Tha copy filmed here has been reproduced thanks to the ganeroaity of:

National Library of Canada

Tha images appeering hare are the best quelity possibia considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers ara flimed beginning with the front cover end ending on the last page with a printed or illustrated impres. sion, or the back cover whan appropriata. Ali other original copias are filmed baginning on the first page with a printed or lilustrated impression, end anding on the lest page with a printed or llluatratod impression.

The iast recordad frame on aech microficha shali contain the symbol $\rightarrow$ (maaning "CONTINUED"), or the symbol $\nabla$ (maaning "END"). whichover epplies.

Maps, pistas, charts. etc., may be filmad at diffarent raduction ratios. Those soo large to be entiroly included in one exposure are filmed beginning in the upper left hand cornor, left so right and sop to bortom. as meny frames as requirad. The following diagrams illustrate the method:

L'exampieire filmt fut raproduit grâce ata géndrasite de:

Bibliothèque nationale du Canada

Les images suiventes ont did reproduites svec is pius grend soin. compre tonu de ie condition as de lo nerzer'́ de l'axempleire flimd. or en conformitd avec ies conditions du controt de filmege.

Les exampiaires originaux dont ta couvartura an papiar cet lmprimso sont fllmds an commencans par io promiar plat ot an tarminant soit par la darnitre pege qul comporte une amprainze d'impression ou J'lliustrotion, soit par to second plat, selon to cas. Tous les autres oxemplairas originoux sont filmde an commançant par la pramidre page qui comporta une emprointa d'impression ou d'illustration at on ferminent par la dernibre pege qui comporte une telie emprointa.

Un des symboles suivents apparaitre sur is dernibre image de chaqua microficho. salon ie cas: is symbolo $\rightarrow$ signifio "A SUIVRE". Io symbolo $\nabla$ signifie "FiN".

Les cartas, planchas, tabiaaux, otc., pauvent ötra filmds des raux de reduction difforants. Lorsque io document est trop grand pour itre raproduir an un saul clicht, il est filmd a partir de l'ongie suptriaur geucha, de gaucha droita. ot da haut on bas, on prenant la nombra d'imagas ntcasaaira. Les diagrommeo suivents iliustrant io móshoda.

## Technical and Bibliographic Notes / Notes techniques et bibliographiques

Institute has attempted to obtain the best original y available for tilming. Features of this copy which y be bibilographically unique, which may atter any of Images in the reproduction, or which may nificantiy change the usual method of fliming are cked beiow.

## KEY TO PRONUNCIATION

Three methods are used to indicate the pronunciation of the words forming the headings of the separate articles:
(1) By dividing the word into syllables, and indicating the syllable or syllables to be accented. This method is followed where the pronunciation is entirely obvious. Where accent marks are omitted, the omission indicates that all syllables are given substantially the same value.
(2) Where the pronunciation differs from the spelling, the word is re-spelled phonetically, in addition to the accentuation.
(3) Where the sound values of the vowels are not sufficiently indicated merely by an attempt at phonetic spelling, the following system of diacritical marks is additionally employed to approximate the proper sounds as closely as may be done:

A , as in tate, or in bare.
a, ass in almes, Fr. ame, Ger. Bahn=a of Indian names.
a, the same sound short or medium, as in Pr. bal, Ger. Mann.
$a$, as in fat
a, as in tall.
a, obscure, as in rural, similar to $u$ in but, 6 in her: common in Indiau names
$E_{0}$ as in me= $i$ in machine.
e, ast in met.
$e$, as in her.
I, as in pine, or as ei in Ger. Mein.
i, ass in phn, also used for the short sound corresponding to $e$, as in French and Italian worde.
cu , a long sound as in Fr. jodne, $=$ Ger. long of, as in Sxhne, Góthe (Goethe).
eu, corresponding sound short or medi$\mathrm{um}_{\mathrm{m}}$ as in $\mathrm{Fr}_{\mathrm{r}}$ pow = Ger. oí mhort. $\bar{\delta}$, as in note, moan.
o, as in not, frog-that is, short or medium.
i, as in move, two.
n , as in tube.
u , as in tub: similar to es and also to $a$.
H, as in bull.
u, as in Sc abune=Fr. as in da, Ger. $u$ long as in grin, Buhne.
$d$, the corresponding short or medium sound, as in Fr. but, Ger. Muller. ol, as in oil.
ou, as in pound ; or as au in Ger. Heus.

The consonants, $b, d, f, h, j, k, 1, m, n, n g, p, s h, t, v$, and $z$, when printed in Roman type, are always given their common English values in the transliteration of foreign words. The letter $c$ is indicated by s or $k$, as the case may be. For the remaining consonant sounds the following symbols are employed:
ch is always as in rich.
4, nearly as th in this = Sp. d in Madrid, etc.
$f$ is always hard, as in go.
represents the guttural in Scotch lock, Ger. naoh, also other dimilar sutturals.
p, Er. nasal $n$ as in bom.
$r$ reprement both English $r$, and $r$ in fonels words, in which it is gen-

## VOLUME III

## Encaustic Tiles,

ornamental parins tiles of lanked pultory, murch navel during the midills nges in the mavemouts of churvion mind
 tie thle. strictly wis anlled, Whas decorutial with patterns furmal loy different colored rlays inluld in the tile ame fired whth it. The int uppeurs to have orig. inated in the latter part of the twelfth rentury, to husce nttuinel its highest perfectlon luring the thirteputh, unt to have sunk into disuse in the fiftuenth. During the whole of this pertorl it was principnlly carrind on in England und Normanily. After a long lanse the art was reviyef in England in 18:0 hy Wriglt, in Shelton potter. In modern mamifac lure two methorls are employel, the 'plustic' and the 'semi-dry or 'inst' methol. The first in. In all essentials, that nsed in the midille ages, excent, prrhaps, in the perfectlon of modern molding appliances: the second consists in ramining pulverizel clay with $n$ mlinimum of mointure into metal dies, the silswegnent firing of tiles thus consolidated bring uttended with less risk from shrinkukr.
Enceinte (ium-samt) in fortification, the contimums line of works whirh forms the muin euclosure of a town or fortress. The tern is also aplieyl to the aren within this linc.
Encenia (en-sio'ni-a), festivals anthe fonnaling of a iot, or the derifation of in phureh: unil in later times periontieal ceremonips, ns int Oxform, in commenoration of fomulers und benefaetors.
Encephala (rin-sef'n-la), that livision terizel by possesslug a distinet head, and ompprising the Gistemporla, P'teropoda :inil Crphaloposa.
Encephalitis (en-srf-a-li'tis) inflam-

## Encephalon

(en-spf'a-lon), a term for the brain and whole nervous mass inciniled in the skull. Euchanter's Nightshade (.ry). n name common to piants of the kelus riirar, nat. nirler Onagrapers: $O$. hutetinnu is common in the Vnitmi States

Irmil Carolina to 'Illinols, and C. alpina firrloer morth. The former is about a tiwit mul a haif lilgh, and has dellente wite lonves ; small, white flowers tinged with plak, and small. moundish neeplvepsels eovereel with hooked brintles. It abomils in shaily woods. C. alping is Nmilar, but smaller and more delicate. Hoth species are common in parta of Furope.
Enchasing (cn-chaising), the art of dental ornamentarojucing raised or inupon metuifile surfuces Enchorial Writing (en-kifri-al), writing used hy the old Esyptlans form of common purposes of iffe. as dintinct from the hieroglyphic and hieratie (used by the priests). Called also Demotic.
Fncke (en'ke), Johank Franz, a Hamburg, in 1791 He Henomer, born at Hamburg, in 1791. He standed under the astronomer Ganss at Gijttingen. During the war of liberntion (181:3-15) he servel as an artlllerist lin the German army, andi ufter the prace becaine assistant in the ohsurvatory of Seelerg, near Gotha. Ifere he calculatal the orbit of the comet observerl by Merlanin, Miss Herseliel mul Pons, predieted its return, and detecteal I graclual accelerution of movement, ascribel by him to the presence of a reslsting medium. The enmet ls now known us Fncke's comet. (Rea Comets.) The fame of hls works, Die Entfernuug der Soune ('The Distance of the Sun') und Der Fcumsdurchgan": con 1769.9 ('Tranitit of Venus of $1769^{\circ}$ ) led to his sppointment as dirpetor of the Berlin Observatory (1825). n position which le hell till his death in 180 s.
Encluve (an-kliv), a trom used in German and French to denote a place or muntry whieh is entirely surrounded by the territories of allother powner. Thus, severai petty duchies and priueipalities arr enelaves of Prussia.
Encrinite (enkrin-It), n name often applied to all the marine animals of the orver Crinolden or stonelilies, ciass Erhinoviermatn, but more speeifically restricted to the genera having ronniled, smooth stems attached to the
bottom, and supporting the body of the clopedis. Britennion, published in Ed animal, which has numerous jointed bursh, in eieven editions-the drat arms radiatlng from a central diec, in 1708, tho lat in 1011: Rees Oyoloped which the mouth is situated. Fnerinites were exceedingly numerous in pant agee of the world's history ; of those stili exfiting our knowiedse has been sreatly increased of recent yearm throush deepsea dredging. Soms of theso forms are very graceful and interenting. Sce also Orinoldea.
Inoyolical (en-nikilk-al), a letter adall his bishops, condemning certain errorm, or civing advlee regarding important public guentions. It difery from a Bull in the fact that the latter is more special is to dentination.
 Orclopedia (Greek en, in kyilos, of circle, and paideia, instruction), a tematic vlow of the whole extent of buman knowiedge or of particular depart. mente of it with the subjects arranged senerally in alphabetical order. Varro and $1 \mathrm{lln}_{\mathrm{s}}$ the elder, amons the Romant, attempted works of an encyclopedic nature, the iatter in his well-known Historia Naturalis or Natural IIfistory. Other anclent encyclopedic works were those of Stobwens and Suidan, aud especially of Marcianus Capella. In the tirtenth century a work on a regular plan was complled by the Dominican, Vincent of Beauvals (d. 1204), In wblch was exhibited the whole sum of the knowledge of the mlddle ages. Hls wort was entitied Speculum Historiale. Naturale, Doctrinale, to which an anonymous author added some years later, a Speoulum Moralo. Roger Bacon's Opus Majus also belonged to the encyclopedic class. An exceedingly popuiar work was the $D_{0}$ Proprictatious Rerum of Bartholomeus de Glanvilla, an Engllsh Franclecan friar. which malntalned its reputation fron 1300 to the middle of the sixteenth century. In the seventeenth century varijus encyclopedle works were complled, wheh as the Latln one of Johann Helnrich Alsted (ln 7 vols, Herborn, 1620). In $1: 74$ appeared the first edlitlon of Moreris Le Grand Dictionnaire Historigwe; in 1077 Johann Jacob Hoffma:jn pubIished at Basel his Learicon Universale; and in 1097 appeared Bayle's famous Dic. tionnaire Historique et Oritique, whinh is still of great value. The first English alphabetical encyclopedia was the Loxicon Technicum pubisished in 1704. Among the chief English works of this kind are: Eiphraim Chahbers' Cyclopedia, or a Universal Dictionary of Arts and Sciences, published in 1728; the Ency. 180yd.20; Ridinburgh Eneycir vedia, 18 30; The London Encyclu edia, 18 Tho Penny Oyolopedia, 1843-43, Chambero' Fincy.lopedis, 1800-68, sec ediltlon, 1888- $\mathrm{H}_{2}$

The larser American encyclopedias the Encyclopedia Americana 1820 the New American Oyclopedia, 1858 and 1881: Johnmon's Universal Cu pedia, 1874-77, and of more recent d the New Internetional Encyclopedia, rols, and the Brcyclopedia America 16 ruis. Of the french encycloped the mont famous is the great Dictionna Encyclopédique, by Diderot and D'Al bert (see next articie) ; the Encyolops Methodique, ow par Ordre des Matiel 1781-1852; the Enoyclopedic Moder 1824-82; the Encyclopedie des Gene IIfonde, 1835-44; the Lictionnaire do Conversation et de la Leoture, $1851-$ and the large and vaiuable Grand $L$ tionnaire Universel du XIX Sie edlted by Larousye. Numerous works this Hind have been published in $G$ many, the most popular being the $C$ cersations-Leaikon of Brockhaus ; Mey Konvervations-Lexikon; Plerer's Eont aation-Lemikon, and that issued Spamer. Tbe mont comprehenslve is Augemeino Encyklopädic, orisinally edl by Profeseors Ersch and Gruber. In dition to the works mentioned ma others bave been lasued of smalier al the artlcles, whlle llttle less numero being condensed, and adapted to the $p$ puses of the busy reader. As a ge example of these may be mentloned prement work. In addition to the gene works mentloned, there are many of clal character and several dictlonar witb encyclopedic $\ln$ formation, such the English Encyclopedic Dictionary a the American Certury Dictionary Encyclopedia.
Encyolopédie ( $\mathrm{C} p-$-sik-lo-paldes), $T$ important llterary work of the elghteer century after the works of Voltalre a Rousseau, originated in a French trai latlon of Ephraim Chamber: Cycloped Dlderot was appointed to edlt it, a enlisted the ablest men of the time contrlbutors. D'Alcmbert (who wro the famous Discours préliminaire) edlt the mathematlcy ; Rousseau wrote $t$ musical artlcles: Daubenton those co nected with natnral hlstory; the Ab Yron, those on logic, metanhysles as ethles; Toussalnt, those on jurlspru ence; Buffon contrlbuted the artlc Nature: and Montesquieu, Voltalr
in Edine Arat in Cyclopetio, edia, 1810 dia 1823 43-43, and -68, second
opedias are 1820-88: 1858-03 bal Cyclo. recent date lopedia, 20 Americane, cyciopedias Iotionnaire Id D'Alem. noyolopodio fatiores. Moderne, -Gens du laire de la 1851-58; trand Dic: $x$ Siecle works of in Gerthe Con18; Meyer's ETonverlssued by sive is the aally edited er. In adned many nailer aize, numerous, to the purAs a good itionad the the general tny of speiictionarles such as ionary and onary and -de), TME the most eighteenth oltaire and nch trans. yclopedia. it it, aud etime as tho wrote ire) edited wrote the those conthe Abbe ysics and jurisprudvarticle Voltaire,

Endecagon

Buler, Marmontel, D'Holbach. Turgot, Grimm and Condorcet tout nome sliare in the great work. Diderot himself was a prollfic contributor on a wide varlety of toples. The prospectus appeared in Novemhice, 1750 , and the firnt volume in 1751, the whoie being completed, despite fierce opposition in 1765 .
Endecagon (en-dek'r.ann), a plane anglen
Fndemic (en-demik; Greek, on, and commonly demos, peoplet, a name tack the Inhabitants of anses which attrict or country, and have their orisin in nome local cause, as the physical character of the piace where they prevall, or in the employments, habits and mode of living of the people. Diseases which are endemic in one country may also appear in others, and become epldemic under influcnces resembling those which are the causes of the endemic in the former piace.
Enderby Land (e n'd e r-bi), an island in the Antarc tic Ocean, long. $50^{\circ}$ z., crossed by the Artarctic Circle.
Endive (en'div), n plant, Oichorium Endiria, nat. order Compositom, a native of Asia, introduced into Britain in 1548, and critivated for culinary purposes. It has large, sinuate, mooth, toothed. or finely curled, deepgreen leaves, which, when blanched, are nsed in maiads, soups, etc. Chicory or anccory is C. Intybus.
Fndless Screw (end'les), a mechansisting of a screw, the thread of which gears into a wheel with shew teeth, the obliquity corresponding to the angle of pitch of the screw. It is generally employed as a means of producing slow motion in the adjustments of machines, rather than as transmitter of any great amount of power.
Tndlicher (endil-her), Steprias botanist, etc., born at Presburg in 1804. He was successively conrt-librarian at Vienna, and keeper of the naturai history museum; ard in 1840 was appointed professor of botany in the Unlversity of Vienna, and director of the botanic garden, which he immediately began to reorganize. He took part on the popular side in the German revolution of 1848, and died by his own hand in 1849. Among bis chief botanical Works are his Genera Plantarum a syo tematic treatise on botanv; and his En. chiridion Dotanioum or Manual of Boteny:

## Endocarditis

(en-do-kar-di'tis), i. inflammation of the endocardium or serous membrane coves ing the vaives and internal surfice of the heart.
Endogamy (en-dofa-mi; Oreek, eno don, wlthin: gamos, marriage), a custom amons nome Eavage peopies of marrying only within thelf own tribe ; oppoaite to ecogamy.
Endogenous Plants (en-iojo ${ }^{\circ}$ nue), (Gr. endon, within; gen, to produce). one of the large primary clastes into which the vegetable kingdom is divided, $s 0$ named in concequence of the new

1. Soction of the stem of a Palm: e, Portion of otem, netural dise, showing the onde of the bundies of roody iberi e, Remaine of leaf-taltho if Bundles of woody fiber. 2, Fadogenoun Led showing ite paralliol vaina. \& Monocotyledoncus Seed, abowing ita cinglo cotylodon: a a, Cotyledom. 4, Gormination of Palm; e, Cotyledoa; b, Albomeni d, Plumule; o, Radicio iovuline from a abort abenith, ondorhisa, 5 , Flowor of Endogem.
woody bundles ielng developed in the interlor of the stem, in whioh there is no distinction of pith and bark. In trant verne section them bnndles appear scattered through the callular matter, beins more compact towards the olrcumference. The other orsang of the plante are also churacteristic. The leaves are zenerally parallel-veined, the fowers nounlly with three organs in each whorl, the seed has an embryo wi one cotyledon, and the radicle isanes frum a sheath and is never developed into a tap-root in germination. To this class belong palms, grassem, rushes, lilies, etc. Endogens increase in thickness only to a limited extent; hence they are not injured by twining plants as exogens are.
Endomorph (en'dn-morf), a term ap closed in crystais of other minerals enIndoparasite (en-do-par'a-sit; Greek asite living on the indernal organs of ani-
mals, as opposed to an cotoparasite which infests the skin.
Endorhiza (en-do-ríza), in botany, radicle of the embryo of monocotyledonous plants, which is developed inslde a sheath (Gr. endon, withln, rhiza, a root) from which it issues in germination. The cut shows the germinating embryo of the oat. Endoskeleton (en-d 0 -s $k$ e l'etun), in anatomy, a term applied to the internal bony structure of man and other animals (Greek, endon within), in contradistinetion to exaskeleton, whieh is the outer and hardened covering of such animals as the crab, lobster, etc. Endosmose, or Endosmosis (en'dos transmission of mos, en-dos-mi'sis), the transmission of fluids or gases through porous septa or partitions from the exterior to the interior of a vessel. An instrument for measuring the force of endosmotic action is known as an endosmometer.

## Endosperm

(en'do-sperin), the tissue surrounding the embryo in many seeds and which is contained with it within the testa. It comtains the supply of food for the germinating embryo, and is also called albumen or perisperm.

## Endymion

(en-dim'i-on), a personage of Greek mythology, according to various accounts a huntsman. A shepherd, or a king of Elis, who is said to have asked of Zeus, or to have reseived as a punishment, eternal sleep. Others relate that Selēné or Diana (toe moon) conveyed him to Mount Latmos in Caria, and threw him into a perpetual sleep in order that she might enjoy his kisses whenever she pleased.
Enema (en'e-ma), any liquid or gaseous form of nuedieine for injection into the reetum. It is most commonly administered to induce peristaltic action of the bowels, hit it is often the most desirable means of couveying into the system nourishment or stimulants. Energy (en'er-ji), in physics. the possesses of doing work. A body may possess energy in or e of two forms. viz., ua binetic energy, that is, the energy due to motinn, and potential encrev, that is. ehergy due to what may he called a position of advantage. Thus, a noving mass, a bullet for example, can do work in virtue of its motion, and the name kinetic energy is given to energy of this kind.

Under this name is also included energy belonging to molecular motion, to electricity in uotion, to heat and light, and to actual chemical action. Again, as examples of potential energy we may take the case of a mass raised up to a position in whieh it is capable of doing work by falling-the weight of a clock, for instance; but the term also includes the energy due to electrical senaration, to ahsorbed heat, and to chemical separation, as in gunpowder, whieh is ready to do work by means of its explosion. From the investigations of Joule and others into the nature and phenomena of heat and the discovery of the equivalence of a definite guantity of meehanical energy to a definite quantity of heat, the grand principle of the consercation of ciltergy was established. This asserts that the total amount of energy in the universe, or in any limited system which does not receive energy fr m withour, or part with it to external matter, is invariable. If energy of any form seems to disappear in such a case it reappears in some other form. Thus. mechanical energy may be converted into heat. lleat again may be converted into tie energy of eleetrieity in motion, or into the potential energy of chemical stparation. And eleetrical energy, whether potential or kinetic, and the energy of chemical separatiou, ure also convertible into heat. (See also Correlation of Physical Forccs,) Connected with this principle is another which states that no known natural process is cxactly, reversible, and that if we transform mechanical energy into lieat, for example, we never can pass baek aud obtain from the heat produeed precisely the anıount of meehanical energy with whieh we commenced. Whatever attempt is made to transform and retransform energy by an imperfeet process (and no known process is perfect), part of the energy is necessarily transformed into heat, and is dissipatcd so as to be incapable of furiher useful transformation. It, therefore, follows that as energy is in a constant stute of transformation, there is a constaut process of degradation of energy giing on, a process by which energy constantly approaches the unavailable form of uniformly diffused heat and all the en. ergy of the universe will take this final form, unless sume process of reversal may arise.

## Enfantin <br> (inn-fon-tan!) Rarthelemy

 l'rosper, me of the chiet apostles of St. Simonianism; born at Paris in $179 \%$. In 1825 he became acquainted with St. Simon, who in dying confided to him the task of continuing
## energy

 to. elecht, and as ex. ay take a posiIg work for indes the ion, to separaready plosion. le and acna of valence cal enat, the ion of ts that ae uniwhich our, or $s$ inva ems to ears in hanical heat. to tise or into steal'ader porgy of ertible ioll of th this hat ne rever. echanj. le, we m the unt of comade to by an proc rgy is and is of furrefore nstant gy gor 4 conforin he enfinal 1 maythe work. This he did with success until after the revolution of 1830 , whell, as the representative of the social and religious theories of the school, he quarreled with Bazard, the representative of its political ideas. Enfantin organized madel communities, which quickly fell to pieces; the new organ of the sect, the dlobe, was a failure; their couvent at Ménilmontant, of which Euf:antin was 'supreme father,' was broken up by govarnment (183i2). Ile himself was imprisoned as an offender against publie: morality (heing an advocate of free love), and on his releass attempted to found a model colony in Egypt, which whs broken up in the second year. He then retired to Tain (Drôue), where he lived for some time as a farmer. In 1841 he was sent as member of a commission to explore the industrial resources of Algiers, and on his return published a work on the Colomization of Algiers (1848). On the revolution of 1848 he started a new journal, the Crédit public, but ufter two years withdrew from public: notice. Ite afterwards held an official positon on the lyons and Mediterrniean liailway mutil his death in 1564.

Enfield (en'fald), a market town of 0 miles nopth hy east of London. It is the seat of the government manufactory of rifles aud small arms. Pop. (1911) 56,344 .
Enfield, a township of ILartford Co., Hartford; divided into three districts of 'Thomponville, Inzardville, and Entield Street. Carpets, rugs, antomobile parts, cisket hardware, paper, paint, and cloth, - tc., are mannfactured. Pop. 11,000 .

Engadine (en-ga-dēn'), a beautiful the Grisims, on the bank of the Lun, bordering on the 'Tyrol, ahout 50 moles long, bitt in some parts very narrow, divided into Ypper and lawer. The pop. of the whole valley amonits to about 12,000 . The laugnage generally spoken is the Ladin; a branch of the Romantc tongle. The cold, dry climate and mineral springs liave made the valley a favorite resort for invalids.
Engaged Column, in arcluitecture, a to a wall so that part of it (usually less than half) is concealed.
Engel (eng'l), Karl, a German writer in 1882. at London, where he had been settled for more than thirty jears. He wrote The Music of the IIOst Ancient Nutione. An Introduction to the Study
of National Music, Musical Mythe and F'acts, etc.
Enghien (an-gi-an), or Enguren, a town in Hainault Belgium, between Brussels and Tournal. It has a superb castle, and cave the title of duke to a prince of the house of Bourbon conde in memory of the victory gained here by the gr:at Condé. Pop. 4541.
Enghien (ap-gi-an), Loots ANToint Henri de Bourbon, Duke of, boru at chantilly in 1772: son of lonis Lleury Joseph Coude, Duke of Honrbon. Oin the ontbreak of the revolution he quitted France, traveled through rarious parts of Europe. and went in 7, 2)2, to Flanders to join his grandfather, the Prince of Conde, in the campaign against Erance. From 1796 to 1799 he commanded with aistinguished merit the vanguard of Conde's army, which was disbanded at the Peace of Luneville (1801). He then took np residence as a private citizen at Ettenheim in Baden, where he married the Princess Charlotte de Rohan Rorhefort. He was generally looked upou as the leader of the émigrés, and was suspected by the Bonapartists of complicity in the attempt of Cadoudal to assassinate the first consul. An armed force was sent to seize him in Baden in violation of all territorial rights, and he was brought to Vincennes on the 20 th of March, 180t. A mock trial was held the same night ; and on the following morning he was shot in the ditch outside the walls. It was this event which drew from Fouche the comment since become proverbinl: 'C'est plus qu'un crime, c'est nne faute' ('It is worsc than a crime, it is a blunder').
Engine (en'jin), a merhanical contrivance in which one or other of the natural forces is utilized for the performance of work of aome kind; often distinctively a steam engine.
Engineer (en-ji-n̄̄r $\left.r^{\prime}\right)$, a term of somewhat loose application, being applied both to mechauics employed in the construction or management of steam engines, and also to persons in general 'who make the useful application of mechanical science their peculiar study and profession,' the term engiacering laving a corresponding meaning. Those who turn their attention especially to the construction of docks, bridges, canals, lighthouses, rallroads, sewage and drainage, etc., are generaliy classed as cilil engineers : those who devote themselves to the manufacture of machinery are known as mechanical engineers; while mining engineers are those who discover minerals and manage mines, and electrical engineers those who are con-
cerned in eiectrical applications. A distinct department from any of these is that of the military engineer. The special duties of the military engineer consist in the construction of fortifications, including the trenches and. hatteries required in besieging places; also of barracks and magarines, and of roads and hridges to facilitate the passage of an army. Civil engineering as a profession may he said to have originated in England about 1770, when the improvements of the steam engine by Watt opened a new field for invention and adaptive skill. Since then it has pursued an active course of development.
Engineers, Corps or, organized in 1802. It is a special arm of the military service, charged with the selection and purchase of sites and the construction of fortifications ; the removal of ohstructions in streams; and important field duties in preparing for the movement of forces. It also plans and superintends harbor and river improvements, and makes suryeys and geographical explorations. Until 1866 the engineer corps had the superintendence of the West Point academy; but since that year all branches of the service share in its supervision. A similar corps in the British army is known as the Royal Engineers.
Engineers. IN THe NAVY are comcharge of the machinery of steam vessels. A thorough practicai education in the construction and management of steam machinery is required. In military law they are considered non-combatants.
England, including Waleg, the souththe isiand of Great Britain, is situated between $50^{\circ}$ and $55^{\circ} 46^{\prime} \mathrm{N}$. iat., and $1^{\circ}$ $46^{\prime}$ E. and $5^{\circ} 42^{\prime}$ w. ion. On the N. it is hounded hy Scotiand; on all other sides it is washed by the sea; on the E. by the North Sea or German Ocean; on the s. by the English Channel; and on the w. by St. George's Channel and the Irish Sea. Its figure is, rougbly speaking, triangular, but with many windings and indentations, the coast-line measuring not less than 2765 miles. The length of the ccuntry, measured on a meridian from Berwick neariy to St. Alban's Head, is 365 miles. Its hreadth, measured on a parallel of iatitude, attains its maximum hetween St. David's Head, in South Waies, and the Naze, in Essen, where it amounts to 280 miles. The area is 58,311 square miles, of which 50.933 square miles are in England, and 7378 square miles in Wales. This is exclusive of the Channel Isiands and the

Isle of Man, which together would ad 302 square miles more to the area. Th subdivision of England into counties said to date from the time when th country was still under several king but it does not appear to have assume a definite form till the time of Alfre the Great The existing division wa first completed in the time of Henry VIII

The capital of England and of th British Empire is London. The citie next in size (in order of population are: Liverpool, Manchester, Birmingham Sheffield, Leeds, Bristol, West Ham Bradford, Kingston and Newcastle.

Physical Features.-The chief inden tations are: on the east, the Humbe the Wash and the Thames estuary ; o the west, the Solway Firth, Morecamh Bay, Cardigan Bay and the Bristo Channel ; those on the south are ies prominent, though inciuding some usefu harbors. The greater part of the coas consists of cliffs, in some places ciayey in others rocky, and sometimes juttin out int bold and precipitous headiands The chief islands are: Holy Isiand, th Farne Isiands, Sheppy and Thanet o the east coast; the Isle of Wight on th south; the Scilly Isles at the scuthwes extremity; and Lundy Island, Angiesey Holyhead and Wainey on the west.

The chief elevations of England an Waies are situated at no great distanc from its western shores, and consis not so much of a continuous chain as o a succession of mountains and hilis stretching, with some interruptions, fron north to south, and throwing out numer ous hranches on both sides. The mos important of its offsets are those of th west, more especially if we include i them the mountain masses in North western Engiand sometimes classed sep arateiy as the Cumbrian range. Amil these mountains lie the celehrated Eng iish lakes, of which the most importan are Wipdermere, Derwent Water, Conis ton Lake and Ullswater. Here also the lighest summit of Northern England Scawfell (3210 feet).

A large part of the surface of Englanc consists of wide valleys and plains. Be ginning in the north, the first vaileys or the east side are those of the Coquet Tyne and Tees; on the west the beauti ful valley of the Eden, which, at firs hemmed in between the Cumbrian rang and Pennine chain, gradually widens out into a plain of about 470 square miles, with the town of Cariisle in it: center. The most important of the north. ern piains is the Yaie of York, which has an area of nearly 1000 square miles. Properiy speaking, it is still the same
ould add The nntice is when the al kinge, assumed of Alfred sion was ary VIII. 1 of the he cities puiation) mingham, le. indenHumber, aary ; on orecamhe Bristol are less ne usefui the coast $s$ clayey, 3 jutting eadiands. land, the hanet on at on the nuthwest Angiesey, est.

plain which stretches, with scarceiy a a Roman possession. (See Britcin.) singie interrnption, across the counties On the withdrawai of the Roman forces, of Lincoin, Suffolk and Essex, to the ahout the beginning of the fifth century mouth of the Thames, and to a considerable distance iniand, comprising the Central Plain and the region of the Fens. On the west side of the isiand, in S. Lancashire and Cheshire, is the fertiie Cheshire Plain. In Waies there are no extensive piains, the valleys generally having a narrow, rugged form favorahie to romantic beauty, hut not compatihle with great fertiiity. Wales, however, by giving rise to the Severn, can jnstiy ciaim part in the vale, or series of aimost unrivaied vales, aiong which this stream pursues its romantic course through the connties of Montgomery, Salop, Worcester and Gioucester. South: east of the Cotswold Hilis is Saiisbury Piain, but it is oniy in name that it can he classed with the other piains and ievei lands of Engiand, heing a large, eievated piateau, of an ovai shape, with a thin, chaiky soii only suitable for pasture. In the southwest the only vaies deserving of notice are those of Taunton in Somerset and Exeter in Devon. A large portion of the sontheast may he regarded as a continuous plain, consisting of what are called the Weaids of Susscx, Surrey and Kent, hetween the North and South Downs and containing an area of ahout 1000 sqnare miies. The southeast angie of this district is occupied hy the Romney Marsh, an extensive level tract composed, for the most part, of a rich marine deposit. Extensive tracts of a similar nature are sitnated on the east coast. Many of these lands are naturally the richest in the kingdom, hnt have heer utilized only hy means of drainage.

England is weil suppiied with rivers, some of them of great importance to industry and commerce. Most of them carry their waters to the North Sea. If we consider the drainage as a whoie, four principal river basins may be distinguished, those of the Thames, Wash and Humher heionging to the German Ocean; and the Severn helonging to the Atlantic. The Thames, which is the chicf of Engiish rivers, has a length of 215 miles. Other rivers unconnected with these systems are the Tyne, Wear and Tees in the northeast; the Eden, Rihhie, Mersey and Dee in the northwest. The south coast streams are very unimportant except for their estuaries.
In regard to the minerais, ciimate, agricnlture, manufactures, etc., of England see the articie Britain.

Oivil History.-The history of Eng- Kingdom of Northumhria, fonnded by Ida land proper begins when it ceased to be in 547 ; absorbed by Wessex in 827.
6. Kingdom of East Saxons, founded by son and the grandson of Alfred, bot Frehew in 527; ended in 823 . 7 . King- vigorous and able rulers, had each it dom of Mercia, founded hy Cridda about 584 ; ahsorbed by Wessex in 827. Each state was, in its turn, annexed to more powerful neighhors; and at length, in 827, Egbert, king of the West Saxon kingdom (Wessex), hy his valor and superior capacity, united in his own person the sovereignty of what had formerly heen seven kingdoms, and the whole came to he called England, that is Angle-land.

While this work of conquest and of intertribal strife had heen in progress towards the estahlishment of a mnited kingdom, certain important changes had occurred. The conquest had been the slow expulsion of a Christian race by a purely heathen race, and the country had returned to something of its old isolation with regard to the. rest of Europe. But before the close of the sixth century Christianity had seeured a footing in the southeast of the island. Lthelbert, king of Kent and suzerain over the kingdoms south of the Humber, married a Christian wife, Bertha, daughter of Charibert of Soissons, and this event indireetly led to the coming of St. Augustine. The conversion of Kent. Essex and East Anglia was followed by that of Northumherland and then by that of Mercia, of Wessex, of Sussex, and lastly of Wight, the contest between the two religions being at its height in the seventh century. The legal and political changes immediately consopuent upon the adoption of Christianity were not great, hut there resulted a more intimate relation with Europe and the older civilizations, the introduction of new learning and culture, the formation of a written literature, and the fusion of the tribes and petty kingdoms into a closer and more lasting unity than that which could havr 'en otherwise secured.

The kingdoi wever, was still kept in a state of a. ance by the attaeks of the Danes. who had made repeated incursions during the whole of the Saxon period, and about half a century after the nuifieation of the kingdom hecame, for a brief time, masters of nearly the whole of England. But the genius of Alfren the Great, who had ascended the throne in 871, speedily reversed matters hy the defeat of the Danes at Ethandune ( 878 ). Guthrum, their king, embraeed Christianity, became the rassel of the Saxon king, and retired to a strip of land on the east coast, including Northumbria and called the Danelagh. The two inimediate suceessors of Alfred, Edward (901-925) and Athelstan (825-240), the
vigorous and able rulers, had each it turn to direct his arms against thes settlers of the Danelagh. The reigns o the next five kings, Edmund, Edred Edwy, Edgar und Edward the, Martyr are chiefly remarkahle on account of th conspieuons place ocenpied in them $h$ Dunstan, who was counselor to Ed mund, minister of Edred, treasurer unde Edwy, and supreme during the reign of Edgar and hiis successor. It was possi bly due to his poliey that from the tim of Athelstan till after the death o Edward the Martyr (978 or 979) th country had comparative rest from th Dancs. During the tenth century man changes had taken place in the Teutoni constitutions. Feudalisin was alread taking root: the king's authority ha increased: the folkland was heing take over as the king's personal property: th nobles hy hirth, or ealdormen, were he coming of less importance in administra tion than the nohility of thegns, th officers of the king's court. Ethelre ( $978-1016$ ), who sueceeded Edward, wa a minor, the government was feehl condueted, and no united action bein taken against the Lanes their incursion became more frequent and destructivf Animosities between the English and th Danes who had settled among them be came daily more violent, and a genera massacre of the latter took place in 100: The following year Sweyn invaded th kingdom with a powerful army and us sumed the erown of England. Ethelre was compelled to take refuge in No mandy; and though he afterwards re turned, he fonnd in Cannte an adversar no less formidable than Sweyn. Ethelre left his kingdom in 1016 to his son Ed mund, who displayed great valor, hu was compelled to divide his kingdom wit Canute; and when he was assassinate in 1017 the Danes sueceeded to the sov ereignty of the whole.

Canute (Knut) who esponsed th widow of Etlielred, that he might reton cile his new subjeets, obtained the nam of Great, not only on account of hi personal qualities, but from the extent $n$ his dominions, heing master of Den mark and Norway as well as England In 1035 he died, and in England wa followed by other two Danish kings Harold and Hardieanute, whose join reigns lasted till 1042, after which th English line was again restored in th person of Edward the Confessor. Edwar was a weak prince, and in the latte years of his reign had far less rea power than his brother-in-law Harold son of the grest earl Godwin. On

## England

Edward's death in 1006 Harold accord ingly obtained the crown. He found however, a formidable opponent in the gecond cousin of Edward, Wiiliam of Normandy, who instigated the Dares to irvade the northern counties, while he, Fith $60,000 \mathrm{men}$, landed in the south. Harold vanquished the Danes, and hastening southward met the Normans near Hastings, at Senlac, afterwards called Battle. Harold and his two brothers fell (October. 14, 1066), and Wiliiain (10cc-87) immediately claimed the government as lawful king of Engiand, being subsequently known as William I, the Conqueror. For some time he conducted the government with great moderation ; but being obliged to reward those who had assisted him he bestowed the chief ufices of government upon Normans, and divided among them a great part of the country. The revoits of the native Eng. lish which foliowed were quickiy crushed. continental feudalism in a modified form was established, and the Engiish Church reorganized under Lanfranc as Archbishop of Canterhury.

At his death, in 1087, William II, commonly known hy the name of Rufus, the conqueror's second son, obtained the crown, Robert. the eldest son, receiving the duchy of Normandy. In 1100, when William II was accidentalig killed in the New Forest, Robert was again kept from the chrone by his younger brother Henry (Henry I), who in 1106 even wrested from him the duchy of Normandy. Henry's power being secured, he entered into a dispnte with Anselm the primate, and with the pope concerning the right of granting investure to the ciergy. IIe supported his quarrel with firmness, and brought it to a favorable issue. His reign was also marked by the suppression of the greater Norman nobles in England, whose power (like that of many continental feudatories) threatened to overshadow that of the king, and by the substitution of a class of lesser nobles. In 1135 he died in Normandy, leaving behind him only a dgughter, Matilda.

By the will of Henry I his daughter Maud or Matiida, wife of Geoffrey Plantagenet. Count of Anjou, and fre-
quently styled the Empress Matilda bequently styled the Empress Matilda, be-
cause she had first beeu married to cause she had first been married to clared his successor. But Stephen, son of the Count of Biois, and of Adela, daughter of Williann the Conqueror, raised an army in Normandy, landed in
England, and declared himself king. After years of civil war hamself bloodshed an amicable arrangement was brought,
about, by which it was agreed that Stephen shouid continue to reign during the remainder of his life, but that he shouid be succeeded by Henry, son of Matilda and the Count of Anjou. Stephen died in 1154, and Henry Plantagenet ascended the throne with the title of Henry II, being the first of the Plantagenet or Angevin kings. A larger dominion was united under his sway than had been held by any previous sovereign of Engiand, for at the time when he became king of England he was already in the possession of Anjou, Normandy and Aquitaine.
Henry II found far less difficultr in restraining the license of his barons than in abridging the exorbitant privileges of the ciergy, who claimed exemption not only from the tares of the state, but also from its penal enactments, and who were supported in their demands by the primate Becket. The king's wishes were formulated in the Constitutions of Clarendon (1164), which were at first arcepted and then repudiated by the primate. The assassination of Becket, however, placed the king at a disadvantage in the struggle, and after his conquest of Ireland (1171) he submitted to the church, and did penance at Becket's tomb. Henry was the first who placed the common people of England in a situation which led to tueir having a share in the government. The system of frank-pledge was revived, triai by jury was instituted by the Assize of Clarendon, and the Eyre courts were made permanent by the Assize of Nottinghain. To curb the power of the nobles he granted charters to town, freeing them from all subjection to any but himself, thus laying the foundation of a new order $n$ society.
Richard I, called Cour de Lion, who in 1189 succeeded to his father, Henry II, spent most of his reign away from Kingland. Having gone to Palestine to join in the third crusade, he proved an intrepid soldier. Returning homeward in disguise through Germany, he was made prisoner by Leopoid, duke of Austria, but was ransomed by his subjects. In the meantime John, his brother, had aspired to the crown, and hoped. by the assistance of the French, to exclude Richard from his right. Richard's presence for a time restored matters to some appearance of order; but having undertaken an expedition against France, he received a mortal wound at the siege of Chalons, in 1199.
Ji $3 n$ was at once recognized as King of England, and secured possession of Normandy ; but Anjou, Maine and Tou-
raine acknowledged the claim of Artbur, dependent during the barons wara. son of Geoffrey, second won of Henry II. On the death of Arthur, while in John's power, these four French provinces were at once lost to England. John's opposition to the pope in electing a successor to the see of Canterbury in 1205 led to the kingdom being placed under an interdict: and the nation being in a disturbed condition, he was at iast compelled to receive. Stephen Langton as archbishop, and to accept his kingdom as a fief of the papacy (1213). His exactions and misgovernment bad equaily embroiled him with the nobles. In 1213 they refused to follow him to France, and on his return defeated, they at once took measures to secure their own privileges and abridge the prerogatives of the crown. King and barons met at Ikunnymede, and on June 15, 1215, the Great Charter (Magna Charta) was signed. It was speediiy declared nuil and void by the pope, and war broke out between John and the barons, who were aided by the French king. In 1:16, however, John died, and his turbulent reign was succeeded by the almost equally turbulent reign. of IIenry III.

During the first ycars of the reign of Henry III, the abilities of the Eari of Pembroke, who was regent until 1219, retained the kingdom in tranquillity; but when, in 1227 , Henry ussumed the reins of government he showed himself incapable of managing them. The charter was three times reissued in a modified form, and new privileges were added to it, but the king took no pains to observe its provisions. The struggle, iong maiutained in the great council (henceforward calied Purliament) over moncy grants and other grievances reached an acute stage in 1:63, when civil war broke out. Simon de Montfort, who had iaid the foundations of the House of Commons by summoning representatives of the shire communities to the Mad Pariiament of 1258, had by this time engrossed the sole power. IIe defeated the ling and his son Edward at Lewes in 124, and in his famous marliament of 1065 stili further widened the privileges of the peopie by summoning to it burgesses as weii as knights of the shire. The escape of Prince Fiwward, however, was followed by the battle of Evesham (1265), at which Earl Simon was defeated and siain, and the rest of the reign was undisturbed.

On the death of Henry III, in 1272, Edward I succeeded without opposition. From 1276 to 1284 he was iargeiy occupied in the conquest and anneration of Waies, which had become practically in
$12 y^{2}$ Ballioi, whom Edward had decid to be rightfil heir to the Scottish thron did homage for the fief to the Engli king; but when, in 1294, war broke ol Fith France, Scotland also deciared wa The Scots were defeated at Dunbe (1200), and the country piaced und an English regent ; but the revoit und Wailace (1297) was foilowed by thi of Bruce (1306), and the Scots remaine unsubdued. The reign of Edward we distinguished by many legai and iegisi tive reforms, such as the separation the old king's court into the Court Exchequer, Court of King's Bench, an Court of Common Pleas, the passage the Statute of Mortmain, etc. In 129 the first perfect pariiament was sun moned, the ciergy and barons by speci writ, the commons by writ to th sheriffs directing the election of $t w$ knights from each shire, two citizer from each city, two burghers from eac borough. Two years iater the impos tion of taration without consent pariiament was forbidden by a speci act (De Taliagio non Concedendo). Th great aim of Edward, bowever. to is ciude Engiand, Scotland and Waies one kingdom proved a failure, and died in 1307 marching against Robe Bruce.

The reign of his son Edward II wa unfortunate to himself and to inis king dom. He made a fceble attempt to carr out his father's iast and earnest reque to prosecute the war with Scotiand, bu the Engiish were aimost constantiy ut fortunate; and at length, at Bannocl burn (1314), they received a defeat fro Robert Bruce which ensured the inde pendence of Scotland. The king soo proved incapahle of reguiating the law less conduct of his barons: and his wiff a Woman of boid, intriguing disposition joined in the confederacy against him which resulted in his imprisonment an death in 1327.

The reign of Edward III was as bril liant as that of his father had been th reverse. The main projects of the thir Edward were directed against Framo the crown of which he claimed in $13 \%$ in virtue of his mother, the daughter o King Philip. The victory won by thi Biack Prince at Crecy (1346). the cap ture of Caiais (1347), and the victory of Poitiers (1356) uitimately led to the Peace of Bretigny. in 1360 , by which Fdward III received all the west of France on condition of renouncing his claim to the French throne. (See Brétigny.) Before the close of his reign
however, these advantages were all lost

again, save a few principal towns ou became King of England (as Henry VI) the coast.

Edward III was succeeded ln 1377 by his grandson Richard II, son of Edward tlie Black l'rince. The people of England now began to show, though in a turbulent manner, that they had acquired just notions of government. In 1380 an unjust and oppressive poli tax bronght their grievances to a head, and 100,000 men, nader Wat Tyler, marched towards London (13s1). Wat Tyler was killed while conferring with the king, and the prudence and courage of lichard appeased the insurgents. Desplte his conduct on thls occasion, Richard was deficlent in the vigor necessary to curb the lawlessness of the nobles. In 1398 he banished hls cousin, Henry Bolingbroke; and on the death of the latter's father, the duke of Lancaster, unjustly appropriated his cousin's patrimony. To avenge the injustice Bolingbroke landed in England during the king's absence in Ireland, and at the head of 60,000 malcontents compelled Richard to surrender. He was confined in the Tower, and despite the superior claims of Edmund Mortimer, Earl of March, Henry was appointed king (1399), the first of the House of Lancaster. Richard was, in all probability, murdered early in 1400.

The manner in which the Dnke of Lancaster, now llenry IV, acquired the crown rendered his reign extremely turbnlent, hut the vigor of his administration quelled every insurrection. The most important-that of the Percies of Northumberland, Owen Glendower and Douglas of Scotiand-was crushed by the battle of Shrewsbury (1403). During the reign of llenry IV the clergy of England first began the practice of burning heretics under the act de haretico comburendo, passed in the second vear of his reign. The act was chiefly dirceted against the Lollards, as the followers of Winkliffe now came to be callet. Henry died in 1415, learing his crown to his son, Henry V, who revired the claim of Edward III to the throne of France in 1415 and inraded that country at the head of $30,000 \mathrm{men}$. The disjointed councils of the French rendered their country an easy prev; the victory of Agincourt was gained in 1415; and after a second campaign a peace was concluded at Troyes in 1420, by which Henry received the hond of Katherine daushter of Oharles VI, was appointed regent of France during the reign of his father-in-law, and declared heir to the throne on his death. The two kings, however, died within a few weeks of each other in 1422, and the infant son of Henry thus
and France at the age of nine months.

England during the reign of Heary VI was subjected, in the first place, to all the confusion incident to a long minority, and afterwards to all the misery of a civil war. Henry allowed himself to be managed by any one who had the courage to assume the conduct of his affairs, and the influence of his wife, Margaret of Anjon, a woman of uncommon capacity, was of no advantage either to himself or the realm. In France (1422-53) the English forces lost ground. and were finally expelled by the celebrated Joan of Arc, Calais alone belng retained. The rebellion of Jack Cade in 1450 was suppressed, only to be sncceeded by more serious tronble. In that year Richard, Duke of York, the father of Edward, afterwards Edward IV, began to advance his pretensions to the throne, which had been so long held hy the honse of Lancaster. Hls claim was founded on hls descent from the third son of Edward ITI, Lionel, duke of Clarence, who was his great-great-grandfather on the mother's side, while Henry was the great-grandson on the father's side of John of Gaunt, duke of Lancaster, the fourth son of Edward III. Richard of York was also grandson on the father's side of Edmund, fifth son of Edward III. The wars which resulted, called the Wars of the Roses, from the fact that a red rose was the badge of the house of Lancaster and a white one that of the honse of York, lasted for thirty years, from the first battle of St. Albans, May 22, 1455, to the battle of Bosworth, August 22, 1485. Henry VI was twice driven from the throne (in 1461 and 1471 by Edward of York, whose father had previously been killed in battle in 1460 . Edward of York reigned as Edward IV from 1461 till his death in 1483, with a briet Interval in 1471; and was succeeded by two other soverefens of the hotuse of Yotk, first his son, Howard $\nabla$, who reigned for eleven weeks in 1483; and than by Lin brother, Richard III, who reigned Lrom 1483 till 1485, when he was defeated and slain on Bosworth field by Henry Tudor, of the house of Lancaster, who then became Henry VII.

Henry VII was at this time the representative of the house of Lancaster, and in order at once to strengthen his own title. and to put an end to the rivalry between the honses of York and Lancaster, he married in 1486 Elizabeth. the sister of Edward $\mathbf{V}$ and heiress of the house of York. His reign was disturbed by insnrrections attending the impostures of Lambert Simnel (1487), who
pretended to he a son of the Duke of both expcuted. Mary, a bigoted Catholic, Clarence, brother of Hidward IV, nnd of seems to have wished for the crown onis Perkin Warbeck (1488), who affirmed for the purpone of rexstabiishlng the that he was the duke of York, younger Roman Catholic faith. Poiitical motives brother of Edward V; but neither of had induced Philip of Spain to accept of these attained any magnitude. The king's worst fault was the avarice which led him to employ in schemes of extortion such instruments as Empson and Dudley. His administratlon throughout did much to increase the royal power and to establish order and prosperity. He died in 1509.

The authority of the Engllsh crown, which had been so much extended by Henry VII, was by his son, Henry VIII, eserted in a tyranical and capricious manner.- The most important event of the reign was undoubtedly the lieformation ; though it had its origin rather in Henry's caprice and in the casual siturtlon of his private affiirs than in lis conviction of the necessity of a reformation in religion, or in the solidity of reasoning employed by the reformers. Henry had been espoused to Catharine of Spain. who was first married to hls elder brother Arthur, a prlnce who died roung. Henry became dissatisfied with his queen, and enamored of one of her maids of honor. Annc Boleyn. IIe had recourse, therefore, to the pope to dissolve a marriage which had at first been rendered legal only by a dispensation from the pontiff; but failing in his desires he broke away entirely from the Holy See, and in 15.34 got himself recognized by act of parliament as the head of the English Church. He died in 1547. He was married six times. and left three children, each of whom reigned in turn. These were: Mary, by his first wife, Catharine of Aragon ; Elizabeth, by bls second wife, Anne Boleyn; and Fdward, by his third wife, Jane Seymour.

Edward, who reigned first, with the title of Edward VI, was nine years of age at the time of his succession. and died in 1553, when he was only sixteen. His short reign, or rather the reign of the Earl of Hertford, afterwards Duke of Somerset, who was appointed regent. was distinguished chiefly by the success which attended the measures of the reformers, who acquired great part of the power formerly engrossed by the Catholics. The intrigues of Dudley, duke of Northumberland, during the reign of Edward, caused Lady Jane Grey to be declared his successor; but her reign, if it could be called such, lasted only a few days. Mary, daughter of Henry VIII. was placed upon the throne, and Lady Jane Grey and her husband were
vail on her subjects to aliow him any share of power. She died in 1558 .

Elizabeth, who succeeded her sister Mary, was attached to the Protestant faith, and found little difficulty in establishlng it in Fingland. Having concluded peace with France (1559), Elizabeth set herself to promote the confusion which prevailed in Scotland, to which her cousin Mary had returned from France as queen in 1561. In this she was so far successful that Mary placed herseif in her power (15188), und after many years' imprisonment was scut to the scaffold (1587). As the most powerful Protestant nation, and as a rival to Spain in the New World, it was naturai that England should become involved in difficulties with that conntry. The dispersion of the Armada by the English fleet under Howard. Drake and Hawkins was the most hrilliant event of a struggle which abounded, in mlnor feats of vaior. In Elizabeth's reign London became the center of the world's trade, the extension of Hritish commercial enterprise heing coincldent with the ruin of Antwerp in 1585. The parliament was increased by the creation of sixty-two new boroughs, and its members were exempted from arrest. In literature not less than in politics and in commerce the same full life displayed itself, and England began definitely to assume the characteristics Which distinguish her from the other European nations of to-day.

To Elizabeth succeeded (in 1603) James VI of Scotland and I of England, son of Mary, Queen of Scots, and Darnley. His accession to the crown of England in addition to that of Scotland did much to unite the two nations, though a certain smoldering animosity still lingered. His dissimulation, however, ended in his satisfying neither of the contending ecclesiastical parties. the Puritans or the Catholics; and his absurd insistence on his divine right made his reign a continuous struggle be1 ween the prerogative of the crown and the freedom of the people. His extravagance kept him in constant disputes with the parliament, which wonld not graut lim the sums he demanded, and compelled him to resort to monopolies, loans, benevolences, and other illegai methods. The nation at large, however, continued to prosper through the whols of this inglorious reign. His son, Charles
I. Who succeeded him in 1625 , Inherited the mame exalted ideas of royal preroga. tlve, and hls marriage with a Catholic, his arbitrary rule and illegal methods of raising money provoked bitter hontility. Under the guldance of Laud and Strafford things went from bad to worse. Clvif war broke out $\ln 1042$ hetween the king's party ard that of the parliament, and the fatter proving vletorious, in 1649 the king was beheaded.
A commonweulth or republican government was now eatabisisied. its most prominent figure being Oliver Cromwell, the ableat leader of the parlinmentary forces. Mntinies in the ariny among Fifth-monarchlsts and Levellers were nnbdued by 'Uromwell and Fairfax, and Cromwell ln a serles of masterly movements subjugated Ireiand and gained the lmportant battles of Dunbar and Worsester. At sea Blake had destroyed the Royaiist fleet muder Rupert, and was engaged In an honorable struggle with the Dutch under Van Tromp. But withln the goveruing body matters had come to a deadluck. A dissolution was necessary, yet parlinment slirank from dissoiving itself, and in the meantime the reform of the law. a settlement with regard to the church, and other important matters remained untonched. In April, 165.3, Cromweil cut the innot by forcibly ejecting the members and putting the keys of the house in his pocket. Frum this time he was practically head of the governmint, which was vested ln a council of thirteen. A parliament-the Littie or Barebone's Pariament-was summoned, and in December of the same year Cromwell was installed Iord Protector of the Commonwealth of England, Scotland and Ireland. With more than the power of a king. he succeeded in dominating the confuslon at home and made the country feared throughout the whole of Kurope. Cromwell died In 16ins. and tine brief and fephle protertorate of his son Richard followed.

There was now a widespread feeling that the conntry would be better under the old firm of government, and Charles II, son of Charles I, was calied to the throne by the restoration of 1660 . He took complete advantage of the popular reaction from the narrowness and intolerance of Puritanism and in bis later years endeavored to carry it to the extreme of establishing the Catholic religion. The promises of religions freedom made by him before the restoration in the Declaration of Breda were broken by the Test and Corporation acts, and by the Act of Uniformity, which drove two
thousand clerysmen from the church and created the great dimsenting movement of modern times. The Conventicle and Elivemile Acte foliowed, and the Drunken Parllament' restored Eplecopacy in Scotland. At one tlme even civil war seemed agaln imminent. The abolition of the censorship of the press (1079) aud the reaffirmation of the Habeas Corpilis princlple are the most pralneworthy Incidents of the reign.

As Charles II left no lugitimate lasue. hils liruther, the dinke of Yurk, succeeded him as James II (1085-88). An inva sion by all lllegitimate sen of Charlea, the duke of Monmouth, wio cinimed the throne, was suppressed, and the king's arbitrary rule was supported by the wholesale butcheries of such instruments as Kirke and Jeffreys. The klng's zealous countenunce of Homan Cathoiliciem and hls uttempts to force the church and the unlversitles to submission provoked a storm of opposition. Seven prelates were brought to trial for seditious libel, but were acquitted amid general re: juicing. The whole nation was prepared to weicome any deliverance, and in 1688 William of Orange, husband of James' daighter Mary, landed ln Torbay. $\int \mathfrak{a}$. ?ed to France, and a conven. tion su. ed by Willlam settled the crown up him, he thus becomlng Wllliam III. Annexed to this settlement was a Deciaration of Rights circumscribing the royal prerogative by deprivlng the king of the right to exercise dispensing power, or to exact monny, of maintain an army without thes assent of parliament. This placed lienceforward the rlght of the British sovereign to the throne upon a purely statutory basis. A toleration act. passed in 1689, ra. leased dissent from many penaltles. An armed opposition to William lasted for a short time in Scotland, but ceased with the fall of Viscount Dundee, the leader of James adherents: and though tho struggle was proionged in Ireland, it was brought to a close before the end oi 1691. The foliowing year saw the origination of the national debt, the exchequer having been dralned by the heavy military expenditure. A bill for triennial parilaments was passed in 1694 , the year in whicb Queen Mary died. For a moment after her death Wiliiam's popilarity was in danger, but hls successes at Namur and elsewhere, and the obvious exhaustion of France, once more confirmed his power. The treaty of Ryswick foilowed in 1697. and the death of James II in exile, in 1701, removed an important source of danger. Farly in the following year William also died,
and by the act of actlement Anne aucceeded hlm.

The clowing act of William's reiga hed been the formation of the grand allianoa between Bagland, Holland and the German Emplre, and the new queepis rale opened with the brilliant muccomes of Marlboroush at Blenheim (1704) and Ramlles (1706). Througbout the earlier part of her reign the Mariboroushe practically ruied tbe kingdom, the duke', wife, Sarah Jennincs, being tbe queen's mone intimate friend and adviacr. In 1707 the history of England becomes the history of Britain, tbe Act of Union pasced in that year bindling the parliaments and rualms of England and Scotland into a single and more pewerful whole. For the later hlatory of England see artlcle Britain.

Ecolesiastical History.-The firat relig. lon of tbe Ceits of England was Druidism. It has been conjectured that Cbristianity may have reached Britain by way of France (Gaul) before tbe conclusion of the first, or not iong after the commencement of the second century, but the period and manner of its lntroduction are uncertain. It had, however made considerable progress in the 1sland previous to the time of Constantline the Great (300-337).

A period of nlmost total eclipse followed the inroad of the pagan Saxons, and lt was not till A.D. 570 that signs of change showed themselves in the new nationality. On the coming of Austin, or 8 B . Augustine, sent over in 59 t by Gregory the Great, a residence at Canterbury was assigned to bim, and Ethelbert, kling of Kent, and most of his subjects, adopted Christianity. Other missionaries followed; East Saxons were soon after converted by Meliltus i and a bishop's see was eatablished at London, their capital, eariy in the seventh century. The Nortbumbrians were next converted, and tbe conversion of the other kingdoms foliowed in the course of the seventh century.

To promote the union of tbe churches thus founded in Engiand witb the Church of Rome, a grand council was summoned by Theodore of Tarsus, archbishop of Canterbury, at Hertford, in A.D. 673, wben uniformlty was secured among ali the Engiisb cburcbes, and the see of Canterbury made supreme.
The clergy ln course of time attained, particule:if after the Norman conquest, to such a heigbt of domination as to form an imperium in imperio. Under Anselm (1093-1109) the church was practically emancipated from tbe control of the state, and the power of the pope
became supreme. The result was a conslderable increave of monasticism ln Eng. land, and the prevaicnce of the greatest abuses under the cloak of church privilege. Several monarchs showed themseiven restlve ander the papai conirol but without ahaking of the yoke; and though Henry II succeeded ln abating some evils, jet the severity of the penance exacted from him for the murder of Becket is a striking proof of the power tbat tbe church then had in punisbing offenses commltted against itself. The reactlon set in during tbe relgn of Henry III, when the vigorous independence of Robert Gronseteste did much to stlmulate the individual life of the Engilish church. Wlth tbe reign of Edward I the new system of parliaments came as an cffective rival of the church synods, and various acts restralned the power of the clergy. In the fourteenth century the teacbini of Wickilife promlsed to produce a tborongh revolt from Rome; but the difficulties of the house of Lancaster, whlch drove its members to propitiate the churcb, and the Warm of the loses, prevented matters coming to a head.

A steady decay of vital power set $\ln$, however, and when Henry VIII resolved to recast tbe Englisb cburch there was no effective protest. In 1501 the convocatlon of the clergy addressed a petition to Henry VIII, as the chle? protector and oniy and supreme lord of the Englisb Cburcb. Not very long after the parliament abolisbed appeals to the see of Rome, dispensations, licenses, bnll of lnstitution for bishoprics and arcbbishoprics, the payment of Peter'spence, and the annates. In 1534 the papal authority was set aside by act of parliament, and by anotber act of parliament, passed in 1535, Henry assumed the title of protector of the Cburch of England. These acts, aithough they severed the connection between the Englisb Cburch and the hoiy see, did not alter the religious faith of the churcb. But under Edward VI, tbe Duke of Somerset, the protector of the realm during the minority of the king. caused a more tborough reform of tbe doctrines and ceremonies of tbe cburch to be made. At bls instigation pariiament in 1547 repealed the statute of the six articles promulgated by Henry VIII, and in 1551 a new confession of faitb was embodied in forty-two articles, denying the infallibility of conncils, keeping only two sacraments, baptlsm und tbe Lord's supper, and rejecting the real presence, the lnvocation of saints, prayer for the dead, purgatory, and the celibacy of the clergy. At the same time a new liturgy
was componed, in which English was subatituted or Latín.

With the reign of Mary the old reilgfon was reletabiished: and it was not till that of Elizabeth that the Church of England was finally instluted in It prenent form. The doctrines of the church were again modified, and the forty-two nrtlelen were reduced to thirty. nine by the convocation of the clergy in 1503. In 1050 , before the clone of the first year of Elizabeth's relgn, the Acts of Supremacy and Uniformity were passed with the object of rringing about the entire subjection of the church and the peopie in relisious matters to the royal authority.

From James I some rellef was antlelpated by Puritans and nonconformists, but they were disappointed. Under Charles I the uttempt was made, through the instrumentaiity of Laud, to reduce all the churches of Great Britain under the jurisdiction of bishops. But after the death of Laud the pariament aboiished the epinr $x$ ! government, and condemned everyt. \& contrary to the doctrine, worship ad discipline of the Church of Geneva. As soon as Charles II was restored the ancient forms of peclesiasticai government and public worship were reëstablished and three severe measures were passed against nonconformity, namely, the Corporation Act of 1601, the Act of Uniformity, passed in 1662, and the Test Act, passed in 1073. In the reign of William III, and particuiarly in 1680, the divisions among the friends of episcopacy gave rise to the two parties calied the high-churchmen or non-jurors and low-churchmen. The former maintained the doctrine of passive obedience to the sovereign; that the hereditary successlon to the throne is of divine institution; that the church is subject to the jurisdiction of God alone. etc. The gradual progress of civil and religious liberts since that time has settied practically many such controversies. The great increase of the Dissenters in recent times (they are not much less numerous than the members of the Estabiished Church) has ied to new concessions in their faror. and especiaily to the repeal of the Corporation and Test acts (in 1828), the Catholic emancipation (in 1829), and the opening of the universities in England to Dissenters (1871). As at present constituted, the established religion of Engiand is Episcopacy. The sovereign is the supreme head. The church is governed by two archbishops and thirty-one bishops. The Archbishop of Canterbury is styled the primate of all Enpland, and to him
belongs the privilege of crowning the kings and queens of England. The Archbichop of York is ntyled primate of tinglind. The doctrine of the vaures e. Enginnd are contalned in the Thirty-ning Articles; the form of worship is contained in the Book of Common I'rayer.

## English Architeoture, Early.

See Early English Architcciure.
English Art. As remards architeoin respect to the styie prevaient in Engiand between tie invanion of the Anglo-Saxons and the Norman Conquest, from the fact that tb remalns of buildings erected in Esgland before the Conquest are few aad insignificant. The Norman style was introduced in the reign of Fdward the Confessor, though the workmen, both then and after the Conquest, being English, the earlier work preserved many native characteristics. The Norman period proper extends from about 1090 to 1150 . some of the best examples being parts of the cathedrals of Rochester, Winchester, Durham and Canterbury. In the bried period 1160 to 1105 a marked change took place in the adoption of the pointed arch and what is known as the Early English style. Improved methods of conatruction led to the use of iighter walls and piliars instead of the heavy masses employed in the Norman styic. Narrow. lancet-shaped windows took the piace of the round arch; bold projecting buttresses were introduced ; and the roofs and splres became more lofty and more pointed, while in the interiors pointed arches rested on lofty, clustered piliars. The best Eariy English type is Salisbury Cathejral. The Early English style has been reparded as lasting from 1100 to 1270, when the Decorated atyle of Gothic began to prevail. The transition to the Decorated style was gradual, but it may be considered as lasting to 1377. Exeter Cathedrai is an excellent example of the eariiest Decorated style. Between 1360 and 1399 the Deer ated style gave place to the Perpendic ar, which prevailed from 1377 to 1547, $\&$ ad was an exclusively English strie. Gothic architecture, though it lingered on in many districts. practically came to an end in Figgland in the reign of Henry VIII. The Elizabethan and Jacobean styles which followed were transitions from the Gothic to the Itaiian, with which these styles were more or less freely mixed. Many palatial tansions were built in
these styles. In the reign of Charles I Inigo Jones designed, among other buildings, Whitehall Palace and Greenwich Hospital in a purely classic style. After the great fire in London (1666) Sir Christopher Wren designed an immense number of churches and other buildings in classic style, particularly St. Paul's Cathedral, the Shcldonian Theater of Oxford, Chelsea Hospital, etc. Varions phases of classic or Renaissance continued to prevail during the eighteenth and earlier part of the nineteenth century. About 1836 the Gothic revival commenced, and that style has been employed with considerable success in the churches erected in recent times. The Houses of Parliament, erected in 1840-60 in the Tudor style, the Law Courts of Salford, St. Pancras railway station. and the law Courts of Lonjon (opened 1882) in the Gothic, served io sustain an impetus that had been given to the use of that style. At the present day Gothic is much employed for ecelesiastical and collegiate buildings, and a nild type of Renaissance for civil buildings. Of late years a style that has received the name of 'Queen Anne' is much in vogue for private residences. It is very mixed, but withal highly picturesque.

Very little is known of the state of the art of painting among the Anglo-Saxons; hut in the ninth century Alfred the Great causer numerous MSS. to be adorned with miniatures, and about the end of the tenth century Archbishop Dunstan won reputation as a mininture painter. Under William the Conquerer and his two sons the painting of large pictures began to be studied, and Lanfranc, archbishop of Canterbury, adorned the vault of his church with paintings. Numerous miniatures of the thirteenth and fourteenth centuries have come down to us, rude in execution, but not withont originality. From this period down to the eighteenth century a succession of foreign painters resided in England, of whom the chief were Mabuse, Hans Holbein. Federigo Zucchero, Cornelins Jansen. Vaudrck. Lely and Kncller. Of 1ativn artists few are of imnortance prior to William Hogarth (1697-1764). Throughout the eighteenth century English artists attained higher eminence in portrait painting than in other departments, and it culminated in Sir Joshua Reynolds, 'I'homas Gainsborough and George Romney. Barry, West and Copley gained distinction in historical compositions, pespecially in pictures of battles. Landscape painting was represented by Richard Wilson, who painted classical scenes with figures from heathen mythology, and by

Gainsborongh, already mentioned, who painted scenes of English nature and humble life. The Royal Academy of Arts, of which Reynolds was the first president, was established in London in 1769 . Sir David Wilkie (1785-1841), in what is known abroad as genre painting, gained a European reputation that is unsurpassed. In landscape the reputation of Turner (1775-1857) 'stapds alone, solitary, colossal' (Wornum). There were other distinguished landscape painters, among them Roberts, Muller and Constahle, whose works exercisod geeat influence in France. John Philip greatly distinguished himself by his scenes from Spanish life and by his mastery in color. I andserer stands by himself as a painter of animials. In affectine a more accurate and careful style of work, the PreRaphaelites ( $1840-60$ ), while seeking to restore in their practice an early phase of Italian art, exercised a beneficial inflinence, while they themselves ultimately abandoned the style to which at the first they had heen devoted. The list of more recent painters, some of them of high artistic powers, is too extended to be here given.

English sculpture was loug merely an accessory to architecture, and few English sculntors are known by name till comparatively modern times. During the Renaissance period Torregiano came from Italy and executed two masternieces in England, the tomb of the mother of Henry VII, and that of Henry himself at Westminster. The troubles of the reign of Charles I and the Commonwealth produced a stagnation in the art, and were the cause of the destruction of many valuable works. After the Restoration two sculptors of some note appeared. Grinling Gibbons, a wior-carver, and Caius Gabriel Cibber. In the eighteenth century John Flaxman imitated the classic sculpture, and Sir Francis Chantrey produced works in a pseudo-classic style. A return to nature was attempted by Westnacott, Wyatt and Bell; but the first effectual rebellion against the classic dates from Alfred Stevens (1817-75). Other sculptors of note are Sir Edward Landseer (1812-73), who executed the lions on Nelson's monument ; Iord Leighton (1830)96), whose 'Athlete Struggling with the Python' and 'Sluggard ' are well known; Alfred Gilbert (born 1854), who is regarded as one of the greatest figures in British sculpture Harry Bates (1850. 99). Sir George Frampton (born 1860) ; and W. R. Colton (born 1867).
English Channel, an arm of the which separates England from France

## English Language

Finglish Language.
The language goten in England from the settle i: ent of the Anglo Saxons to the Norman Conqliest (say 500-1066) is popularly known as AngloSaxon, through slmply the earliest form of English. (See Anglo-Szxons.) It was a hlghly inflected and purely Teutonic tongue, presenting several dialects. The Conquest introduced the Nor-man-French, and from 1066 to about 1250 , two languages were spoken, the native English speaking their own language, the intruders speaking French. During this period the grammatical structure of the native longuage was greatly broken up, inflections fell away, or were assimllatea to each other; and towards the ent of the period we find a few works written in a language resembling the English of our own day in grammar, but differing from it by being purely Saxon or Teutonic in vocabulary. Finally, the two languages began to mingle and form one intelligible to the whole population, Normans as well as English, this change being marked by a great infusion of Norman-French words, and English, as now constituted, being the result. English is thus, in its vocabulary, a composite language, deriving part of its atock of words from a Teutonic source and part from a Latin source, Norman-French being in the main merely a modified form of Latin. In its grammatlcal structure and general character, however, English is entirely Teutonic, and is classed with Dutch and Gothic among the Low German tongues. If we divide the history of the English language into periods we shall find three most distinctly marked: 1st, the Old Eng. lish or Anglo-Saxon, extending down to about 1100; 2d, the Middle English, $1100-1400$ (to this period belong Chaucer, Wicklife, Langland); 3d, Modern Engllsh. A more detailed subdivision would give transition periods connecting the main ones. The chief change which the language has experienced during the modern period consists in its absorblng new words from all quarters in obedience to the requirements of advancing science, more complicated social relations, and increased subtlety of thought. At the present time the rapld growth of the sciences already existing, and the creation of new ones, have caused whole groups of words to be introduced, chiefly from the Greck.

## English Literature.

erature, in the strict tenee evinted, four literatures had the term,

England-the Celtic, IAtin, Anglo-Saxon and Anglo-Norman. The first includes such names as those of Tallesin, Llywarch Hen, Aneurin and Merlln or Merddhin. The Latin literature prior to the Conquest presents those of Aldhelm, Bede, Alcuin, Asser, Ethelwerd and Nennius For Anglo-Saxon literature see tine article Anglo-Saxons. With the coming of the Normans, although the Anglo-Saxon Chronicle was continued until 1154, the native language practically ceased for a time to be employed in literature, Latia being employed in law, history and philosophy, French in the lighter forms of literature. The Norman trouvere displaced the Saxon scop, or gleeman, lntroducing the Fabliau and the Romance. By the Fabliau the literature was not greatly influenced until the time of Chaucer ; but the Romance attained an early and striking development in the Arthurian cycle, founded upon the legends of Geoffrey of Monmouth's Latin History of the Britons (1147), by Geoffrey Gaimar, Maistre Wace, Walter Map and other writers of the twelfth century. The Latin literaturc included important contributions to the Scholastic philosophy by Alexander Hales (d. 1245), Duns Scotus (d. 1308), and William of Occam (d. 1347), the philosophic works of Roger Bacon (1214-92), the Golias poems of Walter Map, and a long list of chronicles or histories, either in prose or verse, from Geoffrey of Monmouth to Matthew Paris.

Apart from a few brief fragments, the first English writings after the Conquest are the Brut of Layamon (about 1200), based on the Brut of Wace; and the Ormulum, a collection of metrlcal hounilies attributed to Orm or Ormin, an Augustine monk. Next in importance come the rhyming chronicles, Robert of Gloucester (time of Henry III, Edward I), and Robert of Brunne or Mannyng (d. 1340), with other writers of minor consequence. Between the beginning and middle of the fourteenth century the English speech had entered upon a new phase of development ln the absorptlon of Norman-French words. A rapid expansion of the literature followed, having as the foremost figure that of Chaucer (1340-1400), who, writlng at first under French lnfluences, and then under Italian, became in the end the most representative English writer of the time. Contemporary with him Were the poets Wlllam or Robert Langland (1332-1400), John Gower (1325-1408), John Barbour (1316-95). In prose the name of John Wicklifie (1324-84) is prees.anent, the English

## English Literature

## version of Mandeville's Travels being ap- parently of later date. The period

The period from the time of Chaucer to the appearance of Spenser, that is, trom the end of the fourteenth to near the end of the sirteenth century, is a rery barren one in English literature, domestic wars, the struggle of the people to advance their political power, and the religious controversies preceding and mediaing the Reformation. The immediate successors of Chaucer, Occleve were not men of genius, and the 1460), of poetic creation was for the center transferred to Scotland, where James I headed the list which comprises Andrew de Wyntoun, Henry the Minstrel or Blind Harry, Rohert Henryson, William Dunhar, Gavin Douglas and Sir David Lyndsay. In England the literature was chiefiy polemical, the o: noteworthy of Reginald Peacock, Sir John Fortescue, the Paston Letters and Malory's Morte Darthur ( completed 1469-70); the only noteworthy verse, that of John Skelton.
It was now that several events of European importance combined to stimulate life and enlarge the mental horizonthe invention of printing, or rather of movahle types, the promulgation of the Copernican system of astronomy, the and the Reformation, The Rennaissane spread from Florence to England hy means of such men as Colet, Linacre, 1535), the last nomas More (1480the head of a new race of historion at Important contributions to the prose of the time were the Tyndale New Testament, printed in 1525, and the Coverdale Bihle (1535). The first signs of an artistic advance in poetic literature are to he found in Wyatt (1503-42) and Surrey (1516-47), who nationalized the sonnet, and of whom the latter is regarded as the introducer of hlank verse. The drama, too, had by this time reached a fairly high stage of development. The mystery and miracle plays, after the adoption of the vernacular in the fourteenth century, passed from the hands of the clergy into those of the laity, and both stage and drama underwent a rapid secularization. The morality began to controversy, historical chsaracters mingled with the personification of abstract qualities, real characters from contemporary life were introluced, and at length farces on the French model were constructed, the Interludes of John Heywond (d)

15G5) being the most important examples. To Nicholas Udall (1504-56) the first genuine comedy, Ralph Roister Doicter, was due, this being shortly afterwards followed by John Still's Gammer Gurton's Needle (1506). The first tragedy, the Ferres and Porrex, or Gorboduc, of Sackville and Norton, was performed in 1561, and the first prose play, the Supposes of Gascoigne, in 1568. Gascoigne and Sackville were in other respects than drama noteworthy among the earlier Elizahethans; hut the figures which hulk most largely are those of Sidney and Spenser. In drama Lyly, Peele, Greene, Nash and Marlowe are the chief immediate precursors of Shake spere, Marlowe alone, however, being at all comparable with the great master. Contemporary and later dramatic writers were Ben Jonson, the second great Elizabethan dramatist, Middleton, Mars ton (hetter known as a satirist), Chapman, Heywood, Dekker, Wehster, Ford, Beaumont and Fletcher and Massinger. With these were a number of minor poets of some ability. In Elizabethan prose the prominent names are those of Roger Ascham, Lyly the Fuphuist, Hooker, Raleigh and Bacon, the founder in some regards of modern scientific method. The issue of the authorized version of the Bihle in 1611, may he said to close the prose list of the period.

After the death of James I the course of literature hreaks up into three stages, the first from 1625 to 1640 , in which the survivals from the Elizabethan age slowly, die away. The Elizabethan age poets, Cowley, Wither, Herbert, Crashaw. Hahhington and Quarles, and the cavalier poets, Suckling, Carew, Denham, all puhlished poems hefore the close of this period, in which also Milton's early poems were composed and the Comus and Lycidas puhlished. The second stage ( $1640-60$ ) was almost the Pugiven up to controversial prose, the Puritan revolntion checking the production of pure literature. In this controversial prose of the time Milton was easily chief. With the restoration a third stage was begun. Milton turned his new leisure to the composition of his great poems; the drama was revived and Davenant alf Dryden, with Otway, Southerne, Etheresie, Wycherley, Congreve, Vanbrugh and Farquhar in their first plays, and minor playwrights, are the most representative playwrights, are period. Butler established a genre in satire, and Marrell as a satirist in some respects anticipated Swift; while in prose We have Hobhes, Clarendon, Fuller, d. Browne, Walton, Cotton, Pepys, Evelyn,

## English Literature

Bunyan, Locke and a crowd of theo logical writers, of whom the best lnown are Jeremy Taylor ('Spenser of prose' and 'Shakespere of divines'), Richard Baxter, Robert Barclay, William Penn, Genrge Fox, Isaac Barrow, John Tillotson, Stillingfleet, Bishop Pearson, Sherlock, South, Sprat, Cudworth and Burnet. Other features of the last part of the seventeenth century were the immense advance in physical science under Boyle, Isaac Newton, Harvey and others, and the rise of the newspaper press.

Dryden's death in 1700 marks the commencement of the so-called Augustan age in English literature. During it, however, no greater poet appeared than Pope, in whom sagacity, wit and fancy take the place of the highest poetic faculty, but who was a supreme artist within the formal limits of his conception of metrical art. Against these formal limits signs of reaction are apparent in the verse of Thomson, Gray, Collins, Goldsmith and in the productions of Macpherson and Chatterton. The poets, Prior, Gay and Ambrose Phillips inherit from the later seventeenth century, Gay being memorable in connection with English opera; and there was a large number of small but respectable poets. It is in prose that the chief development of the eighteenth century is to be found. Defoe and Swift led the way in fiction and prose satire; Steele and Addison, working on a suggestion of Defoe, established the periodical essay; Richardaon, Fielding, Smollett and Sterne raised the novel to sudden perfection. Goldsmith also falls into the fictional groun as well as into those of the poets and the essavists. Johnson exercised during the latter part of his life the power of a literary director, with Boswell as literary dependent. The other chicf nrose writers were Bishop Berkeley, Arbuthnot, Shaftesbury, Bolingbroke, Burke ; the historians Hume, Robertson and Gibbon; the political writers Wilkes and Junius; the economist and moral philosopher Adam Snith; the philosophical writers Hume, Bentham aud Stewart; the scholars Bentley, Sir William Jones and Richard Porson; the theologians Atterbury, Butler, Warburton and Paley; and some inferior playwrights, of whom Rowe, John Home, Colley Cibber, Colman the elder, Foote and Sheridan were the most important.

With the French Revolution, or a few years earlier, the modern movement in literature may be maid to have commenced. The departure from the old traditione, traceable in Gray and Colline,
was more clearly exhibited in the last years of the eighteenth century in Cowper and Burns, and was developed and perfected in the hands of, Blake, Bowles, and the lake poets; Wordsworth, Coleridge and Southey; but there were at first many survivals from the poetic manner of the seventeenth century, such as Erasmus Dיrwin, John Wolent, Hobert Bloomfield and Samuel Rogers. Among the earlicr poets of the nineteenth century, also, were Crabbe, Scott, Hogg, Campbell, Montgomery, Mrs: Hemans, Procter ('Barry Cornwall'), Milman, L. E. Landon, Joanna Baillie and Robert Montgomery. A more important group was that of Byron, Shelley and Keats, with which may be associated the less notable names of Leigh Hunt, Thomas Moore and Landor, Among the earlier writers of fiction there were several women of note, such as Maria Edgeworth and Jane Austen. The greatest name in fiction is unquestionably that of Scott. Other prose writers were Mackintosh, Malthus, Hallam, James Mill, Southey, Robert Hall, John Foster, Thomas Chalmers, Hannah More, -ubbett, William Hazlitt, Sydney Smith, Francis Jeffrey and Lord Broughan. In he literature after 1830 poetry included among its prominent names those of Praed, Hcod, Aytoun, Lord Houghton, Sidney Dobell, Alexander Smith, Gerald Massey, Charles Mackay, Philip James Bailey, William Allingham, Elizabeth Barrett Browning, Coventry Patmore, Lord Lytton (Owen Meredith), Arthar Hugh Clough, Matthew Arnold, Dante G. Rossetti, Robert Buchanan, William Morris, Lewis Morris, Jean Ingelow, Swinburne and last and greatest, Tenny. son and Browning. A brilliant list of novelists for the same period includes Marryat, Bulwer, Disraeli, Dickens, Tharkcray, Charles Kingsley, Charlotte Brontë, and a large number of later writers of distiuction. To the historical and biographical list belong Alison, Macauley, Buckle, Carlyle, Thirwall, Grote, Milman, Froude, Lecky, Kinglake, Green. Freeman, Stubbs, etc. In science and philosophy, among the chief writers have been Whewell, Sir William Hamiltoa, Mansel, John Stuart Mill, Alerander Bain, Hugh Miller, Charles Darwin, Huxley, Tyndall Max Muller, H.erbert Spencer and it H. Green. Amor.g other prose writers of importance may be named De Quincey, Harriet Martineau, Sir Arthur Helps, Ruskin and Matheyr Arnold. A large and increasing number of writers of American and colonial birta have to be added to the native contributors to present English literature in
its widest sense. (See U'nited States.) Engraving (en-graiv'ing), the art of depicting characters on metal, wood, precious stones, etc., by means of incisions made with instruments variously adapted to the substances operated upon and the description of work intended. Impressions from metal plates are named engravings, prints or plates, those printed from wood being called indiferently wood engravings and wood cuts. While, howevcr, these impressions are not altogether dissimilar in appearance, the processes are distinct. In plates the lines intendeu to print are inclsed, and in order to take an impression the plate is daubed over with a thick ink, which fills all the lines. The surface is then wiped perfectly clean leaving only the incised lines filled with ink. A piece of damp paper is now laid on the face of the plate, and both are passed through the press, which causes the ink to pass from the plate to the paper. This operation needs to be repeated for every impression. In the wood block, on the contrary, the spaces between the lines of the drawing are cut out, leaving the lines standing up like type, the printing being from the inked surface of the raised lines, and effected much more rapidly than plate printing.
Engraving on wood, intended for printing or impressing from, long preceded engraving ou metals. The art is of Eastern origin, and at least ns early as the tenth century eugraving of and printing from wood blocks were common in China. We first liear of wood engraving being cultivated in Europe by the Italians and Germans of the thirteenth century. For a hundred and fifty years, however, there is small indication of the practice of the art, which was at first confined to the production of block-books, playing cards and religious prints. In the fifteenth century the art of printing from engraved plates was discovered iu Florence by Maso Finigucrra. Engraving had long been used as a means of decorating armor, metal vessels, etc., the engravers generally securing duplicates of their works before lajing in the niello (a species of metall:-, enamel) by filling the lines with dark color, and taking casts of them in sulphur. The discovery of the practicability of takiug impressions upon paper led to engraring upon copper plates for the purpose of printing. The date of the earliest known niello proof upon paper is 1452 . The work of the Florentine engravers, however, was almost at onee surpassed in

Yenice and elsewhere in North Italy by Andrea Mantegna ( $1431-1505$ ), Girolamo Mocetto, Giovanni Batista del 'Porto and others In Marc Antonio Raimondi (1475-1534). who wrought under the guidance of Kaphael, and reproduced many of his works, the art reached its highest point of the earlier period, and Rome became the center of a new school, which included Marro da Ravenna (d. 1527), Giulio Bonasone (1531-72), and Agostino de Musis (fl. 1536). In the meantime, in Germany the progress if the art had been not less rapld. of the cldest schools, the most important engraver is Miartia Schongauer (1420-88). He was, howcyer, surpassed a generation later iy Albert Durer ( ${ }^{1471} 1$-1528). who axcelled both in copper wad wood engraving, especially in the latter. Anong his most famous contemporaries and successors were Burgkmair and Lucas Cranach. The Dutch and Flemislo schools, of which Durer's contemporary, Lucas van Leyden was the head. did much to enlarge it scope of the art, either by paying inconsed attention the rendering of liglit aud shade., and the expression of local color, as in the case of Cornelius Cort and Bloemart or by developing freedom and expression of line as in the case of Goltzius and his pupils. Rubens (1577-1640) influenced engraving through the two Bolswerts, Vorstermann. Pontius and P. de Jode, who engraved many of his works on a large size. Towards the end of the seventeenth century etching, which had before becn rarely used, became more conmon, and was practiced with great surcess by Rembrandt ( 1607 -fi9) and other painters of that period. In France Noel Garnier founc? a school of engraving about the middle of the sixteenth rentury; but it produced no work of any high distinction until the reign of Louls YIV, when Nanteuil's pupil fierard Ed.linck and Gerard Audran flourished. The former was skilled in using his praver to produce color effects, the iatter is famed for his engravings from Nicolas loussin and Le Brun. Bnt these wre all surpassed about the middie of the eighteenth century by Wille ( 1717 -1807). a German resident in Paris. Before the middle of the seventeenth century England produced little noteworthy work, availing herself principally of the work of foreign engravers, of whom many took up temporary and even permanent residence. The first English engraver of marked importance was William Hogarth (1697-1764), whose works are distingished for character and expression. Vivares (1712-82), a Frenchman by
birth, laid the foundation of the Eng. lish school of landscape engravlng. which was still further developed by William Woollet (1735-85), who was also an excellent engraver of the human figure. In historical engraving a not less remarkable advance was made by sir Robert Strange (1321-92), and Kichard Earlom (1743-18\% produced some admirable works in mezzotint. In succession to these came William Sharp (1746-1824), James Bazire (1730-1802), Bartolozzi (1727-1815), James Hesth, Bromley, Raimbach and others. The substitution of steel for copper plates (1820-30) gave the power of rrofucing a much larger number of fine impressions And opened new possibilities, for highly finished work. During the closing years of the eighteenth century llne engraving attained a depth of color and fullness of tone in which earlier works generally are deficient, and duriag the nineteenth century it reachec a perfectlon of finlsh Which it had not previously attained. A picture, whether figure or landscape, nay be translated by line engraving with all its depth of color, delicacy of toue, and effect of light and shade; the various textures, whether of naked flesh, silt, sutin, woolen or velvet, all succissfully rendered by ingenious modes of laying the llnes and combinations of lines of varying strength, width and denth. Among engravers who have produced historical works of large size and in the line manner the names of Raphael Morghen, Longhi, Anderloni, Garavaglia and Toschi, in Italy; of Forster, HenriquelDupont, Bridoux and Blanchard, in France, of Burnet, Robinson, Doo, Watt and Stocks, in England, stand preeminent. In the period $1820-60$ landscape engraving attained a perfection in Great Britain which it had not attained in any other country or at any other time. Among landscane engravers the names of Geo. Corke, William Miller, Goodall, Cousen, Brandard and William Forrest hold the foremost places. In mezzotinto engraving Samuel Cousins is unrivaled. In the period $1830-45$ various publications called Annuals, composed of light literature in nrose and verse, and illustrated by highly finished engravings in steel, were very popular. The engravings were necessarily of smali size, and are generally of great excellence. A number of them. both fizure and landscape, are executed wihh such finish and completeness as to we estermed nerfect works. The unrivaled illustrations of Rogers' Poems and liogers' Italy after Turner and Stothard belong to this period. Many of the originals of the en-
gravings in the Annuals were finished pictures of large size. A great part of the difficulty in engraving on a small scale from a large picture consists in determining what details can be left out and withal preserve the full effect and character of the original. Ifter 1870 mary plates were produced by a combinetlon of etching and dry point, a comjaratively cheap and rapid process. Such works hecame fashionable and very popular with collectors. But while sone of them have been excellent of their kind. the process is of limited resource, and the best works in this manner wlll not stand comparison with the masterpieces of line engraving.

Line E'ingrating, as implled by the term, is executed entirely in lines. The tools are few and simple. They consist of the graver or burin, the point, the scraper and the burnisher an oll-stone or hone, dividers, a parallel square, a magnifying lens; a bridge on which to rest the hand; a blind or shade of tissue paper, to make the light fall equally or. the platr, callipers for leveling important erasures, a small steel anvil, a small pointed hammer and punches. In etching, the following articles are re-quired:-a resinous mixture called etching-ground, capable, when spread very thinly over the plate, of resisting the action of the acids used: a dauber for laying the ground equally; a handvise ; some hair pencils of different sizes, and bordering wax, made of burgundy pitch, bee's-wax and a little oil.

In engraving, the plate, which is highly polished and must be free from all scratches, is first prepared by spreading over it a thin layer of ground. The surface is then smoked, and one outline of the picture transferred to it by pressure from the paper on which it has been drawn in fine outlines by a black lead pencil. The picture is then drawn on the ground with the etching needle, which removes the ground in every form produced by 1t, and leaves the bright metal exposed. A bank of wax is then put round the plate and diluted acid poured on it, which eats out the netal from the lines from which the ground has been removed, but leaves the rest of the plate untouched. The plate is then gone over with the graver, the etched llines clearly defined, broken lines connected, ner lines added, etc. Sometimes the plate is rebitten more than once, those parts which are sufficiently bltten in the first treatment being stopped with varnish, and only the selected parts exposed to after-biting. Finally, the hurnisher is brought into play aiternately with tha

## Engraving

craver and point to sive perfectness nud finish. Such is the process for landccape engraving. In historical and portrait engraving of the highest class the lines are first drawn on the metal with a fine point and then cut in oy the graver, first making a fine line and afterwards entering and reëntering till the desired width and depth of linem is attained. Much of the excellence of such engravings depends on the mode in which the lines are laid, their relative thickness, and the manner in which they cross each other. In historical engraving etching is but little used, and then only for accessories and the less important parts.
Soft-Ground Etching.-The ground, made by mixing lard with common etch: ing-ground, is laid on the plate and smoked as before, bnt its extreme softness renders it very liable to injury. The outline of the subject is drawn on a piece of rough paper larger than the plate. The paper is then damped, and laid gently over the ground face upwards, and the margins folded over and pasted down on the back of the plate. When the paper is dry and tightly stretched the bridge is laid across, and with a hard pencil and firm pressure the drawing is completed in the usual manner. The pressure makes the ground adhere to the back and the paper at all parts touched by the pencil, and on the paper being lifted carefully off, these parts of the ground are lifted with it, and the corresponding parts of the plate thns left bare are exposed to the subsequent action of the acid. The grannlated sorface of the paper, cansing similar granulations in the touches on the ground, gives the character of a chalkdrawing. The biting-in is affected in the same manner as already desoribed, and the snbject is finished by wetting and dotting with the exaver,

Stipple or Ohads Enngraving, in its pure state is exclusively composed $3 t$ dots, varying in size and form as the nature of the suiject demands, wut few stipple plates are now produced without a large admixture of line in all parts, flesh excepted. A great advance, how ever, has been made in stinple engraving by the introduction of large and varied forms of dotting in the draperies, the results almost rivaling line engraving in richness and power.

The processes of Aquatint and Mczzotint will be found described under thetr respective heads, the latter differing from all other styles of engraving in that the lights and gradations are scraped or burninhed out of a dark ground that has
first been wrought upon the plate, instead
of the forms being corroded or cut into a plain snrface.

The Miced Style is based on merzotinto, which, still forming the great mass of shading, is in this method combined with etching in the darker, and stipple in the more delicate parts. By this combination a plate will produce a larger number of good impressions than were it done entirely in mezzotinto.

Engraving on Wood. The wiod best adapted for engraving is box. It is cut across the grain in thicknesses eqnal to the height of type, these slices being subjected to a lengthened process of seasoning, and then smoothed for use. Eivery wood engraving is the representative of a finished drawing previously made on the block; the unshaded parts being cut away, and the lines giving form, shading, texture, etc., left standing in relief by excavations of varied size and character, made between them by gravers of different forms. Drawings on wood are made either with black-lead pencil alone or with pencil and India ink, the latter being employed for the broader and darker masses. It is now mnch the practice to photograph drawings made in black and white upon the wood instead of making the drawing on the wood block. When the drawing is put on the wond by washes or by photography instead of being entirely done by pencil lines, the engraver has to devise the width and style of lines to be employed instead of cutting in facsimile, as is the case when the drawing is made entirely in lines. The tools required for wood engraving are similar but more numerous than those of the engraver on copper or steel. Within recent years new methods of reproduction of photographs for the purpose cf printing have largely replaced the art of wood engraving, and threaten to put an end to the whole art of the angraver, except in so far as it is used for the improvement of the photographio prints. The cheapness and close reproduction of nature attained by these processes have made them popular alike with publishers and readers, and books are very generally illustrated by photographic reproductions. (See also Die-sinking, Gems.)
Engrossing (en-gros'ing). in law. denotes extending a deed, that is, rewriting it out fully in fair and legible characters.
Engtossing, Forestalling, and Rein use for the purating, terms formerly commodities in prder the corn or other higher price, or in order to raise the
market price of the same. These practices were once regarded as criminal, and powitlve statutes agalnst them were passed in England in 1260-67, In 1850 62, in 1552 , in 1502 and in 1570 . The offense of engrossing was descrlbed by the statute of Edward III, as the 'gettling into one's possesslon, or buylag up large quantitles of corn, or other deail victuals, wlth intent to sell them agaln.'; forestalling, as the buying or contracting for any cattle, merchandise or victual, coming in the way to the market, or dissuading persons from bringing thelr goods or provisions there; or persuading them to enhance the price when there'; and reprating, the buying of corn or other dead victual in any market and selling it again in the same market, or within 4 miles of the place.' By the statute of Edward VI, the engrossing of corn, which included the buying $I f$ it in one market to sell it in another, was made punishable by imprisonment and pillory: and no one could carry corn from one part of the kingdom to another without a license all the positive statutes against these offenses were repealed in $177^{2}$, but they were still found to be punishable by common law, and it was not till 1844 that they entircly ceased to rank among offenses.
Enharmonic (en-hár-mon'ik), in musplied to sic, is an eplthet apfar to intervals smaller than the regular divisions of the scale, i. $e$., less than semitones. Enharmonic intervals can be produced on stringed instruments, or on speclally constructed fixed-tone instruments having more than twelve divisions in the octave.
Enid (énid), a city, capital of Ga=field iron works, lumver and It has tile and Pop. 13,790.

## Enkhuizen

(engk'hoi-zn), a seaport of Holland, on a projection in the Zuider Zee, 29 milcs northeast of Amsterdam. It had formerly a pop. of 40,000 , but the silting up of the harbor has caused its decay, and its inhabitants number now 6865 .
Enlistment (en-list'ment), the voluntary contract by which men are enrolled in the military or naval forces of a country, as distinguished from conscription ( $q . v$. ). In the United States and Great Britain voluntary enlistment takes the place of conscription cxcept in time of war. In the United States men are enlisted in the Regular Army for seven ycars (four years in active service and three in the reserve). Duration of service in the enlisted army of Great Britain is for twolve years
(three, five or nine years may be in the reserve). Mon are enllsted In the Navy and Marine Corps of the Unlted Staten to serve for four years.

## Enlistments during the Civil

War in tiy Uxited States. The 'calls' for troops by the government during the Clvil war were as follows: April 15, 1861, 75,000 for three months; number enlisting. 08,3:\%. Mar and June 25, 1802, 530,000 for three years; enlistments, 714,213. July 2, 1862, 300,000 for three years; enlistments, 431,958 . August 4, 1862,300,000 for nlne months; enlistments, 87,000 . The 'calls' from October 17, 1803, wcre ordcrs for drafts; on that day was lssued a call" for 300,000 for three years, and February 1,1864 , a call' for 200,000 for the same term-these two 'calls' bringing 374,807 into servlce. March 14, 1864, 200,000 men were called for, for three years, resulting $\ln 284,021$ entering the service. July 18, $1864,500,000$ men for 1,2 and 3 years were called for ; number obtalned, 384,882. The last 'call,' December 19, 1804 , for 300,000 , for 1,2 and 3 years, brought 204,568 into servlce. The whole number called for was $2,759,049$; number obtalned, 2,656,553. Probably not more than 50,000 drafted men performed personal service, substitutes belng obtained. The 'substitute fund,' consisting of money paid as a release from service, whlch was used as a 'bounty fund' for volunteers, ampunted to $\$ 25,00 \%, 000$.
Ennis, a clty of Ellis Co., Texas, 34 cotton gins, oil and lumber mills, etc. Pop. 5669 .
Ennius (en'ni-us), Quintus, an early Latin poet, considered by the Romans as the father of thif literature, was born at Rudla, near Brundusium, in 239 B.c. ; died in 169 в.c. He wrote an epic, Scipio, in hexameters; Roman annals, tragedies and comedies, satires, epigrams, precepts, etc. His whole works are supposed to have beeu extant up to the thirteenth century, but nothing now remains but fragments quoted from other anclent authors.
Finns (ens), a river in Austria, which rises in the Alps of Salaburg, flows $\nabla_{i 2}$ then E. N. E., then N. N. W. enterlns Úpper Austria, (Ober der Enns), which for 15 miles !: separates from Lower Austria (Unter der Enns), and finally enters the Danube a little below the town of Enns ( 4438 inhabitants). Total course about 180 miles.
Enoch (énok), (1) The eldest son of be built after his name (Gen., iv, 17).

## Enoch

(2) Ore of the patriarchs, the father of feeding

Methuseiah. He 'walked with God; and we was not, for God took him' (Gen., Fords ${ }^{24}$ at the age of 365 years. The to mean that anch nidualiy interpreted death, but was removed as Elijah watural Enoch, character of an assumedly prophetical tance has been which considerable imporsupposed quotation by on account of its 14th and 15th verses of his epistle. It is referred to by many of the early fathers; is of unknown authorship, but was probabiy written by a l'nlestinian Hebrew. Its date is also uncertain, critical conjecture ranging from 144 B.c. to 132 A.D. Until the close of iast cenreferences of early in Europe only by the passage of St. Jude supposed to be founded on it. On his return from Egypt, Bruce brought with him from Abyssinia three manuscripts containing It compiete Ethiopic transiation of it. It has since been repeatediy published, Iransiated ard criticised in Europe.
Enos (ä'nōs), a seaport of European N. W. of Gailipoil, on the Regean Sea, in the Gulf of Enos. Pop. S600.-The Gunf of Enos is 14 miles in length by about 5 in breadth.
Ensign (en'sin), formeriy, in the Britried the flag or coiors of an who :arregiment; for this title, second infantry ant has been substituted. In the Inited States uavy the pffice of ensign ranks next below that of iientenant. In naval language the ensign is the flag, over the poop or stern which distinguishes the ships of different nations.
Ensilage (en'si-ijj), in agriculture, a der, vegetabies, etc., in recentacles fren fod 'silos.' These are usuaily pitacles cailed lar structures made of wood, brick circucrete or stone. The fodder, etc., is conand mixed, placed in the silo," is cut down, and, kept compressed silo, pressed weight until in a state fit for feeding. It undergoes a slight ferinentation, and attains a slightiy ncid tasto and smell, Which is particularly grateful to cattle. from about 1875 stem of ensiage dates known to the but the prancice was the system the ancient Romans, was for centuries. Such common in Mexico claimed for it, as that advantages are grass can be made into in a wet season of hay, and that thor ensilage instead nutritive elements, while it has great

Heart; $n$, Nerrous syntem; $l$, Basel of the legs. mature stage. When thls metnmorphosls is complete it exhlbits three stages-that of the larva, caterplliar or grub, that of the pupa or chrysalis, and that of the imago or perfect winged insect. Insects have been divided into three sectionsAmetaluèla, Hemimetaboila and Holme. tabolla, according as they undergo no metamorphosis, an incomplete one, or a complete one. The young of the Ametab. ola differ from the adult only in size. They are all destitute of wings ; the eyes are simple and sometimes wanting. The Hemimetaborla undergo an incomplete metamorphosis, the larva differing from the imago chiefly in the absence of wings and in size. The pupa is usually active, or if quiescent capable of movement. In the Holometabobla the metamorphosis is complete, the larva, pupa and imago differing greatly from one another in external appenrance and habits. The larva is wormlike and the pupa quiescent. The section Ametabsla (which, in the opinion of many naturalists, are scarcely within the pale of the true Insecta) is divided into three orders Anoplüra (lice). Mallophaga (birdlice), and Thysanira (springtails). Tbe section Hemimetabrla comprises the orders Memintëra (cicaúas. bugs, piant lice, etc.). Orthoptēra (cockroaches, crickets, grasshoppers. locusts. earwigs etc.), and Neuropterra (draenn-flies, May-flies, White ants, etc.). The Holometabote
comprises the orders Aphaniptera (Aleas),
Dipidre (snats botilea, sadtlies mow quitoes, house-ilies, ete.), Lepidoptors (butterfies and moths), Hymonoptérs (bees, waspe and ants), derepoiptera (styiops, minute and paranites), and doleoptéra, (iady-birds, flowworms, cock. chafern, weevils, and all of the beatle tribe). A dlvision is sometlmes made Into Mandibulate and Maustellate grouph, the oral apparntus of the former being adapted for mastication, the iatter for imblbltion of liquld food. Both types are, honver, sometimes modltied. and occaslor sombined.

## Entomulogy, Economic. Insecta

 ous specles are very destructive to trees and cuitivated plants, and the ravages committed by them on farms cause losses amounting to many millions of dollara annually. The terrible losses caused by great swarms or locusts have been historical for centuries, and in our day there is cicarcely a cultivated plant that escapes injury by some insect species. Within recent years certain species of moths ha. $q$ been introduced to thls country, the larve of which are doing very serious injury to forest and shade trees. In addition are the clothes moth and other insects which attack furniture, the botflles which attack horses, sheep and cattle, and the species of mosquitoes which soread epldemic dieases, such as ye:.uw tiver and inalarla, among men. Injurious insects are very numerous in species and countless in numbers, and the study of their habits and of the best way to prevent thelr ravages has given rise to a braad field of entomological study. In many cases very encouraging success has been attained, in others the difficulty In dealing with destructive and diseasebearing insects has proved almost insuperable. The common house-fly is one of the species against which a crusade has recently been instituted, it belng known to convey the germs of disease on its feet. Nuch has been doدe in the field of economic entomology, tut much remains to be done and the war against hurtful insects goes actively on.
## Entomophaga (en-tu-mof'a-ga; in-

 applied to (1) a group of hymenopterous insects whose larve feed upon living insects. (2) A tribe of marsupials, as the opossums, bandicoots, etc., which are insectivorous, though not exclusively so. (3) A section of the edentates, as the ant-eater and pangolin.Entomostraca (en-tu-mos'tra-ka), a crusta $8 \mathrm{sb}-\mathrm{class}$ of the crustaceous animals, composing all as.
cept the stail-eyed and senslle-eged
Eroupa, The groups vaually noted hy it Eroupa, The sroups usually noted hy it 1

(Eatomostraca.
1, Cyclope guadricornis: $a_{\mathrm{r}}$ Eye; ce, Erge. 2, Cypris: a, Eye. of other plants orders Alse or They ail belong to the the growth of the plant appears to be a consequeuce of the diseased state of the structure, whlch, in this condition, presents the circumstances favorabie for the development of the germ or spore illo the plant. Epidemic diseases, as cholera, have been ascribed to these spures of germs being conveyed through the air, water, etc. ( Nee Germ Theory.)
Entozoa (en-tu-zóa), a general nime animnls winch those nnaulose parasitien aniouls which infest the borlies of otiner tines, othe nre found in the intesoner in the liver, brein, muscles and other tissues. They pass through

Entozon Magnified.
1, Conürus cerebralis , producing the staggers in sheep). ${ }^{\text {a }}$, Heads (showu on the suriace) separately. 2, Cysticercus cellutosa (causing the meaales in pigo). b, Head.
different stages in their development, and at each stage occupy a different tissue and usualiy a different nnimal. Thus, the cystic or bladder worm, whose presence in the hrain of slieep causes staggers, is the immature form of the tapeworm of the dog, etc. The number of species is being reduced as the relations of the diferent forms are stndied. They all belong to the ciass scolicide,
and are included in the ordern Tremasoda (flukea), Traddda (tapeworms). Acenthocephifa (latestinal worms), Cordiacia (halrworme and a section of the Nematoda (Triomina, etc.).
Entre Rios (en'tre, roion; 'between the Alos Hivers'), as province of the Arsentine Republic, lying between the Uruguay and the Parana; area rati. mnted at 28,784 mq. miles: pop. 376,000 . The province is largely pastoral. Capl. tal, Conception, with nop. of $10,000$. Intropium (en-tro'pi-um) in medlcine, an lnverston or turning in of the eyelashes, consequent elther on loss of substance or on inflamicatory swelling of the lid.
Intropy (en-tro'pl), in thermodynamexpression whose value does not change When the substance under discuasslon undergoes a reversihie compression or expansion, while not recelving any heat lrom external sources nor glving any up to them ; hat which is increased or dimlnished by the amonnt of heat entering or leaving the body. In general the change of entropy that a body experiences when it passes from one state to another by a reversible process is found by divlding the bent that the body absorhs during every infinitesimas part of the process of transformation hy the absolute temperuture of the body.
Tnvironment (en-viron-ment), in evolutionary and sociologically used sions to signify the modifying iuflupnces of surroundings. No plant or naimal can be understool as an entity, since the whole life ls made up of netion and reaction between the organism and its enFironment. There is great disagreement among scientists ns to the relative part played by heredity and environment in determining what the individual shall be: but the influence of outside conditions has been recognized by nnturalists from the time of Ilippocrates down. Bufton, Treviranus and Geoffroy St. Hilaire regarded the surroundings as directly effecting changes in the organism; Erasmus Darwin and Lamarck, as indirectly effecting them. Charles Darwin allowed a measure of truth to both these positions. Invoy (en'voi), a person deputed by a tiat= a crcai- or government to n e 8 owith a foret. uler or or other business, usually appis ue or government. We ister sent che word to a puhlic minister sent on a special occasion or for one particular purpose; hence an encoy is distinguished from an ambassador or permanent resident at a foreien court and is of inferior rank.

Enzyme (en'zinm), any of the unorganized ferments, such as diastase, cytuse, trypsin, etc., which induce fermentive changes iu organic substances. Under some conditions enzermes have the property of facilitating chemical interchanges between certain bodies without entering into the composition of the products that results. Enzymes play an important part in the digestive processes and ure of vital importance in the life history of all plants. They are usually soluble in water and they generally losis their activity at a temperature above $100^{\circ} \mathrm{F}$.
Eocene ( $\left.e^{\prime} \bar{o}-\mathrm{s}^{-1} n\right)$, in geology, a teruu applied to the lower divisiou of the Tertiary stratia, from Gir. ios, dawn, and kainos, reeent, beemise remains of existing organic species first occur here. The Eocene beds are arranged in two groups, termed the Lower and L'pper Eoceue; the strata formerly called Upper Locene being now known as Oligocene. They consist of marls. limestones, clays and sandstones. and are fonnd in the Isle of Wight and in the sontheast of linglaud and liorthwest of France, in Ceutral Luroipe, Western Asia, Northern Africa and the Atlantic coast of North America.

## Eolian Harp <br> (ē-ō-li'an). <br> See To-

 Eolithic Period (e-o.iithik), in early part of the palmolithic period of prehistoric time.
## Eon de Beaumont.

Sre DEFon de Benemont.
Eos (éos), annong the aucient Greeks 4 urora.
Eötvös (fut'reush), Rabon Jozsef, a Ilungarian statesman and anthor, born iu $181: 3$; died in 1871. He completed his studies at the University of Pesth in 18:1. He had already, before leaving the university, prodnced three dramas-The Critics, The Wedding and Revenge, the last 1 tragedy-all which were well received. He became a friend of Kossuth, and distinguisherl himself as a journalist and author of the popular party. He was minister of public instruction in 1848, but resigned the same year. In 1867 he was again appointed minister of public instruction, whieh place he retained till his death. Among his works are the novels: The Carthusian, The Village Notary (translated into English), and Hungary in 1514-giving vivid pietures of Hungarian life in modern and more remote epochs.
(ê-o-zō-ik), the name siven to the oldest fos-
siliferous rocks, such as the Laurentian and Huronian of C'anada, from their being supposed to contain the first or earliest traces of life in the stratified systems.
Eozoön ( $\bar{e}-o-z u{ }^{\prime}{ }^{\prime} n$ n), a supposed gigantic fossil foraminifer found in the limestone of the Laurentian roeks of 'anada, whence the name Eozoön Canadense; ant iu the Archaran rorks of Germany: : sulted from (ir. ©üs, dawn, aud züon, an :minal, as being the uldest furm of lite tracomble in the past history of the globe. It is very denhtfin, howerer. that these are trae fossils, geologists now generally regardiug them as of mineral origin.

## Epacris

(e-pac'ris), a grenus of monopetalous pxogens. the trpical genus of the nat. order Luacridacer, distinguished by having a colored calyx with many bracts, a tubular corolla with smooth limb, stamens affixed to the corolla, and a fivevalved, many-seeded eapsule. The species are shrubbs plants, with axillary, white, red or manle Howers, generally in leafy spikes. Amoug those cultivated in Britain we may mention $E$. grandiflora, which has flowers ne:arly an inch in length, of a brilliant reddish purple at the base and pure white at the apes. The order Epacridacee consists of plants allied to the heaths, chiefly natives of Australia. The fruit of some species is eaten under the name of Australian cranberry, and they are cultivated in Epacris grangreenhouses for their How- dittora (garers.
 dean variets).
Epact (épakt; Gr. ppalitos, added), in chromology, the excess of the solar month above the lunar syuodical month, and of the solar year aloove the lumar vear of twelve synudical months. The epacts then are annual and menstrual or monthly. Suppose the new moon to be on the 1st of January: the month of January containing 31 days. and the lunar month only 29 dars 12 hours, 44 minutes. 3 seconds; this difference : day. 11 hours, 15 minutes, 57 seconal is the menstruul epact. The anuиe pact is nearly 11 days; the solar yea, peing 365 days, and the lunar year 3in4. The ...cts were once of some inuportance in lesiastlcal chronology. being used for fuding when Easter would fall.

Epaminondas (e-pa-mi-non'das) $\begin{gathered}\text { ancient } \\ \text { (ircek }\end{gathered}$ hero, who, for a short time, raised his country Thebes, to the summit of power ant prosperity. IIe was born about 418 B.c. and lilled at the battle of Mantincia in :3tie B.c. He thok the leading pirt in the struggle d:ar:-: : binh Spartan supremacy in Gre "was destrosed, and the supremacy a Tliohes temis: arily sechred. Four time - h.. sheressfi $\because$ invaded the Pelomon aftei' his deali: Tli, bes soon sank to her former secuadary condition. Throughont life he was distinguished for the friendship sulisisting between him and Pelopidas, with whom he selved in the
 acter is ome of the finest roorded in cireek histors. and his virtues have beren praised by hith Nenophon and I'lutarelh. Eparch (ry'irk), in (ireece, the govcial division salled an eparchu, a subtivision of a monarelyy or provinere of the kingdom. In linssia meparely is the diocese or archdiocese of a bishop on archbishop.
Epaulement (e-pilment), in fortifimass of earth or ather matertial which protects the guns in a battery in fiont and on either tlank.
Epaulet (rpial-et). Ep'sustre: (Fr. rpmile, the shoulder), int ornanental slanker-piece belonging to a military or uther dress. Epanlettess were worn in the Bpitish arny till 185.. and are still worn in the navy lyy all oficers of and ahove the rank of lientenant, and ly some rivil officers. From Britnin they naturally mado their way to the linited States, and in fact are in general nse in the armies and navies of molern nations.
Epée
(èpin), Cifables Micinel, Abbe born in 1712; died in 1 ĩs!. Me had chosen the elerical profession, but had to laye the church on account of Jansenist opinions. The great object of his life was the instruction of the deaf and dumb. for whom he spent his whole income. besides What was contributed hy benerolent patrous, ereeting an institution for them at his own cost. He left several works on lis method of instruction. (Sce Deaf and Dumb.)
Epeira (e-pi'ra), a genus of spiders. comprising the largest and hest-known Firropan species. ti. dia. drma. the common sarden spider, is a handsomely marked species.
Eperjes (e-per'vesh), a town of Northern Hungary, on the Tarcza,
the seat of a Greek Catholic bishop. Pop. 13,008.
Epernay ( $\mathrm{p}_{\mathrm{p}}-\mathrm{er}-\mathrm{na}$ ), a town of N. E. Hrince, department Marne, on the Marne, the central depot of the wine trade of Champagne. The vast wine cellars of the town form a labyrinth of galleries cut in the tufa or calcareous soil of the district. P(1). (1906) 20,291 . Ephah (éfa), or Bati, a Hebrew measire of capacity, containiug, according to one estimate or calculation, 8.bitinj gallons: according to another only 4.42 sit galtons.

## Ephemera (r-fem'e-ra), the typical

 Tophemeriaia, gemis of the insect family named from the extreme shortness of their lives in the perfeet stute. They arto known as .lay-flics or dan-flics, and are charanderizel by the slenderness of thorir lodies; the delicacy of their wings, which are erict ind ninequal, the antorine being much the larger; the ratimentary comblition of the month; and the termination of the abdomen in three filiform appendages. In the state of larvo and pupe they arn aquatic: and exist for vairs. When ready for their final change they creep out of the water, genratly towarels stanset of a fine summer evening, berinning to be seen generally in May. They shed their whole skin shortly after leaving the water, propagate their speries, and dir. taking no frod in the periect state. The May-fly is well known to anglers, who imitate it for hait.
## Ephemeris <br> ( $\mathrm{e}-\mathrm{f} \cap \mathrm{n}$ mer-is), fan astronomical alithue, such as

 the Nautical Almanac and Astronomicnt Ephemeris, puhlished by order of the British Admiralty. (See Almanac.)Ephesians (e-fes'yans). The Fipistle to the, a einonical epistle addressed by the apostle Paul to the chureh whirl he hat founded at Ephesus. It was written diring his first captivity at Rome, immerliately after he had written the Lipistle to the Colossians (A.D. 62) ; and was serit by the hands of Tychicus, who also tore the message to the church at Colossse.

## Ephesus

one of the
(ef'e-Fus). an ancient Greek city of Ludia, in Asia Minor. tweive Ionian cities, on the south side of the Casstrus, near its mouth. It :was at one time the grand emporium of Western Asia, having a convenient and spacious harbor. The apostle Vaul visited Ephesus and established o. Christian church there, to which he dedicated one of his epistles. It was famrus for its temple of Artemis (Diana), called Artcmision, the largest
and most perfect model of Ionle architecture, and reckoncd one of the seven wonders of the world. The first great temple begun about b.c. 650 and finished after 120 years, was burnt by the notorious Herostratus in order to perpetuate his name in b.C. 356 (the night of Alexander the Great's birth). A second and more magnificent was then erected, which was burned by the Goths in A.D. 262. Some interesting remains have recently been discovered by excavation. Several church councils were held there, especially the third ecumenical council of 431, at which Nestorius was condemned. The site of the city is now desolate ; near it is a poor village, Aiasoluk.
Ephod (ef'od), a species of vestment worn by the Jewish high priest over the second tunic. It consisted of two main pieces, one covering the back the other the breast and upper part of the body, fastened together on the shoulders by two onyx stones set in gold, on each of which were engraved the names of six tribes according to their order. A girdle or band, of one piece with the ephod, fastencd it to the body. Just above the girdle, in the middle of the ephod, and joined to it by little gold chains, rested the square breastplate with the Urim and Thummim. The ephod was originally intended to be worn by the high priest exclusively, but a similar vestment of an inferior material seems to have been in common use in later times among the ordinary priests.
Ephors (ef'ors), Epirori, magistrates munities of ancient Greece, of whom the most celebrated were the Ephori of Sparta. They were five in number, were elected annually, and both the judicial authority and the executive power were almost entlrely in their hands. Their power became an intolerable bur. den, especially to the kings, aidd in 225 B.O. Cleomenes murdered the whole college and abolished the office.
Ephraem Syrus (e'fra-em si'rus), the Syrian.' writer of the Syrian Church, born at Nisibis about 306 A.D. : died at Edessa in 373 or 378. He wrote several commentaries on Scripture, numerous homilies and other works (as well as liymns), which have come down to us partly in Syriac, partly in Greek, Latin and Armenian translations. His works have been published in Syriac, Greek and Latin.
Ephrain ( $\mathrm{e}^{\prime}$ fra-im), the younger son of one of the Joseph, and the founder When the Isruelites left Egypt the

Ephraimites numbered 40,500 , and their possessions in the very center of Palestine included most of what was afterwards called Samaria.
Epic (ep'ik), a poem of the narrative pic kind. Some authorities restrict the term to narrative poems written in a lofty style and describing the exploits of heroes. Others wide the definition so as to include not only long, narrative poems of romantic or supernatural adventure, but also those of a historical, legendary, mock-heroic or humorous character. Epic is distinguished from drama in so far as the author frequently speaks in his own person as narrator; and from lyrical poetry by making the predominant feature the narration of action rather than the expression of emotion. Among the more famous epics of the world's literature may be noted: Homer's Iliad and Odyssey; Virgil's SEneid; the German Nibelungenlied; the Anglo-Saxon poem of Bcouvulf; the French Song of Roland; Dante's Divina Commedia: Tasso's Gierusalcmme Liberata; Arisoto's Orlando Furioso; Milton's Paradise Lost; Spenser's Fairy Queen. Camoens' Lusiad (Portuguese): and Firdusi's Shah Nameh (Persian): Hesiod's Theogony; the poetic Edda; the Finnish Kalewala; the Indian Máhabhârata may be desc:ibed as collections of epic legends. The historical epic has an excellent representative in Barbour's Bruce; and specimens of the mock-heroic and humorous epic are found in The Battle of the Frogs and Mice; Reynard the Fox; Butler's Hudibras; and Pope's Rape of the Lock. Few efforts have been made to produce epics within the recent centuries ard these few have had little success. The versified narrative has now been replaced with the prose story.
Epicharmus (en-i-kir'mus), a Greek of the Pythagorean writer and philosopher island of Cos abean school, born in the 450. He ramoved to B.O.; died in B.O. the court of Hieron he spent the remainder of his life. He is credited with the invention of written comedy.
Epictetus (e-pik-t $\bar{e}^{\prime} t u s$ ), a Greek Stoic philosopher, horn in Phrygia about a.d. fo. He lived long at Rome, where, in his youth, be was a slave. Though nominally a Stoic, he was not interested in Stoicism as an intellectual system; he adonted its termlnolggy and its moral doctrines. but in his discourses he appeared rather as a moral and religious teacher than as a philosopher. His doctrines approach mese nearly to Christianity than those
of any of the earlier Stoics, and although there is no trace in what is recorded of them of his having been directly acquainted with Christianity, it is at least probable that the ideas diffused by Christian teachers may have indirectly influenced them. The excellence of his system was universally acknowledged. When Domitian banished the philosophers from Rome (A.D. 94). Epictetus retired to Epirus, where he is supposed to have died. Ilis disciple Arrian collected his opinions, which are preserved in two treatises called the Discourses of Epictetus and the Munual or Enchiridion. Epicurus (ep-i-kü'rus), a Greek phiEpicurean school, was born in the island of Samos in b.c. 342 ; died at Athens, in B.c. 270 . He settled at Athens in b.c. 30 C, and purchased a garden in a favorable situation, where he established a philosophical school. Herc he spent the remainder of his life, living in a simple manner and taking no part in public affairs. IIis pupils were numerous and enthusiastically devoted to him. His theory of the universe was hased on the atomic theory of Democritus. The fundamental principal of his ethical system was that pleasure and pain are the chief good and evil, the attainment of the one and the avoidance of the other of which are to be regarded as the end of philosophy. He endeavored, howeyer, to give a moral tendency to this doctrine. He exalted the pure and noble enjoyments derived from virtue, to which he attributed an imperishable existence, as incalculably superior to the passing pleasures which disturb the peace of mind, the highest good, and are therefore detrimental to happiness. Peace of mind, based on meditation, he considered es the origin of all good. The philosophy of Epicurus has been violently opposed and frequently misrepresented ; but while it is not open to the charges of gross sensualism which have been brought against it, it cannot be considered as much better than a refinement of sensualism. In ancient times his philosophy appears to have been more popular in Greece than in Rome, although his disciples were numerous in both, and the Latin poem of Lucretius, De Rerum Natura is a poetical exposition of his doctrines. Epicurus was his writings are extant, whiter, but few of his writings are extant, what we possess Trmprising only some fragments of a
Treatise on Nature, two letters, and detaiched passages. Lucretius, Cicero, Pliny and Diogenes Taertius are our chief anthorities for his doctrinet.

Epicycle supnosed astronomy, a swall circle ence of a larger round the circumferof representinger, a hypothetical mode the planets the planets, which were supposed to have such a motion round the circumference of a large circle, called the deferent, having the earth in its center.
Epioycloid (ep-i-si'kloid), in geometry, a curve generated by the movement of a ciacle upon the conves side of another curve, that generated by the movement of a circle unon the concave side of a fixed curve being called a hypocycloid.

## Epicycloidal Wheel (en-i-si-kloi'-

 wheel or ring fixed to dal wēl), a toothed on its inner side, a framework, gear with it a nother toothed wheel of half the diameter of the first, fitted so as to revolve about the center of the latter. It is used for converting circular into

> Epicycloidal Wheel.
alteruate motion, or alternate into circular: While the revolution of the smaller wheel is taking place any point whatever on its circumference will describe a straight line, or will pass and repass through a diameter of the circle, once during each revolution. In practice, a piston-rod or other reciprocating part may be attached to any point on the circumference of the smaller wheel.
Epidamnus (epi-idam'nus). See DuEpidaurus razzo.
situated in seaport of ancient Greece, particularly celolis, in the Peloponnesus, particularly celebrated for its magnificent temple at Asculanius, which stood on an eminence not far from the town. It had also temples of Artemis, Dionysus, Aphrodite and Hera, and a splendld theater still in fair preservation. The site is now occupied by the village Epi-
darro, where a congress met in 1822 and promulgated the 'tonstitution of Finidaurus.'

## Epidemic

 Disease: (Gr. epi, upon, and demos, people) signifies a disease which attaeks a people, suddenly spreading from one to the otler in all directions, prevailing a eertain time and then dying away. It usually trapals from place to place in the direction of the most frequenteal lines of communication. 'Ilas rat son is that such discases are rommonly due to sonme infectiva matrrial capable of being conveyed from ont individnal to auother, and of being trinasmoted from place to place. Among these diseanseg are smalpox, choleri, srablet fever, measles, ehieken-pox, diphtherin, trphoid fever, sellow fever, etc. Certain disenses which appear to be nore mental than physical sometimes occout so numerously as to assume an epidemic form, such as st. Vitus' dance, couvulsionary diseases. suicidal mania, rtc. (See Findemic.)

## Epidendrum <br> (ep-i-len'drım ; Gr. epi, upon, and dendron. a

 tree), a large genus of tropical American orclids, most of the species of which ure epiphytic, growing on trees. Thare are upwards of 300 species. The stems are often pseudo-bulbs, the leaves are strapshaped and leathery, and the flowers are single or in spikes, panieles or racomes. The flowers are very handsome, and a large number of the speries are in cultivation.
## Epidermis

 the euticle or srarf-skin of the true skin of animals, eonsistion of two layers, an inmer or muenus liver. called the rete mucosum, enmposeri of aetive erlls containing gianules of roloring matter, and an witer or horny lasir, consisting of flattened senle-like rells, dry, inactive and effote, which are whstantly being sled in the form of dust. Both layers are destitito of ferling. and of ressels or norros.-Tle term is also applied to the cellular layer whied covers the surface of plants, usually formed of a layer or layers of inore or less compressed and flattened cells. It may be thin and soft or dense and lagr!, and lias ofte•a :1ppendages in the form of hairs, glands, "tt".
## Epidote

(e p'i-d $\bar{t}$ ). a mineral of a green or gray color, vitrons luster, and partial transparency, a moms ber of the garnet family. The primiors form of the exystals is a riyht rhomboidal prism.
Epigæa
(np-i-jin'a) a genus of shruls of the heath order, charar.
terized he having three leaflet on whtsito of the tive-parted ealys ; and the ullar bring salver-shapma, if clef with its tube hairy on the ins Li. repens. the trailing arbutus, is May-flower of North Ameriea.

## Epigastrium (ep-i-gas'tri-um),

Among the different causes may be mentioned hereditary tendency, gastric disturbances, or some irritation within the skull itself, such as tumors, etc. It is, for the most part, preceded by a tingling sensation, creeping up from tbe foot or hand to the breast and head, or some other premonitory symptom sucb as spectral illusions, headache giddiness, coufusion of tbought, sense of fear, etc.: but sometimes there are no precursive symptoms. During the paroxysm all that is to be attended to is to prevent the patient from injuring him. self: and this is to be accomplished by raising the head gently and loosening all tight parts of the dress. It is advisable to protect the tongue from being bitten by introducing a piece of India rubber, cork or soft wood between the teeth.
Epilobium (ep-i-10'bi-um), the wilplants, nat. order Onagracea. genus of The species are leerbs or undershrubs, with pink or purple, rarely yeliow, flowers, solitary in the axils of the leaves or in terminal leafy spikes. The seeds are tipped with a pencil of silky hairs, and are contained in a long, fuur-celled capsule. There are more than fifty species scattered over the Arctic and temperate regions of the world, ten of them being natives of Britain.
Epilogue (ep'i-log; Greek epi, upon, the closing speecb or short poem addressed to the audience at the end of a play. The epilogue is the opposite of the prologue, or opening address.
Epimachus (e-pim a-kus), a genus of tral) birds of the hoopoe family, resembling the birds of paradise in the exceeding luxuriance and brilliancy of their piumage.

## Epimenides

(ep-i-men'i-dez), an ancient Greek philosopher and poet, born in Crete in the seventh century before Cbrist. He was held for an infallible propbet, and by some is reckoned among the seven wise men, instead of Periander. He is supposed to be the prophet refersed to by St. Paul in Titus, i , 12.

## Epimetheus (ep-i-méthūs), in Greek

 of Prometheus and husband the brother Epimetheus may be translated andora. thought,' as Prometheus 'forethought.' Epinal (â-penal), a town of Eastern ment of the Vosges, on the Moselle. It is well built and has handsome quays. nu ancient Fothic church, a communalcollege, a pablic library, a museum, etc. The manufactures consist of articies in iron and brass, cutiery, earthenware, leather, oil and cbemicals. The famous paper-mills of Archettes are in the vicinity. Pop. (1006; 21,296.
Epinay (ā-penā), Louxsmenorence Petronille, Madame D', a French aluthoress, born in 1725; died in 1783. She became the wife of M. Delalive d'Epinay. In 1748 she became acquainted with Rousseau, and gave him a mitage in which he passed much time. She left interesting memoirs.
Epiphanius (e-pi-finini-us), St., was 130 ; died in 403 born in Palestine about信 About 367 he was consecrated Bishop of Salamis or Constantia, in Cyprus. His work Panarion gives the history, together witt the refutation, of a great number of heresies. His festival is on the 12 th of May.
Epiphany (e-pif'e-ni; Greek, epiphaneia, a manifestation or showing forth), a festival, otherwise called the manifestations of Christ to the Gentiles, observed on the 6th of January in honor of the adoration of the three magi, or wisemen. As a separate festival it dates from 813.
Epiphyte (ep'i-fit; Greek, epi, on; which grows phyton, a plant), a plant which grows and flourishes on the trunks and branches of trees, adhering to the bark, as a moss, lichen, fern, etc., but which does not like a parasite derive any nourishment from the plant on which it grows. Many orchidaceous plants are epiphytes.
Epiphytic (ep'i-fit-ik), the term applied to the spread of contagious diseases among plants. Contazion is as common in the vegetable kingdom as in the animal (see Epidemic, Lpizoötic) and is responsible for enormous losses of wealth. A well-known botanist has estimated that the annual loss of crops from plant diseases throughout the world varies from $\$ 750,000,000$ to $\$ 1,000$, 000,000 . The idea of an international fight against epiphytics was formulated for the first time in 1891, at the International Congress of Agriculture at the Hague. An international commission for studving plant maladies, formed at Rome in 1903, has its seat at Berlin.
Epirus (e-pi'rus; Greek, Eipetros), a country of ancient Greece corresponding to the southern portion of Albania. The inhabitants were only in part Greeks. Epirus became a Roman province in B.C. 168, and shared the fortune of Rome till conquered by the Turis.

## Episcopacy (e-pisku-pa-si), the syb-

 tem of church govern-ment ln which bishops are establlshed a distinct from and superior to priests of presbytert, there being in the churc three dlstinct orders- dcacons, priests and bishops. See Bishop.
Episode (ep'i-söd; Greek, epeisodion, incidental something adventitious) in an poem, which the pcet lias connected with the main plot, but which ls not essential

## to it . <br> Epistaxis (e-pi-staks'is), in medi-

 from withln the nose. name for blecding Epistemology (ep-is-t e-mol' $\delta-j i ;$ inowledge), that department of metaphysics which investigates and explains the doctrine or theory of knowing; distingulshed from ontology, which investigates real existence or the theory ofbeing.

## Epistolæ Obscurorum Viro-

 rum ( Letters of Obscure Men') is cal letters which appeared in of Gatiriin $1515-17$, and professed to be the couposition of certain ecclesiastics and professors in Cologne and other places. It is cunsidered as one of the most masterly sarcasms in the history of literature, and lts inportance is enhanced by the effect it had in promoting the cause of the Reformation. The quthorshlp of thls satire has been a fertile subject of controversy, and ifrom being settled.
Epitaph (ep'i-taf; Greek, epi, upon, scription upon a tomb or monument in in hinnor or memory of the dead. Epitaphs uere in use both among the Greeks and Itomans. The Greeks distinguished by epitaphs only their illustrious men. Among the Romans they became a family institution, and private names were regularly recorded upon tombstones. The same practice has generally prevailed in Christian countries. On Christian tombstones epitaphs usually give bricf facts of the deceased's life, sometimes also the pious hopes of survivors in reference to the resurrection or other doctrines of the Christian faith, etc. Many so-called epitaphs are mere witty jeux d'esprit, which might be described as epigrams, and which were never intended seriously for monumental inscriptions. The literature of the subject is very large.
Epithalamium (e-pi-tha-la'mi-um; thalamos, a chamber, ar. epi, on, and poem in praise of a bride and bride-
groom. Ainong the Greeks and Romans
from the birth of Christ as a starting point, was first introduced in the gixth century, and was generally adopted by the year 1000 . This event is believed to bave taken place earlier, perhaps by four years, than the received date. The Julian epoch, based on the coincidence of the solar, lunar and indictional periods, is fixed at 4713 B.C., and is the oniy epoch estabiished on an astronomical basis. The Mohammedan Era, or Hejira, commenced on July 16, 622, and the years are computed by lunar months. The Chinese reckon their time by cycles of 60 years. Instead of numbering them as we do, they give a different name to every year in the cycie. See Chronology, Calcndar.
Epping (ep'ing), a village of England, don, in the midst of an ancient royai furest which one time covered neariy the whole of Lissex. The unenclosed portion has lately been secured by the public as a free place of recreation.
Eprouvette (ep-rib-vet'), the name of certaining the strength of gunpowder, or for comparing tbe strength of different kinds of gunpowder.
Epsom ( $\mathrm{e} \mathrm{p}^{\prime}$ soom), a town in the miles s. county of Surrey, Engiand, 15 brated for a mineral spring, from the water of which the well-known Epsom salts were manufactured. The principal attraction Epsom can now boast of is the grand race meeting beld on the Downs, the chief races being the Derby and Oaks (which see). Pop. (1911) 19,156. Epsom Salt, sulphate of magnesium artic salt which appeare in capiliary fibers or acicular crystais. It is found covering crevices of roiks, in mineral springs, etc.; but is commonly prepared by artificial processes from magnesian limestone by treatng it witb sulphuric acid, or by dissoiving the minerai kieserite ( $\mathrm{Mg}_{5} \mathrm{SO}_{4} \mathrm{H}_{2} \mathrm{O}$ ) in boiling water, allowing the insoluble matter to settle, and crystallizing out the Epsom salt from the clear solution. It is employed in medicine as a purgative, and in the arts. The name is derived from its having been first procured from the mineral waters at Epsom.
Epworth (ep'wurth) a small town of of Gainsborough, the birthplace of John Wesiey, the founder of Methodism. Pop. 3746.

Epworth League, a nociety foundOhio, in 1889, among the young memberm
of the Methodist Episcopal Church, as a successor to the Young Peopies' Methodist Ailiance of 1883 . Its purpose was 'to attain and belp others to attain the highest New Testament standard of experience and iife.' The suciety grew rapidly and has been of much service to the Church. It now claims to be the largest dencminational socicty of young peopie in the world, having cbapters in many flceign lands.
Equation ( $\bar{c}-\mathrm{kwa}{ }^{\prime}$ slıun), in aigebra, a proposition asserting the equality of two quantities, and expressed by the sigu $=$ betweeu them; or an expression of the same quantity in two dissimilar terms, but of edual value; as, $3_{8}=3$ tid. or $x=b+m$ - $r$. In the lat. ter case $x$ is equal to $b$ added to $m$, with $r$ subtracted, and tbe quantities on the right hand of tbe sign of equation are said to be the value of $s$ on the left inand. An equation is termed simple, quadratic, cubic or biquadratic, or of the first, second, third or fourtb degree, according as the index of the highest power of the unknown quantity is one, two three or four.
Equation, in astronomy, the correcto or subtracted fion or quantity to be added to or subtracted from the mean position of a heavenly body to obtain the true position. The term personal equation is the quantity of time by which a person is in the habit of noting a pbenomenon wrongly; it may be called positive or negative, according as lee nutes it after or before it really takes place.
Equation of Payments, an metical rule for the purpose of ascertaining at what time it is equitable that a person should make payment of a whole debt whicb is due in different parts, payable at different times.

## Equation of Time, $t$ he difference between mean

 and apparent time, or the difference of time as given by a clock and as given by a sun-dial, arising chiefly from the varying velocity of the earth in its orbit and the eccentricity of the orbit. The sun and the clock agree four times in the year; the greatest difference between them at tbe beginning of November is fuily sixteen minutes. See Day.Equator (è-kwåtur), that great circle which is $90^{\circ}$ from the pe every point of which is $90^{\circ}$ from the poles. All places which are on it have invariably equal days and nigbts. Our earth is divided by it into the nortbern and southern hemispheres. From this circle is reckand the latitude of places both north
ing celentia? equator in the plane of the ers of the revenue were selected from terrestrial, an imaginary great circle in their rank. They held their positlon the heavens the plane of which is per- in virtue of a certain property qualificapendicular to the $90^{\circ}$ aris of the earth. tion, and towards the end of the republic celential poler which coiscide from the they possemsed much influence in the extremitlen of the earth's axis, with the to be projected to meet the heavens. During hls apparent yearly course the sun is twlce in the celestial, and vertically over the terrestrial equator, at the beginning of spring and of autumn. Then the day and nlght are equal all over the earth, whence the name equinow. -The magnetio equator is a line which pretty nearly coincldes wlth the geographical equator, and at every point of which the vertical component of the earth's magnetic attractlon is zero; that is to say, a drpping needle carried along the magnetic equator remains horizontal. It ls hence also called the aclinic line. Equatorial (okw antorr-al), an ascontrived for the purpose of directlog at telescope upon any celestial ohject, and of keeping the object in vlew for any length of time, notwithstandlng the dlurnal motion of the earth. For these purposes a princlpal axis resting on firm supports is mounted, exactly parallel to the axis of the earth's rotation, and conseqnently pointing to the poles of the heavens, being fixed so as to turn on pivots at its extremities. To this there is attached a telescope moving on an axis
of $i$ its own ln such a way that it may either he exactly parallel to the other axis, or at any angle to it; when at right angles it points to the celestial equator. By this means a star can he followed by one motion from its rising to its setting. In some observatories the equatorials have the necessary motion given them by clockwork.
Equerry (ekewe-ri, e-kwe'ri), in Britficers of the roy, the name of certain of partment of the master of the horse, whose duties consist in attendance when the sovereign rides abroad. Olficers with the same denomination form part of the estahlishments of the menbers of the
royal famlly.

## Equestrian Order (e-kwes'tri-an)

 'Knights' existing in ancient thome. The equites or knlghts originally formed the cavalry of the army. They are sald bi Livy to have been institutedby Romulus, who selected 300 of by Romulus, who selected 300 of them from the three , principal trlbes. Ahout the time of the Gracchi ( 123 в...). the equites hecame a distinct order in the state, and the judges and the farmgtate. They had particular seats assigned to them $\ln$ the $c$ cus and theater, and the insignla of the.r rauli, in addition to a horse, were a gold ring and a rohe with a narrow purple border. Under the later emperors ihe order disappeared from the stage of political life. Equidæ (ékwi-dè), the horse family, a famlly of animals belong. ing to the order Ungulata, or hoofed mammale, and subdivision Périssodactyla characterized hy an undiylded hoot formed of the third toe and its enlarged horny nail, a slmple stomach, a mane on the neck, and by six incisor teeth on each Jaw, seven molars on either slde of both jaws, and by two small canine teeth in the upper jaw of the males, and sometimes in both jaws. It is divided lnto two groups-one including the asses and zebras, the other comprising the true horses (genus Equus).
Equilibrium (e-kwilih'ri-um), astate rest produced by of equipolse; a state of tion of two or more forces, as the state of the two ends of a lever or halance, when botu are charged with enual weight. When a body, being slightly moved out of any position, always tends to return to its position, that position is sald to he one of stable equilibrium; when the body will not thus return to its previous position, its position is said to be one of unstable equiliibrium.
Equinoctial (e-kwi-nok'shal), in asthe heavens otherwise know, the circle in estial equatherwise known as the celestial equator. When the sun is on the equator there is equal length of day and night over all the earth ; hence the name equinoctial.-Equinoctial gales, storms which are ohserved generally to take place about the time of the sun's crossing the equator, that is, at the vernal and autumnal equizox, in March and September. (See Equinox.)-Equinoctial points are the two points wherein the celestial equator and ecliptic intersect each other; the one being in the frst point of Aries, is called the vernal point: and the other, in the first point of Libra, the autumnal point. These polnts are found to be moviag backward or westward at the rate of 50 ", of a degree in a year. This is called the precession of the equinozes. See Precession. Equinox (d'swi-noks), the precise one of the equime when the sun enters
polnt of Aries about the 21st of March, and the first point of Sibra about the z3d of September, making the day and night of equal length all over the worid. At all other times the lengths of the day and the night are unequal, thelr difference being the greater the more we approach elther pole, whlle in the same latitude it is everywhere the same. See Equinootial.

## Equisetum

( $\mathrm{e}-\mathrm{kwi}$-se'tunn), a genus of ascular cryptogamous plants with hollow-jolnted stems, type of a nat. order, the Equisetacea, srowing in wet places, and popularly called horsetails. See Horse-tail.
Equites (ck'wi-tēz). See Equestrian
Equity Order.
ar supplemental law admindefin in certain courts, founded upon defined rules, recorded precedents, and established principles, the judges, however, liberally expounding and developing them to meet new exigencies. While it aims to assist the defects of the common law, hy extending relief to those rights of property which the strict law does not recognize, and by giving more ample and distributive redress than the ordinary tribunals afford, equity by no means either controls, mitigates or supersedes the common law, hut rather guides itself by its analogies, and does not assume any power to subvert its doctrines. Courts of equity grant redress to all parties where they have rights, ex equo et bono, and modify and fashion that redress according to circumstances. They hring before them all the parties interested in the suhject matter of the suit, and adjust the rights of all.
Equity of Redemption, in law. vantage allowed to a mortgager of a reasonable time to redeem an estate mortgaged, when it is of greater value than the sum for which it is mortzaged.
Equivalents (e-kwiv'a-lents), in the proportions in which the elements combine with one another to form compounds. See Chemistry.
Era (éra). See Epoch.
Era of Good Feeling, the period to 1824 when the Democratic-Republican was virtually the only party in the United States. President Monroe was reëlected in 1821 hy 231 electoral votes out of 232 and some writers restrict the term to his second administration. One elector voted against him on the plea that Washington's record of an unani-
mous election should not be equaled. Internai improvements and tariff question: hioke up the harmony after 1824.
Erard (â-ràr), scacticm, a celebrated musical instrument maker, born at Strasburg in 1752 ; dled in 1831. He went to Paris at the age of elghteen, and in concert with his brother, Jean Baptlste, produced pianofortes superior to any that had previoualy been made in France. He afterwards established a manufactory in London, and made considerable improvements in the mechanism of the harp.
Erasistratus (e-rasiss't ra-tus) an ancient Greek phyician, sald to have been grandson of Aristotle. He lived in the third century before the Christian era, and was court physician of Seleucus Nicator, king of Syria. He was the first who systematically dissected the human body, and his description of the hraln and nerves is much more exact than any given by hls predecessors. He classified the nerves into nerves of sensation and of locomotion, and it is said had almost stumbled upon the discovery of the circulation of the blood. Of his works only the titles and some fragments remain.
Erasmus (e-ras'mus) Desiderius, a Dutch scholar, horn at Rotterdam in 1467. His orlginal name was

Desiderius Erasmus
Gerard, but this he changed according to a fashion of the time After the death of his parents, whom he lost in his fourteenth year, his suardians compelled him to enter a monastery; and at the age of reventeen he assumed the

## Erastianism

monantic hablt. The Bishop of Cambray $14 \forall 2$ he traveled to parls to perfect himeelf in theology and pollte tilterature. He there became the instructor of several rlch Englishmen, from one of whom -Lord Mountjoy - he recelved a penslon for life. He accompanied them to England $\ln 1497$, where he was graciously recelved by the kling. He returned soon after to the contlnent took his doctor's degree, was reileved from his monastic vows by dispensatlon from the pope, and publlshed several of hls works. He returped to England in 1510; wrote his Praise of Folly while residing with Slr Thomas More, and was appointed Margaret professor of divinlty and Greek lecturer at Cambridge. In 1514 he returued to the continent and lived chlefiy at Basel, where he died $\ln 1536$. To extensive learning Erasmus joined a refined taste and a delicate wit. He rendered great and iasting service to the cause of revirling scholarship. Although he took no direct part in the Ieformation, and was reproached by Luther for lukewarmness, he attacked the supposed disorders of monasticlsm and supersti tlon, and advocated a moderate coursc. He edited varlous classics, the first edition of ihe Greek Testament from IISS. (with Latia translation), etc., but his best-know:i books are the Encomium Aforice, or Praise of Folly, and his Colloquies. His letters are very valuabie in reference to the history of that period. Trastianism (e-ras'ti-an-izm) the (which see).
Frastus (e-ras'tus), the learned name physician, who maintained the a Swisiss from which the well-known epithet of Erastian, as now used, is derived. He was born at Baden $\ln 1523$, and died at Basel in 1584. IIe was successively professor of medicine at Heidelberg, and of ethics at Basel. He maintained in his writings the complete subordination of the ecclesiastical to the secular power, declarlng that the church had no right to exclude any one from church ordinances, or to inflict excommunication.
Frato (er'a-tō), in Greek mythology, signifies love of the Musea, whose name over lyric and especlally amatory presided and is generally represented crowned with roses and myrtle, and with the lyre in the left hand and the plectrum in the right, in the act of playing.
Eratosthenes (e-ra-tos'the-nēz), an omer, born at Cyrene, in Africa, in B.C.

276; was librarian at Alexandria, and gained lils sreatest renown by hls investigatlons of the size of the earth. He rendered much service to tbe sclence of astronomy, and firut obsarved the obliqulty of the ecliptic. Of the writing: attributed to him , one only remalns coni-plete-Katasterismoi-which treats of the constellatlons. Ile dled about b.c. 194.

Erbium
and other rare elements, ln some rare known.

## Ercilla y Zuniga (er-thl'sya tho nyég a), Don

 Alonso DF, a Spanish soldier and poet, born in 1533; died in 1505. IIe became page to the Infant Don Philip, accompanied him on his travels, and in 1554 went with hlm to Engiand on the occasion of hls marrlage wlth Queen Mary. After this he fought against the Araucanians of South America (Chlle), and his enic La Araucana is based In the events of thls war. It was first pubilished $\ln 150!$, is wrltten in excellent Spanish, and oceupies an honorable position in the national literature.
## Erckmann-Chatrian (erk-mon

 shat-ri-3iu) tbe joint name of two French-Alsatlan writers of fiction. fmile Erckmann, born at Pfalzburg in 1822, studied law at l'aris. Alexander Chatr.an, born at Soldatenthal, near Pfalzburg, 1820, was fa: some time teacher in the Pfalzburg College. They formed a literary partnership in 1847, but it was not till the ap. pearance of L'Illustre Docteur Mathéus, in 1859, that success attended them. Among thelr most popular books are L'Ami Fritz, Le Fou Yégof, Madame Therese, Hisioire d'un Consorit de 181s, L'Histoire d'un Paysan, Waterloo, Le plébiscite, etc. Chatrian died September 4. 1890, and Frckmann in 1890.Erebus (er'e-bus), in the Greek mythology, the son of Chaos and Darkness. The name Erebus was also given to the infernal regions.
Erebus, Mount, a volcano of the AntLand; hei arctic regions, in S. Victoria Eret
Erechtheus (e-rek'thös), in Greek associated with mythology, a personage Athens, and to the early history of Erechtherum. was built a fine temple, the Eregli (er-e-gle ${ }^{\circ}$ ) on the Acropolis. Hergle ${ }^{\text {en }}$, Erekli, the anclent Heracleia, a seaport of Asia Mlnor, on the Biack Sea, province of Kastamuni, 128 miles E. N. E. of Constan. tinople. Pop. 6000. is inearth. cience he obriting: cono? $t$ b.c. found bium, rare little
(er'e-mit), hermit or An. chorite. See Anchorite.

The Erechtheum (rentored).
Erfurt (erfort) an important town Saxony, on the river Gera, formeriy a fortress with two citadeis, now given up as such. It has a fine cathedral dating from the thliteenth century an several handsome Gothic churches. The university. founded in 1378 and suppressed in 1816, was iong an important institution. There is stlif a royai academy of science and a royal library with 60.000 vois. The monastery (now an orphanage) was the residence of Luther from 1501 to 1508. The town is in a very tlourishing condition, and rapidiy extending. The industrics are varied, ln cluding clothing, machinery, leather, shoes, ironmongery, chemicais, etc. The horticulture of the environs enjoys a high reputation, plants and seed heing produced for sale in great quantities. T'op. (1910) 111,461.
Ergot (ergut), the altercd seed of rye and other grasses caused by the
 attack of a fungus
called Claviceps purpurea. The seed dense, homogeneous tissue largely charged with an vily ed with an oily miles long, $631 / 2$ miles hroad at its center,
fluid. In its per- from 40 to 60 fathoms deep at the deepfect state this germ- est part or fathoms deep at the deepinates and produces whole of its southern shore is. The the Claviceps. the territory of the shore is within When diseased rye and its northern within that of Canof this kind is eaten ada. It receives the waters of the 1. Heads of Ergot(ac) in food for some upper lates by Detroit River at its produced on a graes. 2, time it may cause southwestern extremity, and dischargees Claviceps purpurea (bb) death hy a kind of its waters into Lake Ontario hy the apringing from the Er mortification cailed Niagara River at its northeast end. got is used in obstetric practice to pro- pass from it to Lake Ontario. It io
mote the contraction of the uterus after childbirth.
Erica (e-ri'ka), the heath, a large getype of nus of branched rigid shrubs, of which are nnt. order Ericacese, mont of which are uatives of south Africa, a few being found in Europe and Asla. The leavem are narrow and rigld, tho flowers nre ginhose or tubular, ani fourlobed. Five species are found in Britaim. See Meath.
Ericacese ${ }_{k-1 \mathrm{ni}}^{\text {e- }}$ ne-e), a nat. order of exogenous piants. Sce Erica.

## Ericht

Locu, a Scottish loch amid the Grampian Mountains, on the borders of Perth and Inveruess shires. It is $1+1 / 2$ miles iong by about one mile broad and
 Erica herbacea. joins Loch Rannoch by one outiet.
Ericson, LELF, or LEIF THE LUCKr, a the Norse expiorer, who, about the year 1000 set out to find the country which had been previously aighted to the west, ianded at several places, and winterei at one, which he cailed Vlnland. (See Vinland.) The facts of this voyage are recorded in the Iceiandic sagas.
Ericsson (er'iks-son), JoHn, enginear, died in 1889 born in Sweden in 1803: ded in 1889. He is identified with numerous inventions and improvements on steam machinery and its applications. His chief inventions are his caloric engine, the screw propeller and his turretships, the first of which, the Monitor, distinguished itself in the American Civil war, and inaugurated a new era in naval warfare. He also invented the steam fireenginc, a torpedo boat, and a solar engine. Erie ( ${ }^{\prime}$ 'ri), one of the great chain of North American lakes, between akes Huron and Ontario, about 265 part; area 9600 square miles. The he territory of the United States,

challow compared with the other lake of the serles and is mubject to volent torms. The principal harion are thow on the United States alde-Bnalalo, brte, Cleveland, etc.
Erie, county meat of Firie County, Btate railway and lake commercial center on the eouthern shore of Lake Erie. Only port of l'ennaylvania on the Great Lakem. There are many indnstries, including ironworks for bollern, ensines and electrical machinery, with foundries, rolling-mille and blant fnrnaces, petroleum refineries, brewerins, tanneries wood-working factories, brass, aluminnm and sheet-metal piante, sllk, woolen and paper mills. Presque Isle Bay with peninsula and ad: juining parke, afords naturnl barbor and unmmer retort. There are extensive fresh water fisherie. Commerce exceeds $\$ 100$, 000000 in value annuaily. The chlef as ticles of export are coal, oll, iron and manufactured goods. Pop. 76,380.
Eric Canal, the larcest cannal in the to connect the Great Lakes with the see. It begins at Buffalo on Lake Erie, and extends to the Hudson at Albany It is 303 mlles long; has in ali 72 lucks; surface width of 70 feet bottom. width of 42 feet, and depth of 7 feet. It is carried over several large streams on stone aquedncts ; cont nearly $\$ 10,000,000$, and was opened in 1825. The navigation ls free It is nader contract to deepen and widen it, and thns adant it to larger vessels. As thus dealt with it will be 125 feet wide at top. 75 feet at bottom, and 12 feet deep, cost exceeding $\$ 100,000,000$. Drigena (erij'l-na), Joannes Soo metaphysician, probably born in Ireland about 800-810; died in France abont 875. He spent a rreat part of his life at the court of Charle the Bald of France. Hil treatieo on Predegtination and Freo-will, and another, Do Divisione Natura, contuining many unorthodor views, were condemned by the councile of Valencia in 850 and of Longres in 850, and Pope Nicholas I demandei the immediate disgrace of the oulprit. His subseqnent history is not known.
Figeron (er-jd'ron), a genus of of which E. Camade composite plants, diuretic properties.
Drinaceus (e-ri-natse-us). a genus of bedsehog is the animals, of which the Irinna (e-rinina), see Gredgetog. is said to who lives about 600 B.c. She of Sappho, and died at the age of cight-
cen. She acquired a hish reputation for poetry i her chief work was called Elafite ('The Distati'), of which nothins has come down to ua. An epltaph of two which are stil extant, and believed by some to be bers are by othery deemed epurlous.
Exinnyes (orin'l-s). See Fwries.
Eriodendron (eri-o-den'drun), the wool tree, a genus of plants, nat order Malvacem (mailows). There are elght species natives of America, but one belongs to Asia and Alrica. The species are noble plants, growing from 50 to 100 feet hlgh, having palmate leaven, and red or white flowerg. The wooly coat of the seeds of sume of the species is used in different coun-

Wool Tree (Eriodendron anfractworum). tries for stufing cushlons and slmllar purposes.
Friometer (eri-ome-ter: Greek, on ion, wool ; metron, a meas. ure), an optical instrument for measuring the diameters of minute particies and fibers, from the size of the colored rings prodnced by the diffraction of the light in which the objects are viewed.
Friophorum (eriolofornm). See n (e'ris) Cotton-grass.
Dris (e'ris), in the Greek mythology, ing invite soddess of discord. Not being invited to the marriage of Peleus, she revenzed herself by means of the apple of discord. Seo Paris.
Frith (er'ith), a town of England, in miles Kent, on the Themea, about 14 mer reast of London, pleasant sumTrivar (eop. (1015) 27,760.
Mrivan (erovini , \& Rnsian town, capital of a government of the same name in the Bentenancy of the Caucanus, on the Zanga, north of Mount Ararat. It has a citadel, barracke, a cannon foundry and some mannfactures. Pop. 29,033. The Govenivient has an area of 10,705 aq. miles, and a pop. of 909,100.
Frlangen (erlang-en), a town of Ba Nurnbers. varia, 10 miles N. N. W. of founded in The Protestant univeralt. 17. The indin 174s, is the chief inntitution. The indngtries incluide cotton-spinning combs, weavins, mirrors, hosifry, gloven, combs, etc. Pop. (1805) 23,720.

## Erlan

(erfon), or Bom a town of Ilungary, on the Ifser, 05 miles E. 8. E. of fudapest. It has sundry manufacturew ; and the red wines of the diatrict, esteemed the best in Hungary, are largely exported. Lop. 24,050. Erl-king, the English form of the and Scandinavian poetleal mytholosy to a personified natural power which devises and workn mlschiet, especially to children. Goethe'a celebrated poem Der Firlkönig (llt. 'elf-king') has rendered thls maliclous pirit unlversally known. Ermine (er'min), the atoat, a quadruped of the weasel tribe (Mustcla Ermincal, found over temperate Lurope and N. Americq, but common only in the north. In consequence of the change that occurs in the color of

it fur at different measons-by far mont marked in the Arctic regions-it in not generaliy known that the ermine and stoat are the same. In winter, in cold countries or severe seasons, the fur changes from a reddish-brown to a yel-lowish-white, or almost pure white, under which shade the nnimal is recognized as the ermine. In hoth states the tip of the taii is black. Like snany other species of this genus the craine has the faculty of ejecting a fluid of a musky odor. Its fur is short, soft and silky; the best skins being brought from Rr'sia Sweden and Norway and Hudson liay territories. Its fur was formerly one of the insignla of royalty, and is still used by judges. When used as linings of cloaks the black tuft from the tail is sewed to the skin at irregular disErmina tances.-In heraldry, ermine is one of the furs, represented with its peculiar black spots on a whlte ground.
Erne (ern), the name often given to all tie eagles of the genus IIaliaëtus, but more specifically to the whitetailed sea eagle. See Sea Eagle.
Frne (ern), loveri, a lake of Ireland, a north or lower, and a south or upper
lake (with the town of Enniokillen botween), connacted by a narrow winding channel, and properly formins only expansions of the river Erne. Its entire length Is about 40 milien; average breadth 6 miles. It contains numerous amall islands, and is well stocked with fanThe IRlver Erne rises in Iough Gonnagh, in the County of longford, flows through loughs Oughter and Frne and falla into lonegal Hay below liallyshannon. It is 72 miles long.

## 

 Hanover and Duke of Cumberland, was the fifth son of George III ; born in 1771 ; dled in 1851. He became a field marnhal in the British army, and on the death of Wililam IV, in 1837, he ascended the throne of Hanover, in consequence of the succession to the sovereignty of that country being limited to male heirs. He was succeeded by his son, Georse $\mathbf{V}$, the last of the Hanoverian klaga.Eros (E'ros), the Greek name of Cupid and Amor. This name has alwo been given to a recently discovered planetoid, which is remarkable from the fact that ite orbit, in its nearent approach to the earth, comes within that of Marw. It is thns the nearest to the earth of all celestial bodies except the moon. This fact renders it of great value in the study of the solar parallax, and it has been used for this purpose.
Ercsion Theory ( $p-r^{\prime}$ yhnn), in seolnosion Lheory ogy, the theory, now held by all geologists, that valleys are due to the wearing influences of watet and ice, the latter chicfly in the form of glaciers, as opposed to the theory which regards them as the result of fissures in carth's crust produced ly strains during it upheavel.
Erotic (e-rot'ik; from the Gr. eros, love), relating to love.-Erotio Poetry, amatory poetry.-The name of erotio writers has been applied, in Greek literature, particularly to a class of 10 mance writers, and to the writer of the Milesian Tales.
Erotomania (er- 0 -to-ma'ni-a), mental alienation or melan choly caused by love.
Errata (e-ra'ta; Lat. the plural form of erratum, an error), the list of errors and corrections placed at the end or at the beginning of a book.
Erratics (eratiks), of EmBATIO
Blocks, in keology, bouldera or large masses of angular rock which have been transported to a dietance from their original mountains by the action of ice during the slacial period. Thus, on

## Ersch

## Eryngo

the slopes of the Jura Mountains im-educated partly at the High School of mense blocks of sranite are found which have traveled 60 miles from their origScotch situation. Similarly masses of Welsh rocks (some district granites and of eral tons) occur not uncommonls in the Enface soll of the Midland counties of England.
Grsch (ersh), Jomi Sanuer, a Gerdied in 1828. He was principal in 1766 ; and professor of geography and statistic at Halle. Among his publications are a Dictionary of French Writers; a Manual of German Literature; and, in connection with Gruber, the Universal Encyclopedia of Arts and Sciences (Leipeig, 1818, et seq., 4to).
Erse (ers), a name sometime siven Erskine (ershin), EbMNEzEz, the Church in scoontand of the Seceasion in 1756. He studied at Edinburgh died was ordained minister of Portmoak, in Fife, in 1703, in which situation he continued for twenty-eight years, when he removed to Stirling. His attitude towards patronage and other abuses in the church led to his being deposed. when, in conjunction with his brother and others, is the author of secersal volumes of sermons.

## Frskine, Hevry, a Scottish barrister,

 David, ten th earl of Buchan of Henry Edinburgh in 1746 ; died in 1817. After studying at the universities of St. Andrews, Edinburgh and Glasgow, he adopted the legal profession, and in' 1768 was called to the bar. He twice held the leader of lord-advocate, was for long a high reputation as a wit bar, and held Trsleine Hiskine, wards of Cardross, Scottish jurist, born in 1695; died in 1768 . He was called to the Scotch bar in 1719, and Was author of Principles of the Law of Scotland and the Instutute of the Law of Scotland, both works of authority.Frskine, RalpH, brother of Hbenezer in 1752. He was ordained to the paried of Dunfermline in 1711, and in 1737 joined his brother, who had seceded from the Established Church. His Gospel Sonnets and other religious works were once very popular.
Fraline, Thomas, Lond Erseine, a on of the Scottish lawyer, the youngest aph and restorative, as well as to have born in 1750, and died in 1823. He was formerly much employed in Eampostre was born in 1750, and died in 1823. He was

Edinburgh, and partly at the University of St. Andrews. After verving four years in the navy and seven in the army he commenced the study of law, and in 1778 took his degree at Cambridge and was called to the bar. His success was immediate. In May, 1783, he received a silk gown and the same year was elected member of parliament for Ports. month, a seat which he held till 1808 , When he was raised to the peerage. The rights of juries he firmly maintained on all occasions, but particularly in the celebrated trial of the Dean of St. Asaph for libel. In 1789 he defended Mr. Stockdale, a bookseller, for publishing what was charged as a libelous pamphlet in favor of Warten Hastings. In 1792, being employed to defend Thomas Paine, when prosecuted for the second part of his Rights of Mfan, he declared that, waiving all personal convictions, he deemed it right, as an English adrocate, to obey the call, by the maintenance of which principle he lost his office of attorneygeneral to the Prince of Wales. In the trials of Hardy, Tooke and others for high treason in 1794, which lasted for several weeks, the ability displayed by Erskine was acknowledged by all parties. He was a warm partisan of Fox, and a strenuous opposer of the war with France. In 1802 the Prince of Wales not only restored him to his office of attorneygeneral, but made him keeper of his seals for the Duchy of Cornwall. On the death of Pitt, in 1808, Erskine was created a peer, and raised to the dignity of lord-chancellor. During his short tenure of office the bill for the abolition of slavery was passed. After he retired with the usual pension he took little part in politics.
Bruptive Rocks (e-rup'tiv), in gecllike lava, basalt, graniteg, those which, through other rocks whe etc., have broken state.
Aryngo (er-in'go ; Eryngium), a genus nat order of plants belonging to the wards of 100 mbelliferex . There nre upand subtrof species found in temperate South America climates, but chiefly in called sea-holly, E. maritrmum, also frequents olly, is a British species. It suished by sandy shores, and is distinsuished by its rigid, spiny, glaucous, veined leaves, and its dense heads of blue flowers. The roots are sometimes can. died, and are roputed sometimes caning and restorateputed to stimulat. tonic, and as tending to promote appetite
E. oquatioum is an American specees oylon, mood), occasionally uved for droknown by the name of rattleanake weed. Erysimum (ef rif imum) em ened Crucifera, chiefy biennials, with narrow entire leaves, and yellow, often fragrant, flowera, There are about 100 species natives of northern temperate and cold countries. $E$. cheiranthoidees, a native of Europe and North America, is found in waste places, and from being used as an anthelmintic, is called ,wormseed.
Erysipelas (er-1-sipicelus), the rose, disease characterized by difunged finfe, ${ }^{2}$. mation of the skin of sone part of the body, but chiefy of the tace or head, and attended by fever. It is, generally, an acute affection, its medium duration being from ten to fourteen days. It should be treated by nourishing food and iron tonics, the parts being protected from cold.

## Erythema

(er-i-the'ma), a mild form of inflammation of the skin 80 mewhat resembling erysipelas Some forms are connected with constitutional diseases, as rheumatiom, gout, etc. Erythrea (eri-thris'a), ${ }^{\text {a }}$, zenis of Centaury is the best-known species.
 a name given to what is now called the Indian Ocean, but including the Persian and Arabian gultas The name was latterly restricted to the Arabian Gulf. Erythrina (erri-thrinna), the coral bright red flowers. See Coral Tree. with
Erythronium (er-1-thr fintim), plants, natures of of temperate ile resions, nearly stemless herbs, with two emooth, shining, fat leares, and large generally reddish flowers, which are solitary. They have a long, narrow, solid, scaly bulb. One of them is the dop $s$ s-toth oth violet.
 trees, nat. order Leguminose, containing three species, two tound in Africa and the thirr in Australia. Tle $E$. guineênse of Guinea has a poisonous juice, which is used by the natives as a test of inncence and guilt, and hence the name ordeal tree.

## Erythroxyleæ (er-i-throks.itle-e), a nat. order of exogen Ent plints, having

 alternate stipulate Teaves ; smail, palifid flowers and drupaceous fruit. The prin. cipal genus iss Erythrosyion, some of whose species have a bright reed wood .(bence the name-Gr. orythrod, wood,ing. For E, ooca see Ooca
Eryz (eriks) an ancient city and a mountain in the weat of Sicily, about 2 miles from the sea-coast. The mountain, now Monte San Giuliano, risem direct from the plain to a height of 2184 feet. On the summit anciently stood a celebrated temple of Venus. All trace of the ancient town of Eryz have now disappeared, and its site is occupied by the modern town of San Giuliano.
Erzerum, Erzaroum or Eazizoon ish Armenia, (er'ze-robm), a city of Turtan area capital of a vilayet with an area of $27,000 \mathrm{sq}$. miles, and a pop. of 582,745. The town is about 6000 feet above sea-level, forms ais important strategical center, and has become principal frontier fortress. It is irregularly built, its narrow, dirty streets, flanked by mean houses, being crowded together in the small space enclosed by its lofty walls. The Moslem element prevails largely over the Christian, although it is the metropolis of the Armenian Church in union with Rome. In addition to important manufacturem, especially in copper and iron, it carries on an extensive trade, and is a chief halting-place for Persian pilgrims on their way to Mecca. Pop, about 43,000 . Erzgebirge (ertg'ge-birgej;Ore European mountains forming a natural boundary between Saxony and Bohemia, nearly 120 miles in length and 25 miles broad. The highest summits, which are on the side of Saxony, rise to 3800 or 3900 feet. The mountains are rich in silver, iron, copper, lead, cobalt, arsenic, etc.
Esarhaddon (es-ar-had'on), the son of the most powerful of monarchs. Herful of all the Assyrian sidnarchs, He extended the empire on all sides, and is the only Assyrian monarch Who actually reigned at Babylon. He died about 667 B.c. See Assyria.
Esau (ésn), the eldest son of Isaac, and twin-brother of Jacob. His name (which signifies rough, hairy) was due to his singular appearance at birth, being 'red, and all over like a hairy garment.' The story of his marriage, of his loss of birttright through the craft of Rebekah and Jacob, and of his quarrel and reconciliation with Jacob are quarrel in the book of Genesis. He was the progenitor of the Edomites, who dwelt on Mount Seir.

## Escalator (en-ka-la'tor), a movins

 walk. These are moving platforms to carry passengers from one point to an-other, or steps to carry from one story to deposited on the escar. They are called another. They were first tried at the Chicago Exposition of 1893, and soon became common.
Escanaba (es-ka-na'ba), a city, capiat the north tal of Delta Co.. Mlchigan, good harbor, shipping large amounts of iron ore. Has manufactures of lumber and wooden ware, veneer plants, fnrnace and tannery. Pop. 15,000.
Escatpement (en-kidipont), the gen-time-piece by which the pressure of the Wheels (which move always in one direction) and the vibratory motion of the pendulum or balance-wheel are accommodated the one to the other. By this contrivance the wheelwork is made to communicate an impnlse to the regulating power (which in a clock is the pendulum and in a watck the balance-wheel), so as

Fatcie and Clocis Ebcapmonis.

1. Anchor escapement of a common clock. Duplex encapement. 3, Lover eacapoment. Horisontal or cylinder excmpement.
to restore to it the small portion of force which it loges in every vibration, in conmequence of friction and the resistance of the air. The leading requisite of a good escapement is that the impulse communicated to the pendulum or balancewheel shall be invariable, notwithstanding any irregularity or fonlness in the train of wheels. Various kinds of escapements have been contrived, some of which are shown in the accompanying figure. See also Olock, Watch.
Escar, Eskial (eskar), a late gevficial drift, generally consisting of a longlinear ridge of sand and gravel, including pieces of considerable size. The materials are derived from the waste of till or boulder-clay, and their arrangement took Place probably under watet over which Icebergi fonted, for in Sweden par-
ticularly angular, erratic blocks are olten
crust or seal occasioned on the to the burns or caustic applications.
Escharotics ( (es-kse-rot'iks), substances (which see).
Eschatology (es-ks-tol'o-ji), in theolspecting the last ogy the doctrine rothe millenninm, the second advent of Christ, the resnrrection, jndgment, conflagration of the world, and the final state of the dead.
Escheat (es-chett), in law, a species fanlt of heirs or by forfeiture. from dee which falls or or lapses to the original proprietor, or to the State, as lands or other property. By modern legislation there can be no escheat or failnre of the whole blood wherever there are persons of the half-blood capable of inheriting.
Eschenbach (esh'en-bah), Wolpras val poet or minnesinger, who fouridiein the first half nesinger, who flourished The most esteemed of his numerons worlis. are : The Parzival (printed in 1477) works Titurel, or the Guardian of the draal (printid 1477) ; and the Willehalm, a
poem on the deeds of William of Orange, a contemporary of Charlemagne.
Eschscholtria (esh-sholt' $\mathrm{ti-a}$ ), a small whitish plants, of the poppy order, natives of California and the neighboring sellow, peduncled flowers. The sepals in the form of a calytra flower opens sen-Nassau, on the Werra, 26 miles z . в. E. of Cassel Pop. (1905) 11,113.

Eschweiler (esh'viler), a town of of Rheinland, 9 Prussia, in the province Chapelle and, 9 miles E. N. E. of Aix-laChapelle, on the Inde. It is the seat of large and varied manufacturing industries, especially in iron, conper and zinc, and has coal mines. Pop. 20,643. Escobar y Mendoza (es-bobbar ${ }^{\text {r }}$ Antonia, a Spanish casuist men ${ }^{\prime} d^{\prime}$ tha). born in 1589; died in 1669 . His princion
works are Summula Casuum Conscientia and several scriptural commentaries. He was severely criticised by Pascal, and the extreme laxity of his moral principles was ridiculed by Boilean, Moliere and La Fontaipe.
Escrow (es-kró), a legal writing dedelivered by him to a third person to be purports to benefit, when some condition is performed. Upon the performance of this condition it hecomes an ahsolute deed, but if the condition he not performed it remains an escrow or scroll.
Escurial (es-kưri-al; Spanish, el Escorial), a remarkable building in Spain, comprising at once a palace, a convent, a church and a mausoleum. It is distant from Madrid about 24 miles in a northwesterly direction, and situated on the acclivity of the Sierra Guadarrama, the range of mountains which divides New from Old Castile. It was built by Philip II, and dedicated to St. Lawrence, in commemoration of the victory of St Quentin, fought on the festival of the gaint in $-\frac{57}{25}$. It is popularly considered to he built on the plan of a gridiron, from the fact that St. Lawrence is said to have been broiled alive on a sort of large gridiron. The building is a rectangular parallelogram measuring 744 feet in length hy 580 in hreadth. The interior is divided into courts, formerly inhahited by monks and ecclesiastics. while a projection 460 feet in length (the handle of the gridiron) contains the royal palace. It was begun in 1563 and finished in 1584 . It is of moderate height, and its innumerable windows (said to be 11,000 ) give it (apart from the church) somewhat the aspect of a large mill or barracks. The church is the finest portion of the whole building. The dome is 60 feet in diameter. and its height at the center is about 320 feet. Under it is the pantheon or family vault of the Spanish sovereigns. The lihrary contains a valuahle collection, including a rich store of Arabic MSS. The Escurial was partly burned in 1671, when many MSS. were destroyed, and was pillaged by the French in 1808 and 1813. It was restored by Ferdinand VII, but the monks, with their revenues which supported it, have long since disappeared. In 1872 it was fired by lightning, and suffered serious damage.
Escutcheon
(es-kuch'un) in heraldry, the shield whereon coats of arms are represented. See Herclaty. Fsiraëlon (es-dration), Prany ors, Palentine from the Mediterranean to the

Jordan, and drained by the river Kishon. Among its suhsidiary valleys are those of Engannin, Taanach and Megiddo. This plain is celehrated for many important events in Old Testament history. Esdras (es'dras), Booss or, two apocryphal books, which, in the Vulgate and other editions, are incorporated with the canonical books of Scripture. In the Vulgate the canonical books of Ezra and Nehemiah are called the first and second, and the apocryphal books the third and fourth books of Esdras. The Geneva Bihle (1560) firat adopted the present nomenclature, calling the two apocryphal books first and second Esdras. The suhject of the first book of Esdras is the same as that of Exra and Nehemiah, and in general it appears to he copied from the canonical Scriptures. The second book of Esdras is snpposed to have been either of much later date or to have been interpolated hy Christian writers.
Esk (Celtic for water), the name of two small rivers in England-one in Cumberland and one in Yorkshire: and of several in Scotland, the chied being the Esk in Dumfriesphire; the North Esk and South Est in Tiviarahire: and the North Esk and South Esk in Edinburghshire.

## Es'kar. See Escar.

Eski-jumna (es'kę-jum'na), a town ern slope of the Binar-Dagh. Pop. 8942. Eskilstuna (a'skil-stii-na), a town of Sweden, on river of same name connecting Lake Maelar with Lake Hjelmar, with ironworks and manufactures of steel goods, weapons, eta Pop. 13,663.
Eskimos (es'ki-mőz). See Esquimauc. Eski-Sagra (es'kē-sa'gra), a town of Eastern Roumelia, on the south slope of the Balkans, 50 miles 15.2 of Philippopolis. It has in its vicinity extensive gardens of roses, numerous orchards and mineral springs. Pop. 19,428. Eski-Shehr (este-she hr), a town of Asiatic Turkey, 80 miles 8. I of the Sea of Marmora, with warm baths and manufactures of meerschaum pipes from the deporits of that substance in the neighborhood. Pop. about 20,000 . Fismarch (es'mărh), Jomannes FrimRICH ADGUBT, a German surgeon ; born in 1823; died in 1808. He held hirh offlal positions during the Schleswig-Holstein and Franco-German wars; was a great authority on gunshot wounds; originated valuable improvements

## Esquimarax

in barrack-hospitals, ambulances, etc. ; and tion was the author of several surgical works Fsneh (es'ne), a town of Upper Eigjpt, miles s. B. W. of Thebes, capital of a province of same name, on the site of the ancient Latopolis. Among the rulns there is a beautiful portico of twentyfour lofty and massive columns, belong. ing to a temple of Kneph (the oniy portion of the temple cleared out) and erected in the Ptolemaic and Roman period, with a zodiac on the ceiling. Esneh is the entrepot of the Senaar caravans; has manufactures of cottons, pottery, etc. ; and is reckoned the health. fest place in Egypt. Pop. 16,000. Esocidee (es-ok'j-dê), the family of (Esox lucius) belongs, as also pike mascalonge ( $E$. nobilior) of America the Esop (e'sop). See AEop. Ispalier (es-pal'yér), in gardening; a the branehes of fruit trellis-work on which extended horizontally, with the object of securing for the plant a freer circulation of air as well as a full exposure to the sun. Trees thus trained are not subjected to such marked nor so rapid varititions of temperature as wall trees.
Esperanto (es-per-an'to), an artifieial vented by Dr. Zamenhationai innguage inEspionage Act. The espionage bill its approval by President became a law with 15, 1917. As enaeted into iaw the bill loes not carry the press censorship clause, which was the chief subject of debate. A summary of the bill foliows:
Section (1) deseribes what constitutes the various forms of espionage and provides penalties, (2) gives the government power in times of national emergeney over the vesseis in ports of the United States, (3) provides penaities for those
Injuring vessels merce, (4) provides penaities for cominterfering provides penaities for those cles from the United exportntion of artimeans, (5) empowers the President to take steps toward the enforcement of to trality, (6) gives the governme of neuthority to seize arms or othernment autended for export in violation articles inelothes the President with of law, (7) bid the export of such artio power to forfit and provides penalties for tho sees ing to evade the embargo for those seekpenalties for those guilty of (8) provides to disturb forcign relations aets tending regulations with regard to rens (0) fixes provides penalties for violation of regula.
tions (10) provides penalties for counterfeiting or tampering with official docu. ments, (11) authorizes the issuance of search warrants under special circumstances and fixes penaltles for interference with officers of the government, (12) forbids the use of the mailis for forwarding treasonable matter and fixes pennllies, (13) extends the provisions of the bill to the Canal Zone and the insular possessions of the United States.

## Espirito Santo (es-pére-tö san'to ;

 maritime province of Brazil Spirit'), a north by Bahia, south Brazil, bounded length baia, south by Rio de Janeiro; 120 ienth, about 260 miles; breadth, about Pop. 209,783. 120 miles, 17,310 square miles.Espiritu Santo (es-pére-t8 san'to), Pacific, the iargest of the island of the with some 15,000 of the New Hebrides, Esplanade (es-plahabitants. usplanade (es-plan-ād') in fortificaleft between a citadel wide open space houses of the citadel and the nearest frequently applied to The term is also e-pecially along the a kind of terrace, walks or drives.

## Esquimault (es-ke’malt), a harbor

 the southeast cond navai station on about 3 miles coast of Vancouver Island, of British Cos from Vietoria, the capital most landlocked Roads' outside, is and with the 'Royal anchorage to a fleet largest size. It is the of Vc3seis of the uaval shize. It is the station of British being fortified the Pacifie coast, and is necessaries of and provided with all the Farsima of a first-class naval arsenal. Esquimaux (es'ki-moz), or Eskimos, (as the name is now more generally spelled), a race inhabiting the Arctic coasts of North America, from Greenland to Bering Stralt, and extending into Asia. They eall themselves Inu-it, the people; their other name is eaters an Algonquin word signifying three princiw flesh. They consist of the Frincipai stocks-the Greenlanders: the Weimaux proper, in Labrador; and Hudson Bry Esquimaux, found along Bay, the Bay, the west side of Baffin mouths of the chores as far as the rivers, and Coppermiue and Mackenzie Asiatic sides of on the American and leading phs of Bering Strait. Their stunted physicai peculiarities are a eheek-bstature, flattened nose, projecting and brownisi eyes often oblinue and yellow and other furs are Sealskins, reindeer for dress, according to used as materials as skins of otters. foxes, martens, etcIn summer they live in tente, covered with akins; in winter they may be sald to burrow beneath the enow. In Greenland houses built of stone and cemented with turf are used as permanent habitations, and houses made of slabs of frozen snow for use when traveling or huntins. Vegetation being extremely stunted with. In the limits of their tertitories, their food consists of the flesh of whales, seals, walrus, etc., often eaten raw ; and they show remarkable skill in fishing and hunting. Their weapons are bows and arrows, spears or lances, generally pointed With bone, but sometimes with metal. Their only domestic animal is the Esquimaux dog (which see). In intellect they are by no means deficient ; in mannera they are kind and hospitable. Their religious ideas appear scanty, but success has attended the labors of the Danish missionaries in teaching them the Christian religion.

## Esquimaux Dog, or Eskrmo Doo,

 extensively spread over the of dogs regions of America and of Bastern Asia. It is rather larger than the English pointer, but appears smaller on account of the shortness of its legs. It has oblique eyes, an elongated muzzle, and a bushy tail, which give it a wolfish appearance, and it is wild and wolfish in its habits. The color is generally a deep dun, obscurely barred and patched with darker color. It is the only beast of burden in these latitudes, and with a team of such dogs attached to his sledge the Esquimaux will cover 60 miles a day for several successive days.Esquire (es'kwir; old Fr. escuyer, originally, from $\mathrm{L}_{\mathrm{L}}$ scutum, a shield), bearer; an attendant barer or armorin modern times a title of dignity next in degree below a knight. In England this title is properly given to the younger sons of noblemen, to officers of the king's courts and of the household, to counselors at law, justices of the peace while in commission, sheriffs, gentlemen who have held commissions in the army and navy, etc. It is usualls given to all professional and literary men, and, nowadays, in the addresses of letters, esquire may be put as a complimentary adjunct to almost any person's name. In heraldry the helmet of an esquire is represented sldeways, with the vizor closed.
Esquiros (es-kēros), HENRI AI mancist, and miscellaneous writer, born at Paris in 1814; died at Versailles in 1876. His first work, a volume of poetry, Les Hirondelles, appeared in 1834. This
was followed by numerous romances, and a nommentary on the life of Chrint, L'Evangils ds Peuplo, for which he was promecuted and imprisoned. He then published Le Chante drun Prisonnier, poems written in prison; Les, Vierges Folles; Les Vierges Sages; L'Histoire des Montagnards; otc. Having to leave France in 1851, he readded for years in England and wrote a series of essays for the Revue des Dous Mondes on English life and character, which were trantlated under the title of The English at Home, and were very popular. He also wrote a similar work on the Dutch.
Essay (es'a) a composition in which momething is attempted to be proved or illustrated, usually shorter and less methodical and finished than a yyb tematic or formal treatise; so that it may be a short disquisition on a subject of taste, philosophy or common life. Caution or modesty has induced many writers of note to give the title of essay to their most elaborate productions; thus we have Locke's Essay on the Human Understanding. There ls a class of English writers to whom the descriptive term essayist is applied. The Spectator, The Tatler, The Rambler, and many other extensive collections of brief treatises embracing every variety of subjects are among the works of this class of writers.

## Essek (es'ek). See Erzek.

Essen (es'en), a town of Rhenish Prussia, 18 miles northeast of Dusseldorf, founded in the ninth century, and adorned with a fine church dating from 873. It has recently increased with great rapidity, and is celebrated for the steel and iron works of Krupp, the most extensive in Europe, employing about 40.000 workmen. 7'his great establishment was started in 1827, with only two workmen The works occupy 1000 acres, and the firm possesses coal and iron-stone mines. The rifled steel cannon made here are supplied to most of the armies of Europe. In the Krupp works there is now a steam-hammer of 150 tons. Pop. in 1910, including Altendorf, incorporated with it in 1900, 294,629.

Essence (es'ens), a solution of volatile or essential oils in spirits. See Essential Oils.
Essenes (fs-senz'), or Esszars, a sect among the Jews, the origin of which is unknown, as well as the etymology of their name. It appears to have sprung up in the course of the century preceding the Christian era, and

## disappeared on the diapersion of the varre. In 1596 he was commander of the

 Jews after the dege of Jerumalem. The troops in an expedition against Spain, sect appeari to have been an outcome of ard distinguished himself by the capture Jewinh mysticism and asceticism, which of Cadiz. In an expedition next year he sradually asmumed the form of a distinct organization. Its members were remarkable for their atrictness and abstinence and had a rule of life analogous to that of a monaatic order. Their doctrines had an interesting resemblance to several of those of the Christian dispensation.Fssential Oils (e-sen'shal), volatile oils usually drawn from aromatic plants by subjecting them to distillation with water, such as the oils of lavender, cloves, peppermint, etc. Tassequibo (es-se-kébō), ariver of fows into the Atlantic by an estuary 20 milem in width, after a course of about 450 miles. The district or division of Essequibo is well cultivated ap:? cxtremely fertile producing coffee, cotton, cocoa and sugar. Pop. about 55,000 .
Fissex (es'selks), maritime county in Suffolk, the 8. In of England, bounded by dlesex: area, 1042 sq. miles. The surface is generally level, except in the 28. W., where it is undulating and sometimes hilly. The soil is in general extremely fertile, and particularly well adapted for the growth of wheat. Beans and peas also thrive uncommonly weil. The other principal productions are potatoes, barley, oats, mangolds, turnips, tares, rape, mustard and trefoil. The raising of caraway, coriander and teazel
almost peculiar to this county. It had formerly a great extent of forest, the only survival of which is Epping Forest. The principal rivers in the county are the Roding, Crouch, Chelmer, Blackwater, Colpe, etc. It has also the Thames, Lea and Stour as boundary rivers. On the coast are some valuable oyster-beds, the oysters from which are exported in considerable quantities. The manufactures of the county are not very extensive, the chief being crape silks, straw plait, etc. The chief towns are Chelmsford, the counts town; West Ham, Colchester, Maldon and Harwich. Pop. (1911) 1,062,000.

## Es-souan. See Assouar.

Established Church (es-tablisht), a church hap:
ing a form of doctrine and government estabished by law in any country for the teaching of Christianity within its boundaries, and usually endowed by the state. The upholders of the establish. ment theory maintain that it is the duty of a state to provide for the religious instruction of the people. On the other hand, it is argued tha the state has no right to endow or support any particular sect or denomination, unless tiney assume that that denomination alone is possessed of religious truth and worth. While this is a common institution in Europe, the United States has no established church.
Estafette (es-ta-fet'), a courier who junction with carries his message in conEstaminet (es-tá-mi-nã; French), a permitted.
Estancia (es-tan'si-a), an estate or farm in Spanish. South America, especially one on which cattue are reared.

Estate
(es-tat'), the interent or quantits of interest a man has ln lands, tenements or other effects. Bstates are real or personal Real catato comprises lands, tenements, and hereditaments, held in freehold. Personal estate comprises interests for terms of years in lunds, tenements and hereditaments and property of every other description. Real estate descends to heirs; versonal to executors or administrators. In ordinary language, an estate is a plece ot landed property; a definite portion of land in the ownershis of some one.
Estates of the Realm, in Britain, luris spiritual, the lords temporal and the commons. From the circumstance that the loris spiritual and temporal meet in one house, and practically form one branch of the legislature, the popular error has arisen that the soverelgn forms one of the three estates of the realm.
Este (es'tū), a town of North Italy, a castle, the cradie of of Padua. It has Manufnctures of silk goods, earthenware und majolica; numerous silk mills and whetstone guarries. l'op. of commune 10,002.

## Este,

one of the most ancient and illustrious of the families of Italy. In the eleventh century the bouse of liste became connected by marriage with the German Welfs or Guelphs, and founded the German branch of the house of Este, the dukes of Brunswick and IIanover. The sovereigns of Ferrara and Modena were of this family, several of them being famous as patrons of letters. The lives of Boiardo, Ariosto and Tasso were closely connected with members of this house. The last male representative of the Estes died in 1798. His daughter married a son of the German emperer lrancis $I_{\text {a }}$ and her grandson disappeored from the land of his forefathers at the consummation of Italian unity in 1850.
Estella (es-tel'ya), a town of N. E. Ega, 24 miles southwest of Pampeluna. Pop. 5736.
Estepa (es-tã'pa), a town of South50 miles east by south of Seville. It has a handsome Gothic church. Pop. 8531.
Estepona (es-tīi-pōndh), a seaport of of Malaga, 23 miles northern province tar. Pop. 0310 .
Esterhazy (es-ter-hni $z$ i), a family of authentic genealogy goes back to the fret
hall of the thirteenth century. They were zealous partisans of the house of Hapsburg, to whom, during the reigns of Frederlck II and Leopold I, they lent a powerful support. Amons the more prominent members of the family arePaul IV, Prince Listimifazy a general and literary savant, 1635-1713. Hin grandson, Jicholas Josmpa, a great patron of arts and music, founder of the school in whlch Hayden and Pleyel, among others, were taught, $1714 \% 0$. Nichozas, Prince Esteriazy, dietingulshed as a fleld-marshal and foreign amhassador, 1765-1833.-1 Rince PaUL Astiony, a dietingulshed and able diplomatist, born $\ln 1786$; died in 1866; was successively Austrian ambassador at Dresden, Rome and Britain. He was a supporter of the natlonal Hungarian movement.
Esther (es'ther), a Jewess, who beo came the queen of Ahasuerus (see Ahasuerus), King of Persia, and whose story is told ln the book of the Old Testament called by her name. Thls book ls supposed by some to be the composition of Mordecai himself, the uncle of the heroine. Various opinions are held regarding the time and truth of the story; but the feast of Purlm whlch commemorates the events narrated is still observed by the Jews during the month Adar.
Esthonia (es-tho'ni-a), ${ }^{2}$ maritime sollang government of $\mathbf{R u s s i a}$, bounded by the Gulf of Finland, the Baltic, and the governments of Livonia and St. Petersburg. It includes several islands, of which the most important are Dagoe and Oesel area, about 7818 square mlles. It has for the most part a flat or undulating surface. The whole of the north side, however, sises considerably above the sea, and presents to it ranges of cliffs. The Narva, which merely bonnds the goverament on the east, is the onlv river of any importance; but minor streams, as well as small lakes, are very numerons. About a fourth of the surface is covered with forests of plne, birch and adler. The crops include wheat, barley and oats. The peasantry are almost all of Finnislh origin and speak a Finnish dialect. It was divided between the Germans and the Danes in the 13th century and came entirely into German possession in 1346. In 1561 it passed to Sweden and in 1710 was seized by Russia. It was erected into a separate state by Germany in 1017 during the European war. Reval is the capital. Pop. 413,747.
Estivation
(esti-vlishun). See Dietivation.

## Eistoppel

(en-top'el), in lam, anything done by a party himself which puts a period to an action by closing the ground of controversy.
Fstovers (entotovers) in law necesof estovers is the liberty of taking the necessary wood for a house or farm from another's estate.
Estradiot (es-trad'1-ot), an Albanian dragoon or light-horseman, employed in the French army in the fifteenth and sixteenth centuries. They sometimes fought on foot as well as on horsehack.

## Estremadura

(eat-r a-mader ra), a western division of Spain, consisting of the provinces of Ba dajoz and Caceres. It is fertle, but not cultivated to its full extent. The Tagus and Guadiana intersect it enst to west. Immense flocks of sheep graze on the rich plains. The area is about $16,700 \mathrm{sq}$. miles, and the pop. 818,211 .
Estremadura, a maritime province of the Tagus into two nearly gal, divided by which the northern is the more mountainous. Wines nnd olives are the princlple produce. The principal clty is Lisbon. Area, about 16,000 sq. miles. Pop. 882,-

## 410. <br> Estremez, <br> or Estremoz (a s h-traimôsl'), a town of Portugal, in the province of Alemtejo, 22

 miles west from Elvas. Pop. 7920 .Estuary (es'tū-a-ri), the wlde mouth of a river opening out so as to form an arm of the sea.
Eszek (es-sek'), or Essea, a strongly fortified town of Austria-Hungary, on the Drave, 13 miles from its confluence with the Danube. It has barracks, town house, normal schooi, etc., an important trade and several fairs. Pop. 24,030 .
Etærio (e-te'ri-o), Eterio, in botany, hlscent carpels, either dry upon a fleshy receptacle as the strawberry, or dry upon a dry receptacle as the ranunculus, or fleshy upon a dry receptacle as the raspherry, the parts being small drupes.
Etampes ( $\overline{\text { andinp}}$ ), a town of France, s, by w. from Paris. Pop. (1006) 8720 . Etappen (e-tap'en; Ger.), a department in continental armies commanders of which is to relieve the sponsibility for thelr conmunications in the rear. 'The officers of this department supervise all arrangements for loading and unloading at stations, forwarding, feeding, billeting, etc.

Etawah (a.tan wa ), a town of Hinduutan, N. W. Provinces, capItal of the district of ame name, on the left hank of the Jumna, picturesqueiy sltuated among ravinces, and richly planted with trees. It has some sood hulldIngs and a considerahle trade. Pop. 42. 570. The DIstrict has an area of 1091 square miles, apd a pop. of about 806,708.

Etching (ech'Ing), the art of produclng designs upon a plate of steel or copper hy means of plines drawn with an etching needle (a finepointed steel tool), the ilines belng drawn through a coating or varnish (the ground), and bitten in by some strong acid which can only affect the plate where the yarnish has been removed. See engraving.

## Etchmiadzin. See Armenia.

Eteocles, Polynices (e-téo-k 18 s , p o-l 1-nİ'sex),
two heroes of anclent Greek legend, sons of CEdipus, king of Thehes. After their father's banishment from Thebes, Eteocles usurped the throne to the exclusion of hls brother, an act which led to an expedition of Polynices and others againat Thebes. The two hrothers fell byeach other's hand. See Antigone.
Etesian Winds (e-t ${ }^{\prime} z \mathrm{Z}$-an), wlads blowing at stated times of the year; applled especially to northerly and northeasterly winds which prevail at certain seasons in the Mediterranean regions.
Ethelbert (eth'el-hert), King of Kent, born a hout 560 ; died in 616. He succeeded hls father, Hermenric, and reduced all the Anglo-Saxon states, except Northumberiand, to the condition of dependencies. Ethelbert married Bertha, the daughter of Caribert, king of Paris, and a Christinn princess, an event which led indirectly to the introduction of Christinnity into England hy St. Augustine. Ethelbert was the first Anglo-Saxon king to draw up a code of laws.
Ethelbert, King of England, son of Ethelwulf, succeeded to the government of the eastern slae of the klogdom in 857, and in 860, on the death of his brother Ethelbald, became sole king. His reign was much disturbed by the inroads of the Danes. He died in 866.

Ethelred I (ethel-red), King of England, son of Ethelwulf, succeeded his hrother Ethelbert in 866 . The Danes became so formidable in his relgn as to threaten the conquest of the, whole kingdom, Ethelred died is
consequence of wound received in an actlon with the Danes in 871, and was succeeded by his brother Alfred.
Ethelred II, King of England, son mucceeded hls brother, Edward the Martyr, in 978 , and, for ble want of vlgor and capaclty, was surnamed the Unready. In his relgn began the practice of buying off the Dapes by presente of money. After repeated payments of tribute he effected, in 1002, a massacre of the Danes; but this led to Sweyn gathering a large furce together and carrying fire and sword through the country. They were again bribed to depart; but, upon a new invasion, Sweyn obllged the noblem to swear alieglance to him as king of England; while Ethelred, in 1013, fled to Normandy. On the death of Sweyn be was invited to resume the government, and died at London in the midst of his utruggle with Canute (1016.)
Ethelwulf (eth'el-wulf), King of EngEgbert, about 837 ; died in 857 . His reign was in a great measure occupied in repelling Danlsh incursions: but he is best remembered for his donatlon to the clergy, which is often quoted as the origin of the system of tithes.
Ether (e'ther), ETuEr, a hypothetlcal elasticity supposed to be diffused throughout all space (as well as among the molecules of which solid bodies are composed), and to be the medium of the transmission of light and heat, and probably also the agent active in gravitation. Ether, in chemistry, a very light, volproduced atile, and inflammable fluid produced by the distillation of alcohol with sulphuric acid. It is lighter than alcohol, of a strong, sweet smell, susceptible of great expansion, and has a pungent taste. A mixture of vapor of ether with atmospheric air is extre vely explosive. Its formula is ( $\left.\mathrm{C}_{3} \mathrm{H}_{5}\right)_{2} \mathrm{O}$. Ether produces an intoxication of short duration, and is extensively used as an anmsthetic for surgical operations.
Etherege (eth'e-rej), Sir Geobas, an English writer of comedy, was born about 1636. He studied at Cambridge, traveled afterwards on the continent, and then returned to enter himself at one of the Inns of Court. But he devoted himself less to legal studies than to literature and societs. In 1664 he had his first comedy represented, The Comical Revenge, or Love in a Tub, which was well received. Four years later hls she Would if She Could, appeared, a brilliant play, though frivolous and immoral. Eight years after
wards (1676) he produced his bent comedy, Sir Eloping flutter, or tho Man of Mode. Etherege's plays are witty aud sparkling, and the characters, senulne portraits of the men and women he saw, are rlvidly if lightly drawn. He dled about 1088 .
Etherene (asther-tn). See Ethyleno. Ethical Culture. Socletee bearing this title origrnated in New York ln 1870, at the instance of Mr. Felix Adier, and have extended to some other American citien and to several foreign countries. Thelr purpose is to deal with ethical questions without regard to creed. Their meeting are addressed by speakers on the subject of practical morality, no form of ritual being observed and no special belief demanded.
Ethios (eth'iks) otherwlse called Moral Philosophy or Morale, is the science whlch treats of the nature and laws of the uctions of intelligent beings, considered as to whether they are right or wrong, good or bad. The sclence is more or less closely connected with theology, psychology, politice political economy and jurisprudence, but what most strictly beiongs to it is the investlgatlon of the principles and basis of duty or the moral law, and s inquiry into the nature and origin of the faculty by which duty is recognized. Various answers have been given to the question why we cali an action good or bad, such as that it is consistent or not with the will of God, or with the nature of things, or with the greatent happiness of the greatest number, or that an inward faculty decides it to be such or such; and a great variety of ethical systems have been proposed. The foundations of the leading systems were laid in antiquity, the names of Socrates, I'lato, Aristotle, Epicurus, the Cynica and the Stoics being especially prominent. The introduction of Christianity brought a new element into ethical speculation, and among Christians ethics were intimately associated with theology, and morality was regarded as based on and regulated by a definite code contained in the sacred writings. The speculations of the Greeks were not, however, disregarded, and some of the ablest Christian moralists (as Augustine, Peter Lombard, Erigena, Anselm, Aquinas. etc.) endeavored to harmonize the Greek theories with the Christian dogmatics. Most modern ethical systems consider the subject as apart from theology and as based on independent philomophical principles, and they fall into one of two
great clasem-the utilitarian systems, which recognise, as the chief goul, hiap. pinces, or the sreatent possible matisfaction of the tendencles of our nature: and the rationalintic syotemm, which tecognize that ideas of law and obligation can have their nource only in reason. The firat of the modern school in England was Hobbes (1088-1679). Among those who malntain the utilitarina theory of morals is Paley, who holds that men ought to act so as to further the greatest possible happlness of the race, because God wills the happinens of men, and rewards and punishes them according to their actions, the divine commands being ascertained from Scripture and the light of nature. Bentham's utilitarianism is considerably different from Paley's. It was entireiy dinsociated from theology or Seripture, and maintained that incrense of happiness ought to be the soie object of the moralist and legislator, pleasure and pain being the soie test of actions. To utilitarianism as a special deveiopment belong the later 'evolution ethles represented by Mr. Herbert Spencer, In which biological conceptions, such as 'the preservation of the human race, take the place of the Benthamite criterion for determining what is good and bad in actions. Another theory of ethics places thin moral prineiple in the sentimentnl part of our nature, that is, in the lirect sympathetic pleasuro or sympathetic indignatiun wo have with the impulses which prompt to aetion or expression. By means of this theory, which he treats as an original and inexplicable fact in human nature, Adnm Smith explains all the phenomena of tho moral consciousness. In considering the systems which recognize that the ideas of law and obligation san have their source only in reason, the question, what is the source of the laws by which reason governs, gives rise to a number of psychological theories, among which we may notice Clark's view of the moral principles as rational intuitions or axioms analogous to those of mathematics: Butler's theory of the natural authority of conscience: the position of Reid, Stewart and other members of the later intuitional seliool, who conceive a moral facuity impianted in man which not only perceives the 'rightness' or 'moral obligation' of actions, but also impele the will to perform what is seen to be right. Very similar, so far as classification goes, is the position of Kant, who holds that reason recognizes the immediate obligation of certain kinds of conduct, and that as action is only
good when done from a gool motive, and that this motive must be essentially different from a natural inelination of any kind.
Ethiopia (E-thi-6'pl-n), or Truiopia geography, the country lying to the south of Eyypt, and comprehending tho modern Nubla, Kordofan, Abyssinia and other adjacent distriets; but its limits were not cieariy defined. It was vakueiy spoken of in Greek nind Roman accounts as the lanil of the Ichthyophag, or fish eatera, the Mucrobii or long ilvers, the Truglodytes or dweiliers in caves, and of the fygmics or dwarf races. In uncient times its histosy was ciosely connected with that of Egypt, and about the eighth century B. o. it imposed a dynasty on Lower Egypt, and acquired u predominant influence in the vaiiey of the Nile. In snered history Ethlopin is repeatedly mentioned as a powerful military kingdom (see particuiariy Isaiah, $\mathbf{x x}, \mathrm{E}$ ). In the sixth century b. $\mathbf{c}$. the Persian Cambyses invaded Ethiopia; but the country maintained its indepenience till it became tributary to the Romans in the reign of Augustus. Subsequently Ethiopia came to be tile designation of the country now known as Abyssinia, and the Abyssinian monarchs still call themselves rulers of Ethiopin.
The Ethiopian Langungc, or more aneurately the Geez lannunge, is the old official and eeclesinstical langunge of Abyssinia, introducell into titat kinglom by settlers from South Arabiu. In the fourteenth century it was supplautel as the language of the Ciristian cinurel of Abyssinia by the Aminaric. It is a Semetic language resembiiny Aramaic and Hebrew as well as Arabic. It has a Christian litcrature of some importance. The principal work is a translation of the Bible, including the old and New Testaments and Apocrypin, to which are appended some non-caunonicai writings, such as the Shepherd of Hermas and the Book of Enoch. The language is to some extent represented by the moilern dialeets of Tigre and by that spoken bs soms nomadie tribes of the Soudan. For the Ethiopinn or Abyssinian Church, see Abyssinia find Copts.
Ethiops Mineral (éthi-ops) the man black sulphide ot mercury, prepared by rubbing mercury and sulphar together, either hot or cold. Ethmoid Bone (eth'moid), a iight spongy bone situated between the orbital processes at the root of the nose. Tie oifactory nerves shoot down through its numerous perforations of the nose.

## Ethnology and Ethnography

(etih-nol'ö-jl, eth-nog'ra-fl), sclences f $\quad$... Ing of man, the former analyzin social phenomena of mankind as in their customs, ianguages, institutionm, etc.; the intter belas more concerned with descriptive detalls and the orderiy cuilection of facts relating to particniar tribes and locailtics. Besides these terms there is the term anthropology, used by some to indicate the general science or naturai history of miaukind, of which the other two are parts. Here we can oniy give a few particulars bearing on the strictiy etinological and ethnographle divisions of the subject. (As to the piace of man in the animal kingdom, see Man.) The unity or piurallty of speries of the human race is a question which has given rise to much discussion. The nost common view ilas probabiy becn that which regards ali mankind as descended from Adam and Eive, attributing the great diferences exhibited ly different races to climate and other causes acting for a long period of time. Many haro heid that such differences were to be so accounted for, and that the various typical races of the earth were not descended from a single pair, but were separately created in separate locailties. The bellef that man may have originated from a single yair is supported by the researches of Darwin, who has shown how an accumulation of differences amounting to the appearance of a distinct species may arise from continual modifications of a single primordial form. (See Species.) Certainly umong men the variability of the same race under different climatic condltions is rery striking. Even within a comparatively small period of time physicul surroundings have induced typical differences between the lithe, sparely fleshed Yankee of New England and the plump, rosy-checked Englishman; and the Boer of South Africa, with its dry climate, has developrd a type as decidediy different from his original stock in meist Holiand. The theory of the deveiopment of the human race from a single species demands a vast duration of time; and the filint implements discovered intermingled with remains of the mammoth and other extinct animals have proved that man was a contemporary of the mammoth, the cave bc. and other mammalia of the geologic:i. period antecedent to our own, theugh how distant that period was as reisured by thousands of years it is difricult to say. Another interesting point is in regard to the first home of the human race. This,
of course, is quite uncertain, thoust wo may naturaliy conclude that where the mammalia of the bigheat characteristica appear there was the posaible blrthpiace and center of distribution of mankind.

When we attempt to clamelfy mankind we can searcely find any one phymical characteristic bcionging exclusively to a aingio race. At most we can only may that certain characteristics are the preponderant ones in certain racen. In seeking racial characteristics ethnologisto make use of various principles of clasedfication. Some sive the first place to the shape of the head. Camper, the lyntch apatomist, was the first who attempted to make a scientific distlncthon of rares on this principle, taking ns the basis of measurement the amount of tho facial angie. (See F'acial Anple.) Iht Camper's inethod, though it flustrates exclifeutly the great diferencen which exist between, any, the anthropoid njes with an angie of $42^{\circ}$, the African negro with an angie of $70^{\circ}$ and the Furopean with an angle of $80^{\circ}$, is without certainty, it being possible to find in the populntion of a singln large town as wide variations of the tacial angle as cxist between distinct races. Camper's metiod was thcrefore superseded by the method of Blumenbach, which is based on consideration of all the chief distinctions in shape of the head, according to which he classifed the human family into five varietie the Caucasian, Mongolian, Ethlopian, Malay uud Ámerican. These five varieties werc cut down to three by Cuvier, who treated the Maiay and American as subdivisions of the Mongolian; and extended by Dr. Prichard, who divided the Caucasian clats into a Semitic aud an iryan or IndoEuropcan class. Latham's classification Wrs into: 1, Mongolide (Chinese, Turke, Malays, American races, etc.) ; 2 , Atlantidm (African races, Jews and Arabs): 3, Japetidæ (Indo-Europeaus). Among the later attempts $n$ ade to find a new principie of classification we may mention that of Retzins, based on the relatire length and breadth of the ekull, accurding to which mankind is divided into Dolichocephalic, or long-skulled, and Brachyicphalic, or short, broad-skulled races. latcr developments of cranioiogy have introduced a third class, the Mesoccphalic, repr, nting men between the other two. The general rule ior measuremeni is that the lungitudinal diameter iping rated as 100 , the lateral diameter is expressed in a percentaze of these units. If the index of breadth is from 74 to 78, the skull is termed mesocephalous ; if below 74, it is dolichoceph

## Ethnology and Ethnography

## Ethnology and Ethnography

alous, a narrow or long skull; if it reaches 79, it is brachycephalous, a broad or short skull. The capacity of the brain cavity is also a favorite method with some ethnologists. Here the European atands highest with 92.1 cubic inches; the Australian lowest with 81.7. The character of hair and color of skin have been used by Huxley as the basis of his classification, which divides mankind into: 1, Ulotrichi, crisp, or wooly haired people with yellow or black skin, comprising Negroes, Bushmen and Malaysi 2, Leiotrichi, smooth-haired people, subdivided into Australioid, Mongoloid, Xanthochroic (fair whites), and Melapochroic (dark whites) groups. But many ethnologists hesitate to accept a classification which brings together nations apparently unrelated, such as the Australians, the ancient Egyptians, and the tribes of Southern India. On the other hand, the character of the hair is lound to be one of the surest tests in separating neighboring races, such as the Papuan, and the Malayan and Austraiian tribes. Oscar Peschel's classification, based on a number of different particulars, such as the shape of the skull, the coior of the skin, the nature and color of the hair, the shape of the features, etc., is as foilows :-

1. The Australians.-Characters: skull of the dolichocephalic type, the jaws heing also prognathous or protruded. The nose is narrow at the root, widening greatly beiow. The mouth is wide and upshapely. The body is thickly covered with hair; the hair is biack, elliptical in section, that on the head being frizely, and standing out so as to form a shagsy crown. The color of the skin is dart as a rule, sometimes black, though a light copper-red also occurs.
2. The Papuans.-This race, which is the one most closely allied to the Australians, occupies New Guinea, New Caiedonia, the Golomon Islands, New Hebrides, the Fiji Islands, etc. The most distinctive mark is their peculiarly flattened and abundant hair, growing in tufts, and forming a spreading crown round the head. The skin is always dark, the skull high and narrow (dolichocephalic) ; the jaws prognathous; the lips fleshy and somewhat swollen; the nose hooked somewhat after the Jewish type.
3. The Mongoloid Nations.-To this race belong the Polynesian and Asiatic Malays, the people of Sputheastern and Eastern Asia, the Tihetese, all the Northern Asiatics, with their kinsmen in Northern Europe, and lastly the aboriginal population of America. The common characteristics are: long, straight
hair, eircular in section; almost compiete absence of beard and body hair; zkin dark colored, varying from leather yellow to deep brown, sometimes inciining to red; prominent cheek-bones, and eyes in general set ohliquely. The various members of the Mongoloid race may he classed under the following subdivisions: (a) The Malay race, comprising the Malays of Malacea, Sumatra, Java, etc., the inhahitants of Madagascar, the New Zealanders, the natives of the Sandwich Islands, etc. (b) Southern Asiatics with monosyllabic languages, comprising the Chinese, Indo-Chinese (Burmese, Siamese, Anamese, etc.), Tibetese etc. (c) Coreans and Japaneso. (d) Northern Mongoloids of the Old World, comprising the true Mongols, Turks, Finns, Lapps, Magyars, Bulgarians, etc., all much resemhling the Chinese and Indo-Chinese group in physical characters. (e) Northern Nations of doubtful position. The Yenisel Ostiaks, the Ainos of Yesso, the inhahitants of Saghalien, etc. (f) The Bering Nations, of which the Esquimaux, or Eskimo, are the most important. (g) The American Aborigines or Red Indians.
4. The Dravidians or Aborigines of India.-These tribes have the skin generally very dark, frequently quite black; their hair is long and hlack, not straight but crimped or curly; the hair of beard and body grows profusely; the lips are thick and fleshy, somewhat like those of the negroes, hut the jaws are never prominent. The Dravidians comprise the Tamuls, Telugus, Gonds, Santals or Sonthais, etc.
5. The Hottentots and BushmenThese are tribes of littie importance inhabiting South Africa. They have the hair tufted and matted, the beard scanty, the body almost hairless; the lips are fuli, but not so much so as with the negroes; the nose is of the snub shape; the opening of the eyes is narrow but not obiique. They are slimily built, and the Bushmen in particular low in stature; their color is yellowish or yellowish hrown.
6. The Negroes.-The negroes inhabit Africa from the southern margin of the Sahara to the territory of the Hottentots and Bushmen, and from the Atiantic to the Indian Ocean. They display great variety in external characteristics, and what is popularly considered the typical negro is rarely met with. The color of the skin passes through every gradation, from ehony-black to dark brown, copper-red, olive or yellow. In some tribes the nose fis straigit, in
others hooked, though often broad and fat. The hair of the head is generally short, elliptical in section, and much crimped; that on the body is not plentiful: whiskers are comparatively rare. The negroes may be divided into the Bantu negroes (including the Kaffirs, Bechuanas, etc.) and the Soudan negroes, these divisions being based on differences in language. It is in the Soudan region that the most typical members of the negro race are found.
7. The MI rditerranean Nations.-These include all Europeans who are not Mongoloids, the North Africans, all Western Asiatics and the Hindus. Among them are the highest members of the human race. The nothern nations have the skin quite fair; the southern have it darker; in North Africa and Eastern Asia it becomes yellow. red or brown. The nose has always a hifh bridge prognathism and prominence of the jaws and cheel-bones are rare; the lips are never intumescent, and in no other race are refined and noble features so frequent. Subdivisions are: (a) The Hamites, comprising the ancient Egyptians, the Copts of Egypt and the Nubians, the Berbers and Gallas. ( $b$ ) The Semites.These comprise the Jews, Arals and Abyssinians and the ancient Canaanites, Assyrians. Rabylonians and Phonicians. (c) The Indo-European or Aryan family. This family is divided into two branches, a European and an Asiatic. The European comprises the Germanic or Teutonic nations (English, Germans, Dutch, Danes, Norwegians, Swedes, etc.), the Romance nations (French, Italians, Spaniards, Portuguese), the Sliavonians (Russians, Bohemians, Servians, etc.), the Greeks, and lastly the Celts. The Asiatic comprises the Hindus, Afghans, Persians, Armenians and Kurds. (d) Europeans of doubtful posi-tion.-These include the Basques of the northeast of Spain and southwest of France and various tribes in the Caucasus.
Ethyl (eth'il), the name given to the in ether and alcohol. It is a colorless gas, which is liquefied by moderate cold and pressure, and which burns with a brilliant white flame.
Ethylamine (eth'il-a-menn) an or the substitution of ethyl for all or part of the hydrogen of ammonia. It has the odor and many of the reactions of ammonia.

## Ethylene

Etienne (an-ti-an), $\mathbb{S r}_{\text {re, }}$ a town of Southern France, dep. Loire, on the Furens, 32 miles s. w. of Lyons. It has spacious streets with substantial houses but cwing to the number of public works presents a dingy appearance. The principal buildings and institutions are the cathedral, an ancient Romanesque structure; the town house, courthouse, exchange, communal college, mining school, tallery of arts, library and museum. The town stands in the center of one of the most valuable mineral fields of France; and in addition to the extensive collieries, blast-furnaces and other ironworks in the vicinity, has manufactures of ribbons, silks, cutlery. firearms, etc. The colleries alone emp ploy about 16,000 men. Pop. (1911) 148,650.

## Etiolation (exti-olas'shan; Fr. 6tiolor, to blanch), or BLANCH:

 ing of plants, is a state produced by the absence of light, through which the green coloring is prevented from forming: It is effected artificially, as in the case of celery, by raising up the earth about the stalks of the plants; by tying the leares together to keep the inner ones from the light; by covering with poth, boxes, or the like, or by setting in a dar's place. The green color of etiolated plants may bo restored by exposure to light.Etiquette (eti-ket), a collective term monies and usor the established cere forms which usages of society, from the ticular places, such as courts, levees and public occasions, to the general forms of polite society. Among courts the Byzantine and Spanish courts and the French court under Louis XIV and XV have been noted for their strictness of their etiquette. Social etiquette consists in so many minute observances that a tolerable familiarity with it can be acquired only by a considerable intercourse with polite society. It is often said that all that is necessary to constitute good social manners is common sense and good feeling; but not to mention those formal rules of society which though intrinsically worthless, demand a certain amount of respect, there are also many dificultie! and emergencies in social intercourse which require peculiar tact and delicacy of judgment. Hence quickness of sympa. thy and a certain fineness of observation are more needed for proficiency in this sphere than pure power of intellect. Etive (et'iv), Loci, an inlet of the land, county on the west coast of Scothand, County Argyle, nearly 20 miles long, of very unequal breadth but at the broadent part about $13 / 2$ miles. Tho
acenery of its shores is very beantiful. Abont three miles from the sea, at Connel Ferry, a ridge of sunken rocks crossing it causes a turhnlent rapid, which at half-tide forms a sort of waterfall. Ftna (et'na), or AETNA, MOUNT, the monntain in the province of Catania in Sicily ; height, 10,874 feet. It rises immediately from the sea, has a circumference of more than 100 miles, and domlnater the whole northeast part of Sicily, having a number of towns and villages on its lower slopes. The top is covered with perpetual snow; midway down is the woody or forest region; at the foot is a region of orchards, vineyards, olive groves, etc. Etna thns presents the variety of cllmates common to high mountains in lower latitudes, oranges and lemons and other fruits groming at the foot, the vine rather higher np, then oaks, chestnnts, beeches and pines, while on the loftiest or demert region vegetation is of quite a stunted character. A more or less distinct margin of cliff separates the mountain proper from the surrounding plain; and the whole mass seems formed of a series of superimposed mountalns, the terminal volcano being surrounded by a number of cones, all of volcanic origin, and nearly 100 of which are of considerable sire. The different aspects of the mountain present an astonishing variety of features-woods, forests, pastnres, cultivated field, bare rocky precipices, streams of lava, masses of ashes and scorise, as also picturesque towns and villages From the summit the view presents a splendid panorama, emhracing the whole of Sicily, the Lipari Islands, Malta and Calabria The ernptions of Etna have been nnmerons, and many of them destructive. That of 1169 overwhelmed Catania and huried 15,000 permons in the ruins. In 1669 the lava spread over the country for forty days, and 10,000 persons are estimated to have perished. In 1693 there was an earthquake during the eruption, when over 60,000 lives were lost. One eruption was in 1705, the year of the Lisbon earthquake. Amons more recent eruptions are those of 1832, 1805, 1874, 1875. An ernption is ordinarily preceded hy premonitory symptoms of longer or phorter daration.
Etna, A borough of Allegheny Co. Pittsburgh. It has'rqlling-mills, steel mills, tuhe and pipe works, electric railway supply works, etc. Pop. 5830.
Tton (eton), a town of Englsnd, in B actinghamshire, on the left
the Thames, and opposite Wind-
sor 22 miles west of London. Eton derives its celehrity wholly from its college, one of the great public schools of England, founded by Henry VI in 1440. The huilding, which was commenced in 1441 and finished in 1523, has received important additions in recent times in the shape of mathematical and science schools, a museum, etc. The numher of scholars on the foundation is fixed at seventy, hut there are ahout 800 other scholars (mostly the sons of wealthy parents) who are hoarded in the houses of the masters. The town is connected with Windsor by a bridge across the river. Pop. (1911) 3192.
Dtruria (e-trö'ri-a; Greek, Tyrrhenia), the name anciently given to that part of Italy which corresponded partly with the modern Tuscany, and was bounded by the Mediterranean, the Apenpirss, the river Magra and the Tiher. The name of Tusci or Etrusci was used hy the Romans to designate the race of people anciently inhabiting this country, hut the name by which they called themscives was Rasena (or perhaps more correctly Ta-rasena). These Rasena entered Italy at a very early period from the north, and besides occupying Etruria proper, extended their intluence to Campania, Elba and Corsica. Etruria proper was in a 1 tonrishing condition before the foundation of Rome, in 753 b.c. It was known very early as a confederation of twelve great cities, each of which formed a republic of itself. Among the chief were Veii, Clusium, Volsinil, Arretium, Cortona, Falcrii and Fesule; hut the list may have varied at different epochs. The chiefs of these repnhlics were styled lucumōncs, and united the office of priest and general. They were elected for life. After a long struggle with Rome the Etruscan power was completely broken by the Komans in a series of victorles, from the fall of Veii, in 396 B.c., to the battle at the Vadimonian Lake ( 283 b.c.). The Etruscans had attained a high state of civllization. Thes carried on a flourishing commerce, and at one time were powerful at sea. They were less warlike than most of the nations aronnd them, and had the cnstom of hiring mercenaries for their armies. Of the Etruscan language little is known, although more than 3000 inscriptions have heen preserved. It was written in characteristice essentially the same as the ancient Greel ; hut philologists have not as yet been able to decide with what language it is connected, nor to agree in the decipherment of aimost any inscription. The Etruscans were spebank of the Thames, and opposite Wind-cially distinguiched by their rellgions ino
stitutions and ceremonies, which reveal all Greek. They are elegant in form and
tendencies gloomy and mystical. Their gods were of two orders, the first being nameless, mysterious deities, exercising a controlling influence in the background on the lower order of gods, who managed the affairs of the worla. At the head of these was a deity resembling the Roman Jupiter (in Etruscan Tinia). But it is characteristic of the Fitruscan religion that there was also a Vejovis or evil Jupiter. The Etruscan name of Venus was Turan, of Vulcan Sethlans, of Bacchus Phuphluns, of Nercury Turms. Etruscan art was in the main borrowed from Greece. For articles in terra cotta, a material which they used mainly for ornamental tiles, sarcophagi and statues, Etruscans were especially celebrated. In the manufacture of 1 ottery they had made great advances; but most of the painted vases popularly known as Etruscan are undoubtedly productions of Greek workmen. (See Etruscan Vases.) The skill of the Etruscans in works of metal is attested by ancient writers, and also by numerous extant specimens, such as necklaces, ear-rings, bracelets, etc. The bronze candelabra, of which many examples have been preserved, were eagerly sought after both in Greece and Romc. A peculiar manufacture was that of engraved bronze mirrors. These were polished on one side and have on the other an engraved design, taken in most cases from (ireek legend of mythology. The Etruscans showed great constructive and engineering skill. They were acquainted with the principle of the arch, and the massive ruins of the walls of their ancient cities still testify to the solidity of their constructions. Various arts and inventions were derived by the Romans from the Etruscans.
Etruscan Language (e-trus'kan). Etruscan Vases, a class of beautivases made in Etruiia. but not strictly speaking a product of Etruscan art, since

Etruscan Vases.
they were really the productions of a ripe age of Greek art, the workmanship, subjects, style and inscriptions being
all Greek. They are elegant in form and enriched with bands of beautiful follage and other ornaments, figures ar.. similar subjects of a highly artist; character. One class has black fig': and ornaments on a red ground-the atural color of the clay; another has the figurea of the natural clay color and the ground painted black. The former class belong to a date about 600 B.C., the latter date about a century later, and extend over a period of about 300 or 350 years, when the manufacture seems to have ceased. During this period there was much variety in the form and ornamentation, gold and other colors besides the primitive ones of black and red being frequently made use of. The subjects represented upon these vases frequently rclate to heroic personages of the Greek niythologs, but many scenes of an ordinary and even of a domestic character are depicted. The figures are usually in protile; temples are occasionally introduced; and many curious particulars may be learned from these vase pictures regarding the Hellenic ritual, games, festivities and domestic life.
Ettlingen (et'ling-en), a town of BaEttingen den, 5 miles from Carlsruhe, with manufactures of linen and cotton goods, etc. Pop. (1905) 8040.
Ettrick (et'trik), a district of Scotland, in Selkirk, through which the Ettrick water runs. It is now a sheep-pasture denuded of wood, but anciently formed part of Ettrick Forest, which included the whole country as well as parts of Pcebles and Edinburghshire. The Ettrick Shepherd, James Hogg, was a nattve of this district.
Etty (et'ti), VilliAM, an English 181 painter, born in 1787; died in 1849. He studied at the Royal Academy. He worked long without much recognition, but at length in 1820 he won public notice by his Coral Finders. In 1828 he was elected an academician. Among his works, which were greatly admired, is a series of three pictures (1827-3i) illustrating the Deliveranco of Bethulia by Judith; Benaich, one of Davia's mighty men;. Women interceding for the Vanquished. All these are very large pictures, and are now in the National Gallery of Scotland. Others of note are The Judgment of Paris, The Rape of Proserpine, Youth at the Prow and Pleasure at the Helm. In coloring and the representation of the nude or partially nude figure, particularly females, he displays high ability.
Etymology (eti-molip-ji), a term ap-(et-1-mol
plied (1) to that part
of grammar which treats of the various inflections and modifications of words and shows how they are formed from simple roots; (2) to that branch of philology which traces the history of words from their orlgin to their latest form and meaning. Etymology in this latter sense, or the Investigation of the origin and growth of words, is amongst the oldirst of studles. Plato and other Greek philosophers, the Alexaudrian grammarians, the schollasts, the Roman Varro, and othere wrote much on this subject. But therz work is made up of conjectures at hest ingenlous rather than sound, and very often wild and fantastic. It was not till recent times, and particularly since the study of Sanskrit, that etymology has heen scientifically studied. Languages then hegan to be properly classed in groups and familles, and words were studied hy a comparison of their growth and relatlonship in different languages. It wai recognized that the develorment of language is not an arhitrary or accldental matter, hut proceeds according to general laws.' The result was a great advance in etymological knowledge and the formation of a new science of phillology (which see).
Etzel (et'zel). See Attila.
Eu (eu), a town in Northern France, dep. Seine-Inférleure, ahout 17 miles northeast of Dieppe. It is notable for its old church and the celehrated Chateau $\mathrm{d}^{5} \mathrm{Eu}$. Pop. (1906) 4865.
Eubcea (abéa), formerly called Ne gropont, a Greek island, the second largest island of the SEgean Sea. It is 90 miles in length; 30 in greatest breadth, and reduced at one point to 4 miles. It is separated from the mainland of Greece by the narrow channels of Egripo and Talanta. It is connected with the Beotian shore hy a bridge. There are several mountrin peaks over 2000 feet, and one over 1000 fect. The island is well wooded and remarkably fertile. Wine is a staple product, and cotton, wool, pitch and turpentine are exported. The chlef towns are Chalcis and Karysto. The island was anciently divided among seven Independent cities, the most im. portant of which were Cbalcls and Eretria, and its history is for the most part identical with that of those $t \rightarrow 0$ clties. With come small islands it forms a modern nomarchy, with a pop. of (1007) 116.903.
 writer who flourished at Athens about B.C. 375 . His subjects were chielly mythological.

## Eucalyptus

(a-ka-lip'tus), a genus of trees, nat. order Myr. tacere, mostly natives of Australla, and remarkable for their gigantlc size, some of them attalning the height of 480 or 500 feet. In the Australian colonies they are known by the name of gum trees, from the gum which exuder from their trunks; and some of them have also such names as 'stringy bark,' 'iron hark,' etc. The wood is excellent for shlphuilding and such purposes. The F. globülus, or blue kum. yields an essentlal oil which is valuahle as a febrifuge, antiasthmatic and antispasmodic; the medlcinal properties of this tree also make it useful as a disinfectant and as

Blue Gum Tree (Eucalyplus olobülus). an astringent in affectlons of the respiratory passages. The E. globülus and the E. amugdalina are found to have an excellent sanitary effect when planted in malarious districts such as the Roman Campagna, parts of whlch have been reclaimed by their use. This result is partly brought about hy the drainage of the soil (the trees ahsorhing great quantities of moisture), partly perhaps by the balsamic odor given out. E. mannifěra and others yield a sweet secretion resembling manis. Some yield a kind of gum kino. The Eucalyptus has heen introduced with success into India, Algiers, the South of Europe, etc., and has been extensively planted in Californla, and, wlth the object of lessening llabllity to droughts, along the Central Pacific R. $\mathbf{R}$. Eucharist (u'ka-rist; Greek eucharischaris, grace) tia, from eu, well, and of the Lord's supper, in reference to the blessing and thanksgiving which accompany it. See Lord's Supper.
Euchre (u'ksr), a game at cnrds, very popular in America,
played mostly by two or four persons. After cutting for the deal, five cards are dealt (either by twos and threes or by threes and twos) to each player. The uppermost card of those undealt is turned for trump. The first player has the option either to 'order up' (i.e., to make this card trump) or pass.' In the latter case it is left to the next player to decide if he will play first or pass, and so on till the turn of the dealer comes, who must either play on this trump or turn it down, when all the players have again their choice in turn of making a new trump or passing. If a trump ls 'ordered up' or taken in the first round, the dealer may take it into his cards, discarding instead his poorest card. If the player who elects to play wins five tricks, he counts two; if he wins three tricks he counts one; if he wins fewer than three tricks he is cuchred and each independent opponent counts two. The cards rank as at whist, except that the knave of the trump suit, called the right bower (from Ger. bauer, a peasant), is the highest card, and the knave of the other suit of the same color the second highest. In euchre, as now played, there is an additional card, known by players as je joker, which is the highest trump in every suit.
Eucken (oy'ken), RudoLpH, a GerAurich man philosopher, born at 1846 H East Friesland, January $\mathrm{o}_{\text {, }}$ 1846. He studied at Göttingen and Berlin; taught philosophy at Basel, 18i174 ; and from that time became professor of philosophy at the University of Jena. In 1908 he was awarded the Nobel prize for literature. Philosophy, Eucken holds, is not mere intellectualism, but the application of rital religious inspiration to the practical prohlems of society. This practical idealism he describes as 'Activism.' His works hest known in Engllsh are The Life of the spirit, the Truth of Religion, and Life's Purpose and Life's Ideal. In 1012 he came to America as exchange professor, lecturing at Harvard. Euclid (úklid; Eucleidés), of Alexmathematician, who flourished about 300 B.C. His Elements of Geometry (Stoicheia), in thirteen books, is still extant, and forms the most usual introduction to the study of geometry. The severity and accuracy of his methods of demonstration have as a whole never been surpassed. Besides the Elements, some other workis are attributed to Euclia.
Euclid (Eucleidés), of Megara, an founder ancient Greek philosopher, the founder of the Megaric school of philosophy, and a pupil of Socrates.

Eudiometer ment orlginally (u-d i-o m'e-tér; Gr. ewdios, serene), an instruinent originally designed for uscertaining the purity of the air or the quantity of oxygen it contains, but now employed generally in the analysis of gaseous mixtures. It consists of a graduated glass tube, either straight or hent in the shape of the letter U, hermetically sealed at one end and open at the other. Two platinum wires, intended for the conveyance of electric sparks through any mixture of gases, are inserted through the class ncar the closed end of the tuhe, and approach but do not touch each other. The electric spark causes chemical comhination to take place between the oxygen in the gas to be analyzed and hydrogen which has heen introduced into the tube, and the nature and proportion of the constitnents of the gascous mixture are determined by the diminution in volume after the passing of the spark. Or certain substances, such as caustic potash, pyrogallic acid, etc., may be introduced into the closed tube in order to ahsorb the gases.
Eufaula ( $\overline{\mathrm{u}}-\mathrm{f}_{\mathrm{a}} \gamma_{\mathrm{a}}$ ), a city of Barbour Co., Alabama, on the Chattahoochee River, 80 miles s . E. of Montgomery. It is an important shipping point for cotton, and has cotton mills, oil mills, etc. Pop. 4250.
Eugene (ū-jēn'), or Francors EJoaEne, Prince of Savoy, fifth son of Eugene Maurice, Duke of SavoyCarignan, and Olympia Mancini, a niece of Cardinal Mazarin, was born at Paris, Octoher 18, 1663. Offended with Louis NIV, he entered the Austrian service ic 1683, serving his first campaign as ? Volunteer against the Turks. Here ha distinguished himself so much that be received a regiment of dragoons. Later, at the sieges of Belgrade and Mayence, he increased his reputation, and on the outhreak of war be ween France and Anstria he received the command of the imperial forces sent to Piedmont to act in conjunction with the troops of the Duke of Savoy. At the cnd of the war he was sent as cummander-in-chief to IIungary, where he defeated the Turks at the hattle of Zenta (Sept. 11, 1897). The Spanish war of succession brought Eugene again into the field. In Northcrn Italy he outmaneuvered Catinat and Villeroi. defeating the latter at Cremuna (1702). In 170.3 he commanded the imperial army in Germany and in codperation with Marlhorough frustrated the plans of France and her allies. In the battle of Höchstadt or Blenheim, Eugene and Marlborough defeated the Erench
and Bavarians under Marshal Tallard, Aug. 13, 1704. Next year Eugene. returning to Italy, forced the French to raise the siege of Turin and in one month drove them out of Italy. During the following years he fought on the Khine took Lille, and, in conjunction with Marlborough, defeated the French at Oudenarde ( 1708 ), and Malplaquet (1709), where he himself was dangerously wounded. After the recali of Marlborough, which Eugene opposed in permon at London, without success, and the defection of England from the ailiance against France, his farther progress was in a great measure checked. In the war with Turkey, in 1716, Engene defeated two superior armies at l'eterwaradin and Temesvar, and, in 1717, took Belgrade, after having gained a decisive victory over a third army that came to its relief. During fifteen years of peace which followed, Eugene served Austria as faithfully in the cabinet as he had done in the field. He died in Vienna April 21, 1736. He was one of the great generals of modern times.
Fugene, a city, county weat of Lane ette River. It is surrounded by mountains, is noted for its beautiful scenery, fruits and flowers, and is tributary to rich timber lands. It is the seat of the University of Oregon. Pop. 12,000.
Eugenia (ūjèni-a; so named in honnus of dicotyledonous, polypetalous plants of the nat. order Myrtacee, nearly related to the myrtle. It contains numerous species, some of which produce delicious fruits. The allspice of pimento is the berry of the $\boldsymbol{L}$. pimenta. E. acris is the wild clove.

## Eugenic Acid (ajen'ik), or Eu-

 rived from cloves. Tugenics (ü-jen'iks). From the word oug enesis signifying the quality of breeding well and freely, the word eugenics has recentiy been derived. It is applied to corer the subject of proper mating in marriage, and attention to the requirements needed to produce healthy and the best quality of offspring. It extends to cover the question of whether the unfit should be permitted to marry or cohabit, and the desirability of legal control of this important subject. Eugénie (eu-vhå-né), MARE DE GOZFrench born at Granada in Spain, in 1826. Her father, the Count dc Montijo, was of a noble Spanish family; ber mother was of Scotch extraction, maiden name Kirkpatrick On Jan. 29, 1553,she became the wife of Napoleon III and Empress of the French. On March 16, 1806, a mon was born of the marriage. When the war broke out with Germany she was appointed regent (July 27, 1870) during the absence of the emperor, but on September 4 the revolution forced her to flee from France. She went to England, where she was joined by the prince imperial and afterwards by the emperor, Camden House, Chislehurst, became the residence of the imperial exilies. On Jan. 9, 1873, the emperor died, and six years later the prince imperial was slain while with the English army in the Znlu war. In 1881 the empress transferred her residence to Farnborough in Hampshire.
Eugenius (a-jen'i-us), the name of four popes.-1. FUGenius I, elected on Sept. 8,654 , while his predecessor, Martin 1, was still living; died in 657 after an unimportant ruie.-2. EUoxnius II held the see from 824-827.3. Euterius IIII, born at Pisa, was a discipie of St. Bernard of Clairvaux. He was raised to the popedom in 1145, was obliged to quit Rome in 1146 in consequence of the commotions caused by Arnoid of Brescia; returned by the help of King Roger of Sicily in 1150, and died in 1153.-4. Eugenius IV, from Venice, originaliy calied Gabriel'Condolmero, was raised to the popedom in 1431. In consequence of his opposition to the council of Basei, an attempt was made to deposa him. He died in 1447.
 seven bronze tablets or tables found in 1444 at the town of Gubbio the ancient Iguvium or Eugubium, now in the Italian province of Perugia, bearing inscriptions in the lenguage of the ancient Umbrians, which seems to have somewhat resembled the ancient Latin as well as the Oscan. They seem to have been inscribed three or four centuries B.C., and refer to sacrificial usuages and ritual.
Euhemerism (ühem'er-izm), or iu. EMERISM, a method or system (so named from its founder, Euhemerus, a Greek philosopher) of interpreting myths and mythological deities, by which they are regarded as deifications of dead heroes and poetical exaggerations of real histories.
Culenspiegel (oillen-spe-gl), Trix, a come associated in Germany with all sorts of wild, whimsical frolice, and with many amusing stories. Some such popular hero of tradition and folklore seems to have really existed in Germany, probably in the first half of the fourteenth
century, and a collection of popular tales of a frolicsome character, originally written in iow German, purports to contain his adventurea. The earliest edition of guch is a Strasburg one of the year 1515 in the British Museum. Better known, however, is that of 1519, published also at Strashurg by Thomas Murner. The work was early translated into English and almost all European tongues.
Euler (oi'lér or alér), liconard, a distinguished mathematician, born at Basel, in 1707, and educated at the University of Basel under the Bernouilli, through whose infinence he procured a place in the Academy of St. Petersburg. In 1741 he accepted an invitation from Frederick the Great to become professor of mathematics in the Berlin Academy, but in 1766 returned to St . Petersburg. where he died in 1783, in the office of director of the mathenatical class of the academy. Euler's profound and inventive mind gave a new form to the science. He applied the analytical method to mechanics and greatly improved the integral and differential calculus. He also wrote on physics, and employed himself in metaphysical and philosophical speculations. Among his numerous writings are the Theoria Motuum Planetarum et Cometarum, Introductio in Analysin Infinitorum, Opuscula Analytica, etc.

## Eumenes (u'm $p-n \delta z$ ), the name of

 1. Eumenes I succeeded his incle, Thiletærus, in B.c. 263. He reigned for twentytwo years and then died in a fit of drunk-enness.-2. Eumenes II succeeded his farther, Attalus. B.C. 197 , and, like him, attached himself to the Romans, who, as a reward for his services in the war against Antiochus of Syria, bestowed upon him the Thracian Chersonesus and almost all Asia on this side of the Taurus. Ife died in 159 b.c.Eumenides (ī-men'i-dez). See Furies.

## Eunomians

( $\mathrm{a}-\mathrm{n} \mathrm{o}^{\prime} \mathrm{m}$ l-anz), the foll. lowers of Eunomius, Bishop of Cyzicum, in the fourth century A.D., who held that Christ was a created being of a nature unlike that of the Father.

## Eunuch

(a'nus), a male of the hinman species emasculated by castration. The term is of Greek origin (ennouchos, from eune, a couch or bed; echein, to hold or guard) ; but eunuchs became known to the Greeks no doubt from the practice among Fastern nations of having them as guardians of their women's apartments. Eunuchs were employed in somewhat similar du-

Hes amolis the Romans in the luxurious times of the empire, and upder the Byzan. tine monarchs they were common. The Mohammedans still have them about their harems. Emasculation, when effected in early life, produces singular changes im males and assimilates them in some respects to women, causing them in particular to have the voice of a female. Hence, not so long ago, it was not uncommon in Italy to castrate boys in order to fit them for soprano singers when grown to manhood.
Euonymus (n-on'i-mus), the spindle tree or prick-wood, a nus of shrubs or trees, nat. order Celastrinex, containing about fifty species, natives of the temperate resions of the northern hemisphere. See Spindle Tree. Eupataria, or BUPATORIA ( a -pa-to'-ri-a), formerly Koslofi, a seaport in Russia, on the western coant of the Crimea, government of Taurida. It was here that the allied forces landed at the commencement of the Crimean war (September 14-18, 1854). Pop. 18,000.

## Eupatorium (a-pa-tóri-um), a genus

 tives of Americ and order Compositze. Their roots are perennial, possessing a rough, bitter or aromatic taste; the flowers are bs all, white, reddish of bluish, in corymbs. Amons the many species are $E$. cannabinum, or hemp-agrimony, a British plant, and $E$. nerfoliotum, thoroughwort or boneset. See Boneset.Eupen (oi'pen), a town in Rhenish . Prussia, 7 miles 8. 8. W. of Aix-la-Chapelle. It has manufactures of woolen and linen cloth, hata, soap. leather and chemicals; paper, flax and worsted mills; and an important trade. The town was ceded to Prussia at the Peace of Paris in 1814. Pop. $14,297$.
Euphonium (n-fóni-um), a hrass erally introduced eraly introduced into military bands, and frequently met with in the orchestra as a substitute for the bass trombone, from which. however, it is very different in tone. It is tuned on C or B fiat. and is furnished with three or four valves or pistons.
Euphorbiaceæ (n-for-bi-a'se-e), the order of berbaceous plants, shrubs, of very large trees, which occur in all regions of the globe. Most of them have an acrid, milky juice, and diclinons or moncecious flowers. The fruit is dry or slightly fleshy, and three lobed. Among the genera are: Euphorbia, which yields an oil used as a powerful cathartic; Orotom aflording croton-oil; the

Rectrue commimbe, or castor-oll plant; the Bucue aemprovirend or boxwood plant; the Jetropha llanihot, which yielde the lood bnown as tapioca or caseare. In mont members of the genera the miliky juice contalns caoutchonc. See Oceneve, Oastor-oil, Crotom, Menohineel, Bpurge.

## Euphorbinm

( $\mathrm{a}-$-or ${ }^{\text {bil-um }}$ ), a yellow-ish-white body which is the collidifed fuice of certain plants of the senus Euphorbia, elther exuding naturally or from lncislons made in the bark. It is a powerful acrid substance, virulently purgative and emetic.

## Euphrasia ( $\mathrm{a}-\mathrm{fra}$ andia). See Eyo

## Euphrates

Weetern Acte a celebrated river of e donbls source in two otreams rising in the Anti-Thurus range. It total length is abont 1750 milem and the area of its basin $200,000 \mathrm{eq}$. milem It fiows mainly in a southeasterly course through the great alluvial plains of Bahylonia and Chaldea till it falls into the Perslan Guif by several mouthe, of which only one in Pervian teritory is navigable. About 100 miles from its mouth it is joined by the Tigris, when the united treams take the name of Shatt-el-Arab. It is navigable for about 1200 miles, hut navigation is somewhat impeded by rapids and shallowe. The melting of snow in the Taurus and Anti-Taurus causes a flooding in spring. The water is highest in May and June, when the current, which rarely exceeds 3 milles an hour, rises to 5 .
 See Greoes. Suphuism ( $a^{\prime} f a-1 s m$ ), an fifoctod tipsuished the convermation And writuge of many of the with of the court of Queen Hizabeth. The name sad the style were derived from the Euphues. the 1 natomy of Wit (about 1580), and the Euphues and Mis Enoland (about 1582), of John Lyls.

Eupolis (a'poilis), an Athenian comic poet, who flourished about 429 ma. TV ther the date of his bith nor that of hls death is known with certain. tr. He belongs, like Aristophanes and Cratinnes to the Old Comedy. His works are all lost excent small fragments
Surasia ( 0 -ris'si-a), a term applied to
Eurnpe and Asla considered as a single continent. Geographically they form bat one continent, there being no natural divioion between the two. Europe being practically a peninsular
weutward extension of Aafa. Yet they are separate historically and ethnographically and this has led to their beling regarded as distinct continenta.
Furasians (a-F a'm i-n $n$; ayncopated name infor Europ-Asians) a name sometimes given to the 'half-castes' of India, the outapring of European fathers and Indlan mothern. They are particularly common in the three presl. dential capltals-Calcutta, Madras and Bombay. They generally recelve an European education, and the young men are often engaged in government or mercantile offices. The giris in spite of their dark tint are generally very prety and often marry Europeana.
Eure (eur), a river of N. W. France, which risees in the department of the Orne, and falls into the Seinu after a course of 124 miles, being navlgable for about half the distance.-Also the name of a department in the N. W. of France, formlng part of Normandy; area, 2330 square miles. The surface conaits of an extensive plain, intersected by rivers, chlef of which is the Seine. Almost the whole surface is profitably occupied, the waste not amounting to one-thirtieth of the whole. Apples, pearm, plums and cherries form important crops, and a little wine is produced. The mining and manufacturing industries are extensive, and the department has a considerable trade in woolen cloth, linen and cotton fahrics, carpete, leather, paper, glass. Evreux is the capltal. Pop. (1906) 330,140 .
Ture-et-Loir (eur-t-lwar), a departFrance, forming part of $\ln$ the N . W. of France, forming part of the old provinces of Oritannais and Ile-do-France ; area, 2293 equare milee 4 ridge of no great helght dividem the dopartment into a north and a gonth bein, traverved rospectively hy the Eure and the Loire. The coil is extremely fertile, and there is scarcoly any waste land. A considerable portion is occupled by orchards and ringyard, but the greater part 15 devoted to cereal crops. The department is essentially agricuitural, and has few manufactures. The capital is Chartres. Pop. (1008) 273.823.
Fureka (0-rerd it Gr. heurelka, I have found it), the exclamation of Archimedes when, after long study, he discovered a methor of detectlog the amount of alloy ln King Hlero's crown. Hence the word is used as an expresslon of triumph at a discovery.
Eureka, a cilty, county seat of Humholdt Bay, 5 miles from itifornla, on Humis surrounded by mountains and forests onf
redwood trees and ships large quantities of this iumber to San Francleco. It has lumber and woolen mills, creameries, etc. Pop. 13,500.

## Furipides (a-ripi-daz), a celebrated

 in B.C., $\mathbf{4 8 0}$ or, according to the Arundei marhles, 485, at Salamis. He studied under Prodicus and Anaxagoras, and is sald to have begun to write tragedies at the age of eighteen, although his first published nlay, the Peliades, did not appear until 455' b.c. He was not succesyful in gaining the first prize till the ycar 441 B.C., and he continued to exhibit till 408 B.C., when

Euripidea. he exhibited the Oreater. The violence of unscrupulous enemies, who accused him of impiety and unbelief in the gods, drove Euripides to take refuge at the court of Archelaus, king of Macedonia, where he was heid in the highest honor. According to a tradition, he was killed by hounds in 408 B.c. Euripides was a master of tragic situations and pathos, and shows much knowiedge of human nature and skifl in grouping characters, hut his works fack the artistic completeness and the suhlime earnestness that characterize Eschyius and Sophocles. Euripides is said to have composed seventy-five, or according to another authority ninety-two, tragedies. Of these, eighteen (or nineteen, including the Rhesus) are extant, viz.: Alcestis, Medea, Hippolytus, Hecuba, Heracleide, Supplices, 10 , Hercules Furens, Andromache, Troades, Electra, Helena, Iphigenia, in Tauris, Orestes, Phoenissa, Baccha, Iphigenia in Aulis and $C y$ clops.
Furipus ( 0 -ri'pus), in ancient geograSuripus phy, the strait hetween the island of Euboea and Beotia in Greece. Furoclydon (ü-rok'ii-don), a temLevant, which was the occasion of the hipwreck of the vessel in which St. Paul sailed, as narrated in Acts, ExFil, 14-44, The northeast wind is the wind evidently meant in the narrative.
Europa
( ${ }^{1}-\mathbf{r o}^{\prime} \mathrm{pa}$ ), in Greek mythology, the daughter of Agênor, king of the Phenicians, and the sister of Cadmus. The fable relates that she wal
abducted by Jupiter, who for that ocerdon had assumed the form of a bull, and awam with his prize to the inland of Crete. Here Europa bore to him Minos, Sarpédon and Khadamanthus.

## Europe

( $a^{\prime} r u p$ ), the mallent of the great continents, but the mont important in the hintory of civilization for the lant two thousand yearn. It forms a huge peninsula projectín from Asia, and is bounded on the N. by the Arctic Ocean; on the w. by the Atlantic Ocean; on the B. by the Mediterranean, the Biack Sea and the Caucanus range: on the east by the Caspian Sea, the Ural Iliver and the Ural Mountains. The most northerly point on the mainland in Cape Nordkyn, in Lapland, in lat. $71^{\circ} 6^{\prime}$; the most southeriy points are Punta da Tarifa, lat. $30^{\circ}$ N. in the Strait of Gibraltar, and Cape Matapan, lat. $36^{\circ} 17^{\prime}$, which terminates Greece. The most westerls point is Cape Roca in Portugal in lon. $9^{8} 28^{\prime}$ W., while Ekaterinburg is In lon. $60^{\circ} 36^{\prime} \mathrm{E}$. From Cape Matapan to North Cape is a direct distance of 2400 miles, from Cape St. Vincent to Ekaterinhurg, northeast by east, 8400 miles; area of the continent, about $3,800,000$ square miles. Great Britain and Ireland, Iceland, Nova Zembla, Corgica, Sardinia, Sicily, Malta, Crete, the Ionian and the Balearic islands are the chief islands of Europe. The shores are very much indented, giving Europe an immense length of coast line (estimated at nearly 50,000 miles). The chief seas or arms of the sea are : the White Sea on the north; the North Sea or German Ocean on the west, from which branches off the great gulf or inland sea known as the Baltic; the English Channel, between England and France : the Mediterranean, communicating with the Atlantic hy the Strait of Gihraltar (at one point oniy 19 miles wide) ; the Adriatic and Archipelago, branching off from the Mediterranean; and the Black Sea, connected with the Archipelago through the Hellew pont, Sea of Marmora and Bosporus.

Surface. - The mountains form several distinct groups or systems of very diferent geological dates, the loftiest mountain masses being in the south-central region. The Scandinarian mountains in the northwest, to which the great northern peninsula owes lts form, extend above 900 miles from the Polar Sea to the south point of Normay. The highest summitis are about 8000 feet. The Alps, the hishest mountains in Europe (unlese Mount Elbruz in the Caucasus is claimed as European), extend from the Mediterranean first in a northerly and then in an easterly direction, and attain their great
ent elevation in Mont Blanc (15,781 feet), Monte Roma, and other mumits. Branching of from the Alps though not geolotically connected with them, are the Apennines, which run southeast through Italy, constituting the central ridge of the peninsuia. The hishest summit is Monte Corno ( 8541 feet). Mount Vesuvius, the ceiebrated voicano in the south of the peninsuia, is quite distinct from the Apenninem. By montheastern extensions the Aips are connerted with the Baitan and the Despoto-Dagh of the montheastern peninsula of Europe. Among the mountains of Southwentern Burope are eeveral maenive chains, the lofticat summits being in the lyrenees, and in the Sierra Nevada in the south of the Iheriap Peninsula. The highent point in the former, La Maiadetta or Mont Maudit, has an eievation of $11,-$ 105 feet: Muiahacen, in the latter, is 11,703 reet, and capped by perpetual now. West and northwest of the Alps are the Cevennes, Jura and Voazes: north and northeast the Harz, the That ringerwald Mountains, the Fichteigehirge, the Erzgehirge and Bohmerwaldgehirge. Farther to the east the Carpathian chain encloses the great pinin of IIungary, attaining an elevation of 8000 or 8500 feet. The Ural Mountains between Europe and Asia reach the height of 5040 feet. Besides Vesurius other two voicanoes are Etna in. Sicily and Hecia in Iceiand. A great part of northern and eastern Europe is levei. The great plain of North Europe occupies part of France, Western and Northern Beigium, Holland, the northern provinces of Germany and the greater part of Russia. A large portion of this piain, extending through Hoiland and North Germany, is a iow Eandy ievel not unfrequently protected from inroads of the sea only hy means of strong dykes. The other great piains of Europe are the plain of Lomhardy (the nost fertile district in Enrope) and the piain of Hungary. Part of Southern and Southeastern Inssia consists of steppes, broad. treeiess ieveis, devoted principaliy to pasturage.

Rivers and Lakes.-The main European watershed runs in a winding direction from southwest to northeast, est its northeastern extremity being of very alight elevation. From the Alps descend some of the largest of the European rivers. the Rhine, the Rhone and the Po, While the Dannbe, a stll greater stream, rises in the Biack Forest north of the Alps. The Voiga, which enters the Caspian Sea, an inland sheet without outlet, is the iongest of European rivers, having a direct length of neariy 1700 miles, or

2400 including windingeic. Into the Medlterrancan fow the Ehro, the Rhone and the Po; into the Black isea, the Danuhe, Dnieper, Dniester and Don (through the Sea of A Pov) ; into thn Athntic the Guadaiguivir, the Guadiaca, the Tarua and LoIre ; Into the English Ohannel the Seine: into the North Sea, the Rhin: and Eibe; into the Baltic, the Oder. Vintula and Duna; into the Aretic Ocean, the I)wina. The lakes of Europe may he divided into two groups, the mouthern and the northe:n. The former run along both sidees of the Aips, and amoug them, on the north side, are the lakes of Geneva, Neuchatel, Thun, Jucerne, Zurirlı and Constance ; on the mouth side, Jago Maggiore and the lakes of Como, Lasano, Iseo and Garda. The northern lakes extend across Sweden frum went to cant, and on the east side of the Balice a number of iakes, stretching in the same direction acroms Finiand on the bordera of Russia, mark the coutinuation of the line of deprestion. It is in Ruasia that the largest Euronean lakes are foundLakes Ladoga and Onega.

Geology. The seoiosical features of Europe are exceedingly varied. The oider formations prevali in the northern part as compared with the southern half and the middie region. North of the iatItude of Edinbnrgh and Moscow there is very little of the surface of more recent origin than the strata of the Upper Jura belonging to the mesozoic perlod, and there are vast tracts occupied either hy ernptive rocks or one or other of tho older sedimentary formations. Deumnrk and the portions of Germany adjuining belong to the Cretaceous period, as does also a iarge part of Russia between the Voiga and the hasin of the Dneijer. Middie and Fastern Germany with Po. iand and the valiey of the Dneiper present on the surface Eocene formations of the tertiary period. The remainder of Europe is remarkable for the great divesity of its superficial structure, rocks and deposits beionging to ali periods being found within it, and having for the most part no great snperficial extent. Europe possesses abundant stores of those minerais which are of most importance to man, such as coal and iron, Britain being particuiarly favored in this respect. Coal and iron are also ohtained in France, Belginm and Germany. Gold is found to an unimportant extant, and silver is widely spread in small ruantities. The richest siiver ores are in Norway, Spain, the Erzgebirge and the Harz Mountains. Spain is aiso rich in quirksiiver. Copper ores are ahnndant in tbe Ural Mountains, Thnringia, Cornwall
and Spain. Tin ores are found in cultivated in a. few spots in Italy and Cornwali, the Erzgebrge and Brit- Spain. tany.
limate-Sircumatances con- reindeer and polar bearsa are pecaiter the or to gin- Several circumatances conly the north. In the forents of Lithuania senial, such as itt ponsitlon almowt wholly within the temperate zone, and the great extent of its maritime boundaries. Nuch benefit is also derived from the fact that its shores are exposed to the warm warine currents and warm windy from the southwest, which prevent the formation of ice on most of lis northern sheres. The enstern portion has a less favorable climate than the western. The extremes of temperature are grenter, the summer ieing hotter and the winter colder, whllle the lines of equal mean temperature deelline south as we go east. The ramo advantages of mild and genlal temperaEucope thestern has iver eastern over the rest of the Old World. The dimlnution of mean temperature, as well as the intensity of the opposite seasons, increases as we go east. peking. in lat. t $0^{\circ}$ N., has as severe ? whiter us lutrograd in lat. $60^{\circ}$.

Vegetable Productions.-Witin respect to the regetable vinglom Europe may be dividel into four zoucs. The first, or most northern, is that of fir and birel. The blrch reaches almost to North Cape; the fir ccases a degree farther sonth. The cultivation of grain extends farther north than might be supposed. Barley ripens even noder the seventleth parallel of north latitude ; whent ceases at $64^{\circ}$ in Norway, $62^{\circ}$ in Sweden. Within this zone, the southern limit of which exteuds from lat. $64^{\circ}$ in Norway to lat. $62^{\circ}$ in Russla, agriculture has little importance, its inhabitants belng chlefly occupied with the care of reindeer or cattle, and in fishlng. The next zone, which may be called that of the oak and beech, and cereal produce, extends from the limit above mentioned to the 48th parallel. The Alps, though beyond the limit, by reason of their elercition belong to thils zone, in the moister parts of which cattle husbandry has been brought to perfection. Next we find the zone of the chestnut and rine, occupying the space between the 48 th narallel and the mountain chains of Southern Europe. Here the onk still flourlshes. but the pine species become rarer. Rve., which characterizes the preceding zone ou the continent. gires way to whent, and in the wouthern portion of it to maize also. The iourth zone, comprehending the southern peninsulas, is that of the olive and evergreen woods. The orange flourishes in the southern portion of it, and rice is
can, Baptist Methodint, otc.), and the Charlemagee (771-814) a Great GerGreek Church. A part of the Inhabit- manic empire was eatabliebed, so exants profess the Jewich, part the Mohammedan relliton.

Polifical Divisions.- The staten of Europe an they existed at the beglnning of the European war (1014-18) are given below. Since then several new nations have been formed, chicfly Poland, CsechoSlovakia, Jugo-Slavia, Finland. (See the meparate articles.) Andorre, Monaco and San Marino are independent itaten.
tensive that the Kligdoms of France, Germany, Italy, Burgundy, Lorraine and Navarre were efterward formed out of It. About the time the northern and eastera mation of Europe began to exert an influence in the aliairs of Europe. The Slavs, or glavonians, founded kingdoms in Bohemin, Poland, Ruasia and the north of Germany ; the Magyare appeared in Hungary, and the Normana agitated

History.-Europe was probahly first peopled from Asia, hut at what date we do not know. The first authentic history begins in Greece at about 776 B.c. Greet civilization was at its most flourishing period ahout 430 в.c. After Greece came Rome, which, by the early part of the Christian era, had conquered Spain. Greece, Gaul, Helvetia, Germany between the Danube and the Alps, Southern Britain, Illyria, Dacia, etc. Improved laws and superior arts of life spread with the Roman Empire throughout Europe, and the unity of government was also extremely favorable to the extension of Christianity. With the decline of the Roman Empire a great change in the political constitution of Europe was produced by the general migration of the northern nations. The Ontrogoths and Lombards settled in Italy, the Franks in France, the Visigoths in Spain, and the Anglo-Saxons in South Britain, reducing the inhahitants to gיbjection, or becoming incorporated wita them. Under
all Europe, founding kingdoms and pripcipalities in England, France, Sicily and the East. The Crusader and the growth of the Ottoman power are among the principal events which infuenced Europe from the twelr $h$ to the fifteenth century. The conquest of Constantinople by the Turks (1453), by driving the learned Greeks from this city, gave a new impulse to letters in Weztern Europe, which was carried onward by the invention of printing and the Reformation. The discovery of America was followed by the temporary preponderance of Spain in Europe, and next to France. Subsequently Prussia and Russia gradually increased in territory and strength. The French revolution (1789) and the Napoieonic wars had a profound effect on Euiope, the dissolution of the old German Empire being one of the results. Since then the most important events in European his tory have beell the estahlishment of the independence of Greece: the disappearance of Poland as a eeparat state; the

Against this phalanx of allocracy 24 nations arrayed themmelves: Belgium, Brazil, China, Costa Rica, Cuba, France and her colonies, Guatemala, Great Britain and her colonies, Greece, Haitt, Honduras, Italy, Japan, Liberia, Montenegro, Nicaragua, Panama, Portugal and her colonies, Roumania, Russia, San Marino, Serbia, Siam and the United States.
Belgium, with a population of $8,000,000$, had a casualty list of more than 350.000 ; France, out of a population of $80.000,000$, including colonies lost $4,000,000$, while Russia neariy doubled this total, the catsualties reaching $7.000,000$ out of a total population of $180,000,000$. The Uni'ed States hid $4,000,000$ men under a when the confict ended; more than 3 million of these were upon the fields of France and Ituly; total casualties of the American Army amounted to 236,117. The Rritish Empire raised an army of $7,000,000$ and fought seven foreign campaigns: in France, Italy, Mesopotamia, Dardanellew, Macedonia. East Africa and Exypt. The empire had a casualty list of 3.049,092; of these 658,665 were killed. Canada alone raised an army of over half a million; of these 418,980 had gone overseas when the war ended. Canadian troops sustained 220,182 casualties; 155,790 had been wounded, and more than

00,000 paid the supreme macrifice Italy. Fhil a p-rulation of $36,000,000$, and with $6,500,0 r$. inen calied to the colors, suffered a roximitely $1,500,000$ casualtiea. Germary' casualty i: amounted to 6,338,000; Austria-i agary lont $4 \sqrt{500},-$ 000 , Turkey 750,000 and Bulgaria 200,000. The total entimated casualties of the Entente Alliew was 15,836,000; thowe of the Centrai Powers, 11,788,000: a srand total of $27,124,000$, of which the dead aione numbered neariy $8,000,000$. Thn money cost to the Entente Ailies wns $\$ 172,000,000,000$ : the cout to the Central Powers wan $\$ 77,000,000,0100, \pi$ grand tutal of entimatel cost in money of $\$ 240$; $000,000,010$.

This was the colomal price in blood and treasure that the free nations of the worid had to pay to rid the earth of the blight of Treutonic kultur with Ita materialistic creed.

The pretext for the opening of hostililies was the nasassination, on June 28, 1014, by a Serbian student, of the Areiduke Fradeis Ferdinand, he:r to the dunl throne of Austria-Hunga.y, and his wife, while on a visit is Sarajevo, Boania. Backed by the Cerman war-lords, Autria mado certain demands on Serbia, which were refused, whereupon Austria declared war on July 28 and sent troops against Belgrade. Russia began mobilizing, aud Germany declared war on Russia Augunt 1. On the West, the Germans, disreganding their promise to maintain the neutrality of Palgium, flung their forces into that little country and despite a glorions resistance of the Belgians, crashed their way ihrough and poured into France. Britain by this time had come to the rescue and gallantly alded the Belgians in staying the progress of the enemy. Britain's navy was ready and promptly began the great blockade that was drawn ever tighter as the months went by. Britain's ally, Japan, entered the conflict and after a brief siege took Kiachow and drove the Teutonic influence out of the Orient.

Briefly this is the story of the war year by year:

First Year of War. Belpium and Northern France were overrun by a German invading force under Generni von Kluck. The heroic effort of the French army under General Joffre and a supreme strategic thrust at the German center hy Gemerai Foch turned batk the German tide at the battle of the Marne. The seientific diabolism of the German Bigh Command was revealed when poison gas was projected against the Canadians at Ypres, torturing, blinding and kiling thousands. German terrorism on the
high seas culminated in the sinking of the Cunard liner Lusitania by a German submarine off the Irish coast. Men, women and children to the number of 1152 iost their lives. Of these 102 were Americans. German colonies in South Africa were invaded by British South African troops under General Louis Botha, wino during the Boer war commanded a division against the British. The German hoidings at Tsing-Tau and in the Marshall Islands were seized by Japan. German
on a sixty-mile front. Russian forces, after eariy successes, were defeated at Tannenburg by von Hindenburg, the outstanding military genius on the German side. The uevciopment of aircraft as an aid to artiiiery and as a destructive force on its own account, was rapi and the use of machine guns and hand grenades in trench operations became general.

Second Year of War. The tragic sea and iand operations at the Dardanelles and Gallipoli marked this year with red

in killed and wounded of the Canadian regiments. They ranked in magnitude with the depletion that came to the Aus. tralian and New Zealand armies in the fatal Gallipoli campaign. This year will be glorions forever in the annals of France because of the heroic defense at Verdun. That battle tested to the limit the offensive strength of the German machine and it was found lacking in power
pelago to the Allies. A British Menopotamian force under General Townshend, poorly equipped and unsupported, was cut off in Kut-el-Amara and nurrendered to the Turks on April 29, 1916. The Italian forces under General Cadorna made a sensational advance terminating in the capture of Gorixia. Portugal entered the war on the side of the Allies after it had refused to give up to Germany several

## European War

European War
scls. It was one of the German submarine fleet surrendered to the Allies in November 1918. Russia proved itself to be a military ineffective. German armies under von Mackensen and von Hindenburg oceupied Warsaw, Brest-Litovak, Lutsk and Grodno. Grand Duke Nicholas was renover from the command of the Russian armies and Czar Nicholas assumed command. Germany's pretensions to sea power ended with the battle of Jutland, May 31, 1916, when its Hlgh Seas Heet fled after a running fight with British
on August 30th was hailed as the harbinger of further s'iccesses. These hopes were turned to ashes when von Mackensen headed an irresistible German and Austrian rush which tairly inundated Roumanla. The retreat from Transylvania by the Houmanians was turned into a rout. Bulgarian forces invaded the Dobrudja region ©? Roumania and, on November 28th, ti:e seat of the Roumanian Government wus iransferred from lucharest, the capital, to Jassy. Ronmania ceased to be a factor in the war

Thi Gneat St. Mifiel Salent Obliterated by the Amehicans, September, 1918
cruisers and destroyers. Nerer, thereafter, during the war did the German ships venture out of the Bight of Helgoland.

Third Year of War. This year was marked by two dramatic episodes. The first of these was the sudden entrance and the equally sudden exit of Roumania as a factor in the World War.

The second was the appearance of the United States, which became the deciding factor in the war.

Roumania created enthuslasm in Allied muntries when it deelared war on AustriaHungary A-․jst 27th. A sudden descent by Roum inian army into Transvluania
on December 6th, when Bucharest fell to von Mackensen. Emperor Franz Josef of Austria-Hungary died on November 22d, while Austrian hopes were at their highest.

America's appearance as a belligerent was forecast on January 31, 1917, when Germany announced its intentlon of sinking all vessels in a blockade zone around the Britlsh Isles. Count von Bernstorff was haniled his passports on February 31, and on April $2 d$ President Wilson, in a remarkable address to Congress, advised a declaration of war by the United States against Germany. This was consummated hy a formal yote of Congroge de-

## European War

claring war on April 6th. This action by America wal followed by the organization of a Council of National Defense. Under this body the resourcee of the nation were mobilized. The council was later virtually abandoned as an organizing factor, its functions going to the War Industries Board, presided over by Bernard Baruch; the Fuel Administration, under Dr. Harry Vance C. McComick at its beard, with other governmental bodies. George Creel headed the Committee on Public Information. Conscription wus decided upon as the foundation of America's warmaking policy, and the training of officers and privates in great training camps was commenced. Great shipping and aireraft programs were formulated and the nation as a whole was placed upon a war footing. The Russian revolution, beginning in bread riots in Petrograd, spread through-
out that country, with the rasult that out that country, with the result that Allies.
Last Months of War, from August 1, 1917, to Novemler 11, 1918. America's might and efficiency were revealed in the speed and thoroughness with which her military, naval and civilian resources were mobilized and thrown into the conflict. Under the supervision of the Chief of Staff, two million American soldiers received the final touches in their military training and were transported safely overseas. They became the decisive factor in the war during the summer and fall of
1918. To their glory be it recorded they never retreated. They fought victorious battles ht Cantigny, Château-Thierry, Belleau Wood, St. Mihiel, Siechcprey, Boureches Wood, the Argonne, Stenay, and had reached historic Sedan when the armistice went into effect on November 11.

Italy suffered a severe reverse beginning, October 24, 1917, when the Germans rushed through a portion of the Italian army that had been honeycombed with on the Italians turned ropacanda. Later Austrians with a terrific drive commanded by Genera: Diaz, which resulted in the cupture of nearly half a million prisoners and forcel Austria-Hungary
out of the war.

Canada again emblazonel its name in history through the capture of Passchendacle on November 6, 1917 ; and a year later it was the irresistible Canadians who took Mons, the last stronghold to be wrested from the Germans before the
On the Russian and Roumanian fronts Generals Brusiloff and Korniloff for a time achieved success, but the Bolshertiti
goupei reaching the men in the ranks they threw down their guns and refused to fight. In November Lenine took control of Rumian affairy and a peace treaty with the Central Powers was signed in Irarch, 1918. Roumania also conciuded a peace treaty. Czar Nicholas, who, after the revoiution, had been interned in TwarnkoeSelo and later at Yekaterinberg, was executed July 20, 1918, by order of the Bolsheriki Ural Regional Councii.

The British Mesoputamian forces advanced into Palestine and Mesopotamia destroying the Turkish army. Genera Stanley Maude the leader of the expedi. tion, died in Mesopotamia November 18, 1917. General Allenby, commanding British and Arabian forces, muted and destroyed three Turkish armies in Palestine, capturing Jerusalem December 8, 1917. Daniascus fell to the British in October,
1018 .

The turning point of the war came on March 29, 1918, when General Foch was chosen Commander-in-Chief of all the Al. fied forces. This followed Germany's great drive from Arras to La Fere. Successive German thrusts yislded territory; but Foch, patiently biding his time, elected to halt the German drive with Americaus. The Marines of the United States forces were given the place of honor, and at Chateau-Thierry the counter thrust of Foch was commenced by a complete defeat of the Prussian Guard and other crack German regiments by the untried soldiers of America. A little later the great salient of St. Mihiel, established by the Germans in 1914, was wiped out by American troops.

The 'Yanks' were coming at the rate of 200,000 men a month, and they threw themselves into the conflict with a vigor that inspired the Allies and dismayed the enemy. It was the end of the German advance. the beginning of the humiliating defeat that was to be visited upon the Tcuton warmakers.

Said President Wilson, in his address to Congress December 2, 1918, prior to Railing for Europe to take part in the Peace Conference: 'What wo ali thank God for with deenest gratitude is that our men went in force into the line of battle just at the critical moment, when the whole fate of the world seemed to hang in the balance, and threw their fresh strength into the ranks of freedom in time to turn the whole tide and sweep of the fateful struggle-turn it once for all, so that henceforth it was back, back, back for their enemies, always back, never again forward!'

From Chat teau-Thierry to the armiotice of November 11 was only a short space of

German Retirement Under Armistice of November 11, 1018 Dotted area, invadk $!$ territory of Belgium, France, Luxembourg and AlsaceLorraine; area in small squares, part of Germany west of the Rhine; lightly shaded area to east of Rhine, neutral zone; black semi-circles, bridge-heads of thirty kilometers radius to be occupied by Allied armies.
time, but in it was compreased the humillation of arrogant Teutonle imporialirm, the deatruction of militaristic aribtocracy, and the liberation of the world.

The Armistice. Bulgaria surrendered to General d'Esperey, the Allied commander, on September 20 , agreting to evacuate all foreign territory; to demobilize her army and surrender all means of transport to the Allies; to surrender hei' buate and control of navigation on the Danube and concele to the Allies free passage through Bulgaria for the development of military operations.

The armistice wlth Turkey, signed on October 31, provilled for the opeuing of the Dardanelles and Bosporus; access to the Black Sea; Allied occupation of the Dardanelles and Bosporus forts; surrender of all war vessels in Turkish waters: withdrawal of Turkish troops from Persia; surrender of all garrisons in Heljaz: Assir, Yemen, Syria and Mesopotamia; relense of Allied prisoners.

The armistice with Austria-Hungary, slgned November 3, provided for the demohilization of the Austro-Hungarian army ${ }^{\text {i }}$ evacuation of all territories invaded by Austria-Hungary and a further withdrawal to a line indicated by the Allied commander; surrender of 15 Austrian submarines and all German submarines in Austrian waters; surrender of 3 battleships, 3 lipht cruisers, 0 destroyers, 12 torperio boats, 1 mine layer, 6 Danube monitors; all other ships to be disarmed.

Germany-proud, imperial Germanymet the greatest humiliation of all the Teutonic Allies when the Kaiser and the German High Command were brought to their knees. Thirty-five clauses, the most severe and drastic ever demanderf from a great power, were included in the armistice agreement which took effect at eleven o'clork on November 11. 1018. Among the conditions vere: evacuation of invaded countries, including AlsaceLorraine : surrender of 5000 guns, 25,000 machine guns, 3000 minenwerfers and 1700 airplanes; evacuation of left bank of Rhine; reservation of neutral zone on right bank of Rhine: surrender of 5000 locomotives, 150,000 wiagons and 5000 motor lorries; upkeep of troops in Rhine land to be charged to the German government; return of all prisoners; renunciation of Bucharest and Brest-Litovsk treaties: surrender of 6 battle cruisers, 10 battleships 8 llaht cruisers, 50 destroyers: all other ships to be disarmen; surrender of all German submarines: freedom of access to the Baltic; nll naval nircraft to be concentrated and immobilizod; all Black Sea ports to be evacuated by

Germany: all Russian warohipe selsed by Germany to be surrendered; no tranfferm of German merchant shipping to any neutral Alag.
(See nlso articles under Chateaur Thierry, St. Milhiel, Somme, Marne, Ypres, Gallipoli, Paleatine, Tannenbers: Jutland, Verdun, Neuve Chapelle, erc.; Foch, Pershing, Hais, Diax, Currie, Simn, Benson, etc.; Submarints, Aeronautics, and various countries of the world.)

The Peaco Oongress. The world's greatcst war was followed by the world's greatest peace conference, which opened at three ooclock on the afternoon of January 18, 1010, at the French Foreign Office on the Qual d'Orsay: Paris. Thirty-two nations and dominions took part. The authorized delegates numbered ixty-six, distributed as follows:

Five delegat 38 pach : The Urited Statew, Great Britain, France, Italy, Japan.

Three delegates each: Braxil, Belgium, Serbia.

Two delegates each: Canada, Australia, South Africa, India, Greece, Poland, Roumania, China, Hedjas.

One delegate each: Portugal, Montenegro, Siam, Cuba, New Zealand, Panama, Haitl, Honduras, Nicaragua, Guatemala, San Domingo, Uruguay, Peru and Bolivia.
The representatives of the United States were President Wilson, Robert Lansing, Secretary of State: Renry White, former ambassador to France and Italy; Edward M. House, and General Tasker H. Bliss, representative of the American army with the supreme war council at Versalles.

Georges Clemenceau, Premier of France, was chosen permanent chairman of the conference. The public was not admitted to the meetings of the congress, but from time to time communiqués were issued, announcing the progress of the diecussions. Among important matters which the congress deliberated upon were: the establishment of a Society of Nations (President Wilson's chief reason for visiting Europe): the re-mating of the French and Italian and other boundary lines; the disposal of the former German colonies and Turkish territory in Asia Minor, to be governed under so-called mandatories' of one or other of the great potrers; the question of Russia; the estabilishment of the new states of Poland and Czecho-Slovakia and Jugo-Slavia; the punishment nf those who started the war: the reparation to be made by Germany. The peace treaty was signed at Versnillts June 28,1819 ( Seé Treaty of l'eucc, League of Nations.)

# Summarized Chronology of the War 

## 1914

- June
28.-Assassination of Archduke Franels Ferdinand, helr to throno of Anstriallumgary, and his wife at Sarajevo,
lfosila.

## Evangelical Alliance

members of different sectlow tian church, organized
1846, to lrnd its Infuene
erangelical doctrines (see abo en
has held conferences at Parls,
Genera, New York, London, etc.

Ivangelical Association, a body erfcan Chrintians, chiefy of German deecent, eatabiiched about the beglnning of the lant century. In form of sovernment and mode of worship it seneraily asreen with the Methodist Episcopal Church. Evangelical Union, the name of also familiarly known as the Morison, inn, frow the Rev. Jamey Morison, its oricinator. It took rise in Scotiand in 1810 and three year afterwards organized Iteelf as a separate Christinn denomination. The Morisonians maintain the universality of the atonement, combining with this the doctrine of eternai personal and unconditional election, and denying that any one will be condemned for Adam's fall. In point of church govern. ment the members of the Evangelical Union are independent. The body hai sbout ninety congregations, chiefl in Scotland.
Evangelists (e-van'jeleliste) the writdoctrines, precepts, actions, life and death of Christ; in particular the four evanoeliots, Matthew, Mark, Luke and John. The ancient symbole of the four evangelists are: for Matthew, a man's face; for Mark, a lion; Ror Luke, an oos; and for John, a flying eagle.
Evans (ev'ans), MABY ANN. See Eltot. George.
Evans, Oriver, born at Newport, Del. or of the automatic flour-mill and the high-pressure steam engine, a steam dredge, and the 'Cornish boiler.' He projected a railroad to connect New York and Philadelphia, but lacked the means to baild it. He died in New York in 1819.

Evans, Robert Donolisor, naval offUVans, cer, born in Floyd Co., Virs ginia in 1848: was graduated at the U. s. Naval Academy in 1863 . He entered the navy during the later years of the Civil war, took part in both attacks on Fort Fibher, and was in command of the Yoiktown, at Valparaiso, during the Chilean troublen with this country in 1891. His decisive actions here gave him the popular name of ' Fighting Boi Evans.' He took part in the naval fight off Santiago, Cuba in 1898, as commander of the Iowa. He was commissloned rear admiral in 1901, and died in 1012.
Evans, $\mathrm{Sir}_{\mathrm{B}} \mathrm{Dz}$ Lact a Britigh genEvans, eral, born at Moig in Ireland in 1787. After some years of service in Iedia be joined the Army of Wellington in the Peninsula in 1812, where he nerved with distinction. In 1814 he was
sent to America, and was present at the battles of Bladensburs and New Orleann, returning to Europe In time to take pari in the battie of Waterioo. In 1830, 1831 and 1833 be was elected to pariliment. In 1835 he was appointed to the command of 10,000 troopn raised In Britain on behalf of the Queen of spain. Under the training of Evans thla force became an exceilent army, and several times defeated the Cariith. During the Crimean war he distinguished himselt as commander of the second division of the Engilish army and received the thanks of the Houme and other honors. He died in 1870.
Evans, Thomas Whlisam, a dietin. vans, guished dentist, born at Philadelphia, Pennsylvania, in 1825. He itudied dentistry, and became so expert that he was aent for from France to treat the teeth of Napoieon III. He dwelt in Paris during the remainder of his life worked for members of ail the royal houses of Europe, was loaded with gifta and decoratione, and acquired a fortune of several million doliars. He became interested in military sanitation and founded the Red Cross Society. On the night of the revolutionary outbreak in Paris, after the decisive victory of the Germans over Napoieon's army, Sept. 4, 1870, the Empress Eugenie sought shelter in his house and was heiped by him to escape to Ingiand. He died in 1897, leaving neariy the whoie of his fortune to found a museum and dental institute in Philadelphia. Litigatinn foilowed, and more than ten years passed before the matter was settled in lavor of the terms of his will.
Evanston (er'anz-ton) a city of Cook County, lilinois, on Lake Michigan, 12 miles N. of Chicago. It is pleasantly eituated, and is the seat of the Northwestern University, and other educational institutions. Pop. 24,978.
Evansville (ev'anz-vil), a city, caplEvansvile tal of Vanderburg County, Indiana, the second in population in the State. It is situated on the Ohio River, 183 miles e. of St. Louis, and on several railroad lines. It is the center of a large iobacco-growing section and is an important soft-coal and lumber market. There are manufactures of furniture. brooms, buggies, steam shovels, stoves, pottery, cigars, etc. The public buildings include a courthouse, city hall, libraries and art gallery, U. S. marine bospital, etc. It is served by six steam railroads. Pop. 80,105.
Evaporation (e-vap-o-rā'shun), the conversion of a liquid or solid by heat into vapor or steam, which becomes dissipated into the atmos-
phere in the manner of an elantic fuid. The procens of evaporatlon is constantly going on at the surface of the earth, hut princlpally at the surface of the nea, of lakes, rlvers and poois. The vapor thus formed being apecifically llghter than atmonpheric alr rises to considerable helghts above the earth's surface; and afterward, hy a partlal condenation, forms clouds, and finaliy descends in
Svarts (evoarts), Wrlifac M., an emMansachusettent in 1818 ; warn in Boaton, Yale and studied law at Harvard; began practice in New York ahout 1840 , and aubequentiy became an active member of the Repubilcan party. In the impeach. ment trial of President Johnson in 1848 he was his principal counsel, and in 1812 was counsel for the United States in the Alabama Clainss arbitration. He served as Secretary of Etate during the administration of President Hayes and was United States Senator, 1885-91. He dleal in 1901.
Fiveleth (eve-leth), a village of St. miles N. N. W. of Duluth. Iron ore is mined bese in great quantities. Pop.

## Evelyn

(ev'el-in), Jorin, an English writer of the seventeenth century, born at Wotton, in Surrey, ln 1020; died there $\ln$ 1700. After completing his course at Oxford he studied law at the Middle Temple, visited various parts of the continent, and ln 1659 took the royal slde in the civll war. He published numerous worh, among which are Sculptura, or the History and Art of Chalcography; Sylva, or a Discourse of Forcst Trces: treatises on gardenlng. architecture, éte. But by far his most important work is his Memoirs, comprebending a diary and correspondence, which are interesting contributions to the histnry of the time.

## Evening-primrose,

nat. order Onas acea. nus of plants, ast. order Onas acez. ai. biennis, an American species common in cottage gar. dens, is not unfrequent as an escaped plant in England.
Evening-star, or Hesperus, the planet Venus when visible in inen the the the It is also applied to Jupitar, when simllarly visible after sunset.
Everett (ev'er-et), Alexander Hisl, born at Boston in 1792 a diplomatist, in 1847. After studying died at Canton 1809, he accompanied John Quincy Ad. ams to St - Petersburg as becretary of
legation. He afterwards filled suecmatro diplomatic poate in the Notherlands, Spain snd elsewhere. He was the au. thor, amons oiber worke of Europe, of a Gerinal Survey of the Precent Situction of the Principal Powers (1822) ; and a imilar work on America.
Everett, Eowasp, an American atater: man and author, brother of the precedlng, boru at Dorchenter, Mama. chusette, in 1794. After travellag for some yeary in Germany and England, he returned to America in 1810 to occupy the chalr of Greek literature at Harvard. He became editor of the North American Reviev, was prominent as an orator, and entering the political world, became successively member of Congreas, sovernor of Massachusetts and miniater pienipotentlary in England (1840). 1845 he was appointed presldent of Har vard Collese, and in 1852 Secretary of State. Shortly after he retired into private life. He died in 1865.
Everett, a city of Middlesex Co., Bost Massachusetts, 3 miles from Boston, on the Boston and Maine R. R. It has manufactures of iron and steel, automobiles, boots and shoes, varnishes, chemicals, etc. Here is a Home School for Young Ladies and the Parlin and Ghute Memorial lihrarien. Pod. 83184 Everett, a city, county meat of Snoholort Gardner Bay, 33 mileshington, on Seattle. It Bay, 33 miles $N$ hy 5 of Seattle. It has important lumber and mining industries, shingle factories, fish canneries, shipyards; also manufactures of bricks, paper, furaiture, milis and mining machinery, etc. Fop. 24,814.
Everglades (e 干'errgiada), a low marshy tract of country in Southern Florida, inundated with water and laterspersed with patches or portions covered with high grass and trees. They are 100 miles long and 60 broad. Canals for drainlng them aso under constructlon.
Evergreen (evंer-grên) a plant that through all thetains its $\overline{\text { rerdure }}$ holly, the laurel, thens, as the fir, the holly, the laurel, the cedar, the cyprens, the juniper, the hoim-oak and many others. Evergreens shed their old leaves in the spring or summer, alter the new foliage has heen formed, and consequently are verdant through all the winter season. They form a conslderahle part of the shruhs commonly cultivated in gardens, and are beautiful at all seasons of the year.
Eversion of the Eyelids, or Errmoa disease in which the eyelids are turned outward, so as to expose the red internal
tunic. It occurs most frequently in the lower eyelid.
Evesham (evz'am), a town in Eng: land, in the county and 15 miles 8. r. of Worcester, beautifully situated on the Avon, and giving name to a parliamentary division of the county. It was the seat of a monastery as early es the eighth century. Pop. (1911) 8341. Jviction (evik'shun), the dispossesoccupancy sion of a luerson from the occupancy of lands or tesements. The term occurs most commonly in connection with the proceedings by which a landlord ejects his tenant for non-payment of rent or on determination of the tenancy. In the case of evictions of tenants in Ireland, generally for nonpaymet of rent, the tenants are frequently readmitted as caretakers, or under some other title.
Evidence (ev'i-dens) is that which makes certain and which enables the mind to see truth. It may be (a) intaitive, i.e., resting on the direct testimony of consciousness, of perception or memory, or on fundamental principles of the human intellect; or it may be (0) demonstrative, i.c.. in a strict sense, proofs which estavish with certainty as in mathematical science particular conclusions; or it may be (c) probable, under which class are ranked moral evidence, legal evidence, and generally every kind of evidence which, though it may be sufficient to satisfy the mind, is not an absolutely certain and incontrovertible demonstration.

In jurisprudence evidence is classified into that which is direct and positive and that which is presumptive and circumstantial. The former is that which is proved by some writing containing a positive statement of the facts and bindling the party whom it affects; or that which is proved by some witness, who has, or avers himself to bave, positive knowledge thereof by means of his senses. Whenever the fact is not so directly and positively established, but is deduced from other facts in evidence, it is presumptive and oiroumstantial only. The following are the leading rules regarding evidence in a court of law:-
(1) The roint in issue is to be proved by the party who asserts the affirmative. But where one person charges another with a culpable omission this rule will not apply, the person who makes the charge being bound to prove it. (2) The best evidcnce must be given of which the nature of the thing is capable. (3) Hearsay evidence of a fact is not admissible. The principal exceptions to this rule are-death-bed declarations, evi-
dence in questions of pedigree, public right, custom boundaries, declarations againat interest, declarations which accompany the facts or are part of the res pesta, etc. (4) Insane persons and idiots are incompetent to be witnesses. But persons temporarily insane are in their lucid intervals received as witnesses. Children are admissible as witnesses as soon as they have a competent share of understanding and know and feel the nature of an oath and of the obligation to speak the truth.

## Evidences of Christianity. These

 be divided broadly into two great classes, viz., external evidences, or the body of historical testimonies to the Christian revelation; and internal evidences, or arguments drawn from the nature of Christianity itself as exhibited in its teachings and effects, in favor of its divine origin. The first Christian apologies-those of Justin Martyr, Minucius Felix and Tertullian, written in the second centurywere mainly intended as justifications of the Christian religion against the charges of atheism, immorality, etc., commonly made at that time. Of a more philosophical kind and dealing more comprehensively with the principles of religion and belief in general, are the works of Origen, Arnobius and Augustine in the centuries immediately succeeding. During the middle ages, the scientific representation of Christianity is mostly the work of the schoolmen occupied in welding Aristotelian or Platonic philosophy with the fabric of Christian dogmatics or writing attacks on the Jewish and Mohammedan faiths.In the sixteenth and seventeenth centuries the influences of the Renaissance and the Reformation gave rise to a spirit of inquiry and criticism which developed English deism as represented by Herbert and Hobbes in the seventeenth century, and Collins and Bolingbroke in the eighteenth. The general position of English deism was the acceptance of the belief in the existence of God, and the profession of natural religion along with opposition to the mysteries and special claims of Christianity. It was in confutation of this position that the great English works on the evidences of Christianity of Butler, Berkeley and Cudworth were written. In France the new spirit of inquiry was represented by Diderot, D'Holbach, and the encrelopedists in. general, who assailed Christlanity mainly on the ground that it was founded on imposture and superstition, and maintained by sacerdotal trickery and hypocrisy. No reply
of any great value was produced in the French church, although in the prevlous age Pascal in his Pensées had brought together some of the profoundest considerations yet offered in favor of revealed rellgion. The nineteenth century was distinguished by the strongly rationalistic spirit of its criticism. The works of such writers as Strauss, Bauer and Feuerbach, attempting to ellminate the supernatural and the mysterious in the origin of Christianity, were answered by the works of Neander, Ebrard and Ullmann on the other side. The historical method of investigation, represented alike by the Hegelian school and the 1'ositivists in philosophy, and by the Evolutionists in science, is the basis of the chief attacks of the present time apninst th? supernatural character of Chrlstianity, the tendency of all being to hold that while Christianlty is the highest and most perfect development to which the rellgious spirit has yet attained, it differs simply in degree of development from any other religion. Notable among later apologists of Christianity have been Paley (Natural Theology), Chalmers (Natural Theology), Mansel, Liddon and others, Lecturers of the Bampton Foundation; in Germany, Luthardt, Ewald, Baumstark, etc. Its assailants have been equally numerous.
Evil, The Onilin of, the subject of an appalling quantity of barren speculation. The difficulty of the question lies mainly in this, that the existence of evil in the world seems inconsistent with the view that it was created and is maintained by an omnipotent and beneficent creator. The various theories on the subject have all sought to elude this difficulty either by the supposition of some principle of evll equally eternal with that of gond, or by regarding evil as having only a relative existence, being a kind of good in an imperfect and immature stage. Perhaps the oldest theory upon this subject is that of parseeism, or the religion of Zoroaster, according to which there were two orlginal principles, one good (Ormuzd) and the other evil (Ahriman). This is the doctrine that is now very often spoken of as Manicheism, from the fact that it was adopted by Manes, who attempted to engraft it on the doctrine of Christianity. In contradistinction to this dualistic theory with reference to the orlgin of evil stand the Monistic theories of Brahmanism and Platonism. According to the Brahmanlc doctrine of the emanation of all thlngs from one original being (Brahma), this original being was re: garded as the sole true existence, and
the phenomenal world, with all the evils appearing in it, was held to be mere illusion. Similarly Plato held that the good was the essence of all things, and that the evil and imperfect contained in them had no real existence. The the ory enunclated by Lelbnitz in bis The odicée resembles the $t$ of Plato. In tha. worl he asslgns to the evil existing in the world created by God, which he hoids to be the best of all possible worlds, a merely relative existence; all that we call evil is, he holds, only evil to us because we do not see it in relation to the rest of the universe, for in rela. tion to the unlverse it is not evil but good, and accordingly cannot be evil in its own nature. Another view on the subject is that which neither asslgns to the evil principle (as it does to God or the good principle) an original existence nor denies the real existence of evil, but ascribes it to the exercise of man's free will.
Evil Eye, a power which, according superstition, resides in some people of doing injury to others by a mere look, or a look accompanied by certain words or charms. This bellef, common among the anclents, is still prevalent among the more ignorant classes in Italy, Rusila, Andalusia, Turkey, Egypt, the Highlands of Scotlaud and other places.
Evolute ( $\mathrm{e}^{\prime} 0-1 \mathrm{nt}$ ), in geometry, a curve from which another curve, called the involute or evolvent, is described by the end of a thread gradually wound upon the former, or unwound from it.
Evolution (er-u-la'shun), literally the act of unrolling or unfolding, but used as a term in science and philosophy to indicate the development of an organism or organic entity towards greater differentiation of organs and functions, and, therefore, to a more complex and higher state of being. Thus, in attronomy, the nebular hypothenis, which regards the planetary bodies as evolved from nebular or gaseous matter, is an erample of evolutlon. In geology, ales, the old view whlch considered the animal and vegetable life of each geological period as a new and separate organic creation, has given place to the evolutionary theory of a process of derelopment from earlier types to those of the later periode. But the evolution of the mor complex from the more simple organisms does not necessarily, probably never doem eshibit a linear, seriee of advances ; thnas of the protoplasm which represents the first stage of an animal's existence, part is set aside for one tissue, part for an
other; in the same way, on the theory of the origin of certain animal or vegetable forms from a common stock, some members of a group have manifested such modifications as render them permanently unilike their kindred of whom zome may retain for a longer or shorter time their original characters, while others become specialized in other directiona. Evvolnton is a lam whose operation is trace able throughout every department of nature. It may be equalis well illustrated from the history of philosophy or the arts, or from the historical development of society. But it is in connection with the evolutionary theory of the origin of species that the principle of evolution has been most discussed, atifrming, as it does, that all forms of life both in the animal and vegetable kingdom have been developed by continuous difirerentiation of organs and modifictions of parts from one low form of life consisting of a minute cell. The steps by which this procees has been accomplished and the cautes which have been mainly at work m it form a department of reesarch to mbich many notable scientists-L Lamarci, St. Hilaire, Meckel, Heckel, Spencer, Darwin, Wallace and others have contributed One of the greatest contributions to the theory has been the work of Mr. Darwin (On the Origin of Species), in which he has produced some of the strongest evidence in favor of evolution as an endless progression evolving higher species, genera, families, orderg, classes, the infinitely varied forms being each adapted to the circumstances by which it is surrounded. See also Natural Seleco tion, Species.
Evolution, in mathematics, the procof numbers or quantities
Evolvent (E-vol' 'vent), in mathematEvora (er'ora), a town in Portugal, capital of the province of Alemtejo, 80 miles east of Lishbon. It is an ancient place, poorly built, and its walls, citadel and torts are all in a ruinous state. It has a Roman aqueduct tulil serviceable, a Gothic cathedral, an ecclesiastical seminary, etc., Pop.' 16 , 152

## Evremond, or Evremonr. See St.

 Evreux (er-reek), a town of N. W. ment of Eure, in a fertile evalley on the Iton. Althoubh an ancient town with narrow streess, it is well built, has an ancient Gothic cathedral, a town house,

Ewald (a'valt), Gimone Herinizoz tallist and Bububrici vorita German oriengen in veraity tor. Arter atuding at the university there, in 1827 he became extraordinary, in 1831 ordinary profeesor of theology, and in 1335 protespor of Or rlental languagea. In 1837 he lost his chair at Girtingen on account of his protest againgt the Elings' abrogation of the iliberal constitution, and became professor of theorogy at Tubingen, but in 1848 returned to his old chair at Gobttingen. When Hanover was annexed by Prussia in 1866 he became a zealous defender of ther rights of the ex-king. He died at Gettingen in 1875. Among his chitef works are the following: Complete Oourse of the Hebrew Lanjuages; The Pootical Books of the old Peatament; History of the People of Iurael; $\Delta_{n i t h}$ Hitities of the People of Israel. The History is considered his greatest work. Ewald (ẫ valt), JoHANMEB, a Danish 1743; died in in 1781. At Copenhagen in 1743; died in 1781. After studying theology at Copenhagen University be ran away and enlisted in the Prussian service, which he soon deserted tor the Austrian Having returned to Corenhagen, an elegy which he wrote on the death of Frederick $V$ of Denmark was receited with general admiration, and amoke in himself the consciousness of puetic talent His reputation rapidily increaved with the publication of his tragedies, The Death of Balder Adam and Eve, Rolfkrapo, etc. ; and his odes and songs.
Ewald, JoHN, ${ }^{\circ}$, Danish ${ }^{\text {giteneral, born }}$ 1813. aid Cassel in 1744; died in 1813 ; said to have been a brother of the preceding. He fought for the United States in the Revolutionary war, entered the Danish service in 1r88, rose to the rank of general, and distinguished himself in deferneg of the neutrality of Denmark about 1800. He wrote an able treatise, Inetructions in War.
Ewing ( ${ }^{\text {aning }}$, Thoras, an American Virginia, sin 17889; died in in intio H , Co, came prominent in politics and in ins 1831 and again in 1850 was elected to the United States Senate. In 1841 he whas appointed Seecretary of the Treasury, in 1849 was made the frrst secretary of the Interior. Retiring from the Senate in 1851, he devoted himself to legal practlce in Lancaster, Ohio.
Exarchate (eerz-lirkat), a name of a province or territory under an esareh, or vicerocy. In the sisth century after Christ Justinian formed the middle part of italy into a province of the Eatern Empire, \&ud grave the
sovernment of it to an officer called an exarch. Exarch was also the title of an ecclesiastical grade in the Greek Church. Among the modern Greeks an exarch is a deputy of the patriarch.
Excalibur (eks-kal'i-bur), the famous King Arthur. The of the mythical was sunk deep in a great stone, from which it could be drawn only by the man who was destined to be king.
Excavation, the process of removing rock or earth for the purpose of engineering construction, or of clearing the space for the foundations of a huilding. Where rock is encountered it must first be shattered hy the use of explosives placed in holes drilled for the purpose. Some form of mechanical excavator is usually employed. This may he a steam shovel (which see) or a machine resemhling a dredge, with a series of buckets running on an endless chain. The latter is suitahle orly for shallow cuttings.

## Excelsior

(eks-sel'si-or), the trade name of a fine quality of wood shavings, used in parking perishable goods and for stuffing mattresses, cushlons, etc. The fibers are separated from wood blocks by an excelsior machine, which is a form of vertical planer using reciprocating cutters driven at high speed. Exchange (eks-chanj'), a place in where merchants, agents, hankers, hrokers and others concerned in commercial affairs meet at certain times for the transaction of business. See Stock Exchange.

## Exchange, in commerce, that species

 the debts of individuals residing at a distance are canceled by order, draft, or bill of exchange, without the transmission of specie. Thus, a merchant in New York who owes $\$ 1000$ worth of goods in London, gives a bill or order for that amount which can be negotiated through hanking agencies or otherwise against similar debts owing by other parties in London who have payments to make in New York. This ohviates the expense and risk of transmitting money. The process of liquidating obligations between different nations is carried on in the same way by an exchange of foreign hills. When all the accounts of one country correspond in value with those of another, the exchange between the countries will bo at per, that is, the sum for which the bill is drawn in the one country will be the exact value of it in the other. Exchange is said to be at par when, for instance, a bill drawn in NewYork for the payment of $\$ 1000$ in London can be purchased there for $\$ 1000$. If it can be purchased for less, exchange in under par and is against London. It the purchaser is obliged to give more, exchange is above par and in favor of London. Although the thousand circumstancea which incessantly affect the stete of debt and credit prevent the ordinary course of exchange from being almost ever precisely at par, its flu tuations are confined within narrow limits, and if direct exchange is unfavorable between two countries this can often be obviated by the interposition of hills drawn on other conntries where an opposite state of matters prevails. See also Bill of Exchange.
Exchange, Dexd of, an original comthe mutual transfer of real estate. It takes place between two contracting parties only, althongh several individnals may be inclnded in each party; and the parties must take an equal estate, 23 fee-simple for fee-simple, legal estate for legal estate, copyhold for copyhold of the same manor, and the like.
Exchequer (eks-chek'er), in Britain. deals with the moners received and paid on behalf of the pnblic services of the country. The pnhlic revennes are paid into the Bank of England (or of Ireland) to acconnt of the exchequer, and these receipts as well as the necessary payments for the public service are under the supervision of an important official called the Controller and Auditor General, the payments heing granted by him on receipt of the proper orders proceeding through the treasury. The pnblic accounts are also audited in his department.

## Exchequer, <br> Chat cellor of the

 See Chancellor.Exchequer, Covrt of, an ancient English court of record, established by William the Conqueror, and intended principally for the care and collection of the royal revenues. It was one of the supreme courts of common law, and is said to derive its name from the checkered cioth, resembling a chessboard, on which the sums were marked and scored with counters. The judges of this court were the chief haron and five junior or puisné barons. This court has been merged in the High Court of Justice. In Canada there is a Court of Exchequer for the Dominion.
Exchequer Bills, bills of credit itsned by authority of the British Parluament as a means of raising money for temporary purposem

They are of various sums- $£ 100$ or any multiple of E 100 -and bear interest (generally from $11 / 2 d$. to $21 / 2 d$. per diem on $£ 100$ ) according to a rate fixed at the beginning of each year. These bills pass from hand to hand as money, and form a pripcipal part of the public unfunded deht of Great Britain. Exchequer bonds are similar, but they run for a definite number of years at a fixed rate of intcrest.
Excise (ek-siy'), an inland duty or imdnced and post laid on commodities proand also on licenses to manufacture and deal in certain commodities. Excise duties were introduced into England by the Long Parliament in 1643, being then laid on the makers and vendors of ale, beer, cider and perry. Being a convenient and productive source of revenue, they gained ground, and now furnish ahout two-sevenths of the puhlic revenue. In the United States the term Internal Revenue is employed (which see).

## Excitomotor Action, the action of

 trihuted to muscular organs, the stimulation of which leads to movement. Thus, irritation of a nerve supplying a muscle will lead to contraction of the muscle hy excitomotor action, and irritation of certain nerves distributed to hlood-vessels will lead to contraction of the vessel by acting on its muscular coat.Excommunication (e ks-ko-mū-niexclusion of a Christian from the , the munion and spiritual privileges of the church. Excommunication was practiced early by the Christian Church. A distinction gradually arose hetween a lesser and a greater excommunication, the former being a suspension from church privileges, the latter a formal expulsion excluding from all communion with the faithful. In the middle ages the popes often excommunicated whole cities and kingdoms. In such a case all. religious services ceased and the grave inconveniences thus caused made excommunication a formidable weapon in the hands of the pope, till with frequent abuse it lost its forcc. Besides excommunication an extreme degree of denunciation called anathema, and cutting the offender off from all the hopes and consolations of the Christiun faith, is used in the Ioman Catholic Church. In the Church of England both the less and the greater excommunication
Dxcretion (cks-krē̉shun), in physicarrying off of waste matter from and animal body, a function performed by
the lungs, kidneys, bladder and the skin, besides the action of the intestinal canal.
Excubitorium (e k g-ku-bi-to'ri-um), in mediseval churches, a gallery where public watch was kept at night on thic eve of some festival, and from which the great shrines could be seren.
Exe ( (ises), a river of England, which rises in Exmoor, in the county of Somerset, and after a southerly course of about 50 miles falls into the English Channel at Exmouth.
Execution (ek-se-ki'shun), in law, is on a judgment of judicial writ grounded writ is issued, and is granted for the purpose of carrying the judgment into effect, hy having it executed. Execution is granted hy a court only unon the judgments given by the same court, not upon those pronounced by anotlier.
Execution, the carrying out of the Capital Punishment. Executioner (ek-se-kū'shun-er), the effect a sentence of death carries into capital punishmee of death, or inflicts capital punishment in pursuance of a legal warrant. This duty devolves upon the sheriff in England and the United
States.

## Executive (ekz-ek'ü-tiv), that branch

 of the government of a country hy which the laws are carried into effcct or the enforcement of them superintended. The term is of used in distinction from the legislative and the judicial departments, and includes the supreme magistrate, whether emperor, king, presidept or governor, his cahinet or ministers, and a host of minor officials.Executor (ekz-ek'ū-tor), in law, is last will to carry appointed by a man's cution after carry its provisions into execution after the testator's death. The testator may, by the common law, appoint any person of sound mind and discretion, though otherwise under some legal disabilities as to contracting and transacting business in gencral, such as a married woman or a minor. The duties of etecutors and of administrators are, in general, the same, the difference of the two depending mostly on the mode of appointment, the executor beiag nominated by the testator, the administrator being appointed by the juige of probate. An executor is liahle for any loss occurring to the estate through negligence for paying legatees before all debts are dif.
charged.

Exegesis
Scriptures.
(eks-e-jésis), the exposition or interpretation of the The science which lays down the principles of the art of sacred interpretation is called exegctics or hermeneutics.
Txequatur (ek-se-kwātur; Lat. 'Let written recognition of a consul or commercial agent issued hy the government to which he is accredited, and authorizing him to exercise his powers.
Dxergue (egz-erg'), the small space suhject engraved on a coin or medal, left for the date, engraver's name, or something of minor importance.
Pxcter (eks'ê-tér), a city and rivercounty of Dort, of England, in the of the Exe, 10 miles northwest from its outlet in the English Channel. It is pleasantly situated on the summit and slopes of an acclivity rising from the river, and has handsome squares, terraces and streets. Among the ohjects of interest are the cathedral (founded 1112), the remains of the castle of Rougemont, the Guildhall, the Albert Memorial Museum, St. Michael's Church, etc. Exeter has iron foundries, manufactories of agricultural implements, papermills, etc, and 'Honiton' lace is also made. By means of a canal vessels of 300 tons can reack the city. The largest vessels remain at Exmouth. Exeter is a place of remote antiquity, having been a British settlement long prior to the invasion of the Romans, hy whom it was called Isca Damnoniorum. Pop. 48.660. Exfoliation (eks-fō-li-àshun), in surgery, the process by which a thin laver or scale of dead hone separates from the sound part.
Exhibition, Indtistrial, an exhibition of works of industry and art for the purpose of "citing public interest and promoting $t_{1}$ and manufactures. In 1798 an it rial exhibition of the products of F . cch industry was held at Paris, and proved so successful that in 1802, during the consulate of Napoleon, another was held. The heneficial effects of these exhibitions were so ohvious that a series of them was held at intervals, the eleventh and last thing held at Paris in 1849. In Britain exhibitions of a more or less local nature had been held in Duhlln (1829). Manchester, Liverpool and Birmlngham. and annually in Inndon on the premises of the Society of Arts. The first on an international scale was the Crystal Palace Exhibition in Hyde Dark, London, opened

May 1, 1851. It covered an'area of about 19 acres and attracted 15,000 exhihitors. An International Exhibition, on a small scale, was held at New York in 1853, and in $18{ }^{\circ} \mathrm{J}$ the first French Exposition Universelle was opened in Paris. The buildings were crected in the Champs Elysés, and covered about 24 acres. This was followed hy the national exhibitions of the Dutch at Ha rlem and the Belgians at Brussels, both in 1861, and the following year by the second great international exhibition held in London. The building erected at South Kensing: ton, covered about 17 acres. In 1865 an exhibition was held at Dublin, which, successful in other respects, was a pecuniary failure. The scond French Inter national Exhibition was opened on April 1, 1807, and closed on the 3d of November. It was erected on the Champ de Mars, and covered about 37 acres. The exhibitors numbered nearly 51,000, the visitors about $10,000,000$. In 1si1, the first of a series of British annual international exhibitions of fine arts and industry was opened in London, and contivued through 1872, 1873 and 1874 , but proved unsuccessful. In 1873 the first Austrian international exhibition was held in Vienna. In the United States, a great exhibition was held at Philadelphia in 1876 upon the occasion of the centennial festival of the American declaration of independence. It occupied 60 acres, and had nearly $10,000,000$ visitors. A third French International Exhibition was held at Paris in 1878, the area occupied amounting in all to 140 acres, the visitors numbering ahont $17,000,000$. A fourth was held in 1889, the latter being partly intended to commemorate the centenary of the French Revolution. One of its permanent features is the famous Eiffel Tower of iron, 984 feet high. In 1893 an International Exhibition of large proportions was held in Chicago, Illinois, to commemorate the 400 th anniversary of the discovery of America. It occupied about 600 acres, the total admissions being over $27,000,000$. The French held a grent International Exposition at Paris in 1900, which, in the numher of admissions. was far in pxcess of any similar affair. The Pan-American Exposition. Rywn'. Now York, in 1901, was unicue in its striklng electrical display, ana Was made especially notable by the assassination of Pr sldent McKinley while visiting it. The centenary of the Iouisiana purchase was commemorated by a magnificent exhihition, on the grandest scale. at St. Touls in 1004 . Many smaller exhibitions have been held in

## Exmouth

## Exoroism

the United States, including in recent Sinaitic law. One of the difficulties yearm those commemorating the Lewis and Clarke exploration at Portiand, Oreson, in 1005, the tricentenary of the settlement of Jamestown, Virginia, by one at Norfoik, in 1007, and the expansion of the Pacific States, by one at Seattle, Washington, in 1909. The Panama Pacific Exposition of 1915 (which see) surpassed aii previous industrial exhibitions. Exile (eks'il), originally banishment from one's native country by the compulsion of authority; now prolonged absence from oue's country either enforced or undergone voluntarily.
Exmouth (eks'mouth), a town of 10 miles s. s. E. of Exeter, at the mouth of the Exe. It is picturesquely situated, and is one of the handsomest sea-bathing places on the Devonshire coast. The chiel industries are lacemaking and the fisheries. Pop. (1911) 11,063.
Jxmouth, Edward Pellew, Viscount, in 1757 ; died in 1833, naval officer, born the age of thirteen, served as midshipman in the Blonde frigate during the American war, and greatly distinguished bimself at Lake Champlain. In 1782 be was made a post-captain for a brilliant action in the Pelican, and on the outbreak of the war in 1793 was appointed to the command of the frigate La Nymphe. From this time till the peace in 1802 he was employed in active service. In 1804, on the resumption of hostilities, he was' sent to take the chief command on the East India station, in the Culloden, of seventy-four guns; and here he remained till 1800 , when he had attained the rank of vice-admiral. His next appointment was the command of the fleet slockading the Scheldt. In 1816 be proceeded to Algiers in command of a comoined fleet of twenty-five English and Dutch ships to enforce the terms of a treaty regarding the abolition of Christian slavery which the dey had violated. He bombarded the city for seven hours, and inflicted such damage that the dey consented to every demand. Twelve hunred Christian slaves were freed.
Exocetus (eks-ō-ss'tus), Exoccerus. Exodus (eks'o-dus: Greek, exodos, a going out), the name given in the Septuagint to the second book of the Pentateuch, because it describes the departure of the Israelites from Egrpt. The contents of the book are partly historical, describing the departure of the Israelites from Egypt, and partiy legislative, describing the promulgation of the connected with this book is that, according to Scriptural chronology, the reaidence of the Israelites in Egypt was only 215 years, and it seems incredible that in this time the threescore and ten souls' who aicompanied Jacob to Egypt could have become the two and a halif millions who left with Moses.
Exogenous Plants $\begin{gathered}\text { (eks-oj'e-nus), or } \\ \text { Exocens }\end{gathered}$ plon Exogens, those plassive whose stems are formed by successive additions to the outside. The exogens are the iargest primary ciass of plants in the vegetable kingdom, and their increase by annual additions of new lnyers to the outside of their stems, formed in the cambium between the wood

## Exogenous Plants.

1. Section of a Branch of three years' erowth a. Medula or pith. b. Medullary sheath. a Medullary rays. $c \in$ c, Circles of annual growth. d, Bark. 2, Netted veined Leaf of Exogen (Dak). 3. and the bark, is a feature in which they differ essentially from endogens, whose wood is formed by successive augmentations from the inside. The concentric circles thus annually formed, distinguishable even in the oldest trees, aid in computing the age of the tree. The stem and branches also exhibit a central pith and medullary rays extending outwards to the bark. All the trees of cold climates, and the principal part of those
in hot, are exogenous, and are readily distinguished from those that are endogenous by the reticulated venation of their leaves, and by their seeds having two cotyledons (dicotyledonous). The parts of the fower are generally in fours or fives.
Exorcism (eks'or-sizm), the casting tain forms out of evil spirits by ceropinion prevailerds or ceremonies. Ar opinion prevailed in the ancient church that certain persons, those particularly
who were afficted with certain diseases, especially madness and epilepsy, were possensed by evil spirits. Over such per-• son: forms of conjuration were pronounced, and this act was called exorcism. There were even certain men who made this a regular profession, and were called exorcists. Exorcism still makes a part of the beliefs of some churches. In the Roman Catholic Church exorcist is one of the inferior orders of the clergy.
Fxosmose (eks'os-moss), the opposite Exostemma of endosmose (which see). Cinchonacere of plants, nat. order chings are trees or shrubs, natives of tropical America and the West Indies. E. caribaum and E. floribunda possess properties similar to those of the true cipchona, but without any trace of either cinchonine or quinine.
Exostosis (elss-os-to'sis), in surgery, a bony excrescence or growth from one of the bony structures of the body. It is generally found at the end of long bones near the joints, and in connection with the skull. Amputation is generally required.
Exotic (eks-ot'ik), belonging to foreign countries; a term used especially of plants. Exotic plants are such as belong to a soil and climate entirely different from the place where they are raised. They are nearly always greenhouse or hothouse plants.
Expansion (eks-pan'shun), in physics, crease in the bulk of bodics, in consequence of a change in their temperature. This is one of the most gencral effects of heat, being common to all bodies whatever, whether solid or fluid. The expansion of fluids raries considerably, but, in general, the denser the fluid, the less the expansion; thus, water expands more than mercury, and spirits of wine more than water; and, commonly, the greater the heat, the greater the expansion; but this is not universal, for there are cases in which expansion is produced, not by an increase, but by a diminution of temperature. Water, in cooling, ceases to contract at $42^{\circ} \mathrm{F}$.; and at about $39^{\circ}$, just before it reaches the freezing point ( $32^{\circ}$ ), it begins to expand again, and more and more rapidly as the freezing point is reached. This expansion is about oneeleventh of its bulk, and accounts for the bursting of pipes, etc., when water is freezing in them.
Fixpectation (eks-pek-ta'shun), in the doctrine of chances, the value of any prospect of prize or prop-
erty depending upon the happening of some uncertain event. A sum of money in expectation upon a certain event hat a detcrminate value before that event happens. If the chances of receiving or not recciving a hundred pounds, when an event arrives, are equal ; then, before the arrival of the event the expectation is worth half the money.-Expectation of life, the probable duration of the life of individuals of any given age. A rough estimate of any one's expectation of life is made by calculating two-thirds of the difference between his or her present age and eighty.
Expectorants (eks-pek'tor-ants) in pharmacy, medicine which favor the discharge of mucus from the windpipe and air-passages of the lungs. Such are the stimulating gums and resins, squills, ipecacuanha, etc.
Experiment (eks-per'i-ment), an operation designed to discover some unknown truth, principle or effect, or to establish it when discovered. It differs from observation in the fact that the phenomena obscrved are, to a greater or less extent, controlled by human agency. Experiment distinguishes the modern method of investigating nature, and to it we owe the rapid atrides made in chemistry, physics, etc.
Expert (eks-pert'), a person emiasertly skilled in any particular branch or profession; specifically a scientific or professional witncss who gives evidence on matters connected with his profession, as an analytical chemist or a person skilled in handwriting.
Exploits (eks-ploits'), River of, a river which traverses nearly the whole of Newfoundland from s. W. to N. E. and falls into the Bay of Exploits. It is about 150 miles long, and is navigable for steamers 12 miles.
Explosion (eks-plózhun), a sudjen disruption, generally due to the rapid production of gaseous matter from solids or liquids. Thus, the explosion of gunpowder is due to the sudden formation and expansion of gases into which the powder is converted by chemical agency. Explosions are often caused by the elastic force of steam confined in boilers, etc.
Explosives (eks-plósivz) are comple in pounds practically available in war, in mining, and in general use for the sudden development of immense force. They comprise gunpowder, guncotton, nitroglycerine with its compounds dynamite, lithofracteur, and a large number of others, many of them of extraordinary power.

Diponent (eks-po'nent), in algebra. the number or figure which, placed above a root at the right hand denotes how often that root is repeated or how many multipilcations are neces cary to produce the power. Thus, $a^{2}$ denotes the second power of the root $a$, that is $a$, muitiplied by $a ; a^{4}$ denotes the fourth power. The figure is the exponent or indcx of the power. To express the roots of quantities fractional exponents are used:
thus $a^{\frac{1}{7}} \cdot \frac{1}{a^{3}}, \frac{1}{a n}$, denote the square root, the cubic root and the nth rout of $a$. Fx Post Facto (eks post fak'to ), done after and bearing upon something previousiy donc ; thus, a law is said to be es post facto, or retrospective, when it is enacted to punish an offepse committed before the passing of the law. There is a provision in the Constitution of the United States that no ex post facto law shall be passed.' This has been interpreted to refer only to crimes, and in that sense the phrase is commoniy
Express (eks-pres'), a special message, messenger or conveyance, scnt on a particuiar occasion. The name is given to any regular provtsion made for the speedy transmission of messages, parcel, commission, and the like; and particularly to a railway train which travel at a specialiy high rate of speed, stopping only at the principai stations. Expressed Oils (eks-prest'), in chcmwhich are obtainable from bedies oniy by pressing, to distinguish them frum mineral and essential oils, which last are, for the most part, obtained by distiilation. Extension (eks-ten'shun). (1) In that property of a body my which it occupics a portion of space. Extension is an essentiai as weli as a general property of matter, for it is impossible to form a conception of matter, however minute may be the particie, without connecting with it the idea of its having a certain buik and occupying a certain quantity of space. Every body, however smail, minst have length, breadth and thickness; that is, it must possess the property of extension. Figure or form is the result of extension, for we cannot conceive that a body has length, breadth and thickness without its having some kind of figure, however irreguiar. (2) In logic, extension is the extent of the application of a general term. that is, the objects collectively which are included under it; thus, the word figure
is more extenaive than triangle, ci paraiielogram, etc.; European more tensive than French, Frenchman, man, etc. Matter and mind are the extensive terms of which any definite ception can he formed. Ertension is trasted with comprehension or inten Extincteur (eks-tan-teur), an a of fire cotus for the extinc aining taining watcr, and materiais for gene ing carbonic acid. When requlred materials are brought into contact pushing a rod which breaks a hottie taining acid, the gas mixes with water, and the pressure generated is cient to project the water charged the gas to a distance of 40 or 50 feet. Extract (eks'trakt), a term to del all that can he dissoived of a suhstance hy a specified menstru such as water, alcohoi, ether, etc. modern pharmacy the term is applied two kinds of preparation from vegetab One is obtained by digesting the pian water or other solvent, and evapora or distilling away the excess of soiv until the extracted matter is sufficiel inspissated. The other is got by bruls the piant in a mortar, separating juice, warming it until the green co ing matter separates, and fiitering it The juice is next heated until the al men coagulates, and again filtered. juice is now evaporated to a syrup, green coloring matter added and mixed, and the evaporation is thereaf continued untii the required concent tion is attained. Extracto must capable of being redissolved, so as form a soiution like that from wh they were derived. Extracts are used cookery, medicine and the manufact of perfumery- Extract of Meat tractum carnis) is a soft, yeliowi brown, soid or very thick syrup, wh is empioyed as a portahie soup. It now manufactured on the large scaie processes proposed by Liebig.
Extradition (e ks-tra-dish'un), act by which a pers accused of a crime is given up by the gc ernment in whose territories ha has tak refuge to the government of which he a subject. Treaties have been enter into by the United States with almo ali civiiized countries for the apprehe sion and extradition of persons chary with particuiar offenses, such as murd robbery, embezzlement by public office arson, rape, piracy, etc. The Constit tion of the United States provides th ' a person charged in any state wi treason, felony or other crime, who sha flee from justice and be found in anoth

Extravaganza
Eye
state, shall, on demand of the executive authority of the state froin whieh he fled, be delivered up to be removed to the state having jurisdiction of the crime.'

## Extravaganza <br> (eks-trav-a-gan'za), <br> in music, the drama,

 etc., a species of composition designed to produce effect by its wild irregularity and incoherence; differing from a burlesque in being an original composition and not a mere travesty.
## Extravasation (eks-travia-sáshun),

 an escape of some fluid, as blood or urine, from the vessel containlng it. Blood extravasetion, in contusions and other accidents, is when blood-vessels are ruptured by the injury, and the blood finds it way into the neighboring tissucs. In some accidents to the urethra and bladder extravasation of urine is a very serions occurrence.
## Extreme Unction (eks'trêm ungk'shun) is, resting

 on Seripture authority, one of the seven saeraments of the Catholic Church. It is performed in cases of mortal disease by nuointing in the form of a cross, the eyes, cars, nose, mouth, hands, feet and reins (in the case of males). It is administered after confession and the eucharist, and is believed to remove the last stains of sin. lt ean only be administered by a bishop or priest, and is not applied in the case of young children or excommunieated persons.Extremities (eks-trem'i-têz), the limbs, as distinguishing them from the other divisions of the animal, the head and trunk. The extremities are four in number, in man named upper and lower ; in other animals anterior and posterior.
Exuma (eks-áma), Great nid Litice, two of the Bahama Islands. The former is 30 miles long and 3 miles wide, and has a good harbor. Pop. 2300 .
Exuviz (eks-a'vi- é), the cast-off parts the skins of or coverings of animals, as shells of lobsters, etc.
Eyalet (I'a-let), a former administrative division of the Turkish empire, subdivided into sanjaks or provinees, and kazas or distriets. It was ruled by a pasha, and gave place to the vilayet on the reorganization of the empire in 1871.
Eyck (ik), Hebelte and Jan van, old Flemish sehool, born at Maasevel, Hubert in 13/56, Jan probably about 1390. They lived first at Bruges, whence the younger brother is called John of Bruges, and afterwards at Ghent, to which they
removed about 1420. Here they executcu the celebrated Adoration of the Lamb for the cathedral of Ghent, a painting which, in its different parta, contains above three hundred figures, and is a masterpiece. It was in two horizontal divisions, comprising ten panels, of which ouly the two central ones remain at Ghent the others being at Berlin. Hubert dld not live to see it completed. He died at Ghent (1426), as did also his slster Margaret, who was likewise a painter (1431). Jan finished the work in 1432, and returned to Bruges, where he rcmained till his death, which took place in 1440, and cxecuted several excellent pieces. His reputntion became very great even during his lifetime, by his share in the introduetion of oil-painting, the original invention of which has been incorrectly ascribed to him by many. Jan van Eyek also introduced improvements in iinear and aerial perspective, and in painting upon glass.
Eye (I), the visual apparatus of animals, consisting in man of the globe of the eye, the muscles whlch move it, and of its appendages, which are the eyelids and eyebrows, and the lachrymal apparatus. The walls of the globe of the eye are formed principally of two fibrous membranes, one white and opaque the sclerotio (Gr. skleros, hard)-which

Human Ete.

Exterior. l, Eyebrow. op. upper and lower erelid. $x x$, Eyelashes. The pupil and iris are also shown at $a$ and $b$ respectively.
envelopes two-thirds of the globe posteriorly; and the other transparent, and resembling a horny plate, whence its name, cornea (Lat. corncus, horny). The sclerotic is a tough, fibrous cont, and is the part to whieh the plurase 'white of the eye' is applied. In the front of the globe the selerotic is abruptly transformed into the transparent portion (the cornea), which is circular, and which forms a window through which one can see into the interior. A mucous membrane, the conjunctiva, so named because it unites the eye to the lid, spreads over the ante-
$6-A-U-3$
rior portlon of the globe, and then folds back on ltself and lines the lnternal aurface of the eyelids. On the internal aurface of the sclerotic is a vancular membrane called the choroid. Thls is easentiaily the blood-remsel coat of the eyebali. The front part of the chorold termlnates sbout the place where the sclerotic passen into the cornea in a series of ridges, the ciliary processes. The circular space thus left in front by the termlnation of the choroid is occupled by the iris, a round curtaln, the structure seen through the cornea, diferently coiored in different individuale. In its center is a round hole, the pupil, whlch appears as if it were a black spot. The irt forms a sort of transverse partition divlding the cavity of the eyeball into two chambers, $a$ amall anterior chamber filied with the aqueous humor, and a large posterior chamber filled wlth vitreows humor. The iris consists of a framework of connectlve tisaue, and lts posterior surface ls lined hy cells contalning pigment which gives the color to the eye. In lts substance are bundles of lnvoluntary muscular fibers, one set heing arranged in a ring around the margin of the pupll, the other set radiating from the pupil like the spokes of a wheel. In a bright light the circuiar fibers contract and the pupil is made smailer, but in the dart these fihers relax and cause the pupii to dilate more or iess widely, thus ailowing oniy that quantity of luminous rays to enter the eye which is necessary to vlsion. Just behlnd the pupii is the crystalline lens, resembling a smail, very strongly magnifylng giass, convex on each side, though more so behind. The greater or less convexity of the surfaces of the lens determines whether the vision is long or short. The internal surface of ths choroid, or rather the plgmentary layer which covers it, is lined by the retina or nervous tunic upon which the objects are depicted that we see. It appears to be formed by the expansion of the optic nerve, which enters the eye at lts posterior part about one-tenth of an inch to the lnner side of the axis of the eyeball, and forms at the bottom of the giobe an eniargement, which ls called the papille of the optic nerve. Microscopists describe the retina as being composed of five, or even eight layers, of which the internal one ls vascular and ln contact with the vitreous; the external one, very important in a physloiogical polnt of view, is the membrans of Jacob. It is composed of cones and cylinders or rods, joined together like the stakes of a paiimade, perpendicular to the plane of the
membrane, and forming by their free extremlties a moniac, each mleroscopic divislon of whlch is about 0.001 of a line In diameter according to Rohln, and 0.0008 of a line accordlng to Helmoits: and represents a nention of a rod. These rods and cones are belleved to be the agents by whose aid the waves of light become transformed into the stlmulus of a sensatlon. The ocular globe ls put In motion ln the orbit by six muscles, grouped two hy two, whleh ralse or lower the eyc, turn lt inward or outward, or on lts antero-posterior axia. In these movements the center of the giobe is immovabie, and the eye moves round lts trannverse and vertlcal dlameters. These three orders of movements are lndependent of each other, and may he made singly or in combination, in such a manner as to direct the pupli towards ait points of the circumference of the orbit. Each eye ls furnished with two eyeiids, moved by muscles, which shleld it from too much light and keep it from belng injured. They are fringed with short, fine hairs called eyelashes; and aiong the edge of the lids is a row of glands simllar to the sehaceous giands of the skln. The eybrows, rldges of thlckened Integument and muscie, situated on the upper circumference of the orbit and covered with short hairs, aiso reguiate to some extent the admission of iight by muscular contraction. In reptiles, some fishes (sharks, etc.), in birds, and ln some mammals a third eyelid, or nictitatlng membrane, is present, and can be drawn over the surface of the eye so as to ciear lt of foreign matters, and aiso to modify the llght. The lachrymal apparatus is composed of, first the lachrymal gland, which lies in a depression of the orbital arch ; secondiy, of the lechrymal canals, by which the tears are poured out upon the conjunctiva a iittle above the border of the upper lld; thlrdiy, the lachrymal ducts, which are destined to receive the tears after they have bathed the eye, and of which the orifices or lachrymal points are seen near the internal commissure of the lids; fourthiy, the lachrymal sac, in which the lachrymal ducts terminate, and which empties the tears lnto the lachrymo-nasal canal. The tears, by running over the surface of the conjunctiva, render it E uppie and facilitate the movements of the globe and eyeiids by loosening the friction. The influence of morai or physlcal catses lncreases thelr secretion, and when the lachrymal ducts do not suffice to carry them off they run over the lids.

Vision.-The retina renders the eyc
cenalble of light, and we may thercfore consider it as the ensential organ of vision. The function of the other portions Is to converse the luminous rays to a focus on the surface of the retina, a condition necessary for distinct vision and the clear perception of objects. The visual lmpresslons are transmitted from the retina to the braln by means of the optic nerve, of which that membrane appeara to be the expansion. The two optic nerves converge from the base of the orbit toward the center of the base of the skull, where there is an interiacement of thelr fiberm in such a manner that a portion of the right aerve goes to the left side of the brain, and a part of the left nerve to the right side; this is cailed the chiasma or commiooure of the optic nerves. The principal advantage of havlng two eyes is in the estimatlon of dlstance and the perception of relief. In order to see a polnt as siagie by two eyes We must make its two mages fall on corresponding points of the retinas; and thls impiies a greater or less copvergence of the optic axes according as the object ls nearer or ,inre remote. To accommodate the - different distances the lens is capa, if aitering ltweif with great precision an rapidlty. When we look at a near object the anterior surface of the lens buiges forward, becoming more conver the nearer the object ; the more distant the object the more the lens is fattened. When the transparency of the cornea, the crystaliine lens, or any of the humors, is destroved, either partialiy or entireiy then will partial or total blindness follow, since no Image can be formed upon the retina; but aithough all the humors and the cornea be perfectly transparent, and retaln their proper forms, which is likewise necessary to distlnct vision, yet, from weakness or inactivlty of the optic nerves, or injury of the central ganglia with which it is connected, weakness of sight or total blindness may ensue. Defective vision may aiso arise from the crystailine lens being so convex as to form an image before the rays reach the retina (a defect known as short slght or myopia), in whlch case distinct vision wiil be procured by lnterposing a concave lens between the eye and the object of such a curvature as shail cause the rays that pass through the crystalline lens to mect on the retina; or the lens may be too flat, as is the case in oid age; a defect which is corrected by conver lenses. In the lower forms of life the organs of sight appear as mere pigment spots. Ascending higher, simple lenses or refracting bodies occur.

Insects, crustaceans, etc., have large masser of nimpie eyen or ocelli aggregated together to form zompound eyes-the teparate facets or lenmes being optically distinct, and sometimei numbering many thousands. In the moliusce weli-developed eyem approaching in atructure thome of the hishent animals are found; and is all vertebrate animain the organ of visfon correaponds generally to what has been described, though they vary much in structure and adaptation to the suro roundlyg of the animal.
Fye, in agricuiture and gardening, aisnifies a bud or shoot of a plant nit tuber.
Eye (a), a muncipal boroush, It County Suffolk, 10 miles n Ipswleh. Up till 1884 it sent a r to Parilament, and it still glves p a pari. division of the county. Po:

## Eyebright (i'brit; EJuphrasic

 nalie), a smali plamelonglng to the nat. order Scropte aceer, which 18 common $\ln$ Britita most parts of Europe in North A.wh acc. It is annual, from 3 to 8 incher ${ }^{2} h^{2}$ often much branched. The whole whit has a bitter taste. Under the mante of euphrasy it formerly enjoyed a smet reputatlon $\ln$ diseases of the eyes. $E_{y} \because$ (i'ld). See Eyo.
Eyemun al (j'mouth) a fich! towe th of Berwickshire scothad. at the mouth of the Eye, an lmaportant piace in the thirteenth centroy. Pop. 2436.

Eyepiece, in a telescope, sicrosove or other optical lnstrument the lens, or combination of lense to which the eye is appiled.
Fylau (I'lou), a small town, about 28 miles distant from Kıonlgsbers, in Prus a, famous for a bloody batle fought vitween Napoleon and the allied Russiar.s and Prussians, on the 7th aud 8 th of February, 1807. Both side claimed the victory. The loss of the allies was about 20,000 men, whlie that of the French must have been considerably greater.
Eyre (ar), EDward Jomer, an Ausgovernor born ln Yorkshire, England, in 1815. He went to Austraiia in 1833 , in 1839 discovered Lake Torrens, and in 1840 explored its eastern shores and the adjacent Flinders Range. Fe then commenced his perlious journey along the shores of iñe Great Australian Bight, and reached Klng George's Sound in Western Australia, a distance of 1200 mlies, with a single native boy, having
left Adelaide more than a year belore. In 1846 he published Disooverios in Central Awhtrella. Aftor filling several governorabipa be was appointed governor of Jamalca in 180. In 1865 he was confronted with a negro rebellion which he crushed with nome severity, and was recalled. On his return to Eagland John strart Mili and others took measures to try him for murder, but failed. Carlyle whe one of his mont atrenuous defenderm. He died in 1000.
Syre, Lake a large malt-water lake of South Australia. Area about 4000 mq . miles, but it is subject to great fuctuations in size.
Saploicl (e-zéti-ei; 'God ghall atrengthen'), the third of the great propheta, a priest, and the son of Bual. He was carried away whon youns (about 809 . B.c.) Into the Babylonish captivity. His prophetic career extended over a period of 22 years, from the Bth to the 27th year of the captirity. The Book of Farekiei contains predictions made before the fall of Jerusalem, in 688 B.c. (chaps. i-xxip). propherjes amainst some
of the neighboring tribes (chaps xiv-
xxyi), prophecice concerning the future of Inrel (xxxill-zxxiz), and a ceries of Visions relatios to the circumatances of the people after the ratoration.
Dasa (ea'ra), a celebrated Jowish ceribe and priect. Under his guidance the aecond expedition of the Jews aet out from Babylol to Paleatine under the reisa of 1 rtazerzes I, ebout 458 i.c. The important services rendered by Eara to his countrymen on that occasion, and almo in arranging and in some measure, it is believed, gettling the canon of Scrip. ture, are eapecially acknowledged by the Jewa, and he has even been regarded as the second founder of the nation. Josephns otates that he died in Jernaliem: othere amert that he returned to Babyion and died there at the ape of 120 yearm. The Book of Efere contains an account of the favors beatowed upon the Jow by the Perainn monarche, the rebuilding of the temple, Fara's miadion to Jeruatiem, and the rarions regulations and formy introduced by him. It is written partl| in Hebrew and partir in Cher $n$ whick. has led anme to inncinde that is the work of different hands.

F the eixth letter of the English niphabet, is a labiodental articulation, lormed by the passage of breath between the iower lip and the upper front teeth. It is cinssed az a surd spirant, its correapondins sonant spisant being $v$, which is distinguished from / by being pronounced with voice insten! of breath, an may be perceived hy proni, uncing of, co. (In if, of, however, $f$ is $=v$.) The fisure of the ietter $F$ is the same as that of the ancient Greek digamma, Which it also elosely resembies in power. F, in music, is the lourth note of the Ta (ti), the name given by Guido to the fourth note of the natural diatoni scale of C .

## Faum-tea or Faham-tea

( $\mathrm{la} \mathrm{a}^{\prime} \mathrm{am}$ ), a name givea to the dried leaves of the Angracum fragrans, an orchid growing in the Mauritius and in India, and much prized for the fragrance of its leaves, an infusion of which is used as a stomachic and as an expectorant in puimonary compiaints.
Faber (fáber), Fridericx Wiliam, a theoiogian and hymn-writer, the nephew of George Staniey Faher, born at Durham in 1814. In 1845 he be came a conrert to Roman Cathoiicism, and lounded the oratory of St. Phiiip Neri, afterwards transferred to Brompton. He died in 1803.
Faber, Grozer Stanler, an Engiish in 1773, near Bradford in Yorkshire. He was educated at Oxford, and hecame a feilow of Lincoln Coiiege. He was appointed Bampton Lecturer in 1801 : became a prehend in Saiishury rathedral in 1831, and master of Sherb in Hos pital, Durham, in 1832. He die in 1854. Amongst his principai writings are $\boldsymbol{H}$ ore Mosaica, The Docirine of Regeneration, and 4 Dissertation on the Prophecies.
Tabii (fa'bi-f), an ancient and renowned family of Rome, who, having undertaken the duty of defending Roman territory against the incursions of the Veientines, estahlished themselves at a post on the river Cremera. Being 7-U-3

The fabliaux lashed not only the clergy and nobility in their degeneracy, but even mocked the religious spirit.
Fabre (fabr) Jean Hevir, a French Avepron, Decentist, horn at Saint-Léons, schoolmaster and professor He was a philosophy at the College of Ajaccio and the Lycee of Avignon. His books, including. The Mason Bees, The Iife of the Spider, and The Life and Love of the Insect, show the most minute and sympathetic observation of the habits of insects. He died Octoher 11 , 1915 .

## Tabriano (flabrê-a'no ), an episcomal

 Ancona. Pop. 958 of Italy, province of Fabricius (fa-bris h'e-us), CAIUs cINUS), a pattern of Roman virtue. After having, a pattern of Roman virtue. After Lucanians, and enriched his and with the spoils, of which he alone toot nothing, he was sent on an embassy to Pyrrhus, king of Epirus, who tried in vain to corrupt him hy large presents. In 275 b.c. Fabricius was chosen censor. He died about 250 B.c.Fabricius (fa-brit'se-us), Johann scholar, born at Leipzig in 1668 , herman professor of rhetoric and moral philosophy at Hamhurg, and puhlished many learned works, among which are his Bibliotheca Latina, Bibliotheca Ecclesiastica, and Bibliotheca Antiquaria. He died in 1736.
Fabricius (fab-brit'se-us), गонann tomologist, born in 1745, a Danish enAfter studying at Copenhagen, Leyden, Edinhurgh, and under Linnæus at Upsala, he obtained the post of professor of natural history in the University of Kiel. In 1775 appeared his Sustem of Entomology, which gave to thi science an entirely new form. In 1778 he pubIIshed his Philosophia Entomologica, written upon the plan of the well-kiown Philosophia Botanica of Linneus.
Façade (fa-sīd or fa-sïd'), the face, vation of a building. It usually pripal elethe principal entrance.
Facciolati (fát-cho-lii'tē), Jacopo, an born in 1682; died in classical scholar, the University of Padua. The most important work with which he was connected was the Totius Latinitūtis Lexicon, compiled by Forcellini under his direction and with his coopperation. Face (fäs), the front part of the head, The bony basis of the most of the senses, she thirty-two teeth (these not being in
the strict sense bones), is composed of fourteen bones, called, in anatomy, the bones of the face. The anterior part of the skull (os frontis) also forms an important feature of the face. Of all these bones the lower jaw only is movahle, heing articulated with the hase of the skull. The other bones are firmly joined together and incapahle of motion. In hrutes the jaws project much more than in men, and form the prominent feature of the face, while the forehead recedes. (See Facial Anole.) The face of birds comprehends the ophthalmic regions, cheeks, temples, forehead and vertex; the face of insects includes all between the prohoscis and the prothorax.

## Facet, Facette (fas'et. fa-set'; liter-

 ally a little face), one of a series of small circumscribed plane sur faces, as one of the small plane surface of a crystal or a cut gem.Facetiz (fa-sēshi-e), humorous sayhave been ings, witticisms, jests. There Amongst many collections of such. Jests of the most notahle are the Jests of Hierocles, an old Greek collection, the Liber Facetiarum of Poggio Bracciolini, the Apophthegms of Bacon, Joe Miller's Jest-Book, etc.
Facial Angle (fis'shal), an angle of method of skull menportance in the hy Cor skull measurement, introduced hy Camper, the Dutch anatomist, who

facial Angle.
1, European. 2, Negro.
sought to establish a connection between the magnitude of this angle and the intelligence of different animals and men, maintaining that it is always greater as the intellectual powers are greater. Suppose a straight line drawn at the hase of the skull, from the great occipital cavity across the external orifice of the ear to the bottom of the nose, and another straight line from the hottom of the nose, or from the roots of the upper incisors, to the most prominent part of the forehead. then both lines will form an angle which will be more or less acute. In apes this angle is only from $45^{\circ}$ to $60^{\circ}$; in the skull of a negro, ahout $70^{\circ}$; in a European, from $75^{\circ}$ to $85^{\circ}$. In another mode of drawing the lines the angle included between them variea

In man from $90^{\circ}$ to $120^{\circ}$, and is more capable of comparison among the vertehrate animals than the angle of Camper. This angle though of some importance in the comparison of races, is fallacious as a test of individual capacity.
Facial Nerve, a nerve of the seventh pair of craniai nerves, a motor nerve which supplies the muscles of expression on either side of the face. Paralysis of this nerve produces facial paralysis, the result of which is that the affected side is smooth, unwrinkled, and motionless, the eyelids are wide open and cannot be closed, and the muscles of the sound side, having no collateral opposition, draw the mouth to that side.
Factor (fak'tur), in arithmetic, the from the multiplication of which proceeds the product; thus 7 and 4 arr the factors of 28 . In algehra any expression which is considered as part of a product is considered a factor.
Factor, in commerce, an agent emanother in huyiag or selling, or in the charge of property. A factor seems to differ from a hroker in holding a wlder and more discretionary commission from his employer, in heing ahle to buy and scll in his own name, and in having a lien on goods for his outlay; but the difference depends so much upon the usage of the particular trade, or upon the special irstructions constituting the agency, that no exact line of demarkation can he drawn hetween them. The term factor has in common usage generally given place to the terms agent and hroker, the former applied in the more general, the latter in the more restricted sense. It ls still retained in some special cases, as in that of house factors and factors on landed property in Scotlind, who have charge of the letting and geucral management of house property, farms, etc., called in England estat3 agents.

## Factory

(fak'tur-i: from factor), a name which appears originally to have heen given to estahlishments of merchants and factors resident in foreign countries; it now more commonly signifies a place $\ln$ which the various processes of a particular manufacture are carried on simultaneously. The rapid growth of factories in this sense is a comparatively recent development of industry, resulting from the free use of machinery and the consequent subdivision of labor. Amongst the advantages of the factory system are generally counted: 1st, fucreased pro-
ductiveness arising from the minute division of labor; 2d, the mechanical accuracy and the cheapness of the product turned out by machinery; 3d, the facilities for union and cooperation for common improvement afforded by hringing large masses of workmen together. But this last consideration is probably more than counterhalanced hy the smaller amount of independent intelligence called forth in the individual worker, through the monotons. of the minutely subdivided operations. Decided disadvantages of the factory system are the unhealthiness of the crowded rooms, where the air is full of deleterious elements; and the increasing demand on the labor of women and children, interferlng as it does with the economy of domestic life. See also next article.
Factory Acts, acts passed for the tories and similar establishments. Considering that women and children were not qualified fully to protect themselves against the strain of competition, the British legislature has passed a series of acts to regulate the conditions of their employment in factories. The immediate occasion of the first act passed to regulate factory employment in England was the outhreak of an epidemic disease which committed great havoc among the younger persons employed in factories in the district round Manchester at the beginning of the 19 th century. An act was passed (1802) in which provision was made for the regular cleansing and ventilation of mills and factories, and also for limiting the hours of labor to twelve daily. Other acts were passed later further reducing the hours of labor and providing for proper sanitation, protection from danger, etc. In all the States of the American Union in which the factory is an industrial feature there has heen legislation relative to the conditions of labor and the employment of women and children. Attention is given to the age of children employed. and attendance at puhlic achools for a certain period each year is ohligatory. The daily hours of labor are regulated. In some States the helting. shafting. etc. employed must be securely guarded. Penalties for violation of these provisions are designated.
Facula (fak' $\mathrm{a}-\mathrm{le}$ ), certain luminous epots cometimes risible on the sun's disc. Thene portions have a different spectrum from the other hright parts of the sun, as well as from the maculæ or dark sun-spots. See Sun. Faculty (fak'ul-ti), the mpmhprs

## Faculty

medical or legal professions; thus we npeak of the medical faculty, the faculty of advocates. The term is also used for the profemsors and teachers collectively of the several departments in a university; as, the faculty of arts, of theology, of medicinc, or of law.
Faculty, in law, is a power to do which the lawething, the right to do lege granted by law to do something which would otherwise be forbidden.
Feces (fésez), the excrementitious varies, of course, with different species of animals, according to their diet. The main constituents are unassimilahle parts of the food, on which the digestive precess bas no effect, and other portions, quite nutritious, but which have escaped digestion; also certain waste matters, etc. In disease the composition varies extremely.
Faed (fâd), Jornv, a British artist; 1820. He showed artistic talent at in early age, in 1841 went to Edinhurgh to study, and some years later acquired considerable reputation. Among his principal works are: Shakespere and his Contemporaries; An Incident of Fcottish Justice; The Morning after Flodden; A Wappenshavo, two series of drawings illustrating The Cotter's Saturday Night, The Soldicr's Return, John Anderson My Jo, and Auld Mare Maggie. In 1864 he went to London. He died in 1002. Faed, Tromas, younger hrother of the place in 1826. He studied in Edinhurgh, where at an earls age he became known as a clever painter of rustic suhjects. In 1852 he settled in London, where he won a high reputation. The suhjects he painted were for the most part domestic or pathetic, and in these he contrived and told his own story, and that with a success that emulntes Wilkic. Among his principal works are: Sir Walter Scott and Mis Friends (1849), The Mitherless Bairn (1855). The First Break in the Fanill, (1857), Sunday in tha Backıcoods (1859), His Only Pair (1860), From Daren to Sunset (1861), and The Last $o^{\circ}$ the Clan (1865). A numher of Mr. Fa'd's works have heen engraved in large size, and have been very popular. He died in 1000 .
Faenza (fa-en'zn), an episcopal city of and 10 miles southwest of Rrovince It is sunposed to have heen the first Italian cits in which earthenware was introduced; helle Faience (Which see).
and there is also a considerable trade in apinning and weaving ailk. Pop. of commune 38,757 .
Fagging (far'ing), a custom which ally at most of prevailed generis still practised et when schools, and Harrow, Rughy, and one or two other places. It consists in making the junior boys act as servants or 'fags' in the performance of multifarious menial offices for the elder boys, such as carrying messages, preparing breakfast. etc., for their master in return for which the elder hoy accepts a certain responsibility for keeping order, and becomes the recognized adviser and protector of his 'fags.'
Faggot-vote, a name in Britain for the Jurchase of a vote procured by st ${ }^{\prime}$ te a nominal qualification to cona zuhstantial hasis qualification without chiefly used in county faggot-votes are memhers of in county elections for phich they are usually The way in by they are usually manufactured is by the purchase of a property which is divided into as many lots as will constitute separate votes, and given to different persons, who may not he resident memhers of the constituency.
Fagotto (fa-got'to), the Italian name

## Fahlerz

 of the hassoon (which see). hlack colo is of a steel-gray or ironhack color. It occurs crystallized in the form of the tetrahedron, also massive and disseminated. Its fracture is uneven or imperfectly conchoidal. Specific gravity, 4.5. It consists of from 30 to 40 per cent. of copper with admixture of iron and sulphur; hut it also contains in very variable proportions zinc, lead, antimony, and silver.
## Fahlunite. See Falunite.

Fahrenheit (fa'ren-bit), Gabried physicist, known Diec, a German the thermomer for his arrangement of the thermometer. was horn at Dantzig in 1686. Ahandoning the commercial profession for which he had heep designed, he settled in Holland to study natural philosophy. In 1720 he effected a great improvement hy the use of quick. silver instead of spirits of wine in thermometers. He invented the Fahrenheit scale (see Thermometer), and made serernl valuahle discoveries in physics. He died in 1736.
Faidherbe (fa-derb), Lours Len Cesar. a French general, horn in 1818. pntered the army in 1840, served in Africa and the West Indies, was appointed sovernor of Senegal in

1854, and afterwards of a district in Algiers from 1807 to 1870 . After the fall of Napoleon III he was summoned by the government of the National Defense to Drance and appointed commander of the army of the north. He fought some blcody bnt indecisive battles with the Germans under Mantenfel and Goeben. After the war he was elected to the Assembly by Lilue, his native place, but on the triumph of Thiers retired from politics to private life. He wrote some valuable monographs on Senegal, the Soudan, and uther parts of Africa. He died in 1889.
Faience (fã-yáns'), imitation porcesuperlor to the common pottery in its clazing, beauty of form, and richness of painting, and of which several kinds are distinguished by critics. It derived its name from the town of Faenza, in Italy, where a fine sort of pottery called majolica was manufactured as early as the 14th century. The majolica reached its greatest perfection between 1530 and 1560. In the Louvre, at Berlin, and at Dresden are rich collections of it. The modern. ience appears to have been inizented about the middle of the 16th centur: at Faenza, as an imitation of majolic., and obtained its name in France, where a man from Faenza, having discovered a similar kind of clay at Nevers, had introduced the manufacture of it. True faience is made of a yellowish or ruddy carth, covered with an enamel which is usually white, but may be colored. This enamel is a glass rendered opaque by oxide of tin or other suitable material, and is intended not only to glaze the body, but to conceal it entirely. See Pottcry.
Failly (fá-yue), Pierre Louis Cinarles Aamille de, a French general, born in 1810. He distinguished himself in the Criwean war, and commanded a division against the Austrians in 1859. He was the means of introducing the Chassepot rifle into the French army, and commanded the troops which dispersed Garibaldi's irregulars at Mentana. At the outbreak of the Franco-German war Failly received the command of the Fifth Corps, but was severely criticised by his conntrymen for the unskillfulness of his operations during the war. He died in 1892.

## Fainéants (fan-nā-3n; Fr. 'do-noth-

 thet applied to the later Merovingian kings of France, who were puppets in the hands of the mayors of the palace. Lonis $V$, the last of the Carlovingian dynasty, received the same designation.Fainting (fāuting), or syncope, a sudden suspension of the heart's action, of sensation, and the power of motion. It may be produced by loss of blood, pain, emotional disturbance, or organic or other diseases of the heart. It is to be treated by placing the patient on bis back in a recumbent position or even with head slightly depressed, sprinkling cold water on his face. applying stimulant scents to the nostrils, or anything which tends to bring back the blood to the brain. The admission of fresh cool air and the loosening of any tight articles of dress are important.
Fairbaixn (farbărn), Pataick, a Scottish theulogian and author, born 1805: died 1874. He became a minister of the Established Church, but joined the Free Church at the disruption in 1843. In 1853 he was appointed professor of divinity in the Free Church College, Aberdeen, and in $1856^{\circ}$ principal of the Free Church Jollege, Glasgow. Among his works are. Tupology of Scripture; Jonah. his Lifc. Character, and Mission; Ezekiel; Prophecy; Hernioneutical Manual; Fastoral Epistles of St. Paul. He edited and wrote extensively for the Imperial Bible Dietionary.
Fairbairn, ${ }_{\text {civil }}^{\text {Sir }}$ Williny, a British Kelso, Roxburghshire, in 1789 ; died 1874. He was apprenticed as an enginewright at a colliery in North Shields, and commenced business on his own account in Manchester with a Mr. Lillie in 1817, where he made many improvements in machinery, such as the use of iron instead of wood in the shafting of cotton-mills. About 1831, his attention having been attracted to the use of iron as a material for shiphuilding, he built the first iron ship. His firm became extensively employed in iron shiphuilding at Manchester and at Millwall, London, and bad a great share in the development of the trade. He shares with Mr. Stephenson the merit of constructing the great tubular bridge across the Menai Strait. Fairhairn was one of the earliest members of the British Association for the Advancement of Science, of which he was president in 1861-62. He was created a baronct in 1869. He wrote many valuable professional books and papers, amongst which we may mention: On Canal Steam Navigation (1831); Ironits History, Properties, and Manufacture (1841); Application of Iron to Building Purposes (1854); Iron Shipbuilding (1865). His brother Sm Perim, born 1799, died 1861, was also a mechanical genius, and had large machine works at Leeds.

## Fairbanks

## Fairbanks (far'hanks), Cuarles Wiarren, vice-president was born in Union Co., Ohio, in 1852 He engaged in legal practuce in ind Republican politics, and was a candidate in 1893 for the United States Senate, hut was defeated. He was elected to the Senate in 1897, and in 1898 was a member of the Joint High Britisl-American Commission. He was vice-president of the United States, 1004-08, and was again nominated for that office in 1916, but was defeatel. Died June 4. 1918.

Fairbanks. Tirapneús, American inborn at Brimfield, Mass., in 1796 ; died in 1868. At St. Johasbury, Vt., he estab lished a business for manufacturing castiron ploughs and stoves, and in 1831 received his first patent for an improved platform scale. Dther varieties followel. His son, henry fiatzanks, born in 1830 . Was ordained to the Congregational ministry in 1857. Iater he becance vice. president of E. and T. Fairh ${ }^{\circ}$ \& Co. Fairbury (fär'her-i), a ait capital 60 miles s. s. W. of Iincoln. It has flour and planing mills, iron-works, creamery, and nurseries. Pop. 5ont.

## Fairfax, Tronas, Lorn, a distin-

 leading character in English civil wars. He was born in 1611, at Denton, in Yorkshire, being son and heir of Ferdinando, Lord Fairfax, to whose title and estates he succeeded in 1648. After serving in the Netherlands with some reputation he returned to England, and on the rupture between Charles I' and the Parliament joined the forces of the latter. In 1642 he was a, pointed general of the horse, and two years later held a chief command in the army sent to co-operate with the Scots. In 1045, on the resignation of the Earl of Fssex, Fairfax became general-in-chief of the parliamentary army. After the victory at Naseby he marched into the western counties, quelling all opposition, put down the insurgents in Kent and Essex in 1647, and captured Colchester. In April, 1649, he was occupied along with Cromwell in suppressing revolt in the army; but positively declined to march against the Scottish Preshyterians. He was a member of Cromwell's 1rst parliament. He cooperated in the restoration rf Charles II, being one of the committee charged to secure his retnrn. He died at Nun Appleton, Yorkshire, in 1671. Tirhaven, a towr in Bristol County,of New Bedford, on the New York, New Haven and Hartford Railroad. It has ironworks, tack factory, etc. Pop. 5122. Fair Head, a basaltic promontory on land, County Antrim, rising to the height of 636 ft .
Fairies (fär'êz), Elves, etc., imaginary supernatural beings or spirits supposed to have considerable influence for good or evil in the affairs of men. The name fairy comes ultimately from the Latin fatum, fate. In the 12th century the poem of Lancelot of the Lake introduced the poetical treatment of the fairy world into France; and the fairies played au important part in the romantic works of the time. In the last part of the 17th century the true fairy tales first became popular, the Italians taking the lead in the Pentameron of Basilio. The fashion passed to France. where Perrault in 1697 published Contes de ma Mİre lOye. Numerous imitations soon appeared. The best collections of later times have been the Cabinet des Fées (Paris and Geneva, 17s6, thirty-seven vols.) ; those of the Rrothers Grimm in German, and in Figlish those of Keightley and Croker. As an original writer of fairy tales, Hans Christian Andersen, the celebrated Dane, deserves particular mention.
Fair Isle, an island lying nearly ney and Shetlidway between the Orkby 2 hroad 14 islands, 3 miles long by 2 hroad. It is inaccessihle except at one point, and rises to the height of 480 ft . Some grain is grown, hut the surface is hetter suited for sheep pasture. The men employ themselves in fishing, and the women knit a well-known variety of hosiery, an art which, it is said, the Spaniards introdnced who escaped from a vessel of the Armada. Pop. 214. Fairmont (färmont), a city, capiVirginia, on the of Marion Co., Weat miles s. F of Whenling. Its hur, 71 include a State normal school. It is an important mining city and has ironworks. glass funtories, mining machinery plants. tc. Pop. 16,000.
Fair Oaks, Battle of, fought at 7 miles E . of Fair Oaks in Virginia, Confederate Richmond, between the the Union under Gen. Johnston and 31st May troops nnder Gen. McClellan. was nearly 6000 The loss on each side decisive. 6000 men ; the result was infor sale in an open goods or wares particular place, and generally for the
transaction of a particular class of husiness. The origin of fairs is obviously to be traced to the convenience of bringing together at stated times the huyers and sellers of the stock-produce of a district. In Europe the numerous festivals of the church afforded the most favorable opportunity for the establishment of these markets. This association is indicated in the German name of a fair, which is identical with that used for the ceremony of the mass. In the middle ages fairs were of great importance, and were specially privileged and chartered by princes and magistrates, public proclamation being made of their commencement and duration. But modern facilities of communication have much diminished the necessity for periodical markets, and it is now chiefly amongst agriculturists that they are of much importance, large agricultural meetings being held in various districts for the sale of cattle and horses, and for the exhibition of agricultural implements. There are also, especially in Scotland, a considerable numher of hiring fairs for farm-servants. In the less developed commerce of the East, however, they still retain much of their ancient importance and magnitude. In Europe the most important fairs of the present day are those at Leipzig and Frankfort-on-the-Main in Germany, at Lyons in France, and at Nijni-Norgorod in Russia. The latter is, indeed, the largest fair in the world. The fairs of Great Britain now mestly consist of the weekly market-days of country towns and the agricultural meetings already mentioned. In many places the old fair days are still kept, but are now merely an assemblage of penny theaters, peep-shows, and such amusements. In the United States there are no fairs of the kind so counmon in the old world: the term is applied to a variety of local exhibitions, especially of cattle and agricultural products; it also includes exhibitions and shies for religious and charitable purposes; likewise the fairs of the American Institute of New York, the Franklin Institute of Philadelphia, the Maryland Institute, and of many other organizations. For World's Fairs, see Exhibition, Industrial.

## Fair Trade, an ecnnomical policy

 Britain. which. while not opposed to free trade in principle, would meet the prohibitory tariffs that foreign countries ma, put on British gonds hy placing equally heavy duties on goods sent from these countries to Eritain, See Freo Trade.
## Fairweather, Mouns, on the weat

 America, in Alaska territory. It rise to the height of 14,000 feet, and is corered with perpetual snow.Fairy Rings, a name given in Britseen in fields, etc., formerly supposed to be traced by the fairies in their dances. There are two kinds-one of 6 or 7 yards in diameter, consisting of a bare ring or path, about a foot broad, with green grass in the middle of it; another of smaller dimensions, formed by a cirele of grass, greener and fresher than that in the middle. They are ascribed to a kind of fungus.-Fairy-Ring MUSMBOOM (Marasmius oreades) is a variety of edible mushroom that grows in an everwidening circle, constantly spreading outward a few inches each year, the innermost sections dying. The stem has no ring, the gills are few and far apart, and the car, as it becomes widely expanded, has a peculiar knob-like projection in the center. The cap and stem have a pinkish-buff color, and the gills a lighter shade of the same, varying in its younger stages toward a cream color. The spores are white. They can be found in many old, well-kept lawns. They seldom form complete circles. Several crops grow during each season.
Faith (fäth), the assent of the mind to the truth of what is declared by another, resting on his authority and veracity, either without other evidence or on probable evidence of any kind. In a special sense the term faith is used for the assent of the mind to what is given forth as a revelation of man's relation to God and the infinite, i.e., a religious faith; and in Christian theology we have (1st) historical or speculative faith, or belief in the historic truthfulness of the Scripture narrative and the claims of Scripture to an inspired and supernatural origin: (2d) Erangelical or saving faith, that emotion of the mind (as Dwight defines it) which is called trust, or confidence exercised towards the moral character of God, and particularly of the Saviour.

## Faith, Confession or. See Confer

## Faith Cure,

 can he cured thithout remedies and faith ape the exercise of faith alone. The faith appears to be in the ability of certain individuals to produce this result, or in certain objects, as an image of the Virgin or other religious emblem. That the mind has an influence over the condition of the body is pudoubted, but thatthe mind of another perwon can influence the phymical conditions of a person is problematical. There are certain evidences in its favor, but far too much seems to be claimed for $i t$.
Faizabad ( $\mathrm{t}-\mathrm{zl}$-band'). See Fyzabd.
Fakirs ( fa -kerrs'; ilt ' poor men) ) a Takirs lind of tanatics met with chiefly in India and the neighboring countries, who retire from the world and give themselves up to contemplation. They are properly of the Mohammedan religion, but the term is often used for a mendicant of any faith. They are found both living in communities and solitary. The wandering fakirs gain the veneration of the lower classes hy ahsurd penances and self-mutilations.-A name (pron. fa'kerz) also applied to peddlers in America.
Falaise (fa-lãz), a town of France, situated on Calvados, picturesquely falaise) 23 mil rocky precipice (Fr. tains several ohjects of intcrest amonothers the ruined castle of the dukcs of Normandy, where William the Conqueror was horn. Pop. (1906) 6215.
Falashas. See Abyssinia.
Falckenstein (fal-kin'stin). Fiward sian general, born in 1797 ; died in PrusIn 1813 he entered the Prussian arms, distinguished himself at the hattles of Katzbach and Montmirail. In 1848 he served in the Holstein campaign, and he acted as colonel and chief of staff in the war with Denmark in 1864. In the war of 1866 he commanded the Seventh Army Corps. On the outhreak of the FrancoGerman war in 1870 he was appointed military governor of the maritime provinces.
Falcon (far'kn, fa'kn), a name of hers of the family Falconide (which see). The falcons proper (genus Faloo), for strength, symmetry, and powers of flight are the most perfectly developed of the feathered race. They arc distinguished hy haring the beak curred from the hase, hooked at the point, the upper mandible with a notch or tonth on its cutting edge on cither side, wings ling and powerful, the second feather rather the longest, legs short and strong. The largest European falcons are the jerfalcon or gyrfalcon proper (Falco gyrfalco), a native of the Scandinavian Peninsula, and the Iceland falcon ( $F$. Islandicus): to which may he also added the Greenland faleon ( $F$. Groenlandicus or condicans). Between these three
species much confusion at one time provailed, hut they are now distinctly defined and described. In the Greenland falcon the prevailing color at all asea is white, in the Iceland falcon dark. The latter more nearly resembles the true gyrfalcon of Norway, which, however, is

Peregrine Falcon (Falco peregrinus).
generally darke, rather smaller but with a longer tail. The average length of any of these falcons is about 2 feet. The Greenland species used to be the most highly prized hy falconers. Its food consists chiefly of ptarmigans, hares, and water-fowl. It is found over a wide range of northern territory. The peregrine falcon ( $F$. peregrinus) is not so large as the jerfalcon, hut more elegant in shape. It chiefly inhabits wild districts, and nestles among rocks. It preys on grouse, partridges, ptarmigans, pigeons, rahhits, etc. Its fight is exceedingly swift, said to be as much as 150 miles an hour. The peregrine falcon was one of those most frequently used in falconry. Other Furopean falcons are the hohhy ( $F$. subbuteo), formerly a great favorite for the chase of small game when falconry was in fashion; the merlin ( $F$. asadlon), small but swift and spirited: the kestrcl ( $F$. tinnuncŭlus). one of the most common. The term falcon is by sportsmen restricted to the female. the male. which is smaller and less courageous. being ralled tiercel. tersel, tercelet, or falconet. See Falconry.
Falcone (fal-ko'ná). Ancello. an Italian nainter. horn in 1600 , studied along with Salvator Rosa under Sparnolettn. His paintines, fonsisting chieffy of battlepieces, are highly esteemed. but very rare. He died in 1665. Falconer (fak'nér), H бaH, a Scot1 S0s. After studving aralis is horn in and medicine at Edinburgh be went to

India as a surgeon in 1850. Here he made valuable geological researches, and turned his attention to the introduction of tea cultivation. He was appointed superintendent of the Saharanpur botanic garden in 1832 and of the Calcutta botanle garden ln 1847. A collection of his papers, entitled Palaontological Memoirs and Notes, was published in 1868. In 1855 he returned to England, where he dled in 1865.
Falconer, Wminam, poet and writer Edinburgh $\ln 1732$; was drowned in 1769. He published a poem (The Shipureck) and a Universal II arine Dictionary.
Falconidæ (ful-kon'i-dé), a family of the destructive powers are most perfeetly developed. The family includes the different species of eagles as well as the hawks and falcons properly so-called, comprising the sub-families Buteoninæ (buzzards), Polyborine (caracaras), Aquilinæ (eagles), Falcouinæ (falcons), Milviuæ (kites), Accipitrinæ (hawks), and Círcine (harriers).

## Falconio (ful-kō'ni-ä) DIOMEDE, an

 Pescocostanzo, Italy, in 1842. He came to the U. S. us a missionary ln 1810 ; was ordained a priest in the following year, holding educational and administrative positions in the U. S. and Newfoundland until 1883, when he returned to Italy : was conseerated bishop, 1802, and archbishop, 1895. He was Apostolic Delogate to Canada, 189\%-1902; to the United States, 1902-1911; became cardiual. 1911. Falconry (fal'kn-ri, $f_{n}{ }^{\prime} k n-r i$ ), the pursuit of game by means of trained falcons or hawks; also called Hacking. Falconry is a very old amuse ment in Europe and Asia. In the middle ages it was the favorite spori of minces and nobles; and, as ladies conld engrige in it, it became very prevalent. Cliarlemague passed laws in regard to falconry. In Germany Henry the Fowler and the limperor F'rederiek the Seenud were much addicted to this sport, the latter laving written a work on falconry. In France it reached its height under Francis I, whose grand falconer had under him an establishment of 15 nobles and 50 falconers, cos*'ig smanully about 40,000 livres. In Britain it was practised among the Anglo-Saxons, but grew still more in favor after the Norman Conquest. One of the most interesting Buglish works on the subject is that whlch forms the first part of the Boke of St. Albans, first printed in 1481. In England the Duke of St. Albans is still hereditary grand falconer, and presents the king with a cast (or pair) of falconson the day of his coronation. Falconry contlnued in favor till the 17 th century; but the lnvention of firearms gradually superseded $1 t$, though in isoPated instances gentlemen may atlll be found who pursue the sport to some little extent. In Persia and other eastern

Goshawk hooded for Falconry.
countries hawking is still in great favor. The training of a hawk is a matter requiring great pains and protracted attention, the natural wildness and intractableness of the birds being difficult to overcome. When a hawk suffers ltself to be hooded and unhooded quletly and will leap on the hand of the trainer to receive food, its education is considered far advanced, and the trainer now endeavors to accustom it to the lure. 1'his may be a piece of leather or wood corered wish the wings and feathers of a bird and attached to a cord. The falcon is fed from it, and is reealled by the faleoner swinging the lure round hls head with an aceompanying cry. When it has been tanght to obey the lare it is then practised in the mude of seizing its game, which is first done with tame game attached to a peg. It is then made to tly at free ganie, and when lt is fully trained it is used for sport. It is always kept hooded during excursions, until it is wanted to fly.
Frldstool (fald'stöl), a folding stool provided with a cushion for a person to kneel on during the performance of certain acts of devotion, especially a kind of stool placed at the south side of the altar. on which the klngs of England knecl at their coronation. The term is alsn given to a small desk at which the litany is enjoined to be sung or said.
Falernian Wine (fà-ler'ni-an), an anclent wine of
great repute amongat the Romans. It Mount Faleruus in Campania. It was strong and generous, probably much resembling modurn sherry.
Falieri (fali-a'rè), Marino, Doge of manded the tricops of the repuhllic at the siege of Zara in Daimatia, where be gained a brilliant victory over the King of Hungary. He succeeded Andrea Dandolo, 11th October, 1354, was accused of a design to overthrow the repuhic and make himself sovereign of the state, and beheaded 17 th Aprii, $135 \overline{5}$. The iast scenes of his life are depicted in Byron's tragedy of Marino Falieri.
Falkirk (fal'kerk; Scot. pron. f ${ }^{\prime}$ 'kirk),
a burgh of Scotland, in Stirlingshire, 21 省 miles west hy north of Edinhurgh. The oider portion of it is oid-fashioned and irresularly huilt. There are several modern suburhs. In the town or its vicinity are the Carron Ironworks, the Faikirk Foundry, and other Forks, collieries, chemicai works, distiileries, etc. Faikirk is connected with the port of Grangemouth hy a railway 3 miles iong. The Trysts of Falkirk, heid on Stenhousemuir, 3 miles to the N. N. W., are the largest cattie-fairs in Scotiand. Falkirk is of great antiquity, and is associated with many remarkable historicai events. In the neighborhood was fought the Battle of Faikirk in 1297 between Sir Wiiiiam Wailace and Edward I, the Scots, who were much inferior in numbers, helng defeated. Ahont 1 mile southwest from the town the Highlanders under Prince Charies defeated the royal forces under General Hawiey, Jan. 17, 1746. Pop. (1911) 33,574.

Falkland (fak'land), an ancient toyal of Fife, 21 miles north of Edinhnrgh. It was once the residence of the Scottish kings, and possesses remains of an ancient paiace and some curious oid houses. There was formeriy a castie here. in which David, the eidest son of Robert III, was starved to death by order of his uncle, the Duke of Albany. but no trace of it now remains. Pop. 809.
Falkland (fak'and), Lu ius Cary, Yiscount, an English worthy, horn about 1610 . His father being then Lord-deputy of Ireiand, he was educated at Trinity College, Dubiin. After passing a short time abroad he deroted himself to a life of retirement and the cultivation of polite iiterature, chiefly residing at his seat at Burford, near Oxford, which he made a kind of academy for the learned men of the neighboring universities. In 1639 he

Joined the expedition against Scotland: and in 1040, his peerage being Scottish, he w'as chosen member of thes House of Con ${ }^{7 s}$ for Newport, in the Isle of Wigut. In the first instance be warmly supported the parliament, but doubts of the ultimate objects of the parliamentary leaders caused him to modify his attitude: and in 1042 be accepted from Charles I the office of secretary of state. Wher hostiijties began he emhraced decidediy the cause of the king, thourh he wished rather peace than victory. He was siain at the hattle of Newhury, 20th Sept., 1643. He left hehind him severai pamphiets and puhilished speeches, also a few poems, but nothing that explains the unlversal praises hestowed on him by contemporaries.

## Falkland Islands, an island group

 Great Britain, in the belonging to Ocean, about 300 miles east of Atlantic of Magellan. They consist of two Straits islands, East Faikiand and West Falkiand, containlng respectiveiy about 3000 and 2300 square miles, with a great numher of smalier ones surrounding them; total area, 6500 sq . miles. They are hilly and boggy, entirely destitute of trees, hut covired with a variety of grasses very nutritive for the sheep and cattle the rearing of wish is the principai industry. Fish and sea-fowl abolind. Wool, frozen meat, hides, and taliow are the chief exports. The climate is equable and very heaithy. The Faikland Islands Were discover 7 by Davis on the 14 th August, 1502. In 1710 a French vessel from St. Malo touched at them, and named them Isles Malouines. Settlements were afterwards formed on them by the French, Spaniards, and English aiternately, but the latter have ultimately retained possession of them.Fallacy (fal'a-ri), in logic, is when an aigument is used as decisive of a particular issue which in reailty it does not decide. Properly a failacy is a fauit of reasoning (see Logic).

## Fallières (fai'-yār'), Armand, presi-

dent of tie F'reneh Repubiic, 1006-13, was borit at Mezin, Lot-etGarome in the south of France, in 1841. He studied inw and became mayor of Nerac in 1870. Elected to the Chamber of Deputies he soon became conspicuous as a debater, He served in various ministries from 1880, and in 1890 was elected senator. Eie was president of the senate from 1899 until he was elected eighth president of France, Jan. 17, 1906. He was succeeded in 1913 by Raymond Poin. caré.

Fall of Bodies, All bodies on the earth, by virtue of the attraction of gravitation, tend to the center of the earth. A ball held ln the hand pressee downward; if dropped, it descends perpendiculariy: if placed on an inclined plane, it rolls down, in doing whleh it presses the plane with a part of its weirht. In the alr bodies fall with unequal velocitles, a plece of paper, for instance, more slowly than a ball of lead; and it was formerly thought that the veloclty of the fall of bodies was in proportlon to their weight. This error was attacked by Galileo, who, experimenting with balls of different substanees which he dropped from the tower of Ilsa, was led to the conclusion that the resistance of the air aeting on different extents of surface was the cause of the unequal reloclties, and that $\ln$ a vacuum all bodies would fall with the same velocity. The truth of this last proposition was first demonstrated by Newton in his celebrated 'guinea-and-feather' experiment, where a guinea and fenther are shown to tall slde by side in the vacuum of the air-pump. This experiment proves that the force of gravitation in bodies is proportional to their inertia-that is, to their mass. The laws of falling bodles-that is. of bodies falling freely in a stralght llne and through a distance short in comparison with the earth's center are the following:-

1. Wheu a body falls from rest it zequires velocity at the rate of about 32.2 feet per second. This number, which represents the acceleration due to the force of gravity, varies slightly with the locality, increasing from the equator to the poles, and diminishing as we recede from the center of the earth. (See Gravity, Force of.) At the end of five seconds, therefore, the body would be found to be moring at the rate of $5 \times 32.2$, that is, 161 feet per second.
2. The space fallen through in the first second is half of 32.2 . that is 16.1 feet; and the space fallen through in any given time is found by multiplying the square of the number of seconds by 10.1. Thus, in three seconds a body falls $9 \times 16.1$ feet, or 144.0 feet.
3. The square of the velocity aequired by falling through any number of feet is found by multiplving twice that number by 32.2. Thus, if a body falls 9 feet, the square of the velocity acquired is $2 \times 32 \times 9$, or 576 feet per second. 32 being used instead of 32.2 ; and taking the square root of 576, we find that a velocity of 24 feet is acquired in a fall of 9 feet.
4. When a body is projected vertically
upward with a given velocity, it continuen to rise during a number of seconds lound by dlviding the number that expresses the velocity of projection by 32.2 ; and it rines to a helght found by divlding the square of that number by $2 \times 32.2$, or 64.4 . For a machine used in verifying the laws of falling bodles mee Attuood.
Fall of Man, a commonly received ity, founded upon the hlstorlcal narrative contalned in the third chapter of the book of Genesls, together with the alluslons to the same matter in other parts of Serlpture. Adam, having eaten of the forbidden fruit. ls sald to have fallen; and the relation of mankind in general to this fall is stated by St. Paul in the words: 'By one man's disoledlence many were made slnners' (Rom., v, 19). Thus, in the full of Adam all men are held to have fallen and to have contracted 'original sln,' alienating them from God and rendering them morally inadequate. The doctrine of the fall does not stand alone in Seripture. It is universally agreed by interpreters that in the origlnal sentence protounced on the transgressors there is contained the promlse of a redemption, and that the whole scope of Scripture is directed to the development of thls promise, and of the dlvlne scheme of providence associated wlth it.
Fallopian Tubes (fa-lo'pi-an tabs), in anatomy, are two duets whleh open by one extremity into the womb, one at either angle of the flundus, and terminate at the other end in an open, trumpet-shaped mouth, which nt certain times grasps the ovary and receives the ovum. They are named after Gabriel Fallopius or Falloppio, an Italian anatomlet of the sirteenth century, who first recognized thelr functions.
 and Western Asiatle deer, the Cercus dama. It is smaller than the stag, of a brownish-bay color, Whitish bencath, on the insldes of the limbs, and beneath the tail. The horns, which are peculiar to the male, are very different from those of the stag; they are not properly branched, but are broader towards the upper part, and divided into processes down the outside. A simple snap rises from the base of each, and a similar one at some distance from the first. It is often kept in parks.
Fallow Land is ground that has been left uncultivated for a time, in order that it may recover itself from an exhausted state. Strictly speaking, fallow ground is left aito-

#### Abstract

sether without crops; but in agricultural unage strict fallow is not always adopted, and the term fallow is applied to va. rious modes of treatme-t, of which at least shree distinct varieties are recog. nized: bare fallow, bastard fallow, and preon-orop fallow. Bare fallow is that In which the land remains compietely bare for a whoie ycar; in bastard failow it is plowed up and worked after the removal of a spring or summer crop, preparatory to the sowing of a root or forage crop, to occupy the ground during autumn or winter; in green-crop failow the land is sown with a root-crop, such as turnips or potatoes, placed in rows far enough apart to admit of the intermediate spaces being stirred, pulverized, and cleaned, during its growth, by horse or hand implements.

Fall River, county seat and port of Bristol County, Massa. chusetts, on an arm of Narragansett Bay and Taunton River, 53 miles 8. 8. W. ot Boston. It is at the hcad of deep-water navigation, and the terminus of a line of steamers from New York. It has abundant water-power and very large and numerous cotton factories, an extensive hat factory, a piano factory, and calicoprinting factories, foundries, etc. The city has two high schools and a free textile school, besides many public buildings. Its commerce is important. Pop. 110,295 .
Falmouth (fal'muth), $2:$ seaport of miles w. s. w. of London. There is a good harbor here, with a fine roadstead affording excellent refuge for shipping. Falmouth was at one time an important packet station, but is now chiefly a port of call, its principal trade being in supplies and stores for shipping. Pop. (1911) 13,136.

False Bay, a bay of the Cape Colony, Hope at its entrance, See Cape of Good Hope.
False Imprisonment, the unlawful or detention of any person. Everisonment confinement of the person is imprisonment, whether in a common prison or a privatc house, or cren by forcibly detaining one in the streets or highways. The law punishes false imprisonment as a crime. hesides giving reparation to the party injured, through nn action of trespass. False Personation. All forms of tion, for the purpose of obtaining the pxuperty of others, are punishable by the priminal law ; as instances, the personntion of the owner of any share, stoch,
or annuity, etc.; the faise perconation of voters at an ciection is a misdemeanor, the punishment of which is determined by state statute, involving fine, imprisonment, and deprivation of the rights of citizenship of the convicted person for a certain period.

## False Pretenses. Faise representa.

 ments, made with a frauduient design to obtain 'money, goods. wares, and merclanndise,' or trust, with intent to cheat. At common law a misdemeanor, punishable by statute.
## False Prophecies, with intent to dis-

 are misdemeanors at common law. False Signals. To exhibith a false signai, with a view to bring a ship into danger, is a feiony, punishable by statute.Falsetto (fall-set' $\delta$ ) applies, in singing, to the notes above the nnturai compass of the voice. It is also crilied the head or throat voice, in contradistinction to the chest voicc, which is the natural one. The faisetto voice is produced by tightening the ligaments of the glottis.

## False Weights and Measures.

 The using of false weights and measures is an offense. at iaw punishable by fine. By various statutes standards are provided for weights and for measures of capacity or dimension, a ad all contracts of sale, etc., are referred to such standards uniess there is a speciai agreement to the contrary. See Weights and Measurcs.Falster (fal'ster), an island belongthe entrance of the Baltic, east of Laaland, from which it is separated only by a narrow strait; fiat, well watered and wooded; productive in grain, pulse, potatoes, and, above all, fruit: area, 183, square miles. The principal town is Nykjöbing, Pop. 34,436.
Falun, of FAMLON ( fiilun), a town miles of Sweden, on Lake Runn, 130 an excell of Stockholm. It has an excellent mining-school, museums, mineralogical coliections. etc., Within the town boundary is the famous Falun copper-mine, formerly the richest in Sweden, and worked for 500 years. siiyer and gold are also found here. Pop. חROf.
Falunite
(flifun-it), a mineral of a greenish color, occurring in sis-sided prisms. Its chiof constituent is hydrated silicatf of aiuminn. It takes its neme from Fahlun or Falun in

Famagosta, or Famadiagta (fll-md. east conat of Cyprus. It is of remote antiquilty, was an important place during the middile ages under the Lusignan kings of Cyprus and the Venetians, but, after belng captured by the Turks in 1.571, it deellned. It bas improved, however. In late yeare slnce it ceame into the hands of the British.
Famatina (fa-una-tevua), a distrlet the Argentine Republic, province of in Rloja, rich in copper; highest summit, the Nevada de Famatina, 19,758 feet bigh.
Familiar Spirits (fa-mil'yar), desplrits supposed to be conthually within call and at the service of thelr misters, sometlmes under an assumed shupe, sometlmes attached to a magical ring or the llke, sometimes compelled by magic sklll, and sometimes dolng voluntary service. We find traces of thls bellef in all ages and countries, under farious forms.
Family (fami-li), in zoological classlfications, a group of indiand les more comprehensive than a genus and less so than an order, a famlly usually containing a number of genera, while an order contains so many famllies. Family names usually terminate ln-ide (after Latin patronymics, such as Eacide, sons or descendants of Eacus). In botany it is sometimes used as a synonym of order.
Family Compact, the name given organized by the Duke de Cliviseul, first minister of Louis XV, between the various members of the Bourbon family, then soverelgns of France, Spain, the Two Sicllies, Parma, and Pinceuza; mutually to guarantee each other's possessions. It was signed 15th August, 1561, and entailed on Spain a war with England.
Famine ( $a \mathrm{~m}$ 'in), a dire want of numbers of people at the same time. Irregular rainfalls in tropical climates, imperfect methors of irrigation, or, as in Ireland, the too exclusive dependence of the mass of the people on a single article of food which happens to fail, are amongst the commonest causes of famines. In the eariy and medirevai ages they were frequent : but the rapinity of modern communication and transport has made the rigor of famine almost impossible in Eurone. In Ireland the years 1814, 1816, 1822, 1831, and 1846, were marked by failure of the potato crop, and in the last-mentioned year the dearth was

20 great that $\{10,000,000$ were voted by parllanent for relief of the sulferesm. Indla has loug been the seat of terrific Samines; but of late the Britioh official have been very successful in organizing rellef measures. Amongat the more recent nye that in Northwest India (180. 11001). In which above 800,000 perished: that in Hengal and Orissa (1805-06), whell ubout a million perished; that in Bengal (1874), which was very successfully treated: that in Bombay, Madras, Mysore (1875), in whleh about haif a million dled. In Chlna a great famine took place in 1877-78, in which over nine mullions are sald to lave perished; another took place in 1888 -89 owing to the overtlow of the Yellow Rlver: in 1897 a frightful one oceurred in India.
Fan, the uame of various instruments

> for excltlag a current of air by the propulsion of a broad surface or the rapid motion of a mmali surface. (1) An Instrument made or wood ur lvory, feathers, thin skin, paper, varlously constructed and mounted, and used by ladies to set the alr in motion towards and thus cool the face. As an article of luxury the fnn was weli known to the Greeks and Iomans. They are sald to have been introduced into England from Itaiy in the relgn of Henry VIII. (2) Any contrivance of vanes or flat discs revolving by the ald of machlnery, as for winnowIng grain, for coollng fluids, urging combustion, assisting ventilation, etc., is also so called.
Fan, an abbreviation of Fanatic, apan, plied to basebali enthusiasts, particuiarly those who attend professional games.
Fanariots, or Piranamots (fan-ar'ithe (sue ots), the inhabitants of the Greek quarter, or Phanar, in Constantinople, particularly the noble Greek families resident there since the times of the Byzantinc emperors. The dragoman or interpreter of the Porte and other high officials used to be taken from their number. They have now mostly lost thelr influence at Constantinople, and have in many cases transferred themselves to Athens.
Fanaticism (fan-at'i-cizm), the term Canaticism applied more particularly to the extravagance manifested in religious matters by those who allow themselves to be hurried away by their fancy and feelings, to the adoption not oniy of wild enthusiastic views, but also of inordinate and not infrequently persecuting mensures. By an extension of the term it is also sometimes applied to other forms of extravagance. See $\mathrm{Fan}^{2}$, second.

## Fancy

Fancy (fan'dl) a term approaching ite general acceptation it reters both to the forms of the imagination and to the mental faculty which produces them; but it is uned frequently for the lighter or more fantaticic formis of the Imactination, and for the active play of that faculty which produces them. See Imapination. Fancy Goods, fabrice of various pat. ellke matinn, etc., differing from those which are of a piain or slimple colur, rather ornamental than, soild or useful.
 most prohahly ${ }^{2}$ : nince, which orisinated the Moors in Anda. lusia. It it seluom danced hut at the theater, and In the parties of the lower classeas. It lis danced hy two perions onis, who never touch to much as each other's hands; their reciprocal allare ments, retreate, approaches, and varied morementes, by turne purauing and pursued, their looks, attitudes, and whoie
 voluptuousness.

## Faneuil Hall (tan'0-fi), a pubic

 famous as the piace ing Boston, speeches were made at where stirring the war tor American independence. It ohtained the, name 'The cradie of Amerlcan liberty.' It was enlarged in 1805. Fanfare (fan'tar), a short, lively, musie, commmend ind and writike piece of drums. Aiso S . uib , tively pieces performed on hunting-horns, in the chase.Fan-foot, a name given to a North Ptyodaotylus Arrican lizarrd of the genus geckoes, much dreaded in 'Esypt for its supposed venomous properties.

## Fanning Islands (fan'lng), a group

 Central Polynesia between of coral iiflands in $43^{\circ}$ N. lat., and between $157^{\circ}$ and $162^{\circ}$ w. lon. Thes Include Jarvis, Christmas, Washington, Palmyrn, and Fanning, and bave heen occupied by the Sritish.' The population 1 l very small.Fano (fill $\mathrm{n} \delta$, a senport of Italy, on e Urbino 29 Adriatie, province of Pearo It is a handsome, weli-huilt town, nand has a triumphal arch, erected to Augus. tus, and other antiquities. Pop. 10,535. Fan-palm, a name sometimes given Corÿpha umbraculiféra, ta natitive of Cey. lon and Malahar. (See Tatiput Palm.) It la aleo applied to the Mauritla palm

Orinoco River in South Americs, and which ylelds the natives of theme reslonm food, wine (made from its map), and cordage, beudem serving them for housing during the inundations to which the cuuntry la aubject.
Fany, an African race of people incoast about the Gaboon River the west Ugoway. They are an energetic race, skililed in various arts, and are rapldiy lncreasing in numbers. They are cannlbnis, but contact with Europeans is leadlng them to give up the practice.
Fanshaw (tan'shaw) Sir Iitcuard, an English dipiomatist, poet, and translator, burn in 1608. He studied at Cambridge; was घecretary of the Engiish embansy at Madrid ; and took the royai slde on the outhreak of the civil war in 1041. He was made a baronet in 1650, was taken prisoner at Worcester, but permitted to go at large on hail. After the restoration he was employed on several diplomatlc missions, and $\ln 1064$, as ambassador at Madrid, negotiated a peace hetwcen Engiand, Spain, and Portugai. IIe died at Madrid in 14060 . His poetical ahilitles were ahove mediocrity, as is evinced by his translatlons of the Lusiad of Camoens. the Pastor Fido of Guarini, the Odes of Horace, and the fourth hook of the Eineid.
Fantail, a pariety of the domestic pigeon, so called from the fan-like slape of their tnils. Also a name applied to certain Australian hirds of the fly-catcher family.
Fantasia (fan-tin'zi-a), in music, a species of compositlon in which the author ties himself to no particular theme, ranging as his fancy leads him amidst varlous airs and movements. Fantee (fan-tē'), a country of Africa, on the Gold Coast. whlch extends about 90 miles along the shore of the Atlantic and 70 Inland. The lnhabitants, called Fantees, were the most numerons and powerful people situated immediately on the Gold Coast ; hut their power has been almost entirely broken since 1811 hy repeated invasions of the Ashantees and they have since lived under British protection. The soil is fertile, producing, among other thlngs, frults, maize, and palm-wine.
Fan-tracery, in architecture, elabowork, which spreads over the surface of a raulting. rising from a corbel and diverging like the folds of a fan. Fantracery vaulting is much used in the Perpendicular strle, ln which the vault is covered hy ribs and veins of tracery, of which all the pridcipal lines diverge from
a point, as in Henry VII's chapei, Weatminater.

Fan-tracery Vaulling, Beauchamp Chajel, Warwick

Farad(lar'ad), the unit of ejectricai capacity. It name is derived from that of Michaei Faraday, the famous eiectrician.
Faraday (far'a-dã), Micinafl, one of chemlsts and physicists, was born in humbie circumstancer at Newington Butts, near London, on September 22, 1791. Eariy in life be was apprenticed to a bookbinder in London, but occupied himseif in his leisure hours with eiectrical and other scientific pxperiments. Havlng heen taken by a friend to Sir Humphry Davy's lectures, he attended the course, and conceived such an ardent desire for stindy that he resoived to quit trade. With this end he sent his notes of the lectures to Slr Humphry Davy, who was so struck with the great ability they showed that he appointed him his assistant at the Royal Institution. In 1829 he became lectirer at the Royal Military Academy at Woolwich, and in 1833 he was appointed to the newiy-established chair of chemistry at the Roval Institution. It was while in this office that he made most of his great electrical aiscoveries. His communleations to the Philosophical Transactions have been pubished separately in three vols. (1839, 1844, 1855). In 1832 he received the honorary degree of D. C. L. from Oxford, was made ar honr-ary member of the Academy at Ber 7 with many other honors too numt: 3 to mention. In 1835 he received a pension of $£ 300$ a year from Lord Melbourne. He died Aug. 25 , 1867. As an experimentaiist Faraday Was considered the very first of his time. AE a popular lecturer be was equally dis-
tinguished, and used to draw crowds to the Friday evening lecture at the lloyai Inetitution. Among his puillished works we may mention the foilowing:Researches in Electricity (1831-65), Deo tures on Non-metallic Litemrnts (185i3), Lectures on the Forees of Matter (1800); Lectures on tho Chemical lliatory of © Candlo (1861).

## Faradization (far-a-di-zh'shun), the

 medicai appilication of the magneto-eiectric currente which Faraday discovered in 1837.Farafra (fa-rilifit), the name of one of the Egyptian oases in the Libyan desert.
Farallones (fu-ral-yónêz), a group of -lfic, about 30 milies from the the Pato the Bay of San Francisco.
Farandola ( ( n r-and $\alpha-\mathrm{-la}$ ), an exciting dance popular amongst the peasantes of the mouth of France and the neighboring part of Italy. The men and women, placed alternateiy and facing different ways, form a long ilne winding out and in with a waving motion.
Farce (fars; a dramatic piece of low comic character. It is grotesquo and extravagant rather than artistically humorous.
Farcy (far'sil), a disease to which connected with gianders, the two diseasely generaliy running into each other. It is supposed to be a disease of the absorbents of the skin, and its first indlcation is generaliy the appearance of little tumors calied farcy buds on the face, neck, or inside of the thigh.
Fardel-bound (far'del), a term apsheep affected with plied to cattie and the retention of food alsease caused by third stomach, betw in manlplies or plaits of which it ls firmiy numpacteds Orerripe clover, vetches, or rye-grasi is iiable to produr the disease.
Fareham (fir'am), a town of England, in Hampshire, at the northwest extremity of Portsmouth harbor, giving name to a pari. div. of the county. It has bullding-yards, potteries, and brickworks, and a considerable trade. Pop. (1011) 9674.
Farel (far'ai), Guilaume, one of the earliest and most active of the Swiss reformers, was horn in 1489 in Dauphiny, and at an eariy period :as led by his 'tercc se with toe Walde: ies to adopt s yar - servs. After preaching in various , ts ui Switzeriand, he came to Geneva, ,here he was so succensful at the religious confereaces oi 1534 and

1535 that the council formally embraced the Reformation. He was instrumental, also, in persuading Calrin to take up his residence in Geneva. An attempt on the part of the two reformers to enforce too severe ecclesiastical discipline was the cause of their having to leave the city in 1538. Farel took un his residence at Neufchatel, where he died in $\mathbf{1 5 6 5}$.
Farewell (far-wel'), Cape, a cape at Greeuland.
Fargo (fár'gō), a city of Cass County, of the North and the Great Northern Railroad, 254 miles w. of Duluth. It has iron, wire fence, Hour and other manufactures, and is the seat of the State Agricultural and Fargo Colleges. Pop. 14,331.
Faria y Sousa, Manvel, a Portuguese historinn and poet, born in 1590, of an ancient and illustrious family ; died about 1649.
Faribault (fár'i-bō, far-i-bō), a city Minnesota, 53 capital of Rice Countr: has woolen and furniture fictoris. It buildings include the State asylum for the deaf, dumb, and blind, and an Eliscopal divinity college. Top, 9001.
Faridpur (fárēd-pör ${ }^{\prime}$, a district of ion of Bengal ; area 2207 sq. mile. Chief town, Faridpur, ou the Ma Padmá. Pop. 11,649.
Farina (fa-ri'na, fa-réna), a term commonly wiven to a soft, tasteless, and commonly white powder, obtained by trituration of the seeds of cereal and leguminous plants, and of some roots, as the potato. It consists of gluten, starch, and mucilage.

## Farinelli (fári-nel'é), Carlo, an

 ples in 1705. Italian singer, borm at Na Broschi, 1 nid to true name was Carlo he was made a eunuch. IIc sung in Vienna, Paris, and London with the greatest success. On visiting Spain, where he intended only a hrief sojourn, he f. und King Philip $V$ plunged in a profound melancloly. He succeeded in rcusing him from it by the powers of his voice, and became his prime farorite and political adviser. But the penalty of his adrancement was that for ten years lie had to sing every night to his royal master the same fuar airs. On his return to Italy, in 17 no he found limself almost forgotten, h contimued to exereise a splendidid has. nlite in his country house, near Bolume II. ied in 1782 .Faringdon (fa, edon), a market
town of England, county
of Berks, 16 miles southwest of Oxford. Pop. about 3000 .
Farini (fn-rénề), luigi Carlo, an born in 1812. He studied and author, born in 1812. He studied medicine at Bologna, and practiced as a physician. He became known as a nationalist and patriot in the political invements of 1841, had to leave the culutry rois a time, but returned and $\mathrm{k}::-$ made a inciaber of the Reform Mini: ry at Rome $r$ ining the disturbances of (3+, Disaty, ing equally the views of tie old Corser ative and the extreme Re, ritize? parcy, he went to riedmont, where he was elected a denuty, and fought with great energy both in literature and in parliament on behalf of Cavour and the Piedmontese Constitutionalists. After the peace of Yillafranca he was chosen dictator of the duchies of Parma and Modena, and was mainly instrumental in inducing them to unite with the Piedmontese monarchy. His History of the Papal States from 181 to 1850 is a well-known worh. In 1862 he became president of the ministry. He lost his reason in 1863; died 1866.
Farley, John M, Cabinal (1842Catholic prelate, horn in Ireand Roman came to America when he was 17 years Mid. 1Ie Was secretary to Archhishop McClosker 1872-84. pastor St. Gabriol's Church. Now Fork. 1884-1896, hreame fourth Lrchlishop of New York 1902. and was elcrated to the cardinalate in 1911 . Farmers' Alliance, on association ists in the Vnited States which aricuinated in Texns in 1873. in a coniperative efrort against the depredations of cattle thieves. With increase of membership its pur-
poses
widened poses widened, and kindred societies were formed in ather states, a general consolidation of the rarious socleties being made in 1889 under the title of National Farmers' Alliance aud Industrial Union. Its purposes were largely political, and ont of it grew in 1892 the P'enple's or Populist party. which for a deeade had an active political career. The oripinal association continued as a non-political organization, and is at present in active existence in the Southern and most of the Western States. A marallel organization, formed in Cbicago in 1880, and also called the National Farmers' Alliance, extands over many of the Northern States.

## Farmers-general (French, Ferm-

 private contractors, to whom gunder the ald Frencl mencely whom under the ,ld Frenelh monarchy was let out the conlection of rarious liranches of the revenue, poll-tax, duties on salt and tobacco,customs, etc. These contractors made F'arnese Cup, an antique ayyz cup, highly enormous profits on the farming of the public revenues. A revenue collected in this way not only imposed a much heavier burden on the people, but the merciless rigor of irresponsible and unfontrolled exactors subjected them to hardships and indignities to which they pould not submit without degradation. In 1790 the system was suppressed by the constituent assembly.

## Farming. See Agriculture.

Farne (färn; or Ferne) Isiands, a the group of islets of England, in the German Ocean, off the north const of Northumberland, 2 miles E. by \&. of Bamborough Castle, and separated from the mainland by a channel of aloont $13 / 4$ miles. They have been the seene of several disastrous shipwreeks.
Farnese (farinis'si), an illustrious family of Italy, whose deseent may be traeed from about the middle of the thirteenth eentury, and which gare to the chureh and the Republic of Florenee many eminent names, anongst which the following may be mentioned : I'retro Farnese (died 1063), a general of the Florentines in the war against Pisa: Alessandro. who befame Pope as Praul III (1534-49), and whose gifts to his natural son lier Luigi of the duchies of Parma and I'iacenza laid the foundation of the wenlth and greatness of the family; OtTAlio (1520-85), son and successor of Pier Luigi, spent a long and peaceful reign in promoting the happiness of his subjects AlesSANDRO ( 1546 -92), elder sort of Ottavio became famous as a most surcessful general of the Spaniards in the wars with the Netherlands and France. Ranuzro (1569-1622), son of Ottavio, was a gloomy and suspicious tyrant. The line breame extinet with Antonio in 1731. The name of the Farnese is associnted with several famous buildings and works of art. The Farnese Palace, at Rome, was built br Pope Panl III while he was cardinal by Sangallo and Michael Angelo. It is now the residence of the dethroned Bourbon dynasty of Naples. Its sculpture gallery was formerly very pelebrated, but the best pieces have been removed to Naples, including the following: The Farncse Bull. a celcbrated aneient seulpture reprisenting the punishment of Ciree. diseorered in the sixteenth century in the Batlis of Caracalla at Rome; Farnese llercules, a celebrated ancient statue of Hereules by Glycon, found in the Baths of Caracalla in 1540: Farnesc Fiora, a colossal statue of great merit, fonnd in the Baths of Caracalla;
ornamented with figure
Farnham (farn'am), town of Bngs miles s. w. of Aldocthot; a well-bullt place. North of the town is Farnhiam Castle, the residence of the bithoye Winchester. The staple trade 10 in bop Pop. (1911) 7365.
Farnworth factivurth) a manu: Lancashire, England, 3 mill from Bolton. Pop. (1911) 28,142.
Faro (fiarō), a seaport of Portugal prov. of Algarve, 62 miles s. z. of Cape St. Vincent. It is surrounded by Moorish walls, and has a convenient harbor. Its trade is considerable. Pop. 11, i89.
Faro (färox), a promontory forming the northenst point of Sicily at the entranee to the Strait of Messina. The point is strongly fortified, and on it there is 'a lighthouse 200 years old.
Faro, or Pharo (färó), a game of
Faro, hazard at pards, played elieffy in gambling establishments, anid in which the player plans against the bnnk, represented by a professional faro-banker.
Faroe Islands (fī́ror, Danish Taroe Islands Fürör,' 'Sbeep Islands'), a group of islands in the North Atlantic, lying between Iceland and Shetland. They belong to Denmark, and are twenty-five in number, of which seventeen are inhabited. The islands generally present steep and lofty precipices to the sea. Barley is the only cereal that comes to maturits: turnips and potatoes thrive well. There is no wond, but plenty of expellent turf, and also coal. The inhabitants are chiefly engaged in fisling and the rearing of sleep. Thorsharn, in Strömö, the largest island, is the seat of government. Pop. $\quad 230$.
Farquhar (fir , George, a comic Tarquhar w3 rif eminence, was born at Londonder. $\mathrm{g}^{\prime}$, in 1678 . He tried the stage as an actor at Dublin, but som left it to write plays for the London theaters. His first production was Love in a Bottle, performed at Drury Lane with great sureess in 1608 . The Constant Couple, Sir Harry Wildair. The In. constant, the Recruitinn Offcer. and Thn Beaus' Stratagem (reekoned his masterpiece) followed during the next six years. IIe died in 1707. Farquhar's wit is gennine, and lis characters drawn from nature; hut bis plays have the licentions taint of the time.
Farragut (fnr'a-gut), David GlasGow, admiral of the United States Nary, was horn near Knoxville, Tennessee. July $\nwarrow$, 1801. apd entered the
navy as a midshipman when only ten jears of age. In 1821 he was promoted to a lieutenancy, and was actively engaged in his profession until 1851, when he was appointed assistant inspector of ordnance. In 1855 he received a commission as captain. In 1861 he was assigned to go with the expedition against New Orleans, undertr'sen on the formation of the Confederacy, and sailed in Fehruary of the following year. New Orleans surrendered to the combined attack of the land and naval forces on 25 th April, and Farragut proceeded to Vicksburg, which he safely ran past. In consequence of his success at New Orlcans he was promoted to the rank of rearadmiral. In 1863 Farragut attempted to pass the hatteries at Port Hudson, but was unsuccessful. In August, 1864, he attacked the Confederate fleet in the bay of Mohile, and forced it to surrender, thus making the fall of Mobile merely a question of time. July 25, 1866, he was made admiral, a grade which had not previously existed in the United States Navy. He died in 1870.

## Farrakhabad (fa-rak'hä-badd). <br> Farukhabad.

Farrant (far'ant), Richiard, one of posers of music. Very little is known comhis bistory. He was a gentlerana of the chapel royal in 1564 , and subsequently organist and choirmaster. He is supposed to have died about 1580 . His music, which is ecclesiastical, is distinguished by purity, simplicity, tenderness, and elevation. The anthems Call to Re membrance, and Hide not Thou Thy Face, composed by him, are well known and highly esteemed.
Farrar (far'ar), Frederici Withiam, hay, 1831 theologian, was born in Bomwas assistant master at Harrow in 1855; master of Marlborough College in 1871, archdeacon of Westminster 1883 . He puhlished several popular theological works and works of fiction, and became known as a popular lecturer. He was Bampton Lecturer in 1885. Among his principal works are: The Life of Christ (1874), Life of St. Paul (1879), The Early Days of Christianity (1882), and Lives of the Fathers (1889). He died in 1908.
Farrer, Henky, artist, born at LonHe removed to New York in in 1903. and spent the remainder of his life in that city. He made a specialty of etching and water colors. and some of his lendecapes are of surpassing beauty. He enved secretary of the American

Water Color Society and president of the New York Etching Club. Among hia Paintings are the Old Homestead, $A$ Windy Day, Sucet Restful Eve, Autumn, etc.
Farrer, Thomas Chariss, painter, horn at London in 1838. He studied drawing in a free school founded by Mr. Ruskin, and in 1858 came to New York, where he hecame a very successful teacher of art. He served on the Federal side in the Civil war and returned to England in 1869. His teachings exercised a notable and wholesome effect upon American art.

## Farriery (far'i-eri). See Veterinary

 Farringdon (far'ring-don). See FarFars (fars), or Farsistan (far-sithe southwn a maritime province in Persian $G$ wulf of Persia, ahutting on the Persian Gulf. It is mountainous, but has many rich and well-cultivated districts. The most important products are grain. fruit, wine, oil, cotton, tobacco, sill. cochineal, and attar of roses. The manufactures include woolen, silk, and cotton goods; and in these and other articles an active trade is carried on chiefy with Hindustan. Pop. estimated at $1,700,000$. Farsan (far-sarn'), two islands on the east side of the Red Sea on the coast of Yemen, called respectively Farsan Kebir and Farsan Segir.Farthing (farthing), the fourth part form of of a penng, the modern form of the Anglo-Snaxon feorthung, the fourth part of anything. Until the time of Edwarr I a penny was the lowest coin, though John had issued a farthing for use in Ireland. Silver farthings were employed up to the reign of Edward VI , those of cogper being first put into currency hy Charles II in 1672, the old token' farthings being thus replaced.
Farukhabad, or Farruriabad (farthe Northwest $\begin{gathered}\text { ak-il-bad' } \\ \text { Prorinces }\end{gathered}$ of $\begin{gathered}\text { city } \\ \text { British }\end{gathered}$ India, 2 or 3 miles from the Granges, a handsome well-huilt town, with avenues of trees in many of its streets. Pop. 67,338. The district has an area of 1720 square miles and forms part of the Doab. It is watered hy branches of the Ganges canal. Pop. 925,812.
Fasano (fü-za'no), a town of South 16,848. Italy, prov. of Bari. Pop.
Fasces (fas'séz), among the ancient Romans, a bundle of polished rods, in the middle of which was an axe, carried by lictors before the superior

## Fascia

(fas'si-a, fash'i-a; Lat. a bandage), in anatomy siguifies a thin, tendinous covering which surrounds the muscles of the limbs and binds them in their places.
Fascination (fas-i-nä'shun), the exercise of an overpowering and paralyzing influence upon some animals attributed to certain snakes correspouding somewhat to the so-called evil eye among human beings. Squirrels, mice, and the smaller birds are said to be the most subject to this power; but the fact is far from clearly explained, and is not perhaps even suthiciently demonstrated. Most of the accounts agree in describing the animal fascinated as having a painful consciousness of its danger, and the power exercised over it, but to ve unable to resist the desire to approach the fascinator. Some have endeavored to explain this power as the effect of narcotic emanations from the serpent which stupefy the weaker animal. Others regard it as bearing a striking analogy to the mesmeric intluence which one human being sometimes has over another. Fascines (fas-sēnz'), in the military rods from 6 to 18 feet in length and usually 1 foot in diameter, used in raising batt. .ss, strengthening parapets, riveting :es, etc. The twigs are drawn tightly together by a cord, and bands are passed round them at the distance of 2 feet from each other. Very long thin ones are called saucissons or battery-..ıusages.
Fashion (Cash'un), the prevalent which society from time to time adopts and imposes by a sort of arbitrary law upon its members. In its less important details the law of fashion varies considerably, and is often little more than a play of caprice. On its better side it is an endeavor to embody in general and recognized forms the best judgment as to what is decorous and of good taste and feeling in the varying and often delicate situations which occur, where large and mixed companies are in the habit of meeting together. The circle of fashion is not necessarily coincident with that of gentility. A man may be of noble birth, wealthy, and distinguished without being fashionable.
Fashoda (fa-shōdà), a large town 1867 on the built by the Egyptians in Soudan the banks of the Nile in the Soudan, N. lat. $10^{\circ}$. It gives its name to that portion of the district. Since 1884 it has been in ruins, the Mahdi overthrowing Egyptian rule in that year. In 1898 Marchand, a French adventurer,
hoisted the French flas there after a journey through Africa, but General Kitchener, the Anglo-Egyptian Sirdar, after defeating the Mahdi, marched to Fashoda, arriving shortly after Marchand, and after diplomatic negotiations the Freonh withcrew.
Fasti (fas'ti; . .), among the Romans, fasti sacri, calendar:s of the year, giving the days for festivals, courts, etc., being a sort of almanac.
Fasting (fast'ing), the partial or total abstinence of mankind and animals from the ordinary requinite supply of aliment, by which it is to be understood that quantity which is adapted to preserve them in a healthy and vig: orous condition. It would appear that various warm-blooded animals are capable of sustaining total abstinence much longer than human beings. Cats and dogs have survived for several weeks without nourishment of any kind, but it is probable that few liuman beings could survive such deprivation for more than a week, though there have been examples of much longer abstinence from food. The use of water without solid food enables life to be sustained much longer than it could other ise be.
Fasts, temporary abstentions from food, especially on eeligious grounds. Abstinence from food, accompanied with signs of humiliation and repentan e or grief, is to be found more or less in almost all religious. Among the Jews fasts were numerous, and we find many instances of occasional fasting in the Old Testament. Herodotus sajs that the Egyptians prepared themselves by fasting for the celebration of the great festival of Isis. So in the Thesnophoria at Athens, and in the rites of Ceres at Rome, it was practiced. The Church of Rome distinguishes between days of fasting and of abstinence. The former are: 1, the forty days of Lent ; 2, the Ember days, being the Wednesday, Friday, and Saturday of the first week in J.:nt of Whitsun week. of the third weel in Geptember, and of the third week in Advont: 3, the Wednesdays and Fridays of the four weeks in Advent; 4, the vigils or eves of Whitsuntide, of the feasts of St. Peter and St. Paul, of the Assumption of the Virgin, of All Saints, and of Christmas day. When any fasting day falls upon Sunday it is observed on the Saturday before. The Greek Church observes four principal fasts: that of Lent, one beginning in the week after Whitomntide, one for a fortnight before the A5 sumption, one forty days before Ohristmas. In the Bant, however, the atrict
idea of a fast is more preserved than in the West. The Chureh of England appoints the followir sed days for fasting and abstinen wetween which no difference is made. -1 , the forty days of Lent; ${ }^{2}$, the Ember days at the four seasons; 3, tbe tbree Rogation days before Holy Thursday: 4, every Friday except Cbristmas day: The chinreh, however, gives no directions roncerning fasting.
Fat, an oily, concrete substance, a counorygen, deposited in the cells of the ndipose or cellular tissuc of animal bodies. In most parts of the body the fat lies immediately under the skin. Fat is of various degrees of consistence, as in tallow, lard, and oil. It is generally white or yellowisb, with little smell or taste. It co csists of two substances, stearin and elain or olein, the former of which is solid, the latter liquid. These elements are separated by pressing the fat between folds of bibulous paper, which absorbs the liquid or oil. By aftertreatment with water the oil is separated from the paper. Fats are insoluble in water. Sodium borate is used to secure a mixture of fat and water, as in the making of cold cream. When boiled with caustic alkalies fats arc decomposed (saponification), yielding an alkaline salt of the fatty acid (soup) and glycerin. Human fat appears to contain no stearin, but margarin and olein. It is an excellent packing material in the body, and gives the human fraine its smooth, rounded contour. Being a bad conductor of heat, it is useful in retaining warmth, but its cbief function is tbat of a nutritive reserve.
Fatalism (fa'tal-izm), the belief in destiny, to fate, or an unchangeable uninfluenced which everytbing is subject, lished either by chance or the Creseator Amongst notable bistorical examples of the belief in fate may be mentioned the old Greek conception of a fate wbich stood behind the gods themselves as a controlling power; tbe Mohammedan fatalism, which regards all things great and small as inexorably predetermined, so that no accident is possibla; the tbeological doctrine of predestination amongst Calvinists. See Predestination.
Fata Morgana (fáta mor-ga'na), very striking optical a pame given to a been principally remarked in the Strait of Messina, between the coasts of Sicily and Calabria-a variety of mirage (which see). The images of men, houses, towers, palaces, colnmns, trees, etc., are occasionally seen from the coast, sometimes
in the witer and sometimes in the air or at the surface of the water. 'The same object has frequeutly two images, one in the natural and the otber in an inverted position. The images of a single object are said to be wometimes considerably multiplied.

## Fategarh

(fat-r-gar ), a town of the Northwest l'rovinced of India, 's miles from Farukbabad, the scene of il massacre of upwards of 201 liuropeans during the mutiny of 15.5 . It is now a suburb of biarnkbabad.

## Fatehpur (fate-epir'), an Indian

 town in a distriet of the shme name, Allahabad division, Northwest Provinces. 50 miles s. E. of Cawnpore. 1'op. 10,281. The distriet has an area of 1639 sq . miles. enclosed and fortified it. It now cbiefly consis ts of a vast expanse of magnificent ruins enclosed by a higb stone wall some 5 miles in circuit. Pop 7147.Fates (fats: in Latin, Parcre, in Latin Grcek, Moirai), in Greek and Latin mythology, the inexorable sisters who spin the thread of human life. The appellation Clotho (the spinner) was probably at first common to them all among tbe Greeks. As they were three in number, and poetry endeavored to designate them more preciscly, Clotho becane a proper name, as did also Atröpos and Lachësis. Clotho means sle who spins (the thread of life) ; Atropos signities unalterable fate: Lhehesis, lot or chance: so that all thrce refer to the same subject under different points of view. Tbey know and predict what is yet to bappen. Lacbesis is represented with a spindle, Clotbo with the tbread, and Atropos with scissors, with whicb she cuts it off. We find also in tbe northcrn mythology three beautiful virgins, the Nornen, who determine the fate of men Their names are Urd (the past), Varande (the present), and Skuld (the future). Fatherlasher (fa'ther-lash-er), a Cottus or bullhead (Cottus bubanlis) from 8 to 10 inches in lengtb. The head is large, and is furnisbed witb several formidable spines. The fish is fonnd on the rocky coasts of Britain, and near Newfoundland and Greenland. In the latter regions it attains a much larger size, and is a considerable article of food.
Fathers of the Church, or CrinsFathers. See Church, Fathers of the.

## Fathom

(fath'um), a unit of leugth equal to 6 feet. It is chietly used by sailors, who measurc soutudings, etc., in fathoms.

- Fatigue (fa'tēg) of materials, inbuilding or jury to materials used in building or other purposes from strains or stresses exceeding the elastic limit of resistance. lf, for instance, a bar of iron has an elastic limit of 20,000 lbs. per sa. inch and a breaking capacity of $50,000 \mathrm{lbs}$., and is subjected to stresses greater than 20,000 lbs., a molecular change will gradually take place in it, brittleness will supervere, and it may break at a pressure as low as 30,000 lbs. The factor of safety is, therefore, fixed by engineers within the elastic limit.

## Fatimite Dynasty (fat'i-mit), a

 claiming descent from Fatima, the favorite daughter of Mohammed, and of Ali her cousin, to whom she was marricd. In the year 909 Abu-Mohammed Obeidalla, giving himself out as the grandson of Fatima, endeavored to pass himself off as the Mahdi or Messiah predicted by the Koran. Denounced as an impostor by the reigning Caliph of Bagdad, he fled into Egypt, became Caliph of Tunis, and soon conquered all Northern Africa from the Straits of Gibraltar to the borders of Egypt. His son wrested Egypt from the Abbasides in 970 and founded Cairo. The Fatimite dynasty was extinguished on the death of Adhed, the fourteenth caliph, and a new line began with Saladin.Fatty Acids, a name given to such arated from fats. Fats and fixed oils are composed of one or more acids combined with the radical glycyl. By boiling with potash or soda the fat is decomposed, glycerin and a soap being the products. By treating this soan with hydrochloric or sulphuric acid the base is removed and the fatty acid obtained free. These acids are such as butyric, caproic, stearic, margaric, palmitic, pelargonic, valerianic, acetic, etc. Formic acid has also been included in the fatty series of acids, as it belongs to the same order as those named. Fatty Degeneration, an abnormal found in the tissues $c$ ? the animal body, in which the healthy protoplasm is replaced by fatty granules. It is a sign of defective nutrition, and is cummon in old age, affecting the muscles, the heart, arteries, kidneys. etc. It is accompanied hy great muscular flabbiness, weakness, and want of energy, the sufferer looking at the same time fat and comparatively well.

Fatty Infiltration, ${ }^{2}$ condition in which fat gets within the tissue cells, pushing aside the protuplasm aud occupying its space. It is found in some who are inclined to obesity.

## Fatty Tissue, in anatomy, the adipose tissue, a tissue

 composed oí minute cells or vesicles, having no communication with each other, but lying side by side in the meshes of the cellular tissue, which serves to hold them together, and through which also the blocd-vessels find their way to them. In the cells of this tissue the animal matter called fat is deposited. Fatuity (fa-tū'i-ti). See Insanity.Fatwa (fat'wá), a town of Bengal, I'atna District, 8 miles from Iatna city, at the junction of the Punpun with the Ganges. Pop. $10,919$.
Faubourg (fö-bör), a suburb of is also given to districts now within the city, but which were formerly suburbs without it. Thus the Faubourg St. Germain is a fashionable quarter of Faris in which the ancient nobility resided.
Fauces (fig'sēs; Lat. jaws'), in anatomy, the posterior part of the mouth, terminated by the pharynx and larynx.

## Faucet (fa'set), a form of valve or

 cock in which a spigot or plug opens or closes a part of a pipe for the passage of liguid.Faucigny (fī-sē-nyè), a district of France, department of Hante Savoie, one of the loftiest districts of Europe, being partly traversed by the Pennine Alps.
Faucit (En'sit), Helen, Lady Theo1816, the daughter of Mrs. Faucit in actress. Shie made her début at the Theater Royal, Richmond, in 1833, as Juliet in Romeo and Juliet. She first appeared in Iondon at Covent Garden as fulia is The Hunchback, in which she gained a decided success. She was one of the most important members of Macready's company during the Shaksperean revivals of 1837, and was subsequently the original representative of the heroines in Lord Licton's Lady of Iyons. Monel. Richelicu, etc., and in Browning's Strafford, and Blot on the Scutcheon, and Colombe's Birthday. She married Mr. Martin (afterward Sir Theodore), and Inter was the authoress of a volnme On Some of Shakespere's Female Characters. Died 1898.

Fault (falt), in geology, a fracture of strata, accompanied by a
alding down or an upheaval of the deposit on the one side of the fracture to a greater distance than the other. Faults are frequently met with in coal beds, the miner coming unexpectedly upon an abrupt wall of other strata. The angle this makes with the plane of the bed be

is working indicates whether he must look up or down for its continuation on the other side of the fracture. In mines these faults often serve for natural drains. The cut above shows at $a$ a the change of position in strata caused by a fault.
Faun (fan), one of a kind of rural deities or demigods helieved in among the Romans, inhahiting the forests and groves, and differing little from satyrs. Thei: form was principally human, with a short goat's tail, pointed ears, and projecting horns; sometimes also with cloven feet. There are some famous antique statues of iauns, the Dancing Faun at the Uffizi in Florence (restored by Michael Angelo), the Dancing Faun at Naples, the Faun' (of Praxiteles?) at the Canitoline Museum, Rome, the Sleeping Faun, etc.
Fauna (fa'na; from faun, which see), the animals of a certain region, and also the description of them, corresponding to the word flora in respect to plants.
Faure (fōr), Francois Féis, states1841 ; died 1899. He commanded a hody of volunteers during the Franco-German war, and won the rihhon of the Legion of Honor. He was elected to the Assembly in 1881, served in several successive cabinets, and was chosen president of
the French Repuhlic in 1895 .
Faust (foust), Doctor Jonn, a celewho lived in Germany early in the art, teenth century. According to some accounts he was born in Suabia, others make him a native of Anhalt, others of Brandenburg. In his sixteenth year he went to Ingolstadt and studied theology, became in three years a maginter, bnt
of medicine, astrology, and magio, in which he likewise instructed his familiar Johann Wagner, the son of a clergyman at Wasserhurg. After Dr. Faust had spent a rich inheritance, he, according to tradition, made use of his power to conjure up spirits, and entered into a contract with the devil fur twenty-four jears. A spirit called Mephistopheles was given him as a servant, with whom he traveled about, enjoying life in all its forms, but the evil spirit firally carried him off. Even yet Dr. Faustus and his familiar Wagner play a conspichous part in the puppet-shows of Germany, ard the legend forms the suhject of Goethe's great drama Faust, and furnishes the lihretto for Gounod's famous opera of the same name. As early as 1590 the legend was dramatically treated in England by Christopher Marlowe.
Fausta (fous'ta), Flavia MaximiANA, daughter of Emperor Maximinian, married in 307 A.d. to Constantine the Great. She was murdered by her husband's orders in 326 A.D.
Faustina (fous-ti'na), the name of two Roman empresses: (1) Annia Galeria Faustina (died A.D. 141), the wife of the Emperor Antoninus Pius: and (2) her deughter, who was married to the Emperor Marcus Aurelius (died A.D. 175). Both were accused of dissolute conduct.
Favart (fá-vïr), Charles. Simon, opera in Franator of the serio-comic son of a pastry cook. His in 1710, the tation rests principally on his numerous productions for the opéra aux Italiens and the comic opera. He was the director of a company of itinerant actors which followed Marshal Saxe into Flanders. His wife, Madame Favart, was a famous singer, comic actress, and dancer. and participated in the composition of her husband's plays. Favart died in 1792.

## Faversham (fav'er-sham), a seaport

 of England, County Kent, on a branch of the Swale, giving name to a parl. div. of the county. It is a very ancient place, and has manufactures of hrick, cement, and gunpowder. Faversham Creek is navigable up to the town for vessels of 200 tons. Pop. (1911) 10,619.Favre (flar), Juces, a French poliHe studied law, and in 1509 , at Lyons. himself at the and after distinguishing Paris in 1835, where he became came to as a defender of political prisoners. 183 he outbreak of the revolution of 1848 On ecame secretary to Levolution of 1848 he became secretary to Ledru-Rollin. He
wan a leader of the party of oppusition to the President Louis Napoleou; and after the coup d'stat (1851) he retired from polltleal life for six years, till in 1858 his defense of Orsinl for the attempt on the life of the emperor again brought him forward. From this time he again hecame an active leader of the Repuhlican oppcsition to the emperor. On the fali of the emplre, he became Vice-presider': of the Government of National Defense and Minister of Foreign Affairs. As such he conducted the negotiations for peace with Prince Bismarck. He died $\ln 1880$.
Favrile (fav-ril'), a hlghly decorative, colored, enameled and iridescent glass, usually in vase forms. See Tiffany, Louis Comfort.
Favus (tárus), crusted or honeyavo combed ringworm, a disease chiefly attacking the scalp, and characterized by sellowish, dry incrustations. It is produced by a fungous growth.
Fawcett (fa'set), EdGAR poet and novelist, born in New York, in 1847 ; died in 1904 . He devoted binself to literary pursuits in New York and afterwards in London. He wrote Songs of Doubt and Dream, Purple and Fine Linen, An Ambitious Woman, The New Hero, and other novels; Agnosticism and Other Essajs, and some successful plays.
Fawcett, Henry, an English poliat Salishury in 1833 . He was educated at Cambridge, studied law for a while at the Middle Temple, but soon renounced it. In 1858 , when out partridge shooting, he met with an accident which inflicted on him total blindness. Undiscouraged, however, by his deprivation he gave his attention to economic studies. In 1863 be was elected to the chair of political economy at Cambridge. In 1865 he was elected M. P. for Brighton, which he represented till the general election of 1874, when he was elected for Hackney. He hecame postmaster-general in thie second Gladstone adminlstration, and effected many reforms in his department. In 1883 he was made Lord Rector of Glasgow University. He died Nov. 6, 1884. Amongst his principal writings are: A Manual of Political Economy, Lectures un the Economic Position of the British Lahorer, and articles on Indian finances.-His wife, Mitlicent Garretr Fawcett, shared her hushand's studies, and has published a work. Political Economy for Beginners, which is an ahridgment of her hushand's larger works. She is also known as a prominent advocate of all measures for the
educatlonal and political advancement of women.
Fawkes (faks), Guy. See Gunpowder Plot.
Fayal (fi-al'), an island belonging to Portugal, one of the Azores. It is of a circular form, about 10 miles in diameter. The climate is good, and the air always mild and pure. The soil is very fertile, producing in ahundance wheat, maize, flex, and almost all the frults of Europe. It exports a great quantity of oranges and lemons. The chief place is Villa Horta or Orta. Pop. 22.262.

Fayence. See Faïence.
Fayette,
General La. See Lafayette.
Fayette,
Marie Madeleine, CountESS DE LA. See Lafayette. Fayetteville (fa'et-vil), a city, capital of Cumberland Co., North Carolina, on Cape Fear River, 53 miles s. of Raleigh. It has a large export trade and many cotton factories and other manufactories. Pop. 7045.
Fayoum (fáyöm'), a province of Middle Egypt, a little to the west of the Nile, surrounded hy the Libyan desert; area about 800 square miles. The soil is alluvial, and, in the north particularly fertile. Fayoum is irrigated by canals coming from the Canal of Joseph, and that from the Nile, and is one of the most fertile provinces of Egypt. Here lay the ancient Lahyrinth and the artificial lake Moeris. On the west lies Lake Birket-el-Kurun. The chief town, Medinet-el-Fayoum, is connected with Cairo by a railway. Pop. of province, 371,006.
Feasts (fēsts). See Festivals.
Feather-grass (feth'er-gras), the popular name of Stipa pennāta, a native of dry places in the south of Europe. The leaves are rigid, setaceons, grooved; the awns exceedingly long, feathering to the point. The Rush-leaved Feather-grass is found in prairies in the Western States.
Feather River, a tributary of the Calif California, rising in the Slerra Nevada range. Its length is about 250 miles.
Feathers (feth'erz), the form which the dermal appendages ansume in birds agreeing in mode of development, hut differing in form from hairs and scales. The feather consists of a stem, horny, round, strong, and hollow in the lower part, called the guill, and in the upper part, called the shaft, filled with pith. On each vide of the shaft

Is a web composel of a series of resu-lariy-arranged tibers called burbs. The barbs and shaft constitute the vaic. On the edges of the barbs are set the burbulce, whieh interlock with those of adjueent barbs and thus give strength to the vane. Fenthers are generr Uy dlviderl into two kinds, quill feather found In the whigs and tail, aud plunes or elothing feathers generally covering the remainder of the birl. The feathers of brids are periodically changed, generally onee, but in some species twiee a year. This is called molting. When feathers have reached their full growth they become dry, and only the tube, or the vascular substance which it contains, continues to absorb moisture or fat. When, therefore, part of a feather is cut of, it does not grow out again; and a bird whose wings have been elipped remains in that situation till the next molting season, when the old stumps are shed and new feathers grow ont. If, however, the stumps are pulled out sooner (by which operation the bird suffers nothing), the feathers will be reuewed in a few weeks or even days. The feather is $a$ very strong formation, not readily damaged, the arch of the shaft resisting pressure, while the web and fine fibers yield without suffering. Being n bad eonduetor of hent, it preserves the high temperature of the bird whlle it is so light us to be casily carried in flight. It is rendered almust impervious to wet by the oily fluid whieh most blriss seerete at the base of the tail. Feathers form a considerable article of commerce, particularly those of the ostrieh, heron, swan, peacoek, goose, ete., for plumes, ornaments, filling of beds, pens, ete.

## Feather-star

Comatüla rosacēa, a beuutiful erinoid starfish, eonsisting of a central body or dise, from which proceed five radiating arms, each dividing into two secondary branches, so that ultimately there are ten slender rays. Eaeh arm is furnished on both sides with lateral processes so as to assume a feuther-like appearance. It is fixed when young by a short stalk, but exlsts in a free condition in its adult state.
Febricula (feb-ri-kīla), a short, femined cause, lasting only for a few days. See Fever.

## Febrifuge

 employed to drive ofir or suirit of niter, ete. as quinine, sweet spirit of niter, ete.Febronianism
(fe-bróni-an-izm), in Roman Catholie
theology, a system of doctrines antagonistic to the admitted claims of the pope, and asserting the independenee of na: tlonal ehurches, unil the rights of blishops to unrestrieted action ln metters of diseipline and church government withln their own dioceses. The term is derived from Justinus l'ebronius, a nom de plume assumed by John Nieliolas von Honthelm, Archbishop of Trives, in a work on the clalms of the pope.
February (feb'ri-a-ri; from the Roman Fcbrua, a festival of expiation or purifiention), the second month in the year, having twenty-eicht days, exeept in leap year, when it has twenty-nine. This latter number of days It had originally among the Romans. until the senate decreed that the seventh month should benr the name of Augustus, when a day was taken from February and added to August to make it equal July in number of days.
Fécamp (fü-kiin), a seaport of France, efreure department of $S$ eine-In. férleure, 23 miles northenst of Havre. It ls one of the best ports in the Chanuel, and has many vessels employed in the cod, herring, nnd mnekerel fisheries. Pop. (1006) 15,872.

## Federal Farm Loan Act, passedby

 in July, 1910, otherwise kuown as the Rural Credits Bill, has for its purpose to provide fimds for agricultural development in the United States. Its object is to aid farmers by creating standard forms of iuvestment based upon farin mortgages, to equalize rates of interest upon farm loans, and in this way to open a market for the United States bouds; also to ereate depositories and finl:ncial agents for the United States, and for other purposes connected with the farming interests of the conntry. For this purpose a Farm Lonn Burenu has been organized, under the general supervision of a Federal Farm Loan Board, consisting of the Seeretary of the Treasury and four other members appointed by the President. For this purpose, the continental area of the United States, including Alaska, has been divided into twelve districts, each to contain a Federal Land bank, empowered to loan money to farmers on mortgage on favorable terms of iuterest and repayment. No sueh loan is to exceed fifty per cent. of the value of the land mortgaged and twenty per ceut. of that of the permanent improvements the rean. The interest to be paid in such loans is in no case to exceed six per cent. per annum.To earry out the provisions of this law corporations, known as farm land associatims, may be formed of those engaged or
deviring to engage in agricuiture, their purpose being to mecure funds from the larm loan banks for members of the associations and to take the necessary steps to comply with the requiaite conditions upon which loans can be granted. The amount to be loaned to any individuai is limited to $\$ 10,000$ maximum and $\$ 100$ minimum, and the terms of repayment of the mortgage are so arranged as not to be onerous to the borrower.
Federal Party (fed'er-al), a name portion of the people of the United States who favored the adoption of the Federal constitution, organized the government and administered it during the first three presidential terms. They advocnted a government having attributes of sovereignty, operating upon the peopie directly, and having ail necessary powers for effective action; their opponents favored a simple compact of confederation. The party won no presidents after 1800, and vanished during the twenty years following.

## Federal Reserve Board, a banking

 tution centralizing and co-ordinating the banking system of the United States. Originaily this system was a highiy disorganized one, the currency consisting of notes issued by State banks and destitute of Federal supervision or support. This was succeeded by the National Banking System, inaugurated during the latter part of the Civil War, and with a currency based upon Government bonds deposited in the Treasury, the bank notes being thus sustained by the governmental credit. It was, therefore, entirely successful as a basis of secure circulation, but as a banking system it gradualiy lost its usefuiness, being destitute of an eiasticity in times of monetary stress. It was long felt to be inadequate as a banking system, and much expert thought was given to the probiem of how best to combine it into a singie and seif-working system. This ied, in 1913, to the passage of a bill estabishing a banking and currency system known as the Federal Reserve Act, approved by the President, December 23, 1913. Under this Act the United States is divided into twelve geographical divisions, within each of which is situated a reserve banking city, as a co-ordinating center of all the national banks of that division. These twelve cities, whose districts are numbered from 1 to 12 , are the following: Boston, New York Philadelphia, Cieveland, Richmond, Atlanta, Chicago, St. Louis, Minneapolis, Kansas City, Dalias and San Francisco.Every National bank is required to bocome a stockholder in the Reserve bank of its district, and any State bank or trust company may also become a member bank of its district by compiying with certain requisite conditions. There are at the present time nearly 8000 such member banks in the United States, the largest number, nearly 1000 , being in the seventh or Chicago district. Each member bank is required to subscribe to the atock of the Federal Reserve bank of its district. to the amount of 6 p . cent. of its faid-up capital stock and surpius. The Reserve bank becomes thereby a mother bank and does not do business directly with the public, as banks usuaily do, but in an indirect was, through the agency of the member banks. It hoids a certaln proportion of the reserve funds of the member banks, and also may be made a depository for Government funds. It may secure from the Treasury Government notes known as Federal Reserve notes. and is authorized to issue these against commercial paper, with a minimum gold reserve of 40 per cent. There are nearly $\$ 200,000,000$ of such notes in circulation. Besides this, these banks are granted certain powers of operation in the open market, such as the purchase of commercial paper, foreign exchange, etc., and, in a general way, perform the function of ciearing houses between the member banks. In this way they serve to stabilize the member banks, possessing large capital funds which can be made use of for the public benefit in times of commercial disaster or panic conditions. They are competent to serve as central baiance wheels in case of disastrous conditions of this kind. The whole system is under the supervision of a central Board in Washington, known as the Federal Reserve Board, and consisting of the Secretary of the Treasury, the Comptroller of the Currency, and five members named by the President with the approval of the Senate. The total capital of the tweive banks at present is about $\$ 112,000,000$, and through their operation as central banking institutions the whole financial power of the government can in times of stress be utilized for the benefit of the country at iarge.
Federation of Labor, Aumarchr. Organizations.
Fee (fe) or Figh (fet), in law, primarily meant a loan of land, on estate held in trust on condition of the grantee giving personal or other eervice to the prince or lord who granted it. Feudal estates, however, soon came to
be regarded as inalienable heritages held on various tenures; hence the term fee came to be equivalent to an estate or in-heritance-that is, an interest in land which passes to heirs if the owner die intestate. The amplesit estate or interest in land in that of a fee simple, which is also calied an absoiute fee, in contradistinction to a fee limited or ciogged with certain conditions. A fee simpie means the entire and absolute possession of If id, with full power to alienate it by deed, pift, or wili. It is the estate out of which other lesser estates are said to be carved; such as a fce tail (see Entail), which is limited to particuiar heirs, and subject to certain restrictions of use; and a base fee, which ceases with the existence of certain conditions.
Feeble-minded, a ciass of mentaily on the whole dangerous like the insane, though contributing largely to the criminai ciasses. The number of feebleminded in institutions in the United States in 1005 was 15,318 ; in $1910,20,-$ 731. The totai number in the United States has been estimated at 150,000 . The segregation of ail feeble-minded in coionies where under supervision they can do a little farming or other manuai iabor, is advocated, or their sterilization to prevent them from reproducing.

## Feeling (fei'ing), properly a synonym for sensation, or that

 state of consoiousness which results from the appiication of a stimuius to the extremity of some sensory nerve. It is the most universal of the senses, existing wherever there are nerves; and they are distributed over ail parts of the body, though most numerous on such part: as the finger tips and the lines where skin and mucous membrane pass into each other. This universai distribution of feeling is necessary, otherwise parts of the body might be destroyed without our knowledge. The structures which thus comprehend the impressions of contact are papillw or conical cievations of the skin in which the nerves end, and which are richly suppiied with blcodvesseis. The term fecling is also used for a general sense of comfort or discomfort which cannot be localized, and it is thus that tbe disturbances of internai organs often manifest themseives. In a fourative sense the term is also applied to a mental emotion, or even to a moral eonception; thus we may speak of a friendiy feeling, a feeling of freedom.Felaniche (fel-å-nčchā̀), a town in very ancient place, with Moorish remains. Pop. 11,294,

Felegyhaza
(fa'led-yll-ad), a town of Huntary, 06 milem 8. I. of Budapest, with large cattle-marketis and an extensive trade in corn, wine, and fruit. Pop. 33,081.
Felidæ (féli-ded, animala of the cat in which the predaceous instinets reach their highest development. They are among the quadrupeds what the F'alconide a re among the birds. The teeth and claws are tho principal instruments of the destructive enersy in these animaly. The incisor teeth are equal the third tooth behind the large canine in either jaw is narrow and slarp, and these, the carnassial or sectorial teeth, work against each other iike scissors in cutting flesh; the ciaws a re shenthed and retractile. They ail approach their prey steaithiiy, seize it with a apring, and devour it fresh. The species are numerous in Europe, Asia. Africa, and America, but none are found in Australia. The family comprehends the lion, tiger, ieopard, lynx, jaguar, panther, chetah, ounce, serval, oceiot, cat, etc.
Felix (fêliks), Antonids or ClauDIUS, procurator of Judea and freedman of the Emperor Claudius, is described by Tacitus as unscrupulous and profligate both in his pubiic and private conduct. It was before this Feiix that Paul's discourse (Acts rxiv, 25) was spoken. He was recalled A.D. 62, and narrowly escaped condemnation at Rome, on charges which the Jews had lodged against him.
Felix, Marcus Minucius, a distinembraced guished Roman lawyer, who fense of it instianity, and wrote a devius. The period when he flitied Octauncertain; but Jerome is probabiy right in placing him about A.D. 230 .
Fellah (fei'a), an Arabian word meaning 'peasant,' and used for the laboring class in Egypt. The feliahs or fellaheen constitute about threefourths of the population of Egypt, and are mostly the direct descendants of tho
oid Egyptians, aithough both their language and reilgion are now that of their Arabian conquerors. They llve in rude huts by the banks of the Nile, and have suffered much from overtaxation and oppressive ruie. See Eigypt.
Fellatah (fel-a'ta), Fulbe, or Fucan race of the ${ }^{\text {Ling, a remarkabie Afrl- }}$ locality of which is unknown, the origlnal is now widely diffused throughout the Soudan, where they are the predominaut people in the states of Futa-Toro, Futa Jalon, Bornu, Sokoto, etc. Though of the negro famlly, they have nelther the deep jet color, the crlsped hair, flat nose, nor thlek lips of the negro. In persin they are decldedly handsome, and mostly of a llght copper color. They are shrewd, Intelligent. and hrave, and are mostly Mohammedans. Their influence is contlnually spreading.

## Fellenberg (fel'en-burg), Pirivip

 educationallst, born in $1 \hbar 71$. Having devoted hlmself to the social and intellectual improvement of the peasantry, he purchased the estate of Hofwyl, and established sureessively an Institution for instructlag the children of the poorer classes, a seminary for children in the hlgher grades of life aud a normal school. The pupils were all trained to work in the fields or at the hench, and the product of their labor was sufficient to cover the expenses of their education. Fellenherg's scheme was ultimately so successfill as to attract attention and imitation in other countries. He died in 1844, but the institutions established hy him still exist in a modified form.Fellows (fel'óz), Sir Charles, travejer and antiquarlan, was born in 1799 at Nottingham, England: died in 1860. He explored the valley of the Xanthus in Lycia, and discovered the remains of the cities Xanthus and Teos. His principal works are: Travels and Researches in Asia Minor, and Coins of Ancient Lycia.
Fellowship (fel'ō-ship), an honoruniversities, especially those of Oxford and Camhridge, which entitles the holder, called a fellow, to an annual stipend for a certain period. Fellowships in the English colleges commonly range in value from $£ 100$ to as much as $£ 800$ a year, and the right to apartments in the coilege, and certain privileges as to commons or meals. In American universities fellowships are regulariy distlnctions conferred to enable worthy students to pursue advanced graduate work, producing incomes varying from $\$ 100$ to $\$ 1200$.

Felo de se (fe'io de as Latin, 'a felon in regard to himself'), in law, a person that, being of mound mind aud of the age of discretion, deliberately causes hls own death. Formeriy, in Fingland, the goods of such a person were forfelted to the crown, and his hody interred In an Ignominlous manner; but these penalties have been aboiIshed.
Felony (fel'un-i), in liw, includes generally all crimes below treason and of greater gravity than misremeanors. Formerly it was applled to those crlmes whlch entailed forfelture of lands or goods as part of the punishment prescribed.
Fels, Josepir, an Amerlcan aingle-tax reformer, born in Hallfax U. H., Virglinla, I ecember 16, 1854; dled February $12.3,1014$. He purchased 1300 aeres at Hollesley Bay, England, to form a lahor colony for inemployed, which has since heen taken over hy the government; also purehased $\mathbf{W} N$ acres at Maylands, Essex, Eingland, which was put under cultivation hy small holders; was a supporter of the Falrhope Slugle Tax Coiony at Mobile Bay, Mlabama, and another coiony at Arden, I elaware.

## Felspar

(fel'spár), Feldspar, a mineral widely dlatributed, and usuaily of a foliated structure, consisting of silica and alumina. wlth potash, soda, or llme. It is a principal constituent in all lgneous and metamorphic rocks, as granlte, gnciss, porphyry, greenstone, trachyte, felstone, etc. When in crystals or crystalline masses it is very susceptlble of mechanlcal divisicn at natural jolnts. Its liardness is a little inferior to that of quartz. There are several varlctles, as common felspar or orthoclase, the type of an acid group containing from 7 to 16 per cent. of potash; alblte and oligoclase, soda felspars the quantity of soda exceeding that of lime; labradorite and anorthite, lime felspars. the quantlity of lime in the latter amounting to 20 per cent.
Felt, a kind of cloth made of wool, or of wool and cotton united by rolling, heating, and pressure. The materials to he felted are carded and placed $\ln$ a machine, where they are kept wet and intimately mixed together by a process of heating. Pressure then unites the whole into a compact mass. The use of felt as a material for hata, tente. cloaks, etc., is very ancient. For hatmaking the fur of rahbits, beavere, raccoons and the wool of sheep are generally used. Felt, being a rood non-conductor of heat, is much used for roofing, sheathing boilers, hot water remervoirs, etc. The
poit for anch purponem is made from the coarmest woolen refuse from paper mills. Eeltre (fel'tra), a town in Northern Irom Venice. Ital, about 44 miles N. N. W. $24 \%$

## Felnoca (fe-luk' $n$ ), a luus, uarrow

 of light draught, and rigged with large lateeu maily. They also carry from elghit to twelve large ours. Thay arr comathon in the Mediterranean.Feme Covert lfem kuvert), in iaw, woman, in contradlsthetlou to a feme mole. or slugie woman.
Femern (fáméry), an isiand of l'russia, province of Schieswisliolstein, separated from the maluland by a slaiiow strait about 1 mile broad. The lalaud has a fertlle but marshy soll. The inliabitants are chiefly agriculturists and lishers. Pop. about 10,000 .

## Femgerichte, Feimashichic, or

 (füm'ge-rih-te: from Uid (ierman, fem, punishment, and ycricht, a court), crimiunt courts of (iernany in the middle HLes, which took the piace of the reguiar iulministration of justice (then failen into dreay), especiaily in criminal cases. These courts originated and had their Mhlef jurisdiction in Westphalia, and their proceedings were condincted with the inust profound secrecy. They seem to have been a survival of oid territorial jurisdictions whleh, on the general distraction and iawiessness prevalent after the tail of IIenry the Lion (118\%), acquired an extensive and tremendous nuthority. In process of time, however, they degenerated, and no ionger confined themselves to law and precedent, so that the secrecy in which they enveioped themspives only served as a cioak to their rriminai purposes. The flagrant abuse of their power brought about their fail. In 1401 various princes and cities of Germany, as well as the Swiss confederates, united in a league against thein, but their influence was not entireiy destroyed until an amended form of trial and penai indicature was introfined. The plast Femgericht was heid at \%eil in 15f8. The president of the secret trihunai was calied the Freigraf, and was generaliy a prince or count. His associates, who concurred in and executed the sentence, were cailied Freischofien. These were scattered through all the provinces of Germany, and recopnized one another hy certain signs and watchwords. They acknowlpdged the emperor as their superior, and for this reason generaiiy made him one of their number at his coronation at Aix-ia-Chapeile. The assembilew of the tribunal were open or wecret. The former were held by day is the open air; the latter by night, in a foreat or in concealed and subterranean nlaces. In these dixerent casen the circ: astances of judsment and the procens of trial were diaerent. The rrimes of whleh the seeret tribunal usurped copnizauce were heresy, worcery, rape, theft, rubbery, und murder. The nceusatlun wan unde by one of the Freinchiffen, who, without further proof, derdared upon outh that the aceused had committed the crinue. The aechsed was now thrice sumusoned to appear before the secret tribuual, and the citation was necretiy affixed to the duor of his dweiling or some nelshboring piace; the accuser remained unknown. It, after the third suminons, the accnsed did not appear, he was once more cited in a solemn session of the court, and if stili contumacious, whs given over to the Freischoffen. The first Freischoffe who met inim was bound to exccute the decree of the court. A dagger was left hy the corpse to show that it was not a murder, hut a punishment inflicted hy one of the Ereischoffen. That many judicial murders were perpetrated in thlis manner from revenge, interested montives, or maiice may justiy be imagined.
Femur (fémur), in vertebrate animals, the first hone of the leg, situnted next the trunk of the hody, and in man populariy cailed the thigh: ione.
Fen, a marsh or stretcin of wet boggy poois. Innd ofteu containing extensive is a specia Fens, or the Fen District, is a special term for a marshy district of Engiand, extending into the counties of Cambridge, Iincoin, IIuntingdov. Northampton. Norfolk, and Suffoik. A great part of the district is known as Bedford Level. Much of the land has heen reriaimed at vast expense. The soil of fen lands is generaliy hlack and rich to a depth of 2 or 3 feet, and with proper management in the matter of draining they wili produce heary crops of grass and corn. There are some fens around Boston, Mass.
Fences (fen'ses), continuous lines of posed hetween one prist artificially interposed hetween one portion of the surface of the land and another for the purpose of separation or exclusion. Live fences are made of hawthorn, holly, hox, beech, pte.; dra 1 fenees of stuty, wood, and in recent nmes of iron or wire. In agriculture fences are necessary both for restricting the tenant's owis animais to their pasture and for protecting his land from straying animals. The general
erection of fences on farms la one of the improvements of modern agricuiture.

## Fencibles (fenofibls), a surt of lo-

 cal milltla raiserl for defonse in case of invaxion, und unt Jabie to be sent to serve out of the country. The term volunteers is now used for this kind of service. The Ntate Fencibles of l'biladelphia is an old and hunorable bexly of loceal militla.Fencing (fensius), the art of attack rupler, no shicid helug used. It was iu Italy in the slateenth century that the skillful use of the suali sword first becane common. The art spread tu Spain and then to France, where, on account of the prevalence of dueling, it was hronght to a hlgh degree of development. The small sword or rapler (whirt was adopted for duellng) has a point, hut no edge, and therefore demands the highest degree of adroitness in its use. In the fencing achonis the instrument adopted for exercise is called a foil ; it has a guard of metal or ieather hetween the handle and h/ade, whicil is made of pllant steel and has a hutton at the end in place of a polnt. The parries are made with the weapon itself by opposing the forte of the foll (i. e., the Atrong part from the handle to the center) to the fecble of the adversary's foii (i.e., to the part from center to point): the upper part of the body to the right is defended hy the parry calied ticrce, the upper part to the left hy tile carte, and the lower part hy the scconde. In all parrying care must be taken that in covering the side attacked the other side is not too carelessly exposed to the enimy. After every parry a return should be made with rapidity and decision. The fencer should rely more upon his sword hand for protection than upon his agiiity of iac: yet he must be active on his logs so th: to advance, retreat. or iunge with effect. The knees should therefore he somewhat bent when the fencer is on guard, that he may be light and elastic in his movements. An attack may be made by the mere extension of the arin, or accompanied by a lunge. that ls , hy advancing the hody stepping forward with the right foot without moving the ieft. An engagement means the crossing of the hlades; a disengagement, slipping rour foil under the omponent's and then pressing in the opposite direction: riposte, the attack without pause by a fencer who has parried. Fencing with the hroadsword differs essentially from that with the foil, as the former has an edge as weil as a point, and is therefore meant to cut as well as thrust. Accord-
ing to the luntructlons of drillmantern there are seven cutn, with corresponding guards, and three thrusts. Cut one is a diagunal, downward cut at the left cheek of the adveraary; cut three is delivered with an upward slope at the left leg, and cut fire borizontaiiy at the right slde: cuts two, four, and ais attack the right cheek, right slde, aul right leg, respectively; aud cut seven is directed vertically at the head. Guards one and swo defend the upper portion of the body, the aword sioping upwards in an upposite directlon to the opponent's guarils: three and four protect the legs, the sword sloping downwurds: guards fire and sis defend the siders, when the sword is held vertically, puint dowawards; and guard seven pro tects the liead, the blade meeting the enemy's almost at a right angle. Sluce the introduction of the bayonet, bayinel exerclse has become an important department of fencing in the army. In handllag the bayonet defeusively the right foot in thrown hack and recelves most of the weigit of the hody, the knees are bint, the hayonet brought to a horizontal iomition level with the waist. This is the guard.' and accordlng to the parry to be made the weapon is carried either to the 'high' position, pointing upwards thom the breast, or to the 'low' position. pointing downwards from the hreast. In faking the offensive the right leg is atralght. ened, and the left bent forward, witinut moving the feet from their place. The hutt of the rifle is pressed firmly to the shoulder and points straight forward. In shortening arms" the hutt is carvied back to tie fuli extent of the right arm, while the inarrel (turned downwards) rests upon the left arm. The hody restis upon the right leg, whicin is sligitily hent, while the left is somewhat advanced.

## Fénelon (făn-lōp). Francois de

 Salignac de ta Motire, one of tite most venerahle of the French clergy: born in 1651 at the Chateall Fénelon, in Périgord, of a fumily illustrious in church and state. A gentle disposition, united with great vivacity of mind and a feehle and delicate constitution, characterized his youth. He was educated under the eye of his nncle, the Marguls of Fénelon, and afterwards at St. Sulpice. Paris. He took orders at the age of twenty-four, and distingulshed himself in the work of ennverting Protextants. In 1681 his uncle conferred on him the pricry of Carennac. Soon aftel he wrote his first w.ork. Traite de retucation des Filles. whlch was the banis of his future reputation. In 1689 Tamis XIV entrusted to him the pancatlon of his grandsons, the Dukes of Burgurdy,Anjou, and Berrl. In 1694 he was American people on which they hithcreated Archbishop of Cambray. A theo erto counted. At last, on March 5, logical dispute (see Quietism) with Bossuet, the virtual head of the French Church, terminated in his condemnation by Pope Innocent XII, and his banishment to his diocese by Louis XIV. Fénelon submitted without the least hesitation, and thenceforward lived contentedly in his diocese, sustaining the venerable character of a Christian philosopher, and scrupulously performing his sacred duties. He died in 1715. He left numerous works in philosophy, theology, and belles-lettres. The most celebrated is Lez Aventures de Télémaque, in which he endeavored to exhibit a model for the education of a prince. It was commonly taken for a satire on the reign of Louis XIV, though nothing, prohably, was further from the mind of Fénelon.
Fenians (fári-anz), a name usually derived from Fionn or Finn, the name given to a semi-mythical clans of Irish warriors famous for their prowess. The name has heen assumed in recent years by those Irish who formed a brotherhood in their own country and in America, with the intention of delivering Ireland from the sovereignty of England, and establishing an Irish republic. Ahout the end of 1861 the Fenian Brotherhood was organized in the United States: and its chief council, consisting of a 'head-center,' John O'Mahony, and five other members, which had its seat at New York, soon had branches in every state of the Union, while at the same time large numbers joined the cause in Ireland, where James Stephens was 'head-center.' The close of the American Civil war, when large numbers of trained Irish soldiers who had taken part in the war were released from service, was thought to be a convenient time for taking some decisive steps. Two risings were planned in Ireland, but they were hoth frustrated by the energetic measures of the British government, the first. in September, 1865, by the seizure of the office of the Irish People, the Fenian journal puhlished at Dublin, in which papers were found which revealed to the government the secrets of the conspiracy, and which led to the capture of the ringleaders. Luby, O'Leary, O'Donovan Rossa, and others; the second, in Fehruary. 1866, was as sperdily sumpressed by the suspension of the Habeas Corpus Act in Ireland. An invasion of Canada from New England, attemnted in the same year, failed as miserably as the attempt in Ireland, and convinced the Irish that they could not expect the aid from the

1867, the long-prepared insurrection broke out almost simultaneously in the districts of Dublin, Drogheda, and Kerry. The number of insurgents in the field, however, did not exceed 3000 , and though they burned some police stations, they nowhere faced the troops sent after them. About the same time some forty or fifty Irish-Americans landed in a steamer near Waterford, but soon after fell into the hands of the police. In 1870 and 1871 two raids were again made on Canada, but both were ridiculous failures, the first being repulsed by the Canadian Volunteers, and the second suppressed by the United States government. The modern Irish nationalist party is known as the Sinn Fein (q. v.).
Fenne, Gerge Manville, an English author, horn at Pimlico in 1831 ; died in 1909 . IIe became a successful sketch writer, following this up with a large numher of boys stories, some of them very successful. He also wrote numerous novels and Christmas stories, with several dramas and farces, heing among the most voluminous of modern writers.
Fennec (fenek; Caniszerda), a small animal allied to the dog and fox, and sometimes called the Sahara fox, being a native of that region. It lives on birds, jerboas, lizards, dates, etc., hurrows with great facility, and is easily tamed. It is fox-like in appearance, and is remarkable for the grea size of its ears.
Fennel (fen'el), a fragrant plant, Foniculum vulgare, cultivated in gardens, belonging to the nat. order Umbellifere. It bears umbels of small yellow flowers, and has finelydivided leaves. The fruit, or in common language the seeds, are carminative, and frequently employed in medicine.-Giant fennel is a popular name for Ferüla communis, which attains sometimes a height of 15 ft .

## Fenugreek

(fên ù-ġrḕk), a leguminous plant. Trigo. nella Fonum gracura, whose hitter and mucilaginous seeds are used in veterinary practice. It is an erect annual, about 2 ft . high, a native of the south of Europe and of some parts of Asia.
Feodor (fa'o-dor), the name of three Russian princes-Feodor 1, son of Ivan the Terrible, reigned from 1584-98. He was a feeble prince, who allowed himself to be entirely governed hy his brother-in-law, Boris Godunov. With him the Russian dynasty of Rurik became extinct.-Feodor II, son of

Boris Godunov, reigned only for a short time in 1605.-F'EODOR III, the son of Czar Alexis, reigned from 16ī6-82, warred with the Poles and Turks, and, hy the peace of Baktschisarai, obtained possession of Kiev and some other towns of the Ukraine.
Feodosia (fe-a-do'sẽ-ya; formerly in the southeast of the Crimea. From 1266 to 1474 this town was in possession of the Genoese, in whose hands it hecame the seat of an extensive commerce with the East, and is said to have had a population of 80,000 . It is still one of the most important towns in the Crimea. Pop. 27,238.
Feoffment (fei'ment), in law, that erty in land where of conveying proplivery in deed, that is, actual delivery of a portion of the land, as a twig or a turf; or when the parties, being on the land, the feoffer expressly gives it to the feoffee. As the statute of uses has introduced a more convenient mode of conveyance, feoffments are now rarely used except by corporations. See Seisin, Selzin.

## Ferg naturæ

(fé'rè na'tu-rē; 'of a wild nature'), the name given in the Roman law to heasts and hirds that live in a wild state, as distinguished from those which are domite natura, that is, tame animals, such as horses, sheep, etc. The right of property in such animals exists only as long as they are in a state of confinement or within the houndaries of the possessor's lands, unless it can be proved that any special animal had heen trained to return to its master's property.
Fer-de-lance (fèr-de-1iins), the Craspedocephălus lance-headed viper or tus, a serpent common in Brazil some of the West Indian Islands, and one of the most terrible memhers of the rattlesnake family (Crotalidæ). It is 5 to 7 ft . in length. The tail ends in a horny spine which scrapes harshly ngainst rough ohjects but does not rattle. Its hite is almost certainly fatal.

## Ferdinand (fér'di-nand), German

 NaND I, brother emperors:- $1 \dot{\mathbf{V}}$ FERDIat Alcala in Spirles $V$, and horn In 1522 he receira. 10th March, 1503. of the house of Hapshurg from the emperor, to which were afterwards added the kingdoms of Hungary and Bohemia in right of his wife Anna of Hungary. On the abdication of Charles he succeeded to the imperial tila Fe died in1564.-2. Inmoinand II was born in

1578, and succeeded his uncle Matthias as Emperor of Germany in 1619. He was of a dark and reserved character, and had been brought up hy his mother and the Jesuits in fierce hate of Protestantism. The result was a quarrel with his Bohemian suhjects, who openly revolted and offered the Bohemian crown to the Elector Palatine, a step which led to the outhreak of the Thirty Years' war (1619). (See article nnder that head.) With the help of the Catholic League and John George, Elector of Saxony, he was placed firmly on the throne of Bohemia, where he relentlessly persecuted the Protestants. He died in 1637.-3. Ferdinand III, son of the preceding, was horn in 1608, and succeeded his father in 1637. He had served in the Thirty Years' war and had seen the miseries which it occasioned and was reluctant to continue it. There were eleven years more of it, however, before the Peace of Westphalia was concluded in 1648. Ferdinand died in 1657.
Ferdinand V, King of Aragon, the who received from the pope the title of the Catholic, on account of the expulsion of the Moors from Spain, was the son of King John II, and was horn March 10, 1453. On the 18th of Octoher, 1469, he married Isahella of Castile, and thus brought about that close connection between Aragon and Castile which became the basis of a united Spanish monarchy and raised Spain to pre-eminence amongst European states. After a hloody war of ten years they conquered Granada from the Moors (1491) i hut the most brilliant event of their reign was the discovery of America, which made them sovereigns of a new world. (See Columbus.) This politic prince laid the foundation of the Spanish ascendency in Europe by the acquisition of Naples (1503), and hy the conquest of Navarre (1512) : but his policy was deceitful and despotic. He instituted the court of the Inquisition at Seville in 1480, and, to the great injury of Spanish commerce, expelled the Jews (1492) and Moors (1501). He died in 1516.
Ferdinand I, of Bourbon, King of (pris the Two Sicilies (previously Ferdinand IV of Naples). horn January 12. 1751, was the third son of Charles 1II. King of Spain, whom he succeeded in 1759. on the throne of Naples, on the accession of the latter to that of Spain. In 1768 he married Maria Caroline Louisa, daughter of the Empress Maria Theresa, who soon acquired a dectifed influence over him. After the death of Iouis XVI Ferdinand joined the coalition against France, and
took part in the seneral war from 1703 to 1796 ; but in 1799, after the defeat of the Neapolitans under Gen. Mack, the French took possession of the whole kingdom, and proclaimed the Parthenopean Repuhlic. The new repuhlic did not last long and Ferdinand returned to power in 1800. Six years later he was again driven from Naples hy the French. The Congress of Vienna finally re-estahlished Ferdinand in all his rights as King of the Two Sicilies in 1814, while Naples was still occupied hy Murat. But after the flight of the latter in March, 1815, Ferdinand once more entered Naples. In 1820, in consequence of a revolution, Ferdinand was ohliged to swear to support a new and more liberal constitution, but with the help of Austria he soon set up a despotic monarchy. He died in 1825, and was succeeded by his son, Francis I.
Ferdinand II, grandson of the prethe two Sicilies, who succeeded his father Francis 1, in 1830, was born in 1810 and died in 1859. He was nicknamed Bomba, from the bomhardment of his palace in 1849. He was succeeded by his son, Francis II.

## Ferdinand,

King of Roumania, was born in 1865 and suc ceeded to the throne of Roumania in 1914, following the death of his uncle, Charles I, a few months after the outbreak of the Great war. Although a Hohenzollern, his sympathies were with the Allies, and in 1016 he declared war on the Central Powers.
Ferdinand I, Czar of Bulgarin, in 1861. Prince Ferdinand was elected by the Bulgarian parliament as the successor of Alexander of Battenhurg in 1887 and assumed the title of Czar in 1908, when Bulgaria proclaimed her independence from Turkey. He was an active leader in the Balkan wars and in the European war, which Bulgaria entered on the side of Germany in 1915.
Ferdinand VII, King of Spain, IV, and of Maria Louisa of Parma, born in 1784; ascended the throne in March, 1808, when a popular rising forced his father to abdicate in his favor. A month later he himself abdicated in favor of Napoleon, who conferred the crown on his hrother Joseph. Ferdinand returned to Spain in March, 1814. His arbitrary conduct caused an insurrection in 1820. which was at first successful, but Louls XVIII of France having sent an army to his aid, his authority was once more made ahsolute in Spain. Having no sons, he abolished the
act of 1713 by which Ihilip $V$ had excluded women fron the throne of Spain, and then left his crown to his daughter Isabella to the exalusion of his brother Don Carlos. It was during the reign of this ling that the Spanish colonies in America broke away from the mother country.

## Ferdinandea (ferdi-nande-a). See Graham Island.

Fère (tar), ILA, a town of N. E. France, department of Aisne, at the contluence of the Serre and the Oise, a fortress of the second rank. Pop. 3083.

Ferentino (fā-ren-tếnō), a town in $\begin{gathered}\text { Central } 1 \text { italy, } 6 \text { mile }\end{gathered}$ northwest of Frosinone. It has remains of ancient walls, huilt of hewn stone without mortar. Pop. 12,270.
Feretory (tur'or a kind of hox raade of gold or other metal, or of wood variously adorned, and usually in the shape of a ridged chest, with a roof-like top, for containing the relice of saints. It is borne in processions.
Ferghana (fér-gă'na), a province Turkestan, formed is 1878 out quered khanate of Khokand. It consists mainly of a valley surrounded by high ranges of mountains and traversed by the Sir-Darya and its tributaries; area, 30.000 sq. miles. The climate is warm, and the soil in part fertile, but a considerable portion of the country is desert. Pop. 1906 est., $1,798,500$. Khokand is the capital.
Fergus Falls, a city, capital of Otter Tail Co., Mnne suta, on the Red River of the North It has flour and woolen mills, ironworks. and other industries and a State hospital for the insane. Pop. 6887.
Ferguson (fér'gā-s on), Adam, a Scottish historical and political writer, born in 1724; died in 1816. In 1757 he succeeded David Hume as keeper of the Advocates Library, Edinhurgh, in 1759 was made professor of natural philosophy in the university, and in 1764 of moral philosophy. Ife resigned his chair in 1784. Among his chiel works are an Essay on Civil Society (1767), Institutes of Moral Philosophy. (17日9), History of the Roman Republic (1783), etc.
Ferguson,
James, an eminentexperimental philosopher,
mechanist, and astronomer, was boin of poor parents at Kcith, in Banffshire, in 1710. While a boy tending sheep he acquired a knowiedge of the stars, and constructed a celestial globe. With the help of friends he went to Edinburgh, where he studied mathematics and drawing, making such rapid progress in the latter that he was able to support himself by taking portraits in miniatnre. In 1743 he went to London, where he painted and gave lectures in experimental philosophy. Amongst his bearers was George III, then Prince of Wales, who afterwards settled on him a pension of f50 a year. He died in 1776. His principal works are: Astronomy Eaplained upon Sir Isace Nevoton's Principles (1756) ; Lectures on Mechanics, Hydrostatics, etc. ( 1760 ), and Select Mechanical Exercises (1773).
Ferguson Bequest, a Scottish from John Ferguson, a native of Irvine, who died in 1856, leaving about 5500,000 for philanthropic purposes. Of this, $£ 400,000$ were set apart as a fnnd for aiding in the erection of chnrches and schools, suppiementing the income of hiuisters, missionaries, and teachers of schools, and maintaining public libraries. Only quoad sacra Established Churches, Free, United Presbyterian, and Congregational Chnrches share in the benefits. The Ferguson Scholarships in ciassics, mathematics, and philosophy respectively, one in each snbject annnally open to competitors from all the Scotch nniversities, were also founded by him.
Fergusson (fer'guson), James, a born at Ayr in 1808. He went out to India as partner of an important commercial house, but after some years retired from business to devote himself to the stndy of architecture and early civilizations. In 1845 he published Illustrations of the Rock-cut Temples of India; in 1849, 4 Historioal Enquiry into the True Principles of Beauty in Art; in 1851, The Palaces of Nineveh and Persepolis Restored; in 1855, Illustrated Handbook of Architecture; in 1862, History of the Modern Styles of Architeoture, a sequel to the handbook, both being afterwards combined in History of Arehitecture in All Countries (3 vols. 1865-67), and completed by a Hintory of Indian ind Wastern Architecture (1876). He aiso wrote un the site of the Holy Sepnichre at Jerusalem:Tree and Ser pent Worship: Rude Stone Monuments in All Dountries, etc. He died in 1886. Fergusson, Robers, Scotish poet, $0-\mathrm{U}-3$
was horn at Edinburgh. October 17, 1750. He was educated at St. Andrews University, aud became clerk to a writer of the signet in Edinburgh. He wrote poems, of which those in the Scottish dialect have genuine poetic excellence. Social excesses, into which he was led, impaired his feehie constitution, and brought on disease, which terminated his existence in 1774. He was haried in the Canongate Churchyard, Edinhnrgh, where Robert Burns erected a monument to the memory of his kindred genius, to whom he owed suggestions for several of his own poems.
Ferish'ta, more properly Mohammed Kasim, a Persian historian, born at Astrabad about 1500. He went to India with his father, and was for some time the iutor of a native prince. He wrote a history of the Mohammedan Power in India, which is the best yet written on the period which it embraces. He died ahont 1612.
Fermanagh (fer-mänd), an inland county in Ireland, in the province of Ulster; area, 714 sq. miles. The county is divided lengthwise into two nearly equal portions by Longh Eine, and exhibits a succession of abrupt eminences of slight elevation, hat is mountrinous towarde its wentern boundary. The soil 3 variable, and not remarkably fertile. The mannfactures are unimportant. Politically it is divided into North Fermanagh and Sonth Fermanagh, each sending one memher to Parliament. Pop. 65,430.
Fermentation (fer-men-ta'shnn),
the spontaneous conversion of an organic substance into new compounds by the inflnence of a ferment, these ferments being apparently vegetable organisms of extremely simple type, which by their life, growth, and increase set np the changes. There are several kinds of fermentation: 1st, the vinous or alcoholio fermentation-the most important from an economic and indnstrial point of view-in which the sugar contained in liqnids is converted into alcohol, carhonic acid, and glycerin: 2d, the acid fermentation, in which spiritnons linnors become acid, producing acetic acid: 3d, the putrid fermentation, by which organic snbstances nndergo varions aiterations according to the nature of the substance, and generally set free phinnnous gases. Fermentation is also deacribed as lactic, hntrric, etc., acconding to the nature of the results. The general course of alcoholic fermentation. as seen-in brewing and wine making, is an foilows: After a lapa of fime. which may vary much according to the tempen
ature and other conditions, the liquid acquires a turbid appearance, there is a slight disengagement of gas, which increases till the liquid begins to effervesce, its temperatnre rises to a higher point than that of the surrounding air, and its surface becomes covered with a frothy matter known as yeast. The effervescence becomes more and more vioient till a ciimax is reached, when its intensity gradually diminishes, and the disengagement of gas ceases. The yeast then setties down at the bottom of the iiquor, which is now entireiy deprived of its sugar, and has the characteristic taste and effects of 'fermented iiquors.' The rationaie of this process has long been the subject of much discussion, but there can be little doubt that it is due to microscopic organisms (the jeast fungus) Which lire and muitiply in the iiquid in which they cause fermentation. And the fermentation may be checked or aitogether prevented by anything which prevents the growth of the fungus, for exampie by the presence of any antiseptic substance such as suiphuric acid, carbolic acid, etc., which acts as a poison on the fungus; or by the iiquid being either too hot or too cold (beiow $50{ }^{8}$ or above $86^{\circ}$ Fahr.). Fermentation dif. fers in kind according to the nature of the substance which produces it, and each kind is the special production of a certain species of organism, no two of which wiil ever pass into each other. Lactic fermentation, such as occurs in miik that has been allowed to stand, is caused, according to Pasteur, by the development in tile mass of a microscopic fungus, Penicillium glaucum, the sugar of the milk being converted into iactic acid. The acid or acetous fermentation occurs in liquids which have aiready undergone vinous fermentation. When exposed to the atmosphere such iiquids become sour, and vinegar is produced. This change is probabiy due to the growth of a fungus, Mlycoderma acêti (the vinegar piant). Viscous fermentation often accompanies vinous fermentation, making the wine thick and viscons so that it runs out in threads when poured. It ocenrs at temperatures ranging from $68^{\circ}$ to $104^{\circ}$ Fahr. Butyric fermentation follows on lactic fermentation when the latter is allowed to proceed after lactate of lime has been formed. It is believed that putrefaction is only a speries of fermentation, determined by ferments of the bacterial class. As it is commonly maintained that fermentation may be set up by the necemsary germs entoring the liquorm from the air in which they float the theory of fermentation has a
ciose connection with that of the serm theory of disease. See Germ Theory. Fermented Liquors (fer-ment ed), alcoholic beverages obtained by the fermentation and ciarification of saccharine fuids. These have been in use from the earliest times. Among the commonest kinds are voine made from the juice of the grape; ale or beer made from an infusion of malt; cider, from appies; mead, from honey; kumiss made by the Kirghiz from mares; milk; chica from maize by the South American Indians, etc. From all fer mented iiquors a spirit may be extracted by distillation.
Ferments (fér'ments) certain snbstances which, under particuiar conditions, excite fermentation: Some are of inorganic nature, but the most important are organic. See F'ermentation.
Fermu (fer ${ }^{\prime} m$ of), a town of Middle Italy, province of Ascoil, on a height about' 4 miles from the Adriatic, on which is its port, Porto di Fermo. Pop. 16,577, commnne 20,542 .
Fermoy (fer-moi'), a town in IreBiackwater. It contains Fermoy Coiiege and St. Coiman's Roman Cathoiic College, and has barracks accommodating 3000 men. It has large flourmilis and a considerable trade in corn. Pop. 6454.

Fernando de Noronha (fer-nan'forming one of amalin the Atlantic name about 210 miies from the cosst of Brazil, to which it beiongs, and by which it is used as a penal settlement. It is defended by forts. The group is essentially voicanic in character; the vegetation of the tropical American type, remarkable for the immense nnmber of creepers which festoon the trees. A scientific expedition was sent out by the British Government in Juiy, 1887, to investigate the group. Fernan'do Po, a spanish fsiand in off the west 0 , the Bight of Biafra, off the west coast of Africa, about 20 miies from the mainiand. It is of voicanic origin, and is of an oblong form, broadest at the sonth extremity, 85 miles long and 22 miles broad. It is traversed from north to sonth by a ridge of mountaine terminating in a magnificent cone, 11,040 feet high, called Clarerice Peak. The island is picturesquely covered with foreats and luxuriant vegetation, chiefly palms and the bombax or silk-cotton trea. There are several harbore in the island. The population numberu about 20,000 , and is composed partly of a mir.
ture of negroes, Portugnese, and other Europeans, partly of native-born negroes. The capital is Clarence Town.
Termey (fer-na), a frontier village in France, dep. Ain, $11 / 2$ miles north of Geneva, celebrated as the chief residence of Voltaire from about 1760 to 1778. Pop. 1163.

Ferns (Filices), a natural order of cryptogamous or flowerless plants, forming the highest group of the acrogens or summit-growers. They are leafy plants, the leaves, or more properly tronds, arising from a rhizome or rootstock, or from a hollow arborescent trunk, and being circinate in vernation. a term descriptive of the manner in which the fronds are rolled up before they are developed in spring, having then the appearance of a bishop's crosier. On the veins of their lower surface, or their margins, the fronds bear small vessels named sporangia, containing spores. These spore-cases are arranged in clusters, named sori, which are either naked or covered with a layer of the epidermis, which forms an involucre or indusium. When the spores germinate they produce a cellular structure of a leafy description, called the pro-embryo, or prothallus, npon which are developed organs which have received the names of antheridia and archegonia. When produced npon the prothallus these organs do not immediately give origin to a germinating spore, but from their mntual action proceeds a distinct cellular body, destined at a later period to develop into a fruitbearing frond. Ferns have a wide geographical range, but are most abundant in hnmid temperate and tropical regions. In the tropical forests the treeferns rival the palms, rising sometimes to a height of 50 or 60 feet. Ferns are very abnndant as fossil plants. The earliest known forms occur in Devonian rocks. Various systems of classification for ferns have been proposed. At present the order is nsually divided into six or eight sub-orders or tribes distinguished by differences in the structure of the sporangium. The generic characters are founded on the position and direction of the sori and on the venation. The largest division is that of the Polypodiaces, to which belong the bracken, the maidenhair, the hart's-tongue fern, the ladyferm, etc. The royal fern, however. belongs to the Osmandacere. A few of the ferns are used medicinally, mostly as demulcents and astringents. The specien known as male fern acts to expel tapeworms. Some ferns yield food. Pteris ecoulente in the edible bracken of New Yealand.

Ferozepoor. See Firozpur. Ferrara (fer-rlira), a city of N. Italy, capital of the province of same name, 26 miles N. N. F of Bologna, in a fertile bnt unhealthy plain. It is a well-built town with many remains of the splendor and commercial prosperity it enjoyed under the honse of Este, from the fonrteenth to the seventeenth century. The old ducal palace, the cathedral, the public picture gallery, the honses where Ariosto and Guarin lived, and a monument to Savonarola, who was born here, are among the many interesting monuments which Ferrara contains. Pop. 32,968 . The province was formerly a duchy of Italy held by the House of Este as a papal fief from 1471 till 1547, when it fell to the pope. (See Este.) At the unification of Italy under Victor Emmanuel in 1860 it gave its name to a province bounded on the $N$. by the Po, e. by the Adriatic, 8. and W. by Ravenna, Bologna, and Dodena; area, 1100 square miles ; population, 271,726 . Ferrari (ter-ril're̊), Gruseppre, an Italdied, 1876. Am philosopher, born, 1812; are: Le Filosofia della Rivoluzione, and Corso d'is toria degli scrittori politioi Italio ana.
Ferreira (fer-ái-ra), Antonio, a Portuguese poet, founder of the classical school, born at Lisbon in 1528; died in 1560. His Ines de Castro was one of the earliest tragedies in Enrope.
Ferrel, Wuliam, an American me(now, teorologist, born in Bedford (now Fulton) county, Pa., graduated at Bethany College, Va., in 1844. He was especially appointed to the U. S. Coast Survey for tidal observation, 1867-82, and was conpected with the U. S. Signal Service. He invented the maxima and minima tide-predicting machine, and his meteorological attainments attracted attention both in America and abroad.
Ferrel's Law, a meteorological gener alization propounded by William Ferrel, that the deflecting force exerted on the winds by the rotation of the earth is inversely proportionate to the velocity of motion. This force deflects the winds in the northern hemisphere to the right and those of the southern hemisphere to the letr.
Ferrer, J. GUamia Fianioisoo, teacher and anarchist, born at Abella, Barcelona province, Spain, in 1859. The son of a poor farmer, he re ceived the education of a peasant, yet early showed unusual mental power. He imbibed radical ideas, and at the ase of 14 gave deep offense by drinking the

Wine intended for sacramental purposes. At 26 he took part in an ingurrection fifteen ce mir refuge in Paris. After firteen sears he returned to Spain and settled in Barcelona. He had been enriched hy a legacy of about $\$ 200,000$, and with the aid of this he equipped a press for the printing of works of anticlerical literature. He also became $n$ teacher and one of extraordinary ability. He founded what he called the Modern School, in which the most liberal and anarchistic sentiments were taught. This led, on September 1, 1909, to his arrest on the charge of being an instigator of the revolutionary outbreak in Barcelona at that time. He was hastily and secretly tried, adjudged guilty, and executed on the 13th. This act was imputed to the hatred of the clergy, and excited indignation among the apostles of free thought
ihroughout Europe and America. throughout (fe-rine and America.
Ferrero (eoridir) Gualizimo, an letters, born in 1872 at Portici, near Naples. He has lectured widely in Eu rope and America, and his works are well known, especially his Greatness and Decline of Rome. This throws new light on Roman history and points out striking analogies hetween Roman and modern conditions. Other works are Symbols and The Female Offender (in collaboration with Lomhroso).
Ferret (feret; Putorius or Mustila closely allied to the parnivorous animal inches in length, of a pale-yellow color

> Ferret (Mustèla furo).
with red eyes. It is a native of Africa, but has been introduced into Furope and America. It cannot bear cold or subsist, even in France, except in a domestic state. Ferrets are used, in catching rahhits, to drive them out of their holes, and to drive away rats in the same manner.
Ferrier (ferifer), Dapid, a Scotch in 1843. physician, born at Aberdeen King's College, London a professor in remearches in the brain ind succe His
localizing ite functions attracted great attention, and our knowledse of the conditions of hrain disease, epilepsy, etc., are largely due to his labors. His discoveries are told in The Functions of the Brain (1876), and The Localization of Cerebral Diseate (1879).
Feriier, James Fredmaick, a Scotch hurgh in 1808; died ot born at Edin1864. After studying at Edinhurgh and Oxford he was admitted to the Scottish har in 1832, but gave his attention more to literature than to law. His contrihutions to Blackroood's Magazine, then at the height of its fame, brought him into notice and in 1845 he was appointed to the chair of moral philosophy at St . Andrews. His chief work is the Institutes of Metaphyaic, in which he attempts to huild up in a rigorously logical and deductive method a complete system of knowing and being.
Ferris Wheel,
Tue exhibited at Fair was a mar the Chicago World's ture Its diometrahle engineering feature. Its diameter was 270 ft ; its circumference 825 ft . Its highest point was 280 ft . The axle was a steel har, 45 ft . long, 32 inches thick. Fastened to each of the twin wheels was a steel huh 16 ft . in diameter. The 36 cars on the wheel each comfortahly seated 40 persons, wheel and passengers weighing 1200 tons. The two towers at the axis supporting the wheel were 140 ft . high. The motive power was a 1000 horsepower steam engine under the wheel. By the Ferris wheel the almost indefinite application of the tension spoke to wheels of large dimensions has been vindicated, the expense being far smaller than that of the stiff spoke. It has heen imitated in later exhihitions. Its huilder, George W. Ferris, an ahle , engineer, was born at Galeshurg, Illinois, in 1854; ${ }^{\text {; }} \mathbf{d i e d}$ in
1896 .
Ferro (ferfrof), or Hierro, the most southwestern and smallest of the Canary Islands, ahout 18 miles long and 9 miles hroad. This island having once been supposed the most western point of the Old World, was formerly employed hy all geographers to fix their first meridian, and the longitude reckoned from it. As first meridian its conventional place is $20^{\circ}$ w. of Paris and $17^{\circ} 40^{\circ} \mathrm{W}$. of Greenwich. It is still accasionally used hy German geographers.
Ferrocyanic Acid. See Prusio Ferrol (fer for-nolit a fortified seaport of Northern Spain, in the province of and about 12 miles N. in the
town of Corufa, of the town of Corufia, on a fine inland hay,
connected with the sea by a channel so narrow as to admit oniy one ship-of-theline at a time. The chief navai arsenal of Spain, established on a magnificent scale is here. The manufactures consist chiefly of swords, cutiery, and military and navai equipments. Pop. 25,281.
Ferry (feri), a particuiar part of a where a boat or other conveyance plies to carry passengers or goods from the one side to the other. The right of estabiisisiug a pubiic ferry is usually the prerogative of a government or legisiature. The person who has a right of ferry is required to keep a boat or boats suitabie for the conveyance of passengers, to charge a reas onable fare, and to provide the requisite land-ing-places on either bank of the river. No one wili be aiinwed to establish a rival ferry so near the original one as to destroy cs custom. Common row-ing-boats, sail-ing-boats, large fit-bottomed
river, iake, arm of the sea, etc.,
successful, though it led to his renignation ; aguin premier in 1883 his unfortunate expedition to Tonqnin forced him to retire from office. On Feb. 24, 1893, he was eiected president of the senate, but died March 17 of the same year.
Ferry, Thomas White, Senator, was Eerry, born at Mackinaw, Michigan, in 1827; died in 1890. He was elected to the Michigan legislature in 1850 , served in the Honse of Representatives at Washlington 1864-71, and in the Senate 1871-83. As president pro tem. of the Senate he became acting Vice-President of the United States on the death of Vice-President Wilson in 1875.

## Fertè-sous -

## Jouarre

(fer-ta-so zhö-ar), a nown of France, department of Seine et-Marne. 37 miles E. N. In of Paris. Pop. 4804.

## Fessenden,

William Pitt, an Amer ican statesman and financier, born at Boscawen, N.' H., in 1806; died in 1809 . His anti-slavery views se cured his election to the Senate in 1854, and his speeches brought him fame. When the war broke out he became head of the Finance Committee, and in 1864 became secretary of the treasury. He returned to the Senate in 1865 , becoming the recognized leader of the Republican party, but brought on himself undeserved un: popularity by opposing the impeachment

## of President Johnson (1868). <br> Festiniog (fes-tin'log), a town of N.

 important slate quarries. Pop. 9682 . Festivals (fes'ti-valy), or Fexasta, cepconsecrated tain days or longer periods either in honor of some god, or in commemoration of some important event. Snch festivals have prevailed amons nearly all nations, both ancient and mod. ern. Among the Jews there are six festivals prescribed in the Scriptures (Lev., Ixifi), and thence called sacred feasts. These are the weekly feast of the Sabbath; the Passover, or Feast of Unleavened Bread ; Pentecost, or the Feast of Weeks; the Feast of Trumpets or New Moon; the Feast of the Atonement; and the Feast of Tabernacles. After wards the Feast of Purim (to commemorate the failure of Haman's machina. tions) and the Dedication of the Temple (after its profanation by Antiochus Epiphanes) were added. Among the ancient Greeks were celebrated the Dionysia; the Eleusiania; the four great national games, the Olympic, the Igthmian, Nemean, and Pythian games. Buteach community and city had its own
local fentivals in addition, such as the Panathensea, held by the tribes of Attica, whome union it was intended to celebrate. Among Roman festivals were the Saturnalia, Cerealia, Lupercalia, and others.

The fentivals of the Chrintian Church owe their origin partly to those of the Jewish religion, much as Easter, which corresponds to the l'assover of the Jews, and Whitsuntide, which corresponds to Pentecost; partly also to pagan fentivals, which the Christian hierarciy, finding it impossible to abolish them, applied to Christian uses by converting them into festivals of the church. These festivals are divided into movable and immovable; the former those which in different yearn fall on different days, the latter those which always fall upon the same day. The chief of the movable feasts is Easter, the one on which the position of all the others, except that of Advent Sunday, depends. (See Easter.) Septuagesima Sunday falls nine weeks before Easter, Sexagesima Sunday eight weeks, Quinquagesima Sunday seven weeks, the first Sunday in Lent six weeks, and Palm Sunday one week before Easter. Rogation Sunday falls five weeks, Ascension Day forty days, Whitsunday seven weeks, and Trinity Sunday eight week after Easter. Ash Wednesday is the Wednesday before the first Sunday in Lent, Maundy Thursday the Thursday, and Good Friday the Friday before Easter, and Corpus Christi is the Thursday after Trinity Sunday. Advent Sunday is the nearest Sunday to the feast of St. Andrew, November 30, whether before or after. The chief immovable feasts are the feast of the Circnmcision on the 1st of January, Epiphany on the 6th of January, the Annunciation of the Blessed Virgin on the 25th of March, the Transfiguration of Christ on the 6th of Augnst; the feast of St. Michael (Michaelmas) and All the Angels on the 29th of September, the feast of All Saints on the 1st of November, the festival of All Souls on the $2 d$ of November, and Christmas Day, or the Feast of the Nativity of onr Lord, on the 25th of December. The festivals relating to the Virgin Mary in the Roman Catholic Church inclinde: the feast of the Annunciation; the Purification of the Virgin, or Candlemas; the feast of the Visitation of Onr Lady; the feast of the Immaculate Conception; the Na tivity of the Virgin; the Martyrdom of the Virgin Mary; the Assnmption of the Virgin (Aug. 15) ; and several smaller ones. The worship of the cross introduced two festivals: that of the Invention of the Holy Croas ( May 8), and that of
the Draltation of the Croms (September 18). The maintis daye that are still held as fentivals, and-have religious services connected with them in the Chnrch of England, are called red-letter days, becanie they nsod to be printed with red lettere in the chnrch caiendar; while the eainte daye which were atill retained in the calendar at the Reformation, but had no services connected with them, are called black-letter days, because they were printed in black letters.
Festoon (fes-tðn'), in architecture, (same as Encarpus.
Festus (fes'tns), Porcius, a Roman successor of Feiix. The Apostle Paul appeared before him, and was sent by him to Rome at his own request.
Festus, Sextus Pomperus, a Roman second or grammarian belonging to the thor of an abridgment of a work by Verrius Flaccus called De Verborwm \&ignificatione, a kind of dictionary, which is very valuable for the information it contains about the Latin language. The work of Festns was still further abridged in the eighth centnry by Paulus Diaconus. The one MS. of the orisinal work of Festus is now at Naples.
Fétis (fâtexs), Fraxcois Josspr, a writer on music, born 1784; died 1871. IIe was educated at the Paris Conservatoire; was professor there from 1818 to 1833, when he was appointed director of the Conservatoire at Brasseis. Among his works may be mentioned Traité de la Fugue (1825) Biographie Universelle des Musiciens (1835-44) ; and Traité Complet de la Théorie et de la Pratique de l'Harmonie. His musical compositions incinde operas, sacred music, and instrumental pieces for the piano and the violin.
Fetish, or Fexici (fétish), a word first brought into use by De Brosses, in his work Du Culte des Dieum F'étiches (1760), and derived from the Portuguese feitico, magic, a word which expressed the Portuguese opinion of the religion of the natives of the west coast of Africa. The Portuguese gave this name to the idols of the negroes of Senegal, and afterwards the word received a more extensive meaning. A fetish is any object which is regarded with a feeling of awe, as having mysterions powers residing in it, but withont any conscionsness in the exercise of them. The fetish may be animate, as a cock, a serpent, etc.; or inanimate, as a river, a tooth. a sheil. Fetish worvhip prevails in Guinea and other parts of the
west coast of Africa. In addition to the common fetioh of the tribe every individnal may have one of his own. To this ho offers up prayerm and if they are not heard he punishee it, or perhaps thrown it away, or breaks it in piecem.
Fetus, Faxivs (fétno), the youns of viviparous animals in the womb, and of oviparoue animals in the efs, after it is perfectly formed; before which time it is called embryo.
Fell (fa), Fisu-hozdisg, in Scottish law, in its widest mense signifies any tenure of land which constitutem a reiation of superior and vassal. The term is now however, restricted to a special kind of tenure by which usually a smali piece of ground is held perpetually from a superior on payment of an annual sum. Feudal System (fu'dal), that system by which iand (a fief) is held by a rassal on condition of fideiity-that is, in consideration of services to be rendered to his superior or feudal iord. The nature of the feudal system is to be explained by its origin among the Germanic tribes. In the carliest times the relation of snperior and vassal did not exist in connection with the ownership of land. Each freeman had his share of the tribe lands, which were held simply on condition of his fnlfilling his puhlic duties of attendance at the councils of the mark or township and performing his share of military service in the wars or musters decreed at such conncils. The noble had, of course, more land and more influence than the simple freeman, but there need be no tie of vassalage between them. This seems to have been the primitive sociai organization of the Anglo-Saxons and other German tribes. The lands held by ali freemen, whether noble or ordinary freemen, nuder this system, are said to be allodial, as distinguished from feudal lands, which imply service to a snperior lord. By the close of the tenth century, however, this system had undergone considerabie modifications. The masses of Tentonic invaders who overran Ganl and England had necessarily to confer exceptional powers on their leaders; and as they were for long very mnch in the position of military in an enemy's conntry, these powers were naturally continued. Thns it was that kings, before unknown to the Anglo-Saxons, make their appearance immediately after their descent npon Britain. It was common for a chief or great man to have a retinue or bodyguard composed of valiant vonths, who were furnished by the chief with arma and provisions, and who in return devoterl themselves to pis service, These com-

## Foudal System

panions (Anslo-Saxon, Gestikas; Ger man, Gogetlen) originaily recelved no pay excipt their arme, hornem, and provisiona, and the portion of the spoils which remained alter the chieftain had taken his own share. But when conquered iands came to be apportioned and large dittricts fell into the hands of kings or dukes and their suhordinates, they gave certain portions of the territory to their attendants to enjoy for life. These entates were cailied beneficic or fiefs, because they were only lent to their poseessorn, to revert after their death to the grantor, who immediateiy gave them to another of his eervants on the same terms. As the son commoniy esteemed it his duty, or was forced hy necessity, to devote his arm to the iord in whose eervice his father had Nved, he niso received his father's fief; or rather, he was invested with it anew. By the usage of centuries this custom hecame a right and the fief hecame hereditary. A fief rendered vacant hy the death of the holder was at once taken possession of hy his son, on the soie condition of paying homage to the feudal superior. Thus a feudal nohility and a feudal system arose and for a time existed aiongside of the old aliodial system. But gradually the greater security to be got hy putting oneseif under the protection of some powerful ruier or ieader gave the feudal system the predominance. The free proprietor of ianded property, oppressed by powertul neighbors, sought refuge in submitting to some more powerful nohleman, to whom he surrendered bis land, receivIng it back as a vassal. Even the inferior nohiiity found it to he to their advantage to have themselves recognized as feudatories of the nearest duke or eari; and as the royal power steadiiy advanced, the offices of duke, ealdorman, gerefa, etc., were always hestowed hy the king. Thus the crown became the source of aii authority and possession in the country. The land which had once been 'folciand,' or the iand of the peopie, hecame the iand of the king, from whom all tities to it were held to be derived. Such at least was the development of feudalism in Engiand, where its centralizing tendencies, especially in the matter of holding liand from the crown, were strongly reinforced by the circumstances of the conquest under William the Norman. Under him and his immediate succeesers there was a struggie between rovalty and the nohiiity, which ended in the power of the iatter sinking before that of the kings. On the other hand, in Germany, France, and elsewhere on the continent, the disintegrating tendencies of Seudaiism
as a aystem of government had full play. In theve countries the weakening of the kingiy anthority encouraged tho great feudal duken and counte to set up in an almost abooiute independence, which in France was aftermarde sradually lont in the monarchy grew stronser, hut in Ger many continued to divide the land down aimost to our own times into a number of petty principalitien.
Amons the chief agencien that overthrew the feudai system were the rise of cities, the change in modes of warfare, and the spread of knowiedge and civiliza:tion. The spirit of the feudal ayitem, grounjed on the prevaience of landed pronerty, was necessarily forejgn to cities which owed their origin to industry and personai property, and founded thereon a new sort of power. The growth of thin new ciass, with its wealth and industrial importance, has contributed more than anything eise to social and poiitical development before which the oid feudal relations of society have almost totaily disappeared. Even yet, however, the iaws relating to iand still hear the stamp of feudalism in varions countries. In England, for instance, all landowners are theoreticaily regarded as tenants holding from some superior or lord, though the lord may he quite unknown. See alson Middle Aoes.

## Feuerbach (fin'er-hah), Ludwig An-

 drens, a German metaphysician, son of the ceiebrated jurist (ace next article), whs born at Landshut in Bavarin in 1804. After studying theoingy and philosophy at Heideiberg and Beriin he became a tutor (privatdocent) at Erlangen University in 1828. As his negative views in theology were ohnoxious to government, and thus deprived him of all chance of a professorship, he resigned, and the latter part of his life was passed in straitened cirenmstances. $\mathrm{He}_{\mathrm{e}}$ died in 1872. All transcendental Ideas. such as God, immortality, etc.. Feuerhach came to regard as deleterious iliusions, and considered that the direct contact of the sensen with things alone gave the fuli truth. His works include a Critique of Henci (1839); The Essence of Christianity (1841), translated by George Eliot (1854) : The Essence of Religion (1849), and Godhead, Freedom, and Immortality (1868).Feuerbach, Pauc Johann Anbelm. a German criminai jurist, was horn at Jena in 1775 . Having published his first work, entitled Anti-Hokbes. in 1798, he began in 1799 to deliver iectures on iaw at Jena as privatdocent. In 1801 he became an ordinary professor of jurlsprudence at

Jena, but the following your accepted a chair at Klel. In 1804 he ohtained an appointment in the Univerity of Landso hut, where be was employed to draw up the plan of a eriminal code for Bavaria, which received the royal aseent in 1813. In 1814 be was appointed second president of the appeal court at Bambers, and in 1817 first president of the a ppeai court for the circie of Rezat at Anspach. He died in 1833. Among his most interesting and important works are Remarkable Criminal Trials, and Themis, or Contributions to the Art of Lavomakii:.

## Fevillants <br> (feu-yйp), a religious order which a rose as a re-

 form of the order of Bernardins, and took origin in the abbey of Feuilinnts, near Toulouse, established in 1577. There were also convents of nuns who foliowed the same reform, calied Feuillantines. They were suppressed hy the revolution of 1789, and their convent in Paris taken possession of by a political club named the Fenillants, of which Mirabeau was a member.
## Fenillet (feu-jă), Octare, a French novelist and dramatist, bora

 at Saint 10 department of Mrnche, in 1812, came into notice ahout 1846 with his novels of Le Fruit Defendu, Le Conte de Polichinelle, and a series of comedies and tales which were puhlished in the Revwe des deum Mondes. In 1857 the appearance of Le Roman d'un Jeune Hommo Paucre raised Feuillet to the first rank of the novelists of the day. Amongst his other numerous noyels are Monsieur de Camors (1867), Julia de Tréceur (1872), Le \$phine (1874), Histoire d'une Parisienne (1881), etc. His works have a refined humor, and are free, in great part, from the realistic coarseness of the later French school. Died 1890.Feuilleton (feu-i-ton), that part of
a French newspaper devoted to light literature or criticism, and enerally marked off from the rest of the page hy a line. The feuilleton very commonly containa a taie.
Fever (fōver: Latin, febris), a diseased condition of the body characterized hJ an accelerated pulse, with increase of heat, deranged functions, diminished strength, and often with excessive thirst. Fevers usually commence with chills or rigors, known as the cold atagy thi the disease, although the temperature of the body is really increased. There are also a feeling of lassitnde. pains in the back and limbs, loss of appetite, and nansea. This soon develops into the hot atage, in which the prime quickens and the skin becomes hot ind dry. Thewe phenomena are accom-
panied by thirst, headeche, a furred tongue, a conntipated state of the bowely and a deficiency in the urinary secretion. The symptoms are generaliy nscravated at night, and may even be accoupanied hy sllght delirium. After a time the cristo is reached, when the patient olther dies from gradnal exhaustion or from hyperpyrexia, or he berinm to recover, the fehrile symptoms disappearing sometimes quite suddenly, mometimes very slowly. The lose of strength in fever dne to the waste of tinsue (caused by the ahnormal temperatnre) belig greatiy in excess of the nutritive supply, together with the general disturbances of functions, often brings about fatal results. In many cases fever is only an accompanying symptom of some specific disorder, hut in otherw it is the primary and predominant element, apparently due to some poison operating in the blood. (See Germ Theory of : isease.) These primary or specific fevers may be classified as for-lows:-

1. Continued Fever, in which thern is ro inter?licion of the febrile symptoms ..ll the cris, is reached. Simple ferer, or fehri. 7ha, typhus, typhoid (enteric or gastric fever are examples. Relaphing ever also comes under thin head its chifef feature is the reenrrence of tever about a week after the subsidence of the symptoms.
2. Intermittent Fever or Ague, in which there is a periodic cessation of the symptoms. The varieties are the quotidian, occurring every day; the tertian, recarring in 48 hours : quartan, recurring in 72 hours or every three days.
3. Remittent Fever, in which there is a short daily diminution of the symptoms. The condition known as hectic fever and yellow fever belong to this class.
4. Eruptive Fevers - (1) Smallpox. (2) Cowpox. (3) Chicken-por.
(3) Chicken-poz. (4) Measles. (5) Scarlet fever. ( C ) Erysipelas. (7) Plague. (8) Dengue fever. See the separate articles.
Feverfew (fe'ver-fa; Pyrethrum Par thenium or Matricaria Par thenium). a common composite biennjal. freqnent in waste places and near hedges. It has a tapering root, an erect, branching stem abont 2 feet high, and stalked compound leaves of a hoary green color, and orate cut leaflets. The plant possesses tonic and bitter qualities, and was supposed to be a valuahle febrifuge, whence its name.
Fez, one of the two capltals of MoAtlantic and 85 miles mouth of the Mediterranean. It is finely situated on the

## Fibers used in Manufacture

bllly alopen of a valiey, on the river Fez, Which dividem Oid Hea from New bez. Both parte are surrounded by walle now In very bad repaif. The streeta are narrow, dark, aud extremely dirty; the homen two or three storle high, and without wludows to the street. The interlors, however, are often handeome, the courtyard. being paved and provided wlth fountains. There are many mongues, ons of them the largent in N. Afrlca. The uitan's palace is a large but monewhat rulnoun structure. Fez is a place of conalderable cominerclai lmportance, belng the depot for the caravan trade from the south and eant and havlng extenslve dealing with Europe. The manufactures consist of woolen cloaks, sllk bandkerchiefs, leather, the red cape named fezes, carpets, pottery, etc. Fea was at one time famous as a seat of Arablan learninf. It is consldered a boly town by the Western Arabs, and was resorted to by them as a place of pilgrimage when this way to Mecra was obstructed. Fez was founded ln 783, and was the capltal of an independent state from 1202 to 1548 , attaining a blgh state of prosperlty. The population ls varlously estimated from 00,000 to 140,000 , with about 10,000 Jews.
Fez (from Fez, the abrve town), a of biue slik or of fool at the crown, much worn in Turkey, on the sbores of the Levant, in Egypt, and North Africa generally. The core or centrai part of a turban usually conslsts of a fez.
Fezzan (fez-zin'), a state of North ing a depresslon surrounded byara, formcbains and consisting of a great number of small oases. There are no rivers or brooks, and few natnral springs; but water is found in abundance at various deptbs, generally from 10 to 20 feet. Raln seldom falls; in some districts lt does not rain for years togetber, and but llttle at a time. Wheat, barley, millet, fige, melons, and otber Pruits, tobacco, cotton, etc., are cultivated, but the chief wealth of the country is in its date-palmes. Wlth the exceptlon of goats and camels, and in some districts sheep and cattle, few domestic anlmais are reared. There are few manufactures, but tbere is a considerable caravan trade, especlaliy in slaves, Monrank, the capital, belng the polnt of junction for carapans from Timbuctoo, Cairo, Tripoli, Sondan, etc. The natives are a mired race of Arabs, Berbors, negroes, etc. Fezzan is governed by a lientenant-governor (Kaimakam) sent from, and dependent therefore on, Turkey. The population is variously
estimated at from 80,000 to 100,000 . Area, 120,000 equare millen.
Fiacre (follokr), in France, a somall lour-wbeeled carriage or hads. ney-coach, so called from the Hotel Et. Fiacre, where Baurage, the inventor $\alpha$ thene carriages, eatablished in 1040 an cllice for the hire of them.
Fiat (I'at); (Lat., 'let it be done'), in Engilish law, a sbort order or wnrrant from a judge for making out and allowing certain processen.
Fiat Money, any currency, papor culation and malntained ns inced ln cirby the command (fiat) of a government or other competent power. Tbe term is unually applied to a paper corrency, the cubstance of wbich in valuelems, but which has been made legal tender by them, as distinguished from metal coins supposedly equal to their face value.

## Fibers used in Manufacture.

These may be of mineral, anlmal, or vegetable orlgln. In tbe mineral kingdom a fiber which may be so used has been found in asbestos (which see). Amongst animal fibers the sulk obtained from the cocoons of the sllkworm and the wool of the sheep represent two great clanses. (See Silk and Wool.) Of the latter, the wool of the sheep is by far the most im. portant on account of its length, its fineness, and the comparatlve ease with wbleb lt can be produced in large quantitles for the market. Amongst other animais whose wool or halr is also used to some extent are the goat, especially of the Angora species, the llama or alpaca, the vicuna, the rabbit, the yak, the cblnchllla, etc. But tbe vegetable klngdom furnishes by far the greatest number and variety of fibers for manufacturing purposes. These fibers are obtalned either, as in exogenous plants, from tbe sheath of the bark, or bast; or, as in endogenoun plants, from tbe ceilular tissues and pulp of their roots, stems, and leaves; or, in a few piants, from a hairy coverlng wbich grows upon tbe seeds witbin the pod. Of the first class are flax, from the fibers of the Linum usitatissimum; bemp, from the Cannäbie sativa, a plant of the nettie family; jnte, from several specles of Corchorus, a piant of the lijuden family; China grass from tbe Boehmeria nivea, etc. To the second class belong New Zealand fiax, from the leaves of the Phormium tenax; Manlia bemp. from the leafstalks of the Musa textitis; colr of cocoanut fiber, from the husk of the cocoanut; pita-fiax, the fiber of the leaves of the $\Delta g v_{0}$ Americana, etc. To the third clans belong cotton, from the
cod-halre of Gosoypinm; regetabie sill the fiere which grow upon the seeds of the olladacee, etc. For detalis see Coi - lua, Hemp, Jute, silk, Wool, etc.

Fibrin(fibrin), pecullar organle compound subatance found in animais and vesetablem. Animai fibrin constitutem the solid matter which deposits when blood coaguiates, but it is aiso furnished by the chyle, iymph, saliva, and hy pus and other patholugical fluide. Fibrin is composed of carbon, nitrogen, hydrosen, and oxygen, and is closely allied to albumen and nsein. It is a very lmportant eiement of nutrition. In heaithy venous hiood there is ahout 2.3 present, but its percentage is silghtiy more in arteriai hiood. It is best ohtained by switching newiy-drawn hiood with a glans rod or bundle of twigs, when the fibrin adheres to the rod or twigs in threads, and is purified from coloring matter hy prolonged washing and kneading with water, and then by treatment with aicohoi and ether to remove fat and other suhstancem.

## Fibrous Tissue (fibrus), an anlmal

 tissue with a shining, silvery luster nsed to connect or support other parts. It is of two kinds, white, and yeliow (einastic). It forms the ligamenta, tendons of muscles, etc.Fibula (fih't-la), in anatomy, the outer and smaiier bone of the leg beiow the knee, much smailer than the tihia. See Leg.
Fichte (Gih'te), Johann Gortlieb, a poor parents in 1762; died in 1814. After studying at Jena, Leipzig, and wittenherg he passed severai years as a private tutor in Switzeriand and in Prussia proper, and in Konigsherg made the acqnaintance of the great Kant, who showed some appreciation of his talents. His Versuch einer Kritik aller Offenbarung ('Essey Towards a Criticism of All Revelation,' 1702) attracted general attention, and procured him the profes. sorship of philosophy in Jena in 1793. In 1800 he was one of the nost prominent professors of that miversity during its most brifiinnt period. Here he puhiished, under the name of Wisenschaftelehre ('Theory of Science'), a philosophlcai system, whilch. though founded on Kant's system, gives the iatter a highly idealistic development which was atrongly repudiated hy the Koniksberg philosopher. On acconnt of an articie be had written to the Philosophical Journal (on the gronnds of our belief in the divine government of the world) he fell under the suspicion of atheistical views. This gave
rite to an inquiry, which ended In Fichte losing his chair. He then went to Prussia, where he was appointed in 1805 profeasor of philiosophy at Erlangen. During the war between Prusoia and Frapee ho went to Konlguberg, where he delivered lectures for a short time returned to Beriin after the Peace of Tylath, and in 1810, on the estahisishment of the univer. ity in that cilty, waz appolnted rector and profensor of philowophy. Fichte's philoophy, though there are two diatinet periods to be distingulished in it, is a conuistent idealism, reprementing ail that the Individual perceives as dintinct from hlmself, the ego, as a creation of this $I$ or ego. This epo, however, ls not the cunsciousness of the individual mo much as the divine or unlversal conscloumuess of which the other is hut a part. His philiosophy thus came to assume a strongly moral and reiligious character. Amongst his hest-known works, besides those aiready mentioned are: Syatem der Sittenlehre ('Systematic Ethics') Die Bestimmung dea Menschen ('The Deatination of Man'), Das Wesen des Gelehrten ('The Natnre of the Bcholar'), Grundziloe des Geoenwärtioen Zoftalters ('Characteristics of the Present Age'), Reden an die Deutsche Nation (Addresses to the German Nation').
Fichtelgebirge (fi $h$-t êl-ga-bêr'ga), Germany, in Bavaria ; chief summit Schneebers, 8460 feet.
Ficino (fechénô), Marsmio, an Italian phliosopher of the Platonic school, born at Florence in 1433. His eariy display of taient attracted the notice of Cosmo de' Medicl, who caused him to be instructed in the ancient languages and philosophy, and empioyed him to ald in estabishing a Piatonic Academy at Fiorence (ahout 1460). Ficino amply satisfied his patron, and many excellent schoiars were formed under his tuition. His exposition of Piato'.. "hillomophy suffers from his confonnaint the doctrines of Piato nimid those of ncoplatonism. He died in 1490.
Fiction (fik'shun). See Novel and Romance.

## Fiction,

in law, is an assumptlon made for the rurposes of justice, though the same fact conld not be proved, and may be literally untrue. Thus an heir is heid to be the same person as the ancestor to the effect of making the heir llahie for the debts of tha ancestor. The rules by whlch the existence of legal fictions are limited have been stated as follows: (1) The fiction must have the semhlance of truth. (2) It aball not be used to work a wrons.
(8) It shall only be employed for the end for which it was introduced.
Fiddlewood, the common name of of trees or shrubs with some twenty species wative of tropical America, nat. order Verbenacese. Some of the species are ornamental timber trees ; scveral yield a hard wood valuable for carpenter work. Field (feld), in heraldry, the whole the charges are of the shield on which arate coat when depicted, or of each septeringa.
Field, Crrus West, a telegraphic promotor, born at Stockwell, Mass, in 1819 ; died in 1892 . Having become wealthy by trade in New York, he became interested in the idea of ocean telegraphy, and obtaining a charter giving him exclu: sive right for fifty years of landing ocean teiegraphs on the coast of Newfoundland, he organived an Atlantic telegraph company. Attempta to lay cabies were made in 1857 and 1858, but withont permanent success, and the Civil war having broken out, it was not till 1866 that a cable was successfully laid by the Great Eastern. Mr. Field took an active part in establishing telegraphic commnnication with. the West Indies, South America, etc.
Field, DAFID DUDLEX, lawyer, brother dam, Conzecticut, in 1805; died in 1894 . He became especiaily prominent in the cause of law reform, and in 1857 was appointed president of a commission to digest the political, civil, and penal codes of New York.
Field, Eucems, poet and journalist, 1850 ; died in 1895. He became connected with the Chicago Daily News, and ac quired a repntation as a humorist. His poems of child life including A. Littlo Book of Western Verse, With Trumpet and Drum, Second Book of Verse, Lovo Sonos of Childhood, etc., are quaint and beautiful and highly popular.
Field, Marshas c, an American merin 1835; died in 1906 , Conway, Mass., Chicago in 1856, and in 1865 organized the firm which later became Marshall F'ield \& Co., one of the largest mercantiie houses in the world. His fortune was estimated at $\$ 150,000,000$. He founded (which Fee), Museum of Natural History (which see), and gave vaiuable reai estate to the University of Chicago. Field, Stepnex J., jurlst, born in 1816, graduated $1837 \mathrm{D}^{\text {studied law with his }}$ brother, David brother, David D. In 1849 he went to The Author's Farce The Temple Beau, California and settled at Marysville oand, Don Quirote in Mnolamd, and many There he held various local offlcess was. being little followed, a number of them there he held various local offices; was.being little more than free translation
from the French. He himself became a stage manager, and for some time conducted the Haymarket Theater. Abont 1736 or 1737 he married Miss Craddock, a lady of some fortune, and at the same time, hy the death of his mother, became possessed of a small estate in Dorsetshire. He immediately commenced the life of a country gentleman on a scale which, in three years, reduced him to greater indigence than ever, with a young family to support. He then, for the first time, dedicated himself to the bar as a profession, and for immediate snbsistence employed his pen on various miscellaneous subjects. The Champion, a periodical paper on the model of the Epectator, but written in a freer style, and An Essay on the Knovoledge and Characters of Men, were among the early fruits of his literary industry. In 1740 he was called to the har, and went on circuit, but with so little success that he was compelled to return to literature. In 1742 the first of his great novels, Joseph $\Delta n d r e w s$, appeared, which he had at first conceived as a burlesque of Richardson's Pamela. It was a great success, and was followed by A Journey from this World to the Next, and The History of Jonathan Wild. In 1749 he was appointed a Middlesex justice, a not very reputable office, but which Fielding's honesty and earnest discharge of his dnties did something to render more respectable. In the same year his masterpiece, The History of Tom Jones, appeared, and was followed two years afterwards by Amelia. At length, however, his constitution, exhausted both by hard work and reckless living, gave way, and in the June of 1754 he had to seek the milder climate of Lisbon, where he died 8th October of the same year. The chief merits of Fielding as a novelist are wit, humor, correct delineation of character. and knowledge of the human heart. He drew from a very varied experience of life, which he reproduced with an artistic realism entitling him to be considered, far more than Richardson, as the creator of the English novel.
Field-marshal, the highest milititry ain, Germany, and other countries. In Britain the dignity is conferred by selection cnd enjoyed by hut very few officers, and chiefly for distinguished services or on the gronnd of royal descent. It was introdnced into Britain by George II, in 1736 .

## Field Mouse. See Monse.

Field Museum, an art museum erf cago by Marwhall Field, a wealthy mer-
chant of that city (1885-1800). It occupies the Fine Art Building of the Chicago Exposition of 1893, and was endowed with $\$ 1,000,000 \mathrm{by}$ Mr. Field. In his will he left $\$ 8,000,000$ more to it. Field Officers, in the army, thrwo mand whole battalions-majors, lieuten-ant-colonels, colonels, as distirguished from those entrnsted with company duties, as captains and lientenants.
Field of the Cloth of Gold, appot valley of Andren, between the English castle of Guisnes and the French castle of Ardres, celebrated for the meeting ( 7 th June, 1520), between Henry VIII of England and Francis I of France, attended by the flower of nobility of both nations. The diplomatic resnlts were little or nothing, and the event is now memorahle only as a grand historical parade.
Fieschi (feerestex), Josmph Marie, conspirator, born at Mnrato, in Corsica in 1790. He served for some years in the French army, and in the Neapolitan army of Murat. Having returned to his native land, he was convicted of robbery and sentenced to ten years' imprisonment. After the revolntion of 1830 he appeared in Paris and by means of forged papers obtained a mmall pension and an appointment under the pretense that he had been a victim of the Restoration. Being afterwards deprived of his appointment he resolved to avenge the slight by assassinating Lonis Philippe, which he attempted by an infernal machine on 28th July, 1835. The kiug escaped with a slight scratch, although a number of persons around him were killed. Fieschi was guillotined Feb. 19, 1836, along with two of his accomplices.
Fiesole (fe-er'o-lã; a nciently Freculo), a small town of Italy, 3 miles northeast of Florence, on the top of a steep hill. It has a cathedral and is the seat of a bishop. Anciently it was an important Etruscan city, and still has some Etruscan remains. Pop. 4951.
Fiesole, F'RA Grovaniss DA See Angolico.
Fife (fif), a small instrument of the flute kind, pierced with six fingerholes, and usually having one key. Its ordinary compass is two octavem from D on the fonrth line of the treble staff upwards. A combination of fifem and drumm is the officially recognised mule in the British and Xmerican army and navy. Tife, or Firasimas, a maritime counts of Scotland, forming the penin. sula between the firthe of Forth and Tas; area 501 gq . milem. The surface
is undulating, the highent elevation beins 1720 feet. The principal valley, called Strath Eden, or the 'Howe (hollow) of Fife, watered by the Eden, is very fertile, highly cultivated, and thick1y studded with heautiful mansions and villas. Very fertile also is the district lying along the shores of the Firth of Forth, and remarkahle for the number of towns and villases with which it is lined. The northern sections are generally infertile. Fife is the third largest coal-producing county in Scotland. Iron, limestone, and freestone abound. The chief manufacture of the county is linen, damasks, diapers, checke, ticks, etc.; the first two principally at Dunfermline, the last two at Kirkcaldy. There are salmon and other fisheries. The principal towns are Dunfermline, Kirkcaldy, St. Andrews, and Cupar, the county town. Pop. 218,843. Fifth, in music, an interval consisting Except the octave, it is and a semitone. of concords. Its ratio is $\mathbf{3 : 2}$. It is called the fifth, as it comes, by diatonic ascent in the fifth place from the fundamental or tonic. See Music.

## Fifth Monarchy Men, a sect of

 religious enthnsiasts who during the protectorate of Cromwell assumed to be 'subjects only of King Jesus.' They considered the revolution as the introduction to the fifth great monarchy which was to succeed to the four great kingdoms of Antichrist mentioned hy Daniel (the Assyrian, the Persian, the Grecian, and the Roman), and during which Christ was to reign on earth 1000 years.Fig (Ficus Carica), a deciduons tree belonging to the order Moraces

Fis (Ficus Carica). -a, Fruit abown in mection.
(molberry). It is indigenous to Asia Minor, but has been naturalized in all
the countriem round the Mediterranean. It grows from 15 to 20 or even 90 feet high. In congenial climates it beara two crops in a season, one in the early summer from the buds of the last year; the other (which is the chief harvent) in the autumn, from those on the spring growth. The fruit is a hollow receptacle produced in the axils of the leaves on small round peduncles, and containing a great multitude of minute flowers, the ripe carpels of which are embedded in the pulp. The flowers are male and female, the former situated near the orifice at the top, the latter in that part of the concarity next the stalk. Figs, particularly dried figs, form an important article of food in the conntries of the Levant, and are exported in large quantities to America and Europe. The hest come from Turkey.
Figaro (fig'a-rof), a dramatic charFrench stage hy Beaumarchais in his comedies, the Barber or seville and the Marriage of Figaro. Figaro is a barber remarkahle for his shrewdness and dexterity in intrigue. The plays were adapted for Mozart's Marriage of Figare and Russini's Barber of Seville. The name is alq? well known as that of satirical jou aals ruhlished in Paris and Iondon.
Figeac ( shak), a town of France, E. of Caho' partment Lot, 42 miles E. NT. and Consiat it is an ancient place, and consists chiefly of narrow, crooked streets and antiquated houses with qnaint Gothic fronts. Pop. 4480.
Fighting-fish (1facropodius, or Ctefish of the family nops Angnax) (climbasing fish of the family Anabasidm (climhing
perch), a native of the sontheast of Asia, remarkable for its pugnacious propensities. In Siam these fishes are kept in glass globes, as we keep gold-fish, for the purpose of fighting, and an extravagant amount of gambling takes place about the result of the fights. When the fish is quiet its colors are dull, but when it is irritated it glows with metallic splendor.
Figueras (fi-ga'rus), a town of and 21 miles Spain, in the province of French frontier, defended by a fortress reputed the strongest in Spain. Pop. 10,714.
Figueras, Estaniscac, a Spanish lona in 1818; died in 1882 , A leador in the liberal party of Catalonia, he was elected to the Cortes in 1850, and after the dethronement of Queen Isabella wal prominent in organizing the republican
party. After King Amadeo abdicated, in 1878, Figueras was provisional president for about four months, being the only president Spain has ever known. H. afterwards retired to private life.
Figuier (fege-s), Lours, a Frencis writer of popular works on science, born 1819; hecame professor in the School of Pharmacy, Paris. Among his works are Histoire du Mierveillews dans les Temps Modernes; L'Alchimic et les Alchimistes; Vies des Savants Illustre depuis $\bar{B} A n t i q u i t e ́ ~ j u s q u ' a u ~ X I X ~$ Sidcle; Les Grandes Inventions; Le Tableau de la Nature; etc. Several of his works have been translated into English, including different sections of the one last mentioned. He died in 1804.
Figuline (fig'u-lin), a name given by clay.
Figural (fig'u-ral; or Figuzate) by the terms of arithmetical series of all sorts, in which the first number is always unity. For example:

$$
\begin{aligned}
& \text { III. }-1,4,9,16,25,36 \text {, etc. }
\end{aligned}
$$

Those in the second row are called triangular numbers, because their units may be arranged in equilateral triangles : the members of the third row are called squure numhers; those of the fourth pentagonal, etc.; and so there are also hexagonal, heptagonal, and, in general, polygonal numbers.
Figurehead, the ornamental figure ing part of a shin's stem, over the cutwater and immediately under the bowsprit.
Figworts, the common name of the EgWOrts, Scrophularia, and sometimes also applied to the Scrophulariaceæ, a large natural order of exogenous plants represented by the calceolaria, foxglove, veronica, etc.
Fiji (fejje), Fegeke, or Vitt Islands, an island group, South Pacific Ocean, east of the New Hebrides, between lat. $15^{\circ} 30^{\prime}$ and $19^{\circ} 30^{\circ} \mathrm{s}$. ; and lon. $177^{\circ}$ E. and $178^{\circ}$ W. The entire group which was discovered by Tasman in 1643, comprises altogether 254 islands and islets, eighty of which are inhahited; total area abont 8000 sq . miles. Two of the islands only are of large size, namely, Fiti Jevu, 90 miles long by 60 wide; and Vanua Ievu, rather longer, hnt much narrower and more irregular. Next to these come Taviuni and Kandavu. The talands are of volcanic orisin, extremely fertile, and covered with a luxyrlant folf.
age, especially on the east side. The peaks are usually basaltic cones or newdles, some of which rise to the hoirht of several thousand feet. The consts are almost surrounded with coral reef, and where the shore is not precipitous the heach is formed of fine coral mand. The cocoanut palm grows along the mea coasts; the breadiruit, banana, and pandanus are abundant; the orange, taro yams, sweet potato, and since the commencement of European settlements, maize, tobacco, and the angar cane are cultivated; timber trees, including the chestnut are plentiful; sandalwood is now scarce. The birds are wild ducke pigeons, and domestic fowl, parrots and other tropical species. Except the stock introduced there are hardly any animals. Fish are plentiful. The native enclowe and cnltivate their lands, the women performing most of the mannal labor. The climate on the whole is healthy and agreeable for Europeans. The Fijians are a dark-colored, frizzly-haired, bearded race of Melanesian extraction, althongh intermixed with the Polynesians of Tonga and Samoa. They are cleanly in their habits, and are generally regarded as superior to the Polynesians in intelligence. Their early character, however, was bad. Cannibalism was rednced to a system, and wives, children, and friends were often sacrificed to the fondness for human flesh. Cannihalism seems now to be abolished. This result has been due to the Christian missions, mostly Wesleyan, which have been very snccessful, most of the native population having become professed Christians. From 186月 onwards the influx of Furopean settlers from New Zealand and. the Australian colonies gradually brought the trade of Fiji into importance, and repeated applications were made to the British government, both by the settlers and the king, Thakombau, to annex th. islands. At length, in 1874, this Wwi done, and the Fiji Islands were made a crown colony, under a sovernor, assisted hy an executive connci! and legislative assemhly, both either officialm or nominated by the governor. Native chiefs take part in the administration. the old customary law being still larcely adhered to. Since the annezation the prosperity of the colony has heen remarkahle. The chict article of export in sugar ; the next is copra, the dried kernela of the cocoanut. The other important exports are cotton, molasses, coffee, etc. The demand for labor has led to the introduction of somin 0000 coolies frow India. In 1911 the population was 180), 641. The Furopeans number about 2500 . The capttal is Suva, on the pouth const
of Viti Levu. The island of Rotumah, to the north, was annered to Fiji in 1881. Filaria, a senus of nematodes or come parasites dangerous to man. The guinea-worm ( $F$. medinensis), which occurs in parts of Africa, forms cutancous ahscesses on the back and leg?. The larva inhahits cyclops, a water flea, and is swailowed with dirty water. It is apparently oniy the femaie which is parasitic, and it reachess a length of from 20 to 30 inches. The disease caused by these nematodes is cuiled filarlanis.
Filbert (fil'bert), the fruit of a culAvellana or hazel. variety of Corylus Tile (fii), a bar of cast steel with small, sharp-edged elevations on its surface called teeth, the use of which is to cut into or abrade metals, wood, ivory, horn, etc Filies are of various shapes, as flat, half-round, three-sided, square, or round, and are generally thick. est in the middle, while their teeth are of various degrees of fineness and of different forms. A file whose teeth are in parallei ridges only is called single-cut or float-cut. Such are mostly used for brass and copper. When there are two series of ridges crossing each other the file is double-cut, which is the file best sulted for iron and steel. Rasps are files which have isolated sharp teeth separated hy comparatively wide spaces, and are chiefly used for soft materials such as wood and horn. Each of these three classes of files is made in six different degrees of fineness, the coarsest being called rough, the next middle, foliowed hy bastard, second-cut, smooth, and superfine or deadsmooth, each a degree finer than that which precedes it. Formerly all files were made by hand, the steel har or blank after being forged and ground smooth was laid on the anvil and the teeth struck up with a chlsel. Now, however, all the essential operations are performed by ma. chinery. The first commercially practical machine for cutting files was invented by W. T. Nicholson, of Providence, R. I. This machine with improvements and modifications is wldely used at present. A new and ingenious file has recently been developed in which seml-circular teeth are cut in the face of the hlank. Files of his type are self-cleaning and not apt to clog up in filing soft metals like lead and brass.
File, firow of soldiers ranged one beWhen a column is arrauged two to rear. file ls thus two men.
Tile-fish, a name given to certain fishes from their skins being
granuiated like a file; they constitute the genus Bulistes. B. capriscus, a common inhabitant of the Mediterranean, has the power of infiating the sides of the abdomen at pleasure, and grow to the sixe of 2 feet. B. aculeatus is a native of the Indian and American seas Filibuster (fili-bus-ter), a name ers, chlefly from the United States, who endeavored to effect settlements on the Spanlsh isiands and colonies in Central America. The term is of Spanish origin, hut is ultlmately from the English $/ y^{\circ}$. boat, referring to the small fast-sailing vesseis used by the buccaneers in the 17 th century. Among the most noted of the filibusters was William Walker, who made three expeditions to Nicaragua (1855, 1857, 1860). Also appifed to partisans in a legisiative assemhiy who impede legislation by diiatory tactics
Filicaja (fe-le-ki'ya), Vinconvzo DA, 1642 at Florence of a noble family. The 1684 pution of his odes, sonnets, etc., in 1684 estahlished Fillcaja's fame as the frst poet of his time in Italy. The Grand-duke of Tuscany appointed him governor of Voiterra, and then of Plsa, in which posts he gained the esteem equally of people and sovereign. He died in 1707. Among hls most successful poems are the Canzone to John Sohieski on the occasion of the relief of Vienna from the Turks, and the celehrated sonnei on Italy, imitated by Byron in the 4th canto of Childe Harold, stanzas 42.43 .
Filigree (fil-i-gree ), a kind of ornamental open work in gold or silver, wrought delicately in the manner of littie threads or grains, or of both intermired. The art was practised hy the Etruscans and the Greeks of the Byzantine Empire. In the 17th century it was carried to great perfection in Italy, and silver filigree work is still largely manufactured in the south of Europe. Some of the eastern nations, especially the Chinese and Malays, show great skill in the manufacture of silver fifigree. Filipo d'Argiro, SAN. Same as Fillan (firan), Sr. Two. saints of this name, who flourished in the ith and 8 th centuries, appear in the church caiendars. (1) ST. Firian, or FAorany the leper, whose annual festival is the 20 th of June. His principal church in Scotland was at the iower end of Iuch Earn, in Perthshire, where 'St. Flllan's W'll' was long beliezed to have wonderful healing propertiem-(2) ST. Friluan, the abbot, the son of St, Ken: tikerna in Inchcailleach, in Loch Lo.
mond, had his chief church also is Perthohire, in Strathfillan, the upper par: of Gien Dochart. The silver head of this abbot's crozier, entrusted by King Robert Bruce to the Dewar family, is now is the Antiquarian Museum, Edinburgh.
Fillet (fiifet), in architenture, a small in section, and having the appearance of a narrow band, senerally used to separate ornaments and moidings.
Fillmore (filmor), MiLLARD, the thirteenth President of the United States, was born in Cayuga Ca. New York, in 1800; died in 1874. First a teacher, then a lawyer, he was elected to Congress in 1832, and was reelected by the Whig party in 1836, 1838 and 1840 , and was the chief author of the tarifí of 1842. He was a candidate for Governor of New York in 1844, was elected comptroller of that State in 1847, and was elected Vice-President of the United States in 1848, General Taylor being chosen President. On Tayior's death, July 9, 1850, he became President. His term was one of great politicai irritation, and he gave much offense to the Northern Whigs by signing the biii for the return of fugitive slaves. He was the c- udidate of the American party for the presidency in 1856, hut received no electoral votes but those of Maryiand.
Film. A term used in photography for iike material covered with a sensitized coating for the taking of pictures. Films are produced in the form of a rolied ribbon or in cut sheets for plate holders or special containers. They are chiefly used by amateur photographers and for the production of moving pictures.
Filtration (fii-tri'shun), the process solid matter suspended in it hy causing it to pass through some previous substance or suhstances which catcs and retain the solid matter. The materials of which a filter is composed must have pores or interstices sufficiently coarse to allow the passage of the liquid, and yet sufficiently fine to prevent the passage of any soiid particles. On a small scaie unsized paper is generaily used: but on a large scale various kinds of stone, sand, gravei, powdered glass, clay, porous sulphur, preparations of iron, charcoal, cloth, felt, horsehair, skins, silicated carbon, sponge, wood, wool, cane, capiliary threads, ete., are all employed. In domestic filters the simplest forms are those in which the water pawes down by its own gravitation through the fitering medium to a reservoir lelow. Lateral and ascending fi. $10-\mathrm{U}-3$
tration are not uncommon. One of the inout successfui forms of ascending filter is divided into four compartments, as seen in the figure. The uppermont part, containing the water to be filtered, communicates with the lowent by a tube having a ionse sponge at it mouth to stop some of the impurities. The top of the lowest compartment is composed of a porous slab, through which the wates passes into the third part, which is filled with charconl. The water is finally forced through the charcoai and another slab into the remaining compartment, which is furnished with a tap to draw off the filtered water. The filters at waterworks are large tanks or beds, made of good clay and filled with layers of large stones, pebbles, and coarse gravel, fine gravel, coarse sand and

Leloge's Water Filtin.
1234 . The comparto ments; cb, porous top of 2 d compartment; $c \mathrm{c}$, filtering top of 3d compartment: e, movablo plug.
fine sand-the fine sand being at the top. Other materiais are sometimes ntilized, such as furnace cinders or ciinkers, sheiis or shell-sand, and so forth. The water in the reservoir, collected from springs, surface drainage, and rain, is allowed to deposit its suspended matter in settling-tanks, and then it is run inte the fiiters. By percolation the rest of the mineral matter is removed, and the water then flows into the mains which are to convey is to the locality where it is to be used. Filtration can remove only the substances mechanically surpended in the iiquid. In order to remove dissol red substances distiliation is necersary. In addition to these mechanical methods of filtration, chemical methods are alsn in use, foreign substances heing removed from the water by chemical processes. The water-supply of many cities is now purified hy filtration on a great scale, the last notable example of this being the suppiy of Philadelphia, where an admirahie system of sand filtration has been introdiced during the last decade, with excellent results in removing the pernicions bicteria and relucins tie prevalence of typhoid and other water-borne disenses.
IFinale (fr-nanta), the concluding part of a musicai composition, for instance, of a quartette, of a symphony.
of any act of an opera, of a ballet, etc. It concista of componitions of various charactern.

## Finance

( f -nans'), the syatem or science of public revenue and expenditure. In the plural the term is applied to the income or revenue of a state, to the funds in the public treasury, and also to private income or re mources. See ln thls connectlon such articles as Eachequer, National Debt, Tex, Bank, etc.
Finback, or Finmzr, a name glven
to the species of a genus of whales ( $P h y s d i u s$ ), so called from their possessing a dorsal hump or fin. The name is also sometimes given to the members of the genus Balenoptěra or rorruals.
Finch (finsh), one of the Fringillides, a large family of small seedeating blrds, inhablting all parts of the globe, and belonging to the order Insessorem, section Conirostres. They are distinguished by haplog a sharply-polnted, conical, and $\ln$ most cases a stronglyformed bill, suitable for crushing seeds and other hard objects. The species have been divided among several sub-familips, as the hawfinches, the true finches, the buntings, the larks, the bullfinches, etc.
Finch, Heneage See Nottingham, Finden (fin'den), Wrinam, line engraver, born in 1787; died at London in 1852. He engraved many illustrations for the Annuals and other books. In conjunction with his younger brother Edward and assistants he produced several extensive series of engravings of great merit; the first and most successful of which was Illustrations of the Life and Worke of Lord Byron. Other series followed, including the Royal Gallery of British Art, 1838-40, a very important publication, the engrav: ings in which measure $131 / 3 \times 91 / 2$ in., and are of the highest class. The plates are executed by various engravers of the foremost rank. Besldes his book-plates, FYnden produced some celebrated large engravings, among which may be mentioned The Village Festival, after Wlikle, George IV, after Slr Thomas Lawrence. Findlay (ind Has), a city, county seat miles s. of Toledo, on the Blancbard River. It is in the oil and natural gas region of Ohio and has extensive manufactures of automobile trucks, beet sugar, clay and porcelain ware, machine, boiler, engine and bridge works, etc. Pop. 16,325. Findhorn through the counties of Inverness, flows
and Elfin, and falls into the Moray Firth after a courve of 62 milen.
Fine (fin) in English Law, formeris
signifed a sum of money pald at the entrance of a tenant into his land and on other occations, but now hat the sits nification of a pecuniary penalty exacted either $\ln$ punishment of or in compente. tion for, an offense, whether commilted against an individual, in contravention of the laws of the community, or against the community ltself.
Fine Arts, the arts whose object is the production of pleasure by their immediate impression on the mind, as archltecture, poetry, muxic, painting, and sculpture. In modern usage the term is often restricted to the imita. tive arts which appeal to us through the eje-namely, painting, zculpture, engraving, architecture, and ls sometimes even restricted to the first two as more essentially lmitative and imaginative.
Fingal (fin'gal), a hero of Gaelic romance, celebrated as a sreat warrior and a generous man in many old ballads belonging alike to Ireland and Scotland; but more eapeclally the hero of an epic poem attributed to Fingal's son Ossian, first published by James Macpherson in 1762 . See Ossian.
Fingal's Cave, a famous natural cavern in the island of Staffa, one of the western Islands of Scotland. It extends 227 feet from lts mouth inward, is composed of lofty basaltic columns, beautifully jointed, and of most symmetrical, though somewhat varied forms. The helght from the top of the arched roof to the mean level of the sea is 66 feet ; the breadth at the entrance 42 feet, at the end of the cave 2 feet.
Finger-print System. Impremions prints as a means of identification for police purposes are taken in two ways: rolled and 'plain.' To take a ' rolled; impression the bulb of the finger is placed on the inked slab, and the finger turned over until the bulb, which originally faced to the left, faces to the right. It is then pressed lightly and in the same way upon paper. A plaln lmpression is secured by placing the bulb of the finger on the inked slab and then impressing it on the paper without any turning movement. These impressions are placed on sheets marked out for the purpose, and filed. The system has been adopted $\ln$ the United States, where it 15 used in the pollice departments, in the War Office and in the Marine Corps. Finial ( $\mathrm{fin}^{\prime i} \mathrm{-a}$ ), in archltecture an ornamental bunch of toliage which terminates pinnacles, canoples, pediments, etc., or any ornament of tike kidg

By older writerm the term is used to denote not oniy the leafy termination, but the whole pyramidal mass.
Tiniguerra (feenéswer'ra), Tommaso, or Maso, a Fiorentine goidsmith of the 15 th century, one of the best workers in niello, a form of decorative art then much in vogue in Itaiy, and the inventor of the method of taking impressions from engraved piates.
Fining (fining), a suhstance used to an are out of condition or are of inferior quality. A soiution of isingiass is generally used for heer, and aium, carhonate of soda, salt of tartar, etc., for spirits. Finings aiways destroy some of the real virtue of the iiquor.
Finistère (fi-nis-tär; 'Land's End'), a department of France, so named from occupying its westernmost extremity : area, 2505 square miles. The coast-iine is boid and precipitous, componed almost throughout of lofty granite clifs, in which are nnmerous deep indentations, the two most important of them forming both the hay of Douarnenez and the roadstead of Brest. The interior is traversed hy hilis which extend in ail directions. The soil is generaily fertiie and well cuitivated; fishing is extensively carried on ; and the minerals are of considerahie importance, including iron, zinc, bismuth, and lead. The manufactures consist chiefly of saijcioth, linen, soap, oil, candies, ropes, leather, paper, and tohacco. Shiphuilding also is carried on, and the general trade is extensive. Quimper is the capitai: other towns are Brest, Chateauin, and Morlaix. Pop. (1006) 705,103.
Finisterre, Cape, the most western coast of Galicia.
Finland (finland), formerly a Russian graud-duchy, containing $134,8 \div 9 \mathrm{sq}$. milies, bounded N. hy Norway, E. hy the governments of Oionetz and Archangei, s. by the Gulf of Finiand, w. by Sweden and the Gulf of Bothnia. The capital is Heisingfors. The country, in some parts, is hiliy, heing traversed by the continuations of the Scandinavian Mountains, and, in others, is sandy, marshy, and abounding in lakes, which furnish one of the most characteristic featnres of the scenery. The rivers are unimportant for narigation, hut yieid much motire power and are rich in fisk. Tillage and cattle-breeding are carried on to some extent; but the most valuable exports are the products of the forests, timber, pitch, tar, and rasin. More than half of them belong to the atate, and the management of this por-
tion is carefuiiy regulated, while the private owners handie their estates wastofuily. The fauna of Finland is very zich, ail domestic animais thrive, the hornew being notable for speed, hardihood, and docility. The climate is severe, but heaithy ; the mean yearly temperature lu the north is $27.5^{8}$ F., at Helsingfors $38.7^{\circ}$. The principal minerals are iron and copper: granite is extensively guar ried. The inhahitants are mostiy Finn (see Finns) and Swedes, with a few Lapps, Russians, and Germans. Up to the tweifth century the Finns lived under their own chiefs and were pagans. Their conversion to Christianity took place about the middle of that century, after their conquest by the Swedes. In 1721 the part of Finland which formed the province of Wihorg was secured to Peter the Great hy treaty. The remainder was conquered from the Swedes in 1809, and Alexander I, the Czar of Rnmsia, agreed that the laws, iiberties, and religion of the country shonld be faithfuily preserved. These resemhied those of Sweden, the religion being Lutheran, though there was compiete religious freo dom, the government being based on the Swedish system. There was a national parilament, or diet, consisting of four estates, the nohles, the clergy, the hurgesses, and the peasants, the sessions being convoked by the grand-duke, the Emperor of Rnssia. The senate, the members of which were nominated by the crown, held the superior administrative yower, its sessions being at Helaingfors under the presidency of a governor-senerai, who represented the emperor. All other officials, as weil as the officers of the army, were required to be Finnish suhjects. Under this system of government Finiand was the first part of the Russian empire, possessing a partial independence not agreeahle to the crarm The agreement made by Alexander, however, was retained untii 1898, when the Czar Nichoias II issued an edict rostricting the rights of the people, and robbing them in a. measure of their autonomons government. Other oppremsive ordinances were issued from 1001 to 1803, with the pnrpose of bringing Finland into conformity with the remainder of Russia, hnt causing a rebellions discontent which, in 1904, led to the amasaination of a tyrannical Russian governorgeneral by a Finnish patriot. The outbreak of revolutionary eentiment thronghout Russia in 1905, after the war with Japan. led to a restoration of the former government of Finland. In the following years a syutem of nniversal muitrage was adopted, women being given
the right to vote and to sit in the Diet New oppressive acts gave rise to fresh discontent when it became evident that more attempts were to be made at the Russification of Finland. The opening of the Great war pushed. Finland aftairs temporarily into the background, but following the revolution in Rusia (1017) the separatists of Finland declared their country independent. The Bolshevik govermment of Russia contested this declaration, and the hostilities which broke out gave Germany her opportunity to intervnne. She oceupied Helsingfors in April, 1918. Rccognition of the independence of Finland was made hy France, Denmart nnd Germany.
Finland, GuLr or, a great arm of the Baitic, 250 or 260 miliem long and from 10 to 70 miles, wide stretching from w. to En between Finland on the N. and the Russian sovernments of Isthonia and St. Petershurg on the A . Its. waters are oniy slightiy sait. It contains numerous isiands, severai excellent harbors and strong fortresses.
Finlay (fin'la), GeORGE, historian, Faversham, Kent, in 1709; died in 1875. He was educated, chiefly at Giasgow, for the legal profession, but, stirred by the cause of Greek independence, he went to Greece in 1823, and thenceforward lived chiefly at Athens devoted to the service of his adopted country. His chiet work, the History of Grccee from its Conquest by the Romens to 1864 , was puhished in sections under different tities: Greece under the Romana; History of the $B y$ santine Empire, etc.
Finmark (fin'mark), a division of north, partiy bounded in the the Aretic Ocean. It consists of a monntainous and usualiy sterije tract, stretching 140 miles northeast to southwest, with an average breadth of about 40 milies. The Loffoden Islands beiong to a iong line of coast where important fisheries are estahished. The cod-fishery employs a large number of toats and men, and a great quantity of cod-liver oii is made. Pop. 32,735.
Finner. See Finback.
Finns, in their own language calied people inhabiting the northwest of European Rnssia (governments of Archangei and Olonetz), hut especially the grandduchy of Finland. In a wider sense the term Finns, with its adjective Finnic, is applied to one of the chief branchos of the northern or Uralo-Altaic division of the Turanian family of peoples and ianguages. The Uralo-Finnic family has
been divided inte four groups or
branches: 1, the Urric, to which the Ontiaks, Voguls, and Magyars belong; 2, the Buigaric or Volgaic conaisting of the Tcheremissew and the Mordving; 3, the Permic, componed of the Permians, Sirianes, and Votiakn ; and 4, the Chudic or Baltic sroup. To the last beions, beIdes the Finns proper, the Esths of Fsthonia and the Lives or Livoniana, the Chudes, in the governments of Novgorod and Olonetz, and the lapps in Archangel and the northern parts of Finiand, Sweden, and Norway. The typical Finns are physically of iow stature hut of strong build; with round head, forehead low and arched, features fat with prominent cheek bouem, and obligue eyen. Their language belongs to the northern division of the Turanian or Uraio-Altaic family of languagen, and is mont nearly aliled to the languages of the Enths, Lapps, Mordvins. Voguls, and Hungarians. It is agreeable to the ear, rich in voively and diphthongs copious, and uncommoniy flexible. The language is remarkabiy rich in declensional forms, there being as many as fifteen different cases, expressing such reiations as are expressed in English hy near, to, $b_{y}$, on, in, woith, without, along, etc. There is no distinction of gender in nonns. The verh resembles the noun in its capahiiity for expressing shades of meaning hy corresponding inflections. Finnish ifterature is valuahle chiefly for its rich stores of national poetry. These poems, which had been preserved hy oral tradition from the times of heathendom, were gradnally dying out, tiil 1835, when Lonnrot grouped together in one whole all the fragments he could iay his hands on and pubiished them, under the title of Kalcvala, as the nationai epic of the Finnish people. a second edition, increased almost hy one-half, was puhiished by him in 1849. He aiso puhiished a collection of 592 ancient lyric poems and 50 oid baliads, and collections of proverbs and riddies. A great impuise has been given to the cuitivation of the ianguage in modern times. It is now recognized as an official language side by side with Swedish, and is becoming more and more the vehicle for imparting instruction. In many of the higher educational institutions for both sezes in Finiand the Finnish innguage is used. Works on science and history as well as poetry have been written in Finnish in recent years: a great Finnish-Swedish dictionary has bean pnblished, and there are now a considerahie number of newspapers. The center of this literary life is the city of Helsingfors.

Fins,the projecting wing-like organs which enahie fishen to balance themelves and assiat in resulating their morvments in the water. The fin consists of a thin, elastic memhrane supported by rayn or little bony or cartilaginous ossicles. The pectoral or breast fins are never more than two: they are piaced immediateiy in the rear of the gill opening on the shouider. In a state of rest these fins are parallei with

Fime of a Fynis (Perea Granulata).
p. Peotoral v, Ventral d, First Doreal. df; Second Dormal a, Caudal. at Anal.
the body, and have the aper towards the tail. The ventrale, or abdominal fins, are piaced under the throat or belly, and point downwards and hackwards. They are smaller, in seneral, than the pectorais, and have sometimes long appendages. Those of the back, or the dorsal fins, point upwards and hackwards, and vary in number from one to four, to which sometimes are added several fiulets or pinnule-small appendages which are seen in the mackerel. The anal fins are situated behind the vent, varying in nnmber from one to three, placed verticaliy, and, like the dorsal, generally deeper on the anterior margin. The caudal, or tail fin, terminates the body, and both propels the fish and serves as the rudder by which it steers itself. The pectoral and ventral are known as paired fins, and represent the fore and hind limbs of other vertehrates; the dorsal, anal, and caudal are median, vertical, or unpaired fins, and are organs peculiar to fishes.
Finsbury (finerber-i), a parliamentary ing part of London, bounded by the parliamentary boroughs of St. Pancras, Islington, Shoreditch. London City, and Frestminster. Pop. (1911) 87,976. Finsen Tight Cure, invented by R. Finsen, of Copenharen (died Sept 24, 1904), is used for the cure of lupne, acne, eryaipelas, and aimilar eruptions, and in combination with x-rays for deepseated cancers The Finsen lamp con-
sints of a powerful electric light focusing through telewcopes of colored slam on the disoased surtacen reguiring treatment.

## Fingter-Aarhorn (fin'ster-lirhorn), <br> the hishent peak

 of the Bernese Alps, 14,026 feet above the level of the sea.
## Finsterwalde (fin-s ter-rald o)

 of Brandenburs, Prussia, with manufactures of cotton and woolen cloths. Pop. 10,726.Fion, Frons (fe'on), name siven semi-mythical class of warriors of superhuman size, strength, speed, and prowess. Generally they are supposed to have been a sort of Irish rilitia, and to have had their name from Fion MacCumhal (the Finn MacCoul of Dnnbar, and Bingal of Macphermon), their most distinguished leader; but Mr. Skene beileves the:n to have been of the race that inhabited Ger many before the Germans and Scotland and Ireland before the Scots.
Fiord (fyord), a geographical term (of Scandinavian orisin) applied to long, narrow, and very irregu-larly-shaped inlets of the rea, such as divernify the coast of Norway: Similar inlets of the sea are presented in the sealochs of the west coast of Scotiand, as also in the fiords on the southwest coast of the South Island of New Zealand, where the scenery is singularly imposing. Fiords often seem to owe their origin to the action of glaciers in remote epochs of the earth's history.
Fiorin (fiur-in; $\Delta$ grostie alba), or white-top, a grass found in Northern States of America. It is not of much agricultural valne. A stoloniferous variety, sometimes called 4 . stoloniféru, is often a tronblesome weed.
Fir (fér), a name sometimes used as co-extensive with the term pine, and including the whole genus Pinus; sometimes restricted to trees of the genus 4bies, which differ from the pines in their leaves growing singly, and the scales of the cones being mooth, round and thin. The term fir, thus limited, is applied to the different varieties of the silver fir and the spruce fir, the common silver fir being the 4 bies picioc of bota. nists, while the common or Norway anruce is the 1 bies emcelea. Other nno cies are the great Californian fir (A. grandio), the balm of Gilead fir (A. Bol gamifera), the large-bracted fir ( 4 , nobilis), the hemlock sprnce fr (A. Ocnav densio), oriental fir (4. oriontalie), white spruce fir (A. albe), Douglas fir (4. Dougledi), etc. The Scotch fir in
ansecies of play (P. oylveotrio). The ore, evon in the wident eense of the term,
are almont all remarkable for the regularity of their growth, their taperins form, and the great altitude of thr's stema. Their timber is often highiy aluabie, being aimont soiely used in the condtruction of houses, and for the aparm and masts of ressels of ail kinds. Some of them are planted mainiy as ornamental treen. By some botanists the larch and cedar are included with the firs in the genus Abies. See Spruce, Sil. ver Fir, Hemlook, etc.
Firbolgs (fir'bolgz), one of the legendearliest period of Irish history. Som of the the Irish historians beain their account of the Irish monarchy and list of kings with Slainge, the first Firbois king, who began to reign 1034 8. O. They are cald to have been driren out or aubjugated by a hindred tribe from Scotland, who in turn were expelled or conquered by the Miieainna, The Firboigs may, it has been thought, corresponded to the pre-Aryan inhabitants of Ireiand.
Firdusi (firda'es), or Frrdau'gr, greatent epic poet of the Persians, the born at Khoramsan about 931, and dicd there about 1020. At the request of the Sultan Mahmud, of Ghuznee, Firdusi undertook to write an epic on the history of the Persian kings, the suitan promising him a piece of gold for each verec. Firdusi devoted a great number of years to this work, and produced an historical poem of 60,000 verses, entitled Shanathe ('Book of the Kings'), containing the history of the Persian ruiers from the beginning of the world to the downfall of the Bassanian dvnasty ( 682 A.D.), and conisting properly of a auccession of hitarical epics. The sultan, prejndiced against Firdusi by the poet's enemies, gave him oniy a plece of silver for each verne. In return Firduai retaliated With one of the bitterest and severent satires ever penned. The resentment of Mahmud compelled the poet to wander from court to court seeking a protection which the sovereigns were afraid to give. The Shanameh is one of the finest Asiatic poems. No work in the Persian lansuage can be compared with it. It abounds in rich imagery, contains many passages of splendid poetry, and is of great interest to historians and ethnologista. A French translation of the Shenameh by Mohi, with the Persian text, Was published by the French governmert. Nire (fir), the simultaneous and vividly light during the process of combuation.

The uses and dangers of fire and to some extent the means of controling it, have been senerally nuderntood from á very early period. The symbolic and auperntitious unes of fire are numeroun, and have been, or are, common to ail racem $\Delta \mathrm{n}$ ciently fire was regarded as one of the four eiementr of which ali thinge are compoged, the other three being air, carth, and water. See Combwation and articles following this.

## Fire-alarm, an apparatua, mechant-

 graphic used cal, electrical, and telegraphic, used for detecting fires, and for giving instantaneous notice of an outbreak. Detectors are often placed in the different apartments of a buliding, which ring an alarm when the temperature reaches a certain heisht. In iarpe towns a series of aisnal-hoxes in ditributed in different quarterm from which an alarm can be immediately telegraphed to the Gre-brigade atation.
## Fire Annihilator. See Extincteur.

Fire Armor, a device to protret from the effects of smoke, gas, etc. Devices of this tind have been in use in the United States since 1823. Methods are empioyed to protect the face, and by a wet sponge to keep out dust, smoke and noxious gases from the lungs, while cooling the air respired. Aiso the firemen are suppiled with fresh air through a pipe connected with the face-mask.
Firearms, a general name for all ing-pieces sorts of guns, rifies, fowl-ing-pieces, biunderbuses, pistols, etc., which effect their discharge by the combustion of sunpowder.
Firebsill: (1) a bail filled with powder or other combustibies, intended to be thrown among enemies, and to injure by expiosion, or to met fire to their works (2) A popular name applied to a certain class of meteors which exhibit themselves as giobuiar massen of light moving with great velocity, and not infrequentil passing unbroken across the sky untli lost in the horizon. They differ from ordinary meteors, probably, more in voiume and brilliancy than in any othes distinctive characteristic. They are not to be confounded with another class of meteors that explode in their passage, and appear to let fall a dull red body (meteoroilite) to the earth.
Fire-balloon, a bailioon which is supfrom aire bened with heated air from a fire beneath the mouth of the bag. and rises in consequence. Also a smali balloon sent up at night with fireworks, and Kindling when a certain hoight if

Fireboat, a amall ateamboat equipapparatus, and used when a fre break out on wharres or in shipping.
Firebox, the box (senerally made of copper) in which the fire in a locomotive engine is placed. See Boller. Fircclay, a compact hind of clay, and alumina, with a monali percentage of fron oxide, capable of sustaining intense heat, and used in mating fire-bricks, gasretorth, crucibies, etc. Fireclay belongs to the coal formation, and is interstratified with coai and other rocks. In the United States the supply of fireclays is chiefly from New Jersey, Missourl, Pennsylvania and Ohio.
Fire-damp, the gas contained in coal, farge quantities often given oir by it in tion when mixed with atmospheric air. Explosion takes place when, as is often the case, the coal consists largely of marsh-gas (light carbureted hydrogen). The composition of the gas evolved from coal is variable, but in connectiou with the marsh-gas, oxysen, carbonic acid and nitrogen are aiways present. Fire-damp is a source of great danger to life in coal mines.
Fire-engine, an engine designed to stream of water through a hose upon a confiagration, for the purpose of extin-

Vertioal Bection of Platform-spring Steam Fire-ngine.
guishing it. Fire-engines are of three principal kinds: hand-power, steam and chemical. Hand-pū̃er engines, consisting in the main of a pair of single-acting force-pumps, mounted on wheels and worked by hand, have been senerally superseded by steam fire-engines, consinting of a pair of single-acting suction and force-pumps operated by steam. Chemical
firo-xtinguinhera are of varfons kinds, but mainly depend on the rapid production of carbonic acid sas, which is mised when water.

The mont powerful land stam angine with a boiler steam premure of 100 pounds per quare inch, can devalop a pump presure of 800 pounds per equaro inch, and is rated to dimoharts 1100 galions of water per minute for ifo morvIce.

The practice is to lay 8 -inch howe close in to the fire, and finish out with $21 / 2$-inch hose as belng more expeditioualy and safeiy handled. Each of theie streams shouid be handied by not lew than four men. While in the house the water in the bolier is kept continuously at a steam pretaure of 20 pounds to the square inch by a stationary water-heating apparatus, so that the engines are ready to pump water whenever they leave the engine house. Horse-drawn fire enginea have three horses, as do the hook and ladder trucks.

Motor propelled and operated fire apparatus have been greatly improved in recent years. The types are numerons. Among them are the ordinary steam fire engine, the front wheels and axle of which have been removed and a short four wheel chaseis mbstituted, making it a six-wheeler, the motor almply replac ing the horses, and the pumps beins operated by steam from the bollers, as formerly.

The chemical fire engine is a valuable adjunct to fire department equipment, and nearly every fire department in the country has one or more chemical outfite. The one most generally used is known as the 'combination wagon,' and carrles one or more chemical tank and a complement of hose, ladders and other light fire appliances. The cities of Baltimore, Detroit, Los Angeles, Philadelphia, St. Louis and Washington operate a considerable number of chemical outfits, specializing gas-impregnated water for small enclosed fires, the practice beins to lay in the chemical hose and water fryt, following them up, if necessary with a larger hose and water, or to save 'water damage' to use the small hose for hydrant or engine stream when the chemicalized water has been exhausted.
'Chemicals' are extensively used in sections where water is not avallable. Fire-escape, a contrivance for encape from the upper part of a building which is on fire. It is componed of an arrangement of long ladder. a net is used for lowering people unable
to dewenend the ladder. Other Hinde nt firt-encapes are corde colled in a sleeping apartment, which may be attached to a window; ropen with weights at one end, which may be thrown into windown: poles with baskets attached, and other device usually. In American cities Areemcapen consintiog of iron atairways or ladders are required on all high hullding. The 'Philadeiphia fire-escape' is a hricked-in iron etairway, the oniy entrances to which are on the outnide of the huliding, approached by iron balconies from all floors, with the exit on the street. Firefly, a name indefinitely given to ponsesses much luminomity. Except the lantern-ify, the firefiles are all coleopterous, and are membere of two neariy allied familiee the Elaterides or skipjack, and Lampyride, to which the slowworm be longe. The Britich slowworm has too ilttle inminosity to entitle it to the name of firely, but the Lampyris Italica, and L. oorwoce of Canada are allied to it. True firefiles are found only in the warmer regions of the earth. The Elater or Pyrophorus noctilicus of South America and the West Indies is one of the most brilliant, giving out its light from two eye-ilike tubercles on the thorax. Their light is so powerful that smali print may be read by it and in Hayti they are used to give light for domestic purposes, eight or ten confined in a vial emitting sufficient light to enable a person to write.
Fire-hose.
In the United States hose is made of cotton woven into a tube by machinery, two such tubes belng fitted within each other and held together hy a solution of India rnbber, which renders them fireproof.
Fire Insurance, insurance against Insurance.
Firelock, a musket or other gnn, a filnt and steel, hy lock furnished with is produced in order to discharge it ; distingulshed from the old matchlock, which was fired with a match.
Firemaking. The oldest method of friction of a stick ruhbed in a groove. A later was the fire drill. a stick twirled by a string. A later method was by striling Iron and fint together and thns producing sparks. Before the infention of the lucifer match the hearth-fire was kept alive all night. The match wis preceded by a phosphorus bottle and other less satisfactory devices.
Fire Ordeal. See Ordeal

Fireproofing. Varloun pians have dering houses or an apartment in a runce firepruof, an by constructing them en'rifily of brick or atone, and empioying iron doors, thes and lintele, atone stalrcases and landínse. In the cate of textile fabrice, as cotton, inen, etc., maturation with various saitt, as borax in emplojed, these leaving their cryutals in the nubstance of the fabrica. Wood is bent protected by ilicate of moda, which, on the application of atrons heat, fumes into a slam, and this. enveloping not only the outolde hut alis? the internal fibers of the wood, shields from contact with the oxyren of the nir. Fireproof mafen are generally constr! edi with douhle walis of stout lron, haring a apace hetween the wails filled wit? $x \ldots:$ subatance which is wais ilied wit. of heat.
Fire-raising, in Scotch ia" mame as arcol it. EL lish law. In Scotland it is "apit. crime in some casem hut capit 1 minili.. ment is not now inflicted. See arinu. Fireships are generally old vess.in filied With combustiv!as, and fitted with grappling-irons, to hor enemies' ships and set them on fire. Th. ancient device has been frequently tried in modern warfare, though it can never be of much effect when employed against modern shipm.
Fireworks, preparations in various shapes of sunpowder. charcoal, suiphur, maltpeter, filings of Iron, etc. used for display at times of pubilic rejoicing, etc. They may he diFided into simple hand pleces, such as squibs, crackers, rocketa, Roman candles, etc., and arranged 'piecen,' which are' contrived with much skill and ingenuity to represent, when isnited, various devices and pictures.
Fire-worship, the worship of fire. which worship is the hischest type of Which worship is seen in the adoration of the sun, not only as the most glorions visible ohject in the universe, but also as the source of light and heat. In the early religion of India the snn appears in the form of the god Agni (a name alin to Lat. ionis, fire), what was first regarded as a mere abstract influence or a phenomenon in time being regarded as a sentlent individual. Thus in the Vedic hymns Agni is the god of fire, correaponding to the Greek Hephestos (Vnlcan). In the Fast the Forship of the element of fire Was nractised by the anclent Persians or Magians, and is continued by the modern Parsees. The establishment of this species of idolatry among the Persians is aseribed to Zoronater, who taught
bis disciples that in the sun and in the macred fires of their temules cionl more eapecially dweit, and the i, erefore dlvine homage was to be pald, these.

## Firishta. Bee Feriohos.

Firkin
(ferkin), an old measure of capacity, being the fourth part of a barrel, or equal to $71 / 2$ imperlai gailonm. A mmall cank or kez of indeterminate rise.
Firmament, the vault of heaven. The Which is so rendere 1 in scripture, conveve chiefly the idea of expansion, altherigh the t if molldity is also suggested, inamthe root signification of the hat which is expanded by beat-

## u. <br> Firman

 (fer'man: Pér. ferman), a decree, order, or grant of an "sinntal sorereign, as of Turkey, issued vi rious special purposes, for instance (1) ew ure a traveler protection and ansistarce. It differs from a Hatti Sherif in to far as it may he signed hy any minister, wherras the Intti Sherif is approved hy the Sultan himseif with his special mark, and is therefore supposed to be irrevocabie.Firn, the more or less compneted the material from which ginciers are formed, calied aiso névé.
Firolidse (fir-ol'íde), a family of cirolua gasteropodous moiluses, be longing to the onder Nucleobranchiata or Heteropoda. The members of the typicai genus Firola are very common in tropical seas and in the Mediterranean, but are so transparent that sometimes ther can scarcely be seen. They swim with their foot upwards. They have no sheii. The individ als of Carinaria, another genus, have mall delicate shell enclosing the gills
Firozábád (fê-rō-za-bid'), a town and trict, Northwestern Provinces of India, headquarters of a tahsil of the same name, 24 miles E. of Agra. It contains nomerous ruins of handsome buildings: is a station on the E. Indian Rallway, 817 miles from Calcutta. Pop. 16,023. Pop. of tahsil or revenue distrlet, 108,021.

## Firozpur <br> (ferez-pur ), a thriving commercial town, Punjab,

 India, capital of a district of the samename. The arsenal is the largest in the

Iunjah. Pop., inciuding the military cantonmente, "2 milles $\mathrm{m}_{\text {. of }}$ of the city, $60,437$. The distriet form the mout wuthern of the Labore division. Area, 2702 Eq. miles. : pop. 150,510 . - Firospur is aino the name ol a town in Gurgaon dintrict, PunJab. I'np. 9878.
First-fruits, in the Church of Ens: land, the income of every spiritual bencfice for the firmt year, paid oricinally to the crown, hut now to a board, which applien the monuy mo obtained to the supplementing of the incomes of small beneficen. See Annates. Firth, Farir an estuary, a term applied in Scotland to arms of the sea, much an the Firtil of Clyde, of Thy. and of Forth, etc. It in the same word as the Norwegian fiord (which see). Fischart (fish'drt), Johann, a German satirist, born hetween 15.5 and 1500; died in 1580 . His writings are mostiy satirical, partiy in prowe. partiy in verse, partly of both mixed togethor, and liave the most whlmaical titlea As a satirist he is the most unter straiued of his age, the papal dignity, and the lives of the priesthood and Jesuits, astrological superstition, scholastic pedantry, etc., being among his favorite suhjects of attack.
Fish Commission, established in States in 1871 for fostering the fishing industries hy distributing food-fishes. It has done admirable work hy its study of the locality, food and hahits of edibio fishes, thrir propagation, and the distribution of the young in great numbers in suitabie waters. It has niso made valnahie deep-sea expiorations. State Flsh Commissions are in existence throughout the country.

## Figh Culture. See Pisciculture.

Fish, Hamilton, an American states, man, born in New York City in 1808; died in 1893 . He graduated at Columhin and was admitted to the bar. He was a Whis representative in Congrews, 1843-45; a member of the state senate in 1847: and governor of New York, 1849-51. He was a member of the U. A. Senate, 1851-67, and Figorously opposed the Kansas-Nebraska Bill. During the Civil war he threw all his influence on the side of the national administration, and after the war he wam secretary of state in Grant's cabinet ( $1503-\frac{\pi}{5}$ ).
Fisher, Sydner Gmonos author, was 1856: studied law at Harvand and was admitted to the bar in 1883. His worls are historical in character, inciuding Mom, Wownen and Manners in Oolonid

Times; The Evolution of the Constitution of the United States, etc. Tisher, Joun, Bishop of Rochenter, ley. in Yorkshir: Hern in 1459, at Bevercellor of the University of Camhridge in 1501 and Bishop of Rochester in 1504. He opposed Henry VIII's divorce ; listened to the pretended prophecies of Elizabeth Barton, the Maid of Kent; opposed the royal supremacy, and was imprisoned in 1534 and attainted. His appointment as cardinal by Paul III led to his execution after trial by a special commission, 1535. Fisheries (fish'eress), a term which concerned in the capture of the inhahitants of fresh and salt water for food and other economic purposes. It is thus applied to the procuring not only of lush proper, hut also of other animals aud products found in the sea, such as sponges, corals, pearls, shellfish, turtles, whales, seals, etc. Fresh-water fisheries include those of salmon, shad, alewives, sturgeons, trout, pike, perch, etc. Neafisheries include the herring, cod, haddock, and various other fishes, and are prosecuted in a variety of ways. Of nets the chief varieties are trawls, driftnets, seines, bagnets, and trammel or set nets, while hand line and long line fishing are widely prosecuted. Fisheries have generally been considered so important an object of national wealth that governments have heen careful to protect and encourage them in various ways. The right to various fisheries has often been a matter of international disputes, negotiations, and treaties. Fisheries belonging to particular governments, especially inland fisheries in lakes and rivers, are also frequently protected hy laws relating to the mode of capture, etce., which vary with the particular circursetances in each case.

The countries whose fishing industries vield the most valuahle results are the United States, Great Britain, Japan, Canada, Norway, France, and Russia. The United States surpasses all other countries in value of fisheries, having annual returns worth over $\$ 75,000,000$, or $\$ 900000,000$ if the island possessions be included. The yield of Great Britain is valued at alant $\$ 50,000,000$ of Japan at $\$ 65,000,000$ of Russia at $\$ 30,000,000$, of Canada at $\$ 35,000,000$, of other countries at over $\$ 200.000,000$, the world's total being about $\$ 500,000,000$.

The banks of Newfoundland are one of the richest fishing grounds in the world, and are largely frequented by French fishermen. The German Ocean also yields an exceedingly rich harvest.
especially in Luaring, cod, haddock, fla fish, etc.

## Fishery Question, the Caria

 dian. Under the treaty of 1788, at th the fishing close of the Revolutionary Wai the fishing hanks, coasts, bays, and creek of Canada were thrown open to the fishe men of the United States, hut since th close of the War of 1812 thene fisherie have been a source of continued contro versy. The British Peace Commissioner in 1814 held that the sccond war ha destroyed the first treaty, while the Amer icans maintained that the rights grante by it could not he revoked. An attemp was made in 1878 to settle the dispute b. granting American fishermen the right $t$ fish outside the limit of three marin miles from the Canadian coast. Th question of the right to fish in the Gul of St. Lawrence and the large Canadiahays remained a matter of dispute unt 1871, when hy treaty the fisheries of eacl country were thrown open to the others But as the right to fish in American waters was of no use to Britain, tha country claimed damages for the right to fish in Newfoundland and inshore waters for twelve years, the limit of the treaty. Arhitration followed and the sum in $\$ 5,500,000$ was awarded. In 1888 , on the expiration of this treaty, another was negotiated, hut the United States Senate refused to ratify it, and the question continued open. The corstant old controversy was in the end submitted to The Hague Court for arbitration and a drcision was rendered in 1010, with which hoth nations professed to be satisfied, till United States winning on five of the points in question, Great Britain on the two most important ones.The points gained hy the Uniter? States gave fishermen the right to emplay foreign crews in their hoats, to exercise the same commercial privileges (such as the purchase of boat and supplies) as are accorded to trading vessels generally, to exercise the same privileges on the coast of Newfoundland as in Lahrador, and to le exempt from light, harhor, and other dities imposed on Lahrador. Those gained by Great Britain were the following: In measuring the three miles frinn the coast within which fishing was prohibited, it was decided that in the case if large bavs the hase line should he drawn from headland to headland across the hay, instead of following the across inuositips of the coast. The second point gavi Freat Britain the right to make rensonable regulations for fishing in Canadian watcra. But it was decided that in case auch regulations ehould be dleputed af

unreasonable the disputed point or points May, 1018, in one of the last great drives were to be settled by arbitration. On of the enemy in the European Wrar ( $\mathrm{q} \cdot \mathrm{v}$. ). the whole, both countries deciared them-The Germans drove in a salient from seives satisfied with the decision, and $\Omega$ Soissons to Rheims, Fismes being in the
fruitful source of disaffection between the two nations was removed.
Fish-hook, a curved, barbed, and for catching fish. The Limerick hook, which has the greatest reputation, has a barb that is forged solid, and then filed into the proper shape, while ordinary hooks have a barb that is raised by cutting into the wire. Hookmaking machines are now common, especiaily in tho United States.
Fish-joint, a spice or joining, as in end to end are fastened together by flat pieces of iron (fishplates) placed on each side of the rails, and fastened by screwnuts and boits (fishbolts).
Fish-louse, a general name for those are paratic, of the Copepoda which are parasitic upon fish. The name is also applied to sertain of the Isopoda which have the same parisitic habit.
Fisk, Clinton Bowen, soldier and offYort, ciai, was born at Griggsvilie, New Tork, in 1828; died in 1890. He engaged in the Civil war, enlisting as a private, and rising to the rank of brevet-brigadiergeneral of voiunteers. After the war he heid positions in the $\overline{\mathrm{F}}$ 'reedman's Bureau and in other service, in 1886 wis the candidate of the Prohibition party for novernor of New Jeriey, and in 1888 for president of the United States. He was one of the founders of Fisk University, Tennessee.
Fiske (fisk) Joun, author, was born 1842; died in 1901. He became a lecturer on philosophy at Harvard and subsequentiy assistant librarian. IIe pubiished IIyths and Mythmakers, Outlines of Cosmic Philosophy, The Destiny of Man, and other philosophic works, and subsequentiy produced a series of books on American history including The Critical Period of American History, American Political Ideals, etc. He was very popular in both these fields of literature. Fiske, Minnie Maddern, an American Louisiana, in 1865; made her first appearance on the stage at the age of three and at fifteen became a star. In 1890 she married Harrison Grey Fiske, editor of the Dramatio Mirror. She has starred in various plays with signal success, ope of the favorites being Becky Sharp.
Fismes (feme), an arrondissement of Rheims, department of Marme, France, on the Veble River. Pop. 3410 . It fell into the hande of the Germans in
center of the stroke. They pushed the Allies back from the Vcsle to the Marae, but at Chatteau-Thierry (q. จ.) they were stopped by American troops, who held the line for several weeke. The counter attack began July 19, and by August 1 Fismes had been recoverel and the enemy was in flight behind the Vesle.
Fission (fish'un), in physiology, reproduction by division of one animal of low type into two, each of these, again, dividing into two others, and so on. The products of the division of the body of the primitive organism may either remain undetached, when they will give rise to a composite structure (as in many corals) or they may be thrown off and live an independent existence. The bacteria that cause disease are regarded as fission fungi.
Fissirostres (fis-i-ros'trezz), a tribe of the Insessores or perching birds, distinguished by having a very wide gape, extending beneath the eycs. It comprehends the night-jars or goatsuckers, whip-poor-wili, swallows, swifts, martins, etc. But in modern classification this division is often diaregarded.
Fissurellidse (fis-â-rel'i-de), the keyhoie limpete, a family of gasteropodous moiluscs resembling the limpets in appearance and habits, but differing considerabiy in strecture. The animal is generally too large for the sheil, so that in the typical genus Fissurella the sheil appears as if it were rudimentary. The species are wideiy distributed: many are British, and many fossii.
Fistula (fis'to-la), in surgery, a channel open at both ends cxcavated between an internal surface and the skin surface, showing no tendency to heai, and generaliy arising from abscesses. It occurs most frequently at some outlet of the body, as the urinary passages and anus.
Fistularia (fista-la'ri-a), a genus of acanthopterygious fishes characterized by the elongation of the facial bones into a long fistuia or tube at the extremity of which the mouth opens. A notable species is the tobaccopine fish.
Fitch,
John, inventor, was born at East Windsor. Connectieut, in 1743 ; died in 1798 . After being captured by Indians in Kentucky about 1780, and exchanged, he devoted himself to the application of ateam to navigation, producing a moiel of a steamhont is
1785. A hoat made hy him came on the Delaware in 1787 with some success, and a boat coupleted in 17100 made regnlar trips on the Lelaware for some time. He gained no profit from his inventlon and died in poverty. His boats were moved by paddles, instead of hy wheels, as in Fulton's invention. In 1817 a committre of the New York Legislature derided that he was the inventor of the steam-
Fitchburg (fitch'burg), one of the County, Massachusetts, on the Nashua Hiver, 50 miles $N . W$. of Boston; on the B. and M. and N. Y., N. H. and H. I. H. It has manufactures of wooden toys, files, paper, cotton, and woolen goods, machinerr. and engines. Pop. 41,700.
Fitchet (fich'et), or Firch, the fur low ground, with long, soft it is a yel$\operatorname{lng}$ hairs on its surface, which are pxclusively nsed for artists brushes. The fur is not in great request as it emits an unpleasant odor which is difficult to dissi-
pate. See Polecat.
Fitz, the old French word for fils, surnames, as insed as a prefix in cerptain Titzuaurlce, Fitzwiliiam, especially in the surnames of the illegitimate sons of kings or princes of the blourl, ete.; an, Fitzroy, Fitzclarence.
Fitzgerald (fits-jer'ald), Family of, from William, Castellan family deseended William the Conqueror's reign. Two
branches of this nouse, the Earls of Desbranches of this nouse, the Earls of Desmond and Kildare, were for long the practical rulers of the English part of Ireland. The Kildare branch is still represented by the ducal house of

## Fitzgerald,

Lorn Edward, born near Dublin 1773: died 1798. 1 Ie was a younger son of the Duke of leinster, and married Pamela. the reputed daughter of the Duke of Orleans (Fgalite) and Madame de Genlis. In 1706 lie joined the United Irishmen, and platted for a French invasion of Ireland; was betrayed by a spy, and a rrested. He stabbed two of the officers sent to take him, hut was disabled by a pistol-shot. whlch cansed his death before he could

Fitzgerald, Lo ond Thomas, known born about 1513 ; died in 1536 . He He was, vice-deputy for his father, the ninth was If Kildare, on whose arrest by Henry VIII Iord Thomas raiged a formidable revolt in Ireland, which was ultimately

Thomas with his five uncles was hanged at Tyhurn.
Fitzgerald, a city in Ben Hill County, Tiftor. It has Georgia, 25 miles N. E. of nills, etc. Pop. 5795.
Fitzpatrick, Brivjamin, an AmeriGreen county, Georgia, in 1802 ; died in 1869. He practiced law from 1821 to 1829, when his health broke down and he became a farmer. He was governor of Alabama, 1841-45, and U. S. Senator, 1848-40 and 185i-di, resigning when Alabama seceded and taking an important part in the war. At its close he was chosen president of a convention called to frame a new constitution.
Fitzpatrick, Sir Cinarlirs, a Cana. Quec Dian politlcian, born in Quebec, December 19, 1853; was sradaated at Laval University and admitted to the har in 1876. He was a member of the Quebec Assemhly, 1890-96, as a Liberal; was then elected to the Dominion Parliament and was appointed solicitor-general ln Nir Wilfrid Laurier's ministry. IIe was ninister of justices, 1901-04; and in 1006 became chief-justica of Canada and deputy governor-generai.
Fitzroy (fito-roi'), Robert, an Enggist, born in lish admiral and meteoruloin 186\%. He entered the navy in 1810: from 1828 to 1836 was employed in hydrographical surveys; and was governor of New /ealand, 1843-45. He puhlished Narrative of the Surveving Voyages of the Adventure und Beaglc, 1839 . In 1857 he was promoted to the rank of rearalmiral; in 1863 to that of vice-admiral.
Fiume (fe-o'mi), a seaport town on the Gulf of Quaruero, in the N. E. extremity of the Adriatic. In 1471 Austria took control of it; in 1779 it was attached to Hungary; severed fron Austro-Hungarian control by the treaty of 1019. (See Trenty.) I) Annuntio (q. r.) occupied Fiume in the name of Italy, Sept. 15, 1919. Pop. 50,000 .
Five Forks, Battle of, a battle at Five Forks, force of 25,000 Va., between a Federal and an inferior under General Sheridan General Finfertt Confederate force under Petershurg ickett. It settled the fate of Petershurg, which was evacuated by the Confederates on April 3, and placed General Grant in possession of the SouthenRailroad. The Federal loss was less than 1000; that of the Confederates probahly abont 8000 .
Fixed Alkalies, potash, soda. of the rare metals rubidium and caridet
so named in contradistinction to ammoaia, whieh is termed volatile alkali.
Fized Oils. See Oils.
Fixed Stars,
those stars which appear to remain aiways at the same distance from each other and in the same relative position. The name comprehends, therefore, ail the bravenly hodies, with the exeeption of the planets, with their moons, and the comets. See Stars.

## Fixtures <br> (fiks'tūrs), in law, are ac-

 cessories annexed to houses or laads, which by the fact of their being so annexed become a part of the real property and pass to the freeholder, not being removable at will by the tenant or occupier of the property. The general ruie of law is that whatever lius been affixed to the premises or pat into the land hy a teaant duriag his (кexppaacy cannot be removed without the landlord's consent. Large exceptions are made to this ruie in favor of the tenant, covering generally fixtures for trad", for agricultural purposes, and for ornaunent or convenience ; but the $r$ rmovel must not injure the land or buildings of the landiord.Flag; a piece of cloth on which ce:tain figures or devices are painted, impressed, or wrought, borse on a staff or poie, and usually employed to distinguish one company, party, or nationality from another. In the army a flag ist a banaer by which one regiment is distinguished from another. Flags borae on the masts of vessels not only designate the country to which they belong, but ulso are made to denote the quality of the officer hy whom a ship is commanded. In the United States Navy distinctive blue flags with four, three, and two white stars, are worn at the main, fore, and mizzen by admirals, vice-admirols, and rear-admirals. respectively. Commoinres have a broad hlue pennant, with one white star, which is worn at the main when the commodore is aeting as conmander-in-chief. Anv officer comtaanding a vessel, except one on board of whieh a flag or broad pennant may he worn, shall wear a narrow pennaat at the main. When powder is being taken on hoard a red flag is hoisted at the fore. A yellow flag is the quarantine flag. Flags of truce are white, and on water are met by a boat or vessel from the senior oficer's vessel in charge of a commissioned officer, having a white flag. To lower or strike the flag is to pull it down, or take it in, out of respect or suhmission to sunerinam. To lower or strike the flag in an engagement is a sign of jielding.

A sign of mourning is to hoist the flage at a half or two-thirds of the height of the masts; if on land, at half the height of the stafi. Besides the use of flags at distinguishing emhiems, a very important use of them at sea, both by national and mercantile navies, is as signals according to an arranged code. See Flag of the United States.
Nag, a popular name for many endosenous plants with sword-shaped leaves, mostly growing in moist situations; but sometimes particulariy appropriated to Iric Pseudacórus, nat. order Iridaceæ; also termed Flower de lis or Flover de luce. It has sword-shaped leaves and yeliow flowers, grows in marsiny piaces and hy the sides of streams and inkes. The stout creeping root-stock has been recommended for alleviating the toothacire. and is used for dying black in the Hebrides. The leaves make excellent thateh, uni are also employed for making bottoms to chairs.
Flagellants (flajel-ants; Latin flagellare, to lash or scourge), the name of a ract in the thirteenth century wio maintained that flageliation was of equal virtue with baptism and other saeraments. They walked in procession with shoulders bare, and whipped the:m-clves till the blood ran down their bodies, to obtain the mercy of God and appease His wrath against the viees of the age. Raincr, a hermit of Perugia, is said to have been its founder in 1260. He soon found followers in nearly all parts of Italy. Their numher in time amounted to 10,000 , who went about, led by priests bearing hanners and crosses. They went in thousands from country to country, begging alms. For conturies thry formed a sort of intermittent order of fanatics, frequently reapparing here and there in times of extruoriinary declension or distress.
Flageolet (flaj'e-let), a small windplayed by means of a mouthpiece. The tone produeed is simiiar to that of the piccoio, but is softer in quality, and the range is two octaves. The double fiageolet consists of two instruments united by one mouthpiece, and producing double notes. The name fageolet tones is given to those harmonic tones on the violin, vioioncelio, and other stringed instruments produced by the finger lightiy touching the string on the exaci part which generates the harmoay, and not. by pressing the string down to the finges. hoard.
Flag-officer, in the navy, a general an admiral, vice-admiral, and rear-ad-

miral, who have the right to carry flags indicating their rank at the mast-head. Ilag of the Prophet, the Sanjalo sacred flag of the Mohammedans. It was originally composed of the turban of the Koreish captured by Mohammed; but the black curtain that hung in front of the door of Ayesha, one of Mohammed' wives, was afterwards substituted. It is preserved in the seraglio at Constantinople. The carefully-guarded banner unfolded at the commencement of a war is not the real sacred fiag, though it is commonly believed to be so.

## Flag of the United States. Pree

to the adoption of a nation flag by Cons gress, several flags of different patterns were used in the course of the perlod of stress which cnlminated in the Revoiution. One of these bore the device of a rattiesnake, the suggestion of which appeared as early as 1751, when it was Ghown in Franklin's 'Pennsylvania Gazette'; three years iater, in the form of a severed snake whose parts were identified by the initials of the thirteen colonies, with the motto, 'Unite or die!' it was used to urge union of the coionies to resist the French and Indian invasion. Later the rattlesuake became a suggestive emblem of the colonies and was used by newspapers to express the spirit of the colonies in relation to the mother country. The ' Pennsylvania Journal' incorporated it in its heading in 1775 . John Paui Jones is said to have been the first to hoist an American flag on an American vessel, in December. 1775, when he was serving as first lieutenant on the 'Alfred' in Phlladelphia. This ensign was of the rattiesnake design, but according to Sherburne in his 'Life of Paul Jones', the snake was not coiled but 'running,' and that the field consisted of 13 red and biue stripes; other authorities ciaim that the device was a pine tree with the snake colied about its roots. Stlli another claim is that the first American flag was hoisted on the 'Blaek Irince,' on Deeember 3, 1775. When the first national fleet of reguiarly commissioned ships sailed down the Delaware in December, 1775 , Barry got free of the Capes in the ' Texington, but the other vessels were caught in the ice and did ant get clear for some werks, Uy which time the fleet all earried the Union Flag. It was in this year that Abram Markoe. organizer, and then aptain of the 'City Troop,' Philadelphia's famous mounted body, designed and presented to the troop a flag that is of the greatest interest as being the first that bore the thirteen stripes symbolizing the
thirteen colonies that were then assertins their right in relation to the mother country. In this year also, April 23, Connecticut had a flag bearing as device the arms of the colony and the motto ' $\mathrm{Omi}^{\prime}$ transtulit sustinet'; Putnam, on July 18. 1775, unfurled a flag with a red ground bearing the motto of Connecticut on one gide and on the reverse 'An Appeal to Heaven. Moultrie, on James Island, South Caroiina, hoisted a blue flag, with a crescent in the corner for the Union. The same autumn the Philadelphia floatingbatteries carrled a white flag, a tree in the field and the motto An Appeal to Heaven.' In February, 1776, the flag of the commander-in-chief of the American Navy was presented to the Sonth Caroiina Congress by Christopher Gadsden; it had a yellow field, with a lively representation of a rattlesnake in the middle in the attitude of going to strike and the words underneath: 'Don't tread on me! The Provineial Congress of Massachusetts voted on Aprii 20, 1776, that the flag of the cruisers of that coiony shouid be white with a green plne tree and bearing an inseription 'An Appeal to Heaven.'

On January 2, 1776 , the Great Union Flag was unfurled at Washington's camp on Prospect Hiil, Cambridge, Massachusetts. In it the soiid red of the British flag wns replaced by thirteen stripes with the Union of the British Unlon Jack. This flag was generaily used until the new national flag, itseif a modification of the Great Union Flag, was adopted a year and a half later.

On June 14, 1777, Congress by a resoiution outlined the design of the Nationai flag ' to be thirteen stripes alternate red and white; that the Union be thirteen stars, white in a blue field, representing the new consteilation.' This flag was first used by General Gates. When the vietorious Amerieans marched General Burgoyne's soldiers off the field on his surrandering, on October 17, 1777, they 'proudly unfurled their new flag.' The stars and stripes were also probably at Brandywine and dermantown, but certainly they flew at Valley Forge. On the admission of Vermunt ani Kentucky in 1701. iwn stripes and live stars were addect. and in 1794 Congress deeree! that after May 1, 1795. 'the flag of the United States be fifteru stripes alternate red and white and that the Tnion be fiftenn stars white om a blue field.' It was intended that a new stripe and a new star should be added to the flag for each new State admitted to the Union, but it beeame apparent that if this pian were carried out the fiag would grow too large, cousequently Congress resolved, on April \&

818, that the number of atripes should be edrced to the original number of thirteen, epresenting the colonies, and that only hatar should be added to the field on the dmiswion of a new State. This design ras roade by Samuel Chester Reid, a saval officer, of New York, who invented the signal telegraph at the Battery and the Narrows. Since that time twenty. fight new stars have been added to the gas, which now bears thirteen stripes and forty-eight stars.
Tradition credits the making of the first Stars and Stripes' to Mrs. Elizabeth Ross, in a house later known as No. 80 Areh: Street, Philadelphia, and many patriotic and romantic stories have been published relating thereto. It would seem hat the claim made in Betsy Ross' favor is not without meeting historical support.
It is interesting to note that the first man to carry the American flas around he world was Robert Gray, the discoverer of the Columhia River. He flew it on he 'Columbia' in her voyage lasting from September 30, 1787, till 1790.
Flagship, a ship in which an ad\& a squadron, mirals his flag.

## lahaut de la Billarderie (fato

 t-ylir-dre), Aduoste Charles Joseph, ComTE DE, French general and diplomatt, born 1785; died 1870. He had a brillant career under Napoleon I, but on the feturn of the Bourbons he left France ind lived in exile from 1815 to 1830. Ho arried in Enyland the daughter of Adhiral Keith, who became Baroness Keith 2 1823. He returned to France in 1830, nd was amhassador successively at Berm, Vienna, and London.Lambard (flam'bard), Rarpir, a ho became the chief ninister of Willium nfus. His flagrant extortions earned se hatred of the people, and his character painted in the blackest colors by the troniclers. He was made Bishop of Dur an ; but on the death of William he was mmitted to the "Iower, from whenee he caped, and instigated Robert, Duke of ormandy, to invade England. He was ubsequently restored to Durham. where e lived peaceably till his death in 1128. lambeau ( $\mathrm{Anm}{ }^{\prime}$ 'hर), a sort of torch Heks covered with wax or other intammable matertal, and used at night in luminations, procegsions, ete.
Flamborough Head (flam’bur- $\mathbf{8}$ ), on the east coast of Enxland in Yorkhire. It consists of a lofty range of
chalk cliffs ahout 6 miles long and from 300 to 450 feet high. On the extreme point of the promontory, at a height of 214 feet above sea-level, is a lighthouse 87 feet high, with a revolving light vinible from a distance of 20 miles.

## Flamboyant (flam-boi'ant), a ityle

 in use in France about the same period with the Perpendicular style in England, that is from the 14th to the 10 th century. It was distinguished by the waving and somewhat flame-like tracery of the windows, panels, etc., and is usually regarded as a decadent variety of the decornted Gothic. The moldings in this style are otten ill combined. The pillars are often cylindrical, either plain or with a few of the more

Flamboyant Tracery, St. Ouen, Rouen. prominent moldings of the arches continued down them, without any capital or impost intervening. The arches are usually two-centered, sometimes semicircular, and, in later examples, elliptical.
Flame (fanm), a blaze rising from a burning body, or any inflammable gas in a state of visible combustion. Flame is attended with great heat. nnd sometimes with the evolution of mull light: but the temperature may be intense when the light is feehle, as is the case with the flame of burning hydrogen gas. The flame of a candle may be divided into three zones: an inner zone containing chiefly unburned gas, another zone containing partially-burned gas, and an outer zone where the gns is completely consumed hy combination with the oxygen of the nir. The luminosity of flame depends upon the presence of extremely small particles of solid matter (usually carbon) or of dense gaseous products of combustion. When the pressure of the gns producing the flame is so great that it is all but flar ing, it is follad that certain sounds will cause the flame to alter its shape, thus producing sensitive flames.
Flamen (fia'men), among the ancient Romans the name given to 2ny priest devoted to the service of one particular delty. Originally there were three prieuts so called : the Flamen Dialis. consecrated to Jupiter ; F'lamen Martialis.
sacred to Mary ; and Flamen Quirinalis, who superintender the rites of Quirlnus or IRomulus; but the number was ultiinately increased to fifteen, the orlginni three, however, retaining priority ln point of rank, being mtyied Majores, and eiected from among the patricians, while the other tweive, called Minóres, were elected from the plebians.

## Flamingo (fa-min'go), a bird of the

 genus phenicopterus, formerly placed ln the order of wadlng birds, but now generaliy ranked among the Natatores or swinmers, and constituting a family I'henicopteride, allied to the Anatldas or ducks. Its body ls smaller than that of the gtork, but owing to the great length of theneck and legs it stands from 5 to 6 feet high. 'The beak is naked, lameilate at the edsees and bent as if broken; the feet are paimated and 10 nr -toed. The coumon Hamingo ( $P$. antiquorum) orrurs nbundantly in varions parts of Sonthern Europe, Northern Afrlea, etc. It

Flamingo, with Female on neat.
is pntirely scariet, except the quill feathers, which are jet-biack. The tongue is fleshy, and one of the extravagances of the Romans during the iater period of the empire Was to have dishes com-
posed solely of flamingoes' tongues. famingoes live and migrate in large flocks, frequenting desert sen-consts and sait-marshes. They are extremeiy shy and watchful. While feeding they keep tugether, drawn up artificlally in lines, which at a distance resemble those of an nrmy; and. like many other gregarlous birds. they empioy some to act as sentineis, for the security of the rest. Their fud appearg to be mollueca, spawn,
crustaceans, ete., whick they fian up bis means of their long neck, tarning their head in such a manner as to take all. vantage of the crook in thelr beak. They breed in cumpanies in lnundated marribes, raising the nest to a certaln height by heaplng up the mud with their feet into a swall hillock, which is concare at the top. In thls the femaie lay her eggs, and it was formerly beifieved that she sal on them with her legw hansins down. like those of a man on horseback. But the nests are not so hish as to aliow of this, and the birds really slt with their legs dombled up under them. An American specles of tamingo is $P$. ruber.
Flaminian Way (fam-in'l-an), the road which led from anclent Rome. It was constructed by C. Flamlnius the Eider in 220 B.c. during his censorship, and led from Rome to Ariminum (Rlmini) on the Adriatic, $2 \underline{2}$ milies. Remains uf It are yet extant in various places.
Flamininus (fam-ln-I'nus), Titus Quifitios, a Roman generai, born aboltt 230 B. C. ${ }^{\text {a died abont }}$ 174. He was quarstor in 199, consui in 198, terminated the Macedonlan war by the defeat of Philip at Cynoscephaire 11:and proclaimed at the Isthmian games ii 196 the independence of Greece.

> Flaminius (fa-mln íus), Caros, a hune in 232 b.c., pran general, was tri- in 227, consul In 223, censor in 220 , and again consul in 217. He had a triumph for defeating the Insubrian Gauls; and during his second consuiship he constructed this Fiaminian Way and buiit a circus. In 217 he was sent agalnst Hannibai int., Etruria, and was defeated and killed in the battie of Iake Thrasymenus ( $2: i 1$ June).
Flammarion (fiá-má-re-ob), CAMiLif. author, born at Montig: ny-le-Roi, France, in 1842 . He studici
divlnity, was a pupii at the Astronomiral Observatory of Paris, 1858 -62, and firmed the Astronomical Soclety of France in 1887. His works are popuia: in character. They Include The $A$ tmo.: phere, The Planet Mars. Popular Astronomy, Lumus, etc. IFe became an earnest lnvestigator of spiritualism and wrote severai works favoring that sul). ject.

## Flamsteed (flam'sted), Jorn, thp

 Fngiand, wan born astronomer-royal of graduater wan born $\ln 1646$. He was orders in the Cambridge in 1674, took orders in the church. but devoted blmself chicfly to mathematical and antronemical pirsuits. Me was appointed by Cuarles if aitronomical obeervator tothe king, and carried on his observations at the Queen's llume it (Ireenw/eh, intii the observatory was built for hlm ln 16 īt. Here he passed his life; formed the first trustworthy catalogue of fixed stars; and aupplied the lunar observatlons hy means cit which Newton verified his lunar theory. IIe died in 1710. His great work, II istoria Calestis, was pullisherl in 1720. In 1893 the discorery of it collecttion of hles letters dlsclosed a protracted quarrel betweell him and Newtou.
Flanders (flan'ders) a region of Furope, mow lacluded in Holland, Belglum, and l'raace, stretchlug along the German Oeean. The erertlou of the territory into $n$ colluty took place In the vith century, and was made by Phllip the Bold, king of France, In favor of his son-la-lnw, Baldwlu. It afterwards passed to the unlted honses of Spalu and Austrla, and ultlmately to the intter, but underwent considerable curtuilment ly the conquests of the French in the west, when part of it became Freach Flanders, and by the conquests if the Dutch in tha north. The remuiader still retains its ancieat name, Hurl forms the mokleril provinces of East and West Flanders, In Belglum.-The lfelgian province of biast Flandens (F'ranch F'landre Orientale) has an area of 1107 square miles. The surface forms un extensive plain, sloping gently eastwards. It wholly belougs to the basin of the Schelde. Its soll, partly of a s:andy and partly of a clayey nature, is so industriously and skillfully cultivated thint it has the appearance of a yast garden. The principal rerops are whent and flax. linurn, laces, and damesk are among the limportant manufactures. fiand or (ihent is the capltul.- West Handeas (Freheh, Filoudre Oreidentale) hans ain area of $1 \underline{0} 48$ somare ulles. The surface is generally fint; the soil maturally sandy and poor, but well eultwuted and fertilizerf, thongh not so productive as thant of Finst Flanders. The most important branch of industry is llnen. Great quantlics of lace also are made. Bruges is the enpital.

## Flange <br> (tinnj), a projecting edge, ring, or rib on miny ubject, as

 the rims by whlch cinst-lron, pipes are ronnected together, or the projecting pieres on the tires of the wheels of rall-way-cnrrlages to keep them on the rails. Flank, in furtification, thai part of a work whleh afforis a lateral defense to another. In military tactles flaink signifies the onter extremity of the wing of an army, or of any division of an army, as of a brigade, regiment, or battalion.11-U-3

Flannel (fian'el), a woolen fahrie of loone texture and varlons degreen of linelless, lunch used as a clothing both in hot nud cold countries froun its propertles of promoting insenslbie persplration, which is absorbed and carried off by the atmosphere. Welsh flannels liave attalned a high repiltation. In flanael shirtlngs the wool is freguentis mixed with sllk, ilnen, and cotton.
Flat, " character or slgn in missic, used to lower or depress, by the degrer of a selnitone, ally note in the uatural senfe. It is marked thus b. In accidental fat is one whlch toes not encur in the signature, aud whicin aferts ouly the bar 1 l whleh it is placed.
Flat-fish, $n$ fish whleh has its body of a flattened form, swims ou the sids, and has both eyes on the slde which is uppermost in swimming, as the flouuder, turbot, hallbut, and sole. The word is sometlmes extended to other fishes which have the boxly much compressed, as the skate and other members of the ray fumily:
Flathead Indians, tribes establlshed in the State of Washington, maluly of the now uearly pxtlinet Chinook group of fiahenting Indinns. They fintten the skull of the iafant by some mechanlenl preasure during the first six or elght months of llfe. The same custom anclently prevalled among anay tribes, lint the prattice is now nearly exthe't. The naue Flathead is improperly given to the small civilized tribe of Selish Indians.
Flat River, a city int Mt. Fraucris a R. County, Mismuri. In $n$ leat-miuiag section. l'on. $511:$.
Flaubert (ino-bar), iiustave, novellst, born at lounen, France, In 18:21; died in 1850. His first (unsuccessful) writings were poens, but hls SIadame de Bocury, a renlistle novel, had wonderful success. Other works were Nalummbo, I'rois Contes, ete. lie was a deliberate stylist, bellevlag that the great'st writer was he who hecame the most perfect instrument for recelving impres sions froas external things and rendering them in accurate language.
Flavel (thavel), Jons, noncomformist divine, born in Wurcestershire, England, in 1627; died at Exeter, 1691. He was curate at Deptford and Dartmouth, hut was ejected under the Act of Vuiformity, when he continned to preach privitely.
Flavine (flav'ēn; Lat. facus, yeilow), with gnercitrin yellow dye-stuff identical with quercitrin. and used as a mobstitute for quercitron bark. It glves a fiue olipe yelluw culur to cloth.

Flax
(faky), the common name of the plante of the renus Linwm, nat. order Linacese. The specien, of which there are nearly a huadred, are berbs or mall shrubs, with narrow leares, and yelluw, blue, oor eren white lowern arranged in variounly-formed cywes. They occuf in warm and temperate reclong over the world. The cnltirated apecies is $L$. woitatisaimum. The

Flax (Linum uoitatieximum).
fiber, which is used for making thread and cloth called linen, cambric, lawn, lace, etc., cousists of the woody bundles of the Blender stalks. The fine fibers may be so separated as to be spun into threads an fine as silk. A most useful oil is expressed from the seeds, und the residue, called linseed-cake, is one of the most fattening kinds of food for cattle. When the plant is ripe it is pulled up by the roots, tied in little bundles, and usually left upright on the field till it becomes dry, when the seeds are separated, either by heating on a cloth or by pamsing the stems through an iron comb. The process of removing the seeds is called rippling. The stalks are then retted or rotted in water to free the flaxed fiber from the wooden core or boon of the stem. Two operations are necessary to separate the fibers from the woody part of the stem. The flax is first broiken by means of a wooden handle and gronved board, or by revolving grooved rollers, and then the boon or woody prit is entirely separated from the fiber lyy a broad, fiat, wooden blade called $n$ scutehing blade, or by a machine in which a number of knives attached to the arms of a vertical wheel strike the flax in the direction of its length, and completely everate it. The flax is next heeklel, or combed with a sort of iron comb, beginning with the coarser and ending with the finer, and is

In the Unitel Staten and Oanada condiderable quantitiem of fiax are Erown mostly for the seed, experimente in utilis1 ins the fiber proving uneatisfactory. In 1118 the flazeeed production in the United States way 15,000,000 bushela. The price per bushel in 1016 was $\$ 2.847$; in 1917 it had risen to $\$ 3.085$, and in 1018 there was a further increase to 83.800 per buiahel. In Cauada, according to the IDominion cennus returne the area devoted to flax in 1018 was 921,826 acres, as compared with 019,50 acree in 1017. The erop production in 1017 was $6,044,000$ bushels; in 1018 it was $7,005,000$ bushela. The average yicld of flaxseed in Canada in 12 bushele per acre. In Ontario fax is grown for both seed and fiber. In the prairie provinces fax is practically grown Por seed only, and is purchased by the linseed oil mills in Canada and the United States. (Seo Linseed Oil.) During the war, $191+18$, the Allies depended wolely upon the flax grown in Ireland for producing the aeroplane cloth essential for the wing coverings of aeroplanes. Belpian or Courtrai fiax is the finest in qunlity; Irich comes next; then the Dutch; Rus: sia supplying all the coarser fiber.
Flaz, Nrow Zearand, a fiber obtained onder Lilinces a plant belonging to the order Liliacees the Phorminm tenas. It in indigenous in New Zealand and Norfolk Island, and grows in great tufte with sword-shaped leaves sometimes 6 feet long. The long spike, bearing a large number of yellow flowers, rises from the center of the leaves. The thick, leathery leaves contain a large quantity of good strong fiber, which is used by the natives of New Zealand for making cloth, nets, etc., and Fould be very valuable in commerce but for the gummy matter in the leaves which it is dificult to get rid of. It has been introduced into European culture.
Flaxman (flaks'man), Joris, one of English scnlptors most distinguished died in Ionlorn born at York. 1755; tions of art were derived from earliest notions of art were derived from casts in the
shop of his father, who sold plaster figures, from many of which young Flaxman made clay models. In 1787 he went to Italy, where he remninel seven years, and left many memorials of his genius, besldes executing designs in outline to iliustrate Homer, Dante, and Fischylus, an extensive series for each. In 1794 he returned to England, where he was diligently occupied with his professional pursuits until his death. He had heen elected an associate of the Royal Academy in 1797, royal academician in 1800 , and in 1810 was appointed professor of meulpture to that institution. His work
are vory nnmerous, and arm to be found ail urer the country; and a jarge coliection of castis from the origlal madela, etc., is preserved in University Coliege, Lotidon.
Flea (68), a name for several insect! regaried hy etomologists an constituting a diatiort order Aphaniptera,

a, Fum (Pulex Irritans). D, Larva at mame. C. Pupa of eame.
because the wings are inconspicuous scales. All the specien of the senus are very similar to the common flea (Pules irritans). It has two eyes and sir feet the feelers are like threads: the oral appendages are modified into piercing stilets and a suctional proboscis. The flea is remarkable for its agility, leaping to a surprising distance, and its bite is very troublesome.
Fleabane (AĖ’ban), a name popuposite plants from their supposed power of destroying or driving away fleas, as the species of the genus Conyza, which were believed to have this power when suspended in a room. The common fleabane is Pulicaria dysenterica, found in moist, sandy places in the south of England, whose smoke was supposed to expel fleas. The blue fleabane is Erigeron ecre, common on dry banke.
Nlea-bectle, the name given to difwhich are ierent species of beeties turnip-fiea (Ifaltica nemס́rum), whose larve are cometimes so destructive to the turnip crops, furnishes an example. Flèche (fãsh), La, a town in France, department of Sarthe. on the right bank of the Joir, 25 miles southwest, of Le Mans. It contains a military college, occupying part of the extensive buildings of a former college beionging to the Jesuits. Pop. of commune 10.510.
Flecknoe (flek'nó), Riciasd, an Friter, said to have been a Roman Catholic priest. contemporary with Dryden, and chiefly memorable for having had his name gibheted by that satirist in the titie of hif satire againgt Shadwell. He died in 1678.

## Fleece, Fleece,

Fleet (fet), a general name given col-
Gownex. Bee Argomawte and Jason. Order or thy Gompen. Bee Golden F'lecoe. lectively to the shipe of a navy; also any number of shipm, whether de igsed for war or commerce, keepling in company.

## Fleet Marriages, irregular mars

 without licenge by needy clergymen in the Fleet Prison, London, from about 1016 tili they were suppressed by the Marriage Act of 1754. Thene ciercymen were ready to marry any coupies that came before them for a fee proportioned In amount to the circumstances of those who were married. Sometimen a dram of sin was thought sumincient; at other times the fee wal rather exorbitant. Registers of these marriage were kept by the officiating partien, and a coliection of thene books, pnrchased by sovernment in 18:1, amounted to between 200 and 300 large registers, and upwards of 1000 smaller books. These books were inadmissible as evidence in a court of justice.Fleet Prison, formeriy a celebrated formeriy a celebrated it wan puiled down in 1845 . It itood on the east side of Farringdon Street, and on this site a prison was in existence as eariy as the 12 th century, which took its name from the creek or atream of the Fleet, on the bank of which it was erected. It was early used as a place of confinement for debtors, and served as such down to the period of its aholition. It was burned by Wat Tyler in 1381. in the Great Fire of 1686, and hy the Gordon rioters in 1780. It was the scene of many disgraceful abusen, and was called hy Pope the 'Hannt of the Musen,' from the number of poets who were conflned in it.
Fleetwood (fièt-wud), a reaport and watering-place in Eng land, in the county of Lancanter, on the Wyre, near its entrance into Lancauter Bay, 18 miles northwest of Prenton. It has a school of musketry and barrack. The harbor is safe and commodious. Pop. (1811) 15.876.
Fleming (flem'ing), Jons, a Scottish naturalist, born near I.jnithgow, in 1785 : died at Edinburch 1857. He was sucentively minister of the parish of Bressay, in Shetiand: professor of natural philosophy at Kingis Coliese, Aberdeen, and profeneor of natnral science at the New Collese, Fdinbrrgh. He mrote a Report on the Economicel Minoralogy of the Orkney

## etc. <br> Flemish Language and Litera-

 ture.The Flemish or Vlaemisch language is a form of Low German, differing only slightly in pronunciation and orthography from the Dutch. It is spoken hy a considerable numher of the inhabitants of Belgium, especially in the provinces of East Flanders, West Flanders, Antwerp, Limhurg, and Brabant. A fragmeat of a prose translation of the Psalms upwards of a thousand years old is the oldest extant specimen of the Flemish. The 'father of Flemish poetry, Jakob Van Maerlaut, wrote several romances dealing with Merlin and the Holy Grail, The Mirror of History, etc., in the 13th century; and a version of Reynard the Fox belongs to the same period. The 14th century was remarkahle for the number of wandering poets, authors of knightly romances. The translation of the Bihle, which is considered the standard for the construction and orthography of the language, was finished in 1618. The eighteenth century produced several good writers on philology, but was barren in poetry. The French almost annihilated the native literature, and it did not revive till the revolution of 1830, since which time it has hecn very vigorous. The leaders in this revival were Willems, Blommaert, Van Ryswyck, Conscience, Van Duyse, -Snellaert, Snieders, De Laet, Dedecker, David, and Bormans. Flemish School of painting. See Flensburg (fiens'burg), formerly Prussia, Flensborg, a town in at the west end of the fiord of same name, 20 miles N. N. E. of the town of Bchleswig. It has important manufactures and is the seat of an active trade, being the most important town in Schleswig. Pon. (1010) 60.022.
Flers (făr), a town in France, dep.
Orne, 37 miles northwest of Alencon. It contains the remains of a tine old castle, has manufactures of linen, bleach-works, etc. Pop. (1006) 11,188.
Flesh, a compound substance forming aisting mainly of the of an animale with consisting mainly of the mascles, with connective tissue, and the blood-vessels and nerves, ptc.. supplying them. It consists chiefly of finrin, with albumen. gelatin, bematin, fat, phosphate of sodium,
phosphate of potassium, phosphate and carbonate of calcium, sulphate of potassium, and chloride of sodium. The solid part is, besides, permeated hy an alkaline fluid, called serum. It has a red color, and contains dissolved a number both of organic and inorgaric substances. The organic matter consists of alhumen, casein, creatin and creatinin, inosic and several other acids; the inorganic, of alkaline sulphates, chlorides, and phosphates, wth lime, iron, and magnesia.

## Fleshfly. See Blowfly.

Fleta (fē'ta), a Latin commentary upon English law, said to have been written in the Fleet Prison in the reign of Edward 1. It has been attrihuter to William de Brampton, and also to Thomas de Weyland, J. de Lovetot, and Adam de Strutton.
Fletcher (flech'er), Andrew, a Scottish political wricer, the son of Sir Robert Fletcher, of Saltoun, born in 1653; died at London in 1716. He opposed the court in the Scottish Parliament, and had to retire to Holland. In 1685 he joined the enterprise of the Duke of Monmonth. He afterwards took refuge in Spain and in Hungary, and re. turned to England at the Revolution. He brought forward measures to secur( the religion and liberties of the nation on the death of the queen (Anne), and carried various limitations of the prerogative, forming part of the Act of Security, rendered nugatory by the Scottish union, which he vehemently opposed. Fletcher, Frank F'riday, admiral of Nay: born at Oskaloosa, Iowa, in 1855 , gradi. ated from the Naval Academy in 1875 and was pronioted through various grades to rank of admiral in 1915. He was in command of the naval forces which took possession of Vera Cruz in April, 1914. and succeeded Rear-Admiral Badger as commander-in-chief of the North Atlantic Fleet the same year. He was the inventor of the Fletcher breech mechanism and gun mounts.
Fletcher,
John, English iramatist, collaborator with Francis Beaumont. See Beaumont and Fletcher. Fleur-de-lis (fleur-dèlex' ; French, 'flower of the lily'), in heraldry, a bearing as to the origin of which there is much dispute, some authorities maintaining that it repre-

Fleur-do-lis. sents the lily, others that it represents the head of a lance or some such warlike weapon. The fleur-de-lis has
long been the distinctive bearing of the government of France.
Fleurus (fleu-rus), a town of Bel7 miles northeast of Charleroi. In the vicinity, in 1690, the French under Marwhal Luxembourg defeated the Germans under Prince Waldeck; and in 1794 the French republican forces under Marshal Jourlan defeated the Anstrian army. l'op. about tovo.
Fleury (fleu-rè), André Hercule ter of Louis $X V$, was born in 1653 ; died in 1743. In $16: 8$ louis XIV gave died the bishopric of Frejus, and shortly be fore his death appointed hin instructor to Louis XV. After the death of the regent in 1723 he proposed the Duc de Bourbon as first minister, but in 1726 he overturned the government which he had himself set up, and from that date kept the direction of affairs in his own hands. In the same year he was made a cardinal. The internal affairs of France prospered under his administration, hut his foreign policy was unfortunate.
Fleury, Cladde, a Frenc'i writer, born was educated in the Jesuit College He Clermont, and after beginning to practise as a lawyer resolved to take orders. In 1716 he became confessor to Louis XV. He procured admission into the Academy in 1696 by several important works, among which the best known are his Histoire dui Droit Francais, Mours des 1 sractites, Mours des Chrétien.s, Institution au Jroit Ecclésiastique, Mistoirc Ecclésiastique.
Flexner, Simon, American physician, Rockefelle director of laboratories, search, was born at Louisville, Ky., 180:; and educated at the universities of Lmuisville, Strassburg, Prag, and Berlin. He was associate professor of pathology in Johns Hopkins University, 1891-98; professor of pathological anatomy, 1898-99; professor of pathology, University of Pennsylvania, 1800-1903; director Ayer Clinical Laboratory, Pennsylvania Hospital, 1901-03; and Philadelphia Hospital, 1890-1903. He has written many books relating to bacteriological and pathologinal subjects.
Flinders (flin'derz), Matthew, an English navigator, celebrated for his Anstralian discoveries, horn in Lincolnshire 1774; died 1814. He went to Australia in 1705, and discovercl Bass Strait in 1798. In 1801 he obtained from the British government the command of an expedition to explore the Australian
coasts, in which he spent two years. While returning home he was taken prisoner by the French at Mauritius, and detained till 1810, after which he published his Voyage to Terra Australis. Flinders Island (off the N. E coast of Tasmania) was named after him.
Flint, or Flintshire, a maritime Lint, connty in North Wales, area 255 sq . niles, of which three-fourths is under crops or in pasture. The countr is rich in minerals, particularly lead. the mines of which are productive. Coal also abounds, and copper is obtained in considerable quantities. Flint returns one member to the House of Commons. Capital, Mold. Pon. 92,720. - The former capital, Finst, a parliamentary and municipal borough and seaport, is situated on the estuary of the Dee, 13 miles s. W. of Liverpool. In the vicinity are extensive alkali works and several lead and coal mines. There are also large copper works. The shipping trade of the port is small. A little N. E. of the town, on the shore of the estuary, stands the ancient castle of Flint, commenced by Fienry II and completed by Edward I. It was the prison of Kichard II, and has remained in ruins since 1667. Yop. (11:11) 5474.
Flint, ${ }^{\text {a coity county seat of Genesee }}$ River 34 miles Michigan, is on the Flint It has a state institution for the deaf and dumb, an insane asylum, and manufactures of automobiles and automobile parts, carriages, cigars, iron goods, etc. Pop. 42,000.
Flint, a variety of quartz of a yellowblack color. It is a mornhous or grayishoceurs in nodules or rounded lumps. Its surface is generally uneven, and covered with a whitish rind or crnst, the result of weathering or of the action of water percolating through the rocks. It is very hard, strikes fire with steel, and is an ingredient in glass and in all fine pottery ware. The fracture of flint is perfectly conchoidal: though very hard, it breaks easily in every direction, and affords very sharp-edged, splintery fragments, formerly made into arrow-heads, etc. (See Flint Implements.) Its true native place is the upper bed of the chalk formation, in which it is formed as a series of concretions, the silica in spongis and in other marine animals which lived on the sea floor while the chalk was being deposited being attracted into nodules in this process.
a species of glass, so called becanse pulves: ized flints were originally employed in its
manufacture. It in extensively used for domestic purpones. Its digpernive power in rezard to light renderm it invaluable in the. manufacture of the object-glasses of telescopes and microscopes, as by combining a concave lens of fint-glass with one or two conver lenses of crown-glass, which possesses a much less disperaive power, a compound lens is formed in which the prismatic colors arising from aimple refraction are destroyed, and the lens rendered achromatic. Quartz and fine sand are now substituted for flint in the manufacture of this glass.
Flint Implements, $\begin{gathered}\text { implements of } \\ \text { fint } \\ \text { used }\end{gathered}$ man while unacquainted with the use by metals. For such implements granite, jade, serpentine, jasper, basalt, and other hard stones were also usen, but the most numerous were formed of fint. They consist of arrow-heads, are-heads, lanceheads, knives, wedges, etc. (See Celts.) Flint implements are still used by some savage tribes.
Mintlock, a musket-lock in which fint striking on the is produced by a in common use, now superseded by locks formed on the percussion principle.

## Floating Batteries (föt'ing), bateither on simple rafts or on the hulls of

 ships, for the defense of a coast or for the bombardment of an enemy's ports. They were used notably at the siege of Gibraltar (1779-83) and during the Russian war (1854).
## Floating Breakwater. See Break- <br> \section*{Floating Docks.}

Floating Island, an in inland formed inland water, consisting generally of a mass of earth held together by interlacing roots. They occur on the Mississippi and other rivers, being portions of the banks detached by the force of the current and carried down the stream, often bearing trees. Sometimes such islands are large enough to serve as pasture grounds. Artificial floating islands have been formed by placing lake mud on rafts of wickerwork covered with reeds. They were formerly used in the waters around Mexico, and may be seen in Persia, India, and on the borders of Tibet. On these the natives raise melons, cucumbers, and other vegetables which need mnch water.
Foating Quartz, of quartz of a spongy a porous variety scray in color, so lifht an to float in
water. It frequently contains a nncleus of common fint.
Flobecq (flo-bek), a town of Belgium, N. E. of Tournai. of Hainaut, 20 miles Tl
Floak (flok), the refuse of cotton and en goods, wool, or the shearing of woolen goods, etc., used for stuffing mattresses, furniture, etc. Flock-paper is a kind of wall-paper, having raised figures resembling cloth, made of flock, or of cloth cut up very fine, and attached to the paper by size or varnish.
Flodden (flod'en), a village of Engabout 5 miles land, in Northumberland, about 5 miles s. E. of Coldstream. Near it was fought the celebrated battle in which James IV of Scotland was defeated by the Earl of Surrey (Sept. 9 ,
Flogging (fog'ing), the infliction of whip, lash, or stripes or blows with a judicial pur or scourge, especially as a it has pranishment. As a punishment it has practicully ceased in both the army and napy, though formerly very common. In the United States the whipping-post is maintained as part of the penal methods in the State of Delaware. The chastisement is chiefly imposed for larceny and also for wife-beating. The punishment of the knout in Russia and of the bastinado in the East are severe forms of this punishment.
Flood (flud), Henisy, an Irish orator kenny in and politician, born near Kilthe 1732 ; died in 1791. He entered councillor Parliament in 1759, was privycouncillor for: Great B-itain as well as for Ireland in 1775, vice-treasurer for Ireland 17t5-81. In 1783 he had a personal dispute in the house with Grattan, when a remarkable display of the power of invective was made on both sides. He afterwards became a member of the British Parliament. His speeches and some poetical pieces have been published. Flood-plain, a plain formed by sucextending a considerable distance on each side of a stream and made up of layers of mud, sand, and gravel deposited by the water. Some of these are very wide and usually very level in surface. Notable among such plains are those of the Mississippi, the Amazon, the Nile, and the Ganges.

## Floods, or Indmations, river over-

 Long-continued rains or acean ind meltinations. are apt to melting snows are apt to produce them in rreers; especially the sudden and $\begin{aligned} & \text { in iolent } \\ & \text { ralins }\end{aligned}$ known as cloudbursts: aleo the breaking of reservoir dams. The ocean may cause them through the breaking of dytee orthe overflow of lowlands during severe storms or from earthquake convulsions. Striking examples of river floods are those of Johnstown, Pennsylvania, in 1889, by which several thousand people were drowned, and that of the Hoang Ho, China, in 1853, which caused a frightful loss of life. The dykes of Holland have given way on several occasions, drowning large numbers of people. A cyclone wave in Bengal in 1876 caused a flood in which 200,000 people were drowned. Unprecedented floorls in the Ohio and Mississippi valleys in 1913 killed hundreds of persons and destroyed a vast amount of property.
Floor-cloth (tor), a useful substitute for carpet, the basis of which is a strong open canvas. It is woven 6 to 8 yards wide, and in lengths of from 100 to 113 yards. A length of 60 to 100 feet of canvas is stretched in a frame, brushed with gluesize, and rubjed with pumice-stone. It then receives two or three foundation coats of paint on each side. Each coat on the front is smoothed with pumicestone. When this operation is completed the cloth is transferred to the printing. room, where the pattern is printed in oil colors by blocks, as in calico-printing.
Floorwalker, a person employed
in the large department stores to watch the behavior of employees, to give information to applicants, and to settle any disputes or difficulties that may arise.
Flora (foíra), the Roman goddess of ship was established at Rome in the earliest times. Her festival, the Floralia, was celebrated from April 28th to May 1st, with much licentiousness. In botany, fora signifies the plants of a region collectively, as fauna signifies the animals.

## Floral Games. See Jeus Floraux.

Floréal (flö-rā-al; month of flowers), the eighth month in the calendar of the French revolution. It began April 20th, ind ended May 19th. Florence (for'ens; Italian, Firenze; in old Italian and in poetry, Fiorenza; ancient Florentia Tuscorum), a celebrated city of Italy, capital of a province of same name, 143 miles northwest from Rome, and 50 miles E. N. E. from Leghorn. The city is surrounded by hills, and is beautifully situated on both banks of the Arno, but the greater part of it lies on the right bank. six bridges connect the banks of the Arno, and on either side of the Arno is a spacious quay called the Lung' Arno, a
favorite promenade. The private dwellings are mostly handsome, and the palaces, of which there are many, are noble and impressive structurem The city contains numerous piazzas or squares, the most important of which is the Piazza della Signoria, surrounded by important buildinge, and adorned with a marble fountain, and a bronze statue of Cosmo 1, by John of Bologna. In this piazza is situated the Palazzo Vecchio, originally the seat of the gorernment of the republic, and subsequently the residence of Cormo I. The most ro markable building in Fiorence is the Duomo, or cathedral of St. Maria del Fiore, erected 1298-1474, but its facade not completed till 1887, surmounted by the magnificent dome of Brunelleschi, and situated in a spacious square nearly in the center of the city. Near the cathedral are the campanile designed by Giotto, and the small church of St. John (San Giovanni), the Baptistery, the three bronze gates of which, with figures in high relief, are celebrated as among the most beautiful works of the kind extant. One of these is by Andrea Pisano, the two others by Ghiberti. The church of $S$. Croce is the burial-place of many of the most eminent Tuscans, contains much fine sculpture and many interesting tombs, amongst others those of Michacl Angelo Buonarotti, Galileo, Machiavelli, and Alfieri. In the Piazza S. Croce stands Dante's monument by Pazzi, inaugurated 1865. The chief art collection is the Galleria degli Uffizi. In this gallery are contained specimens of painting and statuary by the greatest masters in these arts. In statuary, among numerous antiques may be specified the Venus de' Medici, the Apollino, the Kinfo-grinder, the Dancing Faun, the Wrestlers, and the group of Niobe and her Children; and in painting there are works by Michael Angelo, Raphael, T1tian, Fra Angelico, Fra Bartolomeo, Andrea del Sarto, Correggio, Guido, and numerous others of the first names in various schools. Other important art collections are preserved in the various churches and palaces, one of the principal being that in the Pitti Palace. The building formerly known as the Bargello, erected about 1250 for the chief magistrate of the republic, and subsequently used as a prison, has recently been rea stored, and is now opened as a national museum, -illustrative of the history of Italian culture and art in medieral and modern times. The Lanrentian or Medicean Library contains upwards of 9000 ancient MSS. The Magliabecchian Iibrary is the grent repository of priated
books. The Biblioteca Marucelliana and the Bihlioteca Riccardiana are also important puhlic lihraries. The charitahle institutions are numerous and important. schuols and other literary and educational cstablishments are also numerous. The manufactures have greatly fallen off, but still emhrace woolens, silk, straw hats, porcelain, mosaics, and numerous objects in the fine arts.
k'lorence was prohahly founded hy the llomans in the 1st century b. c., and early attained considerable prosperity. During the dark ages it was frequentiy devastated, hut it revived ahout the beginning of tbe 11th century, at wisich time the Florentines hecame extersive European traders. Their silk and woolen iabrics excelled, and their skill as workers in gold and jewels was unsurpassed. Ahout this time Florence took an active part in the feud which broke out hetween the Guelphs and Gbibellines, the town generally supporting the former against the imperial party. In 1283 a species of republic was constituted; but about the year 1300 the party struggles again hurst forth hetween the same rival families under the new names of the Whites and the Blacks, in which the Blacks (the Guelphs) were eventually victorious, and the Whites, among whom was the poet Dante, hanished. In the course of these troubles a family of mer©hants named the Medicis rosc to great influence in Florentine politics. O ge of them, Cosmo, horn in 1389, wis the founder of the political greatness of his house. His grandson, Lorenzo, surnamed il Magnifico, as a statesman, schnlar, end patron of art and literature, attained the highest celehrity. Under him Florence, which, though calling itself a repuhlic, was in reality ruled hy him, rose to a great pitch of opulence and power, and notwithstanding the hostility of the pope he exercised a great influence tbroughout Italy. On the fall of the repuhlic in the 16th century a memher of a lateral hranch of the Medici, the line of Cosmo having hecome extinct, was chosen by Cbarles $V$ as Duke of Florence. The ducal dynasty of Medici continued to rule till the year 1737, wben, hecoming extinct, they were succeeded by Francis of Lorraine, afterwards Emperor of Germany. From this period the history of Florence merges into tbat of Tuscany nutil its amalgamation with the Kingdom of Italy. From 1805 thi 1871 it heid the dignity of capital of the kingdom, the seat of government being transferred to it from Turin. Amonggt the illustrions men it has produced are Dante. Petrarch, Boccaccio, Guieciardini, Lo-
renzo de' Medici, Galileo, Michael Angelo, Leonardo da Vinci, Benvenuto Cellini, Andrea del Sarto, Amerigo Vespucci, Machiavelli, and others. Population at last census 220,870 . -The province has an area of about 226 : English square miles. The surface is beautifully diversified hy mountains, valleys, and plains. The climate is generally mild and henlthy, and the soil very fertile. Pop. 937,786.
Florence, Couscil or, along with that of Ferrara, a continuation of the Council of Basel, with sessions at intervals from 1439 to 1442 . Its ohject was a reunion of the eastern and western cburches; but the agreement was later repudiated by a council at Constantinople.
Florence, a city, capital of Florence County South Carolina, 102 miles N. of Charleston. It has railroad shops, cotton-gins, plow, fertilize: and other factories, and a State Indus. trial School for Boys. Pop. 9000.
Florence, a city. capital of Lauder. dale County, Alabama, at the head of deep water navigation on tennessee River. It contains a State normal school. It is in a coal and iron region and has large manufactures. Pop. 7500.
Florentine Work (flor'en-tḕn), a kind of mosaic work, consisting of precious stones and pieces of wbite and colored marhle, which has long been produced in Florence. It is applifed to jewelry, and used for tahle tons, etc.
Flores (fióres), or Floris, an islpelago, on and of the Indian Archieast from Java. It is anich extends long and from is to 35 miles wide, and has a mountainous surface, with several volcanic peaiks. The natives are tall and rohust frizzly-haired savages, helonging to the dark Papuan race. The island is under Dutch supremacy. Sandalwood, hees'-way, and horses are exported. The passage between the east end of the island and tbose of Solor and Adenara is called Flores Strait ; and the part of the Pacific north of the Flores chain and south of Celehes is called the Flores Sea. Flo'res, the most westerly island of long hy 9 miles hroad, with a hilly murface. The chief products are wheat, pulse, and poultry, and great numhers of small cattle are reared. Pop. about 10,000.
Floret (fiöret), a single small flower in a compact inflorescence, as posite compound flower of the Compositee, or in the spikelet of grasses.

## Florian

(flo-re-op), Jean Pieraz
Claris de, a French writer, born 1755; died 1794. He was patronized by Voltaire, and gained fame as a writer of fables, pastorals, romances, and comedies. He was imprisoned during the revolution, but the fall of Robespierre saved him frum the guillotine. His romances Galatée, Estelle, Gonzalve de Cordoue, Nume Pompilius, his fables, and translation of Don Quixote are his best works. Florianopolis (flo-ri-an-op'ठ-lis), fortal of the province of Santa Catharina, Brazil, on the western shore of Santa Catharina Island. It is the chief commercial center of the state. Pop. about 15,000. Floriculture (flo-ri-kul'tar), the culture or cultivation of flowers or flowering plants, whether in open beds, in gardens, in conservatories or greenhouses, or in rooms in dwell-ing-houses.

## Florida

(flori-da), one of the United States, forming the southpastern extremity of the country, and having the Gulf of Mexico on the south and west, and the Atlantic on the east. It consists partly of a peninsula stretching south for about 400 miles, partly of a long, narrow atrip of land running along the Gulf of Mexico to a distance of 350 miles from the Atlantic coast-line. The peninsula is about 90 miles in width, and contains about fourfifths of the total area, which is 58,666 sq. miles. The surface is in genern level, rising little above the sea, especially in the southern parts. Here, however, the swamps or everglades are being drained by the state, and becoming the most valuable lands in Florida. The northern portion is more broken and elerated. The principal river is the $s t$. Joha's. Its tributary, the Ocklawaha, has its cuicse so flat that for a long distance it spreads out into the forest for half a mile or more on either side, so that nothing is seen but trees and water. The Appalachicola, Suwaree, etc., flow into the Gule of Mexico. There are many lakes throughout the peninsula, the largest being Okeechobee (area 650 sq . miles). Numerous islands are scattered along the south and west coasts, the most remarkable of which is a group, or rather a long chain, called the Florida Keys at the southern extremity of Florida. The most important of these is Key West, containing the city and naval station of same name. The state produces tropical fruits in great perfection, especially oranges, lemons, limes, grapefruit and pineapple. The planting of orange groves has been carried on extensively in recent times, and
oranges are now a specialty of Florida. Tobacco, zotton, sugar, malze, potatoes, rice, cats, etc., are among the other productions. The forests form an important source of wealth. The minerals are unimportant, with the exception of phonphates and Fuiler's earth, mined in large quantities. Among the wild animals are the puma, manatee (sea cow), alligator, crocodile, bears and wild cat (lynx). Birds are extremely numerous and varied. The coasts, rivers, and lakes swarm with fish; tortoises and turtles also abound. As regards climate, Florida may be divided roughly into three zones, "southern," semi-tropical and sub-tropical. The mean annual temperature is $70.8^{\circ} \mathrm{F}$., and the rainfall averages 52 inches. The stato is much frequented as a winter health resort for invalids, especially St. Augustine, Ormond, Daytona, Palm Beach, Miami, Tampa, White Springs, etc. Florida, long in a backward condition, has recently made great advances in prosperity, being now well supplied with means of communication, and town and villages rapidly springing up. Tallahassee is the capital and seat of government. Jacksonville, Pensacola, Key West, and Tampa are thriving ports ; St. Augustine is the oldest town in the United States. Proposals have been made to construct a ship-canal through Florida as a short route from the Atlantic to the Gulf of Mexico. Florida was first explored in 1512 and 1516 by Ponce de Leon, a Spanish adventurer. It was ceded to Great-Britain by Spain in 1763 in exchange.for Cubs. reacquired by the Spaniards in 1781, and confirmed to them at the peace of 1783. It was ceded to the United States in 1821, and organized as a territory in 1822. A long series of conflicts with the Seminole Indians retarded its prosperity. In 1845 it was admitted into the Jnion. In 1861 it seceded from the Union, to which it was not readmitted till 1868, when it adopted a new constitution. Pop. (1910) 752,619

Florida, Gंur of. the narrow sea between Florida, Cuba, and the Bahama Islands.

## Florida Keys. See Florida.

## Florideæ

(florideed), a name siven to the rose-spored alge, now more generally known as rhodosperms.
Florid Gothic, that highly-enriched architecture which prevailed in England in the fifteenth and at the beginning of the sixteenth century; often called the Tudor style, as it prevailed chiefly during the Tudor era.

Florin
(forin), a name given to difterent coins of sold or ailver of different valuen, and to money of account, in different countrien. The Englith forin is 20 . or one-tenth of a pound aterling: the Auatrian gulden or forin and the guilder or florin of Holland are each 1e. $8 d$. A gold florin value 6 o, was used in England in the reign of Edward III.

## Florinians (for'in-1-ans), a sect of

 century, so called from Filorinus, a Roman prient who was excommnnicated by Pope Eleutherius in 176.Florio (flori-o), Jomm, lexicogin London of Italian parentstor, in 1545 , died 1625 . He taught French and Italian in Oxford Univernity. He was appointed by James I teacher of languages to the queen and Prince Henry. His chief works are his Italian and Englioh Dictionary, the World of Words, and his
translation of Montaisne. Shakeapere translation of Montaizne. Shakeapere
is said to have ridiculed him in the character of Holofernes in Love's Labor's Lost.

## Floris

(flo'ris), Frans, a Flemish painter, whose family name was Vriendt, born at Antwerp in 1520; died there 1570. At Antwerp he established a school for painters, which produced many eminent artists. His chief works are: The Fall of the Rebel A noels, in the Louvre: The Last Judgment, in the chnrch of Notro Dame, Brussels, and The Assumption in Antwerp Cathedral. Other works are to be met with in Flanders, Holland, Spain, Paris, Vienna, and Florus (forrus), Lucius AnNeus, a Roman historian, was probably a native of Spain or Gaul. He is variously styled in the MSS. $:$ in some L. Anneeus Florus, in others L. Juliue Florus, in others L. Anneeus Soneca, and in one simply $L$. Annaeus. He lived in the beginning of the second century after Christ, and Wrote an epitome of Roman history in four books, from the foundation of the city to the first time of closing the temple of Janus, in the reign
of Augustus.
Floss-silk, the portions of raveled ing the silk from the broken off in reelspun into a soft coarse yarn, and used for common fabrics, embroldery, and Mlotow (fis'tō), Friedrici Abos cal compoeer, born 1812; died 1883. He atudied music in Paris; but his earlier operas did not find faror with the Parlsian opera-house directors, to he had to
content dimmelf with performances in the ariatocratic private theatern. At length the Naufrage do la Móduse was mupeenfully produced at the Theatre Renaibance in 1839. This was followed by L'Ecolave do Damoùne (1848), and L'Ame en Pcine (1846), performed in London as Leoline. Alescandro Stradella was first performed at Hamburs in 1844, and his most muccessful work, Martha, at Vienna in 1847. He wrote later plays, and was director of the court theater at Schwerin from 1855 to 1803. The last years of his life were chiefly spent at

## Flotsam, <br> Jetsay and Ligang in som, is derelict or shipwrecked goods

 floating on the sea jetsam, goods thrown overboard which sink and remain under water; and ligan, goods sunk with a wreck or attached to a buoy, as a mark of ownership. When found, such goods may be returned to the owner if he appear; if not, they are the property of the finder.Flounder (floun'der), one of the nectide, genus flat-fishes, familv Pleurothe comm Pleuronectes or Platessa, nectes or Platesen most or Platesse fesus. It is one of the found alome of the fiat-fishes, and is triad along the shores of almost all countries. The body is extremely flattened at the sides. Flounders have been successfully transferred to fresh-water ponds. They feed upon crustacea, worms, and small fishes, and are much used as food. The Argus flounder is the $P$. argus, and is a native of the American seas.
Flour, the edible part of wheat, or powder, and separated from reduced to the other separated from the bran and quality coarser parts by sifting. The que fin of flour depends principally on the fineness of the sieves through which it is passed and the amount of bran which it contains. The finest flour is obtained in the first grinding of the wheat. The other kinds-biscuit flour, middlings, seconds, etc.-consist of the flour which remains after the first grinding, ground and passed through coarser sieves.
Flourens (fiorin), Gustave a Paris 1838; French socialist, born at deputy professor 1871. In 1863 he was France, and publigh in the College of the title of published his lectures under being engatiotire de l'Homme. After in Turkey and In democratic movements Commune in 1871 ye joined the Paris conflict at Rueil, near Malmaison.

Parts of Flowes. serual flowers some plants have unione flower and the stamens in another. See also Botany. The figure shows the flower of Cheiranthus Cheir' (common wallfower) ; $a$, peduncle ; $b$, calyx; $c$, corolla ; d, stamens ; e, pistil. Flower, Benjamix Ozanee, author t Albion and publisher, was born at Albion, Ilinois, in 1838 . He edited the American Sentinel till 1888, subeequentiy founded and edited the Arens,
and later The Coming A0e. Ho wrote Civilisation's Inferno: Porsons, Plocoes, and Ideas, etc. Died bee. 24, 1918. Flower, Sm Wमliny Henty, sookogist, born at Strattord-onAvon in 1831. After alling several postr, he became in 1884 natural hiotory director at the British Museum and was knighted in 1802. His works, which are highly esteemed, inciude Introduction to the Study of Mammale, The Horse, Eseoys on минеитs, etc. Died 1809.

## Flower-de-lis. See Fleur-dolis.

## Flowering Fery, the popular

 name of Oamunda regati, nat. order Osmundacees. It is one of the noblest and most atriking of our ferns, and srows in bogey placea and wet margins of woods. It derives its name from the upper pinnse of the fronds being transformed into a handsome panicle covered with sporangia.Flowering Bush ( $B$ u $^{\boldsymbol{t} \delta \mathrm{mws}} \mathbf{u m}$ be $3 l a$ tus), nat. order Butomaceex, a beautiful plant found in pools and wet ditches of England and Ireland, but rare in scotland. The leaves áre 2 to 3 feet long, linear, triangular, their sharp edses sometimes cutting the mouthe of cattle, whence their generic name Butromus (ox-cutting). The scape or fiowering stem termlinates in a large umbel of rone-colored flowers.
Flowers, formerly a chemical name in the form of a powder or mealy uubstance, as the fowers of sulphur, etc.
Flowers Aetificial imitations of real flowers, made of various materials. Those are not a modern invention. The Romans excelled in the art of imitating flowers in wax, and in this branch of the art attained a high degree of perfection. The Esyptian artificial flowers were made of thin plates of horn stained in different colorm. sometimes also of leaves of copper cilt or silvered over. In modern times the Italians were the first to acquire celebrity for the skill and taste they displayed in this manufacture, but they are now far surpassed by English and French manufacturers, more especially by the latter. Among materials used in this manufacture are cambric, muslin, satin, velvet, and other woven fabrics, feathers, India ruhber, blown glass, mother of pearl, brass, etc.
Floyd (floid), Joun B UCHATAN poljtician and soldier, born at Blacksburg, Virginia, in 1807 ; died 1863. He was Governor of Virginia in 1850-53, and in 1859 was appointed secretary of

War. When war became probable between the North and South he sent munithons of war couthward and at the close of 1860 went to Virginia, where he became a brigadier seneral in the Confederate army. He lacked military ahility, was easily beaten by Gen. Rosecrans in Went Vircinia, and when in command at Fort Donelson stole away in the night, leaving to asabordinate officer the isnominy of surrendering the fort. He was censured for this act by the Confederate sovernment.
Fluid ( $\mathrm{Ab}^{\prime \prime i d}$ ), a body whose particles on the alightest pressure move and change their relative position without separation $;$ a liquid or a gas, as opposed to a solid Blids are divided into liguide, snch as water and bodies in the form of water; and gaseous bodies or aeriform fluids, Líquids have been also termed non-elastio fluids, for although they are not altogether void of elasticity, they possess it only in a small degree. Air and aeriform bodies have heen called elastio fuids on account of their great elasticity.

## Flukes (fibks), or Fluke-worms, a

 name given to certain parasitic Scolecida (tapeworms, etc.), belonging to the division of Platyelmia or Flat-worms, and included in the order Trematoda. They inhabit various situations in diferent animals-mostly in birds and fishes. The Distoma hepaticum exists in large numbers in the livers of gheep, and causes the disease known as 'rot.' Like the tapeworms, the flukes pass through an elaborate development. Muohydric Acid (fis-8'hi-drik), Ruoric acid.
## Fluorescence (fix-u-res'ens), a

 phenomena premented me given to the chemical rays of the blue the invisihle spectrum when they become luminous and Visible by being sent through nranium glass, or solutions of quinine, horeechestnnt bark, or Datara stramonium. In this way green crystals, as of finorspar, may give out blue rays, due not to the color of the surface of the body, bnt to its power of modifying the rays incident on it. The phenomenon appears to be identical with phosphorescence. It is dne to the refrangibility of the rays being lowered or degraded by the action of the snbstance. The term fluorescence is applied to the phenomenon if it is observed while the body is actually exposed to the sonrce of light; phosphorescence to the effect of the same kind, but nsnally less intense, which is obseryed after the Ight from the source is cut ofs. Bothforms of the phenomena occur in a strongly-marked degree in the mame bodiee. Canary-glans, which is colored with oxide of uranium, is a very convenient material for the exhibition of fluorescence. A thick piece of it held in the violet or ultra-violet portion of the molar spectrum is filled to the depth of from $1 / 4$ to $1 / 4$ of an inch with a faint. zehulous light. If the solar spectrum bi thrown upon a screen freshly wanhed with sulphate of quinine, the ultra-violet portion will be visihle by fluorescence: and if the spectrum be very pure, thi presence of dark lines in this portion will be detected. For a similar phenomenon, presented by the ultra-red rays of the spectrum, see Calorescence.

## Eluoride (fib'u-rid), in chemistry, a

 compound ohtained hy heating hydrofluoric acid with certain metals, by the action of that acid on metallic oxides or carbonates, by heating electro-negative metals, as antimony, with fluoride of lead or fluoride of mercury, and in other ways.
## Fluorine <br> (fi8'u-rin) is a colorless,

 acrid, non-combustible,tasteless, extremely irritating and penetrating, irrespirable, and very active gas. It was first isolated hy De Moissan in 1886. Its name is derived from its principal natural compound, finorspar (which see). Fluorine occurs very sparingly in the free state, but is very abnndant in compounds, such as fluorspar, which is present almost everywhere: cryolite, which is a porous rock quite abundant in Greenland, and in sea and mineral waters, hones, teeth, and milk. It is the most active element and is the greatest supporter of combnstion, uniting with hydrogen, sulphnr, phosphorus, carbon, and many of the metals in the dark. Even the noble metals are attacked by the pure gas. Platinum, gutta-percha. ceresine (a hydrocarhon wax), and lead are able to withstand the action of the gas to some extent. Rubber also is sometimes nsed as a container for it. When fluorine and hydrogen meet, even in the dark, an explosion occurs, hydrofnoric acid gas being formed. Fluorine decomposes water. hydrofluoric acid and oznne resnlting. It is one of the elements that do not combine with oxygen.
Fluoroscope (fio-or' 0 -skop), an apthe effects of the paratus for observing means of the Roentren or X-rays by action on a fluorescent hnbstance. It consists of a tube or box having at one end a screen coated with a finorescent snbstance, such as calcium tnngstate. When an object is placed between the tube in which the rays are

Flus roscopen

as a shadow on the screen of the Huoroscope.

## Fluorspar,

Derbybilime Sparm or $^{\text {of }}$ fluoride of cal.fum, a common mineral found in great beauty in Derbyshire. It generally occurs massive, but crystallizes in simple forms of the monometric sys-tem-viz., the cube, octahedron, dodecahedron, etc., and in combinations of the cabe and octahedron. Pure fluorspar contains 48.7 per cent. fluorine, 51.3 calcium. It is of freqnent occurrence, especially in connection with metalliferous beds, as of silver, tin, lead, and cobalt ores. It is sometimes colorless and transparent, but more frequently it exhibits tints of ycllow, green, blue, and red. From the general prevalence of a blue tint in the Derbyshire specimens it is there known as Blue-john. It is often beautifully banded, especlally when in nodules, which are much prized for the manufacture of vases, and it is made Into a great variety of articles, chiefly ornamental. It is used as a finx in metallurgy, and is a source ot hydrofluoric acid. Its specific gravity is 3.14 but it is of very inferior hardness (4), being scratchable by apatite.
Mushing (flush'ing; Dutch, VlisFlushing singen), a seaport in Holland. province of Zeeland, on the island of Walcheren, at the mouth of the Hond. or Wpst Schelde, here between 2 and 3 miles broad. It is strongly fortified, and has an extensive traif. T'np. 21.807.
Flushing, formerly a village of now a part of Nens Yonnty, New Ity. It is about 9 miles $\mathbb{N}$. E. of the city hall and is a favorite residence of New York business men. Flute (fiot), a portable musical infurnished with six holes for the fingers,
and from one to furteen keja which open other holes. The nound, which is soft and clear in quality is produced by blowing with the mouth into an oval aperture at the side of the thick end of the instrument. Its useful compaes is about two and a half octares, incloding the chromatic tonea. It is usually made in four pieces, and of box or ebony, sometimes, however, of ivory, silver, or even of slasa.
Fluting (fioting), in architecture, perpendicularianels or furrows cut It is used in the Doric, Ionic, Corinthion and Componite orderm, but never in th, Tuscan. When the futes are partillis filled up by a smaller round molding they are said to be cabled.
Flus (fluks), a substance or mixture added to assist the fusion of minerals. In the large way, limeatome and fluorspar are zsed as fluxem. In the minelting of iron the flux must be much that it will comblne with the earth matter of the ore, and form a slas, which must neither be too refractory nor fusio ble. The fincen made use of in amay: or chemical experiments consiat usually of alkalies and alkaline salta, as borax, cyanide of potassium, carbonate ci potassium, carbonate of sodium, common salt which render the earthy mirtorem fusible by converting them into glans The fluxes used in pottery are various, but almust all consist of litharge or red lead, borax, carbonates of potasslum and sodium, and sand.

## (fluk'shuns), in mathe.

matics, the analysis of in. finitely small variable quantities, an oha method of calculation first invented by Newton, which does not essentially difier from that employed in the diferential calculus invented by Leibnitz, except ill the notation. Newton's notation was adhered to by English writers up to the early part of the prement century, but the diferential calcnlns is now univer sally employed.
Fly (fii), a winged insect of varioun genera and species, whose distingnishing characteristics amp that the wings are transparent and have no cases or covers. By these marks flies are alftinguished from beetles, butterfles, graet. hoppers, etc. The true fles, or Dipters, have only two wings, vis., the anterior pair. In common language. $\mathrm{N}_{\mathrm{y}}$ is the housefly, of the kenus Muree The housefly is fonnd wherever man is, and in hot weather canses a great deal of annoyance. It is furnished with a suctorial proboscis, from Fhich, wher feeding on dry substances, it expdes aliquid,

Wbich, by mointening them lite them to be thucked. From Its feet being beete With baira, eacb terminating in a diec majeh is supposed to net as a sucker, it can walk on amooth gurfacee, at a cell. Sm, eren with ith back down. The fomale lays her egrs ( 120 at a time) in horso dunt or other reluee; the harve are pupll witho worme. They change into pupw withaut caoting their aking, and in His omerges. to Their habiti reader them linely to convey deleterious manter or disease germs on their feet and deposit them on food, and in consequence they are now looker nann is juiuguruue vistrants and a cruande has been organized againat them. Flyity Dutchman

Mying Dutchman, a phantom be zeen in atormy weather oil the Cape of Good Hope, and thought to forebode ill luck. One form of the lesend has it that the ship is doomed never to enter a port on account of a horrible murder committed on board; another, that the captain, a Dutchman, swore a profane onth that he would weather the Cape though he should beat there till the last day. He was taken at his word, and there he atill beats, but never succeeds in rounding the point. He cometimes hails ressels and requents them to take letters home from him. The legend is suppowed to have orisinated in the sight of some ship reflected from the clond. It has been made the sronndwork of one or two novels, and an opera by Wagner. Flying Fish, a name common to have the power of ariontining themeelven

Common Fiving Fish (Exocutue volitann).
for a time in the air by means of their larse pectoral fins. Generally, however, the name is linited to the species of the genus Eacoatus, which belongs to the family Scomberesocide (mackerel-pikes) The pectoral fins, which are very large,

In the warmer parts of the Aclantic, and E. cotilione of the Mediterrancan. By nome naturalite thim seaus has been mubdivided into coveral, charactertrod by the prevence or aboence of barbels.

## Elying F0x. See Fawbets.

Flying Lomur, a name stron to ismale, nativen of the Indian Archipelago and belonging to the genns Galoopisidom. They poseene a fiying membrane, which extends as a broad expanalon from the nape of the neck to the tall. By meany of this membrane they can take extended leapm from tree to tree.
Flying Machine. See Afronautios Flying Machine. and Atroplane. Flying Phalanger, Dopalar mambers of a renus of noctnrnal mar anpials (Pctaurue) mearly allied to the true phalangers. $A$ fold of the skin ex. tends along the ficnke, and this acting as a parachnte emablem the animal to leap great distances, itu heary tall serving as a rudder to guide ith courne in the air. Thewe animals inhabit New Guinea and Anstralia, where they are known as 'ily ing equirrels.' The species vary in wire, the smallest being no bireer than a monse. They feed on truit, learem insecta, etc.
Flying Squid, the popular name alopodous mollues of a genns of cephlied to the calamaries or souids, two larse lateral finies or squids, having to leap so lateral fins, which enable them somet so high out of the water that they sometimen fall on shipi' decks.

How Flina Flem Fly.
The arrows indicate the direction of wind and currents of als.
are the principal instruments in their fight, serving to sustain the fish temporarily in the air after it has acquired an initial velocity in its rush through the water. It cal pass throngh the air to a considerable distance, sometimes as mnch as 200 yards, which it does to encape from the attacks of other fishem, eapecially the dolphin. It is mort common between the tropics. The beatinown specien are $B$. volitems sbuadant

Flying Squirrel (Pterimut), a animale famils Ecingidenus of rodent nimals, famils Scinride (squirrela) to which the slin of the fiank, extending between the fore and hind legen impart the facnity of supporting the animal for a moment in the air, as with a parachute, and of making very great leapa. Tho Enropean tiyins gqnirrel (P. or Sciavoptirus Siberious) is a native of the forents in the colder parts of Europe and Axis:
the American flying aquirrel ( $P$. volvcella) is common in the United States east of the Missouri.
Ely-trap, the only species known of nat. order Droseracea, also called Venus's fy-trap. See Dionæa.
Fly-wheel, a wheel with a heavy rim placed on the revolving shaft of any machinery put in motion by an irregular or intermittent force, for the purpose of rendering the motion equable and regular by means of its momentum. Its action depends on the mechanical law that a body once set in motion retains a certain amount of moving force or momentum, which has to be overcome before motion ceases. Thus a heavy wheel which has been made to rotate by some external force such as the pressure on the piston of a steam or internal-combustion engine, continues to rotate after the external force ceases to operate by reason of its stored energy or momentum.
In a steam engine the function of the flywheel is to store up energy during the first part of the stroke under full steam pressure; during the latter part of the stroke, when the pressure is decreased the flyWheel gives out encrgy which suffices to carry the engine over dead centers. It aiso equalizes the variation in the leverage with which the varying stenm effort acts upon the crank to revolve the shaft and external equalize sudden variations in the external loar? or resistance. In the internalcombustion engine, which is usually single-
acting with but one power stroke in acting four piston movements, the flywheel is of especial movemrtance in regulating the speed. See Gas Engine.
Fo (f0), the Chinese name of Buddha. See Buddha.
Foch fosch), General Ferdinand, 1851 at Tarbe in the Basque country on the borders of Spain, but was raised at Metz. His father was a Bonapartist and was secretary for the prefecture of Tarbes under Napoleon IIf. He served in the French army in the Franco-Prussian war as a subaltern, and later became captain of arillery. He was made professor of tactics in the Ecole de Guerre with the title of commandant. When he reached the grade of brigadier-general, Clemenceau, Who was then premier (1907), appointed him head of the war college. At the Battle of the Marnc (September, 1914 ), maneuvering under General Joffre, he held the center of the French line with 120,000 men opposed to 200,000 Germans. Both his wings were driven back, but he made a terrific attack on the enemy's center, broke the German line and saved the day. He succeeded

General Petain as chief of the general stafi of the Ministry of War. In March 1918, he became gineralissimo of the Allied armies, and later in the year he was made a Marshal of France.
Focus (fo'kus), (1) in optics, a point of light meet which any number of rays fracted meet after being reflected or regeom. an a mirro. or a lens. (2) In geom. an important puint on the principal axis of the parabola, ellipse, and hypereach two folipse and hyperbola have in the lo foci, the parabola one, though ond focus case we may suppose a secfoci focus at an infinite distance. The of light proceedin froin the fact that rays reflected froceding from one focus and surface pass through the other reflecting Foetrs (he other focus.

## Eatus (fétus). See Fctus.

Fog, a cloud at or near the surface of densation the earth, produc'd by the conatmasphon of the invisible vapor of the this conde into minute watery particles, curr condensation being caused by a cold current of air or the contiguity of a cold surface. Fogs are more frequent in those seasons of the year when there is a considerable difference of temperature in the different parts of the day. In low, moist places, and in confined places, as valleys, bays, or lakes, surrounded by high lands, they are of frequent occurrence.
Foggia (foj'á), a town of S. Italy, N. e. of Naprovince of Foggia, 123 miles cious streets Gothic cathedral. principal edifice is a corn, for which immense trade is chiefly in been formed under the granaries have 76,688. The under the streets. Pop. bounded by the Adince, which is partly 2954 sq . miles Adriatic, has an area of tures, and produces possesses rich pasPop. 418,510 . sels during fogs, wh sound to warn vesible signis fogs, when lights or other viskinds of cannot be perceived. Various whis of fog signals are used, among which may be mentioned bells, drums, gongs, guns, compressed-air whistles, steam-whistles, and fog trumpets or horns. One of the most powerful signals is the siren fog-horn, the sound of which is produced by means of a disk perforated by radial slits made to rotate in front of a fized disk exactly similar, a long iron trumpet forming part of the apparatus. The disks may ench contain sav twelpe Elits, and the moving disk may revolve 2800 times a minute; in each revolution there are of course twelve coincidences between the slits in the two disks; through the odenings thus made steam or
air at a high pressure is caused to pass, of that there are actually 33,600 puffs of steam or compressed air every minute. This causes a sound of very great power, which the trumpet collects and compresses, and the blast goes out as a sort of sound beam in the direction required. Under favorahle circumstances this instrument can be heard from 20 to 30 miles out at sea. Fog signals are also used on railways during foggy weather; they consist of cases filled with detonating powder, which are laid on the rails and exploded hy the engine when it runs over them.
Föhr (feur), a Prussian island in the of Schleswig; area, 28 sq. miles ; ponst about 4000 , mostly Frisians engaged in fishing, the capture of wild fowl, and agriculture.
Foil, a thin leaf of metal, as gold or Foil, tin, used for various purposes. in fencing, a rod of steel, representing a sword, with a handle or hilt at one end, and a leather hutton at the other to prevent accidents. Foils measure from 31 to 38 inches in length and must be resilient.
Foix (fwa), a town of France, capital of dep. Ariege, in a valley at the font of the Pyrenees, with remains of the old castle of the counts of Foix, and an old churcl and abbey. Pop. (1006) 4498.

Foix, Faston de See Gaston do
 China ; area about $40,0 \mathrm{O} 0 \mathrm{sq}$. miles. The coast is deeply indented by bays and studded with islands. The interior is generally mountainous, but is highly cultivated and generally fertile. The principal products are rice, wheat, harley, tea, silk, sugar, indigo, camphor, and tohacco. The capital is Foo-choo-foo. Pop. about $25,000,000$.
Fokschani (fok-shä'nē), a town of lov, 104 miles N. E. of Bukarest, with an important trade. Pop. 23,783 .
Folc-land (fok-land), that is Folkland, the land of the people, that portion of Anglo-Saxon lingland which was retained on hehalf of the community. It might be occupied in commion or possessed in severalty, but rould not become allodial estate or absolute private property except with the consent of the Witan or highest council in the land. From time to time large grants were made both to individuals and to communities; and land thus cut of from fnle-land was called boo-land or 1:1-U-3
' book-land.' Ultimately the king practically acquired the disposal of it, and the remnant of folc-land became crown lands. See F'eudal System.
Folc-moce, in Anglo-Saxon Engpeople to cunsult respecting public affairs. Foley (föli), Joun HENRy, sculptor, Hampstead in 1874. He was admitted a student of the Royal Academy in 1835. In 1848 he was elected an sssociate, and in 1858 an academician. His works are numerous and highly esteemed. They include statues of Selden and Hampden in Westminster; Goldsmith, Burke, and O'Connell in Dublin; Lord Hardinge and Outram for India; Lord Clyde in Glas gow; the rroup Asia and the colossal statue of Prince Alhert for the Alhert Memorial, Hyde Park. Foley was buried in St. Paul's Cathedral.
Foliation (fō-li-a'shun), in geology, the property or quality in certain rocks of dividing into thin laminæ or plates.
Foligno (follèn'yo), a town of Cen-
tral Italy, province of $\mathrm{Pe}-$ rugia, in a beautiful vale of the Apennines, waterer hy the Clitumnus. Public huildings worthy of notice are the cathedral and the Palazzo Communale. Pop. of commune, 26,278 .
Folk (fök), Josmph Wingate, political reformer, was born at Brownsville, Tennessee, in 1869 . He studied law, was admitted to the bar in 1800, and in 1900 became circuit attorney in St. Lnuis. As such he devcloped and successfully prosecuted numerous brihery cases, and hecame so popular that he was elected Governor of Misscuri in 1005, filling this office till 1909.

## Folkestone (fök'ston), a seaport of

England, County Kent, 6 miles w. hy s. of Dover, terminus of the Southeastern Railway, and a chief station for steamers to and from Boulogne. It is a fayorite watering place, and has a considerable shipping trade. Folkestone is included in the parliamentary borough of Hythe. Pop. (1011) 33,405.
Folklore (forkior), a useful term the the English language, signifying a scientific study of popular tales, traditions, primitive heliefs and superstitions, popular customs, usages, festivals, games, etc. Folklore, though it takes coznizanee of many apparently trivial matters, is of great importance in the science of comparative mythology, and helps to throw much light on the relationshins between races, and on the origin and development of religious beliefs and ceremonies. It

#### Abstract

18. therefore, of great assistance to the ethnologist, the sociologist, and the historian, as well as to the student of comparative mytholopy and of the science of religion. Holklore societies have been formed in eeveral countries, the American society being formed at Cambridge, Mass, in 1888. Its most important purpose is to collect the relics of folklore still existing in America. Fomentation (fo-men-ta'shun), in cation of warm liquids to a part of the body, by means of flannels or other cloths

Fondi (fon'ds), a town of South Italy, near a coast lagoon to which it gives name, prov. Caserta. It is a bishop's mee, and contains a cathedral. Fondi stands in a plain, the ancient Cacubue Ager, which produced the famous Cæcuban wine. Pop. 0930. Fonseca (fon'al'zá), Manuel DioDORODE, soldier and president, was born in Brazil in 1827 ; died in 1892. He spent nearly all his life in the army, being finally made marshal of the empire. Becoming hostile to the government he was deprived of his command

dipped in hot water or medicated decoctions, for the purpose of easing pain by relaxing the skin or deeper tissues.
Fonblanque (fon'blangk), ALbanx journalist, born in 1797 ; died in 1872 . He was educated for the bar, but, devoting himself to journalism, he gained a position on the Times, the Morning Chronicle, and succeeded Leigh Hunt as editor of the Examiner. A reprint of many of his articles, under the title England Under Seven Administratio $\%$, appeared in 1837. In 1852 he was appointed chief of the statistical department of the Board of Trade.
Fond du Lac, same capital of a county of baso Lake, 60 miles N . by w. of Milwankee. It is the center of several railways, and has a large trade. The industries inclnde iron founding, carriage and wagon making, tanning, sawmilling, and the manufacture of caskets, refrigerators, cement blocks and candy, etc. Pop, 18,797.
and banished. He now became leader of the revolutionists, drove the emperor from the throne and was made dictator and provisional president in 1889 . Iv 1891 he was elected the first president of the Republic of Brazil, but his dictatorial rule led to opposition and he was forced to abdicate.
Font, the vessel which contains the water for baptism in a church. It is frequently sculptured in stone or marble, with richly decorative designs.
Fontaine, Jraf de la. See La fontaine.
Fontaineblean (fon-tan-blo), a town of France, dep. Seine-et-Marne, in the midst of the forest of same name, about 2 miles from the Seine and 37 miles \&. s. E. Paris. It owes ite origin chiefiy to the palace, and is a quiet place, with broad, clean streets. Pop. (1906) 11,108. The castle or palace of Fontainebleau is one of the most mas. nificent in Erance. It occupies the site of a fortified chateau founded by Jouis VII in 1162 ; this was coaverted into a ma:-
nificent palace by Francis $I$, and much added to by Henry IV, Napoleon I, Louis Philippe, and Napoleon III. The part is laid out like a vast garden, and adorned with statues, temples, fountains, lakes, and waterfalls. The forest, which is about 50 miles in circumference, covers an area of 42,600 acres, affords numerous pleasant, attractive walks, and abounds with game.

## Fontana (fon-táná), Domenico, an

 Italian architect and engineer, born in 1543; died in 1607. He was omployed by Pope Sixtus $V$ in many great works, among the chief of which was the erection of the Egyptian obelisk in front of St. Peter's. Among other buildings erected by Fontana were the Lateran Palace and the library of the Vatican. He also executed important works at Naples.Fontana, Prospero, an Italian painter, born at Bologna in 1512; died at Rome in 1597. He excelled in design and composition, and adorned several churches in Rome and Bologna with historical frescoes. Among his pupils were his daughter Lavinia (born 1552, died 1614), who excelled in portraits, and the brothers Caracci.

## Fontenay-le-Comte (font-näle

 French town, dep. Vendee, 27 miles $N$. w. of La Rochelle. Has a fine Gothic church with spire 311 feet high; manufactures coarse linen and woolen cloths and is an entrepot for the Gironde and Charente wines. Pop. (1906) 7639.Fontenelle (fopt-nall), Bmaivard is Bovier de, a French author, born at Rouen 1657; died 1757. In 1674 be went to Paris, and soon became known by his poetical effusions and learned works. Before the age of twenty he had assisted in the composition of the operas of Psyche and Bellerophon, which appeared under the name of his uncle, Thomas Corneille. In 1681 he brought out his tragedy Aspar; but it and the other dramas and pastorales with which he opened his literary career were on the whole unsuccessful. In 1683 appeared his Dialogues of the Dead, which were favorably received. His Discourse on the Plurality of Worlds (1686) was the first book in which astronomical subjects were discussed with taste and wit. Among his other works are the History of Orcoles and an Essay on the Geometry of the Infinite.
Fontenoy (font-nwu), a village in Belgin m, province of Hainaut, celebrated for the battle of May 11, 174, in which the French upder Masthal Sase defeated the Britioh, $\Delta u$.
trian, and Dutch allied forces under the Duke of Cumberland.

## Fonterrault (fon-tevro), a village

 of N. W. France, dep. Maine-et-Loire, in a valley 10 mile southeast of Saumur. Here was formeriy a rich Benedictine abbey (now a prison) founded in 1099, containing both monk and nuns, and governed by an abbem. The abbey became the head of an order and had many dependencies. The old monastic buildings, covering from 40 to 50 acres, are now used as a central prison. In the abbey church are the tombs of Henry II and of Richard I, Kings of England and Counts of Anjou, of Eleanor, wife of IIenry II, and Fizabeth, wife of John, King of England.
## Foo-chow (fu-chou), a town of

 province of china, capital of the pilee of Fokien, on the Min, 125 miles N. E. of Amoy. It consists of the town proper, surrounded by walls. and of extensive suburbs stretching along both sides of the river, and communicating by a stone bridge. Foo-chow is one of the five ports thrown open by the treaty of 1843. The trade is very extersive, but the navigation of the river from the sea to the harbor is dificult. Foochow has a large armenal and dockyard superintended by European officers; it is also a great literary center. Pop. estimated at 700,000 .Food. See Aliment, Dietetics, and United States.

## Fool. <br> See Jester.

## Foolah. See Fellatah.

Feast of, the name given to from the fifth to the sirteenth century, in several countries of Europe, by the clergy and laity, with the most absurd ceremonies. The feast of fools was an imitation of the Roman Saturnalia, and, like this, was celebrated in December. The chief celebration fell upon the day of the Innocente, or npon New Year's Day; but the feast continued from Christmas to the last Sunday of Epiphany. The young people, who played the chief parts, chose from amons their own number a mock pope, archbishop, bishop, or abbot, and consecrated him, with many ridiculous ceremonies, in the chief church of the place. They often travestied the performance of the highest ofices of the chureh, while otherm, dressed in different kinds of manks and disguises, engaged in indecent mongy and dances, and practised all powible follies in the church. Except from their anoo ciation with the Saturnalia mothing for
known of the origin of these extravagancies, Which appear to have been very
ancient. They were most common in France, but the feast was also observed in Spain, Germany, England, and Scotland. In France it survived till the year 1644.
Foolscap (fols'kap), paper of the smallest regular size but one (about $131 / 2$ by $161 / 2$ inches) : so called from its water-mark in carly times being the outline of a fool's head and cap, for which Britlsh papermakers now substitute the figure of Britannia. Fool's Parsley, the popular name pium, nat. order of Athisa Cynagrows wild in some places in the Northern States. It is commonly believed to be poisonous, and serious accidents are said to have occurred from its being mistaken for parsley; but if poisonous it is so only in certain localities. Its unilateral reflexed floral leaves distinguish it from most plants to which it is nllied.

## Foo-shan

(fō-shan), a town of China, prov. of Quangtong, 21 miles s. w. of Canton, on one of the branches of the delta of Si-kiang. Pop. est. at 400,000 .
Foot, a measure of length, the name of which is derived from the length of the human foot, containing 12 linear inches.-Syuare foot is a square whose side is one foot, and is therefore equal to 144 square inches.-Cubic foot is a cube whose side is 1 foot, and the cube contains 1728 cubic inclies. The foot is a common measure in various countries, but its dimensions vary considerably.
Foot, in prosody, a measure consisting three, or four, in combinations of long and short, or acned and unaccented. In Greek and I- , rse the feet depend on the quantic. length of the syllables, each foot naving a distinctive name-trochee, iambus, dactyle, anapest, etc. The same names are applied to English measures. an accented syllable in English being beld to be equivalent to a long syllable in Latin or Greek, and an unaccented syllable to a short.
Foot, in animals, the lower extremity of the leg; the part of the leg which treads the earth in standing or walking. and by which the animal is sustained and enabled to step; or that surface of the body by which progression is effected among the mollusca. The foot of man is composed of twenty-six bones, seven of which constitute the tarsus or ankle, which articulates with the les and
corresponds to the carpus (wrist). Five bones form the metatarsus, which corresponds to the metacarpus, and articulates with the tarsus behind, and with the toes in front. The foot is narrow and thick in its posterior part, thinner and broader anteriorly; it forms a right

Seeleton of the Human Foot.
$a$ to $b b$, Tarsus. $b b$ to $c c$, Metatarsus. $c c$ to 1 , Phalanges. 1, Os calcis, calcancuza, or heel-bone. 2, Astragalus. 3, Scaphoid bone. 4, Inner cunoid bone. 5,Middle cunoid bone. 6, Outer cunoid bone. 7, Cuboid bone. 8 to 12, Mctatarsal bones. 13, Firnt row of phalangea. 14, Last row of phalanges.
angle with the leg, and rests upon tha ground at the extremities only. Tha middle portion is in the form of an arch, and, in consequence, resists shocks anil supports pressure much better than it could if it were flat and touched th? ground throughout its whole length. Absence of the arch constitutes flatfoot.
Foota (fo'tá), a territory of Sene. gambia. W. Africa. on the lower Senegal, which bounds it on the northeast. It includes Foota Toro, and other districts. Area, about $15,000 \mathrm{sq}$. $\mathrm{m} . ;$ pop. estimated at 400,000 . Th: natives profess Mohammedanism, and th: country is divided into three district:, each formerly governed by its own chiel', subject to a sovereign chosen from a few privileged families. It is now under French control.
Foota-jallon (fo'ta-jal'un), a reintersected by lat. $12^{\circ}$ N. and lon. $13^{\text {c. }}$ w. It is extremely mountainous, and is the source of the rivers Senegal, Gambia, and Grande. Large herds and flocks are pastured in the highlands; and the soil produces in abundance oranges and bananas, and palm trees, which furnish dates, wine, and oil. The inhabitants are Mohammedans, and are estimated at 700,000.
Foot-and-mouth Disease, a hightagious eczematous affection which attacks the feet and mouths of cattle, manifesting itself by lameness, indisposition to eat. and general febrile symptoms, with ultimately eruptions of small vesicles on the parts affected, and general indisposition of the animal. The disease occasionally spreads to the udder of milch cattle, and it is believed that it
may be communicated to persons who drink the milk of cows so affected.
Football, an outdoor game of considerable antiquity. In former times towns and villages were often matehed against each other, the whole of the able-bodied inhabitants taking part in the atruggle; the goals being often miles apart, and usually consisting of natural objects, as a brook or river. The modern form of the game is played by two parties of players, on a large level plece ot ground, generally oblong in shape, and having in the middle of either of the ends a goal formed by two upright posts 6 to 8 yards apart, with a bar or tape extended between them at the height of 8 or 10 feet from the ground. There are various styles of playing the game, but the two recognized in all important matehes are the Rugby game and the Football Association game, the game played in the United States being a variation of the English Rugbs. In both games the main object is for either party to drive the ball (which is kicked off in the center of the field) through the goal that their opponents are guarding, and thus count a goal against them. In the Rugby game the goal-posts are $181 / 2$ feet apart, and joined by a cross-bar at a height of 10 feet from the ground; and to score a goal the ball must be kicked over this bar by one of the opposite side. In the Association game the upright poles are 8 yards apart, and joined at 8 feet from the ground by a tape, under which the ball must pass to secure a goal. The Rugby game is much rougher and less seientific than the Association game, which discourages rough play and relies mainly on the skilful maneuvering of the ball with the feet, it being forbidden to touch the ball with the hands; while by the Rugby rules the player may catch the ball in his hands, run with it, and kick it dropping. When a goal is made, or at some other arranged interval, the parties change ground for the next struggle, so that any inequalities of situation may be balanced. The roughness of play, and frequent accidents-occasionally fatal-have led to certain modifications in the game, with the purpose of eliminating its more dangerous feature and substituting skill and agility for brute strength.
Foote, Andrew Hull naval officer, born at New Haven, Connectieut, in 1806. He entered the navy in 1822, was engaged in suppressing the African slave trade in 1849-52, and was in command of the China station in 1856. Here, while seeking to protect American property when the Chinese were at war
with the English, he was fired upon by the Chinese. An npolugy being refused, he stormed and captured four Chinese forts. In 1862 he commanded the river fleet in the advance on Forts Henry and Donelson and aided Grant in their capture. He was promoted rear admiral in the same year, but dled while preparing to join his flagship in 1863.
Foote, Sayuri, an English comic writer anu actor, born about wat aro died at Dover in 1777. He was educated at Oxford, and entered the Temple ; but after a course of dissipation, to whieh his small fortune fell a sacrifice, he turned his attention to the stage. He appeared first in Othello, but had little suecess as a tragedian. In 1747 he opened the theatre in Haymarket, with a dramatic piece which he entitled The Diversions of the Morning. It consisted of some very humorous imitations of wellknown characters, in detached scenes, written by Foote, who always took the leading parts himself. After 1752 he performed alternately in London and Dublin. He did not obtain a patent for the Haymarket till 1766. Of his numerous plays, above twenty in number, hardly one is now acted. His humor is described by Dr. Johnson and other witnesses as irresistible.

## Footguards. See Guards.

Footlights, in theaters, the row of oots, lights placed on the front of the stage and on a level with it, to light it up.
Foot-pound, in physics, the term lot expressing the unit selected in measuring the work done by a meehanical force. A foot-pound represents 1 lb . weight raised through a height of 1 foot; and a foree equal to a certain number of foot-pounds, fifty for example, is a force capable of raising 50 lbs. through a height of 1
Foot-rot, a dise in the feet of Foot-rot, sheep, more common form of which is an inordinate growth of hoof, which at the toe, or around the margin, becomes turned down, cracked, or torn, thus affording lodgment for sand and dirt. In the second form of the disease the foot becomes hot, tender, and swollen : there are ulcerations between the toes, followed by the sprout'ng of proud flesh.
Footstalk: (1) In botany, a petiole; the stalk supporting the leaf, or connecting it with the stem or branch. (2) In zoology, a process resembling the footstalk in botany, as the muscular process by which certain of the brachiopoda are attached, the stem
which bears the body in barnacles, the stalk which aupports the ejes in certain crustaceang

## Foraker (fora-ker), Josmpa Briv-

 Rainsboro, Ohio, in 1846. He served aa a private in the Civil war, afterwards studied law and began practice in Cincinnati in 1809. He was Judge of the Superior Court of that city 1870-82, governor of Ohio 1885-89, and United States Senator 1807-1809. He was known as 'the bulldos of politics.' Died May 10, 1017. Foraminifera (fo-ra-mi-nif e-ra), mals of low type bel order of aniRhiropoda, sub-kinglonging to the class nished with a shell or ters, simple or complex, usually perforated by pores

1, Phanorbulina Ugeriana 2, Triloculina tricarinate. 3, Globigerine bulloides. 4, Rotalia Beocarii. 5 , Nonionina turgida
(foramina), whence the name. The shell may be composed of horny matter, or of carbonate of lime, secreted from the water in which they live. Owing to the resemblance of their convoluted chambered shells to those of the nautilus, they were at first resoned among the most highly organized molluscs. In reality they are among tine simplest of the protozoa. The body of the animal is comnosed of granular, gelatinous, highly elastic sarcode, which not only, fills the shell, but passes through the perforations to the exterior, there giving off long thread-like processes called pseudopodia, interlacing each other so as to form a net like a spider's web. Internally the sarcode-body exhibits no structure or definite organs of any kind. Foraminifera appear very eariy in the geological formations. The great formation known as white chalk is largely composed of foraminiferous shells, while another remarkable formation known as Nummulitic Limestone receiven its name from the presence of coin-shaped foraminifers, generally about as large as an English

Forbes
(forbz), Duncan, of Culloden, a Scottish lawyer, lordpresident of the Court of Semsion, born 1685; died 1747. He studied law at Edinburgh and Leyden ; was called to the bar in 1709 , and immediately after appointed Sherify of Midlothian. In 1737 he became lord-president of the Court of Session, in the procedure of which he made many improvements. In 1734, in consequence of the death of his brother, he fell heir to the estate of Culloden. He devoted himself to the improvement of the industry of Scotland, and materially aided in laying the foundations of its commercial prosperity. It was mainly owing to his exertions that the rebellion of 1745 was prevented from ipreading more rapidly among the clans. He wrote several religious works: Thoughts on Religion; Reflections on the Sources of Incredulity in Regard to Religion; Letter to a Bishop, etc.
Forbes, EDWARD, a British naturalist, Man, 1815 ; wied at Edinburgh in 18v4. He early devoted himself to science, and having made scientific journeys in Norway, Sweden, France, Germany, etc., he was attached to a scientific expedition to the Mediterranean, the result of which the peared in a report presented to the British Association, and in Travels in Lycia. In 1842 he became professor of botany at King's College, London. On the opening of the School of Mines, Forbes was appointed lecturer on natural history as applied to geology and the arts. He etill retained his professorship of botany at King's College, and continued to contribute annually some of his most valuable memoirs to the British Association, besides writing for scientific and literary journals. In 1853 he was appointed to the chair of natural history in Edinburgh. Among his more important works, which include a great number of valuable papers on zoological, botanical, and literary subjects. are a History of the Star-fishes and History of Britisk Mollusca.
Forbes (forbz or for'bes), James David, a Scottish scientist. born in 1809: died in 1868. He was educated at Edinburgh University, and admitted to the Scottish bar. In 1833 he was appointed to the chair of natural philosnghy in the Tniversity of Edinburgh. In 1860 he became principal of the United Colleges of. St. Salvador and St. Ieonard. in the University of St. Andrews. His fame rests chiefly on his study of glaciers. His chief publications on this subject are: Trevels throuoh the Alps of Savoy; Norvoy and it Giaciert; Towr
of Mont Blano and Monto Rosa; and Oocacional Papers, on the Theory of Glaciers. Forbes's theory of the Elacier was that it was a viscous body, urged down alopes of a certain inclination by the mutual pressure of its parts. See Glaciers.

## Forbes, Sra Jori, a Scottish physi-

 1881. He settled in London in 1840, where he became physician to Queen Vic toria. He was the founder of the British and Foreign Medical Review, published a number of professional and other works, and contributed to the Cyclopedia of Prao tical Medicine.
## Forbes-Robertson,

Sir Johnstong. celebrated Eny lish actor, born in London, January 18. 1853. He was educated at Charterhouse Arts with the idea of becoming a painter; but in 1874 turned to the theater, making his first appearance in London as Chastelard in Mary. Queen of Ecote. In 1805 he began playing under his own management with Mrs. Patrick Campbell, producing Romeo and Juliet, Hamlet, 1200 beth, and some modern plays. In 1900 he married the actress Gertrude Elilioth, with whom as his leading lady he appeared in Shakespearean and moders plays. He retired in 1914.
Force (fors), that which is the source of all active phenomena occurring in the material world, and of which motion, gravitation, heat, light, electricity and magnetism, cohesion, and chemical affinity are believed to be exhibitions. Mechanical force is the power which produces or modifies motion or tends to do so. It has its orizin in three causes: (1) gravitation; (2) the unknown cause of the phenomena of light, heat, and electricity ; and (3) life. Me chanical forces are of two sorts: one of a body at rest, being the same as pressure or tension; the other of a body in motion, being the same as impetus or momentum. When two forces act on a body in the same line of direction the resulting force, or resultant as it is called, will be the sum of both forces. If thev act in opposite directions the body will remain at rest if the forces be equal: or, if the forces be unequal, it will move with a force equivalent to their difference in the direction of the greater. If the lines of direction make an angle with each other the resultant will be a mean force in an intermediate direction. The composition of forces is the combining of two or more into one (actually or hypothetically), which shall have the cume effect when acting in some given.
direction; the resolution of forces is the decomposing of a single orce into two or more forces, which, acting in different directions, shall be equivalent to the single force. F'orces have difierent denominations according to their nature and the manner in which they act: thus wo have accelerating forces, constant forcen, parallel forces, uniform and variablo Zorces, etc The unii of force in a single force in terms of which the amount of any other force is ascertained. See Dynamice, Energy.
Forceps (for seps), a seneral name for a two-bladed instrument on the principle of pincers or tongm, used for seizing and holding, and for ${ }^{-1}$ tracting objects, which it would be impracticable thus to treat with the fingers. Such instruments are used by watchmakers and jewelere, by dentists in extracting teeth, for holding parts in dissection, for extracting anything from a wound, taking up an artery, and by accoucheurs, etc.

## Force-pump. See Pump.

Forcible Detainer, a violent mithlands, etc, of another from his pomer. sion.
Forcible Entry, the rolently tak: lands or tenements
Forcing (fors'ing), a method of cultivation by which plantes flowers, and fruits are raised at an earlier season than the natural one by protecting them under glass in hot or cold frames, by using stimulating fertilizers, and other means.
Ford, Henky, automobile manufacturer, was born at Greenfield, Michigan, in 1863. He became a machinist, was chief engineer of the Edison Illuminating Company of Detroit, and finally engaged in automobile manufacture, organizing the Ford Motor Company. The cars built by this company were of small size and cheap construction, their price being so low that the business grew enormously. It has become the largest of its sind in the world, turning out nearly 2000 cars daily and employing 50,000 workmen. The plan of profit-sharing has been introduced, under which $\$ 10,000,000$ annually has been distributed among the employees. In 1915 Mr. Ford chartered a ship and trok a party of peace advocates to Eu . rope, with the hope of in some way ending the war. This enterprise failed.
Ford, JoHin, an eary Fhglish dradied about matic author, born in $\operatorname{He}$ entered the $\mathbf{1 5 8 8}$;

Temple in 1602, and appears to have practised as a lawyer. In 1608 he published a monody on Charles Biount, Lord Mountjoy, afterwhrds Earl of Devonshire. His dramas are: The Lover's Melancholy (1029): 'T'is a Pity She's a Whore (1033): The Broken Heart (1033) : Perkin Warbeck (1634); The Fancies Chasto and Noble (1638); The Lady's Trial (1639); The Sun's Darling (1657), and several others written in conjunction with Dekker, Webster, and others.
Ford, Paul Imicester, novelist, born 1865. He is best known by his very successful novel, The Honorable Peter Stirling. He also wrote Janice Meredith, and others; edited the writings of Jeffermon and Dickinson, etc. He was killed by his brother, Malcolm, in 1902. Fordun (for'dun), Joins, the father probably at Fordoun, Kincardineshire, soon alter 1300; died about 1386. He wrote the first five books of his history known as the Scotichronicon (in Latin). bringing it down to 1153, and part of the sixth, and left materials ior its continuation down to his own period. It was resumed about 1441 by Walter Bower, abbot of the monastery of Inchcolm, by whom the five books of Fordun were enlarged, and eleven new ones added, bringing the history down to 1437 . It exists in numerous MS. copies, and several printed editions have been published. the best of which is that of W. F. Skene, Fdinburgh, 1871-72, with translation.
Fore-and-aft, in ships, a term with the keel. Fore-and-aft sails are those that are set on a stay or gaff and boom, such as jibs, staysails, etc.
Forecastle (fōr'kas-l or fōk'sel), a part of a ship of war, or forward of the foremast, above the upper deck. In merchant ships it is the forepart of the vessel, where the sailors live.

## Foreclosure

(for-klo'sür), in law,
is the right of a mortgagee, or of any one having interest in a mortgage, in the event of the conditions of the mortgage being violated. to compel the mortgagor to redeem the pledge or forfeit his right of redemption.
Foreign Attachment. See AttachForeign Bill of Erchange. ${ }^{\text {sefi }}$
 of medical education which applies the
principles and practice of the different branchem of medicine to the elucidation of doubtful questions in a court of justice; otherwise called medical jurisprudence.
Foreshortening (for-short'en-ing), in drawing and painting, the art of reprementing figure

Foreshortened (after figure by Raphael).
in such a manner as to convey to the. mind the impression of the entire length of any object which is pointing more or less directly towards the spectator standing in front of the picture. The projecting object is shortened in proportion to its approach to the perpendicular to the plane of the picture, and in consequence appears of a just length.
Forest (for'est), a term properly applied to an extensive wood, or to a large tract of mingled woodland and open and uncultivated land; but also given to a large tract of hilly or mountain land wholly or chiefly devoted to the purposes of the chase. (See Deer-forest.) Forests proper are of much importance in the general economy of the globe. They greatly affect climate; and their beneficial influence in a physical, economical, and hygienic aspect is now receiving increased attention. Immense forests exist in the Western continent, both in the north and south, the vegetation appearing to possess no limits. In the United States, nevertheless, the forests, though still of great extent, are gradually disappearing; but those of Canada remain very large. In South America, the whole of the valler of the Amazon, which embraces one-third of the entire area of that country, is one vast forest. In Africa also there are forests of immense extent, and the same is the case in Northern Russia, especially in Siberia.
Foresters
(for'est-ers), there are several fraternal benefit

## Forestry

cocietilen under this name, Including the Ancient Order of Forentera, founded in Bngland in 1745, eertablighed in the UnIted States in 1809 ; the boresters of America, founded in 1884, and the Independent Order of Forsisters, 1874:
Forestry (for'en-tri), the act or art forent. The forming and cultivating man lies: (1) In furniching him with timber for building, manufacturing, fuel etc., and wits various other useful products of trees. (2) In their influence on climate. (3) In their influence on waterfow, by keeping the cround more moist, making the outflow more regular, checking the rapid melting of snow, and keeping the hillsides from being denuded of their soil, thus setting up streams and covering cultivated valley lands. The necessity of a proper preservation of the forests seems highly evident, hut the nations have been slow in waking up to this fact. Several of the countries of Europe have been largely stripped of their woodlands by indiscreet cutting in the poorest countries, and only recently have the nations been roused to the necessity of their conservation. This is now oeing carefully attended to in several countries, especially in Germany. In China hroad mountain regions have heen stripped of their trees, with the resule that this soil has been swept away hy the rains, leaving the rocks bare, while hroad reaches of formerly fertie lowlands have been made sterile by the material spread over them hy the rains that swept the mountain slopes.
In the United States the hroad origlnal forests have been very largely cut away, and those remaining have of late years been so largely reduced by indiscriminate cutting and the ravages of carelessly kindled fires that great alarm is felt as to the future of the lumber supply. Within recent years vigorous efforts have heen made to overcome this growing evil. The American Forestry Association, founded in 1882, its purpose being the conservative use of our forest resources, has now nver 5000 memhers, residents of every state, and of Canada and foreign countries. The first State Forest Commission was organized hy New York in 1885 and has now a very large forest reserve set aside in the Adirondacks. Pennsylvania has also large forest reserves in its mountain districts, and many other states have taken similar action. The art of forestry is also being taught in the schools, and a large body of skilled foresters are now in the service of the otates and the
zeneral government. In the Department of Agriculture hat been organized a Diviofon of borestry, and the mont earnent efforta are belfg made to prevent any further needlems waste of our woodlande. In the new and active movement for the conservation of national resources the preservation of the puhlic forests ranks hish, and to ald in this purpose the government has withdrawn as national forest areas a vast amount of the public lands amounting at the present time to 102,831,197 acres, an area about equal to that of Texas and Ohio comhined. These woodlands are under the charge of the National Forest Service and cared for hy about 3000 men, of Whom 250 are profemional forenters. The trees in thene forests are cut with careful discrimination, and new trees are planted to take their place, there heing forest nurseries containing ahout $20,000,000$ plants and capahle of supplying $18,000,000$ a year. New York has $1,000,000$ acres in its forest reserve, Pennsylvania over 920,000 , and the reserves of the other states amount to a very considerahle area. Arbor day is a useful institution in this connection, large numbers of trees being planted on that day and the need of conserving the forests taught to the growing generation in a practical manner.
Forest City, a borough in susquesylvania. 6 miles hanna County, Pennhas coaling industrios of Carhondale. It mills, etc. Pop. 5749 , Forest-fly, the popular name of a of two-winged ficmily (Hippoboscide) of two-winged fies, parasitic on biris and quadrupeds.
Forest Marble,
in geology, an argillaceous la minated, shelly limestone, alternating with clays and calcareous sandstones, and forming one of the upper portions of the lower Oolite ; so called from Which wood F'orest, in Oxfordshire.
Forest Park, a residential village in Cook County, Tllinois, near Chicago, on the Desplaines River. Pop. 0000.
Forfar (far'far), or Angus, a maritime county on the east coast of Scotland, bounded N. hy Counties Aherdeen and Kincardine, w. hy Perth, 8. hy the Firth of Tay, and E . bv the German Ocean; area 880 sq . miles. The surface is covered in the west and northwest by a portion of the Grampians known hy the name of the Braes of Angus, and in the south hy part of the Sidiaw Hills. Nearly half the area is under crops and cattle rearing
is carried to great perfection, the chiel breeds being shorthorns and poiled Anrue. The staple manufacture is coarso linens, which if more or lens carried on in all the towns and villagee, but has its central locality at Dundee. Sandatoue fage are largely quarried in the Arbroath district. Yop. 284,078. -The county town Fonjam is 13 milem north by east of Dundee. The staple manufacture is linen, eapecially of the coarser varieties, there being several large factories in the town, in connection with which are several bleachworks. Pop. 12,882.

## Forfeiture

( lor'fitar), a punish- $^{\text {a }}$ ment annexed to some illegal act or remissnesss of an owner or temant of property, whereby he loses his interest therein, together with his title, the same going to the party injured by such act or remissness.
Forge (forj), a workshop or other establishment in which iron or other metal is hammered and shaped by the ald of heat; also, the works where tron is rendered malleable by puddling and shingling. For military purposes a traveling forge is used by torces in the field.

## Forgery

(for'je-ri), at common law, the fraudulent making or alteration of a writing to the prejudice of another man's rights, or making, malo animo, of any written instrument for the purpose of fraud and deceit: the word making, in this last definition, being considered as including every alteration of or addition to a true instrument. The punishment of forgery at common law is, as for a misdemeanor, by fine imprisonment, and such other corporeal punishment as the court in its discretion shall award. Most, and perhaps all, of the states in the Union have passed laws making certain acts forgery, and the national legislature has also enacted several on this subject; hut these statutes do not take away the character of the offense as a misdemeanor at common law, hut only provide additional punishment in cases enumerated in the statutes.
Forget-me-not, the name of Myo-Corget-me-not, sotis palustris, nat. order Boraginaceex, annual and perennial herbs. Nearly fifty species have heen described. Scorpion-grass is also a name for it and others of its genus. It is a very beautiful plant, and considered to be the emblem of friendship wherever it is grown. Its flowers are bright hiue with a vellow eye. Specie: are found in the United States. The dark-blue forget-me-not of the Azorem
(M. Acorica) is now cultivated in greenhouces, and is much anteemed for the bellifancy of ite flowera.
Forli (for-10 ), town of North Italy, capital of a province of eame name, 88 milem southeant of Bologna. It is handsome and weil built, has manufactures of allk ribbons, ailk twist, woolen sturfe, etc., and a considerable trade. Forli has a cathedral and is a bishop's see. Pop. 43,321. -The province of Forli is bounded on the east by the Adriatic ; area 710 iq. milen; pop. 279,072.
Forlorn Hope, a body of men, asually volunteeru, nelected from different redments, to lead an amsault, enter a breach, or perform other service attended with uncommon peril. The term jef Dutch oriain; hope beins from Dutch hoop, a company.
Form, as a metaphyaical term, has Form, been defined as the ensence of the thing from which reault not only its figure and shape, but all its other qualitifs. Hence it is all that makes a thing intelligible to the mind, in contradistinction to matter, thus regarded as a kind re יnknown substance or substratum.
Formal. hyde (for-mal'de-hid), or Fobmic ALDEHIDE, is a colorless, puingent, irritatins sameous hody $\left(\mathrm{CH}_{3} \mathrm{O}\right)$, with characteristic odor and very decided antiseptic and bactericidal properties. It is the best bactericide known, acting effectively in the gaseous state. It was first produced by Hofmann in 1868. It is made hy the action of heat on wood alcohol, being an oxidation product. It is very irritating to the mucous membrane of the eyes and nose, inflammation resulting after much inhalation of it. It is used by Boards of Health being sprinkled or poured on the floor of a 500 m , all outlets being fastened so as to keen the gas confined therein. Thus used, it acts as a disinfectant, destroying disease germs. The odor may be removed afterwards by ammonia, which is sprinkled about the apartment. It is also used to harden and preserve pathological and histological specimens, etc. It is made and used internally as heramethylenamin, etc., much diluted with water, in some forms of cystitis, etc.
Formation (for-mishun), in gerocks referred to a common origin or period, Fhether they consist of the same or different materials. Geological strata are divided into certain groups of one era of deposition, sometime of very alfsimilar mineralogical character, but enclosing the same fosill speciow; $\mathrm{am}^{2}$, the

Carboniferous, Oufitic, ( waceons, sllurian, laureatian, etc., formallions. See Ceology.

## Formentera

(for-mien-totra), one uf the Balearle Leinnds, about 12 miles lons and 8 broad, hlly, woody, and hut little cuiclvated.
Formios (for'mi-ka), the genus to belong.
Formic Acid (fur'rik; $\mathrm{CH}_{3} \mathrm{O}_{2}$ ), an ants (I. formica, an ant), peated cuantitiens of them ${ }^{2}$, when repeated quantities of them have been infused In bolling water. It is contained in human aweat and urlae, in the common nettie and other piants, and maj; be prepared artlicially in varions wasa. It is a coiorlemi, volatile llquld, with pungent odor, and producing Intense Irritation on the skln.
Formosa (for-mósa), an island in from the Chinese Chlnese Sea, separated strait about 80 miles wide where narrowest. The isiand ls about 250 miies in iength and $70 \ln$ average breadth. It Is divided by a centrai range of mountalns (rising to 12,000 feet) Into a western and eastern part, the former of which (mostly a piain) ls occupied by about 500,000 lmmigrant Chinese, and highiy cultivated, producing in abundance corn, rice, sugar, pepper, camphor, pranges, bananas, etc. The eastern part is Imhahited malniy by wild tribes of Malayan race, who are gradualiy disappearing before the Chinese. Northern Formona is volcanic, and earthquakes occur. Four ports have been open slnce 1860 to European commerce: Tai-wan (the capital), Tam-sui, Ke-lung, and Takow ; and the trade of the 1sland slnce then has greatiy lncreased. The chief exports are coai, tea, camphor, sugar, Indigo, hemp, timher; this island being the principal source of camphor. The imports are cotton and woolen goods and opium. It formerly helonged to China, but was ceded to Japan in 1895, In consequence of the war with China. Japan has had much trouble with the wild tribes and is making vlgorous effort to hring them under control.
Formo'sa, an isiand in the Atlantic, sagos off the west const of Afrlca. See Bissagos.
Formula (f, ${ }^{\prime}$ mitla), a fixed form theology it is a formal or statement of doctrines: in mathematics, a general theorem, a rule or principle expressed in algehraic symhois. In chemlstry it is a mode of expressing the constlituents of
a compound by meana of symbole and Intters. Thus water in repremented by H5O, in which Ho mtanda for the two proportlons of hydrogen and $O$ for the one of oxysen which are combined to produce water. In medicing it iligalifien a prencriptlom.
Forres (for'en), a burgh of Scothand, nituated ln a finely-wouded beautifulify Forren Castle was the realdence of the in arly Heottish Kinge, and Shakeapere ham made this neighborhoud the meene of the chlef events in Jacbeth. Hop. 5oy 4. Forrest (forest) FDW IN. actor, born in Piniiadeiphia In 1806. ile mowed an early taient for the stase, and in 1820 made hle dehut at Phliadelphla as the hero In Home's play of Dowolae. In 1820 he appeared before the New York public as Othello wlth signal success. In 1830 he vlsited En5land, maklog a third and last visit in 1845. Ie contlnued to act wlth rreat anceesn at New York tiil 1871. when he retired, dying in 1872 . His chlef characters were Othello Macbeth, Hamlet. nnd Richard III. His former abode in Phliadeiphia ls now the home of the Ihiladeiphia School of Design for Women, and lie established by wlif a home for aged and infirm actors, near that city. Forrest, Natilan BedFord, Confederate cavuiry commander; born in Tennessee in 1821. He was à slave trader ln Memphis, Tenneasee, and at the outbreak of tive Clvli war joined the Confederate Army as a private, becoming a daring commander of cav: alry and attaining the rank of lieutenantgeneral. He was one of the ahlest cavairy leaders in the war. His name hecame notorlous in connection with the Fort Plllow Massacre, although he aiways denled the charge that no quarter was aliowed. Ife died in 1877 .
Forster (fors'ter), JohanN Giong Adam, a German traveler, son of Johann Reinhold Forster, was born in 1754. He accompanied his father to Russia and England, aud hoth accompanied Cook in his voyage round the world 1772-75. Suhsequently he taught natural history at Cassel, heid a professorial chalr at Wilna, hecame librarlan to the Elector of Malnz, and died at Paris in 1794. An excelient account of Cook's second voyage round the world was writ ten by hlm in connection with hls father He also wrote Exsays on Geography, Narural History, Views of the Lower Rhine, etc.

## Forster, Johann Reinhold, aer-

 foregolng, born in writer, father of the foregolng, born in 1729 . He studiedtheolony at Halle, and became preacher at Nameenhuben. He chletly devoted himmelf, however, til his farrifte mtudlem -mathematices, history, geography, etc. After having been engaged on a miation by the Ihuwian goverament be $\ln 17 \mathrm{HS}$ mirrated to Imadon, where he mupported himself and his mon, Johann lieors, partly by teaching. Ile wam tinully invited to accompany Captain Cook in his necund voyage an naturalint of the expedition. An account of the voyage wan published in his son's name (london, 1777). In 1780 he was invited to Ilaile as profennor of natural hintory, and continued there until his death in 1708 .
Forster, Joms, an Easlish writer, While utudying for the bar in London he contributed to the Examiner and other. periodicals. In 1843 he was calied to the bar, but his main interests renained in the field of literature. Ile became editc. "the Daily News in 1846, and short afterwards of the Eraminer. In 18 , he pubilimed his Life of Goldamith. In 1853 ha retired from the editorship of the Examiner, having been appointed the year previous secretary to the Lunacy Commismion, of which be became in 1861 a commissioner. Juriag this period he devoted himself to historical studies, the result of which appeared in his Arrest of the Five Members, Debates on the Orand Remonstrance, and Life of Sir John Eliot. IIe aiso puhlished blographles of Iandor and Dickens, but died in 1876, before compieting his Life of Swift.
Forster, Wriliam Edward, an EngBradpole, Dorset, in 1818, the son of an eminent minister of the Society of Friends. He entered into the woolen trade at Bradiord. In 1850 he married the eldest danghter of Dr. Arnold, of Rugby. He was returned to Parliament for Bradford in 1861; hecame successively under-secretary for the colonies, vice-president of the Education Committee and a member of the cabinet. He had charge of the Education Bill of 1870 and the Ballot Bill of 1872. In 1875, the Liherais having just returned to power, Mr. Forster accepted the post of chlef secretary for Ireland at a time when that country was distracted oy agrarian and political tumults. "The suppression of the Land League and the arrest of Mr. Parnell and the more violent agitators was carried out by Mr. Forster, hat on the government resolving to change its policy and release the Darnellites Kr. Forster resigned (1882). ifter this he was ofter fourd voting

In oppoeltion to the guverament, paro tleularly in matters of foreisn and imperial policy. He died in 1883.
Foryyth (for-alth') WilliAy, an born in 1812. After a brilliant carreer at Trialty Colloze, Cambridge, he studied law, was calied to the bar in 1830, and became a quern'a counmei in 1850. He repremented the borough of Marylebone In the House of Commonim in 1874-80. Hesides legal works he wrote Hortenalus, or the Duty and Oflec of an Advocute; History of Trial by Jury: Napoleon at At. Helona and Eir Hindsom Lowe; Life of Uicero; Novele and Noveliats of the Lighteenth Century; Uow nibal in Italy, a drama, etc. $;$ abr: contributed to periodicala, Died in 1890. Fort (fört), a small fortified place surrounded with a ditch, rampart. and parapet, for the purpose of de fending a pass, river, road, harbor, etc. Forts are made of different forms and extent according to the exigencies of the case. See Fortificatiom.
Fort Colling, a city, capltal of Larimer County, Colorado on Cache la Poudre Creek, 74 miles N. of Ienver. It is thic seat of the Colorado Agricultnrai Coliege and of a government experiment station. Nearby are large cattie and sheep ranges, and it has a jarge beet-sugar factory. Pop. 10,000.
Fort de France, or Fort hoyal, a of the French West. Indies, island of Martinique, of which it is the capital. It was almust compietely dentroyed bv a cyclone in 1891 . Pop. ahout 14,000 .
Fort Dodge, a city; capital of Weh. tor ster County, Iowa, on the Des Moines Rjver, 85 milles $\mathrm{N} . \mathrm{w}$ of Des Moines. Nearby are coal mines and beds of gypsum and clay. The manufactures include sypuum products, ciay wares, shoes, clothing. It is an important grain market. l'op. 15,543 .
Fort Edward, a village and townCo., N. Y. on the Huden It mas a of much importance in the ? rench and Indian wars and was repeater occupied by opposing forces in the sevolution. General Dieskau (q. v.), in command of the French army, attacked the fort in 1765, but was defeated and captured. It wat from here that Burgoyne (q. v.) began his march to Albany, August 14, 1777. See Saratoga.

Forth (forth) a river of Central ScotFosth Bridge, the great railway Fosth Bridge, viadnct which crosses the Firth of Forth at Queens.
ferry, here about 4000 feet wide at low water. The small inland of Inchgarvie is used as the central aupport of the two chief spans, which are 1710 feet wide each. These spans are each made up of two cantilevers extending towards each other from the opposite sides and connected by a sirder, the cantilevers being 343 feet deep where they rest on the supporting piers and 40 feet at the free ends, and projecting 680 feet, while the central connecting girder is 350 feet in length. There are other two spans of 680 feet each, fifteen of 168 feet each, and seven small arches totaling about 400 feet. Including piers there is about a mile of main ppans and over half a
tected from the enemy' fire by a breastwork or parapet (b), about 8 feet high, sometimes pierced at certain intervals with embrasures through which the guns are fired. Beyond the rampart is the ditch, usually about 12 feet in depth, but varying greatly in width. The ditch is sometimes filled with water; in other cases it is dry. The scarp or escarp (c) is the inner wall of the ditch, and it is faced with mason-wort or hurdles, sods, etc. (the revetement) to retain the earth of the rampart in its place. The counterscarp (d) is the opposite or outer wall of the ditch. From the top of the counterscarp outwards is a space about 30 feet wide (the covered-way, e) pro-

Seotion through Line of Fortificatione.
mile of viaduct approach. The bridge has a clear headway of 157 feet above high water and carries two lines of rails. It was built 1882-89, the contract price being $\$ 8,000,000$.
Fortification (for-ti-fi-ka'shun), the ing positions in science of strengthenmay be defended by a body of men much inferior in number, to those by whom they are attacked; and more particularly, the science of strengthening positions so that they may be held against the assault of troops supported by artillery. Fortifications are usually divided into permanent and temporary. Permanent fortifications are works required to remain effective for any length of time, for the purpose of defending important positions and cities, dockyards, arsenals, etc. Temporary fortifications are such as are designed merely to throw temporary obstacles in the way of the enemy, as fieldworks, etc. The former are constructed on the principle that each part must by its fire support and be supported by some other part ; tiat the works must protect the defenders from the enemy's fire as well as possible, and th. t the fire of the fortress must completely sweep all parts of the ground in front of the fortified lines. The more important details of a regular fortificetion may be briefly described as under: Around the place to be defended is raised a mound or bank of earth called a rampart, on the upper surface of which, the terro-pleine (a), the troops and cannon are placed. The terre-pleine is pro-
tected by a parapet, the long superior outward slope of which towards the open ground forms the glacis. The use of the covered-way is to allow the troops to be drawn up on it unseen by the besiegers for the purpose of making a sortie, it also enables the defenders to keep up a closer fire on the attacking forces. The slope of the glacis is so constructed as to bring the assailants in the direct line of fire from the artillery on the ramparts. In the sectional cut $A$ is towards the interior of the fort, B towards the open country. At certain intervals there are often bastions or projecting works at salient angles, commanding by their fire the curtain or straight portion of the fortified line between them. The use of the bastion has given name to what is called the bastionary system of fortification, which has in modern times largely given way to what is known as the polygonal or German system, which is considered to have various advantages in relation to the powerful artillery of the present day. The polygonal system has also been called the caponier system, from the use of powerful casemated caponiers constructed across the ditches and serving instead of bastions for their defense. The general plan of the worls is polygonal, Fith the ramparts placed on the sides of the polygon. The connecting line of fortifications, surrounding a place is called the fortified enceinte, and the works in a regular fortrest form a very complicater whole, including works to which such names as ravelino, demi.
lunes, etc., are given. The fortified enceinte immediately surroundir- a place is not now considered a su' cient defense, on account mainly of the loas range of modern cannon. Hence it is usual to surround a fortress with a line of detached forts at some distance from the enceinte, or there may be more than one such line of advanced work. Fortifications intended to ward off attacks by sea have their sea-faces now, commonly protected by plates of iron or steel. Scientific fortification may be said to commence with the great French engineer Vauban, who served under Louis XIV. He developed the bastioned system, which, as improved by Cormontaigne and others, is still the prevailing type of French fortification.

Field Fortifications vary much according to the time allowed for construction and during which they may prove useful. Amongst works of this nature are the redan, which consists of two parapets, with a ditch in front, forming an angle facing the enemy; the lunette, which is a redan with short flanks; the redoubt, a closed work with a ditch and parapet all round. As none of those works has a fianking fire in itself, they have to be disposed so that they flank each other within rifle range. To do this effectually, and to strengthen the whole line, the plan generally adopted is to form an intrenched camp hy a line of square redoubts, flanking each other, and also a line of simple redans in front of the intervals of the redoubts. When the time is not sufficient to throw up such works, simple torms of intrenchments, such as shelter trenches, are used to shelter troops or oppose the enemy's advance. A very shallow trench, with the earth thrown to the front, so as to afford shelter to one man lying in it, may be made in somewhat less than half an hour; more elaborate forms in about one hour. So that by placing a man at every 4 feet, active troops can make good shelter for themselves in an hour. To impede the enemy's advance an abattis of felled trees may be used, also wire entanglements, chevaux-de-frise, etc. Fort Madison, a city, capital of the Mississippi River, 24 miles above Keokuk. It has a state penitentiary, iron, lumber, and paper mills, etc. Pop. 8900.

## Fortress Monroe,

 defending, with Fort $\mathbf{W}$ © t , Hirginia, Hampton Roads, Norfolk, and the Gosport navy yard. It contains barracks, a school of ertillery, and arsenal. It is an irregularhexagon, surrounded by a tidewater ditch cight feet deep, and covers eishty acres. Fort Scott, a city, county seat of Bourbon county, Kansas, 99 miles s. of Kansas City. It has an active business in flour, pottery and iron. Here is located the Kansas Normal College. Pop. 11,793.
Fort Smith, county seat of Sebastian county, Arkansas, at the confluence of the Arkansas and Potean rivers, served by five railroads. It is in the heart of rish coal and gas fields, and has many industries, including wagon and furniture factories, wood-working establishments, brick factories, ironworks, etc. Pop. 30,000.

## Fort Stanwix,

a fort on the Mohawk River, on the site of Rome, N. Y erected by Brigadier John Stanwix in 1758. It was besieged by the British in 1777. See Johnson, Sir William; St. Leger.
Fort Sumter, a fort on the enton Harbor, South Carolina. At the opening of the War of Secession it was taken by the Confederates from the small body of Federal troops by whom it was garrisoned ( 14 April, 1861). It repulsed an attack of nine iron-clads on 7 April, 1863, and was heavily bombarded in August of the same year, but maintained its defense till the final evacuation of Charleston, Feh. 18, 1865. It has been rebuilt on a modified. plan.
Fortuna (for-to'na), the Roman goddess of success, corresponding to the Greek T'yche. She is generally delineated with a rudder, emblem of her guiding power; or, later, with a bandage over her eyes and a scepter in her hand, and sitting or standing on a wheel or globe.
Fortunate Islands, an old name of Fortunatus (for-tin-nă'tus), the egend. He obtained of an old popular legend. He obtained a wishing-cap anu inexhaustible purse of gold, which finally ruined him and his sons. The first printe ? edition of the story appeared in Germany in 1509, but in various forms it has appeared in most of the languages of Europe.
Fortnnatus, a Iatin poet, born in Northern Italy about 503 A.d.; Bishop of Poitiers in 597 ; died about 600. His works were numerous, but he is remembered only by his hymns, one of which (Vexilla regis prodeunt) was adopted by the church, and is well known in the modern verwion of J. M. Neale ('The royal 'sannern forward $80^{\prime}{ }^{\circ}$ etc.).

## Fortuny

(for-tb'né), MAriano, a Spanish painter, born near Barcelona in 1830 . He settled at Rome where he became the center of a school of artists in revolt against overstudy of the 'masters.' In 1868 he went to I'aris. Among his best known works are Spanish Marriage, Fantasia at Morocco, The Academicians at Arcadia, The scashore at Portici. Died 1874.
Fiort Wayne, a fiourishing city of Allen Co., situated at the junction of of St. Mary's and St. Joseph's Kivers, which here unite to form the Maumee. It has extensive railroad shops, car-wheel works, hosiery mills, and electrical machinery works, with many other industries. Here are Concordia College and other educational institutions. Fort Wayne derives its narim from a fort trected here in 1794 by deneral Anthony Wayne. Pop. 78,547.
Fort William, a port and summer Canada, on Thunder Bay, at head of navigation on Lake Superior.

## Fort William Henry,

a fort in town of Caldwell, N. Y. at the modern Lake George, erected by Sir William Johnson (q. จ.) in 1755. In August, 1757, it was attacked by Montcalm (q. v.). leading a force of 8000 , including $2000^{\circ}$ Indians ; and Colonel Munro, commanding the English forces, was compelled to surrender.
Fort Worth, a city, county seat of 160 miles N. of Austin, with 17 railroad outlets. Here are numerons industries, including grain elevators, and flour mills, packing houses. furniture-making, woodworking, etc. It is the seat of Polytechnic College, Texas Christian University, and other institutions. 1'op. 73.312.
Forum (fö'rum), among the Romans, any open place where the markets and courts of justice were held. There were a number of such places in Rome, by far the most celebrated being the great Roman forum (Forum Romanum) between Monnt Palatine and the Capitoline Hill. This place, once adorned with the most beautiful statues and buildings, had become almost a waste known as the Campo Vaccino, or cattlefield, but of late years the government has made clearances and excavations and taken charge of the valuable relics which are still left.
Foscari (foskàreé), Francesco, 1372, plected Doge of Venice, born about 1372, elected in 1423. The whole period in which he governor the republic was one of war and tumult, campaigns being
undertaken against the Turks, the Visconte of Milan, and others, in which Venice was mostly victorious, extending her dominion to the Adda. But in his private life the doge was less fortunate. Three of his sons died in the service of the republic, and the fourth, Jacopo being accused of receiving bribes from foreign princes, was condemned to torture and exiled to Crete, where he died. When eighty-five years of age Foscari was deposed from the dogeship at the instigation of a rival, Jacopo Loredano, and died a few days after, November 1: 1457. On the story of Jacopo Foscari is founded Byron's tragedy of The Two Foscari.
Foscolo (fos'ko-lō), Uao, an Italiax about 1776 poet and prose writer born sity of Padua. Before the age of twenty he produced his tragedy 11 Tieste ("Thyestes'), which was received with applanse. His next work of importance was a romance somewhat in the style of Goethe's Werther, called Ultime Lettere di Jacopo Ortis (' Last Letters of Jacopo Ortis'). He then procured a commission in the army (First Italian Legion). After some military experiences under Massena at Genoa and elsewhere, in 1805, he retired and wrote $I$ Sepoleri, one of the finest of his poems. He was subsequently appointed to a professorship at I'avia, of which Nanoleon, displeased at his freedom of speech, soon deprived him. In 1812 he prodiced his tragedy of Ajax, and soon after that of Riccarda. On the fall of Napoleon, Foscolo, who was obnoxious to the Austrians, retired to Switzerland; but finally, in 1815, went to London, where be met with a most favorable reception, and where he died in 1827. Besides the works already mentioned, his eritical writings, Essays on Petrarch and Discourses on the texts of Dante and of Machiavelli's $1 /$ Principe, are well known.
FOSS, or Fosse (French fosse, Latin fossa, a ditch), in fortification, a trench or ditch, often full of water. below the rampart of a fortified place, or a post that is to be defended. Ser Fortification.
Fossano (fos sä'nō), a town in North Italy, on the Stura, 13 miles northeast of Cuneo. It is surrounded by old walls and defended by a castle. It is a bishop's see and has a cathedral. Pop. of commune, $18,175$.
Fosse Way, or Fosse Road, one of from Cornwall by Beth. Coventry, and Ieficester, to Lincoln. It is still traceable nearly all the way.

Fossil
(fosil), a term for the petrified forms of plants and aniraals which occur in the atrata that compose the surface of our globe. Most of these fossil species, many of the genera, and some of the families are extinct. When these remains are only partially fossilized, and occur in superficial or recent deposits, the term subfossil is employed. See Geology and Palaontology.

## Fossil Footprints, <br> the footmarks

 or imprints left at very remote periods by the feet of various animals on the wet clay or sand of sea-beaches or similar localities, and which are now found at various levels in the solid strata of the earth. The footprints in the Silurian and other very antique rocks are mostly those produced by the claws of crustaceans. In the Triassic rocks of Connecticut, numerous footprints have been found, over forty species being represented.Fossil Forests. The coal measures dications of ancient forests, the form of the roots of the trees from which the coal was formed. Several such have been uncovered, as in the coalfieliss of Nova Scotia, where Lyell found the remains of trees 6 to 8 feet high, and one tree about 25 feet high and 4 feet in diameter. At St. Etienne, near Lyons, France, the remains of a fossil forest have been found in an upright position, and in a colliery near Wolverhampton, England, in a space about one-fourth of an acre. have been found the fossilized stumps of 73 trees, with roots attached, and with the broken-off trunks lying prostrate, one of them 30 feet long and all of them turned into coal. Much more recent are the remains of forests lying under beds of peat, 'submerged forests,' as they are called, found in various parts of Europe and America. Especially interesting are the collections of fossilized tree trunks, or ' petrified foreats.' found in the surface in various parts of the earth, the most striking examples being in the western part of the United States. A remarkable group of such trees, some of them 12 seot in diameter, exists in Nnna County, Caii. fornia, and another in Yellowstone Park. in which the trees are still erect, though converted into stone. An extraordinary forest of such trees has been found in Arizona, lying over a wide mpace of ground, come of them 6 feet in diameter and perfectly preserved. These trees are rather mineralized than fossilized. They are found in volcanic regions and are supposed to be due to the action of hot water, which carried of the organic mate-
rial and deposited dissolved silica in its place. In some instances the wood has been converted into solid jasper or has been changed into opal or agate, or filled with chalcedony or crystallized quarta, with beautifully variegated colors.
Fossombrone ( fos -som-brö'n ${ }^{\text {a }}$ ), a 38 miles town of Central Italy. 38 miles w. N. w. of Ancona, on the Metauro, with a fine cathedral. Pop. (commune) $10,847$.
Foster (fos'tetr), Birket, an English artist, born at North Shields in 1812. He learned wood-engraving draughtsman. He soon achieved a high reputation as a book illustrator, and illustrated the works of Goldsmith, Scott, Longfellow, Beattie, etc. His landscape drawings on wood are of great excellence. He afterwards devoted himself to watercolor painting, in which his reproductions of rustic life were very successful. Died in 1890.
Foster, Joins, an English masist, was born in Yorkshire in 1770 . After short trial of the weaving trade Lo studied for the Baptist ministry, obtaine: : charge at Newcastle-on-Tyne, but his pl aching being unsuccessful, he took to literature, contributing extensively to the Eclectic Reviev. In 1805 he published four essays, very celebrated in their time, which established his fame as an author. In 1819 the celebrated Essay on the Evils of Popular Ignorance appeared. He died in 1843.
Foster, Joun Watson, diplomatist, born in Pike Co., Indiana, in 1836. He served with distinction in the Civil War, and was afterwards editor of the Evansville (Ind.) Daily Journal. His diplomatic carear began in 1873, when he was sent as Minister to Mexico. Thence he went $\varsigma \sim$ Russia in 1880, and to Spain in 1883, and in 1891 was engaged in negotiating reciprocity treaties with Spain, Germany and Brazil. He was Secretary of State under President Harrison in 1892-03. He was subsequently engaged in various diplomatic services, the latest being as a member of the Alaska Boundary Tribunal of 1003, and as the representative of China to the Second Hague Conteresin. 1907.
Foster, Stephen Coluns. songPennsylvania, in 1820; aied in 1884, He was very prolific in musica: onmposition, Friting the woris and composing the mut sic of over 125 popular songs and meledies. Amons them 3 re the well-knows airs, My Old Kentucky Home: Old Folle at Home: Willie. We Have Missed You: Odd Black Joe; Onole Ned, etc.

## Fostoria

(fowtori-a), a city of Ohio, lies in Seneca, Hancock, and Wood Counties, 12 miles N. W. of Thinin. It is a considerable railroad and manufacturing center, having five railroads. Natural gas is abundant, and is used for manufacturing and domestic purposes, flour, slass, barrels, etc., being produced. Here is the Ohio Normal University. Pop. 8597.

## Fotheringhay <br> (fo-ther-iug'hay), a village of England

 27 miles northeast of Northampton. In its castle Mary Queen of Scots was bebeaded in 1587.Foucault (forbo), Jfan Bernabd LEON, a French physicist, born 1819 ; died 1868 . His name is especially connected with a celebrated pendulum experiment employed as a method of ahowing the rotation of the earth on its axis, by observing a vibrating pendulum. He also rendered services to optics, electric lighting, photography, etc.
Tonché (fö-shă), Josepri, Duke of Otranto, a minister of Na poleon I, was born in 1763 . Hie was at first educated for the clergy, but having adopted the principles of the revolution he became an advocate and was elected a member of the National Convention in 1792. Here he voted for the death of the kins, and was implicated, at least nominally, in the atrocities of the period. On the fall of Robespierre (1794), Fouche, who had for some time tended towards the moderate party, managed to make friends with Barras, and was rewarded for his betrayal by the ambassadorship to Milan. He was afterwards appointed ambassador to Holland, but ultimately recalled to Paris and made minister of police. Here his peculiar talents had fnll ecope; and although he was twice dismissed by Napoleon, who did not altogether trust him, he always recovered his post, was loaded with riches, ind made Duke of Otranto. He was minister of police at Napoleon's final abdication and played an important part in the arrangements. He remained in office under Louis XVIII for a time, but the dislike of the royalist pnrty at length forced him to resign (1815). He went as ambassador to Dresden, but afterwards retired to Prague, and latterly to Trieste, where he died in 1820 .
Fougasse (fo-gas'), military, a little or mine in the form of a well, 8 or 10 feet wide and 10 or 12 deep, dug under some work, fortification, or pont, charged with powder, or powder and shella, and covered with stones or earth, for deatroying the works by explotion.

## Fougères

 (f0-rhar), a town of N. E. France, dep. Illeet-Vilaine, on a height, 28 milen N. .. of Kennes. It was once fortified, so as to be considered one of the keys of Brittany, but is now open, well built, and has manufacturers of flannels, sailcloth, sacking, etc. Pop. (1806) 21.847.Foula (fou'la), an island belonging
to the Shetland group, but lying some 20 miles to the west. It rises from the sea in lofty cliffs, which swarm vith sea-fowl.

## Foulahs. See Fellatahs.

## Foundatior ( foun-däshun), that part of a building

 which is underground, or the portion of the ground on which walls, piers, etc., rest. Foundstions are usually made by providing a hard, impermeable base for the masonry by methods which vary according to the position and soil. Where there is rock beneath, $2 \ldots$ ing more is needed than a dressing icr the surface. Submerged foundations, such as those needed for breakwaters, bridges, etc., constitute special subjects for engineering science.
## Foundation,

a donation or legacy, in money or lands, for the maintenance or support of some useful charitable institution, as an hospital, a collece, a school, etc.
Foundation-stone, a stone of a ing laid in public with public buildIt laid in public with some ceremony. It has no necessary connection with the foundation of the buildiug. Also called corner-stone.

## Founding. See Zasting.

## Foundling Hospitals (found':

 stitutions for receiving children abandoned by their parents and found by strangers. Among such institutions are that of Paris, instituted in 1670, and that of London in 1739. The latter was originally a hospital for all exposed childrın; but the enormous increase in abandonments caused the hospital to be changed in 1760 to one for poor, illegitimate children whose mothers are known. The objection that foundling hospitals contribute to the corruption of morals is the strongest which can be urged against such institutions, and is not easily answered.Foundry (foun'dri), a place where metal is melted and cast. into the forms required in construction or decoration. Iron, brass, bronze, and type founding are special forms of the ert. See Casting.

Fount, or FONT, among printers, etc., a quantity of types, in proportions sorted lor use, that includes ordinary letters, large and small capitals, single letters, double letters, points, commas, lines, numerals, etc.; as a fount of pica, bourgeois, etc. $A$ fount of 100,000 characters, which is a common frunt, wonld contain 5000 types of $a_{2}$ 3000 of $0,11,000$ of $e, 6000$ of $i, 3000$ of $m$, and about 30 or 40 of $k, x, y$, and 2. But this is to be understood only of the ordinary types, capitals having other proportions, which we need not bere enumerate.

## Fountain

(foun'tan), a contrivance
by which water is made to spout from an artificial channel, and often to rise up to a great height in a jet or jets. There are various kinds of artificial fountains, but in those of an ornamental character the water is usually made to rise in a jet by the pressure or weight of a head of water situated some distance above the orifice of issue, in which case the water will rise nearly to the same height as the head. In some cities the public fountains form a feature on the streets. Rome, in particular, is noted for its fountains. At Paris, also, the fountains of the Place de la Concorde, the Tuileries, and at Versailles, are splendid structures.
Fouqué (fö-kā) $\underset{\text { Ricif }}{\text { Fariebrich Baron }}$ HeinMotte, a German poet and novelist, born in 1777, grandson of the Fouque the subject of the next article. He served as lieutenant of the Prussian guards in the campaign of 1792, thereafter lived in rural retirement, but again returned to the army, and was present at the most important battles in the campaign of 1813. He died at Berlin in 1843. As a writer his work is marked by fantastic unreality and extravagance of conception. Several of his tales, Der Jauberring ('Magic Ring'), Undine, and Aslauga's Ritter ('Áslauga's Knight'), have been very popular. A translation of the latter was made by Carlyle.
Fouque, Heinrich auaust, Baron Prussian general in the Seven Years' war, born in 1698; died in 1774. He was descended from an old Norman family which had fled on account of religious persecutions to The Hagre. Fouque's Mémoiree, containing his correspondence with Frederick the Great, are highly interesting.
Fouquier-Tinville (fix-ki-ă-tanQuentin, notorious for his ferocious cruelts in the first Freach revolution,
was born in 1747. He was an attorney by profession and having attracted the attention of Robespierre, was appointed public accuser before the revolutionary tribunal. His thirst for blood seems to have been increased by gratification, nntil it became a real insanity. He proposed the execution of Robespierre and all the members of the revolutionary tribunal in 1794, but was himself arrested, and died under the guillotine, in a cowardly manner, in 1795 .

## Fourchambault (för-shan-b8), 2

 town of France, dep. Nievre, on the Loire. It has extensive iron-smelting furnaces and forges. Pop. (1906) 4591.Fourcroy (forr-krwa), ANTOINE Francois de, a French chemist, born in 1755. Having adopted the profession of medicine, he applied himself closely to the sciences connected with it, and especially to chemistry. In 1784 he was made professor of chemistry at the Jardin du Roi; and the next year he was chosen a member of the Academy of Sciences. At this period he became associated with Lavoisier, Guyton-Morveau, a:d Berthollet in researches which led to vast improvements and discoveries in chemistry. When the revolution took place he was chosen a deputy from Paris to the rational convention, but did not take his seat in that assembly till after the fall of Robespierre. In September, 1794, he became a member of the committee of public safety. In December, 1799, Bonaparte gave him a place in the council of state, in the section of the interior, in which place he drew up a plan for a system of public instruction, which, with some alteration, was adopted. He died in 1809. His works are numerous. We may mention his Systime des Connaissances chimiques and Philosophie chimique.

## Fourier

(fö-ri-ă), Frangots Mazne Charles, a French mocialist and founder of the system named after him, was born in 1772 at Besancon. He studied in the college of his native town, and subsequently at Rouen and Lyons occupied subordinate situations in mercantile houses. In the last-mentioned town he entered into business on his own account, but lost all his money from the tumults of war and was forced to enlist in the revolutionary army. Discharged in 1795 on account of ill health, he returned to commerce, filling quite subcordinate situations, till he alied in 1837. He wrote his books in his leisure hours and published them out of his scanty Earvinga. His firat book, Théorie des Ouetre Moucements et des Destinées Gofmeralos,

Was pnblished in 1808; the Traite do CAssociation Domcatique Agricole, his most important work, $\ln 18^{202}$; hut it was not tili the last years of his life that they attracted any nutice. In his social system Fourier holds that the operations of industry should he carrled on by Phelansteries, or assnciations of 1800 members comhining their lahor on a distrlet of about a square league in extent, under the control of governors elected hy each community: In the distribution a certain minimum is first assigned for the subsistence of every member of the society, whether capable or not of labor. The remalnder of the produce is shared in certain proportions to be previously determined nmong the three elements, labor, capital, and talent. The capital of the community may he owned in unequal shares by different memhers, who would In that case receive, as In any other jolnt-stock concern, proportional dividends. The claim of each person on the share of the produce apportioned to talent is estlmated by the grade which the indirldual ocenpies in the several groups of laborers to which he or she belongs, these grades belng in every case conferred by the voice of his or her companions. The remuneration received would not of necessity be expended in common. Separate rooms or sets of rooms would be set aside for those who applied for them, no other system of living together being contemplated than such as would effect a saving of lahor in building and the processes of domestic life, and reducing the enormous portion of the produce of indnstry at present carried off by middlemen and distrihuting traders to the narrowest possihle margin.
Foumier, Jean Baptiste Joseph, a born nt Auxerre 1768 athematician, the military school there, and after holding an appolntment for a short time $\ln$ the Polytechnic School followed Bonaparte to Egypt. Here he performed important political service, and was likewise secretary of the Institute of Egrpt. After his return he was, in 1802, appointed prefect of the department of Isere. On Napoleon's return from Elha Fourier issued a royalist proclamation, but was nevertheless appointed prefect of the Rhone. though soon after deprived of the office. He now established his residence in Paris, lived entirely devoted to study, and was in 1815 admitted a member of the Academy of Sciences, and at lifer period appointed secretary for life. He died In 1830 . Amongst hls principal works are the Théorie Analytique do ls Cheleur (1822), and Analyse dee

Equations Detorminces, published in 1831 after his death.

## Fourierism. <br> See Fowrior (Fran00is).

Fourier Series, infinite series of speafter Fourier, who first showed their importance. They proceed according to sines and cosines of multiples of a variable, the various multiples being in the ratio of the natural numbers; and are used for the representation of a function of the variable for values of the variable which lie between prescribed finite limits.

In the discussion of all complex periodic phenomena, such as tidal fiow and ebb, earthquake frequency, the penetration of solar heat lnto the crust of the earth, etc., the true method of attack is along the lines of the Fourier analysls.
Fourth (forth), in music, a distance comprising three diatonic intervals, or two tones and a half. Three full tones compose a tritone or fourth redundant. The diminished fourth consists of a whole tone and two semi-tones.
 Island of New Zealand and Stewart's Island.
Fowey (fo'i), a seaport of England of the river Fowey, formerly one of the chief scaports of England. It carries on an extensive pilchard fishery. Pop. 2258. Fowl (foul), a word originally synonymous with bird, now used in a strlcter sense to designate the birds of the genus Gallua, of whlch the common domestic fowl (cock and hen) is a familiar example. The general form and characters of the bill, feet, etc., agree with those of the pheasants, but the crown of the head is generally naked and furnlshed with nfleshy comb, the base of the lower mandibles also bearing fleshy lobes or wattles-characters which are most conspicuous in the males. The legs of the male are furnished with spurs which are much used in conflict, the cocks being very pugnacious and unable to suffer the presence, of a rival. In the center of the cock's tail are two long feathers, which fall backwards in a graceful arch and add great beauty to the whole aspect of the fowl. Except in the pure white breeds the plumage of the cock is always more splendid than that of the hen. All the species are patives of the East Indies and the Malayan Archipelago. Some have thought that the bankiva jungle fowl, a native of Java, is the original stock of of the domesticated poultry. Fowls were Introduced into China about 1400 B. C., and were common in ancient Greece, being mentioned by Aristophanes and others.
n 1831

Fowling, the taling of wild birds in or for their feathern. It includes a variety of methods, such as the catching of small birds by nets; the taking of ducks and other water-lowl in decoys; the lowering of persons over the brink of precipices to seize the birds that lodge in their hollows and shelves, etc.
Fowling Piece, a light kind of birds of various kinds.
Fox (foks), an animal of the senus Vulpes, closely allied to the dog. with a straight, bushy tail, elongated pupils, and erect ears. Foxes are natives of almost every quarter of the globe, and are everywhere among the most sagacious and wily of all beasts of prey. very voracious, devouring birds and small qnadrupeds, and committing ravages not only on animals, but on fruits, honey, egss, etc. The common fox of Europe (Vulpes vulparis) and Asia is well known. Among other species there are the Arctic fox ( $V$. lagopus), celebrated for its glossy white winter fur; the black foo ( $\bar{V}$. argentatus), similar to the common fox, but distinguishable by its rich, shining black fur, a native of the northern parts of Asia and America; the gray foos (Urocyon Virginianus) has a thick tail containing at its tip a tuft of stif hairs, common through the northern parts of America; the red fow of America ( $V$. fulvus), generally of a paleyellow hue; the crossed fow (V. Pennsylvanicus or decussitus), fur a sort of gray, mnzzle and lower parts of body black, a dark crose on the shoulders; the svoift fow ( $V$. velow), an inhabitant of the plains which lie at the base of the Rocky Mountains. The fox resides in burrows, which it scoops out of the earth by its atrong digging paws, taking advantage of every peculiarity of the ground, and countriving, whenever it is possible, to wind its subterranean way among the roots of large trees or between heavy stones. In these 'earths,' as the burrows are known in sportsmen's phraseology, the female fox produces and nurtures her young, which are odd little snub-nosed creatures, resembling almost any animal rather than a fox. The color of the common fox is a reddish fawn, intermixel with black and white bairs. The hair is long and thick, being doubly thick during the colder months of the year, so that the fur of a fox which is zilled in the winter is more valnable than if it had been etain in the hot months. The tail, which is technically termed the 'brush,' is remarkably bushy, aud partakes of the tinta which predominate over the body, except
at the tip, which is white. The helght of this animal is nbout a foot, and its lensth about two feet and a half.
Fox, Cuarles Jamis, an eminent Enslish statesman, born in 1740, the second son of Henry, first Lord Holland. He was sent to Eton, whence he remored to Hertford College, Oxford. His father procnred him a seat for the borough of Midhurst in 1768 , before he was of legal age, and in 1770 he was appointed one of the lords of the admiralty, which situation he resigned in 1772, and was appointed a commissioner of the treasury. After being a supporter of the administration for six years, a quarrel with Lord North threw Fox into the ranks of the Whig opposition, where, along with Burke and others, he steadily assailed the government, especially on the score of its American policy. In 1780 he was clected member for Westminster, and on the defeat of the administration of Lord North, and the accession of that of the Marquis of Rockingham, he obtained the office of secretary of state for foreign affairs (1782). But the death of the Marquis of Rockingham suddenly divided the party; and when the Earl of Shelburae became first lord of the treasury Fox retired. Soon after a union took place between his friends and those of Lord North, known as the coalition ministry, which was overthrown by Fox's famous Eust India Bill (1783). At the ensuing election nearly seventy of his friends lost their seats; bnt though Pitt had a deciled majority, Fox still headed a very strong opposition, and for some years political questions were contested on both sides of the house with a great display of talent. He took an active part against Warren Hastings, supported the efforts of Wilberforce against the slave trade, and moved the repeal of the Test and Corporation Acts. He welcomed the breaking out of the French revolution, and his views on this subject led to a memorable break between him and his old friend Burke. Fcz firmly opposed the principle on which the war against Fravce was begun, and. strenuously argued for peace on every occasion; but eventually, on becoming secretary for foreign afifairs in 1806, acqniesced -4 the propriety of the war. His health, which had been 'rmpaired by his loose manner of living, now began rapidly to decline, and he died the same year a few months after the death of Pitt, his great rifal. As a powerfol andud pnrely argumentative orator he was of the very first class; although as to eloqnence and brilliancy he perhaps fielded to Pitt, Barke, and Sheridan ; nor were his voice and manner prepomeming, al-
thourh highly forcible. He was of an amiable nature, and a sincere friend to all broad and liberal principles of goverament. His History of the Early Part of the Reign of James II was published posthumously.
Foz, Gromar, the founder of the SoNa, ciety of Friends, or Quakers, was born at Drayton, in leicestershire, in 1024 , his father being a weaver. He was educated religiousiy, and at the age of nineteen persuaded himself that he had recelved a divine command to forsake everything else and devote himseif wholiy to religion. IIe accordingly forsook his relations, equipped himseif in a leathern doublet, aud wandered from place to place, supporting himself an be could. During this itinerant life be fasted much, sometimes sitting the whole day in a retired spot reading the Bible. In 1648 he commenced to preach publicly at Manchester about which time he aiso adopted the peculiar language and manners of Quakerism. At Derby his followers were first denominated Ouakers, in consequence of their trembling mode of delivery and calls on the magistracy to tremble before the Lord. In 1055 ite was sent a prisoner to Cromwell, who, having ascertained the pacific tendency of his doctrines, had him set at liberty. He was, however, treated with great severity by the country magistrary and the sterner Puritans, who disliked the mysticism and want of firm doctrines in his preaching. In 1666 he set about forming the people who had followed his doctrines into a formal and united society. In 1609 he married the widow of Judge Feli, and soon after went to America, where he remained two yeara, which he employed in making proselytes. On his return he was imprisoned in Worcester jail for over a year. He died in 1601.
Fox,
John (Winmam), JR., an Amercan novelist (1863-1919), born in Kentucky, author of many mountain tales, including Little Shepherd of Kingdom Come, Christmas Eve on Loncsome, Hell for Sartain, Blue Grass and Rhododendron, The Trail of the Lonesome Pine, The Heart of the Hills, etc.
Foz, Margarmt, spiritualist, was jorn COE at Bath, Canada, in 1836; died in 1893. The cnlt of spiritualism began with her and her sisters, Leah and Catharine. While living in their father's honse, at Hydeville, New York, in 184748, a series of mysterious rappings took place which were claimed to be the work of spirits of the dead. From this modern spiritualism, which has now grown so spominent, arose. The sis $t$ ers gare
prances for many gears, and Margaret is
said to have been privately married to Dr. Kane, tie Arctic explorer, in $185 a$. Fox-bats, or Flinse Foxise, a name bats of the familiy Pteropids innit-eating bats of the ramily Pteropidso, including some of the largest of the bat tribe, one species, the Pteropus edillis or kaiong, attaining a lensth of from 4 to 8 feet from the tip of one wing to the tip of the other. They inhabit Austraiin, Java, Sumatra. Borneo, etc., as weii as the rontinents of Asia and Africa.
Foxe, Jonn, an English chnrch historian, born in 1517. He stidied at Oxford, and was eiected a fellow of Magdalen in 1543, from which he was expelied two years later on a charge of heresy. In the reign of Edward VI he was restored to his fellowship, but during Mary's reign again went abroad, to Basel. On the accession of Fiizabeth he returned to his native country, and was received in the most friendly manner by his former pupii, the Duke of Norfolk, who settied a pension on him. Secretary Cecii also obtained for him a prebend in the church of Salisbury; and he might have rcceived much higher prefern:int if he would have subscribed to the articles enforced by the ecclesiastical commissioners. He died in 1587. His principal work is the History of the Acts and Monuments of the Church, commonly calied Foxe's Brok of Martyrs, first printed in 1563, in one vol. folio.
Fox'glove, a genus of plants, Digider Scre tälis purpuréa, natural order sophilariacee. It grows on banks, pastures, etc., in hilly and rocky countries in Europe, Asia, and the Canary Islands. Its flowers are campanulate, and somewhat resembling the finger of a slove. It is one of the most stately and beautiful of the herbaceous plants, and one that has great reputation as a medicinal plant, being employed as a sedative, narcotic, and diuretic in diseases of the heart and in dropsy. Its niedicinal properties are due to the glucoside known as digitalin. A decoction or infusion of the leaves is what is generally used. The flowers are usuaily purpie, but sometimes shite. Several species are grown in gar cns, such as $D$. grandifiōra and D. Iutča, with yellow flowers, and D. ferruginëa with brown.
Foxhound, a hound for chasing hound in which are combined, in the highest degree of excellence, fleetness, strength, spirit, fine scent, perseverance, and subordination. The foxhound is smaller than the staghound, its average height being from 20 to 22 inches. It is supposed to be a mixed breed between the

#### Abstract

staghound or the bloodhound and the groyhound. It is commonly of a white color with patches of black and tan.

Fox Iunting, a favorite Epglish Hsed during the autumnal and winter monthe. A pack of foxhounds consists of from 20 to 60 couples of hounds according to the frequency of the hunting days. These doge are carefuliy bred and trained (see Foxhound), and are under the superintendence of one experienced gentleman calied the master, who has the general control of the whole 'field.' Under him is the huntsman, whose duty it is to look after the hounds in their kennels and direct tinem in the field. He is directly responsible for their condition and training. Next him are the whip-pers-in, whose main duty is that of assieting generally the huntsman hoth in the kennels and in the field. A less important function of the whipper-in is that of urging on lagging hounds. The night before the hunt, the gamekeeper, calculating on the habits of the fox to leave his burrow or 'earth' in search of fond at night, stops ali the 'earths' after the foxes have left them. The animals are thus forced to seek refuge in neizhboring thickets or other cover, generally near their 'earth,' and this fact determines tine arrangements of the day's hunting. The huntsmen assemble in the neighborhood of the stopped 'earth' and draw he neighhoring coverts by throwing off tne dogs to search for the fox. The presence of the fox is generally indicated by the whine of some old and experienced hound who has first scented him; but he may hang or keep within the covert for a long time. The person who first sces the fox leave the covert, break cover as it is called, gives the view-halloo after it has got some little distance, npon which the huntsman collects his hounds and sets off in chase followed by the entire field. The foxhounds follow a'rnost entirely by scent, the fox being itseli, erhaps far ahead and out of sight. Wherever, therefore, the scent fails the hounds are at fault, and there is a check till the scent is recovered. When the scent is good most of the honnds own it hy giving tongue, and they are then said to be in full cry. The rider who is first in at the death lashes the hounds ofr and secures the head, feet or pads, and tail or brush of the fox. The midland counties of England, Leicester, Warwick, Yorkshire, etc., are the most celebrated for for hunting. Althongh introduced into the United States, it has never been so ardentiy pursued here as it has been in England.

Fox Indians, Indians of Nolonging to the Alsonkian family, now few in numbers and scattered over Oklahome, Iowa and Kansas.

## FOx Biver, a river of Wisconsin,

 after passing which enters Groen Bas, It is passing through Lake Wingebaco. It is connected by canal with the Mímb. sippi.
## F0x-shark. See Thresher-ahark.

Foxtail-grass, the common name of the genus Alopeodrus, because of the close cylindrical panicle in which the spikelets of flowers are arranged, having momewhat the shape of a fox's tail.
Fox Terrier (teri-er), the typical While the origin of the fox terrier is of considerable antiquity, and though he has emerged from heterogeneous sources, it is generally conceded that he is the result of a judicious cross between the bull terrier and the black and tan, or between the bull terrier and the beagle. The starting-point of the modern fox terrier dates from about 1860. There are two varieties of this breed: the smooth-haired and the wire-haired. As the latter differs from the former only in the matter of coat, a brief summary of the points of the smooth-coated dog will suffice for both. The head is flat and moderately narrom. decreasing in width to the eves. The ears are $V$-shaped and small, dropping forward close to the head, not hanging like a for hound's. The jaws, upper and under, are strong and muscnlar, adapted for punishing. The eyes are dark, small, full of life, fire and inteliigence. Nose, black. The chest, deep, but not broad. Taii, usualiy docked, is set rather high and carried gaily. Legs are straight throughout having no appearance of ankle in front. Coat is straight, fiat. smooth, hard, dense and abundant. Color should be white with markings of black or iight tan, especially about the head. In character, the fox terrier is gay, lively. aiert, intelligent and loyal, and of unfailing pluck. In weight he should not scale over 20 pounds.
Foy (fwa) Maximilitan Serastian, a French general, born in 1775 . He served with distinction under Dumonriez, Morcau, and Massena. In 1815 he commanded a division at Waterloo, where he was wonnded for the fifteenth time. He died at Paris in 1825.
Foyle (foil), river of Ireland, fowing and Londonderry and Calling into Ioush Foyle near Londonderry. It is navigable
up to Londonderry for vencels of 800 tone
Foyle, Lougir, the eatuary of the river Foyle, on the north coast of Ireland, between the countiees of Derry and Donesal. It is 16 milies iong from northeast to couthweet, 1 mile wide at itu entrance, and 0 milies broad in the interior. 4 great part of the bed is exposed at low water.
Fra (fra), an Itaiiat prefix, derived from the word frate, brother, and used before the names of monks; for instanec, F're Giovanni, Brother John.

## Fra Bartolomeo. <br> See Baccio della <br> Porta.

Fraction (frat'shun), in arithmetic of numbera and algcbra, a combination parts of a unit or inter one or more lifths ( t ) is a fraction formed by dividins a unit into five eqnal parts, and taling one part four times. Fractions are divided into vulgar and decimal. Vaigar fractions are expressed by two nnmbers, one above another, with a iiue betwera them. The lower, the denominator, liudicates into how many equal parts the unit is divided; and the number above the line, called the numerator, indicates how many of such parts are taken. A proper fraction is one whose numerator ls less than its denominator. An improper fraction is one whose nu: merator is not less than its denominator. as A.1. A simple fraction expresses one or more of the eqnal parts into which the unit is divided, withont refercnce to any other fraction. A compound fraction expresses one or more of the eqnal parts into which anotber fraction or a mised nnmber is divided. Componnd tractions have tha word of interposed between the simple fractions of which they are composed: thus, $\frac{1}{}$ of of 14 is a compound fraction. A complex fraction is that which has a fraction either in its nnmerator or denominator, or in each of them : thus,
$\frac{54}{9}, \frac{8}{9!}$ and $\frac{54}{6!}$ are comprex fractions. In decimal fractions the denominator is 10 , or some number produced by the continued multiplication of 10 as a factor, such as 100,1000 , etc. ; hence, there is no necessity for writing the denominator, and the fraction is usually expressed by putting a point (.) hefore the numerator,
 pression 542.461 would thns he equivalent to 542 totion Ali calcuiations are much simplified in decimal fractions ; yet, simple as the system is, it was discovered frst in the fifteenth century by the German mathematician Regiomontanus.

## Fracture

 mineral breake, and by which its texture is dispiayed; thun, a fracture io even when' it mhows a level face or plane of some extent; uneren, when the surface is rough and broken, conchoidah, when one side is conver and the other concare, as in a moiluscous sheli; fibrows, when the separated edges have the appearance of torn filamenta; hackly, when there are many fine sharp points or inequalitien.Fracture, in surgery, is the breaking of a bone. It is simpie when the bonc only is divided; compound when there is aiso a wound of the soft parts ieading down to the fracture. A fracture is termed tranoverse, lonoitudinal, or oblique according to its direction in regard to the axis of the bone. It is cailed complicated if accompanied with dislocation, severe contnsions, wounded biood-vesseis, or any disease which prevents the union of the bones and causes tinem to be very easily broken. A comminuted fracture is one in which the bone is broken into several small pieces at the point of ruptnre. An incomplete fracture is one in which oniy a portion of the fibers is broken. A stellate fracture is a series of fractures radiating from a center. When a fracture takes piace there is a ponring out of fluid-lymph-and cells from the blood contained in the vesseis of the lining memhrane of the hone as well as from the vessels of the soft parts which have aiso suffered injury. This materiai snrrounds the broken ends of the bone, becomes firm and consolidated, and in abont three weepk is hard enough to keep the broken ends in position. A formation of bone then takes place round the seat of fracture This is called 'provisional calius,' because, when the process of repair is compieted and true bone has formed to unite the break, it is reabsorhed and gradually disappears. Meanwhile a process of repair goes on between the broken ends, uniting them by the formation of true bone or definitive callng. The more quickly and accnrately after the hreak the broken ends are bronght together, the more rapid wili be the reunion. The trentment of a simple fractured bone is to hring the portions into their natural position and to keep them permanently thns, by spiints of some kind, pasteboard spints. for instance, dipped in warm water, with wooden ones exterior to them ; or a mass of plaster of Paris may be used for the same purpose. Fra Diavolo (fra de-ávo-lo), a celebrated Neapoitan brigand, whose real name was Michelo

Pezza. He was born in Calabria in 1760. lie quitted the trade of stocking weaving for the army, and served for a time in the Papal Legion. He afterwards became a monk, but was expelled on acconnt of miscondnct. He then joined a troop of brigands, of which he became in a short time the leader. The government net a price npon his head; but later, havins need of Fra Diavolo's servicen against the French, they pardoned him and gave him a colonel'm commission. At the head of his band he harassed the French, took refuge in Calabria after the conqnent of Naples by Bonaparte, and incited the people against the Freach. He fell at last into their hands in 1806, and was executed as a robber and incendiary. The Fra Diavolo of Anber's opera has little or nothing in common with the real Fra Diavolo.
Fraise (fraz), in fortification, a destakes driven into the ramparts in a horizontal or inclined position.
Framingham (f râm ming-ham), a Connty, Massachusetts, 23 miles $\mathbf{w}$. of Boston. Mannfactures straw goods, shoes, woolens, paper and rubber goods, steam boilers, machinery, etc. A state normal school is located here. Pop. 12,048.
Franc (frangk) a modern French was given to cor coin, but the same name one of gold and ancient coins in Erance, valne of the gold franc way silvert. The The silver franc tranc was aboat $\$ 2.50$. the gold one. The name was given from the device Francorum Rex, ' King of the French;' on the coin when first struck by King John in 1380. The modern French franc is a silver coin and money of account which since 1705 has formed the unit of the French monetary system, and has also bern adopted as the unit of currency by switzerland and Belgium. It is of the value of a little over 19 cents, and is divided into 100 centimes. Coins of the same value, though under different names, have been adopted in several other countries of Europe, as the basis of their system of currency.
Francavilla (frán-ka-vil'1a), several Italy. The most important is in the province of Lecce. 14 miles w. s. W. of Brindis. Pop. (1906) 17,759.
France (frans; anciently Gallia), a maritimeconntryin the west of Enrope, forming one of its most extensive, most popnlore, 3.d most inflnential states, It is situated between lat. $42^{\circ} 20^{\circ}$ and $51^{\circ}$ $5^{\circ} \mathrm{N}$. ; and lon. $4^{\circ} 60^{\circ} \mathrm{W}$. and $7^{\circ} 40^{\circ} \mathrm{E}$,
and is bounded N. by the Btrait of Dover and the English Channel; w. by the Atlantic (Bay of Biecay) : E. by Spain and the Mediterranean isea in and N. I. by Italy, Swituerland, Germany, and Belginm. Its Ereatent length from north to south is 000 miles , and ite greatent breadth 647 milem. The conatline on the whole is considerably diveralfed by bayw, entuaries, and indentations of varions hinds, and presents numerous good harbora and roadsteade. It is studded by a namber of inlanda, especially in the northwest and weat, the largent being Oleron, Re, and Belle Isle. The total area (inclading Cornica) is 204,092 49. miles. The capital is Paris; the other large towns in order of population are Marseilles, Lyons, Bordeaux, Lille, Tonlonse, St. Etienne, Roubair, Nanten, and Havre.

Mountains.-The interior is traververl from sonthwest to northeast by macceasive chains of monntains, commencing with the Pyrenees and including the Cevennen, the Cote d'Or, the Vosges, and others, forming the watershed, on one ulde of which the rivers flow west and north into the Atlantic and the English Channel, on the other side east and south into the Mediterranean. At its northeantern ex. tremity this system is met by the Alpur and the Jnra. A considerable portion ol the Western Alps belongs to Southeant. ern France. Mont Blanc itself (15,781 feet) is mostly within the french boundary-line. Some lofty Pyrenean peaks are also within French tersitory, the highest being Vignemale (10,702 feet). Nea- the center of France, and separate from the great watershed of the conntry, are several groups of volcanic monntains known by the general name of the monntains of Auvergne, the chief peaks of which are the Plomb dn Cantal ( 5883 feet), the Puy de Sancy ( 6100 feet), and the Pny de Dome.

Rivers.-The spars thrown off by the great watershed divide France into seven principal river basins, six of which are on the northwestern slope and one on the sontheastern. These are:-1. The basin of the Garonne and its affivents (the Ariege, Tarn, Lot, and Dordogne on the right, and the Gers on the left): with the two secondary basing of the Charente on the north, and the Adonr on the south. 2. The basin of the Loire and its tributaries (NRevre and Maine on the right, the Allier, Loiret, Cher, Indre, Vienne, and Sevre Nantaise on the left). 8. The basin of the Seine and itu tributaries (the Aude, Marne, and Oite on the right, the Yonne and Fare on the left. To the north is the secondery basin of the

Somme. 4. The bauln of the Meuse with Its a liluent, the Sambre. 6. The bayin of the Encaut or Scheldt with its aminent the Bearpe. Only the couthern portion of these two basinn is included within the political boundaries of France. 6. The banin which ponits a number of trinutaries, the principal of which is the Monelle, into the Rhine. Only a comparntively small portion of this bacin also 1 included withln the political bounda. rien of France. 7. The hasin of the Rbone, occupying the whole of the territory which lies to the southeart of the great watershed, the tributaries being the Ain, the SaOne, Ardeche, and Gard on the right, and the Icere, Drome, and Durance on the left. The mecondary basing are those of the Var and the Aude. The four great rivern of France are the Loire, Selne, Rhone, and Garonne. France has in all more than 200 navigable strenms, with a total navigation of about 5500 miles. Laken are fev, and indirldually very limited in extent.
Geology.-Among geologleal formations granite holda a chief place as forming the nucleus of the mountains generally, and being the prevailing rock in the Alpe, the Pyrenees, the Cevennes, and in the northwest peninsular portion of the conntry (Brittany). The other crystalline rocks, consisting chiefiy of trachytes and ha: calt, have received a magnificent development in Auvergne, where whole monntains are composed of them, and where the effects of remote volcanic agency are still visible in extinct craters and lava atreams. In the Jura limeatone occurs in such enormous masses as to have given ite name to a peculiar formation (the Juramic). The granite is overlaid by gneles, micaceons and argillaceous slates, succeeded, particularly in tbe Pyrenees, by mountain limestone. The secondary formation, commencing with this limestone, is largely developed in many parts, and furnishes a considerable number of coal and mineral fields. The tertiary formation covers a vast extent of surface, particularly in the southwest and around Paris.
Climete.-Lying almost wholly within the more moderate portion of the temperate zone, between the isothermal lines of $50^{\circ}$ and $60^{\circ}$, France has a climate not inferior to that of any country in Europe. In the south. and jarticularly the contheast, which is the warmest, the olive is successfully cultivated. Further north to a limit determined by a line drawn diagonally in a I. If. I. direction from the department of Gironde to that of the Vouges, the cultivation of maire
or Indian corn extonda. More north. ward stili, a line drawn from the mouth of the Loire to Mesideres in the Ardenne" dopartment marke the oxtreme limit of the proftable culture of the vins. $\mathbf{B e}_{6}$ yond this line ife the fourth and coldeat region. All these regiona, notwithitanding their diverities of temperature, are generally healthy, and have an atmotphere remarkable for maluhrity, serenity, and hrightneas.

Agrieulture, Efo.-About nine-tenths of the soil $r$ France is productive, and about one:- of the whole is under the plow. The cereals forming the great bulk of the cultirated crops are wheat. oate, rye, and barley. The crups next in importance to thene are menlin or mixed corn, potatoen, hemp, rape, malze, huck. wheat, fax, and beet. Beet is cultivated extenoively in nom. departmente, eupecially in that of Nord, for the manufacture of sugar. The cultivation of tobacco it monopolized by the government, and is confined to certain departments. In France the grase is on a much more limited scale than the arable hurbandry, and the hreeding of cattle is indifferently practised. The rearing of sheep if more successful, much of the wool being scarcely inferior to merino wool. Excel. lent horves are bred in the north, and as there is an extensive demand for horsea for the n - y , conetderable pains are taken in the covernment atuds to improve the hreeds. Assen and mules, generally of a superior description, are much employed. The cultivation of the vine is one of the most important branchen of French agriculture, the total quantity of land in vineyards being nearly a twentyfifth of the whole surface. In everything relating to this hranch of culture the French are unsurpassed, the various firstclass winee which they produce under the namen of Champagne, Bnrgundy, Bordeaux, etc., being universally known. It is estimated that in cood years France produces about one-bale of the whole wine production of the world. Since about 1870 the vineyards have snffered greatily from the devastations of the Phylloxera, an insect introduced from America. Among the most important froit-trees cultivated in France are the apple, from the fruit of which much cider is made, especially in Normandy: the chestrut, which in some of the central districts of Erance is a staple of fool among the poorer classes it the mulberry tree, cultivated in the southeast both for lts fruit and its leaves, the latter furnishing the food of the silkworms so largely reared here ; the ollive also in the couthenat ; the pear, plum, peach, orange,
citron, fis, atc. The forents occupy about one-seventin of the whols territury.

Minerels.-Conlifelds are numerous, but only two are really of importancethat of Valenclennes in the northeast, forming the wentern extremity of the reat Belgian coalield, and that of St. Etienno in the southeast, to which the manufactures of that town, lyons, and the surrounding districts are indebted for much of their prosperity. The annual output falis so far short of the annual consumption that a large import takey place from England and Belgium, particularly the latter, and wood con: tinues to be the common fuel throughout France, at least for domestic purposen. The coaldelds contain seams of iron, which are extensively worked, and fur: nish ore to a great numher of blant-furnaces; but of the total amount of ore smelted in the country a considerable proportion is imported. Other metals, such as lead, sinc, manganese, copper, etc., are obtained to some extent. Com. mon salt is obtained from mines of rock. salt, from salt-aprings, and in still greater quantlity from lagoons and salt-marahem on the coast.

Manufcetures. - The most inportant of the textile manufactures is that of silk goods, havlng its chief seat at lyons and the surroundins districts. It employs about two millions of persons, and furaishes about 27 per cent. In value of the whole of the manufucturcd products of France. After silk goods, thongh at a considerable distance, follow cotton etufis and woolens, made largely at Rheims, Amiens, and Beauvais; carpets at AbbeFille; tapestry at Paris and Beauvais linens, including fine muslin, gauee, and lace at 8 St . Qnentín, etc. ; cutlery, porcelain, stoneware, and common pottery, beet-root sugar, leather, paper, hate, hosiery, ateel, iron, brass, and slnc ware, plate and fint glass, etc., besides many ornamental $\varepsilon$ nd artistic articles; jewelry, clocks, surgical lnstruments, types, engravings, etc., which have their common seat in the capital.

Fisheries.-The fisheries of France are important. Amongst the principal is that of sardines on the coast of the Bay of Biscay; that of herring mackerel, turbot, ealmon, etc., in the English Channel and the North Sea; that of tunnies and anchovies on the coasts of the Mediterra. nean. Oyster-breeding is largely engased in, the most extensive oyater-beds being those of the basin of Arcachon in the aspartment of the Gironde. Cod-fishing is carried on actively near the Newfoundland banks by Erench fishermen, and almo neer Iceland.

Oommeree. - The priacipal towns from which ths internal commerce emanate are Paris Lyoms, lloven, LAlle, $8 t$. Btienne, Touloune, Nimen, Nancy, Por. pirana, etc. The foreign commerce is chiefy with Great Britain, Belgum, Germany, and Italy. Britain is far ahead of the others, its imports beling chiefly silla, wrolens, butter, efse, wiae and brandy, and sugar; its exports chinfly wool and woolens, cottons and cotton yarn, coal, machinery, and metals. The shippins of France is much below what misht be expected from the development of its forelsa commerce, conoldervoly more than one-half of which in carried by foreign vensela. The chief seaports are Marmelles, Havre, Bordenux, Rouen, Nantew (Including Bt. Namaire), Dunkirk, Calais, Boulogne, Dieppe.

Conelo, Railwogy, Eto. The camals are numeroun. The Canal du Midi, or as it is sometimes called, the Canal of Iangnedoc, starting frcm a point in the Garonne a little helow Toulouse, is continued in an 5. 日. E. direction into the lasoon of Thau, and therehy fives a continuous navisahle communication between the Atlantic and the Mediterrmnean, in the line of the important towns of Bordeaux. Agen, Toulouse, Carcessonne, and Narbonne. In like manner three separate canals cut acroas the bain of the Rhone; the Canal du Centre, or of Charollain, connecting the Sabne and the Loire: tae Rhone and Rhine Canal, so called from unlting these two rivers, partiy by the intervention of the Douhs : and the. Canal of Bourgogne, connecting the Saone, Yonne, and Seine. In all, France possesses about 3000 mlle of canals in addition to about 5500 miles of navigable rivers, giving a total equal to abont 1 mile of internal navigation for every 25 sqnare miles of anrface. The rallways in France, abont 30,000 miles long, partly belong to the state, and partly have been granted to private companies for a limited period, at the end of which they will become state property.

Administration of Justice.-In accordance with the general arrangement whicb divides the whole country into departments, each department into arrondisucments, each orrondissement into cantons, and eaciu canton iato communes, there is a series of cour : ommencing, with the jnstice of peace juge do paig) of each commune, who judges in petty causes, but Whome more appropriate function is understood to be to act as a kind of umpire between parties at variance, and induce them to settle their difierences without proceeding to formal litigation. Falling such arranger jat, the complainant hringe
his action before the court of first resort (tribunal de previsiére instance), there being one such in every arrondissement, besides a tribunal de commerce to which mercantile and commercial causes are appropriated. From these courts an appeal lies to the courts of appeal (cours d'appel), of which there are twentyseven, each having jurisdiction over several departments. The most important commercial and manufacturing towns have also comuercial courts (tribunaux de commerce), the members of which are elected by the chief husiness men of the respective places. Above all these courts, and properly the only supreme court of the state, is the cour ds cassation, which has the power of reviewing and annulling the decrees of inferior cgurts. It sits in the capital.

Education and Religion.-In France the superintendence of education in all its hranches is expressly committed to a high functionary, who takes the name of minister of public instruction and fine arts and is assisted by an educational council. The highest educational institutions are either special institutions, such as the Museum of Natural History, the Collage de France, the Polytechnic school; or are a sort of university colleges known as 'faculties,' (Facultés de PEtat), each of which is specially devoted to literature, law, medicine, theology, etc. Several of these are usually grouped together to form one académie, there being fifteen academies in all. At these establishments the education given is of the highest description, and need not be particularized. Secondary instruction, either classical or commercial and industrial, is given by the state in the lyceums, by the communes in the communal colleges, or in certain other seminaries. There are ahout 90 lyccums, generally situated in the capitals of the departments, and over 250 colleges. Primary instruction is given in the communal schools, being compulsory and free. Religion was also, until the year 1006, under the cognizance of the state, and fell within the province of the minister of justice and religion. The state declared that the Roman Catholic was the religion of the majority, but did not establish it; on the contrary, it placed all forms of religion which had more than 100,000 adherents, and were not ohviously subversive of social order, on an ennal footing, and professed to deal impartially with all by paying salaries to their ministers. But hy a Inw enacted in Dec., 1005, all religions have been direstablished, and church and state separated, while education has been made
secular. (See also Gallioan Churoh.) Protestants are less than 2 per cent. of the population.

Army and Navy.-By law military service is declared to he obligatory upon every Frenchman who is not pronounced unfit for military service. They have to serve first in the regular army (armés active) for three years, then in the reserve of the regular army for six years, next in the territorial army for six years, and finally in the reserve of the territorial army for ten years. This gives France on a peace footing an army of more than half a million, which on a war footing may be hrought up to two millions. The French navy is manned partly hy conscription and partly by voluntary enrollment. In 1910 the French navy consisted of 25 battleships, $5: 3$ cruisers, 14 gunboats, 68 destroyers, 380 torpedo boats, and 56 suhmarines.

Finance.-France has now one of the largest rates of revenue and expenditure of the nations and a public deht exceeding that of any other country, the total debt amounting to over $\$ 5,800,000,000$. The chief items of revenue are excise and customs, registration, stamps, posts and telegraphs, and other state monopolies, land tax, licenses, etc.

Constitution.-France has been a repuhlic since the overthrow of the second empire hy a Paris mob on the 4th of September, 1870. The details of the constitution were fixed hy a law passed by a national assemhly which met in 1871 (some revision having been made since). This law places the legislative authority in the hands of an assembly composed of two chambers, the chamber of deputies and the senate. The chamber of deputies is elected by universal suffrage, each department forming one electoral district and a member heing elected for every 70,000 inhabitants. The deputies are elected for four years. The senate consists of 300 memhers, of whom 75 were originally elected for life; hut in 1884 it Fas enacted that vacancies among the life senatorships should be filled up as they arose by the election of ordinary nine-year senators. Both senators and deputies are paid. The head of the government is a president, elected for seven years hy a majority of votes of the memhers of the two chambers sitting as one. The pre .int is assisted hy a body of ministet eppointed by him. He has the appointz nt i all cipil and military poste.

Weights, Measures, and Money.-The unit of the French monetary system is the franc (of the value of a little over 18 centh), which is dividet' decimally. (See

Deoimal Syatem.) The aystem of weights and measures is also decimal, the units with their English equivalents being as follows:-the metre= 30.37 inches or 3.28 feet ; the kilometre, or 1000 metres $=1093.6$ yards or .021 of a mile; the are, the squaq. if 10 metres $=1076.441$ square fert : the inectare, or 100 ares= 2.47 acres : the square into netre $=.386$ of a square : ile : the stere of cubic metre $=$ 35.317 cc te feet ; the 1 :e $=1.76$ pints ; the hectolite or inudre litres $=22.009{ }^{\circ}$ gallons; tiut franime $=\mathbf{= 1 5 . 4 3 2 3}$ grains; the kilogramme or 100 is grammes $=2.205$ lbs.
Political Divisions and Extent of Em-pire--Before the revolution of 1789 France was divided into general governments or provinces, the number of which varied at different epochs. Under Francis I, hy whom they were instituted, there were nine, namely, Normandie, Guyenne, Languerloc, Provence, Dauphine, Bourgogne, Champagne-et-Brie, Picardie, Ile de France. Under Henry III there were twelve, formed hy the addition of Bretagne, Orléanais, and Lyonnais. Under Louis XIV the numher was fixed at thirty-two, to which a thirty-third was added by the acquisition of Corsica under Louis XV. At the revolution the whole of France, including Corsica, was parcelled out into departments, and each department subdivided successively into arrondissements, cantons, and communes. This division, carried out in 1790, has since maintained its ground. The numher of depariments was originally eighty-three, hut it has heen at different times increased and decreased. There are now eighty-seven departments, the last formed being HautRhin (Belfort). The average area of each is ahout 2300 sq. miles (more than one-third that of Wales). The most recently acquired territories were Nice and Savoie. By the Franco-German war of $1870-71$ nearly all Alsace and part of Lorraine was lost. In addition to the territory it occupies in Europe, France possenses (either absolntely or as protected territories) Algeria, Tunis, Senegambia, and other territories in West Africa, a large area in western Sahara and another large area of the Congo region. each of considerably more than $1,000,000$ square miles ; Reunion, Madagascar and other Dast African islands; Cochin-China. Tonquin, Anam, and smaller possessions in Asia: French Gulana in S. America, with the iolands of Guadelonne, Martiniqne, etc.; New Caledonia, Tahitt, etc., in the Pacific. The total French dominions at the beginning of the war of 1014-18 were:

|  | Area | 8o. Mriee | Population. |
| :---: | :---: | :---: | :---: |
| France |  |  |  |

History. - France or Gaul, at the earliest period of which anything is known with regard to it, was inhabited by a number of independent tribes, who appear to have been mainly Celtic in race. In the latter half of the second century B. c. the Romans conquered a portion of the southeast, and under Julius Cæsar the conquest of all Gaul was completed between 58 and 51 B.C. (See Gaul.) Subsequently the country became completely Romanized in language, civilization, and religion, and many flourishing towns sprang up. In the decline of the Roman empire German tribes began to make settlements in Gaul, and it was from a body of these known as Franks that the name France arose. Towards the end of the fifth century Clovis, chief of the Salian Franks, made himself master not only of almost all France (or Gaul), hut also of a considerahle terrin tory east of the Rhine. The dynasty which he founded was called the Merovingian, from his grandfather, Merovans. Clovis died in 511, leaving his kingdom to he divided amongst his four sons, a plan often followed hy suhseqnent rulers. The Frankish dominions were thus dif: ferently divided at different times; but two divisior.s, a western and an eastern, or Neustria and Austrasia, becare the most important. A large part of the history of the Franks under the Merovingian kings is the history of the contests between these two states. Latterly Pippin or Pepin d'Héristal, mayor of the palace of the Anstrasian king, conqnered Neustria and made his sway supreme throughout the kingdom of the Franks. This date may he regarded as that of the real termination of the Merovingian line, for although kings belonging to this family continued to be crowned till 752 , they were mere puppets, 'rois faineants as they cre generally called; the real power was in the hands of the mayore of the palace. Pépin died in 744. He was sncceeded. after a brief period of anarchy, by his son Charles Martel; or Charles the Hammen-a title he earned by the conrage and strength he displayed in battle. Dnring his tenure of power all Enrope was threatened hy the Saracens, who, after occupying Spain, had penetrated into France, and were met by Charles Martel on a plain between Tours and Poitiers, and totally deleated (782),

Charles Martel died in 741, leaving Austrasia and the countries beyond the Rhine to his son Carloman, and Neustria and Burquady to his son Pepin the Short. On his hrother's death Pépin seized his heritage, and in 752, thinking it time to have done with the system of roio fainéants, had himself crowned King of the Franks. In 768 he died, and was succeeded hy his sons Charles, afterwards known as Charlemagne (Charles the Great), and Carloman. The latter dying in 771, Charlemagne hecame sole ruler, and conquered and organized an empire which extended from the Atlantic on the west to the Elbe, the Saale, and the Bohemian mountains on the east, and embraced also three-fourths of Italy, and Spain as far as the Ebro. By Pope Leo III on Christmas Day in the year 800 he was crowned in the name of the Roman people as Emperor of the West. There was as yet, strictly speaking, no kingdom of France, Charlemagne heing a German and his empire a German one.

To Charlemagne succeeded in 814 his yonngest son Louis the Piows. At the death of the latter the empire, after many disputes, was eventualiy divided hy the Treaty of Verdun in 843 amongst his sons, the portion nearly corresponding to modern France falling to Charles the Bald. From this time the separate history of France properly begins, the history of the French language heing also traced to the same period, while the eastern portion of the old Frankish territory remained German. After Charles the Bald, the first of the Carlovingian kings, had been sncceeded in 877 by Louis II, and Louis II hy Louis III (879-882) and Carloman (879-884), Charles the Fat, king of the eastern Frankish territory hecame ruler of the western also till 887, when he was deposed. After a hrief usurpation by Eudes, Count of Paris, Charles III, the hrother of Louis III, was recognized as king. But his kingship was little more than nominal France being divided into a number of great fiefs, the possessors of which, though acknowledging the feudal anpremacy of Charles, were practically independent. In these circumstances Charles, nnahle to offer any adequate resistance to the Norman pirates who were devastating the coast and making inenrsions into French territory, snrrendered to them, in 912, the province which took from them the name of Normandy. Towards the end of his reign Hugh of Paris, as he is generally called, Duke of France, was really the most powerful permon in the kingdom, and throughont the reisns of Louis IV, Lothaire and

Louis V, he and his son Hugh Capet held the real power. On the death of Louis $V$ without children in 987 Hugh Capet was chosen as king, and thus became the fonnder of the Capetian dy nasty. The great fiefs of Paris and Or. leans, which he controlled, were thus added to the crown, and Paris became the center of the new monarchy.

The first task of the Capetian line was to reconquer the royal prerogatives fron the great vassals, hut for two centuries without mnch success. Hugh Capet died in 096, and his first three successors, Robert (died 1031), Henry I (died 1060), and Philip I (died 1106), effected nothing whatever towards the establishment of the royal authority. Louis VI was more successful, being greatly helped hy the fact that the nobility had heen much weakened hs the Crusades. The growth of the towns also, which ultimately hecame the allies of the kings, was a powerful check on the nohles.

Louis VI died in 1137, and was succeeded by his son Louis VII, who reigned till 1180. During his reign the stability of the French throne was endangered by the influence acquired in France by Herry II of England, who cqme into possession hy inheritance and hy his marriage with Eleanor of Aquitaine of the whole of the west of France except Brittany. Louis was succeeded hy his son Philip Augustus (Philip II), who did much to strengthen the throne, and deprived John, the king of England, of Normandy, Maine, and Anjou. His son Lonis VIII, who succeeded in 1223, carried on the work by the conqnest of Poiton, and a religious rar being proclaimed against the Counts of Tonlouse, who protected the Albigenses, that honse was extinguished, and thei: domains passed to the royal family. Louis VIII died in 1228, and under the wise rule of Louis IX (St. Louis) the influence of the crown went on increasing, as it did also nnder Philip (III) the Bold (died 1285), Philip (IV) the Fair (died 1314). Louis $X$ (died 1316), John I (died 1316, after a reign of five days), Philip V (died 1322). and Charles IV (died 1328), hy the acquisition of fresh domains and other means until the outhreak of the wars with England.

The first hranch of the Capetian line of kings hecame extinct on the death of Charles IV, the last of the sons of Philip the Fair, the Salic law excluding the female succession. The crown thus feil to Philip of Valois, a cousin, who became ling as Philip VI. His claim was disputed hy Edward III of England, and the diapate led to a meries of wess whicb
were not terminated for more than 120 yeart. During this period France was reduced to a state of great misery. While Edward, victorious over Philip VI, and after his death over John (II) the Good, who was taken prisoner at Poitiers in 1358, compelled the surrender to England of some of the finest provinces of France by the Treaty of Bretigny in 1360, the country was plundered by handitti, and the Jacquerie, a mass of furious peasants (ahout 1358), satiated their spirit of vengeance in the blood of the nobility. Charles (V) the Wise, who sncceeded John the Good in 1364, and his constable, Du Guesclin, were able to restore order only for a short time, although during this reign the English were driven ont of most of their possessions in France. Then came the long and unhappy reign of the imbecile Charles VI (1380-1422), during which Henry $\mathbf{V}$ of England, reviving the claim of Edward III to the French crown, invaded France, won the field of Agincourt, and ohtained a treaty (Treaty of Troyes) acknowledging the right of succession to the French crown in himself and his descendants. Charles VI died in 1422, a few weeks after Henry V, whose son, Henry VI, a minor, was acknowledged as king by the greater part of France. But between 1429 and 1431 the remarkahle peasant girl, Joan of Arc, animated the French in the cause of the dauphin, who was crowned as Charles VII at Rheims in 1429, and in 1451 the English had lost all their possessions in France, except Calais. The political shrewdness and perfidy of Louis XI (1461-83) completed the subjugation of the great harons, and laid the fonndation of ahsolute monarchy. Maine, Anjou, and Provence were left to him hy the will of the last count, and a large part of the possessions of the Duke of Burgundy, including Picardy, Artois, the duchy of Burgundy proper, and Franche Comte, all came into his hands not long after the death of Charles the Bold, in 1477. His son and successor. Charles VIII (1483.-98), united also Brittany to the crown by his marriage with Anne, the heiress of the fief, and effected a conquest of Naples, which lasted but a short time.

Charles was the last king of the direct line of Valois, which was succeeded by the collateral branch of Valois-Orleans (1498), in the person of Louis XII. who was descended from Louis of Valoin, Dnke of Orleans, hrother of Charles VI. In order to keep Brittany attached to the crown he married the widow of his predecensor. On his death the crown
reverted to another hranch of the house of Valois, that of Angouleme, Francis I (1515-47) being the grandson of John, Count of Angouileme, uncle of Louis XII. Francis 1, still continuing the attempts at conquest in Italy, was hrought into confict with Charles $\mathbf{V}$ of Germany, who also claimed Milan as an imperial fief. The result was five wars hetween France and Germany, ir. the first of which Fiaucis had to retreat acrons the ilps; in the second be was taken prisoner at, Pavia; in the third he seized Savoy and Piedmont, which the Peare of Crespy (1544), made at the conclusion of the fourth war, allowed him to keep.

Francis I died in 1547, and his son, Honry II (1547-59), pursuing the same policy, renewed the war for the fifih time with the house of Hapshurg. In the Peace of Catean-Camhresis (1559), with which it ended, Henry had to surrender Savoy and Pielmont, but remained in posecssion of the German hishoprics of Metz, Toul, and Verdun. The year before, Calais, the last English possession in France, had been captured by Francis, Duke of Guise. Francis II, the husband of Mary Queen of Scots, succeeded his father Herry, hut reigned little more than a yea $(1559-60)$. The foundation of the natic I debt, the weight of which broke down the throne 250 years later, was laid in this period. Intrigue and corruption gave to women a dangernus influence at court and in public affairs. Under the administration of Charles IX (condu ted during his minority by the queen-muther, Catharine de' Medici) France was inundated with the blood of Frenchmen, shed in the religious wars from 1562. (See Bartholomew's Day.) These continued throughout ihe reign of Charles IX and his successor, Henry III (1574-89), and were only terminated when Henry IV originally King of Navarre, and since the death of Henry III King of France, went over to the Catholic Cburch (1503), having hitherto heen the leader of the Huguenots.

Henry IV was the first French sovereign of the house of Bourhon, which inherited its right to the throme from a son of Lovis IX. He united to the crown of France the Kingdom of Navarre, which he had inherited from his mother, Jeanne d'Alhret. In his government of France Henry showed all the qualities of a great, prince and a great statesman, entahishing relifions toleration (Edict of Nantes, 1598), and laboring diligently for the welfare of the state. He was. cut ofr prematurely by the dafger of the fanatic Ravailac (1610). During the mingrity of Eenry's son,

Louis XIII, tbe Frencb policy was at first wavering, until the prime-minister, Cardinal Richelieu, gave it a steady direction. He restored tbe Erencb lnfluence in Italy and the Netherlands, humbled Austria and Spaln, and created thint domestic control wbich rendered the government completely absolute.

Louis XIII died ln 1643, the year after his great minister, and was succeeded by Louis XIV, le Grand Monarque.' Tbe policy of Richelieu was carried on by Mazarin during the regency of Anne of Austria, while Louis was stl11 a minor, and also for some years after Louis was declared of age. Durlng bis ministry France obtained by the Peace of Westphalia (1648) the German province of Alsace and hy the Peace of the Pyrenees (1659) parts of Flanders, IIainault, Luxembourg, etc. After the death of Mazarin, in 1661, Louls XIV took the government into his own hands, and ruled with an absolute sway. The period which immediately followed Was the most brilliant in French history. His ministers, especially Colbert, and his generals, Turenne, Conde, Luxembourg, and the military engineer Vanban, were alike - the greatest of their time; the writers of the period were also among the greatest in French literature. An unsuccessful attempt was made on the Spanish Netherlands; a war was nndertaken against Holland, Spain, and Germany, which ended in France receiving Francbe Comte and other places from Spain and Freiburg from Germany. In 1681 Strasbonrg was seized from the empire $\ln$ a time of pace. The last war of Lonis was the war of the Spanlsh Succession (1701-14), wbicb resulted unfortunately for France. During this reign great injury was done to French Indnstry by the revocatlon of the Edict of Nantes in 1685. Louis XIV died ln 1715, leaving the finances in disorder, and a national debt amounting to no less than $4,500,000,000$ livres. Louis XV, the grandson of Louis XIV. succeeded at the age of five years. During his minority the regent, the Duke of Orleans, squandered the revenues in the most reckless manner, and matters went from bad to worse. In 1723 Louis was declared of age, bnt he sank under the pernicious lnfluences of mistresses, like Pompadour and Du Barry, into extravagance and license, entering. into useless and costly wars (war of Austrian Snccession, 174048: Seven Years' war. 1750-63), and contracting enormous debts. During his reign two important acqulsitions were made by France, namely, Lorralne and Coraicin.

With the the period of pin Louis XVI began of the lirench monarchy and aristocracy, whicb had culmlnated ln the preceding reign. The king himself was amiable, but the whole administration was rotten, and the court, the nobility, and tbe clergy formed only one privileged class united to oppress the people. The goor Intentions of Louls were neutralized by a total lack of energy and firmness. The first difficulty of bis government, and the rock on wbicb lt split, was the hopeless condition of the pnblic finances, with which Turgot, Necker, Calonne, Brienne, and again Necker tried in vain successively to grapple. Finding all ordinary heasures unavalling. Necker demanded the convocation of the States General, which had not met since 1614. They met on 5 th May, 1789, but as the nobles and clergy refnsed to conduct busincss so as to give the Third Latate its due weight, the deputies of this hody assumed the title of the National Constituent Assembly, and resolved not to separate till they had given a constitution to France. The clergy and nobles then yielder, and the fusion of the three orders was effected on 27 th June. Foreign troops, bowever, were brougbt to Paris to overawe the assembly. The people now demanded arms, which the municipality of Paris supplied; and on 14tb July the Bastille was captured and destroyed. Lafayctte was made commander of the newly-establisbed natlonal guard. On the 4 th August a decisive step was taken by tbe abolition of all fendal rights and privileges. On 5th October Versailles was attacked by the mob, and the royal family, vlrtually prisoners, were taken to Paris by Lafayette. The king tried to obtaln the aid of some of the foreige powers agalnst bis subjects, and made bis escape from Paris (20th Jnne, 1791); but he was recognized, arrested at V́arennes, and brought back to Paris. On 30th September, 1791, tbe assembly brought its work to a finish by producing a new constitution, which. Was sworn to by the klng on 14th September, and he was then reinstated $\ln$ hls fnnctions. This constitution deprived the king of arhltrary powers, provided liberty of worsblp and freedom of the press, of commerce, of lndustry: abolisbed tbe laws of primngeniture and entail as well as titles; all France was redilvided into eighty-three departments, nearly equal in extent.

The Constituent Assembly was, accordlng to the constitution, immediately followed by the Legislative Assembly, whicb met October 1, 1791, and in which
there were two parties of political im. portance, the Girondists, moderate republicans, so named because their leaders came from the department of the Gironde, who led it, and the Montagnards, extreme radicals, known collectively as the Mountain, because their seats were the highest on the left side of the hall, wbo subsequently became all-powerful in the convention. The constitutionalists and monarchists were already powerless. The declaration of Pilnitz by the Emperor of Germany and the King of Prussia, tbreatening an armed intervention on bebalf of the king, compelled the assembly to take a decisive course, and on 20 tb April, 1702, war was declared against Austria and Prussia. Reverses to the French troops caused a popular rising. and the Tuileries, after a sanguinary combat, were taken and sacked. Tbu king took refuge with bis family in the Assembly, which was invaded and compelled to subuit to the dletation of the victors hy assenting to the suspension of the king and the convocation of a National Convention in place of the Assembly. The first act of tbe Convention was to proclaim a reprblic. On 3d December the king was cited to appear before it. On 20th Jannary, 1793, he was sentenced to death within twenty-four hours, and on the 21 st the sentence was executed. Tbis violent inauguration of the republic shocked public opinion throughout Europe, and armed the nentral states against France. England, Holland, and Spain joined the coalition. The extremists in France only grew miore violent, a committee of pnblic safety, with sovereign authority, was appointed 6th April, and the Reign of Terror begun. The struggle betwreen the Girondists and the Montagnards or Jacobins terminated in favor of the latter. A new constitution was adopted by the Convention on 23d June, called the Constitution of the Year 1, the Republican Calendar being adopted on 6th October, 1793, the year 1 beginning on September 22, 1702. Christianity was formally abolished. Risings against the government were put down with frightful bloodshed. Both in Paris and the provinces erecutions and massacres of persons alleged to be disaffected to the party in power followed each other daily. The queen was executed on 16th October. 1793, the Girondists on 31st October, and others followed, Robespisrre being foremost in the bloody work. At length the reign of terror came to an end hy the execution of Robespierre and his 18so ciates on 27 th and 28th Jnly, 1794. Danton and Hebert, his old allies, he had already brought to the ecalfold. Marat, $14-\mathrm{U}-3$
another man of blood, had perished by assassination. The campaigns of 1743 and 1794 resnlted favorably to the French arms, which were carried beyond the French frontier, Belgium and Holland being occupied, Spain being invaded, and the allies being driven across the Ihinu. These successes induced Irussia and Spain to sign the treaties of Basel (1705), recognizing the Freuch repuhlic: In 1795 the Conventlon gave the republic a new constitution, a chanber of live Hundred to propose the laws, a chamber of Ancients to approve them, an executive of five members, one elected annually, called the Directory. Tbe Couvention was dissolved on 26th October.

Napoleon Bonaparte now began to be the most prominent ngure in French affains; and after his brilliant successes against the Austrians both north aud south of the Alps, and hls empty conjuest of Egypt, it was not difficult for him to overthrow the government of the Dircctory. This was accomplished in the revulution of 18tb and 19th Brumaire (5th and 10th November, 1790), the Dlrectory being succeeded by the Consulate, Bonaparte bimself being appointed First Con${ }^{\text {sul }}$ for ten years. The other two consuls, Cambacerès and Lebrnn, were to have consultative voices only. The new collstitution (constitution of the year VIII. originally devised by Siéyès) was proclaimed the 15 th December. Under the appearance of a republic it really established a military monarchy. Tbe histocy of France for the next sixteen years Is virtually the history of Napoleon. (See Napoleon I.) In 1802 the constitution was amended, Napoleon being made consul for llfe, with the right of appointing his successor. In 1804 he was proclaimed emperor, thls being confirmed by a popnlar vote of $3,572,329$ against 2569 . The emperor was consecrated at Paris by Pins VII, and In 1805 he was also crowned Kling of Italy. For years the continental powers, whether singly or in coalitions, were unable to stand against him, though at sea France was powerless after the great victory by Nelson over the French and Spanish fleets at Trafalgar (1805). The Anstrians and Russians were decisively defeated at the great battle of Austerlltz (1805); the King of Naples was dethroned and Napolcon's brother Joseph was put in his place; another hrother, Iouis, was made King of Holland; while fro a thirui, Jerome, the Kine dom of Westphalia was erected (1807). Prussia was conquered and comnelled to accede to humiliating terms. Napolicon was at the height of his power in 1810 and 1811, his empire then extending from

Denmark to Naples, with capitals at Paris, Rome, and Amsterdam. By this time, however, the Peninsular War (see that art.) had broken out, which was one immediate cause of his downfall, the disastrous Russian campaign of 1812 being another. The latter cost the French the loss of at least 300,000 men. A new coalition was now formed against Na poleon, and in 1813 he was disastrounly defeated by the allies at the great battle of Leipzig. By this time the Peninsular War was drawing to a close and Southera France was actually invaded by Wellington. The allies entered Paris on 31st March, 1814. Napoleon abdicated and received the island of Elba as a sovereign principality. Louis XVIII was proclaimed King c. France, and concluded the Peace of Paris (May 30, 1814). A congress of the great powers had assembled at Vienna to adjust European affairs, when it was annonnced that Napoleon had left Elba, returced to Paris, 20th March, 1815, and been reinstated without resistance in his former authority. The allied sovereigns proclaimed him an outlaw and renewed their alliance against him. Napoleon, anticipating the attack, crossed the Sambre with 130,000 men, defeated Blucher in the battle of Ligny, and marched against the British, who had taken position at Waterloo. Here, on the 18th, was fought the decisive battle which resulted in his final overthrow. On the 7th July the allies entered Paris for the second timc. Napoleon surrendered to the British and was sent to St. Helena as a prisoner.

Louis XVIII at first governed with the support of a moderate liberal party, but the reactionary spirit of the aristocrats and returned émigrés soon got the upper hand; the country, however, was prosperous. Louis died 16th September, 1824, and his brother, Charles $X$, succeeded. On 26th July, 1830, the Polignac ministry, strongly reactionary in its tendencies, published ordinances suppressing the liberty of the press and creating $a$ new system of elections. The result was an insurrection during the three dars, 27th-29th July, hy which Charles $X$ was overthrown and Louis Philippe of Orleans proclaimed king. 9th August, 1830. Dnring the last days of Charles X's reign a French expedition had captured the city of Algiers and laid the foundation of the French colony there. During the eighteen years of Ionis Philippe's reign the chief events were the taking of the Citadel of Antwerp, the temporary occnpation of Ancona, both in 1832, and in 1835 the completion of the conquest of Algeria. Sut later, under the ministry of Guizot,
a policy of resistance to all conatitutional changes was adopted, and a strong opposition having been formed, on 24th F'ebruary, 1848, another revolution drove Louis Philippe into exile. A republic was proclaimed, and on the 10 th December, 1848 Louis Napoleon, nephew of the great Napoleon, was elected president for four years. The president, having gained the favor of the army, dissolved the legislative assembly on 2d December, 1851, put down all resistance in bloud, and by this coup d'état established himself as president for the further term of ten years. A plébiscite of $7,839,216$ yotes confirmed the appointment. On 2 d 上ecember the president was declared emperor under the title of Napoleon III (a son of the great Napoleon being counted as Napoleon II) ; and a plebiscite of $7,824,129$ votes was again got to confirm the appointment. The Crimean War (1854-55) and the war against Austria on behalf of Italy (1859) distinguished the early part of his reipa The latter greatly aided in the foundation of a United Italy, and gave France the territorics of Savoie and Nice (1860). In 1870 the uneasiness of Napoleon and the French at the steady aggrandizement of Pruseia broke out into flame at the offer of the Spanish crown to a prince of the house of Hobenzollern. Napoleon, not satisfied with the renunciation of the German prisce, demanded a guarantee from the King of Prussia that the candidature should never be resumed. This being refused, he declared war. (See Franco-German War.) One French army was driven back by the Germans and cooped up in Metz, another was pushed northwards to Sedan, and so hemmed in that it had to surrender with the emperor at its head. On the news of this disaster reaching Paris the republic was proclaimed. After an almost uninterrupted series of victories the Germaus became masters of the French capital (28th January, 1871), and the war ended in France giving up to Germany Alsace and a part of Lorraine, and paying a war indemnity of five milliards of francs ( $\$ 1,000,000,000$ ). Meanwhile civil war had broken out in Paris, which was suppressed with great difficulty. (See Commune of Paris.) The assembly elected in 1871 for the ratifisation of peace with Germany found it expedient to continue their functions. Thiers beins the head of the administration. In 18i. the Thiers administraticn was overthrown and replaced by one under Marshal MacMahon. In 1875 a republican constitution was drawn up. In 1878 MacMahon resigned his presidentahip, be-
ing nucceeded by Jules Grevy, who in turn was followed by Sadi-Carnot in 1887. Carnot was assassinater in 1804, and was nucceeded by Casimir-Perier as president, Who reaigned January 15, 1895. Two days later Felix Faure succeeded him. During his term of office France was violently agitated by the Dreyfus case, and had a dispute with Lingland about Fashoda, Soudan. Faure died suddenly, Fehruary 15, 1899 ; succeeded by Emile Loupet. Armand Fallières was elected president January 17, 1006. The hostile fecling between Germuny and France due to French extension in the Sondan was brought to a head in 1911 as a result of an outbreak of rebel tribesmen. An active dispute arose, which was finally settled by F'rance's giving Germany a large tract of land in the region of French Congo. Raymond Poincaré succeeded M. Fallières as president, Jan. 17, 1913. In 1914 France entered the European War against Germany and Austria, supported by her allies, Russia and Britain.

Of these nations the situation of France was the most critical. Hostile sentiment had existed between that country and Germany since the war of 1870 71, the loss of Alsace-Lorraine being the most hitter pill which for centuries France had been forced to take. As regards the military conditions of these two countries, the difference was hy no means so great as it had heen in the previous war. The statesmen of France had taken care that the army of that country should not again be found in the unfit state in which it proved to be when Napoleon III, in 1879, fiung down the gage of battlo against Prussia and its German allips But. in 1914, no other country in the world had become so complete a fighting machine or had such a splendid equipment of military material as the Prussia of that date, and the kaiser of the new Germar. empire was not without warrant for the confidence with which he defied the combined powers of France, Great Britain and Russia. It was his first aim to invade and overcome France hefore any efficient aid could reach it from its allies, and, avoiding the French line of defense, he poured his hattalions into Belgium and across the French-Belgian frontier with all possible haste. Yet small and weak as Belgium was, it courageously heid uack the German armies long enough to give France an opportunity to get its forces into the field and for a small contingent of British troops to come to its aid.

Mohilization began in France at midnight of August 2, 1914, and by the time
the German army had reached the Erench frontier there was a large army ready to meet it. That the kaiser and his military advisers expected to take the French by surprise and paralyze their armed forcew as had been done in 1870 is highly probable, but they found them well equipped and ably commanded, and though they were forced to recreat before the irresintible Advance of the German furces, this was doie siowly and stubbornly. The mall British contingent at Mons was truck in late September, and saved itself only by a hasty retreat, and the much stronger French army was soon being driven back. This continued until the foe was only a few miles distant from Paris. But the French commander, Marshal Joffre, was simply making a strategic retreat, and on September 6 checked his army, brought up the considerahle force that held the forts around Paris and made so vigorous an assault upon the enemy that the tables were turned and the Germans, in turn, forced to retreat. For the details of this signal victory, one of the most notahle in the whole war, see Marne, Battle of the. It put an end to the advance of the Germans, forced them to retreat day after day, untii the line of the Meuse was reached, and put a final end to the forward movements of the German armies in the western section of the vast field of warfare.

The French forces had, meanwhile, entered Alsace and made some progress in that section. But the tide of war soon swept further to the west and efforts to regain this coveted territory ceased. For important military events we must now go forward to the spring of 1915 , when the augmented British forces fought gallantly, though not victoriously, at Ypres and Neuve Chapelle, and the French in the Artois region, the latter a tremendous though not successful effort to break the strongly held German lines. But the most striking and long contested of the efforts in this section of the far-extended fieid of battle was the desperate effort of the army under the Crown Prince of Germany to capture the stronghold of Verdun and open in this direction a new route of advance on Paris. This great struggle continued for months, the Ger man army losing heavily in its charges on the outlying defenses of the stronghold. Some of these were taken, yet the French held firmly to their fortress, and in the end, after a struggle of weli nigh a yeare duration, regained all the lost ground. It was a terrihly costly enterprise, in men and munitions, on the part of Germany, and the last strong effort made by them io
capture the famous fortress defended by gallant men whose slogan was 'They shall not pass.' In 1018 the German armies swept over French territory in what was intended to be a series of irresistible drives, but the American armies were now on tho scene and the German tide was turned at Chateau-Thierry (q. v.) at the second battlo of the Marne. Afterward the German tide was ever backward, until a plea for an armistice resulted in the cessation of hostilities on November 11, 1018. The successful conclusion of the war was due in great part to the famous French soldier, Marshal Foch. The French casualties were estimated at $4,000,000$, and the money cost to France was $\$ 32,000,000,000$. By the peace of Yersailles (see Treaiy), the territories of Alsuce and Lorraine, held by Germany since 1871, were restored to French sovereignty as from the date of the armistice, Nov. 11, 1018. As compensation for the destruction of the coal mines in the north of France, Germany ceded to France tho coal mines situated in the Saar Basin. France, Lanovage or. At the time Julius Cesar, the conquest of principal dial by spoken by the inhabitants were Celtic. After the conquest of Gaul by the Romans all these dialects were gradually supplanted by Latin, except in Brittany, where a Celtic diulect still holds its ground. The popular Latin of Gaul, of course, exhibited considerable differences from the written and classical Latin, and by the seventh or eighth century the literary and the popular languages had come to be quite clrarly distinguished as the Latina and the Romana, respectively. Besides the Celtic words, not very numerous, which were included in the new speech, it was considerably modified by Celtic habits of speech, new sounds being introduced. It was still further modified by the influences introduced with the Teutonic invasions. Aiter the Franks in Gaul had abandoned their native language and adopted this new Romanic or Romance tongue it became known as the Francisca, later Francaise. The oldest known monument of the new dialect is the oath of Louis the German, taken at Strasburg, in 842 . In the ninth and teuth centuries two main branches or groups of dialects came to be recognized, the Langue do 0 , spoken in the districts south of the Loire, and the Langue d'Oil, spoken in the provinces of the north and the east. In the thrtreenth century the Langue d'Oil. spoken in the central provinc. of Ile de Frauce, where the capital, Paris, was, came to be regarded as the classical language of the
country, all other dialectas staring into the condition of patois. At the beginning of the sixteenth century Francis 1 prohibited the use of Latin at court and in the public tribunale and formally recognized the French as the nationt ilanguage. As one of the Romance languLges it is a sister tongue of Italian, Spanish, and Portuguese.
France,
Litcrature of. French literature proper begins in the eleventh century with the epic or narrative poems known as chansons de geste, and produced by the class of poets known as Trouvires. These poems belong to Northern France and are very numerous. They are usually divided into three heads: poems relating to French history, in particular to the deeds of Charlemagne, his descendants and vassals; poems relating to Alexander the Great and to ancient history; and poems of the Arthurian cycle, or relating to King Arthur. They are generally written in verses of ten or twelve syllables, and are of a length varying from 1000 to 20,000 lines. One of the oldcst unil best examples of the first class is the Chanson de Roland, or Song of Roland. Of the Arthurian cycle, the Roman de Rou and Roman de Brut; and of the Alexandrine cycle, the Alexandre by Lambert li Cors, and La Guerre de Troie ('War of Troy'), by Benoft de St. More, are examples. Out of the chansons de geste grew the romans $d^{\prime}$ aventures, poems of fietion which are not connected with any of the well-defined topics of the chansons de geste. Distinct from these are the fabliaux, metrical tales of a witty and snreastic kind, belonging mostly to the tweifth and thirteenth centuries. Allied to these is the Roman de Renard, or History of Reynard the Fox, a poem, or rather series of poems, written between the end of the twelfth and the middle of the fourteenth century, and forming a satirical picture of all the classes and institutions of the time.
Side by side with these epics, romances, and tales an abundant lyric poetry flourished from the eleventh century. This song literature is mainly of a sentimental character, and is usually divided into two classes, romanoes and pastourelles. It is in general remarkable for its lyric grace and skillful melody. Its writers, kunwn in literature as Troubadours, were very prolific. The first known of these was Guillem IX, count of Poittiers, near the end of the eleventh century, their most brilliant period heing during, the second half of the twelth and the first half of the thirteenth centuries. The list of Troubadours numbers about 400 in all
love being the leading topic of their poeme, Peire Vidai and Bertrand de Born are among the best known of thern, while Guiraut Riquier, near the close of the thirteenth century, is spoken of as 'the last of the Troubadours.' Their language was the meiodious Provencal of the South. Amongst the prlnclpal of the early lyrists are Thibaut de Champagne (1201-53), Charles of Orlcans (1301-1465). The iatter, a graceful writer of baliades and rondels, was amongst the last of the real Irouveres. Rutebeuf (born 1230), also a writer of fabliaux, is the first of a serles of poets, cuiminating in Francols Vilion, who passed their llfe in a bohemlan alternatlon of gaiety and misery, celehrating cach phase with equal vigor in verse. The Roman de la Rose, the work, in its earlier part, of Guillaume de Lorla, who lived in the first half of the thlrteenth century in the later, of Jean de Meuns (dled 1320), is one of the most notable productions of the time. It consists of more than 22,000 verses, and is a curious combinatlon of a love poem and a satlre. Oiivier Basselin (who dled about 1418) wrote songs celebrating the praises of wine. Francols Villon (14311500) the greatest of French poets before the Renaissance, wrote two compor sitions known as the Great and the Little Testament, interspersed with lyrical compositions of great poetic merit.

In prose literature the first important work is the Histoire de la Conquéte de Constantinople, hy Villehardouin (11671213). The Memoires of the Sienr de Joinville (1223-1317) dellneates the life of St. Louis and the exploits of the last Crusade. Frolssart (1337-1410), the - Herodotus of his age, gives a vivid picture of the chivalry of the 14th century. With Philippe de Commines (14451509) we are introduced to Louis XI, and his contemporarles in a style of history which, if less naive and charming, shows a deeper and more philosophical sense of things. In the llghter prose the Cent Nouvelles Nouvelles already shows the capacity of the French language for the short, witty tale.

The revival of classical learning and the reformation of religion exercised a powerful influence on the French literature of the sixteenth century. Rahelais (1483-1553), a profound hut often gross humorist, and Montaigne ( $1533-92$ ), an interesting and instructive, though somewhat skeptical essayist, hold the first rank. Calvin ( $1509-64$ ) did much by his great theological work, Institution de ln religion Chretienne, to mold French prose in the direction of strength and
gravity. Amongst the other worke which Indicate the rapid development of Erench prose in this century are Brantome's Memoires, the Heptameron of Queen Margaret of Navarre (1492-1540), the translations by Amyot (1513-43) of Ylutarch and other classlcal writers, and the celebrated poiltleal pamphlet, Satire Ménippéc. In poetry Ciement Marot (14.7. 1544) gave a new eiegance to the language in his epistles and epigrame. Pierre de Ronsard (1524-85) and the other members of the celehrated Pliade, Iodelle, Beileau, Dubellay and others, sought to enrich thelr natlve tongue by the introductlon of classical words, constructions, and forms of verse. Du Bartas (1544-90) and D'Aubigne (1550) 1630) carried on the work of Ronsard. Mathurln Régnler (1573-1613) may he said to close this school of poetry. Ho unltes in himself the llghter qualities of the styie of Villon and Marot with the erudition and command of language characteristic of the Ronsardlsts. Malherbe ( $155(6-1628$ ), the creator of a new taste in ilterature, opposed with success the tendency of the Ronsard school, and faliing into the opposite excess sacrificed everythlng to correctness. It was his school that set the example of the smooth hut monotonous Alexandrine. With the Renaissance translations of the ciasslcal dramas appeared, and a member of the Pleide, Jodelie (1532-1573), wrote the first regular tragedy (Cléopatre) and comedy (Eugdne).

The seventeenth century opened with Alezandre Hardy (1560-1631), Rotrou (1609-50), Tristan (1601-55), Mairet ( $1604-88$ ), Du Ryer ( $1605-48$ ), and a host of other dramatists, for nearly a hundred can be enumerated in the first quarter of the century. At length Pierre Corneille (1606-84), with his Cid, Cinne, Horace, and Polyeucte, hrought French tragedy to a degree of grandeur which it has not surpassed. Of seventeenth century prose writers Pascal (1628-62) is vigorous and satirical in his Lettres provinciales; profound, if sometimes mystical, in his Pensés. The letters of Balzac (1584-1684) and Voiture (1598-1648), though rhetorical, were valuahle as models for elegant prose. Descartes (1596-1650) showed in his Discours sur la Méthode that the language was now equal to the highest philosophical subjects, and the great work of his disclple, Malehranche, Recherche de lo Verité is equally admirahle for its elegance of stylo and its suhtlety of thought.

The age of Louis XIV is known as the solden age of French Iiterature. Beaides Corneille, Racine ( 163909 ) representer

## France

the tragic drama, and Mollere (1030-03) brought his sreat manterpieces of comedy on the stare. The 'inlmitable' La Kontaine (1821-95) wrote his Contes and the mont charming collection of fables. for his critical influence, If not for his poetry, Boileau (1636-1711) holds a prominent place. In eloquence the sermons and funeral orations of Bossuet, Bourdaloue, and Massillon take the first rank, Bossuet is also celehrated as a controversiallst and theological historian. Very important, too, are the memoir and maxlm writers of this time. Amongst the former are the Cardinal de Retz, Madame de Mottevlle, Madame ae Sévigné (1627-96), and others; amongst the latter are La Rochefoucauld (161380), St. Evremond (1613-1703), La Bruyere (1630-99). In fiction Le Sage, who also wrote comedies, produced his immortal Ciil Blas and the Diable Boiteut; and the versatile Fontenelle wrote his Dialogues des Morts.

Amongst the writers of the elghteeuth centnry Voltaire holds the first place. IIe clalms notlce as an epic, lyrical, and comic poet ${ }^{f}$ : a tragic and comic dramatist, as a historian, novelist, and philosopher, and he roriained at the head of the sepuhlic of letters for more than half a century. Next to him in Immediate influence on the age stands Jean Jacques Rousseau (1712-78), a writer of an eloguent sentimental vein, well represented by his Nouvelle Héloise and his famous Confessions. His new theories of poiitics and education are embodied in his Oontrat Social and Emile. Buffon (1707-88) devoted hlmself to the production of his immense natural history. Montesquicu (1689-1755), commencing with the Lettres Persanes, a satire on French manners and government, followed with a historical masterpiece, Considérations sur la Grandeur et la Décadence des Romains, and finally with his great work, the Esprit des Lois. Diderot (1713-83), a powerful and suggestive writer in many departments, and D'Alemhert (1717-83), a great geometrician, founded the Encyclopédie, a vaist review of human knowl. edge, often hostile to social order and always to religion. Amongst the philosophers Helvetius, D'Holhach, and La Mettrie represent the extreme materinlistic and anti-Christian school. Condillac. and Condorcet kept most on the side of moderation. Among the writers of fiction Bernardin de St. Pierre (17371814), author of Paul et Virginie, and Prevost (1697-1763). author of Manon Lescaut, are particularly worthy of mention; while dramatic literature was enreched by the Barbter do Qfeille and the

Mariage de Figaro of Benumarchals (1732-40). The age was not poetlcal; poetry had degenerated Into imitations of foreign descriptive poett, such ais Thomson. The mont succeasful writer of thls stamp was Delille (1738-1813). Andre Chenier (1760-94), the most promising of all, fell beneath the gullotine just after completlig hls Jeune Captive.

Nelther the revolution nor the firat empire was favorable to literature. Chateauhriand (1768-1848) and Madame de Stael (1766-1817) gave a new turn to the taste and sentlment of the time, the former in his Génic du Christianisme and his Martyres, clothing the history of Christianity in the romantic hues of his imagination, the latter in ber Corinne and De l'Allemagne lntroduclag the ldealistic spirit and thought of the Germans to her countrymen. A purely reactionary school of thought was headed by Josepl de Maistre (1754-1821), the advocate of theocracy, with a vlgorous despotism for its system of government.

Later on in the nineteenth century the influence of Goethe, Schiller, Shakespere, Scott, and Byron began to be felt, and a new school, called the romantic, as onposed to the old or classic. sprang up, headed by Victor Hugo (1802-85), who promulgated the new thenries in the preface to his drama of Cromuell, and carricu them into practice in numerous poems. The most notahle of his associates were Alfred de Vigny (1779-1863), author of a volume of Poëmes, and of a nnvel, Cinq Mars; Sainte-Beuve (180469), who puhlished several volumes of poetry in those early days, hut became famous later on as a critic, perhaps the hest France has ever possessed; Alfred de Musset (1810-57), who produced sume of the finest lyrics in the language. Charles Nodier, Gérard de Nerval, the two Deschamps, and. later, Theophille Fautier, with others, also belonged to the band of romanticists. On the stage the dramas of Alexandre Dumas, the elder (1803-74), though melodramatic and of inferior literary value, served as rallying points for the new school. To English readers, however, he is hest known hy his novels. A reactinnary movement was attempted, led hy Pnnsard (1814-f7) and Emile Angier (1820-89). Casimir Delavlgne (1793-1843) atteminted to combine the classle and romantic schools; and Lamartine (1790-1860) is more than half a romanticist bv sentlment and stylc. Beranger (1780-1857). the greatest of French song-writers. mar be considered as helonging to neither of the two schools, nor can the sparking comedios and vaode-
villes of Eusene Scribe be claimed by any of the rival parties.

Amons novelists Balzac (1709-1850), by his astonishing ecries of works, La Comédie Humaine, has establisherl hls clain to first place. The novels of (ieorge Band (1804-7 $)$, showed delightful style and an optimistic outlook upon life. Eugene Sue (1804-57), gained popularity through his Mysteries of Paris and Wandering Jew; while Henry Beyle ('Stendhal') launched the first pyychological novels. Prosper Merimee (1803-70) la chiefly known by his Colomba, a tale of the Corsican vendetta. Gustave Flaubert (1821-80) combined romanticism and realism and may be called the father of the modern realistic or 'naturalist' achool, of whom Emile 7ola (1840-1003), Aiphonse Daudet ( $1840-47$ ), and Edmnnd ( $182{ }^{2} 2-97$ ), and Jules ( $1830-70$ ), de Goncourt are the chief exponents. Guy de Maupassant (180-92) is the greatest master of the short story. Of later writers Anatole F'rance (born 1844), stands first, though Julien Viand ('Pierrs loti'), Edouard Rod (1857-1000). Ferdinand Fabre (1830-98), and Itené Bazin (born (1853) deserve mention.

In works of history the nineteenth century was very prolific, the leading historians being Michaud (1767-1849), Sismondi (1773-1842), Guizot (17871874), Amedee Thierry (1787-1873), Angustlne Thierry (1795-1856). Mignet (1706-1884), Thiers (1707-1877), Michelet (1798-1874), Henrl Martln (1810-83), Victor Duruy (1811-1894), Louis Bianc (1813-82). Literary hlstorians are: Villemain ( $1790-1870$ ), Vinet (1797-1847). J. J. Ampère (180n. 64), Littre (1801-81), St. Marc-Girariin (1801-73), Sainte-Beuve (1804-69), Taine (1828-1893). Philosophy is rep resented by Lamennais (1782-1854), Victor Cousin (1702-1807), Jouffroy (1796-1842), Remusat (1797-1875) Augnste Comte (1798-1857) Quinet (1803-75). Montalembert (1810-70) Renan (1823-1892). Among the writers on political economy and soclology are Bastiat (1801-50), Tocqneville (180559), Chevalier (1800-79), Proudhon (1809-65). Jnles Simon (1814-1896) Prévost Paradol (1829-70). Among scientific writers are: Etienne Geofroy St. Hilalre and his son Isldnre, Cuvler, Jusisien, Dnmerll, ln natural science; Gay-Inssac, Bichat, Corvisart. Magen. die, in chemistry and medlelne; and Lagrange, Laplace, and Arago In mathematics. Amongst Orientallsts of note are Champollion, Bnrnnuf, Silvestre de Sacy, and Stanislas Jnlien. The essayinte and literary and art criticm are
legion. We can only mention by name Theophile Gautier. Jule Janin, Philarete Chasles, IA Aon Gozlan, Yaul de St. Victor, Gnstave I'lanche, and St. Rene Taillan: dier. Among poets who belong to a datc posterior to the Romantic movement, or show different tendencies, may be mentioned Gautier ln his later poetry, Charies Baudelaire, Ieconte de Jiale, Francoik Coppep, Panl Veriaine, Staphane Mallarmé, Sully Prudhomme, and Catulle Mendes.
France, Isce or (Ile-de-brance), an ancient province of France, so called because it was originaliy bounded by the Seine, Marne, Ourcq, Alsne, Olse, and formed almost an lsiand.
France, Isle or. Sce Mawritius.

petitore for the empire; but the choice teii nn Charies of Austria, the grandson of Maximiilinn, benceforth known as the Emperor Charies V. From this period Francis and Charies were rivais, and were almost continuaily at war with one another. Both attempted to gain the alifance of Engiand. With this view Francis invited Henry VIII of England to an interview, which took piace near Caiais, between Guines and Ardres, in June, 1520. The magnificence of the two monarchs and their suites on this occasion has given to the meeting the name of the Fieid of the Cloth of Goid. In 1521 war broke out between the rivais, which ended in Francis being defeated and taken prisoner. He could recover his liberty oniy br renouncing his claims to Naples Milan, Genoa, and Asti, the suzerainty of Flanders and Artois, and promiring to cede the Duchy of Burgundy and some other Freach fiets. War was soon after
renowed, as Alliance, called the Holy League, havins been formed between the Pope Clement VIL, the Kiog of Irance, the Kins of England, the Republic of Venice, the Duke of Milan, and other Italian power,, with the object of check. ing the advancen of the emperor. In.thls war fome was taken and tacked by the Conatable of Bourbon (1027), and Italy was devantated, but Francis salaed Ilttle either of fame or material advantare. l'eace was concluded in 1520, hut hontil:tien again hroke out in 1635, when Erancis poosessed himeelf of Bavoy. A hastlly: made-up peace was 300 n broken, and Francis asain found hlmseif at war with the Emperor and the King of England. Fortunately for France the union of the Proteatant princen of Germany againat the emperor prevented bim from foilowlas up his nuccess, and inclined him to a peace, which was conciuded at Crespy In 1544. Charies reaigned ail his claimi on Burgundy, and allowed Francis to retain Savoy. Iwo yearm after peace was made with Fngiand. Francis I possessed a chivalric and enterpriaing apirit, and was a patron of iearning.
Francis II, King of France, son of Henry II and Catharine of Medici, born at Fontainebieau in 1544 , ascended the throne on the death of his father, 1550. The year previous he had married Mary Stuart, oniy child of James V, King of scotiand. The uncies of his Fife Francis, Duke of Guise, and the Cardinal of Lorraine, held the reins of government. Francis, who was of a feeble constitution, died in 1500 .
Francis I, Emperor of Germany, eidest mon of Leopoid, Duke of Lorraine, was born to 1708. In 1736 he married Maria Therema, daughter of the Emperor Charieg VI. After the death of Charies VI (1740) he was deciared by bis wife co-regent of ail the hereditary states of Austria, but without being permitted to take any part in the administration. After the death of Charips $V$ II he was eiected emperor in 1745. He died in 1765. See Maria Theresa.
Francis I, Emperor of Austria, (previously Francis Iİ, emperor of Germany), was born in 1768; died in 1835. He was the son of the Emperor Leonoid II and Maria Louisa, daughter of Charles III. King of Spain. He succeeded his father in 1792 . France deciared war againgt him in i702, and hostilities continned till the Peace of Campo-Formio 1797. In 1789 he entered into a new coalition with Engiand and Russia azainst the French repubilic; but in 1801 Ruspia and Anstria were compelled to conclude the Peace of Luneville.
brance having been declared an empire is 1804, he maumed the title of horedicery " iperor of Amstrias and on the catab. inament of the confederncy of the lhime in 1808 he renounced the titic of Bm peror of Cermany. In 1803 war again broke out between Austria and France. But after the battle of Austeriitz (1805) the Peace of Prebburg was nigned. In 1800 he again took up arms against France, and in the Peace of Vlenna was compeiled to surrender 42,000 square milee of territors. The marriage of his daushter, Maria Loulsa, with Napoleon promived to form a strong tie between the imperial houses, but in 1813 he enrered into an allinnce with Russia and Pruesta against France, and was present to the clone of the contest.
Francis, or Assisi, ST., founder of at Assisi, in Umbria, in 1182, where he died in 1226. In youth Francis did not refrain from the pleasures of the world; but after a serfous illneas he became enthuslantically levout, left the paternal roof, and in 1208 gave himscif to a life of the most rigorous poverty. His followers were at frst few, but when they reached the number of eieven he formed them into a new order, made a rule for them, and got it sanctioned, though at firnt onily rerbality 111 1210, by Pope Innocent III. In 1212 he recelved from the Benedictines a church in the vicinity of Assisi, which now became the home of the order of Franciscans or Minorites. Francis afterwards obtained a bull in confirmation of his order, from Pope Honorius III. After an unsuccessful attempt to convert the Sultan Meledin he returned to Assisi. when the order of St. Clara was founded under hls direction, and a third order, called the Tertiaries, designed for penitents of hoth sexes. He was canonized by Pope Gregory IX in 1228. His festival is on the 4th of October. See Franciscans.
Francis, or Paula. St., was born in 1416 in the city of Paulin, in Calabria: dled in France 1507. He was brought up in a Franciscan convent, and in 1436 founded a new order, which, when the statutes were confirmed by Alexander VI, received the name of the Minims (Latin, minimi. the least). To the three usual vows Francis added a fourth, that of keeping the Lenten fast during the whole year. The fame of his miraculous rures reached Lonis XI of France, who invited him to France, in the hope that Francis would he able to proiong his life. After the death of Louls Charles VIII built him a monastery in the park of Plessif-les-Tours and aleo at

Ambolse, and loaded him with honor and tukens of veneration. Twelve years after his death he was canonised by Leo $X$, and the Catholic Church celebratos bis fentival April 2. See Mínims.

## Francis, Josrpn, inventor, was bora

 in 1801, died in Boston, Massachusetty, eighteen died in 1893. At the aso of righteen he received a prize for a last rowbont. His greatest achierements were in the construction of life-maving appilances. He made the first use of iron floating vessels. He received numerous patenta, medais and decorations, and the thanks of Congrem for wervicos to his country.Francis, purinp, poet and dramatist, died 1773. was born in Dublin 1700 , orders, and kept an academy at bsher, Surrey, where Gibbon was one of his pupils. He was latterly chapiain to Chelsea llospital. He is best known from his trnnslations of Horace and other classic authors.

 whom the authorshlp of Junius's Letters has been ascribed, was the son of the preceding. born in Ireland in 1740 , died 1818. In 1773 he went to the East Indies, where he became a member of the council of Bengal, and the constant opponent of Warren Hastings. In 1781 Francis returned to England, and shortiy after was chosen member of parliament for the borough of Yarmouth in the Inile of Wight. He took a prominent part in the impeachment of Hastings. He published screrai political pamphlets. See Junius.Franciscans (tran-sis'kans) are the members of the relimions order established by St. Francis of Assed about 1210. They are also called Minorites, or Fratres Minores ('lesser friara'), which was the name given them by their founder in token of humility, and sometimes Gray Friars, from the color of thelr garment. The order was distinguished by vowi of aitiolute poverty and a renunciation of the pleasures of the worid. and was intended to serve the church by its care of the religious state of the people. The rale of the order destined them to beg and to preach. The popes granted them extensive privileges, and they had an evil repute as spies. frequenting the courts of princes and the honses of noblemen, gentry, ete. Early in the fifteenth century they split up into two branches. the Conventuals and the Observants or Sabotier. The former went barefooted. wore a long gray casoock and cloek and hood of layso
dimentions, covering the breant and back, and a knotted girdle. The Obeervante wore wooden sandals, a cassock, a narrow hood, a short cloak with a wooden clasp, and a brown robe. In France the members of the order not belonging to any particular sect are called Cordeliers, from the cord which they tie about them. The Capuchins, so called from the peculiar kind of hood or cowl (capuce) which they wear, originated in a reform introduced among the Observantists by Matthew of Baschi in the early part of the sixteenth century, and although it received the approbation of different popes within a short time after its foundation, it did not receive the right of electing a particular general and become an independent order till 1619.

Franciscan or Gray Friar (Cenventual).
St. Francis himself collected nuns in 1209. St. Clara was their prioress; hence they were called the nuns of St. Clara. The nuns were also divided into branches, according to the severity of their rules. The Urbanists were a branch founded by Pope Urban IV; they revered St. Isabe'.e, daughter of Louis VIII of France, as their mother. St. Francis also founded in 1221 a third order, of both sexes, for persons who did not wish to take the monastic vows, and yet desired to adopt a few of the easter observances. They are called Tertiarians or Tertiaries, nnd fere very numerous in the thirteenth century. Francis Joseph I, Emperor of AusHungary, born 1830 ; succeeded his uncle,

Ferdinand, who abdicated in 1819. The chief evente of hil reign were the cension of Lombardy to Italy, as a recult of the Austro- French war (1859); the loss of Venetia, as also of Austria's important influence in Germany, the result of the war fith Prussia (1866); and the annexation of Bosnia and Herzesovina (1008). See Austria. He died Nov. 21,1916. Francis-Joseph Land. See FranzLand,

 Francke (fran'ke) august Hrerancke mann, German theologian and philanthropist, born at Lubeck 1663; died at Halle 1727. He was professor of Oriental literature and then of theology at Halle, but is chiefly known for his successful labors on behalf of poor orphans. In 1695 he founded the famous orphanage at Halle, still known by his name, which now includes, besides the orphan asylum, a great variety of schools, a printing and publishing establishment, chemical laboratory, etc.Franco-German War. The imoccasion of this war was an offer made in June, 1870, by General Prim, then at the head of affairs in Spain of the crown of that country to Leopold of Hohenzollern, a prince belonging to the reigning house of Prussia. The government of Napoleon III demanded of the King of Prussia that he should forbid the candidature of the prince, and when the prince voluntarily retired from his candidature, still insisted that this renunciation should be formally made by the king, and a guarantee given that the candidature would not be revived. This demand was refused, and a formal declaration of war hy France against Prussia was received by Count Bismarck. the Chancellor of the North German Confederation, on the 19th of July. The French were the first in getting their troops to the frontier. but it soon became manifest that instead of being in a complete state of readiness for war. as the minister of war had declared, the French army was defective in almost everything essential to the equipment of an army.

In Germany everything formed a complete contrast to this state of affairs. Fach section of the army was completely organized fa the headquarters of the distriet which it occupled in time of peace. and was only sent to the frontiers after being furnished with everything it required. In addition to this Pruesia,
against which country alone the war had been declared, was not only joined, accordins to treaty, by all the atatem of the North German Confederation, but also by thome of the South, upon whose neutrality, perhaps even upon whome alliance, Napoleon and the French had counted.

Thus instead of the French army making a march of conquest through Germany, as was the expectation of the enthusiastle populace of Paris, the German army, moving wlth remarkable promptitude, was quickly on the soil of France and winnlng vlctories over the poorly prepared French. It was divlded into three sectlons, respectively under the command of General Stelnmetz, Prince Frederick Charles, and the Crown Prince of Prussia, King William, aided by the famous strategist Von Moltre and a staff of general officers, being in general command. Victories won at Weissenburg on August 4 and at Worth and Forbach on the 6th, put the whole French line in retreat. Bazaine with the northern army was overtaken and defeated at Courcelles on the 14th and again at Mars-les-Tour and Gravelotte, after whlch he took refuge behind the fortifications of Metz, where he was besieged by the army under Prince Frederict Charles. Meanwhile the Crown Prince had advanced as far as Nancy, where he awaited reinforcements before engaging MacMahon, who had reached Chalons with a strong army. The advanced detachments of the two armles met on August 27, and a series of engagements and strategic movements ensued, to the advantage of the Germans, the result being that on the 1st of September MacMahon, with whom was the French emperor, was surrounded at Sedan by a force of overwhelming atrength. The positlon of the army was hopelems and on the following day the troops and fortress were surrendered, 50 generals, 5000 other officers and 84,000 soldiers becoming prisoners of war, among them Napoleon III. The only army now left to France was that of Bazalne, then closely besleged at Metz and thls, unable to escape, capitulated on the 20th of October.

The irst result of the surrender at Sedan was an outburst of rage of the Parisians against the Napoleoric dynasty, a republic being procialmed on September 4 and a government of national defense formed, with General Trochu at its hend. By September 18 the German army reached and invested Paris, in such force that the utmost efforts of the French could not relieve their capital city. It held out longer than could have been expected under the circumitancet. but the
repulse of the last salls, on January 19, whowed that a capitulation was inevitable, and on the 21st of February M. Thiers, executive of the new republic, arrived at Vergaillem with a diplomatic commis: sion. Preliminaries of peace were signed on February 26 and accepted by the asaembly at Bordeaux on March 1. The principal terms were the following: 1. That France should cede to Germany onefifth part of Lorraine, including Metz, together with the whole of Alsace except Belfort and the surrounding district. 2. That Firance should pay to Germany a war Indemnity of five milliards of francs $(\$ 1,000,000,000)$. 3. That certain departments of France should remain in the occupation of the Germans, and should not be fully evacuated until after the payment of the whole indemnity. The definitive treaty of peace, which was aigncd at Frankfort on the 10 th of May, and ratificd on the 21 st , confirmed in all easential particulars the preliminaries of Versailles. The last installment of the war lndemnity was paid on the 5th or. September, 1873, and France was completels evacuated by the Germans on the 13th of the same month.
Francois (fran-swi), Sr., a town in the French West Indies, in the lsland of Guadeloupe. Pop. about 6000.

Francolin (fran ${ }^{\prime}$ iso-lin), a genus of birds belonging to the same family with the partridge, whlch they resemble in many respects, though they usually have one or more atrong and sharp horny spurs on the tarsl. The only European member of the genus is the Francolinus vulginis, whlch is characterized by a red band round the neck, and red feet. It is found in the south of France, Sicily, Cyprus, and the southern part of Europe generally. The other species are found in Africa, Asia, and Oceanlca.

## Franconia

(fran-kōni-a; ln German, Franken, so called be cause early in the sixth century it was colonized by Franks), a district of Germany lying to the east of the Rhlne, and traversed by the Maln. After the dlomemberment of the Carlovingian Empire thls district became attached to the German division, and ultimately formed one of the grand-duchles of Germany. In 1806 it was partitioned among Wurtemberg. Maden, Hesse-Cassel, the Saxon duchies, and Bavaria. The last received the largest share, now forming the three dlvisions of Upper, Mlddle, and Lower Franconia.
Franconian Wines, German wined

## Iy in the Bavarian district of Lowe Franconia. The chief sorts are known as Leistenwein and Steinuecin. <br> Franc-tireur (frap-tt-rowr), lit. a ular sharpshooter, one of a body of soldiers organized in France in the war of 1870, and employed in guerrilla warfare for harassing the enemy, cutting off detachments, etc.

Franeker (frin'ek-er), a town in of Friesland, on a canal communicating with the sea at Harlingen. It was long celebrated as the seat of a school of theology. I'op. 7187.
Frangipani (fran-ji-pi’né), a perMarquis Frangipani, Marechal des Armees of Louis $\lambda 1 I I$ of lirance. It was a powder composed of every spice then known, with the addition of ground orrisroot and musk. It is now a perfume prepared from, or imitating the odor of, the flower of a West Indian tree, Plumiera rubra, or red jasmine.
Frangulin (frar'gu-lin; $\mathbf{C H}_{4} \mathrm{H}_{2} \mathbf{O}_{3}$ ), a oring matter contained in the bark of the berry-bearing alder (Rhamnus Franguila. It is a bright-yellow, silky, crystalline mass, without taste or smell, which fuses on heating, and can be sublimed in golden needles. It dyes sill:, wonl, and cotton.
Frank, the signature of a pcrson sending letters free of postage. This privilege was formerly enjoyed by memhers of congress and the bighest officials of the Government, but it was greatly abnsed and by act of Congress, taking effect July 1, 1873, the privilege was entircly abolished. Envelopes wlth a notice of the penalty incurred by using them except for official purposes are now exclusively used. The use of these for public documents was restored to members of Congress in 1875 and to other officials of the government at later dates, there being a penalty for tiic use of the official envelope for private matter.
 English mode of tenure according to whlch a rellglous corporation held lands without being required to perform any but rellgious services, such as prnying for the sonls of the donors. Thls is the tenure by which almost all the aneient manasterien and relifions houses hela their lands, and by which the parochlat clergy and very many ecclesiantical and elcemosynary foundations hold them to this day, the nature of the service being.
upon the Reformation, altered and made conformable to the reformed church.
Frankenberg (frant'en-burg), a German town, kingdom of Serony, 40 miles 8 . of Leipelg. It is regularly built, and has extenaive manufactures of woolens, cottons, and silks, etc. Pop. 12,726.
Frankfort (frank'fort), a eity, county seat of Clinton Co. Indiana, 24 miles E. s. E. of Lafayette, $\ln$ an agrieultural section. It has large machine shops, railroad shops and manufactories of furniture, brickmaking machines, etr. Pop. 8634.
Frankfort, a city, capital of Kentucky and of Franklin Co., is sltuated on both banks of Kentueky River, 65 miles $E$ of Loulsville. The public buildings. comnrising the statehouse, State penitentiary, and variona institutions are handsome, and the scenery around the city is notable for picturesque beauty. It has sawmills and various manufactures, and a large lumbering trade. Pop. 10,465.

## Frankfort-on-the-Main (German,

 furt am Main), a town of Prussia, in the province of 'Hessen-Nassau, 20 mile N. It of Mayence (Mainz). It was for merly a free town of the empire, and down to 1866 one of the free towns of the German Confederation and the seat of the diet. It is mainly situated on the right bank of the Main, but has the suburb of Sachsenhausen on the left bank, the river being crossed by seven bridges. The north or right bank of the river is lined by a spacious quay. The older part of the town contains a number of ancient houses, and largely consists of narrow and unattractive streets, but the principal street, the Zeil, and those of the newer parts of the town, are spacious nad have many handsome modern buildings. The older portion is surrounded by the Anlagen or promenade with gar. dens, on the site of the old fortificationa Fronting this promenade and In the districts outside of it are many very handsome, and some palatial. private residences with gardens. The Romerberg and the Ross-markt (horse-market) are the chief squares in the town. The Rżmer or town-house was erected abont 1405. but not completed in its present form till 1740. In one of lts halis, the Wahlzimmer, the electore of tha emplre met and made thelr arrangements for the election of the emperor, and the Senate of Franifort held ite siltings. In another, the Kaiserval, the emperor was banqueted after his election, snd waited on at table by linge and princem. Themont remarkable of the churches is the mones and banking. The town is proDom or Cathedral of St. Bartholomew vided with tramways, is a great railway ( R . Catholic), in which the German center, and is now reached by the largeat emperors after 1711 were crowned. It vemels navigating the Rhine. Frankiort a a Gothic edifice, berun in 1238. The dates from the time of Charlemacne. It choir was built in 1315-18. The build- was made an imperial free city by a deing was seriounly injured by fire in 1867, cree of the Emperor Louis V in 1329 . but has been completely restored. the
tower left incomplete since 1514 being finished in accordance with the original plans. Other bnildings are the new operahouse, one of the finest buildings of the Find; the courts of justice, of modern construction; the new exchange, a spaemperor bere in 1152, and in 1356 the right of being the place of election for all future emperors was granted to it by the Golden Bull. Frankfort suffered be verely in the Schmalkald war (1552), the Thirty Years' war (1635), the Seven

cious and handsome edifice; the large palace of the Prince of Thurn and Tarise; the new railway-station, a very elegant edifice, which wih favorably compare with any similar structure; the archivebuilding, postoffice, the house in which Luther dwelt, and that in which Goethe was born. There are monuments to Gutenberg, Goethe, Schiller, and others. Frankfort is rich in collections connected with literature and art, and in establishments intended to promote them. The chief of these are the Historical Minsenm (in the archive-building), the Städel Art Institute (in Sachsenhausen, cuntaining a fine gallery of pictures and other collections; the Senckenbers Museum of Natural Historv: the town library, poseossing over 150.000 printed volumea. mand metal goods. chemThere is also a zoological garden and the icals, leather, earthenware, spirite, etc.: Palm Garden, both favorite places of re- and the trade is extensive both by land nort. The manufactures comprise chem- and water. Frankfort was annexed to icals, ornamental articles of metal. sew- Brandenhure in 1250. and notwithstanding machines. straw hats. soap, perfumery, ing its repented captures during the Hupbees, etc. 4 great business is done in site, the Thirty Years', and the Seven

Years' wars, was always an important commercial place. Pop. (1910) 68,235.

## Frankincense ( frangk'in-sens), a

 oleoreninous exudations from different apecies of conifers. American franlincense is got as a soft, yellow, reninous solid, with a characteristic turpentine odor, from Pinus Taeda. Another kind is exuded by the spruce fir, and forms a soft solid, the color of which varies from white to violet red. From this Burgundy pitch is prepared by melting in water and straining through a cloth. The frankincense employed in religious ceremonies (called also incense and olibdnum) is a gum-resin obtained from Boswellia thurifèra (or serràta), a tree nomewhat resembling the sumach, belanging to the Amyridaces, and inhabiting the mountains of India. It comes to us in semitransparent, yellowish tears, or sometimes in masses, of specific gravity 1.22, and possesses a bitter and nauseous tuste.Franklin (frank ${ }^{\text {Fin }}$ ), a village of Norfolk Co., Massachusetts, (township), w. of Boston. If is the site of Dean Academy, and has extensive manufactures of woolen goods, also pianos, straw, and cotton goods. Pop. 5641.
Tranklin, a city of Merrimac Co., Merrimac Rive : 19 miles N. N. W. of Concord. Its manufactures include needles, knitting machines, flannel, paper, hosiery, etc. Known as Salisbury, it was the birthplace of Danin? Webster. Pop. 6132. Franklin, a city, capital of Venango Allegheny River at the mouth of French Creek, 9 miles 今. W. of Oil City, it being the center of the chief oil region of the State. Natural gas is also abundunt. It has oil refineries and manufactures of iron and steel, oil-well supplies, bricks and lumber. Pop. 9767. Franklin, Benjamin, an American born at Boston in 1706: died at Philadelphia in 1700. He was placed with his brother, a printer, to serve an apprenticeship to that trade, and his brother having started the Nero England Courant, Franklin secretly wrote some pieces for it, and had the satisfaction to find them well received. But. on this coming to the knowledge of his brother, he was severely lectured for his presumptlon, and treated with great harshness. Soon after he quitted his brother's employment, and at the age of seventeen started for Philadelphia, where he ohtained employ: ment an a compositor. Here he attracted
the notice of Sir William Keith the Gorernor of Pennaylvania, who induced him to 80 to England for the purpone of purchasing types to entablish himeelf in businewn and when there left him to shift for himself. He got work in a printing office, and after a renidence of eighteen months in London came back to Philadelphia. Here he returned to his trade, and in a short time formed an establishment of his own, in connection with a person who supplied the necessary capital. They printed a newspaper, which was managed with much ability, and gave Franklin much reputation. By his ezes

tions a public library, improved syatems of education, a scheme of insurance, etc., were established in Philadelphin. In 1732 he published his Poor Riohard's Almanack, which continued to be issued till 1757. Being in Boston in 1746 he saw, for the first time, some experiments in electricity, which led him to begin those investigations which resulted in the identification of lightning and electricity, and the invention of the lightning-con: ductor. As a member of the provincial assembly of Pennsylvania he displayed much ability in political affairs, and in 1757 was sent to England as an agent of the province. His reputation was now such, both at home and abroad, that he was appointed agent of the provinces of Massachusetts. Maryland, and Georria. Oxford and Edinbureh conferred on him their hishest academical degrees for his electrical researches, and the Royal Society elected him a fellow. In 1762 he returned to America: but was again appointed agent in 1784, and bronght to Fingland a remonstrance againgt the project of taxing the colonies. He opposed the stamp-act, and in 1774 presented to the ring the petition of the first American Congrema, On his return be was
elected a member of the Congress, and exerted all his influence in favor of the Declaration of Independence. In 1776 he was ment to France as commissioner plenisctentiary, to obtain supplies from that court. After the surrender of Bursoyne he concluded with France the firm treaty of the new states with a foreign power (1778), and was subsequently named one of the commissioners for nesotiating the peace with the mother country. On his return to his native country he filled the office of president of Pennaylvania, and served as a delegate in the Constitutional Convention of 1787, and approved the Constitution then formed. His works include his unfinished Autobiography and a great number of political, antislavery, financial, economic, and scientifle papera. With Washington, he ranks as one of the two greatest and ablest men the United States has yet produced.

## Franklin, <br> Sir Jour, an English Arctic voyager, born in

 Lincolnshire in 1786; died near Lancaster Sound, in 1847. He entered the navy as a midshipman at the age of fourteen, and wais present at the battle of Copenhagen in 1801. He afterwards accompanied Captain Flinders on his voyage to the coast of Australia (1801-03). Shortly after his return he was appointed to the Bellerophon, and had charge of her gignals during the battle of Trafalgar. Two years later he joined the Bedford, which was employed successively in the blockade of Fushing, on the coast of Portugal, and on the coast of America. On the last station he took part in the attack on New Orleans in 1814 and was sligh. wounded. His Arctic wort began in 1816 when he conducted an overiand expedition for the exploration of the north coast of America from Hudson Bay to the mouth of Coppermine River. On his return to England he published a narrative of the expedition, was promoted to the rank of captain, and elected a F. R. S. In a second expedition he surveyed the coast from the mouth of the Coppermine west to Point Beechy, thus traversing in his two expeditions about a third of the distance between the Atlantic and the Pacific. On his return in 1827 he received the honor of knighthood. After serving for some years in the Mediterranean he held the post of governor of Tasmania from 1836 to 1843 . In 1845 he took command of the Erebus and Terror in what proved bis last polar expedition. The problem was the discovery of an Arctic waterway between the Atlantic and the Pacific. The expedition wha mon in Mejrille Bay two monthslater, but from that time no direct tidings were received from it. Many expeditions were sent in search of him both from Britain and America, but with little success. At last an expedition, zent out under McClintock in 1857, discovered in 1850 at Point Victory, in Kiny William's Land, a document which had been depos: ited in a cairn thirteen years before, and gave the latest details of the ill-fated expedition. This paper stated that Sir John died 11th June, 1847; that the ships were abandoned in April, 1848; and that the crews, 105 in number, had started for the Great Fish River. None survived, but many relics of the party have been recovered by later expeditions. Franklin, WILLy B ByzLs, dier, born at York, Pennsylvania, in 1823; died in 1803. He graduated at West Point Academy in 1843, served under General Taylor in the Mex: ican War as a topographical engineer, and became a brigadier-general of volunteers at the outbreak of the Civil War. He was in the battle of Bull Run and the Peninsular campaign and was promoted major-general in 1862 . He served during the rest of the war, was breveted major-general in the regular army in 1865, but soon resigned to engage in busness. He was U. S. Commissioner General to the Paris Exposition of 1889.
Franklinite (franklin-ft), mineral composed of oxide of iron 64.5 to 66 , oxide of zinc 21.8 , and oride of manganese 12.23 to 13.5, and is therefore considered as belonging to the group of minerals called spinels. It is found in New Jersey and named after Dr. Franklin.
Frank-pledge, literally pledge or man. Frank-pledge was a law prevailing in England before the Norman conquest, by which the members of each decennary or tithing, composed of ten households, were made responsible for each other, so that if one of them committed an offense the others were bound to make reparation. Franks, a Germanic tribe or aggregate of tribes which overthrew the Visigoths and Burgundians in Gaul, and gave origin to the name France. See France.
Pranzensbad (frants'ens-btt), a watering-plase in $\mathrm{Bo}^{-}$ hemia, about 3 miles north of Ezer. The mineral springs are alkaline, saline, and chalybeate, and are very efficacious, particularly in scrofulous and cutaneous affection. Pop. 2330.

## Franz-Joseph Land, an island

 Aretic Ocean, lying north of Nova Zembile, and consisting of two chief frlande, much broken up by fords, and a number of smaller ones.
Franzos (frant'sos), Karl Emil, Austria, in 1848, of Jewish parentage. His first literary work, Simé Asia: Piclures of Life in Galicia, Bukovina, Southern Russia and Rumonia, was brilliant success and was widely translated. It was followed by many novels and romances, including Mein Franz, Der Prüsident, T'ragische Novellen, etc.
Frascati (fras-kítē), a town of Italy, about 10 miles 8. E. of Rome situated on the slopes of the Alban Hills, near the site of the ancient Tusculum. It is much resorted to by the Romans in the summer season. Charles Edward Stuart, the Young Pretender, is buried here, in the Cathedral of 8. Pietro. Pop. 9915.

Eraser (frã'zer), ALexander Camp and miscellaneous writer, born in 1819. He succeeded Sir William Hamilton in the professorship of logic and metaphysic s in the University of Edinhurgh, 1856. From 1850 to 1857 he edited the North British Review, and published Essay in Philosophy, 1856; Rational Philosophy, 1858; and a collected edition of the works of Bishop Berkeley.

## Fraser, Simon. See Lovat.

## Fraser

(frásèr-a), a genus of plants, nat. order Gentianaces, containing seven species of erect perennial herbs, natives of North Amerfica. $F$. Carolinensis is indigenous in the swamps of the Carolinas. The root yields a powerful hitter, wholly destitute of aroma. In its medicinal effects it is equal to gentian, and when fresh is said to be emetic and cathartic.
Fraserburgh (fris'ser-burg) a seaAberdeenshire. 22 miles east of Banff. It is substantially built, and has a townhall, a market-cross, building-yards, and two harbors. Fraserhurgh is the chief seat of the Scotch herring-fishery. Pop. 9715.

## Fraser River,

the principal river in British Columbia, rising in the Rocky Mountains. It first flows northwest for about 270 miles, then turns south, and after a total course of about 500 miles falls into the Gulf of Georgia. Gold is found on both the Fraser and its affluents, and the salmon fisherfes are important. Its principal affluents are the Thomson, Quesnelle and Stuart river. New Westminster, Hope, Yale, and Lytton are on its banks.

## Fraserville

 St. Jawrence. Fratercula training the puffFraternal Societies, organiza. trons devoted to social intercourse and to mutual benefit. They are numerous in modern nations, many of those of England Laving made their was to the United States, while others have originated in this country. Their obligations usually inclaude the payment of sick and death benefits and fraternal care of sick memberg. In some of them the lodge principle prevails and social features are promipent. Among them are the Odd Fellows, Free Masons, Knights of Pythias, Order of Red Men, Artisans, eta
Fraternities (fra-ter'na-tén), a voluntary association of men for promoting their common interest, business or pleasure. In thea wide sense it includes all secret and benerolent societies, the monastic and sacerdonal congregations, the orders of knighthood, and also guilds, trader-anione, and the like. In a limited sense it is applied to religious societies for pious practices and benevolent objects. Fraternities were often formed during the middle ages, from a desire of imitating the holy orders. Many of these societies, which did not obtain or did not reek the acknowledgment of the church, had the appearance of separatists, which subjected them to the charge of heresy. The pious fraternities which were formed under the direction of the church, or were acknowledged by it, were either required by their rules to afford assistance to travelers, to the unfortunate, the distressed, the sick, and the deserted, on account of the inefficiency of the police. and the want of institutions for the poor, or to perform certain acts of penitence and devotion. Of this description were the Fratres Pontifices, a brotherhood that originated in Tuscany in the twelfth cenfury, where they maintained establishments on the banks of the Arno. to enable travelers to cross the river, and to succor them in case of distress. A similar sochiety was afterwards formed in France, where they built bridges and hospitals, and provided for the security of the highways. Similar to these were the Knights and Companions of the Santa Hermandad (or Holy Brotherhood) in Spain; the Familiars and Crossbearers in the service of the Spanish Inquisition; the Caiendar Brothers in Germany; the Alexians in Germany, Poland, and the

Netherlands, etc. The professed ohject of ihe Alexians, no called from ilexius, their patron saint, was to visit the sick and imprisoued; to collect alms for distribution: to console criminals, and acccmpany them to the place of execution ; to bury the dead, and to cause masses to he said for those who had heen executed or for persons found dead. There were also Gray Penitents (an old fraternity of an order existing as early as 1264 in Rome, and introduced into France under Henry III), the black fraternities of Mercy and of Death ; the Red, the Blue, the Greeu, and the Violet Penitents, so called from the color of their cowl; the divisious of each were known by the colory of the girdle or mantle. The fraternity of the Holy Trinity was founded at Rome in 1548 by Philip de Neri for the relief of pilgrims and the cured dismissed from the hospitals. The Brothers and Sisterm of Charity are another fraternity whose hospitals are found in all the principal cities of Catholic Ch تistendom.
Fraticelli (fra-ti-chel'le; the diminufrate, brother or monk), the name given, about the end of the thirteenth and during the fourteenth century, and even later, to wandering mendicants of differelit kinds, but especially to certain Franciscans, who pretended to practise the rules of their order in their full rigor. They claimed to be the only true church, and denouuced the pope, whose authority they threw off, as an apostate. They made all perfection consist in poverty, forbade oaths, and discountenanced marriage, and were accused by their opponents of very lewd practices. The scet is said to nave continued till the Reformation which its incmbers embraced.
Frattamaggiore (fràt-tá-má-jóră), miles N. E. of Naples. Manufactures ropes and silk. Pop. 13,170.
Frand (frid), an act or course of dewith the ception deliberately practised or unfair view of gaining an unlawful ing of goods untage, such as the obtainthe of goods under false pretenses, and frend All frauds or attempts to defraud, which cannot he guarded against by common prudence, are indictable at common law, and punishable arhitrarily according to the heinonsness of the offense. Every species of fraud which the la able every transaction into which it enters as a constituent material element. Fraud may be hy false representation, concealment of material circumstances that ought to be revealed, underhand dealing, aud hy takiug advantage of im.
becility or intoxication. A constructive fraud in law is such fraud as is involved in an act or contract which, though not originating in any actual evil or fraudulent desisu, yet has a tendency to deceive or mislead other permons, or to violate puhlic or private confidence, or to impair or injure the puhlic intereuts. Gross criminal frauds are punishable by way of indictment or information; such as playiug with false dice, causiug an illiterate person to execute, a deed to his prejudice, etc. Frauds are not iudictable at common law unless they be such as affect the puhlic, as using false weights and measures.

## Fraunhofer (froun'ho-fèr), Josmpir

 cian, born in 1787, died in 1826. He ultimatcly became a partner in a manufactory of optical instruments at Munich. His may improvements in glassmaking, in optical instruments, and in the polishing of lenses have been eclipsed by his investigation of the innumerable dark fixed lines in the solar spectrum, known as Fraunhofer's lines. The importance of this दiscovery can scarcely be over. estimated. It led to the invention aud use of the spectroscope, to the science of spectroscopy, and to all our present knowledge of solar and stellar chemistry. See Spectroscope, Spectrum, etc.Fraustadt (frou'stat), a town of Prussia, in the government of Posen, 15 miles northeast of Glogau. Pop. 7462.
Fraxinella (frak-si-nel'a), a species nus Fraxinclla, of dittany, the Dictamceous annual plan ornamental herbafragrant leaves and handsome rosecolored flowers.-Dictamnus albus, or common dittany, is also called fraxinella: its flowers are white.
Fraxinus (frak'sin-us), a geuus of deciduous trees of the order Oleaces, containing the ash.

## Fray Bentos (fri ben'tos) a mall

 town of Uruguay, on the river Uruguny, about 170 miles northwest of Montevideo. It owes its existence to immense slaughter-houses and other establishments conuected with the extract-of-meat trade. Pop. about 5000 .Frechette (fré-shet'), Louis Honore, horn at Levis, Quebce, in 1839 . He was clucated at Nicolet College and Tavai University, studied law nud was called to the bar of Lower Canada, represented his native country in the Dominion parliament (1874-79). coutributed to various newspapers, and became editor of La Patric in Montreal in 1884. He pub-
lished colloctions of poems entitled Mes Loleifrs, Lee Fleurs Bortales and Les Oisoavio de Noige (the two lant crowned by the French Acadamy) ; the dramas Wlic Poutro (1862), Papineau (1880), The Thumderbolt (1882), etc. In prose he wrote Petite Hiotolre des Rofs de Franoe, Lettres a Basile, etc.

## Freakles (frek'zo) are small yellow

 or brownish-yellow spots of a circular form, situated in the middle layer of the okin avd underneath the cuticle. They only appear to any appreciable extent on thowe surfaces exposed to the action of the sun, as the necc, face, hands, and armm. Thit affection is most comion in persuns of fair complexion and hair: in wome casen it is permanent, but in most it disappears with the warm reazon.Fredegonde (fred-a-zun'da), the Frankish king of Neustria, born 543 ; died 697. While in the service of the first and second wives of Chilperic her beauty captivated the king. In order to arrive at the throne Fredegonde got Andowena, the first wife of the king, removed by artifice, and the second (Galswintha) by amsassination (568). This led to a war between Chilperic and his brother Sigebert, king of Austrasia, Brunehilde, wife of Sigebert and sister of the murderel gueen, urging her husband to vengeance. Frederonde found means to have sigebert ameasinated, captured Brunehilde and her daughters, and after a series of crimes, ending with the assasgination of her husband, she seized the reins of government on behalf of her son Clothaire, and retained possession of them until her death.
Fredericia (fred-er-rish'i-a), a seaport and fortress of Denmark, in Jutland, at the north entrance of the Little Belt. In 1849 the army of Schleswig-Holstein was defeated here by the Danes, and in 1864 the Danes were compelled to evacuate it before the superior Austro-Frussian forces. Pop. 12,714.

## Frederick (freder-ik), a city, capital

 of Frederick Co., Maryland, 61 miles w. of Baltimore.' It has an extensive trade, chiefly in live stock, grain, flour, tobacco, wool, etc., and various manufactures. During the Civil War it was occupied on diferent occasions by the opposing armies. It is the scene of the exploit made famous by the poem of Barbare Fritchia. Pop. 10,411.Frederick I, Barbabossa (or, as the Germans call him, Rothbakt, both surnames meaning 'Redbend '), Gorman emperos, son of Fred-
orick, duke of Suabia, was born 1121, and received the imperial crown in 1152 on the death of his uncle the Emperor Conrad III. His principal efĩorti were directed to the extension and confirmation of his power in Italy. In hile firut ex. pedition to Ilaly in 1154 he subdued the towns of Northern Italy, and then 80 t himself crowned at Paria with the iron crown of Lombardy (April, 1155), and afterwards at Rome by Pope Adrian IV with the imperial crown (June, 1156). Soon after his return to Germany the Lombard cities revolted, and Frederick led a second expedition into Italy (1168), took Brescia and Milan, and at the diet of Roncaglia, at which all the citien and imperial vaisals of Italy were represented, he assumed the movereignty of the towns and received the homase of the lords. The rights assigned to the empire were so great that many of the cities refused to acknowledge them, and Milan especially prepared for resistance. Mean. time Pope Adrian IV died (1150), and in electing a successor the cardinals were divided, one section choosing Victor IV and another Alexander III. Frederick aupported Victor, and Alexander was compelled to flee from Italy and take refuge in France. Other expeditions into Italy were made in 1101 and 1100, in the latter of which Frederick at first carried everything before him, and wob even able to set up in Rome the Antipope Paschalis III, whom he uppported after the death of Victor IV. His successes were put an end to, however, by a terrible pestilence, which carried of a large part of his army, and compelled him hastily to return to Germany. Scarcely had he settled the most pressing dificulties here when he undertook, in 1174, a fifth expedition into Italy; but he was totally defeated in the battle of Legnano on the 29 th of May, 117\%, in consequence of which nearly all that he had won in Italy was again lost and he was compelled to acknowledge Alexander III as the true pope. In 1188 he assumed the cross, and with an army of 150,000 men and several thousand roluuteers set out for Palestine. After leading his army with success into Syria be was drowned in crossing the river Kalykadnus in 1190.

## Frederick II,

 ceding, born 1104, wandson of the pre peror Honry VI was onn of the Wm priceen Cone and of the Norman Princess Constance, heiress of the Two Sicilies. He remained under the suardlanship of Innocent III till 1209, when he took upon himself the government of Lower Italy and Eicily. The impertal

crown of Germany was then Worn by a Ifval, Otho IV, whome dereat at the battio of Bouvince opened the way to Erederick, who in 1215, after pledging himaelf to nndertale a cructede, was crowned at Air-ia-Chapelle. He canged his eldest son Henry to be chowen king of Rome in 1220 , and the same sear received the imperial crown from the pope. His amhition aimed at the nnb Jngation of Iombardy, the mastership of all Italy, and the reduction of the poper to their oid spirituai office as the lead. ins hishope in Christendom. This led him into constant struggies in Germany and Italy. In 1227 he undertook a crutade; hut when he did reach the Hoiy Land he was able to effect nothin permanent, althongh he had crowned himself at Jeruaalem ns king of Judea. On his return he had to suppress a revolt of his son Henry, whom he imprisoned for life. In 1237 he broke the power of the Lionnbard League hy a victory at Corte Nnova in Lomhardy, and marched on Rome, but did not attack it. The remainder of his life was occupied with his tronbies in Itaiy, and be died in the midist of his wars in 1250. He was one of the ahiest and most accomplished of the ions line of German emperora, and art, literature, commerce, and agricultnre received evers encouragement at his hands. He himself was a good lingnist, was acqnainted with natural history was a minnesinger, and a writer on phllossphy.

## Frederick I,

 1657. died 1713 the Great Elector, born as miector 1 . He succeeded his father as Blector of Brandenhurg in 1688; became Kine of Prussia in 1700; and waw all his reign hitteriy opposed to France. Fredericis LT, King of Prussia, the Great, born Jan. 24, 1712; died Aug. 17, 1786. He was the son of Frederic: William I and the Princess Sophia Dorothea, sister of George II of England. Althonsh he was instructed only in the detalls of military exercises and service, his taste for poetry and music was early deveioped. He was hrutally treated by his father, and in 1733 he was obliged to marry the Princess Elizaheth Christina, danghter of Ferdinand Aibert, duke of Brunswick-Bevern. Frederick Whliam gave the castle of Schönhausen to het, and to the prince the connty of Ruppin, and in 1704 the town of Rheinsberg, where he lired, devoting himself chiefiy to Ilterary parsuits, composing nevnral works, and correaponding with foreign cholars, particalarly with Voltaire, whomInther raleed him so the throne in 1740 and it was not lons belore he suerted the claims of the house of Brandenbury to a part of Silesia then held hy Mari Therean. But his propoals heins rojected, he occupied Lower Slieula in De cember, 1740, defeated the Austrians neer Moiwits, and at Craslau (Chotults). and the Firat Slieaian war was termi: nated by the peace misned at Berlin, July 28, 1742 , ieaving Frederick in possesuion of Sileaia. Soon the Second Silieaian wat hroke out, the reauit of Which was equally favorabie for Frederick. By the Peace of Dresden (December 15, 1\%45) he retained Sliesia and acknowledzed tho husband of Maria Theresa, Erancis I, 2 emperor. During the eieven following years of peace Brederick devoted himuelf to the domestic administration, to the improvement of the army, and at the same time to the mnses. He encouraged agricuitnre, the arts, manufactures, and commerce, reformed the laws, Increased the revenues of the state, and perfected the organization of his army, which was increased to $160,000 \mathrm{men}$. Secret infurmation of an alliance between Anatria, Russia, and Saxony gave him reason to fear an attack and the loss of Silcsia. He hastened to anticipate his enemies hy the invasion of Saxony (1756), with which the Seven. Yeary war or Third Silesian war, commenced. Ithis was a far more severe strugeie than either of the former. In it Frederick had againat him Austria, Rnssia, France, SFeden, and Freater part of Germany, thourgh Britain and some of the German statea were on his side. He sained victories at Prague, Rossbach, Leuthen, Zorndorf, Toggau, and Freibers, bnt antiered mevere defeats in the battles of Koilin, Hochkirch and Kunersdorf. (See Seven Yeare War.) The Peace of Huhartebarg (1763)) terminated this war, frederick keeping Siliesia and ceding nothing. Frederick came ont of the Seven Iears war with a reputation which promised him, in the future, a decisive infinence in the affairs of Germany and Burope. His next care was the relief of his kingdom. drained and exhausted by the conteat. This he prosecuted with great diligence and liberality. On the partition of Poland in 1772 Frederick received a large accession to his dominions. In 1778-79 he frustrated the designs of the Bmperor Joseph II on Bavaria, and the war of the Bavarian Succession was terminated Fithont a battle by the Peace of Teachen (May 13, 1779). Anstria convented to the union of the principalities of Branconia with Prussia, and remonnced tho feudal claims of Bohemis to thone coun-
trice. In the evening of his active life Iredorick conciuded, in connection with Gasony and Hanover, the conference of the German princes, July 23, 1785. An incurabie dropay hautened the death of Frederick, who left his nephew, Fred. erick William II, a kingdom increaved by 29,000 square milles, a weli-filled treasury an army of 200,000 men, great credit with all the European powera, and a state diatinguished for popnlation, industry, wealth, and science. Frederick's work, relating chiefly to history, politics, military acience, philosophy, and the belles-lettres, were all written in Firench, the languase which he regularly used, as he despised German. He was a inan of the highest abilities, hat in some respects narrow and repeilant. Among his closest friends was the Scottish exile, Marmal Keith. Carlyle's Life of Fred. erioh the Grect is an ahle presentation of his career.

## Frederick III,

nucceeded William died Jnne 15, 1888. the Princess-Roye deughter of Quen of Britain, cirlest manded the Army of the Oder in the war With Anstria (1866), and in the FrancoGerman war he led the army which ultimately forced Napoleon III and his army to unrrender at Sedan. He also took a prominent part in the siege of Paris. In 1887 he was attacked by a serlove throat affection, which tnrned out to be of a cancerons character, and which after a series of relapses proved fatal. Hie renown as a military commander, his liberal views, his patience and fortitude under trouble, and his many lovahle gnalitiem made him popnlar.
Frederick VIII, King of Denmark, tian IX in 1806. He was horn in 1843, married the Princess Jonisa of Sweden in 1869, and bad three daughters and far sons, the oldeat son, now Christiau $X$, born in 1870. He was hrother to the dowager Queen Alexandra of Britain, the dowager Empress Dagmar of Russia, and George I of Greece, and father of Haakon VII of Norway. Died in 1012.

## Frederick Augustus II and III.

See Augustur.
Frederick Charles, Prisces, known Prince, born 1828; died 1885. He was nephew to the Emperor William I, and gained fame for his military exploits Inring the wars of 1866 and 1870 . Nadowa, Thionville, Gravelotte. and St. Privat are among his chiel achievements.

## Fredericksburg, a city of Virsinia,

 credexicksourg, on the Rappabannock, 00 miles north by eant of Rjchmopd. Hero the Federal forces nnder Burnside were defeated by the Confederates nnder Lee on the 13th of December, 1802 . It han varied manufactaring industries, and the river affords considerabie water-power. The city is nuder commission form of sovernment. Pop. 6874.
## Frederickstad, a town of Norway,

 the Glommen, 48 miles s. of Christiania. Formerly strongly fortified, it has an arsenal, manufactnres hardwars, pottery, etc., and has some shippins and general trade. 1Pop. 14, $\mathbf{6 0 3}$.
## Frederiok William, of Prnsefa, senerally

 called the Great Elector, was born in 1620 ; died in 1688 . At the age of twenty he sncceeded his father as Elector of Brandenburg. He must be considered as the founder of the Prussian sreatnese, and as the creator of a military spirit among his subjects. His reign began when the nnhappy Thirty Years war was still raging in Germany, and his conduct towards both parties was prudent. He succeeded in freeing Prussia from feudal suhjection to Poland; and obtained possession of Pomerania in 1048. In 1672 he concluded a treaty with the Dntch liepahlic, when this state was threatened by Louis XIV. In 1173 he conclnded a treaty hy which France promised to evacuate Westphalia, and to pay 800,000 lirres to the elector, who, in retnrn, hroke off his treaty with Holland, and promised not to render any aid to the enemies of France. In 1674 the German Empire declared war against France. The elector marched 16,000 men into Alsace, hut a Swedish army having been indnced to invade Prussia, Frederick turned back and totally defeated it at Fehrbellin (1675). Some years after the swedes again invaded his territozies, hut were driven hack. France, however, demanded the restoration of all the conquered terri tories to Sweden. The elector, having refnsed compliance, formed an alliance with Denmark, and waged a new war against Syweden, bnt was at last ohliged to suhmit. He paid great attention to the promotion of agricnlture and horticulture, and, hy affording protection to the French refugees, gained 20,000 indnstrious manufacturers, who were of the greatest a arantage to the north of Germany. Berlin was much improved during his reign. He left to his son a country much enlarged and improved, ar army of $28,000 \mathrm{men}$, and a well-supplied treasury.
## Frederick William I, $\begin{aligned} & \text { King } \\ & \text { of } \\ & \text { of }\end{aligned}$

 con of Frederick I and father of brederick the Great (II), was born in 1088 ; died 1740. While crown prince (1703) be married Sophia Norothea, daughter of the Eiector of Hanover, afterwarda George I of England. On his acceation to the throne, in 1713, he endeavored to increase the army and reform the finances, and became the founder of the exact discipline and regularity which have since characterized the l'russian soldiers. He was very miserly, eccentric, and arbitrary. He opposed Charles XII, and was the protector of tine neighboring lrotestant ritates. His ridicuious fond: ness for tall men in his army is well known. He jeft bebind him an abundant treasury and an army of about 70,000 men. His affairs were in the greatest order and regularity, and to his energy Prussia was much indebted for that prosperity and success which distinguished her till she was lumbled by Napoleon.Frederick William II, King of born 1744 ; died 1707. He succeeded his uncie, Frederick the Great, in 1786, and shared in the second partition of Poland. Frederick William II, Ered of erick Wiliam II, boru 1770 ; died 1840 . During his reign Pruscia suffered much at the hands of Napoleon, inciuding defeate at Jena, Eylau, Friediand, etc., and lost a large portlon of territory, which, however, was recovered after the fall of Napoleon.
Frederick William IV, King of son of Frederick William III, was born 1705; died 1861. He was carefully trained by the best masters in all the leading branches of knowledge and art, civil and military. He took part, though without any aetive command, in the rampaigns of 1813-14. When he succeeded to the throne by the death of his father in 1840 his first proceedings were both of a popular and praisewurthy character. He soon, however, began to pursue a retrograde and absolutist policy. The popular movement which followed the French revolution of 1848 was at first met by the king with firmness, but on the demand of the people that the troops should be withdrawn frem the capital. backed by an attack on the arsenal, the king offered concessions, which, however, he retracted on his power becoming more secure. Subsequently his mind gave way, and he sank into a state of hopeless imbecility, which rendered it necessary to appoint bis brother William regent of the

Kingdom. If died without laue, and was succeeded by his brother, who tew years iater became emperor. of united Germany.
Frederioton (Eredererlitun) the wick Dominion of Capital of Now Brung8t. John, about 84 miles from the river and 54 miles N . N. W. of the town of 8 St , John. It is weli jaid out, and ham handsome pubilic buildings, Inciuding the sovernment house, the provinctai huildiag. courthouse, town-hali, cathedral, uni: versity, etc. The trade is extensive and increasing, the river being navizabio for farge ateamers. Pop. (1011) 7208.

## Frederikshald (frid drek-hal), or EBEDERTKAHALE,

a seaport of Norway, at the mouth of the Tistedal in the Idde-fiord, about 60 miles 5. S. E. of Christiania. Immediateir to the south stands the fortress of Frederiksteen, at the siege of which Charlea XII of Sweden was killed, 30 th Novem. ber, 1718. An obelisk marks the apot Pop. 11,048
Fredonia, a viligge in Chautaugaa miles s. of Dunkirk. It han large nurncries and cannerien, and produce wine, grape juice and flour. Here is a State Normal School. Pop. 5285.
Free-bench, in law, the right which a widow has, in some parts of Engiand, in her hushand's copyhold lands, corresponding to dower in the case of freeholde.

## Eree Church of Eingland, an Epin

 body separate from the Established Church of England, founded in 1844 as a counteracting movement to the tractarian movement. The churches belonging to it, though not numerous, are widely apread. The service is practically identical with that of the evangellcal party of. the national church. The church is governed by convocation and tiree bishops.Free Church of Scotland, byterian Church organized as a separate body from the Established Church in May, 1843, as the final outcome of long con: tinued dissensions in the church, dating back to the reign of Queen Anne. $A$ proposal for union with the United Presbyterian Church failed in 1873; but 2 mimilar prnposal with regard to the fueformed Presbyterian Church was ure cessful in 1876.
Free Cities, their own. and pendent zovernment of by then and virtualiy forming statel by themselves; a name given to certain
of the Gorman Confederation, and exercieed movereign juricdiction within their own boundarien At the time of the Frunch Revolntion the free or 'imperial' cltiee numbered no fower than fifty-one. Thees pradually lost their standing ai free citee, and after the incorporation of Erankfort with Prussia in 1860 only three were left, Hamburs, Bremen, and Labeck. Theme now ranis as eity-itaten of the German empire.
Free Companies, Faze Laxces, the troops of private adiventarers who, In the middle ages, orranized themselves into bands of mercenary soldiers, and let out their gervices to the hishent bidder. They played their most conspicuous part in italy, where they were called Condotrieor.

## Eree Congregations

(Ger. Frele (Gemeinden), sometimes called 'Protentant Eriendi,' a eect of German Rationaliste, who at tirst protewed to he Chriatiane, but now reject the doctrinen of miracnlous revelation and a personal deity. There are upwards of 120 congregations of them in Germany, and a few in the United Btatel.

## Freedmen (liberti, libertini) was the name applied hy the

 Romans to those persons who had been released from a state of servitude. The freedman wore a cap or hat as a sign of freedom (hence the origin of the cap of liberty), assnmed the name of his master, and recelved from him a white garment and a ring. With his freedom he ohtained the rightis and privileges of a Roman citisen of the plebeian rank, hut conld not be raised to any office of honor. The title wras applied to the freed slaves after the Civil war in the United States.Freedmen's Bureau, is thhished ed States in 1865, exercised the Unitanpervision over the freedmen and other lojal refngees, protected their rights, found worl for them, and provided education and medical treatment. It was aholished in 1870 .

## Freeland (fréland), a borough of

 vania. 9 milles N. of Hazleton. It has machine shops and varions factories, with coal-mines in its vicinity. Pop. 6197.Freeman, EDWARD AUGUsTUS, an archzologist, born at Harhorne, Stafiorshire, in 1823, edincated at Trinity College, Oxford, of which he was a scholar and fellow. He received varions academical and other distinctions, and in 1884 became repius profonior of modern his-
tory at Oxford. Elis worken, which are Very voluminous, laciude Hibiory of Arohitcoture, 1810 ; Hibiory and Conquedts of the Earacens, 1850; Old E'ng. lish Hiesiory 1800 ; Growth of the Enf: tioh Comatioution 1872; Hiniorical ELO. sayy, 1872-70 History of the Norman Conquest, 1807-70; and the Reign of Wilfiam Rufus end Acopecion of Henry 1, 1882. He died in 1892.
Freeman, Mary Winkins. See Wil. kina, Mary E.
Freemasonry, the ormanization to a society calling themselves free and accepted masono, and all the myateries therewith connected. This society, if wo can reckon an one a number of societien, many of which are unconnected with each other, though they have the eame origin and a sreat similarity in their conetitution, extends over almost all parts of the slobe, and is conseqnently of the greatent gerrice to travelera who are membere of the craft. According to its own pecillar language, it is founded on the practice of mocial and moral virtue. It claims the character of charity in the moat estended sense; and brotherly love, rellef, and truth are inculcate y in it Fahle and imagination have traced hack the origin of freemasonry to the Roman Empire, to the Pharaohe the Temple of Solomon, the Tower of Babel, and even to the building of Noah's ark. In reality, it took ith rise in the middle ages along with other incorporated crafts. Skilled masons moved from place to place to assist in bnilding the magnificent sacred structures-cathedrale, abbeys, etc.-which had their origin in these times, and it was ensential for them to have some signs hy which, on coming to a strange place, they conld be recognized as real craftsmen and not impostore. Freemasonry in its modified and more modern form dates only from the serenteenth century. The modern ritual is said to have been partly horrowed from the Rosicrucians and knights templars, and partly devised hy Elias Ashmole, the fonnder of the Ashmolean Museum. Freemasonry, thne modified, soon hegan to spread over the world. In 1725 it was introduced into France by Lord Derwentwater ; and in 1733 the first American lodge was established. The United Grand Iodge of England recognizes only two species of Freemanonrythe Oraft and the Royal Arch; Scoteh, Irish. American, and continental lodses acknowledge hither degrees: hut these, with the exception of the Mark Degree, are not universal. In ordinary free: masonry there are three grades-thone of appreatice. fellowecruft, and master me
con-ench of which has its pecuilar infthatory ceremonies: the lant of theae cradee, however, if nocemary to the attainment of tho full rishts and privileget of brotherbood. It is at present a very fourimhing institution in the United States, and had in 1010 nearly $1,400,000$ members, being surpassed in memberwhip only by the Odd Feiiows' Asmociatlon. Freemanonry is under the ban of the church in Spain, Ytaiy, and other Catholic conntries, and it membership there is mall and scattered.
Free Port, a harbor where shipe on payment of a moderate toli, and iond or unload. Goods may be stored at firat at free ports withont paying any duty; the soods may then be either reshipped for export on paying a mere transit duty, or admitted on payment of the usual fuli cnstoms of the country.
Freeport, A city, the county reat of noie, 112 miles sephenson County, Iilithe Pecatonica River and four railroads, popessees railroad shops and manufactures of carriages, windmilis, hardware, gasoline engines, etc. Pop. 21,000.
Free Soil, the name of a politicai founded in 1840 to oppose the extension of siavery to the Territories. It nominated Martin Van Buren for President in that year, but he failed to gain any eiectoral votes. It had a candidate aiso in 1852, but was absorbed by the Republican party in 1850.
 originated in Aisace in the thirteenth century, and quickly became disseminated over Italy, France, nnd Germany. They claimed 'freedom of spirit,' and lonsed their ciaims on Rom., viii. 2.14. 'The law of the spirit hath made me free from the law of sin and death.' Thence they deduced that they could not sin, and lived in open lewdness, going from place to piace accompanied by women under the name of 'sisters.'

## Freestone. See Sandstong.

Freethinkers, an enithet anpijed Deists of the seventeenth and eirhteenth centuries who argued for natural as against revealed religion. Antho Colline (who firmt made it a name of a party by his Discourse of Free-thinking. Iondon, 1713), and his friend, Joil 1 Tciand, are among the chief of the pariy free thinkers. Another ahie writer on the same side was Math. Tindal (difi 1733), Whose Oiriotianity as Old as the Orea:

## Hon. (1780) cauved a great nossation. <br> - Bolingbrote and liume tito tho amope advanced froethinkers. In Nit Voltaire and the encrclopoditt U'Aiembert Diderot, and Helrotlus Ied the opposition ngainat revealed milision. The rame pipirit became favionabio in Germany in the reisn of Frederlek the Great The term is now generaily applied to designate Rationaiiste in general, who are to be found amons Chrititians as weli ais non-Christiana.

Freetown, a seaport of West Africa, capital of the Britibh cet. tiement of Sierra Leone, not far from the entrance of the entuary, or river of Sierra Leone, in the vicinity of extensive swamps, which make it very unhealthy Its principal streets are uroad and straisht, and have a very attractive appearance. Among the pubiic bnildingw are severai churches, agovernor's boute, and barracks. Pop., 30,000 , largeiy liberated negroes. Only a few hundred of these are Europeans.
Free-trade, the term applied to national commerce when relieved from such interference as is intended to improve or otherwise influence it ; that is, unrestricted by laws or tarifif, and not unduiy utimulated by bounties. In all countrles it wat lons heid to be of importance to encourage native production and manufactures by excluding from their own markets, and from the coionial markets over which they had control, the competing produce and manufactures of other countriem $\mathrm{On}_{\mathrm{a}}$ this theory the great body of British commercial legislation was founded until 1840, when the policy of free-trade was introduced in grain, and afterwarde gradnalify extended by the repeal of the navigation laws in 1849 and other great meas. irres, until nearly ail British commercial legislation has been bronght into conformity with it. Free-trade can bardly yet be said to have heen adopted as a principle of commercial policy by any nation except Great Brltain As an economic principie free-trade is the direct opposite to the principie or system of protection, which maintains that a state can reach a high degree of material prise perity only by protecting its domestic industries from the competition of all similar foreign industries. To effect this protecting countries either prohihit the importation of foreign goods by direct legislationi, or impose snch dnties as hhall, by enhancing the price check the intro: duction of foreign goods. The adrocaten of what is called fair trade, a recent development in Britain, profess a preforence for free-trade were it unfvernal or
eren common but in view of the fact that Britain is almost the sole free-trade cuuntry in the world, they declare that a policy of reciprocity is required for the protection of British traders and mannfacturere. The progress made by Britain since 1846 is adduced hy free-trade advocates as a striking proof of the wisdom of the existing policy. See Protection.
Free-will, the power of directing constralnt by necesslty or fate, a doctrine malntained in the fields both of theology and of metaphysics. See Will.
Freezing (freszing), Conomatron, transformation of a liquld into a solld under tbe Influence of cold. Dach a llquid always solidifies at some fixed temperature, wblch is called lts freezing-point, and the solld melts again at the same temperature. Thns the freeaing-point and the melting-polnt, or point of fusion, are the same, and the point is always the same for the same substance. Cunsequently the freezing-polnt of water, or the melting-polnt of lee ( $32^{\circ}$ Fahr.), is taken for one of the fixed points ln thermometry. The freezlng-polnt of mercury is $39^{\circ}$ below zero of sulphuric ether $46^{\circ}$ below zero, of alcohol $203^{\circ}$ below zero Fahr. It has heen shown that the increase of pressure upon water, and upon all snbetances whleh expand in freezing. will lower the freezing-polnt; and that sucb substances as wax spermacetl, sulphur, and paraffin, whlch contract in freezing, have the freezlug-point raised hy pressure. Artificial freezing is attained by the liquefactlon of sollds or the evaporation of llquids. These processes absorb heat, and by abstracting lt from the surrounding substances freeze the latter. Among freezing mixtures are: (1) two parts of pounded ice or fresh snow and one part of common salt, which canses the thermometer to fall to which (2) eqnal parts of water, of powdered crystallized nltrate of ammonla, and of powdered crystallized carbonate of soda, which prodnces a cold of $-7^{\circ}$; (3) three parts of snow with four parts of crystallized chlorlde of calclum, producing a temperature of $-54^{\circ}$; while (4) with a mixture of liqnid nitmus oxlde and carbon disulphide a temperature of $-220^{\circ}$ is reached. Ice-making machines arn now in common nse in the United States, larce quantities of artificial ice belng made at prices enabling it to compete with natural ice.
Freiberg (friberh), a German minthe mining aistrict of Saxony, 20 miles W. s. W. of Dresden, near the Mnlde.

There are utill remains of it former walls, towers, and ditches, but their site has mostly been converted into a promenade. The principal buildings and establishments are the cathedral, the mining academy with a museum attached, the townhonse, the castle (now a military magazine), the royal silver refinery, etc. The Freiberg district yields silver, copper, lead, and cohalt, and the clty has large silver-smelting works, besldes numerous manufactories. Pop. 30,896.
Freiburg (fri'burh), or Frembure im bretseav, a town of of Strasburg. It consists of the town proper, still possessing some remains of fortlications, and of two suhurhs. The chlef bnlldings are the cathedral, a large and beautiful Gothic structure, with a fine portal richly sculptured, and surmounted hy a tower with a splre of exquisite open work 380 feet bigh; the Iudwigskirche; the university, founder in 1456; the museum, theater, grandducal palace, etc. The manufactures are numerons, hut not individnally of great extent. Pop. (1910) 83,324.
Freiburg, a canton and town of SwitFreienwalde
( $\mathrm{fr}{ }^{\prime} \mathbf{e n}$-val-de), a town Potsdam, witb a chalybeate spring and bathing establishment ln the vicinlty. Pop. 7995.
Freight (frat), the sum paid by a biring a sbip or part of a ship, for the nse of snch ship or part during a specified voyage, or for a specified tlme; also any snm charged for the transportatlon of goods, and the guods themselves, however transported.
Freiligrath (fri-lih-rait). Ferminand, at Detmold, 1810 ; dled at Cannstadt, in Wirtemberg, 1876. In 1838 he published at Malnz a volume of hls collected poems, whlch proved successful and gained blm a penslon, which be relinquished on the publication of his Glanbensbekenntnis ('Confession of Falth'). the republican character of wblch caused his prosecution and flight to Iondon. He returned to Germany in 1848 and took part in tbe revolutionary movements, publishing the polltical poems Die Revolution, Februarklanne, and Die Todten an die Lebenden. The lant of tbese led to his being pnt on trial for treaenn. Thits trial. in whlch he was acquitted, is memorable for annther reason. being the first jury trial ever held in Prusula. From in Ensland, but his last jeario were gent
at Cannstadt. Many of hif songe are yet popular. Germany is indebted to him for many admirable translations from foreign languages, an from Burns, Tannahill, Moore, Hemans, Shakespere, Lonsfellow, Walt Whitman, and Victor Hugo. Freising (fríaing), a town of Ba the Isar, 21 miles N. N. E. of Munich. It has a fine old cathedral church. Pop. (1805) 13,538.

Fréjus (frà-zhlis; ancient Forum Julii), a town, France, dep. Var, on the Mediterranean, 45 miles N. $\mathbf{E}$. of Toulon. Pop (1908) 8450.
Frelinghuysen (freling-hisen), the name of several Americans of note- (1) Fraderack, born in New Jersey in 1753, died in 1804. He was a member of the Continental Congress during most of the Revolutionary war, served as a captain in the army, took part in 1796 in the expedition against the Whisky Insurrection, and was United States senator, 1793-96. (2)
azodone, a son of the former, was born in Millstone, New Jersey, in 1787, died in 1862. He commanded a company of volunteers in the war of 1812, and was elected to the United States Senate in 1829. He was made Chancellor of the University of New York in 1838, and in 1844 was nominated for Vice-President of the United States by the Whis party. He was defeated, with Henry Clay, the candidate for President. In 1850 he became president of Rutgers College. (3) Fredsrick Theodore, a nephew of the last named, was born at Millstone, New Jersey, in 1817, died in 1885. He gained eminence as a lawyer, was attornev-general of New Jersey 1861-66, United States Senator 1868-77, and Secretary of State in President Arthur's cabinet 1881-85.
Fremont (frê-mont), a city, county braska, 32 miles w. N. w. of Omaha. It has a large trade in grain and lumber, and has dairying and agricultural interests and various manufactures Pop. 10,000.
Fremont, a city, county seat of Sanmilee 1 dusiy. Liues of steamers run to the principal ports of Lake Erie. It is in a productive oil and natural gas region and has numerons industries. A hydro-electrie power plant was completed in 1913 at a cost of $\$ 1,500,000$. Pop. 12,000.
Frémont, Jour Crablies, explorer, gia, in 1818. He conducted five -Georand adventurous expeditions which ex-
plored the passes of the Rocky Mountains. In the year 1845 he cromed the mountains by a new line, ccaling the summits sonth of the South Pase and crossed 3500 milen of country, much of it in sight of eternal snows, discovering the grand features of Alta California, ito great basin, the Sierra Nevada and the valleys of San Joaquin and Sacramento. He was again in California durias the Mexican war and did much in securin: that country for the United States. In 1848 he purchased a large auriferous tract called the Mariposis estate, on which he settled in 1849. He conducted a final expedition to the Pacific in 1853, and in 1856 he was the first candidate of the newly-organized Republican party for the Presidency, but was defeated by the Democratic candidate. In 1861, on the outbreak of the Civil war, he was appointed a major-geperal of volunteera, He then, as commander of the weatern Union army, marched into Missourl with the view of encountering General Price's Confederate force then in possension of that state, but an order issued by him for the confiscation of the property and emancipation of the slaves of thone in arms against the government was diapproved by the President and he was removed from the command and cent to the East, where he fought an indeciaive battle at Oross Keys. Soon after he resigned his command, being unwilling, for personal reasons, to serve under General Pope. He was appointed Governor of Arizona in 1878, and commismioned major-general in the regular army, retired, in 1890. He died in the same year.
 bom sions, a Britinh soldier, born at Ripple Vale, Kent, in 1852 . Hé entered the army in 1874; served in the Sudan campaign and in the Boer was, where he gained the reputation of a dar ing cavalry leader. At the outbreals of the European war he was appointed com-mander-in-chief of the British land fomen operating in France.
French Berries, known also in and yellow berries, the drupe of the Rhem nue alaternus, one of the apecies of buckthorn. In sive they are rather lem than a pea, have a bitter and astringent tasto and are used by dyers an a yellow coloriay matter. The berrion are imported rom France and also from Persia, whence they are sometimes called Peruian barrica. French Chalk, caly tale a vartots masses composed of mall neales of a
pearly-white color; used by tallore for marting cloth and removing srease. French Guinea, A ceil ony th France of Africa between Portuguese Guines and the British colony of Sierra Leone, and extends inland to about $71 /{ }^{\circ} \mathrm{wW}$. The highland region of Futa Jallon, which befins about 80 m . from the coast, is rich In cold and cattle. The chief products of the colony are palm-oil and nuts, millet, earthnuts, gum, rubber, and coffee. The principal exports are rubber, cattle, ground-nuts, and palm-kernels. A railroad ( 366 m . long) from Konakry, the capital, to the Niger was opened in 1911. Area, 95,000 sq. m.; pop. 1,500,000. French Language and Literature. See Frrance, Language of, and French Revolution, a political revolution for which the intellectual movement of the 18th century, connected with the names of Montesquieu, Diderot, Voltaire and Rousseau, had prepared the way. The direct causes, however, were political and economic rather than intellectual. See France, Eistory.
Ereneau (fre-nd), Philip, poet, was 1752. Graduated at New York city in Captured by a British cruiser in 1780 , he Wrote The British Prison Ship. As editor of the National Gazette his virulent attacks on the Federalists aroused Hamilton's anger. His poems were numerons, chiefly of Revolutionary times. He died in 1832.
Frere (frer), Sis Herbi Babtix ministrator, boorn statemmat, and add 1815; died at Wimbledon, 1884. He entered the East India Company's civil servo ice in 1833; mastered the native lan: guages with great rapidity, and introduced important Improvements into the system of tax collection. He rendered valuable eervices during the muting, at the close of which he was nominated to the viceroy's council at Calcutta. In 1872 he negotiated a treaty with the Sul. tan of Zanzibar, abolishing the slave trade in that ruler's dominions. In 1877 he went to Sonth Atrica as commisesioner for the settlement of native affaira, but this mieston was a fallure. He what the author of a life of hir uncle, John Hookham Frere, numerons lectures, pamphlets, etc.
Frere, Johr Hookray, born at Lon1844. He is now chieAty remembered in one of the writers in the Anisfoacobin Rovieno at the close of the elghteenth cen-
tury; and afterwards connected with the entabliahment of the Ouarterly Roview in 1800. 4 matirical poem pnblithed by him in 1817, entitled Prospeotus and Eppoimen of an Intended National Work, by William and Robert Whistlecraft, followed by another entitled The Monks and the Giante, obtained in their day mnch popularity. His tranalations in verse of some of the comediem of Aristophanes are well known for their remarkable excellezce. Mr. Frere entered parliament in 1796 , and sncceeded Canning as under-secretary for foreign affairs in 1799. In 1818 19 he acted as British ambassador in Spain, and subsequently held other diplomatic posts in Portugal and Prussia. The latter years of his life were gent in Malta.
Fréron (fră-rōn), Elit Catharife, a French journalist, born at Quimper in 1719; died at Paris 1776. In 1746 he commenced a periodical entitled Lettres de Madame la Comtesse de and ; this, with various interrnptions and change of name, was continned until his death. He may be called the fonnder of newspaper criticism in France; and had a lifelong conflict with Voltaire and the encyclopedists.

## Fresco Painting (frea-ko), a meth-

 ing in water colors od of mural paint. grounds of lime or gypsnm. Mineral or earthy pigments are employed, which resist the chemical action of lime. In drying, the colors are incorporated with the plaster, and are thereby rendered as permanent as itself. In prodncing fresco paintings, a finished drawing on paper, called a cartoon, exactly the size of the intended picture, is first made, to serve as a model. The artist then has a limited portion of the wall covered over with a fine sort of plaster, and. upon this he traces from his cartoon the part of the design snited for the space. As it is necessary to the success and permanency of his work that the colors should be applied While the piaster is yet damp, no more of the surface is plastered at one time than what the artist can finish in one day. A portion of the picture once commenced, needs to be completely finished beform leaving it, as fresco does not admit of retonching after the plaster has become dry. On completing a day's work, any unpainted part of the plaster is removed, cntting it neatly along the outline of a figure or other definite form, so that the Joining of the plaster for the next daj's wort may he concealed. The art is very ancent, remains of it being found in India, Esypt, Mexico, etc. Examples of Roman frescoes are found in Pompeli andother placen. After the beginniug of the fifteenth ceutury frewco painting became the favorite proceses of the greatest Italian masters, and meny of their noblent pictorial efforts are frencoes on the walla of palaces and churchem Some ancieat wall-paiutings are executed in what is called Fresco Seoco, which is distinsuished from true fresco by being executed on dry plaster, which is moisteued with lime water before the colors are applied. Fresco painting has in receut years again been revived, and works of this kind havo been executed in the British Houses of Parliameut and other public and privato huildiugs, more especially in Germany. Fresnel (fra-nel) A Voustin Jwaic, a born 1788; celebrated French physicict. He began to experimeat upon the nature of light about 1815, received a prize in 1819 from the Academy of Sciences for his treatise $O_{n}$ the Diffraction of Light, and ju the end did for physical optics what Newton had done for astronomy, his experiments tending to prove the truth of the theory that light consists in the vibration of an elastic medium. Up to that date the emission theory of Newton had held sway. The honor for this great result he shares in common with the Euglish physicist, Dr. Thomas Young. He made the first snccessfnl use of lenses in the lamps of lighthouses, inventing the illuminating apparatus, which is now used throughouc the civilized world.
Fresnillo (fres-nél'yo), a city of MezN. N. W. of Zacatecas. In this vicinity are celebrated silver and copper mines. Pop. 13,000.
Fresno (frez'no), a city, seat of 208 miles F. Fresno of Sounty, California, in a productive grain and fruit region aud if especially noted for the ralsin product of its. vicinity and for its wine. It ships fruits, green and dried, cereals and wool. Pop. 30,000 .
Fret, a kind of ornament much emplojed in Grecian art and in sundry modifications common iu various other styles. It is formed of bands or fillets variously combined, but most frequeutly consists of continuous lines arransed iu rectangular forms. Sometimes called key ornament.
Frets, certain short wood, ivory, or Frets, metal crossbars on the fiugerboards of stringed instrumeuts, as the guitar, ete., which regulate the pitch of the notem. By pressing the striug down to the fingerboard behind a fret onls 50 much of the ntring can be set in vihrition as lies between the fret and the bridge.

## Freudenstadt (froidenstat), a town

 of Wurtembert. 40 miles B. W. Stuttgart, with afi. old church and a town-house. Pop. 7: i. Freya (friya), in the norinera mythology, the goddess of love and wife of Odhr; she was a friend of sweet coug, and loved to hear the prayers of mortals. She had a famous necklace, mnch celebrated in Scandinavian legends: She is often confouuded with Frigga.
## Freyberg. See Freiberg.

## Freyburg. See Freiburg.

Frejcinet (frä-si-ua), Chablea LoUis de Saulces DE, a French atatemman, born at Foix (Ariege), in 1828. He was trained as an cngineer, aud held several important appointunents; he was elected to the senate in 1876 ; was minister of pnbiic works, 1877; minister for foreign affairs, 1879, aud president of the council and minister for foreign affairs for longer or shorter periods iu 1882 and 1886. He is the author of several important works on engineering.
Freytag (fritah), Guarav, a German poet, dramatist, and novelist, born 1816. He was editor of the Leipaio Grenzboten from 1848 to 1870, and has produced numerous snccessful plays, tales, and poems. Among his more famous works are soll wis Haben ('Debit and Credit'); Bilder aus der Dentechen Vergangenheit ('Pictures from the German Past') ; Dic Verlorene Handsohrift ('The Lost' Mannscript'), aud Dis Ahnen ('Our Aucestors'), series of six romances illustrative of old Germau life. Died 1895.
Friar (fy'ar; Fr. frire, Lat. frater, rriar brother), in the Roman Catholic Church an appellatiou common to the members of ali religious orders, but more especially to those of the four mendicant orders, vis. (1) Minors, Gray Friars, or Frauciscans; (2) Angustiues; (3) $\mathrm{DO}_{0}$ miuicans or Black Eriars; (4) White Friars or Carmelites.
Fribourg, or FREIBURG (frê-hor' Eribourg, fri'bprh), a cauton of Switzerland, surrounded by the cantons of Berne and Vaud, except a narrow part, which tonches the Lake of Nenfchatel. The southern part is monntainons, the uorthern part more level. The whole canton abounds in excellent pasturage, and cattle breeding and dairy hushandry are the chief occupations of the inhabitante. Area, 644 square mile:; pop. 127,051, of whom the great majority are Roman Catholics apeahins French. The capital, which has the same name, fo picturesquely situated on the Baane, 17
millen 2. W. Berne. It stands partly on a rocky eminence at the edge of a ravine nearly surrounded by the river, which is here apanned by a muspension bridge 168 feet above the water. The Gothic chnrch of 8 . Nicholas contains ons of the fincat organs in Europe. Pop. 15,794.
Frioassee (fri-kas-sé), a dish of food rabbits, o\% other small hy cntting chickens, rabbits, oy other small animals into pieces, and dreasing them with a strong sance in a frying pan or a lir? utensil.
Fricative (frik a-tiv), a term approinced by the friction of the letters praing throush a friction of the breath organs of articulation, as opening of the Friotion (fris'shnn), in physics, the Hatance which a moving body or the rofrom the surface on which it moets with Iriction arises from the roughness of the aurface of the hody moved on $e$ ad that of the movins body. No such thing can be fond as perfect sn sothness of surface in bodies. In every case there is, to a less or sreater extent, a roughness or unevenness of the parts of the snrface, arising from peculiar teztnre, porosity, and other causes, and therefore when two surfaces come together the prominent parts of the one fall into the cavities of the other. This tends to prevent or retard motion, for in dragsing the one body over the other an exertion mnst be nsed to lift the prominences over the parts which oppowe them. What is called the coefficient of friction for any two snrfaces is the ratio that nnbsists between the force necessary to move one of these surfaces horizontaliy over the other and the pressure between the two snrfaces. Thns, the coefficient of friction for oak and castiron is $38: 100$, or .38 . Friction plays a mont important part in nature and art; for instance, but for it threadis conld not be made nor textile fabrics manufactured. Friction-rollers, a name common ers or cylinders employed to convert slidins motion into rolling motion. Such cylinders are often placed nnder heavy bodies when they are required to be moved any short distance on the surface of the gronnd; and, in machinery, the same method is occasionally employed to diminish the friction of a hearily loaded axis In that case a nnmber of small cylinders are inclosed ronnu the axis, and partake of its motlon.
Friotion-wheels, in machinery, wheels or cylinders intended to assist in diminishing the friction of a horizontal axis The wheels are simply plain cylin.
deru ( $a$, e) carried on parallel and independent axes (b,b). They are disposed so as to overlap pair and pair at each end of the main axis (c), which rests in the angles thns formed by the circnmferencer.

Friction-wheols.
The axis, iustead of sliding on : fixed surface, as in ordinary cases, carriea round the circumferences of the wheels on which it is supported with the same velocity as it possesses itself, and in consequence the friction of the system is proportionally lessened.
Friday (irida), the sixth day of the Frige-deg, the day, from the Anglo-Saxon. to Pras, the day sacred to Frigge or Firideya, the Saxon Venus. See Good Friday.

## Friedland <br> (frēd'lint). (1) A town of Northern Bohemia.

 Wallenstein was created Dnke of Friedland in 1022. Pop. 6241. (2) A small town of East Prussia, 28 miles \&. E. of Konigsberg, on the river Alle. Pop. 2824. The Russians nnder Benningsen were here defeated on the 14th June, 1807, hy the French nnder Napoleon. (3) A town of Mecklenhurg-Strelitz, 30 miles N. E. of Strelitz. Pop. 7143.Friedrich (fredirih), the German Friedich form of Frederick.
Friedrichsthal (fred'rihs-th1), a town in the extreme south of Rhenish Prussia, with glassworks and coal and iron mines. Pop. 5871.

## Friendly Islands, or tonat is-

 in the Sonth Pacific Ocean, a cluster lat. $18^{\circ}$ and $23^{\circ} \mathrm{s}$., and lon. $173^{\circ}$ and $176^{\circ}$. They consist of three groups, which are divided from each other by two narrow chaunels, and number altogether abont 150, with a collective area of ahout 400 sq , miles. The largest island is Tongatabn, in the s. gronp, with an area of 128 sq . miles, and containing the capital, Nukualofa. Vavao, in the N. gronp, which is named after it, is next to Tongatabn in size; the central group is called Hapai. The islands are nearly all Folcante Fith coral reefs and rocks abont them; earthqnakes and volcanic eruptions are frequent; dnring one of which, in Oct., 1885, a new island 2 miles in circumference suddenly appeared.These islands were discovered in 1643 by Tasman, but received their collective name from. Cook. They are now governed by a native Christian prince. The trade is considerable, the chief exports being copra, colfee, and wool. Population, 20,077 , including about 260 foreigners.
Friendly Societies, societies the mutual adrantage of formed for and based on the principle that it is by the contribution of the savings of many persons to one common fund that the most effectual provision can be made for casualties affecting, or liable to affect, all the contributors.

Mutual provident association, on the voluntary principle and in a friendly society form, as an economic duty, is strictly confined at present to the Eng-lish-speaking races, though attempts are being made to introduce the system in both Italy and Austria-Hungary. Provident insurance, indeed, is enforced throughout the German empire among all classes of workmen, but only as a form of state socialism enar ed by law and largely subsidized by the employers. In France the method employed is the individualistic system of savings banks. See I'raternal Societies.

## Friends. See Quakers.

Fries (frẽs), Eluas Magnus, a SwedFries ish botanist, born 1794; died 1878. He published, among other volumes, a great work on fungi.
Fries (frës), Jakion Friedriciri ${ }^{\text {a }}$ died 1843. His works are numerous, the most important being Neue Kritik der Vernunft, System der Philosophie als evidente Wissenschaft, and Wissen, Glaube wnd Ahnung.
Fries, Join a, German-American, Fries, leader of Fries Rebrilion, borm in Bucks county, Pa., in 1704; died in 1825. He took a keen interest in local politics, and when, in 1798. Congress voted a direct tax of $\$ 2,000,000$, and Pennsylvania's quota was fixed at $\$ 237$. 000 , to be levied on houses and lands, he and other Germans of the counties of Montgomery, Lehigh, Bucks, and Berks offered a strenuous opposition. When the federal officers came to collect the tax, Fries put himself at the head of the opposition and formed armed companies These selved and punished such officers as attempted to carry out the law. At a meeting, held in February, 1798, at Lower Milford, he promised to raise 700 men , and soon after, at the head of a company he arrested the government assensors and uberated weveral pcisoners. The next day.
at Bethlehem, he forced the United Stato marshal to liberate his priconery by threatening to resort to firearms. Tho militia was consequently called out, and Fries and others were taken prisonern. He was twice tried for high treason 10 . this offense, and sentenced each time to death, but in April, 1800, was pardoned by President Adams.
Friesland (frérland), the most northerly province of Holland. The area is 1281 sq . miles. Leevwarden is the capital. Pop. 342,286. See Frisians.
Frietchie, Barbara, was borm at in 100, Lancaster, Pa., in 1763; died in 1862. In 1806 she married John Caspar Frietchie, of Frederick, Md. Whittier's celebrated poem Barbara Frietchio (1863), founded npon the story, in now regardnd as of donbtful authenticity or, at least, on a confusion between $\mathbf{M r}$. Frietchie and a Mrs. Quantrell. Mrm Frietchic, however, did greet the Union troops by waving a flag from the porch of her house.
Frieze (frez), a kind of coarse woolen stuff or cloth, with a nap on
(frëz), in architectnre, that part of the entablature of colone side. Frieze umns which lies between the architrave and cornice. It is a flat member or face, usually enriched with figures or other ornaments of sculpture. See Entablature. Frigate (frig'at), originally a Mediterranean vessel propelled by sails and oars; afterwards a ship of war, larger than a sloop or brig and less than a ship of the line, usually carrying her guns (which varied from abont thirty to fifty or sixty in number) on the main deck and on a raised guarter-deck and forecastle, or having wo decks. Snch ships were often fast sailers, and were much employed as cruisers in the great wars of the eighteenth and early part of the nineteenth centuries. The name is no longer in use for naval vessels.
Frigate-bird, or Man-or-whe Brid Irigate-birc, (Tachypětes aquilus). an American tropical web-focted bird of the family Pelecanidse, found on the Atlantic and Pacific coasts. Incinding the long tail, the male bird reaches 3 feet in length, but the body is comparatively small. The bill is longer than the head, strong, hooked at the point, and sharp. In proportion to their mize their wings art louger than in any other bird, having 8 extent of 7 feet or more. Their fight is powerful and graceful; they nelther wim nor wade, but catch the fins: fishes in the air, and cause fiohing biria to dísgorge their prey, which they des:
terounly seize as it falls. Their seneral color is black, but the under feathers of the femalen are white.
Frigga, or Frice, in northern mythOdin, the goddeas after whom Friday is named. She is a goddeas in some reapects corresponding with Venns, and is often confounded with Freya.
Frilled Lizard, an Australian lizsus Kingii, so called from a curions mem-brane-like ruff or tippet round its neck, covering its shoulders, and which lies back in plaits when the animal is tranquil, but which elevates itself when it is irritated or frightened. A full-grown specimen is about three feet in length.

## Frimaire

 month of the mas, hoar-frost), the third dar, dating from September $22,1792$. It commenced November 21, and ended December 20.
## Fringe-tree (Chionanthus Virgin-

 longing to the saica), a small tree bethe olive, and having snow-white which hang down like a fringe, inbabiting America from lat. $39^{\circ}$ to the Gulf of Mexico. It ${ }^{\text {' is }}$ frequently cnitivated in gardens as an ornamental plant. Fonr other species of Chionanthus are known, two of which inhahit the West Indies, the third Ceylon, and the fourth Anstralia.
## Fringillidæ

(frin-jili'i-de), a large family of conirostral birds, comprising the finches (which see).
Frisians (fris'i-anz), a German tribe who, about the beginning of the Christian era, occupied the territory between the mouths of the Rhine and the Ems. They hecame tributaries of Rome under Drnsas, and lived for some time on friendly terms with their conquerors, bnt were driven to hostilities by opprension. In time they extended as far eastward an slesvis and eren made settlements on the Firth of Forth, and probably in other paits of Northern Britain. Abont the end of the seventh centary the Frisians in the southwest were snbdued by the Franks nnder Pepin d'Herintal, Who compelled them to accept Chriati-
anity. A century later the eastern branch of the tribe was conquered and Christianized by Charlemagne. Thelr conntry was divided into three districter two of which were annexed on the division of the Carlovingian empire to the possensions of Lonis the German, and the other to those of Charles the Bald. The latter part was called Weat Frisia. (W. Friealand), and the two former East Frisia (E. Friesland). Their modern history is chiefly connected with Holland and Hanover. The Frioian Lan-

Frigato-bind (Tachyples aguilus). guage holds in some respects an intermediate position between Anglogaxon and Old Norse. Of all the Tentonic dialects it is the most nearly related to English. Its ancient form ex ists only in some remarkable collections of lawn. Three dialects of it are now recognized: the West Frisian, spoken in the Dntch province of Friesland, about Leeuwarden, Bolsward, etc., and used to some extent in literature; the East Frisian, spoken between the mouths of the Ems and Weser; and the North Frisian, spoken on the west coast of Schleswig and South Jutland, and on the islands Sylt, F'Khr, Amrun, etc.
Frit, the matter of which glass is (See Gloses) after it has been calcined. (See Glass.) The term is also applied and used for earthenware, often pounded and used for glaze.
Frit, the Chlorops or Oscinis frit, a ve of which do great damage to barley crops in some parts of the north of Enrope. It is nearly allied to the corn or wheat fly known in Britain.
Frith. See Firth.
Frith, Wriniay Poweli, born at Studley, near Ripon. 1819. After 1840, when he exhibited Molvolio before Olivia, at the Royal Academy, he prodnced a great nnmber of mcenes from Shakespere, Moliere, Dickens, Sterne, Goldsmith, etc., besides his immensely popular pictures, Ooming of immensely Olden Time (1849), Life ot the Seasile (1304), The Derby Day (1858). The Railsoay Etation (1862). Before Dinner at Boswoll's Lodginge (iso8), The Prvate Viow at the Royal Academy (1881). etc. Ee was commisioned by the queen
to paint the marriage of the Prince of Walen. He was elected R. A. in 1862, and was a member of aeveral forelga academies. He died in 1809.

## Frith Gilds, among the Anglo-Snx-

 tions of neighbors for purposes of order and self-defense. They repressed theft traced stolen cattie, and indemnifled parties robbed from a common fund raised hy subsecription of the membery. Frithjof (fret'yof), an Icelandic hero, supposed to have lived in the eighth century. After a eeries of adventures, recorded in an ancient Icelandic saga of the thirteenth century, he marries Ingehjorg, the widow of the king Hring. The story forms the gronndwork of Tegner's popular poem, Frithjof's Saga, and has been freqnently translated.
## Fritillary

(frit'i-la-ri; Fritillaria) a genns of plants, nat order Liliacese, natives of north temperate regione. F. Meleagris, or common fritiliary, If fonnd in meadows and pastures in the eastern and sonthern parts of England. Several species, as $F$. imperialis or crownimperial, are cultivated in gardena, chiefly introdnced from Persia and the warmer parts of Europe.
Tritillary,
the popnlar name of sev${ }^{2}$ erai species of British siiverwashed fritiliary; the paphia is the the dark-green fritiliary: the rare and mnch-prized $A$. lattonia is the queen-ofSpain fritillary.
Friuli (fri- ${ }^{\prime}$ le), a formerly independAretic ent dnchy at the head of the Adriatic, now forming part of Itaiy and Austria. It was one of the most im portant duchies of the Longohard Kingdom, and up to the firteenth century when it was conquered by Venice and its territories dismembered, it retained a considerahle degree of independence. The inhahitants, called Furiani, are Italian for the most part, hut speak a pecuiiar dialect.
Frobisher (frob'ish-er), Sir MarElizabethan navigators, horn neer Doncaster, Engiand, abont 1535 ; died at Plymonth. 1594.' He made three expeditions to the Arectic regions for the purpose of discovering a northwest passage to India. and endeavored to found a settlement north of Hndson Bay, hopes of immense wealth to be found in these northern regions haring taken the puhlic fancy. In 1585 he accompanied sir Francis Drake to the West Indies. At the defeat of the Spanish armada in 1088 he commanded one of the largent
shipe in the fleet, and was honored with kneththood for his wervices. In the yeary 1500 and 1592 he commanded squadrons ageinst the Spaniards and took many rich prizen In 1594 he was sent to the assistance of Henry IV of France, when, in an attack on a fort near Breut, he was mortally wonnded.
Froebel (freu'bel), Fruedrior wir hame AUGUBT, a German educationist, born in 1782 ; died in 1852 After an unvettled and aimless youth, and with nomewhat imperfect culture, ha started teaching, and soon developed a system which has become famous nnder the name of Kindergarten (which wee). He is the author of Dio Menschenerzio: hung ('Hnman Education'), and Mutterund Koselieder a book of poetry and pictnres for children. A Froebel Society, for the promotion of the kindergarten system, was established in 1874.
Frog, the common Engiish name of a rrog, nnmber of a nimals belonging to the ciass Amphibia, having four legs with four toes on the forefeet and five on the hind, more or iess webbed, a naked hody, no ribs, and no tail. Owing to the last pecuiiarity frogs belons to the order of amphibians known an Anura or tailless Amphibia. The tongue in fleshy, and is attached in front to the jaw hnt is free behind, so that the hinder extremitien of the tongue can be protruded. Frogs are remarkable for the transformations they undergo before arriving at maturity. In the spring the spawn is deposited in ponds and other stagnant waters in large masses of gelatinons matter. These masses, with black giobnles scattered through them, soon manifest change, and after a time the young escapes as a tadpole, an animal with short body, circular snctorial month, and long tail, compressed from side to side. Gills project on either side of the head from a cieft which answers in position to the gill opening of fishes. The hindlimbs first appear as huds, later the forelimbs project, the gills disappear, the lungs hecoming more fully developed; the tail gradnally shrinks and falls of, and the animal, which was at first fishlike, then closely resembied a newt (or tailed Amphisian), finally assumes the adnlt or talless form. The mature frop breathes hy lnngs, and cannot exist in water without coming to the surface for air. The only British species is the common frog (Rana temporaria), but the trihe is very numerous, other varic tien being the edible frog ( $R$. escultenta) of the sonth of Europe, eaten in France and South Germnny, the hind quarters being the part chiefly nsed; the bull-fiom
of America (R. pipione), 8 to 12 inchem lons, to namal from its voice remembling the lowing of a ball; the blackrmith fros of Jandro, the Arsue iros of Amertci, te. $O$ the treofroge mont belons to the genve Hyla, (Seo T'reofrog.) Frogu wite with rapidity, and move by lons bound, bein alle from the power of the murales of their hind lege to leap many times their own length.

The skeleton of the adult frog presente come rumarizable points, first in pecullarity being the shape of the head and the enormons aize of the orbits of the eyca, which are so large that when the skull is placed flat upon an open book several Ford can be read through the orifices. Very little room is left for the brain, and in consequence the intellectual powers of the frog are but slender. The vertebre are furnished fith projections at each gide but the ribe are totally wanting. Because of this deficiency the respiratory movements are made not by the sides but by the throat.
Frogish. See Angler-fish, and also Frogspit.

## Frohsdorf. See Froschdorf.

Froissart (frwa-esir), JEAR, was born in 1337 at valenciennes: died in Flanders between 1400 and 1410. He recelved a liberal education, and took ordery in the charch, but his inclination The more for poetry and gallantry. At the age of eighteen he went to England There, having already the reputation of boing a say poet and narrator of chivalric deeds, ho was received with great faror, Philippa of Exinault, wife of Edward III, declaring heraelf his patroness. After returning to the continent and traveling for come time, he again visited England, and In $1361-66$ he was secretary to the queen. Ho also visited Scotland, and was entertained br King David Bruce and William, Earl of Douglas. In 1366 he left England and again traveled. After the death of Queen Philippa, Froissart became curé of Lestines in. Hainault, and was patronized by Wenceslaus, Duke of Brabant, who was himseli a poet, and of whose verses, united with some of his own. Froissart formed a sort of romance called Mcliador. On the death of Wenceslaus he entered the service of Guy, Count of Blois, who pave him the comnry of Chimay, and induced him to take in hand the history of his own time. After twelve fears of a quiet life he again began his travels, chiefly for the parpoeo of collecting further matter for his Ohromiole, and he
asain visited England after a lapeo of forty yeare. Iittle is known of the clow ing part of his life, which is maid to have terminated at Chimay. Bis Chroniole, which reaches down to 1400 , givem a dis Eularly vivid and intereating picture of his times, and also preventh his own character in a pleasing light. The best edition of his Chroniole is that of Buchon, which also contains his collected Podoles (Paris 1835-36, three vols.). The earliest, and in some respects the best, Donglish translation is that of Lord Berners (London, 1525), although that of Thomas Johne (1803-5) is more exact.

## Frome (from or fröm), or Frome-

 Smwoov, a town of England, County Somervet, on a small river of the same name, 19 miles southeast of 1 -istol. The staple manufactures are woolen cloths. Pop. (1011) $10,901$.Fronde (froud), a French parts durXIV, which waged civil war of Louis court party on account of the heary fiscal impositions laid on the people by Cardinal Mazarin, whom the queenmother had appointed primo-minister after the decease of Lonis XIII (1648). At the head of the Fronde stood the Cardinal de Retz (g. v.), and latterly the Prince Louis Conde. The result of this contest, which lasted from 1648 to 1651 , served only to strengthen the royal power. The name is from Fr. fronde, 'a sling;' a member of the parliament having likened the party to boys slinging stones in the streets, but who dispersed on the appearance of the authorities.
Erontenac (rant'nalk), Lours pe 08), the greatest of the COMrTE DE $(1620$ France (Canada) of the governors of New service of France at antering the military service in Italy, Fland carly age he saw and pos salected landers and Germany, and was selected by Turenne ( $\mathrm{q}_{\mathrm{o}}$ v.) to lead troops sent to relieve Canada. He succeeded Courcellos as governor in 1672, built Fort Frontenac the following year, but because of his quarrels with the colonists he was recalled in 1682. Regaining the king's favor he was restored to his former position in 1688 and carried ont a vigorous war against the English settioments in New York and their Indian allies, the Iroquois. In 1000 he defeated Admiral Phipps and the English fleet before Quebec, in commemoration of which Louis XIV caused a medal to be struck. Ire encouraged Ia Salle in colonixing the Mississippi valley and catablished posts at Niagara and Mackinac and Ilinois. Frontenac followed up his successes by invadin the Mohant country, leading an expedition in perwon atsainat

## Froode

Onondaga and Onelda; while on the comet he ravaged Maine and New Yort. Frontinus (fron-tínus), Sixave patrician dencent, born about Roman of died 108. He was sorernor of Britain from 75 to 78 , and dietingulahed himwelf in the wars of the silurem. $H$ o appears to have been twice consul, and was appointed by Nerva to superintend the aqueducts, on which he also wrote. His De Stratagematibus, a treatise on war, and him De Aqueduotibus Urbis Rome are well known.
Fronto (fron'to), Mascus Cornerhetorician of the secoud ceutury after Christ, born at Cirta in Numidia. Hav. ing removed to Rome, he won the special favor of Hadrinn and Antoniuus Pius, aud was entrusted with the education of the inperial priuces Marcus Aurelius and Lucius Verus, His extant remains consist chiefly of some letters to these princes.
Froschdorf (frosh'dorf; called hy a village in Lower Austria, ou the river Leitha, about 90 miles from Vienna. It is remarkable for its magnificent castle, which has acquired a kiud of political importauce siuce 1844, when it hecame the headquarters of the Bourbou party. It was the favorite residence of the late Comte de Chambord, who greatly improved aud heautified the interior.
Prosinone (froz-zi-nónas), a town of of the Cosa, 50 miles E s. $\mathbf{\Sigma}$ of Rome. Pop. of commuiue 11,191.
Prost is the name we give to the stato perature is below the freeziug point of water ( $52^{\circ}$ F.). The intensity of the cold in frost is couveuiently indicated hy the popular expressiou so many degrecs of frost, which meaus that the temperature of the atmosphere is so many degrees below the poiut at which the freeziug of water commeuces. Frost is ofteu very destructive to vegetation, owing to the fact that water, which is geverally the chief constitueut of the juices of plauts, expands when freeziug, and bursts, and thus destroys the vesicles of the plant. Iu the same way rain-water, freezing in the revices of rocks, breaks up their murfacess, aud often detaches large fragments. Hoarfrost is frosen dew. It may either freeze while it is falling, when it is found loosely scattered on the ground; or being deposited as dew in the parly part of the night it may freeze duriug a unbeenuent part of it, owing to radiation. It is seuerally seen mont 15- $\mathrm{C}-3$
profucely in apring and autuman ; becaues at thowe timen, while on clear nifhts the cold is sufficient to freese the dew, the days are at the same time suffielently Farm to carse a very considerable quantity of mointure to evaporato into the alr.
Frostbite, condition caused by the man body. It action of frout on the hu: partial, varying from ordinary chilulnip to complete death of the part frozen. The simpleat treatmeut consists in alowly coaxing back the vitality by frletion.
Frostburg (front'burs). town of 11 milee wet Allegany Co, Maryland. mountainous regiou, and coal is extensively mined. It has iron and firehrick works and is the seat of a state normal schiol. Pop. 6028.
Frosted Glass, slass roughened on destroy its transpareucy, in consequence of which the surface has somewhat the appearance of hoar-frost. The term frosted is also applied to the dead or lusterless appearance of sold and milver jewelry when the surface ts uupolianed. Frothfly, Fmoth-Hoppsk, the comfamily Cercopiden the me of insects of the family Cercopide, the larves and pupe of which are fonud in frothy exudation on plants. See Ouckoospit.
Frothingham (froth'ing-am), Octheologian born Tavros B., Unitarian setts in 1822 . at Bostou, Manachusette, in 1822; died iu 1805. He was ordained in 1847 aud became pastor- of the Third Unitarian Society in New York about 1859. He was a man of broad culture and excellent intellectual powers, aud very radical in his views, resemhling Theodore Parker in his radicalism. He wrote various work, including Transcendentaliom in Now England, The Religion of Humanity, The Parables, etc.
Froude (frod), JAyxs Arthoilt, historian and miscellaneous Friter, born at Totness, Devonshire, in 1818. He was educated at Oxford, waa elected fellow of Exeter College, and received deacon's orders. He resigned his fellowship and withdrew from the orders ou the puhlication of his Nemesis of Faith (1848). Between the yearm 1856 aud 1869 appeared his great work. The History of EDyicne from the हैall of Wolsey to the Defeat of the Spanish Armeda, which was very popular, though it received but doubttul approval from hintorians, He wal for some time editos of Praser. Magaeine, to which he contributed many articles, to well as to othe
periodicala. He was elected rector of SL. Andrown Univeratty in 1800. He wan made Iterary ozecutor to Carlyle, and his Lifo of Oarlule, and Cariylo'c Reminiocenoes, and Lettere and Memort ato of Jeno Weish Carlyle, as edited by him, provoked an extraordimary amount of controvoris. Ho died in 1804 . Fruotidor (Irux'thlor), the twelth publican calendar (dating from September 22, 1702), beginning Ausust 18, and ending September 18th.
Fruit (trot), in botany, the seed of a plant, or the mature ovary, composed essentillly of two parta, the pericarp and the deed. In a more seneral sense the term is appilied to the edible succuient products of certain plante, generally covering and inciuding their seed. The hardier sorts of fruits indigenous to the United States, or which have been caltivated to any important extent there, are the apple, pear, plum, cherry, apricot, peach, and nectarine the sooneberry, currant (rad, white, and black), raspberry, strawberry, muiberry. The more important fruits requiriag a warm climate are the fig, date, grape, orange, lime, hanana, tamarind, pomegranate, citron, hreadfruit, olive, almond melon, cocoanut, etc. Some fruite are of immense economic importance, either from supplying food to great numbers of people (dates) or from furnishing beverages in extensive use (as wine from the grape).

## Fruitarians,

the name applled to those persons who advocate a diet consisting solely of fruit and nuts. As fruite contain little protein, the nuta are necessary to a balanced ration. Compare Vegeterianiom.
Fruit-pigeon, the pame given to the Carpophägue, birds of very hrlliinnt plumage, occurring in India, the warmer parts of Austraila, etc. They are so called becaune they feed entirely on fruit. Frustum (rrus'tum), in geometry, Frust the part of a molid next the base, left hy cutting, off the top portion by a piane parallei to the base; or the part of any solid hetween two plares, which may be either parallei or inciined to each other, as the frustum of a cone, of a pyramid, or of a sphere, which latter is any part comprised hetween two parallel sections.
FIy (iri) Eitzabeth, philanthropist,
the third daughter of John Gurney, of Eariham Hall, near Norwich, England, was born in 1780; died at Ramsgate in 1815. In her eifhiteenth year a cermon preached by William Savery, an

American Quaker, at Norwich, had the effect of turning her attontion to gerious thingen and making her adopt decided viewn on religious mattere. Doout this time aleo she made the acqualintance of Joweph Fry, a London merchant and a atrict Ouafer, to whom she was married in 1800. In 1810 she became a preacher among the Frienda. Having paid a virit to Newgate in 1813, she was so 1 m pressed by the seens of squalor, vice, and misery which she there witnemed that the ameiloration of prison life be came with her a fixed ohject. In 1817 she succeeded in estahlishing a ladies committee for the reformation of female prisonest in Newgate, along with a school and manufactory in the primon, the resulta of which proved eminently ratisfactory. There improvements were shortiy afterwards introduced by her means into other prisons. In the pursuit of her philanthropic labors she made tours through various parts of the United Kingdom, and also visisted France, Belgium, Germany, and Holland.
Frye (fri), Wuluax P., Senator, was born at Lowiston, Maine, in 1831. He studied law, became at-torney-general of Maine in 1867, and member of Congress in 1871. In 1881 he was elected to the Senate, and was a nember of the Paris Peace Conference after the War of 1808. He was continuously reklected and died in 1011.
Fuad Pasha ( $\mathrm{f} \boldsymbol{b}^{\prime}$ ad ph-shi'), Mb HEMED, a Turkish statesman and man of jetters, was born at Constantinople in 1814: died at Nice in 1869. His diplomatic career took him to London, Madrid, and St. Petersbure ; he was four times minister of foreikn affairs, and for five yeare grand vizier; and was the chief support of the reform party in the Turkish empire. He wrote poetry, political pamphlets, and a Turkish grammar which has been translated into severai languages.
Fuca (f0'Ra), STrat or. See Juan Fucaceæ (forkàsed), a nat. order of dark-colored aige, consisting of olive-coiored inarticuiate seaweeds, distinguished from the other alge by their organs of reproduction, which consist of archegonia and antheridia, contained in common chambers or conceptacles united in club-shaped receptacles at the ends or margins of the fronds. Fucaceee exist in ali parts of the ocean, and, though all are probahly occastonaily attached, they may persist as floating mnsses, like the gult-weed. Macrooyntif pyriféra is said to have fronds of 500 to 1500 feet long. See ${ }^{2}$ rupup.

## Fu-ahow

Fu-ohow (fbechou). See Foo-chovo. Fuchsia (fa'echlen; named atter the Germnn botanist), a senus of beautifon flowering shruba, nativen of South America, Mexico, and New Zealand, nat. order Unagracee, characterized hy having a funnei-shaped, coiored, decduooun, four-parted calyx, sometimes with a very long tube f four petales net in the mouth of the calyx-tube and alternating with itt segments ; eight exserted stamens, and a long styie with a capitate stigma. This f. one of our most common decorative greenhonse piante, while the hardy varieties out of doors in the opeu border form in iniportant feature with their drooping, eiegant habit and their wonderful proftuion of flowera.
Fucino, or Cenano (te'chende, chelH'nó ; Latin, Fucinus lacus), tormerly a iake of southern Italy, about 11 milies ioug and 5 miles hroan, 2181 feet above sed-ievel in the province of Aquiia in the Central Apennines. As the jake often rose and submerged the neighboring iands, the Emperor Claudius caused a tunnei to be constructed to carry of its surplus waters into the Garigliano. This rast work was soon aliowed to fali into disrepair. Between 1852 and 1875, however, this work was repaired and eniarged by a company, and the iake has now been thoroughly drained, and 36,000 acres of rich arable land reclaimed.
Fucus (fo'kus), a genus of seaweeds, various common seaweeds which have a flat or compressed forked frond, sometimes containing air-vesseis. Many of the upecies are exposed at low water; they form a considerabie proportion of the seaweeds thrown upon some coasts, and are used for manure and for making kelp. Most contain iodine.
Fuel (fífei), carbonaceous matter, liguid; which may be in the soiid, the which, or the gaseous condition, and rise to in comhining with oxygen, gives rise to the phenomenon of heat, the heat belng made use of for domestic, manufacturing, and other purposes. The essential heat-producing elements of a fuel are carbon and hydrogen, and the fuei is valued in the measure in which these two elements are present. Oxygen, nitrogen. sulphur and phosphorus oceur inciden taify in most fuels. The inorganic matter contained in a fuel constitutes the ash. Fuela may be conveniently divided into three clasues: Solid, as coal, wood, peat, coke and charcoal. Petroleum in its various torman vegetable and animal oils, and alco.
bol are the liguid fuels mont in use. The ehlef gamevus fuels are conl fane, water cane natural sas and producer ras. Amons the solid fuels conl is by far tho most fmportant. The common divition of coal in into anthracite and bituminoue. Bituminous conil is again divided Into: anthracite: cookling aud furnace conll: gas coal; non-cooking, long-tame conl; ifsnite, or brown coni cannel conl. $A \mathrm{~A}$ thracitcic coai difers littie from anthracite, containing 90 to 93 per cent. of free carbon, whereas anthracite containg o8 per cent. American anthracte is a hard dense coal, with a metallic lustre, and burns with a mokelem fame, diving an intense heat. Gas coal contains from 80 to 85 per cent. of carbon, and is rich in gas. lignite is a coal intermediate between peat and bituminous coal, often showing a woody structure. Cannel coal is also a large sas-producing conl.
Wood long heid away as the principal cource of heating, hut for now in common use except in remote country ditricts. Coke and charcoal, the products respectiveiy of coal and wood, aro almo much in use as fuel.
The chemical examination of fuels includes the determination of (1) moituture, (2) auh, (3) coke (4) volatilo matter, (5) fized carbon in coke, (6) guiphur, (7) chiorine (8) phonphorus. Molisturb is determined by noting the loss in weight when a smaii sample is heated at 100 de grees for about one hour. The ash is determined by henting a sampie in a mume furnace untll ail the combustible matter has heen burned off. The ash, which zeneraliy contains silica, oxides of the alkaiine carths, ferric orlde (which sives the ash a red coior), suiphur, ete., is analyzed by the sidinary gravimetric methods. The dete.mination of coke is very important on account of the conclusions concerning the nature of the coal which it permits to be drawn. It may be (1) puiverulent, (2) slightly fritted. (3) spongy nud swelled, (4) compact A compact coke is yieided by good coking coalm and is usualiy iarge in amount.

Iiquid fuels are comprised under the head of petroleum and its producter, tis naphtha, gasoline, kerosine, tar and tar refuse, etc.; aicohol, and for apecial usem chemical derivatives such as amyl-acetate. Crude petroieum consists of about 85 per cent. carbuu and tis per cent hydrogen. It thus provides a very efficient fael. easily regulated, quickly lighted or extinguished, insuring a steady, intense beat and perfect comhustion. To obtein proper combustion of oil fuel, the ofl muat be converted into spray, which is done by a steam jet or atomizer. Within the fan
for yeare alcobol has come prominemay into potice ata source of heat. It hat boes chown that crude denaturod aleohol as a fuel for ure in internal combuation endaes is of bisher declency than tho lishter petroleum oill.
Amons gacoous fuele, ordinary Illumbnating gas holds a prominent place from its une in emall engines and ahop and domestic appliances. In many larse manufrectories producer gan is being extensivoly used, and there is a crowing tendencs to introduce it in all induatrien where hisch temperatures are required and where larse quantities of conl are conwumed. Iti advantaces are demonitrated In the eany regulation of combution; conomy in labor, fuel and heat i and the hish temperature obtained. Producer gat is derived trom the decomponition of water or steam in contact with incundescent carbon. Tbe Arat chemical reaction obtained is the formation of carbon dioxide and the liberation of hydrogen ; this is succeeded by the formation of carbon monoxide, a non-iuminous gan, but one pomeming high calorific power. A plant for manutacturing the gas connista of a producer; or furnace; a vaporizer, for abporbing the waste heat of the gas to make the stenm needed; a cooling washer; and a purifer, to remove the tar. Ofl gas is ahoo used asa fuel; that is, gas made from crude oils.
Prepared fuels are made from inal in a powdered condition. The coal after being washed is mised and ground with tar, pltch or other binding material in the proportion of about 80 parts of conl to 10 of the binder. The mixture is then melted and molded into blocks of a size enasy to handle. Attention has been di. rected to the utilization of conl in the form of dust. The advantages claimed for the direct use of coal dust are: complete combuntion and the consequent elimination of amoke, and the greater efficiency of the fuel; abillty to use a cheap grade of coal; the enlargement of furnace capacity, and email labor cost. One of its disadvantages is that ash dust 1 s discharged into the air in large quantitien. Only the bituminous coals have been successfully used alone.
Fucnte (fu-en'ta) with afixes, the towne in Spain. The most important is
 Badajoz, near the right bant of the Guadaira, 82 miles Enam of Badajos. Pop. 6928 .
Fuero (fy-l'ro), Spani $\bar{u}$ word sif niffing jariddletion law, privilege, and appiled historicily to the wiften charters of particular diotricte towna, otc. In 1883 a civll war broko
out in the Baeque provinces, in amertion of the fueron of that diltriet, which lasted ten years, and was ouly pacitiled by the formal recognition of the Batgne privtlegen in 184 by the queen and cortes of Bpain. The Basque fueros, however, were finally abrogated in 1876 as a result of the Cariset rloing.

## Ficertes (fwirtio), Eatevan amio-

 N10 (1838-1003), an Aunerican civll engineer and eduentor, born at Porto Rico, of mixed Spanish. French and Irish race. He graduated from the Troy (New York) Poiytechnic Institute in 1857 and returning to Porto Rico entered the rojal corpe of engineerm. He was for a trme director of public wortrin Porto Rtco, but renigned and went to New Yort, where bo rendered apecinl services in the work of the Croton aqueduct; belng later engaged as consulting engineer to the legislative comminsion which investigatel the contract of William M. Tweed, the notorious political 'boess' of New York City. In the government's invent. gation of the desirability of a Nicaragua canal be was engineer-in-chlet. He be came dean of the school of engineering in Cornell Unlversity in 1873; director of the college of civil engineering, 1800-02. Fuerteventura (fwir-ta-rin-tér ra), one of the Cnnary Islands, separated from Lancerota by the Stralt of Bacayna. Cabras on tho enat coast has a good harbor. Area, 758 sq. m. Pop. a bout 11,660.Fugger Family (figzer), Thr, a man family, early admitted amons the hereditary nohility, and now represented by two main lines of princes and several minor noble branches. The founder of this family was Johans Fuogen, a manter-weaver who wettled in Augsburs in 1368 and acquired much property. His descendants became leading bankers. merchants, and mine-owners, were liberal and public-spirited men, patrons of art, and several of them became distinguished soldiers and atatesmen. Among the most eminent of the family was Jakob Fugerr ( $1459-1525$ ), who cartied on sreat commercial operations, advanced money to the Emperors Maxlmilian and Charles $\nabla$, and by the former was raised to the rank of nobleman, being aleo im perial councilor under both. Charles $\nabla$ raised Jakob's two nephews, Ralmund and Anton Fugser, to the disnity of countre He also inveeted them with the eutates of Kirchberg and Weissenliorn, which had been mortraged to them, sranted them a seat at the imperial diet. and letteri ziving them princely privileares Saboequently the highent places
of the ampire wese hold by the Fugsers, and princely Ramilliat thought themedves bonored by their oliance.

## Fugitive Slave Law, a lam for

 of fugitive slaves to their materes was pased by the United Btatere Congrove ta 1793, and a much more tringent one fo 1850, making it a penal oreeneo to aidd pervons called upon to asolet in his capp perroons chlied upon to aediet in his capp feeling in the Northern: atma, few Northerners would obey 'f: minnenter, and it was one of the $i$, inf. causee that brought on the Civ: WhFugue (foge, E. Mrite tern, jes: :
 position constra ition in on is shior subjecte or ther.

 various cont quintal divi" of the fotei
 sustained by dal imp in intival of time at Which they funw cich "her, and monotony being nro it th we or usional une of episode," "wsages ojen to free treatment.
Fuhnen. see Funen.
Fuji-Yama
(fl'je-yilma) or Fusicano of a aymmetrical, cone-like shape, in the island of Hondo, Japan, the macred mountain of the Japanese. It bas been quiencent since 1707 ; is 12,400 feet in beight, and it visible in clear weather for a diotance of nearly a hundred milem
Fula, Fulbe see Fellatah.
Fulcrum (ful'krum), in mechanice, about which the support of fixed point
Fulda ( $831{ }^{\prime} d a$ ), a Prussian town, a river of province of Hessen-Nassau, on of Caseel. It is irregularly built; contains a cathedral, a handsome modern edifice ; a castle, once occupied by the prince bishops, and other interesting buildings; and has manufactures of cotton, woolen, and linen goods, etc. The
town deriven its orikin from a once-celebrated abbey founded by St. Boniface (Winfried), the appostle of Germany, in 744. Pop.' 16.800 .

Fulgora (ful'gn-ra), the seneric (which see).

## Fulgurite

name of the lantern-ilien been fused or vitrified by lishtning has strictils, a vitrified tube of sand formed
by the intener heat of uishtaleg when it
 porvon of tb . materialie threrent which it payces.
Fillham (furam), one or the London bounded by parliamentary boroughe, oughe of Chothe Thames and the bormermith minmith. It contains the palace of the Bithop of London. l'op. (1011) 108, 220 Fullica ( $\left.f a^{\prime} 11-k_{a}\right)$. Bee Coof.

## Fuller (fyl-ler), Mamongr. See O. Fuller, Mexvicre wive fuller).

Fuller, peatilis wharon, an emiborn in Ausuata, merican jurint, was at Bowdoin College 1808, and at Harvard Law School, 1865. After practiming a bis native town for a litto over a jear, be moved to Chicago, where he was very unccenful, and nntil 1880 took an actire part in politicm In 1888 Prm. ident Cleveland appointed him chief ty tice of the United States Supreme Canth aposition held by him till his death in 1010.

Fuller, THoxAB, an eminent hitChuch torian and divine of the Church of England, bora in 1008 at Aldwinkle in Northamptonsbire i died in 1001. He graduated at Oneen's College, Cambridse, held sereral clerical ponitione, and in 1043 joined the ling at Oxford during the civil war. Becoming chaplain to sir Ralph Hopion, of the army, he hegan the collection of materials relating to Englitoh history and antiguitien At the close of the war he took refuge in Exeter, and was appointed chaplafin to the infant Priacent Henrletti Maria. Shortly before the restoration be was reinstated in his prehendal atall, and woon after that event was made one of the King's chaplaina, Several of hise writinge are English clavices, remartable for qnaintneiss of ntyle, wit, eagacity, and lear ng. Among the more important are: Hiot I of the Holy Wor; Thi Holy and
 Whurch Hiotory of Britain; and the able alike for the colld information it alionds relative to the provincial hitory of the country and for the profusion of biographical anecdote and acute observation on men and manners.

## Faller's Farth (faprers), a variety

 compact but friable, of unctions or mari, touch, and of varione colloren nosually, with a shade of green. It is aseful in mouring and cleansing cloth, as if 1 mbiben the greace and of used in preparing wool. It consitts of ollica 50 per conti, alumina:20, water 24, and small quantities of nagneala, lime, and peroxide of iron. There are extenaive beds of this earth in Ensland and elsewhere.

## Fulling-mill (fyiling) a mill for

 of peatien or stampers, which beat and press it to a close or compact state, and cieanse it. The principal parts of a fulling-mili are the wheel, with its trundie, which gives motion to the tree or spindle, whose teeth communicate that motion to the pestles or stampers, which fall into troughs, wherein the cloth is put, with fuller's-earth, to be scoured and thickened by this process of beating.Fulmar (fblimar), a natatorial or (Fulmarue glacialio) of the famils Procellaridise or petrels, about the size of a large duck. It inhabits the northern meas in prodigious numbera, breeding in

Fulmar (Pulmarus glacialis).
Iceland, Greeniand, Spitrbergen, the Shetland and Orkney Islands, the Hebrides, etc. It feeds on fish, the blubber of whales, and any fat, putrid, floating substance that comes in its way It makes its nest on sea-cliffs, in which it iays only one egg. The natives of St. other bird. The fulmar is also valued for its feathers and down, and for the oil found in its stomach, which is one of the principal prolucts of $\mathbf{S t}$. Kiida. When caught or assaiied it lightens itself by disforging the oil from fts stomach. There is another and larger species found in the Pacific Ocean.
Fulmination (fui-mi-na'shun), a istry to denote the sudden decompositionof a body by heat or percussion, accompanied by a flash of light and a loud report. Fulminating compounds, or fulminates, are explosive compounds of fulminic acid with various bases, snch as sold, mercury, piatinum, and silver. The old fulminating powder is a mixture of sulphur, niter, and potash. Fulminate of mercury forms the priming of percumion capa.

Inlminio Aaid (ful-min'ik), a peculjar acid, known only in combination with certrin bases, and first discotried along with mercury and silver, forming detonating compounds.
Fulton (fultun), a city, capital of Calloway County, Mineouri, 28 miles N. z. of Jefferson City. Coal is extenaively mined, and there are valuabie mineral springs in the vicinity. There is a large fire-brick factory. Here is a State Insane Hospitai, a School for the Deaf, and several coileges. Yop. 6228.
Fultcu, a village of Oswego County
New York, 24 miles N. W. of Syracuse. It has flow, wooien, puip, and paper mills, machine shops, gunworks, Enifeworks, etc. Pop. 10,480.
Fulton, Rosmas, the inventor of the was born in Lancaster County Pennsylvania, in 1765; died 1815. He adopted the profession of portrait and landecape painter, and in his twenty-second year proceeded to England for the purpose of studying art under West. There he became acquainted with the Duke of Bridgewater, Earl Stanhope, and James Watt, and was ied to devote himself to mechanical engineering. In 1794 he took a patent for a double-inelined plane, which was intended to supersede locks on canais; and he also patented a mill for sawing marble, machines for spinning flax and making ropes, a dredging-machine, etc. In 1797 he went to Paris, where he produced the first panorama that was exhibited there. He also, after some trials, was successful in introducing a boat propeiled by steam upon the 太cine. During a visit to Scotland he had seen and obtained drawings of the Charlotte Dundas, a steam-vessel which had nlied with success on the Forth and Ciyde Canal. His chief occupation in Paris, however, was the invention of torpedoes for naval war fare. He returned to America in 1806, and buift a steamboat of considerable dimensions, which besan to pavigate the Hudson River in 1807. Its progress through the water was at the rate of 5 miles an hour. It was a considerable improvement over previous efforts at steam navigation and the steamboat was soon common on the rivers of the United States. In 1814 he constructed the firnt war steamship, and was engaged upon an improvement of his submarine torpedo when he died.
Fumage (fo'maj; Lat. fumus, smoke), a tax on every house with a chimney, mentioned in Domesday Book, and commonly called Nmoke-farthinge, It is copposed to have been the origin of the hoorth-monoy tm-

## Fundy

posed by Charles II, and repealed by
Wulliam and Mrery.
Fumaria (fáma-ri-a). See Fumitory. Fumaria (fa'ma-ri-a). See Fumitnry. roman small nat. order of exogenous pianth, closeiy allied to Papaveracees. The apecies are siender stemmed, herbaceous piants, senerally erect, thongh some climb by means of their twisting leaf-stalks. Many species are objecte of cuitivation by the gardener for the scike of their showy flowers. Ali are astringent and acrid plants, and are reputed dlaphoretics and aperients. They inhablt the temperate and warm reglons of the northern hemisphere and South Africa.

## Fumigation

(fa-mi-gàshun), the application of fumes, sas, or vapor for the purpose of disinfume houses, clothes, and the like. The fumes of heated vinegar, burning suiphur, or the iike, formerly empioyed, are of bnt little value. For
esses see Disinfectants.

## Fumitory (fu'mi-tu-ri), the com-

 genus of piants, nat. order Fumariacea, Several species are known, natives of Europe, Aisa, and America. The common fumitory is a very frequent weed ln our cornfitlds, and aiso found in hlghly-cultivated gardens. They are slender annnal herbs with much-divided leaves and pur-piish flowers in racemes at the piish flowers in racemes at the tup of the stem or opposite the ieaves.
oficinalis, the hest-known species, was
at one time much used in medicine for scorbutic affections, etc., but its use is now dlecontinned.

## Funaria

(fa-nǻri-a), a genus of mosses, one of which, $F$. hyorometrica, is common $\ln$ Britain, especially on spots where a wood-fire has been, and grows in alis parts of the world. Funchal (fun-shai'), the capital of ated on a bay on the south const, situstretches for nearly a mile along the shore, and presents a thoroughiy European appearance. It ls a coaling statlon for steamers and is much resorted to by invaiids affleted wlth puimonary complaints. Pop. 20,850 .
Function ( $\mathrm{fnnk}^{\prime} \mathrm{sh} \mathrm{mn}$ ). in mathenected with matics, a quantity so conbe made in the latter without prodnecng a corresponding change in the former. In to be a function of the other: t thus. the circumference of a circle ls a function of the dlapeter: the ampan of a trinnzle it a tunctloa of any two of the sides and the
angie they contain. In order to indicate in a general way that one quantity $y$ is a function of another $s$ the notation $y=$ $f$ (o), or something similar, is adopted; thus, if $w$ be the area of a triangle, and $y$ two of the sides, and $\theta$ the contalned angie, we thould write $w=0$
$(x, y, \theta)$.

## Function, the specific office or action

 tem of organs which any organ or wybanimal or vis itted to perform in the tions, functlons of economy.-Vital funclife, as thosens 1 mmediately necessary to etc.-Natural of the brain, heart, lunge, functions less ins vegetative functions, as digeatiens instantly necessary to life, on, absorptlon, assimilation, eswhlich, etc.-Animal functions, those whlch relate to the external world, aa the senses, voluntary motions, etc.Fundamental Note (funda-men'sic, the lowest or gravest tal), in mustring or plpe can sound. Fote thatamental tones are the tones from whlch harmonicu are generated.
Fundi, Fun-purea (fun'dung'si), let the Paspalum of grain allied to milin (the Paspalum exile), mnch cultivated in the west of Africa. It is lisht and nutritious, and has been recommended for cultlvation in Britain as food for invaiids especlalis.
Funds, Publio, and Funded Dreat, constituting mones lent to government debts contra national debt. The meveral have been for by the United States have been for war expendilture. In 1860, at the outbreak of the Civii war, onr natlonal debt was stated at $\$ 64,842,287$. In 1868 it reached the enormous figuren of $\$ 2,773,236,173$. The money was borrowed at varying rates of interest, and a very large portion of the debt consisted of iegal tender notes and other obligations bearing no intereat. The debt was created rapidiy. but lts reduction excited the admiration of the worid; in exveral instances $\$ 100,000,000$. being paid in a single year. It ls now reduced withln easily manageabie limits, amountins, lem cash in the treasury, to about $\$ 1,000$,-
(fun'di), Bay or, a large Iniet of the Atiantic, on the enst const of North America, separating Nova Scotia from New Brunswick. At Its lnner extremlty it divides finto Chilnecto Bay, and Minas Channel and Bayln. with smailer continnations. It in noted for its impetunns tides. which canve rise and fall of from 12 to 70 feet, and the navigation ls dancerons, At it: emtrance are Grand Manan and other fel. ands. A uhip-rallway io belas conotructed
to connect Chignecto Bay with Northumberland strait.
Funen (fa'nen: Danish, Fyen), the largest of the Danidh inlands except Seeland, from which it is sepa. rated by the Great Belt, and from Jutiand by the Little Belt; circuit, about 185 miles: area, 1132 equare miles. The interior towards the went is covered by a range of low hills, but, with this exception, it is composed of large and fertile piains under sood cultivation. The largest atream is the Odense, which ham a course of about 36 miles. The chief towns are Odense, Gvendborg, and Nyborg. Pop. Fith Langeland and Arroe, 240,359 .

## Funeral Rites (fun'er-al ritn), the

 connected with the dite and ceremonies Amons the ancient Esyptians the friends of the deceased put on mourning habits, and abstained from gayety and entertainments for from forty to seventy days, during which time the body was embalmed. Among the ancient Jews great regard was paid to a due performance of the rittes of sepulture ; and among the ancient Greeks and Romans to be deprived of the proper rites was considered the greatent misfortune that could happen. The decorous interring of the dead with relifious ceremonies indicative of hopes of a resurrection is characteristic of all Christian nations. With Roman Catholice the body is the object of solemn ceremonial from the moment of death until interment. The Church of England funeral service is too well known to require any notice. Among other Protemtant bodies there is usually no formal service, but prayer is offered up or an ordinary religions service held before the interment in the house of the deceased or his relatives, or, in the case of a public funeral in some public place. The practice of delivering funeral orations at the interment of the dead by laymen is common in France, and not unfrequent in America. In Ireland the wake, or watching of the dead, by the lower classes, is usually a scene of tumult and drunkenness. For many curious customs at funerals see Brana's Popular Antiquities and Strutt's Manners and Oustoms; see alno Burial.
## Fünflkirchen

(fonnflkirh-en: 'Five Churches'), 1 town of the Austrian Empire in Hungary, on the slope of a hill, 105 miles 8. 8. w. Budapest. It is the see of a bishop, and the cathedral, a handsome Gothic structure, is one of the oldest eccleniastical edifices in Hungary. Funftirchen once had A fourishing univervity. ettended by 2000 studente. Its induatries
comprice finc pottery, woolens, leather, liqueurs, etc. In the neighborhood brown conl and black marble are worked. lop. (1911) 49,822. Fungi (fun'ji), a large natural order
plants, comprehending not on on fowerlesp the variFungi (fun'ji), a large natural order plants, comprehending not only the various races of mushrooms, toadstools, and aimilar planta, but a large upon other plants, and substances which are known as molds, mildew, amut, rust, brand, dryrot, bacteria, etc. Fungi agree with alge and lichens in their cellular structure, which is, with very few exceptions, void of anything resembling vascular tifsue; but differ from them in deriving their nutriment from the body on which they grow, not from the medium by which they are surrounded. They are among the lowest forms of vegetable life, and, from the readinesa with which they spring up in certain conditions, their serms are supposed to be floating in the atmosphere in incalculable numbers. Many diseases are produced by fungi. Fungi differ from other plants in being nitrogenous in composition, and in inhaling oxygen and giving out carbonic acid gas, in these respecte approximating to the similar animal functions. Berkeley divides fungi into two great sections, the first having the spores naked, and comprising agarics, boleti, puffballs, rust, smut, and mildew; the second, comprising the morels, truffles, certain molds, etc., in waich the spores are in sacs (asci). These are again subdivided into six principal orders, all formed on the mode in which the spores are borne, namely:-1. Ascomycetes, comprising a vaist number of the black pustular srowths abundant on dead wood, bark, twigs, leaves, etc. Among these are the mildews (Erysiphe), the black mildews (Oopnodium), and the whole great tribe of Spheria. The truflies (Tuber), morels (Morchella), and Helvellos also belong to this division. 2. Physomyoetes, a small group comprising the true molds. 3. Hyphomyoetes, inciuding the bacteria of disease and the great host of minute molds which cover almost every substance exposed to dampness. To it alsu belong the mold of the potato-rot (Botrytis infestans) and many which induce decay in truit (Oidium), the bread and cheese molds (Penicillium, Aspergillus), and the yeast and vinegar plants, which are submerged mycelia of Penicillium. 4. Ooniomycetes, comprehending the whole family of rusts, smuts, and bunt (Pucoinea, Urédo. Ustiliago, Tilletia, A'cidium, etc.). 5. Gasterompcetes, including the whole trile of puffills, as well as the mubterranean fungi which look
like truffles, hut are dusty and smutty within. 6. Hymenomycetes, typical and well-known examples of which are found in the mushrooms and sapballs. Fungi occur in every part of the earth where the cold is not too intense to destroy the spawn, though they abound most in moist, temperate regions where the summer is warm. Several species afford excellent and abundant food, others are valnable in medicine, while many are deadly poimons and many, plant pests. Fungicides (fun'ji-sidz), snbstances stroy fungous growths on plants. The marked extension of injurious parasitic growths has attracted wide attention to the subjeet of fungicides, and the United States Department of Agricnlture, has issued bulletins un fungicides.
Funnel (fun'el), the shaft or hollow channel of a chimney through which smoke ascends; especially in steamships, a cylindrical iron chimney for the hoiler-furnaces rising ahove the deck. Funston (funs'ton), Frederick, sol1865. In 1808 he joined the army of in Philippines. His most famous exploit was the capture of Aguinaldo, the Philippine leader. In 1916, as major-general, he commanded the forces on the Mexican border. IIe तied February 19, 1917.
Fur. Fur is the fine, soft. hairy covering of certain animals. The term is sometimes distinctively apnlied to sueh coverings when prepared for being made into artieles of dress, etc., while the name of peltry is given to them in an nnprepared state or when merely dried. The animals chiefly sought after for the sake of their furs are the beaver. raccoon, muskrat, squirrel, hare. rahbit, chinchilla, bear (hlaek, gray, and brown), otter, sea-otter, seal, wolf, wolverine or glutton, marten, ermine, lynx, coypon (nutria), polecat (fitch), opossum, fox, etc. (See under proper hendings.) All the preparation that skins require before being sent to the market is to make them perfectly dry, so as to prevent them from patrefying. This is done by exposing them to the heat of the sun or a fire. The small skins are sometimes previously steeped in a solution of alum. When stored in large quantities they must be earefully preserved from dampness, as well as from moths. The fur-dresser, on receiving the skins. first subjects them to a softening process. Fle next cleans them from lox re pieces of the integument by soraping hem with an iron blade. Finally, the fin is cleaned and combed, after whlch it is handed over to the cutter,

shapes required to make the different articles desired.
Fur Trade. In Europe the fur traile is led chietly hy Rueaia, which rields great quantities of furs, eapecially in the Asiaric portions of her dominions. Austria, Turkey, Scandinavia, etc., also yield a vertain quantity. The fur trade of America has lons been highly important, and has given origln to several great trading companies, of which the Dutch East India Company was first. The French early took up the fur trade in Canada, and their chain of forts and trading posts at one time extended from Hudson Bay to New Orleans. Quebec and Montreal were at first trading ponte In 1670 Charles II grauted to Prince Rupert and others a charter empowering them to trade exclusively with the aborigines of the IIudson Bay region. A company, then and after called the Hudson liay Company, was formed, which for a perior of nearly two cenzuries possessed a monopoly of the fur trade in the vast traet of country known as the Hudson Bay Territory. In the winter of 1783-84 another company was formed at Montreal, called the Northecest l'ur Company, whieh disputed the right of the Hudson Bay Company, and actively opposed it. After a long and bitter rivalry the two companies united in 1821, retaining the name of Hndson Bay Company. The monopoly which had hitherto been enjoyed by the original company ahout Hudson Bay was now much extended; hut iv 1808 an act of parliament was passed to make provision for the surrender, upon certain terms, of all the territories belonging to the company, and for their incorporation with the Dominion of Canada. In 1869 the surrender was carried out, Canada paying $£ 300,000$ to the company by way of compensation. The company still possesses about 150 houses, forts, and posts in the whole region formerly belonging to it, and its operations, indeed, extend beyond British America into the United States and to the Sandwich Isles and Alaska. It employs directly somewhere about 3000 ngents, traders, voyagers, and vervants, besides Indian hunters. Some of its posts are situated very far north, almost approachlng the Arctic Ocean. The trade in furs conducted by citizens of the United States has been extensive, bnt in a mrenter degree the result of individnal enterprise than of the management of sigantic corporations. The Alaska Fur Company holds two of the Aleutian Islands in lease from the goverrment with the mole right of killing yeariy not more than 100.000 fur-scalk. Tue fur traủe centers in Lon-
don, this being the only. place in which which the subutance is not directis heated the fur is deed
Furca (tor'ka), Furahions, an Alpine mountain in Switieriand, Canton Valaic immediately weat of BL Gothard; height, 0035 feet, containing the slacier in which the Rone bas itis source. The summit of the Furca Pase over which there is is good road, is 7092 feet high.
Furies (fu'res), Euncrimes, ErunsFuric and Dira), deities in the Greet mythology, who were the avengers of murder, perjary, and filial ingratitude. Later mythologitts reckon three of them. and call them Alecto, Mepara, and Tisiphone. Xisschylus, in his celebreted tragedy of the Eumenides, introduced fifty furien, and with them Fear and Horror, upon the stage. They were regurded with great dread, and the Athenians hardly dared to apeak their names, but called them the venerable godicosses. It was by a similiar eaphemiem the name Eumenided, aignifying the soothed or well-pleaved goddensee, was introduced. Erinnjes, the more ancient name, signifies the hunters or pervecutors of the criminal, or the angry goddesses.
Furlong ffur'long; that is, 'furrowlength, 40 rods, poles, or perches, equal to 220 yards, the eiehth part of a mile. Furlough (fer'o), m military term signifying leave of absence given hy the commanding officer to an sticer or soldier under his command.

## Furnace (fur'nes), a device for the

 production and utilization of heat gonerated by the comhustion of fuel or by the conversion of electrical enerisy. A furnace consists of three essentinl parts: the fireplace, where the fuel Is connumed ; the hearth, where the heat is applied; and the draft. The draft may be supplied hy the use of a high chimney; but where this does not prove sufficient, forced draft by means of blowers, bellows. fans, or a steam jet acting as an injector, is used. The difiference of efficiency be tween forced and natural draft has been estimated as being 25 per cent. in favor of the former. Resulating the supply of fuel is almost as important as resulating the supply of air, and to this end self. feeding furnaces have been devised. Furnacees are conveniently divided into three clasees: (1) Thowe in which the fuel and the substance to be heated are in intimate contact, as in killns and blast furnaces: (2) those in which the substance is heated by the products of combuntion. as in reverberatory furnaces, of which the pudding furnace is a type; (3) those in hy the productas of combustion, art in cruchble, mufle, and retort furnacen Gas furnaces are now in common use, both on account of their cleanlinems and the facility of regulating the heat. For very hish temperatures the electric furnace is utilised. See Eleotrio Furnooe.
## Furneaux Islands (fer'not, a

 ing to Tasmania, at the east end of Bass ing to Tasmania, at the east end of Bass 8trait, inclnding Flinders Island with an area of 513,000 acres ; Cape Barren Island, 110,000 acres ; and Clarke Island, 20,000 acres. On the west the islands have ateep, rocky shores, but on the east alope gradually down to a low, sandy beach, with numerous swamps and lagoons. The inhabitants, who are few in number, many of them 'half-castes,' procure a living hy seal-fishing and preserving mutton-birde, a species of petrel. The islands are named after the officer who was second in command in Captain Ccul's second voyage.Furness (fur'nes), a district of $N$. forming part of what is cqled Ene Lakiand, District. Furness Abbey ib a noble ruin situated one mile s. of Dalton-In-Furness, comprising the church walls, chapterhouse, refectory, and guest-ball, the whole giving evidence of the former magnificence of the structure. It was founded in 1127 iy Stephen, afterwards King of England. Furness, Whiam Hengr, a UniBoston, Mastarian clersyman, born at 1896. He cachusette, in 1802; died in Divinit He graduated from the Harvard Divinity School in 1823, became pastur of the First Unitarian Church of Philadelphis in 1825, and held this charge until 1875, when he retired as pastor emeritus. He was a close friend of Emerson, Sumner, Garrison, and Lucretia Mott, and an earnest abolitionist. He wrote extensively, his favorite theme being the life and character of Christ. His son, WILliam Henkr, Jr. (1828-67), studied art and achieved fame as a portrait painter. A second son, Horace Howard, born in 1833. studied law and was admitted to the bar in 1859. He contributed largely to legal literature, hut is best known as a Shakesperan critic and editor, his variorum edition of Shakespere, of which a numher of volumes have been issued. being highly esteemen, He died in 1912 . Furnivall (fur'i-val), Freperici in Surrey, 1825: JAMes, born at Egham, College, London, and Trinity University pridge. He deroted Mrinity Hiall, Camstudy of early and middle Englisii literature: and was mainly instrumental in

## Furruckabad

establishing the Early Englinh Text Society, the Chaucer Society, the New Shakespere Society the Browning Society, the Wicklife Society, and the shelley Society. He wam the hon. secretary of the Phiiological Society. He edited numerous works, chiefly through the medium of some of these societies, notably the 8ixText edition of Chaucer's Canterbury Tales. He died in 1910.
Furruckabad. See Farukhabad.
Fur-seal, a name given to meveral of seals which have a dense covering of fine underfur. The best known and most valuable is the fur-seal or sea-bear (Callorhinus ursinus) of some of the islands connected with Alaska, especially St. Paui's and St. George's, where it breeds. See Seal, Fur, and l'ur Trade.
Fürsí (forst) Ju L I Us, orientalist, kowo, Prussian Poland, 1805; died at Leipzig, 1873. He devoted himself to philological science, and early showed a marvelously extensive acquaintance with Rabbinical literature. He obtained an appointment as fecturer in the University of Leiprig in 1839, and in 1864 was promoted to the rank of professor. He was the author of numerous works all connected with orientai philology, chief among which are his Concordantice Librorum Sacrorum Veteris Testamenti Hebraica et Chaldaica, and his Hebrew and Chaldeo Lexicon. From 1840 to 1851 he edited Der Orient, a journai devoted to Jewish ianguage, literature, history, and antiquities.

## Fürstenwalde (furst'en-val-dè), à

 miles E. S. F. of Berin, on the right bank of the Spree. It has a brick church of the fourteenth century, and manufactures of woolen and linen cloth, hosiery, and leather. Pop. (1905) 20,498.Fürth (firt), a town in Bavaria. 6 miles w. N. W. of Nurnberg: at the conflinence of the Pegnitz with the Rednitz. It has important aud varied manufactures. including mirrors. pictureframes, jeweiry. gold-leaf, lead pencils, spectacles, machinery. etc. A battle was fought in its neighborhood in 1632. Pop. (1910) 66,533.

Furze (fury), whin, gorse, the comcenus mon name of the species of the genus Ulex, nat. order feguminome. Tweive species have ben described, of which the common furze ( $D$. Europaus) is a low, shrubby plant, very hardy, and very abundant in harren, heathy, sandy. and हravelly soils throughout the Fiest of Europe. The stem in generally 2 or

8 feet high, much branched and mont of the leaven converted into mplnes The flowere are molitary and yellow. It oftem covers excluaively large tracts of country. and maken a splendid appearance when in fower. It is uned as fuel, and sometimen the tops of the branches are used (eupecially the youns topa) as fodder for horien and cattle, after heving been beaten or bruised to moften the pricklen. Fu-San (fo-man), a town and treats port of Corea, mituated on a bay of the same name, on the southenst coast. It imports edt, cotton soods and metals, and exports raw ailk, rice and hides. Pop. of district 16,797.
Fusaro (foraror) Luake or, a amall of Bais, 11 miles w. of Naplem. It is supposed to have been the harbor of ancient Cumas, and is atill celebrated for ity oysterm.
Fuse (fuz), a tube filled with combustible matter, used in bianting, or in discharging hollow projectilea, etc. There are many varieties in ume, such as the fuse used in mining and quarrying, which usually consists of a tube filied with a slow-burning componition, which sradually burns down to the charge: the conowsaion and porcuscion fuses for hollow projectlles, which explode the charge when an object is struck; the electric fuse, which is ignited by the paysage of an electric spark through it; and time or mechanical fuses, uned in some forms of torpedo, and with much explosives as dynamite and guncotton.
Fusee (ful-zé), the cone or conical round wart of a watch or clock, It 1 It is a mechanical contrivance for equalizing the power of the mainspring for as the action of a spring varies with its degree of tension, the power derived from

Berrel and Fusee of a Watch.
the force of a spring requires to be modified according to circumstarcem before it can become a proper zubstitute for a uniform power. In order. therefore, to cor rect this irregular action of the malnapring, the fusee on which the chain or catgut acts is made momewhat conical, so that its radius at every point may be edapted to the atrength of the apring.
Fuseli (fr'so-li), Johr Hismy (orisinal name Paty

at Zurfch; died at London, and was buried In St. Yaul' Cathedral, ji 1820. He wae educatod for the church, but a political pamphlet written by him ind Lavater led to his taking refuge in England in 1705, bent on a literary career. On the advice of Sir Joshua Reynolds he devoted himself to art, went to Italy and atudied there for nearly nine years $\mathrm{He}_{0}$ was elected member of the Royal Academy, and made its keeper in 180.. Among his notable piletures are his contributions to Boydell's Shakeapere Gallery a and forty-seven pletures from Milton. He had considerable literary difte, and his lecturen on painting are still enteemed.
Fusel-oil (fi'seel-oil), a heary, oily, inflammable Auid "with a high bolling-point, dieagreenble, cutting odor and pungent tante, which is neparated in the rectification of ordinary apprit distilled from grain, malt, potatoes, molasres, beet-root, etc. The composition of this fuid depends on the materials used in the manufacture of the apirit, but it may be maid to consist to a large extent of ethylic and amylic alcohol (C.H $\mathrm{H}_{5} \mathrm{O}$ ). Fupel-oil acts very deleteriously on the animal system, and this is the reason why inferior spirita are so injurious in their effects.

## Fu-Shan. See Foo-Shan.

 Fusible Metal
(fas'i-h)), an alloy, usually of lead, tin, ad bismuth, componnded in such definite proportions as to melt at a given low temperatnre. In steam-engines, a ping of fusible metal is placed in the skin of the boiler, so as to melt and allow the steam to escape when a dangerous heat is reached.
Fusible Porcelain, a silicate of soda obtained from cryolite and sand. fused and worked as glass.
Fusiliers (fin-si-lerz'), formerly solor light fintlock armed with a fusil or light fintlock musket closely resembling a carabine. The name is piven to nine or ten resiments in the British army, which differ from other regiments of the line chiefly in the husby worn by officers and non-commissioned officers.
Fusing-point (fiz'ing), the degree which a substance melts or liquefies. This point is very different for different metals. Thue potassinm fuses at $136^{\circ}$ Fahr. hismuth at $504^{\circ}$, lend at $619^{\circ}$. sinc at $680^{\circ}$, silver $1832^{\circ}$. pold $2282^{\circ}$. Malleable iron requirea the hifheet ment of a smith's torse ( $2912^{\circ}$ ) ; whlle cerium, platinum,
and some other metals are infurible in the heat of a mith'n forge, but are fusible in the flame produced by the oxyhydroger blowpipe.

## Fusion (farshun), the convervion of

 a solid body into the liguid state by direct heat, as dietinguished from solution, in which the efifect is produced by means of a liquid. It in Hifilicult, howcver, to draw a line between the two, for the main diference is in the temperature, and when a flux is employed all distinction disappeara. The term in apecially applied to the action of heat on the metals, hut it is extended to any solid matter; thus the passage of ice into water at $32^{\circ} \frac{1}{5}$. is true funion. There are bodies like carbon, lime, magnesia, zirconia, and other metallic oxides which are practically, if not abwolntely, infusible. See Fusing-point.
## 

Fust, Jonarn, a goldemith of Mainz, associated with Gutenberg and Schüfer in connection with the origin of printing. He probably died of the plague in 1466. See Printing.
Fustian (fust'yan), a cotton or mixed linen and cotton fabric with a pile like that of velvet hut shorter. It includes corduroy, moleskin, velveteen, etc.
Fustic (fustik), the wood of the Maclura tinctoria. a tree of the mulberry order growing in the Weat Indies. It is a large and handsome tree. and the timher, though, like most other dyewoods, brittle, or at least easily splintered, is hard and strong. It is extensively used as an ingredient in the dycing of yellow, and is largely imported for that purpose.- Young fustic is the wood of the Rhus cotinus or Verice sumach, a South European shrub with smooth leaves and a remarkable feathery inflorescence. It sields a fine orage color, which, however, is not durahle withoat à mordant.
Fusus (fǐ'sus), a genus of gasteropodons molluses nenrly allied to Murex, with a somewhat spindleshaped univalve shell. The genus comprises many species. They are distributed over the whole world, living generally on muddy and sandy sea-bottoms.
Futehpur. See Fatehpur.
Futhork (fu'thork), the name given to the earliest or runic alphabet in use among the Teutonic and Gothic nations of northern Enrope so called from its firat six letters, $\mathrm{f}, \mathrm{u}, \mathrm{th}, \mathrm{o}$, r. k. See Runes.

Futtipur Sikra. See Fetehpur Sikni

Futtygurh. See Fategerh.
Futurist (fintar-iet), in general, ono who has regard to the future. The name is applied to a modern whool of painting which aims at the de lineation of impression rather than of obeervation. The futurist seek to convey to the canvas a pictorial representations, not of the object, but of his own feelings upon regarding the object. The work of the futurists, like that of the cubists, has attracted wide attention in Europe. It became generally familiar to the American public through the International Exhibition of Art held in New York in 1013.
Fyne (fin), Locir, an arm of the of Argyle, running northwards from the Firth of Clyde for about 40 miles. It
depth varies from 12 to 60 fathums. It is particularly celebrated for its herringe. Fyrd (fard), in Annlo-dason Dng: land land the military arras or land force of the whole nation, compris ing all males able to bear arms. Whe array of the fyrd of each chire was left to the ealdorman.
Fyt (fit), JoHin, a Dutch painter and etcher, born at Antwerp in 1611: died there in 1681. His subjects were chiefly game, honting pieces, doge, fruit, flowers, etc.
Fyzabad, or Faizabad (fliza-bid $)$, a what wan town of Briush Indis, in on the Gogra, 78 miles 2 from Lactonow. It was the scene of one of the outbreak. in the Indian rebellion of 1857 . Pop. including cantonments, $75,085$.

## G

G, the eaventh letter in the Eaglish alphabet. Fnglish $g$ hard is a guttural mute, the 'voiced 'or soft or monant sound corresponding to the 'breathed' or hard or aurd sound $k$ (or o hard). Thim sound of $g$ is what the letter always has before a (except in gool) o o, $u$, and when initiai almo before $e$ and $i$ in all worde of Engiish origin, and when final. The eoft sound of $g$, or that which it more commonly has before $e_{1}, i$, and $y_{i}$ as in gem, gin, gymnestics, is a palatal sound the rame as that of $j$, and did not occur in the oldent English or Angio-Saxon. $G$, in music, (a) the fifth note, and dominant of the normal scaie of O valled alino sol; (b) the lowest note of the grave hexachord; in the Guidonian syutem jamma ut; (c) a name of the trebie clef, which is seated on the $G$ or second line of the treble ataff, and which formerly had the form of $G$.
Gabbro (zab'ro), the name given by sisting essentiaily of Itans to a rock conepidote ontaily of diallage and white ornamental purposes in building for table-topa, etc.
Gabbronite
(g a b $\mathrm{r} u$-ntt), GabronITE, a mineral, a $\vee$ ariety of scapolite, occurring in masses whose structure is more or less foinated or sometimes compact. Its coiors are gray, bluish or greenish gray, and sometimea red.
Gabelle (8iabel), a name originaliy kind of indirectin in France to every the of ladirect tax, as on wine, cloth. etc., but at a later period specialiy appiled to the tax upon salt, which after being frequentily imposed as a temporary means of raising money, became under Charles $V$ a permanent impost. Under Heary 11 nine provinces and three counties parchased perpetual exemption from the tax, but it was not finaliy suppressed in France, by the Constituent Assembly. until 1790. Abont that time, out of $38,000.000$ livres raised by farmers-general from this tax, $7,000,000$ at most came into the treasury. Gabes. same as cabss.

Gabilla (zat-bel'ya) a finger or par cei of tobacco in Cuba. Thirty-uix to forty leaven make a gabilla. 4 gabillas 1 hand, 80 hande 1 bele.
 work bagket of cylindrical form, but without bottom. In a sleze, when forming a trench a row of gabions in placed on the outside nearent the fortress, and filled with earth an it is thrown

Part of Treach with Gabions and Frecines.
from the trench, so as to form a protection against the fire of the beniegred. Each gablon is about 20 inches in diameter and 33 inches in height, but this height is usuaily increased by piacing a row of faccines on the top after the interior has been filled up.
Gable (giflb), the trianguiar end of a honve or other builiding, from the eaves to the top, and distinguinhed from a pediment by this, among thing, that it has no cornicea.
Gaboon (ga-bbn'), The, or M'poncoast of Africa, an estning on the west of Guinea imme, opening from the Gulf tor. Severai rivers dishert of the equainto it. The Gaboon territory forms part of the French Conas territory. The chief tribes are the Mpongwa or Gabonese, and the Fans, who carry on an active trade with Europeans in ivory, copal, ebony, dyewoods, etc. The vast awamp. render the climate unheaithy, bat inland rise some considerable bills with denve

jungle-like woods, the abode of the gorilla. The chief station is Libreville. There are several English trading-posts along the estuary (Glass Town, Olemi, etc.), and mission stations of several nations.
Gaboriau (ga-bo-rè-ō), Emile, a 1834; died ln Paris in 1873. After contributlng to the smaller Parisian journals short sketches published under the titles Ruses d'A mour, Les C'omédiennes Adorées, etc., be achieved a conslderable success by his novel Dossier No. 113 (186'). He continued to work this vein ln a series of clever stories dealing with crlme and its detection: Le Crime d'Oroival, L'Affaire Lerouge, Les Esclaves de Paris, La Vie Infernale, La Corde au Cou, L'Argent des Autres, etc.
Gabriel (gajbri-el; 'hero or man of (od'), according to Biblical history, the angel who announced to Zacharlas the birth of John, and to Mary the blrth of the Saviour. In Jewish mythology he is one of the seven archangels. The rabbins say he is the angel of death for the Israelites, and accordlng to the Talmud he is a prince of fire, who presides over thunder and the ripening of fruits. In Mohammedan theology he is one of the four angels employed in writing the divine decrees, and the angel of revelation, in which capacity he dictated the Koran to Mohammed.
Gad (gad; 'a troop'), one of the twelve tribes of Israel, which took its name from Gad, the son of Jacob and Zillah. At the time of the exodus the tribe numbered 45,050 men of twenty years old and upwards; and as being in pastoral tribe they were assigned a rich district in Gilead between Renben and Mannasseh. See Josh. xiii, 24-28. Gadames. See Ghadames.
Gadara (gad'a-ra) an ancient city of Syria, in the Decapolis, about 6 miles s. E. of the Sea of Galilee. It played an lmportant part in the strusgles against Antiochus, Alexander Jannæus, and Vespasian, and only fell into decay after the Mohammedan conquest of Syria.
Gaddi (gadē). (1) Gaddo, a Florentine worker in mosaic and founder of the modern mosaic art, born 249 ; dled 1312.- (2) TADDEO, an artist. son of preceding, born 1300 ; died 1360 . His works are among the best examples of fourtenth-century art, his decorations of the Church of Santa Maria Novella at Florence being speclally noteworthy. - (3) AgNolo. son of Taddeo, born 1324; died 1390 . His style was compounded from his father and Giotto, and he has
been called the founder of the Venetian school.
Gade (gàde), Niels Wilhyla, one of the leading Scandinavian composers, born in $1817^{5}$ at Copenhagen, where, $\ln 1841$, by his overture entitled Fichoes of Ossian, he gained the prize of the Musical Union. IIe was supported during his studies abrond by a royal stipend, and in 1844 was appointed to succeed Mendelssohn in the direction of the Gewandhaus concerts at Leipzig. In 1850 he was appointed muslcal director to the King of Denmark, and $\ln 1874$ received a life pension. His works, which are Mendelssohnian in character, Include seven symphonies, several overtures, sonatas, quintets, etc.; a lyrical drama Comala; a religious cantata-The Crusaders; an opera-The Nibelungen; etc.
Gades, the ancieut name of Cadiz.
Gadfly (gad'Ai), a name commonly applied to various insects, a large number of which belong to the great Linnean genus $\boldsymbol{E}$ Etrus, while others belong to the genus Tabdinus. © . bovis or $^{2}$ ox gadfy (the Hypoderma bocis of some naturalists) is about 7 lines in length; thorax yellow, with a black band; abdomen white; terminal segments fulvous; wings dusky. This species attacks the horse also, the female depositing her eggs in the skin of these animals in considerable numbers. In a short time the cggs are matured, and produce a larca or worm, which immediately pierces the skin, raising large lumps or tumors filled with pus, upon which the larva feeds. ©E. equi' (the Gastrophilns or Gastrus equi of some naturalists) deposits lts eggs upon such parts of thr skin of horses as are subject to be wuct licked by the animal, and thus they art conveyed to the stomach, where the heal speedily hatches the larve, too well known under the name of botts. © $\boldsymbol{E}$. ovis (also called Cephalomyia ovis) deposits its eggs ln the nostrils of sheep, where the larva is hatched. and immediately ascends into the frontal sinuses, attaching itself very firmly to the lining nembrane by means of two strong hooks situated at lits mouth. Other species infest the buffalo. camel, stag, etc. Fver rhinoceroses and elephants are said not to be altogether exempt from their $n t-$ tacks. The characteristics of the genus Tabd̈nus are two enormous eyes, usually of a greenish-yellow color rayed or spotted with purple antenne scarcely longer than the head, the last joint with five divisions. These lnseets suck the blood of horned cattle, horses, and sometimes
even of men. Cattle exhibit great alarm and excitement at the presence of the gadtly, and rush wildly about, with hend stretched forward and tail stuck out, to escape from their tormentor. These pests are common in the different yections of the United States.
Gadide (gad'i-dé), a family of malacopterous fishes, which includes the cod, ling, haddock, ctc. See Cod.
Gadolinite (gad'o-lin-it), a mineral, with considerable silicate of yttrium, with considerable proportion of lime and magnesia, of the oxides of iron, cerium, lanthannm, glucinum, and of other bases. Gadsden (gadz'den), a town, capital of Etowah County, Alabama, on the Coosa River, 63 milee n. w. of Birmingham. It has blast furnaces, carworks, cottonseed oil and saw mills, etc., and a large trade in lumber, cotton, and grain. There are iron and coal fields in its ricinity. Pop. 10,557 .
Gadsden Purchase (gadzoden), a in Southern New Mexico and Arizona, acquired from Mexico in 1853 by treaty negotiated by Gen. James Gadsden. The pnrpose of this purchase was a proper adjustment of the southern border line of the two territories, the United States paying Mexico $\$ 10,000,000$ for the new area of 45.535 square miles acyuired.
Gadwall (gad'wal), the common name of Anas strepera. a species of duck not so large as the mallard, with long, pointed wings and a vigorous and rapid flight. North America as far down as South Carolina is its favorite habitat. It visits Europe but is rare in Great Britain. Gaedhelic (gü'el-ik). See Gael.

## Gaekwar, or Gaikwar (gik-wir'). See Baroda.

Gael (gall), the name of a branch of the Celts inhabiting the Highlands of Scotland, Ireland, and the Isle of Man. Gadhel or Gael is the only name by which those who speak the Gaelic laingrage are known to themselves. By way of distinction the Highlanders of Scotland call themselves Gael Albinnich (Gaels of Abbin) and the Celtic populntion of Ireland call themselves Gael Erinnich (Gaels of Erin).
Gaelic, is a linguistic title now generof the Celtic language which is spoken in the Highlands of Scotland, and hence distinguished from Manx and Irish, the other two kindred dialects, which scholars of the present day include under the name (or rather spelling) Gaedhelic. The
modern Gaelic differs to some extent from the Irish in pronunciation, in grammar, in idioms, and in vocabulary. The Jiterature of the Gaelic language is somewhat scanty, and is much less ancient and important than the Irish. The carliest written specimens of Gaelic are scraps contained in the Book of Deer, a religious manual belonging to the early part of the twelfth century. To the fourtecnth and fiftecnth centuries a considerable number $r$ - pieces belong. A collection of the older poetry, ascribed to Ossian and others, was made in the lirst half of the sixteenth century by Sir James Macgregor, dean of Lismorehence, called The Dean of Lismore's Book.' Robert Calder Mackay, or Kobb Donn, and Duncan Ban MeIntyre, of Glenorchy, are the two most noteworthy poets among the Scottish Highlanders in modern times. They both belong to the eighteenth century. This century nlso saw the publication of the Bible in Gaelic, the Irish Bible having been previsusly well known in the Highlands. The so-called poems of Ossian appeared about the same time, but in English, and it was not till 1818 that the corresponding Gaelic text appeared. A series of tales and legends of the Highlands of Scotland have been collected and published by J. F. Campbell. Various English works have been translated into Gaelic, and several collections of Gaelic poetry have been published in the present century, as well as Gaelic periodicals. Gaelic poetry still continues to be written not only in Scotland but even in America. Gaëta (gà-àtà ; anciently Caieta), a strongly fortified seaport town of S. Italy, province of Terra di Lavoro, on the Gulf of Gaeta, the seat of a bishop, 45 miles northwest of Naples. It is a place of great antiquity, was a favrite resort of the wealthy familics of Rome, and since the fifth century has had a prominent place in the history of Italy, and especially in that of the Kingdom of Naples. Pop. of commune $15,5 \%^{-}$. Gætulia (je-tüli-a), the ancient name Africa of an extensive region of Africa, on the southern slope of Mount Atlas. It corresponis to the modern Biledulgerid, the southern part of Morocco, and the northern part of the Sahara. It was inhabited by warlike tribes, who are supposed to be the ancestors of the modern Tuaregs of the Sahara oases.
Gaff
(gaf), a spar used in ships to ex-
tend the upper edge of fore-andaft sails which are not set oas stays. The fore-end of the gaff. where it embrases the mast, is termed the javo, the outer end
the poal. The jaw forms a semicircle, and is secured in its position hy a jawrope passing round the mast.
Gage (gaj), Lyman Judson, hanker, York, in was born He entered the banking business in 1853, removed to Chicago in 1855 and became connected with the first National Bank of that city, of which he was made president in 1891. His reputation as a banker of great ability hrought him the appointment of Secretary of the Treasury in President McKinley's cahinet in 1897. He held this position under Roosevelt antil 1903, When he became president of the U. S. Trust Company of New York.
Gage, Matilda Josiris, suffragist, in 1826; was born at Cicero, New York, active advocate in 1898. She hecame an was secretary and aftecwards president of the New York State Society, and also president of the National Women's Suffrage Association and the Women's National Liberal Union. She wrote several works on the subject of women's rights.
Gahn ( $\mathrm{g} \| \mathrm{n}$ ), Johann Gottlieb, a died in 1818 . In chemist, born is 1745; died in 1818. In his chemical work he was associated with Bergman, Scheele, and Berzelius. He left an account of the blowpipe and its application.
Gahnite (găn'it), a name given to automolite in honor of Gahn. It is a native aluminate of zinc, crystallizes in octa-and tetra-hedrons, is of dark green or black color, and is not affected hy the blowpipe flame or hy acids or alkalies.
Gaillac (gh-yak), a town of Southern France, department of Tarn, on the right hank of the Tarn. It exports a good red tahle-wine, the district abounding in vineyards. Pop. 5568 . Gaillarde (gãli-ard; Italian, Gagliarda), a lively Italian dance, in triple tirne; also called, from its alleged origin, Romanesque.
Gainesville (gãnz'vil), a city, capiFlorida, 70 miles tal of Alachua Co., Market gardening is important; and it has phosphate and fertilizer industries. It is a health resort. Pop. 6183 .
Gainesville, a city, capital of Hall N. E. of Atlanta. It has mineral springs and is a summer and health resort. Its industries include cotton goods, cottonseed oil, etc. Pop. 5925.
Gainesville (ganz'vil), a city, capiTexas, near the Trinity River and 285
miles N. E. of Austin. It has cotton compresses, packing mills, ironworks, hrick and broom factories, and does a good trade. Pop. 7624.
Gainsborough (gans'huro), a marland, county of Lincoln, 15 miles northwest of the town of Lincoln, on the Trent, which is navigable by vessels of from 150 to 200 tons, and is connected with the extensive canal navigation ostablished to Manchester, Liverpool, Gloucester, Bristol, London, etc. Among the chief huildings are the parish church, the town hall, and the old hall or manor house, containing the assemhly rooms and mechanics institute-a large quaint huilding, supposed to have been partly built by John of Gaunt. There are oil mills, breweries, malt houses, etc. Pop. (1911) $20,589$.

Gainsborough, Thomas, an Enghorn at Sudbury Sish painter, was was trained under the engraver G. He and the painter Haymang but met with small success till his marriage with Miss Burr, a lady of beauty and fortune, in 1746. After residing for some time in Ipswich and Bath, he went in 1774 to London, where he passed the rest of his life. He was one of the original thirtysix academicians. He rivaled Sir Joshua Reynolds as a portrait painter, and showed no less originality in landscape. He died in 1788.
Gains, Mrra Clark, a celebrated liti1805. gant, horn in New Orleans in 1805; died in 1885. Her father had owned a very large estate in that city, hut she had first to estahlish the fact of her heing a legitimate child of her father, and from 1832 to the time of her death she fought in the conrts for her property, which had fallen into other hands. She won favorahle decisions in the U. S. Supreme Court, but the costs of the long-protracted suit ate up all the proceeds and she obtained nothing.
Gaius (gā'us), or CaiUs. a Roman lawyer of the time of Adrian and Antoninus Pius, of whose life very little is known. Of his numerous works, his Institutes are particularly important; first, as having heen for conturies, down to the time of Justinian, one of the most common manuals of law ; secondly, as havinbeen the foundation of the official compendium of the law which occupies an important place in the reform of the judicial system hy Justinian; and, thirdly, as the only tolerahly full, systematic, and well-arranged source of the old Roma:i law. The bulk of the work in MS. was discovered in 1816 by Niebuhr.

Galactodendron trces. Galactometer
(g a l-a k-tom'e-ter). See Lactometer.
 duced by boiling milk-sugar or lactose ( $\mathrm{CrHH}_{2} \mathrm{O}_{11}$ ) with dilute sulphuric acid. Galacz.
Galago (ga-la'go), the native name of a genus of quadrumanous mammals found in Africa. The species which are nocturnal in their habits, latre long hind legs, great eyes, and large, membranous ears. The great galago ( $\sigma$. (rassicaudatus) is as large as a rabbit. They live in trees, and are zouglit after as food in Africa.
Galanga (ga-lang'ga), or Garangal Root, a dried rhizome brought from China and used in medicine, being an aromatic stimulant of the nature of ginger. It is chiefly produced by Alpinia oficinarum, a flag-like plant about 4 feet high, with narrow, lanceolate leaves and simple racemes of white thowers. The greater galangal is the rlizome of A. Galanga.
Galapagos (ga-liup'a-gos ; the Spangroup of thirteen islands of volcanic origin in the North Pacific Ocean, about 600 miles west of the coast of Ecuador, to which they belong; area, 2950 square miles. The most important is Albemarle, 00 miles long by 15 broad, and rising 4700 feet above the sea. Others are Indefatigable, Chatham, Charles, James, and Narborough. Of these, some are used by the Republic of Ecuador as penal settlements. Many of the fauna and flora of the islands are pecculiar to them, the most remarkable being a large lizard and the elephant tortoise.
Galashiels (gal-a-shèza'), a town in the Gala, about a mile above its confluence with the ' t weed, $\mathbf{2 7}$ miles s. s. E. of Edinburgh. It is noted for its manufactures of tweeds, plaids, shawls, woolen yarns, etc. Pop. 13,952.
Galatea (gal-a-té'a), in classic mythology, the daughter of Nereus and Doris, who rejected the suit of the Cyclops Polyphemus and gave hierself to the Sicilian shepherd Acis. The monster, having surprised them, crushed Acis beneath a rock.
Galatia (ga-la'sha), the ancient name of an extensive region in Asia Minor, so-called from its Gallic inhabiiants, who in the first place formed part of the invading hordes of Gaule under

Biennus in the third century B. c. These were compelled by Attalus, king of Pergamos, to settle within well-definad limits between Paphlagonia, l'ontus, Cappadocia, Lycaonia, Phrygia, and Bithynia. With the Gauls were intermingled a considerable proportion of Greeks; hence the inhabitants were often called Gallogreeci, as well as Galatians.
Galatians (ga-la'shans), Epistie to THE, one of the most im portant epistles of St. Paul, written probably about 56 A.D., soon after his second visit to Galatia, recorded in Acts, xviii, 23. It was directed against the spread of Judaistic practices in the Galatian churches and especially against the practice of circumcision. It has been the subject of numerous commentaries by Luther. Winer, Meyer, Ellicott, Alford, and others.
Galatina
(gï-la-tēna), San Pietro IN, a town of South Italy. in the province of Lecce and 16 miles west of Otranto. Pop. about 11,000 .
Galatz (gia'lats), or Galacz, a town and port in Roumania, in Moldavia, on the left bank of the Danube, hetween the confluence of the Sereth and Pruth. It consists of an old and a new town, the latter on a hill dominating the river and commanding a fine view of the Balkans. The harbor, accessible to vessels drawing 15 feet, is well frequented, and an emporium of trade between Austria, Russia, and Constantinople. The trade was formerly entirely in the hands of the Greeks, but now many English and other foreign houses have established themselves. The chief exports are grain (principally maize), wine, planks and deals, tallow, etc. The imports are chiefly British manufactures, sugar, tin plates, iron and steel, coal, oil, fruits, tobacco, fish, glassware, leather, coarse cloth. When inade a free port in 1834 it had only 8000 inhabitants, but the population has since grown to over 00,000. It ceased to be a free port in 1883.

Galaxy (gal'ak-si; Via Lactea, or Milky Way), in astronomy, that long luminous track which is seen at night stretching across the heavens from horizon to horizon, and which, when fully traced, is found to encompass the heavenly sphere like a girdle. This luminous appearance is occasioned by a maltitude of stars so distant and blended as to be distinguishable only by the most powerful telescopes. At one part of its course it divides into two great branches, which remain apart for a distance of $150^{\circ}$ and then reunite: many other smaller branches are given off. At one point it
spreads out very widely, exhiblting a far-like expanse of interlacing branches nearly $20^{\circ}$ broad; this terminates abruptly and leaves here a kind of gap. At several polnts are seen dark spots in the midst of some of the brightest portions; one of the most easily distinguished of these dark spots has long been known as the 'coal sack.' Accurding to Herschel's hypothesis, our sun and planetary system form part of the Milky Way. Calba (gal'ba), Servius Sulpius, a Nero, born b.c. 3. He was made prator (A.D. 20), and afterwards governor of Aquitania, and in A.D. 33 was raised to the consulship through the influence of Livia Drusilla, the wife of Augustus. Caligula appointed hlm general in Germany, and Claudius sent him in A.D. 45 as pro-consul to Africa, hls services there obtaining him the honors of a triumph. He then lived in retirement till the middle of Nero's reign, when the emperor appointed him governor of Hispania Tarraconensis, but soon after ordered him to be secretly assassinated. Galba revolted: the death of Nero followed (A.D. 68), and he himself was chosen emperor by the pretorian cohorts in Rome. He went directly to Rome, but soon made himself unpopular by cruelty and avarice, and he was slain in the forum in A.D. 69 at the age of scventytwo.

## Galbanum (g a l'ba-num), Galbans,

 cured from at least two species of probelliferous plants, which species of umFerilla gallaniflüa and F. rubricaulis. It ronsists of the 'tears, of gum resin which exude spontaneously from the stem, especially in its lower part and about the bases of the leaves. It is brought from the Levant. Persia. and Indila, and is administered internally as a stimulating expectorant. It is also used in the arts. as in the manufacture of varnish. It is supposed to be vielded by other umbellifers, among whirh are named Ferulāgo galbaniféra, Opoidia galbanifēra, and Bubon Gallanum.Galbulinæ (gal-bu-li'nē), the jacacal American fissirostral birds of tropithe trogons and kingfishers.
Gale (gāl), a plant of the genus Sweet Myrica, nat. order Myricacpes. shrub gale or bog-myrtle (M. Gale) is a shrub from 1 to 3 feet high, which exhales a rather pleasant aromatic odor, and grows on wet heaths abundantly. In America the name is applled to an allied plant Comptonia asplenifolia. See also Candleberry.

Galeidæ
(ga-le’i-dè), the topes, a family of small harks. Two species, the common tope (Galeus. canis) and the smooth hound ( 11 ustelus tulgüris), are abundant in British seas. Galemys (ga-lémis), a genus of shrews. Only two species are known, the Russian desman or muskrat (G. moschata) and the Freuch desman ( $G$. 1 yrenaica). They live in burrows at the side of streams, and feed on insects. See Musk-rat.
Galen (gálen), properly Craudius Galenus, a Greek physician, born A.d 130, at Pergamus in Asia Minor. His father, Nicon, an architect and mathematician, gave him a careful education, and he studied under physicians in Smyrna, Corinth, Alexandria, etc., afterwards visiting Cilicia, Phonlcia, and Palestine. He returned in 103 to Pergamus, where he received a public appointment, but five years later went to Rome, and there acquired great celebrity by his cures. Driven thence by envy, he again traveled for some time and resumed his labors in his native town, but was soon after invited to Aquileia by the Emperors Marcus Aurelius and Lucius Verus (A.d. 169). He followed Marcus Aurelins to Rome, and appears to have remained there for some ycars before finally retiring to Pergamus. The closing part of his life, however, is obscure. One Arabic writer says that he died in Sicily. and Suidas states that he died at the age of seventy, and accordinglv in the year A. . . 200 or 201 ; but it is not improbable that he lived longer. The writings attributed to Galen include eighty-three trcatises acknowledged to be genuine; forty-five manifestly spurious; ginetecn of doultful genuineness, and fifteen commentaries on different works of Hippocrates, besides a large number of short pieces and fragments, probably in great part spurious. The most valnable of his works were those dealing with anatomy and physiology. and he was the first to establish the value of the pulse in diagnosis and prognosis. Till the middle of the sirteenth century his authority in medicine was supreme.
Galena (ga-1éna; PbS), the sulphide of lead, found both in masses and crystallized in cubes, but sometimes in truncated octahedra; its color is bluish gray, like lead, but brighter; luster metallic; texture follated; fragments cublcal; soft, but brittle ; speclfic gravity, 7.22 to $\mathbf{7 . 7 5 9}$; effervesces with nitric and hydrochloric aclds. For the most part. it contains about 86.6 per cent. of lead and 13.4 of
sulphur, generally some silver, and also antimony, zinc, iron, and bismuth. Where the proportion of silver is high it is known as argentiferous galena, and woised with a view to the extraction of this metal. Galena occurs principally in the older or primary rocks, being found in England mainly in the Mountain Limestone (base of the Carboniferous formation). In the United States it is very abundant, the deposit of galena in which the mines of Illinois are situated being the most extensive and important hitherto discovered. The town of Galena (of less than 5000 population) is named from it. Galena, a city of Cherokee County, Columbus. Here lead and zinc are largely mined and smelted and there arc large stamping and smelting works. Pop. 6006.

Galenists (gailin-ists), the name of the body of controversialists who, appealing to the authority of Galen, opposed the introduction of chemical and alchemical methods of treatment into medicine. They adhered to the ancient formulas, which prescribed preparations of herbs and roots by infusion, decoction, etc., while the chemists professed to extract essences and quintessences by calcination, digestion, fermentation, etc. Neither body possessed a monopoly of the truth, and modern medicine combines the better elements in each method.

## Galeopithecus <br> Flying-lemur.

 Galeopsis Caleopsis name of the hempnettles, a genus of plants, of the nat. order Labiate. The best species is $G$. versicolor, which has showy, ycllow fiowers with a purple spot on cach.Galerie des Glaces ( g di-l e-r $\mathrm{e}^{p}$ de é glás), or Hall of Mirrors, a historic room in the Palace of Versailles, so called from the splendid mirrors which adorn the walls. In 1871, William I was proclaimed German emperor here. Here the treaty of peace, ending the European war, was signed, June 28, 1919. (See Treaty.)
Galerius (ga-léri-us), a Roman emperor. See Maximianus.
Galesburg (gảlz'burg), a city, county nois, 163 miles $s . w$. of Chicago, in a fertile farming country. It has railroad shops, iron foundries and manufactures of various kinds. Coal is abundant in its vicinity. Knox and Lombard Colleges are situated here. Pop. 24, M64.
Galicia (gal-ish'e-a), prior to 1919, a crownland of Austria,
bounded by Russia, Rukowina, Hungary, and Moravia ; area, 30,312 square miles ; pop. (Polish in the west, Russnial in the east) $7,315,810$. The great physical features of the country are, in a manner, determined by the Carpathians, which form a long and irregular curve on the suth, and send out branches into Galicin. Farther to the north the hiils subside rapidly, and finally merge into vast plains. It has several considerable rivers, those on the west being afluents of the Vistula, those in the east, of the Danuhe and the Dniester. The climate is severe, particularly in the south, where more than one of the Carpathian summits rise beyond the snow-line. The summers are very warm but comparatively short. The soil in general is fertile, and yields abundant crops of cereals, hemp, flax, tobacco, etc. The domestic animals include great numhers of horned cattle, and a fine hardy breed of horses. Sheep are in general neglected; but goats, swine, and poultry abound, and bee-keeping is practiced on a large scale. Bears and wolvss are still found in the forests; and all the lesser kinds of game are in abundance. The minerals include marble, alabaster, copper, calamine, coal, iron, and rock-salt. Only the last two are of much importance. Rock-salt is particularly abundant. The most important mines have their central locality at Wielicaka. Manufactures have not made much progress. The spinning and weaving of flax and hemp prevail to a considerable extent on the confines of Silesia. Distilleries exist in every quarter. The Roman Catholics and the Greek Catholics are the chief religious bodies. The chief educational establishments are the University of Lemberg and that of Cracow. The principal towns are Lemberg, the capital, and Cracow. After being the field of continuous strife between Russians, Poles, and Hungarians, Galicia continued a Polish dependency from 1382 until the first partition of Poland, in 1772, when it was acquired by Austria. In the war of 1914-18 (sce European War), it was the scene of sevcre fighting between the Russians and the Central Powers. By the peace of 1919 (see Treaty), Austria was reduced to a small state, the great Austro-Hungarian empire was dismembered and Galicia passed under the control of the reconstructed state of Poland. Galicia, one of the old provinces of Spain, situater in the is. w., and bounded N. and W. by the Atlantic, s. by Portugal, and E. by the old provinces of Asturias and Leon. It is now divided into the provinces of Corufa, Lugo, Orense, and Pontevedra; area,

11,212 square miles. Its broken coart, which hat a length of about 240 miles, lies open to the Atlantic, and there are a number of fine natural harbors, of which Ferrol is one of the finest naval ports in Europe. The surface is mountainous, and the proportion of good arahle land limited; hut fruit, par ticularly apples and pears, nuts, walnuts, and chestnuts, is ahundant; and the culture of the vine is common in all the lower districts. The higher mountain slopes are generally covered with fine forests, which feed large herds of swine, and afford haunts to hoars and wolves. Both manufactures and trade are insignificant. The chief town is Santiago de Compostella. The natives (Gallegos) speak an uncouth patois, which other Spaniards scarcely understand. The peasantry are very poor, and many leave for service in other parts of Spain. Pop. 1,941,453.
Galilee (galitile), in the time of Jesus Christ the most northern province of Palestine, hounded on the E hy the river Jordan, on the s . by Samaria, on the w. by the Mediterranean Sea and Phoenicia, and on the N. hy Syria and the Mountains of Lehanon. It was in some sense the cradle of Christianity, its towns of Nazareth, Cana, Capernaum, Nain, and other places being intimately associated with the life of Christ. The inhabitants of this country. mostly poor fishermen, on account of their ignorance and simplicity of manners were despised hy the Jews, who, by way of contempt, called Christians, at first, Galileans. At present Galilee is included in the vilayet of Syria.
Galilee, a portico or chapel anvarious purposes. In it public penitents were stationed, dead hodies deposited previously to their interment, and religious processions formed; and it was only in the galilee that in certain religious houses the female relatives of the monks were allowed to converse with them, or even to attend divine service. The only English huildings to which the term galilee is applied are attached to the cathedrals of Durham, Ely, and Lincoln.

## Galilee,

SEA of, also called Sea of Chinnereth or Chinneroth, and the Lake of Gennesaret or Tiberias, a pear-shaped fresh water lake in Central Palestioe, $121 / 2$ miles long by $71 / 2$ broad. It was apparently formed by subsidence attended with volcanic disturbance ; and is 682 feet helow the level of the Mediterranean. On the east the coasts are nearly 2000 feet high, deeply furrowed by ravines, but flat along the summit.

The whole basin is bleak and monotonous, and has a scathed volcanic look, the clifis and rock along the shore being of hard porous hasalt. At the time of Christ there were on its shores nine flourishing cities, of which seven are now uninhabited ruins, while Magdala and Tiberias ure hoth in a poverty-stricken condition. The lake still ahounds in fish, but the fishery is neglected.
Galilei (gat-i-lined), Galulzo, a most distinguished Italian physicist, born 18th Feb., 1564, at Pisa His father, Vincenzo Galilei, a nohleman of Florence, procured him an excellent education in literature and the arts, and in 1581 he entered the University of Pisa. At nineteen the swinging of a lamp in I'isa cathedral led him to investigate the laws of the oscillation of the pendulum, which he subsequently applied in the measurement of time; and in 1586 the works of Archimedes suggested his invention of the hydrostatic balance. He now devoted his attention exclusively to mathematics and natural science, and in 1589 was made professor of mathematics in the University of Pisa. In 1592 he was appointed professor of mathematics in Padua, where he continued eighteen years, and his lectures acquired European fame. Here he made the important discovery that the spaces through which a body falls, in equal times, increase as the numbers 1, 3, 5,7 . He improved the thermometer, and made some interesting observations on the magnet. To the telescope, which in Holland remained not only imperfect hit useless, he gave astronomical importance. He noted the irregularity of the moon's surface, and taught his scholars to measure the height of its mountains hy their shadow. A particular nehula he resolved into individual stars, and conjectured that the Milky Way might he resolved in the same manner. His most remarkable discovery was that of Jupiter's satelintes (1310). and he observed. though imperfectly, the ring of Saturn. He also detected the sun's spots, and inferred. from their regular ndrance from east to west, the rotation of the sun, and the inclination of its axis to the plane of the ecisptic. In 1610 Cosmo II, grand-duke of Tuscany, appointed him grand-ducal mathematician and philosonher, and with increased leisure he lived sometimes in Florence, and sometimes at the country seat of his friand Salviata, where he gained a decisive victory for the Copernican system hy the discovery of the varying phases of Mercury, Venus, and Mars. In 1611 he visited Rome for the first time, where he was honorably received; but on
his return to Florence he became more and more involved in controversy, which gradually took a theological turn. Tbe monks preached against him, ana in 1616 lie found himself again obiiged to proceed to Rome, where he is doubtfully said to have pledged himself to ahstain from promulgating his astronomical views. In 1623 Gnlileo replied to an attack upon him in his Saggiatore, a masterpiece of eloquence, whicb drew upon him the fury of the Jesuits. In 1632, with the permission of the pope, he published a dialogue expounding the Copernican system as against the Ptolemaic. A congregation of cardinals, monks, and mathematicians, ali sworn cnemies of Galileo, examined bis work, condemned it as highly dangerous, and summoned him before the tribunal of the Inquisition. The veteran philosopher was compelled to go to Rome early in 1633, and was condemned to renounce upon his knees the truths he nad maintained. At the moment when he arose, he is said (but this is doubtful) to lave exclaimed, in an undertone, stamping his foot, 'E pur si muove!' (and yet it moves!). Upon this be was sentenced to the dungeons of the Inquisition for an indefinite time, and every week, for three years, was to repeat the seven penitential psalms of David. After a few days' detention his sentence of imprisonment was commuted to banishment to the villa of the Grand-duke of Tuscany at Rome, and then to the archiepiscopal palace at Sienna. He was afterwards allowed to return to his residence at Arcetri, near Florence, where he employed his last years principally in the study of nechanics and projectiles. The results are found in two important works on the laws of motion, the foundation of the present system of physics and astronomy. At the same time he tried to make use of Jupiter's satellites for the calculation of longitudes; and though he brought nothing to perfection in this branch, he was the first who reflected systematically on such a method of fixing geograpbical longitudes. He was at this tine a thicted with a disease in his eyes, one of which was wbolly blind and tbe otber almost useless, wben, in 1637, he discovered tbe libration of the moon. Domestic troubles and disease emhittered the last years of Galileo's life. He died in 1642 (the year Newton was born). His remains were ultimately deposited in the church of Sta. Croce, at Florence.
Galingale (galinn-gal), a name apthe Cupervs longus, or to its tnbers, which contain a bitter principle, and have tonic and stomachic properties.

Galion
(gal'i-on), a city of Crawford Connty, Ohio, 15 miles w. by s. of Mansfleld. It has machine and raiiroad shops, road machinery, pipe, telephone and other factories, brass foundry, brick and tile works, etc. Pop. 8175.
Galipot (gali-pot), or FBExCE Tuppestins, the long, sort stalactitic pieces of resin which form down the sides of the Pinus maritima.
Gall (gnl), in the animal economy. See Gall-bladder, Bile.
Gall,
Franz Josesph, the founder of phrenology, horn in 1758 in Tiefenbrunn, in Baden; died in 1828. He studied medicine, and practiced at Vienna as a physician, where he made himself known to advantage by his Philosophischinedicinische Untersuchungen
(1791). After a series of comparisons of the skulls both of men and animals he was led to assign the particular location of twenty organs. For some time he confined himself to lecturing on the subject, first in Vienna, and afterwards in his travels through Germany. He then accompanied Dr. Spurzheim, in 1807, to Paris, where he published with his friend, in 1810, the Anatomie et Physiologie du Système Nerveux en général, et du Cerveau en particulier; and in 1812 his own Des Dispositions innées de l'Ame et de l'Esprit, ou du Matérialisme. Spurzheim also published, in London, a wurk upon his own and Gall's theories, which met with severe criticism but extended their views, and at least gave an impulse to the accurate anatomical study of the brain.
Gall, ST. (German, St. Gallen), a nortbeastern frontier canton in Switzerland, abutting on Lake Constance : partly bounded by the Rhine, and enclosing the canton of Appenzell. Its area is 780 square miles. In the south it is ons of the loftiest Alpine districts of Switzerland, and in other quarters is more or less mountainous. It belongs wholly to the basin of the Rhine, in the valley of which the climate is comparatively mild; in the mountainous districts it is very rigorous. Wood and good pasture are found on the mountains; on the lower slopes and valleys, vines and orchard fruits, and corn, maize, hemp, and flax are grown. The manufactares are chlefly cotton and linen goods, particularly fine muslins. The constitution is one of the most democratic in Switzerland. German is the language spoken. Pop. 250,285.-St. Gall, the capital and the see of a bishop, is situated on the Steinach, 2165 feet above sea-level. It contains an old cathedral, now completely modernized, and an old abbey partly converted into public ofices, but containing
also the bishop's reuidence and episcopal library with valuable manuscriptia, The manulactures conaint chlefly of cotton sooda, more capecially embroidered muslins and prints; and the town is the entrepot both for its own canton and thome of Appengell and Thurgau. It is of ancient origin, having grown up around the abbey of St . Gall, lounded by an Irich monk of that name about the becinning of the seventh century. This abbey for several centuries heid one of the highest places in the Benedictine order. Pop. (1910) 37,106.
Gallait (zallila), Lours, a Beigian 1812; died in 1887 . He studied at his native town Tournai, Antwerp and Paris, where he acquired a name by his por tralt as well an his genre and historical palntingo. Among his earlier pictures of note were: Ohrist Restoring Sight to a Blind Man; The Strolling Musiciane; The Beggare Montaigne Visiting Tasso in Prison; Abdication of Charles V. He produced many later pictures, the last of which, The Plague at Tournay (1882), was purchased for the Brussels Museum at the price of 120,000 francs.
Calland (gal-an), ANToINE, a born in Picardy in 1046; principally known for his translation of the Arabian Nights' Entertainments (1704-1717). the first into any European language. Among his other writings are a Treatise on Medals and Coins: Tableau de l'Empire Ottoman; De l'Origine du Café; Paroles remarquables, Bons Mots et Masimes des Orientaux. and the Contes et Fables Indiennes de Bidpai et de Lolman. In 1709 he was appointed professor of Arabic at the College Royal at Paris, and died in 1715 while engaged in translating the Koran.
Galla Ox, or She variety, of remarkaiting Abyssinia. The chief peculiarity is the extraordinary size of the horns, which rise from the forehead with an outward and then an inward curve, producing an exact figure of a lyre, and finally curve a little outward and taper to the top.
Gallas (gallas), a numerous and iting a territory in East Africa, lying to the south of Abyssinia. Their color varies frow a deep black to a brownishFellow; stature tall; bodies spare, wiry, and mnscular: nose often straight, or even arched; lips moderate; hair often hanging over the neck in long, twisted plaits. They have agreeable countenances, and are brave, but ferocious and
cruei, cunning and falthlems. They leare the plaine to their hurwem, sheep, and cown, while they themnelvee cuitivato the mountalns. They number 6 or $8,000,000$. Gallatin (garla-tin), ALsmir, mtate: man, was born in Geneva, Switzerland, in 1701. He was graduated at the University of Geneva im 1774 and emigrated to America in 1780. In 1789 he was a member of the Pennsyivania State Convention, in 17\%3 was elected United States Senator, and in 1794 heiped to suppress the 'Whiskey Insurrection.' In 1801 he was appointed Secretary of the Treasury, his management of which was eminently successful. In 1814 he was one of the Commissioners at Ghent who concluded the treaty of peace with Great Britain, in 1815 was appointed Minister to hrance, and in 1826 was envoy extraordinary to Great Britain. He died in 1849.
Gall-bladder (gni-blad'der), a small liver and containivessel embedded in the Galle git gall. See Bile.
Galle (gai), or Point de Galle a fortified seaport of Ceylon, with a good harbor, formeriy important as a coaling station. Pop. 37,326.
Galleon (gal'le-on), formerly a kind of vessel of war, used by the Spaniards and Portuguese, with from three to four decks. In more recent times those vessels were calied galleons in which the Spaniards transported treasure from their American coionies.
Gallery (gal'er-i), in architecture, length of which is, narrow room, the its width which is at least three times its width, often buit to receive a collection of pictures. Among the most renowned European art-galleries are those of the Lourre at Paris, that of Versailles, the National Gallery in London, the Pitti and Ufizi saileries at Florence, the Dresden Gallery, the Real Museo of the Prado at Madrid, the Hermitage at St. Petersburg, the gallery of Berlin, the gallery of the Museo Borbonico at Naples, those at Venice, Antwerp, Turin, etc. The term gallery is also sometimes applied to what is more properly termed a corridor, likewise to a piatform projecting from the walls of a building supported by piers, pillars, brackets, or consoles, and in churches, theaters, and oimilar buildings, to the upper floors going round the building next the wall.
Galley (galit) a low, flat-built Fessel with one deck, and navigated with sails and oars, once commonly used in the Mediterranean. The common gailey varied from 100 to 200 feet in length, those of smaller sizes being known respectively as half-galleys and
quartergalleym. They carried as many as twenty oars on ench dide, each oar worked by one or more men, and they had commonly two masta with lateen walles. Raised structures in the stern, and even in the prow, were uncommon. These, however, were more fully developed in the kind of galley known as the gallcass, whlch carrled three masta, from 200 to 300 rowers, and sometimes twenty guns. France formerly had a number of galieys for service ln the Medlterranean, in which convlets were forced to labor. The term galley is also applied to the ships of the anclent Greeks and Roranas, especially to their warshipr, which were propelled chiefly by nara.

## Calley. See Printing.

Galley-slave, a person condemned on board a galley, belng work at the oar deck. This mode of punishment was cummon in France previous to 1748.
Gallify (gal-fil), a name for several famlly Cynlpldae, whlch form the morbid products known as galls, each species seeming to be addlicted to a particular plant and a partlcular part of the plant. The tumor or gall ls due to the morbld actlon of an irritating fluld deposited with the exg of the insect. The large galls at the base of oak leaves are produced by the Cynips quercus baccarum, a fly of a brown color, with black antenne, chestnut-brown legs, and white wings. The small galls on the under surface of onk leaves are due to another specles, C. quercus folii, those on the stems of oaks to C. terminalis. The shrubby oak (Ouercus infectoria) of Syrla is attacked by C. galle tinctoria, which glves rise to the hard gall or gallnut, which is chiefly used in commerce. The halry gall of the rose, called a bedeguar, is also the work of a species of Cynips. The larve in thls, as in the oak gall, do not come out till the following spring. See Galls.

## Gallia. See Gaul.

## Galliurd (gal'yard), the name of a

 Romanesca, a favorite Italian dance. The air is quick and lively, with a flowing melody. The word is due to the Spanish gallarda. Many galliard tunes are still extant, such as The King of Denmark's Galliard. The Earl of Esses's Galliard, etc. See Gaillarde.Gallic Acid (galik) (ChHoOs), an acld which derives its name from the gallnut, whence it was
first procured by Scheele in 1788. It exista ready formed in the soeds of the mango, has been found betides in many other plante, in acorns, colchicum, div. divl, hellebore root, sumach, tea, walnuts, etc., and is a product of the decompoillion of tannle acld. It crystallizee in brilliant prisms, generally of a pale-yellow color. It colors the persalts of iron of a deep blulsh black. It la of extensive use in the art of dyelng, an it constlitutem one of the princlpal ingrediente in all the shades of black, and is employed to fir or improve severni other colors. It is well known as an ingredient in ink. See Ink. Gallican Church (sali-kan), a diplled to the Roman Catholic Chureb ${ }^{\text {tin }}$ France. The pecullarity of this church consists (or consisted) not in any diversity of doctrine or practlce from thowe generally held and observed by Roman Catholics in other countries, but in maintainlog a greater degree of independence of the papal see, more espectally by denylng the valldilty of many of the decretals lssued since the time of Charlemagne, and refusing to allow the pope to interfere with the civil jurisalction of the stato and the soverelgn rights of the crown. The freedom asserted in this respect was increasingly recognized by the pragmatic sanctions of 1269 and 1438, and wan still more clearly established by the Oust*o Propositiones Cleri Gallicani ('Eour Propositlons of the French Clersy'), drawn up $\ln$ convocations by the French clergy in 1682. These were:-1. The pope in secular matters has no power over princes and kings, and cannot loose thelr subjects from allegiance to them. 2. He is subject to the decrees of a general conncil. 3. His authority in France is regulated by fixed canons and the laws and customs of the klngdom and church. 4. In matters of falth hls decision is not unalterable (irreformable). During the rev. olution the Gallican Church practicaily disappeared, and tbough Napoleon extorted from Pius VII a concordat for its re-establishment, no agreement was arrived at as to its organization. With the return of the Bourbons the bishopa deprived by Napoleon were restored, and a new concordat concluded in 1817; but its unpopularity led the government to exact from eccleslastics an expression of adherence to the articles of 1682. The July revolution in 1830 gave full freedom to all denominations, and a clause was inserted In the Constitutional Charter expiessly declaring that each person professem his religion with equal liberty, and obtains for his worship the same protection. Later, and especially aince the Vatican

Cownell of 1870, the prosition of the Gallican Church towards the popen has essentally chansed, and the older Gallicanlum may now be said to be represented by the Old Catholics of France.
Gallienus(gal-11-e'nus), P. Licisius, allona a loman emperor, associated with his father Valerlanus until the capture of the latter by the Perslans In 200, when Gallienus continued to reign alone. Hla emplre was llmitul by the revoit of most of the luglona in the provinces, who chose their commanders as Cassars, and thus gave rive to the perlod known as the "Time of the Thirty Tyrants.' Though given up to pleasure, he defeated the Goths in Thrace and Postumus in Gaul, and forced Aureolus, whom the legions of Illyria had proclalmed em. peror, to take refuge in Milan. While maklig preparations to reduce that town he hlmself was assasslnated A.D. 208.
Gallifet (gal-11-fet), $\rightarrow$ A s ro $\mathrm{N}_{\mathrm{c}}$ Auouste, Marquis de, a French woldier, born at Parls ln 1831. Enterlng the army, ho was made general of brigade in 1870, subdued the revolting tribes of Africa 1872-3, and later was made general of dlvision, and recelved the military medal for his hrillant handiing of the army maneuvers in 1891. He retlred $i$. 1894, and was mlnister of war 1899-1900. Gallinaceous Birds (gal-i-nă'shus), hirds now commonly known as Rasorcs. Gall-insects. See Gallfy.
Gallinule (gal'i-nbl), a name for aquatic birds belonglng to the family $\mathbf{R a}$ ddæ or ralls, genera Gallinulla and Porphyrio. They are good swimmers, though they are not web-footed. but have the toes furnished with a narrow membrane. The common gallinule, moor-hen or wa er-hen ( $G$. chloropus) is the only British specles. It ls black, with a red frontal shlild.
Galliot (gal'i-ot), a Dutch or Flemish rounded ribs and fattish bottom, with a mizzenmast placed near the stern, carry$\operatorname{lng}$ a squaremainsail and maintopsail, a forestay to the mainmast (there being no forcsiast), with fore assail and jibs. Gallipoli (gal-ipoolē : ancient Callipern Italy, in the province of Lecce, on a rocky penlnsula $\ln$ the Gulf of Taranto, 47 miles southeast of Taranto. It is fortified, and has a eathedral, a productive tunny fishery, and a good harbor, from which large quantities of olive-oil are exported. Pop. if commune 18.352. Gallipoli (ancient Callipoli), a (ancient Callipoli), a
on a peninsula of the same name at the northeast end of the Dardanelles, 128 miles w. s. W. of Constantlnople. It wa: once fortlifed, but ls now ln a generally dilapidated condition, with no ellfice of note except the bazaara. It was the gate by which the Turks entered Europe (1357), and $\ln$ the Crlmean war the allied forces landed here (1854). During the European war (q. v.), 1014-18, a British aquarirou under Vlee-Aimirnl Sackville Carien, with the co-operatlon of the Fronch, attacked the forts on the peninsula. February 10, 1015, and contlnued the bombardment for several days, during which the outer forts were dentroyed. Owing to illness, Admiral Carden was 1nvalided home, and Admiral de Roebeek took command and made a determined attack on March 18. Mines released by the Turks inflicted considerable damage on the attacking squadron. Meantlme an expeditlonary force was belng gathered, composed mainly of Australlan, and New Zealand troops, styled 'Anzacs' from the Inltinls of Australia and New Zealand Army Corps. Thls force under Sir Inn Ilamilton (q. v.) was landed successfuily on the peninsula later in 1015 and fought with great horolsm, but it became evident that, with the meager supplies at band, they could not hope to win througk the Darianeiles. and the troops wers withIrawn in December and January The British losses reached the total of 112,921 . Gallipoli Oil, a coarse olive-oll used in Turkey-red dyeing and for other purposes, and prepared from olives grown in Calabria and Apulia, the latter being considered the best. The oil is conveyed ln skins to Gallipoli, where it ls clarified and shipped.
Gallipolis (gal-le-po-les'), a city, seat the Ohio river. It has furnlture factories, frundries, flour mills, and the Ohlo Hospital for Epilepties. Pop. 5560.
Gallium (gal'li-um), a rare malleable metal, discovered by spectrum analysis in 1875 by De Boisbaudran in the zinc-blende of Pierrefitte in the Pyrences. It is of a gravish-whlte color, has a brilliant luster, and is fused by the mere warmth of the hand. In its properties it is related to aluminum.
Galliwasp (gal'i-wasp), the Celestus ard about 1 foot in lenge, a species of lizard about 1 foot in length, and remarisably stout and plump. Its general color is brown. It is a native of the West Indies, and is particularly common In Jamaica, where it is much dreaded, though without reason.
Gallnuts (gal'nuts), See Galls.

Map of tee Gallipoli Peninsula

Gallon, a measure of capacity containlons seem to have been formerly used, but in 1689 in Great Britain the wine gallon was declared by law to contain 231 cubic inchen, and this is the present standard in the U. S. for liguids and represents the volume of 8.33888 lhs . avoirdupois of pure water at $39.2^{\circ}$ F. The U. S. dry gallon is 268.8025 cubic inches or 1.16365 liquid gallons. The British imperial gallon now in use contains 10 lbs . avoirdupois of distilled water, or 277.274 cubic inches.
Calloway (gai'j-wa), a district in land, now regarded as embracing Wigtownshire and Kirtcudbright. It has given name to a breed of horses and one of cattle.
Galls (gals), galizuts or nutgalls, a vegetable excrescence produced by the deposit of the egg of an insect in the bark or leaves of a plant. The galls of commerce are produced by a species of Cynips (see Gallfy) in the tender shoots of the Quercus infectoria, a species of oak abundant in Asia Minor, Syria, Persia, etc. They are spherical and tubercular, and vary in magnitude from the size of a pea to that of a hazelnut. White, green, and blue varieties are recognized, the lat ter kinds being the best. They are inodorous, but are strongly astringent from the tannin and gallic acid which they contain, and which are their chief products. Gallnuts are extensively used in dyeing and in the manufacture of ink, and they are also frequently used in medicine. They are chiefly imported from Aleppo, Tripoli, and Smyrna. The Chinese galls, or woo-pei-taze, differ from the foregoing in that they are really an unusually massive kind of crust or cocoon, such as the aphides form on the surface of a plant; the tissues of the plant not being affected. Gall-stones, or Biliary Calculy, derived from the pathological concretions tion known as cholelithiasis. They may be small and numerous, many hundreds of them being sometimes contained in a distended gall-bladder; or large, sometimes over five inches in length; and sometimes they occur in the form of a gritty sand. In the majority of cases they produce no symptoms, but when they become impacted in the cystic or common bile duct. acute symptoms of biliary colic general supervene. The attack is usually sudden and marked by agonizing pain, vomiting, high temperature, etc. It rarely lasts more than a few days, but as gall-stones seldom occur singly, there is danger of a subsequent attack. The pain is said to be the most severe of all forms of suffer-

Galsworthy (Enile'wer-thi), Jons, playwirt British novelist and playwright, born in 1887. His novels include The Country House, $1907 ; A$ Commentary 1908; Fmternity, 1909; A Motley, 1910; The Paticiam, 1911; and his plays, The silver Box, 1900; Joy, 1907; Stife, 1909; Justice, 1910; The Little Dream, 1911.
Galt (galt), a town of Waterloo Co.. miles A. Ontario, on Grand River, 25 Galt ( gilt. of Hamilton. Pop. 10,299. (galt), Sir Alexander Tilioch, a Canadian statesman was born in London, England, in 1817; died in 1803. In 1849, he was elected a member of Parliament, and became active in public affairs, filling many important offices. He was a fluent speaker and an able minister of finance.
Galt, wons, a Scottish novelist, born He went Irvine in Ayrshire in 1779. He went to London in 1804, printed an epic, and tried both commerce and law; but failing in each, wnit abroad. On his return he published his loyages and Travels, his Letters from the Levant, a Life of Cardinal Wolsey, and a volume of tragedies. He became a contributor to periodicals, and fiction writer. His Ayrshire Legatees (1820), writh its humorous descriptions of Scottish middle and low life indicated the true scope of his faculty, and it was followed by his Annals of the Parish (1821) The Provost (1822), Sir Andrevo Wyhie (1822), and The Entail (1823) He went out to Canada as superintendent to the Canada Company in 1826, founded the town of Guelph, returned in 1829, and died in 1839. His son, Sir Thomas Till. Locir, was an eminent statesman.
Galton (gal'tun), Francos, scientist, mingham, born at Duddeston, near Birbridge in in 1822. Graduating at CamAfrica, which , he made two journeys in Africa, which led to his Narrative of an Exinlorer. He is best known by his books on Hereditary Genius, Natural Inheritance, Finger Prints, etc. He died in 1911.

Galvani (gal-vánée, Lucier, an Italgist born $1 a n$ physician and physiologist, born at Bologna 1737 ; died 1798 . He practised medicine in Bologna, and was in 1762 appolnted professor of anatomy at the university. He gained repute as a comparative anatomist ; but his fame rests on his theory of animal electricity, enunciated in the treatise $D e$ Viribus Clectricitatis in Motu Musculari Commentarius, published in 1791. Twenty years before the publication of this treatise he had been making experiments on the relations of animal functions to electricity.

In 1797 he was deprived of his chair for which the carbon plate stands, the whole refusing to take the oath of allegiance to being contained in a glass jar. The liquid the Cisalpine Republic, but was restored to it in less than a year. See also the article Galvanism.

(gal-van'ik), combination of galvanic cells. In a galvanic cell chemical action takes place between a liquid and a metal-usually zinc-which is partially immersed in it; and there is another metal, or solid conducting substance of some kind, also partially immersed. The zinc and the other solid conductor are called the two plates of the cell. The plates must not be allowed to touch each other in the liquid; but a current through an external conductor can be obtained by connecting its ends with the two plates. When this connection is made there is a complete circuit round which the current flows, its course being from the zinc plate through the liquid to the other plate, and from this latter through the cxternal conductor to the zinc plate again. There is a continual circulation of positive electricity in this dircetion as long as the chemical action continues, or, what is the same thing, there is a continual circulation of negative electricity in the opposite direction. The second or inactive plate is usually cither of copper. of platinum. or still more frequently, of gas carnon, that is, the carbon which is deposited in the retorts at gasworks. The liquid which acts on the zine is most frequently dilute sulphuric acid- 1 part of acid to $f$ or 8 of water. In some of the best kinds of cell there are two liquidsone in contact with the zinc and the other with the inactive plate, with a porous partition of unglazed carthenware between them. Fig. 1 shows a battery of four cells of the

Fig. 1.-Simple Galvanic Battery. phuric acid, and the liquid in contact with the carbon is atrong nitric acid. Fig. 3 represents a Dan-
iell cell, which differs from the Bunsen in the contents of the porous cell. The plate within the porous cell is of cosper, and the liquid in contact with the copper is a saturated solution of sulphate of copper, crystals of which are scen heaped up round the top. These crystals are supported by a cage of copper wire, and arc in-

Fig. 3.-Daniell's Cell. tended for keeping the solution saturated.

In the simpler forms of galvanic cell, such as that represented in Fig. 1, there is a continual evolution of hydrogen at the inactive plate, while an equivalent quantity of oxygen enters into combination with the zinc plate, and goes to form sulphate of zinc. Some of the evolved hydrogen adheres to the copper plate and produces a rapid falling of in the electromotive force of the cell. This action, which is the principal cause of the rapid weakening of the current in batteries composed of such cells, is called polarizetion. The purpose of the twofluid arrangement illustrated in Figs. 2 and 3, is to intersimplest kind, each containing a plate cept the hydrogen and prevent it from of zinc and a plate of copper immersed being deposited on the copper or carbon (except their upper portions, in dilute plate. In Daniell's battery, which was acid contained in a glass vessel. It the first of the kind, the hydrogen is taken will be observed that the copper ( $C$ ) of up by the solution of sulphate of copper. each cell is connected with the zinc (z) and displaces copper, which is deposited of the next. The arrows show the direc on the copper plate. In Bunsen's it is Hon of the current. Fig. 2 represents a taken up by the nitric acid, Which is yery common form of battery called Bun- thus gradually converted into nitrous sen's. The rinc plate consists of a slit acid. colinder surrounding the porous vessel in

The strength of the current given hy a hatterydepends partly on the electromotive force of the battery and partly on its resistance. If two hatteries are connected into one circuit in such a way that they tend to drive currents round it in opposite directions, the one which prevails is said to have the greater electromotive force. The electromotive force is proportional to the number of cells, and is independent of their size. As regards resistance, the current will be strongest when the resistance is least ; that is, when the plates are very large and very near together.

Whenever chemical action takes place, heat is produced; hut in the ordinary use of a galvanic hattery only a portion of this heat is produced in the cells themselves; the rest of it is produced in the external conductor. When we heat a wire hy sending the current of a battery through it, the heat generated in the wirc is a portion of he heat dine to the chemical action in the cells. In cells of high electromotive force the heat due to the chemical action is greater (for the same quantity of zinc dissolved) than in cells of low electromotive force. It is much higher for a Bunsen than for a Daniell cell.
Galvanism
(gal'van-izm), the production of electricit y by means of the galvanic battery (which see). The name is derived from Galvani, professor of anatomy at Bologna. who ohserved that the limbs of a dead froz could be caused to move hy the contact of metals. His experiments attracted the attention of Volta, professor of natural philosophy at Pavia, who shortly afterwards invented the galvanic or voltaic hattery.

platem of a battery by washing them with acid, and then rubbing them with mercury. The reason for this operation is, that when ordinary commercial zinc is used without amalgamation, local currents are formed between different portions of the same plate, owing to inequalities or impurities. This local action, as it is called, eats away the plates without contrihuting to the current in the general circuit. Amalgamation renders the surface uniform and prevents this injurious action.
given to sheets of iron coated with zinc hy a non-galvanic process, the Iron being first cleansed by friction and the action of dilute sulphuric acid, and then plunged into a hath composed of melted zinc and other suhstances, as sal ammoniac or mercury and potassium. More properly the name is given to sheets of iron coated first with tin hy a galvanic process, and hen with zinc hy immeision in a hath containing fluid zinc covered with sal ammoniac mired with earthy matter. So

Fig. 2.-Bunsen's Battery. long as the coating is entire, and so long as it is not exposed to corrosive substances, galvanized iron is very durahle. The best variety is immersed into the zinc. three times and Cald smooth between the dippings.
Galvanometer (gal-va-nome-ter), an instrument for measuring an electric current hy the deflection of a magnetic needle. The current flows through a wire coiled usually into the form of a circle, which is placed vertically in the magnetic meridian and surrounds the needle. When no current is passing the needle points north and south, and the

Fig. 1.-Astatic Galvanometcr.
name incorrectly needle needle when so pointing lies in the plane
of the coil. When a current passes through the coil, it exerts a force upon

Fig. 2.-Sine Galvanometer. the needle tending to set it at right angles to the plane of the coil-that is, to set it east and west. The ac. tion of the earth, on th: other hand, tends to set it north and south, and it will actually take an intermediate position which varies with the strength of the current. This position is read oft on a graduated circle (the upper of the two graduated and hrrizontal circles in Fig. 2), usually by means of a long light pointer (shown in the figure) which is attached to the needle at right angles. In some galva nometers, as in that represented in Figure 2, the coil can be turned till it overtakes the needle. The lower graduated circle is for the purpose of measu $r^{1} \mathrm{n}$ g the amount of this rotation.

For measuring very feeble currents, it is more usual to employ the 'astatic' galvanometer, represented in Fig. 1. It has two needles, $a^{\prime} b^{\prime}, a b$ (Fig. 3), as nearly equal as possihle, fastened to one upright stem, with their poles pointing opposite ways. The directive actions of the earth on the two needles are opposite, and hence the resultant directive action of the earth on the two combined is very small. The coil of the galvanometer, on the other hand, is so placed that the current tends to deflect hoth needles the same way. The coil, which is shown in section in Fig. 3, is approximately rectangular, its longest dimension being horizontal. One of the needles $a^{\prime} b^{\prime}$ is just above and the other $a b$ is below the upper part of the coil. The current in thls part of the coil would ure them opposite ways if their polea tere similarly directed, but ar thoji poles are oppositely directed it arges them the same way. The curreat in the lower part and end of the coil aseists in deflecting the 17-U-3
lower needle, and is too distant from the
upper needle to have much effect upon it. The coil is thus placed in a position of great advantage as compared with the earth, and the deflection is proportionately large.

Much sreater eensitiveness can be obtained by the use of the mirror-galvanometer (Fig. 4). Tne round box in the center contains a coil of some hundreds of convolutions, with a very small needle fas tened to a little glass mirror suspended in its center hy a silk fiber. The mircor, with the needle fastened to its back, is shown at m in Fig. 5. Light from a lamp comes through the hole $s$ and falls upon the mirror, which, being slightly concave, reflects it to a focus on the scale $A$, where a hright image of the flame is accordingly seen. The smallest angular movement of the mirror causes a very visihle movement of the hright image on the scale. The curved bar M in Fig. 4 is a magnet (called the controlling magnet), which can be raised

Fig. 4.-Mirror Glalve uometer. or lowered, and turned round. One use of it is to bring the needle into the plane of the coil when the coil is not standing north and south.
Galvanoplasty
(g a 1 -van-o-plas'ti), Same as Electrometallurgy.
Galveston (gal'ves-tun) a seaport of Texas, at the northeast extremity of Galvest $n$ Island, at the mouth of Galveston Bay, about 200 mile w. by s. from New Oriean 3 . It is the most flourishing port in the Gulf of Mexico, especially for the exportation of cotton, of which the shipments are very large. The chief huildings are the custom and market houses, the town-hall, a numher of churches, including a Gothic Episcopal Church and Roman Catholic cathedral, and the Roman Catholic University of St. Mary. There are nine miles of street railroad. and a ca::al connects the port with Brazos River. In September 1900. the city was struck by a tropical hurricane, the pressure of the wind being so great as to lift the waves many feet ahove the high tide level, the inflowing gulf water sweeping all before it. Ths loss of life was over 8000 , and the do.
struction of property very great. The ruined part of the city has been rehuilk and rafied several feet and strong seawalls erected to keep out any future flood.

Fig. 5.

In addition to the commerce, there are numerous manufacturing industries. Pop. 36,981.
Galway (gal'wà), a seaport of Western Ireland, province of Connaught, capital of county of same name, - the mouth of the Corrib, in Galway $\mathcal{E} y, 117$ miles west of Dublin. It conints in its older parts of narrow, irregular streets with antique houses, crowded with a pauper population; in the more modern parts it is spacious and well built. Besides numerous churches and chapels, it has three monasteries and five nunneries. The town-house and county-hall and the Queen's College are among its hest hnildings. The manufactures are insignificant, and the trade, though once important, is no longer worthy of its ezceilent harbor. The chief exports are agricultural produce and marble. There are mills for sawing and polishing marble, a hrewery, distillery, etc. Pop. 13,414. The county, which is washed hy the Atlantic, has an erea of 2372 sq . miles, of which one-eighth is undr - pps. In the northwest or district 0 ... 2mara, it is rugged and mountainous; is ine east, level hut extensively corered with bog; and in the south, fertile and tolerably well cultivated, producing wheat. barley and oats. Iough Corrlh, which lies wholly within it. is the third largest lake in Ireland. The minerals include lead. limestone, marble, and beautiful serpentine. The ñshpries are valuahle. but much neglecter. The principal manufactures are coarse woolens and linens. Pop. 192,549.
Galway Bay, a large hay on the between County Galway on the north and County Clare on the south, ahout 30 miles in length and from 20 to 7 miles in hreadth. Across its entrance lie the Aran Islands, and there are numerous cmall islands in the bay itvelf.

Gama (ga'ma), Dom Vasco DA, the first nevigator who made the voyage to the East Indies by the Cape of Good Hope, was born in 1450 at Sines, Portugal, of a nohle family. The voyage had heen projected under John II, and his successor, Emmanuel the Fortunate, having fitted out four vessels, entrusted Gama with the chief command. He sailed from Lishon on July 8th, 1497, and douhling the Cape, visited Mozamhique, Momhaza, Melinda, and Calicut, returning to Lisbon in 1499. For this exploit he was named Admiral of the Indies and recpived the title of Dom, with an annual pension and extensive privileges in Indian commerce. In the year 1502 he was placed at the head of a powerful fleet, with which he provided for the security of future voyagers by founding establishments at Mozamhique and. Sofala. He also inflicted signal reprisals on the town of Calicut, where the Portuguese residents had been massacred, and established the first Portuguese factory in the Indies. He re-entered Lishon in 1503, and passed the next twenty years in obscurity. In 1524 he was appointed Viceroy of India by King John III, but his administration lasted only three months, his death taking place at Goa in the December of that year.
Gama Grass. See Buffalo Grass.
Gamaliel (ga-mäli-el), the name of two persons mentioned in Bible history, of whom the first, Gamaliel, the son of Pedahzur (Numbers, $\mathbf{i}, 10$; ii, 20 ; vii. 54,$59 ; x, 23$ ) was prince or head of the tribe of Manasseh. The other and better known Gamaliel is mentioned twice in the Acts of the Apostles as a learned doctor of the law, of the sect of the Pharisees. From Acts, xxii, 3. we learn that he was the preceptor of St. Paul: the other reference (Acts. $v, 34$ ) records his famous advice to the Sanhedrim as to their treatment of the apostles. According to tradition. Gamaliel became a Christian. and was baptized by St. Peter and St. Paul.
Gambescn (gam'be-sun), See Acton.
Gambetta (gam-bet'a), Leon Micrec. a French orator and statesman, born in 1838 at Cahors, of a family of Genoese extraction. He was educated for the church, but finally decided in favor of the law, and repairing to Paris became
a member of the metropolitan bar in 1850. In November, 1868, he gained the leaderohip of the republican party by his defense of Delescluze, a noted republican. In 1809, having been elected by both Paris and Marseilles, ne chose to represent the southern city; and in the Chamber of Deputies showed himself an irreconcilable opponent of the empire and its measures, especially of the policy which led to the war with Prussia. On the downfall of the empire, after the surrender of Sedan in 1870, a government for the national defense was formed, in which Gambetta was nominated minister of the interior. The Germans having encircled Paris, he left that city in a balloon, and set up his headquarters at Tours, fron which, with all the powers of a dictator, he for a short time organized a fierce but vain resistance against the iuvaders. After the close of the war he held office in several short-lived ministries, and in November, 1881, accepted the premiership. The sweeping clanges proposed by him and his colleagues speedily brought a majority against him, and after a six weeks' tenure of office he had to resign. The accidental discharge of a pistol caused his death in December, 1882.
Gambia (gam'bi-a), a British colony in West Africa, at the mouth of the river Gambia; area, 69 square miles. The climate is very unhealthy in the rainy season, and there is little fertile land in the colons, but a considerable trade is done in ground-nuts, hides, bees'wax, rice, cotton, maize, ivory, ginger, gum-arabic, palm-oil, etc. Pop. 13,500 .
Gambia, a river of West Africa, ristrict in Futa Jallon and flowing N. W. and $W_{i}$ to the Atlantic; length about 1400 miles. It is navigable for 600 miles during seven months of the vear for vessels of 150 tons, but from June to November the river becomes a torrent, rising from 20 to 50 feet and leaving a rich allurial deposit on its shores.
Gambier Isİands (gam'bi-èr), a coral islands in the South Pacific, about lat. $23^{\circ} 8^{\prime}$ s. and lon. $134^{\circ} 55^{\prime}$ w.; belonging to France. The vegetation is luxuriant and there are numerous birds but no indigenous quadrupeds. A French mission station was formed on the largest island, Mangareva, in 1834. Pop. about 2300.

Gambier, an astringent, earthy-lookployed in tanning and dyeing, and obplained from East Indian trees Uncaria (Nauclea) gambir and U. acida, order Cinchonacee. It is mainly imported
from Singapore. Also called Terra Ja. ponica and Pale Catechu.

## Gambling. See Gaming.

## Gamboge (gam-boj'; from Camboja

 or Cambodia), a concrete, vegetable, inspissated juice or sap, or gum-resin, yielded by several species of

Gamboge Plant (Garcinia Hanburi).
trees. The gamboge of European commerce appears to be mainly derived from Hebradendron oambogoides (or Garcinia Morella), a dicecious tree with handsome laurel-like folige and small yellow fowers, found in Cambodia, Siam, and in the southern parts of Cochin-China. It is yellow, and contained chiefly in the middle layer of the bark of the tree; it is obtained by incision, and issues in the form of a yellowish fluid, which, after passing through a viscid state, hardens into the gamboge of commerce. It consists of a mixture of resin with 15 to 20 per cent. of gum. Gamboge has drastic purgative properties, but is seldom administered, except in combination with other substances. In doses of a drachm or even less it produces death. Other species of Garcinia yield a similar drug, which is collected for local use but not for exportation. The so-called American gamboge is the juice of Visima Guianensis.

## Gambrinus (gam-bri , a mythi-

 cal king landers, to Whom is ascribed the inv.. ion of beer. His figure, often seated on a cask, and holding a foaming tankard, is familiar in German beer cellars.Game Laws (gảm las), laws relating to the killing of certain wild animals pursued for sport, and called game. Formerly in Britain certain qualifications of rank or property were needed to constitute the right to kill game ; but by the Game Act of William IV the necessity for any qualification except the possession of a fame certificate was abolished, and the right given to any one to kill game on his own land, or on that of another. with his permission. The animali deuignated as
game by this act are hares, pheasants, partridses, grouse, heathgame, or mnorgame, blackgame, and bustards. Poaching, or trespassing in pursuit of game, is punisbed by severe laws, especially if done at nigbt. In the United States any one is free to capture or kill wild animals, subject to the laws of trespassing, but laws bave been enacted foi the protection of game during the hreeding season, so as to prevent its extermination. Each state has its own game laws, applicahle to its special game animals and covering its various wild animals and birds, and river and lake fish are protected during certain seasons under similar laws.

## Game Preserves,

 game, for the benefit preservation of hunters, wbich bave for centuries been common in Britain and other countries of Europe. Tbey have only recently heen introduced int) the Jnited States, in which the hunting grounds have long been freely open to the hunter. Tbeir purpose here is the preservation and increase of wild animals instead of tbeir destruction. Deer parks have long been kept in this country, but the first systematic attempt to foster wild game was made about 1860 by Judge J. D. Caton in a park of Ottawa, Illinois. Chief emong those that followed on a large scale is the great game park of Austin Corbin, near Newport, N. H., an enclosure of 36,000 acres, in which a wire fence 8 feet high encloses an oblong tract 12 by 5 miles, through which passes a mountain range 3000 feet high. American game of all kinds are kept here, from buffalo, elk, and moose to the smaller and more tir ${ }^{\text {d }}$ d verieties, and tbere has been a rapid 'ncrease. Dr. J. Seward Webb has a 9000 -acre preserve in the Adirondacks, and various other large parks have been established elsewhere, in which our fast disappearing game animals are augmenting in numbers and game birds of foreign origin have been introduced.Games (gåms), a name of certain Games sports or a musements carried on under regular rules and methods, as witb cards or dice, billiards, tennis, etc. Amc ; the ancients there were public games or sports, exhibited on solemn occasions, in which various kinds of contests were introduced. The Grecian games were national festivals attended by spectators and competitors from all parts of Greece, the chief being the Olympic, Pythian, Nemean, and Isthmian. They consisted of chariot races, sunning, wrestling, and boxing matches,
etc., and to be victorious in one of these contests was esteemed one of the bighent honors of a Greek citizen. The Roman games (ludi) were held chiefly at the festivals of the sods. Tbey might, however, be exbihited by private persons to pleaze the people, as the combats of gladiators, theairical representations, combats of wild beasts in the ampbitheater, etc. With the exception of the gladiatorial and wild beast combats, most of these games have descended to moderu times and have been supplemented by otbers of modern invention, wbile efforts are being made to eliminate tbose of a brutal character. Sec sucb articles as Billiards, Chess, Cricket, Football, etc Gaming (gam'ing), or GAMBLIN $a_{7}$ tbe practice of indulging in games involving some element of cbance or hazard with a view to pecunlary gaiu. In many countries such games, and tbe collateral practices of betting on events, taking sbares in lotteries, etc., are legally prohibited or restricted, as being froquently associated witb fraud and as themselves demoralizing. At other times governments, tempted by the prospect of gain, hare openly encouraged gamhling by licensing gaming houses, or instituting lotteries under tbeir own authority. (See Lottery.) In France public gaming tahles were suppressed from January 1 , 1838, but lotteries are still sometimes carried on. Previous to the formation of the German Empire gambling was encouraged in both of the ways referred to in several of the principalities of Germany. Baden-Baden, in the Grandduchy of Baden, and Homburg, in Hesse-Homburg, were the two most famous resorts in Europe of the frequenters of gaming-tables. After the formation of the empire gaming was suppressed in these places (December 31, 1872), and since tbat time tbe Italian principality of Monaco has become the last publie resort of this species of gambling.

In Great Britain enactments dating back for centuries have been passed for the regulation of gambling, though it is practically impossible to eradicate it. In this country statutes have been passed in most, if not all, of the States, forbldding gambling for meney at certain games, and prohibiting the recovery of money lost at such games. Gambling. however, is very widely practised in most of our great cities.
Gamut (gamiut), or Gammut, in music, the entire series of musical tones in the natural order of ascent or descent. With the musicians of tbe eleventh century A represented the lowest note in their instruments, and
a lower note having been introduced, the Greek gamma ( $\Gamma$ ) was taken to represent it. From its prominent place as first note of the scale its name was taken to represent the whole.
Gandak, GuNDUE (gun-duk'), a river ing in of Northern Hindustan, risGin in the Kimalayas and entering the Ganges; length 400 miles.
Gandia (gân'dē-a), a town and port Gandia of Spain, in the province and 34 miles south by east of Valencia, ou the Alcoy. It is walled and well huilt, with a handsome Gothic church and a fine palace of the dukes of Gandia. Pop. 10,026.
Gando (gilin'dö), a kingdom of the Gando Western Soudan, intersected by the Niger, and inhahited chiefly hy Fellatahs, with a capital of same name. It is very fertile, and has a population fstimated at $5,500,000$. Mohammedianism is the prevalent religion. The ruler is a sultan subordinate to that of Sokoto.
Ganesa (ga-nī'sa), an Indian god, the son of Siva and Paryati, represented hy a figure half man half elephant, having an elephant's $h$ ead. He is the god of prudence and good luck, and is invoked at the beginning of all enterprises. There are not many temples dedicated to him, and he has no public festivals, hut his image stands in almost every house.
Ganga
(g a n'ga), a aame given to the sand-grouse (Pterócles arenarius).
Ganga,
in Hindu mythology, the personified goddess of the river Ganges.
Ganges
(gan'jēz), a river of Hindustan, one of the great rivers of Asia, rising in the Himalaya Mountains, in Garhwal state, and formed by the junction of two head streams, the Bhagirathi and the Alaknanda, which unite at Deoprag. 10 miles below Srinagar, 1500 feet above sea level. The Bhagirathi, as being a sacred stream, is
usually considered the source of the Gangea, rining at the height of 13,800 feet, but the Alaknanda flow further and brings a larger volume of water to the junction. At Hardwar, about 30 mile below Deopras, the river fairly enters the great valley of Hindustan, and flow in a southeast direction till it discharges itself by numerous mouths into the Bay of Bengal, after a course of about 1700 miles. During its course it is joined by eleven large rivers, the chief being the Jumna, Son, Ramganga, Gumti, Gogra, Gandak, and Kusi. In the rainy seamon the flat country of Bengal is overflowed to the extent of 100 miles in breadth, the water beginning to recede after the middle of August. The Ganges delta has the Hugli on the west, the Meghna on the east, and commences ahout 200 miles, or 300 by the course of the river, from the sea. Along the sea it forms an uninhabited swampy waste, called Sunderbunds, or Sundarbans, and the whole coast of the delta is a mass of shifting mud banks. The westernmost branch, the Hugli, is the ouly hranch commonly navigated by ships. The Meghna, or main branch, on the east is joined by a branch of the Brahmaputra. Some of the principal cities on the Ganges and its branches, ascending the stream are Calcutta, Murshedabad, Bahar, Patna, Benares, Allahahad, Cawnpore, and Faruckahad. The Ganges is navigable for boats of large size nearly 1500 miles from its mouths, and it forms a great channel for traffic. It is an imperative duty of the Hindus to bathe in the Ganges, or at least to wash themselves with its waters, and to distribute alms, on certain days. The Hindus helieve that whoever dies on its banks, and drinks of its waters before death, is exempted from the necessity of returning into this world and commencing a new life. The sick are therefore carried to the hank of the Ganges, and its water is a considerahle article of commerce in the remoter parts of India. Ganges Canal, Upper, a lateral India canal in Northern India (N. W. Provinces), constructed for purposes of irrigation and supplementary navigation, extending on the right of the Ganges from Hardwar to Cawnpore. The trunk of the canal measures 445 miles, and the total cost of the works has been ghout $\$ 14,000,000$.-The Lower Gavges Calisir is a sort of continnation of the Tipper, intended for irrigation purposer Gangi '(gannje), a town of Italy, prov: Palermo, overlooked by an old castle. Pop. 11,551.
Ganglion (gang' 1 li-un), in anatomy. an enlargement occurrins
somewhere in the course of a nerve, and containiag nerve celis in addition to nerve filamenta. There are two aystems of nerves which have ganglia upon them.

Ganglion.
Part of the nervous aybtern of the larva of a beetle. (Calosoma sycophonta). a a, Ganglia.
Elirst, those of common sensation, whose gangila are near to the origin of the nerve in the spinal cord. Secondly, the great sympathetic nerve, which has ganglia on varions parts of it. In the juvertebrates, ganglía are centers of nervous force, and are distributed through the body in pairs, one for each ring of the body, connected by fibers, as in the figure. The cerebral gangiia of vertebrates are the brain itself, the masses of gray matter at the base of the brain, as the optic thalamus, etc.
Gangpur (gang'por), a native state of Bengal, in Chota Nagpur, consisting mainiy of hilis, forest, and jnngle; area, 2484 sq. miles ; pop. about 238,806.
Cangrene (gang'grēn), the death of body, wherein the tissues begin to be in a state of mortification, there being aiso complete insensibsiity. A gangrened part must be removed either by amputation or by naturai process, but if a vital part is so affected death wili ensue.

## Gangue (gang), a mineral substance

in a vein.
Gangway
surronnding a metallic ore (gang'wa), a narrow platform or bridge of planks along the npper part of a ship's side for communication fore and aft: also a sort of piatform by which persons enter and leave a vessei.-In the House of Commons the gangway is a passage across the house, which separates the ministry and the opposition with their respective adherents, who sit on seat3 rnning aiong the sides of the house, from the neutral or independent menbers, who occupy seats running across. Hence, the phrase to sit below the gangway, as applied to a member, implies that he holds himseif as bound to neither party.

## Ganja. Same as Hashish.

Ganjam (gun-jam'), a decayed town Presidency, formeriy capital in the district of same name, near the coast of the

Bay of Beugal. It was at one time a fourishing place; but the town has declined since the epidemic of 1815 , when Berhampur became the headquarters. The principal arm of the Ganjam River, which enters the sea to the south of the town, is about one-third of a mile broad. -The district, one of the five Circars, is one of the most productive under the Madras Presidency, yielding rice, cotton, sugar, rum, and pulse, etc. Area, 8313 square miies ; pop. 2,010,250.
Gannet (gan'et), the solan goost, a bird of the genus sula (S. Bassana), family Pelecanidæ. It is about 3 feet in iength, and 6 in breadth of wings from tip to tip; the whoie plumage, a dirty white, inclining to gray; the eyes a paie yellow, surrounded with a naked skin of a fine biue coior; the bill straight, 6 inches long, and furnished beneath with a kind of pouch. It is found from the Arctic Sea to the Guif of Mexico; breeds in immense numbers on the rocky isiands near the coast of Labrador. The maie and femaie are nearly aiike. The foud

> Gannet or Solan Goose (Sula Bassaha).
of the gannet consists of sait-water fish, the herring and piichard being the staple. It takes its prey by darting down on it from a considerable height. It makes its nests, which are composed chiefly of turf and seaweed, in the caverns and fissures of rocks, or on their ledges. The femaie lays only one egg, though, if it be removed, she will deposit another. The young, which are much darker than the oid birds, remain in the nest until nearly their full size, becoming extremely fat. In St. Kilda they form the principai food of the inhabitants, being taken by men lowered from the top of the clifs. Ganoids (gan'oidz: Ganoidei), the second order of fishes according to Agassiz. The families of this order are chlefly characterized by anguiar, rhomboidai, poiygonal, or circular scaies composed of horny or bony plates covered with a thick piate of glossy, enamel-like substance. The ganoids wers
most numerous in Palsosoic and early Mesozoic times, but are now represented by seven genera:-Lepidosteus, the bony pikes or garpikes of the North American Iresh-water lakes; Polyptérus, repre-

Scalise or Ganoid Fishen.
1, Lepidonteus. 2, Cheiracanthus. 3, Palmonircus. 4, Cephalaspis. 5. Dipterus. 0. Acipenser.
sented by a single species occurring in rivers of tropical Africa; Calamoichthys, a similar genus found in Old Calabar; Amia, the fresh-water mudfish of North America; Acipenser, represented by the sturgeon: Scaphirhynchus. best knowa by the so-called shovel-nosed sturgeon of the Mississippi basin; and the genus Polyodon or Spatularia, the paddle-fishes of the Mississippi and great rivers of China. Of the extinct ganoids the most remarkable are the placoderms of the Silurian

## Ganolds.

A, Lepidosteus osseus, the 'Gar-Pike' of the American Lakes; B, Aspidorhynchus, restored (after Agassiz), a Jurassic Ganoid allied to Lepidosteus, but having a homocercal tail.
and Devonian period, comprising the earliest known remains of fishes. The Palæozoic ganoids have all heterocercal tails, forms with diphycercal tails not appearing till the secondary period.
Gantung Pass (gan'tung), a wild Himalayas betweeu Bussahir in the Punjab and Tibet. It is covered with perpetual snow, and is 18,295 feet in height. Ganymede (gan'i-mẽd), in Grecian son of Dardanus, the founder of Troy, and son of Tros and of Callirrhoes, daugh' ter of Scamander. Zeus sent his eagle to carry him off from Mount Ida to Olympus, where he held the office of cupbearer to the immortals in succession to Hebe.

Caol (jal), or Jait, a prison or place of lesal continement. See Prisom. Gaol Delivery, in Eng 11 h haw ${ }^{2}$ judgee on assize to try and deliver every prisoner in gaol on their arrival at the assize town.
Gap (gap), a town of Southeantern France, department of Hauter Alpes. It is the seat of a bishop, and has a trade in wool, fruit, corn, and cattle. Pop. about 9000 .
Gaper-shell (fasiper), a lamellibrarMya trunoata, common on the Atlantic coasts. It has an nblons mhell and bur rows in sand and mud, where it in mought after for bait and for the table.
Gapes (gaxps), a disease of fowls and other Rasorial birds, arisins from the presence in the windpipe of small parasitic worms (Syngomue trache dlis), which, by obstructing the procens of inhalation, cause the bird to continually gasp for breath.
Garancin (gar'anogin), Garanci Is treating pulverized madd obtained by exhausted with water, with concentrated sulphuric acid at $100^{\circ}$ Cent $\left(212^{\circ}\right.$ Fahr.), and again washing with water. The residue thus obtained is found to yield better results in dyeing than madder itself.
Garay (ga'ri), Janos, a Hungarian Par poet born in 1812; studied at Pesth, where he held a minor post in the pubilc library. His heroic poem, Csatár (1834), was succeeded by a number of dramas, mostly historical, the chief being Arbocz (1837), Orszdgy Ilone (1837), and Bátory Erzaébet (1840). His cycle of historical ballads, showins Uhland's influence, was published in 1847, under the title Arpadok, and his lymic poems, Balatoni Kagylok' ('Shells from Lake Balaton'). in 1843. His last wort was a historical epic, Ezent Ldszlf ('St. Ladislaus') published 1850. He died in 1853. His Life was published by Eerencuy in 1883.
Garbage (gar'bij), Disposal or. Vathe disposal of methods are in use for refuse: feeding to swine; burying in the ground; cremation and reduction. European and particularly British practice in to mix in one common receptacle all classes of refuse ashes, tin cans, garbage, etc.-but in the United States gar bage is usually separated from otber waste. Burning or cremation is semernlis practiced; but in large cities the reduction process has proved most matinfactory. St. Louis, St. Paul, and Denver entab-

Ifted reduction plants in 1889 Phile. delphite in 1894 and New York In 1896. Tho garbage is removed to the reduction work, where the grease is extracted and the remainins material made into a fertilizer base. The garbaye is placed in large air-tisht cylinders and steamed or treated with a light solvent. The grease and water are drawn off, and the grease, after it has risen to the top, offered for saie. The remaining material is pressed and dried and sold to fertilizer manufacturera, or mixed with the proper materials to make a commercial fertilizer.
Garbler (garbier), formerly an oficer of the city of London, vented with power to enter any shop, warehouse, etc., to examine druse and spices, and garble (i.e. sift out the coarse parts, dirt, etc.), and make clean the same or see that it was done.
Garcia (gar'mi-a) Calixto, a Cuban Cuba, in 1830; died in 1898 . He He aided in the revolt of 1868, both with money and in person, displaying such military ability that he was made a major-generai of the patriot forces. In 1873, being surprised by the Spanish troops, be fought till all hope of escape vanithed, then sought to kill himself, shooting himself in the bead. Recovering from his nearly fatai wound, he was sent to Spain and imprisoned until after the peace of 1878. In 1895 he egain joined in the patriot outhreak, and continued in it until freedom was won by American ald, in 1898.

## Garcilaso de la Vega (gar-thelin'-

 ly Garcias Laso de la Vega), called the prince of Spanish poets, born at Toiedo, in 1500 or 1503. He went in his youth to the Spanigh court, and in 1529 distinguished himgelf in the Spanish corps serving against the Turks in Austria. An intrigue with a iady of the court led to his imprisonment on an island in the Danube, where several of his poems were composed. He was subsequently engaged in the expedition against Soliman, and in that against Tunis. He was made commander of thirty companies of infantry in 1536, and accompanied the imperial army against Marseilles, but was mortally wounded in attempting to scale a tower near Frejus. He died at Nice in that year, and was buried at Toledo. His name is associated with that of his contemporary Boscan in the impetus given to Spanish literature by the imitation of the Italian poetic style as exemplified in Petrarch, Ariosto, and Sannasaro. His works, which consist of eclogues, epistles, odes, songs, sonnets,etc., are considered very griceful and musical.

## Garcilaso de la Vega, or Garcin

 Vrea, historian of Peru, surnamed the Inca, son of Garcilaeso de la Vega, one of the conquerora of Peru, and a princeess of the race of the Incan; born at Cuzco, Peru, in 1530 or 1540. Having fallew under the groundiess suappicion of the Spanish government, he was sent home in $15 t 0$, and died in 1616 or 1020 . His great work on the history of Peru is in two parts: the first entitled Los Comentarios Reales que tratan del Origen de los Incas, etc. (Lisbon, 1009) ; the second, the Historia general del Peru (Cordova, 1016). He wrote also Hiftoria de la Florida (Lisbon, 1809).Garcinia (gar-sin'i-a) the genus of plants to which the mangosteen and gamboge beiong, of the nat. oriler Guttifêrex.
Gard (gar) a department of Southern France, abutting on the Gulf of Lyons; area, 2258 square miles. The north and west are occupied by the Cevennes and their branches, sioping rradually into a fertie plain, the coastfine of which is so low as to form extensive swamps and salines. The drainage belongs partly to the Garonne, but chiefly to the Rhone, which forms the east boundary. Within the department the chief river is the Gard. The rich lower districts produce a large quantity of wine, and are noted for silk culture. Large quantities of salt are made; and lead, coal, iron, etc., are worked. There are silk, woolen, and cotton manufactures. Nimes is the capital. Pop. 421,166.
Gard, Pont du, a fine Roman aqueduct, in Gard, 10 miles from Nimes, Joining two mountains and passing over the Gardon. It has three tiers of arches, and is 160 ft . high. See Aqueduct.
Garda (gir'da), or Bena'co Lakx Beniacus Lacus of the Romans), the largest lake in North Italy, belonging to the Alpine region. between Lombardy and Venice, 33 miles long, north to south, 3 to 11 miles broad, greatest depth 902 ft., 213 ft . above sea level. The Sarca, almost its only affluent, enters at its north end, and it is drained by the Mincio, which issues from its southeast end, near Peschiera. It is well stocked with fish. Steamboats ply on it, and its shores are covered with vilias.
Gardaya (gar-dáya); or Grardaya, a town of Algeria, in the Sabara, surrounded by a wall Eanked
with towers and entered by ten zaten. Pop. about 8000 .

## Garde Fcosnaise (sand A-kon-las),

 In the service of the kings of France, firmt instituted on a regular footing by Charlee VII, who in 1453 selccted a hundred Scotch archers to form a speciai bodyguard in recognition of the service of the Scotch soldiery in the IIundred Years' war. This body was commanded by Scotchmen of the highest rank. Jantes II, and his sons Henry and Charles, und James II when Duke of Iork, held in succession the rank of captain in it. Gardelegen (gár'de-lis-gen), a town deburg. Pop. 8193.
## Carde Nationale (na-syo-nal), a

 citizens institutcd at Paris, July 13, 1780 , for the purpose of preserving order and protecting liberty. At first it numbered 48,000 men, but was increased to 300,000 when it was organized throughout the whole country. Acting as a royalist and reactionary force, it was crushed by Napoieon in 1705 . It was reorganizerd by the Directory and by Napoleon, and again under the Bourbons, to whom, however, it was a source of such disquictude that it was dissolved by a royal ordinance in 1827. Under Louis Philippe it was resuscitated in its old form. and contributed to his ovcrthrow. In 1851 the national guard was again rcorganized. but in 1855 it was dissolved. In 1970 the national guard of Paris was agnin formed for the defense of the city against the Prussians. The resistance of a section of the guard to the decree of disarmament issued under M. Thiers led to the communal war, at the close of which the guard was declared dissolved by the National Assembly (1871).
## Garde Nationale Mobile, a body

 tuted by Napolen III in 1808 constituted by Napoleon 111 in 1868. on the suggestion of Marshal Niel, to form basea of regiments to supplement th: regular army. It was called into action in 1870. 1871, but was too ill organized to be rfficient.Garden City, a village on Long mile Island, New York, 18 miles E . of New York City. It is a fashionable summer resort. but is chiefly notable for the Gothic Cathedral of the Incarnation. erected in memory of Alexander S. Stewart by his widow. Permanent population about 1000 .

Gardenia (gar-déni-a), a con us order Cinchonaceen, nativen of tropical Asia and Africa, bearing beautifui white or yellowish flowers of great fragrance. The genue was named nfter Dr. Garden, of Charleston, South Caroiina.
Gardening. See Horticulture.
Garden of the Gods, the name markable locality in Colorado, near Colorado Springs, notable for the beautiful and fantastic forms taken by its eroded red and white sandstone rockn. The entrance passes through a Gateway, formed by bright red rocks 300 feet high. The locality, 500 acres in area, has been converted into a nationai park.
Garden-spider, also called Diadem or Cross-s pider, the Epeira diadëma, a common European spider, the dorsai surface of which is marked with a tripie yellow cross. It forms a beautiful gcometric web.
Garden-wr:~iler (Sylvia or $0 u r-$ ruca hortensis), a migratory , $\quad$-bird visiting Northern Europe from t . end of April to September, and ranking ncxt to the blackeap an a songster. It is rather less than 6 inches long, the head, back, neck, wings, and tnil being a greenish brown, the whole under surface of the body a dull brownish white.
Gardes Suisses (gärd swess), a body of guards under the French kings. Swiss companies served in France from the time of Louls XI, but the institution of the Swiss guards as a complete regiment dater from 1616. Both the officers and men were Swiss, and the companies mounted guard according to the rank of the cantons of their captains. The Swiss guards followed in order of precedence after the French guards, enjoyed liberty of worship, and were exempted from service in Germany, Italy, and Spain. Their attachment to the king made them obnoxious t) the people during the revolution, and during the defense of the Lourre in August, 1792, they were massacred without mercy. Gardiner (gar'di-ner), Jorm SravLET (1872: ), an English zoölogist and anatomist, born at Belfast, Ireland, educated at Marlborough Coliege and Gonville and Gaius College, Cambridge, beeoming fellow of the latter college in 1898 and dean 1003-09. He was with the Coral Reef boring expedition to Funafuti, 1896: Maldive and Laccadive expedition. 1899-1001; and with the Indian Ocean expedition on board H. M. S. Sealkirk, 1905. He was appointed uni-
veralty lecturer in sodiony in 1000 and has written numerous papers on oceanographical and soblogeal subjectu. He edited the J'nuna and Geograpay of the Maldive and Laccadive Arehipelagoen, 1802-08.
Gardiner, Lion (1500-1683), an Gardiner, Enslish settler in America. He bought from the Indians in 1630 the amall island now known as Gardiner'n Iglend, but which he named Isle of Wisht. Gardiner, Samume Rawsor, histoFants, Encland, in 1820 died in ion He became profewsor of history at Kink's College, London. He wrote The Thiriy Years' War Oromwell's Place in Hiatory, and other historical works of much value. Gardiner, Steprick, an English prela natural son of Lionel, bishop of Galisbury, and brother of Elizabeth Woodvile, queen of Edward IV. He wan born in 1483 at Bury St. Edmunds, and in 1520 took the degrees of D.D. and uL.D. at Cambridge, where he became Master of Trinity Hall. He passeri at this time by the name of Dr. Stephens. Having become secretary to Wolsey and a favorite with the king, he was despatched to Rome in 1528 to forwarl Henry VIII's divorce, and on his return was appointed secretary of state, and in succession archdeacon of Norwich and Leicester, and Bishop of Winchester. He also went on various embassies to France and Germany. He supported the king in renouncing the anthority of the pope, but opposed the doctrines of the Reformation, and took an active part in the passing of the six articles and in the prosecution of Protestants. He was shecessul in contriving the fall of his opponent, Cromwell, but failed to injure Catherine Parr, and fell into disfavor. During the reign of Edward be was imprisoned in the Fleet, deprived of his bishopric, and afterwards imprisoned in the Tower from 1548-53, but Mary restored him to his bishoprie, and appointed him lord shancellor. He officiated a: her coronation and marriage, and became one of her chief advisers. He tonk an active part in the persecutions at the beginning of the reign, but was outdone in ferocity by Bonnar. He died in 1555.
Gardiner (garidi-ner), a city of Kennebec County, Maine, 7 miles 8. of Augusta. It is on the west bank of the Kennebec River, which is navigable for large vessels to this place, and it is the headquarters of a large commerce in ice, also in lumber. It has saw and paper mills. door and sash factories and shoe industries. Pop. 6000.

## Gardner (fardiner), a village of

 chusette 15 miles w. of Fitchburs. It principal industry is chairmaking. Pop. of town (townshlp), 14,009.Garficld, Haray A., educator, lawyer, dent Garfield, was born at Miram, Ohio in 1863. He practiced law in Cloveland, Ohio became professor of contracts Western Reserve Univervity Law School, 1801. 97; professor of politics in Princeton Univervity, 1003-08; and president of Williams College from 1008. He was appolis:ed Duel Administrator in 1017 by Preaident Wilson.
Garfield (garfêld) James Abram, an American general and gtatesman, the twentieth President of the United States, born at Orauge, Ohio, in 1831, and worked on a furm till his 14th year. He acquired a good education, however, studied law, andi in 1859 was electel to the Ohio state senate. In 1881 he entered the army. was appointed colonel, became chief of staff to Rosecrans, and major-general of volunteers. He resigned his comnand to enter Congress in 1803. It is long and slender, sometimes 2 or 3 feet in length; the head projects forward into a very long, sharp snout; the sides and belly are of a bright silvery color, and the back green, marked with a dark pur-
ple line. The name cartish or sarpite If also siven to other species of Helone, and to a sanoid fish of the genus Lopidos: tous, found in the fromh waters of America. See Bony-pike.
Garganey (garga-ni; A nas querduck calied atso 'nummer teail' from viaiting Britain in summer and being cioseif akin to the teai. It in widely apread through the eastern hemisphere.
Gargano (sllr-ga'nó; Lats b, lapclad mountains in South Itaiy, province of Forsia, forming the spur of the boot in the Italian peninmuia projecting into the Adriatic. The loftient suminit is Caivo, 5450 feet.
Gargantua (gar-gan'tu-a), the hero so named from his father exciaiming - One grand tu as!' 'How large (a guilet) tho. hant!' on hearing him cry out. immediateiy on $h^{2, *}$ " ${ }^{\text {a }}$, 'Drink, drink!' so lustily as to be seard over sevural districts. It requis 900 elis of linen for the body of his shirt, and 201 nore for the gussets, 1100 cowhides for the soles of his shoes, and he picked his teeth with an eiephant's tusk.
Gargarrus (Ear'ga-rus; Turkish, mountain of the ridge of Ida, in Asia Minor, near the Gulf of Adramyti, on the north.
Gargle (gárogl), a liquid application to the throat. In using a gargle the head shouid be thrown weil back so as to keep the liquid in contact Fith the throat. and by expeling the air from the lungs through the iiguid the passage may be thoroughly washed. Care should be taken not to swailow the gargip. Gargoyle (gar'goil), in Gothic architecture, a projecting spout. for throwing the water from the gutter

of a building, usually of some grotenque form, such as the head or figure of an animal or monster.

## Garhmukhtesar. See Gurmuktes-

 wor. Garhwal (sar-hwhi'), or Gumuwat, a diatrict in the Northweet Provincea, India, bounded on the north by TYbet, eant by Kumaun, south by B15. naur district, and weat by the Garhwal tate ; area, 6000 mq . milies; pop. $\$ 29,000$. There are sood roads, and a conaldorable trade with Tibet.Garhwal, or Twiri, a native Indian state under British protection, weat of the district of the rame name ; area, 9180 sq. miles ; pop. 268,8 ch $^{2}$. Chief town, Tehri; chiel river, the Alal: nanda and other headwaters of the Gai ges. It is mituated in the Bimalayie.
Garibaldi (Eare-bil'de), Gruarins hero, was born an Italian patriot and hero, was born at Nice, 180f, his father being a poor fisherman. He cot little education, and for a number of yearm wan a

Giuseppe Garibaldi
sailor on various trading vessels. In 1834 he became a member of the 'Young Italy' party, and being condemy d to death for his share in the scher $2 s$ of Mazzini, escaped to Marseilles, too. eervice in the fleet of the Bey of Tunis, and finaliy went to South America. In the service of the Republic of Rio Grande against the Brazilians he became known as a hrilliant leader, and with his famous Italian legion be subeequently gave the Montevideans such effective aid against Buenos Ayres as to earn the title of hero of Montevideo.' In 1848 he returned to Italy, raised a band of volunteers, and harassed the Austrians unti the cemetion of hontilities and re-atabliohment of

Austrian supremacy in Lombardy. He then retired to switzerland, but in the spring of 1849 proceeded to lome to support Mazzini's republic. He was appointed to command the forces, but the odds were overwhelming, and after a desperate defense of thirtv days Garibaldi escaped from Rome with 4000 of his followers. In the course of his flight his wife Anita died from fatigue and privations. He reached the United States, and was for some years in command of a merchant vessel. He then purchased a part of the small island of Caprera, off the north coast of Sardinia, and made this his home for the rest of his life. The subscriptions of his admirers enabled him in time to become owner of the whole island. In the war ci 1859 , in which Sardinia recovered Lombardy, Garibaldi and his Chasseurs of the Alps did splendid service; and on the revolt of the Sicilians in 1860 he crossed to the island, wrested it after a fierce struggle from the King of Naples, recrossed to the mainrand and occupied Naples, where he was proclaimed Dictator of the Two Sicilies. It was now feared that Garibaldi might prove untrue to his motto-Italy and Victor Emmanuel-but he readily acquiesced in the annexation of the Two Sicilies to Italy, and declining all honors. retired to his island farm. In 1862 he endeavored to force the IRoman question to a solution, and entered Calabria with a small following, but was taken prisoner at Aspromonte by the royal troups. He was soon released. however, and returned to Caprera. In 1864 he received an enthusiastic welcome in Britain. In 1866 he commanded a volunteer force against the Austrians in the Italian Tyrol, but failed to accomplish anything of consequence. Next year he attempted the liberation of Rome, but near Meutana was defeated by the French and poutifical trocps, and was again imprisoned by the Italian government. but soon pardoned and relensed. In $18 \mathbf{T O}_{0} 0$ he gave his services to the French republican government against the Germans, and with his 20.000 men rendered valuable assistance in the southeast. At the end of the war he was elected a member of the French assembly, but speedily resignerl his seat and returned to Caprera. Rome now became the capital of united Italy, and here in January, 1875, Garibaldi tonk his seat in the Italian parliament. The latter part of his iife was spent quietly at Caprers. After 1870 be wrote two or three novelsbut these are very mediocre productions. He died somewhat suddenly in 1882. His autobiography has been published in English.

## Gariep (ga-rēp'). See Orange River.

 Garigliano (gà-ril-ya'nū), a river of S. Italy, formed by the juuction of the Liri and Sacco near Pontecorvo. After a course of 40 miles it falls into the Gulf of Gaëta; but if the Liri is regarded as the same stream, its length is more than double.Garland (garland), Avoustus Hill, statesman. born near $\mathbf{C o}$ vington, Tennessee, in 1832 ; died in 1899. He settled in Arkansas, was a member of the Confederate Congress, 1861-65, and was elected to the United States Senate in 1867, but not permitted to take his seat. He was elected Governor of Arkansas in 1374, and United States Senator in 1876 and 1883, and in $188 \overline{1}$ was appointed by President Cleveland Attorney-General of the United States.
Garland, Hamlis, author, born at Carland, West Salem, Wisconsin, in 1860. His first bouk, Mrain Trateled Roads, was pubisished in 1890, and attracted attention ly its delineation of the hardships of Western farm-life. Later works were Prairie F'olks, Her Mountain Lover, Tyranny of the Dark, The Long Trail, The Shadov World, etc.
Garlic (gärlik; Allium sativum), a hardy, perennial allied to the onion, indigenous to the south of Europe, and forming a favorite condiment amongst several nations. The leaves are grass-like, and differ from those of the common onion in not being fistulous; the stem is about 2 feet high; the flowers are white: and the root is a compound bulb, consisting of several smaller bulbs, commonly denominated cloves, enveloped by a common membrane. It has a strong, penetrating odor, and a pungent, acrid taste Used as a medicine, it is stimulant, tonic, and promotes digestion; it has also diuretic and sudorific qualities, and is a good expectorant.-Oil of garlic is a sulphide of allyl, ( $\left.\mathrm{CsH}_{5}\right)_{2} \mathrm{~S}$, a colorless, strongly-smeling oil, exceedingly irritant to the palate and the skin. It is contained also in the onion, leek, asafretida, etc.
Garnet (gár'net), a beautiful mineral, or group of minerals, classed among the gems, and occurring generally in mica-slate, hornblende-slate, gneiss, and granite, usually as more or less regular crystals of from twelve to sixty or even eighty-four sides. The prevailing color is red of various shades, but often brown, and sometimes green, yellow, or black. They "ary nonsiderably in composition, but admit of classification into three principal groups according to their chief sesquioxide basic
components, viz., alumina, iron, and chrume garnets. Among the varieties are common garnets, pyrope, alamandine, precious or oriental garnet, allochroite, melanite or black garnet, etc. By jewelers garnets are classed as Syrian, Bohemian, or Cinghalese, rather, however, from their relative value and fineness than as necessarily implying that they came from these places. The first, named after Syrian, in Pegu, long the chief mart for garnets, are the most esteemed, being a violet-purple unmixed with black and taking an orange tint by artificial light. The Bohemian garnet is usually a dull poppy red with hyacinth orange tint when held between the eye and the light; the pyrope is a full crimson form of this elass. Coarse garnets reduced to powder are sometimes used in place of emery for polishing metals.
Garofalo (g $\hat{\text { a }}$-rof'à-lo), Benvenuto, (properly Benvenuto Tisio da Garofalo), an Italian historical painter, born at Ferrara in 1481. He painted at Cremona and at Rome, where he beeame intimate with Raphael, and then returned to Ferrara, where he died blind in 1559. His works show the influenee of the Lombard sehool and still more of Raphael, though it is denied that he was an imitator of the latter. Examples of his work are to be found in Ferrara, Florenee, Rome, and London, and most of the leading galleries.
Garo Hills (ga'rô), a district of n. e. India, forming the southwestern eorner of Assam; area, 3146 sq . miles. It is a mountainous and forest region intersected by tributaries of the Brahmaputra. The native Garos are a robust and active race. Among them the wife is regarded as the head of the family, and property deseends through females. Pop. 110,000.
Garonne (gà-rōn; Lat. (Aarumna), a river of S. W. France, rising in the vale of Aran, in the Spanish Pyrenees; length, about 350 miles. It enters Franee and flows northwest to the Atlantie, through Haute-Garonne. Tarn-et-Garonne, Lot-et-Garonne, and Gironde. Below Toulouse it receives, on the left, the Save. Ratz. Gers. Baise. etc. ; on the right, the Tarn, the Lot, and the Dordogne, on joining which, it changes its name to the Gironde. It is navigable on the deseent from St. Martory, and both wavs from Toulouse. The Canal du Midi, joining it at Toulouse, forms a communication between the Atlantic and the Mediterranean at Narbonne, and the Canal Laterral, from Toulouse to Castets-en-Dorthe (Gironde), b pplements its direct navigation.

Garonne, of the south of sirance, one of the five separated by the Pyrenees from Spain. It is travers 1 from south to north by the higher reaches of the Garonne and for about 26 miles by the Canal du Midi. The valleys and the lower northern districts are often of great fertility, and cereals and wine are largely exported. Hemp, flax, oranges, and tobaceo are also much grown. The principal mines are lead, copper, coal, antimony, iron, and zinc, and a fine marble is quarried. There is a large transit trade with Spain. Capital of department, Toulouse. Area, 2529 sq. miles. Pop. 448,481.
Garrick (gàr'ik), DAvid, actor, born at Hereford, in 171:. His graudfather was a French refugee, his father a captain in the army. He was educated at lichfield grammar sehool, spent a short time at Lisbon with an unele, and returning to Lichfield was placed under Samuel Johnson, who was indueed to accompany him to the metropolis (1736). Garrick then began to study for the law, but on the death of his father joined, his brother Peter in the wine trade. He had, however, as a child a strong passion for aeting, and in 1741 he joined Giffard's company at Ipswieh under the name of Lyddal. At Gifard's theater in Good-man's-fields he aehieved a great success as Richard III, and in 1742 was not less suecessful at Drury Lanc. In 1745 he became joint manager with Mr. Sheridan of a theater in Dublin, and after a season at Corent Garden (1746) purchased Drury Lane in conjunetion with Mr. Lacy, opening it 15th September, 1747. with the Merchant of Venice, to which Dr. Johnson furnished a prologue. From this period may be dated a comparative revival of Shakespere, and a reform both in the conduet and license of the drama. In 1763 he visited the Continer ${ }^{2}$ for a year and a half. He had̈ already written his farees of The Luing Valet. Lethe, and Miss in her Teens: and in 1766 he composed, jointly with Colman, the exeellent comedy of The Clandestine Marriage. After the death of Laey, in 1773. the sole management of the theater devolved upon Garrick. until 1776, when he sold his moiety of the theater for $£ 37,000$, performed his last part. Don Frlim in The Wonder, for the benefit of the theatrical fund, and bade an impressive farewell to the stare. He died in 1779. and was haried with great pomp in Westminster Abber. Besides the pieces mentioned he wrote some epigrams, a number of prologuee and epi-
logues, and a few dramatic interludes. He left a large fortune.
Garrison (garij-son), a body of troops atationed in a fortified place (fort town, or castle) to defend It or keep the inhabitants in suhjection.
Gartison, Lindlex M., American
cahinet officer, born in
Camden, N. J., Novemher 28. 1864. Educated at Harvard and the University of Pennsylvania. Admitted to the Philadelphia bar in 1886. Vice-chancellor of New Jersey, 1904-1013. In 1913 he entered President Wilson's cahinet as secretary of war.

## Garrison, Wriluam Liord, an Amer-

 of the anti-slavery movement iry the United States, born in 1805 . He was apprenticed to a shoemaker, hut eventually became a compositor on the Newburyport Herald. In 1827 he became editor of the National Philanthropist, the first American temperance journal. With Mr. Lundy, a Quaker, he then started in Baltimore the paper called the Genius of Universal Emancipation (1829), his denunciations of slave-traders leading to his imprisonment for lihel. On his release he commenced lecturing in Boston, started the Liberator (1831), published weekly with the aid of one assistant and a negro boy. In 1832 appeared his Thoughts on 4 frican Colonization, and in the same year he estahlished the American Antislavery Society. He suhsequently visited Enland, where he was welcomed hy Wilserforce, Brougham, Buxton, and others. In 1835 ' he was saved with difficulty from a Boston moh; hut his principles made steady progress until 1865, when the Anti-Slavery Society was dissolved with its work accomplished. He died at New York, 1879. $A$ volume of sonnets (1843) and one of selections (1852) bear his name.Garrot (ghrot), a duck of the genus Clangula, of the oceanic section of the duck family, widely distrihuted over the temperate regions of Europe and America. They, hreed in the northern countries, returning to the more temperate regions in winter. The golden-eyed garrot (C. chrysophthalmus), aud the harlequin garrot (Clangula histrionica) are common European species.
Garrote (gér- $\mathrm{dt} \mathrm{t}^{\prime}$ ), a mode of punishment in Spain hy strangulation, the victim being placed on a stool with a post or stake (Spanish, garrote) behind, to which is affixed an iron collar with a screw; this collar is made to clasp the neck of the criminal, and the screw is turned until its point enters the spinal
cord, where it unites with the hrain, causing instantaneous death. This word, with the French spelling and pronunciation garrotte, has become naturalized in Great Britain and the United States as a erm for a species of robbery effected hy throttling the victim and stripping him while insensihle.
Garrow Hills. See Garo Hills.
Garrulus (gar'ū-lus), a genus of insessorial hirds of the crow family, containing the jays.
Garrya (gáriri-a), a genus of oppo-site-leaved evergreen shrubs, natives of California, Mexico, Cuha, and Jamaica. G. elliptica is a handsome garden plant with long, drooping, neck-lace-like catkins of pale yellow flowers.
Garter (gar'ter), Ordez of the, the highest and most ancient order of knighthood in Great Britain. The origin of the order, though sometimes assigned to Richard I, is generally attributed to Edward III, the legend being that the Countess of Salishury having dropped her garter while dancing, the king restored it, after putting it round his own leg, with the words, which hecame the motto of the order, 'Honi soit yui mal $y$, pense' (Shame be to him who thinks evil of it). The date of the foundation or restoration by Edward III of the order, as given hy Froissart, is 1344, while other authorities, founding on the statutes of the order. assign it to 1350. The statutes of the order have been repeatedly revised, more particularly in the reigns of Henry V, Henry VIII, Edward VI, and George III the last in 1805. Ladies are said to have heen admitted up till the reign of Edward VI. The common title of the
 order was the Order ff St. George, and it still hears this tiffe, as well as that of the Garter. The original number of knights was twenty-six, including the soveleign, who was its permanent head; and this numher is still retained, except that hy a statute passed in 1786 princes of the hlood are admitted as supernumerary membera.

The peculiar emblem of the order, the garter (5), a dark-blue ribbon edged with gold, bearing the motto and with a gold buckle and pendant, is worn on the left leg below the knee. The mantle is of hue velvet, lined with white taffeta, the surcoat and hood of crimson velvet, the hat of black velvet, with plume of white ostrich feathers, having in the center a taft of black heron's feathers. The collar of gold (3), which consists of twenty-six pieces, each in the form of a garter, has the badge of the order, called the George (4), pendent from it. This consists of a figure of St. George on horseback fighting the dragon. The lesser George (2) is worn on a broad blue ribbon over the left shoulder. The star (1), formerly only a cross, is of silver, and consists of eight points, with the cross of St. George in the center, encircled by the garter. A star is worn by the knights on the left side when not in the dress of the order. The officers of the order are the prelate, the Bishop of Winchester; the chancellor, the Bishop of Oxford; the registrar, Dean of Windsor; the garter king of arms and the usher of the black rod. There are a dean and twelve canons, and each knight has a knight-pensioner.
Garter-fish. See Scabbard-fish.
Garter Snake, a nont of the kenus Thamnophis, widely distributed on the American continent from Southern Canada to Central America. It is a small reptile, a specimen a yard long and an inch in greatest diameter being considered a large one. The garter snake inhabits swamps, woods and rocky fields, and lives on worms, frogs, fish, small mammals and birds. Some species are semi-aquatic. The common color marking of the garter snake is three light-colored longitudinal stripes on a darker ground, and slatecolored ventral surface.
Gary (gari), an industrial city in in 1906 on the shore of Lake Michigan, a few miles s.e. of Chicago, as the seat of an immense plant of the Indiana Steel Company, an outgrowth of the $\mathbf{U}$. $\mathbf{S}$. Steel Corporation. It was named from Elbert H. Gary, an eminent corporation lawyer, born at Wheaton, Illinois, in 1846, and president in 1898 of the Federal Steel Company, which was merged into the U. S. Steel Corporation in 1901, of which he was made chairman of the Board of Directors. The town quickly 1910 to 18,802 . Gary School System, ilt method of
mechanical education which has been adopted in the industrial city of Gary, Indiana. It is a study, work and play school,' all provided for in the wame building, in suck a way that the full capacity of the schoci rooms, workshops, gymnasium and nlayground are successively occupied by the several classes There are no fixed courses or set textbooks, each child being free to select the studies and work he prefers. There is also no division into elementary and hish schools, all these being in the same buifding and using the same school rooms, shops, etc.

Gas,an elastic aeriform fluid, a term originally synonymous with air, but afterwards restricted to such bodies as were supposed to be incapable of being reduced to a liquid or solid state. Under this supposition gas was 'a term applied to all permanently elastic fluids or aira differing from common air.' After the liquefactic of gases by Faraday, the old distinction between gas and vapor, viz., that $t^{\prime}$ latter could be reduced to a liquid or sulid condition by reduction of temperature and increase of pressure, while a gas could not be so altered, was no longer tenable, so that the term has resumed nearly its original signification, and designates any substance in an elastic aeriform state Gases are diatinguished from liquids by the name of elastic fluids; while liquids are termed non-elastio, because they have, comparatively, no elasticity. But the most prominent distinction is the following:liquids are compressible to a small degree, and expand into their former state when the pressure is removed; and in so far they art elastic, but gases appear to be in a continued state of compression, for when left unconfined they expand in every dirrection to an extent which has not hitherto been determined. In respect of this indefinite expansiveness, all gaseous bodies obes more or less strictly two laws commonly called the 'gaseous laws. The first, known as the law of Boyle and Mariotte, given first by Robert Boyle in 1662, and then by Mariotte in 1676, is that-The volume of a given mass of pas varies inversely with the pressure to which the gas is subjected; or, in other words, the density of a given mass of gas is in direct proportion to the pressure that the gas is subjected to. The second of the gaseons laws is commonly called the law of Dalton and Gay: Lussac. It is, however, properly called Charles's law. Dalton published it in 1801: but Gay-Lussac who stated it in 1802, crives the credit of havins dis covered it, fifteen yeary previoualy, to

Citizen Charles. The law may be stated as follows:-T'he volume of a gas maintained under constant pressure increascs for equal increments of temperature by a constant fraction of its original volume; and this fraction is the same whatever is the nature of the gas. A mass of gas, whose volume is 1000 at $0^{\circ}$ C., becomes, at $100^{\circ} \mathrm{C}$., 1366.5 , the pressure remaining constant. In virtue of these laws a gus may now be defined to be a substance possessing the condition of perfect fluid elasticity, and presenting under a constant pressure a unifurm state of expansion for equal inerements of tem-perature-a property distinguishing it from vapor. There is, however, no known gas that obeys these two laws perfectly ; thus of the gases whose liquefaction has been attended with most difficulty (oxygen, hydrogen, nitrogen, carbonic oxide, nitric oxide, carburetted hydrogen and helium), all except hydrogen are more compressible than they should be theoretically, while hydrogen deviates slightly in the opposite direction, being less compressible than Boyle's law would indicate. The other gases pxhibit even greater deviations from Boyle's law, and the amount of the deviation rapilly increases as the gas is brought nearer and nearer to liquefaction. The law of Dalton or Charles which gives for equal elevations of temperature equal increments of volume is also deviated from by every gas, and more and more so as the point of liquefaction is approached.

The liquefaction of gases is effected by the application of cold or pressure, or both combined. For any given pressure there is a particular temperature at which the gas liquefies. At a certain point, however, called by Andrews the critical point of tempcrature, the distinction between liquid and gas appears completely lost. At and above this temperature no pressure that can be applicd will convert the fluid into the form of a liquid even though the rolume is diminished by pressure so much as to make the density of the fluid greater than that of the liquid oltained $s^{2}$ lower temperatures. By 1908 all gases harl been liquefied, including the extremely rare hydrogen and helium.

The power of motion inherent in all parts of aeriform matter is accounted for by the kinetic theory of gases. according to which a gas consists of an enormous number of molecules moving about with very great velocity. Great as is their nuriber, however. the molecules are sparsely distributed thronkh space, in comparison with their distribution when the substance is in the solid or
liquid condition. A molecule of a gas Hying about moves on in a straight line till it meets another molocule, or till it impinges on a side of the containing vessel. Meeting another molecule the two turn each other aside, just as two billiard balls when they come into collision are both deflected from their previous paths. Passing thence each flies on in a Etraight line till it meets another molecuie, and each is again deflected. When the molecules impinge on the side of the vessel chat contains the gas they rebound as a hilliard ball does from the cushion of the billiard table; and the perpetual shower of molecules that strike and rebound from the sides gives rise to the phenomenon of gaseous pressure, just as an umbrella held out in a hailstorm is pressed downwards owing to the numerous impulsive blows that act upon it. When the temperature of a $\mathrm{g}^{r}$ is raised the energy of the molecules is iscreased. They strike with greater velocity, and the number of blows on the side of the vessel is also increased. The pressure is therefore greater; and the law of Daltou or Charles is easily shown to be a consequence of the kinetic theory. Boyle's law also follows very simply from it ; for if we diminish the volume of the containing vessel to one-half, one-third, or to any other fraction of its original volume, we increase the number of molecules in a given space, a cubic inch for instance, in the same ratio. Consequently. the number of impacts on a square inch of the surface of the containing vessel will also be increased in the same ratio. and the pressure will thus be increased in that ratio, too. It is estimated that in a cubic centimeter of gas at standard temperature and pressure there are nineteen million million million molecules.
Gas, Iigititivg bx, as ordinarily understood, the application of carburetted and bicarburetted hydrogen gas. that is olcfiant gas, to the lighting of buildings. streets, etc. In 1739 the Rev. Mr. Clayton published a paper in the Philosophical Transactions, on the inflammable nature of the gases obtained hy the decomposition of pit-coal in heated close ressels; but no practical application of this discovery was made before 1792, when Mr. W. Murdoch. a native of Ayrshire. in the employ of Messrs. Watt and Bonlton. lighted his own house and offices at Redruth on this principle. In 1708 he prected a gas apparatus on a large scale at Soho Foundry, Birmingham, and in 1802 M . Le Bon lighted his house in Paris by gas. and made a proposal to supply the whole city. The intiroduction of gas for public lighting fas,
however, strongly resisted, through fear of possible explosion, it being first tried in the streets in London in 1813. In the United States the resistance continued longer, $\cdot$ Boston adopting it in 1822, New York in 1827 and Yuiladelphia in 1835. Frum this, time coal gas became the most common illuminating agent wherever it could be prepared econom. ically. Another kind of gas for lighting has lately come into use to some extent, namely, voater-gas, produced from the decomposition of water in the form of steam by passing it through incandescent fuel. Gas for lighting, however, has been to a large extent superseded by electricity. See Water-gas.

Gas is obtained from coal, the best sorts being those bituminous coals known in England by the name of cannel, and
the hydraulic main-a large horizontal pipe at first about half-filled with water -some separation is effected between the liquid products of distillation and the gaseous, which bubble up through the liquid into the upper portion of the main. At the end of the main the liquids fall by their greater gravity into the sunk reservoir known as the tar-well, while the gas is conducted to the condenser or refrigerator (c), a series of bent iron tubes kept cool either by exposure to currents of air or by allowing water to flow over them. In these there is a further deposit of tar and water, and the gas passes on to the washer, a series of celis in which the gas is forced through water or exposed to water spray for the removal of ammonia. The scrubber (D), which is sometimes used in place of the

Gas-work, shown in Section.
in Scotland by the name of parrot. The coal is distiiled in retorts of cast-iron (A), or now more generally of fir'-clay, heated to a bright-red heat. As they issue from the retort into the hydraulic main ( B ) the products of distillation contain vapors of tar and naphtha, together with steam impregnated with carbonate of ammonia and hydrosulphide of ammonium. These vapors wouid condense in the pipes in which the gas must be distributed, and would clog them up; they must therefore be so far removed by prerions moling as to cause no inconvenient condensetion at ordinary temperatures. The crude gas contains, besides, sulphuretted hydrogen, the combustion of which would exhale an offensive odor. Carbonic acid weakens the illuminating power of the gas, and has also to be removed. In to produce a steady flame from the burn-
gas-holder, sometimes called a gasometer, is usually a very large cylindrical alrtight structure of hron plates, closed at top, open below, and having the lower end immersed in a water reservoir. It ls supported by chains passing over pulleys on iron columns, the greater part of the welght of the gas-holder being counterbalanced by weights attached to the chains, so that it can exercise a certain regulated pressure on the gas contained $\ln 1 \mathrm{lt}$.

The quantity of gas consumed by each consumer is measured by an instrument called a meter, of whlch there are two classes-the wet and the dry. The wet meter is composed of an outer box about three-fifths filled wlth water. Wlthin thls is a revolving four-chambered drum, each chamber being capable of containlng a definite quantity of gas, which is admitted through a pipe in the center of the meter, and, owing to the arrangement of the partitions of the chambers, causes the drum to maintain a constant revolutlon. Thls sets in motion a train of wheels carrying the hands over the dials which mark the quantity of gas consumed. The dry meter consists of two or three chambers, each dividef by a llexible par: tition or diaplagm, by the motion of which the capacity on one side is diminished while that on the other is increased. By means of slidevalves, like those of a steam engine, worked by the movement of the diaphragms, the gas to be measured passes alternately in and out of each space. The contractions and expansions set in motion the clockwork which marks the rate of consumption. The diaphragms in all the chambers are so connected that they move in concert.
The profitable consumption of gas, whereby the strongest light can be had at the least expenditure of gas, depends considerably upon the form of the burner. and the mode by which the flame is fed with the air necessary for its combustion. There must be a sufficient supply of oxygen to convert the carbon of the gas into carbonic acid, and the hydrogen lnto water. If oxygen is lacking, the flame will be smoky from excess of carbon. In this case the remedy is either to reduce the supply of gas or increase the supply of air. This may be effected by modify$\operatorname{lng}$ the form of the burner. or $\ln$ the case of the Argand burner by having a different shape of glass chimney. As to the form of the burner. it has been found that a plaln jet $1 / 4$ inch in diameter at the orifice, will not give a flame free from smoke of a greater height than $21 / 2$ lnches; but the same quantity of gas which would give a smoky flame from 2
plaln jet, will produce a clear bright flame by extending or dividing the aperture of the jet so as to expose larger surface of flame to the atmosphere. It is not, however, necessary to increase the superticlel area of the flame; it may even be diminlshed with a more intensely luminous effect by having instead of one aperture two small ones placed at an angle to each other, so that the jets may cross each other. This forms the union jet. Another form is the slit or batwing burner, in which a clean slit is cut across the top of the beak. In the Argand burner a circle of small holes supplies the gas, and a current of air is admitted through the center of the flame, which is steadied and conslderably increased in brilliancy by being surrounded by a glass chimney. For the lightling of large halls an lmprovement called the sun-light has been introduced. Thls conslsts of rings of union jets. The lncandescent gas light is produced by the heat from a bunsen burner making lncandescent a fragile mantle of certain rare metals of great resisting powers to heat, which yield an intense light when heated. Thls is known as the Welsbach light. See Natural gas, Producer gas. Acetylene gas. Gascoigne (gas-koin'), Georae, an 1535. educated at Can poet, born in to Gray's Inn in 1555. Being disinherited by his father, he served with distinction in Holland and was made prisoner by the Spaniards: but returned safely to England, and died at Stamford in 1577. He ls chiefly remembered for his blauk-verse satire. The Steele Glas (1576), and the Complaynt of Philomene. a rhyming elegy (1576), but he wrote two or three comedies and tragedies.
Gascoigne, Sir William, an English judge of the Court of King's Bench, born about 1350; died in 1419. He is chiefly famous for directing the imprisonment of the Prince of Wales (afterwards Henry $V$ ), who had struck him in open court for condemning one of his dissolute friends. He also declined to obey the king and sentence Archbishop Scroop to death. alleging that the law gave him no power over the life of an ecclesiastic. In each case the king ultimately approved his actlon.
Gascony (gas'kī-ni), an old divisGaronne, the sea, and the Pyrenees. It composes the departments of Hautes Pyrénees. Gers. and Landes, with part of those of Bas Pyrenees. Haute Garonne. Tot-et-Garonne, and Tarn-et-Garonne. The Gascons, who are of mixed Basque and Gothic descent, used to have
the character of beling brave, faithful, and peculiarly tenacious of purpose, but much given to boasting, whence the word gas connode.
Gas Engine, The term 'gas englne' to cover all types of heat engines in whicb tbe power ls derived from the combustion of a mlxture of alr with a gaseous, liquid or pulverized solid fuel, within the

R. E. P. Aeroplane Motor.
cylinder of the engine. The term 'internal combustion engine' is also properly applied to this class to distinguisb it from steam or hot air engines, where the beat wbich energizes the working substance, sucb as steam or air, is generated in an external furnace. The fuels most commonly used in gas engines are coal gas, water gas, natural gas, producer gas, blast furnace gas, gasoline, naptha benzine, kerosene, fuel oil, crude petroleum, alcobol, oil tar, and in some instances powdered coal.

and Abbe Hautefeuille in 1682. In 1791 John Barker patented in England a gas turhine, and in 1794 Robert Street patented an oil engine in whicb the oll was first evaporated in tbe cylinder and then ignited. Following Lebon's design of 1790 , several experimental engines for coal gas were developed between 1823 and 1842 , but it was not until 1860 that a commercial engine was bullt by Lenoir. In this engine the gas and air were drawn into the cylinder in the first portion of the stroke; the slide valve then closed and the cbarge was lgnited. Many Lenoir engines were used, in splte of the high gas consumption of 100 cuble feet per horse-power hour.

In Otto and Langen's 'free piston' engine of 1867 the weigbted piston flew upward after $t^{t}$ ", explosion, and turned the shaft on tbe return stroke hy means of a ratchet gear. The consumpion of gas was about 57 cuble feet per horsepower hour, but the engine was very noisy. In 1876 Dr. Otto brought out the first engine of the 'four-cycle' type, working on a princinle surgested Independently hy Beau de Rochas in 1862. This is literally a 'four-stroke-cycle,' requlring two revolutions of the crank. shaft per power stroke, as follows: 1-out stroke, suction of charge; 2-returnstroke, compression of cbarge; 3-out stroke, explosion or power stroke; 4-
return atroke, exhaust and scavenging. being the slngle-acting, with a long trunk The inlet valve is open on the firit piston. stroke, and the exhaust valve on the fourth. The compresslon of the gas before ignitlon gave much greater economy,

reducing the consumption to $20 \mathrm{cu} . \mathrm{ft}$. per horse-power hour. In 1881 Clerk dcvised a two-cycle engine, receiving an impulse every revolution, in which the exhaust took place at the outer end of the first stroke, and the fresh charge was at once pushed in by a separate displacer plston' or pump. Modern two-cycle engines of small sizes make use of a closed crank case instead of the displacer cylinder. The first successful American engine was the Brayton in 1873.
Six-cycle engines, compound engines and a four-cycle engine with alternate strokes of different lengths have been built, as also various types of gas turbines.
The Lenoir engine was double-actlng. The first Otto engine was single-acting, i.e. received impulses only on one side of the piston, and while two- and four--ycle engines are now made both single- and double-acting, by far the commonest type

In 1883 Dr. Rudole Diesel patented an engine in which air alone was compressed to a pressure of about 500 lbr . per sq. in., reaching a temperature of about $1000^{\circ} \mathrm{F}$. The fuei was then injected into the cylinder in the form of a spray, and ignited spontaneously in the heated air. The efficiency of the Diesel engine is high ; it can use low grades of fuei, but has the disadvantage of greater weight per horse-power. Dlesel englnes are made both 2 - and 4 -cycle, single- and double acting. One of the most interesting modern developments of the zas engine is the growing use of Diesei enginez for marine propulsion.

Gas engines require that thelr cylinders shali be cooled. In small engines, and in some automoblle and most aeronautic motors, alr coollng is accomplished by providing the cylinders with radiating tanges, ins or pins, and a fan is gener. ally employed. In most stationary engines, a water jacket is used. In auto mobiles the water is circulated by a pump or by thernsl syphon, cooled in a radla. tor and used over. In some engines the water is simply allowed to boil, and the latent heat or evaporation absorbs the heat from the cyiinder.
Ignition of the charge is most commonly effected by an electric spark, or by a hot tube or flame uncovered at the proper instant. The two general types of electrle ignition are the jump-spark or high tension, and the make-and-break spark, or low tension.
Engines usine fixed gases are arranged either with a mixing valve for mroportioning the alr and gas, or wlth separate inlet valves for each. Engines using volatile hydrocarbons, as gasoline, benzine, alcohol, etc., are equipped with some form of carburetor for vaporizing the liquid and mixing it with the entering air. With kerosene and heavier oils some form of pre-heating or volatilization is commonly practiced, or else thr oil is injected into the cylinder. Sor e engincs will run on kerosene if startad first cn a more volatile oil. Heavy tars and even powdered ccal can be injected into the cylinder.
The valves of the gas engine were at first of the flat slide type, but higher pressures brought the general use of the mushroon-shaped poppet-ralve actuated by a cam-shaft. A modern development is the cylindrical sleeve type, consisting of one or two sleeves riding concentrically on the cylinder and actuated by eccentrics. A great advantage in the elimination of noise and wear is claimed
for this form. In two-cycle engines, so called 'valveless,' the valves take the form of ports uncovered by the piston in its travel.

Gas-engine governors are divided into two general classes, the throttling type which varies the quantity of the expioslve mixture admitted to the cylinder, and the "hit or miss" which varies the freguency of the lmpulse strokes by oultting to ignite the charge ln the cylinder whenaver the engine rises above a certaln given speed.

The various types of engines have all leen tried in different fields, but some idea of the commoner tendencies are here given :

Stationary engines-smaller powers, mostly 4 -cycle horizontal, single-cylinder, and vertical one- to four-cylinder, single acting.

Stationary engines-large powers, horizontal, double-acting, frequently twocycle. Built in all sizes up to 6,000 horsepower.
'ortable engines-smali two- and fourcyele gasoline engines, one- and two-cylinder, vertical and holizontal, single-acting.

Automobile engines-mostly four-, sirand eight-cylinder, vertical four-cycle, single-acting engines; a fow two-cycle.

Marine engines-small, for motor boats, one- to six-cylinder like automobile, but with $t$ 'o-cycle engines common.

Marine engines-large, mostly Diesel, two- and four-cycle, single- and doubleacting. Producer-gas engines have deen tried on shlps.

Aeronautic engines-similar to automobile engines, but wonderfully lightened; also multi-cylinder, $V$-shaped engines and revoiring-cylinder engines. Two- and four-cycle.

The great advantages of gas engines over steam are the absence of boilers, coal and ashes, and the higher efficlencies obtainable. Small engines using city gas are more pconomical than similar-sized steam plants. Large steam plants produce power for lower cost than city gas, but cen be equalled or bettered by producer gas and by some types of oil engines. Modern producer-gas units consume less than $11 /$ ibs. of coal per horsepower hour. A Diesel engine wiil deVeiop a horse-power hour on $1 / 2 \mathrm{lb}$. of Texas petroleum. A consumption of 1 pint of gasoline per horse-power hour is good practice for weil-designed automobile engines. With other forms of fuel the efficiency varies with the type of engine and grade of fuel, but the total efficiency of well-designed gas engines ranges from $10 \%$ to $35 \%$ of the energy
avallabie in the fuel. as against $1 \%$ to $20 \%$ for steam practice.
Gaskill (gasikil), Furzabeti Cleohorn at Chers, an English novelitt born at Chelsea. England in 1810; dled in 1815 . In 1832 she marrled Willam Gaskill, a Unitarian minister. Mary Burton (1848), a novel of factory ilfe brought her fame. Thls was followed by many others, including the weil-known Cranford.
Gas Mantles, known commonly as Welsbach mantles, used with a Weisbach burner, are manufactured as foilows: A textle form in knitted of cotton, ramle or silk, and this form is then saturated in a bath containing 93 per cent. thorium nitrate and 2 per cent. cerium nitrate. The textile form is then subjected to a hot flame which burns away the textile fabric and converts the partlaily fused earths into oxiues. In this condition the mantles are exceedingly fragile. To impart to them the necessary body to permit of handling aud transportation they are dipped in colludion. This coliodion ls what burns away when the mantle ls first llghted after being put in piace on the burner.
Gasoline (gas'o-lën), a highly voiatlle,
inflammable compound of fluid hydrocarbcns, resulting from the difillation of crude petroleum or coal. It is used in carbonizing water gas and as fuel in vapor stoves, lamps and in gas engincs for automobiles and other purposes.

## Gasoline-Flectric. A gasoline-elec-

 was introduced in Germany in 1913 . It comprises a power car and ten trailers each of 5 tons capacity. The power car carries the generator set, viz., two Daimler motors of 125 korsepower each, driving a dynamo instalied in the center. Theurrent is transmitted to the electric motors, actuating each of the wheels of the power car and trailers.
Gasoline Engine or Gasolinm. Engine.
Gaspé (gäs-pax), a district of Canada, the $S_{t}$ prov. Quebec, on the south of Gulf of St Ine estuary, washed by the Bay is an Lawrence of which Gaspe ble Gaspe Basin is a tisheries are valuable. Gaspe Basin is a port on Gaspe Bay. Gassendi (gas-sen'dē; properiy Gassend), Pierre, a French phllosopher and mathematician, born in 1592; died in 1655 . His Exercitationes Paradoxice adversus Aristotelem (1624), while they gave great offense to the

Aristotelians, obtained him a canonry in the cathedral of Digne ; but a second book of Exaercitationes excited so much enmity that he ceased all direct attacks on Aristotle. He strenuously malntained the atomic theory, in opposition to the views of the Cartesians. Ils later works are Do Vita, Moribus et Doctrina Lipicuri (1077), Syntagma Philosophiee E'pecuri (1649), and lives of Tycho Brahe, Copernicus, Peurbach, and Regiomontauus (John Muller).
Gas-Stove, a stove whlch uses inof heating and cooklng. Sheet-iron stoves of various patterns are used for this purpose, others take the form of logs of terra-cotta, pierced with holes for the outflow of the gas.
Gastein (gils'tin), or Wirdbad GasAustria, 3000 feet above the sea, 48 iniles south of Salzburg, wlth thermal springs ( $64^{\circ}$ to $100^{\circ}$ ) containing salt and carbonates of magnesia and lime. It gives the name to a treaty signed here in 1865 by the Emperor of Austria and the King of Prussia, the non-observance of which led to the German war of 1866 . Gasteromycetes (ga s-t è r-ū-mi-sesé: Gaston de Foix (gas). See Fungi, a French soldier, born in of Nemours, John de Foix, Count d'Estampes, and Mary of Orleans, sister of Louis XII. whose favorite he became. At the age of twenty-three he routed a Swiss army, rapidly crossed four rivers, drove the pope from Bologna, and won the celebrated battle of Ravenna (1512), but was killed while attemptlig to cut ofi a body of retreating, Spaniards.
Gastonia (gas-tóni-a), a town in Gaston Co., North Carolina, 22 miles $W$. of Charlotte. It has cotton mills, shirt factory, tannery, etc., and a large shipping business in cotton yarns and cloth. Pop. 5559 .
Gastornis (gas-tōr'nis), a large fosspacies, remalns of which have been discovered in the lower Eocene deposits of Meudon, near Paris, and elsewhere. The bones indicate a bird as tall as the ostrich, and its structural peculiarities point to affinities with the Grallatores or wading-birds. Gastralgia (gas-tral-gi-a), a severe generally arising from indigestion. Gastrea See Gastrula.
 colorless fuid with an
acid taste and mour odor secreted by the mucous membrane of the stomach, and chief agent in the process of digestion. It is acid, and contains pepsin, its essential nitrogenous principle. The activity of the fluid has been ascribed to various acids present, lactic, acetic, and butyric, but it appears that free hydrochloric acld is that which is secreted by the stomach, the others being the products of change of food undergoing digestion. The acid is necessary for the pepsin to exercise its properties, which are limlted to the conversion of nitrogenous sulustances into peptones, fatty matters not belng affected by it. (See Pepsin.) Gastrle julce also holds in soiution various inorganic salts, chiefly chlorides and phosphates, occasionally also abnormal substances such as urea, ammonia, salts, and biliary acids. It is not possessed of any marked reactlons with ordinary chemical reagents, does not become turbld by boiling, and gives no striklng precipitates with acids, alkalies, or minerul salts. The amount secreted daily in the human adult is estimated to be about 14 pounds, but as it is continually reabsorbed, there is no great quantity present at any one time.
Gastric System, all the parts of the tribut body which contribute to digestion.
Gastritis (gas-tritis), or Gastronnteritis. See Enteritis. Gastrochaena (gas-trō-kēn'a), a genus of boring biValves (Gastrochanida), whlch also includes the remarkable Aspergillum and Clavagella. The original shell has the two valves typical of Lamellibranchs; but these are delicate, and become surrounded by a secondary tubular shell lining the cavity which the mollusc bores into limestone, coral, and other shells.
Gastrocnemius (gas-trok-ne'mi-us). the most exterual of three superficial muscles forming the calf of the leg and terminating above the heel in the tendo Achillis.
Gastrolobium (gas-tro-lo'bi-um), a large genus of leguminous plants occurring in Southwestern Australia. Several of the species often prove fatal to cattle, and they are hence known as poison-plants.
Gastromalacia (gas'tru-ma-la'si-a), softening of the stomach, a disease occurring in infants. Gasitropods (gas-try'pods), or Gasterorods, a class of molluscs, consisting of animals usually inhablting a univalve shell. The distinguishing characteristic is the foot, which is broad, muscular and disc-like, attached
to the ventral surface. The class in other or in series. When the combustion divided into two sub-classes the Branch- chamber has been filled with compreneed lata or Branchiogastropoda, breathlng water by gills, and the Pulmonata or Pulmogastropoda, breathing air by a sort of luns apparatus. The former include whelks and periwinkles, etc.; the latter include land-snails, slugs, pond-snails, etc. Gastrostomy (gas-tros'to-mi), the operation of forming an srtificial opening into the stomach with the view of introducing food when it cannot be received naturally on account of obstruct'nn or stricture of the gullet. Gastrotomy (gas-trot'o-mi), in surmaking an incislon in the stomach to remove a diseased part of foreign body. Gastrula (gas'troo-la) or Gasteaea. the name applied by Haer. !el to a thimble-shaped larva which appears in the life history of many different kinds of organisms. Such a larva, as it occurs in an annelid, or in the simple vertebrate amphioxus, consists of an nuter layer of cells, or ectoderm, and an inner or endoderm. The inner layer lines the gastral cavity, which communicates with the interior by an opening called the blastopore. The gastrula itself arises from a blastospherc, or hollow ball of cells, by the folding in of the cells at one point, as a thimble might be made by pushing in one sidc of a hollow ball. The outer and the inner layer of cells of the gastrula always give risc to definite organs of the future animal.
Gas Turbine, a turbinc engine operexploded gases, first invented by lene Armengaud in France, in 1006. Gas turbines are now of two types, the constant pressure and the explosion. The Armengaud engine is of the former type. The gas and air:"o compressed separately and the mixture admitted in a constant stream into a combustion chamber, where it is ignited by an incandescent platinum wire. The largest engine of this type ever produced was only 300 horsepower, and the death of the inventor left it unperfected.

Of the explosion type the Holzwarth turbine is the most efficient. In this the combustion chamber is intermittently filled with a mixture of gas and air admitted at the base of the machine. Ignition. explosion and increase in pressure of the burnt gases and their expansion through a nozzle result, after which the gases act, on a horizontal thrbine wheel. There it e five or ten similar explosion chambers arranged in a circle at the base of the turbine, and these act one after the
air, compressed sas is driven in, while the nozzle valve remains clowed. When the gas is isnited the valve is forced open and the pressure of the gases is transformed into kinetic energy. After each explosion the chamber is cleared and cooled by fresh air.

The turbine is provided with a hori-

Holzwarth Gas Turbine.-Sectional Elevation,
A, compressed air chamber. B, compressed ans chamber. C. combuation chamber. D, valve admitting compressed air to combuntion ohamber. E, nosslo valve admitting exploding gas to rim of motor $F$.
zontal governor shaft driven by a screw gearing. To this shaft are keyed the main governor, the emergency governor for preventing ignition, a tachometer, the ignition mechanism and the gear for operating a vertical oil distributor.
Gates (gats), Horatio, an American soldier, born in England in 1728. At the capture of Martinique he was aide-de-camp to General Monkton, and he was with Braddock when the latter was defeated in 1755 . On the conclusion of peace he purchased an estate in Virginia, on which he resided untii the Revolutionary war in 1775. He was at the head of the American army of the north when the British general Burgoyne was forcod to surrender his whole army at Saratoga (1777), though most of the credit for this victory belonged to the preceding commander, General Schuyler. In 1780, after the capture of Genpral Iincoln by Clinton, at Charleston, Gates received the chief command of the sorthern districts, but was badly defeated two months later by Cornwallis at Camden. He was then superseded by General Greene and brought to court.
martial, but was finally acquitted, and reinotated in bis command in 1782 after the capture of Cornwallis He then retired to Virginia, and in 1700, having emancipated all his slaves, he memoved to New York, where he died in 1806.
Gates, Merbill Edwards, educator, born at Warsaw, Niw York, in 1848. He was principal of the Albany Academy, 1870-82, preaident of Rutser Colleze, 1882-90, and of Amherst College, $1800-09$, and a Congregational minister after 1890. He wrote International Arbitration, Highest Use of Wealth; Sidney Lanier, Poet and $\Delta r$ rist, etc.
Gateshead, a parliamentary and England, County Durbam, on the right bant of the Tyne, opposite Nowcastle. of which it is practicaliy part. being connected with it by three hridges. The industrial establishments include works where heavy articles in iron, sucil as girderw, anchors, and chain cahles, as weil as engines: etc.. are made: shipbuilding yards, roperies, brass, copper, and iron fcindries, paper, glue, vinegar, glass, artificial manure, and large clipmical works. In the vicinity are quarries from which the celebrated "Newcustle grindstones ' are olstained, and nunerous collieries. Pop. (1911) 116,928.
Cath (Hebrew, 'wine-press'), one of the five royal cities of the I'hilistines, which, from its situation on the borders of Judah, was of much infortance in the wars of the Jews and Philistines. It was the native town of Goliath, and was successively eaptured by David, Hazuel, and Uraiah, who dismantled it. The site cannot be determined with cortainty, but it is sometimes identified with Tell-es-Safieh, between Ekron and Ashdod.

## Gatineau

(gat-i-nö), a river of Canada. Quebec province, the largest affinent of the Ottawa. rising in some lakes, and fowing almost due south to enter the Ottawa nearly opposite Ottawa city. It is not navigable more than five miles abnve the Ottawa except hy canoes. but its rapid waters are well stocked with fish, and arailable as waterpower. The eountry through which it flows is, however, only partinlly settled.
Gatling (gat ing $^{2}$ ), Rrchard Jordan County, North Caroling in in Ilorttora 1803. He studied medicine. but never practiced, removing eventually io Hartford, Connecticut, where he invented several ingenjous machines, the most important being the machine gun which bears his name.

## Gatling-gun. See Meokine-gun.

Gatehina, Gatcuina (sat-chl'na), a town of Hussia, sovernment of, and iss millen s. s. W. of St. Petershurs, on a susall lake. It in regularis built, and contains one of the ninest of the imperial palaces of Russia, pop. 14,735.
Gau (gou), a German word of douhtful origin, meaniug in general district, but in a; -ial sense a distrim: as a political unit dd its inhahitants as a political associnton. It formed a murt of middle division between the highent unit, the state, and the lowest, the village, corresponding in some respects t., the ' hundred.' The freemen of the Gail met at cer:ain periods, under an elected hearl, to settle matters $\mathrm{r}^{-}$!ating to the public weal; and in the same way the head men of the Gauen met to settle natters relating to the state at large: In the Frankish Empire tife clanactur of the Gau was altered, eaeh Gail uuw having as its head une or more royni officers sealled grafs or counts. These countships became horeditary, and about the twelfth century the Gau ceased to exist as a political division, though the nanic lias survived in Aargau, Thurgan, etc.

## Gauchos

(pa-rochos). notives of the pallu: is of the ifa Plata enuntries in South America, of Spanish deseent. The race is noted for theli spirit of wild independence, for horsemnnship, and the use of the lasso. Their mode of life is rude and uneivilizel, and they depend for subsistenee chiefly on cattle-rearing.
Gauge, Gage (gãj), Stìam and to engine boilers for registering the force of steam and the level of the water. Tho first often consists of a siphon tube, with cqual legs, half-filled with mercury. One and is fastened into a pipe, which enters that part of the boiler which onntains the steam ; the other end is open to the atmosphere. The steam. acting on the mercury in one leg of the gauge, presses it down, and the mercury in the other leg rises, the difference between the two columns being the height of unercury which corresponds to the excess of the pressure of the steam in the boiler above the pressure of the atmosphere: or, in other words, to the effeetive pressure on the safety-valve. For high-pressure engines the steam-gauge nsually consists of a spiral tube into which the steam is admitted. and which hecomes less bent the greater the pressure. The watergauge is a verical glass tube, or flat
case, communicatios abore and below with the boiier. Gauge-cock are tometimes put instead of or in addition to the tubes, for enabiling the engineer to verify the level of the water.
Gauge, a standard of measurement. uraitles the diatance between the ceutera of each pair of rails, which in the ordinary gauge used in the United Statea is 4 feet $81 / 2$ inches. The bruad gangi: an in the Great Western Raliway of EiLsiand, is 7 feet; the Irish, Indiall, aud spanish gauge is 5 feet 6 inches. Speciai narrow gauges have recently been adopted for mountain and minerai iines, such as the 3 feet 18 inch ganke of the Norwegin lines. Gauge is also the uaine applied to various contrivances for measuring any special dimension, sucih as the wire gauge, an obiong piate of steei, with notches of different widths cut on the edge and numbered, the size of the wire being determined by trying it in the different notehes untii one is found wbich it exactly fits. The thickugys of sheet-metal is tried by a simiiar gauge.
Gaul (gal), Gallia, in ancieut geog-
rapby, the country of tbe Gauis, the chiel branch of the original stock of Celts. It extended at one time from the Pyrenees to the Rhine, and included also a part of Italy. Hence it whas dividend into Gaul on this side (the Ronian side) of the Alps, or Galiia Cisalpina, and Gaul beyond the Alps, or Gallia Transaipina. Later the former was regurded quite as part of Italy, and the naine Galiia was restricted to Transaipine Gaul, or the country nearly corresponding to modern France. Julius Cmsar, about the middle of the first contury b.c., found Transalpine Ganl divided into three parts: 1. Aquitania, extending from the Pyrenees to the Garonne, chiefly ocenpied by Ibarian tribes; 2. Gallla Celtica, Celtic Gaul, from the Garonne to the Seine and Marne; 3. Galiia Belgica, Belyic Gaul, in tbe north, extending to the Rhine.
Migrations among the Gauls nhout 397 B.c., and their passage of the Alps, first bring the Gallic nation into the region of bistory. Having crossed the Alps they fell upon the Etruscans, defented the Romans at Allia ( 380 b.c.), and sacked and burned Rome, the capitol, bowever, being saved by Camillus. More than a century after the burning of Rome, the eastern Gauls, in $280-278$ B.C., made tbree destructive irruptions into Macedonia and Greece. Several trilhes pursued their conrse into Asia Minor, whore, nnder the name of Galatians, they iong retajned their national pecniliarities.

After theno migrations the Gaule alons the banke of the Danube, and in the mouth of Germany disappeared. Triben of German orisin occupied the whole country ais far as the libine, and oven beyond that rives. The Beize, who were partiy German, occupied the northorn part of Gaui, from the Seine and Marne to the British Cbanzel and the Jehlnw, from whence coionista passed over into Britaln, and settled on the conut diatricto. The Ceitn in Gaul bad attained some degree of cuitivation by interconrse with the Greeks and Cartharinians before they cnure in contact with the Romans. Those of Cinaipine Gaul continued formidable to lome until after the First Punic war, when the nation was compelled, as the resuit of a war of six years, to submit to the Romans ( 220 s.c.). When Hannibai marched on Roms they attempted to shake off the yoke; but the Romana, victorious over the Carthaginiand, re duced them again to submistion. Thirtyme yenrs iater ( 189 日.C.) their kindred tribe in Asia, the Galatians, met with the same fate; they aiso were ranquished, and their princes ,tetrarchy) became tributary. In tie years 128122 zc the Komans conquered tbe southern part of Gaul along the sea from tbe Alpa to the Pyrenees, and here eatablished their dominion in what was called the Prorince (Provincia) a name inat atill exista as Provence. Not long after Ganlish tribes shared in the destructive incursions of the Cimbri and Teutones on the Roman territory, which were ended by Marias in the hattles of Aqum Sextio (Aix) in 102, and Vercelli in 101 b.c. On the appointment of Jnlius Cassar to the proconaulslip over the countries bordering on Gaul. he resolved to subject all Gaul, and executed his purpose in less tban uine years ( $58-50$ 日.c.), in eight bloody campnigns. The dominion of the Romans in Gaul was confined by colonies, and the liberal grant of the Roman citizenship to several Gallic tribes. The relifion of the Druids, being suppressed in Gunl by Tiberins and Claudius, gradnnlly retreated into Britain. soon also conquered by tbe Romans. After the extinction of the Cresars, she Gars once more attempted to recover ar liberty by aid of the Germans, but \& :er this last effort became entirely Romanized, even their ancient language, the Celtic, being smpplanted by a corrupt Latin dialect. About the year 488 the Franks subdned the greater part of Gaui, and put a perind to the dominion of the Romans in that country. See France.
Gault (gnlt), i.1 geolesy a series of stiff marls or col lareous clayn,
varying in color from a light gray to a dark blue, occurring between the Upper and Lower Greensands of the Chalk formation of England. It is developed chiefly in the neighborhood of Folkestone (hence called Folkestone marl), and in Cambridgeshire.
Gaultheria (gal-tbèri-ii), a genus of ing to the order American sirubs belong- It is widely distributed in North America. At. procumbeus, the well-known wintergreen plant, is a creeper bearing white flowers, and in the fall edihle red berries.
Gauntlet, or GANTLET (ganthet, originally of gant'let), a glove made and jointed at the fingers, used as part of the armor of a warrior in former times.
Gaur, or Gous (gour), a ruined city west of Murshedashad. 60 miles north by of Bengal, extending about 7 miles capital the old Ganges. Several villages now stand on tbe site of the city.
Gaur, Goor, one of the largest of all Bibos gaurus), inhabitating gaurus or tain jungles of India, remark the mounextraordinary elevation of its spinal ride the absence of a dewlap, and its white 'stockings,' which reach above the knee. It is so fierce when roused that neither tiger, rhinoceros, nor elephanat dare attack it. The hide on the shoulders and hindquarters is sometimes nearly 2 inches in thickness even after being dried, and of being manufactured into shields. purpose of being manufactured into shields. The animal is supposed to be incapable of
domestication.

## Gauss (gous), Kapr Friedrich, a 1777. In 1801 he mathematician, born

 quisitiones Arithmetica, treating of ${ }^{\text {is }}$ determinate analysis or transcendental arithmetic, and containing, in addition to many new theorems, a demonstration of the theorem of Fermat concerning triangular numbers. He also calculated, by a new method, the orbit of the planets Ceres and Pallas. In 1807 he became professor of mathematics and director of the observatory at Göttingen, a position which he held till his death in 1855 . He was pronounced by Laplace to be the greatest mathematician in Europe. His chief works were the Theorio Motus Corporum Celeatium (1809), Intchsitus I is Maonetice Terrestris (1833), Dioptrische Untersuchungen (1841), and Untersuchungen uiber Gegenstände der höherenGeodesie (1844). Gaut. See Ghats.

Gautama (ga'ta-ma), a name of Buddhism. See Buddha, the founder of
 born in 1811 at Tarbes (Hautes-Pyre, nées). He studied painting under Rioult for two years, but gave up the brush for the pen, tbrew himself vigorously into the Romanticist movement. publisbed a volume of poems in 1830, and for several years worked at general literary criticism. In 1832 appeared his poem Allertus; but his first great success was the romance. Mademoiselle de Maupin, which led to his engagement by Balzac as secretary. He was afterwards engaged as theatrical and art critic on the Revue de Paris, the Artiste, the IIoniteur, and tbe Journal officiel. Owing to his connection with the Journnl Oficiel his fortunes hecame linked in some measure with tbose of the Bonaparte family, and he was appointed librarian to the Princess Mathilde. In 1872 he was sent by the republican government on a literary mission to Italy, and died in the same year. Among the most interesting of his productions may be ranked his Voyages en Espagne (1843), his Italia (1852), Caprices et Zigzags (1845), and Constantinople (1854), narratives of his travels: his Roman de la Momie (1856), Le Capitaine Fracasse (1863), Belle Jenny (1865), Spirite (1866), novels, together with the brilliant short stories, Portunio, Une Nuit de Cléopatre, Jean et Jeanette. Le Roi Candaule, etc. ; and his Histoire de l'Art Dramatique en France depuis Jingt-cinq Ans (1849), Les Beaus Arts en Europe (1852), etc.

Gauze (gaz), a thin transparent stuff of silk, linen, or cotton. It is eitber plain or figured, tbe latter heing sometimes worked with flowers of silver or gold.
Gavarni (gàvar'nē), the assumed name of SULPice Paut Chevalier, a French caricaturist, born at Paris in 1801. Originally a mechanical draugbtsman, he began his artistic career in 1835 by designing costumes for theaters and ju urnals of fashion. He then established $r$ Gens du Monde; but the journal was failure, and the artist spent some tim in $r^{*}$ debtor's prison of Clichy. On is : ase he was emploped upon the Charivuri, the success of which was due in great part to his genius. His best known works are Les Enfants Terribles, Les Reves, Lso Fourberies de Femmes, and Impressions de Ménages. In 1847 he visited England, and the sketches which he sent from St.

Giles, London, to L'Illustration created an immense sensation. He afterwards illustrated Eugens Sue's Wandering Jew, Balzac's novels. ai it cther works. He died in 1866.

## Gavazzi gàvát'sé ), is essandro,

 and political agiator, bern it Bologna 1809; died at (ione 1839. it the age of fifteen he became a wunis of the Barnabite order, at twenty he was professor of rhetoric in the College of Naples, and soon after made his mark as a pulpit orator. In 1846 he was chaplain general of the Roman patriotic league. Suhsequently he threw off his papal allegiance and joined the agitation which ended in the short-lived repuhlic. The French occupation of Rome drove him into exile, when he traveled through Britain and America lecturing against the Church of Rome, his power as an orator evoking much enthusiasm. He was with Garibaldi in 1860, and made suhsequent visits to Britain gathering funds for the Free Italian Church, in the interests of which he lectured, preached, and traveled on deputation work till a short time before his death.Gavelkind (gärel-kind), an old the land of the father was at his death equally divided among his sons, or in default of sons, among the daughters. The issue of a deceased son inherited the father's part. Collaterally, also, when one brother died withont issue all the other brothers inherited from him. Gavelkind, before the Norman conquest, was the general custom of the realm; it was then superseded hy the fendal law of primogeniture, and only retained in Wales and Kent. The custon continned in Wales till the time of Henry VIII in Kent all land is still held in gavelkind unless specially disgaveled hy act of Parliament.
Gavial (gả'vi-al: Gavinis Gangeti-
eus), the Indinn crocodile, characterized by the narrow, almost cyl-

Head of Gavial or Gangetic Crocodilo (Gavialis Gangeticus).
indrical jaws which form an exceedingly elongated muzzle. The teeth (about 120
in number) are of equal length, and the feet are completely webbed. The males can he distinguished from the females hy the shape of the muzzle, which is much smaller at the extremity. The only extant species occurs in South and Eastern Asia, especially in the Ganges. It feeds on fishes and small prey.
Gavotte (ga-vot ${ }^{\prime}$, an air for a dance with two strains, each of four or eight hars, in $\frac{2}{4}$ or time, the starting notes occupying hall a har. Like the minuet, it has been introduced for free treatment into suites, sonatas, ete. The name is said to be derived from the Gavets, the inhabitants of the Gap, in France.
Gay (gū), John, an English poet, born near Barnstaple in 1688, and apprenticed to a silk mercer in London. In 1711 he puhlished his Rural Sports, which he dedicated to Pope, with whom he formed a close friendship. In 1712 he hecame seeretary to Anne, Duchess of Monmouth, and his mockheroic poem, Tricia, or the Art of Walking the Strcets of London, appeared in the same year. In 1714 his caricature of Amhrose Philips' pastoral poetry was published. under the title of the Shepherd's Weck, and dedicated to Lord Bolinghroke, by whose interest he was appointed secretary to the Earl of Clarendon, in his embassy to the court of IIanover. In 1715 appeared his burlesque drama of What d'ye Call It? bas his next piece, the farce, Three Hours After Marriage, altogether failed. In 1720 he puhlished his poems by suhscription, in 1723 his tragedy, The Captives, and in 1726 his well-known Fables. His Beggar's Opcra, the notion of which seems to have been afforded by swift, was first aeted in 1727, at Lincoln's Inn Fields, where it ran for sixty-three nights, but the lord chamherlain refused to license for performance a second part entitled Polly. The latter part of his life was spent in the house of the Duke of Queensherry, where he wrote his sonata Acis and Galatea and the opera Achilles. He died in 1732.
Gay, Marie- Françoise- Sophie, a in French authoress, born at Paris in 1776 ; maiden name, Nichault de Lavalette. She was first married to a financier, M. Liottier, from whom after six years she was divorced to marry M. Gay, a receiver general under the empire. Her salon was a famous resort for the men of letters and artists of the time. She died at Paris in 1852. Her chief worke are Laure d'Estell (1802), Anatolo (1815), Le Moqueur Amourewse (1830), Sodnes de Jeunes Ages (1833), Lब

Duchesse de Chateauroux (1834), Lcs Salons Célebres (1837), and Le Mar Confident (1849). For her daughter delphine Gay, see Girardin (Madame de).
Gaya (gide), the chief town of a disgal, on the right bank of the Phalgu, a tributary of the Ganges, 260 miles N. w. of Calcutta. It consists of an old and a new town. The former occupies a rocky height, is inhabited chiefly by Brahmans, and being regarded as a place of great sanctity, is annually visited by vast crowds of pilgrims. The latter, called Sahibganj, is the trading quarter, and the seat of administration where the European residents dwell. The place a bounds with objects of Hindu worship, and almost every height in the vicinity is the subject of a legend. Pop. 71,288. The district has an area of 4712 square miles.
Gayal, Gral (gi'al), a species of wild in the mountains of Northern Burmah and Assam, and long domesticated in these countries and in the eastern parts of Bengal. The head is very broad and fat in the upper part, and contracts suddenly towards the nose; the horns are short and slightly curved.' The animal has no proper hump, but on the shoulders and forepart of the back there is a sharp ridge. The color is chiefy a dark brown. Its milk is exceedingly rich, though not abundant.
Gayarre (gi-do-rá) Charles arLonisiana in 1805, 18 , hist in 10 , born in see secretary of state of Louisiana 1846-53, and presiding judge of the city of New Orleans. He wrote History of Lonisians and Louisi...a: Its History as a French Colony.
Gay-Lussac (gē-lus-ak), Lours Joand physicist, sEPII, a French chemist (Haute-Vienne) in at St. Lénnard in 1850. He was educated in the Ecole Polytechnique from 1797 to 1800 , and afterwards in the Ecole des Ponts et Chaussees, but preferring chemistry, he entered Berthollet's Ecole Laboratory. In 1802 he returned to the Polytechnique as demonstrator of chemistry. and in 1804 performed his two ballonn ascents for scientific purposes. the first with Biot. the second br himself, an account of which appeared in the Journal de Physique. In 1806 he was elected to the Academy of Sciences. In 1808 he was appointed professor of physics at the Gorhonne, a nost he held for twenty-four years, in 1800 professor of chemistry in
the Ecole Polytechniquc, and then succeeded Fourcroy as professor of general chemistry in the Jardin des Plantes. In 1831 he entered the chamber of deputies, and in 1839 he was made = peer of France, but he never took an stive part in politics. He was especially celebrated for his researches into the chemical and physical properties of gases and vapors. For many years he edited, in conjunction with Arago, the Annales de Chimie et de Physique; and many of his numerous memoirs were published in this or in the Comptcs Rendus. He also published, along with Thenard, Recherches Ph Phsicochimiques, in which some of their most important discoveries are described. Other works are his Cours de Physique and lesons de Chimic.
Gaynor (gả́nor), William J., New York jurist, born at Whitestown, lyn 1 York, in 1851. He went to Brooklyn in 1873 and worked on Brooklyn and New York newspapers while studying law. Was admitted to the bar in 1875, and took part in many important cases, becoming known nationally for his work in breaking up rings in the Democratic party and in securing the co viction of John Y. Kane for election fruds. He was elected judge of the Supreme Court of New York in 1893 and again in 1907, for twelve years, declined a nomination for mayor of Brooklyn in 1897, also for governor of New York and for judge of the Court of Appeals, and in 1909 was elected Democratic mayor of New York. As such he gave eminent setisfaction by his earnest efforts to improve conditions in that city. In the nominating convention for governor in 1910 he poclined to let his name be used. He was shot by a disappninted office-seeker in the summer of 1910, receiving a serious but not a fatal wound. He died September 11, 1913 . Gaza (gña), an ancient town of Philistines, near the Mediterran of the miles s. s. w. of Jerusalem. The modern town, Ghuzzeh, is a principal entrepôt for the caravans passing between Egypt and Syria. The population has increased rapidly of recent years and is now estimated at 16,000 .
Gaza (gà zad), Theodore, a Renais sance scholar, born at Thessalonica about 1405; died in Calabriassa- in 14is. He came to Italy atout 1430 : became teacher of Grepk at Ferrara; was patronized by Pope Nicholas V, Cardinal Bessarion, and King Alfonso of Nanles. Gaza labored for the diffusion of Greek literature, not only by teaching. hut also by his writings, and especially by Latin translations of the Greek clag-
sics. His chief work is a translation of the writings of Aristotle on natural history.
Gazelle (ga-zel'; Gazella dorcas), the type of a sub-family of antelopes (Gazelinæ), which includes some 23 species of small, mostly desertloving forms.
 Its color is a light fawn upon the back. dcepening into darkbrown in a wide band which edges the tlanks and forms a line of demarcation between the color of the lיpper portions of the bods and the pure white of the abdomen. The eye of the gazelle is large, soft, and lustrous. Both sexes are provided with horns, round, black, and lyrated, about 13 inches long. It seems to be confined to the north side of the Atlas Mountains, Egypt, Abyssinia, Syria, Arabia, and South Persia.
Gazette (ga-zet': from gazzetta, a small Venetian coin, which was the price of the first newspaper), a newspaper, especially an official newspaper. The first gazette in Fugland was published at Oxford in 165.. On the removal of the court to London the title of London Gazette was adopted. It is now the official newspaper, and published on Tuesdays and Fridays. It is the organ by means of which all state intelligence, proclamations, appointments, etc., are promulgated, and in which declarations of insolvency are published. A similar official newspaper is published also in Edinburgh and Dublin.
Gazetteer (gaz-e-têr'), a gengraphical dintionary; a book containing descriptions of natural and political divisions, countries, cities, towns, rivers, mountains, etc., alphabetically arranged. Among the more important general works of this kind are McCulloch's Geographical Dictionary, Johnstone's Dictionary of Geography, Blackie's Imperial Gazetteer. Lippincott's Pronouncing Gazetteer (based upon Blackie's), Saint Martin's Nouveau Dictionnaire de Géographie Universelle, and Ritter's Geographisch-Statistisches Lexikon. There are also various gazetteers confined to particular countries.
Gazogene (gaz'u-jẽn), an apparatus used for manufacturing aerated water on a small scale for domestic use, by the combination of
an alkali and an acid, as carbonate of soda and tartaric acid, which yield carbonic acid when mixed with water. It generally consists of two globes, one above the other, connected by a tube, the lower for containing water, and the upper the ingredicnts for producing the gas. The vessel is made air-tight bv neans of a screw-top, a,sd when water is gently introisced ints the upper globe from the lower, by inclining the vessel so as to fill about a half of the former, chemical action takes place, and the carbonic acid evolved gradually saturates the water in the lower globe. When this has taken place the aerated water can be drawn off by opening a stopcock at the top attached to a second tube which reaches almost to the button of the lower globe.
Gean (gēn), a kind of wild cherrytree (Prunus Avium), common in Britain. The fruit is smaller than that of the common cherry, of a red color when unripe, and a deep purple or black when it arrives at maturity. The flavor is supcrior to that of most cherries. The wooll is used for furniture and other purposes.
Gearing (ge g ), in machinery, the pa1 collectively by which motion communicated to one portion of a machine is transmitted to another, generally a train of toothed wheels. There are two cinief sorts of wheel gearing, viz. spur-gearing .nd beceled gearing. In the former he teeth are arranged round cither the concave or conver surface of a cylindrical wheel in the direction of radii from the center of the wheel, and are of equal depth throughout. In bevcled gearing the teeth are placed upon a beveled surface round a wheel which if the slope of the bevel were continued would form a cone.
Geary (gére), Joun Whire, born Pennsylvania, in 1819; died in 1873. He became an engineer officer in the Mexican war, and then the first United States postmaster of San Francisco. Returning to the East in 1856, he became governor of Kansas Territory and restored order there, but resigned in 1857. During the Civil war he served with distinction and became a brigadier general, and at the close major general. In 1866 he was elected governor of Pennsylvania and rerlected in 1869.
Gebang Palm (ge-bang'), the Oo. rypha gebanga, a fanleaved palm of S. E. Asia.
Geber (gébér), an Arabian chemist or alchemist, often denisnated the father of chemistry, who four ished during the eighth century. He was
acquaiuted with nearly all the chemical processes in use down to the eighteenth century. His writings describe various kinds ci furnaces and other apparatus, and cupellation, distillation, and other chemical processes; the purification, composition, and properties of the metals then known-gold, silver, copper, lead, tin, and iron, and the functions of mercury, sulphur, and arsenic. He is the reputed author of an immense number of works, as well on metaphysics, lauguage, astronomy, etc., as on chemistry.
Gecko (gek'ō), a name common to necturnal the members of a family of acterized by the (Gechotide), characterized by the general flatness of their
form, especially of the head, which is somewhat of a triangular shape; the body is covered on the upper part with numerous round prominences or warts; the feet are rather short, and the toes of nearly equal length and furnished with flattened sucking pads hy means of which the animals can run up a perpendicular wall, or even across a ceiling. The greatest number feed on insects and their larver and pupe. Several of the species infest houses, where, although they are perfectly innocuous, their appearance makes them unwelcome tenants. Ons species is common in N. Africa and S. Europe.
Ged (ged), William, the inventor of about the heginning of the eigh edinburgh century died in poor circumstances in 1749. IIe first practiced his great inprovement in the art of printing in 1725; and some years later he entered into a partnership in London, the result of which was the production of two praverbooks only. He returned to Scotland in 1733 , and published a stereotype edition of Sallust.
Geddes (ged'es), Alexander, a Roman Catholic divine, poet, and miscellaneous writer, was born in Banff, Scotland, in 1737; died in London 1802 . His works include a translation of the Bible, pamphlets, and pocms.
Geddes, rair Eric Campbelx, British Lord of the railroad expert and First in India of Scotch parents. When he was seventeen he came to America. In Alabama he worked as a lumberjack and sailed for Australia when he was twentyone. He spent a year sheep herding and Fent to India, where, within five years, he became traffic manager of a railroad. From there he was promoted to the management of the North Eastern Railway of Fingland. In May, 1815, he was made Deputy Director General of Munitions,
and Premier Iloyd (worge appointel him Director of Military Railways and Direc-tor-Gencral of Transportation in France. On the retirement of Sir Edward Carson he became First IJord of the Admiralty. Geddes, Jenny, the name tradition who, duri gives to a streat fruit-seller Chur, duriug the tumult iu St. Giles' Church, Edinburgh, iu July, 1635 , when the dean attempted to introduce the Episcopalian service-hook, threw her stool at his head extlaiming, Villain! dost thou say mass at my lug?' This tumult led to eveuts which annulled 1spiscopacy and restored I'resbyterianism. The honor of the exploit has been claimed fur a Barhara Hamilton, wife of John Mein, merchant in Edinhurgh, hut Jenny Geddes, the street fruit-seller's claim, has always been the popular one, and recently a memorial brass was placed in St. Giles to her ulemory.
Geefs (gafs), Guithaume, a Belgian sculptor, born at Antwerp 1806, died 1883 . Among his most important works are the coonument to the Victims of the Revolution of 1830 at Brussels; a statue of Rubens in front of Antwerp Cathedral; statues of King (eopold, etc. His brothers JosEPH (died 1860) and Aloys (died 1841) were also sculptors of reputation.
Geel (gàl). See Gheel.
Geelong (gee-long'), an Australian seaport town, colony of Victoria, near the head of the west arm of 1 Port Philip Ray, 45 miles sonthwest of Melbourne. The town is well laid out, and there is an extensive botanical garden and several puhlic parks. There are three jetties in the hay, alongside of which ships of the largest tonnage can load and discharge. There are wool mills, tanneries, ropeworks, etc., and a considerahle trade is done in wool. Pop., inclusive of suburbs, 23,311 .
Geestemünde (g ă s ${ }^{\prime}$ tè-mủn-dè), a North Prussia, in Hanoport town of of the Wiar, in Hanover, at the mouth haven Wy ser, separated from Bremerhaven by the Geeste. Extensive docks were constructed here in 1857-63. The port is strongy fortified, and the trade is increasing rapidly. The industries include shipbuilding, iron-founding, engineering, etc. Pop. 23,625. Geestendorf. formerly a separate town, has been united with it since 1889 .
Geez ( $\mathrm{gex}_{z}$ ), the name of an EthioGefle pian language. See Ethiopia. (yef'le), a seaport of Sweden, near the mouth of a river of same name in the Gulf of Bothnia 50
miles N. of Upsala. It stands on both
sides of the river and two islands formed by it, and has an excellent harbor. It has manufactures of linen, leather, tobacco, sail-cloth, etc.; shipbuilding yards ; $h$ and an extensive trade in deals, tar, 1 pitch, iron, etc. Pop. 29,522.
Gegenbaur (g ${ }^{\text {an }} \mathrm{g}$ e n-bour), anatohurg Germany hurg, Germany, in 1826. He studied biology, became professor of anatomy at Jena in 1858 and at Heidelherg in 1873. He wrote several able works, chief amung which is his Outline of Comparative Anatomy.
Gehenna (gè-hen'a), a term used equivalent to in the New Testament as and rendered in the authorized (and the revised) version by hell and hell-firc. It is a form of the Hebrew Ge-hinnom, the valley of Hinnom, in which was Tophet, where the Israelites sometimes sacrificed their children to Moloch (II Kings, xxiii, 10). On this account the place was afterwards regarded as a place of ahomination, and hecame the recentacle for the refuse of the city, perpetual fires heing kept up in order to prevent pestilential effluvia.
Geibel (gi'bl), Emanuel, a German died 1884. He horn at Liiheck in 1815; of Bonn and Berlin and the universities or two in Greece. He published in 1840 his first collection of noems, which reached its hundredth edition in 1884. In 1843 he puhlished a tragedy, King Roderick; in 1846 the eqic König Sigurd's Brautfahrt. A second collection of his poems appeared in 1848-Juniuslieder ('June Songs'). Other collections were issued later. He was honorary professor of esthetics and poetry in the Thiversity of Munich $1851-69$, but spent his later days in his native town. He wrote also Brunhild, a tragedy; The Loreley, an opera in rhyme ; and several other plays. hit his fame rests on his lyrics, which are immensely popular.
Geikie (gë'ki), Sir Archibald, geologist, born at Edinburgh in 1835. He was appointed to the geological survey in 1855; hecame director of the Scottish survey in 1867; was professor of geology and mineralogy in Edinburgh University 1870-81, and in 1881 became director general to the United Kingdom survey, and head of the Museum of Practical Geology, London. He is the author of numerous manuals, etc., on geology.

James, geologist, brother of Archibald Geikie, was born at Edinburgh in 1839. He was engaged on the Scottish survey from 1861 until
he succeeded his brother in the reological professorship at Edinburgh in 1882. He is the author of The Great Ice Age, Pre historic Europe, Outlines of Geology, etc. He died March 2, 1915.
Geissler's Tubes (sts1er), from the name of Heinrich Geissler, a philosophical instrumentmaker of Bonn, who produced tubes made of very hard glass, and containing highly rarefied gases. Each end of the tube has a platinum wire sealed into it to serve as an electrode. When a discharge of electricity from an induction coil is caused to take place in these tubes, very brilliant effects may be produced.
Gela (jē'la), one of the most important ancient Greek cities of Sicily, situated on the south coast of the island hetween Agrigentum and Camarina; founded in 690 B.c. by a colony of Crctans and Rhodians. The colony was remarkably prosperous, and in 582 B.c. sent out a portion of its inhabitants, who founded Agrigentum. In 280 Phintias, the tyrant of Agrigentum, utterly destroyed Gela. Its site has heen the suhject of much controversy.
Gelada (gel'a-da), a singular Abyssinian baboon, remarkable for the heavy mane which hangs over the shoulders, and which only grows when the animal is adult. It is called Gelada Ruppcllii, in honor of Dr. Ruppell, its discoverer.
Gelasius (jc-la'si-us), the name of two popes-GELASIUSI and II. The former, who held the see from 492-496, founding on the alleged primacy of Peter, was one of the first who openly maintained that the Roman bishop alone was entitled to regulate matters of faith and discipline, though in practice he had not then attained any such superiority. Gelasius II, pope for only one year (1118-19), and originally called John of Gaeta, was elected by the party hostile to Henry $\mathbf{V}$, but was obliged to give way to Gregory VIII. supported by the emperor, and shortly after died in the monastery of Clugny.

## Gelatine (jel'a-tin), a roncrete ani-

 mal substance, transparent, and soluhle slowly in cold water, but rapidly in warm water. It is con: fined to the solid parts of the body, such as tendons, ligaments, cartilages, and bones, and exists nearly pure in the skin, but it is not contained in any healthy animal fluid. Its leading character is the formation of a tremulous jelly when ith solution in boiling water cools. Gelatine does not exist as such in the animal tis.sues, but is formed by the action of hoiling water. The coarser forms of gelatine from hoofs, hides, etc., are called glue; that from skin and finer membranes is called size; and the purest gelatine, from the air-bladders and other membranes of fish, is called isinglass. With tannin a yellowish white precipitate is thrown down from a solution of gelatine, which forms an elastic adhesive mass, not unlike vegetahle gluten, and is a compound of tannin and gelatine. It is this action of tannin on gelatine that is the foundation of the art of tauning leather. In relation to the arts the uses of gelatin have been greatly extended. It is the foundation of the dry-plate system of photography; it is used in the printing process employed hy Goupil of Paris and others for making highly artistic copies of pictures; and it is extensively utilized by druggists fo: coating pills and nauseous drugs. In the form of isinglass it is employed by hrewers for clarifying beer, and also for wine, by reason of its forming a coagulum when acted upon hy the chemicals of those liquids and precipitating the extraneous matter held in solution.

## Gelderland,

Guelderland (gel'derthe Netherlands; aren, 1063 English sq. miles. It is generally flat. and has much alluvial soil, well fitted both for arahle and grass hushandry. The manufactures, principally woolen, cotton, and linen goods, soap, salt, and glass, are carried on extensively in various quarters. The principal towns are Arnheim. Nijmegen, Thiel, and Zutphen. Pop. 566,549.
Geldern (gel'dèrn), a town of Rhenish Prussia, 27 miles northwest of Disseldorf. Pop. 6551. Gelder-rose. See Guelder-rose.
Gelee (zhé-lă), Claude. See Claude Gell Lorraine.
(jel), Sir Wrlliam, an English antiquarian and classical scholar, born in 1777; died at Naples in 1836. He was educated at Camhridge, and was for some time a fellow of Emanuel College in that university. In 1814 the Princess of Wales (afterwards Queen Caroline) appointrd him one of her chamherlains, and he accompanied her on her travels for several years. His principal works are: The Toporraphy of Troy, The Geography and Antiquities of Ithara, The Itinerary of Greece. The Itinerary of the Morea, The Tonography of Rome, and the interesting and heautiiul work, Pompeiana, or Observations Upon the Topogranhy, Edifices, and Ornaments of Pompeii.

Gellert (gel'ért), Cinistian FUbohtBGotr, a German poet, horn in 1715 : died in 1769 . He was appointed extraordinary professor of philosophy at Leipzig in 1751, where his lectures were received with great applause. His hymns, talcs, fahles, and essays enjoyed much popularity in tjeir day.
Gellius (jellius), Aunus, a Roman author of the second century. His Noctes Attica, a book of selected passages from many ancient authors, is now of great value, as the authors from which he drew his materials are in a great mcasure lost.
Gelnhausen (Eellnhou-zn), an old walled town of Prussia, province Hesse-Nassau, 16 miles $\mathbf{E}$. N. e. of Hanau, on the Kinzig. Its principal buildings arc a large Gothic church of the thirteenth century, and, on an island in the Kinzig, a recently-restored palace in which Frederick Barbarossa and several of his successors used to reside. Pop. 4500.
Gelon (jélon), an ancient Greek ruler, tyrant of Gela, and afterwards of Syracuse. After the death of llippocrates, tyrant of Gela, he seized the sovercign jower (B.C. 491), and about 485 b.c. gained possession of Syracuse. From this time he hent all his energies to the aggrandizement of his new capital, the power and importance of which he greatly increased hy his conquests and good government. His aie was sought by the Greeks against Xerxes, hut a formidable invasion of Carthaginians under Hamilcar engaged him in Sicily. The result was the total defeat of the Carthaginians in the great battle of Himera ( B.C. 480). It is eelehrated in an ode by Pindar. Gelon died in 478 B.c., and was succeeded by his brother Hieron.
Gelsemium
(jel-se'mi-um). a genus of plan5s helonging to the nat. order Loganiaceæ, the best-known, G. nitidum or Carolina jasmine, being an evergreen climbing shruh of the Southern States, with twigs producing a milky juicc, opposite lanceshaped shining leaves, and sweet-scented yellow flowers. The root has valuable medicinal properties, being used for controlling certain forms of nervous irrit?bility.
Gemara (ge-mä'ra), in Jewish lit. erature, the second part of the Talmud or commentary on the Mishna. See Talmud.
Gembloux (zill - -h8), an old BelNamur. 24 miles gian town, province of has a Benedictine abbey of the ninth cen-
tury, now used as a royal agricultural institution. Pop. 4643.
Gemini (jem'i-nI, the Twins (II), the third sign of the zodiac, so named from lts two brightest stars, Castor, of the first magnitude, farthest to the west, and Pollux, of the second, farthest to the east. Its constlituent stars form a blnary system revolving in about 250 years. The sun is in Gemiai from about May 21st till June 21st, or the longest day.
Gemmation (jen-mā'shun), in zoology, a mole of reproduction among certain animals of low type. whlch consists in the production of a bud or buds, generally from the exterior, but sometimes from the interior, of the body of the animal, which buds are developed into lndependent beings that may or may not remnin attached to the parent organism. The fresh beings thus produced are known as zooids. Gemmation is also observed in plants of simple organization such as the yeast.
Gems (jems), or precious stones, are sometimes found crystallized in regular shapes and with a natural polish. more commonly of irregular shapes and with a rough coat. The term gem often denotes more particularly a stone that is cut, polished, or engraved, and it also includes pearls and various artificial productions. Preclous stones in their natural state are usually encrusted with various deposits; and it is to remove this crnst and to bring out the real beauty of the gem that the work of cutting and polishing is performed. The stones that are thus treated include the rubs, diamid, emerald, sapphire, garnet, topaz and umethyst. These are classed as transparent stones. The opal is semi-transparent. Among the more or less opaque stones are the turquoise, lapis lazuli, agate, onyx. cat's-eye, moonstone, bloodstone, jade and carnelian. Imitation gems are extensively manufactured. The base of one class of imitations is a pecullar kind of glass of considerable hardness, brilliancy and refractive power called paste or strass. When the strass is obtained very pure it is melted and mixed wlth substances having a metallic base, generally oxides, which communlcate to the mass the most varied colors. Another class often froudulently offered for sale as genuine stones are made by cementing thin plates of precious materials over and sometlmes under a body of werthless glass. This veneered stone successfully undergoes the surface test, and by the unlitiated is often accented as a valuable gem.
The art of manufacturing gems synthetically, that is, by the combinatior of
chemical elements present in the real stone, has reached a high degree of success. The diamond, which is an allotropic form of carbon, has hitherto resisted attempts to reproduce it of sufficient sise to have a commercial value. By dissolving carbon in molten !ron and suddenly cool$\operatorname{lng}$ the molten masn bya stream of water. whereapon the outer part contracts with great force and compresses the interior so that the carbon separates out, Moissan. the French chemist, succeeded in isolating small crystals, none, however, as large as $1 / 25$ inch in diameter.
Experiments in the manufacture of the ruby have met with such success that the synthetic ruby is produced of a size and of a perfection that would place a prohibitive value on the natural stone. The ruby, chemically considered, is crystallized alumina, or oxide of aluminum, with a small percentage of oxide of chromium. Sapphire is of the same material, differing from the ruby only in color. The ruby owes its fine red color to the presence of oxide of chromium; the sapphire its deep blue to either a lower oxide of chromium or to an oxide of titanium. Crystallized alumina in the different colors receives different trade names, as Oriental emerald for the green; Oriental topaz for the yellow; Oriental amethyat for the purple; while the water-clear, colorless crystal is known as white sapphire. The process of manufacture of rubies is carried on with the oxyhydrogen blowpipe, to whose intense heat the powdered alumina with its soloring oxides is subjected. Rubies have been thus produced weighing 12 to 15 carats when cut. The average weight of the native Burmese ruby is about one-eighth of a carat. The sapphire and the so-called Oriental stones are prepared in the same manner, with the addition of proper coloring matter. The emerald and opal have not emerged from the experimental stage, although Becquerel, a French chemist, is reported to have produced opals from solutions of silicates with high-tension electric currents. To be distinguished from synthetic gems are reconstructed stones, which (as yet only done with the ruby) are pieces of the natural stone fused to gether. They are very brittle. The pearl is not produced synthetically, but many imitations exist. The Japanese produce them by fastening a piece of mother-ofpearl in the shells of the pearl-oyster and allowing it to remain there for a number of years. The turquoise, a phosphate of alumlnum colored with copper, is not synthetically produced, although various experiments with its manufacture have been made.

## Gemsbok

(jemz'bok), the Oryx aazella, a large and powerful member of the antelope family, innabiting the plains of South Africa. It equals the domestic ass in size, has a short, erect mane, a long, sweeping, black tail, and long, sharp-pointed, heavy liorns, nearly straight from base to tip, and obscurely ringed throughout the lower half. By the aid of these natural bayonets it ean easily defend itself from the smaller Carnivora, and it has been known to drive off, and even kill, the lion himself, when attacked by him.

## Gendarmes (zhâp-darm), the name

 France originally given in France to the whole body of armed men, but after the introduction of standing armies to a body of heavy-armed cavalry, which composed the chief strength of the forces. Gendarmes are now the French armed police. They are all picked men; they are usually taken from the regular forces, and are of tried courage or approved conduct. There are horse gendarmes and foot gendarmes. They are formed into small parties called brigades: and the union of a number of these forms a departmenial company.Gender (jen'der), in grammar one of those classes or categories into which words are divided according to the sex, natural or metaphorical, of the beings and things they denote. It niay be exhibited by a class of words marked by similarity in termination, the termination having attached to it a distinction in sex, as seen in nouns, adjectives, particinles, etc. There are three genders in all: masculine, feminine, and neuter. but these three distinctions only exist in some langurges. In Sanskrit, Greek, and Jatin all three are present, as also in German and English. English words expressing males are said to be of the masculine gender; those expressing females, of the feminine gender: and words expressing things having no sex are of the neuter, or neither gender. Gender is thus coincident with sex in Englisb, and is a very simple matter. But in otber languages sex and gender have little or no necessary relation, the majority of the names applied to inanimate objects being eitber masculine or feminine, and the grounds for such distinction being quite obscure. In the languages derived from the Latin-Italian, French, Spanish, and Portuguese-a neuter gender is not recognized. In tbe hichly inflected languages there are certain terminations distinctive of the different genders, but in English gender only to a slight exteni depends on the form of the word-ese, for instance, is a femi-
nine termination. In English the gender of a noun only affects the pronoun substituted for it.
Genealogy (je-ne-al'o-ji), the syzand exhibition of the origin, descent, and relations of families (or their pedigree). Persons descended from a common father constitute a family. Under the idea of degree of relationship is denoted the nearness or remoteness of relationship in which one person stands with respect to another. A series of several persons, clescended from a common progenitor, is called a line. A line is either direct or collateral. The collateral lines comprehend the several lines which unite in a common progenitor. For illustrating descent and relationsbip genealogical tahles are constructed, the order of which depends on the end in view. The common form of genealogical tables places the common stock at the head, and shows the degree of each descendant by lines. Some tables, however, have been constructed in the form of a tree, in which the progenitor (German, Stammiater) is placed beneath, as if for a root.
General (jen'er-al), the commander of an army, or of a division or brigade ; the highest military title, with the exception of that of field-marslinl. In the United States service there are three ranks, the bighest general, the second major-general, and the lowest brigadier-general, the last being immediately above a colonel, as in other services. In Britain three similar ranks exist, their titles being general, lieuten-ant-general and major-general. General, in the Roman Catholic Church, is the title given to the supreme head, under the pope, of a monastic order. In most of the orders he is elected for three years, or some other fixed term, by the Jesuits for life, but the election must be confirmed by the pope.

## General Assembly. <br> See Assembly (General).

Generalization (jen-er-ali-i-z in the act of comprebending, under a cummon name, several objects agreeing in some point which we abstract from eacli of them, and which that common term serves to indicate.
General Lien (lenn), in law, is the right to retain possession of a chattel until payment be made, not only of any deht due in respect of that particular chattel, but of any balance that may be due on general account in the same line of business. Geceral liens do not exist at common law, but depend entirely upon contract express of
implied from the special usage of dealing between the parties.
General Paralysis, known also as sis of the Insane, Dementia Paralytica, and Progresslve General Paralysis, is a disease due to the progressive destruction of the nerve cells of the brain cortex and to bypertrophy of the supporting connective tissue, and is frequently attended by spinal complications. It occurs most commonly in adult males, and can almost always be traced to syphilitic or alcoholic degeneration. Later research, Instituted by the growing frequency of this disease and its serious character, has resulted in the conclusion that it is a parasyphilitic type of disease. The spirochata pallida, the essential germ-organism of syphilis, is present in the central nervous system of a large proportion of the cases of general paraiysis, and nearly all of them give a positive Wassermann reaction. The presence of an organism resembling the Klebs-Loeffler bacinus has been detected, and for a time it was held that the disease was due to a bacterial toxin; but this theory has since been abindoned, and it is now believed that if these bacteria play any part in the progress of the malady, it is of secondary importance. The symptoms of general paralysis may be divided into mental, sensory and motor. The mental symptoms are characterized by lack of adjustment, lack of will power, indecision and irritability; also by moral perversions, as indecent exposure, criminal assault, theft and various minor offenses. Among the sensory symptoms, loss of sight and hearing, formications and anesthesias are common. The motor symptoms are marked by the loss of power of expression by speech or in writing, aphasia, irregular gait and a change in the pupillary reflex. The mental defect associated with these departures from the normal may assume various forms, as alternating periods of excitement and depression, with periods in between of a return to the normal state. This is the so-called paralysis of double or circular form. The second group shows a progressively increasing loss of mental power, the memory, business capacity and will power gradually deteriorating, with only slightly marked evidence of depression or excitemeni. A third group comprises cases of expansive delirium or maniacal excitement. Extravagant delusions as to the wealth and power, and extreme excitement passing into homicidal mania, are distinguishing features of this class. In a fourth group depression associated with loss of memory and with delusions is a marked symptom. All cases gravitate toward dementia. In the early stages
of the disease the physlcal signs may not be marked. But usually the onset of the malady is characterized by stolidity of countenance, tremulous lips, hindered and blurred articulation, assoclated with a tremor of the hand and arm which interferes with writing, and an ataxic or spastic gait. The patient is also llable to eplleptic or apopiectic selzures. The stage of complete paralysis supervenes. The patient is a physical and mental wreck, bed-ridden, utterly heipless, unabie to retain feces or urine. Death results from exhaustion, in coma or convulsions, from heart failure or lung complications. Recovery from general paralysis is at present of rare occurrence, though recoveries have been reported, taking place before the advanced stages were reached. General Ship, in maritime law, is a ship announced by the owners to take goods from a particular port at a specified time, and which is not under special contract to particular individuals.
General Staff, is that part of armp consists of a number of ofticers selected for their special fitness to ald in carrying out the principles of military procedure as formulated by the general commanding officer. The body of the general staff had its origin in Germany, where a number of officers, not attached to any corps, were appointed to prepare maps, strategical schemes, and statistics regarding the relative strength of armies. It in to be distinguished from the company of general officers surrounding a commander in the fieid of war. In the United States the General Staff Corps was created by act of Congress, February 14, 1003. It is governed by rules prescribed by the President, and is made up of about fifty officers who are detailed for a period of four years. Their duties consist in studying the efficiency and strength of the army, plans for defense, mobilization and strategic positions (in time of war).

## General Theological Seminary,

situated in Manhattan Borough, N. Y., and founded in 1817, is the chief seminary of the Protestant Episcopal Church of America. After many years of financial difficulty it was placed on an independent basis by the gifts of Dean Hoffman, who administered its affairs (1878-1902). It has both an ordinary course of three years and a post-gradiaste course. It confers the degrees of B.D. and D.D., the latter of which is both academic and honorary. No fees are charged for its tuition, and there are many valuable prizes. Its statistics, in 1914, were: faculty, 15; students, 137 ; library, 58,535 volumes.

## Generalization, the act of emppre-

 general name a number of objects which agree in one or more points. The general term stands for the many objects in so far only as they all agree. This process is akin to classification and defnition; and the higher form of it is inductlon.Generation (jen-er-î'shuu), in single successlun of hama in beings (or animals) who are born, gruw up, and reproduce their kind; hence, an age or period of time between one succesyion and the next, as the third, the fourth, or the tenth generation. The length of a human generatlon is usually estimuted at about thirty years.
Generation. See Reproduction.
Generation, Alternate, or Metamultiplication, seen in some invertehrate animals or even in plants, in which purents produce progeny unlike, sometimes extremely unlike, themselves, while this unlike progeny give rise to others resembling the original forms. Nometimes there are more than one unlike form between these like foriz. The Hydrozoa ahundantly illustrate this phenomenon, also the Echinoderms, Polyzoa, Tunicata, the wheel animalcules, Nematoid worms. flatworms, tapeworms, several of the true Annelids among Crustaceans, Daphnia, the Phyllopods among Insects, the plant-llce. The steps may be seen in certain of the Hydroid Polyps, thus: (1) There is an ovum or egg, free-swimming and impregnated. (2) This ovum attaches itself to a fixed submarine object, and develops into an organized anlmal. (3) This organism produces buds or zooids, often of two kinds-one set nutritive, the other generative-unlike each other and unlike their parent, the whole iorming a hydroid colony. (4) The generative set mature eggs, which on being liberated hecome the free-swimming ova (No. 1), and the cycle is renewed. A somewhat similar phenomenon is that of Parthenogenesis (which see).
Generation, Spontaneous, or Abiothat living matter oenesis. the doctrine neously, that under certaln circumstances dead matter may huild itself up into living matter without the intervention of already existing protoplasm.' In the 17th century this was the dominant view, sanctioned alike hy antiquity and authority. and was first assailed by Redi, an Italian philosopher. Buffon held the doctrine in a very modified degree. He held that life is the indefeasihle property of certain indestructible molecules
of matter which exist in all living things, and have inherent activities by which they are distinguished from non-living matter. Of course it is only animals or plants of very low type and minute size that have been supposed to be produced spontaneously, and the readiness with which such appear lends plausibility to the theory. Experiments of recent date, moreover, seem to point to the spontaneous origln of life. Dr. H. Charlton Bastiun and others claim that they succeeded ln obtaining living organlsms from certain chemleal solutions. Dr. Edward A. Schafer, of the British As: sociation for the Advancement of Sclence, points out that blology tends to obl'terate the llne between llving and non-living matter.

## Generator. See Dunamo.

## Generic Name

(je-ner'ik), in natural history, the denominntion which compreliends all the species of a genus; thus Canis ls the generic name of nuimals of the dog kind: Felis, of the cat klnd; Cervus, of the deer kind. See Gcnus.
Genesee (jen-e-sese), a river of the United States, which rises in Pennsylvania, flows north through New York, and falls into Lake Onta:io 6 miles beiow Rochester, after a course of $14 \overline{5}$ miles. It is notable for its varied and romantic scenery, and its extraordinary falls. These falls are five in number: three of them occur about 90 miles from the moilth of the river, and are respectively 60, 90 and 110 feet high. The other two are near Rochester, and are both about 100 feet high.
Genesis (jen'e-sis; Greek, creation, hirth, origin), the first book of the Bible and of the Pentateuch, named in the Hebrew canon $B$ 'reshith (' In the Beginning'), from the term wlth whlch it commences. From the Greek translators it received the name it is now commonly known hy. Genesis consists of two great but closely connected divisions:-(1) The history of the creation, the fall of man, the flood, the dispersion of the human raee, chap. i-xi. (2) The history of the fathers of the Jewish race, chap. xii-l. A certain apparent difference of style and language, the occurrence of what seem gaps on the one hand, and repetitions and contradictions on the other, and the different use of the term for the divine name (Jehovah, Everlasting; and Elohim. Almighty), led very early to the question of the integrity of the book, and various critics declare that larger or smaller interpolations have been made in the original text.

Genet (Jen'et), a dipitigrade carnivorous mammal of the famiiy a. The genus Genetta contains species, the best known of which is the $\boldsymbol{G}$. vuldaris, the common genet, whose range extends aii around the Mediterranean, including Western Asia, Northern Africa, and Southern Europe. It is about the size of a smaii cat. but of a ionger form, with a sharp-pointed snout, upright ears, and a long tail. It has a beautifui soft fur, and, ilke the civet, produces an axrecable perfume. The hnbits of the genet are iike those of the weasei tribe; it is easily tamed, and is sometimes empioyed in Constantinopie and eisewhere to catch rats and inice.
Geneva (je-néva: German, Genf; Switzerland, capita: of the canton of the same name, situated at the western extremity of the Lake of Geneva, where the Rhone issues, here crossed by seperai bridges, and dividing the town into two portions, the iarger and more important of which is on the ieft or south hank. The environs are covered with handsome villas. and the town itself, when approached either by iand or water, has a very attractive appearance. It was formerty surrounded by walls and reguiar fortifications, but since 1850 these have hen removed. The town is divided into two parts, an upper and a iower. The upper town. occupied chiefly by the weaithler citizens, consists of weli built houses and liandsome hotels: the iower town, the seat of trade and residence of the poorer classes, consists inrgeiy of houses remarkable for their height. and iining narrow, irregular, dark. and ili. cieaned streets ; hut great improvements have recently been carried out. The more important public huildings are the rathedrai or Church of St. Pierre, a Fothic structure of the 10th. 11th, and 12 th centuries, occupring the highest site in the town, and by its thre towers forming the most' conspiclous object within it. somewhat defaced externaiiy hy a very incongruons Greek peristyle : the town-house in the Florentine strie; the Musee Rath containing a coiiection of pictures and other works of art; the university buiiding, nearly opposite the botanic warden, rebuiit in 1867-71. and containing the public librarv. founded by Bonivard. the prisoner of Chillon. in 1551. and now numbering 90.000 vois.: and the museum of naturai history. The oniy important mannfactures of Geneva are those of watches, mnsienl boxes, and jowelry, for all of which the town is justiv famed. Geneva has ample raiiway communication, and is one of the principal entrances
for touriste and travoiers into S witserland. In literature and ecience Geneva han iong occupied a distinguinhed piace, and it has been the birthplace or the remidence of many eminent men, including Caivin, Beza, Knox, Le Sage, Neckor, Ile Candoiie, Roussrau, sismondi, etc. Gieneva eariy adopted the princlples of the Ieformation, and chiflly through the teaching of Calvin, the town acquired an important intluence over the spiritual life of Europe, and became the center of ednucation for the Protestant youth of Britain, France, and Germany. Pop. 105,710. - The canton is bounded hy the canton of Vaud and the Lake of Geneva, and hy France. Area, 109 sq. mies. It belongs to the hasin of the Rhone, and the oniy streams of importance are that river and the Arve, whieh joins it a iittie beiow the town of Geneva. The soii has hen so much improved hy skillfui and preserving culture that abundant crops of aii kinds suitabie to the cimate are raised, and the whoie territory wears the appearance of a garden. Manufactures consist chiefly of clocks and watches, musicai boxes, mathematical instruments, gold, siiver, and other metal wares, woolen cioths, and silk goods of various descriptions, hats, leather, and articles in leather; and there are numerous cotton milis, calico printing works, and dye works. The territory of Geneva having by the arrangements of the Congress of Vienna, ohtained an accession of fifteen communes, detached from trance and Saroy, was admitted a memher of the Swiss Confederation in 1814, and ranks as the twenty-second canton. Its constitution of 1848 is the most democratic in the federation. Ail religious denominations are declared to have perfect freedom, but two of them are paid by the state- the Roman Cathoiics, amounting to rather more than a third of the popuiation, and the Protestant Nationai Church. 132 ianguage spoken is French. Pop. 132,609.
Geneva. See Gin.
Geneva, ${ }_{\mathrm{Ne}}^{\mathrm{a}} \mathrm{c}$ city of Ork, Ontario County. New York, on Seneca Lake, midway between Syracuse and Rochester. on the Lehigh Valley and New York Cen: tral railroads. It has various manufacturing industries and extensive nurseries, snd is the site of a state experiment sta. tion, and of Hobart Coiiege. Pop. 12,446. Geneva, Lake of, or Lake Limai the largest of the Swiss iakes, extending in the form of a crescent, with its horns pointing southward, between France on the south, and the cantons of Geneva,

Faud, and Valals: length, measured on its north shore, 55 miles, nud un its south shore, 40 miles ; centrai breadth, about $b$ miles; area, 331 eq . miles ; sreatent depth, mo feet. It is 1150 feet above the gea. On the north the shore is iow, and the ground behind ascends grailuaily in heautiful siopes. On the south, ani partleulurly at the east end, the shore is rocky and abrupt, and lofty preclplees often rise sheer from the water's edge. It conthins varlous species of fish, and its water is remarkably pure and of a beautifn' blue color. The Rhone, which enters its castern extremity a mudily turbld stream, issues from lts western extremity perfectly peiiucid, and likewlse of the finest blue.
Geneva Arbitration. Se Alabama Genera Bible, a cony of the Bible Cleneva Bible, in English, printed at Geneva; first in 1500. This cony was in common nse in lingland till the version made hy the order of James I wins introduced, and it was laid aside by the Calvinists with reiuctance. It was the first whlch dlvided the text into verses and the first to omlt the apocrypha. From its stating (Gen., ili, \%) that our first parents made themselves 'breeches,' it is sometimes known as the Breeches' Biblr. Geneva Convention, an agreement an international conference held in Geneva in 18tit, for the suceor of the sick and wonnded in time of actual warfarc. The neutrality of liospitals, ambulances, and the persons attending on them was provided for; and the use of the red cross on a white ground as a sign of neutrality has received the adhesion of ail civilized powers. Those wearing it are known as the Red Cross Society ( $q . v$. ).
Geneviève (jen'e-rêv, Fr. zhen vivāv), Genevieve the name of two female saints.-1. St. Genevieve, the patron saint of Paris ; born at Nanterre, about 5 miles from Paris, in the year 423; died at Paris about the beginning of the 6th century. She devoted herseif while yet a child to the conventual life. Her prayers and fastings are credited with having saved Paris from the threatened destruction by Attia in 451. Many iegends are told respecting her, and several chnrches have been dedicated to her. Her festival is held on the 3d January.-2. St. Genevieve, by birth Duchess of Brabant, wife of Siegfried. count palatine in the reign of Charles Mrartel (ahout 750). According to the lezend, which is the subject of several tales and dramas, she was accused of adultery during her husband's absence and condemned to death ; but was allowed
to escape, aud whe lived slx years in a cavern upon nuthing but herbs. She was finally found, and carried home by her husband, who in the meantime had become convinced of her innocence.
Genghis Khan, or jxyours Kuax (Jen'gis), a Mongol conqueror, born about 1140 ; died $122{ }^{\text {a }}$. His father was chlef over thirty or forty clans, but paid trihute to the Tartar khan. He succeeded his futher when only fourteen years of age, and made hlmsell master of the neighboring tribom. A great number of tribes now combined their forces against hilm, but he found a powerful protector in the great Khan of the Karaite Mongois, Oung, or Ung, who gave him his daughter in marriagc. After much interneciue warfare wlth various Tartar tribes and many victorice Ge 4 ghis was prorlalmed Khan of the Unlted Alongol and Tartar trihes. Ile now professed to have a divine call to comguer the world, und the idea so alimated the spirit of his whiers that they were easlly icd on to new wars. The country of the Uigurs, in the center of Turtury, bind long excited his ambltion. This nation was easily subdurel, and Genghis Khan was nuw master of the greatest part of Tartary. Leading his tribes to conquest in 1200 , he passed the great wail of China, the conquest of China occupying him more than six yenrs. The capitai, then called Yenking. now Peking, was taken by storm in 1215 and plundered. The murder of the ambassadors whom Genghls lihan had sent to the King of Kharism (now Khiva) ied to hls invaslon of Turkestan in 1218 with an army of 700,000 men and the two cities of Bokhara and Samarchand were stormel, piliaged, and burned. Seven years in succession was the conqueror lusy in the work of destruction, pillage. and suhjugation. and extended his ravages to the banks of the Dnieper in Europe. In 1205 , thongh more than sixty years old. he marched in person at the head of his whoie army against the king of Tungnt (Southwestern China), who had given sholter to two of his enemies, and had refused to give them up. A great hattie was fought, in which the King of Tangut was totaliy defeated with the loes of 300.000 men . The victor remained some time in his newly subdued provinces, from which he also sent two of his sons to compiete the conquest of Northern China. At his death his immense dominions were divided among his four sons.
Genii (jéni-f). See Genius.
Genipap
(Jin'i-pap; Genipapo, the Guiana name). the fruit of a South American and West Indian
tree, " Genipa Americane, nat. order Rubiacea. It is about the size of an orange, and of a pleatant vinous fiavor. Crenista (Jin-jsta), a senus of iesuminous plants, comprinins about 100 species, one of which ts the Plenta genista, the Plente genet, frum which the I'iantagenets took their name. The Genista tinctoria, or dyer's broum, mo called, as it was formeriy much employed by dyers, who obtained a good fixed yeilow or orange color from it, is frpquent in Engiand and the iuwlands of Scutland.
Genitive Case (Jen'i-tiv), in grammar, a case in the deciension of nouns, adjectives, pronouns, participles, etc., expressing source, origin, possession, and the like. In English grammar the corresponding case is the pussessive case.
Genius (jếnyus), a tutelary deity; the ruing and protecting power of men, piaces, or things ; a good or evil spirit supposed to be attached to a persun and influence his actions. The Geuil of the Romans were the same as the Daimónes (Demons) of the Greeks. According to the beilef of the Romans, which was common to aimost ail nations, every person had his own Tenius; that is, a spiritual heing, which introduced him into ilfe, accompanied him during the course of it, and again conducted him out of the worid at the close of his career. The Genil of women were calied Junones. The Genil were wholly distinct from the Manes, Lares, and Penales, though they were allied in one important feature-the protection of mortais.

The term genii (with the singular genie) is aiso used as equivaient to the jinn (singular jinnee) of Arabic taies. These are supposed to be a class of intermediate beings between angels and men. See Jinn.
Genlis (zan-lés), Stefpianie Félicite Ducrest de St. Aubin, Countess de, a French althoress, born near Autun $1 \overline{17} 46$; died at Paris 1830. At four years of age she was admitted as a canoness into the noble chapter at Aix, and at serenteen married the Count de Geniis. By this marriage she became niece to Madame de Montesson (who had been privately married to tiie Duc d'Orleans), and obtained through her the piace of lady-in-waiting to the Duchesse de Chartres. In 1782 the Duc de Chartres (Philippe Egalite) appointed her governess of his children. She obtained great influence over her employer, and was the obiect of no little scandal in her reiations with him, which was strengthened by the mysterious appearance of an adopted daughter, after-
wardn known by the name of Pamela, who married Lord iddward Fitzgeraid. At this time she publibhed several works on education, etc. On the hreaking out of the Revolution she retired for a while to Switzeriand, and tben to Aitona. In 1800 she returned to France, pained the favor of Napuieun, who gave her a penslon. From that time nhe resided constantiy in l'aris. Hier workn, which embrace a wide variety of sulbjerets, nmount aitugether to about ninety voilunes, and suctude solne of the standard novels in the French fanguage. lier voinminous Mémoires, written when aile was upwards of eighty years of age, abound in scandal, and are fuil of nialignant attacks upun her contemporaries.
Gennesaret (Jen-es'a-ret), sea or. See Galitee (Sea of).

## Genoa (Jen'o-n; Ital. Cienorica, La superba'), a seaport of $\mathbf{N}$.

 Itniy, the chief commercial city of the kingdom, on the coast of the Mediterraaean, at the head of the guif of the same name, 75 miles \&. E. of Turin. It is beautifulif situated at the foot and on the siope of the Ligurian Alpa, the iower hiils of which furm a background to the city. It is enciosed by extensive fortifcations, and the heights around are crowned with detached forts. It has a most imposing effect when approached cither by land or sea. In the older parts of the town the streets are extremeiy narrow, with lufty bnidings on either side. In the newer quarters many of them are spacious, and are iined with palaces and other noble edifices. Some of tile palaces are filled with works of art by the greatest masters. The principal are-the Ducal paiaro (now containing the law courts and arious public offices), the Paiazzo det Municipio or town-hali, the Palizzo Brignole or Rosso (with the iarcest piculure gailery in Genoa), the Palazzo Pailavicini, the Palazzo Reale, built in the sixteentil century for the Durazzo family, was purchased in 1815 by the royal family, and the palaces of Doria, Serra, Cambasio, Bnlbi, and Durazzo. The most remarkable of the churches is the Dnomo, or Cathedral of St. Lorenzo, founded in the eleventh century, but not completed tiil the beginning of the tweifth: S. Maria in Carignano. built in imitation of the original plan of St. Peter's at Rome ; S. Stefano, a Gothic church the oldeat parts of which date from the end of the tweifth century; B . Ambrogio, containing two paintings by Rnbens and the Assumption of Guido Reni. The prineipal charitable institution is the Albergo de' Poveri, in which 1600 individuals, orphans and old people,find shelter. Others are the Ospidale del Pammatone founded in 1430; and a hospital recently huilt hy the Galliera family. Among the theaters of the city may be mentioned the Teatro Carlo Felice, an elegant structure, with a spiendidly fitted up interior. Besides the university, founded in 1775 , the chief educational institutions are the theological seminary, the school of fine arts, the royal marine school, and the navigation school. The huilding of the Bank of St. George, one of the most ancient hanks of circulation and deposit in Europe, is now used as a custom-house. In one of the open spaces there is a fine marble statue of Columbus, with accompanying allegorical figures. The Campo Santo, or

cemetery, ahout $21 / 2$ miles from the city, is ore of the most beautiful burial grounds in Europe. It contains fine mortuary huildings and much statuary in white marble. The manufactures of Genoa include cotton and silk goods, gold, silver, paper and leather goods, sugar, and preserved fruits. The old harhor, which is of a semicircular form and about $\%$ mile in diameter, is formed by two moles projecting into the sea from opposite sides; there are now also two outer or additional harhors formed hy moles recently constructed. The principal articles of export are cereals, oils, fruit, cheese, ragn, the products of
its manufactures, etc. Many emigrants embark here. Imports-cotton, wool, wheat, sugar, coffee, coal, hides, iron, etc.

Under the Romans Genoa was famous as a seaport. After the hreaking up of the empire of Charlemagne, it constituted itself a republic, presided over by doges. From 1119 it was almost constantly at war with Pisa down to 1284, when Genoa inflicted a crushing defeat on Pisa. The Genoese obtained the supremacy over Corsica, and nominally over Sardinia, possessed settlements in the Levant, on the shores of the Black Sea, on the Spanish and Barbary coasts, and had a very flourishing commerce. The rivalry between Genoa and Venice was a fruitful source of wars during the 12 th-14th centuries. Meanwhile the city was internally convulsed hy civil discord and party spirit. The hostility of the democrats and aristocrats, and the different parties among the latter, occasioned continual disorder. From the contests of noble rivals, in which the names of Doria, Spinola, Grimaldi, and Fieachi are prominent. Genoa was drawn into the Guelph and Ghibelline contest. In the ahsence of internal tranquillity the city sometimes submitted to a foreign yoke in order to get rid of anarchy. In the midst of this confusion St. George's Bank was foundcd. It owed its origin to the loans furnished hy the wealthy citizens to the state, and was conscientiously supported hy the alternately dominant parties. In 1528 the disturbed state regained tranquillity and order, which lasted till the end of the eighteenth century. The form of government estahlished was a strict aristocracy. The nohility were divided into two classes-the old and new. To the old helonged, hesides the families of Grimaldi, Fieschi, Doria, Spinola, twen-ty-four others, who stood nearest them in age, wealth, and consequence. The new nobility comprised 437 families. By little and little Genoa lost all her foreign possessions. Corsica, the last of all, revolted in 1730 , and was ceded in 1788 to France. After the battle of Marengo (1800) Genoa was taken possession of hy the French. In 1805 it was formally annexed to the Empire of France, in 1815 to the Kingdom of Sardinia, with which it has become a portion of the Kingdom of Italy. Pop. (1911) 272,221. Genoa, GULF of, a large indentation of the Mediterranean, in North Italy, at the head of which lies the city and port of Genoa. No precise points can be named as marking its entrance; but it may, perhaps, be generally said to comprise the entire space north of lat. $43^{\circ} 40^{\circ} \mathrm{x}$.

## Genre-painting

 (zhaln-r), that department of painting in which are depicted scenes of everyday life, in opposition, for instance, to historical painting, in which historic personages are exhibited, or to landscape. Gens (jens), in Roman history, a clan or stock embracing several families united together by a common name and certain religious rites; as, the Fabian gens, all having Fabius as part of their personal name; the Julian gens, all named Julius; the Cornelian gena, etc. Gens D'Armes. See Gendarmes.Genseric
(jen'sér-ik), a king of the Vandals, who, baving obtained joint possession of the throne of Spain with his brother Gonderie, erossed the Straits of Gibraltar with 50,000 men, A.D. 429 , on the invitation of Bonifacius, the Roman governor of Afriea, to assist him against the Moors. He, however, soon deelared bis independence, nnd, having completely defeated Bonifacins, founded a kingdom, which. in 439, had its seat at Carthage. He colleeted a powerful fleet, ravaged the eoasts of Sieily and Italy, and in $4 \overline{5} 5$ took and sacked Rome. Two unsuccessful attempts were made by the Eastern and Western emperors to overthrow bis power, but Genseric secured all his conquests, and, notwithstanding all his cruelties, was permitted to die ir peace A.d. 477.
Gentian (jen'shan), the name given to the members of the genus Gentiäna (order Gentianaceæ), a large genus of bitter herbaceous plants, having opposite, often strongly rihbed, leaves, and blne, yellow, or red, often showy flowers. The calyx consists of four or five valvate segments: and the corolla is four or five parted; the fruit is a two-valved, onecelled. many - sided capsule. They are for the most part natives of hilly or mountainous districts in the northern hemisphere. The most important species is Gentiäna lutĕc, a native of Switzerland and the mountainous parts
Yellow Gentian (Gentiana lutéa). of Germany. The root has a rellowish brown color and a very hitter taste, and is imported into the United States in considerable quantities, where it is used medicinally, and also as an ingredient of cattle foods. In Switzerland
and Bavaria a liqueur called Enziangeist or 'gentian-spirit' is made from it. Many of the blue-Howered species, as G. acaulis, G. nitdlis, and G. verna, are among the most conspicuous and ornamental of European Alpine plants. America has several attractive species.
Gentianacea (jen-shan-a'se-é), the monopetalous exogens, consisting mostly of annual or perennial herbaceous plants, with opposite often connate entire leaves, and yellow, red, blue, or white flowers, which are borne in diebotomous or trichotomous cymes or in globose terminal heads. All are characterized by their bitter principle. The order contains ahout 520 species, which are widely dispersed throughout the world, occurring most plentifully in temperate mountainous regions. Some very handsome speeies are tropical, while a few oceur in Arctic latitudes.
Gentile (jen'til), in Scripture, any one belouging to the nonJewish nntions and not a Christian; a beathen. The Hebrews included in the term goim, or nations, all the tribes of mpn who bad not received the true faith, and were not circumcised. The Christians translated Goim by the L. gentes, nations, and imitated the Jews in giving the name gentiles to all nations who were not Jews or Christians. In civil afiairs the denomination was given to all nations who were not Romans.
Gentleman (jen'ti-man), in English law, every man above the rank of yeomen, including noblemen; in a more limited sense, a man who without a title bears a coat of arms, or one who is 'a gentleman by reputation,' through belonging to some liheral profession or holding some office giving him this rank. In the United States it propprly indieates a man of gentle or refined manners, hut has lost this sease in its very general application.

## Gentlemen-at-Arms, a body of

 tlon forty gentlemen, headed by a captain, lieutenant, and standard-hearer, whose duties are to form a bodyguard to the British sovercign on state occasions. The corps was established by Henry VIII in 1500 , under the name of the Rand of Gentlemen Pensioners. Appointments to the corps are made ly the sovereign, from a special list of retired officers kept by the com-mander-in-chief.Gentoo (jen-ty'). a term applied by Hindustan old writers to a native of Hindustan, or to the language.
Gentz (gents), Friedrici Vox, \& licist German diplomatist and publicist, born 1761; died 1832. He was
secretary to the directory of finances at Berlin when the French Kevolution broke out, of which he was an ardent opponent. He served alternately in the Prussian and Austrian civil service, and his pamphlets and manifestoes proved formidable obstacles to the invasions of Napoleon. He took part in the congresses of Vienna and Paris, as well as in others. Among his various works was a life of Mary,

## Genuflexion (jen-ū-flek'shun; from

 and fectere, to bead), the get of knee, ing the knees in worship. act of bendfrequent allusions to genufiexion in the Old and New Testaments, and it would appear that the use was continued among the early Christians. Genuflexion obtains, both by rule and prescription, in various places in the offices of the Roman Catholic Church, and at different parts of the services of the Church of England.Genus (jē'nus), in scientific classificies possessing, certain characters in common, by which they are distinguished from all others. It is subordinate to order, tribe, and family. A single species, possessing certain peculiar characters which belong to no other species, may also constitute a genus, as the giraffe. Geodes (jéōdz), round hollow nodules, matters, somtaining sometimes earthy somets, sometimes a deposit of agate, They are found and spars crystallized. They are found more or less in all volcanic rocks, and have been formed by water depositing their materials in the hollows of those rocks.
Geodesy (je-od'e-si), the science of surveying extended to large tracts of country; the branch of applied mathematics which determines the general figure and dimensions of the earth, the variations of the intensity of gravity in different regions, etc., by means of direct observation and measurement. See Trigonometrical Survey.
Geoffrey of Monmouth (jef'rā; also Geoffrey ap Arthur), an ecclesiastic and historian of the twelfth century. He sprang from the Norman settlers in Wales; became archdeacon of Monmouth, whence he was, in 1152 , raised to the bishopric of St. Asaph. He died in 1154. His famous history was first published in 1128. This Chronicon sive Historia Britonum is now known to be. as the compiler states, chiefly a translation from an ancient book in the Breton tongue, discovered by Walter Calenius, an archdeacon of Oxford. It contains a pretended genealogy of the kings of Britain
from the time of the fabulous Brutus, or Brute, the Trojan, to the death of Cadwallader, King of Wessex, in 688. It was soon translated into French, English, and Welsh, and became a great source of romance to the writers of successive generations.

## Geoffroy St. Eilaire ( $z$ hof-rwá san tẽ-lär),

 Etienne, a French naturalist, born in 1772; died in 1844. He was educated at the colleges of Navarre and I, emoine, and became a favorite pupil of Haily. At the age of twenty-one he obtained the chair of zoology in the Parisian Jardin des Plantes. As a member of the Egyptian expedition in 1798 he founded the Institute of Cairo, and returned about the end of 1801 with a rich collection of zoological specimens. In 1807 he was made a nember of the Institute, and in 1809 professor of zoology at the Faculty of Sciences. He devoted himself especially to the philosophy of natural history. The fundamental idea brought conspicuously forward in all his works is, that in the orgarization of animals there is only one general plan, one original type, which is modified in particular points so as to present differences of genera. This view met with strong opposition from Cuvier. Among his principal works are Sur le Principe de pUnité de Composition Organique: Philosophie Anatomique; Histoire Naturelle des Afammiferes, written in conjunction with Cuvier, and Notions de Philosophie Naturelle (1838).Geoffroy St. Hilaire, Isidore gist and naturalist, son of theysiolo. wes born was born at Paris in 1805; died in 1861 . He devoted himself to natural history, and in 1824 was appointed assistant to his father at the Jardin des Plantes. He was elected to the Academy of Sciences in 1833 , and afterwards became successively inspector-general of the university, member of the council of public instruction, and professor of zoology at the Academy of Sciences. One of his chief works, Histoire Générale et Particuliére des Anomalies de l'Organisation chez l'Homme et les Animaux, adds valuable confirmation to the theories of his father. He was the means of founding the Acclimatization Society of Paris.
Geognosy (jē-og'nu-si), a term the German minerach originated among synonymous with geology. It is the science of the substances which compose the earth or its crust, their structire, position, relative situation and properties.
 associations formed with the view of obtaining and disseminating geographical knowledge. Of these, the first was founded in Paris in 1821; the second, the Royal Geographical Society of Engiand, in 1830; the American Geographical Society at New York in 1852, and others elsewhere at various dates. The National Geographic Society, founder at Washington in 1888, has an enormous membership, numbering considerabiy over 100,000 due to the circulation of its richly illustrated monthly magazine.
Geography (jeog'ra-fi; from the graph $\delta$, I write), the science which treats of the world and its inhabitants, giving an account of the earth as a whole, and of the divisions of its surface, natural and artificial, describing the different countries, states, provinces, isiands, cities, etc. It may be regarded as embracing several departments or branches. Mathematical Oeography is that branch of the general science which is derived from the application of mathematical truths to the figure of the earth, and which determines the relative positions of places, their longitudes and latitudes, the different lines and circles imagined to be drawn upon the earth's surface, their measurement, distance, etc. Physical Geography treats of the physical condition of the earth, its great natural divisions of land and water, the atmosphere, and the movements of oceanic and aërial currents; the geological structure of the earth: and the natural products of the earth, vegetable and animal. It is concerned chietly with general laws and principles, as they are manifested upon a grand scale, and in the organic kingdom with the existence of groups of animals and plants. This branch approaches at various points the sciences of geology, hydrology, meteoroiogy, botany, zoology, and etinnology. Political Geography embraces the description of the political or arbitrary divisions and limits of empires, kingdoms, and states: and treats of their government, iaws, social organizations, etc. Commercial Geography has to do with the distribution of the prodncts of the earth or the workship between different nations.

The earliest idea of the earth formed by mankind seems to have been that it was an immense dise, in the center of which their own land was situated, surrounded by the ocean, and covered by the sky as with a canopy. The Phernicians were the first people who made any great progress in extending the bounds of geo-
graphical knowledge. They seem to have explored all the shores of the Mediterranean, and at an early period to have passed the Pillars of Hercules (by the Strait of Gibraltar), and visited to some extent the Atiantic shores of Europe and Africa, extending their voyages as far nurth as Britain, and as far sonth as the Tropic of Capricorn. In the Homeric poems (which may be regarded as representative of the ideas entertained by the Greeks about the commencement of the ninth century b. C.) the earth is supposed to resemble a circnlar shield surrounded by a belt of water which was the source of all other streams. The world of Herodotus (born 484 B.C.) extended from the Atlantic to the western boundary of Persia, and from the Red Sea or Indian Ocean to the amber lands of the Baltic. The Indian expedition of Alexander the Great ( 330 B.C.) greatly eniarged the ancient knowledge of Vorthern and Eastern Asia. About $32 C$ b.c. Pytheas, a seaman of Massilia (ancient Marseiiles), a Greek colony, sailed along the western coasts of Spain and Gaul, visited Britain, and, pursuing his voyage, discovered an island, henceforward famous as Ultima Thule, which is supposed to have been Iceland. Eratosthenes ( $276-196$ B.c.) first used parallels of latitude and longitude, and constructed maps on mathematical principles. He considered the world to be a sphere revolving with its surrounding atmosphere on one and the same axis, and having one center. The Geography of Strabo, a Greek of Pontus, written about the beginning of the Christian era, embodies all that was known of the science at that period. The countries lying round the Mediterranean were known with tolerable accuracy, bnt the Atiantic shores of Europe were very vaguely comprehended, while of the northern and eastern portions the most erroneous notions prevaiied. Pomponius Meia, an early Roman geographer, wrote about the time of the Emperor Claudins. He divided the world into two hemispheres, the Northern or known and the Southern or unknown; the former comprising Europe N. of the Mediterranean and w. of the Tanais (Don); Africa s. of the Mediterranean and w. of the Nile; and Asia. The next famous geographer is Ptolemy, who lived at Alezandria about the middle of the second century A.D. In Eurone, Spain and Gaul were now correctly delineated. together with the southern shores of Britain. Northern Germany and the southern shores of the Baltic were pretty well known, as also some portion of Russia in the neighbor-
hood of that sea, and the southern part of European lussia. In Asla lt was considered certain that there were wide resions inhablted by nomadic tribes called Scythlans, while from the far east came some vague reports of China. The Geography of Ptolemy remained the acknowledged authorlty during the whole of the mlddle ages. From his time up tlll the thirteenth century no advance was made in geographical knowledge until Marco Polo opened up new fields of inquiry. The acconnt of hls travels first made known to Europe the existence of Japan and of many of the East Indian islands and countrles. Then followed the discovery of America in 1492, and from this time forward the progress of dlscovery was extremely rapid. In 1407 the Cape of Good Hope was doubled by Vasco da Gama, four years after its discovery by Bartholomew Diaz. Within thirty years from the date of the first voyage of Columbus the whole of the east coast of America from Greenland to Cape Horn had been explored. In 1520 Magellan passed the straits which bear his name, and his vessel, crossing the Pacific and Indian Oceans, returned to Europe by way of the Cape of Good Hope, being the first that had circumnavigated the globe. The west coast of America was explored as far as the Bay of San Francisco about the middle of the sirteenth century. At the same time discovery in the east advanced with rapid strides. Within twenty years of Gama's arrival in India the coasts of East Africa, Arabia, Persia, and Hindustan had been explored, and many of the islands of the great Archlpelago discovered. The expeditions of Willoughby and Frobisher in 1553 and 1576, of Davis in 1585, of Hudson in 160\%, and of Baffin in 1616, though they failed in their object of finding a N. W. passage to India, materially enlarged our knowledge of the Aretic regions. By the middle of the seventeenth century the Dutch, under Tasman and Van Diemen, made the Australasian Islands known to the world. Late in the following century Captain Cook added largely to geographical knowledge hy his survey of the Pacific and its innumerable isiands. The Antarctic contlnent was dlscovered in 1840 by American, English, and French expeditions, and the northwest passage round North America was found by McClure in 1850. The travels of Humboldt, Spix and Martius, Lewis and Clark, Fremont, and others have made us acquainted with the general features of the American continent. In Asla numerous travelers have contrlbuted much to render our
knowledge certain and precise in respect to a great part of the continent. The interior of Australia has been explored hy Sturt, Eyre, Leichhardt, Burke, Wills, King, McDouall Stuart, etc. The opening up of the African interior was materially advanced hy the explorations of a host of travelers, including Bruce, Park, Denham, Clapperton, the Landers, Burton, Speke, Grant, Baker, Barth, Livingstone, Rohlfs, Schweinfurth, Cameron, Stanley, etc., and now is almost as well known as that of Europe and America. Wlthin the present century great adrances have been made in Arctic geography, the site of the North Pole having been reached in 11009 and that of the Soutl Pole in 1911. The progress which has marked recent discovery has heen materially assisted by the governments of various countries, and by the numerous geographical societies formed during the nineteenth century. The scientitic study and teaching of geography are becoming more and more recognized to be of high importance, and $\ln$ both at present Germany takes the lead. See also Ocographical Societies, the articles on the different (cuantries, and such articles as E'arth, Climate, ete. Geok Tepe (gök-te'pe), a town and oasis of fortress of Central Asla, oasis of the Akhal-Tekke-Turkomans, Russians under. $38^{\circ}$ N. In 1879 the russians under General Lomakine were defeated here with heavy loss, but in January, 1881, it was stormed by General Sknbeleff after a three weeks' slege, when about 8,000 fugitlves were massacred, no quarter being given.
Geological Surveys (jê-ol-oj'i-kal). have been made hy the Active efforts country to obtain a jue states of this geological conditions, just idea of their beiogical conditions, the first movement being made by North Carolina in 1823, followed by Massachusetts in 1830, and by 11 more states in the succeeding decade. while by the end of the century nearly all the states had entered upon a systematic investigation of their rocks and minerals. Pennsylvania, New York, New Jersey, and some of the Eastern states did thls Work with a large degree of completeness. The United States government early entered upon similar work, sending out numerous expeditions, and a United States Geologlcal Survey was organizud in 1879, which diligently continned the work, its field of operations embraclng the whole country. Great Britain was the first country in Europ? to engage in a simllar work, beginning in i822. It has been followed hy nearly all the countries of Europe and by its eeveral
colonies.

Geology (jex-01’o-ji; Gr. ge, the earth, science which treats of the history of the earth, as ascertained by the study of its exterior or crust, investigating the successive changes which have taken place in the rock-masses composing it, their relations, structure and origin, and discussing also the main fcatures of the animal and vegetahle life of the past as bearing on the earth's history. The present condition and conformation of the earth is the result of vast changes in the past and of agencies working through

Section of River Terraces, showing Successive Levels of Flood Plains.
immense periods of time, and the same or similar agencies may still be secn at work producing similar changes. Thus rocks, both aqueous and igneous, are still being formed. The former receive their name from owing their origin mainly to water, which acts both chemically and inechanically on the crust of the earth, in wearing down rocks and soils and carrying the débris often to considerable distances. The sediments thus carricd to sea, or into lakes and estuaries, are spread abroad in the water, and form stratified deposits, which in course of time solidify into rock. With sufficient time all land wrould thus be eventually degraded beneath the sea. were it not that the loss is compensated ly disturl)ance and elevation of land always slowly taking place over great portions of the continerts and islands of the world. Such disturhances have produced strange phenomena amung the stratified rocks, which may be contorted. tilted up, dislocated, or otherwise changid in their original arrangement. The strata resulting from aqueous depusits are consolidated (petrified) chiefly hy pressure and chemical decomposition and recomposition. Some forinations are many thousands of feet in thickness. Contraction of the crust of the earth due to radiation of the heat of the earth into space has also had immense effects, the result being that over brond areas rocky masses have been contorted and compressed to a great degree, and mountain rankes upheaved.
Igneous rocks also form a considerable portion of the visible crust of the earth, though murh smaler in amount than those of sedimentary origin. Some of the igneous rocks consist of beds of voleanic
ashes, others of old lavas, others of masses of matter which were introduced in a melted state from below among the strata. Granite is the most important and widely-spread of the igneous rocke, and is generally regarded as the fundamental rock of the earth's crust. Rocks that have been melted are known to be igueous by their structure, and also by the effects they have produced on the strata with which they are associated. Shales, sandstones, etc., are often hardened, bleached, and even vitrified at the points of junction with greenstone, basaltic, and felspathic dykes, r= old lava heds. and the same kind of alteration takes place on a grenter scale when large masses of igneous rocks have been intruded on the strath.
That the rocks which form the crust of the earth had the same general origin with the igneous rocks and sedimentary strata now forming lias heen well established, and that there is a regular sucression of strata from the older to the newer, the oldest being normally lowermost, the newest uppermost, is also well ascertained. A corresponding succession in regard to the animal and vegetable life of former ages has also been proved by the fossils that accompany the successive strata. This auperposition of strata and the succession of life in timc are two cardinal doctrines in geology. Observation and experiment alike estab.lish the doctrine of superposition. Thus it the edges of the strata on which In तn stands the rocks known as the Wo. ich and Reading beds are seen to lie ol the chalk. Far within these edges well-sinkers are aware that often after sinking several hundred feet through the London clay the chalk is reached. In like manner proceeding westward across the middle of England, it is found that

Siction of Subyarine Pluns.

1. Land cut in to caves, tunnels, bea-stacky, reefs, and skerries by the waves, and reduced to a platform below the level of the sea, $(s s)$ on whieh the gravel. sand. and mud (d) produced by the waste of the coast may accumulate.
the Chalk rests on the Greensands, the Greensands on the Upper Oolites, the lower Oolites on the Lias, the Lias on the New Red marl, and so on through lower memhers of the geological serjos of English rocks. Similar conditions
may be found in all other countries, the superposition of strata being widely evident. Each great group of rocks consistas of several subdivisions called for mations, and each group, and even to a considerable extent minor subdivision, is characterized by the presence of distinct assemblages of organic remains. The successive appearance of such remains, which constitutes the succession of lifo in time, was the great discovery of Wm. Smith, made more than a century ago. The main rock-systems into which the earth's crust is divided, and which are based on the characteristics of the organic remains contained in them, are shown in the following table in ascending order:

rentian, or Fundamental Gneiss.
Eozoic .......
in one of which was found a structure believed by Dawson, Carpenter, and others to be a foraminifer and called Eozoon Canadense. It is now, however, generally believed to be a mineral product, In the Outer Hebrides and on the west coast of the North Highlands, rucks occur of highly metamorphic gneiss, which are probably of Laurentian age. The term Pre-Cambrian or Archaean is now applied to these rocks in the British area; they crop out also in North and South Wales, in the Malvern Hills, and in Charnwood Forest in Leicestershire. No fossils have yet been observed in these rocks. The Huronian Rocks of North America are possibly intermediate in age between the Laurentian and the rocks next mentioned.

Cambrian.-These rocks come next in succession to the Laurentian strata. The term Cambrian has been used differently by different geologists. The purple grits and slates to which the term Cambrian was restricted by Murchison form the greater part of the group of hills in Wales that lie east of Cardigan Bay ; they are also well seen in Carnarvon-

Normal Fauits.
shire, where the celebrated slate quarries of Penrbyn and Llanberis lie in Cambrian strata. Parallel strata, known hy the same name, are found abundantly in other parts of the earth. Many of the beds are destitute of fossils, but these occur in certain localities down to the lowest beds of the system, and include brachiopods, trilobites, and other low organisms.

The Silurian Rock: were first worked out in detail in South Wales and the bordering counties by Sir Roderick Murchison, and an account of them published in the year 1839 in his Silurian System. They are divided by geologists into the Lover and Upper Silurian. The former comprises in ascending order the Lingula beds (so named from a characteristic fossil shell), the Tremador slate, the Llandeilo flags, and the Caradoc or Bala heds. The Lingula flags (Potsdam sandstone of the United States) rest conformably on and in fact pass by gradations into the Cambrian rocks. Above them lie the Llandeilo flags of North Wales, named from the town of Nlandeilo in Carmarthenshire, where they
occur in a typical form. Above and passing into these lie the Caradoc or Bala beds (I'renton limestone of United States). The most characteristic fossils of the Lower Silurian are the crustaceans known as trilobites, of which more than 200 species are known to belong to these rocks. Other fossils include hydrozoa, corals, echinodermata, numerous mollusca (brachiopods in particular, also lamellibranchiates, pteropods, gasteropods, cephalopods or cuttletishes). No fishes nor any other vertebrate animals have yet been found in the Lower Silurian rocks. In the United States the Upper Silurian include the Oriskany and Niagara beds; in Britain occur a number of successive beds, from the Pentamerus to the Ludlovo. All the formations are in general terms fossiliferous, repeating the organisms of the Cambrian, and also having in their upper strata the earliest ildications of the fishes, consisting of small teeth and scales of placoid fishes.

Old Red Sandstone and Devonian.The Old Red Sandstone first received that name in contradistinction to the New Red Sandstone, the former occurring below and the latter above the Carboniferous strata. Where the uppermost Silurian strata join the Old Red Sandstone there is a gradual passage between them. A broad belt of Old Red Sandstone crosses Scotland in a northeast direction between the Firth of Clyde and Montrose and Stonehaven, nnd it occurs elsewhere in that country and in various parts of England. The Scotch beds were first carefully studied by IIugh Miller, who discovered in them remarkable fish forms (the Pterichtliys, Cephalaspis, etc.). The absence of marine shells and the nature of the fossil fishes of the Old Red Sandstone of Great Britain indicate that the formation was deposited not in the sea, but in a great fresh-water lake, or in a series of lakes, for the nearest living analogues of many of the fish are the Polypterus of the African rivers. the Ceratodus of Australia, and in less degree the Lepidosteus of North America. In Canada, the sandstones of Gaspe are of Devonian age. as is found by their containing Cephalaspis.

The name Devonian has been given to a series of rocks in Devonshire bearing fossils intermediate in character between those of the Tipper Silurian and those of the Carboniferous limestone, nnd which are considered as the equivalents of the Old Red Sandstone of the west of England and of Scotland. The terms Devonian and Old Red Sandstone are thus generally considered equivalent in point
oi time, and, though first found and studied in Britain, are now known in many parts of the world. These rocks have been divided into Lower, Middle, and Upper Devonian. The lower beds chiefly consist of slaty beds and green and purple sandstones, with brachiopods. The middle group, which includes the l'lymonth limestone, contains numerous corals. The Upper Devonian group contains land plants (Stigmaria, etc., and many shells), some of which are identical with those found in the Lower Carboniferous lime-stone-shales.

Carboniferous Rocks.-In the south and middle of England, and in Ireland, the Carboniferous Rocks, so named on account of the masses of coal contained in them, consist chiefly of limestone at the base and Coal-measures nbove.

The Coal-measure beds consist of alternations of sandstone, shale. fire-clay or underclay, conl, and ironstone. Underneath each bed of coal is a bed of under-clay with the roots known as Stigmariæ, forming the soil in which the plants were rooted, by the decay of which, passing into peat, material was supplied for the production of coal. These coal-bearing beds are numerous in England, where they have long been worked, their abundant product being the basis of the great industrial progress of that country. In

apecien of fossil plants have been named, a larse proportion of which are ferns, including some tree-ferns. The remaining chiel plants are gigantlc club mosses known as Calamites, Lepldodendron, and Sigillaria. Coniferous trees also occur, as do the wings and wing-cases of beetles and other ingects, spiders, etc., and large amphinian land animais. In the purely marine serien of rocks, of which the Carboniferous limentone forms the most important part, we find corals, very numerous crlnolds, hrachiopods also exceedingly numerous, and Lamellibranchiate mollusce. Many cuttlefishes and numerous fish also occur, the latter including great sharks; trilohites are scarce. The greatest known development of the Carbonlferous strata is in the United Sta ${ }^{+}$es, in which the beds spread over a vast area of country, and yield an enormous

I'assage of Granite UpWARDS INTO Solk 1. solid blocks. rounded blocks. c. soil. output of coal. They occur also widely in China ithough as yet little worked), and to some extent in all the continents and many of the countries of the parth.

The Permian - series succeeds the Carhoniferous rocks, and were long considered as part of the New Red Sandstone. They, were named Permian by Sir Roderick Murchison, from the government of Perm, in European Russia, where they largely ocenr. They consist of sandstone, red marl, etc., and contain a bed of the magnesian limestone. The fossils of the Permian group are generically and specifically few in number, but as a whole their affinities and grouping are decidedly Palæozoic. All the Permian fish have heterocercal tails, like the majority of the Palæozoic genera, in which the vertebral column is prolonged into the upper lobe of the tail. whereas in the modern fishes the vertebral column is not prolonged into either lobe.
The New Red Sandstone, or Trias. succeeds the Permian strata. It has received the name of Trias from the fact that when fully developed. as in Germany, it consists of the three great divisions of Keuper, Muschelkalk, and Bunter Sandstein. Few old genera and no species pass thus far upwards. The majority of the genera of Brachiopoda disappear, and the whole grouping of
the fomsils now ceases to be Palsoozolc, and ascumes a character common to the Secondary rocks. In its sreatest development in England, the Bunter series (of soft red sandstove and quartz conglomerate) is ahout 3000 feet thick. The Muschelkalk may be well meen, among other places, near Gotha, and at Eisenach in Thuringia. It is a gray, shelly limestone, rich in fossil mollusca. No fossils are known in the Bunter Sandstones of England, though a few are found in equivalent strata in Eurupe. The upper red marl (Upper Trlas) varies from 500 to 2000 feet in thickness, and contains, hesides other fossils, footprints and hones of reptiles. In the United States the Triassic rocks of Virginia and North Carolina contain workable heds of coal. The red sandstone of the Connecticut Valley is of Bunter age. Ahove the Keuper strata occur a series of beds called the Rhatio beds, from similar strata in the Rhæetic Alps, and appear to he intermediate hetween the red marl and the next series of strata. At the hases of the Rhæetic heds have heen found minute teeth of the earliest known mammal (Hicrolestes Rhaticus), a small insect-eating marsupial.

The Lias and Oolitc series succeed the New Red and Rhætic beds. On the continent of Europe the Lias and Oolite together are termed Jurassic, because in a typical form they are largely developed in the range of the Jura. The Lower Lias clay and lime, as a whole, is rleh in the remains of life. Theso include crinoids, decapod crustaceans, Terehratulæ, and other Brachiopoda, and numerous Lamellibranchiate molluscs. Cephalopoda, such as ammonites and belemnites. are specially numerous. together with species of nautilus. Fish are numerous and there appear in the Lower Lias a great number of remarkable reptiles. some of pigantic size, as the Ichthyosaurus, the Ilesiosaurus, and the well-known Pterodactyle. The Marlstone series, or Middle Lias, which is generally a brown. ferruginous, soft, sandy rock. is rich in many forms of ammonite and belemnite. etc. From the Upper Lias clay much alum shale, as also the well-known Whithy jet, is ohtained. It is a stiff, unfertile, dark-hlue clay.
The Oolitic strata as a whole stretch across England from southwest to northWest, or from Portland Bill to North Yorkshire. The Inferior Oolite, the lowest member of the Lower Oolite, chiefly consists of heds of yellow limestone. Much of the limestone is oolitic. that is to say, it is formed of small concretionary bodies, like the roe of a fish, cemented to-
gether in a calcareous matrix. Amons lowils of the Bath or Great Oolite, which ancceed that mentioned, are reptiles of the semera Teleomurns and Megalomanrue, together with the sigantic Ceteo carus (or whale-lizard) probahly about 60 feet in length. During this part of the Oolitic epoch, while in the wouth of England the atrata, were excluaively marine, in the middle and north they were to a sreat extent eatuarine, fremhwater, and terreatrial.

The Middle and Upper Oolite succeed, and are locally divided into many beds, an important section of the Upper being the Portland limentone, found especially in the inle of Portland, and used as a favorite building stone. The ceiebrated Portland stone has been employed in many puhlic huildings, including St. Paulm. Like those of all the other Oolite formations it is cream-colored, and generally fosailiferous. Oolitic rocks, known hy the name of Jurasoic, almont Identical with thone of Britain, occur largely in France ; and the mountain range of the Jura, dividing France and Switzerland, is chiefly formed of Liagsic and Oolitic rocka. From thence they range interruptedly northwards and eastwards, covering a large part of the plaing of European Ruasia, and extending along the Himalayas.

As regards the fossil remains of the Ihas and Oolite, a remarkabie feature is the vast development of Cephalopoda, es: pecially of the zenera Belomnites, Nautilus, a mmonites, and Ancyloceras. There are also many genera and species of fishes, chiefly in the Lias, and the genera and species of reptiles are so numerous that this life-period has heen sometimes called 'the age of reptiles.' The plants include ferns, horsetails, conifers, cycads. etc. Viewed as a whole, the Llassic and Oolitic strata seem to have been deposited in warm seas round groups of islands frmed of the older Palaozole rocks of Europe. Succeeding them is a series of transition strata, known as the Purbeck and Wealden, developed in several localities and leading upward to the cretaceous rocks.

The Cretaceous Formation is divided into a lower and an upper series of strata, comprising in Fingland the Lower Groensand, the Gault, and the Upper Greensand. It derives its name from the Chalk, a sort of soft, white linestone, Ahich occurs in thick beds in Europe and Asia, covering an enormous area. On examination with the microscope, much of it is found to consist of the shells of Foraminifera, Diatomacea, spiculae and other remains of sponges, Polyzoa, and $20-\mathrm{U}-3$
ahellf, hishly comminuted. Somewhat aimilar depoaltn are now forming in the open Atlantic at great depthy chiefly of Foraminifera of the senue ctobigerinc. Plants are comparatively sew in the Chalk, hut animal remains are very nomerous More than eirhty apeciem of fish are known; various sreat reptlle forme as the Mosasaurus, Plesionaurus, and Ichthyomarus, Pterodactylem, etc. In America the Cretaceoum epoch presents some extraordinary reptilian forms of immense aize, aiso various birds. The sands and marls of New Jernes, are of this age, and similar beds occupy extensive tracts in the western recions ; but there is no true white chalk in America.

Of the Tertiary strata the Eooond Rooks form the lowest divinion. The ntrata are divided into the Lower Docene and the Upper Eocene or Oligocone. The Lower Eocene rocks lie sometimen on upper beds of Chalk, and sometimes on beds lower in the series. They are therefore highly unconformable, and in this we have the reason of the complete difference in the species of the Cretaceous and Bocene rockg, for great continental areas of Chalk were up heaved above the sea, and remained as dry land for a period of time so long that when thoy were again suhmerged the life ot Cretaceous times had died out. and other forms appeared. Remains occur of hirds allied to the vulture and kingfisher, and a small swimming:

UPwand myro Sotho
a, solid mandatone.
b, broken-up manditone. c, earthy layer.
hird with tooth-like serratures on the bill; turtles and river tortoises are numerous. In the Upper Eocene or Olisocene various Ungulate mammalia are lound, such as the Anoplotherium, Palmotherium, a kind of river-hog, tapirs, etc. In France, in the Paris basin, the Eocene strata are largely developed. The Wahsatch, Bridger and Uinta beds of North America are of Eocene age.

The Miocene Rocks are well represented by strata (mostly of fresh-water origin) in Central France (Auvergne, etc.) and Switzerland. Over many parts of Europe, Asia, and America there are other Miocene strata, each more or less pomessing peculiaritien. They show a
marked prugression in mammalian forms over thuse of the Eoceue, showing a divtinct and denided evoiution.
The Pliocime strata contain many fossiis indicative of still greater progress and approaching somewhat clonely to the animal forme of modern date. They include remains of apecies of mantodon, eiephant, bippopotamus, and horse, as aiso of the common otter, deer, etc., of a character showing that the dawn of the recent period is near at hand.

The Post-tertiary or Ouaternary Epoch is that immediately before the period in which we are now (the recont). It is characterized especially hy various glacial phenomena, and in particuiar by numerous evidences of a riaciai period, when the northern heminphere was subjected to a climate of the utmont rigor, and much of it huried under heds of slacier ice, probably as thick as that of the north of dreenland at the prement day. (See

Helladotheajum Duvemnoty. An extinct member of the girafe family.
Qlaciers.) It is believed that suhsequently a slow withdrawal of the glaciers took place, ieaving behind them beds of sand, gravel, and clay, full of boulders and ice-scratched stones, intermingled with shells of Arctic or seml-arctic type sometimes lying at beights of from 800 to 1200 and 1400 feet above the present sea-level. These phenomena are more or less universal over great part of Northern Europe and North America. Among Post-tertiary plants there are Scotch firs, pines, yews, oaks, alders. The mammalian remains include those of elephants, rhinoceroses, hippopotamus, the common horse, bison, anrochs, red deer, roe-deer, Irish elk, Machairodus (a tiger?). etc. Many of these animal remains are found in the celehrated bone caves, several notable examples of which have been investigated. (See Cave.) In these have been found not only snch remains as those of the cave bear, cave hyena, fox, wolf,
cat, lion, reindeer, Irich elk, bison, rhfnoceros, elephant, etc., hut also the works of man, such as flint implementa, and in some localities human skulis and other bones associated with the above-named mammalia. When the ice had fully paceed away the recent period began, diftinguished hy the prewence of man and of the iower animals which stdil exist, and marked by few and minor seoiogical changes.
Geometrical Mean, the second of a geometrical progression containing three terms. The geometrical mean of two numbers is equal to the square root of their product. See next article.
Geometrical Progression, af pumm-
bers which increase or decrease hy equal ratios ; as, 2, 4, 8,16 or $16,8,4,2$. Geometry (je-ome-tri; Greek of, earth, and metron, meat: nre), as its name implies, was primarily the mathematical science which has for its ohject the measurement of portions of the earth's surface; but now geometry may be termed the acience which treats of the properties and relations of definite portions of space, such as surfaces, volumes, angles, lines. The relation between the parts of the same figure may be of two kinds, -of position or of magnitude; for example, two points in a straight line, four points on the same circle, two straight lines perpendicular to one another, a straight line tangent to a circle, are relations of poaition. On the other hand, the proportionality of homologous lines of two similar fignres, the equality of the square constructed on the hypotenuse of a right-angled triangle to the sum of the squares constructed on the sides containing the right angle, that of the volumes of two pyramids on equal bases and of the same height, are relations of dimension. Bnt the relations of position govern the relations of dimension, and vice versa; that is, the one set of relations depend npon the other. Thus it is because a triangle is rectangular that the square constructed on one of its sides is equivalent to the sum of the squares constructed on the other two, and, vice versa. that relation hetween the magnitudes of the squares on the three sides depends on the triangle being right-angled. The geometer may draw indifferently from the gtudy of a figure either the knowledge of the relations of position or that of the relations of dimension, on the condition that he knows how to apply relations of the one kind to those of the other: and the principal aim of genmetry is to eramine into the connection between the
relations of masnitude and thoce of poaition.

Geometry may be convenlently divided into meveral priacipal mections-elementary seomentry, practical geometry, analytical jeometry, Infinitenimal geometry, etc. Dlementary geometry comprehend two parts-plane seometry, the object of which is the atudy of the mimplent figuren formed on a plane by atralght lines and clircles; and polld seometry or geometry of three dimenvions which treats of atraight lines and planes convidered in any relative ponltion whatever, of fisurea terminated by pianea, of the cylinder, of the cone, and of the sphere. Analytical geometry, either plane or solld, makes une of the method of coordinates introduced by Dencartes and primarlly applied to correm. In anclent times, though corves were studled and the princlpal properties of conic sections known, stili no connection existed between thes curven, nor was there any means of establivhing one, so that the mtudy of one was of no value to that of another. The first qnention in introdncing the analytical method was then to fix upon mome means which wonld serve to construct every curve by auccessive points as numerous and as closely brought together as is necensary in order to lay down the enrve. Now the position of a point in a plane may be determined by two inter jecting perpendiculars drawn from two fixed llnes -.the coordinate axes-at right anglen to each other. An equation may then be found which states the reiation between the coordinates of any polnt, that is, its distance from the two coordinate axes. (See Coördinetes.) The study of the curves will thus be slmply the study of their equations. In this way a typicai equation for a curre in a certain system may be got, so that if at another time the curve is represented under another definition in investigating its equation in the same system of coordinates, particniarized so as to aimpiify as much as possible the calculations, it wili suffice to compare the particuiar equatlon with the general one to verify the identity of the curve, to give it its name, and to know all the properties of it which have been studied previously. In a simiiar way the analytical geometry of solid bodies is based on the fact that the position of any point in space can be determined by reference to three intersecting planes. Infinitesimal geometry is simply a coutinuation of the analytical geometry of Descartes. of which it mav indeed be said it forms a part: the difference consists simply in the nature of the questions which, as they involve the measurement
of magnitudes, the incumantly variabls elements of which cannot be summed up by finlte party require the use of the infinitenlmal calculus. Decoriptive geom. efry consiats in the application of seumetrical rulen to the reprementation of the fisures and the various relations of the forms of bodies according to certain conventional methods. In the dewcriptive geometry the sltuation of polnte in apmey is represented by thelr orthosraphical projectlone, on two planew at rlght anglew to each other called the plance of projection.

History. - The origin of geometry is asslgned by an ancient traditlon to Eaypt, but the bistory of the science, as far as it is known, commences In Greece with Thales ( $639-548$ b.c.). Tu him is attributed the dincovery of the propertien of triangles. His disclple, Pythagoras (born about 580), founded a celebrated schooi in Italy where geometry was as blahly honored as phliosophy. He discovered the theorem of the square of the hypotenuse, thus completing, so to apeak, the geometry of poiygons. He was alpo the firat to show that the circle contains. greater area than any plane figure having the same perimeter, and that the sphere contalns the greatest volume bounded by a given surface. After him Anaxagoras, Hippocrates of Chlos, Theodorus of Cyrene, and Archytas of Tarentum cuitivated the science and have left names connected wlth various problems, but the next great deveiopment of the science is due to Plato and his disciples, who iald the foundation of the analytical method and deveioped the fundamental principies of geometrical loci. Enclld. who belonged to the famous school of Alexandria, and flourished abont 285 B.C., has the merit of collecting and systematizing ali the more important problems and theorems worked out by his predecessors, besides adding many new ones of his own. He aiso wrote various other mathematical works, a book of Data. a treatise on Porisms, etc., most of which have been lost. It is in his Elemento of Geometry, which are stili the favorite text-book, that the method of proof known as the reductio ad absurdum is first found. After Enclld came Archimedes (287-212 B.c.). Among his achievement. are the determination of the ratio of the diameter of a circle to its circumference, and the investication of the areas of the circle and parabola and other problems much more dificult than any previously attacked. Archimedea had completed that branch, the object of which is the comparieon with each other of magnitudes of the amme nature; Apol-

## Geometry

Jonius ( 217 a.c.) mado an analogous progrees in that which treate specially of the propertief of Hurem. His eight books of Conius, in which he considers these curves in the oblique cone, which had not been done until that time, contain almost all their interenting propertien, thow which relate to their foci, tangenta, aaymptotes, or diameters, and to their involuten. Eratonthenes, Nicomeden, the inventor of the conchoid; Hip. parchus, who made nome progrees in sphericai trigonometry Meneiaus ( 80 A.D.) ${ }^{\text {Ptoiemy ( }}$ (125 AD.), Pappus ( 380 ), and Procius (440), continued the fame of the Alexandrine schooi. Diophantua introduced methode of an alsebralc kind. and was the modei on which the Arabic seometere, and Leonard of Pisa, Cardan, and finally Vieta formed themveives. He is thus the connecting link between the ancient and modern seometricinn. After the mack of Alexandria and the buraing of ite library the acience was confined to India and to the Arabic echooi of commentatorn, and it was not till the middie of the ixiteenth century that seometry revived in Europe with Vieta (1540-1603), who introduced the use of aigebraic symbols for the solution of zeometrical problems. Trisonometry owea to him most of the eiegant formuiw which now constitute it. In the writinga of Kepler (1571-1631) we find the firt appications among the moderns of the method of Exhaustions of Archimedes frecd from the dificultien which had encumbered the geometry of the Greeks; and to Cavalieri (d. 1647) belongs the honor of an entireiy new method for quadratures and cubatures, Descartes ( $1686-1650$ ), developed Vieta's discover. ien, created the science of analytical geometry, which greatly extended the domain of geometrical science. Fermat (1570-1633) and Barrow (1030-77) with their methods of tangents and of maximums; Huyghens (1629-95), with the theors of involutes, were on the road to the differential caiculus, as Roberval, Paccal, and Wallis with their processes of summation were to the integral calculus. Newton (1842-1727) and the brothers Bernouilli (1054-1705. 1867. 1748) made important contributions, such as the theorem on the generation of curres of the third order and the method of isoperimeters. About the berinning of the nineteenth century a decided advance was made by Monge (1746-1818) and Carnot (1753-1823). The Descriptive geometry of the former established the whole theory of projections. Carnot's first contribution to geometrical science was bis principle of the
corrolotion of Roures, a principio which, having been farther gencralized, io now known as the prinoiplo of oontimuisy. Hia aecond contribution was his ilibory of tranverosele. On theoe inventions it founded modorm geometry, which hac revolutionised the gcience, and has dron us generallsed conceptions provioumy undreamed of. Amongat the later seomotriciane who heve contributed to extend the methods and domain of the acience wo may mention Ponceiet for his theory of reciprocal pciare, Chaslem for his treatieo on porimen etc.; Sir William Rowan Hamilton for his invention of guater niona, an entireiy new method; Cayley and giventer for their application of generalized seometricai mothode to apace of more dimenalons than three.
Geophagism (jt-of ${ }^{\prime}$ a-jism), or tice of eating come kind of earthy matter, clay, chalt, etc., common amongat uncivilised peopies, such as the South American Ottamace, the Indiane of the Hudson Bay country, the Weat Indian blacke, the negroee in some of the United States of America, and otheri. In wome casen it in probably uaed to aliay hunger, but it is also practised where tae suppiy of food is suffient. Amongut chlorotic young, women a similarly depraved appetite is not uncommon. Uncinarianis (bookworm disease) is nometimes produced by it, the hookworms getting into the blood through the inteatinet.
 in 1539; was the son of Aibert the Brave, the founder of the Albertine line of Baxony, and succeeded in 1500 to the hereditary dominions of the Albertine house. Later on he became invoived in the turmoils of the Reformation period. He was not at first whoily hostile to reform, but thought that it could be better ef: fected by means of papal edicts than by the revoit of Luther. Accordingly be became embittered by the uncompromising cone of Lather's iater writingn, and endeavored to suppress the Reformation within his dominions by vioient measures. These, however, were unsuccesaful, and in 1539, on the accession of his brother Henry, who was a Protestant, the Reformation was successfuiliy introduced into the dominions of the Albertine house of Saxony.
George, Sr m $_{\text {r., a maint venerated both }}$ churches, ind the eantern and western land. He was canonized in 494 or 496 by Pope Geiasius. His orisin is very obscure, one of many iegends represent.
tyred by Diocletian. Gibbos bas wought and srand to identily this legendary mint with lwe motorious and turhulent Arian beretic George of Cappadocis, who was elain in 801 in ridny of the populace who had beas infurtated hy hls oppremaion and his vioience apainst pagans and orthodox. But the mont eminent meholare, both Roman Catholic and Lrotentant, are of opinion that the reneration of St. George has been traced up to mo early a period as to make it vert improbable that notorious Arian could have been folinted on the Catholic Church is a saint and martyr. The killing of a dragon that wes about to swallow a malden is a legendary feat attrihuted to bim. He Fas adopted hy the Genoese as their patron maint, and in 1222 the Council of Oxford ordered that his day (the 2i3d of April) should be observed as a nationai holidey in Ensland; in 1350 he was made the patron of the order of the Garter hy Fdward III.
George, Oroze or 8t. The following merous ordery which have been lounded in honos of $8 t$. Georse:- (1) A military order inatituted in Rumain in 1769 hy the Empren Catharine II as a reward of qiliftary achierements. It consists of lour clamen, to which afth, intended for non-commisuloned oficers and priFates, Fas added in 1807. (2) An order instituted in Bavaria hy the Emperor Charles VII (Chairles Aibert) in 1720. and recognised by King Louis II in 1871. Since the reorsanization the order, which had previousiy been a mere deco ration for the noblity, has devoted itself to such services as the care of the wounded on battlefieids, etc. (3) An order instituted by Ernest Augustus of Hanover in 1890. (4) A Sicilian militars order, instituted by Joseph Napoleon, 24th Fehruary, 1808, and remodeled by King Ferdinand IV in 1819 . (5) The name under which the order of the Garter was firnt instituted in Engiand. See Garter (Order of the).
Ceorge, Sr., one of the Bermudas. It haif a mile hroad, is 3 miles iong and tains a port of the same name, which is a British military station.
George, Thes, a hadge exhibiting the figure of 8t. George encouncollar by the Knighta of the Gerter the collar B
George I, of (Great Britain, and Elector of Hanover, was the son of the Blector Ernest Aupuntus, by Sophia, dauchter of Fredericle, Elector Palatine,
born Ma: married u nter to James 1. Ho was 1030, and in 1683 mas whom, in 1644, on account of a suapeetad Intrisue with Count honipamark be cauced to be imprisoned and kept in com. finement for the reat of her life. In 1448 he muccoeded hle father as elector. He commanded the imperial army in 1707 during the war of the Spaniah nucce: sion: and asceaded the throne of Gruat Hritain on the death of Queen Anne in 1714. Amonget the notabie events of hia reign were the riving of the Scottish Jacobites (1716-16); the Triple and Yuadrupie Alliances againgt Spaln ( 1717 and 1718) ; and the fallure of the South Sea Company (1720). He died in 1727. The private character of Georse I was bad, but he showed much sood sense and prudence in sovernment, eapecially of his German dominions. 8 g Sophia Dorothea he had a mon, George, afterwards Georse II of England, and a daughter, Bophia, the mother of Frederick the Great.
 King of Creat Britain, son of Georse I, was born Uctober 30 , 1083. He married in 1705 Whheimina Carolina of Brandenhurg-Anopach. In 1708, then oniy electorai prince of Hanorer, he dintinguished himeeif at Oudenarde under Marlborough. In 1727 be succeeded his father on the Enslish throne, but inherited to the full the predilection of George I for Hanover. His reign is notable for the great event with which it is filled, and for the number of men sreat in art, ietters, war, and dipiomacy which then adorned England. The war of the Austrian succession, in which George II himself took part at Dettingen, the Jacobite rebellion of 1745, the conquest of Canada, and the growth of the Britinh empire in India are amongnt the chief events of his reign. George II died suddeniy October 25, 1760. He was a prince of very moderate ablities, resardiess of science or iiterature; of obstinate temper and vicious habite: hut honest and open in his disposition.
Ceorge TIT, Gzomoz Wirivaz Great Britain Fhederick. King of 1/Hest son of Frederick, Prince of whe
the Princess Aususta of Saxe-Gotha, and succeeded his srandiather, Georre II, in 1700. In the foliowing jear he married the Princess Charlotte Sophia of Mecklenhurg-Strelitz. The sixty Jearis of his reign were filed with ereat eventh, amonget which are the Wilkee controFermy, the American Revolution, 1770-83: the French Revolution, 1789, and the

Irich rebellion, 1798, etc. George III, while conscientious, was mentally obtuse, and his narrow patrlotism, his obatinate prejudices, and blind partialities were even more hurtful to British interests than the indifference of his predecessors had been. Hls tastes and predusements were plain and practical, literature and the fine arts receiving but a small share of his attention. His private life was very exemplary. In 1810 the king's mind, which had already given way several times, finally broke down, and from that tlme to his death on January 29, 1820, his biography is a blank.
George IV (Grorgi fremiricic Great Britain, son of George K ing of Princems Charlotte of Mecklenburg-Stre litz, born in 1762; dled June 26, 1830. Hls dlssipated life, hls extravagance, hls supposed marriage with a Catholic, Mrs. Fitaherbert, alienated from hlm the affection of hls father and the eateem of the nation. In 1795 he married the Princess Carollne of Brunswick, from whom he sool. separated, and who was afterwards tried for adultery in 1820 and acqultted. In 1811 George became regent, and, on the death of George III in 1820 , succeeded as king.
George $V$ (Frederick Eriest AlBritain, was born at Marlborough House, Iondon, June 3, 1865. He was the second son of Edward, Prince of Wales, afterwards Edward VII. His elder brother, Duke of Clarence, died In 1892, leaving hlm heir to the throne, to which he succeeded on the death of hls father, King Edward, May 6, 1910. The career of the new ling as a prince was largely in the nayy, whlch he entered at the age of 12, and continued until he reached the throne, passing through tine several grades from midshipman in 1880 to rear-admiral, 1901, Fice-admiral, 1903, and admiral, 1907. This progress in the navy was not made without regard to merit, as the sailor prince showed himself brave, ready and efficlent on more than one critlcal occasion. In 1803 he married the Princess Vletoria Mary, daughter of the Duke cf Teck, and has six children, the oldest, Edward Albert, succeeding hlm as Prince of Wales. The sallor prince became Duke of Cornwall when his father took the throne, and soon after started on a tour of the colonies, opening the first parllament of the Commonwealth of Australia $\ln 1901$. In the fall of 1005 he went to India, and in 1908 visited Canada, to attend the celebration at Quebec, but did not visit the United States, as his father had done in a rimilar trip to Canada.

George $V$ differs from hin father in aeveral particulare. He doem not mhare Edward's love of aports, in lens approachable and more intellectual, and in devoted to home life. As a monarch he has shown ability and deciaion, especially In his determination not to talse the coronatlon oath in its old form of ofrensive allusion to the doctrines of his Catholic and non-conforming subjects. In 1911 he visited Indla, a step which no former British kling had taken. The purpose of his visit was to be crowned emperor of this distant realm of the empire.
George I, 'King of the Helleners' Dec. 24, 1845, was born at Copenhasen Denmark. In 1803 be was elected King by the Greel National Assembly. In 1867 he married the Princess Olga, a niece of the Russian czar. His conduct as a constitutional monarch was correct and regular, and he won the popular aympathies by the efforts he made on behalf of the expansion of Greel nationality. He was fatally shot by an anarchist ln Salonika, March. 18, 1913, and was succeeded by his son, the crown prlnce Constantine, born August 2,1868 .
George, Henry, political economiet, was born at Philadelphia, Pennsylvanla, in 1839. He wrote a number of works, the most famous being Progress and Poverty, upon whlch was based the doctrine maintalned by the Single Tax' advocates, namely, that all land should belong to the state and pay a tax sufficient to meet all the expenses of the government. He was the author of several other worke. He wan twice nominated for mayor of New York, In September, 1886, and October, 1897; in the former he was defeated and he died suddenly during the heat of his canvass of the latter, October $29,1897$.
George, Lakib, a lake in New York Washington Counties, sonth of Lake Champlain, into which it dischargea at Ticonderoga. It is 36 miles long, and from $8 / 4$ mile to 4 miles in width. It is surrounded by lofty hills wooded to the top, has richly wooded ghores, and many picturesque inlands. Caldwell, Bolton, and other places on its banks are favorite resorts, and in summer large numbers of tourlsts are attracted by the beauties of its scenery. Here was fought a severe battle in 1755, in which the French and Indlans were defeated by the English. and it was the scene of several other warlike events. Fort Ticonderoga lay between it and Lake Champlain. George Junjor Republio, vonilo
community founded in 1896 near Ithaca, New York, by William R. George, as an experiment in the training of outlaw children of the elums in their future dutien as American citizens. The children govern the community themeelves under a system of municipal adminlstration, and the experiment has been so successful that simllar communlties have been founded in other localities.
George-noble, a zold coin of the of the value of 6s. 8d. sterling ( $\$ 1.60$ ). It is so called from bearing on the reverse the figure of St. George killing the dragon.
George's Channel, Sr., the arm of eparate Irean which Inarates Irish Sea. From Holyhead and Dublin on the north to St. David's Head and Carnsore Polnt it extends about 100 miles, with a breadth varying from 50 to 70 miles. Its depth ln the mlddla varies from 40 to $n$ fathoms. The bottom is chlefly sand diavel.
Georgetown (jorj'town), formerly
a city of the Dlstrict of Columbia, on the left bank of the Potomac, near the city of Washlngton; now a part of Washington, with which it was incorporated ln 1878 . It is beautifully situated on a range of hills, and abounds with villas and country seats. It contains the Georgetown Unlversity. (the oldent Cathollc college in the United States), the Peabody Library, etc. The Chesapeake and Ohlo Canal commences here. Pop. 16.183, Included in the Dlstrict of Columbla.

## Georgetown,

or Demerara, the capltal of British Gulana, at the mouth of the Demerara. It is neatly built, conslsting of broad streets at right angles, with canals in the middle, and lofty wooden houses, often wlth luxuriant gardens attached. There is a bar at the mouth of the river. and large shlps have to discharge and load by means of lighters. Georgetown is the seat of an Anglican bishop, and has $a$ number of churches, schools, hospitals, etc. The chlef exports are sugar, rum, and coffee. Pop. 63,176, of whom only one-tenth are whites.
Georgetown, county seat of GeorgeCarolina, a port of entry at the head of Winyah Bay on Samplt River, 50 miles N. I of Charleston. It has turpentine distilleries, saw mills, and other industries, and a trade $\ln$ cotton, naval stores, lumber, fish, etc. Pon. 6530.
Georgetown University, an edn-
institution in Washington, D. C., founded in 1789 under the auaplcen of the Roman Catholic Church. It has about 850 atudents attendias and 144 instructors in the faculty, and a library of over 100,000 volumes.
Georgia (jory'ta; by the Russians called itrusia, and by the natives themselves Karthli, was formerly a kingdom, but is now included in the Russian government of Tifils, though the name is sometimes loosely employed to designate a much larger portion of the territory possensed by Russia south of the Caucasus. In the latter sense it has an area of say 34,000 square miles, but Georgia proper does not exceed about 15,000 square miles. The natives are a fine-looklng race, the Georgian women, llke the Circassians, being celebrated for thelr beauty. The Georgian language, together wlth that of the Mlngrelians, Lazes, and other Caucasian peoples, seems, according to the latest researches, to form a perfectly distinct linguiatic family. It possesses a not unimportant Ilterature, commencing with the introductlon of Christianity into the country. The hlstory of the Georgians first be comes trustworthy about the time of Alexander the Great, to whom they became subject. About B.c. $32 \pm$ they gained their lndependence under Pharnavas. They became Christianized towards the end of the fourth century. After yielding for a time to the supremacy of the Arabian caliphs Georgia regalned its independence towards the end of the tenth century, which lt retalned till 1789, when Heraclius, successor of George XI, formally ceded his domlnlons to the Rusian emperor Paul.
Georgia, one of the Southern Tilted Tennessee and North Carolina. E. by South Carollna and the Atlantic, s. by Florida, and W. by Alabama; length, north to south. 320 miles; breadth, 250 miles; area. $59,265 \mathrm{sq}$. mlles (about the same as England and Wales). The coast is bordered by a chain of islands, separated from the mainland by narrow lagoons or sounds. On them the famous sea-island cotton is raised. The land is low towards the coast. berinning as a salt marsh, grown over with tall reeds. continuing next as swampy rice plantations and then as 'pine barrens' about 60 to 90 miles inland. whence it gradually finen ax a sandy distriet. inter spersed with fertile tracts. till it reachee the lower falls of the Savannah, Osechee, Oconee, and other fivers. Fere the hilly and finally mountainous retion called the Upper Country beging, a fertio and mino
brious region extending north and went till it risel into the Appalachian mountain chain, the highent peal in the state being 4821 feet. Alons the coast and near the lower cournes of the streams are rich alluvial districts, interspersed with meadows, which are suited to rice culture. In the couthwestern part of the State is a large area which has long been juatly celebrated for its cotton product, Georgia being next to Tezas in its yield of cotton, averaging about $2,000,000$ bales annually. Of the rivern, the Chattahoochee, which flows under the name of the Appalachicola into the Gulf of Mexico, is navigable for steamers for 300 miles; the Savannah is navizable for steamers part of the year for 250 miles ; and the Altamaha and its amuents are navigable for small vensels 300 miles upwards. The climate is mild and pleasant, but unwholesome in the low parts of the country during the months of July, August, and September. The soil in many parts is very rich. Cotton and corn are the leading plantation producta, and rice, with some sugar-cane, are staple crope in the lowlands. In addition, tobacco, the sweet potato, and other crops are cultivated with success. The fruits, which include peaches, apples, melons, oranzes, bananas, etc., are of the finest and large quantities of them are shipped to the North. The chief minerals are granite, marble, iron ore, limestone, clay, asbestos. manganese, bauxite, some coal, sold, silver, lead, etc. Georgia ranks second (Vermont, first) in the production of granite in the United States. The pine forests turnish large supplies of lumber, rosin and turpentine. Of manufactures the most important is the production of cotton goods, and of cotton-seed oil. Atlanta is the seat of the legislature and largest town; the other principal towns are Savannah (the chief seaport), $\Delta u$ guata, Macon, and Columbus.
$\Delta$ charter for the foundation of a colony in the territory now called Georgia was obtained in 1732 by General Oglethorpe from George II, after whom the state was named, his purpose being to colonize it with debtors taken from the London prisons. Georgia was one of the thirteen original states. In 1788 it adopted the constitution of the United States by a unanimous vote. In January, 1861, Georsia meceded with the Confed: eraten, took an active part in the Civil war, and was conquered by a Federal army under General Sherman (1884-5) and restored to the Union. The history of Georgia in the last few years has been one of material prosrena. The National Expositions held at Atlanta in 1881 and 1800 were of great benefit to agricultural
and manufacturing interente which have repidly developed. Pop. 2,600,121.
Georgia, Guns or, a large culf of between the continent of North America and Vancouver's Island; about 120 milem in length from north to south; the breadth varies greatly in ite diferent parts, from 6 miles to 20 . It communicates with the ocean on the north by Queen Charlotte Sound, and on the south by the Strait of Juan de Fuca.
Georgia, Sourt, an island in the north point $53^{\circ} 57^{\prime}$ Atlantic, lat. at its. $38^{\circ} 13^{\prime} \mathrm{W}$. It is 80 miles long, and has high and rocky coasts, inaccesaible from ice during a great part of the year. It abounds with seals and sea-fowls.
Georgia Bark (Pinokneva puben), Southern United States closely resembling the cinchona or Peruvian bark, and belonging to the natural order Cinchonaceas. The corolla is tubular; the stamens five, with a single style; and the capsule contains two cells and numerous seeds. The wood is soft and unfit for use in the arts. The inner bart is extremely bitter, and is employed with success in intermittent fevers.
Georgian Bay, Rormerly called dit Manitoulin, the northeastern part of Lake Huron, partl) separated from the main body of the lake by the peninsula of cabot's Head and the ialland of Great Manitoulin. It is about 120 miles long and 50 broad.
 of Terek, North Cancatia, Russia. It has a trade in silk and leather. Pop. 14,000. Georgium Sidus, by heme hiven the planet which he dibcovered March 13, 1781; now Enown as Uranus.
Georgswalde (se-or grillan), Austria, on the Saxony frontier. It has linen manufacturers. Pop. (1910) 8836. Geotropism (je-ot'ru-pizm), in botany, a disposition or tendency to tum or incline towards the earth, as the characteristic commonly exhibited in a young plant, when deprived of the counteracting influence of light, of directing its growth towards the earth.
Geotrupidse (jor-tri'pi-des), a fammellicorn beetles. They inhabit temperate climates, and are useful in removing disgusting substances. When alarmed they feign death. The Geotrapes oter
oorarius, or watchman-beetle of Britain, is the type of the family.
Gepidæ (jepirde) a people of Germanic origin, firat read of as settled about the mouth of the Vistnla in the third century. Before the fifth century they had misrated to the Lower Danube, where they were subjngated by the Huns; but, revolting against Attila'a mon, they recovered their freedom and emtablished themselves in Dacia. There their power grew so great that they levied tribute from the Byzantine emperors down to Justinian's days. In the end of the fifth century a powerful enemy arose against them in the Ostrogoths; and after them came the Longobards, who, in alliance with the Avars, inflicted a crushing defeat on the Gepidse in 566 . A part suhmitted to the Avars, while a part accompanied the Longobards to Italy, and finally became assimilated.
Gera (ga'ra), the chief town of the principality of Reuss-Schleiz, in Germany, on the right bank of the Elster, 35 miles s. s. W. of Leiprig. It has manufactures of woolen, linen, cotton, and othe: soods Pop. 47,455.
Gei lce (je-ríchá), town of $s$. Italy, province of Regrio di Cala ria, 36 miles $N$. 2 of Regrio. The cath |ral, once a handsome structure, was nined by the earthquake of 1783 . Yop. 10,752 .

## Gerando. See De Gerando.

Geraniaceæ
( je-ra-ni-ä'se-ę ), a nat. order of exogenous plants, the distinguishing character of which is to have a frnit composed of five capsules or cases, connected with as many flat styles, consolidated round a long, conical beak, giving some of the species the name of stork's-bill and crane's-bill. These plants are usually astringent and odoriferous, and many of them have beautiful flowers, eapecially those of the renus Pelargonium, natives of the Cape of Good Hope. The species are mostly herbaceous plants. A few of then have edible tubers. See next article. Ceranium (je-ra'ni-um), the typical genns of the order Geraniacese (which see), popular name crane's-bill. They have nsually palmately divided leaves and regular flowers with ten stamens and five carpels. Some thirteen species are wild in Europe, of which the $G$. robertianum or hert-robert is the most common. An American apecies, G. macula tum, from its astringency called ' alum-root.' is used medicinally as a gargle and otherwise. The so-called geraniums of our gardens belong to the genus Polargonium. Cultivation hes pro-
dnced many varieties, which from their beanty are great favoritem.
Gérard (zhl-rir), Finngois $P \Delta g_{-}$ CAL, BLDON, a French hirtorical and portrait painter, born at Rome in 1770; went to Paris (1786), and studied under David. In 1790 he exhibited his firut notable painting. Belioarius. He was much patroniserl by Napoleon, for whom he painted the battle of Austerlits and was made a baron by Louis XVIII, after completing his large painting of the Entrance of Hewry IV into Paris. Amongot his portraites the mont famous are thone of Talleyrand, Talma, Louis Philippe, Madame Recam: ier, Mlle. Mars, etc. He died in 1837. Gérard, Jman Ionace Isidoner a illustrator, generally known under the pseudonym of Grandville, wam born at Nancy in 1803, died at Paris in 1847. He went to Paris in 1824, and after som: minor works acquired great popularity in 1828 by his Metamorphoses du Jowr, a representation nnder the guise of animal heads of human foibles and weaknemes. Later on he became a contribntor to $L_{0}$ Charivari and an illngtrator of the works of Beranger, La Fontaine, Gulliver's Travels, Robinson Orwsoe, etc.
Gérari, Maurice Etrinere, Coust, Gerard, marshal and peer of France, born 1773. He served as a moldier dnrins the repnblic and the empire, distinguishing himself at Austerlits and other battles. In 1813 he was made a seneral of division and a connt. He distinguished himself in the battle of Lisny, and at Waterloo acted under Gronchy. He tool an active part in the revolution of 1830; became war minister and marshal; commanded the troops which rednced Antwerp in 1832; became prime minister 1834: commander of the national gnard 1838; died at Paris in 185 .
Gérard de Nerval, the psendonyme brunie, a French man of letters, born in Paris in 1808. His earlier productions were poetic, Elégies nationales and Poésies diverses. As an daherent of the Romantic school he set himself to translate Goetbe's Faust, and performed it in a manner which the old poet himmeli pronounced a marvel of style. Amongst his best works are his short tales and sketches, Voyages in Orient, Contes ot Facétien, La Boheme Galante, etc. He became Insane and coumitted suicide in Parls, 1855.
Gerasa (jermica), Gerasin, or DJEramb, a ruined town in Syria, 80 miles s. m. W. of the town of Damascus. It was everal dimes de.
strosed and rebuilt. The ruins, comprising ancient walls, gateways, a forum, baths, thecters, and temples, are very extenaive.
Gerba, or Jerra (jer'ba) an island coant of Tunis. It is ebout 20 mlles long and 14 broad. The surface is level and fertile, and occupied by a population of 45,000, mostly Berbers.
Gerbillus (jer-bll'us), a genus of (the gerbils) of the family Muride (mice). Ther have a jong tail, which is tufted at the end. There are several species, found in the sandy parts of Africa and Asia. The Egyptian serbil (G. XIgyptiacus), which inhabits Esypt around the pyr sids, is the type. It is about the sive of a mouse and of a clear yellow color.
Gerfalcon (jer'faw-ku). Sne Falcon.
Gerhard (ger'hart), Enoard, a German archæologist, born in 1795; died in 1867. Having traveled in Italy, he devoted himself to archæology, and in 1829 took part in founding the Archzological Institu.e at Rome. Returning to Germany in 1837, he became archeoologi:- at the Royal Museum at Berlin, and afterwards professor at the university. Among his numerous works are the following: Antike Bilduerke (with 140 plates) ; Auserlesene Grieohische Vasenbilder ( 330 plates) ; Etruskische und Campanische Vasenbilder, Griechische Mythologie, etc.
Gerhardt, Karc, an American sculpHis works of sculpture include in 1853. General Grant, Henry Ward Beecher and Samuel I. Clemens and statues of John Fitch, Nathan Hale, Isruel Putnam and many others.
Gerhardt (ger'härt), Ka:L Fris DRICII, a German chemist, porn in 1816. He studied under Liebig at Giessen, went to Paris in 1838. was appolnted professor of chemistry at Montpellier, returned to Paris in 1842 to purgue his investigations; went in 1855 to Strasburg as professor in chemistry and pharmacy, but died soon after, in 1856 . Gerhardt is the anthor of several works, amongst which the most reliebrated is his valuable Traité de Chimie Organique. The methods he originated have had a great influence on modern chemistry.
Gerhardt, Paur, the greatest of Gerin 1607. He studied theology, became pastor of Mittenwalde in 1651, and afterwards at Berlin. A strict Jutheran, he opposed energetically all attempts to unito.
the Lutheran and Reformed Churches and was removed from his church in 1086 in consequence of his refusal to subseribe to the edict of 16th Sept., 1604, prohibiting mutual insults or offensive language between the churches. In 1688 he was made archdeacon in Jubben, where he died in 1676. His excellent book of hymns appeared at Berlin in 1687 (Geiotliche Andaohten). Many particular hymns have found English translators and appreciation.
Géricault (zhä-rê-kō), J ean Lours TIEODOKEANDRE French painter, born at Rouen in 1791; went to Paris in 1806 and studied under Charles Vernet and Guérin. His first pictures (the Chasseur Officer and the Wounded Cuirassier) were rshibited in 1812 and 1814. In 1817 he visited Italy, r turned to Paris in 1819, and painted the Raft of the Medusa (a well-known shipwreck of the time), a work of much power, which won immediate popularity. He died at Paris in 1824.
Gerizim (jèr-i'zim), Mount. See Germ (jedrm), in physiology, the earliest form under which any organism appears; that is, the rudimentary or embryonic form of an organism. The name is also given to certain minute organisms which give rise to disease. See Germ Theory.
Germain (zher-man), St., the name of a number of places in France, among which is St. Germain-enLaye, a town in the department of Seine-et-Oise, about 6 miles north from Versailles and 11 miles w. N. W. from Paris, on the left bank of the Seine. . The most remarkable building is the royal palace, commenced by Charles $V$ in 1370, and embellished by several of his successors, especially Francis I and Louis XIV. It was used as a prison during the revolution, afterwards as a high school for calvary officers, and was ultimately restored in 1862 by Napoleon III, who established in it a museum of Gallo-Roman antiquities. The forest of St. Germain is one of the finest in France, extending over 10,000 acres. Pop. 17,297.
German Catholics, areligious sprung up in Germany about the close of the year 1844. The immediate cause of its formation was the exhibition by Arnoldi, bishop of Treves, of the holy coat progerped in the eathedral of that city, accompanied by a promife of plenary indulgence to whoever should make a pilgrimage to Treves to worship it. The announcement caused a general feeling of antonishment in Germany, and two
priesta, Johannes Ronge of Sllesia and Juhann Czerski of Posen, whose independent views had already caused the deposition of the one and the secession of the other, led a eecesaion movement, appealing to the lower srades of clergy to unite in founding a national German church independent of the pope. A number of congregations were formed, eapecially in Leipzig, under the celebrated Robert Blum, and in Magdeburg, under the teacher Kote. Two creeds were drawn un for the new church, the Confession of Schneidemizhl, by Czerski, which, though somewhat Roman Catholic, rejected indulgences, purgatory, auricular confession, etc., and the Confession of Breslau, drawn up hy Ronge. The latter, which was far more heterodox, was substantially adopted hy the Councll whlch met at Leipzlg, March 22,1845 . The organizatlon was almost the same as that of the Preshyterian Dissenting churches of Scotland. Each congregation was to choose its own pastor and elders. For a time the new church had a great success. Many Proteatants joined the borly, which, by the end of 1845 , numbe ed nearly 300 congregations. Difficultles soon arose, however. The majority of the German governments began to use represslve measures. More fatal were internal dissensions, one party, headed by Czerski, clinging to the tradltions and doctrines of the Roman Catholic Church, the other, headed by Ronge, tending to mix up democratic and sociallstic principles with their creed. After the rise of 'Old Cathollcism' the movement lost all importance.
German Confederation. See Ger German Evangelical Protestant Church (United 8 tratee) is 1 lb having no confession of falth. Its ministers are assoclated in district unions. It has a membership of about 35,000 .
German Evangelical Synod of North America. Thls body aceepts books of the Lutheran and Reformed Churches, representing in the United States the State Church of Prussia, which ls a union of the Lutheran and Reformed bodies. It celebrated, Oct. 12, 1890, the semicentennial anniversary of its organization in the United States. The number nf members is abnut 300.00 .
Germanicus (jer-man'l-kus), Oasar, son of Nero Cla istinguished Roman, the jounger Antonia, a niece of Angut-
tus, was born B.c. 15. He was adopted hy Tiberius, his parental uncle, and marrled Agrippina, the granddaughter of Auguatus. When Augustus died (in A.D. 14) Germanlcus was invited hy the rebellious legions on the Rhlne to amaume the sovereignty, hut refused, and quelled the revolt. He then crossed the Rhine, surprised and defeated the Marai with great slaughter. Next year (A.D. 15), a campaign against the Catti and the Germans, led hy Arminius, resulted in a series of victories. The followlng year he again made lis way lnto Germany, defeated the Cherusci twice, and made an incursion into the country of the Marai. Tiberlus now became jealous of the glory of Germanicus, called him home under pretense of granting hlm a triumph, then, to get rid of him, sent him into the East to compose the disturbances in Armenia and Cappadocla. This he performed in A.D. 18. visited Fgypt the following year and dled on hls return to Syria (A.D. 19) under some suspicion of having been polsoned by Cn. Piso, the governor of Syria.
Germanium (jer-man'i-um), a mehy Dr. Winckler in 1885 . Its symbol is Ge ; atomic weight 72.3 ; has a melting polnt of about $1650^{\circ}$ F.. a perfect metallic luster and a graylsh-white color. Fifteen years before its discovery its existence had been prophesied by Mendelejeff to fill a gap in his periodic table between silicon and tin.
German Ocean. See North Sea.
German Paste, the name siven to made for feeding cage-hirds, such as canaries, larks, nightingales, etc. The following is one of various reclpes: one pound of pea-meal, half a pound of blanched sweet almonds, two ounces of fresh hutter, two ounces of molst sugar, fifteen grains of hay saffron. Mr and beat well with a little water, pase through a colander, then expose to the air till dry.
German Sarsaparilla, a name the roots or rhizomes of Cares arenaria, C. disticha, and C. hirta, from their being occasionally used In Germany as a substitute for sarsaparilla.
German Silver, Nicker Sicier, or PACEFONG, is an allop of copper. nictel, and zinc in different proportions, amongat which the following may be mentioned. Spoons and forks are made from 2 parts copper, 1 nickel, 1 zinc; knife and fort handles from 5 copper, 2
nickel, 2 zinc, a mixture closely resembling alloyed silver; addition of lead produces an alloy which appears well fitted for casts, and for mafing candlenticks, etc.; iron or steel, on the other hand, makes the alloy whiter, harder, and more brittle. German silver is harder than true silver, and takes a splendid, high polish. It melts at a red heat. the zinc being volatilized in the open air. It is attacked by the strong acids, and it is also affected by common organic acids, such as vinegar, and by some saline solutions.
German Tinder, or amadou, is prepared from the Boletus fomentarius, a fungus growing on the oak, birch, and some other trees, or from the Boletue ioniariue found on the willow, cherry, plum, and other trees. The fungus is removed with a sharp knife, washed, boiled in a strong molution of saltpeter, beaten with a mallet, and dried. In surgery it is sometimes used to stop local bleeding.

## Germantown (jer'man-toun), a

northern section of
Philadelphia, pleasantly situated on high ground about 6 miles north of the city hall. It was settled by Germans about 1683 immediately after the founding of Philadelphia, and here Washington attacked the British occupying Philadelphia, October 4, 1777, but was defeated. It is largely settled by business men of the city and contains many elegant residences.
Germany (jer'ma-ni; Latin, Gerland; French, Allemagne), the name given collectively to the states in Central Europe which constitute the German Empire. The limits of Germany have varied greatly at dififerent times; and at present there are large numbers of Germans in race and language who are not included within the boundaries of the empire, many being natives of Austria and Switzerland. As one of the Teutonic peoples, the Germans are akin by race to the Dutch, English and Scandinavian peoples. The capital of Germany is Herlin; Weimar was the temporary capital on the overthrow of the monarchy, 1918; other large cities are Hamburg, Breslau, Munich, Dresden, Leipzig, Cologne. The following table shows the component parts of the German Empire as it cyisted prior to the European war of 1014 18. BG the peace of Versailles, 1919 (gee Treaty), Germany lost Alsace-Lorraine (to France) and parts of Prussin (to Po-
land), and all her colonies. With the land), and all her colonies. With the abdication of William II. in 1918, Ger-
many became a republic. Pop, $50,000,000$.

Physical Features.-Germany", as regards its surface, may be divided into three dififerent regions. Farthest mouth is the Alpine region along the southern frontier, comprising parts of Bavaria, Wurtemberg, and Baden lying next to Austria and Switzerland. North of this the Suabian-Bavarian plateau extends to the montain resion of Central Germany, where the chain known as the Fichtelgebirge in continued east by the Erzgebirge and the Riesengebirge, forming the boundary next Austria; west by the Thuringerwald, Rhöngebirge and Spessart, farther north lie the Harz Mountains. The great plain in the north extends without interruption to the German Ocean and the Baltic. Germany is remarkably well watered. Its central mountain region and plateai form part of the great waterohed of Europe. The Danube proceeds across it in an eastern direction, and the Rhine, though it neither rives dor terminates within Ger.
many, flows within it for the greater part of its course. After these come the Eibe, the Oder, Weser, Main, Neckar, Monel, Ems, and Eider-all of which are navigable. Germany ponsemes much and varied minerai riches, the most important minerals being bituminous and brown coal, iron, sinc, lead, and salt. Tin, quicksilver, antimony, suiphur, marhle, kaolin, asbentos, freentone, etc., oceur in various iocalities. Germany is likewise extremely rich in mineral waters, especiaily in the southern parts. Though the country extends over $812^{\circ}$ of latitude, its mean annual temperature is remarkahly uniform. This is owing mainly to the different elevations of the surface, the iow piains of the north having a higher, while the bills and plateaux of the south have a lower temperature than their latitudes might seem to indicate. The mildest climate is enjoyed by the valleys of the Rhine and tbe Main.

Agrioultural Producto, Etc. - Thene are varied and numerous. With the exception of the loftier mountain districts, where the surface is fit only for pasture, the growth of all the ordinary cereals is universal. Potatoes, hemp, and flax also form most important crops, and in many parts the sugar-heet is cuitivated on an extenaive scale; also tobacco and hops. Wine is produced in many districts. The cultivation of the vine diminishes in importance from southwest to northeast, but is carried on to some extent even in the Prussian provinces of Saxony, Brandenhurg, and Posen. Great quantities of other fruits are produced, principally the apple, pear, plum, and cherry. The forests are of great extent and value, particuiarly in the mountain districts. The central plateau is more sparingly wooded, hut the eastern part of the north piain has extensive forests. This plain is larsely sandy, hut has heen made to yield ahundantly and furnishes graving grounds for large numbers of farm animals. Amons domestic animais, the horned cattle of the districts along the North Sea and the Baltic, the sheep of Saxony and Silesia, and the swine of Westphalia have long been famqus. The horse, except in Schleswig-Holstein, East Prussia, Mecklenhurg, and some other parts, appears to he much neglected. Game is very ahundant, and includes, in addition to the smailer kinds, the boar and the wolf. Fish are numerous, both in the rivers and iakes.

Manufactures.-Linens are made in every part of Germany, hut more especially in Weatphalia, Silesia, Bohemia, and Sainony; woolens in the Prusaian provincen of the Rhine, Saxony, Bran-
denburg, and Silenia, in the kingdom of Saxony, and in Almace; the cotton manufacture conatituter the chlef manufacturing induatry in Alsace-Lorraine, the kingdoms of Saxony and WUrtembers, and the grand-duchy of Baden, and flourinher in Bavaria, Prusain, and other parts; the siik manufacture flourishes in the Rhine provinces and in Baden; iron manuinctures are carried on in most of the statem, hut principally in Prussia, AisaceLorraine, Bavaria, and Saxony; steei is largeiy manufactured in the Rhine provinces. The manufactures of beet-root sugar, of leather, of metals, porcelain, giass, fancy flowers, hate, musicai instruments, watches, ciocks, wooden wares, including toys, etc., are likewise important ; and breweries and distilleries are to be met with everywhere, beer being the favorite beverage of the Germans. Stettin is one of the principal shiphuliding centers in the world and the Krupp ironworks at Essen are unrivaied.

Commerce. The commerce is very extensive, and is administered and suided by special iaws of a union called the Zoliverein or Customs Union, which emhraces the whole of Germany and also the grand-duchy of Luxemhurg. The exports and imports comprise a great variety of manufactured goods and ravi products. The manufactures of Germany are now sent to all parts of the world; and in various places there is a gtrong competition hetween German and British goods. By far the principal seaport is Hamburg; others are Bremen and Bremerhaven, Stettin, Königsberg, Dantris, Lubeck, etc. The total length of railways is over 37,000 English miles, of which all hut about one-twelfth are state railways. By the iaw of Dec. 4, 1871, a uniform gold standard was introduced for the monetary system of the whole German Empire. The denominational unit is the mark, nearly equal to 1s. of British money and divided into a hundred pfonnige. Since 1872 the French metrical system of weights and measures has been in lorce throughout the German Empire. See Decimal System.

Finances.-The revenue is derived prin. cipally from the customs duties collectel throughout the Zoiiverein, from excise duties on heet-root sugar, salt, tobacco, and mait, and from the contrihutions made by each state in proportion to its population. According to the budget for year ending March 81. 1911. the revenut amounted to $2.853,781,095$ marke, of which customs and excise were entimated to yield $1,441,620,000$ marks. The chip? item in the expenditure was on military administration, amounting to $808,740,757$

Germany
mark. The eutimate for the navy was 412,173,342 marke. A mark is equivalent to 23.8 cents. The debt of the empire is of no zreat amount.

Cometitution.- The constitution of the German Empire is hased upon the decree of the 16th of April, 1871, which took effect on the 4th of May foilowing. The presidency of the empire belongs to the crown of Prussia, to which is attached the hereditary title of Emperor of Germeny. The prerogativen of the emperor are to represent the empire in its reiation to other atates, to declare war if defensive, and conciude peace in name of the empire, to contract alliances, etc. The emperor has also the supreme command of the army and the navy, appoints and dismisses oficials of the empire, appoints consuls, and superintends the entire consulate of the empire. The legislative anthority is vested in the Bundesrath (Federal Council) and the Reichstag (Imperial Diet), the former consisting of 68 reprementatives of the different states of the empire, 17 from Prussia, 6 from Bavaria, 4 each from Saxony and Wurtemberg 3 each from Baden and Hesse, 1 from Saxe-Weimar, etc. The Reichstag consists of 397 deputies elected hy secret voting in all the states of the empire.

Army and Nevy.-Service in the army or navy is obligatory on every man in Germany from the 1st of January of the year in which he completes the twentieth jear of his age to the end of his fortymecond year, unless he be released altogether, or for times of peace, hy the competent anthorities. Seven jears must be spent in the standing army or fleet (three of them in active service in the cavalry and two in the infantry, and the remainder in the reserve). The next five yeare are passed in the Landwehr, the members of which may be caiied out only twice for training dnring that period. All men capahle of bearing arms who are not in the line, the reserve, or the Landwehr, must belong to the Landsturm, which is called out only in case of invasion of the territory of the empire. Young men above seventeen years of age who are abie to pass an examination unon general subjects, and who volunteer ic active service in the army, and agree to equip and maintain themselves during the time that their active service lasts, are admitted into the reserve after one gear's continnouls service. The peace strength of the army, in 1915, wns 870,000 men, and the total war strensth of trained soldiers $5,400,000$. The German navy consisted, in 1915, of 100 hattleships and armored cruisers, 308 torpedo boats, and destroyern, and was being rapidly added to,
eapecially with battleahipy of sreat aice and power.

Religion and Einostion. While the Roman Catholic Cbnrch is mitrong in Germany having a membernhip of more than $20,000,000$, the Protentant denominations are greatly in the lead, having nearly double this memberthip. There are alow over a half million of Jeww. Education is compuleory thronghont Germany: Every commune or parish must support at its own cost a primary mehool. Every town in addition must maintain one or more middle schoois, which supply a higher education than the elementary schools. Above theme are real achools (Realschulen) piving a still higher edncation, institutions of aimilar standing called oymnasiums, siving an education in which the ancient ianguages form a more important element, and, above all, the universities, of which there are 21 in the country, the chief heing those of Berlin. Leipzig, and Munich. The Germans as a whole are perhap the bent educated people in the world.

History. -The date of the first arrival of the Germanic or Teutonic races in Europe is nnknown. At the close of the second century B. O. Germanic tribes called Cimbri and Tentones left their homes in the Danish peninsula, and descending npon Italy, were defeated hy Marius at Aque Sextio (Aix in Provence) and Vercelle in Northern Itaiy. The Romans did not again come in contact with the Germans till Cuesar's invasion of Gaul bronght on a contest with the Suevian prince Ariovistus ( 58 B.C.). At that time several German trihes had crossed the Rhine and settled in the district between that river and the Vosges Mountains, whilie others had pnghed their way through what is now Belsium. The Germans on the left bank of the Rhine were soon subjugated, and two expeditions were made by Caesar across the Rhine. Under Augustus a systematic attempt was made to suhjugate the vast and little-known region of Germania extending hetween the Rhine and the Vistula, and from the Danube to the North Sea. Tiberius rednced all the tribes hetween the Rhine and the Eibe, hut a few years later there was a revolt, in which three Roman legions under Varua were annihilated by Arminius, leader of the Cherusci, abont 9 A.D. The attempt to subjngate the Germans was given up by Angustus; and Germanicus, althongh he avenged the defeat of Varus by a necemolon of campaigns, failed to recover the Roman ascendency. About this time each tribe or nation among the Germans is dewcribed as having been di.
vided into four classen: 1. The nobles, from whom the kinge and chiefs of the districts were chowen. 2 The freemen, Who, with the nohles, had the risht to choose their residence and hold heritable property, and who formed the chief strength of the armies and voted in the popular assemblies. 8. The freedmen, a middle class between freemen and slaves, who had no landed property, but farmed the land; they were not admitted to the popular assemblies. 4. The slaves, who were entirely in the power of their masters. In religion the Germans were polytheists. Amons their great gods were Woden (or Odin), Donar (Thor), Thiu (Tyr), Frisga, etc. They erected no temples and had no idols, hut helieved in a future life and in eternal justice.

As the aggressive force of the Roman empire abated, it continued to be more and more subject to the incursions of the Germans, who hy the end of the fifth century had overrun Gaul, Italy, Spain, and part of Africa. After this Germany itself continued in a divided state till it came under the single rule of Charlemagne. (See France.) The history of the German Empire proper commences with the Treaty of Verdun ( 843 A.D.) , which separated the land of the Eastern Franks under Ludwis the German from that of the Weatern and Central Franks. Out of Ludwig's kingdom was developed the German nationality. Charles the Fat became emperor in 881 , and three years later was also elected king of the West Franks, thus again uniting under one scepter the monarchy of Charlemagne. After his deposition in 887 the two territories of the Eastern and Western Franks were again separated, the former electing Arnulf as their king. He died in 899 , and was succeeded by his infant son Louls, who was proclaimed King of Lorraine in 900 , assumed the title of emperor in 908 , and as such is designated Lonis IV. He died in 911, and the German nations chose Conrad, Count or Duke of Franconia, as his successor. He died in December, 918, of a wound received in battle with the Huns. In 919 Henry the Fowler, Duke of Saxony, was elected. He was succeeded hy his son, Otto the Great in 936, who revived the empire of Charlemagne, receiving the crown of Holy Roman Empire from the pope in 962. He died in 973 , and was succeeded hy his son, Otto II, who had been crowned emperor by the pope in his father's lifetime. Henry II, Duke of Bavaria, marnamed the gaint. the hereditary heir of the Sazon line, was elected at Mainz, on the death of 0 tto in 1002 , crowned emperor in Rome 1014 and died in 1024.

With him ends the Sazon line of emperorm
Conrad II, surnamed the Salle, a Franconias nobleman, was chosen to graceed him. He spent several yearm in Italian ware, defeated the Polem, and restored Lusatia to the empire. He died in 1039. He was succeeded by his son, Henry III, who had been chomen in his lifetime, and who, the imperial power being now at its hishent point, exercised more deapotic authority in Germany than any of his predecessors. The fruits of his policy were lont hy his won, Henry IV ( $1056-1108$ ). In his reign occurred the famous quarrel with the pope regarding investitures, which ended in Henry having to humble himself before the pope at Canossa. His life was embittered hy contests against rival emperors and later by the defection to the papal party of his own son Henry, by whom he was eventually deponed. Ilenry $V$ (1106-25) inherited, however, the quarrel of the inventitures, took Pope Paschal II prisoner, and was excommnnicated by seven councils. At length the question of investiture was settled hy the Concordat of Worms (1122). On hil death there was a contested election and a civil war between Lothaire, Duke of Sazony, and Conrad of Hohenstaufen, in which the former was successful.

A contest was now hegun between the Saxon and Hohenstaufen (Suahian) families, in which the celebrated party names Guelf and Ghibelline originated. On the death of Lothaire in 1138 Conrad III (of Hohenstauten) was chosen to succeed him. Conrad died in 1152, and was succeeded by his nephew Frederick Barbarossa (which see). His son, Henry VI, began his reign with a war in Southern Italy. He conquered Sicily, and was crowned king of it in 1104. He died at Messina in 1197. Philip, brother of Henry, and Otto IV, were elected by rival factions in 1108. Philip, who was successful, was assassinated in 1208. Otto IV, the son of Henry the Iion, was recognized by the Diet of Frankfort in 1208 as the successor of Philip. He attempted the conquest of the Two Sicilies without success, and died in 1218. Frederick II. King of the Sicliles, was elected emperor in 1212. His life passed in contentions with the popes and the Lombard cities. He died in 1250. Conrad IV, his son. had to contend againgt William of Holland. He died in 1254. He was the last emperor of the house of Hchenstaufen, which hecame extlict on the death of his son. His successor, William of Holland, was slain in Frienlynd in 1256. Richard, Enal of Cornwill, and

Alfoneo X, King of Cautile, wore chomen omperors in 1257; but the internal difitelone of Germany had eireedy doprived the ofice of all authority, and neither of thom had any power. Until 1278 the German Emplre had no real heed.
Rndolph, Count of Hapeburg and Cyburs, the mont powerful prince in Hel. vetia, was chosen emperor in 1272, and under him and his succewors the statua of the empire wat rentored. He enriched his own Comily hy hil victories over the King of Bohemia, and acquired Anstria, 8 styia, and Carinthia as imperial gefi for his rons Albert and Rudolph. He died in 1201. Adolphns of Naskan, his yuecensor, was deposed in 1208 bj the Dhet of Mains. Albert I, mon of Rndolph, way chomen emperor the mame year. He is chlefly celebrated for his warr with the 8wis as Dnke of Austria, which led to the independence of switteriand. He died in 1308, and was unceeeded by Henry VII of luxembours, who, during nearly the whole of his reign, lived in Italy, where he died in 1313. In 1814 a donble election took place, Frederick. Duke of Anstria, sometimes called Frederick III, was elected alons with Lovis of Bavaria. On the death of Frederick in 1330 the latter became sole emperor. He died excommnnicated and deposed in 1317. Charles IV, King of Bohemia. wai elected in 1346. His reisn is chieily diar tinguiched for the Golden Bull (1856) regulating the electorate. (See Golden Bull.) He died in 1378. Wencenlaus, hils son, wae deposed for his axcesses in 1400. Rnpert. Connt Palatine. elected in 1400, possenved little anthority. Sigismund. King of Hnngary and Bohemia. con of Charles IV, was elected by a party in 1410. His relgn is distinguished by the commencement of the Reformation in Bohemia, by the Council of Constance, and the condemnation of Hins and Jerome. He died in 1437. Albert II (V of Anstria) was elected in 1438, and died in 1439. He was succeeded hy Frederick III, Dnke of Styria and Carinthia. He was the last emperor who wai crowned in Rome. Thenceforth the German emperors were always of the honse of Anotria. He died in 1493 . His son, Maximilian I, surceeded. During his reim the Diet of Cologne was held, which divided the estates of the empire into ten circles for the better maintenance of the public peace.

Dnring the period here briefy reviewed the empire had nnder:one many changes. At the extinction of the Cariovingian dynasty Germany was divided into five natonis or dukedom-Franconia, Suabia,

Bavaria, Sazony, and Lorraine. Heary the Fowler and the Oitos added the marchoce of Auatria and Memia, Heary the Lon and Albert of Brandeabure added Mecklenbare and Pomerania. The bouce of Auntria added Styria, Carinthis, Oar niola, and the Tyrol. But Bwitseriand had been loit, and the old Burgundian territories of the empire, Francho Comt\%, the Lyonnaits, and Provence, had sone to consolidate the French monarchy nader Lonit XI. Bohemia and Hungary, and many of the Italian citien espectaily in the noth, were also connected with the empire, but the connection was more formal than real, and the circles eutablinhed by the Diet of Cologne (1012) repremented at that time the entaten of the empire, vis: 1. Anstria, 2. Bavaria, 8. Suabla, 1. Franconia, 5 . the Upper Rhine (Lorraline Heme, otc.), ${ }^{6}$ the Lower Rhine, or the Blectorates (Mains, Trier, Cologne), 7. Bargundy (Netheriande); 8. Wentphalia, 0. Lower Sarony (Bruntwick, Lanebnrg, Lavenhurg, Holutein, etc.), 10. Upper Saxony (8axony, Bran: denbnre, Pomerania, etc.).

The chief political machinery of the empire was connected with the diet. or adminiatrative amembly. The exact conutitntion of the carly German diets is not known. In the 12 th centiry the connts of the empire became distinguished from the princes, and loat the right of roting in the diets. The election of an emperor wan at first nndertaken by the whole diet. In the 18th century the number of electors was restricted to veven, to which two more were afterwardis added. (See Elector.) The diets were called by the emperor at his own pleasure, but as they had the power of grant$\operatorname{lig}$ supplies their meetings were frequent: and as their anthority over the difierent states was partial, and their policy could only be carried ont by the execntive force of the emperor, they can hardly be regarded an an independent power in the atate. Neither the time nor the place of meeting of the diet was at first fixed. From an early period the cities of Ger. many were represented in the diet. In early times they generally snpported the authority of the emperor, as their interest was common with his in diminishing the power of the greater vasale. Mnnicipalities were at frot established abont the reign of Frederick 1 , and 100 on began to essert their independence. The predatory hatitu of the nohlen, bended the clams of superiority over entire cities or particular citizens asserted hy the princes, involved the cities in continual wariare with the feudal nobility, and often alleo with their ecceleviabtical maperioren The
necomity of defenaiag their privieges compelled them to enter into leagues amons thempeives. Amons the earilient of thewe combinations was the Hanseatio Iengue, formed to remiat both the oppres. alon of rulers ind the depredationa of land and mee robbern 4 ieasue was formed in 1250 by more than sixty eities of the Rhine, headed by the three ecclediastical electorm, to renist the depredstions of the lesser nobles. The suabian League, lormed in 1376, was of similiar oricin. Theme leagues were met by counter-ansociations of nobles and princen.
Maximilian, who succeeded to the empire in 1403, was succeeded in 1519 by his arandeon Charies V. (See Maximilion I, Charles V.) The reion of Charies, the mont important in the Cerman annais and the most brililant in the 10th century, was divided among three great conflictsthe continued struggie between France and Germany, the conflict with the encroaching Ottoman empire, and that with the Reformation. In 1550 Charles resigued the empire to his brother Ferdinand. The Councli of Trent was concluded in Ferdinand's reign. He died in 1504. Then followed Maxmilian II, Rudolph II. Matthias and Ferdinand II. By this time was begun a rellgious war, by which Germany was devastated for thirty, years, hence calied the Thirty Yea: war.
The invasion of Germany by Christian IV of Denmark in 1625, the Pence of Lubeck (1629), the Invailon of Gustavis Adolphus (1630) , the battles of Leipzig in 1631. of the Lech and Latzen in 1832, of Nyrdingen in 1634, the war with France in 1635, beiong to the history of the Thirty Years' war (which see). Ferdinand died in 1037, and was succeeded by his son, Ferdinand II. The latter had gained a military reputation by the battle of Nordingen. but Baner, Bernhard of Saxe-Weimar, Torstenson, Turenne, and the Great Conde gained repeated victories over his tronns. He was at length induced to enter into negotiations: and the Thirty Years' war was concluded by the Peace of Westphalia (24th Octoher, 1848), in which the policy of France and 8 weden was triumphant. The prinripal conditions which concerned Germany were a general amnesty and restoration of rights. France received definiteiy the bishoprics of Metz. Toul, and Verdun, with Breisach, Tpper and Inwer Alance, and ten imperial cittes in Alsace. Sweden recelved Rugen, and Hither Pomerania and part of Farther Pomerania, with some other territories. Greater power was given to the Protestants and the right of the princes and states to
$: 1-U-3$
make war and alliances among thembelve. or with foreiguers was recognimed.
The emperor died in 1657. Hin yon, Leopold 1, was elected emperor in 1008. The suecem of Louls XIV in his invaion of Holiand led to a condition againat him, in which the emperor joined (1673). Thi war was continued for nome yearr, and terminated by the Peace of Nimeruen, 1879. The League of Augaburs, in which the emperor joined, led to a wecond protracted war with France, which wai concluded by the leace of Ryawiek. In 1692 the emperor erected Hanover into an electorate, and in 1700 he permitted the Fiectur of Brandenburs, Frederick III, to take the title of King of l'rumela. The war of the Spanich Succession, in which Great Britain, Hoiland, and the empire were lengued against France, was begun in 1702. To it beiong the victorlem of Marlborough and Eugene (Bienheim, Oudenarde, Baipiaquet ). The Emperor Leopold died in 1703. He was succeeded by his son, Joseph I, who died in 1711. Joseph was succeeded by his brother, Charies VI. (See Oharles VI.) The alilance against France was dissoived by the Peace of Utrecht in 1713, to which the emperor refused to sccede, and waa left alone against France. After a brief campaign between 1rrince Eugene aud VIIlarm he acceded to the Treaty of Rastadt, negotia ted between these commanders, 7 th March, 1714. The Spanish Netheriands, and Napies, Milan, Sardinia, and other Italian conquesta were left to the emperor. Having no maie heirs, Charien had promalgated in 1713 the Pragmatic Sanction, reguiating the succession to his hereditary dominions in favor of his daughters in preference to those of his brother, Joseph I. He dic? in 1740. Charies Albert, elector of Bava :a, mon-inlaw of Leopold I. got himself chosen emperor (as Charles VII) in 1742. He laid claim to the hereditary posseasions of the Honse of Austria. and entered into an ailiance with France, Spain, Prumia. etc, against Maria Theresa. daughter of Charies VI. But he died in 1745, and Francis I. Grand-duke of Tuscany, the husband of Maria Theresa, was elected emperor; thus the Honse of HapsbursJorraine, which had succeerled to the hereditary possessions of Austria. was recognized as the head of the empire. After a brief intervai there took piace the Seven Yeara' war (1750-A3), In which Austra. Russia, France, and Saxony comhined against Prussia, then raled by Frederick the Great. The Peace of Hubertsburs (15th Feb., 1763) concluded the war. Prussia retaining her acquil. tiopa. In 1765 Joseph II succeeded to
the imperial crown, becoming at the rame dime corregent with his mother of the Anotrian heredleary dominione Ho joined with Ramele and Pruanis in the arme partition of Poland (1772). Ho wat zucceeded by his brothet Loopold, who, dring in 1792, was auceoded by hle con, Fran: cis II. Ho jolned is 1703 in the eecond partition of Poland. Be took the coms. mand of his army agalnat the French in 1794, concluded the Peace of Campo For milo with Bonaparte (17th October, 1797) joined the wecond coalition against France In 1799, and concluded the Treaty of Luneville ( 8 d February 1801); joined the third coalition in 1806, and concluded the Treaty of Presburr ( 20 th December, 1805). In 1804 Francia took the title of hereditary Emperor of Auatria, renounclis two years later that of head of the German Empire, which, indeed, had censed to eriat, owing to the conquente of Napoleon.
The States of Germany were again united by the Treaty of Vienna (1815). in a confederation called the German Confederation (der Deutiche Bund). In 1818 a seneral commercial league, called the Zollverein, was projected by Prustia, and was gradually joined by most of the German states, exclusive of Austria. Revolutionary outbreaks caused great difturbances in various German states in 1830 and 1848. particularly the latter. The German diet was restored in 1851 by the efforts of Prussia and Austria, who became rivals for the anpremacy in the confederation. In 1866 the majority of the diet anpported Austria in her dise pute with Yrussia respecting the disposal of the duchien of Schleswis and Holstein, whereapon Prussia withdrew from the confederation and declared it dissolved. The Seven Weeks: war between Austria and Prusnia ended in the defeat of the former, the loss of her Italian possessions, and her exclnsion from the German Confederation, which was re-formed by Prussia under the title of the North German Confederation. After the Franco-German war (which see), in which the Sonth German states as , well as the North German Confederation, supported Prussia, King William of Prussia was proclaimed German Emperor at Versailles on 18th Jannary, 1811, the new empire comprising all the German Statees with the exception of Anstria. The parliament of the new German Empire met at Berlin on 21 st March, and adopted the new constitntion. William I died in 1888 and was succeeded by his son Frederick, who, however, died in the mame year, from a cancerous affection in his year from a cancerous and was succeeded by bis son os

William 1I. Since the unity of the acopire was attained endeavorn have beem made to evtabilish a colontal cmpiro, principally In Africa, including Gorman East and Southweot Africa and a larse tract of land in the reyion of the Frencl Conso, adjoining the German Kamerun protec torate.

In Polynena, Germany nequired a portion of New Guinea, the Blwmarck Archipelago, and some of the Solomon and Marshall Idlands. It had also taken powsemsion of a seaport region of northern China, with the surrounding inland section. In 1914 it took up the quarrel between Austria and Servia, fomenting a War in which the leading nations of Europe became engafed, and subeequently those of Avia and America. An regaris the colonial posectaions of Germany, ahove mentioned, it will suffice to may hetu thnt they were all lost in consequence of the war. For the conflict that followed the Servian trouble, the greatest, in several respects, in the history of the world, Germany was amply prepared, having been transformed into a military machinc, without equal elsewhere on the earth. For a century it had been developing its system of militarism, and, by 1014, the nation had become a trained army of. unequaled efficiency, while its military equipment was, in many respectn, completr. Austria, its chief auxiliary in the war, was also in good fighting order, but the same was the case with its nelgiboring enemles, France and Russia, which had followed the example of Germany in developing a system of milltarism. This was not the case with Britain, which had no system of conscription or general training. But, on the other hani, it had the decided advantage of possessing much the greatest naval foree in the world, this givIng it control of the sea so far as surface navigation was concerned. Such was the position of Germany and its chief enemies when the great European War began in August, 1014. The kaiser, William II, had complete milltary control of the nationul Teutonic fighting machine and had long cherished an ambition to lift Germany to the position of autocrat over the narions of the world. At all events, such was apparently the case, it being a very widespread opinion that Kaiser William had made the murder of the Austrian Archduke the pretext for plunging all Europe into war for purposes of his own. In the diplomatic correspondence that sollowed, the voice of Anstria is scarcely heart, the dealings of Russin, France anil Britain being with Germany alone.

Germany took the opening part in the

Ths that way thus forced upon Nonpops the vasguard of ite army botes acr mio the bonder of Belglum before the exchang: of diplomatic noten had eaded and wat been opealy declared. This basty action wes them advisediy, the purpoo being to in. rade Erance by a dank attack through Belglum before it could get ite army erectively into the feld. Belglum, amall as it was, defeated this cheme, holdins beck the lnvadern while the wort of mobllfantion in France went actively on. Whe the German Invaders at length cros the French frontier, a powerful and wa! equipped army was ready to meet rber At oret, indeed, it seemed as if the dur, Acter of 1870 was to be repeated, the fri in ?h forces, with their amall Britioh "'nt:i" gent, falling back before the viouruls German advance until the hant: +1. Marne were reached and the? ritue i. femsers of Paris brought aly.n... wit ut? cannon range. Then, with 1 inw. Ph reverse movement, the armles of Eta co were harled upon thelr foes and riap 6 man forcem driven lrresiutibly bact untis thelr line of defense on the Alane wo reached. Here a trench lline had been pir. pared and at this point began the syste; of trench warfare which was to be continned in that quarter for jears. In the spring of 1018 the Germans pushed agaln into France, but were stopped and beaten back with the ald of the Americans, who had entered the war in 1017. This last desperate drive was unsuccessful, and to avold disaster to the German armies, they were compelled to heat a retreat that became a rout. (See IIfrne, Chateas. Thieriy, Argonne, St. Miniel, Sodwsons.)
We must deal more briefy with the events of the war ln other fields. On the castern frontier the large army of Rumaia was quickly in the field, successfully at first, but meeting with disastrous defeat in the invasion of Poland by the army under Von Hindenburg. Warsaw was lont and the Russlans driven out of the Carpathlan region. The revolntion that eventually overthrew the imperial government of Russla so utterly disorganized that conntry that its armies practically ceased to exist, and propositions for an armistice between the extremists who gained control of the Russlan sovernment and the astute German diplomats were made. Another field of warfare in which Germany tool active part was that of Italy, the armien of which had made marked advances upon Triest and Trent, during two yearm of persistent war with the Austrians. In November, 1017, atrong German army came to the ald of the Autrians and to effectivels that the

Itallans were difien back to :line of the Pave. Inter in the war fo Italinns turned the tables and foreed tio Autrinna to murrender, November 4, 1018. The German armiatice, which followed a crumhing sories of Allied attacks in France was ilsmed November 11. 1018. Germany's navy, beyond a well-Lonstat battle of the coant of Jntland (q. V.), remained for the mont part in home ports, and ienominioumly aurrendered to the A1life withont a show of Aght. - Her in an I, ngwage.-German is one of Teutonic languages, of Aryan or i. ?c. MMpps, atock. Of these, the Gothic, row long extinet, precents us with cic. -llest apeciment of any Teuwnic spuech that we possens in the fras-
its of a translation of the Bible mare by Bishop Ulalam about A.D. 300. Anslo Saxon comes next: German followe someWhat later. The German dialects anoken In the lower and more northern locallites have long exhibited considerable ditier. ences from thome apoken in the highor and more inland, thus firing the to the distinction between Figh German and Low German. Mlddia Eish German became literary In the twelfth century, its poetry giving it a predominance as far as $\Delta u s$ tria. The following century Suabian was the predominant dialect, and its infuence is apparent in all the writings of the fourteenth and fifteenth centuries. Ultimately Upper Saxon became the language of literature and cultivated melety in conseqnence of the translation of the Blble by Luther, 'ich may be said to have fixed the Nev ligh German.

German Literath, "-The Ilteratnre of Germany received its first impulse from the fondness of the early Germanic races for celebrating the deeds of their gods anil heroen. According to Taritns, the warriors would advance to attack chanting wild war-songs. Of these early songs nothing even in a translated form has been handed down to ns. The legenis immediately connected with the Gothic Erankish, and Burgnadian warriorz of the period of national migration-Dietrich (Theodoric) Slegtried, Hildebrand, ete. have for the most part some historical fonndation, and many of them were eveatually incorporated in the IVIboinmgenilith
the most celebrated productlon of Germar medleval poetry. On the introducthon of Christianity was opened another sphere of literary actlvity. Metrical tratislations of the Evangelists, the Krint and Heliand, appeared in the ninth century in the High and Low German dlalects, respectlvely. The Ludioigslied, a gean in honor of the vlctory of louis III, king of the Franks, over the Normans in 883, was composed in Oid High German by a Frankish ecclesiastic. The preservation of the Hildebrandlied is also due to churchmen, who transmitted it partly in the High and partly in the Low dialect. The Merseburger Gedichte, two songs of enchantment written in the tenth century, throw light on the ancient religious hellefs of Germany; but in general the hostility of the clergy to the old pagan literature of heroic legends, beastlables, etc., was not favorable to its preservatlon.

In the twelfth and thlrteenth centuries poetry passed from the monasteries and ecclesiastical schools to the palaces of princes and the casties of nobies. Under the cultured emperors of the house of Hohenstaufen the first bloom of German literature came. Many of the poets of this period were nobles by birth, some of them even princes. Heinrich von Weldeke was the first to introduce into his heroic poem Encit that spirit of devotion to women called by the old Germans Minne (love, hence the name Minnesänger, Love-Minstrel). A still greater name is that of Wolfram von Eschenbach. the author of Parzical, a poem embodying the legends of King Arthur, the Knights of the Round Tabie, and the San Graal (Holy Grail). These traditions, together with the exploits of Charlemagne, of Alexander the Great, and the Trojan herops, inspired also the lays of Gottfried of Strasburg, Hartman von der Aue, and others. These subjects were all taken from the romances of the French trouredres, and treated in a style closely resembling thirs. But we have besides real national epics in the Nibelungenlied and Gurrun. (Sce Nibelungenlied, Gudrun.) The lyrics or minnesongs of this period are not less remarkabie than its romances and epics. Perhaps the most gifted lyrist is the celebrated Waither von der Vogeiweide. Next to him rank Helarich von Ofterdingen, Relnmar der alte, and the Austrian pnets Nithard and Tannbäuser. Several hundreds of these poets were engaged ln traveling from palace to palace and from castle to castle, in the manner of the troubadours of Provence. Their songs were mostiy in the Yuabian dialect, and
the poets constituted what is called the Suabian school. In the thirteenth certury didactic poetry beroth to be cult: vated with some success. The dawn of historicai literature ls heralded by the chronicles of Limburg (1336-98) and of Alsace (1386), hut the age of chivalry, as Uirich von Lichtenstein complained in his poem F'rauendienst, was decllning. During the troublous times of the Interregnum (1256-73) poetry passed to the homes of the prlvate ritizen and the workshops. These plobeian sungsters formed themselves iste guilds in the lmperial cities-Nurnhers, Frankfort, Strasburg, Mainz, etc., and were called Meistersünger, in contradistinction to the knightly Minnesänger.

In the fourteenth century Germany produced severai mystical theologians, discipies of Meister Wckhart, the most celebrated of whom were Tauler and Suso, whose sermons and writings pared the way, in some measure, for the Reformation. The only good poetry in the fourtepnth, and up to the close of the fifteenth century, were the splrited lays of Halb Suter and Veit Weber, who celebrated the victories of Switzerland over Austria and Burgundy. The invention of printing caused an increasing literary activity, and the works printed ln Germany between 1470 and 1500 amounted to several thousand editions. In 1498 there was published the celebrated beastepic Rcincke Vos ('Reynard the Fox'). Other nopular works were the Narrenschiff ('Ship of Fools') of Sebastian Brandt, an allegorical poem ln which the vices are satirized; The Satires of Thomas Mirner: and (in 1519) Till Erilenspicgel, a coliection of humorous stories about a wandering mechanic.

In the sixteenth century a new era opens in literature with Luther's translation of the Bible. The writings of Linther, Zwingli (1484-1531), Sebastian Frank (1500-45?), Melanchthon (14971560) Ulrich von Hutten (1488-1523), one of the chief writers of the Epistolar Ohscurorum Virorum, constitute the principal theoiogical literature of the Reformation. History was new written in a smperior styie, and with greater comprehensiveness, by Frank in the Zeitbuch and Weltbuch, and bv Sebastian Munster (1489-1552) in his Kosmographie: also by Tschudi (1505-72) in Chronicles of Sucitzerland and by Aventinus (1477?1534), the Bavarian chronicler. The autobiography of Gotz von Berlichingen also deserves mention as a sketch of the rude lives of the smaller nobility. Amons the poets of thls period Mane Sach (1294-1576), the cobbler of Nurem.
berf, the greatest of the Meisterslinger, and Johann Fischart (died 1580), a great matirist, and author of Das gluckhafte Schill, stand much above their contemporaries. Many of the hymns and relicious lyrics of the age are of high merit, particulariy those of Luther, Eber, Waldis, and others. The drama also made considerabie progress, Hans Sachs betore mentioned, and Jakob Ayrer (died 1005) being amongst the best writers in this department. But it was in learned and scientific treatises that the age was most proilic. Amongst the chief names in this respect are Luther, Camerarius, Cornelius Agrippa, Paracelsus, Copernicus (astronomy), Leonhard Fuchs (botany and medicine), Conrad Gesner (zoology and ciassics), and Agricola (mineralogy).
By the heginning of the seventeenth century iiterature was on the deciine. This century is known in German literature as the period of imitation. Most of the poets were graduates of yniversities; and learned societies were formed for the purpose of improving the language and literature. A new school of poetry, known as the first Silesian school, was founded, of which Martin Opitz (15971639) was the leader. His works are more remarkable for smoothness of versification than for true poetic inspiration. As a critic his work Dic Deutsche Poeteric became a kind of manual for verse makers. Amongst the chief members of the Silesian school were Simon Dach (1605-69), von Zesen (1619-89), Johann Rist (1607-67). and, greatest of ail, Paul Fleming (1609-40), whose lyrics are natural and cheerfui as the songs of a lark. Of this school also was Andrens Gryphius (1616-64), who may be said to have founded the reguiar German drama. The second Siipsian schooi, headed hy Hoffmann von Ilofimannswaidau (161879), and Lohenstein (1635-83), carried affectation to its utmost. Both the Siiesian schools were opposed hy the 'court poets; Canitz (1554-09), Besser (1654-1729), and many others who imitated the French schooi and took Boilear for their guide. Germany's greatest hymn-writer, Gerhardt (1608-75). helongs to this period. Among the bent satirists and epigrammatists were Ingau (1604-55) and Lauremberg (1591-165:9). Amongst novelists Moscherosch, with his Geschichte Philanders con Sittewald, and Grimmeishausen in his Simplicissimus give graphic pictures of life during the Thirty Years' war. Amongst the scientific and philosophic writers of the period we may mention Kenier (1571-1631), Puffoadorf (1632-94), the puhlicist, and

Jakob B8hme (1575-1624), the great mystic who stood almost alone in using the vernacular in communicating phiiosophical instruction. Leibnitx (16461716) was the first to lay a scientific basis for the study of philosophy, but his works were composed chiefly in French and Latin. Woiff (1679-1754), his discipie, shaped the views of his master into a comprehensive yystem, and published his works in the German language.

In the eishteenth century poetry revived with Hailer (1708-77), remarkable as a descriptive poet, and Hasedorn (1708-54), a lyrist of considerahle merit. The Saxon school headed by Gottsched (1700-66) aimed at a reformation of German poetry in the direction of French ciearness and correctness, modeling the drama as far as possihle on the works of Corneille and Racine. These tendencies hrought ahout a vioient controversy with a group of writers in Zurich, known as the Swiss school, and headed by Bodmer and Breitinger, who took the English poets as their modei, and laid stress on the function of imagination and feeling in poetry. The result of the controversy was that most of the young writers at Leipzig shook off the authority of Gottsched, and even estahlished a periodical (The Bremer Beitralge) in which the principles of their former master were attacked. Amons the contrihutors were Rabener (1712-91), a popular satirist with a correct and easy style; Zacharili (1726-77). a serio-comic epic poet; Gellert ( $1715-69$ ), the author of numerous popuiar hymns, fahles, and a few dramas now forgotten; Kustner (1719-1800), a witty epigrammatist and taiented mathematician: Giseke, Cramer, Fuchs, Ebert, and many others of more or less note. To the schonl of Haile belonged Kleist (1715-59), Gleim (1710-1803), a ceiebrated fahnlist. and others. Gessner of Zarich (1730-87) gained in his time a high reputation as a writer of idyis. With the writings of Klopstock ( 1724 1803) and Wieland (1733-1813) the ciassical period of German literature (usually reckoned from 1780) may be said to begin. Though the evic poem of the first (Messias) is no longer counted a poem of the first rank, yet Klopstock's work with its ardent feeing for the spiritual and subilime, is recognized to have had a beneficent effect on German literature. Wieiand, a striking contrast to Klopstock, awakened with his light and hriiliant verse a greater sense of gracefnlness in styie. But it was reserved for Gotthold Ephraim Lesaing (1729-81) to give a new direction to Garman literature. He established a new schooi ot
criticism and dealt the fatal blow at French infuence. His traizedy, Emilic Galotit, his comedy of Mimme von Bern helm, and his philosophic drama Nathan der Weise, were the best models of dramatic composition which German literature had yet produced, and his direction of the German mind toward Shakeapere and the English drama was not the least of the many impulses he contrihuted to the literary growth of his countrymen. Herder ( 1744 -1803), with his universal knowledge and many-sided activity, followed Lessing as another great infuence in the literary world. The researches of Winckelmann (1717-68) in ancient scnipture led to a new understanding of art, as those of Heyne in ancient literature mark the development of modern German seholarship. A union of the students at Göttingen University, where Heyne taught, gave rise to the Gottinger Diohterbund or Hainbund, among the members of which were Gotttried Aug. Burger (1748-94), anthor of Lenore and other wild and picturesque ballads and songs ; Yoss ( $1751-1826$ ), the translator of Homer, and author of one of the finest Cerman idyls, Luise, together with the two hrothers Stolberg, Boie, Hollty, Claudius, etc.

This period was followed by a time of transition and excitement known in Germany as the Sturm-und-Drang Periode (Storm and Stress period), which found its fullest expression in an early work of Goethe's (1749-1832), the Sorrows of Werther. The literary excitement was raised to the highest pitch hy the Rauber ('Rohhers') of Schiller (1759-1805) afterwards the friend and coadjutor of Goethe. By the joint exertions of these two great men German literature was hrought to that clasaical perfection which, from a purely local, has since given it a unirersal influence. Of a highly individual character are the works of Jean Paul Richter (1763-1825), a writer of profound humor and pathos; and Jung Stilling (1740-1817), whose autohiography holds a peculiar place in German literature for the charming naivete of its thought and style. In the departments of science and philosophy, we have the names of Moses Mendelssohn (17291786) : A. G. Baumgarten (1714-62), the founder of the science of mathetics; the historians Mosheim (1694-1755), Dohm, Moser, Spittler, Johannes Muller ; Adelung, the philologist ; Basedow and 'Pestalozzi the edncationalists ; Ernesti, Spalding. Rosenmuller, and Michaelis, theologians; Eichhorn in theology and universal and literary history; and the scientific writerm Blumenbach. Euler,

Vega, Herwchel, and otheres In the field of pure metaphywics Immanuel Kan: (1724-1804), was mucceeded by Fichte (1762-1814) Herel (1717-1831), and Schelling (1776-1854).

Partly produced by the influences of the Sturm-und-Drang period, and partly trained in the laws of art laid down and worked ont by Goethe and Schiller in their many famons and admirable works, the so-called romantic sohool, distinguished by its enthusiasm for medieval suhjecty and its love of what is mysterious and transcendental in life or thought, gradually succeeded in gaining public attention about this epoch. Amongst the principal writers of this school after its two great leaders are von Hardenberg, better known as Novalis (1772-1801), pensee-writer of deep poetic insight; Lndwig Tieck (17731853), a writer of tales, dramas, and dramatic criticisms; La Motte Fouqué, Clemens Brentano, Hoffman, Museus, Werner, vou Kleist, etc. The two Schlegels (August Wilhelm, 1767-1845, whose transiation of Shakespere is still celehrated, and Friedrich, 1772-1829, best known by his philosophy of history) also belong to this school.

The war of liberation against Napoleon I introduced a strong manly enthusiasm for a time into the hitherto gloomy and melancholy productions of the romanticists. Amons the patriotic poets of the time Ernst Moritz Arndt (1769-1860) and Theodor Kormer (1791-1813) hold the first place. The hallads and metrical romances of Ludwig Uhland (1787-1872) hrought him a world-wide fame. Friedrich Ruckert (1789-1868) also may be noticed as a lyric poet of merit. During the excitement prodnced by the Jnly Revolution in France (1830) a achool of writers arose in whose works the social and political ideas of the time were strongly refiected. The most prominent names among this party are Ludwig Borne (1786-1837) and Heinrich Heine (1799-1856), whose writings combine the keeyest satire and the finest pathos. Among the better fnown members of the school is Karl Gutzkow (1811-1878), a popular dramatist and novelist. As in England and France of late, the novel, especially the novel of a social or political character, has taken a prominent place in literature. Most distinguished are Gnstav Freytag, Fr. Spielhagen. Paul Heyse, Berthold Auerbach, Fanny Lewald, Hacklander, Reuter, etc. Of late. however, science and learning rather than literature and the arts have produced the names of most eminence. Alezander von Hum. boldt (1760-1859), one of the first and
mont eminent of theae, gave a great im- opment of the egg into the embryo. (b; pulve to almont all branches of znowledge In botany a cell contained in the embryo by his Cosmos, his Travels, and his Views of Neture, and by the seneral suggeativeneas of his labors. In hintory, Niebuhr and Theod. Motnmeen, the historians of Rome; Leopold Ranke, the historian of the popes; Dahlmann, Gervinus, Sybel (French Revolution), Giemebrecht, Julian Schmidt, H. Kurz, and others may be mentioned. Biography has been well represented by Varnhagen von Ense, Pertz, David F. Strauss, and others. German modern theolosy and Biblical criticism has had lately much influence in the relisious world. Baur, Bleek, and Ewald are some of the widely-known names. Histories of art have been written by Kugler, Burcthardt, Lubke, and others. The brothers Grimm-Jakob (1785-1883), Wilhelm (1786-1859), were the founders of a new branch of philological and poetic investigation in ancient German literature. Eminent names in general philological science are those of Bopp, Pott, Schleicher, Steinthal, and Friedrich Muller. In natural sciences, Oken, Burmeister, Carus, Cotta, Liebig, Helmholtz, Virchow, Schleiden, Grisebach, Vogt, Bessel, Brehm, Häckel, Bastian, etc., are the eminent names; in philosophy, Schopenhauer, Feuerbach, Romenkranz, Kuno Fischer, von Hartmann, Lotze, etc. Amongst recent poets Anastasius Grin (pen-name of Count von Auersperg) and Nikolas Lenau amongst Austrian, and Meissmer and Hartmann, natives of Bohemia, have a considerable reputation. Heryegh, Hoffmann von Fallersieben, Freiligrath, and Franz Dingelstedt have infused strong political sentiments into their poetry. Emmanuel Geibel, von Scheifel, Bodenstedt, and others represent a poetry more comprehensive in its aims and tendencies. To these might have been added numerous names of still later date, recent German literature having become very voluminous, though none of the existing writers have yet won eminence.
Germersheim (ger-mérz-him), a in the Bavarian Palatinate on the Rhine, 8 miles 3. W. of Sp.ier. Pop. (1905), 5914. Germinal (Fr. zhar-mé -nal), the French republican calendar, March 21 April 19:
Germinal Vesicle (jer'mi-nal), physiology, the nuclens of the ovam or egs of animals It contains within it a nucleolus called also the germinal spot. The germinal vesicle undergoes important changes in the early stages of the devel-

In botany a cell contained in the embryo Germination (jer-minanahun), the first act of growth by an embryo plant. The immediate causes of germination are the presence of moisture and atmospheric air and a certal. elevation of temperature. Moisture softens the integuments of the seed and relaxes the tissue of the embryo; atmospheric air supplies oxygen and nitrogen; and a temperature which must be at least as high as $32^{\circ}$ Fahr., by exciting the

vitality of the embryo, enables it to tako advantage of the agents with which it is in contact. During germination various changes take place in the chemical constituents of the seed, and are usually accompanied with increase of temperature, as is seen in the process of malting. Along with these other changes commonly take place: a root is produced, which strikes perpendicularly downwards and. fixing itself in the soil, begins to absorb food; a growth upwards then commences and ends in the protrusion of a stem and leaves.

## Germ Theory of Disease,

 the theory that certain diseases are communicated from an infected person to an uninfected one by living organisms which gain access to the body of the afficted person by the air or food, or drink, and which, growing and multiplying in the body they invade, produce the changes characteristic of the particular disease. The period during which the living particles of contagious matter retain their vitality like the rate of their growth and multiplication, varies in different cases, but it is limited in all. Few, if any, resist the destructive influence of a tem: perature of $300^{\circ}$ Fahr., while most succumb at the tomperature of $200^{\circ}$ or even less, particulariy if exposea for zumotime. Many of them are capable, how-
ever, of withstanding great reduction of temperaturew Animal possons generally are deatroyed by boiling, and clothes, sheets etc. infected, may be rendered pure by being exposed to a temperature of $300^{6}$ b'ahr. These living organisms are grouped together as microbes or micro-organisms, and are divided into different classes. The micrococcus is a round form about the 32,000th of an inch in size, and multiplies by fission. The bacterium is rod-shaped, about the 10,000th of an inch long, with rounded ends; it also multiplies by fisson. The bacillus is a third form also rod-shaped, and comewhat larger than tie bacterium. They often form lons chains or threads, and increame by division and by spore formation. Vibrio and spirilhum are somewhat similar forms ; and, like the others, increase with a rapidity beyond conception. The connection between these micro-organisms and the various forms of zymotic disease has been thoroughly established. The only method of investigation that yields reliable results, is to separate the organism supposed to be the cause of the disease, and cultivate it outside of the body. Thus a drop of blood from a person suffering from a special disease, which contains the bacteria, or bacilli, etc., believed to be the producers of the disease, is placed in a flask containing a nourishing material, care having been taken to destroy all other organisms in the flask. The special microbe flourishes there, let us suppose. It is then cultivated in one flask after another through successive generations, only a single minute drop of the material in one flask being used to inoculate a succeeding one. In this way a pure cultivation is obtained, a cnltivation, that is, containing the particular microbe and none other. If this is the true cause of the disease, then a drop of the solution containing it introduced into the body of an animal, capable of receiving the disease, ought to produce it, and the particnlar organism introduced should be found multiplying in the blood and tissues of the infected animal. Such a demonstration has been given of the cause of a few diseases. Dr. Koch, of Berlin, published in 1876 a paper giving a full account of the life history of the bacillus organism which had been observed in animals dead of splenic fever; and in 1877 the great French chemist, Pasteur, proceeded to investigate the subject, and his investigations conclusively support the germ theory of disease. In 1882 Dr. Koch, of Berlin, announced the discovery of a microorganlsm in tuberculosis,
sometimes called consumption when infecting the lunge This is found not caly in the lunge of pernons who have died of tubercle, but also in the saliva of tubarcular and consumptive patiente, and multiplies also by spores. Thus it is that the spittle of a convumptive patient, oven after it has dried up, may be capable of imparting the disease, owing to sporem being scattered in the air. After the epidemic of cholera in Egypt in 1883, which spread to France and Italy, investigations were undertaken by $\mathrm{I}^{2}$ rench, German, and British commissionerm. Dr. Koch detected a peculiar bacillus, shaped like a comma (,), in the intestine of persons who had died of cholera, in the discharges from cholera patients, etc. He believed that this bacillus was the active agent in the production of the disease. All investigation, in short, seems to point to the fact that every infectious or contagious disease is due to some form of micro-organism, and that there is one particular organism for each particular disease. Each organism produces its own disease and none other ; and the special disease cannot arise unleit its germ has gained entrance to the body. The channels through which these germs obtain entrance are innumerable, but they have one origin and one only, and that is a preceding case of disease. In the case of cholera and typhoid fever the deleterious microbes seem generally conveyed by impure drinking water; the germs of some other diseases appear to be transmitted by the air; others are conveyed by insects, as yellow fever by one species of mosquito, malaria by a second species, and sleeping sickness by the tsetse fly; even our common honse ty is known to be a source of danger in this direction. The 'germ theory' affords the hope and suggestion of a method of diminishing, if not of getting rid of, such diseases al. together, and to sone extent also indicates the direction in which their cure is to be sought. If the particular microbe of each contagious disease were known, the condition of its life and activity understood, there is great probability that its multiplication in the living body could be arrested, and the disease thus cured. Eiven without such knowledge, however. the germ theory indicates that the means for arresting the spread of contagious diseases and diminishing their occurrence consist in preventing the spread of the germs from an existing case of disease. It is well to state that the disease-bearing microbes are only a few of the many specles known. the most of them being harmless and really of great benefit to mankind,
in varions ways. Also to state that these abuts on the Mediterranean, is mountainorganinme are not all resetable, like the ous and mostly rugfed, but with many bacteria, some of them being animal. See Dioinfectont.
Gerôme (hatron ), Jear Lions, at Vemoul. He went to Paris and studied under Paul Delaroche. In 1853 be traveled in the East. In 1855 the first of his great pictures, Tho Age of Augustus and the Birth of Christ, appeared, and four years later his picture of the Roman gladiators, Ave Casar Morituri celebrated Phryne before her Judges.

Jean Léon Gérome fertile valleys, which produce olives, wine, whent, rye, etc. Pop. 290,287.
Geronimo (je-ron'i-mol), an Apache chief, noted in Americas frontier history. In 1884 and 1888, at the head of a band of hostile Indians, he was active in Arizona, committing many outrages on the white settlers. He surrendered to General Crook, in 1886, under an agreement that his band and their families should reside for two years in the East. But while negotiations were pending, he escaped with his followers to the mountains, where he remained until driven to exhaustion by General Miles. He and his associates were finally settled at Fort Sill, Okla.
Gerry (jer'ri), Elbridae, statesman, born in Marblehead, Massechusetts, in 1744. He was a member of the Continental Congress: delegate to the Constitutional Convention; member of congress 1789-93; commissioner to France 1792-98; governor of Massachusotts 1810-12, and Vice President of the United States from March 4, 1813, till his death, November 23,1814 .
Gerrymander ( $\mathrm{ge} \mathrm{r}^{\prime} \mathrm{i}$-man-der), in American political history the name, first used in Massachusetts in 1812, given to an unfair political arrangement of electoral districts. It had its origin from a bill signed by Gov. Elbridge Gerry, which so apportioned a senatorial district in Republican interests that from its fantastic shape on the map it was said to resemble a salamander. Gerrymander was substituted for salamander, and the name persiste to this day, although Governor Gerry was not responsible for the bill he signed.
His other works include Death of Casar, The Plague at Marseilles, Rex Mbicen, L'Eminencs Grise, and various scenes from Oriental life. M. Gerome was decorated with the Prussian order of the Red Eagle and made a commander of the legion of bonor. He died in 1804.
Gerona ( $\mathrm{ha}-\mathrm{r}^{\prime} \mathrm{B}^{\prime} \mathrm{na}$ ), a fortified town of
N. E. Spain capital of the province of Gerona in Catalonia, at the confluence of the Ona and the Ter, 52 miles northeast of Barcelona. It consists of an old and a new town, the former on the slope of a hill, with antiquated houses and a stately cathedral. There are spinning and weaving; also paper factories. Gerona was once the residence of the Kings of Aragon, and as a place of strategic importance has sustained many memorabie siegr. Pop. 15,787,The provaran area 2270 square miles,

Gers (zhār), n department in the s.w. of France, separated from the Bay of Biscay by the department of Landes: area 2425 square miles. The southern part is covered with ramifications of the Pyrenees separated by valleys, each of which is watered by its own stream. The chief of these are the Gers, Losse, Save, etc. More than half the land is under the plow, and about a seventh in vineyards. Much of the wine is made into Armagnac brandy. Auch is the capital. Pop. (1906) 231,088.
Gerson (zhăr-sön), Jean De, properly
Jean Cifablier, a celebrated French theologian, born at Gerson in 1363. He was ardent and couragcous in advocating improvementi and reforms. When the Council of Constance (141418) in which he took a leading part proved unable to settle the differencen
existing in the church, be at last gave up the strusgie in despair, and not daring to return to France, where his onemies had then the upper hand, sousht shelter for a time in Bavaria and Auatria. In 1419 he returned to his native country, and upent the last ten years of his life with his brother, the prior of a community of Ceiestine monks at Lyons, liv. ing an ascetic iife, and devoting nimseif to religious meditation and the composition of theoiogical and other treatises. The authorship of the Imitation of Ohrist, by Thomas a Kempie, was at one time erroneousls ascribed to him.
Gerstäcker (zer-ster'er), Frimpich novelist, born at German traveler 1818 ; died in 1872. In 1837 he came to America, where he earned a living by the most various empioyments-as a sailor, stoker, innkeeper, woodeutter, and trapper and hunter in the prairies of the west. He returned to Germany in 1843, and bega his iiterary life by the puhlication his experiences in America, Streif- $\quad d$ Jagdzüge durch die Vereinigten F Non Nordamerikas (Dresden, 1844) was followed by Die Regulate Arkansas; Die Flusspiraten des ar sippi; Miosiosippibilider, etc. In 134 verstacker was engaged on behal of the German government to collec information which might be useful th German emigrants. The results were published under the title of Reisen in 1853. afterwards made voyages to South America, Egypt, West Indies, -d other places, which are described in his Neue Reisen 1868). Amongst his many romazess ( most of which may be had in Entiish) are Die beiden Etrilfinge (1856), Im Busch (1864), General Franco (1865), Californisohe S̀ kizzen (1856), and others.

Gerund (Jer'und), the name given Latin verh originally to a part of the power of government as a verh, hut also resemhles a noun in heing governed by prepositions. In early English or AngloSaxon a dative form of the infinite is used to indicate purpose, and is often called the gerund. In modern English what seems to be a present participle governed hy a preposition is sometimes denominated a gerund. in such phrases, for example, as 'fit for teaching': but this is merely a verbai noun representing the old Anglo-Sazon noun ending in -ung. Gervaise, or Geryase (jer'vã). a monk of Canterbury, born in 1150. Amongst his writings is an important chronicle, Ohronica de tempore regum Anglia, Stephenin Henrici If et

Ricardi I. It in reprinted in Twyeden's collection. Gervaie died probahly about 1200.

Gervaise (or Grivase) or Tin BURT, a chronicler of the tweifth and thirteenth centuriee born at Tillhury in Essex about the middle of the twelfth century. Having completed his studies in England, he visited the courts of Italy and of Germany was appointed hy Otto IV Marshal of the Kingdom of Aries. He died, according to wome in 1218. His chief works are Otia Imperialia (containing a history of the kings of France and England) ; Illustrationes Galfridi Monemuthensis) ('Illustrations of Geoffrey of Monmonth') ; Historia Terre Sanctes ('History of the Holy Land ') ; Du Origine Burgundiorum ('On the Origin of the Burgundians'). Most of his writings still remain in manuscript in the Cottonian coliection and the Corpus Christi lihrary, Cambridge.
Gervas (jer'ras), a small shrub, the Stachytarpheta Jamaioensio, nat. order Verbenacem, a native of the West Indies and warm parts of America, the leaves of which are sold in Austria under the name of Brasilian tea, and used in Britain to adulterate tea.
Gervinus (ger-vénus), $G$ I org Gottrraid, a German critic and historian, horn at Darmstadt in 1805. He quitted commerce in 1825 to study at Heidelberg, was for some time a teacher, and qualified as a privatdocent. After a visit to Italy he published his Geschichte der Poetisochen Nationalliteratur der Deutachen ('History of the Poetic National Literature of the Germans'). In 1835 he was appointed extraordinary professor at Heidelberg, and the following year ordinary professor of history and literature at G8titingen; but in 1837, being one of the seven protessors who protested against King Ernst August's hreach of the monstitution, he was hanished from Hanover. After another visit to Italy he returned to Heidelberg, where in 1844 he was appointed an honorary professor. He now began to take an active part in politics on the liberal side; became editor of the newly-founded Deutzche Zeitung, and was returned to the federal diet hy the Hanse towns. Discontented with the tendency of affairs after 1848. he gave up politics and resumed his old studies. In 1849 he puhlished the first of his great work on Shakespere, in 1853 bis Histor" of German Poetry. and in 1855 the first voiume of his History of the Nineteenth Century, which, however. was never carried farther than the French revolution of 1830. Amongst his last writings was
a critical essay on Handel and Shakoaperc. He died in 1871. Gesonins (fendini-ns) Fumpaci German orientalist and Biblical critic born in 1788, studied at Gottingen, and became profemer of theolosy at Halle. In 1810-12 his Hebrow and Chaldee Diotionary of the Old T'estament appeared. In 1820 he risited Paris and Oxiord for the purpose of collecting materials regarding the Semitic languages. In 1824 he published his large Thesaurus philo-logico-criticus Lingue Hebraicae et Chaldaica, completed in 1858 by Rodiger. Besides the works mentioned, Gesenius wrote a Hebrew Grammar, a history of the Hebrew language, and notes to the German translation of Burckhardt's Travels in Syria and Palestine. He died in 1842.
Gesner (ges'nér), Abratana, geoloNova Scotia, in $1797 ;$ died in 1864 . He was appointed in 1838 to examine the geological resources of the lower provinces of Canada, and discovered how to produce oil for lamps from bituminous shale and cannel coal. To this oil he gave the name of ' kerosene.'
Gesner (ges'ner), Konrad von, a 1516, studied at Strasburg, Bourges, and Paris, and became schoomaster in his native town. Hoping to raise himself from his needy condition, be went to Basel, and devoted himself particularly to the study of medicine. Afterwards he became successively professor of Greek at Lansanne, and of philosophy at Zurich. He did important work in the departments of history, zoology, and botany. His Bibliotheca Universalis is a descriptive catalogue of all writers extant in Greek, Latin, and Hebrew. His Historia Animalium must be regarded as the foundation of zoology; and in botany he was the inventor of the method of classifying the vegetable kingdom ascording to the characters of the seeds and flowers. He died of the plague at Zarich, 1585. Gesneracese (ges-ner-f'sef), a n exogens, typical genus Gesnera. There are many species, mostly natives of tropical and snbtropical recions. They are shrubby herbs, often with tuberous rhizomes, and scarlet, violet, or blue flowers. Some of the genera are frequent in our hothouses, such as Gloxinia, Achimenes,

## Gesnera, etc. <br> Gessler. <br> See Tell.

Gessner
(gesinetr), Gavomor, a German poet and artist, was
born at Zurich in 1730; died there in 1787. In 1740 he was sent by his father to learn the business of bookyelling at Berlin, hut having taken a dialite to the businews he maintained himelf hy executing landscapen. On his return to Zuirich he pablinhed Daphnis, amall volume of idyle, and Tod Abole ('The Death of Abel'), a kind of pastoral Iayl in prose. These idyls acquired for him a great reputation amongst contempor. ries. For some years afterwards he devoted himself to the engraving art, in which he also became very eminent.
Gesta Romanorum (ges'ta ro-ma-nớrum; - Deeds of the Romans'), the usual title of a collection of short tales, legende, etc., in Latin, vers popular during the middle ages. The book was probahly written about the close of the thirteenth century by a certain monk Elinandus, an Englishman or a German. The meparate tales making up the Geats are of very various contents, and belong to different times and countries, the sourcem from which they are derived being partly claseical, partly oriental, and partly western. Whatever may have been the intention of the original compiler, they very moon were adapted to the moralizins tencencien of the time, and moral reflections and allegorical interpretations were added to them, it is said, by a Petrus Bercorius or Pierre Bercaire of Poitou, Benedictine prior. After the Reformation the book fell into oblivion.

## Gestation <br> (jes-ta'shun; Latin, geos tare, to bear), in physiol-

 ogy, the name given to the interval which elapses hetween the impregnation of any of the mammalia and the period of birth. This period varies from 25 days, in the case of the mouse, to 620 , in that of the elephant.Geste, Chansons de See Franco-

## Literature.

Getæ (ge'tē), an ancient people of Europe, dwelling at firat in Thrace ; afterwards a part of them moved west on the north bank of the Dainube, where they weye known to the Romans as the Daci. (See Dacia.) Another portion moved east into Asia.

## Gethsemane (geth-sem'a-né; 'oil-

 press'), an olive gar den or orchnrd in the neighborhood of Jerusalem, memorahle as the scene of the last sufferings of our Lord. The traditionary site of this garden places it on the east side of the city, a very little beyond the Kedrnn, near the base of Mt. Olivet. It contains some very old olfvetreen, pinusly regarded as baving stood there in the time of our Lord.
## Gottysburg

(get'tis-burg) a city, the capital of Adams County, Pennsylvania. Here are the Pennsylvanian Collese (Lutheran), founded in 1832; the national cemetery for Union soldiers, and a national homestead for the orphans of Union coldiers. At Gettyshurs a battle was fought (July 1, 2 and 3, 1863) between the Union forces under General Meade and the Confederate forces under General Lee, in which the latter suffered defeat. This great battle was the turning point in the Civii war, the critical event In the great struggle of the North and South, and in consequence the hattlefield has been converted into a national park, adorned with numerous monuments erected by the regiments engaged. To these, in 1910, the State of Pennaylvania added a noble monument, on which are inscribed the names of all Pennsylvanians who took part in the battle. P'op. 4030.
Geum (jéum), a genus of hardy ing to the nathaceous perenniais, belong: natives of the northern parts of the world. G. Canadense, chocolate-root, or hloodroot, a North American species, has some reputation as a tonic. A species of saxifrage is also called Geum.
Geyser ( $\mathrm{gl}^{\prime}$ 'zer), a slight alteration from geysa, to gush or rush forth, and applied to natural springs of hot water of the kind that were first ohserved in Iceland. The geysers of Iceland, about a hundred in number, lie about 30 miles N. W. of Mount Hecla, in a plain covered by hot springs and steaming apertures. The two most remarkable are the Great Geyser and the New Geyser or Strokkur (chnrn), the former of which throws up at times a column of hot water to the height of from 80 to 200 feet. The hasin of the Great Geyser is about 70 teet across at its greatest diameter. The New Geyser, which is only 100 yards distant, is much inferior in size. The springs are supposed to be connected with Mount Hecla, and the phenomenn of eruption has been explained by Tyndall as due to the heating of the walis of a fissure, whereby the water is slowly raised to the boiling point under pressure, and explodes into steam, an interval being required for the process to be repeated. The geysers of Iceland, however, have been surpassed hy those discovered in the Rocky Mountains in the Yellowstone region of the State of Wyoming, the largent of which throw up jets of water from 90 to 250 feet hish. (See Yellowstone.) The hot-lake district of Auckland, Nom Zealand, is also famous in possessing
some of the most remarkable geyser scenery in the world. Thene phenomena are of three kinds; the pulas (also-ipringe), zeycers continually or intermittents active; mgawhas or inactive puias, which emit ateam, but do noo throw up columns of water; and waiariki or hot-water cifterne. This region formerly wa remarlable for the number of natural terraces containing hot waterpoois or cisterns, and ite lakes all filled at intervals hy the bolling geysers and thermal apringa, but the contiguration of the country wai considerabiy altered hy a disastrous volcanic outbreak in 1886, its beautiful pink and white terraces being dentroyed. Ngah. apu or Ohopia, a circular rocky barin, 40 feet in diameter, in which a violent feywer is constantly boiling up to the height of 10 or 12 feet, emitung dense clouds of ateam, is one of the naturai wonders of the southern hemlaphere, and is much viaited hy tourists traveling through New Zealand.
Ghadames (fhatix'mes), a town of southwest of Tripoli. It in about 810 miles s. W. of the town of Tripoli, is situated in the midst of an oasis, and is the center of caravan routen to Tunis, Tripoli, etc. Figs, daten, bariey, wheat. etc., are grown in the gardens, which are watered hy a hot-spring. Pop. about 7000.

## Ghagra, or Groora. See Gogra.

Ghara, or Garba (gàr'ra), a river in the Punjah, helng the name hy which the united streams of the Bias and Sutlej are known, from thelr confuence at Endrisa to the junction with the Chenab, after which the united waters fow under the name of the Pundnad to the Indus. The Ghara is ahout 300 miles long.
Ghâts (ghts) or Ghauts, Eastarv and Wratran, two ranges of mountains in the peninsuiar portion of Hindustan, the former running down the east side of India, but leaving broad tracts between their hase and the coast; the latter running down the west side, but leaving only a narrow stríp between them and the shore. Both meet near Cape Comorin. The general elevation of the Western Ghats varies from 4000 to 7000 fet. Its best known portion is the Neilgherries, with Dodabetta Peak. their hishest point 8760 feet above the sea. The Western Ghats form a water shed, and the rain collected on its eastern slopes makes its war rieht across India to the Bay of Bengai. They are covered Fith firie forests. aind have most picturesque scenery. The Eastern Ghatis are of
conaiderably lem elevation, on the aver- the banke of the Ganges; has a trade in ase about 1500 feet, and have none of the beauty al the western ringe. They are, however, rich in metal.
Ghâts (bitis), or GHavrs, ai Hindu landing-ptaire on a river, eapecially. when

Ghooela Chat, Benares.
large and substantially constructed. These ghats are very numerous on the Ganges, and are great places of resort by the people of the towns where they

Bathing Ghits on the River Jumna at Muttra.
are situated. Some of them are noteworthy from an architectural point of view, having temples, bathing-houses, etc., at the top.
Ghavipur (gatezepror), a town in of the Ghazipur District, Neadquarters Provinees. abont 44 miles northeast of the town of Benares. It stretches aloag
mugar, tobarco, rose-water, and otto of roses ; azd is a healthy place. The ruins of the Palace of the Forty Pillara, and a mpnument to Lord Cornwallie, who died lere in 1805 , are here. 1'op. $30,429$. The district, one of the hottest and dampeint in the N. W., has an arca of 1478 Eg. milem.

## Ghazni

(glzine̊), Gnuznex, or GHizNi, an ancient and ceiobrated city and fortress in Afghanistan 84 milies s. s. W. of Cabul, on an eminence 7726 feet above sea-level. The wail embraces the whole of the hili ; the houses are of mud; the streets, dark, narrow, and irregular. The country round Ghazna is very productive in grain, fruits, tobacco, etc. Three miles northeast are the ruins of the anclent city, which under the ceiebrated Sultan Mahmud ( $990-1030$ ) (see Ghaznavides), was the capital of a great empire. It has been twice taken by British forcen ( 1839 and 1842). Pop. est. about 10,000. Chaznavides (gazi-na-vidz), a dyby Alepteghin, originaily a slave beionging to the Ameer of Bokhara. Ghazna was the seat of his power, and became, under his successors, the capital of an empire which reached from the Tigris to the Ganges, and from the Sihon to the Indian Ocean. The most brilliant period of the dynasty was that of Sultan Mahmud ( $990-1030$ ). It became extinct towards the end of the twelfth century after having lost most of its possensions. Ghebers (gåbèrz). See Guebres.
Ghee ( ${ }^{(x)}$ ), or Girr, a peculiar kind of butter in use among the Hindus. It is made from the milk of the buffalo or the cow. The milk is boiled for an hour or so, and cooled, after which a little curdled milk is added. Next morning the curdled mass is churned for haif an hour; some hot water. is then added, and the churning continued for another half-hour, when the butter forms. When after a few days it becomes rancid, it is boiled till ail the water is expelled, and a little more curdled milk added with some salt or betel-leaves, after which it is put into pots. In this state it will keep for a long time. It is too strong for European taste, but is a favorite article of consumption amongst rich Hindus.
Gheel (gāl), a village and commune the town of Antwerp and in the p. E. of of that of Antwerp and in the province spot in the midst of a sandy waste and if inhabited by a cians of peasant farm-
eri, It has manulacture of cloth, hats, War and tallow candlen, etc.; tannerles, dreworth, ropeworls, etc., and a conelderable trade in butter. The commune ha been lon remerkable for containlay a colony of deranged perwons, nutaberlar at prement about 1000, who are lodred and ponrded in the houme of the couvtry people, who make use of their mervices, when svailahle, in field and other lubor, Little or no restraiut is emplozed, and the beat effects thence ensue. Latelf a houpital has been erected, with medical utaif, for the mupervision of the relations between the iusane and their custodiers. Patients are cent hither from all parts of Belginm. Pop. 14,087.
Ghent (rent: French, Gand; FlemLbh, Gond or Gent), a town in Belpium, capital of the province of East Flanders, in a fertile plain at the confluence of the Lys with the scheldit. It is upwards of 6 miles in circnmference and is divided hy canals into a number of blands connected with each other by bridgee, Ercept in some of the older parti it is well hnilt, and has a number of fine promenades and many notahle bulldings. Amongst the latter are the cathedral of St. Bavon, a vast and richlydecorated structure, dating from the thirteenth ceutury; the church of St . Nicholas, the oldest in Ghent; the chnrch of St. Michael, with a celebrated Crucifixion by Vandyk; the university, a handsome modern structure, with a library of abont 100,000 volumes and 700 MSS. ; the Hotel-de-Ville; the Belfry, a lofty square tower surmounted hy a gidded dragon, and containing a fine. set of chimes consisting of forty-fonr bells, one of which is the famous : Roland of 'Ihent'; the new Palais de Justice ; the Marche dn Vendredi, an extensive square, intereating as the scene of many important historical events; and Les Béguinages, extensive nnnneries fonnded in the thirteenth century, the principal occupation of whose members is lacemaking. Ghent has long been celebrated as a mannfactnring town, especially for its cotton and linen goods and lace. Other industries of importance are sugar-refining, hosiery, thread, ribbons, instruments in steel, carriages, paper, hats, delftware, tobacco, etc. There are also machine-works, engine-factories, roperies, tanneries, breweries, and distilleries. The trade is very important. A canal 16 feet deep and 11 yards wide. connects it with the Scheldt at Ternenzen. but is less used than it might he on account of the heavy imposts levied hy Holland on vessels passing throngh. Another canal compects the Lys with the caual from

Brugen to Ontend. A new dock, capable of holding 400 remeetr, was opened in 1881. Population, 182,482. It in menHoned as a zown in the grenth century. In the ninth century Bildivin, the urrat count of Flandera, built a fortrom here againot the Normans. Under tho countis of Fhanders Ghent continued to incrence, and in the fourteenth centnry could cend 50,000 men into the field. The wealth and liberty of its citizens digposed them to a hold maintenance of their privilegee againut the encroachments of feudal lords like the Dukes of Burguady and the King of Spain. In 1782 the Netherlands foll under the power of France, and Ghent became the capital of the department of Emsaut (Scheldt). In 1814 it became, alous with Flanders, part of the Netherland an, till the separation of Belgium and Hollaud. See Beloium.
Ghent, Tranty or, the tresty which twen brought to a clowe the war hetween the United States and Great Britain, 1812-14. It was negotiated at Ghent, Beigiom, by representatives of the two countries, and was signed on December 24, 1814. Although the United States had gone to war primarily becanse Great Britain had impressed American seamen and hampered American commerce, no mention was made of either in the treaty. As ratified it declared for form and universal peace' and stipulated that all territory (with the exception of the Passamaqnoddy islands), taken duriug the war should be returned.
Gherardesca (flordr-des'ka), a family of Tuscan origin which plays an important part in the history of the Italian repubbics of the middie ages. Historically the most prominent member of the tamily is Usolino. whose death, and that of his two sons and grandsons, by starvation in the 'Tower of Hunger,' is described in one of the celebrated pasmages of Dante' Ditina Commedia.
Ghetto (get'to), the name frequently applied to the Jewish qnarter of large cities.
Ghibellines (gib'el-linz), the name of a political party in Italy, which, in general, favored the claims of the emperor against thove of the pope. The name is sald to be derived from Waiblingen, a small estate belonging to the Hohenstaufen princes. See Guelfs and Ghibellines.
Ghiberti (gê-ber'tê). Loranzo, an Italian statuary, born about 1378 at Fiorence; died about 1455. He early learned from his stepfather, Bartaluccio. an expert goldemith, the arts of drawing and modeling, and that of
castlos metaia. He was amgaged in paintins frewcoes at Rimini, in the palace of Pandolio Malatenta, when the priori of the society of merchants at Fiorence invited artists to propose models for one of the bronze doors of the baptlatry of Ban Giovanni. The Judses selected the worke of Donatello and Ghiberti as the hent (according to Vasart, alsc that of Bruneliemechi, who is not mentioned by Ghiberti himself as one of the competitors) ; hut the foruer voluntarily withdrew his claims, string the preference to Ghiberti. After twenty-one years' iabor Ghiberti completed the door, and, at the requent of the priori, executed a second, after almost as long a period. Michael Angelo maid of these, that they were worthy of adorning the entrance to paradise. During these forty years Ghiberti also completed other Works, bas-reliefs, statues, and some excellent paintings on slans, most of which may be seeu in the cathedral and the church of Or San Michele at Fiorence.
Ghiks (kéka), HEIE ENA, Princess known by the pseudonym of Dora d'Istria, a writer of travels, historical studies, and novels. She was the daughter of Prince Michael Ghika, and niece of Gresory Ghika X, hospodar of Wallachia, and was horn at Bukareat in 1828. She was carefully educated, and acquired by frequent travels an extensive knowledse of modern languages and literature. In 1849 she was married to Prince Kolt-zofi-Massalsky. Her first important work, La Vie Monastique dans lEglise Orientale, was published at Paris in 1855. La Suisse Allemande, Lee Femmes en Orient, Des Femmes par une Femme, represent social and political studies on modern civilization. In Au bord des Lacs Helvétiques (1864) she collected a number of stories written for the Revue des Deux Mondes. Amongst her other works are Eli Albanesi in Rumenia; and La Poésie des Ottomans (1877). She also won distinction as a landscape painter. She died in 1888.
Ghilan (givian $n^{\prime}$ ), a province of Perthe Caspian Sea; area, about 4250 square miles. The lofty range of the Elhurz Mountains forms its southern boundary. The whole province, except where cleared for cultivation and on the monntain summits, is covered with woods, and the excessive rain and dense vegetation render much of the level country a morass. The climate is consequently unhealthy. The province is rich in metals and very fertife. The capital is Resht. Pod. about 250,000.
 Comead DOMSicoon one of the older blorentiae paintert, born at Florence in 1460 ; died 140 H: way the con of a soldamith known as Il Ghirlandalo (the garland-maker), from his akill in making rarlande. HE was distinguished by fertility of invontion, more natural rendering of llfe, and a more accurate pernpective than his predecemsore. Amonget his bent works are the freacoen in the Sassetti Chapel of the Trinity Church and in the choir of Santa Marm Noveila at Florence, and the pictures in the Ufini and the academy at Flurence. Michael Angelo was one of his pupile.

## Gianibelli <br> or Giambichli (jan-i-bel'te, (jam-bel' l ), Findricion, an

 Italian military engineer, born at Mantua about 1530. After having offered his services to Philip II of Spain without much result, he went to England, where Elizabeth gave him a pension and sent him to help the Netherlanders in their defense of Antwerp against the Spaniards (1585). Here he made himself famous by the damgiee which his inventions did to the enemy. After this he returned to England, where he fortified the coast-line against the Spanish invasion, and suggested the use of fireships, which were so disastrous to the Armada.
## Giannone

(ján-o'nă), Pietro, an Italian author equally celebrated by his fate and by his writings, born in 1676. He studied law in Naples, and after winning a high place as an advocate retired to give himself up to the execution of his great work, the Civil History of the Kingdom of Naples (1723), The severity with which Giannone treated the church, and the attacks which he made on the temporal power of the popes, drew upon him the persecutions of the court of Rome, and of the clergy in general. The offensive publication was burned, and the author excommunicated. Giannone therefore quitted Naples, 1723, and took refuge in Vienna, where, for a time, he was protected by the influence of powerful friends, but had ultimately to leave and betake himself to Venice in 1734. Expelled from Venice by the suspicious republic, he finally took refuge in Geneva. Here he wrote his Triregno, a bitter attack on the papal pretensions. In 1736, having been enticed by a government emissary to enter the Sardinian States. he was seized and imprisoned in the citadel of Turin, where he died in 1748.
a name in America for dynamite. Giants (ji'antz), people of extraorsacred and profane, makes mention of giants, and even of races of giants, hut this in general securs only at that early stage of civilization when the national mind is apt to exaggerate anything unusual. Hence the Cyclopes and Lesstrygones of the ancients and the Cornish and Welsh giants of English folk-lore. The first mention of giants in the Bible is in Gen., vi. 4, where the Hebrew word used is nephilim, a word which occurs in only one other passage, where it is applied to the sons of Anak, who dwelt about Hebron. and who were described by the terrified spies as of such size that compared with them they appeared in their
own sight as grasshoppers A race of giants called the Rephaim is frequently mentioned in the Bible, and in Gen., xiv, and $x v$, appear as a distinct tribe, of whom $\mathrm{Og}^{2}$, king of Bashan, is sald to have been the last. Other races of gianta are mentioned, such as the Emim, the Zuzim, and the Zamzummim. The gianti of old Greek or of Norse mythology have, of course, merely a symbolic existence, representing benignant or adverse forces of nature on which man might count in his struggle to reduce the world around him into some kind of order. The tales of old writers regarding gigantic human skeletons have now no importance, it being mostly certain that these boves do not belong to giauts, but to animals of the primitive world which, rom ignorance of anatomy, were taken for human bones. The ordinary height of men is between 5 and 6 feet; amongst the Patagonians of South America, however, the average seems to be considerably higher, though not so high as to entitle them to be considered a race of giants. Notable deviations from this medium height are not at all uncommon, especinily among the Teutonic peoples. The following are amcngst authentic instances, ancient and modern, of persons who attained to the stature of giants: The Roman Emperor Maximin, a Thracian. nearly 9 feet high: Queen Elizabeth's Flemish porter, 7 feet 6 inches; C. Munster, ${ }^{2}$ yeoman of the guard in Hanover, who died in 1676, 8 feet 6 inches high: Cajanus, a Swedish giant, about 9 feet high, exhibited in London in 1742; C. Byrne, who died in 1783, attained the height of 8 feet 4 inches ; Patrick Cotter O'Brien, who lived about the same time, was 8 feet $78 / 4$ inches; a Swede in the celebrated grenadier guard of Frederick William I of Prussia stood $81 / 2$ feet. In 1844 died Pauline Wedde (called Marian), over 8 feet 2 inches at the age of eighteen. One of the highest on record is the Austrinn giant Josef Winkelmaier ( 1865-1887), whose height was 8 feet 9 inches. As a rule, giants are comparatively feeble in body and mind. and are short-lived. Gigantic stature is generally accompanied bv a want of proportion in parts, some parts growing too quickly for others. or continuing to grow after the others have ceased. The relation between the upper and lower half of the body is not disturbed: but the skull, brain, and forehead are relatively tmall, the jaws very large, the shoulders, breast, and haunches very brand, and the muscnlar system comparatively weak. Some giants are affected with the diseasm called acromegaly, an ailment of the pob
terior half of the pituitary body, a small, ductless gland situated at the base of the hrain, in the sella turcica, a saddle-shaped space in the sphenoid bone. In these the hands, head, and feet are especially enlarged.

## Giant's Causeway

(jI'antz kaz'wa), an extensive and extraordinary assemblage of polygonal basaltic columns on the north coast of Ireland, in the County of Antrim, between Bengore Head and Port Rush. The name is sometimes given to the whole range of basalt cliffs along the coast, some of which reach the height of 400 or 500 feet; but it is more properly restricted to a small portion of it where a platform of closely-arranged basalt columns from 15 to 36 feet in height runs down into the sea in three divisions, known as the Little, the Middle, and the Grand Causeway. The last is from 20 to 30 feet wide, and stretches some 900 feet into the sea. The Giant's Causeway derives its name from the legend that it was built hy giants as a road which was to stretch across the sea to Scotland. There are similar formations on the west coast of Scotland, on the island of Staffa.
Giant's Kettles, a name given in cal, pot-shaped, smooth hollows excavated in rocks, usually filled np with stones, gravel, etc. They were probably formed by water from the ice of the glacial period, descending through moulins or glacial chimneys and setting stones and boulders in rapid rotation. The potholes found in the beds of rapid streams and near waterfalls had a similar origin. Giaour (jour), a Turkish word from by the Turks to designate the adherents of all religions except Mohammedan, more particnlarly Christians. The use of it is so common that it is often applied without intending an insult.
Giarre (ji-ar'rã), a Sicilian town near the coast, in the province of Catania. In the neighborhood are What is left of the famous chestnut trees of Aitna. Pop, 26,194.
Gibbon (gib'un), a name common to the apes of the genus $H y l o b-$ ates, but more particnlarly restricted to the species $H y$ lobartes lar, which inhabits the islands of the Indian Archipelago. It is distingnished from other quadrumañous animials by the slenderness of its form, but more particularly hy the extraordinary length of its arms, which, when the animal is standing, reach nearly to the ankles, and which enables it to wring itself from tree to tree with won-
derful agility. Its color is hlack, hut its face is commonly surrounded with a white or gray beard. There are various other species, and the gibbons are classed among the anthropoid apes, and can stand erect with more ease than the orang or gorilla, their long arms aiding them to maintain the erect attitude, though they cannot wall with ease.
Gibbon, Elowabi, an eminent EngPutney in lish historian, was born at Putney in Surrey in 1737. He was the son of a gentleman of an ancient Kentish family. He entered Magdalen Collere, Oxford, where he remained fourteen months. Having declared himself a Roman Catholic, his father placed him under the care of M. Pavillard, a learned Calvinistic minister at Lausanne, by whom he was reconverted to the Protestant faith. His residence at Lausanne wan highly favorable to his progress in knowledge and the formation of regular habit of study. The belles-lettres and the history of the human mind chiefly occupied his attention. In 1758 he returned to England, and immediately began to lay the foundation of a copious library; and soon after composed in the French language his Essai sur l'Etude de la Littérature (1761). In 1763 be visited Paris and Lausanne, and he journeyed in Italy dnring 1764. It was here that the idea of writing his great history occnrred to him as he sat musing among the ruinm of the capitol at Rome, while the harefooted friars were singing vespers in the Temple of Jupiter. In 1770 he published a pamphlet entitled Critical Observations on the Sieth Book of the Xneid. In 1774 he obtained a seat in Parliament for Liskeard, and was a silent supporter of the North administration and its American politics for eight years. In 1778 the first quarto volume of his Decline and Fall of the Roman Empire was published, and at once made a public reputation for its author. In 1778 he drew up on behalf of the English government a Mémoire Justificatif in answer to the manifesto of the French court. and for this service he was made one of the lords of trade. On the retirement of North he lost his appointment. and soon after withdrew to Lausanne (1783), where, in the course of fonr years, he completed the three remaining volumes of his history. which ware published together in 1788. In 1793 he returned to Englana, where he died in 1794.
Gibbon, Jonn, soldier, born in Pennsylvania in 1826 . He graduated at West Point in 1847, became captain in 1859; took part in the Civil war, commanding a brigade at Antietam and

Gettysburg, and serving as major-seneral in Grant's Wilderneso-Richmond campaign. He was breveted major-general in the regular army in 1865, promoted brig-adier-general in 1886, retired in 1891, and died in 1896.
Gibbons, Jamis, a cardinal of the Roman Catholic Chnrch, was born at Baltimore in 1834. He was ordained a priest in 1861; made hishop of North Carolina in 1868, and of Richmond in 1872; archhishop of Baltinnore in 1877, and created cardinal in 1886. As an author he is hest known by The Faith of Our Fathers.
Gibbons, Orlando, an English mu1583 ; died in 1625. At the age of twentyone he was appointed organist of the Chapel Royal, and in 1622 he received the degree of Doctor of Music from the University of Oxford. Three years later he died of smallpox at Canterhnry, where he had gone to be present at the marriage of Charles I with Henrietta of France. He was huried in Canterhury Cathedral, where his wife caused a maqnificent tomh to be erected to him. He is the author of Madrigals and Anthems ('Hosanna to the Son of David!' 'Almighty and Everlasting God!' etc.).
Gibbs, Oriver Wolcotr, an American New York City. He was professor of physics and chemistry in the College of the City of New York, 1849-63, and Rumforl professor of chemistry in Harvard University, 1863-87. He was one of the contributing editors of the American Jour. nal of Science. His chemical researches in analytical and inorganic chemistry were of great value. The Wolcott Gibhs Laboratory at Harvard is named for him. Gibel (jib'el), a fish of the carp genus, Cyprinus gibelio, generally known in England as the Prussian carp, and helonging to that section of the genus having no harhules at the mouth. It is a good table fish, hut seldom weighs more than $1 / 2 \mathrm{lh}$. It is said to be ahle to live so much as thirty hours out of water.
Gibeon (ghih'e-on), one of the ancient royal cities of the Canaanites, a 'great city' of the Hivites, who at an early stage of Joshua's conquests, hy disguising themselves in old clothes and professing to come from a far country, obtained an alliance and covenant with the Israelites. When the stratagem was discovered, the Israelites resolved to ohserve the covenant, hut condemned them to be hewers of wood and drawerg of water nnto all the congregation' (Jos., ix, 21). It was during the
battle here between Joshua and the five kinge of the Amoriten that the aun 'stood still upon Giheon, and the moon in the valley of Ajalon.' Gibeon has been identified with the modern EI-Jib

## Gibraltar (jib-ral'tar), a town and

 strongly-fortified rocky peninsnla near the southern extremity of Spain, a military stronghold of Great Britain. It is connected with the mainland hy a low, sandy isthmus, $11 / 2$ miles long and $8 / /$ mile hroad, known as the 'neutral ground,' and has Gibraltar Bay on he west, the open sea on the east and south. The highest point of the rock is ahout 1400 feet above sea-level; its north face is almost perpendicular, while its east side exhihits tremendous precipices. On its south side it is almost inaccessible, makirg approach from seaward imposisible; the west side, again, although very rugged and precipitous, slopes towards the sea; and here the rock is secured by extensive and -powerful hatteries, rendering it apparently impregnahle, Vast sums of money and an immense amount of lahor have been spent in fortifying this celehrated stronghold, which, as a coaling station, depot for war material, and a port of refuge in case of war, would form one of the most important points of support for British naval operations and British commerce eastwards. Numerous caverns and galleries, extending 2 to 3 miles in length, and of sufficient width for carriages, have heen cnt in the solid rock, with port-holes at intervals of every 12 yards hearing upon the neutral gronnd and the bay, and monnted with more than 1000 guns, some of them of the largest size. The garrison numbers abont 6000 . The town of Gibraltar is situated on the west side of the peninsula, terminating in Europa Point, and thus fronts the hay. It consists chiefly of one spacious street about $1 / 2$ mile in length, lined wit's shops, and paved and lighted. Its water supply is derived from the rainfall. Gihraltar is a free port, and has a considerable shipping trade, heing an entrepot for the distribution of British mannfactures. The chief export is wine. The civil population amounts to ahout 22,000 . -Gibraltar, known to the Greeks as Calpe, was first fortified as a strategic point hy the Saracen leader Tarik Ihn Zeiad in 711-12. from whom it was thenceforward called Gebel-al-Tarik, the rock of Tarik. It was ultimately taken by the Spaniards from the Moors in 1462 . fortified in the European style. and 0 much mirengthened that the engineers of the seventeenth century considered it impresnahle. It was taken, however, after a vicorom bomberdment in 170 ?by a combined English and Dutch force under Sir George Rooke and Prince Georse of Darmatadt, and was secured to Britain by the Peace of Utrecht in 1713. Since then it has remained in British hands, notwithstanding some desperate efforts on the part of Spain and France to retake it. In $1704-5$ it was closely hesieged; in 1727 it was hard prensed by a Spanish force when Admiral Wager, with eleven ships of the line, relieved it. In 1779 , Britain being then engaged in a war with its revolted colonies and with France, a last grand effort was made by Spain to recover Gihraltar. The siege lasted for nearly four years, the fire being for the great part of that time very harassing, and rising on several occasions into a fierce and prolonged hombardment. It was heroically and successfully defended, however, by General Elliot (afterwards Lord Heathfield) and the garrison. Since that time, in the various British and Spanish, and also French wars, Gibraltar has only been blockaded on the land side.
Gibraltar, Strarts or, the channel from the Atlantic into the Man entrance The narrowest part is a little to the west of Gibraltar, and 15 miles across, A strong and constant current Hows into the Mediterranean from the Atlantic Ocean, in the middle of the Straits, but the undercurrent as well as two feeble lateral currents along the coast set towards the ocean.
Gibson (gih'son), Charles Dana, Massachuse artist, horn at Roxbury, in New Yetts, in 1807. He stndied art Na successtnl instructor and socjety cartoonist in New York. The 'Gihson girl' an American type, was created by him. He wrote People of Diokens, Sketches and Cartoons, $A$ Widow and her Friends, The Bocial Ladder, etc.
Gibson, JoHN, one of the most disof modern times, born near Conway, in Wales, in 1700; died at Rome in 1868. He was the son of a landscape-gardener. and was apprenticed to a woodcarrer at Iiverpool, where he attracted attention by a fignre of Time modeled in wax which he exhinited at the age of eighteen. The patronage of Mr. W. Roscoe assisted him to 80 to Rome, where he was cordially received by Canova. On the death of Canova in 1822, Gibson entered the studio of Thorwaldsen. His reputation was now widely spread, and his works were eagerly sought after by his countrymen. In 1836 he was made a Royal Academician; but to the end of
hils life he continued to make Rome his chief place of residence. Mont of Gibson's suhjects are taken from classical mythology, and are executed with a noble severity and purity of style. Among his best works are: The Wounded $\Delta$ mason; The Hunter and Hie Dog; Hylas and the Nymphs, Helen, Proserpine, Sappho, and others. One of his peculiarities as an artist was the practice of coloring his statnes.

## Giddings (gidings), Francina

 HENRY, nociologist born at Sherman, Connecticut, in 1855. He engaged in journalism and afterwards became a professor of and lecturer in sociology. Has held this chair in Columbia University since 1894. He wrote The Theory of Sociology, The Principles of Sociology, and other works on this subject.Giddings, Joshua Reed, statemman, sylvania, 1795: died in 1864 . Snccessfully practicing as a lawyer, in 1839 , he was elected to congress, serving for twenty years. An advocate of the abolition of slavery in the territories, he seized every opportnnity to aid in the formation of a puhlic sentiment hostile to its further extension. His life was often threatened, and twice he was assaulted hy armed men on the floor of the Honse, and once mobbed in Washington. For antislavery resolntions introduced hy him he was cessured by vote of the House. He was a forcihle speaker and ahle writer.
Giers (geerz), Nicholas Cablovitch DE, a Russian statesman descended from a Swedish family settied in Finland, was born in 1820 . After holding various posts, in 1875 he became adjunct to Prince Gortschakoff, the minister of foreign affairs, whom be succeeded in 1882. His policy in general was understood to be of peaceful tendencies, and in particular opposed to Panslavistic ideas of development. In Central Asia, however, he continued the policy of advance, and in 1885 the Russian occupation of positions within the Afghan frontier nearly brought about a war with Britain. He died in 1805.
Giessen (ge'sen), a town of Germany
capital of the province of Upper Hesse, in the Grand-duchy of Hesse-Darmstadt, on the Lahn. It was once fortified, and is still entered by fonr gates, but its ramparts have been converted into pleasant walks. It has a castle, now converted into government offices, and a university founded in 1607, and possessing valuable apparatus, ay observatory, and a botanical sarden. Pop. 31,153 .

Gifford (gifford), Rosarme Swars, machusetty in 1840 , the son of a poor boatman. He traveled extensively in the interent of art and became one of the leading American landscape painters, and was also distinguished as an etcher and art instructor. He died in 1905 .
Gifford, Sandford Robinbon, painter, in 1823 ; died in 1880 . He developed a vermatile talent as an artist, his main attention being given to landscapes. Among his noted works are Coming Storm, Waves Breaking on the Beach, and Morning in the Mountains.
Gifford, Villuam, a critic and satirist, born at Ashburton, Devonshire, in 1757. He was apprenticed to a shoemaker, but possessing a strong taste for study he was enabled by the kindness of some friends to go to school and afterwards to Oxford University. After heing some time tutor in Earl Grosvenor's family he published in 1794, The Baviad, a atire directed against the poetasters of the Della Crusca school: and in 1795 The Mavied, a severe satire on the contemporary drama. In 1797 he became editor of the Anti-Jacobin; and he published a translation of Juvenal in 1802. On the foundation of the Quarterly Revievo in 1809, he became its editor, conducting it with much ability. He also edited the works of Massinger, Ford, Jonson, and Shirlev. He died in 1826, and was interred in Westminster Abbey.
Gifford Lectures, lecturesbips enGifford, one of the judges of the Court of Gession, Edinburgh, from 1870 to 1881, Wholeff $f 80,000$ for the purpose. Ther were founded in connection with the Universities of Edinburgh, Glasgow, Aberdeen, and St. Andrews, and are for the exposition of natural religion in the widest sense of that term; the lecturers to be subjected to no test of any kind; to belong to any denomination whatever, or to no denomination. The appointments are for two years, but may be held for six. The lecturers were to deliver a yearly course of about twenty original lectures open to all. The first lecturers were: Glasgow, Max Muller ; Edinburgh, Hutchinson Stirling; St. Andrews, Andrew Lang; and Aberdeen, E. B. Tylor. Gijon (he-hon'), a seaport in Spain, on the Bay of Biscay. It consists of an old and a new town, the former on the upper part of a slope and the latter below. It contains a cigar manufactory, employing about 1400 persons. and has various other industries and a zood trade. Pop. 52,226.

Gile (jela), Rzo, North American river, which risem in New Mexico and flows westward for 450 milem, and then unites with the Colorado. Curious ruins of stone-built housen occur all alons its bank. In these are found irasments of pottery.

## Gila Monster <br> (Heloderma suspeotum), a poisonous

 lizard of the desert region of the Southwest United States. It is one cf the largest lizards of the continent, and has scales of brilliant orange and jet black. Its bite is fatal to small mammals and birds and very injurious to man, though seldom fatal. H. horridum, of Mexico, is similarly poisonous.Gilbert (gil'bert), Sis Huicparar, an English navigator of the reign of Queen Elizabeth, born in Devonshire about 1539. In 1578 he obtained from the queen a patent, empowering him to discover and colonize in North Xmerica any land then unsettled, and made an unsuccessful voyage to Newfoundland. In 1583 be saiied to it again, and took poessession of the harbor of St. John's. On his seturn bome he embarked in a small vessel and was lost in a storm.
Gilbert, SIR JOHN, an English first exhibited painter, born in 1817. He work was The in 1836. His first notable work was The Arrest of Lord Hastings by the Protector Richard, Duke of Glouoester, in water-color. He has also painted in oil, and among his more notable productions in that branch of the art are Don Quixote giving Advice to Sanoho Panues, The Education of Gil Blas, and a series of tableaux of the principal character in Shakespere. He possessed especial merit in depicting old English scenes. He was the most prominent artist engaged on the Mlustrated London Newos for a number of years after its commencement in 1842, and during the same period did a great amount of book illue tration. In 1871 he became president of the Society of Water-Colors. In the same year he was knighted, and in 1872 he became an A.R.A. becoming I.A. in 1876. He died in 1897.
Gilbert, Jorn Gribs, actor, born at 1810: died in 1897. Massachusetts, in years in the United After acting four ears in the United States and England. he joined Wallack's company in New York in 1862. He was highly popular in old men characters, such as Sir Peter Teazle. Sir Anthony Absolute, Old Dornton, etc.
Gilbert, Joris 8 ., naval architect, 1801: died in 1891. in Connecticut in balance drydock now used at all iur
portant meaports, and built some of the largent drydock in the United States. Eor meveral yeari he was in the service of the Austrian governmect, and declined tempting offers from Russia on account of ase.

## Gilbert,

Whitas SOHWENE, an English dramatist, horn in London in 1838. In 1857 he hecame a clerk in the Edncation Office, and in 1862 was called to the har, but has devoted his time since then almost exclusively to literatnre. In 1875 he entered into partnership with Arthur Sullivan, the composer, and in conjunction with him produced a series of comic operas, Trial by Jury (1876), Pinafore (1878), The Pirates of Penzance (1880), Patience (1882), Iolanthe (1883), Princess Ida (1884), The Mikado (1885), etc. Died hy drowning, May 29, 1911.
Gilbertine Order (g il 'her-te̊n), an founded in England hy Gilbert of Sempringham in the twelfth century. They followed the Augustinian rule, and their numerous monasteries were suppressed if Henry VIII. There was also a Gilbertine order of nuns.
Gilbert Islands,
or Kinasmill Group, a group of sixteen islands in the Pacific Ocean, on the equator, between lon. $172^{\circ} 0^{\prime}$ and $174^{\circ} 30^{\prime} \mathrm{E}$. Area about 170 sq . miles. They are of coral formation, and all low and not fertile. Their chief products are mostly the cocoanut, pandanus, taro, and the breadfruit tree. The islanders differ from the Polynesians, and more nearly resemble the Malays. The women are much smaller in proportion than the men, with delicate features and slight figures. Pop. of the group 40,000 , of whom a certain number are Christians. They were annexed by the British government in 1892.
Gilberton, a borough in Schuylkill miles from Mahanoy City; a mining town and the railroad center for all coal mined in the Mahanoy and Shenandoah Valleys. Pop. 5401.
Gilboa (gil-bo'a; Hehrew. Bubbling Fountain'1. a range of hills in Palestine. hounding the plain of Fsdraglon on the N.E. One of them is inentified with the ancient Gilhoa. the scene of Saul's last fatal battle (I Sam., xxix, 1).
Gildas (girdas) THEWIRE (SA. PIENS), a British ecclesiastic and historian of the sixth century, of whom little is known. There is extant a Latin treatise or diatribe ascrihed to Glldas which benrm the title of Epistole
de Deoidio Britannias (' On the Dentruction of Britain'), but the violent invective which it employs against the Britons has led to doubts respecting its autheno ticity.
Gilder
(gil'der), Riohard Watmox, editor and author, born at Bordentown, New Jersey, in 1844. He engaged in railroad work, established the Newark Regioter, in 1870 became managing editor of Scribner's Magazine, and in 1881 editor-in-chief of The Century. He puhlished Five Books of Song, For the Country, In Paleatine and Other Poems, etc. He died in 1909.
Gilder, Williay Henar, arctic explorer, brother of the preceding, was horn at Philadelphia in 1838, died in 1900. He took part in the Franklin Search Expedition of 1878-80 and the De Long Arctic Expedition of 1881. After the disaster to the latter he made a winter journey of two thousand miles through Siberia to the neareat telegraph station, and took part in the search in the Lena delta for De Long and his companions. He wrote $B$ ohso et $k e^{\prime} s$ Search and Ice Pack and Tundra.
Gilding (gild'ing) is the art of ap-finely-divided plying sold-leaf or gold in surfaces of wood, stone, or metale, a very ancient art, it having heen practiced amons the Egyptians, Greeks, Romans, and ancient Persians. The processes employed at the present day are very varied. Metals are gilded either by what is called chemical gilding, mercurial gilding, electrofilding (see Electrometallurgy) or by the application of gold-leaf. Copper and brasa, for instance, may be gilded by the process called wash or water gilding, with an amalgam of gold and mercnry. The antface of the copper, freed from oxide, is covered with the amalgam, and afterwards exposed to heat till the mercnry is driven off, leaving a thin coat of gold. (Yilding is also performed hy dipping a linen rag in a saturated solution of gold, and hnrning it to tinder, the black powder thus ohtained being rubbed on the metal to be gilded, with a cork dipped in salt water, till the gilding appearm. Iron or steel is often gilded by applying gold-leaf, after the surface has been well cleaned, and heated until it has acquired the blue color which at a certain tempert: ture it assnmes. Several leaves of sold are thns applied in succession, and the last is burnished down cold. One process of chemical gilding is by dipping the arttcle into a solntion of gold, what is termed Elkington's solntion heins composed as follows: -5 oz. (troy) of fine gold; nitronydrochloric acid, 62 on (avolv
dupols) : diseolve by heat, and continue the heat until the censation of red or jellow rapors; decant the clear liquia; add 4 gals. of distilled water, pure bicarbonate of potassilum 20 lbw, and boll for two hours Gllding on wood, plaster, leather, parchment, or paper fis performed by different processes of mechanical gilding. The first of these is oil-ridling, in which gold-leaf is cemented to the work by means of oil-size. In the case of paper or velium the parts to be gilt recelve a coat of gum-water or fine size, and the gold-leaf ls applied before the parts are dry. They are afterwards burnished with agate. Lettering and other gildlyg on bound books are applied without size. The gold-leaf is laid on the leather and imprinted with hot brass types. Brass rollers wlth thin edges are employed $\ln$ the same way for lines, and similar tools for other ornaments. When the edses of the leaves of books are to be gilt they are first cut smooth ln the presm, after, whlch a solution of lsinglass in splrits is lald on, and the gold-leaf is applied when the edges are ln a proper state of dryness. Japaner's gilding 18 another kind of mechanical gilding, whlch is performed in the same way as oll-gilding, except that instead of gold-leaf a gold dust or powder is employed. Frames of pictures gnd mirrors, moldings, etc., are gilt by the application of gold-leat, or by the cheaper process of 'German gilding' that is, by tin-foll or silver-leaf, with a yellow varnish above. Porcelaln and other kinds of earthenware, as well as glass, may be gllt by fixing a layer of gold in a powdered state by the action of fire. The gold-dust or powder required in thls operation may be obtained by preclpitating it from a solution in aqua regla, elther by means of sulphate of iron or protonitrate of mercury. In order that the gold powder may be applied to the surface of the article to be gilt it must be well mixed wlth some viscous vehicle, such as strongly-gummed water. It is then laid on with a fine camel-halr brush.
Gilead (gil'end), a mountain region having Bashan on the north Palestine, and Ammon on the south. It was noted for its balm, as well as for its pasturage.
Giles ( $\ddagger$ Inz), ST. (St. सEftius), a native of Greece, who according to the legend, llved in the sixth century, and was descended from an illustrious tamilly. He is said to have worked miracles, and founded a convent in France. He became patron saint of Edinburgh. His festival falls on the 1st of September.

Giles, 8t., name of a parish in London, with which is incorporated that of St. Georre, Bloomsbury, both in the borourg of Elnsbury. The wretchednems of St. Giles in often contrauted with the luxury of St. James in London.
Gilfillan (git-6ian), Gronce, a BritGiluan lab author, born In 1813j died in 1878. He became a licentinte of the Secession (Presbyterian) Church, and in 1833 was ordalned to the School Wynd Church, Dundee. His numerous writings among which may be mentioned A Gallery of Literary Por traits, and The Bards of the Bible, possess a vigorous atyle and great powern of fancy.
Gilfillan, Robrat, A Soottish Doet, bor. in Dunfermiline in 1798; died in 1850. He learned to be a cooper, and after trying one or two other trades he was latterly coliector of police rates $\ln$ Leith. In 1831 he publisied a small volume entitled Original Songs.
Gilghit, or Grorr (girgit) a valley situated on and district in dashmere, Hindu Kaish, and watered by the Gilgit, or Yasim, a tributary of the Indus.
Gill (jil), a measure of capacity equal to $1 / 2$ of a pint, and $y^{2}$ of a gallon.
Gill (gil), David, astronomer, born in Aberdeenshlre $\ln 1843$. He became in 1879 royal astronomer at the Cape of Good Hope. He organized expeditions to observe two transite of yenum, and in 1885 began a photographic survey of the sonthern heavens, maklig a catalogue ln 1895 of 450,000 stars. His publications have been valuable and numerous.
Gill, Throdori Nicholas, ich thyoloAfter gist, born in New York in 1837. After many yearg connection with the Smithsonian Institution, he became professor of zoology at Columbian Universlty, now George Washington University, In 1884. He has publisher numerous. papers on fishes and has given attention to other departments of zoology.
Gilles (zbbl), ST., a town in Southern rich in vineyards. Pop. 6381.
Gillette (glliet), Wrinim Hooker, born at Hactor and ramatist, was born at Hartford, Connecticut, in 1887. He began a stage career in 1877, and after 1881 plaved in his own dramas. These include The Profzasor, Held by the Enemy, Secret Servioo, Sheriock Holmes, etc.
Gillies (giliz), JoHm, a Scottish historian and scholar, born at Brechin in 1747; died at Clapham in
1830. He settled in London, where he applied himgelf to literature. He wrote a Hietory of Anoiont Greece cind a View of the Reign of Fredoriok II, and translated a number of Greek works.
Gillray (iliora), J caricaturist, born about the middle of the eishteenth century; dled In London in 1815. He caricatured the klng (George III) and the members of the House of Lords and afterwards the French and the French celehritles of the day.
Cills (Ells), the respiratory organs of animals whleh resplre hy ohtainlng oxygen from water, as crustaceans, molluscs, fishes and amphlbians. In fishes they consist of cartilaginous or bony arches attached to the bones of the head, and furnished on the exterior convex slde wlth a muititude of fleshy lpaves or fringed vascular fibrlls resembling pinmes. The water ls admitted by the fill-opening, and acts upon the blood as It circulates in the fibrile.
Gillyfower (jil'i-flou-er), a name Gilynower bestowed on such cruclferous flowers as the wallfower or carnation, etc. The clove-plnk (Dianthus Carvophyमus) is termed clove gillyfower. Gilman, Ciarlotiz Priking, an Amborn at Hartford, Connectlcut, Juiy 3 . 1860. Her books lnclnde Women and Economios (1898), Concerning Ohildren (1900), The Home, Its work and Infuenoe (1903), The Man-Made World (1910).

Gilman, Davizic Coit; edncator, cut, in 1831 ; died $\ln 1908$ He connectiat Yale in 1852, and was professor of geography there 1856-72 ; president of the University of Caiifornia 1872-75. Elected the first president of Johns Hopklns University in 1875, he served there tili 1901, and in 1902 was eiected president of the Carnegie Institution. He was a memher of the Venezneia boundary-iine commisslon of 1896-97.
Gilmore, Jamps Roberts, author, dled in 1903. He wrote, under the pen name of Edmund Kirkp, several noveis of Sonthern life dnring the Civii war, and also wrote a nnmber of historical works, inclnding The Rear-Guard of the Revolution. John Seveir as a Commonwealth Builder, etc.
Gilolo, Jnoro (je-1ono), an island in the Indian Archipelaro, the largest of the Molnccas ; area, 6500 eqnare miles. It ls of singuiar form, conisting of fonr penlnsnlas, radiating N., 8. In, E. 8. E., and 8., from a common
center, and having larse bayw between. It is rucged and mountainous, the mountalns belas voicanlc. The princlpal productions are rago, cocoanuts, apicen, edlbie hlrds'-neats, useful timber, etc.; hormes, cattle, and sheep abound. Deer, wild boarm and other game are likewise plentiful. The original Inhabltanta, called Alfoories, have been gradualiy premed Into the interior by the Malay.. The isiand is under Dutch ruie and has a population of abcut 120,000 .
Gil Polo. See Polo.
Gilthead
(gilt'hed; Ohrysophrys ant rata), an acanthopterysious fish of the Sparidse or mea-bream fam-
ily common ln the Medlterranean. It has strong grinding teeth for crushing the shelis of the molluscs on which it leeds: a yeliow hand stretches from eye to eye (whence its generic name, signifylng 'golden eyehrows'). Its coior is a mixture of silver and sky-hlue, its dorsal and caudal fins are hlack, while hrown lines pass aiong the sides. It is a fine fish, and sometimes reaches a welght of 18 to 20 lhs.
Gilt Toys, the trade term for trlnkets of copper or Germansilver, wlth a thln coating of goid or silver spread over its surface. Gilt toy are thus cheaper than goid and eliver jewelry, bnt they may be equally hriliiant and as littie liabie to tarnlsh. In Britaln this industry is chlefly carried on at Blrmlngham; and ln France at Paris and Lyons.
Gimbals
(gim"aiz), the name of the
pair of rings wlthin which the mariner's compass is slung, or any pair of simiiar rings. The gimhals maintain the compass-bowl and the compasscard in a horizontai position, there being two concentric rings, the onter turning about a horizontai axis, and the inner turning about a similar axis at right angies to the other. Ship chronometers are often suspended the same way.
Gimlet (gimilet), a small tool with a pointed screw at the end, used for horing hoies in wood or other snhstances by turning. A larger instrument of this nature is termed an auger. Gimp (gimp), a slik. woolen, or cotton twist stiffened by a fine wire, or sometimes a coarse thread running through it, and mnch used in trim. mings for dresses, etc.
Gin (jln), a splrit distiled irom berries grain, and flavored with junlperberries, and sometimes with oll of turpentine and common salt, and with other substances. The name is from gemicere, the French for 'juniper,' It is largely
manufactured in Holland, particularly in Schiciam, and the in thence imported in thus ofton called schiedam as well as Hollanda. In Great Britain in in largely manufactured in London, where it often goen by the name of Old Tom, and to a lem extent at Plymouth and Bristoi. What is termed 'sin' in Great Britain difers materiaily from Hullands and even from the beat English gin, as it is a plain corn apirit, which derives ita flavor from oil of turpentine, with certain aromatics in amall quantitles.
Gin, the name of certain machine employed in raising weishtr. One form consista of three poles, 12 to 15 feet long, often tapering from the lower extremity to the top and united at their upper extremities, whence a block and tackle is suspended. A space of 8 or $\forall$ ft . separaten the lower extremities planted in the ground, and a kind of windlass is attached to two of the lezs. Another kind of gin is a sort of whim or windlass for raising coal, etc. It is worked by a horse, which turns a cylinder, and winds on it a rope by which the weight is raised. See Cotton Gin.
Gingal (jin'gal), a kind of large Asia. It is fired from a rest, and may be mounted on a light carriage.
Gingelly Oil (Jin-jel'i). See Benné Ginger oit Nin East Indian plant of the order Zingiberacez. It grows in in oist places in various parts of tropical Asia and the Asiatic is-

Ginger Plant (Zingiber aftinale). lands, and has been introdnced into the West Indies, particularly Jamaica, as also into S. America and W. Africa. The kind most esteemed is Jamaica ginger. The rhizome, or underground stem, is what is used, being employed in various ways. It has an aromatic, pungent taste, and when young is candied, and makes an excellent preserve. It is a favorite condiment and is used medicinally as a carminative, stomachic, and in indigestion. It enters into the composition of a great number of confections, infusions, pills, etc. The special preparations are the tincture and the essence of ginger, and the syrup, prepared by mixing
twenty-ive parta of ayrup with one of the atrong tincture. Infuocion of singer is a preparation useful for fiatulence.
Ginger-ale, in abrated water made lemonade, but favored with singer inatead of lemon.
Ginger-beer, a pleasant, non-alcohollic, effervemcing beverage, made by mixing together finger, cream of tartar, sugar, yeast, and water, and ailowing the whoie to ferment for a time, then bottling. Ginger-beer may aiso be prepared thns: Add to each galion of water 1 lb . of refined sugar, and $\ddagger$ os. of ground ginger. Boil for an hour, add the white of two eggs remove the scum. Strain into a veasel to cool, cank it np with the juice and peel of a lemon. Add a very small amonnt of brewer's yeant, and bung up tightly for a fortnight.
Gingerbread, a well-known cake the chief ingredients being four and treacle, with butter, eggs, etc., and enough singer to flavor it.
Ginger-cordial, or Grnoer-wine a from raising lemon beverage made and water, with some whisky or bragar, Gingham ( ging'am $^{\prime}$ ), a cotton fabric distinguished from calico by having the colors woven with the fabric, not printed on woven The with the are various; sometimes fancy designs, sometimes checkered, and sometimes striped. Umbrella ginghams are all of one color.
Gingko (gingiko), the Japanese the name of coniferous trees of yew gamus Salisburia belonging to the yew lamily. The Salisburia adientifolia is a tree which sometimes rises nearly 100 feet in height. It is destitute of resin. It is a native of China and Japan, and was introduced into Europe in 1754, when it was brought to England. Its fruit encloses a kernel which, when roasted, may be used as food, and which tastes like maize.
Ginsburg (gins'birh), Christran, a rabbinical scholar, born at Warsaw in 1830. He is the author of Historical and Critical Commentary on the Song of Songs; The Karaites, their History and Jiterature; The Es, senes; The Kabbalah, its Doctrines, Derelopment, and Iiterature, and other works of similar character. His greatest work is, however, the Massora. He wes one of the scholars pugared on the r vised version of the Oid Testament.
Ginseng (jin'seng), a plant of achinseng, order Aralia Asia, Panam
and about 1 foot hish. It root in ro at Rome, and became the pupil of Poter garded as a sort of panacea mons the Chinces, and is larsely imported, but it appears to be really of very little efficacy; the tante is sweet and mucilaginous, accompanied with nome bitternese, and aloo allishtly aromatic. Another apecies of

Ampriona Gincoag (Panax gwinguafotiom).
cinsens, Panax quinquefolium, inhabits Canada and the northeastern parts of the United States. Uuantities of its root are went to China.
Gioberti (jo-bér'te), Vncmazo, an statemman, born at Turin in 1801; died at Paris in 1852. Having been educated for the church, he was appointed chaplain to Charles Albert, King of Sardinia, but rendered himself obnoxious by his republican sentiments, and was firnt imprisoned, and, in 1833, banished. The first few years of his exile he spent at Paris, and afterwards became a teacher of philosophy in a sehool at Brussela. There he published two works, one of which was an attempt to reconcile philosophy and Roman Catholicism. In 1843 appeared his Primeto Morale O Oivile depli Italiani, a defence on liberal principles of the papacy, a wort which bronght over the majority of the prieste to the national party. In 1847 he published a work entitled Il Gesuita Moderno ('The Modern Jesuit'). When Charles Albert in 1848 granted a constitution to Sardinia, Gioberti retnrned to his native conntry, but he soon after withdrew to Paris.

## Giobertine Tincture

( jo-ber'tin),
a preparation for restoring illegible writings or faded pictures. The inventor of it was Giovanni Antonio Gioberti (1761-1824), a native of Piedmont. Gioja Del Colle
(jo'yà del kolla),
a town in Southern Italy, province of Bari, on a slope of the Apenninee. Pop. 21,721.
 Nsples about 1632, a scholar of Spagiojetto, studied the great Italian mastern
of Cortona Yaul Veronene had afterwards great infuence on als manner. He imitated the greatent masters so well that even connoimeurn were imponed upon. In 1679 he was employed by Charles II to ormament the Becurial, and at the court of Spain he became a sreat favorite. Giordano wan eapecially succensful in imitating the manner of Bassano, and of the Chevaller Masaimo Etanzioni. After the death of Charlem II he returned to his native country, where he died about 1706 His mont celebrated pieces are his Irescoes, in the Eacurial, at Madrid, Florence, and Bome. Some of hil finest painting are at Dresden.

## Giorgione (Jor-jojni), properly

 born in 1477 at Castelfranco, one of the most celebrated painters of the Venetian rchool. In Venice he ornamented the facades of several large buildings with fremcoes, which have montly perished. He fonnd in Titian a formidable rival in this bratich of bis art. His portraite are reckoned among the finest of the Italian achool. His plecee are rare, bnt some are to be seen at Milan, and in the galleries at Vienna and Dreaden. He died in 1511.Giotto (jot't0) properly AybrociorTo or ANeroLotro Bondone a celebrated Italian painter. He was born probably about 1276, at the Florentine village of Vespignano, and in his boyhood tended cattle. But having been seen by Cimabue, as he was drawing figures of his sheep upon a piece of slate, that artist carried him to Florence and taught him painting. His natural talent and graceinlnesm developed so rapidly that he soon surpassed all his contemporaries. He represented human figures with truth and nature, and surpassed all others in the dignity and pleasing arrangement of his figures, and a regard to the proportions and disposition of the drapery. His figures have more life and freedom than those of Cimabue, as he particularly avoided the stif style. Among his most celebrated pieces is the Navicella (ship). at Rome (a picture of 'Peter Walking Upon the Waves' '), some fresco paintings at Horence, also the history of Sit. Francis, at Assisi, and several miniatures. He was equally successful as a statuary and as an crchitect. He died in 1336.

## Giovinazzo

 of Sonth Italy, province of Bari, on the Adriatic, the seat of a bishop. Pop. 11,617. Gipsy. See Gypsies.

Gisaic
(Ji-raf'; Camelopendalio of raf(a), a rumbinant animal inhabiting Africe, and constituting the only apecies of ite genum and family. It is the talleet of all animate a fuli-grown male renching the height of 18 or 20 feet.

This great stature is mainiy due to the extraordinary length of the neek, in whlch, however, there are but seven vertebree, though these are extremely elongated. It has two bony excreacences on Its head resembing horns. Its great height is admirabiy sited with lts habit of leeding on $t$, leaves of trees, and in this the anlmal ls further aided by lts tongue, which ls botb prehensile and capable of being remarkably elongated or

Five-Horned Giraffe, showing Missen Horns.
zontracted at will. When it browses the herbage on the ground it stretches out its furelegs as wide as poselble till it can reach the ground by means of its long neck. Its color ls n mally light fawn, marked with darker spits. It is a mild
and foofensive animal, and in captivity is very gentie and playiul The giraíe If a natre of a great part of darica, from Abyumina and Sennar to Senegal and the regions adjacent to the Cape Colony.

## Giraldus Cambronsis (jeraldup

 eén), an early Engligh hintorian, born about 1140. His proper name wai Gerald de Barry, and be wat mon of William de Barry, a Norman nobie of Pembrokeatire. He was educated under bis uncle, tbe Blisbop of St. David'e, and afterwards at the Univeraity of liaris. He returned in 1172, and was appointed arcbdeacon of St. Davld's. Hin uncle dying soon after, Geraid was elected to succeed him, but the $k i n g$ refused to confirm the appolntment, and Gerald witbdrew to Parit, where he was appointed profeasor of canon iaw. In the foliowing year (1180) he returned to Engiand, where be was required to administer the bigboprlc of St . David'h, the proper blshop baving proved himselt incompetent. He discharged tbis office for four years, and was then appointed a royal chapiain. As companion to the king's son, Prince John, he went to Ireland $\ln 1185$, where he colifected the materiais for his Topography of Ireiand (Topographia Hibernie). He afterwards drew up a similar work on Waies (Itin. crarium Cambria). Wben he cled is uncertaln.Girard (ji-raric), Itmpiner, platocrat near Bond philanthropist, was born he establizhux France, in 1750 . In 1769 adeiphlished himseif in business In Philof a great fortune lo the Went India trade. In tbe war of 1812 he was the financlal mainstay of the United States government. at one time advanclig $\$ 5,000,000$. At his death, in 1831, his property amounted to $\$ 9,000,000, \mathrm{a} \mathrm{snm}$ co asidered very jarge at that time, and tha buik of which was left for charitable parposes. The celebrated Girard Coilege, at Philadelphia. was founded by hlm, costing $\$ 2,000,000$, an lnstitution for the education of orpban boys, between tbe ages of six and fourteen. It has proved one of the most successful and useful of charitable institutions.
Girardin (zbertrodap), Emine DE, politician, born French journalist and and educated in Paris. He was connected as projector, editor, or otherwine with a nnmber of newspapers and periodicals, the most successful being La Presse. a Conservative organ established in 1836. A controversy $\ln$ Its colnmns led to a duel between Girardin and Armand Oarrel,
which proved fatal to the latter. In poiltice Glrardin played many parta. He was ined 6000 trance in 1817 fur attacks on the imperial rovernment in La Liberto. He wrote numerous political pamphletr and a few picces for the stage. He died in 1881.- His firnt wife, Nelphine Gay, daushter of the novelint Madame Sophle Gey, was a well-known authoren: born 1804: died 1850. She wrote the ncvels Lo Lorgnon, La Marquis de Pontanges, Le Oenne de M. de Balzac, Il ne faut pae jower aveo Doulour, and Marguerite; contrlbuted to the Presse newspaper, and wrote for the tage Lady Tartuffo and Le doio fait peur, and other pieces.
Girasol (ine ra-sili), a precious opastrons lighte, reflects a briliiant reddish light. It is usually of a milk-white or bluish-white color. The brightest are brought from Brazil and Siheria. The name is sometimes hestowed on the Asteria sapphire. One variety is known as the fine opal.
Girder (gir'der), a main beam, elther of wood or iron, resting upon a wall or pler at each end, employed for supporting a sinperatructure, or a superincumbent weight, as a floor, the upper wall of a house when the lower part is sustained by pillars, the roadway of a hridge, and the like. Wooden girders are sometimes cut in two longitudinally and an iron plate inserted between the pleces, and the whole bolted together. This species of girder is called a sandwich-girder. For bridges cast-iron girders are sometimes cast in lengths of 40 feet and upwards, but when the span to be crossed is much greater than 40 feet, recourse is had to wrought-iron, or to trussed, lattice, or bow girders, and cast-iron is now little used. A trussed-girder is a wooden girder strengthened with iron. A lattico-girder is a girder consisting of two horizontal beams united by diagonal crossing bars, somewhat resembling wooden latticework. A box-girder is a kind of girder resembling a large hox, such as those employed in tuhular hridges. There are also bowstring-girde. s, which are varieties of the lattice-girder, and consist of an arched heam, a horizontal tie resisting tension and holding together the ends of the arched rib, a series of vertical suspending bars hy which the platform is hong from the arched rib, and a series of diagonal braces between the suspending bara.

## Girdle of Venus <br> (Cestum Venerio), an animal belong

 ing to the actinozoa, found in the Mediterranean. In shape it resemhles a ribbon, and it is apparently propelled bythe cilla which fringe it edre. The mouth is situated on the inforior cige It is iridencent by day, and brillianily phosphorencent at nisht.
Girgeh (jir'je), of town formerly the left bank of the Nile. It pomectien a Homan Catholic convent, the oldent in Esypt. Pop, 10,803.
Girgenti (jir-jen'te), town in the southwent of Sicily, capital of the province of mame mame, 68 miics 8. 8. I. of Palermo, a few milles from the sea, on an eierated alte, with a cathedrai, library, museum, etc. It exports wheat, oil, fruit, and sulphur, ite port being Porto Empedocie. Near the town are the extensive and remarkablo ruins of the ancient Agrigentum. Pop. 20,024 .The province has an area of 1490 square miles, and is rather mountainous in character. Pop. 371,638.
Girodet-Trioson ( ehe -rodidrebo Louis Girodet de Roussr, arench hifo torical painter, born in 1767 ; died in 1824. Amons his famous pictures are Endymion, Hippoorates, Tho Delwga, Atala, Napolcom Receiving the Keys of Vienne, and St. Louis in Egypt.
Gironde (chê-röpd), a department of France, on the Bay of Biscay, named from the Gironde entuary; area, 8160 square milem. The surface is generally flat, and almost the whole department belongs to the hasin of the Gironde, which is formed by the fnnction of the Dordogne and Garonne. The cllmate is generally mild and extremely moist. One-third of the surface is wante, and abont one-fonrth is arable land. The staple production is wine, Medoc, Graves, Cotes, and Entre-deux-Mers being the most celehrated growths. (See Bordolais Wines.) The forests of oak and pine are extensive. The minerals are unimportant, hut mnch salt is ohtained from lagoons. The mar. ifactures are varied; the trade, which has its center at Bor deaux, is very important. Bordeaux is the capital. Pop. (1806) 823,025.

## Gironde, River See Geroma.

## Girondists (zher-rond-ints), GIzonDINs, one of the great

 political partios of the first French revolution. The Girondists were republicans, bnt were more distinguished for visionary dieals than for a well-defined policy; hence they fell an easy prey to the party of the Mountain. Their leaders were three of the deputies of the GiroadeVerginaud, Guadet, and Genconne, hence the name. Iouls XVI was obliged, in 1782, to select a ministry from amonsthe Girondists, but it was whort-lived. In the convention their struggles wlth the Montagnards forced them into extrems measures which they would otherwise have avolded. They wished to save the king, but many of them, from a mistaken policy, voted for his death. Thelr fall dates from their uisuccessful impeachment of Marat (1793), soon after which a large number of them were proscribed 2 and twenty-one executed.
Girton College, Cambridge, the for women in England. Most noted in 1869 at Hitchin, it was removed to Girton, and opened in 1873 . Newnham Hall, Cambridge (opened 1875), is also connected with it.
Girvan (gir'van), a seaport of ScotGIrvan land, county of Ayr, situated at the head of a fine bay, on the Girvan. The winter herring fishery is the most important industry. Pop. 4024.
Gisors (zhè-sor), a town of Northern Gisors France, department of Eure, with a well-preserved castle of the twelfth century. Pop. (1906) 4345.
Gissing (gis'lng), Groras Robert, novelist, born at Wakefield, England, in 1857; died in 1904. He made a close and accurate study of the London populace, and wrote a large number of novels, somher but strong life-pictures. Gitschin (gich'in), a wallea town of a fine valley, on the Cidlina. It has a castle built hy Wallenstein, whose residence it was. Pop. 10,000 .
Giulio Romano (j8'ié- rob-mis'nō), an Italian painter, architect, and engineer, the most distinguished of Raphael's scholars, born at Rome near the end of the fifteenth century. During the lifetime of Raphael he palnted with him and under his direction, and many of his pro ductions are quite in his manner. After having finished the fresco-work ln the Hall of Constartine in the Vatican at Rome, under Clement VII, he went to Mantua, where he executed a series of remarkable works in architecture, palntlng, and engineering. The Palazzo del $T$ (palace of the T) was rebuilt and ornamented entirely by him, or under his direction. After the death of San Gallo in 1546 the buildling of St. Peter's was committed to him, but he dled the same year. After the death of Raphael he gave hlmself up to his own lmagination, and astonished all by the boldness of his style, by the grandeur of his deslgns, by the fire of his composition, by the loft1ness of his poetical ideas, and his power of expression.

Ginargevo
(jurja'vo), a town in Houmania, on the Danube, opposlte Rustchul the most important ghipping port on the Koumanian side of the river. The Russians were defeated here by the Turks in 1854. Pop. 13,978. Ginsti (jus'té), Grvarper, an Italian satirical and political poet, born in 1809; died ln 1850. He is considered by his countrymen as the rlval of Beranger in popular lyrical poetry.
Givet (zheva), a town of Northeastern France, in the $\Delta$ dennes, with leather manufactories and other industries. It is a place of great strategic importance, and its citadel of Charlemont is of great atrength. Pop. (1906) 6110.

Givors (zheovor), a town of Southeastern France, deportment of the Rhone, and on that river, a center of the coal trade, with lronworks, glassworks, silk weaving and dyeing-works, etc. Pop. (1906) 11,444.
Gizeh (ge'ze), a town of Egypt, on the left bank of the Nile, opposite Old Cairo. Some miles off are the celebrated pyramlds, which have been named from it. Pop. 11,500.
Gizzard (giz'ard), a strong muscular of pard of the alimentary canal of birds, which enables ther. to grind their food. A gizzard occurs also in many gasteropods, and in certain cephalopods and crustaceans. In birds it is lined by a thick muscular coat, and usually contains pieces of gravel, etc., to facilitate the grinding process.
Glace Bay, a port of Cape Breton, from Suy, Nova Scotia, 15 miles Trom Sydney.
Glacial Period (gla'shal), or Iox AGE, in geology denotes that portion of the post-tertiary period, in which Europe and North Amerlea, north of latitude $50^{\circ}-40^{\circ}$ were subjected to intense cold, and covered with ice and glaciers to a great depth. This phenomenon has been demonstrated from a study of the actual effects of glaclers in the Alps, and of varied traces of surface change and disturbance that could have had no other origin. The traces of ancient glacial action are abundantly discoverable in Britain and Scandinavia and in other parts of Northern Europe, and are profuse across nearly the whole width of North America. They are found also ln the Himalayas and some other reglons. See Geology.
Glacier (gla'sher) National Park. ed Stater has for years been acqulring localitien of great natural attraction, or remarkable for unique features, to be
kept permanently unchanged as public areas. Prominent amons these are the Yellowstone and the Yosemite National Parks. An important addition to this seriem of national areas is the Glacier National Park, set anide by acts of Congress in 1810. This lies in Northern Montana, between the Canadian border and the line of the Great Northern Railroad. It contains about a million acres, being second in area only to Yellowstone Park. The region is one of natural wonders, which range from verdant valleys and wooded heights to glacial peaks. Within the area are numerous glaciers and mountain lakes, the locality presenting many examples of sublime scenery. Birds and animals are numerous, and the locality as a whole forms a splendid addition to our series of national pleasure grounds. Glaciers (glàshers), icy masses of snow, yet not exactly like common ice which cover the summits and sides of mountains above the snow-line. They are found in Switzerland, Scandinavia, the Andes, the mountains of Alaska, in

Glincior of Zermath, Bwitseriaad.
many parts of the Rocky Mountain range, etc. They extend down into the valleys often far below the snow-line, and bear a considerable resemblance to a frozen torrent. They take their origin in the higher valleys, where they are formed by the congelation and compression of masses of snow in that condition called by French writers névé, by German authors firn. The ice of glaciers differs from that produced by the freering of still water, and is composed of thin layers filled with air-bubbles. It is likewise more brittle and less transparent. The glaciers are continually moving downwards, and not infrequently reach the
borders of cultivation. The rate at which a glacier moves generally varien from 18 to 24 inches in twenty-four hours At its lower end it is generally very steep and inaccessible. In its middle course it resembles a frozen atream with an undulating surface, broken up by fissures or-crevasses. As it descends it experiences a sradual diminution from the action of the sun and rain, and from the heat of the earth. Hence a phenomenon universally attendant on glaciersthe issue of a stream of ice-cold turhid water from their lower extremity. The de-cent of glaciers is shown by changes in the position of masses of rock at their sides and on their surface. A remarkable glacier phenomenon is that of moraines, as they are called, consisting of accumulations of stones and detritus piled up on the sides of the glacier, or scattered along the surface. They are composed of frag: ments of rock detached by the action of frost and other causes. The fissures or crevasses by which glaciers are traversed are sometimes more than 100 feet in depth, and from being often covered with snow are exceedingly dangerous to travelers. One of the most famous glaciers of the Alps is the Mer de Glace, belonsing to Mont Blanc, in the valley of Chamouni, about 5700 feet above the level of the sea. It is more especially, however, in the chain of Monte Rosa that the phenomena of glaciers are exhibited in their greatest sublimity, as also in their most interesting phases from a scientific point of view. Glaciers exist in all zones in which mountains rise above the snowline. Those of Norway are well known, and they abound in Iceland and Spitzbergen. Hooker and other travelers have given accounts of those of the Himalaya. They are conspicuous on the Andes, while the Southern Alps of New Zealand rival in this respect the Alpine regions of Switzerland.

The problem of the descent of the glaciers is of extraordinary interest, and various theories have been put forward to account for it. It was shown by Professor J. D. Forbes, of Edinburgh, that a glacier moves very much like a river: the middle and upper parts faster than the sides and the bottom ; and he showed that glacier motion was analogous to the way in which a mass of thick mortar or a quantity of pitch flows down in an inclined trough. His theory is known as the viscous theory of glaciers, which presupposes that ice is a plastic body, and this plasticity has been satisfactorlly explained by Professor James Thomson, of Glasgow, by the phenomenon of the meltins and reireezios of ice. Water, he dis.
covered, when subjected to pressure, freezes at a lower temperature than when the pressure is removed. Consequently, When ice is suhjected to pressure it melts; if it is relieved of pressure the water again solidifies. Therefore if two pieces of ice are pressed together, they tend to relieve themselves hy melting at their points of contact, and the water thus produced immediately solidifies on its escape. If ice is strained in any way it similarly relieves itself at the strained parts, and a similar regelation follows. This, when applied to the glaciers, gives a complete explanation of their plasticity. Pressed dowawards by the vast superincumbent mass, the ice gradually yields. Melting and refreezing takes place at at strained points goes on. In the latter some parts, at others the gradual yielding process there is no visible melting, but there is the gradual yielding from point to point to the pressure ahove, and there is the transference relatively to each other of the molecules that constitnte the, at first sight, solid mass. If, however, at certain points the strain is intense, the ice becomes extremely brittle. The latter fact. disposes of Tvadall's objection to Forbes's theory, which was based on the fact that crevasses proved the brittleness, and not the viscosity of ice.
Glacier Tables, large stones found ported on pedestals of ice. The stones attain this peculiar position by the melting away of the ice around them, and the depression of its general surface by the action of the sun and rain. The hlock, like an umbrella, protects the ice below it from both; and accordingly its elevation measures the level of the glaciar at a former period. By and hy the stone table becomes too heavy for the colnmn of ice on which it rests, or its equilihrium becomes nnstable, whereupon it topples over, and falling on the snrface of the glacier covers a new space of ice, and hegins to project afresh.

## Glacis

(gla'sis), in fortification, is the sloping surface of the outermost portion of a fortified line descending from the parapet of the corered way to the level ground or open country in front. It must be so placed that the guns of the fort will rake it at

## every point. <br> Gladbach, Brearsch-

 town of Prussia, province mannfacturing 8 miles northeast of Col Rheinland, (1905) 13,410 .Gladbach, Moncharn- (mennchenPrussia, province of Rheinland, 16 milem
west of Dusseldort, with extenaive manufactures of cotton and mired cotton goods, etc. Pop. (1905) 00.714.
Gladden, Washingtoz, author, borr at Pottsgrove, Pennsylvania, in 1836; was ordained in the Congregational Church, and hecame a pastor in Columhus, Ohio, in 1882. He has written very largely on social reforms and other subjects, among his hooks being Tools and the Man, Social salvation, Ohristianity and Socialism, The Church and Modern Life, etc. Died July 2. 1118. Gladiators ( $\mathrm{g} 1 \mathrm{ad} \mathrm{d}-\mathrm{i} \mathrm{a}^{\prime}$ turs), combatants who fought at the puhlic games in Rome for the entertainment of the spectators. The first instance known of gla iliators being exhibited was in R.C. 264, hy Marcus and Decimus Brutus at the funeral of their father. They were at first prisoners, slaves, or condemned criminals; hut afterwards freenen fought in the arena, either for hire or from choice; and later men of senatorial rank, and even women, fought. The regular gladiators were instructed in schools (ludi), and the overseer ( $l a-$ nista) purchased the gladiators and maintained them. Men of position sometimes kept gladiatorial schools and lanister of their own. The gladiators fought in the schools with wooden swords. In the public exhibitions, if a vanquished gladiator was not killed in the combat, his fate was decided hy the people. If they wished his death, perhaps because he had not shown sufficient skill or hravery, it is stated that they held up their thumbs ; the opposite motion was the signal to save him. This, however, is doubtful, the meaning of the terms used to express it being uncertain. According to some authors, the significance of the thumb movement was the reverse of that ahove stated. The victor received a branch of palm or a garland. The gladiators were classified according to their arms and mode of fighting; thus there were retiarii who carried a trident and a net (I. rete) in which they tried to entangle their opponent; Thracians, who were armed pith the round Thracian huckler and a short sword; seeutores, who were pitted against the retiarii, etc.
Gladiolus (gla-d ${ }^{\prime} \overline{0}-\mathrm{lus}$ ), a genus of plants of the iris order. having a bulbnus root with a recticulated covering, natives of Europe and N. Africa, but especially S. Africa. The leaves are pnsiform, the flowers brilliantly colored. There are many species, some of them popnlar zarden plants, others grown in hothouses.
Gladstone ( 1 lad'stun). Henkrer JOHN, son of the fa-
mous statesman, Willinm Do Gladstone, was born at London in 1854. He was educated at Eton and Oxford and entered parlinment in 1880, being private secretary to his father, then prime minister, in $1880-81$, and subsequently holding various positions in the treasury, the war, and the home offices, being first commis sioner of works $1894-95$, and subsequently secretary of state for home affairs. In 1909 he was appointed governor-general of the newly organized commonwealth endulled the Union of South Africe.
Gladstone, whutan Ewatr, a celof Sir John Gladstone, was born at Liverpool in 1809 . He entered Eton 1821, and left it in 1827 , becoming afterward a student of Christ Church, Oxford. He left college in 1831, having taken high bonors. After leaving Oxford he spent six months in Italy. In 1832 the first Reform Act was passed, and Mr. Gladstone's public career commenced by his being returned for Newark, and in 1834

Right Hon. W. E. Gladstone
accepting the post of Junior Lord of the Treasury in Peel's cabinet. At this period he was a Tory, and as his party quickly went out it was not until 1841 that he again held any public office, in which year he became, under Peel, Vice President of the Board of Trade and Master of the Mint. In $18+2$ great fiscal reforms were inaugurated, some of which were understood to be due to Mr. Gladstone. Having become President of the Buard of Trade, he carried, in 1845, a measure for the abolition of restrictions on the exportation of machinery, and in 1844 he carried a railway bill, establishfifg cheap trains. He took part with Peel
in the repeal of the corn-lawn, a course which coot him his seat for Newark. In 1847 he was returned for Oxford University, and he then supported the bill for the removal of Jewish disabilities, the repeal of the Navigation Laws, etc. He now besan to develop remarkable ability as a financier, and fiercely attacked Mr. Disraeli's budget of 1852. The same year he became Chancellor of the Exchequer under the Earl of Aberdeen, a post which he also held for a short time in 1855 under Lord Palmerston. In 1858 he became High Commissioner Extraordinary to the Ionian Islands, and him Studies on Homer appeared about the same time. In 1859 he again took office as Chancellor of the Exchequer under Lord Palmerston. At the general election of 1865 Mr . Gladstone was returned for South Lancashire, and on the decease of Lord Palmerston he became the Liberal leader in the Commons in the Russell administration, still continuing to hold the Chancellorship of the Exchequer. The government, being defested on the reform question, went out in 1860, and Lord Derby came into power. In 1867 a Reform Bill, establishing household suffrage in burgs, was carried by the Conservatives, but to the final shape of it Mr. Gladstone and Mr. Bright materially contributed. In 1868 Mr. Gladstone succeeded in abolishing compulsory church rates, and he also carried his resolutions dealing with the Irish Church, but his Irish Church Suspensory Bill was rojected by the Lords. At the general election of 1868 he lost his seat for South Lancashire, but was returned by Greenwich. There being a great Liberal majority in the new parliament, Mr. Disraeli was soon forced to resign, and Mr. Gladstone became premier. Next year he carried his bill for the disestablishment of the Irish Church, and in 1870 his Irish Land Act. In 1871 army purchase was abolished. The Ballot Act was passed in 1872, the Alabama claims were settled, and the Scottish Education Act enrolled on the statute-book. Parliament was dissolved in 1874, and the Conservatives ousted Mr. Gladstone from office, as they had secured a good majority. During Lord Beaconsfield's tenure of office Mr. Gladstone denounced the Bulgarian atrocities, the Anglo-Turkish Treaty, and the Afghan War, and his speeches during his candidature for Midlothian greatly helped to render the government unpopular. In 1880 the general clection reinstated Mr. Gladstone firmly into power (Midlothian being no:- his constituency), and his second Irish Iand Bill became law in the following year. In 1882 g

Prevention of Crimes and an Arrears Act for Ireland were passed, and in 1883 measures relating to hankruptcy, etc., were also carried. In 1884 the bill extending household suffrage to the counties was carried, and the Gladstone ministry fell the next year. Lord Salishury, who had formed an administration, got the Redistrihution of Seats Bill passed, and under it took place the general election of 1885, Mr. Gladstone still continuing to represent Midlothian. Next year Lord Salisbury resigned after an adverse vote in the Commons, and Mr. Gladstone again came into power. He soon startled the country hy introducing a measure of Home Rule for Ireland. It failed to pass the Commons, and an appeal was made to the country, the result of which was emphatically adverse to Mr. Gladstone's proposals. He had to make way for Lord Salishury. In 1892 the result was again reversed; Gladstone once more resumed authority; he resigned March 2, 1894, and died May 19, 1898, heing interred with a State funeral at Westminster Abhey.

## Hlagolitic Alphabet (g1a g-o-lit'-

 cient Slavonic alphahet. The Slavonic languages have from very ancient times heen written with two alphahets, the glagolisic and cyrillic. The latter is the modern Slavonic and Russian alphahet; the former is still used in Istria. Croatia, and Dalmatia, and its use has heen authorized in the Roman Catholic liturgies of those districts.Clair (glar), the white of eggs, used as a varnish for preserving paintings. Bookhinders also use it for finishing the hacks of books.
Glaisher (lga'sher), an English aeroborn in 1800 naut and meteorologist, born in 1800,
ascent of 37,000
it.
it record.

## Glamorgan

(gla-Lu fan), or Glamorganshire, a county in South Wales ; area, 576,540 acres. The north and northeast parts of the county are extremely mountainous, and often exhibit scenes of the most romantic heauty. The southern portion is comparatively level and very fertile, particularly the Vale of Glamorgan. The climate in this part is remarkably mild, as snow does not lie long on the ground, and tender shrubs thrive in the open air. Glamorganshire belongs wholly to the basin of the Severn: and all its streams, of which the Tant is the largest, flow in a south direction. The cattle are reckoned among the hest in Wales. The
minrral wealth of Glamorgansire is
incalculable value. Itu coal-fielde, its stores of ironstone and limentone, are most extensive and the ironworks of Dowlais and Cyfarthfa are among the largest in the world. The woolen manufacture is carried on to some extent. Principal towns-Curdif, the capital; Merthyr-Tydfil, Swansea, and Neath'. The county returns five members to the House of Commons. Pop. 1,130,818.
Glance (glans), a neme given to some minerals which possess a metallic or pseudometallic luster; as antimony plance, bismuth olance, oobalt slance, etc.

## Glance-coal. See Anthracite.

Glanders ( 81 an 'ders), one of the most formidable diseasem to which horses are subject, indicated hy a discharge of purulent matter from the points of contagion, sometimes one or both nostrils, with a hard enlargement of the suhmaxillary glands. In acute glanders the discharge, hy its copioueness, impedes respiration and ultimately, produces suffocation. The disease is highly infectious, and may easily he communicated to man hy the purulent matter coming in contact with the skin or mucous membrane. The disease is treated by mallein. See also the article Farcy.
Glands, a certain class of structures in animals, some of them forming organs which are the seat of an excretion, and provided with an excretory canal. In man there are two lachrymai glands, situated at the external angle of the eyes under the upper eyelid; six salivary, of which three are on each side, hehind and under the lower jaws ; two parotid, two submaxillary, two auhlingual, two mammary, confined to the female (the breasts in women) : the liver, the pancreas, the two kidneys, etc. The lymphatic slands, which take up and elaborate the lymph, are somewhat different frorn these in character; and still more different are certain other hodies denominated the ductless glands, as the spleen, thymus, pineal, thyroid, pituitary, and suprarenal (or adrenal). Botanists have given the name of glands to small bodies observed upon the surfaces of plants, and many of which seem to secrete certain fluids.
Glanvil, or Glasvicue (glan'vil), Ranulpi de, Engilish lawyer and warrior of the 12th century. In the reign of Henry II he held the office of justiciary, and repeiled the invasion of William the Lion, King of Scotland. Who was taken prisoner as he was besieging the Castle of Alnwick. Richard I is sald to have imprisoned Glanvil,
and oblifed him to purchase hir freedom With $£ 10,000$ towards a crusade to the Holy Land. He accompanied his master on this expedition and perished at the riege of Acre in 1100. To Glanvil is attributed a treatise on the laws and customs of England (DO Legibus et Consuc. tudinibus Inglice) © written about 1181, and first printed in the year 1554, being the earlient treatise on English law.
Glarus (elitros), swise canton, surrounded by St. Gall, the Grisons, $\mathrm{Uri}^{2}$ and Schwyz, area 266 sq . milee. On all sidee, except towards the north, Glarus is walled in by lofty mountains; lakes are numerous, and the cenery in their neighborhood is magnificent. The inhabitants are chiefly engaged in the cotton manufacture and in agricultural pursuits, rearing sheep and cattle, and exporting cheese, butter, etc. The constitution is a pure democracy. Pop. 83,349. The capital, Glarus, situated on the Linth amid grand scenery, is a wellbuilt town, with a good trade. Pop. 6000 . Glasgow (glas'lo or go ), the largest second in size in Great Britain, is situated mainly in the county of Lanark (a emall portion being in Renfrew), on both banks of the Clyde, the larger and more important part of it on the right or north bank. The southern portion fin built on bow-lying level ground, the northern portion to a great extent on a series of elevations of varying heights The streets are in general wide and straight, running mostly at right angles east and west, and north and south. Of the former, may be mentioned as a great thoroughfare the Trongate and its continuation Argyle Street, of the latter Buchanan Street. The houses are built almost wholly of freestone, and as a whole Glasgow is now excelled by few cities in the kingdom in architectural beauty. of the buildings the cathedral, situated in the northeast of the city is the only one of historical interest. It is supposed to have been begun about 1240, and completed within the next two centuries. It is a large Gothic edifice in the early Pointed style, with tower and spire from the center: length of interior 319 feet; width 63 feet ; height of nave 90 feet, of choir 85 feet, spire 225 feet. It is especially distinguished for the beauty of its crypt, one of the most perfect in Britain. The windaws are filled with painted glass on a uniform plan. The University of GlasRuw was founded in 1451, and is now a Ghurishing institution. Connected with it is the Hunterian Museum of anatomy, mutural history, etc., left by Dr. William Huater. The Municipal Buildings, in
the center of the city, in George Square, form an imposing pile in the Renait sance utyle. They were completed io 1887. Moot of the public monumenta are collected in George Square, the finent square in the city. Glasgow has several pubic parks, the largest, the Green, containing 140 acres. There are also $\mathbf{B o}$ tanic Gardens with extensive hothouses. There is a collection of pictures belonging to the city, and containing a number of very valuable works especially of the Venetian school. The industries aro unequaled for variety by any town in the kingdom, with the exception, perhape, of London. They embrace cotton, linen, woolen, silk, and jute, in all the proco esses of manufacture ; calico-printins, dyeing, and bleaching ; pig and malleable iron and steel, and machinery and metal goods of all descriptions; shipbuilding which might almost be called a staple, over 400,000 tons of shipping having been launched in some years on the Clyde ; extensive chemical works, potteries, glassworks, brickworks, breweries, distilleries, tanneries, tobacco works, sugar-refining works, etc. The commerce is commensurate in extent with the manufactures. The river itself, the chief highway of this commerce, ham ben navigable for large vessels up to the heart of the city, and the harbor accommodation has been and is still being exo tended by the construction of docks, quays ( of which there are over 6 miles), and other improvements. In the extent of its merchant marine Glasgow is surpassed by few cities in the world. The improvement of the navigation of the Clyde, which within the past century was fordable at and below the present harbor of Glasgow, has been of immense service to the city, though the total cost oi deepening, widening, straightening, and the construction of quays, doc'ss, etc., has exceeded $\$ 100,000,000$. The ${ }^{-1 \text { ways and }}$ the Forth and Clyde ar Ionkland Canals form important aus is means of communication. Horse traluways pass along the principal streets, and are under municipal control. In a sanitary point of view Glasgow has greatly improved in recent times, but it still reo mains less healthy than it might be During recent years the whole municipal expenses have been defraved without anv direct taxation; the profits made by the city in street-cleaning, gas, water, tramways, etc., leaving a margin over all costs of government. The city is well supplied with water from Loch Katrine.
Glasgow is a very ancient city. It: origin may be traced back to the foundation of the bishopric by st. Munge

about 560 . It was erected into a royal burgh in 1180. The first bridge was built in 1345. Its industrial importance did not begin until ufter the union in 1707, its previous trale being chiefiy with Europe. The Union opened up the trado with the American colonies, and tobacco became a source of wealth to the Glasgow merchants. Commerce then began to take other directions, and the progress made within the nineteenth century was remarkable. Pop. in 1610, 7644; 1712, 1:3,832; 1801, 77,385 ; 1901, 761,109. Tho city had grown to over a million inhabitants ( $1,095,171$ ) by the beginning of 1018. The rateable value was given as $\mathbf{£ 7 , 7 0 3 . 0 7 8}$. In alldition there are large suburbs, and the city of Paisley (populittion 86,503 ) is situated on the outskirts. Class, an artificial substance. hard, brittle, and in its finest qualities quite transparent, formed by the fusion of silicious matters with an alkali. Of the origin of its manufacture nothing is known, but the ancient Egyptians carried the art to great perfection, and are known to have practiced it as early as 2000 b. c., if not earlier. The Assyrians the Phœnicians, the Greeks and Etruscans were all acquainted with the manufacture. The Romans attained peculiar excellence in glassmating, and among them it was applied to a great variety of purposes. Among the most beautiful specimens of their art are the vases adorned with engraved figures in relief: they were sometimes transparent, sometimes of different colors on a dark ground, and very delicately executed. The Portland or Barberini vase is almost the only surviving specimen of its kind. The morle of preparing glass was known long before it was thought of making windows of it. The first mention of this mode of using glass is to be found in Lactantius, in the third century after Christ. St. Jerome also speaks of it being so used ( 422 A. D.). Benedict Biscop introduced glass windows into Britain in A. D. 647 . In church windows it was used from the third century. The Venetians were long celebrated for their glass manufncture, which was established before 700 A. D. Britain did not become distinguished for glass until about the commencement of the sixteenth century. Tho excise laws relative to the glass manufacture were at one time complicated in the extreme, and tended to check improvements in glassmaking. These laws were repealed in 1845 by Sir Robert Peel, as part of his free-trade policy, and beneficial effects were immediately apparent in the improved quality, cheapness and greater variety of descriptions of glass produced. Glass is largely
mado in France, Germany, Belgium and the United States, great quantities of it being here producel.

Glass is formed by the fusion of silicious matter, such as powdered fint or fine sand, together with some alkall, alkaline earth, salt, or metallic oxide. The nature of the glass will depend upon the quality and proportion of the ingredients of which it is formed; and thus an immense variety of kinds of glass may be made, but in commerce five kinds only are usually recognized: 1. Bottle or coarse green glass. 2. Broail, spread, or sheet window-glass. 3. Crown-glass, or the best window-glass. 4. Plate-glass, or glass of pure soda. 5. Flint-glass, or glass of lead. Colored glass may be mentioned as a sixth kind. The physical properties of glass are of the highest importance. Perhaps the chief of these is its transparency, and next to that its resistance to acids (except hydrofluoric). It preserves its transparency in a considerable heat. and its expansibility is less than that of any other known solid. Its great ductility, when heated, is also a remarkable property. It can, in this state, be drawn into all sorts of shapes, and even be spun into the finest of threads. It is a bad conductor of heat, and is also very brittle. It is usually cut by the diamond.

The works in which glass is made are called glass-houses. They are commonly constructed of brick, and made of conical form. A large vault is made in the interior of the cone, extending from side to side, and of sufficient height to allow workmen to wheel in and out rubbish from beneath the furnace, which is placed over the vault, and separated from it by an iron grating. The materials used for the formation of the glass are sometimes calcined in a calcar or fritting furnace, and a chemical union between the ingredients commenced, forming a frit. But this process is not essential, and the materials, after being ground and thoroughly mixed up together, are now usually placed at once in melting pots or crucibles made of fire-clay, the meltingpots being then placed in the melting furnace or oven. This is a kind of reverberatory furnace, is often circular in form, arched or domed above, and capable of keeping up an immense heat. The crncibles are placed in the furnace at equal listances from each other round the circumference. each pot being opposite ${ }^{+n}$ an opening in the wall of the furnace in order that the crucible may be charged or discharged by the workman from without. In recent times a furnace called a tank furnace has come into use and enables melting pnts to be dispensel with, as the material can be melted in
and worked from the furnace directly. The voe of the annealing furnace is also emential in glasamaking, the process of allowing the glass to cool there being called annealing. Unless this process be very carefully managed, however, the articles formed in the glass-house will be of no use, from their liability to break by the slightest scratch or change of temperature.

Sheet glass is the commonest description of glass. It is composed of various ingredients in varying proportions, usually of sand, chalk or limestone, sulphate of soda, and cullet or hroken slass. $A$ coarse variety of it may he made of a mirtuye of two parts by measure of soapboilers' waste, one of soda-ash and one of cleaned sand. In France the materials employed are commonly:-sand 100 parts, sulphate of soda 30 , carbonate of lime 30 , coke to aid in the reduction of the sulphate of soda 5 , with some dioxide of manganese to correct the greenish tinge that glass with a soda hase possesses. When the materials are properly melted a quantity is taken out of the pot on the end of an iron tuhe about 6 ft . long, and the workman hy blowing Into and swinging the tube while heating and reheating the glass, imparts a cylindrical shape to the newly-formed product. The rounded extremity of the cylinder (which may be 4 ft . long or more) is softened in the furnace in order to enahle the workman to blow a hole in it. This opening may he made hy heating the cylinder and then stopping up the tube with the thumh, when the expansion of the air causes the cylinder to burst open at the end. The other rounded end is detached after cooling by winding round its circumference a thread of red hot glass, which causes a clear fracture. The cylinder is now split open parallel to its axis hy a diamond, and then conveyed to the flattening furnace where it is heated and opened out into a flat sheet of glass. It is afterwards placed in the annealing furnace.

Crown glass is differently formed by different makers, but its composition is essentially the same as the best sheet class. It used to be the only windowglass made, hut its manufacture has been almost altogether superseded hy that of wheet glass. The ingredients being melted and at the proper temperature, a quantity of the glass is withdrawn hy the tube (to the amount, by successire addition, usually of 10 lbs . in all). By various manipulations this, from having the form of a hollow ohlate spheroid, is made to assume the form of a thin circular plate, with a thick part called the buIf: eyo
in the center, being the point at which an iron rod in attached to it for the purpose of cauning it to revolve rapidly and spread out into a sheet before the furnace. The hull's eye used to be commonly seen in the window of humble dwellings, the piecen of glase containing them being cheap.

Flint glase or Oryatal is one of the kinds largely made, being employed for table utensils, globels ornaments, etc. Powdered flint was formerly employed in its manufacture, but fine white mand has heen substituted. The other materials are red lead or litharge, and pearl-anh (carbonate of potash). The following is said to be a good mixture:-Fine white sand, 300 parts; red lead or litharge, 200; refined pearl-ash, 86 ; niter. 20 ; with a small quantity of arsenic and manganese. The furnace is kept at a verr high temperature until the whole of the materials are fused. When the glags becomes translucent the temperature is diminished until it becomes a tenacious mass. Suppose a glass vessel is to be made, the iron tube is put into the crucible, and the required quantity of glass lifted out, which after certain adjustments is rolled into a cylindrical form on an iron table called the merver or marver. The workman then hlows the glass into the form of a hollow globe, and re-heats and hlows until the glohe becomes of the required thinness. An iron rod called the punty is now attached to the end of the glass furthest from the tube, and the tuhe detached. The workman now heats the glass on the punty, and sitting down upon a chair with smooth arms, he lays the punty upon them, and rolling it with his feft hand he gives the glass a rotatory motion, while with an instrument in his right, somewhat like a pair of sugartongs, he enlarges or contracts the different parts of the vessel until it assumes the requisite shape. A pair of shears is also made use of in certain cases. The article is then detached from the punty, and carried to the annealing furnace. Many of the articles, after coming from the annealing furnace, are sent to the cutter or grinder. The operation of grinding is performed hy wheels of various diameter and of various edges, some of iron, others of stone, and some of wood. Rich and delicate deaigns may be cut upon the articles by means of small wheels of copper and steel upon which emery is kept constantly falling. Ornamental figures may also be encraved, or rather etched, upon articles of glass by means of hydrofiuoric acid. care being taken to place a coating of some nubatance over the parts not to be
acted upon. Various ornamental forms are siven to the surface of glans vensels bs metallic molde. The mold is usually copper, with the figure cut on its inside, and opens with hinges to permit the glass to be taken out. The anglen of molded objects are always less sharp than those of cut-ploss.
Green or bottle-glase is formed of the coarsest materials, such as coarse sea or river mand, lime, and clay, and the most inferior alkalies, as moapboilers' waste, and the slag of iron ore. A cheap mixture for this kind of glass may be made of common aand and lime, with a little clay and sea salt. The manipuiations of the glassblower in fashioning bottle class into various forms are in general the same as those performed by the flintglass blower. Wine and beer bottles, which are required to be all of a certain capacity, are blown in molds, so that their containing portion may be as nearly as possible of the requisite size. When the articles are made they are carried to the annealing furnace. Green bottle-glass is preferable to all other kinds for vessels required to contain corrosive substances ; it is less fusible than fint glass, and thus the better adapted to many chemical purposes.
Plato-glass is a fine and thick glass cast in sheets. One maker's ingredients are as follows:-white sand, 300 lbs.; soda, 200 ; lime, 30 ; nxide of manganese, 2; oxide of cobalt, 3 oz.; and fragments of glass (cullet) equal to the weight of sand. After being melted in large crucibles, and the liquid glass having been thoroughly skimmed, it is transferred by a copper ladle to smaller pots (cuvettes). When the glass in the smaller cructble is ready for casting it is poured upon an iron casting-table, and a large metal cylinder moved along spreads the glass into a broad uniform sheet. Tbe subsenuent stages of the process are concerned with the discovery of flaws, the squaring of the edges, the grinding of the surfaces plane, the grinding of the sides, and the polishing. Before grinding and polishing the glass is what is called common 'rough plate,' and in this state it is much used for roofing, cellar-lighting, etc., being non-transparent. Rolled plate, which is cast on a table that mparts a surface of grooves. flutings, lines, etc., is extensively used for the same purposes.
There are several other kinds of glass that may he noticed. Pressed glass is fint olass formed into articles by pressing into moulds of iron or bronze, a fine eniface being afterwards attained by beting oo that a thin film on the sur-
face melta. Slag glass in glacs trom the slas of blatt-furnaces mixed with other ingredients; it in largely nued for bottlom. uptical olase is made of apecial variettes of fint and crown glass. strase, which is used for imitating sems, is a very dease Hint glana, colors being imparted by metalic oridem. Spun plass is glase in the form of very tine threadis, in which atate it may be woven into textlie fabrics of great beauty. Tripteo olase is made by covering a face of each of two sheets of glass with very thin gelatin and placing between them a very thin sheet of celluloid. These are then subjecter tn bydraulic pressure. Triplex glass will crack but not gy in splinters or sepnrato.
Colored Glass.-Colgred glass is of two kinds-entirely colored, the coloring matter being melted along with the other ingrediente or partially colored, a quantity of white glass being gathered from one pot, and dipped into the other containing the colored glass, by which the whole receives a skin of colored class. The coloring matters are chiefiy the metallic oxides. $A$ beautiful yellow color is imparted by siliver in union with aiumina (powdered clay and chloride of silver being used), also by uranium and by glass of antimony; red colors by oxide of iron, copper, and gold; green by protoxide of iron, axide of copper, oxide of chromium etc.: blue by cobalt: orange by peroxide of iron with chloride of silver,
Glass, Carter (1858-), an AmeriLynchbur can cabinet officer, born at newspaper businessa, He entered the the Lynchburg News. For twenty years he was a member of the city council of Lynchhurg, and was a member of the Virgivie senate, 1899-1903. Elected congressman to fill the unexpired term of 1002-03, he continued in congress till 1918, when he succeeded William G. McAdoo (q. v.) as secretary of the treasury. Glass-painting, the art of produc glass with colors that aise pictures upon by the use of pieces of colored olase in which the color forms part of the composition of the glass itself. Originally there was hut one method of making ornamental glass windows. which was by the latter process; the pieces of stained or colored glass were cut to the desired shape, and let into the Erooves of finelymade leaden frames which formed the pattern in outline. so that the pictures resemhled mosaic work. In the silteenth century, the enamel colore haring been discovered, a new process came into vogue, the designs being now painted on
the slam and burned in. At the present day the two methods, or a combination of the two, are chielly empioyed, the nosaio-enamel method being the mont common, and consisting of a combination of these two. The chief seats of the art in Britain are Birmingham and Bdinhurgh; in France, Paris and Sevres: in Germany. Munich and Nurnbers; in America. Philadelphia and Pittshurgh.
Glass Paper, or Ctrewine finely made by class on a sheet of paper or cloth which has been besmeared with a coat of thin giue, the glue being stili wet. It is much used for polishing metal and woodwork.
Glassport, a horough in Allergeny has foundries and manufactures of steel, gears, edge-tonis, spikes, rivets, fint glass, etc. Pop. 6540 .
Glass.Snake, a lizard, genus Ophiosaurus, in form resembling a werpent, and reaching a length of 8 feet. The joints of the tail are not connected by caudal muscies, hence it is extremely brittle, and one or more of the joints hreak off when the animai is even slightly irritated.

## Glass-sponges. <br> See Sponge.

Glasswort (glas'wurt), a name given to the plants of the genus Ealicornia, nat. order Chenopodiacee, succulent marine herbs growing ahundantly on the coasts in the south of Europe ard north of Africa, and when burned, yielding ashes containing soda, formerly much employed in making both soap and glass.

## Glastonbury (glas'en-ber-i), a town

 Somerset, which derives interest from the ruins of its once magnificent Benedictine ahboy, now consisting of some frasment of the church, the chapel of St. Joseph of Arimathea, and what is calied the abbot's kitchen. Its ahbots sat among the barons in Parliament. The last was hanged on a neigbboring eminence hy order of Henry VIII for refusing to surrender the abhey. Pop. 4251.Glatz (gists), a town of Prussia, Neisse, 51 miles s. s. w. of Breslau; mannfactnres of linen, cotton, and wooleu goods, leather, carpets, etc. It has a fortress or citadel, now of little importance. Pop. (1905) 16,051.
Glauber (gow ber), Joir Rumoupr, 1603 or 1604 . Herman chemist, life seems to have been somewhat nnsettled-at least he remided in many diferent placem-Vienna,

Saitsburs, Frankfort, Kitzingen, Cologne, aud Basei, and finaliy in Amutordam, where he died in 1088 . He is chieny romembered for his discovery of suiphate of noda or Glauber's Salt, which be termed sal mirabile, in consequence of his sreat faith in itn medicinal guaiitien. Glauber's Salt, sulphate of sodium, so calied hecause of the importance attached to its chemirai and medicinal properties hy Glauher. It forms iarge, coiorless, monocíinic prisms, which effloresce on exposure to the air. It is soiubie in water, and when heated meits in its water of erystallization. It is found in many locailies, both dissoived in the water of mineral springs and of salt lakes, round which it effioresces.
Glanchan (glou'hou), a manufacturing town of Saxony on the Mulde, 54 miles W. s. W. of Iresden. It has mauufactures of woolens, carpets, linens, leather, dyeworks, print-fields, and worsted mills. Pop. (1005) 24,550.

Glancoma ( $\mathrm{gla} \mathrm{k} \mathrm{ko}^{\prime} \mathrm{ma}$ ) in medicine, an aimost incurable disense of the eye, in which the eyebali becomes of stony burdness by the accumulation of fluid within, and the consequent increase of pressure causes disorganization of all the tissues. Ioss of sight is sometimes very rapid. Cailed also Glaucosis.
Glaxing (glaz'ing) is the covering of earthenware vessels with a vitreous coating in order to prevent their being penetrated by fluids. The materials of common glass would afford the most perfect glazing were it not liahle to crack. See Potiery.

## Clazounof (gláze-nof), ALexandmr

 CONSTANTINO VITCH, a Rusaian composer, born at St. Petersburg, August 10, 1865. He belongs to the advanced Russian school and in 1906 was appointed director of the St. Petersburg Conservatory. He has composed a numher of symphonic poems, and other instrumental music; also cantatas and songs.Gleaning (glēn'ing), the gathering ears of corn left uncared for hy reapers. This is a common practice in England. Glebe (gleb), in the established churches of Engiand and Scotland, the land possessed as part of the revenue of an ecclesiastical benefiee, usualiy along with a dwelling-house. The incumbent may be regarded as the proprietor of the glehe for the time being. but he cannot alienate it. In Scotland. where lain* are arable, the glebe muot
consint of 4 acres at leant. The stebe must be taken as near the manso as pomible.

## Gleditschia ( 1 le-dian'li-a), a senus

 suminowe, to which $G$. triacanthos, the honey-locust, beionge.Glee (gle), in munic a comporition in conaisting of or more parts, seneraliy the subject of more than one movement, from grave to gay, etc. Instrumeutal accompaniment is illegitlmate.
Gleemen (giémen), itlnerant singers In the Anglo-Naxon perlod of English history. After the Norman conquest they were termed minstrele. Gleiwitz (gli'vits), a town of Prumthe, provlnce of Silesla, on the Klodnitz. It has extensive government ironworks, foundries, machineworks, glassworks, worsted and other milis, etc. Yop. (1010) $\mathbf{6 0 , 9 1 0}$.
Glencoe (glen'kō), a romantic Scot(glen vo, a romantic scot-
tish in the county of Argyle, near the head of Loch Etive. It is bounded both sldes by almost perpendlcular mountains over 3000 feet high, and is iraversed by a mountaln stream, Oscian's 'dark torrent of Cona.' The valley was the scene of a tragedy known as the 'Massacre of Glencoe.' The state of the Highlands after 1690 was a aubject of great anxiety to the government. Although the Highlanders had ceased any lmportant operatlons ince the death of Dundee at Kllliecrankle, they had not lald down their arms. In 1691 a proclamation was lssued promising pardon to all who should swear allegiance on or before 31st December. All the chlefs, with the exceptlon of one Ian of Glencoe, complied. The latter had unfortunately exceeded the prescribed period, and a certificate which he produced to prove that he had offered to take the oaths at Fort-Wlliam was suppressed, as is thought, by Stalr. The King's signature was obtalned to an order to extirpate the MacDonalds. On the 1st of February, 1692, a party of soldiers, 120 in number. commanded by Captain Campbell of Glenlyon, marched un the glen and took quarters as frlends. The soldiers belonged mostly to the clan Campbell, enemies of the MacDonalds; but they, were well treated, and all went on merrily for twelve fiacs. At five in the morning of the 13th Glenlron and his men suddenlv fell on the MacDonalds. Thirty-eight men were murdered, and many who had escaped perished in the snow. sank into bogs, or dled for lack of food. Much obloquy has been heaped upon King William on account of
bis share in the masaacre, but the utmost of what he would neem to have beve guilty was carelemnees in signing with. out invectigation the order montioned abore.

## Glendower (flep'dou-tr), owzen, dietinguibbed Alsury in

 Welah history, born about 1850. At an eariy age he was ment to London, and studled for the bar, but rellnquithed the profession on belng appointeri an esquire to lichard II, whom he supported to the last. He carrled on a content wlth Lord Grey de Kuthyn respectlog an entate, and the latter being charged with the delivery of a summons to Owen from Henry, to attend him on his Scottinh expedition, purposely nesiected to deliver it. Glendower was outlawed for disaffection, and his enemy reized upon his lands. Glendower dispossessed Grey of hls lands, and, havlug ralsed a conilderable force, caused hlmseif to be proclajmed Prlnce of Wales, September 20,1400 . lle defeated the Ling's troops, retired to the mountains, rad foiled all subsequent attempts to : - hlm to action. He afterwards ju the coalltion of the Percles agains, denry, and was crowned 'sovereign of Walea.' Glendower arrived Wlth hle force too late for the battle of Shrewsbury; and, seeing all was lost, retreated, and continued his marauding warfare. This he kept up with various success, occasionaliy assisted by Charlea VI of France. Finding it impomible to subdue him, Henry V, in 1415, condescended to treat with him ; but Owen dled during the negotiation.
## Glenlivet (glen-liv'et), a valley or district of Scotland in

 the county of Banff. Whiskey of a partleularly fine favor has long been made In the district. In Glenllvet the Protestant army, under the Earl of Argyle, was defeated by a Roman Catholic force under the Earl of Huntly, in 1594.Glenroy (glen-rol'), a deep valley land, parallel to Glenmore Glen), in Iochaber, Invernemsenhire. It is nearly 14 mlles in length, and iittle more than $1 / 2$ mlle in breadth, and is celobsated for its so-called Parallel Roads, which are three parallel terraces running along elther side of the glen. Not only do the lines on the same side run parallel to each other, but on both sides they respectively occupy the came horizontal level. These terrices project at some parts only a few feet from the hillside, and at others widen ont so as to be a number of vardis in breadth. The lowest terrace is 800 to 862 feet above the sea-level; the middle, 1002 to 1077

Soot ; and the higheat 1144 to 1156 feet. Their oricin har been much disputed, but according to Maceulloch, Agasia, Buckland, and Geikie, the roads are shore-lines of fresh-water lakes. howerer, no land-barrier is discoverabie in the ricinity, they refer the iake or laken to the glacial pertod, hoiding that glaciers must have dencended from Ben Nevis and dammed up the water in Gienroy. An theme siaciers did nut disappear simultancously, the surface of the lake had diferent eievations nuccemsiveiy, and thus diatinct ehore-linem or beaches were furmed at different timen.
Glens Falls, town of Warren the Hudson River, 61 milies north of Aibany, and with large water-power, the river here failing 50 feet. Shirts and coiliarn, paper and pulp, etc., are made, lime and Portland cement are produced, and fine biack marbie is quarried. There is here a state armory. Yop. 15,243. Glenville (glen'vil) a residential section of Cleveland, Ohio, to which it was annexed in $190 \bar{J}$. It is on Lake Erie, 4 miles N. E. of the city hall. Pop. (1900) 5588.
Globe (siob), a sphere, a round solid to be generated by the revolution of a to be generated by the revolution af a ficial globe, in geography and astronomy, is a lobe of metal, pluster, paper, pasteboard, etc., on the surface of which is drawn a map or representation of cither the earth or the heavens, with the several circles which are conccived upon them, the former being called the terrestrial globe, and the latter the celestial globe. In the terrestriai globe the wire on which it turas represents the earth's axis, the extremities of it representing the poles. The brazen meridian is a vertical circle in which the artificial globe turns, divided into 360 degrees, each degrec bring divided into minutes and seconds. The brass meridian rcceives the pnds of the axis on which the globe revolves. At right anples to this, and conserjuentiy horizontal, is a brond ring of wood or brass representing the horizon; that is, the true horizon of the earth which iipg in a plane containing the earth's center. The horizon and brass meridian are connected with the stand on which the whole is supported. On the surface of the giobe. as on other maps. are marknt parailels of latitude, meridians, etc. On a globe of some size the meridians are drawn thronch every $15^{\circ}$ of the equator, each answering to an hour's difference of time between two niaces. Hence they are called hour ciroles. A number of
problome or questions many of them more curlous than uselul, may be solved by means of a terrestrial giobe. Among the most important ar much as to find the latitude and longitude of a piace, the diference of time between two placem, the time of the sun's rising and setting for a given day at a given piace, etc.
Globe, a clty, capltal of Gila County Bowt Arizona, 124 miles 8. W. of Bowie. Here are rich gold, silver, and copper ores. Pop. 7083.

## Globe-fish,

the name riven to serpral fishes of the genera
Dideiun and T'etradódon, order Piectoznathi, remartable for por mensing the power of suddenis assuming a giobular
 form by swai- Pennant's Globe-fish (Tatraddon lowing air or water, which, passing into a ventrai sac, inflates the whole animal iike a balioon.
Globe-flower, a popuiar name of Trollive Europaus (nat. order Ranunculacea), a common European plant in mountainaus regions, having deepiy five-lobed serrated leaves and round paie-yeilow biossoms, the sepuls of which are large and conspicuous, while the petals are very smali. It is often cultivated in gardens, and is common in mountain pastures in Great Britain. It is represented in America hy only one species.
Globigerina (xio-hi-jer-i'na), one of the Foraminifera, a microscopicai animal having a many: celled shell, found fossil in the chalk and tertiary formations, and still so abundant in our seas that its shelis after death form rast caicareous deposits of mud or ooze known as 'giobigerina noze.' Globulin (glob'a-lin), a substance forming a considerable proportion of the blood globules, and aiso occurring, mixed with albumen, in the cells of the crystalline lens of tha eye. It resembies albumen.
Glockner (glok'nèr), or Gross Glockner, a mountain in Austria belonging to the Noric $\mathrm{Al}_{\mathrm{i}} \mathrm{i}$ s, on the frontiers of the Trrol, Carinthia, and Salzburg. It is 12,350 fret in height, and takes its name from the resembiance of the principai summit to a large beil. Glogan (glógon), or Gross-Groant, a Prussian town and fortress in Silesia, on the Oder, 54 milies N. W. of Breslau. It has a Latheran and a

Cathollc symnasium, some manniactorien and a brist inland trade. Its principal edincen are four churches, one of them formoris having been a cathedral. Pop. (1906) 23,461.

Glommen (fiom'en) the hargent tiom Lake Orenund about $217{ }^{2}$ feet above the sea-jevei, in the southeant of Bouth Trondhjem, flow generally Boy and after a courne of above 870 milen faile into the Gkajerrack at Frederlkitadt. Gloria (slorita). See Dosology.

## Gloriosa

(sio-ry-0'ma), a genus of tuberoun-rooted, cllmbing herhe of the nat. order Liliacee, so named from the aplendid appearance of lts Howers. They have branched stems and flowers montly of a beautiful red and yellow coior, with six lons, ianceolate, unduiated segments, which are entireiy reflex 1 . G. superba, a native of India and trupical Africa, ir cuitivated in hothoamel.
Glory Pea, a nar siven to Clianminous piant, native of the desert resions of Australio a low, atragging ahrub with light-colored, hairy, pinnate leaves, and iarge, hrilliant scarlet fowers, the standand or banner petal of which appears in the form of an elongated shfeld with a dark hrown bose in the center.

## Gloss (slos), an expianation of some

 work, written at the passage to which it refers. The earlient glosses, as those in Greek, Latin, and Hebrew MSS., were interlinear; they were afterwards placed in the margin, and extended finally in come instances to a sort of running commentary on an entire hook.Glossary (gios'a-r), a limited or parlary of words used hy any author, especially in an oid author, or one writing in a provincial dialect, or of words occurring in a special class of works of the technical terms of any art or sclence, of a dialect, and the like.
Glossop (gloa'sup) a municipal borshire, 30 miles from Sheffield. It is the principal seat of the Derbsshire cotton manutacture, and there are also woolen and paper mills, iron foundries, dyoing, bieanhing and print works, erc. Pop. 21.526.

## Glottis

(glot'is), the opening at the upper part of the trachea or windpipe, and between the vocal chords, which. by its dilatation and contraction, contributes to the modulation of trie voice. See Leryne.
 river port of Earland, capital of the county of mame namer on tho left bank of the Severn, here dirlad Into two channele lacloulas the Ite of Alnes and cromed by two flne bridses 88 milem north by eant of Bristal, and 80 milles went by north of London. It cas. rien on a coniderabie chippins trade, the Gioucenter and Berkeiey canal diving accets to the docks. The most remarfabic public edifice is the cathedral; it wail orisinally the church of a Benedictine ahbey, dating from 1008, and was converted into a cathedral at the Reforma. tion. It exhihits a great variety of atyles, the choir, with lte roof of lan-tracery belng a fine example of Perpendicular Gothic. Other huildings are several handsome oid churches the shlre hall, the gulldhall, the bishop's palace, county schools of art and science, etc. The schoois include the enllegiate achooi founded hy Henry VIII the theolofical college, the hiue-coat achooi tounded in 1686 (and now known as Sir Thomas Rich's achooi), and the grammar-nchool of 8. Mary de Crypt, tounded in the time of Henry VIiI. The industries are rather varied, including iron and shlphullding worke, manufactures of cutlery, chemicale, moap, matchen, and various others. Pop. 60,020 . The county of Gloucenter or Gioucesterwhire borders on the went on the entuary of the Severn, and bas an area of 1237 sq. milen. The county is naturaliy divided into three distinct dintricts, the Hill or Cotawoid in the E: the Eevern Valiey in the mlddle; and the Forest of Dean in the w. The principal rivers are the Severn, with its almuents the W.re, the Leden, and Lower and Upper Avon; and the Isis or Thames, with its affuents the Colne, Churnet, and Windrush. Iron and coal are pientiful and lead ore is found. Limentone and freestone are also met with. Arriculture is in a flourishin state, especiaily in the vale districts of the county. Gloucenter is, however, much more of a dairy than an agricuiturai county. The celebrated cheese, known as double and single $G$ vo cester, is produced chiefly in the $\nabla$ al of Berkeiey, Orchards are numerous. 1 om the produce of whlch large quantities of cider are made. Gioncenter is a considerable manufacturing county, and has been long famous for its fine broadcloths. Pop. (1011) or2,081.
Cloucester, a city and port of Ehoeetts, near the extremity of Cape Ann, 28 miles N. N. E. of Boston. It is a popular summer resort, and fisheries and cranite quarcying are the chief industriet the
fighery interests are the largent of any place in the United States, and there is a large foreign import trade. It was founded in 1623, chiefy by settlers from Gloucenter, England. Here is the oldeat Univernalist Church in the United States, founded in 1770. About two miles distant is Norman's Woe, the scene of the wreck of the 'Hesperus,' celebrated by Longfellow. Pop. 24,398.
Gloucester, ${ }^{\text {a county, }}$ co Camden the Delaware River, 5 miles s. of Philadelphia, with which it is connected by ferry. It has manufactures of Welsbach mantles, rugs, etc. ; an immigrant detention station; and a shipbuilding plant in the vicinity. Pop. 10,050.
Gloncester, Roburt or, a monk of flourished in the latter half of the thirteenth century ; wrote a chronicle of England extending from the siege of Troy to the year 1270.
Glover, Richard, an English poet, engazed in born 1712 ; died 1785. Though voted much of his attention to literature, and secured a high reputation as a scholar and poet. In 1760 he entered parliament, where his abilities gained him conriderable infuence. He was the author of two epics, Leonides and the Atheniad; London, or the Progress of Commeroe; two tragedies. Boadicea and Medea, etc. Gloversville (gluv'ers-vil), a city York, 44 miles N. W. Wulton Albany. It is largely engaged in the manufacture of gloves (whence its name) ; also of gloveand shoe-leather. Pop. 20,042.
Gloves (gluvs) are coverings for the wrist band, or for the hand and the separate sheath lor each cloth etc. The chief leathers used in glove manufacture are doe, buck, and calfskins: sheepskin for military gloves: lambskin for much of the so-called kid gloves; true kid for the best and finest gloves ; dog, rat, and kangaroo sking, etc. The leather in all cases undergoes a much lighter dressing than when used for boots and shoes. Leather gloves are usually cut out by means of dies, and sewed br a machine of peculiar construction. The best woolen, thread, and silk gloves are made by cutting and sewing, but commoner gloves are made by knitting and Feaving. Gloverwille, in New York, is the chief Amprican seat of the manufacture. In Fongland leather gloves are manufactured at London, Worcenter, and elsewhere. İmerick was formerly cele-
brated for sloves of a peculiarly delicate kind. Italy, Bel ium, Sweden, Denmark, and Germany all manufacture excellent gloven, but France supplies the world with most of the finer and more expendive kinda Gloves are a very ancient article of drens, and many curions customs and usages are connected with them. Throwing the glove down before a permon amounted to a challenge to single combat. The judges in England used to be prohibited wearing gloves on the bench; and it was only in case of a maiden assize that the sherifis were allowed to present a judge with a palr of gloves.
Glowworm. ( $10^{\prime}$ w urm), an insect of the genus Lampÿris ( $L$. mootilica), of the order Coleoptera, or beetlea, the name being atrictly applicable only to the female, which is without winge, comewhat resemblen a caterpillar, and emits a shining green light from the extremity of the abdomen. The

Glowwome (Lampyris noctiluca).
1, Male. 2, Femaile, upper side. 3, Female, under nide, showing the three posterior negmeato (a) from whioh the light proceeds.
male is winged, and flies about in the evening, when it is attracted by the light of the female, but gives out no light itself. It would seem that the glowworm possesses the power of moderating or increasing the light at will. Decipitated specimens retain their power of giving out light for a considerable time. In pure oxygen, warm water, or when crushed, the light of the luminous organs is increased in intensity. The larve are very voracious, living on anails, which they attack and kill. Gloxinia (gloksa genus of plants, nat. order Gesneracem, distinguished by the corolla approaching to bell-shaped, the upper lip shortest and two-lobed, the lower threelobed, with the middle lobe largest, and
also by the aummit of the atyle reing lyric genius which was dentined to create roundec and hollowed. The apecies are a new order of rausical componition. After natives of tropical America. They arc producing many pieces of the unual class valued as among the greatest ornaments of our gardens, owing to their richly colored leaves and their ample, graceful, delicately tinted flowers.
Gluchov, or Glouk iov (gio'hov), a town of Russia, sovernment of, and 148 mile east by north from, Tchernigov. Yop. 14,858.
Glucic Acid (glosik; or Glucinic, produced by the action of alkalies or acids on tugar. It is a colorless, amorphous substance, is very soluble in water, attracts rapidly the moisture of the air, and its solution has a decidedly sour taste. All its neutrally reacting salts are soluble.
Glucina (gla-sil'na), the only oxide beryllium. It is white, tasteless, without odor, and quite insoluble in water, but soluble in the liquid fixed alkalies.
Cluci'num. Same as Berylism.

## Gluck

(glyk), Alma, American soprano, born at Bucharest, Roumania, in 1886, was brought to America when she was three years old. She began her vocal studies with Buzsi-Peccia in New York in 1906, and made her operatic debut in the Metropolitan Opera House in November, 1909. She gained first rank in grand opera and later became a prime favorite on the concert stage. In 1914 she married Efrem Zimbalist, the celebrated violinist.
Gluck (gluk), Christopi Wilibald, Hiuc a German musical composer, born in Bavaria in 1714; died in Vienna, 1787. When a boy he became a chorister, and acquired some skill on the harpaichord and organ. He came under the patronage of Prince Lobkowitz and Prince Melzi, who placed him under the tutelage of the famous organist and composer, Sammartini, in Milan. His first opera was Artaserse, produced at Milan in 1741, and he wrote eight other operas within five years. Invited to Lon: don he produced La Caduta de' Giganti (The Fall of the Giants), which was not a success and was withdrawn after a few performances, despite the fact that it set forth the victories of the Duke of Cumberland. Another opera, Artamene, written earlier met with tavor.

In London Gluck became deeply impreased with the majestic character of Eandel's airs and choruses, and with the aimple but natural dramatic style of Dr. Arne. This viait to London, and a short tulp to Paris, helped to develop that
of opera at Yaris Vienna, Rome, and Naples, he returned to Vieana. The Trionfa di Clelia (1762) was the lant of his operam in his first style. However well pleased the public was with his music, he was not so. He felt himself continually cramped by the character of the libretti of Metastasio, who had hitherto furnished him with texts, which were rather lyrical dramatic poems than genuine dramas. The composer at last found a poet in the person of Raniero Calzabigi, who sympathized with him in his ideas, and the result of their co-operation was the Orfeo ed Euridice, performed publicly for the first time in 1762 . This opera marked a new era. The fame it acquired at once it never lost. Various works of lighter character filled up the interval between this year and 1766, when his second great opera of Alceste was produced, which raised public feeling to the point of enthusiasm. In his dedication of this work to the Grand-duke Leopold of Tuscany he enunciates the principles of the new school, which shortly were that the opera should be a musical drama, not a concert in costume; that the text must be descriptive of real passion; that the music must voice fully the spirit of the text; that in accompaniments the instruments must be used to strengthen the expression of the vocal parts by their peculiar characters, or to heighten the general dramatic effect by employing them in contrast to the voice. Gluck now became convinced that his system must be tested on a wider field, and believed that the Royal Opera in Paris offered all a composer could demand. A Frenchman of culture and genius, Bailly du Rollet, adapted Racine's Iphigénie en Aulide for musical treatment, and after a considerable amount of opposition from the musical critics of the old Italian and French school, at that time represented in Paris bv Piccini, the piece was brought out in 1774. The intensest excitement prevailed: all Paris took sides. and for a long time the Gluckists and Piccinista contended with much bitterness, but ultimately the victory remained with the Gluckists. Shortly after the production of the Iphigénie. the Orfeo was adapted for and put on the French stage, and was followed hr the Armine in 1777. and bv the Iphigénie en Tauride in 1778. Gluck's last important work, and by many considered his rreatest. It pnds 'ae ecrien of works which rave a direction to the operatic cenfus of Mehul and Onecubin
in Brance, and of Mozart and Beethoven in Germany.
Glückstadt
(glak'atat), a town of Prussia, in Holstein, on the Glibe, 28 miles N. W. of Hamburg. Formerly important as a fortress, it is now a sort of sub-port to Hamburg. Fishing is carried on to a considerable extent. Pcp. 6586.
Clucose (gio'kos ; $\mathrm{C}_{4} \mathrm{H}_{18} \mathrm{O}_{6}$ ), a vari-cane-sugar, existing in grapes, and produced from cane-sugar, starch, dextrin, cellulose, etc., by the action of acids, certain ferments, and other reagents. There are two varieties of it, distinguished by their action on polarized light, viz., dextroplucose which trirns the plane of polarization to the right; and laevopincose, which turns it to the left. When seated up to $400^{\circ}$ it becomes caramel, and is used by cooks and confectioners as a coloring matter. It is called also Grapesugar and Starch-sugar, and is produced both in the solid and in the liquid form, its manufacture being now of considerable importance. In the United States the liquid sugar, as prepared from Indian corn starch, is what is generally known as glucose, and it is used for various purposes, as for confectionery, canning frnits, making artificial honey for table syrup, in brewing, etc.
Glucosides (glö'kō-sidz), a large curring in animal or vegetable products. possessing the common property of rielding glucose and other products when they are boiled with dilute acids, or are acted on by certain ferments.
Glue (gl8), a gelatinous substance obtained from different tissues of animals, and nsed as a cement for nniting pieces of wood or other material. The best quaiity is obtained from fresh bones, freed from fat by previous boiling, the clippings and parings of ox-hides, the older skins being preferred; but large qnantities are also got from the skins of sheep, calves, cows, hares, dogs, cats, etc.. from the refuse of tanneries and tanning works, from old gloves, from sinews, tendons, and other offal of animal origin. By a process of cleaning and boiling the albuminoid elements of the animal matter are changed into gelatine. This in a soft, jelly-iike state constitutes size; dried into hard, brittle, glassy cakes, which before nee must be meited in hot water, it forms the wr known glue of the joiner, etc. When a solution is mixed with acetic or nitric acid it remains liqnid, bnt still retains its power of cementing; In this state it is called liquid olue. Marine Glue is a cement made by div-
colving India rabber in ofl of turpentine or coal-naphtha, to which an equal guartity of shellac is added.
Glume (glom), in botany the imbricate scale-like bract inmerted on the axis of the spikelet in Graminem (grasses) and Cyperacem (sedges). The glume forms the husk or chaff of grain, called also the palea or pale.
Gluten (gib'tun), a tough, elartic substance of a grayish color, which becomes brown and brittle by drying, found in the flour of wheat and other grain. It contributes much to the nutritive quality of flour, and gives tenacity to its paste. $\Delta$ similar substance is tound in the juices of certain plants.
Glutton (glut'on), the Gulo Arctious,
a carnivorons quadruped, about the size of a large badger, and intermediate between the bear family (Ursidæ) and the weasels (Mustelidæ), resembling the former family in general structure and the latter in dentition. It inhabits Northern Enrope and America, and is known also by the name of Wolverene or Wolverine. The glutton is slow and deficient in agility, bnt persevering, cunning, fierce, and of great strength. It prefers putrid flesh, and has an extremely fetid odor. The fur is valuabie, that from Siberia being preferred from its being of a glossy black. The animal receives its name from its voracity, which, however, has been greatly exaggerated.

## Glycerine <br> (giis'ér-in; $\mathrm{C}_{3} \mathrm{H}_{2} \mathrm{O}_{2}$ ), a

 transparent coloriess liquid, chemically described as a triatomic or trihydric alcohol, obtained from the by-products of candle and soap factories by saponification with aikalies or by the action of superheated steam. It ha: a sp. gr. 1.267, and sometimes molidifies at a low temperature to a crystalline mass. It absorbs moisture from the air, and dissolves in or mixes with water and alcohol in ali proportions, but is insoinbie in ether. It acts as a solvent both on inorganic and organic bodies. The uses of glycerine are very numerous. Its applications in pharmac' are aimost endless; as an external af olication in chaps, rough skin, chafing, etc., it is mnch used. Internaliy it is frequently prescribed in combination with iron, and also as a snbstitute for cod-liver oil, and in cases of diabetes. In the arts it is used wherever a substance requires to be kept more or less moist. for pxample. modeling clap: tobacco, paper for printing. etc. ; also in spinning weaving, ropemaking. and tanning. It is an excellent preservative medium for meat. and for natural history specimens; and its property of loweringthe froesing-point of water maken it useful in gat-meters, floating-compasses and the like. It is almo the starting-point of certain valuable chemical products, one of the chief of which is nitroglycerine.
Glycogen (gli'ko-jin), in orgenic chemistry and physiology, a proximate non-nitrogenous principle occurring in the epithelial cells of the liver, where it exists as an amorphous matter. In properties it seems to be intermediate between starch and dextrine, and in contact with saliva, pancreatic juice, diastase, or with the blood or parenchyma of the liver, it is converted into glucose.
Glycol ( $\mathrm{gli}^{\prime} \mathrm{k}$ ol or $\mathrm{kol} ; \mathrm{C}_{2} \mathrm{H}_{6} \mathrm{O}_{2}$ ), the omponnds type of a class of artificial ties and chemermediate in their properhol and glycerine or the bodies of which these are the types. Otherwise expressed, glycol is a diatomic acid, alcohol heing a monatomic and glycerine a triatomic. It is liquid, inodorous, of a sweetish taste, and insoluhle in water and alcohol. Glycon (gli'kon), an A thenian sculp-
tor known hy his colossal marhle statue of Heracles, commonly called the 'Farnese Hercules,' now in the musenm at Naples. He prohably lived in the first century $\mathrm{B}_{\mathrm{o}} \mathbf{C}$.
Glycyrrhiza (gli-si-ri'za), a genus of which G. glabra, the liquorice plant, is the type.
Glyptodon (glip'to-don; Gr. glypodous, tooth-so named from its fluted teeth), a gigantic fossil edentate animal, closely allied to the armadilloes, found in

Glyptodon (Glyptodon clavipus).
the upper Tertiary strata of South America. It was of the size of an ox and was protected hy a coat of mail formed of polygonal osseous plates nnited

## by sutures. <br> Glyptosaurus

(glip-to-sp'rus), a genus of fossil land lizards, found in 1871 in the Tertiary beds of Wyoming, and so named from the fect that the head and parts of the body were covered with highly ornemented bony plates (Gr. glyptos, engraved). Fonr species were discovered, the largest about four feet long.

## Gmelin

 (gmel'in), Joharif Groma, a German naturalist, born in Tubingen in 1709; died 1755. On taking his medical degree he went to st. Petershnrg, and became professor of chemistry and natural history. In 1783, at the expense of the Empress $1:$ Russia, he took part in an exploring expedition to Siberia, returning to St . Peteruhurg in 1743, where he puhlished his Fhora of Siberia. He became professor of botany and chemistry at Tubingen in 1749, and published Travels in Siberia (1762). -His nephew, Samuel Gotilime, botanist and traveler, was born in 1744, at Tubingen, where he studied physic, and in 1763, took the degree of doctor of medicine. He obtained a professorship of botany at St . Petershurg abont 1766, and puhlished a Historia Fucorum, 1768. He traveled in Asia, and being imprisoned by the Khan of the Chaitaks, he died in confinement in 1774. His Travels appeared in 1770-84.-Another nephew, JOHANN FRIEDRIOH, was born 1748, died $18 n 4$. He was professor of medical sciciece at Gorttingen for about thirty jears published a Dictionary of Botany, an a History of Natural Sciences, and edited an edition of Linnæus Gmelina (gmel-i'na), an Asiatic genus of plants helonging to the order Verbenaces. All the species form shrubs or trees, some of the latter affording very valnable timber.Gmünd (gmunt), a town of Wurtemberg, on the Rems, 28 miles E. N. E. of Stuttgart, formerly an imperial free city. It has three chnrches of great antiquity, and an extensive museum of industrial products. The manufactures are chiefly wooled and cotton goods, jewelry, and trinkets.' Pop. 18,700. Gmunden (gmun'den), a town of Upper Austria, situated among magnificent scenery, on the Traun, where it issues from the northern extremity of the late of that name, 35 miles southwest of Linz. Most of the inhahitants are employed in the neighboring salt-mines. Gmunden is a favorite bealth-resors and summer residence. Pop. with suhurhs 7126 .

## Gnaphalium ( $\mathrm{na} \mathrm{a}-\mathrm{pha} \mathrm{a}^{\prime} \mathrm{li}-\mathrm{um}$ ), a spread composite genus of widely-

 pread composite plants having their foliage usually covered with a white weoly down, and their flower-heads of the 'everlasting' kind. G. Leontopodium is the edelvoeiss of the Alps (which see). G. polycephalum is the cotton-weed, common in the United States.Gnat (nat), the name applied to neveral species of insects of the senus Cules. The common gnat (O.
pipione), type of the sub-family Culici-
dse, in of wide georaphical distrihution, and is noted for its power of inflicting irritating wounds. The proboscis or sting of the female is a tube containing four spiculso of exquisite fineness, dentated or edged; these are moditied mandibles and maxilise. The males do not sting, and are further distinguisked by their plumelike antenne. These insects also feed on the juice of plants. The female deposits her eggs on the surface of stag. nant water in a long mass. After having remained in the larval state for about twenty days, they are transformed into chrysalids, in which ell the limbs of the perfect insect are distinguishable, through the diaphanous robe with which they are then shouded. After remaining three or four days wrapped up in this manner, they become perfect insects. The trouhlesome mosquito belongs to the same genus.

## Gneisenar (gnizn-ou), Auaust WILHELM ANTON,

 Count Neidthard von, a Prussian general, born in 1760; died 1831. He served with the German auxiliaries of England in America; and as chief of Blucher's staff chiefly directed the strategy of the Prussian army at Waterloo. He was made field-marshal in 1831.Gneiss (nis), a species of rock, commica, arranged in layers. The layers, Whether straight or curved, are frequently thick, but often vary considerably in the same specimen. Gneiss passes on one side into granite, from which it differs in its foliated structure, and on the other into mica slate. It is rich in metallic ores, gold, silver, cobalt, antimony, copper, iron, etc., occurring in this rock, hut it contains no fossil remains. Porphyritic gneiss presents large distinct crystals of felspar which traverse several of the foliated layers. Gneiss often contains hornhlende in place of mica, and then receives the name of syenitic gneiss. The only difference hetween this rock and granite consists in the foliation of gneiss. the materials of granite bting crystallized promiscuously, those of ,neiss heing segregated in layers. It is the principal rock of very extensive districts: it predominates in Norway, and all the north of Europe. It ahounds in the Southern Alps and the Pyrenees, and forms the loftiest chains of the Andes of Quito. In the United States, also. gneiss is a common rock, especially in New England and the eastern and southern parts of New York.
man Jurist, born at Berlin in 1816 and tudied at the univernity there, in which, in 1814, he became profensor-extraordinary, and in 1858 ordinary profensor. He likewise took part in politics as a member of the Prussian House of Deputies, and of the diet of the German Empire, ranging himself on the liberal side. He wrote extensively on law, constitutional history, etc., and had a specially thorough knowledge of English constitutional history, his Wistory of the English Constitution havirg heen translated and puhlished in Einglend in 1886. He died in 1895.

Gnesen (guắzn), a town of Prussia, province of Posen, 45 miles southwest of Bromberg. It is an ancient place; is the see of an archhishop, and has a cathedral, in which the kings of Poland used to be crowned. Pop. 23,727. Gnome (nōm; Greek, on $\boldsymbol{\sigma}^{\boldsymbol{m}} \mathrm{B}$ ), a short, pithy saying, on tisexpressed in figurative language, containing a reflection, a practical ohservatio $\%$, or a moral masim. Among the Greeks Theognis, Phocylides, and others are called the Gnomic poets, from their sententious manner of writing.
Gnome (nom), in the cabalistic and medizval mythology, the name given to the spirits which dwell in the interior of the earth, where they watch over mines, quarries, and hidden treasures. They assume a variety of forms, hut are generally grötesque dwarfs, ugliness being their appropriate quality, though the females, gnomides, are originally heautiful.
Gnomon ( $\mathrm{n} \delta^{\prime} \mathrm{mon}$ ), th style of a dial, or a structure erected perpendicularly to the horizon, from whose shadow the altitudes, declinations, etc., of the sun and stars may he deter. mined. The gnomon is usually a pillar or column or pyramid erected upon level ground. It was much used by the ancient astronomers, and gnomons of great height, with meridian lines attached to them, are still common in France and Italy.
Gnomonics
(nō-mon'iks), the art and theory of making sun-dials on true scientific principles.
Gnostics (nos'tiks: Greek, gnosis, knowledge). a general name applied to early schools of philosophical speculators, which combined the fantastic notions of the oriental systems of religion with the ideas of the Greek philosophers and the doctrines of Christianity. They nearly all agreed on the points that God is incomprehensihle ; that matter is eternal and antagonistic to God; that creation is the work of the

Demiwrge, an emanation from the Su- the Ophites (beginning of the second ceapreme Deity, subordinate or oppomed to God; and that the human nature of Christ was a mere deceptive appearance. Certain forms of Gnouticism are mere adaptations of the Persian dualism to the solution of the probiem of sood and evil; while the pantheism of India seems to have been a pervading influence in others. Simon the masician (Simon Magus), of whom Luke speaks in the Acts of the Apostles, is senerally looked on as the first of the Gnostics. The dogmas of the earliest Gnostics may be reduced to the following heads:-God, the highest intelligence, dweiis at an infinite distance from this world, in the Abyss, removed from all connection with every work of temporal creation. He is the source of all good ; matter, the crude, chaotic mass of which aii things were made, is, like God, eternai, and is the source of ail evii. From these two principles, before time commenced, emanated beings caiied coons, which are descrined as divine spirits, inhabiting the Pieroma, or plenitude of light, which surrounds the Abyss. The world and the human race were created out of matter by one æon, the Demiurge, or, according to the later systems of the Gnostics, hy several wons and angels. The zons made the bodies and the sensual sonl of man of this matter: hence the origin of evil in man. God gave man the rational soui; hence the constant strnggle of reason with sense. What are called gods by men (for instance, Jehovah, the God of the Jews) are merely such æons or creators, under Whose dominion man hecame more and more wicked and miserahie. To destroy the power of these creators, and to free man from the power of matter, God sent the mosic exalted of all zons, to which character Simon first made pretensions. The Nicolaitans mentioned in the Reve. lation of St. John, so calied from Nicolas, a deacon of the church at Jerusalem, were one of the earliest sects, and are described as forerunners of the Cerinthians. Cerinthus, a Jew, of whom John the evangeiist seems to have had some thowledge, combined such reveries with the doctrines of Christianity, uni maintained that the most elevated æon sent hy God for the ealvation of man, was Christ, who had descended npon Jesus, a Jew, in the form of a dove, and through him revealed the doctrines of Christianity, but before the crucifixion of Jesns separated from him, and at the resnrrection of the dead will again be nnited with him, and lay the foundation of a kingdom of the most perfect earthly felicity, to continue 1000 years. Carpocrates and the nect of
tnry), to whom the term Gnontic was first applied, saw in the Serpent a wise and sood being, and carried to its extreme form the invervion of the Biblical story. The later Gnostics have heen divided into three achools. The first wat the Syrian, founded hy Menander, a pupil of Simon. This achool emphasizes the conflict between Good and Evil-the $\mathbf{8 u}$ preme Deity on the one hand, and the Demiurge and his angels or æons on the other. The second was the school of Aiexandria, represented hy Basilides and Vaientinus; the system of the iatter being the most compiete and ingenious of ail. In that light or plenitude, which aii the Gnestics speak of as surrounding the residence of the Supreme God, he has placed fifteen male and as many female wons. The Supreme God, the Unhezotten, the Original Father, whom he aiso cails the Deep (Bathos), is the first of these zons; Thinking Siience was his wife, and Inteiiigence, a maie, and Truth, a femaie, were their children. These produced The Word and Life, the latter a femaie, who gaie hirth to mankird and society. These eight constituted the first class of the thirty zoons. The second class, of five couples, at the end of which stood the Only Begotten, and the third. of six couples, at the head of which stood the Comforter, were, in a similar manner, descended from Mankind aud Society, and whom ail the zons of the kingdom of the other seons in their duties; and Jesus, consisted, like the first, of permonified ideas. The officers of this heavenly state are four male æons-Horus, who guards the boundaries of the region of light: Christ and the Holy Ghost, who instrnct light begat in common, and endowed with their gifts. Man and the world were forned hy a demiurge out of matter which was partly materiai, partiy spiritual. partly soul-iike. Christ, the Saviour of men, when he appeared on earth had a visihie hody made of the spiritual and the soul-like substance only. At his baptism the son Jesus united itself with him, and instructed mankind. A third school of Gnosticism, whose center was Asia Minor, was represented hy Marcion of Pontus, the son of a Christian bishop, who flourishei abont the middle of the second century. Marcion assigned to Christianity, as the one absolutely independent religion, a complete isolation from the Oid Testament revelation, the author of which was, in his opinion, merely a just but not a good being. The true God begat many spirits, among which were the creator of the world, the rishteous God, and the lawsiver of the

Juws. The last, through the prophetr, promised Christ; but Jesus, who actually appeared, and is the true Redeemer, was the Son of the truly good God, and not the Jewish Messiah. Towards the end of the second century Tatian, a Syrian Christian, adopted Gnostic doctrines, and founded a sect. Bardesanes, a Syrian, and Hermogenes, an African, who, in the reign of the Emperor Commodus, a postatized from Christianity, and established sects, bordered, in their hypotheses concerning the origin of good and evil, upou Gnosticism. There have been no Gnostic sects since the fifth century; but many of the principles of their system of emanations reappear in later philosophical systems, drawn from the same sources as theirs.
Gnu (nö), the Wildebeeste ('wild given to two species of South African antelope (Catoblëphas gnu, and C. gorgon). The former species is now rarely found south of the Vaal; its form partakes of that of the antelope, ox, or horse. Both sexes have horns projecting slightly outwards and downwards, then forming an abrupt upward bend. They have bristly black hair about the face and muzzle, a white, stiff mane, and horselike tail. They attain a length of about nine feet, and stand about four feet high at the shoulder. They live in herds; are said to be fierce when attacked, but when taken young have been found to be capable of dorrestication. The brindled gnu (C. gorgon) is larger than the common gnu, has black stripes on the neck and shouiders, and a black tail. Both species wheel in a circle once or twice before setting off when alarmed.
Goa ( $80^{\prime} a$ ), a city in Hindustan, on Portuguese territor coast, capital of the Portuguese territory of the same name. The name is applied to two distinct places, namely, Old Goa, and New Goa or Panjim. The former was once the chief emporium of commerce between the East and West, and had a population of 200,000 , but it is now nearly deserted, though some pains are taken to keep the ancient churches and convents in repair; pop. less than 2000. New Goa or Panjim was chosen as the residence of the Portuguese viceroy in 1759 ; and in 1843 it was made the capital of Portuguese India. It is situated on the left bank of the Mandavi, about 3 miles from its mouth, contains many fine public bulliings, cathedral, Ficeregal palace, etc. The trade of Goa, at one time the most extensive of any place in India. is now inconsiderable. Pop. 8440. The territory around Goa belonging to the Portu-
guese has an area of 1002 eg. miles. It Is well watered and fertile. About twothirds of the total population, numbering about 475,000 , are the descendants of Hindus converted to Christianity on the subjugation of the country by the Portuguese.
Goalanda (gol-i-14n'da), a river mart and municipality of Bengal, at the confluence of the main streams of the Ganges and Brahmaputra. Pop. $815 \%$
Goalpara (gū-zl-pu'ru), a district of Assam; area 3897 sq. miles; pop. about 450,000 . It lies on both sides of the Brahmaputra, and is exposed to river floods. Rice is the staple crop; and brass and iron utensils, gold and silver ornaments, etc., of an artistic character are manufactured. Goalpara Town is the chief center of trade. Pop. 6287.
Goa Powder (gō'a), a powder used in the treatment of certain skin diseases, obtained from the pith of a leguminous tree, a species of Centrolobium, and called also Araroba Powder.
Goat (gōt), a well-known horned ruminant guad:uped of the genus Capra. The horns are hollow, erect, turned backward, annular on the surface and scabrous. The male is generally bearded under the chin. Goats are nearly of the size of sheep, but stronger, less timid, and more agile. They frequent

rocks and mountains, and subsist on scanty, coarse food. Their milk is sweet, nourishing, and medicinal, and their flesh furnishes food. Goats are of almost interminable variety. and it is not certainly known from which the domestic goat is descended, though opinion favors the C. agagrus, or wild goat of Western Asia. Goats are generally subdivided into ibexes and goats proper. They are found in all parts of the world, and many
varloties are valued lor thols hair or wool. The akin is propared for a variety of purposes, and ylelde the leather well known under the name of morocco. The Ceshmere gont, as its name indicates is a native of Cashmere ; it is smaller than the common domestic soat, and has long, silky, fine hair. The Angora goat is also furnished with soft niliky hair of a siiverwhite color, hanging down in curllng locks 8 or 9 inches iong. Its horns are in a spiral form, and extend iateraily. The Rocky Mountain goat is the Haplocérus montanus, or big-horn (which see).
Goat Island, a small isiand of 70 acres, which divides the current of the Niagara River at the Falls. It is connected with the American shore by a bridge.
Goat-moth, a large British moth larve, which are about 3 inches in length, hollow out galleries in the wood of trees, which they first soften by a juice of a strong smell whlch they secrete. With the sawdust made in the operation they form cocoons, in which the chrysalids are deveioped. The larval condition lasts for three years. C. robinia, the locusttree carpenter-moth, an American specles, expands about three inches, and is gray in coior.
Goat's-beard, the general name of Tragopogon, order Composite, herbacepus perennlals, chiefly natives of Europe. The geeds have feathery appendages ; hence the name. The purple goat's-beard ( $T$. porrifolius) is cuitivated for its root as a tabie vegetable known as Salsify, and called, in the United States, the oyster plant, its flavor somewhat resembling that of the oyster.
Goat's-rue (Galega oficindis), a ous to the souteguminous plant lndigenas a forage, and is supposed to increase the milk of cows that feed npon it. It is found in North America in dry, sandy soii, from Canada to Florida.
Goat's-thorn, a name given to two hardy, evergreen piants of the genns Astragalus. A. Tragacantha (great goat's-thorn), and A. Poterium (smail goat's-thorn). The fcrmer, long cuitivated in Great Britain, is a native of the south of Europe, the latter of the Levant. There is an American species, 4. Canadensis.

Goatsucker, a name common to the Coatsucker, birds of the genus Caprimulous. as also to all belonging to the same family-the Caprimulifide. given originally from the erronenns opinion that they suck goath. The Europenn goat-
sucker (C. Europaus) feeds upon nocturnal ineectn, as mothe, gnata, beetles, etc., which it catches on the wing, flying with its mouth open. Its mouth is comparatively large, and lined on the inoide with a glutinous aubatance to prevent the emcape of those insects which fly into it. Like all birds which catch flies when on the wing, the gape is surrounded by stifi bristles. When perched, it usually sits lengthwise on a bare twis, with its head iower than lts tail, and in thls attitude utters a jarring note, whence one of its commou names-night-jar, or nightchurr. It has a light, soft piumage, mlnuteiy mottied with gray and brown, and is about 10 inches in length. The American chuckwili's widow, whip-poor-wili, and night-hawk belong to the same family. Gobelins Manufactory (gob-iap), manufactory at Paris, established by Coibert in 1607, on the site of a previousiy existing manufactory which had been set up by Gilles Gobeiin, a ceiebrated dyer in the reign of Francis I. Coibert coliected into it the abiest workmen in the divers arts and manufactures connected with house decoration and uphoistery. The Gobeiins has since then continued to be the first manufactory of the kind in the world. Many celebrated paintings of the old Italian, French, and Spanish schools have, in the most ingenions manner, been transferred to tapestry.
Gobi (gotbe), Desert of, the Shamo or sand-rea' of the Chlnese, an immense tract of desert country, occupying neariy the center of the high tableland of Eastern Asia, between lat. $35^{\circ}$ and $45^{\circ} \mathrm{N}$, and lon. $90^{\circ}$ and $110^{\circ} \mathrm{E}$., and extending over a large portion of Mongolia and Chinese Turkestan: Its extreme length is probabiy about 1800 miles; mean breadth, between 350 and 400 mlies : area, $\mathbf{3 0 0 , 0 0 0} \mathrm{sq}$. miles. Its general elevation is over 4000 feet above the sealevel. The East Gobi is occupied by different tribes of the Mongollan race, who have numerons herds of camels, horses, and sheep. In the West Gobi are some nomadic tribes of the Tatar race. This tract is suppose at one time to have veen a great inland sea.
Goblin (gob'lin), a spirit of popular snperstition, generaily malignant in nature and grotesqne in appearance: mnch the same as a gnome.
Goby (gobi). the general naine of a pamily of acanthopternus fishes (Gobildæ) characterized as follows:Two dorsal fins nearly united into one. the anterior fin having fierible reys, not spinous, as is nsaal in the Acanthoptery: gians: ventral fins thoracic, and united
more or leme by their basen ; body scaly, the head unarmed. Like the biennien, they can live for some time out of water. The family is very numerons, about 400 species being known, but does not inciude any important food firhes. The sobies are among the nest-building fishes, and live among the rocks near the shore.
God, the self-existent, eternal, and Supreme Being, the creator and uphoider of the universe, worshiped by must civilized nations. The Christian God is held to be an infinite and absolute belng; a perfect personal spirit; eternal; immutabie; omniscient; omnipotent; and perfectly sood, t:ue, and righteoun. The arguments for the existence of God have been divided into the ontological, the cosmolofical, the pasychological, the physicoteieologicai, and the moral. The ontological argument starts from the idea of God ittelf, and professes to demonstrate the exiatence of God as a necessary consequence from that idea. This form of argument in, in some shape or other, a very old one, but was first fully developed and applied by Anselm in the 11th ceutury. The manner in which it was stated by Anselm is this: 'God must be thought of as that being than whom none can be thought greater; but this being the highest and most perfect that we can conceive, may be thought as existing in actuality as weli as in thought-tihat is to say, may be thought as something still greater; therefore God, or what is thought as greatest, must exist not only in thought but in 'act.' This argument has been presented in other forms. Descartes, while refuting Anselm's form of the ontological argument, revived it himself in another form. Applying the test ot truth which he derived from his celebrated for-maia- 'I think, therefore $I$ am.' that whatever we clearly and distinctly perceive to belong to the true and unalterable nature of a thing may be predicated of it, he found on investigating God that existence beiongs to his true and unalterable nature, and therefore may legitimately be predicated of him. Another argument was adduced by Descartes to prove the existence of God, which, although not the same with the ontological argument, appears to resemble it. It in called the psychological argument. Like the ontological argument, it starts from the idea of a supreme and perfect being, but it does not assert the objective existence of that being as implied in its idea, but infers such objective existence on the ground that we could have acquired the idea only from the beling which corromponds to it. The cosmological arscument atarti not from an idea, but.from
contingent exiatence, and infers from it an absoiutely necemary belng as itu cause. Stated syilogistically, the argument is: Every new thing and every change in a previously existing thing must have a cause sutticient and pre-existing. The universe consista of a system of changes. Therefore the uuiverse must have a cause exterior and anterior to itself. The argument caiied the physicuteieologicai is that which is commonily known as the argument frum design, which has been so fuliy illustrated by Paley in his Natural t'heology. It is simply thls, that in nature there are unmistakable evideuces of the adaptation of means to ends, which lead us inevitably to the idea of one that planned this adaptation, that is, of God. The morai argument is derived from the constitution and history of man and hls reiatlous to the universe, belng based on such consideratluns as our recognaltion of good and evil, rlght and wrong, the monitions of conscience, and the fact that a moral government of the world may he observed. Anorher argument is based on the (alieged) fact that a belief in the existence of a Supreme Being is everywhere found to be implanted in the breast of man. This argument is used among others by Cicero, and many thinkers are inclined to give a good deai of weight to it ; stili it is pronounced by others to be at best only a probable argument, if it may be accepted as valid to prove anything at ali. Others argue the existence of God from the manifestations which he has made of himseif to men, but these, as weli as miracles, it is admitted even by Christian theists, can be accented as reai ouiy by such as previously believed in the divine existence.
Godavari (gō-da'va-rê) a large river ris of Central India, which rises about 50 miles from the shore of the Indian Ocean, flows across the Deccan from the Western to the Eastern Ghats in a general southeasterly direction, and being joined by several afluents. faiis by three principal mouths into tie Bay of Bengal, after a course of 000 ailes. Before the river divides there are three grrat obstacles to navigation.. caused by three rocky barriers.-Godavaki is also the name of a British district of the Madras Presidency: area, 7345 sq. miles; pop. 1,791,512. Coringa and Coconada are its chief rorts.
(rod'fré). Sir Edmondbury. the magistrate who received the depositions of Titns Oates with regard to the alieged Popish plot. Sept. 28. 1678. He was moon after found dead, plerced with his own aword, though evf-

## Godfrey of Bonillon

'antly not by his own band. His death that on a certain day no one should leave nal imputed to the resentment of the his house before noon, that all window papists, and the excitement aroused was the actual cause of the Popinh Piot agitation.
Godirey of Bonillon, feader of the sade, son of Bustace 11, count of Boulogne, born near Niveiies, 1061 ; died at Jerusaiem, 1100. $11 e$ distinguished limseif while fighting for the Bmperor Ilenry IV in Germany and Italy, and was made Duke of Bouillon. In order to expiate his sin of fighting against the pope, he took the cross for the Hoiy Land in 1005 , and led 80,000 men to the
Last way of Constantinople. On the 1st of May, 1097, they crossed the Bosporus, and began their march on Nice (Nicera), which they took in June. In Juiy the way to Syria was opened by the victory of Dorylæum (Eski Shehr), in 1 'hrygia, and before the end of 1097 the crusaders encamped before Antioch. The town of Antioch feii into their hands in 1098, and in the following year Godfrey. took Jerusalem itseif, after a five weeks' siege. The icaders of the army elected him king of the city and the territory; but Godfrey wouid not wear a crown in the place where Christ was crowned with thorns and contented himseif with the titie of duke and guardien of the holy scpulcher. The defeat of the Esyptians at Ascalon placed him in possession of all th Ifoly Land, excepting two or three places. Godfrey now turned his attention to the organization of his newiyestabiished government, and promulgated a code of feudai laws calied the Assize of Jerusalem. Godfrey was a favorite subject of medixeval yoetry, and is the central figure of Tasso's Jerusalem Delivered.

## Godfrey of Strasburg, a German

flourished about 1200, was probably who in Strasburg, but at any rate iived there Besides many lays, we are indebted to him for the great chivairic poem. Trisian und Isolde, derived from the legends of the Round Tiable.
Godiva (go-di'va), the wife of Leofric, entry in the reign of Edward the Corfessor, heroine of a celebrated tradition. In 1040 certain exactions imposed on the inhabitants bore heavily on them, and Godiva interceded for their relief. Leofric, bowerer, only laughed at her. and when she persisted in her entreaties at last said to her, half joculariy, that he would grant her request if she would ride naked throngh the town of Coventry. Godiva took her husband at his word, proclaimed
bo clower, and that no one should even look out until noon wan past. She then mounted naked on her palirey, rode through the town, and returned; and Leofric, in fuitiiiment of his promine, freed the inhabitants from the burdens he had imposed on them. Oniy one perwon, Peeping Tom;' the story says, attempted to look out, and he was immediately struck biind. A yeariy pageant, in which a young woman enacted the part of Godiva, was iong kept ap at Coventry, and stiii occasionaliy takes piace. Tennyson's poem on Godiva is weli known.
Godkin (god'kin), Edwin Lawrence, land, is 1831 editor, born at Wickiow, IreHe sraduated, aieo in, CWil Ork, 1802. engaged in journalism and was Beifast, Journaism and was corre ing thent of the London Daily Nows durCi the Crimpan war and the American Civii war. He was admitted to the bar in New York in 1858, became editor in 1865 and proprietor in 1860 of The Nation and in 1882 of the New York Fvening Post. Godna (god'na). See Revelganj.

## Godolphin (go-dol'fin), Sidnex, Earl of Godolphin, an Engiish

 poiitician, was a native of Cornwall, date of birth unknown, probabiy 1635. Under Charies II, he was one of those who voted for the exclusion of the Duke of York from the throne in 1680. He nevertheless retained office under that monarch, as he did aiso under William III, with whom he had long been in correspondence. During the reign of Anne he was appointed iord high-treasurer of England, and in this office did much to improve the public credit. and check corruption in the administration of the pubiic funds. In 1706 he was made Earl of Godolphin. and four years afterwards was obliged to retire from office. His death took ?ace in 1712. He was a man of great business capacity. but his treasonable correspondence with James while he held an office of trust under William of Or ange is a serious biot upon his character.Godoy (go-doi'), Manuer, Duke of Alcudia, better known as the Prince of the Peace, was born at Badajoz. Spain, in 1767; died in 1851. He entered the royal body-guards in 1787. His personal qualities soon made him a favorite at the Epanish court. and his promotion was rapid. In 1791 be became adjutantgeneral of the guards, in 1792 lieutenantgeneral, Marquis of Alcudia, erandee of Spain of the first class, and prime-minis-
ter; and in 1785, as a reward for the part he had taken in concluding peace with France, he was presented with a large and valuable landed entate, and made a knisht of the Golden Fleece. It was on this occauion also that he was named hy the king Prince of Heace. As he used his vast power in the promotion of French more than Spanish intereats, he became extremely unpopular, and the hatred of the people became 00 great in 1808 that he had to take refuge in France. Having lost everything, he lived for a lons time only on the bountr of his royal friends. In 1847 he was permitted to return to Spain and resume his titles. The larger portion of his domains, however, wan irrecoverahly lost, and he ended his days in obscurity and poverty.
God Save the King, the hurden appellation of a well-known English national sons. Concerning the author and the composer opinions differ. It has been attrihuted to Dr. John Bull, chamber musician to James I; his ode, dating from the gl' 1 powder plot beginning 'God save great James our King.' But the composition we now possess would seem to have been, both words and melody, the work of Henry Carey (died 1743). It appears to have heen first published, together with the air, in the Gentleman's Maguzine in 1745, when the landing of the young Stuart called forth expressons of loyalty from the adherents of the reigning family. After Dr. Arne, the composer of another national song (Rule, Britannia), had hrought it on the stage, it soon became very popular. Since that time the harmony of the song has undouhtedly heen improved, hut the rhythm is the same as originaliy.
God's Truce, a means adopted by Middle Ages to check in some in the the hostile spirit of the times, hy fixing certain days or periods during which private feuds must cease. This began about the heginning of the eleventh century. The church forhare all feuds from Thursday morning to Monday morning, as these days were consecrated hy the death and resurrection of Christ: excommunication being the penalty. Afterwards the whole of Thursday was included, the whole time from the beginning of Advent to the Epiphany, and certain other times of religiovs import. Hostile encounters were forbidden in the precincts of churches, convents, and graveyards.
Godwin (god'win), Farl of Websex, an Anglo-Saxon nohle, horn about 930 : died 1052 . In 1018 he was created an earl by Canute, and married
the king's niece Gythe. During the relgn of Bdwand the Confemor, who married Godwin's daughter, a quarrel arome be tween Godwin and the king, occanioned by the partiality of Edward for Norman favoriten, and Godwin was compelled to quit the kingdom. In 1052, however, he returned with an army, forced Edward to enter into negotiations with hlm, reestahlished bimseif triumphantly in his oid supremacy, and caused the expulaion from the kingdom of mont of the Norman intrudera. Ile was the father of Harold, the last Anglo-Saxon king.
Godwin, Mary, also well known by her maiden name of Wollstonecraft, born in or near London in 1750; died 1707. Her early training was very defective, hut fitting hermelf for a teacher, she set up a school, in sonjunction with her sisters, at Islington in 1783. In 1786 she puhlished Thoughte on the Education of Daughters. This was followed hy an answer to Burke's Reflections on the French Revolution, the Vindication of the Righte of Woman, and other works. She had peculiar Ideas on marriage, and formed a somewhat loose connection with an American of the name of Imlay, whose desertion caused her to attempt suicide. Some time after she fixed her affection on William Godwin (see next art.). As the honds of wediock were deemed a species of slavery in her theory, it was only to legitimize the forthcoming fruits of the union that a marriage between the parties took place. She died in giving hirth to a daughter, who afterwards hecame the wife of Shelley, the poet. Among her other works are a Moral and Historical View of the French Revolution, and Letters from Sroeden, Norway, and Denmark.
Godwin, Parke, journalist, born at 1816; died in 1904. He studied law, hut preferred listerary pursuits, and for many years was connected with the New York Evening Post. He was deputy collector for New York during the Polk administration, edited for a time The Pathfinder. and contributed to the Democratic Rcziew. He also wrote for and for some time edited Putnam's Magazine.
Godwin, William, an English novelist and political writer. son of a Dissenting minister, was born in 1756; died 1836. In 1778 he hecame the minister of a Dissenting congregation near London, and continued in that capacity for five years, after which he removed to London. where he set himself to gaining his livelihond hy literary labors In 1793 a ppeared his Inquiry Oonoorning Political fuatice, the liberal tone of

Which exposed him to rome danger of a government prosecution. The next year appeared hiy novel of Ocleb Williame, or TAings as They Are, which rapidly and denervedil attained an immence popuiarity. He married May Woliatonecraft (see preceding art.). a memoir of his wife was published by Godivin in 1798. In 1700 lie published a new novel, st. Leon. Among Godwin's subsequent works are: H'aulkner, a tragedy; Eosay on Scpulchers: Mandeville, a novel; A I'reatise on Population, in reply to Melthus: History of the Commonwealth of E'ngland; Cloudesley, a novei ; Thoughts on Man, anu Lices of the Necromancers. Godwinia (god-win'i-a), a genus of order Aracea. A gizantic species ( $G$. gigas) discovered in Nic.ıragua producem but one very large and very deeply cut laaf supported on a staik 10 feet long. The inflorescence appears at a different time from the leaf, and consists of a stalk about - 10 inches high supporting the spathe or flower 2 feet long, purplishblue in cuior, with a carrion-ike odor.
Godwit (god'wit), the common name graliatorial birds (Limosa), family scoiopacids (snipes). There are several European species, among them the common godwit ( $L$. melanura) and the red godwit ( $L$. rufa). There are besides the great American godwit, the cinereous godwit, the black-tailed godwit, the redbreasted godwit, etc. The common godwit frequents fens and the banks of rivers, and its flash is esteemed a great delicacs. Goes (hös), or Tergoes, a fortified province town and port in Holiand in South Beveiand, 16 miles west of Bergen op-Zoom. Pop. 0023.
Goethals (gothalz), Georae Wasiincton, an American military engineer, iorn in Brookiyn, New York, June 29, 1858. Graduated at the United States Military Academy and assigned to the corp of engineers in 1880. he became ileutenant-coionel and chief of the volunteer engineers in 1898, and major of the U. S. engineers in 1900. In 1905 he was graduated at the Army War College, and in $190 \%$ became chief engineer of the Panama Canal. Premident Taft appointed him in 1912 governor of the Canal Znne. He was designated Acting Quartermaster General in December, 1917, by'President Wilson during the war. Goethe (gow'te), JoInAxiv Woupoang von, the greatest fgure in Grisan literature, was born in 1740, at Erankfort-on-the-Main; died at Wei-
mar in 1831. His father, who was a Doctor of Lawn and imperial councilor, was a well-todo cítisen and an admirer of the fine arth The Sevea Yeari' war broke out when Goethe was eizht yeara old, and Count de Thorane, Veutenant du roi of the French army in Germany, was quartered in the houme of hil father. The count, beius an amateur and liberal patron of art encouraged the boy's incipient tante for picturem. At the same time goung Goethe learned the French lansuage practicaily; and Erench theatricai company, then performing at Frankfort, awakened his taste for dramatic performances. Drawins, muaic, natural science, the elements of jnriaprudence, and the ianguages occupied him in auccession. After the breaking off of a youthful love affair, which gave a name to the heroine of his great work Fauat and some featuren to his Wilhelm Meister, he was sent to the University of Lelpaig to prepare himself for the legal profession, but he did not follow any regular course of atudies. Goethe began at this period, what he practiced throughout his life, to embody in a poem, or in a poetical form, whatever occupied his mind intenseiy: and no one, perhapa, was ever more in need of such an exercise, a his nature continualiy hurried him from one extreme to another. In 1768 he left Leipzig, and after an illness of some length he went in 1770 to the Univernity of Strasburg, to pursue the study of law. according to the wish of his father. At Strashurg he became acquainted with Herder-a decisive circumstances in his life. Herder made him more acquainted with the Italian school of the fine arts. and inspired his mind with views of poetry more congenial to his character than any which he had hitherto conceived. While here he feli in love with Frederica Brion, daughter of the pastor of Sesenheim, hut the affair, though it made a more abiding impression on him than some others, resnited in nothing. Goethe's numerons love affairs form one of the most curious studies in biography. His attachments were all fugitive; the love passion was continuons, but the object was ever changing. In 1771 he took the degree of Doctor of Jnrisprudence, and wrote a dissertation on a legal subject. He then went to Wetzlar to practice law, where he fonnd. in his own love for a betrothed lady, and in the fate of a yonng man named Jerusalem. the subjects for his striking work. The Sorror: of Werther, which formed an epoch in Garman literature. The attention of the pnhlic had already been attrectod to him, however, by his arama Gote von Bep

Vichinean (publimhed 1773). Worther appeared in 1774. Nof lons after the publication of Worther Charles Auguntug, the hervalitary dule of Eazo-Welmar, mado the acquaintance of Goethe on a journey, and when in 1775 he took the government into his own handn, he invited Guethe to his conrt. Goethe accepted the invita. tion, and on the 7 th of November, $17 \%$, arrived at Weimar. Wieland was aiready there, having heen the duke'm thtor: Herder was added to the band in 1776; Schilier was afterwards one of itn mems bers for a few years ; and other poetr and criticis and novelists were gathered round thene chieff. Goethe was the leading apirit of the group even duriug the last quarter of the eighteenth century, when these men and otherm were conntructing and guiding the literature of ali Germany; and his supremacy hecame yet more absolute afterwards, when for another generation he atood alone. In 1776 he wan made privy-conncilor of legation, with a seat and vote in the privy-councli. In 1782 be was made president of the chamber, and ennobled. In 1786 he made a journey to Itaiy, where he remained two years, visited Sicily, and remained a lons time in Rome. This residence in Italy had the effect of still further developing his artistic powers. Hers his Iphigenic was matured, Figmont finished, and Tansc projected. The first of these was puhlinhed in 1787 , the second in 1788, and the third in 1790 . In the same year with Tasso was puhlished the earliest form of the first part of Faunt, with the title Dr. Faunt., ein Trauerapiel ('Dr. Faust, a Tragedy'), a poem in a dramatic form, which belongs rather to Guethe's whole life than to any particular period of it. At the time that Goethe was engaged in the production of these works of imagination he had heen pursning various other studles of a scientific nature with as ardent an interest as if these had belonged to his peculiar province. The result of his studies in botany was a work puhlished also in 1790 . Versuoh die Metamorphose der Pflanzen zu Frkldren ('Attempts to Fxplain the Metamorphosis of Plants'), in which he gives expression to the view that the whole plant, and its different parts, may all he regarded as variously modified leaves. In the following year (1791) he began to. apply himself to optics, and in 1791-92 he prolished a work on this subject camed Beitrige zur Optik. On the 1 st of May. 1791, he became director of the court theater at Weimar. In 1792 he followed his prince during the campaign of the Prumsians against the revolutionary party in Erance, and was prewent at the battle
of Valmy on the 20th of September. At the Weimar theater he brought out some of the dramatic cheth-d'curre of Schlifer, and there, too, hin own dramatic worka firat appeared, crotz con Berliohingen, Fowet, Iphigonia at Tauris, Tasso, Olavigo, Ntelta, and Count Eigmont. In 1794ind Goethe published Wilhelm Meister's Lehrjahre ('Wilheim Meister's Apprenticenhip'), a novei which has become weli known to English renders through the tranalation of Cariyle, und which had an a continuation Wilholm Meinter's Wanderjahre (th: a, his travein as a journeymnn; 1821). Ilis next work of Importance was Hermann und Dorothea (1797), a narrative poem, in hexameter verse, the characters of which are takeu from humhie life. In 1803 Goethe married Christiane Vulpius, with whom he lived since 1788, and of wl.mm he alwayn spoke with warmth and gratitude for the degree in which she had contrihuted to his domentic happinesm. In 1808 he published another edition of Faust in a connilerahiy altered form In 1809 was pubIIshed Wahlverwandtuchaften ('Elective Affinities '), another novel, and in 1810 the Parbenlehro or 'Theory of Colors,' a work in which he had the boldnems to oppose the Newtonian theory, and to which Goethe himself attached great impurtance, although the theory therein promulgated has met witl: no acceptance among men of scieuce. : $1811-14$ appeared Goethe's autohiography, with the title Aus meinem Leben: Dichtung und Wahrheit; in 1819 the Westostlicher Diean, a remarkahle coliection of oriental songs and poens. Gopthe's last work was the second part of Faust. Which was completed on the evening hefore the last anniversary of his Hirthday which he lived to see. Goethe's works taiken altogether form a rich constellation of poetry, romance, science, art, and philosophy. His greatest production is his Faust, emphatcally a philosophical dramatic poem, and the best of Goethe's productions in a department for which he seems to have heen born. Much light is thrown on Goethe's life and character hy the puhlished correspondence with his contemporaries. Herder, Frau von Stpin, Lavater. Jacohi. Merck, Countess Stulberf, etc. ; hy Fckermann's Conversationh, and especially hy his own Autobiography, which he himselt describes as 'poetry and truth,' and in which prohahly the truth is sometimes clouded hy the poetry. George Henry Lewes's Life of Goethe is a standard work both in Germany and Britain.

## Gog and Magog. <br> Ezekiel predicts

 of Gog and Magosthe destruction (ch. xxxvili and
xxxix) by the Jewn and mention is aiun made of them in Revelotion (ch. XX). Interpreters generally underntand them to be aymbolical exprenious for the heathen nations of Asia. Makor is mentioned as the mecond con of Japheth in Genesis (ch. $x, 2$ ). Gog and Magug are aifo the names given to two reputed glants of eariy British histury, whone statues are erected in the Guilidhall in London. These statues are supposed to have been originaily made for carrying about in papeanta. The present figures of Gog and Masog, which are 14 ft . high, were erected in 1 亿08.
Gogo (go ${ }^{\circ}$ o), a town in Bombay Kathia war, on the Guif of deninsula of milem N. W. of Bombay. P'op. 193 8000.

Gogol (roigol), Nikolai Vasillin the province of Ploitava in 1800; ; died 1852. He went to St. Petersburs in 1820 and tried the stage, but failing, lound hin true vocation in literature. His work: are extremeiy popular in Russia for thpir graphic and humorous delineation of everyday life and manners, and more especiaily Russian country life. Among his most notable works are-Eveninges at the Farm (1832): Mirgorod, a coliection of taies (1834) ; the Dead Souls (1842), a satirical nuvel, depicting the pablic abuses and barbarism of mạnners prevalent in the provibces; anú R(visor, a comedy. Ills later years were tinge with religious mysticism, and he wrote some curlous Confessions.
togra (gog'ra) the chief river of Ondh. forming an important waterway for that quarter of India. It is a tributary of the Ganges : length, 600 miles.
Goiter (goi'zér) or Bronchockle Great Britain as :Derbyshire neck,
 Dease cndemic Derbyshire. Switzerland, some parts of France and South America, and in many other parts of the worid, chiefly in vaifoys and elerated piains in mountainous districts. It is a morbid enlargement of the thyroid gland, forming a soft and more or A Female Affected with less moblle tumor or Gaiter. sign of inflammation, on the anteris any of the peck. It sometimes grows to such a size as to hang down over the breast, and
respiration and swaliowing may be jum. peded by it, though often it causes little imconvenionce. It is regarded as the result of a combination of causem, among which if the drinking of water 1 mpresnated with lime or chalk, these nuhatancem being ingented with the water. it in treated by giving smail dones of the thyroid slands of sheep or by sursical excimion.

## Gokcha (gok-cin') Goxisorian

 loke in itumsian Armenia. occupylag a trianguiar cavity 540 equare milies in extent, at an eleration of 6400 ft. above the sea. It receives the water of meveral streams without having any consideri.ble outiet.Golconda ( gal k on'da), a furtress in the Nizam's domini ned city of India Hyderabad. The fort is 1 mines w. of Nizam's treasury, and alew used as the prison. In former time Goiconde iarge and powerful Goiconda was Deccan, but was subdined ingdom of the in 1687, but wan subded to by Aurengsebe of the Delhi empire. to the dominions Gold (goid) a precious metal of a bright yellow color, and the most ductile and maileable of ali the metais: symbol Al (Lat. surum) ; atomic weight, 106. It is one of the heav. lest of the metals, and not being llable to be injured by exposure to the air, it in well fitted to be used as coin. Its ductility and malleability are very remarka. we. It may be beaten !ato leaves so ex. ceedingly thin that 1 grain in weight will cover 56 equare inches, such leaves haring the thickness of only zrifor th part of an inch. It is also extremely ductile: a single grain may be drawn into a wire 500 feet long, and an ounce of gold covering a silver wire is capabie of being extended upwards of 1300 milies. It may aiso be melted and remelted with scarcely any diminution of its quantity. It is soluble in nitromuriatic acld or squa regia, and in a sointion of chlorine. Its specific gravity is 19.3, so that it is abont nineteen times heavier than water. The fineness of gold is estimated by carats. pure gold being 24 carats fine. (See Carat.) Jeweler's goid is usually a mixture of goid and copper in the proportions of three-fourths of pure gold with onefourth of corma. Gind is seldom ased for any purpose in a nt! " of perfect pnrity on account of its be jess, but is com. bined with some other metal to render it harder. Etandard soid, or the alloy used for the goid coinage of Britain, consisto of twenty-two parts of cold and two of copper (being thns 22 carats fine): Articles of jewelry in sold are made of overs
degree of fineness up to 18 carath, 4 , isu 18 parts of gold to 8 of alloy. The alloy of gold and silver is found already formed in nature, and in that most generally known. It is distingurshable from that of copper by possessing a paler yellow than pure gold, while the copper alloy has a color bordering upon reddish yellow. Palladium, rhodium and tellurium are also met with as alloys of gold.
Gold has been found in smaller or larger quantities in nearly all parts of the world. It is commonly found in reefs or veins among, quartz, and in alluvial deposits; it is separated, in the former case, hy quarrying, crushing, washing, and treatment with mercury. The rock is crushed by machinery, and then treated with mercury, which dissolves the gold, forming a liquid amalgam; after which the mercury is volatilized, and the gold left hehind; or the crushed ore is fused with metalic lead, which dissolves out the gold, the lead being afterwards separated hy the process of, cupellation. By the 'cyanide process,' in which cyanide of potassium is used as a solvent for the gold, low-grade ores can be profitably worked. In alluvial deposits it is extracted by washing, in dust grains, lamine, or nuggets. In modern times large supplies of gold were obtained after the discovery of America from Peru, Bolivia, and other parts of the New World. Till the discovery of gold in California, a chief source of the supply was the Ural Mountains in Russia. An inmense increase in the total production of gold throughout the world was caused hy the discovery of pold in California in 1848, and that of the equally rich gold-fields of Australia in 1851. The yield from both sources has considerahly decreased. Other sections of the United States have of late years proved prolific sources of gold, especially Colorado, which now surpasses Calfornia in yield and Alaska, wheh equals it. Canada has gold-fields in sereral localities, the richest heing those of the Klondike. At present the richest gold-field in the world is that of South Africa, which yielded in 1010 a value of $\$ 175,000,000$, so mew b at exceeding the combined yield of the United States and Australia. Russia and Mexico followed these in yield. The total production throughout the world amounted to over $\$ 450,000,000$ of which the United States produced $\$ 06,000,000$. Enormons quantities of gold are consumed in the arts and are linst hy wear of coin and jewelry.
Goldau (gold'ou), a valley in SwitzSchwyz, hetween the Rigi and the Rossherg. It was the acene of a tre-
mendous landslip (2d Sept., 1808) by Fhich a portion of the Hossbers, about 8 milles long, 1000 feet broad, and 100 feet thick, fell in one mass into the valley, hurying several villages and killing upwards of 450 percons.
Goldbeater's Skin, ${ }^{2}$ thin momb from the large intestine of the ox used by gold-beaters and was formerly sometimes used in surgery.
Goldbeating, the art or process extremely thin leaves of gold used in gilding, etc. The gold is cast into ingots weighing about 2 oz. each, and measuring about $\%$ of an inch broad. These ingots are passed hetween steel rollers till they form long rihbons of such thinness that a square inch will weigh $61 /{ }^{1}$ grains. Each one of these is now cut into 150 piecea, each of which is beaten on an anvil till it is about an inch square. These 150 plates are interlaid with pieces of fine vellum ahout 4 inches square, and heaten till the gold is extended nearly to the size of the vellum leaves. Each leaf is then divided into four, interlaid with goldbeater's slin, and heaten out to the dimensions of the skin. Another similar division and heating finishes the operation, after which the leaves are placed in paper hooks ready for use.
Goldberg (grittberg), a town in lesia, 14 miles southwest of Liegnitz. The place owes its origin and name to a gold mine in the neighborhood, ahandoned since the fifteenth century. Pop. 6804.
Gold Coast, a Britis h crown-colcomprising that part of the Guinea coast which extends from $3^{\circ} 30^{\circ}$ w. to $1^{\circ} 30^{\circ}$ E. lon., stretching inland to an average distance of 50 miles. Estimated area, $15,000 \mathrm{sq}$. miles. To this has been recently added a protectorate, chiefy from Ashantiland, of ahout $31,600 \mathrm{sq}$. miles, and a further region known as the Northern Territories of the Gold Coast, between $8^{\circ}$ and $11^{\circ} \mathrm{N}$. latitude. The climate is unhealthy. The first settlements on the Gold Coast were made by the Portuguese, who huilt the fort of Elmina, which was seized hy the Dutch in 1637. Subsequently there were a number of Dutch and En! !'sh settlements established, but the: ner were transferred to Britain in 187\% The chief forts and settlements are Ct e C. Castle, Elmina, Accra, Axim, Dixco\%. and Annamaboe. The chief products are gold, palm-oil. ivory, copal, caoutchouc, etc. Estimated population, $2,700,000$, of whom about 150 are Europeans.

## Golden Age

Golden Age, almont all races, period in the hietory of of primeval innocence and enjoyment, in which the earth wex common property, and brought forth cirntaneously all things necessar tur inpyy existence, while beasts of rey lived ai pence with other animals. ibe Romuns rof : red thim time to the re.sn of saturn. The socalled 'golden uy: of Koman iterature is reckoned from ciae ime of Livius Andronicus, 250 B.C. to the death of

## Augustus Cresar, A.D. 14. <br> Golden Beetle, the popular name of

 beetles of the genus Chrysometramerous most obvious characteristic is the their brilliancy of their color. There are none of large size. Among species found in the United States is the Ladder Beetle.Golden Bull, an important docuof Germany ment in the history Charles IV in 1356. Its immediate object was to regulate for all time coming the mode of procedure in the election and coronation of the emperors.
Golden Calf, an image cast by Aaron from the earrings of the people for the worship of the Israelites while encamped at the foot of Mount Sinai. Two similar idols were set up by King Jeroboam, centnries later, one in Dan, the other in Bethel. Golden-Crested Wren, GoldenRagulus, or Kinglet (Regŭlus cristatus), a beautiful bird belonging to the family Sylviadæ, distinguished by an orange crest. It is the smallest of British birds, being only about 31/2 inches in length, is very agile, and almost continually in motion.
Golden Nagle. See Eagle.
Golden-eje, Clangn̆la vulodris, a See Garrot. Golden Fleece, in classical mytholgold in quest of which Jason under of the Argonautic expedition to Colchis. The fleece was suspended in an oak tree in the grove of Ares (Mars), and was guarded by a dragon. When the Argonauts came to Colchis for the fleece, Medea put the dragon to sleep and Jason carried the fleece away. See Argonewfo, Jason, Medea.
Colden Flecce, Onpar of ram the tary order inititutied by Philip the Gootil Duze of Burtendy, in 1429, on the 00 canion of his marriare with the Portu-
guese princess, Isabella. The order now belongs to both Austria and Spain. The knights carry suspended from their collars the figure of a sheep or fleece in gold. Golden Gate, the entrance from the Pacitic Ocean to the harbor of San Francisco, a waterway about 5 miles long and 1 mile wide and with a strikingly beautiful and picturesque setting.
Golden Forde, originally the name of a powerful Mongol tribe, but afterwards extended to all the followers of Genghis Khan, and of Batu, the grandson of Genghis Khan, who invaded Europe in the thirteenth century. Under Batu the Golden Horde adyanced westwards as far as the plain of Mosi in Hungary, and Liegnitz in Silesia, at both of which bloody battles were fonght in 1241. They founded the empire of the Kiptshaks, or the Golden Horde, which extended from the banks of the Dniester to the Ural, and from the Black Sea and the Caspian to the mouth of the Kama and the sources of the Khoper. This empire lasted till towards the close of the fifteenth century, when it was overthrown by Ivan III.

## Golden Horn,

the harbor of Constantinople, an inlet of the Bosporus, so called from its shape and beauty.

(Aured Legenda), a colleation of lesends of the Saints made in the 13th century by Jacobus de Voragine, archbishop of Genoa (died 1298). It consists of 177 sections, each of which is de;cted to a particular saint or festival, arranged in the order of the calendar. Caxton printed a translation in 1483, and another edition was prodnced by Wynkyn de Worde in 1498.
Golden Number, in chronology a the year of the moon's cycle; so called from having formerly been written in from having formerly been written in the calendar in gold. To find the golden number add 1 to the given year, and divide the sum by 19 , what remains will be the nnmber required, unless 0 remains, for then 19 is the solden number.
Golden Pheasant. See Pheasant.
Golden-rod (Solidago) is a senns of plants, natural order Oomponitm, chiefly natives of North America, and abundant in many parts of the United States. Mont of the species have orect rod-like, scarcelybreached tema, Fith alternate serrated lever and torminal spikes or racemes of tmaily yellow flowers. They flower in the late fummer and eurls antuma.

Golden Rose, in the Roman Cathoment of sold consecrated by the pope on the fourth Sunday of Lent. It was originally a single tlower of wrought gold, colored red; afterwards the golden petals were decked witb rubles and other gems; finally the form adopted was that of a thoray branch, with several flowers and leaves, and one principal flower at the top, all of pure gold. It is sent to some favored prince, some eminent cburcb, or distingulshed personage.
Golden Rule, the rule laid down by on the Mount: 'Therefore all things whatsoever ye would that men should do to you, do yon even so to them.'
Golden Saxifrage, the popular of tbe genus Chrysosplenium, a small genus of Saxifragaceex, consisting of annual or perennial rather succulent herbs, with alternate or opposite crenate leaves, and inconspicuous greenish axillary and terminal fowers. They are natives of Central and Northern Europe, the Himalayas, and parts of America.
Goldfinch, a common European hird, helonging to the Finct familly. It is about five incbes in entire length, black, scarlet, yellow, and wbite being beautifully mingled in its plumage. The colors of the female are duller than tbose of the male. Its brilliant plumage, soft and pleasant song, and docility make it a favorite cage-hird. The black-beaded poldincb, native of South America, and accidental in the United States, bas a hlack bead.
Golden Wedding, the 50th anniwedding, in wbich it is venderstood that the presents given to the married conple shall all be of gold.
Goldfish, the trivial name of a beantiful species of carp, found in the fresh waters of Cbina. It is greenisb in color in the natural state, the golden yellow color being found only in domesticated specimens, and retained by artificial selection. These fishes are reared by the Chinese in small ponds, in hasins, or porcelain vessels, and kept for ornament. By careful selection, many strange varieties and monstrosities bave been propagated. They are now distribnted over nearly all the civilized parts of the world, but in large ponds they readily revert to the color of the rriginal stock.
Cold Lace, themeelves ollt threads wbicb are eitber
silt silver wire. In the former the soldIeat in fixed directly on the threads by means of a gum. In the latter finer kind the fine gilt silver wire is twisted compactly round the silk threads which are tben ready for being manufantured into lace.
Gold Leaf, one of the forms in which purpose of gilding. It is prepared by a prolonged beating out of the metal between sheets of vellum and thick skin. A preliminary tusion at a high temperature serves to increase the malleability of the gold. After beating the leaves are placed in books holding twenty-ive. The leaves are about three and a quarter inches square and are prodnced in ten different sbades of color, according as the gold was alloyed with much or little cooper or silver.
Goldmark (gold'mirk), Kans, an Coldmark Anstrian nusical composer, born at Keszthely, Hungary, in 1830; died in 1915. The oween of Sheba, produced at the Court Opera in 1875, brougbt him wide recognition, but he is best known by his aymphons, The Rustio Wedding, and his overture, Sakuntala. Other works include a short opel a, The Oricket on the Hearth, and Merlin
 ciferous annual, witb arrow-shaped leaves and terminal racemes of yellow flowers. It is cultivated to a considerable extent in Europe for its seeds, which are fed to cattle, and also yield a useful oil.
Goldoni (grol-do'né). Carlo, a celebrated Italian writer of comedies, born at Venice in 1707; died at Paris 1793. He settled as a. advomate in Venice, but shortly took to a wandering life with strolling players, until in 1736 he married the daughter of a notary and settled down in Venice. Here he first began to cultivate that department of dramatic poetry in whicb he was to excel ; namely, description of character and manners. After tbls he took Moliere for bis model. In 1761 the Italian players invited him to Paris, wbere many of his pieces met with nncommon applause. He became reader and master of the Italian language to the daughters of Louis XV; and for a time received a pension. His best known works include La Bottega di Caffe, La Baruffe Ohiozzotte, I Rusteghi, Todero Brontolon, Gli Innamorati, Il Ventaglio, Beliserio, Momolo Oourtesam. La Notte Oritica, La Bancarotta, La Donna Di Garbo, LImpostore Locandiera, le yamela and Dame Prudenta. His autoblography appeared in 1787.

## Goldsboro (golds'bo-ro) $\begin{aligned} & \text { an } \\ & \text { North } \\ & \text { Carolina, city } \\ & \text { of }\end{aligned}$

 of Wayne County, 49 milies s. z . of Raleigh. It is of importance as a railroad center, and has manufactures of carrlages, machinery, mattresses, furniture, cotton, boxes, etc. ; also oll and rice mills, woodworking establshments, etc. Pop. 6107.Goldschmidt (golt'shmit), Meier Askon, a Danish novelist, born of Jewish parents $\ln 1819$; died 1887. In 1840 he founded what became the most famous of Danish newspapers, The Corsair, celebrated for lts brilliant wit and audacluus satire. In 1845 he published hls first novel, $A$ Jew. whlch was translated into Engllsh and several other European languages. In 1847 he published a collection of short stories, and began the issue of another newspaper, North and South. His chlef novels are Homeless, The Heir, The Raven, and The Vaeillator. He also published a series of short storles of Jewish life, and a play, The Rabbi and the Knight. His style is said to be thr most graceful in the language.
Goldsmith (gold'smith), OLIVER poet and miscellaneous writer, born in 1728, at Pallas, County longford. Ireland; died in London ln 1774. lis father, a clergyman of the Established Church, held the living of Kilkenny West. In 1745 he was entered as a sizar at Trinity College, Dublin. In 1749, shortly after his father's death, he quitted Dublin with the degree of bachelor, and was advised by an uncle who had already borne a large part of the expenses of his education, to prepare for holy orders. Rejected for holy orders, he became tutor in a family, but soon lost his situation on acconnt of a dispnte with the master of the house over a game at cards. The same uncle who had given him assistance before now gave hlm $£ 50$ to go to Dublin to study law, but he had scarcely arrived at the elty when he lost the whole sum in gambling. In spite of hls repeated lmprudences he was once more succored by his uncle, who supplied him with means to go to Edinburgh to study mediclne. Here he remalned eighteen months, durlng which he acquired some slight knowledge of chemistry and natural history. At the end of this period he removed to Leyden, again at the expense of his ancle; and afterwards wandered over a large part of France, Germany, Switzeriand, and Italy. It was probably at Fadua that he took a medical derree, as he remained there six months; but his uncle dying while he was in Italy be was
obliged to travel on foot to England, and reached London in 1756 with a few pence ln hls pocket. After some years of hard experience as a chemist's assistant, medical practitioner, proofreader, and school usher, he drifted into literature. He conducted a department in the Monthly Review, wrote essays in the Public Leelgcr (afterwards published under the title of the Citizen oj the World), anà a weekly pamphlet, entitled the Bee. In 1761 he was introduced to Dr. Johnson. In $17{ }^{2} 4$ he appeared as a pnet bv the publication of his Traveler. In $176 f$ appeared his Vicar

Oli It Goldsmith
of Wakefield, which at once secured merited applause. In 1768 his comedy of the Good-Natured Man was acted at Covent Garden with but indifferent success. His poetical fame was greatly enhanced by the publlcation of his Deserted Village, $\ln 1770$. In 1773 he produced hls comedy of She Stoops to Conquer, which was completely successful. He also compiled histories of England, Greece, and Rome ; and a History of the Earth and 4 nimated Nature, a pleaslng work, bnt one of no scientific valne. His last days were embittered by the pressure of debt, incurred partly by his improvidence and partly by his generosity. The manners of Goldsmith were eccentric, even to absurdity. As a poet. his Traveler and Deserted Village have given him a deserved repntation; and his Vicar of Wakefield is one of the best known and most delightful of English novels.
Gold Wire, an ingot of silver super ficlalls covered with gold, and drawn through a great number of holes of different sizes antil it is brought to the requisite finenem.

Golf, a game played with clubs and called link, over a tract of ground boles, ranged at distance varying from 186 to 600 yards from each other, and usually totailing a distance of about 6000 yards. [Courses comprising fewer holes are also laid out where the tract of ground is too small for the full number of hoies.] The clubs are of different uses, and have different names according to the purpose for which they are respectively designed; as the driver, brassie, putter, mashie, mid-iron, cleek, niblick and jigger. The rival players are one on each side, which is calied a two-some, or $t$, against two, called a four-some. The object of the game is, starting from the first 'tee,' where the ball is put in place, to drive the bali into the first hoie with as iew strokes as possibie, and so on with all the holes in succession, the side which holes its bail on any occasion with the fewest strokes being said to gain the hole. The match is usually decided by the greatest number of holes gained in one or more rounds, called match play, or the aggregate number of strokes taken to 'hole' one or more rounds, called medal piay.
Golgotha (gol'go-tha). See Calvary. Goliath (go-11'sth), piant of Gath His height slain by David (I Sam., xvii); which, taking the cubit at 21 inches, would make him a little over 11 feet. The Septuagint and Josephus read, 'four cubitu and a span.'
Goliath Beetle, the popular name of genus Goliãthus, natives of Africa and Nouth America, remarkabie for their lurge size, and on account of their beauty and rarity much prized by collectors. There are severai species, as $G$. cacicus (goliath beetle, proper), $G$. polyphémus, $G_{\text {. micane, }}$ etc. $G$. cacious, a South American spccies, is roasted and eaten by the natives of the district it inhabits, who regard it as a great dainty. It attains a length of 4 inches.
Gollnow (gol'no), a town in Prus. Stetin. Pod. 8539.

## Goloshes

 (gu-lo es), a word introfrom the French duced into our language derived from the Spanish oalocha, meaning a wooden shoe or clog. It was formerly applied by the Engiish to a kind of wooden clogs. The name is now restricted to overshoes, now generally made of vulcanized India rubber.Gomarites (gímaritz), Gomarisiss, mar, a Dutch disciple of Cairin in the seventeenth century. The sect, otherwise cailed Dutch Remonstrants, very strongly opposed the doctrines of Arminius, adhering rigidly to those of Calvin. See Reformed Ohurch.
Gombroon ( ( om ${ }^{\prime}$ bronn), another name for Bender Abbas, which see.
 ( g -márara), one of the Ca nary Islands, about 12 miles by 9 in extent; pop. 15.358. It has two towns, St. Sebastian and Villa Hermosa. Gomez (gom'ez) Maximo. a Cuban patriot, born in Barri, San Domingo, in 1838; died in Cuba in 1905. He served as a lieutenant in the Spanish army sent to occupy San Domingo and won distinction in the battie of San Lome. After San Domingo won its freedom he went with the Spanish troops to Cuba, where, becoming incensed at the actions of the government toward the peasants, he left ti.e army and joined the patriots, becoming an able and successful leader in the war of 1868-78. He was promoted major-general and atterwards made commander-in-chief of the patriot army. In the revolt of 1895 he again joined the Cuban insurgents, and fought with distinction tili the Americans occupied Cuba. In 1899 he was given a reception and banquet in Havana by the United States military authorities.

## Gomez (go'mez), Smba stiano. a Span-

ish painter, born at Seville about 1616; diel about 1690 . He was originally a slave of Murillo, but on accourt of his genius he was liberated by his master and reccived and taught among his pupils.
Gomorrah (go-mor'a). See Sodom.
Gompers (gom'pers), samuel, labor leader, born in London in 1850, came to the United States in 1883. Here he became a cigarmaker, early took part in the organization of workingmen, and was one of the founders of the American Federation of Iabor. and editor of the 4 merican Federationist. In 1882 he became president of the Federation, which position he still retains. As such be is a power in the labor world, the

Federation including over a hundred aational and international labor unions. On the entrance of the United States into the European War in 1917 he was selected as one of the six members of the Advisory Commission of the Council of National Defense. He gave himself enthusiasticaily and successfully to the heaiing of the differences between capital and iabor so as to insure a successful prosecution of the war. It was due largeiy to him that industrial peace was maintained while the country was at war. He declined to meet the Germans who invited him to attend a conference of the German Federation of Trade Unions to discuss peace. Instead, he visited Great Britain and other Allied countries. meeting the representatives of iabor and inspiring them with his own ardor and discouraging any attempts to dicker with

## the enemy. <br> Gomul Pass

(go-mul'), a pass acroses the Sulaimán range from the Punjab into Afghanistan. It follows the course of the Gomul River, and is an important trading highway.

## Goncourt (gren-kïr), the name of two

EDMOND DE (1822-96) and JULES DE (1830-70), the first born at Nancy, the second at Paris. Their first literary efforts were in the field of history, but they are best remembered for their work in the French realistic schooi of fiction. Chief among their novels are Charles Demailly (1860), Saur Philomène (1861), Renée Mauperin (1864), Germinie Lacerteus (1865), Manette Salomon (1867) and Madame Gervaisais (1869). The following studies hy Edmond alone are also important : L'Art au XVIII e Siècle (1874), L'Oeurre de Watteau (1876), L'Oesure de Prudhon (1877). Gonaives (g $\delta$-na-ēv'), a town on the west coast of Hayti, on the bay of the same name, 65 miles N. N. W. of Port au Prince. It has an excellent harbor. The exports are cotton, coffee, salt and mahogany. Pop. about 18,000.
Gonda (gon'da), chief town of district 28 miles of the same name, Oudh, India, about 15,000 . The district has an area of 2881 sq. miles.
Gondar (gon'där), a chief town of dence of the king, and still the restsiastical headquarters, is situated on hill of considerahle height, about 22 miles north of Lake Dembea. The town is divided into several quarters; contains many churches, and the ruins of a magnificent towered castle, built in the adr-
teenth century by Indian architects under the direction of Portuguese mettlers. It was burned by King Theodore in 1868. Pop. 6000.

## Gondokoro

(gondo-ko'ro), formerly a trading and missionary station and military port on the Bahr el Abiad or White Nile, lat. $4^{\circ} 65^{\prime}$ N. ; for a time the chief seat of the Egyptian government of the Upper Nile, and important as a center of the ivory and siave trade, but now deserted during most of the year, though it atill has an ivory trade.
Gondola (gon'du-la), a sort of barge, curiously ornamented, and navigated on the canals of Venice. The middle-sized gondolas are upwards of 30 feet long and 4 broad; they always terminate at each end in a very sharp point, which is raised pervendicuiariy to the height of a man. Near the center is a curtained chamber for passengers. The boatman is called gondolier.
Conds, the aboriginal or rather nonAryan inhabitants of the old territorial division of Hindustan called Gondwana, corresponding pretty nearly to what is now called the Central Provinces. After a long period of repression, they attained to a position of great prominence and power, and in the sixteenth, seventeenth, and eighteenth centuries three Gond dynasties simultaneously held almost the whole Gondwana under their sway. With a rise of the Mahrattas the power of the Gonds declined, and in 1781 the last of their dynasties was overthrown and the independence of the Gonds ceased. Their numbers have been variously estimated up to $2,000,000$, partly under feudatory states. and partly under the British government, in the Central Provinces.
Condwana (gund-wäna), an extensive, imperfectly defined tract of Central India. See Gonds.
Gonfalon (gon'fa-lon), an ensign or standard; especially an ensign having two or three streamers or tails, fixed on a frame made to turn like a ship's vane, or, as in the case of the papal gonfalon, suspended from a pole similarly to a sail from a mast. The person entrusted with the gonfalon in many of the medisval repablican cities of Italy was often the chief personage in the state.
Gong, a Chinese musical instrument made of an alloy of copper (about seventy-eight parts) and tin (about twenty-two parts), in form uls a round flat dish with a rim two to three inches in depth. It is struck

## Gongora y Argote

by a kind of drumetick, the head of uned for the purposes of making loud monorous signals, of marking time, and of adding to the clangor c.: martial instruments

## Gongora y Argote (gon-go'rae ar-

 a celebrated Spanish poete, LU 18 , at Cordova in 1561; died there in 1627. He was educated for the church and was made chaplain to the king, and a pribendary in the cathedral of Cordova. His works consist chiefly of 1yr. ical poems, in which he excelled. He introduced a new poctic phraseology cailed the estilo oulto, and founded a schonl of writers, the Gongorisias, who carried this depraved atyle to an absurd length.Gonidia (goz-id'i-a), the name given to the gecondary, reproductive, green, spherical cells in the thallus of lichens, forming the distinctive mark between those plants and fungi.
Goniometer (goz-ni-om'eter), an inolid strument for measuring cularly the angles reflecting goniometer is an instrument of this kind for measuring the angles of crystals by determining through what angular space the crystal must be turned $s 0$ that two rays reflected from two surfaces successively shall have the same direction.
Gonorrhcea (gon-o-re’a), a specific of the male prentagious comale vaition attended, from its early stages, with a profuse secretion of much mucus intermingled with pus. This secretion contains the germ of the disease. Though termed a renereal disease, it is totally distinct from syphilis. It is a painful disease, and may result in the chronic catarrh called gleet, or may lead to stricture and other serious evils in the male and inflammation of uterus, Fallopian tubes, ovaries, or peritoneum in the female, necessitating various excision operations and perhaps resulting in permanent invalidization of the person affected. Various other complications may occur in both seres, and carelessness on the part of the sick may result in gonorrhœal infammation of the eyes, which is very likely to cause blindness. Sterility may result in both sexes.
Gonsalvo (gon-salyo), Herfaymez I CGULAR, de CORDOVA, a Spanish soldier, called the great captain (el gran capitan), was born at Montilla, near Curdova, in 1483; died at Granada, 1515. He dintinguished himself
is the Portuguere war which began in 1475, and in the great war with the Moore, which ended with the congnent of Granada in 1492 . In 1405 he was sent to assist Ferdinand II, King of Naples, against the E'rench, who occupied the whole of that kingdom. In less than a year Gonsalvo drove the French over the Neapolitan frontiers, and returned to Spain, where he was engaged in subjectins the Moors in the Alpujarras, when Louis XII of F'rance renewed the war azainat Naples. Gonsalvo again took the Geld, and by the victory near Seminara in 1502 obtained possession of both Calabrias. In 1503 he gained a still more important victory near Cerignola, in consequence of which $\Delta$ hruzzo and Apulia submitted, and Gonsalvo marched into Naplea. He then sat down before Gaeta. As the giege was protracted, he gave up the command to Don Pedro Navarro, and advanced to meet the enemy. He defeated the Marquis of Mantua; and on the Garigliano, with 8000 men, ohtained a complete victory over 30,000 French the consegnence of which was the fall of Gaëta. The possession of Naples was now secured. He was viceroy in Italy until 1507, when, through the jealousy of the king and the calumnies of the courtiers, he was deprived of his office. He thereupon retired to Granada, at which place he died.
Gonzaga Family (gon-zàgá), a faily who ruled over Mantua for over three centuries. Many illustrious soldiers, statesmen, churchmen, and promoters and cultivators of arts, science, and literature sprang from this stock. They became extinct in 1708.
Good, James Isaac, an American theGood, ologian, born at York, Pennsylvania, in 1850. Studied at Union Theological Seminary; was ordained to the German Reformed ministry 1875, and held several pastorates. He was successively professor of church history (1890-03) and dean of the theological seminary (1893-1907) at Ursinus College, Philadelphia; and professor of Reformed Church history in the Central Theological Seminary, Dayton, Ohio. He has published several works, including a History of the Reformed Church in Germany and in the United States.
Goodale (good'al), Grorge Lincoln, botanist. born at Saco, Maine, in 1839. He became a lecturer in medical schools in Maine, in 1870 pror fessor of natural sciences in Bowdoin College; in 1882 instructor in botany in Harvard ; later professor; and in 1888 Fisher profenor of natural history; ca-
rator of botanical museum, 1879-1909; 'cross-buns' on this day has now no aince honorary curator. Goodall (good'al). Inownen, line-enland, in 1795 . He was melf-taught Eng. early in his career attracted the notice of Turner, a number of whose pictures he engraved, including the large plates of Tivoli and Cologne, and various plates in the England and Wales and Southern Coast series. lee also engraved many plates for the annuals, and the largest number of the landscapes after Turner that illustrate the elegant editions of Rogers's Italy and Poems. He encraved a number of plates for the Art Journal, several from pictures by his son, Frederick Goodall, of which the Cranmer at the Traitors' Gate and the Happy Days of Charles I, both of large size, are the most important. He died in London in 1870.
 Goodall, the engraver; born in London in 1822; died in 1904. At seventeen years of age he began to exhibit, and produced pictures very varied in subject and generally of high excellence. He was elected A. R. A. in 1853, and R. A. in 1863 . Exemplifying variety, the following may be named; Raising the Maypole in the Olden Time (1851), Cranmer at the Traitors' Gate (1856), The Opium Bazaar, Cairo (1863), Mater Purissima and Mater Dolorosa (1868), The Subsiding of the Nile (1873), The Holy Mother and Child (1876), The Flight into Egypt, and A Nev Light of the Harem (1884).

Goode, George Brown, ichthyologist, in 1851 ; died in 1896 He studied in the Harvard Museunt of Comparative Anatomy, and from 1874 , till his death was connected with the Fish Commission and the National Museum. Became assistant secretary of the Smithsonian Institution in 1887. He wrote The Fishes of Bermuda, A. History of the Menhaden, Game Fishes, and Food Fishes of the United States, etc.
Good Friday, a fast of the Christian our Saviour's crucifixion, kept on the Friday of Passion Week, that is, the Friday before Faster. It has been celebrated from a very early perior In the Roman Catholic Church the celebration of this fast includes prayers for all classes of people, including heretics, schismatics, pagnns, and Jewrs, and the 'Adoration of the Cross,' but no mass is celebrated. In nearly all Protentant churches the day is observed, and special religious services are held, The practice of eating hot
rellgious significance.

## Good Hope, Capt or. See Cape of Good Hope.

## Goodiow (rood'no ), Feane Joins-

 sove an American educator, born in Brooklyn, New York, January 18, 1850 . He wes graduated from Amherst in 1879 and from the Columbia Law Schocl in 188\%. He was instructor or professor in administrative law and municipal science at Columbia, 18831914 ; collaborated with James Bryce in the preparation of The Amerioan Oommonvealth and was chosen by China a her constitutional adviser. In 1914 he was elected president of Johns Hopkina University.
## Goodrich (good'rich), Sanuex Gris-

 Ridgefield, Connecticut, in 1793 born at 1860 He was a publisher in ${ }^{\text {died }}$ in and atterwards in Boston. He intion known as 'Peter Parley.' a pe is best known as 'Peter Parley, a pseudonymassumed in writing, editing, and compiln aildred, in writes, earing, and compilling children 's books. can coadministration he acted as American consul at Paris. He wrote Recollecions of a Lifetime: Sketches from a Student's Window, etc.

## Goods and Chattels, the legal

 denomination for per and popular distinguished from things real, or lands, tenements, or hereditaments.Good Templars, IIDMrFindant O2. ance broth ood DER OF, a temperprinciplet orhood which combines the principles of teetotalism with certain mysmasons, imitated less or more from freeand ingignis peculiar to itse, passwords, nated ingnia peculiar to itself. It originated in New York in 1851, and extended to Britain in 1868.
Good-will the benefit derived from a business beyond the mere value of the capital, stock, funde, or property employed in it, in consequence of the general pubiic patronage and encouragement which it receives from constant and habitual customers. It has lezally considered a subject of sale alons with the stock, premises, fixtures, trade debte, etc. Goodwin Sands, certain dangerous 4 or 5 miles off the east coast of $\frac{\text { about }}{K}$ Goodyear (good'yer), Ciraburs, inHaven, Connecti ventor, was born in New years he experimented in 1800 . For many years he experimented with India rubber, to form from it a solid elastic materini, and in 1844 obtained his first patent. He endured great privations in his efiorth, even after he had succeeded in hardening fubber by the addition of sulphur, and
although winning the grand prise in the London and Parls World's fairs of 1851 and 1805 and the cross of the Lesion of Houor, he died in poor circumstances in 1800.

## Goole ( 8 bl), a town and river-port of

 Ridins), on the Ouse, 23 miles (West mouth of Hull. The town dates from 1824 , when it became a bonding port, and it has a good shipping trade. Besides the tidal hasin a series of large and commodious docks have been constructed. The exports are chiefly coal, machinery, and woolen goods. Ship and boat building, sailmaking, iron-founding, artificial manure and agricultural machine making are carried on to some extent. Pop. (1011) 20,334.Goorkhas (gor'kas), the mountainIndia, with whom of good understandiug with the British exists. They now freely enter the native army, and are amongst the most faithful and courageous of the Indian troops, having particularly distinguished themselves in the hattles of the Satlej in 1845-46, during the muting of 1857, in the war with Afghanistan in 1878-79, and in the short Egyptian campaign of 1882. They are Hindus in religion.
Goosander (go-san'der ; Mergus), a torial hirds, characterized by a heak thinner and more cylindrical than that of the ducks, aud having each mandible armed at its margins with small, pointed teeth, directed hackward like a saw, the upper mandihle heing curved down at its extremity; there are about seven species. M. Merganser, the soosander or merganser proper weighs ahout 4 lbs. It is an Arctic bird, moving south in winter, and in severe seasons frequents the lakes and rivers of Britain. It feeds principally on fish, which it seizes hy rapid diving. The M. sorritor, the red-breasted goosander, measures about 21 inches in length, and weighs about 2 lhs . The $M$. cucullatus is the hooded goosander peculiar to North America.
Goose (gros), the common name of the Anseride or Anseres of earlier taumily a well-known family of natatorial hirds. The domestic goose lives chiefly on land and feeds on grass; there are many varieties, hut they do not differ widely from each other. It is ralued for the table aud on account of its quills aud fine soft feathers. The common wild goose, or grey-lag, which is migratory, is the Anser ferus, and is helieved to be the original of the domestic soose, The Snow-roone
(A. hyperboroue) of North America is 2 leet 8 nches in leagth, and its winge are 6 feet in extent. The bill of this bird is very curious, the edsen having ach twenty-three indentations or atrons $t$,eth on each side. The inside or concavity of the upper mandihle has also seven row of strong, projecting teeth, and the tougue, which is horny at the extremity, is armed on each side with thirteen long aud sharp hony teeth. The flesh of thly species is excellent. The Laughing or Whito-fronted Goose ( $\mathrm{A}_{\text {. }}$ albifrome) inhahits the northern parts of hoth continents, and migrates to the more temperate climates during the winter. The bean-goose ( 4 . segétum) is also common to both continents The Oanade goose (A. or Oypnopsis Canadonsif) is the common wild goose of the United States, aud is known in every part of North America. It is also found in Europe. Other species are the berniols goose and the brent goose (which see), the dusky goose (A. rufescens) and the pink-footed goose (A. brachyrhynchus). Cooseberry (gbs'ber-1; Aibes proseularia), a low, hranching shruh, growing wild in Siberia and the north of Europe, other species heing found in North America. Along with the currants it forms the order Grossulariaces, which is now usually comhined with Saxifragacee. The hranches are armed with numerous prickles, and bear three to five lobed leaves and incouspicuous flowers. The fruit is a succulent herry, very wholesome aud agreeahle, of various colors-whitish, Jellow, green, and red. Gooseherries are popular fruits for preserving, aud are extensively cultivated, heing of very easy culture. They may be raised from slips, which is the nsual mode of perpetuating varieties; new varieties are raised from seed. The plant of four years old produces the largest and finest fruit; afterwards the truit becomes smaller, hut increases in quantity. $\boldsymbol{R}$. niveum, an American species, has fine white flowers, and is cultivated as an ornamental shrab.

## Goosefish, the Angler (which see).

Goosefoot (Chenopodium) is a genus of plants, nat. order Chenopodiacee, indigenous to the temperate parts of the eastern continent. They are weedy plants common in waste places, and hear mall, greenish flowers, which are sessile in small clusters, collected iu spiked panicles. C. botrys, the Oak of Jerusalem, is found in sendy ielतes from New Eugland to Illinois, The seeds of C. guino of Peru are used as fopd, See Guinoun

## Goosegrass. <br> See Cleavers.

Gopher (gotifer), the game of various of North America. The Geomye bursarius, or pouched rat, has large chsekpouches extending from the mouth to the shoulders, incisors protruding beyond the lips, and hroad, mole-like forefeet. Several American burrowing squirrels also get this name, as Spermophilus F'ranklinii, N. Richardsonii, etc.; as also a species of burrowing land-tortoise of the Nouthern States, whose eggs are valued for the table.
Gopher-wood, the wood of which The name does not convey to us any idea of what species of wood is meant.
Göppingen (geup'ing-en), a town of ع. s. e. Stuttgart. It is regularly built; contains a handsome church, town-house, old castle, and hoapital; and has a mineral spring ; manufactures of woolen and linen cloth, hats, paper, etc. Pop. (1005) 20,8i0.
Gorakhpur ( for -ruk-pbr'), a town of Provinces $\mathrm{Hind} u$ itan, Northwest the district of same Benare, on bank of the Rapti. It has considerable trade in grain and timber, sent down the Rapti to tne Gorgra and the Ganges. 1'op. 6f,148. -The district has an area of 4598 square miles. It is generally flat, and traversed by numerous streams, of which the principal are the Rapti and larger Gandak.
 a fish of the genus Osphroménus ( 0 . olfax), fanily Anabasidæ or climhing perches, a native of China and the Eastern Archipelago, but introduced into the Mauritius, West India Islands, and Cayenne on account of the excellence of its flesh, where it has multiplied rapidly. It is deep in proportion to its length, and the dorsal and anal fins have numerous short spines, while the first ray of the rentral is protracted into a filament wi nxtraordinary length. It is one of the few fishes which build nests, which it dnes by interweaving the stems and leares of aquatic plants.
Gordiacea. See Nematelmia.

## Gordian Knot. See Gordius.

Gordianus (gor-di-ä̉nus), M. Anthree Rome TONIUS, the name of krandson, Anslictzed as Gordian, The frat was born in 158 A.D., and had gov-
erned Africa for many years, when he was proclalmed emperor at the age of eighty. He amociated his son with him in the empire, but six weeks later the son was killed in tighting against the rival emperor Maximinus, and the father, in an agony of grief, died by his own hand. The grandson was proclaimed emperor by the soldiers in Home 238 A.D., aithough he was not more than filteen years of age. He reigned six years, when he was assassinated hy hil soldiers at the instigation of Philip, prefect of the Pretorian guard.
Gordius (gordi-us), in Greek legend, a Phrygian peasant father of Midas, who was raised to the Phrygian throne in accordance with an oracle whleh declared to its Phrygian consulters that their seditions would cease if they elected as king the first man they met, mounted in a chariot, going to the temple of Zeus. This was Gordius, who, to evince his gratitude, consecrated his chariot to Zeus, and fastened the pole with so ingenious a knot that the oracle promised the dominion of the world to him who should untie it. Alexander the Great cut it with his sword, and to 'cut the Gordian knot ' hecame a proverb.
Gordon (gor'don), FaMMr or, a celehouse, the origin of which is still wrapped up in a certain measure of obscurity. It is prohable that the family came over to England with William the Conqueror, and at a subsequent period settled in Berwickshire, where a parish and village bear this name. The adhesion of Sir Adam Gordon, Justiciar of Iothian, to the cause of Bruce gave him estates on Deeside and the Spey Valley. The direct male line died out in the person of Sir Adam of Gordon, who fell in the battle of Homildon (1402). But, from his female and illegitimate descendanta, a number of branches sprang up. His grandson was made Earl of Huntly (1445). The head of this branch was made marquis in 1599, and Duke of fiordon in 1884. It became extinct in 1836. The title Marquis of Huntly passed to a hranch of the family which acquired the title of Earl of Aboyne in 1860. The earls of Sutherland, the barons of Lochinvar, the viscounts of Kenmure, and the earls of Aberdeen are all branches of the Gordon tamily. The title Duke of Gordon was revived in 1875. and given to the Duke of Richmond and Lennox.
Gordon, Charles Geohge, a British Gordon, soldier. known also as 'Chlnese Gordon' and Gorion Pasha, wat born at Woolwich in 1833, killed at Khartoum in 1885. He entered the Royal

Bngineers in 1852, and served in the Crimea ( $1804-56$ ). Luring the Taeping rebellion in China Gordon succeeded in completeiy crushing the revoit by means of a specialiy-trained corps of Chinese, exhibiting marvelous feats of skilful coidiership. On his return to England with the rank of coionei he was aprointed chief engineer officer at Gravesend, where his military taients and philantiropy were conspicuousiy displayed. From 1874 to 1870 he was guvernor of the Soudan under the khedive. For a few months in 1882 he held an appointment at the Cape, and he had just accepted a mission to the Congo from the king of the Belgians, when he was sent to withdraw the garrisons detained in the Soudan by the insurgent mahdi. He was shut up in Khartoum by the rebels, and gallantly heid that town for a whoie year. A British expeditionary force under Lord Wolseiey was despatched for his relief, but found great difficulty in the desert journey, and an advance corps sighted Khartoum on 24th January, 1885, only to find that the town had been captured. by the mahdi two days before, and Gordon murdered. iordon's character was marked by strong religious feelings, which in time became so intensified as to make him somewhat of a religious enthusiast and fataist.
Gordon, Charles Willam ("Raiph man and author, born in Giengarry, Ontario, September 13, $1860 ;$ studied at Toronto University and Knox Coliege, Toronto, and was a Presbyterian missionary in the Rocky Mountains from 1890 to 1894, when he became minister of St. Stephen's, Winnipeg. His best known
novels are Black Rock (1898), The Sky novels are Black Rock (1898), Glrngarry (1801), The Prospector (1904), The Doctor (1806). Gordon Bennett, a mountain, 15,tral Africa, in the Ruwenzon range, near the Albert Nyanza, first seen by Stanley in 1875. Gordon, Lord Grorge, son of Cosmo 1751 ; died in 1793 . He entered when young into the navy, but ieft the service during the American war. He then became a member of the House of Commons. His parliamentary conduct was marked by a certain degree of eccentricity, and by his opposition to the ministry. A bil the relief of Roman Cathoiics from certain penalties and disabilities, in June, 1778, Lord George headed an excited mob of about 100.000 persons, who went

In procession to the House of Commona to present a petition araiust the meazure. The dreadful riots which ensued led to his arrest and trial on the charge of high treason; but, no evidence being adduced of treasonable devisn, he was acquitted. In the beginuing of 1788 , having been twice convicted of libeiing the french ambrssador, the Queen of France, and the crit inal justice of his country, he retired to Holland, but he was arrested, sent home, and comraitted to Newgate, where he passed the remainder of hil life. He was undoubtedly of unsound mentality.
Gordon, Jorn Brows, soldier, was ia, in 1832 ; in in 1004 County, Geornfantry captain in the Confederate Arm in 1801. served through the war with grent distinction, being wounded eight times, and becoming major-general. He was elected to the United States Senate was 1873 ; resigned in 1880 , and in 1886 he was elected Governor of Georgia. He served as senator again, 1891-97. He was chosen commander-in-chief of the United Confederate Veterans in 1000.
Gordon, Sir John Watson, a Scotof the Royai Scottish Academy, president in Edinburgh in 1788 ; died in 1864. He applied himself aimost exciusively to portrait-painting, in which he obtained great excelicace. He was empioyed to paint the portraits of many of the most eminent men of the day, among whom we may mention. Sir Walter Scott, Dr. Chalmers, De Quincey, etc.
Gordon, Patrick, a Senttish soidler, in 1690 In 1661 , died at Moscow service, became a generai, and rose high in favor with Peter the Great. He kept an interesting diary for the last forty years of his iffe, part of which has been published.
Gore, Thomas Pryor, statesman, born in 1870, in Webster County, Mississippi. and of the right eye at 11, by accidents yet was graduated in a normal scidents, 1890, taught schooi 1890-91, was ated in law at Cumberland Univerdu(Tenn.) and wus admitted to the bar in 1892. He removed to Texas in 1895 , was nominated for Congress by the Pe, was Party in 1898, but defeated. He joined the Democratic party in 1890, removed to Lawton. Okiahoma, in 1901 ; was elected to the Territorial Legisiature in 1902-05, and after an active canvass, in which he had blindness and poverty to contend with, he was eiected United States Senator for a partial term in 1907, and reelected in 1809. rather rock, belonging to the foot, which is nut inverted, and in France, on the coast of Africa, a little more than a mile from the southern shore of the promontory that forms Cape Verd. Pop. 1500.
Gorgas (gorgas), Whichax Craweral of the United States Army, born in Mobile, Alabama. October 3, 1854. He studied at the University of the South and at the Bellevue IIospital Medical College, New York. In 1880 he became a surgeon of the U. S. A. In 1898 he was appointed chief manitary officer of IIavana. Here he successfully combated yellow ferer, 1898-1002. In 1004 he was appointed chief sanitary officer of the Panama Canal. Under his direction the sanitation of the Isthmus became a matter of intelligent administration.
Gorget (gorjet; French, gorge. mor, either scale work or plate, for the

Plate Gorget. protection of the tirroat. The camail, or throat covering of chain inail. which is sometimes called the gorget of mail, belonged more to the helmet than to the bridy armor.
Gorgias
(gor'-ji-as), a Greek orator and sophist, born at I,eontini sixty years of age he was sent as ambag. sador to Athens. Ite was a popular teacher of rhetoric. and Plato named one of his dialogues after him. He is said to have reached the extraon dinary age of 107 or 108 years. Two works attributed to him are extant The Apology of Palamedes and the Encomium on Helena, but their genuineness has been questioned.
Gorgons (gor'guns), in Greek mytholwhose names were Stheno, Eurgale and Medusa. They were all immortal except Medusa. Their hair was said to be ent twined with serpents, and they turned to stone all those who lwoked upon them. Medusa was killed by Perseus (which see).
Gorilla (go-rilla), Trogladytes Gothe ape kind. It attains a height of about 51/2 feet, is found chiefly in the woody equatorial regions of the African continent, is possessed of great strength, has a barking voice, lives mostly in trees, and feeds chiefly on regetable substances. as the fruit and cabbage of the palmtree, the pawpaw, the banana, etc. The erect position in more readily afsumed than in mont other anthropoid
shorter and broader; but ths ordinary cait is on all-foura. It has a ferocious and brutal cast of features, due to extremely prominent supra-orbital ridges and retreiting forehead. It great strength and ferocity make it the monarch of the forest it inhabits, even the lion shrinking from contents with it Horillas make a sleeping-place like a hamuuck, connecting the branches of the

Gorilla
sheltered nad thickly-leared part of a tree by means of the long, tough, slender stems of parasitic plants, and lining it with the broad, dried fronds of palms or with long grass. This hammock-like abode is constructed at different heights from 10 to 40 feet from the ground, but there is never more than one such nest in a trep. The gorilla has thirteen ribs, and in the proportion of its molar teeth to the incisors and in the form of its pelvis it approaches closely the human form. The Phonician navigator Hanno found the name in use in the fifth century B. 0 . in W. Africa.
Göritz (görritz). See Görz.
Gorkum (gorkum; properly Go rinchem), a fortified town of the Netherlands, on the Linge, at its junction with the Merwede, the name given for a short diatance to the river formed by the union of the Waal and the

Mane, 22 milien 工. 1. 5 . of Rotterdam. Pop. $11,885$.

## Gorky, Maxim

(ALExtiMAX1* Movitcil IXESItKOFT), the pen name of a Kusaian novelist, born in 1888, of a peasant family, spent his eariy life in tramping and workins amons the lowest grades of INuasian life. Ile finaliy began writing, producing stories, noveis, and piays which depicted with wtartlins vividness ilfe in the slums and among the tramps of IRusaia. Görlitz (geur'lits), ${ }^{2}$ town in the Liegni.z, province of siiesia, on the left bunk of the Nelsese. It is weli bullt, having generaily substantial houses, several large squaren and spacious streets. Its industrien include woolent, linene, and cuttona, machinery, etc. Pop. 80,031. Görres (zeur'res), Jurob Joomph publiciat and VoN, a distinguished German 1770; died at Munlch in 1848. He began life with very advanced ideas, but uitimateis his republican views borame much modified, and he ended as an uncompromising Vitrninontane R. Catholic. He taught in a gehool at Cublentz, and having studled Persian, he priduced a translatlon of part of the Shahnameh. In 1814 he gtarted the Rheinische Merkur, the organ of the Aerman national movement against Napoleon, but it was suppressed in 1816. Owing to his support of Cntholicism, he was appointed professor of hlstory at Munich. Ile wrote on a great variety of subjects. Amone tise chief works are Aphoriams on Art. Faith and Soience, Mythological IIistory of Asia, Christian Mysticism, etr. Gortschakoff (gor chat-kov), Russian general, born in 1792 ; died 1861. He took part as an artilipry officer in the battle of Borodino in 1812, and served in the suhsenuent campaigns of the aliles against the French. IIp took a prominent part in the Turkish war (1828-29) $i$ the Polish war (1831) : the invasion of Hungary (1849) ; and in the war with Turkey and the western nowers (1853-55). In the Crimea he held the command in Sebastopol during the siege. Aftpr the war he was made governor of Poland. Cortschakofi, Aiexander Miorisian diplomatlst. brother of the preceding was born in 1798 ; died in 18R3. Me entered the diplomatic arrvice $\ln 1824$ as secretary to the Russian emhass, in Iondon. His experience in diplomatics was extended in Vienna, Florence. Stnttgart, etc., and he showed considerable dexterity in mecuring the neutrality of Austria dur-

In the Crimean war. In 1850 ho became mininter of loreign aliairs, and in 180 chancellor of the empire. He was a prominent member of the Beriin Con.

Gonlar

## Goslar

 'zos'lar), an interesting oid town of Pruscia in Hanover, 28 m ! ' noutheast of Hildenheim, on the north aide of the llarz, at the foot of the Rammeisbers. It once ranked as a free imperial city, has remains of its oid fortifleations, and some oid hulidings, inciuding part of a palace of the German emperors, dating from the eleventh century. There is aiso o town-house of the fifteenth century. The inhahitant are chiefly engased in the copper, silver, and other mines in the neighborhood. Pop. 17,817. Gospel (sos'pel). The Greek word used as the equivaient is ecungelion, or rether euaggelion, a good or joyful mesnase. In the New Testament it denotes primarily the giad tidings respecting the Mesaiah and his kingdou-this was emphatically the gospel (Anglo Snxon, godspell, sood tidings). It was quite naturaily employed as a common title for the bistorical accounts which record the facts that constitute the basis of Ciristianity. It may be fairly said that the genuineness of the four narratives written by Matthew, Mark, Luke, and John rests upon sood evidence. They were ail composed in the latter half of the first century: thone of Mathew and Mark some years before the destruction of Jerusalem ; that of Luke ahout the year 64 ; and that of St. John about the close of the century. Before the end of the second century we have ahundant evidence that the four Gospels, as one collection. were generaliy used and accepted. While the early existence of these Gospels has heen admitted, much discussion has taken place regarding their origin, and their relation one to a nother. They seem to have been viewed as sn many original and independent sonrces, each one as much so as the others. The critical spirit of modern times has refused to halt at this point ; it has sought to get at, so to speak, the genealogy of the several Gospels with their different degrees of relationship. Each of the four Gospels has in turn been assumed by different critics to be the first out of which the others arose : and the theory has heen more than once propounded of some prior, more strictly original document, no longer extant. which formed the common basis of them all. The supposition of an original decnment from which the three synoptical Gospels (those of Matthew, Mark, and IJuke) were drawn. each with more or less modification, would naturally occur to those who rejected the notion that the evangelists copled from each other. The fonrth Gospel, as the narrative coincides with that of the other three in a fewpancages oniy, it not drawn into the dicusaion, and the received explanation in the only satiffactory one with ranpect to it, mamely, that John, writing last, had seen the other Goapels, and purponely abatained from writins anew what had been sufieiently recorded. Another conjecture is that the Gospels aprans out of a common oral tradition. According to this view of the orisin of the Goupels, that of Mark, if not the oldent in componition, in yet probably the most direct and primitive in form ; it is the tentimony delivered hy Peter, ponsibis with little aiteration. The Goapeis of Matthew and Luke, again, 'represent the two great typen of recension to which it may be supposed that the simple narrative waic subjected. Iuke represent the Hellenic, and Matthew the iater Hebraic form of latter seems to in its present shape the recurd of the p give the last, authentic recurd of the primitive Gospel.' A com. yieids some interesting resultal If we suppose the history they contain to we divided into sections, in forty-two of these ail the three narratives coincide: twelve more are given hy Matthew and Mark oniy, five hy Mark and Luke oniy, and fourteen by Matthew and Luke. To these must be added five peculiar to Mathew, two to Mark, and nine to Lake. Bui this applies only to seneral coincidence as to the facts narrated; the number of passages either verhally the same, or coinciding in the use of many of the same words, is much smaller. Briefly stated the critical result is as follows:-
There stare is a singular coincidence in subThis agreement wonid be of no diapell. without the differences of no difficulty mark the one divine source would only they were all derived. On the oth which the difer all derived. On the other hand. the asere:nent, would offer no dithout since there may he a substantial hifficulty, between ecount that differ greationy mode of expression, and the very ence might be a guarantee of inderiference. Several blographies of Jeguependthe holy family written by nnknown authors of the second, third, and iater centuries are known as $\Delta$ pocryphal Gospels. They have no historical nor doctrinal value whaterer. The titles of the best known of these are: The Goapel of James, The Gospel of Joseph the Carpenter. The Gospel of Thomas. The Gospel of Nicodemus, The Acts of Pilate, and his IJetter to Tiberiaf, etc.
Cosport (rosiport), a town and fortified seaport of Bngiand, county of Hante, on the weat side of the
entrance to Portamouth harbor, and di- rious articles in gold and silver. Pop. rectly opposito the town of Portsmouth. (1910) 39,553 . Besides containing infantry barracks, it is an important naval depôt, including a victualing yard, large government factories, and Haslar Hospital, the chief establishment in Britain for invalided sailors. Pop. (1911) 33,301.
Gossamer (gos'a-mer) is the name like cobweb, which is seen to float in the air in clear dass in autumn, and is most observable in stnbble-fields, and upon tnrze and other low bushes. This is formed by several kinds of small spiders, and only, according to some, when they are soung.
Gosse (gos) Edmund Wiluiam, son of Philip Henry Gosse, was born in London in 1849. He was appointed assistant in the British Museum in 1867, translator to the Board of Trade in 1875; specially studied the northern literatnres, and published Northern Studies, consisting of critical essays on Scandinavian, Dutch and German literature. He also published several volumes of poetry and critical essays, and was Clark Lecturer in English literature at Trinity College, Cambridge, in 1884-89
Gosse, Philip Henky, naturalist, was 1810: born to Worcester. England, in 1835 he was in 1888. in Newfound to and afterwards traveled through Canada and the United States, making all the time large collections of insects, etc. In 1844 he visited Jamaica. Among his many works are: The Canadian Naturalist, The Birds of Jamaica, A Naturalist's Sojourn in Jamaica, The Aquarium, Marine Zoology, Life, Actinologia Britannica, Romance of Natural History, etc., besides many contributions to the learned societies. Göteborg, or Gitiferorg (yeu'teCotha (goita), in town of Gurg. Gotha (gotita), a town of Germany, Coburg-Gotha, on the Leine. 14 miles $w$. s. W. Erfurt, is well built, with fine environs and suburbs. The principal building is the ducal castle or palace, occupying the crown of the height on which the town is situnted. This town alternates with Coburg as a residence of the dukes of the dnchy. It contains a mnseum, a picture-gallery. a valuable cabinet of engravings. a library of 200.000 vols. and 60 M M MSS., of which 2500 are Arabic and 400 Perstan and Turkish. and a collection of over 80,000 coins and medals. The manufactures consist chiefly of wonlen, linen. and cotton tissnes, porcelain, musical instruments, and va-

tain group of Switzerland, On the confines of the cantons Tessin and Uri, belonging to the Lepontine or Helvetian Alps, which it connects with the Bernese Alps. It forms a kind of central nucleus in the great watershed of Europe. Its culminating point has a height of 10,600 feet. The Col of St. Gothard, at its summit level, where the Hospice stands, is 6808 feet high. Over it an excellent carriage road was completed in 1832. A railway tunnel has been pierced through this mountain group between Goschenen on the north and Airolo on the soutb, thus directly connecting the railway system of North Italy with those of Switzerland and Western and Central Germany. This tunnel has a total length of 16,295 yards, or rather more than $97 / 4$ miles. Its construction, begun in 1872, was completed in 1881 , and it was opened for traffic early in 1882. Its total cost was about $\$ 12,000,000$.

## Gothenburg System. See GottenGothic Architecture burg. (goth'ik) ${ }^{\text {a }}$

 term applied to the varions styles of pointed architecture prevalent in Western Europe from the middle of the twelfth centriry to the revival of classic architecture in the sixteenth. The term was originally applied in a depreciatory sense to all the styles which were introduced by the barbarians who overthrew the Roman Empire. Bnt the invention or introdnction of the pointed arch gave birth to a new style of architectnre, to which the name Gothic is now properly restricted. The chief characteristics of Gothic architecture are:-The predominance of the pointed arch and the subserviency and snbordination of all the other parts to this chipf feature; the tendency through the whole composition to the prednminance and prolongation of vertical lines: the absence of the column and entablature of classic architecture. of aquare edres and rectangnlar surfaces. and the smbstitution of clustered shafte. rontraîted surfacen. and members mnltinlipd in rich variety. This style oricinater in France and spread very rapidly to Dagland, Germany,Italy, Spain, and the Scandinavian coun- nection between these and the Gothe tries. In England it was introduced by proper. About the middle of the third William of Sens, who built Canterbury century these began to encroach on Cathedral in 1174, and there followed an the Roman Empire. Having seized the

independent course of development. The Roman province of Dacia, they were Gothic architecture of Britain has been assailed by Decius, whom they twice divided into four principal epochs-the defeated. In 253 they captured TrebiEarly English, or general style of the zond, where a large fleet of ships fell into thirteenth century; the Decorated, or style of the fourteenth century; the Perpendicular, practiced during the fifteenth and early part of the sixteenth century (Flamboyant being the contemporary style in France); and the Tudor, or general style of the girteenth century. From that time Gothic architecture declined in Britain, but a revival set in about 1825, and many fine specimens of Gothic have pince been erected, chiefly ecclesiastical buildings.
Gothland (gotland), or (Swedish, Gotaland), one of the large sections into which Sweden was originally divided, and including the portion south of lat. $59^{\circ}$ $20^{\prime} \mathrm{N}$. Goths, an anTeutonic tribe occupying when first known to bistory the region adjacent to the Black Sea north of the lower Danube. A people of similar name is mentioned by Tacitus as dwelling south of the Baltic, and Geats or Gauts are and sacked Rome in 409 , invaded raiy known to us from the Anglo-Saxon poem time in 410. After his death (in 410) the Beowulf as inhabitants of Southern Visigoths succeeded in establishing a new Sweden; but there is no mecemary con- kingdom in the southern partm of Gaul
and Spain, of which, towards the end of the fifth century, Provence, Languedoc, and Catalonia were the principal provinces, and Touionse the seat of government. The last king, Roderick, died in 711 in hattle against the Moors, who had crossed from Africa, and suhsequentiy conquered the Gothic kingdom. After the fall of the Western Roman Empire, by the invasion of Odoacer in 476, the Eastern emperor, Zeno, persuaded Theodoric, king of the Ostrogoths, to invade Italy in 489. The Goth became king of Italy in 493, and laid the foundation of a new Ostrogothic kingdom, which, together with Italy, comprised Rhætia (a part of Switzerland and the Tyrol), Vindelicia (part of Bavaria and Swahia), Noricum (Saltzhurg, Stiria, Carinthia, Austria), Dalmatia, Pannonia (Further Hungary, Slavonia), and Dacia beyond the Danube (Transylvania, Wallachia). This kingdom came to an end in 554. Subsequently the Goths hoth here and in Spain entirely disappeared as a distinct people.

Christianity appears to have early taken root among the Goths settled in Moesia, a Gothic hishop being mentioned as present at the council of Nicrea (325). Their form of Christianity was Arianism, Which was patronized hy their protector Valens, and certainly adopted hy their yishop, Tlifilas. The introduction of Christianity among the Goths, and the circumstance of their dweiling near and even among civilized suhjects of the Roman Empire, greatiy contributed to raising them in civilization above the other German trihes. Bishop Ulfilas, in the fourth century, translated, if not the whole, at least the greater part of the Bihle into Moeso-Gothic, using an alphabet which he formed out of those of the Greeks and Romans. Unfortunately only a small portion of this translation has come down to us; but this is quite sufficient to enable us to form an opinion of the language at that time, and is of the highest value from a philological point of view. Besides this translation there exist a few other monuments of the language, which are, however, of minor importance. Gothic was onf of the Teutonic tongues, being accordingly a sister of Angio-Saxon and Engiish, German, Dutch, Danish, etc. Being committed to writing earlier than any other Teutonic language, Gothic exhihits peculiarities entirely its 0 wn , and hence its value in the study of Teutonic philology in general. It is richer in inflections than any other of the Teutonic tongues. Swedish is the least like the Gothic of all the Germanic dialects, and the probahility is that the Gothe migrated to Scandinavia from
the country on the east of the Vistula long hefore they proceeded southward. See Ulfilas.

## Gottenburg,

or Gothenburg (zot-en-hurg: swedish, Göteborg), a seaport town in Sweden, the second in respect of population and trade, capital of the lin of the same name, situated at the mouth of the Gota, in the Kattegat, 255 miles W. S. W. Stockholm, intersected hy canais. It is one of the hest huilt towns in Sweden, and the seat of a hishopric. It has manufantures of sail-cloth, cotton, and other goods, and possesses shipbuilding yards, tohacco factories, hreweries, sugar refineries, etc. The trade is very extensive, the harbor being excellent and always free from ice. It has a good depth of water, is defended hy forts, and there is a drydock cut in

the solid rock. The completion of the Güta canal and railway faciiities have increased its importance. Among sociai reformers the town is noted for its iicensing system, known as the 'Gottenburg system,' under which the puhlichouse licenses are controlled by the municipaiity and granted to a company, which, after paying the expenses of management with 6 per cent. annual interest on the shareholders' capital, makes over the profits to the town treasury. This plan has heen in force since 1865, and has been experimented with, less successfuliy, in some other localities. Pop. 177,200 .
Gottfried (got'fred) von Strasbura.
See Godfrey of Strasburo.
Göttingen (geat'ing-en), a town of
over, on the Leine, 50 milea B. s. In Hanoven It is a place of great autiguity, and is generally well built, having wide and apacious atreets Its chief attracthon is the univernity, founded in 1734 by George 11 of Bngland and elector of Hanover, opened in 1787, and which has a European reputation. It has an average attendance of over 1000 students. Connected with the univernity are museum, an observatory, an anatomical theater, botanical garden, and a library possesped of 500,000 printed volumes and 5000 MSS. The manufactures comprise woolens, chemicals, scientific instruments, etc. Pop. (1910) 37,094.
Gottland, or Gormbard (got'land), belongine to an isiand of the Baltic, coant of sweden. It is of irregular shape, and has an area of 1200 sq . miles. The coast in for the most part rocky and deeply indented. The interior consints of a limentone platean, intersected near it center by a range of heights frum 200 to 300 feet above the sea. The soil is fertile. The chief town, Wiaby, was once a flonrishing member of the Hanseatic League. Pop. 82,781.
Gottrched ( OOt' $^{\prime}$ shet), Jomans CHASTOPH, a German writer, born in 1700 ; died in 1766. He became profestor of eloqnence and poetry, and afterwards of logic and metaphyaics at Leipzis; and for many years was dictator in Germany in matters of literary taste. In 1728 he published the first sketch of his Rhetorio, and in 1729 his Kritische Dichtkunst ('Critical Art of Poetry'). Both these works condemn the disfisurement of the lauguage by the use of foreign words, and oppose the bombast in poetry then prevailing.
Gottschalk (got'shalik), Lours MozEAU, musician, was born in New Orleans, Lonisiana, in 1829. His marked musical ability induced his father to eend him to Paris to receive farther education. In 1848 his series of public concerts in Paris met with much succeas. He afterwards appeared in the United States and in Mexico and South America. He died in Brazil in 1869.
Goude (son"di), a town of Holland,
In the province of South Holland, 11 milies northeast of Rotterdam, separated into two unequal parts by the Gonwe, which here nintes with the Ijssel. The town is composed of neatly built houses, and is intersected by numerous canals. The great marketplace is the largest in Holland. The church of St. John is noted for its organ and its painted glage window, said to be among the finevt in Europe. There are pipe-
works, potteriea, and breweries, and manufactories of stearine candles, yarn, and cigar. Gouda is a great market for cheese, sold under the name of Gouda cheese. Hop. 22,303.
Goudimel ( $\beta^{0}$-di-mel), OLA0ds, a hrench musical composer, born in 15.10; killed during the St. Bartholomew massacres at Lyons in 1572. Palestrina was one of his pupils at Rome. His most important work is a setting of the French version of the Psalms by Marot and Beza. Some of theme tunes are still used by the French Protestant Church and by the German Lutherans.
Gough (gof), Huar, Viscount, an English general; born at Woodstown, County Limerick, in 1779 ; died 1869. He joined the army in 1794, and was present the year after at the capture of the Cape of Good Hope. He served in Spain in 1809-13; was made major-general in 1830. and sent to India as commander of the Mysore division of the army in 1837. He commanded the land forces in the Chinese war of 1841; was made baronet, and returned to India as commander-in-chief; suppressed the revolt of the Mahrattas, 1843; and commanded in the Sikh wars of 1845-48. He was superseded by Sir Charles Napier in 1849. He was made baron in 1846 ; created viscount and pensioned, 1849 ; fieldmarshal, 1862.
Gough, John Bartholomew, temperKent, in 1817 ; died in 1886. He attained a great celehrity as a fervid orator on his special subject in the United States and elsewhere, and published his autobiography, orations, and a volume of sketches, Sunlight and Shadow.
Goulburn (gol'bern), a city of New
South Wales. in Argyle County, 134 miles s. W. of Sydney, well laid out with broad streets lined with substantial buildings. Pop. 10,916.
Gould (gbld), Augustus Addison, naturalist, horn at New Ipswich, New Hampshire, in 1805; died in 1866. He graduated in medicine at Harvard College in 1830, and while practicing engaged in acientific stady, devoting himself to botany, zoology and conchnlog. y . In the latter he became an authority of world-wide eminence. He aided Sir Charles Lyell in his geological investigations in the Onited States. He was the author of valuable works on conchology and nther subjects.
Gould, Bendamin Apthorf astronoCould, mer. born at Boston. Maspachusette, in 1824; died in 1896 . Graduating at Harvard in 1844, he pursued the stud. of science abroad, and in 1849 ซas aj-
pointed on the United States Coast Survey, when he devised methods to determine longitude by aid of the telegraph. He was director of the national observatory at Cordova, Argentina, 1870-85, completing there three extensive catalogues of stars, and conducting ohservations in meteorology and climatology. His Uranometry of the Southern Heavens is a work of great value.
Gould, Melen Miller, philanthropist, born in New York in 1868. Inheriting ample means from her father, she became distinguished for her discriminative gifts for charitadie and educational purposes. During the war with spain she became an active worker in the Woman's National War Relief Association, and contributed liberally to its funds, and for other purposes connected with the war. Since then she has given much for educational parposes, including $\$ 100,000$ to the University of N. Y. She married Élinley J. Shepard, January 22, 1913.
Gould, Jay (Jason), rnancier, was born in Roxbury, Delaware County, New York, in 1836 ; died in $1899^{\circ}$ He was one of the first of the daring American speculators and one of the most unscrupulous of them all. By his unusual ability as a stock-dealing financier and his audacious schemes and methods, he accumulated an enormous fortune for his era, valued at over $\$ 72,000,000$.
Gould (gold), JOHN, ornithologist, born at Lyme, Dorsetshire, in 1804 ; died at London in 1881. Originally a gardener, he was appointed curator to the Zoological Society's Museum in 1827, and henceforward his whole life was devoted to the study of birds. His chief works-all magnificently illustratedare: A Century of Birds from the Himalayan Mountains, 1831: The Birds of Europe, 5 vols. folio. 1832-37; The Birds of Avetralia, 7 vols. folio, 1840-48. with 3 supplementary volumes, $1850-52$; The Birds of Great Britain, 5 vols., 1862-73, etc., besides a number of monographs on the humming-birds, the trogons, etc.
Gounod (gö-nō), Cilaries Franposer, horn at Paris in the Conservatoire under Halery, Lesue at and Pauer, and afterwards in Italy. His first important work was Faust (1859), which raised him to a high rank among composers. Other operas followedMireille (1864), Romet et Julictte, Cinq Mars (1877), Polyeucte (1878), and later, Charlotte Corday. He wrote also a Messe Solennelle, a motet Gallia, and other choral works and songs ; his oratorios Redemption (1882) and Mors of

Vita (1885), and a Mass for the Jeanne D'Arc fentival (1887), were popular. He died in 1893.
Goura (g $j^{\prime}$ ra), a genus of largesized pigeons, natives of the Archipelago, comprising ahout Papuan Archipelago, comprising ane and and remarkable for their great size and the open erect crest with which the head is adorned. They pass most of the time on the ground, feed on fruits, and huild their nests on the lower hranches of trees. They have a stately bearing, harmoni-ously-colored plumage, and are in bigh esteem for the table.

## Gourami. See Goramy.

(gord), the popular namb for the species of Cucurbita, a genus of plants of the nat. order Cucurbitacer. The same name is given to the different kinds of fruit produced hy the various plants of this genus. These are held in high estimation in hot countries : thev attain a very large size, and most of them ahound in wholesome, nutritious matter. The C. Pcpo, or pumpkin, acquires sometimes a diameter of 2 feet.

Flower and Fruit of Squash (Cucurbita Melopepo).
The C. Melopepo, or squash, is cultivated in America as an article of food. The C. Citrullus, or watermelon, serves the Egyptians for meat, drink, and physic, and is largely grown in the United States. The C. aurantia. nr orange-fruited gourd. is cultivated only as a currosity, aná is a native of the East Indies. The Lagenaria vulgäris, or bottle gourd, a native both of the East and West Indies, is edible, and is often 6 feet long and 18 inches in circumference. The outer roat or rind serves for bottles and watercups.

## Gourd-tree.

Gourock (go'rok), a town of Renrewshire, Scotland, on the It is a favorite 2 miles west of Greenock. avorite watering-place, yachting sation, and has a pier for steamers. Pop 5261.

Gout, a form of arthritis, a constitutional disorder siving rise to paroxysms of acute pain with a specific form of inc immation, appearing after puberty, chiefly in the male mex, and returning after intervals. It is very often preceded by, or alternates with, disorder of the digestive or other internal organs, and is generally characterized by affection of the first joint of the great toe, by nocturnal exacerbations and morning remissions, and by vascular plethora; various joints, organs, or parts becoming affected after repeated attacks without passing into suppuration. It may be acquired or hereditary. In the former case it rarely appears before the age of thirty-five; in the latter, it is frequently observed earlier. Gout was formerly believed to be due $t o$ an excess of uric acid, but recent researches point to an infective urigin, the source of the toxæmia being the digestive tract. Indolence, inactivity, and too free use of tartarous wines, fermented liquors and very highseasoned and nitrogenous food are the principal causes which give rise to this disease. Gout is also called, according to the part it may affect, Podogra (in the feet), Gonagra (in the knees), Chiragra (in the hands), etc. It may be acute or chronic, and may give rise to concretions, which are chiefly composed of urate of soda. It is a disease very difficult to cure, as its regular attacks usually occur late in life, when the habits of indulgence which are adverse to its cure have become fixed. Strict regulation of the habits of life is one of the most important elements in the treatment of gout.

## Gout-weed. See Bishop-reeed.

Govan
(guv'an), a town of Scotland, county of Lanark, on the left bank of the Clyde, to the west of (ilaszow, of which it forms a suburb. It is the site of extensive shipbuilding yards, engineering works, dyeworks, etc. Pop. (1911) 8!,725.
Government (guv'ern-ment) is a mon speech in varordused in comdenotes the act of governing, the persons who govern, and the mode or system according to which the sovereign powers of a nation, the legislative, executive, and judicial powers are vested and exercised. Aristotle classified the forms of government into three classes: 1st, Monarchy or that form in which the sovereignty of the state is vested in one individual; 2d, Aristocracy, or that in which it is confided to a melect portion of the community supponed to pomsems peculiar aptitude for
its exercise; and 3d, Democracy, or that in which it is retained by the community itself, and exercised, either directly, as in the small republice of ancient Greece, or indirectly. by means of representative institutions, as in the constitutional states of modern times. Wach of these forms if brought into existence by the general will of the community, maintained by its consent, and employed for its benetit, is maid to be a legitimate government. But each of these legitimate forms was considered by the ancients to be liable to a particular form of corruption. Monarchy had a tendency to degenerate into tyranny, or a government for the special benefit of the single ruler; aristocracy became ollgarchy ; and democracy degererated into ochiocracy or mob rule. Through each of these various forms, each legitimate form being followed by its corresponding perverted form, governiment was supposed to run in a perpetual cycle; the last form, ochlocracy, being followed by anarchy. As a means of avoiding these evils, a mized government is supposed to have been devised. The best species of mixed government was believed by Aristatle to be a union of aristocracy and democracy. The most remarkable instance of this form is, however, supposed to be seen in that balance of powers which forms the essence of the British constitution. The most remarkable instance of democratic government is the federal republic of the United States. See Aristocracy. Demoo racy, Monarchy, Oligarchy, Republic, etc.
Governor (guv'èr-nur), $c$ contriv* ance in mills and machinfor maintaining a uniform velocity w. a varying resistance. A common

Governor of a Steam-engine.
form of steam-engine governor consists of a pair of balls (A B) suspended from a vertical shaft kept in motion by the en gine. When the engine goes too fast the
balls fly farther asunder, and depress the end of a lever ( $\mathrm{N} P \mathrm{O}$ ), which partly shuts a throttle-valve, and diminishes the quantity of steam admitted lnto the cylInder; and on the other hand, when the engine goes too slow, the balls fall down towards the spindle and elevate the valve, thus increasling the quantity of steam admitted into the cylinder. By thls ingenlous contrivance, therefore, the quantity of steam admitted to the cylinder is ezactly proportioned to the resistance of the engine, and the velocity kept constantly the same. A similar contrivance ls employed in mills to equalize the motlon of the machinery. When any part of the machlnery is suddenly stopped, or suddenly set going, and the moving power remains the same, an alteration ln the veloclty of the mill will take place, and it will move faster or slower. The governor is used to remedy this.
Governor's Island, an island in harbor, on which is Fort Columbus, headquarters of the Military Department of the East ; also a small island at the main entrance of Boston Harbur, on which is Fort Winthrop.
Gower (gou'èr), JoнN, an early and trlend of Chaucer, born about 1320 ;

John Gower.
died $\ln$ 1408. He was liberally educated, and was a member of the society of the Inner Temple. He appears to have been in affluent circumstances, as he contrlbuted largely to the bullding of the conventual church of St. Mary Overy, In Southwark. His chief works are his Speculum Meditantis, Vox Clamantis, and Confersio Amantis, of whlch the first was a moral tract relatlive to the conjugal duties, written in French rhymes (now lont) ; the second a metrical chronicle of
the insurrection of the commons under Richard 1I, in Latin elegiac rerse: and the thlrd an English poem in eisht books, containing 30,000 lines, relative to the morals and metaphysicm of love, one of the earliest products of the Englinh prens, being printed by Caxton in 1483.
Gowirie (gou're) Coxspiracy, one of the strangeat eplsodes in 8cottish history, took place in Ausust, 1601. King Jamea VI while hunting In Falkland Pary, Fifeshlre, was amked by Alezander Ruthven (brother of the Earl of Gowrie) to accompany him to Gowrle House, near Perth, on the pretext that they had caught a Jesult with an urn of forelgn golden pieces hid under his cloak. On arriving at Gowrie House an attempt wat made on the life or liberty of the king, but an alarm being ralsed, both the Ruth. vens were slaln, and James with difficulty escaped, as the Gowries were very popular with the lnhabltants of Perth.
Goyanna (gō-yan'a), a clty of Brasil, miles N. w. of the port of Reclfe or Pernambuco. Commerce in cotton, sugar, rum, hides, timber, castor-oll, etc. Pop. about 15,000.
Goyaz (gō-yüsh'), an inland provlnce (gū-yüsh'), an inland province
of Brazll, area 288,462 square miles. Chief town, Goyaz. The principal occupation of the inhabitants is cattle rearing and agriculture. Gold was formerly plentiful, and diamonds and other precious stones have been found. Pop. 260,395 . The chief town, formerly called Villa Boa, has a cathedral, government palace, etc. Pop. 10,000.
Gozo, or Gozzo (got'sol), an island ing to Britalne Mediterranean, belongMalta; length, 9 mlles ; breadth, 5 miles; area, about 40 square mlles. A good deal of grain and fruit is raised; but the most important crop is cotton. Cattle of superlor quality are reared. The chlef town, Rabato, contains about 6000 , and the whole Island about 22,000 inhabltants. Gozzi (got'se ), Carlo, an Italian dramatist, born at Venice in 1722 ; died in 1808. His princlpal wort conslsts of a serlé of dramas based on falry tales; which obtalned much popularity and were highly praised by Goethe, Bchlegel, De Stael, Sismondl, etc.
Gozzoli (got'sole), Bernozo, an Florence in 1424; died pome born at 1498. He was ; died some time aiter and wrought at Forence. Rome, Orpeto. and Pisa. His name is specially tdentified wlth the great series of mural paintings in the Campo Santo, at Pisa, conslstins of 24 subjects from the Old Tentament,
from the Invention of Wine by Noah to the Vioit of the Queen of Shebe to Solomom.

## Graaff-Reinet

(gruf-ri’net), a town of Cape Colony, capital of a divimion of the same name, the oldest and largeat town in the midiand district of the colony. There are cburches and schools of the English Epincopalian and the Dutch Reformed denominations, a public lihrary, and a college. It is regularly laid out with atreets at right angles, the intervening squares being filled up with vineyards and gardeus. Pop. ahout 6000 .

## Graafian-Vesicles

(grafi-an), in snatomy, numerous small, slobular, transparent folliclen found in the ovaries of mammals. Each follicle contains one ovum, which is expelled when it reaches maturity. Small at first, and deeply embedded in the ovary, they gradually approach the surface, and finally hurst and discharge the

## ovum. <br> Graal. See Grail.

Gracchus (grak'kus), Roman family of the Sempronian gens, several members of which bave hecome historical. Thrarus Sempromius Gracchus, a seneral of the Second Punic war, was consul 215 b.c., defeated Hanno 214 B.O., and was killed 212 g.o.-Another Tiberivs Simpzonivs Gracchus became consul 178 в.c., and again 183 b.o. He married Cornelia, a daughter of Scipio Africanus, and was the father of the two most celehrated Gracchi, Tiberius Sempronius and CAUS, the former born ahout 169 b.c., killed 133 B.C. ; the latter horn 159 в.c., killed 121 B.c. The hrothers having lost their father early, received from their mother Cornelia a careful education. At a more advanced age their minds were formed and ennohled hy the Greek philosophy. Tiherius early made himself conspicuous in the military service. Under the command of his brother-in-law, the younger Scipio he served at the siege of Carthage. While he was yet a mere youth he was received into the College of Augurb-an honor usually conferred only upon distinguished statesmen. He was subsequently questor to the Consul Mancinus, and was employed in the Namantian war, in which he greatly distinguisbed himself by the conclusion of a treaty by wbich he saved the lives of 30,000 men who were entirely at the mercy of the Numantines. Tbis treaty was, however, repudiated hy the Romans, but it impreased his popularity immenselv. In 133 B.C. he offered bimself as a candi:
date for tbe tribuneahip, which ofice ren-
tered his person inviolable so lons an he was invented with it, and placed him in a situation to advance his great plans for the improvement of tbe condition of the people in a legal way. His first efforty were directed to a reform of the Roman land system, hy the restoration or enforcement of the old Licinian law, which enacted that no one sbould possess more than 500 acres of the public domains, and that the overplus sbould be equally divided among the pleheians. This law, which was now called, after Gracchus, the Sempronian, or, hy way of eminence, the agrarian law, he revived, hut with the introduction of several softening clauses. He was violently opposed by the aristocracy and the trihune Marcus Octavius, whose veto retarded the passage of the hill. Tiherius, however, by exerting all the prerogative of his office, managed to pass his hill, and three commissioners were appointed to carry it into execution, namely, Tiherius himself, his brother Caius, and his father-in-law Appius Claudius. Soon after this Attalus, king of Pergamus, died, hequeathing his treasures to the Roman people. Tiherius proposed that this bequest should be divided among the recipients of land under the new law, and to give the popular assemhly instead of the senate the management of the state. But fortune turned against him; he was accused of having violated his office; of aspiring to he king ; and at the next election for the tribuneship he was slain, witb 300 of his followers, at the entrance to the Temple of Fides. Ten years after tbe death of his hrother Tiherius, the Jounger Gracchus obtained the tribuneabip. In the discharge of his office he first of all renewed his brother's law, and revenged his memory by expelling many of his most violent enemies from the city. Several popular measures gained him great favor with the people, but the intrigues of the nohles ultimately caused his fall. Livius Drusus, a trihune gained over to their interests, had the art to withdraw the affections of the populace from Cains hy making greater promises to them, and thus ohtained a superior popularity for himself and the senate. Hence it resulted that Caius did not ohtain a third tribuneship, and Opimius, one of his hitterest pnemies, was chosen to tbe consulate. A tumult, in which a lictor of Opimius was killed, gave the senate a p:etence for empowering the consuls to take strong measurear. Opiming made an attack upon the supporters of Gracchus with a hand of disciplined soldiers. Nearly 3000 vere slain, and Gracchus escaped to the rrove of the Enaries. Where he was flain at his
own request by a slave, who then killed himself.
Grace (gras), in theology, the dience of the Hoiy Spirit in renewing the heart and restraining from sin ; or, that supernatural gift to man wherebs' be is enabled to take to himself the saivation provided and offered through Christ (speciai or saving grace). Before the fifth century iittle attention was paid to the dogmatic question of grace and its effecte. Pelagius, a native of Britain, having used some free expressions, which seemed to attrinute too little to the assistance of divine grace in the rel.ovation of the heart of man, and too much to his own ahility to do good, Augustine undertook an accurate investigation of this doctrine. He came to the opinion, which has since been so much discussed, that God, of his own free-will, has foreordained some to eternai felicity and others to irrevocahle and eternal misery. In accordance with this view of Augustine is the doctrine of predeatination. The majority of those who were considered Catholic or Orthodox coincided with Augustine, and, with him, pronounced the Pelagians heretics, for hoiding that human nature is still as pure as it was at its first creation, that all the corruption which prevails is the effect of the influence of had example, and that, consequently, man heing sufficient for uis own purification, has no need, at ieast, of preventing grace. The Ahbot Cassianus, of Marseilles, adopted a middle course, in order to reconcile the operations of grace and free-will in man's renovation, by a milder and more scriptural mode. He considered the predestination of God, in respect to man's salvation, as a conditional cne, resting upon his own conduct. His followers were named semi- or half-Pelagiane, though the Catholic Church did not immediately declare them heretics. Subsequentiy a gradual change of sides was exhihited. During the middie ages the scholastic theologians so perverted the doctrines of Augustine as to make them easily reconcilable with those of the Peiagians. But at the Reformation Calvin and Beza, and the great body of their followers, re turned to the fundamental principles of Augustine. In the meantime, however. the Catholics had not come to a finai agreement concerning this dogma. This appears from the qnarrels of the Dominicans and Jesuits, and from the rase of the Jesuit Lewis Molina. in 1588, from whom the Molinistic disputes in the Netheriands received their name. In the seventeenth century, also, two new parthes, which had their origin in the dispute
concerning the doctrine of predentination, sprang up in the Netheriande, nameiy the Arminians or Remonstrante, amons the Protestants, and the Jansenista among the Catholice. (See 1 rminians, Jansenisto.) From that time the members of the Christian church have continued to differ upon this subject.
Grace, Days or, in commerce, a certain number of days immediateiy following the day, specifled on the face of a bill or note, on which it becomes due. Tiil the expiry of these days payment is not necessary. In Britain and the United States the days of grace are three, but they have been rescinded in some of the American States. Austria (three days) and Rnssia (ten days) are the only other countries which aliow days of grace.

## Graces <br> (grà'ses; Greek, Oharite8,

 translated by the Romans Gratic), the goddesses of grace, from whom, according to Pindar, comes everything beautiful and akreeabie. According to most poets and mythoiogists, they were three in number, the daughters of Zeus and Eurynome, and Hesiod gives them the names of Aglaia (hrilliancy), Thatia (the blooming), and Euphroayne (mirth). Homer mentions them in the Iliad as handmaids of Hera (Juno), but in the Odyseey as those of Aphrodite (Venus), who is attended by them in the hath, etc. He conceived them as forming a numerous troop of goddesses, whose office it was to render happy the days of the immortais. The three graces are usnally represented slightiy draped or entirely nude. locked in each other's embrace, or hand in hand.Graciosa (grimeso ${ }^{\prime} z a$ ), one of the Azores. Chief town, Santa Cruz. Pop. 9000.

## Gradient (grad'yent), in roads and railways, a term nsed to

 signify the departure of the track from a perfect level, usually expressed as a fraction of the length: thas 1 in 250 signifies a rise or fall of 1 foot in 250 feet measured aiong the line.Gradual (grad'i-ai), the psaim, anthem, or hymn, said or sung in the service of the Roman Cathoiic Church between the Epistle and the Gospel; so named from heing anciently. chanted on the steps of the amho or pul. pit, or of the altar. By an easy transition the name was frequently applied to the Antinhonary, which was originally one of the three service books of the church, hat afterwards in the eleventh or tweifth century incinded in the missai. 1 Graduation (Eradian arbnn), the art of dividing finto the

## Graffiti (graf-fistet), the rude dealgna

 and inscriptions of popular origin drawn or engraved with a style upon the wall of ancient towns and building, particularly of Rome and Pompell. Those in Pompeli are in Latin, Greek, and Oncan.
## Graft, Grafiche a recent addition to

 States, and referring to the practice of secret bribery for political servicetice of defrauding states or cities for personn aggrandizement. Any dishonest pain in political or official service is called and those taking part in it grafters grafter has been defined by Gov. A Folk of Missouri, as 'one who fornor himself on the people either with or out the sanction of the law, and withan unjust profit from the people, draws analogy gee next article.) people.' (For anaiogy see (graft'ing), an operation Grafting (grafting), an op or scion of an individual plant is inserted upon another individual, so as to become organically united with the stock on which it has been placed. Grafting can only take place between plants which have a certain affinity, individuals of the same species, cenus, or order. The graft does not become identified with the stock to which it is united, but retains its own peculiarities of variety or species. The

Splice-grafting. Saddle-grafting. Cleft-grafting.
parts between which grafting is effected must be actively vegetating. The advantages derived from grafting are the preservation of remarkable varieties, which could not be reproduced from seed: the more rapid multiplication of particuperiod of fructification, which may thus be advanced by several vears. The prizcipal methods of graiting are-1. By approach. - This process is intended to unite at one or more points two plants growing trom separate roots Plates of 1889.
bark of equal ine are removed the wounds ase hept tosether and protected from air. Stems, branchen, or roots may bo united in this way. 2. By soions.Under this head there are a variety of methode, such as whip, oplice, eleft, sadile, crown grafting, etc. In whipgrafting or tonguo-grafting the stock in cnt obliquely across and a slit or very narrow angular incision is made in ith center downwards across the cut surtace, a similar deep incision is made in the scion upwards, at a corresponding angle, and, a projecting tongue left, which being inserted in the fincision in the stock, they are fastened clomely together. Splicoorafting is performed by cutting the ends of the acion and stock completely acroms in an obliqne direction, in snch a was that the rections are of the same shape, then laying the ohlique surfaces together so that the one exactly fits the other, and securing them by tying or otherwise. In oleft-grafting, the stock is cleft down, and the gralt, cut in the shape of a wedge at its lower end, is inserted into the cleft: while, in saddle-grafting, the end of the stock is cut into the form of a wedse, and the base of the scion, slit up or cleft for the pnrpose, is affixed. Crown-grafting or rind-grafting is performed by cutting the lower end of the scion in a sloping direction, while the head of the stock is cut over horizontally and a slit is made through the inner bark. A piece of wood, bone, ivory, or other such snbstance, resemhling the thinned end of the scion, is inserted in the top of the slit hetween the alburnum and inner hark and pushed down in order to raise the bark, so that the thin end of the scion may be introduced withont being hrnised. The edges of the bark on each side are then bronght close to the acion, and the whole is bonnd with matting and a lnmp of clay pnt round it. 3. By buds.This consists in transferring to another stock a plate of hark, to which one or more buds adhere. Bnd-grafting is the most commonly practised, especially for multiplvine fruit-trees and roses, owing to the facility with which it may be performed.
Grafton (grafton), AUGUsTUS HENRY, THisd DUKE of, nnder Poch. He was secretary of state nader Rockingham, first lord of treasury under the elder Pitt. and premier during the illness of the latter (then Lord Chatham). He snbsequently held the privy seal nuder Lord North, and again nnder Rockingham. He died in 1811. . He was the snbject of some of the most hrilliant of the famnus and bitingly satirical letters of Junius.

Grafton (rrapton) county reat of sinia, 99 miles . 5 of Wheeling in a refion of coel and naturn gas. It has raliroad chopa, slace, tile and pottery worke etc.; a state relorm achool and na. tional cemetery. Pop. 8500 .
Grafton, Conntage of Worcester miles 8. E. of Worcenter. The township is drained hy the Blackstone River and its trihutaries, which afford water-power. Boots and shoes, cotton and thread are larsely manufactnred. Pop. 5705.
Gragnano (gri-aja'no), a town of Italy, province of Naples. It is chiefly of interent for its wines and macaroni. Pop. 13,806.
Graham (gram or graiam), Gronge, mechanician and watchmaker, born in Cnmberland, 1075. He succeeded Topion, the watchmaker, in bnsiness in London, and invented meveral important astronomical instrumente. H. invented the dead-beat eacapement and a compensation pendulum for clocks.
Graham, Jayris. See Montrose, Martanis of. JoHN, Visconnt Dundee. commonly known as Clar erhouse, eldent son of Sir William Gra ham of Claverhonse, was born abont 1650 and educated at St . Andrews. He went abroad and entered the service of France and afterwards of Holland, hut, failing to obtain the command of a Scottish regi. ment in the Scottish service, he returned to Scotland in 1677, where he was appointed captain of a troop of horwe raised to enforce compliance with the establish. ment of Episcopacy. He distinguished himself by an nnscrupnlons zeal in this service, eapecially after the murder of Archbishop Sharpe in May, 1679. The Covenanters were driven to reaistance, and a body of them defeated Claverhouse at Drumclog, on 1st June. On the 22d. however, the Dnke of Monmouth defeated the insurgentes at Bothwell Brig, and Claverhouse was eent into the west with abeolute power. In 1682 he was appointed sherif of Wistonshire, and, assisted by his hrother David, continued his persecntions. He was made a privy-conncilor, and received the estate of Dudhope, with other honors from the king, and althongh on the accession of James his name was withdrawn from the pripy-conncil it was soon reatored. In 1686 he was made hrigadie-general, and afterwards major: general; and in 1688, after William had landed, he received from James in London the titles of Iord Graham of Claverhonse and Viscount Dundee. When the king fied he returned to $\begin{aligned} & \text { kdinburgh, but }\end{aligned}$

Inding the Coremanters in pomeraion he retired to the north, followed by General Mackay. After makins an attempt on Dundee, Claverhouee finally encountered and dofented Mackay in the Pases of Killicrankie (17th July, 1699), hut was cilled in the battle.

## Graham,

Thowne, master of the mint, an pminent ohemist, was born at Glascow in 1805, and educated at Giassow Univeraity. In 1827 he commenced teaching private matbematical ciasses in Glassow, aud in 1820 succeeded to the lectureship of chemistry in the Andersonian Univeraity. In 1831 he was appointed professor of chemistry in the Amsterdam University. In 1831 he estabiisbed the faw that gases tend to diffuse inversely as the square root of their specific gravities. He afterwards made a series of investigations into the constitution of arsenates, pbosphates, and phospboreted hydrogen, and into the fnnction of water in different salts. In 1837 he was elected professor of cbemistry in tbe University of London, and soon after setting in the metropolis he was appointed assayer to the mint. In 1841 he was cbosen first president of the Chemical Society, wbich he bad assisted in founding; and is 1846 he assisted in fonnding tbe Cavendish Society, over which be presided. He read tbe Bakerian lecture in 1849 and in 1854, tbe subject of both being the diffusion of liquids, wbicb he further treated before the Royal Society in 1801 . He distinguished the crystalloids and colioids in liquid solutions, and gave to their separation tbe name of dialysis. In a subsequent paper, Philosophical Transactions, 1866, be applied these discoveries to gases, under the name of atmolysis. The passage of gases through heated metal plates and the occlusion of gases were also ahly investigated by him. He died in 1869.
Grahame (gram or grajam), Jamers, Glasgow in 1765 . He studied law in Edinhurgh, and in 1791 became a Writer to the Signet. In 1795 he was admitted to the Facuity of Advocates, of wbich he continued a member untii 1800 , when he took orders as a clergyman of the Church of England. Previous to this all his literary productions bad been published. While at the university be printed and circnlated a collection of poetical pieces. These appeared in an amended form in 1797. In 1801 he published a dramatic poem entitled Mary, Queen of Scotland, and in 1802 appeared, anonymonsly, The Sabbath. The Birds of Scotland, and British Georgics followed. He subsequently held curacies at Shefton, Durham,
and Sedrefield, hut his henlth gave way, and be died at Glasgow in 181.
Graham Island, or votemict yilland which in Juiy, 1831, ruec up in the Mediterranean, about 30 miles sonthwent of Sciacca, in sicily. It attained a height of 200 teet witb a circuit of 8 milen but disappeared in Ausust. It reappearod for a sbort time in 18u*.
Graham Land, a tract of land in Ocean; uliscovered in 1842 by Biscoe. Who touk possession of it for Great Britain. It stretcbes between fant. $63^{\circ}$ and $68^{\circ}$., and $10 \mathrm{n} .61^{\circ}$ and $68^{\circ}$ w.; and is aup posed to be of great extent.
Grahamstown, town of Cape Cuiony, district of Albany, ahout 480 miles east of Cape Town. It is a weif-buiit, thriving place, and is the seat of an Angican bishop. 1 'op. about 15,000.
Grail (gral; variousis spelt Greah, graal, Grazal, Grasal, etc.), the legendary hoiy vessel, sups seed to have been of emerald, from which Cbriat divpensed the wine at the fast supper. It was said to have been brought to Jngland by Joseph of Arimatbea, but to have been taken back to heaven until the appearance of heroes worthy to be th guardians. Titnrel, a descendant of the Asiatic prince Perillns, wbome dencendants bad allied themselves with the famliy of a Breton sovereign, was chosen as its keeper. He erected for it a temple on tbe model of that at Jerusalem, and organized a band of guardians. It was visible only to the baptized and pure of heart. With tbis legend that of King Arthur became connected. Tbree of his knigbts, Galahad, Percival, and Bors, had sight of it , and on the deatb of Percival it was again taken to heaven.
Grain (grãn), the name of a mall weight. the twentieth part of a scruple in apothecaries' weigbt, and the twenty-fourth of a peanyweisbt troy. See Avoirdupois.
Grain includes all those kinds of grass which are cnltivated on account of their seeds for the production of meal or flour. All kinds of graln contain in varying quantities tbe following elements: gluten, fecula or starch, 2 sweet mucilage, a dizestible ammatic substance contained in the hulls, and mointure, which is predominant even in the driest grain, and serves, after planting, tic stimuiate the first motions of the serm. The grains include wheat, oats, rice, In dian corn, rye, buckwheat. barley, millet, etc. The term. corn, used in Durope, io reatricted to Indian corn is United Statem

Crain Coust, the former name of const of Africu see Ureine of Paradibe. Grain Hevator. Seo Elocetor.

## Graining (Lewoloowe Lamoestrion-

 kind, found chiedy in the Mersey and itr tribuenriem and lil some of the swias lakes. The note is more rounded than that of the dace, the eye larger, aud the dormal tin commences half-way inctreeu the polnt of the nuee and thi emil of the fleshy portion of the tall. it melldom weighs more than hale a pound ; in habit and food it resembles the trout.Grain-leather, dreaed horse-hides, Hina etc. blacked goatskina. sealif the hair wide, for shoee, booth, etc.
Grain-moth, a minnte moth of arain which two upecies are known, Tinea granella and Bucalis ceroalella, whose larve or grubs devour grain in granaries. The mothe have narrow, fringed wings, of a satiny lunter. Grains of Paradise, graine or Molaguetta pepper, the pungent somewhat aromatic aeed of $\Lambda \mathbf{m o x m m}$ Meleguetta, nat. order Zingiberaceer, a plaut of tropical Wentern Xfrica. They art chiefly nsed in cattle medicines and to give a fiery pungency to cordials. The Grain Coant" of Africa takes its name from the production of these seeds in that region.

## Grakle

(grak¹. Gracula), a zenus of birds of the order I'asseres, and of the starling family (Sturnideo), inhabiting India and New Guinea. One of the genus is the Indian mina tird ( $G$. musica), which can be taught amusing tricks and can imitate the hnman volce. It is of a deep velvet black, with a white spot on the wing, yellow bill and
 feet, and two yellow wattles on the back of the head. A considerable number of other birds not belonging to this genus have also been called grakles, snch as the purple grakle. or crow-blackbird of America. See Crovblackbird.
Grallatores. - Heed and Foot of Craze. Grallatores
(gral. $-\mathrm{CO}^{2}-$ res), an order of birds which formerly included the heron, ibis, stork; bnt these are now pnt into another order and the Grallatores, properly so called, congint of the following familien,
namely, thoee of the suipe, otint, and rue: the red-thanke, green-shanke, and tand-pipers; the curlaw , phalaropet, stilte, and arocets; the plovera, oyatorcatchers, turnatones, lapwinge, courbers:

Crallatoren.-a. leg and foot of curlew. b, Head of enipa. c, Beak of avocet.
the jacanas, and bustards; the raila and coots; and the cranem. They sre senerally known an wadin birde, an they frequent hores and banke of atreams, marshes, etc., and their legs and beak are commonly rather long.
Gram, the chickpea (Cicer arietinum ), used extensively in India as fodder for horses and cattle, and now being introduced into our Sonthern Statem.
Gramines (grami-ne-è). See Crass.
Grammar (gramiar), in reference to any language, is the syitem of rnles, principles, and facts which muat be known in order to speak and write the language correctly. Comparative grammar treats of the laws, cnstoms, and forms which are shown by comparison to be common to various languages; general or universal grammar, of those laws which, by logical deduction, are demonstrated to be common to all. The divisions of grammar vary with the class and aiso with the method of treatment. In common Fnglish grammars the division is generally fonrfold: orthography, which treats of the proper spelling of words, and includes orthoepy, treating of the proper pronunciation; etymology, which treats of their derivations and inflections; syntas, of the laws and forms of construction common to compositions in prose and verse; prosody, of the laws peculiar to verse. Although the systematization of grammar had begun in some sort in Plato's time it was chlef. 5 to the Alexandrian writers that it owed its development. The first Greek gram. mar for Roman students was that of

## Grammar Sohoois

#### Abstract

Dionyalus Thrax, in ue about 80 n. Comparative rrammar can ouly be maid to have existed from the bedmeing of the ninetcenth century, whea the critical study of Sanmkrit entablished the alunitien of the languages of the Indo-European sroup. Grammar Sohoole, an old $n \mathrm{nam}$ achools at which a mecoadary education

 is given, as a preparation for a univer sity course. The term neems to have arfeen from the once almost excluaive cccupation of theme achools in the teaching of the elementi or grampar of the Jatin and Greek languasem. In Digland the character of the teachlus in mecondary achools, where not reutricted bs endowmenta, is necessarily infuepced by the conrue of instruction in the univeralties, in which the classical element still preponderates. In Bcotiand, however, the grammar achools appear rather to heve led the movement to adapt the higher education to the practical requirements of modern life, as also in the Unlted States, where the term High School or College is generally used. Many of theme present diplomas to sraduates.Gramme (gram), the nalt of weipht
in France $=15.4323$ grains A decagramme or ten grammes $=\mathbf{5} .044$ drams: hectogramme ( 100 srammes) $=3.627$ 0.: ${ }^{\text {a }}$, kilogramme ( 1000 grammes) $=2.205 \mathrm{lbs} . \mathrm{a}$ myriastamme ( 10,000 grammes $)=22.046 \mathrm{lbs}$ Grammont (gra-mon), a town of 22 mlles 8. s. Felgium, Gast Fianders, of the Dender. Chief mannfactures: Ilnen, lace, thread, paper, tobacco-pipen, etc. Pop. 11,097.
Grammont, ORDER of (Grandmonration tains), a monautic order established hy Stephen of Thlers in 1076 at Muret, hut afterwards (1124) removed to Grandmont. The order became extinct at the Revoiution.
Gramont, or Grammont, Philibert, duke of Grammont, horn in 1621. He served under the Prince of Conde and Turenne, went to England two years after the Restoration, and was highly distinguished by Charles II. After a long course of gailantry he married, under compulsion. Miss Elizabeth Hamilton, and died in 1707. His memoirs we. dictated to his brother-jn-law. Anthoni, Count Hamilton, who tollowed James II, entered the Freach service, and died In 1720.
Gramophone (gramos-fon), an inspeech, dimilar in character to the phono-
graph. Instoad of a wair cylieder, it
employ
coverer which when i. reord is traced in a apiral line. This record is otched into the metal, or photocraphically reproduced on another shoet of metal. The sound to 50 produced hy caualng the poiat attached to the diaphram to follow the apiral record at the plate is rotated.
Grampian Monntains ( Di r an m, range, or rather serles of sanges and elevated mances, stretching acrons scotland diagonalls as w. to N. E. for about 150 milet. With the exception of Bon Nevia, the Grampian comprite all the hisheet mountalns in Scotland, Bea Cruachan, Ben Lomond, Ben Lawer, Schichallion, Bea Macdhul ( 2208 feet), Calragorm, Cairntoul, etc.
Grampus (sram'pus), a namei ior (several marine cetaceous mammals allied to the dolphins, eupecjaily Orca oladiator of the Atlantic and North Sea, which grows to the leagth of 25 feet, and is remarkahly thick in proportion to its length. The upout-hole is on the tap of the neck. The color of. the hack is blact: che beily is of a snowy whiteneas, and on each shoulder is a larse white apot. The grampus is carnlvorous and remartahly voracious, even attacking the whale.
Gran (grän), a town of Hnngary, at the confuence of the Gran with the Danube, 25 miles northweat of Budapest. It was the resldepce of the Hungarlan monarchs, and their finett city till ruined hy the Turks about 1613. It is an archbishop's see and has a fine cathedral. Pop. 17,909.
Granada (sra-nádi), a city in the the province of Granada. The streets rise picturesqnely ahove each other, with a number of turrets and silded cupolas, the whole belng crowned by the Alhamhra (which see), or paiace of the ancient Moorish kings. In the background lies the Slerra de Nevada, covered with snow: The streets, however, are narrow and irregular, and the huildling inferior to those of many other towns in Spain. The town is partly huilt on two adjacent hills, hetween whlch the Darro flows, traver, ing the town and falling into the Geail, which flows ontride the wall. The cathedral Is an irrerular but oplendid bnilding, and the archioforop's palace and mansion of the captain-feneral are also noteworthy; hut the apecial features of the town are the Alhambra, and noother Moorish palace called the Gengrelife, built on an opporite hill Cranda bas

## Grand Canon

no manufactures of importance. Its univerity was founded about 1530, and is attended by some $\mathbf{1 0 0 0}$ students. The city was founded by the Moors before 800 , and from 1036 to 1234 was included in the Kingdom of Cordova. In 1235 it became the capital of the Moorish kingdom of Granada, and attained almost matchless splendor. In 1491 it remained the last stronghold of the Moors in Spain, but was taken by the Spaniards under Ferdinand and Isabella in 1492, along with the kingdom having then a population of perhaps 600,000 . Its prosperity continued almost without diminution till 1610, when the decree expelling the Moors from all parts of Spain told severely upon it and it has never recovered. Pop. 75,000. - The province, which in partly bounded by the Mediterranean, has an area of 4028 sq. miles. Pop. $492,460$. Granada, formeriy a Moorish kingthe Mediterranean, now represented by the three provinces, Granada, Almeria, and Malaga ; area, $11,000 \mathrm{sq}$. miles. The interior is mountainous, being traversed from east to west by several ranges, particularly the Sierra Nevada; but many of its valleys and low grounds are distingnished by beauty and fertility. The olive and vine are extensively cultivated, and fruit is very abundant. The sugarcane thrives in some parts. After long forming part of the kingdom of Cordova, Granada became a separate kingdom in 1235. In 1492 it passed into the possession of the Spaniards.
Granadilla (gran-a-dil'a), the West fruite of various indian name for the genus of the passion-fiower family. Some species have been introduced into Europe, chiefly for their flowers, the chief being the purple-fruited, $P$. edilis; the waterlemon, $P$. laurifolia; the flesh-colored granadilla, anu the $P_{\text {. }}$ quadranguldris, the most valuable for cultivation in Great Britain.
Granby (gran'bi), John Manners, Duke of Rutland born in 1721; educated at Eton and Cambridge; raised a foot regiment in 1745; became colonel of horseguards in 1758 and lieutenant-general in 1759 ; commanded the British troops in the Seven Years' war (1760-63), and was commander-in-chief of the British army from 1768 to 1770 , the year of his death. He was elected to Pariament in 1754, 1761, and 1768 .
Gran Chaco, EL (el grän chäko), a tine Republic, lying mainly between the Vermejo. Parań, and Salado. In the
west it in intersected by ofiects of the Andes, and in the east forms extendive plains and marshes, while in the wouth are sandy deserts interspermed with salt pools. Greater part, however, is covered with primeval forest. It is inhabited by various Indian tribes, the total Indian population being estimated at from 20,000 to 40,000 . The Central Ohaco is well adapted for growing sugar-cane, tobacco, maize, rice, etc., but not for cereals senerally. The name is also applied to a much more extensive territory of similar character extending into Bolivia and

## Paraguay

## Grand Army of the Republic,

an organization of the Union soldiers who served in the Civil war, formed in 1866 at Decatur, Mlinois. It spread to other States very rapidly, a convention held in November of that year being attended by delegates from 10 States. The second 'Encampment' was held in Independence Hall, Philadelphia, in 1868, Gen. John A. Logan, of Ilinois, being elected com-mander-in-chief. Since that date annual conventions have been held, and since 1878 the commander has been changed annually. In 1010 an enthusiastic and well attended convention was held at Atlantic City, New Jersey but the ranks of the veteran order had been rapidly depleted by death, and in the years to come the decrease will be very rapid. Largely through the efforts of the order service pensions have been granted to all soldiers of the war, and the veteran band is now cared for by the sovernment. Aftiliated organizations are the 'Woman's, Relief Corps,' the 'Loyal Ladies' League,' and 'The Sons of Veterans.' On the b0th anniversary of the battle of Gettyaburg, in July, 1913, a great reunion of the Grand Army, with Confederate veterans, was held at Gettyaburg, the ceremonies including scenes representing incidents of the

## battle, etc. <br> Grand Canon of the Colorado,

a deep gorge through which the Colorado River flows in Arizona, 217 miles in length and surpassing in depth and grandeur any other cafion on the earth. With the addition of Marble Cafion, with which it connects, it is 286 miles long. The summit width varies from 9 to 13 miles, and the avernge depth is over 5200 feet, the maximum depth being 6300 feet, a depth maintained for about 50 miles. It is believed to have been entirely exeavated by the river, which is supposed to have begun its cousse in the surface of the plateau. Boating parties have several time gone down the chasm, though
rapids and falls render this enterprise very dangerous, and a number of lives have been lost in the attempt.
Grand Duke, the title of the sovereign of several of the atates of Germany, who are considered to be of a rank between duke and king: also applied to members of the imperial family of Russia.
Crandee (gran-dé), in Spain a noble of the first rank, consisting partly of the relatives of the royal house, and partly of such members of the high feudal nobility as had the right to enlist soldiers under their own colors. Besides the general prerogatives of the bigher nobility, and the priority of ciaim to the highest offices of state, the grandees possessed the right of covering the head in the presence of the king, with his permission. The king called each of them 'my cousin' (mi primo), while he addressed the other members of the kizh nobility only as 'my kinsman' (mi pariente).
Grand -ills, a garden city, founded Nrand. 1005, on Exploits R., Newfoundland, Canada, about 60 miles below Red Indian Lake. Neighburiug spruce forests supply materiai, and the Grand Falls, power, developed to 23,500 horsepower, for great paper-milis. The proprietors secured 2300 sguare miles of woodland, where a cut of $50,000,000$ feet is made annually. The city sprang into existence completely equipped with churches, schools, halls, hotels, etc. The daily output of the mills, comprising eleven large steel buildings, is 120 tons of "newsprint" paper per day.
Grand Forks, n city oi North Dn Frand Forks County, on the Red River of the North, and on the Northern Incific and Great Northern railroads. It. is the seat of the University of North Dakota and Weslev Cnlleqe and is an important distributing and manufacturinm center. Flour, lumber and flax products lead. Pop. 12,478.
Grand Haven, a city and summet Ottawa County, Michigan, on Lake Michigan, and on the s. bank of Grand River. It is 80 miles by water $\mathbf{z}$ of Milwaukee, and is a port of entry with a good harbor, 20 to 80 feet deep. There are large mhipments of grain, fruits, and celery, important fisheries, shipyards, and various manufactures. Pop. 5856.
Grand Island; a city of Nebraska. Countr, on the Platte River, 154 milew W. by s. of Omahas It has sugar and veivins induatries, brick and marble-
works, a large horse market. It is on the Lincoln Highway of the Coast-to-coant Auto Route. Pop. 12,000.
Grand Junction, a city, capital of Colorado, 93 miles s. W. of Glenwood. Springs. Gold, silver, and coal are found in its vicinity, and it has a beet-nugar. factory, fruit evaporators, etc. Pop. 7754.

Grand Jury, a body of men selected ent laws of the several states, usually numbering 24, and whose duty it is to receive secretily the evidence presented regarding alleged crimes, and if satinfied that a crime has probably been committed, then to present an indictment againat the accused to the proper court. As a rule, the Grand Jury is approachable only through the prosecuting officer of the district, but they have a right to take up any inquiry independently of such officer, and it is aiso within their power, if not their duty, to investigate in a zeneral way the conditions of public institutions, and make presentments regarding the same.
Grand Pensionary, formerly an Grand Pensionary, officer of the Dutch Republic. In the great towns thit first magistrate was called a pensionary. his office being a paid one. The grand pensionary was the secretary of state of the Province of Holland. He held offic: for five years, and was el-cible for reelection. The office was abolished on the formation of the Kingdom of Holland in 1806.

Grand Pre (grlin pre), a beautiful village on the basin of Minas, King's County, Nova Scotia; the scene of Longfellow's poem, Evangeline. The French settlers there were expelled hy Virginian colonists in 1013. Pop 1600.

Grand Prix (gran pre). See Eoolo des Beaux Arts.
Grand Rapids, a city, capital of Kent County: Michigan, situated on the rapids of the Grand River, 30 miles from its mouth. Its manufacturing incorests are greatiy promoted by the fine water-power, It is traversed by several railroads and has a large trade in lumber, and extensive manufactures, the furniture woiks alone empioying more than 16,000 hands. Nearby are large gypsum quarries and cement and calcined plaster are extensively manufactured. The city has many fine public and private edifices, various chantable institutions, and is the meat of Catholic and Protestant Eipiecopal bithoptict Yop. 135,000.

## Grand Rapids, ${ }^{2}$ eits capital of

 Wisconain, 22 miles s. w. of Point. It has paper and pulp mills, flour mille, and other induntries. Pop. 6521.Grand Sergeanty, an ancient tensimilar to knisht-service, but of super dignity. Instead of serving the king seneraily in his wars, the holder by this tenure was bound to do him some specified honorary service, to carry his sword or banner, to be the marshal of his host, his high-steward, butler, champion, or other officer. It was practically abolished with other military tenures hy Charles 11.

Grange (grānj), in the United States, for the purpose of promoting the interenta of agriculture, more especially for abolishing the restraints and burdens imposed on it by the commercial classes, the railroad and canal companies, etc., and for doing away with middlemen. Granges originated in the order of Pa trons of Hushancry, founded in Washington in 1867. The central hody of this was calied the National Grange, and subordinate granges were estahlished in the several states in ali they numbered admitted to memhership on equal terms with men, and this aided greatly in the rapid growth of the order, which in 1875 had a membership of $1,500,000$. It was pclitical in its early purposes, and succeeded in having several laws passed in the interest of agriculture. It also sought to gain control of grain elevators and railroad terminal facilities. The political movement was afterwards left to the Farmeri Alliance (which see), leaving the grange to a useful growth in the social and industrial field. Its membership has much decreased, yet it remains a popular institution.
Grangemouth (grânj’muth), a seaburgh, Stirlingshire, Scotland, at the trance of the Forth and Clyde Canal, 3 miles I. N. E. of Falkirk. The town was founded in 1777 in connection with the construction of the canal ; its prosperity was increased by the opening of docks in 1843, 1859, and 1882. It has shiphuilding-yards, sawmills, a rope and
sail factory, and brickworks. 483.

Granilla neal insect. Granite
( gran-il'a), the duat or gmall grains of the cochithe minerals rock, componed senerally of mis muarta, felspar, and mica, mixed up without regular arrangement of the crystais. The grains vary in size from that of a pin's head to a mass of two or three feet, but they seldom exceed the size of a iarge gaming die. When they are of this gize, or larger, the granite is said to be 'coarse-grained.' Granite is an igneous, or fire-formed, wock which has been exposed to great heat and presgure deep down in the earth. It is one of the most ahundant of the igneous rocks seen at or near the surface of the earth, and was formerly considered as the foundation rock of the slobe, or that upon which all sedimentary rocks repose; but it is now known to heiong to various ages from the Pre-Cambrian to the Tertiary, the Alps of Europe containing granite of the later age. In Alpine situations it presents the appearance of having broken through the more superficial strata; the beds of other rocks in the vicinity rising towards it at increasing angles of elevation as they approach it. It forms some of the most lofty of the mountain chains of the eastern continent, and the central parts of the principal mountain ranges of Scandinavia, the Alps, the Pyrenees, and the Carpathian Mountains are of this rock. It is ahundant in America and is largely quarried in the United States for building purposes, especially in New England, the best known quarries heing those of New England. It is abundant in South Carolina and Georgia, hut mnch of this, as well as that of some parts of California, is in a singular state of decomposition, in many places being easily penetrated hy a pick. Granite suppiles the most durable materials for huilding, as many of the ancient Egyptian monuments testify. It varies much in hardnees as well as in color, in accordance with the nature and proportion of its constituent parts, so that there is mnch room for care and taste in its selection. Granite in which felspar predominates is not well adapted for buildings, as it cracks and crumbles down in a few years. The decomposed felspar of some varieties of granite yields the kaolin used in porcelain manufacture. Granite in which mica is replaced by hornblende is called syenite, the famnm Qnincr granite of Masuachusetts being properly a syenite. When both mica and hornblende are prewent it is called suenitio granite; when tale supplants mica it is called protogene,
filcose, or chloritio granite s mixture of quarts and hypersthene, with scattered faken of micu, is called hypersthonio oranite; and the name of graplio orenite, or pegmatite, is given to variety composed of felspar and quarts, with a little white mica, 80 arranged is to produce an irregular laminar structure. When a section of this latter mineral is made at right angles to the alternations of the constituent materialm, broken lines resembling Hobrew characters present themsolves; hence the name. Granite abonnds in crystallized earthy minerals; and these occnr for the most part in veins traversing the mass of the rock. Of theae minerals beryl, garnet, and tourmaline are the most abundant. It is not rich in metallic ores. The oriental basalt, found in rolled masees in the deserts of Egypt and of which the Egyptians made their statues, is a true granite, its black color being cansed by the presence of hornblende and the black shade of the mica. The oriental red granite chiefly found in Egypt, and of which Pompey's Pillar and Cleopatra's Needles were constructed, is composed of lart grains or imperfectly formed cryotals of fesh-colored felspar, of transparent gna $z$, and of black hornblende.
Gr nite City, a city in Madison posice St. Louis. It has steel foundries, pead and enameling works, box factory, brewery, machine shops, etc. Pop. 15,000.
Granje (Eran'ha), Ta. See IUdefonso. Crano (gra'no), a coin of Malta, abont 1/6 cent in value.
Gran Sasso D'Ttalia, or Monte mountain of Naples, the culminating peak of the Apennines; height, 0519 feet. Crant, in law, a gift in writing of passed or conveyed by word only; thus, a grant is the regular method by the common law of transferring the propprty of incorporeal hereditaments, or such things whereof no actual delivery of posseasion can be had.
Clant, Firmprick Dent, soidier, son born at St of Gen. U. Sis Grant, was gradnated at West Point in 1871, became colonel of the Fonrth Cavalry, and resigned in 1881. He was appointed min. ister to Anstria in 1885, and was police commissioner of New York. 1894-88. He Fas made brigadien yeneral of volunteers on the outbreak of the Spanish war. Served in Porto Rico, and afterward commanded the military district of San Junn: tranderred to Luxon, 1901-02. Be
was comminioned brigadier-reneral in the United States army in 1001, and majorgeneral in 1808, and has commanded the Department of the Inke since 1808. He died April 11, 1912.
Grant, Gromar Munmo, Canadion in 1835. author, born in Nova Scotia in 1835; died in 1002. He was made principal of Queen's University, Kingo ton, in 1877, and wrote Ocean to Ocoan, and edited Picturesque Oanada.
Grant, James, novelist, born at Bainburgh in 1822. In 1846 he pnblished his first book, The Romance of War. A large nnmber of works followed, most of them concerned with militury life or based on historical events, $A d v e n-$ tures of an Lide-do-Camp (1848), Bothwoll (1851). Jane Seton (1853), Frank Hilton (1855), King's Oion Borderers (1865), White Cockade (1867), Britioh Battles on Land and Sea (1873), Old and New Edinburgh (1880-85), etc. He died in 1887.
Grant, Mrs. ANNE, of Laggan, a diatinguinhed Scottish anthoress, born at Glaggow in 1755; maiden name, McVicar. Her hnsband, the Rer. James Grant of Lagcan, died in 1801, anc left her a widow, with eight children, in very embarrassed cirenmstances. In 1803 she pnbliahed by snbseription a volume of poems, and in 1806 won repntation by her Letters from the Mounteine, a series of letters describing her life in the Highlands, the character of the people, and the natural scenery. Her chief subsequent works are her Memoirs of an American Lady, Essays on the Superstitions of the Highlanders of Soottand (1811), Eighteen Hundred and whirteen, a poem (1814), and Memoirs, published in 1844. She died in 1858.
Grant, Uursses Sinpe0s, feneral and preaident of the United States, born in 1822, at Point Pleasant, Clermont Connty, Ohio. His real name was Hiram Uysses Grant, the name afterwards used by him having arisen out of an error in the rearistration of his cadetship. After gradnating in the military academy at Weat Point, he served during the Mexican war, taling part in every battle except Bnena Vista, and being breveted captain for gallantry. In 1854 he resisned his commisoion and engaged first in farming near St. Lonfts, and then in the leather trade with his father at Galena, Illinois. On the outbreak of the war in 1861 he aminted in the organization of troops and when the 21 st Illinois wan formed he was made colonel. He seized Paducah, commanding the Tennessee and Ohio diviclons: checked the departure of sinelosemants
from Belmont, captured Fort Henry and Fort Dunelson with their garrisons. Grant wan thereupon promoted to the rank of major-general of volunteers and assigned to the district of West Tennescee. On April 6-7, 1862, he won the battie of Shiloh the first great engagement of the war. He took part in the operations against Corinth and late? assumed conduct of operations in that region. On October 16th, he was advanced to the command of the Department of the Tennessee. In November he commenced operations against Vicksbnrg, Mississippi. After a siege of forty-seven days (May 18 to Jnly 4, 1883) the town snrrendered with its large garrison. The important victory at Chattanooga, which followed, opened the way into Georgia for the Federal troops. In March, 1864, he was appointed lientenant-general, and assnmed command of all the armies of the United States. In a succespion of

## General Grant

hotly-contested battles at the Wilderness, Spottgylvania, North Ann?, and Cold Harbor, he steadily advanced on Petersburg and Richmond, investing Petersburg and carrying on a protracted siege which continued for many months. The Confederate works were flanked at the end of March, 1865, and Lee's retreating army was parsued, surrounded, and forced to surrender, April 9, 1865. This event practically ending the war. In 1866 Grant was raised to the supreme rank of general, specially revived for his honor, and in 1868 was elected President of the United States. His administration allayed the soreness which still survived from the mreat strugale between the states, and was also noteworthy for the reduction of the national debt and the settlement of the Alabama dispute with England. He was re-elected in 1872. After his retirement io 1877 he made a
journey aronnd the world and was 50 ceived everywhere with the highent honor, as one of the greatest of modern moldiers. Later he became involved in a fimancial concern which exploited his name and left him heavily in debt. He manfully endeavored to repair his cortune by writing and publishing his Memoirs, and in this he was successful, though suffering greatly from the cancerous disease of which he died at Mt. McGresor, New York, July 23, 1885. He was buried at Riverside, New York, Augnst 8, 1885, in a handsome mausoleum bnilt by the voluntary contributions of his admiring fellow-citizens.

## Grantham

(grant'am) a municipal berough of England, in Lincolnentary miles s. S. W. of Lincoln. It is well built, principally of brick, and has a fine Gothic church of the thirteenth century, with a tower and spire 273 feet high Pop. (1911) 20,074.

## Granulation

(gran-in-1a'shun), the subdivision of a metal into small pieces or films. It is employed in chemistry to increase the snrface, so as to render the metal more snsceptible to the action of reagents, and in metallurgy for the gubdivision of a tough metal iike copper. Small shot is made by a species of granulation. Granulation, in surgery, the formation of little grainlike flesliy bodies on the surfaces of nleers and formerly suppurating wounds, serving both for filling up the cavities and bringing nearer together and uniting their sides. The color of healthy grannlations is a deep florid red. When livid they are unhealthy, and have only a languid circulation.
Granvella, or Granverise (gran'not, Cardinal DE, minister of state to Charles $V$ and Philip II of Spain, was born in 1517 near Besancon. He studied at Padua and at Lonvain, in his twentythird year was appointel Bishop of Arras, and was present at the diets at Worms and Ratisbon. In 1545 he was sent to the Council of Trent, and on the death of his fatror in 1550 was appointed by Charles $V$ to succeed him in the office of chancellor. In 1552 he negotiated the Treaty of Passan, and in 1553 arranged the marriage of Don Philip with Mary Queen of England. Under Philip II be remained chief minister, and in 1559 negotiated the Peace of Càteau-Cambrésis. Philip immediately after quitted the Netherlands, leavins Margaret of Parma as governor and Granvella as her minister. In 10.00 be became Archbiabop of

Mechlin, and in 1581 was made a cardinal; hut in 1664 he was obliged to yieid to the growing diwcontent aroused by his tyranny in the Netherlandi, reaign his pont and retire to Beanncon. In 1570 Philip sent him to Rome to conclude an alliance with the pope and the Venetians against the Turte, and afterwards to Naples as viceroy. In 1575 he was recalle to Epain, and placed at the head of the sovernment with the title of President of the Supreme Council of Italy and Castile. In 1084 he was created Archhishop of Bemancon, and died at Madrid in 1586. He preserved all letters and despatches addressed to him, nine volumes of which, published 1851-62, are of value in illustrating the history of the sixteenth century.
Grpinville (sray-vel), a fortified seaport of France, department of Manche, at the mouth of the Bosca, in the English Channel. Pop.

## 11,622. <br> Granville (gran'vil), Granviur

 GDORGE LETESON-GOWER, 2 m an English statesmar, was born in London in 1815; educated at biton and Christ Church, Oxford entered Par: liament in 1836. In 1840 he became undersecretary for foreign affairs, and in 1846 succeeded to the peerage. In 1868 he was colonial mecretary under Gladstone and in 1870 he became secretary for foreign aftairs, which he held until 1874. During this period he negotiated the Treaty of 1870, guaranteeing the independence of Belgium, and 'protested' against the Russian repudiation of the Black Sea clause of the Treaty of Paris. He died in 1891.
## Grape (grāp). See Vine.

Grapefruit, a tropical and semienus citrus, the size of the fruit varyin from that of a large orange to 6 or 7 inch diameter. It grows from California to the West Indies and is extensively cultivated in Florida. The name comes from the fact that the fruits, despite their large size grow in clusters like grapes. The round variety, also known as Pomelo, is widely used as a dessert fruit. Another form, the Shaddock, is of pear shape and is seldom used as food.

## Grape-shot, a kind of shot

 sisting of three tiers of cast- Grape-hot. iron balls arranged, three in a tier, between four parallel iron diacs connected together by a central wrought-iron pin,Oumerhot is now more used than srapeshot.

## Grape-sugar. See Glwoose.

Graphite (zraf'it), one of the bon occurs in nature, alio known under the names of Plumbego Black Lead, and Wad. It occurs not infrequently as a mineral production, and is found in great purity at Borrowdale in Cumberland, and in large quantitiem in Canada, Ceylon, and Bohemia. Graphite may be heated to any extent in close vessels without change ; it in exceedingly unchangeable in the air; it has an iron-gray color, metallic luster, and granular texture, and in soft and unctuous to the touch. It in used chiefly in the manufacture of pencils, crucibles, and portable furnaces, ib burnishing iron to protect it from ruat, for giving a mocta surface to castinf molds, for coating wax or other impres. sions of objects designed to be electro typed, and for counteracting friction be tween the rubbing surfaces of wood ol metal in machinery.
Graphophone (graf'orfon), an apparatus for repro. ducing sound, invented in 1880 . Lik the phonograph (which see), it has is main cylinder coated with wax, which re. volves against the point of a needle. Thin connects with a diaphragm at the end of a tuhe running to the funnel mouthpiece. Words or other sounds passing into this mouthpiece cause the diaphragm to vi. brate correspondingly and make a recoril by the needle on the wax cylinder. Wher the machinery is reversed the words ars reproduced.

## Graphotype

(grafio-tip), a process for ohtaining blocks for surface printing, discovered in 1860 hy De Witt Clinton Hitcheoc. , whe, observed that, on rubbing the enamel from a visiting-card with a brush and water, the printed letters stond out in relief, the ink having so hardened the enamel that it resisted the action of the brush. The first graphotype drawings were made on hlocke of chalk with siliceous ink, but the chalk-hlock was soon superseded hy the use of French chall ground to the finest powder, laid on a smooth plate of sinc, suhmitted to intense hydraulic pressure, and then sized. The drawing is made with aablehair brushes and ink composed of lamphlack and glue, and when finished is gently rubbed with silk velvet or fitelshair brushes until the chall between the ink lines is removed to the depth of $\%$ inch. The hlock is then hardened by beling steeped in an allaikse alicicte, and
molde being taken from it, atercotype platee are cast for printios.
Grapnel (grap'pel). or Gapurna, fitted with four or five flukes or clawn and commonly ued to fasten boatis or other mmall vensele. The name was aloo given to the grappling-iron formerly used In naval engazements to hold one mhip to

## another. <br> Grapple Plant (grap'), the

 Harpagophytum procumbens, ${ }^{2}$ South Afrcan procumbent plant of the nat. order Pedallacee. The seeds have many hooked thorns, and clink to the mouths of grazing cattie, cauning conolderable pain.Graptolite (grap'tu-lit), one of a fossil hydrozoa, senus (Graptoithus) of ing sertularians in having a horny polypary, and in having the separate zooids profected by little horny cupe, all springing from a common fleah or ceenoearc, but differing $\ln$ that they were not fixed

Block of Stone containing Graptolitea.
to any solid object, but were permanently free. Graptolites usually present themselves as silvery impressions on hard black shales of the Silurian system, presenting the appearance of fonail pens, etc., whence the name.
Graslitz (grasilits), a town of $\mathrm{Bo}-$ hemia, on the Zwoda, 89 miles W. N. W. of Prague. It has important manufactures. Pop. 11,803.
Grasmere (sras'mer), a beantiful Werme lake of England, county of Westmorelana, of oval torm, about 1 mile long by $1 / 2$ mlle broad. The village of Grasmere ls at the head of the lake.
Grass (gras), a name equivalent to
the botanlcal order Graminacem, a very extensive and important onder of endogenous plants, comprising about 250 genera and 4500 species, including many of the most valuable pasture-plants, also those which yield corn the sugarcane, the tall and graceful bamboo, etc. The nutritious herbage and farinaceous seed furnlshed by many of them render them of incalculable importance, while the stems and leaves are useful for various textile and other purposem. The rooth are fibrous; the stem or culm is usually
cylindrical and fointed, varying in lensth from a fow Inchen to 80 or 90 loet, as in the bamboo (is the angarcane and maine the atem is colid, but poroun), and conted with allex; leares, ene to each node or joint, with a rheathing petiole; apikelets terminal, panicle, racemone, or apiked; fiowers hermaphrodite or polygemous, dentitute of true calyz or corolla, murrounded by a double set of bracts, the outer constitutling the glumes, the inner the palew; stamens hyposynous, three or six; filamenti long and flaccid; anthers verpatile; ovary molitary, slmple, with two (rarely three) styles, one-celled, with a slugle ovule; fruit known an a caryopaie, the seed and the pericarp being inceparable from each other. The more important divisions of the natural order of gramsem are: (1) Panioacea, including the Panices (millet, fund, Guinea grass): the Andropogonew (sugar-cane, dhurra, lemon-grass); the Rottboelliec (gama-grasa); etc. (2) Phalaridea (maize, Job's teara, canary-graes, foxtailgrass, soft-grass, Timothy grasio. (3) Poacee, including the Oryza (rice); Stipes (feather-grass, esparto) ; Agrostee (bent-grass); Avences (oats, vernal grass) ; Festuceas (fescue, meadow-grass, manna-grass, tefi, cock'm-loot grass tussac grass, dof'retail grass) ; Bambusew (bamboo) ; Hordea (wheat, barley, rje, spelt, rye-graas, lyme-gracs). In its popular une the term grasses is chiefly applled to the pasture grasses as dintinct from the cereals, etc.; but it is also applied to some herbs, whlch are not in any atrict sense grasses at all, o. g. ribgrass, scurvs and whitlow grame After the culture of herbage and forage plants became an important branch of husbandry, it became customary to call the clovers, trefoils, sainfoin. and other flowering plants grown as fodder, artificial grasses, by way of dlatinction from the grasses proper, which were termed natural grasses. Of the pasture srasmes. some thrive in meadows, others in marshes, on upland fields, or on bleak hills, and they by no means grow indircriminately. Indeed, the species of grass will often indicate the quality of the moll; thue, Holous, Dactylis, and Bromus are found on sterile land, Festica and Alopeculrus on a better soll, Poe and Oynosilus are only found in the best pasture land. See Dog's-tail Grase, Fesoue, Footail, Meadovo-grats, Tussac, etc.
Grass-cloth, the name of certain made in the Fast beautiful light fabrics meris nives, or Ching the tiber of Boel Pigne, etc. None of the plants Fielding the fiber are srawses. The Queensland
srameloth plant, of the nettle order, Fielde a fine atrons fiber. Oloth han been made from bamboo, and a conrme mattios from eaparto both of which are true cranace.
Grasse (rit), a town of France, timen, 23 mepartment of Aipen MariIt ham extensive manufacturem of perfumery. There are immense sardens of rowes and orange flowers around the town, millions nf pounds of flowers beins gathered annually for use in perfumemaking. Pop. (1811) 10,704.
Grasifinch, Grass-QuT, names belonging to the finch tomily, so called from feeding chiefly on the seeds of grasses.
Grassthopper, the name of various the order Orthoptera nearly akin to the iocuste. They are characterized by very jong and siender legs, the thighs of the hinder legs being large and adapted for jeaping, by large and delicate wings, and by the wing-covers extending far beyond the extremity of the abdomen. Grasshoppers form an extensive group of insects, and are diatinguished by the power which

 $\triangle$ Gmearorper
A, harv: B. pupan ,ith the redimentary winge: C, sdult, or imaco, with the fully developed wingh. they posmens of leaping to a considerable distance, and by the striduious or chirpins nolise the males produce by rubbing their wing-covers together. They are generally of a greenish coior.
Grass of Parnansus, a senus of rownly referred to the matural orders

Dromeraces and Eypericacene, and found for the mont part in boser situations is the colder northern countriea. The common gram of Parnamus (Parnasein palus:trib) is a beantiful autumnal plant with heart-thaped leaves and a sinsle yellow-ish-white flower.
Grasionil, On or Graniug of On of SpIkinand, a fragrant volatile oil, used chiefly in perfumery: and obtained from Indian grasses of the senus Andropogon.
Grass-tree, the popular name of a genus of Australifin plants (Xenthorricea) of the nat. order

Grametree (Xanthorrhou hantilio).
Lliacees having shrubby stems with tufts of lons, grams-ilke, wiry foliage from the center of which arise the tall flower-atalks, which sometimes reach the height of 15 or 20 feet, and bear dense cylindrical spikes of blossom at their summit. The base of the leaven forms, when roasted, an agreeabie articie of diet, and the leaves themseives are used as fodder for all kinds of cattle. A resin, known in commerce as akaroid reain, is obtained from all the species, which are also popularly known as black-boys.
Grass-Wrack, or Stackass (Zosphanerogamous plant beionging to the Naiadees. forming green beds at the bottom of the sea where it is of no great depth. When dried it is used for stufting mattresses, and packing soods. It has been recommended as a subetitute for cotton. The ash contains soda:
Gratian (gri'ghe-an), otherwise Gratianus adgustus, Roman emperor, eident son of the Emperor Valentinian I, was born $4 D .350_{\text {, }}$ and when onls eisht years of ase raised by his father to the rank of Duguntus. On the death of Valentinian in 376 the Dantern Empire remained subject to Valens, and Gratian was oblired to share the weatern part with his half-brother. Valentinian II, then four reasm old in 878 be succeeded to the Bustern Empires

## Gratian

which he bestowed on Thoodosives I. He way deverted by his moldiess whilo leading thom againat Maximus, and put to death at Lyons in the eishth year of his reign. Cratian, otherwise Farcrscus Gre the twelfth ceutury a uative of Chiuci, and author of the Deoretum, or Concordis discordantium Oanonum, a rich atorehouse of the canon law of the middie ases. Gratiola (gra-ti'u-la) geuus of senus, nat. order Scrophulariacee, containing about twents epecies of herbs, widely disperwed through the extratropical regions of the globe. $G$. oficinalis grows in meadowi in Eurnpe. It is cxtremely bitter, andiacts violently both as a purgative aud emetic, and iu overdoses It is a violent poison. $G$. Virginica is a native of the United States and has somewhat similar propertiea, as also G. Perwvianc, of South America.
Grattan, Hreray, an Irieh orator and in 1746, educated at Trinity Collese and Middle Temple ; called to the Irish bar in 1772, and in 1775 elected member for Chariton iu the Parliament of Ireland. In 1780 he moved resolutions asserting the crown to be the only link between Britain and Ireland, and in 1782 led the volunteer movement, which was instrumental in cecuring the concession of iudependence to Ireland. For these services the Irish Parliament voted him 550,000 and a house and lands. The corruption of it members and the uucertain relations with England remulted in the failure of 'Grattan's Parliament.' Grattan himself became opposed to the popular feeling ses represeuted by the Onited Iriohmen, and in 1797 temporarily seceded from Parliament, and lived in retirement. In 1800 he came forward as member for Wicklow to oppose the Union, and on the pasaage of Pitt's measure was roturned to the imperial Parliameut in 1800 for Malton in Yorkehire, and in 1806 for Dublin. He supported the war policy of the administration, but was latteriy chiefly occupied in promoting Catholic emancipation. He sisd in 1820, and was interred in Westminster $A$ bbey. Gratz, or Graz (grats), a town of turesquels situated on the Mur, 90 milie southwest of Vienna. The older town, on the left bank, is connected with the suburbs of Iend and Gries on the right by several bridses, benides a railway bridge. The Schloubers rises 400 ft . above the river, but the fortifications of the town have civen place to avenues and pleasure grounds. The cathedral of 8 t .

Creplius, built in 1456, is a majoutie Gothic atructure with a fine altar and paintinge near it is the maucoleum of Ferdinand II. The univerulty, founded in 1586, has over 1100 students and a library of 80,000 vole. The Jonnneum, for the promotion of arriculture and schentific education, has a large library and museums. The manufactures condot of ateel and iron ware wonp confectionery, beer, etc. Pop. (1911) 131,781.
Grîtz (rretz) HMNRICH, a Jowich in 1817: diedian, born at Xions, Posen, came prodied in 1891 . In 1854 he became profensor in the Jewish theological essor ary brealau, aud in 1870 a prodersor at the univeralty. His Gesohiohto 1860-00. ( 11 pols. 1858-70; new ed. 1891-08) trans. by Bella Low, 6 vols. history of the Je atandard wors on the Grat of the Jewe.
Grandent Germany, Weat Prueda, right bauk of the Viatula, 18 miles E. s. w. of Marienwerder. The manufactures include machinery, cantings. cirare, tobacco, tapestry four, otc, and there are breweries and dintillerie. Pop. $40,818$.
Gravel (Erav'el), a depoalt of rounded, water-worn gtonea. Gravels are produced by the action of moving water, usually of streams or of the mea. In course of time gravels may become consolidated by cementing asents and by, pressure and then form 'conglomerate: The pebbles in a gravel may consist of any kiud of rock, but most commouly they are of quarts. In addition to marine and fuviatile sravels, $\&$ third croup is often recogniseit-the slacial sravols. These are parily due to the action of running waters, emerging from the melting ice-sheets and siaciers, which wash out the finer materiale from the slacial debris. Gravel is extenaively used for making concrete and mortar, and as road material. In pathology, gravel conaints of small concretions or calcull in the kidneys or bladder. See Coloulus.
Gravelines (griv-len), a small sonfortrens of France, department Nord. Pop. 6284.
Gravelotte (rivilot), a viliage of Germany, province of he scethringen, 7 miles went of Metz. the sceue of one of the fiercest battles of the Franco-German war, reulting in the retreat of the French to Mets.
Grave Tounds, extensive mounds found in many parts of the Uuited States, especially in the Ohio and Mieninoippi Valleys, fu which occur romains of the old fahabitants, with filat arrowheade and pottery,

They are attrihuted to a race known as Mound Builders and now supposed to have been the ancoutors of the prement Indians. Some of theme mounds are of rreat mize and occamionally they take the chape of animale Bee I ownd Builders. Graver.
Gravesend (erinsend), a municipal and parliamentary borough of England in Kent, on the south bank of the Thames, 21 miles cast of London. It is a grest rendesvous for shipping, the boundary port of London, and troops and pamsengers frequently embark there to avoid the passage down the river. In the vicinity are extensive market gardens. There is nome trade in mupplying shipn' stores, and hoet-building, fron-founding, etc., are carried on. Pop. 28;117.
Gravina (gri-véna), town of Bari, on the Gravina. It has a cathedral, convents, and a college. Pop. 18,085.
Graving (craving), the act of ship's hottom. cleaning and repairing a done in a drydock called a graving-dock. See Dooke.
Gravitation (rrav-i-tå'shun), the which all the hodies and particies of matter in the universe tend towards one another. According to the law of gravitation discovered hy Newton, every portion of matter appears to attract every other portion with a force directiy proportional to the product of the two masees, and inversely proportional to the sqnare of the distance between them. Kepler had given the lawn, deduced from observation, according to which the planets describe their orhits. From these Newton deduced the lawn of the force in the case of the pianets; and subsequently he generalized the statement of them, by showing the identity of the nature of the force that retains the moon in her orbit, with that which attracts matter near to the snrface of the earth. He denied, however, that such a force as attraction could exist and heid that the seeming attraction was due to some form of ether pressure or other external cause. The application of the grand law that he had discovered subsequently occupied a large part of the mathematical labors of Newton. Attacking the prohlem of lunar inequalifies, he secounted for them hy considering the perturbation due to the attraction of various bodien of the solar ayutem; and by accounting for sil the observed perturbations by means of his newiy-discovered law he conformed the truth of the
law itrelf in such a way as to put it beyond oll question. The computation of thsee various attractions has renched anch a degree of sccuracy in the hands of mathematicians mince Newton, that the mont compllicated motions of the hearenly bodies can be predicted. The law hes alco been applled succematully in weiphing the planeta, explaining the pathe of comets, the motions of the thdal wave, atc. It has siso been demonatrated to hold good in the case of comparatively small bodies. Thui Mankelyne determined the attraction of a particular mountaln, and Cavendish and Bally measured the attraction of balls of jead on light, finelybalanced hodien, and thns determined the mean density of the earth.
Gravity (grav'i-ti), the term applied to the force with which the earth is held to attract every particle of matter. The force of gravity is least at. the equator, and gradually incresses as wo recede toward the poles. Thus a given mass, if tested by means of a springbaiance of sufficient delicacy, would appear to weich least at the eqnator, and wouid seem to get heavier and heavier an the latitude increases. This is due to two causes: first, the centrifugal force at the equator is greater than that in high latitnden, because of the sreater radius of the circle dewcribed at that place; and, second, the attraction is diminished by the sreater distance of ohjects on the surface from the earth's center. From both causes combined a hody which weifhe 194 lbs. at the equator would weigh 180 ins. at either pole. Experiments to determine the force of gravity from point to point are made by determining the length of a pendulum that beats seconds at each place. By experiments made by Captain Kater at Leith Fort it was found that the force of gravity at that place is snch that a body, unresisted by air or otherwise, would acquire in one second, under its influence, a velocity of 32.207 feet per second. At Greenwich the acceleration is $32.191 \check{2}$ feet.
Gravity, Sperific. See Epecifo G Gravity.
Gray (gra), a town of France, departSaone. It has an active trade. Pop. 6826.

Gray, Asa, botanist, born in 1810 at Paris, Oneide County, New York; died in 1888 . He was appointed Fisher professor of natural history in Farvard University in 1842, and held tho chair till 1873, when he retired from ith more active dutien. Fe gained sreat enalnence at a botanist, his vorle includins Blomento of Botemy (1888), 4 M(nnma
of Botany (1848), and other botanical toxt-booky also portions of works on the flora of North America and the Goners Boroall-Americana, ${ }^{\text {a }}$ Free Emamination of Darroin's Treaties (1861), a volume entitled Darsiniane (1876), etc.
Gray, David, a Scottich poet, born at 1838; Merkland, Dnmbartonahire, in from which he went, with Hobert Buchanan, to London in 1860 to try his fortune in literature. After a brief strus: sle consumption ret in, and he died at Merkland in 1861. A mall volume comtaining the poem entitled The Lesgote, some Iyrics, and a few connets, with the title In the Shadows, reprements the whole of his work.
Gray, Brisina, electrician, born at in 1801. He was one of the inventer of the telephone, and applied for a for a patent on the apme day with cavent gell who preceded him only a lew hour. He subsegnently made improvements in the telephone and invented improved methods of telegraphy.
Grey, Groner, legslator, was born at , Newcastle, Delaware, in 1840, anas admitted to the bar in 1883. He 1879 and was elected United State: Senator in 1885. In 1898 he was appointed a member of the Spanish-American Peace Commission, and was made a U. S. circuit judge in 1889. He was appointed a member of the Permanent Court of Arbitration at The Hague in 1800 and was chairman of the Coal Strike Commission of 1902. He was also a member of the Figheries Arbitration Commission of 1910.

Gray, Thomas, an English poet, born don in 1716; educated at bridge. In 1738 he entered himself at the Inner Temple, but accompanied Walpole in his tour of Europe nntil they quarreled in Italy. He returned to England in 1741, and on the death of his father took up his residence at Cambridge. In 1747 his Ode on a Distant Prospect of Eton College appeared, and in 1751 his famous Elegy Written in Cowntry Churchyard, which went through four editions in two months. In 1757 he declined the laureateship, and the same jear published his odes, On the Progress of Poesy, and The Bard. In 1759 he removed to London, where be Feslad for three years, and in 1768 the Duke of Grafton presented him with the professorchip of modern history at Oambridge. He died in 1771, and was bnried at Stoke Pogis, Buckinghamehire. His chief poems
other than thow mentloned were the Odo for Muoto and a fragmentary cuay on the Allience of Edwoetion end Governmont. In Latin verse he in marpamed by few, and bis letters are admirable apecfmens of the eqistolary itjle
Gray, black culor intermediate between Cray-lag, a popular name for the wild soose. See Goose.
Grayling (grilins) a senus of monide. The common the hmily Sal-

Grayling (Thymallue migatris).
mallue vulodris) is fonnd in many EngIinh streams, and is scattered over En: rope from Lapland to North Italy, and also over part of Ania. The grayling preferm rapid streams where the water in clear and cool, and the bottom mandy or pebbly, and it reqniren, on the whole, deeper water than the trout, to which it has a certain similarity in habit. The seneral color is yellowith brown, incindIng the fins: several deeper brown linem run along the body; under the belly white. The color olten varies in difrerent atreams. It is a favorite fish of the angler. In North America there is a grayling of different apeciem, T. tricolor, which is not only delicate eating, but also furnishes sood aport.
Gray-owl, the tawny-owl (strie tridula), inhabita Northern Europe and America.
Grajwacke (grâ-wak'e), a meta. morphic sandatone in which grains or fragments of varions mineraln, as quartz and felspar, or of rocks, $2 s$ slate and siliceous clay rocke, are embedded in an indurated matrix which mas be siliceous or arillaceons. The colors are gray, red, blne, or some shade of these. The term, as used by the earlier writers, inclnded all the conslomerates, sandstones, and shales of the older formations, when these had been subjected to considerable change. At fimt it was nearly synonymous with the Silurian strata, these, especially in Scotland, yielding the only genuine craywacke. The term is now little used.
Grazalema (gra-thi-la'mi), a town of Spain, in Andalnsia, province of Cadia, on the slope at thy foot of a derran 68 milem s . F . D of

Cadis. It han a handeome Cothic ebarch Pop. 6587.
Creat Baryior Reel, a vast natwater which skirtm the conet of gueensland, Australio It in chiefy of coral formation and more than 1000 miles in length.
Great Barrington, Berligei of County, Mamachusetter, on the Homa. tonic River, 18 miles a. . W. of Pittafield, in the pleturesque Berkehire Hill. Pop. 6026.

Great Basin, an extencive platean Creat between the Waratch aud the sierra Netrad Mountains, comern Oregon, neardy all of Nevada and eastern Calliornia; area about 210,000 equare milien. Numerous mountain ridses crons it. It in so calied from the fact that none of its waters reach the sea, but sink into the ande, evaporate, of flow into some saline lake. Chief among these is the Great Salt Lake of Utah.
Great Bear Lake. See Boer Lake. Great Britain. See the articles Scotland, and Wales.
Great Cirole Sailing, of Tanomer method of navigating a vessel according to which her course is always kept is nearly an poestible on a sreat circle of the aphere, that is, a circle which has for its center the ceater of the aphere. Ais arc of such a circle joining two placen siven the bhortent distance between them, concequently the course of a ressel sailing on this are will be the shortest posible. A simple instrument called a spherograph is employed for finding the great circle course between places, and this is accompanied by tables complied for the same purpose.

## Great Dane, aleo called Uimer dos

 strong handsome of German mastifi, a 83 in. in height at the shoulder, carring the head and neck high, with prick ears. It unites the strensth of the mastif with the elegance of the greyhound. It hunts chiefly by sight, but is usually a kindly, companionable dos, and is in Britain rarely employed in the chase. The hair in short, hand, and dense, the color various shades of gray ('blue'), red, bleck, or Fhite, with patchem of the other color:Great Nastern, an iron steamship; breadth, $821 /$ or, including paddle-borem 118 feet; height, 68 feet ( 70 to top of bul-
werte). It had aix muite five of fron and one of wood, and could spread 7000 jard of eally bealdes havins elsht enginet, divided between the cerewn and paddles, and capable of working at 11,000 horwo power. Its carcer was unfortuante, ito principal imereating employment belas to lay the Atlantic tolerraph cable of $1800^{\circ}$ 66, for which it sise and stendiness speo cially quallied it EInally, after being used for some time $10^{2}$ s show ship, it wact cold at auction in 1888 and broken up.

Grebe (ratb), the common name of oopt, family Colrabid charreterised by a miraight, conlcal bill, no tall, tarme

Blorsed Grobe (Pelicope cornAlvo).
short, toes fiattened separate, but broadls fringed at their edses by a frm membrame, and legs aet so far back tbat on land the srebe acames the aprisht pooition of the penguin. The reographical dintribation of the renus is very wide, thise birds haunting meas as well as ponds and rivers. They are excelient swimmers and divers; feed on smali fisbes, frogs, crustaceans, and insects; and thelr nents, formed of a large quantity of srass, etc. are generally placed amone reedis and sedsew, and rise and fall with the water. Five opecies are European and nine are Nortb American, nome of them (crested rrebe, borned grebe) beins the same as thowe of Furope. The sreat crested srebe is about 21 to 22 inches long, and bas been called satin grebe from its beautiful ilvery breast-plumage, much esteemed as material for ladies' mufis.
Crecee (gress), a conntry, now a In 8 dom , of Southeastern Enrope, the earliest portion of this contlnent to attain \& bish degree of civilization, and to produce works of art and literature of a hish type. It lorms the sontbern extremity of wbat is called the Balkan Peninsula, and itself partly conints of a vell-marised peninsnla, the Morea or Peloponnesns, nnited to Northern Greece by the Inthmus of Corinth. The name Greece (Iatin, Grccoia) is of Roman orfin, the native name for the conntry being Fellas, and the people calling themselves Hellẽnes. Anciently Hellas was nsed in a wider sense, so as to include botb Greece itself and all countries that bad become Greek by colonization. Modern Greece is separated frgm Albania, Servia and Bulgaria on the north by an artificial boundary extending from the Ionian Sea to a point beyond Kavala on the Arsean Sea, and cumprises ratber lese than ancient Greece, wbiva also took in part of what is now Albania. Ancient Greece was divided into a number of independent states or territories.
namaly, is Northern Groce, Themely, Splrus (mot ta the modera slagdom), Locrls Phocis Bootio, dotolla, Acaras: nita, Attica, Mesaris in the Peloponnesue, Coriath, Arpols, Achato Eit, Temonia, Laconit (Eparta), and Arcadla, the latt entirely inland. These names are still kept up, bnt the country is now divided into nomes, or nomerchlos, some of which are formed of the Greek inlands, namely, Enben, Corfu, Cepbalonia, Zante, and the Cjclades. The total area is 46,522 muare milles the population $4,600,000$.

Physioal pestures.-Greece proper is remarkable for the extent of ite conatline, formed by numerous sulfa which penetrate into it in all directions. The largent, the Corinthian Gulf, or Gulf of lepanto, on the east, and the Earonic Gutf, or Gulf of Cegina, on the west, wbich nearly meet at the Istbmus of Corinth, meparate Northern Greece from the Morea. This isthmns, however, bas recently been pierced by a ship-canal and is no longer an obstruction to commerce. Another striking feature is the mountain. ons character of the interior. On the north are the Cambnnian Mountains, with Mount Olympue ( 9704 ft .) at their eastern extremity. From this range a lofty cbain, called Mount Pindus, runs sonthwards almost parallei to the eastern and wentern coasts of Greece. At a point in this cbain called Monnt Tympbrentus

Typbrestus (Monnt Velnkbli) two chains proceed in an easterly direction, the northern being called Monnt Othrys, the southern terminating at ThermopFle, Monnt CEta ( 8240 (t). The Cambnnian Monntains, Pindns and Othrys, enclose the fertile vale of Themaly, forming the batin of the Penens (Salambria), and the ranges of Othrys and Ceta in close the smaller banin of the Sperchius (Heliada). Another range, tbat of Parnasaus (bisbest snmmit 8068 ft ), branches off from Monnt OBta and runs still more to the sunth. The peaks of Citbseron, Parnes, Pentelicns, and Eymettus lie in the same direction, and the range in wbicb tbey are found in continned to the sontheast point of continental Greece. This range on the sonth and that of GEta on the north enclose the basin of the Cephissus, with Lake Copais. The cbief rivers on the west side of tbe Pindns chain are tbe Aracbtus (Arta) and tbe Achelons (Aspropotamo). The cbief feature in the monntain gystem of the Peloponnesns is a range or series of ranges forming a circle ronad the valley of Arcadia in the interior, baving a nnmber of brancbee proceeding outwards from it in different directions. The bigheat range, th the Peloponpenpe, Mpupt Thy
sutus ( 7004 feet), branchew off from the clrelo roumd Areadia, sterlten ecvinwarde and terminates in the promestitiry of Twanam (Cepe Matapan). Die chiol Fiver in the Leloponnene are the Eurotra (Baslijpotamo), the Alphens (Ru. phia), draining Arcadia and Ells; and the Penens, drainin Eils, The rock most largeiy developed in the mountains of Greece is limeatone, which often acmumes the form of the inest marhle. Granito occurs in patchem Tertiary form in prevail in the northeart of the 5 , 1 nt nesus; and in the northwest nal..b thos whores of Eilis, are considerabl tract of ailuvium. Sliver, lead, zinc, hit col! ", are found and worked to som wr whe the famous ancient siliver minets of Li ":iu" in Attica stili pleiding sor.at ribur.

Climate.-The climatr , .onr-a!ly mild in the parts exporn \& $b$. sea equable and genial, but iti hie rur .nns...ir ous regions of the interio ontetirnoce :re: cold. None of the mounsains 24 its limit of perpetual snow ; hut se" .ral in tain it far into the gummer. In gearul the frat snow falls in Octoher and the last in April. During numm: scarcely ever falle, and the chanithe minor streams become dry. Towards the end of harvent rain becomes frequent and copious ; and intermittent fevern, etc., become common. In ancient times, when the country was more thickly peopled and better cultivated, the climate seems to have been better.

Vopetation, Agriculture, etc.-Greece is mainly an agriculturai country, though agriculture is in a somewhat backward tate. The land is iargely heid by peasant proprietors. The principal crops are wheat, barley, and maize. The cuitivated land produces ail the frnits of the iati-tude-figs, almonds, dates, oranges, citrons, melons, etc. The vine also grows visorounly, as it did in ancient Greece. But a much more important product of Greece, enpecially on the coasts of the Peloponnesus, and in the islands of Cephalonia, Zante. Ithaca, and Santa Maura, is the Corinthian grape or currant. The oilive is also largely grown (as in ancient times), and the culture of the mulberry, for the reartng of nikworms, has recently been greatiy extended. The extensive lorests contain among other trees a peculiar kind of oak ( $O$ uercus Xopiops), which yields the valonia of commerce. The domestic animals are neither nnmerous nor of good breeds. Asses are almost the onive beasts of bur den empiosed: and dairy produce is obtnined from the sheep and the goat.
Monufactures, Trade. Communioatiomn, ote.-Whe manufactpres arp extremely

Uons. itution, ete.-According to the presitit constitution, the throne is hereditary in the family of King George (second son of the late King of Denmark). The legislative authority is vested in a aingle chamber, cailed the Bouis, the memher of which (proportioned in number to the amount of the population) are piected for four yeare by ballot hy manho 1 suifrage. The executive power rests with the king and ministry. The Greek Church alone is estahlished. but ali forms of religion enjoy toieration. Justice is administered, on the basis of the French civil code, by a supreme court (Areios Pagos), at Athens ; four royai courts (Ephiteis), at Athens, Naupila, Patras, and Corfu; air teen courte of primary resort (Protodokeia), one in each principal town. The public revenue, derived chiefly from cnstoms, land ta tohacco and petroleum monopoly, ta domains and national property. etc. estimated for 1910 et $\$ 29,750,000$; the expenditure $\$ 20.210,000$. Greece has a large deht. the total for 1910 heing abnut $\$ 170.000,000$. All abiebodied maies are liable to military serrice during a term of nineteen years. of which in the infantry one rear and in special corps two years mnist be spent with the colors, the remainder in the reserve and in the landwehr or militia. In 1910 the tntai nominal streneth of the frmy was 50 mm . The mary entuixted of three small ironclads, and a number of gunhoats and torpedo boats.

People.-The ancient Greeks were an Aryan race, probably mont cionels aldin to
27-U-3
the Italian peoples. They were noted for and at last the hardy Dorian inhabitants physical beauty and intellectual gifth of the mountainous region about Mount The prement population contains a conmiderable intermisture of foreign stocks, amons which the Albanese, or Arnants, are the most numerous; but the great mafority, though not without some taint in their blood, are of Greek extraction. While the population of Greece proper, at the last censns, was as above given, the whole Greek nationality reaches nearly $8,000,000$, of whom $3,500,000$ are found in European Turkey and 2,000,000 in Asia Minor. Education in Greece is free and compulsory in theory (from the age of five to twelve), but a large proportion of the people can neither read nor write. There are three grades of schools, the primary national achools, the Hellenic or secondary grammar mehools, and the gymnasia, which are higher grammar schools or collezes. In addition there is a nniversity at Athens.

The national dress of the Greeks resembles the Albanian costume. For the men it consists of a tight jacket, generally scarlet, wide trousers descending as far as the knee, and embroidered gaiters: for the women it consists of a vest fitting clowe to the shape, and a gown flowing loosely behind.

History.-The earliest inhabitants of Greece were the Pelasgians, of whom little or nothing is known with certainty. To them are attributed certain remains of ancient bnildings, especially the socalled Cyclopean works in the Peloponnesus. The Pelacgians were succeeded by the Hellenes, or Greeks proper, who may have been simply one of the Pelasgian tribes or races. To the early period of the Hellenic occupation of Greece belong the legends of the Trojan War, of Theseus, of Jason and the Argonants, etc. The Hellenes were divided into four chief tribes-the Wolians, occupying the northern parts of Greece (Thessaly, Boootia, tc.) : the Dorians, occupying originally a small region in the neighborhood of Mount OEta; the Achzans, occupying the greater part of the Peloponnesns ; and the Ionians, ocenpying the northern strip of the Peloponnesus and Attica. Of the four principal tribes the Ionians were most infinential in the development of Greece. The distribution of the Hellenic tribes was greatly altered by the Dorian migration, sometinies called 'the return of the Heracleidee' (descendants of Hercules), placed by Thncydides about eighty years after the fall of Troy, or about B.c. 1104, according to the ordinary bnt questionable chronology. Before the great migration several smaller ones had taken place, causing comsiderable disturbance;

Otta conquered a large jurt of Northern Greece, and then entered and subdued the greater part of the Peloponnesus, drivins out or subjngating the Achseans, as the Achæans had the Pelaegians, In the legend the Dorians are represented as having entered the Peloponnesus under Temenus, Cresphontes, and Aristodemas, three descendants of Heracles (Hercnles), who had come to recover the territory taken from their ancestors by Eurysthens. Of the Achean inhabitants of the Peloponnesus a large section occupied the territory formerly in possession of the Ionians, henceforward called Achaia. The Ionians driven out of the Peloponnesus found at first a refuge among their kindred in Attica, bnt owing to its limited territory were soon compelled to leave it and found Ionic colonies on several of the islands of the Agean Sea and on the middle part of the coast of Asia Minor, where they bnilt twelve cities, later forming an Ionic Confederacy. The principal of these were Ephesus and Miletus. About the same time another body of Greeks, from Theesaly and Boeotia, are said to have founded the AFolian colonies on some of the northern islands of the Figean, and on the northern part of the western coast of Asia Minor. The Arolic colonies of Asia Minor also formed a confederacy of twelve cities, afterwards reduced to eleven by the accession of Smyrna to the Ionic Confederacy. The sonthern islands and the southern part of the west coast of Asia Minor were in like manner colonized by Dorian settlers. The six Doric towns in Asia Minor, along with the island of Rhodes, formed a confederacy similar to the Ionic and ZEolic ones.

In course of time many Greek settlements were made on the coasts of the Hellespont, the Propontis (Sea of Marmora), and the Black Sea, the most important being Byzantinm (Constantinople), Sinope, Cerasus, and Trapezus (Trebizonde). There were also flonrishing Greek colonies on the coasts of Thrace and Macedonia; for example. Abdera, Amphipolis, Olynthus, Potider. etc.; and the Greek colonies in Lower Italy were so numerons that the inhabitants of the interior spoke Greek, and the whole resion received the name of Greater Greece (Magna Greela). The most famous of the Greek colonies in this quarter were Tarentum, Sybaris, Croton, Cu me, and Neapolis (Naples). Sicily also came to a great extent into the hands of the Greeks, who founded on it or enlarged many towns, the largest, mot powerful.
and mont highly cultured of the Greek colonies here belng the Corinthian colony of Eyracrae founded in the eighth ceutury \& $\alpha_{0}$ Other important colonies were Oyrene on the north const of Africa, and Manailia (Marweillen) ou the south coast of Ganl. All thene colonies an a rule preserved the customs aud institutions of the mother city, but were quite independent.

Although ancient Greece never formed a siugle state, the various Greek tribes always looked upon themselyes as one people, and classed all other nations as Barbarol (loreigners). There were four chief bonds of uuion between the Greek triben. Firat and chiefly they had a common language, which, despite its dialectic peculiarities, was nnderstood throughout all Hellas or the Greek world. Secondly, they had common relifious ideas and institutions, and especially, in the oracle of Delphi, a common religions sanctuary. Thirdly, there was a general assembly of the Greeks, the Amphictyonic League, in which the whole people was represented by tribes (not by states), and the chief functions of which were to guard the interests of the sanctuary of Delphi, and to see that the wars between the separate states of Greece were not too merciless. The fourth bond consisted in the four great national festivals or games, the Olympian, Isthmian, Nemean, and Pythlan, on the first of which the whole of Greece based its cajendar.

The various separate states of Greece may be divided, according to the form of their constitution, into the two great classes of aristocratic and democratic. Sparta or Lacedzemon, the chief town of Laconia and of the Doric tribe, was the leading aristocratic state i and Athens, the capital of Attica and the chief town of the Ionic tribe, was the leading democratic state; and as a rule all the Doric states, and subseqnently all those under the influence of Sparta, resembled that city in their constitution; and all the Ionic states, and those under the infineuce of Athens, resembled it. These two tribel or races are the only ones that come into prominence dnring the earlier part of Greek history subsequent to the Doric migration. Sparta in said to have derived its form of government, and all its institutions, in the uinth century B. C., from Lycurgus, whose regulations developed a hardy and warlike spirit amoug the people, the results of which were seen in their conguests over surroundiag states, especially over the Messenians in the eichth and serenth centuries B. C.
The constitntion of Atheus appears from the lezeuds of Theseus and Codrus to have been at firet monarchical, and
afterwards arintocratic, and to have first received a more or less democratic character from Solou at the begiuning of the sixth ceutury B.a. This was followed abont fifty years later by a monarchical usurpation under pisistratus, and his sons Hippias and Hipparchus, the last survivor of whom, Hippian reigned in Athens till 510 B.c. Alter the expuision of Hippias the repnblic was restored, under the leadership of Cleisthenes, in a more purely democratic form than at firat. A brief struggle with the Spartana, whose aid was invoked by some of the noblet, now took place, and Athens emerged from it well prepared for the new danger which threatened Greece.

The Greek colonies in Asia Minor and the adjacent islands, after being conquered by Crcesus, king of Lydia, fell with the fall of Cresus into the power of Cyrus, king of Persia. In Es C. 500, however, the Ionians revolted with the assistance of the Athenians aud Eretrians, and pillaged and burned Sardis. The rebellion was soon crushed by Darlus, who destroyed Miletus, and prepared to invade Greece. In 492 he sent an expedition against the Greeks under his son-in-law Mardonius, bnt the fleet which carried his army was destroyed in a storm off Mount Athos. A second army, under the command of Datis and Artaphernes, landed ou Eubcea, and after dentroying Eretria, crossed the Euripus into Attica; but it was totally defeated in R.C. 490 on the plain of Marathon by 10,000 Athenians and 100 Plateans, under Miltiades. In the midst of preparations for a third expedition Darius died, leaving his plans to be carried ont by his sou Xeryen, who, with an army of $1,700,000$ men, crossed the Hellespont in 481 by means of two bridges of boats, and marched through Thrace, Macedonia, and Thessaly, while his fleet followed the line of coasr. In the pass of Thermopylse he was held in check by Leonidas with 300 Spartans and 700 Thespians; but the small band was betrayed and aunilhilated ( 480 b.c.) ; and the way throush Phocis and Bcotia being now open he advanced into Attica, and laid Athens in ruius. The deliverance of Greece was chlefly due to the genius and conrage of Themistoclen. The nnited fleet of the Greeks had al-. ready couteuded with succems asainst that of the Peraians of Artemisium, and had then salled into the Saronic Gnlf, followed by the enemy. Themistocles snc-r-eded in inducing the Persians to attack in the narrow strait between Attica and Salamis, and totally defeated them.

From a nelphboring height Xerzes himnelf witnessed the destruction of hif floet,
and at once began a spoedy retreat with his land army through Thesaly, Macedonia, and Thrace, leaving behind him 300,000 men in Thessaly. In the spring of the following year (479) these advanced into Attica and compelled the citizens once more to seek refuge in Salamis; but were so completely defeated at Platrea by the Greeks under Pausanias, that only 40,000 Yersians reached the Hellespont. On the same day the remnant of the Persian fleet was defeated by the Greeks off Mount Mycale.

The brilliant part taken by the Athenians under Themistocles in repelling this invasion of Athens greatly increased her influence throughout Greece. From this date begins the period of the leadership or hegemony of Athens in Greece, which continued to the close of the Peloponnesian war, 404 B.C. The first thing which Athens exerted her influence to efrect was the formation of a confederacy, including the Greek islands and maritime towns, to supply means for the continuance of the war by payments into a common treasury established on the island of Delos, and by furnishing ships. In this way Athens gradually increased her power so much that she was able to render tributary several of the islands and smaller maritime states. In 469 b.c. the series of victories won by the Athenians over the Persians was crowned by the double victory of Cimon over the Persian fleet and army on the Eurymedon, in Asia Minor, followed by the Peace of Cimon, which secured the independence of all Greek towns and islands. Shortly after followed the brilliant administration of Pericles, during which Athens reached the height of her grandeur.
The position of Athens, however, and the arrogance and severity with which she treated the states that came under her power made her many enemies. In the course of time two hostile confederacies were formed in Greece, one consisting of Athens and the democratic states of Greece; the other of Sparta and the aristocratic states. At last, in 431, war was declared by Sparta on the complaint of Corinth that Athens had furnished assistance to Corcyra in its war against the mother city; and on that of Megara, that the Megarean ships and merchandise were excluded from all the ports and markets of Attica; and thus began the Peloponnesian war which for twenty-seven years devastated Greece.

In the frst part of the war the Spartans, who invaded Attica in 431 b.C. and three times in the five years following, har considerable successes, which were aided by the pestlieace that broke
out at Athens and the death of Periclam In 225, however, Pylos was captured by the Athenian general Demorthenem, and the Spartan sarrison in the inland of Sphacteria was compelled to surrender to Cleon. Soon after Cythera fell into the hands of the Atheniana but they were defeated in Boeotir at Delium (424) and at Amphipolis in Thrace by Brandas in 422, when both Cleon and Brasidas were killed. The Peace of Nicias ( 421 B.c.), which followed the death of Cleon, brought disaffection into the Spartan Confederacy, the Corinthians eudeavoring with Argos and Elis to wrest from Sparta the hegemony of the Peloponnesus. In this design they were supported by Alcibiades; but Sparta was victorious at the battle of Mantinea in 418. Soon after this the Athenians resumed hoatilities, fitting out in 415 B.C. a masnificent army and fleet, under the command of Alcibiades, Nicias, and Lamachus, for the reduction of Syracuse. Alcibiades, however, being subsequently deprived of his command on a charge of impiety, betook himself to Sparta, and exhorted the city to renew the war with Athens. By his advice one Spartan army was despatched to Attica, where it took up such a position as prevented the Athenians from obtaining supplies from Eubcea, while another was sent under Gylippus to assist their kindred in Sicily. These steps were ruinous to Athens. The $\Delta$ thenian army and fleet at Syracuse were completely destroyed, and though the war was maintained wih spirit the prestigo of Athens was seriously diminished. Many of her allies joined Sparta, and a revolution and brief change of government tended still further to weaken her. Still she made not unsuccessful efforts to regain her position, conquered the revolted towns about the Bosporus, and defeated the Spartan admiral Callicratidas of the islands of Arginuse in 406. Sparta, however, was now in receipt of Persian ald, and Lysander, having captured nearly the whole Athenian fleet at EEgospotamos (405), retook the towns of Asia Minor, surrounded Athens, and blocked the Pireus. In 404 B.c. the Athenians were starved into surrender, the fortifications were destroyed, and an aristocratic form of government was established by Sparta, in which the supreme power was placed in the hands of thirty individuals, commonly known as the Thirty Tyrants. Only a vear later, however (403). Thrasybulus was able to re-establish the democracy.

The period which follows the fall of Athens is that of Sparta's leaderahip or hegemony in Greece, which lavted till tho
battle of Leuctra, in 871 2.0. The Spar tan rule was not more liked than that of Athein, and the character of the Spartan atate itmelf, with its increase of wealth and power, underwent sreat change. To eqape the stigma of havins ceded the citien of Ariatic Greece to Persia, Ageni:lave was sent to retake them, but was defeated by the fleet of Pharnabasus under Conon the Athenian; and the states of Greece, the Spartans included, at last, in 387, agreed to the disgraceful Peace of Antalcidas, by which the whole west const of Asia Minor was cedsd to the Persians. An act of vioience committed by a Spartan generai in garrisoning Thebes in 380 was the commencement of the downfall of Sparta. The Thebans revolted under Pelopidas and Epaminondas, and the Spartans on invading Boeotia were so compieteiy defeated at Leuctra in 371 B.c. that they never fuily recovered from the blow. With this victory Thebes won the leading place in Greece, which she maintained during the lifetime of Epaminondas, whose influence was paramount in the Peloponnesus. Epaminondas fell in defeating the Spartans and Arcadians near Mantinea in 362, and his death reduced once more the authority of Thebes in Greece.
Two years after the death of Epaminondas, Phiiip, the father of Alexander the Great, became king of Macedonia. An occasion for interference in the affairs of Greece was furnished him by the war known as the Sacred war ( $355-346$ ), arising from the Phocians having taken possession of some of the land beionging to the sanctuary of Delphi. The Phocians were besieged by the Thebans, who calied in the aid of Philip of Macedon, who was accorded the piace tiii then held hy the Phocians in the Amphictronic League. It was not. however, tili the Locrian war ( $839-338$ ) that Philip acquired a firm hoid in Greece. The Locrians had committed the same offense as the Phocians, and Philip, as one of the members of the league, received the charge of punishing them. The real designs of Philip soon became apparent, and the Athenians, on the advice of Denosthenes, hastily concluded an aifiance with the Thebans, and sent an army to oppose him. The battle of Cheronea which ensued (338) turned out. hnwever, disastrously for the allies. and Philip became master of Greece. He then collected an army for the invasion and conquest of the rotten empire of Pervin, and got himself declared commander-in-chief by the zuphictyonic League at Corinth in 337 B.C.; but before he was able to start he was assavinated, za. 39

The deaign of Philip was taken up and carried out by his son Alexander the Great during whowe abmence Antipater was left behind as governor of Macedonia and Greece. Soon after the doparture of Alexander, Agim 111 of Sparta headed a rising asainst Antipater, but was defeated at Mesalopolis in 330 z.a, and no other attempt was made by the Greeks to recover their liberty for nearly a hundred years. At the close of the wars which followed the death of Alexander, and which resuited in the diviaing of his empire, Greece remained with Macedonia.

The iast efforts of the Greeks to recover their independence proceeded from the Acheans, who, though frequently mentioned by Homer as taking a prominent part in the Trojan war, had for the most part kept aioof from the quarrels of the other states, and did not even furnish assistance to repei the Pervian invasion. They had taken part, though reiuctantly, in the Peioponnesian war on the side of Srarta, and had shared in the defeat of Megalopolis in B.c. 330. In the course of the first half of the third century B. C. several of the Achean towns expeiled the Macedonians, and revived an ancient confederacy, which was now known as the Achean League. Aratus of Sicyon became itr leading spirit. It was joined aiso by Corinth, and even by Athens and FEgina. The Spartans, however, who had maintained their independence against Macedonia, naturally looked with jeaiousy on the efforts of Aratus, and during the reign of Cleomenes a war hroke out between Sparta and the Achæan League. The league was at first worsted, and was only finaiiy successful when'Aratus sacrificed the uitimate end of the ieague by cailing in the aid of the Macedonians. In the battie of Sellasia ( 222 B.C.) Cieomenes was defeated, and the Macedonians became masters of Sparta. Aratus died in 213, and his piace was taken by Philopeemen, 'the last of the Greeks,' who succeeded in making the league in some degree independent of Macedonia.

About this time the Romans, who had just come out victorious from a second war with Carthage, found occasion to interfere in the affairs of Greece. Philip $\mathbf{V}$ of Macedon having aliied himself with Hannibal, the Romans went over Flaminius to punish him, and in this war with Philip the Romans were joined by the Achsean League. Philip was defeated at Cynocephale in 197 B.C., and was ohliged to recornize the independence of Greece. The Achean Leapne thus became upreme in Greece, having-heen
joined by all the states of the Pelopon- by the Porte on the 25th April of thio nenus. But the league itself was in year. The crown was offered to Ieopold, reality subject to Rome, which found con-prince of Saxe-Coburs, and when he restant ground for interference until 147 B.o., when the league openly resisted the demand of the menate, that Sparta, Corinth, Argos, and other cities, should be separated from it. In the war which ensued, which was concluded in 146 B.C. consul Mummius, Greece completely lost its independence, and was subsequently formed into a Roman province.

On the divison of the Roman Empire Greece fell of course to the eastern or Byzantine half. From 1204 to 1261 it formed a part of the Latin Empire of the Bast, and was divided into a number of feudal principalities. In the latter year it was reannexed to the Byzantine Empire, with which it remained till it was conquered by the Turks between 1460 and 1473. In 1699 the Morea was ceded to the Venetians, but was recovered by the Turks in 1715. From 1715 till 1821 the Greeks were without intermission subject to the domination of the Turks. In 1770, and again in 1700 , they made vain attempte at insurrection, but in 1821 Ali, the pasha of Janina, revolted against the Snltan Mahmoud II, and secured the aid of the Greeks by promising them their independence. The rising of the Greeks took place on the 6th of March, under Alexander Ypsilanti, and on the 1st of Jannary 1822, they published a declaration of independence. In the same year All was assassinated by the Turks, hut the Greeks, encouraged by most of the Enropean nations, continued the struggle under varions leaders, of whom the chlef were Marcos Bozzaris, Capo d'Istria, Constantine Kanaris, Kolocotroni, etc. In 1820 the Turks, with the aid of Ibrahim Pasha, took Tripolitza, the capital of the Morea, and Missolonghi, and though Lord Cochrane organized the Greek fleet, and the French colonel Fabvier their army, the Turks continued to triumph everywhere. A treaty was then concluded at Jondon (July 6, 1827) between Britain. France, and Russia, for the pacification of Greece, and when the mediation of these three powers was declined by the sultan, their united fleets, under Admiral Codrington, annihilated the Turkish fleet off Navarino. October 20,1827 . In the beginning of the following year (1828) Count Capo d'Istria became president of the ntate, and later on in the same year Ihrahim Fasha was forced to evacuate Greece. At last, on the 3 d of Fehruary. 1830, a protocol of the allied powers declared the independeace of Greece, which was recognized
by the appure of Corinth hy the Roman ent, made him unpopuiar, and although cused it, to Otho, a young prince of Bavaria, who was proclaimed King of the Hellenem at Nauplia in 1852. But his arbitrary measures, and the preponderance which he gave to Germans in the government, made him unpopular, and although after a rebellion in 1843 a constitution was drawn up, he was compelled by another rebellion in 1882 to abdicate. A provisional government was then set up at Athens, and the National Assembly ofteres the vacant throne in succession to Prince Alfred of England and Prince Willian George of Denmark. The latter accepted it, and on March 30, 1863 , was proclaimed ar King George I. In 1864 the Ionian Islands, which had hitherto formed an independent republic under the protection of Britain, were annexed to Greece. The promises of extension northward held out to Greece hy the Berlin congress were in danger of being witbdrawn, hut the persistence of Greece led in 1881 to the cession to her of Thessaly and part of Epirus, or about one-third less than the territory promised at Berlin. The situation, however, always remained somewhat strained. The union of Eastern Roumelia with Bulgaria, in 1885, gave rise to demand for a rectification of frontiers, and war with Turkey was only prevented by the great powers, which enforced the reduction of the Greek army to a peace footing by blockading the Greek ports. The same occurred in 1896, when war was declared against Turkey on the people of Crete demanding their right to become a portion of Grecian territory. The result was disastrons to their aspirations, Turkey pouring troops into Thessaly and utterly defeating the Greck troops. In 1009 Greece made another unsuccessful attempt to ohtain possession of Crete. In 1012 Greece joined with the neighboring states in a war against Turkey. By the treaty of Bukarest she acquired additional territory, including Salonika and Kavala. George I was killn] hy an anarchist in 1913 and succeeded by Constantine I, whose pro-German policy obstructed the projected operations of the British and French forces at Salonika, and this led, on June 13, 1017, to the deposition of Constantine by France and Great Britain. His second son, Alexander, who was anti-German in sentiment, was placed on the throne. Venizelos, the former premier, was restored to power and the Greek policy changed.

Religion of Ancient Grecce.-The religion of the ancient Greeks was polytheism, there being a great number of
divinities, many of whom must be regarded as personifications of natural powers, or of phenomens of the external world, personified sentiments, etc. Thus there were gods corresponding to Earth and Heaven, the Ocean, Nisht, etc. The Komans, when they became acquainted with the literature and religion of the Greeks, identified the Greek deities with those of their own pantheon. In this way the Greek and Roman deities came to be confounded together, and the names of the latter even came to supersede thome of the former. The supreme ruler among the gods was Zeus (Roman Jupites or Juppiter), the son of Kronos (Roman Saturn), who after the subjugation of the Titans and Giants ruled in Olympus, while his brother Pluto reigned over the lower world (Hades, Tartarus), and Poseidon (Neptune) ruled in the sea. Like reverence was paid to Hēra (Juno), the sister and wife of Zeus, and the queen of Heaven; to the virgin Pallas Athēne (Minerva) ; to the two children of léto (Latona), namely, Apollo, the leader of the Muses, and his sister the huntress Artémis (Diana), the goddess of the moon; to the beautiful daughter of Zeus, Aphrodité (Venus), the goddess of love; to Aress (Mars), the god of war, Hermês (Mercury), the herald of the gods, and others besides. In addition to these there was an innumerable host of inferior deities (Nymphs, Nereids, Tritons, Sirens, Dryads and Hamadryads, etc.) who presided over woods and mountains, fields and meadows, rivers and lakes, the seasons, etc. There was also a race of heroes or demigods (such as Heracles or Hercules, Perseus, etc.) tracing their origin from Zeus, and forming a connecting link between gods and men, while on the other hand the Satyrs formed a connecting link between the race of men and the lower animals. The true teachers of the Grcek religion were the poets and other writers, and it is to the hymns, epics, dramas, and histories of the Greeks that we must turn in order to learn how they regarded the gods. No degree of consistency is to be found in them, however, the personality and local origin of the writers largely moulding their views. A belief in the justice of the gods as manifested in the punishment of all offences against them was cardinal. The man himself might escape, but his children would suffer, or he might be punished in a future state-the latter view being less commonly held than the former of an entailed curse. The gods are also represented by the Greeks as holy and truthfol, although they are in innumerable other passages described as
themselven guilty of the gromsent vicen, and likewise as promptins men to sin, and deceiving them to their own dentruc tion. In their gemeral attitude towards men the sode appear as inspired by a feeling of enyy or jealouny. Hence thoy had constantly to be appeased, and their favor won by sacritices and offeringe. Certain clamsen were, however, under the peculiar protection and favor of the gode, especially strangers and suppliants. The Greeks believed that the sods communicated their will to men in varions wayn, but above all, by means of oracles, the chief of which were that of Apollo at Delphi, and that of Zeus at Dodona. Dreams ranked next in importance to oracles, and divination by birds, remarkable natural phenomena, sneesing, etc., was practised. The Greeks appear to have had at all times some belief in a future existence, but in the earliest times this belief was far from being clearly defined.

Greece, Language of.-The Greek language belongs to the Indo-European group, and is thus a sister of the Sanskrit, Latin, Teutonic, and Celtic tongues. It is customary to distinguish three leading dialects according to the three leading branches of the Greeks, the Wolic, the Doric, and the Ionic. to which was afterwards added the mixed Attic dialect; besides these there are several secondary dialects. Akin to the Ionic is the so-called Epic dialect, that in which the poems of Homer and IIesiod are written, and which was afterwards adopted by other Epic writers. The Doric was hard and harsh; the Ionic was the softest. The Aolic was spoken on the north of the Isthmus of Corinth (except in Megara, Attica, and Doris), in the ANolian colonies of Asia Minor, and on some of the northern islands of the Egean Sea. The Doric was spoken in the Peloponnesus, in Doris, in the Doric colonies of Asia Minor, of Lower Italy (Tarentum), of Sicily (Syracuse, Agrigentum) ; the Ionic in the Ionian colonies of Asia Minor, and on the Islands of the Archipelago: and the Attic in Attica. In each of these dialects there are celebrated authors. The Ionian dialect is found pure in Herodotus and Hippocrates. The Doric is used in the poems of Pindar, Theocritus. Bion, and Mowchus. In Aonlic we have fragments of Alceus and Sappho. After Athens had obtained the sapremacy of Greece, and rendered itself the center of all literary cultivation, the masternieces of JeachyIms, Sophocles. Euripides. Aristophanes, Thucydides. Xenophon. Plato, APIgtotle. Isocrates, Demosthenen, etc., made tas

## Greece

Attic the common dialect of literature. Grammarians afterwards distinguished the genuine Attic, as it exists in those masters, from the Attic of common life, calling the latter the oommon Greek or Hellomio dialect. In this latter dialect wrote Theophrastus, Apollodorus, Polybing, Plutarch, and otherm. Many later writers, however, wrote genuine Attic, as Lucian, Flian, and Arrian. Except the dramatints, the poete by no means confined themselves to the Attic ; the dramatistu themselves assumed the Doric, to a certain degree, in their choruses, and the other poets retained the Homeric style, which was a congeries of forms occurring as peculiarities in the various dialectu.

At what time this language first began to be expressed in writing has long been 2 subject of doubt. According to the usual account Cadmns the Phaenician introduced the alphabet into Greece ; and It is an nndoubted fact that the most of the (freek letters are derived from the Phoer ician ones. The Greek alphabet possem the following twenty-four letters:

Modern Greek, as spoken by the uneducated classes, is called Romaic, from the fact that those who speak it considered themselves before the descent of the Turks upon Europe as belonging to the Roman Empire, and hence called themselves Romaioi, or Romans. The Greek of the educated classes, that used in the newspapers and other literature of the present day, is distinguished from it by a greater resemblance to the Greek of antiqnity, which renders it easy for any one who has a satisfactory acquaintance with ancient Greek to read the modern literary Greek. Besides the foreign words introduced into modern Greek, many words have changed their original signification. The grammar has also undergone considerable modification. For example. the numbers have heen reduced to two by the suppresilion of the dual: and the cases to four by the disappear-
ance of the dative, which is now expressed by a preponition with the secuastive. The first candinal numeral is now used as an indefinite article. The dogreet of comparison are mometimes expressed by the une of pleon (more). The past and future tenses are formed by the aid of the verbs cohd (I have), and theld (I will). The infinitive mood has its place wupplied by a periphrasin with the verb in the mbjunctive, and the middle voice has disappeared. The ancient orthography is still preserved, but the rowels $\eta_{1} i$, and $v_{\text {, and the diph- }}$ thonge $e t, b t, v t$, are all pronounced like 00 in English seen; $\beta$ is now pronounced as $v$, and the sound of $\delta$ is expreased by $\mu \pi ; \Delta$ is pronounced like th in thus, and $\theta$ like th in think.

Greeco, Literature of.-The commencement of extant Greek ilterature is to be found in the two epic poems attributed to Homer, the IMad and the Odyscey, which it is commonly believed took shape on the Ionian coast or its islands somewhere between 950 and 850 B.C., and came thence to Greece proper (but see Homer). The former deals directly with the Trojan war, the latter describes the wanderings of Ulysses in returning from it. Another poem, of a hnmorous character, the Batrachomyomachia, or 'Battle of the Frogs and Mice, one of the first and best of parodies, was also ascribed to Homer, but on altogether insufficient grounds, being of comparatively recent origin. In European Greece there appeared about the middle of the ninth century, at Ascra in Boootia, the poet Hesiod, who stood at the head of another epic school. Of the sixteen worki attributed to him there have come duwn to us the Theogony or Origin of t.he Gods, the shield of Heracles (a fragment of a larger poem of leter anthorship), and, most important of all, the Works and Days, a didactic work on agriculture. The works of Homer and Hesiod constituted in a certain degree the foundation of youthful education among the Greeks. The Homeric and Hesiodic schocls begin to meet in the Homeric hymns composed by different hands between 750 and 500 b.C. Nert came the period of Elegiac and Iambic poetry $(700-480)$, both Innian, in which the poets's own feelings and personality became distinctly manifested, the chief names heing those of Callinns of Ephesns (flourished about 690 b.c.). Tyrteus, originally of Attica (675). Archilochns of Paros (670). Simonides of Amorgos (600). Mimnermus of Smyrne (620). Solon of Athens (694), Theognis of Megara (640), Pho
cylides of Miletus (540), Xenophanes of ( B 20 ), Simonides of Oeos (480). Greek lyie poetry wal inceparably linked with music, the lyric period proper lanting from about 670 to 40 a. 10 Two principal whools may bo distinguished, the asolian and the Dorian. To the former belong Alcreus ( $611-580$ ), Sappho ( 610 ), and Anacreon ( 530 ), though the works which now bear Anacreon's name are spurious. To the Dortan school belong Aleman of Sparta ( 660 B.O.), credited with the invention of the strophe and antistrophe, Stesichorus (Tisias) of Himera ( 620 ), who added to these the epode Arion (600), who gave shape to the dithyramb, and lbycns of Rheginm (540). Simonides of Ceos (480) was even more famons as lyric poet than as elegist, his lyrics marking the commencement of a school of national lyric poetry. His nephew, Bacchylides, was also famoun, bnt the chief was undoubtedly Pindar (522-443). About this time began a new literary development, that of the drama, the ea:liest names in which are Thespls (536) and Phrynichus (512478). The performance at first, however, was merely a sort of oratorio or choral entertainment, until Rischylus ( $525-456$ ) introdnced a second actor, and snbordinated choral song to dialogue. a third and even a fourth actor was added by Sophocles ( $495-405$ B.C.), who supplemented the heroic tragedy of Eschylns with the tragedy of human character and the fundamental passions. Euripides (480-406) brought new qualities of picturenqueness, homeliness, and pathos with a lesi rigid artistic method, and formed a fitting third in the great tragic triad. With this rapid growth of tragedy there was a corresponding development of comedy which assumed an artistic form about 470 B.C. The names of Cratinus (448) and Enpolis (430) are overshadowed by that of Aristophanes (448-385), who for nearly forty years was the burlesque commentator npon the life of the period. Aristophanes may be regarded as closing the period of the old comedy; the middle comedy of from 390 to 320 (Antiphanes, Alexis, and nthers) was transitional from the great political comedy to the new comedy of manners, which was vigorous from 380 to 250 in the hands of Menander, Philemon, and Diphilns.
In the meantime a prose literature had arisen. commencing with the group of early Ionian writers ( $550-450$ ). of which Pherecydes of 8yros. Anaximenes, and Anaximander, philosonhers, and the logographer or compiler Hecatens of Miletus Were chlef: Heilaमleps of Mitylene
(450) wat one of the carlicat exitical hintorians, but Herodotus ( $481-128$ ) was the first writer of great hintoric rank, as he was also the firat great prowe styliat. Thucydides ( $471-400 \%$ ) wat the founder of philowophic hintory, and Xenophon ( $431-354$ ), who has left excellent hintoric narratives was alno the carilient Greek essayist. The oldent piece of Attic prose is the ensay on Athenian polity wrongly assigned to Xenophon. Other writers in history were ctedas ( 115 398), Philistus (303), Theopompus (352), and Ephorus (340): Trom 860 onwards Attic history and archwolo y were preserved in works by varions writers, of whom Philochorus (300-200) way chief. The study which oratory and rhetoric received in Athens was an 1 m portant factor in shaping Attic prose, the chief orators being Antiphon ( $480-$ 411), Andocides ( $415-390$ ), Lybias 403 381 ), Isocrates ( $436-338$ ), Ireus (890353 , , and above all, Demosthenes (384322) with his contemporaries, Ahschines, Lycurgus, and others, and Demetrius of Phalerum (318) who nshered in the decline of oratory. Philosophy shared the development of history and oratory, reaching a rare elevation in Plato ( 420 347), a rare comprehensivenems in Aristotle $(384-322)$, the founders of the academic and peripatetic schools. Minor Socratic schools were the Cyrenaic, founded by Aristippus ( 870 ), the Megaric, fonnded by Euclid (399), and the Cynic, founded by $\Delta$ ntisthenes. In the earlier part of the third centrary the rival schools of Epicurus (342-270) and of Zeno (344-260) became prominent.

From about the year 300 BCO . the literary decadence may be held to date; the period 300 to 146 being known as the Alexandrian. It comprises the learned poetry of Callimachus (who flonrished at Alexandria ( 250 B.C.) and of Lycophron (260), the epic of Apollonins Rhodins (194), the didactic poetry of Aratns (270), and Nicander (150), the pastoral poetry of Theocritus, Bion, and Mowchns, the satirical Silloi of Timon (280), the philology and criticiem of Zenodotus (280), Aristophanes of Bysantium (200). Aristarchus (156), and ApolIndorus (140), the version of the Septuagint, and the ecientific works of Eucleides (300), Archimedes and Eratosthenes (240). From 146 B.C. dates the Greco-Roman period in Greek litprature, to which belong the historians Polybins ( 145 в.c.). Diodorus Eiculas ( 40 B.c.), Dionvsius of Halicarnassus (25 B.C.). Josephus, Arrian ( 100 A.D.). Appian ( 140 A.D.) and Herodian (240 A.D.), the biographies of Pluthreh ( 80
A.D). of Diosenes Laertius and of Elavius Philontratus ( 235 A.D.), the seographles of Strabo ( $18 \mathrm{~A} \mathrm{D}_{\mathrm{J}}$ ), and of Paucanias ( 160 A. . ) , the astronomy and geo raphy of Ptolemy the informatory worles of $\Delta$ thencous (100), SElian (200), and Stobseus (480), the rhetorical and belles-lettristic works of Hermosenem (170), Apthonius and Caasius Longinus (260), the medical works of Gaien (160), the satirical works of Lucian (160) and of Julian (331-363), the development of the Greek romance, best represented in Heliodorus (390), Achiles Tatlus, and Chariton, etc. During this period phiiosophy in in the main divided between Stolciem and Neoplatonism, the former repremented by Epictetus ( 00 A.D.) and Marcus Aurelius (170), the latter hy Plotinus (240), Porphyry, and Iamblichus. The school of Athens had for chief exponent the eclectic Proclus (450). In verwe the hent names were the fabulist Babrius (40), Oppian (180), Nonnus, Quintus Smyraseus ( $400-450$ ), and Muceus ( 500 ). The special feature of the later Graco-Roman period was the rise of a. Christian Greek literature represented hy the patristic epistles, homilies, etc., and ecclesiastical histories, such as those of Eusebius, Socrates, and Sozomen. Among the chief writers were Justin Martyr, Origen, and Clement of Alexandria. Eusehius, Gregory of Nazianzus, Basil, Gregory of Nyssa, Chrysostom, etc. After 529 and until 1453 came the Byzantine period, of which the most important section was from about 850 to 1200 . It was characterized by such writers as Eustathius, Photius, and Suldas, mainiy occupied in the attempt to reduce to system a large ill-ordered and aimless erudition.

On the fall of Constantinople in 1453 the cultivated ciasses who stiil retained the pure Greek either perished or took to fight, or adopted the language of the conquerors. The popular Greek, however, survived, and despite its vulgarization and the modification of its grammatical forms and syntax, it cannot be said that Greek has been a dead language at any period since Homer. By aome modern Greek literature is dated from Theodore Prodromos (1143-80), a monk and writer of popular verse, but the only names of importance until the close of the eighteenth century nre those of Maximus Margunius ( $1530-87$ ), Anacreontic poet and letter writer, Leo Allatius (1586-1669), Sciote, scholar and poet, George Chortakes (seventeenth century), Cretan poet, Franciscus Scuphtos, Cretan writer on rhetoric (1681). Elias Meniates (1669-1714), a Cephalonian
eccleaintic, Vincentius K'rnaro, Cretan poet, author of Erotocritis (1756), Kotman, the JEtolian (1714-79), preacher and founder of achools, Rhegas Pherraios (latter half of eighteenth century), patriotic poet, Eusenios Bulsaris (1716. 1806), writer of cientific and relifious works, and Nicephorus Theotokes (17361800), writer on metaphysice and theology. At this period the patriotic movement found one outlet in the purification of the language and the development of a new literary impulse. The most important figure was that of Adamantron Koraes, or Coray, (17481833), who did more than all his predecessors to found a literature. Anthimos Gazes (1704-1837) and Athananius Christopulos (1772-1847) were eminent as grammarians and lexicographers, the latter also as a lyric poet. Neophytus Bamhas (1770-1855), miscellaneous educational writer, Constantine ALConomos (1780-1857), theological writer, Theoclytus Pharmakides (1784-1862), ecclesiastic and journalist, Spiridion Zampelios, literary antiquary, and Trikoupis, orator of the struggle for independence, were also prominent. The poetry of the people is represented chiefly in the songs of the Klephts and other songs dating from the war of independence. At this period the war-songs of Rhigas were sung by the whole nation, and at a later period the two Soutzos, Panagios and Alexander, Calvos, Solomos, and others, earned distinction in the same kind of poetry. The Soutzos were further distinguished as satirists, and Aiexander ranks also with the dramatist Rhisos Neroulos and Zampelios. Among the most gifted of recent writers is Rhisos Rangabe, distinguished in lyric, dramatic, and epic poctry, also as a novelist and a scholar.

Grecee. $\Delta r t$ of.-As in literature so in art the Greeks attained the highest pitch of excellence, and in architecture and sculpture furnished models for the rest of the world. In no other race has the artistic spirit been so generaliy diffused throughout the people, expressing itself in the minor arts of life, in the practicai application of ornament in the forms of domestic furniture, pottery, metal work. mosaics, and the like, not less perfectly than in the master-works of architecture and sculpture.

The earliest architectural remalns in Greece are pre-Hellenic in origin and Asiatic in character, Greek architecture proper dating from about the close of the eighth century B. c. The earliest known example-the Doric temple at Corinth-helonga to about the middle of the serenth century B. c., and points to
an Esyptian orisin, the stylo belng remotely, derived from the so-called 'protoDorle' temple of Bení Haman in Lower Esypt. Throughout the history of the art it is the public buildinge, more par-

Temple of Zeus at Olympis-Dorio order.
ticularly the temples, in which the genius of the Greeks displayed Itself. The private houses remained simple and even rude in appearance, rarely rising above a single story, and having no external decoration. The temples were for the most part rectangular, though the circular form sometimes occurs in the later periods of Greek art. In the simplest form of the rectangular temple (the apteral) there were no columns; but, by an easy development from this, the side walls were carried out beyond thome constituting the ends of the building, so as to form a porch. The extended walls terminated in pilasters (anter) between which, in the front line of the porch, two columns were placed. As a further development, four additional columns were placed in advance of the line connecting the anta, sometimes in front only (prostyle), sometimes at both ends (amphiprostyle). More complex forms were known as peripteral, where the columns were carried completely round the building; as dipteral, where a donble range of columns surrounded it; and as pseudo-dipteral, where a double range of columns was plssed in front and rear, but nnly a single range at the sides. The dip-struction, in the systematic substitution teral and pse:- do-dipteral styles were sel- of delicately-curved lines for straisht dom employed, the chief example of the lines in the columns and steps of their dibieral having been the temple of Diana temples, and wherever the illasion at ai Epinenus, buitit by Ctesiphom in the tending the sight of straight lines in
perupective was likely to prove an eldo. meat of wenknem. Color and gilding also played ad important part in the total ofiect, the oid tufe temples beins colored throughout, and even in the marble templer, thoush it is doubtrul is the marble colusinns were ever coiored, the monldings of cornices and cellinge, the capitale of the ante, the moulding: of the pediment and the trisiyphs were all decorated with color. The colonnadea and porticoes, whicb were usualiy buiit round market-places and aiong quays in meaport towns, were aimilar in atyie to the templen. See also $A$ rechiteoture.
Greek sculpture has been divided into five pripcipal periode, namely: 1. Tbe Dedalian or Eariy (-680 B.c.). 2. The Erinetan or Arebaic ( $580-480$ B.c. ). 3. The Pbldian or Grand ( $480-400$ e.c.). 4. The Praxitelean or Beautiful ( $400-$ 250 B.c.). 5 . The Decline ( 250 B.c. onwards). The age of Dedalus marks an adrance from an eariier primitive sculptura it which blocks of wood and stone were rudely fashloned linto the semblance of life, the imperfections of the art being concealed by real hair and adventlitious draperien. During the Deedalian period tbe treatment was bighly conventlonalized, a singie type serving for a variety of dylnities and beroes, the balr being often eutirely curled and gathered into a club behind, and the dresses of the female divinities being divided into a few perpendleular folds. Many of tbese ebaracteristics survived in the $Z$ ginetan period, but a hlgher knowledge of anatomy and greater freedom and boldness of treatment are apparent. The sculptures of the Theseum form a connecting link between the XEginetan school and tbat of Pbldias. To Phidias, hesides hls statues of Atbena and Zeus, were due the designs for the sculptures of the Parthenon, tbe actual work of these, bowever, being probably done by bls pupils Alcamenes, Agoracritus, and otber artists of bls time. To thls age helonged the sculptor and arcbitect Polycletus (about $452-412$ b.c.), whose statue of a youth bolding a spear obtained the name of The Canon, as heing a standard of form. About the same time the Breotian eculptor Myron flourisbed, the famous Discoholus being a reproduction in marble of one of his bronzes. The Praxitelean period is cbaracterized by greater grace and elegance ln cbolce of subject and treatment, together with more of the sensual element makln for ultimate decline. Praxiteles excelied in female figures, his Apbrodite at Cnidus In Caria being his most famous wort. His ripal, Scopal of Paros, was employed on the
bas-relief of the Mausoleum at Hallcarnemsus, and was the scuiptor of the famoun gronp repriconting the denteruc tion of the children of Nicbe. In Lymp. pue of Sicyon, in the time of Alezender the Great, tho Praxitelean achool foumd lts last great figure prior to the decling of the art.

Painting in Greece is said to have had ith origia in Bicyon, and to have exiated as mere outline and monochrome untll Cimon of Cleons introduced variety In coloring forenhortening, and a len rigid art. The Greek artiste worted in wax or renin or in water-color, brought tu the required conalistency by mixing with sum, slue or wite of ess ; and they painted upon wood, clay, planter, stone, parchment, and canvas Until a late period, however, they rarely painted upon waila, usually painting upon panela or tablets to be encased in wallo. The earlier masters appear to have used only four colorw-red, yeliow, wbite, and black, hut by the tlme of Apellem and Protogenes many other pigment were in use. The earliest painters of renown were Micon of Atbens (about 460 B.c.), and Poly. gnotus of Thasos and of Athens (about 403-430 8.c.) ; but a higher degree of lllusion and realism appears to have been reacbed under Zeuxis and his rival Parrhaslus, towards the close of the fifth century B. C. A greater name than any of these is tbat of Apelles, the friend of Alezander tbe Great, contemporaneounly with wbom flourished Protogenes of Caria, painter and statuary, and Nicias of Athens, a distingulsbed encaustic painter. Of the worl of these artists only a general conception can be formed from the mosaics and frescoes of Pompeli.
Greek Church, or Holy Oriental Ciccs Church, Orthodox Apestolic Cburch, that section of the Chriatian church dominant in Eastern Europe and Western Asia, especlally in Turkey, Greece, Russla, and some parts of Austria. In the first ages of Christianlty numerous cburcbes were founded by the aposties and tbeir successors in Greekspeakling countries; ln Greece itself, in Svria, Egypt. Mesopotamla, Asia Minor, Thrace, and Macedonla. Thene were subsequently called Greek, in contradlstinction to the churches in which tbe Iatin tongue prevailed. The removal of the seat of empire hy Constintine to Constantlnople, and the subeequent separation of the eantern and western empires afforded the opportunity for diverslties of language, moden of thinking, and custrms to menifeat themelves. and added political ceuses to the scound of nepare.
thon. During the earlicat poriod the chlef mite of inisuence la the Bantern Church were Jerumalem, Antioch, and Aleran: drien the eeat of that myctical philoegphy, b) which the oriental church was dif anguished. In 841, 200 after the synod Antioch, the rivalry between the Blahop of Rome and the Bishop of Conutantinople began to amame importance, and before 100 diferences of doctrine with reapect to the procerdon of the Hols Spirit appeared. The council of Chalcedon in 451 accorded to the eastern binhop the same honort and privileses in his own diocese as thowe of the Bishop of Rome, and in 484 each bishop excommunicated the other. The title of CEoumenioal Patrieroh was asyumed by John, Biahop of Conatantinople, in 688, and in the followins year the phrsee 'Filioque' ('and the Son') way added by the Latina to the Nicene creed (which now reads ' proceeding from the father and the son'), an addition to which the Greek Chnrch wan oppowed. In 048 Pope Theodow deposed Patriarch Panl II; bnt a reconclifation of the chnrchen wan effected at the Conncil of Rome ( $\mathbf{8 8 0}$ ). The doctrines of the Greek Chnrch were defined by John Damascenus in 730. The disruption wan haotened by the benishment of Ignatium by Michael the Druaken and the consecration of Photing (858). The Pope Nicholan I and Photins excommunicated each other in 867 . The schism was temporarily healed after the death of Photins, but Michael Cerularius reopened it by charging the Latins with heterodoxy. He was excommnnicated by Leo IX in 1054, and in turn excommunicated the pope in the aame vear, since which the Greeks have been severed from the Roman communion, though the Rnsso-Greek Chnrch was not separated nutil the twelfth century. The presence of the Crusaders in the East aggravated the qnarrel ; Latin patriarchates were established in Antloch and Jerusalem. and, thongh on the capture of Constantinople by the Crusaders a I atin patriarchate was set up there (1204), the schism was revived there as soon as the Latin empire fell (1262). Reunion was propbsed in 1273 by Patriarch Joseph, and effected, with the acknowledgment of the pope as primate, at the conncil of I.jons (1274). The nnion, however, was annulled in 1282 by Emperor Andronicus II, and in 1283 and 1285 by syrods of Constantinople. It was again effected under John Palsenlogus at Fiorence in 1439, hut was repndiated in 1443 hy the Patriarchs of Alerandria, Antioch, and Jerusalem. In 1453, when the pattiach fied from the

Turke, a echlematic Grezory ficholarive was chonen in his place. In 1570 unguccemaful begotiation wore commenced with a riew to union with the Luthorane, and in 1723 the Englith btahope eron propoed that the Greot and Aagileas churches whould unite, a proponal revived by the Archbishop of Moneow in 1800. The claims of the ciar in 1858 to the pro: tectorate of the Greek churches in Turitey was one of the cavses of the Crimean war.

The Greek Cbnrch in the only chnreh which holds that the Holy Ghost proceedy from the Father only; the Catholic and I'rotestant churchem deriving the Boly Ghost from the Father and the Son.? Like the Roman Chnrch, it has seven sacrament-baptiam; chrism; the encharist, preceded by confeasion; penance ; ordination : marriace ; and extreme unction. But it in peculiar-1, in believing in baptism hy immeruion, the chrism (confirmation) bein united with it; 2 , in adopting, as to the encharist, the doctrine of transubatantiation, as well as the Roman view of the host; but in ordering the bread to be leavened, the wine to be mixed with water, and both elements to be diatribnted to every one, even to children, the communicant receiving the hread hroken in a apoon filled with the consecrated wine; 3, the clergy are permitted to marry, but only once and to a virin; widowed clergy are not permitted to retain their livings, but 80 into a cloister, where they are called hieromoncohi. Rarely is a widowed hishop allowed to preserve his diocese. The Greek Cburch grants divorces, hut does not allow the laity a fourth marriage. It difers from the Roman Church in anointing with the holy oil, not only the dying bnt the sick, for the restoration of health, forcivenems, and sanctification. It rejects the doctrine of pargatory, works of supererogation, indulgences, and dispensations, hnt admits prayers for the dead, whose condition appears to be considered nadetermined nntll the final jndgment. It recognizes no risible vicar of Christ on earth, but the oplo itual authority of patriarch is lictle inferior to that of the pope. It aflows no carved, sculptured. or molten image of holy persons or suhjects ; but the representations of Christ, of Mary, and the saints, must he merely painted, and at most inlaid with preclons stones. In the Rnssian chnrches, however, works of scnipture are found on the altars. In the invocation of the sainta, and especially of the Virgin, the Greeks are as zealons as the Romans. They aleo hold relics. sraves, and cromes sacred; and croosing in the name of Jeans they com

(716) 288-5989 - Fax
ader as having a wonderful and blessed 17 finence. Among the means of penance, Nitis are particularly numerous with ditem. They fast Wedneeday and Friday of every week, and benides observe four great annual fasts, namely, forty days beCore Easter; from Whitsuntide to the days of St. Peter and Paul; the fast of the virgin Mary, from the 1st to the 15th of August; ;and the apostle Philip's fast, from the 15th to the 26 th of November; besides the day of the beheading of John the Baptist, and of the elevation of the cross. The calendar of the Greek Church is in the old style, their new year's day falling on Jan. 13th.

The services of the Greek Church consist almost entirely in outward forms. Preaching and catechizing constitute the least part of it. Instrumental music is excluded altogether. The mass is considered of the first importance. The convents conform, for the most part, to the strict rule of St. Basil. The Greek abbot is termed higumenos, the abbess higumené. The abbot of a Greek convent which has several others under its inspection is termed archimandrite, and ranks next a bishop. The lower clergy in the Greek Church consist of readers, singers, deacons, etc., and of priests or popes and protopopes or archpriests, who ars the firat clergy in the cathedrals and metropolitan churches. The members of the lower clergy can rise no higher than protopopes, for the bishops are chosen from among the monks, and from the bishops are selected the archbishops, metropoitans, and patriarchs. In Russia there are twenty-four dioceses. With which of them the archiepiscopal dignity shall be united depends on the will of the emperor. The seats of the four metropolitans of the Russian Empire are St. Petersburs, Kiev, Kasan, and Tobolsk. In the Tarkish dominions the dignities of Patriarch of Constantinople. Alexandria, Antioch, and Jerusalem still suhsist. The $\mathbf{P a}$ triarch of Constantinople still possesses the ancient authority of his see ; the other three patriarchs exercise a very limited jurisdiction, and live for the most part on the ald afforded them by the Patriarch of Constantinople.
Greek Fire, an inflammahle and used in medieval the Byzantine Greeks. It was poured from cauldrons and ladles, pomited through long copper tubes, or flung in pota, phialo, and barrels. The art of compoundins it was concealed at Constantinople with the greatest care, but it appears that naphtha, sulphur, and niter entreed into its compoition.

## Greek Language, Literature,

 Art, etc. See under Greece.Greeley, a city, capital of Weld County, Colorado, on the Cache la Poudre River, 52 miles N. of Denver. It is the center of the sugarbeet industry and in a rich, irrigated district. Pop. 10,000.
Greeley (gréle), Horace, journalist, Hampshire, was born at Amherst, New farmer, and learned the son of a poor in Vermont. In 1831 he went printing York, where, after an unsuce to New tempt to start the Morning Post, the fit, penny paper, he commenced in 1834 to issue the Weekly New Yorker, which ran for seven yeara. The Log Cabin, another weekly, eatablished by him in 1840, reached a circulation of 80,000 , and gave him a reputation which ensured the success of his Daily Tribune founded in 1841, and edited by him till his death, In his conduct of it he won high reputation as an editor of marked ability. In 1848 he was elected to Congress, but failed to impress his constituents with the necessity of retarning him a second time. In 1851 he visited Europe, and was one of the jurors in the London World's Fair. He opposed the Civil war, but was ${ }_{P}$ a firm supporter of the Union and of President Lincoln, and at the close of the war advocated a general amnesty and universal suffrage. In 1872 he was nominated for the presidency in opposition to General Grant, but was defeated. The strain of electioneering and the death of his wife brought on an illness of which he died a few weeks later. Among his works are his Hints towards Reforms (1850) Glances at Europe (1851), History of the Struggle for Slavery Extension (1856), The 4 merican Couslict (1864), and Recollections of a Busy Life (1869).

## Greely,

 adolpius W., explorer, was born at Newbaryport, Civil war, gaining the He served in the and receiving severe wounds of captain nteredring severe wounds. In 1867 he was placed in the signal service in 1888 , 1881 the Lady Franklin Bay expedition After ertremion to the Arctic region. After extreme hardships. in which some of the expedition died of starvation, he and his command were rescued in 1884. when the whole of them were at the point of death. In 1887 he was made chfet of the mignal zerrice, with the rank of brigadier-general He pablished Three Years of 4 retio Servic. American Weather, etc.Green, Mrs, Hetry Howland Rosgenerally beiieved to have been the world's richest woman, died in New York City, Jrly 2, 1916, in her eighty-mecond year. She left the buik of her estate, estimated at $\$ 100,000,000$, to her son, Col. E. H. R. Green, and her daughter, Mrs. Matthew Astor Wilkes, in trust for ten years.
Green, Johr Rickard, historian, 1837: ordained curate in 1860, subse quentiy vicar of St. Philips, Stepney, and librarian to the Archbishop of Canterbury at Lambeth. For some time he wrote constantly for the Saturday Review; but he was comparatively iittle known untii the publication in 1874 of his Short History of the English People, which secured him immediate fame. It was followed by a larger edition of the same work entitled $A$ History of the English People (1877-80), a volume of Stray Studies from England and Italy, and by the Making of England (1882). In his later years his work was carried on in distressing conflict with iung disease, and he died in 1883. The Conquest of England, his iast work, was published posthumously by his wife, it having been almost completed by him prior to his death.
Green, Sprr, fish-culturist, born at 1817 ; died in 1888 . New York, in mate knowiedge of He gained an intiinvented methods for their preservation and propagation, and was in a sense the father of modern pisciculture. Was made superintendent of the fish commission of New York in 1868, and wrote several works on the subject of fish hatching and culture.
Green, Thomas Hinl, an English 1838. philiosophical writer, born in and firgt low of Balliol Coilege in 1862 , 1867. In 1877 he was appointed Whyte's professor of moral philosophy; but his Work was abruptly closed by his death in 1882. Apart from his Prologomena to Ethios, publisued posthumouslv in 1883 , the buik of hic work was in the form of articles contributed to the North British and Contemporary Reviews. He was one of the strongest opponents of the English empirical school.
Greenbacks (gren'bakz), the poppeper currency first issuied by the United States government in 1862 during the Civil war, the name being an iiluvion to its color. It is sometimes used also to include United States bank-notes It
gave name in 1876 to a political party. known as the Greenback Party, which advocated an unllmited issue of sovern. ment paper currency.
Green Bay, ecaty and lake port, County, Wisconsin, at the head of Green Bay, lake Michigan, at the mouth of Fox River. It has a iarge trade in lumber. extensive sawmilis, cooperage works, and breweries, and other flourishing industries. Yop. 25,236.
Green-brier, a popular name in the United States for a very common thorny climbing shrub Smilax rotundifolia, having a yeliowishgreen stem and thick ieaves, with smali bunches of flowers.
Green-dragon, a North American herbaceous plant, the Ariscma Dricontium, one of the arum tamily, called also wake-robin. For another green-dragon, see Dracunculus.
Green Mountain Boys, a name the Vermont miiitia in the Amerlcan Revolution, when led by Ethan Allen to the taking of Fort Ticonderoga, and subsequently it was also given to Vermont regiments in the Civil war. The name was taken from the principal range of mountains in the state.
Greene, Nathaniee, a general of the American revolutionary army, born at Potowhommet, Rhode Island, in 1742 . In 1770 he was eiected to represent Coventry in the generai assembly of Rhode Island, and was soon after excommunicated by the Quakers for taking arms on the prospect of war with Britain. In 1774 he joined the Kentish Guards as a private, and in May, 1775. he was appointed brigadier-generai and commander of the Rhode Island contingent in the army before Boston. He gained at once the confidence of Washington, was made major-general, and appointed to the command in New Jersey. At Trenton (1776) and Princeton (1777) he led a division, and in the subsequent fighting he held important commands, and repeatedly distinguished himseif, In 1778 he was quartermaster-general and in 1780 presided at the trial of Major Andre. In the same year he was appointed to the command of the southern army. In this command he showed the highest ability, worsted Cornwaliis with very inferior forces, and succeeded in Fresting Georgia and the Carolinas from the British. He is iooked upon as ranking next to Washington in military abiity in the revolutionary army. He ditd in 1786.

## Greene,

 utudied at Camatiot, born ahout 1560 ; of B.A. in 1578, alter which he traveled on the continent. He was graduated M.A. in 1583 , lived a wild and protligate life, and died in poverty in 1592. His works consist of plays, poems, tales, and tracts. His romances include Pandosto (1588), The History of Arbasto (1617), A Pair of Turtle Doves (1606), and Menaphon (1587). His plays comprise The Honourabic Historie of Friar Bacon and Friar Bungay (1594): Orlando Furioso (1594), Alphonsus, King of Arragon (1697), and James IV (1598). In addition he prodnced many miscellaneons works. His Groat's Worth of Wiit Bought with a Million of Repentance (1592) is remarkable for the allnsion to Shakenpere 'an npstart crow, beantified with our feathers.' His Pandosto furnished the hasis for Shakespere's Winter's Tale.Green Darth, an opaque, dull, earthy olir regreen, soft, ties in amygdaloidal rocks. It consists of silicate of iron and aluminum, with potassium and sodium in water.
Green-ebony, an olive-green wood Sonth American tree Jacaranda ovalifolia, nat. order Bignoniacex, nsed for round rulers, turnery, marquetry work, etc., and also much used for dyeing.

## Greenfield (grēn'fêld), a county seat <br> of Franklin county, Mas-

 machusetts, on the Connecticut River, 36 miles N. of Springfield. It has cutlery, edge-tools, silverware, and other manufacturing industries; it is an automobile center, and a favorite summer resort. Yop. 10,427. Greenfinch, Green-linnett, or (Coccothraustes chloris), a hird of the finch family, and one of the most common of European birds. It frequents hedges, gardens, and small plantations, and feeds on grain, seeds, or insects. Its song is not melodious.Green Gage (grên gāj), a variety claude of the French, introduced into Britain by a person named Gage. It is large, of a green or yellowish color, and has a jnicy, greenish pnlp of exguisite flavor. It is well known in the United

## States. <br> Greenheart

(grenhart: Nectandra Rodiai), a tree of the nat. order Ianracese, a native of Gniana, called also the bobeeru. Its wood is hard and darable, and is used in ship-
bnilding, not beine lisble to attacks from the Teredo. The bark contains the alkaloid bebeerine.
Greenhouse, a building constructthe preservation of delicate plants. A greenhouse is mometimr" dintinguished from a hothouse by not equiring artificial heat during summer, and from a conservatory in having the plants in pots and not in the ground. The lean-to form, in which advantage is taken of a house or garden wall as a support, is frequently used, but the growth of plants in anch houses is one-sided, and the span or archroofed structnres, with slass on all sides, are to be preferred. The materials used are chiefly glass, wood, and iron.

## Greenland <br> (gren'land; Danish and German, (rōnland), an

 extensive island belonging to Denmark, situated on the northeast of the continent of $\mathbf{N}$. America, from which it is separated by Davis Straits, Baffin Bay, and Smith Sound. It extends from $59^{\circ}$ $45^{\prime}$ to about $83^{\circ} \mathrm{Nr}$. lat., and has an area of about 850,000 square miles. Like the northern parts of N. America generally, Greenland is colder than the corresponding latitudes on the east side of the Atlantic. In June and July the son is constantly ahove the horizon, the ice on the coast is hroken up and floats southward, and a few small lakes are opened ; bnt the short summer is followed by a long and dreary winter. The interior, which is lofty and has the appearance of one vast glacier, is nninhabitable, and all the villages are confined to the coasts, which are lined with numerous islands, and deeply penetrated by fiords. The Danish colony extends north. on the western coast, to the Bay of Disco, in lat. $69^{\circ} \mathrm{N}$. Cultivation is confined to the low shores and valleys, where grasry meadows sometimes occur with stunted shrubs and dwarfed hirch, alder, and pine trees. Attempts to raise oats and harley have failed, but potatnes have been grown towards the sonthern extremity. Turnips attain the size of a pigeon's egr, and cabbages are very small. The radish is the only vegetahle which grows unchecked. The inhahitants are largely dependent upon hnnting and fishing. Whale blnbber and seal oil are nsed as fuel. Despite the proximity of America the flora and fauna are rather of an Enropean character. The land animals are the Esquimo dog, the reindeer, the polar bear, the Arctic fox (blue and white). the ermine, the Arctic hare, and the musk ox. Among the amphibia the walras and several species of seal are common. The seas abound in fish, the whale and cod fisheriesbeing of special importance. Sea-fowl are sbundant in summer, and largely killed. The chief mineral product is cryolite, but graphite and miocene lignitic coal are also fonnd. Oil, eider down, furs, and cryolite are exported. The population, which is chiefly Eskimo, numbers about 12,000, not more thán 300 being Europeans. For administrative purposes Greenland, or rather its coast is divided into two inspectorates of North and South Greenland. The residences of the lnspectors are at Disco Island aud Godhaab, but the most populous district is Juliansbaab.

Greenland was discovered by nn Icelander named Gunnhjorn about 876 or 877. It was colonized from Iceland about the end of the tenth centnry and other Scandinavians followed. In 1264 it was polltically united with Norway, and about the middle of the fourteenth century pcssessed two flourishing colonies on the west coast, named West Bygd nnd East Bygd. These settlements, however, gradually disappeared from history, and the expeditions sent ty Denmark in 1585, 1606, 1636, 1654, and 1670 for the purpose of fiading the colony were unsuccessful. Verious relics, inscriptions, etc., have been found. In the reign of Elizabeth Captnins Frobisher and Davis rediscovered the coast, bat nothing was done to explore it until the Dnnish government ln 1721 assisted Hans Egede, a clergyman, to establish a European mission gettlement, Good Hope (Godharb). Whale fisheries were established on the coast by the Engllsin and Dutch about 1590. The interior of the country was first crosged from east to west by Nansen ln 1888. Peary in 1886 penetrated the lce-cap for 100 miles, lat. $69^{\circ} 30^{\prime} \mathrm{N}$. He made other trips between 1891 and 1902, traced the northern coast, and discovered some ontlying islands. In 1900 Amdrup completed the survey of the southeast coast; in 1908-08 the Danish Northeast Greenland Expedition under Erichsen made detailed exploration of the east coast. The country was found to he uninhabited, but there was signs of former settlements. Green Mountains, a monntain New England, commencing near New Haven, Connecticnt, and extending north through Massachnsetts and Vermont. between Lake Champlain and the Connecticut River. Monnt Mansfield, the highest peak, is 4408 feet high. The range is a northern extension of the Appalachians. Greenock (gren'nk) a parliamentown of Scotland, County Renfrew, aboat 20 milet west hy north of Glasgow. 28-U-3

The principal public buildings are the custom-house, the Watt monument, containing the Greenock library, and the Watt Museum and Lecture Hall. There are large lndustries, including sugar refinerles, ship-bnilding yards, and various others. Greenock carries on a considerable coastling and foreign shipplng trade, especially wlth East and West Indies, Americn, and Australin. Large number of vesscls unload at Greenock and ascend to Glasgow for cargoes. I'op. $88,142$. Greenough (grēn'ठ), Horatio, a Boston, Maren noted sculptor, horn at 1852, Massachusetts. In 1805; dled ln 1852 . He was graduated at Harvard ln 1825, but before this dnte went to Rome to stndy art, and after 1826 reaided in Italy, principally at Florence, until 1851. An early work was the dealgn from which Bunker Hill monument was constructed. His Chanting Cherubs was the first group in marble ever executed by an American sculptor. His Venus Contending for the Golden Apple won great admiration at Florence. Among the most important of his works is the colossal Washington, ordered by the United States government, and placed in front of the national capitol. A volnme of Escays, by him, was publlshed ln 1853.-RicHapd S. Grienougir, his brother (1819-1904), was also a sculptor of mnch ability and of a poetle and refined style, but he failed to reach the eminence of the elder Greenough.

## Green Paints, are for the most

 part compounds of copper nad of chromium. The best known greens are the following:-Bremen green, or verditer, consisting mainly of a hasic carbonate of copper. Brunswick green, a hydrated oxychlorlde of copper; bnt the name is sometimes given to a hydrated basic carbonate, also known as mountain green. Chrome and emerald green are oxide of chromium. Emerald green (which see) is also tivd as synonymous with Schweinfurt green. English green is a mixture of Scheele's green with gypsum. Guignet's green is oxide of chromium prepared in a peculiar way. Innpary green is a kind of malachite fonnd in Hungary. Rirman's green is got by heating zinc oxide with a cobalt compound. Saxony green is an indigo color used in printing. Scheele's green is arSenite of copper, and Schwoeinfurt green, Voronese green, and Vienna green, are also componnds of arsenic and copper. Ferdigria is a hydrated basic carbonate of copper, often seen in copper maucepane Besides these are green colors derived from plants. Of these may be mentioned chlorophyll, the green color of Icanv:sep rreen the juice of Rhamnus cathar ticue or buckthorn, made into a green lake with alumina; Ohinese indigo-green, etc.

## Green River,

 Cren erally west and northwest, and enters the Ohio 200 miles below Louisville. It is navigable fur boatw for about 200 miles.Hreen River, Wyoming, rises in W. into Cly Yoming, flows 8. E. Colorado, and then 8. W. and s. throngh Utah, joining the Grand Kiver. a branch of the Colorado, after a course of 750 m . Its drainage area is 47,220 sq. m.
Greensand, a name common to two ring in the southeast of England, the Isle of Wight, etc., the one (lower greensand) belonging to the lower cretaceous series, the other (upper greensand) to the upper cretaceous series; between them is the clay called the gault. They consist chiefly of sands, with clays, limestones, and chert bands. They were named on account of the green colos, due to silicate of iron, which some of the beds show, though some tertiary sands are as green. In the United States similar strata exist, known as marl, and used for fertilizing purposes. Marl occurs abundantly in New I rrsey, Virginia, and North Carolina.
Greensboro, a city, county seat of Carolina, on the mainord County, North ern Railroad. Here is the State Normal College, Graeusboro College for Women, the Agricultural and Mechanical College (colored), etc. The principal industry is cotton goods; other products are furniture, cigars, tobacco, fertilizer, electric fixtures, etc. Pop. 19,246.
Greensburg, a city, county seat of ana, 47 miles s. w. of Indianapolis. It has large stone quarries, and manufactures of carriages, chairs, spokes, flour, etc. Pop. 5420.
Greensburg, borough, county seat of ( 1 , Westmoreland County, Pennsylvania, 31 miles er of Pittsburgh on the main line of the Pennsylvania Railroad. It is in a great coal and gas region, and manufactures flour, engines, glass, nuts and bolts, etc. It contains the barracks of Troon A, Pennsylvania State Police. Pop. 13,012.
Greenshank, a European sand-piper (Totänus canescens), often called the whistling enipe from the shrill note it utters when first flushed.
Green-tea, a the of a greenish color. to the mode in which the leaves of
the tea-plant are treated in the procem of drying.
Greenville, a city, capital of Wish. ington County, Mivelr. sippl, 100 milee N. N. W. of Jactron. It has cottonseed-oil and lumber mille etc., and a large trade in cotton. Pop. 0,610 . Greenville, a city capital of Crechuille, Darke County, Ohio, 85 miles 2.. W. of Dayton. It has foundry and machine shope, etc., and is in a tobaceorgrowing region. Pop. 6257.
Greenville, a city of Mercer County, Greenville, Pennsylvania, on three railroads. It has steel plant, railiroad shops, foundries, etc., and is the, seat of Thiel College (Lutheran). Pop. 6809.
Greenville, Greenvill county county, South Carolina, on the Reedy River, on the main line of the Southern Railway, 160 miles E of Atlanta. It has three collegiate institutions, and is an important cotton market and the center of the southern textile industry. Pop. 15,741.
Greenville, a city county seat of Greenville, Hunt County, Texa, on the Sabine River, 52 miles N. E. of Dallas. It has cotton indnstries, refinery, oil mills, brick plants, etc., and is the seat of Burleson (Baptist) College and Peniel (Holiness) University. Pop. 8850.
Greenwich (grent ich), a parliamentary borough of England, County Kent, on the right bank of the Thames, about 5 miles 8. In of London Bridge. It is built partly on an acclivity, but chiefly on the level ground skirting the river. There are extensive iron fonndries and engineering works, barge and boat-building yardis, boiler works, mast, block, and sail works, telegraph cable worta, roperies, chemical tactories, etc. The object of greatest interest is the magniffcent hospital the oldest portion of which was originally a palace of Charles II. It was converted to its charitable purpose in the reign of William and Mary. Three additional wings were built from designs by Sir Christopher Wren, who also completed the unfinished pile of Charles II. As an hoapital for aged and disabled seamen of the navy, it was opened in 1705, and subsequently accommodated abont 8000 . In 1865, however, it ceased to be an asylum for seamen, and is now the seat of the Royal Naval College for the education of naval officers. It also contains a naval mn. senm and pictnre callery. Adjoining it are the Royal Naval school for boys, and an infirmary for sick and disabled seamen. Greenwich Park, an open, undulating piece of ground, area 180 acres, finely wooded and well stocked with devs, if a
tavorite resort of holidey-maling Londoners during the gummer. The celebrated obervatory of Greenwich, erected by Charlee II for Hametecd, stande upon an eminence in the park. The longitude of all British mape and charth, and aleo of those inued by the government of the United Staten of America, as well as many of thowe published in other countries is computed from this observatory, which ${ }^{2} 2^{\circ} 20^{\prime} 23^{\prime \prime}$. ${ }^{\prime \prime}$. trom the observatory of Paria, and $18^{\circ}$ In from the meridiar of Ferro. Greenwich (inclnding Deptiord and Woolwich) was erected into a parliamentary borongh in 1832. France, which had long refused to accept the Greenwich meridian, did so in 1911, so that now all the principal countries of the world have adopted this as the basic meridian. Pop. (1911) 05,968
Greenwich, a village of GreenFairfield County, Connecticut, on Lons Isiand Sonnd, 30 miles from New York. A favorite auburben resort for New Yorkers, with many handsome residences. The township forms the s. W. extremity of the state and has a population of 16,463.
Greenwood, county seat of Greenline in the Piedwood Co., south Caroton factories, cotton-seed oil milles cotother industries. Pop. 6614.
Greenwood, a city, county eeat of sippi, on the Yazoo Rive Conntle Misof Jackson. It is one of the larzest cotton markets in the Sonth. Pop. 8000.
Greg, Whiner Rathbons, an Eing in 1881; was commissioner of custome in 1856, and controller of the stationery office $\ln \cdot 1864$ Besides his miscellaneous exajas and pamphlets (collected in 1881 and 1882) he was the author of Shetches in Greece and Turkey (1833), The Ger man Sohism and the Irish Priests (1845), The Creed of Christendom (1851), Essays in Politioal and Social Scienoe ( 1853 ), Fniqmas of Life (1872), Rooks Ahead (1874), and Literary and Social Judjoments (1877).
Gregarinidæ (gregar-in'i-de), a mal organisms, comprising the lowest forms of the Protozoa, fonnd parasitic in various animals, especially the cockroach and earthworm. The Gregarinidæ conelist of an outer colorless transparent membrane, with only faint signs of fibrillons structure, inclosing a granular mass, in which there is a nucleus sarrounded by a clear space. They are destitute of a mouth, and have not the power
of giving out preadopodit, and hitherto no definite organs have been detected in them.
Grégoire (grioswar), Henma, Count, Bishop of Blois a churchman and statesman of the Frenck revolution, born in 1750. In 1789, while cure of Embermenil. in the dintrict of Nancy, he was sent by the clergy of Lorraine as their representative to the statesgeneral. As one of the secretaries of the constituent assembly he joined the extreme democratic section, and in the convention voted for the condemnation, thongh not for the death, of the king. Although extreme in his democratic opinions, he was an unfinching Jansenist. He was a member of the Council of Five Handred, of the corps legislatif, and of the senate (1801). On the conclusion of the concordat he resigned his bishopric. He voted against the establishment of the imperial government, and alone in the senate resisted the restoration of titles of nobility. He himself afterwards accepted the title of count, but in the senate was always one of the small body who opposed Napoleon, and in 1814 was one of the first to vote for his deposition. He passed the latter part of his life in retirement, and died at Paris in 1831. He left numeroum works, among them Ruines do Port Royal, 1801: Essai Historique sur les Libertes do CDEqise Gallicane; Histoire des Sectes Religieusen depuis le 0 ommenoement de ce Sidcle, 1810 and 1828, and 4 nnales de la Religion, 1796-1803,
Gregorian Calendar (gre ${ }^{8} \mathrm{or}^{\prime}$ endar as reformed by Pope Gregory XIII in 1582 (see Calender). The Gregorian year is the ordinary year, as reckoned according to the Gresorian calendar.
Gregorian Tones, in manic, a introdnced by Gregory the Great In the early ages of church music the Greek system of tetrachords, or what was supposed to be the Greek system, was for lowed. There were in the time of Ambrose of Milan fifteen socalled Greek modes or scales in nse. In order to simplify chnrch music he selected four of these scales, the Dorian, Phryfian, Aolian, and Mixo-Lydian, to which he attempted to reduce all the chants and melodies snng in chnreh. This welection of scales was soon found to be too limited. The chnrch singers refused to be bonnd to it, and it failed to represent the melodies actually in use. In these cirenmstances Gregore the Grent introdiced a new reform and extension of chntch music. To each of the scales admitted by Ambrose he added a new acale or
mode, commencing with the fourth below the leynote of the ori inal scale. Thene new scales he called plagel, while to the four introduced by Ambrowe he gave the name of authentio. He introduced the practice of naming the tones by the letterm of the alphabet. The following is the arrangement of his eight wcalen:-

10t. Authentic (Dorian), 20. Plagal,
8. Authentic (Phrygian), 4th Pleqal,
Sth Authentic (iaioiain),.
6th. Plagal,
7th. Authentic, Hyper Dortan or Mixo-Lydian,
8th. Plagel,

The scale of C , with the semitones botween the $3 d$ and 4 th, and the 7 th and 8 th, which in the modern system is called the natural meale, and is the pattern on which all the others are formed, was thus, it will be seen, one of the plagal scales introdnced as an innovation by Gregory. Gregory (greg'o-ri), Patriarch of Constantinople, born in 1730, atudied at Mount Athos, lived as a hermit, was made archbishop at Emyrna, and, in 1795, Patriarch of Constantinople. He led an active, tolerant and benevolent life, promoted schools and the art of printing. In 1798, however and again in 1806, he was accused of intrisuing for the freedom of Greece, and twice banished to Mount Athos, though each time restored to his post after a short interval. But in 1821, when the Greek insnrrection broke out in the Morea, his native conntry, he became once more an object of suspicion to the Porte, and when, shortly after, he allowed the family of Prince Moronsi to escape from his guardianship, he was seized as he left the chnirch on the first day of the Easter feetival and hanged in his robes of office before the chnrch gate.
Cregory, the name of sixteen notice only the following:-Gregory I, called also the Great, born at Rome, of noble family, about 540. He became a member of the senate, and was made prefect of Rome in 573. He expended his inheritance in the foundation of monasteries and charitable institntions, ind then took monastic vows himself. Pope Pelagius II sent him on an embassy to Constantinople, and afterwards made him papal secretary. On the death of Pelagins in 590 he was chosen his snccessor. He displayed great zeal for the conversion of heretics, sending missionaries to sicily, Bardinia, Lombardy, England, etc., as well as for the advancement of monach-
ism, and the enforcement of clerical callbacy. He died in 604. The worts ascribed to him are very numerous; his senuine writings consint of a treatice on the Pastoral Duty, Lettere, Berlpture Commentaries, etc. - Gricony VII (Hif debrand), born about 1020 at Soana, in Tuscany; passed part of his early life in Rome, became a monk at Oluny, and then retnrned to Rome with Bruno on the election of the latter to the papal chair. He exercised great influence over Leo IX (Brano) and his succemorn, Victor II, Nicholar II, and Alexander II; and under Nicholas II he succeeded in depriving the clergy and people of Rome of a voice in the election to the pontificate by siving the power of nomination to the cardinals alone. On the death of Alexander II (1074) he was raised to the papal chair. His chief aim was to liberate the Church wholly from the domination of the State in political as well as ecclesiastical matters. He therefore prohibited simony and the marriage of priests (1074), and abolished lay investiture (1075); the only remaining source of the anthority of princes over the clergy of their dominions. The Emperor Henry IV refused to obey this deoree, and Gresory, after deposing several German bishops who had bought their offices of the emperor, and excommunicating five imperial councilors concerned in this transaction, summoned the emperor before a.council at Rome to defend himself against the charges brought against him. Henry then caused a sentence of deposition to be passed against the pope by a conncil assembled at Worms the pope, in return, excommunicated the emperor, and Henry, finding himself in difficnlties, went to Italy and submitted at Canossa (1077) to a humilliating penance, and received absolution. After defeating Rodolph of Suabia, however, Henry caused the pope to be deposed by the Conncil of Brixen, and an anti-pope, Clement III, to be elected in 1080 , after which he hastened to Rome and placed the new pope on the throne. Gregory passed three years as a prisoner in the castle of St. Angelo, and though finally liberated by Robert Guiscard, he was obliged to retire nnder the protection of Gniscard to Salerno, where he died in 1085. -Grebory XIII (Ugo Buoncompagno), born at Bologna in 1502; created cardinal in 1565; chosen successor of Pius $V$ in the popedom in 1572. He permitted the Cardinal of Lorraine to make a puhlic thanksgiving for the massacre of St. Bartholomew, enconraged plots against Queen Elizabeth, and incited Philip II to attack her. His foreign policy cost him much money for
subuidien to excite enemien to the Turks and heretice, and his tivaucial expedients to fill his exchequer ruined the trade and divturbed the peace of his own dominions. He did much to encourage education, his expenditure for thin purpose exceeding two million Roman crowns, out of which many coilezen at Home were endowed. He reformed the Julian caiendar (see Calondar). He died in 1585.
Gregory, Adausra, Lady, an Irich ough, County Gaiway, in 1853. She is one of the founders of the Irish National Theater and author of many plays, including Spreading the News, The Rising of the Moon, The Jackdaw The Workhouse Ward and The F'ull Moom.
Gregory, James, mathematician and telescope inventor of the reflecting shire, about 1638, and educated at Marischal Coilege. In 1643 he published Optica Promota, explaining the idea of the telescope which bears his name. He spent some years in Itaiy, and published at Padua in 1607 a treatise on the $Q$ uadrature of the Circle and Hyperbola. He became professor of mathematics at St. Andrews in 1608, and at Edinburgh in 1674, but died in 1675.
Gregory, Jamms, physician and auwas born at Aberdeen in 1753 ; died in 1821. In 1780-82 he pubisshed his Conspectus Medicince Theoretica; in 1790 he became professor of the practice of physic, and in 1792 he issued his Philosuphical and Literary Essays.
Gregory, Jorin, phygician, grandson ventor of the reffecting telescope. He was born in 1724; died in 1773. His works include Elements of the Practice of Physic, a Comparative View of the State and Faculties of Men and Animals, and 4 Father's Legacy to his Daughtere. Gregory, Oninthus Gimbert, Huntingdonshire in 1774; died 1841. He became mathematical master in the Royal Military Academy at Woolwich, and published a treatise on astronomy and several mathematical works, of which his Treatise on Mechanics was of most importance.
Gregory, Thomas Watt (1861-), hom at Crawford an American cabinet ofncer, Southwestern Presbyterian University and the University of Virginia. He was admitted to the Texas bar in 1885, and became attorney-general of the United States in the cabinet of President Wilson in 1014, and resigned March 1, 1019.

## Gregory of Nazianzus (Grepo-

 sianzenus), a father of the Greek Ohurch, born near Nazianzue, in Cappadocla, between 318 and 329 ; atudied at Athens, and in 355 and 353 taught rhetorlo in that city. He afterwards retired for some time with Babil to the Desert of Pontus. He beran to preach in 362 , and between 365 and 374 was associated with his father in the bishopric of Nazianzus. He went to Conitantinople about 378 or 379 to oppose the Arians, and was appointed bishop of that see by Theodosius in 380 , but in the following year retired to his former charge of Nazianzus. He died in 389 or 390 . His works consist of letters, mermons, and poetry. His eloquence is nearly on a levei with that of Banil and Chrycontom. His festival is on 9th May.Gregory of Nysso, a father of chery the Greek Church, brother of St. Basil, born at Sebaste, Pontus, about 332 ; died about 398. By his brother's influence he was made Bishop of Nyssa, in Cappadocia. Having opposed the Arians, he was banished at their instigation by Valens from 370 to 378. He took a prominent part in the Councils of Constantinople from 381 to 394. His festival is on 9 th March. His works consist of dogmatic treatises, Scripture commentaries, sermons, letterm, etc.
Gregory of Tours (Gregoriwe historian of Gaul, born in Auvergne in 539 or 544 ; died at Tours in 593 . He became Bishop of Tours in 573 . He had the courage to oppose Chilperle and Fredegonde in their violent courses, and acted the part of a peacemaker in the dynastic quarrels of the period. His Historia Francorum is a valuable chronicle of sixth century events.

## Gregory Thaumaturgus,

Saint, born in Pontus about 210 A. D. became a Christian at an early age, and was a disciple of Origen; was bithop of Neocæsarea, from 244 till his death in 270. His life and miracles are narrated by Gregory of Nyssa.

## Gregory the Illuminator,

Saint, the apostle of Armenia, born about 258 A.D. From 302 to 331 he was patriarch of the Armenian Church, but the last years of his life were passed as a hermit. He died about 342.
Gregory,'s Mixture, a popular and aperient medicine, consints of two parts of rhubarb, four of calcined mag. nesia, and one of ginger. It may be now
with benefit occacionally, but not aystematically.
Greifenberg (cri'fn-berh), the name Prusaia particuiariy a walled town province of Porrerania, government of Stettin. Pop. (1005) 7208.

## Greifenhagen (grifn-hil-gèn), a

 province of Pomerania, government of Stettin. It has manufactures of wovien and linen cloth. Pop. 6473.Greifswald (grifs'valt), a town of Pomerania, on the navigable river Rick, about 3 miles above its entrance into the Baltic. It contains a univeraity, founded In 1456, attended by about 600 students, and possessed of a ilbrary ( 100,000 vols.), museum, obeervatory, etc. It has manu: factures of machinery, oil, paper, and tobaceo; and a considerabie shipping trade. Greifswaid was one of the fanse towns about 1270; was assigned to Sweden by the Peace of Westphalia 1048; wus occupied successively by various northern powers, and finally ceded to Prussia in 1815. Pop. (1005) 23,750.
Greiz (grits), a town of Germany, anincipality of Reuss Greiz, in a valley on the rigit bank of the Elster, 16 miles south of Gera. It is the residence of the eider branch of the Reuss family: is wailed, well built, and has a castle and palace. Pop. (1005) 23,114. Grenada (gren- ${ }^{\prime}$ da), one of the lands; about 85 miles northwest of Trinidad ; obiong in form, $241 / 2$ miles iong, N. and A., and 10 miles broad; area 133 square mifes. The island is traversed north to south by an irregular mass of volcanic mountains, attaining elevations of 3000 and 3200 feet above sea-level, and having lateral branches of iower hills. Cocoa, sugar, rum, and spices stand first in the exports. The island has a lieu-tenant-governor, and a iocal iegislature consisting of a council and a house of assembly of seventeen elected members. The capital is St. George Town. Grenada was discovered by Columbus in his third voyage in 1498, and colonized about the middle of the seventeenth century by the French, who exterminated the Caribs. In 1762 it was taken by the British, and though recaptured by the French in 1770 was restored to Britain in 1783. Pop. 65,627, of whom only a few hundreds are whites.
Grenade (grenad), a small explosive sheil, thrown by the hand. The term was first used by Du Billey, in reference to the siege of Arles (1636).

Uutil about the end of the 17th century, When muaketry became common, coldiert of the line were trained to throw grenades, hence the name srenadier ( $9,0$. ). Discarded for a lons time the gronade was revived by the Japancee in the RumenJapanese war (1001-05). Its importance in warfare grew and during the European war grenades ol various types were used by ail the beiligerents. The hand grenade of 1918, made of cant iron or componition metal was ovoid in form and was exploded by an automatic device. It difered from the earlier models in that inutead of expioding at the point of contact it went of while still in the air. These srenades were charged with suffocating, tear-producing, or incenchary gasen, which were at effective as the aplintered shell. A form of grenade much usel in the trenches was made of a cane handie with a metal head, containing the bursting charge of lyddite, and the detonator to effect the explosion when the misalie struck; attached to the handle was a piece of cloth to act as the tail and make the grenade strike on its detonating head. In the rife grenade a stout cylindrical tube is inserted into the muzzle of an ordinary gun. These grenades couid be thmwn 35 or 40 yards. For longer distance the rifle grenade was used. The latest model of rifle grenade is cylindrical in form and can be fired with an ordinary cartridge. The grenade is inserted into a wide-mouthed attachment that makes the riffe look like an ancient biunderbuss. Pointed into the air at an angle of 45 degrees a rifle grenade weighing one pound can be thrown a dls. tance of more than 200 yards. The minc grenade is the invention of N. W. Aasen. a Norwegian engineer. It consists of a cylinder with a conical point, containing the projectiles and explosive charge as well as the mechanism necessary to force it up from the ground where it is buried. Grenadier (gren-a-der'), originaliy a soldier destined to throw the hand-grenades. Soldiers of long service and acknowiedged bravery were selected for this service, so that they soon formed a kind of élite. There were at first only a few grenadiers in each regiment. Companies of grenadiers were formed in France in 1670, in Engiand a few years later. With the development of the musket the iamo snon became only a souvenir of the ancient practice: the troops so called generaliy formed one battalion of a regiment, distinguished by the height of the men and a particular dress, as for instance, the high bearskin cap. With the British and French the grenadier company was the first of each battalion. The title in the British army
remaine ooly in the reciment of Grenadier Guarde Gronadine ( $\operatorname{cran}^{\prime}$ and $d \mathrm{n}$ ), athin gausy allk or woolen fabric plain, colored, or embroidered, unod for hadies' dremen, ,dhawle, etc.

(gren'ádens), or Guxkadules, a chain of small tellands and rocks in the Weat Indien, between the ililands of Grenada and St Vlacent; principal inland, Carriaco They produce cotee, Indigo, cotton, and sugar. Pop. 6790.
Grenfell (gren'fel), Wmimed Thoxborn near Chenter, England, in 1865 . began hia career as a medical mionionary in England in 1887, and subsequently became superintendent of a Labrador branch of the Misaion to Deep Sea Fishermen. His work among the people of Labrador has been of the mont self-acrificing and beneficial character, and he has brought about great improvement in their s.nitary and other conditions, incinding, recently, the introduction of the Lapland relndeer to that country. Has written reveral works on Labrador and his experiencen. Grenoble (zre-njbb), a fortifed capital of the department of Irare France, and atrongly placed on the Ietere, 06 milles southent of Lyons. Grenoble occapies both siden of the river, which is crossed by three bridges, and lined by fine quays. It has a cathedral, and a more noteworthy chnrch (Saint-Andre), with the tomb of Bayard; a public library of 170,000 volumen and 7500 MSS , a college, mnseum, bishop'= palace, courthouse, arsenal, and extendve public gardens. The mannfactures connibt of gloves, which may be condidered the staple, linen and hemp goods, liqueurs, leather, etc. Grenoble existed in the time of cesear; and Gratian, who had improved it. changed its name trom Cinlaro to Gratianopolis. Pop. (1010) 77,438.

Grenville (gren'vil), Gromag, a Britbrother of Earl Temple, and fanther William Wyndham. the first Iord Grenville; born in 1712; died in 1770 . He became treasurer of the navy in 1704: secretary of state and subsequently Irish lord of the admiralty in 1762 ; first lord of the treasury and chancellor of the excheaner in 1783. In 1783 he introduced a scheme of colonital taxation, and in 17 MA proposed a stamp tax to be levied in the American colonies, which was one of the proximate causes of the American rar of independence. In 1785 he retired from offec, and was replaced by Lord Rock-
ingham. The Grenville Papers (1852-63) contain his most important political correupondence.

## Grenvilie, Wuluay WXXDRA 5

 above; was born in 1750 . In 1783 he was appointed paymaster-general of the. army; in 1789 becume apeaker, and in the same year became secretary of state for the home department. In 1700 he was raised to the peeraze am Baron Grenville, and from 1781 till Pitt's resignation in 1801 held the post of forelgn mecretary. On the return of PItt to office in 1804 he declined to join him, and continned in opposition fill Fitt's roath, when he becarae the head of a mition ministry, including Fox and Gr 1800. The ministry rejigned in 180 after having passed an act for the abolition of the slave trade. He did not apola take office. He died in 1834.Gresham (gresh'am), sis T with a merchant of Lom buta
in 1519. In 1552 he was geat
of Henry VIII's money affain
werp, where in two years he pua 1 a heavy loan, and raised the king tatit considerably. On the accession of (1hatbeth he was deprived of his ofiee. $t \rightarrow \mathrm{ft}$ was soon restored to him, and he as also knighted. In 1558 he erectef at th own expense the Royal Exchange for merchants of London. He died if is: The 'Gresham Law', in finance, fo thr principle that a less valnable curreney m . evitably snnplants and drives ont ter more valuable, in direct proportion tw the abnndance of the former medinm.
Gresham, Waitas 2., stateman. was born gear Lanesville,

Indiana, in 1832; died in 1805. He was elected to the leginiature as a Hepublican in 1868, tarved through the Clivil war, retiring as brevet major-general, and was United Staten diatrict judge for Indiana, 1800-82. He wa: appolnted postmastergeneral in 1882 and Secretary of the treasury in 1884. Joining the Democratic party in 1802, he was appointed Secretary of State by President Cieveland. His career as judge was marked by his support of popular rights.
Gretna Green (gret'na), a viiiage of scotland, 8 miles north of Cariinle, was long antorious for the celebration of the marriages of fugitive lovers from England. To conclude a lawful (though irregular) marriage in Scotland, it was only necessary for an unmarried coupie to so and declare themseives man and wile before witnesses, and it was in this way that these runaway coupies were married; but such marriages were put an end to in 1850, by an act declaring that no irregular marriage in Scotland , Nhould be valid uniess one of the parties had resided in Scotland for twenty-one days next preceding such marriage.
Greuze (grewz), Jwar Baptistin, a in Burgunds, 1720. Althoughinter, born some time and attention to historical subjects, he later confinea himself to depicting scenes of the family life of the bourgeois or middle class. As a colorist he occupies a high place. He died in 1805.

Grévy (gra-vè), Frangois Paul Cicv Jules, French president, was born at Mont-sous-Vaudrez. France, in 1807; died in 1891. He took part in the revolution of 1830 and afterwarde, as a lavyer, defended in tise courts some of his feliow-insurgents. He was vice-president of the Constitutional Assembly of the 1848 republic, and president of the National Assembly of the new republic, 1871-73 aud 1876. In 1879 he was chosen president of the French republic by a large majority and reélecter in 1886, but resigned in 1887 in consequence of a scandai in which his son-in-law was implicated.
Greville (grevil), Sir Fulke, Lord Brooke, an English writer: born in 1544. Having studied at Cambridge and Oxford and made the tour of Europe, he became a courtier, and enjoved the favor of Flizabeth, James I, and Charles I. In 1628 he was stabied by an old servant, and immediately expired. He wrote the life of Sir Philip Eidntr; Crelica, a collection of 109 songs: Lloham and Mustaphe, two tragedies, etc.

## Greville, Hexhy. See Dusand

 Grey (gra). Charles, Eant an Einslich statemman, eldent mon of Chariea, frat Earl Grey born in 1794 ; died in 1845 . He was educated at bicon and at King's Colleze, Cambridge. In 1780 he was returned to Parilament as member for Northumberiand. On the accession of the Grenville ministry in 1808, Grey, now Lord Howict, was made frat lord of the admiralty, and on the death of Fox succeeded him as secretary for zoreign afiairs and ieader of the Mouse of Cummons. The death of his father in 1807 raised him to the House of Peers, and from this period up to 1830 he beaded the opponition in the Lorda, and especially opposed the proceedinge againnt Queen Caroline. On the accension of Wliliam IV and the retirement of the Wellington ministry, Earl Grey was nummoned to office. The great event which marks his administration is the panding in 1832 of the first reform bill.
## Grey of Fallodon, Emward Gery,

 British stikesman, foreign secretary from 1905 to 1016 , was borm in 1862 and heid office as under-secretary for foreign affairs from 1892-05. It was during his controi of the forcign office that the European wur broke out (1014). He was appointed Ambnssador to the United States in 1010. Grey, Sir George, a British colonial governor: Was born at Lisbon, Portugai. in 1812; died in 1898. He traveled in Austraiia in 1837 and published un account of his journey. He was successively appointed governor of Southern Australia, of New Zealand, of the Cape of Good Hope.Grey, Lady Jawi an interesting figure in Eaglish history, the daughter of Eenry Grey maruuis of Dorset, afterwards duke of Suffolk, by Frances, daughter of Charles Brandon, duke of 'Suffolk, and Mary, younger sister of Henry V1II. in whose reign Lady Jane was born, in 1537. She displayed much precocits of talent ; and under the tuition of Aylmer, afterwards bishop of London. she acquired a knowledge of the learned languages, as well as French and Italian. She was married to Lord Guifford Dudley fourth son of the Duke of Northumberland, in 1553. Edward VI, who died in 1553, was induced on his deathbed to settle on her the succesalon to the crown. The council endeavored to keep his death secret, with a view to secure the persons of the princesses, Mary and Elizabeth, and when Mary discovered the design the council proclaimed Lady

Jave queve. On the approach of Mary, however, the council demerted Lady Jane, and Mary was proclaimed queen. Jane was now confined to the Tower. She and her hunband were arraigned, and pleaded ruilts of hish treayon; but their doom was suapended, and it was not until after the auppreudon of the rebellion of Sir Thomas Wyatt, in which the Duke of Buflolk, Lads Jane's father, had participated, that the sentence was executed. She and her husband were buheaded on Tower Hill, Fehruary 12, 1654.
Grey. See Gray.

## Grey Friars. See Franciscene.

Ground, in painting the first layer preceding and color. The Itallan achool phael employed white grounds, but afterwards, when canvas had superseded panels, the Italian and Spanish mehools adopted an oil ground of a dnll red color. The Dutch and Flemish masters used light grounds varying from white to gray, and their exsmple has been followed by the English painters and those of the modern European school.
Ground Dove, a name of various which which resemble the gallinaceous birds in living mainly on the ground, their feet being better suited for walking than perching. The name is especially given to the members of the genns Ohamapelia, mall birds belonging to the warmer parts of America, and includes the bronzewing pigeons of Australia. The large pigeons of the genus Goura (the crnwned piseons) are also so called. See Goura. Ground-hog. Same as Aardvarli.
Ground-Ice. See anehor-Ioe.
Ground IVy, Alechoma hoderaote,
plant of the order Lablitue, with a creeping atem and purple flowern. Ten made from it is used by the poor for pectoral complaints It was formerls employed to filavor ale.
Groundnat, a term which denotes the Arichis hypogeca, or the tubers of certain umbellifers (earthnuts). The Arachis hypogoa is a lezuminous annual of diffuse habit, with hairy stem, and abruptly pinnate leaflets. The nut or pod is situated at the end of a stalk of some length and is ripened under ground, this stalk having the peculiarity after flowering of bending down and pushing the fruit into the earth. The plant is extensively cultivated in the United States and in several tropical countries. The nuts have an agreeable flavor and are largeiy eaten after having been roasted, while they yield an oil that may be used for olive-oil. When ground up finely and mixed with oil, are called peonut-butter. See also Earthnut.
Ground-pine (Ajinga Chamapitys), plant, so called from its resinous smell. Also a name given to some lycopods or club-mosses.
Ground-rent, is the rent paid to person for the use of ground on which buildings are erected. The usual arrangement is for a specified time. In the United States a ground-rent deed is usually drawn for a term of years, mentioning the consideration-money on which interest is payable. Groundsel (ground'sel; Senecio vult belonging to the nat. order Composita. The plant is emollient, has a slightly acid taste, but is rejected by almost every quadruped except the hog and goat: cage-birds are fond of the seeds. The Golden Senecio is an American species.
Ground Squirrel, the squirrels of th. genus Tamics, somewl at resembling the marmot. They differ from the common squirrel in possessing cheek-pouches, and in retreating into burrows. They are well known in America, but species are also found in sia and Africa.
Group Insurance. A new form of benef mutual social benefit, recently come into use. It is a
sort of outmrowth of the workmen's compensation acts. which it has closely followed. The first compensation act was the Fedetal law of 1808 , and the first State act to $5_{0}$ into force was the New Jervey one of 1011, while groap insurance
in America began in 1012. Social ingarance was needed in cases where the compensation law were not operative, as in the case of those dependent on artisans. Some insurance companies are inclined to beileve that this form of insurance is likely to take as strons a hold as the compensation laws, and policies of this kind have been bought by some employers on a large scale and presented to their workmen as a way of showins their good will. By the taking out of group insurance, rates may be much reduced as the need of agents is diminished. In an insured group men with slight ailments will be included with those perfectly sound, the insurance companies beins confident that men seriously diseased will not be taken into a group. Most sroup insurance is offered either in the form of single life insurance or with more elaborate policies, as life insurance divability provision, annuities for dectining yeari, etc. We find much larger co-operative insurance bodies abroad than in this country, where there are the Societes de Secours Mutuel which have enrolled over 4,000,000 people in France and a halt million in Belgium. Here worknien of foreign birth are too much inclined to change empiosment, but the introduction of group insurance has tended to cheek this habit.

## Grouse <br> (grous), the general name of

 family Tetre gallinaceous birds of the mart is raonides, whose distinguishins color, in pla naked band, often of a rea wild place of an ejebrow. They are Hive in fand almost untamable. They regions families, in forests and barren leaves. They feed on berries, buds, and abandoning the female, and learing male her the whole care of the proseaving to eggs number eight to fourteen. The iargest species is the capervaileis vood grouse. (See Oapercailzic.) Oth vecies are the black grouse, the red couse, commonly called simply the rouse, and the white grouse or ptarmgan. The black grouse (Tetrio tetrio) is about the size of a common fowl. Tho male has the outer feathers of the tail curved outwards, so that the tail is lyreshaped. It chiefly lives in high and wooded situations. feeding on various kinds of berries. The female is commonly called gray hen. To this renus belong several species peculiar to North America. the most remarkable of which is the pinnated grouse or prairis hen (3. ow pido), which inhabits open demert plaing in particular districts of the United States. The male is furnished with wing: like appendages to his neck, covering twoloose, orange raca, capable of being infated. Another specien is the cook of the plains (which wee). The grouse with hairy feet and which undergo seasonal change of plumase form the zenus Lago. pus. Of these the red growse (Lagopus scoticus) is the mont important. This bird, also called moorfocol, is found in great plenty in the Bighlands of Scotland, also In Wales, the north of England, Ireland, - and the Scottish isiands. It pairs in the spring; the female lays eight or ten eggs. As soon an the young have attained their full size they unite in flocks of forty or fifty, and are extremely shy and wild. Thle bird attracts large numbers of sportumen every August to the Scottish moors to tale part in the grand sporting campaign which followz the tweltth. The ptarmigan or wohite grouse (Lago. pwe mutus or vulparis) is ash-colored in summer, but its hue changes to a pure white in winter. It is found in scotland and in most northern regions, inhabiting the tope of mountains. See also Hazel Grouse, Ruffed Grouse, Sand Grouse.
Grove
(gror) SIR Grobge, an Englikh writer, born in 1820 ; died in 1900. He was educated as a civil engineer, in which capacity he was connected with the Britannia Bridge and other important works. He was long secretary to the Crystal Palace Co., and did much for the popularizing of classical music in connection wito its concerts. For some years he edited Macmillan's Mapazine, and he was editor of, and a contributor to, the great Diotionary of Music, published in 1878-1889. He was also an extensive contributor to Smith's Dictionary of the Bible. He was knighted in 1883.
Grove, Sir William Robert, physiin 1811; died at London in 1888. He was graduated from Oxford in 1835 and became succeseful as. a lawyer, meanwhile devoting himself to the study of physical science, in which he made important discover es. About 1839 he invented the useful nitric-acid voltaic battery which bears his name. He was among the first to maintain the theory that heat, light, and electricity are mutually con: vertible, and that heat is a mode of motion. He developed this theory in his Correlation of Physical Forces.
Grow (gro), Gavisia A., statesman, Connecticut, in 1824., removing to Penn. sylvania in 1834. In 1850 he Fas elected to Congrems, werving for twelve years, and Tras electes Speaker of the House in 1801. He rendered important services in Congreva, and was a trrong advocate of
the Homestead bill. He roturned to Oongrens in 1804, and died in 1807.
Grub, the term applied to the coft, wormilike larva of coleopterous and other insects. Some apecies do much injury to the rooti of plante, growing corn, etc.
Grünberg (qrin'berh), a town in of Liegnitz, Silesia, surrounded by vinojards, which produce large quantities of wine. Pop. 23,162.
Grundtvig (gron'vig), Nixioley 1872), Danish poet and theologian, born at Udby, in Zealand, became known as the author of Northern Mythology (1808) and Decline of the Heroic Lge in the North (1800) These were followed by the Rhyme of Roeskilde, the Rooskildo Saga, and patriotic songs He became the head of a religlous school, the Grundtvigians, who strove to free the church from the interference of the state. From 1839 Grundtvis preached in the Church of Vartor Hospital in Copenhagen, after 1881 with the title of bishop. His son published his Poetioke Skrifter ( 8 vola) in 1880-83.
Grundy, Mrs., an imaginative char Speed the Pacter in the English comedy is troubled about the opinion of her neithbor on some topic and akks anxiously, 'What will Mra Grundy say?' Since then Mrs. Grundy represents the general opinion of the public on any mooted question, and is a synonym for common gossip.
Grunt, Gronter, an American fish of Grunt, the family Hemulonides, also termed pio-fish and red-mouth. The first of these names relates to the sound it emits when taken out of the water, the last to blood-red marks on the gums or lips. The Growler, found in America, also emits a grunting sound.
Gruyère (gri-yar), a village, Switzerland, canton and 16 miles south of Fribourg, on a hill crowned by a fine old feudal castle. It gives its name to the well-known cheese made from a mixture of goats' and ewes' mill. It is firm and dry, and possesses cells of considerable magnitude.
Gryllus (griluas), a genus of orthopterons invecte, embracing the house and field crickets, though some also include in it the grasshopper.
Grysbok (gris'bon, grey buck': Antilope melanotio, or Calotraous melandtif) a species, of antelope found in Southern Africa. It attains about 3 feet in length, is $11 / /$ feet hlth at the shoulder, and it color in teddibt
cres. feek.
Guacharo ( $\mathrm{F} \boldsymbol{\mathrm { F }} \mathrm{A}$-charers; Ateatormis Uarpensio), a bird of the sook-ucker family, of nocturnal babite antive of Sonth Americen and foond in great numbers in certuin caves of Veneznela, Trinidad, and ellowhere. It is abont the dise of a common fowi, with a cnrred and toothed hill wings long and pointed. Their good in principally fruite, npon which they grow to fat that the Indians destroy great nnmbers for the sake of their oil or clarified fat, which is transparent inodoront, and keepp long without becoming rancld. It is called also oitbiond
Guadalajara (swaddala-hirti), tal of the province of same name, on the Henares, 44 miles northeast of Madrid. It is snbstantially bnilt, with mannfactures of woolens, soap, ear thenware, etco. Pop. 11, 144.-The province, area 4678 square miles, is mountainons, or rather forme part of an elerated plateau. Pop. 200,186.
Guadalajara, a city of Mexico, of Jalisco, in the fraittral villey of $A$ the majac, on the Rio de Santilaso; a herse and handsome city, with a fine cathedral (heing an archhithop's see), and other good buildings; a nilverity, a mint, convents, etc. Varions manufactures, are carried on, as those of silveremithe' and goldsmithe' ${ }^{3}$ wares, papper, leather, hats, pottery, cloth, etc. Pop. $101,208$.
Guadalquivir (8a-dai-k iver; var') a river of Spain abich gwadilke frontiers of Murcia, traverses Andinincia from northeast to southwest, paesing the towns of Cordova and Seville, and thereafter flowing s. s. w. falle into the Atlan. tic. Its courne is 250 miles, of which 70 miles are navigable. It abounds with fabh. Guadeloupe (gri-ielbp) one of the composed of two portions, separated by a narrow arm of the sea called Riviere Salee (salt river). The western and larger portion is Basseterre, or Guade loupe proper, 27 miles long by about 15 miles hroad.' The eastern portion, called Grande-terre, is nearily 30 miles lons hy 10 to 12 miles hroad. Guadelonpe proper is of volcanic formation, the culminationg moint being $L$ La sonfritere, 5018 feet. Grande-terre, on the other hand, is generally fiat, and of coral formation. Guandelonpe is watered by a number of small streams which become dry in anmmer. Grandeterre has only a tew uprings of brackith, undrinkable water, The cli-
mate if hot and nohenithy, with a remarkabls humid atmoaphere, and hurricance are frequent and destructive. The soil is fertile. The chief exports are ungar, collee, dye and cahinet woode pepper, manioc, tobneco, etc. The chiel town is Bame-terre. Pop. 134,000, or with dependencies (Marí Galante, Denrade, etc.), 188,112.
Guadiana ( $\left.{ }^{W}+-d i-1 l^{\prime} n t\right), a$ river of Spain, which rises in New Castile, fiows first northweat, then southwest into Natremadura, and on reaching Badajos begins to form part of the boundary between Spain and Portugal. Entering that kingdom, it finally falls into the Atlantic after a conrse of 400 miles, of which only 35 are navigahle.
Guadix (swa-dek ), a town of Southern Spain, Andalnstio, in the province and 31 miles E . F . of Granda. Said to be the firt himhop's see erected in Spain, with a bandsome cathedral, and a finely, situated old cautle, almost in ruins. Pop. $11,300$.
Guaduas (swidwas), a town, repanhlic of Colombia, remarkahle as being one of tha most elevated placee on the globe, beling 8700 feet above rea-lerel. Pop. 8000 .
Guaiaoum (pwaknm), zenus of plante, belonging to the ardial order Zyoophyilaoeea, and containing four or five arborececent speceles natives of the west Indies and the tropical parts of America. G. oficionalo has wood that is esceedingly hard, of a pale yellow color near the exterior, and blachish brown at the heart, hearier than water, and well known under the name of ifonum witce. Among other nsees it is emplosed in the construction of ornamental ar ticles of furniture, being susceptible of a fine polish. This tree yiedal the resin Guncoum Plant (Guaiknown as guaiacnm, coum offinind which either fowi apontaneously from the tree, or from incloions or perforations in the stem, or is sot hy extraction by meane of spirit from the wood. It is greenish-brown, has a balkamic odor, tante somewhat hitter and pongent, and it diteolven freely in gpirt, hatt is insoluhle in water. Its chiof use is in medicine, the recin (as well as a decoction of the bark and wood). acting as a attmulation in chronice rheumer
them, and beine nsed also in gout, mero Iula, yphilis, ete Cuslegas: (he Arcentife Republic prov. Entre Rion, on Fiver of tame name. Pop. 9000.

## Cuslegwayahn ( 5 whe-jwi-ch $0^{\prime}$ ).

 rentine Republic. Pop. 15,000.Guam (gwam), Guaban, Guajan or Iadrone Islands, acquired from Spain by the United States after the Spanish-Amer ican war. It lies in the North Padic Ocean, lat. $13^{\circ} 30^{\circ}$ N., lons. $145^{\circ}$ B. It has an area of about 200 square miles, is mountainous in the sonth; low and of coral formation in the north. The chief porte are Agana (the capital) and San Luis de Apra. The island is well wooded, the soil, Pertle. Bread-fruit, cocoanut, nce, sugar and indigo are cultivated. Pno. about 13.000 .
Guan (got an a gallinaceous bird of Penelope. The sides of the head and front of the throat are naked and watthed. The guans are natives of Sonth America.

## 

 a small fertile plain among rocky bills, five miles east of Havana. Pop, about 15,000.Guanaco (gwin- ${ }^{\prime} k \delta$ ), Auchenia huruminant, closely akin to the llama, alpaca, etc. It is believed to have been the progenitor of the domesticated llama and alpaca.
Guanajay (swi-nainh), a town of Cuba, 33 miles w. 日. W. of Havana and few miles from the coast. Pop. 10,000. Guanajuato (gwty in ion wisto), a tal of the state of the same name, 160 miles northwest of Mexico, is situated in a narrow defile, hemmed in by mountains, at the height of 6800 feet above the sea, with steep irregular streets, but wellbnilt houses. Pop. 35,147. The state is situated in the center of Mexico; area. 11,411 square miles ; pop. (1910), 1,075,270 . Its mines, once the richest in the world, still yield a large amonnt of zold and silver. The surface is traversed by the Cordiliera of Anahuac, 7000 feet high. Guanches (gn-an'chez) the aborigi-
nes of the Canary Islands, long ago extinct as a separate nation, although Guanche blood probably flows in the veins of many of the present inhabitantes They posseswed hish moral
and phytcal gualitice. Ther prectiod the embelming of the dead the few wrocth of their linguase which remalin moom cot nate to the Borber tonive.
Guano ( wan -no; Perurian hmano, dons), a valuable manure conainting of the partially decomponed and dry excrement of fisb-eating yee-birds, which has in some places accumulated in greit massel. The name hat been also extended to accumulations of a similar kind from land birds, and even from bata in caverns. Owing to the fact that rain washen such depomits away, srent accumulatione of guano erist pripelpelly in hot and dry tropical reciona. The most important of all were the depoift on the Chincha Islands off the coast of Peru, which yielded a considerable revenue to the country, bnt are now quite exhausted. From 1888 to 1872 about $8,000,000$ tons were sot from these islands. The guano which was found there was from 60 to 80 or 100 ft . in thickness, and was entirely due to the droppings, acenmnlated for many asen, of the innumerable sea-birds which make these islands their resting-place and breed-ing-gronnd. Other depositis of less extent have from time to time been found, and Peru still remains the chief source of supply, its deposits being now, however, worked under the Chilean gnvernment. Gnano varies extremely in composition, but it may be ronghly divided into nitrogenous and phosphatic. The first of these contains about 21 per cent. of ammonia. This is the case with the Peruvian variety, which contains almost all the inorganic matter required by a plant, and that in a highly available form, so that it is looked upon as one of the best of all fertilizing agents for difierent crops. Its nse as a manure was known to the native Peruvians centuries ago, but no attention was paid to the accounts by modern travellers of its wonderful efficacy until A. von Humboldt brought some to Europe and had it analyzed. It began to be brought to Europe abont 1846. It is used raw or in its natural state, but most of the phosphatic gnanos (some of which bardly deserve the name of guanol require to be dissolved by sulphnric acld before using. There are also manures known as fioh ouano, prepared from fish or fish refuse, Resh guano, blood guano, etc. Large gnantities of fish guano are made in the United States, the menhaden being the fish used, and the oil being extracted before the fish are ready for conversion into manure. Fish guano is also at the present time largely made in Europe. It is an excellent subutitute for the natural suana.

Cuantanamo (wim-cinil-mb), of dex Earradiso, a town of Eantiago de Ouba province, Ouba, 38 millen 2 N. $\mathrm{E}_{\mathrm{n}}$ of gantiacto de Oube (direct). It has radlroad connection with the man and is in the midat of an extenaive coiteo-growing dif trict. Guantanamo Bay is an American naval station. Pop. about 8000 .

## Guapore (iva-po'ra) or ItENE? a

 which rises in the Brasilian province of Matto Gromo, and after a varied courve of about 500 miles, unites with the Mamore in forming the Madeira.Guarana (gwd-ra'nd), or Brazmitan COCOA the seeds of the Panlinia sorbilis, a \&outh American tree. It is extensively used as a beverage and contains twice as larse a proportion of caffeine as coffee.
Guarani (swlu-ri-né), tribe of abo-
ricines, once apread widely through central and southern Brasil, Paraguay, Bolivia, Argentina, and Uruguay. Their migratory movements, the most widespread among South American aborigines, were peaceful, and, including the kindred Tupi, they may be sald to have comprised the major part of the eastern Amasons.
Guarantee (gar-an-tef), in law, an person binds himself to answer for the failure of another. In the United Statem no person is liable on any special promise to answer for the debt, default, or miscarriage of another person, unless a written agreement, or some memorandum in writing for such purpose, shall be sicned by the promiser or some other party law: fully authorized by him. It is a general rule that the surety shall not be bound beyond the express words of the angagement.

## Guardafui (fwirdde-wes), Caps, or llas Jerdarcois, the most

 Eastern point of Africa, at the e:trance of the Gulf of Aden, a frequent scene of shipwreck.Guardian (gardyan), in law, the capable of directing themselves, and efpecially of infants, that is, persons under 21 years of age. He is entitied to the care and custody of the person of his ward. If he spends more than the intereats and profits of the estate in the maintenance and education of the ward, without permision of court he mas be held liable for the principal thus consumed. Guardianehip lasts until the ward has attained the age of twento-one. Truat companies have now
largely entered into the bualoens of guardlanahip, a custom which adds greatly to the marety with which entater are handled.
Gamrian Angel, the angelic some, is supposed to watch over every human being with a view of prewerving him or her from moral ovil. The notion is besed on Gen zivill, 16; Matt. xvili; 10, and Heb. i, 14

## Guardians of the Poor, in Eng.

 permons elected by a parish or union to manage the affairs of the poor. Bach ratepayer hat one or more votem in proportion to his property, the maximam being twelve. The cuardians have the management of the workhouse, and the maintenance, clothing, and rellef of the poor.Guards (sardz), troops whose duty in to defend the perwon of a ruler. In modern times the term guerd has been uned to deaignate corpe diftinguished from the troops of the line by superior character, or only by rank and dress. Among the mont famous guards were those of the rulers of France. The Scottish Gnards of Charles VII (see Garde Ecossaise) and the Swis: Guards (see Gardes Suiges), enrolled by Louis XIV, have acquired 'hintorical importance. Under the latter monarch the Royal Guard amounted to $10,000 \mathrm{men}$. In 1789, when the revolution besan, all the branches of the guards amounted to about 8000 men. The Imperial Guard was formed by Napoleon I in 1804, and in 1812 it a mounted to $\$ 6,000$ men. His guards were almost completely annihilated at Waterloo. The Imperial Guard waa revived by Napoleon III in 1854, and took part in the Crimean war ; but in the Franco-German war of 1870-71 its career was closed at the su:render of Metz. The guards of Frederick the Great of Prussia were of distinguished courage and remarkable height. The German guard now forms a complete army corps, and one of the finest bodies of troops in Europe. In England the guards, otherwise called the household troops, consist of the Life Guards (1st and 2d), the Royal Regiment of Horse Guards, and three reniments of foot suards, namely, the Grenadier Guasis, the Coldstream Gnards, and the Scots Fuillier Guards. The 1st and $2 d$ Life Guarde, and the Royal Horse Grands stand at the tead of the cavalry of the conntry as the three regiments of foot suards do of the infantry. In time of peace ther constitute the garrison of London and the suard of the sovereisn at Windeot.

## Guard-ship, <br> 

 the marise affairs in a harhor, and to vicit overy nicht the ahips of war which are not commicoioned; whe also uctes an a depot for ceamen ralied in the port until appropriated to other vemela.Gnarini (fwirtins), GIovarini Battieta, an Italian poet, was born at Berrara in 1597 ; and died in 1612. After having studied at Ferrara, Pisa, and Padua, and lectured in his native city on Aristotle, he entered the nervice of Duke Alphonso II of Ferrara, who sent him on various important minmions. Having loat the favor of the prince, he retired into private ilfe hut was recalled in 1085 to the amice of secretary of state. Two years after he retired a aecond time. In 1597 he eatered the mervice of Ferdinand 1, prand-duke of Tuscany, which he soon quitted. His propensity to litigionsnesa necemultated his renidence at Venice, Padua, and Rome. In 1005 he weat an an ambasador of his native city to the court of Rome, to congratulate Paul $V$ on his elevation. He died at Venice. Guarini it one of the mont elegant authors of Italy, an if especially shown in his Pastor Fido ('Faithful Shepherd'), a famous paftoral drama.
Guarneri (swar-natre), the name of an Italian family belonging to Cremona, distinguished for its akill in violin-making. The most celebrated of the family was Gluseppe, whose best instruments belong to the years 1690-1707. Guastalla (Eway-thlia), a small town which, in the sixteenth century save its name to the dominion of the Gonzagas, dukes of Mantua.
Guatemala (swh-te-mina), a republic of Central America : area estimated at 48,200 square milea population, $2,119,000$. It is in general exceedingly picturesque, and distinguished by a luxuriant and varied vegetation. It is wholly mountainous or elevated, the main chain of the continuation of the Andes traversing it southeast to northwest, and sending off numerous branches. Along the main chain are a considerable number of volcanoes, several of which are said to be active-as Fuego and Agua ( 14,890 feet high), which sends forth torrents of water. The state is well watered by numerous streams, none of much importance. There are several lakes, the most important being Dulce, through which a great part of the foreign trade of the state is carried on; Amatitlan, Atitlan, and Peten. On the sableland, of which a considerable portion of
the atato is formed, the climate is milld; but in more elovatod situations the cold is intencer cyoso is much valuable tim. ber. The coll generally is of great fertilito producins according to altitude, moll, etc, maize, what, rice, coike, cotton, tobreco, augar, cochineal, cacao, indiso resetablem and tropical fruition in great rariety. Wihre plants are numerous, including ramie, henequen, and otherm. The mont important product is colfee, and the other chief exports are gking, caoutchouc, cochineal, wool, etc. The trade is chiefly carried on with Britain and the United Statem. In the eltoe or mountainous parts of the northwest conaiderahle focks of mheep are raised, the wool of which is manufactured into coarme fabrica But the manufacturing industries are very inajgnificant, and trade is hindered by the paucity of roads and railwaya. Only about a third of the population are of European or mized descent, the reat being Indians of the Astec, Toltec or Maya races, mostly speaking their own mative tongue. Numbers of the Indians are atill quite uncivilized. Great attention is now being pald $t_{1}$ ) education, the chilidren, even Indlans, in mall and remote villagee being cumpelled to attend school. The capital is Guatemala la Nueva (New Guatemala). The chief port is San Jose on the Pacific: Champerico on the Pacific and Livingaton In the Bay of Honduras are the other porta. The legislative power is reated in a national assembly elected fur six years by univerual sulirage. The executive is vested in a president, elected for four years. GOATLMALA Ciry, the capital of the republic, is situated about 6000 feet above the sea and had a populativn of 120,000 in 1916. It was almost completely destroyed by a series of tarthquakes that occurred in December, 1917, and January, 1918. The first capital of the country-now known as Ciudad Viega -was overwheimed by a volcanic eruption in 1556. The second capital, Guatemala la Antigua, was situated about 25 miles west of the present capital. It was destroyed by an earthquake shock in 1774, but was rehuilit and now has a population of about 7000 . It is locally celebrated for its thermal springs.
Gusva (swha), the popular name for plants of the tropical senus Poidium of the nat. order Myrtacese. P. Gueisva (the guava tree) is a mall tree, with square branches, egeshaped leaves, and large white axillary flowere, which are succeeded by feshy ber ries, which are either apple or pear shaped in the two principal varieties. The polp is of an agreeable fiavor, add
of this fruit in made a delicions and wellh hnown jelly. These is alco a product called guava chece.
Gusviare (wh-whra), a river of the Orinoco: length, 800 milem Gasyaquil (milthal') a city and the Guayagull, here about 2 milcu wide, come 10 mile above ite mouth in the Gulf of Guaynguil. Bebiod the town is an extonalie marah, which renders it unhealthy. There is aleo a deficiency of water but the town if improving and has already street cars and telephones. It is the chief port of Ecuador, and one of the best on the west comet of Soutb America. Ite principal exports are cacao (to the ralue sometlimes of $\$ 5,000,000$ ) cortee and ivory-nuts. Pop. estimated at 80,000 .
Guayre (swird), La, a seaport in rounded by mountalas and precipices. It curries on a conslderable trade, and exports coflee, cacao, etc. Pop. about 12,000.
Gubbio
(sub'i-s; ancient Iguoium), province of Umbria. It is in op the see, and bas manufactures of sill d woolen stuith. Here were discovered the Eugubine Tablee (wblch eee) in 144. Pop. 630.

Guben (8otben), a town in Prumia, province of Brandenburs. Brewing, djelng, and tanning are carried on, and there are manufactures of woolen and linen cloth, tobacco, etc. Pop. 36,681. Gudgeon (gujum; Gobio), a frechcarp family (Cyprinida). It bas short dorsal and anal fins, without spines; on eacb side of the mouth there is a mall barbel; nelther jaw is furnicbed with teeth, but, at the entrance of the tbront, there are tivo triangular bones tbat perform the ofice of crinders. There fish are taken in sentle itreams, and measure only about 6 incbea.
Crudrun (sudrun), a celebrated longing to the end of tbe twalifth century, receiving its name from lt heroine Gudrun, daughter of King Hettel of Herclingen. Hettel is defeated by Hartmut, son of King Louis of Normandy, wbo carrien Gudrun ori, and on her stendfast refusal to marry bim, has har subjected to varions klads of ill treatment, and in particular lets his mother keep her for years ongased in the lowent risds of drudgery. At last she is ret louned ind revenged br her brother and her butrothed, Eing Horvis of Seeland.

The poem alco deals with the forturee of Gudrun's father and mother, grandfathes and grandmother, otc., and the scome is pertif in North Cormany, Denmark, Frimiand, partly in Ireland and Nor: mandy.
Guebres, Gurames (rsberr), a namo given to the fre-wormippers of Peralan reprecented in India by the Parnees. The original Guebrem or followers of Zorometer are now reprecented almont solely by thove who inhablt tho cldie of Yed and Kirman and the adjoinlng villagee. At present they number only about 7000. As mupreme delty they recornize Ahuramasda, or Ormuzd, the principle of lisbt and source of all that is sood; and bis opponite and antagonist, the evil principle, the latter calied Abriman. Ther believe in tbs exintence of bearen and hell, between whicb stretches the Bridge of the Gatberer or Judge; over this none but the rishteous may pana. Among their leading practices may be mentioned their refusal to contract marriages with those of other creeds ; thelr objection to eat beef or pork, or to partake of anything cooked by one of another religion, etc. They regard Ahuramasda at the source of lifht, and in their temples they feed the altarm with perpetual fire, and hince their name firewornhlppers; but ti. 'n not revere it except as a symbol of $i$ ity. When, in 651 A. $D_{1}$, Yexdegird, $L_{1}$ last of the Samanlden, was defeated by the Caliph Omar the majority of the Pervians embraced Islamicm. Those who continued Zoromatrians recelved the name of Guebres or infidele, and were subjected to permecutions so severe that the majority emigrated to Indic, where they became known as Parseen. See Parsees.

## Grelderiand (sel'der-lant). Soe Gelderland.

## Guelder Rose (f: der ), or Guxt.

 DiE 3 Rosis, a name siven to the culdfatei variety of the Viburnum Opulus, or 5 ..er elier, of the order Caprifollacea. On account of tbe sbape and color of its fiowers it is sometimes called the 8nowball Iree. Itm fruit is of a pretty red color.Cuelf (gwelf), or Gumiph, the name of a distineuished princely family which originated in Germany, but was also at one time connected with Italy, and which still fouriahes in the two linen of the house of Brunswick, the rojal (to wbleb the reigning family in Britain belonga) and the ducal. The firut who bore the name is aaid to have been Well, the son of Isenbrand, whose srandfather mas a receal of Charlemagne. See Brusucidiol (Eamily of) and Guelfe end Ghrowinue.

Gualfs and Ghibellines, $n$ a me: grent Italian political partios in the 18th and 14th conturlem The namen are derived from the Italian Guols and Ghibollunh which are corrupted from the German Welfon and Wriblimpon Thee hat ter words came to be nued tes party dents. nations in Germany, in the war betwicen Henry the Proud and Conrad of Bobengtaufen, to whom belonged the cetate of Waiblingen in Wurtembers. About the year 1200 the deviruations Gnelf and Ghibelline came to be employed to denote respectively the Itallan patriotic and papal party, and the pasty wilch supported the domination of the German emperore in Italy. After the fall of the Hobenstanfen the Gbibellines became the partizane of aristocracy, and the Guelf the partinans of democracy qud Hberty ; bnt the denignations ultimately denoted mere communal and family fende and Dente, orifinally a Guelf, bat subseqnenty a Gbibeliline, a coerted that the two partien were the cause of all the mimeries of Italy. The contert continned with bitterneme for almont three bundred yearr. Corresponding partien appeared in Italy nnder many difieront namem as the bianoht and neri (white and black) in Florence, etc.
Guelph (swelf), a town of Canada, farming diatrict, 45 miles w . of Toronto with mannfacturen of woolens, sewins: machinet, and agricnitural implementin, and a model farm kept no by the provincial government Pop. (101i) 15.148. Guercino (wer-ciénb). See Bar Gnereza, or GUwazs (ser'e-za, ger. species of montes remarkable for its beauty, inhabiting the monntaing of Abjasinia. Short, glowey jet-black fur covers its limben, back, and bead, while a long fringe of silky, white hair dependa from the \#lank. It trequents lofty trees. Guericke (ger'ilee) OTTO vor, a Magdebarg (of erman physicist, born at master or mayor) In 1602: died at Hamburg in 1886. Abont 1650 be invented the air-pump, with which he made pnblle experiments at the diet at Ratisbon, be fore the Emperor Ferdinand III. His most important observations, collected by bimself, appeared at amsterdam in folio (in 1872).
Guérin (fa-rap), Jean Baptistz, born at Tonlon in 1783 : died at Paris in 1855. He painted portralte and historical subjects, lifs chlef pictares are the fol-
lowiag: Oof 4 focr tho Death of 4 bel , Tao Deed Ohrtar, 4 dom end Evo Divien onis of Paradioo, Anmo of Aucivic and Her Bume, atc.
Grermiey (straist) the socond larget and ment mootern of the Channel Ioland, Ying off the north conat of France, 40 miles from Oherbours, and about 08 millen from Brart Point in Devonalifer. It is of a triengular form. about 9 milies long, and 8 to 4 milice brond. The northern part in lovel, the southern more elovated, coast lofty and abrupt, the illand being almoot entirely of granite formation. The climato io extremely henithy; noow is rare, and frosten llyht and of short continuanoe. The soll in lertile. The breeding of cattle and the dairy are the principal objects of attention: and the butter made if highly cotcoemed. Horticniture and fortculture aleo recelive moch attention, and frait, aspecially figs and grapen (the latter jrown under glame), if very abnndant. The srape. housen are further utilised for the rinions. of early reretablen and tomatoen, which are sent to the London market. The principal exports are cattle (the dairy cows being renowned), truite, vegetables in the eariy spring; sranite tor paring, eto. The dialect of the firland fin the pnre Norman of mome centuries aso; bnt a knowledge of English is zeneral. The principal place of education if Emizabeth College, at St. Petor's Port, the capital, and only town in the island. Steamers ply resularly between Guernacy and London, Sonthampton, Plymonth, and Weymonth. The filand if nuder a liontenant-sovernor, Who reprements the soverelgn in the assembly of the stated, a kind of local parliament. It is atron lis fortfied, and has a well-organized militis. Pop. 40,477. See Channel Iolande.
Guernsey Lily, Nerine Sermiensis, with parple red flowern, native of South Africa, tamily, Amaryilidacers, no called from some of its bnlbs belas cast np in Gnernsey from a wrected ship and there taking root. Thert are ceveral other specles also called Gnernsey lillem
Gnerrero ( Hexico; area, 24,227 sq. milem. It surface is finely diversified by monntain and valley, and partly corered by native forests: and it is ricb in minerals, inclnding gold, silier copper, and iron. The principal port is $\Delta$ capalico. Pop. 470.205, mnetlo Indlans.
Guerrillas (kerlias in Spanish go siven in Epain to light, irresular troops consinting chiefly of peasants who fonght againot the favadiag Erench in the parly
part of the prow at ceatury. The mame hat now breome quite a general term for auch irregular troopm, and hate traveled $\mathrm{tan}^{-}$beyond spain, ruecbing pretts moch the entizo world.
Guenolin, Brerimand dv. Soo Dw Cuent Gueselim.
(gow ; Fro 'bagass'), name siven in dericion to the allied nobles and other mellcontents in the Netherlapde who renited the deapotinm of Philip 11, in 1000-67. The Count of Brinalmont having termed the malcontenti Quoua, they adopted the name, and a suitahle badse called the "begsaris donier.' They were totalily diaporned in

## 1507. <br> 

 Luse Vexers DE A Spanith drematic poet, born in 1570; dled in 1644. His literary fame resto chielly on bis Diablo oojuelo (' Lame Devil') which sugrented the famous Diable Bottens of Lo saje.Guglielmi (syl-yel'me), pierro, an Italian componer, horn 1727; died 1804. He componed comic and heroic operas for the Italian thentre, vit ited Vienna, Madrid, and London, and afterwards returned to Naples, where he became the rival of Prealella. In 1783 Pius VI named him chapel-manter of St. Peter's. He left more than 200 piecen, remarkable for their aimple and beactiful airs, their rich harmony, and their apirit and oricinality.
Cuiana (stan'a), Bamish, a colAmerice, ony in the north of Sonth America, about 660 miles lons and 200 milles broad, bounded m hy Dutch Guiana, W. hy Venesuela and Brasil. N. and N. I. by the Atlantic and 8. by Brasil; eattmated area, $109,000 \% \mathrm{q}$. miles. It is divided into three gettlements-Berhice, Demerara, and Esseguibo The ccast tract forms a dreary belt, 10 to 40 milles broad, of mad-banks and shallows, and when drained the surface sinks 1 foot below the sea-level, hence strict attention mnst be paid to dams and slnices. This ailuvial deposit is succeeded by a ranfe of low hills not exceeding 200 feet in height. The interior is traversed in various directions by chains of hills or mountains. On the western boundary is the singular flattopped and almost inaccemrible mountain Rrimima, rising to a height of 8600 feet. The remaining mnnntains do not reach more than 4000 teet elevation. The most valuable mineral product is gold, the mining of which has been actipe since 1898. Diamonds are also tound. The chief rivern are the Beaequibo, Demerara, Berbice, and corentyn. The climate, thongh molat and warm, is not on the whole nn-
healthy. Cultivation if condmed to the const region; the coll is very fertlio, and much of $3 t$ well adapted for the augarcane the cultivation of which is mostly carred on hy Indian and Chinemo coollch. Guiana almo producem coftee, tobaceo, indiso, ste. Vegetation is mingularly luxuriant, and the fortet-trees are of the mont

magnificent dencription. Erruita, medicinal plants, fibrous regetables, dyoing woods etc. abound. The flora includen the Viotoria Regia, the largeat of the water-liliem Amoag the animals are the jaguar tapir, armadillo, aloth, vampire bat, alligator, etc., and many species of biris, such as humming-birds, parrots, etc. Snakes, some of them venomous, and tronblenome insects are namerous. Guiane has two dry and two wet seasons, each continuing for three months: December, January, Fehruary, June, July, and Angust, constitute the wet season, the other months of the year the dry. The mean annual temperatnre is nearly $81^{\circ} 2^{\prime}$. Violent thunderstorms occur at the charge of the seasons; but the hnrricanes, so destructive in the West Indies, are unknown. The trade is concentrated mainily in Georgetown, the capital. Sugar, rum, and mo sases are the principal exports. Guiana ras ilist settled by the Dutch abont 1 3. It was taken hy the Britich in 1783, in 1796, and again in 1803, and later it was definitively given un to them. Pop. 301,623 ; a great proportion boins of African race or coolies from India.
Guiana, Doror, or Sumival, America, intuated between Enalish and French Gniana; area, abont 48.070 ea. miles. The reveral supect is the mame with that of Brition Grianerat and
awampy on the coast, and mountainous in the interior; well watered by pumerous streama, and of which the Surinam and it: amuents are the chief. It hai also a similariy warm, moist climate, and is very fertiie. Only a small part of the colony is under cultivation, the products beins nimilar to those of Britioh Guiana. On the Surinam River, about 10 miles from its mouth, is situated the capital, Paramaribo. The principal exporte are sugar, coffee, molasses, and rum. The gold washings are of considerable valne and crushing plants have been introduced. The government is vested in a governor-seneral and council. Pop. 84,103.

## Gniana, Franci, E'rench colony

 Dutch Guians and Brati 35,000 equare miles. This territory resembles British Gniana in its physical features, climate, and vezetable productions, with the addition, in the latter case, of pepper, cloves, cinnamon, nutmes, etc. The colony comprises the island of Cayenne, celebrated for the pepper bearing that name. Gold has alno been found in considerable quantities, and of late gold washing has been the chief inanstry and has proved very prgitable, the annual yield being nearly $\$ 2,500,000$. The French are said to have first mettled in Cayenne in 1604. Pop. 32,908. Guiana Bark, the bark of Portorder Cinchonacese, considered to posseses great value as a febrifnge. Guicciardini (gwe chir-déns), ian historian, born at Florence in 1482 ; died in 1540. He became professor of jurisprudence at Elorence, and held Various pnblic appointments. He began in 1534 his famous History of Italy-Dell Istoria di Italia-which embraces the period $1490-1534$. It has been translated into English. Guides (gidz) in an army, persons ance with selected or their acgnaintwhich the army topography of the place in to conduct the army or detachments of it to any place which has to be reached. The name of 'guides' is sometimes given to troops without any very specific meaning. In the Indian army it is siven to a regiment of cavalry and infantry attached to the Punjab Frontier Force. Guido Aretino (swédi d-retes. Arezzó, an Italian monk, celebrated for his skill in music, flourished in the eleventh century. He was a native of

Arezzo, became a Benedictine mank, and finally prior of Avellana, where he died in 1050. He invented the musical stafif of lines and spaces (or at least systematized their use), and be introduced the names of the first six notes of the scaie, $u t, r e$, mi, fa, sol, le.
Gridon (gi'don), the little flas or standard of a troop of cavalry.
Guido Reni
(gwédod rå'ne̊), a celebrated Italian painter, born at Bologna in 1575 ; died there in 1642. Being the son of a musician, he devoted some time to the study of music, but, as painting seemed his true vocation, he was piaced under the tuition of Dionysius Calvaert, and subsequently joined, in his twentieth year, the school of the Caracci. In 1602 he visited Rome, and having seen the paintings of Caravaggio, he imitated his style. At the request of Cardinal Borghese he painted The Crucifixion of St. Peter and the Aurora. He was also employed by Paul $\mathbf{V}$ to paint a chapel on Monte Cavallo, and one in Santa MariaMaggiore. Guido's paintings are senerally considered as belonging to three different periods. His earliest pictures, after the style of Caravaggio and Caracci, display powerful contrasts of light and shade. His second manner exhibits light and agreeable coloring, with little shade. His third period is marked by careless haste. Having quarreled with Cardinal Spinola, the treasurer of Urban VIII, he left Rome and returned to Bologna, but was snbsequently recalled. In 1622 he removed to Naples, bnt, after a brief atay, returned once more to Bologna, never to leave it again. Among his most famous works may be mentioned his Aurora, his Ma idalene, Michael Vanquishing Satan, Lot and his Daughters, his Fortune, etc. Guido was also celebrated in his own day for his etchings, but his works of this class have now snnk very much in value. Guienne, or GUYENNE (gè-en'), an of Gironde, Lot, Lot-et-Garonne, Dordogne, and Aveyron, with part of Landes and of Tarn-et-Garonne. The capital was Bordeanx. It fell into the hands of the English in 1152, was nearly all conquered by Charles $V$ in 1377, reconqnered by Henry $V$ and Henry VI, and finally annexed to France in 1453.
Guignet's Green (genya), a pigment prepared by heating in a reverberatory furnace a mixture of three parts of boracic acid and one of bichromate of potassinm, made into a thick paste with water. This color is guite fized-it does not aiter by Hyht
or reapants, and it is quite harmiens, 0 that i: orms an excellent suhstitute for the greens which contain arwenic and copper.
Guild (gild), a society or association for carrying on commerce, a handicraft, or some other undertaking. Such associations are known from very early times in various countries. The societies of tradesmen exclusively authorized to practice their art, and governed by laws of their own, played a very important part in the middle ages. They often formed a hulwark against the oppression of the nobility, and were thus extremely conducive to the growth of municipal and civil liberty. Traces of these trade societies are found in the tenth century. In Milan we find the mechanics united under the name credentia. At Florence the trades were federated into twenty-one guilds or arti. These originated in 1282, on the overthrow of the nobility, and every candidate for citizenship was obliged to enter some particular guild. Such a step be came a necessity at a period in which individual rights, as such, failed to secure respect. The purely Teutonic guilds, although connected with the constitution of the cities, possessed certain peculiarities. In the thirteenth century the German guilds of craftsmen obtained the right of defending by arms their own interests, and hecame so powerful that persons unconnected with a trade were often glad to attach themselves to them. As illustrations of the manner in which associations originaliy instituted for defensive purposes hecame the mainstay of a tyrannical monopoly mas he mentioned, the frequent withholding of permission from more thnn a certain number of master mechanics to reside in one place, the restrictions placed upon particular branches of industry, and upon the free exercise, by each individual, of his trade except under the sanction of the guilds. With the view of destroving the political influence which they had acquired the Emperor Frederick II aboltshed them by a decree issued in 1240; but the decree remained without effect, as did also the clauses inserted with a similar view into the Golden Bull in 1355, and it was not until the last century that unrestricted freedom to practice any trade was established in the German states. In Austria this was done in 1860, and in 1868 it was done for all the states of the North German Confederation. In Britain trade gnilds long posseessed an importance which was mainly political. As the right of roting was involved in the membership of a gulld, many perwons,
not mechanich, acquired the rights of 'freemen' hy connecting themselves, with some body of this kind. Thene guilde, in Enginnd, had no legal right to prevent any man from exercising what trade he pleaved. The only restriction on the exercise of traces was the statute of Elizaheth, requiring seven yeare' apprenticeship. This the courts held to extend to such trades only as were in heing at the time of the passing of that statute; but hy an act passed in 1835, every kind of restriction on artisans, trades, etc., was abolished. The guilds or companies of the city of London (among the oldent of which are the weavers, founded in 1104; the parish clerks, in 1232; the saddlers, in 1280; the fishmongers, in 1284) are still very important corporations, which give relief to poor and decayed members, and also manage vast funds hequeathed for benevolent purposes. Besides the secular guilds there were from a very early period, in Britain, relifiouz guilds. From the time of Henry Il all such guilds were required to have a charter from the crown. In 1388 a return of these guilds was ordered to be made, and it was then found that that of Corpus Christi, York, numbered 14,800 members. The property of the religious guilds was sequestrated in the reign of Henry VIII. In France guild-privileges were sold by the state from the tenth century till the revolution of 1789, but at that date guilds were entirely abolished. This was done also at a later period in Belgium, Holland. Italy, Sweden, and Denmark. Many of the tradesunions have now somewhat of the character of the ancient guilds.
Guildford (ging furd), an town of
England, town of Surrey, on the Wey, a wellbuilt and thriving place. It has an ironfoundry, corn, paper, and powder mills, and an important grain market. Pop. (1911) 23,823 .

Guildhall (gildhal), the city hall of
London, Cheapside, first huilt in 1411. all but mnsumed in the great fire of 1686; and in 1689 rebuilt. The frort was not erected until 1780 . The most remarkzhle room is the hall. 153 feet long, 48 broad, and 55 high, used for city feests, etc. It contains the curions wooden statues of Gog and Magos. In the common-council room is a coliection of pictures, some of them valuable. There is also a library in the Guildhall.

## Guillemot (Enlemot), a name of several web-footed Mntion

 bel-aging to the family Alecte or ants. The suillemots have a straigbe, comopreased, and pointed bill, covered with leathers an far as the nostrils, and have no hallux or hind-toe.

The winge are pointed and very short, the legs also short, and placed far back. They live on fish, and build on precipitous rocks adjoining the sea. The common guillemot (Uria troile), about 18 inches in length, lays one egg; the black guillemot (U. grylle), of the North Atlantic, is maller and lays two or three eggs ; the 0 . Sopteolus is entirely white.
Guilloche (gillomh'), in Grecian architecture, an ornament consisting of straight or curved bands symmetrically interplaited.

## Guillotine (gil-lo-ten'), an engine

 one stroke-an for beheading persons at ages-adopted with improvements by the National Aouembly of France during the frist revolution on the proposal of a Dr. Guillotin, after whom it is named and still used in France. The original invention of machines of this kind is ascribed to the Persians, and similar intraments were in use in Italy and Germany in the middle ages. In the guillo-

Guillotine as ueed in Paria.
tine decapitation is effected by meant of a steel blade loaded with a mass of lead, and sliding betwesa two aprisht potts, frooved on their inner siden, the
person's neck being confined in a circular opening between two planke, the apper one of which also alides up or down. The condemned is strapped to a board, whish in the cut is shown reating horizontally on the table in front of the upright posts, but which is easily drawn forward and set upright when necessary, and again canted over upon the table and rapidy moved up so as to place the neck of the condemned within the semicircle of the lower plank, the other being raised for the purpose. On the right of the table is a large basket or trough of Ficker-work for the reception of the body. Under the place where the bead rents is an oblong trough for its reception. The knife in fixed to the cap or lintel on the top of the posts by a claw in the form of an 8, the lower per, of which opens as the ppper part closer. This claw fe acted upon by a lever, to which a cord is attached.
Guimaraens, or Gumaras ( $\mathrm{g}_{\mathrm{e}}^{\mathrm{e}} \mathrm{m}$ rüns ${ }^{\circ}$ ), a town in Portugal, province of Minho, strongly fortified and well built. Pop. 9104.
Guimaras, an is sland of the Philippines between Panay and Negros. It is about 24 m . long, and is mountainous in the w. (highest peak, Mt. Jaljat), and flat in the s. Pop. 20,000 .
Guimbal, pueblo, Iloilo, province, s. pines, 65 m .8 .8 of Panay I., Philipwoods m. 8. 8. W. of Conception. DyeWoods and woven fabrics are exported. Pop. 11,000.
Guindulman, a town at the southhol Isiand, Philippines. Pop. 12,000. Guinea (gin'e), a geographical divicluding then of Western Africa, including the Atlantic coast-line and an indefinite area of the interior between the frontiers of Senegambia and Cape Negro, or Cape Frio (where German territory now begins). It is divided into two districts, lying north and south of Cape lopez ; the former, called North or Upper Guinea, includes Sierra Leone, Liberia, the Grain, Ivory, Gold, and Slave coasts, the states Ashantee, Dahomes, Benin, etc.; the latter, called South or Lower Guinea, includes Congo, Angola, and Benguela. See the separate articles.
Guinea, an English gold coin worth first coined in the reign of Charles II (1683), of gold from Guinea, and bore the figure of an elephant. Its value ranged at different times from 208 up to 303 , until, in 1717, it was fixed at 218. In 1817 the coin was withdrawn from circulation. Ic is, however, still customary to estimate professional honoraria, eto, in suineas. pper The Thish tally ostis, and train pidy 5 of e of tised the of ody. th The the form 15 as cted at mis. Porified

Guinea, Gun or, that portion of the shores of Upper Guinea, between Cape Palmas and Oape Lopes, and including the bights of Benin and Biafra. The islands of Fernando $\mathrm{Po}_{0}$, Prince's, and St. Thomas, are within this gulf. Guinea, Niw. See New Guinea.
Guinea-corm, a name given to rains aiso called millet, one of the States it is cuitivated nnder the name of broom-corn.

## Guinea-fowl,

or Pinicado, a genus family Phasianide of gallinaceous birds, aliy all natives of Africa. The common guinea-fowi (Numida meleagris), now weil known as a domestic fowl, has a slate-colored piumage varied with round white apots. It is about the size of a common fowl, and is of a noisy and guarrelsome disposition. Its eggs are

Guinea-fowl (Numida meleagrin).
enteemed. Among the other species of guinea-fowl may be mentioned the $N u$ mida vulturiva (or Acryllium vulturinum), by far the most beautiful of them all, with somewhat vulturine head and neck; the Numida miträta, found in Kaffraria and in Madagascar and the Numide cristäta, a native of the Cape of Good Hope.

## Guinea-grass (Panicum maximum),

 grass, a native of Africa, of the same genus with the millet, often 6, and sometimes even 10 feet in height. It has been naturalized in South America and the West Indies, and largely cultivated for fodder. It does not perish even in the temperate zone, but there it is not so productive as in warmer ciimates.Guinea Pepper (Xylopia aromatof the same family with the custard apple. Its fruit, consisting of ciry car: pels, is used as pepper, 'Negro Pepper.' The term Guinea Pepper is often used as Malaguetta. It is also a common desis:
nation of Ocpsioum frutescens. See Oaysicum.
Guinea-pig, a well-known rodent dx or Cavi Thammal family care dom car the domentic apechmen is sometimes regarded as dencended from Caria aperea, and sometimes termod Cavie cobays. It is a native of South America (like the other cavies), and 50 sembies the pig only in itt grunting voice. It is a timid little animal, extremely pro lific, and it feeds on vegetabiem especially parsiey, bread, grain, etc. It is very destitute of intelligence.
Guines-nlum, the fruit of a Weat African tree, Perinarium eaceloum, order Ohrysobalanacees, growing to the height of 00 feet.
Gnineg-worm (EilariaMedinensis), a parasitic worm of the order Nematoda, white, of the thickness of pack-thread, somewhat attenuated at the hook-shaped posterior er tremity. It varies in length from 6 inches to several feet, and it is found in the intertropical regions of the Old World. It is frequently found in the tissue of the human body below the aldin, and produces a painfui uicer, out of which a small portion of the worm issues to eject its eggo. It is then carefully extracted by winding it round a stick once or twice every day, care being exercised not to break the worm. The manner in which it effects an entrance into the body is unknown.
Guingamp (gap-yan) a town in France, dep. Cotet-duNord, on the Trieux; has manufactures of linen, thread, etc., and several tanneries. Pop. 9233.
Guipuzcoa (seputh'ro-1), one of the three Basque provinces, Bay of Bica Spain, bounded N. by the 728 square milles. The coast is bold and 728 sq. milies. The coast is bold and rocky, and much indented; the interior is generally mountainous. The chief riches of the province are in its minerals particularly iron, and its woods, which are used in smelting it. San Sebastian if the capital. Pop. 185,850.
Guisborough ( $\mathrm{g}^{2} \mathrm{bu}-\mathrm{rb}$ ), a town in England, in the county of York (North Riding), situated in a narrow but fertile valley, extending along the Tees. It has ropeworks and tanning. Pop. 7,062.

## Guiscard

(sis-kar), Ronime (that is, Robert the (tunting) Dult of Apulia and Calabria, a mon of Chnered de Hauteville, born in 1015. Ifs brothers, having acquired large ponies sions is Italy, Robert followed them alout

1053, and in the same year captured Pope Leo IX at Civiteila. On the death of his brother Humphrey he was proclaimed count of Apulia in 1057. He then conquered Calabria, and Pope Nicholas II made him granfalonier of the church. Having become a trihutary of the holy zee, and suppressed the privileser of the Apuiian nobility, he sent hif youngent brother, Roger, to selze Sicilj. Robert himbelf arrived in sicily in 1061, and, in conjunctlon with his brother, defeated the Sa acens at Eana. Returning to Italy, Robert conquered the towns still remainlog in the hazds of the Saracens, heing detained from 1008 to 1071 at the siege of Bari. In 1074 he was excommunicated hy Gregory VII for refusing to become his vaseai, but the ban was removed in 1080. As his daughter Helen was betrothed to the son of the Byzantine emperor, Michael VII, Guiscard, on the latter's deposition, took up arms in his favor, and defeated Alexis Comnenus at Durazzo (1082). As Gregory VII had heen meanwhile imprisoned by the invading forces of Henry IV of Germany, Guiscard deiivered the pontiff in 1084. He then went again to Epirus, where he repeatediy defeated the Greeks and, by means of his fleet, made himseif master of many of the islands of the Archipelago. He was upon the polnt of advancing against Constantinopie, when he died in the isiand of Cephalonia in 1085.

Guise (gwêz), a town of France, dep. on the left hank of the Oise. It has manufactures of textiles, iron and copper foundries, etc., and a iarge work for makins stoves, connected with which is an edfice in which live some 400 families of the working peopie. It is an ancient city and its castle gave its titie to the distinguished family of that name (see the foliowing article). Poo. (1906) 7562. Guise (gwez), a distinguished ducal the house of Lorraine. The founder was Claude, a son of Rene II, duke of Lorraine, who in 1506 became naturalized in France. In his favor the county of Guise was erected in 1528 hy Francia 1 into a duchy. He dled in 1550 , ieaving hehind him five daughters (the eldest of whom, Marie, married James $V$ of Scotiand, and was the mother of Mary Queen of Scots). and six sons-Francois, who succeeded him, Charies (Cardinal of Lorraine), Louis (Cardinal of Guise), CIaude, Francois, and Rene. The family acquired great political importance on the a ccess con of Francis II, who was married to Kary Queen of Scots. The direct line
became extinct in 1075. In 1704 the titie was revived for the house of Condé. -Two of the dukes require particular mention- Frangois de Lorbaine the secund duke, born in 1519, eariy diatinguished himself in war, especially at Metz, which he defended with success againat Charles $V$, and at the battie of Renti, 1544. In his Italian expedition $(1550-57$ ) he failed to conquer the kingdom of Naples. But he was succesaful In that which resulted in the final annexation of Calais to 'rirance. Under Henry II and Francis II he was the virtual ruier of France. On the death of Francls II the factions of Conde and Guise arose, the Protestants (Huguenots) belng on the side of the former, the Cathoilcs on that of the latter.- When civil war hroke out the Duke of Guise took Rouen and Bourges and won the battie of Dreux in 1562. He was preparing for the ige of Orleans, the central point of $1: 4=$ Protestant party, when he was assassinated hy a Huguenot nohieman, Feb., 1563. He left memoirs written hy himself.-Hensy, third duke, eidest son of the preceding, was born in 1550 . He was a bitter opponent of the Husuenots, and fought against them at Jarnac and Moncontour, and advised the massacre of St. Bartholomew (1572). From revenge he personaily conducted the assassins to the house of Coligny. In 1570 was formed the Catholic League, first projected by his uncle, the Cardinai of forraine. A perlod of civii war followed, the party of Guise proved too strong for his opponents, and having brought about a rising of the Cathoiics in Paris (May 1588), he entered the clty in triumph. He might now have made himself master of the throne, but negotlations were set on foot, and the duke's dispiays of imprudent amhition jed to his assassination in the kins 3 cahinet. Decemher 23. 1588, at Biois, whither the states had heen summoned in order finaliy to ratify the treaty that had been arranged.
Guitar ( F : tar'),

1. French Guitar of Sevcateenth Century. 2, Modern Guitar.

a stringed instru-
ment with a hoilow body, and a neck somewhat similar to that of a vioin, used easpecially to accompany the voice.

The modern or Spanish suitat has ix atrings, the three highent of gut, the three lowent of gill covered with fine wire, tuned reapectively to the $D$ in the mecond apace of the bany staff, $\Delta$ its fourth, and the trehle $D, O_{1}, B$, and $D$. The intermediate intervals are produced hy hringing the stringe, hy the pressure of the fingers of the reft hand, into contact with the frets fired on the key-board, while those of the right pluck or twitch the strings. It is extremely popular in Spain. The Spaniards derived it from the Moors, who hrought it from the East. Guizot (gezo), feangois-Prerris torian and statesman, born at Nimes in 1787: died in 1874. His father, a law. yer, having in 1794 nerished by the guillotine, his mother and her three sons retired to Geneva, where Francois was gratuitously educated at the gymnasium. In 1805 he commenced legal studies at Paris, but gradually drifted into the literary profession. In 1812 he married Mlle. de Meulan, editor of the Publiciste, and became professor of history at the Sorbonne. On the fall of the empire he obtained several puhlic offices, such as councilor of state, and director-general of the departmental and communal administration. In 1816 he puhlished Du Gouvernement Representatif ot de l'Etat actuel de la France, and Dssai sur Tinstruotion Publique. In 1820 the Duc de Berry was assassinated, and Guizot's party fell before in ultra-royalis, reaction. In 1825 he was deprived of his chair on account of the political character of his lectures, but it was restored to him in 1828. In 1829 he again became councillor of state, and in 1830 was elected deputy for the arrondissement of Lisieux. After the July revolution he was appointed minister of the interior, but resigned in 1831. After the death of Perier, Guizot, along with Thiers and De Broglie, formed a coalition ministry, and he rendered great service as ninister of puhlic instruction. He became amhassador at the British court in 1840, and next year he became the real head of the government of which Soult was the nominal chief. He retained the office of minister of foreign affairs until 1848, and during that period oppored all measures of reform. After the fall of Louis Philippe, Guizot escaped and fled to England. Henceforth he practically retired from puhlic life. Born of a Calvinist fa-sily, Guizot alwaye remained a stern Protestant of the orthodox type, although he zealousis supported the temporal authoritv of the pope. Among his numerous works may be menthoned, Histoire do la Civilisation en

France, Eietoire gónérele de ls Civiliection en Ewrope; Histoire de le Rdvolw. tion d'Angleterre; Wechington; Discours our la Rdvolution d'Anoleterro Meditetions et Etudes Morales; Guillewme to Conguctrant; Mémoires powr servir lHistoire de mon Tempe (1808-68) ; Meditatione our l'Etat Aotwel de le Re ligion Chrótionne; Mélanges Blogrephiques et Litt6raire; Histoire do France Racontée a mes Petits Enfante; etc.
Gujerat, Gujarat (gibja-rat ${ }^{\prime}$ ), or ince in Western Hindustan, Presidency of Bombay; total area, 70,038 eq. miles: pop. over $9,000,000$. The southwent portion is an extensive peninsula, with the Gulf of Kach (Cutch) on the northwest side, and the Gulf of Camhay on the southeast. The central districts form an extensive plain, but the northern and eastern districts are mountainous, rugged, and jungly. The rivers incinde the Narbada, Myhe, and Sebarnati. The climate is very hot in summer, and during the hot months the surface mostly appears sand or dust, and in the raing season a thick mire; but it is extremely fertile. Gujerat comprises a number of native states within its area, the chief being the scattered territories of the Gaekwar or Guicowar of Baroda. The population presents an extraordinary as semblage of sects and castes. It sivem name to the vernacular language of Northern Bombay-Gujarati. The area of the British portion, comprising the. districts of Surat, Broach, Kaira, Panch Mahals, and Ahmedahad, is $\mathbf{1 0 , 1 5 8}$ square miles, and the population estimated at about 4,798,504.
Gujranwála (gilj-rin-whla), a town of India, in the Punjah, administrative headquarters of a district of the same name. It has inconsiderable manufactures of country warea, such as braes vessels, etc. Pop. about 30,000.Area of district, 2578 square miles.
Gujrát (göj-rat'), a district of India of the in the lieutenant-governorship of the Punjab, in the Rawal Pindi div: sion between the Jehlam and the Chenah. Pop. abont 700,000 .-GuJro.t, the capltal, 5 miles from the Chenab, is a commercial center. Its manufactures are principally of cotton and of Gujrit ware, that is. inlain work in gold and iron. Pop. 19,410.
Gulbarga (gol-harga), a town of derabad. Pop. 29,228.
Gulden (gident: a siiver coin of Austria-Hinagary and also of Holland, worth about 40 centm 410 called a forim

## Guiedgarh trict Bombay Presidency. Pop. about

 12,000.Gules (gris), the heraldic name of the color red. It ranke after the metale or and argent. Gulfport, connty seat of Harrison County, Miseisaippl, halt way between New Orleans and Mobile. Has extensive exports of inmber and napal stores ; has railrond shops, foundries, enw mills. trucking interests, etc. Gulf Stream, one of the mont cellebrated of the oceanic currents so called because it issues from the Gulf of Mexico. It owes its orisin to the fact that the westward-moving watera of the tropical portion of the Atlantic, enconntering the enstward projection of Sonth America, become divdied into two currente, one wettug sonthwards along the Brazilian coast, and the other nortiward past the months of the Amazon and OrInoco, into the Caribbean Sea. It then enters the Gulf of. Mexico, and thence emerges through the Channel of Florida as the Gnif Stream. Its course is next to the north and eastward, in a direction parallel to the cownt of the United States, past Cape Hatteras (lat. $35^{\circ} 18^{\circ}$, along the monthern edge of the 'great banks' of Nantucket ana Newfoundland (between the meridians of $48^{\circ}$ and $60^{\circ}$ west), after which its conrse as a distinct current cannot be traced. In the earilier part of its conrse, especially when ronnding the extremity of Forida, the Guif stream forms a well-defined enrrent, distinguished by its high temperature and its deep blue or indigo color. On account of the descent of the Polar or Bafin Bay carrent along the coast in a direction opposite to that of the Gulf stream, the water on its inland side is colder than that to the eastward of it. The difierence of temperature be tween the Gulf Stream and this cold corrent sometimes amounts to $20^{\circ}$ (or even $30^{\circ}$ ) Fahr. The velocity of the Gulf Stream varies with its course. Within the Florida Channel it attains a mean of 65 miles per day, this sinks to 56 miles of Charleston, becomes 36 milles to 46 off Nantucket, and 28 miles to the south of the Newfonndland Banks; 300 miles to the eastward of Newfoundland its movement is harrlly perceptible. At the bottom of the Florida Channel the obwerved temperature is $34^{\circ}$, that of the surface from $80^{\circ}$ to $84^{\circ}$. 'Geographers have greatly exaggerated the influence of The Gulf Streame on the temperature of Ebrope. If it possemes any direct inanence such must be extremely small, as
the cenrrent in both too narrow and too ahallow, and its alisht amount of sub perior heat probably vanitiches after it has pawed Cape Hatteras. The relatively high temperatuse of westera and north. weitern Europe must rather bo-referred to the general net of the tropical watera to the northeast, and to the warm wind blowing in the mme direction, and not to the Guif stream excluaively.
Gulf-weed (Sargassum) a genus of seatweeds (Algre) suborder Fucacere, of which one speciem 8 . Beooiforrum, exists to an enormons extent in the tropical seam. It floats on the surface, and is propagated by bnds: It deriver itts ordinary appellation from the exploded idea that it is borne on the Culf Stream from the Gulf of Mexico. Sereral areas of the ocean exhibit rreat guantities of this and other weeds floating on the enrface. One such, the sargasso Sea, is in the North Atlantic, 1ying Eonthwest of the Azores, and nortil of the tropic of Cancer.
Gull (sul), the general name of a family of birds distinguished by their straight bill, bending downwards towards the point, and marked below the nnder mandible by a triangular prominence, by their large wings, slender legs, palmated feet, and small hind toe. Generally seen in large flocks, the larger species freqnent the sea, the smaller, lakes or rivers. They swim well, but are incapable of diving. Their flight is rapid and long snstained. They are extremely voracions, and feed on every kind of

Lewer Black-Backed Gull (Larne fuacus).
animal food, putrid or fresh. Their principal food is fish, which they catch with great agility, darting down like an arrow. They breed only once a year, laying two to four eggs. The species are exceedingly numerous, and resemble each other greatly. Among the principal are the comimon gnll (Larus oanus), which breeds on the coast, or inland in moory districts; the lesser black-backed guli, $L$. fusous; the black-headed gull, $L$. ridibundus, of which the maxted guil, $L$. capistrùtus, is only a variety; the ivorj
soll, I. eburnewe; the Iceland sull, $L$. round trark, transparent, and almont colcolandious, dintinguished by its white oriens, faintly dorong, completely coluble quill feathers from the herring gull, $L$. in wator, the solution being feebly acid. argentatus; the sreat black-backed guil; the burgomanter ; the little gull, sabine's gull; the kittiwake, etc.
Guilet. See ©
Gulper (gul'per), deep mea eel, renary width of its mouth.

Guiper (Saccopharymz ampullacoun).
Grum, a ubstance of various properfrom the ties which exudes spontaneonsly plum, the peach of certain trees, such as the made in the bark to facilitate the fons Gums form non-crystalline rounded drops or tearn, the purest varieties being transparent or translucent. of a pale yellow but cometimes of a dark color. When dissolved in water gum forms a thick, amooth fluid, with considerable viscosity. Some cumb, such as gum-arabic, dissolve in water ; others, like tragacanth, are only partially solnble; they are insoluble in alcohol. this property distinguishing them from resins. They have no odor, and only a very faint taste. The different kinds of nnm receive their names from the conntries from which they are importedsuch as gnm-arabic, gum-senegal, Barbary gum, East India gum, etc., and from individual features, as cherry-tree gnm , tragacanth, etc. Gum-resing require water and alcohol to dissolve them. See Gum-resins.

## Gumal. See Gomul

## Gum-arabic,

is the pnrest form of garded as typical. It comes from various species of Acacia, such as the Acacia vera, 1. seyal, and A. arabio or nilotica (see Accua). The gum erudes spontaneonsly, and its appearance is an indication of the tree being in an nnhealthy zondition ; bnt in order to get it in sufficient quantity incisions are made in the bark. Gum-arabic is very largely employed in the finishing and dressing of Tabrics : for thlickening the coiors in cal-ico-printing; in pharmacy; as a cement; in int-making for making crayons and water-color cakes, and for many other parpones The purent sum-arabic is in

Gumbinnen ( $\mathrm{r}^{2} \mathrm{~m}$-binen), a Prat alan town, prov. Eant Pruscia, on the Yisaa. It has brewint and dindlling, and manufactures of woob. en and linen cloth. Pop. 14.194.
Gum-boil, an abocens in the sumerally the reult at bacterial infection through the prewence of decayed teeth or atnmps. The carious tooth or stump, if the inflemmation proceeds from this cause, ahould be removed. The purulent matter should be evacuated by a free incision, and the mouth ofter washed with tincture of myrrh and water. Gum-cistus (Ciotus ladaniförus), in Portugal, and plant largely cultivatod pleasant balsamic odor.
Gum-dragon. See Tragacanth.
Gum-elastic. See caoutchono, India Gum-elemi. See Etemi.
Gum-juniper, the resin of Callitis erous tree of Barbary, wised in varinith etc
Gumming (guming), direase of condes, plums, apricots, peacher, etc., conasting in a morbid exudation of gam, and generally resulting in the death of the tree.
Gum-resins, solidified jui.es exuded by various plants. They contain a gum, which is solnble in water, and a resin, which dissolves in spirit, so that the body usnally is nearly quite solnble in dilute alcohol; but there are nsuaily present in addition essential oil, and a variety of impnrities. The cumresins have freqnently a strong and characteristic taste and smell. Thes are molid, opaqne, and brittle. The common gumresins are aloes, ammoniacum, asafoetida, bdellium, galbannm, gamboge, myrrh, olibannm, opoponax, sasapenum, and scammony.
Gumti, or Goomit ( 8 om'te), a river of Hinilnstan, rises in the northwest provinces, and flowing couthenet falls into the Gankes between Gharpur sid Benares. In its course it pasmes the cities of Tucknow and Jaunpur. Length about 500 miles.
Gum-trees, a general nanu for trees (which see).
Gun, a missile weapon. causing dostruction by the discharke of ball, bullet or other substance, throush
a cylindrical tube, alons which it in United Staten navy the term is applied to propelled by the action of cunpowier or men of war of le than 2000 tona, other exploilve substance. The term in equipped with large aud small ordnance clodes small arms, such as portable, and capable of considerable apeed though

Vertical Section through a Turret and Barbetto for 12-inch Guns.
a, turret-5un; $b$, turret-port armor plate; $c$, dechting-hood; d, turret-roof; e, eacape-scuttle; 4. coutte for accen from deck $o$, elentric rammer; $h_{1} h$, combined hydraulic recoil and apring returncylinders; $i$, manin deck; $j$, zun-aleeve; $k$, trunmions on sun-loeve; $l_{\text {, }}$, deck-lug; $m$, turret-epun dider; $n$, turret-pan; 0 , ammunition-hoist guiderailo; $p_{\text {, }}$ gun elovating gear; $p_{0}$, turret-rollers; $r$, $r_{\text {, }}$ uppor and lower turret-roller paths; so 8 , turret aupports or foundations; ${ }^{\text {b }}$, holding-down elip; $w$, berbetto-armor; $\quad$, zun-deck; w, handling-room; $z_{1} y_{1}$ magacinote $y_{1}$ ammunition-hoist carriage; , water-ticht doorr from magasines and thellrooms to handling-room; $a^{\prime}$ protective deck; ${ }^{\prime}$ upper platiorm; c', lower platform. (From Scienside 4 merican.)
sporting and military weapons; machineguns, which discharge a rapid succession of bullets through one or more barrels on a rest; and the heavier pieces termed canuon or oräsance. See Cannon, Rife, Machine-gun, etc.
Gurboat, a class-vessel belonging to the cruiser, and mounting one or more heavy guns. They are useful because of their light draft, which enables them to run close in shore or up rivers whose depth would prevent the passage of larger vesela. The term was originally applied to ma'l vessels mounting one gun, but lu the the lisht draft feature is retained. Specjal gunboats have been bullt for shallow rivers, but the ciass is not a jarge one and is not apt to be greatly added to because of its ismited range of effectivenens except for special purposes.

## Gun-carriage, the structure on

 mounted, and on which it is fired. Guncarriages are of very various constructions. In the case of a field or siege piece the carriage is united, for, traveling, with a two-wheeled forepart, termed a limber, to which the horses are attached, so as to form a single four-wheeled carriage. In action the gun

Plan
 Rapid-Fire Gun.
a, top-carriage saddle; b, pedestal or pivot (the only part of the pedestal showing in the cut is the deok flange, the remainder being in the interior of 10 top-carriage); $e$, cylinarical sleeve; $d$, hyd tulic recoil-cylinder; $e_{1} f$, spring returnoylinders; $\theta^{2}$, projecting arm by which gun is attached to spring return-rods; $h$, projecting $\operatorname{a} / \mathrm{m}$ by which gun in attached to recoll-oylinder pistonwh; $j$, hand-wheel for elevating gear; $k$, handwheel for training sear; $l$, thoulder-piene; $m$, auxillary trining-wheel; $n, n$, trunnion bearinge; $o_{0}$ gun-abield; \& q, eun-tight.
is unlimbered, and then reet on its pair of wheald and on a stroan support termed the traili. a gun in a cortrems has its carriage commonly mounted on
what is termed a truevoing plasform, that in a strong tramework mupported ou metal trucks or mell wheeta Theme trucks are constructed to ruu ou metal rille which are latd in concentric arce of circlem, whose ceuters are a real or imaginary pivot close to the mouth of the embrasure throush which the gun fres. By this means the myzzle of the gun, when rua up, is brought uearly over the pivot, so that the direction of its fire may be altered laterally considerahly, and yet allow of a very narrow embrasure Carriages on the disappearing principle, which are visihle to the enemy only during the acts of aiming and fring (while the loading is effected under shelter), are best exemplified in those of Col. Moucrief. In one of these the carriage is so contrived that a heavy counterweight attached to it is sufficient to raise the gun into the position for firing, the sides of the carriage having some resemblance to the 'rockers' of a rockinghorte. The recoil brings the gun down into the loaiding position, after which it is again bronght into firing position as before. The iron carriages now made are thus elahorate mechanical structures. In mortars a cast-jiron bed takes the place of carriage.
Gunootton, or Prooxyune, is an cormed hy the extion of nive substance cotton. In the process of manufacture sulphuric acid is mized with the nitric, its function being to absorb the water formed by the weakeaing of the nitric acid as it gradually comhines with the cotton. The product of this process is a chemical compound of fonr or five times the explosive power of gunpowder. The cotton is generally reduced to a finely divided condition, and the guncotton molded into discs of suitable sizes. When ignited in a free state it burns with a strong flame; it is only when fired by a detonating fuse or when heated in confinement that it oxplodes. The presence of water and othe: snbstances does not interfere with this kind of explosion. From this follows the important fact that it can he kept wet with safety while in a condition in which it may be exploded ty means of a detonator. In ahort, when woet it is quito safe, and yet quite ready for woork at a moment's notice; for, while it refuses to burn even in the heat of powerful fame, the application of a large or of a smail detnnator inserted in one dry disk of guncotton causes the wet mass to explode with its full riolence. Bursters of guncotton and water have been used in shells for certain purposes. When exploded it producet littie mole $30-\mathrm{U}-3$
and a very emall amount of revidual matter. There are alvo preparations allied to guncotton with wood fiber an a basis, such an Schulze's powder, Eamdunt powder, etc. An imperfect chemical form of zuncotton termed collodion poluble in a mixture of ether and alcohol, is unco in photography and aurgery.

## Gunduck. See Gandak.

## Gunja. Same as Hashish.

## Gunnel (gunoel), or Butreariar

 fish which belongs to the lamily of the Blennics, The common guanel resemblos an eel, is about 6 inches in length, is hrown in color and has black apote on the base of the dorsal fln. It is termed 'butterfish' on account of the mucoun mecrstion of its skin.Gunner, in the United States navy in a warrant officer of the line officeranks as assistant to the ordnance ofleer and under him is responsible for the ordnance of the ship. Gunners are promoted from the leading petty officers after examination and after six years service are eligible to take the examination for chief-gunner and if they pass rank with (but after) ensigns, also to take er. aminations for appointment as ensigna.

## Gunnera (gun'er-a), n genus of

plants of the "brendfruit order, one species of which ( $G$. scabra), a native of S. America, somewhat resembles the rhubarb, and is used an an ornamental plant. It has large rough leaves, astringent roots, while its leafgtaliss are a substitute for rhubarb.
Gunnery (gun'er-i), the science of tillery. Gunnery may be divided into the theoretical and practical branches. The former consists chiefly in the application of mathematics to the solntion of the problems in dynamics involved in the consideration of the motion of shot through the air, and is essential to the design of good systems of rifing and well-proportioned projectles. Practical kunnery, which deals with the actual firing, has reference rather to the use of individual guns than to the handling of artillery on a large scale. Theoretical gunnery wonld be simple were the projectiles fired in vacuo, as gravity alone would, in such a case, require to be taken into account, and the path of projectiles would simply describe a parabola. The line taken by a projectile (or ite trajectory as it is called) is, howerer, subject to modifications caused by the remiotance of the air, the form of the shot etc Among the things to be constidered is

## Gunnison River

gunnery are the velooity of the projectile, Instial and subsequent, the engte of olvation of the plece, the range or dintance to which the projectile is carried, te. With cant-iron mpherical shot the chief complication arises from the center of gravity never falling oxactly in the center of the figure. IRIfled suns, however, fire projectilew with a certain knovon rotetion, and in the cane of elongated shot, thene are more accurately centered in the bore by the action of the grooves, and possens the faculty of traveling point first, and of thas overcoming the resistance of the air. One mechanical divadvantaze belong to rfied shot, namely, the wild irrezularity of sheir ricocbet, dicadvantage which, however, does not apply to whells burnt on the instant of grase by percusslon funes, or before contact by time fuses. The most approved projectlles have their centers of gravity nearly half way alons their axes, and in flicht they carry towards the right band of the person layins the gun, a species of deviation to wbich the name of drift or delection is given. The recoll of a gun must necesarily diminish the velocity of its projectlle; and this bas been carefuliy borne in mind by men who bave made gunnery their especial study.
Gunnison River, a stream of Colomiles in length which fows into Grand Hiver at Grand Junction. In its course are several magnificent cafons, the Grand Cafion being about 40 miles long, and 2500 feet in deptb. There is a tunnel througb the bordering mountain.
Cunny-bagis are bags made of 2 ins manufactured in India of some native fiber, chiefly jute. They are extensively used in India in packing rice, sago, spices, etc., for export, and in $\Delta$ merica for bale of cotton.

## Gunpowder

 '(gun'pow-der), a mirture of saitpeter, sulphnr, and charcoai. We bear of gunpowder from a very early period. It appears to have been used in China before the Christian era, though it is doubtfal if tbey understood the making of this explosive in its modern sense. Marcus Grecus, who lived about the nintb century, describes its composition, whicb was also known to Roger Bacon, who refers to it in 1267. It was also apparently known to the Arabs at an early period. In 1342 the Moors employed it in the slege of Algectras. According to the common story, the discovery of its propulsive power was due to the German monk Berthold Schwarz between 1290 and 1320 . Guns are said to have been employed by Di-ward III in 1827, on hin tuvaion of Acotinad. It is aloo amertod that sunpowder was employed in 1346 by the Engilah at Crics. It was noth howovor, until the mixteenth century that its nose in warfare became general The proportion of the ligeredienter in the composition of sunpowder in rificrent in different countriem, and in powder for diferent purponem. The crude maltpeter is dimalved In an equal weight of bolling mater in a copper boiler, filtered, and allowed to cool and crystalise in a trongh in order to purify it from nitratea of zoda and ume, chlorides of potanium and sodlum, etc., the iliquid being continually a-itated, 20 that the cryitals may be formed small and pure. They are then wathed and allowed to drain. The sulphur in purifed and yround. The charcoal in obtained from alder and wiliow wood, or from doswood for the finent powder. Thene ingrediente are first ronghly mixed, then aprinkled with water and incorporated under rollers in a mill, and formed into a cake termed 'mill cake.' This is broken up nider grooved rollers, and brougbt by pressure into 'prena cake:' After this it is granulated, by being passed between toothed roliers, and separated lito classes by sieversol diferent sizes of mesh. Within recent jears a very large grain baa been adopted for the beavient cbarges ; thit is termed pellet or pebble powder. 'Pellet' powder is made by filling the cylindrical holen in a thick gun-metal plate witb mealed powder and by means of platons under an hydraulic press, forming them into sbort cylinders or 'pelletu', with a emsll cavity at one end to catch a flame the more readily. 'Pebbie' Dowder is made by catting or pressing edges wbich divide the press cake into umall cubes ; these. like pebbies, bave their corners rabbed off and rounded by friction. There is alko 'Brown' powder, the componition $n^{\prime}$ wbich is not well known. This powder 18 remarkable for equable action, greater coberency, and diminisbed danger in using, and for decidedly greater power under diminisbed pressure of gas in the barrei. Schuitze's powder is also a powerful explosive, remarkabie for the uniformity of its sbooting. As it is necessary that the flame must traverse the interstices between tbe grains, the grain must be suited to the gize of the charge of the gun. A smoketess powder has also been introduced. The greatest precautlons must be taken to prevent îre or water from coming into contadt witb gunpowder. Hence it is usually lept in mapazines which are of kre + strensth
in defensive worls, althongh sichter and
well-ventilated building guffice under other conditions. In the tranaportation of sunpowder, the canks should bo duatprool, and the carriagen and reasele containing it should be water-tisht. As iron vemols are dangerous sunpowder is usually packed in copperhooped berrela made with copper nall The explonive power of sunpowier is very great. It is, however, necemary to place it within a confined apace, as, when it is beaped up in the open air, it explodes without report or much effect. As the result of experiments it appear that the weight of the gases produced hy inflaming gunpowder If about bix-tenthy of that of the powder, and their volume 288 times 1 ts buik, when they have attained an elasticity equal to that of the air. If the effect of heat evolved during the combustion be added, the elastic force is increased to 1000 atmospherem in round nnmbern.
Gunpowder, 8 xoxizess. See mokeless Powoder. Gunpowder Plot, a conspiracy land in 1604, the second year of the reign of James I, hy misguided Roman Catholice, to hlow up the king and pariiament in order to be revenged on the government for its meverities against their religion. The time ultimately fixed for the execution of the plot was the 5th of November, 1600 , when pariiament was to be opened hy the king in person. The plot originated with Robert Cateshy Thomas Winter, and John Wright, and was at once made known to Guido Fawken, a zealous Catholic, who had served in the Epanish army in Flanders, and to Thomas Percy a relation of the Earl of Northumherland. These five were the original conspirators, hut the plot was snbsegnently communicated to Sir Everard Dighy, Amhrose Rookwood, Francis Tresham, Thomas Keyes, Christopher Wright (a brother of John), and to some Jewuit fathers and others. The conspirators took a house next the Parlia. ment Honse, and their original plan was hy digging under this house to undermine the House of Parliament. They latterly discovered, however, that there was a cellar right under the chamber of parliament, which was occupied by a coaidealer. They at once hired this cellar, and filled it with powder, faggots, and hillets. The plot was discovered hy means of a letter sent to Lord Mounteagie, a Catholic peer in favor with the conrt, who laid it before the secretary of state, Cecll. It was a warning couched in mysterious termes, not to be present at the approachins meeting of parliament. Cecil showed it to some of the council, and did nothing
till the return of the king from a hunting party. On hearing the ietter Jamen at once divined itm meaning, and declared that it referred to sunpowder. This led to inventigation and to the arrese of Jawkes in the ceilar, where a hosahend and thirty-niz barrels of powder were discovered. It is now very senerally thousht that Tresham, the reputed author of the ietter to Lord Mounteagie, had previously informed his iordahip of the piot, and that the seading and pubilication of the ietter were merely intended a hiinds. It seems aiso that Cecii, knowins the king's vanity, was desirous of makins him the discoverer of the plot. Catenhy Percy, and the two Wrights were kiiled in defending Hoibeach House, in which they had takeu refuge, acainst the sherif. Sir Everard Dighy was tried and executed at Northampton ; Tresham died in prison. Fawles, Rookwood, Winter, and others were tried at Westminster on January 27 th, 1606 , and executed on the 80 th and 31 st .

## Gunroom, a compartment in a ship of war, partly occupied

 hy the junior officers.Güns (gunz), a town of Hungary, 57 miles 8. E. of Vienna. It consists of a walled town of ijmited extent, and a iarge suburb; staple manufacture wooien cloth. Pop. 7930.
Gunter (gun'ter), EDMUND, an English mathematician, who flourished in the reign of James $I$, and invented the instruments mentioned in following articles, as also the sector, etc. He was horn in 1581 and died in 1626. He was educated at Orford. and hecame professor of astronomy in Gresham College, London, in 1819. He was the first to employ the terms cosine, cotangent, etc.
Gunter's Chain, the chain in comring lan mon use for meascalled from its inventor, Edmund Gunter. Its iength is 66 feet, or 22 yards, or 4 poles of $51 / 2$ yards each: and it is divided into 100 links of 7.92 inches each. 100,000 square links make 1 acre.
Gunter's Scale, a scale having varions iines upon it, of great use in working prohlems in navigation. This scale is usually 2 feet long and ahout $11 / 2$ inches hroad. On the one side are the natural lines, and on the other the artificial or logarithmic nnes.
Guntur (gun-tor'), a town of Hindustan, presidency of Madras, district of Kistna, 46 miles from Masuli: patam, and 30 miles from the Coromandel coast. Pop. about 30,000 .

Gunwale, chip or hont.
Gurhwal, Guxwas See Gerhicel. Gurjun (furjun), thin baleam or oll, derived from trees of the cenes Dipterocarpur, in Burmah and the Eaterern Archipelago. It is used in var-nith-making, for mixing paints, preserving wood from the attacks of white nntty, and aloo medicinally.
Gurkhas. See Goorkhas.
 India, in the Meerut diatrict, Northwertern Provinces, on the Ganses, which is hefo crowed by a much-frequented ferry. A great annual fair attracte $200,000 \mathrm{pif}$ frime from all parte of the count.j. Pop. about 8000 .
Gurnard (gurnard), or GOENET the popular name of acanthopteroue fishes of the genue Trigla. The head fo angular and whily covered with bony pintes. The body is elongated, nearly round and tapering; there are two dormal fins; the pectoral fins are larse ; the teeth are smail and numeroul.

Gray Gurnard (Trigla gurnerdus).
The gray gurnard is the Trigla ournar duf, common on the British coast; the red gurnard is the T. ouoilus, aiso common on the mame conats; the fying gurnard if the T. volitans, which inhabits the Mediterranean, Atlantic, and Indian reas.
Gurney (Eurni), Gin Golowostay, England, In 1793; died in 1875 . He studied medicine but gave bis attention to chemistry. His inventions inciude the lime-magneajum and oii-gas lights, the bigb-pressure steam jet, the tubular boiler a steam carriage, etc., and he ciaimed the invention of the oxyhydrogen blowpipe and to have been the first to observe the deflection of the maknetic needle by roltaic cross currents. He was $\mathbf{E n i g h t e d ~}$ in 1863.
Gustavus I (gus-tax'rus), commonly wai born in 1490, or, according to others, in 1498. He was the son of Erric Johanston, a Swedish noble, served under Srante

Sture, the adminiatrator of the kiagdem, War troacheroualy carricd of with other noble 8wodes by Chaiotian II of Donmark, and kept a priconer ta Jutiand for more than reached, after many dangert, Dalocarlit. where he rouned the peacantio to realiot Danish oppremion, doleated the Danes, took Upeala, Stockholm, and other towns, and drove the Danee out of sweden. Solicited to become kipfy be congented, and was crowned in 1027 . In 1520 he procured the abolition of the Roman Cathoilic religion in 8 weden, and cotablished Protentanism in its stoed He died in 1560 . During bis long reign 8 weden made sreat progrese in commerce and civilization.
Gustavis II, Gueravus Adorpios. King of Bweden, grandion of Guatarus Vace, was born In 1694, and received a mout careful education. He was trained to war under experienced generale, took bie place in the state councile at the ase of sixteen, and was in command of the army in bis seventeenth year during the war with Denuark, which was concluded in 1013, and by which sweden recovered impor: tant possessions on the Baltic. He then turned his arme againet the Rumainna.

Guatavus Adolphus, King of Sweden
Afterwards he was engaged in a war with Poland, which lasted nine. years, and was concluded on advantageous terme for Gustavus in 1629, he being allowed to retain important conquestry in Eadt Prumia.

Bi. attention was now dirorted from porthore wass by the alials of Germany. The oppremion of the Protcotanter by Fordinand 11 eacited his aympathy and the progres of Wallonatein alarmed him for the extintonce of Yrotectantiom in Germany. Probably also ho wat moved by Enlitiry ambltion Hie embarked for Germany in 1030 with about 20,000 men landed near the mouth of the Uder, and In a ohort time had eeived nearly all Pomeravia. Aftes takins many fortifed towns, repeatediy defeatine the jmperial generale, at Lesprif (1081), Wurabure (1031). Pamage of the Lech (1632), and conquering a sreat part of Germany, be wae allled in the batle of Lutzen, after defeatiog Wallenstein, 16th November, 1832. (See Thirty Yeers' Wer.) Though a sever dicciplinarian, be wae beloved by bis coldierm, and the prentise of succens derived from his victories lasted long after his death. He panke amons the great soldiers of the world.
Gustavas III, King of sweden, ceeded his Rather, Adolphue Frederick, in 1771. Finding the country weary of the miarule of the noblen, he gained the sood-will of the army, surrounded the ascembly of the atatew-seneral, and forced them to accept a new constitution which much reatricted their privileges. In 1788 he took command of the army agalnat Ruania and Denmark, and atormed the defenses of Frederickehall, dentroy ing a great nusiber of vessels. In 1789 he executed another coup d'état, arreating the opponition leadera, and passing a law extending the royal prerogative. On the outbreak of the French revolution he made etrenuous exertione to form a coalition between Rusuia, Denmark, Eweden, and Spain, but while preparations were maling, a conspiracy of the nobles was formed against him, and he was shot at a masquerade by Ankarstroem, a dis: banded officer, on 16 th March, 1792. He died on 29th March.
Gustavus IV (Adoupiob), King on 1at November of Sweden, was born his his Rather, 29th March, 1702 . On agsuming power Gustavas showed that he had inherited his father's hatred of the principles of the French revolution, which he carried to the extent an fanaticim. After the Peace of THlsit he exposer in n self to a war with Russia while he vas at war with France, by refusing to join the continental blociade and opening his ports to England; and in 1808 he quarreled with England, his only ally. Finland was loot to Sweden in conseguence, boling takon by Rasaia, and in 1800 .
revolution took place. Gugtarne was do shroned, and his uncle, the Duke of Bun dermanta, was prochitmed king under the title of Charles XIIL. Qustayos dicd in puverty at Bt, Gall, 7 th Tiobrmary, $188 \%$.
Gustavus $V$, King of Smaden, bera ceeded his lather, Ocear 11, Doc. $8,1007$. Ho is a creat srandeos of Marahal Bos nadotte of Napolcon's arma, who suo ceeded Charles XIII in 1818. Ho mar: ried in 1881 the Princem Victoris of Baden, and has threo gona, the oident bo ins the Crown Prince Ginstavis Adolphus. Guistrow (sin'tro), a soma of Ger Schar manJ in Mecklenburt. Gchwering on the Nebel. It has an active trade and indurtries of nome importance. Pop. (1805) 17,163.
Gut. See Catgut and Silliworm-gwt.

## Gutenberg (roten-berc) Jo工is

 printing rith movable types, was born at Mayence or Mains, about the end of the fourteenth century. Listle or nothias io known of his early life. In 1484 be to said to have been living in Straobury and in 1436 to have atarted or attempted to start a printing ofince there; but this geems falae. In 1448 we find him at Mainz, where he formed, two years alter a co-partnerwhip with Johann Fust, and established, mainly with the money of the latter, a press, in which the Mcserim Bible, the Letters of Indulgence, and the Appeal Against the Turks were priated. After five years this connection was dils solved, and Fust gued Gutenbers for large advances which he could not pay, and by a judsment at law obtained posression of most of the printins materala, with which, in company with hie mon-inlaw Schofrer, he continued to print books. After this, according to some, Gutenbers carried on a separate printing eatablishment; but there is no printed maiser which can be ascribed to Gutenbers atter 1454. He died in 1468 .Guthrie (guthres), a city of Logan County, Oklahoma, formerly capital of the state. It is on the Cimmeron River, 31 miles 1 . of Oriahoma City, and is an important trade and manufacturing center, having large lumber and milling interests, etc. Pop. 11,911.
Guthrie, Tromas, e scotish divine, born at Brechin, Forfar shire, in 1803. He was edreated ot the Unifersity of Malinburgh, \& th nsed as a preacher in connecti. Wit: the Church of Scotland in 18es and held several pastorates. The work with which hie name ie chiefiy idontified cat of

Scotland, was the introduction into Vdinburgh of the ragged school system, then recently origlnated in London and Aherdeen. Into thls work he threw himself with characteristic energy, employing in it both his personal labors and his pen. His Plee for Ragged Schools (1847) remalns one of the must celebrated of his productions. He became editor of the Sunday Mfagazine in 1864, hut never assumed full editorial responslbility. He died in 1873. His chief later works are, The Gospel in Ezekiel (1855), A Plea for Drunkards (1856), Cherist and the Inheritance of the Saints (1858), etc. An Autobiography and Memoir has been published by his sons.

## Guthrie, Thomas Antwont, an-

 stey; born at Kensington, England, in 1856. He became a member of the bar in 1880, ans subsequently devoted much time to authorship, chlefly of humorous tories. Among his works are: Vico Versa, The Giant's Robe, The Blacle Poodle, The Tinted Venus, Love Among the Lions, etc.Gutta-percha (gut'a-pèr'cha; Ma-'gum-tree'), a substance resembling caoutchouc in many of its properties, but stronger, more soluble, and less elastic. It is the lnspissated mllky juice of Iso nandra Gutta and other kindred trees of the nat. orr ${ }^{-} r$ Sapotaceæ. It chiefly

Spris of Gutta-percha Tree. comes from Malacca, Borneo, and other lslands of the Indlan Archipelago. When pure, gut-ta-percha is or a hrownish-red color. Below the $t$ emperature of $50^{\circ}$ It is as hard as wood and ex. ceedingly tough. By an increase of heat it becomes more flexible, until at a temperature of $115^{\circ}$ F. it becomes pasty, and $140^{\circ}$ or $150^{\circ}$ it may be molded this all varieties of forms with the greatest ease, retaining precisely the same form as It cools and hardens to lts 7 vious state of rigidity. It is insoluhle :- water, soluble with difficulty $\ln$ eth an. 1 other caoutchouc solvents, but $\nabla$ I ${ }^{\text {l }}$ is of tarpentine and naphtha. It is wut attacked by solutions of alkalies nor hy hydrofluoric acid, but it is acted on by
sulyhuric, nitric, and hydrochloric acida. Gutta-percha has been applied to a rariety of purpomen: as a subatitute for leather, especially in the soles of shoen, etc., as an insulating coating for the copper wires of suhmarine telegraph cables, as an ingredient $\ln$ mastica and cements. for the manufacture of flexihle b.ae tubes, bottles, etc.
Guttenberg, a towno in $\mathrm{Hu}_{\mathrm{J}}$ ©ounty on the Hudson River, opposite New 1 irh. It his manufactures of chemlcals. $i \mathrm{~m}$. broideries, pearl buttons, etc. Pop. 5647. Guttiferge (gut-if'eré), in natural order of exogenous trees or shrubs, whlch generally mecrete an acrid yellow resinous juice, in some cases of considerable value, as the gamboge yielded hy the Garcinia morelle, or the tacamahaca from the Popilus baloamifera. They are found in the humid and hot places of tropical regions, chlefly South America. The fruit of some is hlghly esteemed, in particular the mangosteen and the mammee apple.
Gutzkow (zotsikj), KARI FirpiNAND a German writer, born at Berlin in 1811. After studying theology he took to journalism and politics, and became the leading spirit of a small hody of reformers known as Young Germany. In 1835 his novel Wally die Zoeiflerin appeared. It was at once confiscated by the government as hostile to religion and soclety, and the author was imprisoned for three months. In splte of government prohibitlon Gutzkow managed to publish a number of works from Hamburg, where he bad settled. Amongst these are: Blasedow und seine Sohne (1838), a satlre, and Börne Leben (1840). He was active, also, in dramatic literature, producing Richard Savage (1840), Patikul (1841), and Uriel Acosta (1847), tragedies, and Topf wnd Sohwort, a comedy. He died in 1878 .
C+ützlaff (guts'laf), KArI, a. German missionary, born in 1803. He went out as a missionary to the Battas in Sumatra in August, 1826, but settled instead in Batavia, Singapore, and Slam. In 1831 he went to China, acted as British interpreter during the first Chlnese war, visited Earope in 1849, and dled at Victoria, Hong-Kong, in 1851. His principal works are: Jowrnal of Thres Vopapes along the Coast of China in 1851, 1852, and 1888 (London, 1894): China Opened, or a Display of the Topog: rophy, fistory, eto.. of the Chinese Em . pire (1898): Gesohich to de Chinesischen Reichs (Stuttgart, 1847).
Guy (EI), Thomas, the fonnder of Guy's Hospitai, Londinn. was the
son of a lighterman in Southwark, and borm in 1643. He was brought up a bookseller. He dealt largely in the 1 m portation of Bihles from Holland, and afterwards contracted with Oxford for thome printed at that univeraity; but his ntricipal gains arose from dealings in Noith Sea stock in 1720. He amassed a firtune of nearly half a million sterling, : which he spent upwards of $£ 200,000$ in building and endowing his hospital in Southwark, besides erecting almshouses at Tamworth and supporting various other cherities. He was member of Parliament for Tamworth from 1694 to 1707. He died in 1724. See Guy's Hospital. Guyenne.

## Guy of Warwick, an old English

 mance, whose hero is an Anloknight maid to have been the son of Siward, baron of Wallingford, to have become Earl of Warwick, and to have slain in single combat the Danish giant Colhrand, the Dun-Cow of Dunsmore, and the dragon of Northumberland, and many other wonderful feats. He is said ultimately to have become a hermit in Warwick.Guyon (ge-yón), Jeanne-Maris Boucelehrated mystic, the introducer in France of the system of Quietism, was born at Montargis 13th April, 1648. At the age of sixteen she was married to Jacques Guyon, after whose death in 1676 the tendency to mystic enthusiasm which had characterized her younger years, agnin acquired ascendency, and she began the religious propagandism of her extreme views of vell-abnegation, indifference to life and death, and even to future saivation or perdition. She became associated with some enthusiastic priests, abandoned her children and her goods, reserving a moderate annuity; and moved from place to place, making numerous proselytes. She also puhlished numerous works, such ps Le Cansique des Cantigues interprett selon le Keno Mystique (1685) ; Poósies Spirituelles (five vols., 1685); Discours Chretiens et Spirituels (1716), etc. At last the Archhishop of Paris thought it necessary to take steps against the spread of Madame Guyon's mystical doctrines. Through his influence she was shut up in the convent of the Visitation, but afterwards released at the instigation of Madame Maintenon, who berwelf became for a time a convert to the new doctrines. and allowed Madame Guyon to preach in the reminary. of St. Oyr, where she made a convert and disdiple of F'enelon. a comminitor of eccle-
siastics, chief amongst whom was Bowsuet, now sat in judgment, and the doctrines of Madame Guyon were condemned (1695). This led to her being imprisoned for some yeare, latterly in the Bastille, whence she was liberated in 1702 . The rest of her life was spent in retirement and in works of charity. She died in 1717.

Guyot (gè-yō), Arnold, geographer and physicist, born in switzerland in 1807. He studied theology at Berlin, then took up natural science, and became professor of history and physical geography in the Academy of Neufchatel. He shared in Agassir's investigations of glacier phenomena of the Alps. In 1848 he emigrated to the United States and delivered lectures in Boston, which afterwards appeared under the title Earth and Man. He rendered much service to meteorological science in connection with the Smithsonian Institution. In 1855 he was appointed professor of geology and physical geography in the College of New Jersey, Princeton, where he continued until his death in 1884.
Guy's Hospital, a London hospital, Thomas Guy (see Guy, Thomas). The original building, completed in 1725 and endowed at a cost of over $£ 200,000$, contained accommodation for 400 sick or incurahle persons. It has since heen improved and enlarged greatly, and is now the largest in Iondon, the beds amounting to 720 . Attached to the hospital is an extersi;e medical school containing lecture-rooms, theaters, museums, and medical library.
Guzerat. See Gujerat.
Gwalior (gwh'1e-or), a city and fortress of Hindustan, cr ital of the state of Gwalior, situated miles south from Agra. The fortress the largest, the strongest, and the mont magnificent in India. It stands on an isolated rock about 350 ft . high and nearly perpendicular in the upper part. The fortress contains wells and reservoirs of water, and is inaccessible except hr steps up the side of the rock. Old Gwalior, the town at the northern angle of the base of the rock is huilt of stone, and has some remarkable ruins of temples and an interesting example of old Hindu palace architecture. The new town, known as New Gwalior or Lashkar (the camp), the residence of the ruler, Maharajah Sindia, has sprung up recently on the southeastern shirt of the rock, but is already a flourishing city with a pop. of 89,164. The State of Gwalior, in political relationship with the government of India, conciste of ret.

## Gwyniad

eral portions of territory, otherwise known counta, in 1087, according to others in as Sindhia's Dominions, the largest and 1691. most compact portion, usually known as Gwalior, being the one containing the above town and fortress. The total area of Gwalior is about 20.000 sq. miles. Gwalior is not as a whole very fertile; one of its most notable products is opium. The drainage is chiefly taken by the Chambal. Pop. about $3,000,000$, mainly Hindus.
Gwyniad
Gwiniad (gwini-ad; w. from govn, white). The

1Coregornus Pennantii, a fish of the salmon or trout kind found plentifully in some of the Welsh lakes, in Ulleswater, and in

Gyges reigned, according to Herodotus, B. c. 716-678. He was the favorite of the Lydian king Candaules, who, to cor ince him of the beauty of his queen, showed her to him naked. The queen was so incensed that she ordered Gyges either to murder the king, ascend his vacant throne, and become her husband, or to atone for his curicsits by death. He chose the former.
 Greeks to the public building where the

many lakes in Europe. It is gregarious, and may be taken in great numbers at a dranght.

## Gwynn

 a celebrated mistress the name of Nell, was at first an orange girl, and also gained her bread by singing from tavern to tavern. About 1667 she became the mistress of Lord Buckhurst, who surrendered her about 1670 to the king. As mistress of the king she had an establishment, and was made lady of the privy chamber to Queen Catharine. She was merry and open-hearted, is sald to have been faithful to Charles, mindful of old friends. and a liberal patroness of the poets Dryden, Lee, Otway, and Butler. From her are sprung the dukes of St. Albans. She died, according to some ac-young men, quite without clothes (hence the name, from gymnos, naked), exercised themselves in leaping, running, throwing the discus and spear, wrestling, and pugilism. Its objects, however, were extended also to the exercise of the mind : for here philosophers, rhetoricians, and teachers of other branches of knowledge deli ivered their lectures. Gymnasia were at first only open level places, surrounded by a wall, and partitioned off for the different games. At a later date they were composed of a number of connected buildings, spacious enough to admit many thousands. See Gymnastics.

## Gymnasium, a term applied in Ger-

 schools in which formerly Latin and Greek, and the brancher connected with antiquity, were taught amont to the ex-clusion of other subjecte. $\Delta$ more practical bent is given to the course of instruction in these institutions now, though the real-achools, as they are called, are the institutions specially eatablished for high-class education in such branches as mathematics and physical science, history and modern languages. The gymnasia are the feeders of the universities, and the training adopted in them is specially intended to equip the pupils for entering these institutions. The last or exit-examination, to show wheiner the pupils are fit to enter any of the universities, is very severe, and includes history, Latin and Greek, and at least one foreign language. Gymnastics (jim-nas'tiks; for derivation, see $G y m n a^{-}$ sium) is the technical term used to designate any syatem of exercises specially designed to promote the development of physical, and especially of muscular powers. An excellent gymnastic training is given by cricket, football, rowing, and similar amusements, but the special value of formal gymnastic exercises is that they are capable of being scientifically arranged so as to secure not only a general development of muscular power, but also an accurate knowledge of the "ros of the various muscles, and further th- 'hey are capable of being applied to eac -ndividual case, so as to meet, allow for, and as far as possible overcome, defects in physical organization. For these purposes an elementary course of gymnestics is of great value to all, especially $w$ the sedentary student. In regard tc eymnastic exercises two general rules may be laid down, which will form an efficient guide in self-imposed erercises. The first is the universal rule in mechanics that the strength of any machine is the strength of its weakest part ; the second is the fundamental law of muscular exercise, that it is exercise within the extreme power of the muscle which develops and improves, while straining weakens and injures, and excessive exercise develops particular muscles abnormally at the expense of the general health. It is quite possible, indeed, to carry physical exercises as a whole too far, and to develop muscular power at the expense of vital strength. Thll the age of twelve the ordinary games and paotimes of childhood are generally quite sumident exercise: after that some very light wy. tem of gymnastics may be adopted to ald the development of the syatem. After tho age of thirty-five unusual museviar ehbrts are apt to leave perdstent mtraing, and moderate exercise becomes the rafest the muncolarelopins and siving tone to the muscalar ajitem.

Gymnogen (jim'nu-jen), in botany a plant with a naked seed. Among gymnogens are pines and firs, yews, joint-firs, the cycads, etc. In the gymnogens there is no proper ovary, the seeds being fertilized bj the pollen coming into direct contact with the foramen of the ovule without the intervent! s . of a stigma.
 seed; a gymnogen (which see). Gympie (gim'pi), a municipal towni of Australia, in Queensland, on the side of a range of hills overlooking the river Mary, 116 miles north of Brisbane. It owes its origin to the goldfields here which have yielded good results. The town has some good public buildings, wellpaved streets, and is lighted by gas. Pop. 12,000.
Gynæceum (ji-nési-um), in botan5. the pistil taken in a collective sense, precisely as the stamens form the androecium.
Gynecology ( $\mathrm{jin} \mathrm{n}-\mathrm{e}-\mathrm{k}$ ol $\mathrm{l}^{\prime} \mathrm{o}-\mathrm{j} i$ ), that science which treats of diseases peculiar to women.
Gynandria (ji-nan'तri-a), the name classes in the artificia characterized by having the stameus and pistil consolidated in a single body, as in orchids.
Gynerium (ji-ne’ri-nm), a genus of grasses, of which the best known is 8 . argenteum or Pampas Grass (which see).
Gyöngyös (dvenn'dveush), a town of Hungary, 44 miles N . v. of Budapest; it has manufactures of woolen stuffs an active trade, and produces the celebrated Erlauer red wine. Pop. 18,442.
Gypaëtus
(ji-pa'ę-tus), the genus of birds to which belongs the Bearded Vulture or Lammergeyer of the Alps (which see).
Gypsies (jip'ses ; from Egyptians, the
name by which they were called in the English statutes), a wandering nation, whose physical characteristics. language, and customs differ much from those of European nations. They are called by the French Bohomiens, from the belief that they were Buasites driven from Bohemia; in Germany the general zame is Zipouner. which is not unlike the Italiag Zingeri. They call themeelve: Rommany, from 50 m (man): This rece in alowly meltins eway. It prevent total number hardly reaphas 500.0001 of whom there are abotet 120.000 in Faropean Turkey: 140.000 in Hungery ; 60.000 in 1tran: nyivenia; 40,000 in Dpiln ; 40,000 uprend
over Germany, France, and Italy in Britain, of whom, however, only number are tent-gypsies, presert language and traditions of $\because$ the the remainder acattered over other countrie. The gypsiem are now considered to have come from India, the main body of their language, though mised with a great number of borrowed words, having a close altinity with some of the Indian languages. Gypsies are remarkable for the yellow brown, or rather olive color, of their skin; the Jet-black of their hair and eyes, the extreme whiteness of their teeth, and generally for the symmetry of their limbs. The typical Gypsies rarely wettle permanently anywhere, but live in tents, wandering abont working in wood and iron, making domestic utensile, telifiag fortunes, practicing tricks, etc. Their talent for music is remarkable, and some of their melodien have become the much-valued properts of other nations, or are incorporated in mome of onr favorite operas. They have no peculiar religion. Amongst the Turks thes are Mohammedans; and in Spain, at least, as well as in Transylvania, they follow the forms of the Christian religion, without, however, caring for instruction, or having any real interest in religion. The marriage ceremony is of the simpleat hind. If the husband becomes tired of his wife, he will turn her of withont ceremony. There is no idea of edncation amongst them. The children grow up in idleness and the habits of stealing and cheating. The Gypsies first appeared in Germany and Italy about the beginning of the fifteenth centnry. At that timg they wandered about in hordes with a commander at their head. In the Austrian States, where they are very numerous, Maria Theresa formed the plan of converting them into orderly clitizens. But her ordinances that they should dwell in settled habitations, practice some trade and gend their children to school, remained to a large extent ineffectual.' In England the Gypsies first appeared about the beginning of the sixteenth centnry, and notwithstanding severely repressive enactments on the part of the government continned to maintain themselves as tinkera. mat and bagket-makers, etc. In Scotland they were more favorably received, and frequently intermarried with the natives. The town of Yetholm, in Roxhurghslire, was once a sort of headquarters for the race, and almost exclusively inhabited by Gypsies. Considerable numbers of the British Gypsies have emigrated to Amerfica, where they gettle amonsst the people and lose their distinctive characteristics. With regard to their lankuage, a large number of the words in all the diferent
dialects are of Indinn orisin, as already mentioned. The grammar of the tongue is also oriental, and corresponde with the Indian dialects. This similarity cannot be considered the work of chance, particularly as their persons and customss show much of the Hindu character. Amongst the chief authoritien in the Engligh language on the subject of the language and origin of the Gypaies are: Georse Borrow's account of the Gypsies in Spain and Romano Lavosil; O. (f. Leland, the Enplish Gypaies and their Lanowage; and Smart and Crofton, the Dialect of the Enolish aypsies.
Gypsum (jpp'sum), a monoclinic mineral, chemically a hydrated calcic sulphate (CaSO2H5O). It is found in a compact state as alcobaster, or cryatallized as selenito, or in the form of a moft chalky stone, which in a very moderate heat gives out its water of crystallization, and becomes a very fine white powder, extensively ised under the name of plaster of Paris (which see). This last is the most common, and is found in great masses near Paris, where it forms the hill of Montmartre, near Aix in Provence, and near Burgos in Spain. Gypsum may be geologically of any age, but occurs abundantly in the more recent sedimentary formations, and is even now forming. When gypsnm occurs without water it is. called anhydrite, but in its most ordinary state it is combined with water.
Gypsy Moth, a small brown moth, mon in Europe, Porthetria Dispar, comharmful, and a pest in America since its sccidental introduction into New England about 1870. It eats the foliage of trees, sometimes destroying whole forests. Since 1800 extensive public meamnres have been taken for its extermination, but with little success. The moths live by preference on oaks, apples, gray birch and willows, but will not thrive on white pine. Accordingly, owners of forests where direct control of the pest would be impositble because of the expense are advised to cut down their trees and plant white pine instead.

## Gypsy-wort, Lycorpus Furopaue, a <br> labiate plant found in

 Britain in ditches and on river bank. It yields a dye said to be used by the Gyposies to render their skin darker.Gyrencephala (ji-ren-sef f -la), one classes into which $\mathrm{O}^{\text {of }}$ the four submalia characterized divided the mamispheres of the chice by having the hemispheres of the cerebrum covering the greater part of the cerebellum and the oiffactory lobee It comprehends the Quadsumana, Carnivora, Artiodactyla, Períio.-
dactyla, Proboscidea, Sirenia, and Cetacea.
Gyrfalcon, or Jerfalcon (jer-falGyroscope kon). See Falcon. tus, consisting of a rotat$\operatorname{lng}$ dise mounted by yery accurately fitted pivots in a ring or rings (forming a sort of gimbals), for illustrating the properties of rotation generally. The fundamental principle of the whole is the resistance which a disc in rapid motion presents to any change of direction in the axis of rotation. Some curious phenomena may be exhibited by it difficult to explain without resorting to mathematical formule. The figure shows a simple gyroscope. If the disc $A$, which revolves on

Gyroscope.
an axis within the ring B , is set very rapidly in motion by the unwinding of a string round the axis, and if the part $c$ is then rested on a pivot at the top of the upright support $D$, the apparatus instead of falling will go slowly round in the direction shown by the arrows. The gyroscope, on a large scale, has been utilized to give steadiness to vessels in rough seas and is considered as applicable to the aeroplane, to keep it on a fixed level. One of the most successful of the recent applications of the gyroscope is in its connection with the marine compass. All battleships in the United States Navy are fitted with the gyro compass. As a gyro compass is independent of the magnetism of the earth and of the ship, and, when running properly, always points to the North Pole, its great convenience in ressels carrying heavy guns and armor is at once apparent. Another important use of the syroscope is found in its relation to the naval torpedo, especially the Whitehead pattern. Its first application to thls purpow was made by an officer in the Aus-
trian navy in 1895, and this device or an improved modification of it, such as the Angle Gyroscope invented by Leut. W. I. Chambers, of the United States Navy, is in use on all torpedoes. See Torpedo. Another interesting application of the syroscope is in the Gyroscope Railway, which see.
Gyroscope Railway, a railway gle line of ralls, on which the car is kept erect by the steadying power of a pair of heavy gyroscopes, or fly wheels, rotating in opposite directions at very high velocity. There are two recent invenilions of this kind, an English and a German, practically the same in character. The English, the invention of an Australian named Brennan, had its first form in a model, a small car on which the gyroscopes rotated at the enormous speed of 7500 revolutions per minute. They were huug in special bearings and rotated $\ln$ a partiai vacuum, the friction being so slight that the wheels would continue to revolve and give stability to the car for a considerable time after the power was shut off. Also, in such a case, supports at the side kept the car from overturning. This model showed itself capable of traveling at high speed on a single rail, rounding sharp curves, and even traversing with ease a wire cable hung in the air. In 1909 a car was tried 14 feet long and 10 wide, capable of carrying 40 passengers. The gyroscopes in this, moved by a gasoline engine, revolved in a vacuum at a speed of 3000 rotations per minute. They were $31 /$ feet in diameter and weighed together $11 /$ tons. With a full load of passengers this car sped easily around a circular rail 220 yards long, and proved that it could not be upset, since when all the passengers crowded to one side the car remained frmly erect, the gyroscopes liftiog it on the weighted side. It is claimed that in the monorail system a speed of more than 100 miles an hour is safely possible. The German invention, displayed by Herr Schorl, a capitalist of Berlin, is in many respects like the English one. The ex: perimental car was 38 feet long and 4 wide, the gyrosconie fly wheels beink very light, weighing but 125 pounds each. while their speed of rotation was 8000 per minute. The same success was attained as in the English experiments, and there seems to be a succemoful future before this interesting vehicle of travel.

H,the oighth letter of the English alphabet, often cailed the copiratt, as bejog a mere ampiration of breathins, though not the only aspirated letter in Englinh. The sound that distinctively be longe to it is that which it han at the bepinning of a ayllable before a vowel, es in hard, heavy. It in very commonly joined to other consonants to represent sounds for which there are no apecial letters in the alphabet, as in the digraphs oh, ah, th (child, ship, thin, this), or in other conconantal combinations of various origins and values, ais in the words enough ( $\rho \mathrm{h}=$ f), plough ( $g$ h silent), philosophy ( $p h=f$, rhetoric (h iilent), etc. Oh is common in words taken from the Greek, but in this case it generally has the $k$ sound, ss in chemistry ohyle, logomachy, etc. See Grimm's Lawo.
Haakon VI. See Hakon VII. Haarlem (hirlem), a town of Hol10 miles w . of $\Delta$ manterdam, intervected the Spaarne, which in joined by cana/s from Leyden and Amsterdam, and along which a considerable traffic is maintained. The town is well and regularly built; the streets ercmedingly clean, planted with trees, aris laid out in promenades Among the notable buildings are the town-hall, the church of St. Bavon with its celebrated organ, the Prinsenhof, in which the provincial ansembly meets. The manufactures of Haarlem, as well as its population, are less than what they were formerly; but it has still various industrial works, a celebrated type-foundry, the oldent and most famous printing-ofice in Holland, while its flower trade, enpecially in hyacinthe and other bulbs, is very important. On the south aide of the town is the park of Haarlem, a plantation of fine old beechen surrounded with villae cafce, ond places of holiday resort. Haar lem was a pronperoun place ai far back an the twelith century. During the re voit of the Netheriands it suatalined a tamous seven montha' siege by the Spanjarde It is the birthplace of Laurence Coster, and of the peinterm Ontade, the Woureernans,-Ruidad, etc. Pop. 70,491.

Haarlem (hlilem), Laki or, a toro mer lake of Holland. adjoining and communicating Fith the $Y$, between Haarlem and Amaterdam. Previously a swamp, it was formed in the fifo teenth century by the overfiow of the Rhine and the crumbling away of the banks of the $\bar{Y}$, and imperiled by ite growth the towns of Haarlem, Amsterdam, and Leyden. It was 18 miles lons, 9 miles broad, and about 14 feet deep. The draining of it was commenced in 1840, and completed in 1853. The will thus reclaimed, known as the Haarlemmer Polder, now forms a commune, which numbers over 16,000 inhabitanti
Tabakknk (hab'a-kuk, or ha-bak'uk). the eighth of the twelve minor prophets. He flourished about 600 s.c. at the time of the invaaion of Judah by the Chaldeane, againat whom he prophemes God's retributive jurtice. He concludes with a kind of pealm (chap. 3) remariable for the majenty of its language and the cublimity of its thought.
Habberton (hab'er-tun), Joirr, author, born at Brooklyn, New York, in 1842. He merred an an ofilcer in the Civil war, 1862-65, and afterwards became a fournalist and novelist. His Helen's Babies (1876) was a very popular story. Other books are: The Worst Boy in Tovon, Who Was Paul Grayson, 1 Lucky Lover.
Fiabeas Corpus (ha'be-as lor'pus), Ha0eas Corpus in law, a writ addressed to one who has a person in custody, commanding him to produce the body of the permon named at a certain place and time. From the time of the Magna Charta impriconment at the difcretion of any person has been unlawful in Bngland, but for lons the royal prerogative was so indefinite and the power of the crown so sreat that pernons were frequently detained in cuatody at the dif. cretion of the crown. It was not till 1679 that the Habeas Corpus Aet provided the sreat remedy for the violation of permonal liberts br the writ of habece corpus ed subjiciondum (that you have the body to answer). The providions of the act may
be stated generally thus:-1. That on complaint or request in writing, by, or ou behaif of, any perpon committed and chargec with any crime (unless treason, felony, etc., expressed in the warrant), the lord-chancellor, or any of the judgee shall award a habeas corpus for such prisoner, and whall discharge the party, if bailable, upon security being given to appear and answer to the accusation. 2. The writ shall be returned, and the prisoner brought up within a limited time, not exceeding twenty days. 3. No person once delivered by haveas corpus shall be recommitted for the same offence. 4. Every person committed for treason or felony may insist on being tried at the nezt assizes, or admitted to bail, and if not tried at the second assizes or sessions, he shall be discharged from the imprison: ment. The English atatute has been copied in the United States without essential change. It is the grandest mafeguard against despotism which jurisprudence alfords. In the days of slavery the writ was often issued in behalf of slaves who had escaped from their masters, and when it was shown that the masters had hrought them into a free state the court set them free. So important was the writ of habeas corpus considered by the framers of the constitution of the United States that they inserted an express provision (art. I, sec. 日) that it should not be suspended - unless when in cases of rebellion or invasion the public safety may require it.' The question whether the power to suspend is vested in Congress or the President, or in each alike, is a disputed point. During the Civil war the power was exercised by the president, with the tacit consent or express permission of Congress. No state court has a right to issue the writ for the discharge of a person held under the authority of the federal government. The proceedings upon a return of a writ may take place in chambers before a single judge, or before several judges in open court, as determined by the language of the writ.
Habergeon (ha-ber'jun), a jacket of the hauberk, and without sleeves, worn during the midile ages hy the squires and archers.
Habibulla Khan, Ameer of Afghanistan, born at Cabnl in 1872. succeeded his father, Abdur Rahman Khan. Octoher 3, 1901. Babitants, or Haritans. a name tante of Canada, especially in Quebec province, who are of French extraction and still speak the French language and preserve French customs. See Canada.

Hackberry varieties of the nettle-tree, Ooltis orasaifolia, also of the Celtis occidentalis, belonging to the nettle family Urticacem.
Hack asack (hak'en-mak), a town, capital of Bergen County, New Jermey, 12 milev N. of New York, and with manufactures of paper boxes, silk, wall-paper, etc. Many New York business men reside here. lop. 15,000.
Hackländer (háten-dér), Frifdmici Whlimis von, $n$ German novelist and comedy writer, horn in 1810. He engaged first in commerce, then entered the lrussian artillery; and commenced his literary career in 1841 with Pictures from a Soldier's Life in Time of Peace. He then became successively private secretary to Baron Taubeuhein, whom he accompanied to the East, and to the Crown Prince of Wurtemberg. In 1849 he served with the Austrians during the war with Sardinia, and published his observations in Soldier Life in Time of War. He was ennohled hy the Emperor Francis Joseph. He died in 1877. Amongst his many writings distinguished by a mirture of pathos and humor, we may mention Daguerreotypen (1842), Handel und Wandel (1850), Der Newe Don Ouixote (1858), Geschichten im Ziclazack (1871) ; of his comedies, Der Geheime Agent (1850) was the most successful.
Hackmatack (bak'ma-tak), a term applied in many parts of the United States to the American larch. See Larch.
Eackney (hak'ne ), a suburb of miles N. N. E. of St. Paul's. It includes Hackney proper South Hackney, Homerton, Clapton, Dalston, etc., and is a favorite residence of wealthy merchants. Pop. 222,587.
Hackney Coach, a coach let out ney coaches began first to ply under this name in London in 1625, when they were twenty in number. Hackney coachmen are generally put under police regulations, and a tariff of fares imposed upon them. Cahs are now the common kind of hackney coaches.
Faddington (had'ing-tun), a capital of the county of same name, 17 miles east hy north of Edinburgh, on the Tyne. The town has a Gothic church of the eleventh or twelfth century. Its grain market is one of the largest in scotland. Pop. 5125. -The county, also called Hast Lotimas, is bounded by the Hirth
pular rican rassi, town, sen New paper New 1 'ol.

It hreeds in inmense numbers in the northern seas in February and March, and constitutes a considerable article of food. It is plentiful on the coasts of America, from New York to the Arctic resions.
Padersleben (hà-d è rs-iáben), a Schle . Fiord, in the Littic on the Hadersleben Hades (hădēz), originaiiy the Greek or invisihime of the iord of the iower Piuto; binie world, afterwards called Scriptout in later times, as in the Greek seif. With is appiied to the region itseif. With the ancients Hades was the common receptacie of departed spirits, of good as well as had.
Radji (ha'jes), the Mohammedan pilMohammedan ge to Mecca, which every his life, and after which he is entitled to prefix Hadji to his name. The pilgrimage was made in disguise hy Burckhardt in 1814, hy Burton in 1853, and hy T. F: Keane in 1878, each of whom pnhlished accounts of his journey.
ibn., though sometimes as high as 10 ibs . guages.
of Forth, the German Ocean Berwickahire, and Midiothian; area, 280 square miies, of which four-fifths are arahle or fit for cultivation. The Lammermuir Hills yield coal, iron, and limestone. Fishing and fish-curing are carried on at Dunbar and other points. Pop. 38,602. Taddock (bad'uk), a weii-known (Gadidæ), Morrhua (Gadus) aglefinus. It is smaller than the cod, which it much resemhies, hut it has a dark spot on each side of the hody just behind the head. This fish commonly weighs from 2 to 6

#### Abstract

Hadji Khalifah (ha'je kal'l-fa) the surname of Mustapha-Ben-Abdaliab, a Turkish historian, born at Constantinople about 1005 ; became 'first secretary' to Sultan Mourad IV and died at Constancinople in 1658. His most important work is Keshf-ul-tzunan, a kind of encyclopedia of Arahic, Turkish, and Persian literature. Among his other works are Chronological Tablea, Mirror of the World, and History of the Maritime Wars of the Turke. Ali the works mentioned above have heen transiated into Latin and modern ian-

> Haddock (Melanogrammus colefinus).

Hadley (had'li), Artrur Twining, an American educator: born in New Haven, Connecticut, in 1856. He graduated at Yale College in 1876; became professor of politicai science in 1836 and president of Yaie University in 1899. He accepted the Rooseveit professorship at Berlin, $1907-08$.
Hadley (had'li), JoHn, an English astronomer, born towards the end of the seventeenth century. He is the reputed inventor of the guadrant that goes by his name, though the honor. is also claimed for Newton, from whom Hadley got a descrintion of the instrument in 1727, and for Thomas Godfres, of Philadeiphia, who produced his instrnment ahnut the same time as Hadley, in 1731. The Royal Society decided that Godfrey and Hadiey were both entitied to the honor of the invention. Hadiey also invented the sextant. He died in 1744 . Hadramaut (hidra-má), a dis in the older and wider use of the tert, extended from Yemen on the west to Oman on the easti and from the Indian

Ocean on the south to the creat dewert of Ell Ahkaf on the north. The name th however, generally confinod bs the matives to a much smalier tract in the southweat. There are nome fertile valleys and glens, one of the mout important being that of the Wadj-Donn, where the alopes of the mountains are covered with towns and Fillagen, and grain crope, datem, indiso. bananaa, etc., 1 extentivels cultivated. On the coast Makallah is the chief commercial depot.
Pladrian (ha'dri-an), in full, Pop the fourteenth in the series of Roman ems perory, born at Rome, 24 th Jan., 76 ADD His father, who wae cousin to the Hmperor Trajan, died when he was ten jears old, and left him under the charje of his illuatrious kinsman. He married Sabina, Trajan's grandniece, accompanied the emperor on his expeditions, filled the highent offices of state, and, on the death of Trajan, acsumed the government as him adopted son (117). He made peace with the Parthians, renouncing all conqueats

Coin of Hadrisn. east af the Euphratea, and boughtor War with the Roxola ni by payment of a sum of mones. Fiom the year 121 he spent most of his time in visiting the various provinces of the empire. Hadrian's policy was peaceful one, because he caw that the further extension of the empire only weakened it. Although avoiding war as much as he could, he kept the armien in excellent condition, fortified the frontiers in Germany, and, crossing, over into Britain, constructed the wall known as Hadrian's Wall (or that of Severus), which protected the Roman province from the barbarous tribes of the north. He nert traveled into Aoia and Africa, and lived in Athens for three years. In 181 he promulgated the Edictum Porpetuum, a fixed code of lawn, which forms an important epoch in the development of Roman law. In 182 the Jews began a rovolt and for four years carried on a blooty wer, ths only notable one of his long retbi. Hadian died at Bale in 188.
 quite as often associated with the name of Severus. See Severus (W all of).

Eidrosanrus tinct reptiles whoe gonus of large exlound in the nowe remains hare been the Enited Stater. a fincerample, found in Now Joreos, in in the Philidelphia Academy of Natural sciences. It appearr to have resembled the sisaatic ifuanodon of Europe is its emormous dimenaiona herbivorous hahite, and anatomical structure.
Fieokel (hek 1 ) Enrot, German naturalint, born at Pots. dam in 183 , atudied medicino and science at Berlin, Wurshurcs and Vienna; traveled in Norway and Italy, became profeseor of soolopy at Jena in 1860 . Iater he viaited Spain, EsJpt India, and Ceslon to perfect his knowledge of natural forms. He is the mont prominent exponent of the Darwinian theories and of the doctrine of monimm in Germany. Amonk his works may be mentioned the Rediolaria (1862), The Hintory of Oreation (1868), Anthropology (1874), Hiatory of the Evolution of I (an (1875), Riddle of the Oniverse (1902), and Wondere of Life (1005). He died August 0, 1010.
Eicmal Cavity (hémal), in anatplied to the cavity omy, a term apgreat centery of circulation in the Vertebrata, together with the direstive and reapiratory apparatum. The $\boldsymbol{H}$ emal Arch te the arch formed by the projections anteriorly of the ribs and the sternum from the vertebre.
Hematemesis
(hema-tem'e-ris), vomiting of blood from the stumach, resulting from mome disease of the stomach, as ulcer or cancer. Trematin Bmarme (he'ma-tin), the red coloring matter of the blood occurring in solution in the interior of the blood corpuscles or cells. It is the only structure of the body, except hair, which contains iron.
Ramatite (héma-tit), $\mathbf{R} \geq \mathbf{D} \triangle D$ and Iron.
Trematopus (be-mato-pus), a gethe best known apecies of which is $H$. ostrellgus, or common oyster-catcher. Eicematoxylin ( A - ma-toksi-lin; $\mathrm{ChH}_{4} \mathrm{O}_{5}$ ), the coloring matter of lowwood, or Hamatosylon oomponianum. This coloring matter is a constituent part of all the colors prepared with loswbods and the changes which it nadergo by the action of ectas and alkalioe reader he uncul as a rembent to detect
Tiematoz0a
(h $6-\mathrm{ma}-\mathrm{to}-20^{\circ} \mathrm{a}$; Gr. neimer blood and
coon, a living creature), a name grot to the paraitic animale which, undot cere thin conditions, exiat in the blood of mammala, birds, reptlle fiches, and many invertebrate animalm. "hey are generally micromeopic, and are thought to be connected with various diseasew.
Trematuria (he-ma-t u'ri-a; Gr. comatuia haima, blood, and ouron, urine), a discharge of bloody urine, usually ariolng from disease of the kidneys or bladder. In some parts of Africa it is an endemic disease ariaing from a parasite in the blood.
Fsemoglobin, HzEMOOLOBULN (hossemifluid or quite fluid matter of the color contained in the red corpuscles of the blood. It can be resolved into an albuminous substance called slobulin and the colorins matter hematin.
Hemontysis (he-mop'ti-sis; Gr. nama, b100d, and ptyais, a spitting', the coushing up of blood, mometimes produced by fullness of the blood veasels of the lungs or throat, or by the rupture of blood vessels as a consequence of ulceration. It is distinguished from blood coming from the stomach by the comparative smallness of its quantity, and by its usually florid color. It occurs in heart disease, in pneumonia and tubercular disease of the lungs. It is sometimes a case of vicarious menstruation.

## Hæmorrhage. See Hemorrhage.

## Hæmorrhoids. See Hemorrhuids.

Hæтия (be'mus), in ancient geography, the chain of mountains now known as the Balkan.
Fafid (ha'fid), MulaI, Sultan of Morocco, born in 1873, the half brother of Sultan Abdel Aziz, educated at University of El Azaar, Cairo. He was viceroy of Southern Morocco for seven years, and in 1907 put himself at the head of the rebellion against Sultan Azis whose course of life had caused great dissatisfaction. After a struggle lasting about a year the revolution succeeded, Ais was dethroned, and Hafid proclaimed sultan, February 11, 1908.
Tafiz (ha'fiz), MOHAMMED SHEME ED DIN, one of the most celebrated and most charming puets of Persia, was born at Shiras in the beginning of the fourteenth century. He studied theology and law, sciences which, in MOhammedan countries, are intimately comnected with each other. He preferred iadependent poverts as a dervish to alife at court, whither he wan often invited by Gultan Ahmed, who earnentiy premes
ante to Ficit Byedad. Eit died at Shiras about 1890. His poems, known collectively as the Divan, are Anarernntic in sentiment, abounding in the pratice of love and wine.
Faggar. See Ahegoar.
Eag, the name of the fishes of the genus Myaine, which, with the allied lampreys, constitute the order of Maraipobranchil. They are of worm-lito form, and have no eyes or ncalem. The mouth is formed for suction, is without lips, and furnished with flemy filaments or barbels. There is a single median tang upon the palate, by means of which the has makes its way into the interior of other fishes, such as the cod, ling, or haddock, where it lives parasitically. The Myalno glutinosa, or common haf? takes ite name from the quantity of rised mucus which it can secrete. An A.merican species is not uncommon in riveru of New York and New England.
Hagen (hä'gen), a thriving manuCagen facturing town of Prussia, in Westphalia, at the confluence of the Volme and Ennepe. It has manufacturem of woolen, linen, and cotton cloth, leather, hats, steel, and ironware. Pop. 88,600.
Hagenau (ha'ge-nou), a town of Germany, Lower Alsace, 18 miles north of Strasburg, on the Mloder. It has some manufactures in woolen and cotton goods, soap, etc., and a conaidprable trade in grain, oil, hope, etc. Pop. 17,068.
Hagerstown (ha'germ-toun), a city, county seat of Washington County, Maryland, 22 miles N. W. of Frederick, on several railroads. It is an active manufacturing town, with varied industries, including wood-working plants, textile mills, metal working industries, railroad shops, etc. Pop. 16,507.
Haggai (hagiait), the tenth in orior of the minor prophets, and first of those who prophesied after the captivity. The book of Hagsai consists of four distinct prophetical addresmentwo in the first and two in the second chapter-intended to rouse his disheartened countrymen to the rebuilding of the temple. They were delivered in 520 8.c., and are written in a brief atyle. The closing prediction foreshadows the eatablishment of the Messianic Kingdom.
 meaning in general holy writings, but apecifically applied to the writing included in the Jewish Ketubim, of third division of the Scripturem See Bibla

 Hahnemann (hi'neman) sancom Christian Fmiedricia, the founder of the homoeopathic system, born at Meissen in 1765; studicd medicine at Leipig, Vienna, and Erlangen, taking his degree at the last-mentioned place in 1774. After practicing in varions places, he published in 1810 his Or ganon der rationellen Heilkunde, which fuily explained his new syatem of curing any disorder by employing a medicing which produces a nimilar disorder. (See Homasopathy.) Hahnemann was driven from Saxony by the government prohibiting him from dispensing medicines, but found an asylum ultimately in Paris, where his syztem was authorized by the government and ncyuired a certair popularty. In its developed form it now ranks among the prominent schools of medicine. He died at Paris in 1843.Eiaigs bom invaras British general, borm in Fifehtro in 1861 , ca.
tered the humar serviee in the army in 1888 and took part in 1888 ; the Eudan campaign nuder Kitchoaer. In the Boer War ho merred as atarf omileer and woa repute for akill and courage, reaching the rank of lieutenant-colonel. Hew wit. spector general of cavalry in India in 1003 and major general in 1004, was chief of ataif in India $1000-13$ and in 1014 was made commander of the YYrut Army on the France-Beigum une. He uhowed brilliant powers on the Alupe and at Ypres and in 1016 succeeded General French as commander-in-chief of the Britioh forces in France.
Hail (hil), small mastes of ice or frosen rain falling from the clouds is showers or storme, rarying in their form, being either ansuiar, pyra. midal or ateiinted, as weli an in their consistency, being sometimes as hard as ico and sometimes as soft as snow. At

Pozme or Hatutionia.
Fig. 1. a, Hailotone which fell at Bonn in 1822: diametor 14 inches, weight 300 ernine $b c$ b, Seetions of diflerently ahaped $H$ ailostones which foll on the same ovenaion. Fis. 2. a, Section of Hailotione with minuto pyramide on it aurfece. bed $o$, Fregmenta of mom whoa burst acunder.
the center there is generaily an opaque spongy mass, resembling sleet in its composition, and round this a semi-transparent congealed mass, consisting of a succession of lajers or strata, is formed. l'roperly there are two kinds of hailthe small grains which generaliy fall in winter and usually before snow ; and the large hail which occurs chiefy in apring and summer, and is mant severe in very hot climates The swall-srained hail is probably formed by the freening of raindrops as they pass in falling through colder air than that from which they started. The large or common hali is probably due to the meeting of two cur rents of air, of very unequal temperature and electric tension. The usual sise of hailstones is about $1 / 4$ inch in diameter, but they are frequently of much larger dimentions sometmes even 3 or 4 toche
in diameter. In hot, and even in tem. pernto climatew they aro often very destructive to crope. Tailes, Doni see Delrympio (Sir Frinan (hrilin), un iniand of province of Quano-Tung, between the China Bea and the Guif of Tonquin, and separated from the mainland by a channel of 15 misen, encumbered with shoals and corai reeff. It is almont ovai in shape, and has an area of over 16,000 muare milien. The fertie iowiands on the northern and western cuasth are ocrupied by immigrant Chinese, to the number of about $1,500,000$, who cultivate rice, sugar, tobacco, etc. The filleries are ateo productive. The interior, which is mountainous and covered with foresta, is inhabited by a distinct race still in a very primitive stage. The capital is Kiangchow, on the northern coast, a large seaport.
Hainant, or hairatet (a-nof; Hain Hent Dutch, Hennegoven; German, Hennegau), a province of Beigium, bounded on the south and west by France; area, 1403 square milem. Thoush nowhere praperiy mountainous, it is very hilis in the moutheant, where it is covered by the Wentern Ardennes. In other directions it is generaily fat, though veli diversified. About three-fourthus of the whole surface is arable, and scarcely a hundredth part is waste. The soil is senerally fertie, and there are extenaive coal fields, coal, together with flax, ilinen, hemp, tobacco, and porcelain being the chief articles of export. Manufactures, chiefly cutlery, woolen and linen goods, etc., are carried on to a great extent. The capital is Mons. Population, 1,146,046. The old province of Hainault, in Camar's time the native district of the Nervil, was in the tenth ces: ary governed by a race of counts, the succession of which continued unbroken till 1436, when Jacqueline, heiress of William IV, was forced to cede her lands to Philip, duke of Burgundy. With Mary of Burgundy, Hainanit passed to the honse of Anstria. but in 1850 a part of it was ceded to France, and is now included in the department of Nord.
Hainburg, or hambithe (hin'burh, Hainburg, him'byrh), a town of Lower Austria, beautifully situated on the Danube, 27 miles snutheast of Vienna. It is walled; has an ancient town house, remains of a Roman aqueduct, and other antivuities. The old castle on the height is the Heimbure of the Nibelungenlied, the old frontier fortress of the Hune. Pop. $622 \%$

## Eainichen

 east of Leipeis Razony, 41 milien southationg. It has manufactures of woolen, linen, and cotton cloth, and is the chief seat of the German flannel manufacture. Pop. 7032.Hair (har), the fine, th readike, more or lens elantic subatance, of verons form and color which conntitutem the covering of the skln in the ciane of mammailia. It has the same une an feathere in birds, and scaiem in fimben and reptifen. No sperifes of innmmatia in withourt halr in an adult state, not even the Cetacea. In quadrupeds it in of the mont various conformatios. from the finest

Hame op Varioot antmala Maonitidi.
wool to the quills or $u$ porcupine or the brietlen of the hog. The human body is naturally covered with iong hair only on a few parts; yet the parts which wo should generally demeribe as destitnte of it produce a fine, short, colorless, nome times hardly perceptibie hair. The only places entirely free from it are the palma of the hands and the soles of the feet; but the body of the maie often produces hair like that of the head on the breast, shouldera, arms, etc. Each bair consitits of a shaft and a root. The shaft or part outaide the akin does not grow ; but the root embedded in the skin expands at its lower end into a sweliing or bulb which is composed of little cells and grows by forming new cells, the nld ones being pressed forward and becoming part of the shaft. The color is due to minute pigment granuies in the celis of the hair. The color of the hair is a race character; and the shape of the shaft has lilewise been used in this way, transverse wections showing circular. oval, flat, or reniform outlines. The human hair varies according to age, sex, conntry, and circumstances. At birth an infant generally has light hair. It always grows darker and atiter with age. The same to the case with the eyelashes and eyebrown. At the age of paberty the hair grows in the armpits. etc, of both seres and on the chin of the male. The helir of men is atronger and stilier; that ot

Semales longer (even in a atato of naturo), thicicker, and not so liable to be ohed. Connected with the haire are manall slands which secrete an oily substance eerving an a labricant to the akin as well as the halr. Thewe are called sebaceoua glande. If the root is deatroyed there if no meany of reproducing the hair; but if it folls out without the root being deatroyed, at is often the case after nervous fevers, the hair grows out again of itzelf. Erach hair, indeed, lasts only a certain time, after which it fill out and is re placed by another as long as the papilla nnot weakened. Grayness of hair is cansed by a deficient amount of pigment granules in the hair cells, The deficiency ariven at the hair bolb where the cells are produced. Any infinences that affect the nutrition of the bulb may thus affect the color ${ }^{\text {an}}$, well ${ }^{28}$ the growth of the hair. Baldnnene is caused by atrophy of the papilila senerally dio to lessened circulation of the blood in the scalp. For some direnves which have a close connection with the hair, see Plica Polonica, Ringworm, Sycosio. Under ordinary ciranmutances hair is a very stable subatance. It is the last thing which decays, and it often grows after death and lasts for centuries. Hair is not acted on by water, bnt heated in it nuder pressure it decomposen evolves anlphuretted hydrogen, and dissolves; it is also dissolved by allalien and acids. When burned it emits - diargreeable odor as of burning horn.

Hair for manufacture is turnished chiefly from the horse, the ox, the hos, the goont, especially the Angora or Mohair gont, the camel, and the alpaca. That of the first three it most used for upholstery purposes, the short hair heing manufactured into curled hair for stưings and the long straight hair manufactured into haircloth for seating. The long huir fin aliso reserved for the manufacture of fiching-lines, hrushes, etc. White hair in of the most value, being most adapted for dyeing and for the manufacture of fancy articles. The horse-hair used for weaning comes chiefly from Russia, Germany, Belgium, South America, and Australia. Rnssia, chiefly furnishes the bristles so largely used for brushes. The mahle, the miniviver, the marten, the badger mupply the finer brushes or hair-pencille of painters. The hair of the zoat the camel, and the alpace is chiefly used in combination with or subordinated to wool and other fibers for spinning and Teaving into dress fabrica. The kind of hair most used in mannfacture is the fleecy coat, or woft hair of the theep, known an wool (g. o.). Huran halr to used chieny for the manufacture of

Wish curle, beards, chignons etc. Mout of the supply come from Irance, Ger: many and Italy, where the peasant dirls aell their hair to itinerant dealera. In every case, and for any parpose, hair is always bert taken from the healthy living gubject, hair of diseased and dead people being much inferior.

The numerous preparations sold for this parpose have generally a basis of lead or nitrate of silver. Birmuth, pyrogallic acid, sulphur, the juice of green walnut shells and other astringent vegetable juices, are also employed. Hair-eel, the living form into which horme-hairs, when left to noak in running water, are supposed by many to develop. The horse-hair worm or hair-eel is really a Nematode. See Nematelmia.
Hair-grass (Aira), a genus of grassen belonsing to that division of the order in which the upikelets have two or more florets, and the inflorescence is a loose panicle. It is of little use for cattle, which disilike it but may serve where covert is wanted for game. A. caspetofa, or tufted hair-grase, the windlentrae of the scotch, in used as thatec for ricks, and in some places for making matu.
Hair-powder, a preparation of and some perfume, formerly much used to whiten the head. Sometimes the powder was colored. The custom of wearing it was introdnced from France into England in the reign of Charles II. To make the powder hold, the hair was usually greased with pomade. It is now scarcely to be seen except on the heads of footmen in attendance on the people of rank or wealth.
Hair-spring, in watches, the fine of steel, which is attached to the made the balance wheel, and serves by its resisting power to equalize the vibrations of the escapement-wheel.
Hair-tail (Trichiurus), a genus of acanthopterons fishes, of the tropical marine fanna, generally found near land. The body is long, scaleless, ribbon-shape, and ends in a lons. whip-lite tail. The dorsal fin extends along the whole back and is spiny throughout. There are six species known, some of them being four feet long. The Dilvery Hair tail, of Ribbon-î̉h, is fonñ in the Atlantic, along the enat comut of the United States from Cape Cod to Morida and in the West Indie. The others aro

Hair-worms. See Nematelminthes. Eaiti. See Hayti.
Elajilij (hájij-lij), an Esyptian, Indian, and African tree of the zenus Balanites (B. X1gyptiaca), nat. order Simarubee, cultivated for its edible fruit, from the seeds of which an oil is expressed.
Hajipur (hä-je porr) a town of Intrict, Bengal, on the Little Gandak, a short distance above its confuence with the Ganges. Its command of water traffic gives it considerable commercial importznce. Pop. about 20,000 .
Hake (hảk), the Merlucius vulgaris of Europe, and the M. albidus of N. America, fishes belonging to that

Hake (Merlucius inlparis).
division of the cod family or Gadidx which has the head much fattened, and two dorsal and one long anal fin. The European hake is known in some places as king of the herrings, on which it preys. Hakim (ha'kim), Turkish word, originally signiffing sage, philooopher, and then a physioian. Hakim bashi is the physician of the sultan, that is to say, the chief of the physicians, always a Hurk: whilst the true physicians in the seraglio under him are Western Europeans, Greeks, and Jews.

## Hakluyt

(hak'zot), Ricisard, one of
the earliest English collectors of voyages and maritime journals, born in 1553. He entered Christ Church Collese, Orford, in 1575, and became so eminent for his acquaintance with cosmography, that he was appoisted nublic lecturer on that science. About 1584 he went to Paris as chaplain to the English ambassador, and stayed there five years. After his return home he prepared for the press his collection of The Principal Navigations, Voyages, and Discoveries of the English Nation, made by Sea, or over Land, Within the Compass of These 1500 Years. The first volume, in folio was published in 1589 , and the third and last in 1600. Besides narratives of ncarly 220 voyagen, these volumes comprise patente, letters, instructions, and other documents, not readily to be found elsewhere. Hakloyt died in 1616, and wan interred in Weatminster Abbey.

## Takodadi (hizo-dildo), or Haro- <br> DATE a cits of Japan,

near the south end of the island of Yemso, at the foot of a hill on the ahore of a beautiful and spacious bay, which forms one of the best harborm in the world. The commerce is important and there are manufactures of matches, etc. The city is strikingly clean, well laid out, and attractive in other particulars. Pop. 78,040.

## Eakon VII (ha'kon), Prince

 Charles of Denmark, was elected by the Norwegian parliament and popular vote (Nov. 12-13, 1905), as the first ruler of the resuscitated ${ }^{2}{ }^{2} 5^{-}$ dom of Norway. He was born in 1872, the second son of Frederick VIII of Denmark, and in 1896 married Princess Maud, third daughter of Edward VII of England. He chose the name Hakon as a revival of the title of a number of ancient kings of Norway.Halacha (hal'a-ka), Hazaka (Heb.
'rule'), the Jewish oral or traditional law, as distinguished from the written law laid down in the Scriptures, and like it believed to be of divine origin. It was finally reduced to a written code forming part of the Talmud.
Halberd, or HALBERT (hal'bert), an offensive weapon, consinting of a pole or shaft about 6 feet long, having its head armed with a steel

1, Halbert (Time of Henry VIII). 2, Do. with gleur-dolie (Henry VII). 8, Doublonzed Hialbort (Charles I). 4, Halbert (Charles II). B, Do. (William III).
point edged on both sides. Near the head was a cross piece of steel somewhat in the form of an axe, with a apilke or hook at the back. It was much used in the English army in the fixteenth century, and gave ite name to troope called haber.
diers; to whom was confided the defense of the colors, and other special duties. It is now used only on ceremonial occations. Talberstadt (hali-ber-atat'), a town of Prnseia, in the province of Saxony, 32 miles 8 . W. of Magdeburg, on the right bank of the Holemme. It is an old town, with many timber-framed and curiously, ornamented houses. Its principal buildings are the cathedral, the Liebfrauen chnrch, an old Episcopal palace, town house, etc. It has considerahle manufactures of carpets, soap, leather, oil, gloves, etc. Pop. 46,481. Halcyon (hal'si-on), an old or fisher. It was fabled to lay its egrs in nests that floated on the mea, ahout the winter molstice, and to have the power of charming the winds and waves during the period of incubation, so that the weather was then calm; whence the term, halcyon days. See also Kingfither.
Hale (hal), EDwARD Evirati, anBowton, Massachnse clergyman, born at Bonton, Massachusetts, in 1822. He was graduated at Harvard in 1839 , was the pastor of a Unitarian Church in Worcester, Massachnsetts, 1846-56, and of one in Boston 1856-1003, when he was appointed chaplain of Congress. He died June 6, 1009. His books were numerous and a number of them highly popular. Prominent among them were The Man Without a Country, Ten Times One is Ten, Philip Nolan's Friends, 4 Nevo Enoland Boyhood, etc.
Tiale, Horatro, philologist, was born 1817, a son New. Hampshire, about at Harvard in 1837, he studied philolosy and produced a valuable work entitled Ethmology and Philology, that contalned a remarkable amount of information on those suhjects He also edited the Iroquois Book of Rites. He died in 1898. Rale, John P. statesman and Freedency, was born at Rochester, New Hampshire, in 1806. Elected to Congress in 1842, he hecame prominent in his opposition to slavery. In 1846 Mr . Hale was chosen U. S. Senator. In 1847 he Was nominated for the Presidency hy the National Liberty party. and in 1852 hy the Free-soil party. His speeches were replete with humor and pathos. His 16 years in the Senate were devoted to the aritation of the slavery question. He died in 1873.
Hale, Nathan, an American patriot, ticut, in 1705 . Ye was gradnated at Yale Collese in 1773 , entered Washington's army in 1775, and took part in the battle
of Lops Island in 1776. Being ment by Washington to penetrate the enemy's line and obtain information, he was taken, condemned as a apy and executed the next day September, 1776 He has aince been looked upon as a martyr to the cause of liberty. He aaid, 'I only regret that I have but one life to lose for my country.'
Fale, Sabait Josiria, authoress, Hampshire, in 1793; died in 1876. She pnblished The Gomius of Oblivion, and other Poems in 1823, and Northsoood, a novel, in 1827. She edited the Ladies ifagazine, Boston, 1828-37, and pnblished other poems and worke of fiction.
Tales (halz), $A L E X A T D E R D E$ surtor; an Enamed the Irrefragablo Docin Gloucestershire, date nnknown, celehrated among the controversialistas of the thirteenth century. He died at Paris in 1245.

Halévy (lala-ve) Jacqums FisanFrench musical composer, born of Jewish parentage at Paris, 1799. He studied at the conservatory ninder Lambert and Cherubini, and was sent to Italy to finish his musical education. Here he wrote his first two operas Les Bohémiennes and Pygmalion. The first of his pieces performed was a little comic opera, $L$ irtisan, given at the Theatre Feydau in Paris, in 1827. His chef d'œurre, La Juive appeared in 1835, and rapidly obtained a European celebrity. Among his other works are L'Eclaire, $\dot{G}$ wido et Ginevra, La Reine do Chypre, Le Val diAndorre, and La Fbéo ave Roses. He died at Nice in 1862. He was a cultivated and acholarly composer but without much genins.-Eis son, Ludovio HaLEvy, born In 1834, was a popular anthor of vandevilles, and wrote the librettos of most of Offenbach's operas. He also wrote the charming $L$ 'Abbe Constantin and other novels, and a number of plays, inclnding Frou Frow and Tricoche et Cacalot, a comedy which had a remarkable success. He died in 1908.

## Ralf-moon, in fortification, an out-

 facem forming a salfent angle, whose gorge is in the form of a crescent or halfmoon.Filf-pay, in the British army, is tion for past geranted as a remunerawho or past services, either to an officer Who retirem altogether from active duty after the fill period of service, or to one who is compelled by in-health, reduction of his regiment or some exceptional canse, to quit active service for ational
ordinary printing.
Haliaètus (hal-j-2i'tus), the senus of birds to which belong the white-tailed sea eagie of Britain, and the whiteheaded or bald eagle of America. Ealiburton (hali-bnr-tun),

THOMAS CHANDLER, an Anglo-American humorous writer, born at Windsor, Nova Scotia, in 1797: died in 1865. He practiced iaw in Halifax, wrote a Histonioal and Statistical Account of Nova Scotia; and contribnted a series of hnmorous letters to a Halifax newspaper nnder the pseudonym of 'Sam Slick.' In 1840 he becanie fudge of the Supreme Court of Nova Scotia, but subsequently went to England. In 1859 he was elected a member of Parliament.
Halibut (hal'i-but), or Hoxisox.
the Hippoglossus vulodris, one of the largest of the Plenronectidse or flat-fisi family, sotnetimes weighing more than 300 lbe . The fish has a compressed body, one tide resembling the back and another the belly, and both ejes of the aame side of the head. It is
and have often elegant forms, but are unfit for any use. One apecies, $H$. oculata, is popularly known as the 'mermaid's glove.'

## Talicore (ha-lik'o-ré). See Dugony.

Ealifax (hali-faks), a city of England, in the county of Yort (West Riding), on the Hebble, 36 milem w. 8. W. of York. It is built on a, rising slope, and has a very picturesque áppearance. The more modern streets are apacious and Fell pared. Among the principal bnildings are the parish chnrch of St. John the Baptist (restored 1879), All Sonls' Chnrch, the square Church; the town-hall, market-hall, theater, assembly rooms, infirmary. etc. There are several charitable institutions, three pnblic parks, and two grammar-wchooln. Halifax commands abundant enpplies of coal and water, and en extendve inland navisation connecting it with Fill and Inverpool. It is one of the centerm of the woolen and wornted mannfactures in Yorkuhire. a sreat variety of goods being
produced. There are aleo iron, chemicent and machine-mating worta. Pop. (1911) 101,056.
Ealifas, city, capital of Nove slope of a commanding hill, on the western side of Halifax harbor. The harbor is one of the best and most spacious in America and is casy of access at all seasons of the jear. Its length from north to south is about 16 miles, and it terminates in a beautiful sheet of water called Bedford Basin, within which are 10 square miles of good anchorage. The harbor is well fortified, and has an extensive government dockyard. The city, which was firat settled as a colony by Governor Cornwallis in 1749, has apacious and regular streets, an elecgant Province buildios, largo Roman and Anglican Catholic cathedrals, a military hompital, theater univeraity, etc. It is the principal naval tation of British America, has an extensive foreign and coasting trade, and large exports. There are numerous manufac tures, including iron castings, cars machinery paint, soap, cordage, fertilizers, skates, tobacco, paper, etc. $i$ also rolling mills. Pop. (1011) 46,619. This city was the scene of a frightful accident on Docember 6 1917, when a French vessel, loaded with munitions, including a large quantity of high explosives, was run into by a vessel laden with supplies for the Belgian Relief Commission. The munition ship was set on fire and quickly exploded with terrific violence, the whole city being shaken and the section of its known as Bichmond, a district of over two square miles in area, almost completely wrecked. by the explosion and the widespread conflagration that followed. This. the northern part of the city, consisted largely of frame buildings, but the more substantial buildings farther away suffered considerable damage from the violent shock. The loss in human life was great, more than 1500 persons being killed, while about 4000 'were injured. The property lose was entimated at $\$ 50,000,000$.
Falifax, Charles Montague, Eari statesman, born in 1681 : died in 1715 He was educated at Westminster School and Trinity College, Cambridge. He first attracted notice by his verses, and in 1687 wrote, in conjunction with Matthew Prior, The Toun and Oountry Mouse. He entered the House of Commons as member for Maluen during the Convention Parliament became a lord of the treasury in 1692. and chancellor of the exchequer in 1894. His administration was distinguished by the adoption of the funded debt syatem, and by the eatabish-
ment of the Bank of England. In 1700 he was rained to the peerage as Baron Ballfax, was twice impeached by the House of Commons, and remained out of office during the reign of Anne. Having tat $n$ an active part in securing the succession of the house of Brunswick, George I created him an eari, and bestowed on him the order of the Garter. He became first lord of the treasury in 1714. His charmeter was a mirture of meanness and arrogance, but his taste in literature and the arts was good, and he had a great talent for finance.
Ralifax, George Savile, Marquis OF, son of Sir William Saville, English statesman and writer, born in 1630 ; died in 1695. Having exerted himeelf for the return of Charles II he was created Viscount Halifax in 1667, in 1669 Earl, and in 1682 Marquis of Halifax, being also keeper of the privy seal and president of the councis. He supported James II, but lost his favor by opposing the repeal of the Test and Habeas Corpus acta. He was chomen speaker of the Eouse of Lords in the Convention Parliament, and largely contributed to tre elevation of William III to the throne. He wrote Advice to a Daughter, various political tracts, such as the Character of a Trimmer, Maxims of State, etc. He himseil was a specimen of the trimmer, his conduct, however, heing guided more by patriotic than personal reasons.
Taliotis (hal-i- $0^{\prime}$ tis), a genus of gasteropodous molluscs, both fossil and recent, commonly called earshells, or sea-cars, found adhering to rocks on the shore and remarkable for the pearly iridescence of the inner surface. The name is derived from their likeness to an ear.
Fall (hal), an ancient town of Austria, in the Tyrol, 6 miles past of Innsbruck, on the Inn, which is here navigahle. It has very extensive salt works, and in recent times has become a summer resort. Pop. 6191.
Hall, a town of Wurtemberg. Set Schwöbisch-Hall.
Th11 (hal), AsApH, astronomer, bom at Goshen, Connecticut, in 1829; diei in 1907. He graduated at the University of Michigan, and in 1863 was made professor of mathematics in the United States navy. In 1877 he made the capital discovery of two moons of Mars, named by him Deimos and Phobos. Hall (hal), Busin, a naval officer and traveler, con of Sir James Hall of Douglaes, borm at Mainburgh in 1788, entered the nary in 1802, and became poot-captrin in 1817. Amonget his prim
cipal works are: 4 Voysge of Disoovery to the West Cocet of Oorea and the Greet Loo Choo Ioland (1817); Eetracts from - Jowrnal (written on the Pacific coast of America); Travols in North America (1829) i Fragments of Voyages and Travels; Sohioes Heinfold, or 4 Winter in Styria. He died in Gonport in 1844. Fill, Charise Fhairos, an Arctic New Hampibire, in 1821. He began life as a blackmith, became a journalist in Cincinnati ; in 1860 organized an Arctic expedition in search of Sir John Franklin and remained among the Eskimos two jears. In 1864 he undertook a second expedition to the same regions. where he remained till 1869. In 1871, at the instigation of Hall, the United State government fitted out the Polaris for an expedition to the North Pole, and placed Captain Hall in command. The Polaris sailed from New York, June 29, 1871, and on August 30, reached lat. $82^{\circ} 16^{\prime}$ N., and then turned back to winter in a sheltered bay, lat. $81^{\circ} 38^{\prime}$. where Hall died on November 8th. An account of his first expedition was given by Capt. Hall in his Arctio Researches.
Fill, EDWARD, an English chronicler, born in London about 1495 ; died in 1547. He practiced law and attained the office of judge in the sherifr's court. He had a seat in the House of Commons, and was a zealous Catholic. Hall's Chronicio, published in 1548 , is a curious picture of the manners and customs of the age.
Fiall, G. Stannow, an American educator, bo. at Ashfield, Massachusette, in 1845. Ie was educated at Williams College and in Germany. In 1888 he was chosen president of Clark University at Worcester, Massacbusetts. He is especlally noted for his work on tbe paychology of the adolescert. His books include Aspects of German Culture (1881) ; The Oontents of a Ohild's Mind on Entering School (1894), and Adolescence (1806).
Fill Javis, anthor, was born at Pal Philadelphia, in 1783: died in 1808. He atudied law, practiced, and became a judge. His works include Legends of the West, Tales of the Border. The Widerness and the War-path, etc., and with T. IL MoKinney The History of the Indian Eribee of North America.
Hall, Jucrs, geolorist, was born at Eingham, Macsachusetts, in 1811: Aicd in 1806. H6 was appointad on the Now Yort reological mtafi in 1887, and began a murves of the weent of the ante. 4 Ifs rewearches won him distinction,
their remulte being demeribed in the Pu taontology of Now York. He vie made itnte geologint of Iowa in $185 \%$ of Wisconain in 1858, and of New Yosk in 1866.
Eiall, Joampr, an English prelate and writer born in $157 \leq$. He wa educated at Emmanuel College, Cam: bridge, became successively dean of Worcenter, bishop of Exeter (1627), and bishop of Norwich (1641). He arreed with the Puritans in doctrine, but diyapproved of their viewi of church government, and took a prominent part in defending the liturgy of the chnrch against the views published by the Nonconformists in the tract Smectymaum. In 1642 he was sent to the Tower alons with twelve other prelatee who had protested against their expulaion from the House of Peerm. In 1613, when the destruction of the Entablichment was finally renolved on by the Puritang, he was specially named in the ordinance passed for mequestering what were called notorious delinquents, and heartlemly robbed of all his property by inquisitory, who turned him houseless into the streets Ultimately he was allowed to take pow session of a small estate which he pow sessed at Hisham, in the ricinity of Norwich. Here he spent the remainder of his days nnontentaitiously, performing the duties of a faithful pantor, and died at the advanced age of eighty-two, in 1656. Amongut his writings are: Virgite miarum, a weries of poetical satires written in his earlier years: 4 Century of Meditations; Contemplations; etc. Fiall, Marsyanin an Englith physi1790; died in 1857. He studied at Bainburgh and on the Buropean continent, commenced practice at Nottingham in 1815, and removed to London in 1826, where he obtained a large practice. Dr. Hall was distinguished by his medical writings on diagnosis, the ctrculation of the blood, and female diseanes; but particularly by his discoveries made public in his wor's on the nervous syetem, and by his method of restoring apphyziated persons.
Eall, NewMar, an English minister. was born in 1816 ; died in 1902 He preached in the Congregatinual Church of Hull, 1842-54, was an mavocate of the canve of the North during the American Clvil war, and camo to Imerica in 1807, where he preadid by Sors both hotapes of Congret On hio yotura to INondon hs wan metarmentol ? the croction there of monamont to hbraham Inacolo His Oame so Jove
atro Itely, the Land of the Forwm and tho Vetions, and other worth Fall, Romongr, the Diedentrated in divine land war born at Arnsby, Leicenterahire, in 170s the son of a Baptiat minister. He atudied at the Baptat College at Brintol, anil afterwards at $\Delta$ berdeen. In 1783 he became asaintant pastor of Brondmead Chnrch in Bristol, suffered for a time from mental alienation, recovered and became pastor of the Baptist Charch at Cambridge, where he zoon acquired a great reputation by his preaching and hfs writinges anch an Xoology for the Freedom of the Prese (1783); Modern Inidelity (1800); and Reflections on War (1802). He asain became insane and resigned his charge, but recorering, married and settled at Leicenter in 1808, till in 1826 he wat again called to Bristol. Nearly all his lite he suffered $s 0$ intensely from calculus in the kidney that for twenty jears he was never able to pass an entire nisht in bed, and could obtain rest only by a ruinous use of laudanum. He died in 1831.

Hall, Samuex Carter, an English 1889. He studied law and became in barrister; reported parliamentary debates for the Nero Times; edited in succession the $A_{\text {mulet }}$.the Newo Monthly $1 \mathbf{M a g a z i n e , ~}$ and the $\Delta$ rt Journal (1839-80), besidee various popnlar annuals, and ,he Book of Gems, Book of Britioh Balleds, and Baronial Hall.
Hall, Thozas Cummine, theolojian, in 1858. Was born in Armagh, Ireland, studied at Berlin and Gottingen. and in 1898 became professor of theology in the Union Theological Seiminary Author of The Pover of an Endless Life, The Bocial Sionificance of the Evangelioal Revival in Enpland, The Bynoptio Gospels, John Hall, Tastor and Preacher, and contribntrions to the religious press of the country.

## Hall of Fame of Great Ameri-

cans. The institution thns named fice on the ground of the Uniciversity of New York, in New York City It has misseum of seven rooms on the ground floor and a colonnade, 400 feet long, above. The building was erected in 1000 by aid of a gift of 8100,000 from Helen Gould. There are 150 bronze tablets in panele to raceive inscriptions of eminent citizens dend over ten yeare, 50 to be chosen in 1800 and 5 each mucceeding five jearis 50 voten $450 m$ the melecting
committee of 100 beling neoded to accept any name. At prement only 61 mames have been chooen, 29 in 1800, 11 in 1005, and 11 in 1010. The names chowen in 1800 were an follow: Warhingtion, Lincoln, Webater, Eranklin, Grant Marmhall, Jegereon, Emerwon, Fulton, Lonsfellow, Irrins, Bdwarde, Morse, Farrasut, Clay, Peabody, Hawthorne Peter Cooper, Whitiey, R. E. Lee, Horace Mann, Audubon, Kent, Beecher, Story, John Adama, W. E. Channing, Glibert stuart, and Ase Gray. In 1005, J. Q Adams, Madiron, Lowell, Whittier, and Sherman; of foref Agamis, and Paul Jones, and of eminent women Mary Lynn, Emily O. Johnson, and Maria Mitchell were elected.  nmes 1805 , en in LinmallFrancike's Institution, founded by Pastor Francle in 1608, comprising an orphan aylum, achools: etc. The univeraity, with which that of Wittenbers was incorporated in 1817, is a celebrated inatitutom founded in 1694, and attended by 1500 students. Halle has extensive trade and manufactures, chiefly chemicale, oil, malt, dyes, arricultnral machines, etc, besiden its celebrated salt-work Halle is mentioned ts early as 800 . It was lons a powerful nember of the Hansealic 1.eague. Pop. (1910) 180,843.

Halleck (hal'ek), Fitz Grmans, poet, born at Guilford, Connecticnt, in 1790 . He became a clerk in a New York banking-house, and for jears was in the employment of John Jacob Astor. In 1819 poems by him and a friend (J. R. Drake) appeared in the New York Divening Post under the sig: natnre of Oroaker \& Co.. and attracted some attention. In 1820 he published Fanny, his longest poem, a satire on the follies and fashions of the day. In 1822 he visited Europe. Amongst his best poems are Marco Bozzaris, To tho Memory of Burns, Alnvoiok Castle, and Red Jacket. He died in 1867.
Halleck, Hanar Waozr, an Amerinear New York, in 1815; was edncated for the army at West Point, and entered the engineers in 1839. In 1846 be published Elements of Military Art and Soience, and he was raised to the rank of captain for his services in the Mexican war. In 1854 he left the army and settled in San Francisco as a lawyer and director of a mining company. On the outbreak of the Civil war in 1861 he was created major-general in the United States army. He commanded at the siege and capture of Corinth in 1862, and soon after was made commander-in-chief of the Union armies, directing their movements from Washington. till snperseded by General Grant in 1804, when he was appointed chief of staff. Ulitimately he received the command of the South Djvision at Louisville, where he died in 1872. Amongst his writings are two works on International Lavo.
Falleluia (hal-eld'ya), or Haxis('praise ge the Lord'), a Hebrew formula of praice often ocenrring in the Psalms, and which is retained in the tranelations of the varions Christian churches, probably on account of its full and fine monnd, so proper for pnblic relifions eervicem The Great Halleluja is the name siven by the Jews to Pealms calif-cxil, which are anng on the feasts of the Pamover and Tabernacles.

Faller (halleer), Aubracat, von, a ogist, born in Bern in 17U8; studled medicine at Tubingen, and afterwards at Leyden under the famous Boerhinave. He became a public lecturer on anatomy at Bern and afterwarde physician to the hompital and principal librarian. In 1780 he was made professor of anatoms and gurgery in the Univeraity of Gottingen. In 1747 his Prima Linea Phyoiologoia appeared, and in 1757 his Elemente Physiologice Corporis Humani. Other works appeared later, and he was ennobled by the Emperor Francis I, and became chief magistrate of Bern, to which he had retired in 1753. Haller had a considerable reputation as a poet. He also wrote three phillosophical romances, Usong, Alfred the Grat, and Fabius and Cato. He died in 17 T7.
Falley (halii), Edmund, an English mathematician and astronomer, born in 1656. He was educated at Qneen's College, Oxford, published before he was nineteen a method for finding the aphelia and eccentricity of the planets, and stajed two years in St. Helena (1676-78) cataloging the stars of the Southern Hemisphere and arranging them into constellations. In 1682 he discovered the comet which bears his name, and his prediction of its retnrn in 1759 was the first of its kind that proved correct. He surveyed the coast of Dalmatio at the reqnest of the German Emperor, and returning to England, was elected Savilian professor of geometry at Oxford (1703). In 1713 he was made serrptary of the Royal Society, and astre, nomerroyal in 1718 . He died in 1742.
Fialley's Comet, discovered in 1682 (See preceding article.) Halley's demonstration that this comet was the same Fith the comet of 1456,1531 , and 1607 first fixed the identity of comets. It performs its revolution in about 73 yearm. Its last appearance was in 1910, when it failed to show the brilliance displayed on earlier occasions.
Halliwell-Phillipps, Jayse OnCHARD, orig inally J. O. Hacurwmi Shakenperean scholar, was born in 1820; died in 1889. In 1839 be began his editorial labors with a reprint of Mandeville's Travels. He was a leading and active nember of the Percy and Shakestere societies; for the former he edited the Minor Poems of Ludgete, Early Noval Ballads of England. Nursery Rhymes of England, etc. : and for the latter, Coventry Mysteries, Tor the ion's Jesto, TM Fairy Mythology of Shathenere, etc. Eff
chict Shakenperean pahlications are a Iffe of Shekespere (1848), the Worke of Shakespere in 16 folio volumes, only 100 copies printed; Calender of the Recorde of Stratford-on-Avon; History of New Plooo; and Owtlines of the Lifo of Shakospers. He insued also 17 volumen of lithographed facsimiles of the quarto plaje, and a great number of pamphlets on Shakenpere, stratiord, and kindred topics. He also published a valuable Dictionary of $\Delta$ rchaic and Provincial Woris.
Hall-mark, the official stamp, affixed pany of London and certain assay officea to articles of cold and Eilver as a marl of their fineness. The hall-mart generally denotes the place of mannfacture or assay, as an anchor for Birmingham; a leopard's head for London; tree, salmon, and ring for Slasgow ; a crown for Sheffield. The otandard-mark for gold is a lion pamant for England; for Edinbnrgh, a thintle; for Glasgow, a llon rampant; for Ireland, a harp crowned.
Tallow-even, or HAL工ow ex min ing of the 31st of October, so called as being the eve or vlgil of All Hallows or Al Saints, which falls on the 1st of November. It ls associated in the popular imaginatlon with the prevalence of supernatnral influences, and in Scotland is frequently celebrated by meetlags of young people, with the performance of various myatical ceremonies humorously deacribed by Burns in hls poem Hallove'en. The celebratlon of it ln various ways has spread widely and is very common in the United States.
Fallucinations (hal-u-si-na'shunz), rol, are morbld conditlons of mind in which the patient is conscions of a perceptlon without any impression having been made on the external orrans of sense. Halluclnatlons are to be Jistinguished from delusions, for in these there are real sensatlons, though they are er. roneously interpreted. Plnel was the first who connected hallnclnatlons with a disturbance of the phenomena of sensation, and the investigation has been pursned further by Esqulrol, Maury, Brlere, de Bolsmont, and others. All the senses are not eqnally subject to hallncinations: the most freqnent are those of hearlng: next, accordling to many, come those of gight, smell, touch, and taste; and ballncinations of several senses may exist cimultaneously in the same individual, and also be compllcated with certain delnsions. The simplest form of hallncinations of hearing is the tingling of the
ears; bnt the atriting of clocit, the sounds of muslenl instruments and of the human roice are often heard, and in thene instances, an in thowe of the perturb.tions of the other senven, there mant be a diveased seasorinum thongh there shonld he no structural deransement of the nerves. Hallncinations are not confined to those whose mental faculties have been allenated, but occasionally anmail end torment even the mane. Occailonally hal. luclnations sapervene where the syitem in healthy, and the individual fully conwcious of the nnreality of the ohject that address hls senses, and this disorder is often ansociated with mnch ahility and wledom in the condnct of life. Amongat well-known and anthenticated hallncinations are that of the eecond Earl Gres, who was haunted by a gory head, which, however he could dlamise at will, and that of Bernadotte king of Sweden, who was hemet in his riden by a woman in a red cloak, although perfectly conscions of the hallucination ninder which he labored.
Falluin (alu-an) a town of France, dep. of Nord, on the risht bauk of the Lys, 10 mllee N. N. E. of Lille. It has conslderable manufactares of clothe, linen, and calicoes, beaides cotton and oil mille, etc. Pop. 16,599.
Fallux (hallnkz), the innermost of the five digits whlch normally compose the hind foot of a vertebrate animal; in a person the great toe, in a bird the hind toe.
Halmstadt (halm'atat), a seaport of Sweden, on the Cattegat, at the month of the Nissa. It has cloth-mating, brewing, salmon fisheries, and a trade in deals, lumber, pitch. Pop. 15,362.
Halo (hã' 10 ), the name tiven to colored clrcles of light sometimes seen round the sun or moon, and to other connected luminous appearances. These phenomena are classified as: (1) halos proper, consisting of complicated arrangements of arcs and circles of llght surroundling the snn or moon, accompanled by others tangent to or interwecting them; (2) coronas, slmple rings, generally somewhat colored; (3) aureolas, the name given to the kind of halo snrrounding a shadow projected npon a cloud or fog-bank, or to the colored rlags observed by aeronauts on the npper surface of clouds. All these appearances are the result of certain modifications which llght andergoes by reflection, refractlon, dispersion, dlifraction, and interference When it falls npon the cryatals of lee, the raindrops, or the minnte particles that constitute cloude

Talpine (halpon), Owames Gre born in Ireland in 1820, came to the United Statem and adopted the profespon of journalism. He merved in the Civil war, and was brevetted brigadier-general at its close. Under the pen-name of Milen O'Relly he wrote Pooms, Miles O'Reilly Papers, etc. He died in 1868.
Fials (hals), Frans, the elder, a portrait and senre painter, born probably at Antwerp, Belgium, about 1580; died in 1666. Hals is usually regarded at the founder of the Dutch school of genre-painting. His subjects of feastins and carousal are treated with marvelous vivacity and spirit, and as a portrayer of faces convulsed with laughter he is Fithout a rival. Of his portrait groups eisht noble examples are preserved in the muceum of Haarlem, the finest being that dated 1633 , representing the oflicers of the corpe of St Adrian. The Mandoline Pleyor (1630), in the gallery of Amsterdam, The Laughing Oavalier and Hille Bobbe (National Gallery, Berlin), are typical examples of his eingle figures.
Halstead (halrated), MURAT, journalCounts, Ohio was born in Butler proprletor of the 1820 i died in 1008 . A and later of the Commeroial Gazette, he bename an important figure in the annals of the Republican party.
Biam, one of the three sons of Noah. , He had four song-Cush, Mizraim, Phut, and Canaan-from.the first three of whom the tribes that peopled the African continent are stated to have oprung, while Canaan became the father of the tribes that pincipally occupied the territory of Phoenicia and Palestine. See Eamites.
Tism, the inner angle of the joint les of an animal, but more generally understood to mean the cured and smoked thigh of the hog. Usually the meat is first well rubbed with salt, and a few days after it is rubbed again with a mixture of salt, saltpeter, and sugas, though mometimes the saltpeter is omitted. After lying for eight or ten days it is ready for drying. The smoking of ham consists in subjecting them to the smolo of a fire, wood being used in preference to coal.
Famadan (ham-A-dann'), a city of ancient Ecbatana. in the province of Jrak-Ajemi, 185 miles southwest of Teheran. it is pleasantly situated near the base of a great range of mountaing, and is surrounded by ruins as well as by beautiful oschards and gardens. It has
extensive caravangeries and basaarm a number of tannerien, and also conalderable manufactures of caspets, woolone, and cotton stufia. Pop. estimated at 40,000 .

Pamah (ha'ma), or HAMATH, a city of Byria, on the banks of the Orontes or El-Azs, on the caravan route between Aleppo and Damagcus, in a well-watered and productive district. Amongst the curiosities are huge Pernian water-wheels, 70 or 80 feet in diameter, which are turned oy the current of the river and supply the houses and gardens with water. The famous Hamath In scriptions were noticed by Burckhardt in 1812 , but only recently examined and published. They are cut in relief on four stones of black basalt. The characters are entirely different from any others known, and no key to their decipherment has yet been discovered.
Iamamelidaceæ (ham-a-mel-i-di'-se-s), the witchhazels, a small natural order of episynous exogenous trees or shrubs, varying in height from 6 to 30 feet. Hamemelis Virginica yields the drug witch hasel.

## Tambato. See Ambato.

Hamburg (ham'burg), a maritime city in Germany, formerly free, now a portion of the empire, and the greatest commercial port on the continent of Europe, is situated about 80 miles from the North Sea, on the north branch of the Elbe, which is navigable for large vessels. The town of Altona adjoins it on the west. From the Elbe proceed canals which intersect the eastern and lower part of the city in all directions, and it is also intersected by the Alster, which here forms two tine streets, the Binnenalster and Aussenalster. The quays and harbor accommodations are very extensive. After the destructive fire of 1842 whole streets were rebuilt in a magnificent and expenaive style. Hamburg in not, however, very rich in notable buildings. Amongst the most important are the church of 8 t Nicholas, a noble Gothic structure with a lofty tower and spire, built between 1845 and 1874 ; St. Peter's, another lofty Gothic edifice ; St. Michael'm, the largent of the churches: St. Oatherine's an ancient edifice; St. James's, erected in 1351, but surmounted by a modern towes:
an elegant Jewich temple ; an exchange, a noblo edilice, conuinting chiefy of a mas nificent hall, aurrounded by a fine colonnade. There are aleo the Johanneum institution, containing an ancient college, moweume, and the city library, with about 800,000 volumen; neveral well-endowed hospitais; sooiosical and botanic cardens; the Kunsthalle, a large collection of pictures and eculpture; theaters, otc. Hamburg is of most importance on account of its great shipping trade and the business of banking, exchange, marine aminrance, etc. carried on in connection with that its manufacturem, though jarke are leas important, inciuding abipbuilding, tobacco and cigar makikg, ironfounding, brewine, etc. a preat many emigrantis embart here. Pop. 958,079 . The state of Hambur embracen a territory of 168 square miles and conaints of three diviaions, vis. :-City of Hamburs, fifteen rural districts, and outiying towns and baiifwicks (Cuxhaven, Rítsebuttel, etc.). The iegislative power belongs in common to the senate and the house of burgesses, bnt the executive power is vested chiefly in the senate, which is composed of eighteen members, of whom nine must have studied law or finance, and of the other nine seven must belong to the commerciai class. The memberi are eiected for life. The house of bur gessen consiste of 160 members, half of whom are ejected every three years by the votes of ali tax-paying citizens, while the other half are chosen partiy by a much-restricted franchise, and partly deputed by gnilids and corporations. The city owes its fonndation to the emperor Charlemagne, who ( $808-811$ ) built a citadel and a ch.urch on the heights between the Elibe and the eastern bank of the Alster, as a bulwark against the neighboring pagans. It became important as a commercial city in the twelfth century, and in the thirteenth it combined with Libeck in forming the Hanseatic Jeague. In 1618 Hamburg was formally acknowiedged a free city, of the empire. During the Thirty Yeas war its popnlation and prosperity cuntinned to increase on account of the immunity of its position, and in the foilowing century it obtained a large share of the trade with North America. In 1810 it was formally incorporated in the French empire with the northwestern part of Ger many; in 1815 it joined the Germanie Confederation as a free city; in 1888 it was included in the Zoilverein.
Famden, a town (township) of New 6 mifes N. of New Haven. Iron castings, cuspender webbing, radiators, corvets and

Prien implements are produced. Pop. 7000. Hameln (himelo), stowe of Germaty, in Hanover, on the Wemer, which is here cromed by a sus pension bridge. It hat many pictureqque old buliding and remaina Pop. 18,065.

## Famerton (ha'mer-tun), Pirinis

 critic, born at Ganenide, in Lancashire, in 1834; studied landscape painting, but deviated into literature, pubilishing a wort on Heraldry in 1851, and in 1855 The Iales of Look 4100 and other Posmn. In 1859 Mr. Hamerton married a French lady, and afterwards realded chiely at Autun. He made himself well known to the English public as a writer on art. Amoncet his works are Thoughte about Art (1882), Oontemporary Prenoh Paintere (1867), The Intelleotwal Life (1873), Frenoh and Englioh (1889), and eeveral noveis. He died in 1894.Hamilcar (ham-11'kar), the name Hamilear of meveral Cartharsinian generals, of whom the most ceiebrated was Hamilcar, surnamed Barca (the lightning), the father of the great Hannibai. While quite a yonng man he was appointed to the command of the Carthaginian forces in Siciiy, in the eishteenth year of the first Punic war, B.0. 247, when the Romans were masterm of almost the whole island. For two jearm he defied all the effort of the Romans to dislodge him; but the Carthaginian admiral, Hanno, having been totally defeated of the 28gates, B.0. 241, he reluctantly consented to evacuate Sicily. $\Delta$ revolt of the returned troopa, joined by the native Africane, was successfully repremsed by Hamilcar. He then entered on a series of campaigns in Spain, where he founded a new empire for Carthage. Here he passed nine yearm, and had bronght the whole oovthern and castern part of the country under Carthaginian rule when he was siain in battie against the Vettones, B.c. 229. His great - design if making Spain a point of attack against Rome was ably carried out by his son Hannibai.
Familton (hamil-tun), city of Scotland, in Lanarkshire. on the Clyde, about 10 milies sontheast of Giasgow. Nnmerous vilias and gardens Five it a pieasant rural aspect, Coal. Ironstore, and limestone are extensively worked in the vicinity. The county bnilid. ings, town-hali, and extensive cavalry barracks are the mont important public bulidingw. Near the town is Hamiliton Palace, seat of the Duke of Hamilton, a large building, chiefly modern. In the
adjecent rrounde are the ruine of Ondsow Ongth and a few old oake, the romain of Cadsow Horesh Here a herd or wid cattle are kept, white, with bleck eare and musele. Pop. (1011) 88,64t.
Finmilton, the ialand metropolts of Victoris, Austraila on the Grange Burm Creel, countien of Dundas and Normands, 221 milies w. of Melbourne, with which $1 t$ in connected by raliway. The dietrict is pattoral and asticultural. Pop. 4020.
Familton, the capital of the Ber mudar, on the coast of the largent illand, with a landlocked har bor. Pop. 2246.
Fiamiltor, a city of Canada, in the province of Onterio. counts of Wentworth, on the south side of Burlington Bay, Lake Ontario, an important railway center, with excellent water ahipping faclities, is situated in a fertile horticultural and africultural nection. The public buildings include custom house, theaters, pubiic mehools, Coilegtate Inptitute, Technical School, Normal School and the Provincial Asyium for the Invane. There are numerous factorien earaged in the manufacture of steei, iron, coiton and woolen zoods, agricuitural ma: ehinery, plow, boats, furniture, wire fencing, machinery etc. Pop. 100,808.
Irmilton, adt, county seat of ButGreat Kiami River, 25 milem north of Cincinnati. A manufacturing city with larye safe and bank rault factories, paper min, tool and Corism encine plants, etc. Served by four ateam and two electric railwaye. Founded in 1791 by General Arthor 8t. Ciair. The eite of oid Fort Hamilton is marked by an imposing monument in heart of city. Pop. $35,279$.
Tamilton, Arexandra, a distinand legislator during the content for independence, was born in 1757 in the isiand of Nevis, Weat Indies. At the age of sirteen he became a atudent of Columbia Collese, New York. On the outbreat of the war he received (1776) a commintion as captain of artillery, and soon attracted the attention of Washington who appointed kim his aide-de-camp and employed him in the mont delicate and dificult affairs. In 1781 he left the mervice, studied, entered Congrens as a member from New Yort in 1782, and in 1887 fias one of the delegttes to the Conettitutional Convention. He wan a wrong supporter of the federai parts, and by the letter which he wrote to the Deily $4{ }^{\text {d }}$ vertiser, of Now York, afterwards published under the titie of The Fedenelist,
contributed grantly to the sucem of tho party. It was due to his atrenuous ciorts that the congatition was ratiand by the State of Now Yort. On the orpanisation of the federal government in 1785 , with Wrahington at ite head, Hemilion was appointed secretary of the treasury and won a high reputation by his Adirul treatmont of the national anancen. This oflice he held till 1790, when he ruil med and retired into private life. In 1780 he was appointed mecond in command of the provitional army raleed under the appre. hension of a Erench invasion, and on the death of Washinston, in 1789, he became commander-in-chiel. In 1804 he became invoived in a political dispute with Maron Burr, then candidate for the covernornip of New York, accepted a challenge from that gentleman, and received a fatal wound in the subsequent duel, July 11, 1804.

Eamilton Anderw (1676-1741), an American lawyes, perhapa the abiest of his time and the fint to achieve a continental reputatior In 1717 be became attorney-genernl of Me.nsplva. nia and was in the $p$, fincial council 1721-24. He was elected from Bocho county to the prorincial ausemtiy 1727. 39. He is best known for his kratuitous defenge of John Peter Zenger (q.. ), of Now York, who was arrented for printing seditious libel. Hamilon's detense rosulted in the nequittal of Zenger and entablished freedom of the pren in North America. Fie was born in Scotiend, weat to Virginia, and removed to Phiiadelphia. Familton, Annsww ( F 1703 ), an in America, born in Scotland. From 1602 to 1701 he was governor of the coloniem of East and West. Jervey, and was appointed deputy governor of Penngylvania by Winiam Penn in 1701.
Eamilton, Sis Ian Standere Mo\%TEITH (1853- ), British general, borm at Corfu. Hé entered the army in 1873. served in the Afghen war (1878-80). Boer war (1881), Nile Expedition (1884-85), and in the 'South African war of 1899-1001, where he took part in the defense of Ladyumith. Ho was chief of stalif to Lord Kitchener (q. v.), 1001-02. He fought in the Buropean war (1914-18) and commanded the Mediterranean Bxpeditionary Forces in the heroic campaign at Gallipoll (q. 7. ). ELamilton, James, a marine painter, 1820, and was brought to the United States in infancy. He studied and practiced art in Philadelphia, and won distinction by his illustrations of Dr. Kanes Arotic Emplorations and hit aio
mised Oepture of the Boresis and Old Iromoidee. He was evpecialy succomal in the sepresentation or water cceneth, and was unsurpaneed in his definoation of oconaic efrocter. Hio died ln 1878
Ifamilton, patrici, unually contieh reformer was the second sun of sir Patrick Hamiliton of Kincavel and Stanehouse, and of Catharine, daughter of the Duke of Aibany, recond non of James 11. Ho was probably born in Glawgow in 1504 , and was educated partly at St . Andrews and partly at Parts where he took his degree in $152 G$. While still a boy he had been appolnted Abbut of Fearn, in Howhire, but nover went into romidence, zetting inotead at St. Andrew in 1028, Here he began to announce his convictions in the principles of the Reformation, and was bummoned in 1626 by Archbiliop Boaton to stand his trial for herens. Ae fed to Germany, where his education as a reformer wai completed hy an intimate acquaintance with Lnther and Melanchthon. After six months' absence he roturned to scotiand, and began to preach the gospel openly at Linlithgow, but wal allured by Beaton to St. Andrewt under pretence of a friendly conference, pnt on hin trina, convicted of various herenies, and bnrned at the stake, March 1, 1527, in the twenty-third year of his age. His death did perhaps more to extend the principles of the Reforma: tion in Ceotland than even his life could have done.
Hamilton, Sir Wrurum, grandson thillon, of Wiiliam, third duke of Hamilton, was born in Scotland in 1730. In 1761 he was elected member of parliament for Midhurst, and in 1784 he received the appointment of ambas: rador to the conrt of Naples. He devoted his leisure to mience, making observations on Vesuvius, detna, and other volcanic mountains; and the resnlts of his researches are detalled in the Philosophical Transactions, and lu his Oampi Phlegrai, or Observationt on the Voleciocs of the Two Siciliee (Naples, 177e-79, three vols. folio). He took an active part in the excavation of Hercnlanenm and Pompeil, and collected a cabinet of antignities, of which an acconnt was published by D'Hancarville, in a aplendid work with finely colored plates. Sir William's second wife was the Lady Hamilton, who beceme notorions from her connection with Admilul Nolson. He died in 1803. Familton, fir Wrurur, a metaphy. logician and mont learned philowopher of tho Seottich cebool, was born in 1788 at Glayjow, where his father and grand-
fathor beld to auccmaloe the chalse of anatomy and botany Having getedied with dirsinction at Giavzow, in 1800 he antored Baliol Collocs, Oxtord, an a Bneli exbihitiones, whore he galind Irit-class honoss. In 1818 he was admitted to the Scottisb bar, hat geves acgulred a pracHee in blo profeasion, his tanto lying much more towards the study of philosophy, in whici he had already mado extensive rencarchen. In 1820 he became a candidate for the chair of moral phllueurphy in Edinburgh, rendered vacant hy the death of Thomas Brown, but being defented hy Profemeor John Wileon, he was obllsed to content himself with the unimportant chalr of univeraal hittory, Sorming no part of the collese enrriculum, to which ho was appointed in 1821 by its patrons, the Fiaculty of Adrocater. In 1829 the publleation in the Bdinburgh Revievo of his celehrated critiquo of Cousln's ayntem of philosophy gare him at once a firat place amongat the philosophical writers of the time. Thir wat foliowed in 1830 hy bis criticiem of Brown, and in 1881 hy his article on the authorihip of the Epistole Obsourorum Virorum. In 1836 he was appointed to the chair of logic and metaphysicm in Edinbargh University. Here be gathered about him a number of ardent stadentr, and reentahilished the same of the scottish achool of metaphycicians, which had begun to wane. In 1846 he puhlished an annotated edition of the works of Thomas Held, and in 1854 the firat volume of a simiiar edition of the works of Dngald Stewart. He died suddenly at Edinburgh in 1856. His lectures on logic and meta. physics were collected and edited by Dean Mansel and Profencor Veitch. HamIlton's most important contributions to philosophy are connected with his doctrine of the Qnantification of the Predicate ln ble aystem of logic; his theory of the 'relativity of knowledze,' in the Kantian sense, held along with an apparently incompatible doctrine of im. mediate perception of the non-eso; and his defintion of the infinite or unconditioned as a mere negation of thought. Hamilton, Ers Wnurux Rowar, mathematician and attronomer, was born in Dublin in 1806. Before he had completed his fourteenth year he had made himwelf acquainted with thirteen languages, amons which were Arable, Persian, Eiinductanf, Sanakrit, and Sywlac. At the ago of zerenteen be mas pronounced by a competent authority the arot mathemettcen of Lis ase At Trinity College, Dublin, he guined the highest honorn, and he was appointed in 1827 professor of astronomy in Trinity Collefe,

#### Abstract

os well in entronomarsosil. Ho was preident of the Boyal : Academy. Ho contributed numesous. י2 .is to the tranactions of learned bodien, and made coms valuable discovericu; but his fame is chien lonnded on his invention of the calculus of quaternions, a new method in the hisher mathematicm Amongst his publinhed works are General Method in Dynamica, Algebra as the Dcience of Pure Tome, and 11 emolre on Discontinwowe Funchiona. He died in 1805. Fiamilton Group, an American tion, ocenpying the middle of the Devonian period, mo named from Hamllton, Now York, near which it is best displayed. It conaists of shaies, with some limestones, and foliows the Appalachian syutem nouthward into Virginia, with an extenuion westward into and beyond Obio. Flagatones of exceilent quality are obtained from it, and some of its deeper bituminons) layers are supposed to be the chief source of the Pennsylvania and Weut Virinia petroienm and naturai gas. The fosesis inclnde land and water plante, invertebrate animals and fishes.

Temirpur (humer-pur'), a town of Provinces on the right bank of the Jumna. Pop. 7155.
Ramites (ham'Its; descendants of Ham) the name given to a number of races in North Africa, who are refarded as of kindred origin and speak alled tongues. They include the ancient Egyptians and their modern descendants, the Copts, the Berbers, Tuaress, Kabyles, the Gallas, Falashas, Somali, Dankali, etc.
Pamiet (hamiet), Prince or DenMARK, the bero of Shakespere's most famous tragedy. The story is fonnded on an old tradition, related, amongat others, by Saxo-Grammaticus, of a Danish prince, Hamlet, who lived about 500 B.c., but is essentially altered in detaile and conclueion.
Famlin (ham'lin); Hannibal, ViceMaine, in 1800. He practiced law, and gerved as a member of the Legislature. In 1842 be was elected to Congress, and in 1848 to the Senate. In $1866^{\circ}$ he was elected vice-president with Lincoln. He was returned $i$ he Senate in 1809, serving until 1881, fud died in 1891.
Eamm (him), a manufacturing town (amm Prussia, province of Westphalia. Its induatries, which are important, sre mainly in metais. Pop. 43,658. Tamme (bim) a town in the prov-32-U-3
$18 \mathrm{~m} . \mathrm{x}, \mathrm{z}$, of Ghent. Among its pstact. pal mannfacturem are ropa ou, tan, and linen. Pop 15,000.
Prinuor-beam, a short bam at of a pripeipal rafter in a roof, in the place of the tio-beam. Hammer-beams aro ued in pairs, and project from the wall, es:

Hammon-bease Roof, Wentmineter Eiall.
tending leas than half-way acroms the apartmenta. The hammer-beam is generally supported by a rib rindig up from a corbel beiow; and in its turn forms the support of another rib, constitntins, with that apringing from the oppowite hammerbeam, an arch.
Hammer-oloth, a cloth mometimes naed to cover the box-seat of a private carriaze. It unaally bee ry the coat of arms of the owner of the carriage.
Bammeriest (håm'er-fest), a maritime town in Norway, in Finmarken; on Hvaloe (Whale Iniand), a bare, treeless, barren spot, in lat. $70^{\circ} 40^{\circ} \mathrm{N}$, being th 8 the mont northerly town in the world. It is a fighing center, and carries on a lively trade. Though within the Arctic circle, the winter is comparativeis mild, and the snrrounding waters seldom freeze. Pop. 2298.

## Hammer-headed Shark. sie e

 Rammer-0yster, a bivalveshell: Hammer-0yster, abivalve mhel. garis inhabiting the Indian Archipelago, resembling the peari-oyster when yonns, but becoming always more hammer-like as it advances in age, by the iengthening of its two ears.
## Eammer-Purgstall (purgaty),

 HERR vON. an eminent orientaliet, was born in 1774 at Grats, in Styria. He was educated at the Oriental Academy, V1enna, and when atil a very joung mantool a share in the preparation of Meninsk's Arabio Persian, and Twrkish Lexicom. In 1760 he accompanied as interpreter to Constantinople the internuncio Freilherr von Herbert, who afterwards intrusted him with a miexion to Esypt, where he collected varions antiquitiem and mannseripts for the Imperial Library. He also accompanied, as interpreter and tecretary, Sir Sidney 8mith and YussufPasha in the campaign against General Menou. In 1810, on the occasion of the marriage of Napoleon with Maria Lonisa of Austria, he accompanied the latter to Paris, where he became intimate with Syirestre de Sacy and other orientailists. In 1817 he was appointed imperial councillor at the court of Austria, where he also held the post of interpreter. On succeeding to the eatates of the Conntess of Purgstall in 1836 he received the title of Freiherr (Baron). He died in 1856. Among his numerou literary works may be mentioned Comstitution and 4 dministration of the Ottoman Empire; Constantinople and the Bosporve; History of the Ottoman Empire (ten vols.) ; History of Turkish Poetry; and History of Arabio Literature.
Fammersmith, a suburban district dlesex, abont 6 miles w. S. W. of the London pont-office. The Thames is here cromed br a fine suspension bridge. The vicinity is ocenpied chiefly by nurseries and market-gardens. Pop. of parish, 121,603.
Piammerstein (ham'erratin), Oscperatic manager, born at Beriin, Ger mayy, in 1847; came to America in 1863. He en saged in the cigar bnsiness, inrented labor-saving devicem in this industry, atrical and operatic enterprises. He wrote neveral short comedies in German and produced them in New York. Became manager of the Stadt Theater in 1870, and subsequently built the Harlem Opera Honse, the Manhattan Opera House, and neveral theaters. He bnilt in 1907 a mas nificent opera house in Philadelphia, which he sold in 1910 and went to England, where he bnilt a grand-opera house in London. His rivalry with the Metropolitan Opera Co. ended in his signing au agreement (1010) not to produce onera for ten years. He rlied August 1, 1919. Piammock (hamok), a rectangular about 6 feet lons and 4 feet wide, gathered together at the two ends and aling horicontally, formins a cort of bed or place in which one may recine for pleasure. Hammock ave in common use on board
shipe of war. The word is cald to be of Caribbean orisin.
Fimmond (ham'nnd), a city of Iake County, Indiana, 20 miles 8. S. I. of Chicago. It has a large slanghter house, a distillery, and manufactures of hardware, steel springs, nails, chemicals, etc. 1op. $20,025$.
Flammond, Join Hars, mining enFrancieco in 1855 He waindial Freiburg, Baxony, and became an expert on the United States geoiogical survey in 1880. He subsequently examined mining fields in all parts of the world, being consuiting engineer in South Africa 1883-96. Then he joined in the reform movement, and though taking no part in the Jameson raid; yet was arrested in connection with it and sentenced to death, a sentence, afterwards commnted to fifteen years' imprisonment. He was later reieased on payment of a fine of $\$ 125,000$. In 1911 he was appointed to represent the United States at the coronation of George $V$.
Fammond, Whliam A., surpeon, land, in 1828. born at Annapolis, ry. ated at the University of New York in 1848, and entered the army as assistant surgeon. He became professor of anatomy and phyaiology in the University of Maryiand in 1860, re-entered the army in 1861, and was appointed surgeon-general in 1862. He was professor of nervous diseases at Beilevue Hospital (1868-73) and subsequently at the University of New York. He wrote Sleep and its Derangements, and other works.
Hammonton, a town in Atlantic County, New Jersey, 31 miles 8. m of Philadelphia. It is in a fruit and ponltry region, and produces wines, ent-glass ware, etc. Pop. 5088.
Yammurabi (hax-mor-râbe , a king of Babylon, identified by Schrider with Amraphel, king of Shinar (Gen. 14:1). By his victories over Elam, Larsa, Sumer and Akkad he unified the 3abyionian empire. His reign is variousiy dated between 2400 and 2000 B. C. The discovery and transla: tion of the Hammurabi code in 19(1) threw much light on Babylonian history. Eampden (hamp'den), Jons, celp. position to taration by prerogative, was born in London in 1594, being cousingerman by the mother's side to Oliver Cromwell. In 1009 he was entered a geutleman cummoner at Magdalen College, Oxford. He began the atudy of law iu the Inner Temple, but having inhorited an ample fortune on his father's death he Ifved the uaual life of a country sentle.
man. He entered Pariliament to the bo ginning of Charies I's retign member for Grampound, and continued to sit in the Honse of Commons three timen in succeasion as member for Wendover, and finally as member for Buckso Although for some yearm a uniform opposer of the arbitrary practices in church and state, it was not until 1036 that his resstance to Charles's demand for ship-money made him the argument of all tongues. Al though the decision in the Court of Exchequer was given against him by seven voices to five, the victory, as far as regarded public opinion, was his. In the following year (1637) he was one of those who meditated emigration to America, which they were prevented from carrying out by an order in council detaining them. Henceforward he took a prominent part in the great contest between the crown and the Parliament, and was one of the five members whom the king, in 1642, so imprudently attempted, in person. to seize in the House of Commons. When the ritpeal was made to the sword, Hampden accepted the command of a regiment in the Parliamentary army under the Barl of Essex, and was fatally wounded on Chalgrove Field, 24th June, 1643.
Hampshire (hamp'shir, Hasts, or naritime county including the Iale a Wight, in the wouth of Ensland; area 1640 sq . miles. Its surface is pleasantly varied with gently rising hills, fruitful valleys, and extensive woodlands. The coast-line is very irregular; the principal indentation, Southampton Water, is navigable almost to its head for vessels of considerable hurden. In its confines is the New Forest, and among its streams is the Avon. Two ranges of chalt hills, the North and South Downs, traverse the county, running in direction nearly east and west. On the Downs large flocks of sheep, known as the 'Hampshire Downs' are fed. Hampshire is also famous for its wool, bacon, honey, and timber. The manufactures are unimportant, hat the shipping is very extensipe. Pop. 915,503. Eampstead (hamp'sted), a suburb mentary borough in Middlesex. It is sitnated on the declivity of a hill on the northwestern side of the city, and has long been celebrated for its fine air and the beanty of its surroundings. Hampstead Heath crowns the summit of the hill, and is now sprinkled over with hardsome villag Pon, 82,329.
Fampton (hamp'tun) a village of ${ }^{8}$ W. of London, on the left bank of the Thamen. Pop. 6221 . About a mille from
the fillage are the palace and part of Hampton Court, oridnally built by Oar dinal Wolves in $15 \% 5$. Hampton Coust has been the renidence of many sovereicang, from Heary VIII, to whom it way pro sented by Wolsey, down to George II. It contains a valuable collection of pictures by Holbein, Lely, Kneller, West, etc.
Hampton, a city, connty reat of Miso. of the original shires of the Colony of Virginia, on the north side of Hampton Roads, 15 miles N. N. W. of Norfolk ; was settled in 1610; incorporated as a town in 1887, and as a city in 1008. There are large fish and oyster industries and several crab-canning factories. The Hampton Normal and Agricultural Institute, for the education of Indian and Negro youthe and a National Soldier's. Home are just outside the corporate limits. Pod. 5505 . Hampton, Wadr, grandson of a Revolutionary beneral of the same name, was born at Columbia, South Carolina, in 1818; died in 1802. Graduating at the University of South Carolina, he became a lawyer, and on the outbreak of the Civil war joined the Confederate army. In 1862 he served as a brizadiergeneral at Antietam and in 1803 was wounded at Gettysburg. Promoted major general, he was placed in command of all the cavalry of Lee's army in 1864, and served in South Carolina in 1805, He was elected governor of South Carolina in 1876 and again in 1878, was United States Senator, 1879-91, and was appointed commissioner of railroads in 1893.
Fampton Court Conference, a conference which took place in 1604 at Hampton Court under the presidency of James I between the representatives of the Episcopalian and Puritan partiea in the church. A few slight alterations were made in the Common Prayer Book, and it wam determined that a new verdion of the Bible should be undertaken. This the Authorized Version, appeared in 1611. Hampton Normal and Agricul. tural Institute, a college for colyouthe ored and Indien under the both sexes, founded in 1808, an auspices of the American MiF Association and under the charse He General samnel C. fret derote to Hampton, Virginia. At firmi devoted to colored stadents, Indians were admitted in 1878, 15 held as prisoners of war being the first students. The Indian pupile are chiefy from the sloux tribe. Instructroa is riven in farm work and in varions trades to boys, and in houcchold york, sewing, etc., to girle. The inotitute has a
trect of 185 acres of farm land, and a few miles away han 600 acres mainly devoted to stockraining. The atudents are kept under military discipline. They number aboat 1300 colored and 60 Indians, under 100 instructorn. Among the numerous craduatem the mont notable has been Booker T. Wavhington, of Tuskegee Institute.

## Hamster

(ham'stèr; Crioetus), a genus of rodeut animals belonging to the family of the Muride (mice). They are distinguished by their having cheel-pouchem in which they convey srain, peas, etc., to their winter residence, and are common in the north of Europe and Aria.
Fan, a Chinese dynasty (B.C. 208 to the A.D. 220), with which commeuces the modern hiftory of China.
Hanaper (han'a-per), formerly an of Chancery, so called because all writs restarding the public were once kept in a henaper or hamper.
Hanau (han'ou), a town of Prussia, confluence of the Kinzig with the Main. Pop. (1910) 37,472.
Blancock (han'zok), Johis, a Revoludent of Congrens, born in Quincy, Massachucetty, in 1737. In the inception of the Revolutionary struggle he was a leading spirit, and the attempt to arrest Hancock and samuel Adame led to the battle of Lexington. Mr. Hancock was a member of the Continental Cougress from 1775 to 1780 , also from 1785 to 1786 , serving as prealdent of the body from 1776 to 1777. The Declaration of Independence as first published bore only his name. He served as rovernor of Massachusetty twelve years. As an orator he was eloguent; an a presiding officer, disnified and impartial. He died in 1793.
Tancock, WINFTLD Scomp, soldier County, Penusylvania, in 1824 ; graduated at Weat Point in 1844, served as lieutenant in the Mexican war and was made captain in 1855. In 1861 he was appointed brigadier-general of volunteers, and served with distinction in the early years of the war, on the Peuinsula, at Antietam, and at Fredericksbuig. He commanded a corps at Gettysburg aud was Founded. In 1864 he took command of the eecond corpm of Grant's army, and at the battle of Spotaylvania captured neariy 4000 prisoners and tweuty pleces of artllery. In 1864 he was made briga-dier-general in the regular army and major-seneral in 1860, and held several comamande mutil 1880, when he wain nomi-
nated by the Democratic party as ite candidate lor the Preaidency. Bo was do feated by Garfield, the Bepublican candidate, and died in 1886.
Hancock, a town of Houshton County, Michigan, connected with Lake Superior by a mhip canal, and on the Copper Range and the Mineral Range railroads. Rich veins of pure copper are mined here, and there are extensive stamping mills, large foundrien and machiue shops, amelting works, etc. Pop. 8981.

Fand, the part of the body which terminates the arm, conainting of the palm and fingern, connected with the arm at the wrist ; the principal organ of touch and prehenaion. The human hand is composed of twenty-seven bonen, namely, eight boues of the carpus or wrist arranged in two rows of four each, the row nert the forearm containing the scaphoid, the semiluuar, the cuneiform, and the pisiform, and that next the metacarpus, the trapezium, the trapezoid, the on magnum, and the unciform. The metacarpus consints of the five bones which form the palm, the first being that of the thumb, the others that of the fingers in succession. Lastly, the fingers pror $r$ contain fourteen bonea called phalauge of which the thumb has but two, all the, her digits having three each. These bones rejointed so as to admit of a vaijety of 1 ovements, the more peculiar being those by which the hand is flexed backwards, forwards, and sideways, and by which the thumb and fingers are moved in different ways. The chlef muscles which determine these movemeuts are the lewors, which pass down the forearm, are attached by tendons to the phalanges of the fingers, and serve to flex or bend the fingers; and the extensors for extending the fingers. There are two muscles which flex all the fingers except the thumb. The thumb has a separate long and ahort flezor. There is a common extenmor for the fingers which passes down the back of the forearm aud divides at the wrist into four tendons, one for each finger, each being attached to all three phalanges. The forefiuger and little finger have, in additiou, each an extensor of its own, and the thumb has both a short and a long extensor. The tendons of the muscles of the hand are iuteriaced aud bound together by bauds and aponeurotic fibers, and from this results a more or less complete uuity of action. It is sometimes difficult to make a movement with aingle finger without the others taking part in it, as in executing instrumental music, for instance; but practice given to these movemente perfect independence. Of all the movements of the
hand the opposition of the thumb to the other fingers, alone or united, especially characterises the human hand. This action of the thumb renults from its length, from the first metacarpal bone not being placed on the same plane an the other four, as is the cace in the monkey, and from the action of a muscle-the long flexor of the thumb-peculiar to the bu-

Breneroz or Homan Hand and Wmier.

1. Scaphoid bone. 2, Semilunar bone. 3, Cuneitorm bone. 4 Pisiform bone. b, Oa trapetium. a, Os trapesoiden. 7, Os magrum. 8, Unciform bone. 9, Metacarpai bonee cI thumb and fingers. 10. Firct row of phalanges of thumb and fingers. 11, Seoond row of phalanges of fingers,
man hand. This muscle completes the action of the other motor of the thumb, and permits man to hold a pen, a graver, or a peedle; it gives to his hznd the derterity necessary in the execution of the most delicate work. Properly speaking then, the hand, with its highly specialized muscles, belongs to man alone. It cannot be considered, as in the ape, as a normal organ of locomotion, though it is clogely approached in structure in the highest apes. It is essentially the organ of touch and prehension. It molds itself to a body to ascertain its form; it comes to the aid of the eye in completing or rectifying its impressions. The functions of touch devolve principally upon its anterior or palmar face, the nervous papille abounding specially at the end of the fingers. A layer of adipose tissue, very close in terture, protects, without lessening its power or its delicacy, the network of muscles, vessels, and uerves, with which this remarkable organ is equipped.
Pandball, a game of ball, played - for etriking, the hand only being used. The regulation handball court is from 60 to 65 feet long, and 22 to 25 feet wide. Two or four men can play, one or two on a side.
Eandouffs, an instrument formed of by a short chain or fixed on a hinge on the ends of a very short iron bar, which
being locked over the wriate of a malefactor, prevents his umir? his hands. Fändel (handel: properly Huen-
 great German compr "ip born at Helle on the Saale, in 1685. The utrons pamion which he early showed for the art overcame his father's opponition to training him as musician, and at the ase of even he was placed under the tuition of Zachau, organist of Halle Cathedral, and was 800 n so far advanced in the practical part of the reience as to be able to officiate occasionally as deputy to his inmtructor. In 1096 he was sent to Berlin, where he heard the music of Bononcini and Arionth, then at the head uf the Berlin Opers. House. He returned to Halle, was ap pointed organist of the cathedral in 1702 , but woon left to visit Hanover and Hamburg, where Steffani and Reinhard Keiver, the latter the greatest German operatic composer of his day, resided. At Hamburg he played second volin in the orchemtra, and brought out in 1704 his firut Fork, an oratorio on the Passion, and his first opera, Almira, followed in February by his Nero and subsequently by his Florinda and Daphne. In 1706 he went to Italy. On his return to Germany ho entered the mervice of the FHector of Han-

George Enedericis Findel
over, afterwards George I of Encinci, as musical director. He visited Dingland twice, and ultimately, having receired a pension from Queen Anne, mettied down there. For some years his popularity WFa very great. He was pleced at the head of the newly-founded Royal Acterny of Music, and accumalated a large fortune
 Athalia, 1733) had met with encouraged him to new efforts; and he prodnced in succession Isrcel in Egypt, L'Allegro and Il Penseroso, Saul, and The Mesoiah. The lant-mentioned. which is his chief work, was brought out in 1741, for the benefit of the Founding Hospital. It was not much apprecialed at the firat representation, hut increased in reputation every ver $P$. In 17.12 the Samson appeared, in 1746 the Judas Macoabaews in 1748 the Solomon and in 1752 the Jephthah. In 1752 he became hlind, but did not lose his spirits, continuing to perform in public and even to compose. He died at London In 1759, and was buried in Westminster Ahbey. Handel was of large and ungainly person. His manners were rough and his temper violent, but his disposition was hnmane and liberal. As a musician his characteristics are boldness and strength of style and comhination of vigor. spirit, and invention in his instrumental compoaitions.

## Eand-fish. See Cheironeetes.

Fandicapping, in horse-racing and and sporth, a system of equalizing the chances of victory in favor of each of the competitors iy allowing certain advantages to an inferior competitor, as, in he:sme-racing, the making the hest horses carry heavier weights proportionably to their racing qnalities, or, in chess-playing, the stronger player giving up one or more of his men at the beginning of the gane. Fand-language. See Deaf and Hand-plant, the Cheirostémon platree of the order Sterculiacted. It grows alout 30 feet or more in height, and has dowers, the stamens of which present an appearance somewhat like that of the human hand.
Bands, Larive or or. This rite, as munication of spiritual gifts, or of something else which could not be literally deIfored into the hands of another, has been
in use from the earliest times. It occurs in Scripture as a patriarchal usaze, appropriate and becoming perhapm rather than strictly relicious, but later assumes more of the character of a lormal rite, as in the ritual of animal sacrifice amongat the Jews, when the officer was required to lay his hands on the victim while still alive, except in the case of the paschal lamb. In the early church this rite was nsed in benediction, absolution, the unction of the sick, and the reconciliation of penitents as well as in ordination and confirmation. The rite is still retained hy most western churches in the ceremony of ordination, and th the Roman Catholic, Anglican, and Lutheran churchem both in confirmation and ordination.
Hang-Chow (hing'chou'), or HavaCHOO, a large city, capital of the province of Chekiang, China, on the estnary of the Taien-tang-kiang. Fanging, as a mode See Capital Punishi,ıent. Eanging - buttress, in architecture, a buttress not standing solid on a foundation, hit supported on a corbel. It is applied chiefly as a decoration.
Hanging Gardens. The Hanging Gardens of Babylon were anciently reckoned among the wonders of the world. Their construction has been varionsly ascribed to the legendary $Q u$ een Semirnmis and to Nehnchadnezzar. Diodorus and Strabo have given descriptions of them. They are said to have formed a square, with an area of nearly four acres, and rose in terraces, sup-
 ported on masonry arches, Handing-buttress. to a height of 75 feet. Thes were irrigated from a reservoir built at the top. to which water was lifted from the Euphratem by a merew.

Tang-nest (Icteride), a popular Church of Broohlyp, In 1918 he redgnit can orroles, a tamily of finch-like perch. Church and became profemor of Biblical ing birds, of brilliant biack and coior, the Theoiogy at the Drew Theological Eunbent known being the Baltimore orioie. They are so called from their curious purse-like nests, often about two feet ions. with a hole for entrance near the bottom. See Oriole.

## Hankow (hin'kou' ; Mouth of the

 port in China, in the province of IIupeh, at the junction of the Han with the Yang-tse-kiang; Han-yang being on the opposite bank of the Han, and Wuchang on the other side of the lang-tse. The port was opened to foreign trade in 1862, and has become the chief emporium for the green-tea districts in the centrai provinces, which formerly sent their produce for export to Canton. Large steamers ascend to the town. In 1857 Hankow feil into the hands of the Taiping rehels, and was almost compietely demolished by them. Pop. estimated at 850,000 . Fanley (han'li), a municipal and North Staffordshire, England, pleasantly situated an rising ground near the Trent, 18 miles north by west of the county town of Stafford. It is yuite a modern town, owing its growth entirely to the vant manufactures of china and earthenware in which the inhabitants are moutly empioyed; but there are also iron-furnaces, foundries, brickworks, and meveral important collieries. Pop. (1011) 66,264. Fanne (han'a), MAROUS ALONzA, in 1837 ; died in 1904. He grew wealthy in business, became active in political affairs, was chairman of the National Republican Committee in 1896 , managed the McKiniey presidential campaign, and was elected United States Senator in 1897. He continued chairman of the committee In the campaign of 1800 .Elannan (han'an), Fempraio War can Methodist Eniscopal cléreyman and theological instructor born at Cochecton, N. I $z$ educated at Hackettotown Collo riate In titute and Wesleyan Univeraity, Conn. He was graduated from the Drew Theological Seminary in 1893, ordained to the Methodist Episcopal ministry and became pastor of a church at Bayport N. Y. the same year. He was pastor of the First Church of Meriden, Conn ${ }_{n}$ from 1894 to 1898, and pastor of the First Church of Waterbury, Conn., 1538 1901. Hemoving to Brookiyn he became pastor of the Bushwick Avenue Church in 1901, remaining there till 1909, when he accepted call to the New York Avenue
the sut Weto taken priconers. Eannibal sow marched into Apulit, spreading tes rof Wherever he approached. Rome, in cornternation, proclaimed F'ablus Mraimus dictator, who sagacioualy remolved to hasard no more open battles, but exhaust the atrength of the Carthaginians by delay. But for nome time the wisdom of this policy was not understood by his countrymen, who, disuatisfied with his inactivity, appointed Minutius Felix his colleague. The result was that the latter was drawn into a battle by Hannibal, and would have perished but for the ald of Fablus. After this the Roman generale aroided engagements, and Hannibal at this critical period maw his army waeting away in inactivity. Next year (216) however, the rashnems of the new consul Terentius Varro gave Hannibal the last of his sreat victories. The battle was fought at Cannse, the Romans under L. armilius Paulus and Varro numbering more than 80,000 men, the Cartheginians about 50,000 , and ended in a total defeat of the Romans, 40,000 or 50,000 of whom were alain and the rent scattered. Instead of marching on Rome, Haunibal now cought quarter in Capua, where Iuxurious living undermined the discipline and health of his troops. The campaigns of 215,214 , and 213 were comparatively unimportant. Whilo Hannibal was geizing Tarentum (212), Capua was invested by two Roman armies. To relieve Capua Hannibal marched on Rome, and actually appeared before its gates (211), but the divervion remained fruitless, and Capua fell. In 207 a reinforcement tardily sent by the Carthaginians to Hannibal, under command of his brother Hasdrubal, was intercepted by the Romans and destroyed at the Metaurus. Hannibal now retired to Bruttium (the toe of Italy), where he etill maintained the contest against overwhelming odds, till, in 203, he was recalled to defend his country. invaded by Scipio. In Africa he was defeated by the Romans at Zama ( 202 B.c.), and the second Punic war euded, after a bloody contest of eighteen years, in Carthage having to accept the most humiliating conditions of peace. Hanuibal now devoted himaelf as civil magistrate to restoring the resources of Carthage, and was working at reforms of administration aud finauce when the jealous Romans sent ambassadors to demand his surrender. He fled to the court of Antiochus of Syria, and offered his services for the war theu commeucing against the Romans. They were accepted, but Rannibal's advice for the conduct of the war was not followed, and he himself as commander of the Syrian feat failed in an expedition againet the

Rhodiana In 190 日.c. Antiochus was forced to conclude a diegraceful praco with the Homans, one of the terms of which was that Hannibal mbould be dolivered up. Hannibal, again oblised to flee, took refuse with Pruajag, king of Bithyuia, and is said to have salned several victories for Pruaias acainut Eumenes, king of l'ergamum, an ally of the Romaus. But the Roman meuate once more sent to demand the surrender of their inveterate enemy, and Hannibal, finding that Prusias could not protect him, took poison rather than fall into the hands of the Romans. He died in B.C. 183.

## Rannibal, a city of Marion County,

 bauk of the Miesissippi, ou the west bauk of the Mississippi. 120 miles north of St. Louis ; served by four railroads. It is the boyhood home of Mark Twain. The chief manufactures are cement, lime, shoes, car wheels. stoves. structural steel, flour, wagous and boxes. Pop. 20,000.Hanno (han'no ), Carthaginian navcenturies B.C., who made a voyase on the western coast of Africa for the purpose of discovery and of settling colonies. He Wrote on account of his voyage, which still survives in a Greek translation known as the Periplus of Hanno. From this account Hanno would appear to have gone as far as the coast of Guinea.
Hanoi (hai-noil), or Kman'o, capital of Tonquin, on the river Sonska , in a fruitful plain. Gold and diver filigree, lacquered waren, silks, mat and basket weaving are its principal indus tries. Although the river is navigable ouly for small veseels the trade of Hanol is considerable, chiefly with the southern provinces of China. Pop. variounly estis mated at over 100,000 .

## Hanover (han'o-ver; Ger. Hanno

 ver) formerly a kingdom: in the northwest of Germany, now a province of Prussia. It is of very irregulas shape, and is divided by interveniug terri: tories into three distiuct portions, besiden some small territories to the south, aud a range of sandy islands liuing the coast: The total area is 14,857 sq. miles. Fot administrative purposes it is divided into six districto-Hanover, Hildesheim, Lüneburg. Stade, Osnabrick, Aurich. The surface in the south is covered by the Harz Monntains, but the rest of the country is a low, monotonous fiat. with a gentle slope to the North Sea. The Emg, the Wever (with its tributaries the Teine and Aller), and the Elbe flow through fertile districts industriously cultivated for corn and fax. Near the coast the land is marshy, but feeds large sumbers of very muperior cat-tle In Centril Hanover the soll is of a barren, mandy natuse. The Blas Monnthins sre Itch in minerals, the working of which is an important induntry. Hanores wan lons connected with the Brungwick family, and latterly more eppecially with the line of Branewick-Lunehurg. Draest Angustus a prince of the latter line, became in 1682 the irnt Dlector of Einover, mirried a smaddaughter of Jamen I of Ensland, and was mucceeded in 1698 by his con, Georre Louis, who in 1714 became Georre I of Incland. Henceforth it was ruled in connection with Bngland. In 1814 the Congrens of Vienna raised Hanover to the rank of a kingdom, the crown of which was worn by George IV and William IV, bnt on the scceation of Queen Victoria, passed hy Salic law to Finent Angurtus, dnke of Cnmberiand. In 1851 he was succeeded by bis son, George V, bnt in 1886, Hanover having become eerionaly involved in the Anstro Prussian contest, his kingdom was congnered and absorbed hy Prnasia. Pop. (1006) $2,759,699$.

Eanover, capital of the Prussian wated in an province of Hanover, sitnated in an extensive plain on the Leine, which here receives the Thme and become: navisable. The old town, irresularly built and with many antiquated bnildinge, in surronnded by the handsome new quarterw which have arisen to the north, enst, and montheant. There are fine promennden, and a large wood with beautitul walks, the Bilenriede, lies on the cantern aide of the city. Amonsst the principal building are the Market Church, the old town-house, the theater, one of the fineat in Germany, the royal palace, the Musenm of Art and Science, the Royal Library, containing 175,000 Folumex, the Central Railway Station, the Waterioo Monument, etc. About a mile to the N. W. is Schloss HerrenhauGen, the favorite remidence of George I, George II, and George V. Nearer the town is the colomal Welfenschloss, or pelace of the Guelphs, now fitted np as a polytechnic mchool. Hanover is a manufacturing town of some importance, has cotton-mpinning, machine worle, iron fonndrien, chemical works, tobaceo and cifar factories etc. Hanover is firm mentioned in 1163. It joined the Hanseatic Lengue in 1481. It became the residence of the duke of Branewfck-Linebure, and capital of the principality in 1603. Pop. (1710) $502,378$.

Tinnover, \& vilige of Gratton Connthe Oonnecticut piven Eamphire, near of Ooncord. It is chiefly notahie as the seat of Dertmouth Collese, founded in

1769 and prominent ainong our colladiat inatitutions. Pop. 2075.
Tanover, borongh of York County, Lanover, Pennaylvania, 26 miles W. of York. It has foundrien, machino mhopa, cisar-boz, wise, cloth, llove, and varions other factories, Pop. 7057.
Hanse Towns (hana), eartain danse Cown German and -other commercial citien of Northern Europe formerly associated for the protection of commerce and united by what was called the Henseatio Lowgua. In the middlo of the thirteenth century the sea and land swarmed with pirate and rohberm. In particular the thriving ports of the Baltic and the North Sea were infented, and in 1219 a compact was made between Hambnrs, Ditmaruh, and Hadeln to protect the adjacent waterm. Thil was followed in 1241 hy an alliance between Hamburs and Labeck to keep open the road across Holstein, connecting the North Bea with the Baltic. In 1247 this league was joined hy Brnnewick, and out of this grew the Hanma or league, which at its most flouriahing period embraced 85 towne, maritime and inland, from Reral and Narva to Amaterdam and Middleburg, and from Cologne to Brealan and Cracon. Among thene the town of IV: beck was recosnized as the chief town of the league. Here assembled the depntien of the other Hanse town to deliberate om the affair of the confederacy; but the decrees of the diet had no efict unlew they received the sanction of the ceparate town. The chief tradins centers of the league were the factories of Novgorod in Rumaia, Bergen in Norway, Bruges, and Jondon (the so-called Steelyari). Thewe factories were anbject to an almost mos nastic discipline, which even required their officers to be celibates and live at a common table. During the latter half of the fourteenth century the power of the league was at its height. It had armies and navies, gained victories in war over the kings of Norway and Denmarit, and deposed a king of sweden. It made thorongh provision for the vecurity of commerce on the Baltic and North Sam, constructed canals, introduced a uniform system of weights and menguren, and op veloped the principles of mercantilo lew. Bnt as its power and ambition fincringed it was felt to be an opprevive monopoly establiahed mainly in the intarmete of the great meaport towns. If becumo lam aned-
 prifice learned the covintut of trade, formed naval forter of thotr owa, and oncoureged navpation. lout of the inland memberw of the confederation withdrev. and during the fifteenth and mistoonth
ceaturien the cities of Hamburs, Lanoburs, and Llibeck were almont alone in their active eficorty to maintain the power of the Hanse and recure for it the cum. mand of the Baltic. Abont the middic of the dirteenth century the Dutch became predominant in the Baltic trade. In 1507 Bariand revoked all special privjleses of the Hansentic merchants, and in 1614 Lubeck, Stettín, Danaig, Brunawick, Laneburs, Hamburs, Bremen and Cologne, with a few maller towns, were the only placem that contribnted to the support of the Hansa. The league atill made desperate efiorts to retain its monopolien, but the cost of doing no now became a heary tax on the remaining allien. At the last seneral nueembly, held in 1630 at Lubeck, many of the members went representatives only to renounce their alleriance. The name atill remained attached to the free cities of Lubeck, Bremen, and Hamhure, under whose protection the marviving zactoriem continned to exiat, that of Bersen being still manazed in the old way till 1763. In 1813 Frank-fort-on-the-Main was inciuded in the number of the Hanse towns, and in the German Confederation theme fonr cities had tomether one vote in the diet. Frankfort was incorporated with Prussia in 1800, but the other three towns are still egarate constituents of the German Empire.
Fiansi (han'ses), a town of Hissar ern Jnma Canal. Pop. about 15,000 . Tansom-cab,
a two-wheeled hackney carriage or cabriolet used in the cities and large towns of Britain and the United States, and named after the inventor. It holds two permons besides the driver, who sits on an elevated seat behind the body of the carriage, the reins being hrought over the top.

In $18: 5$ he was made a field-marahal, and he died in 1804
Tiardness (hard'nes), the quality ot bodies which enables them to realat abration of their aurfices. In miaoralog s acale is veed in which a mot of mtandard bodien are arranged and numbered, and other bodien are referred to this meale with reapect to hardnees. The following is the acale siren by F. Mohs:-tale 1, rock-atalt 2 , calcupar 8, fuormpar 4, apatite 5 , Relapar 6 , quarti or rock-crystals 7 , topas 8 , corundum 8 , diamond 10. Materials, according to this arrangement, whlch are acratched by rock-eryutal and are not scratched by felapar are ald to have a hardness between 6 and 7.
Tardoi (hnr'do-s), a town of India, admlnistrative headquarters of Hardol district. Oudh, 63 milem from Lacknow. Pop. 12,174.
Fardouin (ardoran) Jras, a born in 1646; dled in 1729. He maintained the extraordinary hypothesls that all the writlngs nuder the names of the Greek and Roman poets and hiatorians, except those of Homer, Herodotus, Cliero, and Pllny the Blder, the cattres and epintles of Borace, and the Georgicm of Vircil, are the epnrious prodnctions of the thirteenth century, writen by monks nuder the direction of one Severus Archontius.
Fardpan,
a strata of hariened clay, sand, or gravel, several feet nuder the eoft inper moil, for which it serves as a fonndation, and alds in holding water. It has become a popnlar term for the lowest point of deacent in any state of afíalra.
Fiardtack, large, hard biscult or carders made for the use of coldlers on the march. Abont 14 of these welgh a pound and abont 20 are served daily to marching coldierm.
Elardwar (hnr-dwir), s town of Indis, in Saharappr district, Northwestern Provinces. It is -ituated on the Gangen, and is one of the principal places of Hindn-pilstimaze, and of the ceromonial of bathing in the macred
river. The town if of great andiguity and mas intermeting ruine pop. 2500 .

## Bardware (hard'war) the name

 moner articlem made of iron, hrase, and copper. The manufacture of such articies now forme a girgntic induatry in Great Britelin, eapacally, in England where its chief ceati are Birmingham and shemeid.
## Hardwood Trees, are usually trees

 uch the ohe beech growth, such as the oak, beech, witch-eim, eim, anh, service-tree, waluut, chestnut, acacia, etc., the tiesue of which is firm ang ciose. They are distiusuished from wolto wooded trees such as the willow, poplar, etc., and reainous trees such as the pine, fir, cedar, larch, etc.Eiardy (hardi), THouAB, novelint, land, in 1840. He served an apprenticeship as an eccieniastical architect; published his first novei, Desperate Remedies, In 1872, and has since continued a meries of favorite fictions. His best known work is F'ar from the MIadding Oroved, with ite fine air of rural iife. Otherm are The Hend of Ethelberte, The Trumpet Major, The Woodlanders, The Return of the Native, The Mayor of Dasteriritac, Tess of the D'Vrbervillos, etc.
Tiare (har), the common name of the
rodent quadrupeds of the senus Lepwe with ious earm, lons hind iimbs, a ghort tail, soft hair, and a divided upper lip; its dentai formula is: iucisors ? cauinen 9 , moiars $\frac{1}{5}-\frac{1}{8}=28$; the two forefert have five and the hinder four toen. They run by a kind of leaping pace. The females produce litters of three to six ahout four times a year. The young leverets have their ejes open at birth. The commou hare (L. timidus) is found throughout Europe and some parts ,st Asfa. It is tawny red on the hack aud white on the beily, and is about 2 ft lons. The mountain hare or varying hare (l). variabilis), confined to Northern Europe and the mountainous regions of the south, is amaller than the common hare, and becomes white in wiuter. L. cunicuilus is the rabbit, properly so calied, distinguished by its smaller size and hurrowing habith (See Rabbit.) The Americau hare (L. Americanus), not much iarger than a rahhit, is found ?n most parts of North America. In North America there are also the polar hare (L. glacialis), a variety of the varying hare ( $L$. variabilit), but of auperior size and purer color: and the prairie hare (L. campertris), one of the specien known as jackass harew or Jack-rabbits. from their size and length of limb. The hare, which ham
no courage and little cunning, is protected from its onemies mainly by the acuterem of ste sidht and hearing and lic. extriords. nary swiftuen of loot Its volco to never heard ezcept when meised or wounded, When it utters a sharp loud cry, not rary nolike that of a child. Its Amh in tather dry, but is much prised for ite poculiar davor.
Hare,
Juhve Cranzer, an Engline cial subjecta, born in 1780 ; died in 18ंब5. Ho was educated at the Charterhoues, and Triuity College, Camhridge. In $18{ }^{2} \mathrm{ho}$ became rector of Herntmonceaux, in 1840 was appointed Archdeacon Lewen, in 1851 obtained a prebend in Chicheater Cathedral, and in 1853 bo came one of the queen's chaplaina In concert with his brother, Auguatue Wililam Hare, he published a well- znown work entitied Guesses at Truth by Treo Brothers. His other writiugs iuciude noverai voiumes of sermons; a Memoir of John Sterling, prefized to collection of his writings ; and Vindionfion of Luther Apainat His Recont Englioh Assailents.
Hare,
Romert, chemist, born at Philsdeiphia, Pennisivania, in 1781 ; died in 1858. He was profemor of chemistry in the Univernity of Peanay:rania, 1818-47, and rained fame by the invention of the oxyhydrozen hiowpipe. He also invented the valve-cock, the cal: orimeter, etc. He inventigated spiritual. ism and became convinced of its truth, being the firat scieutist to accept it.
Parebell (herbel), the 8 coteh BLUEBELL (Compenits rotundifolia), a piant of the nat. order Campauniacee, common on dry and hiliy pastures, by roadaldes, etc., in most districte of Enrope, with a belishapedhiue (sometimes white) flower. The radical leaves are cordate or reniform, the stem-ieaves partiy ovate or ianccolate, partly linear. Its siender stem fo from 4 to 6 luches high, and bears sometimes a single fower. Several American species of Cempenila are known to ail lovers of wild flowers.
Fiareld (har'eid; Herelde plecialif), the long-talied duck, an oceanic duck liavias a whort thick biti, hish forehead aud two very lons feathers in the tail of the male, whilat the females have the tail short and rounded. It inhahits the northern aenes, and is frequent in Oriney and Ghetland.
 Barem. (ha'rem, ha'rom; - Ary 'the malman to bignify the women's apartmente in houschold catablimhment for: bidden to every man ercopt the humband and near relations. The women of the harem may condet aimply of a wife and ber attendante, of there may be meveral wive and an indefinite number of conctibinen ot female slaven, with black cunuchs etc. The preatent harem is that of the Snitan of Iurkey. The Fomen of the imperial harem are all maver, renernlly Circamlans or Georsians. Mheir Ife if epent in bathing, iremoing, walling In the sardens, witneming the Foluptrous dancew performed by their alaves etc. The women of other Thrite enjoy the no cilt of their friends at the bethe or in ench other's housen, and appear in public accompanied by slavan and ennuche; bnt the women of the c itan's harem have aone of these privilezes. It is of course only the richer Monlems who can maintifu harem: the poorer clansen have generally but one wife.
Hare's Ear (Bupleurnen), plant bellifer The of the nat order Umapecien (B. rotumiliolimin) flourishes best on a chalky coll. Under the name of thorough-toce it was at one time used as a valnerary.

## : invieut

(Ar-ficur), a town of France, dep. of Seine Inferienre, on the Ieararie, near its entrance into the Seine, 6 miles east of Barre, once the chief port at the mouth of the Seine. Pop. 2612.
Tlargreaves (h irgnevz), Finuund Gouport, England, in 1815; became a sold-digser in California in 1849, and being atruck with the similarity in geological formation between Callfornia and Australia, believed that pold exituted in the latter. This he proved in 1856 by discovering gold in the Bine Hills of New Sonth Wale. He was appointed commistioner of crown lands and received en award of 860,000 . De died in 1801.

## Increaves (burfores) as fictial invontor,

 author of two importane impcorcmentis tis the art of cottomatelnaly whas born mons Blecitbara about 1720; died In 1778. In 1700 he invented a mechime for carelisg, and some yoars after the opinningoonny, by which be was able to sple will not. eral opindlen at onze.Firricot (harthleo), a seperal terla ney-bean, cenue Parious apecime They conditute a palatable and nutritions article of diet
Erring (haring), Wrumank, bent a German nenown as Wilibald Alexis. 1871 It arelist born in 1797 ; died in 10rl. He adoptod law am a profection, but gave it np in favor of ilterature. in 1823 and 1827 reppectively he pnblished the novele Wellodmor and Sohlous 4 ye . lon, Which were tranileted into Engilich and other languagen. These were followed by a long serice of Writings, conditing nof only of novele and noreletten, but of booke of travel, plays, ballades otce HI mont important worte however, were hit toric novele, such as obbenis, Roland von Berlin, Der Faloohe Waldemar, etc.
Farington $(h a r i n g-t u n)$ sn of some merit, born in 1501 . Engith in $100{ }^{\text {got }}$ At his baptism Queen Elizabeth atood aponsor. He was in 1506 excluded from court on account of his poem Mrotamorphoses of Ajac, bnt was scon allowed to return. Hit bent-known performance if perhaps, his translations of Orlando Fr rioso in heroic verse.
Haríri (har'ést), Ago Morimмed
ma Kabia bien afi, aun named FI Harif, or the will merchant, his father's occupation, a celebreted Arabic scholar and poet, who lived chlefly at Bassorah in the time of the Abbargide caliphs, born A.D. 1054 ; died 1121 or 1123. He is best known by his Meldammat, a collection of talem narrated as in. cidents in the life of the hero $4 \overline{b s}$ Zeid. a clever ímpostor who adopts every career in life, and succeeds in all to admira. tion.
Harlan John Marshaix, american jurist, born in Kentncky in 1833; died in 1011. In 1801 he organized the Tenth Keutucky Resiment, of which he was colonel until 1863, when he became attorney-zeneral of Kentncky. In 1877 he became an Asmociate Jnaice of the United States Supreme Court, in which position he abowed himself a liberal constructionist. In 1889 he became profensor of law in the George Washington University. He was a member of the Bering Sea Tribunal in 1808.

His patromase war extended to Switt, Popo, and other literary men, and he mede a valuable collection of books and MBS, which intter are prewerved in the Bridet In ceum, where they form the Brofioticoe Harioianc. Those which have been printed constitute the: Herloiem Mionol Lany.
Barlingen (har'angen), a meaport Frienland intervected by numeroun canale It hat a great trade with Paso land in corn, cattele, butter, otce Popo. 10,448.
Farmattan (har-mat'sn), a bot and dry wimd, which, coming from the interior of Africh, pro vails at trimes on the const of Guince in D. eember, January, and Fehruary. Uno der itu infuence veretation wither, and the krame becomes lize hay. It fr ofmilar to the simoon of Eypt and the efroceo of Italy.
Harmodius (hap.modil-as) Soa som.
Harmon (harmon), JVDEON, porernor, wa born at Newton, Ohio, in 1816. He attodied law bo came major of Wyoming, Ohlo, in 1875: judge of the Court of Common Plens in 1876 and of the Suiperior Court in 1878; and in 1880-97 was Attornoj-Genoral of the United Staten in the Oleveland cablnet. Ho became profemor of law in the Univority of Oincinnati m 1808, and was klected sovernor of Ohio by the Democratic par $t \ln 1000$.

## Harmonica

(hir-monifla),

Trantilin's npmo lor a musical inctrument constructed with sinses of ilficerent Disen sprolving by meina of mechanisu
worked by the loot, and played upon by touchins the rim of the classes with the moistened finfer. It conatituted the ' mualcal slames of Goldamith's era. The name fan now usually applied to an instrument consiating of a meries of glass keys played by two small hammerm.
Tarmonics ( b \& $\mathrm{r} \cdot \mathrm{m}$ on'iks), the accessory ounde accompanying the predominant and apparently imple tone of any etring, plpe, or other conorous body. No purely mimple sound, a a no sound wboee vibrations are all in the same period, is producible in nature. When a mound is produced by the vibiation of an open string, the whole string vibrates as a unity, Eiving rise to a tone called the fundamental. The string, bowver, further divides into various mections, which vibrate separately and more rapddly, and produce sounds difiering from the fundamental, but bearing certain fixed proportions to it. The first barmonic of the fundamental note of any string is that produced by balf the string, and is the octave of the first; the second barmonic is given by the third of the string, and if the fifth or dominant of the cundamental note, and so on, tbe complete series of barmonics containing all the notes of the muslcal scale. But wbile harmonice enter into the composition of any musical sound from any vibrating boiy whatsoever, the different structure of difierent instruments suppresses now some now others of the succession of barmonics, and a different body of tone is thns produced, distinguisbing a note in one instrument from the same note in another. These dififerences are called in English quality, in Frencb timbre, in German klangfarbe.
Fiarmonist: (har mon-iste), a reWurtemberg about the year 1788 by two brotherm called George and Frederick Rapp. They endeavored to re-establlsh the social practices of tbe early Christian church, encouraged celibacy, beld all tbeir soods in common, and taught tbe second advent Persecuted by tbeir countrymen, the followers of Rapp emigrated to Amer: ica, and establisbed themselves (1805) successfully at Harmony, in Pennsplvania. They afterwards migrated to Indiana, but this venture not proving successful, tbey sold their land at New Harmony to Robert Owen, the soclalist, and finally settled at a place which they named Economy 17 miles from Plttsburgh. George Rapp died in 1847, but the community till exists, though reduced to a very small number of members as a result of it policy of cellibacy. It has, bowever, a properts of great value,

## Earmonium

 (halr-móni-um), a muicel instrument of modern invention producins sounds Fomewbat resembling those of the organ, sesulting from the pressure of wind on a eries of vibrating metallic reed. By the action of bellows, to wbich the feet communlicate a more or less rapid movement, the air is made to impinge against thln tongues of metal (here termed reeds), and to set them vibrating. These metal tongues are fitted into a slit in the top of a small box or sonorous cavity, called a wind-box, and are enabled to vlbrate by belng fixed only at one end. The discovery tbat tbe form of the windboxes determines the quality of the suand produced by the vlbration of theso metallic tongues contributed very much to the development of the harmonium, as it enabled the player to imitate the mound of the oboe, flute, etc. The instrument has a keyboard like that of a piano, and when one of the keys is pressed down a valve is opened, wbicb allows the wind from the bellows to rush througb one of the wind-boxes and act on tbe vibrator. There are several stops, by means of whicb the performer can direct the stream of wind into the wind-boxes which produce a flute, clarionet, or any other sound. There is also a knee action, wblcb either serves as an expression stop, or brings all the stops of the instrument into play at once, and what is called the percussion action, which consists in the application of a mall hammer, which strikes the vibrator as soon as the key is pressed down, and tbus aids the action of tbe wind. The better class of harmonlums bave now usually two or more extra rows of vibrators, whicb, acted upon by separate stops, add so many octaves to the compass.
## Farmony. See Mwsic and Counter

 Harmony (bar'mo-ni), EvaverurGospres, the title of works written with a view to prove the substantial agreement of the four evangelists. The beretic Tatian composed ln the second century the Diatessaron, the first work of this kind, a continuous narrative of tbe events written in tbe gospels. From tbls har mony all passages were omitted wblch favored the doctrine of the real humanity of Christ, and bence told against the peculiar doctrlnes of Tatian. Theopbilus of Antioch is sald to have composed a book of a slmilar kind, and Ammonlus (died 243 A.D.) erecuted anothor Dic tessaron, with the corresponding passages arranged in parallol columns. the Ten Inderes of Eusebius probably appeared inthe firat half of the fourth century, and was more complete than ith predecemory. Among modern harmonitate are Gremwell, Robinson, Tischendort, etc.

## Harmony of the Spheren,

an hypothesis of Pythasoras and hin echool, according to which the motions of the heavenly bodies produced a mudic imperceptible by the earm of mortals. He supposed these motions to conform to certain fired lawe, which could be expremed in numbers correapondins to the numbers which sive the harmony, of mounds.
Earmotome ( h \& $\mathrm{r}^{\prime} \mathrm{mo-t8m}$ ), or CEOBS-ETON5, mineral which occurs in risht rectansular prisms terminated by four rhombic planes corresponding to the solid angles of the prism; bnt more frequently in twin-erystals formed by the intersection of two fattened prisms at risht anglem to each other. Its prevailing color is white, and it is hard enough to scratch glass.
Harnack (här'nak), ADoLpy, a GerDorpet in 1851. In 1889 he was called to Berlin, where his lectures attracted students from all over the world. He regards the development of dorma as a deleterious process of interfusion of Greek forms of thought with the gospel teaching. His Lehrbuch der Dogmengeschichte, translated as the History of Dogma (1895-1900), is an epoch-making work.
Harness (hir'nes), the various artisoke a horse or another animal to any vehicle. See Bit, Bridle, Saddle, etc. Harold I (harold) or Haracd (HaKing of Norway, one of the greatest monarchs of that country, succerded his father in 863 . He brought all the Norwegian jarls nnder his power, and completely subjected the country. of the conquered jarls, Horlf, or Rollo, emigrated to Neustria (France); others established themselves in Iceland, the Shetland Isles, the Faroes and the Orkneyn. In conseqnence of their incursions into his dominions, Harold embarted with a naval force to subdne them, and having conquered the Orkneys, etc., returned home. He fixed his residence at Trondhjem, and died there in 933 .
Earold III (Mardrada, the Hardy'), King of Norway, the son of Sizurd, a déscendant of Marold llaarfager. In his youth he rent to Constantinople and took part in the expedition to Italy against the African piratea. He was ultimately appointed commander of the imperial bodygnard, and defeated the saracena. About 1042 he returned to $33-\mathrm{U}-3$

Norway, after having, on his way through Rusuif, married the danghter of the Grand-duke Jaroalar. In 1047 he wacceeded his nephew, Macnus the Good, as gole ling of Norway. In 1008 ho jolned Tontis, the brother of Harold II of Ensland, in an invacion of that country, but Fas defeated and alain at the battle of Stamford Bridge. See Harold II below. Fiarold I, gurnamed Harofoot, Danish ceeded hin father Cannte in 1035 am king of the provinces north of the Thames, and became king of all Ensiand in 1037. His conntrymen, the Danes, maintained him upon the throne against the efiorts of Errl Godwin in favor of Hardicannte ; and Harold later gained the earl over. After a reign of lour yearn, he died in 1040.
Harold II, King of England, born , bout 1022 Mas tho secund son of Godwin, earl of Kent. On the death of Edward the Confessor, January 5, 1006, he stepped without opposition into the vacant throne, withont attendins to the claim of Edgar Atheling, or the asserted begnest of Edward in favor of the duke of Normandy. The latter immediately called npon him to resign the crown, and npon his refusal prepared for invasion. He also instisated Harsld's brother, Tontis, to infest the northern coants of England in conjunction with the king of Norway. (\&ee Harold III above.) The nuited fleet of thene chiefs sailed up the Hnmber, and landed a numerous body of men; but at Stamford Bridge, in Yorkehire, were totally routed by fiarold, whose brother Tontly fell in the battle. Immediately after he beard of the landing of the duke of Normandy at Pevencers in Susmex. Hastening thither with all the troops he conld muster, a genernal engagement ensued at Senlac, near Hastingm, October 14, 1086, in Which Harold was slain, and the crown of England passed to William.
Haroun al Raschid. Bee Harum Harp, a stringed instrument of ride Harp, a stringed instrument of creat Aevrians, Egyptians, Hebrewn, Greeke, Iriah, Welsh, and other nations. Itw variety of form and construction was only qualled by its nuiversality. The modern instrument is well known: its form is nearly triangular, and the strings distended from the npper part to one of the fildea, It stands erect, and is played with both hands, the strings belin struck or palled with both ingers and thnmbuck The ingtrument in its ancient formm was very defective. Fryptisn harpu are reprerented with four, eeven, ten, twenty, or
moze atringe, but we have little idea of the meale to which thes were tuned. The frames are depicted an being curved in varions forme, and the front pillare are wanting. The harpe of the Hehrews were probably similar to the Egyptian instruments. It is probable that the various

Celtic harps were derived from some oriental pattern. Amons the AngloSarons the harp was a favorite instrument. The modern harp was by no means an efficient instrument, until pedals were invented, an invention finally perfected hy Sebastian Erard, whose patent was taken out in 1795. In 1810 he patented a double-action harp with seven pedals, each effecting two changes in the pitch of the strings. The harp thus conatructed contains forty-three strings tuned according to the diatonic scale, every eighth string being a replicate in another octave of the one counted from.
Harp, ELoLun. See Eolian Harp.

## Harpe.

Tarper William Rainer, educaOhio, in 1856: graduated at Muskingum College in 1870. He became professor of Hebrew at the Baptist Union Theological Seminary. Chicago, in 1879-1886; of Semitic languages at Yale Oollege in 1886-1891; prefident of the Univeraity of

Chicago in 1801. He was very mucsentul in promoting itw intereats, benefited by the liberal donations of John D. Rockefeller. He died in 1806.

## Flarper's Feryy, e town of Went

 Potome Riser airginia, on the Shenandoah, 81 miles west of Baltimore. The Potomac here passes through a gorge in the Blue Ridge, and the town is notable for the beauty of its scenery and as the seat of memorable events. In 1859, John Brown, the noted abolitionist, captured the United States arsenal at this place, with a view to promote a slave insurrection. He was taken and executed. In 1802 the place was captured by Stonewall Jackson and a large garrison taken prisoners. It was the mcene of other events during the Civil war. There is here college for colored students. Pop. 166.Harpies (harpez), the ancient Their parentage, ages, appearance, names, and number are very diferently given by the poets. In the Homeric poemis they are merely storm-winds. Hesiod represents them as two young virgins of great beauty called Aello and Ocypete. The later poets and artists vied with each other in depicting them under the most

Harpy, trom an antigue gem.
hideous forms, covered with filth and polluting everythjig in contact with them. They are often represented as having female faces.
Farpoon (har-pön'), one of the printhe cipal instruments used for the capture of whales and large fish. See Whate.
Harp-seal. See Seal.
Earp-shell, the shell of a genus of molluses (Harpa) belonging to the gasteropoda and to the whelk family. The species are found more especialiy at the Mauritius. The shells are very beautiful, being of brilliant color.
Tarpsiohord (harp'si-kord), a
atrument formerly in use, in apperance and conmtruction imilar to a grend pianoforte. In the front the leys were diepoeed, the long ones being the naturals, and the short ones the sharps and flate. Thewe keys being premsed by the fingern, their inclomed extremities raised little, uprisht, oblong slipe of wood called jaoks, furnished with crow-quill plectrums which atruck the wires, instead of the hammers of the modern pianoforte.
Farpy-eagle (Thrasaetue Harpyia or) or Harpyia destruo tor) a rapacinus bird which inhabits tropical America from Southern Mexico to Sonthern Brazil. It is an extremely powerful bird, and in total length slightly in excess of the golden eagle. It has, however, a somewhat shorter expanse of wing. Its sboulder muscles possess enotmous atreagth. Its bill is powerful and crooked, and its ciaws are extremely strong and sharp. The barpy-eagle feeds on birds, sloths, fawns, raccoons, etc., as well as on fish, water-snakes, and the egs of the tortolise.
Harquebuse
(har $r^{\prime} k$ werbus). Arguebus.
Tarraden, BEatricz, novelist, born in London about 1864.
Her novel, Ships That Pass in the Night (1893), was very successful. Othern from her pen were In Varying Moods, Hilde Strafford, etc.
Tarrier (bar'i-er), a kind of dog employed to bunt the hare. It closely resembles the foxhound, but is smalier in size.
Rarrier, the name of several hawks of the genus Cirous, allied to the buzzards. They strike their prey upon the ground and generally fly very low. The marsh-harrier, the hen-harrier, and the ash-colored harrier, are found in Europe, and the marsb-harrier ( O. aruginosus) in Nortb America and Cuba. It is from 21 to 23 inches long. The henharrier (C. cyaneeus) is 18 inches to 20 inches long. It is very destructive to poultry-yards, whence the name.
Hartiman, Edward Henky, railroad Hempetead New Yoier, was born at gaged early in the brokerage business in New Yort and was a member of the Stock Excbange at 22. Active and enterprising as a broker, he engaged vigorously in railroad finance, was made a director of the Illinois Central R. R. in 1883, was Jater its rice-president and acting president. and in 1898 secured a controlling interest in the Union Pacific R. th. He developed and greatig increased the effeiency of this road. From this bads he rapidly gained control of
other romde, by aid of a daring wratem of finaucing, umins the credit of one road to raise funds to purchase a controlling influence in another. In this way ho gained control of the Central and Sonthern Padife railroads, the Oremon Rallroad and Navigation Co., and made a vigorous effort to abworb the Northern Pacific. He was defeated in this by James J. Hill, the strugsie leading to the stock exchange panic of 1901. A few years of this bold and discreditable system of speculation, in which he uned the property of otbers for bis own ends, rained him to the position of the railway antocrat of the United States. In 1006 the Interstate Commerce Commission inatituted an investigation of his methods, which by the time had given him dominating control of a considerable number of roads, a large interest in others, and a similar interent in many financial institutions, and had brougbt him enormous wealth. The only public services rendered by him were a marked improvement in the condition of the roads nnier his control and a scientific expedition wbich he sent ont in 1899 to explore the wastes of Alaska and the Nortb Pacific. He died in 1009.
Harrington (haring-tnn), Jaxae, a celebrated political writer, born in 1611 ; died in 1677. Having sturlied nnder Chillingworth at Ox ford, and traveied on the continent, be was, on the outbreak of the Civii war, desirous of procuring a reconciliation between the king and Parliament, bnt his elforts were futile. During the Protectorate he wrote his Oceana, whicb describes an ideal republic, and which was published in 1656. In the reign of Charles II be was imprisoned on a charge of plotting against the government, bnt was released on account of the decay of his mental faculties. In addition to the Oceana he also published an Englith translation of four bouks of the XEneid.

Hantings, Amome (1787-1872), at choir leader. His hymnalo includo The Ohristian Pagamist The Kother's Hymu. Book, Devotional II ymns and Poots, etc.

## Hastings, Waraek, firte sovernor

 at Daylesfori, in Worcenteruhire, in 1923 ; and died there in 1818. He was grandinoi of the rector of Dayiesford. He wer educated at Westmineter school, and in 1750 he set out for Bengal in the capicity of a writer in the service of the Eart India Company. When stationed at Cosoimbazar he was taken prisoner by Surajah Dowlah on the capture of the piace (1756). Having made his escape, he served as a volmatcer-under Clive in 1757. He wis representative of the Company at Moorsheliabad from 1768 to 1761 . In the latter year he removed to Calcutta, having obtained a reat in the Bengal Councll, but returned to England in 1764. As he lost the buik of his means by unfortunate Indian investmentr, bo again entered the Company'e wervice, and sailed for India in 1700. In consequence of the miseovernment of the Nabob of Bengal the Company had deprived him of all real power, and now wished to have the country more directly under thelf control. Warren Hastings was its chiot inetrament. in this nndertaking, and is 1772 became president of the supreme Council of Calcutta. Mohn med Reza Khan, the administrator of the revenum of Bengai, was now accused by an unprincipled character named Nnncomar of corruption and abuses of power. In thit prosecntion Hastings acted as the tool of the Company. Mohammed and Shitab Roy, dewan of Behar (who had been similarly accused), were afterwarde honorably acquitted, bnt meantime the reorganization desired by the Company had been carried out. In 1773 the 0 ompany's powers were considerably modified by an act of Parliament, and Hauting: now received the title of Governor-zeneral of India. As the majority of the Council disapproved of Haatinge' part policy, Nnncomar, his oid ally, took advantage of the circumstance to sceuse him of peculation (1776). The accumations were favorabiy received by the Gonncil, when Nancomar was suddenly acensed by a Caicentta merchant (acting probably on the instigation of Hantingis) of forsery, tried, and executed. In 1776 the directore of the Company petitioned the government for biv remown hrom the Cotionbut Hantygn resigood, and a mrccencor to him 52 appointed. In 1777 one of the members of the Counell died, and Hautioge, having thus procured a cautins vote, withdrow him relirnation, and retyined to ollice. He now diaplayed estraordinary remorce in meeting dapserous morements on the part of the Mahrattas, the Nham of the Deecan, and Hyder All of Mryote, and to procure the needful money was lees than merupulous in hin treatment of the rulers of Benares and Oude. lle this gave good srounds for censure, and a motion for his recall was puswed in the House of Commonm, Fox's India Blli was thrown out in 1783, but next year Pitt's bill, entablishing the bourd of control, pacmed, and Hating reisned. He left Indis in 1785 , and was impeached by Burke is 1788, beins charged with acty of injastice and opprei. dion, with maladminintration, receirling of briben, etc. This celebrated trial, in which Barke, Fox, and Bheridan thumdered against him, began in 1788, and terminated in 170 with his acquittal. but cont him his fortune. The Company in 1798 settled on him an ennuity of f4000 a year, and lent him ex50,000 for eingheen years free of interest. He parved the remainder of his life in retirement tit Daylesford, which he purchased.
Wat, an outdoor covering for the head, (as felt, various shapes and materiain a brim as its most distinctive and general feature. Hats are of ancjent origin. Among the Greeke, for instance, the potasos wa porn, which had a brim, and was dimilar to the round felt now worn. The shape of the hat has varied extremely in Europe at different periods. The drees het or sille het with a emooth nap outside is an important form of this article, thongh felt hates are in more general wear. (See Felt.) The slik hat was invented at Florence abont 1760 . The manufacture, however, did not make much progrees till 1828 . Up to and even after this time beaver fur was the chief material for hats. $\Delta$ silk hat is compowed of a skeleton, to which the silk plush is glned. The skeleton, consisting of three parts, the cylindrical part or body, the crown, and the brim, is usually made of linen, covered with gum-lac, and to the cylindrical part the crown is gummed. The cylindrical part is made by gumming together the edges of a piece of cloth shaped on a cylinder. The brim is composed of snperposed layers of stiffer cloth, and made with a flat projecting surface round its inner edge, which is gummed to the skeleton. For covering the hat a

acrom in an oblique line. This cover is drawn over tho maleton on the block, and fitted ezactil to it by the application of a hot iron. The heat of the from melt the rumolac, which on cnolins coments the covering to the akeicton. The edgen

## Haйу <br> in 1822 mineralogist. born in 1743 ; died

 in 1822. He studied theology, became an abbe, and during twenty-one years occupied the place of a professor, at first in the college of Navarre, and afterwards in that of the Cardinal Le Moine. He atudied botany, and subseqnent$1 y$ mineralogy, and introduced a once celebrated sys tem of crystallography. On the outbreak of the revolution Hadly was imprisoned for refusing to subscribe to the new constitution, but his life was saved by the exertions of Geoffroi de St. Hilaire. In 1793 he was appointed a member of the Commission of Measures and Weights, in 1794 conservator of the Cabinet des Mines, and in 1795 teacher of physics in the Ecole Normale. In 1802 Napoleon made him professor of mineralcgy in the Musee d'Histoire Naturelle, and also shortly after in the Faculte des Sciences. Hatiy was remarkable for the extreme modesty of his disposition. His principal writings are his Essai sur la Théorie et la Structure des Cristaus (1784), his I'raité de Minéralogie (1802), his Traité elémentaire de Physique (1803), and his Traite de Cristallographie (second edition, 1822), etc.-His brother Valentin, bern 1745, died 1822, strerted the first institution for the inatruction of the blind. See Blind (The). Eavana (ha-van'a; Spanish La important maritime city capital of Cuba, on the northwest side of the island, with an extensive and excellent natural harbor. The town in the older parts has aarrow, badly-paved streets, but thereare also wide and handsome promenades and avenues. The houses, which are low and with flat roofs, resemble thome of Southern Spain. Havana is the see of a bishop, and was the seat of the sovernor. The cathedral formerly contained the ashes of Columbus, which were brought hitter from San Domingo in 1796. Among the other buildings are the governor's house, the admiralty, the university, the exchange, the opera jouse, etc. The staple manufacture is that of its celebrated cigars. The other manufactures, consisting chiefly of chocolate, straw hats, and woolen fabrics, are not of mnch conseqnence. The trade is extensive, the most important articles of export being sugar and tobacco, unmanufactured or in the form of cigars and cigarettem; other exports are molasses, coffee, wax, honey, rum. The United $\mathbf{S t a}$ tes have the principal share of the trade, and Spain and England rank next.
The town was founded in 1511, but was only fairly begun in 1519 . In 1762 it was taken by the British, who restored it to Spain in the following year. It was blockaded by the American fleet during the war with Spain. January 1, 189!. the United States military authorities took formal possession of the city, and relinquished it in 1002. Pop. (191:) 324,200.
Tavel (his'vel), a navigable river of Germany, which rises in Meck-lenburg-Schwerin, enters Prussia, flows past Spandau, where it receives the Spree, and joins the Elbe, after a course of 160 miles.
Havelberg (ha'vel-burg), a town in caverg Prussia, province of Brandenburg, on the Havel, engaged in brewing, sugar-refining, and shipbuilding. Pop. 6649.

Havelock (hav'ok), Sir HINRY, major-general in the British army, was born at Bishop-Wearmouth. near Sunderland, in 1795. Having entered the army, he served with distinction in the Burmese war (1824-26). In 1829 he married a daughter of Marshman, the celebrated misslonary, became a Baptist, and

Was distinguished during the remainder of manufactures paper, and has a mall his life by his earnest religious zeal. Ho shipping trade. Pop. himself in the Sikh war of 1845. In Haverhill (bã'ver-il), a city of Essex 1851 he was promoted to the adjutantgeneralship of the queen's forces in India. On the outbreak of the Indian muting he was despatched to Alfahabad to support Sir H. Lawrence at Lucknow and Sir H. Wheeler at Cawnpore. After several victories he arrived at Cawnpore and found that Nana Sahib had massacred the prisoners. Pursuing his march to Lucknow, he defeated the Rebels at Bithoor, and finally, with the aid of Outram, won the battle of Alumbagh. Having captured Lucknow, Havelock and Outram were shat up there until relieved by Sir Colin Campbell, 17 th November, 1857. He died just seven days later. He was raised to the rank of major-general and made a baronet.

## Eaven (hä'ven), Josmph (1816-74),

 at Dennis, Massachusetts, educated at Amherst College, and studied for the ministry at Union Theological Seminary, New York. He was pastor of Congregational churches at Ashland and Brookline, Misssachusetts, for a time, and later became professor of systematic theology at Chicago Theological Seminary, 1858-70.Havexfield (háver-feld), Fravcis cducator and historian, born at Shipston-on-Stour educated at New College Ox ford. He was Rhind lecturer at Evlinburgh, 1905-06; Creighton lecturer at London University 1910; a governor of Westminster school, 100008 , first president of the Society for the Promotion of Roman Studies, 1910-16. Among his publications are: The Romanization of Roman Britain, Ancient Town-Planning, Military Aspects of Roman Wales, etc.
Haverford College of instilution s!inated at Haverford. Per.nixlvania, 9 miles W. N. W. of Philajelphia. It is Inder the control of the Society of Friends.
Haverfordwest
(hav'er-ford, haxt. Wales, county town of Pembroke, and one of the Pembroke nistrict of parliamentary boroughs, on the West Cleddaw River. It

County, Massachusetts, on It herrimac, 33 riles $\mathbf{N}$. of Boston. has extensive manufactures of boots and sboes, employing nearly 15,000 hands, and also produces box boards, hats, caps, flannels, and bricks. The river is navigable to this town. The poet Whittier was born here in 1807. Pop. (1910) $44,115$.
Faverstraw (hav'er-stra), a villase of Rockland County, New York, 35 miles N . of New York City. It has extensive manufactures of bricks and ${ }^{\circ}$ brick machines, and has dyeworks and print mills Pop. 5669.
Ravildar (halv-il-dar'), the highest non-commissioned officer in the native armies of India, in rank equivalent to a sergeant. Also a police oficial in villages.
Eavre (u-vr), Ls (formerly Le Havreo de-Grace), a seaport of Northern France, dep. Seine-Inferieure, on the north side of the estuary, of the Seine, 108 miles northwest of Paris, built of brick or stone in straight, wide streets. The public buildings possess lit. tle interest. The manufactures inclucie chemicals, machinery, cotton goods, earthen and stone ware, paper, glass, oil, refined sugar, ropes, etc. a government tobacco factory employs 300 workmen; and a great number of vessels are built But the chief dependence of Harre is on its commerce, which is the greatest of any French port next to Marseilles. It has a large trade with England and Germany, and especially with America, importing great quantities of cotton and other produce; and exporting numerous artinles of French manufacture. The importance of Havre dates from the early part of the sixteenth century. Pop. (1906) 132,430.

Rawaii (hä-wies) or Mawatank Isl.
ANDS, formerly the SANDwror Islands, a cluster of islands in the North Paclfic, thirteen in number. with total arca estimated at fom to 7000 equare miles. Five of these islands are barren islets, and only four are of considerable size. They are generally of volcanic origin and mountamous in charno
ter, with numerous lofty peaks The and of Hawail, is 13,805 feet high, and Mauna Loa (an active volcano on the same island) is 13,675 feet. On the eastern slope of the latter is the famous volcano Kilauea, 4400 feet in elevation, hut with an enormous ater and a living lake of fire, which at times overflows in tremendous eruptions. Haleakala on Maui Island, is 10,030 feet high and has a crater 2000 to 3000 feet deep and from 25 to 30 miles in diameter. It is, however, inactive. The surface of the islands in general is rugged, though with many fertile valleys; the coasts high and precipitous, with few good harbors. Of the habitable islands, Hawaii (which now gives its name to the group) is much the larg est, its area being 4015 nguare miles. The second largest, Maui, of 728 square miles area, consists of two peninsulas, connected by a low isthmus. The most important island is Oahu, of only 600 square miles in area, yet the most populous and containing the city of Honolulu, the capital and chief port of the island group. Next in size is Kauai, of 544 square miles. The remaining habitable islands are much smaller, Molokai, of 261 square miles, being peopled by a coluny of lepers, sent there from the other isiands. The native Hawaiians are of the light-colored oceanic Malay stock, and have become civilized and converted to Christianity. There are extensive forests, and fruits grow profusely, including banana, mango, guava, plantain, and others. Coffee is a semi-wild plant, and taso yields. an important food product. Of cultivated plants, the sugar cane is by far the most important, the grest bulk of the population being engaged in its culture, and Hawail ranking third in cane sugar production. Coffee and rice are also raised, the chief exports being sugar, rice, coffee, hananas, tallow, and hides. The natives of the islands have greatly decreased in numbers, being now much surpassed hy the introduced population, consisting of Japanese, Chinese, Portuguese, and comparatively few other Europeans and Americans. Honolulu has grown into a city of considerable importance, having a splendid harbor, and concentrating nearly the whole trade of the islands.
These islands were discovered by Captain Cook in 1778, the discoverer losing his life here. Each island had formprip its own king. hut under Kamehameha 1 (who died in 1819) they were combined into one kingiom. It was a simple despotism until 1840, when Kamehameha III granted a constitutional povernment. At a later date Queen Liluokalani sought to
rentore the deapotism and in 1893 a revolution hroke out, headed by American mottlera, and the queen was deponed and a provisional government formed under the presidency of Sanford B. Dole. It wat made a republic in the following year. The islands were offered to the United States, hut not accepted until August, 1898, when the warship Philadolphia was gent to take possession. In June, 1000, the group was organized under a territorial government, and given the title of Hawail Territory Pop. 101,009.

## Hawarden (hardeu), a town in

 Elintshire, Wales, lying in a coal district, and having valuable clay beds in the vicinity. In the neighborhood is Hawarden Cantle, residence of the late William E. Gladstone. Pop. $20,575$.Hawes (hauz), Stmprisk, an English poet, who lived in the end of the fifteenth and beginning of the sixteenth century. The exact date of his birth and death is unknown. His principal work is The Historio of Graunde Amour and la Bell Purcell, of The Pastime of Pleasure.
Hawfinch (ha'finch; Cocothraustes grossbeak, so called from tho belief that it subsisted principally on the fruit of the hawthorn. It is one of the largest of the finches. It resembles the chaffinch in color, hut is distinguished from it by its enormous beak, larger aise, and hill-hook formation of some of its wing-feathers. Among American species of grossbeak are evening grossbeak and pine grosebeak.
Hawick (haik), a parliamentary
burgh of Scotland, in Roxhurghshire, on the Teviot, 50 miles s. W. from Edinburgh. The staple industries of the town are the manufacture of hosiery and tweeds, but tanning, skin-dressing, oil-making, dyeing, and iron-founding are also carried on. Pop. 17,303.
Hawk (hak), a name often applied to eagles, vultures, and owls. except the cludes the falcons as well os the haw in. proper, the latter being distinguithe hawks the former chiefly by their shorter from which do not reach the extremity wings, tail, and have the fourth quill longest the the first short : their heaks aleo are and rohust and want the tooth-like are less an the tooth notch nf the former. None is bolder and more persparious in pursnit of its prey than the parrow-hawl (which see) ; see also Falcon.
Hawle (hagk), EDFARD, IOMn, a celehrated Fonglish naval commander, horn in 1705: died in 1781. He entered the navy as a midushipman. in 1734 received the command of the Wolf, and

In 1737 became commander of a muadron, and defeated the Trench fieet at Belleisle. Hawke was in consequence made a K. $\mathrm{C}_{\text {. }}$ B., and vice-admiral of the blue. In 1768 he defeated the French at Quiberon. Hawke was, in 1765, appointed vice-admj i of Britain, and was elevated to the per age in 1776 .
Hawker (hak'er) Robzat stepies, was horn in 1805 English poet and divine, was educated at Oxford and became vicar of Morwenstow, Cornwall. His works comprise Eoclesia, Cornioh Ballads; Echoes from Old Corncoall; The Quest of the Sangreal; etc.

## Hawkers and Peddlers, travel

 dors of small warea.Hawke's Bay, a dilatrict of Nee Zeaicoast of North Island; area, $3,050,000$ acres, containing much fertile soil, well adapted for agricuitural and pastoral purposes. The capital is Napier. Pop. 8775. Hawkesbury, a river in New south the Pacific near Sydney, and remarkable for its inundations.

## Hawking. See Falconry.

Hawkins (hak'ine), Sis Anthony Hope, author, widely known as 'Anthony Hope,' was born in London, 1864, studied law, but gave up his practice in 1894 and wrote many novels. He was knighted in 1918. Author of Man of Mark, Mr. Witt's Widow, Dolly Dialogues, Prisoner of Zenda, The Indiscretion of the Duchess, The Heart of the Princess Osra, Phroso, etc.
Hawkins, Sir John, an Engiish sea out commander, born at Plymin ${ }^{\text {n }}$ 1rzo. He made severai voyages in his youth in the slave trade and was defeated by the Spaniards in 1567. He was appointed vice-admiral and knighted for his services against the Spanish Armada, and in 1595 sailed. in company with Drake, against th Spanish colonies in the West Indies, but was unsuccessfui. $H_{f}$ died the same year. Hawk-moth, one of the sphinx

Privet Eawk-moth.
moths. so called fro its hovering motion. which resembles that of a hawk looking for its prey. The death's head hawk-moth is the Acherontia atropos; the privet hawkmoth. the Sphins Ngustri; the humming-hird kawk-moth, the Macroplesses stellaterum.

Hawkweed, or Hieracium, a zenvs Hawnweed, of composite plants characterized by yellow, orange or red flowers, with imbricated involucre, furrowed and toothed fruit, and bristly pappus. In America, the native spectes of Hieracium are generaiiy known as rattlo-snake-weeds, but $H$. Gurantiacum, which is supposed to be naturalized frum Europe, is known as the orange hawkweed. Hawley (ha'te), Josmpa Roswext, statesman, was born at Stewartsville, North Carolina, in 1826. He studied law, and became prominent as a Republican writer and speaker. He served during the Civil war, and was mus. tered out as brevet major-general. In 1866 he was chosen governor of Connecticut, and in 1868 president of the Repubilcan Nationai Convention meeting at Chicago; was member of Congress, 1872 76, and in 1873-76 president of the United States Centenniai Commission, in which he was largely instrumental in furthering the international exhibition at Philiadelphia. In 1881-1005 he was United States senator. Died in 1805.
Hawser (ha'ser), in ships, a small cable or a large rope, in size between a cable and a tow-line, used in warping, etc.
Hawthorn (ha'thorn), or WHrrvthoris (Órategun Oxyacantha), a smaii spiny European tree, beionging to the sub-order Pomees of the order Rosaces, rising sometimes to the height of 20 to 25 feet. The leaves are aiternate, obovate, 3 to 5 lobed; the flowers are white, sometimes with a reddish tinge, disposed in corymbs, and possess an agreeabie perfume; the fruit is a drape of a red color, and is edibie. The species are about fifty in number, ail shrubs or smail trees. A number of them belong to the United States. When younk the hawthorn springs up rapidly, -and if pruned grows into a thick hedge. When it arrives at the height of a tree, however, it makes wood very slowiy. The timber is hard and durable, and fit for many purposes of utiilty. The doubleflower kind is one of the most ornamental for shrahberies. Hawthorn blowsom is often calied May, from the time of its flowering in England,
Hawthorne, Nathaniec. a novelist Hawthorne, of remarkable orifinalItr, borm at Salem. Massachusetts. in 1804: died in 1884. He studied at Bowdoin College. where he took his dempee in 1825 along with the poet Longfellow. For a number of years after this he led a re. tired and studious life in Salem. Writing tales. some of which appeared in news. papers and magasinen. In 1857 appeared
his Twion-told Tales, a collection of storles which he had contributed to various American periodicals. In 1838 he was appointed a weisher in the Boston customhouse, a post which he held for a few yearn. In 1846 he published his Mosses from an Old Manse; in 1850 The Scarlet Letter; in 1851 The House of the Soven Gables; and in 1802 The Life of President Pieroe, and the Blithedale Romance. In 1863 he became American consul at Liverpool, a post which he held until 1857. He died at Plymouth, New Hampshire. Other works are his Transformation (1860), Our Old Home (1863), etc.JuTisAN, son of the above, born in 1846;

Nathanial Hawthorne
also a novelist. He wrote Bressant, Idol atry. The Subterranean Brotherhood, etc. Tay (hal), the stems and leares of fodder, dried in the sun, and stored usually in stacks. The time more suitable for mowing grass intended for hay is that in which the saccbarine matter is most abundant in the plants, viz. When the grass is in full flower. For the operation of mowing, dry weather, and, if possible, that in which sunshine prevails, is chosen. The making of the grass into hay generally takes three or Iour days to get it ready for stacking. This period is principally occupied in aiternately tedding (i.e. shaking out the grass loovely) and gathering it up into cocks or small heaps, previous to stacking. Care must be takem to avoid haymaking either under a scorching sun or during the prevalence of rain. and the cocks should never be opened in the morning untll the disappearance of the dew. In stacking the great object is to preserve the freahnems of the
herbage, and to induce a slisht degree of fermentation. If the weather has boes wet a few layers of atraw may be inserted ai intervals. Salting is also recommended. On large farme the tedding in performed by a tedding or haymating machine.
Bay, Jomis, American matesman and Iay, author, born at Salem, In liana, October 8, 1838; died at Newburgh New Hampshire, July 1, 1905. He graduated from Brown University in 1858, atudied law in the office of Abraham Lincoln, way admitted to the bar in 1861, and soon after became Lincoln's private secretary, aerving until his death. He was secretary of the U. K. Lesation at Paris, 180\%-67, at Vienna, 1867-60, and at Madrid, 186970. After his return he was for five year: an editorial writer on the New York Tribune; and 1879-81 first assistant secretary of state. In 1897 Hay was appointed by President McKinley ambassador to Great Britain, but was recalled in 1898 to become secretary of state, succeeding W. R. Day, who was sent to Paris an a member of the Peace Conference. This office he held until his death. He directed the peace negotiations with Spain after the war of 1898, influenced the Powers to declare publicly for the 'open door' in China, urged the 'administrative entity' of China, and took the initiative in inducing Russia and Japan to 'localize and limit' the area of hostilities. With Lord Pauncefote he secured the abrogation of the Clayton-Bulwer Treaty and the conclusion of a new treaty with Great Britain (1901), by which Great Britair Withdrew her objections to a canal conlatructed by the United States across the Isthmus of Panama, under the guarantee of neutralization by the latter Power. He also negotiated treaties with Colombia and Fith Panama, looking toward the concludion of the canal; arranged the settlement with Germany regarding Samoa, and that by just commission concerning the disputed Alaska boundary in 1903. He published Pike County Ballads (1871), The Breadeoinners (1883), etc., and with John $G$. Nicolay Abraham Lincoln: A. Hietory (10 vols 1894).
Tayden, Ferdinand Vandivimer, an Westfield, Mass $1829^{\text {geologist, born in }}$ Oberlin in 1850 ., 1829; graduated at Oberlin in 1850 ; engaged in the Civil War as surgeon of volunteers, and was breveted lieutenant-colonel; spent many years in exploring the Rocky Mountains and adjacent country. He edited the first eight reports (1867-1876) of the United States geographical and geological surreys and wrote several works on exploration in the West. He died in 1887

## Haydn

 born at Rohnstrian musical composer, zary and Austria, 1732 ; died 1809. At the age of aix he was eent to school at Haimburs, where he learned, among other thinge, singing and playing by rote. On account of the excellence of his voice he was appointed a choir-boy at 8t. Stephen't Church, Vienna. At the age of sirteen his voice began to break, and he iost his situation as chorister. Having made the acquaintance of Metastasio, Porpora, and Gluck, Hadyn gradually attracted attention by the brilliancy of his compositions; the Oreation being his masterpiece. Hajdon (he'dun), BENJAMIN Ros painter, born in 1786 ; died by his own hand in 1846. In 1804 he became a student of the Royal Academy, and in 1807 exhibited his first work, Joseph and Mary Reposing (in Egypt), asd his Dentatus in 1809. His Judyment of Soloman appeared in 1814. In 1815 he estabiished a achool in opposition to the Academy, an undertaking which ended in pecuniary faiiure in 1823. He was the chief English historical painter of his time.Layes, Charies Willard, Dr. C. years Chief Geoiogist of the United States Geoiogical Survey died in Washington, D. C., February 10, 1016. He was born in 1859 .
Fayes, (häz), Isaac Israme, Arctic County, Pexpiorer, born in Chester 1881. He wnsyivania, in 1832; died in tion of 1885-55 under Dr. Kane, and himself commanded an expedition in $1860-61$. He served as an army doctor during the war, and in 1869 he visited Greenland. He wrote The Open Polar Sea, and The Hand of Desolation.
Hayes (hăz), Rutierford Birchard, President, was born at Dela. ware, Ohio, in 1822. He was a successful practitioner of the law until in 1861, at the outbreak of the Civil war, he was made major of voiunteers. His conduct on the field was marked by conspicuous gailantry, and he attained by meritorious service the rank of brevet major-general. In 1865 he was elected a member of Congress, where he won the reputation of a good working member. In 1867, 1869 , and 1875 he was eiected governor of Ohio. In 1876 he was nominated for the Presidency against Damucl J. Tilden, the Democratic candidate. The election proved so close that the resait was in doubt, both parties claiming a victory. An Electoral Commision, appointed by Congress, was rearired to decide the result of the election,

Which declared in favor of Mr. Hayce His administration was conclliatory to wards the South, and earnent in its elforts for the reform of the civil service. After his retirement he was actively interested in education and prison reform. He died in 1893.
Hay Fever, or Hap Abthic, 2 com. the aymptoms of plaint characterzed by ing of the nasal mucous membrane, contous watery discharse and parazyam of sneezing. The exciting cause is attributed to various substances, auch an pollen of certain flowers, dust, etc.
Haymarket Square Riot, anocrence at Chicago on May 4,1886 , when a bomb was thrown by some undentified person during an anarchist meeting on Randolph Street. Seven policemen, who had been endeavoring to disperse the mob, were kiiled, and 27 others wounded. The bomb thrower was never arrested, but four men were hanged as accomplices and everal others were imprisonel.
Haynar (hinou), Jucrus Jazom, an Austrian general, born is 1786; died in 1853. He took part in the batties of Austerlity and Wagram.
(hañ), IBAMc, a Revolutionary
Hayne (hăn), Isano, a Revolutionary
lina in 1745 . Tarty born in South Caroluna in Charleston, he was paroled to visit his sick family. Required to join the British, he fied to the American camp, and was made colonei, but was soon captured and hanged.
Hayne, Paul Hamilion, American poet, born at Charleston S. C., 1830. Calied the Laureate of the South; died 1886.
Hayne, Robert Young, American aerved in the war against 1791 . He 1812 and in 1023 agaisst England in 1812, and in 1823 became United Statem Senator from South Carolina. He opposed Daniel Webster in debate over Foote's resolution. Died 1839.
Hay-Pauncefote Treaty. see Hoy. Bayti (hà'ti), Harm, or Sax Do: arivao (originally Dapaliola; Latin, Hispaniola), one of the West In: dies, southeast from Cuba, and weparated from it by the Windward Passage, 50 miles broad. Its length is 400 and breadth 150 miles; area, about 28,000 square miles. It in of irregular form, intersected west to east by three chaing of mountains. The central chain containg the highest peak, Loma TMa, 10,200 foot The principal plain is the fertile Vegit Real. The rivers are numerous, but of mall dre. The minerals include sold, silver,
quicisailiver, etc., but are sreatly neslected. Gayti as a whole is one of the healthient of the Went Indian Inlands. The seacons are: a wet, during which heayy rains are most frequent in May and June; and a dry, durins which little or no rain falls. The form includem pinen, mahogany trees, furtic, satin-wood, lignum vitte, and other cabinet and dje woods, plantaine, bananas, Fams, batatas, orangen, pineapplen, etc. The ataple cultivated producte are: colfee, sugar, indigo, cotton, tobacco, and cacao. The fauna includes the asout, European cattle aud piss run wild, snakee, caymans, turtles, etc. Amons the principal towns in Hayti are Port-au-Prince, Ban Dominso, Jacmel, and Cape Haytien,

Hajti was discovered by Columbus in 1492. It was then inhabited by perhap: $2,000,000$ nativen, but so ruthlesaly did the Spaniards deal with the aborigines that within a century they practically exterminated them, having introduced negro alave in their place. In 1630 the French mettled in the weatern part of the island, and in 1697 the western portlon was ceded to them, while the eantern remained Span-inh- In 1791 the negroes revolted aşainst France, and latterly the whole ialand came under the negro. leader Toussaint LOaverture, who established an independent republic. He was captured, but in 1803 Dessalines headed a new insurrection, drove out the French and was crowned emperor of Hayti. He was asmacoinated in 1806, and the Spaniards regained the eastern portion of the island. In 1821 the Spanish portion deciared itmelf independent of the mother conntry: and asmumed the name of Epanish Hayt; but it was rubjugated by Boyer, the President of the Haytian Republic, or French Hayti. In 1844 the inhabitants of the Rpanish portion rose, and formed themselves into a republic under the name of San Domingo (Republica Dominica). In 1801 Santana negotiated a reunion of the atate with Spain, but Spain evacuated the island in 1865. From that period its hiatory presents a long record of revolution and bloodshed, of which the gunpowder explosion that killed President Leconte in 1912, is typical. It now comprises the Republic of Hayti on the west side of the island, and the Dominican Republic on the east. Port au Prince is the capital of Hayti, which has an area of 10,204 sq. miles and population of $2,000,-$ 000. San Dominso is the capital of the Dominican Repubilic, which has 18,045 sq. miles area and about 700,000 population. The people are in ereat part negroes and muiattoes. A murderous outbreak in 1915 led to a ten days reign of terror and Uaited Statem intervention, that country
takiug control of the cuatom house and finaucen for ten years, and entablishing a native conntabulary force under the command of an American officer.
Fiazard (has'ard), zame at dice Hazara played for money. The player in called the oaster, and his opponent, who bets with him, is called the setter. The former calls a main, i a. any number from 5 to $\theta$ incluaive. He then throws, with two dice, and wins if he 'nicks.'. Five in a nick to $5 ; 6$ and 12 are nicks to $6 ; 7$ and 11 to 7 , etc. The carter lowes or 'throws out' if' he throwa acen, or deuce ace (called orabs). Hazard is a game involvins nice calculations.
Razaribagh (ha-zur-i-bate') chiet town of the district of the mame name, in Chota Nagpur, Bengal. Pop. 15,306. The district contains 7021 equare milem. Pop. 1,104,742.
Tazebronck (az-bruk), a town of ing a fine church with an open spire 240 feet high. It has linen manulactures, breweries, tanneries, dye-worke, etc. Pop. 9194.

Frazel (halzel; Corylus), a genus of shrubs or small trees of the order Corylacem or Cupuliferee. It belongs to Europe, North Africa, Asia, and North America. The leaves are roundish-cordate, alternate and shortly petiolate. The European havel ( $O$. Avelland) produces the nutis called filberts, and grows best in a tolerably dry soil. It bears male and female flowers, the former composing cylindrical catkins. The hazel-nut oil is little inferior in flavor to that of almonds Hazel branches form excellent walkingaticks, fishing-rods, etc., and the wood produces good charcoal, often employed by painters The American hazel ( 0 . americana) very much resembles the E0 ropean. The roots are nsed by cabinetmakers for vencering ; and in Italy the chips are sonetimes put into turbid wine for the purpose of fining is
Hazel-grouse (Bondsa botulina), a species of grouse inhabiting the continent of Europe and great part of Asia, allied to the ruffed grouse of America.
Tazeline (häzel-i $)$. an alcoholic liquid distilled from the fresh leaves of the Hamamélis Virginica, the witch-hazel, native to the United States. It is exceedingly useful as an application to wounds. stanching the bleeding and promoting healing. It is equally useful for bruises, inflammatory swelings. sprains, and the like. It is applied on a pledget of lint to bleeding piles. In internal bleeding, whether from the lungm, ntomach, or bowels, it sive very mativfac-

## Finaleton

tory remulth There are eoveral officinul preparations of the witch-hazel, a fuid extract and a cincture, the dose of the former being 15 to 00 drope, and of the latter 2 to 5 . Hazeline is the name given to a ciear coiorleme liquid prepared by certain chemistr, but not oficinal.
Eazleton (has 'ei-ton), a city of La22 miles 8. of Werne County, Pennayivania, high Valley and Pennaylvania rafiroads It is in the anthracite coai region, surrounded by coilerien and other industries affiiated with mining. It has iron, steel and pump works; also numerous textle establishments, such as silk, knitting, underwear and shirt tactories. An excel: lent state hospitai is located here. A iocal corporation manufactures electricity from cuim (waste from coal mines) and sells electric power cheaply. Pop. 30,147.
Hazlitt (baz'it), Wimina, Engiish Unitarian minic and essayist, son of a stone in 1778; died in 1830. In 1793 he became a student in the Unitarian Coilege, Hackney, but on leaving it devoted his time to portrait painting. This was in its turn renounced for iiterature, his firnt publication belng an essay $O_{n}$ the $P_{\text {xinci- }}$ ples of Human Action, 1805. He delivered various series of lectures, and contributed to the Edinburgh Revievo, etc. Among his chief works are: Characters of Shakepeares Plays, A View of the Enjlish Stage, Lectures on the Enplish poets, Leotures on the English Comic Writers, Table Talk, Leotures on the Elizabethan Age, Lifo of Napoleon Bonaparte, and Round Tabio essays, written with Leigh Hunt. Winciam Carew, born in 1834, grandson of the above, became an author and editor, amoag his publications being History of the Venetian Republic, Mgmoirs of William Hazlitt, etc.
Head (hed), the term appiied to the anterior part of the body of an animal when marked off by a difference in size, or hy a constriction (neck). A gradual increase of complexity in the structure of the head is observable as we ascend from the lowest to the highest forms of iffe. In the Protozoa, Infusoria, and Golenterates nothing that can be regarded as a head is found, and it is not till we s.scend to the worms proper, the articulated animals (crustaceans, myriapods, spiders, and insects), the land and freshwater gasteropods (snails and whelks), and the cuttle fishem, that a head proper is found. The cuttle-fishes have a remaric. able cartllaginous box, which, ilie a skull, protects their anterior nervous ganglia, and sives support to the muscles. The head of the vertebrated animals presents a reg-
vilar meries of lucreasias compladity from the lancalet upwardy, and as the antorior. nervous mana enlaryen, and its ganglia is. creaco in compiexity, wo do the anterior Vertebre change their character; as the brain becomen apecialised so don the brin-case or nkuli, attaining its hichent deveiopment in man. In $m a n$, and in tho higher vertebratee the head condate of sis upper chamber, lodsing the brain, the eyes, and other wense organs, and a lower, iodging the firmt portion of the alimentary canal. In proportion as the vertebrates become developed, the hrain increaver in gise, and its porition advancem anterioris, until, in man, it comer to overhans the face. The head is the seat of intellisence and of consciousnemes as it contains the brain and the organs of mence, touch being the only sense not limited to it. See $8 \mathrm{ku} / \mathrm{h}$.
Head, Sis Francis Bond, miscellaneing, born 1793 ; died 1875 . He was present at the battle of Waterioo, being in the royal engineers; in 1825 undertook the working of goid and silver mines in Rio de la Plata; in 1835 became $800^{\circ}$ ernor of Upper Canada, and in 1838 guppressed the Canadian insurrection, and was made a baronet. He was the suthos of Bubbles from the Brunnon of Nrecoaw, Rough Notes of Rapid Journeys coroce the Pampas; A Faggot of Fremch stioks, The Horae and his Rider, etc.
Head, Sir Groras, a writer of travele, He heid etc., born in 1782 ; died in 180. was prorious posts in the army, and was present at most of the great battles of the Peninsula. In 1814 he proceeded to Canada to be chief of the commicearlat of a proposed navy on the Canadian lakes, and subsequently published his experiences in Forest Scenes and Inoidonts in the Wilde of North Amerioa. He was knighted in 1831. He also wrote Rome, 4 Tour of MIany Days, translations of Pac ca's Memoirs, and of Apvielus, with other work.
Headache (Oephalalota), arises from a variety of causes. The principal forms it assumes are:-(1) Congestive Headache, arising from over fulness of hlood. It may be cured by purgatives, while reduction of the diet and saline medicines are beneficial. (2) Anamio Headoche, which arises from a deficiency of hlood, and ocenry in parmons badly fed or in weal kirls. Good food and Iron tonic, Fith applfeation of cold to the head. are often of service in ench cases. (3) Neroows Headeole, which often attacks the studious. and which is rellieved by nerve tonicy, and especially by phosphorus pilla (4) DVomalio Beaio
wohe, which is often due to exposure to cold. What is called Hemiorania or Moorim, which is the limitation of the hendeche to one-half or lene of the byad, ts often treated with bromide of potamium. In cases in which headache arises from diconee of the liver, nausea renulte, and this characterizen bilious headache. Impurity of blood and gouty affections, as well an disease of the kidneya, are frequent sources of headache.
Head Eunters, a title siven to cluding the Dyaks of Borneo, the Ky inof Celeben, the natives of Formosa, etc. on account of their savage mania of hunting for human heads, chiefly by nocturnal raids, and treasuring them as trophies. The practice resembies the scalptaking of the American Indians.
Eleadley, Jokx Tyiez, historian, wan Now Yort, in 1814; was graduated at Union College in 1839 . In 1855 he was elected secretary of state for New York. He was the author of numerous works of history and blography, including Napoleon and his Marchals (1846), Oliver Oromwoll (1848), The second War Betivecn England and the United Etates (1853), Life of Washington (1854), and The Great Rebollion (1863-66). He died in 1897.- H isis brother, Phinsas Camp (1819-1801), a Presbyterian rinister, wrote Women of tho Bible, Publio Men of To-day, Lives of Josephine, Kossuth, Grant, etc., and many other works. Healds. See Heddles.
Health (helth) is that condition of the bodily the living body in which all and perfectly The most perfect and unattended with pain. ally connected with a certain condition of the bodily organs, and well marked by certain external signs. See Sanitary Seienco.

## Health, Biul or. See Bill.

Health,
Muniotpal Boards of, in tutions organized under city government and deriving powers frow state laws for the purpose of protecting the health of the citizens. Every city of importance has a municipal board of health.- STATE Boards 0F, institutions established by state legislative enactments, intended to have central advisory relation with local sanitary organizations. and to superintend a state system of vital statistics. They have been created in most of the states, and in the District of Columbia, with ever-widening activities.

## Hearing.

Hearn, Inrondo, author, born in readded for many years in Now Orienns and Now York, and later in Japan. His Two Years in the Frenoh Weat Indies is an example of poetical prome that attracted much attention. Be wrote aleo Ctimpses of Unfamiliar Japan, and other worke He dled in 1804.
(hern), Thoxas, an English
antiquary, born in 1078 ; died
Hearne atudied at Oxford, and
Hearne in 1735 Hearne studied at oxiord, and was in 1701 appointed a asintant keeper or
the Bodleian Library, and he held the the Bodleian Library, and he hed the 1715, but had to reaign as his Jacobite principles precluded him from taking the oaths to the government. Amons his works may be mentioned Ductor Historious, Reliquia Bodlciana, History and Antiquities of Glastonbury, editions of Leland, of Spelman's Lifo of Alfred, Fordun's Sootichronioon, etc.
Hearst, pinseg philanthropist, born in 1842, her maiden name be ing Apperwon. In 1801, she was married to George F. Hearst, late United States Senator from California, who died in 1891. He left her very wealthy, and she donated from $\$ 3,000,000$ to $\$ 4,000,000$ to the University of California for buildingm, having previously paid the cost of a competition of the best architects of Europe and America for the plans. She also gave $\$ 200,000$ to the American University. Washington, D. C., to build a National Cathedral School for girls and considerable sums for other educational and charitable work.
Hearst, Whuthy Rakdolph, son of Hearst, the preceding, born in San Francisco, California, in 1862. He became a journalist in early life, and was editor and proprietor of the San Francisco Examiner in 1886. In 1895 be bought the New York Journal, and later bought the Advertiser and renamed it the American, and started the Chicago American and Mornino Eaminer, the Boston American, and the Los Angoles Examiner. He engaged actively in politics, made himself prominent by his radical newspaper methods. was elected to Congress in 1803 and 1905, and was a candidate for the Democratic Presidential nomination in 1904. He ran for mayor of New Yort City in 1005. for governor of New York State in 1900, and for mayor again in 1009.
Heart (hart), a hollow muscular or gan, the function of which is to maintain the circulation of the blood, the organs of circulation heing the heart.
the arteries, the velom, and the capillary vensels The heart in mon, quadrupeds birde, and some reptiles is componed of four cavities, two awrioles and two ventriclee. It is enveloped in a membrane called the pericordium, and in mituated toward the left of the cavity of the chest, between the luage. With each beat the apex of the heart gtrikes acalnat the wall of the chest is the space betwren the fifth and girth riby a little belory and to the right ol the left nipple. The right auricle communicatem with the Fight ventricle, benides which there are in it three openinga, that of the vena oava inferior, that of the vena cava euperior, and that of the coronar! vein. The communication between this auricle and ventricle is closed by a valve when the rentricle contracto. The right ventricle communicatea with the pulmonary artery, the opening into the artery beling guarded by a valve formed of tiree flape. When these are brought together they interrupt the communication between the ventricle and the artery. The left auricle communicates throuph a valved opening with the left rentricle, and containg the orifices of the four rulmonary veins. The left ventricle, bemides the communication with the left auricle, contain the orifice of the aorta, almo provided with a valve aimilar to that of the pulmonary artery. The auricle and ventricle of one side are meparated from those of the other by a complete muscular partition, the septum cordis. The valves at the openings of the arteries are called semilunar, that at the orifice of the right auricle tricuspid, that at the orifice of the left euricle mitral, and that at the orifice of the rena cava inferior the Eustachian valve. The heart is formed of a firm thick muscular tissue, composed of fibere interlacing so as to form a figure of eight. It also contains nerves and vessels. The arteries carry the blood from the heart to all parts of the body. They terminate in the capillary vessels, a series of extremely minute tuben which pane over into the veins. The veins are the channels by which the blood passes back from the body to the right auricle of the heart. The blood which is returned from the veins is purplish red, from excess of carbonic acid gas and deficiency in oxygen, and is called venous; that which leaves the heart is bright red, being oxygenated, and is called arterial. The venous blood parts with its excess of carbonic acid and receives new supplies of axygen in the capillary system of the lungs, flows into the pulmonary reins, thence into the left cavities of the heart, thence it passes into the aorta, and is transmitted to all parts of the body, re-
turning to the voins by the caplliary eys. tem. It is now become renous, pacoce through the velns from the extremitice towards the heart, receiving the chyle and the 1 mph and is emptied into the right cavitien of that organ, which roturne is through the pulmonary artery to the capillary vemels of the lungs, where it is aub-

jected to the influence of the air, reaumes the qualities of red or arterial blood, and is ready for a new course.

The mechanism of the circulation is as follows:-The blood contained in the two venso cavm is poured into the right auricle, which contracts, and thus forcen the fluid to escape ; but the vedse caveo oppome to its backward passage the column of blood which they contain ${ }^{\text {r and }}$ it munt therefore pass into the risht ventricle. The ventricle then contracts, and the tricuspid valve closing the pasuage through which the liquid entered, it is corced into the puimonary artery, alons which it must flow (return to the ventricle being prevented by the memilunar valve) into the capillary yyutem of the lungs, whence it passes into the pulmonary veins, which pour it into the left auricle by four orifices. The contraction of the auricle impels it into the left rontricle, by which it is driven forward inio the aorta (the mitral valve preventing its return into the auricle), and thence Into the general circulation. The two auricles contract and relax simultaneously with each other, as do also the two ventricles. The relaxation is called diastole; the contraction systole. The quantity of blood projected at each syatole is generally entimated at six ounces. The causes of the alteruate contraction and relasation are
satiroly involuntary and depondent on the nervous system to a large extent The aybtole of the ventricles la the canise of the motion of the blood in the arteries, which dillate with each waro driven into them.

The beart is the reat.of various and gemerally dangerons diemaen One of them is perioarditio or inflammation of the pericardlum, the doubie llning membrane or bas enveloplns the beart. The cance of this disease mas be exproure to cold, or an injury, or it may be compiicated with othei diceaces Infommation of the inner lining is termed omioonditio. Valvuler divence is a common affection of the heart, the ralven becoming thlekened, contracted, rigid, or otherwise affected, so that they cannot properly perform their duty. The mitral valve, for Inatance, may become too narrow and contracted, and the rennit is that all the blood doen nut pasis into the aorta. In other casem of valvular diceave, the mame reanlt followns vis. imperfect depletion of the ventricles and anriclen, the return of hlood being termed regurgitation. The heart consegnently becomes weakened, while the entire gyutem nnfiers. Ovirgrowoth or hyper trophy and diatation are frequent rebult of valvolar disease. In much cases the avoldance of vlolent exercisen and emo. tions is necemary. The use of digitalie is often muccenemi in atrengthening and soothing the beart. Certain diseases produce atrophy, in which the beart becomes feeble in action, whlle fatty degoneration occurs when the muscalar fibers are replaced by oleaginous particles. This rendera the hea-:- pecnliarly liable to rupture under any straln or violent emotion, bence such shonld be carefnliy avolded by patientio. Amons other organlc diseages of the heart are engine pectorio (the canse of wilch is uncertain), distinguished by a vense of strangling or suffo cation in the breast. Nouralgia of the heart is aimilur in symptoms to anglina. A very common heart allment is palpitation, often cansed by indigestlon, and the excesslve nse of tea and tobacco. Syncope or fainting resnlts from the sndden cessation or slowing of the heart's action, and may be cansed by excitement, emotion, or shock of some kind. Some of the ahove forms of heart disease can be discovored only by anscnitation or percnasion; others are very orident even to non-profewional observerm.

## Eeart'g-ease. <br> Sce Tiolet.

Reart-urchin.
sea-nrchins on accuint of their cordate or heart shape.

Heat (bet), the name givee to a peo culicr conmation, and also to the agent which produces it, this bolng now belleved to be a certain motion in the minute moleculen of which all bodies are componed.

One of the mont obvioum effectin of heat is to alter the femperature of bodien. In almost all casem when heat is anpplied to 2 body, the temperature of the hody rises. and when heat is removed the tempera. ture of the body falle. If the increase of temperature is ofldent, and auch as may be poted by the thermometer, the heat 18 then termed sensible; il not, as in the cane of ice immediátely melted, it is termed latent. Temperature in, in fact, the tendency that a hody has to impart heat to other boanes. II two bodies impart no heat to each other when in contact, they are aald to have the mame temperature. When the one possessen more heat than the other there in an impartatlon of heat from the former nntil the temperatnro is eqnalized. Dliferent bodien require very direrent amounts of heat in order to raise thelr temperature throngh the name nnmber of degreem. Thus it requirem abont thirty times as mnch heat to raise the temperatnre of 1 lh . of water $1^{\circ}$ as to raise the temperature of 1 lb . of mercury by the same amonnt. The terme capacity for heat and specifo heot are nsed in relation to thle pruperty of bodlen. The capaclty for heat of a body is the quantity of beat reqniled to ralse its temperature $1^{\circ}$ from some fised point, an from $0^{\circ}$ C. or from $82^{\circ}$ Fah. The apecific heat of a snbatance is the ratio between the quantity of heat reqnired to raise the temperature of the mabstance $1^{\circ}$ from some fized polnt and the quantity of heat reqnired to raise the temperatnre of an eural mase of distilled water $1^{\circ}$ from $0^{\circ} 0$

Heat changes the dimensione of bodles. Increase of volnme it the normal effect, althongh the reverve ls observed in water between $0^{\circ} \mathrm{C}$. and $4^{\circ} \mathrm{C}$., and in iron and bismuth. Between moderate 11 mits bodies expand nearly regnlarly with the temperatnre, bnt this does not hold good of the more extreme limits. (See Bepansion.) Addition of heat liquefes solid bodies, and converts liquids into pases. During the conversion of a molid into a lignid, or a liquid Into a gas, a conslderable quantity of beat is absorbed, and in the reverse process heat is given out; bnt thif is one of the cases in which. though heat is taken in or given ont, the temperature la not altered. Hence the heat is sald to be made latent. Heat also alters the power of bodies for condwoting electricity. In molidis the conductivity in diminimhed
to a great extent by an lecreace of a few degrem in the tomporature. In ilquidm on the other had, imereace of tempora: ture increaces the conductivity. The mag. netic properties of bodies are aleo changed hy heat. For example, an iron bar that hae been magnetised suddenly lowes the whole of its marnetism at a particular cemperature. Heat pomenees the power of altering the chemionl propertice of bodien. In mome caseen it breaks up chemfeal compounds, hnt in general it favors chemleal comhinution.

In meannring quantities of beat various units may be adopted, as, for instance, tho quantity necemary to meit a pound of ice. But the unit quantity of heat now generaily fixed on (the Centigrade thermometer and metrical ayetem being employed) is the quantity of heat which will raise the temperature of 1 gramme of distilled water from $0^{\circ}$ O. to $1^{\circ}$ O.; or 1 ib . of water may be used instead of 1 gramme, and one degree Fahrenheit inmtead of one degree Centigrade. Calorimetry is the technical name given to the part of the sabject that deals with the practical measarement of quantitien of heat.

When heat is appiled to one end of a bar of iron it is propagated through the subutance of the bar, producing a rive of temperature which is first perceptible at near, and afterwarde at remote portions. This tranemision of heat is called conduotivity. The bent conduotore are metale but all bodiew conduct more or leas. The bent conductor fis silver, next foliow in order of their conductivity copper, cold, brass, sinc, tin, nteel, iron, lead. With the exception of mercury and other melted metals, lignids are exceedinsly bad condactors of heat. This can be nhown by heatiuy the upper part of a colnmn of liguid and observing the variations of temperature below. These will be fonnd to be scarcely perceptihle and to be very slowly produced. If the heat were applied below we shonld have the process called the conveotion of heat; the lower layers of lignid wouid rise to the surface, and be replaced by others which wonld rise in their turn, thus prodncing a circulation and a seneral heating of the liqnid. When tho heat is applied above the expanded layers remain in their place, and the rest of the liquid can be heated by conduction and radiation only.

Radiation of hout conaistu in the propegation of heat from a hotter body to a colder one through an intervening me dium which is not heated dnring the procem. The heat is transmitted by the same medium that tranmmits light from a luminous bois. Radiant heat and light
brations of an clactle medium, the lumbniferous ether, supponed to fill all mpece, and they obey the same laws of mection, refraction, interteremce, and polartation. They alno oboy the general law of wavo motion. A iuminous body exciten in the elher waree or undulations of a great many diferent wavo-jengthe nomo of them capahio of afrecting the ege as lisht, and others not. Heat rays need not be at ali luminous; they may have no Ushbgiving power, hat may be what are known an ray of darli heet, capable of beins detected by the thermometer, but not perceptible to the eye. Otber ray are purely chemical in their effect (am in photography), and are callied cotinio ray. The senerai effect of radiation is to equalize the temperature of any aystem of hodieu su placed as to be capablo of radiating one to the other. Eyery body of the aysatem is conatantiy sending forte. heat rays in all directions, and receivins the heat radiated from the other bodice. But the hotter bodies emit more than they receive, while the colder bodies recelvo more than they emit, and the temperature of the syatem is thus sraduaily equalised. The raplidity or otherwive of raditation difers much in diferent bodien, Tho radiation depends on the nature of tha murface of the body, and the power of a body to radiate heat in intimately connected with ith power of aboorbins heat radiated to it, and with ite power of 10. fecting heat Surfaces. that are good ridiatore are sood sbeorbers, and curtacm that ahoorb heat readily refeet it badly. Thne, a kettle covered with soot lowes when filled with hot water heat mote rapidly than one with a brightiy pollighed aniface. The best aboorber of all 10 a anrface covered with a thin contung of lampblack. Brishtly polished metalis are the wrat absorber among the bodie that are not transperent to radiant heat.

The transmis ion of radiant heat through various substances is a mubject of great importance. In this connection the terms diathermanows and sthermumows correspond to transparent and optguo in the case of lisht. One of the.chief diathermanous bodiem forminlt, Comanom white clase transmitis ray of high ro frangibility, ntopping thow of low ferrangbility. Bence its use as a fre Eercen. For the greater part of the heat of a common fire is of the dart kind, and fo nearly all stopped by the slase ibnt Elass doen not dereen from the keat of the ruy a freat part of which comerits of heat of high retrangibility. On the other hand, moked rockenalt trenumite wery ittio of the heat of hish refrangiblity, though it
is almont perfectly diathermanous to cart heat.

The nature of heat was long a subject of active controversy. The common theory during the last centnry, and in the early part of the present, was the mato rialiotic, or that by which heat was regarded as an imponderable fluid (caloric) which could permeate all matter, and which, uniting with the particles of bodies, produced the phenomena associated with heat. The materialistic theory was held by Black and Lavoisier, but it was exploded by the experiments of Rumford and Davy. Among the contributions of Davy to the science was his celebrated experiment of rubbing togethes two pieces of ice, while surrounded by an ice-cold atmosphere, until they melted away completely. He concluded that 'the immediate cause of the phenomenon of heat is motion, and the laws of its communication are precisely the same as the laws of the cummunication of motion. Between 1840 and 1843 Jonle conclusively established the truth of this theory -the dymamical theory of heat-by measuring the amount of energy required to prodnce a definite heating effect, and by showing that the quantity of heat obtained by expending a definite amount of energy in friction is the same whatever is the nature rf the body in which the friction takes place. The conclusions arrived at by him are thus given :-
1st. The qnantitv of heat produced by the friction of bodies, whether solid or lignid, is always proportional to the quantity of work expended.

2d. The quantity of heat capable of increasing the temperature of 1 lh . of water by $1^{\circ}$ Fah. requires for its evolution the expenditure of mechanical energy represented by the fall of 772 lbs. through 1 foot. This amount of energy or work, equal to 772 foot-pounds, is called the dynamical equivalent of heat.

That heat is a form of energy is now considered by all to be beyond question. Every substance is considered to have some tind of molecular structure, and heat is regarded as consisting in the relative motions of the molecules or particles. The greater the energy of the motion the higher the temperature of the body, so lons as it maintains its original state, solid, liquid, or gaseous ; and an alteration in the nature of the motion probably constitutes the change from one of the atates of matter to another. After the time of Rumford and Davy, Fourier and Carnot were hichly distinguished for their inqniries into the mathematical theory of beat. Fonrier inventicated the theory of conduction and radiation, while on the in-
vestigations of Carnot has been founded the branch of Thermo-dynamics, which treats of the conversion of heat into mechanical force or enery, and vice versa. (See Thermo-dynamica.) The investigations of Joule and the discovery of the quantitative equivalunce of energy with heat, led to the enusciation of the theory of the conservation of energy. See Energy.

## Heat-engine. <br> See Thermo-dynamio Engine.

Feath (hēth), the common name of many plants of the nat. order
Ericaces. Those that belone to the genus Erica have their leaves simple and entire; their flowers oval, cylindrical, or even swelled at the base; the corolla is fourcleft; the stamens eight, terminated by anthers which are usually notched or biaristate at the summit, and the frnit dry, fonr or eight-celled. From < 50 to 500 species are known, twelve or fifteen of which inhabit Europe, and have small flowers, whilst all the remainder are natives of South Africa (the vicinity of the Cape of Good Hope). Many of them bear brilliantly colored flowers.

## Efeathfield (hẽth'teld), George Auaustus Dhhot, Lord,

 a British general, born in Roxburgh: shire in 1718; died in 1790 . He studied at the University of Leyden, and at the French military school at La Fere, and served for some time in the Prussian army. He entered the British army in 1735, was wounded at Dettingen in 1743, and in 1762 took part in the capture of Havana. In 1775 he became commander-in-chief of the forces in Ireland, and soon after governor of Gibraltar. Spain and France having sided with America against Britain, Gibraltar was besieged by the two former powers, and successfully defended by Elliot from 1779 to 1783, the siege and defence being among the most memorable in history. The ring sent Elliot the order of the Bath, and shortly after he returned to England, and was created Baron Heathfield in 1787.Feat Spectrum, the part of the spectrum from an incandescent body that contains invisible heat rays. To produce the heat spectrum properly lensess and prisms of ruck-salt must be employed. When the spectrum from the sun is examined it is found that the maximnm heat intensity is in the darkheat spectrum at a considerable distance from the place where light ceases to be perceptible. Heaven (hevin; probably signifying Heaven (hev'n; probably signifying elevated), in a phymical sense, the arure vanit which mpreade above ns like a hol-

## Heary Spar

 manifested, in contrast with especially According to the Hebrew scriptures heaven consisted of three regions:-(1) That of the clouds, or alr; (2) that of the stars; and (?) the abode of God. They also divide it into two parts, "The Heaven' and the 'Heaven of Heavens.' Among the Greeks the gods were supposed to reside on Olympus, and the classic poets placed the abode of the just in the Elysian fields. The heaven of Islam is a scene of sensuous enjoyment while that of the Buddhist consist in Nirvana, regarded by some as meaning the absorption of individual existence in the great ocean of being. The ancient German had his Walhalla, and the American Indian has his happy hunting grounds. Among Christians the general opinion is that heaven is the residence of the Most High, the holy angels, and the spirits of just men made perfect, that this abode is eternal, and its joys intensely spiritual. Heavy Spar. See Baryta.
Hebe (hathe), in Greek mythology, the bearer to the gods, until replaced by

Hebe, by Canora. Ganymede, a daushter of Zeus and Hera, who gave her as a wife to Heracles. In the arts she is represented with the cup in whlch she presents the nectar, with the figure of $\&$ charming young girl, her dress adorned with romes, and wearing a wreath of flowers.
Heber (he'ber), an Enelit Rimaris ALD. bishop, was porn and 1783: died in 1826 In 1800 he entered Brasenose College, Oxford, and in 1803 wrote his celebrated prize poem of Paloting. After traveling on the contt-
nent he became, in 1807, rector of Hodnet, and having married Amelia, daughter of the dean of St Acaph, was appointed prebend of the cathedral. On the death of Birhop Middleton, Heber was consecrated Bishop of Calcutta in 1823; but he had only occupied the ponition for about two years when he died of apoplezy at Trichinopoli, in 1826. In addition to his hymns, the best known productions are Paleatine ${ }^{2}$ an edition of the works of Jeremy Taylor (with Life); Poems and Tranalations.
IRébert (ă-bär), Jacoues Rewe, notorious during the French revolution, was born at Alencon in 1757 ; was executed in 1794. Hebert first attracted notice as editor of the violent Jacobin organ Le Pere Duohesne. In 1782 he became a member of the municipality of Paris, which contributed to the massacres of September, and he was named attor: ney-general under the commune. In 1793 the Girondists procured his arrest, but he was released by the convention. He was one of those who established the worship of reason, and he was always on the side of bloody measures. Having denounced Danton, the latter, in conjunction with Robespierre, secured his arrest and decapitation with the guillotine in 1794.

Hebrew Language and Literature (he'bro), the language and literature of the Jews, Israelites, or Hebrews, especially at that period When they formed a compact nation inhabiting Canaan or Palestine. (For a sketch of the history of the people see $J$ Jovs.) The Hebrew language forms a branch of the Semitic family of languages, being atin to the Aramaic (Chaldee and Syrlac), Arabic, Ethiopic, and Assyrian. In the antiquity of its extant literary remalns Hebrew far surpasses the other Semitic idioms, and in richness and development is only inferior to the Arabic. The language is deficient in grammatical technicalities, especially in moods and tenses of the verb, in the absence of the neuter, gender, etc. Its roots are triliteral (consisting of three consonants), and words are derived from them by the reduplication of the letters of the root, and by the addition of formative elementi before and after the roots. The alphabet is composed of twenty-two consonants, the vowels being expressed by marks above or below these letters. The accento and marks of punctuation amount to about forty. The writing is from right to left. There are three kinds of Hebrew alphabet now in use the square or Amsyrian (properly called the Babyionian), the
mont common; the rabbinical, of medisval; and the curaive, or alphabet need in ordinary writing.
The extant clamical Hebrew writings embrace' a period of more than 1000 yeare from the era of Moses to the date of the componition of the books of Chronicles, which ttand last in the Hebrew Bible. During this period the written language underwent surprisingly little change. In passing from the book of Genesis to the books of Samnel we do not recognize any very striking difference in the language. Even those who assert that the Pentateuch as a whole is of a comparatively late era, admit the great antignit of some of its contents, which do not difier in language from the reat. There is indeed to be observed a very decided difference in style and languase between the earliest and the very latest Hebrew writings; bnt this change was sndden, hence Hebrew literature is distinguished into Pre-exilian and Pont-exilian, the Babylonish captivity forming the break between the two. The writings which belong to the age subseqnent to the Babylonish captivity differ very considerably from those which belong to the preceding age ; the influence of the Aramaic or Chaldee language, acquired by the Jews in the land of their exile, having greatly corrupted the tongue. The historical books belonging to this age are the books of Chronicles, Eara, Nehemiah, and Eather. In the prophets who prophesied dining and after the captivity, with the exception of Daniel, the Aramaic impress is by no means so strong as we might anticipate, they having evidently formed their style on that of the older prophetr. At what time Aramaic became the dominant element in the national language it is impossible to determine, but eventually it entirely took the place of the old Hebrew as a spoken tongue. The fragments of the popnlar language in the New Testament are all Aramaic ; and ever aince the Hebrew proper has been preserved and cultivated only as the language of the learned and of books, and not of common life.

After the return from the captivity, the Jewish literature was carefully cultivated. Under Ezra the Scriptures were collected, and arranged into a canon. The Pentatench was publicly read, taught in schools, and translated into Aramaic. The legal or rellgions traditions explanatory or complementary to the law of Mose were collected and eatabliahed as the oral law. Theme labors remited is the Mid. rash, a general exponition of the Old Tentament, divided into the Harcona and the Baggada. To the Maccabean era be-
long the Apooryphe (in Greek), various Greek verions of the Bible, and several collections of prayera, poems, and proverbs To the ancceeding epoch belong some celebrated doctors of the lawHillel, Shammal Gamaliel, and others: while the age following the deatruction of Jerumalem (A.D. 70) witnessed the completion of the New Testament and the worke of Josephns, written, however, in the Greek languaje. On being driven from their capital by the Romans, nnmerous schools were established by the Jew: in which their language and literature were tanght. Of these mehools the most celebrated were thome of Babylom and Tiberias. The Miohna, which contains the traditions of the Jew and interpretations of the Ecripturem is supposed to have been compiled in the latter part of the second or in the earlier part of the third century; and the rabbis of Tliberias and Babylon wrote numerous commentaries on ft. These commentaries were at length collected into two meparate works, the Jerusalem and the Babylonian Talmuds. The Jerusalem Talmud seems to have been completed about the end of the fonrth centnry, and the Babylonian Talmud about a centnry later, under the care of Rabbi Ashe. What are called the Targumo-that is Aramaic translations of portions of the Old Testament-belong partly to times momewhat anterior, partly to times subseqnent to thif period. The Jewn latterly adopted the languages of the varions peoples among whom they happened to dwell, though they also wrote in classical Hebrew as well as in the less pnre form of the Rabbinical Hebrew. The most brilliant epoch-of mediteval Jewish literature is that of the domination of the Moors in Spain. Of modern literatnre in the Hebrew language there is little that is of general interesi.
Febrews (hê'brơa), Epistus to This, one of the books of the New Testament, the canonicity and anthorship of which have been mnch discussed. The immediate snccessors of the apostles (Clement of Rome, Justin Martyr, etc.) seem to have considered it as of canonical authority. Its canonicity was also maintained by st. Jerome, by the almost nniversal consent of the- Latin and Greek churches, and by Ambrose of Milan; while in 416 a decretal of Innocent I was issued in fayor of thif riew. As to the anthorship, the early Roman church denied its Pauline orisin. In Carthage it was (in the second century) ancribed to Barnabas, while at the zame time in Alezandria it was ascribed to Paul. This view was supported by Clement of Alexandria, and Origen, tho
former belleving that it wam written by Paul in Hebrew, and translated into Greek by Luke. Latterly the Panline anthorahip became generally accepted throughout Christendom, but in modern times the prevalent opinion is that Panl was not the author. The epistle was probably addressed to a Jewish section of the Boman church, althongh mome maintain that it was addressed to Jewr of Alexandria. If the latter view be coro rect $\Delta$ pollos may be the author, althongh tradition seems to favor the claim of Barnabas. The question is apparently one incapable of settlement.

## Hebrides (heb'-rivdez) or Wrstary

 of Ptolemy, and Hebudes of Pliny, the being an erroneous insertion), a series of islands and islets off the west coast of Scotland, usnally divided into the Outer Hebride: (popnlarly called the Long Island), and the Inner Hebrides. The islands within the Firth of Clyde are not now considered as part of the Hebrides. The Hebrides are divided between the shires of Ross, Inverness, and Argyle. They number nowards of 400 in all, but only abont 80 are inhabited; area, abont 2800 eqnare miles; population, about 100,000 . The islands are, on the whole, monntainous, and abound in moss and moors. Although humid, the climate is mild. The soil is mostly poor, and agriculture, except in certain localities, especially Islay, is very backward. Oate and barles, with potatoes and turnips, constituite almost the entire prodnce of the soil. Cattlo-rearing and fishing are staple industries. The land is mainly occupied by sheep-farmers, and by great nnmbers of crofters occnpying small pieces of arable land and having often the right in common with others to a tract of rongh pasture. There are also many cottars or anbtenants, and excess of population has arisen in varions localities from the minute subdivision of land. The condition of the inhabitants generally, is very depressed; their dwellings miserable-the older being without chimneys or windows -and their living poor. Gaelic is the nniverual language, although English is tulerably well known. The Hebrides were parly colonized by Norwegians, and belonged to Norway from tbe ninth to the thirteenth centnry, being annexed to Scotland in 1265 . In 1346 a chief of the Macdonald clan assnmed the title of 'Lord of the Isles,' and he and his succeamors affected a cort of semi-independence, but the Hebridea were finally annezed by Jamee $V$ in 1540. : celoroll fethearbe or 1 c cmres, now with eztensive blanketo sarpet woolen

PhLKhally), a town in Palentine, 18 miles month by weat of Jerusalem, 2835 feet above sea-level. It lies in the narrow valley of Mamre, and was one of the three citien of refnge west of the Jordan. Its streets are narrow and dirty. A monque, called EL-Haram, formerly a church, contains the alleged tombs of Abraham, Isaac, Jacob, Sarah, etc. Hebron is one of the oldest of existing town. It was the reaidence of Abraham and the patriarchs, and at one time of David. Pop. about 15,000 .
Tecatreus (hek-a-téus), an eminent ancient Greek historian and seographer, born (probably) abont 550 B.O. jied abont 476 B.O. He Visited Esypt, Thrace, Greece, the consts of the Euxine, Italy, Spain, and Africa. His two great works were his Tour of the World and his Genealogies or Histories. Only fragments of his writings are extant.
Hecate (hek'a-te, or he'kat), an ancient Greek sordess, whose powers were various. She could bestow wealth, victory, and wisdom; good lack on sailors and hunters; prosperity on youth and on the flocks. She was latterly confounded with other divinities, such as Deméter, Arte̋mis, and Persephone (Proserpine), and finally became especially an infernal soddems, and was invoked by magicians and witches. Dogs, honey, and black female lambs were offered to her at places where three roads met. She was often represented with three bodies or three heads, and with serpents twined ronnd her neck.
Fecatomb (hes'a-tom, or hek'atoxm; Greek hecaton, a hundred, bous, an ox), in ancient Greek worship literally a sacrifice of a hundred oxen, but aoplied generally to the sacrifice of any large nnmber. It was necessary that the victims should be without blemish. Only parts such as the thighs legs, or hide were burned, the rest furnishing the feative meal at the close of the sacrifice.
Fieckles (hek'lz), or Hacostrs, an apparatns employed in the preparation of animal and vegetable fiber for spinning. It consists of a series of long metallic teetb, through which the material is drawn so as to comb the fibers ont straight and fit them for the anbsequent operations. The teeth are fixed in a wooden or metallic base, in several rown, alternating with each other at short distances apart.
Heokmondwike (hel'mund-wh).
cloth, and wooten jarn manufactorlos. Pop. 8017.
Hecla, or Herra, (hek ${ }^{2}$ an), a volcano from its south weat conot, about 5000 feet in height, and having several cratera, It in composed chiefly of basalt and lava, and is always covered with snow. Many eruptions are on record. One of the most tremendone occurred in 1783, after which the volcano remained quiescent till September, 1845, when it again became active, and continued with little intermitsion till November, 1846, to discharge ashes, some masses of pumicestone, and a torrent of lava. The last outbreak was in 1878.

Hector (hek'tur), the son of Priam the Trojans, whose forces he commanded His wife was Andromache. His exploits are celebrated in the Iliod. Having slain Patroclus, the friend of Achilles, the latter sought revenge, and Hector was slain by him. The body of Hector was dragged at the chariot wheels of the conqueror: but afterwards it was delivered to Priam for a ransom, who gave it a solemn burial. Hector is the most attractive warrior in Homer's Iliad, in which one of the finest episodes is his parting from Andromache before his last combat.
Hector, ANsire Alezander, an Irish in 1902. Under the title of Mrs. Alexander she wrote many popular novels, among the best known of them being Her Dearest Foe and Whe Wooing ${ }^{\prime} t$.
Yecuba (her'0-ba), of Phrygia, in - Greek legend the second wife of Priam, king of Troy, to whom she bore Hector; Paris, Cassandra, Troilus, and other children. After the fall of Troy she was given as a slave to Odymseus, and according tn one form of the legend, $\mathrm{In}_{n}$ despair $\because$ ?d into the Hellespont.
Heddle
(hed'), in a .oom, one of the parallel double threads which are arranged in sets, and with their mounting, compose the harness for raising the warp threads to form the shed and allow the shuttle to pass. Each heddle has a loop or eye in its center, through which a warp thread passes.
Hedera (hed'er-a). the genus to which

## Hedge

 iy belonge.(hedj), a fence formed of living trees or shrubs. Hedges are often composed of one or more of the zollowing:-Hawthorn, crab, blackthorn, holly, privet, beech, hornbeam, maple, barberry, furze, broom, alder, poplar, willow, zew, box, arborvite, sweet-briar, etc. AI: though superior to dry-stone walle, they
take up much room, and exhauat the moll to come extent. Bedjes are probably more common in Angland than in any other country, though they were not $5_{0}$ common till the clone of the serenteenth century. Thes are increasing in une in the United States, various plants being used, among which privet has recently become very popalar.
Hedgehog hedy hog: Erinaotus (Europars), an insectivorous animal, covered with spines in lieu of hair. By means of a special muscle it is able to roll itself up into a ball,

Hedgehos (Erinachus Europaus).
and in this form can defy most of its enemies. It has a rudimentary tail, elongated nose, short ears, with a cranium comparatively broad. The hind feet have five toes, and strong coarse hair covers some parts of the body. The teeth are numerous. Including the tail, it attains a length of 11 inches. It usually resides in small thickets, and feeds on fruits, roots, and insects. It is fond of raw or roasted flesh, and devours cockroaches in large numbers when kept in houses. It hibernates in winter. The fe-

Skull of common Hodgehog (Erinachus Europew).
male bears four to eight young at a birth, the young soon becoming covered with prickles. It is found in most parts of Earope. Other species are found in Asia and Africa.
Hedgehog Plant, a name bentowed plants of the genus Medioago (eapecially $M$. infeatata) whose pods are spirally twisted and rolled up into a ball and fur nimhed with prickles.

Hedge-mustard (Sioymbrium ) common in waste piaces.
Hedin, Svers, a Swedish traveler, He traveled in Persia and Mesopotamia in 1885-86, way sent on an embasey to Persia in 1890, and continued his travels in Asia until 1897, crossing through Eant Turkestan, the Pamir, and North Tibet. Returning in 1006, he continued his explorations in an almost unknown region, the vast expanse of West Tibet, which he crossed twice from north to south, finding the country wildiy mountainous, with intervening valleys and many iakes, generaily sait. He returned in 1908, having discovered the true sources of the Bramaputra and Indus rivers. He wrote Through Asia and other works. Hedjaz. See Hejaz.
Fedjrah. See Hejra.
Fedonism (hydon-ism), the ethical pleasure is held to be the chief to which Greek ethics hedonism was represented by the Cyrenaic and Epicurean schools. The classical exposition of the modern type of hedonism is found in Mill's Utilitarianism, although his argument is generaliy admitted not to be free from serious inconsistencies. Utilitarianism reaily aims at the greatest happiness of the greatest number, a collective rather than individual good.
Hedysarum (he-dis'a-rum) See Fleem (hảm), Jan David Dis, a Dutch painter of fruit flowess, and still life, born in 1600; died in 1674. He studied under his father, and soon obtained large sums for his pictures, which are characterized by great deilicacy and attention to detail and truth and briiliancy of coloring. His Madonnas, etc., bordered with garlands of fruits and flowers, were also famous.
Heeren (hă'rén), Arnold Hbrmann born in 1760 Luwig, a German historian, entered the gymnasium of Bremen, and in 1784 took his degree of Doctor of Philosophy at Göttingen. In 1787, after returning from his traveis in Itaiy, he became professor extraordinary of phiiosophy at the same university. In 1801 he was elected professor of history. His writings combine extreme accuracy of statement with picturesqueness of style. His principal productions are Geschiohte der clascischen Lieder im Mittelalter: Handibuch der GesoMiohte der Staaten doe Alterthuma, etc.

Hegel (ha'd), Geobe Wuranc man metaphyician a celebrated German metaphysician, born at stuttgart in 1770; died in 1831. He studied at the theolosical institute of T'uoingen from 1788-43, and was next a private tutor at Berne (1793-9*), and subsequently at Frankfort-on-the-Main (1707-1800). Having removed to Jena, and contracted an intimacy with Schelling, he devoted himself to metaphysical study. After the battle of Jena, Hezel wan empioyed on a newspaper at Bamberg until 1808, when he became successiveiy rector of Nurnberg Gymnasium, professor of philosophy at Heidelberg (1816), and at Berlin from 1818 to his decease in 1831. Among his works the mont important are hil3 Phinomenologie des Geistes (1807), Wissenschaft der Logik (1812-16), Encyclopadie der philosophischen. Wissenschaften (1817), and Grundlinien der Philosophio des Rechts oder Naturrecht und Etactsvoifsenschaft (1821). The philosophy of Hegel foiiowed that of schelling, in adopting as a presupposition the indentity of Knowing and Being, of Thought and Keality ${ }_{2}$ of Subjective and Objective. But he differs from schelling, who contempiates this indentity with its inner opposite through the medium of a purely intellectual intuition, for Hegel neems rather to revert to Kant's Transcendental Logic. He thus asserts that if the order and connection of our thoughts is involved in the order and connection of things, the universal form in the course of objective ection must eractiy agree with the form of the development of our thoughts, and vice versa. As there are, according to him, three stages in the process of thought and existence, his system has necessarily a threefoid division: logic; the philosophy of nature; and mental philosophy. Hegeiianism has been more influential in the direction of the philosophy of religion than in any other dena tment; brit it is divided into three ps, reprosenting respectively the su atural, the rational, and the mystical.
Fegira (hej'i-ra.) See Hejra.
Feide (hrides), a town of Prussia, in IInistein, with manufacture of paper. etc. Pop. (1005) 8758.
Reidelberg (hl'dl-berh), town of ated on the left bank of the Neckar, here crossed by two bridges, in one of the loveliest districta of Germany. It atands on a narrow strip between the river and the castle-rock and Gelsberg, spurg of the Konigatuhi ( 1850 ft ) ; and chiefly conrists of one main street and lews fmportant crom and parallal atreete. The principal

remarkable edifice in Heidelberg. It is cessible. The barometric method is based now an jyy-clad ruin, but is carefully on the fact that as the mercurial column jreserved from further decay. The prin- is supported by the atmospheric pressure, hipal industry is brewing. Pop. (1910) it must fall when conveyed from a lower 6,016.
Heidelberg Catec ${ }^{3}$ ism. The Felof Pithers delbers of Palatinate Catechism is of greater importance than any other as a standard of the German reformed churches. It was compiled by the Heidelberg theologians, Caspar Olevian and Zacharias Ursinus, at the request of the Elector Frederick III of the Palatinate; it was published in 1563, was approved by several synois, and was subjected to revision by the Synod of Dort.
I eidenheim (hiden-him), a town of Würtemberg, 46 miles I. B. I. Stuttgart. It has manufactures of wnolen and linen cloth, etc. Pøp. (100 ) 12,173.
Heights, Minasurmment of, or Hipof geodesy which treats of the measurements of the absolute or relative height in ionce for the greatent accaracy the pressure is diminished. Were the atmosphere uniform in dendity throughout, nothing could be simpler than the meas. urement of heights by the barometer, but gases being very compresaible, the lower strata of the atmosphere are denser than the upper strata, being exposed to greater pressure. Thus a column of air 100 feet high has far greater weight at the sealevel than a similar column at the top of a mountain 4000 feet high; and the effect on the barometric column of rising 100 feet from sea-level is correspondingly greater than the effect of rising 100 feet from a height of 4000 feet above the level of the sea. Moreover, increase of temperature affects the density of the mercury in the barometer, and also that of the air and further complicaten the problem. Hence for the greatent accaracy in determining the diference of level
to mercurial barometers and four thermometers are required. 2wo of the thermometers are used for determining the temperature of the air at the atations, and two are attached to the barometers for determining the temperature of the mercury. The observations are made simultaneously. The aneroid harometer is in some respects more suitahie than the mercurial, being much more portabie, and requiring two thermometers only. After the necemsary ohservations are made the required height may be calculated hy the nse of certain logarithmic formulse, or by the ronsh method stated under Barometer. Tahles ohviating the use of logarithons are often supplied hy instrument makers along with aneroid barometers. The method in which use is made of the principle that water boils at the temperature of $212^{\circ}$ noder the fuii pressure of the atmosphere but at a lower temperature with a smaller atmospheric pressure, such as is given hy an elevated position, is simpie and sufficiently accurate for many purposes. It has been found that if water at the sea-level boils at $212^{\circ}$, on rising 510 feet it will boil at $211^{\circ}$, and so on.

## Heilbronn (hirbron'), a town of

 itnal wartemberg, heautifulify in architecture in the older parts, hat having modern suhnrhs. Its finest edifice is the old Gothic church of St Kilian. It has flourishing industries. Heilhronn was long an imperial free town. Pop. (1010) 42,709.Heiligenstadt
( hili-gen-stat), a town of Prussia, prov. Saxony, on the Leine. It has cigar and other manufacturess Pop. 7955.
Heilprin (hilprin), $A$ NGELO, geol1853, was hrought to America in 1856, and became a student in and director of the Academy of Natnral Sciences of Phiiadelphia. Was president for five years of the Geographical Society of Philadelphia, leader of the Peary Relief Expedition of 1892, and traveled in many conntries. He wrote Geographical and Geological Distribution of Animale, Geological Evidenoes of Evoolution, The Arotic Problem, with works descrihing the 1002 eruption of Mont Pelee, which he investigated. He ilied July 17, 1907.
Heimdall (himdal), a divinity in ory, who keepe watch on the bridge Bifrost, which connects the domain of the Alair or Gods with that of men. His uight and hearing are acuter than those of mortals, and nothing can evado his Fiflance.

## Heine

(hi'ne), Heinhice, a German poet and author, was born of Jewish parente at Duleweldorf in 1799, and died at Paris in 1856 . He studed Law at Bonn, Berlin, and Gottingen; took his degree at the latt-mentioned place and in 1825 embraced Christianity. He afterwarde iived at Hamhurg, Berlin, and Munich, hut in 1830 he settled in Paris, supported himself hy his iiterary iaborn, and dwelt there until his death. From 1837 to the overthrow of Inuis Phiilppe in 1848 he enjoyed a pension of 4800 trancs from the French government. Of the numerous literary works of Heine there may be mentioned in particular-Gedichto ( ${ }^{( }$Poems') ; Reisebilder ( ${ }^{\prime}$ Pictures. of Travei') ; Buch der Lieder ('Book of Songs ') ; Doutachland Ein Wintermürchen ('Germany, a Winter Tale') : Atta Troll; Romanzero, etc. As a poet Heine is remarkahie for the simpifity and pathos of many of his iyric pieces. His powers of wit and raillery were also great, hut he often transgressed the bounds of propriety and decorum. Scepticism-and oversensnousuess are his two prominent characteristics. During the latter years of his life be suffered great agony from a spinal complaint, which confined him almost constantly to bed.
Heineccius (hi-nek'se-us), Joнanк write Gotruive, a German writer on logic, jurisprudence, and ethics, born in 1681; died in 1741. Bis works on Roman law were highly valued.
Heinrich (hin'rik), the German form of Henry.
Heinsius (hinsi-us), Danimet, a critic, born 1580; died 1655. He studied at Franeker and Leyden, at the latter under Joseph Scaliger ; became professor of history and politics at Leyden in 1005, and librarian and secretary in 1607. He pnhisshed editions of Hesiod, Horace, Virgii, and other classical writings, and wrote Latin and Greek poems.
Heir (âr). See Descent.
Heir-apparent, the person who ceeds to the ancestor if he survives him, hecause no other person can ever gain precedence over him, as an eldest son. Compare Heir-presumptive.
Yieirloom (arlism), in law, means some personal chattel which goes hy special custom to the heir-at-lu .: together with the inheritance. The term is often applied to the case whero certain chattels. snch an pietures, etci; are directed hy will to follow along with the eatate.

## Heir-presumptive

honld to immediate immediately wonld, under exfating circumatances, be his heir, but whowe right of inheritance may be defeated by nome nearer heir belos born, an an only daughter, who is digplaced by the birth of a son. Compare Hoir-apparent. Hejaz (hej-is') or Hysez, diviaion north half of the east coast of the Red Sea, comprehendins a lowland (Tehama) and a tract of highlande, east of a range of mountains attalning a helght of perhaps 8000 feet. Mecca, Medina, Jiddah, and Yambo are the chief towne, the fint two being annnally resorted to by rast numbers of pilgrims. Long a part of Turtes, it declared its independence in 1917.

## Hejra, <br> Hejira, or Hidara (heji-ra),

 an Arabic word signifing emisration. The Mohammedaha designate by it the filght of Mohammed their prophet from Mecca to Medina. From this fifsht, which happened on the 13th of Eeptember, 622 A.D., but which they fix on the 16th of July of the same year, they begin their compntation of time.Fiel the Norse goddess of the dead, He, who dwells beneath one of the three roots of the ash Yggdrasil ; daughter of Loki. Dark rivers surround her abode; a dog watches withont ; the horse she ridem has three feet; she herself is half black and half of fair complexion.
Felamys (hel'a-mis), the jumpingHelamys hare or jumping-rat, a go nus of rodent animals allied to the jerbnas.
Helbeh
(hel'be), the seed of a plant of the leguminous genus Trigonella (fenugreek), with a somewhat bitter taste, whose flour, mixed with dhnrra, is used as food by the laborers of Egypt. Helder (hel'der), a fortified seaport northern part of the province of North Holland, opposite the island of Texel, and commanding the entrance to the Zuider Zee. From a fishing town Napoleon converted it to a fortress and naval station of the first rank, and called it his Northern Gibraltar. Being much erposed, the port and coasts are protected by gigantic dikes, one 6 miles long and built entirely of Norwegian granite. Pop. 27,458.
Felen (hel'en), or Heximina, in ancient Greek legend, the most beantiful woman of her age, danghter of Zeus by Leda. By advice of Ulysses her numerous wuitors were bound by oath to respect her choice of a husband, and to maintain it even by arms. She chose Menelaus, but was afterwards carried oft
to Tros by Paris, the Trojan war aries Ins from the claim made by Menelaun fos the fulilment of the outh. After the death of Paris she married his brother Deiphobus. On the fall of Troy the re turned to Sparta with Menelaus, but wau murdered at Rhodes.
Fielens (hel'e-na), city. capital of Helena Phillips County, Artansas about 100 milem E of Little Ruck. It is on the Mississippi, 75 mile below Memphis, has cotton gins and preaces and lumber mills and is an important cotton ehipping point. Pop. 8772.
Felena, a city, capital of the state of Montana and of Lewis and Clark County, is in Prickly Pear Valley, near the Rocky Mountains, and 14 milles W. of the Mimourl River. It is traverned by the North Pacific and Great Northern railroads. Here are rich gold mines, and silver, copper, and lead are found and mined. The city has melters and other industries, and contains the state capitol and other public buildinger Pop. 12,515.

## Felena, the name of several maints,

 of whom the chief was the mother of the Emperor Constantine the Great, a woman of humble origin, and a native either of Bithynia or of Britain. She became the wife of Constantins Chlorus, who, however, was compelled to repndiate her when made Cresar by Diocletian in 292 A.D. At the samo time he made her son his sole heir and Constantine, on his accession, took her to reside with him at the palace, and gave her the title of Augusta. She did much for the advancement of religion, and is said to have discovered the truo cross, in honor of which she founded the Church of the Holy Sepulcher at Jeruselem. She died shortly after at the age of eifhty, in 328 or 326 A.D.Felena (he-léna), ST., an isdand in Helela the South Atiantic, belonging to Britain, about 850 miles southeast of the Island of Ascension, 1150 miles west from the west coast of S. Africa, and 2000 milles from the east coast of Bravil ; greatest length, $101 / 2$ miles; greatest breadth, 7 miles ; area, about 47 equare miles. Its position, in the ocean thoroughfare from Burope to the East, has made it a place of call for vessels, while it has acquired special celebrity as the place of Napoleon's banishment, and where he resided from 1816 till his death in 1821. It has precipitous and almost inaccessible coasts particularly on the north, where nearly pernendicular clifis rise to a height of from 600 to 1200 feet. The only town on the island is Jamet Town, which bas a fine natural harbor,
and aflords excellent anchorage in 12 fathoms. The island, which is of volcanic formation, deriver ith name from havias been discovered by Juan de Nova Castile on St. Helena's Das. It was afterwards possessed by the Dutch, and finally was ceded to the English about 1651. During the British-Boer War (1900) Com. Cronje and over 4000 of his army were deported here after their capture by the British under Gen. Kitchener. Pop. about 5000 .
Felensburgh (hel'en e-bur-ro), a Dumbartonshire, at the entrance of the Gare Loch, on the north shore of the Firth of Clydr. opposite Greenock, from which it is distant about 4 miles. It is chiefly a residential town and summer resort for Glasgow and neighboring towns. It takes its name from Helen, wife of sir James Colquhoun, by whom it was founded in 1777. Pop. 8554.
Helenus (bel'en-us), a Trojan and Hecuba, twin-hrother of Cassandra, and hushand of Andromache after Hector's death. He foretold the desting of zineas.

## Heliacal

(he-li'a-kal), in astronomy, rising or setting at the same time, or nearly the same time, as the sun. The heliacal rising of a star is when, after being in conjunction with the sun and invisible, it emerges from the light so as to be viaible is the morning before sunrising. On the contrary, the heliacal setting of a star is when the sun approaches so near as to render it invisible by its superior splendor.

## Helianthemum (he-1i-aq'the-

 herbaceous undershrubs and shrubby or
## creeping plants; the rock-rose genus. <br> Helianthus (bex-li-an'thus), a genus

 North ol Compositue, chiefly American annual or perennial herbs, with rough leaves and large yellow flowers, of which the common sunLower ( $H$. annuus) and the $H$. tubentsus (the Jerusalem artichoke) are examples.Helicid\&
(he-lis'i-de), the general name by which the land shell-snails are distinguished. See Helia. Elelicon (helitkon; now Sagara), a mountain range of Greece, in the west of Boeotia, in some sense a continuation of the range of Parnassus. It was the favorite reat of the Muses, who with Apollo, had temples here. In it also were the fountains of Aganippe and Hippocrene. The hishest summit, now called Pcicoumi, is barely 5000 feet hish.

Belicopter (heli-kop-ter), an aeroplane flying machine with a vertical screw arrangement to lift It into the alr, and other power apparatus to give it horizontal motion. It has

Villard's Helioopter.
not get been practically realized, though some experiments have been made.
Helictis (bel-ik'tis), a genus of carnivorous quadrupeds, allied to the skunks, of which there are at lemat two species, one (H. moschata) found in Chine, the other ( $\boldsymbol{H}$. nepalensio) in India. Helier (hel'yer), St., the capital of the island of Jersey, on the south coast, on the east side of BL . Aubin's Bay. It is protected by two fortresses, Elizabeth Castle on a rock in the bay, opposite the town; and Fort Regent, overlooking the inner harbor. The chief public buildings are Parliament House, the court house, and the public library. The harbor, docks and quays are commodious, and there is a considerable shipping trade. The mild climate and cheapness of liviag make it a favorite place of residence and summer resort. It is the seat of the states, or representative parliament of Jereey, and the torminus of two emall railways. Pop. about 30,000 .
Heligoland (hel'i-got-land; Germany, Helgoland-Holy Land), an island belongiug to Germany, in the North Sea, about 40 miles from the mouth of the Elbe; 1 mile long and $1 / 8$ mile broad; highest point 200 feet. fts rocks present a perpendicular face to the sea, but are being rapidly corroded by the waves. The inhabitants, of Erisian descent, are mainly fishers and pilots, but the town is a popular bathing resort. Heligoland was captured by Britain from Denmark in 1807, and conceded to Germany in 1890, being annexed to the Prussian province of Schleswig-Holstein in 1892. It was strongly fortified and was of great importance in the European war (q. v.), 1014-18, as an aeroplane and
naval base. The treaty of pence, 1919, gmall distances on the ply particularis ordered the forts destroyed. Pap. 8000 .

## Heliodorus

 (hel-1-0-do'rus), a Greek romance writer, born at Emesa, in Syria, about the fourth century. The work that has come down to us If the Jikhiopice, the oldent and bent of the Greek romances. It is a tale of ad. venture in poetical prove, with an almont epic tone. The romance is supposed to have been written in his early yeare before he became a Christian and Bishop of Tricea in Thessaly. It is, however, sometimes asserted that Heliodorus was a cophist of the third ountury, who has been erroneously confounded ith the bishop.Eeliogabalus (hel-1-o-zabia-lua) or man emperor, son of Sertus Varius Marcellus ; bors about A.D. 205, and orisinally called Varims 4 vitus Bessianus. He received his name from having been, while gtill a child, priest of Elagabalus, the Syro-Phoenician sun-god. After the death of Macrinus he was invested, at the age of fourteen, with the imperial purple, but his licentiousness soon displeased the populace, and he was slain in an insurrection of the pretorians, A.D. 222, after a reign of less than four years.
Heliograph (he $11-\mathrm{u} \cdot \mathrm{graf}$ ), or Hels. various contrivances for reflecting to sun's light either temporarily or continuously to an observer at a distance. The simpleist heliostat is a mirror hung up at a distant station 0 as to reflect a fiash to the observer whose station may be many miles from it. This mirror is generally so adjusted that the flash occurs exactly at mome prearranged hour, and by being in readiness. the observer can get an observation with precision as regards time. Some heliostats are visible for 200 milew. If being fitted with an adjuatment of clock-wort, the mirror can be made to revolve with the sun, and thus reffect a beam of sunlight steadily in one direction being then called also heliotrope. The heliostat has been used for ignaling in war.
Heliogravure
(he-li-a-gra'var), a the process of photo-engraving or a print obtained by that process ; strictiy a photoengraved metal plate. Originally any process by which engravings were printed either like woodcuts or like copperplates was called photogravure.

## Feliolite (héli-u-lit), a zynonym of

felapar. Heliometer

## (hs-li-om'e-ter), an intrument for measuring

the apparent diametors of the cun and of the moon. In the common modern form the object-rians of the telmcope is cut into two halves, relatively movable by a ecrew. Each hal forme a perfect image in the focus of the eye-plece, and by varying the distapce between the halllences the images may be made to diverse from, of approach, each other. If, in contemplatios a celential body, the objectglamel are placed 20 as to bring the majes to touch each other, the diotance of the centers of the object-giasses, meas. ured in eeconds, dives. the diameter of the image.
Feliopolis (be-li-op'u-lis: City of the Sun), the Greek name of the city called by the Eyptians $\mathrm{On}, \mathrm{An}$, stood on the z. side of the Pelayiac branch of the Nile, near the apex of the Delta, and was one of the most ancient and important of Eogptian cities. It was the chief seat of the widom of the Dsyptians, and Thalem, Plato, and Solon aro reported to have learnt from its priesta. The obelisk called 'Cleopatra's needle,' taken in 1878 to England, and then brought to New York in 1880, was originally tranaported to Alezandria from this city.
Heliopolis, in Cœlosyria. See Baal Teliopsis (hè-li-op'uis), a genus of plants of the family Asseracea, comprising about seven species. Eeliophila (höli-ofila), a senus of Brassicaoea, consisting of about ten species of South African herbs or shrubs. Heliornis (heli-or'nis), a genus of lobiped birds of the family birds, sun-sre, which comprises the sunAla, grebes, coot-grebes or finfoots. Also, in entomology, a senus of lepidopterous insects.
Felios (helli-on), the zod of the sun
(Latin, Sol) in the Greek mythology; son of Hyperion and Theia, and brother of Eos (Aurora, the dawn) and Selenē (Luna, the moon). He dwells with Eos in the ocean behind Colchis, from which he issues in the morning, and to which he returns at night. His worship was extensively diffused, and he had temples in Corinth, Argos, Trcezene, and Elie, but particularly in Rhodes, the Colossus of which was a representation of Helios.
Helioscope (hèli-u-skop), a telescope fitted for viewing the sun without distressing the eyes, si when the image of the sun is recelved upon mirrors formed simply of surfages
of tranoparent slace which refect onls a madl portion of the llight. Dicliostat (héli-u-ntat). See Hell Faliotherapy (bell-i-6-ther? $a$-pi), the diseace by exponing the naked bodry to the sun's rage. It has been found particularly helpful for tuberculonf of the bonea, jolnts and ganglione, thongh it has been ysed with success in other diveases aiso, inciuding acute rhenmatiam and even certain affections of the eve.
 pham ), nat. order Boraginancew. The apo cles are herbs or under of the warmer parts of the world, and have alternate leaven and mali flowers usualls disposed in ecorpiold сумен. H. Duropecum, the common heilotrope, is indigenous in the couth and weat of Furope and has mall white or pale red flowers with a ruit of four drupes under a thin feeshy covering. The $\boldsymbol{H}$. Perwvien num is a very fragrant
Heliotrope (Jenny zarden plant, Erowing to Lind variety). abont 2 feet in height and bearing mali lilac-biue flowers.
Feliotrope, the biooditone, a rariets of quartz, partakias of the character of jasper or of chalcedony It is of a deep green coior, and covered with red apota. It is hard, and is nsed for burnichers: the more finely-marted stones are prized for seals, aignet-ringst etc. It is lound in Tartary, Persia. beria; in the island of Rum, Scotiand, and elsewhere.
Ieliotype (hesif-n-tip), photos pictures can be printed in the same man ner as lithographs, depending on the fact that a dried film of gelatine and bichromate of potash, when exposed to light, is afterwards insoluble in water, while the portion not so exposed swells when steeped. A mirture of gelatine, bichromate of potash, chrome alum, and water is ponred on a plate of glass, where it shortly settles into a film. When dried the film contracts and separates from the glass. A picture is then printed on it from a mezatire aftor which it is attached to a plate of sinc and copies are taken from it by inking it with lithographic ink ezactly as in the ordinary lithographid process. The films are technically callad
'skine' Bometimes a gutta-percha mold is prepared from the film, and copper doposited on it by the electrotype procest the piate thns produced beling printed from in the ordinary way.
Holium (hell-um), a newly-dincopered eiement, first lound in the sun by its apectral lines, and oo named from being supposed to be pecullar to that body. It wan discovered on the earth in 1805 in the Norwesian minerai cleveite, and han aince been found in various connections. It is supponed to be identical with the aipha ray given of by radium. Its atomic weisht fs doubie that of hydrozen.
Felix (héliks) (1) a spiral line as culd of wire in a coil, or such a curve as is described by every point of a screw that is turned round in a fixed nut. (2) In architecture, a small volute or twist under the abacus of the Corinthian capital, of which in every perfect capital
are sixteen, it each angle, und

Hellees of Corinthian Capital. two meeting niuer the middle of each face of the abacus. Helix, a genns of gasteropodous molHelix, luscs, comprising the land thell-snails. The common sarden snali (H. hortensis) and the edibie snail of France (H. pomatia) are examplea.
Hell (A. Saxon, hel, from helen, to cover), signifies originally the covered or invisible place. In the English Bible the word is used to transiate the Hebrew sheol (grave or pit) and Gehenna (properly the valley of Hinnom), as well as the Grcek Hades (the unseen). In the Revised Version of the New Testament. however, hell is used only to translate Gehenna, Hades being left where it stands in the Greek. In common usage hell signifies the place of punistment of the wicked after death, its earlier meaning being lost. The distinctive Scripture term for the place of future punishment of the wicked is Gehenna, which, nnlike Sheol and Hades, never has an intermelliate signification ; and Christ adopting on thls point the current language of the time gave the sanction of his authority to the leading ideas involved in it. Gehenna. or hell, is with him the place of final torment. The Eastern and Wentern churches are at one as to the punlahment of hell being partiy 'a paln of lous', that is, the conscinusneas of belne debarred the preserce of God, and party a pain
of sones, that is real phyulcal ouftering, ciga, and more particalariy of Fobsen The provalling fdea amons modern theo and Aramaje womb and fdioma The Iogiang is that the 'fire' and the 'worm' mont noted of the Jewioh Hollicaitede phit. are dralficant emblems to dro us the onopherm was thilo of Aloxandria, and mont correct and livins conceptions of the chlef of the learael labore of the the reality that we can poosibiy attain in Alezandrian Jow ran the Septuadiat our present circumstances.
veralom of the OId Tentament.
Iolladotherium ( hel-a-do-therl-

The whole of these the middle ages helmets were made of plants are ac-stecl, fregnently lnlald with gold, and procounted purgative, and in large doses vided with bari and flaps to cover the face act as a narcotic acrid poison; hut they in battle and to allow of being opened at are now little used in medicine. Vera-other times. The full-barred helmet ontrum album, order Melasthacea, a very tirely covered the head, face, and neck, different plant, is known as white hellebore. It is extremely acrid, and in the form of powder is nsed to destroy caterpillars.

## Eellen

(hel'en), In Greek mythology, son of Deucalion and Pyrrha, and fonnder by hls three sons Dorns, ALOins, and Xuthus of the great branches of the Greek people or Hellenes.

## Tellenists (hel'en-ists), a name for <br> thos. Jews who, espe-

 cially In Egypt after the time of Alexander the Great, became imbued with Greek culture and clvilization, and spoke and wrote in Greek. To them was due the formation of the peculiar dialect termed the Hellonistio dialect of Greek, the special leature of which was its une of fos:
having in front perforations :or the admisfion of air, and slits through whlch the wearer might see the objects around him. Thu open helmet covered only the head, ears, and neck, leaving the face nnguarded. Some open helmets had a bar or bars from the forehead to the chin, to guand against
the trangerere cut of a broedeword. The modern military belmots airond no profection for the face. Firemon wear a heary bead-plece of leather and brame, or other materlaio, to protect theme 20 far as ponalble from fallins ruine at contifgration. Ilelmets of white felt, with colds of linen wrapped round them, are worn in India and other hot climatee as a protection againat the cun. The name belmet is aliso siven to a kind of hat worn by policemen. In heroldry the helmet is borne over a coat of arma, and the form and pouttion of it vary accorde ing to the quality or dignity of the bearer. See Heraldry.
Helmet-shell, the common name of the senus Cassis, ganteropods of the family Buccinide. Mont of the apecies are inhabitante of tropical shores, but a few ar lound on the coant of the Mediterranean. Some of the shells attain a large size. Those of $\boldsymbol{O}$. M!a, 0 . cornuta, $\boldsymbol{O}$. twberosa, and othes. decien, are the ma. terial on which thei zameom are usually eculptured.

## Heimholtz (helm'holta), Itencurx-

 Ludwia Eymikand, a German phyblologiat and phyulcist, born In 1821 at Potudam, and edncated at Berlin. In 1848 he became profemor of znatomy at the Academy of. Fine Arth, Berlin, and in 1840 he obtained the chair of phyalology at Konigsberr, from which he was successively traniferred to the same post at Bonn (1856), and at Feldelberg (1858). In 1871 he was appointed professor of physici at Berlin. Ilis work has been chiefy in thove departments of physics which are in clonest relation with physiologry, notably in acoustice and optics. Of his many pnblications the beet known are: The Conservation of Force (1847), Manual of Optics (1856-68), Popular Lectures on Bcientifo Aubjects (London, 1873 and 1881), and Sensa. tions of Tone as a Physiolonical Basis for the History of Musio (1862, London 1875). He was ennobled by the German emperor In 1883 . He died in 1894.Elelmont (bel'mont), Joiss Baptist VAN, born in 1577 at Brussels: in his seventeenth year gave pnblic lectures on surgery at Lonvain. Percelving the defects of the system of Galen, he annonnced his intention of reforming medicine, but finally renounced its practice, and traveled for ten vears. He was then indured br an empitiral chemint to take up the study of ckemistry, and his medical tastes reviving, be retired to Vilvorde near Brussels, where he oc cupied himself till his death with medical labost He boested of having fonnd the
weane of prolonging life, compond ridion. ary theories on the constitution of man, and os disenser and made some gevelins dincoveries in chemletry. $\mathrm{H}_{0}$ wha probably the fret to introduco the term geo into ecience, and was aleo firat to obeorro. the acid reaction of the sastric juice. The ayotem of Van Helmont rucembleo that of Paracelsum, but in moro clanf and ecientific. The emperors Rodolph II, Matthlas, and Ferdinand 11, invited him to Vlenna, but he preterred the independence of his laboratory. He died in 1044, and hie manuscripts were printed by Elzevif.
Helmstedt, or Hirugtapt (helmwict 20 ollet), a town in Brunr wick, 20 milies E.E. E. of Brunuwict; formerly member of the Hancearic League. There are a fine church of the tweffth century and bulldings in the Romanenque style formerly accommodating a univeraity abolished in 1800. Pop. 14,209.
Helmund (hel'mund), a river in Aighnnistan, which it travermes diagonally northeast to southwest, and ultimately falls into the extensive Lake Hamoon, after a conree of about 650 miles. Itm nource is 11,500 feet above nea-level.
Heloderma (hel-n-derma) a Mexicar genus of lisards of which one species at least, $\boldsymbol{H}$. horridum, has been proved to be venomous, all its teeth being furnished with poison glande. It is abont 3 ft . in length; has a thick and squat body covered with rough seales, forms bnrrows under the roots of trees, is nocturnal in habit, and is said to feed on insects, worms, millepeds, etc.
Heloise, Eloise (ai-io-ez'), celebrated still more on account of her fove for Abelard; was born in Paris in 1101. After the mutilation of her lover she was persuaded by him to take the veil at Argenteuil, and ultimately became prioress of the convent there untll 1120, when she entered, with some of her nuns, the oratory of the Paraclete, bulit by Abelard at Nogent-on-the-Seine, where she lived in exemplary plety. 1 , died in 1164. Contemporary writers os eak in high terms of her genius. She underutood Latin, Greek, Hebrew, was familiar with the ancients, and well read in philosophy and theology.
Helots (hel'otz), slaves in ancient
Sparta. They were the property of the state, which alone had the disposal of their life and freedom, and which assigned them to certain citizens, by whom they were employed in privato laborm Agriculture and all mechanical
artm at Sparta were in their hands, and they were alsc oblized to bear arms for the state in case of necemity. They behaved with great bravery in the Peloponneuian war, and were rewarded with liberty ( 431 B.a.), but 2000 appear to have been subseqnently secretly massaered. They several times rose against their masters, hut were always and finally reduced.
Helper (hel'per), Hinton Rowan, North Carolina, in 1829 . He lived for a time in California and wrote the Land of Gold. He won great notoriety by his The Inpending Crisis of the Soulh (1857), an antislavery work which created a great sensation. Other works were No-joque and Nearoes in Negroland. He was United sitates consul at Bnenos Ayres, $1861-67$, and died hy suicide in 1009 .
Felps, Sir Artirur, an English es1817. He sayist and historian, born in 1835, and from 1859 until his death in 1875 was clerk of the privy-council. His works, which are for the most part of a pleasant moralizing type, with many indications of a fine, if pot of a robust personality, comprise Thoughts in the Cloister and the Crowd (1835) ; Catherine Douglas, a Tragedy (1839) ; Essays ucritten during the Intervals of Business (1841) ; The Spanish Conquest of America (1855-01) ; Realmah, a Romance (1868) ; Ivan de Brion, a Russian Storv (1874), and various others. He also ediced the Prince Consort's Speoches (1862), and the Queen's Leaves from a Journai (1868), receiving knighthood shortly before his death.
Helsingborg (hel-sing-bor ), a 8 e anarroweet part of the Sonnd, opposite Elainore. It has manufactures of leather, dye-works, tile-works, salt-works, and a spacious harbor. Pop. 33,843.
Helsingfors (hel-sing-tors'), a seaof Finland, on a peninsula in the gulf of that name, 180 miles W. N. W. St. Peteroburg. Helsingors is the residence of the governor, the seat of important courts and public offices, and contains a university, reenved from Abo in 1827. It has mannfactures of linen, sail-cloth, and tobacco an important trade in timber, corn, and fish, and one of the best harbors in the Baltic. Pop. (1910) 147,218.
Helsingör. Eee Elsinore.
Helst, Bartholomew yar pur, a mofí distinguifhed Dutch portrait painter, born at Haarlem in 1611 or
1612. His picture of a banquet of a conpany of civic guard in the Stadthoume at Amsterdam wam called hy Sir Jonhua Reynolds 'perhaps the first pieture of portraits in the world.' He died at Amsterdam (where he had lons reaided) in 1670.

Helston (hel'stun), a borough of England, county of Cornwall, on an acclivity on the left hank of the Cober, 9 miles 8. W. Falmouth. Principal industries, mining and shoemaking, and there is some shipping trade from Port Leven, 3 miles distant. Pop. 2938, Helvellyn (hel-vel'lin), one of the England, county of Cumberland, between Keswick and Ambleside; height, 3313 feet.
Helvetian Republic (hel-vê'shun) given to the republic extablished in Switzerland by the French in 1798 . See Svitzerland.
Helvetic Confession (hel-vet ${ }^{\text {(hik) }}$ the name of a document drawn up by Martin Bucer in 1536 to settle the controversy between the Lutherans and the Zwinglians; and also of one drawn np by Bullinger (1566) at the request of Friedrich III, elector of the Palatinate, and adopted in Switzerland, the Palatinate, France, Hungary, Poland, and Scotland.
Helvetii (hel-v'shi), anciently a Gallic or Celtic nation, dwelling in the country now nearly corresponding with Switzerland. They were not much known to the Romans until the time of Jnlius Cæsar, who. as governor of Gunl, prevented their intended emigration, and after many bloody hattles pressed them back within their frontiers. After their subjection hy Cæsar several Roman colonies were estahlished amongst them. On the death of Nero the Helvetii, for refusing to acknowledge Vitellius as emperor, were mercilessly pnnished by Cacina, one of his generals, and thenceforth almost disappear as a people. From them Switzerland is often called Helvetia.
 AdBIEN, a French philosophical writer, born in 1715. Having made a fortnne as a farmer-general, he devoted himself to philosophic work. In 1758 he published his one important book. De rEsprit ('On the Mind'), the materialism of which drew upon him many attacks. It was condemned by the Sorbonne, and pablicly harned hy decree of the Parliament of Paris. Iu 1764 he went to England. and the year aiterwards to Germany, where Frederick the Great aud
other German princen received hi with many proofs of enteem. He died 17 171 in Paris. He also wrote work, $D e$ lHomme, and an allegorical poem, Le Bonhewr.
Helvoetsluis (hel'vut-alois). See

## Hemans

Hellevoetaluis.
THRA, an English poetess, born at Liverpool in 1794; maiden name Brown. She first appeared as an authoress in 1808, with a volume enticled Early Blossoms, which was followed in 1812 by her more successful volume, The Domestio Afections. Later works were, Lays of Many Lands songs of the $\Delta f$ fections, Hymus for Childhood, National Lyrics, etc. She died in 1835.
Fematin (hem'a-tin), or Hzwatis the blood occurring in sointion in the interior of the biood corpuscles or cells. It is the only structure of the body, except hair, which contains iron.
Fematite (hem'a-tit), a name apred hematite and brown hematite. They are both of a fibrous structure, and the fibers, though sometimes nearly parallel, usuaily diverge or even radiate from a center. They rarely occur amorphous, bnt almost always in concretions, reniform, Elobular, botryoidal, staiactitic, etc. The red hematite is a variety of the red oxide, and is one of the most important iron-ores. The brown hematite is a variety of the brown oxide or hydrate; its streak and powder are always of a brownish yellow. See Iron. Fematoxylin. See Hamatoxylin.

## Hemeralopia

(hem-er-a-10'pi-a), a defect in the sight in consequence of which a person can see only by artificial light; day blindness. It is also used, however, for exactiy the opposite defect of vision.
Remerobiidæ (hem-er-o-bi'de), the ily of neuropterous insects.

## Hemerocallis (hem-er-o-kal'is),

 See Day-lily. Femidesmus (hem-i-des'mus), a genat. order Asciepiadaces, having opposite leaves, and cymes of smali greenish flowers. H. indicus yields the Indian sarsaparilla, a reputed alterative, dinretic, and tonic, which is rarely employed in England.Femimetabola (.me-ta-bs 7 a ), the insecta which nnderco an incomplete motamorphosia, the larva filfering from
the perfect insect chjefly in the absence of wings and in aise.
Femiopia ( $-\sigma^{\prime} p i-a$ ), a defect of visthe midt part of the object he looks at, npper of it, its circumference, or its apper or lower part, or more commonly one lateral haif being completely obwcured. Also called hemianopsia.
 fecting one-half of the body.
Femipodius (-podi-ns), a zenus of rasorial burde allied to the quails. The swift-flying hemipodius is the little quail of New South Wales. Temiptera (he-mip'ter-a) an order of four-winged insects, having a suctorial proboscis, the outer wings, or wing-covers, either entirely formed of a substance intermediat? between the eiytra of beetles and the ordinary membranous wings of most insects, or leathery at the base and transparent towards the tips (hemelytra). In one group (Aphides) all the wings when present are membranous. The true wings are straight and unpiaited. Some feed on vegetable and some on animal jnices. Those having the upper winge of a uniform substance throughout (whether leathery or transparent) have been constituted into a section, and by some naturaiists into an order named Homoptera; those having them partly leathery and partly transparent constitute the section or order Heteroptera. To the Hemiptera belong the plant-lice, boat-fly, cochineal insect, locust, bug, lanternfiy, etc.
Hemisphere (hera'is-fêr), haif a of the halves into which the earth may be supposed to be divided. It is common to speak of the Eastern Hemisphere and the Western Hemisphere, the former, aiso caiied the Oid World, comprising Europe, Asia, Africa, Austraiia, etc. ; the latter, North and South America, etc. The boundary between the two is quite arbitrary, and a more natural division of the earth is into the northern and the southern hemisphere, the equator forming the dividing lize.
Hemlock, or Himiock Spruce, a can fir (Abies Canadensis) from its branches resembling in tenuity and position the common hemlock. The bark contains tannin and is largely used as a snbstitute for oak-bark in tanning leather. It forms great part of the forents of Canada and of the northern United States, extending northward to Hudson Bay. Its timber is not much anteemed,
as it splite obliquely and decay rapidly in the atmonghere. Femlook (hem-lok), a poisonous nat. order Umbelliferse, supposed to be identical with the plant koneion of the Greeks. It is a tall, erect, branching biennial, with a smooth, shining, hol-

Hemlock (Conium maculatum). low stem, usually marked with purplish spots, elegant, much divided leaves, which when bruised emit a nauseous odor, and white flowers in compound umbels of ten or monc zays, surrounded by a general involucre of three to seven leaflets. It is found throughout Europe and temperate Asia and in the United States, in waste places, banks, and under walls. It is said to be fatal to cows when they eat it, but that horses, goats, and sheep may feed upon it without danger. In the human subject it causes paralysis, convulsions, and death. The poison administered to Socrates is supposed to have been a decoction of it, though others are of opinion that the potion was obtained from water-hemlock (Cicuta virösa). Hemlock is a powerful sedative, and is used medicinally. The alkaloid, coniine, is considered the best preparation. It is often serviceable as a substitute for, or an accompaniment to, opium.

## Hemorrhage

(hem $u$-rij), a flux of sels containing $i t$, whether from a rupture or any other cause. A hemorrhage from the lungs is called hemoptysis; from the urinary organs, hematuria; from the stomach, hematemesis; from the nose, epistacis; the treatment of course varyin with the cause and seat of the mischief. Hemorrhoids (hem'u-roidz), signithe rectum otherwise called piles. In general, hemorrhoids manifest themselves between the period of puberty and old age, although infants and aged people are not entirely exempt from attacks. In some cases they appear to be the effect of a certain hereditary disposition, but any circumstance which producea a tendency or stagnation of the blood at the extremity of the rectum is to be reckoned among the local causes. The accumalation of fecal matter in the intestines, eflorts to
expel urine, the obntruction of any of the vincera, eapecialls of the liver, the trequent use of hot bathing, of drantic purgen, long continuance in a aitting ponture, riding on hormeback, pregnancy-zuch are some of the ordinary causen of hemorrnoids. They are classified in several varieties as external when apparent at the anus; internal, when concealed within the orifice; blind or open, regular or irregular, active or passive, periodical or anomalous, etc. The best mode of treatment is to recur to hygienic rather than medicinal influencer. The subject should avoid violent exercise; the food should not be too stimulating or nutritious. Traveling, or an active life, should succeed to sedentary habits. Constipation should be remedied by laratives or gentle purgatives. Anything which may be productive of a local heat should be avoided; as warm seats, soft beds, too much sleep. If the pain is considerable recourse should be had to sedatives, gentle bleeding, leeches. The use of suppositories containing drugs, such as tannic acid or extract of witch-hazel (hazeline), will be found very useful; in mild cases iodotorm suppositories may be curative. If the disease appears under a more severe form a surgical operation may become necesmary. Hemp (Cannäbis eativa), a plant, the Canndbis, naty. known species of the genus are divided into five lanceolate and coares iy serrate leaflets ; the male flowers, which are on separate stems, are green, resemb ling those of the hop; the female flowers are inconspicuous, and the fruit is a little hard capsule containing a single seed. It is a native of Western and Central Asia, but has long been naturalized in Bravil and tropical Africa, and is extensively cultivated in Italy and many other European countries, particularly Russia and Po land. The Indian variety, often known as Cannaxbis Indica, is the source of the narcotic drug variously know 1 as hashish. bhang, or s'unjah. The hemp fiber is tough and strong, and peculiarly adapted for weaving into coarse fabrics such as sailcloth, and for twisting into ropes and cables. Immense quantities are exported from Russia. The finer sorts are used for shirtings, sheetings, etc., which, thongh for shirtings, sheetings, etc., which, tho very
coarser than that made from flax, are very
much stronger and equally susceptible of belos bleached. The hemp of Dingland in very superior, but the plant does not pay the larmer, and prry little of it is grown. In mome of the United Staten it is a crop of considerable importance. The seed must be sown thin, not more than 1 to 2 bushels to an acre. Small patha are often left open along the field lengthwise, at about 7 feet distance from each other, to allow the plucking of the male plants first, as the female require to remain standing a month longer to admit of the seed be coming ripe. But in some parts the whole crop is cut at once, plants for seed being separately cultivated. The plant bning stripped of its let ves, and dried in the open air, may be stored, but when rteeped green it turns out of a better olor. The steeping takes from four to aleven days, and the operation is known to be completed by the inner reed or woody fiber separating easily from the fibers of the outer bark. When thoroughly steeped it is taken out of the water and spread out in rows on the grass to bleach. This takes three weeks or more, during which period it requires constant turning with a light, long pole. After drying it is scutched or broken by breaks and scutching-stocks, resembling those employed for flax. Beating is the next operation, which separates the 'boon' from the fiber. The hemp is now ready for being heckied, after which it may be spun. Hemp-seed is much used as food for cage-birds, and also yields an oil. Sisal hemp or (henequen) and Manila hemp are not true hemps.
Hemp-palm, a Chinese and Japan(Chamarops excelsa), of the fibersalm whose leaves cordage is made.
Hempstead, rillage of Nassau County, of Long Island, 20 miles E. of New York City, forms part of Hempstead town. Pop. 4964. Hempstead town contains East Rockaway, Freeport, Hempstead, Lawrence and Rockville Center, and part of Floral Park, all resorts. Pop. 44,297. Hems, or Homs (Roman, Emesa) a northeast of Damascus. It is fortified and has an active trade. The plains of Hems were the scene of the defeat of Zenobia by Aurelian in 272 A. D.; and of the defeat of the forces of the Sultan of Turkey by Ibrahim Pasha in 1832. Pop. estimated 66,000.
Henbane (hen'bān) a plant of the order Solanacere. H. nigev, a native of Europe and Northern Asia, is a coarse erect biennial herb. found in waste groupd
and loose dry coll, having cott, clammy, hairy foliage of disagreeable odor, pale yellowish-brown flowerw atreaked with purple veina, and a five toothed calyx. The cxpreased juice of the leaves and seeds is often used as a sedative, antispasmodic, and narcotic, having in many case: the great advantage over laudanum of not producing constipation. When taken in con-
 siderable quan- Henbane (Hyoscydmuanigu). tity it proves
quickly fatal to man and mont animaln particularly to domestic fowls.
Henderson, a city, county seat of ture Henderson County, Ken tucky, on tr - ~hio River, about midway betweer Louisville, Ky., and Cairo, Il. It is a larg corn and tobacco market, with excelle., shipping facilities, three railroads and the river. There are buser and wagon factories, a cotton mill, furnsture factory and other industries. The section is underlaid with a high grade of soft coal. Pop. 12,567.
Hendricks, Tromas A. Vice-Prenident of the United States, was born in Muskingum County, Ohio, in 1819. He studied law and practiced in Indiana, serving from 1851 to 1869 in the Indiana Legislature and in both Houses of Congress. In 1872 was elected sovernor of Indiana. In 1876 and 1884 was a candidate for the Vice-Presidency. He lost the election in the former year, but was elected with Grover Cleveland in the latter year. He died in 1885.
Heney, Francis Josepry, lawyer, bom Hen, at Lima, New York, in 1859. He graduated at the University of California and the Hastings Law School, was admitted to the bar in 1883, engaged in legal and other occupations in Arizona, and was attorney-general of Arizona, 1893-94. He removed to San Francisco in 1895, and was later chosen by Attor: ney-General Knox to conduct caseb of fraudulent land dealings at Portland Oregon. In these he secured the removal from office of United Statem Attorney John H. Hall for conspiracy, and the conviction for fraud of United Staten Senator Mitchell, George O. Brownui, and others. He served for a uime as United Staten District Attorney for Oregon, and in 1008

## Hengist

began an investigation of the wholemalo corruption then existing in San Francisco. He succeerded in proving great bribery and graft, in which a party leader named Reuf and Mayor Eugene Schmidt were deeply involved. During their trials Heney was shot by a saloonkeeper, but recovered and continued his cases.
Hengist (heng'gist), a prince of the sued for aid from the Saxons against the inroads of the Scots and Picts. The Saxons under Hengist aud Horsa accordingly landed at the mouth of the Thames, and defeated the northern tribas near Stamford in 450 A.D. Being rejnforced from home they afterwards united with the Scots and licts against the Britops, whom they altimately dispossessed. Hengist founder the kingdom of Kent, established his residence in Canterbury, and died ahout the ycar 488.

## Fengstenberg <br> (heng'sten-burg), Ernst Wilumba, a

 German divine and commentator, born in 1802: died in 1869. His influence as leader of the orthodox party was established by the publication of the Luangelische Kirchcnzeitung (1827), of which he was editor. ilis works include a translation of Aristotle's Metaphysics; Christology of the Old Testament, and Introduction to the Old Testament; Commentary on the Psalms, the Revelation of St. John; History of the Kingdom of God in the Old Testament, etc.Hen-harrier, a species of hawk of cyaneus. See Harrier.
Henley, William Ernest, an Eing, Ingland, 1849 ; died, 1903 . With Robert lauis Stevenson be collaborated in a series of plays; also edited The Magazine of Art, The Scots (later National) Observer, The New Reviev, and other serials; two or three anthologies of lyrics, etc. His poetry is vigorous and vivid and shows a fondness for unrhymed lyrical measures and experiments in unusual rhymes. A collected edition of his poems appeared in 1898; but For England's Nake (1000) and Havoin.jrn and Lavender (1001) were later volumes.
Eenley-on-Thames, a municipal England, in Oxfordshire, on the left bank of the Thames. here crossed by a handsome bridge, 35 miles west of Iondon. Pop. 6456 .
Henna (ben'a), a shrub (Lawosonis inermis), uat. urder lythracea. bearing opposite entire leaves and numerous small white fragrant flowers disposed in termipal ranicles Externally it beary
considerable resemblance to the European privet. It grows in molst slituations throughout North Africa, Arabia, Persia, and the East Indles, and has acquired celebrity from being used by the inhabitants of those countries to dye yellow the nalls of their fingers and the manes, hoofs, etr., of thelr horses.

## Hennepin (hen'i-pin), Lous, French

Franciscan missionary and explorer in America, born at Ath, Belginm, about $1 \mathrm{fA0}$; died after 1701. He went to Caiadu iu 1673 and In 1678 joined La §alle, then starting on his most famous expedition, and from Fort Crevecceur (near the present Peoria, 111.) was despatched, with two companions, to explore the Illizois to its mouth, and the upper Mississippi. On April 11, 1680, he was captured by a band of Siour Indians, probably near the mor ${ }^{\circ}$ of the Wisconsin River, and was adojes 1 into the tribe; during his captivity visited, probably first of white men, the Falls of 8 St Anthony, and escaping returned to Fort Frontenac (1681). Soon afterward he returned to France, and in 1683 published his famous book Description de la Lowisiane, (1683), Nouvelle dícoucerte d'un tres grand pays (1637), in which he claimed to have descended the Mississippi to its mouth (a claim since shown to le false), and Nouveau voyage (1698).
Henry I, of Germany, surnamed The tion because fis election to according to tradielection to the German emplre was announced to him while fowling; born in 876; the son of Otho the Illustrions, duke of Saxony. Ilenry, on the death of his father, became duke of Saxony and Thuringia. Ile was elected emperor of Germany in 919, and was the true founder of the empire. By his prudence and activity Suabia and Bavaria were forced to tender allegiance, and Lorraine was reunited to the German Empire in 925 . He was defeated, however, by the Hungarians, and forced to pay a yearly tribute to obtain a truce for nine years. He spent this period in developing a sound military organization, and turning his arms against various Slavonle tribes in the sonth, was everywhere victorious. At the end of the trnce with the Hungarians he refused the tribute, and completely routed them in 933. Besides his military reforms be diminished the feudal privileges, and granted to the cities of the empire their first municipal charters. 11." lied in 036.
Henry II, The Saint Emperor of was an of Heary the Quarreler of B:
varin, and great-grandson of the Bmperor finding himgelf dewertect, was obliged to so

Henry I. He inherited Bavaria in 995, and on the death of Otho III in 1002 laid claim and was elected to the empire. He had to proceed to Italy to ansert his sovereignty there, the Lambard citiem having chosen Harduin of Ivrea as their king. During his absence Bolealas of Po land extended his away over che whole of Bohemia, but after repeated campaigns Henry succeeded in recovering Bohemia, and in 1018, in the Peace of Budissin (Bautzen), reduced him to complete sublection. In the midst of these campaigns igainst Boleslas he made another expe aition into Italy (1013) against Harduin. On this occation Henry was crowned emperor by Pope Benedict VIII. He made a third expedition into Italy in 1022 to aid Benedict against the Greeks. He died in 1024.
Henry III, Emperor of Germany, the house of the Salian Franks, son of the Emperor Conrad II, was born in 1017; chosen king in 1026; succeeded his father in the imperial dignity, in 1039. He weakened the power of the great feudal lords and forced the duke of Bohemia in 1042, and the king of Hungary in 1044, and again in 1047, to accept their dominions as imperial fiefs. His influence was also paramount in Italy, especially in Milan, and in the month, where the Normans in Apulia and Calabria paid him homage. In 1046 he deposed the rival popes Benedict IX, Sylvester III, and Gregory IV, and caused Suitger, bishop of Bamberg, to be elected in their stead ns Clement II. His efforts to secure the permanence of the infinence of the empire over the see of Rome were thwarted by Cardinal Hildebrand (Gregory VII). He died in 1055. His first wife was a daughter of Canute the Great of England.
Eenry IV, Emperor of Germany, born in 1050. and at the death of his father was only five years old. His whole life was a series of tronhles, partly of his own causing. His severe treatment of the Saxons led to a rising which was crnelly pnnished. His treatment of the conquered people was such that they complained to the pope, and Gregory VII (Hildehrand) accordingly summoned Henry, in 1076, to appear hefore him at Rome and answer the charges, at the same time forbidding the sale of eccleslastical dienities. Henry not only disregarded the threat, hnt instigated the bishopen assembler by his omier at Worms. to renounce their obedience to the pope. Gregory, however, pronounced sentence of excommunication aralnat him, and Henry,
to Italy and make a humilinting aubmission to the pope (1077). The influence which the nope sained by his victory produced a reaction; the Italian princes who had long been dingatistied with Gregory, oflered fenry their amointance. The German princen, however, at the instigation of the pope, elected Rudolph, duke of Suahia, king: Heary hastened back to Ger many and overcame hie rival, who lont his life in 1080. Gregory again excommunicated Henry; but at the Council of Brisen, in 1080, he was deponed by the German and Italian bishope as a heretic and a norcerer, and Guibert, archhishop of Ravenna (Clement III) set up in his place. In 1084 Heary succeeded in entablishing Clement at Rome, but was obliged to return to Germany to maintain his obliged to cross the Alps in aid of his ground against two rivals who successively arose. In 1085 Henry was again protege Clement III. But the dissatisfaction against him in Germany had not subsided, and though he succeeded in crushing the rebellion of his eldest son, Conrad, who died deserted at Florence in 1101, his second son'Henry made himself master of his father's person in 1105 by stratagem, and compelled him to abdicate the throne at Ingelheim. Henry IV ended his life and his sorrows in neglect at Liege in 1106.

## Henry V, Emperor of Germany the

 son and successor of Henry IV (see above), was born in 1081. On his ascension the question of inveatiture distracted the empire anew. Pope Pascal wonld confer the imperial crown ouly upon condition that the rights claimed by Gregory shonld be formally conceded. Henry therefore seized the pope at the altar, and imprisoned him until he yielded two months later, and crowned Henry in April, 1118 Disturbances, however, arose in Germany, especially with Lothaire of Saxons, and the pope, declaring that his peace with the emperor had been compnisory, fomented the strife. The war continued two years, and devastated Germany, and after a second expedition to Italy and excommunication by succetsive popes. Henry, was compelled to yield in the matter of investiture, and in 1122 subserihed the Concordat of Worms. He die? at Utrecht in 1125. and was the last of the Salic ca Frankigh family of emperors. which pas succerder $h y$ the Suabian house. He murried Matilda, a danghter of Henry I of Foncland.
## Reniy V1, Emperor of Germany.

 son of Frederick I and Beatrice of Burrundy, the third emperor of the house of Hohenatanfen, bore in1160, crowned king in 1169 , succeeded King beins Elenty of Gnime, the real head his lather as emperor in 1180 . He kept Richard Coeur du Lion in pricon, and obtained a large ransom for him. He died in 1197.

## Henry VII, Emperor of Germany,

 chocen emperor in 1308. Among the first acts of hin reign were recognition of the independence of the Swins cantons of Schwys, Uri, and Unterwalden, and the Franting of the kingdom of Bohemia to his son John. He compelled the Milaneme to give him the iron crown of Lombardy, nuppremed by force the revolt which then broke out in Upper Italy, captured part of Rome, which was in the hands of Neapolitan troops, and was crowned Roman Emperor by two cardinals. He died suddenly in 1313.
## Eenry II, King of France, born in

 , succeeded his father, his mistress, Diana of Poitiers, exercised an important influence over king and court After a brief war with England for the recovery of Boulogne, a war of longer duration and more serious results originated in 1551 in disputes between Henry and the pope as to the duchies of Parma and Placentia, and continued to devastate Europe till the general peace of Cateau-Cam brecis, 1559. To conirm the peace Philip II, become a widower by the death of Mary of England, was to marry Elizabeth, Henry's eldest daughter by Catharine de Medici. In the course of a tourney held to celebrate the event, Henry was mortally wounded by a splinter from the lance of Lord Montgomery, captain of the Scottish guard. He was succeeded in 1559 by his eldest mon, Francis 11 . Henry III, King of France third Catharine de Medich, born in 1551; and ceeded his brother, Charles IX, in '1574. In the previous year be bad been chosen king of Poland, which he was obliged to quit wecretly when called to the throne of France. In 1578, after a civil war, he granted to the Protestants the favorable edict of Beaulieu, but the concession led to the formation of the League, and Henry, to re-establish his authority, declared himself its head. Civl war, however, again beoke out, and though hostilities were gain put an end to by the Peace of Berserac in 1577, they were renewed in 1580 until the Peace of Fleix (November, 1:80). The death of his brother the Duc d'Anjou in 1584, which left Henry of Navarre, a Caivinist, heir-apparent to the throne, brought on another war, called the war of the Thrce Henries, the leading pertons engaged in it beaides theof the Leapue, and Henry of Navarre. In 1588 Henry of Guico expelled the king from his capi! 1 . An apparent reconcliation at Blois was followed by the amamination of the Guicen, and Henry, finding himself everywhere oppoged by the Catholic party was compelled to ally himself, with Heary of Navarre. The two princes advanced on Paris, but in 1589 Henry III was stabbed by Jacques Clement a Dominican, and dled next day. He was the last of the branch of Orleans-Angouleme of the stock of the Valois, and was succeeded by Henry of Navarre, the first of the house of Bourbon.
Henry IV, of France was the son of Anthony of Bourbon, Duke of Vendome, and of Jeanne d'Albert, daughter of Henry, King of Navarre, and heraelf afterwards' Queen of Navarre. He was born in December, 1563, at Pau. Educated by his mother in the Calvinistic faith, be early joined, at ber wish, the Protestant army of France, and zerved under Admiral Coligny. In 1572 he married Margaret of Valois, sister of Charles IX, and after the massacre of St. Bartholomew, which took place during the marriage festivities, was forced to adopt the Catholic creed. In 1578 he escaped from Paris, retracted at Tours his enforced abjuration of Calvinism, put himself at the head of the Huguenots, and took a leading part in all the subsequent religious wars. On becoming presumptive heir to the crown in 1584 he was obliged to resort to arms to assert his claims. In 1587 be defeated the army of the League at Coutras, and after the death of Henry III gained the battles of Arques (1589) and Ivri (1580). He was obliged, however, to raise the siege of Paris; and convinced that a peaceful occupation of the throne was impossible without his professing the Catholic faith, he became nominally a Catholic in 1503. After his formal coronation in 1594 only three provinces held out against him-Burgundy, reduced by the victory of Fontaine-Francaise in 1505; Picardy, reduced by the capture of Amiens in 1596 ; and Brittany, which came into his hands by the submission of the Duke of Merceeur in the spring of 1598. The war against Spain was concluded in $1598 \mathrm{ky} \mathrm{t}^{\text {' }}$ Peace of Vervins to the advantage of France. The same year was signallized by the granting of the edict of Nantes, which secured to the Protestants entire religious liberty. He made use of the tranquillity which followed to restore the internal prosperity of his hingdom, and particularly the wasted finances. in which he was successful with the sid
of his prime-minister Sully. At the in. involved with his brother Geoffrey, who atance of Solly Henry divorced Margaret of Valoit, and in 1000 married Marie de Medich, niece of the Grand-duke of Tuscany, mother of Louis XIII. She was crowned at St. Denis in 1610, but on the following day Henry was stabbed by a fanatic named Ravallac, while examining the preparations for the queen's entry into Paris. The great benefit which Henry IV bestowed upon France entitle him to the designation which he himself assumed at an assemhly of the Notables at Rouen in 1596, the Regenerator of France (Reataurateur de la France).
Henry I, King of England, Bnrnamed youngest son of William the Conqar'), was born at Selby in Yorkshire, in 1068 , He was hunting with William Rufus when that prince was killed, in 1100, and instantly riding to London, caused himself to be proclaimed king, to the prejudice of his elder hrother Robert, then absent as a Crusader. He re-estahlished hy charter the laws of Edward the Confessor, recalled Anselm to the primacy, and married Matilda, daughter of Malcolm III of Scotland, thus conciliating in turn the people, the church, and the Scots. Robert landed an army, but was pacified with a pension, and the promise of succession in event of his brother's decease. Soon after, however, Henry invaded Normandy, took Robert prisoner in 1106, and reduced the duchy. He was successful also in the struggle with France. The last years of his reign were very troubled. In 1120 his only son William was drowned in returning from Normandy, where, three yearm later, a revolt occurred in favor of Robert's son. The Welsh also were a source of disturhance. Henry appointed as his heir his daughter Matilda or Maud, whom he had married first to the Emperor Henry $\nabla$. and then to Geoffres Plantagenet of Anjou. Henry died at Rouen in 1135, and was succeeded hy Stephen.
Henry II, King of England, first of in Normandy in 1133, was son of frey, count of Anjon, and Matilda, faughter of Henry I. He was invested with the duchy of Normandy, hy the consent of his mother, in 1150; in 1151 he succeeded to Anjou and Maine, and by a marriage with Fileanor of Guienne gained Guienne and Poiton. In 1152 he invaded England, but a compromise was effected, hy which Stephen was to retain the crown, and Henry to succeed at his death, which took place in 1154. The commencement of his reien was marked by the diemissal of the foreign mercenaries; and although
pointed itinerant jugtices to make regular excurnions through them; revived trial by jury, diccouraged that hy combat, and demolished all the nowly erected cantlem as 'dens of tbleven.'
Eenyy III, King of Ensiand, son of souieme; born at Wincbester in 1207 . succeeded his fatber in 1216. At the time of his accession the dauphin of France, Louis, at the head of a foreicn army, supported by a faction of English nobles, bad assumed the reins of government; hut was compriled to quit the country by the Eari of Pembroke, who was guardian of the young ling until 1219. As Henry approached manhood the displayed character wholly nnfit for his station. He discarded his most able minister Hu bert de Bursb, and after 1230, wben he received bomage in Poitou and Gascony, hegan to bestow his cblet favors upon foreigners. His marriage in 1236 witb Eleanor of Provence, increased tbe diflike to him feit by his snbjects, and altbough be received frequent grants of money from parliament, on condition of confirming the Great Charter, yet bis conduct after each ratification was as arbitrary as before. At iength the nobles rose in rebeliion under Simon de Montfort, earl of Leicester ànd hnshand of the king's sister ; and in 1258, at a parliament held at Oxfard, known in history an tbe Mad Pariiament, obliged the ling to gign tbe body of resoiutions known as the Provisions of Oxford. A feud arose, bowever between Montfort and Gloncester, and Henry recovered some of his power. War again broke out, and Lonis was called in as arbitrator, bnt his award being favorabie to the king, Leicenter refused to snbmit to it. A battle was fougbt near Lewes, in whicb Henry was taken prisoner. A convention, called the Mise of Levoes, provided for tbe future settlement of the kingdom; and in 1265 the first zennine House of Commons was snmmoned. Leicenter, however, was defeated and slain in tbe battle of Evesham (1265), and Henry was replace" upon the throne. He died in 1272. His son Edward 1 succeeded him.
Henry IV, King of Engiand, first Lancaster; born ing 1387 ; eldest son of John of Gannt, duke of Lancaster, fourth son of Edward III. His mother was heiress of Edmnnd, earl of Lancaster, second son of Henry III. In the reign of Richard II he was made eari of Derby and duke of Hereford, but having in 1308 preferred a-charge of treason against Mowbray dnke of Norfoll, he was banished with his adversary. On the death of

John of Gaunt in 1800 Richard withheid Henry's inheritance, and Henry ianding in England, Eained pontendon of Richard's perton. The deposition of Richard by parjiament, and the election of Heary, was followed by the murder of the late king. A plot against the king in 1400 was discovered in time to prevent its muccess, and many executions of men of rank foilowed; hut an insurrection in Waies noder Owen Glendower proved more formidable. The Scots were decisively defeated by the I'ercies at Homildon, and their leader, the Eari of Douglas, was captured (1402). An order from Henry not to permit the ransom of tbat nobieman and otber Scottish prisonore was regarded as an indignity by the Percles, who set Douglas free, made an aliiance with bim, and joined Glendower. The king met the inaurgents at Sbrewsbury (1403), the battle ending in tbe defeat and deatb of Percy. The Eari of Northumberland was pardoned, and but few rictims were exceuted. A new insurrection, beaded by tbe Eari of Notting. ham and Scrope or Scroop, arcbbisbop of York, broke out in 1405 , but was suppressed by the king's third son, Prince John. The rest of tbis king's reign was comparatively untroubled. In 1405 James. son and heir to King Robert of Scotland, was captured at sea on his way to Francr. and was detained a prisoner in England. Henry died in 1413, and was succeeded hy Hency $\mathbf{\nabla}$.

## Henry $\mathbf{V}$,

King of Engiand, born at Monmouth in 1388. On succeeding his fatber, Henry IV, in $141:$. be sbowed a wisdom in marked contrast to a somewhat reckless youth. He restored their estates to the Percies, and liberated the Earl of Marcb, but in other respects based bis internal administration upon that of his father. The persecution of the Loliards is the chief biot upon the eariy part of his reign. The struggle in France between the factions of tbe dnkes of Orleans and Burgundy afforded Henry a tempting opportunit for reviving the claims of his predeces urs to tbe French crown. He accordingly lancied near Harflemr in August, 1415, and tbough its capture cost him more than half bis army hn decided to return to England by way of Calais. A iarge French army endeavored to intercept bim at the piain of Agincourt but was completeiy routed (October. 1415). A year iater the French were defeated at sea by tbe Duke of Bedford. In 1417 the jiberal grants of the Commons enabied Henry once more to invade Normandy with 25.000 men. The assassination of tbe Duke of Burgundy, which induced his son and successor to join Heary,
greatly added to his power, and the alliance was coon followed by the famous Treaty of Troyes (May 21, 1420), by which Henry engaged to marry the lrincem Catharine, and to leave Charlem VI in possession of the crown, on condition that it should so to Henry and his helre at his decease. He returned in triumph to Ensland, but on the defeat of his brother, the Duke of Clarence, in Normandy by the Earl of Buchan, he again set out for France, drove back the army of the diauphin, and entered Paris. a son was at this time born to him, and all his great projects seemed about to be realized when he died of fever at Vincennes in August, 1422, at the age of thirty-four, and in the tenth year of his reign. He was succeeded by his son Henry VI.
Henry VI, King of England, born at crowned at Wentminster in 1420, at Paris in 1430. As he was an infant not pine months old at the death of his father Henry V, his uncle John, duke of Bedford, was appointed resent of France ; and his uncle Humphrey, duke of Gloucester, made protector of the realm of Englond. A few weeks after Henry's succession Charles VI of France died, when, in accordance with the T'reaty of Troyes, Henry was proclaimed king of France. The war which followed at first proved favorablo oo the English, but in ihe end, by the heroism of Joan of Arc the death of the Duke of Bedford, and the defection of the Duke of Burgundy resulted in the loss to the English of all their possessions in France except Calais. In April, 1445, Henry married Margaret of Anjou, daughter of Rene of Provence. Two years later Humplumy of Gloucenter died, when the Earl of Suffolk acquired the chie? power in the kingdom, but his government was very unpopular. The ingurrection of Cade followed, and the Duke of York ret:-ning from Ireland, a great party was formed in his favor, and he was declared by Parliament protector of the kingdom, the imbecile Henry being by this time unable even to personate majesty. The appointment was annulled in the following year, the king having recovered his faculties. York retired to the north, and being joined by his adherents, marched upon Iondon. He encountered and defeated the king's army at St. Albans ( 1465 ), the first battle of the thirty yearn' wars of the Roses. The king again becoming deranged. Yort was once more made protector. Four years of peace followed. but the struggle was moon renewed. The king's forces were beaten at Blore Heath and Northampton, and though they sained the Battle of

Wakeield, at which York was killed, they were again defented by his con bipward at Towton and Hexham. Henry wam rostored for a few months in 1471 by War: wick, 'the king-maker,' but the battles of Barnet and Tewkeabury proved the hopelenanems of his cause, and he died, come may was murdered, a few days alter the last battle, in May, 1471. He was a sentle, pious, well-intentioned, hopelemaly incompetent king, whone beat reputation is that of founder of Eton Collese and King'a College, Cambridge.
Henry VII, King of Encland, first Tude movereisn of the race of Tudor, born in 1458. He was the son of Edmund, earl of Richmond, son of Owen Tudor and Catharine of France, widow of Henry V. His mother, Margaret, was the only child of John, duke of Somernet, grandson of John of Gaunt. After the battle of Tewkeabury he was carried by his uncle, the Earl of Pembroke, to Brittany, and on the usurpation of Richard III was naturally turned to as the representative of the house of Lancaster. In 1485 he assembled a small body of troops in Brittany, and having landed at Milford Haven, defeated Richard at Bosworth, and was proclaimed ting on the field of battle, his right being subsequently ricospized by parliament. In 1486 he married Elisebeth, daughter of Edward IV and heireas of the house of York, and thus united the claims of the rival houses of Yort and Lancaster. The reign of Henry VII was troubled by repeated insurrections. of which the chief were that headed by Iord Lovel and the Stafiords (1488), and the impostures of Lambert Simnel (1487) and Perkin Warbeck (1490-99). He brought about a match between the Infanta Catharine, daughter of Ferdinand of Aragon and of Isabella of Castile, and his eldest son Arthur: and on the death of the latter, in order to retain the dowry of this princess, he caused his remaining son Henry to marry the widow by papal dispensation, an event which. in the seauel, led to a separation from the see of Rome. He married his eldest daughter to James IV, king of Scotland, from which marriage there ultimately resulted the union of the two crowns. In his later years his avarice became increaringly marked, two exchequer judges, Fimpion and Dudley. being employed in all worts of extortion and chicanery in order to gratify this passion. His reign, however. was in the main beneficent. Its freedom from wars permitted the development of the internal resources of the country. His policy of depresine the feudal noblity, which proportionably exalted the middle ranke, wail highly malutary. por atme,
bowever, the powne lout by the aristoc- authority of the chief pontif in Engiand, racy gave an undue preponderanco to that of the crown. Henry died at Richmond is 1500. Penvy VIII, King of Ensland, son
in 1491 , mucceeded his father in 1500 . Horn was soon prevalled upon to join in a leagre formed againgt Louls XII of France Some campaigns in France followed, hut the succens of the Englinh at the Battle of the Spurs (1513) was succeeded by no adequate result, the tuking of Tournay being the only Iruit of this expensive expedition. Meantime, more aplendid uuccens attended the Engliah arms at home, Jamen IV of Scotland beins completeiy defested and slain at Flodden Field (1513). Henry, however, granted peace to the Queen of Scotiand, his inter, and established an influence which rendered hir kingdom lons secure on tbat side. Finding himself deluded by his Illes, he soon after made peace with France, retaining Tournay and receivins a large sum of money. From 1515 until 1529 the government was practically in the hands of Wolses, no parliament being summoned in that period until 1523. After the election of Charies $V$ to the German Empire, both Charies and the French king, Francis I, sought the alliance of England. A friendly meeting took place between Henry and Francis at the Field of the Cloth of Gold (1520), hut the interest of Charles preponderated, and Henry declared war against France, though with no important results. Now came the determination of the king to divorce his wife Catharine, who was older than be, had borne him no male heir, and had, moreover, heen in the first place the Fife of his elder hrother. The last of these points was the alleged ground for seeking divorce, though Henry was probably inflonenced largely hy his attachment to Anne Boleyn, one of the queen's maids of honor. Wolsey, for his own ends, had at first been active in promoting the divorce, but drew hack ard procrastinated when it became apparent that Anne Boleyn would be Catharine's successor. This delay cost Wolsey his power and the papacy its authority in England. Henry in disgust eagerly caught at the advice of Thomas Cranmer, afterwards Archhishop of Canterbury, to reter the cave to the univervities, from which he soon goi the decision that he desired. In 1533 his marriage with Catharine was declared null and an anticipatory private marriage Fith Anne Boleyn declared lawtul; and as these decisions were not recognived by the pope, two Acts of Parilament were obtained, one in 1534 setting aside the
the other in 1635 declaring Benry tho protector of the English church. But al. though Henry discarded the authority of the Roman Church, be adhered to its theological tenetra and while, on the one hand, he executed Bishop Fisher and Sir Thomas More for refuning the oath of supremacy, he hrought many of the reformers to the stake. Finding that the monks and friars in Engiand were the most direct advocates of the papal authority, and a constant source of disaffection, he suppressed the monasteries by act of parliament, and thereby inflicted an incurable wound upon the Catholic relision in Engiand. The fail of Anne Boleyn was, however, unfavorable for a time to the reformers. Henry then married Jane Seymour, and the birth of Prince Edward in 1537 fulfilled his wish for a male heir. The death of the queen was followed in 1540 by Henry's marriage with Anne of Cleves, the negotiations of which were conducted hy Cromweil. The king's dislike to his wife, which resulted in another divorce became extended to the minister who had proposed the union, and Cromwell's disgrace and death soon followed. A marriage with Catharine Howard in 1541 proved no happier, and in 1542 she was execuied on a charge of infidelity. In 1543 he married his sirth wife, Catharine Parr, a lady secretly inclined to the Reformation, who survived the king. In the measitime Scotland and France had renewed their alliance, and England became again involved in war. James $V$ ravaged the burdern, hut was defeated at Solway Mos: in 1542, and in 1544 Boulogne was captured, Henry having again allied himseli with Charlea $V$. Charles, however, soon withdrew, and Henry maintained the war alone until 1546. Disease now so much aggravated the natural violence of Henry that his oldest friends fell victims to his tyranny. The Duke of Norfolk was committed to the Tower, and his son the Earl of Surrey was executed. Henry died on January 28. 1547, and was succeeded by his son, Edward VI.
Eenry, 'Josepry, physicist, was born 1799. In 1820 he began a series of brilliant experiments in electricify said to have invented the first machine moved by the agency of electro-magnetism. In 1892 he was called to fill the chair of natural philosophy at Princeton. In 1846 he was elected secretary and director of the Smithionian Institution. His published papers, chiefly on the suhjects of electricity and magnetism, include over 150 titlem. Be died in 1878.

Eenry, Marrimer, a celobrated Ens; died in 1714. Eenry, o, nen-name of the American Sydney Porter (9. 0.).
Henry, Parmick, orator, was born at died in 1799. Indolent in diaposition, he tried several occupationa unsuccenefuiily during youth, finaly studying law and winning sudden digtinction, in 1763, by hir telling speech in a cave arainst the clergy. His powere as an orator have never been surpassed. A remarkable upeech made by him in 1705 in the House of Burgesses in Virginia led to active reuistance to the Stamp Act, and itt enforcement became impracticable. He was a delegate to the First Continental Congrets, and in 1775 made bis most famous speech before the Virginia Convention at Richmond. He was governor of Vir ginia $1770-79$ and 1784-85, and in 1788 vigorously opposed the adoption of the Federal Constitution. He is looked upon as the most eloquent of Americans. Henry the Lion, DUXE or \&axremarkable prince of Germany in the twelfth century, was born in 1129. He succeeded bis father, Henry the Prond, in 1130, assuming the government of Saxony himself in 1146. At the diet of princes in Frankfort (1147) he demanded restitution of Bavaria, taken from his father by Conrad VII; but was worsted in the war which followed. It was restored to him, however, in 1154, after the death of Conrad, by the Emperor Frederick, Henry's cousin. His possessions then extended from the Baitic and the North Sea to the Adriatic, and he was successful in opposing the league formed against him at Merseburg In 1166. About two years afterwards he separated from his wife and married Matilda, caughter of Henry II of England. He then went on an expedition to the Holy Land, and during his ahsence his enemies, and even the emperor, made encroachments on bis dominions. In 1174 he followed Frederick I on his fifth expedition to Italy, but left him at the siege of Alessandria. He was then pnt under the ban of the emplre, and his dominions were given to otber prices. Henry defended himstlf for a time snccussfully, bnt was at last oblized to take refuge in England. In 1182 he asked pardon of the emparor on his knees, and Frederick promised bim his hertiltary possessions. Brunswick and Lunehurg, on condition of his undergoing exile for three years. He therefore again went to Eng: hand, but returned to Brunswick in 1184.

In 1188 he was once more compalied to leave the conatry, and it wes oaly in 1100, at the close of a year's fighting, that a reconclilation wai finally ifirected. Henry died at Brunswict in 1103, H0 was much in adrance ot his age in fottering induatry, science, commerce and the arth.

## Henry the Navigator (Don Hon-

Navegador), Jourth con of King John I of Portugal, born in 1394. In bit youth he gave brifiliant proofs of courage. When the Portusuene conquered Ceuta in 1415 Henry distinguighed himmelf by his brapery, and was knighted by his father, after whowe death he chose for his retidence the city of Sagres, in Algarve, near Cape 8 g. Vincent, aud vigorously pronecuted the war against the Moors in Atrica. He erected at Sagres an obnervatory and a school of navigation. From time to time he sent vessels on voyagea to the coasto of Barbary and Guinea ; resulting in the discovery of the islands of Puerto Santo and Madeira, and some years later of the Azores. In 1433 Gillianez, one of his navigatori, safely doubled Cape Bojador, and other adventurers, pushing still further south, discovered Cape Blanco in 1411 and Cape Verd in 1455. A profitable commerce with the natives of Went Africa was zoon developed, and the Senegal and Gambia were partally explored. After acting an general againat the Moors in 1458 Henry died at Sagres on the 13 th of November, 1458. His effortu not only laid the foundarions of the commerce and colonial possessione of Portugal, but gave a new direction to navigation and commercial enterprise.
Henryson (hen'ri-sun), Robmat, a teenth century, born about 1425 ; died ahout 1506. He spent most of his life at Dunfermline, whe be was schoolmaster. The Testament of Oressoid, bis most important work, is a continuation of Chaucer's Troilus and Creseide, thoush with individual merit; and he was probably the author of the early Scottish pantoral, Robin and Makyne. Amongat his other works were a Tale of Ornheus. The Moral Fables of Asop, in Scottish meter, and an allegorical hallad, The Bludy Sert.
Henty (hen't), Gromar Axpmad, an English writer, born near Cambridge in 1832: died in 1002. He served for a time as war correspondent for London papers., and afterwards wrote a number of novels and a larre number (over seventy) of books of hititorical fic tion for boys.
Hepar Sulphuris (ilt "liver of
called from its brownimb-green and liverlike appearance), a mixture of polynulphides of potansium with suiphate or thioaulphate of potash.

## Fepatiose (hepatl-ab) or Liven

 plants belonging to the gruus anemone. Tepatitis (he-pa-trtes), diseann tion of come part of the !iver. Hephaestion (he-les'tlon), a noPelia, the friend of Ajexander the Great. He accompanled the klos in his Aolatic campaisny, and dled at Ecbatana (2.0. 325 or 824 ). Alexander had hle body conveyed to Babyion, and erected a monument to hlm, conting 10,000 talente. Rephestus (he-fen'tus), a sod of Identified by the Romaus with thelr Vul: canna, lye premided over fire, and was the patron of all artists who worked in irom and metals. He fixed him residence in Lemnos, where he bulit himself a paiace, and ralsed forgen to work metals. The Cyclopen of Siclly were his workmen and attendants ; and with hlm they lab:icated not only the thunderbolts of Zeins, but also arms for the gods and the most celebrated heroes. His forges were supposed to be under Mount RAtna. Aphrodite (Venus) was the wlfe of Hephestus. Seppenheim (hep'en-him), an ln- $\begin{aligned} & \text { In- } \\ & \text { terenting old walled }\end{aligned}$ town of Germany ln Hesse-Darmstadt, 16 milles south of Darmstadt. Pop. 6304. Feptarohy (hep'tar-kl), the sevinto which England was divided in AngloSaxon times. The kingdomm were founded at different timen, and at no one time were they all independent monarchies together. In 827 King Fgbert of Wesmex united the other kingioma into one, and asmmed the title of king of England. Spe England.
## Eeptateuch

(hpp'ta-tuk), n name sometimes glven to the five books of Mosen or Pentatench. together with the books of Joshua and Jndges. Hera
(hee'ra), an ancient Greek goddess, identified by the Komans with their Juno, the sister and wife of Teus (Jupiter). and daingter of Kronos (Saturn) and Rhea. The poets repressent Zeus as an unfaithfui husband, and Hera as an obstinate and jeaious wifre. liee regult of which la frequent strife between them. She was worahipped In ail (ireece, but her principal seats were at Argos and at Samos. The companions of Hera Were the Nymphs, Grares, and Hours. Irf was her particular servant. Among
animula, the peacock, the soome and the cuckno were macred to her. Her nsual attribute in a royui diladem ou her head. The feativais in her honor were called Herma. The princtpain were thome celebrated every fifth year at Arbos, which clty was conaidered to be eupeciaily under her protectlo
Eeraoles neracalled by the Romans Herculea, the most celebrated hero or seml-divine permon. age of Greek mytholony, was the mon $0^{\circ}$ Zeus (Jupiter) by Alcmena, the wife of Amphltryon. He was broueht up at Thebes, and before he had completed his oighth month stransled two snakes sent by the jeaious Hera (Jnno) to devour him. In youth he had several distlnguished Iratructors.
 among the itse Centaur Chelron. Early In life he had, at the command of Zeus, to subject hlmuelf for twelve years to the wili of Burystheus. on the nnderstanding that after he had ucquitted hlmself of thls duty he should be reckoned in the number of the gods. He therefore went to Mycenze, and performed at the hirding of Furystheus the tasks known as the twelve labors of Heracles. These were: (1) to kIII a llon which ravaged the rountry near Mycene: (2) to destroy the Leernean hydra; (3) to capture. alive and unhurt, a stag famonn for its incredibie swiftness, lts golden horns, nud hrazen feet ; (4) to captnre alive a will buar which ravaged the neighborhowl of Frymanthus: ( K ) to clean the stables of Angeas, where 3000 oxen had been confined for many years: (6) to klll the birds which ravaged the country uear the lake Stymphaius, in Ar. cadia, and ate huluan thesh; (T) to bring alive iuto felopmanesiss a prodiglous whid hill, which laid wasce the lalated of ('rete: (8) to ubtain the mares of Diomodes, which fed upon human thesh: ( $(9)$ tu obtain from the quecti of the Amazons a girdie which she itad received from Ares (Mars) : (10) to kll the monster Geryon. king of Gades, and bring to Argos hls numerous flocks, which fed upou human Hesti ; (11) to obtain appies from the gardea of the Heaperides; (1iU) the last and
mont dangerous of all, to bring from the Internal resions the threo-hended doe Cer boruer Benides thaee labors, be also achleved of his own accord others equaily celebrated. Thus, he ramefted the cods in their warn againat the glanta, and it was through him alone that Zeus obtained the victory. Haring attempted to pinmer the trmpie st Iniphi, he became ensafed in minflirt with Apollo. and was minished hy helng moid to Omphile, queen of lydia, an an wlare, whor rentored him to iliberty and married him. Ilaving inter returned to Greece, he becanic the humband of De-

Hescules alayios the Hydra.-From sculpture at Flurenas
innira, who unwittingly brought about his death by giving him \& tunic poisuned with the blood of the Centaur Newsus, which whe innocently believed would retain for her Heracies love. The poison took effect whenever the garment was put on, and as the distemper was incurable, Heracles placed himself on a burning pile on the top of Mount (Exta, was received up into heaven, and being there reconciled to Hera, received her daughter Hebe in unarriage. In ancient works of art Heracles is generally represented naked, with strong and well-proportioned limbs ; he is sometimes covered with the skin of the Nemaran lion. and holds a knotted club In his hand, on which he often leans. The principai ancient statue of him which remains is the Farnese Hercules at Rome, $h$ work of the Athenian Glycen. The myth of Heracles is beileved by many writers to represent the course of the sun through the tweive signs of the zodiac. His marriage with Hebe was expiained aven by the ancients as symbolic of the renewing of the sun's conrse after its rompletion.

## Heraoleum

(her-a-kiēnm). a genus of large nmbelliferous

Ephondylium (common cow-paruatp of hos-weed) In very common in Britala is damp meadow sround and patures H: diganteum (the Miberiau cow-parraip) is often grown in shrubberten, reaching the height of 10 feet.
Feraclides (her-a-kll'de), the descendents of Heracles but morp particnlariy thnoe who, acelated hy the Inrians, succemfnily amaerted by nrmm thrir elsim to the Pelopownevis, whence their ancentorn had bepe driven by usirpers. Hee (Jreeon (Hisfory).

## Heraolitus (her-a-kil'tus), a Greek

 phiionopher, born at Hiphesns, who flonrished ahont 613 E . C. He traveled in different countries, particuilarly in Africa. On his return to Fphesns he was offeren the chief magistracy, but refuped it. He is maid to have intterly repaired to wolitary mountains to live on roots and harbe ; hut, being attacked by a fatal dimease, whe oblised to return to the city where he died coon afterwards, it is sald in his sixtieth year. IIf left a work on Nature, in which he treats sliso of religion and politics. Som fragmente only of this work remain. He in considered us beionging genernlly to the Ionic achool of phllosopheres though he differed from it in important particulare. He considered fire as the first principle of all things, deacribing it as an ethereal substance, 'self-kindled and selfextinguished, from *hich the world is evolved (not made) by a natural operation. It in also a rational principle, and the source of the human soul. Phenomena exist in a constant state of fux, always tending to assume new forms, and finally returning agsin to their source.Heraclius (her-a-klinu), Roman eniperor of the East, born in Cappadocia about 575 A. D. : the son of Heraclius, exarch of Atrica. At the head of a fleet from Carthage, in 610. he assisted in dethroning Phocas, the murderer and successor of the Fmperor Mauritins, and himself ascendec the throne. In a succession of splendid victories he crushed the Persians under Chosroes; but the energy of his earle: years seems to have worn itseif out, and he made no effort to check the victoriouls prng: - itis of Mriammed. Befure his dealh Syria, Pales! .. Mesopotamla, and Egynt had fallen "uer tite dominion of the caliphs. He dled in 641, and was succeeded by his son, Constsntine III.
Ferald (her'ald). an officer whose functions originaliy were to carry messages of conrtesy or defiance between sovereigns or persons of knightly rank, to mperintend and register the results of tial by is ttle, tournamente, and
other chivalric exercises, to record the vallant deeds of combatants, proclaim war or peace, marshal procesaions and public ceremonials, and especially, in Iater times, to resulate and determine all matterm connected with the use of armorial bearingt. Heralds began to appear abont the twelfth century, and assumed the functions which ultimately belonged to their office gradually. The herald, after the office was fully constituted, was created with many ceremonies, and had to pass through various grades of protracted service before reaching the full dignity of a herald. The office is now shorn of much of its importance. Heralds are appointed in England by the earl marahal, whose office is hereditary. The Heralds' Oollese, or Collese of Arms, founded by charter of Richard III in 1483, consists of the three chief heralds (see Garter King-of-Arme), the six subordinate or provincial heralds of York, Lancaster, Chester, Windsor, Richmond, and Somerset; two heralds appointed on the accession of George I, called Hanover herald and Gloucester king-of-arms, to gether with the earl marshal and secretary, in all thirteen persons. There are four marshals or pursuivants, called bluemantle, rouge-croix, rouge-dragon, and portcullis, who usually succeed to vacancies in the Heralds College. Among the duties of the Heralds' College are the recording of pedigrees and the granting of coats of arms to persons who wish to assume them. The Heralds' College, or Lyon Court, in Scotland, consists of Lyon ring-of-arms, and six heralds, with six parsuivants.
Herald-crab, a secies of crab the carapace of which presents a fanciful resemblance to the shield and mantle figured by heraldic painters in depicting coat-armor.
Heraldry (herald-ri), the whole dnties, or more cience of a herald's of the forms, terms, and laws which per. tain to the use of armorial bearings or conts of arms. Badges and emblems on shields, helms, banners, etc., naturally occurred in the earliest times, and the symbols were sometimes hereditary. The origin of heraldic arms, properly so called, is, however, to be attributed to the necessity which arose during the Crusades of distinguishing the leaders of the numerous and motley bands of warriors which constituted the Christian armies. One of the oldent specimens of heraldic bearings extant is the shield at Mans of Genfirry Plantagenet. who died in 1150 . Rollm of arme in Engiand are extant from
the reigns of Henry III, Fdward I, and Edward II. The use of arms on the Great Seal of England was introduced by Richard I. The bearins of cont-armor by private persons was prohlibited by proclamation in the reign of Henry $V$. The chief courts of jurisdiction in questions of heraldry are the Heralds' Colleze in England, and the Lyon Court in Scotland. (See Herald.) The rules of heraldry now practised at the Heralds' College are comparatively modern, and differ in some respects from those of other European courts. A coat of arms consists of the figure of a shield marked and colored in a vast variety of ways, so as to be distinctive of an individual, a family, or a community. The shield or escutcheon represents the original shield used in war, and on which arms were anciently borne. The surface of the escutcheon is termed the field, and the several parts or points of it have particular names, so that the figures which the field contains may be precisely located. Color is given in the coat of arms by means of tinctures, two of which are metals-or and argent, that is, gold and silver-the rest oolors proper. These colors are, in heraldic terminology: azurc, blue; gules, red; sable, black ; vert, green ; purpure, purple ; tenney, orange ; sanguine, bloodcolor. The last two are comparatively uncommon. An object represented in its natural colors is said to be proper. When not given in colors or by actual gilding the tinctures are represented by points and lines in black and white. Or is distinguished by small dots covering the part; argent is represented by leaving the space blank; azure is shown by horizontal lines; gules, by perpendicular lines; sable, by perpendicular and horizontal lines crossing each other ; vert, by diagonal lines running from the dexter chief to the sinister base; purpure, by diagonal lines running from the sinister chief to the deater base. Another class of tinctures are the furs, of which the two principal are ormine and vair, and which have also their special method of representation. The figures borne on the shield may be either purely artificial and conventional, or may represent real objects, animals, plants, etc. Of the former the $m$ : common are known as oridinartes: ind have the following names: Chief, 'ale, 3nd, Fesse, Bar, Cherron, Cross, and i- ifre. The ohlef is a portion of the shield at the top marked off by a horizontal line, and covers the upper third part of the field. The pale occupies the middle third part of the field perpendicularly. The bend is dravi dlagonally from the dexter chief to the dinio.

ter base in the form of a belt, and also known as marshaling, and when the ocenpies the third of the field. A diminutive of the bend is the bendlet. The fesse occupien the middie third of the field horizontally. The bar is formed after the manner of a fesse, but occupies only a tifth of the field, and is not contined to any particular part of it, except when there is oniy one bar, when it is put in the place of a fesse. Bars are mustly two in a fieid, sometimes three or more. A diminutive is the barrulet. The chevron may be regarded as made of a bend derter and sinister issuing from the right and left base points of the escutchecn and meeting like two rafters. The cross is the ordinary cross of St. George. The saltire is the equally well-knowp cross of St. Andrew. The shield is often divided by lines running simiiarly to the ordinaries; hence when divided by a perpendicnlar line it is said to be party per pale, when by a horizontal line party per fesse, when by a diagonal line party per bend. Similarly, when it seems to bear several pales or bends or bars, it is said to be paly, bendy, or barry of so many pieces, paly of six argent and gules, for instance. Oharges are the figures of natural and artificial things, and include animals and plants, impiements and ohjects of all sorts, and various imaginary monsters, being drawn either on the field or on one of tile ordinaries. It is a rule in heraldry that metal must not be put on metal nor color on color; hence, if the field say is argent, it cannot have ${ }^{2}$ charge or an ordinary tinctured or directly upon it. Various technical terms describe the position of auimals; thus, a lion is rampant when he is erect standing on one of his hind legs; sejent, when sitting; couchant, when lying at rest, with the head erect; passant, in a walking position; gardant, looking full-fared; rampant gariant, erpet and looking fullfaced; salient, in a leaping posture. So trippant is said of the stag when trotting: lodged, of the stag when at rest on the ground; volant, of birds in general in a flying posture; rising, of a bird that is preparing to fly; displayed, of birds seen frontwise with ontspread wings; naiant, of fislies when swimming; and so on. The tepth and claws of lions and other ravenons beasts are called their arms; and when these have a special tinctnre the animal is sald to be armed of such a tinctnre; similarly if their tougne he of a special tincture, they are said to be langued of this tincture. Often two or more coats of arms are united together on one shield, so that the whole may be a very complicated affair. The art of arranging arms in this way is
shieid is divided up into squares for the reception of different coats, it is said to be quartered. There are aiso certain exterior ornaments of the atieid or escutcheon, namely, the helmet, mantling, crest, wreath, motto, aud supporters. The helmet, which is placed on the top of the escutcheon, varies both in form and materials. Those of sovereign priuces are of goid, those of the nobility of silver, and those of gentiemen of polished steei. The full-faced helmet, with six bars, is for the king and princes of the blood; the sidelong helmet, with five bars, is for dukes and marquises, etc.; the full-faced helmet of steel, with its beaver or vizor open, is for knights; and the sidelong helmet, with the vizor shut, for the esquire. The mantling or mantie was anciently fixed to the belmet, to which it served as a covering. Mantlings are now used like cioaks, to cover the whole achievement. The crest is placed above the helmet, with the wreath serving as a kin? of support ; the latter is composed of two colors wreathed or twisted together. The motto consists of the word or phrase carried in a scroil under or above the arms. Supporters we:e originally only ancient devices or badges, which by cus. tom came to embellish armorial ensigns. They are called supporters becanse they nold the shield, as the lion and the unicorn in the weli-known royal arms of Fngland. The present royal arms of Britain exhibit the arms of England, Scotland, and Irelan. 1 th the four quarters of the shied ; that is: Quarteriy. 1 and 4, England ; 2, Scotland; 3. Ireland. The arms of England are - Gules, three lions passant gardant in pale or: Scotland, or, a lion rampant within a doubie tressure flory counter-fiory gules; Ireland, azure, a harp or, stringed argent.

## Eeralds' College.

Herat (her-it'), a city in the northwest of Afghanistan, in a beautiful and fertile plain, about 370 miles west of Cabul. It is inclosed by a inroad deep moat. and an earthen mound surmounted by a lofty wali of unburued brick, and defended by a strong citadel. From each of four of the five gates a long street of bazaars (one paulted throughont its entire length) leads towards a square in the center of the town. The remaining streets are narrow and dirty. The most important mannfactures are carpets, sword-blades, shoes, cloaks, and sheepskin caps. The trade, almost entirely in the hands of Hindus, is greatly favored by the situation of the town on the great thorough-
fare from India westward. Herat was gent, and has been used in medicine, and long the capital of the emplre founded hy Tamerlane. 1'op. ahout 45,000 .
Hérault (Ă-ro), a department of nean coast; area, 2393 square miles. In the northwest it is covered by the Cevennes, but it descends rapidly towards the coast, which is lined by lagoons. The chief rivers, the Hérault, Orh, and Lez, are partly navigahle; but the most important water communication ls the Canal du Midi. The arable land, about one-sixth of the whole, is generally fertlle. The vine and mulherrry are extensively, the olive more partially cultivated; fruit is abundant; and aromatic, medicinal, and dyc plants are largely grown. Salt is obtained in large quantities. Capital, Montpellier. I'op. 488,285 .

## Herbaceous Plants (her-bä'shus)

 plants of which the stem perishes annually, while the roots remain permanent and send forth a new stem in the following season.
## Herbarium

(her-bă'ri-um), or Hortus Siccus, a collection of dried plants systematically arranged. The specimens should be collected in dry weather, and carried home in a japanned tin-box or vasculum, a small pocket-hox heing desirable, however, for mosses and small plants. Very delicate specimens should be at once placed in a small fieldhook of unsized blotting-paper carried tightly strapped between suitable boards. At home they are carefully arranged upon hibulous paper, and pressed hetween smoothly planed deal boards either hy putting weights upon the hoards or hy using a screw-press.
Herbart (her'härt) Johann Fimed
RICE, a German philosopher born at Oldenhurg, 1776 ; died, 1841. In 1805 he was extraordinary professor of philosophy at Göttingen; in 1809 he went to Königsberg as Kant's successor; but in 1883 returned to Göttingen, where he remained till his death. Herbart starts from the Kantian position hy analyzing experience. He posits a multiplicity of "reals," or things which possess in themselves ahsolute existence apart from appreciation hy the mind of man. Ethics be ranks as that hranch of esthetics which investigates the agreement or disagreement between volition and the fundamental moral ideas. Hls works on the science of education have been much studied

## Herb-bennet

(that is, Saint Bennet or Benedict's herh), a plant, Geum urbinum, known also as Avens. It is aromatic, tonlc, and astrin-
as an ingredient in some ales.
Eerb-Cinristopher, the hane-berry, Herb-nistopher, Actea apicate. Herbert (her'bert), ED DWBD, Loro Herbert of Cherbuby, in Shropshire, au English writer, born in 1581, and educated at Univeraity College Oxford. In 1609 he distizguished himsell at the siege of Juliers under the Prince of Orange, and in 1614 served agaln in the Low Countries under the same leader. In 1618 he was sent ambassador to the court of France, hut was recalled in consequence of a quarrel with Constahle Luynes, the favorite of Louis XIII. On the death of Luynes, however, he was sent back to France as resident amhassador. At Paris, in 1624, he printed his famous book, De Veritate, with the ohject of asserting the sufficiency, univer sality, and perfection of natural religion. In 1625 he returned from France and was created an Irish peer, and In 1631 an English haron. He joined the parliamentary party, hut subsequently quitted it, and sufered in fortune in consequence. He died in London in 1648. The character of V. Trd Herbert, as shown In his memoirs, थs vain, punctilious, and quixotic, l open, generous, and hrave. Another work of his was De Religione Gentilium. Soon after his death was published his Life and Reign of Henry VIII, $a^{-1}$ a coliection of his poems was publisied in 1665.
Heruert, Grobge, poet and divine, rert, brother of Lord Herbert of Cherbury, born in 1593; was educated at Westminster and at Trinity College, Camhridge, of which he hecame a fellow in 1615. From 1619 till $1022^{2}$ he was university orator. The death of James I in 1625 put an end to his prospects of civil promotion, and in the same year he took orders, and hecame a prehendary in the diocese of Lincoln. In 1630 he took priest's orders, and was presented to the rectory of Bemerton, near Sallshury, In Wiltshire. He died ln 1633. His collection of religious poems, The Temple, was published $\ln 1631$, and the Jacule Prudentum, a collection of proverbs, in 1640. His poems bear the marks of an exceptionally fine nature, if not of genius, hut they are marred hy conceits and mannerisms. His chief prose work was The Gountry Parson (1652).
Ferbert, Smaney, Iord Henbanat or Lea, an English staterman, son of the eleventh Earl of Pembroke. was born in 1810. He was educated at Harrow and Oxford, and was Conservative member for South Wilt from 1832 till shiortly before his death. He was secre-
tary to the admiralty under Peel in 1841, and in 1845 was made secretary for Far $_{3}$ but became a convert to free-trade, and quitted office with Peel in 1846 . From 1852 to 1855 he was war secretary in the Aberdeen cabinet, and in 1859 became again secretary of war. Early in 1861 he was transferred to the House of Lords, but died in the same year.
Herbert, Victor, an American mnpecei, born in Duhlin, Ireland, in 1859; received his musical education in Gerand special study to the rioloncello. He has held the appointment of soloist and conductor in several American orchestras; and since 1904 has conducted his ewn orchestra in New York. His compositions inclnde orchestral compositions, songs, etc.; and a large number of light operas, including Babes in Toyland, and The Spring Maid

## Herculaneum (hèr-kūlánê-nm), an

 miles s. Erom Naples, completely huried with Pompeii, Stabix, etc., by lava and ashes during an eruption of Vesuvius in the reign of Titus, A. D. 79. The site had heen long sought in vain, when in 1713 three statues were fonnd in digging a well at the village of Portici. In 1738 the weil was dug deeper, and traces of huildings were found. The theater was then discovered, hut though the excavations were continued for many years it is now the cnly huilding to be seen underground, as the successive excavations were immediately filled up with ruhbish from a new digging. A nnmber of puhikc buildings and private dwellings were laid bare, and many objects of great value discovered, snch as statues, busts, beautiful mosaics, wall paintings. charred papyrns mannscripts, etc. One of the houses discovered contained a quantity of provisions, consisting of fruits, corn, oil, pease, lentils, pies, and hams. Few skeletons have been fonnd either in Pompeii or Herculanenm, so that it is probahle most of the inhabitants had time to save themselves by flight. Among the most interesting ohjects discovered here were the papyri, over 1750 of which are now in the Naples Museum, hut hardly a third have yet been unrolled, the process presenting great difficulties from the tendency of the MSS. to crumble. The knowledge of ancient art has, however, gained more hy the discoveries made here than literature. Recently a design of making a complete excavation of these ruins has been entertained, bnt as yet no work has been done.Heroules (her'hulles). See Hercoles.

Hercules, one of Ptolemy's northern its accompanying to which the sun, with traveling constellg at present is situated in this constellation, which includes some re markable star groups and nebule. Hercules, Pillars of, the ancient tories, Calpe (Gibraltar) and Ahyle (Ceuta), at the entrance to the Mediterranean.
Hercules-beetle, a very large Braziltle, Scarabaus or Hynastes Herculcs. An enormous horn projects from the head, and a smaller one from the thorax, and the beetle attains a length of 5 inches.

## Hercynian Forest (her-sin'i-an),

the general name given by the ancients to the forestciad mountains in Centrai Germany, extending from the Rbine to the Carpathians.
Herder (hér'dèr), Jomann Gotrfried von, a German author, horn in poor circumstances in 1744 . He went in 1762 to K8nigsberg, prorured an appointment in Frederick's Coliege, and was permitted hy Kant to hear all his lectures gratis. From 1764 to 1769 he was an assistant teacher at the cathedral school of Riga, with which office that of a preacher was connected, and it was during this period that he published his Fragments on German Literature. In 1769 he resigned his post in order to travel, and became traveiing tutor to the Prince of Holstein-Oldenburg. But in Strasbnrg he was prevented from proceeding hy a disease of the eyes; and here he became acqnainted with Goethe, on whom he had a very decided infinence. Besides, his Fragments. his 'Critical Woods, (Kritische Wälder) and other productions had gained him a considerahle reputation, and he was appointed in 1771 court preacher, superintendent, and consistorial counselor at Buckehurg, and in 1776 to the same offices at Weimar. In 1801 he was made president of the high consistory, a place before only given to noblemen. He was subsequently made a noble hy the Elector of Bavaria. He died in 1803. As a theologian Herder contrihuted to a better understanding of the historical and antiquarian part of the Dld Testament. His Geist der Hebräischen Poesie ('Spirit of Hehrew Poetry') is highly valned. He did much also for the better appreciation of the classical authors. His greatest work is his Ideen zur Philosophic der Geschichto der Menschhnit ('Ideas on the Philosophy of the Biatory of Man; 1786 et req.).

He also wrote zome plearing conge and translated the Epanieh epic. The Oid Fereditaments (her-a-dit'a-mente), of property that may dascend to an heir. Corporeal hereditamenta condist of material and tangible ponseesaions, incorporeal hereditaments of rights and privlleges not themselves tangible, though conferring claimy on tangible possaesions. Hereditary Diseases, see Disease. Heredity (her-ed'i-ti), the transmisspring of physical and intellectual charsctera. This has been at all times be lieved in, but it is only in recent times that the conviction has, in the hands of Darwin, Herbert Spencer, and Wallace, been methodized so as to embody an important zoological doctrine. The modern piew of evolution in biology resta upon the belief that acquired pecullarities, or differences which may arise between parent and ofispring, can be transmitted with some probability of permanence, especially If the variation presented by the yonng is determined by external conditions, or if it is anch as to adapt the possessor more thoroughly to the conditions under which it if placed. On the other hand, while variations may be thus permanently transmitted by heredity, yet this very tendency of the young to repeat the characters of the parent is also a check on variability, or the tendency of structure and attributes to change with the environment. It may be noted that while the utrong tendency to hereditary transmission works in the majority of cases so az to perpetuate those most fitted to survive, it secures the same result in cther cases by a converse action. The question of the heredity of acqnired characters, changes arising during the lifetime of an individnal, has of late years been vigoronsly debated, without any definite conclnsion. It is strongly maintained by many zoologiste that snch characters cannot be transmilted to offispring, bnt their arguments and evidences are not unfficient to convince the many who hold the opposite view, and the problem is still an open one.
Hereford (he're-ford), a city and parland, capital of a connty of the mame name, on the left bank of the Wye. The principal streets are broad and straight; houses mottly of brick, and the public bnildings of stone. The beautiful cathedral near the Wye was rebnilt, in the reign of Wiliam the Conqueror, on the gite of an eariler edifice and pe tored in 1888 under the direction of sir
G. G. Scott. Other public buildinge are the collese adjoining the cathedra, the shire-hall, the county-jail, free library and museum, corn exchange, market-hall, and pont-office. The manufactures, which are inconsiderable, consist of glovea, leather, turnery, nail', etc. Heresord was lons an important garrison town on the Wellh border, and was the last city to unrrender to the parliamentarians Pop. 22508The county, which is entirely inland, and borders on Wales, has an area of 833 w, milen, nearly the whole of which is arable, meadow, and parture. The connty belongs wholly to the badin of Severn, towards which river it has a seneral alope north to month, as indicated by the courne of its rivers, the Wye and it affuents. The soil is in general fertile. Wheat is the principal crop, bnt barley, oats, beans, pease, hops, and turnipe are also extensively cultivated. Orchards are numerous, and a large quantity of excellent cider is made. The Herefordshire cattle are held in high eatimation for meat, though not good milkers. Horses are bred in considerable numbers. Oak timber is abnndant, and forms, with oak-bark an article of export. Pog. (1911) 114,269.

Heretic (her'e-the), one who embrace holds some theological doctrine which conficts with the beliefs of the Catholic or niversal chnrch, but who, at the tame time, calls himself a Christian. Many of the early Christians preserved their Jewish or Greek philosophical notiong and mingled them with the doctrines of Christianity. Even in the time of the apostles we find traces of the Gnostics, and subseqnently a great variety of heret. ical sects or secteriea arose. Among the chief may be mentioned the Manicheanse, Sabellians, Arians, Apollinarians, Neator iane, Monophysitei, Pelagians, Monothelites, Panlicians, etc. Among religionista stigmatized as heretics in later timen by the Roman Catholic Church, were the Waldensen, the Wicliftes, Humaltem Lntherans, and all Protestant secta and chnrches. Before Ohristianity wat mado the religion of the Roman state, nothing but excommunication was inficted upon the heretic ; bnt severe laws were pacioed soon after the conversion of the emperorn. The code of Jnstinian contains many ordinances againut heretice, and the canon law made it a dnty to denonnce them, under pein of excommnnication. As early an 358 Priscillian was condemned to death as a heretic by the Spanith binhopa at the Councl of Trives: but the periecutions of heretics, propersly no called, be san in the pontificute of Gresory VII, in
the elerenth century. Spain, Italy, and France, from the thirteenth to the sixteenth centnry, suffered much from these perwecntions, but the states of Germany showed greater moderation. In England the hurning of heretics was practiced bofore 1200, and lons continued. Hereny is now left entirely to the cognizance of the ecclesiantical courta.
Herford (her'fort), a town of Prnssia, in Westphalia, 16 miles southwest of Minden. It bas manufactures of linen and cotton goods, leather, basket-work, and tobacco; oli mills, etc. Pop. (1910) 32,546 .
Heriot (her ot), in old English law, beast or other cbattel, payable to the best of the of the fee on the decease of the owner, landbolder, or vassal.
Heriot, Gposaz, founder of the hosbears his pital in Edinhurgh wha jeweler to King James VI, was born in 1563. He tollowed his father's profession, and was admitted a member of the Incorporation of Goldsmiths in 1588. In 1597 he was appointed goldsmith to the queen hy James VI, and on the accession of the latter to the English crown followed the court to England. He died in 1624. He left nearly tbe whole of his fortune to lound a hospital in Edinbnrgh for the maintenance and education of poor fatherless boys, freemen's sons, of the town. The present magnificent structure known as fieriot's Hospital was built hetween 1628 and 1659. See Edinburgh.
Herisar (hả'rezou), a town of Swit-
zerland, in the canton and 4 miles nortbwest of Appenzell. It bas mannfactnres of mnslin and other tinds of cotton goods. Pop. 13,501.

## Heristal. See Herstal.

Herkimer, a village, capital of Tork, on the Mew of Utica. It has leather board, knitting and furniture mills, and cheese is largely made in the vicinity. Pop. 8000 .
Herkimer, Nrchouas, soldier, born Leramer, in New York abont 1715, commanded at Fort Herkimer, New York, when attacked by Indians in 1758, and in 1777 led a militia force to relieve Fort Stanwix, then besieged hy British and Indians. In an engagement at Oriskany he was mortally wounded.
Eermann (hèr'man), Johann Gotrfritid Jarob, a German scholar, born in 1772 . Fe began to lectnre on ancient literature at Leipais in 1794, and with this univeraity he was connected till his death in 1848. Her-
mann oricinated valuable reforms in the method of Greek grammatical instruction; and he is especially known for his editions of awechylus, Euripides, Aristophanem, Bion, and Moschus, and for the controvernies in which his theories involved him with other acholaris.
Hermannstadt ( $\mathrm{he} \mathrm{r}^{\prime}$ man-stat), a yania, on the Cibin, 64 miles s. E. E Klausenburg. It consists of a high and a low town, connected hy steep stone stairs, and of three subnrbs. The high town is double walled and well built. Its origin dates back to the 12 th century, and it was once an important fortress. It is the seat of the governor of the province and of the Greek metropolitan of Transylvania. The mannfactures are varied, and tbere is an important transit trade, chiefly to and from Constantinople Pop. (1810) 25,0n8.
Hermaphrodite (h e r-maf’ rū-dit), an animalin which the characteristics of hoth sexes are either really or apparently combined. especially an animal having the parts of generation both of male and female, so that reproduction can take place without the nnion of two individuals. Hermaphrodites are divided into true and spurious, the first exhibiting a real combination of the characteristics of the two seres; while in the recond the combination is only apparent. The animals in which the organs of the two seres are normally combined in the same individual are confined to the invertebrate division of the animal tingdom, as for example certain gronps of the inferior worms, molluses, harnacles, etc. There are no real bermaphrodites in any of the higher species of animals.
Fermaphrodite Brig, a hrig that rigged forward and schooner-rigged aft.
Hermas (her'mas), one of the socalled apostolic fathers, generally snpposed to be tbe person mentioned by that name in Rom., xvi, 14, though others maintain that he lived much later. He is known as the autbor of a work entitled the Shepherd, circulated at Rome early in the second rentnry, and for whirh a p'ace in the canon was even claimed. Only a few fragments exist of the Greek original, but the Iatin translation, made at a very early period, appears to be complete. It is prized as a relic of the primitive church. Hermenentios (her-me-na'tiks; from a Greek word meanius to explain or interpret), the science which fixen the principles of the inserpretation of the macred writinge. Ber
meneutica bears the mame relation to eoogesis as theory to practice. See Esegesis.
Hermēs (her'mês), called by the Rocury), in Greek mythology the son of Zeus and Maia, the daughter of Atlas. He was born in Arcadia, and soon after hi- birth left his cradle and invented the lyre by stringing the shell of a tortoise with three or seven strings. The lyre, however, he resigned to Apollo with whom it was ever after identifiled. Hermes also invented the Pandean pipe. The ancients represent Hermes as the herald and messengcr of the gods. He couducted the souls of the departed to the lower world. He was the ideal embodiment of grace, dignity, and persuasiveness, but also of prudence, cunning, fraud, perjury, theft, and robbery. His cunning was frequently of service both to the gods and the heroes, and even to Zeus himself. Later writers ascribe to him the invention of dice, music, geometry, letters, eic. Ie was wor shipped in all the cities of Greece, but Arcadia was the chief place of his worship, his festivals being called Hermaxa. In the monuments he is represented as in the flower of youth, or in the full power f. early manhood. He often appears with suall wings attached to his head and to his ankles. Among his symbols are the cock, the tortoise, a purse, etc., and especially his winged rod, the caduceus.
Hermes, Grorg, a German theololed theology at the University of Munster; became teacher in the gymnasium of that city. and in 1807 professor of dogmatic theology in the university. When the Prussian government established the University of Bonn, Hermes was appointed to the chair of Catholic theolozy (1820). Here he distinguished himself hy an ingeinious eflort to base the doctrines of the church on Kant's system of philowophy an attempt known ns Hermesianism. It aroased powerful oppositlon, being condemned as heretical
by a papal letter of 1835, two yearm after the death of its originator.
Hermes Trismegis'tus, a mythsonage, the reputed author of a great variety of works, probably written by Egyptian Neo-Platonists, who sacribed the authorship of the highest attainments of the human mind to Thoth, the Egyptian Hermes; regarding him as the source of all knowledge and inventions, the Logos incarnate, thrice greatest (Gr. tris megistos). Clement of Alexandria mentions the contents of forty-two books of Hermes which were extant in his time. Of those which now remain the most important is the l'oimandres or Poimander, a dialogue on nature, the creation, the deity, the soul, knowledge, and similar topics. Of the extant works none belongs, in all probability, to an earller date than the fourth or perhaps the third century of our ara.

## Eermetic Art

(her-met'ik), another name for Alchcmy (which see).
Eermitage (her'mi-tij), one of the finest French wines, produced along the Rhône between Valance and Valiere, in the ci-devant Dauphiny, It is of two kinds, red and white; the former is preferred.
Eermit-crab, family (Paguride) of well-known common to take possession of and occupy the cast-oll univalve shells of various molluscs, carrying this liabitation about with them, and changing it for a larger one as they increase in size.
Hermit-thrush, of which there are Hermit-thrush, several varieties, known under the specific names Turdwe pallasi, Turdus manus, and Turdus unalanca, is found in nearly all parts of N. America. It is about $7 \frac{1}{3} \mathrm{in}$. long, with a white breast spotted with dary brown and an olive head and neck which shaden into dull red towards the tail.
Hermits. See $\Delta n c h o r i t e s$.
Hermon (her'mon), a mountain of Syria, belonging to the AntiLebanon, about 9400 feet high.

## Hermopolis. See Syra.

Hermosillo (her-mo-sil'yos), a city in Mexico on the the state of sonura, Mexico, on the river Sonora, 84 milem north from the port of Guaymas, with which it has a large trafic. It has a mint distilleries, and flour-mills Pop. 17,618.
Hernandia (her-nan'di-a), Eenus
treem, forming the nat. order Hernandiacem. They have aiternate entire leavew and flowers aro ranged in axillary or terminal spikes or corhymbs. $H$. $80-$ nora, or Jack-in-the-box, is so cailed from the noise made by the wind whistling through its persistent involucels. The fibrous roots Hernandia sonorn (Jack-in- chewed and ap-
the-bos). Hernandia sonorn (Jack-in- chewed and ap-
theboz). cansed by the Macamsar poison form an effectual cure, and the juice of the leaves is a powerful depilatory. The wood is light that of $\boldsymbol{H}$. Guianensis takes fire so readily from a flint and steel that it is used in the mame way as amadon. Eerne, Jurigs A., actor and playYork, in 1839 ; died in 1801. His plays inclnde Hearts of Oak, The Minute Men, Drifting $\Delta$ part, Margaret Fleming, and Shore Acres, the last-named the most popular. Hernia (her'ni-a), in surgery, a tnmor formed by the displacement of a soft part, which protrudes by a natnral or accidental opening from the cavity in which it is contained. The brain, the heart the lungs and most of the abdominal viscera may become totally or partially displaced, and thns give rise to the formation of hernial tumors. Bnt the term is ordinarily applied to abdominal hernia. Bvery part of the abdomen may become the seat of hernia, but it most commonly appears in the anterior and inferior region, which, being destitute in a sreat measnre of mnscular fibers, and containing the natnral openings, of fers less resistance to the displacement of the viscera. Most of the viscera, when displaced, pnsh the peritoneum forward before them: this membrane thus forms an envelope of the hernia, which is called the hernial sac. The hernia itself is usually a loop of the small bowel, and though it has been pnshed throngh the wall of the abdomen, forming a tumor under the skin, the freces still pass along it. If the hernia can be returned to the abdomen. it is said to be reducible; if from its size or other canse, it cannot be replaced, it is irredncitie. $A$ hernia is said to be strangulated when it is not only irredncible, bnt also subjected to a continnal constriction. which interferes with the circulation through the blood-remell of the
part and the paceace of the feceay It may be rapidly fatal. Conntriction may be prodncod by difierent cal ses, but sea. erally occure at the marying of the open-
ing through which the hernis protrudes. As soon as a patient perceirem that he is arfected with a hernia he should have recourse to medical adrice, for the diveaso is then in its most favorabie mate for treatment. The hernia when it is reduced must be prevented from recurring by the constant pressure of a pad or truss. An irreducible hernia must be aupported with great care. All vioient exercises, and excess in diet, must be avoided. The strangulated hernia requirem prompt relief, and may neceasitate an operation.
Hernössind (her'neu-aln), a meapori and cathedral town of Sweden, capital of Westernorrland, on the island of Hern8, in the Gnlf of Bothnia, with a considerable shipping trade. Pop. 7890.

Hero (hèro), Greek priestess of Aphrodite at Sestos, on the coast of Thrace, for love of whom Leander, a yonth of Abydos, swam every night across the Hellespont, guided by a torch from her tower. He was at length drowned in the attempt and his body washed ashore, when Hero, overcome with anguish, threw herself from the tower on the corpse of her lover, and perished. There is a Greek poem by Mnsens on this snbject.
Hero (or Acraxandma), one of the most Nistinguished Greek mathe maticians and merhanists of ancient times, who flonrished abont b.C. 100-100. A common pneumatic toy, called Hero'b fonntain, is attribnted to him, and he also invented the solipile, a heliostat, etc. Herod (herod), called the Grmat, King of the Jews, was a native of Ascalon, in Judea, where he was born abont 74 B.c. He was the second son of Antipater the İumean, who, being made procurator of Judea by Jnlius Cæsar, appointed . Ferod to the government of Galilee. He at first embraced the party of Brntus and Cassins, but after their death reconciled himself to Antony, by whose interest he was first named Tetrarch, und afterwards King of Jndea. After the battle of Actinm he successfully paid conrt to Angustus, who confirmed him in his kingdom. On all occasions his abilities as a politician and commander were conspicuons: bnt his passions were fierce and ungovernable, and his wife Mariamne, her brother, grandfather, and mother, and his own gons ky her, vere all pat to death by him. He rebnilt the temple at Jerualen with great magnificence, and erected a
atately theater and amphitheater in that city. He also rehuilt Samaria, which he called Sebaute, and constructed many stroay fortresses throughout Judea, the principal termed Cemarea, after the emperor. The birth of Jeaus Christ is said to have taken place in the lant year of the relgn of Herod, viz., B.c. 4, the year also nignalized by the manacre of the children of Bethlehem. Herod's policy and influence gave a great temporary splendor to the Jewish nation, but he was also the first to shake the foundatlon of the Jewish government, by dissolving the national council, and appointling the high priests and removing them at pleasuse, without regard to the laws of succension.
Herod Agrippa I, son of Arlstonice, daughter of Herod the Great. For his attachment to Caiigula he was imprisoned by Tiberius, but on the accession of Caligula (A.D. 37) he received the guvernment of part of Palestine and subseguently all the dominions of Herod the Great. To please the Jews, with whom his rule was very popular, he caused 8 . Janes to be put to death, and Imprisoned St. Peter. He dled in the circumstances related in Acts rii, in A.D. 44.

Herod Agrippa II, non of the lant of the Herodian line. Being too young to govern, Jndea was, on his father's death, reduced to a Roman province. He snbsequently received the kingdom of Chalcis, and obtained the superintendency of the temple at Jerusalem. With his sister, Berenlce, he heard the defence of Paul before Festns at Caesarea. Being driven from Jerusalem by the revolt of the Jews, he joined Cestius, and later on Vespasian, and during the siege of Jerusalem was very serviceable to Titus. After its reductlon (A.D. 70) he and Berenice (with whom he was auspected to have an incestuons interconrse) retnrned to Rome. He is supposed to have died there, A.D. 94.
Eerod An'tipas, gon of Herod the wife. Cleopatra, was appointed tetrerch of Galilee on his death (B.C. 4). This was the Herod wbo put to death St. John the Baptist, at the reqnest of his wife Herodias, John having reproached them for thelr incestnous nnion. Having visited Rome he was acensed of having been concepned in the conspiracy of Sejanns, and was stripped of his dominions, and rent (A.D. 89) with his wife into exile at Lngiunum (Lyons). or, as some eny, to Spaln, where he died.

Herodiones (her-od-1-0'mes), the herona, a modern name for an order of birds including the herons proper but also the hitterns, storks, apoon-bills, ihises, etc.
Ferodotus (her-od'o-tus), the oldent Greek historian whone. work have come down to un, the 'father of hintory' born at Halicarnamus, In Ala Minor, about s.0. 484. Before writins his history he traveled extensively, vislting the ahores of the Hellespont and the huxlne, Scythia, Syria, Palestine, Bahylon, and Lebatana, Ligypt as far as Elephantine or other parts of Northern Africa, everywhere investlgating the manners, customs, and religion of the people, the hlstory of the country, productions of the soil, etc. On returning home he found that Lygdamis had usurped the suprome authority in Halicarnassus, and put tc death the noblest citizens, among others hls uncle, the eplc poet Panyasls, and Herodotus was forced to seek an asylum in the island of Samos. Having formed a consplracy with several exiles he returned to Halicarnassus and drove out the usurper, but the nobles who had acted with him immediately formed an aristocracy more oppresslve than the government of the baniched tyrant, and Herodotus withdrew to the recently founded colony of Thuri, in Italy, where he seems to have spent most of his remaining life. Here, at an advanced age, we are told by Pliny, he wrote his immortal work, a statement strengthened by the fact that events are noticed in the body of the book which occurred so late as 409 B.C., while its abrupt ending proves almost beyond question that he was prevented by death from completing it. The history is divided into nine books, each bearing the name of a mnse, and is written in the Ionic dialect. The object of the historian is to narrate the confllct between the Greeks and Persians, and he traces the enmity of the two races back to mythical times. Rapidly pasaing over the mythlcal period he comes to Croesus, king of Lydia, of whom and of his kingdom he gives a comparatively full history. The conqueat of Lisdia by Cyrus induces him to relate the rise of the Perslan monarchy and the subjugation of Asia Minor and Babylon. The history of Cambysen and his Dgyptian expedition leads him to introduce the valuable details of the history. seography, and manners and customs of Eiypt. which ocenpy the second book. The Geythian expedition of Darius caunem the historian to treat of the Scythians and the north of Burope; and the subequent extendion of the Pernian kingdom niforde him tho
opportunity for giving an account of Cyrene and Libya. In the meantime the revoit of the lonians hreaks out, which eventuaily hrings on the condict between fireece and Peraia. An account of thls outbreak and of the rine of Athens after the oxpuloion of the Peisintratidse, is followed hy whai properiy constitutes the principal part of the work, and the history of the Persian war now uns on in an uninterrupted stream until the taking of Seston. There are English tranalations of his history by Beioe, Cary, and Rawlinson, the last being accompanied by important notes and dissertations.
Heroes (be’roz), a name applied by the Greeks to mythical per sonages who formed an intermediate link between men and gods. They were demigods, whose mortal nature only was destroyed by death, while the immortal ascended to the gods. The heroic age of Greece is considered to have terminated with the return of the Heracildee Into the Peloponnesus (b.c. 1100.) There were six wieat heroic races, descended respectively from Prometheus and Deucalion, Inis hus, Agenor, Danaus, Pelops or Tantailus, and Cecrops. Individual families, as, for instance, the ※acida, Atride, Heraclide, belong to one or another of these races. Great sacrifices were not offered to the heroes, as they were to the Ciympian deities ; but groves were consecrated to them, and iibations purarel out on their sepuichers.
Heroin, Diacetylmorphine, An aikaby acetylization. The process cousists of henting pure morphine aikaloid with acetyl chloride, washing the product obtained with difute sodium carbonate soiution and thep purifying it by crystalization from hot alcohoi. It occurs as a white crystailine powder, has a bitter taste, and is odorless. It is soiuble in ubout 1700 mililiters of water, 31 of alcohol, 1.4 of chioroform, and in 100 mililiiters of ether at $25^{\circ}$ Centigrade. Its meiting point is about $172^{\circ}$ Cent. It is used as a sedative in cough mixtures and to relieve nervous irritations and moderate pain. Its effects are less depressiug than those of morphine, hut its use may become habitual
Hérold (ă-rold), Lours Josepy Fixt composer, born in 1791; died in 1833. He entered the conservatoire at Paris, afterwards studied at Rome, and became musical tutor to the daughters of Murat, king of Naples. His first successfui opera was Les Rosieres, produced in 1817. This was followed by, among other mivior comp
poitions, Lo Muletier (1823), and Marle (1826). Eis chief writs, however, are the famous Zampa (1821), and the Pro ans Oleres (1835).
Heron hirdun; the common name of ntituting with the bitterns the family Ardeido, type of what is now commonly regaried as a separate order of hirds, the Herodiones. The herons are very numeroun, and aimost universaliy spread over the riube. They are dintinguinhed by having a long bili cleft benentif the eyes, a compressed boiy. long siender legs naker above the tarwal joint, three toes in front, the two outer united by a memhrane, and by mod. erate wings. The tail is ahort, rounded, and composed of ten or twelve feathers. The common heron (Ardesa oinerēc) is ahout 3 feet in length from the point of the hill to the end of the tail, builds its neat in high trees, many being sometimes on one tree. Its food consista of fish, frofer moliuscs, mice, moies, and similar smail animais. It has an insatiable voracity, and digests its fond with great rapidity, It haunts fresh-water streams, marshes, ponds, and iaken, ns aleo the sea-shore. It was formerly in high esteem for the tahie, and, being remarkable for its directiy nascending fifght, was the special quarry pursuedi in faiconry hy the larger hawks. The great heron ( $A$. herodias) is an inhahltanit of America, and is calied also great biue heron; the great white herou or egret ( $A$. or Herodias alba) belongs to Europe; and the green heron ( $A$. virescens), the fiesh of which is mucb esteemed, is a native of North America. Feron. See Hero.
Ferpes (héripêz), a slin disease passes through a reguiar course of in. crease, maturation, decline, and termination. in from ten to fourteen days. It is characterized hy vesicies which arise in distinct but irreguiar ciusters, and commonly appear in quick succession, and near together, on an inflamed hase; generally attended with heat, pain, and considerahie constitutional disorder. The term includes shingies and the like. The name herpes is given from the tendency of the eruption to creep or spread from one part of the skin to another (Greek hernein, to creep).
Ferpetology (hèr-pe-toloo-ji ; 1 rom Gr. herpeton, a reptile), that department of natural history which treats of reptiles. See, Reptife. Lerrera (Áralra). Fravicisco, one of the greateat painters of the Seville schonl. wis born there ahout 1576; died at Madrid in 1656. Ee de
sisned with apirit and rigor, and may
jumtly be juatly be reparded an the founder of a new national achool. His Last udgment Equal praise is due to hi Holy Family and the Onipowring of the Holy spirit. He also displayed minch skili in fresco painting and hronze work.-His youngeat non, Francesco, surnamen El Mozo, wam born in 1622; died in 1685. He gained a great reputation in oll-painting and freaco, and became principal painter to Philip IV.
Herrick (herik), Ronert, an Fing 1501 ; died about 1674 . He was vicar in Dean Prior in Devonshire for about 20
that the berrings wisrated in -two creat shoaln every nummer from the Yolar Sees to the coants of Europe and America, returning in the winter, but the migration is probably only from a deeper part of the ocean to a shallower. The Reeding ground of the herring is probahiy the muo deposits found in the deeper parts of the sea, and it seemn to be a fact that during their vifits to the shaliower watery of the coant for the purpome of spawning they do not feed, or feed very iittie. In summer the herring leaves the deep water where it has pansed the winter and spring months, and seeks the conat where it may depomit itn ova, and where they nay be exposed to the influences of oxy.

years; suffered deprivation under the gen, heat, and sunight, which are ensengovernment of Cromwell; but recovered tial to their development They are his henefice after the restoration of Charles II, in 1660 . His compositions were published in 1648 , under the title of Hesperides, or the Works, both $H \pm$ mane and Dirine, of Robert Herriok. It is a delightful collection of love iyrics, Herrick, Robert, horn at Camhridse, from Harvard, 1890 . Since 1893 he ha been associated with the University of Chicago, and has been since 1905 professor of English. His works include The Common Lot (1904), The Master of the Inn (1908), Topether (1908), The Healer (1911), One Woman's Life (1013), His Great Adventure (1913), etc.
Herrin, a city of Williamson County, Marion. It has a powder plant, machine shops and foundry, and there are mane coal mines in its vicinitr. Pop. Herring (her'ing), the general Herring of fishes of the genus name pex, the most important of which is the Clupěa harengus, or common herring. It is of wide distrihution in the North Atlantic: It was formerly suppowad
generally foliowed hy multitudes of hakes, dog-fishes, etc., and gulls and other seahirds hover over the shoals. They swim near the surface, and are therefore easily taken by net. So great is their fecundity that the enormous number taken appears to produce no diminution of their abundance, as many as 68,000 eggs having been counted in the roe of one femaie. Herring, without any apparent cause, often desert parts of the coast where for a time they have been remarkahly abundant, not returning, in similar plenty till after the lapse of a number of years. Such seems to be the case on our Eastern coasts. The common American species, C. elongata, differs somewhat in its external appearance from the common European species, C. harengus, above described. It varies in length from 12 to 15 inchem: the color ahove is deep blue, tinged with vellow, with silvery sides and lower parts. Herring are full of roe in the end of June, and continue in season till the be sinning of winter, when they deposit their spawn. The mode of fishine for herrine is by drift-nets, very similar to thoser employed in the pilchard figherfes; the

Herrohel

Aebling is carried on only in the nisbth the most tavorablo time bolag when it ith quite dart, and the surface of the water ruubed by a brecel. dac) are the sprat or garvie (Clupera sprattus), the pilcharid or gypay herring (C. pilchardus), the whitebatt, anchovy, etc. The alewife (Calosa tyrannus) a fish of the same genus as the shad, frequents the rivers of the Northern United states and Canada, and is popularly known as a herring. It is taken in large numbers, and is considered much superlor to the common herring.
Ferrnhut (hern'hot) a village of Dresden. It was fongded by Count of sendorf in 1722, for the Moravian Brethrem and it afterward became the metropoils and center of that sect of Chriotians, who, from this town, are often called Herrnhuters. See Moravian Breth-

## ren. <br> Harschel

(her'shel). Caboliny LoCRETIA, sister of the nytronomer Sir William Herschel, born at Hanover in 1750; diled in 1848. She joined her brother at Bath in 1771, and acted during his life as his astronomical asidetant. She also found time to conduct a weries of observations of her own. Her obencrations were published by the Royal Soclety, of which she wha made an honorary member. On her brother's death she returned to Hanover. Ferschel, Sin Joir Fecomack william Hersehel. was born in 1782 at glough, near Windwor; died in 1871. In

1818 he was graduated B.A. at Cambridfor and wat conior wrangier and Bmicto prisemen. After bis lather's death be apent elight years roviewing the pohule and clusters of start discoresed by hils father. The fenults were sivon in 1833 to the Royal society in the form of a catalogue of atarn. The catalogue con. tained observations on 625 nebule and clusters of stare not noticed hy his fathor, and on a reat number of doubie athr between 8000 and 4000 in ali. In 1880 he produced his excelient Preliminery Dinoourre on the Study of Netural Philos. ophy, and about the same time publiched eoveral treatises in the Enovolopedic Metropolitena, Lardner's Oyolopedia, etc. In 1834 be entabilithed, at bls own ex. penve, an obmervatory at Feldhuycen, near Cape Town, hic object veling to discorer whether the dilutribution of the stara in the zoothern hemiophere correaponded with the resuite of hif father's labore in the north. He returned to England in 1888, and 1847 was pubilibhed Result, of Astronomical Observatione made during $1884-58$ at the Cape of Good Hope, being the Completion of a Telescopio Burvey of the Whole Surface of the Visitle Heavens. He was one of the earliest pioneers in photography; was made a D. C. I L of Oxford; and on the queen's coronation he was created a baronet. In 1848 he was president of the Royal Astronomical Society, and in 1850 was appointed Master of the Mint, an office which he resigned in 1855. Among Bir John's other works are Outlines of Astronomy, Familiar Lectures on Boientifio Subjects, and a translation of the lliad in verse. Ferschel, Sir Wriming, astronomer, (ersen, son of a musician of Hanover, born in 1738; died in 1822. He came to England in 1767, and was employed in the formation of a military band, and in conducting, while organist at Bath, several concerts, oratorios, etc. Although enthuslastically fond of music, he had for some time devoted his lelisure hours to the study of mathematics and astronomy: and beine diissatisfled with the only telescopes within his reach, he set about constructing instruments for himself. Late in 1779 he began a regular survey of the heavens, star by star. with a 7 -foot reflector, and discoverr: March 18, 1781, a new primary planet. named by him the Georoium sidus, but now known as Urinus. This discovery extended his fame throughout the world, and brought him a pension of $£ 400$ a year. with the title of private astronomer to the ring. Assiduously continuing his observations, he mpasured the rotation of Satarn, discovered two of itw suteliftem
and observed the phenomean of Iter riage He aleo diccovered the ertellites of Uriaus, and observed the volcanic structure of the Junar mouataine. At Slough, near Windmor, he erected a teleacope of 40 feet length, and completed it in 1787. Hernehel received much amiatance in making and recording obmervations from bis sister Caroline ; and later ble brother,

Bir WIliam Hersebel
a skiliful optical instrument maker, ient him valuable ald. In 1802 he lald before the Royal Soclety a catalogue of 5000 nebuie and clusters of stars which he had diacovered. He was made D. C. I. by the Univeraity of Oxford, and in 1816 was knighted.

Fervinld (hersifelt), a town of Prupola, province of Hewo Neceau, 10 miles n. N. m of Fulda. 1Pop. (1000) 8488.

Herntal (hersitul), or IIzaratal a Meume, 3 milem northeast of Lieje. It was the residence of Yepin ie Gros, and afterwards of several Erench kings of the ceond rsce ; and has a church founded by Charlemagne. Pop, 20,114.
Rertford (bert'ferd) an Bnglish town, capital of Hertford County, on the Lea, 21 miles north of London. It consiste of three principal streets, meeting in a central square. There are breweriem and oil and four mills. Of the castle, which was built by Edward the Eider about DOS, but a small portion remains. Pop. 10,284 . The county of HErtrord (contracted lizars) is bounded by Cambridgeshire, Essex, Middienex, Buchingham, and Bedford; area, 636 so. mlies. Agriculture is the princlpal industry. Pop. (1011) 311,321 . Kertogenbosch, See Bois-io-Dwc.
Ferta (herta), IEnRik, a Danish dramatic poet, was born at Copenhagen, of Jewish parents, in 1798; died in 1870. He wrote a great number of poems and novels, but his best works are his piays. Among the best known are Nvend During's Huuc, a tragedy founded on an old saga, and Kong Renés Detter. Hertz, HesNRICI RudoLf, German physicist, was born at Hamburg, Germany. in 1857 ; died in 1894. He studied at Berlin and in 1880 became assistant to Helmboltz. In 1885 he was called to the technical sehool at Karisruhe, and in 1898 succeeded Clausius at Fonn. He greatiy advanced the science or clectricity, was the continuator of the work of Faradas and Cierk-Maxweii, and was a singularly ingenious experimenter. He demonstrated the existence of eiectromagnetic waves of comparatively slow frequencr. The 'Hertzian' waves are propagated through space, and can be reflected, refracted, and polarized like light. Wireless telegraphy is the practical development of his discoveries, Hertz's discoveries rank with Faraday's discovery of the induction of currents, and he wrote valuable treatises.on difficult problems in electricity and dynamics.
Heruli (her a-le), an ancient Germanic people, orisinaily found on the northern shores of the Biact Sea. Under the leadership of Odoacer they helped in the overthrow of the Western Dmpire. About the end of the sixth century they ceased to have a separate exist eqce as a people,

## Hervey

(her've), James, an English divine, born in 1714; died 1738 ; was curate to his father and succeeded to the llvings of Weston Favel and Collingtree. His works, which had a great popularity notwithstanding thelr turgid and meretricious style, include Meditations among the Tombs; Reflections in a Flower Garden; Theron and Aspasia, religious dialogues; and a volume of Letters. Hervey Islands, a group of islands Ocean, 8. W. of the Society Islands, lat. $20^{\circ}$ s., lon. $160^{\circ} \mathrm{W}$., consisting of nine islands, elther volcanic or coraline, the largest belng Raratonga. Pop. about 7000. Called also Cook's Islands.

Hervieu (ervyé), Paul Ernest, a tist, born at Neuilly-sur-Seine, France, in 1857. He has written a number of novels and plays, and in 1900 was elected to the French Academy. His plays include Les Trenailles La loi de thomme, L'énigme, Lo Dédale, Le Reveil, Connais-toi, Bagas telle, Le Destin est Mastre. Herzegovina (hert-se-go-vénd), ${ }^{\text {a }}$ kan peninsula, now under the Austrian sway; bounded on the N. by Croatia and Bosnia, on the E. by Novibazar, on the s. E. by Montenegro, and on the 8. and w. by Dalmatia; area, 700 square miles. The surface is generally mountainous, but contains many fertile valleys. Pop. about 220,000 . An insurrection which broke out in July, 1875, formed the beginning of a train of events resulting in war between Russia and Turkey. In accordance with the Treaty of Berlin (1878) the province was occupled by Austrian troops, and, in common with Bosnia, was governed by an Austrian military governor until 1008, when the two provinces were annexed to the Austrian empire.

## Rerzen (hert'sen), ALiskANDER, ${ }^{a}$

 ut Moscow ; dled at Paris in 1870. While a student at Moscow he lmbibed extreme philosophical and socialistlc views, which brought about his imprisonment and exile. He was afterwards pardoned, but spent the latter part of his life (from 1847) abroad. Among his numerous works are the novels. Who is to Blame? and Dr. Krupow; Letters from France and Italy; On the Development of Revolutionary Ideas in Russia; Recolleotions of my Lifetime; Memoirs of the Empress Catharine, ete.Herzog (här'zoh), Johanir Jakos, logian a German Protestant theoErlangen in 1882. He was successlvely professor of historical theolory at Lau-
manne, church history at Halle, and latterly at Erlansen. His chief works are Calvin and Zwingu, Lifo of OEcolempedius and the Reformation in Basel, and his great Real-Encyllopadio für Protestantische Theologie und Kirche, a vant collection of German learning and speculation, of which he was the editor, and to which he contributed over 500 articles. Hesiod (héshe-od), one of the oldest poets of Greece, belongling to the eighth century b.O. and connected with Ascra, a village of Bootia, at the foot of Mount Helicon. Little is known of his life. Of numerous works attributed to him there remain only the Theogony, a collection of the oldest rablem concerning the birth and achievements of the gods; the shield of Heracles, a fragment of a larger work; and a dldactic poem, Works and Dayz, which treats of agriculture the cholce of days, etc., with prudential precepts concerning education, domestic economy, etc.
Hesperides (hem-peri-dex), in Greek mythology, certain nymphs who lived in gardens, of rather uncertain locality, as guardlans of the golden apples that grew there, being assisted in the charge by a dragon. Hesiod places the gardens in an island of the ocean far to the west. It was the eleventh labor of Heracles to kill the dragon and bring the golden apples of the Hesperides to Eurystheus.
Hesperornis (hes-per-or'nis), a fossll bird found in the chalk formation of Kansas, about 6 feet long, without wligs, and having its jaws armed with teeth, which are not set in sockets, but in a common groove. It has been described as 'a klnd of swimming, loon-like, raptorial ostrich, with. out fore-limbs, with the gape armed with formldable rows of strong teeth like a gigantic lizard, and with a large, broad, and flattened tall like a beaver.'
Hesperus (hes'per-us), among the anclent Greeks, a name of the evening star (the planet Venus).
Hesse (hes), or Hessen, anclently a territory of Germany, situated Main, Latween the rivers Neckar, Rhine, Ortunes in, and Fulda. After various Phllip I, who succeeded in the landgrat his death in 1507 divided his domin at among his four divided he deminions of these, however, reunited the territories in part; so that there remained only the two main divisions of Hesse-Casuel and Hesse-Darmstadt, the latter jow known simply as Hesse. See following articles. Hesse, or Hesserf, Grand-duchy or, formerly known as Hessew

Darmstadt, an independent state of South Germany, consinting of sundry distinct portions of the two main purtions, one (forming the provinces of Rheinhessen on the left, and Starkenburg on the right bank of the Rhine) lies immediateis to the north of Baden, the other, Oberhessen (Upper Hesse), is entirely eaclosed hy the Prussian province of Hessen-Nassau; area of whole grandduchy, 2904 sq . miles. Oberhessen is generally, mountainous; the provinces Starkenburg and Rheinhessen are also mountainous towards their frontiers, more especialiy in the southeast, hut there are aiso extensive piains heionging to the valleys of the Main and the Rhine. The climate is.greatiy diversified, heing coid and hleak in the mountainous districts, and mild and pieasant in the valleys of the Rhine and the Main. Mnch of the soil, particuiarly in the provinces of Starkenhurg and Rheinhessen, is remarkahiy fertile. The vine forms a most important ohject of culture, and fruit is very abundant. The principai towns are Darmstadt, the capitai, Mainz, Giessen, Bingen, and Worms. About two-thirds of the inhabitants are Protestants. Pop. 1,119,893. The Grand-duchy of Hesse originated in the division of the Landgraviate of Hesse in 1567. (See Hesse.) In 1806 the landgraviate was erected into a grand-duchy with an enlarged territory hy Napoleon. It was rednced to its present limits in 1866. when it had to cede to Prussia some districts in the north, besides Hesse-Homburg, which, after being separated from it since 1596 , had been reunited to it in the heginning of the year in which it was ceded. The reignlng grand-dnke, Ludwig (Louis), was married to Princess Alice of Great Britain.

## Hesse-Cassel, or Kurhessen ('Elec-

 trict of Germany, formeriy an independent electorate, containing 4430 sq . miles, hut now, with the exception of several small strips of territory, forming part of the Prussian province of Hessen-Nassau. It was founded in 1567. (See Hesze.) The last twenty years of its independent history is simply a narrative of conflicts between the people for poiitical freedom and the elector for absoiute rule. At last. on the outhreak of the German war of 1866, the elector deciared himself on the side of Austria, and his territory was occupied hy Prussian troops. On the conclueion of the war Hesee-Carsel was annered to the Prussian territories as a conquered country.Henco-Darmstadt. Eee Herac

Hesse-Fomburg, before its absorpafter the German war of 1866 , a landgraviate of Germany, consisting of two parts: the lordship of Homhury, gituated N. N. W. of Frankfort, and the lordship of Meissenheim. It had an area of abont 105 square miies, and a population of 27,000 inhahitants. The greater part of the puhilc revenue was ohtained from the gaming-tahies of the watering-place, Homburg, the capital.
Hesse-Nassan, or Hzssmik-Nassav, sia, formed out of the former Principality of Hesse-Cassei, the Duchy of Nassau, the Landgraviate of Hense-Homhurg, the territory and town of Hrankfort, etc. It horders on the Prussian provinces of Westphalia, Hanover, Saxony, and the Rhineland, the Kingdom of Bavaria, etc., and encloses Upper Hesse. (See Hesse, Grand-duchy of.) The boundary is partly formed hy the Rhine, Main, Weser, aud Werra. Other rivers are the Lahn and Fulda. The greater part of this province helongs to the central German plateau, and has a rugged surface, partiy covered hy branches of the Harz. Stiii, ahout 40 per cent. of the whoie is arahle, while ahout the same is wooded. The chief minerai is iron. Minerai springs are numerous. The manufactures consist chiefly of woolens, cottons, and linen. The principai towns are Cassel, the capital, Wiesbaden, aud Frankfort. Area, 6055 square miles. Pop. (1805) 2,070,052. Hessian (hesh'an), a stout coarse cloth made of hemp.
Elessian Boots, a kind of high bootw worn over tight trousers, in fashion with miiitary gentiemen in the eighteenth centary.
Hessian Fly (Cecidomyia deatruoily ripulide tor) a fly of the faminy Tipulids, of the order Diptera (two-winged flies), the iarva of which is very destructive to wheat, bariey, and rye crops (it does not attack oats). It is so named from the unfounded belief, prevalent in America, where it is specially destructive, that it was hrought over to that country in the baggage of the Hessian mercenaries employed against the Americans in the war for independence. The female fly is ahout the eighth of an inch in length, with a wing expanse of ahout a quarter of an inch. Its bods is brown, with the upper parts, the thorax, and the head of a darker shade approach. ing to hiack. The wings are of a duaky gray, and are surrounded with fringes. The male is somewhat maller than the Grand-duchy of. female and has longer antenne. The
female filew usually lay their egsa on the joung plants twice in the jear, in May and September, out of which egss the magsots hatch in from four to fourteen daym. Theae work themselven in between the leaf-sheath and the stem, and fix themselves near the lowest jointe, of ten near the root, and suck the juices

Hzeaun Fly (Cecidomyia deatructor). a. Male (natural sise), b, Male (magnifed). c. Pupe fixed on the joint of the whemt-talalk.
of the stem, so that the ear falls down at a sharp angle. These maggots turn to pupre, from which the flies develop in about ten days. It has long been a pest in America and Germany, but did not appear in Britain till the summer of 1886.

Hessians. In 1775 , during the Revoica, the British king called for volunteers to put down the rebelfion. As these came but slowly, he hired mercenary troops from the German states, obtaining nearly 30,000 in all. As many of these came from Hesse-Cassel the general term of 'Hessians' was applied to them. Some of them, taken prisoners, settled in the United States after the war.
Festia (hes'ti-a), one of the later the Latin Vesta.
Heteral'ocha. See Huiabird.
Feterocercal (het-e-ro-ser $r^{\prime} k a l$ ), a term applied to ganoid and elasmobranchiate fishes, in which the vertebral column runs to a point in the upper lobe of the tail, as in the sharks and sturgeons.
Feteropoda (het-er-op'o-da), an orthe most highly organized of the Gasteropoda. In this order the foot is compressed into a vertical muscular lamine, serving for a fin, and th. gills, when present, are collected into a mass on the
hinder part of the back. The chief genera are Oarincric ani Firoile. Feteroptera (hot-er-op'tere: Gr. pteron, a wing), a section of hemipterou invects comprising those in which the two pairs of wings are of diferent consistence, the anterior part heing horny or leathery, but generally tipped with membrane. They comprise the land and water buga. By gome naturalists the Heteroptera are separated from the Homoptera (the other section

Hevenorrsan. $a$, the Boutellum: b, Hemelytra. of the Hemiptera), and raised into a distinct order.

## Retman

(het'man), or ATaycas, the title of the head (general) of the Consacks This disnity was abolished among the Comacks of the Ukraine hy Catharine the Great, and although the Cossacks of the Don still retain their het$\mathrm{man}_{\text {, }}$ the former freedom of election is gone, and the title of chief hetman is now held hy the Russian heir-apparent to the crown.
Eeuglin (hoiglin), THEODOE, traveler, horn in 1824; died in 1876. He first beche known by his travele. He rat became White Wile travels in the region of the White Nile and Abywainia (1854) ; took part in the German ernedition of $1861-68$ to the Dgyptian Snudan: and afterwards accompanied Mdme. Tinne in her expedition to the Upper Nile. In $1870-71$ he made a jour: ney to the region of Spitsbergen and Nova Zemhla, and in 1875 a lant journey to the shores of the Red Sea. He published several volumes of African travel and natural history.
Heureaux (hul-r8 ), Ulysams, Prendent of San Domingo, born at Porto Plata, in 1846. He engaged in the war against Spain, was elected president in 1882 and twice reelected, and after two unsucceasful efiorts to assassinate him, he was killed in a third attempt. in 1890.
Hewlett (hillet). Maurace Hriner, 1861. His best known book is The Forest Lovers, a work of much merit, which was awarded an Academy prize in 1899. Others are 4 Masque of Dead Florentines, and Songs and Meditations.
Eexachori (hekse-kord), in the anof four tonew cient music, an interval alens tones and one semitone, equir. alent to that which the moderns call a siath.

## Hexagon

(hekráa-gon), a plane ifyuro of wx mide and wiz antilet When these lineen are cqual the figure is called erogular heocgon, Hexahedron (he wo a molid bounded by ix planee the term cube is now generalis applied to

## the regular heeschectrom. <br> Hexameter <br> (hers-ametert), a verre or epic of ${ }^{2} \mathbf{x}$ reet, the heroic

 mank The sixixt foot is always a mpon dee (two long aylibles) or a trochee (a long and a thort). The firt five mes be all dactrys (two enort syllables and one long), or ail apondees or a mixture of both.' The echeme of this verve then it-
with all the varieties which the mingling of the two kinds of feet afford In modern poetry the hexameter has been frequently need. In Englinh hexametera accent is almost entirely subuttuted for length, and trochees generally tale the phace of spondeen Longtellow in hit Evannolines Kipgales in hit 4 ndromeda, and Cloush in hil Bothte, have adopted this form of veree. The following finee are apecimens of Clough's English hexam. eters :-
 vilua
 bout under 1 pentit 1 an
Hexandria (hekr-an'dri-a), in the any, a clases of planta havinge six stament which are all of equal or nearily equal lensth.
Hexapla (hekrapla; Greek, hearapla, the Holy Scriptures in ils languaneo applied particularly to the combination of six versions published by Origen, contrining the Hebrew text with a trangecipt of it in Greek characters, the Septuasint, and three other verrions, those, namely, of Aquilia, Symmachus, and Theodotion. It is only oxtant in fragmenta. Hexastyle (hers' $\mathrm{a}-\mathrm{stif})$ ), in architec portico or temple which has ofx columns In front.
Hexham
(herrsam), a town of Enf: land, in Northumberlandshire, on the Tyne, about 20 miles west from Newcaatle. There are here ruins of an abbey charch, oridenaily a crucfiorm utructure, boill about $\mathbf{7 7 4}$, destroyed two centurlee later by the Dine renorated in 1113, and demoliahed by the Scotts in
1206. Hats, cloves, and leather are mannfactured, but the industries are chiefly agricultural. Pop. 8417. The BaxtL OF Byxay, fought 10th May, 1484, was one of thone belonging to the wary of the Rowes. The Lancastrians under Somersect were defented by Montagu.
Heydeck (hrdek), Kht wruank von, cometimes called $\boldsymbol{H} \boldsymbol{\sigma}$ dogger), a Bararian landscape painter, born at Suaralben, in Lorraine, in 1788; died at Munich in 1861. He entered the military academy at Munich in 1801, and row to the rank of lieutenant-general. Heylin (hilin), Purum en Engith
 or Deteription of the Globe, in. 1625. In 1629 he became chaplain to Charles I, and obtained veveral benefices, from which he whas ejected during the clvil war. At the Rettoration he was made subdean of Wentminster. He wrote a Life of Laud. $\triangle$ Defente of the Churoh of Enolamd, and ceveral theological works.
 an eminent German acholar and critc, born 1729; died 1812. He was educeted at Chemnits and at Leipzig Un:versity, and after a lon atrugsle with povert', he recelived, in 1763, an Invitation to become protemor of eloguence and poetry at Gottringen. He was soon after (17ef) appointed first librarinn, and remained bere till hat death. He particelaril applied himeit to clamical critciem and the illustration of the writioss of the ancients, and published valuable eaditione of Homer, Pindar, Diodorus Biculum, Epictetus, Virgil Tribullus, etc. Heyie (hrize), put Joinari Loddramatiot borm at Berlin in 1830; nettled at Manich in $1884 . \mathrm{He}$ wrote many playk, and short stories; but his fame resta on his great nove nels, including Dio Kinder der Welt ('The Children of the World ') and Im Paradiese ('The Paradive (liub'). Eenerally recognized as amons the most powerful and artistic works of modern German fiction. He died April 2, 1914.
Heyward (hi'ward), Tromas, signer of the Declaration of Inde pendence, born in St. Luke's parish, S. C., In 1746 ; died there 1800 ; member of the firt General Assembly of South Carolina after the filght of the rogal governor: of the committee of mafety; delegate to Congreess 1770-1778; wia in aetive mill. tury service in south Carolina, where be wes wounded in 1780 .
Heywood (ha'mad), a municipal bor celime ough of England, for han. combire, about 8 mille northweit of virax:
cheater. The making of power-looms, iron all branches of coung, boiler-making, and facturing, are extensively carried on. Pop. (1011) 26,098. Heywood, Joun, an early English first half of the sixteenth century, and died at Mechlin about 1565. Sir Thomas More introduced hlm at the court of Henry VIII. with whom he became a favorite. Hls zealous attachment to the Mary ; but this very circumstance rendered him an ohject of susplcion during the two succeeding reigns, and he found it expedient to retire to the Continent. Heywood's dramatic works may be classed as Interiudes, as they stand between the niracle-plays and the drama proper. Arrong them are: A Mery Play between the Pardoner and the Frere, the Curate and Nevbour Pratte; A Parable of the Spider and the Fly; the Four P's ; etc. Heywood, Thomas, dramatlst, lived James I. and Charles I. He was born in Lincolnshire, and educated at Cambridge. He composed wholly or in part 220 different plays. Of these only about twentyfour remaln, of which the one most admired ls $A$ Woman Killed with Kindness, published ln Dodsley's Collection. He was also the author of Great Britain's Troy, An Apology for Actors, and a number of other works.
Fiezekiah (hez-e-ki'a; Hizkiyah, genof Jehovah ), the twelfth Klng of Judah, and one of the best. He succeeder Ahaz about 717 B.C., and died about 698 B.c. He repressed idolatry, fought successfully against the Phillstines, and hoped to hecome entirely independent of Assyria, but had hls fenced cities captured. and was mulcted $\ln$ a large tribute. About thls time Hezekiah had a serious illness from which he miraculously recovered, and celehrated his fresh lease of llfe ln a thanksgiving preserved in Isainh, xxxvili. Among the ambassadors who came with letters and gifts to congratulate hlm on hls recovery was the vlceroy of Babylon, to whom he displayed the royal treasures. For this he recelved a terrihle rehuke, and be was told by Isalah that from Bahylon would come the ruin and captivity of Judah. The greater part of the deripture records bearing on the reign of Hezeliah ls occupled hy the two invasions of Sennacherih. and the sudden destruction of the Assprian armv. Hezekiah did nit lonk survive this dellverance. Biawatha (hi-a-wa'the). an Indian legendary hero and peace-
maker, known by this name amons the Iroquois and hy other tities among the other tribes of North America. He is mentioned in various works on the aborigines, and in 1855 was immortalized in the poem Hiaveatha, by Longfellow.
Tibben, Johs Grier, an American Iilu, educator. born in Peoria, Ilinois, in 1861. He was graduated at Princeton University, in 1882, and at Prlnceton Theologicai Seminary, 1886. After a year of study at the University of Berlin he was ordained a Preshyterian minister in Chambersburg. Pennsyivania. In 1891 he hecame instructor at Princetoa; in 1803, professor of logic ; and in 1912, presldent of the university:
Fibbing, a fillage in st. Louis . County. Minnesota, 80 miles N. W. of Duluth. It has mining and lumbering interests. Pop. 8832. Tibernia (hi-ber'si-a) the ancient name of Ireland, applied to it first by Jullus Cesar.
toit yrat by ANCIENT URDER of, a - Catholic organization instituted about 1650 for the protection of the Catholic religion in Ireland, hut now devoted to 'the advancement of the principles of Irish nationality: It has extended to other countries. The American branch has 250,000 members.
Hibiscus (hi-bis'kus), an extensive Ma genus of plants, nat. order Malvacem (mallows), chielly natives of , The specles are remarkahle for abounding in mucilage and for the tenacity of the fiber of thelr bark, whence several are employed for many economical purposes in the different countries where they are indigenouis. The petals of $H$. rosa-sinensis, a plant with large, handsome, usualiy red flowers, frequent in green-houses, are astringent, and used in China as a hlack dye for the hair and eyes. The handsome flowering shrab known in gardens as Althea frutew is a species of hlbiscns ( $H$. syrincus). The root of $H$. Nanihot yields a mucilage used in Japan as size and to give a proper consistence to paper. The leaves of H. cannabinus are eatable, and an oil is extracted from lts seeds. while it is cultivated in India for its fiber.
Eicoup, or Mrccovan. (hik'up). is a tory muscles convulsive catch of the respirep. repeated at short intervals. Though generally a trivial and transient inconvenience. its oceurrence in the last stager of acute disease is often a fatal aymptom. Hickes (hiks), Gzorac, an Finglish divine, philologist, and antignary, was born in 1842; died in 1715. He became dean of Worcester in 1883,
but of this he was deprived in 1090 for refruing to take the onths to William III after the Revolution. He followed the fortunes of James II, and was consecrated suffragan Bishop of Thetford in 1694 by the non-juring Archbinhop Sancroft. Of his numerous works the moot important are Institutiones Grammatice AngloSasonice et Maso-Gothice; etc. (Oxon. 1689), and Linguarum veterum septentrionalium, Whesawrws Grammatico-Oriticus et $\Delta$ roheologicus ( 0 zon., 1705). Tickory (hiko-ri), the name given ber trees of the genus Carya, beionging to the nat, order Juslandacee (walnut). They are natives of the United States, and are remartable for stateiiness and general beauty. The wood is heary, strong, and tenacious, and is used for making carriage-shafts, screws, whiphandles, cogged wheels, etc. The shagbark (C. elba) yieids the hickory nut of commerce, and its wood is very valuabie. C. olivaformie yields the pecan-nut. The pig-nut or brown hickory is the C. glabra, and the swamp hickory is C. amara, so calied from the bitterness of its nut.
Ficks, FhiAs, a noted preacher in the Society of Friends, born at Hempstead, New York, in 1748; died in 1830. He was an active aboiitionist, and was instrumental in inducing the New York legislature to pass an act in 1827 which liberated all slaves within the state. His ministerial services were continued for 50 years without compensation, and be gradually came to adyocate the most radical Unitarian da res. This in time led to a disruption $c$ the rociety, a body being organized uuder his teachings who are now popularly known as 'Hicksites.'
 the $N$. it is very mountainous and weli wooded, with extensive siiver, copper, and sron mines; but in the $s$. it is level and fertile, and stock-raising and farming are the chief industries. It has also a trade in cotton and tobacco. Area, $8575 \mathrm{sq} . \mathrm{m}$. Pop. 641,895.
Hides (hids), the skins of animals, name is more commoniy given to the undreased skins of the iarger domesticated animals, as oxen, horses. ptc.. the smalier hing called skins. The hide trade is now an important one. Fieracium (hi-er-l'si-nm). See FawkFiera Picra (hi'er-n pi'kra), 'Holy tic composed of aloes and canella bart made into a powder and mixed with
honey, atill a favorite in domentic medicine and veterinary practice.
Fierapolis (hr-er-apo-lif), a ruined near the right bank of the Lycua, 121 miles east by south of Smyrna. It wan famous for its thermal springe, was the birthpiace of Epictetun, and is mentioned by St. Yaui in his epistle to the Colossians (iv, 13).
Etierarchy (hrér-ar-ke; from Gr. Elerarchy hieros, sacred, and arohe, government), sacred government, sometimes the church, sometimen the rule which the ecclesiasticai governing body exercised as at once priests and civl magistrates. In the former sense the hierarchy arose with the establishment of the Christian church as an independent society. In the middle ages the papal hierarchy gathered great strength, and the pope became a spiritual monarch, ruiing western Christendom with power but feebiy iimited by princes and councils. A reactionary movement began in the 14th century, and the general tendency of subsequent events has always been to make the civil and hierarchical power more and more independent of each other. The term hierarchy as used to denote the governing and ministering body in the church, according to its several gradations, can strictly be appiled only to those churches which are ruled by bishops, guch as the Roman Catholic Church and the Anglican Church, which aiso holds the theory of a hierarchicil gradation of rank and authority. Both these churches comprise the three orders of bishops, priests, and deacons.
Hieratic Writing (hi-er-at'ik; Gr. cred), the mode of writing used by the Egyptian priests in their records. See Hieroglyphics.
Hiero I (hreerō), an ancient Greek ruler or 'Tyrant' (that is, absolute monarch) of Syracuse in Sicily, brother of Gelon, whom he succeeded in 478 B.c. He was an eniightened ruler, and a patron of genius and learning. His cuurt became the rendezvous of the most distinguished writers of his time, including Pindar. Fischyius, Bacchylides. Fpicharmus, and Simonides. The Fiero of Xenopion contains the finest eulovium of this monarch. He was several time victor in the Grecian games. Pindar has celebrated his victories; several odes of this poet are filled with his praises. Hiero died at Catana, 467 b.c.
Hiero II, King or Tyrant of Syraof Hierocles cuse (2ap-214 B.C.), Bon of Hierocles, a noble Syracunan. who claimed a deacent from the family of

## Hieroohloe

Gelon. Ho was chonen by the soldiere as general in 275 B.0., and recognized an lans about 270. In 264 he made an alliance with the Cartherinians ageinst Rome, and thus began the firat Punic war. Being defeated by the Romans be made peace by the payment of tribute and was ever after a faithful and uneful ally to them. His subjects enjojed great prosperity during his reign. Hiero dovoted himself to the construction of mill. tary machines of all kinde, and shipe of great aize, under the direction of Archimedes, who lived in Syracuee during this reign.
 Hieroglyphics (hroor - u-gimbit sacred, and olypho, I ensrare), moros, oripinally applied to the inscriptione sculptured on buildings in Egypt in the belief that the writing was confined to sacred subjectes, and lefble only to prients. The term has also been applied to pic ture-writing in general, such as that of the Mexicans and the still ruder picturem of the North American Indians. Three different modes of writing were used by the anclent Hgyptians, the Hieroglyphio, the Hieratio, and the Demotio. Pure hieroglyphic writing is the earlient, and consists of figures of material objecta from every sphere of nature and art, with certaln mathematical and arbitrary symbols. Next was developed the hieratic or priestly writing, the form in which mont Egyptian literature is written, and in which the symbols almost cease to be recognizable as figurea of object. Hieratic writings of the third millennium B.O. are extant. In the demotic or enchorial writing, derived directly from the hieratic the symbole are still more obscured. The demotic was first used in the ninth century b.o., and was chiefly mployed in social and commercial intercourse. Down to the end of the eighteenth century scholars failed to find a clue to the hieroglyphic writings. In 1799, however, M. Bouchard, a French captain of engineers, discovered at Rosetta the celebrated stone which afforded European scholars a key to the language and writing of the ancient Egyptians. It contained a tri-lingual inscription in hieroslyphics, demotic characters, and Greet, which turned out to be a decree of the priesty in honor of Ptolemy $V$, issued in 195 B.C. The last paragraph of the Greek inscription stated that two travelations, one in the sacred and the other in the popular Egyptian language. would be found adjacent to it. The discovery con alphabet was the firnt tasis. The
demotic part of the inccription wan first examined by De Bacy and Arerblad, and the rifulication of a number of the aymbolm avcertained. The hierogiyphic part
was next carefully examined and compared with the demotic and Greel. At lact after much studs Champollion and Dr. Thomas Youns, independently of each other, discovered the method of readin the characters (1822), and thuo provided a clue to the decipherment of the ancient Egyptian writing.
Hieroslyphic characteri are either ideographic. $e .$, aning well-known object! as aymbols of conceptions or phonetio 2.er reprementins worde by bymboh atanding for their mounds. The phonetio digna are asain divided into al phabetical rigne and ayllable digns. Many of tho ideographic characters are oimple enoush: thus the ficure of a man, a woman, a cilf, indicate imply thowe objects: Other: however, are less dimple, and convey their meaning figuratively or symbolically. Water was expressed by three zigeas linee, one above the other, to reprenent wavea or ripples of running water mill by a milk-jar, oil by an oil-jar, fishing by a pelican seizing a fish, i. e., fishing! seeing and wight by an eje; and so on. The nature of the phonetic hieroglypha. which represent aimply sounds, will be underntood from an explanation of the accompanying cots.

1. The frat hieroglyph in the name of Kleopatra is a knee, whieh is kne or kik in Coptic. and repreventa the $K$ of Kleopatra. K does not occur in the name Ptolemaios. 2. The second hieroglyph in Kleopatra is a llon couchant, which is laboi in Coptic, and labu in the old Eyyptian, and represents the $L$ of both names. In Kleopatra it occupies the second place, and in Ptolemaios the fourth. 3. The third hieroglyph in Kleopatra is a reed. which is $a k \in$ in Coptic and aak in the old Egyptian and represents the EF of Kleopatra. The

Cartouche of Cleopatra. reed is doubled in Ptolemaios and occupies the eirth and seventh placem, where it reprementa the diphthong ai of Ptolemaios. 4. The fourth hieroglyph in Kleopatra is a noose, which represents the $O$ of both namen and occurs in the third place of Ptolemalos. E . The fifth hierogiyph in Kleopatra is a mat, which represent the $\mathbf{P}$ of both names, and is the initial of Ptolemaios. 6. The sixth hierogiyph in Kieopatra is an cagle, which is akioom in Coptic, and repre-
venta the A , which in found twice in the name Kleopatre, but does not occur in the name Ptolemaion, although the diphthone as occur as dencribed above No. 8. 7. The meventh hieroslyph in Kleopatra is a hand, which is toot in Coptic, and representis the $T$ of Kleo patra, but doen not occur in Ptolemaios, where it might be expected to
Cartouabe of Ptolemy, be expected to
occupy the eccond place. The second place of Ptole-
maios is occupied by a semicircle, which is found at the end of feminine proper rames, and is the Coptic feminine article T. The researches of Champollion satisfied him of the existence of homophones, or characters having the same phonetic value and which might be interchanged in writing proper names. 8. The eighth hieroslyph in Kleopatra is a mouth, which is ro in Coptic, and represents the $\boldsymbol{R}$ of Kleopatra 9. The ninth hieroglyphic in kleopatra is the eagle, which is explained in No. 6 above. 10. The memicircle is the I of Ptolemaios, which with 11, the egg found at the end of proper names of women, is a feminine affix. In the name of Ptolemaios there is atill the $M$ and the 8 to account for. The fifth hieroglyph in the cartonche of Ptolemaios is a geometrical figure, concisting of three sides of (probably?) a parallelogram, but now called a hole, because the Coptic mu has that signification, and represents the M. The hook represents the $\mathcal{S}$ of the word Ptolemalos. Vowels were only regarded by the Egyptians as they were needed to avoid ambiguous writing.

There are groups of hieroglyphs of which one element is an ideographic sign, to which a phonetic complement is added to indicate the pronunciation of the ideo graphic rign. The woris of a text could be written in hieroglyphs in three ways1, by phonetic hieroglyphs; 2. by ideoFraphic hieroglyphs; and 8, by a combination of both. According to Ebers, in the perfected system of hieroglyphics the symbols for sounds and syllables are to be regarded as the foundation of the writing, while oymbols for ideas are interipersed with them, partly to render the meaning more intelligikle. and partly for ornamental purposes, or with a view to keep up the mystic character of the hieroslyphics.

## Eieronymites

(hi-e r-on'i-mits), or of St. Jerome (Hieronymus), an order of religious permons entabliohed is 1874.
who wear a white habit with a black acapulary. They pomensed the conrent of $8 L$ Lawrence in the Becrarinl, and Itlll have convents in Eicily, the Wcit Indiet, and South Americ. Hieronymus, 8 . Sco Jevomo, St. Eigginson (htsin-zun), THOMAB ican writer, born in Oambridge, Mame chusetts, in 1823. An activo abolitionist, he took part in the troubles in Kanma in 1856, and was colonel of a colored regoment in the Civil war. He in the author of works of history, fiction, biography. and essays, including Malbone, a 10 mance, Outdoor Papere, Oldport Dape, History of the United Etates, Oonoermmo $\Delta l l$ of Ds, Tales of the Enohanted IAL ande, etc. He died May $9,1911$.

## High Altar. See Aliar.

High Church, a term applied to $:$ Hgh Church, party in the Church of England. It originally indicated a party among the younger clergy during the latter part of the reign of Jizabeth, who asserted that Calvinism was inconsistent with the ancient doctrine and constitution of the primitive church, and who claimed a divine right for epireopacy. Bishop Andrewes was the chief writer of this party, and Laud becamo its most active leader. The term now generally refers to those who exalt the authority and jurisdiction of the church. and attach great value to ecclesiantical dignities and ordinances, being more or less identified with the ritualintic party. See Ritualism.
Righgate (hrfat), \& N. W. subprb of London, vituated on a hill commanding fine views of the mecropolis and the surrounding country, $5 \%$ miles from St. Paul's.
Figh German, originally the Teunigh Gcrman, tonic dialect spoken in the southern and elevated parth of Germany, as distinguished from Platt Deutsch or Low German, spoken in the northern and more lowland portions of Germany. See Germany.
Fighlands (hilandz), a somewhat vison of Scotlandefinite keographical divison of Scotland, N. and W. of line running N. F from Dumbarton on the Clyde through lae countien of Dumbarton. Etirling. Perth, Forfar, Kincardine: then N. W. through Aberdeen, Banf, Moray, and Naim to the mores of the porey Firth. The Hishlands are senerally gabdivided into two parte, the Wert Eipho lands and the North Fighiandit. The whole of the district, which embrecen the Celtic-apeaking part of Scotiand if wild
rugsed, and mountainous, with much extension of sheep-breeding and the aygrand and picturemque muenery. The weatern coant is indented by many narrow arms of the sea, and is Hanked by numerous islands. l'orming, by their natural characteristics, a region distinct from the Lowlands of scotland, the Highlands were long in a state of poitical nemiindependence, and socially and otherwise and particularly in retalning the use of the Gaeiic tongue-the people have still certain characteristles peculiar to themseives. What especially separated thim region from he rest of scotland, was not oniy the Celtic language and hlood, but also the clan system and all connected with it. See Clan.
In the earliest times the Highiand chiefs gave ailegiance to higher rhiefs or princes, by whom the Scottivh kings were acknowiedged as soverclgns merely in name. Among these native princes were the powerful iords of the Isles, who flourished from very ancient tlmes to the reign of Jamen V. They ruied over all the Western Islands (the Hebrides) from Islay north, and over the western part of the county of Inverness, and as powerful allies excrted an influence over the greater part of the Highiands. In the early part of the fifteenth century the Highlanders threatened to overrun great part of the slands, but they reccived a check in the defert of Donald of the Isles at Harlaw in 1411. From this time onward their incursions on the Iowland parts of Scotland were confined chiefly to occasional plundering ralds. In the wars of the seventeenth century the Highlanders were largely engaged on the side of the Stuarts, and great numbers fought under both Montrose and Dundep. After the smppression of the rising of 1715 a strenuous attempt was made to hreak up the tribal organization of the Highlanders. An act wat pussed in 1724 for their disarmament; between 1726 and 1737 great milltary roads were formed under the direction of General Wade, and a chain of fortified military posts constructed, to overawe the people. The chieftains made evect effort to maintain their threatened power. and to destroy the effect of the innovatlons with which the government sought to weaken the bonds of the clans, hut the weakening went on. The rebellion of 1745 gave the government an opportunity of hastening the process, by the abolition of beritable jurisdictions (which see), and of the anclent privileges of the chiefs. A stringent law for dlsarming the people was passed, and they were even prohibited from wearing their national dress. a prohibition not formally removed till 1782, The great
propriation of larse tracts to game have tended much to depopulate nome parte of the Highlands. In other parts, notably in some of the Weatern 1slands, the population bas increased beyond a point where their circumacribed condition could aupport them, and much discontent, acitation, and troubie have been the result. (See Croftery.) The Highiand dress, so well known at the present day, is modern in a sood many of its features, and especially so in the great variety of tartans that have been invented, and of which each clan now appears to claim one. There are a number of regiments in the Britlsh army originally recruited in the Highiands, and known as Highiand regiments. or Highlanders. The organization of these is still kept up, cach regiment having its distinctive tartan, some retaining the kilt, others wearing trousers.
Fighness (hi'nes), a title of honor glven to princes or other persons of rank, used with poss. pro nouns his, her, etc., and with the addition of royal, imperial, serene, applied to the members of royal, imperial, and som" German suvereign families.
High Places, in Scripture, eml-g- Laces, nences or mounds on which sacrifices were offered. Altars and places of worship were erceted from the very earliest times on the tops of hills, etc. As such a practice led to idolatrons observances, it was strictly forbidden hy the law of Moses. High places are frequently mentioned in conjunction with aroves.

## High Point, a city in Gullford

 County, North Carowood mies N. E. of Salisbury. It has wood-working mills and cotton, tobacco and other factories. Pop. 9525.High Priest, the head of the Jewish hooks of Moses the holder of this dienity is simply deslgnated the priest ; the eplthet hioh occurs on one or two occasions, hut as a distinctive epithet it appeais to have been added suhsequentiy. The formal consecration of Aaron. the hrother of Moses, together with his sons. to a hereditary priesthood. is recorded in Fxod. Xxviii. The high priesthood continned in the ine of Aaron. sometimes in one, and sometimes in another hranch of it. untii the coming of Christ. From B.C. 153 till the time of Herod the Great the regal and priestly authority ware united in members of the Asmonsean famiiy (the Maccabees). After the subjugation of the Jews the high priesthood was often ariltrarily conferred hy the foreign masters.

High Seas, the open sen. The prining the ocean hizhway is that the jurimdiction of maritime statom extends Zor oniy 3 miles, or withln cannon rauze of their own coasts, the remalnder of the seas belng hlgh seas, accessibie on equal terms to ali nations. Inland seam und estuaries, of course, are excepted.
High Sohools, in the United States, ing instruction between the elementary or common schools and the college or university. The high schooi has grailuaily superseded the older academy or eiementary achooi of the ciassicai type, and the curriculum is being constantly aitered to meet the needs of the modern indus: trial system. Business subjects, manual training, agriculture, and actuai instruction in the trades have bepn introduced into many high schonls. Seven lines of wort have been deciared by the Hlgh School Teachers' Association to be essentiai: language, mathematics, history and civice, cience, music, drawins and manual tralning. The iength of the high school course is four years, and the usual age of pupils upon entrance is fourteen years. About 5 per cent of the students prepare for college. Many clty hish schools have evening ciasses for those unable to attend during the day.

## Highways. See Road.

Hilary (hli'a-rl), ST., one of the early Poitiers, of which city, after his conversicn from heathenism, he became the bishop about $; 50$. 11 . Arians caused his banishment to Ihrygia, whenee he returned after sume years, and was an active diocesan till inis death $\ln$ 267.

Hilda (hil'da), SAint, a grandniece of lorn abont 614 ; died in 680 . At the uge of fourteen slie was baptized by Panlinus. She was successiveiy head of the abbey of Hartlepooi and of the famous monastery at Whitby.
Hildesheim (hlldeshim), a city of bishopric since 8022 . It retains sploudid specimens of medirval architecture. Pop. (1910) 50,246 .

Hildreth (hil'dreth), Richard, historian, was born at Deerfieid, Massachusetto, in 180\%. He edited the Boston Atlas, was on the staff of the New York Tribune and published various works. He is best known, however, by his History of the United © $n$ ites, published $1849-52$, and
regarded as a standard work. He died at Florence Italy, in $186 \%$.
Fill, David Bennett, Iuwyer and Hils, statesman, born in liavana, New York, in 1843 ; died in 1910. He was admitted to practice of the law in 1804, was elected to the State legislature in 1870, and made lieutenant-governor of New Yort in 188\%, succeeding Mr. Cleveland as governor when the iatter became l'remident. He was nomlnated and elected governor by the Democratic party in 1885 and again in 1888, and was made United Staten Senator in 18!)1. He was a prominent candidate for the presidential nomination in 1892, and in 1804 practically controlied the Democratic presidential nomination.
Fill, DAvid Jayne, educator, born at Plainfield, New Jersey, in 1850. IIe was professor of rhetoric at Buckneli University in 1877-79; president, 1879-88; and president of the Universlty of Rochester, 1888-96. He was appointed first ansistant United States Secretary of State in 1808 and ambassador to Germany in 1808 . He wrote several works on rhetoric, biographies, etc.
Fill, James Jerome, railroad official Hill, and financler, born near Guelph, Canada, in 1838. He was engaged for years in raiiroad enterprises in the Went and in 1890 became activeiy interested in buiding the Great Northern Railway, extending from Lake Superior to Puget Sound. He became president of the Great Northern system in 1893, and retired in 1907, remaining chairman of the board of directors. He was vice-président of the New York Chamber of Commerce. Died May $29,1910$.
Fill, iowrinnd, a popular preacher. notalie for his humor and.eccentrlelties, son of Sir Rowland Hill. Bart., of Hawkstone in Shropshire, was born in 1744; died in 1833. He was ordalned in the Anglican Chnrch, but embracing the views of the Calvinistic Methodists. he soon began to preach in barns and mefting-honses, and when thes were too smaii or too dlstant, or not to be procured. in streets, fields, and highways. In 1783 he laid the foundation of Surrey Chapel in the Biackfriars Road, London, where he preached with great snccess every winter for about fifty years, making summer excursions to the provinceg. where his preaching attracted immense crowds. He publlshed sermons and other thenlogical works. of which the best known are his Pillage Dialogues.
Hill, Rowland (Vracoowt Hics) a above, was born in 1772 nenhew of the above, was born in 1772; died in 1842.
yenr, obtained the rank of captaln in 1708, and became colonel of the 80th Roriment in 1800. Ho took pert in the Espptan campaisn, and in 1803 was mide major-zeneral. He served with great diatinction during the campaicns of Moore and Wellington in the Peninsule. In 1809 he became lieutenantgeneral in 1812 he was made a K. B.; and in 1814, on being made a peer by the

Vicoount Hill.
title of Baron of Almarez and of Hawkstone, Parliament voted him a perpetual pension of $£ 2000$. At Waterloo he commanded the right wing of the British, and he was personally thanked by Weilington tor his servicen. In 1828 he was appointed commander-in-chief of the Brtitioh army, a post which he held tili 1842, when he retired and was made a viscount.
Fill, Sre RowLaxp, an English postal in 1795 ; died in 1879 . He was engafed an a schoolmaster till 1833, shortly after which he wai appointed secretary to tha commissioners for the colonization of Bouth Australia. In 1837 he published a pamphlet recommending the adoption of a low and uniform rate of postage throughout the United Kingdom. The scheme was approved by a committee of the House of Commons, which examined its details in 1838, and eariy in 1840 the penny postage system, which seems to have been originaliy proposed by Mr. Jamez Chalmers of Dundee, was carried into effect with the assistance of Mr. Hili, who, for this purpose, received an appointment in the Treanurgi In 1848 he received a pubic testimonial of the value of upwards of $£ 13,000$. In 1846, he was
made secretary to the pontmanter-general, and in 1804 chlef socretary to the post: owec. In 1800 be became K.O.B. Ho retired from the post-ower tour years inter with a penaion of 52000 , bestden a grant of $£ 20,000$ voted by parilinment
fillah (hiru), a town of Arlate Turkey, 60 milles couth by went of Begdad, on the Eaphrates, among the ruins of ancient Babyion. It hat good bezeare, and manufnctorien of dilt and leather. The Duphrates is here cromed by a floating briaze. Pop. about 10,000.
Fillel (hulell), Jewish rabbl, born at Babyion about घ.0. 112 He came to Jerusalem, it is eald, at about forty years of ase, became prenident of the Sanhedrim and tounder of the achool of Hillel. Sbammal, another member of the Sanhedrim, became the head of a rival and houtile echool Hillel's party was the more liberal of the two, and became the dominant one.
Fill Forts, the refuges and atronghoids of the eariy in: habitants, exieting in every country of Europe. Their range in time extenda from the eariy prehiatoric through the early historic periods of the racial arena in which they are found. They were the original sites of various citien, such as Jerusalem, Athen, and Rome.
Hillsboro, (hirs bo-ro) a eity cap68 miles s. w. of Dalias. Manutnctures cotton cloth, cottonseed-oll, four, advortising noveities, etc. Pop. 7500 .
Hillsdale, a city, capital of HillHilisdale, daie County, Michigan, 80 miles s. w. of Detroit. It has a creamery. milk condensery, flour milis, and varied manufactures. Pop. 8001.
Hill States, a collective name siven to several independent and feudatory states of India. They are situated on the eart ide of the Butlej. and comprise aboat twenty staten, in: cluding Sirmar, Bilanpur, Banhahr.
Hill Tipperah, a native state of Hill ripperah, Hindustan, adjoinIng the British district of Mipperah. Bengal. The country is hilly, several ranges of hille running paraliel from N. to s ., with broad intervening valies. Wild elephants and other large game abound in the foresta. The principai crop is rice, and tea is indigenous in some parts of the hilis. The zorernment is despotic and patriarchal, and a resldent political asent protects Britiob interents Area, 4086 mquare miles. Pop. 173,320.
Bill Tribes, the neme dren collectively to tho numer.
ous wild teiben inhabiting the mountain. ous recions of Indln
If10 (hy10), the chlet town of the fland of Buwall, and the second larzest in the Slandwich Ialande. It has the only harbor on the Ende of Hawail and considerahle trade, ther belne large mupar plantations in ite vicinity. Pop. 19,785.
Tilpreoht (hil'prekt) Byavar Vor at Hoheneryleben, Germany, in 1850. In 1886 be became profemor of Semitic Philolosy at the Univermity of Pennsylvanis, and wan the leader of everal expeditions eent to explore the ittes of ancient Bahylon and other Asiatic cities. Ee sathered much valuahle mate rial, has written many papers on Babslonian and oriental ubjecta, and is a prominent authority in cunelform writIngen Bli work on the subject of texte from the Nippur library gave fise to widempread controverty.
Fimalaja (hiomith-ya, of him-slaye, the abode of mow), a chain of mow mountains in Asia, the mont elerated on the earth, which eeparates the Indian Penincula from the plateau of Tibet, between the 72d and 98th decrees of $\mathrm{s}_{0}$ lon on or between the Indus on the west and the Brahmaputra on the east: length about 1500 miles, average breadth abont 180 miles. The direction of the Himaliya range from the Indus is for sreat part of its length from northwest to southeast, after which it curves gradually to the east, or slightly to the northeart. The sreat plain of India, south of the Himalaya has a general elevation of 1000 feet above the mea. The transition from this plain to the aecent of the range is marked in the northwest by a belt of dry porous ground hroken up into numerous ravines Dast of this the Taral, a belt of sloping marsh land, occupies the same position. The Tarai is covered with forest and jungle, is crowded with wild animals, and is vers malarious. Be yond this lies the Bhabar, a belt of a gravelly and sandy nature covered with forests of valuable timber-trees, The dine, maris, or divars, longitudinal valleys partly cultivated and partly yielding forest growth, occupy the space between the Bhabar and the slope of the Fimflayas themselves. The reneral heikht of the HimAlayas is double that of the Alps: the pasmes over the former ordinarily exceed. often by. half a mile, the elevation of Mont Blanc. The Tbi-Gamin Pass in Garhwal. the hichest of all, is 20.467 feet. the Mustagh 18,019 feet, the Pasangls 18,000 leet, the Krombruns

18,818 foet, and the Dara Ghat 17,750 foot hith Thore are Eoveral summits in the Himeliaya which appronels cloedy to double the aboolute olevation of the hichent of the Alpe, and 120 of them ano atated to be above $20,000 \mathrm{fces} \mathrm{Tho}$ riveris of the Punjab (IIro Watere') uprine from a portion of the gruat chata Which maj bo coneidersed a ditinct reoup under the title of the Northwestorn Aitm. laya Some of the peard here rito to heirht of 24,000 to 25,000 foct: or to 28,278 feet If the Karratorum ti segarded an part of the Himalajes. In the Conatral or Middle Himalayas rise the courcen $\alpha$ the Ganger and Jumna, in a recion 50 . garded hy the Hindue an holy ground. Farther eastward In Nepal, in the Mishest part of the Himalaya, $0_{0}$ far as it is known and menaured. Dhawalacit hat an elevation of 26,828 feet, the Gaurlsankar or Mount Everest, the hirbent known mountain in the world, is 29,002 feet; the Yamas croup rises to the heikht of 26,680 feet, the Ihilisia rioup to 28,8 8 . Going farther east, in Silkim, or on 1t: borders, we find Kanchinjinga, the wentern peak of which is 28,150 feet hish, the enat. ern 27.815 feet, while the Kibru ridge risen to 24,015 feet. slikim forms a comparatively narrow hat interesting torritory, walled in on three dides by ctupendous mountains from 17,000 to 28,000 feet hin. Here terminates the reglon of the Midale Himalaya, mont of the utream: from which unite in the Ganges. The Eautern Himalaya, which extends from sikkim east to the Brahmaputra and completes the chain. wends all its waters to the laut-named river, and is all comprised in Bhutan. A little to the east of Silitm Chamalari attains the heisht of 23,044 feet About 250 milles further caut a conspicuous group has been obverved with two peaks, named the Cemini or Twins, 21,500 feet bigh. Thence towards the east the mountains ofnk rapidly, hut the range may he traced beyond the right hank of the Brahmaputra. This streim, as well as the Indus, rises on the littleznown north side of the Hmalayn, their sources not being far apart. The snowy ridge of the Himalayas, as far as exam. ined. consists everywhore of granite, with which are immediately associated Enelice and mics-slate, followed. in demeending, by metamorphic and secondary rocks till wo arrive at the more recent alluvial deposits. Earthquakes are still frequent within this retion : and hot springe gum forth in ahundance. even from beneath the snow. The limit of perpetual mon in the middle division (10n. 78 $8^{\circ}$ ) is stated to he abont 15.500 . feet on the wouth alde and 18,500 feet on the north-
orn. In Sikilm the now-ilne deccends on the mouth alde to 14,010 feet, whlio on the north it rives to a level of 10,400 feet. Immense slacier exict at various parte. The vegetation of the IIImalayas If very sich, there being forents of plae, apruce, allver-ifr, and deodar cedar at suitable elevations, with rhododendrons in rich profusion. Amons the more characteriatic animala are the jak, muakdees, wid sheep, etc.

## Eimera (him'e-ra), an ancient (ireek

 Sleily, the ulte of which is near the modern Termini. Here Gelon and Theron annibilated the urmy of Hamilcar the Carthaginian ( 480 B.e.). In 400 B.C. Hannibal, grandsou of Hamilear, razed the town to the ground.Iimyarites. (himijarila), a race or bla, regarided as descendants of Himyar, one of the mythical anceators of the Arabs According to tradition they became the dominant race in Yemen about 3000 years before Mohammed, and spread to the Euphrates on the one hand and Abyssinia on the other. Their most flourishing period appears to have been from bbout 100 B.c. tili A.D. 6\%2y, when they nuccumbed to Mohammedanism. The Himyaritio language, not now spoken, formed, with the Arabic and jthiopic, the southers branch of the Semitic family of tongues. During the last hundred years several hundreds of IIImyaritic inscrip. tions have been coliected, and deciphered by means of alphabets with the corresponding Arabic letters which had been preserved. The Mahrah tribes of S. Arable are the direct descenjants of the ancient Himyarites.
Einckley (hindie), a town of Engshire, bot mootly in the county of Ieleester. It lies 12 miles southwest of Ieicester, and contains an ancient church. Pop. (1011) 12,838.
Fincmar (hink'mar), Archbishop of satesman was horn shout 806; dien Epernay 882. He was at first a monk in the Abbey of St. Denis. In 845 he was elected archbishop of Rheims, where he exercised extensive political as weli as ecclesiastical authority. He was a man of enlightenment, one of the best scholars of his age, and was distinguished as a Aefender of the liherties of the chnrch. He wrote two treatises on Predestination, and numerons other works.
Find (hind), the female of the atag, or red-deer. See Deer.
Findenburg, PavL vow, German
born at Powen in 1847. If materod the army, way decorated lor courage at Ba. dowa 1846, and alro In the Vrameo-Prum slan War, 1870. Placed on the General Stafi, he was made major-general in 1010 , lleutenant-generai in 1003, and retired in 1011. He re-entered the army in 1814, won the virtory of Tannenberc, defeathy the liumsians with great jose, and in November was made field marchal. In 1016 he was placed in supreme command over the eastern front, and of Ausuat 20 succeeded Oeneral von Faikenhayn as chief of the Gieneral Statr.
Findi (bin'di), one of the languages
of India, being that form of Hindustanl which employs the Devenagarl or Bannkirt character.
Hindley (hind 16 ), a town of Ensland, in Iancashire, sling name to one of the parliamentary dietricts of s. w. Lancashire. Cotton manufacture is the chief induatry, and coal abounde in the vicinity. Hop. 24,106.

## Binduigm. See Brahmanism.

Findu Kush (hin'de kosh), or Ir. dian Caudcabues. a mountain system of Central Asia. It is generaily considered as a continuation of the Ilimajayas, which it anjoins at the Indus, and then stretches went till it unites with the (hur Mountains in North Afghanistan. Its cuiminating point. in the range of Hindu-Koh, to the north of Cabul, fs said to be about 20,000 feet. In many features the Hindu Kush resembles the Himaiayas proper, though it lo lower and without forests.

## Hindus, or Hindoos. See India.

 Hindustan (hin-du-ntln'), the name commonly siven to the whole Indian empire, properly applies only to the Punjab and the valley of the Ganges.Hindustani (hin-dus-ta'nes), one of the chief languages of Indla, having various forms or dialects. When written in the Persian character, it is known at Urdu, another form of it is called Hindi.
Hiogo (hé- $\boldsymbol{j}^{\prime} \mathrm{g}$ ), a seaport of Japan, 1860. It is situated on the island of Hondo, on the Bay of Osaka, 40 miles s. W. of Kioto. The trade with the interior is important, and the exports large. Pop., inclusive of Kobe, 285,002.
Fiouen-Thsang (voo'en-tsang), and Buddhist priest, born abont A.D. 602 ; died in 684. He wrote travels in India, and translated many Hindu books on Buddhism into Coinese.

Fip, the fruit of the dogroes of wild brier. it contains canain, zugar. eftric and malic acile, and is sometimen used in making coneorrec.
Rip-joint, the joint of the hip, a ball. the recepition or femur or thish-bone into the mocket or acetabulum of the on innominatum. For Gexion, extenalion, rotation, and atrength combined, it is the most perfeet joint in

## the body. <br> Hipparchus. See Hippias.

Eipparchus (hip-ar'kus), an anwas born at Nicea, in Bithynia, and lived about a.c. 100-125. He resided for some time at Rhodes, but afterwards went to Alezandria, then the great mehooi of ucience. A commentary on Aratug is the only work of his extant. He firat ascertalined the true length of the year, discovered the precenilion of the equinoxet, determined the revolutions and mean motions of the planets, prepared a catalogue of the fixed starn, etc.

## Hipparion (hip-ar'i-on), a fossil

 Camily, of the genis of the borme ocene periods. The members are dlstinguished by the fact that each foot posremen a single fully-developed toe, bordered by two functioniess toes which do not touch the ground, but simply dangle on each side of the central toe. The hipparion was about the size of an ass, one American species belng, however, about the size of a goat.Hippias (hipp plas), ruler of Athens, whove death ( B.c. 527 ) be amsumed the government, in conjunction wlth his brother Hipparchus. The latter being amsassinated while conducting a solemn processlon to the temple of Minerva, Hipplas selzed the reins of the government alone, and revenged the death of hls brother by imposing taxes on the people, selling officen, and puttling to death ali of whom he entertalned the least suspicfun. His tyranny became at last unbearable and lie was expelled from the clty в.c. $\frac{10}{}$.

Kippo (hip $\overline{\text { o }}$ ), sometimes called Hippo Regive to distinguls it from another town of the same naras on the Carthaginian coast : an anclent Numidian city. the ruins of which still exlst a short dlstance south of Honu in Algeria. It was the episcopal poe of St. Augustine, and was destroyed by the Vandals in 430.

Rippoboscidx (hip u-hos'ai-de), a.

- th paraltic on hirds and quadracus The type is the genus H(ppoboce: or sione-ily.

## Bippocampus <br> (hip-u-kamp pup)

 clomely ailied to the pipefishem, of singular conutructlon and pecullar bablta: the upper partn have mome renemblance to the hesd and neck of a horwe in minatare, which has ausgented the name. When swimming they maintain a vertical ponltion; their seneral lensth is from 6 to 10 inches, and they necur in the Mediterranean and Atiantic.Fippocras (hipuokras), a medicinat drink, composed of wive (generaliy a mlxture of lisbon and Canary), with an infusion of mixed apicea and other ingredlenth, formerly muctr uned in Fingland, and ntlli common on the continent.
Hippocrates (hl-pok'ra-tea), the most famounamons the Greek physlcians, the father of medr. cine, born in the island of Com B.O. 460. Besides practicins and tearhins his profession at home he traveled on the continent of Greece, and died at an advanced

Hippocrates.-Antique bust. ase, B.C. 357, at Larissa, in Thessaly. His writings, whick were early celehrated, beeame the nucleus of a collection of medical treatises by a number of authora of different piaces and perlodes which were lons attributed to bim , and still bear his name. The bast edition is that of Littre (in ten vols. 8vo, Parls, 1839-61). Among his gennine wrltings are the first and third books on epidemics; the aphorisms; on dipt in acute diseases ; on air, waters, and locallities; on proguostics ; on wounds of the head. IHppocrates was one of the first to insist on the importance of diet and regimen in disease. IIe bad ramario able skill in diagnosis, practicer anscults. tion, and tanght the doetrine of "eritical dave."
Hippocrene
(hid:a-knens: "The Horwe'n Dountain'), a
epring on Monnt Helicon, mountain in Beootia, consecrated to the Musem, the waterm of which possessed the power of poetic inspiration. It is said to have risen from the ground when struck by the hoofe of Pegasus.
Tippodrome (hip'n-drom); the public place where the horse and chariot race: were held. In Byzantine times the hippodrome at Constantinople acquired great renown, and factions originating in the hippodrome cansed perpetual confumon in all departments of the pnblic service. The name is cometimes applied to a modern circus.
Eippogrifi (hip'n-grif), a fabulous horse and half grifin. Bippolytus (hip-pol'i-tus), in Greek mythology, son of Theceus, whowe atepmother, Phsedra, fell in love with him, and accused him to his father in order to revenge herself for his indifierence. He was pnt to death, but his innocence being afterwards established, Phedra destroyed herself. See Phadra.
:ippolytus, an early Ohristian details of whose history are involved in obecurity. He appears to have lived about the beginning of the third century, and is snpposed to have suffered martyrdom under Alexander Severus. Tha mott important of his writings is the Philosophumena, a refutation of heresies, discovered in 1842.
Sippomane (hip-om'ân), a genns the Enphorbiacere. The H. Mancinella is the manchineel.
Bipponaz (hip-po'naks), a Greek 540 R.C. of whose works on Ephesus in ment of 100 lines remains. He was deformed in person, was hanished from Epheans for his satirical raillery, and lived in extreme poverty.
Zípponotis. See Bellerophon.
Hippophagy
(hi-pof $a-\mathrm{gi}^{2}$ ), the practice of feeding on horge flesh. Hippophagi was the name given by old geographers to certain nomadic Scythinn tribes on the north of the Caspian Sea, who fed on horse flesh. Horse feah has heen eaten for a considerahle time in Germany, and it has been regularly eold in Paris since 1866.
Bippopotamus
(hip-po-pot'a-mus),
the typical genns of $\Omega$ family of Ungulates, of which two living species are known. One species, II. omphibive, is of large rige, and is
common throughout the greater part of Africa; the other, $\boldsymbol{F}$. uberionois, is not only maller, but has other important direrences, and in found only in the African west coast rivers, and thowe flowing into Lake Tchad. The former specles has a thick and aquare head, a very large muzsle, small eyes and earm, thick and heavy body, whort legs termin-

## Hippopotamus (Eippopolemus amphiblus)

ated hy four toes, a short tail, two ventral teats, skin abont 2 inches thick on the back and sides, and withont hair, except at the extremity of the tail. The incisors and canines of the lower jaw are of great strength and size, the canines or tnsks being long and cnrved forward. These tusks sometimes reach the length of 2 feet and more, and weigh apwards of 6 lbs. The animal is killed by the natives partly as food, hut also on account of the tusks and teeth, their hardnew being superior to that of ivory, and leas liable to turn yellow. The hippopotamus has been found of the length of 17 feet, and stands abont 5 feet high. It delights in water, living in lakes, rivers, and entuaries, and feeding on water-plants or on the kerbage growing near the water. It is an excellent swimmer and diver, and can remain nnder water a considerable time. The behemoth of Job is considered by commentators to be the hippopotamns, as the description of his size, manneris food, and hannts is not nnlike thome of the latter animal. Amons the ancient Egyptians it was revered as a divinity, as it is among the negroes in wome localities. Several extinct species are found in old-world tertiary and dilnvial formations.
Bipourites (hip-nr-iptez), a genus of fossil bivalves, having the under shell of great depth, and of a conical form, with a fiat lid or operculnm, occurring in the lower challs. Whey are allied to the living Ohame, or gaping cockle. The Hippurite 7 imestono is an important reprementative of the cretaceous rocks in the eouth of jrrance and tho

Pyrencem, characterized by a large admixture of shells of the family Hippuritids. Ifip-i:00f, a roof, the ends of which same inclination to the horizon as its other two widem
Pixoshims (heronhèma) a comon the 5 coast of Hondo. Pop. 142,763. Iirschberg (hirshiberh) \& a town of Silesia, 78 milem W. s. w. of Breslav. Pop. (1910) 20,500.
Rirsoh, DMiL Gustav, was born in and after being aducated in Germany, studied first at the Univermity of Pennaylvania and then returned to Germany to continue his studies the Universities of Berlin and Leipaig. He became a rabbi and minister of Har Sinai Congregation, Baltimore (1877). After holding other charges, he became professor of rabbinical literature and Tonophy, University of Chicago. He editor of the Biblical Department of the Jouoish Enoyclopedia (1803-06) ; has edited the Zeitgeiot (Milwaukee), Reform (New Yorts), and is now at the head of Reform Lidpocate (Chicago). Tircoh, Maurict, Baron DE, born in died in 1896 . He realized a vast fortune which be employed in bettering the condition of his race. He was a founder of the Jewish Colonization Society and gave it a capital of $\$ 10,000,000$, subsequently increased by $\$ 35,000,000$. Fingen (hisjen), Tromas Lours, bnrs, Indiana, in 1852. He settled in Springfield. Mass., where he engaged in the oll business and had a long fight with the Standard Oil Company. He was candidate of the Independence party for president in 1808.
Rissar (his-sär), a town of Hinduistrative headousrters of district of the same name. Pop, about 17,000. The div. trict has an area of 3540 sq. miles. Pop. 780,000. Hissar is also the name of a diss trict of Bolhara, in which large crops of rrain and cotton are produced. The capital, Hissar, has abont 10,000 population. Fistology (hid-tol $8-j i$ ), the study of into the formation of animals and plants, and their various organs, by menti of the microscope and chemich and phyaical reacents. It may be doncribed as a kind of minute anatomy. It comprehends the mtructure and mode of development of the various tismues, and if
divided into animal hintology and vegetable histology.

## Ristory (bis'tu-ri; Greek Miotorie,

Irom $h$ is tofod, I lequire into) is used by Herodotus in the nenme which it has since retained, of a narrative of events and circnmstancen relating to man in his social or civic condition. a record of bare tacts by themselves does not constitute history. Snch a record (forming a chronicle or annals) in chronologically valuable; bnt to attain the disnity of history we must have mocial events and evolution detailed with considerable fullness, and the growth and movements of society, from one phase to nnother, distinctly traced and recorded. The mod: ern school of historians devote mnch ato tention to the social life of the people; their method being further characterized by the utmost accnracy of rewearch, the extreme importance assigned to contemporary documentary evidence, and careful weighing of data. The field of history proper is so far restricted as to its mubject, that only the doings of a community possessing something of an independent organic life can constitute it Eistory may be conveniently divided into ancient, mediseval, and modern; bnt these divis lons have little scientific value. The firnt includes the Jewish history and that of the nations of antiguity, reaching down to the destruction of the Roman fompire, A.D. 476 ; the second begins with 476 and comes down to the discovery of Americs in 1492, or to the Reformation; the third section extends from either of theme erat to our own times. The earliest written history is found graven on the monuments of Egypt, Assyria, etc. These, though of the barest description, have the value of contemporary chroniclen. Next come the histories fonnd in the canonical books of the Old Testament; but the real inventors of the artistic form of history were the Greeks.
Eitchcock (hich'kok), EDWARD, geologist. born at Deer field, Massachusetts, in 1783 ; died in 1884. After being for four Jears minister of a Congreqational church a.t Conway, Massachusetts, he was appointed in 1829 professor of chemistry and natural hintory at Amherst College, and in 1845 prevident of the same college, and profensor of natural theology and geology. He was connected with the state survey of Masea chnsetts, Vermont, and part of New York, valuable reports on which he pnblished. He was anthor of varions other works, tome geological and some of misteelianeout character. Thene include Geologn of the Connecticut Vallew, a hishly popular voris on Elementery Geology; IWubtrotion of
$38-\mathrm{U}-3$

Aurface Geology, Roligion of Geology and its Conneated Scienoes, and Rominio oences, pnblished shortly before his denth.
Bitchoock, Exfan Aurur, diploMechias Maine, in 1835 ; died in 1909 . He engaged in mercantile and corporation purninte, was appointed United States minister to Russia, in 1897, and ambasandor in 1898, and entered the McKinley cabinet as Secretary of the Interior in 1809, holdins the same office nnder Roosevelt nntil March, 1907. He was active in bringing abont the prowecntion of those accnsed of defranding the Indians.
Bitohin (hich'in), a market town of in Ersland, in Hertfordshire, 34 milem north of london. The parish church, St. Mary's, contains some fine brameem of the fonrteenth, fifteenth and sirteenth centrries, and a notable altarpiece by Rubens. Many women are employed in straw-plaiting, and lavender is fargely srown in the vicinity. Pop. 11,800.

## Hitopadesa (hit-o-pa-da'sha; San-

 tion), an ancient Sanskrit work, taken from an older work called the Panchatantres or the five books, the source also of the collection known as the fables of Bidpal or Pilpay. The book consists of fables, one story growing ont of another after the eastern fashion, with verses cited from ancient writers by the interlocutors, and was designed for the instruction of princes. It has been translated into many Asiatic and Bnropean languages.Bittites (hit'Its), a Canaanitish nation first mentioned in connection with Abraham, who bought the field and cave of Machpelah from them. There are notices of them in Palestine dnrins and after the captivity. Egyptian and Ansyrian inscriptions seem to indicate that the nation consisted of a confederacy ruled by a number of chiefs, and many relics have been discovered within recent years indicating that there was at one time a Hittite empire extending over a large area in Asia Minor and Syria. Their chief territory was in the Orontes Valley, and they seem to have played a prominent part in the history of Sonthwest Asia for a considerable period.

## Bitu. <br> See Itun.

Riva0a (herva-ida) an island in the larigent of the southwestern gronp of the Marquesar:; 22 miles lons past to west; abont 10 miles greatest breadth. It is mountainons, and bears indications of volcanic eruptions.

## Bive. <br> See 1 piery.

Bivites (hivits), a Canaanitich tribe first noticed in Gen., zoriv. At the conqnest of Canaan the main body occupied the northern contines of Wentern Palestine. Solomon subjected them tc a regular tribute.

## HPLassa. See Lassa.

Eoadly (hōdli), Benjamin, an Eng died in 1701sh prelate, born in 1076; died in 1761. He wrs educated at Cambridge; took orders in 1700, and after being settled in London distinguished himself in controversy with Bishop Atterbnry and others. A staunch low-churchman, he was appointed Bishop of Bangor, in 1715. A sermon preached before the king in 1717, gave rise to the 'Bangorian Controversy, regarding the divine authority of the king and the chnrch. He was translated to the see of Hereford in 1721, to Salisbury in 1723, and Winchester in 1734.
Hoang-EIo (hö-ang-hü), or Yusow River, a large river in China, the sources of which are in monntains in the Koko-Nor territory, north from Tibet. After a winding course of severai hundred miles, it proceeds nearlv dne north to about lat. $41^{\circ}$; then east for nearly 200 miles, when it suddenly bends round, anil flows directly south for about another 200 miles; then turns abrnptly east, and flows in that direction till it reaches Lung-men-kau. when it diverges to the northeast, and falls into the Gnlf of Pe-che-le, abont lat. $37^{\circ} 30^{\prime}$, and lon. $118^{\circ}$ $30^{\circ}$. From the thirveenth century till 1853 the Hoang-Ho entered the sea in lat. $34^{\circ}$, south of the penineula of Sban-tung, but at the latter date it took its present course. Since then vast sums have beeu spent in watching and strengthening the banks of the river, which is constantly overflowing at some point. In the alltumn of 1887 the whole body of the river burst its banks about 800 miles from its mouth, and flooded abont one-sixth of the province of Ho-nan, destroying towns and villages and cansing a loss of life, the lowest estimate of which is one million. Its length is estimated at about 2 CM miles. It derives its name from the vast quantities of yellow earth held in a statr of solution by ith waters.
Hoar (hor), Gromer Frisbit, senator, was born at Concord, Massachusetta, in 1826; died in 1804. He gracillated from Harpard College in 154 . in hl afterwards from the Dane Law school, Harvard. He practiced law at Worcester, was elected to the state lerisiature in 1852, to the state senate, 1857; was mem.
ber of Congress, 1809-77, and United States Senator from 1877 until his death. He served on the Tilden-Hayes Bilectoral Commission and was chairman of the Repuhlican National Convention of 1880. He has ieft valuahie memoirs of his obnervations during his long career.

## Hoar-frost.

## Hoarhound.

See Frost.

## Hoatzin

(ho-at'zin), or Hoactzin, Opisthocómus cristatus, a singuiar gregarious South American hird, sometimes called the crested touraco, re ferred hy some naturalists to the family Cracidse (curassows), order Gallinacese: hy some made to form an order hy itself (Opisthocomi) ; hy others regarded as of the order Insessores, and allied to the plantain-eaters. The plumage is hrown streaked with white, and the head has a movable crest. It is of the size of a pheasant, and has an enormous crop with a very small gizzard.
Hobart (hóhert), up to 1881 Hobabt Town. the capital of Tasmania. situated at the foot of Mount Wellington ( 4168 ft .), on the river Derwent, aboat 12 miles from its mouth. The city is huilt in the form of a square, the streets crossing each other at right angles. Among the puhlic huildings are the government house, the government offices, the houses of pariiament, town-hall, postoffice, mnseum, Episcopal and Roman Catholic cathedrals, and several other places of worship, many puhlic and prirate schoois, the general hospital, etc. There are several jam manufactories, hreweries, flour-mills, tanneries, a woolen factory, etc.; and in connextion with the shipping interest first-class patent slips. The harbor is casy of access, and has ample depth, capacity, whanf and dock accommodation. Pop. (1911) 27,526. Elobart (ho bart), Garmetr Avausat Long Branch, New Jersey, in 1844 He adopted the legal profession and was a member of the New Jersey legislature, 1873-85, being president of the zenate, 1881-82. He became very prominent in Repuhlican politics, and after heing defrated for the United States Senate in 1884, was nominated for Vice-President, and elected for the term 1897-1001. He died November 1, 1899 , before the completion of his term.
Hobbems ( $\mathrm{h} \mathrm{oh}^{\prime}$ be-ma), Minindiar landscape painter. ormpirifout, a Dutch 1638; died in 1709.
ELobbes (hobs), Thomas, an English
pher born in 1688 at Malmenbury i c in 1679. He was educated at Oxford, d afterwards traveled on the Oontinen', ${ }^{3}$ tutor in the Eari of Devonshire's family, becoming acquainted with Gamendi, Detcartes, Galileo, etc. He was also intimato with Lord Bacon (some of whone worls he translated Into Latin), Lord Herbert of Cherhury and Ben Jonson. From 1637 to 1641 he resided much at Chatsworth, hut becoming alarmed at the probahility of political commotions, he went to Paris. He stayed abroad some yearm, and during that time puhlished most of his work. He alro tausht mathematics to the Prince of Wales (Charles II), then in Paris, who after the restoration gave him a pension of $£ 100$. He spent his latter dayw with the Devonshire famiiy. The most remarkahie of his works is his Leviathen, or the Matter, Form, and Power of a Commonvealth ( 1651 ). Other works are De Cive (1642), De Corpore Politico (1050), De Libertate, Necesitate et Cesw (1654), and Behemoth, a history of the Civil war, puhlished after his death. He also puhlished a metrical version of the Iliad and Odyssey. In the history of the development of freethought in Europo Hohhes holds an important place, and he was one of the first great English writerm on government. He conceived the atate of nature to he one in which all thinga are at war with one another, and government as the result of a compact, susgested hy selfishness, for the sake of peace and protection. Abmolute rule was the best form of government, but this is gualified hy the assertion that obedience to a ruler is due only so long as he can afford protection to the subject. His philosophy, depreciated among his contemporaries, was more or less adopted by Locke, Hartiey, Hume and Priestly.
Eoboken (ho'bo-ken), a city of New Jersey, on the Hudson River, and close to Jersey City, which axtends immediately to the sonth. It Jies opposite New York, with which it is connected by steam ferries. It is the terminal of the Lackiwanna Railroad, and is served hy several others. It has various manufactories, and five lines of European steamers salif from this port. Among the public institutions is the Technical Institute. Pop. 75,000.
Elobson (hob'snn), Richmond Prapson, naval oficer, was borm at Greensboro, Alahama, in 1870, and graduated from the naval academy if 1891. Durins the 1898 war with Spain he took a collier, the iferrintac, foto the entrance of Santiago harbor, and sunlt her in the channel, with the purpone of closios it against the Spanima squaliso

In the harbur. Be and hil compeniong onapod in a small boat and unrrendered to the Spanish commander. For this he was promoted first naval constructor. He realmed and was elected to Congrees, 1000, whas he strongly insinted on the danger of war with Japan.
Hobson's Choice, a choice withtive; that which is tendered, or nothing; the one thius or none. This phrase In and to have originated from one Hobson, a livery-atalie keeper at Cambridge, Enghand who obliged each customer reqniring the hire of a horve to take the next in turn, or that which atood nearest the itable-door.

## Roohe (ouh), Lanzies, seneral in the

 born in 1768 . He took servic: in the Drench guands when sixteen years old, and at the revolution joined the popular party. He sreatly distinguished himself at the siese of Thionville and the defense of Dunlirk, and shortly afterwards, when marcely twenty-five years of age, received the command of the army on the Moselle. In 1793 ha drove the Austrians out of Almace, and soor after was arrested hy the Jacohins and imprisoned at Paris. In 1794 he was released, and appointed commander of the army destined to quell the rising in the west, and afterwards to that in La Vendee. In 1796 he conceived the plan of attacking Britain, by making a degcent on Irrland. He accordingly set Rall in December from Brest, hut the expedition utterly failed, and he was ohliged to return without having even effected a landing. After his retarn he recelved the command of the army of the Samhre and Meuse. He opened the cumpaifn of 1797 by a bold passage over the Rhine, and had defeated the Anstrians in ceveral engageitents, when he was stopped in the path of victory hy the new of the armistice concluded in Italy. He died snddenly in. September of the name year (1797).
## Hochst (holsst), a town of Prnssia, in

 Erankfort. It has varied indnstries. Pop. 14,121.Hochstradt (hoh'stet) Bavaria, the heim in 1704. Fup. 2471. Fook, the name given to the German cistrict. It is a white still wine, hut is sometimes rendered sparkling. The name is alno applied to all the Rhenish wines, Fockey (hok'i), a game at ball and hurling in Ire?and. It is played with - club curved at the lower end, by a
number of persons divided into two paro ties or sides ; and the object of each alde is to drive the ball into that part of the field marked of as their opponento conl. In Canada and the zorthern United States it is played commonly in the winter on ice.

Ioe Hookey, however, is more meientific than the old shinty and arose in Canade about 1880. It was introduced into the United States hy some of theme Canadian college players (1894-05), and the same has become very popular in America. The game requires a rink 112 ft . long ar 358 ft broad, and boundary hoards, preferahly 36 in . hish, for carroming. a vulcanired ruhber dife, 1 in . thick and 3 in . in diamever, known as a puck, is advanced by pushing or lifting with hockey sticks ghout four feet long, terminating in a blade set at an angle of about $45^{\circ}$ with the haft. This hlade may not be more than 3 inches wide. The object of the game in to drive the puck into the opponents' soal, which counts as one goal. The soals consist of pockets of netting extending back from posts and are uir feet wide and four feet high. The players are seven in number, consisting of lour forwards and three for defense.
Hoe ( $\mathrm{h} \delta$ ), an instrument for cutting up weeds and loosening the earth in fields and gardens, in shape something like an adze, being a plate of iron, Fith an eye for a handle, which is set at a convenient angle with the plate. The Dutch hoe differ: from the common hand hoe in heving the cutting hlade wet like the hlade of a spade. A horse-hos is a frame wheel-mounted, and furnished with ranges of shares spaced so as to work in the intervals between the rowe of turnipe, potatoes, etc. It is used on farms for the same purpose as the hand hoe, and worked by horse-power.
Hoe, Richard Marsh, inventor, born 1886. He invented in 1846 : died in printing press, and suhsequently the Hoe web-perfecting press. These inventions made a revolution in the art of nowspaper printing, to which they were specially adapted.
Huf (hof), a town in Bavaria, Upper the Franconia, on the left bank of the Saale, 30 miles N. N. E of Baireuth. It has woolen, linen, cotton, leather and paper manufacturen. Marble and ironstone are worked in the vicinity. Pop. (1910) 41,128.

Hofer (hofer) Andreas, a Tyrolese choler patriot, born in 1767. In 1796 he led a rifle company against the French on Lake Garda, and after the Peace of Luneville took a prominent part in the
orguination of the Trrol millitia. In 1800 he took the lead in an innurrection of the Tyrolese for shating off the yoke of Bavaria, to which their country had been tranderred by the Treaty of Pres: burg. In a short time, with intermittent asmantance from the Austrians, he defeated the Erench and Bavarian troopa, and nearly the whole country was liberated. Hofer then carried on the military and civil adminiatration, under the most singular circumatancem, till the Peace of fienna was proclaimed. Misled by false reports he commenced hostilities anew, and thus forfeited the protection of the amnenty. He remained concealed for some time, but was at last betrayed to the French, and carried to Mantua, where he was tried by a court-martial and shot, February 20, 1810. His family was indemnified for the loss of their property by the Emperor of Austria in 1819, and his son ennobled.
Foffiman (hofman), Cearlies Fensborn at New York in 1806; died in 1884. He edited the $A$ merican $M$ inthly MagaHine and the Now York Mirror; published Greyslaer, a novel; The Viail of Faith, and other Poems; and a namber of songs, ete During the last thirty years of his life he was afilicted with mental derangement. A complete edition of his poems was pnblished by him nephew in 1874, with a critical introdnction by W. C. Bryant.

## Hoffmann,

AUGOET HEnNETOE, called also Hormmann von Fancimaslumens, a German lyric poet and philologist born at Fallersleben in Hanover in 1798; died at Corvey in 1874. Under the influence of the brothers Grimm he took to investigating old German literature, and became professor of German literature at Breslau in 1835. He also made special studies of Dutch and Sileaian literature. He was dismissed in 1842 for the supposed revolutionary tendencies of his songs, and led a wandering life for some jears. In 1860 he became librarian to the Duke of Ratiber. He pablished several volumes of songs, and works on the German language and literature.

## Rofimann,

Ernet Thiodor AmaDros, or, properly, Banst Theodor Wrublim, a German novelist was born at Konigsberg in 1776, where he studied law. He afterwards held several minor judicial appointments znder gorernment, and died in 1 gon , intemperate habits having ruined his health. He cultivated music and art especially caricature, with succems. Among his work of fiction are the Phantasiesticle
in Callote Manier (1814) ; Die MHivire des Teufels (1816): the Nrentestole (1817) ; the Aerapionibrilieve, tic.

Iofmann, Josmpr, celebrated planGallicia, in 1877, and became no proficleat under the tutelage of his father, who wat a capellmeister and composer, that at the age of 10 he made a concert tour of America. The infant prodisy doveloped into a brilliant player followin a period of retirement and further stady in Durope. He returned to the United State in 1001 and made an instant succem.
Bog, a general name for the nngulate Sus, or swine. The head is prolonced into a pointed or truncated snout; the feet have four toes, two of which reach the ground, and the akin is very thick, and mostly enrered with stiff bristles. The common hos (Sus sorofa), in a tame state, is almost universal, except in very high latitudes. The prevailing color of the domestic animal is a dull yellowish white, sometimes marked irresularly with black and sometimes totally black. It is omnivorous in its habits, devouring almost any vegetable or animal anbstance. It is also very prolific, has usually two Iltterm in a year, a litter consistins of from ten to even twenty. Its flesh formo a material part of the food of mankind, though Jews are strictly enjoined not to eat it and Mohammedans. asree in this prohibition. Pork takes salt better than almost any other meat, and hence forms an important article in military and naval atores. The lard of the hos is employed in a variety of preparations, and the bristlem are used in large quantlities in the manufacture of brushem, while the skin, when tanned, is used by saddlers, bookbinders, etc. The hc., is erroneonsly looked on as a peculiarly stupid and sluttonous animal ; it has also an undemerved reputation for filthy habits, but the too common filthiness of pig-stien is more the fault of the owner thas the tenant. It wallows in the mire, but this is a pectliarity of the pachydermata, to cool themselves and provide a protection against insects. The wild-boar, from which mont of our domesticated varieties are derived, is found in most parts of Europe and Asia. In size the wild animal considerably exceeds the domesticated hos, the legs are longer and more muscular, and the back therefore much higher. Fnnting this animal has alwaye been a favorite ampament, and can still he practiced in various parts of Europe. The wild hons of Hindustan, which giford the amue ment of "pis-atticion" to the Brith resident there belong to the upecies \&.
cristatus, closely allied to the Enropean wild-boar. Another species is fonnd in Southeantern Asia, Java and various Islands, and distinct from it is the Guinea hog of W. Africa, which is also sald to have been natnralized in Brazil. As allied to the hos mas be mentioned the Babyrowseg, the genus Phooooharws, or wart-hoge and the peccaries In 1010 there were on American farmg 44,158,000 hoge; $50,041,000$ in 1812; $05,248,000$ in 191. On March 31, 1918, there were on American farms 74,324,000 hora, valued at the enormons $u$ um of $\$ 2,500,000,000$, by far the greatent number produced in a rigle jear. Ho cholera (see Sroine Fover) was np till recently responsiblo for heavy low among swine, but thank to the efifort of Congrens the dinease is gradually being stamped out. Constantly increadis appropriations of Congrens permitted the cholera-control demonstration work to be extended to thirty-five staten in 1018. The lone in 101 from hos cholera was 119 per thousand; this was reduced in 1017 to 48 per thoumand, eaving of $\$ 45,000,000$. According to the Federal Bureau of Crop Estimates, the mortality dne to hog cholera in 1917 wan the lowent ever recorded in America. The profitable production of hoga demands dry, manitary, comfortable housing. The mov: able type of hog house.
Hogarth (hb'garth), Wgiliam, born at London in 1097 ; lied in 1764. He was apprenticed to a silversmith, who employed him in engraving ciphers and crests on spoons and pieces of plate. In 1720 he commenced business for himself, painting portraits, and making designs and book-plates for the bookeellers, etc. Among these was a series of illustrations to Hudibras. Beaides portraits, he also painted miscellaneous snbjects in oil. In 1729 he married the danghter of Sir Jamem Thornhill, the painter, against her father's wishes, who is said, however, to have been mollified when Hogarth produced his celebrated series of pictures called the Harlot's Progress, a work which bronght his great powers fnirly before the public. The engravings of theme, which became exceedingly popular, were prblished in 1731 . This was followed by the Ralee's Progress and Mar riage a la Mode, two similar series of paintings and engravings ; Industry and Tlleness, Beer Street and Gin Lane, The Election, The Enraged Musician, The Cowntry-Inn Yard, The March to Finchlev, Strolling Actresses Dressing in Barn, Four Stages of Orwelty, and a host of other engravingn, which all evinced his
extraordinary powerm of matire, wit and imagination. Several portraitu, notably thote of himself, Garrick, Lovat and Wilkes, are manterpieces in their way. He was also ambitious of shining as an historical painter, but in this line he was not so sriccemsinl. In 1753 his work on the Analyais of Beanty appeared, a treatife which bronght him little fame, and which was severely ridiculed by his enemies and professional rivala. In originality of imacination and invention, and for vigor of realism and dramatic power Hogarth atands in the highest rank, and his senius was always enlinted on the side of virtue and morality. Thongh bent known as an engraver, he pomensed high qualities as a painter. The beat edition of his works is that published by Boydell (London 1780), the plates of which retonched by Heath and others, have been repeate-fly pnblished aince.

## Bog-deer.

the popular name siven to teleostean fishes of the genns Scorpana, family Scorprenidue or Triglide. The best known species is the S. scrofa, common in the Mediterranean, having the head flattened sideways, armed with spines, and adorned with membranons lobes or filaments. It is of a large size and a red color.
Fogg, James, more famlliarly known ces, by the name of the Ettrick Shepherd, was born in Selkirkshire, Scotland, in 1770: died at Altrive, on the Yarrow, in 1835. After recriving a very scanty education, he began to earn his bread by daily labor as a shepherd. His early rhymings brought him under the notice of Sir Walter scott, by whome advice be published a volume of ballads under the title of The Mountain Bard. The failnre of an ill-judged agricultural acheme brought him to Edinburgh, where he pablished the Forest Minstrel (1810), and started a weekly periodical entitled The $\boldsymbol{S p y}$, which, after a short time, became defunct. The appearance of the Queen's Wake in 1813, with its charming ballad of Kilmeny, established Hogg's reputation as a poet. In 1815 he published his Pilgrims of the Sun, which was followed by Mador of the Moor, the Poetic Mirrar (a collection of imitations of living poets), Queen Hynde, and Dramatic Talen, as well as by The Brownie of Bodsbeck, and other prose tales; the Jacolite Relics (partly written by Horg) etc. From 1817 he had held the farm of Altrive from the Dnke of Bucclench at a merely nominal rent; but his farmins schemes never throve, and he was sener ally in narrow circumatancen.

Hog Island,small tract of land, Eouthweat of Mhiladebphia, which became famous during the great war' of 101L18. Bere in SeptemEer, 1917, was established under the direction of the United States Shlpping Board, the largest shipbuilding plant in the world. There were 50 mipipayy extending over a mile of water front. Outfitting pieres 1000 feet long, were also built. The land taken over by the government was 846 acres of virsin woll.
Hog-plum, the popular name of the genus Apondias, plants order Anacardiacees. Some of the apecien yield pleasant fruits, Ns 8. purpurea and 8 . luteo of the West Indies, the species generally called hogplum, because their fruit is a common food for hoge.
Hogshead, meäaure of capactty conlons; or $521 / 2$ imperial gallons, For beer it was 54 gallone, for rum 45 to 50 gallons, for hrandy 45 to 60 gallons. Now seldom nsed in Britain, in the United Statem the word has come to घignify a large calk. For tobaceo it varies from 750 lbs . in some statelt, to 1200 ibs . in others.

## Hohenlinden

( h of-en-lin'den), village of Bavaria, 20 miles east of Munich, celehrated for the victory gained hy the French under Moreau over the Austrians under the Archduke John, December 3, 1800. APohenlohe (hoten-10e), forrerly a containing 680 square miles, now chiefly under the sovereignty of Wurtemberg, and partly under that of Bavaria.
Hohenstaufen (herman princely family, several members of which filled the imperial throne. The founder of the family was Frederick, lord of Hohenntaufen, a castle in the Suabian Alps, who, for his services to the Emperor Henry IV, received the duchy of Suahia, and the hand of his daughter Agnes. HII: son Conrad was elected emperor in. 1138. After the death of Conrad (1152) the confidence which was felt in the Hohenstaufen familly caused the choice to fall on his nephew, Frederick 111 of Suahia, who was followed by Henry VI (1180); who added hy his wife the Hingdom of Sicily and Naples to the hereditary dominions of the family; and he again by Otto IV (1197) and Trederick II (121550), all belonging to the same house After the death of Frederict II his son Conrad was acknowlediged as hin succe. mor, with the titte of Oonrad IV, by mont of the ntates of the empire ; but Ianocent

IV Lald him under an interdict declared him to be deprived of all hil linds, and permecuted him with ralention hatred tiil his death in 1251. The porveromone of the family ultimately fell to Bavarlan Baden and Wurtembers.
Fohenstein- Frnsthal (hsionarnst'tul) tor in Corm
 Pop. (1010) 15,632
Fohenzollern (hben-trol'srn), two united princlpalities of Germany, rince 1852 an administrative divilion of Prussia. It consistes of a long. narrow, irregular strip of country, entirely surrounded by Wurtembers and Baden. Area, 441 square miles. Pop. 71,000. The princely family of Hohen: zollern dates from Tassillon, who lived under Charlemagne, 800 A.D. There have been several lines and branches, the main one beling represented by the last emperor of Germany, William II (g. v.).
Höhscheid (héshit), commonly Rhenish province, Prueda w. of Barmen. Its industries includo lead-mining, and the manufacture of catlery and hardware. Pop. (1010) 10,083. Hokusai (botyonl), a celebratod Japanewe painter, born at Honjo in Yedo (now tokiol in 1760: died in 1840. No less than 80,000 draw. ings are secredited to him.

## Holacanthus, See Coval Fisies.

Holbach (hol'bah), PaOL Hinnvigir losopher, borm at Heidelsheim, in the Palatinate, in 1723; died in 1789. In Paris he became the patron and ansociate of the encycloppedister and contributed many papers to the Enoyolopodie. The principal work attributed to him, which appeared nnder the name of M. Mirahaud, is the Systame de la Nature. He afterwards puhlished Syatdme Bocial, or Prin. oipes Naturels de ta Morale et de la Politigue: Bone Sene, or Idees Naturelles opposes aum Idbes Surnaturelles-a wort of atheist's catechism; EiComents de lo Morale Universelle; etc., ett. According to Holbach's teaching matter in the only form of existence, and everything in the effect of blind necessity.
Folbein (hol'bin), Harse an emfo at nent Germar painter, bom at Aussbnry in 1497. He atudied vodes his gither, Hane Holbein the elder 2 painter of considerable merit (1460 1520 ), and at an earl $15^{\circ}$, ectled at Basel, where he exercised his art till about 1626. He then came to pincland, whas letters from hiofriciod minimug
whowe Panogyio on Polly he had illuwtrated by a series of drawinge, procnred him the patronage of the chanceilor Sir Thomas Kore. He was appointed court painter by Eeniry VIII; and painted many celebritice. Bin paintinge include a

Hans Holbein the younger
Madonne at Darmstadt (better known through the replica at Dresden), representing the Burgomaster Meyer and his Wives kneeling to the Virgin; and the Solothurn Madonna. His famous Dance of Death has been preserved oniy in the ongravings of Lutzelburger. There are a conaiderable number of engravings on wood and copper from Holbein's designs. He died at Whitehall of the plague in 1643.

Eolberg (holbers), Ludwig, Baron, tereture whe father of modern Danibl barr at Barth dorinions in 1684 ; died at Copenhagen in 1754. He atudied at the University of Copenhagen, and afterwards traveled through a good part of Europe, spending some time in Oxford, where he taught music and modern lansuaress, and studied modern history and philesuphy. In 1718 he was appointed to an ordinary professorship in the University of Copenhagen, where after this date he rhiefly resided till his death. In 1735 he was elected rector, and in 1787 treasurer of the university in which he held his professorship. and in 1717 he was raised to the rank of baron. His works may be divided into four cinnsem-poems, stage pieces, philosophial treatises and historical works. His poems are chiefly of a satirical nature. The most celebrated is Peder Pcars, a comic heroic poem in fourteen cantos,

Which is gtill regarded throughout the Al candinavian countries at a manterpiece. Almont equally famous is his Niooles Klimm's Eubterraneow Travele, a Eatirlcal romance in prome His stage pleces are all either comedien or farcem, and are nearly all characterized by true comic power. Among his philowphical writuge the most important is his Moral Rofootione (1744). His historical works in. clude The Political, Eoclesiastioal, and Geographical Condition of the Danith Monarchy, $A$ General History of the Jous, and 4 History of Famous Mon and Famowe Women (1730-45).
Eolcus (hol'kns), senus of gramsea (nat. order Graminew): ex. tremely common in some pastnrey, where they are called soft grassem. Whether because of their innutritious quality, or of the moft hairs with which they are covered, they are neglected by cattle. $H$. oacoharatus contains a large quantity of sugar, and H. odoratus is celebrated 105 its fragrance. $H$. lanatus is the only North American species.
Fold (hold), the whole interior cavity or belly of a ship, or all that part of her inside which is comprehended between the floor and the lower deck throughout her length.
Eolden, Edward Sinaleton, astronosouri, in 1848 He was profestior of mathematics at the Naval Academy 1873-81; president of the University of California, 1883-88: director of the Lick Observatory. 1888-98; afterwards astronomer $0^{0}$ the Smithsonian Institation, and since 1801 librarian of the United States Military Academy. He has written many papers on astronomical and other

In 1855 he removed to Europe, where his remarkable manifentetions excited rreat attention. He was especially notable from havins convinced bir William Crooken, the famous phy: foist, of the truth of copiritualines

## Home,

 1782. He author, born in 1690 ; died in was called to the bar in 1724 He and acquired reputation by a number of pubications on the civil and Scottish law. In 1752 he became a judge of sension, and ansumed the title of Lord Kanies. In addition to his legal works he published Dasays on British Antiquities; Besays on the Prinoiples of Morality and Natural Religion, in which he advocates the doctrine of philosophical necensity Introduction to the Art of Thinking; rnd his best-known work, Eloments of Orith cism, in which, discardins all arbitrary rules of literary componition, he endearvis to establish a new theory on the principles of human nature. In 1776 he published the Gentleman Fiarmer; and in 1781 Loose Thoughts on Education. Fome, JoHis, a Scottish clergyman comes and dramatic poet, born at Leith in 1722 ; died at Edinburgh in 1808. He atudied for the church, and was appointed to the parish of Athelstaneford vacant by the death of Blair, author of the Grave. His tragedy of Douglas was performed at Edinburgh in 1756, and attained a wonderful popularity, which has not yet altogether disappeared. The production gave great offense to the church as a body; the author was threatened with ecclesiastical censures, and in consequence resigned his living, and ever after acted and appeared as a layman. He retired into England, obtained the protection of the Earl of Bute and received a considerable pension. His other plays, the Siege of Aquileia, the Fatal Discovery, Alonzo, and Alfred, are absolutely forgotten, a fate which their mediocrity deserves. His History of the Rebellion of 1715-46 also disappointed public expectation.Home Department, that departexecutive government of Britain in which the interior affairs of the country are regulated. It is analogous to the ministry of the interior of other conntries; its headquarters is the home office, and its chief is the home necretary.
Elomer (hómér; Greek, Homêros), an ancient Greek epic poet of wome even doubting kno with certainty, isted. The most probable opinion is that he was a native of some locality on the soa-board of Asia Minor, and that he flourished between 950 and 850 g.c. The earliest mention of the name of Homer is found in Xenophanes (sixth century m . C.) The common statement that he wail blind may mafely be dincarded. The poe:na
that have been renerally attributed to Homer are the Ihed and Odysoey. The Batrechomyomachic, or Battle of the Frogs and Mice, and certain hymns to the sodis also passed under his name, though belonging to a later period. The Iliad in its present form consintes of twenty-four books, and tells the story of the alege of Troy from the quarrel of Achilles with Agamerunon to the burial of Hector, with subordinate episodes. Th. Odyssey is aleo in twenty-four bookn. and records the adventures of Odyssella (Ulysmen) on his return voyase to hil home in Ith. aca after the fall of Troy. Inven an early as the beginning of the Obristian era, certain Greek critics (the Separatists) maintained that the two poems were the work of different poets, but the general belief continued to be that there was one author for both. The entire syitem of

Homer-ancient buast Homeric criticim, however, was revolutionized in 1705 by F. A. Wolf in his Prolsgomena to Homer. He asserted that the Iliad and Odypsey were not originally committed to writiag, and were not two complete and independent poems, but originally a series of songs of difierent poets (Homer and others), celebrating single exploits of heroes, and first connected as wholes by Pigistratus, about 540 B.C. Some of Wolf's arguments have been proved erroneous, but since his time the old views in regard to the Ilised and Odyaney have been held by comparatively few of the ablest scholars, though what theory is now the most common is difficult to say. Among the most conservative theories is that which assigns to Homer a central or basal portion of both Iliad and Odyssey, to which additions by other poets were gradually united; but generaliy the Odyssey is regarded as of somewhat later date than the Iliad, and not by the peet who produced the lliad in its orisinal form.
Eomer, Winslow, painter, born at gan to Hze studied lithography, then bean to draw on wood for engravers, and In 1850 entablinhed himecif in New Tors,
where he became a newupaper artint and correapondent. His war pletures were highly enteemed, eapecially his Prisoners at the Front. He died in 1910.
Home Bule, in Britiah politice a been very actively advocated in regard to Ireland. The leading feature of the Irish Home Rule party neems to be the establishment of a native parliament in Ireland to conduct all local and internal legialation, leaving the general political government of the empire to on fmperiai parliament. The movement originated In the formation of the Home Government Association at Dublin, in 1870, nader the prenidency of Mr. Isaac Butt. At tbe general election of 1874 the party succeeded in mending 60 Home Rule members to parliament for Irish constituencies. The elections of 1885 and 1886 atill further strengthened the party, 86 members following the lead of Mr. Parnell (which see). The conversion of Mr. Gladstone and many members of the Liberal party to Home Rule principles added immense ditrength to the movement. In 1893 a Home Rule bill was passed by the Commons, bnt defeated by the Lords. Another bill introduced by Mr. Asquith in 1912 met with a dimiliar fate; but wras enacted into Jaw May $2 \sqrt{5}, 1914$, over the veto of the House of Lorde. It provides for an Irish Parliament consisting of a nomi. nated House of Lords and a House of Commons with 164 mernbers, a wide range of financial powers being granted to the Irish sovernment. The outbreal of the Enropean war (August, 1914) postponed enforcement, bnt Premier Lloyd George announced, in April. 1918, that the time had come to grant Home Kule, but coupled the annonncement with the statement that conscription would be made applicable to Ireland. This led to opposition. and the measure was again pnstnoned. Tome-siokness, in medicine, Nosariging from an intense and uncontrolled feelin of urief at separation from one's home or native land.
Eomestead (hóm'sted), a manufacturing town of Allegheny county, Peancylrania, 7 miles 8. F. of Pittabnesh. It has extensive steel workd and other manufactures. A serious iebor outbreak took place here in 1802, attracting wide attention and ending in the lost of several liver. Pop. 18,713. Somestead Laws, laws enacted in by Consrem or by Itate legislatures with by Oongsem or by State legislatures with hranch of practical theology which teaches
a flem to securing to familian the pon the principles of adapting the discournes
mention of a home and land. Under theme of the pulpit to the aplitual benefit of lawe ans citizen, or person who declarse the the pulpit to the eppritual benefit of
for instructing their henrem by their dootrines and example. Incremed attention has been drawn to homiletics by Lyman Beecher of Yale.

## Fiomily (hom'j-H), a discourve or

 to an andience on rome subject of listion; a disconree prononnced in the church by the minister to the congrega. tion. The ancient homily was sometimes simply a convermation the prelate talk. ing to the people and interrocating them, and they in tarn talking to and interrogating him. In modern nse a homily differs but little from an ordinary mermon, the idea of cimplicity, however, being always attached to it. The earlieat existing examples of the homily are those of Origen in the third century. In the achools of Alexandria and Antioch this form of discourne was sedulously cultivated, and Clement of Alexandria, St. Dionjuins, and Gregory Thaumaturgus are among the names most eminent in this department. It was in later centuries, however, and in the hands of Athanasius Gregory of Nyesa, and Gregory of Nasianens, Basil, Cyril of Jerusalem, and Cyril of Alezandria, and especially of Chrysontom that the homily reached its highest excellence. Angustine and Gregory the Great were among the western composers of homilies. In the Church of Bngland, after the Reformation, two official books of homilies were issned. These were called The Furst and Second Booke of Homilies, and the former, ascribed to Cranmer, appeared in 1537; the latter, said to be by Jewell, in 1563. They were originally meant to be read by those of the inferior clergy who were not qualified to compose dis. courses themselves.
## Homing Pigeon. See Oarrier Pig-

 Homocercal(ho-mn-s er ${ }^{\prime} \mathrm{kal}$; Gr. homos, same, kerkठs,
 tail), a term applied in the case of fishes which have tails with rays diverging symmetrically from the backbone, as opposed to heterocercal.

## Fomeopathy <br> (hö-mee op' $a$-thi), the name of a system

 of medicine introduced by Samuel Hahnemann, of Leipaig (died 1843). It is fonnded npon the belief that drugs have the power of cnring morbid conditions similar to thowe they have the power to excite, an old belief of Hippocrates lons ago expressed in the Latin phrase similia similibus ourantur (s like is cured by like'). In contradistinction to this sys tem the more common method of treating disensen wat termed by hip heteropetinyor ellopeting. In practice inomagnthy IO meriy was ampociated with the nyturn of adminintering infinitmimal donen, though this practice has been modified within rocent jearm and larger dowes are siven. The ayntem of homosopathy in Hurope, and empecially in Britain, has been bitteris opponed by the older school of medicine, though the antagoniam has mitigated within recent yearm. In the United States homceopathy met with lens oppon. tion and had a conaderable development, numerous medical colleges, hospitaln, etc, being eatablished for the study and practice of this syntem. Accordins to the definition adopted by the $\Delta$ merican Inititute of Homceopathy, a homeeopnthic phywician is one who adds to his knowledge of medicine a special knowledse of homoopathic therapeutics and obmerves the lavo of similia All that pertaing to the great field of medical learning is his, by tradition, by inheritance, by risht. This explains why homeopathic physicians Eometimes prescribe 'old school drugs.
Bomoiousians (hob-mol-b'al-ans), a sect of Arians who maintained that the nature of Christ is not the same as but only similar to that of God. See Homoonsians.
Homologous (hom-ot'o-sus), (1) in geometry, corresponding in relative position and proportion. (2) In physiolosy, corresponding in type of structure; thus, the human arm, the foreleg of a home, the wins of a bird, and the swiroming-paddle of a dolphin or whale, being all composed emmentially of the same structural elements, are sald to be homologous, thongh they are adapted for quite difierent functions. See $\mathbf{\text { Lna- }}$ logue.
Homoousians (bo-mb-8'di-ans), the orthodox party in the chnrch during the great controversy upon the nature of Christ in the fonrth century, who maintalned that the nature of the Father and the Son is the same, in opporition to the Homoiousians, who held that their natures were only similar.
Homontera (hom-op'ter-a), one of Homoptera the sections into which the order of hemipterons insects has been

divided, the other section being the Heteroptera. The insects of this cection have the wins-covers generally getexed, of the
man condistence throughout, the antern no montly hort and terminated by a bristle, and the body convex and thicis To this eetion belong the sphides, cicsdas, lantern-fliem, etc.

## Eioms (höras). See Heme.

Honan (hornlin' ${ }^{-}$a once popalous city of China, in the province of mame name, on an aftluent of the Hoant-ho. The province has an area of 65,104 square miles. It is generally level, and in watered by the Hoang-ho and its affluents. The woll is fertile and carefully cultivated; the forests in the west supply timber; and mines yield tutenag or Chinewe copper, cinnabar, mica, etc. Honan suffered severely from the inundation of the Hoang-ho in 1887; capital, Kaifung. Pop, about 22,000,000.
Honawar (hō-nit-wur'), seaport and of the same name, Bombay, on an estuary into which the Gersoppa river falls. It has an important and growing coasting trade. Pop. 6029 .
Hondo (hon'dib), the name given by
the Japanese to the chief island in their empire. In many geograph1cal works Nippon or Niphon is the distinctive appelation of this island, but by the Japanese themselves that name is applied to the whole country. The area of the island is 87,425 sq. miles, and the population 33,327,935. See Japan.
Honduras (hon-ä'ras), a republic of Central America ; area, 46,400 square miles, bounded N. by the Caribbean Sea and the Gulf of Honduras, w. by Guatemala, 8. w. by Salvador and the Bay of Fonseca on the Pacific, and 8. In by Nicaragua, the coast line being about 350 miles in length. Its surface is hilly, with numerous fertile valleys. Its mineral wealth is very considerable, and includes gold. silver, lead and copper, the copper deposits being very. rich. The chief rivers are the Chamelicon, Ulua, and Aguan, flowing to the Caribbean Sea, and the Choluteca, an affluent of the Pacfic. There are extensive forests abounding in fine timber, including mahogany and rosewood, with dye-woods, copal, rubber. etc. The cultivated productions include maize, beans, some wheat, rice, plantains and tobacco. The bannna is widely cultivated, surar-cane yelds two or three crops a year. the coffee is of excellent quality and sarsaparilla and vanilla of the $\mathrm{t} \ldots$ ouality are grown. Since 1880 the cap tal hins been Tegucikalpa; the nrincipal ports are Truxillo on the Caribhean Sen, and Fort San Iorenzo, on the Pacfic. The constituthon of Bonduram sives the legislative
power to a congress of deputien componed of thirty-weren members. The executio authority is in the hands of the Predident: Reciprocity of trade with the Unitted Stater was eatablished April 30, 1800 Pop, about 600,000.
Honduras, BAY or, a wide inlet of the Caribbean Sea, having on the wouth Guatemala and Hondurag and on the west British Honduras and Yucatan. Along its shores are the Islands of Bonaca, Ruatan, Utila, Turneť, and numerous islets and reefs called cay.
Honduras, British, or Bruizay British colony of dentral America, having north and west, Yucatan; west and south, Guatemais: and east, the Bay of Honduras. Area, $7,562 \mathrm{sq}$. miles. The coast in generally low and swampy, but the land rises to wards the interior, and in some parts may be called mountainous. The mountains, and the wide valleys between them, are covered with extensive forests of the finest timber, including cedars, pines, ironwood, logwood, braziletto, mahogany, etc. Sugar-cane, coffee, bananas, cocoanut, tobacco, etc., are cultivated; and the exports imclude mahogany, logwood, banenas and other fruite. The climate is fairly healthy. since 1884 the government has been administered as in a crown colony under the presidency of a governor. The capital is Belize or Balize. Honduras was transferred by Spain to England by treaty in 1670, but at different times its occupation was contested by the Spaniards till 1783. since which perfod it has remained quietly in the ponersion of Great Britain. The population is composed chiefly of negroes and Caribs from the West Indies, who were first brought to the country as slaves. Pop. 31.471, including about 400 white.

Hone (hon), the name given to sereral varieties of slaty stones employed in whetting knives, razori. or other eife-tools. They are usually piecem of hard, close-grained clay-alate, containing minute particles of quarts, with a uniform consistence. Best of ali varietien is the Turker nil-stone, and next in evteem are the Arkansas oil-stones. Others of value are the German and Scotch hones, and the Canada oil-atones.
Hone, Wilusam, an English antiquary, born in 1780 : died in 1842. He beana life in a law-office, and became imbured with freethinkins opinions. In 1800 he abandoned the law and made ventures as a writer, bookeller and publisher, which were all fallures. In 1817 he was prosecuted by sovernment for the publication of alleged imreverent
parodien and lampoons, when he defended himeelf with great acutenem, and was acquitted. He suhsequently had a large cum aubcribed for him as a champion of the freedom of the press. He sradually abandoned freethought and the writing of satires for relicion and antiquarianism. His chief puhlications are the Lvery-day Book (1826), Table-book (1827-28), and Year-book ( 1829 ), perfect mines of antiquarian lore.
Boney (hun'i), a vegetable product collected by bees from the hlossoms of flowers, and deposited in the cells of their combs. The best is clear and transparent, and solidifies when kept for some time into a granular, white mass. Some varietien of it are dark yellow or hrownish in color. Spring honey is more esteemed than aummer honey; and the latter more than that of autumn. Virgin honey is taken from hives in which the bees have never swarmed, and it is of a white coior. Yollow honey is extracted from all sorts of combs. The flavor of honey largely depends on the plants from which it is collected. Honey is obtained in large quantities in many countries, partly from wild bees, but chiefly from those kept in hives. In addition to its ordinary domestic uses, it is employed medicinally as a promoter of expectoration, to sweeten certain medicines, to make a gargle with vinegar, etc. The ancients used it as we do sugar, and made of it and wine a misture which they very much liked. They also used it in making mead, a fermented liguor made of honey and water. Gee Honey-comb.
Eoney-ant, an ant (Myrmecocyctus Merico, and living in communities in ing terranean galieries. In summer a certain number of these insects secrete a kind of honey in their abriomens which become 20 distended as to appear like small pellucid grapes. When food is scarce these ants feed the others from their store of honey. They are also dug up and eaten by the inhabitants of the country.
Honey-badger. See Ratel.
Honey Bear, a name of the kin Honey-buzzard. ${ }^{\text {Sidee }}$ Buzard.
Honey-comb, a wasen celluhr bees in which to deposit their homex and eges. The wax is secreted hy the insect in the form of small and thin oral scales in the folds of the abdomen. The comb is composed of a number of cells, most of them exactly bexagonal, and arranged in
two layers placed end to end, the openings of the layers being in opposite directions. The comb is placed vertically, the cells being therefore horizontal. The vides of the cells are very thin, and yet the whole atructure is of conaiderable atrength. Some cells are destined for the exclusive reception of honey; others for the reception of larve.
Honey-dew, a liguid saccharine substance found on the leaves of trees and other plants in small drops like dew. There are two kinds; one scecreted from the plants, and the other deposited hy aphides. Different inds of manna are the dried honey-dew or saccharine exudations of certain plants. See Manna.
Honey-eater, the name given to a number of insessorial hirds forming the family of Meliphagide, of the tribe Tenuirostres. They form a

Wattied Honey-ester (Anthochara mellisora).
numerous group, feeding principally on honey and the nectar of flowers. They are natives of Australia and the adjacent islands. They have long curved sharp bills, with tongues terminating in a pencil of delicate fiaments, to enahle them the better to extract the juices of flowers. Honey-guide, a name given to the Indicator, which by their motions and cries conduct persons to the nests of wild honey-bees. They are natives of South Africa.
Honey-locust, Swher Locust, or Honey-locust, BLack Locust (Gleditschia triacanthos), a forest tree belonginy to the United States, natural order Leguminose. The leaves are pinnated, divided into numerous small leaflet5, and the foliage lias 2 light and elegant appearance; the fowers are greenish, and are succeeded by long, often twisted pods, containing large brown
seedo, enveloped in a sweet pulp. This tree is especially remarlable for its formaldable thorns, on which account it has been recommended for hedgen. The $G$. momosperina, a tree rewembling the last in teneral appearance, srows in swamps in Illinois and southwentward. The wood is inferior ln guality.

409, while Elonoriun shat himself up in Ravenne. Some of the fineat provinces of the empire, Spain, Gaul, and Yanzonia, were loest in this reign.

## Bonor (on'ur), in law, is a seignory

 held under one baron or lord-paramount. Eonors Mards of, ladien in the gerran European queen who attend their miatress when the appears in public. In Dngland they are eight in number.Ronorable (on'ur-a-bl), RIGET Honorable, titlem given in the United Kingdom to peers, their familien, and certain public functionaries. (See $\Delta d$ dress, Forme of.) In America the governors of States, Judgen, members of Congrepe, and otheri holding offices of dignity and trust, are atyled honorahle.
Bonors of War, are etipulated terms rison murrendering, in consideration of a brave defence, etc. Sometimes the van guished are allowed to march out vaith their arms, drums beating and colors figing if or they may be permitted to deposit their arms and stores and return to their own country on parole.
Hoobly (höbli) or Hubli, a town of Bombay Presidency, a great center of cotton trade. Pop. 60,214 .
E00ch, or HCOGH (hoth), Pieter De, one of the best Dutch painters He was peculiarly successful in de 1 icting see aes, illuminated by sunlight, of Dutch domestic life.
Bood, Johr Berc, general, born in died in 1879. He graduated at West Point in 1863, joined the Confederate army in the Civil war, commanded a division of Lee's army at Antietam and at Gettysburg, and lost a leg at Chickamauga. Commissioned lieutenant-general, he succeeded Johnston in command of the army opposing Sherman in 1864. He was defeated hy Sherman in two battles, was forced to ahandon Atlanta, and afterwards invaded Tennessee.
Hood, MOUNT, is the northernmost Rance, peak in Oregon in the Cascade be cl arly seen from Ehliot, the crevasses, and, such as the Hood have yet to be explored. It has a height of $11,225 \mathrm{ft}$. See Cascade Range. Food, Robin, a celehrated outlaw ccount who, eccording to the popular Gherwod 1 his followers, inhabited Sherwood Forest, in Nottinghamshire, and almo the woodlands of Barnsdale in
the adjoining Weat Riding. They sup ported themedrem by levying toll an the pealthy, and more eapecially on coclociastics, and by hunting the deer of the forent. The famous members of his band were his lieutenant, Little Johni his chaplain, Eriar Tuck: William Scadiock, Georye-Greene, Much, the miller's son, and Maid Marian. It is stated that ho was born in 1100. His death is maid to have occurred in 1247, in consequence of the treachery of the prioress of Kirkleen, who opened an artery hy which he bled to death. His skill with the lons-bow and quarter-gtaff wan celehrated in tradition. What hasis of fact there is for the story of Rohin Hood is doubtful. Grimm maintained that he was one with the Teutonic god Woden. Other theories suppose him to have been a rebel jeoman in Lancaster's rebellion under Bdward II; a Saron chief who defied the Normans: and a fugitive follower of Sir Simon de Montfort after the battle of Evesham. Bood, Samuet, Viscount, a Britich He join admiral, born 1724 ; died 1816. 1740 , and attained the rank of post-cap-

tain in 1759. Haying become rearadmiral, he preserved the ialand of St. Christopher's from being taken hy DE Grasse, assisted in the defeat of De Grasse by Rodney in 1782, and was rewarded with the title of Baron Hood of Catherington in the Irish peerage. In 1793 he commanded against the French in the Mediterranean, and captured Toulon and Corsica. In 1798 he was made an English peer, with the title of Viscoñt Hood.-ALmxaNDER, Vifcouns BRIDPORT, hrother of the preceding, was also an admiral. He commanded noder Lord Howe in the Channel fleet in 1794;
defeated the Freach off L'Orient, 1795; was created Vircount Bridport, 1801; died 1814. SI SAMOM, counin of the above, born 1762 , died 1815 was prement at the battle of the Nile, 1188; captured Tobago and the Dutch mettlemants in Guinna, 1803; and defeated the Erench muadron of Rochefort in 1806.
Hood, Tromas, an Englinh poet and humority, of Scotch extraction, born at London in 1798; died in 1845. During a redidence at Dundee, and while only fifteen or airteen years of age, he contributed articles to a local paper and magasine. In 1821 he became suoeditor of the London Magazine, and in 1826 appeared his Whims and Oddities, which was followed hy National Tales and a volume of eerious poetry. From 1829 to 1837 he conducted a Comio Annual. At the eame time his pen was employed on other suhjects, and he published The Epping Hunt, a comic poem, ridiculing Cocknes sportsmen; Eugene Aram's Dream, inserted in the Gem, of which he was for a short time editor; and Tyiney Hell, a novel. In 1837, on the termination of the Comic Annual, he commenced a monthls periodical entitled Hood's Own, which consisted chiefly of selections from the former work. His health now began to fail, and with a view to its recovery he paid a visit to the Continent. While there in 1839 he published his Up the Rhine, which, baved on the lines of Humphrey Clinker, was very popular. Shortly after his return he undertoois the editorship of the New Monthly Magazine, and continued it till 1843. His principal contributions to it he puhlished separately, under the title of Whimsicalities. His last periodical, entitled Hood's Magazine, was commenced in 1844 ; but his health shortly afterwards completely broke down, and his death occurred in the following year. It was during his last illness that he contributed to Punch, The Song of a Shirt, The Bridge of Sighs, and The Lay of a Laborer. Hood is unrivaled as a punster, and he possesses a singular power of combining the humorous with the pathetie. He had the satisfaction of krowing that the pension of $f 100$ conferred upon him during hiv last illness by Sir Robert Peel was to be transferred to his wife.
Biood, Tom, son of the great humorist, born in and a miscellaneous writer, at Oxford, and durine his residence there he wrote $P$ On Gn ? 1861 appeared his Daugiters of King Daker, and other Pooms. In 1863 he becam editor of Jhen. which became very
popular under his management Ein tal. enth, although aimilar to those of his father, were lem hrilliant.

## Hooded Crow, see Crovo.

Hooded Seal (Oyotophora, oriptaca): a specten of mint thi male of which ponsensen a movable inflatable muscular hag, atretching from the muzale to about five inches bebind the eyes. The prevailing color is bluish black-the head and limhe being nui. formly black. Its usual range extends in America southwards to Newfoundland, and in Europe to Southern Norway.
Hooded Snake. See Dobra do Oopello.
Hoofs, the horny tissues which constitute the external part of the feet of certain animals, mostly herhip. orons. They may be regarded as homologues of the toe-nails of other animals. They are composed of epithelium cells, agglutinated and dried, and of intercellular substance and cell contents. Chemically they consist of keratin.

## Rooghly River. <br> Sea Hught

Fook, Throdors EDWARD, novelict don in 1788; died in 1841 ; was the son of James Hook, a musical composer. After leaving Harrow he employed himself in composing the farce of The Soldier's Ro turn, instead of reading for Oxford. Vor some years Hook led a life of galety in London, and became notorious for practical joke and similar eacapades. In 1812 he was appointed accountant-general and treasurer of the Island of Manitlus; but, owing to his gross carelesmen, a large deficiency in the military chent was discovered, and in 1818 he was sent home under arreat, but no proceedings were taken against him. From 1820 to 1841 he was editor of the John Bull, and at intervals from 1824 to 1828 he puhlished his Sayings and Doings, while in 1836 he became editor of the Novo Monthly Maqazine. His other principal works are Life of Sir David Baird, and a series of novels, among which may be mentioned Love and Pride. Jack Brap, Gitbert Gurney. Gurney Married, Pro cepts and Practice, and Fathers and Rone.
Hook, Walter Farquital. Dean of Chichester, born at London in 1798: died in 1875. In 1821 he sraduated at Christ Murch. Ceford, was appointed vicar of Leeds in 1857, and pro-
 1859. He wrote an Fleclesiagtical Biography. a Ohurrh Dictionnry, Lives of the Archbishops of Cantewhery, etc.

## Fookah. <br> See Pipe (Tobacoo).

Hooke,
Nathanims, an English hist torian, born about 1600 ; died 1763. He was a friend of Pope and other literary men. His bent-known work is his Roman Hiatory, from the Earliest Period to the $\Delta$ coession of $\Delta u$ pustus. Hooke, RoBzar, an Engling mathe. opher, born 1 aician and natural philus. he invented the balance spring of watches, an honor otherwise ascribed to Huyghens. He partially anticipated the Newtonian theory of gravitation and the undulatory theory of light.
Hooker
(huk'er), Joskph, generai, chusetts, in 1815. Graduating at West Point in 1837, he served in the Fiorida and Mexican wars with conspicuous gallantry. At the outhreak of the Civil war he was made brigadier-general of voiunteerm. He distinguished himseif in the ceveral engagements in the Peninguia in 1864, particuiariy at Maivern lill, and became known as 'fighting Joe Hooker.' He took part in the subsequent batties of 1882, beins wounded at Antietam, and suhsequently was commissioned brigadiergeneral in the reguiar army, already holdins the rank of major-generai of voiunteers. He commanded a division at Frederickshurg, was given command of the army of the Potomac in January, 1863, and was defeated by Lee and Jackson at Chanceliorsvilie in May. He took part in the battles near Chattanooga, and in the battle of Lookout Mountain he was commander. Later he commanded the army of the Cumberiand near Atlanta, Georgia. In 1864 he had charge of the northern department, of the department of the east in 1865, and in 1866 that of the lakes. He died in Garden City, Long Island, in 1879.
Blooker, Sis Josmpi Dalton, a Brit, ish botanist, born in 1817, son of Sir W. J. Hooker. In 1839 he joined the antarctic expedition of the Erebus and Terror under Sir J. C. Roes, puhishing on his return the Botany of the Antarctio Voyage. In 1847-51 he traveied in the Himalayas, and his Himalayan Journala embody the results of the journey. He and George Rentham (which see) wrote the great work Genera Plantarum. puhiished 1862-1883.

## Booker, Riciard, a celehrated Eng.

 died in 1000 . In divine, born in 1579 he was appointed deputy professor of Hebrew; took orders in 1581, and was made preacher at Faul's Croms. His Ecolesiastical Polity, publinhed at various dates, and written indefense of the Church of England, is 50markahie for iearning and ytyle.
Hooker, THoyas an Engliah-American theolo ian, born in Mark. field, Liecestershire, Banland, in 10.88 ; died in Hartford, Conn., in 1847. Ho gettled in Nergtowne (now Oembridse) Mass., in 1633, hut belns discontented with condltions ied his congregation to Connecticut and founded Hartiord in $163 \%$. He caused the adoption of the Pwismental Orders of Connecticut, and in 1643 was one of the organizera of the United Colonies of New Engiand. He publiched n number of sermons and various theological treatives.
Fookworm, a smail, worm-like anious parasitic dlsease. The disease was first traced to this rorm (a minute form, less than an inch in length) in Italy in 1843. Its action in exhaustins the blood was not discovered until 1879, and not untii 1002 was the existence of an American variety of the animal demonstrated by Dr. Uharies W. Stiles, of the Marine Hospitai Service, who indicated the character of the disease by cailing it the 'germ of iaziness.' The poorer classes of the South had long manifested a pecuiar lassitude, with anæmic pallor. Dr. Stilem traced the worm into the body from the soli, finding that it made its way through the skin of the feet into the circuiation. reaching the iungs and from them the respiratory passages and the digestive tract. Fastening itself to the wails of the howels, it sucks the blood of the victim. There may be several thousand of these worms in one person, causing considerable loss of blood by sucking and hy making minute hoies throush which the blood oozes into the intestinal tract. It is believed that the hookworm was conveyed to America from Africa by negroes brought in siave ships. It does not seriousiy affect the negroes, hut has been affecting the whites for more than a century, producing a condition unfitting them for energetic labor. Dr. H. F. Harris was the first to recognize the eggs of the hookworm and reaiize the danger of the divease in this country. In 1002 Dr. Stiles was sent a bottie of the parasites from the South, and found in it a different species from that of Europe. Out of 130 cotton mill operatives he found more than 12 per cent. with the disease. In the sandy districts more than 70 per cent. were infected, and in some localities as many as 90 per cent. The disease is confined in this country to the South, rarely appearing north of the Potomac. Its wide prevalence is attrihuted to the unsanitary habit of hlecks and poor whites alike in distrib-
ating their excrement ovor the woil and in poing barefoot, clviag the worme in the excrement on opportunity to fasten in the akin of the foet bortunately the diecane is eacily cured by the uny of thymal, which kills the worme or forces them to loosen thelr hold, followed by purgative, which removes them frum the body. By the adoption of suitable sanitary habits this gerious affection may be eradicated. John D. Rockefeller, in 1809, contributed $\$ 1,000,000$ to be used In fighting the dimease, and now that its cause and the method of dealing with it are so well known its ravages may be overcome. Hoole (h>1), JoHn, dramatist and tranalator, born at London in 1727; died In 1803, In 1703 be published a tranalation of Tasso's Jerusalem Delivered, and of aix dramas of Metastasio In 1707 . His tragedies of Oyrus, Timanthes and Cleone were unsuccessful. In 1773-83 he published separate volumes of his translation of Orlando Furioso. In 1792 he translated Tasso's Rinaldo, and eaded his IIterary labors with a more complete collection of dramas from Metastailo.
Hoop-ash (Celtis crassifolia), an Urticacee, found in the forests of Ohifu and in the wentern States. It is a fine tree, attains a height of 80 feet, and is employed for charcoal. Its fruit is round, and in size nearly equal to a pea. See Hackberry and Nettlo-tree.
Hooper (hup'er), Joris, an English ing studied ret Ormer, born in 1495. Havterclan order, but by the year 1539 he had adopted the Reformed opinions. and withdrew to the continent on the limposition of new articles of faith by Henry VIII, and lived at Zurich. In 1547 he returned to England, and took an active share in the Edwardine Reformation. In 1050 he was nominated Bishop of Gloucester, but declined consecration until certain vestments and ceremonies were digpensed with in his case. On the accession of Queen Mary, in 1543, Hooper was deprived and imprisoned, and in 1555. was burned at (iloucester, near his own cathedral. His works consist chiefly of a Godly Confession and Protestation of the Christien Foith. Lectures on the Creed. Sermons on the Book of Jonah. Annotatione on the Thirteenth Chapter of the Romans, and expositions of several pasims.
Tiocpifig-courth, or Wमnoping= known by rapid series of coughs endine in a long-drawn inspiration, during which 2 shrill whintling sound, the hoop, is pro-
duced. Two or three such its of coughing follow one another untll some pherus fis expelled, and vomiting may occur. Dur Ing a evere spanm the face becomes awollen and purplish as if eufocation were threatened. It la evidently due to a poinon actins as an irritant on tho pneunogantric nerve. It is contaglous and mont commonly attacks children, and senerally only once in their liven. The hooping-cough ugually comes on with a running nowe, difficulty of breathlos, and niight fever, which are succeoded by a hoarmenems, cough and dificulty of expectoration.
Zoopoe (hu'pi; Uphipa), a bird forming the type of a tamily generally classed with the bee eaterm or the honey-eaters, but also with the horm-

Hоорое ( $U_{p}$ dpa epopo).
bills. The European hoopoe ( $U$. epops) is about 12 inches long; it has a fine crest of pale cinnamon-red feathers, tipped with black; upper surface on the whole ashy-brown; wings black, the coverts having white bars; throat and breast pale fawn; abdomen white, with black streaks and dashes. It has a very wide range, from Burmah to the Britial Islands and Atrica. It is a ground-seeder. preying chiefly on insecte, and seems to dplight in filth; it neste in cavities of trees or walls, and its egss vary from fonr to seven. The hoopoe utters a loud donble or treble hoop, whence its name. Poorn (hörn), a seaport of Holland, on a small bay of the ZulderZee, 20 miles $N$. N. I. of Amsterdam. The trade is extensive, more expecially in cheese. Pop. 10, 4 it.
Boosac Irunnel, a railway tunnel
part of Mamachucetes, on the wentern
from Bonton to Troy, N. I It pierces the Hoome Mountain, the summit ranso extending mouthyard throush Masazchuswotts from tho Green Mountanse of Vermont. It is $4 \%$ millos long, and has: double line of ralls.
Hoosiok Falls, Elllege of RensYort, 25 millem s . s of of Troy. It hat manuftecturen of reapera, mowers, woolen coode iron and paper mill' maclinery. Pop. 6532.

## Eoover, <br> Hambert O., minins ensineer and Bovernment outcer, wis

 born at West Branch, Iowa, in 1874. Ho anfated in mining operation in Colifor nia acutralis, and China, where in 1809 ho became ehief engineer of the Chineso Imporial Board of Mining. Going to Ens: land to whe occupied with mining and other enterprises and on the outbreak of the European war was made chairman of the American Reliof Commission in Lomion and later of the American Com-- doton for Belgian Relief. On the United States entering the war he returned to accept the office of Food Controller with autocratic powers over the prices and distribution of food. See United States.Hop (Humilus lupilun) a plant of (hemp tamily), a native of Eurobe, and perhaps of the United States, where it occurs wild. The root is perennial, giving out several herbaceous rough, twining stems, with lurge lobed leaves; the fertile flowers are green; the fruit is a catkin, and the plant is cultivated for the sake of the catkins, which are employed to communicate to beer its bitter flavor. The young shoots are sometimes boiled and teaten like asparagus; the fibers of the old ateme make good cords. The cultivation of the hop is more carefully attended to in England than in any other country, Kent being the chief county in which it is grown, but the plant is also extensively reared in other parts of Europe, as also in North America, Australia, New Zealand, etc. The use of the hop catkins depends upon a peculiar bitter substance which they contain, called lupulin, which is a yellow powder, containing a bitter principle and a volntile oil. The lupulin constitutes from 10 to 12 per cent by weight of the catkin, and the bitter principle forms 8 to 12 per cent of the lupulin. Having tonic, stomachic and narcotic properties, hops are often used medicinaily. Pillows stufficd with lops are used to induce sleep.

Hore (ho'ro), is cland cal mytholosy, cores the soddeceen of the manone and the order of nature. Their number was indelinite; in Athens two only were wormijped. Thes are represented as blooming maldens carrying the diferent products of the semeons.
Fore Canonics, or in thply Hons, Catholic Church the canonical or appointed houre at which certain hymns and devotions, themselves termed Hors or Howrs, are performed in monasteriel. See Oinonical Hours.
Formpollo (ho-ri-pol'o), the allesed tian hieroslyphice pretended to have been tranalated from the Egyptian into Greek. By many authoritiea the book is guppowed to have been written about the fifth centory and tranalated as late as the fifteenth.
Foratii (horri'mbe-I), three Roman brothers, who, scoording to tradition, in the reign of Tullus Eontlius engaged three Alban brothers (the Curiatif), in order to decide the eupremacy between Rome and Alba. Victory went to Rome, and the sole surviving Horatius was triumphantly conducted back to the city. But his sister had been betrothed to one of the Curiatil, and her demonstrative grief so enraged Horatius that he stabbed her. For this he was condemned to death, but his father and the people ohtained his pardon.
Horatius Cooles ' (ho-ra'she-us ko'ancient Rome. The Targuins having after their hanishment, sought refuge with the Etrurian King Porsenna, the latter advanced against Rome (b.c. 507) to restore them. According to tradition Horatius Cocles, along with two companions, held the Sublician hridge against the enemy, while the Romans broke it down behind them. When this was nearly finished he sent back his two companions, and as the bridge fell he plunged into the Tiber with his armor and mafely reached the opposite bank.
Foratius Flaccus, Qunvos comas Horach, the greatest. of Latin lyric poets, Fas born rear Yenusia. In Southern Italy, B.C. 65. His father was a freedman. a collector of taxes, and had purchased the farm at which his won was
borma, When Earace way ebout twelve yarr of ase his tather remored wheh him to Rome, where ho receivct an excallones education. at the ase of dichtem ho Went to $A$ thens to complote his studicu. Altar the acmamination of Jvilus Cbias Brutus came to Athens, and Boracs, Nocs Whth other Romans youthe, Jolncd, the army. He was appornted to a military trihunephip was prevent at Philipph and on the delent of Brutus marod himmell hy fisht. On the prociamation of an amnenty to the ranquiched Borace yo turned to Italy, hut found his father dead, his paternal eatate conficated, and himeelf reduced to poverty. Be wha, however, enahled to purchace a clerkship in the quaentor's ofice, which eashled him to pubitat frugally and to cultivate his puetical talent. His poems procured him the friendehip of Virill and Varins, and to them he was indehted for his firut acguaintance with Mecenas, who was the rriend and confident of Auguatus Cmary and Who expended his wealth for the ancourazement of literature and the arts. Mecenas received Horace amons his intlmate frienda, and, after some jearm, provented him with a manil entate or farm in the Sahine country about 10 milice from Tihur (Tivoli), which Fas sumefent to maintain him in eare and comfort during the reat of his life. He had also a cottafs at Thinur, and at Rome or one or other of these country residences the latter part of his life was spent. Although he was ultimately introduced to Augustus he never sought favore from him, and he in said to have declined an ofter of the manasement of his private correnpondence. He died in B.O. 8, the name Jear as his friend and patron Mecenas. Ifs works consist of four books of oden; a book of epoden or short poems, two bioks of catires; and two hooke of epiatles. one of which is often cited as a separate work, under the title of Ars Pootice. The lyrics of Horace are largely hased on Greek models, but the exquisite heauty of his languase is all his own. It is how. ever, in his satires and epiatles that he shows the createst power and originalits, wit and humor, gravity and galety, shrewdness and common cenve, tender sentiment, and at times melancholy. Hia writings have been often translated, and into many languages. In Earlish Pope and Swift have given tree imitations of various parts of his writinga. The poetical tranalation of Francis is well hoom, hat is inferior to that of Sir Theodore Martin.
Fifrie (hewrde), a tomn of the Prussian province of Wentphalle on

Horeb (hö'reb; Arahic, Jebcl Mlisa, Mountain of Moses), a mountain helonging to the same ridge as Mount Sinai, where is stiil pointed out the rock from which water issued at the
blow of Moses.

## Horehound

 with whitish, (hōr-hound; Marrubium vulgäre), a lahiate plant, downy leaves and stem; flowers, small, nearly white, in crowded whorls, possessing an aromatic smell and bitter flavor. It is a popular remedy for coughs and colds, usually as an infusion. It is a native of Europe. Black horehound (Ballóta nigra.), also a labiate nlant, is a malodorous and unattractive weed. Horehound is domesticated in the United States.(hör'gen), a town of Swit(hor'gen), a the lake of Horgen Zurich, with some manufactures and a harbor with a considerable trade. Pop. 6914.

## Horizon

(ho-rizon), in ordinary speech the line where earth and sky seem to meet, or the circle which hounds that part of the earth's surface visihle to a spectator from a given point. This is termed the sensible, visible or apparent horizon, as distinguished from the rational or celestial horizon, an imaginary great circle, parallel to the sensible horizon, whose plane passes through the earth's center, whose poles are the zenith and the nadir, and which divicies the sphere into two equal hemispheres. In ohserrations with the sextant at sea. when the real horizon is invisihle a smali basin containing mercury may serve as an artificial horizon. The ohservation that is then made is the angle hetween the sun or star and the image of the sun or star in the basin of mercury, and it -s easily seen that half this angle is the altitude of the object ahove the real horizon. In geology, the term is applied to any well-marked formation which suffices as a starting-point from which to study the rest. Eorizon, Dir or. See Dip. Horizontal Parallax.

See Parallas. dages of the head, as in decr, cattle, etc.. hut as a term denoting a particular kind of suhstance nothing should be called horn which is not derived from the epidermis or outer layer of the integument, whether on the trunk, hoofs, or head. Horn is a tough, flexible, semitransparent substance, most liberally developed in the horns of bovine animals, but, also found in connection with the 'shell' of the tor toise, the nails, claws and hoofs of animals, the beaks of bird and turtle, etc. Horn is softened very completely by heat, so as to become readily flexible, and to adhere to other pieces similarly softened. True horn consists principaily of an alhuminoid principle, keratin, with a small portion of gelatine and a little phosphate of lime. In some species of animals the males only have horns, as for instance the stag. In cattle hoih male and female have horns, though there are also hornless cattle. Horns differ widely in the case of different animals. Thus the horns of deer consist of bone, and are deciduous; those of the giraffe are independent bones, with a coveriug of hairy skin ; those of oxen, sheep, and antelopes consist of a hony core covered hy a horny sheath. The horns of the rhinoceros alone consist exclusively of horny matter. The iorns of oxen, sheep, goats and antelopes are never shed, except in the case of the prong-horned antelope. The numher never normally exceeds four, and in the case of deer the horns are branched.

The various kinds of horns are employed for many purposes. The principal used in the arts are those of the ox, buffalo, sheep and goat. Deer horns are almost exclusively employed for the handles of knives and of sticks and umhrellas. Those which furnish true hurn can be softened hy heat (usualiy in hoiling water), cut into sheets of various thickness, which sheets may be soldered or welded together at the edges so as to form plates of large dimensions, and polished and dyed so as to imitate the much more expensive tortoise shell. The clippings of horn may he wclded tugether in the same manner, and made into snuffboxes, powder horns, handles for umhrellas, knives, forks, etc. As horn has the valuable pronerty of taking on aud rethining a sharp impression from a dif, many highly ornamental articles may be turned out. Comhs for the hair are made from the fiattened sheets. and ont of the solid parts of buffalo horns beantiful carv ings are made.

notes, from the horn of an animal. The name includes a large family of wind-instruments, many of which have fallen into disuse. The French horn, or simply the horn, consists of a metallic tube of about 10 feet in length, very narrow at top, hent into rings, and gradually widening towards the end whence the sound issues, called the bell. It is hlown through a cup-shaped mouthpiece of brass or ailver, and the sounds are regulated by the player's lips, the pressure of his hreath. and by the insertion of the hand in the bell of the instrument. As a simple tube, unprovided with boles, the horn yields only the generating note, and of course would he confined to one key; hut hy means of crooks the tube can he lengthened, and transposed into any key. By inserting the hand into the bell, which flattens a note, the intermediate notes are produced. The compass of the instrument is three octaves. Music for the horn is always written in the key of C , an octave ligher than it is played, with the key of the composition marked at the beginning of each movement : thus ' corni (or horns) in $D^{\prime}$ directs the performer which crook he must use to play the notes in the key indicated. The bugle, cornet-a-piston and saxhorn are allied instrnments. Horn, Cape See Cape Horn.

## Hotm, Hoorne, or Hornes, Phmip, COUNT van, a Flemish soldier

 aud statesman, horn 1518. He w'is the son of Joseph de Montmorency-Nivelle, and of Anne of Egmont, and stepson of John, count van Horn, who constituted him and his hrother his heirs on the condition of assuming his name. Philip gradnally rose to be governor of Gueldres and Zintphen, admiral of the fleet, and councilor of state. He fought at St. Quentin in 1557, and at Gravelines in 1558, and in 1559 accompauipd Philip to Spain. On his raturn he joined the Prince of Orange and Fgmont in resistance to Philip. On the arrival of Alva at Brussels he was arrested in September, 1507 , on a charge of high treason, and lie and Egmont were beheaded iu Jine. 1508 .Hornbeam (hïrn'bem: Carpinus Befere), a small bushy tree common in Britain, and often used in hedges, as it stands cutting and in age becomes very stiff. The wool is white, tough. aud hard, and is used in turnery, for coiss of wheels, etc. The inner hark yields a yellow dye The Amorican hornbeam iCarpinws americana) is a smaii irie sparingly diffused over the whole of the United States. The wood is fine grained, tenacious, and very compact.

Hornbills
(hörn'hilz ) a remarkable group of hirds (Buocrotidx), confined to Southern Ania and Africa, akin to the kingtishere and the toucans, remartable for the very large nize of the hill, and for an extraordinary horny protuberance by which it is surmounted. nearly as large as the hill itself, and of cellular structure within. The rhinoceros hornhill (Buceros rhinoceros) is almost the size of a turkey, of a black color, except on the lower, part of the belly and tip of the ail, which are white. It

## Rhinoceros Hombill (Burdros vhimoceras)

has a sharp-pointed, slightly-curved bill, about 10 inches long. and furnished at the hase of the upper mandible with an immense appendage in the form of an inverted horn. The skeleton though bulky is very light, being permeated with air to an unusual degree. During incuhation the female is plastered up in the bollow of a tree and fed by the male through a small aperture left for the purpose. The hornbills are of arboreal hahit, and feed on fruits; hut in captivity they take small reptiles, and the Abyssinian spectes even attacks snakes.

## Hornblende (hōrnblend), or Am-

 PHibolz, one of the most ahundant and widely diffused of minerals, remarkable on acconnt of the various forms and compositions of its crystals and crystalline particles, and of its exceedingly diversified colors, thns aiving rise to almost numberless varieties, many of which have obtained distinct appellations. It is sometimes in regular distinct crystals, more generally the result of confused crystallization, appearing in masses composed of laminæ, acienlar crystals, or fibres, variously aggregated. It enters largely into the composition and forms a constituent part of several of the trap-rocis, and is an important cunntituont of several ananien of metamorphic rocks, as gneiss and grenite. In of hornblende exhibits vaplous shade of sreen, often inclining to brown, white

or the twelve honges, or twelve or figure the zodiac, in which is marked the difposition of the heavens at a given time and place, and by which astrologers formerly told the lortnnes of persons, according to the position of the stars at the time of their birth. To each of the honses was assigned a particular virtne or influence. The ascendant was that part of the heavens which was rising in the east at the moment; this was the first and moft important honse, or house of life, and contained the five degrees above the horizon and the twenty-ive beneath it. Other honses were those of riches, marriage, death, etc.
Horsa. See Hengist.
Horse (Equus caballus), a well-known family Equidse, order Ungulata (hoofed animals), and snbdivision Perissodactyla (odd-toed); characterized by an undivided, hoof fuimed by the third toe and its enlarged horny nail, a simple stomach, a mane on the neck, and $3 y$ six incisor teeth in each jaw, seven molary on either side of both Jaws, and by two small canine teeth in the npper jaw of the male, rarely in the female. The family inclndes also the asses and zebras, and original types appear to have been at one time common in both the Old World and the American continent. No horses existed in America when it was discovered by Colnmbns, those now found in a wild state there being descendants of those introdnced by the Spaniards. But a number of fossil species have been described from America-one of them standing only two and a half feet in height. The descent of the present horse can be traced through severa. fossil forms back to an animal only about the size of a fox, and having fonr separate digits or toes on the feet. Subsequent forms show how the third toe developed at the expense of the others till eventually a form identical with the common horse appeared. It is doubtfnl whether the horse is now anywhere to be fonnd in its native state, the wild horses of the steppes of Tartary and other regions of the Ond World being possibly descendants of animals escaped from domestication. The horve was probably firnt domesticated in Acia, and it varies much in form, size,
and character with the climate and nature of the digtrict it inhabits. Arabia prodnces perhads the most beautifnl breed, which is also swift, courageous, endurant and perwevering. As bred in modern times the horse has attuined hish perfection. Two breeds-namely the large powerful, black breed of Hianderm, and the Arabian-have contributed miore than all others to develop the premeat varie-

ties from the original, comparatively light-limbed, wiry race. The former laid the foundation of size, strength and vigor for draught horses and for those anciently nsed in war, while the latter conferred speed and endinrance. The ladies' palfrey is largely derived from the Spanish genet, a small, beantifnl, fleet variety of the Moorish barb. The hnnter, characterized by speed, strength and endurance, represents the old English, Flanders and Arabian breeds. The race horse has less of Flemish and more of Arabian blood. Horses are said to have 'blood' or ' hreeding' in proportion as they have a greater or less strain of Arah blood. At the age of two years the horse is in a condition to propagate. The mare carries her yonng eleven months and some days, continnes to hreed till the age of sirteen or eighteen years, and lives on an average between twenty and thirty years. The varions species of the horse family have been artificially crowsed by man, and are fonnd to be fertile with each other; the olispring, however, are generally meerile

## Horse-chestnut

The horse is, atrictly apeaking, an herbivorous animai, and is more serupulous in the choice of his food than mont other domestic quadrupeds. The stapie diet on which horses are kept is onts and hay, with beans added for hoves subjected to heavy work. As a suhstitute for, or an addition to the reguiar food, bran, lin-
seed and carrote are used. The age of a horse can be told hy the marks on its teeth, which change a little yeariy untii the animai is about nine years old, after which period it is difficult to determine the age hy mark. In some countries the tlesh of the horse is used as food; the hide is made into leather; and the hair of the mane and taii is used for making haircioth, for upholsterers' stuffing, etc. Horse-chestnut, a handsome, genus (Escülus) heionging to the nat. order Napindacex, having iarge opposite digitate leaves, and terminal panicies of showy white, yellow, or red flowers.
Hippocastannum (the common horse-chestnut) is familiar to every one. The seeds are large and farinaceous, and have been used as food for animals; they are hitter, and the bark is aiso bitter, astringent and febrifugai. The tree is said to have been brought from Constantinople to England in the beginning of the sixteenth century, and is supposed to be a native of North: ern Asia. Three other species are found in known under the name of Buckeye.
Horse-fly, the Hippobosca equina, a family Hippoboscidæ, parasiticai on the horse.
Horse-guards, the name given to Whitehali, London, the pubiic office, departments under the commander-in-chief of the British army; appiied aiso to the military authorities at the head of the war department, in contradistinction to the civil chief, the secretary-at-war. The name was given to thie buiiding from a guard having been kept there by the horseguards. See Guards.
Horse-latitudes, a space in the tween the westeriy winds of higher latitudes and the trade-winds, notorious for haffing winds and tedions caims.

Horve-power, force with which or its equivalent; the ing. The mode a horse acte when draw. power is to find what weirht he can raise and to what height in a given time, the horse being supposed to pull horizontaily. From a variety of experiments of this sort it is found that a horme, at on average, can raise 160 lbm . weight at the veiocity of $21 / 2$ miles per hour. The power of a horse ezerted in this way is made the standard for estimating the power of a steam engine. Thus we speat of an engine of 60 or 80 hormepower, each horse-power being eatimated as eqnivaient to 33,000 lbs. raised one foot inigh per minute. Engineers differ wideiy in their estimate of the work a horse is abie to execute. That siven above is the estimate of Bonlton and Watt based on the work of London dray-horses, hut it is considered much too high, 17,400 footpounds per minnte being senerally considered nearer the truth. As it matters little, however, what standard he assumed, provided it be uniformly used, that of Watt has heen generally adopted. The general ruie for estimating the power of a steam engine in terms of this unit is to multiply together the pressure in pounds on a square inch of the piston, the area of the piston in inches, the length of the stroke in feet, and the number of strokes per minute, the result divided hy 33,000 wiil give the horsepower, deducting one-tenth for friction. As a horse can exert its fuil force only for abont six hours a day, one horse-power of machinery is equal to that of 4.4 horses. Nominal or calculated horsepower is a term stili used, hut of little real vaiue, from its being caicnlated on steam at a pressure mnch below the reai power exerted. Sometimes the real, actual, or indicated horse-pozeer exceeds the nominal by as much as three to one. Horse-racing, a sport of ancient orjpractised among the Gin, having been The institution of horse races in England heiongs to a very remote peripd. The first reguiar horse races, however, did not take piace tiil the reign of James $I$. The prive then consisted of a goid or silver beli, whence we have the expression 'to wear a way the bell.' The successors of James I fown to Queen Anne Were ail more or iess attached to the sport. Under George I hnose-ractag became more and more flonrishing, and the sport continued to grow in fmportance during the remaibider of the century. The two most celehrated horwes of that period were Flying Childery (foaled in 1710)
and Eclipee (fonled in 1784), whick lons had the reputation of being the feetent horese that ever ran. The former ran four millem in 6 min. 48 sec., carrying 9 mt 2 lhe. The latter was never beaten. None of the Englinh sovereigns was more devoted to horme-racing than George IV. Between 1784 and 1792 , whiie yet Prince of Wales, he gained 180 prizes, including the Derby of 1788 . Horwe-racing was introduced into France from Ensland, and during the reign of Louis XIV, and still more during that of Louls XV, was pursued with the utmont enthusiasm. The revolution put an end to it for a time, but the sport was revived by Napoieon. Horseraces, mostly upon the English model, have also been introduced into varioum other countries. The principal varieties of horuo-sacing are fiat-racing, or racing on level ground; steepie-chasing, or racing over sround not specially prepared for the purpome; hurdie-racing, in which the hornea have to leap over obstacles purponely placed in the way; and match trotting. This last kind of race is a rery favorite one in the United States, where the best trotting horses are to be found, but in England it is not much practised. Formerly ail races were what is calied weight-for-age races, that is, a specified difference in weight was conceded by the older horses. But it was found that when races were conducted on this plan the best horses came to be known, and the inferior ones withdrew, not venturing to compete with them, so that the race resuited in a walk-over. Hence arose the practice of handicapping, that is of adjusting as neariy as possible the weight to be carried to the previously ascertained powers of the horse, so as to reduce the chances of all the horses eatered to an exact equality. Since the introduction of this practice, handicap races have become a very tavorite sport.

In the American coionies racing was introduced eariy in the eighteenth century, and was practiced to some extent in Mary land and Virginia by the middle of the century. Bully Rock, the first American thoroughbred, was imported in 1730, and Bonny Lass, a brood mare of fine pedigree, about 1740. After this time racing stock was frequently imported and the racing area extended from New York to the Carolinas. After the Revolutionary war many fine racers were brought over and the stock of blooded horses rapidly increased. But it was the development of the trotting horse to which the chief attention was paid in the United States, and in its trotters this country has grown preëminent. The American trotter began its career in the importation to

Philadelphia of the Englinh thoroughbred Memenger in 1788 He was 8 years old when brought over and was used in breeding for 20 years. The trotting inmanct appeared in nearly all his deacendants and it is to the Mensenger atock that much the greater part of the notabie trotters in this country is due. The first record of a public trotting match was in 1818, When the gray selding Bonton Biue made a mile in 3 minutes. Such a feat was at that time thousht impossible and when 2.40 was reached. in 1824 , this ecame a popular phrase signifying marvelous speed. Edwin Forrent trotted a mile in $2.31 \frac{1}{2}$ in 1834, while Lady Suffoik made a record of $2.261 / \%$ in 1843 . Year after year afier this the time was cut down, though by small amounta. Dexter in 1807 made a mile in $2.17 \frac{1}{4}$; in 1885 Maud S. cut this down to $2.08 \%$, and finally in 1897, Star Pointer crowed the 2 minute goal, making a mile in $1.69 \%$, and Lou Dillon, in 1803, in $1.581 / 2$. Pacing records have reached the still lower levei of 1.55, made by Dan Patch in 1806. Running is a faster pace than trotting, and the American running record has reached the jow iimit of $1.351 / 2$. This was made by Salvator, at Monmouth Park, in 1890.
Horseradish (Cochlearia armorecia), a common erarden herb, acrid and stimulating in character. It is used in pharmacy in the preparation of compound spirit of horseradish. Horseradish is used in a fresh state as a
condiment with meats.
Eorse-t a il, among the Tarks and other Eastern nations, the tail of a horse mounted on a lance, and used as a standard of rank and honor. The three grades of pashas are distinguished by the number of tailis borne on their standards, three being allotted to the highest dignitaries or viriers, two to the governors of the more important
 provinces, and one only to those of the less important districts of the country.

Horsham
(borsoam) a town of England, in the county of Sureex, on a branch of the river Arun, 37 miles B. 8. W. of London, and 22 milem N. W. of Brighton. It formerly aent a member to parliament, and now gives name to a parliamentary divinion of the county. Pop. (1111) 11,814.
Horsley (horili), SAMUEx, English 1806. He was edncated at Cambridge, and in 1750 became rector of Newington Butts. In 1707 he was chosen a fellow of tbe Loyal Society, of which he was appointed secretary in 1773. After several charges be was appointed in 1788 Bishop of St. David's, from which he was tranglated to Rochester in 1793, receiving at the same time the deanery of Westminster; and finally to St. Asaph in 1802, when he resigned his deanery. Dr. Horsley was the greatest theological controversialist of his dap, and is famous for his controversy with Priestley on Unitarianinm. He pnblished numerous sermons, and several works on Biblical criticism, bealdes editing an edition of Sir Isaac Newton's works.
Horta (hor'ta), a town in the Island the shores of a small bas between two rocky beadlands. It has a tolerable harbor, and exports wine, oranges and grain. Pop. 6734.
Hortense (or-tops), EUGENIEDE Beawharnais.
Eortensius (hor-ten'she-ns), Quinborn of an equestrinn family B.C. 114 ; died p.a. 50 . He held mony military and civil offices, and was elected consul for the year 69 B.. In the previons year he had been engaged to defend Verres during the famous prosecution in which Cicero acted for the accusers. Hortensins continued to maintain a generous and friendly rivalry with Cicero, acknowledging his superior oratorical powers withont jealonsy. His speeches are all lost. Eorticulture (horti-kul-tir: from and colere, to till), or GARDENING, includes, in its most extensive signification, the cultivation of esculent vegetables, fruits, and ornamental plants. In large gardens there are generally separate departments for flowers, fruits and vegetables ; but in small gardens they are usually more or less combined. A garden should be either on a level, bnt admitting of effectual drainage, or on a gentle slope, preferably on the lower portion of a slope facing the sun. It should be well wheltered, either naturally from situation
or artificially by meaus of plastations, walls, etc. The character of the noil is of much importance. A sood loam, or a sandy loam mixed with humue fo the bent. The former is better fitted for fruittreen, but for early crops the sandy 100 m is desirable. While the greater part of a garden athould conaint of such soll, elther naturally or artificially formed, it is ues. ful to have a portion stronger and another much lighter in order to zuit the requirements of diferent plants. The nature of the subsoil is also important. The best is a dry bed of clay overlyins candatone. Digging, ploughing and pulverising the soil, and exposing the zurface to the action of the summer ann and the winter's froist are highly useful operations, by which the tenacity of atif moils if over come, weeds and insects are dentroyed, and a quantity of air is admitted into the gronnd. Nutritive matter is frequently supplied to plants in the form of manure, either organic or inorganic. After the soil is properly dry and pulverized, the seeds are deposited, and this should atways be done in dry weather, for a dry soil is especially requisite for covering in the seeds. Watering is often necemary as a means of nourishment to growins plants, especially as a snpport to newh transplanted vegetablea, and for cleaning the leaves and destroying insects. The methods of propagating plants are vari. ous. For an account of the procemaes of budding and grafting see these articles. Another mode of propagation is that by means of cnttings, or shoots cut of and planted in the soil, where they take root This process is exceedingly simple and easy in the case of many trees, as the willows and poplars: but regnires some management in the heaths, myrtles, and other shrubs. In growing ornamental plants and flowers and exotic fruits, plant-houses of varions kinds are necesary. These comprise the numerous form: of conservatory, plant-stove, greenhouse, pits and frames. Horticnltural tools, instrnments, implements and machianery are very various.

## Hortus Siccus. See Herbarium.

Horus (hö'us), the Latinized form of path, an Egyptian divinity. Two sods were latterly recognized nnder the name. The elder Horus was the son of Seb (identified by the Greeks with Kronos) and Nu (Rhea) and brother of Oniris The other Horns was the son of Osiris and Isis, and is supposed to have come into the world soon after the birth of his parents. On the death of Osiris he was his avenger, defeating the serpent

Typho and enabiing Isis to thwast him wicked deaigns. Both the eider and yonnser Horis were regarded as aymbols of the sun.

## Horus Apollo. <br> See Horapollo.

Hosanna (bo-zan'a), a word comoccurring ln Psalm cxvili, 25, signltying 'mave now.' The psalm was sung on joyful occasions, and particularly at the feast of Tabernacles. The phrave ls used as an exclamation of praise to God, or en invocation of blesainga.
Hosea (ho-séa), the first in order the Old $T$ among the minor prophets of in order of time, fourishing about 750 m c. Nothling is known of his life, except that he was the mon of Beeri, and that his miniatry belonged to the reigns of Uszlah, Jotham, Ahaz and Hezekłah, kings of Judah. The nation generally and the ten trlbes in particular are reproved, exhorted, and threatened in his prophery. He predicts the approaching exile of hly countrymen, and the consol lng promlse of the final return of an lmproved people.
Hoshangabad (hor-shang'in-badd), headqnarters of district of the same name, Central Provinces of India, on the Nerbudda. It ls a chief seat of the British piece-soods trade, and does business $\ln$ entton, grain, etc. Pop. ahout 15,000. The distrlct has an area of 4437 sq. miles. Hoshiarpur (hóshè-ar-por). chlef ministration of town and seat of adPunjah, India. Pop. about 20,000 name, district has an area of 2180 sq. mifes. Hosiery (hósher-l), a general term all kinds of knitted articles, lncluding drawers, petticoats, nightiresses, etc., and fancy artlcles such as head-dresses. hoods, ahawls, neckerchiefs, watch-guards, cravats, etc. The materials used for the purpose are cotton, linen and wool. the last of which is sometimes mixed with cotton or silk. silk is also frequently used alone. Nearly all articles of hosiery, except some fancy articles, are now made by a knitting-frame of some tind or other.
Fosmer (hos'mer). Harriet, sculptochuset born at Watertown, MasRome, and a 1831 . She studied at are ideal heads of Daphtie and Medusa, ${ }_{P}$ uck, the Sleeping Faun, Waking Faun, Reatrice Cenci, etc. She dled in 1908. Hospice (hos'pis), signifies elther a relisfous order, occupied by a fev. monks,
and dontined to racelve and aotortain trav. cilng monkn ; or housio of retuge and ontertinment for travelerm on nome dif. cult road or pase, as the Hompice of the (Ireat St. Bernard.
Tospital (howpj-tal), any bullding cospital appropriated for the reception of any clams of pernons who are unabie to supply their own wanta, and are more or less dependent npon pnbile help to have those wante snpplied. Hence hoopltais are of various kinds, according to the nature of the wants they snpply and the class of persons for whom they are intended. A large number of howpitals are medical; otherm are for the reception of incurahles; otherm for the aged and infirm; others for the edncation of children of people ln rednced circnmstances; others for the reception of the wounded in hattle; and so on. The firat entahlishments of this nature are believed to belong to the fonrth century after Chrint. Their primary object was to afirord a shejter to strangers and travelers, and it was only occasionally that the sick and infirm were admitted. One of the earllent hospitals of which we have any matisfactory informatlon was that entahlished hy the emperor Valens at Cesarea about the end of the fourth century, and whlch was conducted on a very large acale. The Arabs In Spaln, at an early perlod of thelr occupation of that country, founded a magnlficent hospital at Cordova, where physicians were trained, who did a vant deal to advance the study of roedicine. The Arabs have also the credlt of having founded the first innatic asylnm in Enrope, whlch was erected in the clty of diseasen), fever and mallpoz hospitals. everywhere are medical, often called infirmariea. These may be divided into general and special hospltals, the former class admitting cases of all klnds: the latter class admltting only patients suffering from some special tronbie. Thns there are iying-ln hospitals, cancer, consumptlon, ophthalmle, lock (for venereal dlseases), fever and smallpor hospitals. There are also hospitals for chlldren, and tor persons snffering from incurahle dlseases. Such institutions serve a donble pnrpose, inasmuch as they not only afford the best medical advice and treatment to the poor, who wonid otherwise be nnahie to obtain lt. but also snpply the best means of giving instruction in medlclne and snrgery, as in them students have the opportunity of Witnessing cases of neariy every variety of disease. and ohserving how they are treated by the most shtlled physicians and surgeons. For this reason a good infirmary or medical hospital is an indiopenmable adjunct
to overy uchool of modicine and surgery. Hospitate for the sict and bart are unually divided into warde each containing a larger of smalles number of bed. Medi. cal and surgical warde are usuaily kept ceparate, and all contacious diseaves are treated by themselves in dutinct buildings. Ench hospital has a matron, house surgeon, and apothecary resident within Its walla. The duties of the matrou conaist in regulating the night and day nursea, and the washing and laundry department, as weil an the purchase of the necemeary supplies of provisions, and keeping a seneral superintendence over the kitchen and messes of the sick. The house surgeon takes care of all casualties and accidents is the absence of the principal surfeons. The apothecary takes care of the pharmacy and prepares aili the medicines premcribed from time to time by the surgeons and physicians. There is a well-lighted rorm set apart for the percormance of operations, and a mortuary for the reception of corpsees previous to interment. The nurses reileve each other day and night in a regular manner. Particular wards are set aside for the reception of persons laboring under varione and peculiar denominations of divease. It has been objected to the present plan of constructing large edifices for hospital purposes, that the benefit they confer it creatily diminfacid by the rlot of being attacked by how ial dinensen, fever, erysipelac, pyemid, etc., to which the patients are expooed; and the cottage or hut syntem or construction bas been stronely advoctited. This form of hospital consists of temporary detached huts or cottages which could be easily removed or replaced. Difficultien in connection with expease and administration have made this system impracticable. The pavilion system of construction is a compromise between the large blocks and the cottages or hats. According to this sybtem the wards shonld be separated from the adminlstrative part of the establishment, and shonld be arranged in pavilions of one story where practicable, hut never more than of two. The parilion should always surronnd the administrative blocks. This mode of construction is eqnally applicable to large and small establictiments. The Royal Infirmary of Edinbnrgh, the Herbert Hospital of Woolwich, and the New York Hospital are among the best examples of the pavilion style. Convalescent homes, where patiente are reinvigorated by a short stay after being cured in the infirmary, may be regarded as snpplementary to medical hoepitnls, and among subsidiary institutions are dispensarles (which see) and
achools for the tralining of nurves. 8 ppocial bonpitals for the incane are neces. eary. Hospitals or asylume for incbriation have also been organized; likewleo hotpitais for opium habitues, and thooe addicted to the use of other naroctics. The subject of the proper trainiag of nurnes has receired great attention. Training schoole bave been organized in connection with nearly all the larger American bospitale and to the spectal work of nurves within the houpitals has been added that of nocial merrice, which foliows discharyed patiente, into their homes and seeks to improve conditions there, so that recovery may be full and the patient not returned to the hosplal for lurther treatment. Nost hompitals in the city maintain an ambuiance, or large covered wagon, equipped with a bed, instruments and restoratives, for the trantportation of the sick or wounded to the huspital, each ambriance being provided with a surgeon, who applles frut ald and cares for the patient en route.
Militiory and Naval Hospitale or establishmintt for the reception and care of alck and wounded coldiers and seamen have been in extatence in all civillsed countries for a lons period. Multary hospitale are either permanent or temporary estabiehments. Permanent hospitals are entabilished at army posts or forto an ales. at certain other places. Flold houpitale are constructed at the scene of an engesement as mas be demanded, and are tran-: ported from point to point. Thes usually consist of tents, with stretchers for conveying the wounded. Station houpitals are established at intervals during a campaign, between the seat of war and the base of supplies, and patients are convejed from the field hospitals to them as occasion requires. Hospital ships aro ships fitted out as hospitalis in all expeditions beyond the sen. By intelligent treatment the mortality in war has rapldly decreased.
Hospitallers (bos-pital'ers), charitable brotherboods who devote themselves to tend the afick in bospitais. The name is specially applied to an order of knights, the Knights of S. John. See John, Knighte of St.
Hospodar (hos'po-dar), a title of dignity borne by the raseal princes of Moldavia and Wallachia while those states were subject to Turkey and in earlier times hy the princes of Lithuania and the kings of Poland. Host (liost; Latin hostia, a secrithe hreicial victim), at term aead los the bread (or wafer) and wine in the eucharist, as containing the body and blood of Christ. As the wafer alone io
drea to laymen in the Roman Catholic Chureh, as containing both the hody and hlood of the Redeemor, the term host is uruall applied to the consecrated wafor. Gee Lloveiton Mape. Hostago (hobt'aj), a permon left as formance of the articles or conditions of a treaty. The taking or siving of hostases is now scarcely known in the relations of modern communities, but was formerly almont univernal, and many quentions in the law of nations arose out of the practice. If the stipulated terms were obwerved ihe houtagen were returned on each aide, hut if the terms were violated or evaded the hontages might be put to death.

## Eostilius. See Tullue Hootilius.

Sot Ar Jncine an ongine in panaton of heated air is used as the motive power. Several devicen of this Find have been invented, of which the mont anccemaful has been that- of Ericssoa This has been considerably improvad, and is now in use to some extent where mall power is needed. There are several others in use, that of Belom being the only one used to fnrnish larse power for an important indnstry, a lo 7 ge paper manufáctory at Cusset, France. The chief advantage of the hot air enfine is that it requires no boller, and thus escapen the weight and danger incident to this necessity of a steam engine. On the other hand, the pressure to be ohtained from hot air is much less than that of steam, and the working parts need to be much larger. But air engines are cheaper to make, more easily managed, and need less care than steam ensinem.
Botbed, in gardening, a bed of earth stances, such as freuh stable dnng, tanners' hark, leaves of trees, etc., and cov. ered with glass to defend it from the cold air; intended for raising early plants, or for nourishing exotic plants of warm climates, which will not thrive in cool or temperate dir.
Hot, Blast, a stream of air heated to forced through ${ }^{\circ}$ or $600^{\circ} \mathrm{F}$., and and accomplishes the rednction of refractory ores in less time and with less fuel than the cold blast.
Eotchkiss, BeN Jamin Berkelp, Watertown, Connecticat, in 1826. The most notable of his inventions were the Hotchkiss magazi te rifle and Hotchkiss machine gun He made many improve-
monts in projectiles and heavy ordmance. 110 died in 1880.
Hothonee, a hailding for she culdo vation of plames too delt. cate to grow in the open afr. It is bulit chielly of slaca, and renemblen a greenhouse in its atructure and arrangementa except that artificial heat is kept up all the year round.
Hot Springs, a city and noted Lot Springs, health renort capital of Garland connty, Artancas, of miled 8. W. of Little Rock. The apringe num. ber 72 . their water varying from $76^{\circ}$ to $107^{\circ}$ F. It is clear, tastelem and odorless, and in credited with curing rheumatism, gout, nenralgia and other chronic disennes. Fine novaculite (oilatone) is fonnd here, and hones are manufactured. Lead and ailver also cecur. Pop. 16,334.

## Hotapur. See Percy.

Fottentots (hot'en-lots), a pecupotentiar African race, gupposed to be the aboriginal occupants of the south end of Africa, at and near the Cape of Good Hope. Their limits may be said to have been the river Orance on the north and northeast, and the Kei on the east. When voung they are of remarkable symmetr; but their facem are usly, and this uglinest increamen with age. The complexion is: a pale olive, the cheek-bones project, the chin is narrow and pointed, and the face consequently is triangular. The lips are thick, the nose flat, the nostrills wide, the hair woolly, and the beard scanty. When the Dntch firat settled at the Cape in the miladle of the seventeenth century the Hottentots were a numerous nation, of pastoral and partially nomadic habits, and occopied a territory of 100,000 square miles. At the present day this race is nearly extinct within the wide territory which formerly belonged to it, having been entirely hunted out and dispersed by the Boers. Among the offshoots of the Hottentot race are the Griguas, descended from Hottentot mothers and Dutch fathers, living to the north of the Orange river. They are semicivilized, and have some towns and villages. The Koras or Korannam, higher up the river Orange or Gariep, still remain a favorable apecimen of the Hottentot race. They are taller, stronger, and more cleanly than the tribes further west. Other tribes are the Gonas or Gonaquas, much mixed with the Amakesa Kaffirs; the Namaquas, dwelling towards the mouth oi the river Orange ; the Hill Damaras, farther north. The diminutive Bushmen are related in speech to the Hottentots. The language of the

Hottentote is peculiar comiating of a ayntem of clicise or clucks Hottentot's Bread. see Testud-
 Moncrion Milnee, Lomd only mon of Robert Pemberton Milnen, of Fryaton Hall and Great Houghton, was born in Yorkehiro in 1800, and educated at Cambridge. He made wome reputation as a writer of verne, eamaye, memoirs, etc., but it was rather his social and convernational powers, and his kindily patronase of literary aspiranta, than the merit of his writing which gave him his prominent position in Iondon society. in 1837 he entered parijameut an member for Pontefract, at firmt as a Tory but afterwards as a supporter of Russell and Palmernton. He was an active member of numerous learned societien and institutions, president of the Royal Society of Literature, trustee of the Britign Museum, foreign secretary of the Royal Academy, etc. Ile died in 1885. Houghton, a village, capital of igan, on the s. shore of Portage Lake, from which is a ship canal to Lake Superios. It is the seat of very productive copper mines, with umelters. The Michican Collers of Miues is located here. Pop. 8118.
Houghton-le-Spring, $a \operatorname{market}$ Eugland, in the county of Durham, 61/2 miles 2. E. of Durham. The prosperity of the town depends on the numerous conl mines in the neighhorhood. Pop. (1011) 9708.

Eonlton, a village, capital of Aroostook County, Maine, 10 milen w. of Woodstock, N.' B. It has a trade in farming and lumber prodncts and atarch is produced. Pop. 5845.
Fouma, a town, capital of Terremiles s. W. of New Orleans. It is in a ungar-cane and rice conntry, and sugar and molasses are produced. Pop. 6024. Hound (Canis sagas), a name given generally to hunting dogs, hut restricted by scientific writers to such as hunt by scent, a definition which excludes the greyhound. Among the varieties are the hloodhound, staghonnd, foxhonnd, harrier and beagle. Hounds are disthasuished not only by their fineness of meent, hnt hy docility and sagacity. Of the rough-haired and smooth-haired vareties, the former manifest the greatest affection for man.
Founds-tongue, a plant, so called itm leaver. See Oynoglossum.

## Hounslow (bouns 70 ), towe of

 Englapd, in Middlemes, 9 milen mouthwest of Hydo Part Corner, London. The adjoining Hounslow Heath once notorious for the highway robberici
committed on it, is now entirely enclomed, and is the cite of larse cavalry barrack and evtensive powder mills.
Hon-Pe (hU-pa'), Hu-Perr, or HooHe (North of the Lakes), a central province of China. It in inter sected hy the Hanokians and the Yans-tre-kians, and is considered one of the mont fertile parts of the empire. Are, about $70,000 \mathrm{sq}$. miles. Pop. estimated ot $34,000,000$.
Hour (our), the twenty-\{ourth part of cus a day (see Day). In mont countries the hours are counted from midnight to midda., and twelve hourv are twice reckoned. Bnt in some parts of Italy twenty-four hours are counted beginning with sunset, so that noon and midnight are every day at different hourw Each hour is diváed into mixty minutem, and each minnte into sirty meconda.
Eiour-circle. See Globe.
Pour-glass, an instrument for measrring time, consisting usually of two 4 'low hulbe placed one above the other, and having a narrow neck of communication through which a certain quantity of dry sand, water, or mercury is allowed to run from the upper to the lower bulh, the quantity of fand being adjusted so as to occupy an hour in passing from one bulb to the other. The hour-qlass was commonly used in churches during the sixteenth and seventeenth centuries to regulate the length of the sermon.
Hoaris (houriz or $\mathbf{h} 8$ 'riz), the 'blackesed ${ }^{2}$ nymphs of Paradise, Whose company, according to the Korem, is to be one of the rewards of the faithinl. They are deweribed. is moit beautiful virging, endowed with perpetual
youth, and sabject to no impurity. They dwell in beautiful gardens, by fowing streams, and the meanest of the faithful will have at least seventy-two of them.

## Hours. See Hora.

Hours, Onsonranl. See Horce oar
 an active part in Democratic politics in that state. While never holding office, he directed many campaigns for governor. During the Europenn war, under the informal title of Colonel, he served in 1015 as the special representntive of President Wilson in Europe and in December, 1017, became the chie? American member of the International Coizcil of the Entente Allies.
House Boat, a form of summer water ular. It consists of a flat-bottomed scowor float, on which is built a superstructure of several rooms, with balconies, awnings, etc., and often luxuriously furnished. During the pleasant season the house boat is movel from place to place on inland waters as desired. House boats are growing rapidly in favor in the United States and are very common on the Thames and smme other rivers of England.

## House-breaking. See Burglary.

## Housefly. See Fly.

Houschold Gods, among the Roknown as the Lares and Penates, and presiding over the fortunes of the house or family.

## Household Suffrage, suffrage

 the occupancy tart of aphy of a house or a distinct fa Brit house for not less than a year. In Britain it was established in boroughs by the Reform Act of 1867, and exteniled to the counties in 1884. Lodgers occupying lodging which would let unfurnished for f 10 a year are also entitled to rank under this suffrage.
## Household Troops. See Gwards.

Houseleek (housๆak; Sempervivum sulacees) a tectorum, nat. order ©ras. be met with on old walls, the roots of cottages, etc. The stem rises to the height of 8 or 10 inches, and bears a few purplish fowers, which have twalve or ffteen petals. The leaves are applled by the common people to bruises and old ulcers. Housemaid's Knee, an acute in-
the bursa or cac betwere the kneo-pan and the skin so called because it in common among housemaids from their kneel. ing on hard, damp stones. It is treated liice other local infiammations by counterirritants, and if necesmary incision. In all cases the limb ought to have compiete rent.
Fouse of Commons. See Britain; Parliament; also Parliument.
House of Correction, a prison for orderly persons, and certain and disorderis persons, and certain classes of criminals, such as prisoners convicted of felony or misdemeanor, vagrancy, etc., or committed on charge of such. Originally vagrants, trespansers and convicted persons were detained in these houses that they might be compelled to work. They are sometimes called bridewe lls. In Eng. land every county must have one. Thoy have been adopted in the large citiee of the United States.

## House of Governors, <br> The first Buggestion

 of a body under this title was made in 1007 in a panaphlet by William George Jordan of New York, its purpose being to bring about harmony in state lepisla: tion and a closer unity of the States in all particulars. Such a convention of governors was called by Presidant Roosevelt in November of the same year, its purpose being to consider the conservation of the natural resources of the country. The governors of 37 States and Territories attended this convention and the governors themselves called a second one, to be held in January, 1010. This adopted the title of House of Governors. Its purpose was to bring about, througl state action. that political harmony which the reneral government has of late been striving to develop. A session was held at Spring Lake, N. J., in September, 1011, at which steps were taken towards establishing a permanent headquarters and provide for future meetings.
## House of Lords. <br> Seo Britain; also

 Parliament.
## House of Representatives. See

gress.
Houssa, or Havssa (hourima) a re gion of Africa, in Central Soudan, between lat. $11^{\circ}$ and $14^{\circ} \mathrm{N}$.; and lon. $4^{\circ}$ and $11^{\circ} \mathrm{E}$. This country, though yet little known, is represented an extremely fertile, and itiofuliy cultivated. It is under the rule of the Fellatahs, who have subjected the native inhabitanta. the Haussana or Haussas, a race intermediate between the negroes and the Berbers, but generalls ranked with tiv

Intter. They are intellisent and lively, expert weavers as well as agriculturists, and well acquainted with tanning and working in iron. Their language is rich and conorous, and has become the general medium of commercial intercourse in Central Africa. They are Mohammedans. There are two large tuwns in Houssa-Sokoto and Kashna.
Houston (has'tun), a city of Texas,
capital of Harris county, at the head of steamboat navigation on Buffalo Bayou, 48 miles northwest of the

important seaport of Galveston, and the great raiiway center of the State. It stands in an excellent graying district, and contains iron-foundries, cottonpresses. machine-shops, car-wheel works, and other industriai estabiishments. It is a great shipping port for cotton, and rice and lumber are aiso shipped. 'Pop. 78,800.

## Biouston,

Samuel. President of Texas, was born in Virginia in 1793, of Scotch-Irish descent. He was taken to Tennessee in childhood, studied law and practiced at Nashville, and became prominent in the State, being elected to Congress in 1823, and made governor in 1827. He subsequentiy resigned this office, iived severai years among the Cherokee Indians, and in 1832 went to Texas. Here he was active in the revolt of Texas against Mexico, was chosen commander of the army and in 1836 defeated the Mericans at San Jacinto, which resulted in the independence of Teras, of which he was elected Premident. In 1845 Texas entered the Tinion, and Houston was chosen United Statel Senator. He was elected Governor of Texay in 1859, In 1861 he was
deposed for adherence to the Union. E. died in 1863.
Houston Heights, a town in Har-
 aimost exciusively a residential town. Yop. 12,000.
Eiovenden (huv'en-den), Thoyas, painter, born at Dunmanway, Ireland, in 1840, studied art at Cork and in New York, was elected a member of the National Academy in 1882. His Breaking the Home Ties was very popular. Other pictures were The Last Momente of John Brown, Llaine, $A$ Bre$i=3$ Interior, etc. He was killed while trying to save a littie sirl from a rallroad train, in 1895.
Howard (hou'ard), the patrician centuries honse that has been for centility at the head of the English nobility. The first of the family of whom anything is certainly known is Sir William Howard, chief-justice of the common pleas under Edward I and Edward II. His grandson, Sir John Howard, possessed extensive property in Norfoll, and was also sherif of the county. His grandson, Sir Robert Howard, by marrying the co-heiress of the Mowbrays, dukes of Norfolk, greatiy increased the family posseasions, and enhanced the family importance. Their only son, Sir John Howard, distinguished himself in the wars with France in 1452-53, and in 1470 was created Iord Howard, and made captain-generai of the royai forces at sea. Adhering to the fortunes of Richard III he was in 1483 created Duke of Norfolk, and elevated to the high dignity of Earl-marshal of England, but two years after he was kilied at Bosworth tield, and his blood and honors were attainted by parliament, 1485. A like attainder was decreed against his son Thomas, who had been created Earl of Surrey by Richard. Thomas, however, was restored to his titles and possessions, manifested high miiitary talent, and distinguished himseif, especiaily by his defeat of James IV of Scotland at Flodden in 1513. His son Thomas, third duke of Norfolk, obtained distinction both as a naval and military commander, and became High-admiral of England, But in spite of his services both at home and against the Scots and the French. Henry VIII at last condemned him, on slight grounds, to suffer the death of a traitor. The death of Henry preventer the execntion, and he was reinstated in his rank and property by Queen Mary, and died in August, 1554. By his marriage with a daughter of Edward IV he bo came the father of the ll-fated and ao-
complinhed Henry Howard, Earl of Sur rer, the best English poet of his age. (See Surrey, Earl of.) Thomas, fourth duke of Norfolk, entertained the project of marrying Mary Queen of Scots, which led to him being convicted of high treason, and beheaded in 1572 . The attainder was reversed and the famiiy honors restored, partiy by James I and partly by Charles II. The ducai house of Norfolk has thrown out many branches which have enjoyed, or still enjoy, the earldoms of Carlisie, Suffoik, Berkshire, Northampton, Arundel, Wicklow, Norwich and Effingham and the baronies of Bindon, Howard de Walden, Howard of Castle Rising, and Howard of Glossop. As connected with this nobie family we may mention Lord Howard of Effingham, who defeated the Spanish Armada in 1588 ; Catherine Howard, one of the ill-fated consorts of Henry VIII ; and Sir Thomas Howard, who died in the Tower a prisoner, for having aspired to the hand of the Lady Margaret Douglas, daughter of Margaret, queen-dowager of Scotland, and niece of Henry VIII. "The blood of the Howards' has become proverbial, as expressive of ancient lineage combined with high rank.
Boward, Bronson, piaywright, born 1842; died in 1908. His best-known plays are Saratoga, Yowng Mrs. Winthrop, Shenandoah and The Banker's Daughter.
Howard, Joris, an Engiish philanand died in 1790 . His father, a wealthy London tradesman, died when his son was about 19 years of age, and left him an independent fortune. In 1756 Howard undertook a voyage to Lisbon to view the effects of the recent earthquake. The vessei in which he embarked being captured, he was consigned to a French prison. The hardships he suffered and witnesped previously to his reiease first roused his attention to the subject of his future researches. In 1773 he resolved to derote his time to the investigation of the means of correcting the existing abuses in the management of prisons. With this view he visited most of the Engish county jaiis and houses of correction, and in March, 1774, he iaid the result of his inquiries before the House of Commons, for which he received a vote of thanks. In 1775 and 1776 he visited manv of the continentai prisons, as well as those of Scotland and Ireiand, and the substance of his investigations appeared in a work he pubilished in 1777. This work was supplemented by his expertences of foreign prisons (1778-1783).

In 1789 he published an Acoount of the Principal Lazarettos in Burope, with notes on Continentai and British prisons and hospitals. In the same year he made a finai journey through Germany and Russia, when prisons and hospitals were everywhere thrown open for his inspection as a friendly monitor and public benefactor. He died of fever at Cherwon in South Russia.
Howard, OLIVEs Otis, soidier, born at Leeds, Maine, in 1830; died in 1009. He graduated at West Point, served in the Seminole war and through the Civil war, being made majorgeneral of voiunteers in 1862, commander of the Department of Tennessee in 1864, brigadier-general in the regular army in 1864, and major-generai in 1886. He was commissioner of the Freedman's Bureau 1865-74, and Peace Commissioner to the Indians of Arixona and New Mexico in 1872. He retired in 1894.
Howard University, an instituiished at Washington, D. C.. in 1867, by Gen. Oliver O. Howard, whise in charge of the Ereedman's Bureau, for the liberal education of freedmen. As now conducted pupils are admitted without distinction of sex or color. In addition to the college course, there are courses in medicine, dentistry, pharmacy, iaw, theology and normal instruction. It has 105 instructors, 1200 students, a library of 30,000 volumes and an endowment of about \$280,000.
Howe, Edear Warb, noveiist, born 1854 near Huntington, lowa, in 1804. His chief works are 4 Story of a Country Town, The Mystery of the Looks, Confession of John Whitlock, etc. Editor and pubiisher of the $\Delta$ tchison Deily Globe.
Howe, Elias, an eminent inventor, chusetts was born at spencer. Massalonsetts, in 1819: died in 1867. After long experiment he succeeded in 1846 in perfecting a sewing machine, the first satisfactory one ever invented and the basis of all those that have foilowed. He was for severai years invoived in expensive and harassing lawsuits to establish his right to reap the benefits of his own ingenuity, but obtained a verdict in his favor in 1854, and subsequently grew wealthy from the royaities paid on his patent. He equipped a regiment at his own expense in the Cini war, and served in it as a private. Immense numbets of the Howe sewing machines arr now manufactured and sold in America, Great Britain, and elsewhere.
Howe, Julia WArd, author and poet. was born in New York city
in 1819. She received a careful education, and at an earls age wrote plays and poems. She was married to Dr. Samuel G. Howe, philanthropist, in 1843. She afterward continued her stadies, writing philosophical essaym. In 1881 she composed the popular Batile Hymn of the Republio, the favorite lyric of the Civil war. She died in 1010 at the advanced age ot 91.
Howe,
Rtohned, Eard (1726-99), an English admiral. He was made vice-admiral in 1775 and appointed com-mander-in-chief in America February 1776. He conducted the English naval operations in the Revolution.
Howe, WमLiam, छтн Viscount cral: sounger tus, sd Viscount, killed in the Ticonderoga expedition of 1758 , and of Richard, 4th Viscount, later Barl Howe, the admiral. Sent to America in 1758 he took part in the capture of Louisburg and accompanied Wolfe on his expedition to Quebec. In the Revolutionary war he commanied the British at Bunker Hill June 17, 1776, and in October became commanderin-chief, succeeding Gen. Gage. He won the battles of Long Island ( $17^{78}$ ), White Plains (1776), Brandywine (17'77), and Germantown (1777). He was succeeded by Sir Henry Clinton (q. च.). See also Burgoyme.
Howells (how'elz), Whluak Dyan, tinsville, Ohio in 1837. He learned the printer's trade with his father; was afterwards assistant editor on the Ohio 8tate Jowrnal; published a life of Abraham Lincoln and a volume of poems, and was appointed in 1861 consul at Venice. On his return to Americs in 1865 he joined the staff of the Nation, became afterwards editor of the Atlantio Monthly (1871-81), was editorial contributor to Harper's Magazine, 1880-91; editor for a time of the Cosmopolitan, and subsequently editor of the Easy Chair of Harper's. He became widely known as a writer of realistic novels. Among his many works are Venetian Life (1866), Italian Journeys (1867), A Chance Acquaintance (1873), The Lady of the Aroostook (1879), A Modern Instance (1883), The Rise of Silas Lapham (1885), Liter ature and Life (1902), London Films (1905), Between the Dark and the Day light (1807), etc.
Howitt (Kow'it), M\&Ry, an English dauehter witer, born in 1800, the married in 1823 to Mr . William Howit (see next article). Mary Howitt wrote a number of hymns and ballads, wevernal
volumes in prose and verse for children, and translated Miss Bremer's works and H. O. Andersen's Improvisctore Amons her writinge for the young may bo mentioned Tho Ohildren's Year, The Dial of Love, 4 I'reasury of Trales for the Yomms etc. In conjunction with her husband she also wrote The Literature and Ros manon of Northern Europe and Ruinea Abbeys of Great Britain. She died in 1888.

Howitt, Wrisuax, born in 1792 of a Quaker family; began early to publish verwes, and in conjunction with his wife (see above article) published shortly after their marriage a polume of poems-The Forest Minstrel (1823). In 1831 appeared his Book of the Seasons, in 1834 his History of Priestcraft, and in 1838 his popular Rural Life in England. In 1840 the Howitts settled at Heidelberg, and devoted themselves to introducing the literature of the north, especially of Sweden, ta English readers. Student Life in Germany appeared in 1841, Rural and Domestic Life in Germany in 1842. In 1847 Mr. Howitt published his Homes and Haunts of the British Poets, and, after a visit to Anstralia, his Land, Labor and Gold; and whe History of Discovery in Australia. He also wrote History of Enoland. In later life Mr. Howitt and his wife became converts to spiritnalism. He died in 1879.

## Howitzer (hon'it-ser), a short piece

 Howitzer of ordnance, nsnally having a chamber for the powder narrower than the bore, specially designed for the horizontal firing of shells with

Bram Hiowitser ( 24 pounder).
small charges, combining in some degree the accuracy of the cannon with the calibre of the mortar, but much lighter than any gun of the same capacity. The rified gun, throwing a shell of the same capacity from a smaller bore, and with mnch greater power, has snperneded the howitzer for general purposen.
Howler MOnkey (MyeEtes), American monkeys, characterised by remarkable loudnems of voice, which is due to the presence of a larre chamber within the hyoid bone and the enlarge-
ment of the ventricles of the laryax. In the tropical forests of Americe their hideous howle, probably a kind of amorous concert, may be heard during the night more than a mile away. They are prehensile-tailed, large and heavy of body, with a high pyramidal head flattened on the summit.
Howrah (hou'ril), a town of India, on the right bank of the Hugli, opposite Calcutta, of which it is practically a suburb, and with which it communicates by $a$ fioating bridge. It has large dockyards, jnte and saw mills, and various mannfactories. Pop. 157,: 594.

Höxter (henk'ster), a town of Westbank of the Weser, once a Haluse town. Pop. 769.
Hoy (hoi), a small vessel, usually in carrying goods and passengers short distances coastwise, and sometimes in conveying goods to and from larger vessels and the shore.
Toy, an island of the Orkneys, Scotloy, land, $31 / 2$ miles 8 . of Stromness. It is about 13 miles long and 6 broad; mountainous and healthy, bnt with fertile tracts. It has an excellent harbor, Long Fope. At the southwest of the island there in a detached pillar of rock 450 feet high, known as the Old Man of Hoy. Pop. 1380.
Hoya (ho'ya) a senus of Asclepiaand cnltivated in hothouses on account of their ornamental appearance. Hubbard, Elaker, anthor and pubton, Illinois, isher, born at BloominsEast Aurora, New York, the famous Roycroft shop, devoted to making de luxe editions of the cl "cs. He is editor of the Philistine : : Fra, radical and free-spoken journ. d has written No Enemy but Himself, Little Journeye to the Homes of Famous Women, etc. He was drowned at the sinking of the Cunard line steamship Lusitania, which was tor pedoed by a German submarine off the coast of Ireland, May 7, 1915.

## Euanuco Bark, the gray or silk

 imported in the form of quills from aronnd Huanuco in Peru. It is the produce of Cinchona micrantha.
## Iubble-buhble. See Narghile.

## Euber

in 1821. Naturaliot, born in 1750; died his ezesight his wife and wis able, oy the aelp of mettu, 28 miles $\overline{\text { W }}$. of Bonton. It has his wifo and his reader and amanuensis. manufactures of leathos, subber shoel,
wohbing, sousamers, paper and wooden hozes, whoes, lante boits, etc Pop: 6743. Indson, a city, enpital of Columbla E. bank of the Hudson River, 28 mile 5. of Albany it contains ars miles mory, Houne of Refuge for Women and l'iremen's Home, and has extensive manufactures, including clothing, paper, carwheels, machinery etc. with several blast furnaces and iron foundries. It was settled in 1784, and was formerly engaged in the whale fishery and foreign trade. Pop. 11,417.

## Hndson, Herkry, an English naviga-

 He sailed from London in the year 1607 in a small ressel, with only ten men and a boy, to discover the Northeast Passase, and proceeded beyond the 80 th degree of latitude. In a second voyase he landed at Nova Zembla, but could set no further eastward. In 1609 be sailed from Amsterdam in the Half Moon, a veassel of about 80 tons, in the service of the Dutch East India Company, and discovered the Hudson River, which he ascended to the present site of Albany. He spent a month expluring the river and then returned to Europe. In 1610 he set out on another voyage in a ship called Discovery and reached Hudson Bay and Hudson Strait where he wintered; but his crew mutinied after suffering many hardships, and set lim adrift in a boat along with his son John and seven of the crew, none of whom was ever heard of again.Hudson Bay, or Hupsor's Bay, an rather an inland sea, Dominion of Canada, extending between lat. $51^{\circ}$ and $64^{\circ}$ N., and lon. $77^{\circ}$ and $95^{\circ}$ w.; lengtiu, north to south, about 800 miles; greatest breadth, about 600 miles. Hudson Bay is open to navigation for $41 / 2$ months in summer (from middle of June to end of October), but is obstructed hy drift-ice during, the rest of the year. There are many islands, reefs and sand-banks. The shores on the east are high and bold; but those on the west. especially towards the south, are low and level. The white whale is found in its waters, and there is a considerable summer fishery.
Hudson Bay Company, an Engo ing company, chartered by Charles II, May 2, 1670. It had long a monopoly of the trade throughont the whole territory of North America whose streams flow into Hudson Bay, and at ore time as far westward as the Pacific, with rishts of governing and making war. In 1870 its authority was transferred by act of Parliament to the crown, and its ter-
ritories incorporated in the Dominion of Canada. Its trade in furs is etill very large. See Fur Trade.

## Hudson Bay Territory.

See Northwest Territories.
Hudson Falls,
a villase in Washington county, New
York. Pop. 6189.
Fudson River, a river on the AtUnited States. It rises, by two hranches, in the northern part of the State of New York, in the Adirondack Mountains, about lat. $44^{\circ}$ N. Two small streams unite to form the river, which is afterwards joined hy the schroon and Sacondaga. At Glen's Falls it has a fall of 50 feet, after which it runs almost due south to its mouth in New. York Bay. Its whole course is over 300 miles; it is navigable as far as Albany 145 miles, for the largest vessels. The banks of the Upper Hudson are high and rocky; and the scenery very picturesque. It was discovered in 1009 by Henry Hudson, after whom it was named.
Fue (bo-a'), the capital city of Anam,
on the river Hue, which is herv navigahle for mall craft, 10 miles from it mouth in the Gulf of Tonquin. It was fortified in the present century in European style by French officers in the service of the king of Cochin-China. The circumference of the walls is upwards of 5 miles. The city has a considerable 'trade Pop. (1011) 61,600.
Tre and Cry in English law, the pursuit of a felon or offender, with loud outcries or clamor to sive an alarm. This procedure is taken by a person robbed, or otherwise injured, to pursue and get possession of the culprit's person. At common law, a private person who has been rohbed, or who knows that felony is committed, is bound to raise hue and cry under pain of fine and imprisonment. This is generally done by informing the rest constable; and this process is $s$ ecognized by the law of England as means of arresting felons without the warrant of a justice of the peace. The same name is also applied to a paper circulated by the secretary of state for the home department announcing the perpetration of offenses.
Tuelva (n-el'va), a seaport town of
Southwestern Spain, capital of the province of same name in Andalusia. It has wide and well-huilt streets. There are manufactures of matting, ropes, sails, etc., a large trade in the exportation of copper ore; also in fruits and wine. The fisheries, mainly wardine and tunny, aro

A comalderable value Pop. 21,857. -The province of Huelva is mountainous and celebrated copper mines. In the couth it is comparatively level, and has a stch alluvial soil. Pop. 260,880.
Finerta (hwarta), Victoriano, Provisional President of Merico after the death of President Madero, wat born, of Indian descent, in 1854, and graduated in 1876 from the Military College of Chapultepec. His first service in the field was in 1001, when as a colonel the took part in the campaign against the insurgent Yaguis, and alterwards against the Mayas. His life, however, was chiefly passed in scientific work for the armi until 1010, when, as a hrigadier general be took part in the field in the service of Premident Dias against the Madero rerolutionists. He commanded the guard that accompanied-Dias to Vera Crus after his reaignation, and subsequently cerved under President Madero, taking an actire part in the uprisings of 1012 and 1913; but on February 18, 1913, turned traitor to Madero seized and imprisoned him, and was proclaimed Provisional President by his fellow conspirators. The subieqnent assassination of Madero was widely believed to be due to the instigation of Hnerta. He was never recognized as president by the United States and was forced to resign in July, 1914. He was imprisoned in E1 Paso, Texas, in 1915, charged with conspiracy to vio Iate the neutrality laws of the United States, and died there Jan. 13, 1016.
Euet (a-a), Prarre Dantir a French borm at Caen, Normandy, in 1630; died in 1721.
Euggins (huginz), Sn Wminne, tronomer, born in Lonuun in 1824 . He cained distinction by his discoveries with the spectroscope on the sun and stara He was president of the Royal Astro nomical Society 1876-78, and of the British Association 1891-92. He died May 14, 1010.

## Hugh Capet. See Capet.

 Hughes (huis), Crarlis Evans, governor and supreme court jut tina, was born at Glens Falls, New York, ir 1862 . He was graduated from Brown was professor of law at Cornell Univer. Hity 1891-93, lecturer 1893-95, and at New York Law School after 1893. In 1805 he became counsel on the Armstrons inventigations of life insurance companies, and developed very serious evils in the cosduct of these institutions. Bis ercel.lent work in this investigation led to his election as sovernor of New York in 1906, and again in 1808. Appointed a juntice of the U. 8. Supreme Court in 1910, he was made the Republican candidate for Preaddent in 1916, but defeated.
:Inghes, Jorrs, archbichop, was born 1790 in County Tyrone, Ireland, in 1798. He came to the United States in 1817 and was ordained priest in 1826. In 1838 he became coadjutor bishop of New York, bishop in 1847, and its first archbishop in 1850 . In 1861 he was entrusted by President Lincoln with a apecial misgion to France in behalf of the Union canse. He was the founder of St. John's College, Fordham, and of St. Patrick's Cathedral. He died in 1884.
Hughes, Sis Sax (1803-), a CaDarlington, Ont son of John Hughea of Tyrone, Ireland, and Caroline Laughlin. of Scoteb-Irish-Huguenot dencent, edu: cated at Toronto Model and Normal schools and Toronto Univervity. He was lecturer in English in Toronto Collegiato Institute until 1885, when he pnrchased the Lindsay Warder, which he edited until 1897, and was in the Active Militia from his thirteenth year; in 1897 he bocame lieutenant-colonel in command of the 45th battalion. He visited Australia and New Zealand in 1897-98 in the interest of Colonial assistance in imperial wars; served in the Boer war, $1890-1900$, being mentioned in dispatches several times; served in the European war in France, 1014-15, built the cantonment at Valcartier (see Canada) and as Minister of Militia raised contingents for the European war, 1914-18. It was he who sought and obtained for Canada huge orders for munitions from Great Britain and thereby made it possible for Canada to weather the financial depression, pay her own war expenses and emerge from the war in better financial shape than she was when the war broke out. He became colonel in 1902 and was promoted to major-general in 1814.
Fighes, Thomas, an English barrister, author and philosopher, born at Ufington, Berkshire, in 1823. He was educated at Rugby under Dr. Arnold, and afterwards at Oxford. In 1848 he was called to the bar, and in 1869 became a queen's counsel. He is |widely known by his popular novel, Tom Brown's School-days, a picture of school Hife at Rugby published in 1858. Tom Brovon at Owford followed in 1801. He 'died in 1896.
Engli; a city and river port of Bengal, British India. The chief industries are jute bage and alh

Hugli, or Hooginy (biveni), an arm Fugo ( $1-\mathrm{z}^{6}$ ), Vioron Mners, a French poet and noveliat, born in 1802, at Besancon, where his father, then Major Hugo, was atationed in command of a brigade. His father having entered the service of Joseph Bonaparte, king of Italy, and afterwards of Epain, Victor'e earlier yenrs were partly mpent in thowe countries, but in 1812 he went with his

mother to Paris. At the age of twelve he was already writing verses, and in 1823 his first novel, Han d'Islande, appeared, followed in 1825 by Bug Jargal. In 1828 a complete edition of his Odes et Ballades, appeared. In these produc tions Hngo's anticlassical tendencies in style and treatment of his subject had been very visible, bnt the appearance of his drama Oromwell (1827), with its celebrated preface, gave the watch word to the anticlassical or romantic echool. Cromwell was too long for representation, and it was only in 1830 that Hernani, over which the great contest be tween Classicists and f manticists took place, was brought on the stage. Other dramas followed:- Marion Delorme (1831), Le Roi s'amuse (1832), Lucrèce Borgia (1833), Marie Tudor (1833), Angelo (1835); Ruy Blas (1838), Les Bourgraves (1843). During those years he bad also published a novel, Notre Dame de Paris (1830), and seyeral volumes of poetry, Lees Feuilles dAutomne (1831), Les Chants du Or Cepusoule (1835), Les Voim Intérieures (1837), Les Rayons et Les Ombres (1840). His poetry of this period has a melody of grace we-
perior perbape to any that he afterwarde wrote, but wants that deep and oricinal tense of life which is characteriatic of his later poem. During the mame period ho aloo wrote his critical emays on Mirabeana, Voltaire, and a number of articles for the Reowo do Paris. In 1811, after havins been twice previonaly rejected bo wan elected a member of the French Academy: made shortly afterwards a tour in tho Rhineland, of which he wrote a brillinant and interesting account in Lo $R$ him, published in 1842. In 1845 he was made a peer of France by Louls Philippe. Tho revolution of 1848 threw Huso into the thick of the political struggle. At frmt his votes were decidedly Conservative but afterwards, whether from enspicion of Napoleon's deaigns or from other reasons, he became one of the chiefs of the democratic party. After the coup dettat, December 2, 1851, he was one of those who kept np the struggle in the streets against Napoleon to the last. He then fled to Brussels, where he published the first of his bitter satires on the fonnder of the Second Empire, Napolton to Petit. In the following year (1853) the recond, the famous volnme of Les ohditiments, a wonderfol mixture of matirical invective. lyrical passion and pathom appeared. Hago now went to live in Jerrey wat expelled along with the other french exiles in 1855 by the English government, and finaliy settled in Guernsey. It was in the comparative solitade and quitetrem of the Channel Islands that be wrote most of the great works of his later years, Lee, Contemplations (1856), La LLgendo des Sitcles, 1st series ( 1850 ), Ohansons des Rues et des Bois (1865), and his celebrated series of social novele, Lee Mfisérables (1862), Les Travaillewre do la Mor (1886), and L'Homme qui Rit (1869). In 1870, after the fall of the Empire, Victor Higo returned to Paris, where he spent the remaining yearm of $n$ remartably vigorons old age in occa. sional attendances at the senate, and in adding to the already long list of his literary works. Among theme latent prodnctions we may mention guatre-vingt-treize (1872), List of etro Grand-pere (1877), L'Histoire own Crime (1877). Le Pape (1878), Ls Putio Supreme (1879), Religions of Roligion (1880), Les Ouatre Vonte de TELprit (1881), La Légende des sicoles) (last serles 1883), Torquemad (1882). He died in 1885 .
Firauenotis (hagenots), a term of nown orisin, applied by the Roman Catholice to the Protertanto of France dnring the relicione strucsiem of the sisteenth and weventeenth cente
rlem. Dnring the earls part of the gixteenth century the doctrines of Calvin, notwithatanding the opponition of Erancis I, spread चidely in France. Under his muccestor, Henry 11, 1547-60, the Protes. tant party grew strons, and under Francis II became a political force headed by the Bourbon family, especially the King of Navarre and the Prince of Conde. At the head of the Cathollic party stood the Gnisem, and through their influence with the weak, young king, a very long conflict with the Huguenots commenced. The resnlt was that a Husuenot conspiracy, headed by Prince Louis of Conde, was formed for the purpose of compeling the king to dismite the Guises and accept the Prince of Conde as regent of the realm. Bnt the plot was betrayed, and many of the Hnguenots were executed or imprisoned. In 1560 Francis died, and dnrins the minority of the next ling, Charles IX, it was the policy of the queen mother, Catharine de Medici, to encourage the Protestants in the free exercise of their religion in order to curb the Guises. Bnt in 1562 an attack on a Protestant meeting made by the followers of the Dnke of Gnise gave rise to a series of religious wars which desolated France almost to the end of the centnry. Catharine, however, began to fear that Protestantiom might become a permanent power in the country, and, making an alliance with the Guises, she suddenly projected and carried out the massacre of St. Bartholomew's (August 24, 1572). The Protestants fled to their fortified towns and carried on a war with varying snccess. On the death of Charles IX, Henry III, s feehle movereign, found himself compelled to nnite with the King of Navarre, head of the house of Bonrbon and heirapparent of the French crown, against the amhitious Gnises, who openly aimed at the throne, and had excited the people against him to such a degree that he was on the point of losing the crown. After the assassination of Henry III, the King of Navarre was obliged to maintain a severe struggle for the vacant throne and not untll he had, by the advice of Snlly. emhraced the Catholic religion (1593), did he enjoy quiet possession of the kingdom as Henry IV. Five years afterwards he secured to the Finguenots their civil rights by the Edict of Nantes, which confirmed to them the free exercise of their religion, and gave them eqnal claims with the Catholics to all offices and dirnities They wern also left in possesion of the fortremes which had been ceded to them for their mecurity. This adict aforded them the means of forming
a Kind of republic within the kingdom, which Richelieu, who regaried it an a verions obstacle to the frowth of the royal power, renolved to cruah. The war rased from 1624 to 1620, when Rochelle after an obatinate defense, feli before the royal troops the Husuenoto had to surrender all their strongholds, although they were still allowed freedom of conscience under the ministries of Hichelieu and Mazarin. But when Louis XIV and Madame de Maintenon eet the fashion of devoutness, a new perwecution of tha Protestants commenced. They were deprived of their civil righte, and bodies of dragoons were sent to the sonthern provinces to compel the Protestant inhabitante to abjure their faith. The Edict of Nantes was revoked in 1685, and by this act more than 500,000 Protestant enbjects were driven ont, to carry their induntry, wealth, and skill to other countries. In the reign of Louis XV a new edict was issned repressive of Protestantiom, but so many voices were raised in favor of toleration that it had to be revoked. Lonis XVI, in 1787, first pnt the Protestants on an equality with the Catholics. Huia-bird (hwe'a-berd), the native name of a genus of New Zealand starlings, Heternlocha acutirostris or Neomorpha Gouldii, comprising a single species of hirds, occupying a very limited space in a few densely-wooded monntain ranges. The plumage is a very dark green, appearing to be black it: some lights, the tip of the tail white. The most atriking pecnliarity about this bird is that the male has a stont, straight beak; the female a long, slender, curved bill.
Enilk, the name applied to old ships laid by as nnfit for further seagoing service, and nsed as depots for coals, mailors, etc.
Fill, IsAAc, naval officer, born at in, Derhy, Connecticnt, in 1775: died in 1843. He became a naval officer in the United States service. In Jnly, 1812, he eacaped by skilful cailing vith the frigate Constitution from a three days' chase by a British squadron, and on August 19 met and snnk the British frigate Guerriers, after half an hour's fisht, with very little loss to his ship or men.
Hull, Wririam, military officer, was Huil, born in Derby, Connecticnt, in 1753 ; was sovernor of Michigan Territory 1801-14, and in 1812 commanded the Northwest army and snrrendered Detroit to General Brock withont firing a shot. He was conrt-martialed and sentenced to be shot, bnt was pardoned on account of his services in the Revolv. tion. Re died in 1820.

Enall, a clty capital of Ottawa counOttawa Rifer, oppouite Ottawa city. It has pulp, paper, lumber and other mill, and in the ricinity are iron, phosphato and mica minew. Pop. (1918) 22,000. Finll, or Krucsion-on-Huti, a river of itmelf, locally situated in the East Rid. ing of York at the infux of the $11 u l l$ into the eatuary of the Humber. The towu stands on a low and level tract of ground, and atretchen alons the bank of the Humber, from the inundations of which It is secured by strons embankmeuts Among the notable public buildings and institations are the town hall, the new exchange, the corn exchanse, dock offices, etc., the royal ingtitution, the public rooms Hull and Dant Riding College, Reckitt free library the infirmary dipeasary, children's hospital, etc. There are three well-laid-out public parks. The industries of the town are varied, comprising flax and cotton mille, shlpbuilding, rope and mail worte, iron foundries, machine-making, seed-cruahing, color-mak. ing, oil-boiling, etc; but its importance arises chiefly from its shipping commerce, Hull beins one of the builest seaports in the kingdom. The docks are amons the largest in the kingdom. The railway communications are excellent, not fewer than five railway companies running into the town. It is an ancient town, and was of some importance long before it received its charter from Edward I. It played a conspicuous part during the civil war, beins held by the parliamentary forces, and twice besieged without euccess. Pop. (1911) 278,024 Iullah (hul'la) Joan Prxy an Eng: died in 1884 . He entered the Royai Academy of Music in 1832, and attracted some attention by his comic opera, The $V$ Village Coquettes (1836), which was followed by the Barber of Bassore in 1837, and The Outpost in 1838. About this time he began to work for the establishment of popular singing schools. He lecame professor of music at King's College and other institutions in London, and in 1874 inspector of training schools. He wrote some educational and historical works on music emong which are the Grammar of Harmony, Grammar of Cownterpoint, $\boldsymbol{\Delta}$ History' of Modern Mu-

## sio, etc. <br> Tumanists

(hu'man-ists), a party which, during the Renaissance of the sirteenth century, cultivated literature, especially classical literature. Their influence was decidedly in favor of progress and reform, and in this
way they may be conaldered as homildios and cobperatiog with the creat relligion reformert Dramus is the great type of the humaniot, as Luther is of the religlous reformer.
Ifmanitarians (hu - man - i-tiorfane), a term sumetimes applind to the various clasem of anti-Trinitarians, who regand Chrint as a mere man. Their opinions must not be confounded with Arianiem, which admits the prefxistence of Christ, and his prexminence amons God's creaturem. The term is also applied to the followers of St. simon, who maintain.d the perfectibility of human nature without the aid of aupernatural stace. Iumanities (hi-mani-tex ; Latin, ittere humaniores), a term for humble or polite literature, including the study of the ancient clamalcs. in opposition to philonophy and science. In the scotch univernities humanity is applied to the atudy of the Latin language and literature alone.
Fumber (hum'ber), a large river, or rather eatuary, on the eant side of England, between the counties of York and Lincoln. at ith western ar: tremity it is joined by the Ouse after the latter han been augmented by the Derwent and Aire; below Goole it receives the Don, lower down the rirent, and still lower the Hull from the opposite side. It is about 35 miles long, and varies in breadth from 1 to 7 milen. There is at all times a condiderable depth of water in the fair way of the channel, and the navigation is sale and canp.

## Enmbert 1 <br> (in Italian, Umariexo), King of Italy, was

 born March 14, 1844, eldest son of Victor Emmanuel. In the war of 1896, in which Italy joined Prussia againet $\Delta u$ utria, he took the field in command of a division, and distinguished himself by his bravery in the disastrous battle of Custozza. In 1868 he married his consin, Margherita, dauchter of Duke Ferdinand of Gemoa. He succeeded his father on January $\theta_{\text {, }}$ 1878. He was assassinated by a pistol mot, July 20, 1800, by Gaetans Brewci, an Italian anarchist, and was mucceoded by hin son, Victor Emmannel III.Irmboldt (hpmbolt), Fiedzion HETREIOH Armandem, Babon von, a German traveler and naturalist, was born in 1769, at Berlin, where his father hold the pont of royal chamberlain. Ee otudied at the universities of Frankfort-on-the-Oter, Berlin and Guttingen, and also at the commercial academy in IIamburg. His first work was Observetions on the Basalt of ther Rhine (1790). In 1791 be studied min-
ing and botany at the miniog achool in brelbers and subequently became over ceet of the minen in tranconia. In 1797 bo reolved to make a acientific journey in the tropical sones alons with afriead, Aime Bonpland. Thez landed at Cumana, in South America, in July, 1790 and upent five jears in exploring ecientifically the resion of the Orinoco and the upper part of the Rio Negro, the dintrict beiween Quito and Lima, the city of Mexlco and the surrounding country, and the island of Cuba. In 1804 they arrived at Bordeaux, bringing with them an immense mans of freah knowledge in seosraphy, zeology, climatology, meteorology, botany, soblosy, and every branch of nat: ural acience, as well as in ethnolosy and political tatistich Humboldt selected Paris an his renidence, no other city ofier: ing mo many aids to ecientific study, and remained there arranging hir coliections and manuscripts tiil March, 1805, after which he visted Rome and Napies in company with Gay-Luasac, but eventualiy returned to Paris in 1807, when the first volume of hif great work, Voyage aus Régione óquinociales du Nouvear Continent, appeared; the thirtieth and last was published in 1827. In 1827 Humboidt, who had been offered severai high posts by the sovernment of Prussia, and had accompanied the king on several journeys as part of his suite, was persuaded to sive up his reaidence at Paris and settle at Beriin, where he combined the study of science with a certain amount of diplomietic work. In 1829, under the patronage of the Czar Nichoias, he made an expedition to Siberia and Central Asia, which resulted in some valuabie discoveries, pubifshed in his Asio Centrale. In 1835 he published at Paris his Esamen Oritique de le Géographie du Nouveau Continent. In 1845 appeared the first volume of the Cosmos, his chief work, a vast and comprehensive survey of natural phenomens, in which the idea of the unity of the forces which move beiow the var. ety of nature is thoroughiy grasped. Humboldt died in 1859.
Eumboldt, Kari Wilhexm, Baron von, brother of the preceding, was born at Potedam in 1767, and studied at Berlin, at Frankfort-on: the-Oder and at Gittingen. After traveiling in France and Spain, and acting as Prussian minister at Rome, he was called to fill the office of minister of the interior in connection with ecciesiastical and educational ruatters, and had a most important share in the educational progress which Prunsia has since made. In 1810 he became minister plenipotentiary to Vienna, took an active part in the con-
clusion of the Peace of Parin (1814), and at the Congrees of Vienma (1816), and other great diplomatic transactiona In 1810 he was an active membor of the Prueaian ministry, but reaisped and setired to his eatate at Tesel, phere he difed in 1830. His worke include poeme, Ifterary eveaya, etc, but by far the mont valuable are his philological vriting, such as Ldditions and Correotione to Adelung's Mithridates; Researches Regarding the Original Inhabitante of Spain in Connection with the Basque Language; on the Kavoi Lenguage of Java; on the Diveraity of Langwage and its Infuence on the bevelopment of Speeoh; etc.
Bume (hom), DAYID, an eminent cumo historian and philomopher, was born at Edinburgh in 1711 . He was

David Hume
deatined for the law but took up literature and retired to France where he composed his Treatise upon Human Nature. The work was published at London in 1738, but in his own words, 'fell deadborn of the press.' His next work, Esasays, Moral, Political and Literary ( Edinburgh, 1742), met with a better reception. In 1745 he became companion to the insane Marquis of Annandale; and he accompanied General Sinciair in 1746 and 1747 in his expedition against France and in a military embassy to Vienna and Turin. He now published $n$ recasting of his Treatise upon Himan Nature, under the title of an Inguiry Conoerning the Fuman Understanding (1747). In 1762 he published his Political Discowrses, which were well received.
and his Inquiry Concountug the Prin. ciples of Morcle. The mume jear he obthined the appointment of Ilbrarian of the Adrocates Librapy at bdinburgh, and began to write his hintory of Eingland, of which the first voiume appeared in 170, It was, like most of the nueceeding volumes, severely attacked both tot wis relidious and political tendencies; but, in upite of adverse criticiam, his Hiotory of Engiend, after ite completion in 1ivi, was recognized as a utandard work. Its merits are chiofly clearnema and force of narrative and philomophical hreadth of View in the jndgment of men and event. In 1763 be accepted an invitation from the Darl of Hertiord, then proceedinf as ambamador to Yaris, to accompany him, and was enthusiagticaliy received $h y$ Parisian circles in his character of phlosopher and historian. After the departnre of Lord Hertford in 1756, he remained an ohargo doffaires, and retnrned to England in 1760, hringing with him lousseau, for whom he procured a pension and a retreat in Derhywhire. But the morhid sensitivity of Rousseau hrought about a dimagreement which put an ond to the friendship. In 1767 he was appointed under-mecretary of etate, a post which he held till 1763, when he retired to Edinhurgh. Here he lived tiil bis death in 1776. As a philosopher, in which quality his reputation is perhaps greatent, Hume's acute sceptical intellect did great service by directing research to the precise character of the fundamental conceptions in which our knowledge and our belicfe are hased. His acute negative criticism of these conceptions (e. o.i his reduction of the ideas of personal identity, conscience, casuaiity, to mere effects of association) compelled philosophy either to come to a dead halt or to find, as Kant did, a new and profounder view of the nature of human reason.
Fume, Joskrin, politician and econoland. in 1777. After studying medicine at Edinhurgh be was appointed marine gssintant-surgeon in the service of the Fast India Company. He held several lucrative poste, returned to England in 1808 with a fortune, and entered Parliament in 1812, where for many years he was notahle as a financial reformer, and an opponent of monopolies and high taxes. He died in 1855 .
Humerus (hinmer-us), the long eysituated between the shoulder and the forearm; also the corresponding bone in the lower animals.
Rimmidity (hu-midi-ti), in meteor-
41-U-3
molature in the atmosphere. 4 strea epace can only contain one certain amount of water; containing leat it will fill up with evaporation, if more by condenmation. When it contains all the moisture it is capabie of holding, it is maid to be eaturated. If the alr containa one-balf of the water neceecary to maturate it the reiative humidity in 60 ; 100 being the point of satnration, after which precipltation enuen.
Iumming-birds, the name given chilidso) of minute and beautiful hirde, so called from the wound o! their winy in flight. The beak in alender, generally long, sometimes mtraight and sometimen curved; the tongue in long, filiform, bifid at the point, and capahle of being protruded to a considerahle distance. In size humming-hirds vary from that of a wren to that of a humble-bee. They never light to take food, hut feed while on the wing, hovering before a flower, supported by a rapid vibratory movement of the wings which produces the humming noise.
ectsfor
great propor
of theirfoud. These beautiful hirds are peculiar to America, and almost exclusively tropicai. One species, the rnhythroated humming - hird (Trochilus colubris), is somewhat common in the north- Tufted-necked Humminge east of the Unit- bird (Orniomya orndta). ed States. The only note of the humming-hird is a single chirp, not louder than that of a cricket. It is very fearless and irascible, two males scarcely ever meeting without a contest. Among the more remarkahle of these birds is the tufted-necked hummingbird (Ornismya ornata) of Guiana and Northern Brazil. In this species the crest, outer tail-feathers and neck-plumes are reddish chestnut, the latter tipped with green, the throat and upper part of the hreast are emerald green, the hack hronze green. Perhaps four hundred speoies of humming-hirds are now known. Himus (hưmns), a snhstance which occurs in vegetable molu, and in liquids containing decomposing vegetahle matter. Hnmus as it exists in the moil is a prodnct of the decay of regetahle⿻弓 It is a mixture of variou carbon
compounde, which slowly underso combuetion with the production of carbon diosjde, water and ammonla, which aro agalo takes up by planta.
Dinadred, in biritind, a diviaion of so called, according to some writers, becauso each hundred found 100 sureties of the king's peace, or 100 able-bodied men of war. Others thlnk it to have been so called becauce orisinally composed of 100 families. Hundreds are gaid to have been firat introduced into England by Alfred. Formeriy if a crimn was committed, wach as robbery, arwon, killing or malming cattie, dentroying turapikem or worke on navigabie rivern, the hundred had to make it good; but hundreds are now oniy jiahle for damage done by rioterm acting feioniounly.
Eungary (humidififungarian Land of the Magyars, , formerly a kingdom, 8. E. of Austria, in Austro-Hungarian monarchy. It includes Hunpary proper, with Transylvania, Slavonia, Croatia, the Croato-Slavonian Military Frontiers, etc. ; totai area, $125,039 \mathrm{mg}$. miles, with a pop. of 10,254,650. Hunsary Proper (inciuding Transyivania), area, 108,258 sq. milen, and a pop. of 16,721 ,574, may be conddered as a large basin surcounded by mountains on every side except the south. Of these the principai are the Carpathians, which cover the northern and eastern parts of the country with their ramifications. The Danube and the Theice, with their afliuents, are the chief rivern. The Poprad, in the north, is tributary to the Vistula. being the only Hungarian river not belonging to the basin of the Danube. The Drave forms the southwest frontier on the side of Croatia and Slavonia. Between the Danube and the Drave lie the two prin. cipal lakes, the Piatten See or Balaton Lake and the Neusiedler See, from which the water occasionally disappears. Hungary is one of the heaithiest countrien in Europe, and generally has a fertile soll. All kinds of grain, eapeciaily exceilent wheat, wines, fruits, tohacco, hemp, flax, hops, ef: firon, woad, madder, sumach and cotton, are among the products of Hungary. Horses, cattle, sheep, hogs, zame (in the north hears), poultry fish. (especially the sturgeon and salmon). bees and silkworms are rmong the productions of the animai kingdom. Among the minerals are gold. silyer. conper. iron. lead, sinc, cohalt, antimony, sulphur, arsenic, salt, etc., with coal and peat. The rituation of Hungary, which occupies an area where the various races of Furopa meet and interiace, account for the va-
rloty of antionalities it contaling. These comprise bealdee the Hungasians or Masyara (over 0,000,000 in number), Houmaniane Slovacke Germana, Eervians, Ruthenlane, etc. Tho Magyart, who are the dominant race, ars located for the most part cumpactiy in the center of the isingdom. They are brave, high-upirited and sincere, in many respects resembing their kinsmen the Turks, A decided majority are Roman Catholice, the rest lrotentants, chiefly Calvinista, with a few Ureek Catholice. The Germans have wettled ail over the country, and there ls scarceiy a town of Hungary whirh is not at leaut partly inhabited by Germans, while some are ensentlally German. Science, literature, the prem, trade and industry, are for the greater part in their hands. The Hungarian has a naturai incination to agriculture and the breeding of cattle and the fertility of the soil making up for some deficiencies in methods has made Hungary one of the chief grain-growing countries of Europe. The Ifungarian flour is of very fiue quaiity, and is exported to a iarge vaiue, while there are also exteasive wheat exports. IIungary is aino celebrated for its wines, the finest variety of which is the Tokay. There are few extensive manufacturem. Iron and steei works, potterics. glass manufactories, sugar-refineries, sonl and tailow works, are amung the principai. The production of coal and iron is increasing and the annual value of the mining products is about $\$ 20,000,000$. With regard to popuiar education Hungary is behind the Austrian part of the empire, hut education was made compulsory in 1808 . There are universities at Budapest, Kiausenburg and Agram. The Hungarian langunge fis neariy alifed to the Turkish and Finnish, but not to any other tongue spoken in Europe. It has of late been carefully cultivated, and Hungarinns have distinguished themselves in all branches of iiterature. Amone modern names we can only mention those of Andrew Horvath. Fotvbs. A. and C. Kisfaludy, Garay. Vbrobmarty. Petofif, Kerény, Arany. Josika and Jokay. Besides its representation in the controlling body of Delegations (see $\boldsymbol{A}$ watria) Hungary since 1867 has had an independent Diet, consisting of an Upper anil fower House. the first composed of hereditary and life peers. church dienitaries and state dignitaries; the zecond of representatives ciecterl by vote. The Austrian emperor was also king of Hungary: Crontia and Slavonin (now in JugoSlavia) had a common diet of their owil for the mnnagement of internal affairs.

History. -The Magyars, an Asiatic neo-
ple of Turanian sace, alliod to the Finas and the Turte dwoit in what is now Bouthern Kumela bufore they deccended under Arpad into the plain of the Danube, towards the end of the ninth century, and conguered the whole of Huagary and Transylvania. Durios the firat haif of the tenth century their inv ions and incurnione apread terror throushout Ger. many, Erance and Itaiy, but at lensth thelr total defeat by Otho 1 of Gormany put an end to thels maraudinges and under their nattre dynaaty of Arpady they settled down to learm agriculture and the arte of peace. Stephen I ( $907-1030$ ) was the firat who was auccenatul in extending Chriotianity generally amongat the Hungariane, and was rewarded by a crown from Yope Syiveater 11 and with the title of apostolio king (1000). Stephen encourased learning and literature, and under tim Latin became not only the otticsil iansuage of the government, but the vehicle of Hungarian civilization, which it unfortuna ${ }^{+}$Is continued to be for the next 800 s. In 1089 King Ladinlaus extended ie boundaries of IIungary by the conqueat of Croatia and Slavonia, and King Coloman $b_{3}$, that of Dalmatia in 1102 . During the twelfth century the Hungarians first attained, through French connections, a certaln refinement of life and manners. About the middle of the thirteenth century King Beia induced many Germans to eettle in the country which had been depopulated bry the Mongol invasions. With Andrew III (1290-1301) the male line of the Arpad dynasty became extinct, and the royal dignlty now became purely elective. Charies Robert of Anjou was the firat elected (1309). Louis I (1342-82) added Poland, Red Russia, Moldavia and a part of Servia, to his kingdom. The reign of Eigismund (1387-1437), who was elected Emperor of Germany, is interesting from the invasion of Hungary by the Turks (1301), and the war with the Hussites. Sigismund introduced various reforms, and founded an academy at Buda. Matthias Corvinus (1458-90), combining the talents of a diplomatist and seneral, was equally successful against hls enemies at home und abroad, and is even yet remembered by the popular mind as the ideal of a just and firm ruler. He founded a universlity at Pressburg. During the reigns of Tadlalaus II (1400-1516) and Louis II (1516-26) the rapacity of the magnates and domentic troubles brought the power of Hungary low, and the battle of Mohacs (1526) made a creat part of the country a Turíish province for 160 years. The rest was left in digpute between Ferdinand of

A intula and John Rapolya; but eventu. auy by the belp of the Proteptanes it pansed to the former, and has alnce 5 . mained under the acepter of the Bapo burger In 1680 Leopold I took Budi and recovered most of liuncary and Tranavivania. In 1724 Charies V1 80 cured by the l'ragmatic Banetion the Hungarian crown to the female dencendants of the hovee of Hapaburs, and the loyalty of the Hungartany to his daughter, Maria Therema, meved the dynasty from ruin. Maria therema did much 20 the improvement of Hungary by the promulgation of the rural code called Urba. Hum, and by the formation of flliays achools. On the advent of the Erench revolution, and during the wars which on: gued, the Hungarians once more playe: a prominent part in support of the Hapiburs crown. Napoleon feli, but the revolution had given an impetue to ideas of national and popuiar rishts which the Mungarians, long atified under the Germanic traditione and tendencien of thelr rulerm, were amongt the firmt to feel. For a time Francis I and Metternich ntood stify out against all concersions, and tried to govern by pure aboolutiam, but ended by summoning in 1825 a new diet. The diet distinguished itaelf by adoptins the Mayjar language in ite debatem inutead of the Iatin to which it had been accuatomed. Succeening diet. in 1830 and 1832 made new demands in the dlrection of rellpious equality, popular suifrage, and abrogation of the privilegen of the noblem. The Austrian government attempted to repress the Hungarian national movement by imprisoning Deak, Konsuth, and others of the leaders. The struggle continued tlll 1848, when the Freich revolution of that vear gave the impulse for a similar rising in Vienna. Prince Metternich fied to London, and the Viennese court made a formal concession of all important demands but these had no sooner been gyanted than the government began secretly to work against thelr belng put in operation. The dependencies of the Hungarian crown, the Croats and the Waliachians of Tranaylvania were privately encouraged orevolt, and in December of the sam year an Austrian army took the field $w$ h the avowed object of annihilating the independence of Hungary; but a series of pitched battles resulted on the whole mo riuch in favor of the Hungarians that Austria was obliged to call in the aid of Irussia, which was at once granted. After a heroic atruggle the Hungarians had to succumb. The nation was reduced to the position of a province, and some of the greatent atatermen and coldiers of Eran.
gary perished on the scaffold. But the gtruggle was continued by the Hungarians in the form of a constitutional agitation, and at last, when the battle of Sadowa in 1863 separated Austria from Germsny, Austria, left face to face with a nation almost as powerful and numerous as itself, felt compelled to submit. In 1867 a separate constitution and administration for Hungary was decreed, and on Jnne 8th the emperor and empress were crowned king and queen of Hungary with the utmost pomp, according to the ancient ceremonies of a Hungarian coronation. The dualism of the Austrian empire was thus finally constituter. The defeat of the Central Powers in the European war (q. $\nabla$.), 1914-18, resulted in the dissolution of the dual empire, and Hungary became an independent state, mnch redueed in size. Croatia and Slavonia, which had been included in the Hungarian kins'dom, were incorporated in the Serb-Croat-Slovene state, Jugo-Slavia; Transylvania was given to Roumania: a large strip of territory in the north became part of Czecho-Slovakia, and a smaller strip in the northeast was incorporated in the reconstructed state of Poland. (See map of Austria-Hungary.) After the peace of 1019 (see Treaty), Hnngary had an area of about 70,000 acres; pop. about 14,000.000 . For a time a Bolslevist government was set un, under Bela Kun, but uressure of the Allies comnelled his retirement in Aug., 1919. The Roumanians entered the muntry and looted it.

## Eungary Balsam,

a kind of turcured from Pinus Pumilio, the mountainpine of Hungary.

## Hungary Water,

lute alcohol aromatized consisting of diflowers of rosemary or other aromatic substances, used as a perfume, so called becanse first made for the use of a qneen of Hungary.
Hunger (hun'ger), a cravipg for partly arising in the stomach, since it may be relieved temporarily by the introduction into the stomach of material which is incapable of yielding any nutriment to the body. It may be ane to a condition of fullness of the vessels of the stomach. relieved by any stimnlus which, acting on the lining membrane, induces a flow of fluid from the glands. But it also arises from a condition of the system, Eince the introduction of nutriment into the blood, apart altogether from the stomach, will relieve it. This is also evident from the fact that hunger may be experienced even when the stomach is full
of food, and when food is supplied in abundance, if mome disease prevents the absorption of the nonrishment or quickly drains it from the tlood. Hunger may be partially allayed by aleep or by the use of narcotics, tobacco and alcohol, all of which tend to diminish the disinterration of tissues.
Hüningen (hu'ning-en), a town of sace, formerly fortified. It has a famous imperial fish-breeding establishment. 1'op. 8304.

Huns, a nomadic and warlike people of Asia, of Mongolian race, part of whom entered Europe, probably in the fourth century after Christ, conquered the Alans, and drove the Goths out of Dacia. They continued to extend their dominion along the Danube till the time of Attila ( 434 A.D.), who, uniting the whole Hnnnish power under one head became the most powerful prince of his time. (See Attila.) His defeat near Chalons was the commencement of the decline of the power of the Huns, and within a generation after his death in 453, the great Hunnish empire had completely disappeared, and the race been absorbed amongst other barbarous peoples. The term Huns was used by ancient and mediseval writers in a very vague way to indicate barbarons hordes invading Europe from the northeast. The Huns are described as a race of dark complexion with small black eyes, flat noses and broad shoulders.
Hunt, James Menry Leioh, an EngHunt, lish poet and essayist, born at Southgate, near London, in 1784. He was educated at Christchurch Hospital, where he attained some distinction, entered the office of his brother, an artorney, and afterwards obtained a sitnation in the war office. In 1808, in conjunction with his brother John, he started the Examiner newspaper, which soon became prominent for the fearlessness with which public matters were discussed. Ere long official resentment took shape in two prosecutions of the brothers, the second of which, occasioned by an article in the paper of March 22.1812 , reflecting on the character of the prince regent, resulted in the brothers being sentenced to pay a fine of $£ 500$ each, and to suffer two years' imprisonment. During his confinement Ieigh wrote several works. among which are the Feast of the Poets. the Descent of Liberty and the Story of Rimini. In 1818 appeared Foliage, a collection of original prems and translations from Hompr, Thencritus, Bion, etc., and in 1819 the Indicator was etarted. weekly journal on the model
of the Speotator, which contained some of his bent ensays. In 1822 he pro $:$ aded to Italy, having received an invication thither from Byron and Shelley, and, in conjunction with the former, carried on a newspaper called the Liberel, but it proved unsuccessful. On his retura to England Hunt published Recollections of Lord Byron and some of his Contemporaries (two vols., 1828), which provozed somewhat the indignation of the noble poet's friends. Among his snbseqnent works may be mentioned, 4 Lsgend of Florence, a play represented with some success at Covent Garden in 1840; Stories from the Italian Poets (two vols. 1846) ; Men, Women and Booke (1847); A Jar of Honey from Mount Hybla (1847) ; The Town, its Memorable Characters and Events (1848) ; Autobiography (three vols, 1850); Table Talk (1850). In 1842 Mrs. Shelley settled an annnity of $\mathbf{1} 120$ upon Leigh Hnnt, and in 1847 a government pension of $f 200$ a year was bestowed on him. He died in 1859.
Fint, Thomas Sturar, chemist, born 1826; died in 1892 He was professor of chemistry at McGill University, 186268, and of geology at the Massachusetts Institute of Technology, 1872-78. He contributed many valuable papers to scientific jonrnals, developed an original system in organic chemistry and made important researches into the composition of rocks. In 1859 he invented the green ink with which greenbacks are printed.
Eint. Wilulay Howiar, an English don. He was trained in the Royal Academy school, and began to exhibit in 1846. He belongs to the so-called PreRaphaelite school of English artists. (See Pre-Raphaelite School.) In 1853 his Clawdio and Isabella first attracted public attention, followed next year by the Light of the World (Christ teaching in the temple). Mr. Hunt then made a jonrney to the East, the fruits of which are observable in the local coloring and strength of realization in his succeeding pictures of Eastern life among which we may mention The Acapepoat (1856): The Finding of the Saviour in the Temple (1860): Shadow of the Cross (1873) ; Plains of Esdraelon (1877) ; Triumph of the Innocents (1885). Outside of Biblical snbjects Mr. Hnnt painted some notable pictnres: Isabella and the Pot of Rasit, The After-Glovo. The Festival of Nt. Suithin, etc. He died in 1910.
Hunter, Joris, surgeon and physiassisted his brother-in-law, a carpenter
in Glasgow, for some time in his trade, but afterwards went as assistant to his brother William, a prosperous surgeon in London. In 1756 he was appointed honsesurgeon at St. George's Hospital, and also lectured in his brother's school of anatomy. In 1700, his health needing a change of climate, he became staff-surgeon and went with the army to Portugal. Three years afterwards he returned to London, and, in 1768, was appointed surgeon to St. George's Hospital; in 1790 surgeon-general to the army, and inspectorgeneral of hospitals. He died in 1793. Ennter, Robmar ( $9-1734$ ), one of the aver, ablest of the English colonial governors in America, born in Scotland. He entered the army, and it was with the rank of colonel he was appointed governor of New York (1710). He returned to England in 1719. Some years later he became governor of Jamaica. He was among the most genial of early American statesman, and his experience with his legislative assembly was for the New York people a valuable training in constitutional self-government.
Finter, Robyrt Mercer Taliaferro (1809-87), an American statesman, born in Essex county, Virginia, educated at the University of Virginia. He studied law, and began practice in 1830. Politics early interested him, and at the age of twenty-fonr he was elected to the state legislatnre. Elected to Congress in 1837, he made a name for himself as a forceful advocate of free trade, in opposition to Clay's protective 'policy. He was speaker of the House of Representatives, and was returned to Congress several times. In 1847 be became United States senator, and served till the outbreak of the Civil war, when he withdrew on the secession of Virginia and became the Confederate secretary of state. After the war he was treasurer of Virginia.
Eunter, Wiciram, physician and anatomist, elder brother of John Hunter, was born at Long Calderwood, Lanarkshire, in 1718; studied at Glasgow with a view to entering the church ${ }_{2}$ buc abandoned theology for medicine. In 1741 he went to Iondon, where he became a member of the College of Surgeons; acquired a large practice in surgery and midwifery; was appointed accoucheur to the British Lying-in Hospital, and in 1764 physician-extraordinary to the queen; in 1787 a fellow of the Royal Society; in 1780 foreign associate of the Roval Medical Society at Paris, etc. In 1770 he established a theater of anatomy for his own lectures and a splendid museum for his anatomical preparations, objects of natural history, picturen
of ancient coing and medals, etc. He was the author of some important works, in particular the Anatomy of the Human Gravid Uterue, puhlished in 1774. He died in 1783, bequeathing the whole of his splendid museum, valued at $\mathbf{£ 1 5 0 , 0 0 0}$, to the University of Glasgow, with the gum of $£ 8000$ in cash to be expended in a huilding for its reception, and a further sum of f 500 per annum to bear the charges of its preservation.

## Eunting. See Fow-hunting.

Huntingdon (hunt ing-dun), HuNTtracted to HUNTs), a small inland county of England, 30 miles long by 23 broad; area, 359 sq. miles. It has no hillranges of importance, and almost the whole area is arable or in past: Ite. It Is watered chiefly hy the Ouse and the Never, which form its northern boundary. The soil has been much improved hy scientific farming. The northeastern part is included in the great fen district and is principally devoted to grazing. There were here formerly some large lakes or meres, hut they have been drained and made available for cultivation. The soil is principally clay, with sand, gravel and peat-earth in places, the latter in the ren district. There are here many relics of the ancient Roman occupation and two Roman roads traverse the county. There are also interesting mediæval ruins and buildings of historic interest. Pop. 67,583.
Huntingdon, a borough, capital of land, on the r. bank of the Ouse. 17 miles N. W. of Cambridge. It has ancient churches and various manufactures, and was the birthplace of Oliver Cromwell. Pop. 4003.
Huntingdon, a borough, county seat Pennsylvania, on the Juniata River, 34 miles E. of Altoona, in the south-center of the state. It is the seat of Juniata College and a State industrial reformatory, and has manufactures, including hoilers and radiators, sewer-pipe, knit goods, etc. Two hydro-electric plants furnish cheap electricity. Pop. 6861.
Euntingdon, SEinNa, Countess of, nent for piety and munificence, daughter of the Earl of Ferrers. was horn in 1707, and died in 1791. She was married in 1728 to the Warl of Huntingdon. After his death she joined the Calvinistic Methodiste, chose Whitefield for her pastor, and was noted for zeal and devotion. She formed a sect known as the 'Countess of Huntingdon's connection.'

Huntington, a city, capital of Hunton the Little River, one mile from the Wabash, with good railroad facilities. It has extensive limestone quarries, and produces lime, cedar chests, machinory, shears, furnaces, rubber specialtea, pianos, boots and shoes, etc. Pop. 14,453. Funtington, a city, capitai of Cabell county, West Virginia, on the Ohio River, 15 miles above Ironton, Ohio, and on the Baltimore and Ohio and Chesapeake and Ohio Railroads. Here is Marshall College and a State asylum for incurables. Its manufactures comprise cars and carwheels, lumber. glase, stoves, cigars, etc. Coal, iron, salt and lumber are shipped. Pop. 31,161.
Huntington, ${ }^{\text {a }}$ Co., ${ }^{\text {town }}$ in Fairfield miles w. of New Haven. It has saw-mills, distilleries, and manufactures. Pop. 6545. Huntington, a town of Sufiolk Co. port village, on Long Island, 32 m . E. N. F. of Brooklyn. It has very extensive brickyards, as well as other manufactures. Pop. 12,004.
Huntington, Colus Potexe An Hing American railroad builder, born in 1821 at Harwinton, Connecticut ; died 1900. He hecame associated with Leland Stanford, Mark Hopkins and Charles Crocker in the planning and construction of the Central Pacific Railway (1809) and later the Southern Pacific (1881) and the Chesapeake and Ohio railroads and became the operating head of these systems and others. He gave liberally to educational institutions and left a fortune estimated at from 35 to 80 million dollars.
Huntington, Danier, artist, was its in born in New York city in 1810; died in 1906. In 1862-69 he was president of the National Academy, and again in 1877-91. Among his works are A Toper Asleen, Mercy's Dream, and portraits of President Lincoln and Louis Agassiz.
Hunyady Janos (hun'ya-di), a fasoldier, born in Hunyad. Transylvania. about 1395; died ir 1456. His life was devoted to an almaxt unceasing contest with the Turks, in which he showed striking military ahility. His most celehrater exploits were the expulsion of the Turks from Transylvania in 1441, the hrilliant campaign south of the Danube in 1442 . and the storming of Belgrade in 1456. He was defeated at the battles of Varna and Kossova. He acted as eo-regent and governor of the kingdom, $1446-53$, anii one of his sons succeeded to the crown.

Hura (hn'ra), a genus of tropical long north and south, and (exclusive of Euphorbiacea. II. crepitans, the sand- widest part with an area of about 23,000 bux tree, is remarkabie for the ioud report with whlek its seed-vesseis burst. It is a 1arge, branching tree with glossy, poplar-like leaves, inconspicuous dicecious flowers, and iarge, furrowed roundish fruits of the size of an nrange.
Hurdles
(hur'dlz), frames formed of perpendicuiar stakes with horizontal bars, and braced with dlagonal pieces for the purpose of

Sand-box Tree (Hura crepitans). forming temporary fences. In fortification the name is given to a collection of twigs or sticks ciosely interwoven and sustained by iong stakes, serving to render works firm, or to cover traverses and lodgments for the defense of workmen against firearms or stones. Eurdwar.
Hurdy-gurdy
See Hardwar. strument played by turning a handie. Its property, real and personal, and the actones are produced by the friction of a quisition, use, enjoyment, and disposition wheel acting the part of a bow against of it, which she wouid have if she were four strings, two of which are pressed by unmarried. She can make contracts with the fingers or by keys. The other two any person, inciuding her husband; she strings are turned a fifth apart to pro may carry on any husiness, trade, or ocenduce a drone bass, and are not stopped hy the fingers or keys.
hy the fingers or kevs. $\quad$ (huribut), STEPHEN AJ- and her contracts, and she is suhject to
lier and oulitician bin American solS. C., 1815; died in Pern, 1882. He practiced law and was in the Illinois State Legislature from 185\%, to 1861. During the Civii war he was promoted to major general of volunteers and rommanded the 16th Army Corps in Sherman's Mississippi campaign of 1864 . He was U. S. Minister to Colombia and Peru. Iuron, a city, the capital of Beadle miles E by N . of Pierre. It has a large shipping and supply husiness and various manufactures. Pop. 5791.
Eiron (hu'run), IAEEs, one of the five great lakes on the fronIt is of the United States and Canada.
very oid stringed in- woman has all the rights, in respect to sq. miles. It lies 581 feet above ara. ievel. The lake contains several thousand islands, varying in slze from a few square feet to huge islands iike the Gr.at Mauitoulin, which is abont 80 miles long. The waters have a mean depth of 200 and a maximum of 750 feet.

## Huronian Rocks, in geology, a

 certain Archean rocks on the banks of Lake Huron, consisting of schists, sandstones, grits, and igneous rocks.
## Eurons. See Wyandots.

Fusband and Wife, a man and by lawful marriage. The personal rights of the hushand and the wife are in the United States decidedly limited. The husband has no right of chastisement, as under the common iaw, although he is still the ramonized legal head of the family. Bl. wae domicile of the wife foilows that of the hoshand. His duty is to support the mily. The wife's duty is to render household services. The husband is not heid liable for crimes and torts committed hy his wifp, in his presence, unless the tort was committed as agent of the husband, or the crime at his instigation, or with his help, in which case he is guilty as an accompiice. A married pation ; she mav exercise all powers and
enjoy all rights in respect to her property all liahilities which flow from her independent status. All sums which may be recovered in actions or special proceedings hy a married woman to recover damages to her person, estate, or character, are her separate property. Judgment for or against a marrled woman may be rendered and enforced, in a court of record, or not of record, as if she were singie. If a husband ahandons his wife or children he may be arrested and punished. Magistrates' courts usualiy have jurisdiction over cases of abandonment and nonsuppert.
Euskisson (huskis-un), Wmuny, born in Worcestershire, in 1770 . In 1827 he became Secretary of State for the colonies and was areognised
authority on all quentions of trade and commerce. In $18: 28$ a misunderstandins with the Duke of Wellington, then at the head of the cabinet, led to his withdrawing, along with other Iorics, from the adninistration. He was accidentally killed at the opening of the Liverpool and Manchester liailway, Neptember 15, 1830.

Huso (Acipenser huso), the great or Huss, 1373. He religious innovator born about l'rague, took the degree of Master of Arts in 1306, and ir 1308 began to lecture on theoiogy and philosoply. In 1401 he was made dean of the faculty of philosc?phy, became the leader of the Bohemian in opposition to the German professors and academicians, and after the withdrawal of the latter to Leipzig, was made rector of the university (1409). Since 1391 he had been acquainted with the writings of Wickliffe, and his denunciation of the papal indulgences, of masses for the dead, of auricuiar confession, etc., alarmed Archbishop Sbynko of Prague, who had 200 voiumes of Wickliffe's writings burned (1410) in the archiepiscopal palace, and the preaching in Bohemian prohibited. Huss appealed to the pope, John XXIII, who summoned him to appear at Rome. Huss refused to appear, and was in consequence excommunicated, and Prague laid under an interdict as long as Huss should remain in it. The peopie of Prague, however, stood by their preacher, and the pope was compelled to acquiesce. But the quarrel broke out again when Huss and his friend Jerome publicly condemned the papal indulgences granted for the crusade against Ladisiaus of Naples. Huss was again excommunicated and Prague interdicted. The reformer now retired to Hussinstz to the protection of his feudal lord, and here he wrote his books On the Six Errors and On the Church, in which he attacks transubstantiation, the beiief in the pope and the saints, the efficacy of the absolution of a vicious priest, unconditional obedience to earthiy rulc.a, and eimony, which was then extremeiy prevalent, and makes the Scriptures the only rule of matters of religion. The approbation with which these doctrines were received, both among the nobility and common people, increased the party of Huss in a great degree, and emboidened him to comply with the summons of the Council of Conrance to defend his opinions before it. The Emperor Sigismund, by letters of safe conduct, became responsible for his personal aafety; and John XXIII, after
his arrival at Conatance, November is, made promisen to the same effect. Notwithatanding this, he was thrown into prison, November 28, and after several pubiic examinations, conducted with a view to making lim retract opiniont deemed heretical, he was sentenced to death on July 6, 1415, and burned alive the same day, and his ashee thrown into the Rhine. See also Hussites.
Iussari ( h -2arz'), originally the name of the Hunsarian cavalry, raised by Matchias I in 1458. Every twenty houses were oblized to furnish a man, and thus from the Hungarian word husy (twenty) was formed the name Hussar, Husar, afterwards appiied zenerally to light cavalry, similariy dressed and armed, of other European armies.
Fiussites (hus'itz) the followers of John Huss. After the death of Huss, his adherents took up arms for the defense of their $n$. iples, and under the leadership of Johanu यूiska, captured Prague, fortified Mount Tabor, and repeatediy defeated the troops sent against them by the Emperor Sigismund, who had succeeded to the crown of Bohemia. Ziska died in 1424, and was succeeded by Procopius, who also distinguishea himself by many victories. The excesses of this party; however, who were called the Taborites, alienated the moderate Hussites, who called themselves Calistines, and who finally united with the Catholics by the Compact of Prague in 1433 to acknowledge Sigismund as Fing; certain concessions, especially the use of the cup for the laity, having heer made to them by the Council of Basel. The Taborites, thus weakened, were totally defeated at Bomischbrod on 31st May, 1434, and afterwards declined as a political party, finally becoming merged in the Bohemian Brethren. See Bohemia, Bohemian Brethren.
Fustings (hus'tingz), (1) a name given to a court formeriy held in many cities of Engiand, as York, Winchester, Lincoln, but especially applied to the county court of the city of London held hefore the lord-mayor, recorder and sherifis. (2) The platform from which candidates for seats in Parliament addressed the constituency on their nomination previous to the Ballot Act of 1872.
Insum ( $\mathrm{h} \mathbf{y}^{\prime} \mathrm{zum}$ ), a seaport of Prusia in Schleswig-Holstein, with a good trade. Pop. 8268 .
Fitcheson (huch, e-sun), FranOrs, philosophical writer, born in Ireland in 1694. He studied at the University of Glasgow from 1716, to 1716, was licensed to greach, but se:
up a private academy in Dublin. In 1725 his celebrated Inguiry into the Idees of Beauty and Virtue appeared, followed in 1728 by hls Treatise on the Passions. In 1729 he was called to the chair of moral philomophy at Glangow. The main features of his philosophical teachinge are the theory of a distinct moral sente or conscience peculiar to mpn , and his view of virtue as benevolence. Hutcheson's moral philosophy is strongly opposed to the empiricism of Locke, and in thls respect he may be consldered us the precursor of Reld and the Scottish school of philosophy. In 1755 a Aystem of Moral Philosophy was publlshed from bls MSS.

## Hutchinson, <br> ANNE (1590-1643),

 noted religious enthusiast, daughter of a clergyman of Lincolnshlre, England, was born in 1590 ; married Whliam Hutecinson, and in 1634 emi grated to Boston. She held meetings, lectared, and denounced the Massachusettu clergy as being with few exceptions ' under the covenant of works, not of grace.' Her followers were charged with Antinomianism and she was banished from the colony. She and her friends acqulred territory from the Narragansett Indlans of Rhode I., where they set np a community on the principle that no one was to be 'accounted a dellnqnent for doctrine.' After the death of her husband (who shared her opinions) she removed to a new settlement near Stamford, Conn., and in 1843 she and her whole family of fifteen persons (one daughter excepted) were massacred by Indlans.Futchinson, a city, connty seat of Rur, Reno County, Kansas: located near center of the state on the Arkansas River, on main lines of Santa Fe, Rock Islaud, and Missouri Paclic railroads. The industries include extensive seit manufacture, soda ash and strawboard plants, flouring mills, packing house, etc. Pop. 20,000.
Hutten (fon hb'ten, Dlurci vor, a for the influence which hls writinge exercised upon the Reformatlon, was born at the family castle of Steckelberg on the Main, in 1488, and edncated at the famous monastlc school of Fulda. He led a wandering and unsettled life, scmetimes appearing as the man of letters and coniroversialist, at other times as the solder. His firat attacks on the Roman Chnich were in connection with his deferice of the persecuted Reuchiliu, and with the lssulng of the Epistole Obscurorum Virorum (which see). In 1517 ha was crowned laurente at Augsburg, and knighted by the emperos. I Jear or two after he
retired to his fraternul castle to write work after work, addreasing the people, like Lather, in thelr native German, and denonncing the arrogance and corruption of Rome. The Roman authoritien at length began to more against him, and he fled to the cattle of his friend frans yon Sickingen, and from that again to Switzerland, where he died in 1523.

## Eutton (hut'ton, CHABEEE, an <br> mag1l:h mathematician,

 born at Newcastle-npon-Tyne, in 1737. He was first a teacher of mathematics at Newcastle, but having pnblished $\ln 1772$ a amall work on the Principles of Bridges, which attracted attention, he was next year appointed professor of mathematica at Woolrvich College. In 1785 he published his Mathematical Tables, followed not long after by his Tracts, Mathematical and Philosophical and Elements of Conic Sections. Hls Mathematical and Philosophical Diotionary appeared in 1795-96; hls Course of Mathematics in 1798, with an additlonal volume in 1811. In 1812 he published another collection of Tracts on mathematical and philosophlcal subjects. He died $\ln 1823$.Hutton, JAMEs, a scottish geologist, be:n at Edinburgh in 1$\} 26$. He studled at the university there and at Leyden, where he was graduated as M.D. in 1749. Returning to Scotland, he mettled for a time on a farm of his own in Berwickshire, but about 1768 went to Ediniourgh, and devoted himself to scientific researches. His nanie is especially connected with a geological system, the chief features of which are his recognition of the slmplarity of processes in the past and present, and his theory of igneous fusion as accounting for most geological phenomena. Among his numerove works are an Investigation of the Prinotples of Knowledge, a Theory of Rain and a Theory of the Earth, with Proofs and Il'ustrations (1795). He died ln 1797. Huxley (hnkz'it), THowas Henby, an English naturalist, born at Ealing, Middlesex, in 1825 . He was graduated M.B. at the University of Iondon in 1845.; and entered the royal navy as assistant surgeon ln 1846. Sailing ln the Rattlesnake on a surveying expedition to Australia, he sent a nnmber of , Valuable papers to the Royal Society. He held numerons educational and other positions, was president of the British Assoclation in 1870 , was elected lord-rector of Aberdeen Unlversity in 1872, was secretary of the Royal Society, and a member of varlous royal commissions, etc., reslgning pearly all his positions in 1885 on account of 111 health. He was made a member of the privy council in 1892. Among his
work: are The Oocanio Hydrozoa (1897), On the Theory of the Vertebrate simuth Man's Place in Nature (1888), Elements of Comparative Anatomy (1884), Filo mentary Physiology (1888), Lay A Ser. mons Addresses and Roveevs (1870), Phyolography (1877) Anatomy of Inver: tebrato Animals (1877), The Crayish (1879), Science and Oulture (1882). He was a very popular lecturer, and stood in the foremost rank among biologists, strongly sustaining the Darwinian theory. In 1876 he visited America, delivering a series of lectures on fossil horses; his first address was at Johns Hopkins University. He died in 1805.
Huy (we), a fortified town of Belsouthwest of thege and 19 miles east of Namur. It is gituated on the Meuse, which is crossed here by an important bridge. It was the scene of a desperate battle in August, 1014, at the opening of the Buropean war. The German troops after demolishing the forts at Liege advanced on Huy, but the Belgians met them with a stout resistance, which was only overcome after a prolonged engage ment, the invaders suffering heary casual. ties. The town was occupied August 16 by the Germans. In the many wars that have swept over this region Huy has snffered again and apain. It was captured by the Dutch and then by the French, and changed hands repeatedly. Records of the town date back to the 7th century, and some authorities assert that it was founded by the emperor Antonius in 148 A. D. The population in 1004 was 14,164; in 1910 it had grown to 14,545 .
Huygens (hoigens), Crisistian, a physicist, burn io 1629 . He studied at Leyden and at Breda, where he went through a course of civil law from 164648. IIe made several journeys to Denmark, France and England in 1666 settled at the invitation of Colbert in Paris, where he remained till 1681 , when he returned to Holland on account of his health. He died at The Hague in 1695 . Among his most important contribntions to science are his investigations on the oscillations of the pendulum, and his System of Saturn, in which he first proved that the ring completely surronnds the planet, and determined the inclination of its plane to that of the ecliptic. In 1690 he published important treatises on light and on weight. His Traité de la Lumiere was founded on the undulation theory, but in consequence of the prevalence of the Newtonian theory it was long neglected till later researches established Its credit.
 and frult painter, born at Amaterdian in 1082 Ho worted at firut with hit father Justus Buynum, a picture dealer and painter, but afterwards get up on his own account, devoting hlmedf to the painting of fruit and lowers, in which he reached the highest perfection, surparsing all hio predecessors in softnese and delicacy of color, fineness of penciling and exquidte finish. He was extremely jealoum of rivalry, and kept his methods of working, preparation of colors, etc., a deep mecret. He died at Amsterdam in 1749 . His brother JUsTUs was a battle painter, and died at the age of twenty-two years. Another brother, Jakob; copied his brother's flower and fruit pieces so perfectly that they have been mistaken for that master's work. He died in England in 1740.

## Ewang-Ho. See Hoang-Ho.

Hyacinth
(hi'a-sinth), a genus of liliaceous bulbous plants, including about thirty species, among which the gardeu hyacintli (Hyacinthws orientalis) is celobrated for the immense varieties which culturc has produced from it. It is a native of the lierant, and was first cultivated as a garden flower by the Dutch about the begianing of the sixteenth century.
Hyacinth, or Jacintr, a variety of crystals when the mineral zircon whose crystals, when distinct, have the form of a fonr-sided prism, terminated by four rhombic planes, which stand on the lateral edges. Its prevailing color is red, more or less tinged with yellow or brown. The name hyacinth is also given to varieties of the garnet or cinnamon stone, the sapphire, and topaz.
Hyades (h'radèz), a cluster of five stars in the constellation Taurus, suppused by the ancieuts to indicate the approarh of rainy weather when they rose with the sun.
Eyæna. See Hyena.
Fya-hya (Tabernœmontanautilis), a milky plant of South America. See Cow-trees.
Hyalite (hifa-lit), a pellucid variets of opal, resembling colorless gum or resin.
Hyatt (h'at), AxpHicus, scientist 1838: died in 1902 He served with it 183: did 1 ali he held prod tinction in the clivil war, held professor-
ships in leading scientific institutions. and in 1881 became professor of zoology and palmontology in the Masmachasette Institute or Techinology. He was subbe
quently curator of the Boston Society of Natural Hintory. He wrote Momoirs on the Polyzoa, (tuides for Sotence Teaching, etc.

## Hyatt, <br> Joux Wraner, inventor, was horn at Starkey, New York, hi

 1837. His inventions were chiefly that of celinioid, which became an enormous industry, a woivent for pyroxyiin, and a water purifying ayntem.Hybla (hrhla), a mountain in Siclly, where thyme and odoriferous flowers of all sorts grow in abundance. It was famous in ancient times for its honey.
Hybrid (hrbrid), the produce of a has been impregnated by or plant which diferent ailied species or zenus. Much uncertainty prevails respecting the productive crossing of species, but it seems to be estahished that while the crossing of different genera may resuit in offspring, that of different orders wiil not. Hybrids are obtained among fishes from diferent species of carp; among birds, from the goidfinch and canary, the swan and the goose, etc.; among mammals, from the horse and the zehra, the horse and the ass, the produce of the last two being the muie proper from the lion and tiger, the dog and wolf, the dog and fox, the goat and ibex. Instances of hyhride be tween animais of different genera have been furnished by the union of the goat and the anteiope, and of the stag and the cow. It used formerly to be considered that the propagative power of hybrids was either ahsoiutely nuii, or that they propagated only with an individual of the pure breed; bnt the experiments of Dr. Darwin and other recent rosearches have shown that althongh infertility to some degree generaily attends sexual intercourse between different species, yet in sučin intercourse every derree of difference from absolute sterility up to compiete fertijity is fonnd. The resplts hitherto obtained may be summarized as foilows:-The crossing of species of different families is in almost every case infertile; allied species are capabie of producing offispring, and this capabiltty is in indefinite ratio to the degree of their likeness ; hybrids are freqnently fertiie with their parents, bnt more rarely among themselves; there is nu fixed relation between the degree of fertility manifested hy the parent species when crossed and that which if manilested hy their by brid progeny. In many cases two pure species can be crossed with unusual faciity, while the resulting hobrids are remarkably aterite: and, on the other hand, thete tre ppecies Fhich can oaly be
crossed with extreme difficulty, though the hybrids when produced are very fertile. Hycsos (hiteobe or Hyesios, or tribes of Shepherd Kings, wandering thes of semitic descent, who conquered the whoie of Ezypt about 2100 m. C., and were driven out some five hundred yeart afterwarda. The oniy detailed account of them in any ancient writer is a passage of a lost work of Manetho, cited by Josephns. Their epoch covers the thirteenth to the seventeenth dynatien.
Hydaspes (hidus-péz), anclent name of a river of India, the modern Jehlam, or Jhiiam.
Hydatid (bi'da-tid), a term applied to a kind of hiadder-worm, which is the larvai stage of a smaii tapeworm, the Tania echinococcus, found in the dog and woif. The hydatid consista of an externai sac, which is derived from the tissue of the organ in which it is sitnated, and which is filied with buds or capsules containing the larve of the worm.
Hyde (hid), a town of Engiand, in Cheshire, about 7 miies E. B. I. of Manchester. The inhahitants are largeiy employed in cotton mannfacture and coal mines. There are also iron foundries and engineering works. Pop. (1011) 33,444 .

Hyde, or Hids, measure of land, frequentiy mentioned in Domes-day-book and in old Engiish charters, and variously estimated as equivaient to 60 , 80 , and 100 acres-a fact which may be accounted for on the supposition that the quantity was always determined hy iocal usage. It was such a portion of land as might be ploughed with one piough. The hyde at present is reckoned at 100 acres.
Hyde Park, a town of Snffolk county. Massachusetts, 8 miles As. by w. of Boston. It is situated on the Neponset River, has various mannfactures and is a piace of residerce for Boston husiness men. Pop. (1910) 15, 507.

Hyde Park, a London park containand Park, ing about 400 acres, and having on the west Kensington Gar dens. It abounds with fine trees, and is the great fashionable promenade and public lounge of Western London. It contains the Rotten Row, a piece of road set apart for equestrians ; the Serpentine. a large sheet of ornamental water, much frequented in summer for bathing, and during frosts for akating; and the Albert Memorial, a structare in memory of the Prince Consort. Fyderabad, or Humazarad (hriders
dustan, which comprehends the greater part of that central platenu of Southern India known as the Deccan, and is in potcerion of a Mohammedan prince, the Nisam; aree 82,700 we. mille exclualve of the Berar or Hyderabad Assigned Districts under. Britsh administration. The country is interrected or bounded hy the Godavery, Kistnah, and their trihntarien. The soil is fertile, though mnch sood land is not yet hrought under cultivation. The chlef products are riee, wheat, maize, sugar-cane, tobacco, cotton, indiso, fruits and timber. 1'op. 11,174,887. The ruier of Hyderabad belongs to a dynasty founded hy Asaf Jah, a distingnished soldier, whom the Emperor Aurungrebe made viceroy of the Deccan in 1713, with the title of Nizam or ReguIntor. Mir Mahhuh All, the prenent Nizam, was born in 1868, and is in point of rank the frut Mohammedan ruier in India, with a regular army of ahout 15 , 000 , besides numerous irregulars.-Hydranizad, the capital, is situated on the River Musi, at an elevation of 1072 feet above the sea. It is surrounded hy a stone vali flanked with bastinns, forming an irregular quadrangie abont $2 \%$ miles upon the river and 2 miies broad. Among the chief huildings are the extensive palace of the Nizam, the British renidency, the Char Minar, or Fonr Minarets, huilt about 1590 as a Mohammedan coliege, but now used for warehonsen ; the Jama Masjid, or cathedral mosque, designed after the one at Mecca. There are manufactares of silks, trinkets, and turbaus Pop. of city, with suburbs, is given as 500,623 .
Hyderabad, or Haidarabad, a town Hyderabad District, Sind. II is situated on a rocky eminence about. 3 miies from the eastern hank of the Indus. The streets are narrow and dirty, and the houses mere hovels. The fort contains the arsenal of the province of Sind and the palace of the Emirs. The principal manufactures are arms, silks, cottons, and iacquered ware. Pop. 75,952.
Hyder Ali (hirder ajis), a distinborn in 1728, son of a gen Indian prince, ice of the Rajah of Mysore. By his military talents he hecame the actual ruler of Mysore, and in 1762 deposed Kandih Rao, and had himself chosen Rajah. He encouraged agricuiture and commerce, reorganized the army, and so greatly extended his dominions that in 1766 they contained 84,000 sq. miles, and aftorded an immense revenue. In 1780 he formed an allisnce with the Mahrattas against the English, took Arcot, but was
defeated by Sir Eyre Coote, June 1, 1781. The Mahrattas now joining in a ieague agninst him, he carred on a dimadrantageous war, daring the continuance of

Hyder Ali.
which he died, in 1782 . He was succeeded hy his son, Tippoo Saih.
Hydra (hrdra), in Greek mythoiogy, Bydra a ceiebrated monster, which infested the neighborhood of Lake Lerna, in the Peloponnesus. Some accounts sive it a hnndred heads, others fifty, others nine. As soon as one of these heads was cut off two immediately grew up if the wound was not stopped by fire. It was one of the iabors of Heracles to destroy this monster, and this he effected with the assistance of Iolaus, who applied a bnrning iron to the wounds as soon as each head was cut off. See Heracles.
Hydra, an island of Greece, on the length, 12 miles ; hreadth, about 3 Iorea; snrface, thongh not very elevated (bighest point 1039 feet), is almont entirely composed of bare, sterile rocks; and the inhabitants, most of whom liv in the twn of Hydra, on the nor, western shore, are engaged in trade and commerce. During the war of independence the security which the island afforded raised its popuiation for a time to 40,000 ; and the Hydriotes, with their fleet, played an important part in the strasele. Pop. of island, 7342 ; of the town 6446 .
Hydra (in zoology). See Hydrozoa.
Hydrangea
(hi-dranjjea), a genus of shrubs or herbs of the nat. order saxifragacee, contoining
-bout thirty-three speciem, nativen of Auta
-d America. The garien hydrangea ( $H$. nortenois) is a native of China and was introduced into Britain by Eir J. Banks in 1790. It is a favorite for the beauty and size of its fiowern.
Bydrates (hidrats), compounds of stances or with other compounds. Hydroxide has much the came aignificance, but in the hydrate the water is supposed to retain ite integrity, while in the hydroxide its elements have entered into new combinations.

## Hydraulic Crane (hl-drawlik), a

 hy the pressure of water applied on the principle of the hydraulic or hydrostatic press (which ace). The mechanism consists of one or more such presses, with sheaves or pulleys and chains for the purpose of obtaining an extended motion in the chain from a comparatively siuort stroke of the piston. The power is applied not only for lifting the load, hut also for swinging the jib, which latter object is effected hy means of a rack or chain operating on the base of the movable part of the crane, and connected either with a cylinder and piston having alterncte motion, like that of a steamengine, or with two presses applied to produce the same effect by alternate action. Eydraulicon (hi draw'il-kon), an strument played ancient means of water; a water 01 zn .Hydraulic Engines, engines of motive power is water under pressure. In principle they do not differ essentially from steam engines. the water pressure ceting on a piston or plunger in a cylinder, or on revolving piston similar to that of a r tary steam engine.

## Eydranlic Mining, a system of

 which the force of a jet of water is used to sluice down a bed of auriferous gravel or earth, which is passed through sluices to detain the particies of gold.Rrdraulio Press, known also as Lyuraulio Press, $H y d r o s t a t i o$ Press or Bramah's Press. See Hydrostatic Press.
Hydraulic Ram, a machine tor and depending for its raction on water, pulse of flowing water. The water fallfing from a reservoir passes into a pipe or chamber (b), at the end of which there is a bull vaive (c). The rush of supply water at first closes this, and the water finding no exit there acquires pressure enough to open another valve (d) and
paw into an air vesael placed over it (f). The cemation of premure at valve allown it to fali again; an outrush of water take: place there, relieving valved, which again clomen. The presaure of the flowing water upon valve o once more ciowes this raive, and ralve d again opens,

Hydraulic Ram.
and an additional quantity of water is forced into the air-vessel; and so on by a series of pulsations which send the water along the service pipe, and, in properly arranged machines, raise it to a very considerable height, although the impuise is derived only from the fall of a few feet.
Eydraulics, that part of mechanical science which has to do with conducting, raising and confining water, or of applying it as a motire power. It thus has to do with the fiow of water in pipes or channels. and with th. : various machines in which water is utiized such as water whaels, pumps, turbines, the archimedean screw, the Barker's mill, the hydraulic ram, the hydraulic crane, the bydrauije preess, etc. Hydride (hidrid), a bubstance conbined with sisting of hydrogen combined with a metal, or some other bave. Iydro-aeroplane (hrdron'erplane to which pontoons or fight boats have been attached to enable it to foat or move on the surface of the water. This device has been much used by aeronauts of recent years because of the greater ease and safety in riaing from and landing on the water. The term 'fly-

In -boat' is wometimes applied to machines of this type.
EFdrocarbons (hi-dro-ktr'bunz), in compounds which connimt of carbon and hydrozen only. They are produced chiefly by the decomposition of organic substances, either slowiy by naturai causes, or by artificial means, as in the case of the destructive distiliation of coal for the purpose of making sas. Certain of the hydrocarbons are also found in the gums of trees. Among the best known are parafin, bensine and turpentine.
Eydrocele (hidro-wet), a coliection the coverings of the tenticle or spermatio cord, or in the areolar texture of the ecrotum. It is generally the result of a strain or an inflammation of the testes. A larre tumor is formed, filled with fluid, which has to be frequently drawn off. Radicai cure in adult is effected by tapping or by incision.

## Hydrocephalus (h I-d robs of $a-l u s$ ) an accumulation of

 fluid within tre cavity of the craniom; dropsy of the srain. See Dropey.Eydrocharidacese (hi - dro - charorder of monocotyledonous floating and creeping plants, inhabiting ditches, rivers and lakes in various parts of the world. See Aracheris.

## Eydrochloric Acid (hit.drob-kio'-

 MITHIO ACLD (H CI), a saseous compound of equal volumes of hydrosen aud chloriue. It in evoived during volcanic eruptions, and is found in the water which coliects in the crevices of mountaing, and in rivers which rise in volcanic formations. It may be produced by deromposing common salt with sulphuric acid, or by bringing equal volumes of chiorine and hydrogen together and exposing the mixture to difrused daylight without condensation. It explodes in direct sunlight. Hydrochloric acid is coloriess, has a pungent odor and an acdd taste. It is quite irrespirable, extinguishes fiame and dissolves very readily in water. The chit? use of hydrochloric acid in the arts is to supply chlorine. It is also used in the preparation of glue, phosphorus, carbonic acid, otc. In medicine it is used difuted as a tonic and astringent. In a concentrated form it is a powerful caustic.Hydrocyanic Acid (hi-dro-si-an'Prussio 4 oid (which see).
Fydrodyuamios (hi-dro-di-nam'the general science of dynamics, treat-

Ins specially of the lawe of force as appiled to fulde It in dirlded fato hyro atation which is comeerned with forces applled to fuids at rent, and Mylrohimefice, which treate of the application of forces so as to produce motion in fluids. The term hydrodynamica is, however, very often used in the latter aense, being thus opposed to hydrontatica. The name $H y$ draulice is IVen to the subject when cousidered with reapect to its practical bearing on engineering acience.
Hydro-leotric Machine, amio in which electricity is senerated by the friction of stem against the sides of orifices through which it it allowed to escape under hish preasure.
Eydroinorio acid (his oru-faro OHIDMO AOD (H F), an acd which may be obtained oither in the liquid form or in the anhydrous form as a coloriess gan Both the dry and the liquid form act upon the skin with great viruience. Hydrofluoric acid is used chiefy for etchiug upon giass. The glases is covered with a thin coating of etching wax, and the degign is traced through the wax down to the glass with a fine-pointed instrument. The piate is then treated with an aqueous soiution of the acid or is expowed to the gas itseif. After a sufficient length of time the wax is dissoived away and the design becomes visible. In chamintry hydrofluoric acid is used to decompose and dissolve silicates in mineral analyin.
Iydrogen (hridru-jen), an important elementary substance, one of the elements of water and a component of all vegetable and animal products. It may be obtained by passing the vapor of water over red hot iron filings, or by snhmitting water to the action of an eiectric current, wherebv it is decomposed into its eiements hydrogen and oxygen. Pure hydrogen is a coioriess, tasteless, inodorous gas; it is very inflammable, burning with a paie, very slightiy luminous, but intensely hot flame; it is a powerfnl refractor of light; the least dense and the most rapidly difusible of ail the gases and the lightest body in nature, being about $141 / 2$ times lighter than atmospheric air, with a specific gravity of 0603 . In cousequence of its extreme lightyess it is the recognized standard of unity in referring to the atomic weight of bodies, and it has also been assumed as the nnit in-speaking of the specific gravity of gases, although common air is the more generally received standard. Hydrugen cannot support respiration, but is not directly poisonous,
death opaniag trom mose abenvee of ozy. gen Two voiumee of hydrosen with ofs of air form an explonive mixture. The mont intence heat that can be produced is caused by the burning of hydrosen in axyeen ram, and this priveipio has been applied to increace the temper ature of blant-fumacee in iron-works by making the gases pates separately through heated tuben to the fnrmace Hydro gen is oniy alisbtly soluble in water, nor It there any other liquid whicb is capabie of discolving it in great quantity. 11 y dropen zas can be liquefied by exposure to 600 akmon"heres prensure and $-140^{\circ} \mathrm{C}$., but remains liguid at 820 atmonpberes presure the temperature remaining the game. It was zolldified in 1899 by causing it to evaporate when in the liquid state. It unites with ail other elementary gaseous bodies, aud forms witb them ormpounde, not only of great interest, but of vant importance and ntility; with nitrogen it formin ammonia; with chiorine, hydrochloric acid; witb finoriue, hydrotlucric acid, etc.
Erdrography (hi-dros'ra-i), that cal ecience which bass for of object the description and naturai phenomena of tbe water on the surface of the slobe, whether In seas, lakes, or rivers. It may deal with the river, watersheds, lakes, etc., of a particuiar country; and it also embraces the determination of winds, current and other departments of marine surveying. In Britaln, France, the Unjted Etates, etc., there are hydrographic departments zept up by government, which publimh accurate cbarts of coasts, insue malling directions, etc.
Eydrolinetics (bi-dru - ki-netikz), drodynamics which treats of the applicathon of forces producing motion in fluids, having tbns to do "-itb the flow of liquids in pipes, its insue from orifices under certain preasares, etc. See Hydrodynamics. Erdrometer (hidrom'e-ter), an indetermining the specitic gravity of fuids, thougb some of them can also determine tbe ppecific gravity of sollds. The hydrostatic principie on whicb the nse of the bydrometer depends is tbe well-known one that when a molid body fioats in a liquid, and thns alaplaces a quantity of the lignid, the weigbt of tbe solld body is equal to the wel bt of the liquid that it dimplacee. The density of tbe ilquid is determined pitber by observing the deptbs to whict the bydrometer sinks in the liquid se hydrometer of variable immeraion) or the weichts reqnired to make it alak to a siven depth (the
hydrometer of constant immersion). Of the mecond kind of bydrometer Nicholson's It a sood example. It conulats of a hollow cylinder of metal, surmounted with yery fine metalific stem, to the top of which there is attached a plate or pan for Weighte. From the bottom of tbo metailic cyilinder banga a kind of cap or banket. The whole iustrument in weisbted so as to flont uprisht. On the fine metallic stem tbere is a marked point: and by pntting weight on the upper pan tbe bydrometer is always made to sink precisely to this point. Thus the roiume immersed is always tbe same. From wbat was said above, it is seen at once that different weights are required to sink it to the marked point in different liquids, the denser the liguid the grenter being the weight reqnired: and if the weight of the inatrument itself in known, Hydrometer and also the standard vocight, of weirbt required to sink it to tile marked point in distilied water, tbe calculation of the specific sravity of any liquid from an observation with tbe instrumeut is very easy. But tbe apecific gravity of solids can also be found ly means of Nicbolson's hydrometer, for which parpose the instrument is placed in distilied water and the solid body in put on the upper pan. Weights are then added tiil the hydrometer sinks to the marked point. But the standard weight of the instrument beins known, it is plain that the diference between it and the weights tbat munt be added on the upper pan to the weigbt of the body Whose specific gravity is to be determined must be the welsbt in air of that bodr. The body is now transferred to the basket below the instrument, and the additionai weights whicb must now be piaced in the dish represent the weisht of water displaced by the solld; and the weight of the solld itself divided by this weight is the specific gravity required. Hydrometers of variable immeraion are usualiy made of siass. Eacb of them has a large hollow buib, below wbich tbere is a smaller bnib weigbted with mercury to make tbe instrument fiont upright. The stem is cylindrical and is graduated, the dipisions being freqnently marked on a piece of paper inclosed within the stem. The depth to wbicb the bydrometer sinks in tbe liquid gives the rensity.
Eydromys (bi'dro-mis), a genus of
water-mice $\begin{aligned} & \text { annd in ans } \\ & \text { and adjaceut islanas, dintinguished }\end{aligned}$
from all other rodente hy lte amali numbor of molar teoth. The iargent apecion If twiee the slse of a common rat. In Tamanala they are cailed beaver-rata, are nocturnal and very shy, inhrhit the lanky of both lreah and salt water, and wim with the heip of partiy-webbed hind leet.
Brdropathy (hi-drop'a-thi) a method of trentlos diseapen by the une of pure water both finternaliy and externally, which has come extenclveiy into practice. The system was originated by Vincent Priessnlts, a Silesian peasant, who in 1829 entahilshed at hls native vlllage of Grilfenbers an institution for the hydropathic treatment of diseases, and invented a variety of forms in which the water care might be applied, such an the wet-theet pack, the dry blanket or sweatins zack, the aits, douche, plunge, wave, etc, baths. The new aystem coon acquired popularty, and the original eatablisbment expanded into an extensive suite of buildingr. Other hydroparble institutions woon spruas up in other parts of Germany. In 1842 a hydropathlc moclety was formed in London, and ere lons numerous estahlisbments were erected all over the United Klnsdom. Before Priessnlta's death In 1851 he had the zatisfaction of seelng his syatem adopted throughout Europe, ais weil as in the United States, where It was introdaced in 1845 and spread widely, thongh lt in now li ile nsed. In many cases there can be no doubt of patients having received sreat and lasting benefit hy a sojourn at a bydropathle lnstitutlon, and the free nse of water in its varions forms of appliance; hut it may well be doubted whether tbese advantageous results are not as mucb to be attributed to the ablutions, exercise and diet to which in such circumatancee the patiente readily conform themselves as to the wet bandages, douches and other forms of hydropathic treatment.
Eydrophane (hidrn-fan), a variety parent hy opal, made transparent hy lmmersion 1 ln water. Opel.
Hydrophobia
(hi-drn-fobl-a ; Greek hydör, water, and phobos, tear), a specific disease arising from the blte of a rahid animal. The animals most liable to be afflicted wlth madnese are doge; bnt cats, wolves, foxes, etc., are also subject to it. The early symptoms of rahles In the dog re such as restlessness and general uneasiness, Irritability, sullenness and inclination for ladigentible und unnatural food, and often a propensity to lap its own urine. As the disease proceeds the eyes become red, bright and fierce, with gome degree
of atrahimas or eguinting; twitchings oceur round the eye, and gradually aproed over the whole lece. Alter the macond day the doy usually begins to lone per fect control over the voluntary muscies. He catches at his food, and elther bolt it aimont unchewed, or, in the attempt to chew it, suffers it to drop from his mouth. The want of power over the muscien of the jaw, tongue and thront increasen until the lower juw becomés. dependent, the tong: protrudes from the month, and is of dark, and aimont hiack color. A par iar kind of delirium also comes on, and the anlmal snaps at Imaginary objecte. His thirnt is excer sive, although there is occaslonaily a want of power to lap. Ilis desire to do mif chlef depends much on his prevlous disposition and hahite. IIe utterm alno a peculiar howi and his vark is aitogether disslmilar from hle usual tone. In the later stagem of the dicease a vlicld sailva fows from his mouth, and his hreathing is attended with a harah, grating mound. The loes of power over the voluntary muscles extends, after the third day, throughout his whole frame, he stagrers 1 ln hls galt, and frequently fall. On the fourth or fifth day of the disease the dog dien, sometimes ln convulsions, but more frequently wlthout a strugsle. In regard to man the rebid virus seems to be more vinica: hen it juroçeds from woives than from doge it appeara to be contalned soiely in the saliva of the animal, and does not produce any effect on the healthy skin. But if the skln ls deprived of the epidermls, of if the virus is applied to a wonnd, the inoculation will take effect. The development of the rabid symptoms is rarely immediate; it usuaily takes piace vefore the twenty-frst day but In some eases it has been reported as having. occurred after six months or even ionger. It begins with a slight pain in the scar of the bite, sometlmes attended with a cbill; the paln extends and reaches the base of the breast, if the hite was on the lower limbe, or the throat, if on the upper extremities. The patient becomes dejected, morose and taciturn. He prefers solitude, and avoids hright light: irightful dreams disturh his sleep; the eyes become hrilliant; palns in the neck and throat ensne. These symptoms precede the rabid symptoms two or three days. They are followed by a generai shindering at the approach of any. liquid or smooth body, attended with a sensation of oppreaslor, deep sighs and convalsiva starts, in which the muscular strength is mach increased. A foamy, viscid saliva ls discharged from the molth; the deslatition of solld matters is dificult:
the rospiration hard; the altin at Airat, which Huxley and other authoer divide chlly, and ufterwands corerod with swoat; the pule weak; the att in often followed by a syacopo; thy fits return at frat every few hourf, then at nhorter intervale, and death takees place seneraliy on the second or third day. No means have yet been found of arreiting the progrene of the poiconous virum alter it has once developed in the system. The treatment, therefore, conolita in preventing its development. which may bo effected

Soction of Hydroctatio Promer

Hydroeva. (blane (dro-play), aoter (bydro-play), an moter bottom built in one or mory planes or atepe aloping toward the everm, 10 that when the boat is driven at hish apoed it tende to rise and gilide over do partaco of the water. This plan of construetion if beat adapted to ligtt racing boats.
Hydrontaido Press (h) dru - athro wairy Prase, a bydroctatic apparatua which in its practlen appication was is. vented by Brmes is 1706. It will bo vo derutood from the accompanying ligure. By menam of a suction and force pomp, a $a_{0}$ worked by the lever or handie $I$ turalins about the point $\sigma_{1}$ water is drawn from the reservoir $\boldsymbol{A}$ a and forced along the tube o o into the ciatera throngh the top of which a heary metal planger 14 worta On the apper end of the plunger lo a lure plate $z^{\prime} s^{\prime}$ upon which the sods to bo
to impede the circulation from the wound, by gucking it, and thoroughiy cauterizin: it either with nitrate of silver or with iron heated to a white heat, the pain ui cantery being less as the temperature is greater. If these means are not avaiiable, any hurning substance and most acids may he used. M. Pasteur discovered a method of preventing the development of the disease by a system of succensive inoculations with rahid virus of greater and greater intensity; the inocnlation being made the first day with marrow extracted from a rahid animal 12 to 14 days previousis, the second day with fresher marrow, continuing until marrow only one day old is used. The result of this treatment is claimed to confer immnnity from infection. While this method has been favorably received, many doubt its efficacy, especially the anti-vaccinationista, and question the number of cures really performed. As a sharp critic of the Pasteur aystem has remarked, every one who is bitten and inoculated is connted in M. Pasteur's list, thongh there is nothing to prove that he would have contracted the disease.
Hydrophora
yransed are placed. When water it pumped from the renervoir a Binto the cistern $\nabla_{\text {, }}$ the pressure exerted by the plunger of the pump is tranemitted according to the well-known hydrootatic principle (see Hydrostatios) to the bottom of the plunger 4 , which mecordingls risen and carries the objectes placed on piate $B^{\prime} B^{\prime}$ up againat the top of a fred Irame D D. It was the invention hy Bramah of a water-tight leether collar surronnding the piston that made the uso of the press practicable; before his invention not mneh power conld be doveioped from the eicape of the water ronnd the piston. The collar consinter of a leather ring bent so at to have a semis. circular section (as reen in cut), 10 that the water panaing between the piston and cylinder fills the craseavity of the collar, and hy pressuse produc ${ }^{\prime \prime \prime}$;: packing which fits the tighter an the ? remure on the piston increatem The ijdrostatic prew may be constracted te ave presaries of two or three hnndred tons, and io ex. tensively emploved where very srent force is required, as in teating anchore or raloing very henvy weishts.

Hydrostatics
Hydrothorax
drodjnamics that treats of the application of forces to fluids at rest. Among the chief principles of hydrontatics mas be mentioned the following: (1) The intenaity of pressure at any point of a fluid is the same in all directions; it is the same whether the surface that receives the pressure faces upwards, downwards, horizoutally or obliquely. (2) When a fluid is conined, if the intensity of pressure in one part be increased, as by forcing in a piston or by any other means, an equal increase will be produced in the intensity of pressure at all other parts: in other words, pressure applied to any one part

Pascal's Priaciple.
is transmitted without any change in its intensity to all other parts. The diagram will ald in the understanding of thls. If pressure is applied to $P$ it will be transmitted in all directions through the llquid. If other openings are madn, and if they are fitted with pistons, the pressure that must be applied to any piston equal in area to the area of $P$ is equal to the pressure on $P$; and if the area of one of the other pistons is greater or less than the area of $P$, the pressure required to keep it in its place is proportionately greater than or less than the pressure that is applied to P. This prlnciple, which is known as Pascal's principle from belng distinctly formulated by him, is the most important in hydrostatics, and finds a practical application in the Hydrostatic, or Bramah's Press (see above). (3) Not only is pressure transmitted out to the surface or envelope of the liguid, but within the fluid itself the particles are all pressed together. When a solid is immersed in the liquid it is plessed at every point of its surface in the direction perpendicular to the surface at that point. (4) In every horizontal layer throughout the liguid the pressure per unit area is the same; and this is the cate independently of the shape of any vessel in which the liquid may be contained. The pressure per unlt area in any horizontal layer depends only on the height of the free surface of the liquid
above the layer considered, and the specitic gravity of the liquid ; and it is equal to the welght of a column of the liquid of unit sectional area whose heisht is the height of the free surface. Hence whatever be the shape or size of several vessels, if all have the same area of base, and if in all the water stands at the same height, the pressure on each of the bases is the same. (5) When a solid is immersed elther partially or wholly in a liguid a portion of the lifyuid is displaced. The solid is at the same time pressed at every point by the liquid. But the upward pressure on the solid is greater than the downward by an amount equlpalent to the weight of the liquid displaced by the solid. Hence we obtain what is called the principle of Archimedes, namely, that a body immersed elther wholly or partially in a fluid loses a portion of its weight equal to that of the fluid which it displaces. This principle is of great importance as regards the flotation of bodies, and the determination of specific gravity, etc. In regard to the sinking or floating of bodies three different cases may thus arise: Flrst, the weight of the body may exceed the weight of the liquid it displaces, in which case the body sinks in the liquid; Second, the weight of the body may be less than that of the liquid displaced, in which case the body will not remain submerged unless forcibly beld down, hut will rise to the top and partly out of the liquid until the weight of the liquid displaced is equal to its own weight; Third, the weight of the body may be equal to the weight of the liquid displaced, in which case it will have little or no tendency either to sink or rise.

## Hydrosulphuric Acid (hrdaro-

 sul-fa'rik), or sulphuretted hydrogen, or hydrothionic acid ( $\mathrm{H}_{2} \mathrm{~S}$ ), is a colorless, inflammable gas produced by the putrefaction of sulphurous organic matters. Many mineral waters contaln it naturally. It may be artificlally produced by burning sulphur vapor in hydrogen, or by passing hyrdogen through sulphur.Hydrotherapy (hrdrother'a-pi), the ous ways for therapeutic purposes. Ex. ternally water is beiog used with great success in the frentment of insanity. fever, sciatica, insc ia, sepsis in wounds, etc. Internally, ter is also of great service. whether in lhed injected.
Hydrothorax (hi. i-tho'rakz), a dropsical condition of the pleura. in whirh the pleural cavlty contains a semns fluid exnder from the blood-vessels, not due to inflammidon.

Hydrozoa dom Coelenterata, in which the walls of the body inclose a simple undivided cavity which acts both as a body cavity and a digestive cavity. The body is essentially

A. Part of the colony of Bougainvillea muscus, one of the compound Hydrosoc, of the natural size. B, Part of the same enlarged: p, A polypite fully expanded; $m$, An incompletely devoloped reproductive bud; $m^{\prime}, \mathbf{A}$ more completely developed reproduclive bud; $f$, Coonomere withits inventing periderm and central canal. $\mathbf{C}$, A free reproductive bud or medusiform conophore of the mme: $n$, Gonocalyz; p, Manufrium; c, One of the radiating cautrovancular canals; o, Ocellus; v, Volum; $\ddagger$, Tentacle. (After Allman.)
composed of two layers, an outer layer or ectoderm and an inner or entoderm. Reproductive organs are developed as external processes of the hody-wall, hut reproduction also takes place by fission. The Hydrozoa are all aquatic and almust all marine. The fresh-water hydra is a very good type of the class. The borly is quite soft, and when fully contracted appears like a particle of matter resting on the surface of a plant or stone; but when expanded it shows a long slender body of a bright green or light brown color. One end of the hody develops into a number of long slender tentacles, within which near their bases, the mouth of the animal is found. This is the diatal or free-xrowing end. The other and more siowly growing end is known as the prowt-
mah and ends in a kind of diec or foot hy which the hydra attaches itwelf to objects. The body is hollow from one end to the other. It is found mont in semistagnant waters, where, havjing from its foot-dise, with it long tentaclem expanded, it seizes on the small crustaceans or other suitable prey which comes in contact with it. Its tentacles have a stinging power which soon paralyzes its prey. Under favorahle conditions one or more hydre are usually found at tached to the parent form. Such are produced by a process of budding from the parent. Each of these ultimately eeparates from the parent stem and becomes an independent hydra. The Hydrozoa are divided by Prof. Nicholson into six subclasses, viz. the Hydroida, the Siphonophora, the Lucernarida, the Graptolitoidea, the Hydrocorallinze and the Stromatoporoidea.
Hyena (hi-s'na), a genus of digitigrade carnivorous quadrupeds, constituting a family which unites the skull characters of the Felidæ (cats) with the skeleton and gregarious habitu of the Canide (dogs). The character of this genus are five molars above, and five or four below, on each side, the three anterior molars being conical, smooth, and remarkably large, adapted for hreaking the bones of their prey; the tongne is rough; the legs are each terminated by four claws; the forelezs are longer than the hind legs: the eyes large and prominent ; the ears long and acute; the jaws are remarkable for the strengtb of their muscles, and can crush the hildest and most massive hones with ease. The genus is confined to Africa and Asia. There are three species knownthe striped hyena (Hycene atriate), whose general color is a srayish-brown, diversified with blackish stripes, which run along the ribs, and upon the limbs, these peculiar marks distinguishing it from the other species; the spotted hyena (Hyaena crocuta), so named on account of the well-defined spots that are scattered over its body and limbs ind the hrown hyena (Hycone brunnea), whoe fur is of a blackish-brown tint, diveralied with a lighter color around the neck. The term 'laughing hyena' is applied to the spotted hyena which utters atrange sounds that resemhle hysterical laughter. This animal is also called the tiger wolf.

They are extremoly vorecious, foeding chiefly on carrion, and thus being of ereat utility in the countries where they live: to obtain dead bodies they will even dis ap gravea Along with the true hyenes, the aardwolf of South Africa is 1 leo included in the family of Hyenide. An
extinct species, the cave hyena (H. speLea) was abundant in England, France and Germany anterior to the glacial epoch, and has left its remains in many caves of theme countries.
Hyeres (Elir), a town of Sonthern miles east of Toulon, heautifully situated on a declivits facing the Mediterranean. It is much frequented by patients sufferin from chest or nervous disorders. Pop. (1806) 17,780.

## Hyeres Islands,

a group of islands in the Mediterranean, on the coast of France a little south of Hyeres. Pop. 6755.
Eygieia
(hi-ji-efya), the Greek goddess of health, daughter of Asclepios, or ※isculapius. Her temple was placed near that of disculapius, and her statues were even erected in it. She is represented as a blooming maid with a bowl in her hand, from which she is feeding a snake, the eymbol of health. Hygiene (hi'ji-ēn), ment of medicine which treats of the preservation of health, and the duration of life prolonged by a due attention to physiological or natural laws. It is usually divided into pnhlic and private hyjene, the former having to do with measures for excluding causes of disease (see Quarantine and Jaccination), methods of securins; cleanliness in the streets and dwellings (nee Sanitation and Selcago), methods of maintaining the purity of the snpply of food and drink (see Adulteration); the latter may be considered to emhrace such snbjects as aiimentation (see Aliment, Digestion and Diefotios), clothing (see Olothing), exercise and muscular development (see Gymnestics), etc Eygrometer (hr-grompet \& r), an uring the degree of moisture of the atmosphere. The chlef classes of hygrometers depend either upon absorption or upon condensation. Of the former kind is the hyrrometer of Saussure, in which a hair, that expands and contracts in length according as the air is more or lon moint, is made to move an index. Of the latter cort is Daniell's hygrometer.

This instrument consists of a bent glass tube, terminating in two hulbe, the bulb a being two-thirds filled with mulphuric ether, and the bulb $s$ being, at the commencement of an experiment, empty. The latter is covered with muslin. In process of construction the tube is exhausted of a ir, and is thus filled with vapor of ether. throngh its entire length. A thermometer ( $t$ ) whose hulb is immersed in the ether of the lower arm, is inserted in the tuhe to register variation of temperature, and a sec-

'Daniall's Elyerametar. ond ther mometer $\left(t^{\prime}\right)$ is attached to the stand of the instrnment, to show the temperature of the outer air. If sulphuric ether be dropped on the bulb B, as it evaporates the bulb is cooled, and the vapor of ether is condensed withir it from the hnlb 4 ; while owing to the evaporation from $A$ into $\mathbf{B}$ the temperature of the firmer gradnally falls. The operation is ce.rried on till the temperature of $A$ is so far reduced that dew from the snrrounding air just begins to condense upon it. By means of the thermometer contained in A the temperature is read off at the instant at which vapor begins to condense, and the dew-point is thus ohtained. The hygrometric condition, that is, tine ratio between the quantity of moistnre that the air actually contains and the quantity which it is capable of contair:i.g at the existing temperatnre, is ihen easily deduced. Regnanlt's hysrometer is a modification of the principle of Daniell's instrument, the ether being evaporated hy forcing air throngh it.
Hykshos. See $\boldsymbol{H} y c s o s$.
Hylacosaurus (hi-le-o-sh'rus), a gidiscovered in the Wealden formation of Tilgate Forest, England. Its probahle length was about 25 feet. It is one of the Ornithoscelida, the group which presents a structure intermediate between that of existing birds and reptiles.
Hymen (himen), Hrimseus, $t$ he mythology. No marriage took place without his being invored to manction it. He is described as having around his brows the flowers of marjoram, in his left hand the fiame-colored nuptial veil, in his right
the nuptial torch, and on his feet golden sandals. He is a taller and more serious Eros, and is accompanied by song and dance.
Hymenoptera hr-men-op'ter-a; Gr. and petron, a wing), an extensive order of insects, comprising bees, wasps, ants, ichneumon-fies, gall-fies and allied insects. They are characterized by four membranous naked wings which have comparatively few veins. The second pair of wings is always smaller than the first. The mouth parts are provided with biting jaws and a suctorial organ. The head is freely movable, and besides the lateral compound eges there are usually

Hymenoptera. a, Winsed male of ant; b, winsless worker of ant; c, Pupa of ant; d, larve of ant
onlarged; $e$, the great Eawfy (Sirex gigas). -
three ocelli on the top of the head. The Hymenoptera undergo complete metamorphosis. Females have the extremity of the abdomen furnished either with an ovipositor, forming a boring organ (terebra), or a sting (aculeus). Hence the two suborders into which Hymenoptera are divided: Terebrantia, comprising the sawfies, gall-flies, ichneumon-flies, etc., and the couledta, which include the bees, wasps, ants; hornets, etc.
Bymettus (hi-met'us), a mountain in Attica, now called Trelovouni, southeast of Athens, distinguished among the ancients for the excellence of its marble and its honey. The latter is still in repute.
Hymn (him), originally a song of and heroes on festivals, with the accompaniments of music and dancing. Amons the Hindus the hymns of the Rig-Veda, among the Hebrews the psalma, and among the Greeks the so-called Orphic and Homeric hymins are good examples. The early Christian hymns are full of devotional feeling. Their use datem from the firat days of the church; but the names of the authors even of the more modern hymn cannot be discorered with
certainty, though Prudentins, Paulus Diaconus and Thomas Aquinas are known to have onmposed some of the mont $\omega$ teemed. The use of hymns was ganctioned by the fourth council, at Toledo, in 623. Several of them have names derived from the words with which they begin, sts the Te Deum, the Gloria Patri, etc.
Hyoid Bone (hi'oid), In anatomy, what like the letter U , but with wide bend and shorter limbs in proportion to the body, and having two pairs of upward projections or cornuc (horns). It is suspended horizontally in the substance of the soft parts of the neck between the root of the tongue and the larynx.
Hyoscyamus (hi-or-if'a-mus). See Hypatia (hi-pa'she-a); a Greek female philosopher of tho eclectic school, the daughter of Theon, a celebrated astronomer and mathematician of Alexandria towards the clowe of the fourth century after Christ, at which period she was born. Her father taught her not oaly all the branches of polite learning, but also geometry, tronomy and finally philosophy. She acquired a great $i^{*}$ outation in the latter study, and as preceptress in the school of Plotinus gathered a numerous auditory of students from all parts of the East. She was as virtuous and beautiful as she was learned. But the real and the oppesition of Cyril, the Patriarch of Alex ndria, were aroused at the influence exercised by Hypatia; the lower and more ignorant clergy in particular were stirred against her, and at length a number of them having excited a popular tumult, seized her as she was returning from the schools,
 dragged $h e r$ Hyperbole-D y nais
 of Alexandria, tr, foci; c, centari A An,
 nand finally mur-ameter.
dered her with cir-
cumstances of the sreatent barbarity (415). Charles Kingley chowe the story of Hypatia as the subject of an interesting histrical romance.
Iyperamia (hi-perefmi-a) an ex. cemive flow of blood to any atructure of the body.
Byperbole (hiperbo-la), in seomo etry, a curve formed by
cutting a cone in a direction parallel to makes a greater angle with the base than the side of the cone makes, and when produced cuts also the opposite cone, or the cone which is the continuation of the former, on the opposite side of the vertex, thus producing another hyperbola, which is called the opposite hyperbola to the former one.

## Eyperbole (-bo-le), a rhetorical fig-

 expressed with a fanciful which an idea is phrase which is not to he taken too literally, hut only as representing a certain warmth of admiration or emphasis. 'His fame reaches to the stars' is an example of hyperbole.
## Fyperboreans (hI-per-bo-réans),

 a mythical people, supposed to dwell in the extreme north of the earth. They were favorites of Apollo, and dwelt in an earthly paradise in everlasting youth and health. In modern times the term is applied to certain trees of Northeast Asia and N--thern America.
## Hyperdulia. See Dulia.

Hypericace: (hi-peri-kápef), $\mathbf{H z}$ Fmactiver, a nat. or der of piants, of which the genus $\bar{H} y p e r i-$ cum or St. John's wort is the type. They are herbs, shrubs, or (rarely) trees, with simple, opposite (rarely whorled) leaves. They have terminal or axillary, solitary, cymone or paniculate flowers, usually yellow or white. These plants are much spread; they abound in resinous juice, and many possess medicinal properties. Eyperesthesia (hi-per-ez-thési-a), un excessive sensibility of the nerves of sensation, special or general. In this condition the slightest stimulus may cause a paroxyem of pain, as in ticdouloureux. In the case of the spinal nerves, bright fisshes of light may be ween, sounds heard, and smells and tastes experienced with no apparent cause. Hysteria is the disease most likely to bring on this condition, but it is sometimes induced by rheumatism, gout, skin diseases, etc., and often adds to the distress in the early stages of various fevers. Hyperides (hi-per-i'déz), an AthePlato and Isocrates, born about pupil of Along with Demosthenes and Lycurgus he way one of the leaders of the patriotic and anti-Macedonian party. As an orator he was especially distinguished for his grace and subtlety of expresaion, as well as for his tuct in handling the greation under cowsiderntion. He was
murdered at Jifina by emisuaries of Antipater in 822 m.0. of his orations one has reached us nearly entire; the others only in fragments.
Eyperion (hi-per-ion or hi-péri-on),
in the most ancient mythology of Greece, the god of the sun, afterwards identified with Apollo; alsu one of the Titans.
Eypersthene (hípér-sthèn), a mineral of a color between grayish and greenish black, hut nearly copper-red on the cleavage. It was first found on the coast of Lahrador, and was called Labrador hornhlende.
Hypertrophy (hi-per'tru-fe), literAlly over-nourishment. is an excessive development of the body or any of its organs hy actual increase of the particular parts composing it, as increase of muscular fibre in the heart. It arises from continued oversupply of blood to the part, due it may he to chronic irritation of the part, as for example thickening of the skin in the neighborhood of a chronic ulcer; or it may he due to excessive use of the part. The cure of hypertrophy is attended with difficulty. The diseased organ must be kept at rest if possible. Hyphomycetes. See Fungi.

## Hypnotism. See Mesmerism.

Iypnum (hip'num): one of the largest genera of mosses, including above ninety species, natives of Britain. Many of the species are very large and ornamental.
Eypocaust (hip'o-kast), in ancient baths, etc., an arched chamber in which a fire was kindled for the purpose of giving heat to the rooms above it. The heat was distrihutcd by means of tuhes of earthenware.
Hypochlorites (hy-pu-k loritz), salts, chiefly important as powerful oridizing and bleaching agents ; not, however, when pure, but when containing chlorides. The chief hypochlorites, or at least the complex suhstances which contain hypochlorites, are bleaching-powder, and the bleaching linuors made with potash and sods.

## Eypochondria (hip-u-kon'dri-a), a

 from a disturbance of disorder arising nervous system. It is a form of melancholia. The sufferer lives under the generally groundless apprehension of diferent diseases. Uninterruptedly occupied with the state of his body he takes notice of every feeling, and wishes to have overy trifling pain explained, considering, every one a mymptom of a merious dimease.
## Hypodermic Injections

For everything he wants phyoic. Hypochondria is, physically considered, not a dangerous disease, although it makes the life of the suiferer a torment to himself and his friends. It is occasioned mainly hy too great mental exzrtion, by too sedentary a life, by sexual indulgence or excess in exciting liguors; and also hy want of exercise of the physical and mental powers producing ennui. It can he cured, but alowly, by the avoidance of the habits likely to occasion it, by the adoption of a steady and regular life, with moderate exercise for the mind and body, and by the frequent enjoyment of cheerful society.

## Hypodermic Injections (hi-pu-

 mik), injections of some substance heneath the skin: a method adopted in medicine when the condition of the stomach or other organs renders the use of drugs by the mouth objectionahle, or when rapidity of action is desired. The medicine is introduced by a small glass or metal syringe fitted with a long hollow, needle-shaped point of steel, which is thrnst through the skin.Hypophosphites
(h I - pu-fos'fitz),
salts of hypo phosphorous acid, especially certain modicinal salts, chiefly the hypophosphites of potassium, sodium and calcium. They have heen used with considerahle advantage in disorders of the blood and the digestive organs, and have also been found of benefit in consumption, although failing to effect a cure.
Hyposulphites (hifopu-s ulffitz), phurous acid. Anong the most important are the hyposulphites of sodium and calcium, the former of which is used in medicine as an external remedy in parasitic skin disorders and an internal one in checking fermentation in zymotic diseases. It is variously used in hleaching, photography, and other arts as an antichlore, a dissolvent of bromide and iodide of silver, etc.
Hypotenuse (hrpot'e-nas) in geometry. the longest side in a right angled triangle, namely that

ab, Hypotenues. equal to the sum of the on the other two sides.

Hypothecation (hi - pothe-ka'shan), something in wecurity without siving up the posenension of it. See Botiomry. Hypothesis (hi-poth'o-ils), etymoin popularly used itally a supposition; not proved buted to denote nomething argument In assumed for the zake of usage it denutes either a probable theory of phenomena not yet fully explained, or a strictly scientific theory which accounts for all the known facts of the case, and which only needs the verification of subsequent observations and deductions to become a certainty. Thus the conjecture of Newton that the force of gravity, as exemplified on the earth, might extend to the moon, was in its first stage a prohahle hypothesis; but when it was found to account for all the facts, it hecame a scientific hypothesis or theory. The word theory is frequently used whero hypothesis should be employed.
Hypsiprymnus. See Kangaroo-rat;
Hypsometry (bip-som'e-tri), the heights. See Heights.
Hyracotherium (hi-ra-ku-ther': um), a genus of fossil Pachydermata, belonging to the odd-toed division, intermediate between the hog and the hyrax, occurring in the tertiary strata of England. The species are of the size of a hare.
Hyrax (hr'rakz), a genus of pachydermatous mammalia, intermediate in their character hetween the rhinoceros and the tapir. It is the only genus of the order Hyracoidea, characterized hy having no canine teeth, but long, curved incisors. The front feet have four toes, and the hind feet three. The Cape hyrax is by the colonists of South Africa called Rock-badger and Rookrabbit.
Hyrcania (her-kā̊ni-a), a province of ancient Asia, corresponding to what are now the northern parts of Khorasan and Mazanderan, along the Caepian Sea.
Hyrcanus (her-ka'nus), the name of two $J \in w$ ish highpriests and rulers of the Asmonean family; -John Hyrcanus. the son and successor of Simon Maccabens, assumed the title of prince and the high priest in 137 B.c., freed Judea from the yoke of the Syrians, and founded a dynasty of rulerm which lasted till the accession of Herod. He also subjugated the Spmaritans and Idumseans. He died in 105 B.C, leaving sive sona, two of whom, Aristobulus and Alexander, afterwards governed with the
title of king- Jonn Hirrcanus II, Hysteria
crandeon of the former, was appointed grandeon of the former, was appointed ring in Jerusalem, but was forced by his brother Aristobulus to retire into prirate life. Pompey, however, appointed him high priest in B.O. 63. About 40 za he was taken prisoner by the Parthians and carried with them to Seleucia. Here he remained till he was invited to Jerusalem by Herod, son of Antipater. Being suspected of plotting against Herod, he was put to death in B.O. 30 .

## Hysscp

(his'up; Hyseठpus), a genus of plants of the nat. order Labiate. The common hyssop ( Hysofpua offoinalif) is a perennial shrubby plant rising to the height of 2 feet, u native of 8 iberia and the mountainous parts of Austria, but common in our gardens. It flowers from June to September. The leaves have an agreeable aromatic odor, and a slightly bitter and somewhat warm taste. It was once esteemed as a medicine, but has now fallen into disuse. The hyssop of Scripture (the symbol Hywop ( H .oficinalis), of spiritual purification from sin) is generally identified with the caper (Dagpêris spindsa).
(his-tóri-a), a nervous affection to which women are subject, generally occurring in paroxymm, characterized by alternate fits of laughing and crying, convulsive strussling alternately remitting and exacerbating, sense of suffocation, palpitation of the heart, the sensation of a ball ascending from the pit of the stomach, occasioning a feeling of strangulation (globus hystericus), etc. Women of a delicate habit, and whose neryous system is extremely sensitive, are the most subject to hysterical affections; and the habit which predisposes to these attacks is acquired by inactivity and a sedentary life, grief, anziety and various physical disorders. They are readily excited, in those who are subject to them, by strong emotions, e.specially if sudden. Hysterical complaints are best prevented by a judicious care of the moral and physical education of girls. Men are sometimes, but rarely, subject to disorders not essentially different.
Fythe (hith), a borough of England, Hythe one of the Cinque Ports, in the County of Kent, 11 miles w. S. w. of Dover, to the west of Folkestone, at the foot of a steep hill or cliff. It was anciently a place of great importance; but its harbor has been entirely silted up. It has become a fashionable resort for sea-bathing, and there is here a government school of musketry. A promenade over five miles along the coast was opened in 1881. Pop. (1011) 6387.

I, the ninth letter and the third vowel represents not only alphabet, in which but also the consonantal sound of $y$. The two principal sounds represented by it in English are the short gound as in pit, pin, fin, and the long as in pine, finc, voine, the latter being really a diphthongal sound. It has also three other sounds, vis., that heard in firat, dirk (e, the neutral vowel) ; that heard in moching, intrigue (which, however, can acarcely be considered a modern Ens: lish sound) ; and the consonant sound heard in many words when it precedes a vowel, as in million, opinion, trumion. I and 3 were formerly regarded as one eharacter.

## Iamblichus (I-am'bli-kus), a Greek

 pher, a native of Chalcir in Coele-Syria, who flourished in the beginning of the fourth century after Christ. He was the pupil of Porphyry, and having become perfect in the doctrines of the Plotinian school, he taught with vast reputation. His echool produced many eclectic philosophers, who were dispersed throughout the Roman Empire. His philosopbicel Works now extant are: a Life of Pyitugoras; an Eahortation to the Study of Philosophy; Three Books on Mathematio oal Learming; a Commentary upon Nicomachus Institutes of Arithmetio; and a Treatise on the Mysteries of the Egyptians, Chaldeans, and Assyriane. He died at Alexandria about 333 .Tambus ( $1-2 m^{\prime} b u s$ ), in prosody, a short and lons one ( - ), or an unac cented syllable followed by an accented one. The iambic meter is the fundamental rhythm of many English veraes. The verse of five iambic feet is a favorite meter, being the heroic verse of Erclish, German, and Italian poetry.
Ianthing (i-an'thi-na; Gr. ianthi nos, Fiol eteolored), a senas of ocennic gasteropodous mollusca, With a thin violet-colored, snall-ile shell. When irritated they pour out a -lolet mecretion, which colors the sur rounding water and serven for their con-
cealment, in the same manner as the inis of the cuttle-fish.
Ibadan (Aha'dan), a town of Western Africa, in the Yoruba country, about 70 miles north of the Bight of Benin. Pop. said to be about 150,000, a few of them whites.
Ibague ( 8 -bi-gaj), a town of South America, Republic of Colombia, department of Tolima. Pop. (1012) 23,607.

Toañez ( Abä'nyez; Spanish pron. e-bä'nyãth), Vicente Blasco, a Spanish novelist (1867-), born at Valencia, Spain. His first novel to attain popularity in America was four Horsemen of the Apocalypse. This was followed by Mare Nostrum and others.
Tbarra (E-bir'ra), a town of Ecuador, 60 miles north of Quito. Pop. estimated at 10,000 .
Iberia (i-be ri-a) in ancient geogra-phy:-(1) A fertile district in Asia, between the Euxine and Caspian Seas, a part of modern Georgia. (2) An ancient name of Spain.
Iberis (I-béris), a genus of cruciferous plants 2 of which several species are cultivated in gardens under the name of candytuft.
Tberville (ebar-vel), Pipare li Mornar Sreus D', a French. Canadian soldier and naval officer, founder of Louisiana, born in Montreal in 1681; died in 1706. He saw much service with the French during their earlier strus. gles with the English, being in the exped.Hon which won Fort Nelson (1686), the invasion of Newfoundland and the naval fights of 1697 in Hudson Bay. Serit to establigh a French post at the mouth of the Mississippi, he founded Biloxi, Missor in 1690 and subsequently a post on Mobile Bay and another on Dauphin Island.
Tbez (i'beks), a name of several species of goats. The horny of the male are fattened, have twe longitudinal rdges at the sides, and are crossed by numerous transverse knots. The best-known varieties are the Capra ibes of the Alpu and Apennines, and the O. Stiberics, the bearded ibez of the Himaingas Anothen
species, 0 . egaque, inhabits the lofty rocky peake of Mount Cancasus. Some writers say that the enormous horns of the ibex are employed by their owner as buffers, by which the force of a fall may be broken, and that the animai, when leaping from a great height, wiil alight on its horms, and by their eiastic strength be guarded from the severity of a shock that would be fatai to other animals. The ibex has remarknble powers of endurance, being capabie of sustaining life without iond or water for a very long time. The coior of the thex is a rendilish-brown in summer, and gray-hrown ill winter. There is a darker stripe along tiee spitie and over tine face. They are exceeflingly wary, and difficult game for the lmuter bernuse of the nature of the country where they mam and their rapacity to excape by way of the steepest precipices, impossible for mun.
Ibicui (ib'i-kwi), a river of Brazii, which rises in the Serra do Sarta Anna, province of llio Grande do Sui, and joins the Uruguny at Yapegu after a course of 400 miles.
Ibigau (ib'i-gh; Nyctibus grandis), habiting South America ; sometimes called the grand goat-sucker.
Ibis (i'bis), a genus of birds allied to the storks, the most remarkable species being the libis religiosa, or sacred ibis (also called Threskiornis religiosa). This is found throughout Africa. It is about the size of a common fowl, with head and neck bare, and white plnmage, the primaries of the wings being tipped with black and the secondaries being bright black, glossed with green and violet. It was, reared in the temples of ancient Egypt with a degree of respect bordering on adoration, and after death was preserved in a mummified condition. The cause of its being deemed sacred was no donbt because it appeared in Egypt with the rise of the Nile; but it is now rare in that country, living farther south. There are soveral other species, as the $I$. falcinellus, or glossy ibis, nearly two feet in length, which builds in Asia, but migrates also to Egypt, sometimes visiting England; the 1. rubra of tropical America, remarkable for its scarlet plumage; the I. alba, or white ibis of Florida; the I. or deronticus spinicollis, or straw- $^{\text {and }}$ necked ibis of Australia, etc.
Ibn-Batuta (ibyn ba-tocta) an at Tangiers 1304; died at Fer 1377. He risited Egypt, Syria, Arabia, Persia, Central Abia, India, Chine, the Eastern Archipelago, East Africa, Central Africa, etc., and wrote an escount of his travels.

## Ibn-Eara. <br> Same as Aben-Eerc.

Ibrahim (ibra-him) the Arabic lorm of Abraham, and the name of many sultans and grand-viziert distinguished in Ottoman history. Ibrahim Pasha, an adopted son of Ibrahim Pasha, Mehemet Ali, viceroy of Egypt, born in 1789. He first gave sigmal proofs of his courage and miii-tary talents in the war with the Wababis of Arabia, whom he completely defeated and in the subjugation of Sennaar and Darfur. In 1825 he invaded the Morea at the head of an Egyptian army, with the view of conquering Greece for his father; but in 1828, In convequence of the interference of the great powers, was obliged to abandon the attempt. To effect his father's purpose of making Syria a bulwark to his new Egypto-Cretan kingdom he, in 1831, crossed the Egyptian frontiers with an army, overran Palestine, took SL. Jean d'Acre by storm and made himself master of all Syria. The campaign terminated by an arrangement in which the Porte ceded Syria, and conferred the pashalic of Adana, by a zind of lease, personally on Ibrahim. In no long time war with the sultan again broke out, and resulted in a great defeat of the Turkish forces at Nizib in 1839. By the interference of the great powers Ib rahim was eventnally obliged, after retiring from all his Syrian conquests, to return to Egypt, marching across the desert from Damascus with great loes and suffering. From this time he ap; peared seldom in public life, and emplojed himself chiefly in the imrovement of his own estates. In 1848 he visited England and France. In 1848 Ibrahim, after his father had become superannuated, proceeded to Constantimople, and was nominated Viceroy of Egypt, but he died in the same year at Calro. while Mehemet Ali was still alive. He was succeeded by Abbas Pasha, the favorite grandson of Mehemet Ali.
Ibrail. See Braila
Ibsen (ib'sen), Hervars, a Norwefian dramatist and lyric poet, born in 1828. His first play, Catilina, was produced in Christiania. in 1850. This was an ill-written production, but his Warriors in Helgeiand (1850), and Rival Kings (1884), raised him to the first rank among the national dramatists of Scandinaria, and Love's Vomedy (1802) was the first sten towatrds bis satirical social dramas. He was successively director of the theater at Berem and of the Norske Theatre at Christiania. which he managed in 1857 .02 In 188 ;
he left his native country and thereafter realded chiefly ahroad. His dramas aro partly in prose, partly in verue, and include hintorical phyy and natirical comedien of modern uife. Some of them have been rendered on the English and American staze and are very highly regarded as literary and dramatic productions. The first to attract world-wide attention was 4 Dolls Howse (1879). This was followed hy Ghosts, The Wild Duck, The Master Builder, and others, puychological in their interest, hat vividy realistic in langnage, come of them giving rive to a storm of controversy. Ibsen was also a lyric poet. He obtained a pension from the Storthing. $H_{6}$ died in 1806.
Ibycus (iblik-kus), a Greek, lyric in the sixth century b.O. jlived mostly at Samon in the court of Polycrates. It is related that while on a journey he was surprifed and murdered hy robbers near Corinth. Finding escape imposible, he declared that the cranes which happened to be flying over their heads would avenge his death. The rohbers afterwards seeing a flock of cranes, one of them sald involuntarily, Behold the avengers of Ibycns.' They were in concequence seized, and, after confessing their crime, were executed. His writings are known only by fragments. His poetry was chiefly erotic, but sometimes mythcal and heroic.
Ica (e'ka), a coast department of Ica Peru, area, about 8700 sq. miles; pop. 100,000 . Its capital, Ica, lies in the fruitful valley of the river Ica; pop. 9000.

## Icarus (ik'a-rus). See Dadalus.

Ice (Is), water frozen into a solid mass. Water freezes when its temperature in reduced helow a certain point, which is by universal consent made a fired point on thermometers. That point is called zero on the Centigrade and Reanmur cales, and $32^{\circ}$ on the Fahrenheit scale. Water near the freezing point prenents the curinns anomaly of expanding instead of contracting; as the cooling process goes on. At 4. $1^{\circ}$ Centigrade ( $89.4^{\circ}$ Fahr.) water has its marimum density-point. At temperatures below $4.1^{\circ}$. the volume of the water in. creases as the temperature falls, and decreases as the temperature rises; and at the moment of solidifying the volnme of the mass suddenly increases to a very considerable extent. so that ice at the temperature of freesing is one-ninth greater in volnme than the water from which it is formed is at $4.1^{\circ}$. It is on this account that water freezes at the
top first, and that ice when trozen tioaty at the top of the water. The temperature at which pure water becomes ice is very nearly conatant under ordinary carcumatances ; and it is this fact, along with the ease of procuring water at the freesing temperature, or rather ice at the point of liqnefaction, that has caused the temperature to be adopted as one of the fixed points in thermometeri. The frees-ing-point is, however, nlightis infinenced hy pressure. Increatio of pressure lowery it, and the removal of premure ralsen it. Salt water requirem a lower temperaturn to freeze it than fresh water, and in the procens a larse part of the salt is rejected. Hence water obtained from the melting of sea-ice is nearly fresh. If water is kept perfectly at rest it may be reduced in temperature far below the freezingpoint without turning into ice ; bnt particlem of solid matter snch as dnst must also be kept from falling into it. The expansion of water on its conversion into ice often sives rise to the exhilition of very sreat force, and prodnces very remarkable effects in natnre. Mach of the disintegration observed in rocks and stones anring or immediately after frout is due to it, water having entered into their pores and cavities and hurst ofr particles by ite expanyion. Ice, though it in very hard and brittle, ponsensen the property of plauticity to a very remarkahle degree, and can be moulded into any form by the application of pressure. The platticity of ice is a property of very great importance. It was difeovered hy Forbes, Who explained the motion of slaciers on it. (Seo Glaciers.) In nature ice appears In the greatent masses in the form of glaciers and iceberss, the latter being portion which have become detached from elaciers that extend down into the rea. Ice is now an article of considerahle importance from a commercial point of view, large qnantities of it being shipped to warm climates from countries where it is naturally proinced in ahundance in winter, as the Uhited Statem or Norway. Ice can now be made cheaply by certain proceuses and apparatns (see Rofrigerating Machines), and a very pure and excellent article is thns produced, and has to a coneiderable extent replaced natural ice for domentic and other nse.
Icebergs (is'bergs), large maseses of tached from the whores of the arettic reglons, and foat abont in the ocean at the mercy of the winds and corrontt. They are in fact pieces of slaciers doteched from the parent mass by the ection of the aea and by their own accumalating
weight. They present the strangent and mont pictureague forms, are sometimes milem in length, and riec to a height of pertape 250 or 300 feet above the sea, the portion obove water being calenlated at about an eighth of the whole. Icober consist of clear, compact solld ice, with a bluish-green tint. Their cavitien contain fresh water, from the melting of the ice. They are frequently eacountered in the North Atlantic (of course in the southern meas as well), and have caused many a wreck. The ice that forms on the surface of the rea, called field-ice, is porous, incompact, and imperfectly transparent. The field-ice forms in winter and breaks up in summer. A small field is called a foc; one much broken up forms a pack.
Iceboat, Iow Yachi, a triangular broad end forward, mounted on three akates or runnerm, 8 feet long by 8 inches deep. The motive power is a large sall, fastened to a boom and yard, which may be over 30 feet long. Such boats, running on smooth ice before the wind, may attain an average speed of 30 or 40 miles an honr and sometimes reach over 60 miles. The Hudson RJver is a favorite field for this aport.
Ioe Breaker, a powerful boat or ice in rivers or hartp, used to break the no in ill our large northern rivers use such boats to keep the channel open in the winter. The Great Lakes are kept open for navigatron by this means. An ice-breaking boat employed on Mackinaw Strait has large screws at bow and stern, and breaks the ice by forcing the water up under packice and throwing it up on both sides. Rnsoia employe in the Gulf of Finland a powerful fce-breaking ship, the Ernick, which forces the water npward by aid of a merew, lifting and breaking the ice, which is then cast aside by the strong steel bow, leaving a broad open channal for other ships to follow.
Iceland (island), an island belonging the North to Denmark, situated between Oceans, 250 nilles from Greenland and about 600 miles west of Norway; greatest length, east to wesit, 800 miles; central breadth, about 200 milea; area with adjacent isles, $40,437 \mathrm{sg}$. miles. In shape it somewhat resembles a heart with its narrowest point turned south. The coastIne for a considerable extent on the southeast is almost unbroken, but in all other directions presents a continued succession of deep bays or fiords and jutting promontories, thus affording a number of natural harbors. The interior hat gener-
ally a very wild and demolato apparance, beling covered by lofty mountain mavees of rolcanic oricin, many of them ceowned with perpetual anow and ice, which, atretching down their viden into the inter: vening valleym, form immense slacierm. These lies moontains, which tike the common name of Jokul, have their culminating point in Orafajokul, which is altuated near the southenst coant, and has a height of 0409 feet. Amons the volcanoem the most celebrated is Monnt Hecla, in the south, al:out 5000 feet high. Numerous hot springe or oeysers are scattered throughout the island, but are forind more especially in the southwent, to the northeast of Relljavil. (See Geysers.) There are numerous lakes and rivern. The mont valuable mineral product is sulphur, of which the supply appears to be inexhaustible; the other minerals deserving of notice are chalcedonies, rock-crystale, and the well-known double: refracting apar, for which the island has long been famous. There in a kind of brown coal which to some extent merves as fuel. The climate is mild for the latitude, but the summer is too cool and damp for agriculture to be carried on with much success. In the southern parts the longest day is twenty hours, and the shortent four, but in the most northern extremity the sun at midsummer continues above the horizon a whole week, and of conrse during a corresponding period in winter never rises. Vesetation is confined within narrow limits. Almost the only tree is the birch, which has a very stunted growth, the loftiest of them hardly exceeding 10 feet. There are various fiowering plants, emong which saxifrages, sedums, thrift or sea-plnk, etc., are common. Heath and biberry cover large stretches. Among mosses or lichens are the edible Iceland-moss (which see). Cole potatoes, turnips, radishes, and similar roots thrive tolerably well. But by far the most valuable crop is grass, on which considerable numbers of live stock (sheep, cattle, pontes) are fed. The reindeer, though not introduced before 1770, has multiplied greatly and forms large herds in the interior; but they are of little importance economically. Wildfowl, including the eider-duck whose down forms an important article of commerce, are abundant; the streams are well mupplied with salmon, and on the coasts valuable fisheries of cod and herring are carrled 0n. Manufactures are entirely domeatic, and consint chiefly of coarse woolens, mittens, stockings, etc. The exports are wool, ofl, fish, hormes, feathers, worsted stockings and mitteng, sulphar, and Iceland monss

The Inhabitente are of Ecandinavian ortcin, and apenk a Scandinnvian dialect Fhich stlll represents the ald Norme or Norwecian $\ln$ great purity. They are of Protentant religion. Iceland hat constitution and adminiatration of ite own, dating from 1874. There tr an 4 lthing or Parliament, which meets twlee a year at Rellyjavlk, the capital, and consists of 38 members, of whom 80 are chowen by popular sufraze, and 6 nomlnated by the king. 4 minister for Iceland, nomlinated by the king, is at the head of the administration, but the blghent local authority is vented in the governor.

Some of the settlements of Irish monks had been made in Iceland about the end of the eighth century, but the lisland received the greatent proportion of lte pop. ulation from Norway. In 870 Harald Haarfager had made himself supreme in Norway, and as he treated the landed propritetors opprenaively, numbers left the country and went to Iceland. In the course of sixty years all the habitable parte of the coast were settled. A settled government was established, a sort of aristocratic republic, which lasted for several centuries. Christianity was -introduced in 981, and adopted by law in 1000 ; and schools and two blshoprict, those of Holar and Skalholt, were established. The Latin language and the literature and learning of the West, introduced by Christianlty, were all the more warmly recelved, because poetry and history had already been cultivated here more than elsewhere in the Germante north. Prevlouily to this time the Icelanders had discovered Greenland (983) and part of America (about 1000), and they were now led to make voyages and travels to Europe and the East. Politically and ecclemiastically the most flourishing perod of Iceland-the period, too, when its intercourse with the world abroad was most active-was from the middle of the twelfth to the beginning of the thirteenth century. In 1264 Magnus VI of Norway united Iceland with his own klingdom, with which it passed to Denmark in 1380, remaining with the latter in 1814, when Norway was joined to sweden.
The Icelandic language is the oldest of the Scandinavian group of tongues, and as it is believed to exhibit the Norse lansuage nearly as it was spoken at the date of the colonization of Iceland, it is sometimes called Old Norse. It in rich in roots and srammatical forms, and woft and sonorous to the ear. Icelanajc literature may be divided into an ancient poriod, extending to the fall of the republic, and a modern, extending from that date to the prement time, the former belng far the
richest and most original. Yoetry was early caltivated, and amons the mont im. portant worke in Icelandle IIterature in the collection of aucient heathen cons: called the elder or poetic Eddan. (Bee Edda.) IIstorie: and romantic works, known by the name of Sagas, are numer: oun. Many of thewe are masterplecen of prone ityle, and are still read with ©ob light by the people of Iceland. The early portion of the second period was barren of anything worth mention in the way of Ilterature, nor can the modern pertod boant at all of works ponsenting the interent of thom belonging to the ancient, though alnce the middle of the elghteenth century there in ecarcely a department of ilterature in which Icelandle writers have not done something. Many of the most valuable forelgn works have been tranulated into Icelandic, and even the poeme of Milton are read at many a cottage frendide. Pop. 78,480.
Ioeland Moss, eetraria iclandica, a found in Iceland and other northern parta of the world, and on mountains. It is used in medicine as a mucilasinous bitter, and in Iceland in collected as a nutritlous article of diet. Boiled with mill or water it forms a jelly. Its bitterness may be remove 1 by ateeplng.

## Iceland Spar,

Iocland Mon (CWraria (clamdica). mineral noted for ety of calcspar, ${ }^{2}$ nerl ats property of exhibiting in a remarkable degree the double reiractlon of llght.
Iceni (i-séni), a warlike tribe of ancient Britaln, occupying the modern connties of Suffolk and Norfolk. They lought against the Romans under their queer Boadicea.

## Ice-plant (Mesembryanthèmum orys-

 Mesembryaceex) whillim, ha plant (order above appellit, which has received the vesicles whlch cover lts whole transparent have the appearance of pranules of ice. It is easlly grown as a half-hardy annual. Ichang (echnir), a walled town, in the Chineee prov. of Hupel, stands on the Yang-taze-kiang, 1000 m . from Shanghai at its month. In 1877 it was declared open to forelgn trade. Pop 85,000. Ichang ls the transhipment port for cargo to and from size-ciuen. The imports are chiefly ahirtings. latingencloth, and the exporte whlte was, drugy. mask, tha, and ailior in jusutio.
Iohneumon (li-namun; Horper reade carnirorone tos), a pernas of digitigrade carnivorous animall bolonging to the ciret familly. They have a loag siender body, a mbarp and pointed muzzle, and short legen The moot selebrated apecien,

Exyptian Iohsoumos (Herpmes Iehnoumon). Herpeates Ichnewmon, inhabit: Egjpt, Where it is called Pharaoh's rat. It was adored by the ancient Deyptians on account of lte antipathy to crocodiles, whome ecce it disa out of the mand and suck. It in expert in ceising eerpentr by the necks 50 as to avoid any infury to itsell. It is domenticated in Egypt, and more $\pm 10$ ful than a cat in dentroying rats and mice. Their disadrantage, as domentic animale, is their predilection for poultry. The mongoose, or Indlan ichneumon, is another species, not oo large as the Esyptian, which it resembles in habith, being kept in many families as a useful domestic animal. It was introduced into Jamaica to kill the rats that infested the sugar plantations. This it effected, but has ince become a nuleance from ite ravasee among the poultry of the fisland.

## Iohneumon-fies,

 a large family of hymenopterous In a ects, which all agree in one particular. that they deposit their eggs either in or on the bodies, eggs or larve of otherlnsects. Thene apparently insignificant creatures confer inestimable benefits on man, as they destroy hosts of insect injurious to crope.Ichnology (ik-nol $\underset{\delta-11}{ }$ ), o-ji), (Rhysenneumon-ly the name applied to the modern $\begin{gathered}\text { cience of fossil footprints, or }\end{gathered}$ other impressions on rocks. The imprewdow are almont always found on rocks
that have been deponited as mud; they are not co common in sandatone, jot they abound in the New Ked Sanditome atrita.
Ichthyol ( (l-th-oll), a dark red, olly noux quartz rich in foond from. It is umefui untiwrptic and is employed in the treatment of erymipelas, articular rbeume. timm, ache, e'xema and other akin diseasen. Ichthyolite (ik'thi-p-litt), petriwith the impression of a fith.
T.chthyology ( $1 \mathrm{kr}^{\prime}$ 'thi- $-0^{\prime \prime} \mathrm{b}-\mathrm{ji}$ ), that branch of 80810 gy which treats of fishem. Fishes form the lowent of the tive clases into which the groat sub-kingiora Vertebrata is divided. They may be shortly dencribed as vertebrate animals living in water and reapirin the air therein contained by meanp of gills or branchise, having cold red blood and a heart consistins of one auricle and one ventricle; and having thome organs which take the form of llmbs in the hifher vertebrata repremented by fins. Their bodies are senerally covered with scales overlapping each other, and their usual form (though with much diversity) is lengthened, compressed laterally, and tapering toward both extremitien. The scales of fishes assume various forms, which have been classed under the four typee of cycloid, ctenoid, ganoid, and placoid. Cyclold scales are of a rounded form, and are those met with in the most familiar fishem. Ctenoid wcales, like those of the perch, have spinous, projections from their ponterior marin. Ganoid scales are in the form of thick bony plates covered with a superficial layer of enamel. Placoid scales form detached mavies of various shapes often provided with spines. The skeleton presents great variations from the amphioxus, in which the verte bree are only foreshadowed, to the wellossified skeleton of teleostean tishes. The vertebre are biconcave or amphiceelous, the opposed surfaces forming cups, and they rary in number from seventeen to more than 200. The spinal column is prolonged into the tail, which is two-lobed, the lobes either being equal (a homoceroal tail) or unequal (heterocercal). The skull varies greatly; it may be ossified throughout as in the codfish, or the cartilaginous cranium may persist, as in the lamprey. sharks, and rays. The skull is small compared to the ofere of the animals themselves. The limbs. when present, are four in number. The anterior or first pair are called the pectoral fins. The ventral fins, or second pair of limbs, are variable in position and not always prewent ; thes may bo beneath the pectorald,

When they are jugular; behind the peco torele, whan they are thorcole; or larther back, at ominal. The pelvis is reprecented by two triangular bonec, whlch have no relation to the apinal column, and to which the fin-rase are directly attached. The median or vertical fins, that le, thone altuated on the back, are characterintic of fiches, and thes may extend nearly from the head continuoualy to the anal aperture, an in cels ; they may bo broken up into several dormals, caudal, and one or more anals, as in the cod; or the number of dormals may be increased greatly, as in the mackerel. The fins may be wholly woft and flexlble, or they mas be in part rigid aplnesi or a seriea of soft fin-rays mas be preceded by rigid and often formldable aplnes, whlch sometlmes have a beautiful mechanism for clevation and depresslon. The teeth of fishes are generally very numerous, and may be placed on any part of the interior of the mouth, cometimen on the tongue. They are quite diferent in character from the mammallan teeth. The muscular pharynx and cesophafus lead into a stomach usually well defined, but cometimes only ellghtly differing in callbre from the intestlne. The llver is proportionally large, and has unually a gall-bladder. The heart conslat of a ingle auricle and ventricle whlch is continued forwards by a dilated ressel called the arterial bulb (bulbue arteriosus). From thls vessel the blood is sent rigtt and left along the gills, which are the organs of resplration, and from the gills the aerated blood soes to the body. The sills or branchios are elther free on one margin, as in ordinary fishes, or attached at both extremities. In the lepldoslren another mtructure appears. namely, lungs, whlch atretch throush great part of the body and open on the posterior wall of the pharynx. A pecullar feature of fishes is the alr-sac or wwim-bladder, called also the sound. Anatomically lts origin ls ldentical with that of a lung; but it does not perform the function of a lung. It most probably represents an anclent lung-llke organ which has degenerated loslng its original functlons and assuming others. Its chlef function at present is to serve as an ald in rislng and sinking: but in some fishes it is prolonged so as to approach or even come ln contact F: th the internal organs of hearing, perhups acting as an organ of resonance. Reproduction is by ora or egzs, which in a few cases are retcined in the rody of the temale untll hatched. But the ova are usually fertnized ontride the hody, and the hatchine process left to take place without ald. The eras are, in most cases, in enormons numbers, as in the roe of
the herriag and malmon. Among the charks the numbor is much loas, and arch ovum acquires, before exclumion, a hormy abeath of various shape but usually provided with cirrt, by which it moorn fteelf to yome fixed object. In the pipo-fimbes the male has a marruplum or pouch formed by folde of the abdominal integument, and in this pouch the egge, tranoferred thither on exclualon, are hatehed. The servous aystem of fiales prements conaiderable variety. The auphiozu: has no eulargement of the nervulus trunk comparable to a braln; but in all the others the divlalon into fore, mid, and blnd braln is clearly marked. The olfactory ormans are, in mont cases, plts or sacs, on whose wallo the olfactory filamenta are mpread out. The aense of taste scems leas provided for, the tongue and palate beins montly firm, and often set with teeth. There is no external ear, and the internal apparatus is not wholly lnclowed in bone, as in the hlgher vertebratem, but in partly free in the cavity of the skull. The eje ls , in mont casee, relatively large and fattened externally, the alght being keen. Special organs of touch are wanting 10 : the mont part, thoush the labial filamente, meen in the cod, whiting, mallet, and sturgeon, are of this nature. Amons the mont curious appllances whith which finhes are provided, are the electrical apparatus that appear in some specien, as in the torpedo or electric ray and the electric eel, both of which possess batteries capable of diving a hock of considerable power. Some fishes inhabit excluaively either fresh or salt water; otherm, as the calmon, mlgrate periodically from the one to the other.

Fishes may be roughly divided into two sectlons-the Chondropterysious or Cartilaglnous fishes, having a cartilasinous or fibro-cartilagivets mkeleton; and the Os seous or Bnny tishew, having a bony skeleton. These two creat dlvisions formed the basis of the clasdification of Cuvier. Agassia proposed to divide fishes into four orders accordlng to the character of their scales. viz., Ganoid, Placold, Cycloid, Ctenold, but thls division has not been accepted.
The following divisions are now usually recognized:-

Order 1.-Tvleoster. Osseous or Bony Fighes, corresponding nearly to the Osseous fishes of Cuvier'e clamsification. Characters: Skeieton more or less thoroughly ossified ; two palre of limbu usu. ally present ln the form of finn ; sills free, comb-llke, or tufted: nanally cycloid or ctenold scales. Sub-order 1.-Malaoopteri. Fighes with a complete wet of ins supported by rayn, all of which are woft.
an a rule. Dramplea: herring pike, carp, malmon, eel, etc Sub-order Il.-Anacanthini. Fyshes with fins entirely supported by moft rays; ventral fins wanting, or if present placed under the throat beneath or in advance of the pectoral fins Examples: cod, haddock, ling, sole, turbot, and other flat-fishes. Sub-order III. Acanthopteri. Fishes having one or more of the first rays of the fins in the form of apines ; scales usually ctenoid; ventral fins beneath or in front of the pectorals. Examples: perch, gurnard, mackerel, mullet, etc. Sub-order IV.-Plectognathi. Body covered with ganoid plates, mcales, or spines; ventral fins generally wanting. Examples: globe-fich, sun-fish, trisgerfish. Sub-order V.-Lophobranchih Gille in the form of little tufts upon the branchial arches; scales ganoid. Examplen: hippocampus, or sea-horme.

Order II.- Flasmobzañozil. Characters: Skeleton cartilacinons; no bones in the head, the skull forming a cartilayinous box; gills forming a series of pouches; two pair of fins supported by cartilaginous fin-rays; skin covered by pincoid growths of various kinds, as tubercles, spinem, etc Sub-order 1.-Holocephali. Jaws bony and covered with broad plates representing the teeth; only one external gill-aperture, covered with a gill-cover. The chimera or king of the herrings is an example. Sub-order II.- Plagiostomi. Mouth transverse (Gr. plagios, athwart) and on the under surface of the head; branchial sacs opening by several distinct aperturem. Examples: sharks, rays, akate.

Order III.-Ganoider. Characters: Body covered with ganoid plates, scales, or spines; skeleton partially ossified, the vertebral column being generally cartilaginous; skull with distinct cranial bones; usually two paire of fins, the firat rays of which are mostly in the form of spines; tail generally heterocercal. There are few living ganoid fishes, the great majority of them being found fossil. The best-known examples are the sturgeons.

Order IV.-MARsipobranchit. Cham acters: General form eel-like or serpentine; no paired fins to represent the limbs; only a median fin extending round the posterior extremity of the body: mouth circular and destitute of jaws proper; gills in the form of fixed pouches or sacs. Examples: lampreys and hagfishes.

Order V.-Pinaringobranchin. The lancelet, the only example. Charactera: No skull or distinct brain; no distinct heart; no vertebre; no limbs; mouth a longitudinal fissure aurrounded by filaments; walls of the pharnyz perforated by ciliated slity which terve as branchia.

Order VI-Diparor Reprecented by only a few firhem, as the mud-firt or lepidomiren and ceratodus. Oharecters: Body nomewhat oel-like in form and covered with ecales; pectoral and ventral limbe both present and filiform or sometimen paddle-shaped; both sills and lungs prem ent. These animals form a connecting link between the fishes and the amphibin. Ichthyopsida (ik-tbi-op ide:

Greek, ichthys, afinh, and opsis, appearance), one of the three great primary divisions of the Vertebrata (the others beins Sauropside and Mammalia), comprining the fisben and amphibia.
Ichthyornis (ik-thi-or'nis: Greek, ichthys, a fish, ornis, a bird), a fossil genus of carnivorous and probably aquatic birds, one of the earliest known American forms. It is so named from the character of the vertebre, which, even in the cervical region, have their

Fis. 1, Ichehyornt dispar, restored. Fis. 2, Richt farto inner view; half natural alse.
articular faces biconcave as in fishes. It is also characterized by having teeth set in distinct sockets. Its wings were well developed, and the scapular arch and bones of the legs conformed closely to the true bird type.
Iohthyosaurus (ik-thi-n-sa'rus; Greek, ichthys, a fish, sduros, a lizard), an immense fossil marine saurian or reptile, having an organization combining the characters of saurian reptiles and of fishes with some of the peculiarities of the whales. The members of this genus had four broad feet or paddles enclosed in a single shesth of integument. and a long and powerful tail. Some of the largest of these reptiles must have exceeded 30 feet in length. Their remains range from the Iower Lias to the Chalk, and the great repository hitherto has been the Liat at Lynn Regis. Iohthyosis (ik-thidnis), or FrgraEin Disiases, a roughneve and thickening of the ghin, portions
of which become hard and mealy, and occasionally corneous, with a tendency to excrescences. This divease seldom yields permanently to any plan of treatment jet known.
Icies (I'si-ka), a senus of plants, nat. trees, natives of Gouth America. I. altiopima, the cedar-wood of Guiana, is a useful timber. All of these trees yield a transparent fluid resembling turpentine in many of its properties, and sometimes named icica, also elemi or copal.

## Icolmkill ( $1-\mathrm{k}^{\prime}$ ni-um). See Konia

## Iconinm ( $\mathbf{I}-\mathrm{k}^{\prime} \mathrm{n}_{\mathrm{ni}} \mathrm{um}$ ). See Konieh.

Iconoclasts (I-kon'o-klastz), imagethe early Christion Church that would not tolerate images, much less the veneration of them. At first images of martyrs and bishops were placed in the churches merely to keep their memory fresh, but in the sixth century they began to be worshiped, lights being burned before them and incense offered in their honor. The eastern emperor Leo III issued an edict in 726 ordering the people to abatain from the worshio of such images, and soon after he decreed their destruc tion. This caused great commotion, and there arose two parties in the church, the image-worshipers and the Iconoclasts or image-breakers, who each in turn persecuted the other. In 754 a council at Constantinople condemned image worship; in 787 the second council of Nice (Nicsea) asserted and defined the doctrine. The controversy lasted over a century, coming to an end when, under the Empress Theodora, a councll held at Constantinople (842) declared in favor of the worship of images among the Greeks, a decision which was confirmed by a second council, held $809-870$, in the same place. In the Western Empire also images were at first retained only to preserve the memory of pious men, but the decision of the pope, which allowed the veneration of images, finally prevailed in the Westein Church. See Iconolatry. Iconographic (i-kon-o-grafits), applied to books profusely illustrated. Iconolatry (iknon-ol'a-tri), the worimases of sacred personages connected with the Christian religion, as images intended to represent angels, the Firgin Mary, vaints, martyrs, etc. Iconolatry must not be confounded with idolatry, which worshipe objects as being them: selves divipe or possessing supernatural power. The wormhip or adoratios of
imases was not common in the church for several centuries after Ohrint, and in Its earlier stages it excited mtrons fcelinge especially in the Eastarn cuction of the church. (See Iconoolente.) The mecond council of Nician tanght that imagea were to be retained, but that they were not to be objectas of adoration In the atrict sense, though it was right to malute hemor? and venerate them, and to burn lighta and incense before them. This decree was reo jected by Charlemagne and by a council at Frankfort in 79, but the practice of image worship finally established ituelf in the West Roman Catholicm maintain that the cultus of images is "relative, and that they are not in themselves really adored or honored, 'but that all wormip and veneration is referred to the prototypes.
Icteride (ik-teri-de), a family of American passerine birds, allied to the starlings, remarkable for the hammock-like nesta whinh thes construct, and hence called hangmests. The Baltimore oriole may be regarded as typical. Ictinus (ik-ti'nus), an ancient Greek architect of whom little is known except that he was the chief grehitect of the Parthenon of Athens, $488 \geq 0$ Tcy Cape, a cape of Alasken in the Arc$161^{\circ}$ w.
Ids (r da), in ancient seography:18 1) mountain range in the Troad (Mymia), at the foot of which las the city of Troy. Its highent peak was Gargarus, about 4600 feet. (2) The middle and highent summit of the monntain chain which divides the isiand of Crete from east to west. This peak affords a fine prospect, and is covered with woods of ping maple and cedar, but is not fertile.
Idaho (I'da-h5) one of the United States. It lies on the wentern slope of the Rocky Mountrins, havins Montana and Wyoming on the east, and Washington and Oregon on the went, Utah and Nevada on the couth, and British America on the north: axme 83,888 square miles. It owes its rise and importance to its rich gold fielde, previous to the discovery of which, in 1880 and ubsequently, the territory wan inhabited only by Indians. The State in hrtely mountaipous, the summite riaing to 12,000 and 13,000 feet. In the center are the Salmon River Mountains to which beIngs the pictureerue and lofty gav-tooth Range. It chiel rivers are the Invia or Snake River and the Balmon River, the latter a tributary of the former, which again joins the Columbin. Along the cousw of the Anake Aiver in the an En $43-\mathrm{U}-3$
a. is a denert tract 400 miles lous by 40 to 60 brond. There are valuable foresta, but they extend over only a small area. The acenery along the Salmon River in eome place therrand, the stream fowing betwren perpendicular walle of rock from 600 to 2000 feet high. The Snake River hat three large and fine cataracter one of Fhich, the Shothone Falls, rivals Niagara in magnificence when the water is high. Idaho is rich in mineral deposits, especially gold, billver, lead and copper. The output of lead in 1910 was valued at almoot $\$ 10.000,000$. Marble and opal are also fond. Mineral aprings are numerous. The climate is varied, severe in the mountains and mild in the river valleym The higher mountain ranges are bleak and barren, but the lower hills are generally well wooded, and the soil of the valleys is productive. In general the country is better adapted for grazing than for farming, but more than $8,000,000$ acres are sald to be capable of lirigation, and more than 2,000,000 acres are now artififilly watered. Snake River is the most important stream for irrigating purposes in the south and west. Idaho Territory was formed in 1862. then including Montana and much of Wyoming It was reduced to its preeent limits in 1868, and admitted as a State in 1890. Boise City is the capital. Pop. (1910) 325,594.

## Idalium

( 1 -da'li-um; now Dars), a promontory of the east coast of Cyprus on which was a celebrated temple of Venus; hence ber surname Idalia.

## Iddesleigh

(iddeente), Stafrond
Hendi Nobticote, TIRsT EuRL or, an English statesman, born 1818; died 188e. He was educated at Balliol College, Oxford, where he gained the highest honors; became private secretary to Mr . Gladstone in 1843, and was called to the bar in 1847. In 1851 he succeeded his grandfather in the family baronetcy. He held varions offices, and represented several constituencles in ParHament, being long member for North Devon. He published a treatise, Twonty Years of Financial Policy, in 1862. He was made special commissioner to America to arrange the Alabama difficulty. Subsequently he was secretary for India ( $1867-68$ ) and chancellor of the exchequer (1874-80). Upon Mr. Difraell's eleration to the peerage he became leader of the Lower House, his task being all the more difficult on account of the Parliamentary obstruetion of the Trish Home Rule party. He was elected lord rector of Edinburgh Univerate in 1888. Lord Salisbury hav. ins undertaken to form a soverament, be was created (1885) Earl of Idde.
leigh, and became first lord of the treamnry.
Ide (Id), a fish of the carp family found Cyprinidep, the Louoisous ithes, found in rocky lakes of Northern Europe. introduced into American watern.
Idea (I-déa), as a term in mental philosophy, has been used in varions senses. Plato reparded ideas as the archetypes or original modele of thinge, as existing from eternity and constituting the patterns according to which the Deity fashioned the various things of which we become cognizant by our sensees According to Plato, ideas are independent of matter, and it is they that are the only objects of true knowledre. Aristothe opposed Plato's doctrine of independent ideas, but held the doctrine oi ideas being types or patterna accompanying material things. By Descartes and many modern philosophers the word is employed to signify all our mental representations, all the notions which the mind frames of things. See also Idealism.
Idealism (I-de'al-izm), the philosophical term which, in contradis. tinction to realism, expresses the view that subjective or ideal existence is not only the origiaal but the only true being. and according to which there is allowed to sensible objects merely a phenomenal existence dependent upon the mind of a thinking subject. In modern times idealism has been maintained by Descartes, Berkeley, Kant. Fichte, Schelling, and Hegel. Some of these, as Descartes and Kant, are not, however, pure idealists, inasmnch as they allow at least a problematical existence to sensible things independent of the thinking subject. Berkeley is perhaps the most thorongh-going idealist, holding that what is called matter consists merely of ideas, that is, appearances produced in the mind by the direct influence of the Deity. This dogmatic Idealism of Berkeley differs from the critical or transcendental idealism of Kant. This consists in the doctrine that all the material of experience is given in sensation, but on the other hand the forms of the experience (space, time, and the categories of the undergtanding) arise in ourselves a priori, and that accordingly sensible objects are known only as they appear to us and not as they are in themselves. Fichte, on the other hand, rejected the notion of things in themeelves as untenable and self-contradictory, and created the syitem of so-called subjective ddealism, according to which the I or thinking subject produces the appearance of a menuible world by a mode of actlvity
grounded upon its emential nature. The theorie of Schellins and Hesel are developments of the hichtean doctrine.
Identity (I-den'ti-t ) of person in proved in lezoint of law must often be隹这 proceedings, as in proving a thei, etc. The usual proof is the oath of one who was cognizant of the facts at the time referred to a common defence of persons accused of crime is that it is a case of mistaken identity, in which case the prisoner must nsnally prove an alibi -i.e., that he was in some other place at the time specified.
Ides (Idz), Latin Idus, with the Romans, the 15th day of March, May, Jnly, and October. In the other monthe the 13 th was the ides. The ides of March, on account of Cresar's assassinatlon having taken place on that day, was an eter dies or black day, and the senate was not allowed to slt. See Calendar.

## Idiocy ( $\mathrm{id}^{\prime} \mathrm{i}-\mathrm{n}-\mathrm{si} \mathrm{i}$ ). See Idiot.

## Idiosyncrasy (id-i-u-sin'kra-sl), a

 of the mental or bodily constitutlon of any person, or that constitution or temperament which is pecullar to any person. The more marked ldionyncracies are found chiefly in persons of neurotic type.Tdiot (rdi-ut), a person who, from original defect, is almost destitute of intelligence, or in whom the intellect seems to be almost wholly wanting. In some cases the intellectnal development is so low that there appears to be little more than a vegetative life. Others not quite so low in the intellectnal ccale recognize the persons with whom they live, are capable of being affected hy certain emotions, understand a few gnestions, articnlate a few words, and are able to take their own food, bnt are qulte nnable to do any klnd of work. Those endowed with a little more intelligence may sometimes be employed ln some kinds of labor which present no complicacy or difficulty, but they are incapable of performing any intricate calculation or golng through any long train of reasoning. The hrain of idints is sometimes sufficiently regular in its conformation, although in the great majority of cases there ls somethlng abnormal. The forehead is often repressed, receding, and flattened; sometimes the hack parts of the head are divproportionately large. The majority of fdlots are of small stature and of weak conatitutlon, rarely llving beyond forty yeara. The causes of idiocy are not well lnown. It may be hereditary.
Idocrase (Ido-kras), mineral nome-
times masuive, and very
often in shining prismatic erystals. Its primitive form is a fonraided prism with square bases. It is called also Voamrian or Pryamidal Garnet, and difery from common garnet chiefly in form.
Idolatry (i-dol'a-tri), the worship of an image, object or symbol as having in itself some divine or enper: natural power, and helng ahle in tome way to respond to the worshlp paid to it snch images or objects being called tdols; or the adoration of somethine merely natural as somethling snpernatura and divine. Many have regarded idolatry as a declension from the one true God, and have seen in the various forms of heathen worship only more or leas complete degradations of an original revelation. Others see in idolatry an innate searching after God, and regard it as the first stage of human development, the necessary beginning of a knowledge of God. Idolatry may assume varions forms ; it may consiat in a worship of the powers of natnre, or of the heavenly bndies, or in animal worship, or in the worship of images representing mere fanciful and imaginary deities, or in the still lower fetlchism.
Idria (édri-a), a town of Anstria, in
Carniola, 21 mile southwent of Laihach, celebrated for ite mines of qnicksilver, which, after those of Almaden In Spain, are the richest in Enrope, and em. ploy in mlifing and smelting abont 1300 persons. Pop. 5772.
Idris (l'dris), a mythical figure in Welsh tradition, at once a slant, a prince, and an astronomer. His rockhewn chair may be seen on the summit of Cader Idrls, and the tradition telly that any Welsh hard who should peen the nlght in thls chair would be found in the mornlng elther dead, mad, or with supernatural poetlc powers.

## Idumea (ld-u-mẽ'a). See Edom.

Idun, or IDUNA (e-di'na), a godden in the Scandinavian mytholosy, wlfe of Bragi, keeper of the apples of which the gods ate to keep themselves voung.
Idyl (I'dil; from Gr. eddyllion, a little image') is the name originally and still most nsually applied to a short and hlghly finished descriptlve poem, er peclally if it treats of pastoral suhjects, thongh this last circumstance is not an essentlal character of the idyl. All that is neenssary to constitute a poem of this class is that it presents to view a complete picture in small compas.
Teisk, or Ymas (yaisk), a seaport of Russia, on the Sea of Asor. It was laid out only in 1818, but has mpidily
nermend and now has nurwerien, tannoticu, filo-works, oil-mills, map-worke, etcy and a conderable trade. Pop.

## Iokaterinburg. See Ekaterinburg.

Telete, or Yenmiz, (yeGlets), a town of fuence of the It sov. Of ore, at the conlowriahins manufacturen, and an extenaive tuade Pop. 87,455.
Tesi, or Jesy (ya'm), a walled town of Italy, in the province of Ancona, 17 milen E. W. of Ancona. Pop. (commune) (1910) $24,777$.
If ( $f$ ) , amall island near Marselles
on which is the Ohatean dile, built
by Francis I in 1020. It was later used as a state pilsor, Mirabeau and Philippe Egalite. beine amons ite occupanth
Tglau (efaou), an old town of Aupto Brunn on the Iglawa, 19 miles w. N. T. of Brimn. Ise etaple manufacture is woolen cloth. Pop. (1910) 68,639.
Igleaias (e-blace-an), a walled town of Sardinia, in the province of Cacliari. In fts vicinity are lead, zine, and other minem Pop. (commane) 20, 874.

Iglecias ( 1 -cle'si-as), Mroumy statemman and coldier, was born at Cajamarika, Peru, in 1822. He became ective in politics, was made minister of war, and aided in defending Lima againat Chifean invasion in 1878 . He was subsequently made President of Peru, and Cirned the treaty of peace with Chile in 1883. He lont his reat through an insurrection in 1886, and subwequently lived in Epain.

## Igdraxil. See Yodrasil.

Iglo (esib), manufacturing and mining town of Northern Hungary, on the Hernad. Pop. 7500 .
Tgnaticf ( (s-n'te-ef), Nrororas and diplomatitulovitch, Russian soldiez in $183 \%$ Ee served in the Crimean war, and was made a colonel in 1856. In 1808 he was sent on a apecial mission to Bothara and Khiva, and afterwards an ambaseador to Peking 1860. He was appointed mininter at Constantinople, 1804, and was envoy extraordinary, 1867-78. Be was conspicuous in the negotiations before and after the Rume-Turdish war, and was eppointed mininter of the interior, but was anmissed in 1882. He represented the party in favor of was, in opponition to Prince Gortichakofi. He wat subsequently made zovernor-general of Irkutak. Tgontius (f-nasheus), ST Bishop
tolic fatherw, said to have been a disciple of the apostle John. Hir life and death are wrapped in fable According to the most trustworthy tradition he was appointed Bishop of Antioch A.D. 69, and was thrown to wild beasts in the circus of Antioch by the command of Trajan, the date being siven by some as A.D. 107, by others as 4.D. 116. By the Greek Church his festival is celebrated on Dec. 20 , by the Latin on Feb. 1. In the literature of the early Christian church Ignatius holds an important place as the reputed author of a number of epistles. These have come down to us in three Corms. In the longest text they are 18 in number, but since the fiscovery of a shorter text containing only 7 the first has been universally recognized as in great part spurions, some of the letters entirely so, and others containing interpolations. But even in this shorter form their genuineness has been disputed by numerous scholars. Both of theme text are in Greek, but a still shorter text in the Syriac language, containing only three letters, exists. Some maintain that the Syriac text was the earliest, though not earlier than the middle of tha second centary. Others hold the senuineness of the shorter Greek text.
Ignatius, ST., Patriarch of ConstanMichael I, tinople, son of the Emperor Michael I, was born about 798; died in 878. When his father was deposed he entered a monastery, assuming the name of Ignatius. In 846 he was raised to the patriarchate. He was opposed to the Iconoclasts, and his refusal to admit Bardas, brother of the Empress Theodora, as a communicant, on account of his reported immorality, led to his deposition in 857. The schism between the Greek and Roman Churches began while Photius, his succemsor, was in office, and has continued ever since. He was reinstated In 867, and at an ecumenical council assembled at Constantinople in 869 Photius and his party were condemned
Tgmatius Beans, Sr., the seeds of a hhrub (Ignatiana philippinica, or Strych. nos Ignatii) of the nat. order Loganiacesa, nearly allied to that which producee nux vomica, inhabiting the Philippines, and cultivated in Cochin China. The seeds contain a larger percentage of atrychnia than the nux-romica plant. It was so called by the Jesuits in honor of thelf founder, Ignatiug Loyola.
Ignatius Ioyola. see Loyold and Igneous Rcoks (is'nemis); in seolory, rock which are
atructure to their materiail having been once in a state of fusion, as lava, besalt, granite, etc. Such rocki are not stratified, and may occur in counection with cedmentary rocks of any ase, having usually been forced up from below.
Ignis Fatuus
(frnis fat dous; I.
'foolinh fire'), a lumt nous appearance seen floating over marshy place at night, and sometimea, it is said, in churchyards. It is probably due to some gaseous mixture capable of igniting spontaneously, but it has never been satisfactorily explained, though methane is said to be the source. Also called Will-o'-tho-wisp, Jack-a-lantern.
Ignorantines (ig-no-ran'tens), a rethe Roman Catholic Church devoted to the gratuitous education of children. It Fu founded about 1683 by the Abba de Eis Ealle. The statutes of the order, approved by Benedict XIII in 1725, impose on its members vows of chastity, poverty and obedience. In 1789 the order counted 1000 members, and possessed 121 houses. They were forced to quit France, but were recalled by Bonaparte in 1806. They are now to be met with in various countries. In France the law of 1882 basished them from the public schools. Igualada ( 0 ogwh-la'da), a town in celona, 36 miles w. N. W. of the town of Barcelona, on the Roya, with manufactures of cottons, woolens, etc. Pop. 10,442.
Iguana (i-gwaina), a genus of lizards, the type of the family Iguanidse, a native of Brazil Guiana, and neighboring localities. It has an average length of about 4 feet. Its food consists almost entirely of fruits, fungi, and other vegetable substances. Its head is large, the mouth wide. Along the whole

length of the back to the tip of the tail there is a crest of elevated, compressed, pointed scales; the lower part of the head and neck is furnished with a dew-lap or throat-pouch. The toes are furnished with sharp claws, which enable it to climb trees with ease, while a rapid serpentine
movement of its tall propels it ewiltiy through the wates. Its ungal color ty dars olive-rreen. Its deah is conaddernd a delf. cacy, beins tender and delicately-faverel; resembling that of a chicken. The cest of which the female lays from foar to six dozem, ase alyo caten, havins an as. cellent flavor. They are about the diso of thome of a pigeom, are laid in the mand and hatched by the heat of the sun.
Iguanidse (i-gwan'ide), inmily of is the type. They have the body rounded, sometimes laterally compremed and far: nished with a ridge or merrated crent alons the middle line of the back from nnout to tip of tail, sometimen a throst-ponch or dew-lap present see Igmama.
Iguanodon (15wan'u-don), an er. tinct fomed colomal lizerd found in the Wealden etrata; 10 callad from the resemblance of its teeth to thow of the iguama. The pelvic bomes were strikingly like thow of biris. The ino tegrment does not seem to have ponsernad the spines or bony plates of allied specim. The anterior vertebre were alichty anphiccelous, the ponterior 日at. tho lowre faw was notched for the reception of the beak, at in the parrot. The teeth were large and broed fmplanted in eockets, and transversely ridged. Mantell, its diecon erer, entimated the length of the naimal at from 00 to 70 seet, but Owen's calewlation is 30 feet.
Ihlang-ihlang (Ilang orlang). De Thre (e're), Joras, a suedlit wholar, born in 1707 ; died in 1780. It be e librarian at Upeale, there he ob taik. in 1737 the chair of literature asd politurs in the univerits. Eis mont fmportant work is called glococrium Swio. gothioum (a Swedish-Intin dictionary).
 of Kinshiu, Japan, in Korea Strait. Gonoura is a small eeaport on the s. W. of the island. Pop. about 36,000 ;- area 57 square miles.
Ilang-Ilang (e'lang erlanc; Camange odorata), a larse tree of the order Anonacees, cuitirated in India and the Philippines, and yielding from its flowers a rich perfume.
Idefonso, EAn (illn ed-di-hon'sb), La Granja, a royal paisce buititia a mountainous country by Philip $V$ in inof. tation of Veruallew, 6 miles northenst of Segofia, 40 north by Fest of Madrld. The palace contains a sreat number of Valuable paintingm, statuen, etc,y and the kardens are magnificent.
De-de-Trance (el-do-fripg), en aid
havine Paris as itw capltal, and now montly comprived in the departments of Seine, Oise, und Seine-et-Oise.
Dletzk (e-letz'), a town in the RusCotak sian Gov. of and 45 niles s. of Orenburg. Pop. 12,000. Close bs is the richest salt-bed in Russia, yieldivg about 200,000 tons of salt annualls.
Ilum (il'eum), in anatony, a name of the small intestines.
Mex (1Yels), the genus to which the holly belongs; also a name for the everyreen oak or holm-cak. See Holly and Holm-oak.
Ilford (irford), a town of Besex, Engdon by railroad. 7 It has Ition frem Loncraphle worke and paper-mills. The chapel of the 12 thecentury Hospital of Si. Mary is of archeological interest. Pop. (1011), 78,205.

Ifracombe (ilfra-kym), a marketomehire, oin the Bristol Channel, 41 Diles N. W. Exeter; very picturesquely situated. There in an inner and an outer harbor and an active trade in coal, cattle, and cricuitural produce with Welsh and Irish points fifracombe is a bathing-place and health resort. Pop. 8935.
Ili (ex'ye), a river of Central Asia, montly partly in Chinese territory, but neve Kuldja by two streams, the Tekes and Kungea, rieging in the Thinn-shan Mountains, and flows westwards, falling into Late Balkash by several mouths atter a courno of 800 nr 900 miles, half of which it navigabla

## Hiad ( $\mathrm{nl}^{\prime}$-ad). See Homer.

Higan (olle find, an inlet on the Nr. of Mindanao I., Philippines; also a pueblo of Mieamis, prov., Mindanioj the seat of a United Staten" military gtation harbor, and telegraph office. Pop. about 8500 .
Ilion (ilion), allage of Herkimer hawk Countr, Now York, on the Mo. of Eerkimer. It has a large armory for the manufacture of rifles and pistole, and other induastries Pop. 6588 .
 Greeks the goddess who aselated women in childbirth. In aftertimes she was Identified with Artemis (Diana).

## IIIum. See Troy.

Ilkeston (112ke-tun), a market-town milem E. N. Eo of Derbyshire, Engiand, $\theta$ lofty hill. The church lo a fine ancient
edifice. Manuitactares of hoviery and lace are here carried on to a great ertent, and a number of the inhabitants are employed in mining coal and fronstone. Pop (1011) $31,673$.
Ilkley (ilk ill a villaze of Yorkshire, England, 31 miles west of York, beautifully situated on the Wharfe, and much resorted to by visitants to the hydropathic establishmenta. Near Inkley is the fine old ruin of Bolton Priory. Pop. (1011) 7002.
Illampu (el-ydm-pb'). See Soratc.
Illapel (el-yi-pel'), a town of Chile, Ille-et-Vilaine (éle-vi-lan), a maritime department in the N. w. of France, lying between the English Channel and the department of Loire-Interieure. It is watered mainly by the rivers from which it derives its name-the Villaine, and its tributary, the Ille. Little more than one-half of the surface is arable. The cereal crops consist chiefly of wheat, meslin, rye and oats; other crops are buckwheat, hemp. tobacco, and fax. The minerals include iron, zinc, and lead. The principal manufactures are leather, sail-cloth, sacking, and coarse linens, and the coasting trade is active. Rennes is the capital; St. Malo the chief seaport. Pop. (1008) 611,800 . Illegitimacy (ii-e-giti-ma-if). See Illicium (ii-li'si-nam), a genus of eastern Asiatic and American evergreen deciduous shrube, belonging to the nat. order Magnolicees. The plants of this genus are called aniveedtrees, from their fine aromatic scent. The fruit of I. anisotum (Chinese anise) is the star-anise of the shops (nee Anise). I. religiosum is a Japanese species, held sacred by the natives, who decorate the tombs of their dead with wreaths of it, and burn the fragrant bark as incense be: fore their deities.
Ilimani (ii- yi-manne), one of the loftiest peaks in the Bolivian Andes, fully 21,000 feet high, and covered with glaciers.
Illinois (ilit-noi or -nofs), one of the bounded on North Central United States. bounded on the north by Wisconaln, east by Lake Michigan and Indiana, southeast by Kentacky from which it is separated by the Ohio, and went by the Mississippi, separating it from Minouri and Iowa: grentest length 870 miles: greatest breadth, 210 ; area, 68,665 squaro miles. The aurface is somewhat billy near the Ohio, and undulating towards the west: and a range of blufit runs for considerable distance along the margin
of the Minissippi; but with these exceptions the state is one continuous plain, with a gentle inclination towardy the southwest. It has a sreater proportion of arable land than any other atate of the Union, the state standins centrally in the great prairie region, with its deep, rich moil. The only part of the atate thickly wooded is the extreme south portion. The chief rivers are the Illinois, which traverses the atate diagonally northeast to southwest, Rock, Kankaskia, and Wabash. There are many maller treamg, and the state in very well watered. Indian corn and oaty are the chief objects of cultivation, but wheat, has, buckwheat, potatoes, turnips, cotton, hemp, flax, tobacco, castor-bean, etc.. are also produced, and the cultivation of the vine is making considerable progress. Fruits are largely grown, including apples, peaches, plnms, cherries, and the various berries ; while potatoes, hops, tobacco, far-seed, and broom-corn are among the other products. The common domestic animals are abundant, and immense numbers of swine are reared. Though chiefly an agricultural and mannfacturing state, Illinois has important mineral resources. Bitnminous coal abounds, and the state ranks next to Pennsylvania in coal product. Other minerals are limestone, pis iron, Portland cement, fluorspar, natura gas, etc. Copper lead and zinc are mined in small qnantities, and there are quarries of marble and gypsum. Mineral springs are found in the southern part of the atate. The rocks mostly are limestone, sypsnm, and eandstone. The climate, althongh somewhat hnmid, is generally healthy. The commerce and mannfactures have been largely developed of late years, and there is a greater development of railroads than in any other state. The Illinols and Michigan Canal connects Lake Michisan at Chicago with the Illinois at La Salle (distance 96 miles), and is of sufficient size and depth to permit vesmels to pass from the lake to the Mississlppi, though as yet used only as a drainage canal for Chicago. There 18 a well-organized school svitem. The University of Chicago is one of the best endowed and largely attended of American seats of learning, and Illinois University, at Urbana, is a well-equipped institution, with about 8000 students. There is also the Northwestern University, at Evanston, with a very large attendance. Epringfield is the seat of gorernment, and Chicaso, on Lake Michipan, the principal commercial depot. Illinols was constituted a separate territory in 1809, and admitted an a State into the Union in 1818. Pop. (1010) $5,038,591$.

## I:linois,

a river of the United Stater, formed by the unjon of the Kankakee and Dem Plaince, in tho K. I part of the atate of Illinoin. It dow thence 8. W., and falle into the Micmimippi about 20 miles above the mouth of the Minoouri. It is 500 milles long, half of it being navigable. 4 canal connects the river with Chicago.
Illuminated MSS. See Manwsoripts.
Illuminati (ilu-ma-nalti; the enlightened), a name piven to members of several societien, eupocially to those of a secret society lounded in 1776 by Adam Weishaupt, profemeor of law at Ingolstadt, Bavaria, for mutual assistance in attaining a higher degres of morality and virtue. It apread over Roman Catholic Germany, and contained in its most flourishing condltion 2000 mem bers, among whom were individuals of distinguighed talenty and high rank. The constitution and organization wero taken partly from the Jesuits and partly from the Masons. Di mensions, however, aroes and in 1784 it was dissolved by the Bavarian government. The members were also called Perfectibilista.
Illusion (has been). Much attention perimental paychologiats during recent years to the phenomena of optical illusion by means of geometrical figurem. No complete classification has been made of these, but the following claises contain the best known: 1. Illusions of Reversible Perspective. There are certain figures whlch are capable of two or more perspective interpretations. It is characteristic of these figures that as one looks at them the shift of perapective occurs apontaneonsly and at frregular intervale, An instance of this ls meen in Fisure 1, Which may be seen either as a square block resting upon the ground or as a block projecting upwards and to the left from the plane of the paper. 2. Illusions of Ex:
 tent. These fall . 1. Whatritores's Cuba. An instance of constant and Variable. the latter is meen in Figure 2. Although the dimenmion in these figures are objectivelv fimilar, the filled spaces appear larger than the open. 3. Inusions of Directlon. These also may be constant or variable. An instance of the former clase may be ceen in Figure 3, which is known as Vom Recklinghansen's illusion. If the figure is held a short distance from the efo and
the center atendily fixated, the hyperbolas bcome atraisht linees eo that the igure recombles a chemboard. \&s Illuation of

Ne 2. Ertmholte's Bquares.
Amociation Theme fall into two diviciome amimilative and contrantive, both of which may be produced by a series of rectangles accordint to the syatem of Maller-Lyer. 5. Mired illusions. Produced by a combination of the preceding.

Die 2. Voa Reorlinghausas's Illuion.

- Illusions of Movement. There are various explanations of thene results, but it may be that the interpretation must be drawn from the sciences both of physiolory and paychology.
 name formerly rather loosely applied to a large tract of country on the enat side of the Adriatic, the ancient Illyrins being ancentors of the modern Albanians. Piracy was carried on by the Illyrians, whose kings were therefore embrolled in quarrels with the Romars, which ended in their subjugation in 223 ma. They sought from time to time to shake of their chains, but being always beaten, the country at last became a Roman province. The name of Illyrian provincen was given, by a decree of Napoleon in 1809, to Carniola, Dalmatia, and other countries, then part of the Treach Empire. After the fall of Na poleon the Illyrian Provinces Fife retored to Austria, and designated as the Kingdom of Mlyria, titie which the country bore till 1849, when it was difided into the provinces of Carinthia, Carniola, and the Ooutclander.

Ilmen (H'men), a lako is Rumian sov. of Novsorod, near iti western borders; length about 88 milies, breadth 28. It receives numerous streame, and diecharres itmelf by the Volkhov into Lake Ladoga. It abounds in fiah. There is another late of this mame in Rugala (also called Lake Manitch) on the frontiers of the sovernments of Cau. cames and Don Comacta.
Ilmenau (elme-nou), town of Central Germany, in the Grandduchy of Saxe-Weimar-Eisenach, on the river Ilm. It has a srandidncal castle, manufactures of porcelain terracotta ware, etc., and a hydropathic establichment. Pop. 11,222.
Iminster (ilmin-ater), a mall but ancient market town of England, in Somermetshire, 17 miles south by east Bridgewater. Pop. 2467.
Ilorin (e-loren), a town in the Wentern Soudan, about 150 miles 2 . I. of the Bight of Benin in Nupe : reat center of trade; pop. est. 60,000 to 80,000 , mostly Mohammedans.
Image (im'ij), in optica, the apectrum mage or appearance of an object made by refiection or refraction. It is by means of optical imases that viaion is effected, or that the telescope and microscope are of use. See the articlem Optics, Dye, etc.

## Image Worship. See Iconolatry.

## Imaginary Quantity (i-mall-na- <br> ri), in al-

 gebra, such quantity as $-e^{8}$ in the equation $\theta^{2}=-e^{2}$, when to find the value of we should require to take the square root of $-a^{2}$; and this is impossible. Any algebraic expression containing $\sqrt{ }-1$ is called an imaginary expression. The employment of imaginary quantities systematically has been the foundation of some of the greatest modern discoveries and improvements in geometry.Imagination (i-maj-i-na'shun), litermind by which ally that faculty of the images of things. Besides the power of preserving and recalling such conceptions, the imagination has the power to combine different conceptions, and thus create new images or mental pictures. It is this faculty which is more strictly termed imagination. In the creation of new images, or more properly in the combinim of images which have previously bee deriped from objects of perception, th imagination operates according to the laws of the association of ideas. Its operations are nevertheless not wholly independent of the will, for by directing the attention to some leading thourht, the
will can letermine the limite within which the laws of amsociation are to act, and by practice it can be foutered. Snch free and jet resulated action of the imarination alone can sire birth to the productions of the fine arth.

## Imam

( $\mathrm{i}-\mathrm{m} / \mathrm{m}^{\prime}$ ) ${ }^{2}$ clame of Mohammedan prlenta. In Turkey they attend in the mosgres, call the people to prayer from the minarets, periorm cir cnmeision $^{\text {e etc. In eceleniantical artair }}$ they are independent, and are not subject to the mufti, thnush he is the anpreme priest. They quit their office and reenter the lay order. The sultan, as chief of all ecclectantical affairs, hat the title of imam.
Imans ( $\mathrm{i}-\mathrm{ma}$ us), a name applied by Hindn Kush and the western part of the Himalayan range, and sometimes in a vague way to a range in Central Asia (snpposed to be the Altaian Mountains), which they believed to divide the vast recion to which they gave the name of Scythia, into two parts
Imbecility (im-be-sil'i-ti), weaknems person considerably below the general run of mankind, but is not so great as to be called lunacy or idiocy nor $n 0$ well marked perhaps as to be clansed under any one of the lorms of insanity. Imbeclles sometimes display a considerable amonnt of intelligence in certain direc tions, and are often very cnnning. They may be interesting, amusing. and even uneful members of a community. Eqnity will not met a contract aside on the mere ground of imbecility; but its existence aflords a material ingredient in examin. ing whether it has been obtained frandulently or by undne infinence. In general the court is ready to support the obligation of any contract that a person of weak mind has entered into, nnless it is of snch a nature that a person of sound mind would not have agreed to it, or nnless there is suspicion of frand. An imbecile person may be summoned as a witness, but the degree of credibility attaching to his evidence naturally depends very much on the amonnt of intelligence he displays, and on the nature of the circumstances regarding which his evidence is offered.
Imber (im'ber), Imber-coosen, Embercoose, a name sometimes given to the great northern diver.
Imbro (im'bro), or Imbros, an island of European Turkey, west from the entrance to the Dardanelles, 18 milew lons and 8 broad. It is monntainous, well wooded, and intersected with richlyfertilo valleyn, producins wine, honey,
ofl, cotton, and lead. It has everal nib lagen Pop. 1000, montly Groely.
 Russian district on the south of the Cancasus, now included in the government of Kutals. It formed part of the Kingdom of Georgia in the fourteenth century : became alterwarde independent, and in 1804 it was roluntarily ceded to Rnemia by the last of it moverelgma. Immaculate Conception. See ception (Immeonlato).
Immersion (im-er'shun), in antronomy, the dimappearance of one bearenly body behind another or into its shadow. Immersion occurs at the beginning, and emersence at the end of an occultation or an eclipec.
Immigration (imol-sration), the entry of aliens to a conntry for parpose of mettlement and permanent residence. This mubject has been treated in its seneral aspects under the head of emigration (which see). Bnt the subject of immigration has a particular application to the United States, the present great population of which, ande from its few Indians, is wholly the result of alien inflow, forcible on the part of its nesre popniation, voluntary on that of the whites. And within the recent period thif infiow of mettlems has proceeded at a rate unprecedented in the history of any other conntry, the United States having become the sreat reservole into which flows the excens population of Europe, and in a meamre that of various othet parts of the warld. The earlient permanent settlements of immisrants within the area of the Onited States was at Jamentown in 1607, New York in 1018, and New England in 1620; other locall: ties being snccessively settled during the seventeenth and eighteenth centuries Most of the nations of Enrope were represented in the inflow, thongh the numbers were small as compared with thow of a later date, the total immisration up to 1820 being estimated at only 250,000 persons, mnch lems than that of a singlo year at the present time. The inflow of Africans began in the slave ships of an early date, the first reachin Jamestown in 1620. We have no official record of the number of settlers reaching this country until the year 1817, when Congrems provided for the making of returns in the eeveral cnstoms districts. In the year named 22, 140 arrived, a much larger number than in previous yearn, and the abures and wiffering on whipboard were so great that Congress was obliged to provide remedies, an act to regulate the cocan transport of pasmengere boing parow in
1810. Slince that date collicetora of curtome have reported the numbers of 1 m . migranta arriving in their districte, with are, sex, occupation, and country of birth. The arrivals nince then, counting by decadee, heve been: for the decade ending 1830 . 143,149; 1840. 690,128 ; 1850, 1:713,225; 1800, 2,508,214; 1870, 2,814. 824; 1880, 2,812,191; 1890, 5, 246,813; $1800,3,844,420$, belng a total in the period named of more than $20,000,000 \mathrm{new}$ inhabitante. In the decade $1000-1910$ the rate of immisration rapidly increased, patsing the million mark in the succensive yeare $1005-07$ and reaching in 1007 the Frand total of $1,280,849$; the total for the decade being nearly $0,000,000$. As for the character of this immligration, it was malnly deelrable until within recent yearn, when much of it became undesirable. In the earlier period Great Britaln and Ireland, Germany and Scandinavia supplied the bult of newcomers, but during the pant few decadem 8outhern and Eastern Europe have supplled much the freater numher of immigrants especially Italy, Austris-Hungary and Russia. Immigrants from Canada and Mexico were not counted prior to July 1, 1907, but the census of 1000 showed in this country 1,183.225 perions born in Canada, and 103,445 born in Mexico Many of the immigrants reachlug this conntry have been for various reasons undesirable, and this was generally the case with the Chlnese, who after 1869, when a treaty was made admitting them, came in such numbers that in 1882 a hill was passed prohlhiting the entrance of any new Chinese for ten years. In 1892 the law was continued for a second ten years, and the policy of exclusion ntill holds good. At a later period Japanese laborers began to arrive in large numbers, and the opposition to them became so great that $\ln 1807$ acts were passed prohiblting the entrance of any Japanese and Corean laborers. Great numbers of the European Immigrants have also proved undesirahle for various reasons. such as lgnorance, unhealthfulness. criminal record, lack of means of support. etc., and several restrictive measures have been passed; as yet not sufficlent to satisfy the demand of the people. One great source of dissatisfaction is the cendency of lmmigrants to settle in the great citles and their vleinity, overfilling these already congested centers of alibor, and to avoid eeekine the agricultural districts, where they could be usefully employed. A bureau of informatlon to aid 1 ln the latter purpooe was estahilished in 1807, itt object belng the beneficial distrinutlou of allens among the States and Ter-
ritories dealrias them. This haes proved very unoful in advirins immir rante whom they can find prodtablo amployment aud has resulted in a better diteribution.
cumminition was appointed for the study of immigration problems at home and nbroad. It published a number of ruports, the moat important being in relation to the white alave trafice. The do mand that immigration to the United States should be restricted to thoese able to read and write in Englith or in their own language had often been made, and on three aeparate occaulons bils to this effect had been paseed by Congress, to be vetoed by the President un each occation. A fourth bill of thls kind was passed in the eariy seession of 1017 and this also was retoed, but on this occasion it was passed over the President and became the law of the land. Exeept under a fow specified conditions all immigrants muut be ahle to pass this literary test. During the European war ( $q, v$, ) Immigration to the United States was almost entirely cut off.
Immortality (im-or-tal'i-ti), esempstate of everiastlins life. The dorme of the inmortallty of the soul is very ancient It is connected with aimont all rellgions, though under an infinite rariety of conceptions By the immortaity of the soul we understand the endlest continuation of our personallty, our consclousness, and will. There are 20 many reasons to render immortality prohable. that with most nations the bellef is as clear and frm as the belief in God; in fact the two dogmas are intimately connected in the minds of most men. The hope of immortality must be considered a rellgious conviction. Reason and ruligion command man to strive for continued perfection. This duty man cannot rellingnish without ahandoning at the same time his whole dignity as a reasonable being and a free agent. He nuist, therefore, expect that a continuation of his better part, as the necessary condition for his progress in perfection, will not be denied to him. Hence the helie? In lmmortality becomes intimately connected wlth our belief $\ln$ the existence and goodness of God. Among rude peoples the life after death is usnally regarded as a state of helng not essentially difierent from the present-one in wnich the hnter shall renew hls chase, and his corporeal senses shall have their accustomed gratifications. Among the ancent Greeks and Romans the splrits of the dead were belleved to live in the other world an a sort of shadow, and the life after doath wey also considered as
shadow of the procent, Among nome peoples the imacination atributes changen of condition to the future lifo, and the doctrine of trangmigration, or the progrens of the mind or moul in different Etafes, is developed. Connected with the belfef in the immortality of the soul is the belie? in a state where couls are purffied after death, which existed among the Egyptians and exist among many Christian. See Purgotory.
Imola (e'molia), a town of Italy in the Imola province of Boiorna, on un isiand in the Santeruo, 22 miles $8 . F_{0}$ of Bolurnu. 1'0n. (1010) $88,34$.
Impact (impakt), in its simpiest agliaion of bodies. When a moving body impinges on another body, the bodies may adhere to one another, but unually those purtions of the bodies near which the coilision takes place are compremed and then regain their orifinal form, thus causing the bodies to rebound from one another. Sometimes, however, the impact maj produce a mattering or a permanent deformation of the Impincing bodies. Generaliy part, at least, of the kinetic energy of the bodies is trannformed into other forms of eneryy, such as lisht and heat. New stare prohahly ariee from the colinion of cosmic masses. Taking the imple case in which two spheres moving is the line juining their centers come into collision, there is no total change of momentum, and the relative velocity of the spheres after im. pact is o times their reiative velocity before impact, being the co-efficient of reatitution. If the colliding spheres are rotating, as is usnally the case with billiard balls, or if they collide obllquels. friction comes into play, and the problem is more involved. When a stream of fluid impinges on a solid surface in motion, it: velocity during impact relatively to the anrface remains unchanged in magnitude. Impanation. See Conoubstantiation. Impatiens (im-pa'shi-ens), a genns herhs. One speciew, $I$. noli-me-tangere, or touch-me-not, is a succulent herh with Jellow flowers. I. salsamina ls the garden halsam.
Impeachment (im-pech'ment), an cntion for a crime or misdemeanor, in Which the House of Representatives are the prosecutors and the Senate the body of judges. In Britain the Honse of Commons are the prosecutors. and the House of Lords the judzes. The necessity of some tribnand diatinct from the ordinary courts, for the trial of certain offences, or for any hish misdemeanor in certain ouceth, is apparent, aince the judses of
the hisheat courts cannot in all caico ralely be latrusted with the trial of mel other. The mont noted cavo of imprach. ment in this country was that of Proddent Andrew Johnmon, in 1868, to bolag charsed chlety with violation of the Conatitution and the Tenure of Odice Act. Thie memorable trial lested three month, on each rote taken the Genato standing 35 for conviction and 19 for acquitta. As a two-thirde vote is neceseary for conviction, the impeachment failed by one vote. In Ensland impeachment is a rare event, the lat inatance being the trial of Lord Melville, in 1805. $\lambda$ majortty vot s there is sufficient for conviction, but the crown may pardon the offender. Any civil oficer may be impenched.
Impenetrability (im-pen-e-tra-bil-(-t), in phyale, that property of matter which prevents two bodies from occupyins the same apace at the mame time ; or that property of matter by which it excluden all other matter from the space it occupien.
Impennes (im-pen'nes), iname siven Impennes to awimmins hirds with small wings which have only rudimentary feathers, as the penguins.
Imperator (im-perritar), among the anclent Romans, term originally applied to a military commander, one who held the imperium, or military power. In later timen no one received this title who had not defeated a hoatile force of at least 10,000 men. After the overthrow of the republic imperator became the highest title of the snpreme ruler, and acquired the signiftcation which we attach to the word emperor. It was still given, however, to triumphant senerala, and, in this case, has its old algnification. The emperors appear to have used it because they were considered as superior to all the generals. See Emperor.
Imperial (im-pe'ri-al), pertaining fo an emperor or empire ; thns, an imperial crown is such as fo worn by the German emperor; the Imporicl parliament is that of the United Kinsuom. -A size of paper, meanuring 90 in . by 22 , is also called impertal.

## Imperial Chamber. See Chamber.

## Impetigo

(im-pe-tios), a nkin disease conaleting in an eruption of itching pustules, appearing in clustera, and termianting in a yellow. thin, ecaly crust. It oceurs most frequently on the extremitties.
Impey Pheasant (im-pe; Lophophor Impoudnus), a bird of the phengens family (Phasianide) remarkable for the aplendid colorm and metallic luater of the
plumare of the male, whence it if celled is Inde ( 0 which it is a native) mo manh meantag bird of gold. It is found In the hith and cold resions of the Himahych and be of the aise of a amall turkey. It obtained the name of Impes phearant from the fact that Lady Impey was the introduce the birded (unsuccesufully) to introduce the bird alive into Europe.
Implucentalis (im-pia-sen-tal'i-a), mala. See Aplacontol.
Impluvium (jm-pla'vi-um; Lat. in, ancient architecture, in term which de-

Roman Atrium-A, Impluvium; B, Compluvium. noted in the houses of the ancient Romans a baain in the middje of the atrium or entrance-hall, below the compluvium or open pace in the root, to receive the rain. See Atrium.
Impoon (im-pón') a kind of anteImpost (impost), (1) a tax, tribute, or tax laid by government on goods im-

Imposis.
1, Continuoves. 2, Discontinuover. 8, Shafted. ported. (2) In architecture, the point of junction between an arch and the column, pjer, or wall on which it rests. It is often marked by horizontal monld-

Inge, thonge theo may be abeont. Impoota haro rucolved varlous namex, ac cording to thoir charncter. Thus, anInmour impost is where the monidinge are carried dowa the pler; a diocontive. owe impoat where thore are no zoniding, but the pier is of a diferent section from the arch; haftied imposts are where the arch mouldings apring from a capital and difier from thom of the pier.
Impounding-Cattle. Bee Pound.
Impressionism (im-prea'jun-ism), the term applied to a modern achool of art, which applied to in France and has apread to other countriew. The work of the impremionint was firut exhibited in 1807 and is now to be ceen in every exhibition of art work. The aim of the impresionifis is to set rid of artistic tradition and to look at nature from an orisinal atandpoint. This was alto the aim of the pre-Raphaciftes, but the impremionlats differ from the latter in portraying only the sallent features of nature vilibie in curnory examination and readering theee by bruahwork of the thinnent and ioosest deweription. In the work of some of thesi little carc for beauty of color, form, or expreation is vinible, and the extremints of this school produce work the reverse of attractive. Impressment of Scamen (impres'ment), the act of compeliing persons, especially seafaring men, to verve in the nary. The power of impresaing seamen, formeriy a cominon practice in Eagiand, though still existing, has fallen into abeyance since the concluaion of the general war in 1816. Impressment tises of ancient date, and uniformly practised throughout a long seriem of yearm. It has never been adopted in the United

## Imprimatur

(im-pri-mlitur; Latin, 'Tet it be printed '), the word by which the licenser allows a book to be printed in countries where the censorship of books is exercised in its rigor. See Books, Oensorenis of. Imprisonment (im-pris ${ }^{3}$-ment), the son's liberty, whether in of a perstocks, or by merely keeping in cuistody. It is asually inficted by way of punishment, the power of sentencing to im prisonment being conferred on certain courts or magistrates, and strictly limited by faw. A person may be imprisoned, however, who is merely accused of a crime, in which case he can demand to be released on bail. Imprisonment for in Great Britain and the United Stated

## Impropriation

Ohurch the tranufor of a beadice to the pomection of a layman, the annezing of benefices to cecleulandical corporatlons beIns called appropriotion, though they are somotimes foleatical Appropriations were oripinally annezed to brioprice, prebends, religious housen, etc.; but on the diaso: Intion of the monastories in the reign of Henry VIII the appropriations of the coveral beneficen beiongling to them were siven to the ling, and were afterwards granted ont from time to uime by the crown. It was after this time that the term impropriation was Introduced to denote a benelies in the hands of a lay. man. The appropriator deputed some person to perform divine mervice in much pariah, who, being merely his deputy or viceserent, was called vicar, and his stipend was at the diccretion of the appropriator. The diatinction therefore of a parion and vicar is that the former if ontitled to all the eccleniantical dues of his parish, while the vicar is in effect only the cnrate of the real parson (the appropriator), and receives bnt a part of the proceed.
Improvisatori (im-prov-is-a-tóre), Italy in perions the name siren in claim extemporaneouriy compose and desiven anbject, or ing it, accompanyins their voice with an instrument. Mis has long been a practice in Italy, and many of the improvvisatori have acguired considerable celebrity. The poet Metastanio at a very eariy period showed an extraordinary talent for this kind of composition, but the exercise of it cost so much elrort that from a regard to his heaith he was obliged to give it np. Sven at the present day Italy abonnds in this class of poetical composers. The printed works of the improvisatori who have been most admired have never passed mediocrity, and it is probable we should not have had such beantiful poems from Metastasio if he had not been obliged to renounce extemporaneons poetry.
Imputation (im-pu-táshun), as a term in Christian theology, is used to signify, on the one hand, the reckoning of the ans of man to Christ, and, on the other hand, the reckoning of the righteousness of Christ to believers.
Ina (I'na), or INE, king of the West Saxons in the serenth and eigith centuriem. He mecceeded Ceadwalla abont 689, and after havin obtained advantage over the people of Kent in 694 he turne? him arme against the Britons, from whom he wrested Somervetshire and other parts
of the weat of roalend. Be thea maco war on the $y^{\prime}$ y but the contiot wat cermianter ... Nu much advantere to elther party, us a blocily batile 15 715. He realgned his crown and went as a pilgrim to Rome (723), whore he pamed the reat of his dare in devotion. He was one of the principal logtatator of the Anglo-Saxons. His law are the oldent known to ns among the AngioBaxon kinge, except thowe of the hiag of Kent, and eerved as the foundation of the code formed by Alired the Grent
Inagua (bnalswa) Grat and Irr about 40 milies from the enaterm extromity of Cnba, low and internected with 19. soons, and aflording sood pasture land: area, 600 eq milen pop. 1000 . Little Inagua is quite amall.
Inaja Palm (Inoaja'; Mecimilians can palm growing to the heitht of over 100 leet, with leaver 80 to 50 feet lome The apathes are no hard and woody as to serve for cooking food on the fire : they are also used as bankete, etc. The fruit is edibic.
Inarching (infirching), the name as Grafting.
Inca (in'ka), or YiNA, a word nignilying 'chief,' which the natives of Peru pave to their kinga and princes of the blood before the Apanish conqnent. See Peru.
Incandescent Light ( 1 n - kan- $\mathrm{des} \mathrm{o}^{\circ}$ Gas and Electrioity.
Incantation (in-kan-táshan), a certain formnla of worde, anpposed to have some masical effect, especially if uttered with the accompani: ment of certain ceremonies. Incantations are stll common as a part of popnlar medicine amons the nneducated in many countrien.
Incarnation (in-kar-n'shun; Lat. flea) and caro, aarnio, flesh), a word used to express the manifestation of the Deity in the flesh under the human form; thns we speak of the incarnation of Christ. The Bindns believe in innumerable incarnations of their deities. The most celebrated of thene in Hindnstan are the nine incarmations of Vishnr. See Avatar.
Incei. e (in'sons), aromatic ubstances burned in relisions ritng on account of the sweet odor they emi. The custom of burning incense is ancient and widely spread. Amons the Jews the practice was enjoined as part
 27), the ingredient of the ncenve elso
belog laid down, and it was to be bnrned om a repecial altar called the alter of inoomes. This altar was made of acacia (rhittim) wood, and was overlaid with sold, hence it was almo called the oolden clfor, as distinguished from the altar of bnrnt-ofiering, which was made of brass. The incense was burned daily-morning and evening. In ancient Egrpt, Assyria, Babylunia, India, Greece, and Rome in: cense-burning was part of the worship of the sode and it is still employed as part of the Buddhist ceremonial. Both the Greek and the Latin churche use incense in worship, but the practice probably did not arise until the firth century.
Incest (in'sest) serual intercourse From a very early prohibited degrees. under the ban of the church, and in early Enropean history was pnnishable by the civl conrts as well. In Ingland, incest wres at one time a capital offence, but the punishment of it was afterward left to the spiritual courts, and for some time it was not a crime. The Punishment of Incent Act (1908) made carnal knowledge of a man's mother, sister, daughter, or sranddaughter, whethe: legitimate or il. lesitimate, a misdemeanor. In the United States, incest is a punishable crime; but the degrees within which marriage is permissible are regulated by the statutes of the varions states.
Inchcolm (insh- $\mathrm{kom} \mathrm{m}^{\prime}$ ), a small island of Scotland, in the Firth of Forth, off the coast of ilfeshire, with the ruins of a monastery founded by Alexander I in 1123, of which Walter Bower, the continnator of Fordun, was abbot from 1418 till 1449.
Inchkeith (insh-keth') a small island
of Scotland, in the Firth of Forth, ofir the Fife-

$\$$shire coast, containing a lighthonse.
Incidence Aralim or the angle rihich a ray of light falling on a reffecting or refracting surface makes with the perpendicular or normal to the surface. The angle of incidence, A B H, is always equal to the angle of

Inclination, Manemat or Mawprio Needle.

## Inclination Compass, same as Dip-

 zorming with the borimontal plane any ancle whatever excopting a right angle. It is one of the
mechanical powers by which a small force under certain conditions is nsed to over. come a greater force. When a body lies on an inclined plane part of its weight is supported, so that $f$ a cord bo fastened to it and pulled, a force lem than the weight of the body acting in a direction parallel to the plane will prerent it from sliding, or will move it up the plane. Thns a heary wason is raiced on an inclined road by horse which wnuld be quite unable to exert a pull equal to a quarter of the weight of the wagon. Nealecting friction, the force parallel to the plane necessary to raie the body is equal to the weight of the body multiplied by the vertical height through which it is lifted, divided by the distance it is moved along the plane. In Coena Domini (in aéna dom" nd), a papal bulif wo called from its firut words, it being annually read 'at the Lord's Snpper' on. Holy Thursday. Its earliest form was that promulgated in 1363 by Urban $V$ anathemativing all heretics and favorers of heretics without distinction. The bull was afterwards extended and modified by several popes to inclnde those who imposed taxes npon the clergy for the needs of the state, and in its latest form (promnlgated by Urban VIII in 1627) ppecially anathematized all Hussites, Wicklifites, Lutherans, Calvinists, Unitarians, etc.; all schismatics, pirates who disturbed the papal seas forgers of papal letters; all who should attack or comquer the papal territory, etc. The bull Was annnally promnlgated at Rome till the year 1770, when a mnch modified document took its place, this in its turn being withdrawn by Pius IX in 1869.
Incombustible Cloth (in-kom-bng rendered uninflammable by artificial means. This may be done by steeping the fabric in borax, phosphate of soda or ammonia, alum or sal-ammoniac; but these salts are not snitable for fine fab rics, and that which has been found to answer the pnrpose most effectually is tungstate of soda. A solntion containing 20 per cent. of this salt, along with 8 per cent. of phosphate of soda, renders a fabric perfectly nop-inflammable, and does not interfere with the ironing.
Income Tax, a tax liveried directly description, whether derived trom every caplital, or industry. A tax of this lind was first imposed in Great Britain in January, 1700 , dnring the ministry of Mr. Pitt. It is still retained and a considerable part of the revenue of that king-
dom is derived from it. At present a tax of 10 d . per pound is ievied on all incomes above 6150 , with a reduction allowed on thowe under $£ 400$. A tax of this find existed in the United Statem (1861-70), Imposed to aid in raising revenue during the Civil war. At first it was fired at 3 per cent, but in 1865 was increased to 5 per cent, and the tax on all incomes over $\$ 10,000$ was fired at 10 per cent on the excess over $\$ 5000$. It was repealed in 1870, the total sum raised in the ten years being nearly $\$ 305,000,000$. A simliar tax was enactel in 1894, but was ineffective being declared unconstitutional by the Supreme Court. In 1000 a resolution was adopted by Congress providing for an amendment to the Constitution legalizing an income tax. This was finally ratified in 1013. The tax was one per cent on all incomes of over $\$ 3000$ (or over $\$ 4000$ for married men). The rate was raised from one to two per cent in 1916 and a graduater super tax added on all incomes over 0,000. These Federal Tares are in ac.stion to all state income taxes.

By an Act of Congress, approved October 8,1917 , further additional taxes were imponed on incomes, a normal tax of two per cent. and a super tax of one per cent. on the excess over $\$ 5000$ and not above $\$ 7500$, two per cent on that over $\$ 7500$ and not exceeding $\$ 10,000$. The same progressive rate of increase continues up to incomes of $\$ 15,000$; it is five per cent. for excesses between $\$ 15,000$ and $\$ 20.000$, zeven per cent. between $\$ 20,000$ and $\$ 40,-$ 000 , and ten per cent. on the excess over $\$ 40,000$ and not over $\$ 60,000$. Beyond this sum the graduated scale is raised till fifty per cent. is ievied on the excess of incomes over $\$ 1,000,000$. The exemptions provided by the Act of 1916 were reduced from $\$ 3000$ for a single person and $\$ 4000$ for a married perron to $\$ 1000$ and $\$ 2000$ respectively. The effect of this legislation is that on an income of $\$ 3000$, a married person is assessable for two per cent. normal tax or $\$ 20.00$; on one of $\$ 6000$, the normal tax of two per cent. provided by the 1916 Act, or $\$ 20$ in respect of the exemption of $\$ 4000$ allowed therein, and a further $\$ 60$ for the normal additional tax under the 1917 law, based upon an exemption of $\$ 2,000$, making a total of $\$ 80$ or the calendar year 1917. An income not exceeding $\$ 7500$ is subject to a total tax of 820 J , representing two per cent. on $\$ 3500$, being the excess beyoud the exemption, as levied by the Act of 1016 as normal tax, an additional two per cent. as normal tax on $\$ 6500$, repregenting the excess income over the exemption allowed by the Act of 1917, and a maper taz of one per cent. on the excent
of income over $\$ 5000$. There are, it will be seen, two separate and distinct Income Tax lawe in operation. By the War Income Tax Bili of 1917, there is also provided a tax on the incomes of corporations and individuais except those, in reneral terms, not associated for the purpone of making profits. The rate of such proftes taxes are from twenty per cent. of the excess net income up to sirty per cent., by graduated percentages based on the relation of the amount of net income in excess of siven percentages of invented capital. Thus the tax rate is $20 \%$ on the income not in excess of $15 \%$ of the invested capital for the taxable year: $25 \%$ where the net income exceeds $15 \%$ and is not in excess of $20 \%$ of such capital; $35 \%$ where above $20 \%$ and not exceeding $25 \%$; $45 \%$ where exceeding $25 \%$ and not above $33 \%$ and $60 \%$ of the amount of the net income in exces of $33 \%$ of the capital. Deductions are allowed of $\$ 3000$ in respect of corporations and $\$ 6000$ in the case of individuais. It is also provided that where there is only a nominal capital or none invested, a specific tax of $80 \%$ is levied on the net income after the deduction abure mentioned. See War Revenuc. Incommensurable (rankom- ensen: ematice, a term applied to two magnitudes when they cannot. both be measurel by the same quantity, that is, when they do not contain it one or more times exnetly, as the diagonal and side of a square. Inconnu ( $\mathrm{Fr}_{\mathrm{r}}$ unknown), fish, nsually called the Mackensie River salmon, which in zoological character appears intermediate between the whitefish and the salmon. Its weight is usually about ten pounds, though much larger specimens at times occur. It was discovered by Alexander Mackenzie and named by his followers. As it is found in ali the American and Asian rivers of the Arctic region it is of much importance to the natives of this aection, despite the fact of its being an oily fish.
Increment (in'tro-ment), Urganmed. into use in the Benry George system of land tax, in which it is claimed that much unimproved land is to be found in cities which has increased greatiy in value as a result of improvements on surrounding land. This extra value is apoken of es the unearned increment, and it is claimed that it should be made subject to taxation suffilent to force the owners to improte their land. The phrace came in uce again in 1000 as a feature of the Lhoyd Georse budget of British taration. Eec climed that portions of the many landed exater of Bitain had falned a larie unmpae incrmone of value chrough eutroundiat

## Independenoe

improvemeats, and that this paid a vary to tar thit land at tit true value met with fisorous opponition in the House of Lorde but the Londe were in the end oblised to paw the bill. Incrojables ( Er . Incredibles). A French Directory name which, under the of Parisin conspicuous and to who made themselves by their extravagances in dress, manner and speech. Among their peculiarities was the omission of the $r$ sound in speaking. Their name was taken from their favorite exprewaion, Ma petite pa'ole dhonnew, orest ino ojable. (Me wohd of honnah, it's incwedible.) This type of aflectation has been Fown is Erance by various other names The term has also been appHed to the exaggerated atyle of hats which they wore.
Inculation (in-ka-bishun), in between the introduction of the period principle and the outbreak of the disease. It is then gathering head in the system, and indicated only by such general symptoms and loas of appetite or sleep, etc. In poriod of incubation is well defined. Inoubation, the mode in which birde their youns, that of oitting on the eggs till thoy are hatched by the natural heat of the body. In general it is the female which undersoee the labor of incubation, but among some species, chiefly of monos: amous birds, the male relieves the female Whila the meeks her nourishment; in others the male feeds her. Some birds, like the cuckoo, abandon their egga to be
hatched by otherm. In a state of nature hatched by others. In a state of nature The time of incubation varies with different species, but is always the same with the rame species. In the humming Miris it is 12 to 14 days; in the swallow and lart, 15 ; the canary, from 15 to 18 ; crow 20 ; common hen, 21; pheasant, partridge etc. 22 ; peacock and turkey, 30 i wan, $40-15$; cassowary, 62.-Artif: cial incubation, the hatching of eggs by prolonged artificial warmath, has been long precticed among the Dgyptians and Chimene. Attempts have been made to carry out the artificial syytem on a considerable eale, both in America and England, and Fith remarkable success.
Inoubator. The art of hatching was lnown to the Bgrptiant and Onine at a vers remote period. Brick ovens, homed with horse or camel dung, were owe during four months of the joar, while the manal product has been cotimated at
$75,000,000$ chicks. Within recent timé much improved methods have boen devised, varions waye of maintaining the requiaito temperature being employed. The latent American incubators employ hot ais. The advantage of hatching by artificial means are many, and a much larger number of chicks can be raised with much leme care than where the hatching is done by hens. Incubus (in'ka-bus), a spirit or domon, to whom was formerly ascribed the oppression known by the name of nightmare. These demony play a somewhat important part in the super stitions of the middle ages.
Incumbrance (in-tum'brans), any land which mar right or interest in which diminithen bo held by third persons right to pase title to value of but not the ples of legal incumbrach land. Examtaxes leases incumbrances are unpaid chanics' liens, prirgases, easements, meso forth. The private right of way, and bound to disclose vendor of real entate is deliver to disclose incumbrances und to by whito the purchaser the instrumenta the which they were created or on which the defects arise. Failure to specify incumbrances, if such exist, gives the purchaser the right to reject the titile and wue for damages. "Covenants for title" are covenants inserted in conveyances attesting that there are no incumbrances except such as may be specified.
Incunabula (in-kia-nab'a-la) a term phere to editions of book by blbliogrethe early period of books printed durinc Ilmited to works whe art. It is generally to 1500. Work which appeared previous

## Indemnity (in-dem'ni-ti), a term fro-

 ties and jurisprud quently employed in polious aignificationence. It is used in varito an act of the le but is usually, applied purn act of the legislature passed for the purpose of relieving individuals, eapecially in an official position, from the penalties to which they may have rendered themselves liable by some violation of the lav whether by act or omission, or in case of members of government in consequence of exceeding the limits of their atrict constitutional powers.
## Indenture (in-din'tar), a deed en-

 tered into between two or more parties, and so called because dnplicates of every deed between two or more parties were once written on one oldin, which was cut in half, with a jassed or indented edge, so that they wertedeen to belong to one another. See alco 4 p grentice.Independence ( 1 n -depen'dens), gomery county, Kaney, capital of Montgris Hiver, 86 milles from Bumboldt It
is in a fertile country and is an trericul taral trade center. The manufacture include cotton, paper, bricke tiles, four etc. It lies in a coal, petroleam and natural gas district. Pop. 10, 180 .
Independence, a cits, capital of Missouri, 3 miles $E$. of Kansas Oity, Mo., and 4 miles s. of the Missouri River. It has fruit growing, canning, and stockraising industries and various mavufac tures. Pop. 12,000.
Independence Day, States on the 4th Jul in the United day in 1176 in which the Declaration of Independence was adopted by Congress. Independence FIall, the old State Pennsylvania, built on Chestnut Street, Philarelphia, 1732-41, and occupied by the Congress of the new republic when independence was deelared, July 4, 17 it 3 . It is now regarded as the Becca of Amercolonial architecture and has recently beon restored 1 its original condition. In it is kept as sacred relie the famous Jiberty Bell, ${ }^{x}$ its significant motto, - Proclaim libert throughont all the land to all tid inhabit nts thereof.' It containg numerous histor : portraits.
Indeterminate (in-de-tér'min-ăt), in an indefinite number of tions. Indeterminate analysis is a branch of algebra in which there are alwass given a greater number of unknown quantitles than there are independent equations, by which means the number of solutions is indefinite.

## Index Librorum Prohibitorum

('llst of prohibited bonks'), in the Roman Catholic Church, a title used to designate the catalngue or list of books prohibitel by ecelesiastical authority, on account of the herctical opinions suipposed to he contained in them, or maintained ti 'st or catalogue is of books allowed io read after correction or alteration,
agrecally to the orders of the Papal authorities, it is termed Index Expurga torius. Shich prohibitory catalogues have been in use from a very early period in the history of the church, commencing With a llst of prohibited books drawn up
by a cnuncil beld at Rôme in 401 or even carlier with the proscrintion of the writings of Arins. These prohibitions, in reath of the northern plain rime the thiri fact. Were often issued by other than the the Deccan, which has a Papal authorities. In 1408 a asnod at tion of from 2000 to 8000 feet. It Thondon probihited the rearing of the northern scarp fo formed by number bookn of Wickliffe. In 1514 the Facuity of hill ranged known an the Vindhys.

#### Abstract

Monataine. The other two vide of the Decean are formed hy the Dastern and Weatern Gjats, which stretch southwards along the eastern and western coasts or India, the letter rising in the Nilghiris or Neilgherries to the height of 8760 feet. (See Ghats.) The rast North Indian plain is watered hy three distinct river systems, which collect the drainage of both the northern and southerr slopes of the Himalayas. The first of these systems rises on the northern side of the Himalayas, and makes way through tineir western ranges inio the Punjah as the Indus and Sntlej. The second rises in the same quarter, not far from the sources of the Indus and Sutlej, hut fiows in as opposite direction, and enters India on tre east as the Brahmaputra of Assam and Lasteru Bensal. As these two systems convey to India the drainage of the Tibet in slopes of the Himalares. so the third system, the Ganges, wich is trihutary the Jnmna, drains the southern

 sloper ; traverses the central part of the Indiad plain; nnites near its mouth with the Brahamaputra and forms the immense delta known as the Sunderhunds. The Ganges for thousands of years has occnpied a prominent place in Indian civilization, and $W$ is the sole channel of traffic between Upper India and the seahoard until the opening of the railway system in 1855. In the Deccan the Nerhudda and Tapti carry the drainage of the southern slopes of the Vindhyas into the Gulf of Cambay; and the Godavari, the Kistna (Krishna), and Cauvery rise in the Western Ghats, and traverse the whole of the central tahle-land, reaching the sea on the eastern shnres of the peninsula. The Indian rivers in the lower portions of their courses afford a natural system of irrigation, hut in the higher parts an extensive system of canal irrigation is required. The Ganges and Jum a canals alone irrigate an argregate area of about three million acres. The coasts of India liave very few indentations, and consequently few good natural harbors. There are no lakes of any extent, Chilka and Kolair on the east coast heing the largest. V'limate.-In Southern India the climate, of course, is tropical, and generally the heat is very great. Among the higher clevations of the Himalayas an Aipine climate prevails. The Indian plains are, especially in summer. sultry, unhealthy, and partly barrep. The Deccan and the slopen of the Himalayas enjoy a temperate dimate. The climate of ine Nilghiris is healthy and pleasant, and several sanatoria for Europeans have been extahlished there, as well as on the Himalayas. Throughout the entire country there are
## only two annual seasone the dry meanors

 and the rainy season. The raintall depends upon the monsoons. On the western coast the rainy season hegins with the southwest monsoon, and lasts from May till Novemher ${ }^{\circ}$ on the east conat the rainy season, following the southeast monsoon, lasts from November till March. The rainfall, however, is distrihuted with great irregularity.$V$ Botany and Zoology.-The flora of India offers nothing very distinctive. In the Himalayas it has to a considerable extent a European character; in the south it is tropical. Many plants of temperate climates, such as wheat, harley, European vegetahles, etc., are grown in the northwestern and other parts, while various products of warmer regions are also coltivated, such as cotton, rice, indico, oil-a?eds, jnte, tohacco, sugar-cane, cocoannt, date and other palms, spices, etc. Coffee, tea, and cinchona. thongh of recent introdnction, are now extensively cultivated in India, the first particularly on the slopes of the Western Ghats and in the Nilghiris. The teaplant is also grown in the nonth, hut especially in Assam and along the lower slopes of the Himalayas. European fruits abound, and a mong cultivated fruits may be mentioned the mango, plantain, pomegranate, citron, orange, lime, melon. fig, almond, pineapple, guava, jack, and tamarind. Among trees the teal forests under the protection of the government are of most economic value. The hamboo, the banyan, the sappan, the saul, etc., are all characteristic of Indian forest scenery. In Bengal and some other parts the natives live chiefly on rice, bnt millet is the staple food, grain, barley, wheat, with sweet potatoes, onions, garlic, etc., leing also largely found. Opium is cultiveted in Bahar, Benares, and Malwa. The vast forests of India are tenanted by great numbers of wild animals, birds, and reptiles. Large hords of elephants are still met with in Nepanl, Bastern Bengal, and the Nilghiris ; the boar, the wild boar, and rhinoceros chiefly in the woods of the Eastern Himalayas; the tiget is found in every part of the conntry; the lion is now almost extlinct. Other carnirorous mamnials are the leopard or panther, cheetah, wolf, fox, jackal, and hvena. Several antelopes and deer, wild sheep and goats, the wild ass, the great gaur ox or 'hison,' the wild bnffalo, are among the fauna. Snakes snd reptilns in all varieties are very numeroas, and the cohra and other poisonous suake cause numerous deaths. Ammos domes Hic animals are ozen, camels. horves, mules, sheep and sontm. Of blrd, eafles,
vulturen, the peacock, parrakeeth, the ad-intant-bird, etc. are characteriotic apeciem. Fish are plentiful and in great variety.
Minerafo.-India is richly endowed with minerals; hardly a single metal Beems to be wanting; but they are not worked to any extent. Coal, 1 ron, and salt receive most attention.

Divisions, Administration, and Population. - In 1858 the administration of the British possessions in India, long held hy the East India Company, was transferred to the crown, and in 1877 the British queen assumed the title of Empress of - ndla. The country has long been divided into the three presidencies of Bengal, Madras, and Bomhay; hut the first of these was latterly subdivided into several provinces, and its name has now little or no administrative significance. The lieutenant-governors, chief-commissioners, and other officers at the head of the various divisions are subordinate to the governor-general or viceroy, representing and appointed hy the crown, hut each has a large measure of independence. The governor-general in conncil has power to make laws for all persons within the Indian territories nnder British rule, and for all suhjects of the crown within the allied native states. He acts under the orders of the Secretary of State for India, who is assisted by a councll of fifteen and is always a member of the British cabinet. In India the snpreme execntive and legislative authority is vested in the governor-general, the capital being Calcutta. The British section of the conntry is divided into the presidencies of Bengal (inclnding a considerahle number of provinces), Madras and Bomhay. Besides the provinces of India under direct British administration there are a number of native or feudatory states, the relations of which to the British administration are somewhat varied. Practically, however, they are all more or less nnder control of the Indian government. The total area of British India is estimated at $1.097,901$ square miles, that of the native states 679,267. Gujerat, Rajputana, Maidarahad, Mysore, Orissa, and Travancore are important native States. The total population of India, 1901, was 294,3 31.056, of which the native states had 02.288.224.

Retenue, Money, Weights, etc.-The total revenue to the budget-estimate of yrar 1910 was $£ 74,375,000$ (calculating the rupee at 1s. 4 d., for its actual value has not exceeded 18. 5d. for some years), and the expenditure about the same. The public debt is extimated at $£ 267,200,000$. The chief source of revenue is the landtax, which yields from $120,000,000$ to
$£ 23,000,000$ annually. About 70 per cent of the population are engaged cultivating the soil, while only about 8 per cant, reside in towns of over 50,000 inhabitanth. Opium, which forms a government monopoly, and salt, on which conaiderable duty is levied, are the other two important sources of revenne. The chie? currencs in India is silver, but the mints were recently closed. A government paper currency was introdnced in 1861. Circles of issue with snbordinate agencies were estahlished in the chief towns: and notes from 5000 to 10,000 rupees were made a legal tender within the circle. The chief money denomination is the rupee, which is divided into 16 annas, the anna again heing equivalent to 4 pice. The primary standard of weight, called the ser, is equal to the F'rench Ellogramme, or 2.203 lbs. A weight in common use is the maund, in Bengal 82 lbs., in Bomhay 28 lbs., in Madras 25 lbs. By an ret passed in 1889 the imperial yard is made the atandard measure of length.

- Communications, Trade, otc.-Some of the irrigation canals as well as the rivers supply means of internal navigation, hut thr construction of railways has been the most important atep taken to render the internal communications of India permanently efficient. A considerable portion of the railway system was constructed by companies on whose capital interest at the rate of 5 per cent. was guaranteed by government. Government, however, no longer entrusts the railways to private enterprise, and all lines sanctioned by it are now constructed by the State. The total sanctioned mileage open and under construction in 1910 was abont 32,000 miles. There were 70,000 miles of telegraph line. The imports, including bullion and specie, for year ending March, 1910, amounted to abont $£ 100,000,000$, and the exports to $£ 107,000,000$. About half the imports consist of cotton goods: the exports comprise cotton, opium, oilseeds, rice, wheat, jute, indigo, tea, cotton goods, etc.
Inhabitante, Languages, etc.-India has been peopled by several races which have now become more or less mixed. The Gindus, who are partly of Aryan or Indo-Enropean orisin (see Indo-Eurapean Languages), partly of non-Aryan oricia, are hy far the most numerous. In the couth dwell people of a non-Aryan and Dravidian stock; and the remainder is made un of Arabs, Parsees, Mongolians, etc. The Enrodeans number over 125, 000, and lat adaltion there afe abort 110,000. Eurasians, i.e. the progeny of Hindus and Enropeans. of non-Aryan languages there are about 150 dialects

The Dravidias languagee, the ohief dia lects of which are the Tamil, Teluru, Kanaree, and Malayalam, are spoken by about 28 miliion of people in Southern India. The principal of the modern Aryan vernacularm derived from the ancient Sannkrit and Prakrit are Hindi, Marathi, Punjabi, Bengali, Uryia, Sindhi, and Gujerati. Hindustani, a corrupted form of Hindi filied with Yersian and Arabic words, is the language of the Mohammedan conquerors of India, and has been adopted as the official language and means of general intercourse thronghout the peninsula. The leading reifion is Brahmanism, the professed creed of the majority of the Hindus and the reiigion most distinctive of India. It reckoned 207,731,727 adherents in 1901. Large nambers in the north and northwest are Mohammedans ( $62,000,000$ ). Bnddhistis number about $9,000,000$; Parsees or Fireworshipers 100,000; Sikhs 2,000,000. Among the Hindns the castc system still prevails. (See Brahmanism.) European missionaries have long been active, but only a mere fraction of the peopie are as yet Christians, abont $3,000,000$. Education is now making good progress, schoois and coileges of all kinds having been established thronghout the country. The pupils, however, number only a few millions. There are nniversities (examining bodies only) at Calcutta, Bombay, and Madras, besides other two at Lahore and Allahabad.

History. - The early history of India is obacarely written in the myths of Sanskrit literature, but the first fact of any certainty is that about the year 2000 B.C., or even earlier, an Aryan people of comparatively high civilization descended from the monntain regions of the northwest into the plains of India, where they snbdued the original inhahitants. The expedition of Alexander the Great to the Indus in B.O. 328 gives ns a momentary glimpse of that part of India; bnt up to the time of the Mohammedan conquest there is little anthentic political history of India. In the third centnry B.o. Bnddhism was estabiished throughout India, but it afterwards entirely gave way to Brahmanism. The first six centuries of the Christian era were occupied by struggles between the native dynasties and invaders from the northwest. In the eighth century the tide of Mohammedan connuent began with Kacim's advance into Sind (Til h. .). Bnt the Mohammedans wert azain driten ont in 828, and for more than 150 yeary afterwards the atrong fendal and tribal organizations of the northern Hindu Kingiom were a barter to the Mumsulman advance. $\Delta t$
leagth in the gear 1001 Mahmud of Ghasni reduced the Punjab to a province of Ghasni, and the Mohammedia power was Eradually extended into Southern India. In 1308 Timur or Tamerlane led a great Mogul (or Monsoi) Iavasion of India, and after sacking Delhi retired into Central Asia. In 1526 Sultan Baber, a descendant of Tamerlane, founded the Mogul Empire in India. His grandson Akbar reigned from 1505 to 1007 , and extended his power over most of the peninsula, being distinguished by his jnstice and his toierance in matters of religiom. His son Jehanghir received an ambassador from James I, of England, in 1815. During the reign of his successor, Shah Jeban, famons for his architectural magnificence, the Mahrattas began to be formidabic in Southern India. Shah Jehan was deposed in 1058 by his yonngest son Aurengzebe, who made war successfully with the Afghans, the Rajputana tribes, and the rising power of the Mahrattas. The Sikhs, a Hindu sect, formed a religious and military commonwealth in the Innjab in 1875. On the death of Aurengzebe, in 1707, the Mogni empire began to decline. Mohammedan viceroys like the Nizam and the ruler of Oudh asserting their independence, whije the great Hindu statew of the Sikhs, the Rajputs, and the Mahrattas began to harass the decaying empire. In 1738 Nadir Shah of Persia swept down on Hindustan, sacked Deihi, and carried away sixty millions sterling of treasure. The two immediate successors of Aurengzebe, Bahadur Shah and Jahandar Shah, were incapabie rulers, practically under the controi of the vizier Zulfikar Khan. The three foiiowing were mere names under cover of which Husain Aif, governor of Behar, and Abduila, governor of Allahabad, controlied affairs. During the reign of Mohammed Shah the Mahrattas, who had already subdued the Deccan, wrung first Malwa (1743) then Orissa (1751) from the feeble grasp of the Mogul emperor. The same year saw the first inroad of the Afghan prince Ahmed Shah, foliowed in quick succession by other three invasions, to repel which the assistance of the Mahrattas was obtained. In 1761 the decisive battle of Panipat was fought between the Afghans and the Mahrattas, and ended in the defeat of the latter. The victor, Ahmed Shah, atill recornized the Emperor Shab Alam, bnt the dignitv was little mora than nominal. Shat Alam was anceeeder in 180 dy Akbar II. who was succeeded in turn by Mohammed Bahadnr Shah, the last Mognl emperor, who died at Rangoon a British state nrisnner in 1862.

In the bedining of the darteenth cenr
tury the Portargene followins the wake of Verco da Gama, had establimed factories and fortremees on the contste of Malabar, and soon extended their power over nearly all the ports and illands on the coantio of Peria and Indic In 1595 the Datch gained a footing in Indie. The English Eact India Company bezan its com. mercial rettlements in India in 1613, Surat baing the chief station. (See East India Company.) A grant of a small territory around Madras was received from the Rajah of Bijnagar in 1639, on which was erected the fort of St. George. Madras became a prealdency in 1654. Calcutta, ultimately the seat of government in India, was settled in 1690 , and became a presidency in 1707. The English early came into collision with the Portugueso and Dntch, but it was the atruggle with the French in India, whose firgt settlements were founded in 1604, for influence over the native princes, that led step by step to the establishment of the British empire in India. The first conflict with the French took place in 1746, when the English lost Madras, which was, however, restored by the treaty of Aix-la-Chapelle. In 1651 Dupleix, the French governor at Pondicherry, was powerful enough to place creatures of his own on the thrones of the Deccan and the Carnatic. The Fnglish supported rival candidaten, and the result was a second war, which left English influence predominant in the Car: natic, though the French still controlled the Decan. The most memorable incident in this war was Clive's capture of Areot. About this time important events took place in Bengal, then a subordinate presidency to that of Madras. The Nawab of Bengal, Sirajud-Daula (Snrajah Dowlah), attacked the English settlement at Calcutta with a large army, forced it to capitulate, and thrust the prisoners, to the number of 146. into the Black Hole or common prison of the garrison. a room 18 feet square, with two smali windows. After a night of nuparalleled sufferiug only twenty-three were found alive in the morning. Clive was at once sent with an armament from Madras, recovered Calcutta. attacked and took the French settlement at Chandernapore. ronten the Nawab's army at the battle of Plassey (Jnne 23. 1757), and placed Mir Jaffier on the vice-regal throne, with consent of the Mogul court. In the sonth the Enelish were eqnally victorious. A force despatched by Clive tnok Masulipatam, and the victory gained by Coote at Wandewath on Januar 22, 17e0. completed the destruction of the Brench power in Indie.

Is Bengal Mar Jaffer soon found him-
selt anable to moet the earorbitanat cialms of hif allich and in 1760 be whe 16 poned in tavor of his condin-lew, Mis Kaim, who asreed to pay the blance due by Mir Jamtier an woil as grant the districts of Burdwan, Midnapore, and Chittasong to the Englinh. But disputes coon led to a war, in which Mir Kanim was worted and forced to flee. The British retained the collectormip or fiscal administration of Bengal Behar, and Orissa, under the fiction of a grant from the Mogul emperor. A nominal natlye ruler, however, was still appointed in the shape of a nawab, who recelved an allowance of $£ 600,000$, and the actual collection of the revenues was still left to the native officials. This aystem of donble government entablished by Clive was abolished in 1772 by Warren Hasting, who appointed English officers to collect the revenues and preside in the courth, and thns laid the foundations of the prement system of British administration in India. In 1774 Hastinga was made governor-zeneral of India. Among the notable mearures of his vigorous rule were the refusal of the $£ 300,000$ of the Bengal tribute to the Mogul emperor, the kale of the provinces of Allahabad and Kora (anotgned by Clive to the emperor in 1765) to the nawab of Ondh, and the loan of British troope to the same nawah for the sabjection of the Rohilla Atrhans. For thene and other acts, such as the extortion of heavy fines and forfeitures from the Begum of Oudh and the Rajah of Benares, Hastings was impeached on his return to England. (See Hastinge.) In 1778 the intrigues of the Bombay government led to the first war with the Mahrattas, in which the British arms were only saved from disgrace by the achlevements of the Bengal army which Hastings sent to the aid of the other presidency; and in the war with the Sultan of Mysore the diplomatic skill of Hastings, and the valor of the Bengal troops under Sir Eyre Coote, again won victory for the Brittish. In 1786 Lord Cornwallis succeeded Hastings as governor. His rule is memorable chiefly for the war with Tippoo, Soltan of Mysore, which terminated in the sultan having to snrrender one-half of his dominions to the British and their allies. Sir John Shore succeeded as governor-general in 1793. He was followed by the Marqnis of Wellesley, who arrived in 1798 and whose policy eventually made the Britich power naramonnt from the Himalayas to Cape Oomorin. Under him Typpoo of Myure wes completaly overthrown (1799) and the ceocond Mahratti wir succemafully concluded, Sir Arthur Went sincey (afterwris Dake of Welling:
ton) heving woa the victory of Aemase September 23, 1803), and General Late that of Laswaree (November 1. 1803). In 1800 Lord Corawallin went out as sovernor-seneral for the second time. He died soon after his arrival, and was succeeded by Sir George 1807. In 1809 bome Listurbinto in Travancore and Cochin led to these regions being placed under British control. During the governorship of the Barl of Moira (Marquis of Hastinge, Goorkhas of Nepaul, whir with the short strugsle ended with the cesesion to the British of Knmaion; and another with the thrce great Mahratta princes, the Peshwa of Poona, the Rajah of Náspur, and Holkar of Indore. 'The Penhwar territory wa annezed; the other Mahratta phinces were compelled to accept alliancee placing them ander British protection. A new province, the nncleus of What are now the Central provinces, was formed out of territory recovered from the Pindarin. In 1823 Lord Amherst gncreeded as governor-seneral. During his administration the first Bnrmese war arome, and was concluded in 1826 by the cession to the British of the provinces of Aracan and Tenasserim. Under Lord William Bentinck's rule ( $1828-35$ ) administrative reform and the moral elevation of the peoples of India were chief snbjects of consideration. In 1836 Lord Anckland assumed the governor.hip. Two years
later the Afenan war broke ont, and terminated in the disastrous British retreat. (See Afohenistan.) During Lord Ellenmrough's administration sind was annexed. Sir Henry (afterwards Lord) Hardinge succeeded in 1844 , and the year following the giths, originally a religious sect who had conquered the Punjab, cromed the Sutlef in great force. Fonr hotly-contested battles, at Mudki, Firozshah, Aliwal and Sobrtion, left the British masters of the field. Part of the Sikh territory was annexed, and the infant Dhnleep Singh recognized as rajah of the rest. Daring the governor-generalship of the Darl of Dalhousie, 1848-56, a new war broke ont with the Sikhs, and after their final defeat hy General Gough at Gujerat, February 21, 1848, the PunJab was annesed to the British dominions, This was immediately followed by the second Burmese war, ending in the annexation of Pegu Jnne 20, 1853. The Indian staten of Hattara, Jhansi, and Nagpur were, on the failure of the native succession, annexed to the British possemcions, $18{ }^{2} 2-56$, nad ondh British possemdirectly under Brition rule. During the
same administration the extenalvo peheme of Indian railway and telegraphs and steamilis connection with Zurope via the Red Sea was planned and inangurated, the Ganges Canal opened, and the Punjab Canal besun.

The adminiatration of Viscount Canning (1850-61) was diatinguinhed by a short war with Peruia, and eapecially by the great Sepoy mutiny. Several outbreaks amons the native soldiers toot place during March, 1857. The firut for midable revolt, however, was at Meerut on May 10th, where the Sepoys of the 8 d Lisht Cavalry, assinted by the 11th and 20 th Regiments of infantry, rose and man:sacred the Enropeans. They then fied to Delhi, where they were immediately joined by the native farrison. Here another masaacre took place, and the dethroned descendant of the Mognls once more amamed the sovereignty. The revolt spread rapidly throngh the Northwestern Provinces and Oudh, down into Lower Bengal. Only in the Punjab the prompt measures of the governing officials in disarming the Sepoys prevented an outhreak, and the Bikh popnlation continued steadily lopal. Wherever the mutiny hroke ont it was attended with savage excesses; women were ontraged, and Europeans without distinction of age or sex harbarously murdered. At Cawnpore the revolted Sepoys were headed by Nana Sahih, the heir of the last Peshwa of the Mahrattas. After a heroic but fruitlets attempt to defend themselves, the Europeans capitulated on the sworn promise of Nana Sahib to allow them to retire to Allahabad. On May 27 th the survivors, ahout 450 in nnmber, were emharling when they were attacked by the Nana's troops, and the men indiscriminately massacred. The women and children, 125 in number, were carried back to Cawnpore and kept till the 15th of July, when they were a cunt to piecem on the approach of Havelock's army. Cawnpore was stormed the day following. At Lucknow Sir Henry Lawrence had the foresight to fortify and provision the Residency, where the parrison held ont till relieved hy Havelock and Outram on September 25th. Bnt Havelock was in turn hesieged, and was with difinculty relieved (November 17) by Sir Colin Camphell, afterwards Lord Clyde. Delhi, meanwhile, had fallen, chiefly owing to the skill and valor of Sir John Lawrence. By May, 1858, when Bareilly was taken, Sir Colin Campbell and Eir Hugh Rose had restored order, and the mutiny was at an end.
In 1868 the direct sovereignty of India, and the power of government hitherto vested in the Eant Indian Company, were

rewted In the Britich crown. Iord Canniag returned to Eingland carly in 18(42, and was succeeded by the Earl of ELsin, who died in 1883, Sir John (afterwards Lord) Lawrence was governor-general from 1808 to 1808 , when he was mucceeded by the Earl of Mayo, who did much to develop the material resourcem of the country by removing the rentrictions upon trade between the diferent provincen, and constructins roads, canals, and railway. He was assandinated by a Mohammedan fanatic in the Andaman Iolands, Fehruary 8, 1872 . Lord Northbrook became Viceros in 1872. Dnring hin adminiatratron a famine in Lower Bengal, succensfully obviated by a vant organimation of atate rellef (1874) the dethronement of the Gaekwar of Baroda for disioyalty (1876), and the tour of the Prince of Wales through India ( $1875-76$ ), were the chief events. In $18 i 0$ Lord Lytton was appointed viceroy, and on January 1, 1877, Queen Victoria was proclaimed Empreas of India at Delh. In 1877-78 a most disastrous famine occurred, and despite the most strenuous efforts of the sovernment over five million persons are gaid to have perished. In 1878 the intrigues of Shir Ali, amir of Afghanistan, with Russia, led to a declaration of war on the part of the British. After two campaigns Abdurrahman Khan was estahlished on the Afghan throne by British arma. (See Afghanistan.) The viceroys of late date inciude Lord Ripon. 1880; Lord Dnfferin, 1884; Marguis of Lansdowne 1888; George N. Curzon, 1890; Lord Minto, 1905 ; Lord Hardinge, 1910. On December 12, i:n11. George $1 /$ visited India and was crowned emperor, a splendid 'Durhar' being heid and the capltal changed from Calcutta to Deihi. In the European war the native princes loyaliy supported the British armies.
Indis Matting, a matting woven Papurus Pangorei or corymbosis, and chiefly exported from Bengai. Indians (in-di-an'a), one of the Unigan iake and state, Ohfo, Kentuckr, and Illinols. It is aimost one continued plain, with the exception of the hills of the Ohio River and Wabash valless. which rise from 200 to 600 feet above the sealevel, the highest plevation heing 1250 feet. The western side of the state, north of the Wabash, is mostly prairie land interspersed with lakes, wondlanfls, and swamps. The eastern part was originally thickiy covered with forests. The soll varies from a deep biack sand to clay loom and is generally fertile, neariy onepighth of the area leing open prairie and
well adaptod to acriculture. Indian corn, Wheat, oath, barley, tobaceo, and potatoen are the chiel africultural producta. Molacses, cidar, wine, honey, cheene, mill are aiso plentifully produced. Immense herds of cattle and swine are reared, and alaushtering and meat packing is one of the leading induatries. Between the Wabed and the Ohio there is a coalfield of nearly 7000 sgnare miles, with a conl of exceilent quality, and an outpnt which in 1012 amounted to about $14,000,000$ tona. The other chief mineral products include petroleum, natnral gas, Imestone, madatone and cement, both Portland and natural rock. The natnral gas prodnet was large, but is now practicalls exhnusted. The naturai resonrces of the county have belped to develop the manufacturen, which include flour and srist-mill producter, foundry and machine shop products iron and ateel producte, liquors, etc. Petroleum also yields a large product. The White Water, White River and Wabash are the principal rivers. Water trangportation is fairiy good. Lake Michigan furnishem an ontlet to the north, the Ohio River to the south. The railroads have a length of more than 7000 milles. The principal towns are Indianapoils (the capital), Evausville, Fort Wayne, Terre Haute, New Alhany, Lafayette, South Bend, Mnncie, Richmond, Gary and Hammond, etc. Indiana was part of the territory ceded by the French to the British in 1703, and bv the British to the United States in 1783. It was erected into a State in 1816. Area of the State, 36,354 sqnare miles. Pop. (1910) 2,700,876.
Indiana, a borough, capitai of In40 miles w. N. W. of Aitoona. It has an extensive trade, also iarge siass works, tanneries, flour, saw and planing mills, coal interests, etc. There is here a State Normai School. Pop. 5749.
Indianapolis (indi-an-ap'o-lis), Indiana, iies on the White River, near the center of the state, situated on a plain. It is the center of numerons railroads, and heing surrounded hy rich agricultural and miueral regions is a piace of sreat trade and mannfactnres. It in an 1 m portant market for grain, livestock, timber, etc.. and carries on pork packing: the production of iron goods, agriculturai implements, woolens, flour, etc. The city is well buiit one of the chief public edifices being the Federai bullding. Educathenal and benevolent inatitutions are nnmerous, and the public echool system has high standing. The first settler ap. peared in 1820, and in 1824 the city became the state capital. Pó. (1913) 286.035.

Buddhist Great Tope at Sanchi, Central India.
tinguish, as the most important, the Buddhist style, the Jaina atyle the Dravidian or style of Southern India, the Chalukyan style, the Modern Hindu or Indian-Saracenic style. The history of Indian architecture commences in the third century b.C., with the religious buildings and monuments of the Buddhists. Among the principal forms of BUDDHIST ARCHItectuan are the following:First, the topes, atupas, or towers bullt to mark some sacred spot, and the dagobas, conntructions of a sinilar nature. containing relics of Buddha or Ruddhist saints. These buildings generally collsisted of a circiinr stone basement varying from 10 or 12 to 40 feet in height, nnd from 40 to 120 feet in dlame. ter, on which rose a rounded domical structure, generally of brick or small riok id stones laid in mud, the whole edifice and the large tanks with carved atyiobate. Fising sometimes 80 , sometimes 100 feet steps. The Crasuryan styie, sn named ligh. (See Dapoba, Tope.) Second, from a dyasty which rose in the sixch the rock-cut chaifya halls or churches, century, in what is now Mysore and the

 and the vilarto of monagteries Most of these are lound is the Bombay Presidency; mome also In Bengal and Behar In rock-cut buildings architectural kif is confined to the facade nad the in. terior, which are generally cut out with mout beautiful and perfect detail. Amons the most notable for beauty of deaign are those at Djanta, nid finest and largest of all, the mreat Chaitya cave at Karli, near Bomlay, the date Us which is probably about 80 B.O. Another interesting example is at Eliora (which see). The JAFNA sTMLE is a developpent or corruption of the pure Buddhist. It is characterized by the square or polygonal court, the twelve-pillared dome, the slenderness and elegance of the colnmns, the horizontal arch, the siliras or towers, surmounting the cells containing the images. and, lastly, by the peculiar grouping of many temples together on hilltops. Prominent examples of Jaina architecture are found at Girnar in Gujerat; and at Mount Abu, of the Aravuli range. The DravioIAN GTMEE is that of the peoples of Southern India. Its most flourishine epoch comprises the sixteenth, seventeenth, and even eighteenth centuries of cur era. To this late period belong the great tempies at Tanjore, Tyruvalur, etc. The distinctive parts or tempie proper, with storied py , ram-dal roof; the mentapas or porches, covering the door which leads to the cell; the gopuray or gate-pyramids, in the quadrangular enclosures surrounding the vimanas; the choul. tries or pillared hails, used for various purposes. The general charReteristics of a Dravidian temple of the first class are the storied pyramidal towprs. the hall of 1000 columns, the boid cornice with double flexure, the detachpd shafts, the fichiry.

shaped tower, the star-ghaped temple, and the basemont terrace of stone. The INiLus: saracenio atylif in a general name for a number of nomewhat varying styles, the result of the mixture of Saracenic principles of architecture, brought with them by the Mohammedan conquerors of India, and the distinctive architectural features of the difierent localities where they me:tled. Under the Mogul emperors in the mixteenth century were erected some most magnificent buildings, such as the tomb of Humayun Shah at Old Delhi ; that of Akbar at Secundra (see $A k b a r$ ) ; the palaces of Shah Jehan at Agra and Delhi; and the famous and most beautiful Taj Mahal, built by the same monarch at Agra. The Moslem architecture of India contrasts with the native Indian styles in its use of the radiating arch, in the superior simplicity and grandeur of its style-its flat ornamentation not interferling with the lines of true architectural construction. A characteristic feature also is its fine conventionalism of vegetable forms for decoration and tracery. See Saraoenic Architecture.

Indians (in'di-min), AMmacax, the triber inhabiling the contrient at the time of the diccovery by Columbut, and to sueh of their deecendants as atill zurrive. The name of Indlans was first givon to thew racea from the notion that the newly discorered continent formed part of India. The fahahitantis of India came later to be diatinguliohed as Bat Indians and the others as Americun Indians, for which the contructed form, Amorinde was proponed and adopted hj nome writers. Othor popular names for the American Indian are Red men or Reclatiat. Various theorles as to thelr Aclatic origin are current, hut so far as is known thelr culture is indigenous, beling the reactiona of the Indian to his earifonment. The Eikimo, the most northerly of the tribee, extends acrons the continent alons the Polar Sea. South of these are the Athabascan group, rep: remated by the Ten' a, Kalyuhkho - teane and Tutehonekut'qin tribes on the Yukon River. The other Athabascann ano chiefly found between Hudson's Bay and the Roeky Mountains, but include also the Dogribs, Caribou eatern, Nahane! Yellowkniven and Slave Indione of northwentern Canada and the Beaver Indians on Lake Athabasca; the large Navajo tribe of Arizona and New Mrexien, and the Apachen, of Arizona, Frow Mexico and Oriahome. Canada and the United States east of the Mimivilippi were formerly inhabited by the Algonquif and the Iroquole, generaly at war with each other. The extreme west of the Asonquin region was occupted by the Blickfeet Indiana; the Ojlbwam or Chippewne, heid the thores of Lake Superior; couth and weat of Hndson's Bay were the Crees The Leni-Lenape section of the Alsonquit gronp comprisod the five nstione of the Delaware, Including the Mohicame. The Iroquols included the Benecas, Cayugas, Onondagas, Oneldar, and Mohawke, who formed a league ot five natione, afterwards joined by the Tusenroran. The Eincons were of the Iroquoir group. The Bloux group necupied the plains between the Rocky Monntaing and the Mitalesippl, and ir. cluded the Amelniboine, Winnepeess, Iowas, Datotan, Omahat, Omgen, Kansas, Crows, and Mandans Weat of the Miasiesippi also vere the Pawnetio about the

Tidia Paper, a name orisinally zivndia Papor, en to a very. Hfati 2lic rhent buff paper made hy hand in viins The use of the word 'Iudia' was probrisly due to the tendency to give that awe to anythiug originatios in the Eant. Its firut une wain in printing very line engriavingh, which were therefore commonly called 'India proofa' The orisinal India paper was introdnced iuto Europe in 181, where teste showiag its great strength $\delta=1$ durability created wide intereat amons paper manufacturerm, who thereupon undertook to duplicate it. The term lo now uned to describe an extremely light, thin paper, very toush and opaque, mede priucipally in England Germany, Italy, France, Holland and Belifim, and used espectally in printing Bihien, hut also freqneuty in other books where it is desirable to reduce their hulk and weight, without affecting their durability, or uecemitatius smaller type
Indie papi is essentially a ras paper, no mechanice vood pnlp being usco. The opaque characier is due to the large percentage of mineral matter remaining in the fiber. Even more important than the materials used is the great alill and care exercied throughout the procenen of manufacture to sotatia tho -ifural mattor India Rubber, a peculiar elautic subb carbon and hydrogen, found in sucpansion in the mility jnice of many different familles of piants. (See Ocontchouc,) The crude rabber is venally preparm where the juice Is collected, by drying the juice over a fire in the mun on moulds of clay, pedidion of lates iby eraporating the fuice in the sun and removing the
cuccuadve pellicles formed on the surfece; of by coagulatans the juice, as in Nics. rague, by an applicatiun of the juice of the bafuce vine, and kneading and rollins the conculated masa, Most of the rubber of commerce is derived from Brasil and the Andee attetes of South America, alco from Dentral America, Mexico etc. galler quantitie from Java, Penans. Singapore, Amam, and South Arica. The purest comes from Mart, Brasil, in large bottlea und thick platie. Prior to the introduction of rubber into Europe, in the early part of the eighteenth century, it had already been turned to various domentic and industrial unes, such as the making of bottlea, yringes, boote, and water prooing by the matives and rewidents along the banke of the Amason. In Europe the firnt important practical applications of it are ansociated with the names of Mackintosh, the patentee in 1823 of a Waterproofing process hy the solution of the sum in of of turpentine and alcohol and in coal-tar naphtha, and Handeock, the inventor of the 'masticator,' a machine for the condensation of crude lumps or shreds of caoutchouc, as imported, into compact homogeneous blocke for subeequent division into cakes, sheets, rollers, etc. Its great modern utility, however, is due to the American inventor, Charles Goodyear, the inventor of the vulcanizing process, in which ruhber is hardened by the addition of sulphur, patented in 1844. Since then its uses have multiplied so rapidly that it is employed in every dopartment of industry. Thus apart from its une in blocks and sheets, etc., in tapes or threads for weaving into elastic tissues, and as varnish for waterproofing, it is employed, in combination with other reainous material in a solvent such as nopitha, as a cement or marine glue When combined with a small quantity of walphar, etc., it is used for the manufacture of overshoes, boota, gloven, life-pregervers, gas-bace, steam and water packing, belting, firehose, tuhing, springs, tirem artificial sponges, etc. With a larger proportion of sulphur, and cured of vulcanized by exposure to a hirh temperature, it is used for the manulacture of combs, pen and pencil holdwre, rulers, inkstands, buttons, canee, eyrinezes, jewelry, and. when colored with vermilion. for mountions for artificial teeth, etc. In eombination with asphalts, oils, and sulphur. etc. and valcanized (kerito) it is neeri for covering telerraph, wires. A new field for ite use hise lately developed in the hrge automnbifo tires, the rapid prorrees of the eutomobile industry having 00 of the automohile industry having oo one or more personst for acmimatinn or of
hearlly on the sources of uupply and condiderably increase the marizet value of rubber. The inqumeieat supply hes led to active mearch for new sourcis and the development of existing cources, especially that of Mexico, which has become one of the important ruhber producern. Lazaculapa district, Chiapas is the largest in the world, with 7,000,000 tree and an output of 100,000 lbs. The export from Brasil in 1010 was 38,953 tons of which 17,071 came to the United States. Tise Palo Amarillo tree and the Guayule nhrub of Mexico yleld rubber in addition to the regular ruhber tree, and rubber-yielding plants have been found elsewhere, as in Mozambique and Africa sonth of the Zambesi, where is a thick vine called the laudolphia, Which Vields this product.
Indicative (in-dik'a-tiv), that mood of the verb in which something is said positively; hence it has also been called the ponitive mood, as distinguished from the subjunctive and potential.

## Indicator (in-di-ka'tur), (1) an in-

 and recording trument for ascertaining the cylinder the pressure of steam in tradistinction to the steam-engine, in comshows the pro the steam-gange, which boiler. (2) An apparatus steam in the in a telegraph for giving signals or on which messages are recorded as the dial and inder hand of the alphabetic telegraph. (3) A genus of African hirds, the honey-guides or honey-guide cuckoos. See Honey-guide.Indic Languages, the class of Indoyan) languages comprising the dialect at present spoken in India, as Hizdi, Hindustani, Mahratti, Bengali, and the dead languages Prakrit, Pali, and Sansshat.
Indiction (in-dik'shnn), in chronology, a period or cycle of fifteen years, supposed to relate to some judicial acts, probably the puhlication of tariffs of the taxes which took place at stated intervals under the Greek emperors. Three sorts of indiction are mentioned :- (1) the Cessarean, which fell on the 8th of the calende of Ortober, or 24th of September: (2) the indiction of Constantinople (berinning A.D. 812). On the let of September: and (3) the pontifical or Roman, whinh herins on the calends of Jannart. We find ancient charters in England dated by Indietions. Indiotment (indit'ment), In law, written acmisation of to and premented
upgn oath by a grand jury to a court Indiomontit must hero a priciec and suf ficient certinints.
Indigestion (Indijentyun). see Indigirka
(endyoperika), a river of Datorn Siberia, flowing northwards into the Aretic Ocena; length 760 milen
Indigo (in'di-got, ane veretable dyeing and calico-printing; an mportant commercial prodnct in the Bast and West Indien, Merico, Braill, Egypt, etc. It is chiefy obtained from various leguminons planta of the genus Indigoféra, herbaceons or phrubby plants, with pinnate leaves, and small, blne, purple, or white

Indigo-plant (Indigafere tincteria).
pea-shaped flowers disposed in axillary racemes. They are very nnmerons in the equatorial regions of the slobe. The species most commonly cultivated are the 1. Anil, a native of Tropical America, but now cnitivated aleo in the Fast Indies ; the 1. tinctoria, also cuitivated in both Indies; and the 1. carulea. The 1. tinotoria is the species most abundantly cultivated. The greater part of the indigo nsed pt the present day comes from India, especially from the provinces of Bengal, Onde, and Madras. The ground is plonghed towards the end of the year, and the seed sowed in the early spring of the following year. The first cutting of the plants takes place abont midsummer, and the second abont two months later, the process of extracting the dye varying as the leaves are fresh or dried. Irsigo occurs in the market in pieces which are sometimes cnbical, sometimes of an irregular form ; these pieces are easily broken, the fracture being dull and earthy. The color varies from light-blue to blackish-blne; when rubbed with the nail a coppercolored streak is formed on the surtace of the mass. Indigo is insoluble in water, but when exposed to the action of certain denxidizing agents it becomes solnble in alkaline solutions, losing its blne color and forming a reeen solntion from which, when precinitated by acids, it becomes white. but it instantly becomes blipe on exposure to the alr. Commerctal indiso
containa about 50 to 00 per cent of pure indizo Hne, the remander conaliting of substances called indigo ginten, indito yellow, indigo red, otc. Artiticial indiso in now produced by chemical procemen having been dibcovered $\ln 1878$, TEIN hatis come into use sufficiently to diminith the demand for the natural prodnct, and is said to be superior to the latter in color and wearing powers
Indigo-bird, a North American bird (Oyanospiza oyanos) of the finch family. It is of a deepblue color, and is a sood songster.
Indigo-copper, the native protonule an indigo-blne color.
Indigofera (in-di-gofora), large genus of plants, nat order Leguminosee, inclnding about 220 species, indigenous in the warmer parte of Ania, Africa and America. See Indigo. Indigometer (in-di-someter), an taining the depth of color of indigo. Indium (in'di-um), metal diccovin 1803 by ered by Reich and Richter in 1803 by means of spectroscopic analysis in the zinc-blende of Frelbure. It has been isolated in mall quantitte. and is of a silver-white color, soft, and marks paper like lead; specific gravity, 7.421 at $16^{\circ} .8$. The metal is related to cadimium and zinc, and its spectrum ex. hibits two characteristic lines, one Violet and another blae.
Indo-China, the name now siven to sula of Asis the southeastern peninCamhodia, Cochin-China, Tonquin, Anam, etc. It was formeriy known an farther India.

## Indo-European Languages,

 also cailed Abyan or Indo-Gemmanic, the most important of the great families into which hnman speech has been divided, spoken by various peoples in Asia and Eurone. The chief branchen of this family are the Tentonic or Germanic, including English, German, Dutch, Danish. Swedish, Icelandic, and the extinet Gothic c the Siavonic (Polish, Ramian, Bohemian) ; the Lithuanian; the Celtic (Welsh, Trish, Gaelic. Breton) ; the Latin or Italic, and the Romance tonguen deacended from it (French, Italian, 8panigh. Porturuese) : the Greek, the Armenian, the Persian, and the Sanskrit. All these tongues are regarded as being descended from a common ancestral tongue or parent speech. snoken at nome remote period in the oririnal home of the Aryans. Thly home has bean varit ously lociont in Central Avien Ecend- Writern. See Phidolopy.
 nected with Centrril Indik, and conslotina of ueveral detached portions, the largest being bisected by the Narbada; total aree, 8400 aq. milen. It forms the remnant of the covereignty of the Mahratta dynasty of Holkar, and Holkar as the fumily name is associated with the title Maharajah, which belongs to the ruler of the tate. It is traversed by the Vindhya Mountains, and much of the country in well wooded. Indore is generally fertile, the cultivated crops including whent, rice, millet, cotton, sagarcane, oil-eeede, tobaceo, and opium, which in one of the principal producth. Among the inhabitants are nnmerous Bheels. The ruling clase are Mehrattas. The Holkar dynasty was fonnded by Mnlhar Rao ahout the midide of the eighteenth century. Their dominions were at one period much more extended than at pretent. Pop. about 850,000 . - Irmore, the capital is of modern origin, and in recent times has rapidly increased. The Maharajab's palace is the most conspleuous edifice. The British refidency is one of the handeomest in Hindustan. Pop. (1011) $44,947$.

## Indorsement (in-dors'ment) or $\begin{gathered}\text { or } \\ \text { DORSEMENT. }\end{gathered}$

 Indra (in'dra), a Hindu deity, originally representios the sky or heavens, and worshiped in the Vedic period as the supreme god, though he

Indra.-Coleman's Hindu Mythology.
afterwards assumed a subordinate piace in the Pantheon. He is commonly repretented with four arms and hands riding on an elephant. When painted he is covered with eyer. He is pat once beneficent as giving rain and shade, and awful and powerful in atorm as wieldiog the churderbolt. In one aspect be is lord the ingerior sode and pionis men dwell in fuil and uninterrupted meapuone tollicity. Indre (apdr), a department of Central France: area, 2008 aquare milea. It belongs to the beasin of the Loire, which receiven its watern by the Indre, a river of 140 miles length, the Crense and the Cher. The department if generaly flat, and nearly two-thirds of the auriace fin arable. Large erops of wheat and barley are produced; other important crops are hemp and flax. A conaiderable quantity of land is occupied hy vinesards. The minerale inclnde iron, IIthographic stonee, and eeveral varieties of marhle. The principal manufactnres are fine woolen cloth, and iron and nteel goode, linen, howiery, etc... Custennroux II the capital. Pop. 290,216.
Indre-et-Loire (apdr-twir), a deFrance: area, 2377 partment of Central belongs to the basin of the Loire, and is traversed both by it and its tributary the Indre, as also by the still more important tributarien the Vienne and the Crense, besides the Cher. They are all navizable within the department, and furnish it with almost nnlimited means of water communication. The surface is finely diversified, and more than onehalf is arahle, Hemp and fiax are extensively cultivated, and fruit is very ahundant. Iron is worked to nome extent; and there are valuahle millstone quarries. Clay, hoth for ordinary purposes and the finer kinds of pottery, is ahundant. The manufactures are not of much importance. Tonrs is the capital. Pop. 337,916.
Induced Current (in-dant'), the tricity which is produced or exent of elecconductor when the magnetic field in which it is placed is altered in any way; that is, 1st, when the strength of the current in a neighboring conductor is altered: or 2 d , when a neighboring conductor in which a current fows is altered in position; or 3d, when a neighboring mafnet is moved; or 4th, when the magnetization of a neighboring magnet is altered. Thus, if there is a closed circuit, say a coll of wire with its ends joined, throngh which no current is passing , the motion of a magnet in its neighborhood will induce a current in it, the direction of this carrent heing always such as to oppose the motion. Induction (in-dnk'shnn), in logic, is by which we that process of reasoning to the general, rise from the particular to deduction. In inductionater-process
ne not onls mieed into gnerals, but thene into stll hirhor reneralities. In following thir method we procied from the known to the unknown, and obtain 2 conclution much wider than the preminew. Thut a person who has had any experf ence eatily arrive by induction at the conclugion that fire buins wood, and when any piece of wood whatever is presented to him he will have no hewitation in mas: ins that fire will burn it. An it is impoarible that all particulars can be obeerved, there is always a certain risk of error, and the inductive method must be worked with extreme cantion; but wcience properly so called would be impossible if we did not presnppose a faculty of arriving from experience at the lnowledge of truths not contrined in that experience. Hence the ground of induction fr the established fact that nature is uniform.
Induction, in English ecclesiatical clerk premented to a benefice with the temporalites thereof. The person inducting taken the clerk by the hand, and lays it on the ring key, or latch of the chnrch-door or wali of the church; or he delivers a clod, turf, or twis of the glebe, and thns fives corporal possession of the chnrch. The doors are then opened, the clerk pnt into the church, and the bell tolled to make the induction known. The incnmbent must assent to the Thirty-nine Articles and the Book of Common Prayer, and take the oath of allesiance. In Scotland the minister is inducted by the presbytery. Induction, Eirectronagnertc, the of electricity is produced in a conductor when the magnetic field in which it is placed is altered in any way. See In duced Current.
Induction, Elecriostatic, the acbution of a charge of electricity on a condnctor is altered by the approach of an electrified body. When a body charged with one kind of electricity is approached towards an insulated conductor which originally had no charge, a charge similar to that of the influencing body is produced on the remote side, and an equal charge of the opposite kind on the near side of the insulated condnctor. It is to the mutual induction be tween the two coatings. one charged positively, that the Leyden-j-r is indebted for its large electrical capac 'ty.
Induction, Maakitic. the action by stances become magnetic when in a matnettic fleld, that is, when in the
seichborhood of magnets or correnty of electricity. See Elootro-magnetiom, Mes notiom.
Induotion-coil, an instrument inkorfin in which rapid breaking and mating of the current of electricity in a primary short coil of wire sives ris to a succenolion of induced current: (wee In. duced Owrrent) of very great electro-

Induction-eoil.
motive force in a long secondary coll. Such a coil often consists of a copper wire many miles in length, and a succemsion of powerful sparks passes between its terminals when the primary current is ranidly made and broken.
Indulgence (in-dul'jens), in the Roman Catholic sys tem is the remistion granted by the church to a repentant sinner of the temporal punishment due to his sin, whether this punishment be the pains of purgatory, or penance which the chnrch has the right to impose according to the gravity of the sin. It must be understood that the indulsence is never to be considered as constituting a remission of the sin itself. The principle of indulgencem rests on that of good works. Many saints and pious men have done more good works and suffered more than was required for the remission of their sins; these are known as works of supererogation, and the sum of this surplns cono stitutes a treasure for the church, which is under the control of the pope, who is privilesed to make use of it as he finds advinable in exchange for pious works. Indulsences are of two kindn: plenary, when conuidered an equivalent subatitute for all penance; and partial, when only a portion of penitential works is relared. Local indulgences are attached to particular placel, real indulgences to varions good works. The historic orisin of indulgences is traced to the public penances and the canonical punichments which the early Christian church im. posed on offenders, especially on those who were gulity of any frievolas crime. such as apostany, murder, and adultery. When ecclesiastical discipline became milder it was allowed to commute these punishments into fines for the ben: efit of the church. The firat remorded instance of the use of the name indulgenen was by Alexander II in the
eloreath century, but the inutitation foulf was in full development durint the Orumades At firnt the only cource of indulgencen wan in Bome, and they coald be obtained only by soing there. The supponititious abuse of granting induisencen inflamed the seal of Luther, and the Protentant theologians have alway found indulgencen one of the mont amailable points of the Roman Catholic nyatem.
Indus (in'dus), the chief river of the a length of about 1800 miles, drains an area of about 370,000 mquare miles and rises in Tlbet on the north of the Himalaya Mountains. At first it flows in a northwesterly direction, but after bursting through the Himalayas flows fouthwest till it enters the Indian Ocean. At Attock it is joined by the Kabul from Afshanistan, and here, 950 feet above the sea, it is nearly 800 feet wide, and from 80 to 60 feet deep accordin: to the season. Near Mittankot it receives on the east the Panjnad, or united stream of the 'Five Rivers' of the Punjab. In Slnd it gives off several extensive arms or canals, which are of great valide for Irrigation; and below Haldarabad It divides into a number of mouths. Its delta extends about 130 miles along the coast. Vessels drawing more than 7 feet cannot generaliy enter any of lts mouths ; but steamers of light draught ascend from Haidarabad to Multan.
Industrial and Provident Societies, societies that carry on some trade for the mutual benefit of the members. In Great Britain various acts have been passed for the regulation of such socleties, the most lmportant being in 1876, amending and consolidating all previous acts. The Societies which may be registered under thls act are societies for carrying on any labor, trade, or handlcraft, whether wholesale or retail, of which societies no member other than a society registered under this act shall have or clalm an interest ln the funds over $£ 200$. No society can be registered which has a membershlp of less than seven persons; and every society mast have a registered office; must pubilsh its name outside the office and elsewhere; must submit its accounts to an annual public audit; must sead annual returns to the regintrar, etc. A register of its memberi names must be properly lept. The registrar, on application of one-fith of the members, may, with the consent of the treasurer, appoint ore or zore faspectors to ex amine into the affairy of the society and
report thereon. Socleties of thim Ind have made no progrens in the U. B. Industrial Education in a broad cludes all rocational education sense in $n$ the industries. In common usage, how. ever, the term is not applied to the profesolonal training of the encineering echools (see Tochnioal Schools), or to manual training of the elementary schools (see Manual Training), but to the fleld of specialized training lying between the two. Both trade and technical education are the development of the nineteenth century, and owe their appearance, on the one hand to the growth of the factory gatem with its division of labor and the breakdown of the apprenticeshlp system, and, on the other, to the increased application of science to the industries. The first lmportant step in the direction of such education in the United States was the establishment of a number of evening schools under private auspices. The first trade school establlshed in the Unlted States was the New York Trade School, founded in 1881. Another movement led to the establishment of preparatory trade schools for youths of legal working age, who now leave the elementary schools in large numbers. These schools do not aim at specialized trade tralnlng, but afford instruction that will glve a boy or girl a definite advantage in entering upon the work of mill or factory, or in entering upon apprenticeship at a skilled trade. A part-time or co-onerative plan, is also emplover ln some citips.
I. W. W. (Indostrial Workers of Organizations.
THE WORLD). See Labor

Inertia (in-ér'shi-d), or Vis Inemine (Lat the power of inactivity'), the passiveness of matter or lts indiference to rest or motion. Newton's first law treats of thls property, in virtue of which a body at rest will remain at rest, and a body in motion will continue to move in a straight line and with a uniform velocity unless some force acts upon it.

## Infallibility

( In -fal-i-bil'i-ti), exemption from the possibiiity of error in regard to matters of both faith and morals-a clalm made by the Roman Catholic Church both on its own behalf and on that of the pope. The infailibility of the church is of two kinds, active and pasaive; the former signifylng the function of the church of authoritatively settling doctrinal disputes; and the latter that property in virtue of which she 'an never embrace erroneove doctrlne. The infailibility of the pope was settled in the Vatican Council, 1870. The dogma whe
then formulated in the following terms: -'We teach and define that it is a dosma divinely revealed; that the Roman ponthif, when he apeaks eathedra-that is when in discharse of the office of pastor and doctor of all Christians, by virtue of his supreme apostolic authority, he defines a doctrine regarding faith or morals to be held by the univeral church, by the divine assistance promised to him in blessed Peter-is possessed of that infallibllity with which the Dlvine Redeemer willed that His church should be endowed for defining doctrines regarding faith or morals, and that, therefore. such definitions of the Roman pontiff are irreformable of themselves, and not from the consent of the church.' A considerable body refuse to acknowledge the infallibility of the popes. See Old Catholics.
Infant (in'fant), a term in the Engt persons who have not attalned their majority, that is, the age of twenty-one years. In general, contracts made by infants are not blnding, except for necessaries suited to their state. Belng an infant ls no bar to criminal proceedings: but young persons are not punlshed for of fences if they have not knowledge and discretion to distinguish them to be such. Infants require the consent of parents or guardians to marry. The jurisdletion in respect to infants is generally vested in either probate or orphans' courts.
Infante (ln-tan'te), or INTANT (from siven in sat. infans, chila), the title given in Spain and Portugal to the princes of the royal house. The princesses are called infanta.
Infanticide (infan'tl-sid), the murcrime that is especially common In the case of Illegitimate children, the main cause being shame; but infanticide is sometimes the result of puerperal insanity. In trial for infanticlde it must be proved that the child was born fully alive. Infanticide was prevalent in Greece and Rome. In modern times many barbarous natlons are guilty of wholesale chlld-murder. Among the South Sea Islanders and aboriglnal Australians the destruction of infant life is systematized. The Hlndus destroy female children without compunction, and abortion ls common among the Mohammedans. In Chins, also, infantlcide is common.
Infantile Paralysis, an infections form of spinal paralycis occarring efre quently in young chlldren. It comes on suddenls, and the paralysie iteolf may
not be obresred until several days have elapued. The early gymptoms are sover. convulatons rometimes romiting and numbness or tingling in the uimbs afiected. The paralymis affects nsmally one leg, more often two, occurionall the arms and the face. The whole of the limb is not necessarily paralyzed ; often only a certain sroup of musclen is affected. These muscles rapldly waste and become fiacecid. In less severe casen not the whole limb but only a sroup of mutcies is affected, and there is always mome hope of return of power. Usually, however, a llmb paraiyzed in infancy doen not grow. Few cases are fatal.

The alarming increase of the diecase in the United states withln recent years has led to wide study and much speculation. Investigations have shown that the disease is transmisslble and that it is due to a speclicic organism. During the acute stages of the disease, therefore, patients should be isolated and all discharges from the nose and month should be disinfected. Treatment at the outset should be directed to the relief of the pain, and the promotion of elimination by means of laxatives, nourishing food, hot baths, etc. About a month afterward local treatment of the atrophled musclem should be commenced, and effirt made to prevent deformitles. For the connection of the stabie fly with infantile paralyois see Stable Fly.
Infantry (in'fan-tri), foot-soldlers collectively. Except among semibarbarous nations, and during the prevalence of the lnstitutions of chivalry, infantry has alwavs been consldered the most important military arm, and this has been peculiarly the case since the formation of standing armles. Infantrv may be divided into varlons classes, most commonly lnto light lnfantry and infantry of the llne. Under equal circumstances well-trained infantry is almost universallv successful against any other kind of tronps.
Infant Schools, institutions established in the latter part of the eighteenth century for the education of very young children, Waldbach, In Alsace, and New Lanark, In Scotiand, are both clalmed as the cradle of the lnfant school
Infection (in-fek'shun) a term some-
times used to slgnify the commnnication of disense through the atmosphere, as contrasted with contapiom (com, and tango, to touch), communics: ton of divense through the medlum of touch. In many cabet infection and contagfon are used at aynonymous. Some diseases may apread in both mannern,

## Infentions Discases. See Oontagiom Infernal Machines (In-fer'nal); contrivances made to resemble some harmlens ohject,

 ret flled with a dangerous explonive. They are arranged to be set off hy clockwork, or on opening a box containing the exploaive. The bombe of dynamite or other explosive substance now so often thrown or set off hy a fuse for the purpose of causins denth or dentruction of property must be classed in the same caterory.Infinite ( $\mathrm{in}^{\prime}$ fin-it), a term in metaphysics, which has been the source of much controverny. Some maintain that there correnponds to infinity a distinct notion; while others affirm that the word is a name for a mere negative, that we can never really form any dif tinct idea of the infinite.
Infinitesimal (in-fini-tes i -mal), in mathematice, an infinitciy small quantity, or one which is no smm as to be incomparahle with any finite uantity whatever, or which is lens any asalgnable quantity. The infl -al calculus is a department of t 5 mathematics which emhraces b differential and the integral calcolus.
Infin tive (in-fin'i-tiv), the indefnite mood of a verb, or that in which the verh is represented without a subject: he mere name-form of the verh. As ti zerb expresses an action, or a state, it generm iy beloags to a suhject Those action or state is expressed; but if we wilh to express the mere idea of this actio or state we use the infinitive, wich, therefore, in many languages is employed without further change as a snbatantive-for instance, in Greek and German only preceded by the nenter article. The infinitive may be regarded as the point of transition from a verb to a substantive, and is often used as the subject of a proposition.
Infirmary (in-firm'a-ri). See HosInflammation (in-fla-máshun), a morbid process, of which the most obvious phenomena are pain, swelling of the affected part. perceptible increase of heat to the patient, and redness beyond the natnral degree, often followed by febrile symptoms. Inflammations may arise from external injuries, or may be hrought on hy morbid or poisonous matters in the syatem, sudden changes of temperature, etc. The three commonly deacribed terminations of infiammation are resolutien, swppuration and mortification or
sloughing. Resolution is that recovery from the diporder which is effected withont the intervention of any disorganising procema, and when the vempels return to their normal condition on the excitias cause of the disorder being withdrawn and this is the mont favorable mode of termination. If inflammation cannot be remolved it may go on to suppuration, When the skin is either divided by the knife or hreaks of itmelf, and there is an encape of a jellow, cream-like fuid, after which the symptoms may ahate. The tendency to suppuration is marked by the pain becoming fall and throhbing, while the pulve becomen more full withont being lems frequent. Mortification is accompanied hy the sudden ceasation of pain, and there is the actual death of the part affected. When the circumstances are favorahle this dead part slonghs of hy a vital process known as ulceration, and the cavity gradually fills np and heals. In many cases indammation may rather be considered as a malutary process than as a disease, for it frequently prevents evils which would occamion either serious or fatal consequences. The most important remedy in cases of severe inflammation is hot fomentations, hlisters, hloodletting the warm bath, combined with low diet and perfect quietude. In the beginning cold is excellent. As to inflammation of the intestines, wee Bn teritio; of the eye, see Iritis; of the bowels, see Peritonitis; of the hrain, see Meningitio; of the lungs, see Preumonia. Inflection (in-flek'shun; Latin, inResio, a hending), in grammar, the changes in form which words undergo in consequence of standing in certain relations to other words in a sentence. These changes occur for the mont part at the end of words, and the inflectional elements were all probably at first separate vocables. To inflection belong those changes which comprise cases, numbers, persous, tenses, etc. In some languages we have pasitive proof of inflections being formed of words originally distinct. Thus Fr. aimerai, I shall love, the future of aimer, to love, is, literally and historicalls, I have to love, and is compounded of aimer, to love, and ai, I have, the first person present indicative of avoir. The same is the case in Italian and Spanish. The loss of inflections is a common feature of the Romance tongues as compared with the Latin, on which they are hased, and is also a featnre of English as compared with Anglo-Saxon. The result in both cases in much less freedom in the arrangement of words, but this is probably counterbalanced hy greater perspicuity.

Inflorescence in-lormeme, in botiny, the mode of low. ering of any apeciee of plant, that th the manner in which itu bloseome are grouped together, and in zome casee in which they are sucecesively npen. The

Varietyes of Injlomagcince.

1. Spike. -2, Amentum or Caticin. 3, Recema. 4. Punicle. ${ }^{6}$, Whori. 8 . Umbel-a, rimple, b, compound. ${ }^{7}$, Cyme. 8, Corymb. 9 , Thyrrua. 10, Head or Capitulum. 11, Fasciculur or Fascicle. 12, Spadix. 13, Anthodium.
principal forms of inflorescence are the amentum, oorymb, oyme, reoorne, paniole, thyrsus, spike whorl (see those termi): oentrifugal and centripetal are also terms applied to two kinod of inflorescance.
Infiruenza (in-fib-en'zn; Italian, indenote an epidemic catarrh of ased rather severe character, the symptoms of which are those of what is usually called a cold, with others such as lassitude and general depression, loss of sleep, feverishness, nausea, loss of appetite, somecimes vomiting, often an inflammatory 3tate of the throat and pharynx, bronchitis, or other complications. It is not usualiy fatal, the patient generally recovering in a week or ten days, but it sometimes leaves behind chrouic bronehitis or consymption. An infectious zorm of influenza, known under the name of la grippe, has at intervals srread extensively. An epidemic of it began in the Unitei States ahont 1890, and mince that date it has never quite ceaped, necasionally breaking out severeiy. it fis very apt to leare the puttent with come ce
sanic wenknem. In 1918 a form of the disease known as Bpanish Infucuse Ewept over the world, with fatalition extimated at $6,000,000$. Spain, Indla, Great Britala and America, were the chiet sulfareste. Information (in-ror-minghan) in cusation exhibited agninst a percion or 20 nome criminal offence. It difters in no renpect from an indictment, except that it is filed at the mere diecretion of the proper lav offer of the goremment $\infty$ oficio, withont the intervention of a trand jury. The procem has not been put in motion by Congreme for misdemeanor, but is common in civil promecutions, for penaltien and forfeitures. The information is usually made upon knowledse given by rome other person than the owncer, called the relator. The term allo denoté a written statement made on oath before a juatice of the peace previous to the issuing of a summonis or complaint against a permon.
Informer (in-former) in law, a pernon who informs or preferm an accusation against another, whom he unspects of the violation of some peral statnte. When the informer io entitice to the penalty or part of the penalty, npon the conviction of an offender, he is or he is not a competent witnese, according as the atatute creating the peralty has or has not made him so. The early legislation in England, granting rewards to informern, gave rlve to the most flagrant abusen, and police oficem made a trade of seducing poor, fznorant persons to the commission of crimen, et pecially the issuing of counterfeft money, to gain the reward.
Infusion (in-f0'zhun), a molution of some vegetable subitance in hot or cold water, such an are often used for medicinal parpowes. The water employed may be at boiling heat, but if the substance is itself bolled the result in a decoction. In preparing certain infusions cold water is preferable, as bringing out the constituent desired. The process of making an infusion is mnch the same as that of making tea.
Infusoria (in-fa-só'ri-a), clase of minute, mostly microveopic. animals, so named from being frequently developed in organic infusiona, provisionally regarded as the highest clase of the Protozoa. They are provided with a month, are dentitute of preadopodia, but are furnished with vibratle cilla. Most are free-awimming, but wome form colonies by bndding. and are fixed to a solld object in their adult condition. The body consiatis of outer transparent cuticie layer of firm sarcode called the cortical
hajep, and a central man of memlliguid macode which acts as a stomech 4 nucleve, having attached to its outcide 2 apherici particle callod the nucleolns, is embedded lo the cortical lager. Contrio-

tions of the body are effected by marcode fibers. The cillia, with which most are furnished, are not only organs of locemotion, but form currents by which food is carried into the mouth. Reproduction takes place variouely. They are divided into three ordern, Ciliata, Suctoria, and Flasellata, in accordance with the character of their cilia or contractile filaments. Many of the organisms formerls included amons Infusoria are now regarded as vegetable.
Ingalls (ing'galz), Joun Jayzs, dleton Mtatesman, was born in Miamoved to Atchison, Kansas, in 1858 , rewas elected to the State Senate in 1862. From 1873 to 1880 he was a United States Senator, and attained a wide reputation as an orator. He was president pro tem. of the Senate during his last three years of service. He died in 1900 . Ingelow (in'je-lo), Jran, an English in 1897. In 1863 she published a volume of poems, which ran through fourteen editions in five years, and her popularity afterward increased both through her prowe writings and her pnetry. In prose she wrote novels and tales for children, including MOpse the Fairy. Studies for Stories, Off the Skelligs, Sarah de Borenger, Don Jolin, etc. Her Kigh Tide
on the Oocest of Elsoolnoling 1571, was her mont tamous posio.
Ingemann (ingo-min) Buarzuro and noveliet, born in 1769 ; died in 1892 After attaining distinction by his lyric narrativo and drumatic poetry ho traveled in Germany, brance, and Italy in 1818-19, and on his return wrote historical somances (taiking scott as his moodel) illuntrative of the habits of his country. men during the middle ages; oome of these have been translated into Engelish. Ingersoll (in'ser-mol), EnNrur, natuiran, in 1852. He was employed, MichAaydem Survey and the Fish Commontion, and wrote a number of worke, including, Natural Hiotory of Noote and Birdis; Priendif Worth Knowing; The Ioe Bucen; Wild Nviohbore, etc.
Ingersoll, Rompre Grack, olator, born 1833. He was admitted to the bur in 1854, soon gained dintinction as an orator, and engaged in the Civil wiar as colonel of a cavalry regiment. He became attorney-zeneral of Illinois in 1886 , and in 1876, at the Republican National Convention, made striking oration in favor of the nomination of James $\mathbf{G}$. Blaine as a candidate for the Presidency. For years he lectured against the Chris. tian doctrinea, becoming very popular as a lecturer on this and other subjecta, but injuring himself in public entimation. He died in 1899.
Inglis (ing'gle), Henay David, a misburgh in cellaneous writer, born at EdinHis in 1795 i died in London, 1835. His works include Tales of Ardennes (1825), Spain in 1830 , Ireland in 1884. Of his fictitious works his Nevo Gil Blas. is the bent. Some of his works appeared under the pseudonym of Derwent Con-
way. way.

## Ingoldsby, Tromas. See Barharm,

 Ingolstadt (ing'oi-stat), 2 fortfied Danube, 35 miles 8 . wh Baparia, on the has an old and a new. castle, a fine old Gothic church, a Jesuit college, an arnenal, etc.; manufactures of ordnance and gunpowder, breweries, etc. Ingolstadt had a university of some celebrity, founded in 1472. but in 180 it was re moved to Munich. Pop. 22,207.Ingot (ing'got), a small bar of metal size by castine of a certain frrm and is chlefly arplit in moulds. The term is chiefly anplifed to the small massen or barm of gold and ailver intended elther for coining or exportation to forelga

Ingres
 Qusici, a swonen painter, borm ta 1781. He atudied under Livid. About 1804 he woat to thome where he rowlded for fifteen yearm, and efter a further realdence of four journ in Florence he nueceeded Denon in the Bchool of Fins Arta in Paris, his fame being by thle time fully entablished. In 1833 ho succeeded Horace Vernet as director of the French Academy at Rome In 1834 he was nominated Chevalier, and in 1845 commander of the Lecion of Honor. In 1855 he received the srand medal of honor at the International Exhibtion, and in 1862 he was made a senator and member of the councll of public instruction. He died at Paris in 1887. Among the best known of his numerous plectures are Bonaparte as First Coneul, CEdipus and the Sphine A potheosio of Homer, painted in the ceiling of one of the apartments of the Louvre; Birth of Venus, Jesus in the Midet of the Dootors, Molitere in His Study, Virgil Reading His Enoid to Augutut, etc.
Ingria (in'eri-a), a district of Ruseia, Ingria forming a part of the government of Petrograd, in which the capital, Petrograd, is situated, but at one time belonging to sweden.
Ingrossing (ingroining), in law. See Ingulphus (n- mul'fus) or Imaver, powed to have been born in Londond, is sup1030. He became a favorite of Edgitha, the wife of Edward the Confessor, who introduced him to William, Duke of Normandy. In 1051 he became his secretary, resigning that office in 1064, when he became a monk in the abbey of Fontenelle, in Normandy, whence he was invited to England by William, and created abbot of the rich monastery of Croyland. He died in 1109. A history of the monastery of Croyland from 664 to 1091 was long attributed to him, but is now believed to be a fabrication of the thirteenth or fourteenth century.
Inhaler (in-hailer), an apparatus for substances, as steam of hot and volatile of chloroform, iodine, etc.
Inhambane (in-ytm-bu'na), a Portuport on the east coast of Sonth Atrice There are coconnut-palm, sugar-cane and robber plantationa, and coffee frows wila. Native pon of dictrict, 800,000 . Pop. of town, 2300.
Ingeritance (in-heri-tans).
Inheritance Tax. Amposed or charye
the devolution of the properts of a doconsed perton to bis helre or jegatuen This is a rery old Zorm of taxation, and Wir timet vaposed in the Roman Empire to raice money for the support of the army. In Fangland such taxe are known $2 a^{2}$ 'death dutien' and were Irat impoond about 1780, althoush a stemp tar oxistod as earis ais 1694. Inheritance ture are now in force in practically all the countries of Europe and in meresal of the Unlted States. The form and rates of inheritance tax vary in the different stataGenerally, however, the tax is graduated according to the amount of property involved, in several stateo runntig from 1 to 5 per cent. $A$ fedoral tax on inheritances was pawed by Congrem in 1916, the tax being a progreasive one, succemively increabing from 1 per cent, on $\$ 5000$ to 10 per cent on $\$ 0,000,000$, no deduction being allowed on direct bequenta to children or by heads of familles as in Stato inheritance tares.
In the revenue moasuren passed in 1917 In a war eatate tax, which imposes upon the tranafer of each real wotate of every decedent dying after the passage of thin act, the transfor of which is tarable, ote.. taxes graduated from one-half of one per cent of the amount of the net estate not in excess of $\$ 50,000$, to a rate of ten per cent of the amonnt by which the net entate exceeds $\$ 10,000,000$. Exemption is made in respect to extates of those dying while serving in the military or naval forces of the United States dnring the war existing at the time the act was passed.
In Hoc Signo Vinces in hof sits), (Latin, In this sign thow shalt conguer). This legend according to tradition appeared on a laming croes in the sk to the Roman Emperor Constantine I before his battle with Maxentius.
Inia (in'i-a), a kenus of Cetacea belonging to the dolphin family, containing only one known species, f. geofiroyensio, about elght feet in length, pound in the Amason.
Initiative and Beferendum, a system of legislation by which the people of a state can either initiate measures to be enacted by their own vote into lawn, or cause laws enacted by the legialatura to be referred to them for approval or rejection. This system provails in Switearland and was adopted in South Dakota in 1898, and Oregon in 1002. In the latter stato it has been actively applicd and with an effect that has lod various other statee to adopt it, in the form of constitutional. amendments. These include Montan in 1808, Oklahoma in 1907, Mañe and Mar-
eoort in 1008, Artansens and Colopedo in 1010. Soveral ofter stateen bave asoptod it in partal form and it is growing in popularts. In 20 other atate, howeves, fit as tar roeching in scopo an in Oreson, and pormore eleo ith it in evels setivo opertion. The prinelple of the Inltiative and Ifoforeacium has been adopted in many cuter which have the comminalon form of covornment, as an important aid to ith filiconcy. To th in some instances, hat boen added the kecall, \& provilion which cilres the power to recall from ofice any oficiel with mhose enduct the public in ilmati-fed. The principle of the Recall ar applied to the fudiciary is etrenuously opposech.
Injeotions (in-fek'thunas), in surgery, to the diferent eifecto depirod to be proo duced, thrown by means of a prill syinge into the natural caritien of the boly, or thone ocendioned by divenco. Woppds and cores are usually cleansed In the way when thes extend far below tho mith. In diseares of the nose, the earb, the blelder and urethra, the uterun, ote, injections are often used. Pure warm wates if injected with the higheat succew for the removal of pus, blood, or even foreisn bodies Sometimes as: tringent medicinen, to restrain excessivo evacuatione, sometimes atimnlating ones, sometimes soothing medicaments, to mitigate pain, etc, are added to the water.

## Injector (in-jek'tur), an apparatum for supplying water anto-

 matically to steam boilers. Feed pumpa for feeding water into boilers are diffenlt to keep in order when driven at high speed, and nome lorm of injector in now in general use in place of high speed pumpe. The principle is to permit steem to encape from the boiler finto a chamber supplied with water from without, the steam presonre being sufflient to force this water into the boiler through an aperture opening into ith lower part. Injoctors are in general use in locomotive bollers, in which the steam pump worted only when the engine was in motion, wo that if it stood still for any length of time the water in the boiler was apt to set too low. The injector overcomes this deficiency and keeps the boiler constantly supplied with water when it is making steam.Injunotion (ip-jungk'ohun), a writ seal of a court of equity, to restrain proceedings in other courts, or a prohibitory writ restraining a person or perrons from doing some act which anpearst to he arainat equity, and the commitalon of which is not punisbable by
eriminal hav. Disobrdience to an injuacthon constituten costempt of court puarlobable accordingly. Tis froe une of the injunction power againat habor organiza. tions has of late years siven rico to much bitter foeling.
Inls, ariquor or pisment naed far writing or printing. All ordinary writing ink owe their properties to the pretence of zallate or tannate of iron held in suapension by means of cum. Gall-nuta contain gallotannic acid, which gives a black precipitate with per-malts of iron; they also contain pectom, which converts sallotannic acid, when exposed to the air, into gallic acid. This latter acid colors ferric saltu a much deeper black than the former acid. The envential point in the preparation of a sood writing ink are therefore the premence of an iron malt, an infurion of gall-nutu and gum , and the allowing the mixture to remain for some time exposed to the air. All other zubstances which are added to ordinary ink nat coloring matters in the place of cali-nutu only impalr ita quality. As ink is liable to become mouldy it is customary to add a emall quantity of such substances as emsential olle, carbolic acid, crnshed cloven, or sometimes corrosive sublimate, in order to prevent this result. For copying int a little sugar is added, which prevents it drying before a copy can be made. The so-called alizarin inke differ from ordinary inke in containing a little free actd, and uenally also a small quantity of in: digo dissolved in sulphuric acid, whict prevents too pale an appearance in writ. ing. Such inke become very black by exposure to ammoniacal fumel. Ink is nomeHimes prepared in calkes or powder, which when dicolved in water may be used as ordinary ink; the thickening ingredients added are usually madder and indigo discolved in sulphnric acid Colored writinginks, as red, blue, etc., are simply solutons of some coloring materials, cochineal and Brasil-wood being used for red. Prussian blue tor blne, etc. Gold and ailiver inks consist of a fine powder of the metals. suepended in a solution of sum-amebic.Marking ink usnally considte of a molution of silver nitrate thickened with gum and sometimes colored by means of sap-green. -Printing ink may be made br boling linseedeoll and barning it abont a minute. and mising it with lampleck, with an addition of soap and remin. If it be wished to obtain colored printing. Inke, this may be done by adding the necessary pigments to the oil while it is being heated. Vermilioz it wsed to nive aredi color, ultramarine for blues, and lead cbromate for yellows.-Lithographio ink,

## Inkberty or Wintmanmay (Ilest

 belonging to the holly family flicine with clony leathers leaves and black berrien. The pokeweed is also called by this name. Inland Waterways. The out. the Europenn war in 1914 focured the attention of the people of the United Statem on the question of inland waterways, which, in the matter of national defense are indispensable to the rapid mobilization of feets at menaced points. It gave fresh vigor to the acheme of co-ordinating the canals and waterways from north to вouth along the Atlartic coast. The first link of the chain connectis the Boston Navy Yard with the New Yorl Navy Yard by way of the Cape Cod Canal and Long Island Sound; the second link connecting the New York Navy Yard with the Phlladelphia Navy Yard will follow the line of the antiquated Delaware and Raritan Canal ; and the third, connecting the Philadelphia Navy Yard with the Navy Yard at Norfolk, is traced by the Delaware and Chesapeake Canai, which is to be improved to a ship's canal depth.Apart from this Atlantic Intra-Coastal Route there are many other waterways in the country which have been of great service in the transportation of commerce. Chlef of these are the Erie Canal conneeting the Hudsoa River at Albany and Troy with Lake Erie at Buitalo, deepened and improved from time to time till the completion of the New Yorl State Barge Canai in 1918; the Florida Coast Line Canal, from Mayport, Fla., to Miami Fla., a diatance of 370 miles; the Miam and Erie, from Cincinnati' to Toledo, Ohio; the Chesapeate and Ohio Oanal, from Cumberiand, Md., to Washington, D. C. In 1917 a Committee on Inland Water Transportation was organized for the movement of freight on the Mississippi and its tributaries, the vitimate object being the establishing of barge lines between New Orieans, St. Louls and the Twin Cities. See Camale. Inlaying (in-laning); is the art of of one subotance by inserting into carlitio
tion of the ciothing which they are aetually wearing), so that they may retain them as security for the price of theif lodsins and entertainment. The modern hotel if in a lepal senas an inn.
Inness (in'net), $G$ gosom, landscafe painter, was horn at Newburgh, New York, in 1825. No painter has repremented the aapecte of nature in the American climate with deeper feeling, a finer mentiment of light and color, or a better command of technical refources. His American Sunset was melected as a reprenentative wort of American art for the Paris Exposition of 1807. He died in 1894.
Innocent (in'u-vent), the name of thirteen popes, of whom onif the following need be particularily dealt with :-ImNocint 1, aucceeded Anab. tasius I as Blihoy of Rome in 402. H0 supported St. Chry contom, and renounced the communion with the Eantern churches on account of their treatment of that eminent man. In 409 he was sent to obtain terms of peace from Alaric, but without success. He died in 417, and is one of the most distinguiched sainter his day being Juil 28 .-Immocent II, a Roman of noble birth, elected pope in 1130 by a part of the cardinali, while the others elected Peter of Leon, who took the name of Anacletus. Innocent filed to France, where he was acknowledged by Louif VI and by Henry 11 of England; aiso by the Emperor Lothaire, who conducted him in 1133 to Rome, where Anacetus also maintained bis claims as pope. Innocent was oblized to retire, and though reinstated in 1137 Anacletus maintained himeelf untii his death in 1138 . Innocent in 1139 held the second ©Ecumenten Council in the Lateran, which condemned the opinions of Arnoid of Brescla, and declared the decrees of Anacletus null. Innocent died in 1143.-Inrociery III. Iothario. Count of Semi, born in 11A1, was unanimounly eiected pope at the ake of thirty-seven. He displajed arreat enerky and much enhanced the papal power. Af ercommunicated Philip, Auguatus, King o France, and laid his tinfdom under no interdict in 1200 becanes Philip had rejus diated his wife, and obliged the king in mbmit. He extorted a similar wibmit

## MICROCOPY RESOLUTION TEST CHART

(ANSI and ISO TEST CHART No. 2)

alon from John, king of England, who refuced to contirm the election of Langton an Archbiahop of Canterbury, by laying the kingdom under an interdict, and in 1212 formally deporins him. Amont all Christendom was now subject to the pope, two CruEadew were undertaken at his order, and hir influence extended even to Constantinople. The movement against the Albigenses and establishment in 1108 of the inquinitorial tribunals, from which the Inquinition itself originated, were noteworthy events of his pontificate. In 1215 he held a council by which transubstantiation and auricular confession were reaffirmed as dogmas, and the Franciscan and Dominican orders were confirmed: Innocent died in 1216. He left various works on legal and theological subjects; and the Stabet Mater, Veni Nancto Spir itus, and other sacred hymns, are said to have been written by him.-INNOCENT XI, Benedetto Odescalchi, born in 1611 , served in his youth as a soldier, took orders at a later period, and rose through many important posts, until he was elected pope in 1676, on the death of Clement X. He was eminent for probity and austerity. Though hostile to the Jemits, whose opinions he attacked in the decree Super quibusdam axiomatis moralibus, yet he was obliged to condemn Molinus and the Quietists. Being inrolved in a dispute with Louis XIV, the authority of the pope in France and elsewhere received a severe blow in the IV Propositiones Cleri Gallicani (Fonr Propositions of the Gallican clergy, 1682). These disputes were highly favorable to the English Revolution, as it induced the pope in 1689 to nnite with the allies against James II, in order to lower the influence of Louis XIV. He died in 1689, and was succeeded by Dlexander VIII.
Innocents, Frast or Howr, varioualy Childermas a festival observed in the Western Chnrch (including the Anglican) on the 28th, and in the Eastern Church on the 29th December, in commemoration of the massacre of the children at Bethlehem by the order of Herod. Innsbruck (ins'prook), a town of Tyrol, beautifully situated on the Inn, near the conflnence of the Sill, surronnded by striking gronps of lofty monntains. Among the chief buildings are the Hofkirche or Franciscan Church, containing the splendid tomb of the Emperor Maximilian I and the tomb of Hofer; the church of St. James: the imperial castle or palace; the Golden Roof, a sort of oriel window roofed with ellt copper, and projecting in front of a building originally
a palace of Count Frederick of Tyrol : the town-house ; the Capuchin munastery; the university; and the provincial museum. It has mannfactures of textiles, substitutes for coffee, etc. Pop. 53,194.

## Inns of Chancery, in London, nine

 institution: named Thavie's Inn, New Inn; Symond's Inn, Clement's Inn, Clifford's Inn, Staple's Inn, Lyon's Inn, and Barnard's Inn, formerly preparatory collezes for law students
## Inns of Court, four very anclent 80 -

 cieties in London exclusively invested with the right to call to the English bar; also the buildings belonging to these mocieties, in which the member dine and barristers have chambers. The gentlemen belonging to these societies may be divided inio benchers, outer barristerm, inner barristers, and students. The benchers are the highest in rank, being usually Queen's Counsel, and it is they who have the right of granting or refusing a call to the bar, or of disbarring persons unfit to practise. The four inns of court are the Inner Temple and Myddle Temple (formerly the dwelling of the knights templar, and purchased by some professors of law more than three centuries since); Lincoln's Inn and Gray's Inn (anciently belonging to the earls of Lincoln and Gray). Each inn is self-governing, and all have eqnal privileges. In each inn building there is a hall, chapel, library, etc., besides sets of chambers occupied by barristers and solicitors. Previousiy to being called to the bar it is necessary to be admitted a member of one of the inns of court and to go throngh a certain course of legal study and 'Keeping terms.'. Any person who has passed a public examination at any nniversity in the British dominions may be at once admitted as a student to any of the inns. Every other person must pass an examination in the English and Latin langnages and English history before a joint board appointed by the four inns. No solicitor, parliamentary agent, clerk to justice of the peace, or to any barrister, conveyancer, solicitor, etc... can be admitted as a stndent until such person ceases tn act in any of these capac. ities and has taken his name off the roll of any court on which it may stahd. The edncational year is divided into three terms. Attendance is not compulsory on students either at lectures or private classes; nor is it essential to study the practice of law in the chambers of a barrister or pleader. thoush this is recommended. A term is lept by the student being present at six dinners during the term in the hall of the society to whichbo belonge, or three if he is a member of one of tue British anjiversitien. Ditudents are required to pase an examination in Jurleprudence, Roman Oifil Law, Conatitutional Law and Legal History, the Law of Real and Perronal History, Common Law, Equity, and Criminai Law. there being four examinations in each year.
Inoculation ( in-o $\left.k-a-1 a^{\prime} s h u n\right)$, in medicine, the introduction, by a gurgical operation, of a minute portion of infective matter into contact with the true skin, for the purpose of exciting artificially a mider form of some contagious disease, and thereby protecting the human system against similar attacks in future; keeping in mind, however, that such a process can be only of efficacy in regard to diseases which attack us only once in the course of our lives, such, for instance, as smallpox. The term is chiefly used in connection with smallpox. The practice of inoculation with material taken from a smallpox patient, long followed in parts of Wales, was seemingly scarcely known throughont England till the early part of the eighteenth century, and its adoption was chiefly due to the exertions of Lady Mary Wortley Montagu, who became acquainted with it in Turkey. For many years the practice met with the greatest opposition, both from the medical profession and the clergy; hat later it came extensively in vogue, the smallpox thus induced being of a milder and much less often fatal type than ordinary smallpos. The great objection to it was that it tended to apread this serions disease, inoculated smallpox being equally infectious with the other kind. After the discovery of vaccination by Jenner, in 1798, inoculation was gradually superseded, and the British legislature even prohibited the latter, while making vaccination compulsory. See Emallpox and Vaccination.
Inosite (in'o-sit; $\mathrm{CaH}_{3} \mathrm{O}_{6}$ ), a sacInosite charine substance, isomeric with glucose, found in the muscular substance of the heart. in the lunge, kidneye, brain. etc. In 'Bright's disease' it has been found in the urine, and it exists also in several plants.
Tnouye, K aonu, Count, a Japanese of Cbosku in 1839. He made a vecret journey to Europe with Count Ito. serving as a common mailor on the vovage; and on their return thev. at the rive of their lives. anvocated the adoption of Western methods. After the rpstoration, in 1808, he was constantly emplojed by the government, as minister of public Forks and foritgis \#ecretary, He fat
raised to the peerage in 1885 and made ministor of the interior in $169 \%$.

## Inowraclaw (tnormitrize), of Jung-Bremad, etown

 of Prusaia, province of roan. It has large beds of rock-malt and caltpeter workn Kop. 26,141 .In Partibus Infidelium (l) in parall: belonging to infidels'), the title iven since the thirteenth century to birhops appointed hy the pope in countrie whero his sway is not recognized, and who having no proper dioceme, take their title from a territory which may have oned formed a see, hut does ho longer: thus Roman Catholic hishops in Britain for merly had such titles as Bishop of Nicopolis,' 'Bishop of Anazarba.'

## Inquest (in'kweat), See Coroner.

Inquisition (in-kwi-sichun), in the a court or tribunal estahlished for the examination and punishment of heretic. The institution was founded in the twelfth century hy Father Dominic, who was charged by Pope Innocent III with order: to incite Catholic princes and people to oppose heretics. Pope Gresory IX in 1233 completed the denden of his predecessors, and the Inquisition was successively introduced into several parts of Italy, and, with certain limitations, into some provinces of France. It never managed to establish itself in England at all. The trihunale of faith were admitted into Spain in the middle of the thirteenth century; but a firm opposition was made to them, particularly in Castile and Leon, and the hishopa there maintained thelr exclusive juriadiction in epiritual mattarm. A change. however, afterwardis took place; and while in other countries of Darope the Inquisition could never obtain a firm footing-in some falling entirely into diause, as in France-in Spain it became a political engine towards the end of the fifteenth century, under Ferdinand and Isabella, who used it as a wreapon to break the strength of the nobles, and to render the royal anthority absolute. In 1477, when several turbulent nobles had been reainced in the southern part of Spain, Queen Isabella went with the Cardinal Pedro Gonzalez de Mendoza to Geville, where this prelate, as Archbishop of Seville, made the firut aftempt to introduce the Inoulaition. expectally with refard to cittens of Jewith orifin. After thle the denien was discioned of extondins It over the whole conntrs. In the an semhly of the grates held at Toledo. 1480. the erection of the new tribunal was urred be the cartinal, ary after mome oppor
altion eatablished undor the name of the General or Supreme Inquiaitor. The new court was opened in Sorille in 1481. Tor quemada, prior of the Dominican convent at Segovia, and lather-confemsor to the Cardinal Mendow, had already been appointed by F'erdinand and Itabella the first srand inquiditor in 1478. The Dominican monantery at Seville soon became insufficient to contain the numerous prisonern, and more than 2000 persons are said to have been burned alive in the first year or two. The jope, however, opponed the establishment of the Spanish Inquisition as the converuion of an ecelesiastical into secular tribunal, and repeatedly summoned the inquisitor-seneral to Rome. Torquemada, instead of obeying, sent a friend to defend his cause, and in 1483 Sixtus IV was obliged to yield and acknowledge Torguemada as Inquisitor-general of Canstile and Leon, and a later bull subjected Aragon, Valencia, and sicily to the inquiaitor-peneral of Cantile. The introduction of the new tribunal was attended with risiogs and opposition in many placen, as at Saragonesa, but the people were obliged to yield in the contest. The tribunal was wholly dependent on the Spanish movereigns, and became a powerful instrument for establishing the arbitrary power of the ling on the ruins of the national freedom; for putting down the clergy, who had previously acknowledged only the jurisdiction of the Roman see; and for oppressing the nobles, and taking away the privileges of the estatem The property of those who were condemned fell to the king; and, although it had been granted to the Inquisition, it was still at his diaposal. Fer dinand and Isabella, indeed, devoted a part of this property to found convents and hospitals; hut the church, notwithstanding, lost many possessions by menns of the Inquisition. It is compnted that there were in Spain above 20,000 officers of the Inguisition, called familiars, who served as spies and informers. These posts were sought even by persone of rank, on acconnt of the great privileges connected with them. The snpreme tribunal, under the inquisitor-zeneral, sat at Madrid. He was ausisted by a council of six or seven, and there were various officials belonging to the court, the one xpecially appointed to carry on prosecntions beins called the fiscal. As soon as on arcuser appeared, and the fiscal har called upon the court to exercise their authority, an order was issued to seize the acensed. If he did not appear at the third snmmons he was excommunicated. From the moment that the prisoner was fo the powet of the court he was cit of
trom the world. The adrocate who was appointed to defend him could not speak to him except in the presence of the inquisitors. The accused was not confronted with the accuser nor the witnemses before the court, neither were they made known to him; and he was often subjected to the torture to extort a confession, or to explain circumatances which had not been fully explained by the witnessen. Imprisonment, often. for life, scoirgins, and the lows of property, were the punithmenti to which the penitent was subjected. Wearing the san-benito, or reat of penitence,- sort of coarse jellow tunic, with a cross en the breast and back, and painted over with devilsTres common method of punishment, the penitent having to wear it for a fixed period. When sentence of death was pronounced against tho accused the auto de fo, or ceremony of burning the heretic in public, was ordered. This usually took place on Sunday, between Trinity Sunday and Advent. As the chnrch never pollutes herself with blood; a servant of the Inqnisition, at the close of the procession and ecclesizstical ceremonial preceding the execution of the sentence, gave each of those who had been sentenced a hlow with the hand, to signify that the Inquisition had no longer ans power over them, and that the victims were ahandoned (relaxados) to the secular arm. A civil officer, 'Who was affectionately charged to treat them kindly and mercifully,' now received the condemned, bound them with chains, and led them to the place of execution. They were then asked in what faith they would die. Those who answered the Catholic were first strangled; the rest were hurned alive. Even in more modern times the original organization of the Inquisition was hnt little changed, but the auto da fo was seldom Fitnessed after the sixteenth century. The powers of the court latterly became more limited, however, hy various restrictions, and at last, under Joseph Bonaparte, it was abolished altogether in 1808. It was reeestahlished in 1814 by Ferdinand VII. hut on the adoption of the constitntion of the Cortes, in 1820, it was again abolished. According to the estimate of its historian, Llorente. tho nnmher of victims of the Spanish Inquisition from 1481 to 1808 amounted to 341,021 , n gross exageration, according to Prescott. Of this nnmber, 32,000 were burned.

The Inquisition, abolished for Italy hy IVapolenn in 1808, restored in Kome by Pins VII in 1814. still exists, nominally at least, as one of the 'congregations' The ceacornlip of the pross was under it.

## Insanity (in-min'til), a seneral term

 tellectual disorder, whether conminting in a total want or ulienation of underatanding, an in idiocs, or in the diseaved atate of one or neveral of the facultiem. Medical writers heve adopted different gystems of clansification in their trer.tment of this subject; but perhaps thi most convenient is that which comprises all mental diseases under the four heads of mania, melancholy, dementia or fatuity and idiocy. Idiocy is either a congenital or an acquired defect of the intellectual facultie. Oongenital idiocy may originate from a malformation of the cranium, or of the brain ittelf. Acquired idiocy proceeds from mechanical injury of the cranium, or from injury or disease of the brain, from excess in sensual indulgences, etc. (See Idiot.) Dementia is marked confusion of thoughte, loss of memory, childishness, a diminution or loss of the powers of volition, and zeneral weakmindedness ; it differs from idiocy in being curable. Cretinism, sometimes siven as a separate category, is a form of idiocy associated with a characteristic malformation of the body. Mania is a species of mental de: in ingement characterized by the disorder of one or several of the facultien, or by a blind impulee to acts of fury. Adults are the principal subjects. Females are more exposed to it than malen. Violent emotione, a dimipated life, excens in any indulgence, sometimen prodnco it. It is sometimes cured, but sometimes remains stationary, and sometimes is converted into dementla. Melancholy is a species of mental disorder consisting in a depression of spirita. Some dart or mournfnl idea occupies the mind exclusively, so that by degrees it becomea unable to judge rightly of existing cirenmetances, and the faculties are difturbed in their functions. Several hinds of melancholy are distinguished; the distinctions are founded, however, mostly on the canses of tie disease, among the more important of which are love, religlous views, repeated failures to reach an earnestly desired end, a sudden nervous shock, and the like. The course of the disease is various; sometimes it lasts a series of years; sometimes it ceases of itself, or is cured by medical aid. Very frequently melancholic patients commit suicide, a tendency that is not to be overlooked. In it also bodily health is likely to be neglected, thus leading to certain other dipeases. See Lunatio $\Delta$ splum, Luncoy. Non compos mentio. etc.Inscriptions, records, not of the nagraved or inseribed on s.one, metal, ciay,
of other durable matital. Inecriptone of this Idod remain in many cates our sole wource of knowledse of lons periods of ancient hiatory. Probably more than 100,000 inscriptions have been found of varled character, and an extendivo literature has grown up around them. Vory many of them are mortusry epitaph: Far more important are records of events in the history of kings, commercial contracts and religious inscriptions.

## Insecticides (in-mek'ti-n Id $z$ ), $\quad \mathrm{u}$ b-

 stances, not necemarily poinonouk, used to prevent or destroy the insect enemies of planth Biting or snawing insects are destroyed by mistures of arsenic, snch as Paris kreen, arsenate of lend, and London purple; sucking insects by suffocating substances, such ar soay, su!phur and hyrocyanic acid gas.Insectivora (in-sel-tiv'o-ra), an order of mammals living to a great extent on insects. They are plantigrade, and have a well-developed ctavicle, a discoidal placenta, incisor teeth larger than the canine, and molar teeth set with sharp conical cugps. They are usually of emall size, and many of them live underground. They are found throushont the world, with the exception of Australia and South America. The chie? insectivorous families are the Talpids or moles, the Soricide or shrew. mice, and the Erinaceidmor or hedgehows. Insectivorous Plants, plante which ishment from the insects entrapped by them. See Dionca, Aundev, Pitoherplant.

## Insects. See Entomology.

Insertion (in-uefrimun), in botany, the place or mode of attach: ment of an organ to its support. Insertion. is described as epigynows when on the enmmit of the ovary, hypogynoue when beneath the orary, and perioynous when npon the calyz surrounding the ovary.
Insessores (in-se-sbixes), in ornithology, the perchers or parmerine birds, an extensive order of birds comprehending all thowe which live habitually among trees, with the exception of the birds of prey and the climbing birds. The toes, which are three before and one behind, are specially adapted for perching and nest-building. These birds live in pairs, bnild in trees, and generally display great art in the construction of their nests. In them the organ of the voice attains it utmont complexity, and all our ainging birde belong to the order. The form of the boak varies widely, and thle has led to the entabuthmint of fotit
important mubordioate gruapn. (1) The Comirostres, or 'conical-beaked' Insercores; (2) The Dontirustres or 'toothbeaked' perchern; (8) The Tonuirostres, of alender-beahed perchers; (4) The Fheirontres, or cleft-beat (swallowe, sifty poat-rackers etc). In modern clasdications the Missirostres are gen-

A, Head of Hoopoe (Upupa epops), thowing the tonuinomall type of beak. B, Head of Red-backed Shrike (Lanime collurio), , howing the dentirostral type of beak. C. Head of White-bellied Swift (Cypedue malloa). Rhowing the fisairostral type of byf. $D$, Head of Corn-bunting (Emberisa miliaria), showing the conirotral type of beali. E. Foot of the Yoliow Wagtall (Motacilla sulphurea). F. Foot of a Finch (rringilla).
erally excinded from the order, which is also divided otherwise. Two main divisions, the coromyodi or singing-birds and the Mesomyodi or songless birds, are now generally recognized, the distinctive characters being based on the structure of the larynx. The former, again, are divided into the Turdiformes, or thrush-like birds; the Fringilliformes, or finch-like birds; and the Sturniformes, or starlingIIte birds. See also Ornithology.
Insignia (in-rigni-a), the name given power and dienity, such as the man of crown, the lvory chair, and the twelve lictors with their axes in the time of the Ruman links: the crowns and scepters of European monarchu: the pallium, the infula, the etafr, and ring of the higher orderm of the Roman Cattolic prienthood.

The name of insignia is also applied to the decorations wura by the diucrunt orders of merit.
Insolvency (in-colv'an-ail). See BanbInspiration (in-aph-ra'ghnn), is thedeas into the ology, is the infus:on of ideas into the human mind by the Holy
Spiri: By the inspiration of the Soripturea is meant the in ituence of the Holy Spirit exercised on the understandings, imatinations, memories; and other mentai feculties of the writers, by means of which they were qualified for communicating to the world divine revelation, or the knowledge of the will of God. Theological writere have enumerated several kinds or degrees of inspiration which are founded upon the supposition that God imparted to the sacred penmen that measure and degree of assistance which was just suited to the nature of the nubjects which they committed to writing, and did not supergede the use of their natural powers and faculties, and of their acquired knowledge, where these were sufficient. Thus distinctions have been drawn between in. spiration of direction, inspiration of superintendency, inspiration of elevation, and inspiration of suggestion. All orthodox theologians agree in ascribing divine assistance to the scriptural writers, but differ widely as to the degree, extent, and mosle of inspiration. The advocates of plenary inspiration assert that every verse if the Bible, every word of it, every syllable, every letter is the direct utterance of the Most High. In opposition to this theory some writers confine inspiration to all that is directly religious in the Bible, to all that is matter of direct revelation, leaving out of the question all that can be known by ordinary intellectual application. Other authorities attribute inspiration only to the spirit, ideas, or doctrines of the Scriptures, exempting the strict form or letter. Some go yet further, and include in the fallible sections the mode of argument and expository details.
Insterburg (en'ster-burg), a town of Insterburg Prussia, province of East Prussia, 16 miles west from Gumbinnen, at the confluence of the Angerap and Inster, which here form the Pregel. It has iron-foundrins, distilling, brewing, manufactures of linen, leather. and earthenware, etc. Pop. (1910) 31,627.
Instinct (in'stinkt). the power by which, independently of all instruction or experience, and without deliberation, animals are directed to do spontaneously whatever is necossary for the preservation of the indivinmal, or the continuation of the Ind. Three main
theoriee have been hald with regard to infunctrve actions:-(1) That theme vasyous impulsem and laculties were be stowed by the Creator upon each apecies as its necessary and characteristic outtit. (2) That ingtinct is the accumulated results of individual experience, fixed ky repetition, and transmitted as an inheritance to succeeding races. In this view instinct is intelligent in its origin, an organized experience, a lapsed intelli: gence: (3) That the greater number of complex instincts arise through the natural selection of variations of simpler instinctive actions-variations arising from unknown causes. The last theory is that of Darwin.
Institute of France $\left(\begin{array}{c}\text { (in-sti-tat) } \\ \text { principal philo- }\end{array}\right.$ sophical and. literary society of France, organized after the first storm of the French Revolution in $17 \%$, to replace the Académie Française, the Académie des Sciences, and the Académie des Belles Lettres et Inscriptions, its object being the advancement of the arts and sciences. The Institute now embraces five distinct dirisions or académies, each having a separate field of knowledge or thought: (1) The Académic Francaise, originally established early in the seventeenth century. Its department is the French language and literature, and its ordinary members number 40. (2) The Académic des Inscriptions et Belles Lettres; ordinary members, 40. (3) The Acadsmic des Sciences; ordinary members, 65. (4) The Académio des Beaves Arts; ordinary members, 40. (5) The Academio des Sciences, Morales, et Politiques; ordinary members 40 . Each academy has an independent organization and a free disposition of the funds committed to it Members are elected for life by ballot, and have an annual salary of 1500 francs. To each academy are attached a certain number of honorary members and foreign associates. Admission into the Academie Francaise is a great object of ambition with most French literary men. The name of this distinguished body was changed in 1848 to Institut National de France, having previously been called National. Imperial, and Royal at different times.

## Institute for Medical

Research, in important institution John D. Rockefeller in New eniowed by him with funis amounting in all to $\$ 8,400.000$. Its purpose, as at pres ent constitutar. is that of research into the canses of nbscure diseases and it neems cifeniated to prove of impiene
beneft a new houpltal has bera edacd to it, with 70 beds, to bo confined to thom nuffering from apecitied dimusees which ato under apecial examination by the racult: At prement these are contined to infantib paralyale, pneumonia and hoart dimace, In order that an exhaustive atudy of these diveatees may be nifide
Institutes, a book of elkments or wort containing the principies of a syatem of jurisprudence; an the lnotitutes of Justinian ; the Inetitutes of Gaius; Fre: kine's Inatitutes of the Law of Scotland. Instrument (in'utrö-ment), in music, ance for the production of musical monnd. Musical instruments are divided into three kinds-wind-instruments, atringed instruments, and instruments of percussion. The chief modern stringed inetruments are the violin, viola, violoncello, and double base, the harp, mandolin, suitar, and piano; the chief wind-instruments, the flute, oboe, bassoon, clarinet, basset-horn, serpent horn, trumpet, trombone, ophicleide, and organ; the chie! percussion instruments, the drum, tambourine, cymbals, and triangle.
Instrumental Musio, musle proinotrumento, as contradistinguished from vocal music Instramentation is guite a modern art, and may be said to have been first cultivated to any purpose among the Italians, who up until the middle of eighteenth century however, used only instruments of the viol kind, and who even yet are sparing in their use of wind instroments. In Italy, Leo, Durante, Jomelli, and Majo; in France, Ramean; in Ger: many, Haydn and Mozart, deserve the credit of carrying the art to a perfection up to their time undreamed of. Further developments of an important character are due to Berlioz and Wagner.
Insulator (in'sulin-tur), a body used to separate an electrified conductor from other bodies, and which offers very sreat resistance to the pamage of electricits. Glass, shellac. resins, sulphur. ebonite, sattapercha, silk, and baked wood are notable insulating materials. The cut shows the neral forms of insulatort

Iomalator.

In talearaph lines to
support the wires on the ports. They are umalls made of porcelain or clas. Insurance (in-shorans), is is comtruct wherefo for a ctop

one party undertakee to indemnify another against certain riakn. The party undertaling to make the indemnity is called the imaurer or underweriter, and the one to be indemnified the ascured or insured. The instrument by which the contract is made is denominated a polioy; the ovents or causes of loss ingured againat, riolis or perile; and the thing insured, the subjeot or ineurable interest. Marine insurance relatem to property and riske at sea: iusurance of properts on ahore againat fire is called fre insurance. Lifo iusurauce, iu its widest gense, is a contract entered into by the insurer to pay a certaiu beuefit contiusent upon the duration of one or more liven. Bealdes theae classes of insurance there are many othera: the traveler may insure himmelf acgainst loss entailed from damage by rail or sea; the farmer from the inroade of disease among his live atock; the employer from the fraud of a dishomest cashier, etc. Our atteutiou will, however, be confined to the first three divisions.
The practice of marine inaurance seems to have long preceded ingurances againgt fire and upon lives, and probably dates from the end of the fourteenth or beginning of the fifteeuth ceutury. It is, however, contended, on the authority of Livy, that traces of the practice mas be found during the second Punic war, while other writers, foundiug on a passage of Suetonius, ascribe the introduction of the principle to the Emperor Claudina, Nearer our own day, there are extant rules. of sundry guilds or social corporations of the Anglo-Saxons, whereby, in consideration of certain contributions, the members guarantee each other against loss from fire, water, robbery, or other calamity. Insurauce, viewed in its commercial ast pect, however, seems to have been first undertaken in Flanders. It is probable, from a statement in 43 Elis. chap. 工il, that iusurance was introduced into England by the Lombards early in the sixteenth century.

While all fire and life assurances are made at the risk of companies which contaiu within themselves the requisites of security, wealth, and numbers, a large proportion of marine insurances is made at the risk of individuals called underwriters. The London underwritere form an influential society known as Lloyd's. As a emall number of rinks would not secure a safe average to the individual insurer. owing to the great hazard property at sca is exposed to, he prudently takes but a fractional part of the entire risk on himeelf. and this im effected by sulbscribing or underuriting the stipulated proportion on a policy drawn out for the
entire aum to be covered. The necenity for circulating the policy and negotiating the ingurance has given riee to the bualness of the insuranoo broker, with which, however, that of the underwriter in frequently combined. Policies are elthet valued where the insurance is based on a specific bill of lading or open, where in the case of lons, the value of a vensel with her stores is estimated as at the date of aliling, her freight at the amount she would have earned had the voyase beeu succeafully accomplished, and her cargo at its invoice price, adding premium and all chargen. The losmes against which the insured is not protected are:-1. Acts of the government, nuch as the destruction of soode in quarantine. 2. Breach of the revenue laws. 3. Consequences of deviaHion from the terms of the policy. 4. Breachen of the law of nationa, such as failure in attempting to run a blockade. 6. Unseaworthinens, or incompetency of the master. 6. Loms arisiug from unusual protraction of the voyage. 7. Liability for doing damage to other vensels. 8. Average (which see).

Fire insurance is a contract of indemnity by which the insurer, in consideration of a certain premium, undertakes to indemnify against all loss or damage iu buildinge, stock, goods, etc., by fire during a certaln period. Insurances of this nature are hardly ever made by individualis. but almost invariably by corporations and joiut-stock companies. Fire insurauce ham been practised in Britain for nearly two centuriem, but was introduced considerably later on the European continent and in xmerica. At an early period after its institution it was considered in Britain a legitimate subject for taxation, the tax, however, being abolished iu 1869. No guch tax has ever been imposed in the United States. Insurances are generally divided into common, hazardous, and doubly hazardous, the premil m increasing with the degree of risk. Nothing can be recovered from the insurers in the event of loss uulens the party insuring had an interest or property in the subject insured at the time the iusurance was effected and wheu the fre happened. Sometimes no single office will insure to the required amount; in such a case it is done by different ofilices. Fire iusurance being a contract of indemnity. it is only the actual loss that can be recovered. The premises must not be materially altered, except by arrangement. during the risk, otherwise the policy will be void. The policy will also be vitiated should there be any misrepresentation or omission in the demeription of the subject insured, and the insurers do not hold themseives liable
tor loas of damage by foselon apemy, fot, fe any branch of the military nervice of civil commotion, or military or usurped power.

Life insurance is a much simpier contract in many reapectis than either of the yreceding. There can be but one ione, that caused by death, and therefore there is no partial lons nor average. The rate of 8 per cent. has senerally been adopted as a bavis for the calcuiation of premiuma. Life insurance companies are divided into three classel. The firat conniste of corporations or, joint-stock companies, who undertake to pay fixed sums upon the death of the party insuring with them: the profits of such societies are wholly divided amons the proprietors. The second ciass is formed on the hasis of mutual insurance, the members themseivem being the company, and liabie to each other for all claime, the profit accruing therefrom heing from time to time aliotted to the insured, senerally in the form of bonsusem, The third class, or mixed companies, are proprietary companies charging such increased rates af will yieid a bonus, but which, in return for the working expenses and guarantee of their capital, rewerve a stipulated portion of their profits for their proprietors. It is imponaihle to say with certainty which is the preferabie form. Life insurance not being a contract of Indemnity, a perton may insure in as many offices as he likes, and his executors will recover the full amount from each of the insurers. It is iegal for a wife to insure her hushand's life, as she is dependent upon him for support; or for a hurband to insure his wife's if she has an annuity or property settled upon her for life in which he has an interest ; or for a creditor to insure his dehtor's ilfe. The poilicy is void where ohtained hy false representations. Life insurances are often assigned as a security for deht; the assigner hinds himself to pay the premiums. Every life insurance company is bound to prepare a yearly statement of its revenue and of its balance-sheet according to prescribed forms, and must cause certain periodical investigations to he made into its affairs, and prepare and furnish to shareholders and poijcyholders periodical statements of its business.

Government Insurance. A Bureau of War Risk Insurance was created by act of Congress on September 2, 1914, insuring American vessels and their cargoes against the risks of war. Insurance was extended to cover the masters, officers and crews in June, 1917. A still further extension of the activities of the bureau was embodied in the War Risk Insurance Bill passed by Congress on October 6, 1017, pioviding insurance for all persons
dierm and saifiors misht appiy for inate ance in mitripien not exceeding $\$ 10,000$ for each any num on eaceuling 10,000 for each applicant premiums, payable monthly, are raded accoriling to age and average 88 per $\$ 1000$ per year. The insurance, which it not compulsory, providen for either death or disability.
Intaglio (in-tal'yo; Ital, from intagliare to incise, cut into); precious gtone or gem in which the subfect is hoiluwed out so that an impremsion from it would present the appearance of a bas-relief. The word is applied to a new method of newspaper printing, introduced Into America from Germiany, also called the Mertens process. In ordinary processes newspaper illustrations are printed from lines of type upon whose raised dots, previousiy inked, a sheet of paper is pressed, carrying away an inked impresfion ; but hy the intagio process the printing is done from the surface of inmiteiy minute depressions:

## Interdict (in tér-dikt), an ecciesias- <br> tical censure in the Roman

 Catholic Church, the effect of which, taken in its most extended sense, is, that no kind of divine service is cejehrated in the place or country under the sentence; the sucraments are not administered, the dead not buried with the rites of the church. This interdirt is cailed real or locml, while the personai interdiet regards oniy one or more persons.Interest (in'ter-est), the allowance made for the ioan or retention of a sum of money which is lent for, or becomes due at, a certain time; this allowance being generally estimated at so much per cent. per aunum, that is, 80 much for the use of $\$ 100$ for a year. The money lent or forborne is calied the principal; tiue sum paid for the use of it, the interest. The rate of interest is the proportional amount as compared with the principai for the use of money, as six per cent. for 100 cents of principal. Interest is either simple or compound. Simplo interest is that which is ailowed upon the principai oniy, for the whoie time of the loan or forbearance. Compound intereat is that which arises from any sum or principal in a given time by increasing the principai, at fixed period, by the interest then due, and hence obtainins interest apon both intereat and principal. The rate of interest, supposing the mecnrity for the principal to be equal, depend obviousiy upon what may be made by the employment of money in various industrions undestalinges of on the rate of

#### Abstract

proft Whore prodte are hish intorext - hish and vion weras; in fact, the rete of iaterctit stimply the net prout on capItal. Beldex this however, the intereat on ceeh particular loan must further vary cecordins to the eupponed rink of the lender, the supposed colvency of the bor rower, tce In Burope formerly the impoelition of interent was alternately prohibited and permitted, the cleres being zenerally unavorablo to the practice. Calvin was amony the frat to expose the error and impolicy of prohibition. In 1046 it first received a parliamentary sanction in Engiand and it was fixed at 10 per cent: In 1624 it wai reduced to 8 , in 1651 to 6 , and in 1724 to 5 , at which rate it remained till 1854, when all umury acts were repealad. Similar reductions have taken place is the United States bish rates of interest prevalling in newly setthed region and low ones in the older districte, 5 per cent being a common rate in the large citien and thickly settled States.

## Interference

(in-ter-fer'eny), in phyales the mutual action of wave of any kind (whether thoee in water, or sound, heat, or light waves) upon each other, by which, in certain circumatances, the vibrations and their effecte are increased, diminishat, or neatralized. When two minute pencils of light, radiating from two different luminous points, and making a small angie with each other, fal upon the same spot of a screen or a plece of paper, it is found that in some cases they illuminate the paper or screen more stronaly than either would have done singly, and sometimes they destroy each other's effects and produce a black spot or fringe. Such phenomena have been explained in accordance with the undulatory theory of light, and furnish a strong argument in tavor of that theory. The interference of waves of sound is a phenomenon which may be frequently observed in the beat of the tones of the heavier organ pipes. Again, to a person situated in the middle of a bell the sound wave from the vibrating segments of the bell interfere and produce only a moderate loudness, whereas to a person at a short distance outside the edge the loudness is intolerable.
Interior, Departuent of the, organministrative departments of the Uniterl States zovernment. Its head is the Secretary of the Interior, a member of the Cabinet. It supervisen ali public lands and patents, education, the census, penslons, the territories, Indian affairs, etc.

Interlaken (In-tor-Ha'en, 'bs tween the iakes ", a vil. lase in Switaeriand, in the canton, and 23 miles 8. I. of Berne, benutifuily oituated near the left bank of the Aar, between the laken of Thun and Briens much remorted to by tourists. Pop. 3747.
Interlude (in'tér-idd), orlginally an chestertainment cxuibited on the utage between the acts of a play, or between the piay and the afterpiece, to amuse the spectators, while the actorm reated or shifted their dress, or the scenes nnd decorations were changed. In England dramas uppear to huve borne this name frum the time they superseded the miracle and myatery plays till the period of the Elizabethan draina. The name in also given to a brief piece of church music, prepared or extempora, for the organ, and played nfter each stanza except the last of a metrical psalm or hymn. Interment (in-tér'ment). See Burial.

## Intermezzo

(in-tèr-met'so), in dramatic literature, nearly the same as interlude, a short musical piece, generally of a light sparkling charneter, played between the parts of a more important work, such as an opera, dramn, etc. Peces intended for independent performances are sometimes designated by this nume by the Freneh and the Italiaus. Intermittent Fever.
Internal Revenue, a term used States to designate revenue collected by the government from zaxes aside from those on imported koods. The first tax of this kiun was laid in 1791 on distilled spirits. Taxes were afterwands laid on carriages and several other articles. On the recommendation of President Jeffrrson, all internal taxes were renealed in 1802. and no others were authorized until 1813, when the war of 1812 made an increased revenuc necessary. After 1818 un such taxes were levied until 1861, when the Civil war compelled a re-enaetment of internal-revenue laws. A tax was imposed on a great variety of articles, also on incomes, sales, legapies, pte. By the acts of 1866,1867 and 1868 many taxas were nbolished, but revenue on spirits, tobneen, fermented liquors and a few other articles was continued. In the Spanish-Ameripan war, 1898, and the European war, 191418, internal revenue was relied on ehictly to meet increased expenditures. In Canada and Grent Britain the taxation which corresponds with the American internal revenue is known as excise (q. v.). Sce also War Revenue, Income Trio, etc.
