

...my way down to this place) I had the pleasure of meeting them all in good spirits, and riding the idea of having been called upon, which they said, was not surprising, as they had frequently assumed themselves on their way up by indulging in opinions in the different services caused by the annual appearance of a good crop.

...young men to indulge with their friends in the belief that they intended to make a move on St. Paul in favor of Tean, therefore it is not to be wondered at, that they were called upon.

...The Brule (which) in conjunction with a few hundred Indians, probably go on a war party next year, or if they choose to call some of their commanders Generals, and appoint one of them a grand commander, I fancy they have a right to do so, and I am sure that in a European General would be as much at a loss at the head of a brigade of Brule and wild Indians, as a Brule General would be at the head of European troops.

...I sincerely hope, and I am pretty certain, that the Brule will do nothing which will call for the interference of either the British or American authorities; and I trust the Hudson's Bay Company will not interfere in that which does not concern them. I am, Sir, Your obedient servant,

JOHN GEORGE MACKENZIE, A Brule.

William Thyer, Oct. 5. The Montreal Gazette will please give this one insertion.

Agricultural Report.

The month of September was dry, but cold for the season, and unfavorable for ripening in perfection late crops. At the end of August a large portion of the Oats in the district was green and unripe, and some of it remains green to this day. The greater part, however, has been cut and housed. Most of the Peas were cut at the beginning of the month, but are now green and in good condition. There was frost several nights in September, and all crops that were not sown, or not yet ripe, must have been some degree, particularly the Oats, which are Oats that are yet green, cannot be of much value. Buckwheat, Indian-corn and Potatoes were, with few exceptions, withered with frost early in the month, and could not subsequently have made much improvement. Buckwheat and Indian-corn must, in their unripe state, be put for any other use than feeding swine. The Potato crop will be considerably less productive, from being so early checked in their growth by frost before those that were late planted had arrived at their full size, and, indeed, before any of the crop were perfectly ripe. The general produce of this valuable crop must be further materially diminished in consequence of the dry-rot in the seed planted last spring. The dry-rot is a new and extraordinary disease in the vegetable, which it would be greatly desirable to find a remedy for. In England, early planting is found to succeed best in its prevention; my own experience would lead me to the same conclusion. I have, in a former report, recommended that potatoes intended for seed should, if possible, be stored in pits in preference to cellars or root-houses. When put into pits, it would be well to mix dry earth and sand, plentifully with the potatoes. They will then keep in a more healthy condition, and will not sprout, if the air is completely excluded, which it must be, to keep them safe. When they are required for planting in the spring, it is recommended that they be taken from the pits, and put into the ordinary state, and sown immediately. All this should be done in the same day, and the Potatoes as little exposed to the air as possible, until planted. Some varieties of Potatoes are more subject to dry-rot than others. I see by a late report from Scotland, that what are known as the Fothergill Reds, a variety introduced into that country a short time ago, are said "now to exhibit all the symptoms of decaying old age." My not the common red variety of Potatoes in Canada be affected in a similar way, and I believe they are. The remedy is easy, that is, to raise new seed from the apples produced on the stems of Potatoes, which, no doubt, are given for that purpose, because they do not appear necessary for any other. These apples should now be carefully gathered, and the seed preserved for sowing in the Spring. The apples should be taken from the best and most healthy plants, of an approved variety, and preserved in dry sand until the Spring; the seed may then be taken from the apple and sown in the garden, in properly prepared soil. The season has been favorable for Turnips, where not sown too early. They are not grown in this neighbourhood for any other purpose than the table. It would be well to find good food for horses, and would keep better than any other variety of Turnip. Carrots are not cultivated to any great extent. I believe they might be grown in Canada in much perfection as in any country on the globe, and to a much profit for the farmer. The expense of cultivation is not so great for potatoes. They will keep perfectly safe in soil that is fit to grow them throughout the winter, and are most excellent food for every description of Stock in Spring, when all other vegetables are scarce. The Meadows have not produced much late-maturing, or after-grass this fall, and the oats are not in so good condition as usual at this period of the year. Beef, though a fair price, cannot be considered high. Pork is much higher, or priced thus for many years past. It would now pay the Canadian farmer well, to feed Pork, provided his swine were of a good description, easy to be fed.

...in consequence of coming late into ear, and hence sowing the fly, yet I would most strongly recommend the early sowing of Oats, the moment the soil was in a fit state to receive the seed and be harrowed. I have invariably found a better and more valuable crop of Oats from early sowing than from late. If we must sow wheat late, in order that the crop may escape the fly, it would be well that the farmer should have his other crops early, so that they might be cut and secured in good season, and before the wheat was ripe. Peas also require early sowing. The produce of this crop this year is more abundant than usual. A large quantity of Hay has been sent to Quebec from this District, and especially from the neighbourhood of Montreal. The crop of Hay was not certainly so great this year as last in this District, and the whole of last year's crop being required for consumption, it would appear that Hay will probably maintain a good price throughout the next winter and spring. The straw is not very abundant, and every pound of it would be required for manure, were justice done to the farms it is produced upon. The apprehension of having to pay a high price for cattle provender, may induce some proprietors of farms and farms, but unless these owners are actually engaged in their having "chickens" on hand, they have no influence whatever on the price of provender, because they must be supported by whoever has them in possession.

In conclusion, I would wish the farmer to be convinced, that the more he is able to make his farm produce in every way, the more he will be able to enjoy of the comforts of life, whether produced in this or other countries. An abundant produce from the soil will extend the market for this produce, in various ways, which I hope it is not necessary for me to explain fully here. Abundant crops, and the increase of our flocks and herds, will afford us a surplus of exchangeable value, which will purchase the comforts of life for us, that our own farms do not directly furnish. This will encourage and extend commerce, and open a market for our produce, which we never could have, with scanty crops, and few and ill-fed flocks and herds.

Wm. Evans.

Cote St. Paul, Oct. 6, 1836.

Mexico.

Captain Turner, of the schooner Mary Hooper, arrived on Sunday from Matamoros, sailed August 27th, reports that Gen. Urea, the Mexican commandant at that place, issued, on the 20th of August, a proclamation, or general declaration of war, against the U.S. and Americans of the United States, occasioned by a report that the United States had recognized the independence of Texas. The movements of Gen. Urea were regarded as confirmations of the report, and very naturally. Subsequently, when Gen. Urea learned the falsity of the rumor, he recalled the proclamation, but to the great time it had much aggravated the already hostile feelings of the Mexicans against the Americans. A Mexican army of 12,000 men consisted of about 3500 officers, and 8000 having departed, and were now in the woods in the vicinity, and were daily committing depredations on the inhabitants of the Texas. The Mexicans, Teal and Carraes, remained in close confinement when the Mary Hooper sailed.

Lower Canada.

Three vessels with Royal names cleared out at the Custom-house this day; ship Prince George, bark Prince and brig British Queen, all for London. The united crews of these three vessels are one hundred and twenty-one years—Quebec Gazette.

United States.

STRENGTH SWALLOW.—This beautiful new boat, under the charge of Capt. A. M. Lewis, has now taken her station at a point near the New-York Albany and Troy line. Her construction is after the most approved model for speed; she is 221 feet long, 23 feet wide, and 10 feet high, and is capable of passing the bar without difficulty at all tide. The cabin and saloon are elegantly and appropriately furnished, and the arrangements on deck are in all respects well calculated to insure passengers comfort and convenience. Her speed is equal to that of any boat on the river. For the present she stands at Poughkeepsie only.

Commercial.

Table with columns for date (THURSDAY, OCTOBER 6) and various commodities like Flour, Sugar, Coffee, etc., with prices.

Table with columns for date (FRIDAY, OCTOBER 7) and various commodities like Flour, Sugar, Coffee, etc., with prices.

Table with columns for date (MONDAY, OCTOBER 10) and various commodities like Flour, Sugar, Coffee, etc., with prices.

MONTEAL MARKETS, Oct. 7.—A very good demand has existed for both Peas and Potatoes.

...of the stand still principle. With mouths open and hands extended, they have from the first settlement of the country, stood still, and cried to the soil give, give, give; until, on continued neglect and ill-treatment, it has become nearly exhausted and very unprofitably of its bounties; so much so, indeed, that its children, the enfans du sol, are in danger of starvation. Lower Canada was wont to export large quantities of grain—it now scarcely raises enough to supply its own wants.

Even as regards the increase of population, the Province may, comparatively speaking, be said to suffer from the stand still doctrine. It has not "gone a head" in this respect, as the neighbouring States, or as Upper Canada. Nor, again, have the inhabitants multiplied so rapidly in the Seigneurial parts as in those where a better state of things exists. The Vindicator, in its last number, furnishes an illustration of this. The population of the County of Montmorenci, which was early settled and blessed with feudalism, in 1831, was 3743, and is now 4127, being an increase in five years of 384. The County of Drummond, which was chiefly stocked with the children of British descent, had, in 1831, a population of 3568, being less by 177 than that of Montmorenci has, in 1836, a population of 5064, being an increase of 1507, or fully four times as much as that of the other. Should the fairness of the comparison, in these two instances, be questioned, the rate at which the whole population has increased, exclusive of immigration, will be found to be of a stand still kind.
