The copy filmed here has been reproduced thanks to the generosity of:

Douglas Library Queen's University

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Dougles Library Queen's University

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les examplaires originaux dont le couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par le dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par le première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles sulvants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

# HISTORY

OF THE

# British Settlements in America.

#### SITUATION AND EXTENT.

THE British dominion in America extending over a tract of country called, for the purpose of distinction, by the general name of British America, comprehends the vast and unknown extent of country, bounded south, by the United States of America, and the Atlantic ocean; east, by the same ocean and Davis's Straits, which divide it from Greenland; extending north to the northern limits of the Hudson's Bay charter; and westward to an unknown extent—lying between 42° 30' and 7° north last tude; and between 50° and 105° west long. from Greenwich; and between 25° east and 30° west long, from Philadelphia.

It is divided into four provinces, viz. 1. Upper Canada; 2. Lower Canada, to which is annexed New Britain, or the country lying round Hudson's Bay, and the Island of Cape Breton;—3. New Brunswick;—and 4. Nova Scotia, to which is annexed the Island of St. John's.—Besides these there is the Island of Newfoundland, which is governed by the admiral for the time being, and two lieutenant governors, who reside at Placentia and St. John's.—The troops stationed at Newfoundland, however, are subject to the orders of the Governor-general of the four British provinces.—Of each of these provinces our intention is to enter into a brief description.

## the mall bot them till a winters are more fevere. UPPER AND LOWER CANADA

#### souther the largest rivers are thosen over and the show lies SETUATION EXTENT AND BOUNDARIES OF

The provinces of Upper and Lower Canada, constituted by act of parliament in 1791, comprehend the territory heretofore called Canada, or the Province of Quebec; ituated between 42 196 and 500 north latitude, and 610 and 810 west longitude from London ; or 14° cast, and 6° west from Philadelphia. Their length is about fix hundred miles, and their breadth five hundred

and fifty car and officereged by Scarana with the These provinces are bounded on the north, by New Britain; on the east, by the Gulph of St. Lawrence, and part of the Province of New Brunswick; on the south-east and south, by the district of Maine, New Hampshire, Vermont, New-York, and the lakes; the western boundary is undefined. The Province of Upper Canada is the same as what is commonly called the Upper. Country. It lies north of the great lakes, between the latitudes of 46° 30' and 50°, and is separated from New York by the river St. Lawrence, here called the Gataraqui, and the Lakes Contrie and Eric amount and but have out of the character of the

Lower Canada lies on both fides the river St. Lawrence ween 61° and 51° W. Ion. from London; and 45° and 529 Lat, and is bounded fouth by New Brunswick, Maine, New Hampshire, Vermont, and New York; and well by Upper

Cineda.

The line which divides Upper from Lower Canada commences at a floor boundary, on the north bank of the lake St. Francis, if the cove, west of Pointe du Boudet, in the limit between the township of Lancaster and the Seigneuric of New Longuevil. ranging along the faid limit in the direction of north thirty-four degrees well to the westernmost angle of the said Seigneurie of New Longwevil; thence along the north-western boundary of the Seigneurie of Vandreuil; running north, twenty-five degrees call. amtil it strikes the Ottawas river; to ascend the said river into the lake Tomiseanning; and from the head of the said lake, by a line drawn due north, until it strikes the boundary line of. Hudfon's Bay, or New Britain. Upper Canada, to include all the territory to the wellward and fouthward of the faid line, to the unnoil extent of the country known by the name of Canada, เด็งกับกับเยาไก้อยี่ อดุษา ยาก ความที่เก็บก็ต่องสิทธิ์ยที่เม

## AIR AND CLIMATE.

The climate is not very different from that of the New-England States; but as it is farsher from the fea, and more to the northward than most of them, the winters are more severe. Winter continues with such severity from December to April, as that the largest rivers are frozen over, and the snow lies commonly from four to six seet deep during the whole of that time. But the air is so serene and clear, and the inhabitants so well desended against the cold, that this season is neither unhealthy nor unpleasant. The springs open suddenly, and vegetation is surprisingly rapid. The summer is delightful, except that a part of it is extremely hot.

## harbone HISTORY OF ITS SETTLEMENT, &c. of departs

Canada was undoubtedly discovered by SEBASTIAN CAROT, the famous Italian adventurer, who failed under a committee from Henry VII. But though the English monarch did not think proper to make any use of the discovery, the French quickly attempted; we have an account of their filling on the banks of Newfoundland, and slong the lea coast of Canada, in the beginning of the fixteenth century. About the year 1806, one Denys, a Frenchman, drew a map of the gulph of St Lawrence; and two years after, one Aubort, a thip-mafter of Dieppe, carried over to France fome of the matives of Canada As the new country, however, did not promise the time and ing quantities of gold and filver produced by Mexico and Peru, the French for some years neglected the discovery. At last, in the year 1523, Francis I, a fensible and enterprising prince, fent four thips, under the command of Verasani, a Florentine, to profecute discoveries in that country. The particulars of this man's first expedition are not known. All we can learn is, that he returned to France, and next year he undertook a fecond. As he approached the coast, he met with a violent form; however, he came to near as to perceive the natives on the shore, making friendly signs to him to land. This being found improdicable, by reason of the warf upon the coaft, one of the failors threw himlelf into the les ; but endeavouring to fwim back to the thip, a furge threw him on Thore without figns of life. He was, however, treated by the natives with such care and humanity, that he recovered his fireight, and was allowed to fwim back to the ship, which immediately returned to France. This is all we know of Verszani's fecond expedition. He undertook a third but was no more heard of, and it was thought that he and all his company perished before he could form any colony

in ange, lone Jeques Carting of St Maloes, fet fail under commission from this French king, and on the goth of May arrived ats Cape Bonavista in Newfoundland. He had with him two small thips besides the one in which he failed He fed clong the coals of that ifland, on which he discovered inhabitants; probably the Efkimaux. He landed in feveral places along the coast of the Gulf, and took pollesion of the sountry in the king's name of On his return, he was again feat put wish a commission, and a pretty large force; his mairned in Agas, and passed the winter at St. Groix; but the season proved for levere, that he and his companions must have died of the feurvy, had they not, by the advice of the natives, made use of the decoction of the tops and bark of the white pines. As Cartier, however, could produce neither gold nor filver, all that he could fay about the utility of the fettlement was difrepanded: and in 1540, he was obliged to become pilot to one M. Roberval, who was by the French king appointed viceroy of Conade, and who failed from France with five veffels. Arriving at the Gulf of St. Lawrence, they built a fort a mid Cartier its left to commend the garrifon in it, while Roberval returned to Erance for additional recruits to his fettlement, MAt. lafe. having embasked in 1549, with a great number of adventurers, meigher he nor any of his followers were heard of more

This fatal accident to greatly discouraged the court of France. that for fifty years no measures were taken for supplying with necessaries the fettlers that were left. At last Henry IV. apinted the Marquis de la Roche lieutenant-general of Canada the neighbouring countries. In 1598 he landed on the Isle of Sable, which he absurdly thought to be a proper place for a fettlement, though it was without any port, and without product except briars. Here he left about forty malefactors, the refuse of the French jails. After cruizing for some time on the coast of Nova Scotia, without being able to relieve these poor wretches, he returned to France, where he died of a broken heart, His colony must have perished, had not a French ship been wrecked on the island, and a few sheep driven upon it at the same time. With the boards of the ship they erected huts; and while the theep lasted they lived on them, feeding afterwards on filb. Their clothes wearing out, they made costs of feel-Ikins; and in this miferable condition they pent leven years, when Henry ordered them to be brought to France, The king had the curiofity to fee them in their feel-skin dresses, and was lo moved with their appearance, that he forgave them all their offences, and gave each of them fifty crowns to begin the world anew. han and America We proposed with the

Ha soo, one Charvis, a commander in the Franck move proving to Canada, from whose heartenned with structy per poyage to Canada, from Whose heartenned republic with worse nich alouty pro with the same good fortune, but died while his was lord for a third. The many specimens of profit the he Canadian trade, at last induced the public to think this it. An armament was equipped, and the equipment of it. to Pontgrave, with powers to extend his differences up the river St. Lawrence. He failed in 1603, having in his going much Champlain, who had been a captain in the newy, and was man of parts and spirit. It was not, however, till the 1608, that the colony was fully established. This was accom plished by founding the city of Quebec, which from that tim commenced the capital of all the fettlements in Canada. The colony, however, for many years continued in a low well and was often in danger of being totally exterminated by the indians. As the particulars of these wars, however, could not ther be entertaining, nor indeed intelligible, to many of our readers, we choose to omit them, and in general observe the the French not only concluded a permanent peace with the la diens, but fo much ingratisted themselves, with them, they they could, with the greatest case, prevail upon them at one time to murder and scalp the English in their settlements. These pracsices had a confiderable fhare in bringing about a war win France, when the whole country was conquered by the Britis in 1761; and at the treaty of Paris, in 1762; was ceded by France, to the crown of England, to whom it has ever times. belonged to a raffer of the parties and the FACE OF THE COUNTRY, PRODUCE, &c.

Though the climate is cold, and the winters long and tedjous, the foil in general is very good, and in many parts extremely fertile; producing many different forts of grains, fruits, and vegetables. The meadow grounds, which are well watered, yield excellent grais, and breed vast numbers of great and small cattle. The uncultivated parts are a continued wood, composed of prodigious large and lofty trees, of which there is such a variety of species, that even of those who have taken most pains to know them, there is not perhaps one that can tell half the number. Canada produces, among others, two losts of pines, the white, and the red; four forts of firs; two forts of cedar

Tor a more particular history of this country the reader is referred to Char-Sevela's history of it; to the Encyclopedia Britannica; articles, Canada, Qu her, and America, No. 195, 200, and 207.

and oak, the white and the red; the male and female maple; three lorts of ath trees, the free, the mungrel, and the baltard; three forts of walnut trees, the hard, the foft, and the imooth; wast numbers of beech trees and white wood; white and red elms and poplars. The Indians hollow the red elms into canot fome of which made out of one piece will contain twenty perions; others are made of the bark; the different pieces of which they few together with the inner rind, and daub over the feams with pitch, or rather a bituminous matter relembling pitch, to prevent their leaking; the ribs of these canoes are made of boughs of trees. In the hollow elms, the bears and wild cats take up their lodging from November to April. The country produces also a vast variety of other vegetables, particularly tobacco, which thrives well. Near Quebec is a fine lead mine, and many excellent ones of iron have been discovered. It hath allo been reported that filver is found in some of the mountains,

The rivers are extremely numerous, and many of them very targe and deep. The principal are, the Ouattauas, St. John's, Seguinay, Despaires, and Trois Rivieres; but all these are swallowed up by the great river St. Lawrence. This river issues from the lake Ontario; and, taking its course north-east, washes Montreal, where it receives the Quattauais, and forms many fertile islands. It continues the same course, and meets the tide upwards of four hundred miles from the fea, where it is navigable for large veilels; and below Quebec, three hundred and twenty miles from the fea, it becomes fo broad and fo deep, that thips of the line contributed in the last war to reduce that city, After receiving in its progress innumerable streams, it at last falls into the ocean at Cape Rosiers, where it is ninety miles broad, and where the cold is intense, and the sea boisterous. This Fiver is the only one upon which any fettlements of note ere as yet formed.

A river has been lately surveyed, by the deputy Surveyor-General of Canada, from its entrance into the Bay of Renty, near Cardaraqui, to its source of Lake St. Clie; from which there is an easy and short portage across N. W. to the N. E. angle of Lake Huron; and another that is neither long nor difficult, to the southward, to the old settlement of Toronto, This is a short rout from Fort Frontinae to Michillimakkinak.

# PRINCIPAL TOWNS.

ault m

Mon which i St. Lawrence and St. Charles, or the Little River, about three hundred and twenty miles from the leas. It is built on a rock, partly of marble, and partly of flate. The town is divided into an upper and lower. The houses in both are of stone, and built in a tolerable manner. The fortiscations are strong, though not regular. The town is covered with a regular and beautiful citadel, in which the governor resides. The river, which from the sea hither is four or five leagues broadmarrows all of a sudden to about a mile wide. The haven, which lies opposite the town, is safe and commodious, and about five fathoms deep. The harbour is stanked by two bastions, that are raised twenty-sive seet from the ground, which is about the height of the tides at the time of the equinox.

From Quebec to Montreal, which is about one hundred and feventy miles, in failing up the river St. Lawrence, the eye is entertained with beautiful land(capes, the banks being in many places very bold and steep, and shaded with lofty trees. The farms sie pretty close all the way, several gentlemens houses, neathy built, shew themselves at intervals, and there is all the appearance of a flourishing colony; but there are sew towns or villages. It is pretty much like the well settled parts of Virginia and Maryland, where the planters are wholly within themselves. Many beautiful islands are interspersed in the channel of the river, which have an agreeable effect upon the eye. After passing the Richelieu islands, the air becomes so mild and temperate, that the traveller thinks himself transported to another climate; but this is to be understood only of the summer months.

#### solim yrome p to Scharolenkivienes. 19 retyr on and that

The town called Trois Rivieres, or the Three Rivers, is about half way between Quebec and Montreal, and has its name from three rivers which join their currents here, and fall into the river St. Lawrence. It is much reforted to by feveral nations of Indians, who, by means of these rivers, come hither and rade with the inhabitants in various kinds of furs and skips. The country is pleasant, and sertile in corn, fruit, &c. and great numbers of handsome houses stand on both sides the river.

#### MONTREAL.

Montreal stands on an Island in the river St. Lawrence, which is ten leagues in length, and four in breadth, at the foot of a mountain which gives name to it, about half a league from the river and to example to the league from the river and the companion of the league from the river and the companion of the league from the river and the river and the river and the river state of the river

of note

e dodw utokali utokali the fouth shore. While the French had possession of Canada, both the city and island of Montreal belonged to private proprietors, who had improved them so well, that the whole island liad become a most delightful spot, and produced every thing that could administer to the conveniencies of life. The city forms an oblong square, divided by regular and well-formed areets; and when taken by the English the houses were built in a very handsome manner; and every house might be seen at one view from the harbour, or from the southernmost side of the river, as the hill on the side of which the town stands falls gradually to the water. This place is surrounded by a wall and a dry ditch; and its fortifications have been much improved by the English. Montreal is nearly as large as Quebec, but since it fell into the hands of the English it has suffered much by fires.

The principal towns in Upper Canada are Kingston, on Lake Ontario, Niegara, between Lake Ontario and Lake Erie, and Detroit, situated on the western bank of Detroit river, between Lake Erie and Lake Huron, and nine miles below Lake St. Clair.

#### POPULATION.

Upper Canada, though an infant fettlement, is faid by some to contain forty thousand, by others, only twenty thousand intenditants. The truth probably is between them. Lower Canada, in 1784, contained one hundred thirteen thousand and twelve souls. Both provinces may now contain about one hundred and fifty-two thousand souls, which number is multiplying, both by natural increase and by emigrations.

#### RELIGION.

About nine tenths of the inhabitants of these provinces are Roman Catholics, who enjoy under the present government the same provision, rights, and privileges, as were granted them in 2774, by the act of 14th of George III. The rest of the people are Episcopalians, Presbyterians, and a few of almost all the different sects of Christians.

# TRADE.

The commodities required by the Canadians from Europe are, wine, or rather rum; cloths, chiefly coarse; linen; and wrought iron. The Indian trade requires rum, tobacco, a sort of dustiblankets; guns, powder, balls, and slints, kettles, hatchets, toys,

Nisgare and Detroit, though at present in possession of the British government, contrary to the treaty of peace, are, without any possible doubt, both within the limits of the United States.

and trinkets of all kinds. While the country was in possilion of the French, the Indians supplied them with poultry; and the French had traders, who, like the original inhabitants, aras verfed the vaft lakes and rivers in canoes, with incredible industry and patience, carrying their goods into the remotest ports of America, and among nations entirely unknown to use Theis again brought the furs, dec. home to them, as the Indians were thereby habituated to trade with them. For this purpole, people from all parts, even from the distance of one thousand miles, carie to the French fair at Montreal, which began in June, and fometimes lasted three months. On this occasion many solemnisties were observed, guards were placed, and the governor assisted to preferve order in fo great and various a concourle of lavage nations. But fometimes great diforders and tumults happened and the Indians frequently gave for a dram all that they were possessed of. It is remarkable, that many of these perious actually polled by the then English fettlement of Albany in News York, and travelled two hundred miles further to Montreal, though they could have purchased the goods they wanted cheaper at the former.

Since Britain became possessed of Canada, her trade with that country has generally employed from thirty to forty thing, and about four thousand seamen, Tille and Dalboost greet ne

# bny .... GOVERNMENT.

By the Quebec act, passed by the parliament of Great Britain in the year 1791, so much of the act of the 14th of George FII. passed in the year 1774, as relates to the appointment of a council for the government of the province of Quebec, is repealed; and it is enacted that there shall be within each of the provinces of Upper and Lower Canada, a Legislative Council. and an Affembly, who, with the confent of the Governor. appointed by the King, shall have power to make laws. The overnor may give or withhold his majesty's affent to bills passed by the legislative council and assembly, or referve them for his haroffy's pleasure. Bills reserved are to have no force till his bjerry's affent is fignified by the governor, which, to be valid must be lignified within two years from the time the bill is preferited to the governor. The governor must transmit to the secretary of state copies of such bills as have been assented to. which his Majesty in council may declare his disallowance of within two years from the receipt.

The Legislative Council is to consist of not fewer than seven members for Upper, and sisteen for Lower Cauada, to be summened by the Governor, who must be authorized by the King. Such members are to hold their seats for life, unless forfeited by four years continual absence, or by swearing allegiance to some foreign power.

The House of Assembly is to consist of not less than sixteen members from Upper, and not less than sifty from Lower Canada, chosen by the freeholders in the several towns and

ceives and the merchants of those countries.—A profit which is now exclusively enjoyed by British subjects, or foreigners residing in Great Britain, as intermediate agents; but, it may be said, that the fearcity of specie in America, and their great demand for English manufactures, will secure the fur trade to Great Britains—such, however, should remember, that the rapid progress of manufactures in the United States, aided by the present spirit of emigration in Europe, will soon lessen this demand, and leave the Americans at liberty to carry their fure and other articles to a market which will rapidly increase their specie sufficient to enable them to range the European and other markets, with that advantage which the British merchant has long experienced almost without a rivalmindeed, it is impossible to consider the rapid advances which America has made since her independence, without at the same time being convinced, that instead of drawing her supplies of manufactured goods from Great Britain, she will, er'e long, become her rival in the most important articles in almost every other European market.

intermecrica, and to Great manufacn Europe, carry their secie fuffint advana rivalhas made at inftead the willcry other diffracts. The council and affembly are to be called together at least once in every year; and every affembly is to continue four years unless sooner dissolved by the Governor. All questions are to be decided by a majority of votes of the members present. His Majesty may authorize the Governor to fix the time and place of holding the elections, (subject, however, to such provisions as may hereaster be made by the Legislature) and to fix the times and places of holding the sessions of the assembly, and to prorogue and dissolve the same whenever he shall judge it necessary.

The Governor, together with such of the executive council as shall be appointed by the King, for the affairs of each province, are to be a court of civil jurisdiction for hearing and determining appeals, subject however, to such appeals from their judgment as heretofore existed. All lands in Upper Canada are to be granted hereafter in free and common locage and also in Lower Canada, when the grantee shall delire it, subject nevertheless to alterations by an act of the Legislature.

British America is superintended by an officer stilled Governor General of the four British provinces in North-America, who, besides other powers, is commander in chief of all the British troops in the four provinces and the governments attached to them and Newfoundland. Each of the provinces have a Lieutenant Governor, who, in the absence of the Governor. General, has all the powers requisite to a chief magistrate.

# CAPEBRETON;

ANNEXED THE PROVINCE OF LOWER SANADA.

# SITUATION, EXTENT, &c.

The island, or rather collection of islands, called by the french Lie Island & Madam, which he is constiguous as that they are commonly called but one, and comprehended under the name of the Island of Cape Breton, his between lat. 45° and 470 N. and between 59° and 60°. W. long, from Longdon, or 14° and 15° E. long, from Philadelphia, and about 45 longuest to the castward of Halifax. It is about one hundred sailes and length, and fifty in breadth; and is separated from Nova Scotia by a narrow strait, called the Gut of Casso, which is des communication between the Atlantic Ocean, and the Cambo of St. Lawrence.

for a furrounded with little sharp-pointed rocks, separated to see the second other by the waves, above which some of their tops of which some of their tops of which some of the salt, turning towards the south. On the other parts of the coast there are but at few anchoring places for small vessels, in creeks, of between illets. The harbour of St. Peter's, at the west of the island, is a very commodious place for carrying on the sheery.

## CLIMATE.

Except in the hilly parts, the surface of the country has but.

Bittle folidity, being every where covered with a light moss and with water. The dampnets of the soil is exhaled in fogs, which rendering the air unwholesome. In other respects, the term is very cold, owing either to the prodigious quantity of long times or to the number of forests, that totally intercept the rays of the sun; the effect of which is besides decreated by a country of the sun; the effect of which is besides decreated by

# HISTORY OF ITS SETTLEMENT, &c.

Though some fiftermen had long reserted to this island overy framer, not more than twenty or thirty had ever fixed there.

The French, who took possession of it is August 1713, were

brough ened in the lar dred re haftily slous. of the Royale, and lived upon Fort Dauphin for their principal fettlement. This harbour was two lesgues in circumferance. The thips came to the very there, and were sheltered from winds. Forests affording oak sufficient to fortify and build a large city, were near at hand; the ground appeared less barren than in other parts, and the fishery was more plentiful. This harbour might have been rendered impregnable at a trisling expence; but the difficulty of approaching it a circumstance that had at first made a stronger impression than the advantages resulting from it) occasioned it to be abandoned, after great labeter had been bestowed upon the undertaking. They then turned that views to Louisbourg, the access to which was caser; and convenience was thus preferred to security: the fortification of Louisbourg, however, was not begun till 1720.

In the year 1714, some fishermen, who till then had lived in Newfoundland, settled in this island. It was expected that their number would soon have been increased by the Adadicis, who were at liberty, from the treaties that had been greated them, to remove with all their effects, and even to dispute of their estates; but these hopes were disappointed. The Adadicis chose rather to retain their possessions under the deminion of Britain, than to give them up for any precasious advantage they might derive from their attachment to Prance. These place was supplied by some distressed adventurers from Europe, who came over from time to time to Cape Breton, and the manber of inhabitants gradually increased to sour thousand. They were settled at Louisbourg, Fort Dauphin, Port Tanasant, Nerucka, and on the coasts where they sound a proper back for drying the cod.

This island was attacked by the English in 1745; and the event is of so singular a nature, that it deserves a particular detail. The plan of this first invasion was laid at Boston, and New-England bore the expense of it. A merchant Pepperel, who had excited, encouraged, and directed the prize, was intrusted with the command of an army of six thereford men, which had been levied for this expedition.

Though these forces, convoyed by a squadron from James's, brought the first news to Cape Breton of the danger that the send it; though the advantage of a surprise would have secured the landing without opposition; though they had but its hundred regular troops to encounter, and eight hundred inhabitants hastily armed, the success of the undertaking was still precareful. What great exploits, indeed, could be expected from a

ulitia fuddenly affembled, who had never fren a fiege or faced an enemy and were to set under the direction of fea-officers Theft unexperienced troops flood in need of the aftifside of force fortunate incident, which they were indeed

fromed with in a fingular manner.

The combruction and repairs of the fortifications had always heff in the cate of the garrison of Louisbourg. The folenwere eigen of being employed in these works, which they gred as conducive to their fafety, and as the means of procuring them la comferrable fublishence, When they found thole who were to have paid them, appropriated to themblude the profit of their labours, they demanded justice. It was denied them, and they were determined to affert their inter As these depredations had been shared between the chief in of the colony and the lubaltern officers, the foldiers could hasin no redrefs. Their indignation against these rapacious exsele to fuch a height, that they despiled all authority. sy had lived in an open rebellion for fix months, when the British appeared before the place,

This was the time to conciliate the minds of both parties, and vaite in the common cause. The foldiers made the first rances; but their commanders miltruffed a generofity of which they themselves were incapable. It was firmly believed at the foldiers were only defirous of fallying out, that they ght have an opportunity of deferting; and their own officers them in a manner priloners, till a defence fo ill managed them to the necessity of capitulating. The whole

hared the fate of Louisbourg, its only bulwark.

his valuable policilion, restored to France by the treaty of Air la Chapelle, was again attacked by the British in 1758, and taken. The possession was confirmed to Great Britain by the ace in 1763; tince which the fortifications have been blown up, and the town of Louisbourg dismantled.

# SOIL. PRODUCTIONS. &c.

The inhabitants never applied themselves to agriculture, the foil being unfit for it. They often fowed corn, but it feldom came to maturity; and when it did thrive to much as to be worth resping, it had degenerated to confiderably, that it was not lit for feed for the next harvest. They have only continued to plant a few pot-herbs that are tolerably well tafted, but must be renewed every year from abroad. The poornels and featcity of pattures has likewise prevented the increase of cattle. In a word, the foil of Cape Breton feems calculated to invite none but fifthermen,

Though the illand was entirely covered with forests before to was inhabited, its wood has fcarce ever been an object of trade A great quantity, however, of foft wood was found sheet to de firing, and fome that might be used for timber; but the might always been fearce, and the fir Lever yielded mineh refines The seltry trade was a very incomiderable object. It confilled wild in the lkins of a few lynxes, clks, mulk-rats, wild catavibe otters, and foxes both of a red and filver-grey colour, in thele were procured from a colony of Mickana Indiang who had fettled on the ifland with the French, and never could raise more than fixty men able to bear arms, The rest came from Stillehand or the neighbouring continent. Greater advantages might police bly have been derived from the coal mines, which abound in the island. They lie in a horizontal direction; and being a than fix or eight feet below the furface, may be worked will digging deep, or draining off the waters. Notweith prodigious demand for this coal from New-England, from year 1745 to 1749, these mines would probably lave been faken, had not the thips which were fent out to the Free islands wanted ballast. In one of these mines a fire has & kindled, which could nover yet be extinguished.

The people of Cape Breton did not fend all their will to Europe, they fent-part of it to the French fouthern iffind contwenty or twenty-five thips from feventy to one hundred forty tons burden. Befides the cod, which made at least male their cargo, they exported to the other colonies timber, pani thin oak boards, falted falmon and mackrel, train-oil; and he coal. All thele were paid for in sugar and coffee, but chiefly in rum and molaffes. The island could not confume sli there commodities. Canada took off but a small part of the overplus; it was chiefly bought by the people of New-England, who gave in exchange fruits, vegetables, wood, brick, and cattle. This trade of exchange was allowed; but a smuggling trade was added to

it, carried on in flour, and falt fish.

# POPULATION, CHIEF TOWNS, &c.

On this island there are about one thousand inhabitants, who have a lieutenant-governor refident among them, appointed by the king. The principal towns are Sidney, the capital, and Louisbourg, which has the best harbour in the island.

This island may be considered as the key to Canada, and the very valuable fishery, in its neighbourhood, depends for its prosection on the possession of this island; as no nation can carry it on without some convenient harbour of strength to supply and protelt it; and Louisbourg is the principal one for their purpoles.

# NEW BRITAIN;

ANNEXES TO THE COVEREMENT OF LOWER CANDA.

The country lying round Hudion's Bay, or the country of the Equipment, comprehended Labrador, New North and South Wales, has obtained the general name of Naw Battakin, and attached to the government of Lower Canada, A superintendant of tride, appointed by the Governor General of the four British Provinces, and responsible to him, reader at Labrador.

#### John Set C.L. I M.A. T.B.

The climate, even about Haye's river, in only lat. 57°, U. bring winter, excellively cold. The mows begin to fall in when the frost is most rigorous, in form of the finest land, he set on the rivers is eight feet thick. Port wine freezes e a folid mais; brendy coagulates. The very breath falls on blackets of the beds in the form of a hear frost, and the ed clouds often, are found frozen to the wall. The fun rifes, is the thereof day, five minutes past nine, and fets five minutes into these. In the longest day the sun rises at three, and sets out hims. The ice begins to disappear in May, and hot weather commences about the middle of June, which at times to violent as to scorch the faces of the hunters. Thunder is Brequent, but very violent. But there is a great difference best and cold in this valt extent, which reaches from lat. 50, 40, to lat. 6g north. During winter the firmament is not without its beauties. Mock funs, halos are not unfrequent; they are very bright, and richly tinged with all the colours of the rainbow. The fun rifes and fets with a large cone of yellowish light. The night is enlivened with the Aurora Borealis, which spreads a thousand different lights and colours over the whole concave of the iky, not to be defaced even by the fplendour of the full moon; and the stars are of a fiery redness.

In this leafon it however frequently happens, that the air is to full of watery vapours, that the fun will be obscured for several weeks together. This is occasioned by the rime, which ascends from the open sea water, and being condensed by the cold, is titten by the wind to a considerable distance at times, from forty

to hity miles.

The climate is very perceptibly milder in the interior, than in the parts on the sea coast. The snow is not half so deep, nei-

ther in the care of preca

The helia are un

In f

compa

and fer variou who c and fel health. other h vage an finest si nate wi toautur tremes ( frequen country of man demical Country

As far which is place call don, is for the great cific Oce the bay, with pine of differe rally run buildings, in the fan

But on fouthward Moofe an

ther are the hottest days in summer so sultry. If a then is frozenin the upper country, it is owing to his not having taken proper care of himself; whereas upon the sea coast, with every accessary precaution; a man will frequently have his note, sace, or singerends skinged.

The heavens in cold winter nights, do not exhibit that luminous appearance, which, as before remarked, is observable on the sea roast; nor do the stars shine with that resulgent lustre. The Aurora Boreslis is not so common nor so brilliant; the Parhelia and Paraselence are less frequent; and fogs in the winter are unknown.

In short, the see coast and the upper country will admit of no comparison: one is temperate and healthy, the land dry, pleasant, and fertile in spontaneous productions, and the animal creation various and excellent for the support of man; in it, a person who could live retired, might pals his days with cale, content. and felicity, and if he did not enjoy an uninterrupted state of health, it would not be the fault of the air he lived in. On the other hand, the lower country is one endless bog, where the savage animals themselves are sometimes constantly swampt. The finest summer's day will begin with a scorching heat, and terminate with a cold eatherly fea fog. The weather usually incident togutumn and midfummer, is experienced in their different extremes during the short space of twelve hours. The inhabitants frequently fall a prey to the severity of the frost. The whole country furnishes but one species of quadruped fit for the support of man; and the Europeans are accurfed with an afficting epidemical diforder, which they very emphatically term "The Country Distemper."

FACE OF THE COUNTRY, SOIL, &c.

As far inland as the Hudson Bay Company have settlements, which is six hundred miles to the west of Fort Churchill, at a place called Hudson House, lat. 53°, lon. 100° 27'W. from London, is stat country: nor is it known how far to the caltward the great chain of mountains seen by the navigators from the Pacific Ocean branches off. From Moole River, or the bottom of the bay, to Cape Churchill, the land is stat, marshy, and wooded with pines, birch, larch, and willows. The pine trees, which are of different kinds, are but small; near the sea-coasts they generally run knotty, and are unfit to be used in the structure of good buildings. The same may be said of the juniper trees, growing in the same fituation.

But on leaving the marshy ground, and retiring inland to the southward, the trees are of a more stately growth; and about Moose and Albany Forts, they are found of all diameters. Here

the climate is much more temperate than at York Fort and Churchill Settlement. Potatoes, turmps, and almost every species of kitchen garden fluff, are reared with facility; and no doubt corn might be cultivated, if the lords of the foil, the Hudiob's Bay Company, had patriotism enough to make this extensive country of any fervice to Great-Brittin. But it has been an invariable mixim with them for many years past, to damp every Lindable endervour in their fervines, that might tend to make thefe "countries generally beneficial to the Mother Country. This conduct will appear very extraordinary to those who are unacquainted with the felf-interested views of the Comsuny. They imagine, that if it was known to the nation, that the lands they possels were expable of cultivation, it might induce individuals to enquire into their right to an exclusive charter; it is therefore their buliness to represent it in the work light polible, to discourage an inquiry, which would shake the founlation of their beloved monopoly.

Throughout the woods to the fouthward the ground is covered with a very thick mols, among which grow various kinds of small shrubs, bearing fruit, such as gooseberries, currants, strawberries, respherries, eranberries, with many others too tedious to mention. A herb, which the natives call Wee fuc a pucha, grows very plentifully in all parts of the country. The Indians make use of it by way of medicine; it makes a very agreeable tea, and is much used here, both by Europeans and natives, not only for us pleasant flavour, but for its salutary effects. Its virtues are many; it is an aromatic, very serviceable in rheumatic eafes, strengthens the stomach, relieves the head, and allo promotes perspiration. Outwardly, it is applied to gangrenes, contusions, and excorations; in the latter case the powder is made ale of. Another herb of much utility to the natives grows likewise here; this they eall Jack ash a puck. They mix it with their tobacco to reduce its strength.

In the interior of the country is a great quantity of coal, which is conveyed down the rivers by the currents. A person belonging to the Hudson Bay Company once brought down a piece he had taken from the earth, where it was piled up in heapt. It was in every respect similar to that brought to London stom the North of England and Scotland. He said that he asked the Indians the use of it; and on their expressing their ignorance, he put some of it in the fire, which burnt violently to their treat astonishment. What other treasures may be concealed in this unknown repository, or what valuable ores may be intermixed with the coal, we will not take upon us to determine.

At these countries are well flored with mode, beaver, otters, &c. but the red deer, jumping deer, and buffaloe, are not to be found till where the country becomes more open, and so free from woods, that in many places scarce a sufficiency can be procured to make a temporary fire for travellers, who are obliged instead thereof to use buffaloe dung.

Many specious lakes are to be found in the inland parts. Medof these abound with sish, especially when joined to a river; but the natives seldom or never look after them, and the greater part of those Indians who come to the English settlements to trade, will neither est fish, water-fowl, nor any amphibious animal.

How far the foil of this country may be favourable to the culture of vegetables, we are not able to advance. Experiments, which should be our principal guide to knowledge in these matters, never having been much made use of, though we may venture to affert, that many parts would admit of cultivation. The Hudson's Bay Company servants have tried Indian corn and barley, by way of experiment, which came to perfection; potatoes, turnips, carrots, radishes, unions, &c, have been lately reased, and found as good as those in Canada.

The fruits which (pontaneously shoot up, are not in such great variety in the wildernesses of Canada, as in the country we are speaking of. The natives collect vast quantities of a kind of wild cherries and bring them in for sale. The Hudson's Bay people make an excellent beverage of them, which is grateful to the taste, and is an excellent antiscorbutic. Raspberries, strawberries, currents, cranberries, and an infinity of other kinds are to be found every where. So that a person, without the help of annuantition, may in the summer season procure a very comfortable subsistence, were he bewildered, and alone. Should any one be in this situation, almost every pond of water would furnish him with eggs of ducks, &cc. and every thicker with a satiety of delicious fruit.

The eastern coast is barren, past the efforts of curivation. The surface is every where uneven, and covered with masses of stone of an amazing size. It is a country of fruitless and frightful mountains, some of an astonishing height. The vallies are full of lakes, formed not from springs, but rain and snow, to chilly as to be productive of a few small trout only. The mountains have here and there a blighted shrub, or a little mots. The vallies are full of crooked, stunted trees, pines, sir, birch, and cedars, or rather a species of the juniper. In latitude 60° on this coast, vegetation ceases. The whole shore, like that on the west, is faced with islands at some distance from land,

Though Spile Ponk trekelles Churchill, Nelfon, Hayes, New Severn, Millen grand Moste einers, all which empty into Hudfon's and beginne Box from the west. The mouths of all the rivers are filled weight finels, except Churchill's, in which the largest ships may lie; which ten mileshigher the channel is obstructed by fund banks. All the mileshigher they have been explored, are full of rapide stand catacasts, from ten to fixty feet perpendicular. Down these allversche Indian traders such a quick passage; but their return is a labour of many mouths.

# THE THABITANTS, CUSTOMS, &C.

The inhabitants among the mountains are Indians; along the coasts, Esquimaux. The Hudson's Bay Indians, in all probability, were originally tall, properly proportioned, strongly made, and of as manly an appearance as any people whatever. This, however, was before their commerce with Europeans had energated and debaled their minds and bodies, by introducing spirituous liquors among them, and habituating them to severe courses of drinking. They are naturally much addicted to this fatal custom; but when it is encouraged and enforced by those who call themselves an enlightened people, it certainly is not only blameable, but highly criminal. Were common lense but made use of to direct the conduct of those who are benefited by the trade carried on with the Indians, lelf-interest and good policy would teach them to discourage, as much as possible, a habit so prejudicial to them, and fatally destructive to these miserable people. They are generally of a benevolent disposition, and easy to be persuaded by persons who understand their language; but as a must unconscionable gain is got by trading in spirits with them, it is not to be supposed the factors will eyer be induced to put a stop to this unchristian practice. An Indian will barter away all his furs, nay even leave himfelf without a rag to cover his nakedness, in exchange for that . vile unwholesome stuff, called English brandy. If by such excessive intoxication they only irreparably injured their own constitutions, and debilitated their race, the confequences, though pernicious, would not be fo dreadful as they usually are; but during their intoxication not only fresh quarrels ensue, old grievances are also renewed, and death is frequently the consequence of former bickerings, which but for this stimulator had been buried in oblivion.

By this diabolical commerce the country is impoverished of inhabitants, the trade of course imperceptibly declines, and this extensive settlement is in a great measure prevented from rivaling many of our other foreign establishments.

erished of , and this a rivaling per complexion, their features regular and agreeable, and few differted or deformed persons are seen among them. Maken your they have excellive large bellies, which is to beautibuted to the enormous quantity of food they devoure; but as they grow towards puberty this part decreases this common fize. Their constitutions are strong and healthy, and their disorders few; the chief of these is the dysentery, and a violent pala in the breast, which the English call the Country Distemper. The latter is supposed to proceed from the cold air being drawn into the lungs; which impeding the vessels from spreading throughout that organ, hinders the circulation, and renders respiration extremely painful and difficult. They seldom live to a great age, but enjoy all their faculties to the last.

In their dispositions they are mild, affable, and good-natured, when lober; but when intoxicated they are loft to every locial quality, and discover the greatest propensity to quarrelling, theft, and the worst of vices. When we view the fair fide of their characters, we find them kind, courteous, and benevolent to each other, relieving the wants and necessities of their distressed brethren with the greatest good-nature, either by counsel, food, or cloathing. The good effects of this excellent disposition are frequently experienced by themselves; for, as in their mode of life no one knows how foon it may be his own fate to be reduced to the verge of extremity, he secures for himself a return of kindness, should he experience that vicissitude. On the other hand they are fly, cunning, and artful to a great degree; they glory in every species of furacity and artifice, especially when the theft or deception has been fo well executed as to escape detection. Their love to their offsprings is carried to a very great height. From the state of childhood to maturity they seldom or never correct their children, alledging that when they grow up they will know better of themselves. Neither is this indulgence made a had use of when reflection succeeds the irregularities of youth; on the contrary, fentiments of reverence, gratitude, and love, link their affections to the authors of their being; and they seldom fail to give the utmost assistance to their aged parents whenever their imbecility requires it. in the

With respect to their corporeal abilities, they are almost without exception great walkers; they patiently endure cold, hunger, and fatigue; and bear all misfortunes with admirable fortitude and resignation, which enables them bravely to encounter the prospect of ill, and renders the mind ferene under the pressure of adversity. As their country abounds with innumerable

herds of deer, olks, and buffalors, they frequently make great flaughter among them; and upon these occasions they have no regard to futurity, or providing for an unfuccelsful day. Whether they happen to be pining under the grafp of pinching necessity, or enjoying themselves in all the happiness of health and plenty. they kill all they can, having an incontrovertible maxim among them, which is, " the more they kill, the more they have to kill :" and this opinion, though diametrically opposite to reason or common sense, is as pertinaciously held by them, as his tenets are by the most bigotted enthusiast. Indeed, they too frequently find it to their cost to be grounded on folly, as they sometimes suffer extreme hunger through it; nay, many have been starved to death, and others have been reduced to the fad necessity of devouring their own offspring.

As a great part of the Factory provisions confifts of geese killed by the Indians, the English supply them with powder and shot for this purpole, allowing them the value of a beaver Ikin for every ten geefe they kill; accordingly, after the Indian has got this supply, he fets off from his tent early in the morning into the marshes, where he sets himself down, with a degree of patience difficult to be imitated, and being sheltered by a few willows, waits for the geefe. They shoot them flying, and are so very dexterous at this sport, that a good hunter will kill, in times of plenty, hity or fixty in a day. Few Europeans are able to endure cold, fatigue, hunger, or adverfity in any shape, with an equal degree of magnanimity and composure to that which is familiar to the natives of this country. After being out a whole day on a hunt, exposed to the bleakest winds and most penetrating cold, and that without the least thing to satisfy the calls of nature, an Indian comes home, warms himfelf at the fire, fmoaks a few pipes of tobacco, and then retires to rest, as calm as if in the midst of plenty; but if he happens to have a family, he cannot always boast of this equanimity; when reduced to extremity, his affection for them predominates over his philosophy, if it might be so called, and it gives way to the most pungent forrow.

A belief in some over-ruling invisible power bears a principal share in the character of these unpolished Indians. By this he is induced to impute every occurrence of his life to supernatural causes. His good or had success in hunting, the welfare of his friends and family, his duration in this mortal state, &c. all depend upon the will and pleasure of some invisible agent, whom he suppoles to prefide over all his undertakings: for instance, one man will tayoke a compicuous star, another a wolf, one a bear, and

snother a particular tree; in which he imagines the Great Seing relides, and influences his good or ill fortune in this life.

The religious fentiments of these people, though confused, are is fome respects just. They allow that there is a good Being, and they fometimes fing to him; but not our of fear or adoration, for he is too good, they fay, to hurt them. He is called Kuch a men s.to. or the Great Chief. They further fay, there is an evil Being, who is always plaguing them; they call him Whiteleto. Of him they are very much in fear, and feldom cat any thing, or drink any brandy, without throwing some into the fire for Wassti-co. If any misfortune befals them, they fing to him, imploring his mercy; and when in health and prosperty do the same, to keep him in good humour. Yet, though oblequious fometimes, at others they are angry with him, especially when in liquor; they then run out of their tents, and fire their guns in order to kill him. They frequently perfuade themselves that they see his track in the mofs or fnow, and he is generally described in the most hideous forms. They believe that both the good and the bad Being have many fervants; those of the former inhabiting the air, but those of the latter walking on the earth. They have likewife an opinion that this country was once overflowed; an opinion founded on meeting with many lea shells far inland.

They have no manner of government or subordination. The father, or head of a family, owns no superior, nor obeys any command. He gives his advice or opinion of things, but at the lame time has no authority to enforce obedience; the youth of his family follow his directions, but rather from filial affection or reverence, than in confequence of any duty exacted by a superior. When feveral tents or families meet to go to war, or to the Factories to trade, they choose a leader, but it is only voluntary obedience they pay to the leader to chosen; every one is at liberty to leave him when he pleases, and the notion of a commander is quite obliterated as foon as the voyage is over. MERITALONE CIVES THE TITLE TO DISTINCTION; AND THE POSSESSION OF QUALITIES THAT ARE HELD IN ESTEEM IS THE ONLY METHOD TO OBTAIN RESPECT. Thus a person who is an experienced hunter; one who knows the communication between the lakes and rivers; one who can make long harangues; is a conjuror; or if he has a family; such a man will not fail of being followed by feveral Indians, when they happen to be out in large parties; they likewise follow him down to trade at the settlements; he is, however, obliged to fecure their attendance upon this occasion by promises and rewards, as the regard paid to his abilities is of too weak a nature to command subjection,

for perpetrating their revenge. Perfonal courage, patience under teardhips, and a knowledge of the manners and country of their adserfaries; are the qualifications fought after in the choice of a leader. They follow him, whom they have thus chosen, with fidelity, and execute his projects with alacrity; but their obedience does not proceed from any right in the leader to command; it is folely founded on his merit, on the affection of his followers, and their define of subduing their enemies. These sentiments actuate every breast, and sugment the union, while in more civilized nations such a compact is effected by a slavish submission to military laws; for as the soldier has no choice in his commander, it frequently happens that neither his abilities nor his character are calculated to gain their esteems

The Indian's method of dividing the time, is by numbering the hights elapsed, or to come; thus, if he be asked how long he has been on his journey, he will answer, "so many nights," From this nocturnal division, they proceed to the lunar or monthly division, reckoning thirteen of these in the year, all of which are expressive of some remarkable event or appearance,

that happens during that revolution of the moon.

Their method of computing numbers is rather abstruse, as they reckon chiefly by decades; as follows:—Two tens, three tens, &c. Ten tens, or an hundred tens. A few units over or under, are added or substructed. Thus, thirty-two in their tongue is ex-

prefied, by faying three tens and two over.

Those Indians of whom we have now been treating and of whom the Peltries are obtained, are known by the following names, viz. The Ne-heth-aw-a, the Assine-poetuc, the Fall, the Sussee, the Black-feet, the Paegan, and the Blood-Indians. These are the only Indians with which the Company trade, and consequently the only ones whose manners, customs, &c. are known.

The laudable zeal of the Moravian clergy induced them, in the year 1752, to fend missionaries from Greenland to this country. They fixed on Nesbit's harbour for their settlement; but of the first party, some of them were killed, and others driven away. In 1764, under the protection of the British government, another attempt was made. The missionaries were well received by the Esquimaux, and the mission goes on with success.

## ANIMALS.

The animals of these countries are, the moose deer, stags, rein deer, bears, tygers, buffaloes, wolves, foxes, beavers, otters, lynges, martins, squirrels, ermines, wild cats, and hares. The

n, in the country, at of the en away, ent, ano-

ags, rein , otters, cs. The win deer pale in wast herds towards the north in Ostober, focking the extreme sold. The male polar bears rove out at less on the floating ice, most of the winter, and till June the females lie concealed in the woods, or beneath the banks of rivers, till March. when they come abroad with their twin cubs, and bend their course so the sea in search of their consorts. Several are killed in their passage; and those that are-wounded show wast fury roar hideoully, and bite and throw up in the air even their own progeny, The females and the young, when not intersupted, contipue their way to the fea. . In June the males return to shore and by August are joined by their consorts, with their cubs, by that time of a confiderable fize. The feathered kinds are, geeles bustards, ducks, growse, and all manner of wild fowls. Indeed multitudes of birds retire to this remote country, to Labrador and Newfoundland, from places more remotely fouth, perhaps from the Antilles; and some even of the most delicate little species. Most of them, with numbers of aquatic fowls, are seen returning fouthward with their young broods to more favourable climates. The favages in some respects regulate their months by the appearance of birds; and have their goole-month, from the vernal appearance of geefe, from the fouth. All the growfe kind, ravens, cinercous, crows, titmouse, and Lapland finch, brave the severest winter; and several of the falcons and owls seek shelter in the woods. Of fish, there are whales, morfes, feals, cod-fish, and a white fish, preferable to herrings; and in their rivers and fresh waters, pike, perch, carp, and trout.

All the quadrupeds of these countries are clothed with a close, soft, warm sur. In summer there is here, as in other places, a variety in the colours of the several animals; when that season is over, which holds only for three months, they all assume the livery of winter, and every sort of beasts, and most of their sowls, are of the colour of the snow; every thing animate and inanimate is white. This is a surprising phenomenon. But what is yet more surprising, and what is indeed one of the most striking things, that draw the most inattentive to an admiration of the wildow and goodness of Providence, is, that the dogs and case from Britain that have been carried into Hudson's Bay, on the approach of winter have entirely changed their appearance, and acquired a much longer, softer, and thicker coat of hair than they had originally.

# DISCOVERY AND COMMERCE.

The knowledge of these northern seas and countries was owing to a project started in England for the discovery of a north west

passage to China and the East-Indies, as early as the year 15761 Since then it has been frequently dropped and as often revived, but never yet compleated; and from the late voyages of discovery it feems probable, that no practicable passage ever can be found. Forbisher discovered the Main of New Britain, of Terra de Labrador, and those streights to which he has given his name. In 1585. John Davis failed from Portsmouth, and viewed that and the more northern coafts, but he feems never to have entered the bay. Captain Hudson made three voyages on the same adventure, the first in 1607, the second in 1608, and his third and last in 1610. This bold and judicious navigator entered the streights that lead into the bay known by his name, coasted a great part of it, and penetrated to eighty degrees and a half, into the heart of the frozen zone. His ardour for the discovery not being abated by the difficulties he struggled with in this empire of winter, and world of frost and snow, he stayed here until the ensuing spring, and prepared, in the beginning of 1611, to purfue his discoveries; but his crew, who fuffered equal hardships, without the same spirit to support them, mutinied, seized upon him and seven of those who were most faithful to him, and committed them to the fury of the icy leas in an open boat. Hudson and his companions were either fwellowed up by the waves, or gaining the inhospitable coast, were destroyed by the savages; but the ship and the rest of the men returned home.

Other attempts towards a discovery were made in 1612 and 1667; and a patent for planting the country, with a charter for a company, was obtained in the year 1670. In 1646, Captain Ellis wintered as far north as 57 degrees and a half, and Captain Christopher attempted farther discoveries in 1661. But besides thele voyages, we are indebted to the Hudson's Bay Company for a journey by land; which throws much additional light on this matter, by affording what may be called demonstration, how much farther North, at least in some parts of their voyage, ships must go, before they can pass from one side of America to the other. The northern Indians, who came down to the Compamy's factories to trade, had brought to their knowledge a river, which, on account of much copper being found near it, had obtained the name of the Copper Mine river. The Company being defirous of examining into this matter with precision, directed Mr. Hearne, a young gentleman in their fervice, and who having been brought up for the navy, and ferved in it the war before last, was extremely well qualified for the purpole to proceed over land, under the convoy of those Indians, for that river; which he had orders to survey, if possible, quite down to its exit into the fea; to make observations for fixing

the latitudes and longitudes; and to bring home maps and drawings, both of it and the countries through which he should pals. Accordingly Mr. Hearne let out from Prince of Wales's Fort, on Churchill river, latitude 580 471 north, and longitude 940 71/ west from Greenwich, on the 7th of December, 1779, Mr. Hearne on the 13th of July reached the Copper Mine river, and found it all the way, even to its exit into the sea, incumbered with shoals and falls, and emptying itself into it over a dry flat of the shore, the tide being then out, which feemed, by the edges of the ice, to rise about twelve or fourteen feet, This rife, on account of the falls, will carry it but a very small way within the river's mouth, so that the water in it has not the least brackish taste. Mr. Hearne is, nevertheless, fure of the place it emptied itself into being the sea, or a branch of it, by the quantity of whalebone and feal skins which the Esquimaux had at their tents; and also by the number of seals which he faw upon the ice. The fea, at the river's mouth, was full of islands and shoals, as far as he could see, by the assistance of a pocket telescope: and the ice was not then (July 17th) broke up, but thawed away only for about three quarters of a mile from the shore, and for a little way round the island and shoals which lay off the river's mouth. But he had the most extensive view of the sea when he was about eight miles up the river, from which station the extreme parts of it bore N. W. 

By the time Mr. Hearne had finished his survey of the river, which was about one o'clock in the morning on the 18th, there came on a very thick fog and drizzling rain; and as he had found the river and sea, in every respect unlikely to be of any utility, he thought it unnecessary to wait for fair weather, to determine the latitude more exactly by observation; but by the extraordinary care he took in observing the courses and distances, walking from Congecathawhachaga, where he had two very good observations, he thinks the latitude may be depended on within 10' at the utmost. It appears from the map which Mr. Hearns constructed of this singular journey, that the mouth of the Copper Mine river lies in latitude 72° N. and longitude 250 W. from Churchill river; that is, about 119° W. of Greenwich. Mr. Hearne's journey back from the Copper Mine river to Churchill, lasted till June 30th, 1772; so that he was absent almost a year and seven months. The unparalleled hardships he fuffered, and the effential service he performed, have met with a fuitable reward from his masters. He has been several years governor of Prince of Wales's Fort on Churchill river, where he was taken prisoner by the French in 1782.

Though the adventurers failed in the original purpose for which they navigated this bay, their project, even in its failure, in been of advantage to England. The vast countries which surround Hudson's Bay, as we have already observed, abound with animals, whose fur and skins are excellent. In 1670, a charter was granted to a company, which at present confist of only seven persons, for the exclusive trade to this bay, and they have acted under it ever since with great benefit to the private men who compose the company, though comparatively with little advantage to Great-Britain.

Prince Rupert was their first Governor; the Duke of Albemarle, Lord Craven, Lord Arlington, and several other noble personages, constituted the first committee. The tenor of their charter is as full, ample, and comprehensive, as words can well make it; and, as if they suspected the intrusion of some adventurers on their territories, to participate in this valuable trade, the most severe penalties, with forfeiture of property, are laid on all those, who shall haunt, frequent, or trade upon their coasts; how far their successors have been entitled to these exclusive immunities, or how far their confined manner of carrying on the trade has proved beneficial to the country, we shall

The first traders to these parts acted upon principles much more laudable and benevolent, than their successors seem to have been actuated by. They appear to have had the good of the country at heart; and to have endeavoured by every equitable means, to render their commerce profitable to the mother coun. try. Their instructions to their factors were full of fentiments of Christianity, and contained directions for their using every means in their power, to reclaim the uncivilized Indians from a flate of barbarism, and to inculcate in their rude minds the humane precepts of the gospel. They were at the same time admonished to trade with them equitably, and to take no advantage of their native simplicity. They were further instructed to explore the country, and to reap such benefit from the soil and produce thereof, as might redound to the interest of the English nation, as well as contribute to their own emolument. And laftly, they were directed to be particularly careful in feeing that the European fervants behaved orderly, and lived in fobricty and temperance, observing a proper veneration for the fervice of God, which was ordered to be collectively performed at every feafonable opportunity.

These were injunctions worthy the exalted stations and rank in life of those who had the first direction of the affairs of the Company; and reslected much honour on their characters, as

ns and rank fairs of the paracters, as men and christians: and had these praise-worthy establishments been adhered to, the country granted them might at this day have been a real advantage to Great-Britain. But instead of encouraging the trade, by a mild, equitable, and gaging deportment towards the natives;—instead of ingratiating themselves by affability and condescension with a harmless people, the Hudson's Bay Company use them with undeserved rigour, causing them frequently to be beat and maltreated, although they have come some hundreds of miles in order to barter their skins, and procure a few necessaries to guard against the severity of the approaching winter: owing to this conduct the trade has materially declined of late years.

Another reason why the Company's trade has declined, is a want of spirit in themselves, to push it on with that vigour the importance of the contest deserves. The merchants from Canada have been heard to acknowledge, that was the Hudson's Bay Company to prosecute their inland trade in a spirite danner, they must be soon obliged to give up all thoughts of penetrating into the country; as from the vicinity of the Company's factories to the inland parts, they can assord to undersell them in every branch.

To explain this emulation between the company and the Canadian traders, it will be necessary to review the state of the Company in the year 1773. About that time the Canadian traders from Montreal, actuated by a laudable spirit of industry and adventure, and experiencing the pecuniary advantages that. refulted from their exertions, had become fo numerous and indefatigable at the head of the rivers which lead to the Company's fettlements; that the trade of the latter was in a great measure cut off from its usual channel. The Indians being supplied with. every thing they could wish for at their own doors, had no longer occasion, as they hitherto had done, to build canoes, and paddle feveral hundred miles, for the take of cultivating a commerce with the Company; in which peregrination they were frequently exposed to much danger from hunger; so much so, that at one time feven canoes of upland Indians perished on their return to their own country.

Ever fince the above period, the Canadian adventurers have annually increased in the upland country, much to their own emolument, and the great lots of the Company: who, it may be faid, are sleeping at the edge of the sea, without spirit, and without vigour or inclination to affert that right, which their exclusive charter, according to their own account, entitles them to.

It is true, the Hudson's Bay Company have at this time a few establishments in the interior country; but these are carried on

in fuch a languid manner, that their exertions have hitherto proved inadequate to the purpole of supplanting their opposichtse squalet ogu, equic.

The Company fignify to their Factors, that they have an indisputable right to all the territories about Hudson's Bay, not only including the Straits and Bay, with all the rivers, inlets, &c. therein, but likewise to all the countries, lakes, &c. indefinitely to the westward, explored and unexplored. They therefore fligmatize the Canadian merchants with the infulting epithets of pedlars, thieves, and interlopers; though the quantity of furs imported by themselves, bears no comparison to those sent from Canada. If this unbounded claim, to which they pretend, be founded upon justice, why, in the name of equity do they not affert these pretentions by a proper application to the British Parliament to remove the industrious pedlars, whom they would feem to look upon with fuch ineffable conand prevent their any longer encroaching on their territories; but the shock they received from the parliamentary application of the patriotic Mr. Dobbs, in the year 1749, has given them a distaste to parliamentary inquiries. They know the weakness of their claim, and the instability of their pretenfions; it is therefore their interest to hide from an inquisitive but deluded nation, every investigation which might tend to bring to light the futility of their proceedings.

If the Canadian traders can adduce any profit to themselves by profecuting this inland business, what are not the Hudson's Bay Company enabled to do, with every advantage on their fide,

would they profecute the trade with vigour?

York Fort at this time has four subordinate settlements; at which fettlements, conjointly, the Company allow one hundred fervants, whose wages amount to about one thousand eight hundred and fixty pounds per annum; besides a sloop of fixty tons, that makes a voyage once a year between York Fort and Severn Factories. In the year 1748, the complement of men at that fetttlement was no more than twenty-five, whose wages amounted to four hundred and seventy pounds per annum, and the trade then stood at thirty thousand skins one year with another. The other establishments which the Company maintain in the Bay, have suffered the like proportional change, all decreasing in trade. and bearing additional incumbrances.

To exhibit at one view a state of their several establishments in the Bay at present, the following table is subjoined.

lishments

Notwithstanding this pretended standard is in itself sufficiently hard upon the Indians, and discouraging to the trade, yet the factors, and the company, in conjunction, do not think it so; for out of this a pernicious overplus trade must be raised; which as Mr. Robson justly observes, "is big with iniquity, and striking at the very root of their trade as a chartered company:" it is intended to augment the emoluments of the governor, at the expense of justice and common honesty: it oppresses the Indian who lives a most wretched life, and encounters a variety of disficulties, cold, hunger, and satigue, to procure a sew necessaries for himself and indigent family.

This overplus trade, as it is called, is carried on in the following manner; for instance; suppose an Indian would trade one pound of glass beads, it is set down in the standard at two beaver skins; but the conscientious factor will demand three, or perhaps four beaver skins for it; if the Indian asks for a blanket, he must pay eight beavers; and if he would purchase a gallon of brandy, he must give after the rate of eight beaver skins for it, as it is always one half, and sometimes two-thirds water. The consequence of this griping way of trade is in the end very hurtful to themselves, as the Canadians, in the inte-

rior country, underfell them in every article.

Before the Canadian merchants pursued the fur trade with such diligence as they now do through the lakes, and had penetrated into the interior parts of Hudson's Bay, a great number of Indians used annually to come down to the company's settlements to barter their skins. And though the company have now in a great measure lost the benefit of this lucrative traffic, it may not be amiss to mention the manner in which Indians

profecute their voyages to the factories.

In the month of March, the upland Indians affemble on the banks of a particular river or lake, the nomination of which had been agreed on by common confent, before they feparated for the winter. Here they begin to build their canoes, which are generally completed very foon after the river ice hreaks. They then commence their voyage, but without any regularity, all striving to be foremost; because those who are first have the best chance of procuring food. During the voyage, each leader canvasses, with all manner of art and diligence, for people to join his gang; influencing some by presents, and others by promites; for the more canoes he has under his command, the greater he appears at the factory.

Being come near their journey's end, they all put ashore; the women to go in the woods to gather pine-brush for the bottoms

afhore; the

of the tents; while the leiders smoke together, and regulate the procession. This being settled, they re-embark, and soon after arrive at the factory. If there is but one captain, his situation is in the center of the cances; if more, they place themselves on the wings; and their cances are distinguished by having a small flag hosted on a stick, and placed in the stern.

When they arrive within a few hundred yards of the fort, they discharge their fowling-pieces, to compliment the English ; who, in return, falute them by firing two or three small cannon; The leaders feldom concern themselves with taking out the bundles, but the other men will affift the women. The fattor being informed that the Indians are arrived, fends the trader to introduce the leaders with their lieutenants, who are usually their eldest sons or nearest relations. Chairs are placed for them to fit down on, and pipes, &c. are introduced. During the time the leader is smoking, he says very little; but as foon as this is over, he begins to be more talkative; and fixing his eyes immoveably on the ground, he tells the factor how many canoes he has brought, what Indians he has feen, asks how the Englishmen do, and says he is glad to see them. After this the governor bids him welcome, tells him he has good goods and plenty, and that he loves the Indians, and will be kind to them, The pipe is by this time removed, and the conversation becomes

During this visit, the chief is drest out at the expense of the factory in the following manner: a coarse cloth coat, either red or blue, lined with baize, and having regimental custs; and a waistcoat and breeches of baize, the whole ornamented with orris lace. He is also presented with a white or cheek shirt; his stockings are of yarn, one of them red, the other blue, and tied below the knee with worsted garters; his Indian shoes are sometimes put on, but he frequently walks in his stocking set; his hat is coarse, and bedecked with three offrich feathers of various colours, and a worsted sash tied round the crown; a small silk handkerchief is tied round his neck, and this completes his dress. The lieutenant is also presented with a coat, but it has no lining; he is likewise provided with a shirt and eap, not unlike those worn by mariners.

The guests being now equipped, bread and prunes are brought and set before the captain, of which he takes care to fill his pockets, before they are carried out to be shared in his tent; a two gallon keg of brandy, with pipes and tobacco for himself and followers, are likewise set before him. He is now conducted from the fort to his tent in the following manner: In the front

a halberd and enfign are carried; next a drummer beating a march; then several of the factory servants bearing the bread, prunes, pipes, tobacco, brandy, &c. Then comes the captain, walking quite erect and stately, smoking his pipe, and conversing with the factor. After this follows the lieutenant, or any other friend, who had been admitted into the fort with the leader. They find the tent ready for their reception, and with clean pine-brush and beaver coats placed for them to fit on. Here the brandy, &c. is deposited, and the chief gives orders to some respectable person to make the usual distribution to his comrades. After this the factor takes his leave, and it is not long before they are all intoxicated; when they give loofe to every species of disorderly tumult, fuch as finging, crying, fighting, dancing, &c. and fifty to one but some one is killed before the morning. Such are the fad effects of the vile composition they are furnished with, upon these occasions.

After continuing in a state of intoxication, bordering on madnels, for two or three days, their mental faculties return by degrees, and they prepare themselves for renewing the league of friendship, by smoking the calimut; the ceremony of which is as follows: A pipe made of stone is filled with Brazil tobacco. mixed with a herb fomething like European box. The stem of the pipe is three or four feet long, and decorated with various pieces of lace, bears claws, and eagles talons, and likewise with variegated feathers, the spoils of the most beauteous of the feathered tribe. The pipe being fixed to the stem and lighted, the factor takes it in both his hands, and with much gravity rifes from his chair, and points the end of the stem to the East, or fun-rife, then to the Zenith, afterwards to the West, and then perpendigularly down to the Nadir. After this he takes three or four hearty whiffs, and having done to, prefents it to the Indian leader, from whom it is carried round to the whole party, the women excepted, who are not permitted to imoke out of the facred pipe. When it is entirely smoaked out, the factor takes it again, and having twirled it three or four times over his head, lays it deliberately on the table; which being done, all the Indians return him thanks by a kind of fighing out the word Ho,

Though the above ceremony made use of by the Indians, in smoking the calimut, may appear extremely ridiculous and incomprehensible, yet, when we are made acquainted with their ideas in this respect, the apparent absurdity of the custom will vanish. By this ceremony they mean to signify to all persons concerned.

of people, the riches are to reap that whilst the sun shall visit the different parts of the world, and make day and night; peace, firm friendship, and brotherly love. shall be established between the English and their country, and the fame on their part. By twirling the pipe over the head, they further intend to imply, that all persons of the two nations, wherefoever they may be, shall be included in the friendship and brotherhood now concluded or renewed.

After this ceremony is over, and a further gratification of bread, prunes, &c. is presented, the leader makes a speech.

generally to the following purport:

"You told me last year to bring many Indians to trade, which I promised to do; you see I have not lied; here are a great many young men come with me; use them kindly, I say; let them trade good goods; let them trade good goods, I say! We lived hard last winter and hungry, the powder being short measure and bad; being short measure and bad, I say! Tell your servants to fill the measure, and not to put their thumbs within the brim; take pity on us, take pity on us, I fay! We paddle a long way to fee you; we love the English. Let us trade good black tobacco, moist and hard twisted; let us see it before it is opened. Take pity on us; take pity on us, I say! The guns are bad, let us trade light guns, small in the hand, and well shaped, with locks that will not freeze in the winter, and red gun cases, Let the young men have more than measure of tobacco; cheap kettles, thick, and high. Give us good measure of cloth; let us see the old measure; do you mind me? The young men prove they love you, by coming to far to fee you; take pity, take pity, I fay; and give them good goods; they like to dress and be fine. Do you understand me?"

As foon as the captain has finished his speech, he, with his followers, proceed to look at the guns and tobacco; the former they examine with the most minute attention. When this is over they trade their furs promiscuously; the leader being so far indulged, as to be admitted into the trading room all the time,

if he defires it.

It is evident that the fur and peltry trade might be carried on to a much greater extent, were it not entirely in the hands of this exclusive company, whose interested, not to say iniquitous spirit, has been the subject of long and just complaint,

It will, we doubt not, feem very mysterious to the generality of people, that the company do not exert themselves to turns the riches of this country to their advantage, when they alone are to reap the benefit of their exertions. People will naturally

be led to conclude from their conduct, that what writers have faid on this subject is devoid of truth, and mere chimeras; but this is for want of knowing the peculiar views of the company, their affection for their long fostered monopoly, and that singular obscurity which invelopes their whole constitution, nay, the whole of their mercantile transactions.

The company do not entertain the least doubt, but if the country they possess was properly explored by persons of ability, valuable discoveries might be made; but this they think may be so for from redounding to their interest, that it might have a contrary effect, by encouraging adventurers to petition for liberty to partake of these discoveries, and thereby occasion an investigation to take place, which would probably shake the foundation of their charter. This is not all; as the company consists at present but of seven persons; this small number wisely think, that as long as they can share a comfortable dividend, there is no occasion for their embarking in additional expenses, in order to prosecute discoveries which might trans-

pire to the world, and endanger the whole,

The limits of the bay and straits comprize a very considerable extent; the foil of which, in many parts, is capable of much improvement by agriculture and industry. The countries abound with most kinds of quadrupeds, &c. whose skins are of great value. The numerous inland rivers, lakes, &c. produce fish of almost every species; and in the seas in and about the straits, and the northern parts of the bay, white and black whales, feahorses, bears, and seals, are killed in great numbers by the Esquimaux, whose implements for this purpose are exceedingly simple. What advantage might not then arise to the nation from this branch of trade alone, were it laid open? If able harpooners were fent on this employ, with sufficient assistants, and properly encouraged, greater profits would accrue from this fishery, than from all the peltry at present imported by the com-The furrounding country, which at present is entirely unknown to us, would, in all likelihood, be the confequence of these seas being more frequented than they are. And indeed if ever the forts and fettlements on the American boundary line are furrendered according to the treaty of peace, England has no other means in her hands to counterpoile the superior advantages the America's will then possess in the fur trade, than to throw the trade to Hudson's bay open, and thus destroy a disgraceful monopoly, or to incorporate with it by a new charter the merchants trading to Canada, and thus infuse into it a fresh portion

In M company w hvo hundre of mercantile vigour: by this means an extensive intercourse with nations, to which we at present are almost strangers, might be opened, and a country explored whose resources may equal if not surpass those of the country round Canada.

If it be objected to this, that the vast quantities of sice in the straits must impede a vessel from making discoveries, we answer, that many years the ice is so insignificant in quantity as not to obstruct the passage of the ships in the least; and in those searches when it is thickest, it is dissolved and dispersed in the ocean long before the return of the ships in September.

Even in the very confined manner in which the company carry on this trade, it is far from being inconfiderable in value, though their ships seldom stop but a very short time for the purpose of trading with the Esquimaux; they employ three ships annually,

which are manned with seventy-five men.

The company exports commodities to the value of about ten thousand pounds, and bring home returns to the value of twenty-nine thousand three hundred and forty pounds, which yield to the revenue about three thousand seven hundred and thirty-four pounds. This includes the fishery in Hudson's bay. That this commerce, small as it is, affords immense profits to the company, and even some advantages to Great-Britain in general. cannot be denied; for the commodities exchanged with the Indians for their skins and furs, are all manufactured in Britain; and as the Indians are not very nice in their choice, such things are sent of which there is the greatest plenty, and which, to use a mercantile phrase, are drugs. Though the workmanship bappens to be in many respects so deficient, that no civilized people would take it, it may be admired among the Indians. On the other hand, the skins and furs brought home in return afford articles for trading with many nations of Europe to great advantage. These circumstances prove the immense benefit that would redound to britain, by throwing open the trade to Hudson's bay, since even in its present restrained state it is so advantageous.\* The only attempt made to trade with Labrador, has been directed towards the fishery. Great-Britain has no settlement there. The annual produce of the fishery amounts to upwards of forty-nine thouland pounds.

In May 1782 all the forts and fettlements belonging to the Hudson's bay company were destroyed by the French, the damages sustained were rated at hive hundred thousand pounds.

# NOVASCOTIA

I Kar that bet a stratistic of the

COMPARENDING THE PROVINCE OF NEW-BRUNSWICK AND NOVA-SCOTIA.

## SITUATION, EXTENT, AND BOUNDARIES.

THESE provinces are lituated between 43° 30' and 49° north latitude, and 60° and 67° east longitude from London, or 8° and 15° east longitude from Philadelphia. Their length is four hundred miles, and their breadth three hundred. They are bounded on the north, by the river St. Lawrence; on the east, by the gulf of St. Lawrence, which walkes its coasts one hundred and ten leagues in extent, from the gut of Canso, at its entrance into the gulf, to cape Rozier, which forms the south part of the river St. Lawrence, and by the gut of Canso, which divides it from Cape Breton; on the south, it is walked by the Atlantic ocean, having a sea coast of ninety leagues, from cape Canso, east, to cape Sables, west, which forms one part of the entrance into the bay of Fundy, which also forms a part of its southern boundary; west, by a part of Lower Canada, and the district of Maine.

Not withstanding the forbidding appearance of this country, it was here that some of the first European settlements were made. The first grant of lands in it was given by James the First to his secretary, Sir William Alexander, from whom it had the name of Nova-Scotia, or New-Scotland; since then it has frequently changed hands, from one private proprietor to another, and from the French to the English nation backward and forward. It was not confirmed to the English, till the peace of Utrecht, and their design in acquiring it does not seem to have arisen so much from any prospect of direct profit to be obtained by it, as from an apprehension that the French, by possessing this province, might have had it in their power to annoy the other British settlements. Upon this principle, three thousand families were transported in 1749, at the charge of the government, into this country, who built and settled the town of Halifax.

The tract of country within these limits, known by the name of Nova-Scotia, or New-Scotland, was, in 1784, divided into

part ward St. Cand within Scotia north

twp

Dur with the and for country barren, parts, the and form falt mark home co

hove-Scotia, on the fouth-east. The former comprehends that part of the old province of Nove-Scotia, which he so the northward and westward of a line drawn from the mouth of the river St. Croix, through the center of the bay of Fundy to bay Verte, and thence into the gulf of St. Lawrence, including all lands within fix leagues of the coast. The rest is the province of Nove-Scotia, to which is annexed, the island of St. John's, which lies north of it, in the gulf of St. Lawrence.

#### SOIL, PRODUCTIONS, &c.

During a great part of the year, the atmosphere is clouded with thick fog, which renders it unhealthy for the inhabitants; and four or five months it is intensely cold. A great part of this country lies in forest, and the foil, in many parts, is thin and barren. On the banks of the rivers, however, and some other parts, the foil is very good, producing large crops of English grass, hemp, and slax: many of the bays, and salt water rivers, and some parts of the sea coast, are bordered with fine trasts of salt marsh; but the inhabitants do not raise provisions enough for home consumption.

## RIVERS, BAYS, LAKES AND CAPES.

The rivers which water this country we shall mention in connection with the different counties in which they principally flow, a few, however, call for separate notice. The rivers Risconge and Nipisiguit run from west to east into Chaleur and Nipifiguit bays, which communicate with the gulf of St. Lawrence. The river St. Croix (which is the true St. Croix is yet undetermined) empties into Passamaquoddy bay, and forms a part of the boundary between New-Brunswick and Maine. St. John's is the largest river in the province. It empties into the north fide of the bay of Fundy, and is navigable for vessels of fifty tons, fixty miles, and for boats upwards of two hundred miles. This is a common route to Quebec. The banks of this, river, enriched by the annual freshets, are excellent land, About thirty miles from the mouth of this river commences a fine level country, covered with large trees of timber of various kinds. Masts, from twenty to thirty inches in diameter, have been cut on this tract. The tide flows, in this river, eighty or ninety miles. It furnishes the inhabitants with salmon, bass, and sturgeon. Near fort Howe, the river suddenly narrows, and occasions a fall at certain times of tide, like that at London Bridge.

The coast of these provinces is indented with numerous baves and commodious harbours. The principal, as you descend foutherly from the mouth of St. Lawrence river, are Gaspeck Chaleur, Verte, which is separated from the bay of Fundy by a myrow ifthmus of about eighteen miles wide; cape and harbour of Canfo, forty leagues castward of Halifax. Chedabucto bay about ten leagues north-west of Canso. Chebucto bay, on which stands the town of Halifax. The bay of Fundy, which extends fifty leagues into the country, in which the ebb and flow of the tide is from forty-five to fixty feet. Chenigto bay is at the head of Fundy bay. Passamaquoddy bay borders on the district of Maine, and receives the waters of St. Croix river. At the entrance of this bay is an illand, granted to several gentlemen in Liverpool in Lancashire, who named it Campobello. At a very configurable expense, they attempted to form a settlement there. but failed. On feveral other islands in this bay there are settlements made by people from Massachusetts. Among the lakes in these provinces, which are very numerous, and many as yet without names, is Grand lake, in the province of New-Brunfwick, near St. John's river, about thirty miles long, and eight or ten broad, and in some places forty rathoms deep.

The principal capes are cape Canfo, on the west side of the entrance into Chedakusto bay, and cape Sables, on the east side of the entrance into the bay of Fundy.

There are fettlements of Acadians on all these rivers, whose banks are good land.

#### PRINCIPAL TOWNS.

Harrax is the capital of the province of Nova-Scotia. It flands on Chebucto bay, commodiously situated for the fishery, and has a communication with other parts of this province and New-Brunswick by land and water carriage. It has a good harbour, where a small squadron of ships of war lie during the winter, and in the summer protects the fishery. The town has an entrenchment, and is strengthened with forts of timber. It is said to contain fifteen or sixteen thousand suhabitants,

Shelburne on port Roseway, near cape Sables, was supposed, in 1783, to contain six hundred families; since that time it has become less populous. Guysborough formerly called Manchester, situated on Chedabucto bay, about ten leagues north-west of cape Canso, contained, in 1783, about two hundred and sitty families. Rawdon forty miles from Halifax, has about sixty houses. Annapolis on the east side of Fundy bay, has one of the finest harbours in the world. In other respects it is a poor, inconsiderable place.

FREDERICKTOWN, about ninety miles up St. John's river,

is the capital of the province of New-Brunswick.

### FORTS.

There are feveral forts in these provinces: these are fort Edward at Windsor, capable of containing two hundred men; Annapolis, in its present state, one hundred; Cumberland, three hundred; fort Howe, on St. John's river, one hundred; besides which there are barracks, inclosed in a stockade at Cornwallis, for about fifty men.

# TRADE.

The exports from Great-Britain to this country confift chiefly of linen and woollen cloths, and other necessaries for wear, of fishing tackle, and rigging for ships. The amount of exports, at an average of three years, before the new settlements, was about twenty six thousand sive hundred pounds. The only articles obtained in exchange are, timber and the produce of the sishery, which, at a like average, amounted to thirty-eight thousand pounds. But from the late increase of inhabitants, it is supposed that they will now erest saw mills, and endeavour to supply the West-India islands with lumber of every kind, as well as the produce of the sishery, which will be a profitable article to both countries. The whole population of

Rec decl new

Mare Halifanorth the halifants polis refightin around forty fe though

THIS ern coaft miles long a rich for principal who is the tants are of cape Hing to ab arms. We to for much which it, and pork.

Nova-Scotia and the islands adjoining, is estimated at fifty thoufand. This estimate it is supposed is considerably too large. Recent accounts of these settlements represent them as in a declining state, having great numbers of the houses built in the new towns uninhabited, and considerably reduced in value.

## INDIANS, &c. 1 5 miles the way for

The Indians here are the Micmacks, and the tribs called the Marechites. The former inhabit the eastern shore, between Halifax and cape Breton; between Cumberland county and the north-east coast of the province, towards Chaleur bay; about the heads of the rivers which run through the counties of stants and King's county; and between cape Sable and Annapolis royal. This tribe is supposed to have about three hundred sighting men. The Marechites inhabit the river St. John, and around Passamaquoddy bay, are estimated at one hundred and forty sighting men; they are much superior in all respects to the Micmacks.—The animals are the same as in the United States, though much less numerous.

# ISLAND OF SAINT JOHN.

-----

in with the are allegated HIS island lies in the gulf of St. Lawrence, near the northern coast of the province of Nova-Scotia, and is about fixty miles long, and thirty or forty broad. It has feveral fine rivera a rich soil, and is pleasantly situated. Charlotte-town is its principal town, and is the residence of the lieutenant-governor. who is the chief officer on the island. The number of inhabitants are estimated at about five thousand. Upon the reduction of cape Breton in 1745, the inhabitants of this island, amounts ing to about four thousand, submitted quietly to the Britis arms. While the French possessed this island, they improved it to fo much advantage, that it was called the granary of Canada which it, furnished with great plenty of corn, as well as beef and pork. It is attached to the province of Nova Scotia. - A ch of old gar alot by a 1 5. 2. hat fallige was it or a wall.

## "NEWFOUNDLAND ISLAND.

1112111 EWFOUNDLAND is fituated to the east of the gulf of St. Lawrence, between forty-fix and fifty-two degrees of north latitude, and between fifty-three and fifty-nine degrees west longitude, separated from Labrador, or New-Britain, by the straits of Belleisle; and from Canada, by the bay of St. Lawrence; being five hundred and fifty miles long and two hundred broad. The coasts are extremely subject to fogs, attended with almost continual storms of snow and sleet, the sky being usually overcast. From the soil of this island the British reap no great advantage, for the cold is long continued and severe; and the fummer heat, though violent, warms it not enough to produce any thing valuable; for the foil, at least in those parts of the island which have been explored, is rocky and barren; however, it is watered by feveral good rivers, and has many large and good harbours. This island, whenever the continent shall come to fail of timber convenient to navigation, which on the fea coast perhaps will be at no very remote period, it is said, will afford a large supply for masts, yards, and all forts of lumber for the West-India trade. But what at present it is chiefly valuable for, is the great fishery of cod carried on upon those shoals, which are called the banks of Newfoundland. Great-Britain and North-America, at the lowest computation, annually employ three thousand sail of small crast in this fishery; on board of which, and on shore to cure and pack the fish, are upwards of one hundred thousand hands; so that this fishery is not only a valuable branch of trade to the merchant, but a fource of livelihood to so many thousands of poor people, and a most excellent nursery for feamen. This fishery is computed to increase the national stock three hundred thousand pounds a year in gold and filver, remitted for the cod fold in the north, in Spain, Portugal, Italy, and the Levant. The plenty of cod. both on the great bank and the leffer ones, which lie to the east and fouth-east of this island, is inconceiveable; and not only cod, but several other species of fish, are caught there in abundance; all of which are nearly in an equal plenty along the shores of Newfoundland, Nova-Scotia, New-England, and the isle of cape Breton; and very profitable fisheries are carried on upon all their coasts,

This entirely but the norther were pe this lim leagues o illands o Newfour to creft i fifty fold the Fren west con States and independ centia, B families r are fent o the admir illand, be

Placentia

fr. Dr Ditt

This island, after various disputes about the property, was entirely ceded to England by the treaty of Utrecht, in 1719; but the French were left at liberty to dry their nets on the northern shores of the island; and by the treaty of 1763, they were permitted to fish in the gulf of St. Lawrence, but with this limitation, that they should not approach within three. leagues of any of the coasts belonging to England. The final islands of St. Pierre and Miquelon, fituated to the fouthward of Newfoundland, were also ceded to the French, who stipulated to creft no fortifications on these islands, nor to keep more than fifty foldiers to enforce the police. By the last treaty of peace. the French are to enjoy the fisheries on the north and on the west coasts of the island; and the inhabitants of the United States are allowed the same privileges in fishing as before their independence. The chief towns in Newfoundland are, Placentia, Bonavista, and St. John's: but not above one thousand families remain here in winter. A finall foundron of men of war are fent out every fpring to protect the filheries and inhabitants, the admiral of which, for the time being, is governor of the island, besides whom there are two lieutenant-governors, one at Sent at St. John's, a self and a service and Placentia, and the other at St. John's, and the same of the same of the same of the state of the s The same of the sa

GREENLAND.

REENLAND is a general name by which is now denoted the mast easterly parts of America, stretching towards the north pole, and likewife fome iflands northward of the consinent of Europe, lying in very high latitudes. The whole of this country was formerly described as belonging to Europe, but from its contiguity to, and probable union with the American continent. it appears most proper to be classed among the countries belonging to the latter; we therefore have followed Mr. Morfe, and placed it among the divisions of North-America,—It is divided into two parts, viz. West and East Greenland, of each we shall here give a description from the best authorities extant.

## GREENLAND.

HIS country is now laid down, in our latest maps, as part of the continent of America, though on what authority is not very clear.

Whether Greenland is an island, has not yet been decided, as no ship has penetrated higher than the seventy-eighth degree, on account of the ice. That it is not an island, but a part of the American continent, is rendered probable; aft. Because Davis' straits, or rather Bassin's Bay, grows narrower and narrower towards the feventy-eighth degree north .- 2d. Because the coast, which in other places is very high towards the fea, grows lower and lower northward .- gd. Because the tide. which at cape Farewell, and as far up as Cockin's found, in the fixty-fifth degree of latitude, rifes eighteen feet at the new and full moon, deereases to the northward of Disko, so that in the seventieth degree of latitude

it rifes little is no tide at : which howev fo narrow at able to call to once; but the they cannot i That part of it which the Europeans have any knowledge of is bounded on the west by Bassin's bay, on the south by Davis' straits, and on the east by the northern part of the Atlantic Ocean. It is a very mountainous country, and some parts of it so high that they may be discerned thirty leagues off at sea. The inland mountains, hills, and rocks are covered with perpetual snow; but the low lands on the sea-side are clothed with verdure in the summer season. The coast abounds with inters, bays, and large rivers; and is surrounded with a vail number of islands of different dimensions. In a great many places, however, on the eastern coast especially, the shore is inaccessible by reason of the floating mountains of ice. The principal river, called Baal, falls into the sea in the sixty-south degree of latitude, where the first Danish lodge was built in 1721; and has been navigated above forty miles up the country.

West Greenland was first peopled by Europeans in the eighth century. At that time a company of Icelanders, headed by one Frieke Rande, were by accident driven on the coast. On his return he represented the country in such a favourable light, that some families again followed him thither, where they soon became a thriving colony, and bestowed on their new habitation the name of Groenland, or Greenland, on account of its verdant appearance. This colony was converted to Christianity by a missionary from Norway, sent thither by the celebrated Olaf, the first Norwegian monarch who embraced the Christian religion. The Greenland settlement continued to increase and thrive under his protection; and in a little time the country was provided with many towns, churches, convents, bishops, &c. under the jurisdiction of the archbishop of Drontheim. A considerable commerce was carried on between Greenland and Norway; and a regular intercourse maintained between the two countries till the year 1406, when the last bishop was fent over. From that time all correspondence was cut off, and all knowledge of Greenland has been buried in oblivion.

it rifes little more than eight feet, and probably continues to diminifh, till there is no tide at all. To which may be added the relation of the Greenlanders, which however cannot be much depended on, viz. that the firait contracts itself to narrow at last, that they can go on the ice so near to the other side, as to be able to call to the inhabitants, and that they can strike a fish on both sides at once; but that there runs such a strong current from the north into the strait, that they cannot pass it.

Ellis's voyage to Hudfon's bay for the discovery of a north-west passage.

as part of

no ship has ice. That it id probable; and narrower hich in other ard.—3d. Befound, in the l moon, deep of latitude

This strange and abrupt cessation of trade and intercourse has been attributed to various causes; but the most probable is the following: The colony, from its first settlement, had been harraffed by the natives, a barbarous and favage people; agreeing in cultoms, garb, and appearance, with the Efquimaux found about Hudson's bay. This nation, called Schrellings, at length prevailed against the Iceland settlers who inhabited the western district, and exterminated them in the fourteenth century : insomuch, that when their brethren of the eastern district came to their affistance, they found nothing alive but some cattle and flocks of sheep running wild about the country. Perhaps they themselves afterwards experienced the same fate, and were totally destroyed by these Schrellings, whose descendants still inhabit the western parts of Greenland, and from tradition confirm this conjecture. They affirm that the houses and villages. whose ruins still appear, were inhabited by a nation of strangers, whom their ancestors destroyed. There are reasons, however, for believing that there may be still some descendants of the ancient Iceland colony remaining in the eastern district, though they cannot be visited by land, on account of the stupendous mountains, perpetually covered with fnow, which divide the two parts of Greenland; while they have been rendered inaccessible by sea, by the vast quantity of ice driven from Spitzbergen, or East Greenland. One would imagine that there must have been some considerable alteration in the northern parts of the world fince the fifteenth century, fo that the coast of Greenland is now become almost totally inaccessible, though formerly visited with very little difficulty. It is also natural to ask, by what means the people of the eastern colony surmounted the above-mentioned obstacles when they went to the assistance of their western friends; how they returned to their own country; and in what manner historians learned the success of their expedition? Concerning all this we have very little fatisfactory All that can be learned from the most authentic records is, that Greenland was divided into two districts, called West-Bygd and East-Bygd: that the western division contained four parishes and one hundred villages; that the eastern district was still more flourishing, as being nearer to Iceland, sooner fettled, and more frequented by shipping from Norway. There are also many accounts, though most of them romantic and slightly attested, which render it probable that part of the eastern colony still subsists, who, at some time or other, may have given the imperfect relation above mentioned. This colony, in ancient

times hund The | rant d tains fion : barbar their I Norwa cellive ern; di turers, ties and not, app arrested ftone at this atte voyage by Que not read he had name, a municati of the c away for of Lond fuing fpr fmall fqu the strait lilver mi

times, certainly comprehended twelve extensive pasifies; one hundred and ninety villages; a bifhop's fee, and two monafteries; The present inhabitants of the western district are entirely ignorant of this part, from which they are divided by rocked mount tains, and deferts, and ftill more effectually by their apprehenfion : for they believe the eaftern Greenlanders to be a cruel barbarous nation, that destroy and eat all strangers who fall into their hands. About a century after all intercourse between Norway and Greenland had cealed; feveral ships were font successively by the kings of Denmark in order to discover the castern district; but all of them miscarried. Among these adventurers, Mogens Heinfon, after baying furmounted many difficult ties and dangers, got fight of the land; which, however, he could not approach. At his return he pretended that the fhip was arrested in the middle of her course by certain rocks of loadstone at the bottom of the sea. The same year, 1576, in which this attempt was made, has been rendered remarkable by the voyage of Captain Martin Frobisher, sent upon the same errand by Queen Elizabeth. He likewise descried the land; but could not reach it, and therefore returned to England; yet not before he had failed fixty leagues in the strait, which still retains his name, and landed on several islands, where he had some communication with the natives. He had likewise taken possession of the country in the name of Queen Elizabeth; and brought away some pieces of heavy black stone, from which the refiners of London extracted a certain proportion of gold. In the enfuing spring he undertook a second voyage, at the head of a small squadron, equipped at the expense of the public, entered the straits a second time; discovered upon an island a gold, and lilver mine; bestowed names upon different bays, islands, and head lands; and brought away a lading of ore, together with two natives, a male and female, whom the English kidnapped.

Such was the success of this voyage, that another armament was fitted out under the auspices of Admiral Frobisher, consisting of fifteen sail, including a considerable number of soldiers, miners, smelters, carpenters, and bakers, to remain all the winter near the mines in a wooden fort, the different pieces of which they carried out in the transports. They met with boisterous weather, impenetrable fogs, and violent currents upon the coast of Greenland, which retarded their operations until the season was far advanced. Part of their wooden fort was lost at sea; and they had neither provision nor sucl sufficient for the winter. The admiral therefore determined to return with as much ors

as he could procure, of this they obtained large quantities out of a new mine, to which they gave the name of the Counters of Suffex. They likewife built an house of stone and lime, provided with ovens; and here, with a view to conciliate the affection of the natives, they left a quantity of small morrice-bells, knives, beads, looking-glasses, leaden pictures, and other toys, together with several loaves of bread. They buried the timber of the fort where it could be easily found next year; and sowed corn, pease, and other grain, by way of experiment, to know what the country would produce. Having taken these precautions, they sailed from thence in the beginning of September; and after a month's stormy passage, arrived in England; but this noble design was never profecuted.

Christian IV, king of Denmark, being desirous of discovering the old Greenland settlement, sent three ships thither, under the command of captain Godske Lindenow, who is said to have reached the east coast of Greenland, where he traded with the savage inhabitants, such as they are still found in the western district, but saw no signs of a civilized people. Had he actually landed in the eastern division, he must have perceived some remains of the ancient colony, even in the ruins of their convents and villages. Lindenow kidnapped two of the natives, who were conveyed to Gopenhagen; and the same cruel fraud was practifed by other two ships which sailed into Davis' straits, where they discovered divers fine harbours, and de-

Nothing can be more inhuman and repugnant to the dictates of common justice than this practice of tearing away poor creatures from their country, their families, and connections: unless we suppose them altogether destitute of natural affection; and that this was not the case with those poor Greenlanders, fome of whom were brought alive to Copenhagen, appears from the whole tenor of their conduct, upon their first capture, and during their confinement in Denmark. When first captivated, they rent the air with their cries and lamentations : they even leaped into the fea; and, when taken on board, for fome time refuled all fullenance. Their eyes were continually turned towards their dear country, and their faces always bathed in tears. Even the kindnels of his Danish majerly, and the careffes of the court and people, could not alleviate their grief. One of them was perceived to shed tears always when he faw an infant in the mother's arms; a circumstance from whence it was naturally concluded, that he had left his wife with a young child in Greenland. Two of them went to fea in their little canoes in hope of reaching Greenland; but one of them was retaken. Other two made the fame attempt; but were driven by a ito m on the coast of Schonen, where they were apprehended by the peafants, and reconveyed to Copenhagen. One of them afterwards died of a fever, caught in fishing pearl; during the winter, for the governor of Kolding. The reft lived fome years in Denmark; but at length, feeing no prospect of being able to revisit their native country, they fonk into a kind of melancholy diforder; and expired.

In some places they are said to have found a confiderable quantity of ore, every hundred pounds of which yielded twenty six ounces of filver. The same Admiral Lindenow made another voyage to the coast of Greenland in the year 1606, directing his course to the westward of cape Farewell. He coasted along the straits of Davis, and having made some observations on the face of the country, the harbours and islands, returned to Denmark. Carsten Richards, being detached with two ships on the same discovery, described the high land on the eastern side of Greenland, but was hindered by the ice from approaching the shore.

Other expeditions of the same nature have been planned and executed with the same bad success, under the auspices of a Danish company of merchants. Two ships returned from the western part of Greenland loaded with a kind of yellow land, supposed to contain a large proportion of gold. This being affayed by the goldsmiths of Copenhagen, was condemned as useless, and thrown overboard; but from a small quantity of this fand, which was referved as a curiofity, an expert chemist afterwards extracted a quantity of pure gold. The captain, who brought home this adventure, was so chagrined at his disppointment, that he died of grief, without having left any directions concerning the place where the fand had been discovered. In the year 1654, Henry Moller, a rich Dane, equipped a vessel under the command of David de Nelles, who sailed to the west coast of Greenland, from which he carried off three women of the country. Other efforts have been made, under the encouragement of the Danish king, for the discovery and recovery of the old Iceland colony in Greenland; but all of them miscarried, and people began to look upon such experditions as wild and chimerical. At length the Greenland company at Bergen in Norway, transported a colony to the western coast, about the fixty-fourth degree of latitude; and thete Norwegians failed in the year 1712, accompanied by the Rev, Hans Egede, to whose care, ability and precision, we owe the best and most authentic account of modern Greenland. gentleman endeavoured to reach the eastern district, by coasting fouthwards, and advanced as far as the States Promontory; but the leason of the year, and continual storms, obliged him to return; and as he could not even find the strait of Frobisher, he concluded, that no such place ever existed. In the year 1724, a hip, being equipped by the company, failed on this discovery, with a view to land on the east side opposite to Iceland; but

rendered this scheme impracticable. His Danish majesty, in the year 1728, caused horses to be transported to Greenland, in hope that the settlers might by their means travel over land to the eastern district; but the icy mountains were found impassable. Finally, Licutenant Richards, in a ship which had wintered near the new Danish colony, attempted, in his return to Dennark, to land on the eastern shore; but all his endead yours proved abortive.

Mr. Egede is of opinion, that the only practicable method of reaching that part of the country, will be to coast north-about in small wessels, between the great slakes of ice and the shore; as the Greenlanders have declared, that the currents continually rushing from the bays and inlets, and running south-westwards along the shore, hinder the ice from adhering to the land; so that there is always a channel open, through which vessels of small burden might pass, especially is lodges were built at convenient distances on the shore, for the convenience and direction of the adventurers.

That part of the country which is now vifited and fettled by the Danes and Norwegians; lies between the fixty-fourth and fixty-eighth degrees of north latitude; and thus far it is faid the climate is temperate. In the summer, which continues from the end of May to the middle of September, the weather is warm and comfortable, while the wind blows eafterly; though even at this time storms frequently happen, which rage with incredible violence; and the fea coafts are infested with fogs that are equally disagreeable and unhealthy. Near the shore, and in the bays and inlets, the low land is clothed with the most charming verdure; but the inland mountains are perpetually covered with ice and fnow. To the northward of the fixty-eighth degree of latitude the cold is prodigiously intense; and towards the end of August all the coast is covered with ice, which never thaws till April or May, and fometimes not till the latter end of June. Nothing can exhibit a more dreadful, and at the same time a more dazzling, appearance, than those prodigious masses of ice that furround the whole coast in various forms, reflecting a multitude of colours from the fun-beams, and calling to mind the enchanted scenes of romance. Such prospects they yield in culm weather; but when the wind begins to blow, and the waves to rife in vast billows, the violent shocks of those pieces of ice dashing against one another, fill the mind with horror. Greenland is feldom visited with thunder and lightning, but the

aurors borealis is very frequent and bright. At the time of new and full moon, the tide rifes and falls upon this coast about three fathoms; and it is remarkable, that the springs and fountains on shore rife and fall with the flux and reflux of the ocean.

The foil of Greenland varies like that of all other mountainous countries: the hills are very barren, being indeed frozen throughout the whole year; but the valleys and low grounds, especially near the lea, are rich and fruitful. The ancient Norwegian chronicles inform us, that Greenland formerly produced great number of cattle; and that confiderable quantities of butter and cheese were exported to Norway; and, on account of their peculiar excellency, fet apart for the king's use. same histories inform us, that some parts of the country yielded excellent wheat; and that large oaks were found here, which carried acorns as big as apples. Some of these oaks still remain in the fouthern parts, and in many places the marks of ploughed land are easily perceived: at present, however, the country is destitute of corn and cattle, though in many places it produces excellent pasture, and, if properly cultivated, would probably yield grain also. Mr. Egede sowed some barley in a bay adjoining to the Danish colony; it sprang up so fast, that by the latter end of July it was in the full ear; but being nipped by a night frost, it never arrived at maturity, This feed was brought from Bergen, where the summer is of greater heat and duration than in Greenland; but in all probability the corn which grows in the northern parts of Norway would also thrive here. Turnips and coleworts of an excellent tafte and flavour are also produced here. The fides of the mountains near the bays are clothed with wild thyme, which diffuses its fragrance to a great distance. The herb tormentil is very common in this country, and likewife many others not described by the botanists. Among the fruits of Greenland we number juniper-berries, blue-berries, bil-berries and bramble-berries.

Greenland is thought to contain many mines of metal, though none of them are wrought. To the fouthward of the Danish colony are some appearances of a mine of copper. Mr. Egede once received a lump of ore from one of the natives, and here he found calamine of a yellow colour. He once sent a considerable quantity of sand of a yellow colour, intermixed with streaks of vermilion, to the Bergen company: they probably found their account in this present; for they desired him,

by a letter, to procure as much of that fand as possible; but he was never able to find the place where he faw the first spe-It was one of the smallest among a great number of iffands, and the mark he had fet up was blown down by a violent from: politibly this might be the same mineral of which Captain Frobifher brought so much to England. This country produces rock-crystals both red and white, and whole mountains of the albeltos or incombustible flax. Around the colony, which is known by the name of Good Hope, they find a kind of baltard marble of various colours, which the natives form into bowls, lamps, pots, &c. All that has been said of the fertility of Greenland, however, must be understood only of that part which lies between the fixtieth and fifty-fifth degrees of latitude: the most northern parts are totally destitute of herbs and plants. The wretched inhabitants cannot find grafs in sufficient quantities to stuff into their shoes to keep their feet warm, but are obliged to buy it from those who inhabit the

more fouthern parts.

The animals which abound most in Greenland are, rein-deer, foxes, hares, dogs and white bears. The hares are of a white colour and very fat; the foxes are of different colours, white, greyish and blueish, and smaller than those of Denmark and Norway. The natives keep a great number of dogs, which are large, white or speckled, and rough, with ears standing upright, as is the case with all the dogs peculiar to cold climates; they are timorous and stupid, and neither bay nor bark, but fometimes howl difmally. In the northern parts the natives yoke them in fledges, which, though heavy laden, they will draw on the ice at the rate of seventy miles in a short winter's day. These poor animals are very ill rewarded for their service, being left to provide for themselves, except when their mafters happen to catch a great number of feals; on thefe occasions the dogs are regaled with the blood and entrals; at other times they subsist, like wild beasts, upon muscles and berries. Here are also found great numbers of ravens, eagles of a prodigious fize, falcons and other birds of prey; and likewife a kind of linet, which warbles very melodiously. Wholes, sword-fish, porpoises, &c. abound on the coasts; also holybut, turbot, cod, haddock, &c. The more dubious animals alfo, called mermaids, fea-ferpents and krakens, faid to be found on the coast of Norway, are said likewife to dwell in their feas. Mr. Egede affures us, that in the year 1734 the fer-ferpent was feen off the new Danish colony, and railed its head mast high above the surface of the water.

The people who now inhabit the western coast of Greenland, and who, without doubt, are the descendants of the ancient Schrellings, who exterminated the first Iceland colony, bear a near refemblance to the Samoiedes and Laplanders in their persons, complexions, and way of life: they are short, brawny, and inclined to corpulency, with broad faces, flat nofes, thick lips, black hair and eyes, and a yellowish tawny complexion: they are for the most part vigorous and healthy. but remarkably short lived, few of them reaching the grand climacteric, and many dying in their infancy and in the prime ject to a weaknels in the eyes, occasionof youth : the are ed by the pring. Is and the glare of the fnow in the winter-time! the leprofy is known among them but is not contagious. Those that dwell in the northern parts are miserably formented with dysenteries, rheums, and pulmonary disorders, boils and epilepfy. The small-pox being imported among them from Copenhagen in the year 1734, made terrible havoc among these poor people, who are utterly destitute of any knowledge of the medicinal ert, and depend entirely for. assistance upon their angekuts or conjurers. In their dispositions the Greenlanders are cold, phlegmatic, indolent and flow of apprehension, but very quiet, orderly and good-natured; they live peaceably together, and have every thing in common, without strife, envying or animosity; they are civil and hospitable, but slovenly to a degree almost beyond the Hottentots themselves; they never wash themselves with water, but lick their paws like the cat, and then rub their faces with them. They eat after their dogs without washing their diffies; devour the lice which devour them: and even lick the fweat which they scrape off from their faces with their knives. The women wash themselves with their own urine, which they imagine makes their hair grow, and in the winter-time goout immediately after, to let the liquor freeze upon their skin. They will often eat their victuals off the dirty ground, without any vessel to hold it in, and devour rotten slesh with the greatest evidity. In times of scarcity they will subsist on pieces of old fkin, reeds, fea-weed, and a root called tugloronet, dreifed with train oil and fat. The dung of rein-deer taken from the intestines, the entrails of partridges, and all forts of offals, are counted dainties among these savages; and of the scraplings. of feals skins they make delicate pancakes. At first they could not take the Danish provisions without abhorrence, but now they are become extremely fond of bread and butter, though

they fill retain an aversion to tobacco and spirituous liquors; in which particulars they differ from almost all savages on the face of the earth.

The Greenlanders commonly content themselves with one wife, who is condemned, as among other lavage nations, to do all the drudgery, and may be corrected, or even divorced, by the husband stepleasure. Heroes, however, and extraordinary personages are indulged with a plurality of wives. Their young women are generally chafte and bashful; but at some of their feafts, in the midit of their jollity, a man retires with his neighbour's wife behind a curtain made of Ikins; and all the gueffs. thus coupled, retire in their turns. The women think themfelves happy if an angekut or prophet will thus honour them with his careffes. There people never marry within the prohis bited degrees of confanguinity, nor is it counted decent in a couple to marry who have been educated in the fame family. They have a number of ridiculous and superstitious customs; among which the two following are the most remarkable:-While a woman is in labour, the gossips hold a chamber-pot over her head, as a charm to hasten the delivery. When the child is a year old, the mother licks and flabbers it all over, to render it, as the imagines, more strong and hardy, and an are seen

All the Greenlanders hitherto known, speak the same language, though different dialects prevail in different parts of the country: it abounds with double confonants, and is fo guttural, that the pronunciation of many words is not to be learned except by those who have been accustomed to it from their infancy. The letters C, D, F, Q and X, are not known in their alphabet, Like the North-Americans, and inhabitants of Kamschatka, they have a great number of long polyfyllables. Their words, nouns as well as verbs, are inflected at the end by varying the terminations without the help of articles; but their language being found defective, they have adopted a good many words from the Norwegian dialect. Notwithstanding the endeavours of the Danish missionaries, they have no great reason to boost of the proselytes they have made of the natives of Greenland. These lavages pay great deference and respect to the Danes, whom indeed they obey as their masters, and hear the truths of the Christian religion expounded without doubting the veracity of their teachers; but at the same time they listen with the most mortifying indifference, without being in the leaft influenced by what they have heard. They believe in the immortality of the foul, and the existence of a spirit whom they call Torngarfuck

s I want will a grow if the age The first missionaries among the Greenlanders entertained a doubt whether they had any conception of a Divine Being, as they had no word in their language by which to delignate him. When they were asked who made the beaven and earth, and all vinble things? their answer was-"We know not; or, we do not know him; or, it must have been fome mighty person; or, things always have been as they are, and will always remain fo." But when they understood their language better, they found they had some vague notions concerning the foul and spirits, and were solicitous about the state after death. It was evident also that they had some faint conceptions of a Divine Being.

They believe in the doctrine of the transmigration of souts—that the soul is a spiritual essence quite different from the body-that it needs no corporeal nourishment—that it survives the body, and lives in a future better state, they believe will never end. But they have very different ideas of this state, Many place their Elyfium in the abyffes of the ocean, or the bowels of the earth, and think the deep cavities of the rocks are avenues leading to it. There dwella Torngarfuck and his mother; there a joyous summer is perpetual, and a shining lun is obscured by no night; there is the limpid stream, and abundance of fowls, fishes, rein-deer, and their beloved seals, and these are all to be caught without toil, nay, they are even found in a great kettle boiling alive. But to these delightful seats none must approach but those who have been dextrous and diligent at their work, (for this is their grand idea of virtue) that have performed great exploits, and have maftered many whales and feals, have undergone great hardships, have been drowned in the sea, or died in childhed. The difembodied spirit does not enter dancing into the Elysian fields, but must found five whole days, some say louger, in sliding down a rugged rock, which is thereby smeared with blood and gore. Those unfortunate fouls which are obliged to perform this rough journey in the cold winter, or in boilterous weather, are peculiar objects of their pity, because they may be easily destroyed on the road, which destruction they call the second death, and describe it as a perfect extinction, and this, to them, is the most dreadful consideration. Therefore during these five days or more, the surviving relations must abstain from certain meats, and from all noify work, except the necessary fishing, that the foul may not be disturbed or perish in its perisons passage. From all which, it is plain, that the Greenlanders, stupid as they have been represented, have an idea that the good will be rewarded, and the bad punished, and that they conceive a horror at the thought of the entire annihilation of the foul.

Others have their paradife among the celeftial bodies, and they imagine their flight thither so easy and rapid, that the soul rests the same evening in the manfion of the moon, who was a Greenlander, and there it can dance and play at ball with the rest of the fouls; for they think the northern lights to be the dance of sportive souls. The souls in this paradise are placed in tents round a vast lake abounding with fifth and fowl. When this lake overflows it rains on the earth, but should the dam once break, these would be a general deluge. Belginson the graduate that there are a contracting

per property is to the second second

diste ministers, differ concerning the principles of his existence; some affirming that he is without form or shape; others, that he has the shape of a bear; others, that he has a large human body with only one arm: while others affirm, that he is no larger than a man's finger, with many other absurdities of a similar kind. They have also a peculiar kind of mythology, by which they believe all the elements to be full of spirits, show among which every one of their prophets is supplied with a familiar which they name Torngack, and who is always ready when summoned to his assistance.

The Greenlanders are employed all the year round either in fishing or Munting. At sea they pursue the whales, morses, feals, fish for earng, and fea fowl. On shore they hunt the rein-deer in different parts of the country; they drive thefe animals, which feed in large herds, into a narrow circle or defile, where they are eafily flain with arrows. Thoir bow is made of fir-tree, wound about with the twifted finews of animals; the string is composed of the same stuff, or of seal skin; the arrow is a good fathom in length, pointed with a bearded iron, or a sharp bone; but those with which they kill birds are blung that they may not tear the flesh. Sea fowls they kill with lances, which they throw to a great distance with furprising dexterity. Their manner of catching whales is quite different from that practifed by the Europeans; about fifty persons, men and women, let out in one long boat, which is called a three boat, from kone a " woman," because it is rowed by females only. When they find a whale, they strike him with harpoons, to which are fastened with long lines some seal skins blown up like bladders. These, by floating on the surface, not only discover the back of the whale, but hinder him from diving under water for any length of time. They continue to purfue him until he loses strength, when they pierce him with spears and lances till he expires. On this occasion they are clad in their spring coats. confisting of one piece, with gloves, boots, and caps made of feal fkin fo closely laced and fewed that they keep out water,

The wifer Greenlanders, who confider the foul as a spiritual immaterial effence, laugh at all this, and say, if there should be such a material, laxuriant paradife, where souls could entertain themselves with hunting, still it can only endure for a time; afterwards the souls will certainly be conveyed to the peaceful mansions: but they know not what their food or employment will be. On the other hand, they place their hell in the subterraneous regions, which are devoid of light and heat, and filled with perpetual terror and anxiety. This saft fort of people lead a regular life, and refrain from every thing they think is evil.

Thus accourred, they lesp into the fear and begin to flice off the fat, even under water, before the whale is dead They Have many different ways of killing feals; namely, by striking them with a small harpoon equipped also with an air bag; by watching them when they come to breathe at the air-holes in the lee, and firiking them with spears; by approaching them in the diff guile of their own species, that is, covered with a feal skin, creeping upon the ice, and moving the head from fide to fide as the feals are accustomed to do. By this stratagem the Greenlander moves towards the unsuspecting seal, and kills him with a spear. The Greenlanders angle with lines made of whalebone cut very small, by means of which they succeed wonderfully. The Greenland canoe, like that used in Nova-Zembla and Hudfon's bay, is about three fathoms in length, pointed at both ends, and three quarters of a yard in breadth; it is composed of thin rafts fastened together with the finews of animals. It is covered with dreffed feal-ficine both below and above, in such a manner that only, a circular hole is left in the middle, large enough to admit the body of one man. Into this the Greenlander thrusts himself up to the waist, and fastens the skin so tight about him that no water can enter. Thus fecured, and armed with a paddle broad at both ends, he will venture out to fea in the most stormy weather to catch seals and sea-fowl; and if he is overset, he can easily raise himself by means of his paddle. A Greenlander in one of these canoes, which was brought with him to Copenhagen, outstripped a pinnace of fixteen oars, manned with choice mariners. The kone boat is made of the fame materials, but more durable, and fo large that it will contain fifty persons with all their tackle, baggage and provisions: she is fitted with a mast, which carries a triangular fail made of the membranes and entrails of feals, and is managed without the help of braces and bowlings; there kones are flat bottomed, and sometimes faxty feet in length. The men think it beneath them to take charge of them, and therefore they are left to the conduct of the women, who indeed are obliged to do all the drudgery, including even the building and repairing their houses, while the men employ themselves wholly in preparing heir hunting implements and fishing tackle,

This country is but thinly inhabited.\* In the winter time he people dwell in huts built of stone or turf; on the one

Most of the Greenlanders live to the fouthward of the fixty-fecond degree north latitude, or as the inhabitants are wont to fay, in the fouth; but no

side are the windows, covered with the skins of seals or reins deer. Several families live in one of these houses, possessing each a separate apartment, before which is a hearth with a great lamp placed on a trevit, over which hangs their kettle; above is a rack or shelf on which their wet clothes are dried. They burn train oil in their lamps, and for a wick they use a kind of mosa, which fully answers the purpose. These lamps are not only sufficient to boil their victuals, but likewise produce such a heat, that the whole house is like a bagnio. The door is very low, that as little cold air as possible may be admitted. The house within is lined with old skins, and surrounded with benches for the conveniency of strangers. In the summer time they dwell in tents made of long poles fixed in a conical form, covered in the inside with deer skins, and on the outside with seals skins, dressed so as that the rain cannot pierce them.

# EAST GREENLAND, Colonia

East-Greenland was for a long time considered as a part of the continent of West Greenland, but is now discovered to be an assemblage of islands lying between 760 46' and 80° 30' of north latitude, and between 9° and 20° of east longitude. It was discovered by Sir Hugh Willoughby in the year 1553, who called it Groenland, supposing it to be a part of the western continent. In 1595, it was again visited by William Barentz and John Cornelius, two Dutchmen, who pretended to be the original discoverers, and called the country Spitzbergen, or

Europeans live there, fo that these partgare but little known. The European colonies have fixed themselves to the northward of the fixty-second degree of the fixty-second degree of the fixty second degree of th

States, His wiln

A factor, who lived many years in the country, and whose accuracy, as far as the subject will admit, may be depended on, found, in the compose of forty leagues, which was the circle of his dealings, nine hundred and fifty-seven constant residents, besides occasional visitors. This part of Greenland is the roost populous, except Disko bay, which is the best place for trade, and the southern parts. In other places, an individual may travel fixty miles and not seet with a single person. Suppose, however, that the country is inhabited for the space of four hundred leagues, and that there are one thousand souls for every forty leagues, the amount would be ten thousand. The above-mentioned factor thinks, that there are not more than seven thousand, because there are so many defert places. He asserts, indeed, that the native Greenlanders, in 1730, amounted to thirty thousand; and when he made his first calculation in 1746, there were still twenty thousand; consequently, since that time, their number has diminished at least one-half.

They alledged, that the coast discovered by Sir Hugh Willoughby was some other country; which accordingly the Hollanders delineated on their maps and charts by the name of Willoughby Land whereas in fact no fuch land ever existed; and long before the voyage of these Dutchmen, Stephen Barrows, an English Shipmaster had coafted along a defolate country from north latitude 984 to 800 11, which was undoubtedly Spitzbergen, "The fea in the neighbourhood of the islands of Spitzbergen abounds very much with whales, and is the common refort of the whale-fishing ships from different countries, and the country itself is frequently visited by these ships; but till the late voyage of the Hon. Capt. Phipps, by order of his Majerry, the fituation of it was erroneously laid down. It was irragined that the land stretched to the northward as far as 820 of north latitude; but Capt. Phipps found the most northerly point of land, called Seven Islands, not to exceed 809 go' of latitudes Towards the east he saw other lands lying at a distance, so that Spitzbergen plainly appeared to be furrounded by water on that fide, and not joined to the continent of Afia, as former navigators had supposed. The north and west coasts also he explored, but was prevented by the ice from failing so far to the northward as he wished. The coast appeared neither habitable nor accessible; it is formed of high, barren, black rocks, without the least marks of vegetation; in many places bare and pointed, in others covered with fnow, appearing even above the clouds. The valleys between the high cliffs were filled with fnow and ice. " This prospect," says Capt. Phipps, " would have suggested the idea of perpetual winter. had not the mildness of the weather, the smooth water, bright fun-shine, and constant day-light, given a cheerfulness and novelty to the whole of this romantic scene." The current ran along this coast half a knot an hour, north. The height of one mountain feen here was found, by geometrical mensuration, to be at one time one thouland five hundred and three feet and a half, at another one thousand five hundred and three feet and eight-tenths. By a barometer constructed after De Luc's method, the height was found to be one thousand five hundred and eighty-eight feet and a half. On this occasion Capt. Phipps has the following remarks: " I cannot account for the great difference between the geometrical measure and the barometrical according to M. De Luc's calculation, which amounts to eightyfour feet seven inches, I have no reason to doubt the accuracy of Dr. Irving's observations, which were made with great care. As to the geometrical measure, the agreement of so many triangles, each of which must have discovered even the smallest error, is the most satisfactory proof of its correctness. Since my return, I have tried both the theodolite and barometer, to discover whether there was any fault in either, and find them, upon trial, as I had always done before, very accurate."

There is good anchorage in Schmeerenburgh harbour, lying in north latitude 74? 44, east longitude 9° 50' 45", in thirteen fathoms, fandy bottom, not far from the shore, and well sheltered from all winds. Close to this harbour is an island called Amsterdam Island, where the Dutch used formerly to boil their whale oil; and the remains of some conveniency erected by them for that purpose are still visible. The Dutch ships still resort to this place for the latter season of the whale sishery.—The stone about this place is chiefly a kind of marble, which dissolves easily in the marine acid. There were no appearance of minerals of any kind, nor any signs of ancient or modern volcances. No insects, nor any species of reptiles were seen, not even the common earth worm. There were no springs or rivers, but great plenty of water was produced from the snow which macked on the mountains.

The most remarkable views which these dreary regions present, are those called Icebergs. They are large bodies of ice
silling the valleys between the high mountains: their face towards the sea is nearly perpendicular, and of a very lively light
green colour. One was about three hundred feet high, with a
cascade of water issuing from it. The black mountains on each
side, the white snow, and greenish coloured ice, composed a very
beautiful and romantic picture. Large pieces frequently broke
off from the icebergs, and fell with great noise into the water:
one piece was observed to have sloated out into the bay, and
grounded in twenty-four sathoms; it was sifty feet high above
the surface of the water, and of the same beautiful colour with
the iceberg from which it had separated.

These islands are totally uninhabited, though it doth not appear but that human creatures could subsist on them, notwithstanding their vicinity to the pole. Eight English sailors, who were accidentally less here by a whale fishing ship, survived the winter, and were brought home next season. The Dutch then attempted to settle a colony on Amsterdam island above mentioned, but all the people perished, not through the severity of the climate, but of the scurvy, owing to the want of those

not apnotwithors, who ived the ich then ye menerity of of those remedies which are now happily discovered, and which are found to be so effectual in preventing and curing that dreadful disease. The late account also of six Russian sailors, who staid four years in this inhospitable country, affords a decisive proof that a colony might be settled on East-Greenland, provided the doing so could answer any good purpose.

A Genland company was formed in London in the year 1603. A joint stock of forty thousand pounds was by statute to be raised by subscribers, who were incorporated for fourteen years from the first day of October in that year; and the company to use the trade of catching whales, &c. to and from Greenland, and the Greenland seas; they may make bye-laws for the government of the persons employed in their ships, &c. Stat. 4 & 5 W. III. cap. 17. This company was farther encouraged by parliament in 1696; but partly by unskilful management, and partly by real loss, it was under a necessity of entirely breaking up, before the expiration of the term assigned to it, ending in 1707. But any person who will adventure to Greenland for whale-fishing, has all privileges granted to the Greenland company, by a Anne, cap. 16. and thus the trade was again laid open. Any subjects may import whale fins, oil, &c. of fish caught in the Greenland seas, without paying any customs, &c. Stat. 10 Geo. I. cap. 16. And ships employed in the Greenland fishery are to be of such burden, provided with boats, fo many men, fishing lines, harping irons, &c. and be licensed to proceed; and on their return are paid twenty faillings per ton bounty, for whale-fins, &c. imported; 6 Geo. II. cap. 33. The bounty was afterwards increased, but has been lately diminished, and fince this diminution the trade has increased.

EAST AND WEST-FLORIDA.

### SITUATION, BOUNDARY AND EXTENT.

LAST and West-Florida are situated between 25° and 31° aorth latitude, and 5° and 17° west longitude from Philadelphia; the length is about six hundred miles, and the breadth about one hundred and thirty. They are bounded north, by Georgia; east, by the Atlantic ocean; south by the gulph of Mexico; west, by the Mississippi; lyin, in the form of an L. The climate variet very little from that of Georgia. Florida was first discovered in 1497, by Sebastian Cabot, a Venetian, then in the English service; whence a right to the country was claimed by the kings of England; and this territory, as well as Georgia, was included in the charter granted by Charles II. to Carolina. In 1512, how ever, Florida was more fully discovered by Ponce de Leon, a able Spanish navigator, but who undertook his voyage from the

mest absurd motives that can well be imagined. The Indians of the Caribbee islands had among them a tradition, that somewhere on the continent there was a fountain, whose waters had the property of restoring youth to all old men who tasted them. The romantic imaginations of the Spaniards were delighted with the idea. Many embarked in voyages to find out this imaginary fountain, who were never afterwards heard of-Their superstitious countrymen never imagined that these people had perished. They concluded that they did not return, only because they had drank of the immortalizing liquor, and had discovered a spot so delightful, that they did not choose to leave it. Ponce de Leon fet out with this extravagant view as well as others, fully persuaded of the existence of a third world, the conquest of which was to immortalize his name, In the attempt to discover this country, he re-discovered Florida, but returned visibly more advanced in years than when he fet out on his voyage. For some time this country was neglected by the Spaniards, and some Frenchmen settled in it. But the new colony being neglected by the ministry, and Philip II. of Spain having accustomed himself to think that he was the sole proprietor of America, fitted out a fleet at Cadiz to deftroy them. His orders were executed with barbarity; the French entrenchments were forced, and most of the people killed. The prisoners were hanged on trees, with this inscription. " Not as Frenchmen, but as heretics."

The cruelty was foon after revenged by Dominic de Courgues, a skilful and intrepid seaman of Gascony, an enemy to the Spaniards, and passionately fond of hazardous expeditions and glory. He fold his estates, built some ships, and with a felect band of adventurers, like himfelf, embarked for Florida He drove the Spaniards from all their posts with incredible valour and activity, defeated them in every rencounter, and by way of retaliation, hung the prisoners on trees, with this inteription, " Not as Spaniards, but as affaffins." This cinedition was attended with no other confequences; Gourgues blew up the forts he had taken, and returned home, where no notice was taken of him. It was again conquered in 1529. by the Spaniards under Ferdinand de Soto, not without a great deal of bloodshed, as the natives were very wartike, and made vigorous reliftance. The fettlement, however, was not fully established till the year 1665, when the town of St. Ameudine the capital of the colony while it remained in the hands of the Spaniards, was founded. In 1686, this place was taken and pillaged by Sir Francis Drake. It met with the fame fate in Vol. IV.

of buscancers. In 1702, an attempt was made upon is by Colonel More, governor of Carolina. He fet out with five hundred English and seven hundred Indians; and having reached St. Angustine, he besieged it for three months, at the expiration of which, the Spaniards having sent some ships to the relief of the place, he was obliged to retire. In 1740, another attempt was made by Ceneral Oglethorpe; but he being outwitted by the Spanish governor, was forced to raise the siege with loss, and Plorida continued in the hands of the Spaniards till the year 1763, when it was ceded by treaty to Great-Britain. During the list was it was again reduced by his Catholic Majesty, and

was guaranteed to the crown of Spain at the peace.

Among the rivers that flow through this territory, and fall into the Atlantic les. St. John's and Indian rivers are the principal. St. John's river rifes in or near a large swamp, in the heart of East-Florida, and pursues a northern course in a broad navigable stream, which, in several places, spreads into broad beys or lakes. Lake George, which is only a dilatation of the river, is a beautiful piece of water, generally about fifteen miles broad, and from fifteen to twenty feet deep. It is ornamented with feveral charming islands, one of which is an orange grove, intersperfed with magnotias and palm trees. Near Long Lake, which is two miles long and four wide, and which communicates with St. John's river by a small creek, is a vast fountain of warm. or rether hot mineral water, iffuing from a high bank on the river : to boils up with great force, forming immediately a valt concular bason, capacious enough for several shallops to ride in. runs with rapidity into the river, at three or four hundred distance the water is perfectly clear, and the prodigious and variety of fifth in it, while fwimming many feet deep, pear as plainly as though lying on the table before your eyes: the water has a difagreeable taste, and smells like bilge water. This river enters into the Atlantic, north of St. Augustine. ladisa river rifes a fhort distance from the fea coast, and runs from north to fouth, forming a kind of inland passage for many miles along the coast. Seguana, Apalachicola, Chatahatchi, Efcambia, Mobile, Pafcagoula, and Pearl rivers, all rife in Georgia. and ran foutherly into the gulph of Mexico.

There are, in this territory, a great variety of foils. The caftern part of it, near and about St. Augustine, is far the most suffruitful; yet even here two crops of Indian corn are produced. The banks of the rivers which water the Floridas, and the parts contiguous, are of a superior quality, and well adapted to

Georgia,

the culture of rice and corn, while the more interior country, which is high and pleafant, abounds with wood of almost every kind; particularly white and red oak, live oak, laurel megaolis, pine, hiccory, cyprels, red and white cedar. The live oaks, though not tall, contain a prodigious quantity of timber; the thank is generally from twelve to twenty feet in sircumference, and rifes ten or twelve feet from the earth, and then branches into four or five great limbs, which grow in nearly a horizontal direction, forming a gentle curve. " I have stepped," lays Bartrem, a sabove afty paces, on a firaight line, from the trunk of one of there trees to the extremity of the limbs." They are ever green, and the wood a most incorruptible. They bear a great quantity of small acorns, which are agreeable food, when roasted, and from which the Indiana extract a sweet oil, which they no in cooking homminy and rice.

The laurel magnolia is the most beautiful among the trees of the forest, and is usually one hundred feet high, though some are much higher. The trunk is perfectly erect, riling in the form of a beautiful column, and supporting a head like an obtuse cone. The flowers are on the extremities of the branches; are large, white, and expanded like a role, and are the largest and most complete of any yet known; when, fully expanded, they are from fix to nine inches diameter, and have a most delicious fragrance. The cypress is the largest of the American trees, "I have seen trunks of these trees," says Bartram, "that would. measure eight, ten, and twelve feet in diameter, for forty and fifty feet straight shaft." The trunks make excellent shingles boards, and other timber; and when hollowed, make durable and convenient canoes, "When the planters fell these mighty trees, they raise a stage around them, as hish as to reach above the buttreffes; on this stage eight or ten negroes ascend with their axes, and fall to work round its trunk."

The intervals between the hilly part of this country are extremely rich, and produce spontaneously the fruits and vegetebles that are common to Georgia and the Carolinas. But this country is rendered valuable in a peculiar manner by its exten-

St. Augustine, the capital of East-Florida, is situated on the fea coast, latitude 29° 45'; is of an oblong figure, and interlected by four streets, which cut each other at right angles. The town is fortified with bastions, and inclosed with a ditch; it is likewife defended by a castle, called fort St. John, which is well the district shift for the time.

<sup>\*</sup> Travels, page 85.

appointed to ordnance. The north and fouth breakers, at the entrance of the harbour, form two channels, whose bers

have eight feet water.

The principal town in West-Florida is Pensacola, latitude 30° as. It lies along the beach, and like St. Augustine, is of an oblong form. The water approaches to the town except for small vessels, are obstructed by a low and sandy shore. The bay, however, on which the town stands, forms a very commodious harbour, and vessels may ride there secure from every wind. The exports from this town, consisting of skins, logwood, dying stuff, and silver dollars, amounted, while in the possession of the British, on an average, to sixty-three thousand pounds, annually; the average value of imports, for three years, from Great-Britain, was ninety-seven thousand pounds.

ounds.

From the flattering accounts which he gave of the country, and from the confequential advantages that would accrue from fettling a colony in those parts, Louis XIV. was induced to establish a company for the purpose. Accordingly a squadron of four vessels, amply provided with men and provisions, under the command of Monsieur de la Salle, embarked with an intention of fettling near the mouth of the Mississippi; but he unintentionally failed a hundred leagues to the westward of it, where he attempted to establish a colony; but through the unfavourableness of the climate, most of his men miserably perished, and he himself was villainously murdered, not long after, by two of his own men. Monsieur Ibberville succeeded him in his laudable attempts. He rafter two successful vovages, died while preparing for a third. Crozat succeeded him; and in 1712, the king gave him Louisiana. This grant continued but a fhort time after the death of Louis XIV. In 1764. Louisiana was ceded to the king of Spain, to whom it now belongs.

This country is intersected by a number of fine rivers, among which are the St. Francis, which empties into the Missisppi at Kappas Old Fort, navigable about two hundred and fifty or three hundred miles; its course is nearly parallel with the Mississippi, and from twenty to thirty miles distant from it;

Spain.

the Natchitoches, which empties into the Miffiffippi above Point Coupee; the Adayes of Mexicano river, emptying into the gulph of Mexico; and the river Rouge, on which, it is well known, are as rich filver mines as any in Mexico. This is supposed to be one principal reason why the exclusive navigation of the Mississippi has been so much insisted on by

A tropichis Louisiana is agreeably situated between the extremes of heat and cold; its climate varies as it extends towards the north. The fouthern parts, lying within the reach of the refreishing breezes from the fea, are not scorched like those under the same latitudes in Africa; and its northern regions are colder than these of Europe under the same parchols, with a wholesome ferene air. To judge of the product to be expected from the foil of Louisiana, we should turn our feyes to Egypt, Arabia, Felix, Persia, India, China, and Japan, all lying in corresponding latitudes. Of these, China alone has a tolerable government; and yet it must be acknowledged, they all are, or have been famous for their riches and fertility. From the favourableness of the climate, two annual crops of Indian corn may be produced; and the foil, with little cultivation, would furnish grain of every kind in the greatest abundance, The timber is as fine as any in the world, and the quantities of live oak, ells, mulberry, walnut, cherry, cypress, and cedar, are aftenishing. The neighbourhood of the Mississippi, belides, furnishes the richest fruits in great variety; the foil is particularly adapted to hemp, flag, and tobacco; and indigo is at this time a staple commodity, which commonly yields the planter three or four cuttings a year, . In a word, whatever is rich and rare in the most desirable climates in Europe, seems to be the spontancous production of this delightful country. The Mississippi and the neighbouring lakes furnish in great plenty several sorts of fish, particularly perch, pike, sturgeon, and cels,

In the northern part of Louisians, forty-five miles below the mouth of the Ohio river, on the west bank of the Mississippi. a fettlement is commenced, conducted by Colonel Morgan, of New-Jersey, under the patronage of the Spanish king. The spot on which the city is proposed to be built, is called New-Madrid, after the capital of Spain, and is in north latitude

160 301

The limits of the new city of Magrid are to extend four miles fouth, and two miles well from the river, to as to cross beautiful, living, deep lake, of the pureft fpring water, on

The the culture of hindred yards wide, and feveral miles in length, emptying itlelf, by a constant rapid narrow stream, through the center of the city. The banks of this lake, which is called St. Annis, are high, beautiful, and pleasant; the waters deep, clear, and fweet; the bottom a clear fand, free from woods, thrubs, or other vegetables, and well frored with fifth. On each fide of this delightful lake streets are laid out, one hundred feet wide, and a road is to be continued round it of the fame breadth; and the trees are directed to be preferved for ever, for the bealth and pleasure of the citizens. A freet one hundred and twenty feet wide, on the banks of the Miffiffippi, is laid out, and the trees are directed to be preferved for the fame purpose. Twelve acres, in a central part of the city. are to be referved in like manner, to be ornamented, regulated and improved by the magistracy of the city for public walks: and forty half acre lots for other public uses; and one lot of twelve acres for the king's ufe. A the same

New-Madrid, from its local fituation and adventitious privileges, is in a prospect of being the great emporium of the western country, unless the free navigation of the Mississippi should be opened to the United States: and even should this desired event take place, which probably will not without a rupture with Spain, this must be a place of trade. For here will naturally center the immense quantities of produce that will be borne down the Islinois, the Mississippi, the Ohio, and their various branches; and if the carriers can find as good a market for their cargoes here, as at New-Orleans or the West-Indies, and can procure the articles they defire, they will gladly save themselves the difficulties and dangers of navigating the long Mississippi.

The country in the vicinity of this intended city is represented as excellent, in many parts beyond description. The natural growth confists of mulberry, locust, sassays, walnut, hiccory, oak, ash, dog-wood, &c. with one or more grape vines running up almost every tree; the grapes yield, from experiment, good red wine, in plenty and with little labour. In some of the low grounds grow large cypress trees. The country is interspersed with prairies, and now and then a cane patch of one hundred, and some of one thousand acres. These prairies have no trees on them, but are fertile in grass, slowering plants, strawberries, &c. and, when cultivated, produce good crops of wheat, barley, Indian corn, slax, hemp, and tobacco, and are casily tilled. The climate is said to be favourable for health, and to the culture of fruits of various kinds, and particularly for garden

ord four cross a er, out vegetables. Iron and lead mines, and falt springs, it is afferted, are found in such plenty as to afford an abundant supply of these necessary articles. The banks of the Mississippi, for many leagues in extent, commencing about twenty miles above the mouth of Ohio, are a continued chain of lime-stone. A fine tract of high, rich, level land, S. W. by W. and N. W. of New-Madrid, about twenty-sive miles wide, extends quite to the river St. Francis.

It has been supposed by some, that all settlers who go beyond the Mississippi, will be for ever lost to the United States. There is, we believe, little danger of this, provided they are not provoked to withdraw their friendship. The emigrants will be made up of the citizens of the United States. They will carry along with them their manners and customs, their habits of government, religious and education; and as they are to be indulged with religious freedom, and with the privilege of making their own laws, and of conducting education upon their own plans, these American habits will undoubtedly be charished; if so, they will be Americans in fact, while they are nominally the subjects of Spain.

It is true, Spain will draw a revenue from them, but in return they will enjoy peculiar commercial advantages, the benefit of which will be experienced by the United States, and perhaps be an ample compensation for the loss of so many citizens as may migrate thither. In short, this settlement, if conducted with judgment and prudence, might be mutually serviceable both to Spain and the United States; it might prevent jealousies; lessen national prejudices; promote religious toleration; preserve har mony, and be a medium of trade reciprocally advantageous.

But it is well known that empire has been travelling from east to west. Probably her last and broadest seat will be America. There the sciences and arts of civilized life are to receive their highest improvements: there civil and religious liberty are to slourish, unchecked by the cruel hand of civil or ecclesiastical tyranny: there genius, aided by all the improvements of former ages, is to be exerted in humanizing mankind, in expanding and enriching their minds with religious and philosophical knowledge, and in planning and executing a form of government, which will involve all the excellencies of former governments, with as sew of their defects as is consistent with the imperfection of human affairs, and which will be calculated to protest and unite, in a manner consistent with the natural rights of mankind, the largest empire that ever existed. ing from east be America. receive their berty are to ecclesiastical ats of former epanding and phical know-government, governments, he imperfecd to protest ights of mando with these

prospects, which are not merely the visions of fancy, we cannot but anticipate the period, as not far distant, when the American empire will comprehend millions of souls west of the Mississippi was never designed as the western boundary of the American empire. The God of Nature never intended that some of the Best part of his earth should be inhabited by the subjects of a monarch four thousand miles from them. And we may venture to predict, that, when the rights of mankind shall be more fully known, and the knowledge of them is fast increasing both in Europe and America, the power of European potentates will be confined to Europe; and their present American dominions become, like the United States; free, sovereign, and independent empires:

It seems to depend on a timely adoption of a wise and liberal policy on the part of Spain; whether or not there shall be a speedy revolution in her. American colonies. It is afferted by the best informed on the subject, that there are not a hundred Spanish families in all Louisians and West-Florida; the bulk of inhabitants are French people, who are inimical to the Spanisrds, and emigrants from the United States, and a few English, Scots, Dutch, and Irish. This was the case in 1791; and as all emigrations to this country have since been, and will probably in suture be; from the United States, and these emigrations are numerous, the time will soon come, when the Anglo Americans in this country will far exceed the number of all other nations.

The wretched policy of New-Orleans, unless changed, will haften a revolution in the Spanish colonies. So long as the governor can dictate laws and dispense with them at his pleasure, and create monopolies in trade for his own and his favourites' advantage; as is now the case; there can be no stability in the commerce of this place. The exclusive right, even of supplying the market with fresh beef, pork, veal, mutton, is monopolized. No farmer or planter is allowed to kill his own beef, fwine, calf, or sheep, and fend it to market; he must fell it to the king's butcher, as he is called, at the price he is pleased to give; and this man retails it out at a certain price agreed upon by the governor, in just such pieces as he thinks proper, through a window or grate. Ask for a roasting piece, and he will give you a thin or brifket of beef; point to the piece you want and he will tell you it is engaged to your superior. From similar conduct, turkies now fell for four or five dollars a piece, which

under the French government, were in abundance for half & dollar. The monopoly of flour is, if possible, on still a worfe funting for the inhabitant; and the tobacco inspection yet more discouraging to the planter. The GOVERNOR, or the crown, as it is called, must have an undefined advantage in every thing, Hence all are ripe for a revolution the moment one shall offer with prospect of being supported, whether it shall come from the United States, England, France, or internally from the inhabitants. There you have a seed a 7 " 1 1

It is faid to have been the fixed resolution of the British miniftry to feize on New-Orleans, in the first instance, in case a rupture with Spain had taken place, as a necessary prelude to an attack on the Spanish possessions in the West-Indies and on the For this purpose every bend of the river, every bay and Harbour on the coast, have been surveyed and sounded with the utmost exactness, and all of them are better known to the British than to the Spaniards themselves ... for the state of the state of the

Whilst the United States were engaged in the revolution war against England, the Spaniards attacked and possessed themselves of all the English posts and settlements on the Mississippia from the Iberville up to the Yazoos river, including the Natchez country; and by virtue of this conquest are now peopling and governing an extent of country three degrees north of the United States's fouth boundary, and claiming authority which no treaties warrant. This alone will probably be deemed fufficient cause for the United States to join with any other power against Spain, the first opportunity, as they conceive these territories belong to them by treaty. In such case, the Kentucky country slone could, in one week, raife a sufficient force to conquer all the Spanish possessions on the Missisppi ; whilst one thousand men would be equal to defend the whole country of New-Orleans and Louisiana from any enemy approaching it by fee. The greater a hostile fleet entering the Mississippi, the greater and more certain would be their destruction, if opposed by men of knowledge and resolution.\*

<sup>\*</sup> The following extract of a letter from a gentleman at New-Orleans, dated September, 1790; contains much useful information, in confirmation of the above: for a the took they dry the is in it is the of the

When I lest you and my other friends at Baltimore, last year, I promised to write to you by every opportunity, and to communicate to you every inormation which I could derive from my excursion to the Ohio, down that which is the second of the second

า ( ) เมื่อ, มีวา ดูกุระเริ่มกวานี้

New-Orleans stands on the east side of the Mississippi, one hundred and five miles from its mouth, in latitude 300 121 north. In the beginning of the year 1787 it contained about 1 . 10 . 10 . 10

entities the telephone to beautiful stream, during my stay at Kentucky and the western posts, my visit to the Illinois and the different fatlements on the Missishppi, from thence down to New-Orleans.

" As I have devoted more than twelve months in making this tour, with the determination to judge for my felf, and to give you and my other friends information to be depended upon, regarding the climate, foil, natural productions, population, and other advantages and disadvantages, which you may depend on finding in the country I have passed through, I cannot, within the narrow bounds of this letter, comply with my intention, and your wish, but I must beg of you to rest satisfied with what follows ;"

" Nearly oppfite to Louisville is a stockade fort, garrisoned by two companice of the first United States regiment. What use this post is of, I never could learn.-It is a mere hospital in the summer season, and the grave of brave men, who might be usefully employed elsewhere. Fort Harmar is as remarkably healthful; fo is the New-England settlement at Muskingum; and I think the Miami settlement will be healthful when the people have the comforts of good living about them; at present they are the poorest among the poor emigrants to this country, and not the best managers. Below the falls on the west side, is a miserable settlement, called Clarkesville, frequently flooded, and composed of a people who cannot better themselves at present, or I suppose they would not continue here. From thence I made an excursion by land to Post Vincent, diftant about one hundred miles: the fort here is garrifoned by two companies, at great expense, but little use. Not liking the country on account of the many hostile neighbouring Indians, I hastened out of it, and went with a party of Frenchmen to Kaskaskias, in the Illinois country, and visited Prairie des Rochers, St. Phillip's, Belle Fontaine, and Kahokia; from whence making up a party to purfue some hostile Kukapoos, and steering due east, we fell on the head waters of the Kaskaskia river, which we crossed at some distance. This is a delightful country! On our return to Kahokia, I croffed over to St. Louis, on the Spanish fide. but I did not proceed far into the country; what I did fee I did not like, and therefore bought a canoe and went down the Milliflippi to St. Genevieve and the Saline. Not being pleased with these places, nor the country around, I embraced the company of some French hunters and traders going tuwards the St. Francis river, in a fouth-west direction from St. Genevieve. After travelling thirty miles nearly, I came to a fweet country; here meeting with fome Shawanese Indians going to l'Ance la Graise, and New-Madrid, I made them a finall present, and engaged them to escort me there, which they did through a country fine and beautiful beyond description; variegated by small hills, beautiful timber, and extensive plains of luxuriant foil. Here the Spaniards are building a handsome fort, to encourage the settlement by Americans, on a plan of Colonel Morgan's, of New-Jersey, which, had it been pursued, as proposed by him, would have made this the first in all the western country; but they have deviated from it, fo much as to discourage the settlement, and many have left it. The banks of the Miffiffippi overflow above and below the town, but the country back from the river is incomparably beautiful and fine. I made a tour back

one thousand one hundred houses, seven-eights of which were confumed by fire in the space of five hours, on the soth of March, 1788. It is now rebuilt. Its advantages for trade are very great. Situated on a noble river, in a fertile and healthy country, within a week's fail of Mexico by fea, pear to the British, French, and Spanish West-India plands, with a moral certainty of its becoming the general receptacle for the produce of that extensive and valuable country, on the Mississiand Ohio these circumstances are sufficient to enfure its future growth and commercial importance access &

The greater part of the white inhabitants are Roman Catholics; they are governed by a viceroy from Spain; the number

to the principle of the section and the section of the section of

of inhabitants is unknown, by the heliege s was enforced to

with American his in securely by barrowill there. to the river St. Francis, distant about twenty-eight or thirty miles, and returned by another route more fouthward, to my great fatisfaction. Exprelling to fome of the people, at New-Madrid, my furprife at Coionel Soon's account of this country, I was told that he never went one hundred yards back from the river, either on the Ohio or Mississippi, except once, and that was at l'Ance la Graise, where a horse was provided for him, and he rode fifteen or twenty miles, and returned fo encaptured with the country, that he would not liften to the propofed fettlement of New-Madrid being fixed at any other place; and he actually applied to Colonel Morgan for forty surveys, most of which were executed; and he entered into obligations for fettlements thereon; but the Colonel refuting to grant him three hundred acres of the town lots, for a farm, as it would be injurious to other applicants of equal merit, S\*\*\* fwore he would do every thing in his power to injure Morgan and the fettlement; which it feems he has endeavoured to do, to the ruin, however, of his own reputation. I am fatisfied that the failure of this lettlement is only owing to a narrow policy in the Spanish government, or to a deviation from their first plan, and not from the causes represented by its enemies. This is the country, of all others, I have seen, which I would with to fettle in, had Colonel Morgan's plan been adopted, or carried into execution; and thoulands among the best people of the western country would already have been fettled here. Why it was not, I know not; but I am told jealoufy of his fuccels was the caute. Factor I am for fatting it a

After continuing two months in this delightful country, I proceeded to the Natchez, which has already become a confiderable fettlement, and is now under the government of Don Gayofo, a man greatly beloved; but the Spanish government, though I think it liberal at present, will not long agree with American ides of liberty and justice; and a revolution is now in embryo, which a small matter will blow to a flame; and New-Orleans itself will be at the mercy of new subjects, if joined by a handful of the Kentucky people 18 301 all

a application and the second to a construction of the Management and the Management of the Construction of

#### MEXICO, or NEW-SPAIN.

MEXICO is fituated between 9° and 40° north-latitude, and 18° and 50° west-longitude. Its length is two thousand one hundred miles, and breadth one thousand fix hundred. It is bounded on the north, by unknown regions; on the east, by Louisians and the gulph of Mexico; on the south by the isthmus of Darien, which separates it from Terra Firms in South-America; and on the west, by the Pacific Ocean.

This vast country is divided into three grand divisions, viz.

1. OLD-MEXICO. 2. NEW-MEXICO PROFER. 3. CALIFORNIA, lying on the west, and a peninsula.

#### The party served on the promise of t

The ancient kingdom of Mexico, properly so called, was divided into several provinces, of which the vale of Mexico itself was the finest in every respect. This vale is surrounded by verdant mountains, measuring upwards of one hundred and twenty miles in circumference at their base. A great part of it is occupied by two lakes, the upper one of fresh water, but the lower one brackish, communicating with the former by means of a canal. All the water running from the mountains. is collected in this lower lake, on account of its being in the bottom of the valley; hence it was ready, when swelled by extraordinary rain, to overflow the city of Mexico. This delightful region contained the three imperial cities of Mexico. Acolhuscan, and Tlacopan; besides forty others, with innumerable villages and hamlets; but the most considerable of these, according to Clavigero, now scarcely retain one twentieth part of their former magnificence. The principal inland provinces to the northward were the Otomies; to the fouth-west the Milatzineas and Cuitlateeas; to the fouth the Tlahuicas and Cohuixcas; to the fouth-east, after the states of Itzocan, Jauhpepac, Quauhquecollon, Atlixco, Tehuacan, and others, were the great provinces of the Mixtecas, the Zapotecas, and the Chiapanecas; towards the east were the provinces of Tepayacac, the Popolocas, and Totonacas. The maritime provinces on the

Mexican gulf were Coatzacualco and Cuetlachtlan, called by the Spaniards Cotasta. On the Pacific Ocean were those of Coliman, Zacatollan, Tototepec, Tecuantepec, and Zoconochco.

The province of the Otomics began in the northern part of the vale of Mexico, extending through the mountains to the north, to the distance of ninety miles from the city of Mexico; the principal cities being Tollan, or Tula, Xilotepec: the latter made the capital of the country by the Spaniards. Beyond the settlements of the Otomics, the country for more than a thousand miles in extent was inhabited only by barbarous and wandering savages.

The Malatzinea province contained the valley of Tolocan, and all the country from Taximaroa to the frontier of the kingdom of Michuacan. The valley of Tolocan is upwards of forty miles long from fouth-east to north-west, and thirty in breadth, where broadest. Its principal city, named also Tolocan is fituated at the foot of a high mountain covered with snow,

thirty miles dist it from Mexico, " and the less it as the self-capital of a

The country of the Cuitlatecas extended from north east to fouth-west, upwards of two hundred miles, extending as far as the Pacific Ocean. Their capital was named Mexcaltepec, once a great and populous city, situated upon the sea coast, but of which the ruins are now scarcely visible. That of the Tlahuicas was named Quauhnahuac, and situated about forty miles to the southward of Mexico. The prevince extended almost sixty miles southward, commencing from the southern mountains of the vale of Mexico.

The country of the Cohuixcas extended on the fouthward as far as the Pacific Qcean, through that part where at prefent the port and city of Acapulco lic. It was divided into the states of Tzompanco, Chilapan, Tlapan, and Tistla; the latter a very hot and unwholesome country. To this province belonged a

place named Tlachco, celebrated for its filver mines.

The province of the Mixtecas extended from Acatlan, a place diffant about one hundred and twenty miles from Mexico, as far as the Pacific Ocean towards the fouth-east. The inhabitants carried on a confiderable commerce, and had several well-inhabited cities and villages. To the east of the Mixtecas were the Zapotecas, so called from their capital Teotzapotlan, In their district was the valley of Huaxyacac, now Oaxaca, or Guaxaca.

The province of Mazatlan lay to the northward of the Mixteres; and to the northward and castward of the Zapotecas was Chimantla, having their capitals of the same name with their province laft of fide of fides, of Huexota Tlafcalar former finally has Spaniard the fecon

catlan, a Mexico, The inhad feveral Mixtecas tzapotlan, ixaca, or

the Mixptecas was vith their provinces. The Chiapaneers, Zoqui, and Queleni, were the last of the Mexican provinces towards the south-east. On the side of the mourtain Popocatepec, and around it, lay several states, of which the most considerable were Cholallan and Huexotzinco. These two having, with the assistance of the Tlascalans, shaken off the Mexican yoke, re-established their former aristocratical government. The Cholulans possessed a simally hamlet called Cuitlascoapan, in the place where the Spaniards afterwards sounded the city of Angelopoli, which is the second in New-Spain.

To the eastward of Cholula lay a considerable state named Tepeyacac; and beyond that the Popolocas, whose principal cities were Tecamachalco and Quecholac. To the southward of the Popolocas was the state of Tahuacan, bordering upon the country of the Mixtecas; to the east, the maritime province of Cuetlachtlan; and to the north, the Totonacas. The extent of this province was one hundred and sifty miles, beginning from the frontier of Zacatlan, a state distant about eighty miles from the court, and terminating in the gulf of Mexico. Besides the capital, named Mizquihuacan, this country had the beautiful city of Chempoallan, situated on the coast of the gulf, remarkable for being that by which the Spaniards entered the Mexican empire.

Coliman was the most northerly of the province on the Pacific Ocean; the capital, named also Coliman, being in latitude 19, longitude 279, 2%. Towards the south-east was the province of Zacotlan, with its capital of the same name; then tame the coast of the Cuitlatecas; after it that of the Cohuxitans, in which was the celebrated port of Acapulco. The Jopi bordered on the Cohuixca coast; and adjoining to that the Mixteca country, now called Xicayan; next to that was the large province of Tecuantepec; and lastly, that of Xochonocheo.

This province, the most southerly of the Mexican empire, was bounded on the cast and south-east by the country of Xochitepec, which did not belong to Mexico; on the west by Tecuantepec; and on the south by the ocean. The capital, called also Xoconocheo, was situated between two rivers, in 14 degrees of latitude, and 28% 3' of longitude. On the Mexican gulf there were, besides the country of Totonecas, the provinces of Cuetlachtlan and Coatzacualco; the latter bounded on the cast by the States of Tabasco, and the peninsula of Yucatan. The province of Cuetlachtlan comprehended all the coast between

river Alvarado and Antigua, where the province of the Totonecas began.

The climate of this vaft country varies much according to the fituation of its defferent parts. The maratime places are hot. unhealthy, and moist; the heat being so great as to cause people to fweat even in the month of January. This heat is funposed to be owing to the flatness of the coasts, and the accumulation of fand upon them. The moisture arises from the vast evaporation from the fea, as well as from the great torrants of water descending from the mountains. The lands which lie in the neighbourhood of high mountains, the tops of which are always covered with fnow, must of necessity be cold; and Clavigero informs us, that he has been on a mountain not more than twenty-five miles distant from the city of Mexico, where there was white frost and ice even in the dog day. " All the other inland countries." favs the fame author, " where the greatest population prevailed, enjoy a climate fo mild and benign, that they neither feel the rigour of winter nor the heat of summer: It is true, in many of the countries, there is frequently white frost in the three months of December, January, and February, and fometimes even it fnows; but the small inconvenience which such cold occasions, continues only till the rising sun: no other fire than his rays is necessary to give warmth in winter; no other relief is wanted in the scason of heat but the shade: the fame clothing which covers men in the dog-days, defends them in January, and the animals fleep all the year under the open fky.

"This mildness and agreeableness of climate under the torrid sone is the effect of several natural causes entirely unknown to the ancients, who did not believe it to be inhabited, and not well understood by fome moderns, by whom it is believed unfavourable to those who live in it. The purity of the atmosphere, the smaller obliquity of the solar rays, and the longer stay of this luminary above the horizon in winter, in comparison of other regions farther removed from the equator, concur to lessen the cold, and to prevent all that horror which disfigures the face of nature in other climes. During that feafon a ferene sky and the natural delights of the country are enjoyed; whereas under the frigid, and even for the most part under the temperate zones, the clouds rob man of the prospect of heaven, and the fnow buries the beautiful productions of the circh," No hels causes combine to temper the heat of summer. The plentibut showers which frequently water the earth after mid-day,

mid-day,

from April or May, to September or October; the high mountains, continually loaded with snow, scattered here and there through the country of Anahuac; the cold winds which breathe from them in that season; and the shorter stay of the sun above the horizon, compared with the circumstances of the temperate zone, transform the climes of those stappy countries into a cool and cheerful spring. But the agreeableness of the climate is counterbalanced by thunder storms, which are frequent in summer, particularly in the neighbourhood of the mountain of Tlascale; and by earthquakes, which are at all times felt, though with less danger than terror. Storms of hail are neither more frequent nor more severe than in Europe."

One undoubted inconvenience which Mexico has, is that of volcanoes, of which Clavigero enumerates five. One named by the Spaniards Volcon d'Orizaba, is higher than the peak of Teneriffe, according to the account of the Jesuit Tallandier, who measured them both. It began to send forth smoke in the year 1545, and continued burning for twenty years, out has not discovered any symptoms of eruption since that time. It is of a conical figure, and by reason of its great height, may be seen at fifty leagues distance. The top is always covered with snow, but the lower part with woods, of pine and other valuable timber. It is about ninety miles to the eastward of the capital.

Two other mountains, named Popocatenec and Iztaccihuatl, which lie near each other, at the diffance of thirty-three miles to the fouth-east of Mexico, are likewise surprisingly high. Clavigero supposes the former to be higher than the highest of the Alps, confidering the elevated ground on which the base of it stands. It has a crater more than half a mile wide; from which, in the time of the Mexican kings, great quantities of smoke and flame iffued. In the last century it frequently threw out great fliowers of ashes upon the adjacent places; but in this century hardly any sinoak has been observed. This mountain is named by the Spaniards Volcan, and the other Sierra Nevada; the latter has also sometimes emitted slames. Both of them have their tops always covered with fnow in fuch quantities, that the masses which fall down upon the neighbouring rocks supply the cities of Mexico, Gelopoli, Cholula, and all the adjacent country to the distance of forty miles, with that commodity, of which the confumption is so great, that in 1746 the impost upon what was confumed in the city of Mexico, amounted to fifteen thoufand two hundred and twelve Mexican crowns; some years after,

it amounted to twenty thousand, and is now in all probability a great deal more. Befides thefe there are the two mountains of Coliman and Tochtlan, both of which have occasionally emitted flames. Clavigero does not minclude in the lift of Mexican volcanoes, either those of Nicaragua or Guatimala, because these countries were not subject to the Mexican sovereigns. Those of Guatimala sometimes break forth in a most furious manner, and in the year 1779 entirely destroyed that beautiful city. The Nicaraguan volcano, called Juruyo was only a small hill before the year 1760. In that year, however, on the 20th of September, it began to burn with furious explofions, ruining entirely the fugar work, and the neighbouring village of Guacana: and from that time continued to emit fire and burning rocks in such quantities, that the erupted matters in fix years had formed themselves into three high mountains, nearly fix miles in circumference, During the time of the first eruption, the ashes were carried as far as the city of Queretaro, one hundred and fifty miles distant from the volcano; and at Valladolid, differt fixty miles from it, the shower was so abundant, that the people were obliged to sweep the house yards two or three times a day.

Bendes their volcanoes, there are others in Mexico of a very remarkable height. The great chain of mountains called the Andes, are continued through the isthmus of Panama, and through all Mexico, until they are lost in the unknown mountains of the north. The most considerable of that chain is known in Mexico by the name of Sierra Madic, particularly in Cinalo and Tarahumara, provinces no less than one thousand two hundred miles distant from the ca-

pital.

Mexico is well watered by very confiderable rivers, though none of them are comparable to those of South-America. Some of these run into the gulf of Mexico, and others into the Pacific Ocean. The Alvarado has its principal source among the mountains of the Zapotecas, and discharges itself by three navigable mouths in the Mexican gulf, at the distance of thirty miles from Vera Cruz. The Goatzocualco rises among the mountains of the Mixtecas, and empties itself into the gulf near the country of Onohualco. The river Chiapan, which likewise runs into this gulf, rises among the mountains which separate the district of Chiapan from that of Guatimala. The Spaniards call this river Tabasco, by which name they also called that tract of land which unites Yucatan to the Mexican

lexican

The most celebrated of the rivers which run into the Pacific Ocean, is that called by the Spaniards Guadalaxara, or Great river. It rifes in the mountains of Toloccan; and after running a course of more than fix hundred miles, discharges itself into the ocean in 22° latitude.

There are likewise in this country several lakes of very confiderable magnitude, but those of Nicaragua, Chapallan, and Pizquaro, which are of the greatest extent, did not belong to the ancient Mexican empire, The most remarkable were those in the vale of Mexico, upon which the capital of the empire was founded. Of these, the fresh water one called the take of Chalco, extending in length from east to west twelve miles. as far as the city of Xochimilco; from thence, taking a northerly direction; it incorporated itself by means of a canal with the lake of Tezcuco; but its breadth did not exceed fix miles. The other, named the lake of Tezcuco, extended fifteen or rather seventeen miles from east to west, and something more from fouth to north; but its extent is now much less by reason of the Spaniards having diverted the course of many of the streams which run into it. This lake is falt, which Clavigero supposes to arise from the nature of the soil which forms its bed.

Besides these, there are a number of smaller lakes, some of which are very delightful. There is a vast variety of mineral waters, of the nitrous fulphureous, and aluminous kinds, some of them so hot, that meat might be boiled in them. At Tetuhuacan is a kind of petrifying water, as well as in several other parts of the empire, One of them forms a kind of smooth white stones, not displeasing to the taste; the scrapings of which taken in broth are celebrated as a diaphoretic, probably without any good reason. The dose for a person not difficult to be sweated is one dram of the scrapings. Many of the rivers of Mexico afford surprising, and beautiful cascades, particularly the great river Guadalaxara, at a place called Tempizque, fifteen miles to the fouthward of that city, . Along a deep river called Atoyaque, is a natural bridge, confisting of a vast mound of earth, along which carriages pass conveniently. Clavigero supposes it to have been the fragment of a mountain thrown down by an earthquake, and then penetrated by the river.

The mineral productions of Mexico are very valuable; the natives found gold in several provinces of the empire; they sathered it principally from among the sands of their rivers

in grains, and the people in whose country it was found, were obliged to pay a certain quantity by way of tribute to the emperor. They dug filver out of the mines in Tlocheo, and fome other countries; but it was less prized by them than by other nations, Since the conquest, however, so many filver mines have been discovered in that country, especially in the provinces to the north-west of the capital, that it is in vain to attempt any enumeration of them. They had two forts of copper; one hard, which served them instead of iron, to make axes and other instruments for war and agriculture; the other kind, which was foft and flexible, ferved for domestic utenfils as with us, They had also tin from the mines of Tlachco, and dug lead out of mines in the country of the Otomies, but we are not informed what uses they put this last metal to, They had likewife mines of iron in Tlascala, Tlachco, and fome other places; but these were either unknown to the Mexicans, or they did not know how to benefit themselves by them, In Chilapan were mines of quickfilver; and in many places they had fulphur, alum, vitriol, cinnabar, ochre, and an earth greatly resembling white lead. These minerals were employed in painting and dyeing, but we known not to what use they put their quickfilver. There was great abundance of amber and asphaltum upon their coasts, both of which were paid in tribute to the king of Mexico from many parts of the empire; the former was wont to be fet in gold by way of ornament, and asphaltum was employed in their sacri-

Mexico produces fome diamonds, though but few in number; but they had in greater plenty some other precious stones, fuch as amethysts, cats eyes, turquoifes, cornelians, and some green stones resembling emeralds, and very little inferior to them, of all which a tribute was paid to the emperor by the people in whose territories they were found. They were likewise furnished with chrystal in plenty from the mountains which lay on the coast of the Mexican gulph, between the port of Vera Cruz and the river Coatzacualco. In the mountains of Celpolalpan, to the castward of Mexico, were quarries of jalper and marble of different colours; they had likewife alabaster at a place called Tecalco, now Tecale, in the neighbourhood of the province of Tapeyacac, and many other parts of the empire. The stone tetzontli is generally of a dark red colour, pretty hard, porous, and light, and unites most simily with lime and fand, on which account it is of great request for

buildings in the capital, where the foundation is bad. There are entire mountains of load-stone, a very considerable one of which lies between Teoitztlan and Chilapan, in the country of the Cohuixcas. They formed curious figures of nephritis stone, some of which are still preserved in European museume They had a kind of fine white tale, which burnt into an excellent plaster, and with which they used to whiten their paintings. But the most useful stone they had, was that called itztli, of which there is great abundance in many parts of Mexico: it has a gloffy appearance, is generally of a black colour, and femi-transparent; though sometimes also of a blue or white colour. In South-America this stone is called pietra del galinazzo; and Count Caylus endeavours to thow, in a manufcript differtation quoted by Bomare, that t, e obfidiona, of which the ancients made their vafes murini, were entirely fimilar to this stone. The Mexicans made of it looking-glasses, knives, lancets, razors, and spears, Sacred vales were made of it after the introduction of Christianity.

The foil of Mexico, though various, produced every where the necessaries, and even the luxuries of life. "The celebrated Dr. Hernandez, the Pliny of New-Spain," says Clavigero, has described in his Natural History about one thousand two hundred plants, natives of the country; but his description, though large being confined to medicinal plants, has only comprised one part of what provident nature has produced there for the benefit of mortals. With regard to the other classes of vegetables, some are esteemed for their flowers, some for their fruit, some for their leaves, some for their root, some for their trunk or their wood, and others for their gum, resin,

oil, or juice."

Mexico abounds with a great variety of flowers, many of which are peculiar to the country, while multitudes of others imported from Europe and Afia rival in luxuriance the natives of the country itself. The fruits are partly natives of the Canary islands, partly of Spain, besides those which grow naturally in the country. The exotics are water melons, apples, pears, peaches, quinces, apricots, pomegranates, figs, black cherries, walnuts, almonds, olives, chesnuts, and grapes; though these last are likewise natives. There are two kinds of wild vine found in the country of the Mixtecas, the one resembling the common vine in the shoots and figure of its leaves; it produces large red grapes covered with an hard skin, but of sweet and grateful taste, which would undoubtedly improve greatly by culture. The grape of the other kind is

hard, large, and of a very harsh taste, but they make an excellent conserve of it, Clavigero is of opinion that the cocoa tree, plantain, citron, orange, and lemon, came from the Philippine islands and Canaries; but it is certain that these, as well as other trees, thrive in this country as well as in their native foil. All the maritime countries abound with cocon nut trees; they have feven kinds of oranges, and four of lemons, and there are like. wife four kinds of plantains; the largest, called the zapala, is from fifteen to twenty inches long, and about three in diameter; it is hard, little esteemed, and only eat when roasted or boiled, The platano large, or "long plantain," is about eight inches long, and one and a half in diameter; the skin is at first green, and blackish when perfectly ripe, The guinco is a smaller fruit, but richer, fofter, and more delicious, though not so wholesome, A species of plantain, called the dominico, is smaller and more delicate than the others. There are whole woods of plaintain trees, oranges, and lemons; and the people of Michuacan carry on a confiderable commerce with the dried plantains, which are preferable either to raisins or figs, Clavigero enumerates twentyeight different forts of fruit, natives of Mexico, besides many others, the names of which are not mentioned. Hernandez mentions four kinds of cocoa nuts, of which the smallest of the whole was in the most use for chocolate and other drinks daily made use of; the other kinds served rather for money in commorce than for aliment. The cocoa was one of the plants most cultivated in the warm countries of the empire, and many provinces paid it in tribute to the emperor, particularly that of Xoconochco, the cocoa-nut of which is preferable to the others, Cotton was one of the most valuable productions of the country, as it served instead of flax, though this last also was produced in the country: it is of two kinds, white and tawny-coloured, They made use of rocou, or Brasil-wood in their dying, as the Europeans also do: they made cordage of the bark, and the wood was made use of to produce fire by friction.

The principal grain of Mexico, before the introduction of those from Europe, was maize, in the Mexican language called fluolli, of which there were several kinds, differing in size, weight, colour, and taste. This kind of grain was brought from America to Spain, and from Spain to other countries of Europe, The French bean was the principal kind of pulse in use among them, of which there were more species than of the maize; the largest was called ayacotli, of the size of a common bean, with a beautiful red slower; but the most esteemed was the small, black,

heavy French bean. This kind of pulse, which is not good in Italy, is in Mexico so excellent, that it not only serves for suftenance to the poorer class of people, but is esteemed a luxury even by the Spanish nobility.

Of the esculent roots of Mexico, the following were the most remarkable: 1. The xicama, called by the Mexicans catzotle was of the figure and fize of an onion, folid, fresh, juicy, and of a white colour; it was always eat raw. 2. The camote, is another, very common in the country, of which there are three forts, white, yellow, and purple: they eat best when boiled. 2. The cacomite, is the root of a plant which has a beautiful flower called the tyger flower, with three red pointed petals, the mide dle part mixed with white and yel fomewhat refembling the spots of the creature whence i akes its name, 4. The huacamote, is the root of a kind of Cassava plant, and is likewise boiled. 5. The papa, a root transplanted into Europe, and greatly valued in Ireland, was brought from South-America into Mexico. Besides all which they have a number of kitchen vegetables imported from the Canaries, Spain, and other countries of Europe. The American aloe is very similar to the real one, and is a plant of which the Mexicans formerly, and the Spaniards ftill, make great ufe.

They have a variety of palm trees. From the fibres of the leaves of one species they make thread: the bark of another kind, to the depth of three singers, is a mass of membranes, of which the poor people make mats: the leaves of another kind are used for ornaments in their seltivals: they are round gross, white, and shining, having the appearance of shells heaped upon one another. A fourth kind bears nuts called cocoas, or nuts of oil. These nuts are of the size of a nutmeg, having in the inside a white, oily, eatable kernel, covered by a thin purple pellicle. The oil has a sweet scent, but is easily condensed, when it becomes a soft mass, as white as snow.

Of timber trees there are great variety, of a quality not inferior to any in the world; and as there are a variety of climates in the country, every one produces a kind of wood peculiar to tielf. There are whole woods of cedars and ebonies, valtuantities of agallochum, or wood of aloes; besides others valuate on account of their weight, durability and hardness, or for heir being casily cut, pliable, of a fine colour, or an agreeable avour. There are also in Mexico innumerable trees remarkble for their size. Acosta mentions a cedar, the trunk of hich was sixteen fathoms in circumference; and Clavigero entions one of the length of one hundred and seven Paris

In the city of Mexico he mentions very large tables of cedar made out of fingle planks. In the valley of Atlixed is a very ancient fir tree, hollowed by lightning, the cavity of which could conveniently hold fourteen horfemen; may, we are informed by the archbishop of Toledo, that in 1770 he went to view it along with the archbishop of Guatimala, a. which time he caused an hundred young lads to enter its cavity. Our author mentions fome other trees, of the species called ceiba, which for magnitude may be compared with this cele. brated fir. "The largeness of these trees," says he, " is proportioned to their prodigious elevation, and they afford a most delightful profped at the time they are adorned with new leaves and loaded with fruit, in which there is inclosed particular species of fine, white, and most delicate cotton; this might be, and actually has been, made into webs as foft, delicate, and perhaps more fo, than filk; but it is toilfome to fpin, on account of the smallness of the threads, and the profit does not requite the labour, the web not being lasting, Some use it for pillows and mattreffes, which have the fingular property of expanding enormously when exposed to the heat of the fun. De Bomare fays, that the Africans make of the thread of the ceiba that vegetable taffety which is so scarce, and so much esteemed in Europe. The scarcity of such cloth is not to be wondered at, confidering the difficulty of making it, The ceiba, according to this author, is thigher than all other trees yet known." to . I all the way was a line in the same

Clavigero mentions a Mexican tree, the wood of which is very valuable, but possonous, and if incautiously handled when fresh cut, produces a swelling in the scrotum. He has forgot the name given to it by the Mexicans, nor has he ever sees the tree itself, nor been witness to the effect.

This country abounds also with aromatic and medicinal trees, producing gums, tesins, &c. From one of these a balsam is produced, not in the least inferior to the celebrated balsam of Mecca; it is of a reddish black or yellowish white, of a sharp, bitter taste and of a strong but most grateful odoux; it is common in the provinces of Panuco and Chiapan, and other warm countries: the kings of Mexico caused it to be transplanted into their celebrated garden of Huaztepec, where it stourished, and was afterwards multiplied in all the neighbouring mountains. The Indiana, in order to procure a greater quantity of this balsam, burn the branches, which afford more than mere

of these a he celebrated sh white, of a odour; it is dother warm as a planted into it shourished, buring mouner quantity of the than mere diditation though undoubtedly of an inferior quality; nor do they regard the top of the times, which are yery abundant; the ancient Mexicant were wont to extract it alfo, by decoction. The first percel of this ballain brought from Mexico to Rome was fold at one hundred ducate per ounce, and was, by the okeling in derination be matter fit for chrism, though sportolis on this labject observer An oil is also drawn from the fruit of this tree fimilar in take and fmell to that of the bitter almond, but more sprimanious. From two other trees, named the Busconex and maripunda, an oil was extracted equivalent to the beliam; the former is a tree of a moderate height, the wood of which is aromatic, and fo hard, that it mil keep. fresh for several years, though boried under the earth the leaves are small and veltow, the flowers likewise small and white, and the fruit fimilar to that of the laurel. The oil was distilled from the bank of the tree, after breaking it, and keeping it three days in spring water, and then drying it in the fund the leaves likewife afforded an agreeable oil by diftillation. The maripenda is a furub with lanceolated leaves, the fruit of red colour when ripes and refembling the grape. The oil is extracted by boiling the branches with a mixture of fome of the fruit.

The trees producing liquid amber, the liquid storax of the Mexicans, is of a large fize, the leaves similar to those of the maple, indented, white in one part and dark in the other, disposed of in threes; the fruit is thorny and round, but polygonous, with the surface and the angles wellow; the bark of the tree parsly green and partly tawny. By incisions in the trunk they extract that valuable substance named liquid amber, and the oil of the same name, which is still more valuable. Liquid amber is likewise obtained from a decoction of the branches, but it is inferior to that obtained from the trunk.

The name copalli in Mexico is generic, and common to all the refins, but especially significant these made use of for incense. There are ten species of these trees yielding refins of this kind, the principal f which is that from which the copalist got, so well known in medicine and varnishes. A great quantity of this was made use of by the ancient Mexicans, and is full used for similar purposes by the Spaniards. The tecopalli, or tepecopalli, is a refin similar to the incense of Arabia, which distils from a tree of moderate size that grows

in the mountains, having a fruit like an acorn, and containing the nut inveloped in a mucilage, within which there is a small kernal useful in medicine.

The mizquit, or mezquite, is a species of true acacia, and the gum distilling from it is said to be the true gum arabic; it is a thorny shrub, with branches irregularly disposed, the leaves small, thin, and pinnated; the slowers being like those of the birch tree; the fruits are sweet and eatable, containing a seed, of which the barbarous Chickemeeas were wont to make a kind of passe that served them for bread. The wood is exceedingly hard and heavy, and the trees are as common in Mexico as oaks are in Europe, particularly on hills in the temperate countries.

Of the elastic gum, which is found in plenty in Mexico, the natives were in use to make foot balls, which, though heavy, have a better spring than those filled with air. At present they varnish with it their hats, cloaks, boots and great coats, in a manner similar to what is done in Europe with wax, and by

which means they are rendered all water proof.

Clavigero laments, that the natural history of vegetables in Mexico is very little known, and that of animals no better, The first Spaniards, says he, who gave them names, were more skilful in the art of war than in the study of nature, Instead of retaining the terms which would have been most proper, they denominated many animals tygers, wolves, bears, dogs, fquirrels, &c. although they were very different in kind, merely from some resemblance in the colour of their skin, their figure. or fome similarity in habits and disposition. The quadrupeds found in Mexico at the arrival of the Spaniards, were lions, tygers, wild cats, bears, wolves, foxes, the common stags, white stags, bucks, wild goats, badgers, pole-cats, weafels, martins, fquirrels, polatucas, rabbits, hares, otters and rats. All thefe animals are supposed to be common to both continents. The white flag, whether it be the same species of the other or not, is undoubtedly common to both, and was known to the Greeks and Romans. The Mexicans call it " the king of the Stags." M. Buffon imagines the white colour of this creature to be the effect of captivity; but Clavigero fays, that it is found wild, and of the same white colour, on the mountains of New-Spain, In many other points, he also controverts the opinions of this selebrated naturalist, who will not allow the lion, tyger or Tabbit, to be natives of America.

The animals which are common to Mexico, with the other parts of the continent, are, the Mexican hog, the moufete, the opossum, the armadillo, the techichi, a small animal resembling a dog, which being perfectly dumb, gave occasion to a report, that the Mexican dogs could not bark. The slesh of this animal was eat by them, and was esteemed agreeable and nourishing soud. After the conquest of Mexico, the Spaniards having neither large cattle nor sheep, provided their markets with this quadruped, by which means the species soon came to be extinct, though it had been very numerous. The land-squirrel is very numerous in the kingdom of Michuacan, has great elegance of form, and is extremely graceful in its movement; but it cannot be tamed, and bites most furiously every person who approaches it.

Besides these, there are sea-lions, raccoons, and that voracious animal named the tapir. There are likewise great numbers of monkeys of many different kinds, some of which have heads resembling those of dogs; some of them are strong and serce;

equalling a man in stature when they stand upright,

Among the animals peculiar to Mexico, is one named by Clavigero coyoto, which appears to have been inaccurately described by natural historians, some making it one species and fome another. The tlalcojotl, or tlalcoyoto, is about the fize of a middling dog, and in Clavigero's opinion, is the largest animal that lives under the earth. The tepcizuintli, or a mount tain-dog, though it is but of the fize of a small dog, is so bold that it attacks deer, and fometimes kills them, Another animals larger than the two foregoing, is called the soloitzcuintly forme of these are no less than four feet in length; it has a face like the dog, but tusks like the wolf, with erect ears, the neck gross; and the tail long; it is entirely destitute of hair, except only the fnout, where there are some thick crooked bristles : the whole body is covered with a smooth, foft, ashcoloured skin, spotted partly with black and tawny. This species of animals, as well as the two former, are almost totally extinct. A Lyncean academician, named Giovanni Fabri, has endeavoured to prove, that the xoloitzcuintli is the same with the wolf of Mexico; but this is denied by Clavigero,

An animal called ocotochtli, a kind of wild cat, is remarkable more for the fabulous account of it, than for any fingular property with which it is really endowed. According to Dr. Hernandez, when this creature takes any prey, it covers it

with leaves, and afterwards mounting on fome neighbouting tree, it begins howling to invite other animals to ear its prey, being itself always the last to eat, because the posson of its tongue is so throng, that if it are first the prey would be inself. ed, and other animals which eat of it would die. To their must be added a curious animal of the mole kind, which is called tozen, or tuga ; it is about the hac of an European mole,

but very different otherwise.

The birds are fo numerous, and of fuch various sphearances and qualities, that Mexico has been called the country of birds as Africa is of quadrupeds. Though Hernandes passes over a great number of species, he yet describes above two hundred peculiar to the country. He allows to the eagles and hawks of Mexico a superiority over those of Europe; and the falcons of this country were formerly esteemed so excellent, that, by the defire of Philip II, an hundred of them were fent every year over to Spain. The largest, the most beautiful, and the most valuable kind of cagles is called by the Mexicant itzquauhtli, and will purfue not only the larger kind of birds but quadrupeds, and even men.

The aquatic birds are very numerous and of great variety; there are at least twenty species of ducks, a wast number of geefe, with feveral kinds of herons, great number of fwans; quails, water-rails, divers, king's fithers, pelicans, &c. The multitude of ducks is sometimes to great, that they cover the helds, and appear at a diffence like flocks of theep. Some of the herons and egrets are perfectly white, some ash-colours ed; others have the plumage of the body white, while the neck, with the tops and upper part of the wings, and part of the tail, are enlivened with a bright fearlet, or beau-

tiful blue

There are a great number of birds valuable on account of their plumage, which was made use of by the Mexicans in their excellent Mofaic works, an art which feems now to be totally loft. Peacocks have been carried from the old continent to Mexico; but not being attended to, have propagated very flowly. The birds remarkable for their long are likewing very numerous; among which that called the centronitl, by Europeans the mocking-bird, is the most remarkable, on account of its counterfeiting naturally the notes of all others Erabati is a feat, they both the own

For a more particular account of these animals les History of Quadrupeds

Messico, like all other American countries, shounds with reptiles, many of them of an enormous fixe. The crocodies are not lets to be dreaded than thole of Africa or Afia , and there are likewife some of those monstrous serpents met with in the Bast-Indies and in South-America, though happily the frecies of thole serrible creatures feems to be nearly extinct at they are feldem to be found but in lome folitary wood, or other remote place. There are great numbers of listeds, fome of which the people suppose to be possonous; but others think this opinion ill-founded. There are leveral kinds of poisonous ferpents, of which the rattle-faske is one. The conocount is mother pollonous ferpent, and remarkable for having a lumis nous appearance in the dark; by which, as by the rattle in the tail of the former, travellers are warned to avoid it. Among the barmless snakes is a very beautiful one about a foot in length, and of the thickness of the little finger; it appears to take great pleafure in the fociety of ants, infomuch that it will eccompany thele infects upon their expeditions, and return with them to their usual nest; it is called both by the Mexicane and Spaniards the " mother of the ants;" but Clavigero fuppoles, that all the attachment which the make shews to the ant-hills proceeds from its living on the ants themselves. The ancient Mexicans were wont to take delight in keeping and harmlels green inake, which they catched in the fields, and which, when well fed, would grow to the length of five or fix feet. It was generally kept in a tub, which it never left but to receive food from the hand of its master; and this it would

The aquatic animals are innumerable. Clavigero mentions a species of frogs to large that a single one will weigh a pound, and which are excellent sood. Of sish proper for food, he says, that he has counted upwards of one hundred species, without taking in the turtle, crab, lobster, or any other crusts-cous animal.

take either mounted on his shoulder or coiled about his legs.

Of flying and other minute infects the number is predigiously great. There are a variety of beetles; some of a grean colour make a great notife in flying, on which account children are fond of them. There are great numbers of shining beetles, which make a delightful appearance at night, as well as the luminous slies which abound in the country. There are six kinds of bees and four kinds of wasps; of which last, one collects wax and honey of a very sweet taste; another is called the wandering wasp, from its frequent change of abode;

of Quadrupeds

and in confequence of these changes, it is constantly employed in collecting materials for its habitations. There is also a black horner with a red tail, the fting of which is fo large and ftrong. that it will not only penetrate a fugar-cane, but even the trunk of a tree. The lake of Mexico abounds with a kind of fly. the eggs of which are deposited upon the flags and rushes in fuch quantities as to form large malles; thele are collected be the fishermen, and earried to market for sale; they are eaten by both Mexicans and Spaniards, and have much the lame tafte a the caviare of fish : the Mexicans eat allo the flies themselves ground and made up with falt petre. There are abundance of gnate in the moilt places and lakes, but the capital, though fituated upon a lake, is entirely free from them. There are other flies which make no noise in their flight, but cause a vio. lent itching by their bite, and if the part be scratched, an open wound is apt to enfue, The butterflies are in valt numbers. and their wings glow with colours far fuperior to those of Europe; the figures of fome of them are given by Hernandez, But not with Randing its beauties and advantages, Mexico is Subject to the dreadful devastations of locults, which sometimes occasion the most destructive famines.

There are some of the worms of Mexico made use of by the inhabitants as food, others are poisonous. There are great numbers of scolopendræ and scorpions, some of the former growing to an immense fize. Hernandez fays, that he has feen Some of them two feet long and two inches thick. The fcorpions are very numerous, and in the hot parts of the country, their poilon is fo strong as to kill children, and give terrible pain to adults. Their fting is most dangerous during those hours of the day in which the fun is hottest. In the province of Michuacan is a fingular species of ant, larger than the common one, with a greyish body and black head; on its hinder part is a little bag full of a sweet substance, of which children are very fond: the Mexicans suppose this to be a kind of honey collected by the infect; but Glavigero thinks it rather is its, cage. There is a mischievous kind of tick, which in the hot countries abounds among the grafs: from thence it eafily gets upon the clothes, and from them upon the fkin; there it fixes with such force, from the particular figure of its feet, that it can fearcely be got off; at first it feems nothing but a fmall black speek, but in a short time enlarges to such a degree, from the blood which it fucks, that it equals the fize of a bean, and then affumes a leaden colour. Oviedo fays, that the best and

fafest method of getting speedily rid of it is by anomiting the part with oil, and then scraping it with a knife. If it is not speedily removed, a wound is made similar to that which the nigera or chagoe makes. The following insects were eaten by the ancient Mexicans: 1. The atelepitz, a marsh beetle, resembling in shape and size the slying beetles, having four feet, and covered with a hard shell. 2. The atopinan, a marsh grass-hopper of a dark colour and great size, being not less than six inches long and two broad. 3. The ahuihuith, a worm which inhabits the Mexican lake, four inches long, and of the thick-ness of a goose quill, of a tawny colour on the upper part of the body, and white upon the under part 1 it stings with its tail, which is hard and poissonus 4. The ocuilizac, a black marsh-worm, which becomes white on being roasted;

Among the curious productions of the animal kind to be met with in this country, Clavigero mentions a kind of zoophytes, which he saw in the year 1951, in a house in the country, about ten miles from Angelopoli, towards the south-east: they were three or sour inches long, and had sour very stender seet, with two antennae; but their body was nothing more than the sibres of the leaves, of the same shape, size and colour, with those of the other leaves of the trees upon which these creatures were found. Gemelli describes another kind of these zoophytes, which are found in Manilla.

Mexico produces also silk-worms; and the manufacture of silk might be carried on to great advantage, were it not prohibited for some political reasons. Besides the common silk, there is another found in the woods, very white, soft and strong. It grows on the trees in several maritime viaces, particularly indry seasons: unless by poor people, however, this silk is not turned to any use, partly from inattention to their interests, but "chiesly," says Clavigero, "to the obstructions which would be thrown in the way of any one who should attempt a trade of that kind. We know from Cortes's letters to Charles V. that silk used to be sold in the Mexican markets: and some pictures are still preserved, done by the ancient Mexicans upon a paper made of silk."

Cochineal is one of the most valuable products of Mexico, and great care is taken to rear the insect in different parts; but the best is that which comes from the province of Mizteca; some have reckoned, that more than two thousand five hundred bags of cochineal are sent every year from Mizteca to Spain;

and the trade is that article carried on by the city of Cames

is computed at two handred thousand crowns value. or sale la

Though Mexico was definally inhabited by a number of different nations, yet all of them refembled with other pretty much, not only in character, but in external spicearance. "They generally rather exceed, "fays Clavigerouse shan fall under the middle fize, and are Well-proportioned in all their limbs : they have good complexions, narrow foreheads, black eyes, clean, firm, white and regular teeth ; thick, black; coarle. gloffy, bait; thin beards, and generally no hair upon their legs. thighs and arms, their fkin being of an olive colour! There is scarcely a nation on earth in which there are fewer person deformed : and it would be more difficult to find a finale hump. backed, lame or fquint-eyed man among a thousand Mexicans, than among an hundred of any other nation. The unpleasant nels of their colour, the smallness of their foreheads, the thinnels of their beards, and the coarlenels of their hair, are to far compensated by the regularity and fine proportion of their limbs, that they can neither be called very beautiful nor the contrary, but feem to hold a middle place between the extremes : their appearance neither engages nor difguilts; but among the young women of Mexico there are many vory beautiful and fair, whole beauty is at the fame time rendered more winning by the natural sweetness of their manner of speaking and by the pleasantness and natural modesty of their whole behaviour. Their senses are very acute, especially that of fight, which they enjoy unimpaired to the latest age. Their conditions are found and their health robust; they are entirely free of many disorders which are common among the paniards; but of the epidemical diseases to which their counis occasionally subject they are generally the victims; with them these diseases begin, and with them they end. One never perseives in a Mexican that stinking breath which is occaflored in other people by the corruption of the humours or indigestion: their constitutions are phlegmatic; but the pituis tous evacuations from their heads are very fearity, and they feldom spit. They become grey-headed and bald earlier than the Spaniarde; and although most of them die with acute discases, it is not very uncommon among them to attain the age of an hundred. They are now, and ever have been, moderate in eating, but their passion for strong liquors is carried to the greatest excess: formerly they were kept within bounds by the severity of the laws, but now that these liquon

are become so common, and drumbenness is unpunished, one-half of the people seem to have lost their senses; and this, together with the poor manner in which they live, exposed to all the beneful impressions of disease, and destitute of the means of correcting them, is undoubtedly the principal cause of the havor which is made among them by epidemical disorders.

Many persons allow the Mexicans to possess a great talent of imitation, but deny them that of invention; a vulgar error, which is contradicted by the ancient history of that people. Their minds are affected by the same variety of passions with those of other nations, but not to an equal degree: the Mexicans feldom exhibit those transports of anger, or frenzies of love, which are to common in other countries. They are flow in their motions, and thew a wonderful tenacity and steadiness in those works which require time and long-continued attention. They are most patient of injury and hardship, and where they suspect no evil intention, are most grateful for any kindness shewn; but some Spaniards, who cannot distinguish patience from insensibility, nor distrust from ingratitude, say proverbially, that the Indians are alike infensible to injuries or benefits. That habitual distrust which they entertain of all who are not of their nation, prompts them often to lye and betray; fo that good faith cerwinly has not been respected among them so much as it deserves. They are by nature taciturn, ferious and austere, and shew more enxiety to punish crimes than to reward virtue.

Generofity and perfect difinterestedness are the principal festures of their character. Gold, with the Mexicans, has not that value which it enjoys elsewhere. They seem to give without reluctance what has cost them the utmost labour to acquire. The neglect of felfish interests, with the dislike which they bear to their rulers, and consequently their aversion to perform the talks imposed by them, seem to have been the only grounds of that much exaggerated indolence with which the Americans have been charged; and, after all, there is no fet of people in that country who labour more, or whose labour is more necessary. The respect paid by the young people to the old, and by children to their parents, feem to be feelings that are born with them. Parents are very fond of their children; but the affection which husbands bear to their wives is certainly less than that which wives bear to their husbands; and it is very common. for the men to love their neighbour's wives better than their

the first the state of

0

minds, that it is often difficult to determine whether the one can the other predominates a they meet dangers with intrepldity when they proceeds from natural cautes, but are easily terrified by the floring looks of all Spaniards. That stupid indifference about death and eternity, which many authors have thought inherent in the character of every American, is peculiar only to those who are yet founde and uninformed as to have no idea of a future state.

Thus much with respect to the general character of the Mexicans; but Clavigero observes, that "the modern Mexicans are not in all respects similar to the ancient, as the Greeks of these days have little resemblance to those who lived in the times of Plato and Pericles. The ancient Mexicans showed more fire, and were more fensible to the impressions of honour; they were more intrepid, more nimble, more active, more industrious; but they were at the same time more superstitious and cruel."

The principal inhabitants of Mexico, in modern times, are Spaniards fent thither by the court, to fill the posts of governs ment. They are obliged, like those in the mother country who aspire to any ecclesiastical, civil or military employments. to prove, that there have been neither heretics, Jews, Mahommedans, nor any person in their family who have been called before the inquisition for four generations. Merchants who are defirous of going to Mexico, as well, as to other parts of America, without becoming colonists, are compelled to observe the fame forms: they are also obliged to swear that they have three hundred palms of merchandife, their own property, in the fleet in which they embark, and that they will not carry their wives with them. On these absurd conditions they become the principal agents of the European commerce with the Indies. Though their charter is only to continue three years and a little longer for countries more remote, it is of great importance. To them alone belongs the right of felling as commissioners, the major part of the cargo. If thele laws were observed, the merchants stationed in the new world would be confined to dispose of what they have received on their own account.

The predilection which the administration has for Spaniards born in Europe, has reduced the Spanish Creoles to acquiesce in subordinate stations. The descendants of the companions of Cortes, and of those who came after them, being constantly excluded from all places of honour or of trust that were any

way confiderable, have feen the gradual decay of the power that supported their fathers. The habit of being obliged to bear that unjust contempt with which they have been treated, this at last made them become really contemptible in They have totally long in the vices which originate from indolence, from the heat of the climate, and from a superfluous enjoyment of all things, that firmnels and that fore of pride which have ever characteriled their nation. A barbarous tuxury hameful pleafures, and romantic intrigues, have enervated all the vigour of their minds, and superstition hath completed the ruin of their virtues, Blindly devoted to priests too ignorant to enlighten them by their infirections, too depraved to edify them by their example, and too mercenary to attend to both these duties of their-function, they have no attachment to any part of their religion but that which enfeebles the mind, and have neglected what might have contributed to rectify their morals of their the part spon of their

The Mestees, who constitute the third order of citizens, are held in still greater contempt. It is well known that the court of Madrid, in order to replenish a part of that dreadful vacancy which the avarice and cruelty of the conquerors had occasioned, and to regain the considence of those who had escaped their sury, encouraged as much as possible the marriage of Spaniards with Indian women: these alliances, which became pretty common throughout all America, were particularly frequent in Mexico, where the women had more understanding and were more agreeable than in other places. The Creoles transferred to this mixed progeny the contemptuous slight they received from the Europeans. Their condition, equivocal at first, in process of time was fixed between the whites and the blacks.

These blacks are not very numerous in Mexico. As the natives are more intelligent, more robust and more industrious, than those of the other colonies, they have hardly introduced any Africans except such as were required either to indusge the caprice, or perform the domestic service of rich people. These slaves, who are much beloved by their masters, on whom they absolutely depend, who purchased them at an extravagant price, and who make them the ministers of their pleasures, take advantage of the high savour they enjoy to oppress the Mexicans; they assume over these men, who are called free, an ascendency which keeps up an implacable hatred between the two nations. The law has studied to encourage this aversion, by taking effectual measures to prevent all connection between

them. Negroes are prohibited from having any amorous generation with the Indians; the men on pain of being multiplied? The wimen, of being feverely punished. On all their accounts, the Africans, who in other fettlements are entitled to Europeans, are in the Spanish Indies their warm friends. on all all on a part of their warm friends.

Authority has no need of this support, at least in Mexico, where population is no longer what it was formerly. The first historians, and those who copied them, have recorded that the Spaniards found there ten millions of fouls. This is fup. poled to have been the exaggerated account of conquerors, to exalt the magnificence of their triumph; and it was adopted, without examination, with fo much the more readiness, as it rendered them the more odious. We need only trace with attention the progress of those ruffians who at first desolated these fine countries, in order to be convinced that they had not fucceeded in multiplying men at Mexico and the adjacent parts, but by depopulating the center of the empire : and that the provinces which are remote from the capital, differed in nothing from the other deferts of South and North-America, It is sking a great concession, to allow that the population of exico has only been exaggerated one-half, for it does not much exceed two millions, enably the the papillion and the

It is generally believed, that the first conquerors massacred the Indians out of wantonness, and that even the priests incited them to these acts of serocity. Undoubtedly these inhuman foldiers frequently shed blood without even an apparent motive; and certainly their fanatic missionaries did not oppose these behavities as they ought to have done. This was not, however, the real cause, the principal source of the depopulation of Mexico; it was the work of a flow tyranty, and of that avarice which exacted from its wretched inhabitants more rigorous soil than was compatible with their constitution and the climate.

This oppression was coeval with the conquest of the country. All the lands were divided between the crown, the companions of Cortes, and the grandees or ministers who were most in savour at the court of Spain. The Mexicans, appointed to the royal domains, were destined to public labours, which originally were considerable. The lot of those who were employed on the estates of individuals was still more wretched: all groaned under a dreadful yoke; they were ill sed, they had no wages given them, and services were required of them, under which the most robust men would have lunk:

This man, fo famous in the annels of the new world, had accompanied his father in the first voyage made by Columbus. The mildness and supplicity of the Indians affected him so firongly, that he made himself an ecclesialtic, in order to devote his labours to their conversion; but this foon became the least of his attention. As he was more a man than a priest. he felt more for the cruelties exercised against them than for their superstitions. He was continually hurrying from one hemisphere to the other, in order to comfort the people for whom he had conceived an attachment, or to foften their tyrants. This conduct, which made him idolized by the one, and dreaded by the other, had not the success he expected. The hope of firiking awe, by a character revered among the Spaniards. determined him to accept the bishopric of Chiaps in Mexico. When he was convinced that this dignity was an infufficient barrier against that avarice and cruelty which he endeavoured to check, he abdicated it. It was then that this courageous, firm; difinterested man, secused his country, before the tribunal of the whole universe. In his account of the tyranny of the Spaniards in America, he accuses them of having destroyed fifteen millions of the Indians, They ventured to find fault with the acrimony of his stile, but no one convicted him of exaggeration. His writings, which indicate the smiable turn of his disposition, and the sublimity of his featiments, have flamped a differace upon his barbarous countrymen, which time hath not, nor never will efface.

The court of Madrid, awakened by the representations of the virtuous Las Casas, and by the indignation of the whole world, became sensible at last, that the tyranny it permitted was repugnant to religion, to humanity, and to policy, and resolved to break the chains of the Mexicans. Their liberty was now only constrained by the sole condition, that they should not quit the territory where they were settled. This precaution owed its origin to the fear that was entertained of their going to join the wandering savages to the north and south of the empire.

With their liberty their lands ought also to have been restored to them, but this was not done. This injustice compelled them to work solely for their oppressors. It was only decreed, that the Spaniards, in whose service they laboured, should stipulate to keep them well, and pay them to the amount of five pounds five shillings a year.

From these profits the tribute imposed by government was subtracted, together with four shillings and four-pence half-penny for an institution, which is associately the conquerors should have thought of establishing. This was a fund set apart in each community, and appropriated to the relief of such Indians as were decayed or indisposed; and to their support under private or public calamities.

The distribution of this fund was committed to their caciques, These were not the descendants of those whom they found in the country stathe time of the conqueft. The Spaniards choice them from among those Indians who appeared the most attached to their interests, and were under no apprehension at making these dignities hereditary. Their authority was limited to the supporting the police in their district; which in general extended eight or ten leagues, to the collecting the tribute of those Indians who laboured on their own account, that of the others being stopt by the masters whom they served, and to the preventing their flight by keeping them always under their inspection, and not fuffering them to contract any engagement without their confent. As a reward of their services, these magistrates obtained from government a property. They were permitted to take out of the common flock two-pence half-penny annually, for every Indian under their jurisdiction. At last they were empowered to get their fields cultivated by fuch young men as were not yet subject to the poll-tax; and to miploy girls till the time of their marriage, in fuch occupations were adapted to their fex, without allowing them any falary except their main, tenance. The Constitute and see in the state when

These institutions, which totally changed the condition of the Indians in Mexico, irritated the Spaniards to a degree not to be conceived. Their pride would not suffer them to consider the Americans as free men, nor would their avarice permit them to pay for labour which hitherto had cost them nothing. They employed themselves successively, or in combination, erast, remonstrances, and violence, to effect the subversion of an arrangement which so strongly contradicted their warmest passions; but their essential were inessectual. Las Casas had raised up for his beloved Indians protectors who seconded his design with zeal and warmth. The Mexicans themselves finding a support, impeached their oppressors before the tribunals, and even the tribunals that were either weak or in the interest of the court. They carried their resolution so far, as even unanimously

to refuse to work for those who had treased any of their councillation with injustice. This mutual agreement, more than any other circumstance, gave folidity to the regulations which had been decreed; the other, prescribed by the laws, was gradually established. There was no lorger any regular by them of oppression, but merely several of those particular venations which a vanquished people, who have soft their government, can hardly avoid from those who have subdued it

These clandestine acts of injustice did not prevent the Mexicans from recovering, from time to time, certain detached portions of that immense territory of which their fathers had been despoiled. They purchased them of the royal domain, or of the great proprietors. It was not their labour which enabled them to make these sequisitions; for this they were indebted to the happiness, of having discovered, some of them, mines, others, treasures, which had been conceased at the time of the conquest. The greatest, number derived their resources from the priests and monks, to whom they owed their existence.

Even those who experienced a fortune less propitious, procured for themselves, by the sole profits of their pay, more convenience than they had enjoyed before they underwent a foreign yoke. We should be very much deceived if we should judge of the ancient prosperity of the inhabitants of Mexico by what has been said by different writers of its emperor, its court, its capital, and the governors of its provinces. Despotism had there produced those stall effects which it produces every where. The whole state was sacrificed to the caprices, pleasures, and magnificence, of a small number of persons.

The government drew confiderable advantages from the mines which it caused to be worked, and still greater from those which were in the hands of individuals. The salt we greatly added to its revenue. Those who followed agriculture, at the time of harvest paid a kind of a third of all the produce of the lands, whether they belonged to them as their own property, or whence they were only the sarmers of them. Men who lived by he chace, fishermen, potters, and all mechanics, paid the same reportion of their industry every month. Even the poor were seed at certain fixed contributions, which their labour or their ms; might put them in a condition to pay.

The Mexicans are now less unhappy; European fruits, corn and cattle, have rendered their food more wholesome, agreeable,

and abundant. Their houles are better built, better disposed, and better furnished. Shoes, drawers, shirts, a garment of wool or cotton, a rust, and a hat, constitute their dress. The digmy which it has been agreed to annex to their enjoyments, has made them better economists, and more laborious. This case, however, is far from being universal; it is even very uncommon in the micinity of the mines, towns, and great roads, where tyranny seldom sleeps: but we often find it with satisfaction in remote parts, where the Spaniards are not numerous, and where they have in some measure become Mexicans.

The employments of this people are very various; the most intelligent, and those who are in easy circumstances, devote themselves to the most necessary and most useful manufactures, which are dispersed through the whole empire. The most beautiful manufactures are established among the people of Tlascal; their old capital, and the new one, which is called Angelos, are the center of this industry; here they manufacture cloth that is pretty fine, calicoes that have an agreeable appearance, certain slight silks, good hats, gold lace, embroidery, lace, glasses, and a great deal of hard-ware.

The care of flocks affords a maintenance to forme Mexican, whom fortune or nature have not called to more diffinguished employments. America, at the time it was discovered, had neither hogs, sheep, oxen, horses, nor even any domestic animal, Columbus carried some of these useful animals to St. Domingo, from whence they were generally dispersed, and at Mexico more than any other place: these have multiplied prodigiously. They count their horned cattle by thousands, whose skins are become an object of considerable exportation. The horses are degenerated, but the quality is compensated by the number. Hogs lard is here substituted for butter. Sheep's wool is dry, coass, and bad, as it is every where between the tropics.

The vine and olive tree have experienced the same degeneracy: the cultivation of them was at first prohibited, with view of leaving a free market for the commodities of the mother country. In 1706, permission was given to the Jesuita, and little afterwards to the Marquis Del Valle, a descendant for Cortea, to cultivate them: the attempts have not proved by cessful. The trials, indeed, that have been made, have not be abandoned, but no person has solicited the liberty of following an example, which did not promise any great emoluments.

Other cultures have been more successful; cotton, sugar, fills, focus, tobacco, and European corn, have all thriven to some persons. The Spaniards are encouraged to protective the labours which these cultures require, from the happy circumstance of their having discovered iron mines, which well on itself of the persons as well as some mines of a land of copper that is hard enough to serve for implements of husbandry; all these articles, however, for want of men and industry, are merely consumed within the country. These is only the vanilla, indigo, and cochineal, which make a part of the trade of Mexico with other nations.

### deed to mellagon E. W. AME XA COM base mogelland

New Mexico is so called, because of its being discovered later than Old-Mexico; is bounded on the north by high mountains, beyond which is a country altogether unknown; by Louisiana on the east; by New Spain on the fouth; and on the west by the gulph of California, and the Rio Colorado; extending, it is said, above one hundred miles from east to west, and about nine hundred from south to north; but the twentieth part of the country within these limits is neither cultivated nor inhabited, either by Spaniards or Indians. As it lies in the midst of the temperate zone, the climate, in general, is very pleasant; the summers, though very warm, are neither sultry nor unwholesome; and the winters, though preety sharp, are far from being insupportable, and, for the most part, clear and healthy.

The greatest encomiums are lavished on the fertility of the foil, the richnels of the mines, and the variety of valuable commodities produced in this country. It is faid to be beautifully diverlified with fields, meadows, riling grounds, and rivers; abounding with fruit and timber trees, turquoiles, emeralds, and other precious stones, mines of gold and filver, a great variety of wild and tame cattle, fifh and fowls. Upon the whole, we may fafely affirm, that New-Mexico is among the pleasantest, richest, and most plentiful countries in Ame-Hes, Si any other part of the world. There are few great or havigable tivers in it; the most considerable are, the Rio Solado, md Rio det Norte, which, with feveral smaller freams, fell inid the vgulphoof Mexico. On the coast of the gulphoare divere bays, rootts, and erecks, which might be easily converted into excellent harbours, if the Spaniards were possessed of any portion of that commercial spirit which animates the other maritime nations of Europe, hory mand and greater and at a fast ad

The Spanish writers cell ut, that New-Mexico is inhabited by augreat wriety of Indian nations or tribes, totally sinconnested with each other; but the principal are the Apachas a brave, warlike refolute people fond of liberty and the inveterate enemies of tyranny and oppression About the closes of the dast century, thinking themselves aggrieved by the Spanishingovernment; they made a general infurrection, and did a great deals of mischief, but were at last obliged to submits and have fince been curbed by Aronger garrifons mi Most of the natives are now Christians. When the Spaniards first entered this country, they found the natives well clothed, their finds cultivated, their villages neat, and their houses built with Stone Their flocks also were numerous, and they lived more comfortable than most of the other lavages of America. As to religion, they were idolaters, and worthipped the fun and moon; but whether they offered human facrifices, we are not fufficiently informed. The holy hope that a

As to the number of the provinces of this country, we can advance nothing certain; some writers making them only sive, others ten, afteen, twenty, and twenty-five, but adding no description, either of them, or the towns contained in them, excepting the capital, Santa Fé, which we are told stands near the source of the Rio del Norte, in 36° north latitude, and about one hundred and thirty leagues from the gulph; that it is a well-built, handsome, rich town, and the fest of the bishop, suffragan of Mexico, as well as the governor of the province, who is subordinate to the viceroy of Mexico, or New Spain.

### CALIFORNIA

California is the most northerly of all the Spanish dominions on the continent of America, is sometimes distinguished by the name of New-Albion, and the Islas Carabiras; but the most ancient appellation is California, a word probably owing to some accident, or to some words spoken by the Indiana and misunderstood by the Spaniards. For a long time California was thought to be an island, but Father Caino, a German Jesuit, discovered it to be a peniasula joining to the coast of New-Mexico, and the southern parts of America. This peniasula extends from Cape St. Sebastian, lying in north latitude 130 30% to Cape St. Lucar, which lies in north

America which is less known; and on the west and south, by the Pacific Ocean or great South seal The scools, especially towards the Vermillion sea, are covered with inhabited islands, on some of which the Jesuita have established statements; such as St. Clament, Paxaros, St. Anne, Cedars, so called from the great number of these trees in produces, St. Joseph, and a multitude of others. But the islands best known, are three lying off cape St. Lucar, towards the Mexican coast. These are called Less Trees Marias, if the three Maries, in They are but small, have good wood and water, fall pits, and abandance of game; sherefore the English and French pirates have sometimes wintered there, when bound on cruizes in the South Seas.

As California lies altogether within the temperate zone, the natives are neither chilled with cold nor fcorched with heat; and, indeed, the improvements in agriculture made by the Jefuits, afford frong proofs of the excellency of the climate. In fome places the air is extremely hot and dry, and the earth wild, rugged, and barren. In a country firetching about eight hundied miles in length, there must be a confiderable variation of foil and climate; and, indeed, we find, from good authority, that California produces fome of the most beautiful lawns, as well as many of the most inhospitable delarts in the universe. Upon the whole, although California is rather rough and craggy, we are affured by the Jeluit Vinegas, and other good writers, that with due culture, it furnishes every necessary and conveniency of life ; and that even where the atmosphere is hottest, vapours riling from the fea, and dispersed by pleasant breezes, render it of a moderate temperature.

The peninfula of California is now flucked with all forts of domestic animals known in Spain and Mexico. Horses, mules, affes, oxen, sheep, hogs, goats, and all other quadrupeds imported, thrive and increase in this country. 3: Among the native animals is a species of deer, of the fize of a young heifer, and greatly refembling it in shape; the head is like that of a deer, and the horns thick and crooked like those of a ram. The hoof of the animal is large, round, and cloven, the skin spotted, but the hair thinner, and the tail sharper than that of a deer. Its flesh is greatly esteemed. There is another animal peculiar to this country, larger and more bulky than a sheep, but greatly resembling it in figure, and, like it, covered with a fine black or white wool. The flesh of the animal is nourishing and deligious, and happily for the matives, is for abundant, that nothing more is required than the trouble of hunting, as these animals wander about in droves in the forests and on the moun-

tains. Father Torquemado describes a creature which he canto species of large bear, something like a buffalo, of the fine of ficer, and nearly of the figure of a fter this hair is staiwater of a yard in length, its neck long and aukward, and on we fore. head are horns branched like those of a ftag. The tail is a verd in length, and half a yard in breadth, and the hoof cloven like thole of an ox. With regard to birds, we have boy an imperfect account; only, in general, Pather, Venegus tells of that the coaft is plentifully flored with percocks, bullards, geeler cranes, and most of the birds common in other parts of the world. The quantity of fifth which reford to thele could be incredibie. Salmon, turbot, barbel, fkate, mackerel atter are caught here with very little trouble; together with pearl eviters, common oyfters, lobfters, and a variety of exquifite shell fifh. Plenty of turtle are also caught on the coasts. On the South fee coasts are some shell fish peculiar to it, and perhaps the most beautiful in the world; their lustre surpassing that of the finest pearl, and darting their rays through a transparent varnish of an elegant vivid blue, like the lapis lauguli. The fame of California for pearls foon drew forth green numbers of adventurers, who learched every part of the gulph, and are ftill employed in that work, notwithstanding fashion has greatly diminished the value of this elegant natural production. Father Torquemado observes, that the sea of California afforda very rich pearl fisheries, and that the hostiss, or beds of oysters. may be feen in three or four fathoms water, almost as plain as if they were on the surface will save monage, at a national

The extremity of the peninfula towards cape St. Lucaris more level, temperate, and fertile than the other parts, and confequently more woody. In the more distant parts, even to the farthest missions on the east coast, no large timber hath yet been discovered. A species of manna is found in this country, which, according to the accounts of the Jesuits, has all the sweetness of refined sugar without its whiteness. The natives firmly believe that the juice drops from heaven.

The Californians are well made, and very strong; they are extremely pussilanimous, inconstant, stupid, and even intensible, and seem deserving of the character given to the Indians in general. Before the Europeans penetrated into California, the natives had no form of religion. The missionaries, indeed, tell us many tales concerning them, but they is condensly bear the marks of forgery, as not to be worth repeating. Each nation was then an assemblage of several cottagns more or less numerous, that were all mutually confederated by sali-

No kind of drefs was used by the men, but the women made use of lome covering, and were even lond of ornamenting themselves with pearls and such other trinkets at the country efforded. What mostly displayed their ingenuity was the construction of their fishing nets, which are faid by the lefuits to have even exceeded in goodness those made in Europe; they were made by the women, of a coarle kind of flax procured from fome plants which grow there. Their houles were built of branches and leaves of trees; nay, many of them were only inclosures of with and Rone, raised half a yard high, without my covering, and even these were so small, that they could not firetch themselves at length in them. In winter they dwelt

under ground, in caves either natural or artificial.

In 1526 Ferdinand Cortes having reduced and lettled Mexico, attempted the conquest of California, but was obliged to return, without even taking a furvey of the counreport of his death having disposed the Mexicans to general infurrection. Some other attempts were made by the officers of Cortes, but thefe were also unfliccefsful, and this valuable coals was long neglected by the Spaniards, who, to this day, have but one lettlement upon it, In 1595, a galleon was fent to make discoveries on the Californian shore, but the vessel was unfortunately lost. Seven years ter, Count de Monteroy, then viceroy of New-Smin, Sebastian Biscayno on the same defign with two ships a tender, but he made no discovery of importance. 1684, the Marquis de Laguna, also viceroy of New-Spain, dispatched two thips with a tender to make discoveries on the take of California; he returned with an indifferent account, but was among the first that afferted that California was not an island, which was afterwards confirmed by Father Caino, as already related. In 1697, the Spaniards being discouraged by their losses and disappointments, the Jesuits solicited and obtained permission to undertake the conquest of California. They arrived among the lavages with curiofities that might amufe them, corn for their food, and clothes for which they could not but perceive the necessity. The hatred these people bore the Spanish name, could not support itself against these demonstrations of benevolence. They testified their acknowledgments as much as their want of fensibility, and their inconstancy would permit thein. These faults were partly overcome by the religious institutors, who pursued their project with a degree of warmth and resolution peculiar to the society. They made them-

felves carpenters, majons, weavers, and husbandmen; and by thele means succeeded in imparting knowledge, and in some measure a take for the useful arts, to this favage people, who have been all successively formed into one body. In 1745. they composed forty-three villages, separated from each other by the barrennels of the Toil and the want of water. The inhabitants of these small villages subfift principally on corn and pulic, which they cultivate, and on the fruits and domestic ani. mals of Europe, the breeding of which last is an object of continual attention. The Indians have each their field, and the property of what they reap; but fuch is their want of forelight, that they would founder in a day what they had gathered if the missionary did not take upon himself to distribute it to them as they flood in need of it. They manufacture some coarse stuffs, and the necessaries they are in want, of are purchased with pearls, and with wine nearly resembling that of Madein, which they fell to the Mexicans and to the galleons, and which experience bath shown the necessity of prohibiting in Califor, nia. A few laws, which are very simple, are sufficient to regulate this rising state. In order to inforce them, the missionary chooles the most intelligent person of the village, who is empowered to whip and imprilon, the only punishments of which they have any knowledge. In all California, there are only two garrisons, each confiding of thirty men, and a soldier with every missionary; these troops were chosen by the legislators, though they are paid by the government, Were the court of Madrid to push their interest with half the zeal of the Jesuits, California might become one of the most valuable of their acquisitions, on account of the pearls and other valuable articles of commerce which the country contains. At present, the little Spanish town near cape St. Lucar, is made use of for no other purpose than as a place of refreshment for the Manilla ships, and the head refidence of the millionaries.

### GOVERNMENT, COMMERCE, &c.

The civil government of all this valt country, included in the general name of Mexico, is administered by tribunals, called audiences, three of which are held in Old, and two in New-Mexico. In these courts the viceroy of the King of Spain presides; his employment is the greatest trust and power his Catholic Majesty has at his disposal, and is perhaps the richest government intrusted to any subject in the world. The viceroy continues in office three years.

The clergy are exceedingly numerous in Mexico; the pricht, mbiles, and nume, of all orders, make a fifth part of the white inhabitants, both here and in other parts of Spanish America.

The city of Mexico is the oldest in America, of which we have any account. The Abbe Clavigero, who is our authority for the preceding account of this country, dates his foundation as far back as 1825. It is situated in the charming vale of Mexico, on several small islands, in take Tetzcuco, in north latitude 19. 26, and 276 34 west longitude from Perro. This vale is surrounded with losty and verdant mountains, and formerly contained no less than forty eminent cities, believe offlages and hamlets. The city is subject to frequent muindations, as is easily accounted for from its local situation, the lake in which it stands being the reservoir of the waters flowing from the neighbouring mountains.

Concerning the ancient population of this city, there are various opinions. The historians most to be relied on lay, that it was nearly nine miles in circumference, and contained upwards of fixty thousand houses, containing each from four to ten inhabitants. Some historians reckon one hundred and twenty thousand, and some one hundred and thirty thousand houses. By a late accurate enumeration, made by the magistrates and pricks, it appears that the prefent number of inhabitants exceeds two hundred thousand. We may form some idea of its populouineis from the quantity of pulque and tobacco which are daily confumed in it, afcertained from the cuffort house books, February 23, 1775. Every day upwards of one hundred and ninety thousand pounds of pulgue are carried into the city, which are almost folely confumed by the Indians and Mulattoes, who drink this beverage. The tax upon it amounts annually to about two hundred and eighty thousand crowns. The daily confumption of tobacco is reckoned at one thousand two hundred and fifty crowns, which we will be to be the state of the

The greatest curiosity in the city of Mexico is their floating gardens. When the Mexicans, about the year 1325, were subdued by the Colhuan and Tepanecan nations, and confined to the small islands in the lake, having no land to cultivate, they were taught by necessity to form moveable gardens, which shated on the lake. Their construction is very simple. They

Pulque is the usual wine or beer of the Mexicans, made of the fermented julee of the magnet. This liquor will not keep but one day, and therefore what is made is daily consumed.

take willows and the roots of marth plants, and other mate july which are light, and twill them together, and to broady another mate july and the control of which are light, and twitt them together the light of the plattorm, which is capable of higher them as to form a fort of plattorm, which is capable of higher ing the earth of the garden. Upon this foundation they lay, the light buffers which float on the lake, and overpread the light buffers which float on the lake, and overpread the light had been the light buffer which they draw up from the bottom for the lake, and overpread the light buffer to the lake, and breadth buffer and breadth Their regular figure is quadrangular; their length and breadth various but generally about eight rods long and tarce wide and their elevation from the jurface of the water in less than a foot. Thele were the first fields that the Mexicans amned after. the foundation of Mexico; there they first cultivated the maile, great pepper, and other plants necessary, for their fapport. From the industry of the people their fields foon became numerous. At prefent they cultivate flowers and every fort of garden herbs upon them. Every day of the years at fun-rife. innumerable vessels or boats, loaded with various kinds of flowers and herbs which are cultivated in thefe gardens are feen arriving by the canal at the great market place of Mexico, All plants thrive in them surprisingly; the mud of the lake makes a very rich foil, which requires no water from the clouders in the largest gardens there is commonly a little tree, and a little hus to shelter the cultivator, and defend him from the rain or the fun. When the owner of a garden, or the Chinampacian he is called without o change his fituation to get out of a bid neighbourhood, or to dome nearer to his family, he detarrinted his little hoat, and by his own ftrength alone, if the gardin is imall, or with the affiftance of others, if it is large, conducts, it wherever he pleases, with the little tree and hoe upon in That part of the illand where thefe floating gardens are; inm place of delightful recreation, where the fenies receives the highest possible gratification in the bired that sid or sairbosumo

The buildings, which are of ftone, are convenient, and the public edifices, especially the churches, are magnificent, and the city has the appearance of immense wealth.

The trade of Mexico confifts of three great branches, which extend over the whole world. It carries on a traffic with Engrops, by La Vera Cruz, fituated on the gulph of Mexicologous the North fea; with the East-Indies, by Acapulco on the South less, two hundred and ten miles fouth well of Mexicologous with South-America, by the same port. These two for operations of Cruz and Acapulco, are admirably well fituated for the commercial purposes to which they were applied to be meant that Mexicologous her wealth over the

whole world, and receives in return the numberless luxuries and secessies which Europe affords her. To this port the fleet from Cadiz, called the Flots, conlifting of three men of war, a sconvoy, and fourteen large merchant thips, annually arrive sout the beginning of November. Its cargo confifts of almost every commodity and manufacture of Europe; and there are few nations but have more concern in it than the Spaniards, who and out little except wine and oil. The profit of thele, with the freight and commission to the merchants, and duty to the king is all the dvantage which Spain derives from the American commerce. When all the goods are landed and dispoted of at. La Vera Cruz; the fleet takes in the plate, precious stones, and other commodities for Europe. Some time in May they are resdy to depart. From La Vera Cruz they fail to the Havannah. in the ifle of Cuba, which is the rendezvous where they meet the galleons, another fleet which carries on the trade of Terra Firms by Carthagens, and of Peru by Panama and Porto Bello. When all are collected and provided with a convoy necessary for their forety, they freer for Old-Spain. 39

Acapulco is the fea port by which the communication is kept up between the different parts of the Spanish empire in America. and the East-Indies. About the month of December, the great plicon, attended by a large thip as a convoy, which make the only communication between the Philippines and Mexico, annually arrive here. The cargoes of these ships (for the convoy. though in a clandestine manner, likewise carries goods) consist of all the rich commodities and manufactures of the cast. At the same time the ennual ship from Lima, the capital of Peru. comes in, and is computed to bring not less than two millions of pieces of eight in filver, befides quick-filver, and other valuable commodities, to be laid out in the purchase of the galleons cargoes: Several other ships, from different parts of Chili and Peru, meet upon the same occasion. A great fair, in which the commodities of all parts of the world are battered for one another, lasts thirty days. The galleon then pray res for her voyge, loaded with filver and fuch European goods as have been hought necossary. The Spaniards, though this trade be carried." montirely through their hands, and in the very heart of their minions, are comparatively but small gainers by it. For as hey allow the Dutch, Great-Britain, and other commercial states. ofurnishthe greater part of the cargo of the flota, so the Spait inhabitants of the Philippines, tainted with the indolence high ruined their European ancestors, permit the Chinese

merchants to furnish the greater part of the cargo of the galleon, No. with Randing what has been faith of Worn Crus the Acapulco, the city of Moxico, the capital of the empire weight to be confidered as the center of commerce in this part of the world; for here the principal merchants refide, and the grastell. part of the business is negociated. The East-India goods from Acapulcy, and the European from Nera Crus, also puls through this city. Hither all the gold and filver come to be coined here the king's fifth is deposited, and here we wrought the thole utenfils and ornaments in plate, which are coury yes, fent into Europe, the state fine the ment of person, sods gling

The empire of Mexico was finally fubdued by Cortes in the year 1511. Montezuma was at that time emperor of Mexic co. In the course of the war, he was treacherouly taken by Cortes, and held as a priloner. During the imprisonment of Monteguma, Cortes and his army had made repeated attacks on his subjects, but without success. Cortes was now deter mined, as his last resource, to try what effect the interposition of Montezuma might have to foothe or overawe his libjeds. This unfortunate prince, at the mercy of the treacherous Spiniards, and reduced to the fed necessity of becoming the infine ment of his own difgrace, and of the flavery of his lubication advanced to the battlements in his royal robes, in all the pomp in which he used to appear on folemn occasions, At fight of their fovereign, whom they had long been accustomed to honour, and almost to revere as a god, the weapons dropped from their hands, every tongue was filent, all bowed their heads, and many profrated themselves on the ground. Montezums addressed them with every argument that could mitigate their rage, or persuade them from hostilities. When he ended his discourse, a sullen murmur of disapprobation ran through the crowd; to this succeeded repreaches and threats; and their fury rising in a moment, they violently poured in whole fight of arrows and vollies of Rones upon their unhappy monarch two of the arrows ftruck him in his body, which with the blow of a stone on his temple, put an end to his life. Guatimoun fucceeded Monte zuma, and maintained a vigorous opposition against the assaults of Cortes; but he, like his predecessor, after a noble defence, was forced to lubmit, and his capital was wrelled from him by Cortes and his followers.

The exultation of the Spaniards, on accomplishing this arduous enterprise, was at first excellive. But this was quickly twenty thousa

teleichthad animated them amidit for many hardships and dangers." infeed of inenhaustible westile which they expedied from essenting medier of Monteguine's treafords, and the ornanients of lo many temples their repactoufness could collect only an intentiderable booty amidfi rains and defeition. Guarimozing sware of his impending fate, had omered what remained of the riches smafnd by histantedois to be thrown into the lake. The Indian auxiliaries, while the Spaniards were engaged in conflict with the enemy, had carried off the most waluable part of the spoil. The funt to be divided among the conquerors was fo finall, that many of them disdained to accept of the pittance which felt to their share, and all murmured and exclaimed some against Cortes and his confidents, whom they suspected of having fecretly appropriated to their own use a large portion of the riches which would have been brought into the common flock; others against Guatimozin, whom they accused of obstipacy, in refuling to discover the place where he had hidden his treasure, it a special section was appropriate that and are absorbed

Arguments, intreaties, and promiles, were employed in order to foothe them, but with fo little effect, that Cortes, from solicitude to check the growing spirit of discontent, gave way to a deed which stained the glory of all his great actions. Without regarding the former dignity of Guatimozin, or feeling my reverence for those virtues which he had displayed, he ubjected the unhappy monarch, together with his chief favouric, to torture, in order to force from them a discovery of the oyal treasures, which it was supposed they had concealed. Guatimozin bore whatever the refined cruelty of his tormentors ould inflict, with the invincible fortitude of an American varrior. His fellow-sufferer, overcome by the violence of the nguish, turned a dejected eye towards his master, which seemto implore his permission to reveal all he knew. But the gh spirited prince, darting on him a look of authority mined with scorn, checked his weakness, by asking, " Am I now poling on a bed of flowers?" Overawed by the reproach. persevered in his dutiful filence, and expired, amed of a scene so horrid, rescued the royal victim from hands of his torturers, and prolonged a life referved for w indignities and fufferings,

The gold and filver, according to Cortes, amounted only to one hundred twenty thousand pefos, a sum far inserior to that which the Spaniarda had beenly divided in Mexico. The fate of the capital, as both parties had foreseen, decided that of the empire. The provinces submitted one after another to the conquerors. Small detachments of Spaniards march, ing through them without interruption, penetrated, in different quarters, to the great South ocean, which, according to the idea of Columbus, they imagined would open a short, as well as a casy passage to the East Indies, and secure to the crown of Castile all the envied wealth of those fortile regions; and the active mind of Cortes began already to form schemes for attempting this important discovery. In his after schemes, however, he was disappointed, but Mexico hath ever since remained in the hands of the Spaniards.

The face of the capital, as both patries lind forescen, decided that of the empire, The provinces lubraited one after another to the conquerurs and Wallalh Vente, of Spaniards marching through them without interception, penetrated, in different quarters, tathe great South occar, which seconding to the iday of A DIL R E M A CHITCHE O de crown of the Complete Total to despelled though an interpretation active mind of Chive began already to form felicines, for alternois important suffercery, In his after Ichemes, however, disperified out Mexico has ever high remained in the

E now enter upon the description of that part of the globe, where the human mind will be fuccessively surprised with the sublime and astonishing works of Nature; where rivers of amazing breadth flow through beautiful and widelyextended plains, and where lofty mountains, whose summits are covered with eternal snow, intercept the course of the clouds, and hide their heads from the view of mortals. In some parts of this extensive region, nature hath bountifully bestowed her treasures, and given every thing necessary for the convenience and happiness of man. We have only to regret, that a fet of avaricious men have successively drenched with innocent blood these plains, which are so beautifully formed and enriched by the hand of Nature; and that the rod of spanish preparish has prevented the population of a country which might have supported millions of beings in affluence.

# TERRA FIRMA, OR CASTILE DEL ORO.

TERRA FIRMA is fituated between 60° and 82° west longitude, and the equator and 12 degrees north latitude; its length is one thousand four hundred miles, and its breadth seven hundred: it is bounded on the north by the Atlantic ocean, (called there the North sea;) on the cast by the Atlantic ocean, and Surinam; on the south by Amazonia and Peru; and on the west by the Pacific ocean. It is divided into two grand divisions, Noath and South; these are again subdivided into provinces.

The northern division containing, 1. Danien, or Tenna.
FIRMA PROPER: 2. CARTHAGENA: 3. St. MARTHA: 4. VENEL
ZEULA: 5. COMANA: 6. PARIA, or NEW-ANDALUSIA.

The louthern divition containing, 1, New-Granabatt 2, Posts

### PERIEN, OR TERRA FIRMA PROPER.

Darien is the narrow isthmus, or neck of land, that, properly speaking, joins North and South-America together, but is generally reckoned as part of the latter. It is bounded on the north by the North sea, on the south sea, on the east by the gulph or river of Darien, and on the west by another part of the South sea, and the province of Veragua. It lies in the form of a bow, or crescent, about the great bay of Panama in the South sea, and is three hundred miles in length and sixty in breadth. This province is not the richest, but is of the greatest importance to Spain, and has been the scene of more actions than any other in America. The wealth of Peru is brought hither, and from hence exported to Europe. This has insulated many enterprising people to make attempts on Panama, Porto. Bello, and other towns of this province; in hopes of obtaining a rich booty.

The Scotch tot possession of part of this province in 1600, and attempted to form an establishment, which would have proved one of the most useful and important that ever was projected. Of the rife, progress and catastrophe, of this wellimagined, but illefated, undertaking, Sir John Dalrymple, in the lecond volume of his Memoirs of Great-Britain and Ireland. has given a very interesting account, authenticated in every particular by unquestionable documents. The projector and leader of the Darien expedition was a clergyman of the name of Paterson; who having a violent propensity to see foreign countries, he made his profession the instrument of induling it by going to the new western world, under pretence of converting. the Indians to the religion of the old. In his courses there, he became sequainted with Capt. Dampier and Mr. Wafer, who afterwards published, the one his Voyages and the other his Travels, in the region where the feparation is narrowest between the Atlantic and the South feas; and both of whom, particularly the first, appear by their books to have been men of confiderable observation, But he got much more knowledge from men who could neither write nor read, by cultivating the acquaintance of fome of the old Buccaneers, who, after furviving their glories and their crimes, fill, in the extremity of age and misfortune, recounted with transport the case with which they had passed and repassed from the one sea to the other, some times in hundreds together, and driving strings of mules before themiloaded with the plunder of friends and of foes. Paterion. having examined the places, fatisfied himfelf, that on the ifthmus of Darien there was a track of country running acro Atlantic to the South fea, which the Spaniards had feffed, and inhabited by a people continually at war with them that along the coast, on the Atlantic fide, there lay a string of islands called the Sambaloes, uninhabited, and full of natural firength and forests, from which last circumstance one of them was called the Island of the Pines; that the leasthere were filled with turtle, and the manatee or fea-cow; that mid-way between Porto Bello and Carthagena, but near fifty leagues distant from either, at a place called Acta, in the mouth of the river of Darien, there was a natural harbour, capable of receiving the greatest scets, and defended from storms by other islands which covered the mouth of it, and from enemies by a promontory which commanded the passage, and hidden rocks in the passage iticlf; that on the other fide of the ifthmus, and in the lame tract of country, there were natural harbours, equally capacious

and well defended; that the two less were connected by a ridge of hills, which, by their height, created a temperate climate in the midt of the most fultry latitudes, and were sheltered by squeets, not yet rendered damp by them, because the trees grow at a distance from each other, having very little underwood; that, contrary to the barren nature of hilly countries, the foil was of a black mould two or three feet deep, and producing spontanes only the fine tropical fruits and plants, and roots and herbs; that roads could be made with ease along the ridge, by which make, and even carriages, might pass from one fea to the other in the space of a day; and consequently this passage seemed to be pointed out by the singer of Nature, as a common center, to connect together the trade and intercourse of the universe.

Paterson knew that ships which stretch in a straight line from one point to another, and with one wind, run less risks, and require fewer hands, than thips which pals through many latitudes, turn with many coasts, and require many winds; in evidence of which, vellels of leven or eight hundred tons burthen are often to be found in the South leas, navigated by no more than eight or ten hands, because these hands have little else to do than fet their fails when they begin their voyage, and to take them in when they end it; that as foon as fhips from Britain got so far south as to reach the trade wind, which never varies, that wind would carry them to Darien, and the same wind would carry ships from the bay of Panama, on the opposite fide of the isthmus, to the East-Indies; that as foon as ships coming from the East-Indies to the bay of Panama got so far north as the latitude of forty degrees, to reach the westerly winds, which, about that latitude, blow almost as regularly from the west as the trade winds do from the east, these winds would carry them, in the track of the Spanish Acapulco ships, to the coast of Mexico; from whence the land wind, which blows for ever from the north to the fouth, would carry them along the coast of Mexico into the bay of Panama. So that in going from Britain, thips would encounter no uncertain winds, except during their passage south into the latitude of the trade wind; in coming from India to the bay of Panama, no uncertain winds, except in their passage north to the latitude of the westerly winds; and in going from the other fide of the isthmus to the east, no uncertain wind whatsoever .- Gold was seen by Paterson in fome places of the ithmus, and hence an island on the Atlantic fide was called the Golden Island, and a river on the fide

to the South fee was called the Golden river; but these were objects which he regarded the stitute, because far greater were in his eye; the removing of dillances, the drawing nations nearer to each other, the preservation of the yaluable lives of feather, and the laving in freight, to important to merchants, and in time to important to them, and to an animal whole life is of fo thort duration as that of men.

By this obscure Scotchman, a project was formed to lettle, o this neglected spot, a great and powerful colony; not as other colonies have for the most part been settled, by chance, and upprotected by the country from whence they went; but, by system, upon foresight, and to receive the ample protection of those governments to whom he was to offer his project; and certainly no greater idea has been formed fince the time of Columbus.

Paterion's original intention was to offer his project to England, as the country which had most interest in it, not only from the benefit common to all nations, of shortening the length of voyages to the East-Indies, but by the effect which it would have had to connect the interests of her European, West-Indian, American, African and East-Indian trade. But Paterion having few acquaintance, and no protection in London, thought of drawing the public eye upon him, and ingratiating himlelf with monied men and with great men, by affifting them to model a project, which was at that time in embryo, for creeting the Bank of England. But that happened to hum which has happened to many in his lituation; the persons to whom he applied made use of his ideas, took the honour of them to themselves, were civil to him for a while, and neglected him afterwards. He therefore communicated his project of a colony only to a few persons in London, and these few discouraged him.

He next made offer of his project to the Dutch, the Hamburghers, and the elector of Brandenburgh; because, by means of the pallage of the Rhine and Elbe through their states, he thought, that the great additional qualities of East-Indian and American goods, which his colony would bring into Europe, would be distributed through Germany. The Dutch and Hamburgh merchants, who had most interest in the subject of his vifit, heard him with indifference: the elector, who had very little interest in it, received him with honour and kindness. But court arts and falle reports lost him even that prince's was called the Go'den Illand, and a river op the earl

Paterson, on his return to London, formed a friendship with Mr. Fletcher of Salton, whose mind was inflamed with the love of public good, and all of whole ideas to procure it had a sublimity in them. Fletcher brought Paterson down to Scotland with him, presented him to the Marquia of Tweedale. then minister for Scotland; and then, with that power which a vehement spirit always possesses over a diffident one, persuaded the Marquis hy arguments of public good, and the honour which would redound to his administration, to adopt the project. Lord Stair, and Mr. Johnston, the two secretaries & flate, patronifed those abilities in Paterson which they possessed in themselves; and the lord advocate, Sir James Stuart, the fame man who had adjusted the Prince of Orange's declaration at the revolution, whose son was married to a niece of Lord Stair, went naturally along with his connections. Their persons, in June 1695, procured a statute from parliament, and afterwards a charter from the crown in terms of it, for creating a trading company to Africa and the new world, with power to plant colonies and build forts, with confent of the inhabitants, in places not possessed by other European nations.

Paterson, now finding the ground firm under him, and that he was supported by almost all the power and talents of his country, the character of Fletcher, and the fanction of an act of parliament and royal charter, threw his project boldly upon the public, and opened a subscription for a company. The frenzy of the Scotch nation to fign the folemn league and covenant, never exceeded the rapidity with which they ran to subscribe to the Darien company, The nobility, the gentry, the merchants, the people, the royal burghs without the exception of one, and most of the other public bodies, subcribed. Young women threw their little fortunes into the Rock; widows fold their jointures to get the command of money for the same purpose. Almost in an instant four hundred thousand pounds were subscribed in Scotland, although it be now known, that there was not at that time above eight hundred thouland pounds of cash in the kingdom. The samous Mr. Law, then a youth, afterwards confessed, that the facility with which he faw the passion of speculation communicate itself from all to all, satisfied him of the possibility of producing the same effect from the fame cause, but upon a larger scale, when the Duke of Orleans, in the year of the Mississippi, engaged him against his will to turn his bank into a bubble. Paterson's project, which had been received by ftrangers with fears when opened

to them in private, filled them with hopes when it came to them upon the wings of public fame! for Col. Erikine, for to Lord Cardrofs, and Mr. Haldanc, of Gle gles, the one a generous branch of a generous flem, and the other a country gentlemen of fortune and character, having been deputed to receive subscriptions in England and on the continent, the English subscribed three hundred thouland pounds, and the Dutch and Hamburghers two hundred thouland pounds more.

In the mean time the jealoufy of trade, which has done more mischief to the trade of England than all other causes put together, created an alarm in England; and the Houles of Lords and Commons, without previous inquiry and reflection, on the 13th of December, 1695, concurred in a joint address to the king against the establishment of the Darien company, as detrimental to the interest of the East-India company, Soon after, the Commons impeached fome of their own countrymen for being instrumental in creeting the company; and also some of the Scotch nation, one of whom was a peer, Lord Belhaven; that is to fay, they arraigned the subjects of another country, for making use of the laws of their own, Among fix hundred legislators, not one had the happy ray of genius to propose a committee of both parliaments, to inquire into the principles and confequences of the establishment; and if these should, upon inquiry, be found, that the benefit of it should be communicated, by a participation of rights to both nations. The king's answer was, "That he had been ill advised in Scotland." He soon after changed his Scottish ministers, and sent orders to his resident at Hamburgh to prefent a memorial to the senate, in which he disowned the company, and warned them against all connections with it. The senate sent the memorial to the assembly of merchants, who returned it with the following spirited answer; " We look upon it as a very strange thing, that the King of Britain should offer to hinder us, who are a free people, to trade with whom we please; but are amazed to think, that he would hinder us from joining with his own subjects in Scotland, to whom he had lately given fuch large privileges, by to folem a an act of parliament." But merchants, though mighty prone to passion, are easily intimidated. The Dutch, Hamburgh, and London merchants, withdrew their subscriptions.

The Scotch, not discouraged, were rather animated by this oppression; for they converted it into a proof of the envy of the English, and of their consciousness of the great advantages

which were to flow to Scotland from the colony. The company proceeded to build fix thips in Holland, from thirty-fix to fixty gunts and they engaged twelve hundred men for the colony; among whom were younger fons of many of the mobile and most entient families of Scotland, and fixty officers who had been diffranced at the peace, who carried with them fuch of their private men generally raised on their wond or the estates of their relations, as they knew to be faithful and broves and most of those were Highlanders. The Scotch parliament on the 5th of August, 1698, unanimously addressed the sing to Support the company. The lord president, Sir Hugh Dalis rymple, brother to Lord Stair, and head of the bench, and the lord advocate, Sir James Stuart, head of the bar, jointly draw memorials to the king, able in point of argument, information and arrangement; in which they defended the rights of the company upon the principles of constitutional and of public law, And neighbouring nations, with a mixture of supprise and respect, saw the poorest kingdom of Europe sending forth the most gallant and the most numerous colony that had ever gone from the old to the new world.

On the soth of July, of the year 1698, the whole city of Edinburgh poured down upon Leith to fee the colony depart amidit the tears, and prayers and praises of relations and friends, and of their countrymen. Many feamen and foldiers, whole lervices had been refuled, because more had offered themfelves than were needed, were found hid in the fhips, and when ordered afhore, clung to the ropes and timbers, imploring to go without reward with their companions. Twelve hundred men failed in five flout ships, and arrived at Darien in two months, with the loss of only fifteen of their people. At that time it was in their power, most of whom were well born, and all of them hardly bred, and inured to the fatigues and dangers of the late war, to have gone from the northmost part of Mexico to the foutlimost of Chili, and to have overturned the whole empire of Spain in the South feas ; but modell, respecting their own and their country's character, and afraid of being accused that they had plunder, and not a settlement, in view, they began with purchasing lands from the natives, and fending messages of amity to the Spanish governors within their reach : and then fixed their station at Acts, calling it New St. Andrew, from the name of the tutelar faint of Scotland, and the country itself New-Caledonia. One of the fices of the harbour being formed by a long narrow neck of land which ran into the fea, they cut it acrois fo as to join the

cosmand the harbone. Within this defence they preced the fort, planting, upon it fifty, pieges of suspent. On the oth fiduof the harbone there was a mountain a mile high, on which they placed a watch house, which, in the ransfed sis within the impiece for suspent, which in the ransfed sis within the impiece for prevent all imprife. Toth place, it was about fored that the Highlanders often repaired, to enjoy a cool sire and so talk of their friends they had left behind, in their hills, friends there minds were as high as their mountains. The first public aft of the solony was to publish a declaration of freedom of strade, and religion to all nations. This luminous idea-originated with Paterfor.

But the Dutch East India company having preffed the king. in concurrence with his English subjects, to prevent the fetthement at Darien, orders had been fent from England to the governors of the West Indian and American colonies, to illus preclamations against giving affiliance, or even to hold correct. ndence with the colony, and thefe were more or less harfbly expressed, escording to the tempers of the different governors. The Scotch, trusting to far different treatment, and to the supplies which they expected from these colonies, had not brought provisions enough with them, they fell into difestes from bad food and from want of food. But the more generous lavages, by hunting and fishing for them, gave them that relief which fellow Britons refused. The lingered eight months waiting, but in vain, for affistance from Scotland, and almost all of them either died or quitted the settlement. Paterson. who had been the first that entered the ship at Leith, was the left who went on hoard at Darien.

During the space of two years, while the establishment of this colony had been in agitation, Spain had adde no complaint to England or Scotland against it; the Darien council even avered in their papers, which are in the Advocates Library, that the right of the company was debated before the king, in presence of the Spanish ambassador, before the colony left Scotland. But now, on the gd of May, 1698, the Spanish ambassador at London presented a memorial to the king, which complained of the settlement at Darien as an encroachment on the rights of his master.

The Scotch, ignorant of the mifortunes of their colony, but provoked at this memorial, fent out another colony foon after of thirteen hundred men, to support, an establishment which was now no more. But this last expedition, having been

afreno ron mee the they cut a secreta he is the courte

more hallly prepared than the first, was unlacky in its passage; one of the thips was loft at fes, many men died on thip-liourd and the sell arrived at different times, broken in their health and dispirited, when they heard the fate of those who had gone before them. Added to the misfortunes of the first colony, the fecend had a misfortune peculiar to itfelf : the general affemu bly of the church of Scotland fent out four ministers with orders to take charge of the fouls of the colony, and to creft a presbytery, with a moderator, clerk, and record of proceed. ings; to appoint ruling elders, descons, overfeers of the manness of the people, and affiftants in the exercise of church difcipline and government, and to hold regular kirk fessions." When they arrived, the officers and gentlemen were occupied in building houses for themselves with their own hands, because there was no help to be get from others ; yet the four ministers complained grievously, that the council did not order houses to be immediately built for their accommodation. They had not the precaution to bring with them letters of recommendation from the directors at home to the council abroad. On these accounts, not meeting with all the attention they expected from the higher, they paid court to the inferior ranks of the colonists. and by that means threw divisions into the colony,

The last party that joined the second colony at Darien, after it had been three months fettled, was Captain Campbell of Final, with a company of the people of his estate, whom he had commanded in Flanders, and whom he carried to Darien in his own ship. On their arrival at New St. Andrew, they found intelligence had been lately received, that a Spanish force of fixteen hundred men, which had been brought from the coast of the South les, lay encamped at Tubucantee, waiting there till a Spenish squadron of eleven ships which was expected should arrive, when they were jointly to attack the fort. The military command was offered to Captain Campbell, in compliment to his reputation and to his birth, who was descended from the families of Breadalbane and Athol. In order to prevent a joint attack, he resolved to attack first; and therefore, on the second day after his arrival, he marched with two hundred men to Tubucantee, before his arrival was known to the enemy, stormed the camp in the night-time, dislipated the Spanish force with much flaughter, and returned to the fort the fifth day: but he found the Spanish ships before the harbour, their troops landed, and almost all hope of help or provision cut off; yet he stood a fiege near fix weeks, till almost all the officers were dead, the

enemy by their approaches had cut off his wells, and his balls were so far expended, that he was obliged to melt the pewter dishes of the garrison into balls. The garrison these capitulated, and obtained not only the common honours of war and security for the property of the company, but, as if they had been conquerors, exacted hostages for performance of the conditions. Captain Campbell alone defired to be excepted from the capitulation, saying, he was sure the Spaniards could not forgive him the mischief which he so lately had done them. The brave, by their courage, often escape that death which they seem to provoke: Captain Campbell made his escape in his vessel, and, stopping no where, arrived safely at New-York, and from thence to Scotland, where the company presented him with a gold medal, in which his virtue was commemorated, to inflame his family with the love of heroic actions.

A harder fate attended those whom Captain Campbell left at Darien. They were so weak in their health as not to be able to weigh up the anchors of the Rifing Sun, one of their ships which carried fixty guns; but the generous Spaniards affified them. In going out of the harbour the ran aground: the prev was tempting, and to obtain it, the Spaniards had only to stand by and look on; but shewed that mercy to the Scotch in distress, which one of the countrymen of those Scotch, General Elliot, returned to the posterity of the Spaniards at the end of the late conflagration at the fiege of Gibraltar. The Darien thips being leaky and weakly manned, were obliged in their voyage to take shelter in different ports belonging to Spain and England. The Spaniards in the new world shewed them kindness; the English governments shewed them none; and in one place one of their ships was seized and detained. Of these only Captain Campbell's ship and another small one were faved : the Royal Sun was loft on the bar of Charleston, and of the colony, not more than thirty, faved from war, shipwreck or disease, ever saw their country again.

Paterson, who had stood the blow, could not stand the resledion of missortune: he was seized with a lunacy in his passize home after the ruin of the first colony, but he recovered in his own country, where his spirit, still ardent and unbroke, presented a new plan to the company, sounded on the idea of King William, that England should have the joint dominion of the settlement with Scotland.

He survived many years in Scotland, pitied, respected, but neglected. After the union of htwo kingdoms, he claimed

reparation of his loffes from the equivalent-money given by England to the Darien company, but got nothing because grant to him from a public fund would have been only an aft of

works, of poets for subjects of fatire, the they are more often to be found in the records of history. The application of the Dutch to King William against the Darien company, affords the furest of all proofs, that it was the interest of the British islands to support it. England, by the imprudence of ruining that fettlement, loft the opportunity of gaining and continuing to herfelf the greatest commercial empire that probably ever will be upon earth. Had she treated with Scotland, in the hour of the diffrest of the company, for a joint possession of the set. tlement, or adopted the union of the kingdoms, which the fovereign of both proposed to them, that possession could cartainly have been obtained ... Had the streated with Spain to relinquish an imaginary right, or at least to give a passage across the ifthmus, upon receiving duties for high as to overbalance all the chance of loss by a contrahand trade, the had probably obtained either the one or the other. Had she broke with Sprin for the lake of gaining by force one of those favours, the world have loft far less than the afterwards did by carrying a war into that country for many years, to force a king upon the Spaniards against their will. Even a rupture with Spain for Darien, if it had proved successful, would have knit the two nations together by the most folid of ties, their mutual interest; for the English must then have depended upon Spain for the fafety of their caravans by land, and the Spaniards upon England for the fafety of their fleets by fea. Spain and England would have been bound together as Portugal and England have long been; and the Spanish treasures have failed, under the wings of English navies, from the Spanish main to Cadiz, in the fame manner in the treasures of Portugal have failed under the fame protection, facred and untouched, from the Brazils to Lifbon,

Panama is the capital city of this province, where the treefures of gold and filver, and the other rich merchandiles of Peru, are lodged in magazines till they are fent to Europe. It is fituated west longitude 820 154, north latitude 89 574 1 465

In 1670, it was facked and burnt by John Morgan, an English adventurer, who had the preceding year taken Porto Bello. This misfortune induced the inhabitants to remove the city to its present situation, distant about a league from the place where it frood before. For the greater fecurity the new city was inclosed by a free Rone wall, and the houses were built of Rone and brick. Since that time feveral bastions have been added and now there is always a complete garrison maintained, and the walls are mounted with large cannon. But all their precautions could not fave this city from another misfortune; it was entirely confumed by fire in the year 1737. After this accident it was egain rebuilt, in the manner as it now stands, with neat elegant houses, but not magnificent. The inhabitants are rather independent in their fortunes than rich; there are few of them opulent, and scarce any in a state of poverty. As to the harbour, it is convenient, and well fecured against storms by a number of furrounding islands, and is capable of containing the largest fleets. Here the royal audience is seated, at which the governor of Panama relides; for which reason the city is commonly deemed the capital of the province.

This place, a little while after it was founded, became the capital of the kingdom of Terra Firma. Some hopes were at first entertained from the three provinces of Panama, Darien, and Veragua, which composed it, but this prospecity vanished instantaneously. The savages of Darien recovered their independence, and the mines of the two other provinces were found to be neither sufficiently abundant, nor of an alloy good enough to make it worth while to work them. Five or six small boroughs, in which are seen some Europeans quite naked, and a very small number of Indians who have come to reside there, form the whole of this state, which the Spaniards are not assamed of honouring with the great name of kingdom. It is in general barren and unwholesome, and contributes nothing to trade but pearls.

The pearl fishery is carried on in the islands of the gulph. The greatest part of the inhabitants employ such of the negroes in it as are good swimmers. These slaves plunge and re-plunge in the sea in search of pearls, till this exercise has exhausted their strength or their spirits.

Every negro is obliged to deliver a certain number of oysters. Those in which there are no pearls, or in which the pearl is not entirely formed, are not reckoned. What he is able to find

beyond the stipulated obligation, is considered as his indisputable property; he may sell it to whom he pleases, but commonly he cedes it to his master at a moderate price.

Sea monsters, which abound more about the islands where pearls are found than on the neighbouring coasts, render this sisting dangerous. Some of these devour the divers in an instant. The manta sish, which derives its name from its figure, surrounds them, rolls them under its body, and suffocates them. In order to defend themselves against such enemies, every diver its armed with a poignard; the moment he perceives any of these voracious sish, he attacks them with precaution, wounds them, and drives them away. Notwithstanding this, there are always some fishermen destroyed, and a great number crippled.

The pearls of Panama are commonly of a very fine water. Some of them are even remarkable for their fize and figure; there were formerly fold in Europe. Since art has imitated them, and the passion for diamonds has entirely superfeded, or prodigiously diminished the use of them, they have found a new mart more advantageous than the first. They are carried to Peru, where they are in great estimation.

This branch of trade has, however, infinitely less contriguous to give reputation to Panama, than the advantage which it hath long enjoyed of being the mart of all the productions of the country of the Incas that are destined for the old world. These riches, which are brought hither by a small sleet, were carried, some on mules, others by the river Chagre, to Porto Bello, that is situated on the northern coast of the isthmus, which separates the two seas.

### CARTHAGENA.

Carthagena is one of the most considerable provinces in this territory, on account of the great trade carried on by the capital, for the country itself is neither sertile, rich, nor populous. The capital city, called likewise Carthagena, is situated in west longitude 77°, and north latitude 11', on a sandy island, by most writers called a peninsula; which forming a narrow passage on the south-west, opens a communication with that called Tierra Bemba, as far as Bocco Chica. The little island which now joins them was formerly the entrance of the bay, but it having been silled up by orders of the court, Bocco Chica became the only entrance; this, however, has been silled up since the attempt of Vernon and Wentworth, and

which it tions of world, t, were o Porto isthmus,

s in this he capibopulous, in west fland, by w passage at called ad which bay, but t, Bocco has been orth, and

the old paffage again opened. On the north fide the land is so narrow, that before the wall was begun, the distance from fea to fea was only thirty-five toiles; but afterwards enlarging, it forms another illand on this fide, lo that fexcepting thele two places, the whole city is entirely furrounded by falt water. To the eastward it has a communication, by means of a wooden bridge, with a large fuburb. called Kemani, built on another island, which is also joined to the continent by a bridge of the same materials. The fortifications both of the city and suburbs are built after the modern manner, and lined with free-stone; and in time of peace, the garrison consists of ten companies, of seventyfeven men each, besides militia. The city and suburbs are well laid out, the freets strait, broad, uniform, and well paved. All the houses are built of stone or brick, only one flory high, well contrived, neat, and furnished with balconies and lattices of wood, which is more durable in that climate than iron, the latter being foon corroded by the acrimonious quality of the atmosphere. The climate is exceedingly unhealthy. The Europeans are particularly Subject to the terrible difease called the black vomit, which fweeps off multitudes annually on the arrival of the galleons, It feldom continues above three or four days, in which time the patient is either dead or out of danger, and if he recovers; is never subject to a return of the same distemper. This difease has hitherto foiled all the arts of the Spanish physicians, as has also the leprofy, which is very common here. At Carthagena, likewife, that painful tumour in the legs, occasioned by the entrance of the dracunculus, or guinea-worm, is very common and troublesome, Another disorder, peculiar to this country and to Peru, is occasioned by a little-infect called nigua, fo extremely minute, as scarce to be visible to the naked eye. This insect breeds in the dust, infinuates itself into the foles of the feet and the legs, piercing the fkin with fuch fubility, that there is no being waver of it, before it has made its way to the flesh, If it is perceived in the beginning, it is extracted with little pain; but having once lodged its head, and pierced the kin, the patient must undergo the pain of an incision, without which a nodus would be formed, and a multitude of intects reengendered, which would foon overspread the foot and leg-One species of the nigua is venomous, and when it enters the toe, an inflammatory swelling takes place in the groin, 100 182 103 Al lee . . . 5 2 . .

# shing the previous in the back in be held as in heredicary.

St. Marina is bounded on the north, by the North feation the east, by Rio de la Hache; on the fouth, by New Granada and on the welt, by Carthagena, It is three hundred miles in length, and two hundred in breadth, is a mountainous country, and the land very high. Here begins the famous ridge of mountains called the Cordilleras des los Andes, which run from north to fouth the whole length of the continent of South America; it is extremely hot on the lea coast, but cold in the internal parts, on account of the mountains; it abounds with the fruits proper to the climate, and there are mines of gold and precious stones, as also salt-works. The Spaniards pollels but one part of this province, in which they have built Martha the capital. The air about the town is wholesome, and is seated near the sea, having a harbour surrounded with high mountains. It was formerly very confiderable when the galleons were fent thither, but is now come almost to nothing. #### dige profest on VIEIN E'Z'U'E L'A. Adda Jane to

. It in propertie win e brige be inconfiguerene conducted it. The province contiguous to St. Martha on the east was first vifited by Alonfo de Ojeda, in the year 1499; and the Spaniards, on their landing there, having observed some huts in an Indian village built upon piles, in order to raise them! above the stagnated water which covered the plain, were ledto bestow upon it the name of Venezuela, or Little-Venice, by their usual propensity to find a resemblance between what they discovered in America, and the objects which were familiar to them in Europe. They made some attempts to fettle there, but with little success. The final reduction of the province was accomplished by means very different from " those to which Spain was indebted for its other acquisitions in the New World. The ambition of Charles V. noften engaged him in operations of fuch variety, and extents that his revenues were not sufficient to defray the expense of carrying them into execution. Among other expedients for supplying the deficiency of his funds, he had borrowed large fums from the Vellers of Augsburgh, the most opulent merchants at that time in Europe. By way of retribution for thefe, or in hopes perhaps, of obtaining a new loan, he bestowed upon

them the province of Venezuela, to be held as an hereditary fief from the crown of Castile, on condition that within a limited time they should render themselves masters of the country, and establish a colony there. Under the direction of fuch persons, it might have been expected, that a settlement would have been established on maxims very different from those of the Spanjards, and better calculated to encourage hich uleful industry, as mercantile proprietors might have known to be the most certain source of prosperity and opulence: but unfortunately they committed the execution of their plan to some of those soldiers of fortune with which Germany abounded in the fixteenth century. These adventurers, impatient to amais riches, that they might speedily ahandon a Ration which they soon discovered to be very uncomfortable, instead of planting a colony in order to cultivate and improve the country, wandering from district to district in search of mines, plundering the natives with unfeeling rapacity, or oppressing them by the imposition of intolerable talks. In the course of a few years, their avarice and exactions, in comparison with which those of the Spaniards were moderate, desolated the province so completely, that it could hardly afford them sublistence; and the Velfers relinquished a property from which the inconsiderate conduct of their agents left them no hope of ever deriving any advantage.\* When the wretched remainder of the Germans deferted Venezuela, the Spaniards again took possession of it; but notwithstanding many natural advantages, it is one of their most languishing and unproductive settlements, 1 00 11 344 345 0

#### PARIA AND COMANA.

These provinces are bounded on the north by the North sea, on the east by Surinam, on the west by New-Granada, and on the south by Guiana; its produce is various, but in relating the origin and operations of the mercantile company, in which an exclusive right of trade with them has been vested, we shall hereafter have occasion to consider their state and productions in a more ample manner.

# MINING STUDIOS AND POPAYAN.

The provinces sometimes known as the new kingdom of Granada, is entirely an inland country of great extent. This important addition was made to the dominions of Spain about the year 1536, by Sebaltian de Benalcazar and Gonzalo Ximenes de Quesada, two of the bravest and most accomplished officers employed in the conquest of America. The former, who commanded at that time in Quito, attacked it from the south; the latter made his invasion from Santa Martha on the north. As the original inhabitants of this region were farther advanced in improvement than any people in America but the Mexicans and Peruvians, they defended themselves with great resolution and good condust. The abilities and perseverance of Benalcazar and Quesada surmounted all opposition, though not without encountering many dangers, and reduced the country into the

form of a Spanish province,

The provinces are so far elevated above the level of the fea. that though they approach almost to the equator, the climate is remarkably temperate. The fertility of the vallies is not inferior to those of the richest districts in America, and the higher grounds yield gold and precious stones of various kinds. It is not by digging into the bowels of the earth that this gold is found, it is mingled with the foil near the furface, and separated from it by repeated washing with water : this operation is carried on wholly by negro flaves; for though the chill fubter. ranean air has been discovered, by experience, to be to fatal to them, that they cannot be employed with advantage in the deep filver mines, they are more capable of performing the other species of labour than Indians, As the natives are exempt from that fervice, which has wasted their race so rapidly in other parts of America, the country is still remarkably populous, Some districts yield gold with a profusion no less wonderful than in the vale of Cineguilla, and it is often found in large pepitas, or grains, which manifest the abundance in which it is produced. On a rifing ground near Pamplona, fingle labburen have coilected in a day what was equal in value to a thouland pelos. A late governor of Santa Fé brought with him to Spain a lump of pure gold, estimated to be worth seven hundred and forty pounds flerling. This, which is perhaps the largest and finest specimen ever found in the new world, is now deposited in the royal cabinet of Madrid. But without founding any calculation on what is rare and extraordinary, the value of

the gold usually collected in this country, particularly in Popayan and Choco, is of confiderable amount. Its towns are populous and flourishing. The number of inhabitants in almost every part of the country daily increases; cultivation and industry of various kinds begin to be encouraged, and to prosper; a considerable trade is carried on with Carthagena, the produce of the mines and other commodities being conveyed down the great siver of St. Magdalen to that city. On another quarter there is a communication with the Atlantic by the river Orinoco; but the country which stretches along its banks towards the east is little known, and imperfectly occupied by the Spaniards.

PERU is fituated between the equator and 25% fouth latitude, and 600 and 81' west longitude; tits length is eighteen hundred miles, and its breadth, according to fome authors, three hundred and ninety, and others fix hundred timiles; but the latest and most authentic accounts state it at about five hundred. It is bounded on the north by Terra Firms, on the west by the Pacific Ocean, on the South by Chili, and on the cast by the mountains called the Andes. The bounds of our work will not permit us to enter into the ancient history of this country before its conquest by the Spaniards; we can, therefore, only in brief observe, that the empire of Peru, at the time it was subdued, extended along the South sea, from the river of Emeralds to Chili, and on the land fide to Popayan, according to some geographers. It contained within its extent that famous chain of mountains which rifes in the Terra Magellanica, and is gradually loft in Mexico, in order to unite, as it should seem, the southern parts of America with the northern.

It is now divided into three grand divisions or audiences; s. Quito: 2. Lina, or Los Reves; and, g. Los Charcos. As to its climate, mines, foil and produce, they differ greatly in different parts of the country.

# Q y I T O.

The extensive province of Quito is bounded on the north by Popayan, and includes a part of that government; also by the state of the state of the state of

according to

all the varie

The compilers of the Encyclopædia Britannica flate the fituation of Peru between 1 deg. 40 min. north, and 26 deg. 10 min. fouth latitude, and 56 and 81 deg. west longitude, and make its length eighteen hundred, and its breadth, as above, three hundred and ninety miles.

<sup>. +</sup> Guthrie.

Bante fe de Bogota; on the fouth by the governments of Piura and Chachapoyas; on the east it extends over the whole government of Maynas and the river of the Amazons to the meridian, which divides the Spanish from the Portuguese dominions; and on the west it is bounded by the South sea; extending, accor ing to Antonio de Ulloa, fix hundred leagues in length, and about two hundred in its greatest breadth; but this greatly exceeds the computation of all other geographers. He however observes, that it must be owned a great part of those vast dominions are either inhabited by nations of Indians, or have not hitherto been sufficiently peopled by the Spaniards, if indeed they had been thoroughly known; and that all the parts that can properly be faid to be peopled, and actually fubjet to the Spanish government, are those intercepted by the two Cordillers of the Andes, which, in comparison to the extent of the country, may be termed a street or lane, fifteen legues, or fometimes more, from east to west; to this must be sided feveral detached governments; separated by the very exenlive tracts inhabited by free Indians,

The climate of Quito differs from all others in the same pafilel, fince even in the center of the torrid zone, or although under the equinoctial, the heat is not only very tolerable, but even in some places the cold is painful; while others enjoy all the advantages of a perpetual spring, the fields being constantly covered with verdure, and enamelled with flowers of the most lively toldurs. The mildness of the climate, free from the extremes of heat and cold and the constant equality of the day and night, render this country, which, from its situation, might be thought to be parched by the constant heat of the fung and scarcely inhabitable, both pleasant and fertile; for Nature has here difpensed her bleffings with so liberal a hand, that this country in leveral respects surpasses those of the temperate zones, where the vicifitudes of winter and fummer, and the change from heat to cold, cause the extremes of both to be more fenfibly felt. However, in different parts of the country, the air is very different; in one part are mountains of a stupendous height and magnitude, with their fuminits covered with fnow and The plains are temperate, the valleys hot, and, according to the high or low situation of the country, are found all the variety of gradations in temperature possible to be conceived between the extremes of heat and cold,

Quito, the capital, in 00 13' fouth latitude, and 77° 50' west longitude from Greenwich, is so happily situated, that

The Spe

Peru, at

ea, from

Popayan,

ne north

nd of Peru nd 56 and ta breadth, neither heat nor cold are troublesome, though both may be sell in its neighbourhood; and what renders this equality more delightful is, that it is constant throughout the whole year, the difference between the seasons being scarce perceptible. Indeed the mornings are cool, the remainder of the day warm, and the nights of an agreeable temperature.

The winds, which are pure and falubrious, blow for the most part from north to south, but never with any violence, though they sometimes shift their quarters, but without any regard to the season of the year. Such fignal advantages resulting from the climate, soil, and aspect of this country, would be sufficient to render it the most enviable spot upon earth, as it is supposed to be the most elevated, if, whilst enjoying these delights, the inhabitants were not harasted by terror, and exposed to continual danger: for here tremendous tempests of thunder and lightning prevail, which are sufficient to appal the stoutest heart; whilst earthquakes frequently spread universal apprehensions, and sometimes bury eities in ruins.

The distinction of winter and summer consists in a very minute difference; the interval between the month of Septem. ber and those of April, May or June, is here called the winter feafon, and the other months compose the summer. In the former feafon the rain chiefly prevails, and in the latter the inhabitants frequently enjoy whole days of fine weather; but whenever the rains are discontinued for above a fortnight, the inhabitants are in the utmost consternation, and publis prayers are offered up for their return. On the other hand, when they continue a short time without intermission, the like fears prevail, and the churches are again crowded with supplicants to obtain fine weather; for a long drought produces dangerous diseases, and a continual rain, without intervals of sunshine destroys the fruits of the earth. The city of Quito, however, enjoys one peculiar advantage in being free from mulketoes and other troublesome infects, such as fleas and venomous reptiles, except the nigus or pique, which is a very small insect shaped like a fleas but hardly visible to the fight.

The fertility of the foil here is incredible, for the fruits and beauties of the several seasons are visible at the same time; and the curious European observes with a pleasing admiration, that while some herbs of the field are fading, others of the same kind are springing up, while some slowers lose their beauty, others blow to continue the enamelled prospect; thus, when the fruits of the trees have attained their maturity, and the

ruits and ime; and tion, that the fame r beauty, us, when and the leaves begin to change their colour, fresh leaves blossom, and fruits are feen in their proper gradation, in fize and ripeness on the same tree. The same incessant fertility is conspicuous in the corn, both reaping and fowing being carried on at the fame time; so that the declivities of the neighbouring hills exhibit all the beauties of the four feafons in one affemblage. Though all this is generally feen, yet there is a fettled time for the grand harvest; yet sometimes the most favourable season for lowing in one place is a month or two after that of another, though their distance does not exceed three or four leagues, Thus in different spots, and sometimes in one and the same, fowing and reaping are performed throughout the whole year, the forwardness or retardment naturally arising from the different fituations, fuch as mountains, rising grounds, plains and valleys; and the temperature being different in each, the best times for performing the several operations of husbandry must also differ.

The chirimoya is confidered as one of the most delicious fruits in the world; its dimensions are various, being from one to five inches in diameter; its figure is imperfectly round, fatted towards the falk, where it forms a kind of navel, but all the other parts are nearly circular; it is covered with a thin loft shell, which adheres so closely to the pulp as not to be separated from it without a knife; the outward coat is green, variegated with prominent veins, forming all over it a kind of net-work; the pulp is white, and contains a large quantity of juice refembling honey, of a sweet taste, mixed with a gentle acid of a most exquisite flavour, . The seeds are formed in several parts of the pulp, and are somewhat flat. The tree is high and tufted, the stem large and round, but with some inequalities, full of elliptic leaves, terminating in a point, The blossom differs little from the colour of the leaves, which is a darkish green; and though far from being beautiful, is remarkable for its incomparable fragrance,

The granadilla in its shape resembles an hen's egg, but is larger; the outlide of the shell is smooth, glossy, and of a faint carnation colour, and the infide white and foft; the shell contains a viscous liquid substance: full of very small, and delicate grains, less hard than those of the pomegranate. This medullary fubstance is separated from the shell by a fine and transparent membrane. Its fruit has a delightful sweetness blended with acidity, very cordial and refreshing, and so whole-

some, that there is no danger of eating to excels,

The frutilla or Peruvian Brawberry, is very different from that of Europe in fige; for though they are here generally not shove an inch in length, they are much larger in other parts of Peru; but their tafte, though juicy, and not unpelatable, is not

equal to those in Europe: - E approprie - write flow the in . . .

The country is observed to abound more in women than men, which is the more remarkable, as those causes which induce men to leave their country, as travelling, commerce. and war, naturally bring over more men from Europe than women. But there are many families in which there are a number of daughters, without one fon among them. The women enjoy a better flate of health than the men, which may be owing in some measure to the climate, but more particularly to the early intemperance and voluptuousness of the other, fex. " 2 " -e- it out the day out forther a co

The Creoles are well made, of a proper stature, and of a lively and agreeable countenance. The Mestinos are also in general well made, often taller than the ordinary fige, very robust, and have an agreeable air. The Indians, both men and women, are commonly low of stature, though strong and well proportioned; but more natural defects are to be found among them than in any of the rest. Some are remarkably short, some ideots, dumb, or blind, Their hair is generally thick and long, which they wear loofe on their shoulders ; but the Indian women plait theirs behind with a ribband, and cut that before a little above the eyebrows, from one ear to the other, The greatest disgrace that can be offered to an Indian of either. fex, is to cut off their hair; for whatever corporal punishment flieir masters think proper to inslict on them, they bear with patience; but this affront they never forgive, and accordingly the government has intorposed, and limited this punishment to the most enormous crimes. The colour of the hair is generally a deep black; it is lank, harsh, and as coarse as that of a horse, On the contrary, the male Mestizos, in order to distinguish themselves from the Indians, cut off their hair, but the semales do not adopt that custom.

The Mestizos in general wear a blue cloth, manufactured in this country; but though they are the lowest class of the Spaniards, they are very ambitious of distinguishing themfelves, as fuch, either by the colour or, fashion of the clothes

they, wear, county, he will be fit it to be it had as to s'an The Mestizo women affect to dress in the same manner as the Spanish, though they cannot equal the ladies in the richness of their stuffs. The meaner fort wear no shoes, but, like the men of the same rank, go baresooted,

nner 36 he riche ut, like

The dress of the Indiana confilts of white cotton drawers. which hung down to the calf of their leg, where they are loofe, and edged with a lace fultable to the Ruff. The ufe of thirt is supplied by a black cotton frock, made in the form of a fack, with three openings at the bottom, with the middle for the head, and others at the corners for the arms; thus covering their naked bodier down to their knees; over this is a ferge clock, with a hole in the middle for putting the head through, and a hat made by the natives. This is the general drefs, which they never lay afide, even while they fleep; and they have no additional closthing for their legs "feet." The Indians, who have acquired some fortune, particularly the barbers and phlebotomists, distinguish themselves from their countrymen by the finencis of their drawers, and by wearing a fairt, which, though without sleeves, has a lace four or five fingers in breadth, fastened round like a kind of ruff or band, They are fond of filver or gold buckles to their shoes, though they wear no stockings, and instead of a mean serge clock, wear one of fine cloth, which is often adorned with gold or · / · · · · · · · · · · at superfluence ser filver lace, " ...

There are two kinds of dresses worn by the Indian women, made in the same plain manner with those worn by the men in general, the whole consisting of a short petticoat and a veil of American baize. But the dress of the lowest class of Indian women is only a bag of the same make and stuff as that of the men, which they fasten on their shoulders with two large pins; it reaches down to the calf of the leg, and is fastened round the waist with a kind of girdle. Instead of a veil, they wear about the neck a piece of the same coarse stuff, dyed black, but their arms and legs are naked,

The people have dishes unknown in Europe, but are particularly fond of cheese, and have excellent butter in the neighbourhood of Quito. Sweetmeats are very much admired.

Rum is commonly drank here by persons of all ranks, but their favourite liquor is brandy. The disorders arising from the excessive use of spirituous liquors are chiefly seen among the Mestizos; and the lower class of women, but among the Creoles and the Mestizos, are also extremely addicted to the same species of debauchery.

Another liquor much used in this country is mate, which is made of an herb known in all these parts of America by the name of paraguay, as being the produce of that country. Some of it is put into a calabash tipped with silver, called here

mate, with fugar and some cold water. After it has continued there some time, the callabate filled with boiling water, and they drink the liquor thinks in pipe fixed in the calabash. It is also usual to squeeze into the liquor a small quantity of the juice of semions of Seville oranges, mixed with some persument from odoriferous slowers. This is their usual drink in the morning fasting, and many also the it at their evening regale. The manner of drinking it appears very indestruct, the whole company taking it successively through the same pipe, it being carried several times round the company till all are satisfied. This, among the Greoles, is the highest enjoyment; so that when they travel, they never fail to carry with them a sufficient quantity of it, and till they have taken their dose of mate they never eat.

The vice of gaming is here carried to an extravagant height, to the ruin of many families, some losing their stock in trade, others the very clothes from their backs, and afterward those belonging to their wives, which they hazard, stimulated by the

hope of recovering their own.

The common people, the Indians, and even the domestics, are greatly addicted to stealing. The Mestizos, though arrant cowards, do not want audacity in this way; for though they will not venture to attack any one in the street, it is a common practice to shatch off a person's hat, and immediately seek their safety in sight. This acquisition is sometimes of considerable value; the hats worn by persons of rank, and even by the wealthy citizens, when dressed, being of white beaver, worth sisteen dollars, beside the hat band of gold or silver lace, safetened with a gold buckle set with diamonds or emeralds.

In Quito, and all the towns and villages of its province, different dialects are spoken, Spanish being no less common than the Inga, the language of the country. The Creoles use the latter as much as the former, but both are considerably adulterated by borrowed words or expressions. The first language generally spoken by children is the Inga, for the nurses being Indians, many of them do not understand a word of Spanish, and thus they afterward learn a jargon composed of both languages.

The sumptuous manner of performing the last offices for the dead, demonstrates how far the power of habit is capable of prevailing over reason and prudence, for their offentation is so great in this particular, that many families of credit are runed by preposterously endeavouring to excel others: and the people

The commerce of the province of Quito is chiefly carried on by Europeans fettled here, and others who occasionally arrive. The manufactures of this province are only cottons, some white and striped baize, and clothe, which meet with a good market at Limi, for supplying the inward provinces of Peru. The returns are made partly in filver, and partly in fringes made of gold and filver thread, and wine, brandy, oil, copper, tin, lead, and quickfilver. On the arrival of the galleons at Carthagena, thefe traders refort thither to purchase European goods, which, at their return, they confign to their correspondents all over the province. The coasts of New-Spain supply this province with indigo, of which there is a very large confumption at the manufactures, blue being univerfally the colour which this people adopt for their apparely They also import, by way of Guayaquila, iron and feel, both from Europe and the coast of Guatimala.

The disposition of the Indians in the province of Quito is extremely remarkable, and they appear to have no resemblance to the people found there by those who first discovered the country. They at present possess a tranquility not to be disturbed either by fortunate or unfortunate events. In their mean appared they are as contented as a prince clothed in the most splendid robes. They shew the same disregard to riches and even the authority and grandeur within their reach, is so little the object of their ambition, that to all appearances it seems to be the same to an Indian whether he be created an sleade, or obliged to person the office of a common executioner.

Their floth is so great, that scarcely any thing can induce them to work. Whatever, therefore, is necessary to be done, is lest to the Indian women, who are much more active; they spin and make the half shirts and drawers which form the only apparel of their husbands; they cook the provisions, grind barley, and brew the beer called chicha, while the husband sits squatting on his hams, the usual posture of the Indians, lookath is busy wife. The only domestic service they do is to their little spot of land, which is sowed by the wife. They are once seated on their hams, no reward can induce they are once seated on their hams, no reward can induce they are once seated on their hams, no reward can induce they are once of their cottages, they charge their wives to say that they are not at home. They are lively only in parties of pleasure, rejoicings, one terrsininents, and especially denoing; but in all these the liquor must circulate brilkin, and they continue drinking till they are entirely deprived both of sense and motions and must note.

It is remarkable that the Indian women, whether maids or married, and Indian young men before they are of an age to contract matrimony, are never guilty of this vice rit being a maxim emong them, that drunkennels is the privilege of more but mafters of families, who, when they are unable to take care of themselves, have others to take care of themselves.

The women present the chicha to their bushends in calabeshes, till their spirits are raised, then one plays on a pipe and tabor, while others dance. Some of the best voices among the Indian women sing song in their own language, in those who do not dance, squat down in the usual posture till to their turn. When tired with intemperance, they all down together, without regarding whether they be near the wife of mother or their own faster or daughter. These sells with some some three or four days, till the priest soming among them, throws away all the chichay and disperse the Indians, left they should procure more.

Their funerals are likewise folemnized with executive drinking. The house is filled with jugs of chicks, for the sold of the mourness and other visitors; the latter even go out into the streets, and invite all of their nation who happen to pay by, to come in and drink to the honour of the deceased. This ceremony hits four or five days, and sometimes more, strong liquor being their supreme enjoyment.

The Indians in the audience of Quito are faid to aft contrary to all other nations in their marriages, for they never make choice of a woman who has not been first enjoyed by others

This is a liquor made from maine by the following process: The min, after being loaked in water till it begins to grow, is dried in the lun, then ed a little, and at last ground. The flour, after it has been well in put with water into a Jarge vessel, and left for two or three days to its table is nearly that of the most indifferent kind of aydres it is an anounthing, and specitive liquor, but it will not keep above turning four.

for The maig, un, then ell kn eye to ison it which they confider or a certain indication of the periodal attractional After anyoung man has made cho cerof 4 becomen, be after her of her father; and having obtained his content; they begin so cohabis together as man and wife and affift the fathers in-law in cultivating the land. At the end of three or four months, and frequently of a year, the build und leaves his bride or wife; without any ceremony, and pechaps expolulates, with his father in-law for endeavouring, to deceive him, by impoling upon him his daughter, whom nobody elie had thought worthy of making a bedfellow. But if no diffult arises in the man on this account; or any other, after palling three or four months in this commerce, which they call amanarie, or to habityate one's folf, they then marry. This custom is still very common, though this whole body of the clergy have uled all their endeavours to put a flop to it. Accordingly they always ablilive them of that fin before they give them the nuptial benediction.

It has been observed, that the dependenties of the juridictions of Guito are seated between the two Cordillers of the Andes, and that the air is more or less cold, and the ground more or less therile, according to the height of the mountains. These barren tracks are called defarts; for though all the Cordillers are dry, some are much more to than others, and the continual snow and frosts senden some parts of them incapable of producing a single plant, and consequently they are uninhabitable by man or teast.

Solde of these mountains, which appear to have their bales refling on other mountains, sile to a most assembling height, and reaching for above the clouds, are here, although in the midst of the torrid sone, covered with perpetual snow. Erom experiments made with a barometer on the mountain of Cotopani, it appeared that its suggests was alcounted fix thousand two hundred and sister way yards above the surface of the sea, something above three geographical miles, which greatly exceeds the height of any other mountains in the known world.

Cotopani became a volcano about the time when the Spaniards first arrived in this country. A new eruption happened in 1743, which had been for some days preceded by a continual interior rumbling notic; after which an aperture was made in surprise, as also three others near the middle of its declivity; so parts, which the cruption commenced, were buried under adigious matter of snow. The ignited substances which were jested, being mingled with a considerable quantity of snow and

too malling anight the flames, were carried down with fuch amousing rapidity, that the plain from Callo to Latacunga was depriloned, and all the houses, with their wretched inhabitants were wept away in one general and inflantaneous defirediba. The liver of Latacings was the receptacle of this dreadful Bood fill betoming swollen above les banks, the towent folled wer the adjustent country, continuing to fweep away houses and cattle, and rendered the land near the town of the lame mame as the rever one raft lake, "Here however, the inhabitants had fligion warning to fave their lives by flight, and retrested to a more elevated spot at some distance. During three days the volcand specied sinders, while torrents of lava with melya ise and from, poured down the fides of the mountain. The etunt on continued for leveral days longer, accompanied with terrible rostings of the wind, rushing through the erators which had been opened. At length all was quiet, and seither Imoke now fire were to be feen; until in May, 1744, the flames forced a pallage through feveral other parts on the fides of the mountain forthet in clear nights the flame, being reflected by the transpar zent ice, exhibited a very grand and beautiful illumination. On the 13th of Navember following it ejected fuch prodigious quantries of fire and leve, that an inundation, equal to the fore mer, from enfurd, and the inhabitants of the town of Latacungs for forestime gave themselves over for lost.

The most fouthers mountains of the Cordillers is that of affects or Sangay, which is of a prodigious height, and the for greatest part of it covered with snews yet from its summit issues a continual fire, attended with explosions which are plainly heard at forty leagues distance. The country adjacent to this volcino is entirely barren, being covered with cinders ejected from its mouth. In this mountain rises the river Sangay, which being joined by the Upano, forme the Payra, a large river which discharges itself into the Maranon.

Pichincha, though famous for its great height, is one thousand two hundred and seventy-eight yards lower than the perpendicular height of Cotopaxi, and was formerly a volcano, but the mouth or crater on one of its fides is now covered with land and calcined matter, so that at present neither smoke nor fire issues from it. When Don George Juan and Don Automo de Ullua were nationed on it for the purpose of making astronomical servations, they found the cold on the top of this mountain tremely intente, the wind violent, and they were frequent involved in to thick a fog, or, in other words, a cloud, that

an object at fix or eight passes differen was feargely differentiale. The six grew clear by the clouds moving nearer to the earth, and on all fides furrounding the mountain to a vest different representing the sea with the mountain sanding like an allerd in the center. When this happened, they heard the decading a of the tempels that discharged themselves on Quie and the neighbouring country. They law the lightning iffue in clouds, and heard the thunder, roll far baneath them. the lower parts were involved in tempoks of thunde they enjoyed a delightful ferenity; the wind was abased the thy clear, and the enlivening says of the fun moderated the feverity of the cold. But when the clouds role, their thickness rendered respiration difficult: from and hail felt continually. and the wind returned with all its violence fo that it was impossible entirely to overcome the fear of being, together with their hus, blown down the precipiee on whose edge it was built or of being buried in it by the constant accumulations of ice and fnow. Their fears were likewise increased by the fall of enormous fragments of rocks. Though the imaliest crevice vinble in their hut was flooped, the wind was to piercing that it penez trated through; and though the hut was finall, crowded with inhabitants, and had feveral lamps confinitly burning, the cold was fo great, that each individual was obliged to have a chafing. dish of coals, and several men were constantly employed every morning to remove the snow which fell in the night, By the feverities of fuch a climate their feet were fwelled and fo sens der, that walking was attended with extreme pain, their hands covered with chilblains, and their lips to fivelled and chopt, that every motion in speaking drew blood, and the sale of t

## LIMA, OR LOS REYES

The next divition of Peru is the audience of Lima, which is bounded on the north by Quito; on the east, by the Cordilleras of the Andes; on the south; by the audience of Los Charcos; and on the west, by the Pacific ocean; it being about seven hundred and seventy miles in length from north to south, but of an unequal breadth.

The climate and foil of this country is uncommonly various; in some places it is exceedingly hot, in others insupportably cold, and in the city of Lima, where rain never falls, it is always temperate. The seasons vary within the compais of a

few miles, and in resignin parts of the audience, all the vicifia of tudes of weather are experienced in twenty-four houses at time extraorday remarkable that no rains fall, or rivers flow on the fea country is refreshed by thick fogs, land of the heat-shated by dense clouds that never condense into showing the his phenomenon, has drawn, the attention of omany an naturalists; without their being able satisfactorily to account the for shates and many and part of the satisfactorily to account the saturalists; without their being able satisfactorily to account the saturalists; without their being able satisfactorily to account the saturalists; without their being able satisfactorily to account the saturalists.

Spring begins towards the close of the year, that is, about the mi end of November or the beginning of December, when the varours which fill the simosphere during the winter fublide post and the fum to the great joy of the inhabitants, again appears, of and the country, then begins to revive, which, during the ablence it of his rays, had continued in a flate of langour. This is fueceeded by furamer, which though hot from the perpendicular direction of the lung rays, is far from being insupportable; thed heat, which, indeed, would otherwife be excellive, being moderated by the fouth winds, which always blow at this feafon, though with no great forte. Winter begins at the latter end of June or the beginning of July, and continues till November or December, when the fouth wind begins to blow fronger, and to produce a certain degree of cold, not, indeed, equal to that in the countries where the ice and frow are known, but lo keen that the light dreffes are laid by, and cloth or other warm ftuffs worn. During the winter the earth is covered with fo thick a fog, as totally to intercept the rays of the fun; and the winds, by blowing under the shelter of the fog, retain the particles they contracted in the frozen zone. In this feafon only the vapours diffolve into a very small dew, which every where equally moistens the earth; by which means all the hills, which during the other parts of the year offer nothing to the fight but rocks and wastes, are clothed with verdure and enamelled with flowers of the most beautiful colours. These dows never fall in fuch quantities as to impair the roads or incommode the traveller; a very thin stuff will not foon be wet through, but the continuance of the mists during the whole winter, withour being exhaled by the fun, fertilizes every part of the country.

Lima is as free from tempelts as from rain, to that those of the inhabitants who have neither visited the mountains por travelled into other parts, are absolute strangers to thun er and lightning; and are therefore extremely terrified when they first hear the former, or tee the latter. But it is very remarkable, that what is here entirely unknown, should be so common thirty leagues to the east of Lima; it being no farther to the mountains, where

But though the capital is freed from the server of thele 1x3 tempelts it is subject to what is much more decidfuld Larth and quakes happen here to frequently that the intabitante sant under continual apprehentions of their being from their fud-19 dennets and violence, buried in the vains of their swn Roules 4 yet these earthquakes, though so sudden, have their presiges, 101 one of the principal of which is a numbling neite in the town of the cartio, about a minute before the flocks are felt, that is feems to pervade all the adjacent subterraneous part; this is follower by mal howlings of the pres who feem to presige " the pros .. og danger. Tho bealts of burden polling the freets flop, and by a netural instinct spread open their legs, the better to focure themselves from falling. On these portents the terrified inhabitants fly from their houses into the freets with fuch precipitation, that if it happens in the night, they appear quite naked; the urgency of the danger at once banishing all sense of delicacy or shame. Thus the streets exhibit such odd and singular figures as might afford matter of diversion, were it possible to be diverted in so terrible a moment d'This fudden consourfe is accompanied with the cries of children waking out of their fleep, blended with the lamentations of the women, whole agonifing prayers to the faints increase the common fear and confusion. The men are also too much affected to refrain from giving vent to their terror, fo that the whole city exhibits a dreadful fcone of consternation and man less figer rour ett of the . I Ha et roue horror, not all seek see

The carthquakes that have happened at the capital are very numerous. The first fince the establishment of the Spaniards was in 1582, but the damage was much less confiderable than in some of the succeeding, Six years after, Lima was again visited by another earthquake, fo dreadful that it is still folemply commemorated every year. In 1600 another happened, which overturned many houses. On the anth of November, 1630, such prodigious damage was done in the city by an earthquake, that in icknowledgement of its not having been entirely demolished, a festival on that day is annually celebrated. Twenty-four years after, on the 3d of November, the most stately edifices in the city, and a great number of houses, were destroyed by an earthquake, but the inhabitants retiring, few of them perifher ed. Another dreadful one happened in 1678; but one of the most terrible was on the 28th of October, 1687. It began at four in the morning, and destroyed many of the finest public?

buildings and houses, in which a great number of the inhabi. tants perished; but this was little more than a prelude to what followed, for two hours after the shock returned with such impetuous concussions, that all was laid in ruins, and the inha-bitants felt themselves happy in being only spectators of the general devastations by having faved their lives though with the loss of all their property. During this second shock, the sea returing considerably, and then returning in mountainous waves entirely overwhelmed Callao, which is at five miles dillance from Lima, and all the adjacent country, together with the mucrable inhabitants. From that time, fix carthquakes have happened at Lima previous to that of 1746. This last was on the 28th of October, at half an hour after ten at night, when the concustions began with such violence, that in little more than three minutes, the greatest part, if not all the buildings in the city, were destroyed, burying under their ruins those inhabitants who had not made sufficient haste into the fireets and Iquares, the only places of fafety. At length the horrid effects of the first shock ceased, but the tranquility was of fhort duration, the concussions swiftly succeeding each other. The fort of Callao also funk into ruins; but what it fuffered from the earthquake in its building was inconfiderable, when compared to the dreadful cataltrophe which followed; for the fea, as is usual on such occasions, receding to a confiderable distance, returned in mountainous waves, foaming with the violence of the egitation, and luddenly buried Call-o and the neighbouring country in its flood, This, however, was not entirely effected by the first swell of the waves, for the fea retiring farther, returned with fill greater impetuofity, and covered both the walls and other buildings of the place; so that what even had escaped the first inundation, was totally overwhelmed by those succeeding mountainous waves. Twenty-three thips and vessels, great and small, were then in the harbour, nineteen of which were lunk, and the other four, among which was a frigate named St. Fermin, were carried by the force of the waves to a confiderable distance up the country, This terrible inundation and carthquake extended to other parts on the coaft, and feveral towns underwent the same fate as the city of Lima, where the number of persons who perished within two days after it began, amounted, according to the bodies found, to one thousand three hundred, besides the maimed and wounded, many of whom lived only a thort time in great forture. The country of Lims enjoys great fertility, producing all kinds of grain, and a prodigious variety of fruit. Here and duffry and are supply the moisture which the counts withhold. The ancient Incas of Peru caused small canals to be formed morder to conduct the waters of the rivers to every part of the country. The opaniseds, finding these useful works executed to their hards, had only to keep them in order, and by these are watered spacious fields of barky, large meadows, plays tations, vineyards and gardens, all yielding uncommon please. Lims differs from Quito, where the fruits of the earth have no determined season, for have the harvest is gathered in, and the trees drop their leaves in the proper season.

Although the lummer here is not, yet venomous creatures are unknown; and the lame may be laid of the territory called Valles, though here are lome ports, as Tumbez and Piura, where the heat is almost as great as that of Guayaquil. This lingularity can therefore proceed from no other cause than the natural drought of the climate.

The audience of Lima is divided into four bishoprics, Truxillo, Guamanga, Custo and Arequipa. The diocese of Truxillo lies to the north of the archiepiscopal diocese of Lima, and like all the others is divided into several jurisdictions. The city of Truxillo is seated in 8° 6 south latitude, in a pleasant situation, though in a sandy soil.

In the diocese of Guamanga is a rich quicksilver mine, from which the inhabitants of a neighbouring town procure their whole substitute; the coldness of the air in that place, checking the growth of all kinds of grain and fruit, so that they are obliged to purchase them from their neighbours. The quicksilver mines wrought here supply all the silver mines in Peru with that necessary mineral, and notwithstanding the prodigious quantities already extracted, no diminution is perceived.

Guico, which gives name to another diocefe, is the most mount city in Peru, being of the same date with the empire of the Incas, and was founded by them as the capital of the empire. On the mountain contiguous to the north part of the city are the ruins of a samous fort built by the Incas, whence it appears, that their design was to inclose the whole mountain with a prodigious wall of such construction as to render its ascent absolutely impracticable to an enemy, in order to prevent all approach to the city. This wall was entirely of freestone, and strongly built, some of the stones being of a prodigious

megnitude. The city Cuicomis hearly equal to ether of

The this Bidioptic are feveral mines of gold and fileer that

The Courth diocete of the sindlenge of Lima it Arequipa, which continue the tity of the fame same one of the largest in all Feru's and it is delightfully forted in a plain; the houses are well didit of state, and generally losty, commonious, faiely desorated on the out-fide, and nearly furnished within. The temperature of the air is entremely agreeable, the stole being never excellive nor the heat triublesome, so that that fields are always clothed with verdure, and enamelled with sowers, as in a perpetual spring. But these advantages are allayed by its being frequently exposed to dreadful carthquakes, for by these convultions of Nature it has been four times laid in ruins. The city is, however, very populous, and among its inhabitants are many noble families.

In this bishopric are several gold and silver mines, and in some parts are large vineyards, from which considerable quantities of wine and brandy are made. Among the other productions is Guinea pepper, in which the jurisdiction of Africa in this diocese carries on a very silvantageous trade, the annual produce of these plantations bringing in no less than fixty thousand dollars per annum. The pods of this pepper are about a quester of a yard in length, and when gathered are dried in the sim and packed up in bags of rushes, each bag containing an arobe of a quester of a hundred weight, and thus they are exported to all parts. Other places of this jurisdiction are famous for vast quantities of large and excellent olives, far exceeding the sinest produced in Europe, they being nearly the fixe of a hour egg.

## LOS CHARCOS.

The audience of Charcos, the last division of Perus is equal in extent to that of Lime, but many of its parts are not to well inhabited, some being full of vast deserts and impenetable forcits, while others have extensive plains intercepted by the stupendous height of the Cordilleras: the country is inhabited only in such parts as are free from those inconveniences. It is bounded on the north by the diocese of Cuses, and reaches southward to Buenos Ayres; on the east it extends to Brass; and on the well it reaches to the Pacific ocean, particularly at Atacama. The remainder of the province borders on the king dom of Chili.

mercial world for the immense quantity of flyer it has produced. The discovery of this emaking treasure happened at the commencement of the year 1345, by a mere accident, which we shall mention afterwards. At a small distance from it are the bot medicinal baths, could be Diego; whither some re-

grations were most frequent, the country of the Incas had a much greater reputation for riches than New Sprin, and, in reality, for a long time much more considerable treatures were brought away from it. The defire of partaking of them must necessarily draw thither, as was really the case, a greater number of Castilians. Though almost all of them went over thither with the hope of returning to their country to enjoy the fortune they might acquire, yet the majority settled in the colony. They were induced to this by the softness of the climate, the shubrity of the air, and the goodness of the provisions. Mexico presented not the same advantages, and did not give them reason to expect so much independence as a land infinitely more remote from the mother country.

Culco attracted the conquerors in multitudes; they found this capital built on a ground that was very irregular, and divided into as many quarters as there were provinces in the empire. Each of the inhabitants might follow the ulages of his native country, but every body was obliged to conform to the worship established by the founder of the monarchy. There was no edifice that had any grandeur, elegance or convenience because the people were ignorant of the first elements of atchitecture. The magnificence of what they called the " palace of the fovereign, of the princes of the blood, and of the great men of his empire;" confilted in the profusion of the metals that were lavished in decorating them. The temple of the Sun was diftinguished above all other edifices pits walls were incrifted or fliesthed with gold and filver, ornamented with divers figures, and loaded with the idols of all the nations whom the Incas had entightened and fubdued.

As it was not a solicitude for their own preservation which occupied the Spaniards at first, they had no sooner pillaged the immense riches which had been smalled at Culco for four cen-

¥

tid) is must

suries, than they went in great numbers in 1934, under the order of Sebathan de Benaleszar, to undertake the delitruction of Quito. The other towns and boroughs of the empire were over-run with the same spirit of rapine; and the citizens and the temples twere plundered in all parts.

Those of the conquerors, who did not take up their residence in the fettlements which they found stready formed, built towns on the fet coasts, where before there were none, for the strendity of the soil had not permitted the Peruvians to multiply, much there, and they had not been induced to remove thither from the extremity of their country, because they failed very little. Paits, Truxillo, Callao, Pisca and Arics, were the roads, which the Spaniards deemed most convenient for the communication they intended to establish among themselves and with the mother country. The different positions of these new cities

determined the degree of their prosperity.

Those which were afterwards built in the inland parts of the country were crefted in regions which presented a fertile soil, copious harvests, excellent pastures, a mild and salubrious climate, and all the conveniences of life. These places, which had hitherto been so well cultivated by a numerous and flourishing people, were now totally disregarded. Very soon they exhibited only a deplorable picture of a horrid desert; and this wildness must have been more melancholy and hideous than the dreary aspect of the earth before the origin of societies. The traveller, who was led by accident or curiosity into these delolate plains, could not forbear abhorning the barbarous and bloody authors of such devastations, while he restected that it was not owing even to the cruel illusions of glory, and to the fanaticism of conquest, but to the stupid and abject desire of gold, that they had sacrificed so much more real treasure, and so numerous a population.

This inlatiable thirst of gold, which neither tended to subsistence, safety nor policy, was the only motive for establishing new settlements, some of which have been kept up, while several have decayed, and others have been formed in their stead. The sate of them all has corresponded with the discovery, progress or declension of the mines to which they were subor-

dinate.

Fewer errors have been committed in the means of procuring provitions. The natives had hitherto lived hardly on any thing but maize, fruits and pulle, for which they had used no other featoning except salt and pimento. Their liquors, which were made from different roots, were more diversified; of these the

With the make, at O fearls. The fpirit of de men. The

eds obsids

chichs was the most usual; but the conquerors were not latisfied either with the liquors or with the food of the people they had Subdued. They imported vines from the old world, which from multiplied sufficiently in the lands of the coasts at Ica. Pica. Nafes, Mogueous, and Truxillo, to furnish the colony with the wine and brandy it wanted. Office facceeded fill better, and vielded a great abundance of oil. which was much toperior to that of the mother country. Other Truits were transplanted with the fame fucces, " Sugar fucceeds fo well, that none of any other growth can be compared to that which is cultivated in those parts, where it never rains. In the inland country wheat and barley were fown; and at length all the European quadrupeds were foon found grazing at the foot of the mountours, some additionages & thickers in the parties and a supplementation.

This was a confiderable flep, but there itill remained much more to be done. After they had provided for a better and a greater choice of sublistence, the next size of the Spaniards was to have a dress more commodious and more a ceable than that of the Peruvians. These were, however, better clothed than any other American nation. They awed this super ority to the advantage which they alone pollered, of having the luma and paces, domestic animals, which served them for this use

After the conquest, all the Indians were obliged to wear As the oppression under which they grouned did not allow them to exercise their former incustry, they contented themselves with the coarser cloths of Europe, for which they were made to pay an exorbitant price. When the gold and filver which had escaped the rapacity of the conquerors were exhausted, they thought of re-establishing their national manufactures. These were some time after prohibited, on account of the deficiency which they or affoned in the exports of the mother country. The impossibility which the Peruvians found of purchaling foreign stuffs, and paying their taxes, occasioned permission to be given at the end of ten years for their re-establishment. They have not been discontinued since that time, and have been brought to as great a degree of perfection as it was possible they could be under a continual tyranny.

With the wool of the vicuna, a species of wild paros, they make, at Cusco and its territory, stockings, handkerchiefs and These manufactures would have been multiplied, if the of destruction had not fallen on animals as well as on The same wool, mixed with that of the sheep imported

Arequips, Curio and Lions. In these towns in made a prodigious number of gold toys and plate, for the win as prodigious number of gold toys and plate, for the win as private persons, and also for the churchest. All these manuser tures are but coarsely, wrought, and mixed with a great deal of copper, a We seldom discover more taste in their gold and silver laces and embroideries, which their manusactures also, oduce, This is not altogether the ease in regard to their lace, which, when mixed with that of Europe, looks very brautiful. This last manusacture is commonly in the hands of the nums, who employ in it the Peruvian girls, and the young mestees of the towns, who for the most part, before marriage, pass some years in the convent.

Other hands are employed in painting and gilding leather for rooms, in making with wood and ivory pieces of inlaid work and sculpture, and in drawing figures on the marble that is found at Cucuca, or on linen imported from Europe. These different works, which are almost all manufactured at Cusco, serve for prinaments for houses, palaces and temples; the drawing of them is not bad, but the colours are neither exact nor permanent. If the Indians, who invent nothing, but are excellent imitators, had able masters and excellent models, they would at least make good copyists. At the close of the last century, some works of a Peruvian painter, named Michael de St. Jacques, were brought to Rome, and the connoilseurs discovered marks of genius in them.

Though the Peruvians were unacquainted with coin, they knew the use of gold and silver, for they employed them in different kinds of ornaments. Independent of what the tortents and accident produced them of these metals, some mines had been opened of little depth. The Spaniards have not granspitted to us the manner in which these rich productions were drawn from the bosom of the earth. Their pride, which has deprived us of so much useful knowledge, undoubtedly made them think, that, in the inventions of a people whom they called harbarous, there was nothing that was worthy to be recorded.

The difference as to the manner in which the Peruvians worked (their mines, did not extend to the mines themselves. The conquerors opened them on all fides. At first the gold

mines perion clearly manne totally order was ob

richer, found o metal a

more in tains, to was the incrusta millions

Other produce cient to mented quips, he the reft,

waters h from the to the 'S common which w vented of de Juleph far from rich, that had to el all the Sp of the ne without v made the number of other, and upon one expedient mines tempted the avaries of the greater aumber more that exist perions discouraged these whom passon had not blinded these clearly haw, that, for some anormous fortunes raised in this manner, great numbers who had only moderate fortunes, ward totally mined. These mines sunk into such discredit, that, in order to prevent them from being abandoned, the government was obliged to take the twentieth part of their produce, instead of the fifth, which it at first received to the sun order out.

The mines of filver were move common; more equal, and richer, be They even produced filver of a fingular species, rarely found elfewhere. Towards the fea-took great lumps hof this metal are found in the fands, and describe the remaining of the metal are found in the fands,

There are a great number of other mines which are infinitely more important, and are found in the rocks and on the mountains. Several of them gave false hopes; such, in particular, was that of Ucuntaya, discovered in 1.713: this was only an incrustation of almost massy filter, which at first yielded several millions, but was soon exhausted.

Others which were deeper have been alike deferted: their produce, though equal to what it was originally, was not sufficient to support the expense of working them, which augmented every day. The mines of Quito, Cusco and Arequips, have experienced that revolution which awaits many of the rest,

There are greater numbers of very rich mines which the waters have invaded. The disposition of the ground, which from the summit of the Cordillerss goes continually shelving to the South sea, must necessarily render these events more common at Peru than in other places. This inconvenience, which with greater care and skill might often have been prevented or diminished, has been in some instances remedied.

far from the town of Puna, the mine of Laycacota; it was fo rich, that they often cut the filver with a chizel, Profperity had so elevated the mind of the proprietor, that he permitted all the Spaniards, who came to feek their fortune in this part of the new world, to work some days on their own account, without weighing or taking any account of the presents he made them. This generosity drew around him an infinite number of people, whose avidity made them quarrel with each other, and the love of money made them take up arms and fall upon one another; and their benefactor, who had neglected no expedient, to prevent and extinguish their sanguinary conten-

This idea of Divine vengence was reversed form long time; but at last, in 1940, Biego de Backina affociated with other opulent people to avere the springs which had deluged to much treasure. The labours which this difficult undertaking required were not sinished till 1954 within this wild as sinh) But mines fall riches than this have been discovered it such for example, is share of Potos, which was found in the same sound try where the lines worked that of Porco.

An Indian, named Hualpa, in 1545, pursuing some deer, in order to climb certain steep rocks laid hold of a bush, the roots of which loofened from the earth, and brought to view and ingot of filver to The Indian shad recourse to it for his own ule and never failed to return to his treasure every time that his wants, or his defires folicited him to it. .. The change that happened in his fortune was remarked by one of his country. men, and he discovered to him the secret, ... The two friends: could inot akeep their council and enjoy their good fortune: they quarrelled; on which the indifereet confident difcovesed the whole to his malter, Villaroell, a Spaniard who was fettled in the neighbourhood. Upon this the mine became known, and was worked; and angreat number rof them were found in hits avicinity; the principal of which are in whe porthern part of the mountain, and their direction is from north to fouther The most intelligent people of Peru have observed; that this is in general the direction of the richest mines, a great well at his took to the and a section with the

The fame of what was paffing at Potos soon spread abroad, and there was quickly built at the foot of the mountain a town consisting of sixty thousand Indians and ten thousand Spaniards. The serility of the soil did not prevent its being immediately peopled. Corn, fruit, slocks, American shuffs, European daxuries, arrived there from every quarter. Industry, which every where follows the current money, could not learth for it with so much success as at its source. It evidently appeared, that in 1738 these mines produced annually near nine hundred and seventy-eight thousand pounds, without reckoning the silver which was not registered, and what had been carried off by fraud. From that time the produce has been so much diminished, that no more than one eighth part of the coin which was formerly struck is now made.

the Spaniards, in purifying their gold and filver, afe moreury, with which they are hipplied from Guandan Velicham The common opinion is, that this mine was different in 1642 the trade of mercury was then fill free; it became an exclusive trade in 1671; at this period all the mines of mercury were flut, and that of Guanca Velica alone was worked, the property of which the kings referved to thimfelf. It is not found to diminish. This mine its dug in a prodigiously large mountain, fixty leagues from Lima. In its profound abyle are feen fireets, fquares, and a chapel, where the inviteries of religion on all festivals are belebrated; millions of flambeaux are continually kept to enlighten it.

Private people, at their own expense, works the mine of Guanca Velica. They are obliged to deliver to government, at a stipulated price, all the mercury they extract from it. As soon as they have procured the quantity which the demands of one year require, the work is suspended. Part of the mercury is sold on the spot, and the rest is sent to the royal magazines throughout all Peru, from whence it is delivered out at the same price it is sold in Mexico. This arrangement, which has occasioned many of the mines to drop, and prevented others from being opened, is inexcusable in the Spanish system; the court of Madrid, in this respect, merits the same reproaches as a ministry in other countries would incur, that would be blind enough to lay a duty on the implements of agriculture.

The mine of Guanca Velica generally affects those who work in it with convulsions; this and the other mines, which are not less unhealthy, are all worked by the Peruvians. These unfortunate victims of an infetiable avarice are crowded all together and plunged naked into these abysses, the greatest part of which are deep, and all excessively cold. Tyranny has invented this refinement in cruelty, to render it impossible for any thing to escape its restless vigilance. If there are any wretches who long survive such barbarity, it is the use of cocoa that preserves them.

In the Cordillers, near the city of Paz, is a mountain of remarkable height, called Illimani, which doubtless contains immense riches; for a crag of it being fome years ago severed by a flash, of lightning, and falling on a neighbouring mountain, such a quantity of gold was found in the fragments, that for some that metal was fold at Paz for eight pieces of eight per ounce; but its summit being perpetually covered

The city of La Paz is of a middling fize, and from its fituation among the breaches of the Cordilleras, the ground on which it stands is unequal, and it is also surrounded by mountains. When the river Titacaca is increased, either by the rains, or the melting of the snc 7 on the mountains, its current forces along large masses of rocks with some grains of gold, which are found after the slood has subsided. Hence some idea may be formed of the riches inclosed in the bowels of these mountains, a remarkable proof of which appeared in the year 1730, when an Indian, washing his feet in the river, discovered so large a lump of gold, that the Marquis de Casse Fuerte gave twelve thousand pieces of eight for it, and sent it as a present to the King of Spain.

HILI is fituated between 25° and 45° fouth latitude, and 65° and 85° west longitude; its length is one thousand two hundred and sixty miles, and its greatest breadth five hundred and eighty; it is bounded on the north; by Peru; on the east, by Paragua or La Plata; on the south, by Patagonia; and on the west; by the Pacific ocean: It lies on both sides of the Andes; Chili Proper lies on the west; and Cuyo or Cutio, on the east. The principal towns in the former are St. Jago and Baldivia; in the latter, St. John de Frontiera:

The first attempt of the Spaniards upon this country was made by Almagro in the year 1535; after he and Pizaro had completed the conquest of Peru. He set out on his expedition to Chili with a confiderable body of Spaniards and auxiliary Indians. For two hundred leagues he was well accommodated with every necessary by the Indians, who had been subjects of the Emperors of Peru; but reaching the barren country of Charcos, his troops became discontented through the hardships they suffered, which determined Almagro to climb the mountains called Cordilleras, in order to get the sooner into Chili; being ignorant of the invaluable mines of Potosi, contained in the province of Charcos, where he then was. At that time the Cordilleras were covered with snow, the depth of which obliged him to dig his way through it. The cold made fuch an impression on his naked Indians, that it is computed no less than ten thousand of them perished on these dreadful mountains, one hundred and fifty of the Spaniards sharing the same fate, while many of the survivors lost their fingers and toes through the excess of cold. At last, after encountering incredible difficulties, Almagro reached a fine, temperate, and fertile plain on the opposite side of the Cordilleras, where he was received with the greatest kindness by the natives. These poor savages, taking the Spaniards for

deputies of their god Virachoca, immediately collected for them an offering of gold and filver, worth two hundred and ninety thouland ducats; and foon after brought a prefent to Almagro worth three hundred thousand more. These offerings only determined him to conquer the whole country as foon as possible. The Indians, among whom he now was, had acknowledged the authority of the Peruvian Incas, or Emperors, and consequently gave Almagro no trouble. He therefore marched immediately against those who had never been conquered by the Peruvians, and inhabited the fouthern parts of Chili. These savages fought with great resolution, and disputed every inch of ground; but in five months time the Sparnards had made fuch progress, that they must infallibly have reduced the whole province in a very little time, had not Almagro returned to Peru, in consequence of a commission sent him from Spain.

In 1546, Pizaro having overcome and put Almagro to death, fent into Chili, Baldivia or Valdivia, who had learned the rudiments of war in Italy, and was reckoned one of the best officers in the Spanish service. As he penetrated southward, however, he met with much opposition; the confederated caziques frequently gave him battle, and displayed great courage and resolution, but could not prevent him from penetrating to the valley of Massocho, when he found incredibly fertile and populous, Here he founded the city of St. Jago, and finding gold mines in the neighbourhood, forced the Indians to work in them, at the fame time building a castle for the safety and protection of his new colony. The natives, exasperated at this slavery, immeditely took up arms, attacked the fort, and though defeated and repulfed, fet fire to the out works, which contained all the provisions of the Spaniards. Nor were they discouraged by this and many other defeats, but still continued to carry on the war with vigour. At last, Valdivia having overcome them in many battles, forced the inhabitants of the vale to submit; upon which he immediately let them to work in the mines of Quilotta, This indignity offered to their countrymen redoubled the fury of those who remained at liberty. Their utmost efforts, however, were as yet unable to flop Valdivia's progress. Having eroffed the large rivers Maulle and Hata, he traverfed a vaft trust of country and founded the city of La Conception on the South fea coult; he erected fortreffes in feveral parts of the country, in order to keep the natives in awe, and built the city called Imperial, about forty leagues to the fouthward of Conception. The Spanish writers say, that the neighbouring valley

in a state of inactivity. About fixteen leagues to the castward of Imperial, the Spanish general laid the foundations of the city. of Villa Rica, fo called on account of the rich gold mines he found there. But his ambition and avarice had now involved him in difficulties from which he could never be extricated: he had extended his conquests beyond what his strength was capable of maintaining. The Chilesians were fill as desirous as ever of recovering their liberties. The horses, fire-arms, and armour of the Spaniards, indeed, appeared dreadful to them; but thoughts of endler flavery were still more fo, In the course of the war they had discovered that the Spaniards were vulnerable and mortal men like themselves; they hoped, therefore, by dint of superiority in numbers, to be able to expel the tyrannical usurpers. Had all the nations joined in this resolution, the Spaniards had certainly been exterminated; but some of them were of a pacific disposition, while others considered servitude as the greatest of all possible calamities. Of this last opinion were the Aracceans, the most intrepid people of Chili, and who had given Valdivia the greatest trouble. They all role to a man; and chose Capaulican, a renowned hero among them, for their leader. Valdivia, however, received notice of their revolt fooner than they intended he should, and returned with all expedition to the vale of Araccea; but before he arrived, fourteen thousand of the Chilesians were there assembled under the conduct of Capaulican; he attacked them with his cavalry, and forced them to retreat into the woods, but could not obtain a complete victory, as they kept continually fallying out, and haraffing his men. At last Capaulican having observed, that fighting with such a number of undisciplined troops, only served to contribute to the defeat and confusion of the whole, divided his forces into bodies of one thousand each. These he directed to attack the enemy by turns, and though he did not expect that a fingle thousand would put them to flight, he directed them to make as long a stand as they could, when they were to be relieved and supported by another body, and thus the Spaniards would be at last wearied out and overcome. The event fully answered his expectations. The Chilesians maintained a fight for feven or eight hours, till the Spaniards, growing faint for want of refreshment, retired precipitately. Valdivia ordered

them to possess at some distance from the field, to Row the pursuit; but this design being discovered to the Chilesians by his page, who was a native of that country, the Spaniards wore furrounded on all fides, and cut in pieces by the Indians. The general was taken and put to death; fome fay with the torture ufustly inflicted by thole flavages on their prifoners; others, that he had melted gold poured down his throat; but all agree, that the Indians made flutes and other instruments of his bones, and preserved his skull as a monument of their vic. tory, which they celebrated by an annual festival. After this victory, the Chilchans had another engagement with their enemies, in which also they proved victorious, defeating the Spaniards with the lofs of hear three thousand men; and upon this they bent their whole orce against the colonies. The city of Conception being abandoned by the Spaniards, was taken and destroyed; but the Indians were forced to raise the siege of Imperial, and their progress was at last stopped by Garcia de Mendeda, who defeated Capaulican, took him prisoner, and put him to death. No defeats, however, could dispirit the Chilesians; they continued the war for fifty years, and to this day, they remain unconquered, and give the Spaniards more trouble than any other American nation. Their most irreconcilcable enemies are the inhabitants of Araccea and Tucapel, those to the fouth of the river Bobio, or whose country extends towards the Cordilleras. The manners of these people greatly resemble those of North-America, but feem to have a more warlike difpolition. It is a constant rule with the Chilesians never to sue for peace. The Spaniards are obliged not only to make the first overtures, but to purchase it by presents. They have at last been obliged to abandon all thoughts of extending their conquests, and reduced to cover their frontiers by erecting forts at proper distances.

The Spanish colonies in Chili are dispersed on the borders of the South sea. They are parted from Peru by a desert eighty leagues in breadth, and bounded by the island of Chiloe, at the extremity next the straits of Magellan. There are no settlements on the coast except those of Baldivia, Conception island, Valparaiso, and Coquimbo, or La Screna, which are all sea ports. In the inland country is St. Jago, the capital of the colony. There is no culture nor habitation at any distance from these towns. The buildings in the whole province are low, made of unburnt brick, and mostly thatched. This practice is observed on account of the frequent earthquakes, and is pro-

The climate of Chili is one of the most wholesome in the whole world. The vicinity of the Cordillers, gives it fuch a dilightful temperature as could not otherwise be expected in that latitude. Though gold mines are found in it, their richnels, has been too much extolled; their produce never exceeds two hundred and eighteen thousand seven hundred and fifty pounds per ann. The foil is prodigiously fertile. All the European fruits have improved in that happy climate. The wine would be excellent if nature were porperly affifted by art; and the corn harvest is reckoned a bad one when it does not yield a hundred fold. With all these advantages, Chili has no direct intercourse with Spain; their trade is confined to Peru, Paraguay, and the favages on their frontiers. With these last they exchange their less valuable commodities for oxen, horses, and their own children, whom they are ready to part with for the most trifling things. This province supplies Peru with great plenty of hides, dried fruit, copper, falt meat, horses, hemp, lard, wheat, and gold; in exchange it receives tobacco, fugar, cocoa, earthen ware, woollen cloth, linen, hats, made. at Quito, and every article of luxury brought from Europe. The ships fent from Callao on this traffic were formerly. bound to Conception bay, but now come to Valparaiso. The commerce between this province and Paraguay is carried on by land, though it is a journey of three hundred leagues, forty of which lie through the snows and precipices of the Cordilleras; but if it was carried on by sea, they must either pass the straits of Magellan, or double cape Horn, which the Spaniards always avoid as much as possible. To Paraguay are sent some woollen stuffs called ponchos, which are used for cloaks: also wines, brandy, oil, and chiefly gold; in return they receive wax, a kind of tallow fit to make foap, European goods, and negroes.

Chili is governed by a chief, who is absolute in all civil, political, and military affairs, and is also independent of the viceroy. The latter has no authority except when a governor dies, in which case he may appoint one in his room for a time, till Spain names a successor. If on some occasion the viceroy has interfered in the government of Chili, it was when he has been either authorised by a particular trust reposed in him by the court, or by the deference paid to the eminence of his office; or when he has been actuated by his own ambition

to extend his authority. In the whole province of Chili there are not twenty thousand white men, and not more than fixty thousand negroes, or Indians, able to bear arms. The military establishment amounted formerly to two thousand men; but the maintaining of them being found too expensive, they were reduced to sive hundred at the beginning of this century.

With respect to the power of the governor of Chili, it is doubtful whether the above is correct, as some writers affert that he is subordinate to the viceroy of Peru, in all matters relating to the government, to the finances, and to war, but independent of him as chief administrator of justice, and president of the royal Audience. Eleven inferior officers, distributed in the province, are sharged, under his orders, with the details of administration.

### PARAGUAY, OR LA PRATA.

" The me " " I get man was whitely it p

in the state of the season of the season of

PARASUAY is fituated between 12° and 37° fouth latitude, and 50° and 75° west longitude; its length is one thousand five hundred miles, and its breadth one thousand. It is bounded on the north, by Amazonia; on the east, by Brasil; on the south, by Patagonia; and on the west, by Chili and Peru.

It is divided into fix provinces, viz. PARAGUAY, PARANA, GUAIRA, URAGUA, TUCUMAN, and RIO DE LA PLATA.

This country, besides an infinite number of small rivers, is watered by three principal ones, the Paragua, Uragua, and Parana, which, united near the sea, form the famous Rio de la Plata, or Plate river, and which annually overslow their banks; and on their recess, leave them enriched with a slime, that produces the greatest plenty of whatever is committed to it.

This vast tract is far from being wholly subdued or planted by the Spaniards. There are many parts in a great degree

<sup>\*</sup> The grand river La Plata deserves a particular description. A Modencie lesuit, by the name of P. Cattanco, who failed up this river, speaks in the following language concerning it: " While I refided in Europe, and read in books of history or geography that the river de la Plata was one hundred and fifty miles in breadth, I confidered it as an exaggeration, because in this hemisphere we have no example of fuch vast rivers. When I approached its mouth, I had the most vehement desire to ascertain the breadth with my own eyes, and I have found the matter to be exactly as it was represented. This I deduce particularly from one circumstance when we took our departure from Monte Viedo, a fort fituated more than one hundred miles from the mouth of the river, and where its breadth is confiderably diminished, we failed a complete day before we discovered the land on the opposite side of the river; and when we were in the middle of the channel, we could not discover land on either side, and saw nothing but the fky and water, as if we had been in some great ocean. Indeed, we should have taken it to be sea, if the fresh water of the river, which was turbid like the Po, had not fatisfied us that it was a river."

linknown to them, or to any other people in Europe. The principal province of which we have any knowledge, is that which is called Rio de la kita towards the mouth of the above-mentioned rivers. This province with all the adjacent parts, ist one continued plain for feveral hundred miles, extremely fertile, and produces cotton in great quantities; tobacco, and the valuable herb called paraguay, with a variety of fruits, and the podigious rich pastures, in which are bred such herds of cattle, that it is faid the hides, of the boalts are all that is properly bought, the carcale being in a manner given into the bargain. A horse some time ago might be bought for a dollar, and the usual price of a bullock, chosen out of a herd of two or three hundred, was only four rails, But contrary to the general nature of America, this country is destitute of woods. The air is remarkable sweet and serene, and the waters of La Plata are equally pure and wholesomes! and so such bor

The Spaniards first discovered this country by failing up the river La Plata in 1515, and founded the town of Buenos Ayres, fo called on account of the excellence of the air, on the fouth fide of the river, fifty leagues within its mouth, where it is feven leagues broad. This is one of the most considerable towns in South-America, the capital of this country, and the only place of traffic to the fouth of Brafil. Here we meet with the merchants of Europe and Peru, but no regular fleet comes hither as to the other parts of South America pitwo, or at molt three register, ships make the whole of their regular intercourse with Europe; their returns are very valuable, confishing chiefly of the gold and filver of Chili and Perus fugar and hides Those who have carried on a contraband trade to this city, have found it more advantageous than any other. The benefit of this contraband is now wholly in the hands of the Portuguele, who keep magazines for that purpole in fuch parts of Brasil as lie near this country one we should affine a mised and or book

Buenos Ayres is regularly built, its streets are wide, the houses are extremely low, and each of them is accommodated with a garden. The public and private buildings which, fixty years ago, were all made of earth, are of more solid and commodious construction, fince the natives have learned the art off making brick and lime. The number of inhabitants is about thirty thousand. One side of the town is defended by a fortress with a garrison of six or seven hundred men; the ships get to it by sailing up a river that wants depth, is full of islands, shoals, and rocks, and where storms are more frequent and more defeadful than on the ocean. avery night on the fpot where they come to, and on the most inoderate days a pilot must go to found the way for the ship; after having surmounted these difficulties, the ships are obliged, at the distance of three leagues from the town, to put their goods on board some light vessel, and to go to rest, and to wait for their eargoes at Incurado de Barragan, situated seven or eight leagues below:

Paragua sends annually into the kingdom of Peru as many as one thousand five hundred, or two thousand mules. They travel over dreary deserts for the distance of eight, or nine hundred leagues. What is not man capable of doing, when necessity, resolution, and averice are united? neither deep and miry swamps, nor summits of losty mountains covered with eternal snow, can bar his progress. The province of Tucuman furnishes annually, sixteen or eighteen thousand oxen, and sour or five thousand horses, brought forth and reared upon its own territory. Paragua sends several articles of commerce to Spain, but they are all brought from neighbouring districts. The only article it surnishes from its own territory is hides, all these are sent to Europe from Buenos Ayres.

We cannot quit this country without mentioning that extraordinary species of commonwealth which the Jesuits erected in the interior parts, and concerning which these crafty priests have endeavoured to keep strangers in the dark.

About the middle of the last century, those fathers reprefented to the court of Spain, that the want of success in their missions was owing to the scandal which the immorality of the Spaniards never failed to give, and to the hatred which their insolent behaviour caused in the Indians. They infinuated, that were it not for those obstacles, the empire of the gospel might, by their labours, have been extended into the most unknown parts of America; and that all those countries might be subdued to his Catholic majesty's obedience, without expense, and without force. This remonstrance met with success, the sphere of their labours was marked out, and the governors of the adjacent provinces had orders not to interfere, not to fuffer any Spaniards to enter into this pale, without licences from the fathers; they, on their part, agreed to pay a certain capitation tax, in proportion to their flock, and to fend a certain number to the king's works whenever they shall be demanded, and the missions should become populous enough to supply them.

On these terms these Jesuits gladly entered upon the scene of action and opened their spiritual campaign. The began by

sathering together about fifty wantering families, whomstiey perfunded to fettle, and they united thim into a little township fuper trullure, which smazed the world, and added much to their power, at the lame time that in occasional much envergant their faciety. For what they had made the beginning, they laboured with such indestigable paint, and such indicately policy, ther by degrees they multified the minds of the most matterly policy, ther by degrees they multified the minds of the most matterly repaired, who had long distanced to substitute these their government, who had long distanced to substitute these their government, who had long distanced to substitute these family and substitute their substitute and post their substitute their religions and these soon induced others to follow their example, magnifying the peace and tranquility they enjoyed under the direction of the Fathers.

Our limits do not permit us to trate with precision all the steps which were taken in the accomplishment of to extraordimary a conquest over the bodies and minds of men. The Jesuits lest nothing undone that could confirm their subjection, or that could increase their number; and it is said that above three hundred and forty thousand families lived in obedience and expressed an awe, bordering upon adoration, yet prosured without any violence or confirmint; that the Indians were instructed in the military art, and could raise finty thousand men. well armed; that they lived in towns, were regularly clad, laboured in agriculture, exercised manufactures, fome even aspired to the elegant arts, and that nothing could engel their is fubmillion to suthority, expept their contentment under it ou Some writers have tressed the charefter of these Jesuits with great feverity, accusing them of ambition, pride, and of carrying their authority to such an excels, as to cause not only per-ma fons of both fexes, but even the magistrates, who were always A chosen from among the Indians, to be corrected before them with fripes, and by fuffering persons of the highest distinction, within their jurisdictions, to his the hem of their garments as an the greatest honour. The priests themselves possessed large, property, all manufactures were theirs, the natural produce of the country was brought to them, and the treasures annually remitted to the Superior of the order, seemed to evince that zeal for religion was not the only motive for forming thefe The Fathers would not permit any of the inhabitants of Peru, whether Spaniards, Mestizos, or even Indiana, to come within their missions in Paraguay. In the year 1757, when part of this territory was caded by Spain to the crown of

WITH respect to the flands belonging to the Spanish monarchy in this part of the glose, we shall notice them in another place; but in order to afford a more particular view of the Spanish interest in her South-American colonies, as well as of the policy pursued by her with respect to their, we shall effer a few additional general remarks on the government, ecclesiafical exhibitament, and tyltem of trade carried on with them in business and in business.

the peace and tranquility, they enjoyed under the alice tion of

Notwithstanding the rapid depopulation of America, a very confiderable number of the native race still remains both in Mexico and Peru, especially in those parts which were not expoled to the first fury of the Spanish arms, or delolated by the first efforts of their industry, fill more ruinous. In Guatimala, Chiapa, Nicaragua, and the other provinces of the Mexican empire, which firetch along the South fea, the race of Indiana is Aill numerous; their fettlements in fome places are to populous, as to merit the name of cities. In the three sudiences into which New Spain is divided, there are, as we have before mentioned, at least two millions of Indians; a pitiful geninant, indeed; of its ancient population, but such as still forms a budy of people superior in number to that of all the other inhabitants of this extensive country, In Peru leveral districts, particularly in the kingdom of Quito, are occupied almost entirely by Indisne, 3 In other provinces they are mingled with the Spanisignificant in many of their lettlements are almost the only of the life bee stre Sincham at single of the rent sage

infusion flations in fociety. As the inhabitants both of Migricol and flations in fociety. As the inhabitants both of Migricol and flations in fociety. As the inhabitants both of Migricol and flations in fociety. Lets violence was requisite in bringly life them to form conformity with the European modes of civil life. But wherever the Spaniards lettled among the flavage tiles, of America, their attempts to incorporate with them have been always fruitles, and often fatal to the natives. Impatient of refraign, and dildaining labour as a mark of levelity, they either abandoned their original letts, and fought for independence in mountains and forefts inaccellible to their depressions, or perished when reduced to a flate repugnant to their ancient ideas and habits. In the districts adjacent to Carthagens, to Panama, and to Buenos Ayres, the desolation is more general than even in those parts of Mexico and Peru, of which the Spaniards have taken most full possession.

But the establishments of the Spaniards in the new world, though fatal to its ancient inhabitants, were made at a period when that monarchy was capable of forming them to the best advantage. By the union of all its petty kingdoms, Spain was become a powerful state, equal to so great an undertaking. Its monarchs having extended their prerogatives far beyond the limits which once circumscribed the regal power in every kingdom of Europe, were hardly subject to controus, either in concerting or in executing their measures.

Such was the power of the Spanish monarchs, when they were called to deliberate concerning the mode of establishing their dominion over the most remote provinces which had ever been subjected to any European state. In this deliberation they selt themselves under no constitutional restraint, and that as independent masters of their own resolves, they might issue the edicts requisite for modelling the government of the new colonies, by a mere act of prerogative.

This early interposition of the Spanish crown in order to regulate the policy and trade of its colonies, is a paculiarity which distinguishes their progress from that of the colonies of any other. European nation. When the Portuguese, the English, and French, took possession of the regions in America, the advantages which these premised to yield were so remote and uncertain, that their colonies were suffered to struggle through a hard in sancy, almost without guidance or protection from the parent state. But gold and the first productions of the Spanish settlements in the new world; were more alluring, and immediately attracted the attention of their monarch.

Though they had contributed little to the discovery, and almost nothing to the conquest of the new world, show in Rainthn all med the sanction of its legislators, and having acquired has species of dominion formerly unknown, they formerly plan to exercifing it, to which nothing limitar occurs in the History of human affairs.

human affects and the form of Spanish jurisprudence with respects to America, is to consider what has been acquired there as verted in the grown rather than in the state. By the bull of Alexand der VI. on which, as its great charter, Spain founded its right, all the regions that had been, or should be discovered, were beflowed as a free gift upon Ferdinand and Ilabella. They and theiz successors were uniformly held to be the universal proprietors of the vast territories which the arms of their subjects conquered in the new world. From them all grants offland there flowed, and to them they finally returned. The leaders who conducted the various expeditions, the governors who presided over the different colonies, the officers of justice, and the ministers of religion, were all appointed by their authority. The people who compoied and removeable at their pleafure. infant lettlements were entitled to no privileges independent of the lovereign, or that ferved as a barrier against the power of the crown. It is true, that when towns were built, and formed into bodies corporate, the citizens were permitted to elect their own magistrates, who governed them by laws which the community enacted. Even in the most despotic Rates, this feeble spark of liberty is not extinguished; but mins the cities of Spanish America, this jurisdiction is merely municipal, and is confined to the regulation of their own intevernment, and the general intere?, the will of the fovereign is law; no political power originates from the people; all centers in the crown, and in the officers of its nomination.

When the conquests of the Spaniards in America were completed, their monarchs, in forming the plan of internal policy for their new dominions, divided them into two immense governments, one subject to the viceroy of New-Spain, the other to the viceroy of Peru; the jurisdiction of the former extended ever all the provinces belonging to Spain in the northern division of the American continent; under that of the latter, was comprehended whatever she possessed in South-America. This arrangement, which, from the beginning, was attended with many inconveniencies, became intolerable when the remote provinces of each vice-royalty began to improve in industry

and population. As a remedy for those evils, a third viceroyalty has been eftablished in the present century at Santa Fe de Bogota? the capital of the new kingdom of Granada, the juridiction of which extends over the whole kingdom of Tierre Pitme and the province of Quito. Those viceroys not only represent the perion of their lovereign, but pallels his regul prerogatives within the precincts of their own govern.
ments in their utmost extent. Like him, they exercise fupreme authority in every department of government, civil, milivery and oriminat. They have the fole right of normating the perions who hold many offices of the highest importance, and the occasional privilege of lupplying thole which, when they become vacant by death, are in the royal gift, until the furceffor appointed by the king shall arrive. The external pomp of their government is suited to its real dignity and power. Their courts are formed upon the model of that at Madrid, with horse and foot guards, a houshold regularly estab. lithed, numerous attendants, and enfigns of command, display. ing fuch magnificence as hardly retains the appearance of delegated suthority; but yel, or, mel most

But as the viceroys cannot discharge in person the functions of a supreme magistrate in every part of their extensive jurisdistion, they are aided in their government by officers and tribunals fimilar to thole in Spain. The conduct of civil affairs in the various provinces and districts, into which the Spanish do. minions in America are divided, is committed to magistrates of various orders and denominations; fome appointed by the king. others by the viceroy, but all fubject to the command of the latter, amenable to his jurisdiction. The administration of justice. is vested in tribunals, known by the name of Audiences, and formed upon the model of the court of chancery in Spain. These are eleven in number, and dispense justice to as many, diffrifts, into which the Spanish dominions in America are divided. The number of judges in the court of Audience is various, according to the extent and importance of their jurisdiction. The flation is no less honourable than lucrative. Both civil and criminal causes come under their cognizance, and for each peculiar judges are let apart. The Spanish viceroys have often attempted to intrude theinfelves into the feat of juffice. and with an ambition which their diffance from the controul of a superior rendered bold, have aspired at a power which even their mafter does not venture to affume. In order to check an usurpation which must have annihilated justice and security America, I will v .co., rayin . . ..

in the Spanish colonies, by subjecting the lives and property of all to the will of a fingle man, the viceroys have been probis bited in the malt explicit terms, by repeated laws, from interfering in the judicial proceedings of the courts of Audicace or from delivering an opinion, or giving a voice with respect as any point hitigated before them. In fome, particular cales, which any question of civil right is involved even the political regulations of the viceroy may be brought under the review of the court of Audience, which, in those inflances, may be deemed an intermediate power placed between him and the as a constitutional barrier to circumicriba his jurifais diction. But as legal reftraints on a person who represents the fovereign, and is clothed with his authority, are little fuited to the genius of Spanish policy, the helitation and referre with which it confers this power on the courts of Audience are re-They may advise, they may remonstrate; but, in the event of a direct collision between their opinion and the will of the viceroy, what he determines must be carried into execution, and nothing remains for them but to lay the matter before the king and the souncil of the Indies. Upon the death, of the viceroy, without any provision of a successor by the king the supreme power is vested in the court of Audience relident in the capital of the vice-royalty, and the fenior judge, affifted by his brethren, exercises all the functions of the vicesoy while in the office continues vacant. In matters which come under the cognizance of the Audiences, in the course of their ordinary jurifdiction, as courts of justice, their featences are final in every litigation concerning property of less walue than he thousand in pelos; but when the subject in dispute exceeds that sum, their decisions are subject to review, and may be carried by appeal before the royal council of the Indies. of the direction is a state of the

In this council, one of the most considerable in the monarchy for dignity and power, is vested the supreme government of all the Spanish dominions in America. It was sirst established by Ferdinand, in the year 1511, and brought into a more perfect form by Charles V. in the year 1524. Its jurisdiction extends to every department, ecclesiastical, civil, military and commercial. All laws and ordinances relative to the government and police of the colonies originate there, and must be approved of by two-thirds of the members, before they are issued in the name of the king. All the offices, of which the nomination is reserved to the crown, are conferred in this council. To it each person employed in America, from the viceroy downwards, is accountable: it reviews their conduct, rewards their services.

and inflicts the punishments due to their malverfations? before it, is laid all the intelligence, either public or fecret, received from America, and every felience of improving the administration, the police, or the commerce of the colonies, is submitted to its confideration. From the first institution of the council of the Indies, it has been the constant object of the catholic monarchs to maintain its authority, and to make such additions from time to time, both to its power and its splendor, as might render it formidable to all their subjects in the new world, Whatever degree of public order and virtue fill remains in that country, where so many circumstances conspire to relax the former, and to corrupt the latter, may be ascribed in a great measure to the wife regulations and vigilant impection of this respectable tribunal.

As the king is supposed to be always present in his council of the Indies, its meetings are held in the place where he refides. Another tribunal has been instituted, in order to regulate such commercial affairs as required the immediate and perfonal inspection cothose appointed to superintend them; this is called Cala de la Contratacion, or the house of trade. and was established in Seville, the port to which commerce with the new world was confined, as early as the year 1501. It may be confidered both as a board of trade and as a court of judicature , in the former capacity, it takes cognizance of whatever relates to the intercourse of Spain with America; it regulates what commodities should be exported thither, and has the inspection of such sa are received in return : it decides concerning the departure of the fleets for the West-Indies, the freight and burden of the ships, their equipment and destination i in the latter capacity it judges with respect to every question, civil, commercial, or criminal, arising in confequence of the transactions of Spain with America; and in both these departments, its decisions are exempted from the review of any court but that of the council of the Indies.

Such as the great outline of that fystem of government which Spain has established in her American colonies. To enumerate the various subordinate boards and officers employed in the administration of justice, in collecting the public revenue, and in regulating the interior police of the country; to describe their different functions, and to inquire into the mode and effect of their operations, would prove a detail no less intricate than sninute, and uninteresting.

The first object of the Spanish monarchs was to secure the productions of the colonies to the parent state, by an absolute

cure the abiolute

brobibition of envintercourse with foreign nations. They took b pelleflique of America by right of conquest, and conscious not only of the feeblenels of their infant, feutements, but aware of bethe difficulty in establishing their dominion over tegions fo exfistensive or in tetaining formany reluctant nations under the yoke, ithey dreided the intrusion of ftrangers; they even shunned their infredign, and endeavoured to keep them, at a distance from their coalisms. This foirit of jealoufy and exclusion, which at hifir was natural, and perhaps necessary, augmented as their posfessions in America extended, and the value of them came to be mere fully understood; in consequence of it, a system of coloponizing was introduced, to which there had hitherto been nothing fimilar among mankind, In their American fettlements; the Spanish monarchs took what was peculiar to each, and studied to unite them. By fending colonies to regions so remote; by establishing in each a form of interior policy and administration, under distinct governors, and with peculiar laws, they disjoined them from the mother country. By retaining in their own hands the rights of legislation, as well as that of impoling taxes, together with the power of nominating the persons who filled every department of executive government, civil or military, they secured their dependence upon the parent state. Happily for Spain, the fituation of her colonies was fuch, as rendered it possible to reduce this new idea into practice. Almost all the countries which she had discovered and occupied lay within the tropics. The productions of that large portion of the globe are different from those of Europe, even in its most southern provinces. The qualities of the climate and of the foil naturally turn the industry of such as settle there into new channels. When the Spaniards first took possession of their dominions in America. the precious metals which they yielded were the only object that attracted their attention. Even when their efforts began to take a better direction, they employed themselves almost wholly in rearing fuch peculiar productions of the climate, as, from their rarity or value, were of chief demand in the mother country. Allured by vast prospects of immediate wealth, they distained to waste their industry on what was less lucrative, but of supea rior moment. In order to render it impossible to corned this odi error, and to prevent them from making any efforts in industry which might interfere with those of the mother country, the selectablishment of several species of manufactures, and even the culture of the vine, or olive, are prohibited in the Spanish colunies, under fevere penalties. They must trust entirely to the tuloide as vu ...

mother country for the objects of primary necessity. Their clothes, their furniture, their instruments of labour, their luxu4 ries, and even a confiderable part of the provisions which they consume, were imported from Spain. During a great part of the fixteenth century, Spain, possessing an extensive commerce and flourishing manufactures, could supply with ease the growing demands of her colonies from her own stores. The produce of their mines and plantations was given in exchange for thele; but all that the colonies received, as well as all that they gave, was conveyed in Spanish bottoms; no vessel belonging to the colonies was ever permitted to carry the commodities of America to Europe: even the commercial intercourse of one colony with another was either absolutely prohibited, or limited by many jealous restrictions. All that America yields flows into the ports of Spain; all that it confumes must issue from them, No foreigner can enter its colonies without express permission; no vessel of any foreign nation is received into their harbours; and the pains of death, with confiscation of moveables, are denounced against every inhabitant who presumes to trade with them. Thus the colonies are kept in a state of perpetual pupillage; and by the introduction of this commercial dependence, refinement in policy, of which Spain fet the first example to the European nations, the supremacy of the parent state hath heen maintained over remote colonies during more than two centuries and a half.

Such are the maxims to which the Spanish monarchs feem to have attended in forming their new settlements in America; but they could not plant with the same rapidity that they had destroyed; and, from many concurring causes, their progress has been extremely slow in filling up the immense void which their devastation had occasioned. Migration and population has been so much damped, that fixty years after the discovery of the new world, the number of Spaniards, in all its provinces, is computed not to have exceeded fifteen thousand.

The mode in which property was distributed in the Spanish colonies, and the regulations established with respect to the transmission of it, whether by descent or by sale, were extremely unfavourable to population. In order to promote a rapid increase of people in any new settlement, property in land ought to be divised into small shares, and the alienation of it should be rendered extremely easy. But the rapaciousness of the Spanish conquerors of the new world paid no regard to this fundamental maxim of policy; and, as they possessed power,

which e withes, as encome vorting duced in can next landed from cir and of 1

To the expensive burden of population of its and circumes in the claim legislator at once is slight destate.

By the

high pro confidere acquired that perio to the pr was deem and imp members. from the industry, fary to fir realonabl was impo and at the vices wh tained w vinces; } annual an either an subject to for a limi which enabled them to gratify the utmost extravagance of their wishes, many seized districts of great extent, and held them as encontendas. By degrees they obtained the privilege of converting a part of these into mayorasgos, a species of fies, introduced into the Spanish system of seudal jurisprudence, which can neither be divided nor alienated. Thus, a great portion of landed property, under this rigid form of entail, is withheld from circulation, and descends from father to son unimproved, and of little value either to the proprietor or to the community.

To this we may add, that the support of the enormous and expensive fabric of their ecclesiastical establishment has been a burden on the Spanish colonies, which has retarded the progress of population and industry. The payment of tythes is a heavy tax on industry; and if the exaction of them be not regulated and circumscribed by the wisdon of the civil magistrate, it becomes intolerable and ruinous: but, instead of any restraint on the claims of ecclesiastics, the inconsiderate zeal of the Spanish legislators admitted them into America in their full extent, and at once imposed on their instant colonies a burden which is in no slight degree appressive to society, even in its most improved state.

the famous regulations of Charles V. in 1542, the high pretentions of the conquerors of the new world, who confidered its inhabitants as flaves, to whole fervice they had acquired a full right of property, were finally abrogated. From that period the Indians have been reputed freemen, and entitled to the privileges of Subjects. When admitted into this rank, it was deemed just, that they should contribute towards the support and improvement of the lociety which had adopted them as members. But as no confiderable benefit could be expected from the voluntary efforts of men unacquainted with regular industry, and averse to labour, the court of Spain found it necesfary to fix and fecure, by proper regulations, what it thought realonable to exact from them, With this view, an annual tax was imposed upon every male from the age of eighteen to fifty; and at the same time, the pature as well as the extent of the fervices which they might be required to perform, were afcertained with precision. This tribute varies in different provinces; but if we take that paid in New-Spain as a medium, its annual amount is nearly four shillings a head. Every Indian is either an immediate vallal of the crown, or depends upon some subject to whom the district in which he resides has been granted for a limited time, under the donomination of an encomienda.

WET.

In the former case, about three-sourths of the tax is paid into the royal treasury; in the latter, the same proportion of it belongs to the holder of the grants from

The benefit ariling from the fervices of the Indians accrues either to the crown, or to the holder of the encomienda, according to the fame rule observed in the payment of tribute: those fervices, however, which can now be legally exacted, are very different from the tasks originally imposed upon the Indians, The nature of the work which they must perform is defined. and a recompence is granted for their labour. The stated fervices demanded of the Indians may be divided into two branches; they are either employed in works of primary neceffity, without which fociety cannot fublist comfortably, or are compelled to labour in the mines, from which the Spanish colonies derive their chief value and importance. In confequence of the former, they are obliged to allift in the culture of maize and other grain of needlary confumption; in tending cattle; in erecting edifices of public utility; in building bridges, and in forming high roads; but they cannot be constrained to labour in raining vines, olives and fugar-canes, or any species of cultivation, which has for its object the gratification of luxury or commercial profit, In confequence of the latter, the Indiana are compelled to undertake the more unpleasant talk, of extracting ore from the bowels of the earth, and of refining it by fuccessive processes, no less unwholesome than operofe,

The mode of exacting both these services is the same. The Indians are called out successively in divisions, termed Mitas. and no person can be compelled to go but in his turn, In Peru, the number called out must not exceed the seventh part of the inhabitants in any district. In New-Spain, where the Indians are more numerous, it is fixed at four in the hundred. During what time the labour of fuch Indians as are employed in agriculture continues, we have not been able to learn; but in Peru, each mits, or division, destined for the mines, remains there fix months; and while engaged in this service, a labourer never receives less than two shillings a day, and often earns more than double that fum. No Indian, refiding at a greater. distance than thirty miles from a mine, is included in the mita, or division employed in working it; nor are the inhabitants. of the low country compelled to remove from that warm climate to the cold elevated regions where minerals abound,

Together with the form of civil government in the Spanish colonies, the peculiarities in their ecclefialtical conflictution merit consideration. Notwithstanding the superstitious veneration with which the Spaniards are devoted to the holy fee, the vigilant and jealous policy of Ferdinand early prompted him to take precautions against the introduction of the papal dominion into America. With this view, he folicited Alexander VI. for a grant to the crown of the tythes in all the newly-discovered countries, which he obtained on condition of his making provision for the religious instruction of the natives. Soon after Julius II. conferred on him, and his successors, the right of patronage, and the absolute disposal of all ecclesiastical benefices there. In consequence of those grants, the Spanish monarchs have become in effect the heads of the American church: in them the administration of its revenues is vested, and their nomination of persons to supply vacant benefices is instantly confirmed by the pope. Thus, in all Spanish America, authority of every species centers in the crown: there no collision is known between spiritual and temporal jurisdiction; the king is the only superior, this name alone is heard of, and no dependence upon any foreign power has been introduced.

The hierarchy is established in the same form as in Spain, with its full train of archbishops, bishops, deans and other dignitaries. The inferior clorgy are divided into three classes, under the denomination of curas, doctrineros and mislioneros, The first are parish priests in those parts of the country where the Spaniards have lettled; the second have the charge of such diffries as are inhabited by Indians subjected to the Spanish government, and living under its protection; the third are employed in instructing and converting those hercer tribes which diffain lubmillion to the Spanish yoke, and live in remote or insecessible regions, to which the Spanish arms have not penetrated. So numerous are the ecclefiaffics of all thole various orders, and fuch the profule liberality with which many of them are endowed, that the revenues of the church in America are immenle, In viewing the state of colonies, where not only the number but influence of ecclefialtics is fo great, the character of this powerful body is an object that merits particular attention. A confiderable part of the lecular clergy in Mexico and Peru natives of Spain. As perfons long accustomed, by their education, to the retirement and indolence of academic life are more incapable of active enterprile, and less dispoted to firike into new paths, than any order of men, the ecclesialical advencurers by whom the American church is recruited, are commonly fuch as, from merit or rank in life, have little prospect of fuccess in their own country. Accordingly, the secular priests in the new world are still less dillinguished than their brethren in Spain for literary accomplishments of any species; and though, by the ample provision which has been made for the American church, many of its members enjoy the ease and independence which are favourable to the cultivation of science, the body of fecular clergy has hardly, during two centuries and a half, produced one author whole works convey such useful information, or policis fucht a degree of merit, as to be ranked. among those which attract the attention of enlightened nations. But the greatest part of the ecclesiastics in the Spanish lettlements are regulars. The first attempt to instruct and convert. the Americans was made by monks, and as foon as the conquest. of any province was completed, and its ecclefialtical chablifiment began to assume some form, the popes permitted the millionaries of the four mendican orders, as a reward for their fervices, to accept of parochial charges in America, to perform all spiritual functions, and to receive the tythes and other enjoluments of the benefice, without depending on the jurif-

diction of the bilhop of the diocese, or being subject to his censures. In consequence of this, a new careen of usefulnes. as well as new objects of ambition, prefented themselves. Whenever a call is made for a fresh supply of missionaries, men of the most ardent and aspiring minds, impatient under the restraint of a choister, weary of its inspid uniformity, and fatigued with the irksome repetition of its frivolous sunctions, offer their service with eagerness, and repair to the new world in quest of liberty and distinction: nor do they pursue distince tion without fuccels; the highest ecclesiastical honours, as well as the most lucrative preferments in Mexico and Peru, are often in the hands of regulars; and it is chiefly to the monastic orders that the Americans are indebted for any portion of science that is cultivated among them. They are almost the only Spanish ecclesiastics from whom we have received any accounts, either of the civil or natural history of the various. provinces in America.

From this brief furvey, fome idea may he formed of the interior state of the Spanish colonies. The system of commercial intercourse between them comes next in order to be explained. If the dominions of Spain in the new world had been of such moderate extent, as bore a due proportion to the parent state, the progress of her colonizing might have been attended with the same benefit as that of other nations : but when, in less than half a century, her inconsiderate rapacity had seized on countries larger than all Europe, her inability to fill fuch vaft regions with a number of inhabitants fufficient for the cultivation of them, was so obvious, as to give a wrong direction to all the efforts of the colonists. They did not form compact lettlements, where industry, circumscribed within proper limits, both in its views and operations, is conducted with that fober, perfevering spirit, which gradually converts whatever is in its possession to a proper use, and derives thence the greatest advantage. Instead of this, the Spaniards, seduced by the boundless prospect which opened to them, divided their possessions in America into governments of great extent. As their number was too small to attempt the regular culture of the immense provinces, which they occupied rather than peopled, they bent their attention to a few objects, that allured them with hopes of sudden, and exorbitant gain, and turned away with contempt from the humbler paths of industry, which lead more flowly, but with greater certainty, to wealth and increase of national Itrength.

Of all the methods by which riches may be acquired, that of learching for the precious metals is one of the most inviting to men, who are either unaccumbated to the regular affidures with which the culture of the earth and the operation of commerce must be carried on, or who are to enterprinting and rapacious as not to be latisfied with the gradual returns of profit which they yield. Accordingly, as foon as the feveral countries in America were subjected to the dominion of Spain, this was almost the only method of acquiring wealth which occurred to the adventurers by whom they were conquered. Such pro-vinces of the continent as did not allure them to fettle, by the prospect of their affording gold and filver, were totally neglects Thole in which they met with a dilappointmen of the fanguine expectations they had formed were abandoned. Even the value of the illands, the first fruits of their discoveries, and the first object of their attention, sunk to much in their estimate tion, when the mines which had been opened in them were exhaulted, that they were deferted by many of the planters. and left to be occupied by more industrious possessions. All crowded to Mexico and Peru, where the quantities wof gold and filver found among the natives, who fearthed for them with little industry and left Thill, promiled an amenhausted tore as the recompense of more intelligent and persevering

During levelal years, the ardour of their refearabes was kept up by hope rather than hiccefs. At length, the sich filver mines of Potofi, in Peru, were accidentally discovered in the year 1545, by an Indian, as he was clambering up the mountain in purluit of a flame which had fleayed from his flock. Soon after the mines of Sacotecas, in New-Spain, little inferior to the other in value, were opened. From that time, fuccessive discoveries have been made in both colonies. and filver mines are now to numerous, that the working of them, and of fome few mines of gold in the provinces of Tierra Firme, and the new kingdom of Granada, has become the capital occupation of the Spaniards, and is redused into yftem no lefs complicated than interefted ad To deferibe the nature of the various ores, the mode of exerciting them from the bowels of the earth, and to explain the feveral prorefles by which the metals are feparated from the substances with which they are mingled, either by the action of fire, or the attractive powers of mercury, is the province of the natural philosopher or chymilt, rather than of the hillorian,

florian.

The emberant profution with which the mountains of the new world poured forth their treatures altonified mankind, who had been hisherta accustomed to gereive a penurious supply of the pretions metals, from the more fearty flores continued in the mines of the encient hemisphete. According to principles of computation, which appears to be extremely moderate, the quantity of gold and filver that has been regularly entered in the ports of Spain, is equal in value to four milhons flerhing an entity, reckning from the year rags, in which America mandifequence, to the prefent time. Immente as this lum is the Spapish writers contend, that as much more ought to be added to it, in confideration of treasure which has been extracted from the sumes, and imported translutently into Spain without paying duty to the king. By this account; Spain has drawn from she new world a supply of wealth, amounting to more than two thousand millions of pounds fterling.

The mines which have yielded this amazing quantity of tresture, are not worked at the expense of the grown, or of the public. In order to encourage private adventurers, the person who discovers and works a new vein is entitled to the property of it. Upon laying his claim to fuch a ditcovery before the governor of the province, a certain extent of land is messared off, and a certain number of Indians allotted him, under the obligation of his opening the mine within a limited time, and of his paying the cultomary duty to the king for what it shall produce. Invited by the facility with which such are chiained, and encouraged by fome Briking examples of fueces in this line of adventure, not only the languine and the bold, but the timed and dislident, enter upon it with astomilling endour. The charms of this pursuit, like the rage for deep play, are to bewitching, and take fuch full pollellion of the mind, as even to give a new bent to the natural temper. Under its influence the reactions become enterprising, and the coverous profuse: Powerful as this charm naturally is, its force is augmented by the arts of an order of men known in Peru by the contineme of fearchers a shele are commonly persons of deleperste fortunes, who eveiling themselves of some skill in minemlogy, recompanied with the infinuating manner and confident pretentions peculiar to projectors, address the wealthy and the creditions : by plaufible descriptions of the appearances which they have discovered of rich veins hitherto unexplored; by producing, when require, specimens of promiting ore; by affirming, with an imposing affurance, that success is certain, and

that the expense must be trifling, they seldom fail to persuade; an allocation is formed, a small sum is advanced by each coapartner, the mine is opened, the searcher is entrusted with the sole direction of every operation, unforeseen difficulties occur, new demands of money are made, but small a succession of disappointments and delays, hope is never extinguished, and the ordour of expectation hardly abates.

Such is the spirit that must be formed, wherever the active exertions of any society are chiefly employed in working mines of gold and filver. No spirit is more adverse to such improvement in agriculture and commerce, as render a nation seally

opulent.

But in the Spanish colonies, government is studious to cherish a spirit which it should have abouted to depress, and by the sanction of its approbation, augments that inconsiderate credutity which has turned the active industry of Mexico and Perusinto fuen an improper channel. To this may be imputed the stender progress which Spanish America has made during two centuries and a half, either in uleful manufactures, or in those sucretive branches of cultivation which surnish the colonies of other nations with their staple commodities.

As the activity and enterprise of the Spaniards originally took this direction, it is now so difficult to bend them a different way, that although from various causes, the gain of working mines is much decreased, the fascination continues, and almost every person who takes any active part in the commerce of New-Span or Peru, is fall engaged in some adventure of this

kind,

But though mines are the chief object of the Spaniards, and the precious metals which these yield form the principal article in their commerce with America, the fartile countries which they possess there abound with other commodities of such value or feareity, as to attract a confiderable degree of attention, Cochineal is a production almost peculiar to New-Spain, of fuch demand in commerce, that the fale is always certain, and it yields fuch profit as amply rewards the labour and cate employed in rearing the curious infects of which this valuable drug is composed, and preparing it for the market. Quinquina, or Jesuit's bark, the most falutary simple, perhaps, and of most restorative viitue, that Providence has made known unto man, is found only in Peru, to which it affords a lucrative branch of commerce. The indigo of Guatimala is superior in quality to that of any province in America, and cultivated to a confidera-Cacos, though not peculiar to the Spanish colo-

pal article ries which fuch value attention ny of fuch in, and it CARC CINs valuable Quinquina, nd of most unto man, branch of quality to confideranith colo-

nies, attains to its highest state of perfection there, and from she great confamption of chocolate in Europe, as well as in America, is a valuable commodity. The tobacco of Cubs, of more exquisite flavour than any brought from the new world. the fugar raised in that island, in Hispaniola, and in New-Spain, together with drugs of various kinds, may be mentioned among the natural productions of America, which enrich the Spanish commerce. To these must be added, an article of no inconsiderable account, the exportation of hides, for which, as well as for many of those enumerated, the Spaniards are more indebted to the wonderful fertility of the country than to their own forelight and industry, The domestic animals of Europe, particularly horned cattle, have multiplied in the new world with a rapidity which almost exceeds belief. A few years after the Spaniards fettled there, the herds of tame cattle became fo numerous, that their proprietors, as we have before observed, reckoned them by thousands. Less attention being paid to them as they continued to increase, they were suffered to run wild, and spreading over a country of boundless extent, under a mild climate, and covered with rich pasture, their number became immense, They range over the vast plains which extend from Buenos Ayres towards the Andes, in herds of thirty or forty thousand; and the unlucky traveller who once falls in among them, may proceed several days before he can disentangle himfelf from among the crowd that covers the face of the earth. and Idems to have no end. They are hardly less numerous in New-Spain, and in several other provinces; they are killed merely for the lake of their hides; and the flaughter at certain feafons is lo great, that the stench of the carcales which are left in the field would infect the air, if large packs of wild dogs. and vast flocks of gallinazos, or American vultures, the most voracious of all the feathered kind, did not instantly devour The number of those hides exported in every fleet to Europe is very great, and is a lucrative branch of commerce,

Almost all these may be considered as staple commodities peculiar to America, and different, if we except that last men-

floned, from the productions of Spain.

When the importation into Spain of thole various articles from her colonies first became active and considerable, her interior industry and manufactures were in a state so prosperous, that with the product of these she was able both to purchase the commodities of the new world, and to aniwer its growing demands. Under the reigns of Ferdinand and Habella, and

B b 2

Charles V. Spain wis one of the molf industrious countries in Butoper ther many focurrer in wood, and flax, and filk, were for contentione, his protected only to furnish what was fufficient for her own confirmation; but to afford a furplus for exportation. Minemia marked for them, formerly unknown, and to which the above had necess; opened in America, the had recourse and here demetties flore and found there an abundent fupply This will employment much naturally have added vivacity to be fpirit of industry prourified and invigorated by it the monufactures, the population, and wealth of Spain might have gone on increasing in the fame proportion with the growth of her colonies to but various caufes prevented this The fame thing happens to nations as to individuals. Wealth, which flows in gradually, and with moderate increase, feeds and nonrishes that adivity which is friendly to commerce; and calls it forth into vigorous and well-conducted exertions; but when opulence pours in suddenly, and with too full a stream, it overtuens all fober plans of industry, and brings along without a tafte for what is wild and extravagent, and daring in buliness or in action. Such was the great and fudden augmentation of power and revenue that the possession of America brought into Spain; and lone symptoms of its pernicious influence upon the political operations of that moneychy foon began to appear mon

When Philip II, alcended the Spanish throne, with talents far inferior to thole of his father, and remittances from the col lonies became a regular and confiderable branch of revenue. the fatal operation of this tapid change in the flate of the king doms both on the monarch and his people, was at once confaicuous. Philip possessing that spirit of unceasing affiduity. which often characterifes the ambition of men of moderate tal lents, entertained such an high opinion of his own resources. that he thought nothing too arduous for him to undertake; mut up himself in the solitude of the escurial, he troubled and annoyed all the nations around him, He waged open war with the Dutch and English; he encouraged and sided a rebellious faction in France; he conquered Portugal, and main tained armies and garrifons in Italy, Africa, and both the Indies. By fuch a multiplicity of great and complicated oper rations, purfued with ardour during the courfe of a done reign, Spain was drained both of men and money. Under the weak administration of his successor, Philip 111, the vigour of the nation continued to decrease, and funk into the lowest decline when the inconfiderate bigotry of that monarch expelled at once and and districted at such the course to it's

mean a million of his meltindustrious subjects, at the Very time when the esthaulted state of the kingdom required dame entition ordinary exertion of political wisdom to segment at a markous and to review its strength. Early in the segment at a markous and to review its strength. Early in the segment at a markous and to review its strength of parts of her people; that from inability to recruit benerates has parabelled decontrast ben operations, her shourishing manufactures over its life inability that decay which had been the steerest of all should were ruined, her extensive foreign commentatives liftly the trade between different pasts of her own dominions was insert rupted, and the ships which attempted to carry it one were taken and plundered by cenenies whom she once despited Even against the trade by cenenies whom she once despited Even against the was neglected, and one of the most fertile countries in Europe hardly railed what was lassicint for the support of its own inhabitants.

the proportion as the population and manufactures of Spain declined, the demands of her colonies continued to increase. The Spaniards, like their monarchs, intoxicated with the wealth which poured in annually upon them, deserted the paths of industry, to which they had been accustomed, and repaired with eagerness to those regions from whence this opulance affaced. By this rage of emigration, another drain was opened, and the firength of the colonies augmented by exhaulting that of the mother country, and a long of the life in the colonies augmented by exhaulting that of the mother country.

Spain, thinned of people, and decreating in industry, was unable to supply the growing demands of her colonies? His han recourse to her neighbours; the manufactures of the Low Countries of England, of France, and of Italy, which her wants called into existence, or animated with new vivacity, furnished in abundance whatever she required. In vain did the fundamental law, concerning the exclusion of foreigners from trade with America, oppole this innovation. Necessity. more powerful than any statute, defeated its operations, and confirmined the Spaniards themselves to concur in cluding it. The English, the French, and Dutch, relying on the fidelity and honoun of Spanish merchanis, who lend their names to cover the deceit, continue to fend out their manufactures to America, and received the exorbitant price for which they are fold there, either in specie, or in the rich commodities of the new world. Neither the dread of danger, nor the allurement of profit, lever induced a Spanish factor to betray or defraud the persons who confided in him; and that probity which is the pride and distinction of the nation, contributes to its ruin,

The treasure of the new world may therefore be faid not to be long to Spain the fore in reaches Europe, it is anticipated as the price of goods purchased from foreigners.

Thus the possessions of Spain in America have not proved a source of population and of wealth to her, in the lang manner as those of other nations. In the countries of Europe, where the spirit of industry subside in full vigour, every person settled in such colonies as are smiler, in their situation to those of Spain, is supposed to give employment to three or four at home in supplying his wants. But wherever the mother country cannot afford this supply, every emigrant may be considered as a citizen lost to the community, and strangers must reap all the benefit of answering his demands. Such has been the internal state of Spain from the close of the sixteenth century, and such her inability to supply the growing wants of her colonies.

The fatal effects of the disproportion between their demands. and her capacity of answering them, have been much increased by the mode in which Spain has endeavoured to regulate the intercourse between the mother country and the colonies. It is from her idea of monopolizing the trade with America, and debarring her subjects there from any communication with foreigners, that all her jealous and fystematic arrangements have arisen; these are so singular in their nature and consequences, as to merit a particular explanation. In order to fecure the monopoly at which the aimed, Spain did not vest the trade with her colonies in an exclusive company, a plan which has been adopted by nations more commercial, and at a period when . mercantile policy was an object of greater attention, and ought to have been better understood; The Dutch gave up the whole trade with their colonies, both in the Balt and West-Indies, to exclusive companies. The English, the French, and the Danes, have imitated their example with respect to the Kalt-Indian commerce, and the two former have laid a fimilar restraint upon some branches of their trade with the new world. The wit of man cannot, perhaps, devile a method for checking the progress of industry and population in a new colony more effectual than this. The interest of the colony, and of the exclusive company, must in every point be diametrically opposite; and as the latter possesses such advantages in this unequal contest, that it can prescribe at pleasure the terms of intercourfe, the former must not only buy dear and fellcheap, but must suffer the mortification of having the increase

of its furplus flock discouraged by those very persons to whom slowe it was dispose of its productions, were not to order the state of the productions.

Spain, it is probable, was preferred from falling into this error in policy, by the high ideas which the early formed concerning the riches of the new world. Gold and filver were commodities of too high a value to vest a monopoly of them in private hands. The crown wished to retain the direction of Tommerce fo inviting, and in order to fecure that, ordained the cargo of every thip fitted out for America, to be inspected by the officers of the Cafa de Contratacion in Seville, before it could receive a licence to make the voyage; and that on its return, a report of the commodities which it brought thould be made to the fame board, before it could be permitted to land them. In confequence of this regulation, all the trade of Spain with the new world centered originally in the port of Seville, and was gradually brought into a form, in which it has been conducted with little variation from the middle of the fixteenth century, almost to our own times. For the greater fecurity of the valuable cargoes fent to America, as well as for the more easy prevention of fraud, the commerce of Spain, with its colonies, was carried on by fleets which failed under firing convoys; these fleets confisted of two squadrons, one distinguished by the name of the galleons, the other by that of the flota, are equipped annually. Formerly they took their departure from Seville, but as the port of Cadiz has been found more commodious, they have lailed from it fince the year 1720.

The galleons destined to supply Terra Firms, and the kingdoms of Peru an Chili, with almost every article of luxury of necessary consumption that an opulent people can demand, touch first at Carthagena, and then at Porto Bello; to the former, the merchants of Santa-Martha, Garaccas, the new kingdom of Granada, and several other provinces resort; the latter is the great mart for the rich commerce of Peru and Chili. At the leason when the galleons are expected, the product of all the mines in these two kingdoms, together with their other valuable commodities, is transported by sea to Panama; from thence, as foon as the appearance of the fleet from Europe is announced, they are conveyed across the isthmus, partly on mules, and partly down the river Chagte to Porto Bello. This paltry village, the climate of which, from the pernicious union of

of intercourle, the forces mult more only buy dear and fell Servan ent got all to Smith's Inquiry, vii. 17 101 Huer und reader

meedive heat, consinual moisture, and the putrid exhalations ariling from a rank foil, is more fatal to life than any perhaps in the known world, is immediately filled with people. From being the relidence of a few negroes and mulattoes, and of a distribute faithfur relieved every three months, Porto Bella crowded with opulent merchants from every corner of Peru, adjacent provinces; a fair is opened, the wealth of America, is exclusived for the manufactures of Europe; and richest trested on the face of the earth is begun and finished. with that limplicity of transaction and that unbounded confidence which accompanies extensive commerce. The flots holds its course to Vera Cruz. The treasures and commodities of New Spain, and the depending provinces, which were depolitaed at Puebla de los Angeles, in expediation of its arrival, are carried thicker, and the commercial operations of Vera Cruz, conducted in the same mannet with those of Porto Bello, are inferior to them only in importance and value. Both fleets, as foun as they have completed their cargods from America, rendezvous at the Havannah, and return in company to Europe.

The stade of Spain with her colonies, while thus fettered and reftracted, came necessarily to be conducted with the same spirit, and upon the same principles as that of an exclusive company. Being confined to a fingle port, it was of course thrown into a few hands, and almost the whole of it was gradually engroffed by a small number of wealthy houses, formerly in Seville and now in Cadiz. Thefe, by combinations which they can easily form, may altogether prevent that competition which preserves commodities at their natural price; and by acting in concort, to which they are prompted by their mutual interest, they may raise and lower the value of them at pleasure; in confequence of this, the price of European toods in America is always high, and often exorbitant. A hundred, two hundred, and even three hundred per cent. are prefits not uncommon in the commerce of Spain with her colonies. From the fame ingroffing spirit it frequently happens, that traders of the fecond order, whole war joules do not contain a complete affortment of commodities for the American tet, cannot purchase from the more opulent merchants such goods as they want, at a lower price than that for which they are fold in the colonies. With the same vigilant jealousy that an exclusive company guards against the intrusion of the free

treder, whole overgrown monopolitis endeavour to check he progress of every one whole ingroschments they dread. The reference of the American commerce to one port, not only affect its domestic state, but limits its foreign operations. A monopolitic state, but limits its foreign operations. hazard left by a conits domente fate, but limits its foreign operations. A monopo-tiff may acquire more, and certainly will hazard left by a con-sided trade which yields exorbitant profit, than by an extensive commerce in which he receives only a moderate return of gain, it is often his interest not to enlarge, but circumferibe the phere of his activity, and interest of calling forth more vigorous exerrious of commercial industry, it may be the object of his atcentron to theck and let bounds to them. By fome fuch maxim the mercantile policy of Spain feems to have regulated its inter-course with America. Instead of furnishing the colonies with European goods in such quantity as might render both the price and the profit moderate; the merchants of Seville and Codia feen to have supplied them with a sparing hand, that the eagernets of competition amongst customers obliged to purchase in feanty market, might enable the Spanish factors to dispose of their cargoes with exorbitant gain. About the middle of the laft century, when the exclusive trade to America from Seville was in its most flourishing state, the burden of the two united fquadrons of the galleons and flots did not exceed twenty feven thouland five hundred tons, The fupply which luch a fleet could carry, must have been very inadequate to the demands of thole populous and extensive colonies, which depended upon it for all the luxuries, and many of the necessaries of life,

Spain early became fentible of her declention from her former prosperity, and many respectable and virtuous citizens employed their thoughts in deviling methods for reviving the decaying industry and commerce of their country. From the violence of the remedies proposed, it is evident how desperate and fatal

the maledy appeared.

Befides wild projects, many schemes, well digested and beneficial, were suggested; but under the feeble monarchs with whom the reign of the Austrian line in Spain closed, incapacity and indecision are conspicuous in every department of gasernment. Instead of taking for their model the active administration of Charles V, they affected to imitate the cautious procraftinating wildom of Philip H. and destitute of his talents, they deliberated perpetually, but determined nothing. No remedy

\* Smith's Inquiry, ii. 174.

was applied to the evils under which the national commerce, domestic as well as foreign, languished. These evils continued to increase, and Spain, with dominions more extensive and more opulent than any European state, possessed neither vigour, nor money, nor industry. At length the violence of a great national convusition roused the stumbering genius of Spain. The efforts of the two contending parties in the civil war, kindled by the Bispute concerning the succession of the crown at the beginning of this century, called forth, in some degree, the an-

ment spirit and vigour of the nation.

As foon as the Bourbons obtained quiet possession of the throne, they difcerned this change in the spirit of the people, and took advantage of it, It was the first object of Philip V. to suppress an innevation which had crept in during the course of the war, and had overturned the whole system of the Spanish commerce with America. The English and Dutch, by their fuenterity in naval power, having acquired such command of the es, as to cut off all intercourle between Spain and her colonies; spain, in order to furnish her subjects in America with those necessaries of life, without which they could not exist, and as the only means of receiving from thence any part of their treafure, departed to far from the ulual rigour of its maxims, as to open the trade with Peru to her allies the French. The mermants of St. Malo, to whom Louis XIV. granted the privilege of this lucrative commerce, engaged in it with vigour, and carried it on upon principles very different from those of the Spamards. They supplied Peru with European commodities at a moderate price, and not in stinted quantity. The goods which they imported were conveyed to every province of Spanish-America in such abundance as had never been known in any former period. If this intercourse had been continued, the exportation of European commodities from Spain must have ceased, and the dependence of the colonies on the mother country have been at an end. The most peremptory injunctions were therefore ikued, prohibiting the admission of foreign velfels into any port of Peru or Chili, and a Spanish squadron was employed to clear the South les of intruders, whole sid was no longer necellary.

But though on the cellation of the wer, which was terminated by the treaty of Utrecht, Spain obtained relief from one increachment on her commercial system, she was expected to another, which she deemed hardly less pernicious. As an inducement that might prevail with Queen Anne to conclude

a peace, which France and Spain defired with equal ardour. Y not only conveyed to Great-Britain the Afficato, or contract for supplying the Spanish colonics with negroes, which had formerly been enjoyed by France, but granted it the more catraordinary privilege of fending annually to the fair of Porto Bello, a thip of fee hundred tons, laden with European commodities. In confequence of this British fictories were effebilished at Carthagena, Panama, Vera Crus, Buenos Ayres, and other Spanish settlements. The veri with which Spain had hitherto covered the flate and transactions of her colonies was semoved. The agents of a rival nation, reliding in the towns of most extensive trade, and of chief refort, had the bell opportunities of becoming acquainted with the interior condition of the American provinces, of observing their stated and occasional wants, and of knowing what commodities might be imported into them with the greatest advantage. In confequence of information to authentic and expeditious, the merchants of Jamaica and other English colonies who traded to the Spanids main, were enabled to affort and proportion their cargoes to exactly to the demands of the market, that the contrahand commerce was carried on with a facility, and to an extent unknown in any former period. This, however, was not the most farel confequence of the Assento to the trade of Spain. The agents of the British South fea company, under cover of the importation which they were authorited to make by the thip feat annually to Porto Bello, poured in the commodities on the Spanish continent, without limitation or sellraint. Instead of a ship of five hundred tons, as stipulated in the treaty, they usually employed one which de-seeded nine hundred tons in burden; she was accompanied by two or three imaller vessels, which mooring in lome neighbouring sreek, supplied her clandestinely with fesh bales of goods, to replace fuch as were fold. The infrectors of the fair, and officers of the revenue, gained by exore presents, connived at the fraud. Thus, partly by the operations of the company, and partly by the activity of private interiopers, almost the whole trade of Spanish-America was ingroffed by foreigners. The immense commerce of the galleons, formerly the pride of Spain, and the envy of other nations, funk to nothing, and the fquadron itself reduced from fifteen thouland to two thouland tons, lerved hardly any purpose but to fetch home the royal revenue ariting from the fifth on filver. There have tell sure rolle

While Spain observed those increachments, and felt their perhicious effects, it was impossible not to make some effort to refliain them. Her first expedient was to station ships of force. under the appellation of guards coffes, upon the coafts of thole provinces, to which interlopers most frequently reforted. Some check was by this means given to the progress of the contraband trade, though in dominions fo extensive, and for accellible by feat hardly any number of cruifers was fushcient to guard against its invoads in every quarter. This interruption of an intercourse which had been carried on with so much facility, that the merchants in the British colonies were accustomed to consider it almost as an allowed branch of commerce. excited murmurs and complaints. These authorised in some mesture, and rendered more interesting, by several unjustifiable acts of violence committed by the captains of the Spanish guarda costas, precipitated Great-Britain into a war with Spain. in consequence of which the latter obtained a final release from the Affliento, and was left at liberty to regulate the commerce of her colonies, without being restrained by any engagement with foreign power.

As the formidable incroachments of the English on the Ame, rican trade had discovered to the Spaniards the vast consump. tion of European goods in their colonies, and taught them the advantage of accommodating their importations to the occasional demand of the various provinces, they perceived the necessity of deviling fome method of Supplying their colonies, different from their ancient one, of fending thither periodical fleets, That mode of communication had been found not only to be uncertain, as the departure of the galleons and flota was fometimes retarded by various accidents, and often prevented by the wars which raged in Europe; but long experience had shewn it to be ill adapted to afford America a regular and timely supply of what it wanted, The scarcity of European goods in the Smalish fettlements frequently became excessive; their price of an enormous height; the vigilant eye of mercantile attention did not fail to observe this favourable opportunity. an ample supply was poured in by interlopers from the English. the French, and Dutch islands; and when the galleons at length arrived, they found the markets to glutted by this illicit commerce, that there was no demand for the commodities with which they were loaded. In order to remedy this, Spain has permitted a confiderable part of her commerce with America to be carried on by register ships. These are fitted put during the intervals between the stated seasons when the

galleons and flots fail, by merchants in Seville or Cadiz, upon obtaining a licence from the council of the Indica, for which, they pay a very high premium, and are deflined for those ports in America where any extraordinary demand is foreseen or expected. By this expedient, such a regular supply of the commodities, for which there is the greatest demand, is conveyed to the American market, that the interloper is no longer allured by the same prospect of excessive gain, or the people in the colonice urged by the same necessity to organe in the heard-out adventures of contraband trade.

In proportion as experience manifested the advantages of carrying on trade in this mode, the number of register ships increased, and at length, in the year 1748, the galleons, after having been employed upwards of two centuries, were finally laid alide. From that period there has been no intercourse with Chili and Peru but by fingle thips, dispatched from time to time as occasion requires, and when the merchants expect a profitable market will open, These ships fail round cape Horn, and convey directly to the ports in the South sea the productions and manufactures of Europe, for which the people fettled in those countries were formerly obliged to repair to Porto Bello or Panama. These towns, as has been formerly observed, must gradually decline when deprived of that commerce to which they owed their prosperity. This disadvantage, however, is more than compensated by the beneficial effects of this new arrangement, as the whole continent of South-America receives new supplies of European commodities with so much regularity, and in fuch abundance, as must not only contribute greatly to the happinels, but increase the population of all the colonies settled there. But as all the register ships destined for the South seas must still take their departure from Cadiz, and are obliged to return thither, this branch of the American commerce, even in its new and improved form, continues subject to the restraints of a species of monopoly, and feels all the pernicious effects of it.

Among the new tastes which the people of Europe have acquired, in consequence of importing the productions of those countries which they conquered in America, that for chocolate is one of the most universal. The use of this liquor, made with a paste formed of the nut or almond of the cococa tree, compounded with various ingredients, the Spaniards first learned from the Mexicans; and it has appeared to them, and to the other European nations, so palatable, so nourishing, and so wholesome, that it has become a commercial article of

confiderable importance. The cocoa tree grows spontaneously in several parts of the torrid zone, but the nuts of the best quality, next to those of Guatimala, on the South for, are produced in the rich plains of Caraccas, a province of Tetra Firms. In confequence of this acknowledged superiority in the quality of cocoa in that province, and its communication with the Atlantic, which facilitates the conveyance to Europe. the culture of the cocoa there is more extensive than in any diffrict of America. But the Dutch, by the vicinity of their fettlements in the small islands of Curazoa and Buen-Ayre, to the coast of Araecas, gradually engrolled the greatest part of the cocos trade. The traffic with the mother country, for this valuable commodity cealed almost entirely, and such was the supine negligence of the Spaniards, or the defects of their commercial arrangements, that they were obliged to receive from the hands of foreigners this production of their own colonies at an exerbitant price. In order to remedy an evil no less disgraceful than pernicious to his subjects, Philip V, in the year 1728, granted to a body of merchants an exclusive right to the commerce with Caraccas and Cumana, on condition of their employing, at their own expense, a sufficient number of armed vessels to clear the coast of interlopers, ciety, distinguished sometimes by the name of the Company of Guipulcoa, from the province of Spain in which it is ellablished, and sometimes by that of the Company of Caraccas, from the diffrist of America to which it trades, has carried on its operations with such vigour and success, that Spain has recovered an important branch of commerce, which she had suffered to be wrested from her, and is plentifully supplied with an article of extensive consumption at a moderate price. Not only the parent state, but the colony of Caraccas, has derived great advantages from this institution; for although, at the first aspect, it may appear to be one of those monopolies, whose tendency is to check the spirit of industry, instead of calling it forth to new exertions, it has been prevented from operating in this manner by feveral falutary regulations, framed upon forelight of fuch bad effects, and of purpole to obviste them. The planters in the Caraceas are not left to depend entirely on the company, either for the importation of European commodities, or the fale of their own productions, The inhabisents of the Canary illands have the privilege of fending thither annually a register-ship of considerable burden; and from Vera Cruz, in New-Spain, a free trade is permitted in every port, comprehended in the charter of the company,

apans,

In confequence of this, there is such a competition, that, both with respect to what the colonies purchase, and what they sell, the price seems to be fixed at its natural and equitable rate. The company has not the power of raising the former, or of degrading the latter at pleasure; and accordingly, since it was established, the increase of culture, of papulation, and of live stock, in the province of Caractal, has been very considerable.

While Spain adhered with rigour to her encient maxims concerning her commerce with America, the was to much afraid of opening any channel, by which an illicit trade might find admission into the colonies, that the almost shut heriest out from any intercourse with them, but that which was carried on by her annual fleets. There was no establishment for a regular communication of either public or private intelligence between the mother country and its American lettlements. From the want of this necessary institution, the operations of the state, as well as the business of individuals, were retarded or conducted unfkilfully, and Spein often received from foreigners her first information with respect to very interesting events in her own colonies. But though this defect in police was lendibly felt, and the remedy for it was obvious, that jealous ipirit with which the Spanish monarchs guarded the exclusive trade, restrained them from applying it. At length Charles III. surmounted those considerations which had deterred his predecellors, and in the year 1764 appointed packet-boats to be dispatched on the first day of each month from Corunns to the Havannah or Porto Rico. From thence letters are conveyed in imaller velicle to Vera Cruz and Porto Bello, and transmitted by post through the kingdoms of Terra Firms, Granada, Peru and New-Spain. With no less regularity packet boats lail once in two months to Rio de la Plata, for the accommodation of the provinces to the east of the Andes. Thus provinon is made for the speedy and certain circulation of intelligence throughout the valt dominions of Spain, from which equal advantages must redound to the political and mercantile interest of the kingdom. With this new arrangement, a scheme of extending commerce has been more immediately connected, Each of the packet boats, which are vellels of fome confiderable burden, is allowed to take in half a loading of fuch commodities as are the product of Spain, and most in demand in the ports whither they are bound. In return for these they may bring home to Corunna an equal quantity of American productions. This may be considered as the first relaxations of

those rigid laws, which confined the trade with the new world to in high poin, and the hold strempt to admit the rest of the singular to fome therein it.

It was found by one more declive. In the year 1/65, Chirles Mr. Hid open the trade to the windward flands, Cubs, Hilpsmola, Porto-Rico, Margarita and Trinaded, to his fubjetts in every province of Spain. He permitted them to fail from certain ports in each province, which are specified in the editt, it any leafon, and with whatever cargo they doen ed most proper, without any other warrant than a limple clearly ance from the cultom house of the place whence they took their departure. He released them from the numerous and opposifive duties impoled on goods experted to America Indian place of the whole lubitituted a moderate tax of the in the hundred on the commodities fent from Spain. He stlowed them to return either to the fame port, or to any other where they might hope for a more edvantageous market, and there to enter the homeward cargo, on payment of the utual duties, This ample privilege, which we duce broke through all the fences which the jealous policy of Spain had been lahouring for two centuries and schalf, to throw round its commercial intercourse with the new world, was foon after extended to Louisians, and to the provinces of Yucatan and Cambeastory and all help give transciountered no bear of the red

Still however, the commercial regulations of Spain with respect to her colonies are too nigid and systematical to be corried into complete execution. The legislature that ileads grade with impolitions too heavy, or fetters it by reftrictions too fevere, defeats its own intention, and is only multipliging the inducements to violate its flatutes, and propoling an high premium to succurage illicit traffic. The Spaniards both in Europe and America, being circumferibed in their mutual intercourse by the jealouty of the crown, or oppressed by its exactions, have their invention continually on the firetch how to clude its edicts. The vigilance and ingentity of private interest discover means of effecting this, which public william cannot storefee, nor public suthority prevent. This spirit counteracting that of the laws pervades the commerce of Spein with America in all its branches, and from the highest departments in government descends to the lowest. The very selectrs appointed to check contraband trade are often employed as instruments in carrying it on; and the boards instituted to seltrain and punish it, are the channels through which it flows. The king is supposed, by the most intelligent Spanish westers

to be defrauded, by various artifices, of more than one half of the revenue which he ought to receive from America; and as long as it is the interest of so many persons to shreen those artifices from detection, the knowledge of them will never reach the throne.

Before we close this account of the Spanish trade in America, there remains one detached, but important branch of it, to be mentioned. Soon after his accelhon to the throne, Philip II. formed a scheme of planting a colony in the Philippine islands, which had been neglected fince the time of their discovery; and he accomplished it by means of an armament fitted out from New-Spain. Manilla, in the illand of Luconia, was the station chosen for the capital of this new establishment. From it an active commercial intercourse began with the Chinese, and a considerable number of that industrious people, allured by the prospect of gain, settled in the Philippine islands under the Spanish protection: they supplied the colony so amply with all the valuable productions and manufactures of the East, as enabled it to open a trade with America, by a course of navigation the longest from land to land on our globe. In the infancy of this trade it was carried on with Callao, on the coast of Peru; but experience having discovered the impropriety of fixing upon that as the port of communication with Manilla, the staple of the commerce between the cast and west was removed from Callao to Acspulco, on the coast of New-Spain.

h After various arrangements, it has been brought into a regular form : one or two ships depart annually from Acapulco, which are permitted to carry out filver to the amount of five hundred thousand pelos, but they have hardly any thing elfe of value on board; in return for which, they bring back spices, drugs, chine and japan wares, calicoes, chintz, mullins, filks, and every practious article, with which the benignity of the climate, or the ingenuity of its people, has enabled the East to Supply the rea of the world. For some time the merchants of Peru were admitted to participate in this traffic, and might fend annually a thip to Acapulco to wait the arrival of the vessels from Manilla, and receive a proportional share of the commodities which they imported At length, the Peruvians were excluded from this trade by most rigorous edicts, and all the commodities from the East reserved solely for the consumption of New Spain to while the great of entering the in

In confequence of this indulgence, the inhabitants of that country enjoy advantages unknown in the other Spanish colo-

nies. The manufactures of the East are not only more suited to a warm climate, and more showy than those of Europe, but can be sold at a lower price; while, at the same time, the profess upon them are so considerable, as to enrich all those who are employed, either in bringing them from Manilla, or vending them in New-Spain. As the interest both of the buyer and seller concurred in favouring this branch of commerce, it has continued to extend in spite of regulations, concerted with the most anxious jealously to circumscribe it. Under cover of what the laws permit to be imported, great quantities of India goods are poured into the markets of New-Spain, and when the slota arrives at Vera Cruz from Europe, it often finds the wants of the people already supplied by cheaper and more acceptable commodities.

There is not, in the commercial arrangements of Spain, any circumstance more inexplicable than the permission of this trade. between New-Spain and the Philippines, or more repugnant to its fundamental maxim of holding the colonies in perpetual dependence on the mother country, by prohibiting any commercial intercourse that might suggest to them the idea of receiving a supply of their wants from any other quarter. This permission must appear still more extraordinary, from considering that Spain herself corries on no direct trade with her settlements in the Philippines, and grants a privilege to one of her American colonies, which the denies to her subjects in Europe. It is probable, that the colonists who originally took possession of the Philippines, having been fent out from New-Spain, begun this intercourse with a country which they considered, in some measure, as their parent state, before the court of Madrid was aware of its confequences, or could establish regulations in order to prevent it. Many remonstrances have been presented against this trade, as detrimental to Spant, by diverting into another channel a large portion of that treasure which ought to flow into the kingdom, as tending to give rife to a spirit of independence in the colonies, and to encourage innumerable frauds, against which it is impossible to guard in transactions so far removed from the inspection of government. But as it requires no flight effort of political wildom and vigour to abolish any practice which numbers are interested in supporting, and to which time has added the fanction of its authority, the commerce between New-Spain and Manilla feems to be as confiderable as ever, and may be considered as one chief cause of the elegance and splendor conspicuous in this part of the Spanish dominions.

Charles the star the hollow we want in his milester.

Steam Library and the strong of the second o

THIS territory is fituated between the equator and 35° fouth latitude, and 60° west longitude; it is about one thousand five hundred and fixty miles in length, and one thousand in breadth; but, measuring along the coast, it is two thousand miles long, and is bordered with mountains that open from time to time, and form good harbours where vessels may lie in safety.

It is bounded by the mouth of the river Amazon and the Atlantic ocean on the north; and by the same ocean on the east; on the south by the river Plata; on the west by morasses, lakes, torrents, rivers, and mountains, which separate it from Amazonia and the Spanish possessions. On the coast are three small illands, where ships touch for provisions on their voyage to the South seas, viz. Fernando, St. Barbaro and St. Catherine's.

It was accidentally discovered by the Portuguese in 1500. Emanuel, king of Portugal, had equipped a squadron of thirteen tail, carrying twelve hundred soldiers and sailors destined for the East Indies, under the conduct of Peter Alvarez Cabral. This admiral, quitting Lisbon on the 9th of March 1500, struck out to sea to avoid the coast of Guinea, and steered his course southward, that he might the more easily turn the cape of Good stope. On the 24th of April he got sight of the continent of South-America, which he judged to be a large island at some distance from the coast of Assica. Coasting along for some time, he ventured to send a boat on shore, and was assonished to observe the inhabitants entirely different from the Africans,

in features, hair and complexion. It was found, however, impracticable to feize upon any of the Indians, who retired with great celerity to the mountains on the approach of the Poetuguefe; yet, as the failure had discovered a good harbour, the admiral thought proper to come to an anchor, and called the bay Puerto Seguro. Next day he fent another boat on shore, and had the good fortune to lay hold on two of the natives, whom he clothed and treated kindly, and then dismissed, to make a proper report to their countrymen. The stratagem had the desired effect. The Indians, having heard the relation of the prisoners, immediately crowded to the shore, singing, dancing, and sounding horns of different kinds; which induced Cabral to land, and take solemn possession in the name of his Portuguese majesty.

As foon as the court of Lisbon had ordered a survey to be taken of the harbours, bays, rivers and coasts of Brasil, and was convinced that the country afforded neither gold nor filver, they held it in such contempt, that they sent thither none but condemned criminals and abandoned women. Two ships were sent every year from Portugal, to carry the resuse of the kingdom to this new world, and to bring home parrots, and woods for the dyers and cabinet-makers. Ginger was afterwards added, but soon after prohibited, less it should interfere with the sale of the same article from India.

In 1548, the Jews, many of whom had taken refuge in Portugal, beginning to be perfecuted by the inquisition, were Aripped of their possessions, and banished to Brafil. Here, however, they were not entirely forlaken; many of them found kind relations and faithful friends; others, who were known to be men of probity and understanding, obtained money in advance from interchants of different nations, with whom they had formerly had transactions. By the affiliance of fome enterprifing men they were enabled to cultivate fugar-canes, which they first procured from the island of Madeira. Sugar, which till then had been used only in medicine, became an article of luxury; princes and great men were all eager to procure them! felves this new species of indulgence. This circumstance proved favourable to Brafil, and enabled it to extend its lugar plantations. The court of Lisbon, notwithstanding its prejudices, began to be sensible, that a colony might be beneficial to the mothat country, without producing gold or filver; and this feitlement, which had been wholly left to the management of the colonile, was now thought to deferve fome kind of attention; and acgood of the whole, there examed in a look mayed, if the ind whi ing. eng to w inha the ber COUL peop the decli felve in th and: alfo and

This able governor began by reducing their men, with ha always dived in a flate of enarchy, into proper lubordination and bringing their feattered plantations closer together; are which he applied himself to acquire some information respect ing the natives, with whom he knew he must be necellarily engaged either in traffic or war. This it was no early matter to accomplish. Braul was full of small nations, some of which inhabited the forests, and others lived in the plains and slong the rivers; some had settled habitations, but the greater num ber of them led a roving life, and most of them had no intercourse with each other. It is not to be supposed, that such a people would be at all disposed to submit to the yoke which the Portuguese wanted to put upon them. At first they only declined all intercourse with these frangers; but finding themfelves pursued in order to be made flaves, and to be employed in the labours of the field, they took the resolution to murd and devour all the Europeans they could foils upon! The friends and relations of the favages show were taken prifer allo ventured to make frequent at present and were fometimes successful; so that the present the second forced to attend to the double employeem

Soura, by building Sand Strikes, come to the strike to colony; but the honourse of blings, and was relevable it really useful to the mother country, was relevable lefults who attended him. These men, who for their art of infinuation and address have been equalled by some differed themselves among the Indians. When appears were murdered, they were immediately replaced and seeming to be inspired only with sentiments of and seeming to be inspired only with sentiments of and charity, the Indians, in process of time, grew not only familiar but passionately fond of them. As the midlionaries were too sew in number to transact all the business themselves, they frequently deputed some of the most intelligent Indiana in their stead. These men, having distributed hatchets, knives, and looking-glasses, among the savages they met with, represented the Portuguese as a harmless, humane, and good fort of people.

The prosperity of the colony of Brasil, which was visible to all Europe, excited the envy of the French, Spaniards and Dutch successively: the latter, indeed, bid fairest for the conquest of the whole; their admiral Henry Lonk arrived, in the

beginning of the year 1630, with forty fix men of war, on the coast of Fernambucca, one of the largest and best fortified saptainships of these parts. He reduced it after several obstinate engagements, in which the was slways victorious. The troops he left behind subdued the captainships of Termaraca, Pareiba, and Rio Grande, in the years 1693, 1694, and 1695. as well as Fernembucca, furnished annually a large quantity of fugar, a great deal of wood for dying, and other commodities, The Hollanders were to elated with the acquisition of this wealth, which flowed to Amsterdam instead of Lisbon, that they desermined to conquer all the Brafils, and intrufted Maurise of Naslau with the conduct of this enterprise. That general reached the place of his destination in the beginning of the year 1627; he found the foldiers fo well disciplined, the commanders such experienced men, and so much readiness in all to engage, that he directly took the field. He was fuccessively opposed by Albuquerque, Banjola, Lewis Rocca de Borgia, and the Brasilian Cameron, the idol of his people, passionstely fond of the Portuguese, brave, active, cunning, and who wanted no qualification necessary for a general, but to have formed the ort of war under able commanders. These several chigfs exerted their utmost efforts to defend the possessions included the protection; but their endeavours proved the captainships of Siara, resimpe, and the greater part of that of Bahia. Seven of freen provinces which compoled the colony had already. they flattered themselves that one or two campaigns would make them malters of the rest of their caepat pollession that part of America, when they were the revolution happening on the banish-And placing the duke of Braganza on the throne. After this, the Portuguele recovering their spirits, foon drove the Dutch out of Brafil, and have continued male ters of it ever fince, de la de

The country of Brafil is divided into the following provinces, or captainships, as they are called, viz. Paria, Maragnano, Siara, Rio Grande, Pareiba, Tamarica, Fernambucca, Seregippe, Bahia, Porto Seguro, Esperito Santo, Rio de Janeiro, Angra, St., Vincent, and Del Rey.

The harbours of Brasil are Panambuco, All Saints, Rio Janeiro, the port of St. Vincent, the harbour of Gabriel, and the port of St. Salvador; and with respect to rivers, there are a great number of noble streams, which unite with the rivers Amazon and Plata, besides others which fall into the Atlantic ocean.

The climate of Brafil has been deferibed by two eminant paturalities Pifo and Margrave, who observed it with a philo lophical occurrey, to be samperate and mild, when compared with that of Africa statey signibe this chiefly to the refreshing wind which blows continually from the fest . The ar is see only cool, but chilly through the night, fo that the natives kindle a fire every evening in their hats. As the rivers in this country annually overflow their banks, and leave a fort of lime upon the lands, the foil here must be in many places amazingly rich; and this corresponds with the best information upon the fubjed. The vegetable productions are Indian corn, fugar canes, tobacco, indigo, hides, ipecacuans, ballam, Brafil wood, which is of a red colour, hard and dry, and is chiefly used in dying, but not the red of the best kind. Here is also the yellow fultic, of use in dying yellow, and a beautiful piece of speckled wood, made use of in cabinet work. Here are five different forts of palm trees, some curious abony, and a great variety of cotton trees. This country abounds in herned cattle, which are hunted for their hides only, twenty thousand being fent annually into Europe. There is also a plenty of deers, hares, and other game. Amongst the wild beafts' found here, are tigers, potcupines, janouverse, and a fierce animal, fomewhat like a greyhound; monkeys, floths, and the topic raffou, and a creature between a bull and an afs, but without horns, and entirely harmlefs, the flesh is very good, and has the flavour of beef. There is a numberless variety of fowl, wild and tame, in this country; among thefe are turkeys, had white hens, and ducks. The remarkable birds are the humming bird; the lanking, fometimes called the unicorn bird, from its having a horn, two or three inches long, growing out of its forehead; the guira, famous for often changing its colour, being first black, then ash-coloured, next white, afterwards scarlet, and last of all crimson; which colours grow richer and deeper the longer the bird lives. Among the abundance of fish with which the feas, lakes, and rivers of this country are flored, is the globe fish, so called from its form, which is so beset with spines like a hedgehog, that it bids defiance to all fish of prey. But the most remarkable creature is the fea bladder, so called because it greatly resembles one, and swims on the surface of the waves; the infide is filled with air, except a small quantity of water, that serves to poise it. The skin is very thin and transparent, and like a bubble raised in the water resteds all the colours of the fky. Brafil breeds a great variety of ferpents and venomous creatures, among which are the Indian falaman.

Birghoes, a species of serpent about fever yards long, and the it the mitte-fathe, which there atthin an enormous fire; e liboyd, of ree-buck facile, which authors inform us are appable of swallowing a roe-buck whole with his horns, being ctween twenty and thirty foot in longth, and two yards in stroumference. Befides thole, there are many other infolts and

erpents of a dangerous and venomous sature.

The gold and diamond mines are but a recont discovery they were first opened in the year 1681, and have fince yield. ed above five millions fterling annually, of which fum a fifth belongs to the crown. So plentiful are diamonds in this courtry, that the court of Portugal has found it necessary to referein their importation, to prevent too great a dimunition of their value: They are neither to hard nor for clear as those of the East-Indies, nor do they fparkle fo much, but they are whiter, The Brafilian diamonds are fold ten per cent. cheaper than the Oriental ones, Supposing the weights to be equal. The largest dismond in the world was fent from Brafil to the laing of Portugal; it weight one thousand fix hundred and eighty corets, or twelve bunces and a half, and has been valued at fixty-fix millions feven hundred and eighty-laven thouland five hundred pounds. Some fkilful lapidaries however are of opinion that this supposed dismondate only a sopen in which cafe a very great shatement must be made in its value. The crown revenue ariling from this colony amounts to two millions sterling in gold, if we may credit some late writers, befides the duties and customs on merchandile imported from that quarter. This, indeed, is more than a fifth of the precious metal produced by the sames, but every other confequent advantage confidered, it probably does not much exceed the truth.

The extraction of gold is neither very laborious nor dangerous in Brafil. It is fometimes on the furface of the foil, and this is the pureft kind, and at other times it is necessary to dig for it eighteen or twenty feet, but feldom lower. It is found in larger pieces upon the mountains and barren rocks than in the valleys, or on the borders of the river. Every man who different a mine, must give notice of it to the government. If the vein be thought of little confequence by persons appointed to examine it, it is always given up to the public; if it be declared to be a rich veing the government referve a portion of it to themselves; another share is given to the commandant, a third to the intendant, and two shares are secured to the disco-

St. Salvador is the capital of rafil. This city has a noble, specious and commodious burbour, is built on a high and steep rock, hoving the sea upon one side, and a lake forming a crescent on the other. The situation makes it in a manner impregnable by nature, and the Portuguese have besides added to it very strong foreisseations in it is a populous, magnificent, and beyond comparison the most gay and opulent in all Brasil.

The trade of Brasil is very great, and increases every year. The Portuguese have opportunities of supplying themselves with slaves for these several works, at a much cheaper rate than any other European power that has settlements in America, they being the only European nation that has established colonies in Africa, from whence they import as many as forty thousand negroes annually.

The excessive consumence of people to the Brasil colonies, as well from other countries as from Portugal, not only enlarges the imports of yold, diamonds, fugar, tobacco, hides, drugs and medicines, but what is of infinitely more importance to Europe in general, the exportation of the manufactures of this hemilphere, of which the principal are the following i Great-Britain feride woollen manufactures, such as fine bread medley cloths, fine Spanish cloths, scarlet and black cloths, seves, duroys, druggets, figathies, stalloons, samblets, and Norwich Stuffs, black Colchoftes bays, fays, and perpetuanas, called long ells, hats, flockings, and gloves. Holland, Germany, and France, chiefly export fine hollands, bone lace, and fine thread; filk manufactures, pepper, lead, block tip, and other articles, are also fent from different colonies. Belides the particulars already specified, England likewife trades with Portugal, for the use of the Brafils, in copper and brafs, wrought and unwrought pewter, and all kinds of hardware; all which articles have fo enlarged the Portuguele trade, that instead of twelve ships usually employed in the Brasil commerce, there are now never fewer than one hundred fail of large vessels constantly going and returning to those colonies. To all this may be added, that Brafil receives from Madeira great quantity of wine, vinegar, and brandy; and from the Azores, liquors to the amount of twenty-five thouland pounds per annum. Indeed, the commerce of Brasil alone is sufficient to raise Portugal to a considerable height of naval power, as it maintains a constant nursery of seamen; yet a certain infatuation in the policy of the country has prevented that effect even

F W T T E G

amidst all these extraordinary advantages. All the ships in this trade being under the direction of the government, have their appointed seasons of going and returning, under convoy of a certain number of men of war; nor can a single ship clear out or go, except with the seet, but by a special licente from the king, which is seldom granted, though it is easily determined that such restrictions can prove no way beneficial to the general commerce, though possibly the crown revenue may be better guarded thereby. The seets sail in the following order, and at the following stated periods: that to Rio de Janeiro sets sail in January; the seet to Bahia, or the bay of All Saints, in February; and the third seet, to Fernambucca, in the month of March.

The native Brafilians are about the fize of the Europeans, but not fo flout. They are subject to fewer distempers, and are long lived. They wear no cloathing; the women wear their hair extremely long, the men cut their's thort; the women wear bracelets of bones of a beautiful white, the men necklaces of the same; the women paint their faces, and the men their bodies. The food of the Brasilians is very simple; they live upon shell fish by the sea side, along the rivers by fishing, and in the forests by hunting ; and when thefe fail, they live upon cassava and other roots. They are extremely fond of dancing and other amusements, and these amusements are not interrupted by the worship of a Supreme Being, for it is said they know of none, nor is their tranquillity disturbed by the dread of a future state. of which they have no idea. They have, however, their magicians, who, by ftrange contortions, fo far work upon the credulity of the people, as to throw them into violent convultions, If the impostures of these magicians are detected, they are immediately put to death, which ferves in some measure to check the spirit of deceit. Every Brasilian takes as many wives as he chouses, and puts them away when he gets tired of them. When the women lie in, they keep their bed but a day or two; then the mother, hanging the child to her neck in a cotton fearf, returns to her usual occupation, without any kind of inconvenience. Travellers are received with diffinguished marks of civility by the native Brasilians; wherever they go they are furrounded with women, who wash their seet, and welcome them with the most obliging expressions. But it would be an unpardonable affront if they should leave the family where they were first entertained, in hopes of better accommodation in another. Some of these virtues, however, were more applicable to these

natives, before they were corrupted by an intercourse with the Europeans.

With respect to the religion of Brasil, though the king of Portugal, as grand mafter of the order of Christ, is folely in polfellion of the titles; and though the produce of the erufade belongs entirely to him, yet in this extensive country, fix bishoprics have been successively founded, which acknowledge for their superior the archbishop of Bohis, established in the year 1552. The fortunate prelates, most of them Europeans, who fill these honourable sees, live in a very commodious manner, upon the emoluments attached to the function of their ministry, and upon a pention of from fifty to one thouland two hundred and fifty pounds per ann, granted to them by the government. Among the inferior clergy, none but the missionaries who are fettled in the Indian villages are paid, but the others find fufficient resources in the superstition of the people. Besides an annual tribute paid by every family to the clergyman, he entitled to two shillings for every birth, for every wedding, and every burial. Though there is not absolutely an inquisition in Brasil, yet the people of that country are not projected from the outrages of that barbarous and infernal institution.

The government of Brafil is in the viceroy, who has two councils, one for criminal, the other for civil affeirs, in both of which he presides; but there is no part of the world where the lawyers are more corrupt, or the chicanery of their profession more practifed.

to the court who has to have at you want White Side of the state AYENNE is bounded north and east, by the Atlantic ocean; fouth, by the Amezonia; and west, by Guiana, or Surinam. It extends two hundred and forty miles along the coast of Guiana, and nearly three hundred miles within land, lying between the equator and the 5th degree of north latitude.

The land along the coast is low, and very subject to inundations during the rainy scalons, from the multitude of rivers which rush down from the mountains with great impetuosity. Here the atmosphere is very hot, moist and unwholesome, especially where the woods are not cleared away; but on the higher parts where the trees are cut down, and the ground laid out in plantations, the air is more healthy, and the heat great, mitigated by the sea breezes. The foil in many parts is very fertile, producing fugar, tobacco, Indian corn, fruits, and other necesfaries of life.

The French have taken possession of an island upon this coast, called also Cayenne. This settlement was begun in 1635. A report had prevailed for some time before, that in the interior parts of Guiana, there was a country known by the name of del Dorado, which contained immense riches in gold and precious stones, more than ever Cortes and Pizarro had found in Mexico and Peru, and this fable had fired the imagination of every nation in Europe. It is supposed that this was the country in quest of which Sir Walter Raleigh went on his last voyage;

and as the French were not behind their neighbours in their endeavours to find out fo defirable a country, some attempts for this purpose were likewise made by that nation much about the fame time, which at last coming to nothing, the dventurers took up their refidence on the island of Cayenne, In 1642 some merchants of Rouen united their stock, with a delign to support the new colony, but committing their affairs to one Poncet de Bretigny, a man of a ferocious disposition, he declared war both against the colonists and savages, in consequence of which he was foon maffacred. This catastrophe entirely extinguished the ardour of these affociates; and in 1051 a new company was established. This promised to be much more confiderable than the former; and they let out with such a capital as enabled them to collect seven or eight hundred colonists in the city of Paris itself. These embarked on the Seine in order to sail down to Havre de Grace, but unfortunately the Abbé de Marivault, a man of great virtue, and the principal promoter of the undertaking, was drowned as he was stepping into his boat. Another gentleman who was to have acted as general, was affaffinated on his paffage; and twelve of the principal adventurers who had promifed to put the colony into a flourithing fituation, not only were the principal perpetrators of this act, but uniformly behaved in the fame atrocious manner. At last they hanged one of their own number, two died, three were banished to a desert island, and the rest abandoned themselves to every kind of excess. The commandant of the citadel defected to the Dutch with part of his garrion. The favages, roused by numberless provocations, fell upon the remainder; to that the few who were left, thought themselves happy in escaping to the Leeward islands in a boat and two canoes, shandoning the fort; ammunition, arms, and morchendife, fifteen months after they had landed on the island.

In 1663, a new company was formed, whose capital amounted only to eight thousand seven hundred and sifty pounds. By the assistance of the ministry they expelled the Dutch, who had taken possession of the island, and settled themselves much more comfortable than their predecessors. In 1667, the island was taken by the English, and in 1676 by the Dutch, but afterwards restored to the French, and since that time has never been attacked. Soon after, some pirates, laden with the spoils they had gathered in the South seas, came and fixed their residence at Cayenne, resolving to employ the treasures they had acquired in the cultivation of the lands. In 1688, Ducasse, an able seaman, arrived with some ships from France, and

proposed to them the plundering of Surinam. This proposal excited their natural turn for plunder, the pirates betook themselves to their old trade, and almost all the rest followed their example. The expedition, however, proved unfortunate; many of the assailants were killed, and all the rest taken prisoners and sent to the Caribbee islands. This loss the colony has never yet recovered.

The island of Cayenne is about sixteen leagues in circumference, and is only parted from the continent by two rivers.
By a particular formation, uncommon in islands, the land is
highest near the water side, and low in the middle. Hence
the land is so full of morasses, that all communication between
the different parts of it is impossible, without taking a great
circuit. There are some small tracts of an excellent soil to be
found here and there; but the generality is dry, sandy, and
soon exhausted. The only town in the colony is defended by a
covert way, a large ditch, a very good mud rampart, and sive
bastions. In the middle of the town is a pretty considerable
eminence, of which a redoubt has been made that is called the
fort. The entrance into the harbour is through a narrow channel, and ships can only get in at low water owing to the rocks
and reefs that are scattered about this pass.

The first produce of Cayenne was the arnotto, from the produce of which, the colonists proceeded to that of cotton, indigo, and lastly, sugar. It was the first of all the French colonies that attempted to cultivate coffee. The coffee tree was brought from Surinam in 1721, by some deserters from Cayenne, who purchased their pardon by so doing. Ten or twelve years after they planted cocea; we have very little account of the produce with respect to quantity, but as far back as the year 1752, there were exported from Cayenne two hundred and fixty thousand five hundred and forty-one pounds of arnotto, eighty thousand three hundred and fixty-three pounds of sugar, seventeen thousand hine hundred and nineteen pounds of cotton, twenty-six thousand eight hundred and eighty-one pounds of coffee, ninety-one thousand nine hundred and sixteen pounds of cocoa, six hundred and eighteen trees so

# SURINAM, OR DUTCH GUIANA.

THIS province, the only one belonging to the Dutch on the continent of America, is fituated between 5° and 7° north latitude, having the mouth of the Oronoko and the Atlantic, on the north; Cayenne, on the east; Amazonia, on the fouth; and Terra Firma on the west.

The Dutch claim the whole coast from the mouth of Qronoko to the river Marowyne, on which are situated their colonies of Essequibo, Demerara, Berbice, and Surinam. The latter begins with the river Saramacha, and ends with the Marowyne, including a length of coast of one hundred and twenty miles.

A number of fine rivers pass through this country, the principal of which are Essequibo, Surinam, Demerara, Berbier, and Conya. Essequibo is nine miles wide at its mouth, and is more than three hundred miles in length. Surinam is a beautiful river, three quarters of a mile wide, navigable for the largest vessels four leagues, and for smaller vessels fixty or seventy miles farther. Its banks, quite to the water's edge, are covered with evergreen mangrove trees, which render the passage up this river very delightful. The Demerara is about three quarters of a mile wide where it empties into the Surinam, is navigable for large vessels one hundred miles; a hun-

dred miles farther are feveral falls of easy ascent, above which it divides into the fouth-west and south-east branches.

The water of the lower parts in the river is brackish, and unfit for use; and the inhabitants are obliged to make use of rain water, which is here uncommonly sweet and good. It is caught in eisterns placed under ground, and before drinking, is set in large earthen pots to settle, by which means it becomes very clear and wholesome. These cisterns are so large and numerous, that water is seldom scarce.

In the months of September, October, and November, the climate is unhealthy; particularly to strangers. The common difeafes are putrid and other fevers, the dry belly-ach, and the dropfy. One hundred miles back from the fea, the foil is quite different, a hilly country, a pure, dry, wholesome air, where a fire fometimes would not be disagreeable. Along. the fea coast the water is unwholesome, the air damp and sultry; The thermometer ranges from 750 to 900 through the year A north-east breeze never fails to blow from about nine o'clock in the morning through the day, in the hottelt feafons. As the days and nights throughout the year are very nearly of an equal length, the air can hever become extremely heated, nor the inhabitants to greatly incommoded by the heat, as those who live at a greater distance from the equator. The featons were formerly divided regularly into rainy and dry; but of fate years fo much dependence cannot be placed upon them, owing probably to the country's being more cleared, by which means a free passage is opened for the air and

Through the whole country runs a ridge of oyster shells, nearly parallel to the coast, but three or four leagues from it, of a considerable breadth, and from four to eight seet deep, composed of shells exactly of the same nature as those which form the present coast: from this and other circumstances, there is great reason to believe that the land, from that distance from the sea, is all new land, rescued from the water by some revolution in nature; or other unknown cause.

On each fide of the rivers and creeks are fituated the plantations, containing from five hundred to two thousand acres each, in number about five hundred and fifty in the whole colony, producing at prefent annually about fixteen thousand hogsheads of fugar, twelve million pounds of coffee, seven hundred thousand pounds of cocoa, eight hundred and fifty thousand pounds of cotton: all which articles, cotton excepted,

pted,

have fallen off within fifteen years, at least one third, owing to bad management; both here and in Holland, and to other causes. Of the proprietors of these plantations, not above eighty reside here. The sugar plantations have many of them water mills, which being much more profitable than others, and the fituation of the colony admitting of them, will probably become general; of the rest, some are worked by mules, others by cattle, but from the lowness of the country none by the wind. The estates are for the greatest part mortgaged for as much or more than they are worth, which greatly discourages any improvements which might otherwise be made. it not for the unfortunate lituation of the colony in this and other respects, it is certainly capable of being brought to a great height of improvement; dyes, gums; oils, plants for medicinal purposes, &c. might, and undoubtedly will, at some future period, be found in abundance: Rum might be diftilled here; indigo, ginger, rice and tobacco, have been, and may be farther cultivated, and many other articles. In the woods are found many kinds of go, and durable timber, and some woods for ornamental purposes, particularly a kind of mahogany called copic. The foil is perhaps as rich and as luxuriant as any in the world; it is generally a rich, fat, loamy earth, lying in some places above the level of the rivers at high water, which rife about eight feet, but in most places below it. Whenever, from a continued course of cultivation for many years, a piece of land becomes impoverished, for manure is not known here; it is laid under water for a certain number of years, and thereby regains its fertility, and in the mean time a new piece of wood land is cleared. This country has never experienced those dreadful scourages of the West-Indies, hurricanes and droughts; from the lowners of the land it has not to fear, nor has the produce ever been destroyed by insects or by the blaft. In thort, this colony, by proper management, might become equal to Jamaica, or any other. Land is not wanting; it is finely intersected by noble rivers, and abundant creeks; the foil is of the best kind; it is well situated, and the climate is not very unhealthy: it is certainly growing better, and will continue to to do, the more the country is cleared of its woods, and cultivated.

The rivers abound with fish, some of which are good; at certain seasons of the year there is plenty of turtle. The woods abound with plenty of deer, hares, and rabbits, a kind of buffaloc, and two species of wild hogs, one of which, the poccary is remarkable for having its navel on the back. When there it into

The woods are infested with several species of tigers, but with no other ravenous or dangerous animals. The rivers are rendered dangerous by alligators, from four to feven feet long, and a man was a short time since crushed between the jaws of a fish. but its name is not known. Scorpions and tarantulas are found here of a large fize and great venom, and other infects withour number, fome of them very dangerous and troublefome. The torporific cel, the tough of which, by means of the bare hand or any conductor, has the effect of a firong electrical shock. Serpents also, some of which are venomous, and others, as has been afferted by many credible persons, are from twenty-five to fifty feet long. In the woods are monkey's, the floth, and parrots in all their varieties; also some birds of beautiful plumage, among others the flamingo, but few or no finging birds,

Paramaribo, fituated on Surinam river, four leagues from the fea, north latitude 60, west longitude 559 from Greenwich, is the principal town in Surinam. It contains about two thousand whites, one half of whom are Jews, and eight thousand flaves. The houses are principally of wood, some few have glass windows, but generally they have wooden shutters. The streets are spacious and straight, and planted on each fide with orange or

tamarind trees. About seventy miles from the sea, on the some river, is a village of about forty or fifty houses, inhabited by Jews, This village, and the town above mentioned, with the intervening plantations, contain all the inhabitants in this colony, which amount to three thousand two hundred whites, and forty-three thousand flaves. The buildings on the plantations are many of them costly, convenient, and airy. The country around is thinly inhabited with the native Indians, a harmless friendly-race of beings. They are, in general, short of stature, but remarkably well made, of a light copper colour, straight black hair, without beards, high cheek bones, and broad shoulders. In their ears, nofes, and hair the women wear ornaments of filver, &c. Both men and women go naked. One nation or tribe of them tie the lower part of the legs of the semale children, when young, with a cord bound very tight for the breadth of fix inches about the ancle, which cord is never afterwards taken off but to put on a new one, by which means the flesh, which should otherwise grow on that part of the leg, increases the calf to a great fize, and leaves the bone below nearly bare. This, though it must render them very weak, is reckoned a great beauty by them.

muit hem. They paint themselves red, and some are curiously sigured with black. Their food consists chiefly of fish and crabs; and cassay, of which they plant great quantities, and this is almost the only produce they attend to. They cannot be said to be absolutely wandering tribes, but their huts being merely a few cross sticks covered with branches, so as to defend them from the rain and sun, they frequently quit their habitations, if they see occasion, and establish them essewhere. They do not shun the whites, and have been serviceable against the runaway negroes.

Dr. Bancroft observes, that the inhabitants of Dutch Guiana are oither, whites, blacks, or the reddish brown aboriginal natives. The promiscuous intercourse of these different people have generated several intermediate easts, whose colours depend on their degree of consanguinity to either whites, blacks, negroes, or Indians.

The river Surinam is guarded by a fort and two redoubts at the entrance, and a fort at Paramaribo, but none of them of any strength, so that one or two frigates would be sufficient to make themselves masters of the whole colony, and never was there a people who more ardently wished for a change of government than the inhabitants of this colony do at this time. The many gievances they labour under, and the IMMENSE BURTHEN OF TAXES, which threaten the ruin of the colony, make them excusable in their general defire to change the Dutch for a French government. This is precisely the case in Europe, the taxes are so enormous, and the oppression of the Statholderian government so great, that we may venture to affert, that no human power (and we cannot think a Divine one will interfere) can possibly prevent much longer a revolution from taking place,

The colony is not immediately under the States General, but ander a company in Holland, called the Directors of Surinam, a company first formed by the States General, but now supplying its own vacancies; by them are appointed the governor and all the principal officers both civil and military. The interior government confists of a governor, and a supreme and inferior council; the members of the latter are chosen by the governor

from a double nomination of the principal inhabitants, and those of the former in the same manner. By these powers, and by a magniferate presiding over all criminal affairs, justice is executed, and laws are constend describery for the interior government of the colony; those of a more general and public nature are enasted by the directors, and require no approbation by the court.

The colony is guarded by about one thousand six hundred regular troops, paid by the directors. These troops, together with a corps of about two hundred and sifty free negroes, paid by the Dutch government, and another small corps of chasseurs, and as many slaves as the court thinks sit to order from the planters, from time to time, are dispersed at posts placed at proper distances on a cordon, surrounding the colony on the land side, in order, as far as possible, to defend the distant plantations and the colony in general, from the attacks of several dangerous bands of runaway slaves, which from very small beginnings have, from the natural prolificacy of the negro race, and the continual addition of fresh fugitives, arrived at such a height as to have cost the country very great sums of money, and much loss of men, without being able to do these negroes any effectual injury.

The colony was first possessed by the French as early as the year 1630 or 40, and was abandoned by them on account of its unhealthy climate. In the year 1650 it was taken by some Englishmen, and in 1663 a charter grant was made of it by Charles II. About this time it was considerably augmented by the settlement of a number of Jews, who had been driven out of Cayenne and the Brasils, whose descendants, with other Jews, compose at present one half of the white inhabitants of the colony, and are allowed great privileges. In 1667 it was taken by the Dutch, and the English having got possession about the same time of the then Dutch colony of New-York, each party retained its conquest; the English planters most of them retired to Jamaica, leaving their slaves behind them, whose language is still English, but so corrupted as not to be understood

at first by an Englishman.

#### in in the align we are deri 1 10 ELLA EL P. 181 Cast 1 1. 15. AMAZONIA

MAZONIA is fituated between the equator and 20° fouth latitude; its length is one thousand four hundred miles, and its breadth nine hundred miles : it is bounded on the north by Terra Firms and Guiana; on the east by Brasil; on the fouth by Paraguay; and on the west by Peru.

The air is cooler in this country than could be expected. confidering it is lituated in the tors. I zone. This is partly owing to the heavy rains which occasion the rivers to overflow their banks one-half of the year, and partly to the cloudiness of the weather, which obscures the sun great part of the time he is above the horizon. During the rainy season the country is subject to dreadful storms of thunder and lightning.

The foil is extremely fertile, producing cocos nuts, pine apples, bananas, plantains, and a great variety of tropical fruits; cedar, redwood, pak, chony, logwood, and many other forts of dying wood; together with tobacco, fugar canes, cotton, potatoes, balfam, honey, &c. The woods abound with tigers, wild boars, buffaloes, deer, and game of various kinds. The rivers and lakes abound with fish. Here are also sea-cows and turtles; but the crocodiles and water serpents render fishing a dangerous employment.

The river Amazon is the largest in the known world. This river, so famous for the length of its course, this great vallal of the sea, to which it brings the tribute it has received from fo many of its own tributaries, seems to be produced by innumerable torrents, which rush down with amazing impetuosity from the eastern declivity of the Andes, and unite as a spa-

cious plain to form this immense river. In its progress of three thousand three hundred miles it receives the waters of a prodigious number of rivers, some of which come from far, and are very broad and deep. It is interspersed with an infinite number of islands, which are too often overslowed to admit of culture; it falls into the Atlantic occan under the equator, and

is there one hundred and fifty miles broad,

The natives of this country, like all the other Americans. are of a good stature, have handsome features, long black hair, and copper complexions. They are faid to have a tafte for the imitative arts, especially painting and sculpture, and make good. mechanics. Their cordage is made of the barks of trees, and their fails of cotton, their hatchets of tortoile shells or hard stones, their chifels, plains and wimbles, of the horns and teeth of wild beafts, and their canoes are trees hollowed. They spin and weave cotton cloth, build their houses with wood and clay, and thatch them with reeds. Their arms in general are darts and javelins, bows and arrows, with targets of cane or fish skins. The several nations are governed by their chiefs or caziques; it being observable, that the monarchial form of government has prevailed almost universally, both among ancient and modern barbarians, doubtless on account of its superior advantages with respect to war and rapine, and as requiring a much less refined policy than the republican system, and therefore belt adapted for the lavage state. The regalia, which distinguish the chiefs, are a crown of parrots feathers, a chain. of tygers teeth or claws, which hangs round the waift, and a wooden fword, which, according to fome authors, were intended for hieroglyphics,

As early as the time of Hercules and Theseus, the Greeks had imagined the existence of a nation of Amazona; with this sable they embellished the history of all their heroes, not excepting that of Alexander; and the Spaniards, insatuated with this droam of antiquity, transferred it to America. They reported, that a republic of semale warriors actually existed in America, who did not live in society with men, and only admitted them once a year for the purposes of procreation. To give the more credit to this romantic story, it was reported, not without reason, that the women in America were all so unhappy, and were treated with such contempt and inhumanity by the men, that many of them had agreed to shake off the eyoke of their tyrants. It was farther said, that being accustomed to follow the men into the forests, and to carry their

provisions and baggage when they went out to fight or to hunt, they must necessarily have been inured to hardships, and rendered capable of forming so bold a resolution. Since this story has been propagated, infinite pains have been taken to find out the truth of it, but no traces could ever be Lathand Sad wife.

The mind of a good man is pleased with the restection. that any part of South-America has escaped the rayages of European tyrants. This country has hitherto remained unfubdued; the original inhabitants, therefore, enjoy their native freedom and independence, the birthright of every human being. 2. Aganon of the second of the

character proply by, ever is invisible powers, both good and evil; and has they says to hove of grounds to the one, and deprecate he what and versions of the citate.

PATAGONIA is fituated between 25° and 54° fouth latitude, its, length is eleven hundred miles, and its breadth three hundred and fifty: it is bounded north by Chili and Paragua; east by the Atlantic ocean; fouth by the straits of Magellan;

west by the Pacific ocean.

252

The climate is faid to be much colder in this country than in the north under the same parallels of latitude; which is imputed to the Andes, which pass through it, being covered with eternal snow: it is almost impossible to say what the soil would produce, as it is not at all cultivated by the natives. The northern parts are covered with wood, among which is an inexhaustible fund of large timber; but towards the south, it is said, there is not a single tree large enough to be of use to mechanics. There are, however, good passures, which feed incredible numbers of horned cattle and horses sirst carried there by the Spaniards, and now increased in an amazing degree.

It is inhabited by a variety of Indian tribes, among which are the Patagons, from whom the country takes its name; the Pampas and the Cossores: they all live upon fish and game, and what the earth produces spontaneously: their huts are thatched, and, notwithstanding the rigour of the climate, they wear no other clothes than amantle made of seal skin, or the skin of some beast, and that they throw off when they are in action: they are exceedingly hardy, brave and active, making use of their arms, which are bows and arrows headed with

flints, with amuzing dexterity.

Magellan, who first discovered the straits which bear his name, and after him Commodore Byron, have reported, that there exists, in these regions, a race of giants; but others, who have sailed this way contradict the report. Upon the whole we may conclude, that this story is, perhaps, like that of the semale republic of Amazons.

The Spaniards once built a fort upon the straits, and left a garrison in it to prevent any other European nation passing that way into the Pacific ocean; but most of the men perished

The history of Columbus, together with his bold and adventurous actions in the discovery of this country, we have but flightly noticed in this account, as we had done this in a preceding part of this work.\* His elevated mind suggested to him ideas superior to any other man of his age, and his aspiring genius prompted him to make greater and more noble efforts for new discoveries : he crossed the extensive Atlantic, and brought to view a world unheard of by the people of the apcient hemisphere. This excited an enterprising, avaricious, spirit among the inhabitants of Europe; and they flocked to America for the purpoles of plunder. In consequence of which, a scene of bais barity has been acted, of which South-America has been the principal theatre, which thocks the human mind, and almost stage gers belief. No fooner had the Spaniards fet foot upon the American continent, than they laid claim to the foil, to the mines, and to the fervices of the natives, wherever they came, Countries were invaded, kingdoms were overturned, innocence was attacked, and happinels had no afylum. Despotism and cruelty, with all their terrible scourges, attended their advances in every part ; they went forth, they conquered, they ravaged, they destroyed: no deceit, no cruelty, was too great to be made use of to satisfy their avarice: justice was difregarded, and mercy formed no part of the character of these inhuman conquerors: they were intent only on the profecution of schemes most degrading and most scandalous to the human character. In South-America, the kingdoms of Terra Firma; of Peru, of Chiliof Paragua, of Brasil, and of Guiana, successively fell a facrifice to their vicious ambition and avarice. The history of their dulled nothing mentions.

no Basses apar all Re See vol. L' page sous

several reductions was too copious to be inserted at large in a work of this kind; but we have endeavoured to afford the reader a brief view of those transactions which have blatted the character of all those who had any thing to do with the conquest of this part of the globe. Let us then turn from these diffressing scenes; let us leave the political world, where nothing but spectacles of horror are presented to our view; where scenes of blood and carnage distract the imagination; where the avarice, injustice and inhumanity of men, furnish nothing but uneasy fensations ; let us leave these, and enter the natural world. whose laws are constant and uniform, and where beautiful, grand and fublime objects continually prefent themselves to our view:

We have given a description of those-beautiful and spacious rivers which every where interfect this country; and of that immense chain of mountains, which runs from one end of the continent to the other. These enormous masses, which rise to fuch prodigious heights above the humble furface of the earth. where almost all mankind have fixed their residence; these malles, which in one part are crowned with impenetrable and ancient forests, that have never resounded with the stroke of the hatchet, and in another, raile their towering tops, and arrest the clouds in their course, while in other parts they keep the traveller at a diffunce from their fummits, either by ramparts of ice that furround them, or from vollies of frame issuing forth from the frightful and yawning caverns; these masses giving rise to impetuous torrents descending with dreadful noise from their open fides, to rivers, fountains and boiling forings, fill every beholder with aftonishment.

The height of the most elevated point in the Pyrences is, according to Mr. Coffini, fix thousand fix hundred and forty-fix feet. The height of the mountain Gemmi, in the canton of Berne, is ten thousand one hundred and ten feet, The height of the peak of Teneriste, is thirteen thousand one hundred and feventy-eight feet. The height of the Chimborazo, the most elevated point of the Ander, is twenty thousand two hundred and eighty feet. Thus, upon comparison, the highest part of the Andes is seven thousand one hundred and two feet higher than the peak of Teneriffe, the most elevated mountain known in the ancient hemisphere. while filling that is required to be properly to the lighter is freezeward to the

A west to south the second to the same HE val continent of America is divided into two parts, North and South, the narrow ifthmus of Darien ferving as a link to connect them together; between the Florida shore on the northern peninfuls, and the gulf of Maracabo on the fouthern lie a multitude of islands, which are called the West-Indies, from the name of India, originally assigned to them by Columbus; though, in confequence of the opinions of some geographers of the fifteenth century, they are frequently known by the appellation of Antilia or Antilles; this term is, however, more often applied to the windward or Caribbean islands.

Subordinate to this comprehensive and simple arrangement, necessity or convenience has introduced more local distinctions; that portion of the Atlantic which is separated from the main ocean to the north and east by the islands, though known by the general appellation of the Mexican gulf, is itself properly divided into three distinct parts; the gulf of Mexico, the bay of Honduras, and the Caribbean fea, fo called from that class of islands which bound this part of the ocean on the east. Of this class, a group nearly adjoining to the eastern fide of St. John de Porto Rico is likewise called the Virgin isles, The name of Bahama islands is likewise given, or slowers the special special special special

the may be proper to observe, that the old Spanish navigators, in speaking of the Well-India islands, frequently distinguish them into two chastes, by the terms Barlovento and Sotavento, from whence our Windward and Lerward islands, the Caribbean constituting, in strict propriety, the former class, and the illands of Cuba, Jamaica, Hilpaniola and Porto Rico the latter to but the English marines appropriate both terms to the Caribbean islands only, subdividing them according to their lituation in the course of trade; the Windward islands, by their arrangement, terminating, I believe, with Martinico, and the Leeward commencing at Dominica and extending to Porto Rico. ward's Hift. The whole group is called by the Spaniards Lucayos.

intolerable heat, if the trade winds, rifing gradually so the fun. gathers Brength, did not blow in upon them from the fee, and rufresh the sir in such a manner, as to enable them to strend their concerns even under the meridien fun. On the others hand, as the night advances, a breeze begins to be perceived? which blows finantly from the land, as it were from the center, towards the fea, to all points of the compais at once, grand or

By the same remarkable Providence in the disposition of things it is, that when the fun has made a great progress towards the tropic of Cancer, and becomes in a manner verticle, he draws after him fuch a vaft body of clouds, which shield them from his direct beams, and dissolving into rain, cool the air and refresh the country, thirsty with the long drought, which commonly prevails from the beginning of January to the latter end of Mayorely sounded and

The rains in the West-Indies are like floods of water poured from the clouds with a prodigious impetuofity; the rivers fuddenly rife; new rivers and lakes are formed, and in a short time all the low country is under water. Hence it is, that the rivers which have their fource within the tropics, swell and overflow their banks at a certain feafon; but fo militaken were the ancients in their idea of the torrid zone, that they imagined it to be dried and scorched up with a continual and fervent heat, and to be for that reason uninhabitable; when, in reality, some of the largest rivers of the world have their course within its limits, and the moisture is one of the greatest inconveniencies of the climate in feveral places.

The rains make the only distinction of seasons in the West-Indies; the trees are green the whole year round; they have no cold, no frofts, no fnows, and but rarely fome hail; the storms of hail are, however, very violent when they happen, and the hailstones very great and heavy. Whether it be owing to this moisture, which slone does not feem to be a fufficient cause, or to a greater quantity of a sulphureous acid, which predominates in the sir of this country, metals of all kinds that are subject to the action of such causes rust and canker in a very thort time; and this cause, perhaps, as much as the heat itself contributes to make the climate of the West-Indies unfriendly and unpleasant to an European constituand there regions

burricanes, the most terrible calemity to which they are subject as well as the people in the East-Indies, from the climate; this destroys, at a stroke, the labours of many years, and profirates the most exalted hopes of the planter, and at the the moment when he thinks himself out of danger. It is a sudden and violent from of wind, rain, thunder and lightning, attended with a furious (welling of the lest, and lomntimes with an earth, quake; in thort, with every circumflance which the cleaning can affemble that is terrible and delirative, first, they see prelude to the enfuing havoc, whole fields of lugar canes hirled into the air, and scattered over the face of the country. The itropgest trees of the forest are torn up by the roots, and driven about like stubble; their windmills are swept away in a moment; their utenfils, the fixtures, the ponderous copper boilers, and ftills of feveral hundred weight, are wrenched from the ground and battered to pieces; their houses are no protection: the roofs, are forn off at one blait; whilst the rain, which in an hour railes the water five feet, ruthes in upon them with an irrefiltible violence.

The grand staple commodity of the West-Indies is sugar; this commodity was not at all known to the Greeks and Romans, though it was made in China in very early times, from whence was derived the first knowledge of it; but the Portuguele were the first who cultivated it in America, and brought it into request, as one of the materials of a very universal lux. ury in Europe. It is not determined, whether the cane, from which this substance is taken, be a native of America, or brought thither to their colony of Brasil by the Portuguese, from India and the coast of Africa; but, however that may be, in the beginning they made the most, as they still do the best. fugars which come to market in this part of the world. The juice within the fugar cane is the most lively, excellent, and the least cloying sweet in nature, which, sucked raw, has proved extremely nutritive and wholesome. From the molasses rum is distilled, and from the scummings of the sugar a meaner spirit is procured. The tops of the canes, and the leaves which grow upon the joints, make very good provender for er cattle, and the refuse of the cane, after grinding, serves for fire, to that no part of this execulent plant is without its

The negroes in the plantations are subsisted at a very easy rate; this is generally by allotting to each family of them a small portion of had and allowing them two was in the week, Saturday and Sunday, to cultivate it; fome are sublisted in this manner, but others find their negroes a certain portion of Guinea or Indian cern, and to some a falt herring, or a small portion of bacon or salt pork, a day. All the rest of the charge consists in a cap, a shirt, a pair of breeches, and a blanket, and the profit of their labour yields ten or twelve pounds annually. The price of men negroes, upon their first arrival, is from thirty to fifty pounds, women and grown boys left; but fuch negro families as are acquainted with the business of the islands. generally bring above forty pounds upon an average one with another; and these are inflances of a fingle negro man, expert in the bulines, bringing one hundred and fifty guiness; and the wealth of a planter is generally computed from the numb of flaves he possesses on or natural like is the set of possesses for

HIS island, the largest of the Antilles, and the most values ble, lies between 17° and 19° north latitude, and between 76° and 79° west tongitude, is near one hundred and eighty miles in length, and about sixty in breadth; it approaches in its figure to an oval. The windward passage right before it hath the island of Cuba on the west, and Hispaniols on the east, and is about twenty leagues in breadth.

This island was discovered by Admiral Christopher Columbus in his fecond voyage, who landed upon it May 51 1495, and was to much charmed with it; as always to prefer it, to the reft of the illands; in confequence of which, his fon chole it for his dukedom. It was fettled by Juan d'Efquivel, A. D. 1509, who built the town, which, from the place of his birth, he called Seville, and cleven leagues farther to the eaft flood Melilla. Oriston was on the south side of the island, seated on what is now called the Blue Fields river. All their are gone to decay, but St. Jago, new Spanish-Town, is still the capital. The Spaniards d this country one hundred and fixty years, and in their time the principal commodity was cacoa; they had an immense flock of horses, affes, and mules, and prodigious quantities of sattle, The English landed here under Penn and Venables, May 11, 1654, and quickly reduced the island. Cacoa was also their principal commodity till the old trees decayed, and the new ones not thrive; and then the planters from Barbadoes introduced lugar canes, which hath been the great staple ever fince,

The prospect of this island from the sea, by reason of its constant verdure, and many fair and lafe bays, is wonderfully pleafant. The coast, and for some miles within the land, is low; but removing farther, it rifes, and becomes hilly. The whole island is divided by a ridge of mountains running saft and west, fome riling to a great height; and thele are compoled of rock, and a very hard clay, through which, however, the rains that fall incessantly upon them have worn long and deep cavities; which they call gullies. These mountains, however, are far from being unpleasant, as they are crowned even to their summits by a variety of fine trees. There are also about a hundred rivers that iffue from them on both fides; and though none of them are navigable for any thing but canoes, are both pleating and profitable in many other respects. The climate, like that of all countries between the tropics, is very warm towards the fea, and in marshy places unhealthy; but in more elevated situations cooler, and where people live temperately, to the full as wholesome as any part of the West-Indies. The rains fall heavy for about a fortnight in the months of May and October; and as they are the cause of fertility, are stilled seasons. Thunder is pretty frequent, and ometimes showers of hail; but ice or lnow, except on the tops of mountains, are never feen, but on them, and at no very great height, the air is exceedingly cold.

The most castern parts of this ridge are famous under the name of the Blue Mountains. This great chain of rugged rocks defends the fouth fide of the island from those boisterous north-west winds, which might be fatal to their produce. Their streams, though finall, supply the inhabitants with good water. which is a great bleffing, as their wells are generally brackish. The Spaniards were persuaded that these hills abounded with metals; but we do not find that they wrought any mines, or if they did, it was only copper, of which they faid the bells in the church of St. Jago were made. They have several hot springs, which have done great cures. The climate was certainly more temperate before the great earthquake, and the island was supposed to be out of the reach of hurricanes, which since then it hath severely felt. The heat, however, is very much tempered by land and fea breezes, and it is afferted, that the hottest time of the day is about eight in the morning. In the sight, the wind blows from the land on all fides, fo that no thips can then enter their ports.

In an island so large as this, which contains above five millions of acres, it may be very reasonably conceived that there are great variety of soils. Some of these are deep, black, and rich, and mixed with a kind of potter's earth, others shallow and sandy, and some of a zaiddle nature. There are many savannahs, or wide plains, without stones, in which the native Indians had huxuriant crops of maize, which the Spanisida turned into meadows, and kept in them prodigious herds of cattle. Some of these savannahs are to be met with even amongst the mountains. All these different soils may be justly pronounced fertile, as they would certainly be found, if tolerably cultivated, and applied to proper purposes. A sufficient proof of this will evise from a very cursory review of the natural and artificial produce of this spacious country.

It abounds in maize, pulle, vegetables of all kinds, meadows of fine grais, a variety of beautiful flowers, and as great a variety of oranges, lemons, citrons, and other rich fruits. Useful animals there are of all forts, horses, asses, mules, black cattle of a large fize, and theep, the flesh of which is well tasted, though their wool is hairy and bad. Here are also goats and hogs in great plenty, sea and river fish, wild, tame, and was ter fowl. Amongst other commodities of great value, they have the fugar cane, cacoa, indigo, pimanto, cotton, ginger, and coffee; trees for timber and other ules, fuch as mahogany, manchineel, white wood, which no worm will touch, cedar, olives, and many more. Besides these, they have suffic, red wood, and various other materials for dying. To these we may add a multitude of valuable drugs, fuch as guaiacum, china farfaparilla; cassia, tamarinds, vanellas, and the prickle pear or opuntia; which produces the cochineal, with no inconfiderable number of odoriferous gums. Near the coast they have felt ponds, with which they supply their own consumption, and might make any 

As this island abounds with rich commodities, it is happy likewise in having a number of sine and safe ports. Point Morant, the eastern extremity of the island, hath a fair and commodious bay. Passing on to the south there is Port-Royal; on a neck of land which forms one side of it, there stood once the fairest town in this island; and the harbour is as sine a one as can be wished, capable of holding a thousand large vessels, and still the station of the English squadron. Old harbour is also a convenient port, so is Maccary bay; and there are at least twelve more between this and the western extremity, which is point Negrillo, where ships of war lie when there is a war with Spain. On the north side there is Orange bay, Cold harbour, Rio Novo, Montego bay, Port Antonio, one of the finest in

the island, and several others. The north-west winds, which sometimes blow suriously on this coast, render the country on that side less sit for canes, but pimento thrives wonderfully; and certainly many other staples might be raised in small plantations, which are frequent in Barbadoes, and might be very advantageous here in many respects.

The town of Port-Royal stood on a point of land running far out into the fea, narrow, fandy, and incapable of producing any thing; yet the excellence of the port, the convenience of having thips of feven hundred tons coming close up to their wharfs, and other advantages, gradually attracted inhabitants in fuch a manner, that though many of their habitations were built on piles, there were near two thousand houses in the town in its most flourishing state, and which let at high rents. The carthquake by which it was overthrown, happened on the 7th of June, 169s, and numbers of people perished in it, This earthquake was followed by an epidemic disease, of which upwards of three thousand died; yet the place was rebuilt, but the greatest part was reduced to ashes by a fire that happened on the 9th of January, 1703, and then the inhabitants removed mostly to Kingston. It was, however, rebuilt for the third time, and was raising towards its former grandeur, when it was overwhelmed by the fea, August 28, 1722; there is, not withstanding, a small town there at this day. Hurricanes since that time have often happened, and occasioned terrible devastation; one in particular, in 1780, which almost overwhelmed the little 

The island is divided into three counties, Middlesex, Surry, and Cornwall, containing twenty parishes, over each of which presides a magistrate, styled a custos; but these parishes in point of fize are a kind of hundreds. The whole contains thirty-fix towns and villages, eighteen churches and chapels, and about twenty-three thousand white inhabitants.

The administration of public affairs is by a governor and council of royal appointment, and the representatives of the people in the lower House of Assembly. They meet at Spanishtown, and things are conducted with great order and dignity. The lieutenant governor and commander in chief has five thousand pounds currency, or three thousand five hundred and seventy-one pounds eight shillings and fix-pence three farthings sterling, besides which, he has a house in Spanish-town, a pen or a farm adjoining, and a polink or mountain for provisions, a secretary, an under secretary, and a domestic chaplain, and other sees, which make his income at least eight thousand sive

hundred and fifty pounds currency, or fix thousand one hundred pounds sterling.

The honourable the council confirts of a prelident and ten members, with a clerk, at two hundred and feventy pounds, chaplain one hundred pounds, uther of the black rod and melfenger, two hundred and fifty pounds.

The honourable the affembly confifts of forty-three members, one of whom is chosen speaker. To this affembly belongs a tlerk, with one thousand pounds salary; a chaplain, one hundred and fifty pounds; mellenger, seven hundred pounds; deputy, one hundred and forty pounds; and printer, two hun-

dred pounds, ....

The number of members returned by each parish and county see, for Middlefex seventeen, viz. St. Catharine three, St. Dorothy two, St. John two, St. Thomas in the Vale two, Clarendon two, Vere two, St. Mary two, St. Ann two: for Surry fixteen, viz. Kingston three, Port-Royal three, St. Andrew two, St. David two, St. Thomas in the East two, Portland two, St. George two: for Cornwall ten, viz. St. Elizabeth two, Westmorland two, Hanover two, St. James two, Trelawney two.

The high court of chancery confifts of the chancellor (governor for the time being) twenty-five mafters in ordinary, and twenty mafters extraordinary, a register, and clerk of the patents, serjeant at arms, and mace-bearer. The court of vice admiralty has a sole judge, judge surrogate, and commissary, king's advocate, principal register, marshal, and a deputy-marshal. The court of ordinary consists of the ordinary (governor for the time being) and a clerk. The supreme court of judicature has a chief justice and sixteen assistant judges, attorney, general, clerk of the courts, clerk of the crown, solicitor of the crown, thirty-three commissioners for taking assistants, a provost-marshal-general, and eight deputies, eighteen barristers, besides the attorney-general and advocate-general, and upwards of one hundred and twenty practising attornies at law.

The trade of this island will best appear by the quantity of shipping, and the number of seamen to which it gives employment, and the nature and quantity of its exports. The following is an account from the books of the inspector-general of Great-Britain, of the number of vessels of all kinds there registered, tonnage, and number of men, which cleared from the several ports of entry in Jamaica, in the year 1787, exclusive of coasting sloops, wherries, &c.

#### actions of to living an act at the state of the same of BARBADOES.

DARBADOES, the most easterly of all the Caribbee islands, fubject to Great-Britain, and, according to the best geographers, lying between 59° 50' and 62° 2' of west longitude, and between 12° 56' and 13° 16' of north latitude. Its extent is not certainly known; the most general opinion is, that it is twentyfive miles from north to fouth, and fifteen from east to west; but these mensurations are subject to so many difficulties and uncertainties, that it will perhaps convey a more adequate idea of this island to tell the reader, that in reality it does not contain above one hundred and seven thousand acres. The climate is hot but not unwholesome, the heat being qualified by sea breezes; and a temperate regimen renders this island as safe, to live in as any climate fouth of Great-Britain; and, according to the opinion of many, as even Great-Britain itself. This island has on its cast fide two streams that are called rivers, and in the middle is said to have a bituminous spring, which sends forth a liquor like tar, and ferves for the same uses as pitch or lamp oil. The island abounds in wells of good water, and has several reservoirs for rain water. Some parts of the foil are faid to be hollowed into caves, some of them capable of containing three hundred people, These are imagined to have been the lurking places of runaway negroes, but may as probably be natural excavations. The woods that formerly grew upon the island have been all cut down, and the ground converted into fugar plantations. When those plantations were first formed, the soil was prodigiously fertile, but has fince been worn out, infomuch, that about the year 1730, the planters were obliged to raife cattle for the fake of their dung, by which means the profit of their plantations was reduced to less than a tenth of its usual value. Notwithstanding the fmalluess of Barbadoes, its soil is different, being in some places fandy and light, and others rich, and in others spungy, but allpf it is cultivated according to its proper nature, so that the island presents to the eye the most beautiful appearance that can

Oranges and lemons grow in Barbadoes in great plenty, and in their utmost perfection. The lemon juice here has a peculiar fragrancy. The citrons of Barbadoes afford the best drams and sweetmeats of any in the world, the Barbadoes ladies excelling in the art of preserving the rind of the citron fruit. The juice of the limes, or dwarf lemons, is the most agreeable fouring we know, and great quantities of it have of late been imported into Britain and Ireland. The pine apple is also a native of Barbadoes, and grows there to much greater perfection than it can be made to d Europe by any ar means. A vast number of diment to peculiar to the commate are also found to flourish in Barbadoes in great perfection, such as the aloe, mangrove, calabash, cedar, cotton, mastic, &c. Here likewise are produced some sensitive plants, with a good deal of garden stuff, which is common in other places. In short, a native of the finest, the richest, and most diversified country in Europe, can hardly form an idea of the variety of delicious, and at the same time nutritive vegetable productions with which the island abounds.

When Barbadoes was first discovered by the English, few or no quadrupeds were found upon it, except hogs, which had been left there by the Portuguese. For convenience of carriage to the lea fide, some of the planters at first procured camels, which undoubtedly would in all respects have been preferable to horses for their sugar and other works; but the nature of the climate disagreeing with that animal, it was found impossible to preserve the breed, They then applied for horses to Old and New-England; from the former they had those that were fit for show and draught; from the latter those that were proper for mounting their militia, and for the faddle. They had likewife some of an inferior breed from Curassao, and other settlements, They are reported to have had their first breed of black cattle from Bonavista, and the isle of May; they now breed upon the island, and often do the work of norses. Their asses are very serviceable in carrying burdens to and from the plantations, The hogs of Barbadoes are finer eating than those of Britain, but the few sheep they have are not near so good, They likewise have goats, which, when young, are excellent food. Racoons and monkeys are also found here in great abundance. A variety of birds are produced on Barbadoes, of which the humming bird is the most remarkable. Wild fowl do not often frequent this fland, but sometimes teal are found near their ponds, A bird

which they call the man of war, it hid to meet thips at twenty leagues from land, and their return is, to the inhabitants, a fure fign of the arrival of these ships, When the wind blows from the fouth and fouth-west, they have flocks of curlews, plovers. snipes, wild pigeons, and wild ducks. The wild pigeons are very fat and plentiful at fuch feafons, and rather larger than those of England. The tame pigeons, pullets, ducks, and poultry of all kinds, that are bred at Barbadoes, have also a fine flayour. and are accounted more delicious than those of Europe. Their rabbits are scarce; they have no hares, and if they have deer of any kind, they are kept as curiofities. The infects of Barbadoes are not venomous, nor do either their inakes or their fcorpions ever sting. The muskettoes are troublesome, and bite, but are more tolerable in Barbadoes than on the continent. Various other infects are found on the island, some of which are troublesome, but in no greater degree than those that are produced by every warm fummer in England. Barbadoes is well supplied with fish, and some caught in the sea surrounding it are almost peculiar to itself, such as the parrot fish, snappers, grey cavallos, terbums, and concy fish. The mullets, lobsters, and crabs caught here are excellent; and the green turtle is, perhaps, the greatest delicacy that ancient or modern luxury can boast of. At Barbadoes this delicious shell fish feldom fells for less than a shilling a pound, and often for more. There is found in this island a kind of land crab, which eats herbs wherever it can find them, and shelters itself in houses and hollow trees. According to report, they are a shell fish of passage, for in March they travel to the sea in great numbers.

The inhabitants may be reduced to three classes, viz, the massers, the white servants, and the blacks. The sormer are either English, Scots, or Irish; but the great encouragement given by the government to the peopling of this and other West-Indian islands, induced some Dutch, French, Portuguese, and Jews, to settle among them; by which, after a certain time, they acquire the rights of naturalization in Great-Britain. The white servants, whether by covenant or purchase, lead more easy lives than the day-labourers in England, and when they come to be overseers, their wages and other allowances are considerable. The manners of the white inhabitants in general are the same as in most polite towns and countries in Europe. The capital of the island is Bridge-town.

When the English some time after the year 1625, first land, ed here, they found it the most destitute place they had hitherto visited. It had not the least appearance of ever have ing been peopled even by favages. There was no kind of beafts of pasture or of prey, no fruit, no herb, no root fit for fupporting the life of man. Yet, as the climate was to good. and the foil appeared fertile, some gentlemen of small fortune in England resolved to become adventurers thither. The trees were so large, and of a wood so hard and stubborn, that it was with great difficulty they could clear as much ground as was necessary for their subfishence. By unremitting perseverance, however, they brought it to yield them a tolerable support; and they found that cotton and indigo agreed well with the foil. and that tobacco, which was beginning to come into repute in England, answered tolerably. These prospects, together with the storm between king and parliament, which was beginning to break out in England, induced many new adventurers to transport themselves into this island. And what is extremely remarkable, so great was the increase of people in Barbadoes, twenty-five years after its first settlement, that in 1650, it contained more than fifty thousand whites, and a much greater number of negro and Indian flaves. The latter they acquired by means not at all to their honour; for they feized upon all those unhappy men, without any pretence, in the neighbouring islands, and carried them into slavery; a practice which has rendered the Caribbee Indians irreconcileable to us ever fince. They had begun a little before this to cultivate fugar. which foon rendered them extremely wealthy. The number of flaves therefore was still augmented; and in 1676 it is supposed that their number amounted to one hundred thousand, which, together with fifty thousand whites, make one hundred and fifty thousand on this small spot; a degree of population unknown in Holland, in China, or any other part of the world most renowned for numbers. At the above period, Barbadoes employed four hundred fail of ships, one with another, of one hundred and fifty tons, in their trade. Their annual exports in fugar, indigo, ginger, cotton, and citron-water, were above thirty-five thousand pounds, and their circulating cash at home was two hundred thousand pounds. Such was the increase of population, trade, and wealth, in the course of fifty years, But fince that time this island has been much on the decline, which is to be attributed partly to the growth of the French sugar colonies, and partly to our own establishments in the neighbouring isles. Their numbers at present are said to be

twenty thousand whites, and one hundred thousand slaves, Their commerce consists of the same articles as formerly, though

they deal in them to less extent.

Barbadoes is divided into five districts and eleven parishes. and contains four towns, viz. Bridge-town, Oftins, or Charlestown, St. James's, formerly called the Hole, and Speight'stown. Bridge-town, the capital, before it was destroyed by the fires of 1766, confifted of about fifteen hundred houses. which were mostly built of brick; and it is still the feat of government, and may be called the chief residence of the governor, who is provided with a country villa called Pilgrims. fituated within a mile of it; his falary was raifed by Queen Anne from twelve hundred to two thousand per ann, the whole of which is paid out of the exchequer, and charged to the account of the four and a half per cent duty. The form of the government of this island so very nearly resembles that of Jamaica, which has already been described, that it is unneceffary to enter into detail, except to observe that the council is composed of twelve members, and the assembly of twenty-The most important variation respects the court of chancery, which in Barbadoes is constituted of the governor and council, whereas in Jamaica the governor is fole chancellor. On the other hand, in Barbadoes, the governor fits in council. even when the latter are acting in a legislative capacity; this in Jamaica would be confidered improper and unconstitutional. It may also be observed, that the courts of grand sessions, common pleas and exchequer in Barbadoes, are distinct from each other, and not as in Jamaica, united and blended in one supreme court of judicature.

We shall close our account of Barbadoes with the following

authentic document.

Warner was kighted ta, by the influence of his parton tent

back in bleen, such bent bandred forth recenits, amply ton HIS iffand, commonly called St. Kitt's, is fituated in 62 west longitude and 17° north latitude, about fourteen leagues from Antigua; is twenty miles long and about feven broad; it was discovered in November, 1493, by Columbus, and named after himself, but was never planted or possessed by the Spaniards: it is in reality the oldest of all the British settlements in the West-Indies, and the common mother both of the French and English settlements in the Caribbean islands. It was first settled by a Mr. Warner and fourteen other persons in i623. Mr. Warner, a respectable gentleman, had accompanied Capt. North in a voyage to Surinam, where he had become acquainted with a Capt. Painton, a very experienced scaman, who suggested to him the advantages of a settlement on one of the West-India islands deserted by the Spaniards, and pointed out this as cligible for such an undertaking. Mr. Warner returning to Europe in .. 1620, determined to carry this project into execution. He accordingly failed with the above party to Virginia, from whence he took his pellage to St. Christopher's, where he arrived in the month of January, 1622. and by the month of September following had railed a good crop of tobacco, which they proposed to make their staple commodity of horse in a fall of the of the of a a a a co

Unfortunately, their plantations were destroyed the latter end of the year by an hurricance; in consequence of which calamity, Mr. Warner returned to England, and obtained the powerful patronage of the Earl of Carlisle, who caused a ship to be sitted out and laden with all kinds of necessaries, which arrived on the 18th of May following; and thus saved a settlement which had otherwise died in its infancy. Warner himself did not, however, return till the year 1625, when he carried with him a large number of other persons. About this time, and, according to some writers, on the same day with Warner, arrived D'Esnambuc, the captain of a French privateer, togearther with about thirty hardy veterans belonging to her; she had been much damaged in an engagement with a Spanish galleon; they were received kindly by the English, and

After this exploit, these two leaders returned to their respective countries to solicit succours, and bringing with them the name of conquerors, they met with every encouragement. Warner was knighted, and, by the influence of his patron, fent back in 1626, with four hundred fresh recruits, amply furnished with necessaries of all kinds. D'Esnambuc obtained from Cardinal Richelieu, the then minister of France, the establishment of a leparate company, to trade with this and some other islands. Subscriptions, however, did not come in very rapid, and the thips tent out by the new company were to badly provided that of five hundred and thirty-two new fettlers, who failed from France in 1687, the greater part perished milerably at fea for want of food. The English received the survivors, and, to prevent contests about limits, the commanders of each nation divided the island as equally as possible among their respective followers. The island thus continued in the hands of the French and English until the peace of Utrecht, when it was anally ceded to Great-Britain. We are not, however, to Suppofe, that during this period harmony and good will prevailed; on the contrary, the English were three times driven off the island, and their plantations laid wafte: nor were the French much less sufferers. Such are the consequences of those curled Alems or maxims of government, which beget a spirit of enmity against all those who are of a different nation. After the peace of Utrecht, the French possessions, a few excepted, were fold for the benefit of the English government; and in 1782. eighty thousand pounds of the money was granted as a marriage portion to the Princels Anne, who was betrothed to the Files of Orange. In 1782, it was attacked and taken by the French, but sgain ceded to Britain at the peace of 1782.

About one half of this island is supposed to be unfit for cultivation, the interior parts consisting of many high and barren mountains, between which are horrid precipices and thick woods. The lostiest mountain, which is evidently a decayed volcano, is called Mount Milery; it rises three thousand seven hundred and eleven feet perpendicular height from the sea. Nature has, however, made a recompense for the sterility of the mountains by the settlity of the plains. The soil is a dark grey loam, very light and porous, and is supposed by Mr. Edwards to be the production of subterraneous sires sinely incorporated with a

Vide Miltory of West-Indies, vol. i. p. 429.

pure loam or virgin mould; this foil is peculiarly favourable to the culture of sugar. In the south-west part of the island hot sulphureous springs are sound at the foot of some of the mountains: the air is, on the whole, salubrious, but the island is subject to hurricanes.

St. Christopher's is divided into nine parishes, and contains four towns and hamlets, viz. Basseterre, (the capital) Sandy point, Old road, and Deep bay; of these, Basseterre and Sandy point are ports of entry established by law. The fortifications on this island are Charles fort and Brimstone hill near Sandy point, three batteries at Basseterre, one at Fig-tree bay, another at Palmeton point, and some others of little importance.

St. Christopher's contributes twelve hundred pounds currency per annum towards the support of the governor-general, belides the perquisites of his office, which in war time are very considerable: the council consists of ten members; the house of allembly of twenty-four representatives, of whom fifteen make a quorum. The qualification for a representative is freehold of forty acres of land, or a house worth forty pounds per annum; for an elector, a freehold of ten pounds per annum; the governor is chancellor by office, and fits alone on the bench, The jurisdiction of the courts of king's bench and common pleas centers in one superior court, wherein justice is administered by a chief justice and four affiftant judges, the former appointed by the king, the latter by the governor in the king's name; they all hold their offices during pleasure. The office of the shief judge is worth about its hundred pounds per annum; those of the affistant judges triffing. The present number of inhabitants are estimated at four thousand white inhabitants, three hundred free blacks and mulattoes, and about twenty-lix thousand Saves

As in the other British islands in the neighbourhood, all the white males from fixteen to fixty are obliged to entit in the militia; they serve without pay, and form two regiments of about three hundred effective men each: these, with a company of free blacks, constituted the whole force of the island before the last war. Since that period, a small addition of British troops have, we believe, in general been kept there.

South Olderoad, and Drep bay of their his rather and Sandy NTIG A is fituated about twenty leagues eath of St. Christopher's, in west longitude 60° 5', and north latitude 178 go. It is about fifty miles in circumference, and is reckoned

the largest of all the British Leeward islands.

This island has neither stream nor spring of fresh water; this inconvenience, which rendered it uninhabitable to the Caribbees, deterred for some time Europeans from attempting a permanent establishment upon it; but few, if any, are the obstacles of Nature, which civilifed man will not overcome, more especially when interest spurs him on. The soil of Antigua was found to be fertile, and it foon prefented itself to the view of enterpriling genius, that by means of cifterns the necessity of springs and streams might be superseded. Hence, as early as 1632, a son of Sir Thomas Warner, and a number of other Englishmen, fettled here, and began the cultivation of tobacco. In 1674, Colonel Codrington, of Barbadoes, removed to this illand, and succeeded so well in the culture of sugar, that, arismated by his example, and aided by his experience, many others engaged in the same line of business. A few years after, Mr. Codrington was declared captain-general and commander in chief of the Leeward islands, and carried his attention to their welfare farther than perhaps any other governor either before or fince has done, and the good effects of his wildom and attention were foon manifest,

Antigue, in particular, had to far increased, that in 1699. when General Codrington headed an expedition against the French settlement at St, Christopher's, it furnished eight hune dred effective men. Mr. Codrington dying in 1698, was fucceeded by his fon Christopher, who, pursuing his father's steps. held the government till 1704, when he was superseded by Sir William Matthews, who died foon after his arrival, Queen Anne then bestowed the government on Daniel Park, Esq. a man who for debauchery, villainy and despotism, though he may have been equalled, was certainly never excelled. His government lasted till Dec. 1710, when his oppressions aroused

Crops here are very unequal, and it is exceeding difficult to furnish an average: in 1779, there was shipped three thousand three hundred and eighty-two hogsheads and five hundred and seventy-nine tierces of sugar; in 1782, the crop was sisteen thousand one hundred and two hogsheads and one thousand six hundred and three tierces: in 1770, 1773, and 1778, there were no crops of any kind, owing to long continued drought. The island is progressively decreasing in produce and population. The last accurate returns to government were made in the year 1774, when the white inhabitants of all ages and sexes were two thousand five hundred and ninety, and the enslaved blacks thirty-seven thousand eight hundred and eight; seventeen thousand hogsheads of sugar of sixteen hundred weight each, are deemed, on the whole, a good saving crop; as one-half of the canes only are cut annually, this is about an heathead to the acre.

Antigua is divided into fix parishes and eleven districts, and contains fix towns and villages. St. John's, which is the capital, Parham, Falmouth, Willoughby bay, Old road, and James's fort; the two first are the legal ports of entry. The island has many excellent harbours, particularly English harbour and St. John's, at the former of which there is a dock-yard and arsenal exablished by the English government.

The military establishment here is two regiments of infantry and two of militis, besides which there is a squadron of dragons and a battalion of artillery raised in the island. The governor, or captain-general, of the Leeward islands, though directed by his instructions to visit each island within his

on whed the French por were defented pair we sault ward et a TRENADA lies in west longitude 617 404, north latitude 129 0. It is the last of the windward Caribbees, and lies thirty leagues north of New-Andaluffa, on the continent, According to some, it is twenty-four leagues in compais; according to others, only twenty-two; and it is faid to be thirty miles in length, and in forme places fifteen in breadth. The island abounds with wild game and fish; it produces also very fine timber, but the cocoa tree is observed not to thrive here fo well as in the other islands. A lake on a high mountain. about the middle of the island, supplies it with fresh water ftreams. Several bays and harbours lie round the illand, some of which might be fortified to great advantage; for that it is very convenient for Thipping, not being subject to hurricanes, The foil is capable of producing tobacco, lugar, indigo, peale and millet.

Columbus found it inhabited by a fierce, warlike people, who were left in quiet possession of the island till 1650; though, according to others, in 1638, Ma Poincy, a Frenchman, attempted to make a fettlement in Grenada, but was driven off by the Caribbeans, who reforted to this island in greater numbers than to the neighbouring ones, probably on account of the game with which it abounded. In 1650, however, Mont, Parquet, governor of Martinico, carried over from that island two hundred men, furnished with presents to reconcile the favages to them; but with arms to subdue them, in case they should prove untrastable. The savages are said to have been frightened into submission by the number of Frenchmen, but, according to some French writers, the chief not only welcomed the new-comers, but, in confideration of some knives, hatchets, sciffars, and other toys, yielded to Parquet the fovereignty of the island, referving to themselves their own habitations. The Abbe Raynal informs us, that thefe first French colonists, imagining they had purchased the island by

thefe trifles, affumed the fovereignty, and foon afted as tyrants. The Caribs, unable to contend with them by force; took their usual method of murdering all those whom they found in a defendeles state; This produced a war , and the French fettlers, having received a reinforcement of three hundred men from Martinico, forced the lavages to retire to a mountain a from whence, after exhausting all their arrows, they rolled down great logs of wood on their enemies. Here they were joined by other favages from the neighbouring islands; and again attacked the French, but were defeated anew; and were at last driven to fuch desperation, that forty of them, who had ofcaned from the flaughter jumped from a precipice into the les; where they all perished, rather than fall into the hands of their implacable enemies. From thence the rock was called to morne des fauteurs, or, " the hill of the lespers," which name it fill setsins. The French then destroyed the habitations and all the provisions of the savages; but fresh supplies of the Caribbeans arriving, the war was renewed with great vigour, and great numbers of the French were killed. Upon this they refolved totally to exterminate the natives; and having accordingly stracked the lavages unawares, they inhumanly put to death the women and children, as well as the men; burning all their boats and canoes, to cut off all communication between the few furvivors and the neighbouring islands. Notwithstanding ill these barbarous precautions, however, the Caribbees proved the irreconcileable enemies of the French; and their frequent infurrections at last obliged Parquet to sell all his property in the island to the Count de Cerillac in 1657. The new proprietor, who purchased Parquet's property for thirty thousand crowns, fent thither a person of brutal manners to govern the island. He beliaved with such insupportable tyranny, that most of the colonists retired to Martinico; and the few who remained condemned him to death after a formal trial. In the

" Tree Entry with

Of the manner in which these persons carried on the war against the natives, a pretty correct estimate may be formed from the following circumstance; a beautiful young girl, of twelve or thirteen years of age, who was taken alive, became the object of dispute between two of the French officers; each of them claiming her as his prize, a third coming up, put an end to the contest by shooting the girl through the head.

<sup>+</sup> Mr. Edwards attributes this fale to another caufe; he fays, the Caribbees were totally extinct, and that it was the great expense which Parques had been at in conquering the island which obliged him to sell it.

whole court of justice that tried this miscreaut, there was only one man (called Archangeli) who could write. A farrier was the person who impeached; and he, instead of the figurators, stated with a horse-shoe and Archangeli, who performed the office of clark, wrote round it these words in French, "Mark of Mr., de la Brie, counsel for the court."

Gren

Corillac, receiving, as supposed, but little profit from his capital, conveyed all his rights, dec. to the French West-India company; the charter of which being abolished in 1674, the island became vested in the crown of France. Under the various calamities to which this island was subjected, it will not be supposed to have made much progress. By an secount taken in 1700, there were at Grenada no more than two hundred and fifty-one white people, fifty-three free savages or mulattoes, and five hundred and twenty-five slaves. The useful animals were reduced to sixty-four horses and five hundred and sixty-nine head of horned cattle. The whole culture consided of three

plantations of fugar, and fifty-two of indigo.

This unfortunate state of the affairs of Grenada was changed in 1714. The change was owing to the flourishing condition of Martinico. The richest of the ships from that island were fent to the Spanish coasts, and in their way touched at Grenada to take in refreshments. The trading privateers, who undertook this navigation, taught the people of that illand the value of their foil, which only required cultivation. Some traders furnished the inhabitants with flaves and utenfils to erect fugar plantations. An open account was established between the two colonies. Grenada was clearing its debts gradually, by its rich produce, and the balance was on the point of being closed, when the war in 1744 interrupted the communication between the two illands, and at the same time stopped the progress of the fugar plantations. This lofs was supplied by the culture of coffee, which was purfued during the hostilities with all the activity and eagerness that industry could inspire. The peace of 1748 revived all the labours, and opened all the former fources of wealth. In 1753, the population of Grenada confifted of one thousand two hundred and fixty-two white people, one hundred and seventy-five free negroes, and eleven thousand nine hundred and ninety-one devest me The cattle amounted to two thousand two hundred and minety-eight horses or mules, two thousand four hundred and fifty-fix head of horned cattle, three thouland two hundred and feventy. eight sheep, nine hundred and two goats, and three hundred,

and thirty one hogs. The cultivation role to bighty three fugar. plantations, two millions feven hundred and twenty five thous fand his hundred coffee trees, one hundred and fifty thousand shree hundred cacos trees, and eight hundred cotton plants. The provisions confished of five millions leven hundred forty thouland four hundred and fifty trenches of callada, nine hundred and thirty-three thousand five hundred and ninety-fix banine trees, and one hundred and forty-three fquares of potatoes and yams. The colony made a rapid progress, in proportion to the excellence of its lon; but in the course of the last war but one, the island was taken by the British. At this time, one of the mountains at the fide of St. George's harbour was frongly fortified, and might have made a good defence, but furrendered without firing a gun; and by the treaty concluded in 1763, the island was ceded to Britain. On this cession, and the management of the colony after that event, the Abbe Raynal has the following remarks: "This long train of evils [ the ambition and mismanagement of his countrymen has thrown Grenada into the hands of the English, who are in possession of this conquest by the treaty of 1763. But how long will they keep this colony? Or, will it never again be restored to France? England made not a fortunate beginning. In the first enthusiasm raised by an acquifition, of which the highest opinion had been previously formed, every one was eager to purchase estates there; they fold for much more than their real value. This caprice, by expelling old colonists who were inured to the climate, fent about one million five hundred and fifty-three thousand pounds out of the mother country. This imprudence was followed by another. The new proprietors, missed by national pride, substituted new methods to those of their predecessors; they attempted to alter the mode of living among their flaves. The negroes, who from their very ignorance are more attached to their cuftoms than other men, revolted. It was found necessary to fend out troops, and to shed blood: the whole colony was filled with fuspicions: the masters, who had laid themselves under a necesfity of using violent methods, were afraid of being burnt or maffacred in their own plantations: the labours declined, or were totally interrupted. Tranquility was at length restored, and the number of flaves increased as far as forty thousand, and the produce raised to the treble of what it was under the French government. The plantations were farther improved by the neighbourhood of a dozen of islands, called the Grenadines or Grenudilloes, which are dependent on the colony. They are Vot. IV.

from three to eight leagues in circumference, but do not afford a fingle (fpring of water, one small one excepted; the air is wholesome ; the ground covered only with thin bushes, has not been dereened from the fung it exhales none of those noxious vapours which are fatal to the husbandman, Cariacou, the only one of the Grenadines which the French occupied, was at first frequented by turtle fishermen; who, in the leisure offorded them by to estwar occupation, employed themselves in clearing the ground! In process of time, their small number was increased by the accession of some of the inhabitants of Guadaloupe, who finding that their plantations were destroyed by a particular fort of ants, removed to Cariacou. The island floud rifled from the liberty that was enjoyed there. The inhab to collected about one thousand two hundred flaves, by whose labours they made themselves a revenue of near twenty thousand pounds a year in cotton. The other Grenadines do not afford a profped of the fame advantages, though plantations are begun there. Sugar has succeeded remarkably well at Becoura; the largest and most fertile of these islands, which is no more than two leagues distant from St. Vincent May the the to me the same

In the year 1770, the conquest of this island was accomplished by D'Eltaing, the French admiral, who had been prevented from attempting it before by his enterprise against St. Vincent, Immediately after the conquest of St. Lucia, however, being reinforced by a figurdron under M. de la Motte, he fet fail for Grenada with a fleet of twenty fix fail of the line and twelve frigates, having on board ten thousand land forces. Here he arrived on the second of July, and landed three thousand troops, chiefly Irish, being part of the brigade composed of natives of lieland in the fervice of France. These were conducted by Count Dillon, who disposed them in such a manner as to surround the hill that overlooks and commands George's-town, together with the fort and harbour. To oppose these, Lord M'Cartney, the governor, had only about one hundred and fifty regulars, and three or four hundred armed inhabitants; but though all refistance was evidently vain," he determined neverthelels to make an honourable and gallant defence. The preparations he made were fuch as induced D'Estaing himself to be present at the attack : and even with this vast superiority of force, the first attack on the entrenchments proved unfuccessful. The second continued two hours, when the garrison was obliged to yield to the immente differity of numbers who affaulted them, after having killed or wounded three hundred of their antagonists.

The whole the luft tell thu

of

the in h a de ing riva and line

to a

not a count had a tated lately that a The Barri

of the of up to encourage ceeding the though

lingworth of the

Having thus made themselves masters of the entrenchments on the hill, the French turned the cannon of them towards the fort which lay under it, on which the governor deminded a capitulation. The terms, however, were so extraordinary and unprecedented, that both the governor and inhabitants agreed in rejecting them, and determined rather to surrender without any conditions at all, than upon those which appeared so extraorgant. This they did, and it must be acknowledged, that the protection which was afforded to the helples inhabitants of the town and their property, was such as reflected the highest honour and lustre on the discipline and humanity of the conquerors, protections and safeguards were granted on every application; and thus a town was saved from plunder which, by the strict rules of war, might have been given up to an exasperated soldiery.

In the mean time Admiral Byron, who shad been convoying the homeward bound West-India fleet, hastened to St. Vincent. in hopes of recovering it; but being informed by the way, that a descent had been made at Grenada, he changed his course, hoping that Lord M'Cartney would be able to hold out till his arrival. On the fixth of July he came in fight of the French fleet, and without regarding D'Estaing's superiority of six ships of the line and as many frigates, determined, if possible, to force him to a close engagement. The French commander, however, was not to confident of his own prowels as to run the risk of an encounter of this kind, and having already achieved his conquest, had no other view than to preferve it. His defigns were tacilitated by the good condition of his fleet, which being more lately come out of port than that of the British, failed fatter, for that he was thus enabled to keep at what distance he pleased. The engagement began at eight in the morning, when Admiral Barrington with his own and two other ships got up to the vanof the enemy, which they attacked with the greatest spirit. As the other ships of his division, however, were not able to get up to his affittance, these three ships were necessarily obliged to encounter a vast superiority, and of consequence suffered exceedingly. The battle was carried on from beginning to end in the laine unequal manner; nor were the British commanders. though they used their utmost efforts for this purpose, able to bring the French to a close engagement. Thus Captains Collingwood, Edwards, and Cornwallis, stood the fire of the whole French fleet for tome time. Captain Fanthaw of the Monmouth, a fixty-four gun ship, threw himself lingly in the way. of the enemy's wan; and Admiral Rowley and Captain Buchart.

fought at the fame difadvantage; fo that finding it impossible to continue the engagement with any probability of fuccels, a general cellation of firing took place about noon. It re-commenced in the fame manner about two in the afternoon, and lasted with different interruptions till the evening a During this action some of the British Shing had forced their way into St. George's harbour not impring that the enemy were already in pollellion of the island. They were foon undeceived, however, by perceiving the French colours flying afhore, and the guns and batteries firing at them. This discovery put an end to the defign which had brought on the engagement; and as it was now high time to think of providing for the lafety of the British transports, which were in danger from the number of the enemy's frigates, the engagement was finally discontinued. During this action fome of Admiral Byrod's ships had suffered extremely; the Lion of fixty-four guns, Captain Cornwallis, was found incapable of re-joining the fleet, which were plying to windward, and was therefore obliged to bear away alone before the wind. Two other ships lay far aftern in a very distressed situation, but no attempt was made to capture them, nor did the French admiral flow the least inclination to renew the engagement.

Grenada was again reftored to Great-Britain at the peace of Paris; it contains about eighty thousand acres of land, of which although no lefs than feventy-two thousand one hundred and fortyone scres paid taxes in 1776, and may therefore be supposed fit for cultivation, yet the quantity actually cultivated has never exceeded fifty thousand acres. The face of the country is mountainous, but not inaccessible in any part, and abounds with springs and rivulets. To the north and the east, the foil is a brick mould, the fame, or nearly the fame, as that of which mention has been made in the history of Jamaica; on the west fide, it is a rich black mould on a substratum of yellow clay; to the fouth, the land in general is poor, and of a reddish hue, and the same extends over a considerable part of the interior country. On the whole, however, Grenada appears to be fertile in a high degree, and by the variety, as well as the excellence of its returns, feems adapted to every tropical production. The exports of the year 1776, from Grenada and its dependencies, were fourteen millions twelve thousand one hundred and fifty feven pounds of muscovado, and nine millions two hundred and feventy-three thousand fix hundred and feven pounds of clayed fugar, eight hundred and eighteen thousand seven hundred gallons of rum, one million eight hunhuse nincthor form putting infuttoo, plan fand fore from cultime toph efter great

dred and swenty-feven shouland one hundred and fasty-fix! pounds of sedice, four hundred, and lifty layer thouland leven. hundred and nineteen pounds of caros, minery one shoulend nine: hundred and forty-three pounds of setten twenty-feven. thousand fix hundred and thirty-eight pounds of indigo, and fome fmaller articles; the whole of which, on a moderate computation, could not be worth lefs, at the ports of hipping, than fig hundred thousand pounds sterling, excluding freight, duties, infurance, and other charges, alt deferves to be remembered too, that the fugar was the produce of one hundred and his plantations only, and that they were worked by eighteen thoufand two hundred and ninety-three negroes, which was therefore rather more than one hogshead of fixteen hundred weight from the labour of each negro, old and young, employed in the cultivation of that commodity; a prodigious return, equalled. we believe, by no British island in the West-Indies, St. Christopher's excepted. The exports of 1787 will be given hereefter: they will be found, except in one or two articles, to fall greatly short of those of 1776.

This island is divided into fix parishes; St. George, St. David, St. Andrew, St. Patrick, St. Mark, and St. John; and its chief dependency, Cariacou, forms a seventh parish. It is only fince the restoration of Grenada to Great-Britain by the peace of 1783, that an island law has been obtained for the establishment of a Protestant clergy. This act passed in a 784, and provides flipends of three hundred and thirty pounds currency, and fixty pounds for house rent per annum, for five chrgyman, viz. one for the town and parish of St. George, three for the other five out parishes of Grenada, and one for Cariacou. Befides these stipends, there are valuable glebe lands, which had been appropriated to the support of the Roman Catholic clergy, whilst that was the established religion of Grenada. These lands, according to an opinion of the attorney and folicitor general of England, to whom a question on this point was referred by the crown, became vested in his Majesty as public lands, on the restoration of the island to the British government, and we believe have fince been applied by the

If the decision of the attorney-general and folicitor-general was founded on justice, and the government of Great-Britain had a right to seize these lands and apply them to a different purpose than that which they were originally intended, and bestowed for, the same principle must justify the French government in seizing the church lands as public property, and applying them to the benefit of their country; hence it appears that what has been termed the most daring serilege and usurpation when done in France, is sanctioned in Great-Britain by legal authority as an act of justice.

colonial legislature, with the confent of the crown, to the farther support of the Protestant church, with some allawance for the benefit of the celerated Romish clergy of the remaining Erench inhabitants.

The capital of Grensda, by an order of governor Melville, foon after the ceffion of the country to Great-Britain by the pence of Paria was called St. George. By this ordinance, the English names were given to the several towns and parishes, and their French names forbidden to be thereaster used in any public acts. The French name of the capital was Fort Royale; it is situated in a spacious bay, on the west or see side of the island, not far from the south end, and possesses one of the safesh and most commodious harbours for shipping in the English West-Indies, which has lately been fortified at a very great expense.

The other towns in Grenada are, properly speaking, inconsiderable villages or hamlets, which are generally situated at the bays, or, shipping places in the several out parishes. The parish town of Cariacou-is called Hillsborough.

Grenada has two ports of entry, with separate establishments, and distinct revenue officers, independent of each other, viz. one at St. George, the capital, and one at Grenville bay, a town and harbour on the east or windward side of the island. The former, by the 27th George III. c. 27, is made a free port.

It appears that the white population of Grenada and the Grenadines has decreased considerably since these islands first came into the possession of the English. The number of whiteinhabitants, in the year 1771, were known to be somewhat more than fixteen hundred; in 1777, they had decreased to thirteen hundred; and at this time they are supposed not to exceed one thousand, of which about two thirds are men able. to bear arms, and incorporated into five regiments of militia, including a company of free blacks or mulattoes attached to each. There are likewise about five hundred regular troops from Great-Britair, which are supported on the British, estab. lishment. Besides the regular troops which are sent from Great-Britain for the protection of Grenada, there are in its garrison three companies of king's negroes, which came from a America, where they ferved in three capacities, as pioneers," artificers, and light dragoons. In Grenada they form a company of each, and are commanded by a lieutenant of the regulars, having captain's rank.

The negro flaves have also decreased. By the last returns preceding the capture of the island in 1779, they were Raied at thirty-five thousand, of which five thousand were in Cari. acou, and the smaller islands. In 1785 they amounted to no. more than twenty-three thousand nine hundred and twenty-lix in the whole. The decrease was owing partly to the want of any regular fupply during the French government, and partly to the numbers carried from the illand by the French inhabitanta; both before and after the peace! sagner considering such

The free people of colour amounted in 1787, to one thouland one hundred and fifteen. To prevent the too great increase of this mixed race, every manumission is, by an act of this illand, charged with a fine of one hundred pounds currency, pivable into the public treasury. But this law has neither operated as a productive fund, nor as a prohibition; for it is usually evaded by executing and recording acts of manumission in some other island and government where there is no such law. The evidence of all free coloured people, whether born free or manumitted, is received in the courts of this illand, on their producing fufficient proof of their freedom; and fuch free people area tried on criminal charges in the fame manner as whites, without distinction of colour. They are also allowed to pollels; and enjoy lands and tenements to any amount, provided they are native-born subjects or capitulants; and not aliens.

The governor, by virtue of his office, is chancellor, ordinary, and vice-admiral, and prefides folely in the courts of chancery and ordinary, as in Jamaica. His falary is three thousand two hundred pounds currency per annum, which is raifed by a poll tax on all flaves; and it is the practice in Grenada to pass a falary bill on the arrival of every new governor, to continue during his government. In all cases of absence beyond twelve

months, the falary ceases and determines.

The council of Grenada consists of twelve members and the affembly of twenty-fix. The powers, privileges and functions of both these branches of the legislature are the same, and exercised precisely in the same manner as those of the council and affembly in Jamaica. A freehold or life etlate, of fifty acres, is a qualification to fit as representatives for the parishes, and a freehold or life estate in fifty pounds house rent in Stan George, qualifies a representative for the town. An

ें जार का में में सुरें में बह राष्ट्रों, "त में हैं एनाइड्रेस नाम क्वानिएक व तान

The turrency of Grenads, or rate of exchange, is commonly fifty-five per cent. worfe than sterling.

chate of ten seres in fee, or for life, or a rent of ten pounds in any of the our towns, gives a vote for the representatives of each parish respectively; and a rent of twenty pounds per ann, issuing out of any freehold or life estate in the town of St. George, gives a vote for the representative for the town.

The law cours in Grenade, besides those of chancery and ordinary, are the court of grand fellions of the peace, held. twice a year, viz. in March and September. In this court the first person named in the commission of the peace presides. who is usually the prelident or fenior in council. The court of common pleas; this court confilts of one chief and four affiftant justices, whole commissions are during pleasure. The chief justice is usually appointed in England, a professional man. and receives a falary of fix hundred pounds per annum. The four affifiant justices are usually appointed by the governor from among the gentlemen of the fland, and act without a falary. The court of exchaquer : the barons of this court are commissioned in like manner as in the court of common pleas; but this court is lately grown into difule.—The court of admiralty for trial of all prize causes of capture from enemies in war, and of revenue leizure in peace or war. There is one judge of admiralty and one furrogate. The governor and council compole a court of error, as in Jamaica, for trying all appeals of error from the court of common pleas.

We have already noticed that there are feveral small islands subject to the laws enacted in Grenada; they each cleft a person to represent them in the general assembly, which is always held in St. George's. As none of the Grenadines have a harbour fit for large vessels, the produce of them is conveyed in small vessels to St. George's, from whence it is exported to the different places of Europe, Africa, America, &c. From the number of velicls that arrive there yearly from different places, and from its being the feat of the legislature, it has become so populous, that two newspapers are published in it. On occasion of the late prospect of a war with Spain, an act was passed here in February 1790, obliging every gentleman to give in upon oath the value of his estate, and the number of blacks upon it, in order that the general affembly might afcertain the number of flaves each should fend to work upon the fortifications on Richmond hill, near St. George's.

We thall close our account of this island with a view of its exports in 1787, with an account of its value in the British market.

A higheration of Exhibitation of both och the hiench all of world

THIS issand is situated between 61° and 62° west longitude, and 15° and 16° north latitude, is about twenty-nine miles long, and sixteen broad; it was so named by Columbus, on account of its being discovered on a Sunday. Prior to the year 1759, its history is a mere blank; at the above period it was taken by Great-Britain from France, and afterwards confirmed to her at the peace in 1763.

When Great-Britain took possession of this island, many Frenchmen had established plantations of coffee in various parts thereof, and these were secured in their possessions by the British government, on condition of taking the oaths of allegiance, and paying a quit rent of two shillings per acre per annum. provided each plantation did not confift of more than three hundred acres. The rest of the cultivable lands were sold by auction under the inspection of commissioners appointed for that purpole: ninety-fix thousand three hundred and forty-four acres were thus disposed of, which yielded to the British government three hundred and twelve thousand and ninety-two pounds eleven shillings and one penny sterling. These purchases made by British subjects do not appear to have answered the expectation of the buyers, for the French inhabitants are ftill the most numerous, and possess the most valuable coffee plantations in the island, the produce of which has hitherto been found its most important staple.

At the commencement of the unjust and destructive war against the American colonies by Great-Britain, the island of Dominica was in a very slourishing state. Roseau, its capital, had been declared a free port by act of parliament, and was resorted to by trading vessels from most part of the foreign West-Indies, as well as from America. The French and Spaniards purchased great numbers of negroes there for the supply of their settlements, together with large quantities of the manufactures of Great-Britain, payment for the greater part of which was made in bullion, indigo, and cotton, and completed in mules and cattle, articles of prime necessity to the planter.

Thus the island, though certainly not so fertile as some others, was rapidly advancing to importance.

The situation of this island is between the French island of Guadaloupe and Martinico, with lafe and commodious roads and harbours for privateers, rendered its defence an object of the utmost importance to Great-Britain; but her despotic principles, folly, and frantic rage against her colonies on the continent, caused a total neglect of her West-India possessions. Posterity will scarcely believe that the regular force allotted to this island, the best adapted of all others for the defence of the Caribbean sea, and the distressing of the French colonies, confisted only of fix officers and ninety-four privates. In 1778, the Marquis de Bouille, the governor of Martinico, made a descent with two thousand men; all resistance being vain, the only thing the garrison could do was to procure as favourable terms of ca-These were granted with such readiness pitulation as possible. as did great honour to the character of this officer, the inhabitants experiencing no kind of change except that of transferring their obedience from Britain to France, being left unmolested in the enjoyment of all their rights, both civil and religious, The capitulation was strictly observed by the Marquis, no plunder or irregularity being allowed, and a pecuniary gratification being distributed among the soldiers and volunteers who accompanied him in the expedition. An hundred and fixty-four pieces of excellent cannon, and twenty-four brass morears, befides a large quantity of military stores, were found in the place, infomuch that the French themselves expressed their surprise at finding so few hands to make use of them. The Marquis, however, took care to supply this defect, by leaving a garrison of one thousand five hundred of the best men he had with him.

Though the conduct of Bouille in the above expedition was such as in every part hereof to reslect honour on him as a soldier and a man, yet it was far different with respect to the Marquis Duchilleau, whom Bouille appointed commander in chief in Dominica. During five years and three months, the period this island was subject to the French monarchy, and under his administration, it was a prey to the most villainous despotism and wanton exertion of power. The principles of the late court of Versailles discovered themselves in all their hellish forms. The English inhabitants were stripped of their arms, and sorbid to assemble in any greater number than two in a

place, under the penalty of railitary execution; and the centihels were ordered to thoot them if they palled in greater numbeau. No lights were to be feen in their houles after nine
o'clock in the evening, nor was an English person to presume
to walk the fracts on any account whatever after that period
without a lanthorn and candle. Mr. Robert How, an English
merchant, and owner of a ship then in the harbonr, attempting
to go on board after that time, was shot dead in the attempt, and
the centinel who did the aft, promoted for having, as the governor expressed it, done his duty.

The town of Roseau was set on are by the French soldiery, which if not done by the governor's orders, was however suctioned by him, for during the whole night on which the melancholy event took place, he was present like another Nero, diverting himself with the scene, and actually forbid his soldiers to assist in extinguishing the slames, save only in houses belonging to the French inhabitants, but he permitted, if he did not possitively encourage, his men to plunder the English innabi-

tants in the midst of their distress.

The accumulated diffresses of the inhabitants ruined a number of the planters, who threw up their plantations, and abandoned them. In 1783 it was again restored to Great-Britain, and the inhabitants restored to the enjoyment of their former

privileges.

This island is divided into ten parishes, the town of Roseau, which contains only five hundred houses, exclusive of the cottages of the negroes, is the capital; it is situated on a point of land on the south-west side of the island, which forms Woodbridge's and Charlotte Ville bays. The island contains many high rugged mountains, several of which contain volcances, which frequently discharge burning sulphur, and from some of the mountains hot springs of water issue. Between the mountains are many fertile valleys, well watered, there being at least thirty sine rivers, besides rivulets, in the country.

There are not, however, at this time, more than fifty sugar plantations in work, and one year with another they do not produce more than from two to three thousand hogsheads per annum. There are more than two hundred coffee plantations, which seem to answer well, as in some years they have produced twenty-six thousand seven hundred and eighty-siye hundred weight. Cacoa, indigo and ginger are also cultivated, but in a very small degree, for the chief of those in the lift of exports are obtained from South-America, under the fantion of the

free port law.

# ST. VINCENT.

The state of the s

THIS island contains about eighty-four thousand acres, and is on the whole well watered; it is however, in general mountainous and rugged, but the intermediate vallies are exceeding fertile. The country held and cultivated by the British, at present, does not exceed twenty-three thousand six hundred and five acres, all the rest of the island being held by the Caribbees, or incapable of cultivation.

The Spaniards, according to Dr. Campbell, bestowed the name of St. Vincent on this island, on account of its being discovered on a day devoted to that Saint in their calendar; but it does not appear that they ever got possession of it on account of the number of Indians who inhabited it; but neither the natural strength of the island, nor their numbers, could ultimately exempt them from European hostilities.

When the English and French, who for some years had been ravaging the Windward islands, began to give some consistence to their settlements, in the year 1660 they agreed that Dominica and St. Vincent should be left to the Caribs as their property. Some of these savages, who till then had been dispersed, retired into the former, and the greater part into the latter. There these mild and moderate men, lovers of peace and filence, lived in woods, in scattered families, under the guidance of an old man, whom his age alone had advanced to the dignity of ruler. The dominion passed successively into every family, where the oldest always became king, that is to fay, the guide and father of the nation. These ignorant savages were still unacquainted with the fublime art of subduing and governing men by force of arms; of murdering the inhabitants of a country to get possession of their lands; of granting to the conquerors the property, and to the conquered the labours of the conquered country; and in process of time of depriving both of the rights and the fruit of their toil by arbitrary taxes.

The population of these children of nature was suddenly augmented by a race of Africans, whose origin was never politively ascertained. It is said that a ship carrying negroes for fale, foundered on the coast of St. Vincent, and the slaves who elcaped the wreck, were received as brethren by the favages. Others pretend that these negroes were deserters, who ran away from the plantations of the neighbouring colonies. A third tradition fays, that this foreign race comes from the blacks whom the Caribs took from the Spaniards in the first wars' between those Europeans and the Indians. If we may credit Du Tertre, the most ancient historian who has written an account of the Antilles, these terrible savages who were so inveterate against their masters, spared the captive slaves, brought them home, and restored them to liberty that they might enjoy life, that is, the common bleffings of nature, which no man has a right to withhold from any of his fellow creatures.

Their kindness did not stop here; for by whatever chance these strangers were brought into the island, the proprietors of it gave them their daughters, in marriage, and the race that sprang from this mixture were called black Caribs: they have preserved more of the primitive colour of their fathers, than of the lighter hue of their mothers. The red Caribs are of 2 low stature; the black Caribs tall and stout, and this doubly-savage race speaks with a vehemence that seems to resemble

anger.

In process of time, however, some differences arose between the two nations; the people of Martinico perceiving this, refolved to take advantage of their divisions, and raise themselves on the ruins of both parties. Their pretence was, that the black Caribs gave shelter to the slaves who deserted from the French islands. Imposture is always productive of injustice. Those who were fallely accused, were afterwards attacked without reason; but the smallness of the numbers sent out against them, the jealousy of those who were appointed to command the expedition, the defection of the red Caribs, who sefuled to lupply fuch dangerous allies with any of the fuccours they had promised them to act against their rivals, the disticulty of procuring sublistence, the impossibility of coming up with enemies who kept themselves concealed in woods and mountains; all these circumstances conspired to disconcert this rash and violent enterprite. It was obliged to be given up after the loss of many valuable lives; but the triumph the lavages obtained, did not prevent them from fuing for peace as supplicants,

The first who came thilter seited peaceably, not only with the consent, but by the assistance of the red Caribai (This success induced others to follow their example ; but these, whether from jealousy, or some other motive, taught the straiges a state secret; that people, who knew of no property but the fruits of the earth; because they are the reward of labour; searnt with astonishment that they could selb the earth itself; which they had always looked upon as belonging to mankind in sene-tal. This knowledge induced them to measure and fix mundaries, and from that instant peace and happiness were banished from their island; the partition of lands occasioned divisions amongst them. The following were the causes of the revolution produced by the system of usurpation.

When the French came to St. Vincent, they brought flaves along with them to clear and till the ground. The black Caribs, shocked at the thought of resembling men who were degraded by slavery, and fearing that some time or other their colour, which betrayed their origin, might be made a pretence for enslaving them, took refuge in the thickest part of the forest. In this situation, in order to imprint an indelible mark of distinction upon their tribe, that might be a perpetual token of their independence, they slattened the foreheads of all their children as soon as they were born. The men and women whose heads could not bend to this strange shape, dared no longer appear in public without this visible sign of freedom. The next generation appeared as a new race; the slat-headed Caribs, who were nearly of the same age, tall proper men, hardy and sierce, came and erected huts by the sea side.

They no fooner knew the price which the Europeans fet upon the lands they inhabited, than they claimed a share with the other islanders. This rising spirit of covetousness was at first appealed by some presents of brandy and a few sabres; but not content with these, they soon demanded fire arms, as the red Caribs had; and at last they were desirous of having their share in all stuture sales of land, and likewise in the produce of past sales. Provoked at being denied a part in this brotherly repartition, they formed into a separate tribe, swore never more to associate with the red Caribs, choice a chief of their own, and declared war.

The number of the combatants might be equal, but their strength was not so. The black Caribs had every advantage over the red, that industry, valour, and boldness, must soon acquire over a weak habit and a timorous disposition. But the spirit of equity, which is seldom deficient in savages, made the conqueror consent to share with the vanquished all the territory lying to the leeward. It was the only one which both parties were desirous of possessing, because there they were sure of receiving presents from the French.

The black Caribs gained nothing by the agreement which they themselves had drawn up. The new planters who came to the island, always landed and settled near the red Caribs, where the coast was most accessible. This preference roused that enmity which was but ill extinguished; the war broke out again; the red Caribs, who were always beaten, retired to windward of the island; many took to their canoes and went over to the continent, or to Tobago, and the sew that remained lived separate from the blacks.

The black Caribs, conquerors and mafters of all the leeward coast, required of the Europeans that they should again buy the lands they had alread purchased. A Frenchman attempted to shew the deed of his purchase of some land which he had bought of a red Carib; "I know not," says a black Carib, "what thy paper says, but read what is written on my arrow; there you may see, in characters which do not lie, that if you do not give me what I demand, I will go and burn your house to night." In this manner did a people who had not learnt to read, argue with those who derived such consequence from knowing how to write. They made use of the right of force, with as much assured and as little remorse as if they had been acquainted with divine, political and civil right.

Time, which brings on a change of measures with a change of interests, put an end to these disturbances. The French became in their turn the strongest; they no longer spent their time in breeding poultry, and cultivating vegetables, cassava, maize, and tobacco, in order to sell them at Martinico. In less than twenty years more important cultures employed eight hundred white men and three thousand blacks. Such was the stuation of St. Vincent when it fell into the hands of the English, and was secured to them by the treaty of 1763.

It was in the western part of the island that the French had begun the culture of cacoa and of cotton, and had made considerable advances in that of coffee. The conquerors formed there some sugar plantations; the impossibility of multiplying

with a change of The French nger spent their getables, cassava, rtinico. In less loyed eight hunuch was the stus of the English,

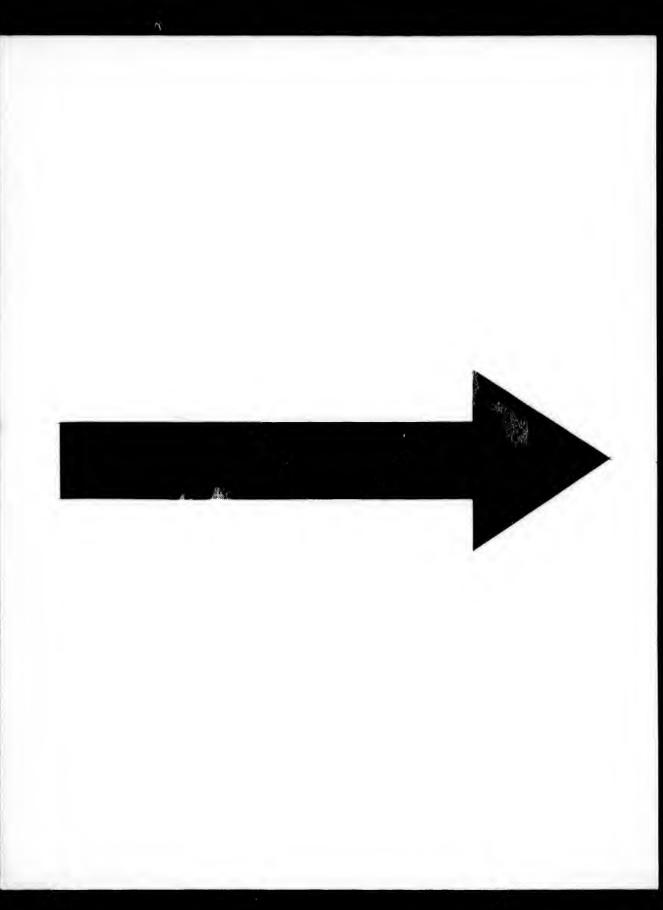

the French had had made confiquerors formed of multiplying them upon an uneven foil, which is full of ravines, made them desirous of occupying the plains towards the east. The savages who had taken refuge there, refused to quit them, and recourse was had to arms to compel them to it. The resistance which they opposed to the thunders of European tyranny, was not, and could not possibly be maintained without great difficulty.

An officer was measuring out the ground which had just been taken possession of, when the detachment that accompanied him was unexpectedly attacked, and almost totally destroyed on the 25th of March, 1775. It was generally believed that the unfortunate persons who had just been deprived of their possessions, were the authors of this violence, and it troops put themselves in motion, and it was determined totall cradicate and destroy them.

Fortunately it was determined in time that the Caribs were innocent, that they had taken or maffacred feveral fugitive flaves who had been guilty of fuch cruelties, and that they had fworn not to stop till they had purged the island of those vagabonds, whose enormities were often imputed to them. In order to confirm the savages in this resolution, by allurement of rewards, the legislative body passed a bill to insure a gratuity of five moides, or one hundred and twenty livres, to any one who should bring the head of a negro, who should have deserted within three months.

On the 19th of June, 1779, St. Vincents shared the fate of many other British possessions in the West-Indies, being taken by a small body of French troops from Martinico, commanded by a lieutenant in the navy. The black Caribbees, however, joined the foe, and the island surrendered without a struggle. The terms of capitulation were easy, and it was again restored in 1783 to Great-Britain; at that time it contained sixty-one sugar estates, sive hundred acres in cosse, two hundred in cacoa, four hundred in cotton, sifty in indigo, and sive hundred in tobacco, besides the land appropriated to the raising plantains, yams, maize, &c. All the rest, except the small spots cultivated by the native Caribbees, retained its native woods, as it does at this time.

The British territory in this island is divided into five parishes, of which only one was ever furnished with a church, which was blown down in 1780. Kingston is the capital of the island, and the seat of government. There are besides three other inconsiderable villages, called towns, but which consist each only of a sew houses. The government of St. Vincent is the same as that of Grenada; the council consists of

## NEVIS.

NEVIS lies about feven leagues north of Montferrat, and is separated from St. Christopher's by a narrow channel : it makes a beautiful appearance from the fea, being a large conical mountain covered with fine trees, of an easy ascent on every fide, and entirely cultivated. The circumference is about twenty-one miles, with a confiderable tract of level ground all around. The climate in the lower part is reckoned to be warmer than Barbadees, but it is more temperate towards the fummit. The foil is very fine in the lower part, but grows coarfer as we afcend. The productions are nearly the same with those of St. Christopher's, and the average quantity of fugar is four thousand hogsheads of fixteen hundred weight each. The island is divided into five parishes, and it has three pretty good roads or bays, with small towns in their vicinity: Charleston, the seat of government, Moreton Lay, and Newcastle. This pleasant island was settled under the auspices of Sir Thomas Warner from St. Christopher's, in the year 1628, His successor, Governor Lake, was considered as the Solon of this little country, in which he disposed of every thing with fuch prudence, wisdom and justice, as procured him high reputation with the French as well as English. In the Dutch war they met with some disturbance from the French, but by being covered by an English squadron, the enemy were obliged to delift from their intended invalion, after a smart engagement in fight of the island. Sir William Stapleton sometimes refided here, and Sir Nathaniel Johnson constantly, at which time the inhabitants of Nevis were computed at thirty thousand. In the war immediately after the revolution they exerted themselves gallantly, and had two regiments of three hundred men each, In that of Queen Anne they behaved equally well, though they were less fortunate; for the French landing with a superior force, and having inveigled most of their slaves, they were forced to capitulate. About four thousand of these slaves the French carried away and fold to the Spaniards, to work in their mines. The parliament, after making due inquiry into

the loffes they had sustained, voted them about a third part of the fum in which they had suffered. These losses by waran epidemic discase, and repeated hurricanes, exceedingly diminished the number of the people. They now, according to Mr. Edwards, do not exceed fixteen hundred whites and ten thouland blacks. All the white men, not exempt by age and other infirmities, are formed into a militia for its defence, from which there is a troop of fifty horse well mounted; but they have no troops on the British establishment. The principal fortification is at Charleston, and is called Charles fort, the governor of which is appointed by the crown, and paid by the inhabitants. There is here a lieutenant-governor, with a council of members, and an affembly composed of three members from each of the five parishes into which the island is divided. The administering of justice is under a chief justice and two affistant judges. The commodities are chiefly cotton and fugar; and about twenty fail of ships are annually employed in this trade. your real Mississin their alies find to

MONTSERRAT is a very small but pleasant island, is called by Columbus from its relemblance to the famous mountain near Barcelona in Catalonia. It lies in west longitude 610 of north latitude 169 15, having Antigua to the northeaft, St. Christopher's and Nevis to the north-west, and Guadaloupe lying fouth fouth-east at the distance of about nine leagues. In its figure it is nearly round, about nine miles in extent every way, twenty-feven in circumference, and is supposed to contain about forty or fifty thousand scree, The climate is warm, but less so than in Antigua, and is esteemed very healthy. The foil is mountainous, but with pleafant valleys, rich and fertile, between them; the hills are covered with cedars and other fine trees. Here are all the animals as well as vegetables and fruits, that are to be found in the other islands, and not at all inferior to them in quality. The inhabitants raised formerly a considerable quantity of indigo, which was none of the best, but which they cut four times a year. The present product is cotton, rum and sugar. There is no good harbour, but three tolerable roads, at Plymouth, Old harbour, and Ker's bay, where they ship the produce of the island. Public affairs are administered here as in the other isles, by a lieutenant-governor, a council of fix, and an affembly composed of no more than eight members, two from each of the four diffricts into which it is divided. Its civil history contains nothing particular except its invalion by the French in 1712, and its capture by them again in the late war, at the conclusion of which it was restored to Great-Britain. The wonderful effects of industry and experience, in mellorating the gifts. of Nature, have been no where more conspicuous than in these islands, and particularly in this, by gradually improving their produce, more especially of late years, since the art of... planting has been reduced to a regular system, and almost all the defects of foil fo thoroughly removed by proper management and manure, that except from the failure of ferions, or the want of hands, there is feldom any fear of a crop.

Gre hun and eigh dred Ame poun from be fee accore twelv

negroo

As

As far back as 1770, there were exported from this island to Great-Britain one hundred fixty-seven bags of cotton, hundred and forty hogsheads of rum; to Ireland one hundred and thirty-three ditto, four thousand three hundred and the eight hogsheads, two hundred and thirty-two tierces, two dred and two barrels of sugar; the whole valued at sinth mine thousand nine hundred and seven pounds; and exposit to North-America valued at twelve thousand six hundred and thirty-three pounds. There are a few ships employed in trading to this island from London and from Bristol, and the average of its trade will be seen in the tables annexed. As to the number of inhabitants, according to the most probable accounts, they consist of between twelve and sourteen hundred whites, and about ten thousand negroes, though some say not so many.

## BARBUDA AND ANGUILLA.

of the part of the second of the property was not a

agreed to a subjection of the same of the same against the same ARBUDA, which belongs entirely to the Codrington family, and the circumference of which is fix or feven leagues, hath dangerous coafts. It is, perhaps, the most even of all the American iffands. The trees which cover it are weak, and not very high, because there are never more than fix or seven inches of earth upon a layer of lime-stone. Nature hath placed great plenty of turtles here; and caprice hath occasioned the fending thither of deer and several kinds of game; chance hath filled the woods with pintados and other fowls, elcaped from the veffels after some shipwreck. Upon this soil are fed oxen, horses and mules, for the labours of the neighbouring fettlements. No other culture is known there, except that of the kind of corn which is necessary for the feeding of the numerous herds in those scasons when the pasture fails. Its population is reduced to three hundred and fifty slaves, and to the small number of free men who are appointed to overlook them. This private property pays no tribute to the nation, though it be subject to the tribunals of Antigua. The air here is very pure and very wholefome. Formerly, the fickly people of the other English islands went to breathe it, in order to stop the progress of their diseases. or to recover their strength. This custom hath ceased, since fome of them indulged themselves in parties of destructive chace.

Must men then be suffered to perish, in order that animals should be preserved? How is it possible, that so atrocious a custom, which draws down the imprecation of almost all Europe upon the sovereigns and upon the lords of its countries, should be suffered, and should even be established beyond the seas? We have asked this question, and we have been answered, that the island belonged to the Codringtons, and that they had a right to dispose of their property at their pleasure. We now ask, whether this right of property, which is undoubtedly sacred, hath not its limits? Whether this right, in a variety of circumstances, be not sacrificed to public good? Whether the man who is in possession of a sountain can resule water to him who is dying

take trys show his tion the

these ve by four been en with thirst? Whether any of the Codrington family would partake of one of those precious pintados, that had cost his countryman or his fellow-oreature his life? Whether the man who should be convicted of having suffered a sick person to die at his door, would be sufficiently punished by the general execration? And whether he would not deserve to be dragged before the tribunals of justice as an assassin?

Anguilla is seven or eight leagues in length, and is very unequal in its breadth, which never exceeds two leagues. Neither mountains, nor woods, nor rivers, are found upon it, and its soil

is nothing more than chalk,

Some wandering Englishmen settled upon this porous and friable rock towards the year 1650. After an obstinate labour, they at length succeeded in obtaining from this hind of turf a little cotton, a small quantity of millet feed, and some potatoes. Six voins of vegetating earth, which were in process of time discovered, received sugar-canes, which, in the best harvest, yield no more than fifty thousand weight of sugar, and sometimes only five or fix thousand. Whatever else comes out of the colony hath been introduced into it clandestinely from Santa Cruz, where the inhabitants of Anguilla have formed several plantations,

In seasons of drought, which are but too frequent, the island hath no other resource but in a lake, the salt of which is sold to the people of New-England; and in the sale of sheep and goats, which thrive better in this dry climate, and upon these wrid

plains, than in the rest of America. The

Anguilla reckons no more than two hundred free inhabitants, and five hundred flaves: nevertheless it hath an assembly of its own, and even a chief, who is always chosen by the inhabitants, and confirmed by the governor of Antigua. A foreigner, who should be fent to govern this feeble settlement, would infallibly be driven away, by men who have preserved something of the independent manners, and of the rather savage character of their ancestors.

The coast of this island affords but two harbours, and even in these very small vessels only can anchor: they are both defended by sour pieces of cannon, which, for half a century past, have been entirely unsit for service.

## BERMUDAS, OR SOMMER'S ISLANDS.

I HIS cluster of islands lies almost in the form of a shepherd's crook, in west longitude 65°, north latitude 32° 30', between two and three hundred leagues distant from the nearest place of the continent of America, or of any of the other West-India islands. The whole number of the Bermudas islands is said to be about four hundred, but very few of them are habitable, The principal is St. George's, which is not above fixteen miles long, and three at most in breadth. It is universally agreed, that the nature of this and the other Bermudas islands has undergone a furprising alteration for the worse, since they were first discovered; the air being much more inclement, and the foil much more barren than formerly! this is ascribed to the cutting down those fine spreading cedar trees for which the islands were famous, and which sheltered them from the blasts of the north wind, at the same time that it protected the under-growth of the delicate plants and herbs. In short, the Sommer islands are now far from being defirable spots; and their natural productions are but just sufficient for the support of the inhabitants, who chiefly, for that reason perhaps, are temperate and lively even to a proverb. At first tobacco was raised upon these islands, but being of a worfe quality than that growing on the continent, the trade is now almost at an end. Large quantities of ambergris were also originally found upon the coasts, and afforded a valuable commerce; but that trade is also reduced, as likewise their whale trade, though the perquifites upon the latter form part of the governor's revenue, he having ten pounds for every whale that is saught. The Bermudas islands, however, might still produce some valuable commodities, were they properly cultivated. There is here found, about three or four feet below the furface, a white chalk stone which is easily chifelled, and is exported for building gentlemen's houses in the West-Indies. Their palmetto leaves, if properly manufacpherd's etween place of ft-India faid to abitable; n miles ed, that dergone t discoil much ig down vere fare north h of the are now ions are chiefly, o a prout being he trade ris were valuable ife their n part c y whale ght still properly our feet fily chiouses in

manufac-

tured, might turn to excellent account in making women's hats; and their oranges are still valuable. Their soil is also said to be excellent for the cultivation of vines, and it has been thought that filk and cochineal might be produced; but none of these things have yet been attempted. The chief resource of the inhabitants for sublistence is in the remains of their cedar-wood, of which they fabricate small sloops, with the assistance of the New-England pine, and fell many of them to the American colonies, where they are much admired. Their turtle-catching trade is also of service; and they are still able to rear great variety of tame-fowl, and have wild ones abounding in vast plenty. All the attempts to establish a regular whale fishery on these islands have hitherto proved unsuccessful; they have no cattle, and even the black hog breed, which was probably left by the Spaniards, is greatly decreased. The water on the islands, except that which falls from the clouds, is brackish; and at prefent the same diseases reign there as in the Caribbee islands. They have seldom any snow, or even much rain: but when it does fall, it is generally with great violence, and the north or north-east wind renders the air very cold. The storms generally come with the new moon; and if there is a halo or circle about it, it is a fure fign of a tempest, which is generally attended with dreadful thunder and lightning. The inhabited parts of the Bermudas islands are divided into nine districts, called tribes. 1. St. George. 2. Hamilton. 3. Ireland. 4. Devonshire. 5. Pembroke. 6. Pagets. 7. Warwick. 8. Southampton. 9. Sandys. There are but two places on the large island where a ship can safely come near the shore, and these are so well covered with high rocks, that few will chuse to enter in without a pilot: and they are so well desended by forts, that they have no occasion to dread an enemy. St. George's town is at the bottom of the principal haven, and is defended by nine forts, on which are mounted seventy pieces of cannon that command the entrance. The town has a handsome church, a fine library, and a noble town-house, where the governor, council, &c. affemble. The tribes of Southampton and Devonshire have each a parish church and library, and the former has a harbour of the fame name; there are also scattered houses and hamlets over many of the islands, where particular plantations require them. The inhabitants are clothed chiefly with British manusactures, and all their implements for tilling the ground and building are made in Britain.

It is uncertain who were the first discoverers of the Bermudas islands. John Bermudas, a Spaniard, is commonly said to have discovered them in 1527; but this is disputed, and the discovery attributed to Henry May, an Englishman. As the islands were without the reach of the Indian navigation, the Bermudas were absolutely uninhabited when first discovered by the Europeans. May above-mentioned was shipwrecked upon St. George's, and with the cedar which they felled there, affifted by the wreck of their own ship, he and his companions built another which carried them to Europe, where they published their accounts of the islands. When Lord Delawar was governor of Virginis, Sir Thomas Gates, Sir George Sommers, and Captain Newport, were appointed to be his deputy-governors; but their ship being separated by a storm from the rest of the squadron, was in the year 1609 wrecked on the Bermudas, and the governors difagreeing among themselves, built each of them a new ship of the cedar they found there, in which they severally sailed to Virginia. On their strival there, the colony was in fuch diffres, that Lord Delawar, upon the report which his deputy-governors made him of the plenty they found at the Bermudas, dispatched Sir George Sommers to bring provisions from thence to Virginia, in the fame ship which brought him from Bermudas, and which had not an ounce of iron about it except one bolt in the keel. Sir George, after a tedious voyage, at last reached the place of his destination, where, soon after his arrival, he died, leaving his name to the islands, and his orders to the crew to return with black hogs to the colony of Virginia. This part of his will, however, the failors did not chuse to execute, but fetting fail in their cedar ship for England, landed safely at Whitchurch in Dorsetshire.

Notwithstanding this dereliction of the island, however, it was not without English inhabitants. Two sailors, Carter and Waters, being apprehensive of punishment for their crimes, had secreted themselves from their fellows when Sir George was wrecked upon the island, and had ever since lived upon the natural productions of the soil. Upon the second arrival of Sir George, they enticed one Chard to remain with them; but differing about the sovereignty of the island, Chard and Waters were on the point of outting one another's throats, when they were prevented by the prudence of Carter. Soon after, they had the good fortune to find a great piece of ambergris weighing about eighty pounds, besides other pieces, which in those days were sufficient, if properly dispesed of, to have

made each of them mafter of a large estate. Where they were this ambergris was uscless, and therefore they came to the defnemte resolution of carrying themselves and it in an open. hoat to Virginia or to Newfoundland, where they hoped to dispose of their treasure to advantage. In the mean time, however, the Virginia company claimed the property of the Bermudas islands, and accordingly fold it to one hundred and twenty persons of their own society, who obtained a charter from King James for possessing it. This new Bermudas company, as it was called, fitted out a thip with fixty planters on board to settle on the Bermudas, under the command of one Mr. Richard Moor, by profession a carpenter. The new colony arrived upon the island just at the time the three failors were about to depart with their ambergris; which Moor having discovered, he immediately seized and disposed of it for the benefit of the company. So valuable a booty gave valt spirit to the new company; and the adventurers settled themselves upon St. George's island, where they raised cabins. As to Mr. Moor, he was indefatigable in his duty, and carried on the fortifying and planting the island with incredible diligence; for we are told, that he not only built eight or nine forts, or rather blockhouses, but inured the settlers to martial discipline. Before the first year of his government was expired, Mr. Moor received a supply of provisions and plenters from England, and he planned out the town of St. George as it now stands. The fame of this settlement soon awakened the jealouly of the Spaniards, who appeared off St. George's with some vessels; but being fired upon by the forts, they sheered off though the English at that time were so ill provided for a defence, that they had scarce a single barrel of gunpowder. on the island. During Moor's government, the Bermudas were plagued with rats, which had been imported into them by the English ships. These vermin multiplied so fast in St. George's island, that they even covered the ground, and had nests in the trees. They destroyed all the fruits and corn within doors; nay, they increased to such a degree, that St. George's island was at last unable to maintain them, and they fwam over to the neighbouring islands, where they made as great havoc. This calamity lasted five years, shough probably not in the same degree, and at last it couled all of a the talk the talk

On the expiration of Moor's government, he was succeeded by Captain Daniel Tucker, who improved all his predecessor's schemes for the benefit of the island, and particularly encou-

raged the culture of tobacco. Being a severe disciplinarian, he held all under him so rigidly to duty, that five of his subjects planned as bold an enterprise for liberty as was perhaps ever put in execution. Their names were Barker, who is faid to have been a gentleman; another Barker, a joiner; Goodwin, a ship-carpenter; Paet, a failor; and Saunders, who planned the Their management was as artful as their defign was bold. Understanding that the governor was deterred from taking the pleasure of fishing in an open boat, on account of the dangers attending it, they proposed to build him one of a particular construction, which accordingly they did in a secret part of the island; but when the governor came to view his boat, he understood that the builders had put to sea in it. The intelligence was true; for the adventurers having provided themselves with the few necessaries they wanted, sailed for England; and notwithstanding the storms they encountered, their being plundered by a French privateer, and the incredible miseries they underwent, they landed in forty-two days time at Corke in Ireland, where they were generously relieved and entertained by the Earl of Thomond.

In 1619, Captain Tucker refigned his government to Captain Butler. By this time the high character which the Sommer islands bore in England, rendered it fashionable for men of the highest rank to encourage their settlement; and several of the first nobility of England had purchased plantations among them. Captain Butler brought over with him five hundred paffengers, who became planters on the iflands, and raifed a monument to the memory of Sir George Sommers. The island was now fo populous, for it contained about a thousand whites, that Captain Butler applied himself to give it a new constitution of government, by introducing an affembly, the government till this time being administered only in the name of the governor and council. A body of laws was likewife drawn up, as agreeable to the laws of England as the fituation of the island would admit of. One Mr. Barnard succeeded Captain Butler as governor, but died in fix weeks after his arrival on the island; upon which the council made choice of Mr. Harrifon to be governor till a new one should be appointed. No fewer than hree thousand English were now settled in the Bermudas, and several persons of distinction had curiosity enough to visit it from England. Among these was Mr. Waller the poet, a man of fortune, who being embroiled with the parliament and commonwealth of England, spent some months in the Sommer islands, which he has celebrated in one of his

poems as the most delightful place in the world. The dangers attending the navigation, and the untowardly fituation of thefe illends, through their distance from the American continent, feem to be the reason why the Bermudas did not new become the best peopled islands belonging to England; as we are told that at one period they were inhabited by no fewer than ten thousand whites. The inhabitants, however, never showed any great spirit for commerce, and thus they never could become rich. This, together with the gradual alteration of the foil, and climate, already taken notice of, foon caufed them to dwindle in their population; and it is computed that they do not now contain above half the number of inhabitants they once did, and even these seem much more inclined to remove to some other place than to stay where they are: fo that unless some beneficial branch of commerce be found out. or some useful manufacture established, the state of the Bermudas must daily grow worse and worse.

The following account we have extracted from Mr. Morfe, as he professes to have given it on the authority of a gentleman who refided many years on the spot :

16 The parish of St. George's is an illand to the eastward of the main land, on which stands the town of St. George's, containing about five hundred houses. Contiguous to this is the island of St. David's, which supplies the town with butter, milk, vegetables, poultry, and fresh meat. In the bosom of the crook lie a vast number of small islands, uninhabited. The island is rocky, and the ground hilly. In the main road a fulky may pass; and even there, in many places, with disficulty; but turn to the right or left, and it is passable only on horseback. The air is healthy; a continual fpring prevalls: cedars. mantled in green, always adorn the hills: the pasture ground is ever verdant; the gardens ever in bloom. Most of the productions of the West-Indies might be here cultivated. The houses are built of a soft stone, which is sawn like timber; when exposed to the whether, and washed with lime, it becomes hard. The houses are white as snow, which, beheld from an eminence, contrasted with the greenness of the cedars and pasture ground. and the multitude of islands, full in view, realize what the poets have feigned concerning the Elysian fields. The inhabitants are numerous; the whole island is a continued village; no less, perhaps, than fifteen or twenty thousand are collefted on this small spot, of whom the blacks constitute two thirds. Happy for the country, were the colour unknown among them! The Bermudians are chiefly feafaring people;

of the men are ever at home; three or four hundred go anmuslly to Turk's island to rake falt, which is carried to America for provisions, or fold to fuch as may call at Turk's island for eash. However industrious the men are abroad, at home they ere indolent; much given, particularly of late, to gambling and luxury. The women are generally handsome and comely; they love their husbands, their children, and their dress. Dancing is their favourite amusement. The men must be equipped in tafte when they appear in company, should they not have a dollar in the pound to pay their ereditors; the women must array themselves like the belies of Paris, should they not have a morsel of bread to preserve their blooming complexion. They are thoroughly acquainted with one another's families, and from their tea table, as from their atmosphere, arises constant gusts of scandel and detraction. To ftrangers they are kind, but among themselves are quarrelsome : their friendly intercourse is too much confined within a narrow circle, bounded by coufins or fecond coufins.

"The common food of the Bermudians is coffee, fish of different kinds, a sweet potatoe, Indian corn, and American sour. Their water is rain preserved in cisterns; the general drink is grog. Fishing is the favourite amusement of the men. The government is conducted under a governor named by the crown of England, a council and general assembly. The established religion is episcopacy. There are nine churches; three clergymen have the charge of these nine; there is one Presbyterian church. A regard for religion is not the characteristic of the Bermudians; they seldom go to church, except it be to attend a funeral, or to get their children baptized, or to hear a stranger."

We shall close this account of the Bermudas with the sollowing extract from the report of the privy council on the slave trade:

"Nothing can better shew the state of slavery in Bermudas than the behaviour of the blacks in the late war. There were at one time between sisteen and twenty privateers sitted out from hence, which were partly manned by negro slaves, who behaved both as sailors and marines irreproachably; and whenever they were captured, always returned if it was in their power. There were several instances wherein they had been condemned with the vessel and sold, and afterwards sound means to escape; and through many difficulties and hardships returned to their masters service. In the ship Regulator, a

## LUCAY'S, OR BAHAMA ISLANDS.

The Bahamas are fituated between 220 and 270 degrees north latitude, and 739 and 811 degrees west longitude. They extend along the coast of Florida quite down to Cuba, and are faid to be five hundred in number, some of them only rocks, but twelve of them are large and fertile; all are, however, uninhabited, except Providence, which is two hundred miles eaft of the Floridas; though some others are larger and more fertile.

These islands were the first fruits of Columbus's discoveries; but they were not known to the English till 1667. The isle of Providence became an harbour for the buccaneers, or pirates, who for a long time infested the American navigation. This obliged the government, in 1718, to fend out Captain Woodes Rogers with a fleet to diflodge the pirates, and for making a fettlement. This the captain effected; a fort was erected, and an independent company was stationed in the island. Ever since this last settlement, these islands have been improving, though they advance but flowly. In time of war the inhabitants, as well as others, gain by the prizes condemned there, and at all times by the wrecks which are frequent in this labyrinth of rocks and shelves. The Spaniards and Americans captured these islands during the last war, but they were retaken on the 7th of April, 1783.

BESIDES the above enumerated, Great-Britain possesses part of a cluster of islands called the Virgin islands, of which there is but little authentic intelligence extant, Mr. Edwards observes respecting them, that if his enquiries were not neglected, his expectations were not answered. They were discovered

three

and named by Columbus, but the Spaniards of those days desmed them unworthy of their attention. They are about forty in number, whereof the English hold Tortols, Virgin Gorda, or Peniston, Josean Dykes, Guana ille, Beef and Thatch islands, Anegada, Nechar, Prickly Pear, Camana's, Ginger, Cooper's, Salt, and Peter's island, with some other of no value. Tortola is the principal, it was originally peopled by Dutch buccaneers, who were afterwards driven from thence by party of Englishmen of the same description. The chief merit of its improvement rests with a party of English settlers from Anguilla, who about the year 1690, embarked from thence and took up their residence in these islands; here they formed themselves into a society, their wants were few and their government simple and unexpensive; a council chosen from among themselves, with a president, exercised both a legis, lative and judicial authority, determining all questions and appeals, without expense to either party. Taxes there were none, when money was wanting it was raifed by voluntary contribution. Lured by the prospects of European intercourse. they, however, purchased in 1773, the privilege of being the subjects of the king of Great-Britain, at the price of four, and a half per cent. on all their produce, and four hundred pounds currency per annum toward the falary of the governor-general of the Leeward islands. Thus does man, unacquainted with his native rights and privileges, under the power of prejudice, purchase of his fellow creature the right to enjoy what God and Nature had made his own. Polterity, however, better acquainted with the rights of man, will perhaps not only dispute the validity of acts of this kind but cancel contracts which their forefathers had no right to make,

The number of inhabitants on these islands at the period above referred to, was about sisteen hundred whites, and seven thousand blacks. It is supposed the white inhabitants do not exceed one thousand, while the blacks are at least ten thousand. In 1787, there was experted from these islands, in forty ships of six thousand sive hundred and sixteen tons, seventy-nine thousand two hundred and three, hundred weight of sugar; twenty-one thousand sour hundred and seventeen gallons of rum; two thousand and eleven gallons of molasses; two hundred and eighty-nine thousand and seventy-four pounds of cotton; dying goods to the value of six thousand six hundred and sifty-one pounds two shillings and six-pence, and other miscellaneous articles to the value of two thousand

## SPANISH WEST-INDIES.

## C U B A.

JUBA is a large and very valuable island, and by far the most important of all the Spanish West-Indies. On the east fide it begins at 20° 21/ north latitude, touches the tropic of Cancer on the north, and extends from 749 to 859 15' west longitude. It lies fixty miles to the west of Hispaniols, twenty-five leagues north of Jamaica, one hundred miles to the east of Jucatan, and as many to the fouth of cape Florida, and commands the entrance of the gulphs both of Mexico end Florids, as also the windward passages. By this situation it may be called the key of the West-Indies. It was discovered by Columbus in 1492, who gave it the name of Ferdinando, in honour of king Ferdmand of Spain, but it quickly after recovered its ancient name of Cubs. The natives did not regard Columbus with a very favourable eye at his landing, and the weather proving very tempestuous, he soon left this island, and failed to Hayta, now called Hispaniola, where he was better received. The Spaniards, however, foon became masters of it. By the year 1511, it was totally conquered, and in that time they had destroyed, according to their own accounts, several millions of people. But the possession of Cuba was far from answering the expectations of the Spanish adventurers, whose avarice could be satisted with nothing but gold. These monsters finding that there was gold upon the island, concluded that it must come from mines, and therefore tortured the few inhabitants they had left, in order to extort from them a discovery of the places where these mines lay. The miseries endured by these poor crea-

tures i end to nish ty hang h as he f had de niards; despera now th built of inconfi who ob it from three S their ca the cov fhips, to pay this kin

tures were fuch, that they almost unanimously resolved to put an. end to their own lives, But were prevented by one of the Spanish tyrants colled Vasco Porcellos. This wretch threatened to hang himself along with them; that he might have the pleasure, as he faid; of tormenting them in the next world worse than he had done in this; and to much were they afraid of the Spaniards; that this threat diverted these poor savages from their desperate resolution. In 1511, the town of Havannah was built, now the principal place on the island. The houses were at first built only of wood, and the town itself was for a long time fo inconsiderable, that in 1536 it was taken by a French pirate, who obliged the inhabitants to pay feven hundred ducats to fave it from being burnt. The very day after the pirate's departure, three Spanish ships arrived from Mexico, and having unloaded their cargoes, failed in pursuit of the pirate ship. But such was the cowardice of the officers; that the pirate took all the three ships; and returning to the Havannah, obliged the inhabitants to pay feven hundred ducats more: To prevent misfortunes of this kind; the inhabitants built their houses of stone, and the place has fince been strongly fortified.

According to Abbé Raynal, the Spanish settlement at Cuba is very important; on three accounts: 1. The produce of the country, which is confiderable. 2. As being the staple of a great trade; and, 3 As being the key to the West-Indies. The principal produce of this island is cotton; the commodity, however, through neglact, is now become to fcarce, that fometimes feveral years pals without any of it being brought into Europe, In the place of cotton, coffee has been cultivated, but by a fimilar negligence, that is produced in no great quantity; the whole produced not exceeding thirty or thirty-five thousand weight, one-third of which is exported to Vera Cruz, and the rest to Madrid. The cultivation of coffee naturally leads to that of fugar; and this, which is the most valuable production of America, would of itself be sufficient to give Cuba that state of prosperity for which it seems defigned by nature. Although the furface of the island is in general uneven and mountainous, yet it has plains sufficiently extensive, and well enough watered, to: supply the consumption of the greatest part of Europe with fugar. The incredible fertility of its new lands, if properly managed, would enable it to furpass every other nation, however they may have now got the start of it; yet such is the indolence of the Spaniards, that to this day they have but few plantations, where with the finest canes, they make but a finall

Qq

quantity of coarse sugar at a great expense. This serves partly for the Mexican market, and partly for the mother country, while the indolent inhabitants are content to import fugar for themselves at the expense of near two hundred and twenty thoufand pounds annually. It has been expected, with probability, that the tobacco imported from Cuba would compensate this loss, for after furnishing Mexico and Peru, there was sufficient, with the little brought from Caracca and Buenos Ayres, to supply all Spain. But this trade, too, has declined through the negligence of the court of Madrid, in not gratifying the general tafte for tobacco from the Havannah. The Spanish colonies have an universal trade in skins, and Cuba supplies annually about ten or twelve thousand. The number might easily be increased in a country abounding with wild cattle, where some gentlemen posfels large tracts of ground, that for want of population can scarce be applied to any other purpose than that of breeding cattle, The hundredth part of this island is not yet cleared; the true plantations are all confined to the beautiful plains of the Havannah, and even those are not what they might be; all these plantations together may employ about twenty-five thousand male and female flaves. The number of whites, mestees, mulattoes, and free negroes upon the whole island, amounts to about thirty thousand. The food of these different species consists of excellent pork, very bad beef, and cassava bread. The colony would be more flourishing if its productions had not been made the property of a company, whose exclusive privilege operates as a constant and invariable principle of discouragement. If any thing could supply the want of an open trade, and atone for the grievances occasioned by this monopoly at Cuba, it would be the advantage which this island has for such a long time enjoyed, in being the rendezvous of almost all the Spanish vessels that sail to the new world; this practice commenced almost with the colony itself. Ponce de Leon having made an attempt upon Florida, in 1512, became acquainted with the new canal of Bahama; it was immediately discovered that this was the best route the ships bound from Mexico to Europe could possibly take, and to this the wealth of the island is principally, if not altogether, owing.

This island, famous for being the earliest settlement of the Spaniards in the new world, was at first in high estimation for the quantity of gold it supplied; this wealth diminished with the inhabitants of the country, whom they obliged to dig it out of the bowels of the earth; and the source of it was entirely dried up, when they were exterminated, which was quickly. done, by a feries of the most shocking barbarities that ever disgraced the history of any nation. Benzoni relates, that of two millions of inhabitants contained in the island when discovered by Columbus in 1492, scarce one hundred and fifty-three were alive in 1545. A vehement defire of opening again this fource of wealth, inspired the thought of getting slaves from Africa; but, besides that these were found unfit for the labours they were destined to, the multitude of mines which then began to be wrought on the continent, made those of Hispaniola no longer of any importance. An idea now fug efted itself, that their negroes, which were healthy, strong, and patient, might be usefully employed in husbandry; and they adopted, through necessity, a wife resolution, which, had they known their own interest, they would have embraced by choice.

The produce of their industry was at first extremely small, because the labourers were few. Charles V, who, like most sovereigns, preferred his favourites to every thing, had granted an exclusive right of the slave trade to a Flemish nobleman, who made over his privilege to the Genoese, who condusted this infamous commerce as all monopolies are condusted a they resolved to sell dear, and they sold but few. When time and competition had fixed the natural and necessary price of slaves, the number of them increased. It may easily be imagined that the Spaniards, who had been accustomed to treat the Indians as beasts, did not entertain a higher opinion of these negro Africans, whom they substituted in their place. Degraded still farther in their eyes by the price they had paid for them, they aggravated the weight

Q q 2

of their servitude, it became intolerable, and these wretched slaves made an effort to recover the unalienable rights of mankind; their attempt proved unsuccessful, but they teaped this benefit from their despair, that they were afterwards treated with less inhumanity.

This moderation, if tyranny cramped by the apprehension of revolt can deserve that name, was attended with some good confequences. Cultivation was pursued with some degree of success. Soon after the middle of the 16th century, Spain drew annually from this colony ten millions weight of sugar, a large quantity of wood for dying, tobacco, cacoa, cassia, ginger, cotton, and peltry in abundance. One might imagine that such say yourable beginnings would give both the desire and the means of carrying them farther: but a train of events more satal each than the other, ruined these hopes.

The first missortune arose from the depopulation of the island; the Spanish conquests on the continent should naturally have contributed to promote the success of an island, which nature seemed to have formed to be the center of that vast dominion arising around it, to be the staple of the different colonies. But it sell out quite otherwise; on a view of the immense fortunes raising in Mexico, and other parts, the richest inhabitants of Hispaniola began to despite their settlements, and quitted the true source of riches, which is on the surface of the earth, to go and ransack the bowels of it for veins of gold, which are quickly exhausted. The government endeavoured in vain to put a stop to this emigration; the laws were always either artfully cluded, or openly violated.

The weakness, wich was a necessary consequence of such a conduct, leaving the coasts without defence, encouraged the enemies of Spain to ravage them. Even the capital of this island was taken and pillaged by that celebrated English sailor, Sir Francis Drake, The cruisers of less consequence contented themselves with intercepting vessels in their passage through those latitudes, the best known at that time of any in the new world. To complete these missfortunes, the Castilians themselves commenced pirates; they attacked no ships but those of their own nation, which were more rich, worse provided, and worse desended than any others. The custom they had of sitting out ships clandestinely, in order to procure slaves, prevented them from being known, and the assistance they purchased from

The foreign trade of the colony was its only resource in this distress, and that was illicit; but as it continued to be carried on, notwithstanding the vigilance of the governors, or, perhaps, by their connivance, the policy of an exasperated and short-sighted court exerted itself in demolishing most of the sea ports, and driving the miserable inhabitants into the inland country. This act of violence threw them into a state of dejection, which the incursions and settlement of the French on the island afterwards carried to the utmost pitch. The latter, after having made some unsuccessful attempts to settle on the island, had part of it yielded to them in 1697, and now enjoy by far the best share.

Spain, totally taken up with that vast empire which she had formed on the continent, used no pains to dislipate this lethargy; she even refused to listen to the solicitations of her Flemish subjects, who carnessly pressed that they might have permission to clear those fertile lands. Rather than run the risk of seeing them carry on a contraband trade on the coasts, she chose to bury in oblivion a settlement which had been of consequence, and was likely to become so again.

This colony, which had no longer any intercourse with Spain but by a fingle ship, of no great burden, that arrived from thence every third year, confifted, in 1717, of eighteen thoufand four hundred and ten inhabitants, including Spaniards, mestees, negroes or mulattoes. The complexion and character of these people differed according to the different proportions of American, European and African blood they had received from that natural and transient union which restores all races and conditions to the fame level. These demi-savages, plunged in the extreme of floth, lived upon fruits and roots, dwelt in cottages without furniture, and most of them without slothes. The few among them, in whom indolence had not totally suppresse she sense of decency and taste for the conveniencies of life, purchased clothes of their neighbours the French in return for their cattle, and the money fent to them for the maintenance of two hundred foldiers, the priests and the government. It doth not appear that the company, formed at Barcelong in 1757, with exclusive privileges for the re-establishment of St. Domingo, hath as yet made any confiderable progress. They fend out only two small vessels annually, which are freighted back with fix thousand hides, and some other commodities of little value.

Domingo, the capital of the island, is seated in that part belonging to the Spaniards on the fouth fide of the island, and has a commodious harbour. The town is built in the Spanish manner, with a great square in the mic le of it, about which are the cathedral and other public buildings. From this square run the principal freets in a direct line, they being croffed by others at right angles, fo that the form of the town is almost square. The country on the north and east fide is pleasant and fruitful; and there is a large navigable river on the west with the ocean on the fouth. It is the fee of an acrchbishop, an ancient royal audience, and the feat of the governor. It has several fine churches and monasteries, and is so well fortified, that a fleet and army fent by Oliver Cromwell, in 1654, could not take it. The inhabitants are Spaniards, negroes, mulattoes, mestees, and Albatraces, of whom about a sixth part may be Spaniards. It had formerly about two thousand houses, but it is much declined of late years. The river on which it is feated is called Ozama. West longitude 69° 30', north latitude 180 25' FRANK IN THE PART OF THE THE PARTY OF T

### PORTO RICO.

This island is situated between 64° and 67° west longitude, and 18° north latitude, lying between Hispaniola and St. Christopher's. It is one hundred miles in length and forty in breadth.

Although this island had been discovered and visited by Columbus in 1493, the Spaniards neglected it till 1509, when the thirst of gold brought them thither from St. Domingo, under the command of Ponce de Leon, to make a conquest, which afterwards cost them dear.

Porto Rico hath thirty-fix leagues in length, eighteen in breadth, and one hundred in circumference. We may venture to affirm, that it is one of the best, if not entirely the best, of the islands of the new world, in proportion to its extent. The air is wholesome, and tolerably temperate, and it is watered by the pure streams of a considerable number of small rivulets. Its mountains are covered with either useful or valuable trees, and its vallies have a degree of fertility seldom to be met with elsewhere. All the productions peculiar to America thrive upon this deep soil. A safe port, commodious harbours, and coasts of easy access, are added to these several advantages.

On this territory, deprived of its savage inhabitants by ferocious deeds, the memory of which more than three centuries have a pulation three were huts. fublifts which from focattle, the ful They reargo

have not been able to obliterate, was successively formed a population of forty-four thousand eight hundred and eighty-three men, either white or of a mixed race: most of them were naked: their habitations were nothing more than huts. Nature, with little or no affishance, supplied them with subsistance. The linens, and some other things of little value, which they clandestinely obtained from the neighbouring of from foreign islands, were paid for by the colony with tobacco, cattle, and with the money which was sent by government for the support of the civil, religious and military establishment. They received from Spain annually only one small vessel, the cargo of which did not amount to more than ten thousand crowns, and which returned to Europe laden with hides.

Such was Porto Rico, when in 1765, the court of Madrid carried their attention to St. John, an excellent harbour, even for the royal navy, and which only wants a little more extent. The town which commands it was furrounded with fortifications. The works were made particularly ftrong towards a narrow and marfhy neck of land, the only place by which the town can be attacked on the land fide. Two battalions and one company of artillery croffed the sea for its defence.

At this period, a possession which had annually received from the treasury no more than three hundred and seventy-eight thousand livres, cost them two millions six hundred and thirty-four thousand sour hundred and thirty-three livres, which sum was regularly brought from Mexico. This increase of species simulated the colonists to undertake some labours: at the same time the island, which till then had been under the yoke of monopoly, was allowed to receive all Spanish navigators. These two circumstances united, imparted some degree of animation to a settlement, the languishing state of which assonished all nations. Its tithes, which before 1765 did not yield more than eighty-one thousand livres, have increased to two hundred and thirty thousand four hundred and eighteen livres.

On the first of January, 1778, the population of Porto Rico amounted to fourscore thousand six hundred and sixty inhabitants, of which number only six thousand sive hundred and thirty were slaves. The inhabitants reckoned seventy-seven thousand three hundred and eighty-sour head of horned cattle, twenty-three thousand one hundred and ninety-sive horses, sisteen hundred and sisteen mules, and forty-nine thousand sisty-eight head of small cattle.

The plantations, the number of which were five thousand fix bundred and eighty-one, produced two thousand seven hundred and thirty-seven quintals of sugar; eleven hundred and sourteen quintals of cotton; eleven thousand one hundred and sixty-three quintals of coffee; nineteen thousand five hundred and fifty-fix quintals of rice; fifteen thousand two hundred and sixteen quintals of maise; seven shousand four hundred and sixty-eight quintals of tobacco; and nine thousand eight hundred and sixty quintals of molasses.

hundred and thirty-four in number, produced annually eleven thousand three hundred and fixty-four oxen; four thousand three hundred and thirty-four horses; nine hundred and fiftytwo mules; thirty-one thousand two hundred and fifty-four

head of Infall cattle.

Till the year 1778, no one citizen of Porto Rico was in reality master of his possessions. The commanders who had fucceeded each other had only granted the income of them; This inconceivable defect hath at length been remedied, the proprietors have been confirmed in their possessions by a law. upon condition of paying annually one real and a quarter, or fixteen fols fix deniers, for every portion of ground of twentyfive thousand seven hundred and eight toises, which they employed in cultures; and three quarters of a real, or ten fols one denier and a half, for that part of the foil that is referved for pesture ground. This easy tribunis to serve for the cloathing of the militia, composed of one thouland nine hundred infantry; and two hundred and fifty cavalry. The remainder of the fland is distributed on the same conditions to those who have little or no property. These last, who are stinguished by the name of Agreges, are seven thousand eight hundred and thirtyfive in number.

## TRINIDAD AND MARGARETTA.

Trinidad is fituated between 59° and 62° west longitude, and 10° north latitude; it was discovered by Columbus, who landed on it in 1498, but it was not till 1535 that the court of Madrid took possession of it.

It is said to comprehend three hundred and eighteen square leagues. It hath never experienced any hurricane, and its climate is wholesome. The rains are very abundant there from the middle of May to the end of October; and the dryness that prevails throughout the rest of the year is not attended with any

inconvenience, because the country, though destitute of navigable rivers, is very well watered. The earthquakes are more frequent than dangerous. In the interior part of the island there are four groups of mountains, which, together with some others formed by Nature upon the shores of the ocean, occupy a third part of the territory; the rest is in general susceptible of the richest cultures.

The form of the island is a long square. To the north is a coast of twenty-two leagues in extent, too much elevated and two much divided ever to be of any use. The eastern coast is only nineteen leagues in extent, but in all parts as convenient as one could wish it to be. The southern coast hath sive-and-twenty leagues, is a little exalted, and adapted for the successful cultivation of cossee and cacao. The land on the western side is separated from the rest of the colony, to the south by the Soldier's canal, and to the north by the Dragon's mouth, and forms, by means of a recess, a harbour of twenty leagues in breadth, and thirty in depth. It offers, in all seasons, a secure assume to the navigators, who, during the greatest part of the year, would find it difficult to anchor any where else, except at the place called the Galiote.

In this part are the Spanish settlements: they consist only of the port of Spain, upon which there are seventy-eight thatched huts, and of St. Joseph, situated three leagues farther up the country, where eighty-eight families, still more wretched than the former, are counted.

The cacao was formerly cultivated near these two villages; its excellence made in he preferred even to that of Caraccas. In order to secure it the merchants used to pay for it beforehand. The trees of produced it perished all in 1727, and have not been re-planted since. The monks attributed this disaster to the colonists having refused to pay the tithes. Those who were not blinded by interest or superstition, ascribed it to the north winds, which have too frequently occasioned the same kind of calamity in other parts. Since this period, Trinidad hath not been much more frequented than Cubagua; still, however, it produces sugar, sine tobacco, indigo, ginger, and a variety of fruits, with some cotton trees and Indian corn, which render it of some importance.

Cubagua is a little island, at the distance of four leagues only from the continent, was discovered, and neglected by Columbus, in 1498. The Spaniards, being afterwards informed that its shores contained great treasures, repaired to it in multitudes in 1509, and gave it the name of Pearle Island.

The pearl bank was foon exhausted, and the colony was transferred, in 1524, to Margaretta, where the regretted riches were found, and from whence they disappeared atmost as soon.

Yet this last settlement, which is sisteen leagues in length and sive in breadth, was not abandoned. It is almost continually covered with thick fogs, although nature hath not bestowed upon it any current waters. There is no village in it except Mon Padre, which is defended by a small fost: its foil would be fruitful if it were cultivated.

It was almost generally supposed, that the court of Madrid. in preferving Margaretta and Trinidad, meant rather to keep off rival nations from this continent than to derive any advantage from them : at prefent we are induced to think otherwife; convinced that the Archipelago of America was full of inhabitants loaded with debts, or who possessed but a small quantity of indifferent land, the council of Charles III, offered great concessions, in these two islands, to those who should embrace their faith. The freedom of commerce with all the Spanish traders was infured to thom. They were only obliged to deliver their cacao to the company of Caraccas, but at twenty-feven fols per pound, and under the condition that this company should advance them some capital. These overtures have only met with a favourable reception at Granada, from whence some Frenchmen have made their escape with a few flaves, either to fkrom themselves from the purfuits of their creditors, or from avention to the fway of the English. In every other part they had had no effect, whether from aversion for an oppressive government, or whether it be that the expectations of all are at pretent turned towards the north of the new world.

Trinidad and Margaretta are at present inhabited only by a few Spaniards, who, with some Indian woman, have formed a race of men, who, uniting the indolence of the savage to the vices of civilised nations, are sluggards, cheats and zealots. They live upon maize, upon what fish they catch, and upon bananas, which Nature, out of indulgence, as it were, to their slothfulness, produces there of a larger size, and better quality, than in any other part of the Archipelago. They have a breed of lean and tasteless cattle, with which they carry on a fraudulent trassic to the French colonies, exchanging them for camlets, black veils, linens, silk stockings, white hats, and hardware. The number of their vessels does not exceed thirty sloops, without decks.

with inha inch havi three is followeig

T

iflanc civil peopl live war of pl the t Befid Spani The tame animals of these two islands have filled the woods with a breed of horned cattle, which are become wild: the inhabitants shoot them, and cut their sless into slips of three inches in breadth and one in thickness, which they dry, after having melted the fat out of them, so that they will keep three or four months. This provision, which is called tassay, is sold in the French settlements for twenty livers a hundred weight.

All the money which the government sends to these two islands, falls into the hands of the commandants, the officers civil and military, and the monks. The remainder of the people, who do not amount to more than sixteen hundred, live in a state of the most deplorable poverty. In time of war they furnish about two hundred men, who, for the sake of plunder, offer themselves, without distinction, to any of the colonies that happen to be fitting out cruizers for sea. Besides these, there are some other small islands claimed by the Spaniards, but to which they have paid little or no attention.

# FRENCH WEST-INDIES.

## MARTINICO.

to real think the training to

nandredindrederick of spipe of the first production in the state of the spin of the spin of the state of the spin of the spin

MARTINICO is the chief of the French Caribbee islands, the middle of which is fituated in west longitude 61° 0;

north latitude 149 30'.

This island was first settled by M. Desnambuc a Frenchman, in the year 1635, with only one hundred men from St. Christopher's, He chose rather to have it peopled from thence than from Europe, as he forefaw that men tired with the fatigue of fuch a long voyage, would mostly with foon after their arrival, either from the climate, or from the hardships incident to most emigrations, They completed their first fettlement without any difficulty; the natives, infimidated by their fire arms, or seduced by promises, gave up the western and fouthern parts of the island to the new comers. In a short time, however, perceiving the number of thele enterprifing strangers daily increasing, they resolved to extirpate them, and therefore called in the favages of the neighbouring islands to assist them; they fell jointly upon a little fort that had been hastily erected, but were repulsed with the loss of seven or eight hundred of their best warriors, who were left dead upon the spot.

After this check, the savages for a long time disappeared entirely, but at last they returned, bringing with them presents to the French, and making excuses for what had happened; they were received in a friendly manner, and the reconciliation sealed with pots of brandy. This peaceable state of affairs, however, was of no long continuance, the French took such undue advantages of their superiority over the savages, that they soon rekindled in the others that hatred which had never been entirely subdued. The savages separated into small bands,

regrocs,

and waylaid the French as they came fingly out into the woods to hunt, and waiting till the sportsman had discharged his piece, rushed upon and killed him before he could charge it again. Twenty men had been thus assassinated before any reason could be given for their sudden disappearance; but as soon as the matter was known the French took a severe and fatal revenge; the savages were pursued and massacred, with their wives and children, and the few that escaped were driven out of Marti-

nico, to which they never returned.

The French being thus left fole masters of the island, lived quietly on those spots which best suited their inclinations. At this time they were divided into two classes; the first consisted of those who had paid their passage to the island, and these were called inhabitants, and to these the government distributed lands, which became their own, upon paying a yearly tribute. These inhabitants had under their command a multitude of disorderly people brought over from Europe at their expense, whom they called engages, or bondsmen. This engagement was a kind of flavery for the term of three years, on the expiration of which they were at liberty, and became the equals of those whom they had ferved. They all confined themselves at first to the culture of tobacco and cotton, to which was soon added that of armitto and indigo. The culture of fugar also was begun about the year 1650. Ten years after, one Benjamin D'Acosta, a lew planted some cacao trees, but his example was not followed till 1684, when chocolate was more commonly used in France. Cacao then became the principal support of the colonists, who had not a sufficient fund to undertake sugar plantations; but by the inclemency of the feafon in 1718, all the cacao trees were destroyed at once. Coffee was then proposed as a proper object of culture; the French ministry had received as a present from the Dutch, two of these trees, which were carefully preserved in the king's botanical garden. Two young shoots were taken from these, put on board a ship for Martinico, and entrusted to the care of one M. Desclieux; this ship happened to be straitened for want of fresh water, and the trees would have perished, had not the gentleman shared with them that quantity of water which was allowed for his own drinking. The culture of coffee was then begun, and attended with the greatest and most rapid success; about the end of the last century; however, the colony had made but small advances. In 1700 it had only fix thousand five hundred and ninety-seven white inhabitants; the savages, mulattoes, and free regroes, men, women, and children, amounted to no more than

ds,

ich-

rom-

vith oon ardfirst

In a ter-

fort the who

our-

ared ents ied; iliaairs, iuch

ever

nds.

five hundred and seven; the number of slaves was but fourteen thousand five hundred and sixty-six; all these together made a population of twenty-one thousand six hundred and forty-sive persons.

After the peace of Utrecht, Martinico began to emerge from that feeble state in which it had so long continued. The island then became the mart for all the windward French settlements; in its ports the neighbouring islands sold their produce, and brought the commodities of the mother country; and, in short, Martinico became famous all over Europe; their labour improved the plantations as far as was consistent with the consumption then made in Europe of American productions, and the annual exports from the island amounted to about seven hundred thousand pounds.

The connections of Martinico with the other islands entitled her to the profits of commission, and the charges of transport, as she alone was in the possession of carriages. This profit might be rated at the tenth of the produce; and the sum total must have amounted to near seven hundred and sixty-five thousand pounds: this standing debt was seldent called in, and less for the improvement of their plantations; it was increased by advances in money, slaves, and other necessary articles, so that Martinico became daily more and more a creditor to the other islands, and thus kept them in constant dependence.

The connections of this island with cape Braton, Canada, and Louisiana, procured a market for the ordinary sugars, the inferior coffee, the molasses, and rum, which would not sell in France. In exchange the inhabitants received salt sish, dried vegetables, deals, and some slour. In the clandestine trade on the coasts of Spanish America, consisting wholly of goods manufactured by the French nation, she commonly made a profit of ninety per cent. on the value of about one hundred and seventy-five thousand pounds, sent yearly to the Caraccas, or

neighbouring colonies.

Upwards of seven hundred and eighty-seven thousand pounds were constantly circulated in this island with great rapidity; and this is perhaps the only country in the world where the specie has been so considerable as to make it a matter of indifference to them whether they dealt in gold, silver, or commodities. This extensive trade brought into the ports of Martinico annually two hundred ships from France; sourteen or sisteen fitted out by the mother country for the coast of Guinea, fixty from Canada, ten or twelve from the islands of Margaretta and Trinidad, besides the English and Dutch ships that

from the island to the northern colonies, to the Spanish continent, and to the windward islands, employed one hundred and twenty vers, from twenty to thirty tons burden.

The war of 1744 put a stop to this prosperity: not that the fault was in Martinico itself; its navy, constantly exercised, and accustomed to frequent engagements, which the carrying on a contraband trade required, was prepared for action. In less than six months, forty privateers, fitted out at St. Peter's, spread themselves about the latitude of the Caribbee islands; yet an entire stop was put to the navigation of the colony, both to the Spanish coast and to Canada, and they were constantly disturbed even on their own coasts. The sew ships that came from France in order to compensate the hazards they were exposed to by the loss of their commodities, fold them at a very advanced price, and bought them at a very low one.

When every thing thus feemed tending to decay, the peace at last restored the freedom of trade, and with it the hopes of recovering the ancient prosperity of the island; the event. however, did not answer the pains that were taken to attain it. Two years had not elapsed after the ceffation of hostilities, when the colony lost the contraband trade she carried on with the American Spaniards. This loss was not so sensibly felt by the colony as the hardthips brought upon them by the mother country; an unskilful administration clogged the reciprocal and necessary connection between the islands and North-America with so many formalities, that in 1755 Martinico sent but four vessels to Canada. The direction of its colonies, now committed to the care of ignorant and avaricious clerks, it foon lost its importance, funk into contempt, and was prostituted to venality. The war broke out afresh, and after a series of misfortunes and defeats, the island fell into the hands of the British; it was restored in July 1763, sixteen months after it had been conquered, but deprived of all the necessary means of prosperity that had made it, of so much importance. The contraband trade carried on to the Spanish coasts was almost entirely lost, the cession of Canada to Great-Britain precluded all hopes of opening ag in a communication, which had only been interrupted by temporary mistakes. The productions of the Grenades, St. Vincent, and Dominica, which were now become British dominious, could no longer be brought into their harbours, and a new regulation of the mother country, which forbad her having any intercourse with Guadaloupe, lest her no hopes from that quarter.

The colony, thus deprived of every thing as it were, and destitute, nevertheless contained, at the last survey, which was taken on the first of January, 1770, in the compass of twenty-eight parishes, twelve thousand four hundred and fifty white people of all ages and of both sexes; one thousand eight hundred and fourteen free blacks or mulattees; seventy thousand five hundred and fifty-three slaves; and sour hundred and forty three fugitive negroes. The number of births in 1766, was in proportion of one in thirty among the white people, and of one in twenty-sive among the blacks.

The island is sixteen leagues in length, and forty-five in cirsumference, leaving out the capes, some of which extend two or three leagues into the fea; it is very uneven, and interfected in all parts by a number of hillocks, which are mostly of a conical form. Three mountains rife above these smaller emirences; the highest bears the indelible marks of a volcano; the woods with which it is covered, continually attract the clouds, which occasion noxious damps, and contribute to make it horrid and inaccessible, while the two others, are in most parts cultivated. From these mountains issue the many springs that water the island; these waters, which flow in gentle ftreams, are changed into torrents on the flightest storm; their qualities are derived from the foil over which they flow; in some places they are excellent, in others to bad, that the inhabitants are obliged to drink the water they have collected during the rainy fealon.

Of all the French settlements in the West-Indies, Martinico is the most happily situated with regard to the winds which prevail in those seas. Its harbours possess the most inestimable advantage of affording a certain shelter from the hurricanes which annoy these latitudes. The harbour of Fort Royal is one of the best in all the windward islands, and so celebrated for its fafety, that when it was open to the Dutch, their ships mafters had orders from the republic to take shelter there in June, July, and August, the three months in which the hurricanes are most frequent. The lands of the Lamentin, which ore but a league distant, are the richest and most fertile in the whole island. The numerous streams which water this fruitful country, convey loaded canoes to a confiderable distance from the fea; the protection of the fortifications fecure the peaceable enjoyment of fo many advantages, which, however, are balanced by a swampy and unwholesome soil. This capital of Martinico is also the rendezvous of the men of war, which

On this account Fort Roya as an improper place to become the center of trade, and we therefore removed to St. Peter's. This little town, notwithlanding the fires that have four times received it to alhes, still contains one thousand seven hundred houses. It is fituated on the western coast of the island, on a bay or inlet, which is almost circular; one part of it is built on the strand along the sea side, which is called the anchorage, and is the place destined for ships and warehouses; the other part of the town stands upon a low hill; it is called the Fort, from a small fortification that was built there in 1665, to check the seditions of the inhabitants against the tyranny of monopoly, but it now serves to protect the road from foreign enemies; these two parts of the town are separated by a rivulet.

The anchorage is at the back of a pretty high and steep hill, Shut up as it were by this hill, which intercepts the easterly winds, the most constant and most salubrious in these parts; exposed, without any refreshing breezes, to the scorching beams of the sun, reslected from the hill, from the sea, and the black sand on the beach; this place is extremely hot, and always unwholesome; besides, there is no harbour, and the ships which cannot winter safely upon this coast, are obliged to take shelter at Fort Royal. But these disadvantages are compensated by the conveniency of the road of St. Peter's for loading and unloading of goods, and by its situation, which is such that ships can freely go in and out at all times, and with all winds.

#### GUADALOUPE.

The notable of this island is seated in about north latitude 169 30%, west longitude 619 20%; it is of an irregular figure, may be about eighty leagues in circumference, and is divided into two parts by a small arm of the sea, which is not above two leagues long, and from fisteen to forty fathoms broad. This canal, known by the name of the Salt river, is navigable, but will only carry vessels of fifty tons burden.

That part of the island which gives its name to the whole colony, is, towards the center, full of craggy rocks, where the cold is so intense, that nothing will grow upon them but fern, and some useless shrubs covered with moss. On the top of these rocks, a mountain called la Souphriere, or the Brimstone mountain, rises to an immense height; it exhales, through various

openings, a thick black smoke, intermixed with sparks that are visible by night. From all these hills slow numberless springs, which fertilize the plain below, and moderate the burning heat of the climate by a refreshing stream, so celebrated, that the galleons which formerly used to touch at the Windward islands, had orders to renew their provision with this pure and salubrious water: such is that part of the island properly called Guadaloupe. That which is commonly called Grand Terre, has not been so much savoured by nature; it is indeed less rugged, but it wants springs and rivers; the soil is not so fertile, or the climate so wholesome, or pleasant.

No European nation had yet taken possession of this island, when five hundred and fifty Frenchmen, led on by two gentle. men named Loline and Duplessis, arrived there from Dieppe on the 28th of June, 1635. They had been very imprudent in their preparations; their provisions were so ill chosen, that they were spoiled in the passage, and they had shipped so few. that they were exhausted in two months: they were supplied with more from the mother country. St. Christopher's, whe. ther from scarcity or design, refused to spare them any, and the first attempts in husbandry they made in the country; could not as yet afford any thing. No resource was left for the colony but from the favages, but the superfluities of a people who cultivate but little, and therefore had never laid up any stores, could not be very confiderable. The new comers, not content with what the favages might freely and voluntarily bring, came to a resolution to plunder them, and hostilities commenced on the fixteenth of January, 1636.

A dreadful famine was the consequence of this kind of war; the colonists were reduced to graze in the fields, to eat their own excrements, and to dig up dead bodies for their subsistence. Many who had been slaves at Algiers, held in abhorrence the hands that had broken their setters, and all of them cursed their existence. It was in this manner that they atomed for the crime of their invasion, till the government of Aubert brought a peace with the savages at the end of the year 1640.

The few inhabitants who had escaped the calamities they had drawn upon themselves, were soon joined by some discontented colonists from St. Christopher's, by Europeans sond of novelty, by sailors tired of navigation, and by some sea captains, who prudently chose to commit to the care of a grateful soil

es they had lifeontented of novelty, stains, who trateful foil the treasures they had faved from the dangers of the fea.

But still the prosperity of Guadaloupe was stopped or impeded
by obstacles arising from its situation.

The facility with which the pirates from the neighbouring islands could carry off their cattle, their slaves, their very crops, frequently brought them into a desperate situation. Intestine broils, arising from jealousies of authority, often difturbed the quiet of the planters. The adventurers who went over to the Windward islands, disdaining a land that was fitter for agriculture than for naval expedition, were casily drawn to Martinico by the convenient roads it abounds with. The protection of those intrepid pirates brought to that island, all the traders who flattered themselves that they might buy up the spoils of the enemy at a low price and all the planters who thought they might fafely give themselves up to peaceful labours, This quick population could not fail of introducing the civil and military government of the Caribbee islands into Martinico. From that time the French ministry attended more serioully to this than to the other colonies, which were not fo immediately under their direction, and hearing chiefly of this island, they turned all their encouragement that way.

It was in consequence of this preference, that in 1700, the number of inhabitants in Guadaloupe amounted only to three thousand eight hundred and twenty-five white people; three hundred and twenty-five savages, free negroes, mulattoes; and fix thousand seven hundred and twenty-five slaves, many of whom were Caribs.

At the end of the year 1755, the colony was peopled with nine thousand six hundred and forty-three whites, forty-one thousand one hundred and forty slaves of all ages and both sexes, Her falcable commodities were the produce of three hundred and thirty-four sugar plantations; fifteen plots of indigo; fortyfix thousand eight hundred and forty stems of cacao; eleven thousand seven hundred of tobacco; two million two hundred and fifty-feven thousand seven hundred and twenty-five of coffee; twelve million seven hundred and forty-eight thousand four hundred and forty-feven of cotton. For her provisions the had twenty-nine squares of rice or maize, and one thousand two hundred and nineteen of potatoes or yams; two million and twenty eight thousand five hundred and twenty banana trees, and thirty-two million five hundred and seventy-seven thousand nine hundred and fifty trenches of cassava. The cattle of Guadaloupe confisted of four thousand nine hundred

and forty-fix horses; two thousand nine hundred and twenty-four mules; one hundred and twenty-five asses; thirteen thousand seven hundred and fixteen head of horned cattle; eleven thousand one hundred and fixty-two sheep or goats, and two thousand four hundred and forty-four hogs. Such was the state of Guaddoupe when it was conquered by the British in the month of April, 1759.

The colony, with its dependencies, was restored to France

by the treaty of peace in July, 1763.

By a survey taken in 1767, this island, including the smaller islands, Deseada, St. Bartholomew, Marigalante, and the Saints, dependent upon it, contained eleven thousand eight hundred and fixty-three white people of all ages and both fexes; seven hundred and fifty-two free blacks and mulattoes; seventytwo thousand seven hundred and fixty-one slaves; which makes in all'a population of eighty-five thousand three hundred and feventy-fix fouls. The cattle confisted of five thousand and fixty horses; four thousand eight hundred and fifty-four mules; one hundred and eleven affes; seventeen thousand three hundred and seventy-eight head of horned cattle; fourteen thoufand eight hundred and ninety-five sheep or goats, and two thousand fix hundred and fixty-nine hogs. The provision was thirty million four hundred and seventy-fix thousand two hundred and eighteen trenches of cassava; two million eight hundred and nineteen thousand two hundred and fixty-two banana trees; two thousand one hundred and eighteen squares of land planted with yams and potatoes. The plantations contained seventy-two arnotto trees; three hundred and twentyseven of cassia; thirteen thousand two hundred and ninetytwo of cacao; five million eight hundred and eighty-one thoufand one hundred and seventy-six of coffee; twelve million one hundred and fifty-fix thousand seven hundred and fixty-nine of cotton; twenty-one thousand four hundred and seventy-four squares of land planted with sugar-canes. The woods occupied twenty-two thousand and ninety-seven squares of land; there were twenty thousand two hundred and forty-seven in meadows, and fix thousand four hundred and five uncultivated or forsaken. Only one thousand five hundred and eighty-two plantations grew cotton, coffee and provisions. Sugar was made but in four hundred and one. These sugar works employed one hundred and forty water-mills, two hundred and fixty-three turned by oxen, and eleven wind-mills.

turned

The produce of Guadaloupe, including what is poured in from the small islands under her dominion, ought to be very confiderable; but in 1768, it yielded to the mother country no more than one hundred and forty thousand four hundred and eighteen quintals of fine fugar; twenty-three thousand fix hundred and three quintals of raw fugar; thirty-four thousand two hundred and five quintals of coffee; eleven thousand nine hundred and fifty-five quintals of cotton; four hundred and fifty-fix quintals of cacao; one thousand eight hundred and eighty-four quintals of ginger; two thousand five hundred and twenty-nine quintals of logwood; twenty-four chests of sweetmeats: one hundred and fixty-five chefts of liquors; thirtyfour casks of rum, and twelve hundred and two undressed skins. All these commodities were fold in the colony only for three hundred and ten thousand seven hundred and ninety-two pounds eighteen shillings and three pence; and the merchandise it received from France has cost but one hundred and ninetyseven thousand nine hundred and nineteen pounds, eighteen shillings and fix-pence: but from that period it considerably increased till the late troubles.

#### SAINT LUCIA.

Saint Lucia is about twenty-two miles long and eleven broad, the middle of it lying in north latitude 39° 14, west longitude 27? o'. It was first settled by the French in 1650, but was reduced by the English in 1664, who evacuated it in 1666. The French immediately re-settled the island, but were again driven away by the Caribs. As foon as the favages were gone the former inhabitants returned, but only for a short time; for being afraid of falling a prey to the first privateer that should visit their coasts, they removed either to other French settlements that were stronger, or which they might expect to be better defended. There was then no regular culture or colony at St. Lucia, it was only frequented by the inhabitants of Martinico, who came thither to cut wood and to build canoes, and who had confiderable docks on the island. In 1718 it was again settled by the French; but four years after, it was given by the court of London to the duke of Montague, who was fent to take possession of it. This occasioned some disturbance between the two courts; which was fettled, however by an' agreement made in 1731, that till the respective claims should be finally adjusted, the island should be evacuated by both nations, but that both should wood and water there. This

precarious agreement furnished an opportunity for private interest to exert itself. The English no longer molested the French in their habitations, but employed them as their affiftants in carrying on with richer colonies a smuggling trade. which the subjects of both governments, thought equally advantageous to them. This trade was more or less confiderable till the treaty of 1763, when the property of St. Lucia was fecured to the crown of France. After that time the colony flourished considerably. In the beginning of the year 1772, the number of white people amounted to two thousand and eighteen men, women and children; that of the blacks to fix hundred and fixty-three freemen, and twelve thousand feven hundred and ninety-five flaves. There were feven hundred and fix dwelling places. The annual revenue at that time was about one hundred and seventy-five thousand pounds, which, according to the Abbe Raynal, must have increased one-eighth yearly for some time. It was taken by the British sleet under admirals Byron and Barrington in the year 1778, but was restored to France at the peace of

The foil of St. Lucia is tolerably good, even at the sea side; and is much better the farther one advances into the country, The whole of it is capable of cultivation, except some high and craggy mountains, which bear evident marks of old volcanoes. In one deep valley there are eight or ten ponds, the water of which boils up in a dreadful manner, and retains some of its heat at the distance of fix thousand toiles from its refervoirs. The air in the inland parts, like that of all other uninhabited countries, is foul and unwholesome, but grows less noxious as the woods are cleared and the ground laid open. On some parts of the sea coast the air is still more unhealthy, on account of some small rivers which spring from the foot of the mountains, and have not sufficient slope to wash down the sands with which the influx of the ocean stops up their mouths, by which means they spread themselves into unwholesome marshes on the neighbouring grounds.

## TOBAGO.

Tobago is fituated in 11? odd minutes north latitude, one hundred and twenty miles fouth of Barbadoes, and about the fame distance from the Spanish main. It is about thirty-two miles in length and nine in breadth. The climate here is not so hot as might be expected so near the equator; and it is said, that it lies out of the course of those hurricanes that have

fometimes proved fo fatal to the other West-India islands. It has a fruitful foil, capable of producing fugar, and indeed every thing else that is raised in the West-Indies, with the addition. if we may believe the Dutch, of the cinnamon, nutmeg and gum copal. It is well watered with numerous springs; and its bays and rivers are so disposed as to be very commodious for all kind of shipping. The value and importance of this island appears from the expensive and formidable armaments sent thither by European powers in Support of their different claims. It feems to have been chiefly possessed by the Dutch, who defended their pretentions against both England and France with the most obstinate perseverance. By the treaty of Aix la Chapelle, in 1748, it was declared neutral, though by the treaty of peace in 1763, it was yielded up to Great-Britain; but, in June, 1781, it was taken by the French, and ceded to them by the treaty of 1783.

### ST. BARTHOLOMEW, DESEADA AND MARIGALANTE,

Are three small islands lying in the neighbourhood of Antigua and St. Christopher's, and are of no great consequence to the French, except in time of war, when they give shelter to an incredible number of privateers, which greatly annoy the British West-India trade. St. Bartholomew is now to be considered as belonging to the crown of Sweden, being ceded to it by France in 1785.

### HISPANIOLA.

In noticing the Spanish settlements in this part of the globe, we have already taken a general view of this island; it only therefore remains to notice the French settlements thereon.

The French towns are, Cape Francois, the capital, containing feveral years ago, about eight thousand whites and blacks. Leogane, though inferior in point of fize, is a good port, a place of confiderable trade, and the feat of the French government in that island. They have two other towns, confiderable for their trade, Petit Guaves and port Louis.

The following is said to be an exact statement of the population, product and commerce of the French colony of Hispaniola in the year 1788, and may serve to shew the immense losses sustained by the late insurrections of the negroes.

Whites, twenty-feven thousand seven hundred and seventeen; free people of colour, twenty-one thousand eight hundred and eight; slaves, four hundred and sive thousand sive hundred and twenty-eight. The plantations were, of fugar, feven hundred and ninety-two; of indigo, three thousand and ninety-seven; of cotton, seven hundred and five; of coffee, two thousand eight hundred and ten. The manufactories were, distilleries, one hundred and seventy-three; of brick and potter's ware, sixty-three; of cacao, sixty-nine, and three tanners.

Its productions exported to France were, seventy millions two hundred and twenty-seven thousand seven hundred and nine pounds of white sugar: ninety-three millions one hundred and seventy-seven thousand sive hundred and eighteen ditto of brut ditto; sixty-eight millions one hundred and sifty-one thousand one hundred and eighty-one ditto of coffee; nine hundred and thirty thousand and sixteen pounds of indigo; fix millions two hundred and eighty-six thousand one hundred and twenty-six ditto of cotton; and twelve thousand nine hundred and ninety-sive dressed skins.

Sold to American, English and Dutch smugglers; twenty-five millions of pounds of brut sugars; twelve millions ditto of

coffee; and three millions ditto of cotton.

The molasses exported in American bottoms, valued at one million of dollars; valuable wood, exported in French ships, two hundred thousand dollars.

Its trade employed five hundred and eighty large ships, carrying one hundred and eighty-nine thousand six hundred and seventy-nine tons, in which the imports amounted to twelve millions of dollars, of which more than eight millions of dollars were in manufactured goods of France, and the other four millions in French produce.

The Spanish ships exported in French goods, or money, one million four hundred thousand dollars, for mules imported by

them into the colony.

Ninety-eight French ships, carrying forty thousand one hundred and thirty tons, imported twenty-nine thousand five hundred and fix negroes, which fold for eight millions of dollars,

The negroes in the French division of this island have, for feveral years past, been in a state of insurrection. In the progress of these disturbances, which have not yet subsided, the planters and others have sustained immense losses. As this unhappy affair has engaged much of the attention of the public, we are happy in being able to give a summary statement of the causes of this insurrection.\*

ne Causes

The fituation of the French colonies early attracted the attention of the conflituent Assembly. At this time all was as tranquil as futh a state of oppression would permit. Political health can only be attributed to a country with a free constitution. The situation of the island is that of a paralytic; one part is torpid, whilst the other is affected with the frantic motions of St. Vitus's dance.

The first interference of the National Assembly in the affairs of the colonies, was by a decree of the 8th of March, 1790, which declared, That all free persons, who were proprietors and residents of two years standing, and who contributed to the exigencies of the state, should exercise the rights of voting, which constitute the quality of French citizens.

This decree, though in fact it gave no new rights to the people of colour, was regarded with a jealous eye by the white planters, who evidently faw that the generality of the qualification included all descriptions of proprietors; they affected, however, to impose a different construction on it. The people of colour appealed to common justice and common sense; it was to no purpose, the whites repelled them from their affemblies; some commotions ensued, in which they mutually fell a facrifice to their pride and resentment.

These disturbances again excited the vigilance of the National Assembly; a decree was passed on the 12th of October, 1790, by which the Assembly declared, as a constitutional article, "That they would establish no regulations respecting the internal government of the colonies, without the precise and formal request of the colonial assemblies."

Peace, however, was not the confequence of this decree. The proprietors, it is true, had obtained a legal right of TYRAN-RIZING, but the unfortunate question still recurred, Who should be permitted to exercise that right? On this head the decree was filent. New diffentions : ofe; each of the parties covered. under a factious patriotism, the most attrocious designs. Assas. fination and revolt became frequent. Mauduit, a French officer of rank, lost his life by the hands of his own countrymen. At length the unfortunate Oge, a planter of colour, who had exerced himself in France in the cause of his brethren, refolved to support by force their just pretensions. He landed in the Spanish territory of St. Domingo, where he affembled about fix hundred mulattoes. Before he proceeded to hostilities he wrote to the French general, that his defire was for peace, provided the laws were enforced. His letter was abfurdly confidered as a declar ration of war. Being attacked and vanquished, he took refuge

Vol. IV.

amongst the Spaniards, who delivered him up to his adversaries. The horrors of his death were the harbingers of future crimes. These disturbances still increasing, the National Assembly found it necessary at length to decide between the contending parties.

On the 15th of May, 1791, a decree was made, confifting of two articles, by the first of which the Assembly confirmed that of the 12th of Ostober, so far as respected the slaves in their islands. It is true, that the word slave was cautiously omitted in this document, and they are only characterised by the negative description of "men not free," as if right and wrong depended on a play of words, or a mode of expression.

This part of the decree met with but little opposition, though it passed not without severe reprehension from a few enlightened members. The second article, respecting the people of colour, was strongly contested: those who were before known by the appellation of patriots, divided upon it. It was, however, determined in the result, that the people of colour, born of free parents, should be considered as active citizens, and be eligible to the offices of government in the islands.

This second article, which decided upon a right that the people of colour had been entitled to for upwards of a century, instead of restoring peace, has been the pretext for all the subsequent evils that the colony of St. Domingo has sustained. They arose not indeed from its execution, but from its counteraction by the white colonists. Had they, after the awful warnings they had already experienced, obeyed the ordinances of an Assembly they pretended to revere; had they imbibed one drop of the true spirit of that constitution to which they had avowed an inviolable attachment; had they even suppressed the dictates of pride in the suggestions of prudence, the storm that threatened them had been averted, and in their obedience to the parent state they had displayed an act of patriotism, and preserved themselves from all possibility of danger.

But the equalization of the people of colour stung the irritable nerves of the white colonists. The descendants of sleves may lose the resemble of their fathers; but the hatred of a despot is hereditary. The European maxim allows, "That they never pardon who have done the wrong;" but in the colonies this perversity attains a more monstrous growth, and the aversion to African blood descends from generation to generation. No sooner had the decree passed, than the deputies from the islands

to the N nial con **fulpende** whites w rather the ginating ! proposed to tear do its place, prehensio cries of t the consti the people in the plan at length bordinatio ties. Am accustomo 1791, that them.

On the which promised to promised born of parties, which

to the National Assembly withdrew their attendance: the colonial committee, always under the influence of the planters. suspended their labours. Its srrival in the island struck the whites with consternation: they vowed to facrifice their lives rather than suffer the execution of the decree, Their rage originating in despotism and phrenzy, carried them so far that they proposed to imprison the French merchants then in the island, to tear down the national flag, and hoift the British standard in its place, whilst the joy of the mulattoes was mingled with apprehensions and with fears, St. Domingo re-echoed with the cries of the whites, with their menaces and blasphemies against the constitution. A motion was made in the streets to fire upon the people of colour, who fled from the city, and took refuge. in the plantations of their friends and in the woods : they were at length recalled by proclamation; but it was only to fwear fubordination to the whites, and to be witnesses of fresh enormities. Amidst these agitations the slaves had remained in their accustomed subordination; nor was it till the month of August. 1791, that the symptoms of the insurrection appeared among & them.

A confiderable number, both of whites and people of colour, had lost their lives in these commotions before the slaves had given indications of disaffection; they were not, however, infensible of the opportunities of revolt afforded by the dissentions of their masters; they had learnt that no alleviation of their miseries was ever to be expected from Europe; that in the struggle for colonial dominion, their humble interests had been equally serificed or forgotten by all parties. They felt their curb relaxed by the disarming and dispersion of their mulatto masters, who had been accustomed to keep them under rigorous discipline. Hopeless of relief from any quarter, they rose in different parts, and spread desolation over the island. If the cold cruelties of despotism have no bounds, what shall be expected from the paroxysms of despair?

On the 11th of September, 1791, a convention took place, which produced the agreement called the Concordat; by which the white planters stipulated, that they would no longer oppose the law of the 15th of May, which gave political rights to the people of colour. The colonial Assembly even promised to meliorate the situation of the people of colour, born of parents not free, and to whom the decree of the 15th of May did not extend. An union was formed between the planters, which, if it had sooner taken place, had prevented the insur-

rection. The infurgents were every where dispirited, repulsed, and dispersed; and the colony itself preserved from total destruction.

By a decree of the National Assembly, the 24th of September, the people of colour were virtually excluded from all right of colonial legislation, and expressly placed in the power of the white colonists.

If the decree of the 15th of May could infligate the white colonists to the frantic acts of violence before described, what shall we suppose were the feelings of the people of colour on that of the 24th of September, which again blasted those hopes they had justly founded on the constitutional law of the parent state, and the folemn ratification of the white colonists? No fooner was it known in the islands, than those diffentions which the revolt of the negroes had for a while appealed, broke out with fresh violence. The apprehensions entertained from the flaves had been allayed by the effects of the Concordat; but the whites no fooner found themselves relieved from the terrors of immediate destruction, than they availed themselves of the decree of the 24th of September; they formally revoked the Concordat, and treacherously refused to comply with an engagement to which they owed their very existence. The people of colour were in arms; they attacked the whites in the fouthern provinces; they possessed themselves of Fort St. Louis and defeated their opponents in feveral engagements, A powerful body furrounded Port au Prince, the capital of the island, and claimed the execution of the Concordat, At three different times did the whites affent to the requisition, and as often broke their engagement. Gratified with the predilection for monarchy and ariftocracy, which the Constituent Assembly had in its dotage avowed, they affected the appellation of patriots, and had the address to transfer the popular odium to the people of colour, who were contending for their INDISPUTABLE RIGHTS, and to the few white colonists who had virtue enough to espouse their caufe, Under this pretext, the municipality of Port au Prince required M. Grimoard, the captain of the Boreas, a French line of battle ship, to bring his guns to bear upon, and to cannonade the people of colour assembled near the town; he'at first refused, but the crew, deluded by the cry of patriotifm, enforced his compliance. No fooner was this measure adopted, than the people of colour gave a loofe to their indignation : they fpread over the country, and fet fire indifcriminately to all the plantations; the greatest part of the town of Port au Prince soon white

In the northern parts the people of colour adopted a more magnanimous and perhaps a more prudent conduct. "They begun," fays Mr. Verniaud, "by offering their blood to the whites," "We shall wait," said they, "till we have saved you, before we affert our own claims." They accordingly opposed themselves to the revolted negroes with unexampled course, and endeavoured to soothe them by attending to their reasonable requisitions.

After this recital of authentic and indisputable facts, it is not difficult to trace the causes of the insurrection. The effects we leave to be described by the professed historian; but the prudent measures of the French government we slatter ourselves will ultimately succeed in extending peace and liberty to every inhabitant of this, and all the other islands under their dominion; and may the godlike plan for the liberation and happiness of the African, be speedily imitated by those governments in Europe who have not had sufficient virtue to set the example.

In this account of the French West-India islands it will no doubt be remarked, that we have taken no notice of the conquest of some of them by Great Britain during the present war. The very great probability that they will soon acknowledge their former dependency on France, and perhaps join in extending her victories over some of the British islands, must be our excuse; but if this is not deemed sufficient, we have only to remark, that the common practice of surrendering, as the price of peace, what has been purchased during a war by a torrent of human blood, render it impossible to say what will, is a few menths, belong to England on France.

The said of the sa

## DUTCH WEST-INDIES.

## ST. EUSTATIUS,

DITUATED in 17? 29' north latitude, and 63° 10' west longitude, and three leagues north-west of St. Christopher's, is only a mountain, about twenty-nine miles in compals, riling out of the sea like a pyramid, and almost round. But though so small and inconveniently laid out by nature, the industry of the Dutch have made it to turn to very good account; and it is faid to contain five thousand whites, and fifteen thousand negroes. The fides of the mountains are laid out in very pretty fettlements, but they have neither springs nor rivers. They raise here sugar and tobacco; and this island, as well as Curassou, is engaged in the Spanish contraband trade, for which, however, it is not so well situated; and it has drawn the same advantage from its constant neutrality, But when hostilities were commenced by Great-Britain against Holland, Admiral Rodney was fent with a confiderable land and fea force against St. Eustatius, which being incapable of any defence, surrendered at discretion, on 3d of February, 1781. The private property of the inhabitants was confifcated, with a degree of rigour very uncommon among civilized nations, and very inconfiftent with the humanity and generosity by which the English nation used to be characterised. The reason assigned was, that the inhabitants of St. Eustatius had assisted the United States with naval and other stores. But on the 27th of November, the same year, St. Eustatius was retaken by the French, under the command of the Marquis de Bouille, though their force confifted of only three frigates, some small crast, and about three hundred men.

### CURASSOU.

This island is situated in twelve degrees north latitude, nine or ten leagues from the continent of Terra Firma, is thirty miles long, and ten broad. It seems as if it were fated, that the ingenuity and patience of the Hollanders should every where, both in Europe and America, be employed in fighting against an unfriendly nature; for the island is not only barren, and dependent on the rains for its water, but the harbour is naturally one of the worst in America; yet the Dutch have entirely remedied that defect; they have upon this harbour one of the largest and by far the most elegant and cleanly towns in the West-Indies. The public buildings are numerous and handsome; the private houses commodious; and the magazines large, convenient, and well filled. All kind of labour is here performed by engines; some of them so well contrived that ships are at once listed into the dock.

Though this island is naturally barren, the industry of the Dutch has brought it to produce a considerable quantity both of tobacco and sugar; it has, besides, good salt works, for the produce of which there is a brisk demand from the English islands, and the colonies on the continent. But what renders this island of most advantage to the Dutch, is the contraband trade which is carried on between the inhabitants and the Spaniards, and their harbour being the rendezvous to all nations in time of war.

The Dutch ships from Europe touch at this island for intelligence, or pilots, and then proceed to the Spanish coasts for trade, which they force with a strong hand, it being very difficult for the Spanish guarda costas to take these vessels; for they are not only stout ships, with a number of guns, but are manned with large crews of chosen seamen, deeply interested in the safety of the vessel and the success of the voyage. They have each a share in the cargo, of a value proportioned to the station of the owner, supplied by the merchants upon credit, and at prime cost. This animates them with an uncommon courage, and they sight bravely, because every man sights in defence of his own property. Besides this, there is a constant intercourse between this island and the Spanish continent.

Curaffou has numerous warehouses, always full of the commodities of Europe and the East-Indies. Here are all sorts of woollen and linen cloth, laces, silks, ribands, iron utensils, naval and military stores, brandy, the spices of the Moluccas, and the calicoes of India, white and painted. Hither the Dutch West-India, which is also their African company, annually bring three or four cargoes of slaves; and to this mart the Spaniards themselves come in small vessels, and carry off not only the best of the negroes, at a very high price, but great quantities of all the above sorts of goods; and the seller has this advantage, that the refuse of warehouses and mercers' shops, and every thing that is grown unfashionable and unsaleable in Europe, go off here extremely well: every thing being sufficiently recommended by its being European. The Spaniards pay in gold and silver, coined or in bars, cacoa, vanilla, jesuits bark, cochineal, and other valuable commodities.

The trade of Curassou, even in times of peace, is said to be annually worth to the Dutch no less than five hundred thousand pounds; but in time of war the profit is still greater, for then it becomes the common emporium of the West-Indies; it affords a retreat to ships of all nations, and at the same time refuses none of them arms and ammunition to destroy one another. The intercourse with Spain being then interrupted, the Spanish colonies have scarce any other market from whence they can be well supplied either with slaves or goods. The French come hither to buy the beef, pork, corn, flour, and lumber, which are brought from the continent of North America, or exported from Ireland; so that whether in peace or in war, the trade of this island flourishes extremely.

The trade of all the Dutch American settlements was originally carried on by the West-India company alone; at present, such ships as go upon that trade, pay two and a half per cent. for their licenses; the company, however, reserve to themselves the whole of what is carried on between Africa and the American islands.

The other islands, Bonaire and Aruba, are inconsiderable in themselves, and should be regarded as appendages to Curassou, for which they are chiesly employed in raising cattle and other provisions.

The island of Saba, situated at no great distance from St. Eu-status, is small, and hardly deserves to be mentioned.

## ST. THOMAS.

An inconfiderable member of the Caribbees, fituated in fixty-four degrees west longitude, and eighteen degrees north latistude, about fifteen miles in circumference, and has a safe and commodious harbour.

### St. CROIX, OR SANTA CRUZ.

Another small and unhealthy island, lying about five leagues east of St. Thomas, ten or twelve leagues in length, and three or four where it is broadest. These islands, so long as they remained in the hands of the Danish West-India Company, were ill managed, and of little consequence to the Danes; but that wife and benevolent prince, the late king of Denmark, bought up the company's stock, and laid the trade open; and since that time the island of St. Thomas, as well as this, has been so greatly improved, that it is faid to produce upwards of three thousand hogsheads of sugar, of one thousand weight each, and other of the West-India commodities in tolerable plenty. In time of war, privateers bring in their prizes here for fale; and a great many vessels trade from hence along the Spanish main, and return with money in specie or bars, and valuable merchandise, As for Santa Cruz, from a perfect defert a few years fince, it is beginning to settle fast; several persons from the English islands, some of them of great wealth, have gone to settle there, and have received very great encouragement to do fo.

#### HISTORY OF

## AMERICAN QUADRUPEDS.

IN a former part of this work \* we have had occasion to offer fome observations on the animals of America; by that account, for which we are indebted to the Abbé Clavigero, M. Buffon, and the ingenious Mr. Jefferson, it appears, that the continent of America contains nearly one-half of the known species of quadrupeds, some of them common to North-America, and to the European and Afiatic parts of the eastern continent, and others peculiar to America: of these the greater part have not been accurately examined: it however appears, that those common to both continents are such as may be supposed to have migrated from one to the other. Comparing individuals of the same species inhabiting the different continents, some are found perfectly fimilar; between others there is often found fome trivial difference in fize, colour, or other circumstances; in some instances the European animal is larger than the American, in others the reverse is true. A similar variety is often found among the same species in different parts of the same continent; this evidently wrifes from the temperature of the climate, quentity of food furnished in the parts they inhabit, and the degree of lafety and quiet possessed; the latter effect is evident on those animals hunted for their flesh or fur, such as the mode deer, beaver, &c. which have gradually diminished in their size wherever they have thus been disturbed; but as we have netther's complete description nor complete catalogue extant, we are not warranted in making many observations. It is very probable, that many of the American quadrupeds are full utterly unknown, and others known only by common report from hunters and others, and the information, therefore, to be received with caution; from this latter cause has sprung that multiplication and misapplication of names, which has produced numberless contradictions in the different writers on this

Page sea, &c. of vol. and a state of the season of the sea

subject. Our account will be little more than a catalogue, with a few remarks on those in particular which constitute that important branch of commerce, the fur trade, or are in other respects peculiarly useful or curious.

The Lama.—The lama is the camel of Peru and Chili; and before the conquest of those countries by the Spaniards, was the only beast of burden known to the Indians; its disposition

is mild, gentle, and tractable.

Before the introduction of mules, these animals were used by the natives to plough the land, and now ferre to carry burdens. They march flowly, and feldom accomplish journies of more than four or five leagues a day; but what they want in speed is made up by perfeverance and industry. They travel long journies in countries impassable to most other animals, are very fure-footed, and are much employed in transporting the rich ores, dug out of the mines of Potofi, over the rugged hills and narrow paths of the Andes. They lie down to be loaded, and, when weary, no blows can excite them to quicken their pace. They neither defend themselves with their feet nor their toeth; when angry, they have no other method of sevenging injuries but by spitting care can throw out their saliva to the distance of ten paces; and it is fell on the skin, it raises an itching, accompanied with a flight inflammation. Their fieth is caten, and is faid to be as good as mutton; and of the hair of the wild fort the Indians make cloth.

Like the camel, they have the faculty of abitaining long from water, and like that animal, their food is coarse and colling; they are neither allowed corn nor hay, green herbage, of which they eat very moderately, being sufficient for their mourishment.

The wild lamss, called gunscos, are ftronger and more active than the domestic kind; they live in herds, and inhabit the highest regions of the Ordelieres, and they run with great swiftness in places of difficult access, where dogs cannot cashy follow them.

The lama resembles the camel in the form of its body, but is without the dorsal hunch; its head is small and well shaped, its neck long, and very protuberant near its junction with the body; in its domestic state its hair is short and smooth, when wild it is coarse and long, of a yellowish colour; a black line runs along the top of the back, from the head to the tail, The tame ones vary in colour; some of them are white, others black, others of a mixed colour—white, grey and russet, dispersed in spots: its tail is short, its ease are four inches long.

flies from Indians hard as its flesh,

Buffel tween the and natu both, equ the fame that no s its feet are cloves like those of the ox, and are armed behind with a spur, by which the animal is anabled to support itself on rugged and difficult ground. The height of the lama is about four seet, and its length, from the neck to the tail, six seet.

Tapiir.—The upiir is the hippopotamus of the new world, and has by fome authors been mistaken for that animal; it inhabits the woods and rivers on the eastern side of South-America, from the ishmus of Darien to the river of the Amazons. It is a solitary animal, sleeps during the day, and goes out in the night in search of food; lives on grass, sugarcanes and fruits. If disturbed it takes to the water, swims with great ease, or plunges to the bottom, and like the hippopotamus, walks there as on dry ground.

It is about the fize of a small cow, its nose is long and lader, and extends far beyond the lower jaw, forming a kind proboseis, which it can centralt or extend at pleasure; each jaw is furnished with ten cutting teeth, and as many grinders; its ears are small and erect; its body formed like that of a hog; its back arched; legs short; and hoofs, of which it has four upon each foot, small, black, and hollow; its tail is very small; its hair short, and of a dusky brown colour. It is mild and inostensive, awaids all hospilities with other animals, and slies from every appearance of danger. Its skin, of which the Indians make bucklers, is very thick; and when dried, is so hard as to resist the impression of an arrow. The natives eat its slesh, which is said to be very good.

#### MALE OF THE OX KIND.

Of this genus, efferent writers have given an account of three diffinct species in America, besides the common domesticated animal, viz. the BUTTALO; the MUSK, and the BISON, though it is doubtful whether the former of these is any other than the bison, and whether the variation between the neat cattle and the bison is any thing more than the effect of domestication; we shall, however, describe each of them.

Bufate.—Though there is the most striking resemblance between this animal and the common ox, both in regard so form and nature, their habits and propensities being nearly similar, and both equally submissive to the yoke, and may be employed in the same domestic services; yet it is certain, from experience, that no two animals can, in reality, be more distinct: the cow

refuses to breed with the buffele, while it is known to preparate with the bison, to which it bears, in point of form, a much bear differnt similitude.

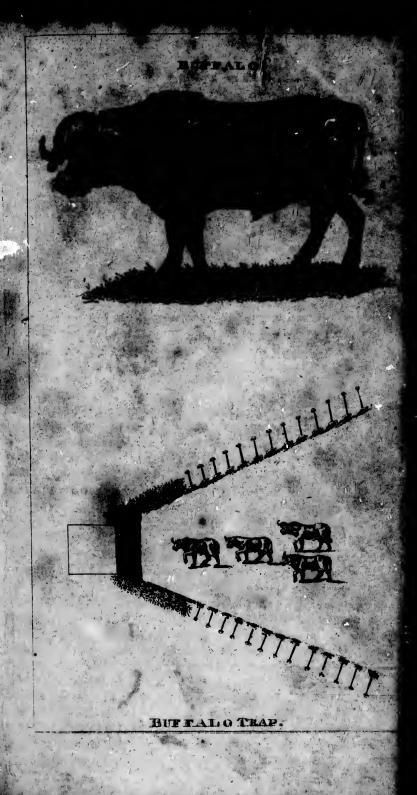

Mr. Umphreville, who flates this animal to be a native of Hudion's bay, gives the following account of the manner in which the Indians take it : "The Indians have various ways of killing the buffalo; one of which is by cautiouly approaching them when feeding. The hunter, upon this occasion, lies on his helly, and will femetimes fire his gun forty or fifty times without raising the herd. They also pursue them on horseback, and shoot them with arrows and guns. But the m by which the creatoft numbers are taken is by making bund, high is confinded in the following manner :- "They are either of a cir. cular or square form, and differ according to the manner of the nation by whom they are made. The fquare ones are compoled of trees laid on one another, to the height of about five feet, and about fifty on each fide of the square. On that fide at which the animals are intended to enter, a quantity of earth is laid, to she height of the construction, so as to form a hill of an easy ascent of about twenty feet. This done, a number of branches of trees are placed, from each fide of the front, in a strait line from the railed hill, for about one hundred feet in length, continually increasing in width, so that though the inward ends of these lines of branches are no more than hifty feet asunder, the exterior end will exceed two hundred feet. After this, a number of poles, nearly fifteen feet long each, are placed at about piece of buffalo twelve feet distance from each other, with dung on the top, and in a strait line from boughs above mention d. At the foot of each pole a man fle concealed in a buffalo skin, to keep the animals in a strait direction to the pound. These poles are placed alike on each fide, dways increasing in breadth from one fide to the other, and decreafing in the same proportion as the animals approach the pound. Every preparation being now made, three or four men fet off on foot to find a herd of cows, for the bulls they think not worth their trouble; these they drive easily along, till they arrive within the vicinity of the pound, when one man is dispatched to give notice to the other Indians, who immediately affemble on horseback on each side the herd, keeping a proper distance, for fear of frightening the animals. By this means they are conducted within the exterior line of poles. It frequently happens that they will endeayour to go out; to prevent which, the men who are placed at the foot of each pole shake their skins, which drives the herd to

the opposite side, where the others do the same; so that at last they arrive at the pound, and fall in headlong one upon another, some breaking their necks, backs, &c. And now the confusion becomes so great within, that though the height of the building shall not exceed sive sect, none will make their escape. To elucidate this description of the buffalo pound, we have ansexed a representation.

Must.—The must bull inhabits the interior parts of North-America, on the west side of Hudson's bay, between Churchili and Seal rivers. They are very numerous in those parts, and live in herds of twenty or thirty. The Indians eat their sless, and make coverings of their skins. They are brought down in sless to supply the forts during the winter. Notwithstanding the slash is said to have a strong slavour of must, it is recknowled very good and wholesome.

It is somewhat lower than a deer, but more bulky; its legs are floot, and it has a small hump on its shoulder; its hair is of a dusty red colour, very fine, and so long as to reach to the stand? beneath the hair its body is covered with wool of an colour, which is exquisitely fine, and might be converted to various articles of useful manufacture.—Mr. Jeremie says, that stockings made of it are siner than filk; its tail is only three inches long, and is covered with long hairs, of which the Esquimaux Indians make caps, which are so contrived, that the long hair, falling round their faces, defends them from the bites of the mustaitoes. Its horns are close at the base, and bend downwards, turning out at the points; they are two seet long, and two seet round at the base; some of them will weigh fixty pornds.

These animals delight chiefly in rocky and mountainous countries; they run nimbly, and are very active in climbing free ascents.

Bijon.—This animal, often called, though improperly, the bufalo, is by some supposed to be the same species as the common domesticated animal. Compared with the neat cattle, however, the bison is considerably larger, especially about the fore parts of his body. On his shoulders arises a large slessly of grisly substance, which extends along the back. The hair on his head, neck and shoulders, is long and woolly, and all of it is sit to be spun or wrought into hats. Calves from the domestic cow and wild builture sometimes raised; but when they grow up, they become so wild that no common sence will consine them.

tern parts of Virginia and Pennsylvania; and so late as the year

2766, herds of four hundred were frequently seen in Kentucky, and from thence to the Mississippi: they are likewise common in some parts of Hudson's bay.

### ANIMALS OF THE BESK KIND.

Of this genus the American forests abound with almost all the varieties known, and in the greatest plenty; to elucidate this fast, we have only to consider the vast quantities of their sannually imported into Europe: it will, however, be unnecessary to describe the varieties of the different species; we shall, therefore, only notice a few of the most particular.

Great Stag, or round horned Elk.—Of this animal there never has yet been a good description; the figure we have given of it in the preceding plate is from a representation professed to be taken from a living one brought from the interior of North-America; it appears to have been drawn at the time it had shed its horns, and at about five years old; it is however afferted, that it does not attain its full growth under twenty years. The

description given of the above is as follows;

At the age of five years, the length of this creature was nine feet, from the end of the mussle to the infertion of the tail, the head and neck being extended in a line with the body; its height at the shoulder was four feet fix inches; length of the head one foot fig inches; breadth over the forehead feven inches; length of the fore legs two feet five inches; length of the neck two feet fix; its ears nine inches; and tail three. Its horns, which it had just shed, are not palmated like those of the moofe; they are large, and, when full grown, measure above fix feet from tip to tip. The antlers are round and pointed at the ends, the lowermost antier forms a curve down. ward over each eye, to which it appears a defence. Its hair was long, of a dark dun colour on the back and fides; on the head and legs dark brown; its eyes full and lively; and below each eye there is a deep flit, about two inches in length, the use of which we are unable to discover.

Is the very lively and active, of great strength of body and limbs; its boofs short, and like those of a calf; the division between them is less than in those of the rein-deer, and, when the animal is in motion, they do not make a rattling noise: it has no mane, but the hair under its neck is longer than that on any other part of the body."

Moofe.—Of these there are two kinds, the black and the grey. The black are said to have been from eight to twelve

l below

th, the

end the

feet high; at present they are very rarely seen. The grey moose are generally as tall as a horse, and some are much taller; both have spreading palmated horns, weighing from thirty to forty pounds; these are shed annually, in the month of February. They never run, but trot with amazing speed. In summer they seed on wild grasses, and the leaves of the most mucilaginous shrubs. In winter they form herds; and when the snow falls, by moving constantly in a small circle, they tread the snow hard, and form what is called a pen. While the snow is deep, and will not bear them, they are confined within this pen, and eat all the bark and twigs within their reach. They are considered as of the same species with the elk of the eastern continent. They are found in New-England, Canada, Hudson's bay, Nova-Scotia, and on the northern parts of the Ohio.

Caribov, or Rein Detr.—This animal is distinguished by its branching palmated horns, with brow antlers. From the tendens of this animal, as well as of the moose, the aboriginal natives made very tolerable thread. It is found in the district of Maine and in the neighbourhood of Hudson's bay, where they are in great herds. Columns of many thousands annually pass from north to south in the months of March and April. In that season the musquitoes are very troublesome, and oblige them to quit the woods, and seek refreshment on the shore and open country. Great numbers of beasts of prey sollow the herds. The wolves single out the strangers, detach them from the slock, and hunt them down: the soxes attend at a distance, to pick up the offals left by the former. In autumn the deer, with the sawns bred during the summer, remigrate northward.

Stag, or Red Deer.—This is the most beautiful animal of the deer kind. The elegance of his form, the lightness of his motions, the flexibility of his limbs, his bold, branching horns, which are annually renewed, his grandeur, strength and swiftness, give him a decided pre-eminence over every other inhabitant of the forest.

The age of the stag is known by its horns: the sirst year exhibits only a short protuberance, which is covered with a hairy skin; the next year the horns are straight and single; the third year produces two antlers, the fourth three, the sisth four; and, when arrived at the fixth year, the antlers amount to six or seven on each side, but the number is not always certain.

Of this species America furnishes several varieties, one of which, found on the borders of the Ohio river, is very large, and commonly considered as a species of the elk.

Fallow Deer.—The principal difference between the stag and the sallow deer seems to be in their size and in the form of their horns, the latter being much smaller than the former, and its horns, instead of being round, like those of the stag, are broad, palmated at the ends, and better garnished with antiers; the sail is also much longer than that of the stag, and its hair is brighter; in other respects they nearly resemble each other.

The horns of the fallow deer are fined annually, like those of the stag, but they fall off later, and are renewed nearly at

the fame time.

They affociate in herds, which fometimes divide into two parties, and maintain obstinate battles for the possession of some savourite part of the park: each party has its leader, which is always the oldest and strongest of the flock: they attack in regular order of battle; they sight with courage, and mutually support each other; they retire, they rally, and seldom give up after one deseat: the combat is frequently renewed for several days together; till, after several deseats, the weaker party is obliged to give way, and leave the conquerors in possession of the object of their contention.

In the United States these animals are larger than in Europe, of a different colour, and supposed by some to be a different species: they are found in plenty from Canada over all parts' of North-America to Mexico.

Roe.—The roe is the smallest of all the deer kind, being only these feet four inches long, and somewhat more than two feet in height: the horns are from eight to nine inches long, upright, round, and divided into three branches: the body is covered with long hair; the lower part of each hair is ash colour, near the end is a narrow bar of black, and the point is yellow; the hairs on the face are black, tipped with ash colour: the ears are long, their insides of a pale yellow, and covered with long hair; the chest, belly, legs, and inside of the thigh are of a yellowish white; the rump is of a pure white, and the tail very short:

The form of the roebuck is elegant, and its motions light and easy. It bounds seemingly without effort, and runs with great swiftness. When hunted, it endeavours to elude its pursuers by the most subtle artifices; it repeatedly returns upon its former steps, till, by various windings, it has entirely confounded the scent. The cunning animal then by a sudden

refemb

spring, bounds to one side; and, lying close down upon its belly, permits the hounds to pass by, without offering to stir.

They do not keep together in herds, like other deer, but live in separate families: the fire, the dam, and the young ones, associate together, and seldom mix with others.

In America the roe deer is more common than in Europe, and in Louisiana it is much larger,

The description of the two following animals are taken from Umphreville's History of Hudson's Bay, and are given in his own words:

" Jumping Deer .- This animal, though not half the fize of the red deer, is not the smallest of the species. The one under description receives its name from the fingular manner of its course; this is by a continual succession of jumps, which they perform with amazing celerity, springing at the the distance of fifteen or fixteen feet at a jump. It is a small, clean-made animal, exceeding lively and gay, and is of a brown colour intermixed with grey hairs; its food confifts of grass, of the fallen leaves of the poplar, the young branches of different kinds of trees, and the moss adhering to the pines. The horns are about two feet long, and refemble those of the red deer, except in fize; they fall off, in the month of April. This handsome animal ruts in November, brings forth in May, and has one and sometimes two at a birth. It is needless to add that the flesh is delicious. There are two other kinds of the jump. ing deer, one of which has a very short tail like the rest of the species, whereas the other kind has a tail about a foot long, and covered with red hairs,

"Apis-to-chik-o-shish.—I am not sufficiently conversant in the science of zoology to give this beautiful animal its proper name in the English language; perhaps it has never yet been described in natural history. The French people resident in these parts call it the Cu Blanc, from a white mark on its rump. A more beautiful creature is not to be found in this or perhaps any other country; extreme delicacy of make, and exact similarity of proportion, are observable in all its parts; no animal here is so swift of soot, not the sleetest horse or dog can approach it. They herd together in large droves but sometimes three or sour only are found in a place. Its horns are not offissed like the other species, nor are they branched; both male and semale have them, but they never fall off; they resemble more the horns of the goat than those of the deer

species. They feed upon most kinds of grass, and the tender twigs of trees. The whole length may be about four feet and a half; the legs are white and slender; the rest of the body a light red, with a white space on the rump."

# ANIMALS OF THE BEAR KIND.

Brown Bear.—There are two principal varieties of the bear, the brown and the black; the former is found in almost every climate, the black bear, chiefly in the forests of the northern regions of Europe and America.

The brown bear is sometimes carnivorous, but its general

food is roots, fruits, and vegetables.

Store L at 1800 1 30 1 1000

It is a favage and folitary animal, lives in defert aud unfrequented places, and chuses its den in the most gloomy and retired parts of the forest, or in the most dangerous and inaccessible precipices of unfrequented mountains. In America it is chiefly found to the northwest of Hudson's bay, and the western side of the continent. It is likewise found about Nootka found, and the Andes of Peru. It retires alone to its den about the end of autumn, at which time it is exceedingly fat, and lives for several weeks in a state of total inactivity and abstinence from food. During this time the female brings forth her young and suckles them; she chuses her retreat for that purpose in the most retired places, apart from the male, lest he should devour them; she makes a warm bed for her young. and attends them with unremitting care during four months, and in all that time scarcely allows herself any nourishment, She brings forth two, and fometimes three young at a time." The cubs are round and shapeless, with pointed muzzles: at first they do not exceed eight inches in length; they are blind during the first four weeks, of a pale yellow colour, and have scarcely any resemblance of the creature when arrived at maturity. The time of gestation in these animals is about six months, and they bring forth in the beginning of January.

In the spring, the old bears, attended by their young, come out from their retreats, lean, and almost famished by their long confinement. They then ransack every quarter in search of food; they frequently climb trees, and devour the fruit in great quantities, particularly the date plum tree, of which they are exceedingly fond; they ascend these trees with surprising agility, keep themselves firm on the branches with one paw, and

with the other collect the fruit.

matuonths,

come ir long reh of n great ey are g agil-w, and

The bear is remarkably fond of honey, which it will encounter great difficulties to obtain, and feeks for with great cunning and avidity.

It enjoys in a superior degree the senses of hearing, smelling, and touching. Its ears are short and rounded, and its eyes small, but lively and penetrating, and desended by a nichating membrane; from the peculiar formation of the internal parts of its nose, its sense of smelling is exceedingly exquisite; the legs and thighs are strong and muscular; it has five toes on each foot, and uses its fore seet as a hand, although the toes are not separated as in most animals that do so; the largest singer is on the outside.

The voice of the bear is a deep and furly kind of growl, which it frequently exerts without the least cause. It is very easily irritated, and at that time its resentment is surious, and often capriciously exerted.

When tamed, it appears mild and obedient to its mafter, but it is not to be trufted without the utmost caution. It may be trught to walk upright, to dance to lay hold of a poll with its paws, and perform various tricks. But to give the bear this kind of education, it must be taken when young, and accustomed early to restraint and discipline: an old bear will suffer neither without discovering the most furious resembles, neither the voice nor the menaces of his keeper have any effect upon him; he equally growls at the hand that is held out to feed, as at that which is raised to correct him.

Black Bear.—Of this animal there are two forts found in the northern States; both are black, but different in their forms and habits. One has fhort legs, a thick, clumfy body, is generally fat, and is very fond of fweet vegetable food, fuch as fweet apples, Indian corn in the milk, berries, grapes, honey, &c. Probably he is not carnivorous. As foon as the first fnow falls, he betakes himself to his den, which is a hole in a cleft of rocks, a hollow tree, or some such place; here he gradually becomes torpid, and dozes away the winter, sucking his paws, and expending the stock of fat which he had previously acquired.

The other fort is distinguished by the name of the Ranging bear, and seems to be a grade between the preceding and the wolf. His legs are longer, and his body more lean and gaunt. He is carnivorous, frequently destroying calves, sheep, and pigs, and sometimes children. In winter he migrates to the

fouthward. The former appears to be the common black bear of Europe; the latter corresponds to the brown bear of the

Alps, and is found in all parts of America.

Polar, or Great White Bear.—This animal differs greatly from the common bear in the length of its head and neck, and grows to above twice the fize. Some of them are thirteen feet long; it limbs are of great fixe and strength; its hair long, harsh, and disagreeable to the touch, and of a yellowish white colour; its ears are short and rounded, and its teeth large.

It inhabits only the coldest parts of the globe, and has been found above latitude eighty, as far as navigators have penetrated northwards. These inhospitable regions seem adapted to its

fullen nature.

It has been feldom feen farther fouth than Newfoundland, but abounds chiefly on the shores of Hudson's bay, Greenland, and Spitzbergen, on one side, and those of Nova Zembla on the other. It has been sometimes found in the intermediate countries of Norway and Iceland: but such as have appeared in those parts have always been driven thither upon floating sheets of ice, so that those countries are only acquainted with them by accident.

Welverent called in Canada the Carcajou, and oy hunters, the Beaver Eater, seems to be a grade between the bear and the woodchuck. He agrees nearly with the badger of Europe, His length is one foot and a half and upwards; his circumference nearly two feet; his head and ears refemble a woodchuck's; his legs short; feet and paws large and strong; tail about feven inches long, black, and very buffy or fhaggy; hair about two inches long, and very coarse; his head fallow grey; back, almost black; breast, spotted with white; belly, dark brown; sides and rump, light reddish brown, This animal lives in holes, cannot run fast, and has a clumfy appearance, He is very mischievous to hunters, following them when setting their traps, destroying their game, particularly the beaver; found as far north as the Copper river; and fouth, as the country between lake Hudson and lake Superior; and on the western side of North-America, in Canada, and the northern States they are very numerous.

Raccoon.—This animal is found in all the temperate parts of North-America. It is found also in the mountains of Jamaica, from whence great numbers of them frequently descend into the plantations, and make great havoc among the sugar canes, of which they are particularly fond. The planters consider these animals as their greatest enemies, as they frequently do infinite

Fox.-

mischief in one night's excursion: they have contrived various methods of destroying them, yet still they propagate in such numbers, that neither traps nor fire arms can repel them.

The raccoon is somewhat less than the badger: its head resembles that of a fox, but its cars are round and much shorter,
and its upper jaw very pointed, and longer than the lower;
its eyes, which are large, are surrounded with two broad patches
of black; its body is thick and short, covered with long hair,
black at the points, and grey underneath; its tail is long and
bushy, and marked with alternate rings of black and white; its
feet and toes are black.

The raccoon is very active and nimble: its claws which are extremely sharp, enable it to climb trees with great facility. It moves forward chiefly by bounding, and though it proceeds in an oblique direction, runs very swiftly.

#### ANIMALS OF THE DOG KIND.

Wolf. Of this animal, which is of the dog kind, or rather the dog himself in his savage state, there are in America great numbers, and a confiderable variety in fize and colour. The dimensions of a skin, measured for writing this account, were as follows: length of the body five feet; the fore legs eighteen inches; of the hind legs fifteen inches; of the tail eighteen inches. The circumference of the body was from two feet and a half to three feet. The colour of these animals in the northern States is generally a light dirty fallow, with a lift of black along their back. In some, the black is extended down their sides, and fometimes forms waving streaks; others are said to be spotted: some of them, particularly in the southern States, are entirely black, and confiderably smaller. The Indians are said to have fo far samed some of those animals before their acquaintance with the Europeans, as to have used them in hunting. They next made use of European dogs, and afterwards of mongrels, the offspring of the wolf and dog, as being more docile than the former, and more eager in the chase than the latter. The appearance of many of the dogs, in the newlysettled parts of the United States, indicate their relation to the wolf. They are found from Hudson's bay to the most southern parts of North-America, and in most of the section States they are numerous.

Fox.—Of the foxes, there are in America a great variety; fuch as the Silver Fox, \* Red Fox, Grey Fox, Crofs Fox, Brant

<sup>.</sup> M. Buffon is of opinion that this is the Ifatis, or Arctic dog.

Fox, and several others. Naturalists have generally supposed that there is more than one species of foxes, but they differ very much in their mode of arranging them. It is highly probable, however, that there is but one species of these animals, as they are found in all their varieties of size, and of shades variously intermixed, in different parts of the United States. Foxes and other animals furnished with fur, in the northern parts, are larger than those of the southern.

#### ANIMALS OF THE CAT KIND.

Catamount,-This animal, the most dreaded by hunters of any of the inhabitants of the forests, is rarely seen, which is probably the reason why no account of him has ever been published, to our own knowledge, except what is contained in a letter of Mr. Colinson's to M. de Buffon. The dimensions of one, killed a few years ago, in New-Hampshire, as nearly as could be ascertained by the skin, were as follows: the length of his body, including the head, fix feet; circumference of his body two feet and a half; length of his tail three feet. and of his legs about one foot. The colour, along his back, is nearly black; on his fides, a dark reddish brown; his feet black. He seems not calculated for running, but leaps with furprifing agility. His favourite food is blood, which, like other animals of the cat kind, he takes from the jugular veffels of cattle, deer, &c. leaving the carcase. Smaller prey he takes to his den; and he has been known to carry off a child. He feems to be allured by fire, which terrifies all other carnivorous animals, and betrays no fear of either man or beaft. He is found in the northern and middle States, and most probably in Hudfon's bay.

Jaguar.—The Jaguar is the most formidable animal of the new continent, rather larger than the panther, with hair of a bright tawny colour. The top of the back is marked with long stripes of black, the sides beautifully variegated with irregular oblong spots, open in the middle; the tail not so long as that of the ounce, and irregularly marked with large black spots.

It is found in the hottest parts of South-America, is very fierce, and when pressed with hunger, will sometimes venture to seize a man.

The Indians are much afraid of it, and think it prefers them to the white inhabitants, who, perhaps, are better prepared to repel its attacks. In travelling through the deferts of Guiana, they light great fires in the night, of which these animals are much afraid.

guar, for the more jacent professed tail is the hair refemble. Mr. Coof body

and the one foo height o They howl dreadfully; their cry, which is expressive of the two monosyllables, hou, how, is somewhat plaintive, grave, and strong, like that of an ox.

The ant eater, though it has no teeth to defend itself with, is the most cruel enemy the jaguar has to encounter. As soon as the jaguar attacks this little animal, it lies down on its back,

and with its long claws feizes and fuffocates him.

Conguar.—This animal is called by some the Puma, or American Lion, but differs so much from that noble animal, as not to admit of any comparison. Its head is small, it has no name, its length, from nose to tail, is five feet three inches, the tail two feet. The predominant colour is a lively red, mixed with black, especially on the back, where it is darkest: its chin, its threat, and all the inferior parts of the body, are whitish: its legs are long, claws white, and the outer claw of the fore feet much slonger than the others.

It is found in many parts of North-America, from Canada to Florida: it is also common in Guiana, Brasil, and Mexico

It is fierce and ravenous in the extreme, and will fwim rivers to attack cattle, even in their inclosures. In North-America, its fury seems to be subdued by the rigour of the climate, for it will fly from a dog in company with its master, and take shelter by running up a tree.

It is very destructive to domestic animals, particularly to logs. It preys also upon the moose and other deer; lies lurking upon the branch of a tree till some of these animals pass underneath, when it drops down upon one of them, and never quits its hold till it has drunk its blood. It will even attack beasts of

prey.

The Couguar of Pennsylvania.—This is another species of couguar, found in the temperate climates of North-America, as on the mountains of Carolina, Georgia, Pennsylvania, and the adjacent provinces. It differs much from the couguar above described: his limbs are shorter, his body much longer, and his tail is also three or four inches longer. But in the colour of the hair, and the form of the head and cars, they have a perfect resemblance to each other. The couguar of Pennsylvania, says Mr. Colinson, is an animal remarkable for thinness and length of body, shortness of legs, and length of tail. The length of the body, from the muzzle to the anus, is five feet four inches, and that of the tail is two feet six inches: the fore legs are one foot long, and the hind legs one foot three inches: the height of the body before is one foot nine inches, and one foot

inches behind; the circumference of the thickest part of

body is two feet three inches.

foribed, chiefly in the colour, which is dufky, fometimes spotted with black, but generally plain. The throat, belly, and insides of the legs, are of a pale ash colour, the upper lip white, covered with long whiskers; above each eye it has very long hairs, and at the corner of the mouth a black spot; its paws are white, and its ears sharp pointed.

It grows to the fize of a heifer of a year old, and has great

frength in its limbs.

It inhabits Brafil and Guiana, is a cruel and fierce animal, much dreaded by the Indians; but fortunately the species is not numerous.

Occlot.—The skin of the male occlot is extremely beautiful, and most elegantly variegated. Its general colour is that of a bright tawny; a black stripe extends along the top of the back from head to tail; its forehead is spotted with black, as are also its legs; its shoulders, sides, and rump, are beautifully marbled with long stripes of black, forming oval figures, silted in the middle with small black spots; its tail is irregularly marked with large spots, and black at the end. The colours of the semale are not so vivid as those of the male, neither is it so beautifully marked.

The occlot very much refembles the common cat in the form of its body, although it is a great deal larger. Buffor makes its height two feet and a half, and about four feet in length.

It is a native of South-America, inhabits Mexico and Brafil, is very voracious, but timid, and feldom attacks men; it is afraid

of dogs, and when purfued, flies to the woods.

It lives chiefly in the mountains, and conceals itself amongst the leaves of trees, from whence it darts upon such animals as come within its reach. It sometimes extends itself along the boughs, as if it were dead, till the monkies, tempted by their natural curiosity, approach within its reach. It is said to prefer the blood of animals to their sless.

Margay.—This is another beautiful animal of the spotted tribe, and known in many places by the name of the Tiger Cat. The ground colour of the body is tawny; the face is striped with black; the body is marked with stripes and large spots of black; the breast and inside of the legs are white, spotted with black; the tail is long, marked with alternate spots of black, tawny, and grey.

The margay is smaller than the occlot, and about the fire of the wild cat, which it resembles in disposition and habit, living on small animals, birds, &c,—It is very wild, and cannot easily be brought under subjection.

Its colours vary, though they are generally such as have been described.

It is common in Guiana, Brafil, and various parts of South and North-America.

It is called the Cayenne Cat, and is not so frequent in temperate as in warm climates.

Lyan.—This animal differs greatly from every animal of the cat kind we have hitherto described. Its ears are long and crest, tusted at the end with long black hairs, by which this species of animals is peculiarly distinguished: the bair of the body is long and soft, of a red-ass colour, marked with dusky spots, which differ according to the age of the creature; sometimes they are scarcely visible: its legs and seet are very thick and strong; its tail short, and black at the extremity; its eyes are of a pale-yellow colour; and its aspect softer and less ferocious than that of the panther or the ounce. The skin of the male is more spotted than that of the semale,

The fur is valuable for its foftness and warmth, and is imported in great quantities from America and the north of Europe. In the United States there are three kinds of the lyng, each probably forming a distinct species, 'The first (Lupus Cervarius, Linn. 3d edit.) is called by the French and English Americans, Loup Cervier.\* He is from two and a half to three feet in length; his tail is about five inches. His hair is long, of a light grey colour, forming, in some places, small, irregular, dark shades; the end of his tail is black; his fur is sine and thick. He is the lyng of Siberia and some of the northern parts of Europe. A few may be found in the north-eastern parts of the district of Maine; but in the higher latitudes they are more numerous.

The fecond, (Catus Cervarius, Linn,) is called by the French Americans, Chat Cervier; and in New England the wild cat. He is confiderably less than the former, or the Loup Cervier. He is from two to two feet and a half long; his tail is proportionably shorter, about three inches long, and wants the tust of black hair on the end of it. His hair is shorter, particularly on his legs and feet; is of a darker colour, brown, dark sallow

Pronounced Loocervee.

and grey, variously intermixed. His fur is said to be of a very different quality; his ears are shorter, and he has very little of the pencil of black hairs on the tips of them, which is so remarkable in the former kind. This animal destroyed many of the cattle of the first settlers of New-England.

The third species is about the size of a common cat. The colour of the male is a bright brown or bay, with black spots on his legs. His tail is about four inches long, and encircled by eight white rings: the semale is of a reddish grey.

Found in the middle and fouthern States.

To the above lift of animals of the cat kind we must add the Kinvajou .- This animal, Mr. Morfe observes, belongs to the family of cats; at least, he very much resembles them. He is about as large as a common cat, and is better formed for agility and speed than for strength. His tail gradually tapers to the end, and is as long as his whole body. His colour is yellow, Between him and the fox there is perpetual war, He hunts in the same manner as do other animals of that class; but being able to suspend himself by twining the end of his tail round the limb of a tree, or the like, he can purfue his prey where other cats cannot; and when he attacks a large animal, his tail enables him to secure his hold till he can open the blood vessels of the nock. In some parts of Canada these animals are very numerous, and make great havoc among the deer, and do not spare even the neat cattle : but we have heard of none in the United States, except a few in the northern parts of New-Hampshire.

Beaver .- The beaver is the most industrious of all animals. Its labours feem the refult of a focial compact, formed for mutual convenience, prefervation and support; and as, in all wellregulated focieties, a due subordination is necessary for the wellordering and conducting each individual effort to the advantage of the whole; fo, amongst these curious animals, we find that, in forming their habitations, all have their proper part of the work assigned to them, that, by dividing their labours, falety, stability and expedition, may be the general effect. To this purpole, a community of two or three hundred affemble together: an overleer is chosen, whose orders are punctually obeyed; and, by striking the water smartly with his tail, gives the fignal where the united force of numbers is neceffory to be applied, in order to strengthen or support the fabric; or, at the approach of an en my, to apprize the fociety of their danger. As foon as a convenient place is chosen for the erection of their building, which is generally a level piece

of ground with a small rivulet running through it, they divide into companies: some are employed in cutting down trees of great fize, which is done by gnawing them with their teeth : these they lay across the dam with surprising labour and perseverance, or form into piles, which others roll down to the water, where they make holes at the bottom for receiving the ends, and placing them upright, secure them in that position; whilst another party is engaged in collecting twigs, interweaving and twisting them with the piles, and thereby strengthening the work; fome collect large quantities of earth, stones, clay and other folid materials, which they dispose of on the upper fide of the piles next the stream, forming a mound ten or twelve feet thick at the bottom, tapering gradually upwards, and capable of fustaining a confiderable weight of water. length of the dam, occasioned by this means, is sometimes not less than one hundred feet. Having completed the mole, their next care is to erect their spartments, which are built on piles: they are of a circular form, and generally confift of two stories. about eight feet high above the water; the first lies below the level of the dam, and is generally full of water; the other above it. The walls are two feet in thickness, neatly plaistered with clay on the infide, which is arched like an oven, and at the top resembles a dome. In each house there are two openings, one towards the water, to which the animal has always access, in case of surprise; the other towards the land, by which it goes out in quest of food. The number of houses in one of thele dams is from ten to twenty-five, some of them large enough to contain a family of twenty or thirty beavers. Each beaver forms its bed of mois; and each family lays in its magazine of winter provision, which confists of bark and boughs of trees: they pile up the latter with great ingenuity and regularity, and draw it out to their apartments as their wants require. They are said to be fondest of the sassaffa, ash, During fummer, they feed on leaves, fruits and fweet gum. and sometimes crabs or cray-fish; but fish is not their favourite Their time of building is early in the summer, winter, they never go farther than to their provision stores, and, during that feafon, are very fat.

They breed once a year, and bring forth two or three at a birth.

Beavers are found chiefly in the northern parts of Europe, Asia and America; particularly the latter, from whence many thousands of their skins are annually brought into Europe. They vary in colour; the most valuable are black with a deep fur; but the general colour is a chesnut brown, more or less dark. Some have been found entirely whit, others spotted;

but both these kinds are very rare,

The beaver is remarkable for the fize and strength of its cutting teeth, which enable it to gnaw down trees of great magnitude with ease. Its ears are short, and almost hid in the fur; its nose blunt, tail broad and slat, nearly of an oval form, and covered with scales; it serves not only as a rudder to direct its motions in the water, but as a most useful instrument for laying on the clay, pressing it into the crevices, and smoothing the outward covering; its fore feet are small, and not unlike those of a rat; the hind seet are large and strong, with membranes between each toe; its length, from nose to tail, is about three seet; the tail is eleven inches long, and three broad.

The castor produced from these animals is found in a liquid state, in bags near the anus, about the size of an egg. When taken off, the matter dries, and is reducible to a powder, which is oily, of a sharp bitter taste, and a strong disagreeable smell. These bags are found indifferently in males and semales, and were formerly supposed to be the animal's testicles; which, when pursued, it was said to bite off, and by that means escape with its life.

The Otter.—Although the otter is not confidered by naturalifts as wholly amphibious, it is nevertheless capable of remaining a confiderable time under water, and can pursue and take its

prey in that element with great facility.

Its legs are very short, but remarkably strong, broad and muscular; on each foot are sive toes, connected by strong membranes, like those of water sowl; its head is broad, of an oval form, and slat on the upper part; the body is long and round, and the tail tapers to a point; the eyes are brilliant, and placed in such a manner, that the animal can see every object that is above it, which gives it a singular aspect, very much resembling an eel or an asp; the ears are short and their orisice narrow.

The colour of the otter is of a deep brown, with two small light spots on each side of the note, and another under the chin.

This animal makes its nest in some retired spot by the side of a lake or river, under a bank, where it has an easy and secure access to the water, to which it immediately slies upon

ich re-

orifice

he fide afy and is upon the least alarm; and, as it swims with great rapidity, generally escapes from its pursuers.

It destroys great quantities of fish, and, in pursuit of its prey, has been observed commonly to swim against the stream.

As foon as the otter has caught a fish, it immediately drags it to the shore, devours a part as far as the vent, and, unless pressed by extreme hunger, always leaves the remainder, and takes to the water in quest of more.

Otters are generally taken in traps placed near their landing places, where they are carefully concealed in the fand. When hunting with dogs, the old ones defend themselves with great obstinacy; they bite severely, and do not readily quit their hold where they have once fastened. An old otter will never give up while it has life, nor make the least complaint though

wounded ever so much by the dogs, nor even when transfixed with a spear.

Otters are found in most parts of the world, with no great variation. They are numerous in North-America, and are common in Guiana, frequenting the rivers and marshes of that country. They are sometimes seen in great numbers together, and are so sierce, that it is dangerous to come near them. They live in holes, which they make in the banks of the rivers.

The otters of Cayenne are very large, weighing from ninety to one hundred pounds. They frequent the large rivers of that country; their cry is loud, and may be heard at a great distance: they are of a dark brown colour; their fur is shorter than that of the beaver, and very soft.

Beside these there is an animal called The Sea Otter.—Vast numbers of these animals inhabit the coast of Kam schatka, and the numerous islands contiguous to it, as well as the opposite coasts of America; they are also found in some of the larger rivers of South-America.

Their skins are of great value, and have long formed a confiderable article of export from Russia. They dispose of them to the Chinese at the rate of seventy or a hundred rubles each, and receive in return some of their most valuable commodities.

The fur of the fea otter is thick and long, of a besutiful fining black colour, but sometimes of a silvery hue; the legs are thick and short; the toes joined by a web; the hind feet like those of a seal; length, from nose, to tail, four feet two inches; tail thirteen, slat and pointed at the end; the largest of them weigh from seventy to eighty pounds.

The sea otter is remarkably harmless, and most affectionates ly fond of its young; it will pine to death for its loss, and die on the very spot where it has been taken away. Before its young can swim, it will earry it in its paws, and support it in the water, laying upon its back. It swims in various positions, on its back, sides, and even in a perpendicular posture, and in the water is very sportive. Two of them are sometimes seen embracing each other. It frequents shallow places abounding with sea weed, and seeds on lobsters, crabs, and other shell side.

It breeds but once a year, and produces one young at a time, which it fuckles and carefully attends almost a year.

The flesh of a young otter is reckoned delicate eating, and

not easily distinguished from that of a lamb.

The Weafel is about nine inches in length; his body is remarkably round and slender; his tail long and well furnished with hair; his legs very short and his toes armed with sharp claws. His hair is short and thick, and of a pale yellowish colour, except about the breast, where it is white. This is a very sprightly animal; notwithstanding the shortness of its legs, it seems to dart rather than to run. He kills and eats rats, striped squirrils, and other small quadrupeds: he likewise kills sowls, sucks their blood, and esteems their eggs a delicacy. He is found at Hudson's bay, Newsoundland, and as far as South Carolina.

Stoat, or Ermine.—It does not differ materially from the weasel in fize, form or habits; even his colour is the same in summer, except that the end of his tail is black, and the edges of his ears and toes are white. In winter he is entirely white, except the tip of the tail. He is generally considered as forming a species distinct from the weasel; but Linnaus makes them the same. They are said to be found in the same places as the former, and Mr. Belknap mentions, that a few have been seen in New-Hampshire.

In addition to the preceding, America has another variety of this family, which appears to differ from the weafel in no respect except in its colour, which is perfectly white both in summer and winter.

Martin.—This animal is called the martin (Marte) by M. de Buffon; in England the pine martin, fir martin, yellow-breafted martin, pine weafel, and yellow-breafted weafel; in New-England the fable; and by the Indians Wauppanaugh. He is formed like the weafel; is generally about fixteen inches long,

and is colour, fpots o have no by hun America ble.

and is of a fallow colour; but his fize, and the shades of his colour, vary in different parts of the country. Some have spots of yellow on the breast, others of white, and others have none. He keeps in forests chiefly on trees, and lives by hunting. He is found in the northern parts of North-America quite to the South sea; his skin is exceeding valuable.

Minh.—The mink is about as large as a martin, and of the same form. The hair on its tail is shorter; its colour is generally black, and its fur coarser; some have a white spot under their throats, others have none. They burrow in the ground, and pursue their prey both in fresh and sait water. Those which frequent the sait water are of a larger size, lighter colour, and have inferior fur. They are found in considerable numbers both in the southern and northern States, and in general wherever the martin is found.

Fisher.—In Canada he is called pekan, and in the American States frequently the black cat, but improperly, as he does not belong to the class of cats. He has a general resemblance to the martin, but is considerably larger, being from twenty to twenty-four inches in length, and twelve in circumference. His tail is a little more than half its length; its hair long and bushy: his fore legs about four inches and a half long, his hinder legs six inches; his ears short and round. His colour is black, except the head, neck and shoulders, which are a dark grey. He lives by hunting, and occasionally purfues his prey in the water. Found in the northern States, Canada, and Hudson's bay. Of each of the animals we have mentioned under this division, there are several varieties which have obtained different names, as the pekan, vison, &c.

Shunk.—This animal is about a foot and a half long, of a moderate height and fize. His tail is long and bushy: his hair long and chiefly black; but on his head, neck and back, is found more or less of white, without any regularity or uniformity. He appears to see but indifferently when the sun shines, and therefore in the day time keeps close to his burrow. As soon as the twilight commences he goes in quest of his food, which is principally beetles and other insects; he is also very fond of eggs and young chickens. His slock is said to be tolerably good, and his fat is sometimes used as an emollient. But what renders this animal remarkable is, his being surnished with organs for secreting and retaining a liquor, volatile and sould beyond any thing known, and which he has the power

and efore ort it s po-

variety el in no both in

M. de v-breastn Newgh. He hes long, of emitting to the distance of a rod or more, when necessary for his defence. When this ammunition is expended he is quite harmles. This volatile fector is a powerful antispatmodic. This animal is found in all parts of America from Hudson's hay to Peru.

There are three or four varieties mentioned by M. Buffon under the name of the Stinking Polecats, all of which poffess this wonderful quality of annoying their enemies from the same

quarter.

Some turn their tail to their purfuers, and emit a most horrible stench, which keeps both dogs and men at a considerable distance. Others eject their urine to the distance of several seet, and it is of so virulent a quality, as almost to occasion blindness, if any of it should happen to fall into the eyes. Clothes infected with it retain the smell for many days: no washing can make them sweet, but they must be even buried in fresh soil before they can be thoroughly cleanled. Dogs that are not properly bred turn back as soon as they perceive the smell; those that have been accustomed to it will kill the animal, but are obliged to relieve themselves by thrusting their noses into the ground.

"A fimilar substance, although not so abundant and fragrant, I have likewise found in bags of the same kind, when I diffected the common weasel, (Muf ya vulgari) which, in all probability, will be sound to possess virtues not much differing from the spodnar, or liquor of the viverra, or the American

"The murquafth, (Caftor mufcatus) which I have also diffected, has no facks of this kind, and therefore I am forcibly led to suspect that its odour resides in the cusicular exhalants and perspired matter."

<sup>\*</sup> Concerning the American Runk, Dr. Mitchell, in a letter to Dr. Polt. 1788, writes thus: " Not long fince, I had an opportunity to diffect the American skunk, (Viverta putorius, Linn.) The most remarkable appearances, on examination, were the following; the tkin was exceedingly lax, infomuch that when pulled away from the subjacent membrane, the hairs, in many places drawn through it, were left rooted in the fat; the urine possessed no more factor than is common to that excrementatious fluid in many other animals; but the peculiar odoriferous substance, which the creature emits when pursued, proceeds from two facks, each capable of containing about half an ounce, fituated at the extremity of the intestinum rellum, and surrounded by large and strong circular muscles, which contracting by voluntary exertion, force out the thick yellowish liquor through two ducts, opening near the verge of the anus. As the animal is neither fwift nor ftrong, this feems to have been given it as a defence against its enemies, on whose approach the volatile matter, is discharged with consderable force, and to no small distance. From its analogy to musk, ambergris, civet and caftor, I am strongly inclined to think it might be with advantage ranked among the antifpaimodics of the Materia Medica, or classed with drugs in the shops of perfumers.

so facks of fides in the

The Stiffing, or Squash, which is the second variety, is pearly of the same fize with the skunk; its hair is long and of the deep brown colour; it lives in holes and clefts of rocks, where the female brings forth her young init is a native of Mexico. and feeds on beetles, worms and finall birds: it deftroys poultry, of which it only eats the brains. When afraid or irritated it voids the same offensive kind of odour, which no creature dare venture to approach. Professor Kalm was in danger of being suffocated by one that was pursued into a house where he slept; and it affected the cattle so much, that they bellowed through pain. Another, which was killed by a maid-fervant in a cellar, so affected her with its stench, that she lay ill for several days; all the provisions that were in the places were so tainted with the finell, as to be utterly unfit for use. This is the coasse of Buston, of which we have given the figure.

Another variety is called the Conepate; it is somewhat finaller, and differs chiefly from the squash in being marked with five parallel white lines, which run along its back and fides from head to tail.

It is a native of North-America. When attacked it briftles up its hair, throws itself into a round form, and emits an odour which no creature can support.

The last of this pestiferous family which we shall mention is the

Zorilla.—This animal is a native of New-Spain, where it is called the mariputa: it is found on the banks of the river Oronoque; and, although extremely beautiful, is at the fame time the most offensive of all creatures. 23 body is beautifully marked with white stripes upon a black g and, running from the head to the middle of the back; from whence they are croffed with other white bands, which cover the liwer part of the back and flanks: its tail is long and bushy, black as far as the middle and white to its extremity: it is an active and mischievous little animal; its stench is faid to extend to a considerable distance, and is so powerful as to overcome even the panther of America, which is one of its greatest enemies.

Notwithstanding this offensive quality in these animals, they are frequently tamed, and will follow their mafter. They do not emit their odour, unless when beaten or irritated. They are frequently killed by the native Indians, who immediately cut away the noxious glands, thereby preventing the flesh, which is good eating from being infected. Its tafte is faid nearly to refemble the flavour of a young pig. The fa

Indians make puries of the fkins.

Sympton March 18 18 18 18

The Coati, or Brazilian Weafel.—This animal has fome refemblance to the bear, in the length of its hind legs, in the form of its feet, in the bushiness of its hair, and in the structure of its paws. It is small; its tail is long, and variegated with different colours; its upper jaw is much longer than the lower, and very pliant; its ears are rounded; its hair is smooth, soft and glossy, of a bright bay colour; and its breast is whitish.

It inhabits Brasil and Guiana, runs up trees very nimbly, cats like a dog, and holds its food between its fore legs like a bear.

The Coati stands with case on its hind feet. It is said to knaw its own tail, which it generally carries erest, and sweeps it about from side to side.

#### ANIMALS OF THE BADGER KIND.

mis in which the value 15 the

The common European badger is the only one found in America; for the animal of this genus, described as a different species, and called the American badger, is nothing more than a variation of the former. It is found in the neighbourhood of Hudon's bay and Canada, as likewise in some of the United States, but does not appear to be numerous.

#### ANIMALS OF THE OPPOSSUM KIND.

Virginian Oppossum.-This animal has a long sharp pointed nose; large, round, naked, and very thin cars, black, edged with pure white, small, black, lively eyes; long stiff hairs each side the nose, and behind the eyes; face covered with short soft white hairs; space round the eyes dusky; neck very short, its fides of a dirty yellow; hind part of the neck and the back covered with a hair above two inches long, foft but uneven, the bottoms of a yellowish white, middle part black, ends whitish; fides covered with dirty and dusky hairs, belly with foft, woolly, dirty white hair; legs and thighs black; feet dufky; claws white; base of the tale clothed with long hairs like those on the back; rest of the rail covered with small scales, the half next the body black, the test white; it has a disagreeable appearance, looking like the body of a fnake, and has the same prehensile quality as that of some monkies; body round and very thick; legs short; on the lower part of the belly of the female is a large pouch, in which the tests are lodged, and where the young shelter as soon as they are born.

The usual length of the animal is, from the tip of the nose to the base of the tail, about twenty inches; of the tail twelve inches.

r.

Inhabits Virginia, Louisiana, Mexico, Brasil and Peru; is very destructive to poultry, and sucks the blood without eating the slesh; feeds also on roots and wild fruits; is very active in ellembing trees, will hang suspended from the branches by its tail, and, by swinging its body, sling itself among the boughs of the neighbouring trees; continues frequently hanging with its head downwards; hunts eagerly after birds and their nests; walks very slow; when pursued and overtaken will feign itself dead; not easily killed, being as tenacious of life as a cat; when the female is about to bring forth, she makes a thick nest of dry grass in some close bush at the foot of a tree, and brings four, five or fix young at a time.

As foon as the young are brought forth they take shelter in the pouch, or false belly, and fasten so closely to the teats, as ot to be separated without difficulty; they are blind, naked, and very small when new-born, and resemble factuses; it is therefore necessary that they should continue there till they attain a perfect shape, strength, sight and hair, and are prepared to undergo what may be called a second birth; after which they run into this pouch as into an asylum in time of danger, and the parent carries them about with her. During the time of this second gestation, the semale shews an excessive attackment to her young, and will suffer any torture rather than permit this receptacle to be opened, for she has power of opening or closing it by the assistance of some very strong muscles.

The slesh of the old animals is very good, like that of a sucking pig; the hair is dyed by the Indian women, and wove into garters and girdles; the skin is very feetid.

Murine Oppossum.—This animal has long broad ears, rounded at the end, thin and naked; eyes encompassed with black; face, head, and upper part of the body, of a tawny colour; the belly yellowish white; the feet covered with short whitish hair; toes formed like those of the Virginian; tail slender, covered with minute scales, from the tip to within two inches of the base, which are clothed with hair. Length, from nose to tail, about eight inches; tail of the same length; the semale wants the false belly of the former, but, on the lower part, the skin forms on each side a fold, between which the teats are lodged.

The species varies in colour. It inhabits the hot parts of South-America, agrees with the others in its food, manners, and the prehensile powers of its tail: it brings from ten to four-teen young at a time; at least, in some species, there are that number of tests: the young affix themselves to the tests as

foon as they are born, and remain attached, like fo many innamate things, till they attain growth and vigour to shift a little for themselves.

Mexican Oppossum has large, angular, naked and transparent ears; note thicker than that of the former kind; whilkers very large : a flight border of black farrounds the eyes ; face of a dirty white, with a dark line sunning down the middle; the hairs on the head, and upper part of the body, ash-coloured at the roots, of a deep tawny brown at the tips : legs dufky: claws white; belly dull cinercous; tail long and pretty thick. varied with brown and yellow, is hairy near an inch from its origin, the rest naked; length, from nose to tail, about nine inches; the tail the length of the body and head,

Inhabits the mountains of Mexico, lives in trees, where it brings forth its young; when in any fright they embrace their parent closely; the tail is prehenfile, and serves instead of a hand, ada hall pile h a.

Cayenne Oppossum. It has a long slender face ; ears creek, pointed and short; the coat woolly, mixed with very coarse hairs, three inches long, of a dirty white from the roots to the middle, from thence to the ends of a deep brown; fides and belly of a pale yellow; legs of a dufky brown; thumb on each foot distinct; on the toes of the fore feet and thumb of the hind are nails, on the toes of the hind feet crooked claws; tail very long, taper, naked and scaly. Length, seventeen French inches; of the tail fifteen and a half; the subject measured was

Inhabits Cayenne, very active in climbing trees, on which it lives the whole day: in marshy places feeds on erabs, which, when it cannot draw out of their holes with its feet, hooks them by means of its long tail; if the crab pinches its tail, the animal fets up a loud cry, which may be heard afar; its common voice is a grunt like a young pig: it is well furnished with teeth, and will defend itself stoutly against dogs; brings forth four or five young, which it secures in some hollow tree. The natives eat these animals, and say their slesh resembles a hare. They are easily tamed, and will then refuse no kind of food.

#### PECCARY OR MEXICAN HOG. . . . . .

This animal, called the Mexican hog, inhabits the hotest parts of South-America, where the species is very numerous; herds confishing of two or three hundred, are sometimes to be

Teen beafts tal er of the

food.

hotest icrous; to be feen together. It is very fierce, and will fight ftoutly with beafts of prey when attacked by them. The jaguar is is mortal enemy, and frequently loses its life in engaging a number of these animals, for they affist each other whenever attacked.

They live chiefly in mountainous places, and are not fond of willowing in the mire like the common hog. They feed on fruits, roots and feeds; they likewife eat ferpents, toads and lizards, and are very dexterous in first taking off the skin with their fore feet and teeth.

It is somewhat smaller than the common hog; its body is covered with long bristles, which, when the creature is irritated, rise up like the prickles of a hodgehog, and are nearly as strong, they are of a dustry colour, with alternate rings of white; across the shoulders to the breast there is a band of white; its head is short and thick; it has two tusks in each jaw; its ears are small and erect; and instead of a tail, it has a small slessy protuberance, which does not cover its posteriors. It differs most essentially from the hog, in having a small orifice on the lower part of the back, from whence a thin watry humour, of a most disagreeable smell, slows very copiously.

Like the common hog, the peccary is very prolific. The young ones, if taken at first, are easily tamed, and soon lose all their natural serocity, but can never be brought to discover any signs of attachment to those that seed them.

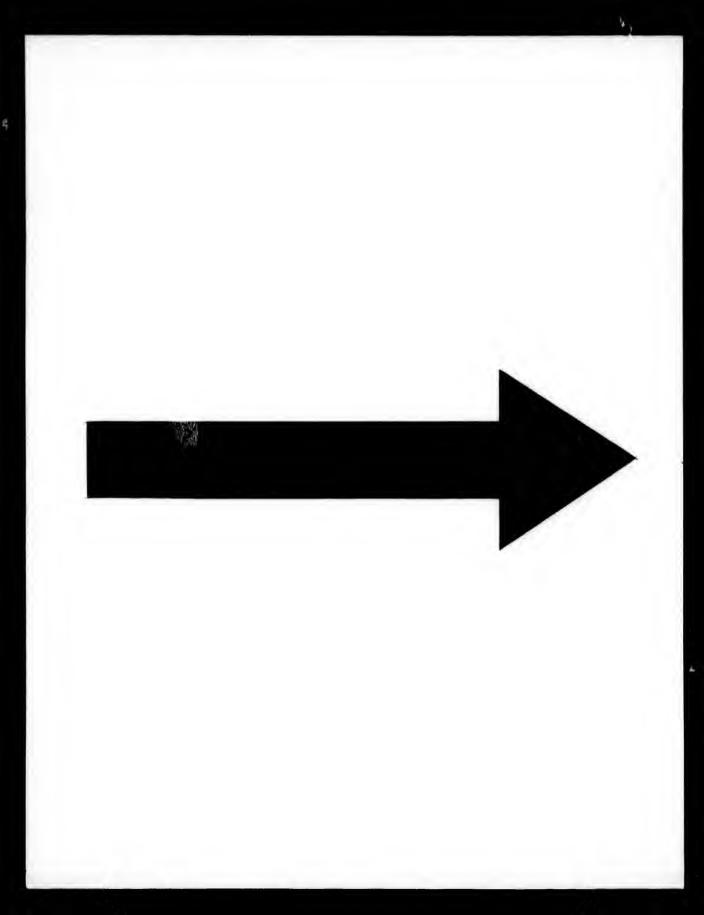

Their fiesh is drier and leaner than that of our hog, but is by no means disagreeable, and may be greatly improved by castration.

Although the European hog is common in America, and in many parts has become wild, the peccary has never been known to breed with it. They frequently go together, and feed in the same woods; but hitherto no intermediate breed has been known to arise from their intercourse.

## ANIMALS OF THE CAVY KIND.

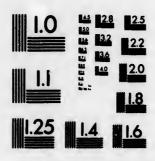

Guinea-Pig, or Reftless Cavy.—This little animal is a native of Brasil, but lives and propagates in temperate and even in cold climates, when protected from the inclemency of the seasons. Great numbers are kept in a domestic state, and therefore we conceive any further observations are unnecessary.

banks of great rivers, such as the Oronoque, Amazons, and

STILL SELLING

Rio de la Pieta; swims and dives remarkably well, and is very dexterous in catching sish, upon which it chiefly sublists: it likewise eats grain, fruits and sugar-canes; feeds mostly in the night commits great ravages in the gardens. They generally teep in large herds, and make a note not much unlike the braying of an ass.

Its help is fat and tender, but like that of the otter, has an oily and fifty tafte. It is about the fize of a small hog, and, by

fome naturalities, has been classed with that animal.

Its fore hoofs are divided in four, the hind ones into three; its head is large and thick, and on the nose there are long whitkers; its ears are small and rounded, and its eyes large and black; there are two large cutting-teeth and eight grinders in each jaw, and each of these grinders forms on its surface what appears to be three teeth, flat at their ends; the legare short, the toes long, and connected at the bottom with a small web; the end of each toe is guarded by a small hoof; it has no tail; the hair on the body is short, rough, and of a brown colour.

It is a gentle animal, easily tamed, and will follow those who feed it and treat it kindly.

As it runs badly, on account of the peculiar confiruction of its feet, its fafety confifts not in flight; nature has provided it with other means of preservation; when in danger it plunges into the water and dives to a great diftance.

Paca, or Spotted Cavy. - This animal is about the fixe of a hare, but its body is much thicker, plumper and fatter. The colour of the hair on the back is dark brown or liver-coloured; it is lighter on the fides, which are beautifully marked with lines of white spots, running in parallel directions from its throat to its rump; those on the upper part of the body are perfectly diffine ; the belly is white. Its head is large; its ears short and naked; its eyes full and placed high in its head near the ears; in the lower part of each jaw, immediately under the eye, it has a remarkable deep flit or furrow, which feems like the termination of the jaw, and has the appearance of an opening of the mouth; its upper jaw projects beyond the under; it has two strong yellow cutting-teeth in each jaw; its mouth is small, and its upper lip is divided; it has long whiskers on its lips, and on each fide of its head under the ears; its legs are short; it has four toes on the fore feet, and three on the hind; it has no tail. It is a native of South-America, and lives on the banks of sivers in warm and moist places. It digs

holes in the ground, fecrets itself during the day, and goes

out at night in quest of food,

It is a cleanly animal, and will not bear the smallest degree of dirtiness in its apartment. When pursued it takes to the water, and escapes by diving. If attacked by dogs it makes a vigorous defence. Its stells is esteemed a great delicacy by the natives of Brasil.

We think this animal might be easily naturalised in this country, and added to our flock of useful animals. It is not much afraid of cold, and being accustomed to burrow, it would by that means defend itself against the rigours of our winter.

There are feveral varieties of them, some of which weigh

from fourteen to twenty, and even thirty pounds,

Agouti, or Long-nofed Cavy.—This animal is about the fize of a hare; its nose is long, upper lip divided, skin sleek and shining, of a brown colour mixed with red, tail short, legs slender and almost naked; has four toes on the fore feet and three on the hind; grunts like a pig, sits on its hind legs, and feeds itself with its paws; and when satisted with food it conceals the remainder. It eats fruits, roots, nuts, and almost every kind of vegetable; is hunted with dogs, runs sast, and its motions are like those of a hare. Its sless, which resembles that of a rabbit, is eaten by the inhabitants of South-America.

Great numbers of them are found in Guiana and Braul; They live in woods, hedges and hollow trees.

The female brings forth at all times of the year, and produces three, four, aed sometimes five at a time.

Akouchi.—This seems to be a variety of the agouti, and, though somewhat less, is nearly of the same form, but its tail is longer. It inhabits the same countries, is of an olive colour; its sless is white, delicate, and has the slavour of a young rabbit; is much esteemed by the natives, who hunt it with dogs, and

reckon it among the finest game of South-America.

Rock Cavy.—This is likewife found in Brafit, is about twelve inches in tength; the colour of the upper part of its body refembles that of the hare; its belly is white; the upper lip divided; the ears short and rounded like those of a rat, and has no tail. It moves like the hare, its fore legs being shorter than the hind. It has four toes on the fore feet, and only three on the hind. Its slesh is like that of the rabbit, and its manner of living is also very similar.

#### ANIMALS OF THE HARE KIND.

American Hare.—This animal is not much more than half the fize of the European hare; its ears are tipt with grey, the

nock and body mixed with cinereous, rust colour, and black ; the upper part of the tail black and the lower part white the legs are of a pale ferruginous, and the belly white. This animal is found in all parts of North-America, fouth of New-Jersey it retains its colour all, the year; but to the northward, in New-England, Canada and Hudson's bay, it changes at the approach of winter; its fummer cost for one, long, foft, and filvery, the edges of its ears only preferving their colour. Its flesh is good, and is exceeding useful to those who winter at Hudson's bay, where they are taken in abundance,

Varying Hare.—This animal in summer is grey, with a slight mixture of black and tawny; tail white, and the feet closely and warmly covered with fur : in winter it changes to a fnowy white, except the tips and edges of the ears, which remain black; this change not only takes place in the cold bleak regions of the north, but when kept tame in stovewarmed rooms. They are in America chiefly found about

Hudson's bay and Cook's river. Brafilian Hare. This animal has very large ears, a white ring round its neck, in every other respect the same as the common hare. It is found in Brasil and Mexico, and is very good for food

Mr. Morfe mentions another species found in all the United States, which burrows like a rabbit; this he thinks to be peculiar to America. The rabbit, though it thrives well, particularly in South-America, was never found wild in any part of the American continent,

#### A STOTH STATE STOTH

Of all animals this is the most sluggish and inactive; and, if we were to judge from outward appearance, would feem the most helples and wretched. All its motions seem to be the effect of the most painful exertion, which hunger alone is ca-

pable of exciting.

It lives chiefly in trees; and having afcended one with infinite labour and difficulty, it remains there till it has entirely stripped it of all its verdure, sparing neitheir fruit, blossom nor leaf; after which it is faid to devour even the bark. Being unable to descend, it throws itself on the ground, and continues at the bottom of the tree till hunger again compels it to renew its toils in fearch of sublistence.

Its motions are accompanied with a most piteous and lamentable cry, which terrifies even beafts of prey, and proves its best defence.

This frequent collects Penetrat mouth l

Though flow, aukward, and almost incapable of motion, the floth is strong, remarkably tenacious of life, and capable of enduring a long abstinence from food. We are told of one that having fastened itself by its feet to a pole, remained in that situation forty days without the least sustenance. The arength in its legs and feet is so great, that, having seized any thing, it is almost impossible to oblige it to quit its hold.

There are two kinds of sloths, which are principally distinguished by the number of their claws; the one called the as is about the fize of a fox, and has three long claws on each foot; its legs are clumfy and aukwardly placed; and the fore legs being longer than the hind, add greatly to the difficulty of its progressive motion; its whole body is covered with a rough coat of long hair, of a lightish-brown colour, mixed with white, not unlike that of a badger, and has a black line down the middle of the back; its face is naked, and of a dirty white colour; tail short, eyes small, black and heavy. It is found only in South-America.

The Unau has only two claws on each foot; its head is short and round, somewhat like that of a monkey; its ears are short, and it has no tail. It is found in South-America, and also in the island of Ceylon.

The flesh of both kinds is eaten. They have several stomachs, and are said to belong to the tribe of ruminating animals.

#### ANT-EATERS.

There are several animals distinguished by the common name of ant-eaters, which differ greatly in form. They are divided into three classes, viz. the Great, the Middle, and the Lesser Ant-eater.

The Great Ant-eater is nearly four feet in length, exclusive of its tail, which is two and a half. It is remarkable for the great length of its fnout, which is of a cylindrical form, and serves as a sheath to its long and slender tongue, which always lies folded double in its mouth, and is the chief instrument by which it finds subsistence.

This creature is a native of Brasil and Guiana, runs slowly, frequently swims over rivers, lives wholly on ants, which it collects by thrusting its tongue into their holes, and having penetrated into every part of the nest, withdraws it into its mouth loaded with prey.

Its legs are to ftrong, that few animals can extricute thanfelves from its grip. It is faid to be formidable even to the
panthers of America, and fometimes fixes itself upon them in
such a marrier, that both of them fall and perish together a for
its obstinacy is so great, that it will not extricate itself from its
adversary even after he is dead.

The fleft has a ftrong difagrecable tafte, but it is esten by

the Indians.

The Middle Ans-easer is about one foot feven inches from note to tail; it inhabits the same countries, and procures its food in the same manner as the last. Its tail is ten inches long, with which it secures its hold in climbing trees by twisting it round the branches.

Both these animals have four frong claws on the fore feet,

The Lefer Ant-eater has a sharp-pointed noise, inclining a little downwards; its cars are small, and hid in the fur; it has two strong hooked claws on the fore feet, the outward one being much the largest, and four on the hind feet; its fur is long, soft and filky, of a yellowish-brow colour; its length, from noise to tail, is seven inches and a half, tail above eight, thick at the base, and taper to the end. It inhabits Guiana; climbs trees in quest of a species of ants which build their nests among the branches.

#### ANIMALS OF THE PORCUPINE KIND.

Braflian Porcupine.—This animal is very different from that known in general under the name of porcupine; indeed it can searcely be said to bear any relation to it, except in its being covered with spines about three inches in length; they are white, very sharp, and have a bar of black near the points. The breast, belly, and lower part of the legs, are covered with strong bristly hairs of a brown colour; its tail is long and slender, and almost naked at the end: the animal uses it in descending trees by twisting it round the branches.

It inhabits Mexico and Brasil, lives in woods, and feeds on fruits and small birds; it preys by night and sleeps in the day. It makes a noise like the grunting of a swine, and grows very

fat. Its flesh is white and escemed good to eat, and an

Coendou.—This animal inhabits the same countries with the last, and its habits and mode of living are similar; but, in respect to its figure, it seems to be a very different animal. Its

cars are short and hid in the hair; its head, body, and upper part of its tail, are covered with long soft hair, in which are interspersed a number of strong sharp spines; its tail is shorter than that of the preceding species, and it uses it in the same manner in descending trees, frequently suspending itself from the branches.

Urfen,-The urchin, or urfon, is about two feet in leagth. and when fat, the same in circumference. He is commonly called hedge-bog or poscupine, but differs from both those mimals in every characteristic mark, excepting his being armed with quills on his back and fides; these quills are nearly as large as a wheat fraw, from three to four inches long, and, unless erected, nearly covered by the animal's hair; their points are very hard and filled with innumerable very fmall barbs or scales, whose points are raised from the body of the quill. When the urchin is attacked by a dog, wolf, or other beaft of prey, he throws himself into a posture of defence by shortening his body, elevating his back, and erecting his quills. The affailant foon finds fome of those weapons stuck into his mouth, or other parts of his body, and every effort which he makes to free himself causes them to penetrate the farther; they have been known to bury themselves entirely in a few minutes. sometimes they prove fatal, at other times they make their way out again through the skin from various parts of the body. If not molested it is an inoffensive animal. He finds a hole or hollow which he makes his residence, and feeds on the barks and roots of vegetables. His flesh, in the opinion of hunters, is equal to that of a fucking pig. Is found in the northern States.

#### ARMADILLO.

This animal is found only in South-America, where there are feveral varieties of them. They are all covered with a firing crust or shell, and are distinguished from each other by the number of the slexible bands of which it is composed.

It is a harmless, inoffensive animal, feeds on roots, fruits and other vegetable, grows very fat, and is greatly esteemed for the delicacy of its flesh.

The Indians hunt it with small dogs trained for that purpole. When surprised it runs to its hole, or attempts to make a new one, which it does with great expedition, having strong that on its fore feet, with which it adheres so firmly to the ground, that if it should be caught by the tail whilst making its way into the earth, its refistance is so great, that it will sometimes leave it in the hands of its pursuers; to avoid this the hunter has recourse to ertifice, and by tickling it with a stick it gives up its hold, and suffers itself to be taken alive. If no other means of escape be left, it rolls itself up within its covering by drawing in its head and legs, and bringing its tail round them as a band to connect them more forcibly together; in this situation it sometimes escapes by tolling itself over the edge of a precipice, and generally falls to the bottom unhurt.

The most successful method of catching armidillos is by success laid for them by the sides of rivers or other places where they frequent. They all warrow very deep in the ground, and saldom für out, except during the night, whilst they are in surch of food.

To give a minute description of the shells or coverings of the armidillos would be extremely difficult, as they are all composed of a number of parts, differing greatly from each other in the order and disposition of the figures with which they are distinguished; but it may be necessary to observe, that in general there are two large pieces that cover the shoulders and the rump, between which lie the bands, which are more or less in number in different kinds. These bands are not unlike those in the tail of a lobster, and, being slexible, gives way to the motions of the animal. The first we shall mention is the

Three-banded Armadillo.—Its shell is about twelve inches bong, with three bands in the middle; the crust on the head, back and rump, is divided into a number of elegant railed figures, with five angles or sides; its tail is not more than two inches long; it has neither cutting nor canine teeth, and has

five toes on each foot.

Six-banded Armadille,—Is about the fize of a young pig. Between the folds of the bands there are a few scattered hairs; its tail is long, thick at the base, and tapers to a point, It is found in Brasil and Guiana.

Eight banded Armadillo.—Its ears are long and upright, eyes finall and black; it has four toes on the fore feet and five on the hind; its length, from noie to tail, is about ten inches, the tail nine. It inhabits Brafil, and is reckoned more delicious eating than the others.

Nine-banded Armedillo has a tenth band, moveable half way up on each fide; the shell on the shoulders and rump is marked with hexangular figures; the breast and belly are covered with long hairs; its tail is long and taper, and the whole animal

three feet in length.

alf way

marked

ed with

One of this kind was brought to England a few years ago from the Mulquito shore, and lived force time. It was fed with raw beef and milk, but refused to eat our fruits and grain.

The Kabafou is furnished with twelve bands, and is the largest of all the armadillos, being almost three feet long from nose to tail; the figures on the shoulders are of an oblong form, those on the rump hexangular. It is feldom eaten.

Weafel-headed Armadillo, so called from the form of its head, which is slender, has eighteen bands from its shoulder to its tail; the shell is marked with square sigures on the shoulders, those on the legs and thighs are roundilln; the body is about sisteen inches long, tail sive.

All these animals have the power of drawing themselves up under their shells, either for the purpose of repose or safety. They are furnished with strong laterel muscles, consisting of numberless fibres, crossing each other in the form of an X, with which they contrast themselves so powerfully, that the strongest man is scarcely able to force them open. The shells of the largest armadillos are much stronger than those of the smaller kinds; their sless is likewise harder and more unsit for the table.

#### ANIMALS OF THE MARNOT KIND.

Quebec Marmot.—This animal is called in the United States the woodchuck; his body is about fixteen inches long, and nearly the same in circumference; his tail is moderately long and full of hair; his colour is a mixture of sallow and grey. He digs a burrow in or near some cultivated field, and feeds on pulse, the tops of cultivated clover, &c. He is generally very sat, excepting in the spring. The young are good most, the old are rather rank and disagreeable. In the beginning of October they retire to their burrows, and live in a torpid state about six months. In many respects he agrees with the marmot of the Alps, in others he differs, and on the whole is probably not the same.

An animal refembling the woodehuck is found in the fouthem flates, which is supposed to form another species, it is called the Maryland Marmot.

Belides the above there are three other species of this genus found in America, the Hoary, the Tail-less, and the Ear-less Marmot; the two former are found in the northern parts of the continent, and the latter on the western side only.

#### ANIMALS OF THE SQUIRREL KIND.

Fox Squirrel.—Of this enimal there are feveral varieties, black, red and grey. It is nearly twice as large as the common grey squirrel, and is found in the southern States, and is peculiar to the American continent.

Grey Squirrel,-The grey squirrel of America does not agree exactly with that of Europe, but is generally confidered as of the fame species. Its name indicates its general colour but some are black, and others black on the back and grey on the fides. They make a nest of moss in a hollow tree, and here they deposit their provision of nuts and accens; this is the place of their relidence during the winter, and here they bring forth their young. Their summer house, which is built of flicks and leaves, is placed near the top of the tree. They fometimes migrate in confiderable numbers. If in their course they meet with a river, each of them takes a shingle, piece of bark, or the like, and carries it to the water: thus equipped they embark, and erect their tails to the gentle breeze, which foon wafts them over in fafety; but a sudden flaw of wind sometimes produces a destructive shipwreck, The greater part of the males of this species is found castrated, They are found from New-England to Chili and Peru. A grey squirrel is found in Virginia nearly twice as large as this; whether it be the same, or a different species, is un-

Red Squirrel.—This is less than the grey squirrel. It has a red list along its back, grey on its sides, and white under the belly. It differs in some respects from the common European squirrel; but M, de Busson considers it as the same species. Its food is the same as that of the grey squirrel, except that it sometimes seeds on the seeds of the pine and other evergreens; hence it is sometimes called the pine squirrel, and is sound in general farther to the northward than the grey squirrel. It spends part of its time on trees in quest of food; but considers its hole, under some rock or log, as its home.

tts colour is red; it has a narrow stripe of black along its back; at the distance of about half an inch on each fide is a stripe of white, bordered with very narrow stripes of black; its belly is white. In the males the colours are brighter and better defined than in the semale. It is sometimes called a mouse squirrel and ground squirrel, from its forming a burrow in loose ground. Linguages consounds it with a striped mouse squirrel found in

the north of Afia; but that animal is represented as in some measure resembling the mouse, whereas this is a genuine squirrel. In the summer it feeds on apples, peaches, and various kinds of fruit and seeds, and for its winter store lays up nuts, acorns and grain. It sometimes ascends trees in quest of food, but always descends on the appearance of danger; nor does it feel secure but in its hole, a stone wall, or some covert place. Found in the northern and middle States.

Flying Squirret.—This is the most singular of the class of squirrels. A duplicature of the skin connects the fore and hinder legs together; by extending this membrane it is able to leap much farther, and to alight with more safety than other squirrels. It lives in the holes of trees and feeds on seeds. Is found in general from the southern parts of Hudson's bay to Mexico.

Besides the above, there are several other varieties of this genus, some peculiar to the whole continent, and some to particular parts, from whence they have been named, as the Hudson's bay squirrel, varied squirrel of Mexico, Mexican squirrel, Brasilian squirrel, &c.

Striped Dormouse.—Of this genus of animals, called sometimes garden squirrels, we believe there is only one species known in North-America, viz. the striped dormouse, which is exceeding plenty throughout all the forests.

#### ANIMALS OF THE RAT KIND.

Of this genus of animals America produces various species, two or three only of which we shall notice.

Musquash, or musk rat of Canada. This animal is about the fize of a young rabbit; its head is thick and short, resembling that of a water rat; its hair soft and glossy; beneath the outward hair there is a thick sine down, very useful in the manufacture of hats; it is of a reddish brown colour; its breast and belly ash, tinged with red; its tail is long and flat, covered with scales; its eyes are large, its ears short and hairy; it has two strong cutting teeth in each jaw, those of the under jaw are about an inch long, but the upper ones are shorter.

This animal is a native of Canada, where it is called the

In many respects it very much resembles the beaver, both in form and manners. It is fond of the water and swims well. At the approach of winter several families associate together. They build little huts, about two seet in diameter, composed

of herbs and rushes cemented with clay, forming a dome-like covering: from these are several passages, in different directions, by which they go out in quest of roots and other soud. The hunters take them in the spring, by opening their holes, and letting in the light suddenly upon them. At that time their slesh is tolerably good, and is frequently eaten, but in the summer is acquires a scent of musk, so strong as to render it perfectly unpalatable.

Wood Rat.—This is a very eurious animal; not half the fize of a domestic rat; of a dark brown or black colour; their tails sender and short in proportion, and covered thinly with short hair. They are singular with respect to their ingenuity and great labour in constructing their habitations, which are conical pyramids, about three or four feet high, constructed with dry branches, which they collect with great labour and perseverance, and pile up without any apparent order; yet they are so interwoven with one another, that it would take a bear or a wild cat some time to pull one of these castles to pieces, and allow the animals sufficient time to retreat with their young.

There is likewise a ground rat, twice as large as the common rat, which burrows in the ground. Bartram's Travel's.

Shrew Monfe.—This is the smallest of quadrupeds, and holds nearly the same place among them as the humming bird does among the seathered race. Their head, which constitutes about one third of their whole length, has some resemblance to that of a mole; the ears are wanting: their eyes scarcely visible; the nose very long, pointed, and furnished with long hairs. In other respects these resemble the common mouse. They live in woods, and are supposed to seed on grain and insects. Disserent species of them are found in Brasil, Mexico, Carolina, New-England, and Hudson's bay.

Mole,—The Purple Mole is found in Virginia; the Black Mole in New-England; he lives in and about the water: they differ from one another, and both from the European. There are three other species found about New-York, viz. the Longtailed, the Radiated, and the Brown; the former is also found in the interior of Hudson's bay.

#### ANIMALS OF THE MONKEY KIND.

The monkies of America are distinguished by M. Buffon by the generic names of Sapajous and Sagoins; they have neither cheek pouches nor callosities on their buttocks, and they are distinguished from each other by characters peculiar to each.

that fruit leap hold one

dish key; the cell:

body tail a lo and han

Bra don The sapajou is surnished with a prehensile tail, the under part of which is generally covered with a smooth naked skin; the animal can coil it up or extend it at pleasure, suspend itself by its extremity on the branches of trees, or use it as a hand to lay hold of any thing it wants. The tails of all the sagoins, on the contrary, are longer than those of the sapajous, straight, slaceid, and entirely covered with hair. This difference alone is sufficient to distinguish a sapajou from a sagoin.

Ouarine, or Preacher.—This is the largest of all the American monkies, being about the size of a large fox; its body is covered with long smooth hair, of a shining black colour, forming a kind of ruff round the animal's neck; its tail is long,

and always twifted at the end.

Great numbers of these monkies inhabit the woods of Brasil and Guiana, and, from the great noise they make, are called Howling Monkies. Several of them assemble together, one placing himself on a higher branch, the rest placing themselves in a kind of regular order below him: the first then begins as though to harangue with a loud tone, which may be heard at a great distance; at a signal made with his hand, the rest join in a general chorus, the most dissonant and mendous that can be conceived; on another signal they are stop, except the first, who sinishes singly, and the assembly breaks up.

These monkies are very sierce, and so wild and mischievous that they can neither be conquered nor tamed. They seed on fruits, grain, herbs, and sometimes insects; live in trees, and leap from bough to bough with wonderful agility, catching hold with their hands and tails as they throw themselves from

one branch to another.

There is a variety of this species of a ferruginous or reddish colour, which the Indians call the Royal, or King Monkey; it is as large and noisy as the former. This is eaten by the natives, and sometimes by the Europeans, and deemed excellent food.

Coaita.—This animal is somewhat less than the ouarine; its body and limbs are long and stender, hair black and rough, tail long, and naked on the under side near the end. It has a long slat face of a swarthy colour, its eyes sunk in its head, and its ears resembling human; it has only four singers on the hands, being destitute of the thumb.

It is found in the neighbourhood of Carthagens, in Guians, Brafil, and Peru. Great numbers affociate together; they feldom appear on the ground, but live mostly in trees, and feed

on fruits; when these are not to be had, they are said to eat sistes, worms and insects; are extremely dexterous in catching their prey, and make great use of their tails in seizing it.

They are very lively and active. In passing from one tree to another, they sometimes form a chain, linked to each other by their tails, and swing in that manner till the lowest catches hold of a branch, and draws up the rest. When fruits are ripe, they are generally fat, and their slesh is then said to be excellent.

There are many varieties of the coaita, which differ chiefly in colour; some are totally black, others brown, and some have white hair on the under parts of their body. They are called Spider Monkies by Edwards, on account of the length and slenderness of their legs and tails.

M. Buffon supposes the Exquima to be another variety of this species. It is nearly of the same size, but its colour is variegated. The hair on its back is black and yellow, its throat and belly white: its manner of living is the same with that of the coaits, and it inhabits the same countries.

Sajou, or Capuchin.—There are two varieties of this species, the prevent and the grey, which, in other respects, are perfectly similar. Their faces are of a flesh colour, thinly covered with down; tails long, full of hair on the upper side, naked below, and prehensile; hands black and naked; length of the body about twelve inches.

These animals inhabit Guiana, are extremely lively and agile, and their constitution seems better adapted to the temperate climates of Europe than most of the sapajou kind. M. Busson mentions a few instances of their having been produced in France.

The sajous are very capricious in their attachments, being fond of particular persons, and discovering the greatest aversion to others.

Sai, or Weeper, inhabits Brafil, is very mild, docile, and timid; of a grave and ferious aspect, has an appearance of weeping, and when irritated, makes a plaintive noise. It is about four-teen inches long, the tail longer than the body; hair on the back and sides of a deep brown colour, mixed with red on the lower parts. There is a variety with hair on the throat and breast.

Great numbers of these creatures assemble together, particuly in stormy weather, and make a great chattering; they live much in trees which bear a podded fruit as large as beans, on which they principally feed.

called t

Saimiri, or Orange Monkey.—This is a most beautiful animal, but so extremely delicate, that it cannot well bear to be brought from its own climate to one less warm and temperate.

It is about the fize of a squirrel; its head is round, eyes reamarkably lively and brissiant, ears large, hair on the body short and fine, of a shining gold colour, seet orange, its tail is were long; its prehensile faculty is much weaker than the rest of the sapajous, and on that account it may be said to form a shade between them and the sagoins, which have long tails, entirely covered with hair, but of no use in suspending their bodies from the branches of trees or other objects.

Mico, or Fair Montey.—This is the most beautiful of all this numerous race of animals. Its head is small and round; face and ears of so lively a vermillion colour, as to appear the effect of art; its body is covered with long hair, of a bright silvery whiteness, and uncommon elegance; tail long, and of statuting dark chesnut colour.

It frequents the banks of the river of Amazons, where it was discovered by M. Condamaine, who preserved one alive till almost within fight of the French coast, but it died before its arrival.

Oistiti, or Cagvi.—This is a small animal, its head and body not exceeding seven inches in length; its tail is long, bushy, and, like that of the macauco, marked with alternate rings of black and ash colour: its face is naked, of a swarding sleep lour; ears large, and like the human, with two very large tucks of white hairs standing out on each side; the body beautifully marked with dusky, ash coloured, and reddish bars; its nails are sharp, and its singers like those of a squirrel.

The oustiti inhabits Brasil, feeds on fruits, vegetables insects, and snails, and is fond of fish.

Sahi.—Sometimes called the Fox-tailed Monkey, because its tail, like that of the fox, is covered with long hair. Its body is about seventeen inches in length; hair long, of a dark brown colour on the back, lighter on the under side; its face is tawny, and covered with a sine short whitish down; the forehead and sides of the sace are white; its hands and sect are black, with claws instead of nails; is a native of Guiana, where it is called the saccawinkee.

Pinche, or Red-tailed Monkey.—This is somewhat larger than the ousiti. It is remarkable in having a great quantity of white smooth hair, which falls down from the top of its head on each side, forming a curious contrast with its face, which is black, thinly covered with a fine grey down; its eyes are black and

lively; throat black; hair on the back and shoulders of a light reddish brown colour; breast, belly, and legs, white; the tail is long, of a red colour from the rump to the middle, from thence to the end it is black.

The pinche inhabits the woods on the banks of the river of Amazons; is a lively, beautiful little animal; has a loft whistling voice, resembling more the chirping of a bird than the cry of a quadruped. It frequently walks with its long tail over its back.

Marikina.—This is by some called the Lion Ape, from the quantity of hair which surrounds its face, falling backwards like a mane; its tail is also somewhat bushy at the end; its face is flat, and of a dull purple colour; its hair long, bright, and silky, from whence it is called the Silky Monkey; it is of a pale yellow colour on the body; the hair round the face of a bright bay, inclining to red; its hands and feet are without hair, and of the same colour as the face; its body is ten inches long, tail thirteen.

This creature is a native of Guiana, is very gentle and lively, and feems to be more hardy than the other fagoins: Buffon fays, that one of them lived at Paris several years, with no other precaution than keeping it in a warm room during

winter.

Tamarin.—This is the fize of a squirrel; its face is naked, of a swarthy slesh colour; its upper lip somewhat divided; its ears are very large and erect, from whence it it called the Great-eared Monkey; its hair is soft, shaggy, and of a black colour; hands and seet covered with orange coloured hair, very sine and smoothe; its nails long and crooked; tail black, and twice the length of its body.

The tamarin inhabits the hotter parts of South-America: is a lively, pleasant animal, easily tamed, but so delicate, that it

cannot bear a removal to a less temperate climate.

Most of the above genus seem to be more particularly natives of South-America, but they are likewise said to be found on the lower parts of the Mississippi.

#### PINNATED QUADRUPEDS.

Walrus, or Sea horse.—There are several animals whose residence is almost constantly in the water, and which seem to partake greatly of the nature of sishes, they are nevertheless classed by naturalists under the denomination of quadrupeds; and being persectly amphibious, living with equal ease on the water as on land, may be considered as the last step in the scale

of the most thick thick ears; the tai disper and folloofely with times part;

that it

nd on the

hose resifeem to vertheless drupeds; ase on the the scale of nature, by which we are conducted from one great division of the animal world to the other. Of these the walrus is the most considerable; it has a round head; small mouth; very thick lips, covered above and below with pelluced bristles as thick as a straw; small stery eyes; two small orifices instead of ears; short neck; body thick in the middle, tapering towards the tail; skin thick, wrinkled, with short brownish hairs thinly dispersed; legs short, sive toes on each, all connected by webs, and small nails on each; the hind seet very broad; each leg loosely articulated; the hind legs generally extended on a line with the body; tail very short; length, from nose to tail, sometimes eighteen seet, and ten or twelve round in the thickest part; the teeth have been sometimes sound of the weight\* of twenty pounds each.

They inhabit the coast of Spitzbergen, Nova Zemble, Hudson's bay, and the gulph of St. Lawrence, and the Icy sea, as far as cape Tichuktichi, and the illands off it, but does not extend fouthward as far as the mouth of the Anadyr, nor are any feen in the islands between Kamschatka and America: they are gregarious; in some places appear in herds of hundreds; are shy animals, and avoid places which are much haunted by mankind ; f are very fierce; if wounded in the water, they attempt to fink the boat, either by rifing under it, or by striking their great teeth into the fides; roar very loud, and will follow the boat till it gets out of fight. Numbers of them are often feen fleeping on an island of ice; if awakened, fling themselves with great impetuofity into the fea, at which time it is dangerous to approach the ice, lest they should tumble into the boat and overfet it; do not go upon the land till the coast is clear of ice. At particular times, they land in amazing numbers; the moment the first gets on shore, so as to lie dry, it will not stir till another comes and forces it forward by beating it with its great teeth; this is ferved in the same manner by the next, and fo in fuccession till the whole is landed, continuing tumbling over one another, and forcing the foremost, for the lake of quiet, to remove further up.

Teeth of this fize are only found on the coast of the Icy sea, where the animals are seldom molested, and have time to attain their full growth. His. Kanschatha, 120.

<sup>†</sup> In 1608, the crew of an English vessel killed on Cherry isle above nine hundred Walruses in seven hours time; for they lay in heaps, like hogs huddled one upon another. Marten's Spisserg. 181, 182.

They bring one, or at most two young at a time; feed on sea herbs and fish, also on shells, which they dig out of the sand with their teeth; are said also to make use of their teeth to ascend rocks or pieces of ice, fastening them to the cracks, and drawing their bodies up by that means. Besides mankind, they seem to have no other enemy than the white bear, with whom they have terrible combats, but are generally victorious.

They are killed for the fake of the oil, one animal producing about half a ton.

Seal.—Of this genus there are several species, all of which, there is no doubt, are found on some part of the coast of America.

Whale-tailed Manati.—This animal in nature so nearly approaches the cetaceous tribe; that it is merely in conformity to the systematic writers, that it is continued in this class; it scarce deserves the name of a biped; what are called seet are little more than pectoral fins; they serve only for swimming; they are never used to affish the animal in walking or landing, for it never goes ashore, nor ever attempts to climb the rocks, like the walrus and seal. It brings forth in the water, and, like the whale, suckles its young in that element; like the whale, it has no voice, and, like that animal, has an horizontal broad tail in form of a crescent, without even the rudiments of hind seet.

Inhabits the seas about Bering's and the other Aleutian islands, which intervene between Kamschatka and America, but never appear off Kamschatka, unless blown ashore hy a tempest. Is probably the same species which is found above Mindanao, but is certainly that which inhabits near Rodriguez, vulgarly called Diego Reys, an island on the east of Mauritius, or the isle of France, near which it is likewise found.

They live perpetually in the water, and frequent the edges of the shores; and in calm weather swim in great droves near the mouths of rivers; in the time of slood they come so near the land, that a person may stroke them with his hand; if hurt, they swim out to sea, but presently return again. They live in samilies, one near another; each consists of a male, a semale, a half-grown young one, and a very small one. The semales oblige the young to swim before them, while the other old ones surround, and, as it were, guard them on all sides. If the semale is attacked, the male will defend her to the utmost, and if she is killed, will follow her corpse to the very shore, and swim for some days near the place it has been landed at.

They copulate in the fpring, in the same manner as the human kind, especially in calm weather, towards the evening. The semale swims gently about; the male pursues, till tired with wantoning, she slings herself on her back, and admits his embraces. Steller thinks they go with young above a year; it is certain that they bring but one young at a time, which they suckle by two teats placed between the breasts.

They are vastly voracious and gluttonous, and feed not only on the fuci that grow in the sea, but such as are slung on the edges of the shore. When they are all silled they fall asserp on their backs. During their meals, they are so intent on their food, that any one may go among them and chuse which he likes best:

Their back and their fides are generally above water, and as their skin is filled with a species of louse peculiar to them, numbers of gulls are continually perching on their backs, and picking out the insects:

They continue in the Kamschatkan and American seas the whole year; but in winter are very lean, so that you may count their ribs. They are taken by harpoons sastened to a strong cord, and after they are struck, it requires the united force of thirty men to draw them on shore. Sometimes, when they are transfixed, they will lay hold of the rocks with their paws, and stick so sast as to leave the skin behind before they can be sorced off. When a Manati is struck, its companions swim to its assistance; some will attempt to overturn the boat, by getting under it; others will press down the rope, in order to break it; and others will strike at the harpoon with their tails, with a view of getting it out, which they often succeed in. They have not any voice, but make a noise by hard breathing, like the snorting of a horse;

They are of an enormous fize; some are twenty-eight seet long, and eight thousand pounds in weight; but if the mindenao species is the same with this, it decreases greatly in fize as it advances southward, for the largest which Doubler saw there, weighed only six hundred pounds. The head, in proportion to the bulk of the animal, is small, oblong, and almost square; the nostrils are filled with short bristles; the gape, or rictus, is small; the lips are double; near the junction of the two jaws the mouth is full of white tubular bristles, which serve the same

The leonine and urfine feals copulate in the fame manner, only, after sporting in the fea for fome time, they come on shore for that purpose.

use as the famine in whales, to prevent the food running out with the water; the lips are also full of briftles, which ferve instead of teeth to cut the strong roots of the sea plants, which floating ashore are a sign of the vicinity of these animals. In the mouth are no teeth, only two flat white bones, one in each jaw, one above, another below, with undulated furfaces, which

The eyes are extremely small, not larger than those of a sheep; the iris black, it is destitute of ears, having only two orifices. fo minute that a quill will scarcely enter them; the tongue is pointed and finall; the neck is thick, and its junction with the head scarce distinguishable, and the last always hangs down. The circumference of the body near the shoulders is twelve feet, about the belly twenty, near the tail only four feet eight; the head thirty-one inches; the neck near feven feet; and from these measurements may be collected the deformity of this animal. Near the shoulders are two feet, or rather fins, which are only two feet two inches long, and have neither fingers nor nails, beneath are concave, and covered with hard brilles; the tail is thick, strong, and horizontal, ending in a stiff black fin, and like the substance of whalebone, and much split in the fore part, and flightly forked, but both ends are of equal lengths, like that of a whale.

The skin is very thick, black, and full of inequalities, like the bark of oak, and so hard as scarcely to be cut with an ax, and has no hair on it; beneath the skin is a thick blubber, which tastes like oil of almonds. The flesh is coarser than beef, and will not foon putrefy. The young ones tafte like veal: the skin is used for shoes, and for comering the sides of

The Russians call this animal morskaia korowa, or sea cow; and kapustnik, or eater of herbs.

Manati of Guiana. - The head of this animal hangs downward; the feet are furnished with five toes; body almost to the tail of an uniform thickness; near its junction with that part grows fuddenly thin; tail flat, and in form of a spatula, thickest in the middle, growing thinner towards the edges.

Inhabits the rivers and fea of Guiana; it grows to the length of fixteen or eighteen feet; is covered with a dusky skin with a few hairs. Those measured by Dampier were ten or twelve feet long; their tail twenty inches in length, fourteen in breadth, four or five thick in the middle, two at the edges; the largest weighed twelve hundred pounds; but they arrive at far greater magnitude.

Oronoko Manati.—This is the species to which M. de Buffon has in his supplement given the name of Le petit Lamantia de Amerique, and fays it is found in the Oronoko, Oyapoc, and the rivers of Amazons. Father Gumilla had one taken in a distant lake, near the Oronoko, which was so large that twenty-seven men could not draw it out of the water; on cutting it open, he found two young ones which weighed twenty-five pounds a-

We suspect that the manati of the Amazons, &c. never wisit

the sea, but are perpetually resident in the fresh waters.

These animals abound in certain parts of the eastern coasts and rivers of South-America, about the bay of Honduras, some of the greater Antilles, the rivers of Oronoque, and the lakes formed by it; and lastly in that of the Amazons, and the Guallaga, the Pastaca, and most of the others which fall into that vast river; they are found even a thousand leagues from its mouth, and feem to be stopt from making even an higher advance, only by the great cataract, the Pongo of Borja. They fometimes live in the fea, and often near the mouth of fome river, into which they come once or twice in twenty-four hours, for the take of brouzing on the marine plants which grow within their reach; they altogether delight more in brackish or fweet water, than in the falt; and in shallow water near low land, and in places secure from surges, and where the tides run gently. It is faid that at times they frolic and leap to great heights out of the water. Their uses were very confiderable to the privateers or buccaniers in the time of Dampier. Their flesh and fat are white, very sweet and salubrious, and the tail of a young female was particularly esteemed. A suckling was held to be most delicious, and eaten roasted, as were great pieces cut out of the belly of the old animals.

The skir, cut out of the belly, for that of the back was too thick, was in great request for the purpose of fastening to the fides of canoes, and forming a place for the infertion of the oars. The thicker part of the skin, cut fresh into lengths of two or three feet, serves for whips, and become, when dried,

as tough as wood.

Besides these, an animal has been discovered on the coast of America to which the name of Sea Ape has been given; but it appears to have been feen in only one folitary instance, and therefore it appears unnecessary, except in a professed history of animals, to add any account of it.

length in with twelve preadth, largest greater WINGED QUADRUPEDS.

Bat.—This fingular animal is diftinguished from every other quadruped by being furnished with wings, and seems to possess a middle nature between four-footed animals and birds: it is allied to the one by the faculty of flying only, to the other both by its external and internal structure: in each respect it has the appearance of an imperfect animal. In walking, its feet seem to be entangled with its wings, and it drags its body on the ground with extreme aukwardness. Its motions in the air do not seem to be performed with ease: it raises itself from the ground with difficulty, and its flight is laboured and ill directed; from whence it has very significantly been called the Fhitter Mouse. There are several varieties of the bat kind, several of which are sound in different parts of the continent of America.—See Birds.

# BIRDS OF AMERICA.

the second of the second of the second of the second of

In the following account of the birds of America, nothing more is attempted than an enumeration of the species of the different genera found on that continent; the division and order of Mr. Pennant is followed, and descriptive characters of each genus, in general attended to. As it was impossible in a work of this kind to enter into a description of the different species of each genus, we hope the method adopted will prove more acceptable and advantageous than a mere catalogue of either popular or systematic names.

# DIV. I. LAND-FOWL.

# ORDER I. RAPACIOUS.

Bill, straight, hooked only at the end; edges cultrated, base covered with a thin skin.—Nostrils, differing in different species.—Tongue, large and sleshy.—Head, cheeks, chin, and often neck, either naked or covered only with down or short hairs; the neck retractile.—Claw, often hanging over the breast.—Legs and feet, covered with great scales; the first joint of the middle toe connected to that of the outmost by a strong membrane.—Claws, large, little hooked, and very blunt.—Insides of the wings covered with down.

#### GEN. 1. VULTURE.

Characters.—Bill, straight, blunt at the tip.—Head, featherless, covered behind with naked skin or soft down.—Neck, retractile.—Legs, covered with scales.—The first joint of the middle toe connected to the outermost by a strong membrane.

Of this genus there are five species in America, three of which are found in the United States, and the other two in South-America.

#### GEN. 2. FALCO.

Character,—Bill, hooked, furnished at its base with a strong membrane or cere,—Head and neck covered with feathers.—Legs and feet covered with scales. Middle toe connected with the outmost by a strong membrane.—Claws, long, much hooked, that of the outmost toe the least.—Female larger than the male.

This genus admits of four divisions, of which there are in America as follows: eagles, ten species; hawks, fifteen; falcons, thirteen; kites, two; of these some are peculiar to South-America, others to the North, and some common in both,

#### GEN. 3. STRIX.

Character.—Bill, hooked, without a cere.—Nestrils, oblong, —Eyes, very large and protuberant, surrounded by a circle of feathers.—Head, large, round, and full of feathers.—Eers, large and open.—Outmost toe versatile.

This genus contains the owls, which are ranged in two divisions, the cared and the earlest; of the former there are three species, and of the latter sourceen species known in America.

#### ORDER II. PIES.

#### GEN, 1. LANIUS.

This genus includes a class of birds that form the connecting link between the rapacious birds of the preceding order and the pies; they are called Shrieks, or Butcher birds; their bills are straight, hooked only at the ends.... Tongue jagged at the point.... Toes divided at the origin.... And tail cuneiform. Of this genus there are fourteen species known in America and the West-Indies.

#### GEN. 2. PISTTACUS.

This genus contains the whole race of parrots, parroquets, &c. Bill, hooked from the base: upper mandible moveable...

Nostrils, round, and placed in the base of the bill.--Tongue, broad and blunt at the end.--Head, large; crown flat.--Legs, short.---Toes, two backward and two forward. Of this there are nearly sifty species known in South-America, and we believe only one or two in North-America.

# GEN. 3. RAMPHOSTOS.

The character of this genus is... Bill, exceeding large, hollow, convex, ferrated outwards; both mandibles curved at the tip.... Noftrils, small and round, placed close to the head,...

trong ers. l with hookn the

Bill, fit clining is placed at vided at a middle j Oriolus twenty-fe ty-five, a

\* Of this throat, necl the lefter e breaft, belt orange; the tail black; the legs bla brown; the

Tongue, long, and feathered on the edges.—Feet in most of the species, scansory. It contains the Teucans and Matmots; of the former there are nine species, and of the latter only one; they are supposed to be peculiar to South-America.

#### GEN. 4. CROTOPHAGUS.

The characters of this genus are... Bill, compressed, greatly arched, half oval, thin, cultrated at the top.... Nosirils, round.... Toes, two backward and two forward.... Ten feathers in the tail.

The only bird in this genus is the Ani, of which there are only two species; it is, we believe, peculiar to America.

# GEN. 5. CORVUS.

Bill, strong, upper mandible a little convex, edges cultrated. — Nostrils, covered with bristles, reslected over them.—Tongue, divided at the end.—Toes, three forward and one backward, the middle joined to the outmost as far as the first joint. This genus includes the ravens, crows, rooks, jays and magpies, most of which occur in every climate. There is one species of the raven; four of the crow; four of the daw; fix of the jay; and four of the magpie. Found in America and the West-Indies.

# GEN. 6. CORACIAS.

Bill, fraight, bending a little towards the end, edges cultrated.-- Nostrils, narrow and naked.-- Toes, three forward, divided to their origin; one backward. This genus contains the Rollers, of which there are two species found in South-America.

#### GEN. 7. ORIOLUS.

Bill, straight, conic, very sharp-pointed, edges cultrated, inclining inwards, mandibles of equal length.—Nostrils, small, placed at the base of the bill, and partly covered.—Tongue, divided at the end.—Toes, three forward and one backward; the middle joined near the base to the outmost one behind. The Oriolus are in general inhabitants of America; there being twenty-seven species enumerated on that continent, out of forty-sive, all that are known.\*

Of this genus the Baltimore Oriole deserves particular notice; the head, throat, neck and upper part of the back of the male, is described to be black; the lesser egyerts of the wings orange; the greater black, tipt with white; the breast, belly, lower part of the back, and coverts of the tail, of a bright orange; the primaries dusky, edged with white; the two middle seathers of the tail black; the lower part of the same colour, the remaining part orange; and the less black. The head and back of the semale is orange, edged with pale brown; the coverts of the wings of the same colour, marked with a single bar

to the Entraction I this

#### SEN. 8. GRACULA.

Bill, convex, knife shaped, somewhat naked at the base.—I Tongue, entire, somewhat enlarged and sleshy, sharp at the end:

—Nostrils, small, near the base of the bill.—Toes, three for ward, one backward the middle connected at the base to the outmost.—Claws, hooked and sharp. Of the Gracle, which form this genus, there are about twelve species, none of which are found in Europe, and only four or five known in America.

# CIN. 9. TROCON.

This genus embraces a class of South-American birds, inhabiting Cayenne and Brasil, of which there is only three species. They have the bill short, thick and convex.—Nostrits, covered with thick bristles.—Toes, two backward and two forward.—Legs, feathered down to the toes—and the tail confisting of twelve feathers.

#### GEN. 10. BUCCO.

The Tamatia, or Barbets, that conflitute this genus, are like-wife chiefly South-American birds; on that part of the continent there are seven species found, but none to the North. The bill of this bird is strong, straight, bending a little towards the point; base, covered with strong brissles, pointing downwards.—Nostrils, hid in the feathers. Toes, two backward and two forward, divided to their origin.—Tail, confishing of ten weak feathers.

#### GEN. 11. CUCULUS.

Of the Cuckoo, which forms this class, there are five species found in North-America, and nine in the South. Characters of this genus are, bill, weak, a little bending.—Nostrils, bounded by a small rim.—Tongue, short and pointed.—Toes, two forward and two backward.—Tail, cuneated, confisting of ten fost feathers.

of white; the under fide of the body and coverts of the tail yellow; the tail dulky, edged with yellow. The length both of the male and female is seven inches. This bird suspends its nest to the horizontal sorks of the tulip and poplar trees, formed of the filaments of some tough plants, curiously woven, mixed with wool, and lined with hairs. It is of a pear shape, open at top, with a hole on the side through which the young discharge their excrements, and are fed. In some parts of North-America, this species, from its brilliant colours, is called the Fiery Hangnest. It is named the Baltimore bird from its colours, resembling those in the arms of the late Lord Baltimore, whose family were proprietors of Maryland.

gula and bon two poin whice and fpect of the bird Buff

finall, point lower outmo Buffo which King Leaft found

Of there Ameri King The j thered backw

#### ork. 12. Ficht.

The characters of this genus are—Bitt, straight, strong, angular, and cuneated at the end.—Nostriti, cover with bristles, and reflected down.—Torgat, very long, stender, cyfindric, bony, hard, jagged at the end, missie.—Toes, two forward and two backward.—Tots, confissing of ten hard, stiff, sharp-pointed feathers. This genus is formed of the Woodpeckers, which may be divided into three general classes, green, black, and variegated or spotted; of the green Woodpecker, eleven species have been found in America; of the black, six; and of the variegated twenty-one: besides two species of a small bird called Woodpecker Creepers, the Les Pic Grimpersnax of Bust. These latter might perhaps be with more propriety classed in the genus Yunx.

# GEN. 13. ALCEDO.

Bill, long, strong, straight, and sharp-pointed.—Nostrils, small, and hid in the feathers.—Tongue, short, broad, sharp-pointed Legs, short, three toes forward, one backward, three lower joints of the middle toe joined closely to those of the outmost. This genus includes the King Fishers, which M. Busson divides into three classes, the Great King Fisher, of which there are five species found in America; the Middle King Fisher, of which there are likewise five species; and the Least King Fisher of which we believe only one species has been found on the new continent.

# GEN. 14. GALBULA.

Of the Jacamara, which contitute this genus, we believe there are only three species known, and all found in South-America; they have been considered by many as a species of the King Fisher, and therefore classed by Linnaus Alcedo Galbula. The principal difference in character is in the legs being feathered before to the toes, and the soes being disposed, two backward and two forward.

# GEN. I. SITTA.

The characters of this genu are—Bill, straight, on he lower mandible a small angle.—Navils, small, covered with feathers reflected over them.—Fongue short, horny at the edge, and jagged.—Toes, three forward, ad one backward, the middle tree joined closely at the bese to bth the outmost.—Best toe as large the middle one. The chif birds which form this genus are the Nuthatches, of which here are five species found in America, two of which age comon in the United States.

# GEN. 46. TODUS.

Bill, thin, depressed, broad, base beset with bristles.—Nosrile, small.—Toes, three forward, one backward, connected like those of the King Fisher. This genus contains the Todies, of which there are eight or nine species known, all natives of the warm parts of America, or the West-India islands.

# GEN. 17. MEROPS.

The bill of this genus is quadrangular, a little incurvated, tharp pointed.—Noftrils, small, placed near the base.—Tongue, slender.—Toes, three forward and one backward, the three lower joints of the middle toe closely joined to those of the outmost. This genus contains the Bee Eater, of which five its species have been found in America.

#### GEN. 18. UPUPA

The character of this genus is...Bill, arched, long, flender, convex, somewhat blunt and compressed...Nosrils, minute, situated at the base of the bill....Tongue, obtuse, entire, triangular, and short....Toes, three forward and one backward, middle toe closely united at the base to the outmost. This genus contains the Hoopoes and the Promerces, but there are only two species of the latter found in America, and these in the southern parts.

# GEN. 19. CERTHIA.

Characters of this genus are—Bills, very stender, weak, and incurvated—Nostrils, small.—Torque, not so long as the bill, hard, and sharp at the point.—Toes, three forward and one backward, back toe large.—Claus, long and hooked. This genus contains the birds commoly called Creepers, of which there are twenty species known as the American continent.

#### GEN. 20. TIOCHILUS.

Bill, slender and week; in some straight, in others incurvated.—Nostrils, minute.—Tongue very long, formed of two conjoined cylindric tubes, missile—Toes, three forward, one backward.—Tail confists of ten fethers.

This genus comprehends the varous Humming Birds, or Honey Suckers, which form a numerous class, not less than fifty-fix species are found in the differen parts of the new continent.

# ORDER III. GALINACEOUS.

Heavy bodies, short wings, ver convex; strong, arched, short bills; the upper mandible shuing over the edges of the

M

froi

knownativ Noft: Tong Head long dible

charered fmall of fe are f in S

the

lower. The field delieste and of excellent nutriment; strong legs; toes joined at the base, as far as the first joint, by a strong membrane. Claws broad, formed for scratching up the ground. More than twelve feathers in the tail.

Granivorous, feminivorous, infectivorous, for t runners, of thort flight; often polygamous, very prolific, lay their eggs on the bare ground. Sonorous, querelous, and pugnacious.

Or, with bills flightly convex; granivorous, feminivorous, infectivorous; long legs, naked above the knees: the genus that connects the land and the water-fowl. Agreeing with the cloven-footed water-fowl in the length and nakedness of the legs, and the fewness of its eggs: disagreeing in place, food, and form of bill, and number of feathers in the tail.

#### GEN. S. PHASIANUS.

This genus includes the cock and the pheafants; the former are domesticated in all the settled parts of America; of the latter there are eight species known on the continent, all natives of South-America.

Characters of the pheasant are-Bill, convex, short and strong.--Nostriks, small.--Tail, bending downwards,

#### GEN. 2, MELAGRIS.

This genus contains the turkey, of which but one species is known, and that, though domesticated in most countries, is a netive of North-America.—Bill, convex, short and strong.—Nostrils, open, pointed at one end, lodged in a membrane.—Tongue, sloped on both sides toward the end and pointed.—Head and Neck, covered with a naked tuberose sich, with a long sleshy appendage hanging from the base of the upper mandible.—Tail, broad, consisting of eighteen feathers extensible.

#### GEN. 3. CRAK.

The curaffo forms this genus as well as the Penelope. The characters are---Bill, convex, strong and thick, the base covered with a cere often mounted with a large nob.---Nostrils small, lodged in the cere.---Head, sometimes adorned with a crest of feathers curling forwards.---Tail, large and straight. There are four species of this genus, and three of the penelope sound in South-America. The most effential difference in the two genuses is, that the Bill in those of the penelope is naked at the base.

ŲΠ

in

This genus includes three subdivisions: s. The grows and ptarmigans.—Bill, convex, strong and short; a naked scarlet skin above each eye.—Nofirils, small and hid in the feathers.—Tangue, pointed.—Legs, seathered to the toes. Of these there are seven species, found in the coldest parts of North-America.

the eyes.—The Nofirils are covered with a callous prominent rim; and the Legs naked, with the exception of two species. Of these there are eight species found in the temperate and

warm parts of America.

3. The tinamous, which are peculiar to South-America, and of which five species are known. These birds resemble the pheasants in their habits.—Bill, long and blunt at the tip.—Nostril, placed in the middle with a very wide gap.—Throat, sprinkled with seathers.—Tail, very short.—Hind Toe, curtailed and useless for running.

Tricate at man of Gen. 5. PROPHIA.

This genus includes two species of a bird called the trumpeter, one of which is found in Africs, and one in South-America; the latter is called the agmi or golden-breasted trumpeter, of which there is a beautiful specimen in the Leverisn Museum. Character of this genus—Bill, short, upper mandible a little convex.—Nostrils, oblong, sunk and pervious.—Tongue, cartilaginous, slat, tora or fringed at the end.—Legs, naked a little above the knees.—Toes, three before and one behind, with a round protuberance beneath the hind toe, which is at a small distance from the ground.

# ORDER IV. COLUMBINE.

Bill, weak, slender, straight at the base, with a soft protuberant substance, in which the nostrils are lodged.—Tongue, entire:

Legs, short and red.—Toes, divided to the origin. Swift and distant slight, walking pace. Plaintive note, or cooing, peculiar to the order. The male inslates or swells up its breast in courtship. Female lays but two eggs at a time. Male and semale sit alternately, and feed their young, ejecting the meat out of their stomachs into the mouths of the nestlings. Granivorous, seminivorous. The nest simple, in trees, or holes of rocks, or walls.

#### GEN. 1. COLUMBIA.

There is only one genus of this order; it is therefore needless to repeat the characters; it includes the pigeons and turtles, of which there are known in different parts of America twelve species.

J'han to was

# ORDER V. PASSERINE.

Bedies, from the first of a thrush to that of the golden-orested wren. The enliveners of the woods and fields; sprightly and much in motion; their nests very artificial; morogamous, baccivorous, granivorous, seminivorous, insectivorous; their usual pace hopping, of a few running. Short slyers, except on their migrations only. All have three toes before, one behind.

#### GRM. S. STURNUS

Bill, straight, depressed.—Nostrils, guarded above by a prominent rim.—Tongue, hand and cloven.—Toes, middle toe joined to the outraph as far as the first joint. The stares constitute this genus, of which six species only are found in America.

#### GEN. 2. TURDUS.

Bill, straight, obtusely corinated at top, bending a little at the point, and slightly notched near the end of the upper mandible.

Nostrils, oval and naked.—Tongue, slightly jagged at the end.

Toes, the middle toe joined to the outmost as far as the first joint.—Back toe, very large. This genus includes the thrushes and blackbirds, of which there are twenty-eight species known in America. To this genus we must also assign a race of birds chiefly found in South-America, called ANTERS, on account of their feeding on that insect; they are designated American and nightingale anters; of the former there are eight species known, besides varieties, of the latter only two. Latham considers the whole as different species of the thrush, and Gmelin is evidently of the same opinion, by ranging them in this genus.

#### GEN. 3. AMPELIS.

The character of this genus is—Bill, straight, a little convex above and bending towards the point; near the end of the upper mandible a small notch on each side.—Nastrile, hid in bristles.—Middle tee, closely connected at the base to the outmost. This genus comprehends the chatterers or cotingss, of which there are ten species known in America.

#### GEN. 4. LOXIA.

The principal characters of this genus are—Bill, conically bunched at the base of the front rounded towards the head, under mandible inflected in instantant margin.—Nostrils, placed in the base of the bill, minute and rounded.—Tongue, entire.

Akin Igue, oven

pent cies.

, and the tip.--hroat, tailed

impetnerica; ter, of afeum. little cartilaa little with a

rotubeentire: vift and peculiar a courtmale fit of their us, femecks, or

ncedless irtles, of twelve The birds in America of this genus are the großeaks, crofsbills, and bulkinches; of the two former there are about twenty species, and of the latter five, known upon the American continent,

## GEN. 5. EMBERIZA.

The characters of this genus which includes the buntings are —Bill, strong and conic, the sides of each mandible bending inwards; in the roof of the upper a hard knob, of use to break and comminute hard seeds. There are sixteen species of this bird known in America.

## GEN. 6. TANGARA.

The tangares which form this genus are almost all of them natives of America; there are only forty-fix species known, forty-three of which have been found on that continent. The characters are—Bill, conoid, a little inclining towards the point, upper mandible slightly ridged and notched at the end,

## GEN. 7. FRINGILLA.

This extensive and multifarious genus includes the finches, canaries, siskins, linnets and sparrows, all of which, the canaries excepted, are found in America, to the amount of near fixty species: the distinguishing character of this genus is the Bill, perfectly conic, slender towards the end, and very sharp pointed,

## GEN. 8. PHYTOTOMA.

There is only one species of this genus known, which is the rara of South-America. Its distinguishing characters are—Bill, conical, straight and serrated.—Nostrils, oval.—Tongue, short and blunt; it screams with a raucous interrupted voice, crops and tears up the tender plants, and makes most destructive visits to gardens.

## GEN. 9. MUSCICAPA.

The characters of this genus are—Bill, flatted at the base, almost triangular, notched at the end of the upper mandible, and beset with bristles.—Toes, divided as far as their origin. The fly-catchers constitute this genus, of which thirty-nine species are known in America.

## GEN. 10. ALAUDA.

Bill, short, slender, bending a little towards the end, sharp pointed.—Nostrils, covered with feathers and bristles.—Tongue, cloven at the end.—Toes, divided to the origin.—Claw, of the back toe very long. This genus is formed of the larks, of which there are, we believe, only fix species yet found in America.

## GEN. 11. MOTACILIA.

The characters of this genus are—Bill, awl shaped, straight, the mandibles nearly equal.—Nostrils, nearly oval.—Tongue, jagged and notched. The birds found in America which are included in this genus are, the wagtail two species; the warblers and wrens eighteen species; the fauvette or petty chaps sive species; the signeaters twenty-eight species; the pitpits sive species; the red start, yellow neck worm-eater, middle bill, Guiana red tail, &c. one or two species each.

## GEN. 12. PIPRA.

This genus includes the manakins, of which there are known about twenty-fix species, most of them natives of the hot parts of America. Characters—Bill, short, strong and hard, slightly incurvated.—Nostrils, naked.—Toes, the middle closely united with the outmost as far as the third joint.—Tail, short.

## GEN. 13. PARUS.

Characters—Bill, straight, a little compressed, strong, hard, and sharp-pointed.—Nostrils, round and covered with bristles reslected over them.—Tongue, as if cut off at the end, and terminated by three or four bristles.—Toes, divided to their origin; back toe very large and strong. This genus is formed of the titmice, a remarkable prolific race, laying from eighteen to twenty eggs at an hatch. There appears to be about sixteen species known in America.

## GEN. 14. HIRUNDO.

With the state of the state of

The characters of this genus are—Bill, short, broad at the base, small at the point, and a little bending.—Nostrils, open.—Tongue, short, broad and cloven.—Legs, short.—Tail, forked.—Wings, long. It includes the swallows, martins and swifts, of which there are eleven species known in America.

## GEN. 15. CAPRIMULGUS.

Bill, short, hooked at the end, and slightly notched near the point.—Nostrils, tubular and a little prominent.—Mouth, vastly wide; on the edges of the upper part, between the bill and eyes, seven stiff bristles.—Tongue, small, entire at the end.—Legs, short, feathered before as low as the toes.—Toes, joined by a strong membrane as far as the first joint.—Claw of the middle toe broad-edged and serrated.—Tail consists of ten feathers, not forked. This genus includes the goat suckers, forming sisteen species, sourteen of which, according to some, are natives of America, according to others, are nine only.

## ORDER VI. STRUTHIOUS.

Very great and heavy bodies. Wings imperfect; very fmall, and ulcles for flight, but affiltant in running. Flesh coarse and hard of digestion.

Struthious is a new coined word to express this order; for these birds could not be reduced to any of the Linuxan divisions.

This order contains but two genera, the dodo and the offrich, of the first none have been found in America.

## GRM. STRUTHIO.

The characters of this genus are—Bill, finall, floping, and a little depressed.—Wings, small, unfit for flight.—Legs, long, strong, and naked above the kness. It includes the offrich tribe, being four species, one only of which, the touyou, or grey casowary, is found in America; it is fix feet, high, and in its habits, &c. is in many respects similar to the offrich, to which, however, it is much inferior.

The first of the second section of the control of address of the second for the

# DIV. II. WATER-FOWL.

Add did official Comment

For the most part migratory, shifting from climate to climate, from place to place, in order to by their eggs, and bring up their young in sull security; the thinly inhabited north is their principal breeding place; returning at stated periods, and, in general, yielding to mankind delicious and wholesome nutriment. All the cloven-footed, or mere waders, lay their eggs on the ground; those with pinneted seet form large nests, either in the water or near it. From the first we must except the heron and the night-heron, which build in trees.

All the web-footed fowl either lay their eggs on the ground, or on the shelves of lofty cliss; and none perch, except the

convorant, thuge, and one or two species of ducks.

All the cloven-footed water fowl have long necks and long legs, naked above the knees, for the convenience of wading in water in fearch of their prey. Those that prey on fish have frong bills; those that search for minute insetts, or worms that

Of the web-footed fowl, the Flamingo, the Avosetta and Courser, partake of the nature of both the cloven and webfooted orders; having webbed feet, long legs, naked above the knees, and long necks. The other web-footed water-fowl being very much on the element, have thort legs, placed far behind, and long necks; and, when on land (by reason of the fituation of their legs) an aukward waddling gait.

The make of he cloven-footed water-fowl is light, both as

to ikin and bones; that of the web-footed firong,

## OKDER I. GLOVEN-FOOTED.

## GEN. 1. PLATELEA.

The bird which constitutes this genus is the Spoonbill, of which according to Linnaus and Briffon, there are three fpecies; but M. Buffon contends that there is only one, and that the other two are varieties; whether varieties or different species, two out of the three are found in South-America and the West-Indies.—The Bill is long, broad and thin, the end widening into a form like the bowl of a spoon, rather round at the end .- Noftrile, small, placed near the base .- Tongue, small and pointed. Feet, femipalmated,

## GEN. S. FALANIDEA.

The characters of this genus are-Bill, bending down at the point, with a horn or with a tuft of feathers erect near the bale of the bill. Noffrill, oval Tota, divided almost to their origin with a very small membrane between the bottoms of each. The bird which constitutes this genus is the screamer, of which there is only two species found in South-America. The horned foreiner has likewife on each wing two long spure the horn on its head is three or four inches long, and two or three lines in diameter at the bale : of the fours on the wings, which projest forward, and are the spophyles of the metacarpal bone, the land market

sifing from the anterior part of these extremities, the upper spur is largest, of a triangular form, two inches long, and nine lines broad at the base, somewhat curved, and terminating in a point: the lower spur is only four lines long, and of the same breadth at its origin.

## GEN. 3. MYCTERIA.

Of the Jabirou, which forms this genus, only one species is known; it is an inhabitant of South-America.—Bill, long and nigg, both mandibles bending upwards, the upper triangular.—Nostrils, small: according to Marcgrave, no tongue.—Toes, divided. The bird is as large as a swan, the neck thick, and the bill in general measures about thirteen inches.

## GEN. 4. CANCRONA.

Bill, broad, flat, with a keel along the middle, like a boat reverfed.—Nofirils, small, lodged in a furrow.—Toes, divided. The bird forming this genus is the Boatbill, a bird approaching by its manners the heron tribe. Linnæus mentions two species, but it appears there is only one and two varieties; it is a native of South-America.

## GEN. 5. ARDEA.

The characters of this genus are—Bill, stright, sharp, long, statish, with a surrow extending from the nostrils to the tip.—Nostrils, linear.—Tongue, sharp.—Feet, sour-toed. This genus contains, the herons, storks, cranes and bitterns: they are ranged in sive subdivisions; the crowned, whose bill is scarcely longer than the head; the cranes, whose head is bald; the storks, whose orbits are maked; the herons, whose mid loe is serrated inwards; and those which have the bill gaping in the middle. Of the storks there are two species found in America, and two of the crane: a sigure of one of which, the Hooping Crane, we have given.\* Of the herons

this is as tall as our largest cranes, but of a stronger and thicker make, its bill longer, its head bigger; its neck and tegs not so stender; all the plumage is white, except the great quills of the wings, which are black, and the head, which is brown; the crown is callous and covered with black hairs, straggling and ablicate, under which the reddish skie appears naked; a similar skin covera the talt of loose feathers in the tail is stat and pendant: the bill is several above, and indented at the edges near the tip; it is brown and six jackes long. Catesby has described this bird from an entire skin given him by an Indian, who told him that these birds frequent, is great numbers, the lower parts of the rivers near the sea in the beginning of spring, and return to the

Noftrils, linear, lodged in a furrow .--- Tongue, pointed and flender .---Toes, divided or very flightly connected; back toe very fmall, morning to the state of mining

mountains in fummer. " This fact," fays Catefby, " has been fince confirmed by a white, who informed me, that these cranes are very noisy, and are seen in the Savannas at the mouth of the Altamaha, a d other rivers near St. Augustine in Florida, and also in Carolina, but that they are never found further

Yet it is certain that they advance into the higher latitudes; for the same white cranes are found in Virginia, in Canada, and even in Hudson's bay, as Edwards remarks .- The specific character of the hooping crane, Ardes Americana, is, "Its top, its nape and its temples, are naked and papillous; its front, its nape, and its primary wing quills are black; its body is white; the extrame length is five feet fever, inches." We extract the following passage relating to these birds from Mr. Pennant's Arctic Zoology; "They make a remarkable hooping noise; this makes me imagine these to have been the birds, whose clamour Captain Phillip Amidas (the first Englishman who ever fet foot on North-America) lo graphically describes, on his landing on the isle of Wokokou, off the coast of North-Carolina 'When,' fays he, fuch a flock of cranes (the most past white) arose under us with such a cry, redoubled by many echoes, as if an army of men had shouted together." This was in the month of July, which proves, that in those early days this species bred in the then defert parts of the southern provinces, till driven away by population, as was the case with the common crane in England. which abounded in our undrained fens till cultivation forced them entirely to quit our kingdom." Vol. ii. pag. 442.

## GEN. B. TRINGA.

veral popular names, as the Turnstone, Knot, Lapwing, Purres Sandpapers. &c. They may almost all be classed under
the name Sandpaper, amounting in the whole to about eleven
species, Characters—Bill, straight, slender, about an inch and
a half long.—Nofirile, small.—Tangue, slender.—Toes, divided,
generally the two outmost connected at bottom by a small membrane,

## GEN, 9. CHARADRIUS,

Of the Plover, which conditions this genus, there are ten known species in America. Character. Bill, Araight, short as the head.—Nafrilo, linear; wante the back too,

## GRU. 10. HEMATRADS

A fingle species constitutes this general it is called the Cyster Catcher; common to the old and the continent. Its Bill is long, compressed, and the end cuneated. Nashris, treat, Tengue, scarce one-third of the length of the bill. Tous, only three, the middle one joined to the exterior by a strong membrane; by the help of the bill raises limpets from the rocks, and opens cysters, up which it feeds.

## GEN. 11. PARRA.

The Jacana's constitute this genus, of which ten species are found in various parts of South-America, chiefly in Brasil.—
The Bill is stender, sharp-pointed, base carunculated.—Nestrils, short, subovated, placed in the middle of the bill.—Wings, armed on the front joint with a sharp short spur.—Taes, long, sour on each soot, armed with very long and short sharp-pointed claws, from which circumstance is has by some been called the Susgeon,

## GEN. 12. RALLUS.

Bill, flender, a little compressed and slightly incurvated.—
Nofirils, small.—Tongue, rough at the end.—Body, much compressed.—Tail, very short. Of the rails, which form this gemus, there are seven species found on the new continent.

## CEN. 13. PULICA.

The Gallinule or Water-hen forms this genus, of which seven species are found in different parts of the new continent.—
The Bill of this bird is thick at the base sloping to the point; the upper mandible reaching far up the forehead, and not carneous.—Body, compressed.—Wings, short and concave.—Tess.

## ORDER II. WITH PINNATED FEET.

This order contains only the Phalarope, the Coot, and the Glebe,

The Coor. This bird is found in America as well as in Europe; it frequents ponds and lakes, and may be confidered as the beginning of the extensive tribe of true acquatic birds, as it is almost constantly on the water.—Its Bill is short, strong, thick at the base, sloping to the end, the base of the upper mandible rising far up the forehead, both mandibles of equal length.—Nostrile, inclining to oval, narrow and short.—Body compressed.—Wisgs, short,—Tail short,—Tees, long, surnished with broad scalloped membranes. The coot is classed by Linnaus in the fulica of the preceding order, but the scalloped membranes of its sest cortainly removes it from that genus, however it may agree in other respects.

The GLEBE. The Fill of this bird is strong, stender and sharp-pointed.—Nostrils, linear.—Tongue, slightly cloven at the and.—Body, depressed.—Feathers, thick-set, compast, very smooth and glossy.—No tail.—Wings, short.—Legs, placed very far behind, very thin, or much compressed, doubly serrated behind.—Toes, surnished on each side with a broad plain membrane. Linnæus has classed these birds with the web-sooted, by the name of Colymbri; but Brisson has separated them, and from the make of their feet, they could not with propriety be classed with them. The Glebes are divided into two classes, the greater and the chesnut or castageneux, of each of which there are three species on the new continent.

## ORDER III. WEB-FOOTED.

## GEN. 1. RECUBVIROSTRA.

This genus contains the Avosets, of which there are but two species, one of which is found in America. The legs of the avoset, like the slamingo, contrary to most of the web-footed birds, are very long; it has likewise another singular character, viz, the inversion of its bill, which is bent into the

are of a circle; the substance of the bill is soft and almost membranous at its tip.—Head, neck, and upper part of the bedy, of a pale buff colour; the rest of the lower part of the body, white.—Back and primaries black; lesser coverts white, greater black; beneath which is a long transverse bar of white.—Legs, dusky colour.—Feet, semipalmated, the webs bordering on the sides of the toes for a considerable way. It is a native of North-America, and Mr. Pennant imagines they are sometimes sound entirely white.

## GIN. 2. PHOENICOPTERUS.

This genus includes but one species, the Flammant or Flamingo,—Bill, thick, large, bending in the middle, forming a sharp sngle, the higher part of the upper part carinated, the lower compressed; the edges of the upper mandible sharply denticulated, of the lower transversely fulcated.—Nostrils, covered above with a thin plate, pervious, linearly longitudinal.—Tongue, cartilaginous and pointed at the end; the middle muscular, base glandular, on the upper part aculated,—Neek, very long.—Head, large.—Legs and thighs of a great length,—Feet, webbed, the cabs extending as far as the claws, but are deeply semilunated.—Back toe, very small. When this bird has attained its full growth, it is not heavier than a wild duck, and is yet sive feet high.\*

## GEN. 3. DIOMEDA

Characters—Bill, strong, bending in the middle, and hooked at the end of the upper mandible; that of the lower mandible abrupt, and the lower part inclining downwards.—Nostrils, opening forward, and covered with a large convex guard.—No back toe. The birds in this genus are the Albatrosses. These birds, which in the bulk of their bodies are superior to all the known species of water-fowl, inhabit the shores, islands and seas within the tropics, along the coast of Child and the extremities of America, but it never has been seen the seas of the nerthern hemisphere.

#### GEN. 4. ALCA

The Auks form this genus, of which there are four species found about the new continent. Characters—Bill, thick, strong, convex, and compressed.—Nostrils, linear, placed near the edge of the mandible.—Tongue, almost as long as the bill.—No.back toc.—Black on the back and white beneath.

## GEN. 5. COLYMBUS.

The web-footed birds in this genus, that can be confidered as belonging to America, are only one species of the Guillemot and two of the Diver. The characters of the former are—Bill, slender, strong and pointed, upper mandible slightly bending towards the end; base covered with short fost feathers.—Nostrils, lodged in a hollow near the base.—Tongue, stender, almost the length of the bill.—No back toe.—Colour, in general, black on the back, and white on the breast. Its weight is about twenty ounces.

The bill of the diver is strong and pointed, upper mandible the longest, edges of each bending inwards.—Nostrils, linear, upper part divided by a small cutaneous appendage.—Tongue, long and pointed, serrated at each side near the base.—Legs, very thin and slat.—Toes, the exterior the longest, back toe small, joined to the interior by a small membrane.—Tail, short. This bird is about the size of a goose.

## GEN. 6. RYNCHOPS.

This genus contains only a fingle species and a variety, both natives of North-America: it is sometimes called the Skimmer, from the manner in which it collects its food on the water with the lower mandible; by others it is called the Sheurill and Cutwater.—The bill of this bird is greatly compressed, lower mandible much larger than the upper.—Nostrils, linear and pervious.—A small back toe.—Tail, a little forked. In its habits and figure it resembles the gulls.

## GEN. 7. STERNA.

This genus contains the Terns and the Nodies: of the former there are seven species, all of which are found about the seas of America; of the latter we know of but one common to the same situations; indeed it is nothing but a species of the tern rather smaller. Characters—Dill, short, slender and pointed.—Nostrils, linear.—Tongue, slender and sharp.—Wings, very long.—A small back tor.—Tail, forked.

## GEN. 8. LARUS.

The characters of this genus, which comprehends the Gulls and Mews, names which only distinguish this family into the greater and lesser gulls, are...Bill, strong, bending down at the point, on the under part of the lower mandible an angular prominency....Nostrils, oblong and narrow, placed in the middle of the bill....Tongue, a little cloven....Body, light....Wings, long....Legs, small, naked above the knees....Back toe, small....

Brisson has eighteen species of this genue, and we are inclined to think them as common to the shores of America as Europe.

## GEH. 9. PROCELLARIA.

The Peterel, which forms this genus, inhabits all parts of the ocean; it braves and sports with the most furious storms, and some of the species seem to enjoy those tremendous scenes which sink the courage of the bravest men: they are found in great plenty in the seas near the cape of Good Hope and along the coasts of America, in the same parallels. The characters of this genus are--Bill, straight, except at the end, which is hooked.--Nostrils, cylindric and tubular.--Legs, naked above the knees.--No back toe, but a sharp spur pointing downwards instead.

#### GEN. 10. MERGUS.

The Merganfer is the species that forms this genus; it is found in the north of Europe and north of America.—Its bill is slender, a little depressed, furnished at the end with a crooked nail; edges of each mandible very sharply serrated.—Nostrils, near the middle of the mandible small and subovated.—Tongue, slender.—Fett, the exterior toe longer than the middle. The largest birds of this species are between a duck and goose, the smaller about the size of the duck. There are in the whole about seven species known.

#### GER. 11. ANAS.

This genus includes the whole of the duck tribe, under the name of Swan, Goofe, Duck, Widgeon, Teal, &c. of which near feventy species are known in America; of the species of the swan only one, of the goose ten, the rest ducks, &c. The distinguishing characters of this genus are -- Bill, strong, broad, sat or depressed, and commonly surnished at the end with a nail, edges marked with sharp lamislate. -- Nostrils, small, oval, and Tongue, broad, edges near the base fringed. --- Feet, middle toe the largest.

## GEN. 12. PELICANUS.

The birds in this genus which may be faid to belong to America, or found in its feas, are the Pelican, of which there are two species and four varieties belonging to that continent: the Boobies, fix species; the Frigat or Man of War bird; and, according to the opinion of Buffon, the Gernet. The characters of the pelican are-Bill, long and straight, the end hooked or sloping.--Nostrils; either entirely wanting, or small and placed in a surrow which runs along the sides of the bill.--

GEN. 13. PHAETON.

This genus is formed of the tropic birds; a class of the winged tribe, whose favourite haunts are the sequestered islands of India and America. There are three species known.—The bill is compressed slightly sloping down, point sharp, under mandible angular.—Nostrils, pervious.—Toes, all four webbed.—Tail, cuneiform, two middle seathers tapering and extending to a wast length beyond the others.

GEN. 14. PLOTUS.

Characters—Bill, long, straight, sharp-pointed.—Neck, of a great length.—Face and gullet, covered with feathers.—Toes, all four webbed. The darter or anhings is the only bird in this genus. We believe there are three species, besides varieties, in the southern part of the new continent.

GEN. 15

The penguin may be confidered as the link between birds and fifthes.—Its bill is Brong and Braight, bending only a little towards the point. Tongue, covered with strong, sharp spines, pointing backwards.—Wings, very small, pendulous, asseless for sight, covered with mere flat shars.—Body, covered with thick, short feathers, with broad shafts placed as compacily as scales.—Legs, short and thick, placed entirely behind.—Toes, four standing forward, the interior loose, the rest webbed.—Tail, consisting of only broad shafts. There are two species found on the coasts of South-America.

We noticed at the beginning of this account of Atherican birds, that in the division and orders we had followed Mr. Pennine—the limited genera are as classed by Linnaus, except where otherwise mentioned.

Market and Sand of the sand

MPERFECT as the lift of American quadrupeds and birds must be confessed to be, those of the reptiles must be much more to; few have been the characters who, with leifure and abilities, have possessed the inclination for these researches, and those who have attempted any thing of this kind, have contented themselves with very partial advances, or have found such difficulties as have prevented any great progres; they have, however, done sufficient, we trust, to stimulate others to a farther pursuit, and we may reasonably hope that a few years will open to us a more particular acquaintance with the woods, the marshes, the mountains, and waters of the new continent. The following lists in a more particular manner refer to North-America, though perhaps the greater part are found all over the continent.

#### LIZARD

Alligator,*	119		Lacerta, ci	ocodylus,
Green-lizar	d,+	100		hand it

This formidable animal has a vafe mouth, furnished with sharp teeth; from the back to the end of the tail serrated; skin tough and brown, and covered an in tides with tubercles. Grows to the length of from eighteen to twenty-

the dreadful species is sound in the warmer parts of most Accorded, and most numerous as we approach the south, and the more steres and ravenous; yet in Carolina it never devours the human species, but on the contrary, shuns mankind, yet will kill dogs as they swim in the rivers, and loop which seed in the swamps. It is often seen floating like a log of wood on the surface of the water, and is mistaken for such by dogs, and other animals, which it sees and draws under water to devour at its leifure. Like the wolf when present by long hunger, it will swallow mud, and even stones, and pieces of wood. They often get into the weers in pursuit of sish, and do much mischief by breaking them to pieces.

They are torpid during the winter in Caroline, and retire into their dens, which they form by burrowing far under ground; it makes the entrance under water, and works upwards. In fpring it quits its retreat, and reforts to the rivers, which it (wims up and down, and chiefly feeks its prey near the mouth, where the water is brackish.

It roars and makes a dreadful noise at its first leaving its den, and against bed weather. It lays a vast number of eggs in the sand, near the banks of lakes and rivers, and leaves them to be hatched by the sun: multitudes are del'soyed as soon as batched, either by their own species, or by fish of prey. In South-America the carrion vulture is the instrument of Providence to destroy multitudes, by that means preventing the country from being rendered uninhabitable. Bartram, in his account of his travels, has given a very particular account of these creatures.

+ This little creature is totally green; very stender; tail near double the leagth of the body, and its whole length about five inches.

It inhabits Caroline, is domestic, familiar, and harmless; sports on tables and windows, and amuses by its agility in catching sites; gazes at mankind without concern; swells its throat into a protuberance, which it discharges at

wiff. Cold affects the colours; in that uncertain climate, when there is a quick transition, in the lame day, from hot to cold; it clianges, initially from the most brilliant green to a dull brown. It is fonetimes tempted by a gleam of fun to quit its retreat, but by the sudden change of weather, is so enscelled, as not to be able to return to its hole, and will die with cold.

This reptile has a brown broad head; yellowish brown back, marked with broad transverse dentated bars of black; scales rough; belly cinercous; the jaws surnished with small sharp teeth; four sings in the appear jaw, incurvated, large, and pointed; the instruments of death; as the hafe of each a round oriside, opening into a hellow, that near the end of the tooth appears again in form of a small channel; these teeth may be erected or compressed; wen in the action of biting, they force out of a gland near their roots the family juice; this is received into the round oriside of the teeth; conveyed through the tube into the channel, and thence with warring direction into the wound.

The trit is furnished with a rattle, confiding of joints lookly connected; the number uncertain, depending, as is presented, on the age of the animal, it receiving with every year a new joint. Authors mention forey and feventy.

Rattlefnakes grow to the length of eight feet, and, according to a newspeper account, to fourteen.

They fwirm in the lefs inhabited parts of North-America; now almost extinpated in the populous; none found farther north than the mountains near lake Champlain; but in the fouth infest South-America, even as far as Brasil, Love woods and lofty hills, especially where the strata are rocky or chalky; the pass near Niagara abounds with them. Being flow of motion, they fre-

## COLUBER.

Familiar-Inske, Coluber, aftivus,
Porracious do. — micterizans.
Croffed do. — fimus,
Water-viper, — punctatus,

quent the fides of rills, to make peep of frogs, or of facts animals that offers to quench their think; are generally found during famous in pairs, in winter, collect in multitudes and retire beneath the ground, beyond the reach of frost: tempted be the sub of a foreign day, the colon observed to creep out weak at guid er ion has fiven a piece cound covered with them, and killed with a rod between fixty and seventy, till overpowered with the fitents, he was obliged to review.

They couple in August, and then are most dangerous; are vivipiables, and bring forth in June, about twelve young one; between that and September they acquire the length of a foot.

Providence has given mankind a fecurity and the bite of these dreadful reptiles, for it does not often fail warning the passenger of its vicinity, by the rattle of its will. In fine weather that monition is always given, in wet weather selden, which gives the indieno a dread of travelling armids the woods in rainy testons.

It moves along with the head on the ground; but if alarmed, is dings its body into a circle, coiling itself with the head in the centre erect, and with the eyes daming in a most turrific manner. Happily it may be eafily avoided; it is flow in purfait, and has not she power of fpringing at its affailant, like many of the innocent tribe.

It is difficult to speak of its fascinating powers; authors of credit describe the effects. Birds have been fees to drop into its mouth, squirrels descend from their trees, and leverets run into its jaws. Terror and sussement seem is less hold on these little animals; they make violent efforts to get away, fill keeping their eyes fixed on those of the snake; at length, wearied with their sevenance, and frightness our of all capacity of knowing the course they come to take, become at length the prey of the expessing devenue, probably a deal, last convulsing motion.

Ratiofinakes are apt to frequent houses; every domestic animal on their approach, as if by instinct, takes alarm; dogs bristle, and the positry crest the feathers; hogs only attack them, seeding on them with impunity. The Indians will also eat their fieth.

The bite is of the most venomous kind; if the wound is on a vein or artery, dead, ensure as rapid as thought, if in a fieldy part there are hopes of respectly; if most efficacious, if done in time, is either the hursing or cutting out the part affected. The lymptoms are, sanfes, convalious, faitting of blood and bloody foods; loss of the use of limbs; swellings, and disclosured skin; sever, selivis; and if the cure takes any length of time, disturbed rest, and dreams of the most borrible hinds.

This faske has a long that, frield neck; fangs in the upper jaw; colour of the head and buck thathy; belly faloisted with black and yellow. At the head of the tail a fault largey feldence.

BOA

Hog-note inake, Boe constortrix, Greenish variegated d canina, Large spotted do. confiritor. Murine do. murina. Ash-coloured do. scytale. Yellow spotted do. cenchria, Dulky white do. enydris, Pale-coloured do. hortulana.

\* This is an immense animal; it often exceeds thirty-fix feet in length; the body is very thick, of a dusky white colour, and its back is interspersed with twenty-four large pale irregular spots; the tail is of a darker colour, and the fides are beautifully variegated with pale flots; belides, the whole body is intersperied with small brown spots. The head is covered with small feale so broad lamine betwint the eyes, but has a black belt behind the eyes. It wants the large dog-fange, and of course its bite is not poissons. The tongue is fieldy and forked. Above the ere, on each fide the head riftes his scales of this sergent are all very small roundish and smooth. The tail does not exceed one eighth of the whole length of the animal. The Indians, who adore this monftrous animal, use the skin for clothes, on account of its smoothers and beauty. There are several of these skins of the above dimensions preserved and to be seen in the different museums of Europe, particularly in the library and botanic garden of Upfal in Sweden, which has of late been greatly enriched by Count Grillinberg. The field of this ferpent is est by the Indians and the negroes. Pifo, diargrance and Ken bfer, give the following account of its methed of living and catching its prey. It frequents caves and thick forests, where it conceals itself, and suddenly darts out upon strangers, wild beasts &co. When it chooses a tree for its watching-place, it supports itself by twisting its tail round the trunk or a branch, and darts down upon sheep, gosts, tigers, or any animal that comes within its reach. When it lays hold of animals, especially any of the larger kinds, it twifts itfelf feveral times round their body, and by the vall force of its circular muscles bruises and breaks all their bones; after the bones are broke, it licks the fkin of the animal all over, beforearing it with a glutinous kind of faliva. This operation is intended to facilitate deglutition, and is a preparation for swallowing the whole animal. If it be a stag, or any horned animal, it begins to swallow the feet first, and gradually sucks in the body, and hat of all the head; when the horas happen to be large, this ferpent has been observed to go about for a long time with the horns of a flag flicking out from its mouth ! as the animal digefts, the horns putrefy and fall off. After this serpent has fwallowed a ftag or a tiger, it is unable for fome days to move; the hunters, who are well acquainted with this circumstance, always take this opportunity of destroying it. When irritated it makes a loud histing noise. It is fuid to cover itself over with leaves in such places as sage or other animals, frequent, in order to conceal itself from their fight, and that it may the more easily lay hold of them.

## TWO-HEADED SNAKE.

This has in general been confidered as a montrous production; but Mr. Morfe fays, he is disposed to believe that it is a distinct species; he observes that he has seen one, and received accounts of three others, found in different parts of the United States: one of these was about eight inches long, and both heads, as to every outward appearance, were equally perfect, and branching out from the neck at an acute angle.

HE WELL I'M

ARTWER

HIS MOST CHRISTIAN MAJESTY

AND THE

THIRTEEN UNITED STATES OF AMERICA.

TREATY OF AMITY AND COMMERCE.

LOUIS, by the Grace of God, King of France and Navarre, to all who shall see these presents, greeting:

HE Congress of the Thirteen United States of North-America having, by their Plenipotentiaries refiding at Paris, notified their defire to establish with us and our States a good understanding and perfect correspondence, and having for that purpole propoled to conclude with us a Treaty of Amity and Commerce: We having thought it our duty to give to the faid States a sensible proof of our affection, determining us to accept of their proposals: for these causes, and other good confiderations us thereunto moving, we, repoling entire confidence in the abilities and experience, seal and fidelity for our fervice, of our dear and beloved Conrad Alexander Gerard, royal syndic of the city of Strasburg, and secretary of our council of state, have nominated, appointed, and commillioned, and by these presents, figned with our hand, do nominate, appoint and commission him our plenipotentiary, giving him power and special command for us and in our name, to agree upon, conclude and fign with the plenipotentiaries of the United States, equally furnished in due form with full powers, such Treaty, Convention, and Articles of Commerce and Navigation, as he shall think proper; willing that he all with the same authority as we might or could all. if we were personally present, and even as though he had more special command than what is herein contained; promiling in good faith, and on the word of a king, to agree to confirm, and effablish for ever, and to accomplish and execute punctually, all that our faid dear and beloved Conrad Alexander Gerard shall stipulate and sign, by virtue of the present power, without contravening it in any manner, or suffering it to be contravened for any cause, or under any pretext whatfoever; and also to ratify the same in due form, and cause our ratissication to be delivered and exchanged in the time that shall be agreed on. For such is our pleasure. In testimony whereof we have hereunto set our seal. Done at Verfailles this thirtieth day of January, in the year of our Lord one thousand seven hundred and seventy-eight, and the fourth year of our reign.

### TREATY

(L. S.)

(Underneath)

The Most Christian King, and the Thirteen United States of North-America, to wit, New-Hampshire, Massachusett'sbey, Rhode-Island, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina and Georgia, willing to fix in an equitable and permanent manner, the rules which ought to be followed relative to the correspondence and commerce which the two parties defire to establish between their respective countries, states and subjects; his Most Christian Majesty and the said United States have judged, that the faid end could not be better obtained than by taking for the basis of their agreement the most perfect equality and reciprocity, and by carefully avoiding all those burthensome preferences which are usually sources of debate, embarrallment and discontent; by leaving also each party at liberty to make respecting navigation and commerce, those interior regulations which it shall find most convenient to itself, and by founding the advantage of commerce folely upon reciprocal utility, and the just rules of free intercourse; reserving withal to each party the liberty of admitting, at its pleasure, other nations to a participation of the same advantages. It is in the spirit of this intention, and to fulfil these views, that his

could ect, gh he had ned; proagree to, and exected Conradue of the er, or fufany preform, and ged in the flure. In

IS.

ear of our

t, and the

nited States Tachulett'sfley, Pennna, Southle and pered relative wo parties ries, Rates aid United better obat the most voiding all rces of deeach party erce, those nt to itself. upon recireferving ts pleasure, It is in s, that his

faid Majesty, having named and appointed for his plenipotentiary Conrad Alexander Gerard, royal syndic of the city of Strasburg, secretary of his majesty's essentil of state; and the United States, on their part, having fully empowered Benjamin Franklin, deputy from the State of Pennsylvania to the General Congress, and president to the convention of the State; Silas Desne, late deputy from the State of Connecticut to the said Congress; and Arthur Lee, confellor at law; the said respective planipotentiaries, after exchanging their powers, and after mature deliberation, have concluded and agreed upon the following articles:

Article I. There shall be a firm, inviolable and universal peace, and a true and sincere friendship, between the Most Christian King, his heirs and successors, and the United States of America, and the subjects of the Most Christian King and of the said States, and between the countries, islands, cities and towns, stuate under the jurisdiction of the Most Christian King and of the said United States, and the people and inhabitants of every degree, without exception of persons or places, and the terms herein after mentioned, shall be perpetual between the Most Christian King, his heirs and successors, and its faid United States.

Art. II. The Most Christian King and the United States engage mutually not to grant any particular favour to other nations, in respect of commerce and navigation, which shall not immediately become common to the other party, who shall enjoy the same favour freely, if the concession was freely made, or on allowing the same compensation, if the concession was conditional.

Art. III. The subjects of the Most Christian King shall pay in the ports, havens, reads, countries, islands, cities or towns of the United States, or any of them, to other or greater duties or imposts, of what nature soever they may be, or by what name soever called, than those which the nations most favoured are or shall be obliged to pay; and they shall enjoy all the rights, liberties, privileges, summittee and exemptions in trade, navigation and commerce, whether in passing from one port in the said States to another, or in going to and from the same, from and to any part of the world, which the said nations do or shall enjoy.

Art. IV. The subjects, people and inhabitants of the said United States, and each of them, shall not pay in the ports,

havene, roads, islands, cities and places under the demination of his Most Christian Majesty in Europe, any other or greater duties or imposts, of what nature soever they may be, or by what name soever called, than those which the most favoured nations are or shall be obliged to pay; and they shall enjoy all the rights, liberties, privileges, immunities and exemptions in trade, navigation and commerce, whether in passing from one part in the said dominions in Europe to another, or in going to and from the same, from and to any part of the world, which the said nations do or shall enjoy.

Art. V. in the above exemption is particularly comprised the imposition of one hundred sous per ton, established in France on foreign ships unless when the ships of the United States shall load with the merchandise of France for another port of the said dominions; in which case the ships shall pay the duty above mentioned, so long as other nations the most savoured shall be obliged to pay it; but it is understood, that the said United States, or any of them, are at liberty, when they shall judge it proper, to establish a duty equivalent in the same

Art. VI. The Most Christian King shall endeavour, by all the means in his power, to protect and defend all vessels and the effects belonging to the subjects, people or inhabitants, of the faid United States, or any of them, being in his ports, havens or roads, or on the feas near his countries, iflands, cities or towns; and to recover and restore to the right owners, their agents or attornies, all fuch vessels and effects which shall be taken within his jurisdiction; and the ships of war of his Most Christian Majesty, or any convoy sailing under his authority, shall, upon all occasions, take under their protection all vessels belonging to the subjects, people or inhabitants, of the faid United States, or any of them, and holding the fame course, or going the same way, and shall defend such vessels as long as they hold the same course, or go the same way, against all attacks, force or violence, in the same manner as they ought to protect and defend the veffels belonging to the subjects of the Most Christian King.

Art. Will In like manner the faid United States, and their ships of war failing under their authority, shall protest and defeat, conformably to the tenor of the preceding article, all the vesses and essents belonging to the subjects of the Most Christian King, and use all their endeavours to recover, and cause to be restored, the said vessels and essets that shall

have been taken within the jurisdiction of the faid United States. or any of them.

Art. VIII. The Most Christian King will employ his good offices and interpolitions with the King or Emperor of Morocco or Fez; the regencies of Algiers, Tunis and Tripoly, or with any of them; and also with every other prince, flate or. power, of the coast of Barbary in Africa, and the subjects of the faid king, emperor, states and powers, and each of them, in order to provide as fully and efficaciously as possible for the benefit, conveniency and fafety of the faid United States, and each of them, their subjects, people and inhabitants, and their veffels and effects, against all violence, insults, attacks or depredations, on the part of the faid princes and states of Barbary, or their subjects.

Art. IX. The subjects, inhabitants, merchants, commanders of thips, matters and mariners of the states, provinces and dominions of each party respectively, shall abstain and forbear to fifth in all places possessed, or which shall be possessed by the other party; the Most Christian King's subjects shall not fish in the havens, bays, creeks, roads, coafts or places, which the faid United States hold, or shall hereafter hold; and in like manner the subjects, people and inhabitants of the United States shall not fish in the havens, bays, creeks, roads, coasts or places, which the most Christian King possesses, or shall hereafter posfelt; and if any ship or vessel shall be found fishing contrary to the tenor of this treaty, the faid ship or vessel, with its lid ing, (proof being made thereof) shall be confiscated: it is however understood, that the exclusion stipulated in the present article shall take place only so long, and so far, as the Most Christian King, or the United States, shall not in this respect have granted an exemption to some other nation.

Art, X. The United States, their citizens and inhabitants, shall never disturb the subjects of the Most Christian King in the enjoyment and exercise of the right of fishing on the banks of Newfoundland, nor in the indefinite and exclusive right which belongs to them on that part of the coast of that island which is designated by the treaty of Utrecht, nor in the right relative to all and each of the ifles which belong to his Most Christian Majesty, the whole conformable to the true sense of

the treaties of Utrecht and Paris.

Art. XI. The subjects and inhabitants of the said United States, or any of them, shall not be reputed aubains in France, and consequently shall be exempted from the droit d'aubaine, or

aprifed the in France ited States er port of the duty A favoured hat the faid when they in the same

Art. XII. The merchant thips of either of the parties, which shall be making into a port belonging to the enemy of the other ally, and concerning whose voyage and the species of goods on board her there shall be just grounds of suspicion, shall be obliged to exhibit, as well upon the high seas as in the ports and havens, not only her passports, but likewise certificates, expressly shewing that her goods are not of the number of those

which have been prohibited as contraband.

Art. XIII. If, by exhibiting of the above faid certificates, the other party discover there are any of those forts of goods which are prohibited and declared contraband, and configned for a port under the obedience of his enemy, it shall not be lawful to break up the hatches of such ship, or to open any cheft, coffers, packs, casks, or any other vessel found therein, or to remove the smallest parcel of her goods, whether such ship belongs to the subjects of France, or the inhabitants of the said United States, unless the lading be brought on shore, in the presence of the ossers of the court of admiralty, and an inventory thereof made; but there shall be no allowance to sell, exchange, or alienate the same in any manner, until that after sue and lawful process shall have been had against such prohi-

bited goods, and the court of admiralty shall, by a sentence pronavéby telnounced, have confiscated the same, saving always as well the is moves ship itself, as any other goods found therein, which by this them shall treaty are to be esteemed free; neither may they be detained on tates, refid pretence of their being as it were infected by the prohibited n, ab intesgoods, much less shall they be conficated as lawful prize. But ralization. if not the whole cargo, but only part thereof shall confist of fled or improhibited or contraband goods, and the commander of the lhip provinces, shall be ready and willing to deliver them to the captor who has discovered them; in such case, the captor having received those goods, shall forthwith discharge the ship, and not hinder her by any means, freely to profecute the voyage on which she was bound. But in case the contraband merchandises cannot be all received on board the vellel of the captor, then the captor may, notwithstanding the offer of delivering him the contraband goods, carry the vellel into the nearest port, agreeable to what is above directed.

Art. XIV. On the contrary, it is agreed, that whatever shall be found to be laden by the subjects and inhabitants of either party, or see thip belonging to the enemies of the other, or to their subjects, the whole, although it be not of the fort of prohibited goods, may be conficated in the same manner as if it belonged to the enemy, except such goods and morchandise as were put on board such ship before the declaration of war. or even after such declaration, if so be it were done without knowledge of fuch declaration; so that the goods of the subjects and people of either party, whether they be of the nature of fuch as are prohibited or otherwife, which, as is aforefaid, were put on board any ship belonging to an enemy before the war, or after the declaration of the same, without the knowledge of it, shall no ways be liable to confifcation; but shall well and truly be restored without delay to the proprietors demanding the same; but so as that if the said merchandises be contraband, it shall not be any ways lawful to carry them afterwards to any port belonging to the enemy. The two contracting parties agree, that the term of two months being passed after the declaration of war, their respective subjects, from whatever part of the world they come, shall not plead the ignorance mentioned in this article.

Art. XV. And that more effectual care may be taken for the security of the subjects and inhabitants of both parties, that they fuffer no injury by the men of war or privateers of the other party, all the commanders of the ships of his Most Christian Majesty and of the said United States, and all their subjects

r fuch by n the duty kind; favid as long es, or any shall enjoy, an entire ontained in ed, that its y be made remain in their part, vs. relative rties, which

Art. XVI. All thips and merchandife, of what nature foever, which shall be rescued out of the hands of any pirates or robbers on the high seas, shall be brought into some port of either state, and shall be delivered to the custody of the officers of that part, in order to be restored entire to the true proprietor, as soon as due and sufficient proof shall be made concerning the

property thereof.

Art. XVII. It shall be lawful for the ships of war of either party, and privateers, freely to carry whitherfoever they pleafe the ships and goods taken from their enemics, without being obliged to pay any duty to the officers of the admiralty, or any other judges; nor shall such prizes be arrested or seized when they come and enter the port of each party; nor shall the fearchers or other officers of those places fearch the same, or make examination concerning the lawfulness of such prizes; but they may hoist fail at any time, and depart, and carry their prizes to the places expressed in their commissions, which the commanders of fuch ships of war shall be obliged to shew. On the centrary, no shelter or refuge shall be given in their ports to fuch as shall have made prizes of the subjects, people, or property of either of the parties; but if fuch shall come in, being forced by stress of weather, or the danger of the sea, all proper means shall be vigorously used, that they go out and retire from thence as foon as posible.

Art. XVIII. If any ship belonging to either of the parties, their people, or subjects, shall, within the coasts or dominions of the other, stick upon the fands, or be wrecked or suffer any other damage, all friendly assistance and relief shall be given to the persons shipwrecked, or such as shall be in danger thereof. And letters of safe conduct shall likewise be given to them for their free and quiet passage from thence, and the return of every one to his own country.

Art. XIX. In case the subjects and inhabitants of either party, with their shipping, whether public and of war, or private and of merchants, be forced through stress of weather, pursuit of pirates or enemies, or any other urgent necessity, for seeking of shelter and harbour, to retreat and enter into any of the rivers, bays, roads, or ports belonging to the other party,

Art. XX. For the better promoting of commerce on both sides, it is agreed, that if a war should break out between the said two nations, six months after the proclamation of war shall be allowed to the merchants in the cities and towns where they live, for selling and transporting their goods and merchandises; and if any thing be taken from them, or any injury be done them within that term, by either party, or the people or subjects of either, full satisfaction shall be made for the same.

Art. XXI. No subject of the Most Christian King shall apply for or take any commission or letters of marque for arming any thip or thips to act as privateers against the said United States, or any of them, or against the subjects, people, or inhabitants of the faid United States or any of them, or against the property of any of the inhabitants of any of them, from any prince or state with which the United States shall be at war; nor shall any citizen, subject, or inhabitant of the said United States, or any of them, apply for or take any commission or letters of marque for arming any ship or ships to act as privateers against the subjects of the Most Christian King, or any of them, or the property of any of the inhabitants of any of them, from any prince or state with which the United States shall be at war; nor shall any citizen, subject or inhabitant of the faid United States, or any of them, apply for or take any commission or letters of marque for arming any ship or ships to act as privateers against the subjects of the Most Christian King, or any of them, or the property of any of them, from any prince or state with which the said king shall be at war; and if any person of either nation shall take such commission or letters of marque, he shall be punished as a

Art.-XXII. It shall not be lawful for any foreign privateers, not belonging to the subjects of the Most Christian King, nor citizens of the said United States, who have commission from any other prince or state at enmity with either nation, to sit their ships in the ports of either the one or the other of the

aforciaid parties, to fell what they have taken, or in any other manner whatfoever to exchange their ships, merchandises, of any other lading; neither shall they be allowed even to purchase victuals, except such as shall be necessary for their going to the next port of that prince or state from which they have commissions.

Art. XXIII. It shall be lawful for all and singular the subjects of the Most Christian King, and the citizens, people, and inhabitants of the faid United States, to fail with their ships with all manner of liberty and fecurity, no distinction being made who are the proprietors of the merchandise laden thereon, from any port to the places of those who now are or hereafter shall be at enmity with the Most Christian King or the United States. It shall likewise be lawful for the subjects and inhabitants aforefaid to fail with the ships and merchandiles aforementioned, and to trade with the fame liberty and fecurity from the places, ports, and havens of those who are enemies of both or either party, without any opposition or disturbance whatsoever, not only directly from the places of the enemy aforementioned to neutral places, but also from one place belonging to an enemy to another place belonging to an enemy, whether they be under the jurisdiction of the same prince or under several. And it is hereby flipulated, that free ships shall also have a freedom to carry goods, and that every thing shall be deemed free and exempt which shall be found on board the ships belonging to the subjects of either of the confederates, although the whole lading or any part thereof should appertain to the enemies of either, contraband goods being always excepted. It is also ogreed in like monner that the same liberty be extended to perlons who are on board a free ship, with this effect, that although they be enemies to both or either party, they are not to be taken out of that free ship, unless they are soldiers and in actual fervice of the enemies.

Art. XXIV. This liberty of navigation and commerce shall extend to all kinds of merchandises, except those only which are distinguished by the name of contraband; and under this name of contraband or prohibited goods shall be comprehended arms, great guns, bombs with their susees and other things belonging to them, cannon ball, gunpowder, match, pikes, swords, lances, spears, halberds, mortars, petards, grenadoes, saltpetre, muskets, musket ball, bucklers, helmets, breast plates, coats of mail, and the like kinds of arms proper for arming soldiers, musket rests, belts, horses with their furniture, and all other warlike instruments whatever. neree shall aly which under this prehended her things ch, pikes, grenadoes, east plates, or arming iture; and merchandifes which follow shall not be reckoned among contraband or prohibited goods; that is to fay, all forts of clother, and all other manufactures woven of any wool, flax, filk, cotton, or any other materials whatever; all kinds of wearing apparel. together with the species whereof they are used to be made." gold and filver, as well coined as uncoined, tin, iron, latten, copper, brafs, coals; as also wheat and barley, and any other kind of corn or pulle, tobacco, and likewife all manner of spices, salted and smoaked flesh, salted fish, cheese and butter, beer, oils, wines, fugars, and all forts of falts, and ingeneral all provisions which ferve for the nourishment of mankind and the sustenance of life: furthermore, all kinds of cotton, hemp, flax, tar, pitch, ropes, cables, fails, fail-cloth, anchors, and any parts of anchors, fo ships masts, planks, boards and beams of what trees foever, and all other things proper either for building or repairing ships, and all other goods whatever which have not been worked into the form of any instrument or thing prepared for war by land or sea, shall not be reputed contraband, much less such as have been already wrought up for any other u(e; all of which shall be wholly reckoned among free goods; as likewife all other merchandifes and things which are not comprehended and particularly mentioned in the foregoing enumeration of contraband goods, so that they may be transported and carried in the freest manner by the subjects of both confederates even to places belonging to an enemy, fuch towns or places being only excepted as are at that time belieged, blocked up or invested.

Art. XXV. To the end that all manner of diffentions and quarrels may be avoided and prevented on one fide and the other, it is agreed that in case either of the parties hereto should be engaged in war, the ships and vessels belonging to the subjects of people of the other ally must be furnished with fea letters or passports, expressing the name, property, and bulk of the ship, as also the name and place of habitation of the master or commander of the said ship, that it may appear thereby that the ship really and truly belongs to the subjects of one of the parties, which passport shall be made out and granted according to the form annexed to this treaty; they shall tikewise be recalled every year, that is, if the ship happens to return home within the space of a year: it is likewise agreed, that fuch ships being laden are to be provided not only with passports as above mentioned, but also with cirtificates, containing the several particulars of the cargo, the place whence the

thip failed, and whither she is bound, that so it may be known whether any forbidden or contraband goods be on board of the same, which cirtificates shall be made out by the officers of the place whence the ship set sail, in the accustomed form; and if any one shall think it sit or adviscable to express in the said certificates the person to whom the goods on board belong, he may freely do so.

Art. XXVI. The ships of the subjects and inhabitants of either of the parties coming upon any coast belonging to either of the said allies, but not willing to enter into port, or being entered into port and not willing to unload their cargoes, or break bulk, they shall be treated according to the general rules prescribed or to be prescribed relative to the object in

question, Marine 1999

Art. XXVII. If the ships of the said subjects, people or inhabitants of either of the parties shall be met with, either sailing along the coasts or on the high seas, by any ship of war of the other, or by any privateers, the said ships of war or privateers, for the avoiding of any disorder, shall remain out of cannon shot, and may send their boats on board the merchant ship which they shall so meet with, and may enter her to the number of two or three men only, to whom the master or communander of such ship or vessel shall exhibit his passport concerning the property of the ship, made out according to the form inserted in this present treaty; and the ship, when she shall have shewed such passport, shall be free and at liberty to pursue her voyage, so as it shall not be lawful to molest or search in any manner, or to give her chace, or to force her to quit her intended course.

Art. XXVIII. It is also agreed, that all goods, when once put on board the ships or vessels of either of the two contracting parties, shall be subject to no further visitation, but all visitation or search shall be made beforehand, and all prohibited goods shall be stopped on the spot before the same be put on board, unless there are manifest tokens or proofs of fraudulent practice; nor shall either the persons or goods of the subjects of his Most Christian Majesty, or the United States, be put under any arrest, or molested by any other kind of embargo for that cause, and only the subject of that State to whom the said goods have been or shall be prohibited, and who shall presume to sell or alienate such sort of goods, shall be duly punished for the offence.

Art. XXIX. The two contracting parties grant mutually the liberty of having each in the ports of the other, confuls,

oard of the officers of form; and in the faid belong, he

Form of the paffports and letters which are to be given to the ships and barques, according to the twenty-fifth article of this treaty.

To all who shall see these presents, greeting:

iT is hereby made known, that leave and permission has been given to master and commander of the ship called of the town of burthen tons, or thereabouts, lying at present in the port and haven of and bound for and laden with after that this ship has been visited, and before sailing, he shall make oath before the officers who have the jurisdiction of maritime affairs, that the said ship belongs to one or more of the subjects of the act whereof shall be put at the end of these presents; as likewise that he will keep, and cause to be kept by his crew on board, the marine ordinances and regulations, and enter

in the proper office a lift, figned and witnessed, containing the names and surnames, the places of birth and abode of the crew of his ship, and of all who shall embark on board her, whom he shall not take on board without the knowledge and permission of the officers of the marine; and shall shew his present leave to the officers and judges of the marine; and shall give a faithful account to them of what passed and was done during his voyage; and he shall carry the colours, arms and ensign of the King or United States during his voyage. In witness whereof we have signed these presents, and put the seal of our arms thereunto, and caused the same to be countersigned by at the

#### TREATY OF ALLIANCE,

EVENTUAL AND DEFENSIVE.

LOUIS, by the Grace of Gon, King of France and Navarre, to all who shall see these presents, greeting:

HE Congress of the United States of North-America having, by their plenipotentiaries reliding in France, propoled to form with us a defensive and eventual alliance: Willing to give the said States an efficacious proof of the interest we take in their prosperity, we have determined to conclude the said alliance. For these causes, and other good considerations thereto moving, we, repoling entire confidence in the capacity and experience, zeal and fidelity for our service, of our dear and beloved Conrad Alexander Gerard, royal syndic of the city of Strafburg, secretary of our council of state, have nominated, commissioned and deputed, and by these presents, figned with our hand, do nominate, commission and depute him our plenipotentiary, giving him power and special command to all in this quality, and confer, negociate, treat and agree conjointly with the above-mentioned plenipotentiaries of the United States, invested in the like manner with powers in due form, to determine, conclude and fign fuch articles, conditions, conventions, declarations, definitive treaty, and any

other acts whatever, as he stall judge proper to answer the end which we propole; promising on the faith and word of a king, to agree to, confirm and establish for ever, to accomplish and execute punctually, whatever our said dear and beloved Conrad Alexander Gerard shall have stipulated and signed in virtue of the present power, without ever contravening it, or suffering it to be contravened for any cause and under any pretext whatever; as likewise to cause our letters of ratification to be made in due form, and to have them delivered, in order to be exchanged at the time that shall be agreed upon. For such is our pleasure. In testimony whereof we have set our seal to these presents. Given at Versailles, the thirtieth day of the month of January, in the year of grace, one thousand seven hundred and seventy-eight, and the fourth of our reign.

(Signed)

(L. S.)

LOUIS.

By the King, GRAVIER DE VERGENNES.

#### TREATY.

The Most Christian King and the United States of North-America, to wit, New-Hampshire, Massachusetts Bay, Rhode-Island, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina, and Georgia, having this day concluded a treaty of amity and commerce, for the reciprocal advantage of their subjects and citizens, have thought it necessary to take into consideration the means of strengthening those engagements, and of rendering them useful to the safety and tranquillity of the two parties; particularly in case Great-Britain, in resentment of that connection, and of the good correspondence which is the object of the faid treaty, should break the peace with France, either by direct hostilities, or by hindering her commerce and navigation in a manner contrary to the rights of nations, and the peace subfifting between the two crowns. And his Majesty and the said United States having resolved in that case to join their counsels and efforts against the enterprises of their common enemy;

The respective plenipotentiaries impowered to concert the clauses and conditions proper to fulfil the said intentions, have, after the most mature deliberation, concluded and determined on the following articles:

Article I. If war should break out between France and Great-Britain during the continuance of the present war between the United States and England, his Majesty and the said United States shall make it a common cause; and aid each office surroughly with their good offices, their counsels and their saids, according to the exigence of conjunctures, as becomes good and faithful allies.

Art, II. The effential and direct end of the present defensive alliance is, to maintain effectually the liberty, sovereignty and independence, absolute and unlimited, of the faid United States, as well in matters of government as of commerce.

Art. III. The two contracting parties shall, each on its own part, and in the manner it may judge most proper, make all the efforts in its power sgainst their common enemy, in order to attain the end proposed.

Art. IV. The contracting parties agree, that in case either of them should form any particular enterprise in which the concurrence of the other may be desired, the party whose concurrence is desired shall readily and with good faith join to act in concert for that purpose, as fer as circumstances and its own particular situation will permit; and in that case, they shall regulate, by a particular convention, the quantity and kind of succour to be furnished, and the time and manner of its being brought into action, as well as the advantages which are to be its compensation.

Art. V. If the United States should think fit to attempt the reduction of the British power remaining in the northern parts of America, or the islands of Bermudas, those countries or islands, in case of success, shall be confederated with, or dependent upon, the said United States.

Art. VI. The Most Christian King renounces for ever the possession of the islands of Bermudas, as well as of any part of the continent of North-America, which, before the treaty of Paris, in 1763, or in virtue of that treaty, were acknowledged to belong to the crown of Great-Britain, or to the United States, heretofore called British colonies, or which are at this time, or have lately been, under the power of the King and Crown of Great-Britain.

Art. VII. If his Most Christian Majesty shall think proper to attack any of the islands situated in the Gulph of Mexico, or near that Gulph, which are at present under the power of Great-Britain, all the said isles, in case of success, shall appertain to the Crown of France.

Art. VIII. Neither of the two parties shall conclude either truce or peace with Great-Britain, without the formal consent of

#### CONVENTION BETWEEN FRANCE AND AMERICA.

By the President of the United States of America.

#### A PROCLAMATION.

WHEREAS a convention, for defining and establishing the functions and privileges of the respective consuls and vice-consuls of his Most Christian Majesty and the said United States, was concluded and signed by the plenipotentiaries of his said Most Christian Majesty and of the said United States, duly and respectively authorised for that purpose, which convention is in the form following, viz.

#### CONVENTION,

Between his Most Christian Majesty and the United States of America, for the purpose of defining and establishing the functions and privileges of their respective consuls and vice-consuls.

ls and vicefaid United otentiaries of United States, which con-

States of Amee functions and

United States of the treaty

of Amity and Commerce concluded between them, mutually. granted the liberty of having, in their respective States and ports, confuls, vice-confuls, agents and commissaries; and being willing, in consequence thereof, to define and establish, ina reciprocal and permanent manner, the functions and privileges of confuls and vice-confuls, which they have judged it convenient to establish of preference, his Most Christian Majesty has nominated the Sieur Count of Montmorin, of St. Herent, marechal of his camps and armies, knight of his orders and of the Golden Fleece, his counsellor in all his councils, minister and secretary of state and of his commandments and finances, having the department of foreign affairs; and the United States have nominated the Sieur Thomas Jefferson, citizen of the United States of America, and their minister plenipotentiary near the king, who, after having communicated to each other their respective full powers, have agreed on what follows:

Art. I. The consuls and vice-consuls, named by the Most Christian King and the United States, shall be bound to present their commissions according to the forms which shall be established respectively by the Most Christian King within his dominions, and by the Congress within the United States. There shall be delivered to them, without any charges, the exequatur necessary for the exercise of their functions: and on exhibiting the said exequatur, the governors, commanders, heads of justice, bodies corporate, tribunals and other officers, having authority in the ports and places of their consulates, shall cause them to enjoy, immediately and without difficulty, the pre-eminences, authority and privileges, reciprocally granted, without exacting from the said consuls and vice-consuls any fees under any pretext whatever.

Art. II. The consuls and vice-consuls, and persons attached to their functions, that is to say, their chancellors and secretaries, shall enjoy a full and entire immunity for their chancery and the papers which shall be therein contained. They shall be exempt from all personal service, from soldier's billets, militia, watch, guard, guardianship, trusteeship, as well as from all duties, taxes, impositions, and charges whatsover, except on the estate real and personal of which they may be the proprietors or possessions, which shall be subject to the taxes imposed on the estates of all other individuals: and in all other instances, they shall be subject to the laws of the land, as the natives are. Those of the said consuls and vice-consuls, who shall exercise commerce, shall be respectively subject to all taxes,

charges and impositions, established on other merchants. They
shall place over the outward door of their house, the arms of
their sovereign; but this mark of indication shall not give to
the said house any privilege of asylum for any person or pro-

perty what foever.

Art. III. The respective consuls and vice-consuls may establish agents in the different ports and places of their departments, where necessity shall require. These agents may be chosen among the merchants, either national or foreign, and surnished with a commission from one of the said consuls. They shall consine themselves respectively to the rendering to their respective merchants, navigators and vessels, all possible service, and to inform the nearest consult of the wants of the said merchants, navigators and vessels—without the said agents otherwise participating in the immunities, rights and privileges, attributed to consults and vice-consuls—and without power, under any pretext whatever, to exact from the said merchants any duty or emolument whatsoever.

Art. IV. The confuls and vice-confuls respectively may establish a chancery, where shall be deposited the confular determinations, acts and proceedings, as also testaments, obligations, contracts and other acts, done by or between persons of their nation, and essects left by deceased persons, or saved from ship-wreck. They may, consequently, appoint sit persons to act in the said chancery; receive and swear them in; commit to them the custody of the seal, and authority to seal commissions, sentences and other consular acts; and also to discharge the

functions of notary and register of the consulate.

Art. V. The confuls and vice-confuls respectively shall have the exclusive right of receiving in their chancery, or on board of vessels, the declarations and all other acts, which the captains, masters, crews, passengers and merchants of their nation may choose to make there, even their testaments and other disposals by last will: and the copies of the said acts, duly authenticated by the said consuls or vice-consuls, under the seal of the consulate, shall receive saith in law, equally as their originals would, in all the tribunals of the dominions of the Most Christian King and of the United States. They shall also have, and exclusively, in case of the absence of the testamentary executor, administrator, or legal heir, the right to inventory, liquidate and proceed to the sale of the personal estate lest by subjects or citizens of their nation, who shall die within the extent of their consulate: they shall proceed thither with

the affishance of two merchants of their nation, or, for want of them, of any other at their choice; and shall cause to be depolited in their chancery the effects and papers of the faid effates: and no officer, military, judiciary, or of the police of the country, shall disturb them or interfere therein, in any manner what soever: but the said consuls and vice consuls shall not deliver up the faid effects, nor the proceeds thereof, to the lawful heirs, or to their order, till they shall have caused to be paid all debts which the deceased shall have contracted in the country: for which purpose the creditors shall have a right to attach the said effects in their hands, as they might in those of any other individual whatever, and proceed to obtain tale of them till payment of what shall be lawfully due to them. When the debts shall not have been contracted by judgment, deed or note, the fignature whereof shall be known, payment shall not be ordered but on the creditor's giving sufficient surety, resident in the country, to refund the sums he shall have unduly received, principal, interest and costs: which surety, nevertheless, shall stand duly discharged after the team of one year in time of peace, and of two in time of war, if the demand in discharge cannot be formed before the end of this term, against the heirs who shall present themselves. And in order that the heirs may not unjustly be kept out of the effects of the deceased, the consuls and vice-consuls shall notify his death in fome of the gazettes published within their consulate; and that they shall retain the said effects in their hands seven months, to answer all demands which shall be presented; and they shall be bound, after this delay, to deliver to the persons succeeding thereto, what shall be more than sufficient for the demands which shall have been formed,-

Art. VI. The confuls and vice-confuls respectively shall receive the declarations, protests and reports, of all captains and masters of their respective nations, on account of average losses sustained at sea; and these captains and masters shall lodge in the chancery of the said confuls and vice-confuls, the acts which they may have made in other ports on account of the accidents which may have happened to them on their voyage. If a subject of the Most Christian King, and a citizen of the United States, or a foreigner, are interested in the said cargo, the average shall be settled by the tribunds of the country, and not by the confuls or vice-confuls; but when only the subjects or citizens of their own nation shall be interested, the respective confuls or vice-confuls shall appoint skilful persons to settle the damages and average.

Art. VII. In cases where by tempest, or other accident. French ships or vessels shall be stranded on the coasts of the United States; and ships or vessels of the United States shall be stranded on the coasts of the dominions of the Most Christian King; the conful or vice-conful, nearest to the place of shipwreck, shall do whatever he may judge proper, as well for the purpose of saving the said ship or vessel, its cargo and appurtenances, as for the storing and security of the effects and merchandise saved. He may take an inventory of them, without the intermeddling of any officers of the military, of the cuftoms, of justice, or of the police of the country, otherwise than to give to the confuls, vice-confuls, captain and crew of the vessel, shipwrecked or stranded, all the succour and favour which they shall ask of them, either for the expedition and security of the faving and of the effects faved, as to prevent all disturbance. And in order to prevent all kinds of dispute and discussion, in the said cases of shipwreck, it is agreed, that when there shall be no consul or vice-consul to attend to the saving of the wreck, or that the residence of the said gousul or vice-conful (he not being at the place of the wreck) shall be more distant from the faid place, than that of the competent judge of the country, the latter shall immediately proceed therein with all the dispatch, certainty and precautions, prescribed by the respective laws; but the said territorial judge shall retire, on the arrival of the conful or vice-conful, and shall deliver over to him the report of his proceedings, the expenses of which the conful or vice conful shall cause to be reimbursed to him, as well as those of saving the wreck. The merchandise and effects saved shall be deposited in the nearest custom-house, or other place of fafety, with the inventory thereof, which shall have been made by the conful or vice-confuls, or by the judge who shall have proceeded in their absence, that the said effects and merchandife may be afterwards delivered, (after levying therefrom the costs) and without form of process to the owners, who, being furnished with an order for their delivery from the nearest conful or vice-conful, shall re-claim them by themselves, or by their order, either for the purpole of re-exporting such merchandise, in which case they shall pay no kind of duties of exportation; or for that of felling them in the country, if they be not prohibited there; and in this last case, the said merchandise, if they be damaged, shall be allowed an abatement of entrance duties, proportioned to the damage they have sustained, which

Art. VIII. The confuls or vice-confuls shall exercise police over all the vessels of their respective nations; and shall have on board the said vessels, all power and jurisdiction in civil matters: in all the disputes which may there arise, they shall have an entire inspection over the said vessels, their crews, and the changes and substitutions there to be made: for which purpose they may go on board the said vessels whenever they may judge it necessary. It being well understood, that the functions hereby allowed shall be confined to the interior of the vessels, and that they shall not take place in any case which shall have any interference with the police of the ports where the said vessels shall be.

Art. IX. The confuls and vice-confuls may cause to be arrested the captains, officers, mariners, sailors, and all other perfons, being part of the crews of the vessels of their respective nations, who shall have deserted from the said vessels, in order to fend them back and transport them out of the country. For which purpose, the said consuls and vice-consuls shall address themselves to the courts, judges, and officers competent; and shall demand the said deserters in writing, proving by an exhibition of the registers of the vessel or ship's roll, that those men were part of the faid crews: and on this demand so proved, (saving, however, where the contrary is proved) the delivery shall not be refused: and there shall be given all aid and assistance to the faid confuls and vice-confuls for the fearch, feizure and arrest of the said deserters, who shall even be detained and kept in the prisons of the country, at their request and expense, until they shall have found an opportunity of sending them back. But if they be not fent back within three months, to be counted from the day of their arrest, they shall be set at liberty, and shall be no more arrested for the same cause.

Art. X. In cases where the respective subjects or citizens shall have committed any crime, or breach of the peace, they shall be amenable to the judges of the country.

Art. XI. When the faid offenders shall be a part of the crew of a vessel of their nation, and shall have withdrawn themselves on board the said vessel, they may be there seized and arrested by order of the judges of the country: these shall give notice thereof to the consul or vice-consul, who may repair on board, if he thinks proper: but this notification shall not

in any case, delay execution or the order in question. The persons arrested shall not afterwards be set at liberty, until the consul or vice-consul shall have been notified thereof; and they shall be delivered to him, if he requires it, to be put again on board of the vossel in which they were arrested, or of others of their nation, and to be sent out of the country.

Art, XPI, All differences and fuits between the subjects of the Most Christian King in the United States, or between the Eirizens of the United States within the dominions of the Most Christian King, and particularly all disputes relative to the weger and terms of engagement of the crews of the respective vellels, and all differences of whatever nature they may be; which may arise between the privates of the said crews, or between any of them and their captains, or between the captains of different vessels of their nation, shall be determined by the respective consuls and vice-consuls, either by a reference to arbitrators, or by a summary judgment, and without costs. No officer of the contery, civil or military, shall interfere therein, or take any part whatever in the matter; and the appeals from the faid consular sentences shall be carried before the tribunals of France, or of the United States, to whom it may appertain to take cognizance thereof.

Art. Rail. The general utility of commerce having caused to be established, within the dominions of the most Christian King, particular tribunals and forms for expediting the decision of commercial affairs, the merchants of the United States shall enjoy the benefit of these establishments; and the Congress of the United States will provide, in the manner most conformable to its laws, for the establishment of equivalent advantages in favour of the French merchants, for the prompt dispatch and decision of affairs of the same nature.

XIV. The subjects of the Most Christian King, and citizens of the United States, who shall prove by legal evidence, that they are not the said nations respectively, shall, in consequence, enjoy are exemption from all personal service in the place of their settlement.

XV. If any other nation acquires, by virtue of any convention whatever, treatment more favourable with respect to the consular pre-eminences, powers, authority and privileges, the consula and vice-consula of the Most Christian King, or of the United States, reciprocally shall participate therein, agreeably

estion. The ty; until the of; and they put again on of others of

THOMAS JEFFERSON. (L. S.)

#### PROCLAMATION.

And whereas the said convention has been duly ratified and confirmed by me on the one part, with the advice and consent of the senate, and by his Most Christian Majesty on the other, and the said ratifications were duly exchanged at Paris on the sirst day of January in the present year. Now, therefore, to the end that the said convention may be observed and performed with good saith on the part of the United States; I have ordered the premises to be made public, and I do hereby enjoin and require all persons bearing office, civil or military, within the United States, and all others citizens or inhabitants thereof, or being within the same, faithfully to observe and suffil the said convention, and every clause and article thereof.

In testimony whereof I have caused the seal of the United States to be affixed to these presents, and signed the same with my hand. Given at the city of New-York, the ninth day of April, in the year of our Lord one thousand seven hundred and ninety, and of the sovereignty and independence of the United States the four-teenth.

GEORGE WASHINGTON.

By the Prefident,

THOMAS JEFFERSON.

THE PART OF THE SECOND PROPERTY OF THE PROPERTY OF THE SECOND PROPERTY.

### DEFINITIVE TREATY

BETWEEN

#### GREAT-BRITAIN AND THE UNITED STATES OF AMERICA.

Signed at Paris, September 3, 1783.

In the name of the most holy and undivided Trinity.

IT having pleased the Divine Providence to dispose the hearts of the most serene and most potent prince George the Third, by the grace of God, King of Great-Britain, France and Ireland, defender of the faith, Duke of Brunswick and Lunenburgh, arch-treasurer and prince elector of the holy. Roman empire, &c. and of the United States of America, to forget all past misunderstandings and differences, that have unhappily interrupted the good correspondence and friendship which they mutually with to reftore; and to establish such a beneficial and fatisfactory intercourse between the two countries, upon the ground of reciprocal advantages and mutual convenience, as may promote and fecure to both perpetual peace and harmony, and having, for this defirable end, already laid the foundation of peace and reconciliation, by the provisional articles figured at Paris, on the goth of November, 1782, by the commissioners empowered on each part, which articles were agreed to be inferted in, and to conflitute the treaty of peace propoled to be concluded between the Crown of Great-Britain and the faid United States, but which treaty was not to be concluded until terms of peace should be agreed upon between Great-Britain and France, and his Britannic Majesty should be ready to conclude such treaty accordingly; and the treaty between Great-Britain and France having fince been concluded, his Britannic Majesty and the United States of America, in order to carry into full effect the provisional articles above mentioned, according to the tenor thereof, have constituted and appointed, that is to fay, his Britannic Majesty on his part, David Hartley,

Eig. member of the perliament of Great-Britain; and the faid United States on their part, John Adams, Efq. late a commissioner of the United States of America, at the court of Verfailles, late delegate in Congress from the State of Masse. chusetts, and chief justice of the faid State, and minister plenipotentiary of the faid United States, to their High Mightineffes the States-General of the United Netherlands; Benjamin Franklin, Esq, late delegate in Congress from the State of Pennsylvania, president of the convention of the said State, and minister plenipotentiary from the United States of America at the court of Versailles; and John Jay, Esq. late president of Congress, chief justice of the State of New-York, and minister plenipotentiary from the faid United States at the court of Madrid; to be the plenipotentiaries for corel ding and figning the present Definitive Treaty; who, after ha, ing reciprocally communicated their respective full powers, have agreed upon and confirmed the following articles:

Article I. His Britannic Majesty acknowledges the said United States, vis. New-Hampshire, Massachusetts-Bay, Rhode-Island and Providence plantations, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina and Georgia, to be free, sovereign and independent States; that he treats with them as such, and for himself, his heirs and successors, relinquishes all claims to the government, propriety, and territorial rights of the same, and

every part thereof,

Art, II, And that all disputes, which might arise in future, on the subject of the boundaries of the said United States, may be prevented, it is hereby agreed and declared, that the following are and shall be their boundaries, viz. from the north-west angle of Nova-Scotia, viz. That angle which is formed by a line drawn due north from the source of St. Croix river to the highlands, along the faid highlands, which divide those rivers that empty themselves into the river St, Lawrence from those which fall into the Atlantic ocean, to the north westernmost head of Connecticut river; thence down along the middle of that river to the forty-fifth degree of north latitude; from thence by a line due west on said latitude, until it strikes the river Iroquois or Cataraquy; thence along the middle of the faid river into lake Ontario; through the middle of faid lake until it strikes the communication by water between that lake and lake Erie; thence along the middle of faid communication into lake Erie; through the middle of faid lake until it arrives

Art. III. It is agreed, that the people of the United States shall continue to enjoy, unmolested, the right to take sish of every kind on the Grand Bank, and on all the other banks of Newfoundland, also in the gulph of St. Lawrence, and at all other places in the sea, where the inhabitants of both countries used at any time heretofore to sish. And also, that the inhabitants of the United States shall have liberty to take sish of every kind on such part of the coast of Newfoundland, as British sishermen shall use (but not to dry or cure the same on that island) and also on the coasts, bays and creeks, of all other of his Britannic Majesty's dominions in America; and that the American sishermen shall have liberty to dry and cure sish in any of the unsettled bays, harbours and creeks, of Nova-Scotia,

Magdalen islands, and Labrador, so long as the same shall remain unsettled; but so soon as the same or either of them shall be settled, it shall not be lawful for the said sistermen to dry or cure is sinh at such settlement, without a previous agreement for that purpose with the inhabitants, proprietors, or possessor of the ground.

Art. IV. It is agreed, that the creditors on either fide shall meet with no lawful impediment to the recovery of the full value, in sterling money, of all bona fide debts heretofore contracted.

Art. V. It is agreed, that Congress shall earnestly recommend it to the legislatures of the respective States, to provide for the restitution of all estates, rights and properties, which have been conficated, belonging to real British 1 inche; and also of the estates, rights and properties, of perfo condent in districts in possession of his Majesty's arms, and who have not borne arms against the said United States; and that persons of any other description shall have free liberty to go to any part or parts of the Thirteen United States, and therein to remain twelve months unmolested, in their endeavours to obtain the restitution of such of their estates, rights and properties, as may have been confilcated; and that Congress shall also earnestly recommend to the several States, a re-consideration and revision of all acts or laws respecting the premises, so as to render the said acts or laws perfeetly confistent, not only with justice and equity, but with that spirit of conciliation, which, on the return of the blessings of peace, should universally prevail: and that Congress shall also earnestly recommend to the several States, that the estates, rights and properties, of fuch last-mentioned persons, shall be restored to them, they refunding to any persons who may now be in posfession, the bona fide price (where any has been given) which fuch persons may have paid, on purchasing any of the said lands, rights or properties, fince the confication. And it is agreed, that all persons, who may have any interest in confiscated lands, either by debts, marriage settlements, or otherwite, shall meet with no lawful impediment in the profecution of their just rights.

Art. VI. That there shall be no future confications made, nor any profecutions commenced, against any person or persons, for, or by reason of the part which he or they may have taken in the present war: and that no person shall, on that account, suffer any further loss or damage, either in his person, liberty or property: and that those who may be in confinement on such charges, at the time of the ratification of the treaty in America, shall be

The state of the s

Their high mightinesses the states general of the united states of america.

(TO WIT)

NEW-HANTIMINE, MAISACHUSETTS, ENOUR-ISLAND AND PRO-VIDENCE PLANTATIONS, COUNECTICUP, NEW-YORE, NEW-JERIET, PENNSYLVANIA, DELAWARE, MARYLARD, VIRGINIA, HORTH-CAROLINA, SOUTH-CAROLINA, AND GRORGIA.

A HEIR High Mightinesses the States-General of the United Netherlands, and the United States of America, to wit, New-Hampshire, Massachusetts, Rhode-Island and Providence plantations, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina, and Georgia, defiring to afcertain, in a permanent and equitable manner, the rules to be observed relative to the commerce and correspondence which they intend to establish between their respective States, countries and inhabitants, have judged, that the faid ont cannot be better obtained, than by establishing the most perfect equality and reciprocity for the basis of their agreement, and by avoiding all those burthensome preferences, which are usually the fources of debate, embarraffment and discontent; by leaving also each party at liberty to make, respecting commerce and navigation, such ulterior regulations, as it shall find most convenient to itself; and by founding the advantages of commerce folely upon reciprocal utility, and the just rules of free intercourse; reserving withal to each party the liberty of admitting, at its pleasure, other nations to a participation of the same advantages.

On these principles, their said High Mightinesses the States General of the United Netherlands have named for their plenipotentiaries, from the midst of their assembly, Messeurs their deputies for the foreign affairs; and the said United States of America, on their part, have surnissed with full powers Mr. John Adams, late commissioner of the United States of America at the court of Versailles, heretofore delegate in Congress from the State of Massachusetts bay, and chief justice of the said State, who have agreed and concluded as follows: to wit,

Article I. There shall be a firm inviolable and universal peace, and sincere friendship, between their High Mightinesses the Lords the States General of the United Netherlands and the United States of America, and between the subjects and inhabitants of the said parties, and between the countries, illands, cities and places, lituated under the jurisdiction of the said United Netherlands and the said United States of America, their subjects and inhabitants of every degree, without exception of persons or places.

Art. II. The subjects of the said States General of the United Northenlands shall pay in the ports, havens, roads, countries, islands, cities or places of the United States of America, or any of them, no other nor, greater duties or imports of whatever nature or denomination they may be, than those which the nations the most favoured are or shall be obliged to pay; and they shall enjoy all the rights, liberties, privileges, immunities and exemptions in trade, navigation and commerce, which the faid nations do, or shall enjoy, whether in pessing from one port to another in the said States, or in going from any of those ports to any foreign port of the world, or from any foreign port of the world, or from any foreign port of the world to any of those ports.

peaceable enjoyment of their rights in the conferred, illand and feas, in the East and West Indies, without any hindrance os melefation.

Art. IV. There shall be an entire and perfect liberty of conscience allowed to the subjects and inhabitants of each party. and to their families: and no one shall be molested in regard to his worthip, provided he submits, as to the public de tion of its to the laws of the country. There hall be given moreovar liberty, when any subjects or inhabitants of either party half die in the territory of the other, to bury them in the usual burying places, or in decent and convenient grounds. to be appointed for that purpole, as occasion shall require And the dead bodies of these who are buried shall not in any wife be molested; and the two contracting parties shall provid each one in his jurisdiction, that their respective subjects a inhabitants may benceforward obtain the requilite certificates,

in cases of deaths, in which they shall be interest

Art. V. Their High Mightinesses the States General of the United Netherlands, and the United States of America, the sudeswoor, by all the means in their power, to defend and profest all weifels and other effects belonging to their subject inhabitants respectively, or to any of them, in the roads, havens, internal fear, paffer, rivers, and as far as a jurisdiction extends at sea; and to recover, and coule to restored to the true proprietors, their agents or attorness, all fuch vessels and effects which shall be taken under the diction; and their veilels of war and convoys, in cales diction; and their vessels of war and convey the protection they may have a common enemy, shall take under the protection to the subjects and introduced either party, which fiell not be laden with containing goods, according to the description which shall be made of them here after, for places with which one of the parties is in me the other at war, nor destined for any place blocked, and which shall hold the same course, or follow the same route and they shall defend such vessels, as long as they shall hold a fame course, or follow the same route, against all attacks, for and violence of the common enemy, in the fame manuar ought to protect and defend the velicle belonging to that respective subjects.

Art. VI. The subjects of the contracting parties may, on one fide and on the other, in the respective countries and States, dispose of their effects by testament, donation or otherwise; and their heirs, subjects of one of the parties, and residing in the

country of the other, or elsewhere, shall receive such fuccessions, even ab intestate, whether in person, or by their sttorney or substitute, even although they shall not have obtained letters of naturalization, without having the effect of fuck commission contested under pretext of any rights or prerogatives of any province, city or private person: and if the heirs to whom fuch successions may have fallen, shall be minors, the tutors, or curators, established by the judge domiciliary, of the said minors, may govern, direct, administer, fell, and alienate the effects fallen to the faid minors by inheritance; and in general, in relation to the faid successions and effects, use all the rights and fulfil all the functions which belong, by the disposition of the laws, to guardians, tutors and curators; provided, nevetheles, that this disposition cannot take place, but in cases where the testator shall not have named guardians, tutors, curators by testament, codicil or other legal instrument.

Art. VII. It shall be lawful and free for the subjects of each party to employ such advocates, attornies, notaries, solicitors or

factors, as they shall judge proper.

Art. VIII Merchants, masters and owners of ships, mariners, men of all kinds, ships and vessels, and all merchandises and goods in general, and essels, of any of the confederates, or of the subjects thereof, shall not be seised or detained in any of the countries, lands, islands, cities, places, ports, shores or dominions whatsoever of the other confederate, for any military expedition, public or private use of any one, by arrests, violence, or any colour thereof; much less shall it be permitted to the subjects of either party to take, or extort by force, any thing from the subjects of the other party, without the consent of the owner; which, however, is not to be understood of seitures, detentions and arrests, which shall be made by the command and authority of justice, and by the ordinary methods, on account of debts or crimes, in respect whereof the proceedings must be by way of law, according to the forms of justices.

Art. IX. It is further agreed and concluded, that it shall be wholly free for all merchants, commanders of ships, and other subjects and inhabitants of the contracting parties, in every place subjected to the jurisdiction of the two powers respectively, to manage, themselves, their own business: and moreover, as to the ule of interpreters or brokers, as also in relation to the loading or unloading of their vessels, and every thing which has relation thereto, they shall be, on one side and on the other, considered and treated upon the footing of natural

e fuch fuct or by their ot have obeffect of fuck crogatives of eirs to whom the tutors, of the faid alienate the id in general, all the rights disposition of vided, nevebut in cales

ips, mariners, chandifes and federates, or etained in any rts, shores or r any military arrefts, viobe permitted ort by force, without the be understood made by the nary methods, reof the prothe forms of

that it shall of ships, and g parties, in vo powers repulinels: and as also in relad every thing he fide and on ing of natural

fubjects, or, at least, upon an equality with the most favoured nation.

Art. X. The merchant ships of either of the parties, coining from the port of an enemy, or from their own, or a neutral port, may navigate freely towards any port of an enemy of the other ally. They shall nevertheless be held, whenever it shall be required, to exhibit, as well upon the high feas as in the ports, their fea-letters and other documents described in the twenty-fifth article, stating expressly that their effects are not of the number of those which are prohibited as contraband. And not having any contraband goods for an enemy's port, they may freely and without hindrance pursue their voyage towards the port of an enemy. Nevertheless, it shall not be required to examine the papers of vellels convoyed by vellels of war. but credence shall be given to the word of the officer who shall conduct the convoy.

Art. XI. If by exhibiting the fea-letters and other documents described more particularly in the twenty-fifth article of this treaty, the other party shall discover there are any of those forts of goods which are declared prohibited and contraband, and that they are configned for a port under the obedience of his enemy; it shall not be lawful to break up the hatches of fuch thip, nor to open any cheft, coffer, packs, calks, or other veffels found therein, or to remove the imailest parcel of her goods, whether the faid vessel belongs to the hibjests of their High Mightinesses the States-General of the United Netherlands, or to the subjects or inhabitants of the faid United States of America, unless the lading be brought on shore in presence of the officers of the court of admiralty, and an inventory thereof made: but there shall be no allowance to sell, exchange or alienate the same, until after that due and lawful process shall have been had against such prohibited goods of contraband, and the court of admiralty, by a fentence pronounced, shall have confiscated the same; saving always as well the ship itself, as any other goods found therein, which are to be effected free, and may not be detained on pretence of their being infected by the prohibited goods, much less shall they be confiscated as lawful prize: but on the contrary, when, by the visitation at land, it shall be found, that there are no contraband goods in the veilel, and it shall not appear by the papers. that he who has taken and carried in the vessel has been able to discover any there, he ought to be condemned in all the charges, damages, and interests of them, which he shall have caused, both to the owners of vessels, and to the owners and freighters of eargoes with which they shall be loaded, by his reinerty is taking and earrying them in declaring most expressly the five vessels shall assure the liberty of the estate with which they shall extend who shall be found in a free vessel, who may not be taken out of her, unless they are military men,

Missily in the fervice of an enemy

Art. XII. On the contrary, it is spreed, that whatever fiell be found to be leden by the fubjects and inhabitants of either party, on any thip belonging to the enemies of the other, or to their subjects, although it be not comprehended under the fort of prohibited goods, the whole may be conficuted in the same manner as if it belonged to the enemy; except, nevertheless, such effects and merchandises as were put on board fuch veffel before the declaration of war, or in the fpace of fix months after it; which effects shall not be in any manner subject to confication, but shall be faithfully and without delay restored in nature to the owners, who shall claim them, or estale them to be claimed, before the confication and fale; at also their proceeds, if the claim could not be made but in the space of eight months after the fale, which ought to be public: provided, nevertheless, that if the said merchandises are contraband, it shall by no means be lawful to transport them afterwards to shy port belonging to enemies.

Art. XIII. And that more effectual care may be taken for the fecurity of subjects and people of either party, that they do not suffer molestation from the vessels of war, or privateers of the other party, it shall be forbidden to all commanders of vessels of war, and other armed vessels of the said States-General of the United Netherlands, and the said United States of Americs, as well as to all their officers, subjects and people, to give any offence, or do any damage to those of the other party; and if they act to the contrary, they shall be, upon the fifst complaints which shall be made of it, being sound guilty, after a just examination, punished by their proper judges; and moreover, obliged to make satisfaction for all damages and interest thereof, by reparation, under pain and obligation of their per-

fons and goods.

Art. XIV. For further determining of what has been faid, all captains of privateers, or fitters out of veifels armed for war, under commission, and on account of private persons, hall be held before their departure, to give sufficient caution

as been faid, 'armed' for ate perfons, iens caution history competent judges, when to be entirely responsible for the hadrestration which they may commit in their cruises or voyages, to well its for the contraventions of their scapping and editors equinit the prefets treaty, and against the ordinances and editor which shall be published in consequence of, and in conformity to it, under pain of forfelows and mulity of the fail contentions.

Art. XV. All veilels and merchandifes, of whatforver pature, which shall be released out of the hands of any pintes or robbers, invigating the high few without regulfite committees, shall be brought into some port of one of the two States, and deposited in the hands of the officers of that port, in order to be restored entire to the true proprietor, as soon as due and sufficient proofs shall be made concerning the property thereof.

Art. XVI. If any ships or vessels, belonging to either of the parties, their subjects or people, shall, within the coasts or dominions of the other, slick upon the sands, or be wrecked, or suffer any other sea damage, all friendly assistance and relief shall be given to the persons shipwrecked, or such as shall be in danger thereof; and the vessels, effects and merchandises, or the part of them which shall have been saved, or the proceeds of them, if, being perishable, they shall have been sold, being claimed within a year and a day by the masters or owners, or their agents or attornies, shall be restored, paying only the ressonable charges, and that which must be paid in the same case for the salvage by the proper subjects of the country. There shall also be delivered them safe-conducts or passports for their free and safe passage from thence, and to return each one to his own country.

Art. XVII. In ease the subjects or people of either with their shipping, whether public and of war, or private and of merchants, be forced through stress of weather, pursuit of pirates or enemies, or any other urgent necessity for seeking of shelter and harbour, to retreat and enter into any of the rivers, creeks, bays, ports, roads or shores, belonging to the other party, they shall be received with all humanity and kindness, and enjoy all friendly protestion and help; and they shall be permitted to resresh and provide themselves at reasonable rates with victuals, and all things needful for the sustenance of their persons, or reparation of their ships; and they shall no ways be detained or hindered from returning out of the said ports or roads, but may remove and depart, when and whither they please, without any lett or hindrance.

Art. XVIII. For the better promoting of commerce on both fides, it is agreed, that if a war should break out between their High Mightanesses the States-General of the United Netherlands and the United States of America, there shall always be granted to the subjects on eath fide, the term of nine months, after the date of the rupture, or the proclamation of war, to the end that they may retire with their effects, and transport them where they please; which it shall be lawful for them to do: as well as to fell or transport their effects and goods in all freedom, and without any hindrance, and without being able to proceed, during the laid term of nine months, to any arrest of their effects, much less of their persons; on the contrary, there shall be given them, for their vessels and their effects which they would carry away, paliports and fafe-conducts for the nearest ports of their respective countries, and for the time necessary for the voyage. And no prize, made at fes, shall be adjudged lawful, at least, if the declaration of war was not, or could not be known in the last port which the vessel taken has quitted. But for whatever may have been taken from the subjects and inhabitants of either party, and for the offences which may have been given them in the interval of the faid terms, a complete fatisfaction shall be given them.

Art. XIX. No subject of their High Mightinesses the States-General of the United Netherlands shall apply for, or take any commission, or letters of marque, for arming any ship or ships to act as privateers against the said United States of America, or any of them, or the subjects and inhabitants of the said United States, or any of them, or against the property of the inhabitants of any of them, from any prince or state with which the faid United States of America may happen to be at war: nor shall any subject or inhabitant of the said United States of Americe, or any of them, apply for, or take any commission, or letters of marque, for arming any ship or ships, to act as privateers against the High and Mighty Lords the States-General of the United Netherlands, or against the subjects of their High Mightinesses, or any of them, or against the property of any one of them, from any prince or state with which their High Mightinesses may be at war. And if any person of either nation shall take such commission, or letters of marque, he shall be punished as a pirate.

21

itants of one ither of the eing entered into port, and not willing to unload their carrots, or break bulk, or take in any cargo, they shall not be abliged to pay, neither for the vessels, nor the cargoes, any duties of entry in or out, nor to render any account of their capture, or leaft if there is not just cause to presume, that they carry to an enemy merchandises of contraband.

Art. XXI. The two contracting parties grant to each other, mutually, the liberty of having, each in the ports of the other, confuls, vice-confuls, agents and commissions of their own appointing, whose functions shall be regulated by particular agreements, whenever either party chuses to make such appointments,

Art. XXII. This treaty shall not be understood in any manper to derogate from the ninth, tenth, nineteenth and twentyfourth articles of the treaty with France, as they were numibered in the same treaty concluded the 6th of February, 1778, and which make the articles ninth, tenth, feventeenth, and twenty-fecond, of the treaty of commerce now sublifting between the United States of America and the crown of nor shall it hinder his Catholic Majosty from acceding to that treaty, and enjoying the advantages of the faid four articles.

Art, XXIII. If at any time the United States of America shall judge necessary to commence negociations with the king or emperor of Morocco and Fez, and with the regencies of Ale giers, Tunis or Tripoli, or with any of them, to obtain pallports for the fecurity of their navigation in the Mediterranean fea, their High Mightinesses promise, that upon the requisition which the United States of America shall make of it, they will second such negociations in the most favourable manner, by means of their confuls refiding near the faid king, emperor, and

regencies.

Art. XXIV. The liberty of navigation and commerce shall extend to all forts of merchandiles, excepting only those which are distinguished under the name of contraband, or merchandifes prohibited: and under this denomination of contraband, and merchandises prohibited, shall be comprehended only warlike stores and arms, as mortars, artillery, with their artifices and appurtenances, fufils, pistols, bombs, grenades, gunpowder, saltpetre, sulphur, match, bullets and balls, pikes, sabres, lances, halberts, casques, cuirasses, and other forts of arms; as also, soldiers horses, saddles, and furniture for horses. All other effects and merchandifes, not before specified expressly, and even all forts of naval matters, however proper they may be for the malifoldin and equipment of veilele of war, or for the contribution of whiter fort of mechines of war, by land in he fail we judged contribund, naither by the letter, was the war they be comprehended under the nation of effects which are not expressly before somet, may, without any exception, and in perfect liberty, he treasperted by the subjects and inhabitants of both allies, from and to places belonging to the enemy accepting only, the places which at the sum time shall be befored, which are surrounded nearly by forms of the belliggreent powers.

Art. XXV. To the end that all diffention and quarrel may be avoided and prevented, it has been agreed, that in case one of the two parties happens to be at war, the veffels belonging to the subjects or inhabitants of the other ally shall be provided with fea-letters or paffports, expreshing the name, the property, and the burthen of the veffel, as also the name of the place of bods of the master or commander of the said vessely to the d that thereby it may appear, that the veffel really and truly lengs to lubjects or inhabitants of one of the parties; which mores that be drawn and distributed according to the form nexed to this treaty. Each time that the veffel shall return, the should have such her passport renewed; or, at feast, they ought not to be of more ancient date than two years, before the vellet has been returned to her own country. It has been also egreed, that fuch vessels being loaded, ought to be provided not only with the faid passports or sea-letters, but also with a general peliport, or with particular pafiports, or manifelts, or other blic documents, which are ordinarily given to vellels outward sand, in the ports from whence the vellels have fet fail in the s, containing a specification of the cargo, of the place the next the velicle have let fail in the last place, containvellet deserted, and of that of her destination; or, instead of all thele, with certificates from the magistrates, or governors of cities, places and colonies from whence the yellel came, given in the usual form, to the end that it may be known whether there are any effects prohibited or contraband on board the seles, and whether they are destined to be carried to an eney's country or not. And in case any one judges proper to express in the said documents, the persons to whom the effects

or for the lar, by land the letter, aught a of effects any exerpludies and aging to the large field only that he forme of the

quarrel may le belonging be provided he property, the place of effel to the ily and truly rties; which to the form shall return. at feaft, they rs, before the has been alfo provided not with a general its, or other fiels outward fet fail in the of the place lace, containwhence the or, instead of governors of came, given own whether on board the ed to an enees proper to m the effects

BETWEEN

HIS MAJESTY THE KING OF PRUSSIA, AND THE THIRTEEN UNITED STATES OF AMERICA.

HIS Majesty the King of Prussia, and the United Lates of America, desiring to six, in a permanent and equitable manner, the rules to be observed in the intercourse and commerce they desire to establish between their respective countries, his Marky and the United States have judged, that the said end cannot be better obtained than by taking the most perfect equality and reciprocity for the basis of their agreement.

With this view, his Majesty the King of Prussia has nominated and constituted, as his plenipotentiary, the Baron Frederick William de Thulemeier, his privy counsellor of embassy and envoy extraordinary, with their High Mightinesses the States-General of the United Netherlands: and the United States have, on their part, given full powers to John Adams, Esq. late one

of their ministers plenipotentiary for negociating a peace, heresofere a delegate in Congress from the State of Massachusetts,
and chief justice of the same, and now minister plenipotentiary
of the United States with his Britannic Majesty; Dr. Benjamin
Franklin, late minister plenipotentiary at the Court of Verfailles,
and another of their ministers plenipotentiary for negociating a
peace; and Thomas Jesserson, heretofore a delegate in Congress
from the State of Virginia, and governor of the said State, and
now minister plenipotentiary of the United States at the Court
of his Most Christian Majesty, which respective plenipotentiaries, after having exchanged their sull powers, and on mature
deliberation, have concluded, settled and signed the following
articles:

Article I. There shall be a firm, inviolable and universal peace and sincere friendship between his Majesty the King of Prussia, his heirs, successors and subjects, on the one part, and the United States of America and their citizens, on the other, without exceptions of persons or places,

Art. II. The subjects of his Majesty the King of Prussia may frequent all the coasts and countries of the United States of America, and reside and trade there in all forts of produce, manufactures and merchandise; and shall pay within the said United States no other or greater duties, charges or sees whatsoever, than the most savoured nations are or shall be obliged to pay; and they shall enjoy all the rights, privileges, and exemptions in navigation and commerce, which the most savoured nation does or shall enjoy; submitting themselves, nevertheless, to the laws and usages there established, and to which are submitted the citizens of the United States and the citizens and subjects of the most savoured nations.

Art. III. In like manner the citizens of the United States of America may frequent all the coasts and countries of his Majesty the King of Prussia, and reside and trade there in all forts of produce, manufactures and merchandise, and shall pay in the dominions of his said Majesty, no other or greater duties, charges or tess whatsoever, than the most favoured nation is or shall be obliged to pay; and they shall enjoy all the rights, privileges, and exemptions in navigation and commerce, which the most favoured nation does or shall enjoy; submitting themselves nevertheless to the laws and usages there established, and to which are submitted the subjects of his Majesty the King of Prussia, and the subjects and citizens of the most favoured nations.

States of Majefty forts of in the charges shall be ivileges, he most lves neo which Prussia.

S. 7 . 17 4 14

Art. IV. More especially each party shall have a right to carry their own produce, manufactures and merchandile, in their own or my other veffels, to any parts of the dominions of the other where it shall be lawful for all the fubicate or citizens of that other freely to purchase them; and thence to take the produce. manufactures and merchandife of the other, which all the faid citizens or subjects shall in like manner be free to fell them, paying in both cases such duties, charges and fees only, as are or shall be paid by the most favoured nation. Nevertheress the King of Prussia and the United States, and each of them, referve to themselves the right where any nation restrains the transportation of merchandile to the veffels of the country of which it is the growth or manufacture, to establish against such nation retaliating regulations; and also the right to prohibit, in their respective countries, the importation and expertation of all merchandife whatfoever, when reasons of fiste shall require it. In this case, the subjects or citizens of either of the contracting perties shall not import nor export the merchandise prohibited by the other; but if one of the contracting parties permits any other nation to import or export the same merchandise, the citizens or fubjects of the other shall immediately enjoy the same liberty, or touch the listens your for the

Art. V. The merchants, commanders of vessels, or other subjects or citizens of either party, shall not, within the ports or jurisdiction of the other; be forced to unload any fort of merchandise into any other vessels; nor to receive them into their own, nor to wait for their being loaded longer than they please.

Art. VI. That the vessels of either party loading within the ports or jurisdiction of the other, may not be uselessly harassed or detained, it is agreed, that all examinations of goods required by the laws, shall be made before they be laden on board the vessel, and that there shall be no examination after; nor shall the vessel be searched at any time, unless articles shall have been laden therein clandestinely and illegally; in which case the person by whose order they were carried on board, or who carried them without order, shall be liable to the laws of the land in which he is: but no other person shall be molested, nor shall any other goods, nor the vessel, be seiled or detained for that cause.

Art. VII. Each party shall endeavour, by all the means in their power, to protect and defend all vessels and other effects belonging to the citizens or subjects of the other, which shall be

within the extent of their jurisdiction, by see or by land; and stall their efforts to recover, and cause to be restored to their right owners; their vessels and effects which shall be taken from them within the extent of their said jurisdiction.

Art. VIII. The vettels of the subjects or citizens of either party, coming on any coast belonging to the other, but not willing to unless their eargies of break bulk, shall have liberty to depart, and to pursue their woyage without molestation; and without being obliged to render account of their cargo, or to pay any duties, charges or fees whatloever, except those established for vessels entered into port, and appropriated to the maintenance of the port itself; or of other establishments for the safety and convenience of navigators, which duties, charges and fees, shall be the same, and shall be paid on the same footing as in the case of subjects or citizens of the country where they are establisheds

Art. IX. When any vessel of either party shall be wrecked, so so therwise damaged on the coasts, or within the dominion of the other, their respective subjects or citizens shall receive as well for themselves as for their vessels and effects, the same assistance which would be due to the inhabitants of the country where the damage happens, and shall pay the same charges and dues only as the said inhabitants would be subject to pay in a like case; and if the operations of repair shall require that the whole or any part of their cargo be unladed, they shall pay no duties; charges or fees, on the part which they shall relade and carry away. The ancient and barbarous right to wrecks of the sea shall be entirely abolished with respect to the subjects or citizens of the two contracting parties.

y shall have jurisdiction e; and their other party, by testament ter by themthe same at tants of the ct to pay in neative, such ag a time, as e, until the em. And if quodion shall arise among several claimants, to which of themethe said goods belong, the same shall be decided shally by the laws and judges of the land wherein the said goods are. And where, on the death of any person holding real estate within the territories of the sna party, such real estate would, by the laws of the land, descend on a citizen or subject of the other, were he not disqualified by alienage, such subject shall be allowed a reasonable time to sell the same, and to withdraw the proceeds without molestation, and exempt from all rights of detraction on the part of the government of the respective States. But this article shall not derogate in any manner stom the force of the laws already published, or hereaster to be published, by his Majesty the King of Prussia, to prevent the emigration of his subjects.

Art. XI. The most perfect freedom of conscience, and of worship, is granted to the citizens or subjects of either party, within the jurisdiction of the other, without being liable to molestation in that respect, for any cause or insult on the religion of others. Moreover, when the subjects or citizens of the one party shall die within the jurisdiction of the other, their bodies shall be buried in the usual burying grounds, or other decent and suitable places, and shall be protected from violation or disturbance.

Art. XII. If one of the contracting parties should be engaged in war with any other power, the free intercourse and commerce of the subjects or citizens of the party remaining neuter with the belligerent powers shall not be interrupted. On the contrary, in that case, as in sull peace, the vessels of the neutral party may navigate freely to and from the ports, and on the coasts of the belligerent parties, free vessels making free goods insomuch that all things shall be adjudged free, which shall be on board any vessel belonging to the neutral party, although such things belong to an enemy of the other; and the same freedom shall be extended to persons who shall be on board a free vessel, although they shall be enemies to the other party, unless they be soldiers in the actual service of such enemy.

Art. XIII. And in the same case, of one of the contracting parties being engaged in war with any other power, to prevent all the difficulties and misunderstandings that usually arise respecting the merchandise heretofore called contraband, such as arms, ammunition and military stores of every kind, no such articles, carried in the vessels, or by the subjects or citizens of

one of the parties, to the enemies of the other, thall be semed contraband, to as to induce confileation or condemnation and a loss of property to individuals. Nevertheless, it stall be lawful to stop such vessels and articles, and to detain them for fuch length of time as the captors may thing necessary, to prevent the inconvenience or damage that might enfue from their proceeding paying, however, a reasonable compensation for the lose such arrest shall occasion to the proprietors; and it half farther be showed to use in the service of the captors, the whole or any part of the military stores so detained, paying the owners the full value of the same, to be ascertained by the surrent price at the place of its destination. But in the case supposed, of a vessel stopped for articles heretofore deemed contraband, if the mafter of the veffel stopped will deliver out the goods supposed to be of contraband nature, he shall be admitted to do it; and the vessel shall not in that case be carried into any port, nor further detained, but shall be allowed to proceed on her voyage.

XIV. And in the same case, where one of the parties is engaged in war with another power, that the vessels of the neutral pasty may be readily and certainly known, it is agreed, that they shall be provided with sea letters, or passports, which shall express the name, the property, and burden of the vessel, is also the name and dwelling of the masser; which passports shall be made out in good and due forms, to be settled by consentions between the parties, whenever occasions shall require; shall be renewed as often as the vessel shall return into port; and shall be exhibited, whenever required, as well in the open sea as in port. But if the said vessel be under convoy of one or store ressels of war, belonging to the neutral party, the sample declaration of the officer commanding the convoy, that the said vessel belongs to the party of which he is, shall be considered as establishing the fact, and shall relieve both parties

from the grouble of further examination.

XV. And to prevent entirely all disorder and violence in fuch cases, it is stipulated, that when the vessels of the neutral party, sailing without convoy, shall be met by any vessel of war, public or private, of the other party, such vessel of war shall mot approach within cannon shot of the said neutral vessel, nor lend more than two or three men in their boat on board the same, to examine her sea settlers or passports. And all persons belonging to any vessel of war, public or private, who shall modest or injure, in any manner whatever, the people, vessels, or effects of the other party, shall be responsible

their persons and property, for damages and interest; sufficient security for which shall be given by all commanders of private armed vessels, before they are commissioned.

KVI. It is agreed, that the subjects or citizens of each of the contracting parties, their vessels and effects, shall not be liable to any embarge or detention on the part of the other, fee any millitary expedition, or other public or private purpose whatsoever. And in all cases of seigure, detention, or arrest for debts contracted, or offences committed by any citizen or subject of the one party, within the jurisdiction of the other, the same shall be made and prosecuted by order and authority of law only, and according to the regular course of proceedings usual in such cases.

XVII if any veffel or effects of the neutral power be taken by an enemy of the other, or by a pirate, and retaken by the other, they shall be brought into some port of one of the parties, and delivered into the custody of the officers of that port, in order to be restored entire to the true proprietor, as soon to due proof shall be made concerning the property thereof.

KVIII. If the citizens or subjects of either party, in danger from temperts, pirates, enemies, or other accident, shall take refuge, with their vessels or effects, within the harbours or jurisdiction of the other, they shall be received, protested, and treated with humanity and kindness, and shall be permitted to furnish themselves at reasonable prices with all refreshments, provisions, and other things necessary for their susteenance, health and accommodation, and for the repair of their vessels.

XIX. The vessels of war, public and private, of both parties, shall earry freely wheresoever they please, the vessels and effects taken from their enemies, without being obliged to pay any duties, charges, or sees, to officers of admiralty, of the customs, or any others; nor shall such prizes be arrested, searched or put under legal process, when they come to, and enter the ports of the other party; but may freely be carried out again at any time, by their captors, to the places expressed in their commissions, which the commanding officer of such vessels shall be obliged to shew. But no vessel which shall have made prizes on the subjects of his Most Christian Majesty the King of France, shall have a right of asylum in the ports or havens of the said United States; and if any such be forced therein, by tempest or dangers of the sea, they shall be obliged to depart as soon as possible, according to the tener of the treaties

existing between his faid Most Christian Majesty and the faid.
United States, and the faid th

XX. No citizen or subject of either of the contracting-parsies shall take from any power with which the other may be at war, any commission or letter of marque for arming any vessel to est as privateer against the other, on pain of being punished as a pirate; nor shall either party hire, lend, or give any part of their naval or military force to the enemy of the other, to sid them offensively or desensively against that other.

XXI. If the two contracting parties should be engaged in a war against a common enemy, the following points shall be observed between them:

sit. If a vellel of one of the parties, retaken by a privateer of the other, shall not have been in possession of the enemy more than twenty-four hours, the thall be reftored to the first owner for one third of the value of the vessel and cargo; but if the thall have been more than twenty-four hours in the polfession of the enemy, the shall belong wholly to the receptor, ed. If in the same case the recapture were by a public vessel of war of one party, restitution shall be made to she owner for one thirtieth part of the value of the wellel and cargo, if the shall not have been in the polletion of the enemy more than swents four hours, and one touch of the laid value where the thall have been langer, which fums shall be distributed in gratuities to the receptors. 3d. The restitution in the cases afgelaid, shall be after due proof of property, and furety given for the part to which the recaptors are entitled, 4th, The veffels of war, public and private, of the two parties, shall be regioncally admitted with their prizes into the respective ports of each: but the faid prizes shall not be discharged nor fold there. until their legality, shall have been decided, according to the laws and regulations of the state to which the captor, balongs. but by the judicatures of the place into which the prize shall have been conducted. 5th, It shall be free to each party to make fuch regulations as they shall judge necessary, for the conduct of their respective vessels of war, public and private, relative to the velicls which they shall take and carry into the ports of the two parties. of their limbs t that throlly turn !!

XXIII. If was Mould wife between the two contracting parties, the merchants of either country, then reliding in the other, shall be allowed to remain nine months to collect their debts, and fettle their affeirs, and may depart freely, carrying off all their effects, without molefation or hindrance : and all women and children, scholars of every faculty, cultivators of the earth, artifans, manufacturers, and filhermen, unarmed and inhabiting unfortified towns, villages or places, and in general all others, whose occupations are for the common sublistence and benefit of mankind, shall be allowed to continue their respective employments, and shall not be molested in their persons; nor shall their houses or goods be burnt, or otherwise destroyed. hor their fields walted by the armed force of the enemy, into whole power, by the events of war, they may happen to fall: but if any thing be necessary to be taken from them for the use of fuch armed force, the fame shall be paid for at a realonable price. And all merchant and trading vellels employed in exchanging the products of different places, and thereby rendering the necellaries, conveniencies, and comforts of human life more easy to be obtained, and more general, shall be allowed to pais free and unmidelied; and neither of the contracting parties thell grant or affice any commission to any private armed vessels.

XXIV. And to prevent the destruction of prisoners of war. by lending them into distant and inclement countries, or by crowding them in close and noxious places, the two contracting parties folemnly pledge themselves to each other, and to the world, that they will not adopt any fuch practice; that neither will fend the prisoners whom they may take from the other, into the East-Indies, or any other parts of Asia or Africa, but that they shall be placed in some part of their dominions in Europe or America, in wholesome situations; that they shall not be confined in dungeons, prilon thips, nor prilons, nor be put into irons, nor bound, nor otherwise restrained in the use of their limbs; that the officers shall be enlarged on their paroles within convenient districts, and have comfortable quarters; and the common men be disposed in cantonments, open and extenfive enough for air and exercise, and lodged in barracks as roomy and as good as are provided by the party in whole power they are, for their own troops; that the officers thall also be

empowering them to take or deftroy fuch trading vellets, or in-

terrupt fach commerce bus, 24 magagg the foota

faily furnished by the party in whose power they are, with many rations, and of the lame erticles and quality as are allowed by them, either in kind or commutation, to officers of equal rank in their own army; and all others shall be daily furnished by them with such rations as they allow to a common foldier in their own fervice, the value whereof shall be paid by the other party, on mutual adjustment of accounts for the justenance of prisoners at the close of the war; and the faid accounts shall not be mingled with, or fet off against any others, ner the balances due on them be withheld as a fatisfaction or reprilal for any other article, or for any other cause, real, or presended, whatever; that each party shall be allowed to keep a commillary of priloners of their own appointment, with every separate cantonment of prisoners in possession of the other; which commissary shall see the prifoners as often as he pleafes, shall be allowed to receive and distribute whatever comforts may be fent to them by their friends, and shall be free to make his reports in open letters to those who employ him; but if any officer shall break his perole, or any other prisoner shall escape from the limits of his contament, after they shall have been designated to him, such individual officer or other prisoner shall forfeit so much of the benefit of this article, as provides for his enlargement perole or cantonment. And it is declared, that neither the pretence that war dissolves all treaties, nor any other whatever, thall be confidered as annulling or fulpending this and the next preceding article; but, on the contrary, that the hate of wer is precifely that for which they are provided, and during which they are to be as facredly observed as the most acknowledged articles in the law of nature or nations.

XXV. The two contracting parties grant to each other the liberty of having each in the ports of the other, confuls, vice-confuls, agents, and commissaries of their own appointment, whose functions shall be regulated by particular agreement, whenever either party shall choose to make such appointment; but if any such consuls shall exercise commerce, they shall be submitted to the same laws and usages to which the private individuals of their nation are submitted in the same place.

XXVII If either party thall hereafter grant to my other nation, any particular favour in havigation or commerce, it thall immediately become common to the other party—freely, where it is freely granted, to such other nation—or on yelding the compensation, where such nation does the same.

By their President, with the advice and consent of their Senate.

रेक्टरेडिकार be fighted कर पूर्व लेडिका क्रिकेट कर्क कार्य स्वतिहरू रहता है। 1 13 Britannic MajeRy and the United States of America, being defirous by a Treaty of Amity, Commerce and Navigation, to terminate their differences in such a manner, as without reference to the merits of their suspective complaints and pretentions, may be the best calculated to produce mutual fatisfaction and good understanding: And also to regulate the Commerce and Navigation between their respective courthe fame reciprocally beneficial and fatisfactory: they have respectively, named their Plenipotentiaries, and given them full powers to treat of, and conclude the faid Treaty, that is to fay, his Britannic Majesty has named for his plenipotentiary, the Right Hon. Wm. Wyndham Baron Grenville of Wotton, one of his Majesty's privy council, and his Majesty's principal secretary of state for foreign affairs; and the President of the faid United States, by and with the advice and consent of the Senate thereof, hath appointed for their plenipotentiary, the Hon. John Jay, chief justice of the said United States, and their envoy extraordinary to his Majesty, who have agreed one and concluded the following

#### ARTICLES:

Art. 1. There shall be a firm inviolable and universal Peace, and a true and sincere friendship between his Britannic Majesty, his heirs and successors, and the United Stats of America; and between their respective countries, territories, cities, towns and people of every degree, without exception

of persons or places. When the property will be the person of the person

Art. 1. His Majesty will withdraw all his troops and garrifons from all posts and places within the boundary lines affigured by the treaty of peace to the United States. This evacustion shall take place on or before the first day of June, 1 706. and all the proper measures shall in the interval be taken by concert between the government of the United States, and his Majefty's governor general in America, for fettling the previous strangements which may be necessary respecting the delivery of the faid posts: the United States in the mean time at their discretion extending their fettlements to any part within the faid boun my line, except within the precincts or jurisdiction of any of the faid posts. All fettlers and traders within the preciucles or jurisdiction of the said posts, shall continue to enjoy. unmolested, all their property of every kind, and shall be prosected therein. They shall be at full liberty to remain there, or to remove with all or any part of their effects; and it thall also be free to them to fell their lands, houles, or effects, or to retain the property thereof, at their discretion; such of them as shall continue to refide within the faid boundary lines, shall not be compelled to become citizens of the United States, or to take any orth of allegiance to the government thereof, but they shall be at full liberty so to do, if they think proper, and they shall make and declare their election within one year after.

the evacuation aforefaid. And all persons who shall continue there after the expiration of the said year, without having declared the intention of penaining subjects of his Britannic Majesty, the be considered as having elected to become citizens of the United States.

Art. 3. It is agreed that it thall at all times be free to his Majesty's subjects, and to the citizens of the United States, and also to the Indians dwelling on either fide of the said boundary line, freely to pass and repais by land or inland navigation, into the respective territories and countries of the two parties on the continent of America Tthe country within the limits of the Hudfon's Bay Company only excepted and to navigate all the lakes, rivers, and waters thereof, and freely to carry on trade and commerce with each other. But it is understood, that this article does not extend to the admission of vessels of the United Stetes into the fee ports, harbours, bays or creeks of his Majelty's faid territories; nor into fuch parts of the rivers in his Majefty's faid territories as are between the mouth thereof, and the highest port of entry from the sea, except in small vessels trading bene fide between Montreal and Quebec, under such regulations as shall be established to prevent the possibility of any frauds in this respect. Nor to the admission of British vessels from the fea into the rivers of the United States, beyond the highest ports of entry for foreign vellels from the feel The river Middlippi shall showever, according to the treaty of peace, be entirely open to both parties; and it is further agreed. that all the ports and places on its eaftern fide, to which foever of the parties belonging, may freely be restored toward used by both parties, in as ample a manner as any of the Atlantic ports

All goods and merchandifes whose importation into his Majesty's said territories in America, shall not be entirely prohibited, may freely, for the purposes of commerce, be carried into the same in the manner aforesaid, by the citizens of the United States, and such goods and merchandise shall be subject to no higher or other duties than would be payable by his Majesty's subjects on the importation of the same from Europe into the said territories. And in like manner, all goods and merchandises whose importation into the United States shall not be wholly prohibited, may be freely, for the purposes of commerce, be carried into the same, in the manner aforesaid, by his Majesty's subjects, and such goods and merchandise shall be subject to no higher or other duties than would be payable by

of places of the United States, or any of the ports or places of

his Majestytin Great-Britains tertugit felt to at the trades of an amount

the citizens of the United States on the importation of the fame, in American vessels; into the Atlantic ports of the said States. And all goods not prohibited, to be exported from the said serritories, respectively, may in like manner be carried out of the same by the two parties respectively, paying duty as afore-said.

No duty of entry shall ever be levied by either party on peltries brought by land, or inland navigation into the said territories respectively, nor shall the Indians passing or re-passing with their own proper goods and effects of whatever. But goods in bales, or other large packages unusual among Indians, shall not be considered as goods belonging bona side to Indians.

No higher or other tolls or rates of ferriage than what are or shall be payable by natives, shall be demanded on either side; and no duties shall be payable on any goods which shall merely be carried over any of the portages or carrying places on either side, for the purpose of being immediately re-imbarked and carried to some other place or places. But as by this stipulation it is only meant to secure to each party a free passage across the portages on both sides, it is agreed, that this exemption from duty shall extend only to such goods as are carried in the usual and direct road across the portage, and are not attempted to be in any manner sold or exchanged during the passage across the same, and proper regulations established to prevent the possibility of any frauds in this respect.

As this article is intended to render in a great degree the local advantages of each party common to both, and thereby to promote a disposition favorable to friendship and good neighborhood, it is agreed, that the respective governments will mutually promote this amicable entercourse, by causing speedy and impartial justice to be done, and necessary protection to be extended to all who may be concerned therein.

er Miffiffippi d by a line to n the manner offy, and the en in concert overnment of aid river from y to the prinhe parts adja-, it should apsuch a line as is above mentioned, the two parties will thereupon proceed by amicable negociation to regulate the boundary line in that quarter, as well as all other points to be adjusted between the said parties, according to justice and mucual convenience, and in conformity to the intent of the said treaty.

Art. 5. Whereas doubts have arisen what river was truly intended under the name of the river St. Croix, mentioned in the said treaty of Peace, and forming a part of the boundary therein described, that question shall be referred to the final decision of Commissioners to be appointed in the following

manner, viz.

One Commissioner shall be named by his Majesty and one by the President of the United States, by and with the advice and consent of the Senate thereof, and the said two commissioners shall agree on the choice of a third; or if they cannot so agree, they shall each propose one person, and, of the two names so proposed, one shall be drawn by lot in the presence of the two original commissioners. And the three commissioners so appointed, shall be fworn impartially to examine and decide the faid question according to such evidence as shall respectively be laid before them on the part of the British government and of the United States. The faid commissioners shall meet at Halifax and shall have power to adjourn to such other place or places as they shall think fit. They shall have power to appoint a secretary, and to employ such surveyors or other persons as they shall judge necessary. The said commissioners shall by a declaration under their hands and seals decide what river is the river St. Croix intended by the treaty. The faid declaration shall contain a description of the said river, and shall particularise the latitude and longitude of its mouth and its fource, Duplicates of this declaration and of the statements of their accounts and of the journal of their proceeding shall be delivered by them to the agent of his Majesty and to the agent of the United States, who may be respectively appointed and authorised to manage the business on behalf of the respective governments. And both parties agree to confider such decision as final and conclufive, so that the same shall never thereafter be called into question, or made the subject of dispute or difference between them.

Art. 6. Whereas it is alledged by divers British merchants and others his Majesty's subjects, that debts to a considerable amount, which were bona side contracted before the peace, still remaining owing to them by citizens or inhabitants of the United States, and that by the operation of various lawful impediments since the peace, not only the full recovery of the said

debts has been delayed, but also the value and security thereof have been, in several instances impaired and lessened, so that by the ordinary course of judicial proceedings, the British creditors cannot now obtain, and aftually have and receive full and adequate compensation for the losses and damages which they have thereby sustained : It is agreed, that in all such cases where full compensation for such losses and damages cannot for whatever reason be actually obtained, had and received by the said creditors in the ordinary course of justice, the United States will make full and complete compensation for the same to the faid creditors; but it is distinctly understood, that this provision is to extend to such losses only as have been occasioned by the lawful impediments aforefaid, and is not to extend to losses occasioned by such insolvency of the debtors, or other causes as would equally have operated to produce such loss, if the said impediments had not existed, nor to such losses or damages as have been occasioned by the manifest delay or negligence, or wilful omission of the claimant.

For the purpose of ascertaining the amount of any such losses and damages, five commissioners shall be appointed, and authorised to meet and aft in manner following, viz. Two of them shall be appointed by his Majesty, two of them by the President of the United States, by and with the advice and confer t of the Senate thereof, and the fifth by the unanimous voice of the other four; and if they should not agree in such choice, then the commissioners named by the two parties shall respectively propose one person, and of the two names so proposed, one shall be drawn by lot in the presence of the four original commissioners, When the five commissioners thus appointed shall first meet, they shall before they proceed to act respectively take the following oath or affirmation, in the presence of each other, which oath or affirmation being to taken, and duly attested, shall be entered on the record of their proceedings, viz. I, A. B. one of the commissioners appointed in pursuance of the fixth article of the treaty of amity, commerce, and navigation between his Britannic Majesty, and the United States of America, do solemnly Iwear, or athrm, that I will honeftly, diligently, impartially, and carefully examine, according to justice and equity, decide all such complaints as under the said article shall be preferred to the faid commissioners; and that I will forbear to act as a commissioner in any case in which I may be personally interested,

Three of the faid commissioners shall constitute a board, and shall have power to do any act appertaining to the said commission, provided that one of the commissioners named on each

rity thereof ened, fo that the British receive full which they cafes where t for whatby the faid nited States fame to the is provision ioned by the to loffes ocer caufes as is, if the said damages as egligence, or

B. one fixth article between his a, do solemn-, impartially, quity, decide preferred to act as a comintercsted, a board, and

the faid com-

med on each

fide, and the fifth commissioner shall be present, and all decifions shall be made by the majority of the voices of the commissioners then present; eighteen months from the day on which
the said commissioners shall form a board, and be ready to proceed to business, are assigned for receiving complaints, and
applications; but they are nevertheless authorised in any particular cases in which it shall appear to them to be reasonable and
just, to extend the said term of eighteen months for any term
not exceeding six months, after the expiration thereof. The
said commissioners shall first meet at Philadelphia, but they shall
have power to adjourn from place to place as they shall see
cause.

The said commissioners in examining the complaints and applications so preferred to them, are empowered and required, in pursuance of the true intent and meaning of this article, to take into their consideration all claims, whether of principal and interest, or balances of principal and interest, and to determine the same respectively according to the merits of the several cases, due regard being had to all the circumstances thereof, and as equity and justice shall appear to them to require. And the said commissioners shall have power to examine all such persons as shall come before them on oath or affirmation or books, or papers, or copies, or extracts thereof, every such deposition, book, or paper, or extract being duly authenticated, either according to the legal forms now respectively existing in the two countries, or in such other manner as the said commissioners shall see cause to require or allow.

The award of the said commissioners or of any three of them as aforesaid, shall in all cases be final and conclusive, both as to the justice of the claim, and to the amount of the sum to be paid to the creditor or claimant: and the United States undertake to cause the sum so awarded to be paid in specie to such creditor or claimant with deduction; and at such time or times, and at such place or places as shall be awarded by the said commissioners; and on condition of such releases or assignments to be given by the creditor of claimant, as by the said commissioners may be directed; provided always, that no such payment shall be fixed by the said commissioners to take place sooner than twelve months from the day of the exchange of the ratifications of this treaty.

Art. 7. Whereas complaints have been made by divers merchants and other, citizens of the United States, that during the course of the war in which his Majesty is now engaged, they have sustained considerable losses and damage, by reason

of irregular or illegal captures or condemnations of their veffels and other property under colour of authority or commiffions from his Majesty, and that from various circumstances belonging to the said cases, adequate compensation for the losses and damages so sustained cannot now be actually obtained had and received by the ordinary course of judicial proceedings: It is agreed, that in all such cases were adequate compensation cannot, for whatever reason, be now actually obtained, had and received by said merchants and others in the ordinary course of justice, full and complete compensation for the same will be made by the British government to the said complainants. But it is distinctly understood that this provision is not to extend to such losses or damages as have been occasioned by the manifest delay or negligence, or wilful omistion of the claimants,

That for the purpole of ascertaing the amount of any such losses and damages, five commissioners shall be appointed and authorised to act in London, exactly in the manner directed with respect to those mentioned in the preceding article, and after having taken the same oath or affirmation (mutatis mutandis) the same term of eighteen months is also assigned for the reception of claims, and they are in like manner authorised to extend the same in particular cases. They shall receive testimony, books, papers and evidence in the same latitude, and exercise the like discretion and powers respecting that subject; and shall decide the claims in question according to the merits of the several cases, and to justice, equity, and the laws of nations. The award of the commissioners, or any such three of them as aforesaid, shall, in all cases be final and conclusive, both as to the justice of the claim, and the amount of the sum to be paid to the claimant; and his Britannic Majesty undertakes to cause the same to be paid to fuch claimant in specie, without any deduction, at such place or places, and at fuch time or times as shall be awarded by the faid commissioners, and on condition of such releases or al, figuments to be given by the claimants, as by the faid commiffioners may be directed.

And whereas certain merchants and others his Majesty's subjects complain that in the course of the war they have sustained loss and damage by reason of the capture of the vessels and merchandise taken within the limits and jurisdiction of the States, and brought into the ports of the same, on taken by vessels originally armed in ports of the said States.

It is agreed that in all such cases where restitution shall not have been made agreeably to the tenor of the letter from Mr.

their vely or commifcumstances or the losses obtained il proceedquate comcually obers in the infation for to the said this provihave been ilful omis-

fty's fubfustained essels and on of the en by ves-

fhall not from Mr,

Tefferson to Mr. Hammond, dated at Philadelphia, Sept. 5, 1793; a copy of which is annexed to this treaty; the complaints of the parties shall be and hereby are referred to the commissioners to be appointed by virtue of this article, who are hereby authorised and required to proceed in the like manner relative to these as to the other cases committed to them : and the United States undertake to pay to the complainants or claimants in specie, without deduction, the amount of fuch fums as shall be awarded to them respectively by the said commissioners, and at the times and places which in such awards shall be specified; and on conditions of such releases or assignments to be given by the claimants as in the faid award may be directed : and it is further agreed that not only the now existing cases of both descriptions but also all such as shall exist at the time of exchanging the ratifications of this treaty, shall be considered within the provisions, intent and meaning of this article.

Art. 8. It is further agreed, that the commissioners mentioned in the two preceding articles shall be respectively paid in such manner as shall be agreed between the two parties; such agreement being to be settled at the time of the exchange of the ratisfication of this treaty. And all other expences attending the said commissions shall be defrayed jointly by the two parties, the same being previously ascertained and allowed by the majority of the commissioners. And in the case of death, sickness or necessary absence, the place of every such commissioner respectively shall be supplied in the same manner as such commissioner was appointed, and the new commissioner shall take the same oath or affirmation and do the same duties.

Art. 9. It is agreed that British subjects who now hold lands in the territories of the United States, and American citizens who now hold lands in the dominions of his Majesty shall continue to hold them according to the nature and tenure of their respective states and titles therein; and may grant, sell, or devise the same to whom they please, in like manner as if they were natives; and that neither they nor their heirs or assigns shall so far as may respect the said lands and the legal remedies incident thereto, be regarded as aliens.

Art. 10. Neither the debts due from individuals of the one nation, to individuals of the other, nor shares nor monies which they may have in the public funds, or in the public or private banks shall ever in any event of war or national differences be sequestered or conficated, it being unjust and impolitic that debts and engagements contrasted and made by individuals hav-

ing confidence in each other, and in their respective governments should ever be destroyed as simpaired by national authority on account of national differences and discontents, which is the same of the same of

Art, it It is agreed between his Majesty and the United States of America, that there shall be a reciprocal and entirely perfect liberty of navigation and commerce between their respective people, in the manner, under the limitations and on the conditions specified in the following articles.

Art. 12. His Majesty consents that it shall and may be lawful during the time herein after limited for the citizens of the United States to carry to any of his Majesty's islands and ports in the West-Indies from the United States, in their own vessels, not being above the burthen of seventy tons, any goods or merchandises being of the growth, manufacture or produce of the said States, which it is or may be lawful to carry to the said islands or ports from the said States in British vessels; and that the said American vessels shall be subject there to no other or higher tonnage duties or charges than shall be payable by British vessels in the ports of the United States; and that the cargoes of the said American vessels shall be subject there to no other or higher duties or charges than shall be payable on the like articles if imported there from the said States in British vessels.

And his Majesty also consents that it shall be lawful for the said American citizens to purchase, load and carry away in their said vessels to the United States from the said islands and ports all such articles being of the growth, manufacture or produce of the said islands as may now by law be carried from thence to the said States in British vessels and subject only to the same duties and charges on exportation, to which British vessels and their cargoes are or shall be subject in similar circumstances.

\* CONDITIONAL RATIFICATION, on the part of the United
States, in Senate, June 24, 1795.

Refolved, that the Senate do confent to, and advise the President of the United States to ratify the treaty of amity, commerce and navigation, between his Britannic Majesty and the United States of America, concluded at London, the 19th November, 1794, on condition that there be added to the faid treaty, and article whereby it shall be agreed to suspend so much of the 12th article, as respects the trade, which his said Majesty thereby consents may be carried on between the United States and his Islands in the West-Indies, in the manner, and on the terms and conditions therein specified.

And the Senate recommend to the President to proceed without delay, to further friendly negociations with his Majesty on the subject of the said trade, and of the terms and conditions in question.

Provided always that the faid American vessels do carry and land their cargoes in the United States only, it being expressly agreed and declared that during the continuance of this article, the United States will prohibit and restrain the carring any molaffes, sugar, coffee, cocca or cotton in American vessels, either from his Majesty's islands or from the United States to any part of the world except the United States, reasonable sea stores excepted. Provided also, that it shall and may be lawful, during the same period, for British vessels to import from the faid islands into the United States, and to export from the United States to the faid islands, all articles whatever being of the growth, produce or manufacture of the said islands, or of the United States respectively, which now may, by the laws of the faid States, be so imported and exported. And that the cargoes of the said British vessels shall be subject to no other or higher duties or charges, than shall be payable on the same articles, if so imported or exported in American vessels.

It is agreed that this article and every matter and thing therein contained shall continue to be in force during the continuance of the war, in hich his Majesty is now engaged; and also for two years from and after the day of the signature of the preliminary or other articles of peace by which the same may be

terminated.

And it is further agreed, that at the expiration of the faid term, the two contracting parties will endeavour further to regulate their commerce in this respect, according to the situation in which his Majesty may then find himself with respect to the West-Indies, and with a view to such arrangements as may best conduce to the mutual advantage and extension of commerce. And the said parties will then also renew their discussions, and endeavour to agree, whether in any and what cases, neutral vessels shall protect enemy's property; and in what cases provisions and other articles, not generally contraband, may become such. But in the mean time their conduct towards each other in these respects, shall be regulated by the articles herein after inserted on those subjects.

Art. 13. His Majesty consents that the vessels belonging to the citizens of the United States of America, shall be admitted and hospitably received in all the sea ports and harbours of the British territories in the East-Indies. And that the citizens of the said United States may freely carry on a trade between the said territories and the said United States, in all articles, of which the importation or exportation respectively to or from the said territories, shall not entirely be prohibited. Provided

only that it shall not be lawful for them in any time of war between the British government and any other power or flate! whatever, to export from the faid territories, without the fper cial permission of the British government there, any military fores or naval stores or rice, The citizens of the United States shall pay for their vessels when admitted into the faid ports no other or higher tonninge duty than fhall be payable on British vessels when admitted into the ports of the United States. And they shall pay no other or higher duties or charges on the importation or exportation of the cargoes of the faid vessels, than shall be payable on the same articles when imported or exported in British vessels. But it is expressly serced, that the veffels of the United States shall not carry any of the articles exported by them from the faid British territories to any port or place except to some port or place in America, where the same shall be unladen, and such regulations shall be adopted by both parties, as shall from time to time be found necessary to enforce the due and faithful observance of this sipulation. It is also understood that the permission granted by this article is not to extend to allow the veffels of the United States to cerry on any part of the coeffing trade of the faid British territories; but veffels going with their original cargoes, or part thereof, from one port of discharge to another are not to be confidered as carrying on the coasting trade, Neither is this article to be confituted to allow the cirizens of the faid States to fettle on refide within the faid territories, or to go into the interior parts thereof, without the permission of the British government established there y and if any transgression should be attempted against the regulations of the British government in this respect, the observance of the same shall and may be enforced spains the citizens of America in the fame manner as against British subjects or others transgressing the fame rule. And the citizens of the United States whenever they arrive in any port or harbor in the faid territories, or if they frould be permitted in manner aforefaid, to go to any other place therein shall always be subject to the laws, government and jurisdiction of what nature established in such harbor, port or place, according as the fame may be; the citizens of the United States, may also touch for refreshment at the island of St. Helena, but subject in all respects to such regulations as the British government may from time to time establish there. The

people and inhabitants of the two countries respect ely shall have liberty freely, and securely and without hindrance and molestation to come with their ships and cargoes to the lands, countries, cities, ports, places and rivers within the dominions and territories aforesaid, to enter into the same, to refort there and to remain and reside there, without any limitation of time; and elso to hire and possess houses and warehouses for the purposes of their commerce, and generally the merchants and traders on each side shall enjoy the most complete protection, and security for their commerce; but subject always as to what respects this article to the laws and statutes of the two countries respectively,

Art, 15. It is agreed that no other or higher duties shall be paid by the ships or merchandise of the one party in the ports of the other, than such as are paid by the like vessels or merchandise of all other nations. Nor shall any other or higher duty be imposed in one country on the importation of any articles the growth, produce or manufacture of the other than are or shall be payable on the importation of the like articles being of the growth, produce or manufacture of any other foreign country. Nor shall any prohibition be imposed on the exportation or importation of any articles to or from the territories of the two parties respectively, which shall not equally extend to all other nations.

But the British government reserves to itself the right of imposing on American vessels, entering into the British ports in Europe a tonnage, duty, equal to that which shall be payable by British vessels in the ports of America; and also such duty as may be adequate to countervail the difference of duty now payable on the importation of European and Assatic goods when imported into the United States in British or in American vessels,

The two parties agree to treat for the more exact equalization of the duties on the respective navigation of their subjects and people in such manner as may be most beneficial to the two countries. The arrangements for this purpose shall be made at the same time with those mentioned at the conclusion of the 1 ath article of this treaty, and are to be considered as a part thereof. In the interval it is agreed, that the United States will not impose any new or additional tonnage duties on British vessels, nor increase the now subsisting difference between the duties payable on the importation of any article in Entish or in American vessels.

Art. 16. It shall be free for the two contracting parties, relpectively to appoint confuls for the protection of trade, to reside in the dominions and territories aforesaid, and the said consule shall enjoy those liberties and rights which belong to them by reason of their function. But before any consul shall act as such he shall be in the usual forms approved and admitted by the party to whom he is sent; and it is hereby declared to be lawful and proper, that in case of illegal or improper conduct towards the laws or government, a consul may either be punished according to law, if the laws will reach the case or be dismissed, or even sent back, the offended government assigning to the other their reasons for the same,

Either of the parties may except from the residence of confuls such particular places as such party shall judge proper to be so excepted.

Art. 17. It is agreed, that in all cases where vessels shall be captured or detained on just suspicion of having on board enemy's property, or of carrying to the enemy any of the articles which are contraband of war: the said vessel shall be brought to the nearest or most convenient port; and if any property of an enemy should be found on board such vessel, that part only which belongs to the enemy shall be made prize, and the vessel shall be at liberty to proceed with the remainder without any impediment. And it is agreed, that all proper measures shall be taken to prevent delay, in deciding the cases of ships or cargoes so brought in for adjudication; and in the payment or recovery of any indemnissication adjudged or agreed to be paid to the masters or owners of such ships.

Art. 18. In order to regulate what is in future to be deemed contraband of war, it is agreed, that under the faid denomination shall be comprised all arms and implements serving for the purposes of war, by land or sea, such as cannon, muskets, mortars, petards, bombs, grenados, carcasses, faucisses, carriages for cannons, musket rests, bandoliers, gun powder, match, saltpetre, ball, pikes, swords, head pieces, cuirasses, halberts, lances, javelines, horse furniture, holsters, belts, and generally all other implements of war; as also timber for ship building, tar, or rosin, copper in sheets, sails hemp and cordage, and generally whatever may serve directly to the equipment of vessels, unwrought iron and fir planks only excepted; and all the above articles are hereby declared to be just objects of consistation, whenever they are attempted to be carried to an enemy.

"And whereas the difficulty of agreeing on the precise cases in which alone provisions and other articles not generally contraband may be regarded as such, renders it expedient to provide against the inconveniencies and misunderstandings which might

thence arife; it is further agreed, that whenever any fuch articles so becoming contraband according to the existing laws of nations, shall for that reason be soized, the same shall not be confiscated, but the owners thereof shall be speedily and completely indemnified; and the captors, or in their default the government under, whose authority they as, shall pay to the masters or owners of such vessel the full value of all articles, with a reasonable mercantile profit thereon, together with the freight, and also the demurrage incident to such detention.

And whereas it frequently happens, that vessels sail for a port or place belonging to any enemy, without knowing that the same is either besieged, blockaded or invested; it is agreed, that every vessel so circumstanced may be turned away, from such port or place, but she shall not be detained nor her cargo, if not contraband, be consistented, unless after notice she shall again attempt to enter; but she shall be permitted to go to any port or place she may think proper; nor shall any vessel or goods of either party, that may have entered into such port or place, before the same was besieged, blockaded or invested by the other, and be sound therein after the reduction or surrender of such place, be liable to consistation, but shall be restored to the owners or proprietors thereof.

Art. 19. And that more abundant care be taken for the fecurity of the respective subjects and citizens of the contracting parties, and to prevent their suffering injuries by the men of war, or privateers of either party, all commanders of ships of war and privateers and all others the said subjects and citizens shall forbear to do any damage to those of the other party, or committing any outrage against them, and if they aft to the contrary, they shall be punished, and shall also be bound in their persons and estates to make satisfaction and reparation for all damages, and the interest thereof, of whatever nature the said damages may be.

For this cause all commanders of privateers before they receive their commissions shall hereafter be obliged to give before
a competent judge, sufficient security by at least two responsible
sureties, who have no interest in the said privateer, each of
whom, together with the said commander, shall be jointly and
severally bound in the sum of sisteen hundred pounds sterling,
or if such ships be provided with above one hundred and sisty
seamen or soldiers, in the sum of three thousand pounds sterling,
to satisfy all damages and injuries, which the said privateer or
officers or men, or any of them may do or commit during their
cruise, contrary to the tenor of this treasy, or to the laws and

instructions for regulating their conduct; and further that in all cases of aggressions the said commissions shall be revoked and annuled.

It is also agreed, that vyhenever a judge of a court of admiralty of either of the parties, shall pronounce sentence against any vessel of goods or property belonging to the subjects or citizens of the other party a formal and duly authenticated copy of all the proceedings in the cause, and of the said sentence, shall if required be delivered to the commander of the said vessel, without the smallest delay, he paying all legal fees and demands for the same,

Art. 20. It is further agreed that both the faid contracting parties, shall not only refuse to receive any pirates into any of their ports, havens, or towns, or permit any of their inhabitants to receive, protect, harbour, conceal or assist them is any manner, but will bring to condign punishment all such inhabitants as shall be guilty of such asts or offences.

And all their ships with the goods or merchandises taken by them and brought into port of either of the said parties, shall be seized as far as they can be discovered, and shall be restored to the owners or the sastors or agents duly deputed and authorised in writing by them (proper evidence being sirst in the court of admiralty for proving the property) even in case such effects should have passed into other hands by sale, if it he proved that the buyers knew or had good reason to believe, or suspect that they had been piretically taken.

Art. 21. It is likewise agreed, that the subjects and citizens of the two nations, shall not do any acts of hostility or violence against each other, nor accept commissions or instructions so to all from any foreign prince or state, enemies to the other party; nor shall the enemies of one of the parties be permitted to invite, or endeavour to enlist in the military service any of the subjects or citizens of the other party; and the laws against all such offences shall be punctually executed. And if any subject or entire of the said parties respectively shall accept any sories commission, or letters of marque, for arming any vessel to act as a privateer against the other party, it is hereby declared to be lawful for the said party to treat and punish the said subject or citizen, having such commission or letters of marque, as a pirate.

Art. 22. It is expressly stipulated that neither of the said contracting parties will order or authorise any acts of reprisal against the other, on complaints of injuries or damages, until the said party shall first have represented to the other, a state-

demen demen been r

thent thereof, verified by competent proof and evidence, and demanding justice and fatisfication, and the fame shall either have been refused or unreasonably delayed.

Ant. 2 g. The ships of war of each of the contracting parties shall, et all times, be hospitably received in the ports of the other, their officers and erews paying due respect to the laws and government of the country. The officers shall be treated with that respect which is due to the commissions which they bear; and if any infult should be offered to them by any of the inhabitants, all offenders in this respect shall be punished as diffurbers of the peace and amity between the two countries. And his Msjefty confents, that in case an American vessel, should by stress of weather, danger from enemies or other misfortunes be reduced to the necessity of feeking shelter in any of his Majesty's ports, into which such vessel could not in ordinaty cases claim to be admitted, she shall, on manifesting that necessity to the fatisfaction of the government of the place, be hospitably received and permitted to refit and to purchase at the market price fuch necessaries, as she may stand in need of conformably to fuch orders and regulations as the government of the place, having respect to circumstances of each case, shall prescribe. She shall not be allowed to break bulk or unload her cargo unless the same shall be bona fide necessary to her being refitted. Nor hall be permitted to fell any part of her cargo unless so much only as may be necessary to defray her expenses, and then not without the express permission of the government of the place. Nor shallshe be obliged to pay any duties whatever except only on fuch articles as the may be permitted to fell for the purpole aforefaid.

Art. 24. It shall not be lawful for any foreign privateers (not being subjects or citizens of either of the said parties) who have commissions from any other prince or state in entity with either nation, to arm their ships in the ports of either of the said parties, nor sell what they have taken, nor in any other manner to exchange the same; nor shall they be allowed to purchase more provisions than shall be necessary for their going to the nearest port of that prince or state from whom they obtained their commission.

Art. 25. It shall be lawful for the ships of war and privateers belonging to the said parties respectively, to carry whithersoever they please the ships and goods taken from their enemies, without being obliged to pay any see to the officers of the admiralty, or to any judges whatever; nor shall the said prizes when they arrive at, and enter the ports of the said

parties be detained or feized, neither shall the searchers or other officers of those places visit such prizes (except for the purpose of preventing the carrying of any part of the cargoe thereof on thore in any manner contrary to the established laws of revenue, navigation, or commerce) nor shall such officers take cognifance of the validity of fuch prizes; but they shall be at liberty to hoift fail and depart as speedily as may be, and carry their faid prizes to the place mentioned in their commissions or patents, which the commanders of the faid ships of war or privateers shall be obliged to shew. No shelter or refuge shall be given in their ports to fuch as have made a prize upon the subjects or citizens of either of the faid parties; but if forced by stress of weather, or the danger of the sea, to enter therein; particular care shall be taken to hasten their departure, and to cause them to retire as soon as possible. Nothing in this treaty contained shall; however, be constituted or operate contrary to former and existing public treaties with other lovereigns or flates. But the two parties agree, that while they continue in amity neither of them will in future make any treaty that shall be inconfistent with this or the preceding article.

Neither of the said parties shall permit the ships or goods belonging to the subjects or citizens of the other to be taken within cannon shot of the coast, nor in any of the bays, ports, or rivers of their territories by ships of war, or others having commission from any Prince, Republic, or State whatever. But in case it should so happen, the party whose territorial rights shall thus have been violated, shall use his utmost endeavours to obtain from the offending party, full and ample satisfaction for the vessel or vessels so taken, whether the same be vessels of war or merchant vessels.

Art. 26. If at any time a rupture should take place (which God forbid) between his Majesty and the United States, the merchants and others of each of the two nations residing in the dominions of the other shall have the privilege of remaining and continuing their trade, so long as they behave peaceably and commit no offence against the laws; and in case their conduct should render them suspected and the respective governments should think proper to order them to remove, the term of twelve months from the publication of the order shall be allowed them for that purpose, to remove with their families, effects, and property, but this favor shall not be extended to those who shall act contrary to the established laws, and for greater certainty, it is declared that such rupture shall not be deemed to exist while negociations for accommodating differences, shall

be depending, nor until the respective Ambassadors or Ministers, purpose if such there shall be, shall be recalled or sent home on account of such differences, and not on account of personal misconduct according to the nature and degrees of which both parties retain their rights, either to request the resall, or immediately to send home the Ambassador or Minister of the other; and that without prejudice to their mutual friendship and good understanding.

Artisan, It is suther agreed that his Majesty and the United

Artisque It is further agreed that his Majesty and the United States on mutual requisitions, by them respectively, or by their respective Ministers or Officers authorised to make the same, will deliver up to justice all persons who being charged with murder or forgery, committed within the jurisdiction of either, shall seek an assume within any of the countries of the other, provided that this shall only be done on such evidence of criminality as, according to the laws of the place, where the fugitive or person so charged shall be found, would justify his apprehension as d commitment for trial, is the offence had there been committed. The expence of such apprehension and delivery shall be borne and defrayed by those who make the requisition and receive the fugitive.

Art. 28. It is agreed, that the first ten articles of this Treaty shall be permanent, and that the subsequent articles, except the twelfth, shall be limited in their duration to twelve years, to be computed from the day on which the ratifications of this Treaty shall be exchanged, but subject to this condition. that whereas the faid twelfth article will expire by the limitation therein contained, at the end of two years from the figning the preliminary or other articles of peace which shall terminate the present war in which his Majesty is engaged, it is agreed, that proper measures shall by concert be taken for bringing the subject of that article into amicable treaty and discussion, so early before the expiration of the said term, as that new arrangements on that head, may by that time be perfected and ready to take place. But if it should unfortunately happen, that his Majesty and the United States should not be able to agree on such new arrangements, in that case all the articles of this treaty, except the first ten shall then cease and expire together.

Lastly. This Treaty, when the same shall have been ratified by his Majesty and by the President of the United States, by and with the advice and consent of their Senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said States, and shall be by them respectively executed and observed with punctuality and the most

# PEACE AND FRIENDSHIP

BETWEEN

THE UNITED STATES OF AMERICA, AND HIS IMPERIAL MAJESTY THE EMPEROR OF MOROCCO.

To all Persons to whom these presents shall come or be made known.

HEREAS the United States of America in Congress affembled, by their commissions bearing date the twelfth day of May, one thousand seven hundred and eighty-four, thought proper to constitute John Adams, Benjamin Franklin, and Thomas Jefferson, their ministers, plenipotentiary, giving to them, or a majority of them, full powers to confer, treat and negociate with the ambassador, minister, or commissioner of his Majesty the Emperor of Morocco, concerning a treaty of amity and commerce; to make and receive propositions for

such treaty, and to conclude and fign the same, transmitting it to the United States in Congress essembled, for their final ratification; and by one other commission bearing date the eleventh day of March, one thousand seven hundred and eighty-five, did further empower the said ministers plenipotentiary, or a majority of them, by writing under their hands and feals, to appoint such agent in the said business so they might think proper, with authority under the directions and instructions of the said ministers, to commence and prosecute the faid negociations and conferences for the faid treaty, provided that the faid treaty should be signed by the said ministers: And whereas we the faid John Adams and Thomas Jefferson, two of the said ministers plenipotentiary (the said Benjamin Franklin being absent) by writing under the hand and feal of the faid John Adams at London, October the fifth, one thousand seven hundred and eighty-five, and of the said Thomas Jefferson at Paris, October the eleventh of the same year, did appoint Thomas Barclay, agent in the business aforefaid, giving him the powers therein, which by the faid fecond commission we were authorised to give, and the said Thomas Barclay in pursuance thereof, hath arranged articles for a treaty of amity and commerce between the United States of America, and his Majesty the Emperor of Morocco, which articles, written in the Arabic language, confirmed by his faid Majesty the Emperor of Morocco, and sealed with his royal feal, being translated into the language of the faid United States of America, together with the attestations thereto annexed, are in the following words, to wit.

Royal Seal.

In the Name of ALMIGHTY GOD.

THIS is a Treaty of Peace and Friendship established between us and the United States of America, which is confirmed, and which we have ordered to be written in this book, and sealed with our royal seal, at our court of Morocco, on the twenty-fifth day of the blessed month of Shaban, in the year one thousand two hundred, trusting in God it will remain permanent.

Article I. We declare that both parties have agreed that this treaty, confisting of twenty-five articles, shall be inserted in this book, and delivered to the Honorable Thomas Barclay, the agent of the United States now at our court, with whose approbation it has been made, and who is duly authorised on their part to treat with us concerning all the matters contained therein.

Art. II. If either of the parties shall be at war with any nation whatever, the other party shall not take a commission from

the enemy, nor fight under their colours. Manual bet son line

Art. III. If either of the parties shall be at war with any nation whatever, and take a prize belonging to that nation, and there shall be found on board subjects or effects belonging to either of the parties, the subjects shall be fet at liberty, and the effects returned to the owners. And if any goods belonging to any nation, with whom either of the parties shall be at war, shall be loaded on vessels belonging to the other party, they shall pass free and unmolested without any attempt being made to take or detain them.

Art. IV. A fignal or pass shall be given to all vessels belonging to both parties, by which they are to be known when they meet at sea; and if the commander of a ship of war of either party shall have other ships under his convoy, the declaration of the commander shall alone be sufficient to exempt any of them from examination.

Art. V. If either of the parties shall be at war, and shall meet a vessel at sea belonging to the other, it is agreed, that if an examination is to be made, it shall be done by sending a boat with two or three men only; and if any gun shall be fired, and injury done without reason, the offending party shall make good all damages.

Art. VI. If any Moor shall bring estizens of the United States, or their effects, to his Majesty, the citizens shall immediately be set at liberty, and the effects restored; and in like manner, if any Moor, not a subject of these dominions, shall make prize of any of the citizens of America, or their effects, and bring them into any of the ports of his Majesty, they shall be immediately released, as they will then be considered as under his Majesty's protection.

Art. VII. If any veffel of either party shall put into a port of the other, and have occasion for provisions or other supplies, they shall be furnished without any interruption or moles-

tation.

Art. VIII. If any vessel of the United States shall meet with a disaster at sea, and put into one of our ports to repair, she shall be at liberty to land and reload her cargo, without paying any duty whatever.

Art. IX. If any vessel of the United States shall be cast on shore on any part of our coasts, she shall remain at the disposition of the owners, and no one shall attempt going near her without their approbation, as she is then considered particularly under our

cast on sposition without ader our protection; and if any vessel of the United States shall be forced to put into our ports by stress of weather, or otherwise, she shall not be compelled to land her cargo, but shall remain in tranquility until the commander shall think proper to proceed on his voyage.

Art, X. If any vessel of either of the parties shall have an engagement with a vessel belonging to any of the Christian powers within gun shot of the forts of the other, the vessel so engaged shall be desended and protected as much as possible until she is in safety; and if any American vessel shall be cast on shore on the coast of Wadnoon, or any coast thereabout, the people belonging to her shall be protected and assisted, until, by the help of God, they shall be sent to their country.

Art. XI. If we shall be at war with any Christian power, and any of our vessels sail from the ports of the United States, no vessel belonging to the enemy shall follow until twenty-four hours after the departure of our vessels; and the same regulation shall be observed towards the American vessels sailing from our ports, be their enemies Moors or Christians.

Art. XII. If any ship of war belonging to the United States shall put into any of our ports, she shall not be examined on any pretence whatever, even though she should have fugitive slaves on board, nor shall the governor or commander of the place compel them to be brought on shore on any pretext, nor require any payment for them.

Art. KIII. If a thip of war of either party shall put into a port of the other and salute, it shall be returned from the fort with an equal number of guns, not with more or less.

Art. XIV. The commerce with the United States shall be on the same sooting as is the commerce with Spain, or as that with the most savoured nation for the time being; and their citizens shall be respected and esteemed, and have full liberty to pass and repass our country and seaports whenever they please withput interruption.

Art. XV. Merchants of both countries shall employ only such interpreters, and such other persons to assist them in their business, as they shall think proper. No commander of a vessel shall transport his cargo on board another vessel; he shall not be detained in port longer than he may think proper; and all persons employed in loading or unloading goods, or in any other-labour whatever, shall be paid at the customary rates, not more and not less.

Art. XVI. In case of a war between the parties, the prisoners are not to be made slaves, but to be exchanged one for another,

captain for captain, officer for officer, and one private man for another; and if there shall prove a deficiency on either fide, it shall be made up by the payment of one hundred Mexican dollars for each person wanting. And it is agreed that all-prisoners shall be exchanged within twelve months from the time of their being taken, and that this exchange may be effected by a merchant or any other person authorized by either of the parties.

Art, XVII. Merchants shall not be compelled to buy or sell any kind of goods but such as they shall think proper; and may buy and sell all sorts of merchandize but such as are prohibited

to the other Christian nations.

Art. XVIII, All goods shall be weighed and examined before they are sent on board, and to avoid all detention of vessels, no examination shall afterwards be made, unless it shall first be proved that contraband goods have been sent on board, in which case the persons who took the contraband goods on board, shall be punished according to the usage and custom of the country, and no other person whatever shall be injured, nor shall the ship or cargo incur any penalty or damage whatever.

Art. XIX. No vessel shall be detained in port on any pretence whatever, nor be obliged to take on board any article without the consent of the commander, who shall be at full liberty to agree for the freight of any goods he takes on

board.

Art. XX. If any of the citizens of the United States, or any persons under their protestion, shall have any disputes with each other, the consul shall decide between the parties, and whenever the consul shall require any aid or assistance from our government, to enforce his decisions, it shall be immediately granted to him.

Art. XXI. If a citizen of the United States should kill or wound a Moor, or on the contrary if a Moor shall kill or wound a citizen of the United States, the law of the country shall take place, and equal justice shall be rendered, the consul assisting at the trial; and if any delinquent shall make his escape, the consul shall not be answerable for him in any manner whatever.

Art. XXII. If an American citizen shall die in our country, and no will shall appear, the consul shall take possession of his effects, and if there shall be no consul, the effects shall be deposited in the hands of some person worthy of trust, until the party shall appear who has a right to demand them; but if the heir to the person deceased be present, the property shall be delivered to him without interruption; and if a will shall appear,

Art. XXIII. The confuls of the United States of America, thall refide in any fea-port of our dominions that they shall think propers and they shall be respected, and enjoy all the privileges which the confus of any other nation enjoy: and if any of the citizens of the United States shall contract any debts or engagements, the consuls shall not be in any manner accountable for them, unless he shall have given a promise in writing for the payment or suffilling thereof, without which promise in writing, no application to him for any redress shall be made.

Art, XXIV. If any differences shall arise by either party infringing on any of the articles of this treaty, peace and harmony shall remain notwithstanding, in the fullest force, until a friendly application shall be made for an arrangement, and until that application shall be rejected, no appeal shall be made to arms. And if a war shall break out between the parties, nine months shall be granted to all the subjects of both parties, to dispose of their effects and retire with their property. And it is surther declared, that whatever indulgencies in trade or otherwise, shall be granted to any of the Christian powers, the citizens of the United States shall be equally entitled to them.

Art. XXV. This treaty shall continue in full force, with the

We have delivered this book into the hands of the before mentioned Thomas Barclay, on the first day of the blessed month of Ramadan, in the year one thousand two hundred.

I certify that the annexed is a true copy of the translation made by Isaac Cordoza Nunez, interpreter at Morocco, of the treaty between the Emperor of Morocco, and the United States of America.

THOMAS BARCLAY,

### ADDITIONAL ARTICLE.

#### GRACE TO THE ONLY GOD .-

I, THE under-written, the fervant of God, Taher Ben Abdelkack Fennish, do certify, that his Imperial Majesty, my master, (whom God preserve) having concluded a treaty of peace and commerce with the United States of America, has ordered me, the better to compleat it, and in addition of the tenth arti-

cle of the treaty, to declare, "That if any vessel belonging to the United States, shall be in any of the ports of his Majesty's dominions, or within gun-shot of his forts, he shall be protested as much as possible, and no vessel whatever, belonging either to Moorish or Christian powers, with whom the United States may be at war, shall be permitted to follow or engage her, as we now deem the citizens of America our good friends."

And, in obedience to his Majesty's commands, I certify this declaration, by putting my hand and seal to it, on the eighteenth day of Ramadan, in the year one thousand two hundreds

The fervant of the King, my master, whom God preserve,

I do certify that the above is a true copy of the translation made at Morocco, by Isaac Cordoza Nunez, interpreter, of a declaration made and signed by Sidi Hage Taher Fennish, in addition to the treaty between the Emperor of Morocco, and the United States of America, which declaration the said Taher Fennish made by the express directions of his Majesty.

THOMAS BARCLAY.

Now know ve, That we the said John Adams and Thomas Jefferson, ministers plenipotentiary aforesaid, do approve and conclude the said treaty, and every article and clause therein contained, reserving the same nevertheless to the United States in Congress assembled for their final ratification.

In testimony whereof, we have figured the same with our names and feals, at the places of our respective residence, and at the dates expressed under our signatures respectively.

JOHN ADAMS. (L. s.)

London, January 25th, 1787.

THOMAS JEFFERSON. (L. s.)

Paris, January 1st, 1787.

THE WELL AND THE CONTRACTOR

THE UNITED STATES AND HIS CATHOLIC MAJESTY.

His Catholic Majesty and the United States of America, desiring to consolidate, on a permanent basis, the friendship and good correspondence which happily prevails between the two parties, have determined to establish by a Convention, several points, the settlement whereof will be productive of general

advantage and reciprocal utility to both nations.

With this intention his Catholic Majesty has appointed the most excellent Lord Don Manuel de Goday, and Alvarez de Faria, Rois, Sanchez, Zacoza, Printe de Paz, Duke de la Alcudia, Lord of the Roto de Roma, and of the state of Albala, grandee of Spain of the first class, perpetual Regedor of the city of Santiajo, Knight of the illustrious order of the Golden Fleene, and Great Cross of the Royal and distinguished Spanish order of Charles III. Commander of Valencia, del Ventofe; Rivera, and Acenchal in that of Santiajo, Knight and Great Cross of the religious order of St. John, Counseller of State, First Secretary of State, and Dispatch Secretary to the Queen, Superintendent General of the Posts and Highways, Protectors of the Royal Academy of the Noble Arts, and of the Royal Societies of Natural History, Botany, Chemistry and Astronomy, Gentleman of the Bed Chamber in employment, Captain General of his armies, Inspector and Major of the Royal Corps of Body Guards, &c. &c. &c. And the President of the United States, with the advice and confent of their Senate, has appointed Thomas Pinckney, a citizen of the United States, and their Envoy Extraordinary to his Catholie Majesty. And the faid Plenipotentiaries have agreed upon and concluded the following Articles:

Art. I. There shall be a firm and inviolable peace and sincere friendship between his Catholic Majesty, his successors and subjects, and the United States, and their citizens, without

exception of persons or places.

Art. II. To prevent all dispute on the subject of the boundaries which separate the territories of the two high contracting parties, it is hereby declared and agreed as follows, to wit:

3 R

efted ected her to s may

this centh

made

made ration to the stes of the ex-

homas e and herein States

ees and e dates

he 28th

The fouthern boundary of the United States which divides their territory from the Spanish colonies of East and West-Florids, shall be designated by a line beginning on the river Millifippi at the northernmost part of the thirty-first degree of latitude, north, of the equator, which from thence shall be drawn due east to the middle of the river Apalachicola or Carabiuche, thence along the middle thereof to its junction with the Flint, then ftraight to the head of St. Mary's river, and thence down the middle thereof to the Atlantic Ocean. And it is agreed, that if there should be any troops, garrisons, or fettlements of either party on the territory of the other according to the above-mentioned boundaries, they shall be withdrawn from the faid territory within the term of fix months after the ratification of this treaty, or sooner, if it be possible; and that they shall be permitted to take with them all the goods and effects which they policis.

Art. III. In order, to carry the preceding article into effect, commissioner and one surveyor shall be appointed by each of the contracting parties, who shall meet at the Natches, on the left fide of the river Mississippi, before the expiration of fix ments from the ratification of this Convention, and they hall proceed to run and make this boundary according to the Ripulations of the faid article. They shall make plata and keep journals of their proceedings, which shall be considered as part of this Convention, and shall have the same force as if this were inferted therein. And if on any account it should be found secessary that the said commissioners and surveyors should Hbe accompanied by guards, they shall be furnished in equal proportion by the commanding officer of his Majesty's troops in the two Floridas, and the commanding officer of the troops of the United States in the fouth-western territory, who shall act by common confent and amicably, as well with respect to this point, 22 to the furnishing provisions and instruments, and making every other arrangement which may be necessary or useful for the execution of this article.

Art. IV. It is likewise agreed that the western boundary of the United States, which separates them from the Spanish colony of Louisiana, is in the middle of the channel or bed of the river Mississippi, from the northern boundary of the said States, to the completion of the thirty first degree of latitude north of the equator. And his Catholic Majesty has likewise agreed, that the navigation of the taid river, from its source to the ocean, shall be free only to his subjects and the citizens

Art. V. The two high contracting parties shall, by all means in their power, maintain peace and harmony among the several Indian nations who inhabit the country adjacent to the lines and rivers which, by the preceding article, form the boundaries of the two Floridas; and the better to attain this effect, both parties oblige themselves expressly to restrain, by force, all hostilities on the part of the Indian nations living within their boundary; so that Spain will not suffer their Indians, inhabiting their territory, nor will the United States permit their last mentioned Indians to commence hostilities against his Catholic Majesty, or his Indians, in any manner whatsoever.

And whereas several treaties of friendship exist between the two contracting parties and the said nations of Indians, it is hereby agreed, that in suture, no treaty of alliance, or other whatsoever, (except treaties of peace) shall be made by either party with the Indians living within the boundary of the other; but both parties will endeavour to make the advantages of the Indian trade common and mutually beneficial to their respective subjects and citizens, observing in all things the most complete reciprocity, so that both parties may obtain the advantages arising from a good understanding with the said nations, without being subject to the expence which they have hitherto occasioned.

Art. VI. Each party shall endeavour, by all the means in their power, to protect and defend all vessels and other effects belonging to the citizens or subjects of the other, which shall be within the extent of their jurisdiction, by sea or by land, and shall use all their efforts to recover, and cause to be recovered to the right owners, their vessels and effects which may have been taken from them within the extent of their said jurisdiction, whether they are at war or not with the subjects who have taken possession of the said effects.

Art. VII. And it is agreed that the subjects or citizens of each of the said contracting parties, their vessels or effects shall not be liable to any embargo or detention on the part of the other for any military expedition, or other public or private purpose whatsoever. And in all cases of seizure, detention, or arrest for debts contracted, or offences committed by any citizen or subject of the one party within the jurisdiction of the other, the same shall be made and prosecuted by order and authority of law only, and according to the regular course of proceedings usual in such cases. The citizens and subjects of

both parties shall be allowed such advocates, solicitors, notaries, agents, and factors, as they judge proper, in all their affairs, and in all their trials at law, in which they may be concerned before the tribunal of the other party, and such agents shall have free access, to be present at the proceedings in such causes, and at the taking of examinations and evidence which may be exhibited in the said trials.

Art, VIII. In case the subjects and inhabitants of either party, with their shipping, whether public and of war, or private and of merchants, be forced, through stress of weather, pursuit of pirates or enemies, or any other urgent necessity for taking shelter and harbour, to retreat and enter into any of the rivers, bays, roads, or ports belonging to the other party, they shall be received and treated with all humanity, and enjoy all favour, protection, and help, and they shall be permitted to provide themselves, at reasonable rates, with victuals, and all things needful for the sustenance of their persons, or reparation of their ships, and prosecution of their voyage; and they shall no ways be hindered from returning out of the said ports or roads, but may remove and depart when and whither they please, without any let or hindrance.

Art. IX. All ships and merchandize of whatever nature focuer, which shall be rescued out of the hands of any pirates or robbers on the high seas, shall be brought into some port of either state, and shall be delivered to the custody of the officers of that port, in order to be taken care of, and restored to the true proprietar, as soon as due and sufficient proof shall be made concerning the property thereof.

Art. X. When any vessel of either party shall be wrecked, foundered, or otherwise damaged on the coasts, or within the dominion of the other, their respective subjects and citizens shall receive, as well for themselves as for their vessels and estects, the same assistance which would be due to the inhabitants of the country where the damage happens, and shall pay the same charges and duties only as the said inhabitants would be subject to pay is a like case: and if the operation of repairs would require that the whole, or any part of the cargo be unladen, they shall pay no duties, charges, or sees on the part which shall relade and carry away.

Art. XI. The citizens and subjects of each party shall have power to dispose of their personal goods within the jurisdiction of the other, by testaments, donations, or otherwise, and their representatives, being subjects or citizens of the other party, shall succeed to their said personal goods, whether by testament

or ab inteflato, and they may take possession thereof, either by themselves or others acting for them, and dispose of the same at their will, paying fale duties only, as the inhabitants of the country wherein the lame goods are, or shall be subject to pay in like cases. And in case of the absence of the representative. fuch gare shall be taken of the faid goods, as of a native in like cale, until the lawful owner may take measures for receiving them; and if questions should arise among several claimants to which of them the goods belong, the fame shall be decided by the laws and judges of the land wherein the faid goods are. And where, on the death of any person holding real estate within the territories of the one party, fuch real effate would, by the law of the land, descend on a citizen or subject of the other, were he not disqualified by being an alien, such subject shall be allowed a reasonable time to sell the same, and to withdraw the proceeds, without molefistion, and exempt from all right of detention on the part of the government of the respective States of their Barristan stay versal to an activities of the condition

Art. XII. The merchant ships of either party which shall be making into ports, or into a port belonging to the enemy of the other party, and concerning whose voyage, and the species of goods on board her, there shall be just grounds of suspicion, shall be obliged to exhibit, as well upon the high seas as in the ports and havens, not only her passport, but likewise certificates, expressly shewing that her goods are not of the number of those which have been prohibited as contraband.

Art. XIII. For the better promoting of commerce on both fides, it is agreed, that if a war shall break out between the two said nations, one year after the proclamation of war shall be allowed to the merchants in the cities and towns where they shall live, for collecting and transporting their goods and merchandizes, and if any thing be taken from them, or any injury done them within that term, by either party, or the people or subjects of either, full satisfaction shall be made by the government.

Art. XIV. No subject of his Catholic Majesty shall apply for, or take any commission or letters of marque, for arming any ship or ships to act as privateers against the United States, or against the citizens, people, or inhabitants of the said United States, or against the property of any of the inhabitants of any of them, from any Prince or State with which the United States shall be at war. Nor shall any citizen, subject, or inhabitant of the said United States, apply for, or take any commission or letters of marque, for arming any ship or ships, to act

se privateers against the subjects of his Catholic Majesty, or the property of any of them, from any Prince or State with which the said King shall be at war. And if any person of either nation shall take such commission or letters of marque, he shall be

punished as a pirate.

Art. XV. It shall be lawful for all and fingular the subjects of his Catholic Majesty, and the citizens, people, and inhabitants of the United States, to fail with their ships, with all manner of liberty and fecurity, no diffinction being made who are the proprietors of the merchandizes laden therein, from any port to the places of those who now are, or hereafter shall be at enmity with his Catholic Majesty or the United States. It shall be likewife lawful for the subjects and inhabitants aforesaid, to fail with the ships and merchandizes afore-mentioned, and to trade with the same liberty and security, from the places, perts, or havens of those who are enemies of both or either party, without any opposition or disturbance whatsoever, not only from the places of the enemy afore-mentioned to neutral places, but also from one place belonging to an enemy, to another place belonging to an enemy, whether they be under the jurifdiction of the fame Prince, or under feveral; and it is hereby flipulated that free ships shall also give freedom to goods, and that every thing shall be deemed free and exempt which shall be found on board the thips belonging to the fubjects of either of the contracting parties, although the whole lading, or any part thereof, should appertain to the enemy of either; contraband goods being always excepted. It is also agreed, that the same liberty be granted to persons who are on board a free ship, so that although they be enemies to either party, they shall not be made prisoners, on taken out of that free ship, unless they are soldiers, and in actual fervice of the enemies. Desired off as to had the

Art. XVI. This liberty of navigation and commerce shall extend to all kinds of merchandizes, excepting those only which are distinguished by the name of contraband: and under this name of contraband, or prohibited goods, shall be comprehended arms, great guns, bombs, with their fuses, and the other things belonging to them, cannon balls, gunpowder, match, pikes, swords, lances, spears, halberts, mortars, petards, grenades, salt-petre, muskets, musket balls, bucklers, helmets, breast plates, coats of mail, and the like kinds of arms, proper for arming soldiers, musket rests, belts, horses with their surniture, and all other warlike instruments whatever. These merchandizes which sollow shall not be reckoned among contraband or prohibited goods; that is to say, all sorts of cloths, and all

other manufactures woven of any wool, flax, filk, cotton, or any other materials whatever, all kinds of wearing apparel, together with all species whereof they are used to be made; gold and filver, as well coined as uncoined, tin, iron, letten, brafe, copper, coals; as also wheat, barley, and oats, and any other kind of corn and pulse; tobacco, and likewise all manner of spices. falted and imosked flesh, falted fath, cheese and butter, beer, oils, wines, fuger, and all forts of falt and, in general, all provisions which ferve for the fustenance of life : furthermore, all kinds of cotton, bemp, flax, tar, pitch, sopes, cables, faile, fail cloths, anchors, or any part of anchors, also thip matte, planks, and wood of all kinds, and all things proper either for building or repairing thips, and all other goods whatever which have not been worked into the form of any instrument prepared for war by land or by fea, shall not be reputed contraband, much less such as have been already wrought and made up for any other use; all which shall be wholly reckoned among free goods; as likewife all other merchandizes and things which are not comprehended, and particularly mentioned in the fore-

ing enumeration of contraband goods, fo that they may be t, supported and carried in the freest manner by the subjects of both parties, even to places belonging to an enemy, fuch towns or places being only excepted as are at that time befieged, blocked up, or invested. And except the cases in which any thip of war, or fauadron shall, in confequence of storms or other accidents at fea, be under the necessity of taking the cargo of any trading vessel or vessels, in which case they may Rop the said vellel or vellels, and furnish themselves with necessaries, giving a receipt in order that the power to whom the faid ship of war belongs may pay for the articles fo taken, according to the price thereof at the port to which they may appear to have been destined by the ship's papers ; and the two contracting parties engage, that the vessels shall not be detained longer than may be absolutely necessary for their said ships to supply themselves with necessaries; that they will immediately pay the value of the receipts, and indemnify the proprietor for all loffes which he may have sustained in consequence of such transaction.

Art. XVII. To the end that all manner of differtions and quarrels may be avoided and prevented on one fide and on the other, it is agreed, that in case either of the parties hereto should be engaged in a war, the ships and vessels belonging to subjects or people of the other party, must be furnished with sea letters of passports, expressing the name, property and bulk

of the ship, as also the name and place of habitation of the master or commander of the said ship, that it may appear thereby that the ship really and truly belongs to the subjects of one of the parties, which passport shall be made out and granted according to the form annexed to this treaty. They shall likewise be recalled every year, that is, if the ship happens to teturn home within the space of a year.

It is likewise agreed, that such ships being laden, are to be provided not only with passports as above-mentioned, but also with certificates, containing the feveral particulars of the cargo, the place whence the ship failed, that so it may be known whether any forbidden or contraband goods be on board the fame; which certificates shall be made out by the officers of the place whence the ship sailed, in the accustomed form; and if any one should think it fit or advisable to express in the said certificates the person to whom the goods on board belong, he may do fo; without which requifites they may be fent to one of the ports of the other contracting party, and adjudged by the competent tribunal, according to what is above fet forth, that all the circumstances of this omission having been well examined, they stall be adjudged to be legal prizes, unless they shall give legal satisfaction of their property by testimony equally equivalent.

Art. XVIII. If the ships of the said subjects, people or inhabitants of either of the parties shall be met with, either sailing along the coasts or on the high seas, by any ships of war of the other, or by any privateer, the said ship of war or privateer, for avoiding any disorder, shall remain out of cannon shot, and may send their boats on board the merchant ship which they shall so meet with, and may enter her to the number of two or three men only, to whom the master or commander of such ship or vessel shall exhibit his passports concerning the property of the ship made out according to the form interted in this present treaty; and the ship, when she shall have shewn such passport, shall be free and at liberty to pursue her voyage, so as it shall not be lawful to molest or give her chace in any manner, or force her to quit her intended course.

Art. XIX. Confuls shall be reciprocally established with the privileges and power which those of the most favoured nations enjoy in the ports where their consuls reside or are permitted to be.

Art. XX, It is also agreed that the inhabitants of the territories of each party shall respectively have free access to the courts of justice of the other, and they shall be permitted to

Art. KXI. In order to terminate all differences on account of the losses sustained by the citizens of the United States, in consequence of their vessels and cargoes having been taken by the Subjects of his Catholic Majesty during the late war between Spain and France, it is agreed that all fuch cases shall be referred to the final decision of commissioners to be appointed in the following manner: His Catholic Majesty shall appoint one commillioner, and the Prefident of the United States, by and with the advice and confent of the Senate, shall appoint another, and the faid two commissioners shall agree on the choice of a third, or if they cannot agree to, they shall each propole one person, and of the two names so proposed, one shall be drawn by lot in the prefence of the two original commissioners, and the person whose name shall be drawn shall be the third commillioner; and the three commissioners so appointed shall be fworn impartially to examine and decide the claims in question. according to the merit of the several cases, and to justice, equity, and the laws of nations. The faid commissioners shall meet and let at Philadelphia; and in case of death, sickness or necesfary absence of any such commissioner, his place shall be supplied in the same manner as he was first appointed, and the new commissioner shall take the same oaths, and do the same duties. They shall receive all complaints and applications, authorized by this article, during eighteen months from the day on which they shall assemble. They shall have power to examine all such perfons as come before them on oath or affirmation, touching the complaints in question, and also to receive in evidence all written testimony, authenticated in such a manner as they shall think proper to require or admit. The award of the faid commissioners, or of any two of them, shall be final and conclusive, both as to the justice of the claim and the amount of the sum to be paid to the claimants; and his Catholic Majesty undertakes to cause the same to be paid in specie, without deduction, at such time and places, and under such conditions as shall be awarded by the same commissioners.

Art. XXII. The two high contracting parties hoping that the good correspondence and friendship which happily reigns between them, will be further increased by this treaty, and that it will contribute to augment their prosperity and opulence, will in future give to their mutual commerce, all the extension and favour which the advantages of both countries may require.

And in consequence of the stipulations contained in the sourth article, his Catholic Majesty will permit the citizens of the United States, for the space of three years from this time, to deposit their merchandizes and effects in the port of News Orleans, and to export them from thence, without paying any other duty than a fair price for the hire of the stores; and his Majesty promises, either to continue this permission, if he sinds, during that time, that it is not prejudicial to the interests of Spain; or if he should not agree to continue, he will assign to them on another part of the banks of the Mississippi, an equivalent establishment.

Art. XXIII. The present treaty shall not be in force until ratified by the contracting parties; and the ratifications shall be exchanged in six months from this time, or sooner, if possible.

In witness whereof we the underwritten Plenipotentiaries of his Catholic Majesty, and of the United States of America, have signed this treaty of friendship, limits, and navigation, and have thereunto affixed our scale respectively.

Carolina, South-Carolina, and Georgia, desiring to establish in a stable and permanent manner the rules which ought to be observed relative to the correspondence and commerce which the two parties have judged necessary to establish between their respective countries, states and subjects, his Majesty and the United States have thought that they could not better accomplish that end than by taking for a basis of their arrangements the mutual interest and advantage of both nations, thereby avoiding all those burthensome preferences, which are usually sources of debate, embarrassment and discontent, and by leaving each party at liberty to make realing navigation and connece, those interior regulations, which shall be most convenient to itself,

With this view, his Majesty the King of Sweden has nominated and appointed for his plenipotentiary, Count Gustavus Philip de Greutz, his ambassador extraordinary to his Most Christian Majesty, and knight commander of his orders; and the United States, on their part have fully empowered Benjamin Franklin, their minister plenipotentiary to his Most Christian Majesty: The said plenipotentiaries, after exchanging their full powers, and after mature deliberation in consequence thereof, have agreed upon, concluded and signed the following articles:

Article I. There shall be a firm, inviolable and universal peace, and a true and sincere friendship between the King of Sweden, his heirs and successors, and the United States of America, and the subjects of his Majesty and those of the said States, and between the countries, islands, cities, and towns situated under the jurisdiction of the King and of the said United States, without any exception of persons or places; and the conditions agreed to in this present treaty, shall be perpetual and permanent between the King, his heirs and successors, and the said United States.

Art. II. The King and the United States engage mutually, not to grant hereafter any particular favour to other nations in refpect to commerce and navigation, which shall not immediately become common to the other party, who shall enjoy the same favour freely, if the concession was freely made, or on allowing the same compensation, if the concession was conditional.

Art. III. The subjects of the King of Sweden shall not pay in the ports, havens, roads, countries, islands, cities and towns of the United States, or in any of them, any other nor greater duties or imposts of what nature soever they may be, than those which the most favoured nations are or shall be obliged to pay: and they shall enjoy all the rights, liberties, privileges, immunities and exemptions in trade, navigation and commerce, which

cc. &c. New-Newycafile, Norththe faid detions do or shall enjoy, whether in passing from one port to another of the United States, or in going to or from the

fame, from or to any part of the world whatever.

Art. IV. The subjects and inhabitants of the said United States shall not pay in the ports, havens, reads, islands, extice and towns, under the dominion of the King of Sweden, any other or greater duties or imposts of what nature seever they may be, or by what name seever called, than those which the most favoured nations are or shall be obliged to pay; and they shall easions all the rights, liberties, privileges, immunities and exemptions in trade, navigation and commerce, which the said sations do or shall enjoy, whether in passing from one port to another of the dominion of his said Majesty, or in going to or from the same, from or to any part of the world whatever.

Art. V. There shall be granted a full, perfect and entire liberty of conscience to the inhabitants and subjects of each party, and no person shall be molested on account of his worship, prowided he submits so far as regards the public demonstration of it to the laws of the country. Moreover, liberty shall be granted, when any of the subjects or inhabitants of either party die in the territory of the other, to bury them in convenient and decent places, which shall be assigned for the purpose; and the two contracting parties will provide each in its jurisdiction, that the subjects and inhabitants respectively may obtain certificates of

the death, in case the delivery of them is required.

Art. VI. The subjects of the contracting parties in the respective States, may freely dispose of their goods and effects either by testament, donation or otherwise in favour of such persons as shey think proper; and their heirs in whatever place they shall refide. Shall receive the succession even ab inteffate either in perfon or by their attorney, without having occasion to take out letters of naturalization. These inheritances, as well as the capitals and effects, which the subjects of the two parties, in change ing their abode, shall be desirous of removing from the place of their abode, shall be exempted from all duty called " droit de detraction," on the part of the government of the two flates respectively. But it is at the same time agreed, that nothing contained in this article shall in any manner derogate from the ordinances published in Sweden against emigrations, or which may hereafter be published, which shall remain in full force and vigour. The United States on their part, or any of them, shall be at liberty to make respecting this matter, such laws as they think proper.

Art. VII. All and every the subjects and inhabitants of the Lingdom of Sweden, se well as those of the United States, shall be permitted to navigate with their vessels in all safety and freedom. and without any regard to those to whom the merchandize and cargoes may belong, from any port whatever, and the subjects and inhabitants of the two states shall likewise be permitted to fail and trade with their vessels, and with the same liberty and fafety to frequent the places, ports and havens of powers, enemies to both or either of the contracting parties, without being in any wife molested or troubled, and to carry on a commerce not only directly from the ports of an enemy to a neutral port, but even from one port of an enemy, to another port of an enemy, whether it be under the jurisdiction of the same or of different princes. And as it is acknowledged by this treaty with respect to ships and merchandizes that free ships shall make the merchandizes free, and that every thing which shall be on heard of thips belonging to subjects of the one or the other of the contracting parties, shall be considered as free, even though the cargo or a part of it should belong to the enemies of one or both; it is nevertheless provided that contraband goods shall always be excepted; which being intercepted, shall be proceeded against according to the spirit of the following articles. It is likewife agreed, that the same liberry be extended to persons who may be on board a free ship, with this effect that although they be enemies to both or either of the parties, they shall not be taken out of the free ship, unless they are soldiers in the actual service of the said enemies.

Art. VIII. This liberty of navigation and commerce shall extend to all kinds of merchandizes except those only which are expressed in the following article and are distinguished under

the name of contraband goods.

Art. IX. Under the name of contraband or prohibited goods, shall be comprehended arms, great guns, cannon balls, arque-buses, musquets, mortars, bombs, petards, grenadoes, saucisses, pitch, balls, carriages for ordnance, musquet rests, bandoliers, cannon powder, matches, salt-petre, sulpher, bullets, pikes, sabres, swords, morions, helmets, cuirasses, halberds, javelins, pistols and their holsters, belts, bayonets, horses with their harness, and all other like kind of arms and instruments of war for the use of troops.

Art. X. These which follow shall not be reckoned in the number of prohibited goods, that is to say all forts of cloths, and all other manufactures of wool, slaw, silk, cotton or any other materials, all kinds of wearing apparel together with the things of which they are commonly made; gold, silver coined

or uncoined brass, iron, lead, copper, latten, coals, wheat, barley, and all forts of corn or pulle, tobacco, all kinds of spices, salted or smooked flesh, salted fish, cheese, butter, beer, oil, wines, fugar, all forts of falt and provisions which ferve for the nourishment and sustenance of man; all kinds of cotton. hemp, flax, tar, pitch, ropes, cables, fails, fail-cloth, anchors, and any parts of anchors, ship masts, planks, boards, beams and all forta of trees and other things proper for building or repairing ships; nor shall any goods be considered as contraband. which have not been worked into the form of any instrument or thing for the purpose of war by land or by sea, much less fuch as have been prepared or wrought up for any other ufe. All which shall be reckoned free goods, as likewise all others which are not comprehended and particularly mentioned in the foregoing article; so that they shall not by any presended interpretation be comprehended among prohibited or contraband goods: on the contrary they may freely be transported by the subjects of the king and of the United States, even to places belonging to an enemy, such places only excepted as are befieged, blocked or invested, and those places only shall be confidered as fuch, which are nearly furrounded by one of the belligerent powers. 4 4975

Art, XI. In order to avoid and prevent on both fides all difputes and discord, it is agreed that in case one of the parties should be engaged in a war, the ships and vessels belonging to the subjects or inhabitants of the other shall be furnished with sealetters, or passports expressing the name, property and port of the vellel, and also the name and place of abode of the master or commander of the faid veffel, in order that it may thereby appear that the faid veffel really and truly belongs to the fubjects of the one or the other party. These passports which shall be drawn up in good and due form, shall be renewed every time. the vessel returns home in the course of the year. -It is also agreed that the faid vessels when loaded shall be provided not only with fea-letters but also with certificates containing a particular account of the cargo, the place from which the vellel failed and that of her destination, in order that it may be known whether they carry any of the prohibited or contraband merchandizes mentioned in the ninth article of the present treaty; which certificates shall be made out by the officers of the place from which the veffel shall depart.

Art. XII. Although the veffels of the one and the other party may navigate freely and with all fafety, as is explained in the feventh article, they shall nevertheless be bound at all times

Art. XIII. If on producing the faid certificates, it be discovered that the vellel carries some of the goods which are declared to be prohibited or contraband, and which are configned to an enemy's port, it shall not however, be lawful to break up the hatches of fuch ships, nor to open any chest, coffers, packs, calks or vessels, nor to remove or displace the smallest part of the merchandizes, until the cargo has been landed in the presence of officers appointed for the purpole, and until an inventory thereof has been taken; nor shall it be lawful to fell, exchange or alienate the cargo or any part thereof, until legal process shall have been had against the prohibited merchandizes, and sentence shall have passed declaring them liable to confiscation, saving nevertheless as well the ships themselves as the other merchandizes which shall have been found therein, which by virtue of this present treaty are to be esteemed free, and which are not to be detained on pretence of their having been loaded with prohibited merchandize, and much less confiscated as lawful prize. And in case the contraband merchandize be only a part of the cargo, and the master of the vessel agrees, consents and offers to deliver them to the vessel that has discovered them, in that case the latter, after receiving the merchandizes which are good prize, shall immediately let the vessel go, and shall not by any means hinder her from pursuing her voyage to the place of her destination. When a vessel is taken and brought into any of the ports of the contracting parties, if upon examination she be found to be loaded only with merchandizes declared to be free, the owner or he who has made the prize, shall be bound to pay all costs and damages to the master of the vessel unjustly detained.

Art. XIV. It is likewife agreed, that whatever shall be found to be laden by the subjects of either of the two contracting parties, on a ship belonging to the enemies of the other party, the whole effects, although not of the number of those declared contraband shall be consisted as if they belonged to the enemy, excepting nevertheless such goods and merchandizes as were put on board before the declaration of war, and even six months after the declaration, after which term none shall be

prefurned to be ignerant of it, which merchandizes shall not it any manner be subject to confication; but shall be faithfully and specifically delivered to the owners; who shall claim or cause them to be claimed before confication and sale, as also their protects, if the claim be made within night months, and could not be made sooner after the sale; which is to be public? Provided hevertheless, that if the sale merchandizes be contraband; is shall not be in any wife lawful to carry them afterwards to a port belonging to the enemy.

Art. XV. And that more effectual care may be taken for the fecurity of the two contracting parties, that they fuffer no projudice by the men of war of the other party or by privateers, all captains and commanders of thips of his Swedish Majesty and of the United States, and all their subjects, shall be forbidden to do any injury or damage to those of the other party, and if they act is the contrary, having been found guilty on examination, by their proper judges, they shall be bound to make satisfaction for all damages and the interests thereof, and to make them good

under pain and obligation of their persons and goods.

Art. XVI. For this cause, every individual who is defirous of sitting out a privateer, shall before he receives letters patent, or special commission, be obliged to give bond with sufficient suresties, before a competent judge, for a sufficient sum to answer all damages and wrongs which the owner of the privateer, his officers of others in his employ, may commit during the cruise, contrary to the tenor of this treaty, and contrary to the edicate published by either party, whether by the King of Sweden, or by the United States, in virtue of this same treaty, and also under the penalty of having the said letters patent and special commission revoked and made void.

Art. XVII. One of the contracting parties being at war, and the other remaining neuter, if it should happen that a merchant ship of the neutral power be taken by the enemy of the other party and be afterwards retaken by a ship of war or privateer of the power at war, also ships and merchandizes of what nature sever they may be, when recovered from a pirate or sea rover, shall be brought into a port of one of the two powers, and shall be committed to the custody of the officers of the said port, that they may be restored entire to the true properties as soon as he shall have produced sull proof of the property. Merchants, masters and owners of ships, seamen, people of all sorts, ships and calls, and in general all merchandizes and effects of one of the allies or their subjects, shall not be subject to any embargo, nor detained in any of the countries, territories, islands, cities,

towns, ports, rivers, or domains whatever, of the other ally, on account of any military expedition, or any public or private purpose whatever, by seizure, by force, or by any such manner; much less shall it be lawful for the subjects of one of the parties to seize or take any thing by force, from the subjects of the other party, without the consent of the owner. This however is not to be understood to comprehend seizures, detentions and arrests, made by order and by the authority of justice, and according to the ordinary course for debts or faults of the subject, for which process shall be had in the way of right according to the forms of justice.

Art. XVIII. If it should happen that the two contracting parties should be engaged in a war at the same time, with a common enemy; the following points shall be observed on both sides.

ift. If the ships of one of the two nations re-taken by the privateers of the other, have not been in the power of the enemy more than twenty-four hours, they shall be restored to the original owner on payment of one third of the value of the ship and cargo. If on the contrary, the vessel re-taken has been more than twenty-four hours in the power of the enemy, it shall belong wholly to him who has re-taken it.

ad. In case during the interval of twenty-four hours, a veffel be re-taken by a man of war, of either of the two parties, it shall be restored to the original owner on payment of a thirtieth part of the value of the vessel and cargo, and a tenth part of it has been re-taken after the twenty-four hours, which sums shall be distributed as a gratification among the crew of the men of war, that shall have made the re-capture.

3d. The prizes made in manner above mentioned, shall be restored to the owners after proof made of the property, upon giving security for the part coming to him who has recovered the vessel from the hands of the enemy.

4th. The men of war and privateers of the two nations shall reciprocally be admitted with their prizes into each others portage but the prizes shall not be unloaded or fold there until the legality of a prize made by Swedish ships shall have been determined according to the laws and regulations established in Sweden, as also that of the prizes made by American vessels, shall have been determined according to the laws and regulations established by the United States of America.

of America, shall be at liberty to make such regularidas as they shall judge necessary respecting the conduct which their men of

war, and privateers respectively shall be bound to observe with regard to vessels which they shall take and carry into the ports of the two powers.

Art. XIX. The ships of war of his Swedish Majesty and those of the United States, and also those which their subjects shall have armed for war may with all freedom conduct the prizes which they shall have made from their enemies into the ports which are open in time of war to other friendly nations; and the said prizes upon entering the said ports, shall not be subject to arrest or seizure, nor shall the officers of the place take cognizance of the validity of the said prizes which may depart and be consulted freely and with all liberty to the places pointed out in their commissions, which the captains of the said vessels shall be obliged to shew.

Art. XX, In case any vessel belonging to either of the two States, or to their subjects, shall be stranded, shipwrecked, or suffer any other damage on the coasts or under the dominion of either of the parties, all aid and assistance shall be given to the persons shipwrecked, or who may be in danger thereof, and passports shall be granted to them to secure their return to their own country. The ships and merchandizes wrecked, or their proceeds, if the effects have been sold, being claimed in a year and a day, by the owners or their attorney, shall be restored, on their paying the costs of salvage, conformable to the laws and customs of the two nations.

Art. XXI. When the subjects and inhabitants of the two parties, with their vessels, whether they be public and equipped for war, or private or employed in commerce, shall be forced by tempest, by pursuit of privateers and of enemies, or by any other urgent necessity, to retire and enter any of the rivers, bays, roads or ports of either of the two parties, they shall be received and treated with all humanity and politeness, and they shall be at liberty to supply themselves with refreshments, provisions and every thing necessary for their sustenance, for the repair of their vessels, and for continuing their voyage; provided always, that they pay a reasonable price: And they shall not in any manner be detained or hindered from failing out of the said ports or roads, but they may retire and depart when and as they please, without any obstacle or hindrance.

Art. XXII. In order to favour commerce on both fides as much as possible, it is agreed, that in case a war should break out between the said two nations, which God forbid, the term of nine months after the declaration of war, shall be allowed

to the merchants and subjects respectively on one side and the other, in order that they may withdraw with their effects and moveables, which they shall be at liberty to carry off or to sell where they please, without the least obstacle; nor shall any seize their effects, and much less their persons, during the said nine months; but on the contrary, passports which shall be valid for a time necessary for their return, shall be given them for their vessels, and the effects which they shall be willing to carry with them. And if any thing is taken from them, or if any injury is done to them by one of the parties, their people and subjects, during the term above-prescribed, such and entire saidaction shall be made to them on that account. The above-mentioned passports shall also serve as a safe conduct against all insults or prizes which privateers may attempt against their persons and effects.

Art. XXIII, No subject of the King of Sweden shall take a commission or letters of marque for arming any vessel, to act as a privateer against the United States of America, or any of them, or against the subjects, people or inhabitants of the said United States, or any of them, or against the property of the inhabitants of the said States, from any prince or State whatever, with whom the said United States shall be at war. Nor shall any citizen, subject or inhabitant of the said United States, or any of them, apply for or take any commission or letters of marque for arming any vessel to cruise against the subjects of his Swedish Majesty, or any of them, or their property, from any prince or State whatever with whom his said Majesty shall be at war. And if any person of either nation shall take such commissions or letters of marque, he shall be punished as a pirate,

Art, XXIV. The vessels of the subjects of either of the parties coming upon any of the coasts belonging to the other, but not willing to enter into port, or being entered into port and not willing to unload their cargoes or to break bulk, shall not be obliged to do it, but on the contrary shall enjoy all the franchies and exemptions which are granted by the rules subsiding with respect to that object.

Art. XXV. When a veffel belonging to the subjects and inhabitants of either of the parties, sailing on the high sea, shall be met by a ship of war or privateer of the other, the said ship of war or privateer, to avoid all disorder, shall remain out of cannon shot, but may always send their boat to the merchant ship, and cause two or three men to go on board of her, to whom the master or commander of the said vessel shall exhibit his passpert, stating the property of the vessel; and when the said vessel

Art. XXVI. The two contracting parties grant mutually the liberty of having each in the ports of the other, confuls, vice-confuls, agents and committaries, whose functions shall be regulated by a particular agreement.

Art. XXVII. The present treaty shall be ratified on both fides, and the ratifications shall be exchanged in the space of eight months, or sooner if possible, counting from the day of the signature.

In faith whereof, the respective Plenipotentiaries have figned,

Art. III. If in any future war at sea, the contracting powers resolve to remain neuter, and as such, to observe the strictest neutrality, then it is agreed, that if the merchant ships of either party, should happen to be in a part of the sea where the ships of war of the same nation are not stationed, or if they are met on the high sea, without being able to have recourse to their own convoys, in that case the commander of the ships of war of the other party, if required, shall in good saith and sincerity give them all necessary assistance, and in such case, the ships of war and frigates of either of the powers, shall protest and support the merchant ships of the other: Provided nevertheless, that the ships claiming assistance are not engaged in any illicit commerce contrary to the principles of the neutrality.

Art. IV. It is agreed and concluded that all merchants, captains of merchant ships, or other subjects of his Swedish Majesty, shall have full liberty in all places under the dominion or jurisdiction of the United States of America, to manage their own affairs and to employ in the management of them whomfoever they please; and they shall not be obliged to make use of any interpreter or broker, nor to pay them any reward unless they make use of them. Moreover, the masters of ships shall not be obliged in loading or unloading their vessels, to employ labourers appointed by public authority for that purpole; but they shall be at full liberty, themselves to load or unload their vessels, or to employ in loading or unloading them whomsoever they think proper, without paying reward under the title of falary to any other person whatever; and they shall not be obliged to turn over any kind of merchandizes to other vessels, nor to receive them on board their own, nor to wait for their loading longer than they please, and all and every of the citizens, people and inhabitants of the United States of America, shall reciprocally have and enjoy the same privileges and liberties in all places under the jurisdiction of the said realm.

Art. V. It is agreed that when merchandizes shall have been put on board the ships or vessels of either of the contracting parties, they shall not be subjected to any examination: but all examination and search must be before lading, and the prohibited merchandizes must be stopped on the spot before they are

## GEORGE WASHINGTON,

PRESIDENT OF THE UNITED STATES OF AMERICA.

To all whom these presents shall come, greeting.

HEREAS a Treaty of Peace and Amity has been concluded in the manner herein-after-mentioned, by the Plenipotentiary of the United States of America, and the Dey and Regency of Algiers; which Treaty, written in the Arabic language, being translated into the language of the United States, is in the words following, to wit:

A Treaty of Peace and Amity concluded this present day hima artafi, the twenty-first of the Luna Saser year of the Hegira 1210, corresponding with Saturday the fifth of September, one thousand seven hundred and ninety-five, between Hassan Bashaw, Dey of Algiers, his Divan and subjects, and George Washington, Prefident of the United States of North-America, and the citizens of the said United States.

Article I. From the date of the present Treaty, there shall subsist a firm and sincere peace and amity between the President and citizens of the United States of North-America, and Hassan Bashaw, Dey of Algiers, his Divan and subjects; the vassals and subjects of both nations reciprocally treating each other with civility, honour, and respect.

Art. gency, or den of No of malinflick

Norththey fi Art. II. All vessels belonging to the citizens of the United States of North-America, shall be permitted to enter the disferent ports of the Regency, to trade with our subjects, or any other persons residing within our jurisdiction, on paying the usual duties at our custom-house that is paid by all nations at peace with this Regency; observing, that all goods disembarked, and not fold here, shall be permitted to be re-embarked, without paying any duty whatever, either for disembarking or embarking. All naval and military stores, such as gun-powder, lead, iron, plank, sulphur, timber for building, tar, pitch, rosin, turpentine, and any other goods denominated naval and military stores, shall be permitted to be fold in this Regency, without paying any duties whatever at the custom-house of this Regency.

Art. III. The vessels of both nations to pass each other without any impediment or molestation; and all goods, monies or passengers, of whatsoever nation, that may be on board of the vessels belonging to either party, shall be considered as inviola-

ble, and shall be allowed to pass unmolested.

Art. IV. All ships of war, belonging to the Regency, on meeting with merchant vessels belonging to citizens of the United States, shall be allowed to visit them with two persons only beside the rowers; these two only permitted to go on board said vessel, without obtaining express leave from the commander of said vessel, who shall compare the passport, and immediately permit said vessels to proceed on her voyage unmolested. All ships of war belonging to the United States of North-America, on meeting with an Algerine cruiser, and shall have seen her passport and certificate from the Consul of the United States of North-America, residing in this Regency, shall be permitted to proceed on her cruise unmolested: no passport to be issued to any ships but such as are absolutely the property of citizens of the United States; and eighteen months shall be the term allowed for furnishing the ships of the United States with passports.

Art. V. No commander of any cruifer belonging to this Regency, shall be allowed to take any person, of whatever nation or denomination, out of any vessel belonging to the United States of North-America, in order to examine them, or under pretence of making them confess any thing defired; neither shall they institute any corporal punishment or any way else molest them.

Art. VI. If any vessel belonging to the United States of North-America, shall be stranded on the coast of this Regency, they shall receive every possible assistance from the subjects of this Regency: all goods saved from the wreck shall be permitted.

to be re-embarked on board of any other vellel, without paying

any duties at the custom-house.

Art. VII. The Algerines are not, on any pretence whatever, to give or fell any vessel of war to any nation at war with the United States of North-America, or any vessel capable of cruising to the detriment of the commerce of the United States.

Art. VIII. Any citizen of the United States of North-America, having bought any prize condemned by the Algerines, thall not be again captured by the cruifers of the Regency then at fea, although they have not a passport; a certificate from the Consul resident being deemed sufficient, until such time as they can procure such passport.

Art. IX. If any of the Barbary states at war with the United States of North-America, shall capture any American vessel, and bring her into any of the ports of this Regency, they shall not be permitted to sell her, but shall depart the port on pro-

curing the requilite supplies of provision.

Art. X. Any vessel belonging to the United States of North-America, when at war with any other nation, shall be permitted to send their prizes into the ports of the Regency, and have leave to dispose of them, without paying any duties on sale thereof. All vessels wanting provisions or refreshments, shall be permitted to buy them at market price.

Art. XI. All ships of war belonging to the United States of North-America, on anchoring in the ports of this Regency, shall receive the usual presents of provisions and refreshments, gratis. Should any of the slaves of this Regency make their escape on board said vessels, they shall be immediately returned: No excuse shall be made that they have hid themselves amongst the people and cannot be found, or any other equivocation.

Art. XII. No citizen of the United States of America shall be obliged to redeem any slave against his will, even should he be his brother: neither shall the owner of a slave be forced to sell him against his will: but all such agreements must be made by consent of parties. Should any American citizen be taken on board an enemy's ship, by the cruisers of this Regency, having a regular patiport, specifying they are citizens of the United States, they shall be immediately set at liberty. On the contrary, if they have no passport, they and their property shall be considered lawful prize, as this Regency know their friends by their passports.

Art. XIII. Should any of the citizens of the United States of North-America, die within the limits of this Regency, the Dey and his subjects shall not interfere with the property of

Should there be no Consul, the effects shall be deposited in the hands of some person worthy of trust, until the party shall appear who has a right to demand them, when they shall render an account of the property: neither shall the Dey or Divan give hindrance in the execution of any will that may appear.

Art. XIV. No citizen of the United States of North-America shall be obliged to purchase any goods against his will; but on the contrary, shall be allowed to purchase whatever it pleaseth him. The Consul of the United States of North-America, or any other citizen, shall not be amendable for dehts contracted by any one of their own nation, unless previously they have given a written obligation so to do. Should the Dey want to freight any American vessel that may be in the Regency, or Turkey, said vessel not being engaged; in consequence of the friendship subsisting between the two nations, he expects to have the preference given him, on his paying the same freight offered by any other nation.

Art. XV. Any dispute or suits at law, that may take place between the subjects of the Regency and the citizens of the United States of North-America, shall be decided by the Dey in person, and no other. Any disputes that may arise between the citizens of the United States, shall be decided by the Consul; as they are in such cases not subject to the laws of this Regency.

Art. XVI. Should any citizen of the United States of North-America kill, wound, or strike a subject of this Regency, he shall be punished in the same manner as a Turk, and not with more severity. Should any citizen of the United States of North-America, in the above predicament, escape prisen, the Conful shall not become answerable for him.

Art. XVII. The Conful of the United States of North America shall have every personal security given him and his household; he shall have liberty to exercise his religion in his own house. All slaves of the same religion shall not be impeded in going to said Consul's house, at hours of prayer. The Consul shall have liberty and personal security given him to travel whenever he pleases, within the Regency; he shall have free licence to go on board any vessel lying in our roads, whenever he shall think sit. The Consul shall have leave to appoint his own Drogaman and Broker.

Ave. 20VIII. Should a war break due between the two nations, the Conful of the United States of North-America, and all citizens of faid States, thall have leave to embark themselves and property unmolefted, on board of what veffel or veffels they

shall think proper,

Art. XIX. Should the cruifers of Algiers capture any vessels having citizens of the United States of America on board, they having papers to prove they are really fo, they and their property shall be immediately discharged. And should the vessels of the United States capture any vessels of nations at war with them. having subjects of this Regency on board, they hall be treated in like manner.

Art. XX. On a vessel of war belonging the United States of North-America, anchoring in our ports, the Conful is to inform the Dey of her arrival, and the shall be saluted with twenty-one guns; which the is to return in the same quantity or number. And the Dey will fend fresh provisions on board, as is customary, gratis.

Art. XXI. The Conful of the United States of North-Americe shall not be required to pay duty for any thing he brings from a foreign country for the use of his house and family.

Art. XXII. Should any diffurbance take place between citizens of the United States and the Subjects of this Regency, or break any article of this treaty, war shall not be declared immediately; but every thing shall be searched into regularly, so that

the party injured shall be made reparation.

On the 21st of the Luna of Safer, 1210, corresponding with the 5th of September, 1795, Joseph Donaldson, jun. on the part of the United States of North-America, agreed with Haffan Bashaw. Dey of Algiers, to keep the articles contained in this treaty facred and inviolable; which we, the Dey and Divan, promise to observe, on consideration of the United States paying annually the value of twelve thousand Algorine sequins in maritime stores. Should the United States forward a larger quantity, the overplus shall be paid for in money, by the Dey and Regency. Any velled that may be captured from the date of this treaty of peace and amity, shall immediately be delivered up on SALW PAR her arrival in Algiers.

> In State lame

claus

To all to whom thefe prefents fiell come, or be made known

or hardiettelleternood be illen Whereas the underwritten David Humphreys, hath been duly appointed Commissioner Plenipotentiary, by letters patent, under the fignature of the President and seal of the United States of America, dated the 30th of March, 1793, for negeciating and concluding a treaty of peace with the Dey and Governor of Algiers; whereas, by instructions given to him on the part of the Executive, dated the 28th of March and 4th of April, 1705. he had been further authorized to employ Joseph Donaldson, jun, on an agency in the faid business; and whereas, by a writing under his hand and feal, dated the 21st of May, 1705, he did constitute and appoint Joseph Donaldson, junior, agent in the business aforesaid; and the said Joseph Donaldson, junior, did on the 5th of September, 1795, agree with Hallan Balhaw, Dey of Algiers, to keep the articles of the preceding treaty facred and inviolable.

Now KNOW YE, That I David Humphreys, Commissioner Plenipotentiary aforesaid, do approve and conclude the said treaty and every article and clause therein contained; reserving the same, nevertheless, for the sinal ratification of the President of the United States of America, by and with the advice and consent of the Senate of the said United States.

In testimony whereof I have signed the same with my hand and sand seal, at the city of Lisbon, the 28th of November, 1795.

## DAVID HUMPHREYS.

Now BE IT KNOWN, That I George Washington, President of the United States of America, having from and considered the treaty, do, by and with the advice and consent of the Senate, accept, ratify, and consim the same, and every clause and article thereof. And to the end that the said treaty may be observed and performed with good faith on the part of the United States, I have ordered the premises to be made public; and I do hereby enjoin and require all persons bearing office, civil or military, within the United States, and all other citizens or inhabitants thereof, faithfully to observe and fulfil the said treaty, and every clause and article thereof.

In testimony whereof I have caused the seal of the United States of America to be assixed to these present, and signed the same with my hand.
