Why Some Towns Are Dead

The town that never has anything to do in a public way is on the road to the cemetery. The citizen who will do nothing for his town is helping to dig the grave. The man that curses the town furnishes the coffin. The man who says he has no time from his business to give to municipal affairs is making the shroud. The man who will not advertise is driving the hearse; the man who is pulling back from any public enterprise throws bouquets on the grave. The man who is so stingy as to be forever howling hard times, preaches the funeral sermon, sings the doxology, and thus the town lies buried from all sorrow and care, and the Mayor should never leave town without a crape band on his hat.

A young lady from this village, whose name we withhold on account of her social position in the community, while alighting from a street car in Hamilton one day this week timidly asked the conductor, "Will I get a shock if I step on the car track?" "No Miss, not unless you put your other foot on trolley wire at the same time," replied the conductor politely as he rang the bell to go ahead.

Campers in Trouble

Tenting on the old Camp Ground is not as pleasant as some suppose, at least the party of campers on Green's flats have discovered. Of late great difficulty has been encountered in securing an adequate supply of milk for cooking and drinking purposes. The campers could stand the inconvenience no longer. A cow guaranteed quiet and free from disease with no bad habits was purchased from a nearby farmer. In fact the animal had been made a pet of around the farmer's home. The cow was delivered last week at the camp, and bossy was immediately turned out to pasture. The early education of the cow appears to have been sadly neglected, for the first day out it wandered into the camper's tents and devoured all the eatables in sight besides committing other acts of vandalism. This indiscretion on the part of the cow so enraged the campers that at a meeting held on Monday last it was decided to tie up bossy and take no chances of its committing any more such untidy acts. The cow is at present tied to the sluice gates of the swimming pool. Anyone desiring to purchase a good milker, quiet and sound in every way (with the exception of one bad habit), should inspect this animal, as this is a rare chance to purchase a good cow at a reasonable price.

Greenville

Mrs. C. S. Shields and two sons of Hamilton, is visiting with Mr. and Mrs. J. Surerus.

Mr. and Mrs. Maxwell Walker and baby are visiting at Mr. Richard Surerus.

Mrs. Johnson Tew spent a few days last week in Tilsonburg.

The Women's Institute met Wednesday afternoon at the home of Mrs. James Stutt.

Entrance Examinations

Thomas Akam, Ethel Dorothy Atkins, Phyllis Atkins, Beatrice Bousfield, Ruth Brown, Wm. M. Bowen, Margaret Baker, Clifford Bowen, Cecil Carson, Clifford Cook, William Dougherty, Archie Duncan (hon.), Alfred Eager, Muriel Everitt, Marguerite Fretwell, Geo. Griffin, (hon.) Ena Griffin, Rhoda Gallagher, Kathleen Griner, Morris Hill, Kenneth Harper, Clarence Hill, Evelyn Hopkinson, Ethel Klodt, Doris Leake (hon.), Edyth Lambier, Raymond Long, Elizabeth Lawson, Victor Langton (hon.), Florence Mitchell (hon.), Irvine Madden, Aileen Nicholson, James Organ, Joe Ricci, Chas. Scheer, Ben Sheppard, John Stewart, Alice Smith, Eileen Thompson Harvey Wilkinson (hon.), Nettie Walker, Lucy Yacobucci, Clefford Best, Marion Goodbrand.

Union S. S. Picnic

The Union Sunday School Picnic will be held at Wabasso Park on Friday, August 5th. The following committees have been appointed for the day.

Transportation—Chas. Richards, Dr. Vance, John Anderson, John Mitchell.

Tables—Miss Mary Thompson, Mrs. R. J. Vance, Mrs. John Anderson, Mrs. P. H. Metzger, Mrs. Chas. Drummond.

Supplies—O. B. Griffin, A. Dale. Sports—Dr. Hopper, O. A. Sherwin, Earl Griffin, Chas. Attridge, J. J. Burns.

Finance—Geo. Willis, Peter Mitchell, Robt. Griffin, John Anderson.

Mr. John Harvey met with a very serious accident last Monday morning while at work shingling the roof of the Misses McMonies house on John street. Mr. Harvey was removing the foot rest when it gave way suddenly and he fell to the ground, a distance of about 20 feet, fracturing his leg and receiving a general staking up. He was immediately removed to his home where his injuries were attended to by Dr. McGregor.

Base Ball

To Wallace Foster's pitching for Millgrove, Waterdown owes its defeat on Saturday last by the score of 8 to 1.

Carlisle, who looked like winners for a time in the League, also went down to defeat at the hands of Kilbride by 7 to 6.

Freelton failed to put in an appearance at Campbellville, thereby forfeiting the game.

Locals

Waterdown Civic Holiday Friday, August 5th.

Mrs. M. Bush, of Caistor, spent Sunday with her brother, Mr. H. W. Park.

The Highway Commission have opened an office over the Royal Bank.

Mr. and Mrs. F. Beale of Hamilton, are the guests of D. and Mrs. Atkins.

Mr. Wm. Parkhill, of Hamilton is spending his holidays with Francis Griffin.

The Public Library will open on Saturday evenings only during July and August.

Miss Ethel Copp is spending her vacation in Detroit, New York and other Eastern cities.

Miss Reta Henry left last week on a trip down the St. Lawrence to Montreal and other points of interest.

Mrs. H. Nicol and daughters, who have been spending a couple of weeks in Hamilton, returned home last Saturday.

Mr. Frank Fonger, of 49 Napier St., Hamilton, spent a few days last week with his brother-in-law, Mr. Jacob Metzger.

Mr. Nelson Zimmerman, our fine watch specialist, is spending a few weeks holidays at Kawartha Park in Northern Ontario.

Miss Ruby Spence, pupil of Miss Myrtle Voll, successfully passed her Junior piano examination at Toronto Conservatory of Music.

Mrs. Cush of Rockford and Mrs. Bogle of Strabane are visiting their nephew, Mr. Ed. Blagden and other relatives in the village.

Mr. A. E. Smith, late principal of Waterdown Public school, has secured the position of principal of the Public school at Warton.

Mr. and Mrs. Henry D. Ing of New York City are spending a week on the farm with their brother and sister, Mr. and Mrs. James G. Ing.

Mr. O. Hobbs of Hamilton has purchased from Mr. J. C. Medlar a portion of his property on Main street, Mr. Medlar reserving several front lots.

Mr. C. McDonald, of the Hamilton staff of the Royal Bank of Canada, is relieving the local manager, Mr. W. H. Torrance, who is absent on his holidays.

Mr. and Mrs. J. W. Griffin and family spent the week end with Mr. and Mrs. John Buttrum, Ancaster Road, and Mr. S. S. Buttrum and Mr. Louis Binkley, Hamilton Road.

Miss Bella Drummond is taking a two months trip of Western Canada and the United States going by way of Winnipeg, Brandon, Calgary, Banff, Vancouver and Victoria, and returning by way of Seattle, Omaha, Chicago and Detroit.

The advance agents for the C. A. Newell Circus were in town this week. The circus will exhibit here early in August. This show, which travels entirely by motor trucks, enjoys the distinction of being the finest on the road, and should attract a large audience.

WILL HARNESS RIVER

ST. LAWRENCE WILL FURNISH 5,000,000 HORSE POWER.

Five Dams Are to Be Built, and the Scheme Now Being Perfected is to Be One of the Greatest Engineering Undertakings in the History of the World.

FOR generations a dream of the engineers of the country has been the harnessing of the St. Lawrence river. Like the building of the Panama Canal, it remained in the dream stage for many years. Long dismissed by the cautious as a task too huge to be attempted, the St. Lawrence project is now being seriously considered.

For the last eight or nine months hearings have been held as to the best use for navigation and power purposes of the St. Lawrence river. These hearings have been held before the International Joint Commission, composed of three members from the United States and three Canadian members, who were originally appointed for the purpose of adjusting all differences between the United States and Canada respecting boundary streams. The commission has now before it for consideration recommendations that, if adopted, will mean, probably, the eventual building of five dams in the St. Lawrence (two internationally located and three wholly in Canada), which will produce, when completed, 5,000,000 horse power, 4,000,000 of which will be available for use in Canada and 1,000,000 in New York State and vicinity. The cost of construction is figured at approximately \$1,300,000,000.

The projected dams and power houses at different points in the St. Lawrence will, according to experts, release within a radius of 300 miles power at less than half the cost of present steam power, thus relieving the coal situation and providing new resources of power for lighting systems, traction systems and all kinds of manufacturing undertakings. Instead of the present slack water navigation between Montreal and Lake Ontario, and the score of locks now in use along the 120 miles of the St. Lawrence, there will be only six locks, making vast open stretches for speeding up navigation.

Through this series of dams and power houses it is believed that it will be possible to increase the flow of the St. Lawrence river by controlling the level of Lake Erie. Where now a minimum of 150,000 cubic feet of water per second must be figured on, this vast project undertakes to "balance the flow" of the St. Lawrence river, using Lake Ontario and Lake Erie as reservoirs, and thus make available for navigation and power approximately 200,000 cubic feet per second.

Of course the engineering difficulties to be met with are gigantic. The first steps have already been taken in using diamond drills to find rock bottom on the river bed, approximately sixty feet below the surface of the water. The depth of foundations at the proposed sites, and the general difficulties incident to uncovering these foundations, are matters which complicate the undertaking.

Another problem to be met is that of ice on the river. The proposed plant must be so designed that it can safely and automatically handle as much as 5,000 tons of ice per minute, an amount equal to a trainload of ice three-quarters of a mile long every minute. Ice defences to break up blocks are necessary. In addition, the masonry around the control system through which the water rushes must be heated to a temperature above 32 degrees Fahrenheit, so that the water will not freeze on the masonry and block the flow.

The first section to be built will be a great dam and power house stretching across the St. Lawrence from the American to the Canadian side. Such a structure will cost approximately \$300,000,000.

Complete plans for the work extending over five years or more have been drawn up by the offices of Hugh L. Cooper of New York. Mr. Cooper, who is an expert hydraulic engineer and who built the Mississippi Water Power Project, says: "No engineering proposal in the past even approximates in magnitude and far-reaching influence upon the general public the engineering proposal that is now before this International Joint Commission with respect to the St. Lawrence river. Aside from releasing 5,000,000 horse power, the engineering plans will show and competent engineering authorities will agree that the problems of preserving the scenic beauty at Niagara Falls and facilitating navigation on the Great Lakes system while bringing to highest development the water powers of

the region may be solved in a way that will stand out as a world monument to engineering—an achievement compared to which all past achievements, however great they seemed at the time of the accomplishment, will look small.

"The World War has removed from the normal available man supply more than 20,000,000 men. Probably 85 per cent. of these men belonged to the laboring class. It has been known for a long time that one of the quickest helps for this labor shortage will come from the hydro-electric engineering branch of the profession. Our modern civilization requires, normally, one horse power for every five of its people. Every hydro-electric horse power saves, on the average, ten tons of coal per annum.

"This is to show how the public is dependent upon and interested in the most efficient development of all undeveloped water-power resources."

First Cable Message.

The first Atlantic cable message to Canada was on August 12, 1858, from Queen Victoria.

Cauliflower is handled in the same way as cabbage. If cauliflower gets a severe setback in transplanting to the field, it will tend to cause it to go to seed instead of to form a good head. More especially is this so with the early crop in the warm summer weather. In many small gardens it is generally grown as a fall crop. The plants are slower growers than cabbage and will do better if started about two weeks earlier if we wish a maximum number of good heads. When the cauliflower shows a head about two inches in diameter the outer leaves should be drawn together and tied so as to exclude the light, thus giving a pure white head. Cauliflowers that have not fully developed may be dug up, roots and all, and hung in a cool cellar. They will continue to grow, giving a delicious head after the ordinary season of cauliflower is over. Fully developed heads may be cut off, wrapped in oil paper and stored in a cold room at 32 deg. F. to 34 deg. F. Here they will keep well till Christmas time.—A. H. MacLennan, Vegetable Specialist, Toronto.

The trees in the apple orchard may be scraped down so as to make more effective the later spraying of the trunk and main branches. Egg masses of the Tussock Moth, conspicuously white against the dark bark, may be removed by means of a wire brush or hook on a pole.

Long-tailed lambs are unsightly, and are apt to become very filthy.

Carrier Pigeons in 1099.

According to the poet Tasso, carrier pigeons were employed for the transmission of messages during the siege of Jerusalem in the year 1099.

ANGORA.

Land of Goats Traces Ancestry to European Celts.

A city founded by Midas of the touch of gold; overrun two centuries before Christ by far-wandering cousins of the Irishman of to-day; a great and wealthy community under Rome and Byzantium—and in spite of its checkered history and its past glory, known to recent generations in the West only because of a long-haired goat!

Such is Angora in Central Asia Minor, where Mustapha Kemal Pasha has set up "the Angora Government" which he claims to be the real Government of Turkey, and from where, supposedly surrounded by Bolshevik agents, he is issuing defiant messages to the Allies.

The remote kinsmen of the Irish who figure in the history of Angora were 20,000 Celts from central Europe, who, unable to push into Greece, decided to try their luck across the Hellespont. After harrying the country for half a century they were forced to settle around Angora, then known as Ancyra. Their country became known as Galatia. There St. Paul is supposed to have found a Christian church to the congregation of which he addressed his "Epistle to the Galatians." In the fourth century, the Celtic language was still to be heard in Galatia, according to St. Jerome.

The Celtic invaders were always in the minority and were finally absorbed, as the Norman conquerors of England were absorbed by the Saxons. Many observers profess to see the effects of Celtic blood in the people of Angora to-day, and describe them as lighter in complexion than the people of other parts of the near East, and "the most genial of the Mohammedans of Asia Minor."

Ancyra dwindled to a village under Celtic rule, but following the annexation of Galatia to the Roman Empire in 25 B.C. and during the hundred years in which it was maintained as the Roman frontier province, the city took on great importance. One of the most famous of the ruins of Asia Minor is that of a beautiful marble temple in Angora dedicated "to Rome and Augustus."

During the Byzantine period Ancyra became even more important, its position between Constantinople and Mesopotamia and Persia making it the metropolis of interior Asia Minor. The rising power of the Turks was indicated by the fall of Ancyra into their hands more than a hundred years before the fall of Constantinople. But Ancyra was captured shortly afterward by the Christian crusaders during one of their fiercest sorties inland and was held by them for eighteen years until 1260 when it again fell into Turkish hands.

Though marble reminders of its ancient glory are scattered about in the Angora of to-day, it is predominantly a dingy city of mud, brick houses and narrow streets. A mosque is built against one of the marble walls of the noble old Augustan temple. The walls and gates of the city are constructed of fragments of demolished Greek and Roman buildings, colonnades and other structures.

The city is 220 miles southwest of Constantinople. It has a population of about 30,000, approximately a third of them Armenians who speak Turkish. It is perched on a rocky plateau to the north of which are fertile valleys and to the south of which stretch plains merging finally into a great desert. On these southern plains are pastured large herds of sheep, and goats with long silky hair, which have made the name Angora familiar to western ears. Large quantities of wool and mohair are exported.

Cats, and to a less extent dogs and other animals in the neighborhood of Angora have unusually long silky hair. It is believed that the climate and perhaps the soil of the region are responsible for this peculiar development.

Jack Frost as a Friend.

Let those who will growl when icicles hang on the wall. To millions Jack Frost comes as a friend, and not always in disguise, either.

His influence on soil is wonderful. Besides reducing it to a much finer state of tillage than can be produced by any implements known to man, he improves its fertility and adds to its quantity.

The highest counts of bacteria in soil—and there may be 100,000,000 in a grain—have been obtained in hard winters, and it is during such seasons that the disintegration of rock which produces fresh particles of soil goes on most rapidly.

As water passes from the liquid to the solid state its expansive power is about 150 tons to a square foot, which is equal to the weight of a column of rock about one-third of a mile in height. Then comes the thaw, and as the water contracts away crumbles the surface of the rock, to go to make the soil from which we draw our sustenance.

When Canada Became British.

The Treaty of Paris, concluded in 1763, ended the Seven Years' War between France and Britain for the New France of that day and the Canada of to-day. Following the defeat of Montcalm by Wolfe in 1759 and of Vaudreuil in 1760, the transfer of the country to Britain was made, and the Treaty of Paris is its official document.

Say It with Flowers

The Sawell Greenhouses

To the Farmer:

The purchase of a Piano or Victrola is only purchased invariably once in a lifetime. Therefore it behoves the purchaser to get the best and make sure you have the best.

I have had 25 years experience in tuning and repairing musical instruments, therefore feel quite confident I can choose the best instruments on the market.

I shall be pleased to place any instrument in your home beside any other in fair competition and let you yourself be the judge, without you feeling under any obligations absolutely. I can also save the purchaser quite a few dollars on account of my expenses being so low. I will always give you my best personal service and devote the whole of my time to supplying the country people. A postcard or telephone call will oblige.

Yours truly,

BEST LITTERING TIME

Have the Young Pigs Arrive in April or October.

June and December the Months for Mating—Give the Sow Good Farrowing Quarters—Care of Milk in Hot Weather.

(Contributed by Ontario Department of Agriculture, Toronto.)

Now is the time to start and get ready for the fall litter of pigs. Any females of breeding age should be bred as soon as possible in order that they may farrow before the cold weather of winter sets in. The gestation period of the sow is sixteen weeks and consequently, if the sows are to farrow before winter, it is necessary that they be bred soon. For the average farmer the best time to have the sows farrow is in April and October. When the pigs are born in April they are given a chance to get a good start before the hot weather comes. When the litter comes in the fall, say October or early November, the young pigs are given a chance to get out into the fields and get exercise, which gives them an early start before they are put into the closer confinement of winter quarters.

For those contemplating breeding sows for fall litters, always pick the strongest and most ttypy on hand. Always use the best individuals to be had, particularly those exhibiting a good matronly appearance as shown by the number of teats.

Plenty of exercise while the sows are pregnant is very essential, and a good way for the sows to gain this is to allow them the freedom of the fields after the grain has been cut and taken off. As the time for farrowing approaches, closer watch must be kept on the sow in pig, and a few days, say two weeks before her time is up, she should be brought in and introduced to her new quarters. She need not necessarily be kept in there all the time, but she should be kept in there at night. She should receive a little grain at the outset with plenty of water and some feed of a laxative nature to prevent constipation, which is the bane of hog raisers. By judicious feeding of the sow previous to farrowing the owner will have the sow in good physical condition and the pigs will come strong and healthy, and there will be lots of milk for the youngsters when they arrive.

As for farrowing quarters any good warm box-stall, free from draughts and dampness, is a good place. The quarters should be dry and clean. Some people advocate little bedding for the sow while the pigs are young, claiming that the youngsters are liable to get buried in the straw and the sow is liable to lie on them. A good remedy for this would be to use cut straw where possible. However, if the cut straw is out of the question, it may be just as well not to be too liberal with the long straw. The farmer must use his own judgment when emergencies arise, always being careful to do the best thing for the mother and family.

—J. C. McBeath, O. A. College, Guelph.

2,500 Guineas for Bull Calf.
A 12-days-old bull calf, Haydon's Dutch King, from the famous English Friesland herd of Mrs. Putnam, has been sold for the record price of 2,500 guineas to Mrs. Brown, of St. Albans.
