LONG LIFE.

It is a generally accepted fact that, accidents excepted, human beings live for a longer or shorter period according to their ability to breathe. Pure air is the greatest of all known tonics, and idleness and indolence that keep men and women indoors when they should be enjoying the pure breeze of heaven, are the greatest enemies to health.

But it must be acknowledged that the strongest are subject to many diseases, more especially of the throat and lungs which require nature's remedies speedily to heal and cause the return to perfect health. Amongst these are COUGHS, COLDS, SORE THROAT, ASTHMA, WHOOPING COUGH, BRONCHITIS, INFLUENZA, CROUP, CONGESTION AND INFLAMMATION OF THE LUNGS, CONSUMPTION AND ALL THE ORDINARY DISEASES OF THE CHEST AND LUNGS all of which are relieved if not cured by DR. WILSON'S PULMONARY CHERRY BALSAM, a remedy superior to all others that are known.

The cause of the wonderful power of this medicine easily can be pointed out: It is composed exclusively of the purest vegetable materials, the advantage of their absolute purity being that the dose might be the smaller and that there should be no danger of the stomach being clogged by hurtful and useless material.

The chief ingredient is the extract of Wild Cherry Bark, which is the remedy wonderfully supplied by nature for diseases of the lungs and air passages. Nothing can be more instructive to the student of the wonderful ways of the Creator than the action of this very humble servant. In the first place it acts as a tonic to the stomach aiding to give it a healthy appetite, at the same time assisting it in its work of preparing the food for conversion into pure, healthy blood. Again it has a peculiar soothing, sedative influence on the heart and large blood vessels. The necessity of this is easily understood when it is remembered that any irritation in the lungs prevents the free flow of the blood through them. The heart endeavors to overcome this by increased action and thus it is felt to be beating as if it would break, and if the cause is not removed the derangement is likely to become very great. The Wild Cherry Bark is the natural soother and gradually and quietly the irritation is allayed and gradually the heart and blood vessels assume their natural and healthy condition.

But this is but a part, though an important part, of the work. While the Wild

Cherry Bark tones the stomach, assists in purifying the blood and in allaying the irritation of the heart and blood vessels, a second ingredient is performing the hardly less important work of loosening and displacing the phlegm to raise which causes so much pain and distress. This phlegm clogs the mucous lining of the air-tubes and cells and unless it is dissolved it remains in them, blocking up and after a time rotting and festering them, thus bringing on tubercular consumption. It is the presence of this tough, stringy phlegm that causes the convulsive coughing so characteristic of those with diseased lungs; but what the cough cannot displace this ingredient does, and with the most favorable results.

In addition to these invaluable agents there are others of a soothing and healing nature such as the gum resins of the White Pine and Fir of torrid climes all of whose harsh and irritating qualities have been burnt out by the direct rays of the sun, leaving a healing balsam, and one at the same time grateful to the stomach.

And besides these there is a pleasing and soothing lubricant which supplies the place of the natural mucous secretion which coats the mucous membrane in its healthy state, and keeps it soft and natural. Thus when the acrid irritating phlegm has been dissolved by other ingredients, this one supplies the place of the diseased secretions and aids materially in bringing about a healthy state of the membrane.

All these ingredients together, work one with the other, thus composing a preparation which attacks all diseases of the throat and lungs at their most easily assailable points, and all unite to make a remedy most thorough and searching in its character, widespread in its range of cures, pleasant in taste and immediate in its action.

CONSUMPTION.

This disease is the most dreaded of any on this continent. Its advances are so stealthy, its grasp so firm and unyielding, and its ravages so general—it being no respecter of persons, condition or ages—that its presence is considered one of the greatest calamities that can befall a family. It is only of late years that people have begun to learn that consumption is curable and that it is preventable. Many cases, once considered hopeless, have been cured by DR. WILSON'S PULMONARY CHERRY BALSAM, and hundreds of families, through its agency, have had cause to rejoice in the

ECLIPSES DURING THE YEAR 1881.

There will be four Eclipses during the year 1881—two of the Sun and two of the Moon.

I.—On the 27th of May there will be a partial Eclipse of the Sun. Invisible.

II.—On the 11th of June there will be a total Eclipse of the Moon. Invisible.

III.—On the 21st of November there will be an Annular Eclipse of the Sun. Invisible.

IV.—On the 5th of December there will be a partial Eclipse of the Moon. On that day the Moon rises Eclipsed, which will continue until 6.30.

An interesting phenomenon occurs on the 7th of November. The transit of Mercury over the Disc of the Sun. It will not be visible in Montreal, but the Astronomers of the Chinese Empire will give us the particulars in due time.

"Have you a mother-in-law?" asked a man of a disconsolate looking person. "No," he replied, "but I've a father in gaol."

"I have lost my appetite," said a gigantic fellow, who was an eminent performer on the trencher, to a friend. "I hope," said the friend, "no poor man has found it, for it would ruin him in a week."

"I know a victim to tobacco," said a Chicago lecturer, "who hasn't tasted food for nearly thirty years." "How do you know he hasn't?" asked an auditor. "Because tobacco killed him in 1850," was the reply.

A man passing through a gate in the dark ran against a post. "I wish that post was in the lower regions," was his angry remark. "Better wish it somewhere else," said a bystander; "you might run against it again."

Two young men went fishing the other day, and on returning were going past a farm house, and they felt hungry. They yelled to the farmer's daughters: "Girls, have you any buttermilk?" The reply was gently wafted back to their ears: "Yes; but we keep it for our own calves."

fact that some loved one has been returned to them, as it were, from the jaws of death. We do not assert that this widely known remedy will cure every case of consumption, but we do say, that there are no cases so bad that it will not give relief; that it is useful in all stages of the disease; that hundreds of consumptives have been cured by it, and that, until it has been tried, hope need not be lost.

BRONCHITIS.

This disease is commonly distinguished by a soreness of the throat, lameness in the chest, chiefly under the breast bone, a hacking cough with expectoration of a tough, stringy phlegm, often tinged with blood, but more frequently of a greenish hue; but, in addition, there is often a good deal of oppression in breathing, more particularly in wet weather, a weakness of the general system very hard to shake off, and sometimes feverishness at nights often accompanied by cold sweats. With the latter symptoms there is great danger of consumption, and it is just at this time that DR. WILSON'S PULMONARY CHERRY BALSAM is most useful in not only warding off the approach of consumption, but in eradicating the bronchitis as well.

INFLUENZA

is a disease that attacks whole communities at the same time. Sneezing, coughing, rawness of the throat and air passages with profuse expectorations of acrid phlegm, running at the nose and consequently a rawness and redness of that organ are the symptoms of this disease. DR. WILSON'S PULMONARY CHERRY BALSAM is the cure.

LUNG DISEASES.

Congestion of the lungs, inflammation of the lungs and lung fever, all different stages of the one disease, are first recognized by difficulty of breathing, generally accompanied by pain in the side, severe cough, expectoration of rusty colored phlegm, with fever, loss of appetite and a general feeling of debility. The action of the heart is much disturbed, the pulse beats more quickly, the skin is hot and dry, the urine scanty and light colored, the bowels sometimes costive and at others affected by diarrhoea. This disease or these diseases generally arise from a severe cold causing a filling up of the air vessels of the lungs with blood. Were DR. WILSON'S CHERRY BALSAM taken on the first appearance of the cold, the disease would be speedily eradicated from the system and the constitution strengthened, but even when it has made considerable advances, this wonderful rem-

edy is amongst the most beneficial that can be used, its soothing, cleansing and healing qualities being unequalled.

ASTHMA.

This distressing complaint very often has its origin in diseases affecting the respiratory system during infancy, such as whooping cough, measles and brouchitis, although often it is hereditary, and in all cases one attack seems to lead to others. It is generally associated with some form of chest complaint, more particularly bronchitis, and hence the term "Bronchitic Asthma." The relation between the two ailments in such cases is rendered sufficiently obvious by the fact that the one does not occur without the other; and it is evident that the bronchial mucus membrane gives rise to the reflex nervous action to the worry of the tubes. When the bronchitis is cured the asthma disappears. It is the great usefulness of DR. WILSON'S PULMONARY CHERRY BALSAM in the cure of bronchial and chest disorders that makes it so efficacious in Asthma, for in curing the one it cures all.

COLDS AND SORE THROAT.

These complaints, in our northern and variable climate, are very common, and cannot be effectually guarded against. Despite the greatest care and attention the Cold and Sore Throat will come, and it is hardly doubted that those most liable to these affections are they who are most careful in wrapping themselves up. But it is fortunate that while these diseases cannot be prevented, they easily can be cured by a prompt use of DR. WILSON'S PULMONARY CHERRY BALSAM, which immediately relieves the severest case, which otherwise, quietly, might have grown into consumption, and caused the loss of a valuable life. It is a sad fact that the very great mortality from diseases of the throat and lungs is avoidable, and that if coughs and colds, instead of being neglected, were treated by DR. WILSON'S PULMONARY CHERRY BALSAM before they had gained a foothold, there is not a case but would have been cured.

WHOOPIING COUGH.

This is a very distressing complaint, confined almost exclusively to children. It is known by its convulsive coughs, accompanied by long-drawn-out whoops. The little sufferers are attacked while at the table, reading, or at play, and may be noticed to clutch hold of any support and cough, often till black in the face, and until they bring up a quantity of tough,

stringy phlegm, often bloody in streaks or spots. DR. WILSON'S PULMONARY CHERRY BALSAM is a certain cure.

CROUP.

This is one of the most dangerous diseases to children under nine years of age. The mother, generally in the night-time, is awakened by the prolonged choking cough of her darling child, with signs of suffocation, and often before morning the gentle spirit has fled. But with DR. WILSON'S CHERRY BALSAM at hand, the cure is almost certain. The cause of this terrible disease, usually, is exposure to a damp atmosphere in badly ventilated rooms, want of sufficient clothing, heats, colds, &c. When the attack is first noticed the child should be placed in a hot salt bath, in a warm room, for ten minutes, then wiped dry and placed in bed, covered with flannel blankets, and then given an emetic consisting of an even teaspoonful of powdered alum, and the same quantity of mustard, to produce vomiting. DR. WILSON'S PULMONARY CHERRY BALSAM should then be administered to allay irritation, and prevent and clear the throat of any false membrane that may have been formed. The temperature of the room, also, should be watched, and every pains taken to keep it warm, and prevent additional colds.

WARNINGS.

No cold should be permitted to make any headway. DR. WILSON'S PULMONARY CHERRY BALSAM should be taken on its first appearance. Neglect may lead to years of suffering and a lingering death.

In purchasing this wonderful medicine, be sure that you obtain the genuine article. Its very high reputation has led to its being counterfeited in various parts of the country. See that each bottle has WILSON'S PULMONARY CHERRY BALSAM blown on the glass, and only purchase from reliable dealers.

SNATCHED FROM THE GRAVE.

DOUGLAS, N.B., June 8, 1878.

SIR,—This spring I took a severe cold. It was while following my usual business of surveying lumber. It continued to grow alarmingly worse for four weeks, and was accompanied by soreness and weakness of the lungs. I was fast becoming unable to attend to my business, and took every means to restore my lost health. I consulted doctors and took their medicine without receiving any help, and tried other remedies without better result. I had a terrible cough, raised a good deal, my appetite failed, and I was fast descending to the grave. At this stage a friend re-

commended DR. WILSON'S PULMONARY CHERRY BALSAM, and after using a bottle and a half I became, and have continued, perfectly well. I believe that through the blessing of God this BALSAM saved me from a settled attack of consumption.

WHITMAN ESTEY.

A WONDERFUL CASE.

MUSQUODOBOIT, N.S., March 24, 1879.

SIR,—Last spring my three year old daughter caught a severe cold. She could get no rest at night from coughing, was in a high fever all the time, fell away in flesh, and grew so weak that she could not walk across the house without staggering and had every appearance of being in consumption. We had given her up to die, when hearing that a child similarly afflicted had been cured by WILSON'S PULMONARY CHERRY BALSAM, I went to Shubenacadie, fifteen miles away, and got some. Her cough was easier after the first dose, and after using it for a short time she became entirely cured. This winter I used this same remedy for a severe cold I caught, and when nothing else I tried could help me, it effected a complete cure.

Yours truly, JOHN ANNAND.

RECOMMENDED BY THE FACULTY.

June 8th, 1879.

SIR,—I was seized with great severity by a paroxysm of asthma, a disease with which I had been afflicted for many years past. It was attended with a hoarseness and soreness of the throat and lungs, together with a laborious cough and complete prostration of strength. I was worn out with my struggles against suffocation, when a bottle of WILSON'S PULMONARY CHERRY BALSAM was sent to my house by a friend. At first I thought it nothing but quackery, but it being recommended by my doctor I took it, and in a few days it completely cured me, nor have I ever had any return of the disease since.

CHARLES SEDGER.

Mr. Sedger does not give his address, but being such a remarkable case we give it a place before many others.

INFLUENZA & ASTHMA BANISHED.

ST. JOHN, N.B., Dec. 14th, 1879.

SIR,—Influenza, bad cough and asthma, united afflicted me, and consumption appeared inevitable, when one bottle of DR. WILSON'S PULMONARY CHERRY BALSAM restored me to perfect health. Every previous means of cure that I resorted to had done me no good. THOS. M. STOVER.

ON PURITY OF BLOOD.

It has been well said that as soon as a man begins to live he begins to die. In our every tissue there is continually going on a process of waste and re-construction, of building up and casting down. This is necessary for life itself. The amount of food, water and pure air converted into healthy blood for the nutriment of our bodies must be equal to the amount of material lost in living. It is said that in the course of one year a man receives into his body over one ton of material for the support thereof, and, through expiration, evaporation from the skin and the discharges from the various secreting and other organs, he loses just as much.

The central force in all these changes is the blood, and the maintenance of life is only to be secured by pure arterial blood. The blood is supplied with matter from three distinct sources—the atmosphere, the proceeds of the digestion of food and the absorption of that portion of the tissues which has already served its purpose and become effete. This latter is got rid of, burnt off, in fact, in the lungs.

An eminent family doctor in an article on this subject in *Cassell's Magazine* says: "No injurious matter must float in our veins if we would enjoy good health and the prospect of a reasonably long life. I believe that from the want of knowing how properly to retain the blood in a state of life-giving purity thousands die annually, and tens of thousands do not enjoy their existence as they otherwise might. Their names are legion who pass their lives, if living it may be called, in a condition very far indeed from that of health. They never have much to complain of, probably, while, on the other hand they never can boast. Their state is perhaps best summed up in the simple, but expressive word 'middling' which we hear scores of times, every day. Such people are very easily affected by the state of the atmosphere and by the weather, and in nine cases out of ten they are rendered constitutionally weak, from the fact that the blood in their systems is not so pure as it ought to be. They easily catch colds and other ailments, because their bodies have no resisting power, being either insufficiently nourished or partly poisoned by the blood that circulates through them."

The writer then goes on to say that "any organ and every organ in the body will be rendered weak, inactive and probably unhealthy, if it be for a time supplied with blood of insufficient strength

and purity; but even a weakly and unhealthy organ will begin to regain its strength and vigor, from the very hour the blood-making process has been placed upon a purer and more healthy footing. This should give hope to many who have been suffering long from chronic derangement of some internal organ."

WILSON'S ANTI-BILIOUS AND PRESERVING PILLS.

With the facts just rendered before us it is not necessary to apologize for the introduction of DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS which have proved themselves by years of trial to be not only a safe, mild and certain vegetable Cathartic and blood purifier and cleanser, but, in addition, that they have wonderful powers of building up and restoring the system to full health and vigor. In their composition every element not of positive value is discarded and only the active medicine used. As a result the greatest possible amount of curative material is made to occupy the smallest possible compass, and every atom has its special work to do in the cure of deep seated diseases whose symptoms are: CONSTIPATION, COSTIVENESS, INDIGESTION, HEADACHE, SICK HEADACHE, DYSPEPSIA, LOSS OF APETITE, FOUL STOMACH AND BREATH, BILIOUSNESS, HEARTBURN, DIZZINESS, LIVER COMPLAINT, PILES, JAUNDICE, and all diseases having their origin in impure blood or a disordered liver or stomach.

To cure these diseases it is first necessary to cleanse and purify the blood, liver and stomach and thus take away the causes of them. This duty is well performed by the concentrated juices of extracts of five different medicinal roots of which Dr. Wilson's Anti-Bilious and Preserving Pills are composed.

The first is a safe and certain Cathartic which, while not acting so powerfully upon the coats of the stomach and bowels as to produce irritation or inflammation, as is the case with so many Cathartics, causes a flow of the natural purgative, and thus, by assisting and not forcing nature, its good action is rendered permanent.

The second is a sudorific which stimulates the glands of the skin, through the agency of perspiration, to get rid of the too large quantity of water and effete matter held in solution by the blood.

The third acts chiefly on the kidneys, causing a free flow of urine or water impregnated with certain salts produced by

—A young lady had been trying for three weeks to get a photograph of her pet poodle, but the fidgety little animal would not be taken. So she just had the artist take the photograph of her nicest young man, whitening the moustache and painting the ears up a little, and the resemblance is so perfect that the innocent young man himself admired it, and begged for a copy as "a soovner of the s'gacious an'mal."

—Barnum's portrait is painted on a part of his cages. When his show was in Hartford, the other day, an honest-minded chap was looking about the camp as the workmen were packing up. Seeing Barnum's full face on the side of the cage of the stuffed hippopotamus, he asked the man in charge if Barnum was in there.

"Yes," was the reply, and the door was partly opened.

The stranger peeped in, and exclaimed: "Oh, la! Is that him? He is fatter than I supposed, and is of darker color."

The door was shut suddenly.

the body and harmful if retained. It is the virtue of this ingredient, principally, that makes these pills so efficacious in the cure of DROPSY, STOPPAGE OF WATER, INFLAMMATION OF THE KIDNEYS, &c.

The fourth ingredient has the power of assisting to eliminate unhealthy phlegm and humors from the blood, which quality makes these pills more useful than any other purgative in cases of CONGESTION OF THE LUNGS AND LUNG FEVER.

The fifth ingredient is the one, especially, which makes these pills superior to all others. It has a tonic, strength-producing quality and prevents the cathartics and blood cleansers from doing their important and necessary work at the expense of the system's strength.

Thus it will be seen that DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS are a perfect remedy for the diseases it is claimed they will cure. They cleanse the stomach through the agency of the bowels, skin and kidneys, stimulate the secretion of bile, purify the blood which brings strength to every part of the body, and build up and strengthen the whole system from the moment they are first used so that when no longer needed they leave the patient in a perfect state of health and not debilitated as is so often the case. In addition to these virtues these pills, through the purity of their ingredients, are suited to all climates and, at the same time are adapted to all constitutions, leaving no evil effects behind on the youngest or most delicate patient, while they are, also, powerful enough to remedy the outraged organs of the most brawny worker.

Coming to particulars we find that DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS perform a most important duty in the stomach and bowels. They strengthen these organs, assist in the process of digestion, prevent the fermentation of food and thus cure INDIGESTION, DYSPEPSIA, DIARRHOEA, COSTIVENESS, HEARTBURN, WATERBRASH and many similar diseases. It is unfortunate that the earlier symptoms of these diseases are so generally disregarded and that it is only when the stages of acute pain in the bowels, stomach or brain are reached that the causes and cure of them are considered. It is well to know that DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS will banish these powerful symptoms and in a very short time will work a complete cure of the diseases.

DIARRHOEA

Diarrhoea is a common and a most distressing disease and arises from a diseased

stomach and liver. This is prevented by the use of DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS which also eradicate the disease after one or two doses. Diarrhoea is almost invariably preceded by nausea, occasional colicky pains, and a feeling as of want of circulation in the bowels as if there were a load there. If, on the first symptoms, a dose of these pills be taken, they will carry off the cause of these painful and oppressive feelings, by inducing a free flow of bile, purging away the offending material and relieving the irritation consequent upon it. If, after the first dose, the symptoms should continue in a modified form a second dose will effect a sure cure.

LIVER COMPLAINTS,

including BILIOUSNESS and JAUNDICE are cured by DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS which act energetically on the liver, stimulating and regulating the secretions of the bile, soothing any irritation, allaying the spasm of the duct which often closes the outlet and prevents the bile from being carried away into the intestines. When the bile is prevented from being carried off in this natural manner congestion of the liver or a bilious attack or in a more severe form, jaundice or chronic liver complaint are sure to follow. The reason is plain. The bile is the natural purgative and it is necessary for health that it flow in a regular and proper manner into the intestines, there to assist in the digestion of food and to work off the waste material in the stomach and bowels. If this is not done, not only is the food imperfectly digested, but, also, the liver becomes enlarged and congested and a long train of diseases follows.

PILES

is amongst the most painful and troublesome of these diseases so caused. It originates from the enlargement of the veins which carry the blood from which the bile is secreted to the liver. If the circulation in and to the liver is stopped these veins are necessarily distended until they break and the blood flows from them when they are called bloody piles. If they do not break they are called blind piles. DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS set free the bile to flow on and perform its work and thus cure piles and all other diseases caused by a stagnant liver and stomach.

A COMMON ERROR

is combatted by a popular medical writer in the following words: "A common

—The young man who wants to get up with the sun must not sit up too late with the daughter.

—“Why should we celebrate Washington's birthday more than mine?” asked a New York teacher. “Because he never told a lie!” shouted a little boy.

—Young gent (*who has been away from home some time*). “Well, cook, and how are you?”

Cook. “Only moderate, sir—only moderate; the fact is I often wish I was dead.”
Young Gent. “I'm sorry to hear that; but you should mind what you say, cook; you know it might be ‘out of the frying-pan into the fire.’”

—“Don't you sing, Mr. Stubbs?”
“Well, ah, no—I don't.”

“But all your people do.”

“Well, you see, I got no voice like the rest of them. It isn't my fault; I wasn't consulted. If I'd had a voice in the matter—er—” (getting mixed) “I'd have had one.”

symptom of fever is 'red cheeks,' but no sensible person ever thinks of doctoring red cheeks! When the fever which causes them is cured the red cheeks will soon disappear. Pain in the head, dizziness, impaired memory, noises in the head, specks floating before the eyes, bad taste in the mouth, morbid appetite, pain in the shoulders, side, breast, spine and abdomen, palpitation of the heart, short breath, cold hands and feet, irritable kidneys, torpor of the liver, constipation, rusty skin, sallow complexion, neuralgia and rheumatism are as much symptoms of the disease of the organs of digestion and nutrition, as red cheeks are of fever." He goes on to say that people commonly endeavor to treat the *symptoms* instead of the *disease* which causes them, and for that reason could not cure either. DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS on the contrary, as has been shown, attacks the disease in its citadel and through one fell stroke all the symptoms disappear as if by magic.

FEVERS,

which are commonly caused by blood poisons through the quantity of impure matter in the arteries and veins usually are got rid of by the use of DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS, as is the case with diseases more clearly connected with the nutritive or digestive organs.

IN FEMALE DISEASES

DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS are of great service and may be safely trusted. By them irregularities are corrected, stoppages relieved and leucorrhœa or whites cured. At the turn of life they are especially useful, and by their use many chronic diseases, which at this period so readily seize on the system, are prevented.

RHEUMATISM, GOUT, LUMBAGO, RHEUMATIC FEVER and other diseases caused through foul secretions of the stomach and bowels, and a diseased state of the blood, are assisted in their cure by DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS. They penetrate to the fountains of the blood and render it pure from its source.

THE WONDERFUL SUCCESS

of these pills has shown us clearly that they are an article of public necessity and a public boon, and their ever-growing reputation has induced us, more closely than ever to guard against any decline in quality or efficiency, so that year after

year, as they become even more largely and favourably known, the good done by them may increase in a proportionate degree.

LIVER COMPLAINT CURED.

EEL RIVER, N.B., June 11, 1880.

SIR,—I can hardly express my gratitude for the benefit my daughter has received from DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS. The physicians had given up all hopes of curing her of what they called Liver Complaint, and she had become melancholy and unhappy, and her constitution was much broken down by the use of mercury. She tried your pills, and improved; persevered in their use, and now has recovered.

W. T. COBB.

A BOX WORTH FIFTY DOLLARS.

CARLETON, Dec. 22, 1879.

Mr. J. W. Brayley :

SIR,—For more than four years I have used DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS in my own family, and little or nothing else, and I have no doubt they have saved me many a trip to a physician. I also have recommended them to many afflicted with headache and bilious derangement, and given them to many persons around me invariably with good results. A friend of mine after some experience once said to me: "If I was travelling, and had but one box of pills and could not get another, I would not part with it for fifty dollars." He was right. In my opinion there is no equal to them.

HENRY G. CASEY.

A PREVENTIVE REMEDY.

HILLSBOROUGH, Oct. 26, 1878.

Mr. J. W. Brayley :

SIR,—Your pills relieved me from sick headache, accompanied by costiveness and tremor, to which I was subject for about fifteen years. After five years use in our family, and from the enquiries made for them by others, they seem to be the only medicine the people require. I believe that, if taken in time and properly used, they would supersede the use of almost every other medicine. During the five years we have used the pills in my family we have been visited by several epidemics, such as Diphtheria, Influenza, Scarlet Fever, Measles, &c., from which we all happily escaped, and give the credit to DR. WILSON'S ANTI-BILIOUS PILLS.

W. S. HOPKINS.

—"Depend upon it," as the man said to his coat when he hung it on a peg.

—"Dennis," said Mike, "d'ye see that? I'll fall overboard and you'll jump in and rescue me, and we will divide the reward, which will be a pound apiece."

"Agreed," said Dennis; "go ahead."

A minute later Mike was floundering in the river. But no sooner had he fallen in than Dennis, to his inexpressible horror, remembered that he did not know how to swim, and so, instead of springing in and rescuing the drowning man, he stood leaning over the rail, staring at the bubbles where Mike had sunk. Once Mike came up, but Dennis gave no sign. Twice he came up, but Dennis could neither move nor utter a word. For the fatal third time he came to the surface, and faintly exclaimed.

"Denny, av ye ain't moighty quick, it's only fifteen shillen's aich we'll get for recoverin' the body."

THE HAIR.

By looking carefully at the scalp it will be seen that it contains numerous little thimble-shaped depressions, called hair follicles, at the bottom of which may be seen small nipple shaped bulbous roots, or nerve endings, from which the hair grows. Hairs are cylindrical shaped, each one containing a cavity at the root which fits over the nipple like a thimble over the finger. The skin also contains numerous minute oil glands, some of which open into the hair follicles and secrete an oily fluid, which is poured out into the hair follicles and spread over the hairs to keep them soft and silky, and prevent them from becoming dry and brittle. When these oil glands become torpid and inactive through any cause and do not pour out the oily fluid to lubricate and soften the hairs, the scalp becomes dry and irritable, and often covered with dandruff or scurf, which, if allowed to accumulate, increases the irritation of the scalp, causing the hair to become dry and brittle, and finally to sicken and fall out.

This premature decay, and loss of the hair and change of color may result from loss of vitality or impoverishment of the blood, caused either by sickness or by dissipation. All enervating or irregular habits, or exhausting constitutional diseases, which impoverish the blood and impair the general health, will cause the hair to bleach and turn grey, and fall out prematurely. In fact the appearance of the hair of men, and of animals as well, indicates very fairly the state of their health or their constitutional condition, and thus it is that we expect the hair to fall out after any fever or severe disease, or to lose its color through grief, trouble or anxiety, which unnerve the system. Again, premature decay and loss of the hair may depend upon certain local causes, such as focus, dandruff, &c. When these diseases of the scalp are improperly treated or neglected, they will soon cause the loss of the hair. Want of personal cleanliness and of thorough ventilation of the scalp also cause this loss. The "stove pipe" hat, so commonly worn, is one of the scalp's greatest enemies. Being composed of impervious materials, it prevents the escape of perspiration and causes the scalp to become moist and hot, when the hairs sicken, die and fall out all over the top of the head, leaving only a little strip of hair around the base of the head below the hat, as if to show how generous nature would be if permitted to pursue its natural course.

The fact of the very general loss of hair

makes the demand for some article which will restore the color of or induce the growth of the hair, a very general one. This has given rise to the introduction of many so-called hair dyes, hair washes and similar articles, which are compounded on totally wrong principles, for, as the hair is constantly growing there is always new material to be dyed or washed. But besides these there have also been introduced remedies which are based on the same general and correct principles, that the hair to be healthy must grow in a healthy soil and have a healthy root. In that case the hair itself is sure to be healthy. Perhaps the most favorite of all the remedies of this class is HURD'S HAIR VITALIZER, which is compounded from the prescription of an eminent dermatologist for the purpose of giving increased vitality to the growth of hair, making it more luxuriant, and restoring its natural beauty, color and glossiness.

The special advantages of HURD'S HAIR VITALIZER are the following:

IT CAN DO NO HARM.

To begin with, it is not a kill or cure remedy, but is composed entirely of invigorating materials, so that if it should not be exactly suited to the special case at hand it can do no harm. It contains no sugar of lead, nitrate of silver or other poisonous chemicals so commonly used in hair colorings, but which are capable of being absorbed into the blood and nervous system, causing headaches, palsy, and sometimes even death.

IT IS COMPLETE.

One special feature of HURD'S HAIR VITALIZER is that it combines in the one preparation the essential qualities of a HAIR RENEWER AND INVIGORATOR, A HAIR RESTORER, AND A HAIR BEAUTIFIER AND DRESSER. It, at the same time, keeps the hair clean, restores gray hair to its natural color, prevents baldness and causes hair to grow on a bald scalp in cases where the roots have not entirely disappeared.

A HEAD CLEANSER.

The first apparent results of the use of HURD'S HAIR VITALIZER is as a scalp cleanser. Its effect upon the scalp is almost miraculous. It invigorates and vitalizes the tissues of the scalp, stimulates the hair's bulbous roots, giving them new life and vigor, thus securing a strong, healthy growth, and a due secretion of coloring matter. It also keeps the scalp

—Local Inspector. "Oh, he has been vaccinated, you say. Then show me the marks on his arm. He has the marks, I suppose!"

Mother. "Oh, that he hev, Sir! But not" (*driven into a corner*)—"It was this way, you see, Sir. Farmer Aker's cow she runned after the children, an' ketches my little boy, and torsked him right over the hedge. But the marks—" [*Local Inspector loses his temper.*]

—"Sound," said the schoolmaster, "is what you hear. For instance you can not feel a sound."

"Oh yes, you can," said a smart boy.

"Johnny Wilson," retorted the pedagogue, "how do you make that out? What sound can you feel?"

"A sound thrashing," quickly replied the smart boy.

"Correct," said the schoolmaster. "Come up."

And that smart boy felt and smarted.

clean and entirely free from scurf and dandruff or dead cells, which are thrown off from the root and shaft, and which, if allowed to remain, close up the pores, preventing circulation through the hair. It still further drives away humorous eruptions of every kind.

WHY HAIR BECOMES GREY

There are some who think that when hair falls out it cannot be restored. As well think that when a bird moults its feathers others will not grow again. The hair is constantly falling out, but where there is no disease new hair grows from the hair tubes, and the whole is kept fresh, new and beautiful. But when the vitality is diminished, and the blood insufficient to supply the hair with everything necessary to its health, then the hair becomes thin and gray. It is a sign that the scalp wants toning up, or that it has humors, which can be detected by a small white scale around the hair tube, which, when forcibly removed, will exude a yellowish matter. It may also be a sign that the scalp has contracted and closed around the hair sheath, thus preventing the proper circulation of the coloring matter, or that there is excessive perspiration of the head and want of ventilation, by which the nutritious principles of the hair is destroyed. HURD'S HAIR VITALIZER has been compounded with special reference to all these circumstances, and thus any one of them is met and overcome by it, with the exception of the last, but whose evil effects are neutralized in a very great measure. There are very few cases, indeed, in which grey hair by the use of the vitalizer may not be restored to its natural color, and a natural vigorous growth of the hair succeed the dead condition it was in before the use of HURD'S HAIR VITALIZER.

BALDNESS

Baldness results from the same cause as gray hair, only in a more aggravated condition. When baldness and thinness of the hair arise simply from a diseased scalp, they may invariably be cured by HURD'S HAIR VITALIZER.

AN IMPOSSIBILITY.

But it must not be imagined for one moment that it is claimed that HURD'S HAIR VITALIZER will cause the hair to grow on every scalp. This is impossible, and those who claim it for their remedies go the best way about proving their utter unworthiness. When the scalp is chalky white, thinner than the surrounding skin, and almost transparent, so that the seams

of the bones are seen, the case is almost hopeless. There is a lack of fat under the skin whereby the oil tubes may be nourished. In other words the hair has been starved to death, and it is quite as impossible to bring to life a starved hair as it is to impart life to a dead body. Science has been compelled to acknowledge its inability to create life, although able to sustain it within reasonable limits, when created by a far higher power than pertains to man.

BEAUTIFUL HAIR AND WHISKERS.

Neither must it be imagined that HURD'S HAIR VITALIZER is only useful in cases where the hair is in danger of being lost. As a dressing and an invigorator for the hair it has no superior. A luxuriant head of hair is a noble ornament, and those who have it will be enabled to retain it by the use of this composition. It is frequently the case that those with very thick heads of hair lose it all, the very strength being its worst enemy, preventing the skin from being thoroughly cleaned until all the feeders are choked up. By HURD'S HAIR VITALIZER these all will be kept open and healthy, and old age will come without bringing its customary baldness. If it does bring white hairs they will be long and beautiful, so as to correspond with the aged face. HURD'S HAIR VITALIZER acts on the whiskers in precisely the same manner as on the hair, only more slowly, on account of their more sluggish growth, but the result is none the less satisfactory; the more so from the fact that nature has not been outraged, but merely has been aided to perform its proper duties.

ONE INSTANCE.

WILBOR HOUSE, Bathurst, N.B.,
June 18th, 1879.

SIR,—Some years ago my hair commenced turning grey, for which I used many so-called restoratives, but found no good results. About a year ago I commenced using HURD'S HAIR VITALIZER, which immediately brought back my hair to its original vitality and color. I used it strictly according to directions, and found it exactly as represented. It not only restores the hair to its natural color, but prevents it from falling out. I have frequently used it and always found it the same. I can confidently recommend it to all people whose hair is turning grey from whatever cause, and would advise bald headed people especially to use it.

Yours, THOS. H. HARRIS,

—Talk about pilgrims with peas in their shoes! An acquaintance of ours never takes his walks abroad without ten nails in his boots.

—Miss X—was asked recently which she preferred of the two brothers L—. She responded, "When I am with either of them I prefer the other."

—Only a few years ago a man used to put the seal of affection on her lips. Now he has to put it on her back, and if it isn't trimmed with otter she makes trouble. The new style costs more, but it can't compete with the other kind for real comfort.

—"A lover who had "gone West" to "make a home" for his "Birdie," wrote to her: "I've got the finest quarter section of land (167 acres) I ever put my foot down on." Birdie wrote back: "Suppose you buy another quarter section, John, so we can have a lawn around your foot!" John "made a home," but Birdie never was the mistress of it.

SCROFULOUS DISEASES.

When we are perfectly healthy, the food we eat is well digested and formed into rich, pure blood, containing great multitudes of cracker-shaped cells, called blood cells, so minute that more than three million may be contained in a single drop of blood. The bones, muscles, heart, lungs, brain, nerves and all the tissues and organs of the body are formed out of these little blood cells. But when the food we eat is imperfectly digested it forms thin, impure blood, containing numerous imperfectly developed blood cells, which are collected together and form little grey specks, that scientific men call miliorary tubercules, or large yellow worms, called yellow tubercules. These lumps of grey, cheesy or tubercular matter may be deposited in all parts of the bodies of scrofulous persons, where they act as foreign bodies in the flesh, causing great irritation, then inflammation, and finally ulceration of the surrounding healthy tissues, producing ulceration of the skin and mucous membranes, ulceration of the bones and joints, enlargement and ulceration of the glands, inflammation and ulceration of the liver, lungs, kidneys, &c.

OTHER CAUSES.

Scrofulous Diseases are not alone produced by impurity of the blood, but by impoverishment of the blood as well. The blood becomes thin with a great increase of water, and a remarkable decrease of its solid elements, caused by the use of bad or insufficient food, want of fresh air, sunlight, clean linen, &c. It is emphatically the poor man's disease.

The symptoms which precede the visible signs of Scrofula always indicate disorder of the digestive organs. It has been shown beyond doubt that there are certain forms of Indigestion that end in Consumption, or in one or another form of Scrofula, the result being a weak, sickly, attenuated life, gradually fading into death.

Thus it is absolutely necessary to keep the digestive organs in good order, and the blood pure, rich and life-giving. This special work is best done by a class of medicines called *Alteratives*, from the nature of the change they make, at once *altering* the impure, clogged and watery blood into the rich, health-giving stream which builds up bone and muscle and sinew. Amongst the best, if not the very best of these *Alteratives*, is DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR, which cures all Scrofulous Diseases, including SCROFULA, SCURVY, CANCEROUS

SORES AND ULCERS, SCALD HEAD, SYPHILIS, CATARRH, SALT RHEUM, SKIN DISEASES, CANKER, EPILEPTIC FITS, SICK HEADACHE, ERYSIPELAS, FEMALE DISEASES, ULCERATION OF THE WOMB, KIDNEY DISEASES, GRAVEL, IRRITABILITY OF THE BLADDER, JAUNDICE, LIVER COMPLAINT, INDIGESTION, DYSPESIA, CHRONIC CONSTIPATION, PILES, SPINAL IRRITATION, PALPITATION OF THE HEART, DROPSY, PROSTRATION OF THE NERVOUS SYSTEM, GENERAL DEBILITY, AND ALL DISEASES WHOSE ORIGIN IS IN A DEPRAVED OR WEAKENED CONDITION OF THE BLOOD.

THE REMEDY.

This remedy, DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR, although strong enough to perform the cure of all the above-mentioned diseases, which have one common origin, contains no mineral substance, but is composed of the most active, the most sure and the most efficacious vegetable alteratives which long and patient experimental use have proved to be the best suited to enrich and purify the blood without the introduction of any poisonous substance whose injurious effects are only seen when too late, and when the system is suffering from a disease almost as bad as the one cured, or simply for the time subsided. DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR has been for a long time before the public, and ever since its introduction has been growing in popular favor. Many of its cures have been so remarkable that it was brought prominently before the notice of many eminent physicians, who, after witnessing its beneficial action for themselves, and enquiring into its composition, adopted it into their practice, to their own great satisfaction and to the lasting benefit of their patients. One of the main causes of its great value is the purity of all articles used in it. There is nothing but what has a special work to perform, and as a consequence the action of the remedy is both speedy and vigorous.

CLASSIFICATION.

Physicians classify the treatment of Scrofulous Diseases into two kinds—*preventive* and *curative*. The former is by far the most important, and by attention to the following suggestions there is no doubt that the full development of the disease, even when hereditary, may be averted, and all persons showing the earliest symptoms relieved of all dread of the consequences of neglect.

30	Th.	♈	15	52	9 50	22	45	19	48	character.	

—We read of a widow who has been three times married. Her first husband was Rob, the second Robins, and the third Robinson. The same door-plate has served the whole three; and the question now is, what extended name can be procured to fill out the remaining space on it.

—A little boy, whose father was a rather immoderate drinker of the moderate kind, one day sprained his wrist, and his mother utilized the whiskey in her husband's bottle to bathe the little fellow's wrist. After a while the pain began to abate, and the child surprised his mother by exclaiming: "Ma, has pa got a sprained throat?"

—"Every man should provide liberally for his family," says Mr. Smith. "Ever since my marriage I have kept my wife provided with a sewing-machine surmounted by a mirror."

"What's the mirror for?" inquired a listener.

"Well," said the oracle, "I tell her that when she gets so lazy she can't run the machine, she can sit still and see herself starve to death."

In the *Preventive Treatment of Scrofulous Diseases* the diet must be carefully regulated, light but nourishing food only being used. It is an error to eat too much food, or that which is too heavy, under the impression that strong, heavy food is necessary to give strength. Such food, on the contrary, only increases the evil, and by it the organs of nutrition are impaired rather than improved. The bowels must be kept regular by coarse food and regular doses of DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR, the latter of which has a mild but certain cathartic effect, and in addition operates upon all the secretions and excretions of the body through the glands, and stimulates the purifying action of the liver and kidneys. The clothing should be warm and cover the whole surface, and the patient be kept in a well aired and well lighted room. He should exercise daily, carefully avoiding fatigue, bathe daily with salt or tepid water, using the flesh brush with sufficient vigor to keep up a healthy action of the skin. With these precautions no man, however predisposed to Scrofula, need fear of its overtaking him.

In case the disease has taken a firm hold of the patient, by adopting the treatment above mentioned, only giving greater prominence to Dr. Wilson's remedy, which is both a tonic and an alterative, a cure is almost certain. In cases where there are granular enlargements, with swelling or thickening of the parts, the application of DR. WILSON'S PERSIAN SALVE will be found very useful. It removes the swelling of the affected parts, and in conjunction with the Tonic and Elixir, at once effects a great change in the patient's condition.

DYSPEPSIA AND INDIGESTION.

These diseases are indicated by a variable appetite, a weak stomach, and a feeling as if the food were lying like a load at the pit of the stomach, which it does, there becoming sour, the frequent belching up of bitter water and gas, a coated tongue and a system generally weak and languid. All these symptoms arise from the one cause—the unhealthy condition of the glands of the stomach, the liver and spleen, which DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR is specially adapted to cure. This remedy gives speedy and permanent relief, and, in this respect, its value is inestimable.

JAUNDICE AND LIVER COMPLAINT.

These diseases are indicated by a dull, heavy aching in the side and at the pit of the stomach, a peculiar yellowish or green-

ish tinge of the skin and whites of the eyes, clay-colored stools, almost black urine, an aching head or a general feeling of dullness and stupidity. These symptoms are generally more distinct in spring and early summer, and it is at these periods especially that DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR is most valuable in regulating the system before the advent of the terrible heats of summer. It is a well-worn and true maxim, "Purify the blood in spring and enjoy the summer."

SCROFULA, OR KING'S EVIL, AND SYPHILIS.

These terrible diseases are often handed down from generation to generation. Although of a different origin, the symptoms of both agree in many respects. Both produce swellings in the glands like knots; both have a tendency towards the formation of slow abscesses or gatherings, which, after a long time, break, and discharge a peculiar matter different from the ordinary abscess; both are apt to break out in the skin in scaly or mattery eruptions that are slow to heal, and both affect the bones. For both, the most reliable remedy is DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR, by the use of which not only may the diseased person be cured, but the terrible heritage may be prevented from descending to his children.

SICK HEADACHES AND EPILEPTIC FITS.

That there is a closer connection between these diseases than is generally imagined, is shown by the fact that the children of a parent affected by frequent attacks of sick headache are more subject to epileptic fits than others. The good effect of DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR has so often been shown in these diseases that we have no hesitation in recommending it for them. The good effects of the Elixir will be increased by using with it DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS, both of which combined form the most perfect remedy for all diseases arising from an impure or weakened condition of the blood.

HEART DISEASE.

This disease is indicated by palpitation, short breath, faintness, pain in the region of the heart, irregular pulse, and an indescribable feeling of distress. In cases where there has been no organic change in the heart, DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR will give relief, and should be used when these symptoms show themselves.

—A JURY OF TWELVE.—The months: they all try us.

—To GARDENERS.—To destroy weeds; marry widows.

—HIS FATE.—A correspondent wants to know what will be the fate of the last man. The chances are that he will get left.

—An old bachelor said he once fell in love with a young lady, but abandoned all idea of marrying her when he found that she and all her family were opposed to it.

—“Did you do nothing to resuscitate the body?” was recently asked of a witness at a coroner's inquest.

“Yes, sir; we searched the pockets,” was the reply.

—A Highland landlord's instruction to a new waiter was: Whenever any visitor asks you to go and get a glass of water without whisky to flavor it, go just as quickly as you can, but you needn't be in a hurry about coming back.”

GENERAL DEBILITY AND NERVOUS PROSTRATION.

Half the usefulness of men is lost by what is known as General Debility. There seems to be nothing really wrong about the person, yet his heart seems as if overburdened and distressed, the circulation of the blood is languid, the skin sometimes dry and feverish, and sometimes, again, bathed in a clammy perspiration, the muscles flabby and easily tired, the stomach and bowels disordered, and often affected by wind colic, and, in a word, the whole mind and body seem out of joint. The vim and vigor of the man have gone, and he is ready to let slip past him, unimproved, the opportunities of advancement which lie at his hand. There are many different causes for this condition of things, such as indiscretions and a wrong method of living. To remedy it and regain perfect health, these immediate causes must be given up, and the system be permitted to resume its normal condition. Both of these are greatly aided by the use of DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR, through which both the mind and body are purified, toned and strengthened.

A FEW WORDS OF ADVICE.

It should never be forgotten that nearly every disease is caused by an unnatural mode of living, or indiscretion in one or more of many ways. A return to health is always facilitated by a return to the proper mode of life, good exercise, and a use of the proper remedies which supply that which the system lacks, and gently but surely stimulates it to proper and vigorous action. As previously remarked, an abnormal condition of the digestive organs and a depraved or weakened condition of the blood lead to many diseases, to cure which the blood must be enriched and purified so as to carry strength and health to every portion of the body. Towards this end DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR and ANTI-BILIOUS AND PRESERVING PILLS are the greatest aid, and their use, either jointly or independently, never fails to produce remarkable and beneficial results. By their aid the healthy, life-giving streams reach every part of the body, building up bone, muscle and sinew, and, like the noble rivers of our country, carry on their bosom that which secures happiness, usefulness and wealth.

DYSPEPSIA OF TEN YEARS' STANDING.

ST. MARY'S, April 7, 1875.

SIR,—For ten years I have been afflicted with Dyspepsia in a very distressing form.

During that time I could not taste the smallest bit of meat of any kind without feeling great pressure and sickness in my throat, accompanied with severe vomiting; neither could I drink half a tumbler of water without the same result. At last I got so low that I could not attend to any kind of business, and could scarcely walk without tottering from faintness and exhaustion, and had, likewise, all the nervous irritability that attends this disease. I tried several leading physicians, but daily grew worse, until my friends lost all hope of my recovery. Almost every morning I would vomit pure bile, and my bowels during all this time were very irregular—either obstinate costiveness or severe diarrhoea prevailed—and at last my food was undigested. About two months ago, on the advice of a friend, I procured two bottles of WILSON'S TONIC AND SARSAPARILLIAN ELIXIR, and after taking one and a half am perfectly cured. I can now eat heartily of the strongest food, and drink as much water as I please, and feel comfortable. I am engaged in very laborious work; my strength is increasing daily, and I have not felt so well since I was a boy. I give this statement to the public in the hope that by so doing some others will try this remedy, in which case, I am sure, they will find a certain cure.

W. G. STEPHENS.

FOR THE GENERAL WEAL.

MARIA, July 16th, 1880.

SIR,—I have been troubled for some time with General Debility, Lassitude, Want of Appetite, &c., and tried many so-called remedies, but all of no avail. I was strongly recommended to use your DR. WILSON'S SARSAPARILLIAN ELIXIR, and obtained relief immediately on taking it. I have only taken half a bottle, and today am as well as ever in my life. Trusting you will print this for the benefit of others similarly affected,

I remain, Sir,

Yours, &c.,

G. A. RUDOLF.

LIVER COMPLAINT CONQUERED.

SIMONDS, Nov. 25th, 1876.

SIR,—I have been suffering for a long time from Liver Complaint, General Debility and Dyspepsia in the worst forms. The least food would cause me distress and acidity in my stomach, although I took alkalis constantly. About three months ago I commenced using WILSON'S SARSAPARILLIAN and TONIC ELIXIR, and after two bottles am well in every respect.

J. C. WHITE.

—With a sardonic grin Triz poured some mucilage into his empty hair-oil bottle, and the next morning one of the servant girls' hair was glued so tight that she could not shut her mouth.

—The Massachusetts papers are discussing the question, "May cousins marry?" We should hope so. We don't see why a cousin hasn't as good a right to marry as a brother, or an uncle, or a son, or sister.

—JACOB'S WELL.—A news item says that an English traveller in the Holy Land has discovered Jacob's Well. We are delighted to hear it. There has been a rumor afloat for some time that Jacob was dead.

—"Did you ever dabble in stocks?" asked a lawyer of a witness who was known to have fled from his native land to this asylum of the free. "Well, yes; I got my foot in 'em once, in the old country," was the reply.

MAGNETISM AS A CURATIVE.

From the French Medical schools has come one of the most important remedies for nervous diseases that yet has been brought under the notice of medical men. It is based on the fact that electricity or animal magnetism has important curative powers which only lately have been discovered, and to which stubborn diseases of various kinds that had resisted all ordinary remedies have succumbed. It seems that hitherto one important factor in many diseases has been not recognized. There have been COLDS, CROUPS, DYSENTERIES, INFLUENZAS, ULCERS, RHEUMATISMS, SORE THROATS, LUMPS AND GATHERINGS and even ailments as simple and as common as BUNIONS and ORDINARY PAINS that have refused to yield to the remedies that in ninety-nine cases out of a hundred have proved successful for centuries. The cause of this difference usually is the abnormal magnetic condition of the body. As far as the mere organic construction of a living and dead body are concerned they are the same. Both have bones, muscles, nerves, heart, blood-vessels, brain exactly the same; but how different are they. One has that subtle thing called life, while the other has it not. As subtle, as hard to control, as wonderful in its action as that thing we call life is magnetism, and so alike do they seem that many eminent men believe they are one and the same thing. Thus it is that when the body is in an unfavorable magnetic condition it is impossible to effect a cure by the ordinary remedies, and the patient is doctored and physicked all with no result. Injuries cause ten times as much pain as they ordinarily do, the patient is irritable and out of sorts, his nerves are, as it were, on end, and until this condition of the body is changed any attempt at a cure is in vain.

It is to remedy such a state of things as this that the FRENCH MAGNETIC OIL is adapted, and in this way it becomes the secondary cure for numberless chronic diseases that have hitherto resisted all efforts to remedy them. The FRENCH MAGNETIC OIL is a combination of power-

ful vegetable oils which exist naturally in a state of opposite magnetic condition, but which, when brought together in contact with the nervous system penetrates it readily, brings about a state of magnetic equilibrium, and thus takes away all obstacles to the cure of pain, and permits nature to do her own work in her own way. So closely does the cure follow the rectification of the magnetic system that it is commonly though erroneously believed that the direct cures are effected by the FRENCH MAGNETIC OIL. But it must not be supposed that the number of instances in which the magnetic condition of the system is imperfect is small; on the contrary there are comparatively few whose nerves are perfect, and thus there are very few persons whose health would not be improved by the use of the FRENCH MAGNETIC OIL.

COLDS, COUGHS AND INFLUENZA.

When these diseases result wholly or in part from the action of cold on a system temporarily deprived of its animal magnetism or nerve force by overwork, anxiety, loss of sleep or other causes the FRENCH MAGNETIC OIL is needed, and will effect a speedy cure.

CRAMPS, PAIN IN STOMACH AND BOWELS.

These ailments, together with others of a similar nature, such as FLATULENCY, or WIND in the STOMACH and BOWELS, CHOLERA, DIARRHŒA, DYSENTERY and COLIC very commonly yield to the virtues of the FRENCH MAGNETIC OIL. These diseases are all allied in their causes and nature, and are never visible in systems where the magnetic condition is perfect. The treatment is very simple. The oil should be taken in teaspoonful doses in a little molasses and water, every half hour until relief is experienced; at the same time rubbing it freely on the outside of the pained organ, by which the cure is greatly hastened.

CHRONIC RHEUMATISM, LUMBAGO, SCIATICA, NEURALGIA, &c.

Each of these painful diseases has terrors all its own, and on them the greatest skill of physicians has been expended from the earliest times. Their researches in many respects have been very unsatisfactory. What will cure one man will not touch another. The reason is very plain to those who think. In looking for the cause of the diseases medical men have too fre-

—TIT FOR TAT.—It is beauty's privilege to kill time, and time's privilege to kill beauty.

—A little girl suffering from the mumps declares that she "feels as though a headache had slipped down into her neck."

—The favorite tree with schoolmasters—the birch; with sailors—the 'elm; with frequenters of the turf—the oaks; with cooks—the 'ash; with cricketers—the willow.

—Mr. Michael O'Shaughnessy, an Irish athlete, got very much interested in the perusal of an account of Chinese leprosy. He also got very indignant, but failed to comprehend the exact purport of the article. "Lepers is it!" he remarked. "Lepers is it that the Chinese are? It's an ould man I am, and I'll bet twenty-foive dollars that I'll lep agin any Chinaman in the city. I was the foineest leper in County Cork."

quently confined their researches to changes in the solids and fluids of the body, overlooking entirely the fact that the true difficulty lies in the magnetic condition of the nerves of the affected part. It is in taking cognisance of this that the FRENCH MAGNETIC OIL has its strength, and the remedy being used both internally and externally, the disease is attacked at all points at the one time, and quickly takes its departure.

A GENERAL LIST.

As those who comprehend the principles of the action of this remedy have already seen that the list of diseases cured by it is wonderful in number, variety and range. LOCAL MUSCULAR PAINS, GROWING PAINS IN CHILDREN, PAIN IN THE SIDE, BACK Ache, CRAMPS IN THE LIMES, BUNIONS, CHILLBLAINS and FROST-BITES, ENLARGED VEINS, CHRONIC ULCERS, STRAINS, CRAMPS, TOOTHACHE, EARACHE, and many others are all comprised in it.

MOTHERS' DISEASES.

But one class of ailment is too important hurriedly to be passed by. Ladies who have recently become mothers will find that the rubbing of the FRENCH MAGNETIC OIL upon their breasts will prevent the appearance of lumps and gatherings. If the breasts become at all hard and painful have them well rubbed from the root to the nipple with the FRENCH MAGNETIC OIL, and then apply it on a fold or two of flannel, repeating it every two or three hours. It will soon be found that the pain and heat are relieved; the glands are softened and the milk can be drawn thoroughly and without pain. MILK LEG also yields to the virtues of the FRENCH MAGNETIC OIL and loses its terrors.

AS A HOUSEHOLD REMEDY.

In fact, as a general household remedy the FRENCH MAGNETIC OIL hardly can be equalled. It is cheap, safe and effectual, and we have no hesitation in saying that each day the knowledge of its virtues is growing in every part of this continent.

FOR HORSES.

The FRENCH MAGNETIC OIL is also an excellent remedy for many diseases of cattle and horses. For BRUISES and STRAINS, GARGET, COLIC and BELLY-ACHE it is very effectual. The dose for a Horse is a bottle full, and may be repeated every hour or two until relief is obtained.

AN INTERESTING CASE.

TRACADIE, N.B., June 13th, 1879.

J. W. Brayley, Esq.:

DEAR SIR,—In the fall of 1875 my wife was taken sick with Asthma, and for three years she was an invalid, unable to do any housework, and many, many times so bad that we despaired of her recovering, or even surviving for many hours. We tried all the known remedies for Asthma, but without any avail. We consulted several good doctors, among them an eminent physician from one of the public hospitals in New York, who was here last summer for a while, who also prescribed for her, but without any permanently beneficial effect. In January last, when she was having one of her worst spells, a friend called to see us, and advised us to try British Oil; a few drops taken with sugar, it was said, would alleviate the suffering. When, provisionally, I went to inquire for British Oil, your agent here told me he had none, but that he had what was much better—FRENCH MAGNETIC OIL. I got a bottle. On taking some she found immediate relief, and before she finished using the whole of it her health was completely restored. She took a heavy cold once since, and showed what we thought were slight symptoms of Asthma returning. We got another bottle, a few doses of which completely warded it off. In the interests of other sufferers I have much pleasure in forwarding you this certificate of the efficacy of your FRENCH MAGNETIC OIL, and hope that you will give it all the publicity possible.

Yours faithfully,

JUSTINIAN SAVOY, J.P.,
County Councillor.

RAPID SALES.

ANDOVER, Sept. 31, 1879.

J. W. Brayley:

SIR,—Your FRENCH MAGNETIC OIL always gives entire satisfaction and sells readily. It has the best sale of most all our old standard preparations.

BEVERIDGE BROS.

MORE WANTED.

Sept 19, 1877.

J. W. Brayley:

SIR,—The MAGNETIC OIL I had from your agent is all sold, and has always given perfect satisfaction in every case. It is a marvellously good remedy, and I must have some more immediately. Send me a full supply.

HUGH MILLER.

—INTERESTING YOUNG MEN.—Engrossing clerks.

—How much will a fool weigh?—A simpleton, of course.

—A RELIEF SOCIETY.—A gang of pickpockets.

—WITHDRAWING AN AMENDMENT.—Taking out a false tooth.

—NO TERRORISING!—The last instance known of originality in a marriage announcement in America is the following—"No cards, no cake, no fuss."

—Fond parent to eldest: "Don't you think your baby brother is beautiful?"
Eldest: "Yes, he's very nice; but who cut off his hair?"

—Jack (who has been put in the corner for misbehavior).

"Mamma."

"Mamma. "Well, sir, what is it?"

Jack. "What remarkably nice corners there are in this house!"

THE USE AND ALLEVIATION OF PAIN.

Pain is a great blessing to men. As they are now constituted it seems necessary to existence. It is the watchman that gives warning when the citadel of health is in danger. It informs us that something is wrong in some portion of the body and being warned, proper measures may be adopted to cure. Amongst the remedies for pains that are not too deeply seated DR. WILSON'S CRAMP AND PAIN RELIEVER holds a foremost place. It is at once stimulating, penetrating and diffusive, curing pain both by its revulsive action and its direct action on the nerves. It not only relieves pain, but at the same time subdues inflammation, the cause of the pain. It is so penetrating that it finds its way through the skin into the vessels and nerves, and there exerts its stimulating action, restoring the proper circulation, relieving inflammation and banishing pain. Taken internally its action and results are similar. The great superiority of this method of relief over that given by the use of sedatives is obvious. Preparations of opium, morphia and chloroform do their work by stupefying the brain so that the pain is not felt, while the cause of the pain is untouched. They do not cure the disease but simply hide the knowledge of it from the brain thus causing a feeling of false security that ultimately leads to harm. DR. WILSON'S CRAMP AND PAIN RELIEVER on the contrary relieves the pain by curing the diseases that cause it.

Amongst the diseases cured by DR. WILSON'S CRAMP AND PAIN RELIEVER are INDIGESTION, CRAMPS, DIARRHŒA, CHOLERA MORBUS, VOMITING, CANKERED MOUTH AND STOMACH, and the ordinary pains and aches from the more trivial causes.

HOW USED.

DR. WILSON'S CRAMP AND PAIN RELIEVER is for both internal use and external application. For internal use it should be mixed with milk or molasses, usually a teaspoonful of the Reliever to half a cup full of the other ingredients. When required for external application it should not be diluted, and in very severe cases the application should be followed up by that of a cloth wrung out of hot water and frequently changed.

FOR EXTERNAL USE.

FOR AGUE in the Face, NEURALGIA RHEUMATISM, SCIATICA, LUMBAGO, TOOTHACHE, BRUISES, SPRAINS, STRAINS, FELONS, FROGS, FROSTBITES, BURNS AND SCALDS, where the skin is not broken, STINGS OF INSECTS, and, in fact, all trou-

bles which a liniment is needed to cure, DR. WILSON'S PAIN AND CRAMP RELIEVER is unsurpassed. In such cases it is applied externally either by rubbing it well into the ailing part or by simply saturating a piece of cotton with it and applying it over the sore.

FOR INTERNAL USE

As a stimulant in cases of SUDDEN COLDS which often result in so many severe diseases, the CRAMP AND PAIN RELIEVER is most useful. It is a valuable anti-spasmodic for the relief of internal sprains and pains, and prevents the inflammation which is likely to follow. It also acts as an antiseptic, preventing putrefactive fermentation.

FOR EXTERNAL & INTERNAL USE.

CHRONIC COUGHS, COLDS, SORE THROAT, and DIPHTHERIA are cured by it, when used as a gargle, in which case it is mixed with milk, while the cure is hastened by its being rubbed on the throat. For sudden and severe attacks of CHOLERA, CHOLERA MORBUS, and BLOODY FLUX, take two or three teaspoonfuls of WILSON'S CRAMP AND PAIN RELIEVER and drink it, then bathe externally the stomach and bowels with the medicine, also the limbs if they are cold. Repeat the dose *internally*, if necessary, and continue the bathing until relief is obtained. As CHOLERA and CHOLERA MORBUS most generally commence with DIARRHŒA, if you commence treatment for DIARRHŒA in season, you will certainly avoid or prevent the secondary symptoms. Should CHOLERA or BOWEL COMPLAINT prevail as an *epidemic*, take internally, once or twice a day, a teaspoonful in a little milk. It disinfects the malaria inhaled into the system, imparting warmth, vigor and health, and prevents the separation of the watery parts from other properties of the blood.

In addition to other advantages DR. WILSON'S CRAMP AND PAIN RELIEVER is perfectly safe, easy to use, not liable to spoil by being kept and always ready. It is entirely a vegetable product, swift in action, powerful, reliable and safe. In cases of doubt it may be used without fear of harm. The number of ailments for which it advantageously may be used is very large. For all pains and complaints of the bowels it has a special adaptation. For WIND IN THE STOMACH and flatulent distentions, it is very efficacious as it also is in the thousand and one complaints in which a vigorous stimulant and extractor of inflammation are required.

- A person always meets with a warm reception at a hotel. The minute he arrives he is placed on the register.

THE EYE.

The eyes' chief protection are the eyelashes which prevent the entrance of sand or other foreign substances and the eyelids which are lined with a soft, delicate, pale pink colored mucous membrane which constantly lubricates the inner surface and the outer surface of the eyeballs, to prevent friction, irritation, and inflammation of the eyes when we open and close them. Then again if we raise up and remove a part of the upper eyelid, we shall discover a pink colored body called the lachrymal or tear gland. This little gland secretes a salty fluid called the tears which are nature's own eyewater, and are designed constantly to bathe and lubricate the delicate mucous membrane lining the eyelids, and covering the outer portion of the eyeball, keeping it soft and smooth, and preventing it from becoming irritated and inflamed.

Sometimes, and, indeed, very often, through cold, or irritation arising from the presence of dirt, smoke or some acrid humor in the eye, the outer membrane of the eyeball and the mucous membrane of the eyelid become inflamed. Then the blood vessels which in a state of health are invisible become injected with blood, there is an acutely painful feeling as if sand had got into the eye, the eyes are filled with water and if not relieved, after a short time matter begins to run, the membrane becomes thickened and the sight becomes dim, because the light cannot penetrate through the thickened membrane. Closely on these follow the later symptoms of the disease, or more correctly the final results of neglect. The interior of the eye becomes diseased, there is a deep seated pain in the ball and around the orbit, bulging of the eyeball, and sometimes even the ball becomes ulcerated and bursts, causing total blindness. All these consequences may result from carelessness in the first instance when the painful symptoms became apparent.

RED EYE—ITS PREVENTION AND CURE.

From the early appearance of the disease above described it is called red eye, and in the condition when matter exudes from the eye the disease is contagious, and may be conveyed from one person to another through using the same towel, or contact in any way. In it and all cases of inflamed eyes the following simple but efficacious remedy should be adopted. Bathe the eyes with warm water and milk, two or three times every day, then hold

the head back so that the eyewater may have an opportunity of running into the eye, and then let a few drops of ROBERTS' EYE WATER which has been diluted with an equal portion of soft water free from specks be run into the inner angle of the eye. This may be best done by separating the lids with the fingers, then pulling slightly first the lower lid and then the upper one, so that the eye water may have full contact with the eyeball so as to reach every portion of the inflamed parts. After the acute pain has been relieved the quantity of soft water to ROBERTS' EYE WATER may be decreased gradually until the latter may be used in its full strength. If a teaspoonful of ROBERTS' EYE WATER be added to two or three teaspoonfuls of hot water and a compress of old linen be wet with it, and bound over the shut eyes it will hasten the cure very much. By following the above mentioned method of cure by means of ROBERTS' EYE WATER, the most aggravated cases of RED EYE may be cured, as already has been done.

Special stress has been laid on ROBERTS' EYE WATER in this cure, because it is a preparation intended particularly for the cure of inflammation of the eyeball and eyelid from whatever cause, and its efficacy is undoubted. It is made from the prescription of a celebrated oculist who devoted himself especially to diseases of the eye during a long professional career and his own statement was that with this simple remedy he had saved more eyes from blindness than with all the other medicines and all his operations put together.

OTHER DISEASES

ROBERTS' EYE WATER is also a remedy for SPOTS ON THE SIGHT, SCROFULOUS INFLAMMATION OF THE LIDS, STYES, INFLAMMATION OF THE TEAR SACS and all diseases of the eyeball and eyelids. Besides these it is invaluable in cases of SCROFULOUS, OPHTHALMIAS or SORE EYES OF CHILDREN in which case it should be used in conjunction with Dr. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR through which the Scrofulous taint is eradicated from the body. In any case where ROBERTS' EYE WATER does not appear to perform its proper functions there is very good reason to believe that the system is vitiated, the blood impure and that there is need for the adoption of DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR.

—“Sam, why don't you talk to your master, and tell him to lay up treasures in heaven?” “What de use ob him laying up treasures up dar?” replied Sam; “he neber see um again.”

—A young woman went into the office of a daily newspaper in Fleet street to advertise for a kitchen maid. She said, with a sigh and a wring of her dainty gloved hands, “Oh, I do hope we'll get one soon, for it does almost break my heart to see mother wash dishes, with her rheumatism, too!”

—One Sunday night Professor H—— was sitting in his front garden, when a news-boy said to him, “Professor, did you ever think of the beautiful lessons the stars teach us?”

“What is your opinion,” said the professor, desirous of information, “of their teaching?”

“How to wink,” answered the urchin, in a sad, sweet voice, and went on his way.

THE SKIN.

By the skin you may judge the man. If the skin is soft, ruddy and healthful, the man leads a temperate life and enjoys good health. It is a mistake that the skin is merely a covering thrown around the outside of the body to protect the vital organs within, for that portion of the skin or mucous membrane which lines the digestive canal is estimated to be more than five times as extensive as that which covers the whole body, and the skin or mucous membrane lining the air-tube, more than forty times as extensive as that covering the body.

AN INDICATION

It is also a fact that the condition of the outside skin is but an indication of that which is hid from view, and a pimply, inflamed face, that speaks of plentiful potations of brandy, old cheese, sausage and mustard shows a disorganized, unhealthy and inflamed condition of the internal organs. Thus skin diseases are best attacked internally by remedies which regulate the system and purify and enrich the blood. Foremost amongst these are DR. WILSON'S ANTI-BILIOUS AND PRESERVING PILLS AND DR. WILSON'S TONIC AND SARSAPARILLIAN ELIXIR. These enable the system to carry off by the proper channels, the liver, the kidneys and the bowels, the effete matter which nature demands should by them be ejected from the body, and leaves the skin only its proper and important work to do.

PIMPLES.

It is when, through the inactivity of these organs, or the over burdening of them through the vast amount of impurities contained in the blood, that the skin likewise becomes clogged with impurities, and that CARUNCLES, BOILS, SORES, PIMPLES, &c., appear on it. To effect a cure it is necessary to do more than give remedies which purify the blood. In addition local remedies must be used and amongst these the foremost is DR. WILSON'S PERSIAN SALVE. The base of this remedy is a perfectly pure emollient which restores the natural elasticity of the skin, the loss of which is always the earliest symptom of every skin disease. Combined with this are several healing and fever-preventing balsams of the highest value, and to all are added certain chemical antiseptics or medicines which prevent sloughing or mortification of tissue and the consequent formation of pus or "matter." It will, at once be seen that in DR. WILSON'S PERSIAN SALVE are combined all the curative pro-

perties necessary to the successful local treatment of diseases of the skin.

It cannot be wondered at, then, that the PERSIAN SALVE is a most effective and prompt agent for the reduction of inflammation and the allaying of pain, that it will quiet the most "angry" looking wounds, soften and reduce the hardest and most stubborn swellings and cure painful sores of long standing.

A SPECIAL LIST

Amongst the diseases to cure which the Persian Salve is especially adapted are the following:—SWELLED BREASTS and SORE NIPPLES of Nursing Women, RINGWORMS, FELONS and SCALD HEAD. It is an invaluable dressing for BURNS, SCALDS and DRAWN BLISTERS, SHINGLES, ERYSIPELAS and PILES. It cures BRUISES and FRESH CUT WOUNDS very quickly. FEVER SORES and SCROFULA SORES yield to it and frequently are healed, and inflammation of the eye likewise submits to it.

INFLAMMATION.

It is vain to expect that a sore will be relieved or cured unless the accompanying inflammation be subdued; but the moment the inflammation subsides the healing process begins. In the IMMEDIATE reduction of inflammation the PERSIAN SALVE is specially useful. It never at any time increases pain, but from the first soothing application it begins its work of healing. This statement is made frankly and decisively. No matter how any inflammation on the surface of the skin is caused, the pain, heat, redness and swelling, all are cured and immediate relief given by DR. WILSON'S PERSIAN SALVE.

AN IMPORTANT CONSIDERATION.

This last statement is so important that we repeat it in another form. Inflammation accompanies the great majority of human ailments, and DR. WILSON'S PERSIAN SALVE is a safe, sure and speedy cure for any species of inflammation. Nor does it matter how the inflammation is caused; the pain, heat, redness and swelling are the same, and all are cured by the PERSIAN SALVE.

MANNERS SUTTON, Oct. 30, 1878.

SIR,—This certifies that a boy of mine, twelve years of age, has been cured of a festering sore on his under lip, of three months' standing, by the use of DR. WILSON'S PERSIAN SALVE, after having tried various other remedies. JOHN MCGOWAN.

WORMS, AND HOW TO GET RID OF THEM.

There are three kinds of worms that infest a child's bowels, the tapeworm, the long round worm, and, most frequent of all, the common thread or seat worm. The tapeworm infests the whole course of the bowels, both large and small, the long round worm, principally the small bowels and occasionally the stomach, and the common thread worm the fundament.

THE CAUSES of worms are weak bowels, bad and improper food, such as unripe, unsound and uncooked fruit, and much green vegetables, pork, especially when underdone; an abundance of sweets, and the want of salt in the food.

THE SYMPTOMS of worms are emaciation, itching, and picking of the nose; dark marks under the eyes; grating of the teeth during sleep; starting in the sleep; foul breath; furred tongue; uncertain appetite—sometimes voracious, at other times bad, the little patient sitting down very hungry to his dinner and scarcely before tasting a mouthful, the appetite vanishing; large bowels; colicky pains in the bowels; slimy motions; itching of the fundament; unhealthy, doughy complexion; puffiness of the face and eyelids; tongue, large and marked on the sides by pressing against the teeth; high colored and strong smelling urine. Tapeworm and round worm, more especially the former, are apt in children, to produce convulsions. Tapeworm is very weakening to the constitution and causes great emaciation and ill-health.

Many of the obscure diseases of children arise from worms. In all doubtful cases, therefore, this fact should be borne in mind in order that a thorough investigation may be instituted. Cases are not uncommon in which the presence of worms in the bowels has produced Epileptic and Cataleptic Fits, Dropsy of the Head, St. Vitus' Dance, Palsy, Fainting, Hiccough, Dysentery, Convulsions, Lockjaw, and even idiocy.

THE REMEDY for worms in children is DR. WILSON'S DEAD SHOT WORM STICK which is at the same time agreeable to the appetite of children, in no way injurious to the health, and sure. Its active ingredients are entirely of vegetable origin and are separated from the inert and unpalatable matter with which they are found connected in nature. In a word, DR. WILSON'S DEAD SHOT WORM STICK is a safe, quick, reliable and pleasant remedy for worms in children—one that they can be induced to take without worry and without force. DR. WILSON'S DEAD SHOT WORM STICK has been a favorite with mothers for

many years, and during all these years we have scarcely ever heard of a case in which the symptoms of worms were at all certain that its use was not followed by good results, in some cases large numbers being expelled by a single stick, as many as from twenty five to five hundred having been counted in the subsequent stools.

Under these circumstances we strongly recommend the use of DR. WILSON'S DEAD SHOT WORM STICK whenever there is reason to expect the presence of worms in the child's bowels. In the first place if worms are there they certainly will be expelled, and perhaps, a long train of diseases prevented; and if there are no worms to expel there can follow no evil results either to the child's health or temper. He has eaten a candy—that is all.

But it must be borne in mind that sometimes worms may be expelled without there being any signs of them in the stools either dead or alive. When they are met with high up in the bowels and there destroyed by DR. WILSON'S DEAD SHOT WORM STICK, they usually are acted on by the digestive fluid and become mixed with the excrements, often having the appearance of chopped greens.

It must also be remembered that when the worms are once carried away the evil is not necessarily at an end. The cause that led to their presence once will lead to it a second time unless proper means be taken to prevent it. Children of a scrofulous disposition, especially, are prone to the breeding of worms in the bowels in large quantities. In such cases DR. WILSON'S DEAD SHOT WORM STICK should be given occasionally to expel the new broods, while DR. WILSON'S TONIC AND SASSAPARILLIAN ELIXIR should also be given to tone and strengthen the system and improve the general health. At once the difference in the child's appearance will show that the proper treatment of the disease is being followed, and health, strength and good temper will abound where, but a short time before, weakness and peevishness were the prevailing characteristics.

HOW IT SELLS.

Keady, Grey Co., Ont.

J. W. Brayley, Montreal.

SIR,—Please send me two boxes of worm stick by mail. My customers are delighted with it; consider it the best worm medicine for sale.

Yours truly, D. L. SCARROW, P. M.

NURSE WILSON'S SOOTHING SYRUP

has now been so long before the public; has been so thoroughly and satisfactorily tried, that it has become an indispensable article in every well-ordered nursery. Its inventor, Nurse Wilson, enjoyed during a long lifetime a large practise as nurse and lady physician, and profiting by the advice of the numerous able physicians, under whom she was employed, and after an extensive trial of many articles of the *Materia Medica*, for the relief of the little ones under her charge, at length hit upon the prescription, upon which this SOOTHING SYRUP is compounded, and finding it to be exactly the thing wanted, at length gave to the public the benefit of her experience. NURSE WILSON'S SOOTHING SYRUP differs in composition from all the other Soothing Syrups and Carminatives in the market, and is proportionally safer, more certain, and more efficacious. She, therefore, warns mothers not to confound it with other articles having a similar name; they only resemble it in name, and not in efficacy. Use only NURSE WILSON'S SOOTHING SYRUP, you will find it the very thing you want.

Wind Colic affects many infants from birth; their mother's milk does not seem to agree with and nourish them as it ought, they vomit it almost as soon as it is taken, or pass it through them in curds unaltered, or mixed with greenish slimy discharges, passed with much pain and distress. As a consequence, instead of being plump and hearty, they look wizened and shrivelled, their skin loose and wrinkled; they do not gain flesh, their limbs are cold and drawn up, and their whole system is disordered, because their stomach and bowels being so irritated, their food does not nourish the body while the constant pain and loss of sleep worry and weaken them so that they cannot gain strength. The constant worry and loss of sleep also affects the mother's health, so that she cannot grow strong after her confinement, and if she is not in good health herself, she cannot furnish good nourishing milk, such as would be suited to give strength to her offspring. From this cause many children die young, and with many others the foundation of life-long disease is surely laid. In such cases as this, NURSE WILSON'S SOOTHING SYRUP acts like a charm. Give from six to ten drops of it two or three times daily, or as often as may be found necessary to relieve the pain, and prevent the frequent vomiting, and you will soon see a delightful change. The vomiting, and curdy, slimy, greenish discharges will cease, the

child will sleep quietly and wake up bright and refreshed; the pitiful wailing will be replaced by smiles, and the child will soon assume a plump and healthy aspect, while the mother will have the needed opportunity for rest, will gain in health and strength, and her milk will become more nourishing, and digestive in proportion.

From the fifth to the seventh month after birth *Teething begins*. The babe appears anxious to bite the nipple, the finger, or anything with which his mouth comes in contact, as the presence of round, smooth substances seems to ease the aching of the gums. On looking at the gums they will seem to be more or less red and swollen, showing the markings of the teeth, which are pushing their way out beneath. After a time the child will be noticed to cry out frequently, as if from sudden acute pain, its rest at night is disturbed, its skin hot and dry, its stomach irritable, and its bowels loose; it twitches frequently, and the agonized expression of its countenance betrays the anguish it suffers.

When such a set of symptoms are noticed, NURSE WILSON'S SOOTHING SYRUP is what is wanted to give relief to the little sufferer, and ease the mother's mind. Given in the dose of a small teaspoonful three or four times daily, graduating the dose and its frequency by the relief experienced, and the recurrence of the pain and nervous irritation, it will be found to give ease, to strengthen the child by allowing it to experience the influence of nature's restorer—sleep—to relieve the teasing diarrhoea, check vomiting, assist in digestion, and will prevent those dreadful "fits" from which children are so apt to suffer while teething. Always have NURSE WILSON'S SOOTHING SYRUP on hand if you have young children, for it will give ease if they should awake and cry piteously in the night with pain and inflammation of the gums.

Diarrhoea is a pregnant source of trouble and danger to children in their earlier years. Under the name of *Cholera Infantum*, it carries off every year a great many promising children. This is generally caused by *Indigestion, Sourness of the Stomach*, and irritability of the bowels, and may always be prevented by the use of NURSE WILSON'S SOOTHING SYRUP, perseveringly, in proper doses.

NURSE WILSON'S SOOTHING SYRUP is the greatest boon which medical science has given to mothers. Used persistently it prevents those frequent attacks of wasting illness the effects of which are felt for a lifetime.

WRIGHT'S VERMIFUGE

is the great WORM DESTROYER. Not so pleasant as the Worm Lozenges and Candies, which are so much in vogue, and which no doubt often do much good—it possesses what they do not—a *certainly of destruction of Worms*, wherever they may be found. Worms can no more exist in the bowels after WRIGHT'S VERMIFUGE has come in contact with them, than snow can lie on our streets under the rays of a July sun. Here is where it differs from Worm Candies. They, to do good—that is to destroy the Worms, the Worms must eat the Candies, and they are therefore made with a small quantity of medicine and a good deal of sugar, in order to tempt the appetite of the Worms. If the Worms are already gorged with food, as they are very likely often to be in the bowels, hanging on, filled to repletion, in a semi-torpid state—the medicine in the candy does not affect them at all, because not eaten. But it is with a view to this very difficulty, that WRIGHT'S VERMIFUGE is prepared—it *kills by contact*. The mere presence of the Vermifuge in the fluid of the bowels, passing over the Worms, is destructive to *Parasite Life*, though only purgative, and not at all dangerous to the human animal. Here lies the secret of the unfailling success of WRIGHT'S VERMIFUGE—in its *searching, penetrating, parasite poisoning power*. If the Worms are in the bowels it is sure to *search them out, penetrate and destroy them*. It is a medicine of the old-fashioned downright sort, *sure to do its work every time*.

There are several different varieties of parasites that infest the intestinal canal. The most frequent tenant of the bowels is the *ascaris lambricoedes*, or round worm. Their place of habitation is usually in the small intestines, sometimes passing upward into the stomach, or downward into the large bowel, in either case being generally avoided. The most common variety, the *ascaris vermicularis*, or thread worm, is the source of great irritation. These live principally in the rectum, and at times exist there in large numbers—by the thousand—being often discharged in matted balls. These two kinds belong chiefly to childhood, but sometimes adults are troubled with them. The *tania* or common tape worm, is by far the most formidable of any of these parasitical animals often measuring twenty feet in length. This kind of worm is more frequent in adults than in children, and its place of abode is usually in the small intestines, but extends to the stomach and large intestines. Intestinal

worms prevail most in weak and in unhealthy persons, wherever there is much debility of the digestive organs.

The symptoms of worms are very numerous, and in many cases a large number of them do not co-exist. But mothers, if you find that your child grows thin and pines away; if it picks its nose frequently; complains of itching at the fundament, or says that something is biting it there; if its bowels are always out of order, sometimes costive with colic pains, sometimes very loose with slimy or even bloody discharges; if its appetite is variable, at one time voracious, at another not to be tempted by any food; if its belly is hard, swelled, and full of urine; if its breath smells wormy, its tongue is coated, its mouth is full of a sticky dirty spittle; if it complains of a nasty coppery taste; if it is restless and feverish at night, talks or raves and tosses about in its sleep; if it frequently wets the bed with a very offensive urine; if you notice that it has frequent headaches, palpitation, swimming of the head, nausea, or spells of difficult breathing; if it has sunken eyes, especially if it has a ringing in the ears, followed by convulsive fits; if it has any considerable number of these symptoms, rely upon it, mothers, that *Worms* are the cause of the mischief, and that you cannot safely lose time, but should at once use WRIGHT'S VERMIFUGE, and not be satisfied with one dose, but continue it at intervals, till you have not only rid the child of the Worms, but also of the new broods which will infallibly be hatched out from the eggs by the heat of the body, which are left sticking to the coats of the bowels and shielded from the action of medicine by natural secretion.

WRIGHT'S VERMIFUGE is best given on an empty stomach, for thus it is most certain to come in contact with the Worms, without the intervention of the food, as then it is sure destruction to them. *It will kill the Worms and cure the patient*.

With adults also, WRIGHT'S VERMIFUGE will be found to be an excellent medicine, from the popular idea that they only infest the bowels of children is a mistake, and many diseases, otherwise mild, are augmented by the unsuspected ravages of Worms.

In cases where a *scrofulous taint in the blood* keeps up the symptoms first produced by the Worms, it is best to use an occasional dose of WRIGHT'S VERMIFUGE to keep down the Worms, and assist it by the regular use of WILSON'S TONIC & SARSAPARILLIAN ELIXIR—best known remedy for Scrofula.

RHEUMATISM AND ITS KIND.

There is a class of diseases painful in the highest degree that seem to have a special fancy for the hardy, robust and strong. It includes Rheumatism, Neuralgia, Lumbago, Contracted Joints, Sciatica, Cramp in the Muscles, Sprains, Bruises, Frost-Bites, Burns, Scalds, Chilblains, Erysipelas, Ringworm, Boils, Felons, &c. By some of these the strongest men are bowed down and their strength vanishes like that of Sampson shorn of his locks. Many of them cannot be guarded against, while often it is when strong men are revelling in their strength and fancied security that they are contracted, sometimes never wholly to be banished. A cure for these is in constant demand and very many efforts have been made to supply it. None of them have had the success or gained the reputation of that first introduced by Dr. Dow.

Dr. Dow is a physician of extensive practice in New Brunswick. He is a lover of horses and in the endeavor to invent a prescription whereby many of the diseases contracted by horses through careless handling, hit upon a preparation of virtues so apparent that it speedily became used to cure diseases to which mankind is heir. Dr. Dow in the compounding of this remedy had the advantage of an extensive experience with regard to the curative powers of all the known medicinal agents and of a theoretical and practical knowledge of various chemical affinities brought into play in the combination. Through this knowledge and experience, together with careful investigation and laborious research he was enabled to make a perfectly homogeneous compound, possessing wonderful efficiency and manifold healing influences so as to be adapted to the cure of a wide circle of painful diseases.

As a counter-irritant whose duty it is to draw pain and inflammation to the surface, thus relieving the internal organs, this remedy, which is known the world over under the name of Dr. Dow's STURGEON OIL LINIMENT, is especially useful, and also in restoring the skin to a healthy condition in all those annoying affections attended with inflammation and eruptions, but where the surface is not broken. Amongst the latter are FROST-BITES, CHILBLAINS, BURNS, SCALDS, BOILS, FELONS &c.

A WONDERFUL GROWTH.

A history of the growth of Dr. Dow's STURGEON OIL LINIMENT in public favor and the growth in knowledge of the ail-

ments for which it is a perfect cure would be very instructive. Being originally compounded for but two or three diseases it was at first used for them with the very best results. Then, as other diseases of a like nature, but different in certain particulars required to be mastered, Dr. Dow's STURGEON OIL LINIMENT was applied generally with equal success, until, gradually the list of cures and of ailments cured grew to wonderful proportions. In a similar manner this Liniment grew in public favor. One person who was cured recommended it to another, and another, till the knowledge of its merits became common property, and it began to be looked upon as a cure for every disease in which a liniment is useful. As the years rolled on its reputation became solidified until for several years back it has stood without a rival in the public estimation.

RHEUMATISM.

In no instance has its merits been more joyfully acknowledged than in the cure of Rheumatism, the cause of more acute suffering than, perhaps, any other disease known. Instances in which the sufferer had been confined to bed for months and even years but where the disease yielded to the remedy have been made public and others in which all the zeal and knowledge of medical men had been expended in vain have vanished before it. When referring to this matter it may be but fair to say that the medical profession have not looked at Dr. Dow's STURGEON OIL LINIMENT in a jealous manner, but have recognized its virtues cordially and, in their hands, it has relieved much suffering. More than one good reputation has been aided through it.

CONTRACTED JOINTS—CRAMPS IN MUSCLES.

These painful complaints also yield to Dr. Dow's STURGEON OIL LINIMENT in a wonderful manner. It has banished many a well used pair of crutches to a peg in the wall or the dark recess of the lumber room and enabled the lame to leap for joy. Not a few cures of this nature have bordered on the miraculous.

BURNS AND SCALDS.

These ailments although arising from causes so different are somewhat similar in their nature and effects and both are cured by Dr. Dow's STURGEON OIL LINIMENT. It should only be used in cases where the skin is not broken, as its strength is so

great that it causes very severe pain if applied to the raw flesh. Its effects are marvelous; when applied, the heat or frost, as the case may be, is drawn from the sore and immediately the cure begins.

WHITLOWS AND FELONS.

Whitlows and Felons, too, cause intense agony, and although, fortunately, they are on the whole uncommon, few ailments are more dreaded; but since the merits of DR. DOW'S STURGEON OIL LINIMENT have become known these painful complaints have lost their terrors, for it is capable of relieving them and assisting in a complete recovery. The terrible throbbing pain is banished and the gathering soon breaks and is healed again.

LUMBAGO AND SCIATICA.

For these diseases it is a most valuable remedy. Under its influence the severest pains of Sciatica vanish like a dream, and the different forms of Lumbago yield to it, and the bent and afflicted one is seen to move and act as if nothing had ever been the matter with him.

DISEASES OF HORSES.

A good man is kind unto his beast, and so is a wise man. None but a fool will drive a galled, spavined, and broken-down horse. It never pays so long as it is easier to keep a perfectly healthy horse than a diseased one, and there can be no doubt of this. Take a horse, for example, that is troubled with WIND GALLS, FOUNDER, RINGBONE, SCRATCHES, SCURVY, HARD HOOF, CRACKED HEELS, AND GREASE. A sorry object he is; but there is a cheap available remedy that can cure all of them, and that one is applied externally. It is DR. DOW'S STURGEON OIL LINIMENT which, as we have seen, is also a radical cure for RHEUMATISM, CHILBLAINS, BURNS, FROST-BITES, ERYSIPELAS, BOILS, FELONS, LUMBAGO, SCIATICA, &c., &c., in men. Its cure of the one explains the secret of its action in all the others. It is a powerful counter irritant, drawing to the surface deep seated pain, as does a mustard plaster or fly blister; and in addition it restores the skin to a healthy condition. The method of using DR. DOW'S STURGEON OIL LINIMENT in the various diseases of horses referred to is as follows:

BLOOD SPAVIN.

When applied early in cases of BLOOD SPAVIN it never fails to reduce the soreness and swelling, and if thoroughly applied often brings about a complete cure. POLL EVIL AND FISTULA IN THE WITHERS frequently have been cured by injecting DR. DOW'S STURGEON OIL LINIMENT in the

fistulous pipes. In these diseases it must not be forgotten also that it is necessary that an opening must be made at the point to which the matter gravitates, and be kept open by a seton so as to allow a free exit for the matter. If this is done and DR. DOW'S STURGEON OIL LINIMENT is injected into the fistulous opening, a cure will be effected without fail.

WIND GALLS.

These frequently can be dissipated in one night by saturating a pad made of several thicknesses of old muslin with DR. DOW'S STURGEON OIL LINIMENT, applying it to the Wind Gall, and securing it there firmly by a bandage.

CRACKED HEELS, SCRATCHES AND GREASE.

These all are names of the same disease in different stages of its progress. Although they are very troublesome they readily can be cured by DR. DOW'S STURGEON OIL LINIMENT on the one condition, that strict cleanliness be observed. The affected parts should be washed and thoroughly dried, after which DR. DOW'S STURGEON OIL LINIMENT should be applied. This remedy would be rendered more efficacious for these particular diseases if a drachm of alum or blue vitriol were added to each bottle of the Liniment.

SAND CRACK.

In Sand Crack also, DR. DOW'S STURGEON OIL LINIMENT has been found an effectual cure. It softens the hoof, prevents fungus granulation from the *tensible lamina*, stimulates a healthy secretion of the horn, thus gradually obliterating the opening of the hoof if the coronet be anointed by it two or three times a day. In addition to the use of DR. DOW'S STURGEON OIL LINIMENT a hot iron should be applied to the angle of the crack for a second, and the hoof bound with wax end that the crack may be prevented from extending further.

FOUNDER, RINGBONE AND HARD HOOF.

In these diseases the virtues of DR. DOW'S STURGEON OIL LINIMENT are well known and acknowledged by the most experienced horse-owners, while experience points it out as a valuable strengthener for weak knees.

A GENERAL STATEMENT

In fact it is not too much to say that for the ordinary diseases of horses and cattle DR. DOW'S STURGEON OIL LINIMENT is a general remedy. Certainly it is applicable in all cases in which an external re-

medy is of use. BRUISES, SPRAINS, SADDLE AND COLLAR GALLS, yield to it, and, in fact, with it in his possession the horse owner my feel perfectly safe and independent of the veterinary surgeon except in the most unusual and dangerous cases.

CAUTION.

It must not be forgotten that Dr. Dow's STURGEON OIL LINIMENT is too strong for internal use and must only be applied externally. There is a class of remedies which it is claimed are applicable both externally and internally. This may be true in some trivial cases, but no one after a moment's thought can believe that the stomach of man or beast could endure to take a draught so powerful that deep-seated RHEUMATISM, SCIATICA, AND ERYSIPELAS, in men, and SPRAIN, AND WINDGALLS AND GREASE in horses are cured by it.

LIVERY STABLES.

DR. DOW'S STURGEON OIL LINIMENT is very generally recommended by the owners of livery stables as a means of keeping their badly used horses in good condition.

RHEUMATISM CONQUERED.

ALMA, N. S., Dec. 6, 1878.

DR. DOW: Dear Sir,—I have suffered from the Rheumatism during the last winter more than pen can write. It makes me shudder to think of my pains with every change of weather. A friend brought me

a bottle of your STURGEON OIL LINIMENT, and insisted on my using it. I did so. I am now as well as ever.

C. M. BURROWS.

A WONDERFUL RECOVERY.

CHURCHVILLE, N. S., May 7, 1877.

DR. DOW:—I have been afflicted with Chronic Rheumatism for fifteen years, and at times was not able to raise out of my chair without assistance. My limbs were swollen and joints stiff. I used but three bottles of your STURGEON OIL LINIMENT and am now as well as any person. I can walk as well as ever I could.

D. W. REEVES.

A REMEDY ALWAYS AT HAND.

BUTTERNUT RIDGE, January 29, 1878.

DR. DOW: Dear Sir,—About a week ago, while going through to Fredericton with a friend of mine, Mr. Howard Alward of this place, merchant, his horse cut himself so badly that he was unable to travel, and I was afraid I would have to go along alone. However, I had used your STURGEON OIL LINIMENT and persuaded my friend to try some on his horse, and the effect was wonderful. It took all the soreness out of it, and he was able to go along the next day. Without your valuable LINIMENT he would have to have remained there, I am confident, a week at least.

Yours truly, J. H. MULLEN.
