The copy filmed here has been reproduced thanks to the generosity of:

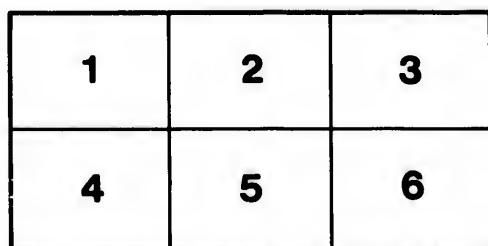

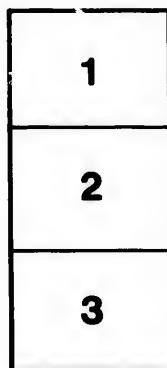

Douglas Library
Queen's University

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

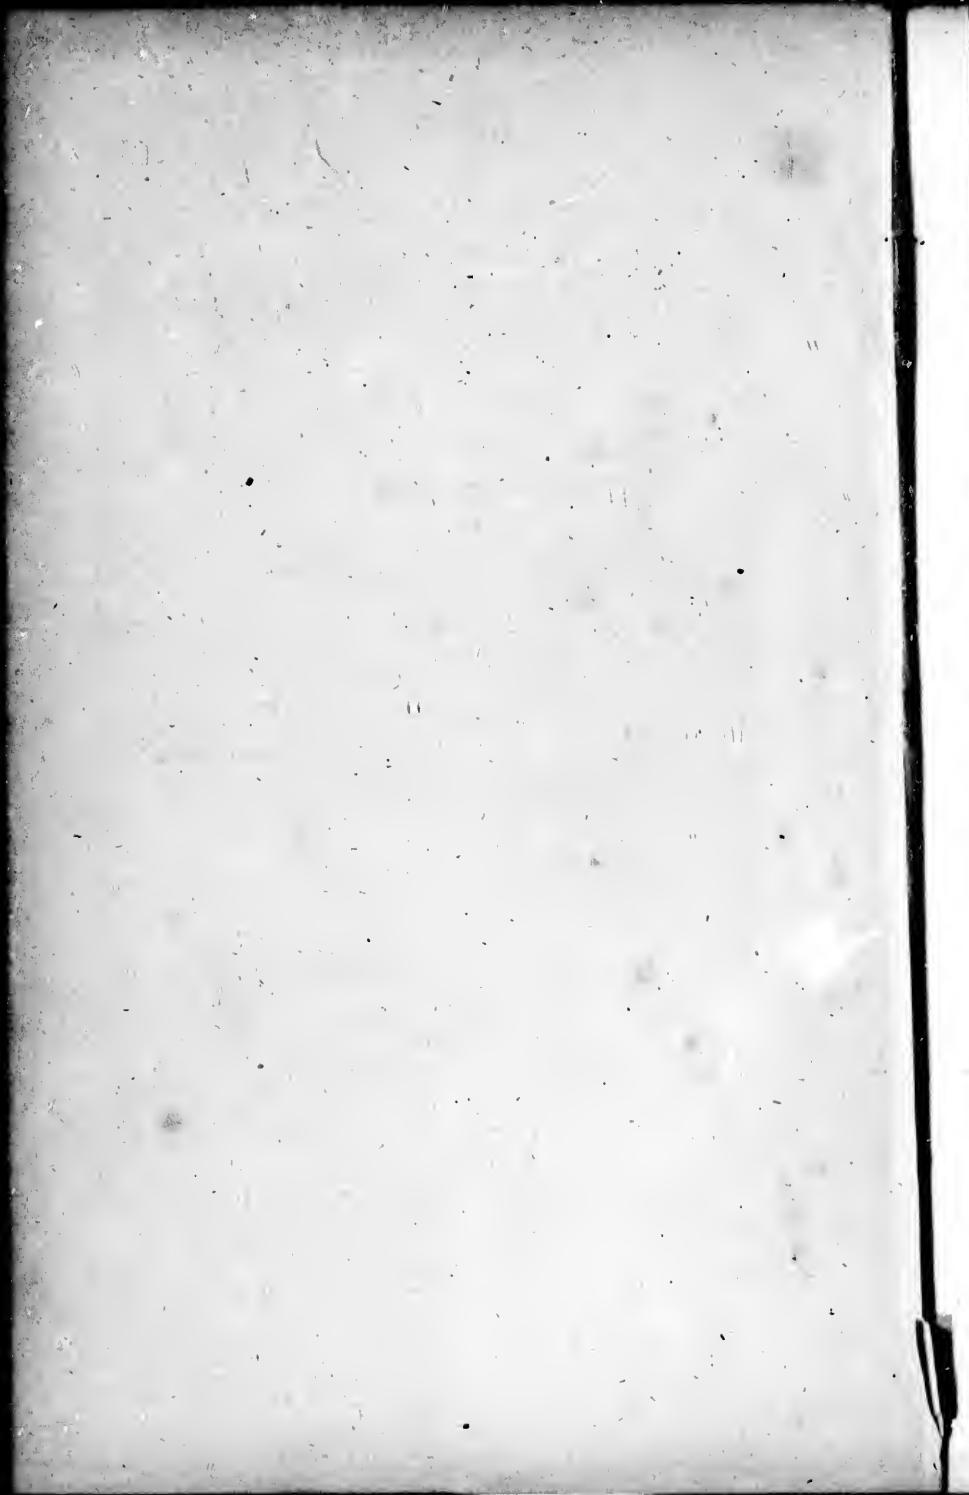

Douglas Library
Queen's University

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier piat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second piat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

TO

AYLMER BOURKE LAMBERT, Esq.

F.R.S. F.A.S.

VICE-PRESIDENT OF THE LINNEAN SOCIETY.

SIR,

I AM conscious of offering but a small tribute of gratitude, when I beg to be permitted to inscribe the following pages with your name. Should they happily meet with approbation, the Public will have, in a great measure, to thank you for their existence; as, without the aid and assistance you so liberally afforded me, my own feeble exertions would have been inadequate to the performance of so important an undertaking.

Should the perusal of this work in any degree add to the pleasure you feel in

P R E F A C E.

AMONG the numerous useful and interesting objects of natural history discovered on the vast extent of the New Continent, none claim our attention in a higher degree than the vegetable productions of North America. Her forests produce an endless variety of useful and stately timber trees; her woods and hedges the most ornamental flowering shrubs, so much admired in our pleasure grounds; and her fields and meadows a number of exceedingly handsome and singular flowers (many of them possessing valuable medicinal virtues), different from those of other countries. All these are more or less capable of being adapted to an European climate, and the greater part of easy cultivation and quick growth; which circumstances have given them, with much propriety, the first rank in ornamental gardening.

A country so highly abundant in all the objects of my favourite pursuits, excited in me, at an early period of life, a strong desire to visit it, and to observe in their natural soil and climate the plants which I then knew; and to make such discoveries as circumstances might throw in my way. This plan I carried into execution in the year 1799; when I left Dresden, the place where I had received my education, and embarked for Balti-

more in Maryland, with a determination not to return to Europe until I should have examined that country to the utmost extent of my means and abilities. In 1811, after an absence of nearly twelve years, I returned to Europe, with an ample stock of materials towards a *FLORA OF NORTH AMERICA*, an attempt at which I now venture to lay before the public, with the flattering hope, that a generous allowance will be made for its unavoidable imperfections, when the extent of the undertaking is considered; and that it will be accepted as it really is intended, as only the groundwork of some future more perfect work upon the subject.

As it may be interesting to some readers to have a sketch of the particulars of my stay in America, and to be informed of the means by which I became possessed of so general a collection of its plants, I shall give a few outlines thereof, previous to the necessary remarks respecting the execution of the work itself.

My first object, after my arrival in America, was to form an acquaintance with all those interested in the study of Botany. Among these I had the pleasure to account one of the earliest, and ever after the most valuable, the Rev. Dr. Mühlberg of Lancaster, in Pennsylvania, a gentleman whose industry and zeal for the science can only be surpassed by the accuracy and acuteness of his observations; I only regret, that his extensive and interesting materials towards a Flora of the United States, in which he has been engaged for a number of years, should not before this have been communicated to the public.

I next visited the old established gardens of Mr. Marshall, author of a small "Treatise on the Forest-trees

not to return
that country to

of North America." This gentleman, though then far advanced in age and deprived of his eye-sight, conducted me personally through his collection of interesting trees and shrubs, pointing out many which were then new to me, which strongly proved his attachment and application to the science in former years, when his vigour of mind and eye-sight were in full power. This establishment, since the death of Mr. Marshall, (which happened a few years ago,) has been, in some respects, kept up by the family, but is now very much on the decline, only a few old established trees being left as a memento of what formerly deserved the name of a respectable botanic garden.

Near Philadelphia I found the botanic garden of Messrs. John and William Bartram. This is likewise an old establishment, founded under the patronage of the late Dr. Fothergill, by the father of the now living Bartrams. This place, delightfully situated on the banks of the Delaware, is kept up by the present proprietors, and probably will increase under the care of the son of John Bartram, a young gentleman of classical education, and highly attached to the study of botany. In Mr. William Bartram, the well known author of "Travels through North and South Carolina," I found a very intelligent, agreeable, and communicative gentleman; and from him I received considerable information about the plants of that country, particularly respecting the habitats of a number of rare and interesting trees. It is with the liveliest emotions of pleasure I call to mind the happy hours I spent in this worthy man's company, during the period I lived in his neighbourhood.

Not far from the latter place are also the extensive gardens of William Hamilton, Esq., called the Woodlands, which I found not only rich in plants from all parts of the world, but particularly so in rare and new American species. Philadelphia being a central situation, and extremely well calculated for the cultivation of plants from all the other parts of North America, I found this collection particularly valuable for furnishing me with a general knowledge of the plants of that country, preparatory to more extensive travels into the interior, for the discovery of new and unknown subjects. Mr. John Lyon, (of whom I shall have an opportunity to speak hereafter,) who had the management of these gardens, was then about to give them up: having the offer of being appointed his successor, I embraced it, and accordingly in 1802 I entered upon the situation. During my stay in this place, which was until 1805, I received and collected plants from all parts of North America; and when Michaux's "Flora Boreali-Americanæ" appeared, which was during that time, I was not only in possession of most of his plants, but had then a considerable number not described by him.

Within this period I had also formed a connection with Dr. Benjamin S. Barton, Professor of Botany in the University of Pennsylvania, &c. whose industrious researches in all the different branches of natural history are so well known to the literary world. He likewise, for some time previous, had been collecting materials for an American Flora. As I was now very anxious to explore the more remote parts of the country, particularly the interesting ranges of the Allegany Mountains, I was enabled, by the kind assistance of this gentleman, to

take a more extensive range for my botanical excursions, which during my stay at the Woodlands had been confined within a comparatively small compass, the necessary attention to the duties of that establishment not permitting me to devote more time to them.

Accordingly, in the beginning of 1805, I set out for the mountains and western territories of the Southern States, beginning at Maryland and extending to the Carolinas, (in which tract the interesting high mountains of Virginia and Carolina took my particular attention,) and returning late in the autumn through the lower countries along the sea-coast to Philadelphia. The following season, 1806, I went in like manner over the Northern States, beginning with the mountains of Pennsylvania and extending to those of New Hampshire, (in which tract I traversed the extensive and highly interesting country of the Lesser and Great Lakes,) and returning as before by the sea-coast.

Both these tours I principally made on foot, the most appropriate way for attentive observation, particularly in mountainous countries; travelling over an extent of more than three thousand miles each season, with no other companions than my dog and gun, frequently taking up my lodging in the midst of wild mountains and impenetrable forests, far remote from the habitations of men. The collections and observations made in the course of these journeys, all of which I communicated to Dr. Barton, were considerable, in respect to the discovery of many new and interesting subjects of natural history in general. But the knowledge which I thereby acquired of the geography, soil, and situation of the plants of that country, (points of the greatest interest

to the practical botanist) was of the greatest importance to me.

Soon after my return from the last-mentioned journey, I had the pleasure to form an acquaintance with Meriwether Lewis, Esq., then Governor of Upper Louisiana, who had lately returned from an expedition across the Continent of America to the Pacific Ocean, by the way of the Missouri and the great Columbia rivers, executed under the direction of the Government of the United States. A small but highly interesting collection of dried plants was put into my hands by this gentleman, in order to describe and figure those I thought new, for the purpose of inserting them in the account of his Travels, which he was then engaged in preparing for the press. This valuable work, by the unfortunate and untimely end of its author, has been interrupted in its publication; and although General Daniel Clark, the companion of Mr. Lewis, (to whom I transmitted all the drawings prepared for the work,) undertook the editorship after his death, it has not, to my knowledge, yet appeared before the public, notwithstanding the great forwardness the journals and materials were in when I had the opportunity of perusing them.

The collection of plants just spoken of was made during the rapid return of the expedition from the Pacific Ocean towards the United States. A much more extensive one, made on their slow ascent towards the Rocky mountains and the chains of the Northern Andes, had unfortunately been lost, by being deposited among other things at the foot of those mountains. The loss of this first collection is the more to be regretted,

s. The
gretted,

when I consider that the small collection communicated to me, consisting of about one hundred and fifty specimens, contained not above a dozen plants well known to me to be natives of North America, the rest being either entirely new or but little known, and among them at least six distinct and new genera. This may give an idea of the discerning eye of their collector, who had but little practical knowledge of the Flora of North America, as also of the richness of those extensive regions in new and interesting plants, and other natural productions.

The descriptions of those plants, as far as the specimens were perfect, I have inserted in the present work in their respective places, distinguishing them by the words "*v. s. in Herb. Lewis.*" Several of them I have had an opportunity of examining in their living state, some being cultivated from seeds procured by Mr. Lewis, and others since my arrival in England from seeds and plants introduced by Mr. Nuttall.

Here I cannot refrain from drawing the attention of future botanists travelling those regions, to two highly interesting plants, of which I have only seen imperfect specimens. The first is what Mr. Lewis in his journals calls "the Osage Apple," or "Arrowwood of the Missouris." This is a tree, or rather shrub, with leaves resembling those of a pear-tree, but broader in proportion; they are alternate, and have a recurved thorn near their base; the flowers are of separate sexes, and appear in axillary, peduncled, globular catkins, which produce a depressed globular fruit, in size and colour resembling an orange, in interior structure approaching near to the genus *Morinda*. This shrub, on account of its fruit

and handsome foliage, must be highly ornamental : the wood, being excessively hard, is preferred by the natives to any other for making their arrows ; and as it does not spontaneously grow in their neighbourhood, they travel annually to a considerable distance South-west, to procure it. About the village of the Osage Indians a few trees have been planted, from which one has been introduced into one of the gardens at St. Louis on the Mississippi. Perfect seeds from the last-mentioned tree were given by Mr. Lewis to Mr. M'Mahon, nursery and seedsman, at Philadelphia, who raised several fine plants from them, and in whose possession they were when I left America. The other plant alluded to is called by Mr. Lewis " A bulbous Rush, which serves the Indians for bread." Of this I have only seen the root, which is of a yellowish-brown colour, about the thickness of a finger, and jointed ; on each joint, which are about three inches asunder, several tubers of about an inch and a half long are produced, of an oblong ovate shape, tapering into a point towards the end ; these tubers are filled with an exquisite white and fine farina, resembling starch ; these roots are used in the same manner as those of *Psoralea esculenta*, vid. vol. ii. p. 475. I take this to be a larger species of tuberous Cyperus.

While I was thus engaged in describing and figuring those new acquisitions to the American Flora, another opportunity offered to augment my resources. Mr. Aloysius Enslen, who had been sent to America by Prince Lichtenstein of Austria, as a collector of new and interesting subjects of natural history, returned to Philadelphia from his extensive travels through the Western Territories and Southern States. This gentle-

man, with whom I had previously been on terms of intimate friendship, was now in possession of an extremely valuable collection of living and dried plants, to which I had unrestrained access. To his liberality I am indebted for many new and scarce specimens, which filled up a desideratum in my collection, particularly in the plants of Lower Louisiana and Georgia. Those species exclusively received from his collection I have distinguished by "*v. s. in Herb. Enslen.*"

At the same time I had frequent opportunities of seeing the herbarium and collection of living plants of Mr. John Lyon, a gentleman through whose industry and skill more new and rare American plants have lately been introduced into Europe than through any other channel whatever. Those plants particularly adopted from his collection I have marked with "*v. s. in Herb. Lyon.*"

By these and several other connections, which it is unnecessary to mention here, added to my own occasional excursions through the different parts of the United States, I was put in possession of an extensive herbarium, containing plants from all the different parts of North America; which when summed up would nearly double the number of those described in Michaux's excellent Flora. As that work was then extremely scarce in America, I determined to publish a Compendium of it, executed on the plan of Hoffmann's *Flora Germanica*, which work I had no doubt would be acceptable to the botanist, and particularly so to the cultivator. I communicated my design to Messrs. Bradford and Inskeep, booksellers at Philadelphia, who gave me every encouragement towards the prosecution thereof.

While I was engaged in arranging my materials for this publication, I was called upon to take the management of the Botanic Garden at New York, which had been originally established by the arduous zeal and exertions of Dr. David Hosack, Professor of Botany, &c, as his private property, but has lately been bought by the Government of the State of New York for the public service. As this employment opened a further prospect to me of increasing my knowledge of the plants of that country, I willingly dropped the idea of my intended publication for that time, and in 1807 took charge of that establishment.

Here I again endeavoured to pay the utmost attention to the collection of American plants, as the establishment was principally intended for that purpose. In this I was supported by my numerous botanical connections and friends, among whom I must particularly mention John Le Conte, Esq. of Georgia, whose unremitting exertions added considerably to the collection, particularly of plants from the Southern States.

The additions to my former stock of materials for a Flora were now considerable, and in conjunction with Dr. D. Hosack I had engaged to publish a periodical work, with coloured plates, all taken from living plants, and if possible from native specimens, on a plan similar to that of Curtis's Botanical Magazine; for which a great number of drawings were actually prepared. But at this period I was attacked by a serious and obstinate intermitting fever, which made a change of air and climate absolutely necessary to me; I therefore, in 1810, took a voyage to the West Indies, visiting the islands of Barbadoes, Martinique, Dominique, Guadaloupe, and

St. Bartholomew's, from which I returned in the autumn of 1811 in a perfect state of recovered health. The vessel in which I returned landed at the town of Wiscasset in the province of Main. This being a country I had never visited before, I examined its vegetation with all possible attention; and although the season was too far advanced for making any new discoveries, I gained considerable information respecting the geography of plants, a point I always considered highly interesting to the science. During my journey towards New York, I had an opportunity of visiting Professor Peck of Cambridge College near Boston, and seeing his highly interesting collection of plants, collected on a tour to the alpine regions of the White Hills of New Hampshire. As the season was too far advanced when I was in that country to suffer me to think of ascending those mountains, this collection was highly gratifying to me.

On my return to New York, I found things in a situation very unfavourable to the publication of scientific works, the public mind being then in agitation about a war with Great Britain. I therefore determined to take all my materials to England, where I conceived I should not only have the advantage of consulting the most celebrated collections and libraries, but also meet with that encouragement and support so necessary to works of science, and so generally bestowed upon them there.

These expectations I found amply realized on my arrival in London. I had very soon the pleasure of forming a circle of acquaintance among those attached to the science of Botany, by whom I was gradually introduced

to the most eminent botanical characters of our age Sir Joseph Banks, with his accustomed liberality, supported my undertaking by giving me access to his extensive library and herbarium. A. B. Lambert, Esq. favoured me not only with the same assistance, but very handsomely offered me the entire use of his library and collection during the compilation of the work. To this gentleman I am in the highest degree indebted for his strenuous support under all the difficulties I had to encounter during its progress; which by his generous exertions he endeavoured to remove whenever they occurred.

Among the many new sources of information now opened to me, I must particularly mention the following original collections, by the assistance of which I have been enabled to correct many errors of former publications, particularly respecting the synonyms,

I. Clayton's Herbarium.—The whole of this interesting collection, from which the "FLORA VIRGINICA" of Gronovius was compiled, is preserved in the Banksian Museum. This has been particularly useful to me in tracing the plants which Linnæus had adopted from that work.

II. Professor P. S. Pallas's Herbarium.—This extensive collection, now in the possession of A. B. Lambert, Esq. was highly useful to me, in comparing the plants of North America with those of the North of Asia, to some of which they have a great affinity, and others are common to both continents.

III. Plukenet's Herbarium.—Preserved in the British Museum, as also part of

IV. Catesby's Herbarium.

V. Walter's Herbarium. This interesting collection, from which Walter's "FLORA CAROLINIANA" was compiled, is in possession of the Messrs. Frasers of Sloane Square, whose father was the intimate friend of Mr. Walter. They very kindly permitted me to make use of it whenever I had occasion to refer to it.

I am also highly indebted to William Roscoe, Esq., who very obligingly communicated to me Mr. Bradbury's Plants collected in Upper Louisiana. This valuable collection contains many rare and new species, having been collected in a tract of country never explored before: those which were entirely new I have described in the Supplement to the present work.

Besides these general collections, there were a number of interesting new plants in the Banksian Herbarium collected by different persons in North America. Among them I found a number of those collected by Archibald Menzies, Esq., during the famous expedition under Vancouver, on the north-west coast of America. As several of them had been described by me from the Lewisian collection, I requested permission of Mr. Menzies to adopt such as were immediately connected with my plan, which he very obligingly complied with.

The number of American plants in the different nurseries and private collections in the vicinity of London, contributed considerably to my resources, and I am highly indebted to those who gave me their assistance, particularly to Messrs. Lee and Kennedy, whose extensive collections exceed any other in Europe.

The accounts I had frequently heard of the celebrated Sherardian Herbarium at Oxford, made me particularly

anxious to examine it. Dr. G. Williams, professor of botany in that University, received me with that kindness so congenial to the true friend of science, and supported my researches to the utmost of his power. Besides the entire Herbarium of Morison, and other valuable collections, I found a general collection of North American plants, among which I was particularly gratified to find all those sent by Mr. M. Catesby to Dr. Sherard. This collection, though made a century ago, is in very fine preservation, and contains specimens of most of the new species of Walter, Michaux, &c. and even some entirely new ones, with the remarks and synonyms of Dr. Sherard, and frequently accompanied with the original letters of M. Catesby. In the same collection are also a number of rare specimens collected by a Mr. Tilden at Hudson's Bay, and those of John Bartram and other correspondents of Dr. Sherard. In fine, I consider this the most complete collection of North American plants now extant. The notes and remarks made here are given in the Appendix and Addenda, as it was not until the body of the work was printed that I had the opportunity of seeing this valuable collection.

Having thus given a general view of the means and resources I had in composing the present work, I shall only add a few remarks respecting its execution.

On a slight inspection of the work, it will be readily perceived that my chief object has been, throughout, to comprise as much matter as possible in the smallest space which attention to perspicuity would allow.

In respect to nomenclature I have followed Willdenow's "SPECIES PLANTARUM" and Michaux's "FLORA

professor of both that kindness, and supported me. Besides the valuable collection gratified to find in North America Sherard. This is in very fine f. most of the and even some old synonyms of d with the ori- c collection are ected by a Mr. John Bartram d. In fine, I tion of North s. and remarks Addenda, as printed that I e collection. he means and work, I shall ecution. will be readily roughtout, to the smallest allow. wed Willde- ux's "FLORA BOREALI-AMERICANA" as near as possible, avoiding carefully to change old established names, however faulty, unless in cases where good authority furnished a more appropriate one. As for example, I have adopted *Fraxinus acuminata* of Lavarck, instead of *Fraxinus americana*, Linn., and *Cynoglossum amplexicaule* of Michaux for *Cynoglossum virginicum*, Linn. But I have never approved of such changes as *Juglans alba* and *cineræa* of Linneus to *Juglans squamata* and *cuthartica*, as the younger Michaux in his "Arbres Forestiers" has done. This otherwise very useful publication is full of such new names, imposed on well known and long established species, and sometimes even without the least hint respecting their names in other authors.

The specific characters in most instances have been modelled anew or altered as it was found necessary. Wherever any alteration had been made it was necessary to quote the author from which the species had been taken in a separate line, as page 16 *Monarda didyma*; after the specific description I had to repeat that it was the same with *M. didyma*, Willd. sp. pl. 1. p. 125. To avoid this superfluous repetition, and save as much room as possible, I found it expedient to adopt, from page 72 to the end, the following mark (—), to be placed after the specific character whenever it had been amended; so that *Stipa avenacea*, page 72, is the same species described by Willd. sp. pl. 1. p. 442, but the character is new or augmented. Wherever the author follows the description without this mark, as page 73, *Saccharum giganteum*, Pers. encr. 1. p. 103, in that case the character has been adopted without alteration.

In some of the more intricate genera, as *Monarda*, *Vaccinium*, *Andromeda*, *Salix*, &c. the specific characters have been extended to a rather unusual length, which may be objected to by some, but I am persuaded will be approved of by most. The beauty of a short and perspicuous character is without doubt preferable to a long one, which the more it is extended the more ambiguous it will become; but the nature of certain genera will absolutely not admit this conciseness, and the works of some of the most celebrated authors have lately proved that it is inconvenient to be limited by a certain number of words in forming the specific character. Among many others I only need to mention Willdenow's last volume of the Species Plantarum, particularly the genus *Aspidium*, and Mr. Robert Brown's excellent "Treatise on the Proteaceæ," in the tenth volume of the Transactions of the Linnean Society. In both these works examples will be found, where the length of the specific character equals if not exceeds in number of words the longest in the present work.

It would have been needless to encumber the work with a superfluous number of synonyms, which can be found in the authors referred to; but those of a late date, or any way illustrative toward the true determination of the species, have been carefully collected, as the means I was possessed of were particularly favourable to the ascertainment of those points, which may be of the highest utility to future publications on the same subject.

In respect to the figures referred to, care has been taken to quote the most correct whenever there was a choice. The plates which accompany the work have

been carefully selected, either from highly interesting new plants, or those which will not admit of cultivation, as some of the *Rhexias*, *Lupinus*, *Gerardia*, &c. As the plates were executed during the progress of the work through the press, references to them could not be inserted in the proper places; but as the plates themselves refer to the pages of the work, it will be easy to supply this deficiency.

Particular attention has been paid in describing the soil, situation, and range of country each species is found in, which will be found very useful to the practical botanist, and especially so to the cultivator of those plants.

After the usual sign of duration, and the time of flowering, each species has been faithfully marked whether I have seen it myself in a living state (*v. v.*), or only in a dried specimen (*v. s.*); in the latter case the name of the herbarium I had it from is generally mentioned. Those I have adopted without seeing them myself in either state, and which are but few, I have marked (+).

To each species a short note has been added, respecting the colour and size of the flower, the habit of the plant, or some other interesting subject illustrative of the species.

Very full descriptions have been given of only some of the most interesting new species, as the limits of the work would not admit of it in general. The careful references to authors and good figures will amply supply this deficiency.

In the alteration made in the systematic arrangement,

I have been guided by the hints given by the learned Dr. J. E. Smith, in his excellent "Introduction to Botany." The classes Dodecandria and Polyadelphia are entirely omitted, and their genera inserted in their proper places in the other classes. *Asarum* next to *Aristolochia*, in Gynandria. *Begonia*, *Portulacca*, *Talinum*, *Calligonum*, and *Hypericum*, in Polyandria. *Hudsonia* next to *Helianthemum*, with which it is closely related in the same class, *Decumaria*, *Lythrum*, *Cuphea*, and *Agrimonia*, in Icosandria. *Halesia* near *Styrax*, in Monadelphia. *Euphorbia* in Diclinia, where it forms, with its other genera, a natural as well as artificial order. The nineteenth class, Diclinia, contains the natural families of Tricoccæ or Euphorbia, Amentaceæ, and Coniferæ. The other genera of the classes Monoecia, Dioecia, and Polygamia, having been referred to their proper classes. The genus *Diotis* more properly belongs to Tetrandria, but had been omitted in that class. *Najas* and *Valisneria* are genera of an order of this class, to which probably might be added all the Aroideæ. How far these alterations may meet the approbation of those best qualified to judge, I have yet to learn, but I am strongly persuaded they will facilitate the study of this lovely science to the young beginner.

In the last class, Cryptogamia, I have gone no further than the family of the *Filices*, according to the formation of the plan of this work, which only included plants which either are, or can be cultivated. The other orders, *Musci*, *Algæ*, and *Fungi*, will form a distinct work from the present, and may appear at some future

period in a more perfect shape than the limits of this work would admit; it being absolutely necessary to illustrate those minute objects with correct figures, without which mere words are useless in describing them.

At the end of the work I have given a Table of Anomalous Flowers; great pains have been taken to make it as correct as possible. This will be found of infinite service, particularly to the young botanist. For this purpose I shall give an example of the use of it. Should the young beginner, unacquainted with the genus *Ga- lium*, happen to find *Galium trifidum*, vol. i. p. 103, he would in vain look for its genus in Triandria; but by referring to this table among the anomalous genera, he will very easily find its proper genus.* Again, by examining a flower of *Asclepias*, he might very probably consider the ten pollen masses for as many anthers, and look for its genus in Decandria, which by the assistance of this table he will trace to be Pentandria.

For the accommodation of the English reader, I have given a double Latin and English Index. Great attention has been paid to the correctness of the General Index, in which the first number in parentheses refers to the number of the genus, the other to the page. The synonyms are distinguished by being in Italics.

Notwithstanding the unremitting attention paid to the correctness of this work, the author is well aware that it will not be found free from those errors which are unavoidable in (nay almost inseparable from) publications of this nature, where so great a number of authorities are to be referred to. But he still consoles himself with the idea of having given to the world a work

which, with all its imperfections, will be found useful, and contribute to the general advancement and progress of the science. This has been the only aim, and will be the highest reward of the labours of

I. MONANDRIA.

I. MONOGYNIA.

1. ZOSTERA. *Cal* et *Cor*. nulla. *Anth.* sessilis. *Caps.* 1-sperma. *Monocicum.*
2. CAULINIA. *Cal* et *Cor*. nulla. *Anth.* sessilis. *Styl.* filiformis. *Stigm.* 2-fidum. *Caps.* 1-sperma. *Mo-
nocicum.*
3. SALICORNIA. *Cal.* ventricosus, integer. *Cor.* O. *Stam.* 1—2. *Sem.* 1. in fundo calycis.
4. HIPPURIS. *Cal.* margo bilobus, superus. *Cor.* O. *Sem.* 1.

II. DIGYNIA.

5. PODOSTEMUM. *Cal* squinæ 2—3. *Cor.* O. *Fil.* furcatum. *Anth.* 2. *Styl.* O. *Stigm.* reflexa. *Caps.* 2-loc, 2-valv. polysperma.
6. CALLITRICHÉ. *Cal.* 2-partitus. *Cor.* O. *Caps.* 2-locularis, 4-sperma.
7. BLITUM. *Cal.* 3-fidus, baccatus. *Cor.* O. *Sem.* 1.
8. CORISPERMUM. *Cal.* 2-partitus. *Cor.* O. *Sem.* 1.

III. POLYGYNIA.

9. ZANNICHELLIA. *Cal.* 1-phyllo, turbinatus. *Cor.* O. *Styl.* 3—5. *Stigm.* peltata. *Sem.* 3—5. nuda.
10. CHARA. *Cal.* et *Cor.* O. *Stigm.* 5. *Bac.* polysperma.

I. MONOGYNIA.

1. ZOSTERA. *Gen. pl.* 1390. Grass-wrack.

- marina.* 1. *Z. foliis integerrimis subtrinerviis, caule teretiusculo.*
Vahl. enum. pl. 1. *p.* 14.
Icon. Engl. bot. 467. *Fl. dan.* t. 15.
 In salt-marsh ditches, in the bay of Delaware, scarce.
 ♀. Aug. *v. v.* Leaves long; flowers very small.
 The leaves are narrower and more obtuse than in the
 European plant; in every other respect it appears to
 be the same.
- fragilis.* 2. *CAULINIA.* *Willd. in act. ac. ber.* 1798. *p.* 87.
 1. *C. foliis ternis oppositivs linearis-subulatis recurvatis*
aculeato-dentatis rigidis. *Willd. sp. pl.* 4. *p.* 182.
Icon. Willd. l. c. t. 1. f. 2.—Michel. gen. t. 8. f. 3.
 In slow-flowing waters; Susquehanna, Kenhaway, &c.
 rivers. ♂. Aug. *v. v.* Immersed, floating.
- flexilis.* 2. *C. foliis senis linearibus apice denticulatis patentibus.*
Willd. sp. pl. 4. *p.* 183.
Icon. Willd. l. c. t. 1. f. 1.
 In small ponds and old ditches: New York to Carolina.
 ♂. Aug. *v. v.* Immersed, floating; flowers very
 small.
3. *SALICORNIA. Gen. pl.* 14. Samphire or Glasswort.
- herbacea.* 1. *S. herbacea patula, articulis apice compressis emarginato-bifidis, spicis axillaribus oppositis pedunculatis,*
squamis obtusis. *Willd. sp. pl.* 1. *p.* 23.
a Engl. bot. 415.
 β *ramis simplicissimis, caule prostrato.*
 γ *caule stricto ramoso, ramis laxis.*
 Var. α and β are common along the sea-coast: var. γ I
 observed on the Salt-lake of Onondago, New York.
 ♂. Aug. *v. v.* Fleshy, smooth; salt taste.
- virginica.* 2. *S. herbacea erecta, ramis simplicissimis indivisis: spicis*
longis articulatis. *Willd. sp. pl.* 1. *p.* 25.
 Frequent on the coast of Virginia and Carolina. ♂.
 July, Aug. *v. v.*; *v. s. in Herbario Gronoviano in*
Museo Banksiano asservato. Smaller than No. 1.
 I consider this no more than a sub-species, and prob-
 ably the same with *S. herbacea* γ .

MONANDRIA MONOGYNIA. Salicornia.

3

3. S. fruticulosa assurgens inordinate ramosa. *Mich. fl. amer. 1. p. 2.*

In sedgy salt-meadows; New Jersey to Carolina. ♂. ♀.
July, Aug. v. v. Resembles *S. fruticosa* very much;
taller than either No. 1. or 2; pale green.

4. HIPPURIS. *Gen. pl. 15.* Mare's-tail.

1. H. foliis plerumque senis linearibus. *Mich. fl. amer. 1. p. 1.*

In ditches and small ponds: Canada to Pennsylvania,
rare. ♂. v. s. s. *fl.* Upright, simple; may be a
new species.

II. DIGYNIA.

5. PODOSTEMUM. *Mich. fl. amer. 2. p. 164.*

1. Podostemum. *Mich. l. c. p. 165.*

Icon. *Mich. l. c. t. 44.*

ceratophyl-
lum.

Closely attached to loose stones in shallow water of
the rivers Ohio, Holston, Kenhaway, &c. ♀. July.
v. v.

I take the liberty to place this plant in Monandria, as it
will be more easily found by a young Botanist under
this head, than under *Monococcia Diandra*.

6. CALLITRICHE. *Gen. pl. 17.* Water-starwort.

1. C. foliis superioribus spatulato-obovatis, inferioribus li- *heterophylla.*

nearibus obtusis emarginatisque.

C. verna *Willd. sp. pl. 1. p. 28?*

Icon. *Fl. dan. 129?*

In springs and rivulets, very common. ♂. May—
July. v. v. Flowers white, axillary; upper leaves
floating.

2. C. foliis omnibus linearibus apice bifidis.

C. autumnalis. *Willd. sp. pl. 1. p. 29?*

linearis.

In similar situations, not so common. ♂. May,
June. v. v. More slender than No. 1. Upper leaves
somewhat spatulate-linear.

3. C. foliis omnibus linearibus truncatis brevibus approxi-
matis.

brevifolia.

MONANDRIA DIGYNIA. Callitriche.

In sandy barren grounds, near mill-ponds, occasionally overflowed: New York to Virginia. ☽ Aug. v. v. Small, creeping along the ground, with a moss-like appearance; flowering seldom.

7. BLITUM. Gen. pl. 18. Strawberry-spinage.

capitatum.

1. B. foliis acute triangulo-hastatis, capitulis alternis in racemum superne aphyllum approximatis. Mich. fl. amer. 1. p. 2. Willd. sp. pl. 1. p. 30.

In woods and about houses, in Canada and the western parts of New York and Virginia. ☽ June, July. v. v. Flowers herbaceous; berries red.

8. CORISPERMUM. Gen. pl. 16. Tick-seed.

*hyssopifoli-
um.*

C. spicis terminalibus, foliis linearibus enerviis muticis. Willd. sp. pl. 1. p. 28.

Icon. Pall. fl. ross. 2. t. 98.

In open plains, called Prairies, of Canada and on the banks of the Missouri River; found by M. Lewis, Esq. ½ Aug. Sept. v. s. in *Herbario Lewisiano*. Small shrub, of a gray aspect: flowers small, in axillary clusters.

III. POLYGYNIA.

9. ZANNICHELLIA. Gen. pl. 1391.

palustris.

1. Z. anthera quadriloculari, stigmatibus integerrimis, seminibus dorso denticulatis. Willd. sp. pl. 4. p. 181.

Icon. Michel. gen. t. 34. f. 1.

In ditches and small rivulets, in Virginia near the Sweet springs. ☽ July, Aug. v. v. Resembles *Potamogeton marinum*; flowers very small.

10. CHARA. Gen. pl. 1397.

vulgaris.

1. C. caulinus ramulisque basi nudis, ramulis teretibus, articulis foliosis, foliolis oblongo-subulatis, bracteis bacca brevioribus. Willd. sp. pl. 4. p. 183.

Icon. Engl. bot. 336. *Feather-beds.*
Floating in old ponds and ditches: Canada to Carolina, common. ☽ July, Aug. v. v. Incrusted; smells disagreeably.

MONANDRIA POLYGYNIA. Chara.

5

2. C. caulinibus nudis superne papilloso, ramulis teretibus basi et in articulis foliosis, foliis linearibus, bracteis bacca brevioribus. *Willd. sp. pl. 4. p. 184.*

Icon. *Willd. in act. ac. ber. t. 1. f. 2.*

In clear waters and small ponds: Pennsylvania, Virginia, &c. ☽ July. v. v. Green, shining, fragile.

3. C. caulinibus diaphanis nudis, ramulis inarticulatis aphyllis compressis, baccis nudis lateribus. *Willd. sp. pl. 4. p. 187.*

Icon. *Engl. bot. 1070.*

In muddy pools and ditches in the western part of Pennsylvania, &c. ☽ Aug. v. v. Green, flexible, tender, transparent.

46.

In sandy fields from New Jersey to Carolina. 4. June
—August. v. v. Flowers yellow, punctated.

11. M. hirsuta, floribus parvis verticillatis, bracteis ovatis
glabris venosis ciliatis calycem aequantibus, foliis ova-
to-oblongis attenuatis subsessilibus serratis subpilosis,
caule acutangulo hirsuto.

M. ciliata. Willd. sp. pl. 1. p. 126.

On slate hills in Virginia and Carolina. 4. June—Aug.
v. v. Flowers small, blue.

12. M. undique pilis longis albidis hirsutissima, floribus par-
vis verticillatis, bracteis brevissimis oblongis acuminatis,
calycibus longe aristatis, foliis ovatis acuminatis
serratis longe petiolatis, caule acutangulo hirsuto.

M. ciliata. Mich. fl. amer. 1. p. 16.

In high mountains of North Carolina and Virginia. 4.
August. v. v. Flowers small, very pale purple.

26. SALVIA. Gen. pl. 50. Sage.

1. S. foliis linear-lanceolatis inferioribus extrosum serratibus
caulèque glabris, calyce pubescente brevissime trifido.

S. azurea. Lam. encycl. 6. p. 625.

S. acuminata. Vent. cels. p. 50.

S. angustifolia. Mich. fl. amer. 1. p. 15.

S. mexicana. Walt. fl. car. p. 65.

Icon. Vent. cels. p. 50.

β Lam. encycl. 6. p. 625.

In open sandy situations of Carolina and Georgia. 4.
July—Sept. v. v. Flowers beautiful blue, some-
times white.

2. S. foliis cordatis acutis tomentosis serratis, corollis calyce
duplo longioribus angustioribus. Willd. sp. pl. 1.
p. 141.

Icon. Murr. in com. gæt. 1778. p. 86. t. 1.

On the banks of rivers in Florida. 4. July—Sept.
v. v. Flowers scarlet.

3. S. foliis lanceolatis serratis, floribus in racemis termina-
ibus oppositis, corollis calyce trifido subaequantibus,
caule brachiat-ramosissimo.

In open plains of the Missouri river. M. Lewis. ④.
v. s. in Herb. Lewis. Flowers small, sky-blue.

Caulis erectus ramosissimus: ramuli tetragonii 4-sulcati.

Folia opposita, brevi-petiolata. *Flores oppositi*, in ra-
cemis foliosis. *Bracteæ* vel *folia floralia lineares*, lon-
gitudine pedicellorum. *Cal.* tubuloso-campanulatus,

ciliata.

32. VALERIANA. *Gen. pl. 60.**pauciflora.*

1. *V. foliis radicalibus pinnatis, caulinis ternatis : foliolis ovalibus acutis serratis, paniculis laxis paucifloris.
Mich. fl. amer. 1. p. 18.*

In shady woods on the Allegany mountains : Tennessee. ♀. June, July. v. v. Flowers white.

radiata.

1. *F. foliis spathulato-oblongis subintegris, fuctu pubes-
cente subtetragono apice nudo. Mich. fl. amer. 1.
p. 18.*

Valeriana locusta radiata. *Linn. sp. pl. 48.*
In fields from Pennsylvania to Carolina ; very plentifully
in Virginia. ♂. June, July. v. v.

capitata.

1. *Tripterella. Mich. l. c.
Anonymos capitatus. Walt. fl. car. 68.*

TRIANDRIA MONOGYNA. Tripterella.

29

Vogelia capitata. *Gmel. syst. nat. 2. p. 107.*Icon. *Mich. l. c. t. 3.*

In wet places, borders of ponds, &c. in Lower Carolina.

O. May—July. v. v. Stem filiform; flowers white, in a small head.

35. IXIA. *Gen. pl. 76.*

1. I. foliis lineari-subulatis scapo unifloro multoties breviore. *Willd. sp. pl. 1. p. 200.*

*caelestina.*Icon. *Bartr. it. 152. t. 3.*

Found by Mr. W. Bartram in South Carolina and Georgia. ♀. Flowers bright blue.

36. IRIS. *Gen. pl. 97. Flag.*

1. I. barba cristata, caule brevissimo compresso subuni-floro, foliis gladiatis longitudine florum, lacinis corollarum æqualibus.

*cristata.*I. cristata. *Ait. kew. ed. 2. 1. p. 117. Willd. sp. pl. 1. p. 225.*I. virginiana pumila. *Pluk. alm. 198. t. 196. f. 6.*Icon. *Bot. mag. 412. Ladies' Calamus.*

On the banks of rivers in rocky situations in the mountains of Virginia and Carolina. ♀. May. v. v. Flowers blue, handsomely crested with yellow.

The root of this species when chewed are very remarkable; they at first occasion a pleasant sweet taste, which in a few minutes turns to a burning sensation, by far more pungent than Capsicum. The hunters of Virginia, notwithstanding those properties, use it very frequently to alleviate thirst.

2. I. imberbis, caule ancipiti multifloro foliis altiore, foliis ensiformibus, stigmatibus petalis interioribus breviribus, capsulis oblongis: angulis sulcatis.

*virginica*I. virginica. *Willd. sp. pl. 1. p. 232.*I. hexagona. *Walt. fl. car. 66.*Icon. *Bot. mag. 703. Jacq. ic. rar. 2. t. 223. Dill. eth. t. 155. f. 188.*

On river sides and near ponds from New York to Florida. ♀. June, July. v. v. Flowers beautiful purple, with the bottom of the outside petals yellow.

3. I. imberbis, caule tereti flexuoso folia æquante, foliis ensiformibus, stigmatibus petalis interioribus æquantes, capsulis ovatis: angulis obtusis.

*versicolor.*I. versicolor. *Willd. sp. pl. 1. p. 233.*

TRIANDRIA MONOGYNIA. Iris.

- Icon. *Bot. mag.* 21. *Dill. eth. t.* 155. *f.* 187.
Very common in wet places, and on the banks of ditches
from Canada to Carolina. \mathcal{U} . June, July. *v. v.*
Flowers purple, stigmata white.
- cuprea.* 4. *I. imberbis*, caule tereti flexuoso folia æquante, foliis
lato-ensiformibus, stigmatibus linearibus brevibus,
petalis omnibus reflexis emarginatis obovatis, interiori-
bus brevioribus, capsulis magnis hexagonis.
On the banks of the Mississippi near New Orleans; dis-
covered by Mr. Enslen, Collector to the Prince Lich-
tenstein of Austria. \mathcal{U} . July. *v. v.* Flowers of a
beautiful copper colour, veined with purple.
- tridentata.* 5. *I. imberbis*, canle tereti foliis longiore, foliis ensiformi-
bus, rudimentis petalorum interiorum tridentatis, den-
ticulo medio acuminato, capsulis trigonis.
I. tripetala. *Walt. fl. car.* 66.
On the sea shore of Lower Carolina. *Walter.* \mathcal{U} .
Flowers blue, with purple veins.
- verna.* 6. *I. imberbis*, acaulis, uniflora, foliis longissimis gramineis
glaucis, tubo longissimo, petalis subæqualibus, capsulis
subrotundis ad terram sessilibus.
I. verna. *Willd. sp. pl.* 1. p. 235. excl. syn. *Pluk.*
On high mountains of Virginia and Kentucky; plenti-
fully on the Cacapon mountains near Winchester.
 \mathcal{U} . April, May. *v. v.* Flowers pale blue, striped
with purple.
- sibirica.* 7. *I. imberbis*, caule fistuloso tereti foliis altiore subtrifloro,
foliis linearibus; capsulis abbreviato-trigonis utrinque
obtusis.
I. sibirica. *Willd. sp. pl.* 1. p. 237.
Icon. *Bot. mag.* 50. *Jacq. austr.* 1. t. 3.
On the banks of the Missouri. *M. Lewis.* \mathcal{U} . July.
v. v. ; v. s. in Herb. Lewis. Flowers blue.
- prismatica.* 8. *I. imberbis*, caule solido tereti folia æquante, foliis an-
gustissimis longis, capsulis elongato-prismaticis utrin-
que acutis.
In deep swamps of New Jersey, near Egg harbour. \mathcal{U} .
July. *v. v.* Flowers pale purple.
37. DILATRIS. *Gen. pl.* 82.
- tinctoria.* 1. *D. petalis lanceolatis extus villosis, panicula corymbosa*
tomentosa, foliis longis nudis linearibus.
D. caroliniana. *Lam. illustr.* 1. p. 127.

Cultivated throughout all America, and sometimes found as it were in a native state. It would take up too much room to mention all the numberless varieties; but one of those brought by M. Lewis, Esq. from the Mandan nation, on the Missouri, deserves particular attention, as it ripens sooner and produces as excellent ears as any sort I know. It would be calculated to cultivate in climates not quite so warm as all the other sorts require.

July, Aug. v. v. Near three feet high ; panicle
close, coloured.

71. LEERSIA. Gen. pl. 105.

oryzoides.

1. L. panicula effusa, spiculis triandris patulis, glumis oblongo-ovalibus carina ciliatis. Willd. sp. pl. 1. p. 325.
L. virginica. Willd. l. c.
Icon. Host. gram. 1. t. 35.

tenuicularis.

2. L. panicula ramis subsolitariis, spiculis imbricatis, glumis orbiculatis ciliatis majusculis. Mich. fl. amer. 1. p. 39.
Fly-catch-grass.

In wet gravelly woods in Illinois and Virginia. \mathcal{U} . July, v. v. This singular and elegant grass I found on the islands of Roanoke river in North Carolina, and observed it catching flies in the same manner as *Dionaea muscipula* : the valves of the corolla are nearly of the same structure as the leaves of that plant. I communicated specimens with this particular circumstance to Dr. B. S. Barton of Philadelphia, who has made mention of it in a paper on the irritability of plants.

72. MILIUM. Gen. pl. 110. Millet-grass.

amphicarpon.

1. M. panicula ramis strictis simpliciusculis, floribus masculis alternis pedunculatis ; floribus feminineis in scapis unifloris radicalibus vaginatis, demum subterraneis.

In light sandy fields of New Jersey near Egg-harbour. July, Aug. v. v.

Culmi plures teretes, vaginati, sesquipedales et ultra. *Folia* lato-linearia, striata, geniculata breviora, undique pilis longis albidis rigidis tuberculo insidentibus tecta. *Vaginae* teretes, striati : suprema aphylla, more foliorum pilosa. *Ligula* barbata.

Panicula in summitate culmi, pauciflora, stricta : ramis simpliciusculis ; pedicellis florum clavatis. *Glumis* oblongis, acutis, nervosis, aequalibus, glabriusculis. *Floribus* omnibus masculis.

Flores femininei in scapis radicalibus unifloris basi vaginatis. *Flores* ante anthesin erecti, dein reflexi, ad maturitatem seminis magni subrotundi subterranei.

This singular grass deserves particular examination in the living plants, as I had no opportunity to describe

In cedar swamps of New Jersey. 2. July, Aug. v. v.
I found this plant among a parcel of grasses and other plants collected in autumn 1811, in Monmouth county, New Jersey. As I had no time to examine the collection then, I was much surprised on finding this very interesting grass among them. That it is the same with *P. stoloniferum* of Peru, I have no doubt, as I carefully compared it with the specimens in the collection of A. B. Lambert, Esq.

82. ARISTIDA. Gen. pl. 125.

dichotoma.

1. A. cespitosa, culmis dichotomis, floribus subspicatis, subuniaristatis: arista contorta gluma breviore: lateribus brevissimis. *Mich. fl. amer.* 1. p. 41.

On dry gravelly soil: New England to Carolina, common. ♂. May—July. v. v. Resembles *Nardus stricta*.

stricta.

2. A. culmis foliisque stricte erectis, racemo longo spicato coactato: aristis gluma longioribus, foliis convoluto-filiformibus, glabris. *Mich. fl. amer.* 1. p. 41.
- In shady rocky situations, on river sides: Virginia, Carolina, &c. ♀. June, July. v. v.

oligantha.

3. A. culmo stricto subramoso, foliis convoluto-filiformibus, floribus distantibus solitariis, aristis longis divaricatis. *Mich. fl. amer.* 1. p. 41.
- A. adscensionis. *Walt. fl. car.* 74.

On the banks of rivers, in rocky places: Illinois, Virginia, &c. ♀. June, July. v. v.

On rocks near the sea-coast in Canada. *Michaux.* ♂.
May, June. v. s. May be distinct from the European species.

IV. TETRANDRIA.

I. MONOGYNIA.

- * *Flores monopetali, superi, monospermi. Aggregatae.*
117. DIPSACUS. *Cal. communis foliaceus. Recept. conicum, paleaceum. Sem. columnaria.*
118. ALLIONIA. *Cal. communis 5-fidus, 3-florus : proprius obsoletus, superus. Corollulæ irregulares. Recept. nudum.*
- ** *Flores monopetali, monocarpi, inferi.*
119. LYCIUM. *Cor. tubulosa, fauce clausa filamentorum barba. Cal. 4-fidus. Bac. 2-locularis, polysperma.*
120. CALLICARPA. *Cor. tubulosa. Cal. 4-fidus. Bac. 4-sperma.*
121. CENTUNCULUS. *Cor. rotata. Cal. 4-fidus. Stam. brevia, Caps. 1-locularis, circumscissa.*
122. PLANTAGO. *Cor. limbo reflexo. Cal. 4-fidus. Stam. longissima. Caps. 2-locularis, circumscissa.*
123. POLYPREMUM. *Cor. rotata, fance barbata. Cal. 4-partitus. Stam. inclusa. Caps. 2-locularis, obcordata.*
124. CENTAURELLA. *Cor. urceolata. Cal. 4-partitus, adpressus. Stigm. crassum, glandulosum, subbifidum. Caps. 1-locularis, 2-valvis, calyce corollaque persistentibus involucrata.*
125. EXACUM. *Cor. subcampanulata. Cal. 4-phyllus. Caps. 2-locularis, compressa.*
126. SWERTIA. *Cor. rotata. Nectariferi pori ad basin laciniarum corollæ. Caps. oblonga 1-locularis, 2-valvis.*
127. FRASERA. *Cor. 4-fida, patens : petala medio glandula barbata. Cal. 4-fidus. Caps. compressa, submarginata, 1-locularis. Sem. pauca, imbricata, marginata.*

**** Flores monopetali, monocarpi, superi.

128. MITCHELLA. *Cor. binæ, infundibuliformes Cal. 4-dentatus. Stigm. 4-fidum. Baccæ ex germinum coalitione didyma, 4-sperma.*
 129. OLDENLANDIA. *Cor. tubulosa. Cal. 4-partitus. Caps. didyma, polysperma.*

**** Flores monopetali, dicocci, superi.

130. RUBIA. *Cor. campanulata. Baccæ 2., monospermæ.*
 131. GALIUM. *Cor. plana. Sem. 2., subrotunda.*
 132. SPERMACOCE. *Cor. tubulosa. Sem. 2., bidentata.*
 133. DIODIA. *Cor. infundibuliformis. Caps. 4-gona, 2-locularia, 2-sperma.*

***** Flores monopetali, dicocci, inferi.

134. HOUSTONIA. *Cor. infundibuliformis. Caps. seminifera, subglobosa, emarginata, 2-locularia, 2-sperma.*

***** Flores tetrapetali.

135. AMMANNIA. *Cal. inferus, tubulosus, 8-dentatus. Caps. 4-locularis.*
 136. PTELEA. *Cal. inferus, 4-partitus. Pet. coriacea. Stigm. 2. Samara monosperma.*
 137. CORNUS. *Cal. superus, 4-dentatus. Drupa nuce 2-bilocularia.*
 138. LUDWIGIA. *Cal. 4-partitus. Caps. 4-locularis, tetragona.*

***** Flores incompleti.

139. ALCHEMILLA. *Cal. inferus, 4-fidus. Sem. 1. calyce inclusum.*
 140. BOEHMERIA. *Cal. inferus, 4-partitus, ♀. O. Nec-tar. O. Sem. 1. Monoica.*
 141. URTICA. *Cal. inferus, 4-phylloides, ♂. 2-valvis. Nec-tar. cyathiforme. Stigm. villosum. Sem. 1. ova-tum. Monoica.*
 142. PARIETARIA. *Cal. inferus, 4-fidus. Involucrum multipartitum. Sem. 1. calyce sicco elongato tectum. Polygamia.*
 143. VISCUM. *Cal. superus, 4-partitus. Stigm. capi-tatum. Baccæ monosperma. Dioicum.*
 144. CEPHALANTHUS. *Cal. superus, infundibuliformis. Recept. globosum, nudum. Sem. 1. lanuginosum.*

TETRANDRIA.

145. ELÆAGRUS. *Cal.* basi persistens, superne coarctatus et quasi superus, campanulatus, 4-fidus. *Drupa* 1-sperma.
 146. HIPPOPHAE. *Cal.* deciduus, inferus, tubulosus, 2-fidus. *Bacca* globosa. *Dioica*.

II. DIGYNIA.

147. PLANERA. *Cal.* campanulatus, 4-fidus. *Cor.* 0. *Nux* 1-sperma, squamulosa. *Polygamia*.
 148. HAMAMELIS. *Cal.* 4-fidus, extus 2-squamosus. *Pet.* 4. longissima. *Nux* 2-locularis, 2-cornis.
 149. CUSCUTA. *Cal.* 4-fidus. *Cor.* ovata, 4-fida. *Caps.* 2-locularis circumscissa.
 150. SANGUISORBA. *Cal.* 2-phylloides, inferus. *Cor.* plana, 4-fida, supera. *Caps.* 4-gona, intra calycem et corollam.

III. TRIGYNIA.

151. PACHYSANDRA. *Cal.* 4-phylloides. *Cor.* 0. *Caps.* 3-locularis. *Monoica*.

IV. TETRAGYNIA.

152. ILEX. *Cal.* 4-dentatus. *Cor.* rotata. *Styl.* 0. *Bac.* 4-sperma.
 153. SAGINA. *Cal.* 4-phylloides. *Cor.* 4-petala. *Caps.* 4-locularis polysperma.
 154. POTAMOGETON. *Cal.* 4 phylloides. *Cor.* 0. *Sem.* 4. sessilia.
 155. RUPPIA. *Cal.* et *Cor.* 0. *Sem.* 4. pedicellata.

I. MONOGYNIA.

117. DIPSACUS. *Gen. pl.* 148.
sylvestris.
 1. *D.* foliis connatis sinuatis, paleis rectis, involucro capitulo brevioribus patentibus.—*Willd.* sp. *pl.* 1. *p.* 544?
Icon. *Jacq. fl. aust.* 5. *t.* 403.
 On the edges of fields and on water sides: Pennsylvania to Virginia. ♂. July. v. v. Probably introduced from Europe, but sometimes found in very remote parts from cultivation.

118. ALLIONIA. Gen. pl. 151.

1. A. caule erecto, foliis lato-cordatis acutis, glabris, pedunculis solitariis, calycibus fructiferis sub-hirsutis, involucro ampliato multo minoribus.—*Mich. fl. amer. 1. p. 100.* *nyctaginea.*
- On the banks of the river Tennessee and its branches.
2. July, Aug. v. v. Resembles *Mirabilis Jalapa*
very much.
2. A. caule diffuso, foliis lanceolatis scabriusculis ciliatis, pedunculis solitariis, involucro subpentaphyllo : foliolis ovatis reticulato-venosis.—*Walt. fl. car. 84.* *albida.*
- In Lower Carolina. *Walter.* ♂. July. v. s. in *Herb. Walter.*
3. A. caule diffuso dichotomo, foliis ovatis scabriusculis nudis, floribus terminalibus fasciculato-racemosis, involucro semiquinquefolio : lacinias subrotundis acutiusculis reticulato-venosis.
On the plains of the Missouri. *M. Lewis.* ♂. Aug.
v. s. in *Herb. Lewis.* *ovata.*

119. LYCIUM. Gen. pl. 343.

1. L. inerme ; foliis anguste spathulato-oblongis. *Mich. fl. amer. 1. p. 95.* *Walt. fl. car. 84.* *carolinianum.*
L. salsum. Bartr. trav. 59.
In salt marshes of Carolina and Georgia. ♀. July. v. v.
Flowers purple, the size of *L. barbarum.*

120. CALLICARPA. Gen. pl. 175.

1. C. foliis ovalibus serratis subtus tomentosis, cymis sessilibus.—*Willd. sp. pl. 1. p. 619.*
Icon. Catesb. car. 2. t. 47. *Pluk. alm. t. 136. f. 3.*
In dry gravelly soil, below the mountains in Virginia and Carolina. ♀. June, July. v. v. Flowers red, in small axillary bunches ; berries red, apparently in a whorl round the branches, hang on very long.

121. CENTUNCULUS. Gen. pl. 189.

1. C. foliis deorsum angustatis : inferioribus ovalibus, superioribus lanceolatis, lacinias calycis subulatis, caule simplici.—*Mich. fl. amer. 1. p. 193.* *lanceolatus.*
In wet barren fields: Lower Carolina, &c. ♂. May.

TETRANDRIA MONOGYNIA. Centunculus.

v. s. in Herb. Nuttall. A very small inconspicuous plant with axillary reddish flowers. The specimens of Mr. Nuttall's were collected on the Missouri, they are about four inches high : and according to his observations, very obligingly communicated to me, this species is generally pentandrous.

122. PLANTAGO. Gen. pl. 186.

data.

1. *P. folii ovatis cordatis latissimis subdentatis glabris, spica longissima, floribus subimbricatis, inferioribus sparsis, bracteis ovatis obtusis.* — *Lam. encycl. 5. p. 369.*

P. kentuckensis. Mich. fl. amer. 1. p. 94.

P. canadensis. Hort. par.

On river sides : Canada, Kentucky, Tennessee, and other western parts. $\frac{1}{4}$. June—Aug. v. v.

major.

2. *P. folii ovatis subdentatis glabriusculis, scapo tereti, spica oblonga imbricata.* — *Lam. encycl. 5. p. 368.* *Willd. sp. pl. 1. p. 641.*

Icon. *Engl. bot. 1558. Fl. dan. 461.*

In fields and on road sides, common. $\frac{1}{4}$. May—Sept. v. v.

Sagina affinis planta minima, floribus albis. Clayt. MSS.* 649. About a foot high, sometimes quite simple and very small; flowers small, greenish-white.

125. EXACUM. *Gen. pl.* 185.

pulchellum.

1. E. corollis quadrifidis, calycibus quadripartitis: lacinii subulatis, panicula corymbosa, pedunculis filiformibus.

Near the sea-coast of New Jersey; rare. \odot . Aug. v. v. Flowers rose-coloured; resembling *E. filiforme* very much.

126. SWERTIA. *Gen. pl.* 449.

corniculata.

1. S. corollis campanulatis corniculatis: cornibus deflexis, foliis ovatis, ramis brevibus.

S. corniculata. *Willd. sp. pl.* 1. p. 1330?

In swamps of Canada and round the lakes of the western part of the United States. δ . July. v. v. Flowers greenish yellow. The Siberian plant differs from the

American in being *cornibus divaricatis adscendentibus, foliis lanceolatis et ramis elongatis*; by which the American plant appears to be a distinct species.

2. S. corollis campanulato-rotatis longitudine calycis, floribus fastigiato-aggregatis axillaribus terminalibusque, pedicellis geminis, foliis spatulato-obovatis nervosis, caule ramoso.

On the Missouri flats, near the Rocky mountain. *M. Lewis.* $\frac{3}{4}$. July. v. s. in *Herb. Lewis.* Leaves large; flowers sky-blue.

3. S. corollis rotatis calyce duplo longioribus, caule simplissimo unifloro, foliis oblongis.

On the alpine regions of the White-hills of New Hampshire. \odot . June. v. v. The whole plant scarcely above an inch high, with one or two pair of small leaves, and a considerable-sized blue flower. Divisions of the corolla oblong, acuminate; of the calyx obtuse. In the Banksian Museum are specimens from Labrador, in every respect agreeing with the New Hampshire plant.

*fastigiata.**pusilla.*

9. I? foliis *oppositis* oblongis obtusis serratis margine reflexis glabris sempervirentibus, pedunculis axillaribus brevissimis subsolitariis unifloris basi bibracteatis. *myrsinoides.*
On the Rocky-mountain and near the Pacific Ocean.
M. Lewis. ♀. July, Aug. v. s. in *Herb. Lewis.*
Frutex sempervirens, glaberrimus, 4-pedalis, ramosissimus: *rami* teretes, fusi, dense foliosi. *Folia* parva opposita, oblonga seu obovata, obtusa, superne serrata, postice integerrima, margine revoluta, vix petiolata. *Pedunculi* axillares, brevissimi, uniflori, solitarii seu terni, basi opposite bibracteati. *Flores* minutti, albi. *Cal.* 4-fidus: lacinias subrotundis, concavis. *Cor.* rotata, 4-fida: lacinias oblongis. *Filam.* 4. ad incisuras corollæ inserta? longitudine calycis. *Germen* superum, ovale. *Styl.* brevissimus, clavatus. *Stig.* 4-lobum, crassum. *Drupa* maturitate monosperma, ovata, atro purpurea, magnitudine pisi. *Sem.* 1. ellipticum.

This very curious shrub, of which I have likewise observed a specimen in the museum of A. B. Lambert, Esq., collected by A. Menzies, deserves to be examined in the living plant. It approaches so near to *Myginda Rhacoma* of Jacquin, that at first I considered it to be the same plant. It likewise has great affinity to *Palitoria ovalis* *Flor. per.* 1. p. 44. t. 84. only the leaves are not opposite, but sparse and crenate not serrated, which is the case always in the present plant. As I do not know the *Myginda Rhacoma*, it would be a curious fact if this plant, from the high cold mountains of the north, should turn out to be the same with the tropical plant. I refer it to *Ilex* at present, till further observations will decide to which genus it belongs, or whether it may not form one by itself.

In sandy fields and among bushes: Canada to Carolina. ♀. June—Aug. v. v. Flowers white, with a red bottom. There is a variety with double flowers, cultivated in the gardens of America, which is a singular circumstance in this genus. The root in some instances grows to an enormous size; I have seen one the thickness of a man's thigh, and more than two feet long. Taken in the place of Jalap, it has the same effect, only in a less degree.
- arvensis.* 6. C. volubilis, glaber; foliis sagittatis utrinque acutis, pedunculis subunifloris, bracteis minutis a flore remotis. *Smith. fl. brit.* 1. p. 232.
Icon. *Engl. bot.* 312. *Fl. dan.* 459.
In meadows: Virginia. *Gron. fl. virg.* 27. ♀. June, July. Fl. v. v. rose-coloured. I never observed this

Convolvulus purpureus. *Willd. sp. pl. l. p. 852.*
Icon. *Bot. mag. 113.*
About gardens, frequent. ♂. June—Aug. *v. v.* Flowers very variable in colour.
- Nil.* 9. I. hirsuta; foliis ventricoso-trilobis, pedunculis brevibus 1—2-floris, bracteis subulatis, calycibus villosissimis longissime acuminatis.
Convolvulus Nil. *Willd. sp. pl. l. p. 851.* *Mich. fl. amer. l. p. 139.*
Icon. *Bot. mag. t. 188.* *Dill. elth. l. 80. f. 91 et 92.*
Near gardens and in hedges, on river sides: Virginia to Carolina. ♂. June—Aug. *v. v.* Flowers beautiful pale blue, only open early in the morning, from which it has been called *Morning-glory.*
- ciliosa.* 10. I. glabra; foliis eximie cordatis margine subciliatis, pedunculis longis unifloris, calycis ebracteati laciinis lato-ovalibus obtusis, corollis tubulato-campanulatis.
Convolvulus ciliosus. *Mich. fl. amer. l. p. 137.*
Near Knoxville in Tennessee. *Michaux.* +.
- Jalapa.* 11. I. pubescens; foliis cordatis integris lobatisque plicato-rugosis subruber subtomentosis, pedunculis 1—3-floris, foliolis calycis ovalibus mucicis, corollis campanulatis, seminibus prolife lanuginosis, radice crassissimo.
Convolvulus Jalapa. *Willd. sp. pl. l. p. 800.*
Ipomoea macrorhiza. *Mich. fl. amer. l. p. 141.*
Icon. *Desfont. in ann. mus. hist. nat. 2. t. 40 et 41.*
Near the sea shore of Georgia and Florida. ♀. June, July. *v. v.* Flowers white, very large.
Obs. — This very interesting plant was first discovered in Georgia by Michaux. After this I frequently have received seeds and roots from Georgia myself; but

little did I suspect it to be the true *Convolvulus Jalapa*, till two circumstances convinced me thereof. The first was seeing a paper on this subject in the *Annales du Muséum d'Histoire Naturelle*, by Desfontaines; and the other, on seeing the living plant recently raised out of a collection of seeds brought from Mexico, in possession of A. B. Lambert, Esq., which in every respect proved to be *Convolvulus Jalapa* of Linnaeus, as well as *Ipomoea macrorhiza* of Michaux, with only the small difference of colour, which was a light purple: but this is of no consequence in this family of plants.

ϵ . A. floribus rubicundis: lacinia intima alba, calycibus foliaceis. *Ait. l. c.*

ζ . A. floribus carnes usque ad basin quinquepartitis. *Ait. l. c.*

η . A. floribus roseis brevibus 10—20-andris.

On the side of hills: Canada to Georgia. Var. α . near Savannah, Georgia. Var. η . near Philadelphia, Pennsylvania. $\frac{1}{2}$. April—June. *v. v.* This beautiful shrub has a great many varieties, besides the above-mentioned, among which is one with double flowers; but the var. η . is the most remarkable. This variety proves clearly, that *Azalea* and *Rhododendron* are one genus, *A. procumbens* excluded, as *Rhododendron* is frequently found with less than ten, and all the species of *Azalea* with more than five stamens.

arborescens.

4. A. foliosiflora; foliis obovatis obtusiusculis utrinque glabris subtus glaucis: nervo vix setigero, margine cilia-

tis, floribus magnis non viscosis, tubo laciniis longiore, calycibus foliaceis : laciniis oblongis acutis, filamentis exsertis.

A. arborea. Bart. catal.

On rivulets, near the Blue mountains : Pennsylvania. ♀. May—July. v. v.—This beautiful species has, to my knowledge, not yet been introduced into the gardens. I have only seen it in its native place and in the garden of Mr. John Bartram, near Philadelphia, whose father introduced it many years ago. It rises from ten to twenty feet high, and forms, with its elegant foliage and large abundant rose-coloured flowers, the finest ornamental shrub I know. The flowers are not so much pubescent as the rest of the other species; the scales of the flower-buds are large, yellowish-brown, surrounded with a fringed white border.

5. *A. nudiflora* : foliis oblongis utrinque tenuissime canopubescentibus : nervo non setigero, floribus parvis non viscosis : tubo laciniis vix longiore, calycibus brevissimis : lacinia unica linearis reliqua quadruplo longiore, filamentis exsertis, ramulis piloso-hispidis.

A. nudiflora bicolor. Ait. kew. 1. p. 319.

Icon. *Trew ehret. t. 48.*

On barren, sandy hills : Carolina and Georgia. ♀. May, June. v. v. Flowers slender, and smaller than the rest, of a pale rose colour or nearly white, with a deep-red-coloured tube.

6. *A. foliosiflora* ; ramis hispidis, foliis oblongo-ovatis acutis utrinque glabris concoloribus : nervo setigero, margine ciliatis, floribus viscosis : tubo laciniis duplo longiore, calycis dentibus brevissimis rotundatis, filamentis corolla vix longioribus.—*Willd. sp. pl. 1. p. 831.*

In swamps and shady woods : Canada to Georgia. ♀. July, Aug. v. v. Flowers white, sweet-scented. There are a number of varieties and even intermediate species between this and the *A. periclymenooides*.

7. *A. foliosiflora* ; ramis glabresculis, foliis parvis oblongo-ovatis submucronatis coriaceis utrinque glabris supra nitidis : nervo subtus setigero, margine revoluto-ciliatis, floribus viscosis : tubo laciniis paulo longiore, calycibus brevissimis, filamentis exsertis.

In deep mossy swamps on the mountains : New York to Virginia. ♀. June, July. v. v. Flowers white

bicolor.

viscosa.

nitida.

with a red tinge; leaves very dark green and shining; they are smaller than in any other species.

glaucia.

8. A. foliosiflora; ramulis hispidis, foliis oblanceolatis acutis utrinque glabris subtus glaucis: nervo setigerō, margine ciliatis, floribus viscosissimis: tubo laciniis duplo longiore, calyce brevissimo, filamentis laciniis corollas subaequantibus.—*Lam. illustr.* . p. 493.

A. viscosa floribunda. *Ait. kew.* 1. p. 319.

In swamps of a clayey soil: New England to Virginia. $\frac{1}{2}$. June, July. v. v. Flowers white, very fragrant; the shrub lower than the rest, and flowering in great abundance.

hispida.

9. A. foliosiflora; ramis strictis hispidissimis; foliis longe lanceolatis: supra hispidis, subtus glabris; utrinque glaucis: nervo setigerō, margine ciliatis, floribus viscosissimis: tubo laciniis amplis vix longiore, calycis dentibus oblongis rotundatis, filamentis exsertis.

A. viscosa glauca. *Ait. kew.* 1. p. 319?

On the borders of lakes on the highest part of the Blue mountains: New York and Pennsylvania. $\frac{1}{2}$. July, Aug. v. v. Flowers white with a red border, and a tinge of red on the tube, which makes them appear to be of a rose-colour before open. They have frequently ten stamens, as in var. η . of *A. periclymenoides*. This shrub generally grows to the height of from ten to fifteen feet, very upright, and has a blueish appearance, by which it may be distinguished from all others at a great distance.

procumbens.

10. A. foliosiflora; ramis diffuso-procumbentibus, foliis oppositis ellipticis glabris margine revolutis, corollis campanulatis glabris, filamentis inclusis æqualibus.—*Willd. sp. pl.* 1. p. 832.

Icon. *Fl. dan.* 9. *Engl. bot.* 865.

In the alpine regions of the White mountains, New Hampshire. *Prof. Peck.* On the Grandfather mountain, Carolina. *Lyon.* $\frac{1}{2}$. July. v. s. in *Herb. Peck.* nec non *Lyon.* v. v. in *Hortis.* Flowers small, rose-coloured. This plant has so much affinity to *Ledum buxifolium*, Ait. that I have scarcely been able to persuade myself that they are distinct plants. Comparing specimens of different varieties of the latter, with those of *A. procumbens* from different countries, in the herbarium of A. B. Lambert, Esq. I could find no other distinction between both, than that of the

Ledum being an upright little shrub, with decandrous flowers which are white, whereas the present species has procumbent stems and pentandrous red flowers. It most certainly ought to be taken from this genus, or else all the rest but this one united with *Rhododenron*.

191. BUMELIA. *Gen. pl. 1736.*

1. *B. spinosa*, erecta ; foliis deciduis lato-lanceolatis utrinque glabris, pedunculis aggregatis unifloris, laciniis corollæ trifidis.—*Mich. fl. amer.* 1. p. 122.
Sideroxylum lycioides. *Willd. sp. pl.* 1. p. 1090.
Sideroxylum læve. *Walt. fl. car.* 100.

pulescens.

1. *P. foliis ovalibus utrinque acutis subtus subtomentosis. Mich. fl. amer. 1. p. 105.*

Icon. *Mich. l. c. t. 13.*

On the banks of the river St. Mary, Georgia. ♀.
July, Aug. v. v. Flowers blush-red, marked with purple lines, in large clusters. Each flower has one of the divisions of the calyx grown out to a large white leaf, tinged with red, which makes this shrub highly ornamental. It is only to be regretted, that it is very shy of cultivation. The small difference of its fruit from *Cinchona* only makes it excusable to keep it separate from that genus; but I have no hesitation in saying, that if *Pinckneya* is not united with *Cinchona*, there will be some of the latter genus found belonging to *Pinckneya*.

197. CAMPANULA. Gen. pl. 889.

1. *C. glabra*; foliis radicalibus reniformi-cordatis crenatis; *caulinis linearibus integris, panicula laxa pauciflora, floribus nutantibus*.—*Willd. sp. pl. 1. p. 892.*

Icon. *Fl. dan. 855.* Engl. bot. 866.

On rocks on the banks of the Susquehanna and in Canada. ♀. July, Aug. v. v. Flowers azure blue, of considerable size.

2. *C. glabra*; caule erecto-flexuoso, ramulis confertis foliosis, foliis lanceolatis subremote serratis, floribus breviter pedicellatis nutantibus.—*Mich. fl. amer. 1. p. 109.*

On high mountains: Virginia and Carolina. ♀. Aug. Sept. v. v. Flowers small, pale blue.

3. *C. glabra*, nitida, erecta; foliis membranaceis remote serratis, panicula ramulis subaphyllis divaricatis, floribus nutantibus.—*Mich. fl. amer. 1. p. 109.*

On slate mountains in Virginia and Carolina. ♀. July, Aug. v. v. Flowers small, azure blue; a very graceful perennial.

4. *C. glabra*; foliis cordatis lanceolatisque serratis, petiolis inferioribus ciliatis, floribus axillaribus sessilibus, corollis 5-partitis planis, stylis corolla longioribus. *Willd. sp. pl. 1. p. 898.*

In shady wet places: Pennsylvania to Virginia. ♂. June, July. v. v. Flowers small, pale blue, two or three in the axillæ of the leaf, nearly sessile; plant from two to three feet high.

5. *C. glabriuscula*, erecta; foliis ovato-lanceolatis in longum acumen desinentibus subserratis, spica fasciculata-multiflora, corollis subrotatis.—*Mich. fl. amer. 1. p. 108.*

C. nitida. Ait. kew. 1. p. 346.

- Cynosbati.* 17. *R. passim subgeminis 2-aculeatum, foliis brevi-lobatis inciso-dentatis molliter pubescentibus, racemis nutanti-paucifloris, calycibus erecto-campenulatis, baccis aculeatis.* — *Mich. fl. amer. 1. p. 111. Willd. sp. pl. 1. p. 1159.*

Icon. Jacq. hort. 2. t. 123. Schmidt arb. 98.

On the sides of hills and rocks in the Allegany mountains, and in Canada. ♀. April—June. v. v. Flowers green; berries dark brown and full of thorns.

205. RHAMNUS. Gen. pl. 358.

- franguloides.* 1. *R. inermis; foliis ovalibus acuminatis serrulatis subtus ad nervos pubescentibus, floribus dioicis, pedunculis unifloris aggregatis, calycibus acutis, fructibus turbinatis.* — *Mich. fl. amer. 1. p. 153.*
- R. alnifolius.* *Willd. sp. pl. 1. p. 1100.*
On dry hills, near rivers: Canada to Virginia. ½. June, July. v. v.; v. s. in *Herb. Lambert.* Flowers green; berries black; leaves small.
- alnifolius.* 2. *R. inermis; foliis ovalibus denticulatis brevi-acuminatis basi sinu parvo cordatis subtus ad nervos pubescentibus, pedunculis bis bifidis, baccis depresso-globosis.*
On the banks of the river Kooskoosky. *M. Lewis.* ♀. May. v. s. in *Herb. Lewis.* Berries purple, very highly esteemed by the Indians of that country.
- carolinianus.* 3. *R. inermis; foliis ovali-oblongis integriusculis glabris, umbellis pedunculatis, floribus hermaphroditis 4-andrhis 1-gynis, stigmate bilobo, fructibus globosis.* — *Mich. fl. amer. 1. p. 153.*
In woods and swamps: Virginia and Carolina. ♀. May—July. v. v. Berries black.
- lanceolatus.* 4. *R. inermis, arborescens; foliis lanceolatis serrulatis utrinque acutis subtus pubescentibus.*
On the side of hills: Tennessee. *Lyon.* ♀. v. s. in *Herb. Lyon.* Berries black.
- minutiflorus.* 5. *R. inermis; foliis suboppositis ovalibus serrulatis, floribus minutissimis dioicis spicatis in rachi alterne sessilibus, stylo 3-fido, bacca 3-sperma.* *Mich. fl. amer. 1. p. 154.*
On the sea-coast of Carolina and Florida. *Michaux.* ♀. +.

206. CEANOTHUS. *Gen. pl. 361.*

1. *C. foliis ovatis acuminatis serratis triplinervibus subtus americanus.*
nervis venisque pubescentibus, paniculis axillaribus longe pedunculatis, pedicellis corymbosis. *Willd. sp.* *pl. 1. p. 1114.*
Icon. *Duham. arb. 51.* *Schmidt arb. 132.*
In dry woods; common: Canada to Florida. $\text{h}.$ May,
 $v. v.$ Flowers small, white. It is commonly called *New Jersey-tea* or *Red-root*; having been actually used in the American war as a substitute for tea.
2. *C. foliis oblongo-ovalibus acutis mucronato-serrulatis intermedius.*
triplinervibus subtus pubescentibus, paniculis axillari-
bus longissime pedunculatis, pedicellis corymbosis
laxia. *Icon. Pluk. alm. t. 28. f. 6.*
In the woods of Tennessee. *Lyon.* $\text{h}.$ June, July. $v. v.$
Leaves not one fourth the size of the foregoing species.
3. *C. foliis obovatis serratis subtus pubescentibus, paniculis axillaribus thyrsoides brevissime pedunculatis, pedicellis aggregatis.* *sanguineus.*
Near the Rocky mountains on the banks of the Mis-
souri. *M. Lewis.* $\text{h}.$ May, June. *v. s. in Herb.*
Lewis. Branches blood-red or purple; panicles not longer than the leaves.
4. *C. foliis ovalibus subserratibus glabris, paniculis thyroi-
deis terminalibus axillaribusque.* *perennis.*
On rocks near rivers: Virginia and Carolina. $\text{h}.$ May.
 $v. v.$ Leaves the size of the first species, but smooth;
the stems scarcely ever remain over winter, but die down to the root.
5. *C. subdecumbens;* *foliis minutis subfasciculatis oblongis microphyllus.*
subintegerrimis glabriusculis, corymbulis terminalibus.
Mich. J. Amer. 1. p. 154.
In sandy woods: Carolina to Florida. $\text{h}.$ May, June.
 $v. v.$ A very delicate little shrub, the root of which, like all the foregoing species, is large and red, from which they derive the name of *Red-root*.

207. CELASTRUS. *Gen. pl. 372.*

1. *C. inermis, scandens;* *foliis oblongis acuminatis serratis,* *scandens.*
racemis terminalibus. *Willd. sp. pl. 1. p. 1125.*

PENTANDRIA MONOGYNA. Celastrus.

Icon. *Duham. arb.* 95. *Schmidt arb.* 140.

In hedges and woods, among rocks : Canada to Virginis.

$\text{h}.$ May, June. *v. v.* Flowers pale yellow; berries orange-scarlet.

bullatus.

2. *C. inermis*; foliis ovatis acutis integerrimis, panicula terminali. *Willd. sp. pl.* 1. p. 1123.

Icon. *Pluk. alm.* t. 28. f. 5.

In Virginia. h. + . Notwithstanding all my diligent researches at the place of its supposed nativity, as well as in the Herbariums of Plukkenet and Bonnier, now at the British Museum, I have not been able to find any information respecting this species: consequently I strongly suspect its not being an American plant.

208. EVONYMUS. *Gen. pl.* 1. p. 373.

americanus.

1. *E. ramis 4-angulatis, foliis subsessilibus elliptico-lanceolatis acutis serratis, pedunculis subtrifloris, floribus omnibus 5-fidis, fructibus verrucoso-muricatis.*—*Willd. sp. pl.* 1. p. 1132.

Icon. *Pluk. alm.* t. 115. f. 5. *Schmidt arb.* 75.

In hedges and shady woods, among rocks, and on the edges of swamps: New England to Carolina. h. June, July. *v. v.* Flowers yellow, tinged with red; fruit scarlet, resembling those of *Arbutus Unedo* at first sight. They are a great ornament to this almost evergreen shrub. The common name in America is *Burning-bush*.

angustifolius.

2. *E. ramis 4-angulatis, foliis subsessilibus elongato-lineari-ellipticis subfalcatis subintegerimis, pedunculis plurimque unifloris, floribus omnibus 5-fidis, fructibus verrucoso-muricatis.*

In shady woods: Georgia. *Lyon.* h. June, July. *v. v.* Flowers and fruit the same as the first species. Though nearly related to it, it is propagated by seeds, and keeps its own distinction, according to information from Mr. Lyon.

atropurpureus.

3. *E. foliis petiolatis oblongo-lanceolatis acuminate serratis, pedunculis divaricatis multifloris, floribus 4-fidis, fructibus laevis.*—*Willd. sp. pl.* 1. p. 1132.

Icon. *Jag. hort.* 2. t. 120. *Schmidt arb.* 73.

On the banks of rivulets: New York to Carolina. h. June, July, *v. v.* Flowers dark purple; fruit red.

209. VITIS. *Gen. pl. 396.*

1. *V. foliis lato-cordatis sublobato-angulatis subtus incano-tomentosis, racemis fertilibus parvis, baccis majoribus.*
Mich. fl. amer. 2. p. 230. Willd. sp. pl. 1. p. 1181.
V. taurina. Walt. fl. car. 242.
Icon. Jacq. schœnbr. 426.
 In shady woods: Canada to Florida. $\frac{1}{2}$. June, July.
v. v. Berries black, large, of a disagreeable fox-smell, commonly called *Fox-grape*. There is a variety with white berries called *Bland's-grape*.
2. *V. foliis lato-cordatis 3—5-lobis: junioribus subtus rufo-tomentosis, racemis fertilibus oblongis, baccis parvis.* — *Mich. fl. amer. 2. p. 230.*
V. vulpina. Willd. sp. pl. 1. p. 1181.
V. Labrusca. Walt. fl. car. 242.
Icon. Jacq. schœnbr. 425.
 β . *V. foliis sinuato-palmatis grosse dentatis: sinibus rhomboideis.* An species distincta?
 In fields and woods: Virginia to Carolina. $\frac{1}{2}$. May, June. *v. v.* Berries dark blue, very agreeable to eat, and frequently converted into very good home-made wine. It is known by the name of *Summer-grape*.
3. *V. foliis cordatis acuminatis inciso-dentatis utrinque glabris, racemis laxe multifloris, baccis parvis.* — *Mich. fl. amer. 2. p. 231.*
V. incisa. Jacq. schœnbr. 427.
V. vulpina. Walt. fl. car. 243.
Icon. Jacq. l. c.
 On the edges of rivers and in woods: Canada to Florida. $\frac{1}{2}$. June, July. *v. v.* Berries green or amber-coloured, small, and ripen extremely late, of a very tart taste; commonly called *Winter-grape* or *Chicken-grape*.
4. *V. foliis inæqualiter inciso-dentatis breviuscule 3-fidis: petiolo nervis margineque pubescentibus.* *Mich. fl. amer. 2. p. 231.*
V. odoratissima. Donn catal. 66.
 On the gravelly shores and islands of the rivers: Pennsylvania to Carolina, $\frac{1}{2}$, May—July. *v. v.* Flowers of an exquisitely fine smell, somewhat resembling *Resseda odorata*. Female plants are very seldom found north of the Potowmac river, though the male extend very far beyond it.
5. *V. utrinque lucidis reniformi-cordatis subæqualiter den-* *rotundifolia.*

213. IMPATIENS. *Gen. pl.* 1365.

1. *I. pedunculis multifloris solitariis, foliis ovatis obtuse dentatis, geniculis caulinis tumentibus*.—*Willd. sp. pl.* 1. *p.* 1176.
 Icon. *Fl. dan.* 588. *Engl. bot.* 937.
 Near springs and rivulets, in shady places: New England to Carolina. \odot . June, July. *v. v.* Flowers plain yellow.
2. *I. pedunculis plerumque bifloris solitariis, foliis ovatis argute dentatis*.—*Willd. sp. pl.* 1. *p.* 1175. *Walt. fl. car.* 219.
 In wet shady places: Canada to Carolina. \odot . June, July. *v. v.* Flowers dark yellow, with red spots on the inside.

214. VIOLA. *Gen. pl.* 1364.* *Acaules*.

1. *V. foliis subpedato-multipartitis: laciniis linear-lanceolatis subintegris, calycis laciniis linearibus acutis*.—*Willd. sp. pl.* 1. *p.* 1160.
 Icon. *Bot. mag.* 89. *Bot. rep.* 153.
 On dry sandy hills and fields: New England to Carolina. \mathcal{U} . May, June. *v. v.* Flowers large, beautiful blue. There is a very handsome variety with pale blue petals, ornamented with a dark purple velvet at the bottom, similar to *Viola tricolor*.
2. *V. foliis palmato-5—7-lobatis postice in petiolum attenuatis: lobis integris*.
 In Virginia. *Leconte in litt.* \mathcal{U} . May. *v. s.* Flowers pale blue.

palmata.

3. *V. pubescens*; foliis cordatis hastato-lobatis palmatisve; lacinii dentatis, calycis lacinii lanceolatis glatris, petalis 2; oppositis basi barbatis.—*Willd. sp. pl.* p. 1159.

Icon. *Bot. mag.* 535. *Pluk. alm.* t. 447. f. 1.

On dry hills and pastures, generally in sandy soil. ♀. April—June. v. v. Flowers blue; early in spring the leaves are generally kidney-shaped, and after the first flowers are gone they become palmated; sometimes it occurs with smooth leaves.

sagittata.

4. *V. pubescens*; foliis oblongis acutis cordato-sagittatis subseratis basi incisis, pedunculis foliis longioribus, calycis lacinii linearibus glabris, petalis 3. inferioribus basi barbatis.—*Willd. sp. pl.* 1. p. 1160.

On dry hills: New England to Virginia. ♀. April—June. v. v. Flowers blue; lower petal white towards the bottom, with purple veins; the rest longer, narrower, and white towards the base.

dentata.

5. *V. glabra*; foliis oblongis acuis basi truncatis serratis inferie subhastato-grandidentatis, pedunculis foliis brevioribus, calycis lacinii linearibus, petalis 3. inferioribus basi barbatis.

In wet meadows and woods: Pennsylvania. ♀. May, June. v. v. Flowers of nearly the same colour and shape as the preceding species.

lanceolata.

6. *V. glabra*; foliis lanceolatis subserratis, pedunculis vix foliis longioribus, petalis imberibus: 2. superioribus subtundis.—*Willd. sp. pl.* 1. p. 1161.

In overflowed meadows: Canada to Pennsylvania. ♀. June, July. v. v. Flowers white; the upper petal painted with purple veins. There are several varieties of this species, some with ovate leaves attenuated in a petiole, some exceeding small, &c.

blanda.

7. *V. glabra*; foliis cordatis acutiusculis planiusculis remote serratis, pedunculis longitudine foliorum, petalis imberibus. 2. lateralibus brevioribus, infimo reliquis longiore lanceolato.—*Willd. hort. berol.* 1. t. 24.

In wet places, bog-meadows: New York to Carolina. ♀. April—June. v. v. Flowers yellowish white; lower petal marked with blue stripes and veins.

elliptica.

8. *V. glabra*; foliis cordatis acutis crenato-serratis planiusculis, floribus erectis, pedunculis longitudine foliorum, petalis oblique flexis: lateralibus angustioribus et lon-

- gioribus infra medium barbatis.—*Willd. sp. pl. 1.*
p. 1161.
- In shady wet places: Pennsylvania to Virginia. ♀. April—June. *v. v.* Flowers white with purple and yellow veins.
9. *V. pubescens*; foliis ovatis subcordatis crenatis: petiolis *primulifolia*.
 marginatis, calycibus ciliatis longis, petalis omnibus obovatis: 2. lateralibus barbatis.—*Willd. sp. pl. 1.*
p. 1162.
- On dry hills: Canada to Virginia. ♀. April—June. *v. v.* Flowers blue.
10. *V. glabra*; foliis cordatis glabris serratis basi cucullatis, pedunculis longitudine petiolorum, petalis oblique flexis: lateralibus barbatis.—*Willd. sp. pl. 1. p. 1162.*
 In grassy wet places: common. ♀. May, June. *v. v.* Flowers blue, white at their base.
11. *V. foliis cordatis crenato-serratis obtusis subtus pubescentibus, pedunculis foliis brevioribus, petalis oblongis: infimo basi barbato.*—*Willd. hort. berol. 1. t. 72.*
 In overflowed meadows: Pennsylvania, &c. ♀. April—June. *v. v.* Flowers blue, white at the bottom; lower petal veined.
12. *V. foliis triangulare-cordatis acutis crenatis subcucullatis papilionacea.*
 glabriusculis, pedunculis longitudine foliorum, petalis obovatis: 3. inferioribus infra medium barbatis conniventibus, 2. superioribus reflexis.
- Near Philadelphia, in wet places. ♀. May, June. *v. v.* Flowers blue, elegantly striated and bearded with yellow down.
13. *V. glabriuscula*; foliis suborbiculatis obtusiusculis sinu clauso cordatis crenato-serratis: serraturis glandulosis, stolonibus floriferis, petalis linearibus calyce vix longioribus.
V. rotundifolia. Mich. fl. amer. 2. p. 150?
- On the high mountains of Pennsylvania, in shady beech-woods, among rotten wood and rich vegetable mould. ♀. June—Sept. *v. v.* This singular species differs from all the rest, in producing its flowers as it were under ground, as they always are covered with rotten wood or leaves; they are of a chocolate brown, very small; the seed-vessel buries itself still deeper in the ground, and is large in proportion to the plant. The inhabitants know it by the name of *Heal-all*, being used by them in curing all kinds of wounds or sores.

*cucullata.**sororia.**clandestina.*

** *Caulescentes.*

- canadensis.* 14. *V. glabriuscula*; foliis subcordatis acuminate serratis, pedunculis longitudine foliorum, stipulis brevibus integris.—*Willd. sp. pl. 1. p. 1160.*
 In shady woods, in rich moist situations: Canada to Carolina, on the mountains. ♀. June—Aug. v. v. Flowers outside purplish-blue, inside white and elegantly veined, sweet scented.
- striata.* 15. *V. glabra*; foliis cordatis acuminate serratis planiusculis, pedunculis longissimis, stipulis lanceolatis serrato-ciliatis.—*Willd. sp. pl. 1. p. 1160.*
 In shady woods: Pennsylvania to Virginia. ♀. May—July. v. v. Flowers white, with purple veins.
- debilis.* 16. *V. glabra*; foliis reniformi-cordatis brevissime acuminate crenatis basi cucullatis, pedunculis foliis duplo longioribus, stipulis serrato-ciliatis.—*Mich. fl. amer. 2. p. 150.*
V. canina *Walt. fl. car. 219.*
 In low grounds: Pennsylvania to Carolina. ♀. May—July. v. v. Flowers not one half the size of the preceding species, pale blue.
- rostrata.* 17. *V. glabra*; foliis cordatis acutis serratis, pedunculis foliis duplo longioribus, stipulis lanceolatis serrato-ciliatis, nectariis rostratis corolla longioribus.
 On shady rocks: near Eastown, Pennsylvania. ♀. May, June. v. v. Flowers blue.
- pubescens.* 18. *V. villoso-pubescentia*; caule erecto superne folioso, foliis lato-cordatis, stipulis oblongis apice serratis.—*Willd. sp. pl. 1. p. 1160.*
V. pensylvanica. *Mich. fl. amer. 2. p. 149.*
 In shady woods, among rocks, particularly limestone rocks: New York to Virginia. ♀. May, June. v. v. Flowers yellow.
- hastata.* 19. *V. glabra*; caule simplici superne folioso, foliis hastatis brevissime petiolatis, stipulis minutis denticulatis.—*Mich. fl. amer. 2. p. 149.*
 On high mountains: Pennsylvania to Carolina. ♀. May, June. v. v. Flowers yellow.
- Nuttallii.* 20. *V. pubescens*; caule simplici erecto, foliis ovato-oblongis acutis obsolete-dentatis nervosis, in petiolum longum attenuatis, stipulis lanceolatis integris, pedunculis longitudine foliorum.
 On the bars of the Missouri. ♀. June. v. s. in *Herb Nuttall.* Flowers yellow.

Claytonia lanceolata.

Icon. *Dod. mem.* t. 50.
In fields and along the edges of woods : Canada to Carolina. ♀. July. v. v. Flowers pale red with darker stripes.
- 2. *A. caule rectiusculo, foliis oblongo-ovalibus subtus canalicante-pubescentibus, paniculis pubescentibus, corollis limbo erectis.* —*Willd. sp. pl.* 1. p. 1259.
Icon. *Pluk. alm.* t. 13. f. 1.
In sandy fields and woods ; common. ♀. June, July.
v. v. Flowers yellowish-green, small. The plant is generally called *Indian Hemp*.
- 3. *A. caule erectiusculo, foliis oblongis cordatis glabris, cymis folio brevioribus.* *Willd. sp. pl.* 1. p. 1260.
A. sibiricum. *Jacq. hort.* 3. t. 66.
On the gravelly shores of rivers: New York to Virginia ; scarce. ♀. July, Aug. v. v. Flowers very

small; plant lower than the preceding species, and very smooth.

224. ASCLEPIAS. *Gen. pl. 429.** *Foliis oppositis.**syriaca.*

1. A. caulis simplicissimus, foliis lanceolato-oblongis sensim acutis subtus tomentosis, umbellis subnutantibus tomentosis.—*Willd. sp. pl. 1. p. 1265.*

In fields and on the banks of rivers, very common: New England to Virginia. \mathcal{Y} . July, Aug. $v. v.$ From three to five feet high; flowers in large close clusters, pale purple, sweet-scented. The nectaries act as fly-traps.

phytolaccoides.

2. A. caule erecto simplici, foliis lato-ovato-oblongis acutis glabris subtus pallidioribus, umbellis compositis lateribus solitariis longe pedunculatis nutantibus.—*Gron. virg. 38.*

On the mountains of Virginia and Carolina. \mathcal{Y} . July, Aug. $v. v.$ Stem about three feet or more high, spotted with purple; leaves large, middle rib purple; flowers sweet-scented; petals reflexed, very dark purple. This plant was introduced into England in 1812, by Mr. Lyon, under the above name.

debilis.

3. A. glabriuscula; caule debili erecto simplici, foliis petiolatis ovali-lanceolatis utrinque acutis membranaceis, umbellis terminalibus laxifloris, pedicellis capillaribus.—*Mich. fl. amer. 1. p. 116.*

In shady rocky situations, near rivulets: New York to Carolina; rare. \mathcal{Y} . July, Aug. $v. v.$ Flowers white; leaves large. The fibres of the stem produce a kind of flax, as all the rest of this genus do, but far superior, being of a beautiful silky gloss and extreme strength.

parviflora.

4. A. foliis lanceolatis acuminatis glabris oppositis basi attenuatis, umbellis lateralibus solitariis, caule suffruticoso erecto. *Willd. sp. pl. 1. p. 1267.*

A. perennis. Walt. fl. car. 107.

In sandy fields: Carolina and Florida. \mathcal{Y} . July, Aug. $v. v.$ Flowers small, white.

nivea.

5. A. foliis ovato-lanceolatis glabriusculis, umbellis erectis lateralibus solitariis, caule simplici. *Willd. sp. pl. 1. p. 1266.*

Icon. *Dill. elth. t. 29. f. 32.* *Bot. mag. 1167.*

On the banks of rivers in sandy or gravelly soil : Virginia to Carolina. ♀. July, Aug. v. v. Flowers white.

6. A. caule erecto superne ramoso tomentoso, foliis lanceolatis utrinque subtomentoso-lanuginosis, umbellis pluribus origine geminis, corniculis appendiculum exsertis.
Mich. fl. amer. 1. p. 115. *Willd. sp. pl. 1. p. 1267.*

Icon. *Jacq. hort. t. 107.*

β. *Willd. l. c.*

In swamps and on river banks ; common. ♀. June — Aug. v. v. Flowers red. The variety β. is more hairy, in every other respect no ways different ; sometimes the leaves are quite smooth, and only pubescent on the upper part of the stem.

7. A. caule simplici bifarium puberulo, foliis subsessilibus oblongo-ovalibus subtus pubescentibus, umbellis terminalibus nectariisque erectis, appendicibus exsertis.—
Willd. sp. pl. 1. p. 1265.

Icon. *Dill. elth. t. 27. f. 30.*

In wet meadows, on the edges of woods and ditches : New England to Virginia. ♀. July, Aug. v. v. Flowers beautiful purple.

8. A. caule simplici, foliis ovatis subtus villosis, umbellis erectis, nectariis resupinatis. *Willd. sp. pl. 1. p. 1265.*

Icon. *Dill. elth. t. 28. f. 31.*

In shady swamps : Virginia and Carolina. ♀. July, Aug. v. v. Flowers purple.

9. A. caule simplici erecto hirsuto, foliis lanceolato-oblongis obtusiusculis subsessilibus utrinque tomentoso-hirsutis, umbellis lateralibus solitariis subsessilibus nutantibus subgloboso-densifloris, appendicibus nullis.

In dry fields : Pennsylvania to Virginia. ♀. June, July. v. v. Flowers green.

10. A. caule simplici erecto, foliis ovatis petiolatis rugosis nudis, umbellis subsessilibus pedicellis tomentosis. *Willd. sp. pl. 1. p. 1265.* *Walt. fl. car. 104.*

A. hybrida. *Mich. fl. amer. 1. p. 115.*

Icon. *Pluk. alm. t. 77. f. 1.* *Bot. mig. 1182.*

On dry sunny hills, on the borders of woods : New York to Carolina. ♀. July, Aug. v. v. A very handsome species ; flowers in dense umbels ; petals and nectaries white ; fructification red.

pedunculis unifloribus brevibus.
On the banks of the Missouri. *Nuttall.* v. s. Flowers
yellow.

231. HEUCHERA. *Gen. pl. 447.*

1. *H. viscido-pubescent*; scapo foliisque asperiusculis, fo-
liis modice rotundato-lobatis dentatis: dentibus dilata-
tis obtusis mucronatis, pedunculis paniculæ tres di-
chotomis divaricatis, calycibus brevibus obtusis, petalis
lanceolatis longitudine calycis, staminibus longe ex-
sertis.
H. americana. *Willd. sp. pl.* 1. p. 1328.
H. Cortusa. *Mich. fl. amer.* 1. p. 171.
Icon. Pluk. alm. t. 58. f. 3.
In shady rocky situations : New England to Carolina ;
frequent. $\frac{1}{4}$. May—July. v. v. Flowers in a long
simple panicle, small ; petals red. It varies sometimes
with nearly smooth leaves.
2. *H. pulverulento-pubescent*; scapo inferne foliisque sub-
tus glabris, foliis subacute-lobatis dentatis : dentibus
rotundatis mucronatis, pedunculis paniculæ brevibus
confertifloris, calycibus campanulatis majoribus, pe-

*pubescens.**viscida.*

PENTANDRIA DIGYNIA. *Heuchera.*

talis spathulatis calyce longioribus, staminibus vix exertis.

On the Blue mountains of Pennsylvania and Virginia. $\frac{1}{2}$. May, June. *v. v.* Flowers larger than the rest of the genus ; petals pale red with yellow.

hispida.

3. *H. hispida, scabra ; scapo petiolis foliisque subtus glabris, foliis acute lobatis, supra hispido-pilosis dentatis : dentibus brevissimis subretus mucronatis, pedunculis paniculae paucifloris, calycibus mediocribus subacutis, petalis spathulatis longitudine calycis, staminibus exertis.*

On high mountains of Virginia and Carolina. $\frac{1}{2}$. May, June. *v. v.* Petals purple ?

villosa.

4. *H. villosissima ; foliis acute lobatis dentatis : dentibus acutis mucronatis, fasciculis paniculae capillaribus laxifloris, calycibus parvis, staminibus exertis.—Mich. fl. amer. 1. p. 172.*

On high mountains of North Carolina and Virginia ; collected on the Peaks of Otter. $\frac{1}{2}$. June. *v. v.* Flowers small ; petals white.

caulescens.

5. *H. basi suffruticosa ; scapo basi petiolisque pilosis, foliis supra glabris subtus ad nervos pilosis acute-lobatis ciliatis dentatis ; dentibus acutis mucronatis, calycibus brevibus villosis, petalis linearibus calyce duplo longioribus, staminibus exertis.*

On high mountains of Carolina. Lyon. $\frac{1}{2}$. May, June. *v. v.* Petals white. In the Herbarium of A. B. Lambert, Esq. are specimens of a *Heuchera*, collected by Pallas in Kamtschatka, which appear to be the same with the present species.

232. ZIZYPHUS. *Lam. encycl. 3. p. 303.*

volubilis.

1. *Z. inermis ; foliis ovatis costato-venosis integerrimis subundulatis, umbellis pedunculatis axillaribus, caule volubili. Willd. sp. pl. 1. p. 1102.*

Rhamnus volubilis. Linn. suppl. 152. Walt. fl. car. 101. Icon. Jacq. ic. 2. t. 336. Schmidt arb. 153.

In deep swamps, near the sea-coast : Virginia to Carolina. $\frac{1}{2}$. June. *v. v.* Flowers small, greenish-yellow ; berries oblong, violet-coloured. It ascends the highest trees of *Cypressus disticha*, in the Dismal swamp, near Suffolk in Virginia, and is known there by the name of *Supple-Jack*.

233. ERYNGIUM. Gen. pl. 456. Delaroche monog.
eryng.

1. E. praealtum ; foliis longissime lanceolato-linearibus acutis : rameis linearis-multipartitis, involucri foliolis capitulo ovoideo longioribus paleisque 3—5-fidis, capitulis paniculatis.—Lam. encycl. 4. p. 759. Delaroche eryng. p. 48.
E. aquaticum β. Willd. sp. pl. 1. p. 1357. Mich. fl. amer. 1. p. 163.
Icon. Delaroche eryng. t. 19. Pluk. alm. t. 396. f. 3.
On the banks of rivers, in overflowed tide-meadows : Pennsylvania to Virginia. 4. July, Aug. v. v. Stem hollow ; flower-heads green or pale blue. I once found a beautiful proliferous variety with pale purple flowers, one on the top of the others.
2. E. simplex ; foliis ovato-cordatis brevissime petiolatis, capitulis omnibus pedunculatis, involucri foliolis paleisque 3-fidis, caule virgato superne tantum ramoso.—Lam. encycl. 4. p. 757. Delaroche eryng. p. 49.
E. ovalifolium. Mich. fl. amer. 1. p. 163.

In woods and near rivers : Canada to Carolina. $\frac{1}{2}$. May. *v. v.* *Nettle-tree.* Berries dark purple.
- crassifolia.* **2.** *C. foliis ovatis acuminatis inæqualiter serratis basi inæqualiter cordatis subcoriaceis utrinque scabris, pedunculis subbifloris.* — *Willd. sp. pl. 4. p. 995.*
C. cordifolia. *Duham. 2. t. 9.*
In woods and near rivers : Virginia, Kentucky, and Tennessee. $\frac{1}{2}$. May. *v. v.* Known by the name of *Hagberry* or *Hoop-ash.*
- pumila.* **3.** *C. foliis ovatis acuminatis æqualiter serratis basi inæqua-*

ibus utrinque glabrinculis : junioribus tantum pubescentibus, pedunculis subtriifloris, fructu solitario.
On the banks of rivers : Maryland and Virginia. ♀.
May. v. v. A small straggling bush ; berries ovate, black.

III. TRIGYNIA.

260. VIBURNUM. *Gen. pl. 503.*

1. *V. glabrum* ; ramis patentissimis, foliis subrotundis crenato-serratis, petiolis laevibus, cymis sessilibus, fructibus rotundatis.—*Willd. sp. pl. 1. p. 1847.*
Icon. *Pluk. alm. t. 46. f. 2.* *Duham. 2. t. 38.*
Common in hedges and fields : New England to Carolina. ♀. May, June. v. v. Berries dark blue ; flowers, as all the following species, white.
2. *V. glabrum* ; foliis ovatis subacutis subserratis, petiolis laevibus, fructibus ovato-oblongis cymis subpedunculatis.—*Lam. encycl. 8. p. 653.*
On the banks of rivers : Pennsylvania, New Jersey, &c.
♀. May, June. v. v. Resembles the former, but is not so straggling in its growth ; berries black.
3. *V. glabrum* ; foliis lato-ovatis acuminatis uncinato-serratis, petiolis marginatis undulatis, cymis sessilibus.—*Willd. sp. pl. 1. p. 1491.*
Frequent among hedges and on borders of woods : New England to Carolina. ♀. July. v. v. Is more inclined to grow to a tree than any of the rest ; berries black.
4. *V. glaberrimum* ; foliis ovalibus margine revoluto subintegermis, petiolis laevibus, cymis ebracteatis pedunculatis.—*Willd. sp. pl. 1. p. 1487.*
Icon. *Mill. ic. 274.*
In swamps, particularly on sandy soil : Canada to Georgia. ♀. May, June. v. v. Berries black ; in the Southern States it becomes an evergreen ; the young branches are ferruginous and sometimes the leaves on their under surface.
5. *V. glabrum* ; foliis obovatis crenato-dentatis seu integerimis obtusis, umbellis sessilibus, fructibus ovato-subrotundis.—*Lam. encycl. 8. p. 658,* *Walt. fl. car. 116.*

prunifolium.

Lentago.

nudum.

obovatum.

- V. cassinoidea*. *Mich. fl. amer.* 1. p. 179.
punicifolium. *β. V. foliis obovatis integris seu apice laxe crenatis obtusis.*
Hort. par. 115.
 In shady woods : Carolina and Georgia. $\frac{1}{2}$. May, June.
v. s.
- cassinoidea*. 6. *V. glabrum* ; *foliis ovato-lanceolatis utrinque acutis crenatis in margine subrevolutis, petiolis carinatis eglandulatis.*—*Willd. sp. pl.* 1. p. 1491.
 In swamps : New York to Carolina. $\frac{1}{2}$. June, July.
v. v. Berries blueish-black.
- lævigatum*. 7. *V. foliis lanceolatis lævibus remote-serratis basi integrerrimis, ramulis ancipitibus.*—*Willd. sp. pl.* 1. p. 1492.
Icon. Mill. ic. t. 83. f. 1.
 Near the sea-coast : Virginia and Carolina. $\frac{1}{2}$. June, July. *v. v.* Berries black.
- nitidum*. 8. *V. glaberrimum* ; *foliis linear-lanceolatis supra nitidis obsolete serratis integrigrise* ; *ramis tetragonis.*—*Willd. sp. pl.* 1. p. 1492.
 In sandy barren woods : Carolina and Georgia. $\frac{1}{2}$. *v. v. s. fl.* A low shrub with small leaves.
- dentatum*. 9. *V. glabriuscum* ; *foliis suborbiculatis ovatisque acutis dentato-serratis plicato-sulcatis utrinque glabris, cymis penduculatis, fructibus subglobosis.*—*Willd. sp. pl.* 1. p. 1488.
Icon. Jacq. hort. t. 36.
 In mountain woods ; frequent : New York to Carolina. $\frac{1}{2}$. June, July. *v. v.* Berries dark blue ; known by the name of Arrow-wood.
- pubescens*. 10. *V. pubescens* ; *foliis ovalibus acuminate dentato-serratis plicato-sulcatis subtus villoso-tomentosis, cymis penduculatis, fructibus oblongis.*
V. dentatum pubescens. *Ait. kew.* 1. p. 168.
V. dentatum tomentosum. *Mich. fl. amer.* 1. p. 179.
 In the lower parts of Virginia and Carolina. $\frac{1}{2}$. June. *v. v.* The whole of the shrub smaller than the preceding one.
- lantanoides*. 11. *V. petiolis nervisque pulverulento-tomentosis, foliis amplis suborbiculato-cordatis abrupte acuminatis inaequilater serratis, serraturis muticis, cymis arcte sessilibus, fructibus ovatis.*—*Mich. fl. amer.* 1. p. 179.
V. Lantana grandifolium. *Ait. kew.* 1. p. 168.
 In shady woods on high mountains : Canada to Virginia ; principally in the forests called Beech-woods. $\frac{1}{2}$.

- June, July. v. v. Berries red, but when ripe black ; known by the name of *Hobble-bush*. . . .
12. V. ramulis petiolisque pilosis eglandulosis, foliis subcordato-ovatis trilobatae acuminatis argute-serratis subtus pubescentibus, cymis longe-pedunculatis.—*Willd. sp. pl. 1. p. 1489.*
Icon. *Vent. hort. cels. t. 72.*
In rocky mountainous situations : New England to Carolina. ♀. May, June. v. v. Berries black. *acerifolium.*
13. V. foliis suborbiculato-cordatis plicato-sulcatis dentatis subtus pubescentibus, petiolis subglandulosis, cymis radiatis, fructibus oblongo-ovatis. *Mich. fl. amer. 1. p. 180.*
V. alnifolium. *Marsh. arb. 162.*
In hedges : Kentucky near Danville. *Michaux.* Tennessee and Upper Carolina. ♀. June, July. v. s. Berries red ; resembles the following species. *molle.*
14. V. foliis trilobatis postice acutis 3-nervibus : lobis divaricatis promissa acuminatis rarer dentatis, petiolis glandulosis, cymis radiatis.
V. Opulus americanum. *Ait. kew. 1. p. 168.*
V. Opulus Pitmina. *Mich. fl. amer. 1. p. 180.*
V. trilobum. *Marsh. arb. 162.*
In swamps and shady woods : Canada ; on the mountains of New York and New Jersey. ♀. July. v. v. Berries red, of an agreeable acid ; resembling that of Cranberries, *Vaccinium macrocarpon*, for which they are a very good substitute. *Oxycoccos.*
15. V. foliis trilobatis, postice obtusiusculis 3-nervibus : lobis brevissimis denticulato-serratis, serraturis acuminatis, petiolis glandulosis, cymis radiatis.
V. Opulus edule. *Mich. fl. amer. 1. p. 180.*
On the banks of rivers : Canada to New York. ♀. July. v. v. A smaller and more upright shrub than the preceding species ; berries the same colour and size, but, when completely ripe, more agreeable to eat. *edule.*

261. SAMBUCUS. *Gen. pl. 505.*

1. S. ramulis petiolisque glaberrimis, foliolis sub-4-jugis oblongo-ovalibus nitidis glabris acuminatis : nervo medio subpubescente, basi interdum appendiculatis, cymis laxis 5-fidis.—*Willd. sp. pl. 1. p. 1494.*
Icon. *Schmidt arb. 142.* *canadensis.*

In swamps and near hedges: Canada to Carolina. $\frac{1}{2}$. June, July. *v. v.* Berries dark purple or black.

tubescens. 2. *S. cortice verrucoso, foliolis 2-jugis ovali-lanceolatis subtus pubescentibus, cymis confertis racemosis.* — *Mich. fl. amer. 1. p. 181.*

On the highest mountains from Canada to Carolina. $\frac{1}{2}$. July. *v. v.* Berries red; resembles *S. racemosa* very much.

262. RHUS. *Gen. pl. 502.*

typhinum. 1. *R. subarborescens; ramis petiolisque villosissimis, foliis pinnatis multijugis, foliolis lanceolato-oblongis argute serratis subtus subtomentosis.* — *Willd. sp. pl. 1. p. 1478.*

Icon. *Duham. 2. t. 47.*

In rocky dry situations: Canada to Virginia. $\frac{1}{2}$. July, Aug. *v. v.* The purple velvety berries appear in large close clusters.

glabrum. 2. *R. undique glabrum; foliis pinnatis multijugis, foliolis lanceolato-oblongis serratis subtus albicanibus, fructibus holosericeis.* — *Willd. sp. pl. 1. p. 1478.*

coccineum. β . *R. elegans.* *Ait. kew. 1. p. 162. Catesb. car. appen. t. 4. Icon. Dill. eth. t. 243. f. 314. Catesb. car. 3. t. 4.* Common in old fields and along fences: New England to Carolina. $\frac{1}{2}$. July, Aug. *v. v.* Berries red; flowers greenish-red; in var. β . scarlet.

viridiflorum. 3. *R. glabriuscum; foliis pinnatis multijugis, foliolis lanceolato-oblongis serratis subtus subtomentosis, racemis erectis herbaceis.* — *Lam. encycl. 7. p. 504.*

R. canadense. *Mill. dict. no. 5.*

On the edges of woods, in dry sunny situations: Pennsylvania and Virginia. $\frac{1}{2}$. July, Aug. *v. v.* Flowers yellowish-green; probably not much more than a variety of the foregoing species.

pumilum. 4. *R. humile; ramis petiolisque pubescentibus, foliis pinnatis multijugis, foliolis ovalibus vix acuminatis aut muticis inciso-dentatis subtus tomentosis, fructibus holosericeis.* — *Mich. fl. amer. 1. p. 182.*

In Upper Carolina. $\frac{1}{2}$. July. *v. s. in Herb. Lyon.*; *v. v. in Hortis.* Not above a foot high: it is the most poisonous of the genus, according to information from Mr. J. Lyon, who, by collecting the seed of this species, got poisoned all over his body, and was lame for a considerable time.

Vernis.

5. *R. arborescens*, glaberrimum; foliis pinnatis multijugis, foliolis ovalibus abrupte acuminatis integris, panicula laxa, floribus dioicis, fructibus glabris.—*Willd. sp. pl. 1. p. 1479.*
Icon. *Dill. elth. t. 292. f. 377. Pluk. alm. t. 145. f. 1.*
In low copses: Canada to Carolina. ♀ July. v. v.
Berries white.
6. *R. ramis punctatis*, foliis pinnatis multijugis (5—6), *Copallinum.* foliolis ovali-lanceolatis integerrimis supra lucidis, panicula foliosa, racemis sessilibus, floribus dioicis.—*Willd. sp. pl. 1. p. 1480.*
Icon. *Hort. schœnbr. 341. Pluk. alm. t. 56. f. 1.*
In dry fields and woods, particularly sandy soil: New Jersey to Carolina. ♀ July. v. v. Berries red.
The leaves of this species are used as tobacco by the Indians of the Missouri and Mississippi.
7. *R. radicans*; foliis ternatis, foliolis ventricoso-ovalibus integris aut sinuate-crenatis, racemis rameis et axillaribus sessilibus dioicis.—*Willd. sp. pl. 1. p. 1481.*
Mich. fl. amer. 1. p. 183.
- α. *R. radicans-scandens*; foliolis amplis integris seu rarer dentatis. *Mich. l. c.*
R. radicans. Willd. sp. pl. 1. p. 1481.
- β. *R. erectum*, humile; foliolis varie sinuato-lobatis, sub quercifolium. floratione tormentosis. *Mich. l. c.*
- γ. *R. foliis oblongo-ovalibus longe acuminatis subrhombicarpon. boideis, fructu multo minore. Mich. l. c.*
Common in all woods, fields, and along fences: Canada to Georgia. ♀ June, July. v. v. Berries white;
known by the name *Poison-oak* or *Poison-vine*. There is no doubt but *R. radicans* and *Toxicodendron* are only local varieties.
8. *R. fruticosum*, amentaceum, nudiflorum; foliis ternatis, foliolis rhombo-ovalibus dentatis subtus pubescens, floribus dioicis.—*Willd. sp. pl. 1. p. 1482.*
R. canadense. Marsh. arb. 129.
Icon. *Turpin in annal. du mus. hist. nat. 5. p. 445. t. 30.*
In rocky situations, about springs: Pennsylvania, Carolina, and Kentucky. ♀ May, June. v. v. Flowers yellow, in catkins, which give it quite a different appearance from the habitus of the genus. *Myrica tri-foliata* Hort. is the same with *R. suaveolens* Ait. and is nothing more than the male plant of this species.
Berries brown.

263. STAPHYLEA. *Gen. pl. 507.**trifolia.*

1. *S. foliis trifoliatis*: racemis pendulis, petalis inferne ciliatis, fructu ovato.—*Willd. sp. pl. 1. p. 1498.*
Icon. *Schmidt arb. 81.*
On the side of dry hills, in rocky situations: New York to Upper Carolina. ♀. May, June. v. v. Flowers white.

264. TURNERA. *Gen. pl. 514.**cistoides.*

1. *T. hirsuta*; foliis linear-lanceolatis obtuse dentato-serratis, pedunculis axillaribus folio brevioribus.—*Willd. sp. pl. 1. p. 1505.*
Icon. *Plum. ic. t. 150. f. 1.* *Sloan. jam. 1. t. 127. f. 7.*
In dry sandy woods, near the town of Savannah, Georgia. *Enslen.* ♂. July. v. s. in *Herb. Enslen.* Flowers yellow, resembling those of *Cistus carolinianus*.

265. CROTONOPSIS. *Mich. fl. amer. 2. p. 185.**argentea.*
linearis.
elliptica.

1. *C. caule erecto dichotome ramosissima*, foliis supra stellato-pilosis, subtus argenteo-lepidotis.
α. *C. foliis linear-lanceolatis.* *Willd. sp. pl. 4. p. 380.* *Mich. fl. amer. 2. p. 186.*
β. *C. foliis ellipticis utrinque obtusis.* *Willd. l. c.*
In sandy soil near the sea-coast, Illinois country and on the Missouri. ♂. July. v. v. Flowers very minute.

266. KOCHIA. *Roth in Schrad. journ. 1800. p. 307.**dentata.*

1. *K. foliis lanceolatis sinuato-dentatis*, caule erecto ramosissimo.—*Willd. hort. berol. 1. t. 28.*
Salsola radiata. *Desf. in annal. mus. nat. p. 28. t. 34.*
Salsola platyphylla. *Mich. fl. amer. 1. p. 174.*
On the banks of the Mississippi, in the Illinois country. ♂. June. v. v. This plant has the aspect of a *Chenopodium* in every part.

267. AMARANTHUS. *Gen. pl. 1431.**albus.*

1. *A. glomerulis axillaribus triandris*, foliis obovatis retusis, caule tetragono simplici. *Willd. sp. pl. 4. p. 382.*
Icon. *Willd. amaranth. t. 1. f. 2.*
A common weed in the gardens. ♂. May—Sept. v. v.

2. A. glomerulis axillaribus triandris, floribus trifidis, foliis obovatis emarginatis, caule teretiusculo ramoso. *Willd. sp. pl. 4. p. 382.*
Icon. *Willd. amaranth. t. 4. f. 7.*
In cultivated grounds: Virginia. ○. Aug. v. v.
grossizans.
3. A. glomerulis triandris subspicatis rotundatis, foliis ellipticis retusis, caule erecto. *Willd. amaranth. p. 20. t. 1. f. 1.*
In similar situations: Virginia. ○. June—Aug. v. v.
lividus.
4. A. glomerulis triandris subspicatis, floribus triphyllis, foliis ovatis retusis, caule diffuso. *Willd. sp. pl. 4. p. 387.*
Frequently a very troublesome weed in gardens. ○. June—Sept. v. v.
Blitum.
5. A. glomerulis axillaribus geminis triandris, floribus masculis triphyllis, foliis ellipticis emarginatis margine undulatis. *Willd. amaranth. 18. t. 8. f. 16.*
Frequently found on road sides and among rubbish. ○. July, Aug. v. v.
viridis.
6. A. racemis pentandris decompositis congestis erectis, foliis ovato-lanceolatis. *Willd. amaranth. p. 26. t. 9. f. 17.*
Common in cultivated grounds: New York to Carolina.
○. June—Sept. v. v.
hybridus.
7. A. racemis pentandris supradecompositis, ramis patentibus pubescentibus, foliis ovato-lanceolatis. *Willd. amaranth. 32. t. 2. f. 2.*
Among rubbish and in cultivated grounds: Pennsylvania to Virginia. ○. Aug. v. v.
paniculatus.
8. A. racemis pentandris supradecompositis erectis, ramis patentibus glabris, foliis oblongis acutis. *Willd. amaranth. 31. t. 2. f. 3.*
In cultivated fields: Virginia and Carolina. ○. July.
v. v.
sanguineus.
9. A. racemis pentandris supradecompositis confertis erectis, ramis pubescentibus, foliis ovatis undulatis. *Willd. amaranth. 33. t. 11. f. 21.*
In cultivated grounds and on road sides: Pennsylvania to Virginia. ○. June—Aug. v. v.
retroflexus.
10. A. racemis pentandris compositis confertis erectis, foliis oblongo-lanceolatis mucronatis. *Willd. amaranth. 80. acus.*
Common in fields of Virginia. ○. July, Aug. v. v.
Leaves red.

- spinosa.* 11. A. racemis pentandris terminalibus compositis, axillæ spinosis. *Willd. amaranth.* 39. t. 4. f. 8.
On road sides and among rubbish; frequent. ♂. June
—Sept. v. v.

268. ACNIDA. *Gen. pl. 1521. Mich. fl. amer. 2. p. 233.*

- cannabina.* 1. A. foliis lanceolatis, capsulis leviusculis acutangulis.
Willd. sp. pl. 4. p. 767.

On the banks of rivers and in marshes near the sea-coast:
New England to Carolina. ♂. July, Aug. v. v.

- ruscocarpa.* 2. A. foliis ovali-lanceolatis, capsulis obtusangulis rugosis.
Willd. sp. pl. 4. p. 767.

Icon. *Mich. fl. amer. 2. t. 50.*

In close swamps, on the banks of rivers among bushes:
Virginia. ♂. July, Aug. v. s. in *Herb. Lyon.*
Very tall and robust.

IV. TETRAGYNYIA.

269. PARNASSIA. *Gen. pl. 523.*

- palustris.* 1. P. foliis radicalibus cordatis, nectariis multisetis.—*Willd. sp. pl. 1. p. 1516.*

Icon. *Fl. dan.* 584. *Engl. bot.* 82.

In bog meadows: Pennsylvania and Virginia. ♀. July,
Aug. v. v. Flowers white, with netted veins of
green or pale purple.

- caroliniana.* 2. P. foliis radicalibus suborbiculatis, nectariis trisetis. *Mich. fl. amer. 1. p. 184.*

Icon. *Bot. mag.* 1459.

In swamps and mosses: New York to Virginia. ♀.
July, Aug. v. v. Flower the same as No. 1.

- asarifolia.* 3. P. foliis radicalibus reniformibus, petalis unguiculatis,
nectariis trifidis. *Vent. malmais.* 39. t. 39.

On high mountains in Virginia and Carolina. ♀. July,
Aug. v. v. Larger in leaves and flowers than the
preceding species.

V. PENTAGYNYIA.

270. ARAlia. Gen. pl. 525.

1. *A. subcaulis*, unifoliata; folio triternato vel triquinato: foliolis oblongo-ovalibus, scapo nudo folio breviore, umbellulis paucis.—*Willd. sp. pl. 1. p. 1521.* *nudicaulis.*
Icon. *Pluk. alm. t. 238. f. 5.*
In shady rocky woods: Canada to Carolina. $\frac{1}{2}$. May, June. v. v. Commonly called *Sarsaparilla*, and as such used in the shops.
2. *A. divaricato-ramose*; petiolis 3-partitis, partitionibus 3—5-foliolatis, foliolis plerisque cordatis, ramulis axillaris foliosis, umbellulis pluribus subpanciculatis superne aphyllis.—*Willd. sp. pl. 1. p. 1521.* *racemosa.*
Icon. *Cold. canad. t. 75. Moris. hist. 1. s. 1. t. 2. f. 9.*
In rocky and shady situations: Canada to Virginia. $\frac{1}{2}$. June—Sept. v. v. Known by the name of *Spikenard*, and highly esteemed as a medicine.
3. *A. humilis*, suffruticosa; caulinibus petiolis setis hispidis, foliis duplikato-pinnatis, foliolis ovatis inciso-serratis inermibus glabris, umbellulis longissime pendulatis.—*Mich. fl. amer. 1. p. 185.* *hispida.*
Icon. *Bot. mag. 1055. Vent. hort. cels. 41.*
In stony woods: Canada, New England, &c. On high mountains: Pennsylvania, Virginia. $\frac{1}{2}$. June, July. v. v. Called *Wild Elder*.
4. *A. caule arborescente foliisque spinosis*, foliis duplikato-pinnatis, foliolis leviter serratis, panicula ramorissima, umbellis numerosis.—*Willd. sp. pl. 1. p. 1520.* *spinosa.*
- β. *A. caule spinoso glauco*, foliis inermibus.
Icon. *Schmidt arb. 102 t. 103. Comm. hort. 1. t. 47.*
In fertile low woods of Lower Virginia and Carolina, likewise in the Illinois country. $\frac{1}{2}$. Aug. Sept. v. v. Known by the name of *Angelica-tree*. The berries used in an infusion of wine or spirits are a remarkable medicine for relieving rheumatic pains. The var. β. was found near Charlestown, South Carolina; I have not seen its flowers. *inermis.*

271. ZANTHOXYLUM. Gen. pl. 1512.

1. *Z. aculeatum*; foliis pinnatis, foliolis ovali-lanceolatis subintegerrimis sessilibus basi squamibus, petiolo com-

PENTANDRIA PENTAGYNIA. Zanthoxylum.

- muni inermi, umbellis axillaribus.—*Willd. sp. pl. 4.*
p. 754.

 Icon. *Duham. arb. 1. t. 97.*
 In shady woods, near rivers: Canada to Virginia and Kentucky. h . April, May. $v. v.$ A tincture of the bark and capsules is recommended in rheumatism and tooth-ach, from which its name *Tooth-ach-tree*.
- tricarpon.* 2. *Z. aculeatum*; foliis pinnatis, foliolis petiolatis oblongo-ovalibus acuminatis serrulatis basi obliquis, petiolo communis aculeato, capsulis ternis sessilibus.—*Mich. fl. amer. 2. p. 235.*
 In woods of Carolina and Florida. *Michaux.* h . July.
 $v. v. in Hortis.$
272. LINUM. Gen. pl. 528.
- usitatissimum.* 1. *L. foliolis calycinis ovatis acutis trinervibus, petalis crenatis, foliis lanceolatis alternis, caule subsolitario.*—*Willd. sp. pl. 1. p. 1533.*
 Icon. *Engl. bot. 1357.*
 Common flax is frequently found in old fields, apparently indigenous. \odot . June, July. $v. v.$ Flowers blue.
- Lewisii.* 2. *L. foliolis calycinis ovatis acuminatis, petalis cuneatis apice rotundatis, foliis sparsis lanceolato-lineariibus mucronatis, caulibus altis numerosis.*
 In the valleys of the Rocky-mountains and on the banks of the Missouri. *M. Lewis.* u . July. $v. v.$ Flowers large, blue; a very good perennial, and it probably might become an useful plant if cultivated.
- virginicum.* 3. *L. foliolis calycinis acutis panicula terminali, floribus remote alternis, foliis linear-lanceolatis sparsis: radicibus ovatis.*—*Willd. sp. pl. 1. p. 1538.*
 On dry sunny hills and fields: New York to Virginia. \odot . July, Aug. $v. v.$ Flowers small, yellow.
- rigidum.* 4. *L. foliolis calycinis ovatis acuminatis trinervibus ciliatis, petalis oblongis angustissimis, foliis rigide-erectis linearibus brevibus.*
 On the Missouri. *Nuttall.* $v. s.$ Flowers sulphur-yellow.
273. DROSERA. Gen. pl. 531.
- rotundifolia.* 1. *D. scapis radicatis simplicibus, foliis suborbiculatis basi attenuatis, petiolis elongatis pilosis.*—*Willd. sp. pl. 1. p. 1543.* *Mich. fl. amer. 1. p. 186.*

pl. 4.

Icon. Fl. dan. 1028.

In swamps filled with sphagnum, as all the following species, generally on sandy or gravelly ground. ♀. July, Aug. v. v. Flowers white; a very delicate and curious plant, as are all the rest of this genus.

2. D. scapis radicatis simplicibus, foliis spatulato-ovobatis, petiolis elongatis nudis.—Willd. sp. pl. 1. p. 1544. Mich. fl. amer. 1. p. 186.

Icon. Engl. bot. 868. Moris. hist. 1. s. 15. t. 4. f. 2. In similar situations: Canada to Carolina. ♀. July. v. v.

3. D. pusilla; scapis radicatis simplicibus, foliis brevibus cuneatis vix petiolatis, petalis ovalibus.

In sandy swamps of Georgia. Enslen. ♂. June. v. s. in Herb. Enslen. The smallest of all the species known; flowers rose-coloured.

4. D. scapis radicatis subramosis, foliis filiformibus longissimis.

In the pine-barrens of New Jersey near Tuckerton. ♀. June. v. v. Flowers large, purple.

Radix: Hybernaculum squamodium, extus ferrugineo-lanuginosum. *Folia*: primordia glabra, dilatato-subulata; secundaria radicalia spiraliter erumpentia, angustissime linearia subtus glabra, supra pilis rubris viscidis tecta, 9—12 polices longa. *Scapi* erecti, pedales et ultra, teretes, glabri, interdum vivipari, bulbiferi. *Racemus* spicatus, unilateralis, recurvatus, simplex seu ramosus. *Flores* pedicellati, erecti, magni, purpurei. *Styli* sex, interdum novem.

This elegant species I discovered about 1805, in the place above mentioned: this extensive swamp, interspersed with barren sand hills, might be called a natural botanic garden, uniting a number of southern plants with those of the north, as mentioned in the preface.

274. SIBBALDIA. Gen. pl. 536.

1. S. erecta, foliis linearibus multifidis. Willd. sp. p. 1. p. 1567.

Icon. Amm. ruth. t. 15.

On the banks of the Missouri. Nuttall. ♀. July. v. s. in Herb. Nuttall. Flowers small, flesh-coloured.

2. S. procumbens, foliis tridentatis. Willd. sp. pl. 1. procumbens. p. 1567.

Icon. Fl. dan. 32. Pluk. alz. t. 212. f. 3.

On the Missouri. Nuttall. On high mountains of Canada and Vermont. ♀. April. v. s. Flowers yellow.

longifolia.

brevifolia.

filiformis.

278. BURMANNIA. *Gen. pl. 542.*

1. *B. flore gemino; alis semicuneatis apice truncatis.—Willd. sp. pl. 2. p. 16.*
In swamps of Virginia. 4. Sept. v. s. in Herb. Gronov. Flower pale purple. This delicate little plant I never was lucky enough to find myself.

biflora.

279. TILLANDSIA. *Gen. pl. 541.*
1. *T. cæspitosa, pruinosa; foliis subulatis recurvatis, scapo setaceo foliis longiore summitate subbifloro.—Willd. sp. pl. 2. p. 14.*
Icon. Sloan. hist. 1. t. 121. f. 1.
Parasitic, on old trees: Florida and Georgia. 24. June. v. v. Flowers purple.
 2. *T. filiformis, intorta, pruinosa; floribus solitariis sessili-bus.—Willd. sp. pl. 2. p. 15.*
Icon. Sloan. jam. 1. t. 122. f. 2 & 3. Pet. gaz. t. 62. f. 12.

*recurvata.**usneoides.*

HEXANDRIA MONOGYNIA. Tillandsia.

Parasitic, on old trees, in shady woods : Virginia to Florida. ♀. July. v. v. Flowers yellowish-green. This singular plant, known by the name of *Long-moss*, does not extend further north than the neighbourhood of the Dismal Swamp in Virginia. The fibres of it, when divested of the outside coating, make excellent mattresses, and are a very good substitute for horse-hair for that purpose.

280. TRADESCANTIA. Gen. pl. 543.

virginica.

1. T. erecta ; foliis lanceolatis elongatis glabris, floribus sessilibus umbellato-congestis pubescentibus.—Willd. sp. pl. 2. p. 16.

Icon. Bot. mag. 105. Moris, hist. 3. s. 5. t. 2. f. 4.
In shady woods : Pensylvania to Carolina. ♀. May, June. v. v. Flowers blue or purple.

rosea.

2. T. erecta ; foliis linearis-gramineis prælongis, pedunculis elongatis umbellatis paucifloris, calycibus glabris.—Mich. fl. amer. 1. p. 193.

Icon. Vent. hort. cels. t. 24.
In wet sandy fields : Carolina and Georgia. ♀. June, July. v. v. Flowers rose-coloured, small, but very handsome.

281. DIPHYLLEJA. Mich. fl. amer. 1. p. 203.

cymosa.

1. D. glaberrima ; foliis subpalmatis angulato-lobatis serratis : lobis acuminatis, cyma multiflora. Mich. l. c.

Icon. Mich. l. c. t. 19 ♂ 20.

Near rivulets on the high mountains of Virginia and Carolina. ♀. May, June. v. v. Flowers white ; berries dark blue : the whole of the plant has the appearance of *Podophyllum peltatum*.

282. CAULOPHYLLUM. Mich. fl. amer. 1. p. 204.

thalictroides.

1. C. glaberrimum ; foliis supradecompositis, foliolis ovalibus, inferioribus petiolatis lobatisque, extremo trilobato.—Mich. l. c. t. 21.

Leontice thalictroides. Willd. sp. pl. 2. p. 149.

In shady woods, on the side of fertile hills : New England to Virginia. ♀. May, June. v. v. Flowers yellowish-green ; berries large, blueish-black ; called by the Indians *Co-kosh*, and esteemed as a medicinal plant among them.

Berberis aquifolium.

Berberis nervosa.

283. BERBERIS. Gen. pl. 595.

1. *B. erecta*; ramis confertim punctatis, aculeis triplicibus, foliis simplicibus obovatis remote serratis, racemis brevibus subcorymbosis, drupis vix carnosis.

B. vulgaris var. *Willd. sp. pl. 2. p. 227. Mich. fl. amer. 1. p. 205.*

On fertile hills, among rocks, &c. Canada to Virginia. ½ April, May. v. v. Flowers yellow, in pendulous racemes; berries red, of an agreeable acid.

2. *B. sarmentosa*, inermis; foliis pinnatis: foliolis sub-3-jugis oblongis repando-dentatis vejosis, petalis bidentatis.

B. pinnata. *Herb. Banks.*

On the great rapids of Columbia River, among rocks, in rich vegetable soil. *M. Lewis.* ½ April, May. v. s. in *Herb. Lewis.* Flowers yellow, in large clusters; berries dark purple, eatable; called by Lewis's company *Mountain-holly*.

Caulis fruticosus, laxe ramosus: ramis sarmentosus, procumbentibus. *Folia* sempervirentia alterna, petiolata, impari-pinnata. *Foliola* 3-juga, opposita, sessilia, impari-petiolata, oblongo-ovata, basi oblique truncata, margine cartilaginea repando-dentata, coriacea, utrinque glabra, laevigata, nitida: dentibus aculeatis. *Petiolæ* teretes, glabri. *Racemi* congesti, bracteati, e gemma precedentis anni. *Flores* aurei. *Bractæ* caducæ, solitariae, subcordatae, acuminate, membranaceæ. *Calyx* triplex, deciduus, patens: exterior minimus, 3-phylus: foliclis ovatis, acutis; medius triplex longior: foliolis suborbiculatis, membranaceis, nervosis; interior longior: foliolis ovalibus, membranaceis, nervosis. *Petala* 6. suberecta, oblonga, apice inciso-bidentata, vix longitudine calycis. *Filamenta* 6. corollæ breviora, crassa, medio bidentata: dentibus oppositis. *Antheræ* bilobæ, crassæ. *Germen* superum, ovatum. *Stigma* sessile, 3-lobum. *Bacca* 3-locularis, 3-sperma, abortione interdum monosperma.

3. *B. sarmentosa*, inermis; foliis pinnatis: foliolis 6-jugis ovato-oblongis repando-serratis, sub-5-nervibus, petalis integris.

In the same situations. v. s. in *Herb. Lewis.*

The specific difference excluded, the description of the preceding species is applicable in every other respect, and together with another in the collection of A. B.

canadensis.

Aquifolium.

nervosa.

Lambert, Esq., collected in Napaul by Mr. Buchanon, forms a new division of the genus, with pinnated leaves; which probably may become a new genus, whenever the fruit is perfectly known, as the statement I have given of it was taken from a single and imperfect berry.

284. PRINOS. Gen. pl. 594.

- verticillatus.* 1. P. foliis deciduis ovalibus serratis acuminatis subtus pubescentibus, fasciculis florum masc. axillaribus umbelluliformibus; feminis aggregatis utrinque 6-partitis.—*Willd. sp. pl. 2. p. 225.*
P. Gronovii. Mich. fl. amer. 2. p. 236.
P. padifolius. Willd. enum. 394.
Icon. Duham. arb. 1. t. 23.
 In wet woods, on the banks of ditches; common: Canada to Virginia. ♀. June, July. v. v. Flowers small, white; berries red or crimson.
- amligus.* 2. P. foliis deciduis ovalibus utrinque acuminatis mucronato-serrulatis subtus pubescentibus, floribus 4-5-fidis, masculis ad imos rannulos congestis, stamineis solitariis.—*Mich. fl. amer. 2. p. 236.*
Cassine caroliniana. Wult. fl. car. 242.
 In sandy wet woods and on the borders of swamps: New Jersey to Carolina. ♀. July, Aug. v. v. Flowers white; berries red, larger than No. 1.
- lævigatus.* 3. P. foliis deciduis lanceolatis adpresso-serratis acuminatis utrinque glabris supra nitidis, subtus ad nervos vix pubescentibus, floribus femininis axillaribus solitariis subsessilibus: masculis sparsis: omnibus 6-fidis.
 On the Allegany-mountains: New York to Virginia. ♀. July. v. v. Berries large, dark-red.
- lanceolatus.* 4. P. foliis deciduis lanceolatis tenuissime et remote serrulatis utrinque acutis utrinque glabris, floribus femininis sparsis subgeminis pedunculatis 6-fidis, masculis aggregatis 3-andris.
 In the lower counties of Carolina and Georgia. ♀. June. v. s. Berries small, scarlet.

Corymbus dense multiflorus, lanato-tomentosus. *Flores* extus albo-lanati, intus flavi. *Pedicelli* longitudine flororum. *Corolla* 6-fida: laciniis oblongis acutis, 3. interioribus vix angustioribus, superne glabris fusco-luteis, inferne densissime lanatis: pilis pluñosis aureis. *Filamenta* 6. filiformia, glabra, corollæ-vix breviora. *Antheræ* ovatæ, erectæ, aurantiacæ. *Germen* superum, subrotundum, glabrum. *Stylus* subulatus, 3-partibilis, longitudine filamentorum. *Stigma* simplex.

This singular and beautiful perennial I discovered about the year 1805, and considered it as a species of *Argolasia* of Jussieu or *Lanaria* of Aiton, until I had the opportunity of seeing Mr. Brown's *Prodromus*, in which the genus *Conostylis* is the nearest of any genus I know, though it even differs from that genus materially by the germ being almost entirely superior, and not half inferior.

293. ALETRIS. *Gen. pl. 579. Mich. fl. amer. 1. p. 189.*

1. *A. floribus pedicellatis oblongo-tubulosis, corollis fructiferis læviusculis farinosis, foliis lato-lanceolatis mucronatis.* — *Mich. fl. amer. 2. p. 189.*

A. farinosa. Willd. sp. pl. 2. p. 183.

Icon. Pluk. amalh. t. 437. f. 2. Bot. mag. 1418.

In dry gravelly woods, on the side of hills: New England to Carolina. ♀. June, July. v. v. Flowers white, in a long spike; known by the name of *Star-grass* or *Colic-root*; the last name, from its being considered an excellent remedy in that disease.

2. *A. floribus subsessilibus breviter tubulatis subcampanulatis, corollis fructiferis rugosis scaberrimis, foliis lanceolato-ensiformibus acutis.* — *Mich. fl. amer. 1. p. 190.*

Wurmbea bullata. Willd. hort. berol. t. 8.

In sandy fields and woods: New Jersey to South Carolina. ♀. July, Aug. v. v. Flowers covered with a mealy substance, as in the first species, but the divisions are tipped with golden-yellow; the leaves are narrower and longer. There is not any doubt of this plant properly belonging to *Hexandria Trigynia*; but the styles are glued together during flowering, and only divide on the ripening of the fruit.

alba.

aurea.

294. AGAVE. *Gen. pl. 582.**virginica.*

1. A. acaulis, herbacea; foliis cartilagineo-serratis, scapo simplicissimo. *Willd. sp. pl. 2. p. 193.*

Icon. Jacq. ic. rar. 2. t. 378. Bot. mag. 1157.

On the rocky and fertile banks of rivers: Virginia to Carolina. \mathcal{U} . July. *v. v.* Flowers greenish-yellow, very fragrant.

295. PHALANGIUM. *Tournef. Juss. gen. pl. 59.**croceum.**Quamash.*

1. P. bulbosum; scapo foliis gramineis multo brevioribus, spica pyramidalis, bracteis convoluto-amplexantibus obtusis, seminibus subglobosis laevigatis.—*Mich. fl. amer. I. p. 196.*

In low grounds of Georgia. *Michaux.* \mathcal{U} . +. Flowers saffron-coloured; seeds black.

2. P. bulbosum; scapo foliis linearibus carinatis longiore, spica racemosa, bracteis linearibus, petalis 5. adscendentibus: infimo deflexo, stigmate obtuso.

On the upper part of the Missouri, near the Rocky-mountains. *M. Lewis.* \mathcal{U} . June, *v. s. in Herb. Lewis.* Flowers large, pale blue.

Bulbus tunicatus, subrotundus. *Scapus* simplex, nudus, erectus, teres, glaber, pedalis et ultra. *Folia* radicalia, pauca, longe linearia, subtus carinata, glabra, semiunciam lata. *Flores* spicato-racemosi, bracteati. *Bracteæ* marcescentes, solitariæ, lineares, membranaceæ. *Pedunculi* solitarii, uniflori, teretes, bracteis breviore. *Corolla* marcescens, infera, hexapetalopartita. *Petala* subæqualia, lineari-lanceolata: quinque adscendentia: sextum deflexum. *Filamenta* subulata, æqualia, petalis breviora, ad basin petalorum inserta. *Germen* trigonum. *Stylus* longitudine corollæ, subclavatus. *Stigma* obtusum. *Capsula* subrotundó-triquetra, 3-locularis: loculis polyspermis. *Semina* oblonga, nigra.

It deviates from the character of *Phalangium* in some respects, particularly in its ascending petals, but not sufficiently to give materials to frame a new genus.

This plant is known among the natives by the name *Quamash*, and the bulbs are carefully collected by them and baked between hot stones, when they assume the appearance of baked pears, and are of an

agreeable sweet taste. They form a great part of their winter stores. Though an agreeable food to Governor Lewis's party, they occasioned bowel complaints if eaten in any quantity.

In shady woods, in sandy soil : New Jersey to Lower Carolina. 1. May, June. v. v. Flowers larger than No. 1, of a deeper yellow.

grandiflora.

3. *U. foliis perfoliatis oblongis acutis, petalis intus laevibus, antheris obtusiusculis, nectaris subrotundis.* *Smith exot. bot. 1. p. 99. t. 51.*

U. perfoliata major. Mich. fl. amer. 1. p. 199.

U. lanceolata. Willd. sp. pl. 2. p. 94.

Icon. *Corn. canad. t. 39. Smith l. c.*

On shady hills, in fertile soil, and among rocks : Canada to Carolina. 1. June. v. v. Flowers larger than the other species, of a beautiful yellow. The *U. lanceolata* of the Hortus Kewensis is the same with Dr. Smith's *U. grandifolia*, according to specimens in the Herbarium of A. B. Lambert, Esq.

4. *U. caule glabro, foliis sessilibus lanceolato-ovalibus subtilis glaucescentibus, corollæ lacinia planis intus laevibus, capsula stipitata.* — *Willd. sp. pl. 2. p. 95.*

sessili/olia.

Icon. *Smith exot. bot. 1. p. 101. t. 52. Bot. Mag. 1402.*
In shady woods : Canada to Carolina. 1. June. v. v. Flowers pale yellow.

puberula.

5. *U. caule puberulo*, foliis subamplexicaulis ovalibus basi rotundatis utrinque concoloribus, corolla lacinialis acutis intus levibus, capsula sessili.—*Mich. fl. amer.* 1. p. 199.

On the mountains of Carolina. *Mich. fl. amer.* 1. + Resembles the foregoing species; flowers larger.

distortus.

303. STREPTOPUS. *Mich. fl. amer.* 1. p. 200.
1. *S. glaber*; foliis amplexicaulibus, pedicellis solitariis medio distorto-geniculatis. *Mich. fl. amer.* 1. p. 200.
Uvularia amplexifolia. *Willd. sp. pl.* 2. p. 93.

Icon. *Pl. rar. hung.* t. 167.
In shady woods: Canada to Pennsylvania on high mountains. ♀. May, June. v. v. Flowers greenish-yellow, the size of *Convallaria majalis*.

roseus.

2. *S. glaber lucidus*; foliis amplexicaulibus serrulato-ciliatis, antheris brevibus bicornibus. *Mich. fl. amer.* 1. p. 201.

Icon. *Mich. l. c. t.* 18.

On the high mountains of Carolina, Pennsylvania, and in Canada. ♀. May—July. v. v. Flowers rose-coloured.

lanuginosus.

3. *S. subcandanti-lanuginosus*; foliis sessilibus basi subcordatis acuminitatis, pedicellis in brevissimo stipite geminatis. *Mich. fl. amer.* 1. p. 201.

On the high mountains: Pennsylvania to Carolina. ♀. June. v. v. Flowers large, yellowish-green; berries red.

nigella.

304. CONVALLARIA. *Gen. pl.* 575. *Desfont. in annal. mus. hist. nat.* 9. p. 46.

1. *C. scapo nudo lavi*, foliis ovatis. *Willd. sp. pl.* 2. p. 160.

Icon. *Fl. dan.* 854.

On the highest mountains of Virginia and Carolina. ♀. May. v. v. Flowers white, fragrant.

umbellata.

305. SMILACINA. *Desfont. in annal. mus. hist. nat.* 9. p. 51.

3. *S. foliis radicalibus oblongo-ovalibus margine et carina capo pubescente, umbella terminali, pedicelis longatis*.—*Desfont. l. c.* 53.

- Convallaria umbellata.* Mich. fl. amer. 1. p. 202.
S. borealis. Ker in bot. mag.
 Icon. Desfont. l. c. t. 8. Bot. mag. 1155.
 On the Allegany mountains: Pennsylvania to Carolina; rare. 4. May, June. v. v. Flowers white, fragrant.
2. *S. subcaulescens*; foliis elliptico-obovatis margine ciliatis, scapo pubescente, umbella corymbosa interdum proliifera, pedicellis nudis nutantibus.—Bot. mag. 1403. *Dracæna borealis.* Willd. sp. pl. 2. p. 158.
 Icon. Ait. kew. 1. t. 5. Bot. mag. 1403. Bot. repos. 206.
 On the Allegany mountains, in bogs, and in Canada and New England. 4. June, July. v. v. Flowers large, greenish-yellow: fruit beautiful amethystine blue.
3. *S. caule bifolio*, foliis cordato-oblongis subsessilibus utrinque glaberrimis, racemo simplici terminali, floribus tetrandris.
Convallaria bifolia. Mich. fl. amer. 1. p. 201.
Majanthemum canadense. Desfont. l. c. p. 54.
 3. *S. foliis ovatis basi virga cordatis.*
 4. *S. caule trifoliato*, foliis lato-cordatis.
 Icon. Pluk. alm. t. 434. f. 4.
 In shady woods, round the roots of old trees and in the bogs on high mountains. 4. May. v. v. Flowers small, white.
4. *S. caule altere trifoliato pubescente*, foliis oblongo-lanceolatis, racemo terminali laxo.—Desfont. l. c. p. 52. *Convallaria trifolia.* Willd. sp. pl. 2. p. 163.
 Icon. Gmel. fl. sibir. 1. t. 6.
 On the highest Allegany mountains, in deep sphagnum places: Pennsylvania, New York, and in Canada. 4. June, July. v. v. Flowers small, white.
5. *S. caule altere folioso*, foliis amplexicaulibus lanceolatis seu ovali-lanceolatis, racemo simplici terminali.—Desfont. l. c. p. 52.
Convallaria stellata. Willd. sp. pl. 2. p. 163.
 Icon. Corn. canad. t. 33. Moris. hist. 3. s. 15. t. 4. f. 7. Bot. mag. 1043.
 In Canada, and along the tract of mountains on river banks as far south as Virginia. 4. May, June. v. v. About a foot high; flowers in a close spike, white.
6. *S. caule altere folioso arcuato*, foliis sessilibus ovatis ciliatis, panicula terminali conferta.—Desfont. l. c. p. 53.
 Icon. Desfont. l. c. t. 9.

Icon. *Fl. dan. 152. Abbot 77. Engl. bot. 279.*
- In dry hilly woods: Canada to Carolina. 4. June, July. v. v.

6. *P. caule angulato, foliis sessilibus ovatis acuminatis, pedunculis unis aut multifloris.* Desfont. t. c. p. 50.
Convallaria latifolia. Willd. sp. pl. 2. p. 162.
 Icon. Jacq. austr. 3. t. 232.
 On the sandy and gravelly banks of rivers, in shady wet situations: Pennsylvania and Virginia. $\frac{1}{2}$. June, July.
v. v. The tallest of all the species, sometimes four feet high.

307. ASPARAGUS. Gen. pl. 573.

1. *A. caule herbaceo inermi suberecto tereti, foliis setaceis molibus, stipulis subsolitariis.* Smith fl. brit. 1. p. 369.
 Willd. sp. pl. 2. p. 150.
 Icon. Fl. dan. 803. Engl. bot. 339.
 Common *Asparagus* is frequently found in an apparently wild state, but has been introduced from Europe.

308. ORONTIUM. Gen. pl. 587.

1. *O. foliis lanceolato-ovatis, scapo cylindrico spicato.*—Willd. sp. pl. 2. p. 199.
 Icon. Amaen. acad. 3. t. 1. f. 3.
 In rivulets and low stagnant waters: Canada to Florida.
 $\frac{1}{2}$. April, May. *v. v.* Yellow flowers in a close cylindric spike, of a most singular smell. I observed a variety with almost linear leaves, in the Salt marshes near New York.

309. ACORUS. Gen. pl. 586.

1. *A. scapo mucrone longissimo foliaceo.* Willd. sp. pl. 2. p. 199.
 Icon. Abbot 77. Engl. bot. 356.
 In overflowed places and old ditches; frequent: Canada to Carolina. Has the appearance of a flag, and called *Sweet-flag*, from the aromatic smell and taste of its roots.

310. JUNCUS. Gen. pl. 590.

- * *Culmis nudis.*
1. *J. culmo nudo tereti, panicula terminali, involucri diphylo spinoso, capsulis subrotundis mucronatis.* Smith fl. brit. 1. p. 374. Willd. sp. pl. 2. p. 204.
J. maritimus. Lam. encycl. 3. p. 253.

- Icon. *Engl. bot.* 1614.
On the sandy sea-coast : New Jersey, &c. 24. July. v. v.
- conglomeratus.* 2. J. culmo nudo stricto, panicula laterali conglobata, capsulis retusis, floribus triandris. *Smith fl. brit.* 1. p. 376. *Willd. sp. pl.* 2. p. 203.
Icon. *Host. gram.* 3. t. 82. *Leers. fl. herb.* t. 13. f. 1.
In wet pastures, frequent. 24. June, July. v. v.
- effusus.* 3. J. culmo nudo stricto, panicula laterali effusa supradecomposita, capsulis obtusis. *Smith fl. brit.* 1. p. 376. *Willd. sp. pl.* 2. p. 205.
Icon. *Host. gram.* 3. t. 83.
Frequent in low grounds, on road sides, &c. 24. June, July. v. v.
- filiformis.* 4. J. culmo nudo filiformi nutante, panicula laterali bracteata subsimplici, capsulis subrotundis. *Smith fl. brit.* 1. p. 377. *Willd. sp. pl.* 2. p. 207.
Icon. *Host. gram.* 3. t. 84. *Pluk. phyt.* t. 40. f. 8.
In boggy mountain meadows ; frequent. 24. July, Aug. v. v.
- bicornis.* 5. J. culmo erecto nudo, foliis subsetaceis canaliculato-planis, involucro setaceo diphyllo erecto paniculam superante, floribus distinctis, calyce lineari-lanceolato acutissimo. — *Mich. fl. amer.* 1. p. 191.
J. tenuis. *Rostk. junc.* 21. t. 1. f. 3. *Moris. hist.* 3. s. 8. t. 9. f. 15.
In sandy wet fields, near ponds : Carolina and Georgia. 24. July. v. v.
- selaceus.* 6. J. culmo nudo filiformi nutante, umbella laterali composita pauciflora, pedunculus multifloris, calyce subulato. *Rostk. junc.* 13. t. 1. f. 2.
In low grounds : Canada to Virginia. 24. July. v. v.
- marginatus.* 7. J. foliis planis glabris, corymbo terminali simplici proliferò, capitulis sub-10-floris, calyce capsulam obtusam æquante. *Rostk. junc.* 30. t. 2. f. 3.
On dry shady hills : Pennsylvania. 24. June. v. v.
- nodosus.* 8. J. foliis nodoso-articulatis teretibus, corymbo simplici, capitulis globosis, capsulis acuminatis calyce longioribus. *Rostk. junc.* t. 2. f. 2.

ALEXANDRIA MONOGYNA. Juncus.

On dry barren soil, on road sides; frequent. ♀. June, July. v. v.

tenuis.

15. J. culmo folioso simplici teretiusculo, foliis canaliculatis, corymbo terminali dichotomo, bracteis breviore, capsula oblonga obtusa calyce breviore. *Rostk. junc. 24. t. 1. f. 3.* *Willd. sp. pl. 2. p. 214?*

In Georgia and Carolina. ♀. +.

biflorus.

16. J. culmo folioso dichotomo, foliis angulatis subsetaceis, floribus oblongis solitariis sessilibus.—*Willd. sp. pl. 2. p. 214.*

Icon. *N. dan. 1098.* *Host. gram. 3. t. 90.* *Engl. bot. 802.*

In overflowed fields, common. July, Aug. v. v.

campestris.

17. J. foliis planis pilosis spicis pedunculatis ovatis, subcervinis intermedia sessili, calycinis foliolis mucronatis capsula obtusa longioribus. *Willd. sp. pl. 2. p. 221.*

Icon. *Engl. bot. 672.*

On dry sunny hills: Pennsylvania to Carolina. ♀. April, May. v. v.

melanocarpus.

18. J. culmo folioso, foliis sub lanceolatis glabris, panicula capillari laxa, floribus pedicellatis.—*Mich. fl. amer. 1. p. 190.*

Luzula melanocarpa. *Desvoux in journal de botanique 1. p. 142. t. 5. f. 2.*

In the western part of Canada. *Michaux.* +. Seeds black.

repens.

19. J. culmis repentibus foliosis, foliis planis angustis, capitulis paucis sessilibus pedunculatisque paucifloris, calycibus subulatis 3-andris.—*Mich. fl. amer. 2. p. 191.*

Cephaloxis flabellata. *Desvoux in journal de botanique 1. p. 324. t. 11. f. 2.*

On sandy hills in Carolina and Georgia. ♀. June. v. s.

311. PEPLIS. *Gen. pl. 605.*

americana.

1. P. floribus axillaribus solitariis, foliis crassis spatulato-ovatis, floribus apetalis.

Inundated during its flowering time, in slow-flowing places of rivers, in Pennsylvania; the flowers so diminutive that to examine them it requires a strong microscope.

II. DIGYNIA.

312. NECTRIS. Gen. pl. 610.

1. N. foliis demersis oppositis capillaceo-multifidis : emersis alternis orbiculatis peltatis integrimis. *peltata.*
N. aquatica. Willd. sp. pl. 2. p. 248.
Cabomba aquatica. Aubl. Gui. 1. p. 321. t. 124.
 In the streams of Carolina and Georgia. ♀. July, Aug.
 v. s.
2. N. foliis omnibus alternis deimersis ternatis ; emersis quinque-pinnatis. *pinnata.*
Floerkea proserpinacoides. Muhl. mss.
 In ditches and slow-flowing rivers : Pensylvania and Virginia. ♀. Aug. v. v. Flowers greenish-yellow in both species, on long axillary solitary petioles. The character of the last species deviates a little from Aublet's; but as I never had an opportunity of seeing his plant in a living state, I consider the difference so trifling that they will be better to remain united.

III. TRIGYNIA.

313. SABAL. Adanson. Pers. syn. 1. p. 399.

1. Sabal. Pers. l. c. *Adansonii.*
Raphis acaulis. Willd. sp. pl. 4. p. 1093.
Chamærops acaulis. Mich. fl. amer. 1. p. 207.
Corypha minor. Jacq. vind. 3. t. 8.
Corypha pumila. Walt. fl. car. 119.
Icon. Bot. mag. 1434. Guersent. obs. in bullet. de la soc. philomat. no. 87.
 Along the sea-coast of Carolina and Georgia. ♂. Aug.
 v. v. A species of palm of but little beauty or use.

314. CHAMÆROPS. Gen. pl. 1688.

1. C. caudice repente, stipitibus aculeato-serrulatis, frondibus palmatis.—*Willd. sp. pl. 4. p. 1155. Mich. fl. amer. 1. p. 206.*
 On the coast of Georgia and Florida. ♂. v. v. s. fl. *serrulata.*

*Hystris.*HEXANDRIA TRICYNIA. *Chamærops.*

2. *C. caudice repente, stipitibus aculeis longissimis intermixta, frondibus palmatis.*

Near the town of Savannah, Georgia. *h. v. v. s. fl.*
This singular palm grows in company with others, and distinguishes itself by its long aculei resembling porcupine quills, and often growing to the length of more than fifteen inches.

Palmetto.

3. *C. caudice arboreo, stipitibus inermibus, spathis duplicatis, frondibus palmatis.* *Willd. sp. pl. 4. p. 1155.*

Corypha Palmetto. *Wall. fl. car. 119.*

On the sea-coast of Carolina and Florida. *h. v. v. s. fl.*

A fine and useful plant; the wood used for forming almost everlasting piles for building wharfs, and the leaves can be manufactured into light and very durable hats.

315. NOLINA. *Mich. fl. amer. 1. p. 207.**georgiana.*

1. *N. folii angustissimis longis aride-gramineis, scapo laxo-ramoso foliis subulatis sparsim vestito, floribus racemosis, pedicellis aggregatis.* *Mich. fl. amer. 1. p. 208.*

Phalangium virgatum. *Lam. encycl. 5. p. 246.*

In barren sandy woods: Georgia. *Michaux and Fraser.*

2. July. v. s. in Herb. Enslen. Root a tunieated bulb; stem two feet and more high; flowers white and small.

316. CALOCHORTUS. *Pursh in linn. trans. v. 11. p. . . .**elegans.*

1. *C. scapo subtrifloro folio unico breviore, petalis interioribus lanatis.*

On the head-waters of the Kooskoosky. *M. Lewis. 2. May. v. s. in Herb. Lewis.* Flowers very elegant, white; the three inside petals are covered with a long down, and have a purple smooth spot on their base. The roots are eaten by the natives.

Bulbus solidus, subglobosus. Folium unicum, radicale, longe-gramineum, glabriuscum, plicato-nervosum, scapo longiore. Scapus simplex, teres, glaber, bi-aut triflorus. Bractæ tot quod pedicelli, lineari-lanceolate. Pedicelli filiformes, bracteis vix longiores. Flores nutantes, magnitudine Hypoxidis erecti.

317. MELANTHIUM. *Gen. pl. 618.**virginicum.*

1. *M. elatum; panicula pyramidata, petalis ovalibus subhastatis planis bimaculatis, floribus plerumque her-*

maphroditis.—*Willd. sp. pl. 2. p. 266. Lam. encycl. 4. p. 25.*

Helonias virginica. Bot. mag. 985.

In low grounds, among luxuriant herbage: New York to Carolina. ♀. June, July. v. v. Flowers greenish-white at first, and turn to a dark brown after flowering for some time.

2. *M. panicula inferne mascula, superne feminea racemosa, petalis oblongis planis brevi-unguiculatis bimaculatis, stylis germine duplo brevioribus.—Walt. fl. car. 125.*

M. polygamum. Lam. encycl. 4. p. 25.

On the mountains of Virginia and Carolina. ♀. July, v. v. Flowers smaller, and not so apt to change colour.

3. *M. panicula superne racemosa feminea, petalis subrotundis unguiculatis plicato-undulatis vix maculatis, extus hirsutis.—Walt. fl. car. 125.*

oblongis, seminibus angusto-linearibus.—*Mich. fl. amer. I. p. 212.*

In shady wet woods of Carolina and Georgia. $\frac{1}{4}$. July.
v. s.

4. *H. scapo folioso, racemo oblongo conferto, bracteis seta-aspodeloides, ceis, filamentis basi latioribus corollam sequantibus, foliis subulato-setaceis.*—*Willd. sp. pl. 2. p. 275.*

Icon. Bot. mag. 748. Pluk. mant. I. 242. f. 3.

On the sandy plains of New Jersey and Carolina. $\frac{1}{4}$.
May, June. v. v. Flowers white, small; root a kind
of bulb: the leaves form large tufts resembling those
of some *Carices*.

5. *H. scapo folioso, racemo specioso laxo, bracteis membranaceis, petalis ellipticis, filamentis filiformibus corollam superantibus, foliis subulato-setaceis longissimis.*

On high-lands near the Rocky-mountains. *M. Lewis.*
 $\frac{1}{4}$. June. v. s. Flowers white; anthers yellow. It
approaches near to the foregoing species, but its flow-
ers are three times larger, and probably an essential
distinction may lie in the seed-vessel, which I have
not seen. This plant is very useful to the natives:
out of its very tenacious leaves they weave their water-
tight baskets, which they use for cooking their vic-
tuals in.

6. *H. scapo folioso, racemo spicato nutante, pedicellis brevissimis suberectatis, filamentis corolla longioribus, petalis linearibus, foliis oblongo-lanceolatis.*

In dry shady and hilly situations: Pennsylvania to Georgia.

$\frac{1}{4}$. July. v. v. Root bulbous, known by the name
of *Star-wort*, and considered a remedy in colic.
Flower white, male and female on different plants,
which is a singularity in this family of plants.

Jacquin's *H. pumila* is without doubt an unexpanded
spike of a male of this species: the appearance of a
germen inferum is occasioned by the male flower
being divested of its petals; and no female fructification
appearing, the small pedicel was considered to be the
rudiments of a germen.

dris, calycibus obtusis. *Smith in linn. trans.* t. 10. p. 380.

On the north-west coast. *Menzies.* On the Rocky-mountains and near the mouth of Columbia river. *M. Lewis.* h. July. v. s. Flowers pale red.

4. M. foliis sparsis confertis linearibus obtusis cartilagineo-denticulatis, pedunculis terminalibus aggregatis unifloris, floribus campanulatis 10-andris, calycibus acutissimis.—*Swartz in linn. trans.* 10. p. 377. t. 30. f. 1. *Andromeda taxifolia.* *Pall. fl. russ.* t. 72. f. 2.

Erica cærulea. *Willd. sp. pl.* 2. p. 393.

Phyllodoce taxifolia. *Parad. lond.* 36.

On the White Hills of New Hampshire. *Prof. Peck.* On the north-west coast and Labrador. *Herb. Banks.* h. July. v. s. Flowers red.

cærulea.

341. DIOSPYROS. Gen. t. 1598.

1. D. foliis ovato-oblongis acuminatis glabris reticulato-venosis, petiolis pubescentibus, gemmis glabris.—*Willd. sp. pl.* 4. p. 1107.

Icon. *Mill. ic.* 126. *Catesb. car.* 2. t. 76. *Mich arb.* 12. In woods and old fields: New York to Louisiana. h.

May. v. v. A middle-sized tree; flowers pale yellow; fruit known by the name of *Persimmon*, the size of a common plum, golden-yellow, of an agreeable taste, when perfectly ripe, but extremely astringent before that time. In the Northern States the fruits are not eatable till the frost has mellowed them.

2. D. foliis oblongis acutis subtus pubescentibus, petiolis longis, fructibus oligospermis. *pubescens.*

In the lower counties of Virginia, Carolina and Georgia.

h. April. v. v. Though Michaux in his *Arbres forestiers* considers this only as a variety, I am inclined to take it as a distinct species; not only shape and pubescence of the leaf, but difference in the structure of the fruit and seeds, indicate it sufficiently.

virginiana.

342. ACER. Gen. pl. 1590.

1. A. foliis palmato subquinquelobis basi cordatis inæqualiter inciso-dentatis subtus glaucis, incisuris acutis, umbellis sessilibus, pedicellis elongatis, germinibus glabris.—*Willd. sp. pl.* 4. p. 984.

rulrum.

Icon. *Mich. arb.* 14. *Schmidt arb.* 1. t. 6. *Catesb. car.* 1. t. 62.

In low woods: Canada to Florida. ♀. April, May. v. v. A middle sized tree: flowers and seeds red; commonly known under the name of *Red-maple* or *Swamp-maple*.

dasycarpum. 2. A. foliis palmato-5-lobis basi truncatis inaequaliter inciso-dentatis subtus glabris glaucisque, sinibus obtusis, floribus conglomeratis, pedicellis brevissimis, germinibus tomentosis.—*Willd. sp. pl.* 4. p. 985.

A. eriocarpum. *Mich. fl. amer.* 2. p. 253.

A. tomentosum. *Hort. paris.*

Icon. *Mich. arb.* 13. *Schmidt arb.* 1. t. 7.

On the banks of rivers: New England to Georgia. ♀. April, May. v. v. A large tree; flowers and seed greenish-yellow; known by the name of *White-* or *Soft-maple*.

barbatum. 3. A. foliis ovato-cordatis breviter trilobis inaequaliter serratis subtus ad nervos pubescentibus glaucisque, pedunculis pilosis masculis ramosis, semineis simplicibus, calycibus intus barbatis, capsulae alii erectis.—*Mich. fl. amer.* 2. p. 252.

A. carolinianum. *Wolt. fl. car.* 251.

In deep pine and cedar swamps: New Jersey to Carolina. ♀. April, May. v. v. A small tree; flowers pale-green; leaves small.

saccharinum. 4. A. foliis palmato-5-lobis basi subcordatis acuminate si-nuato-dentatis subtus glaucis, pedunculis corymbosis nutantibus.—*Willd. sp. pl.* 4. p. 985.

Icon. *Mich. arb.* 15. *Schmidt arb.* 1. t. 8.

In low rich valleys: Canada to Pennsylvania. ♀. April, May. v. v. A large timber tree; flowers yellow. The sugar prepared from the sap of this tree is one of the greatest conveniences for the inhabitants of the western countries, is equal to any other sugar, and procured with little trouble.

nigrum. 5. A. foliis palmato-5-lobis sinu clauso cordatis, lobis divaricatis sinuato-subdentatis subtus pubescentibus, floribus corymbosis, capsulis turgide subglobosis.—*Mich. arb.* p. 238.

Icon. *Mich. arb.* 16.

On mountain lands: New York to Carolina. ♀. April, May. v. v. This large tree produces sugar similar

to the foregoing species, and occupies the same situations where the other is not found; called *Black-maple*.

6. A. foliis digitato-5-lobis, sinubus rotundatis, lobis sub-trilobatis repando dentatis subtus pubescentibus, racemis erectis, filamentis 9. hirsutis, germinibus hirsutissimis.

macrophyllum.

On the great rapids of the Columbia river. *M. Lewis.*
h. April. v. s. A very tall tree; leaves larger than any other known species; flowers greenish-yellow, in long compound racemes.

Arbor grandis. Ramuli juniores purpurascentes, glabri. Folia magna longe petiolata, juniora pubescens. Bracteæ germinarum longissimæ, lineares, apice incisa, sericeo-villosæ. Racemi terminales, erecti, elongati. Pedicelli inferne aggregati, superne solitarii, glabri. Calyx 9-fidus: laciniis obovatis, interioribus vix latioribus. Filamenta 9. subulata, supra medium barbata, calyce vix longiora. Germen hirsutissimum. Stylus glaber. Flores masculi decandri: filamentis calyce duplo longioribus.

7. A. foliis orbiculatis basi subcordatis 7-lobis inæqualiter acute-dentatis utrinque glabris, nervis venisque ad axillas pilosis.

circinatum.

On the great rapids of Columbia river. *M. Lewis.*
h. v. s. s. fl. This beautiful species has leaves of the size of *A. rubrum*.

8. A. foliis inferne rotundatis, superne acuminato-tricuspidatis argute-serratis glabris, racemis simplicibus pendulis.—*Mich. fl. amer. 2. p 252.*

striatum.

A. pensylvanicum. Willd. sp. pl. 4 p. 989.

In low grounds and on the banks of rivulets : Canada to Florida. $\frac{1}{2}$. March, April. v. v. A large shrub ; flowers yellowish-green ; berries scarlet ; known by the name of *Spice-wood*.

Diospyrus. 4. *L. humilis, virgata, nudiflora ; foliis deciduis oblongo-ovalibus subtus venosis subtomentosis, floribus glomerato-umbellatis, gemmis pedicellisque villosis.* — *Mich. fl. amer. 1. p. 243.*

L. melissaeifolia. *Walt. fl. car. 134.*

Icon. Bot. mag. 1470.

In low grounds and near rivers : Virginia and Carolina. $\frac{1}{2}$. April. v. v. A low shrub, resembling the preceding very much ; flowers greenish-yellow ; berries small, scarlet or purple.

geniculata. 5. *L. ramis divaricatis flexuosis, foliis deciduis ovalibus obtusiusculis glabris, basi subtus barbatis, sub floratione nullis, umbellulis terminalibus paucifloris, antheris 4-locularibus.* — *Mich. fl. amer. 1. p. 244.* *Walt. fl. car. 133.*

L. aestivalis. *Willd. sp. pl. 2. p. 484.*

L. foliis lanceolatis enervibus annuis. *Gronov. virg. 159.*

Icon. Bot. mag. 1471.

In low grounds, near rivers and on islands: Carolina.

$\frac{1}{2}$. April. v. v.; v. s. in Herb. Gronov. Flowers yellow; berries globous, scarlet.

6. L. foliis integris lobatisque. Willd. sp. pl. 2. p. 485.

Icon. Trew chret. t. 69 & 70. Catesb. car. 1. t. 55.
Mich. arb. t.

In woods and along the banks of large rivers, frequent in old fields: Canada to Florida. $\frac{1}{2}$. March, April. v. v. Flowers yellow; berries blue. This valuable tree, in respect to its medicinal properties, grows to a large size in the southern regions, where I have seen trees two feet in diameter; but from Virginia northwards it decreases in size, until it becomes a mere straggling shrub.

Sassafras.

353. ERIOGONUM. Mich. fl. amer. 1. p. 246.

1. E. caule erecto dichotomo, florum fasciculis axillaribus solitariis sessilibus, calycis lacinii subrotundis obtusis tomentosis, foliis ad genicula caulis sessilibus ternis quaterniis cuneato-ovoibus supra glabris.—Mich. fl. amer. 1. p. 246.

Icon. Mich. l. c. t. 24.

In pine-barrens of Carolina and Georgia. $\frac{1}{2}$. July. v. v.

The whole of this plant, excepting the upper side of the leaves, is covered with a close tomentum or woolly coat; flowers from twelve to fifteen collected in a cup or involucrum, white.

2. E. caule simplici nudo, florum fasciculis terminalibus umbellatis pedunculatis, umbella involucrata, calycis lacinii oblongis acutis sericeo-lanatis, foliis radicalibus petiolatis lanceolato-oblongis supra villosis.

On the prairies of the Missouri. Nuttall. $\frac{1}{2}$. July. v. s. in Herb. Nuttall. The whole of this plant, as well as the foregoing, is tomentose, but of a more loose texture, approaching to villous; the calyx is covered with long white silky down; flowers bright yellow. In the same country a third species has been discovered, of which I have not materials enough to give a description.

283

On the north-west coast of America. *A. Menzies.* $\frac{1}{2}$.
v. s. in Herb. Banks.

4. A. caulinibus procumbentibus, foliis obovatis acutis rugosis serratis, racemis terminalibus.—*Willd. sp. pl. 2. p. 618.*

Icon. *Fl. dan. 73. Engl. bot. 2030.*

In Canada. $\frac{1}{2}$. May, June. *v. v.* Flowers white; berries black.

5. A. caulinibus procumbentibus, foliis cuneato-obovalibus integerrimis margine convexis coriaceis, floribus fasciculatis, baccis 5-spermis.—*Willd. sp. pl. 2. p. 618.*

Icon. *Schmidt arb. t. 138. Fl. dan. t. 33. Engl. bot. 714.*

In the pine-barrens of New Jersey, and in mountainous and rocky situations of Canada and New England. $\frac{1}{2}$. June. *v. v.* Flowers pale red; berries scarlet. On the plains of the Mississippi the Indians smoke the leaves under the name of *Sacacomis*, and consider them of great medicinal virtue.

*alpina.**Uva ursi.*356. GAULTHERIA. *Gen. pl. 749.*

1. G. caule procumbente, ramis erectis, inferne nudis superne confertim foliosis, foliis obovatis basi acutis tenuissime ciliato-dentatis, floribus paucis terminalibus nutantibus.—*Willd. sp. pl. 2. p. 616.*

Icon. *Bot. rep. 116. Duham. arb. t. t. 113.*

In dry woods, on mountains, and in sandy plains: Canada to Virginia. $\frac{1}{2}$. May. *v. v.* A little shrubby plant, resembling seedling plants of *Kalmia latifolia*; flowers white; berries red, eatable, and known by the name of *Partridge-berries*. The leaves, if properly cured, make a most excellent tea, for which reason it is likewise known by the name of *Mountain-tea*.

2. G. caule repente hispido, foliis subrotundo-ovalibus acutis, floribus solitariis axillaribus subsessilibus octandris, corollis brevi-campanulatis.

Vaccinium hispidulum. Willd. sp. pl. 2. p. 355.

Arbutus filiformis. Lam. encycl. 1. p. 228.

Icon. *Mich. fl. amer. 1. t. 23.*

In sphagnum swamps, particularly where cedars and other evergreens abound: Canada to Pennsylvania. $\frac{1}{2}$. April, May. *v. v.* A small creeping plant; berries white, very sweet, and agreeable to eat.

3. G. erecta fruticosa; foliis ovatis subcordatis serrulatis,

Shallon.

hispidum
Chionanthus

Racemis secundis bracteatis, pedicellis medio bibracteolatis.

On the falls of Columbia and near the Western Ocean.
M. Lewis. On the North-west coast. A. Menzies.

2. *h. May, June. v. s. in Herb. Lewis. nec non Banks.*

Frutes semperfiores. Rami teretes, verrucosi, glabri : juniores ferrugineo-pubescentes. Folia alterna, brevissime petiolata, ovata vel lato-ovalia, interdum basi subcordata, abrupte acuminata, serrulata, coriacea, utrinque glabra, subtus nervis venisque reticulatis prominentibus. Racemi in apice ramulorum axillares et terminales, simplices, ferrugineo-pubescentes. Flores secundi, bracteati, albi, rore rubro pubescentes. Pedicelli solitarii, medio bibracteolati. Bracteae lanceolatae. Corolla urceolata, limbo subclauso, 5-dentata. Bacca subglobosa, acuta, carnosa, purpurea, extus hirsuta, intus semi-5-valvis : loculis polyspermis. Semina ovato-subtriangularia.

3. This elegant evergreen shrub is in high esteem among the natives, on account of its berries, which they call *Shallon*, and which name I have adopted here. Mr. A. Menzies, who was the first discoverer of this shrub, observes one peculiarity, which is its growing under the shade of close pine forests, where scarcely any other plant thrives: this makes it so much more desirable for our plantations, as a highly ornamental shrub, since but few will bear such a situation. I was first inclined to take this species to belong to *Arbutus*, having only seen imperfect specimens; but through the liberal communication of Mr. A. Menzies, I have been enabled to class it more properly with this genus, though it deviates from both in some respects.

357. VACCINIUM. Gen. pl. 658.

In swamp of Lower Carolina and Georgia. ↳ May, June. *v. v. ; v. s. in Herb. Banks.* An elegant small shrub ; flowers red and white striped ; calyx brown.

angustifoli-un.

12. *V. foliis sessilibus cuneato-lanceolatis subserrulatis venosis pubescentibus, fasciculis sessilibus, pedicellis brevissimis, calycibus acuminatis, corollis ovatis fauce valde coarctatis, stylo exerto.* — *Mich. fl. amer. 1. p. 232.*

galeans.

- In shady woods and swamps : Virginia and Carolina. ↳ May, June. *v. v.* Flowers small, yellowish-white ; berries small, globular, black.

- ligustrinum.* 13. V. ramis angulatis, foliis subsessilibus erectis lanceolatis mucronatis serrulatis venosis pubescentibus, fasciculis gemmaceis sessilibus, pedicellis vix ulla, corollis oblongi-ovatis.—*Willd. sp. pl. 2. p. 352. Mich. fl. amer. 1. p. 233.*

In dry woods : Pennsylvania to Virginia ; common on the mountains. ♀. May. Junc. v. v. An upright straight shrub ; flowers purplish-red, berries black. This species varies extremely in the shape and size of the leaves.

- tenellum.* 14. V. ramis angulatis viridibus, foliis sessilibus ovato-lanceolatis mucronatis serrulatis utrinque lucidis, fasciculis confertifloris subterminalibus sessilibus, corollis ovatis.—*Willd. sp. pl. 2. p. 353. Ait. kew. 2. p. 12.*

V. *pensylvanicum.* *Lam. encycl. 1. p. 72. Mich. fl. amer. 1. p. 232.*

On dry hills, in gravelly soil : New England to Virginia. ♀. May. v. v. ; v. s. in *Herb. Banks.* A low, very branching shrub ; flowers pale red ; calyx green ; berries large, blueish-black, extremely sweet and agreeable to eat. The mountains of Pennsylvania produce an immense variety of this species, in size, and shape of the fruit, leaves and flowers.

|| *Floribus solitariis.*

- uliginosum.* 15. V. foliis parvis obovatis obtusis integerrimis supra glabris subtus venosis pubescentibus glaucisque, floribus sub-solitariis, corollis brevi-urceolatis.—*Willd. sp. pl. 2. p. 350. Mich. fl. amer. 1. p. 235.*

Icon. Fl. dan. 231. Engl. bot. 581.

In bogs of the more northern regions of America. ♀. April, May. v. s. From one to two feet high ; flowers rose-coloured ; stamens from eight to ten ; berries blueish-black, eatable.

- myrtilloides.* 16. V. foliis angusto-lanceolatis membranaceis integerrimis subtus juxta nervos et margine pubescentibus, floribus sparsis subsolitariis brevissime-pedicellatis.—*Mich. fl. amer. 1. p. 234.*

V. *angustifolium.* *Willd. sp. pl. 2. p. 351. Ait. kew. 2. p. 11.*

In Canada about Hudson's Bay and Labrador. ♀. April, May. v. s. in *Herb. Banks.* Berries large, blueish-black, known by the name of *Bluets.*

VOL.

17. *V. pusillum*, cespitosum, glaberrimum; foliis cuneato-
obovalibus rotundato-obtusis conspicue serratis mem-
branaceis, floribus rameis solitariis subsessilibus, co-
rolla breviter pedicellata. *Mich. fl. amer.* 1. p. 234.

In the more northern regions, particularly about Hud-
son's Bay. *Michaux.* $\frac{1}{2}$. A little shrub not above
three inches high; berries black. Among the spec-
imens of A. Menzies from the north-west coast in
the Banksian Herbarium is one very like the present
species, but apparently evergreen.

++ *Folis sempervirentibus.*

* *Corollis campanulatis.*

18. *V. humile*; caulis repens, ramulis erectis, foliis
obovatis emarginatis revolutis subseriatibus supra luci-
dis, subtus punctatis, racemis terminalibus nutanti-
bus, corollis cylindrico-campanulatis.—*Willd. sp. pl.* 2.
p. 354. *Mich. fl. amer.* 1. p. 229.

Icon. Fl. dan. 40. *Engl. bot.* 593.

On rocks near the sea-coast: Canada to New England.
 $\frac{1}{2}$. May, June. v. v. A low shrub; flowers pale
red, generally 4-cleft with four stamens; berries red,
acid. The American plant is more robust than the
European, and the leaves are considerably larger.

19. *V. repens*, glaberrimum; foliis petiolatis ovalibus luci-
dis revolutis rarer denticulatis, fasciculis axillaribus
subsessilibus paucifloris, corollis subgloboso-campanu-
latis brevissime 5-denticulatis, antheris dorso muticis.
Mich. fl. amer. 1. p. 229.

In Carolina. *Michaux.* $\frac{1}{2}$. +. Berries small, black.

20. *V. diffusum*; ramis adscendentibus laxis, follis oblongo-
lanceolatis utrinque acutis serratis rigidis glabris, race-
mis terminalibus corymbosis bracteatis paucifloris,
floribus nutantibus, calycibus adpressis, corollis pa-
tulo-campanulatis profunde acuteque 5-dentatis.—
Bot. rep. 105.

In Carolina. *Fraser.* $\frac{1}{2}$. May, June. v. v. Flowers
pink red, very ornamental.

** *Corollis urceolatis.*

21. *V. erectum*, ramosissimum; ramis distichis, foliis nitidis
obovato-ellipticis utrinque acutis glabris serratis, ra-
cemis terminalibus corymbosis bracteatis nutantibus,
corollis cylindraceis.—*Bot. rep.* 480.

In Carolina. ♀. May, June. v. v. Flowers pink-red. This species approaches near to No. 20, but differs in the shape of the corolla materially; it is also near to the following, but sufficiently different.

- myrsinitis.* 22. V. erectum, ramosissimum, microphyllum; foliis sessilibus ovalibus mucronatis subserrulatis supra laevigatis lucidis subtus subhirudinatis scabro-punctatis, fasciculis gemmaceis terminalibus lateralibus, corollis oblongo-ovatis.—*Mich. fl. amer. 1. p. 233.*

lanceolatum. β. V. foliis lanceolatis utrinque acutis.
obtusum. γ. V. foliis subrotundo-ovatis.

In dry sandy woods: Carolina and Florida. ♀. May, June. v. v. A beautiful little shrub; calyx scarlet; corolla purple.

- turifolium.* 23. V. pumilum; foliis obovatis crenato-dentatis glabris; fasciculis congestis subsessilibus axillaribus et terminalibus, corollis brevi-ovatis, filamentis glandulosis, stigmate capitato.—*Bot. rep. 4. Bot. mag. 929.*

V. brachycerum. *Mich. fl. amer. 1. p. 234.*

In dry woods, on limestone rocks: western parts of Virginia, near Winchester and the Sweet-springs. ♀. June. v. v. A handsome little shrub; flowers white, delicately tinged with red.

- ovatum.* 24. V. foliis petiolatis ovatis acutis revolutis serratis glabris coriaceis, racemis axillaribus et terminalibus bracteatis brevibus, corollis cylindraceis, calycibus acutis. On the Columbia river. *M. Lewis.* On the north-west coast. *Menzies.* ♀. May. v. s. in *Herb. Banks.*

- obtusum.* 25. V. repens; foliis parvis ovalibus utrinque rotundato-obtusis mucronatis integerrimis glabris coriaceis, pedunculis axillaribus solitariis unifloris. On the north-west coast. *Menzies.* ♀. v. s. s. fl. in *Herb. Banks.*

358. ANDROMEDA. Gen. pl. 747.

* *Foliis perennantibus.*

- tetragona.* 1. A. foliis imbricatis carinatis margine nudis, pedunculis axillaribus solitariis filiformibus unifloris, corollis nutantibus campanulatis.—*Willd. sp. pl. 2. p. 607.*

Icon. Pall. fl. ross. 2. t. 73. f. 4. Fl. lapp. t. 1. f. 4.
In Canada; Labrador. *Colmaster.* On the north-west coast. *Nelson.* ♀. May, June. v. s. Flowers white.

2. *A. foliis imbricatis subnatis glabris, pedunculis solitaris terminalibus unifloris, corollis nutantibus globoso-campanulatis.* — *Willd. sp. pl. 2. p. 608.*
Icon. Fl. dan. 10. Pall. fl. moss. 2. t. 73. f. 2.
 On the north-west coast. *Nelson.* $\frac{1}{2}$. May. *v. s. in Herb. Banks.* A small creeping shrub, resembling a moss; flowers white, tinged with red.
 3. *A. foliis linearis-lanceolatis convexis revolutis subtus albicans-glaucis supra glauco-canescensibus, floribus aggregatis terminalibus, corollis subglobosis, antheris versus apicem aristatis.* — *Willd. sp. pl. 2. p. 610.*
Mich. Fl. amer. 2. p. 254.
 a. *A. foliis lanceolato-linearis, lacinias calycinis oblongis ribratis.* *Ait. kew. 2. p. 68.*

 b. *A. foliis oblongis, corollis ovatis incarnatis, lacinias calycinis patentibus ovatis albis interdum apice rubicundis.* *Ait. kew. 2. p. 68.*
 In bogs of Canada and Labrador, and on the borders of mountain-lakes, in sphagnum grounds: New York and Pennsylvania. $\frac{1}{2}$. June. *v. v.* A small shrub, about one foot high; flowers white, tinged with red. I strongly suspect the variety *a.* to be a distinct species, which might be called *A. rosmarinifolia*.
 4. *A. foliis lanceolato-oblongis obtusiusculis obsolete serrulatis subrevolutis squamoso-punctatis subtus ferrugineis, racemis terminalibus foliosis secundis, pedicellis brevibus solitariis axillaribus, calycibus acutis basi bibracteatis, bracteis lato-ovatis acuminatis, corollis oblongo-cylindraceis.* *Willd. sp. pl. 2. p. 614.*
Icon. Pall. fl. moss. 2. p. 53. t. 71. f. 1.
 In bogs and swamps; frequent, particularly on the mountains: Canada to Virginia. $\frac{1}{2}$. April, May. *v. v.* Flowers white.
 5. *A. foliis linearis-lanceolatis acutis margine subundulato-revolutis squamoso-punctatis subtus subferrugineis, racemis terminalibus foliosis secundis, pedicellis brevibus solitariis axillaribus, calycibus acuminatis basi bibracteatis, bracteis minutis acutis, corollis oblongo-ovalibus.*
A. calyculata γ . *angustifolia.* *Ait. kew. 2. p. 70.*
 In open swamps: Carolina and Georgia. $\frac{1}{2}$. April, May. *v. v.; v. in Herb. Lambert.* This species approaches nearly to the preceding, but is sufficiently distinct to admit it to be more than a variety.

*hypnoides.**polifolia.**angustifolia.**latifolia.**calyculata.**angustifolia.*

ferruginea.

6. A. fruticosa ; ramis subflexuosis, foliis coriaceis distans
tibus longe petiolatis obovatis plerumque obtusis inter-
gerrimis planis margine revolutis subtus squamoso-
farinosis reticulato-venosis, pedicellis aggregatis axil-
laribus simplicibus unifloris paucis furfuraceo-ferrugi-
neis, corollis subglobosis, antheris muticis.

*A. ferruginea. Walt. fl. car. 138.**A. ferruginea β. fruticosa. Mich. fl. amer. 1. p. 252.**Icon. Vent. malm. 80.*

In the pine-woods of Georgia and Florida. ♀. June.
v. v. A shrub from three to five feet high. Flowers
small, white inside and ferruginous outside.

rigida.

7. A. arborescens ; ramis strictis, foliis coriaceis rigidis con-
fertis brevi-petiolatis cuneato-lanceolatis acutis inter-
gerrimis convexis margine revolutis subtus squamoso-
tomentosis subaveniis, pedicellis aggregatis axillaribus
simplicibus unifloris numerosis furfuraceo-ferrugineis,
corollis subglobosis, antheris muticis.

A. ferruginea. Willd. sp. pl. 2. p. 609. Ait. kew. 2. p. 67.

A. ferruginea α. arborescens. Mich. fl. amer. 1. p. 252.
In barren sandy woods : Carolina to Florida. ♀. April.
v. v. A shrub almost twenty feet high, or sometimes
forming a small tree : though nearly allied to the
former species, their habits, and particularly their flow-
ering time, differ so materially, that I have always con-
sidered them to be distinct species.

nitida.

8. A. glaberrima ; ramus subtriquetris, foliis coriaceis ova-
libus acuminatis integerrimis laevigatis, costa marginem
deflexum percurrente, fasciculis axillaribus, corollis cylindraceis, lacinias calycis elongatis linearibus
coloratis, antheris basi bicorniculatis.—Mich. fl. amer.
1. p. 252.

DECANDRIA MONOGYNA. Rhododendron.

- 1.
- variety γ.* approaches near to *R. ponticum*, but is different in its foliaceous calyx and otherwise; it occupies the borders of lakes on high mountains, and grows to an immense size; its stem is often found eighteen inches and more in diameter, and its foliage triple the size of any other species: it might be considered as a distinct species. The only plant of this sort I have seen in England is in the garden of James Vere, Esq. at Kensington Gore. The leaves of var. β . are so distinct from var. α . that it also has claims to be a species.
- punctatum.* 2. *R. foliis ovali-lanceolatis utrinque acutis glabris subtus ferrugineis resinoso-punctatis, umbellis terminalibus, pedicellis brevibus, dentibus calycis brevissimis, corollis infundibuliformibus, lacinia ovata subundulatis, capsulis elongatis.* — *Willd. sp. pl. 2. p. 607.*
R. minus. Mich. fl. amer. 1. p. 258.
Icon. Bot. rep. 36. Vent. hort. cels 15.
 On the mountains of Carolina, particularly on the head-water of the Savannah river. $\frac{1}{2}$. July, Aug. v. v. An elegant shrub, not near the size of No. 1; flowers pink-red and smaller.
- catawbiense.* 3. *R. foli brevi-ovalibus utrinque retundato-obtusis glabris subtus discoloribus, umbellis terminalibus, lacinia calycis elongato-oblongis, corollis campanulatis.* — *Mich. fl. amer. 2. p. 258.*
 On the high mountains of Virginia and Carolina, particularly on the head-waters of the Catawba river. $\frac{1}{2}$. May, June. v. v. s. fl. The flowers are said to be scarlet.

362. RHODORA. *Gen. pl. 745.*

- canadensis.* 1. *Rhodora. Willd. sp. pl. 2. p. 603.*
Icon. Bot. mag. 474. Lam. illustr. 364. L'Herit. stirp. 1. t. 68.
 In bogs of Canada, and on the high mountains of New York and Pennsylvania. $\frac{1}{2}$. April, May, v. v. A shrub about two feet high, of the appearance of *Azalea*. Leaves elliptic, entire, of a glaucous hue, and pubescent underneath. Flowers in terminal umbels, pale purple.

2.

3.

4.

5.

363. PYROLA. *Gen. pl.* 572.

1. *P. foliis rotundatis sive subrotundo-ovalibus obsolete serrulatis, spica floribus undique versis, pistillo declinato.* — *Willd. sp. pl. 2. p. 621.*
Icon. Fl. dan. t. 10. Engl. bot. 213. Lam. illustr. t. 367. f. 1.
 In dry stony or sandy woods : Canada to Carolina. ♀. June, July. v. v. Flowers white ; the stigma is rotate, with five tubercles.
rotundifolia.
2. *P. foliis reniformibus, scapo squamis nonnullis convolutis vaginantibus remote vestito, spica floribus undique versis, pistillo declinato.* *Mich. fl. amer. 1. p. 251.*
 In Canada. *Michaux.* On the mountains of Pennsylvania, in beech-woods. *P.* ♀. July. v. v. Flowers yellowish-green.
asarifolia.
3. *P. foliis subrotundo-ovalibus serrulatis, scapo subnudo, spica floribus undique versis, pistillo recto.* — *Willd. sp. pl. 2. p. 621.*
Icon. Fl. dan. 55. Engl. bot. 158.
 In Canada and Labrador ; rare in the western parts of New York. ♀. July. v. v. Flowers smaller than the foregoing species, white, with a tinge of red ; stigma peltate.
minor.
4. *P. foliis rotundato-ovatis acutis serratis, spicae floribus secundis, pistillo recto.* — *Willd. sp. pl. 2. p. 621.*
Icon. Fl. dan. 402. Engl. bot. 517.
 In sandy barren woods : Canada to New Jersey. ♀. July. v. v. Flowers greenish-white ; stigma peltate, gibbous.
secunda.
5. *P. foliis suborbiculatis serratis, scapo unifloro, stylo recto.* *Willd. sp. pl. 2. p. 622.*
Icon. Fl. dan. t. 8. Engl. bot. 146.
 In shady woods and sphagnum swamps : Canada to New York. ♀. July. v. v. This pretty little plant has large white and fragrant flowers ; the stigma is five-radiated. All these species are evergreen, and known by the name of *Winter-green.*
uniflora.

364. CHIMAPHILA.

maculata.

1. *C. foliis lanceolatis basi rotundatis remote serratis fascia longitudinali discoloro notatis, scapo 2-3-floro, filamentis lanuginosis.*

*Pyrola maculata. Willd. sp. pl. 2. p. 622.**Icon. Bot. mag. 897. Pluk. mant. t. 349. f. 4.*

In shady gravelly or sandy woods: Canada to Carolina.

\mathcal{U} . July. v. v. Flowers white; leaves handsomely variegated. This plant is in high esteem for its medicinal qualities among the natives, they call it *Sip-sic-sewa*. I have myself been witness of a successful cure made by a decoction of this plant, in a very severe case of hysterics. It is a plant eminently deserving the attention of physicians.

corymbosa.

2. *C. foliis cuneato-lanceolatis basi acutis serratis concoloribus, scapo corymbifero, filamentis glabris.*

*P. umbellata. Willd. sp. pl. 2. p. 622.**Icon. Bot. mag. 778. Lam. illustr. t. 367. f. 2.*

In dry woods, frequent: Canada to Virginia. \mathcal{U} . July. v. v. Flowers greenish-white, tinged with red; anthers purple. Both species are handsome evergreens, and known by the name of *Winter-green*. I have ventured to form a new genus of these two species of *Pyrola*, so very distinct in habit as well as character. The name I have given is taken from the common name *Winter-green*: *Xειράς ήγειας*, and *χειρός αμίκους*.

365. LEDUM. *Gen. pl. 744.**palustre.*

1. *L. foliis linearibus margine revolutis subtus ferrugineo-tomentosis, staminibus denis corolla longioribus. Lam. encycl. 3. p. 459. Willd. sp. pl. 2. p. 602.*

*Icon. Fl. dan. 1031. Duham. arb. 1. t. 67. Schmidt arb. 163.**decumbens.*

- β . *L. spithameum decumbent. Ait. kew. ed. 2. v. 2 p. 48.*
In swamps of Canada and round mountain-lakes of New York. β . Near Hudson's Bay. \mathfrak{h} . April, May. v. v.
Flowers white.

latifolium.

2. *L. foliis linear-oblongis margine replicatis subtus ferrugineo-tomentosis, staminibus subquinis corollam æquantibus. Lam. encycl. 3. p. 459. Willd. sp. pl. 2. p. 602.*

L. grœnlandicum. Retz. obs. 4. p. 26.

*L. palustre. Mich. fl. amer. 1. p. 259.
Icon. Schmidt arb. 164. Jacq. ic. 3. t. 464. Lam. illustr. t. 363. f. 1.*
In sphagnum swamps of Canada. $\frac{1}{2}$. April, May. v. v.
A larger and broader leaved plant than the foregoing one; commonly called *Labrador Tea*.

366. AMMYRSINE.

1. *A. foliis pusillis convexis ovalibus glabris lucidis, corymbis terminalibus congestis.* *buxifolia.*
Ledum buxifolium. Willd. sp. pl. 2. p. 602. Ait. kew. 2. p. 65.
Ledum thymifolium. Lam. encycl. 3. p. 459.
Icon. Bergius act. petrop. 1777. p. 1. t. 3. f. 2. Lam. illustr. t. 363. f. 2.
In pine-barrens of New Jersey and on the mountains of Carolina. $\frac{1}{2}$. May, June. v. v. This elegant little shrub grows to the height of about six inches, and sometimes a foot; the delicacy of its leaves and abundance of its white flowers are highly ornamental. I propose it as a distinct genus, being on one side related to *Ledum*, on the other approaching very near to *Azalea procumbens*, vid. p. 154. The name has been derived from *απος sabulum*, and *μυρτη myrtus pumilus*; being known by the name of *Sand-myrtle* among the inhabitants of New Jersey.

367. CLETHRA. *Gen. pl. 751.*

1. *C. foliis cuneato-obovatis acutis superne grosse-serratis utrinque glabris concoloribus, racemis spicatis simplicibus bracteatis cano-tomentosis.—Willd. sp. pl. 2. p. 619.* *alnifolia.*
C. alnifolia denudata. Ait. kew. 2. p. 73.
Icon. Schmidt arb. 47. Lam. illustr. 369. Mill. ic. 28. Catesb. car. 1. t. 66.
In swamps, frequent: New England to Virginia. $\frac{1}{2}$. July—Sept. v. v. A shrub from three to four feet high; flowers white, as likewise all the following species are.
2. *C. foliis cuneato-obovatis acutis superne tenue-serratis subtus albo-tomentosis, racemis spicatis simplicibus bracteatis villoso-tomentosis.—Lam. encycl. 2. p. 46.* *tomentosa.*
C. alnifolia pubescens. Ait. kew. 2. p. 73.

DECANDRIA MONOGYNIA. Clethra.

In swamps of Virginia and Carolina. ♀. July, Aug. v. v. Though generally considered a variety of No. 1, I take it to be a genuine species, as I have seen seedling plants of both species keeping constantly their distinction.

scabra.

3. C. foliis lato-cunato-obovatis acutis utrinque scabris grosse-serratis; serraturis uncinatis, racemis spicatis subpaniculatis bracteatis tenui-tomentosis.—*Pers. syn.* 1. p. 483?

In the western parts of Georgia. Lyon. ♀. July. v. s. in *Herb. Lyon.*

paniculata.

4. C. foliis anguste cuneato-lanceolatis acutis acuminato-serratis utrinque glabris, panicula terminali elongata racemiflora albo-tomentosa.—*Willd. sp. pl. 2. p. 620. Ait. kew. 2. p. 73.*

In Carolina. Bartram. ♀. July, Aug. v. s. in *Herb. Banks.*

acuminata.

5. C. foliis ovalibus acuminatis basi obtusiusculis serratis utrinque glabris subtus subglaucis, racemis spicatis subsolitariis bracteatis albo-tomentosis.—*Mich. fl. amer. 1. p. 260.*

C. montana. *Bartr. catal.*

On the high mountains of Carolina. ♀. July, Aug. v. v. Grows to the size of a tree; leaves large; flowers resembling those of No. 1.

368. MYLOCARIUM. *Willd. enum.**ligustrinum.*

1. Mylocarium. *Willd. l. c.*
Cliftonia. *Herb. Banks.*

On the dry borders of swamps: Georgia. ♀. May, June. v. v. An elegant evergreen shrub, growing to the height of eight or twelve feet; flowers white, sweet-scented, in terminal spikes; seeds resembling buck-wheat, from which it has been called *Buck-wheat Tree.*

Fruter sempervirens, 8-pedalis et ultra. Caulis ramosissimus, cortice cinereo. Rami sparsi, glabri, fusi. Folia sparsa in summitate ramulorum conferta, patentia, subsessilia, cuneato-lanceolata, acutiuscula, integerrima, utrinque glabra, laevigata, plana, coriacea, subtus glauca. Racemi terminales, solitarii, simplices seu interdum basi ramosi, erecti, bracteati. Bracteae solitariae, oblongae, acutae, membranaceae, deciduae,

Mylocarium ligustrinum.

In pine-barrens and sandy fields: New Jersey to Carolina. $\frac{1}{2}$. June, July. v. v. Flowers large, yellow; berries red, eatable, known by the name of *Prickly Pears*.

There are two or three more species growing on the Missouri; but having had no opportunity to see them myself, I only mention it here, to draw the attention of the botanists in those regions towards them.

400. BARTONIA. Sims in bot. mag. 1487.

1. B. germine folioso, seminibus nudis.
B. decapetala. Sims l. c.

ornata.

On chalky soil and arid volcanic grounds, on the borders of the Missouri. M. Lewis. ♂. July, Aug.
v. s. in Herb. Lewis.

Radix biennis, fibrosa. Caulis ramosus, teres. Rami patentes, scabri. Folia alterna, semi-amplexicaulia, oblonga, basi dilatata, superne sensim angustiora, inciso-dentata seu subpinnatifida, utrinque scabra, glaucescentia. Flores magni, albi, ex axillis superioribus, solitarii, pedunculati. Pedunculi foliosi, folio breviores. Calyx superus campanulatus, 5-partitus; lacinias ovatis, longissime acuminatis, petalis paulo brevioribus. Petala 10. alba, lanceolato-oblonga, acuta, unguiculata. Stamina numerosa, filiformia, petalis breviora. Antherae luteae, oblongae, biloculares. Germen inserratum, oblongum, foliis pinnatifidis calyce brevioribus ornatum. Stylus staminibus longior, filiformis. Stigma simplex. Capsula cylindrica, calyce coronata, apice operculatum 5-valvis. Semina oblonga, plana.

This beautiful plant, whose large white flowers open during the night and spread a most agreeable odour, was discovered in the year 1804, on the white bluffs near the Maha village, by the late M. Lewis, Esquire. In 1807 I made a drawing and description of it, for

ICOSANDRIA MONOGYNIA. Bartonia.

the publication of that gentleman's Tour across the Continent of America to the Pacific Ocean. In 1812, Mr. Nuttall, on his return from a journey in those parts, brought seeds and specimens of this and another species to London; and having by those means the living plants, I agreed with Mr. Nuttall to dedicate it to the memory of Dr. B. S. Barton, of Philadelphia, our mutual friend; under which name it was published in the Botanical Magazine. Since that publication, Mr. Nuttall, whose name has occurred in several pages of this work, with all the credit due to his valuable discoveries, has found himself rather offended at not having given him all the exclusive credit of discovery, which with justice and propriety to the memory of M. Lewis, Esq. I never could do.

nuda.

2. B. germinate nudo, seminibus alatis. *Sims l. c.*
On the banks of the Missouri. *Nuttall.* ♂. July, Aug. v. v. This species has smaller flowers, and the leaves are not so glaucous as the foregoing: in every other respect the above description is applicable to the present one, with little deviation. The number of petals is variable, from ten to fifteen.

401. DECUMARIA. *Gen. pl. 815.**barbara.*

P. serotina. Roth catalect. 1. p. 58.
In the western parts of Virginia. ♀. May. v. v. A small shrub.
- borealis*. 6. *P. floribus corymbosis*, pedicellis elongatis, foliis ovali-oblongis acuminatis eroso-denticulatis membranaceis glabris, fructu subovato.—Mich. fl. amer. 1. p. 286.
Icon. Mich. arb. t.
In Canada and on the high mountains of New England and Pennsylvania. ♀. May, June. v. v. A very handsome small tree; the wood exquisitely hard and fine grained; the cherries hang in clusters, are small, red, and agreeable to the taste, but occasion an astrigency in the mouth, from which they are called *Choke-cherries*.

7. *P. umbellis subsessilis aggregatis multifloris tandem pensylvanica.*
paniculæformibus, foliis oblongo-lanceolatis serratis
glabris basi biglandulosis, ramulis punctatis.—*Willd.*
sp. pl. 2. p. 993.
- P. lanceolata. Willd. arb. t. 3. f. 3.*
In woods and near plantations: New England to Virginia.
h. April, May. v. v. This resembles *P. Cerasus* very much: the cherries are small, and agreeable to eat.
8. *P. umbellis sessilibus solitariis paucifloris, foliis deciduis*
ovatis acuminatis inæqualiter argute serratis utrinque
glabris, petiolis biglandulosis.—*Willd. sp. pl. 2.*
p. 993.
- Icon. Bot. mag. 1117.*
In Canada and on the Allegany mountains. h. May,
June. v. v.
9. *P. umbellis sessilibus aggregatis paucifloris, calycis laci-*
niis lanceolatis, stipulis setaceo-compositis, foliis ob-
longo-ovalibus obovalibusve abrupte promisseque acu-
minatis, fructu subovoato.—*Mich. fl. amer. 1. p. 284.*
In Canada and on the western mountains of Virginia and
Carolina. h. May. v. v. The fruit small, black,
extremely astringent, but eatable in winter; called
Black Choke-cherry.
10. *P. umbellis sessilibus aggregatis paucifloris, foliis ovato-*
ellipticis acutis utrinque glabris argute serratis basi bi-
glandulosis.—*Willd. sp. pl. 2. p. 993.*
- In the western parts of Pennsylvania and Virginia. h.
May. v. v. A shrub about four or five feet high;
the fruit very indifferent, black, the size of a large
pea.
11. *P. umbellis sessilibus aggregatis paucifloris, pedunculis*
calycibusque pubescentibus, foliis brevi-ovalibus ser-
rulatis basi plerumque biglandulosis, drupa sphærica,
nube subrotundo-ovoidea.
P. sphærocarpa. Mich. fl. amer. 1. p. 284.
On the sea-coast of New England. *Michaux.* In the
western parts of Pennsylvania on the borders of lakes.
P. h. May. v. v. A small shrub; flowers smaller
than any other American species; fruit brownish-pur-
ple, very astringent.
12. *P. umbellis sessilibus aggregatis paucifloris, calycibus*
acutis, ramis virgatis teretibus, foliis angusto-lanceo-

*nigra.**hiemalis.**pygmœa.**pubescens.**pumila.*

ICORANDRIA MONOGYNIA. Prunus.

- latis superne serratis subtus pallidis*.—*Willd. sp. pl. 2. p. 990.*
Icon. Mill. ic. t. 89. f. 2.
 In low grounds and swamps: Pennsylvania and Virginia.
 $\frac{1}{2}$. May. *v. v.* A small shrub of the appearance of *Amygdalus nana*; fruit red, very acid.
- depressa.* 13. *P. umbellata sessilis aggregatis paucifloris, calycibus obtusis, ramis angulatis depresso-prostratis, foliis cu-*
neato-lanceolatis rarer serratis glabris subtus glaucis,
fructu ovato.
P. pumila. Mich. fl. amer. 1. p. 286.
 On the sandy shores of rivers and lakes: Canada to Virginia. $\frac{1}{2}$. May. *v. v.* This low shrub, which spreads its branches very much, and does not rise above one foot from the ground, is known by the name of *Sand-cherries*. The fruit is black, small, and agreeably tasted.
- Chicasa.* 14. *P. gemmis aggregatis bifloris, pedicellis brevissimis, ca-*
lycibus glabris, lacinii obtusis, foliis oblongo-ovalibus
acutis seu acuminatis serrulatis, fructu subgloboso,
ramis spinescentibus glaberrimis.—Mich. fl. amer. 1. p. 284.
P. insititia. Walt. fl. car. 146.
 In Virginia and Carolina. $\frac{1}{2}$. April, May. *v. v.* Known by the name of *Chicasaw Plum*. The fruit is yellow and agreeably tasted. It is mentioned in Michaux's Flora, that it was introduced by the Indians; which probably may be the case, as it generally only occurs where ancient camps of Indians have been.
- maritima.* 15. *P. pedunculis subsolitariis, foliis ovato-oblongis acumi-*
natis duplicato-serratis. Willd. enum. 519.
P. acuminata, fruticosa; ramulis glabris, foliis oblongo-
ovalibus longiusculae acuteque acuminatis, calyce glabro,
drupa longiuscula pedunculata ovata acuminata. Mich.
fl. amer. 1. p. 284?
 On the sea-coast: New Jersey to Carolina. $\frac{1}{2}$. May. *v. v.* Fruit the size of a pigeon's egg, very good to eat, dark purple.
- Susquehan-*
nn. 16. *P. pedunculis solitariis, foliis obovato-oblongis subtus*
glaucis serratis basi integerrimis. Willd. enum. 519.
 On the banks of the Susquehannah, Pennsylvania, $\frac{1}{2}$. May. +. It appears to me that this species approaches very near to No. 13.

333

17. P. pedunculis solitariis, foliis ellipticis glabris, fructibus pendulis, ramis subinermibus. *Willd. sp. pl. 2. p. 997.*
Near habitations, frequent. ♀. April, May. v. v. This is the common *Myrabolan Cherry*, and had its origin from America, according to authors.

cerasifera.

18. P. pedunculis solitariis, foliis elliptico-lanceolatis subtus pubescentibus, fructibus rectis, ramis spinosis. *Willd. sp. pl. 2. p. 997.*

spinosa.

The common *Black Thorn*, or *Sloe*, is frequently found in hedge-rows, particularly in Pennsylvania, but has been introduced from Europe.

405. TICAREA. *Aubl. guj. 2. p. 917. Pursh in linn. trans. v. 11.*

1. T. foliis in apice ramulorum confertis, obcuneatis, 3-dentatis, supra villosis subtus cano-tomentosis, floribus terminalibus solitariis brevissime pedunculatis.

tridentata.

In the prairies of the Rocky-mountains and on the Columbia river. ♀. July. v. s. in *Herb. Lewis*. Flowers yellow.

*Frutex ramosissimus. Cortex cinerea. Ramuli brevissimi, gibbosi, apice fasciculatim foliosi. Gemmæ: squamis subrotundis, glabris, fuscis. Folia cuneiformia, quasi in petiolum angustata, apice 3-dentata seu 3-fida, laciniis lateribus acutis, intermedia submarginata, margine revoluta, supra strigoso-villosa, subtus cano-tomentosa, subtriplinervia, semiuncialia. Pedunculi brevissimi, terminales, solitarii, uniflori. Flores lutei, magnitudine *Crataegi oxyacanthi*. Calyx extus hirsutissimus, laciniis acutis. Petala obovata, subunguiculata, calyce paulo longiora. Filamenta circiter 20. longitudine petalorum. Antheræ oblongæ, bilobulares. Germen oblongum, hirsutum, longitudine staminum. Stylus brevis, obliquus. Stigma simplex. Capsula immatura calyce persistente cincta.*

This singular shrub approaches the nearest to *Tigarea* of Aublet: the seeming difference in character may only be owing to the imperfect state of the specimens Aublet's description seems to be made of. It certainly deserves to be separated from *Tetracera*, though generally united with that genus.

406. LYTHRUM. *Gen. pl. 825.*

- Salicaria.* 1. *L. pubescens*; foliis oppositis ternatisque sessilibus lanceolatis basi cordatis, floribus terminalibus verticillato-spicatis 12-andris, capsulis oblongis.—*Willd. sp. pl. 2. p. 865.*
Icon. *Fl. dan. 671. Engl. bot. 1061.*
In wet meadows: Canada and New England. ♀. July, Aug. v. v. About two feet high; flowers very showy, purple.
- verticillatum.* 2. *L. pubescens*; foliis oppositis lanceolatis petiolatis, floribus axillaribus corymbosis subverticillatim aggregatis decandris, fructibus globosis.—*Willd. sp. pl. 2. p. 866.*
Decodon aquaticum. *Gmel. syst. 677.*
Anonymos aquatica. *Walt. fl. car. 137.*
In swamps: Canada to Florida; not common. ♀. July, Aug. v. v. A showy perennial, from two to four feet high; the stems are declinate, and strike frequently roots on their summits; flowers large, fine purple.
- virgatum.* 3. *L. foliis oppositis lanceolatis glabris, caule paniculato, floribus axillaribus ternis pedicellatis 12-andris.*—*Willd. sp. pl. 2. p. 865.*
L. virgatum. *Walt. fl. car. 120.*
In low sandy meadows and swamps. *Bosc.* ♀. July, Aug. v. s. in *Herb. Enslen.* Flowers pale purple. Walter in his *Flora Carolinensis* has it as an hexandrous plant; which probably may be the case.
- alatum.* 4. *L. glaberrimum*; foliis oppositis ovato-oblongis acutis basi subcordatis arcte sessilibus, ramis virgatis 4-gonolatis, floribus axillaribus solitariis sessilibus hexandris.
In Lower Georgia. *Enslen.* ♀. June, July. v. s. in *Herb. Enslen.* From three to four feet high; flowers small, purple.
- lineare.* 5. *L. glabrum, virgato-paniculatum; foliis suboppositis linearibus, floribus axillaribus solitariis 6-andris.*—*Willd. sp. pl. 2. p. 868.*
Near the sea-coast of Virginia and Carolina. ♀. July, Aug. v. v. Three or four feet high; flowers small, white.

407. CUPHEA. *Jacq. hort. 2. p. 83.*

1. *C. viscosa*; foliis oppositis petiolatis ovato-oblongis, floribus 12-andris lateralibus solitariis brevissime pedunculatis.—*Willd. sp. pl. 2. p. 870.*
Balsamona Pinto. Vandell. fasc. t. 3.
Lythrum Cuphea. Linn. suppl. 249.

Resem-
d.

412. SORBUS. *Gen. pl. 855.*

1. *S. foliis pinnatis, foliolis acutis subæqualiter serratis petioloque communi glaberrimis.* — *Willd. enum. 520.* *americana.*
S. Aucuparia β . *Mich. fl. amer. 1. p. 290.*
In Canada and on some of the northern mountains. h. May, June. v. v. Berries purple, not scarlet as in the European species.
2. *S. foliis pinnatis, foliolis acuminatis inæqualiter inciso-serratis petioloque communi glabris, serraturis setaceo-mucronatis.* — *Willd. enum. 520.* *microcarpa.*
S. Aucuparia α . *Mich. fl. amer. 1. p. 290.*
On the peaks of high mountains: New Jersey to Carolina. h. June. v. v. A large shrub; the young branches covered with a shining, dark brown gloss; berries small, scarlet. This species is very distinct from the Canadian *Sorbus*.

413. SPIRÆA. *Gen. pl. 862.** *Fruticosæ.*

1. *S. foliis lanceolatis argute-serratis glabris, racemo terminali composito paniculato, floribus 5-gynis.* — *Willd. sp. pl. 2. p. 1055.* *salicifolia.*
S. foliis lanceolatis, racemis paniculatis divaricatis, petalis albis cortice ramorum rubris. *Ait. kew. 2. p. 198.* *Icon. Mill. ic. t. 257. f. 2.* *paniculata.*
S. foliis ovato-oblongis, racemis paniculatis, petalis albis. cortice ramorum rufescente. *Ait. l. c.* *latifolia.*
In swamps and on the edge of ditches and slow-flowing rivers: Canada to Carolina; particularly on the mountains. h. June—Aug. v. v. This shrub is very variable in size, shape, and colour.
2. *S. foliis lanceolatis inæqualiter-serratis subtus tomentosis, racemo terminali composito confertifloro, floribus 5-gynis.* — *Willd. sp. pl. 2. p. 1056.* *tomentosa.*
Icon. Schmidt arb. 57. Pluk. alm. t. 321. f. 5.
In Canada and on the Allegany mountains: New York to Carolina. h. July—Sept. v. v. A small shrub; flowers red.
3. *S. foliis obovatis integerrimis seu apice dentatis glabris, umbellis sessilibus.* — *Willd. sp. pl. 2. p. 1057.* *hypericifolia.*
Icon. Schmidt arb. 56 & 57.

- chamædrifolia.* In dry swamps of Canada and New York. $\frac{1}{2}$. May. v. v. Flowers white, small, and in great abundance.
- media.* 4. *S. foliis obovatis apice inciso-dentatis glabris, corymbis pedunculatis.* —Willd. sp. pl. 2. p. 1058.
Icon. Schmidt arb. 53.
- β . *S. foliis utrinque subvillosis paucidentatis.* Schmidt arb. 54.
In Canada and on the north-west coast. $\frac{1}{2}$. May, June. v. v.
- betulifolia.* 5. *S. foliis lato-ovatis inciso-serratis glabris, corymbis terminalibus compositis fastigiatis foliosis.* —Pall. fl. ross. 1. p. 33. t. 16.
In the mountains of Virginia. $\frac{1}{2}$. May—July. v. v. Not above a foot high; flowers tinged with red. This species is very distinct from *S. ulmifolia* Willd. sp. pl. 2. p. 1058, to which it has been referred as a synonym.
- opulifolia.* 6. *S. foliis ovatis lobatis duplikato-dentatis crenatis glabris, corymbis terminalibus confertifloris, floribus 3-gynis, capsulis inflatis.* —Willd. sp. pl. 2. p. 1059.
Icon. Schmidt arb. 32. Rob. ic. 134. Comm. hort. 1. t. 87.
On the banks of rivers, particularly in the mountains; Canada to Carolina. $\frac{1}{2}$. June, July. v. v. Flowers white; generally known by the name of Nine-bark.
- capitata.* 7. *S. foliis ovatis sublobatis duplikato-dentatis subtus reticulatis tomentosis, corymbis terminalibus congestis subcapitatis longissime pedunculatis, calycibus tomentosis.*
On the north-west coast. Menzies. $\frac{1}{2}$. June. v. s. in Herb. Banks. An imperfect specimen of this species I observed in the Lewisan Herbarium, gathered on the Columbia.
- discolor.* 8. *S. foliis ovatis lobatis dentatis subuplicatis subtus niveo-tomentosis, paniculis terminalibus pedunculatis ramosissimis.*
On the banks of the Kooskoo sky. $\frac{1}{2}$. June, July. v. s. in Herb. Lewis. A shrub about five feet high.
- sorbiifolia.* 9. *S. foliis pinnatis, foliolis uniformibus serratis, floribus paniculatis.* —Willd. sp. pl. 2. p. 1060.
Icon. Schmidt arb. 58. Pall. fl. ross. 1. t. 24.
On the north-west coast, and probably in Canada. $\frac{1}{2}$. July, Aug. v. v. A handsome small shrub; flowers white.

** *Herbaceæ.*

10. *S. foliis 2-3-pinnatis, spicis paniculatis, floribus 3-gynis dioicis.*—*Willd. sp. pl. 2. p. 1060.*
Icon. Pall. fl. ross. 1. t. 26.
β. S. foliis lucidis, panicula oblonga, spicis gracilibus hermaphroditis.
In the mountains: Pennsylvania to Georgia. ♀. June, July. v. v. Flowers white; a very elegant plant.
11. *S. foliis pinnatis glabris, impari majore 7-lobo, lateribus 3-lobis, corymbis proliferis.* *Willd. sp. pl. 2. p. 1062.*
S. palmata. Linn. suppl. 262.
Icon. Jacq. hort. 1. t. 68.
In fertile wet meadows: Virginia and Carolina. ♀. July, Aug. v. v. A beautiful perennial; flowers red, in large clusters.
12. *S. foliis ternatis lanceolatis serratis subæqualibus, stipulis linearibus integris, floribus terminalibus laxè paniculatis 5-gynis, calyce tubuloso campanulato.*—*Willd. sp. pl. 2. p. 1063.*
Gillenia trifoliata. Mœnch. meth. suppl. p. 286.
Icon. Mill. ic. 256. Bot. mag. 489.
In shady woods and on bogs: Canada to Florida; principally in the mountainous parts thereof. ♀. June, July. v. v. A very fine perennial; flowers large, white. It may, with the following species, with all propriety form a distinct genus.
13. *S. foliis ternatis lanceolatis inciso-serratis subæqualibus, stipulis foliaceis ovatis inciso-dentatis, floribus terminalibus laxè paniculatis 5-gynis, calyce campanulato.*—*Willd. enum. p.*
β. S. foliis ternatis, foliolis pinnatifidis inciso-dentatis.
In shady woods: Kentucky and Tennessee. ♀. June, July. v. v. Flowers resembling the former species. The variety β. appears very different; but, as I have not seen it in flower, I did not venture to make it a distinct species.

*Aruncus.**americana.**lobata.**trifoliata.**stipulacea.**incisa.*

III. POLYGYNIA.

414. ROSA. Gen. pl. 863.

blanda.

1. R. germinibus globosis glabris, caulibus adultis pedunculisque lœvibus inermibus, foliolis (7) oblongis sub-equaliter serratis glabris, petiolis glabris subaculeatis.—*Willd. sp. pl. 2. p. 1065.*

Icon. *Andrews's roses.* *Miss Lawr. roses* 27.

In Canada, near Hudson's Bay, and on the river St. Lawrence. ♀. May—Aug. v. v. The younger branches are covered with straight red spines; the older ones unarmed and shining red.

parviflora.

2. R. germinibus depresso-globosis pedunculisque hispidis, petiolis pubescens subaculeatis, caule glabro, aculeis stipularibus rectis, foliolis elliptico-lanceolatis simpliciter serratis glabris, floribus subgeminatis.—*Willd. sp. pl. 2. p. 1068.*

R. carolina. *Du Roi harbk. 2. p. 335.* *Mich. fl. amer. 1. p. 295.*

R. pensylvanica. *Wangh. amer. p. 113.*

R. humilis. *Marsh. arb. 285.*

In woods on the side of hills: New York to Carolina. ♀. June, July. v. v. About two feet high. There are a number of varieties of this species.

nitida.

3. R. germinibus globosis, calycibus pedunculis ramisque hispidi, petiolis pilosiusculis inermibus, foliolis (7) oblongo-lanceolatis utrinque nitidis glaberrimis.—*Willd. enum. 544.*

In Pennsylvania and Virginia, ♀. June—Aug. v. v. Petals red, obovate.

lucida.

4. R. germinibus depresso-globosis pedunculisque subhispidi, petiolis glabri subaculeatis, caule glabro, aculeis stipularibus rectis, foliolis ovato-lanceolatis obtusiusculis grosse serratis glabris nitidis, floribus subgeminis, calycinis foliolis integris.—*Willd. sp. pl. 2. p. 1068.*

R. carolina. *Walt. fl. car. 149.*

Icon. *Dill. elth. t. 245. f. 316.*

On the borders of swamps: New York to Carolina. ♀. July, Aug. v. v. From four to six feet high.

gemella.

5. R. germinibus depresso-globosis pedunculisque glabris, floribus subgeminatis, foliis oblongis acutis opacis, pe-

tiolis venisque subtus pubescensibus, aculeis uncinatis infra axillaribus caulinis geminatis.—*Willd. enum.*
544.

On dry sunny hills: New England to Carolina. $\frac{1}{2}$. July, Aug. v. v. A low shrub; flower red, large.

6. R. germinibus subglobosis glabriusculis, pedunculis hispidis, petiolis subaculeatis, caule glabro, aculeis sparsis rectis, foliolis (3—5) ovato-oblongis acutis serratis, supra glabriusculis, subtus tomentosis, superioribus simplicibus, floribus subternatis, stipulis linearibus, calycis laciniis tomentosia linearibus vix laciniatis.

In Tennessee. Lyon. $\frac{1}{2}$. July. v. s. in *Herb. Lyon.*
Flowers pale red; leaves small, with coloured veins.

7. R. germinibus globosis, petiolis nervisque aculeatis, ramis glabris, aculeis geminis sparsisque, foliolis (3—5) acuminatis glabris, calyciis foliolis subpennatim setigeris.—*Mich. fl. amer. 1. p. 295.*

In swamps of Virginia and Lower Carolina. $\frac{1}{2}$. June, July. v. v. c. fr. From five to eight feet high.

8. R. germinibus globosis pedunculisque subhispidis, petiolis pilosis subaculeatis, caule glabro, aculeis stipularibus subuncinatis, foliolis (5—7) oblongo-lanceolatis acutis argute serratis subtus glaucis, floribus cymbosis.—*Willd. sp. pl. 2. p. 1009.*

R. corymbosa. *Ehrh. beitr. 4. p. 21.*

R. virginiana. *Du Roi herbk. 2. p. 353.*

R. pensylvanica. *Mich. fl. amer. 1. p. 296.*

Icon. *Andrews's roses. Miss Lawr. roses 3. 24. 36. 54. 66. 68.*

In swamps and on the banks of ponds: New England to Virginia. $\frac{1}{2}$. June, July. v. v. From five to six feet high. There are a great number of varieties of this species.

9. R. germinibus globosis pedunculisque hispidulis, calycibus in expansis muticis, foliis ternatis subtus pubescensibus, petiolis glandulosis aculeatisque, caule glabro, aculeis stipularibus sparsisque subaduncis, floribus cymbosis. *Ait. kew. ed. 2. t. 3. p. 260.*

In North America. *Mason. $\frac{1}{2}$. June, July. +.*

10. R. germinibus ovatis promissae hispidissimis, calycis laciniis integris, aculeis geminatis recurvis, petiolis subaculeatis, foliolis (3—5) lanceolato-ovalibus subener-

Lyonii.

setigera.

carolina.

rubifolia.

laxvigata.

ICOSANDRIA POLYGYNIA. Rosa.

vibus lœvigatis, stipulis angustis subulato-mucronatis.
—*Mich. fl. amer. 1. p. 295.*

In shady woods of Georgia. h. v. v. s. fl. An evergreen; climbing to a great height.

- suavcolens.* 11. R. germinibus ovatis, pedunculis petiolisque glanduloso-hispidis, petiolis subaculeatis, caule glabro, aculeis sparsis rectis tenuibus, foliolis (5-7) ovatis serratis subtina vix glanduloso-pilosis, ramulis unifloris, calycis laciniis integris.

R. Eglanteria americana. *Andrews's roses*, cum icone.

- pendulina.* 12. R. inermis; germinibus oblongis, pedunculis petiolisque hispidis, caule ranisque glabris, fructibus pendulis. *Willd. sp. pl. 2. p. 1076.*

Icon. *Miss. Laur. ros. 9. Dill. elth. t. 245. f. 317.*

In North America. $\text{h. May, June. v. v. in Hortis.}$ Known by the name of *Rose without Thorns*. I never have seen this plant in its indigenous state.

415. RUBUS. *Gen. pl. 864.** *Fruticosi.*

- Idaeus.* 1. R. foliis quinato-pinnatis ternatisque rhombeo-ovatis acuminatis subtus tomentosis, petiolis canaliculatis, caule aculeato-hispido, floribus subpaniculatis.—*Willd. sp. pl. 2. p. 1081.*

Icon. *Fl. dan. 788.*

In hedge-rows: Canada to Pennsylvania. $\text{h. May, June. v. v.}$ The *Wild Raspberry* has a number of varieties.

- villosus.* 2. R. pubescens, hispidus aculeatusque; foliis 3-5-digitatis, foliolis ovato-oblongis acuminatis serratis utrinque pubescentibus, caulibus petiolisque aculeatis, calyce brevi acuminato, racemo laxo, pedicellis solitariis.—*Willd. sp. pl. 2. p. 1085.*

In old fields and commons; frequent: New England to Carolina. $\text{h. June, July. v. v.}$ Known by the name of *Black-berries*.

- strigosus.* 3. R. inermis, rigide hispidissimus; foliolis 3. aut pinnato-quinatis ovalibus basi obtusis acuminatis subtus limateis et candido-tomentosis, calycibus acuminatis, floribus in apice ramulorum axillaribus solitariis, pedunculis calycibusque hispidis.—*Mich. fl. amer. 1. p. 297.*

R. pensylvanicum. *Lam. encycl. 6. p. 246.*

On the mountains: Canada to Virginia. $\text{h. June, July. v. v.}$ An upright shrub; berries very agreeable to eat.

- R. glabriuscula*; foliis digitatis denis quinis ternatisque, foliolis lanceolatis utrinque nudis argute serratis, caule inermi, bracteis lanceolatis.—*Willd. sp. pl. 2. p. 1085.*
In rocky barren woods: Canada and New England. ♀. June, July. v. v. Stem and old branches purple.
- R. ramis petiolis pedunculisque tomentosis sparsim recurvato aculeatis, foliis 3—5-digitatis, foliolis cuneato-ovalatis superne inaequaliter dentatis plicatis margine integerrimo revolutis subtus tomentosis, racemis terminalibus paniculatis, pedicellis divaricatis nudiusculis.*
R. parvifolius, *Walt. fl. car. 149.*
In sandy fields and woods: New Jersey and Carolina.
♀. June, July. v. v. A straggling briar of a gray aspect; the berries hard and dry.
- R. ramis petiolisque glaucis et aculeatis, foliis ternis ovalibus acuminatis sublobatis duplicito-serratis subtus cano-tomentosis, petiolis teretibus, aculeis recurvatis, racemis terminalibus.*—*Willd. sp. pl. 2. p. 1082.*
Icon. *Dill. elth t. 247 f. 319.*
In rocky and mountainous situations: Canada to Carolina. ♀. May, June. v. v. The stem is smooth, and covered with a blueish dew. Berries black or red; known in the gardens by the name of *Virginian Raspberry*.
- R. sarmentoso-procumbens*; caulis petiolis pedunculisque setis rigidis hispidissimis, foliis ternatis inciso-serratis nudis, intermedio pedicellato.—*Willd. sp. pl. 2. p. 1083.*
In Canada, *Kalm.* ♀. +. Resembles some of the following species, particularly No. 9.
- R. sarmentoso-procumbens*; petiolis pedunculisque recurvato-aculeato-hispidis, stipulis subulatis, foliis ternatis quinatis oblongo-ovalibus acutis inaequaliter serratis subpubescentibus, pedicellis solitariis elongatis, petalis obovatis calyce triplo longioribus.—*Mich. fl. amer. 1. p. 296.*
In old fields, common: New England to Carolina. ♀. May, June. v. v. Flowers large; berries black, large, and very agreeably tasting; known by the name of *Dewberries*.
- R. sarmentoso-procumbens*; caule tereti petiolisque recurvato-aculeatis, foliis ternatis glabris inaequaliter *canadensis.*
- cuneifolius.*
- occidentalis.*
- hispidus.*
- trivialis.*
- flagellaris.*

ICOSANDRIA POLYGYNIA. Rubus.

- serratis, intermedio ovato basi cuneato, lateralibus rhombeis.* — *Willd. enum. 549.*
- R. trivialis. Ait. kew. ed. 2. t. 3. p. 269.*
In fields and sandy woods: Virginia and Carolina. $\text{h}.$ June, July. $v.$ $v.$ The leaves are smaller, smooth, and equal on the base; petals more orbicular than No. 8.
- inermis.* 10. *R. caule petiolis pedunculisque inermibus, foliis ternatis ovatis acutis inaequaliter serratis subtus tomentosis, lateralibus subincisis, stipulis setaceo-subulatis.* — *Willd. enum. 548.*
- R. hispidus, Walt. fl. car. 149?*
In Pennsylvania. $\text{h}.$ $+$.
- spectabilis.* 11. *R. inermis glabra; foliis ternatis ovatis acutis duplicato-inaeualiter serratis subtus pubescentibus, pedunculis terminalibus unifloris solitariis, petalis ovatis.*
On the banks of the Columbia. *M. Lewis.* On the north-west coast. *Menzies.* $\text{h}.$ April, May. $v.$ *s. in Herb. Lewis. nec non Banks.* The figure was taken from a specimen in the collection of A. B. Lambert, Esq.
- Frutex elegans, 4-5-pedalis. Rami geniculati, subflexuosi, teretes, levigati. Gemmae alterne, ferrugineae, squamae obtuse. Folia e gemmis subfasciculata, ternata. Foliola ovato-oblonga, acuta, inciso-duplicato-serrata, supra glabra, subtus pubescentia, lateralia basi obliqua, intermedio petiolata. Petioli pubescentes, aculeo parvo recurvato uno altero instructi. Stipulae lineares. Pedunculi terminales uniclori solitarii. Flores magnitudine R. odorati, profunde et amcene purpurascentes. Calyx lacinis oblongis, brevi-acuminatis, pubescentibus. Petala ovata, calyce plusquam duplo longiora.*
- odoratus.* 12. *R. inermis, erectus, viscido-hispidus; foliis simplicibus acute 3-5-lobatis, corymbis terminalibus divaricatis, calycibus appendiculatis, petalis suborbiculatis.* — *Willd. sp. pl. 2. p. 1085.*
Icon. Bot. mag. 323. Mill. ic. 223. Corn. canad. t. 159.
In the woods of Canada and on the Allegany mountains: New York to Carolina. $\text{h}.$ June, July. $v.$ $v.$ A fine ornamental shrub; flowers rose-coloured or crimson; berries yellow, of a very fine flavour and large size, but scarcely ever produced in the gardens.

** *Subherbacei.*

13. *R. herbaceus*, pubescens; flagellis replantibus, foliis ternatis rhomboidatis acutis inciso-dentatis nudis, impari petiolato, floribus subtenuis, pedicellis elongatis.—*Mich. fl. amer. 1. p. 298.* *saxatilis.*
In Canada, and on the mountains of New York to Virginia. \mathcal{U} . June, July. *v. v.* Berries small, black.
14. *R. fruticosens*, pilis rigidis hispidus; foliis ternatis rotundato-ovalibus serratis nudis, stipulis setaceis, racemis floriferis subcorymbosis paucifloris, bracteis ovatis, pedicellis elongatis.—*Mich. fl. amer. 1. p. 298.* *ovovalis.*
In swamps, among sphagnum, on the mountains: New York to Carolina. \mathcal{U} . May—July. *v. v.* Berries with only a few large grains black and sweet.
15. *R. herbaceus*, pusillus; caule inermi subunifloro, foliis ternatis glabris obtuse serratis, petalis subrotundis emarginatis.—*Willd. sp. pl. 2. p. 1088.* *arcticus.*
Icon. *Engl. bot. 1585.* *Bot. mag. 132.*
In Labrador and near Hudson's Bay. \mathcal{U} . May, June. *v. s. in Herb. Lambert.*; *v. v. in Hortis.* Flowers of a beautiful rose colour; berries amber, very delicious.
16. *R. herbaceus*, pusillus; caule inermi unifloro, foliis ternatis glabris argute serratis, petalis oblongis integris, stylis approximatis. *Smith exot. bot. 2. p. 53. t. 86.* *pistillatus.*
R. acaulis. *Mich. fl. amer. 1. p. 298.*
In bogs of Canada, and on the north-west coast. \mathcal{U} . June, July. *v. s. in Herb. Dickson.* Resembles the foregoing one very much.
17. *R. herbaceus*, pusillus, repens; foliis pedato-quinatis incisis, pedunculis filiformibus medio bracteatis, calycibus glabriusculis reflexis. *Smith ic. inea. f. 3. p. 63. t. 63.* *pedatus.*
On the north-west coast. *Menzies.* \mathcal{U} . *v. s. in Herb. Banks.* Petals white? This species may probably belong to the genus *Dalibarda*.
18. *R. herbaceus*, pusillus; caule inermi unifloro erecto, foliis simplicibus cordatis trilobis rugoso-venosis, petalis lanceolatis.—*Willd. sp. pl. 2. p. 1089.* *Smith ic. ined. f. 3. t. 64.* *stellatus.*
On the north-west coast. *Menzies.* \mathcal{U} . *v. s. in Herb. Banks.* Flowers purple.
19. *R. herbaceus*, pusillus; caule inermi unifloro erecto, *Chamæmorus.*

culis minutissime uncinatis.—*Willd. sp. pl. 2. p. 1115.*
Mich. fl. amer. 1. p. 301.

Icon. Fl. dan. 722. Engl. bot. 106.

In wet boggy meadows : Canada and on the New York
and Pennsylvania mountains. \mathcal{U} . June, July. *v. v.*
Flowers yellowish purple. The flowers are smaller,
the petals more rounded on the top, and the leaves with
deeper incisions, than the European plant : compared
in a living state, they may be found different species.

ciliatum.

7. *G. pubescens* ; caule simplici, foliis glabriusculis mar-
gine ciliatis, inferioribus pinnatis, caulinis pinnatifidis,
superioribus palmatis : lacinii linearibus incisis, floribus
corymbosis.

On the banks of the Kooskoosky. \mathcal{U} . June. *v. s. in*
Herb. Lewis. An elegant species ; flowers resembling
those of No. 6.

radiatum.

8. *G. hirsutissimum* ; caule simplici, foliis radicalibus pin-
natis, impari amplissimo reniformi radianti-nervoso
dentato, caulinis amplexicaulibus inciso-laceris, pe-
dunculis axillaribus solitariis, aristis glabris apice sim-
plicibus.—*Mich. fl. amer. 1. p. 300.*

G. camtschaticum. Pallas in Herb. Lambert.

On high mountains of Carolina. *Michaux.* On the
north-west coast. *Menzies.* Likewise a handsome
plant ; flowers yellow.

Peckii.

9. *G. glabriusculum* ; caule unifloro, foliis radicalibus re-
niformibus circinatis basi subtruncatis inciso-dentatis,
petiolis longissimis interdum appendiculatis, petalis
longitudine calycis.

On the white hills of New Hampshire. *Prof. Peck.*

* *Foliis ternatis.*

1. *P. assurgens*, glabriuscula ; stipulis subulatis, foliis ternatis oblongo-cuneiformibus apice tridentatis adpresso-pilosiusculis, corymbo laxo paucifloro, petalis oblongo-obovatis calyce longioribus.—*Willd. sp. pl. 2. p. 1110.*
Icon. *Ait. kew. 2. t. 9. Engl. bot.*
On rocks in Canada and on the highest peaks of the Allegany mountains, particularly at Grandfather-mountains, Carolina. $\text{J}.$ June, July. *v. s. in Herb. Dickson.* ; *v. v. in Hortis.* Flowers white. According to Willdenow, and the figure of *P. retusa* in the Flora Danica, which is quoted as a synonym, the flowers are yellow ; but this figure, if correct, presents most certainly a different plant, as the petals are round, and only the length of the calyx.
tridentata
2. *P. assurgens*, hirsuta ; stipulis ovatis integerrimis, foliis ternatis, foliolis sessilibus approximatis ambitu inciso-dentatis utrinque hirsutis, pedicellis lacinis terminalibus elongatis unifloris, petalis cuneato-oblongis emarginatis calyce duplo longioribus.
emarginata.
In Labrador. *Colmaster.* $\text{J}.$ *v. s. in Herb. Dickson.*
A small species ; flowers large in proportion.
3. *P. assurgens*, lanato-tomentosa ; stipulis ovatis integerrimis, foliis ternatis, foliolis sessilibus approximatis ambitu inciso-dentatis supra hirsutis subtus niveo-tomentosis, pedunculis paucis terminalibus unifloris, petalis lato-obcordatis calyce vix longioribus.—*Willd. sp. pl. 2. p. 1109.*
Icon. *Gmel. sib. 3. t. 36. f. 1. Gunn. norv. t. 3. f. 1.*
In Labrador. *Colmaster.* $\text{J}.$ June, July. *v. s. in Herb. Dickson.* Flowers yellow.
nivea.
4. *P. assurgens*, sericeo-villossima ; stipulis latis membranaceis integerrimis, foliis ternatis, foliolis sessilibus approximatis ambitu inciso-dentatis, supra villis nitidis adpresso-villosis, subtus cano-tomentosis, pedunculis brevibus aggregatis, petalis obcordatis calyce longioribus.
villosa.
P. villosa. Pallas in Herb. Lambert.
On the north-west coast. $\text{J}.$ *v. s. in Herb. Lambert.*
This species approaches in general character very near to the foregoing one, but in habit they differ strikingly ; the last is a more robust plant, covered with shin-

ICOSANDRIA POLYGYNIA. Potentilla.

ing silky hairs, and the flowers are more than double the size of the former, which is a small plant covered with a white woolly tomentum. It approaches also to *P. subacaulis* Wild. sp. pl. 2. p. 1111. according to description, but Gmelin's figure is extremely different from it.

hirsuta.

5. *P. erecta*, simplex, hirsutissima; stipulis lanceolatis integris, foliis ternatis obovalibus laciniato-incisis, panicula pauciflora, pedicellis brevibus, petalis calyce minoribus.—*Mich. fl. amer. 1. p. 303.*

In Canada and the western parts of New York. 4. July, Aug. v. v. Flowers white, small.

*ver
notogrica.*

6. *P. erecta*, ramosa, pubescens; stipulis ovalibus dentatis, foliis ternatis rhombo-lanceolatis inciso-dentatis, rami dichotomis, pedicellis brevibus axillaribus solitariis, petalis calyce brevioribus.—*Willd. sp. pl. 2. p. 1109.*

Icon. *Fl. dan. 171.*

ICOSANDRIA POLYGYNIA. *Potentilla.*

In bog meadows and on the borders of lakes : Canada and on the mountains of New York and New Jersey. ♀. July, Aug. v. v. This is a low-growing shrub, not above eighteen inches high. Though it appears to be no more than a variety of the preceding, the difference of habit is so great, that I was persuaded to propose it as a distinct species : both cultivated near one another, will decide whether it shall be adopted as such or not.

Anserina.

15. *P. repens*; foliis interrupte-pinnatis numerosis inciso-serratis sericeis subtus niveo-tomentosis, pedunculis solitariis unifloris.—*Willd. sp. pl. 2. p. 1095.*

Icon. *Engl. bot. 861.*

On the banks of rivers and lakes : Pennsylvania, New York, and Canada. ♀. May—Sept. v. v. Flowers yellow, large. Specimens from Labrador in the Herbarium of A. B. Lambert, Esq. seem to differ in the form of its petals from the European plant ; they are obovate, and longer than the calyx.

pensylvanica.

16. *P. erecta*, mollissime subcandanti-villosa; foliis pinnatis, foliolis oblongis obtusis subsemi-pinnatifidis tomentosis, panicula stricta multiflora, calycis tomentosi lacinis semiovalibus. *Mich. fl. amer. 1. p. 304. Willd. sp. pl. 2. p. 1099.*
