On the First of *May*, all the Omrahs were ordered by *Nadir Shah* to be at *Mohammed Shah's* by Five of the Clock in the Morning, where they all received Presents from that Conqueror, according to their several Ranks, consisting of Cloaths, Arms, and Pieces of Gold, and Silver-Staff. About eight in the Morning, *Mohammed Shah*, seated in a Royal Litter, with a Canopy Umbrella, and some red Litter, with several of the Omrahs, went towards the General Divan, the Omrahs being mounted at a small Distance behind him; when they came near the General Divan, the Emperor ordered *Saad o' din Khan* to let none but the head Omrahs, and a few of the chief *Manjubdars* to go farther. At the Door of the General

* One would imagine that this was a Marriage formed upon some political Motive, which, however, it is very difficult to discover, since *Nadir Shah* never shewed any Intention of depriving the Mogul of his Dominions. It is not impossible, however, that he might suspect, from the Condition in which he saw the Empire, that it could not long subsist, and might therefore incline to have a Son or a Grandson related to the Imperial Family, as, in that case, to form a Pretension to it; for otherwise this is a Transaction, for which no rational Account can be given, especially, considering the Time when this Marriage was solemnized.

† There cannot be a stronger Mark of Degeneracy and Corruption, than what some People may mistake for Bravery and high Spirit; I mean the sort of self-murders. We have, in this History, the clearest Instance of it; for these People had seen their Country over-run, their Friends and Relations abused and murdered, their Sovereign insulted, and their Government overturned, without so much as enquiring their Persons to prevent such Mischiefs; but now, when the Means of Luxury were to be taken away, and they were in Danger of living poor, they could pluck up a spirit and kill themselves.

Divan, all the Omrahs alighted, and followed on foot to the Door of the private Divan, where *Nadir Shah* was; there the Emperor came out of his Royal Letter and went in. After they had mutually embraced, they breakfasted together, and the Omrahs likewise had Breakfast given them. A little after the following Things were brought in for *Mohammed Shah*, viz. a Crown richly set with Jewels, a Sirpeach, or Fillet, to be worn round the Turban likewise set with Jewels, a Bracelet richly adorned, a Girdle of great Value, two Swords, the Handles set with Jewels, an enameled Cuttarry or Dagger. The Crown *Nadir Shah* put on with his own Hands, making him an Apology at the same time. After giving him some Advice he took leave of him; the Substance of the Advice, was to this purpose; "In the first Place, you must seize all the Omrahs and *Yaguirs*, and pay each of them according to their Maniubs and Rank, with ready Money out of the Treasury. You are to allow none to keep any Forces of his own, but you yourself are constantly to keep Sixty thousand chosen Horsemen, at sixty Ruples per Month, one with another; every ten Men to have one *Dehbashi*, every ten *Dehbashis* one *Sudival*, and every ten *Sudivals* one *Hazzari*. You ought to be well acquainted with the Merit of each, their Name, their Family, and Nation, not allowing any of them, Officers, Soldiers, or others, to be idle or inactive; when any Occasion may require, detach a sufficient Number under the Command of one whom you can trust for Conduct, Courage, and Fidelity; and when that Business is over, recall them immediately, not letting any Persons stay too long in Command, for fear of bad Consequences. You are more particularly to beware of *Nizam al Muluck*, whom, by his Conduct, I find to be full of Cunning and self-interested, and more ambitious than becomes a Subject". *Mohammed Shah*, knowing these Advices proceeded from Good-will, was very thankful, and desired him, as his Empire depended on him, that he would appoint those whom he thought most deserving of the principal Posts. *Nadir Shah* said, "That will not be at all for your Interest, such Officers will have little Deference for you in my Absence. When I am gone, dispose of every Post to those whom you think most worthy; and should they, or any of them rebel, upon the first Advice, I will send a Person to chastise them; if it be necessary, I will send Forces, or, on Occasion, I can be with you myself in forty Days from *Kandahar*; but, at all Events, don't reckon me far off." After this, *Mohammed Shah*, taking Leave, returned back to *Ayib Mabl*, from whence he gave the Omrahs Leave to go home. On the Second of *May*, *Nadir Shah* sent for *Nizam al Muluck*, *Sirbullind Khan*, and the other Omrahs, and having enjoined Obedience to *Mohammed Shah*, and threatened them, in case of Rebellion, took his Leave. It was whispered, that *Nadir Shah* declared before some of his Omrahs, that he had acted indiscreetly in regard to two Things; one was, his giving the Empire to *Mohammed Shah*, who being unequal to so great a Task, the Affairs of *India* would become worse than formerly. The other his giving Quarter to *Nizam al Muluck*, who being so very subtle and crafty, it was more than probable, he would raise a Disturbance; but, as according to the Decrees of Providence, and the Assistance of their own good Fortune, he had once passed his Word to them, he would not act contrary thereto. This shews the Temper and Spirit of this Conqueror, and his Resolution to do nothing that might destroy that Confidence which even his Enemies reposed in him.

* It is very evident, from this very singular and curious Conversation, that, in the Opinion of *Nadir Shah*, nothing could secure a Government like that of the *Moguls*, but a standing and well-disciplined Army, constantly kept on Foot, and as constantly kept in good Order. The reason is not hard to find out: In Countries where the People have Liberty and Property, they have no Temptations, or, at least, very few, to endeavour to overturn that Constitution, or form a Government, by which, or under which they enjoy such Advantages; and in case their Country is invaded from abroad, they are hearty and zealous in defending it. But in such Countries as are under arbitrary Princes, as none have either Liberty or Property, so none but such as are hired to fight, will fight in Defence of that Power which belongs to one whom perhaps they fear, rather than love, or, as in this Case, neither fear him nor love him.

* This is another Proof, that there is no political Distemper so hard to cure, as a rivetted Luxury and total Corruption. One would naturally imagine, that there could not be in Nature a better Remedy contrived, or at least one more effectual than this, which was devised by *Nizam al Muluck*, but even this we see did not operate. While the Mischiefs was upon them, they sunk under it, and groined under the immediate Sense of their Sufferings, but like lethargick Patients, as soon as the Caustick is withdrawn, they relapse again into their former Condition, and sleep as found as ever. We may, however, venture to predict, that the Dissolution of this Government is at hand, and that it will not be long before we hear of *Indagar's* being over-run by foreign Enemies, or a new Family raised to the Throne by some fortunate Insurrection.

On the Fourth of *May*, 1739, he began his March from *Dehly*, having first issued out strict Orders for all his Soldiers to join his Army, upon Pain of Death, which, with great Severity, he inflicted upon such as stood behind, Sixty of whom were discovered, and sent after him, by the Command of *Mohammed Shah*; a large Number was afterwards collected, and were likewise to have been sent to him; but upon Reflection, the *Mogul* Emperor declared in Council, that as it was morally certain these poor People would be likewise put to Death, he saw no Reason why they should make themselves accessory to the shedding of so much innocent Blood, and therefore ordered these Deserters to be set at Liberty. *Nadir Shah*, when he had once begun his March towards *Peris*, prosecuted it with great Diligence, that he might effectually secure the vast Riches he had obtained, and to which, however, he made some Accessions. Some Days before he left *Dehly*, he sent Part of his Army before to *Lahor*; when they approached the Place, and *Zoharia-Khan* was apprized thereof, he called together all the great Men, Merchants, *Serafs*, and wealthy People of the City. At their Meeting it was agreed, that the Khan and they should go out of the City, and send a Message to the commanding Officer, in these Words; "If your Design be to slaughter the Inhabitants, lo! we are here present. If Plunder be your Intent, the City is deserted, and our Effects left there, or if Money be what you want, the *Soubahdar* and Citizens can raise no more than one Crore; so whatever your Intentions or Orders are, that execute. This is a small City, and not able to withstand the Fury of an Army, as *Dehly* is." On the Receipt of this Message, the commanding Officer thought proper to represent the Affair to his Master, who ordered him to receive the Crore of *Rupes*, and to molest them no further. After the Payment of the Money, amounting to 1,250,000*l.* he drew off, and joined the main Army upon their March.

It is amazing, that so sudden, so extraordinary, and so dreadful a Blow as was by this Invasion given to the *Mogul* Empire, did not awaken such as were entrusted with the Administration of Affairs, to a just Sense of their Duty; and yet we are assured, that for almost two Months after the *Shah's* Departure, there were no Steps taken to rectify those Disorders in their Government, that had produced this melancholy Event; on the contrary, the Ministry persisted in their Ill-will to each other, and were more intent on the Means of promoting their separate Interests, or gratifying their particular Resentments, than in contriving any thing for the publick Good, or for restoring their Affairs. Neither did this strange Humour prevail among the Great only, but spread like a pestilential Infection through all Ranks and Degrees of People. The Inhabitants, from the Terror of this Calamity, like People possessed, and in Fits, were quite stupified, and not come to themselves; and what is still more strange (notwithstanding the Oppressions and Disgrace the People of this Empire have met with since *Nadir-Shah's* Departure) the indecent Expressions and beastly Actions of his Soldiers, were the constant Subjects of Discourse, in all Companies, related with a seeming Satisfaction and Pleasure, and by way of Jest and Drollery, not being the least affected with the Reflection on their past Disgrace and Misfortunes, but on the contrary seemed sorry for his going away.

It is impossible to account for this, since the Losses they sustained of all Kinds were incredibly great, for in gold and silver Coin, he carried away twenty-five Crores of *Rupes*, making upwards of thirty-one Millions of our

Chap. II.

Money; in Gold Crores; in Jewels, the Omrahs, twenty famous Peacock; many Crores of and other valuable more, so that in the Crores, which make our Money. He plants, seven thousand about a thousand A and Soldiers acquire or twelve Million Charges of his Ar territories of the *Mogul* vanced them, together Fire, and other A fall much, if any and if to this we of the City of *Dehly* March to and from Inhabitants of this E puted at an Arriv five Millions Sterling sons destroyed in the *Carnal*, in the Ma there, and in the ders, Famine, and there could not fall sons, of all Ranks,

But it was not of this Invasion, but I el, and obtained, ries then possess'd Side of the River its Territories, the other Countries, we rent of that Monarc it was before *Nadir*

Thus we have ire in the *Indies*, through the Course upwards. It is by feet at Part of the elligible, because the higher *Asia* cha Measure their Inha being the purest an their Cities came t ent Nations, and this was occasioned an Monarchy by t that Country, who late *Peris*, into a to *India*, where th of their Country, *Mohammedans* next themselves in strong Country as were m veral Principalities *kammed*, which ga when he first inva so long famous un *Pattans*. * The River *Arack* is a very large and re itute of this Treaty, now the River and the

Money; in Gold and Silver Plate he carried away five Crores; in Jewels, which he took from the Emperor and the Omrahs, twenty-five Crores. He seized likewise the famous Peacock Throne, and nine others, valued at as many Crores of *Ruppes*. In fine Cloths, rich Stuffs, and other valuable Commodities, he picked up six Crores more, so that in the whole, he received at least seventy Crores, which make eighty-seven Millions and an half of our Money. He took with him likewise a thousand Elephants, seven thousand Horses, ten thousand Camels, and about a thousand Artificers of several sorts. His Officers and Soldiers acquired by Plunder ten Crores of *Ruppes*, or twelve Millions and an half of our Money; the Charges of his Army, while he continued in the Territories of the Mogul, the Arrears, *Pey*, and Gratuities advanced them, together with the Goods they destroyed by Fire, and other Acts of Fury and Desolation, could not fall much, if any thing, short of twenty Crores more; and if to this we add the Loss suffered by the Plunder of the City of *Deby*, and the Ravages committed in the March to and from thence, the entire Loss sustained by the Inhabitants of this Empire, will not be exaggerated, if computed at an Arrib of *Ruppes*, or an hundred and twenty-five Millions Sterling. Again, as to the Number of Persons destroyed in the March from *Labor*, in the Battle of *Carnal*, in the March to *Deby*, in the general Massacre there, and in the Consequences of it, such as Self-Murders, Famine, and arbitrary Punishments, it is believed there could not fall less than two hundred thousand Persons, of all Ranks, Sexes and Ages.

But it was not only Blood and Treasure that paid for this Invasion, but Dominions also, for *Nadir Shab* required, and obtained, an absolute Cession of all the Territories then possess'd by the *Indian* Monarch on the West-Side of the River *Attock*, by which Means *Peishor*, with its Territories, the Principality of *Cabul*, and several other Countries, were yielded to *Persia*; so that the Extent of that Monarchy on this Side, is much larger than it was before *Nadir-Shab* came to the Crown.

Thus we have traced the History of this *Tartar* Empire in the *Indies*, from its first Rise, to the present Times, through the Course of three hundred and forty Years and upwards. It is by the help of this History, that the subsequent Part of this Work will be rendered perfectly intelligible, because from thence we see how all Parts of the higher *Asia* changed their Government, and in a great Measure their Inhabitants, since it is certain, that from being the purest and most unmix'd People in the World, their Cities came to be filled by a vast Variety of different Nations, and those too of different Faiths. First, this was occasioned by the utter Destruction of the *Persian* Monarchy by the *Arabs*, which drove the Natives of that Country, who have since been called *Persees*, and of late *Parsses*, into all Parts of *Asia*, but more especially into *India*, where the Manners of the People, and the Laws of their Country, very nearly resembled their own. The *Mohammedans* next, for the sake of Trade, came to plant themselves in the *Indies*, where, when they once found themselves strong enough, they seized such Parts of the Country as were most convenient for them, and settled several Principalities, but particularly that under Soltan *Mohammed*, which gave the great *Timur* so much Trouble, when he first invaded *Indoghan*, and which was afterwards so long famous under the Title of the Kingdom of the *Pattans*. The *Tartars*, as has been before observed in the last Section, had made several Incursions into these Countries, to the great Disturbance of the Inhabitants, who were likewise very much distressed by the continual Quarrels and frequent Wars among their own Princes, who by this Means weakened and destroyed that Force which was absolutely necessary to their common Safety. It is very clear therefore, that the State of the *Indies* was much altered from what it was in the Time of the Ancients, and consequently the Inhabitants were much less

able to resist the Attempts that were made upon their Liberties by the *Europeans*.

For, in the first Place, they had been totally enervated by their Luxury, which drew upon them those Divisions and Distractions which rendered them an easy Prey to the *Mohammedans* and *Tartars*. Neither was this at all cured by their Misfortunes, for tho' it be natural enough for a poor and hardy Nation to attain by slow Degrees, and unwearied Endeavours, to Wealth and Power; yet it is neither reasonable to expect, nor does History make it at all probable, that when once a Nation has been corrupted in its Morals, and softened in its Manners, to a great Degree, it has ever recovered its former Temper and Spirit, tho' brought again into as great Poverty and Distress, as when it first struggled for Empire. This was the Situation of the *Indians* precisely, when they were first known to the *Portuguese*; that is to say, they had attained to the most flourishing Condition that perhaps ever any Nation enjoyed, and by abusing their Wealth and Power, had sunk into all the Depths of Luxury by which the Yoke of Slavery had been brought upon their Necks; which tho' they bore with Impatience, yet they wanted both Force and Virtue to throw off, living still in perpetual Feuds and Animosities against each other, and delighting as much as ever in that Sloth and Love of Pleasure which had brought them into these Misfortunes.

After having these leading Circumstances clearly laid down to us, and our making a few necessary Remarks upon them, from the Lights of Reason and Experience, we shall be as well prepared as we can desire for the perusal of the remaining Part of this Work, and be capable of entering fully into the Spirit and Meaning of it. We shall see how far we have Reason to expect, that modest Writers should agree, and how far we may suppose, they must differ from, the Authors of Antiquity, tho' writing of the same Places, and of the same People. We cannot but believe, that in the great Points of Government, and what may be called the Extentials of a Constitution, there must be still a very apparent Likeness between the ancient *Indians* and the moderns, because these are things permanent in their Nature, as we see in the Customs of the *Jews* and other Nations. Accordingly we find, that as to their Division into Tribes, their Form of Government, and their ordinary Manner of Living, the modern *Indians* resemble those described by the Ancients so much, that there can be no manner of Doubt of their being the same People, or of the Truth of those Relations that are delivered to us from the most early Times.

In the next Place, we find the Religion of the *Indians* exactly in that Situation in which we might expect it, that is, exceedingly altered and corrupted, intermixed with many Notions, Fables and Ceremonies, taken from the Doctrines maintained by the several Nations with whom they have since conversed. Lastly, in respect to Trade, the Inhabitants of the *Indies* appear very much changed from what they were, but changed in a Manner very suitable to the Accidents that have befallen that Nation. They have no longer that Openness and Freedom in their Dealings, that Justice and Integrity in the Performance of their Contracts, that Regularity in their Proceedings, or that strict regard for their Words, which heretofore rendered them famous; but they are to this Day industrious and indefatigable, excellent in the several Manufactures to which they apply themselves, and more attentive than ever to the concealing those Secrets which relate to them. The Commodities, and the wrought Goods of this Country, are such as perfectly correspond with the ancient Accounts of them; so that taking things altogether, there is as much Affinity between the old and the new Relations of this Country, and its Inhabitants, as the foregoing Particulars attentively considered, we can possibly require.

The Subject, as it has been hitherto pursued, has lead us into Abundance of troublesome Digressions, some perplexed and abstruse Inquiries, and through Roads into

* The River *Attock* is a little Stream, as it is represented in some Maps, which divides the Province of *Labor* from that of *Peishor*; but in Truth it is a very large and rapid River, which is fordable only in one Place, which is defended by a strong Castle, called the Castle of *Attock*. So that by virtue of this Treaty, there are four Provinces cut off from the Mogul's Empire, and annex'd to that of *Persia*, the Eastern Boundary of which is now this River and the River *Indus*.

which nothing could carry an Author but the Love of Truth. If either the Search of Ease to myself, or the Desire of acquiring false Fame by amusing my Readers with pleasant Relations, could have diverted me from the Execution of the Plan laid down at the Opening of this Chapter, I might undoubtedly have taken my Journey over plainer Ground, and through a more cultivated Country, I mean that of suspicious Voyages, where we are more indebted to the Imagination, than to the Industry of the Writers; but I was convinced, that this kind of History of the *Indies*,

was a thing equally wanted and desired to complete the Universal History, if I may so speak, of Voyages and Travels; I thought I should render a greater Service to the Publick in compiling what had never been digested before, than by tacking together Piece after Piece, that had been before made publick: As this is now finished, and we enter in the next Section on modern Voyages, I flatter myself, the Reader will, at every Step, discern the great Importance, and singular Utility of the foregoing Part of this Chapter.

SECTION XXIII.

A compleat History of the Rise and Progress of the Portuguese Empire in the East-Indies; their Discoveries set forth in their natural Order; the Form of their Government in those Parts explained; the Causes of the Declension of their Power examined; and the present Posture of their Affairs, in this Part of the World, truly stated.

Collected chiefly from their own Writers.

1. An introductory Discourse, shewing the Design of this Section, and the Method observed therein.
2. The Discoveries made by the Portuguese in the sixteenth Century, and the Motives which induced them to attempt a new Passage to the Indies.
3. The Discovery of the CAPE OF GOOD HOPE, by Bartholomew Diaz, and the Reasons why it was so called.
4. The glorious Expedition of Vasquez de Gama to the Indies, by this new Passage, and his Exploits there.
5. The second Voyage to the Indies, under the Command of Don Pedro Alvarez de Capral, who in his Passage discovered Brazil.
6. The King of Portugal sends Don Vasquez de Gama again into the East.
7. Affairs of the Portuguese to the Arrival of the two Albuquerque in the Indies.
8. Don Francis d'Almeyda sent with the Title of Viceroy.
9. The noble Acts, and extensive Conquests of Don Alphonso d'Albuquerque.
10. The great Wars carried on by, and the prodigious Success of the Portuguese in the Indies.
11. A succinct Account of their Affairs to the Union of the Crowns of Spain and Portugal.
12. The Reasons which oblige us to distinguish between their Conquests and Discoveries.
13. The Maldives and Ceylon, first known to the Portuguese.
14. They visit Sumatra, and the adjacent Islands.
15. The important Discovery of the Moluccas, or Spice-Islands.
16. The Portuguese first visit the Coasts of China.
17. The Islands de los Ladrones, discovered.
18. The large Island of Celebes, first visited by the Portuguese.
19. They discover likewise the Islands in the Straights of Sonda.
20. The Coasts of New Guinea, first known to the Europeans.
21. The Discovery and Conquest of the Philippines.
22. The first Voyage made by the Portuguese to Japan.
23. Attempts made to discover the Land of Yedo, and to the North.
24. The History of the New Philippines, never before published in our Language.
25. An Account of the Caroline Islands, the last discovered in this Part of the Globe.
26. The History of the Portuguese Commerce in the Indies, resumed.
27. Several of their principal Colonies lost, to whom and how.
28. The great Declension of their Power in the Indies.
29. The Causes of that Declension inquired into, and explained.
30. The present State of the Portuguese Settlements and Commerce.
31. Their Importance to the Crown of Portugal considered.
32. Conjectures as to the future State of their Affairs.
33. Observations and Remarks upon the foregoing Section.

THE Discoveries and Conquests of the Portuguese take up not only so large a Part of their own Histories, but make so considerable a Figure in those of Europe, and above all concern the Subject of this Chapter so nearly, that I find myself obliged to treat this Matter in such an Extent, as that it may answer the Reader's Expectations, and fulfil what I have promised for it in the original Plan of this Work. We have already many large and well written Books in several Languages, and some in our own, which promise a compleat History of the Exploits of this Nation in the East; but none of these come up to what I have in View. They take in only a certain Period of Time, and are rather calculated to inform us of the Actions of the several Admirals, Governors, and Commanders in chief, than to give us a compleat Idea of the Rise, Progress, and Declension of the Portuguese Power in those Parts, which is what I aim at, and which, God willing, shall be performed in the Compass of this Section.

But to keep within due Bounds, and to bring so vast a Field of Matter within Compass, I have found it necessary for my Reader's Ease, and my own, to have Recourse to the following Method. In the first place, I shall give a general and succinct Account with due Regard to Persons Circumstances, and Time, of the first Discoveries and Conquests of the Portuguese, the Growth of their Empire in the East, and their several Establishments, till other European

Nations began to interfere with them in those Parts, without running into any Digressions as to the Discoveries made by particular Persons, and by this means I hope to give a clear and easy Account of that great Alteration made in the Commerce of all Europe, by the Discovery of a direct Passage by Sea to the Indies. But as in the subsequent Part of this Work, it will be found extremely requisite to have Recourse to the particular Discoveries and first Intercourse between the Portuguese and several Indian Nations, I shall next endeavour to state with all the Brevity that is consistent with such a Design, the particular Discoveries that have been made by this Nation, or by the Spaniards, who acquired all that they possess in the East-Indies, in right of the Portuguese down to the present Age; and when this is done, I shall resume the general History of their Empire, shew the true Causes of its Declension, and conclude with a fair and distinct Account of their present Possessions in those Parts.

This, I conceive, will fully answer our Intention of representing as accurately as is possible the Progress of this Trade, which, with so much Labour, we have conducted from the very earliest Ages; and in this manner of stating it, the Matter contained in this Section, though not absolutely new in itself, will, however, appear in a Light very different from that in which it has hitherto stood in any Collection of this sort. It will be easy to discern, that the

requiring such a vast Abundance of Materials, as the *Portugueze* Historians, and those of other Nations, who have treated on different Parts of this Subject have amass'd, within the Bounds of one Section, and that too of no great Size, will require great Diligence, and put me under the Necessity of laying aside many things which those Writers might be thought worthy of transmitting to Posterity. But this will be so far from proving in any respect prejudicial to the Reader, that it will on the contrary turn to his Advantage, because it will free him from the Trouble of running thro' a long Course of trilling Circumstances that have little or nothing to do with the main Point.

For, as to the copious and swelling Panegyricks on particular Captains, the long Accounts of the Travels and Labours of Millionaries, and that pompous Detail of Church History, which makes up at least two-thirds of what these Authors have delivered, they are certainly Matters that an *English* Reader would be tempted to hurry over as fast as possible, and therefore the Omission of them must contribute not only to the Elegance, but to the Usefulness of this Performance. Indeed, when freed from these and other cumbersome Circumstances, there cannot be any thing more pleasant or entertaining, and at the same time more curious and instructive than this Part of our History, in which we see what mighty things may be performed by Courage, Industry, and Application, and how soon even the smallest States, by cultivating a maritime Power, become potent and considerable.

The little Kingdom of *Portugal* is bounded on the North and on the East by several Provinces of *Spain*, and on the South and West by the *Atlantick* Ocean. It extends from 37° to 42° of North Latitude, and lies between the 7° and 16° Longitude West from *London*. It is in Length from North to South about three hundred Miles, and in Breadth from East to West about one hundred. The Climate is pleasant and wholesome, the Soil fertile in some Places, but not in many, so that they are supplied with Corn by us, and by the *Dutch*. This Country was formerly famous for Gold, but for many Ages there has been none, or at least but little of that precious Metal found there. There is, indeed, a very rich Silver Mine at *Guzalana*, still wrought with considerable Profit; but the principal Advantage of *Portugal* is its Situation on the Sea, and the Excellence of its Harbours. That of *Lisbon*, if we extend it from *St. Beuz's* above it, to the Bay of *Cascais*, at the Mouth of the River, is four or five Leagues long; but if we only take in that Part of it about the Town, where Ships ride in the greatest Security from Storms and Enemies in eighteen Fathom Water, it will contain several thousand Sail; the Entry of it indeed is hazardous without a Pilot, but on the other hand, Ships ride securely when they are in it, being covered by the Hills on which the City stands on one Side, and by the opposite Banks, which are very high, on the other. There are, besides this, several other good Ports in this Kingdom, the Subjects of which have been always famous for their Application to Maritime Affairs, and after they had driven the *Moors* out of their Country, followed them into their own, and, under the Reign of King *John the First*, defeated them in a great Battle, and took from them the Fortrefs of *Ceuta*, which still remains in the Power of the Crown of *Spain*.*

It was to the Zeal and Magnanimity of the Infant Don *Henry*, the Fifth Son of this King *John*, that the *Portugueze* stand indebted for all that Glory which they have acquired by their Discoveries and Conquests in the East, and we may justly consider the Attempts made by them at this Juncture, as the more extraordinary, since their Country was but just recovered from a long and dangerous Civil War, the Power of their Prince very far from being great, his Finances very low, and the Country so indifferently peopled, that he was obliged to have Recourse to other Nations for Men to recruit his Armies, and to serve on Board his Fleets, which were very far from being considerable; I

do not mean in Comparison of the Fleets fitted out in our Times, but of those that were then employ'd by the Crown of *Spain*, and the Republicks of *Italy*. Yet under these Discouragements, this Spirit of Trade and Navigation not only sprung up, but prospered; and this too, notwithstanding that many of their Statesmen were very averse to such Undertakings, from the Danger and Difficulties that attended them; nor could they in all probability have been carried into Execution, but from the Zeal of the Clergy, who, out of a Desire of propagating the Christian Faith, promoted them to the utmost of their Power.

2. The Infant Don *Henry* Count de *Viseo* was a Prince endowed with all the great Qualities that distinguish Heroes from other Men. He had shewn his Courage in his Youth in the Wars against the *Moors*; but he was far from valuing himself on the Power of destroying or making miserable his Fellow-creatures, and therefore thought the proper Object of Valour was the facing those Dangers that hindered the Prosecution of such Designs as might be beneficial to the human Species. He resolv'd therefore to make himself Master of the *Canaries*, which were then in the Hands of *Maiciot de Betbancourt*, who held them under a Grant from the King of *Castille*, and who for a valuable Consideration made over his Right to Prince *Henry* about the Year 1406. He sent *Ferdinand de Castro*, who was at that time Master of his Household, to take Possession of them, and conceiving that they might be of great Use in the Discovery of the Coasts of the great Continent of *Africa*, which were then very little known, he began about the Year 1410, to fit out Ships for that Purpose, and took *Spaniards*, and others who were skilled in Navigation, into his Service for that Purpose.

The utmost Limits of the South-west Part of *Africa*, then known to the *Portugueze*, was a Cape running out from the Foot of Mount *Atlas*, the proper Name of which was *Channar*, but called by the Seamen Cape *Non*, situated in the Latitude of 28° 10' North; and these Vessels proceeded along the Coast to Cape *Bojadore*, in 26° North Latitude, but they had not the Courage to double it. In 1418 *Tristan-Vaz* discovered the Island of *Porto-Santo*, and gave it that Name, because he first saw it on the Feast of *All Saints*. The next Year the *Portugueze* discovered the Island of *Madeira*, to which they gave that Name, on account of its being covered with Wood. In 1439, a *Portugueze* Captain doubled Cape *Bojadore*, which some think is the same that in the Writing of *Protony* is called Cape *Canarea*. The next Year they sail'd as high as Cape *Blanco*, in the Latitude of 26°, and soon after discovered the *Rio del Oro*, with several small Islands upon the Coast. In 1446, *Nuno Tristan* doubled Cape *Verd*, in the Latitude of 14° 40'. In 1448, in the Spring, Don *Gonzalo Vallo* sail'd to the Islands called *Azores*, or the *Hawk-Islands*, from the Word *Azor*, which, in the *Spanish* Language, signifies a Hawk. They were at that Time uninhabited, and were settled by this Commander, who did not, however, visit at this Time the Islands of *Plores* and *Corvo*, which were settled, as we have elsewhere observed, by some *Flemings*, and from thence were called the *Flemish* Islands.

In the Year 1449, the Islands of Cape *Verd* were discovered on the Behalf of the Infant Don *Henry*; the first of these was called the Island of *May*, because they came thither on *May-day*, and at the same time they bestowed the Names of *St. James*, and *St. Philip* on two of those Islands, the rest remaining undiscovered till the Year 1460. The Progress made by the Infant Don *Henry*, gave great Satisfaction to the Princes that possessed the Crown of *Portugal*, inasmuch that King *Alphonso IV.* or rather the Infant Don *Pedro*, who governed the Kingdom during his Minority, made him a Grant of the Islands of *Porto-Santo* and *Madeira*. The Infant, however, judg'd it requisite, according to the Custom of those Times, to obtain the Sanction of the Holy See, and for that Reason sent Don *Ferdinand Lopez d'azevedo* as his Embassador to Pope *Martin V.* who, as the

* It was very far from being my Intention to give the Reader either a Description of the Kingdom of *Portugal*, or the History of it, for both belong to the succeeding Volume. What I have said in the Text was purely to render the subsequent Part of this Section perfectly clear, and well connected. By comparing the Force of the Kingdom of *Portugal* with the Conquests gained by the *Portugueze* in the *East-Indies*, he will be made fully sensible of the Truth of my Remarks, and by attending to the Situation of this Country, he will be satisfied, that there was nothing in it more than a Nation's turning their Thoughts to that for which Nature designed them; for with Respect to *East India* Voyages, as the Art of Navigation then stood, the *Portugueze* were better fitted than any other People in *Europe*.

thing cost him very little, made a free Grant to the Crown of *Portugal* of all that should be discovered on that Side as far as the *Indies*. This Bull is dated in 1444, and was confirmed by his Successors, *Eugenius IV.* *Nicholas V.* and *Sixtus IV.* which occasioned afterwards high Disputes^b.

In 1471, *Pedro d'Escovar*, discovered the Island of *St. Thomas*, and *Princes-Island*, and on the first Day of the next Year another Island on the same Coast, which for that Reason he called *Anno Bueno*, which is the same that is now called corruptly *Annobon*. In 1484, *Diego Cam*, a *Portuguese*, discovered the Kingdom of *Congo*, and having heard there of a Christian Monarch, who reigned in *Ethiopia*, he magnified his Power so much on his Return, that *John II.* who was at that Time on the Throne, took a Resolution to send by Land two Persons he could trust, to gain some certain Intelligence of this Christian Prince, whom he judged to be Presbyter *John*, and at the same time to gain the most satisfactory Knowledge they could of the State of the *Indies*. The Persons who went with this Commission, were *Pedro de Covillan* and *Alphonso de Payva*, who had strict Orders to commit to Writing whatever they judged worthy of Notice; but more especially the Situation of Places, and the Navigation on the Coast of *Ethiopia*, by which it was judged some Discovery might be made of the Means of passing by a new Rout to the *Indies*. Our Travellers, who spoke the *Arabick* Tongue perfectly, went together to *Alexandria*, and from thence to *Cairo*, from which City they proceeded to the famous Port of *Aden* in *Arabia*, where they had an Opportunity of conversing with Traders of all Nations, and from all Parts of the *Indies*, from whom they learned many things, which were of great Consequence to them, inasmuch that they seemed to put it in their Power to give the King a good Account of the Commission with which they were intrusted. Here they resolved to part, in order, that while one made a Tour through the *Indies*, the other might go to the Court of the Emperor of *Ethiopia*. Accordingly, *Pedro de Covillan* went to the *Indies*, and having made a very exact Map of the Coasts, he crossed the *Arabian* Sea to *Africa*, and after having visited most of the principal Ports there, came to *Sofala*, fully persuaded, as well from the Reason of the Thing, as from the concurring Opinions of the Seamen he conversed with, that a short, and easy Passage, might be found round the Continent of *Africa* to the *Indies*. Full of Joy, from this Discovery, he made the best of his Way to *Cairo*, where he was to meet his Companion; but when he came thither, he was informed that the unfortunate *Alphonso de Payva* had been murdered on the Road to *Ethiopia*. He was somewhat at a Loss as to the Measures which he was next to take; but, after mature Consideration, he resolved to acquaint the King with the Discoveries he had made by Letter, and to continue his Journey into *Ethiopia*, that, at his Return to *Portugal*, he might be able to satisfy the King, in every Respect, so that his Majesty might not be under a Necessity of sending any other Person to make farther Enquiries. He executed this second Journey with the same good Fortune that he did the former, at least at the Beginning, and was extremely well received by *Alexander*, who was at that Time Emperor of *Abyssinia*, who was extremely well pleased with the Offers made him of the Assistance of a powerful Prince, and promised to send *Pedro de Covillan* back again with Letters

to the King his Master; but he dying suddenly, his Successor *Nabu*, treated our *Portuguese*, not only with Contempt and Disrespect, but with the greatest Cruelty, refusing him Leave to return home, and keeping him at Court as a Prisoner for many Years; so that in *Portugal* he concluded him dead, though he lived afterwards to recover his Liberty^c.

3. The same worthy King of *Portugal* *John II.* who he endeavoured, by these his Embassadors, to gain a perfect Knowledge of the State of the *Indies* by Land, neglected not the Prosecution of what had been so long laboured with the same View at Sea. It was to facilitate this Design, that he employed *Bartholomew Diaz*, one of his Courtiers, and a Person remarkable for great Prudence, much skill in the Art of Navigation, as well as for incredible Courage, to proceed still farther along the South-Coast of *Africa*, which accordingly he did in the Year 1487, and executed his Commission with equal Conduct and Success. He carried with him several Negroes, who had been many Years in his Service, and who, from time to time he set on Shore, well dressed, with a small Quantity of Goods, on purpose that they might inform the People of the Country how well they had been used, and how kindly treated by the *Portuguese*. He likewise set up Cross-stones, with the Arms of *Portugal* engraven upon them, to assert his Master's Title to the Countries by him discovered.

At last, arriving in Sight of a high Cape, near which he met with very bad Weather, he lost the Company of victualing Bark, upon which his Crew mutined, complaining, that it was too much to endure at one time the Harshness of the Sea and of Faune. But Captain *Diaz* reprefenting them, that the former was not to be escaped going back, and that the only means they had of preventing the latter, was to proceed till they came to the Place where they could get Refreshments; he prevailed on them to double the Cape, and to sail a good Way beyond it, to a Place where he erected another Pillar-stone; and having obtained a small Supply he returned, and, in his Passage homewards, met with his Bark again, in which, of nine Men that he had left, three only survived, and of these *Ferdinand Gelazzo* died with Joy at the first Sight of his Captain. He continued his Voyage safely to *Lisbon*, where he arrived in December 1487, after sixteen Months and seven Days after his setting out, having discovered above a thousand Miles along the Coast.

He gave the King his Master, a very full Account of that had happened to him, and insisted particularly on the Difficulty with which he had doubled that stupendous Promontory, which, from the stormy Sea about it, he thought fit to call *Cabo Tormentoso*, that is, *The Tempestuous Cape*. But the King, who from the Lights he had received by *Covillan's* Letters, knew how to form a right Judgment of the Importance of this Discovery, styled it *CAPO BUENO ESPERANZA*, or, *THE CAPE OF GOOD HOPE*, which Name it has ever since retained: For he saw clearly from the Agreement between these Accounts, that the passage was now open, and that there wanted but one Voyage more to finish what they had so much desired, and to find a direct Passage by Sea to the *East Indies*.

But while King *John* meditated this great Design in his Mind, and busied himself in contriving the Means of

^b This Transaction shows, that *Don Henry* was a very great Politician, for by pretending that all Countries were to be disposed of at the Pleasure of the Pope of *Rome*, he secured his Holiness's Consent to whatever he demanded; and he very well knew, that whatever was bestowed him by those Grants, would be infallibly supported by the Thunder of the Church. This great Prince died in the Year 1461. The Continent of *Africa* under his Auspice having been discovered from *Cape Nun* to *Cape Sierra Leona*, which is in the Latitude of 48° North, by which the East Coast was laid off all that was afterwards performed.

^c I cannot help owning, that it is a little out of the Road of what is proposed in this Section, to dwell on the Adventures of particular Persons; as I know it is natural for an inquisitive Reader to wish that he might be informed of what became of such remarkable Persons as are mentioned in History, I have taken Occasion, in the former Note, to observe, that *Don Henry*, the first Encourager of the Discoveries of the *Portuguese*, died in the Year 1461; and here I shall observe, that this *Pedro de Covillan*, who was the first of his Nation that ever set Foot in the *Indies*, lived a Prisoner in *Ethiopia* to the Year 1520, when *Don Rodrigo de Lame* came thither in Quality of Ambassador from the Crown of *Portugal*, to whom he related all his Adventures, and from whom he learned what mighty Conquests his Letters had produced.

^d The Remarks made upon this Translation by *Sir William Monson* in his naval Tracts, deserve the Reader's Notice, the rather, because he has been always esteemed a very wise Man, and was, beyond Question, a very able Seaman, and, by no means, envious of the *Portuguese's* Success; he proposed to depreciate their Labours; yet he attributes their Discoveries to the peculiar Providence of God in these Words: Before I treat of the particular of the *East-Indies*, give me Leave to put you in mind of some Observations of mine, which will not be unworthy your Perusal, for they are only to be attributed to God, who is the Searcher of all Hearts, and the Discoverer of hidden Secrets. It is strange and surprising, that so many flourishing Nations as God hath created and civilized, he should elect and chuse the Kingdom of *Portugal* to perform this great Work of his in those Days of less Eminent Reputation, of less Renown and Fame, and of less Ability and Valour than any other Christian Monarch can call to mind, and to assign them such a Time to effect it, when they enjoyed a happy Peace with their Neighbours, and had no Enemy to oppose, or hinder their Designs.

cutting it in such a Manner as might be most honourable to himself and advantageous for his Subjects, the great Ruler of all Things disposed of him otherwise, by calling him out of this Life. In his last Sickness he appointed his Cousin *Don Emanuel*, who also married his Sister, his Heir. This Prince, who succeeded to the Throne of *Portugal*, 1495, was in the Flower of his Age, being then about Twenty-seven, and possessed, in an eminent Degree, those Qualities that are most worthy of a Monarch. He had great Parts, much Penetration, and an excellent Judgment, yet he was so diffident of his own Abilities, that, foreseeing the Execution of his Predecessor's Projects would be attended with a larger Expence than the Discoveries hitherto made had induced, he declined entering upon them, without taking the Advice of his Council before whom he laid all the Informations that either himself or his Cousin King *John* had received. The *Portuguese* Statesmen were extremely divided in their Opinions, for some pressed the King warmly to tread in the Footsteps of his Ancestors, and, to compleat with Glory, what with so much Reputation they had begun; while others as vehemently opposed his Pursuit of this Design, each Party supporting their Opinion by very plausible Arguments.

Such as were desirous that this new Navigation might be attempted, observed, that the Trade to the *Indies* had been the great Source of Power and Riches to every Empire that had been possessed of it, that Providence seemed to have thrown it into the Hands of their Nation, in such a manner that it would not only be disadvantageous but dishonourable, to refuse it; that all Difficulties now were in a manner overcome, so that there remained scarce any thing but the going to take Possession of those fine Countries, and that vast Wealth which all the World thirsted after, though none but themselves knew how to reach; that the engrossing so rich a Trade to *Portugal*, would balance their small Extent of Territory, and enable his Subjects to make as great, or greater Figure than the Inhabitants of Kingdoms much more potent in Appearance; that, in fine, there was no less Danger to be apprehended from abandoning this Design, than Benefit to be expected by pursuing it; since, in all Probability, their ambitious Neighbours, the *Spaniards*, would pursue and accomplish this great Work, which would enable them to execute, with Ease, whatever they might be prompted to by their boundless Ambition.

On the other Side it was alleged, that there were many Things more apparently necessary to the Kingdom than such long, such expensive, and such uncertain Expeditions, since there were several large Tracts of Land, and particularly that spacious Plain between the *Ebro* and the *Tagus*, that were not properly cultivated, the Improvement of which would free them from the Necessity of depending for their daily Bread upon Strangers; that their Country was but thinly peopled, at least, in Proportion to the Numbers it might be able to maintain, if, instead of maritime Expeditions they turned their Thoughts towards making the most of what was in their Power; so that it was very unreasonable to squander away Men that might be immediately useful to their Country, for the sake of distant, and perhaps fallacious Expectations; that all their Discoveries and Conquests hitherto, had furnished him only with a few Negroes, Elephants Teeth, strange Birds, and other Curiosities, in procuring which they had suffered many Shipwrecks, and run the Hazard of many more; that, for a Century together, they had been amused with these golden Dreams, and therefore it was high Time to

awake from this Delusion; that the Kings his Predecessors, had been at vast Expences, to very little Purpose, in Pursuit of the like Designs, and that this ought to render him not only the more cautious in following their Example, but oblige him also to consider the Consequence of a running an exhausted Nation into Expences she was unable to bear; that, besides the Success of the Undertaking, might bring such Demands upon the Crown of *Portugal*, as would greatly exceed her Forces; so that perhaps her Interests at home might come to be sacrificed to those abroad. I have dwelt the longer upon these Arguments, to shew that the greatest and most salutary Designs are liable to as many Objections as the most dangerous and the most destructive.

4. The Deliberations into which the King entered upon this important Affair, though they did not absolutely carry him from his Purpose, or engage him to abandon a Design which was, in some measure, recommended to him, with his last Breath, by that great Prince to whom he owed his Throne, yet they, for a long Time, retarded his Preparations, and hindered him from undertaking that Project in the Manner he had first intended: At last, however, fearing that his Neighbours might take Advantage of a longer Neglect, especially as he understood that the *Spaniards* very vigorously pushed forward their Discoveries, he came to a final Resolution to wait no longer, but to make a Trial of what might be done in this Way, by sending a few Ships only with a small Number of Men, in which he endeavoured to avoid Extremes, and to steer as it were in the Middle, between the Opinions of such as were of his Council. It was in consequence of this Determination, that in the Spring of the Year 1497, he ordered four Ships to be equipped for this Expedition; of these, three were armed Vessels, with some Pieces of Cannon on Board, and the fourth a small Store-ship. We may be sure that their Force was not very great, since, in the whole, it consisted in no more than an hundred and sixty Soldiers and Seamen.

The Person chosen to command was *Don Vasquez de Gama*, a Man of Quality, who possessed all the Talents necessary for such an Employment. On the 9th of July, 1497, he embarked on board the *Gabriel*, which was the Admiral of this little Fleet, of the Burthen of One hundred and twenty Tons, and the same Day put to Sea: On the Third of August he left the Island of *St. Augustine*, on the Twentieth of November he doubled *The Cape of Good Hope*; in the Beginning of the Month of January he put into a Port of *Ethiopia*; and, on the first of March, he entered the Port of *Mozambique*, where the Scoury destroyed many of their People and where they were in great Danger of being betray'd, as soon as they were known to be Christians. His Artillery, however, preserved him, and from thence he continued his Voyage to *Mombaza*, where he again met with very pernicious Dealing. He failed from thence to *Melinda*, the Prince of which Country received him with great Civility, and promised to send an Ambassador by them when they returned into *Portugal*.

Don Vasquez, in Obedience to his Instructions, failed from thence for the Coast of *Malabar*, and arriving happily at *Calicut*, there first heard of a puissant Monarch in those Parts, styled the *Samarin*, which is a Dignity comparable to that of Emperor; there he met, very unexpectedly, with an extraordinary Act of Friendship; for, on the first going of his Officers on Shore, they were met by a *Moor* of *Tunis*, who knew them, by their Dress, to be *Portuguese*; and though both on the score of his Country

* It is evident from hence, that if any Accident, or Shipwreck had attended this Voyage, there had been an End of the Design for ever, though it would have remained just as reasonable and fit to have been undertaken as before, which I mention to shew how probable a Thing it is, that many great and glorious Discoveries have been prevented by such groundless Oppositions.

† The Reader will easily perceive, from this Instance, that it is not a great Force, or a vast Expence, that is necessary to the Execution of an important Design, but the Choice of a good Officer, one who knows what he is to do, and goes with a Resolution to do what he is sent to do. All the maritime Expeditions, from the beginning of the World to this Period of Time, are not comparable to what was performed in the narrow Compass of seven Years Time by *Christopher Columbus* and *Vasquez de Gama*; for the former sailed on the 11th of October, 1492, and the other on the 9th of July, 1497, so that, as I observed before, the Discovery of the *East-Indies* and the *West*, were completed in seven Years, at a tenth Part of the Expence that attended our *last West-Indian* Expedition, and with a Force that would be scarce thought sufficient for equipping, at this Day, three Privateers. I do not say this with any View of making invidious Comparisons, because I am persuaded that our Admirals, who commanded in the *West-Indies*, had he lived in those Times, and been intrusted with either of those Commands, would have done as much as *Columbus* or *Gama*. But I make this Observation with this View, that our Countrymen may be satisfied, that as great Things as these may yet be done, whenever our Undertakings are conducted by *Publick Spirit*, and the Execution of them entrusted to *Officers* who are known to have a greater Regard to Character than Fortune.

and his Religion, it was natural for him to hate them, yet he very generously offered them his Service, and very sincerely fulfilled all that he promised. He acquainted the *Samorin*, that a certain rich, powerful, and warlike Nation, were come from the farthest Parts of the Earth to seek his Friendship, and to desire Leave to trade with his Subjects: This Representation had its Effects; *Gama* was allowed not only to anchor in that Port with his Ships, but was also admitted to an Audience, in which he was treated with all the Kindness and Respect imaginable.

But Things however did not remain long in this Posture, for the *Mobammedans*, who were settled in great Numbers in the Dominions of this Prince, seeing that their own Commerce must be destroyed by the coming of the *Portuguese*, took incredible Pains to misrepresent them, as an ambitious, fraudulent, and cruel People, who meant nothing less than to depose the *Samorin* himself, and to conquer his Country; which Stories had such an Effect on the *Indian* Monarch, that he began to form Schemes for the Destruction of *Gama* and his People. Don *Vasquez* however, had very early Intelligence of his Design, and therefore hastened on Board his Ships, and quitted the Coast. He wrote, however, a Letter to the *Samorin*, in which he vehemently complained of this Breach of Faith, justified himself from the Imputations thrown out against him, and advised the *Samorin* to return to his former Sentiments, assuring him that he would find his Account in changing his Commerce with the *Mobammedans* for that of the Subjects of the King his Master. The *Samorin* wrote him a very polite Answer, in which he threw the Blame upon his Ministers and the *Mobammedans*, promising to punish such as were guilty, assuring him, that, for the Time to come, his Nation should meet with no Reason to complain. He added to these Compliments a very respectful Letter to the King of *Portugal*, in which he accepted the Propositions made him on his Majesty's Behalf, and promised a free Trade to his Subjects, without Prejudice however to his former Allies.

Don *Vasquez* having received the Letters, proceeded to the Island of *Angedive*, at the Distance of fifty Leagues from *Calicut*, where having repaired his Vessels, and refreshed his People, he set sail from thence in order to return to *Europe*. In his Passage, he took Care to put into *Melinda*, where he was received with great Friendship, and the King, according to his Promise, sent with him an Ambassador to *Portugal*. He sail'd from thence to the Island of *Zanguebar*; but finding by the Way, that his Crew was much diminished, he burnt the *S. Raphael*, which was commanded by his Brother *Paul Gama*, and took the Men on Board his own Ship: From *Zanguebar* he sail'd to *Mozambique*, where he took in a Supply of Provisions.

On the 20th of *March* following, he doubled the Cape of *Good-Hope*, proceeded from thence to the *Azores* or *Verceras*, and in the Month of *September*, 1499, arrived safe at *Belme*, having spent two Years and two Months in his Voyage, and having lost by Sicknets and Fatigue, about one hundred Men, and amongst them his Brother. The Captain of his third Ship deserted him in his Passage Home, with a View to get to *Lisbon* before him, in which he succeeded; but this proved rather advantageous than prejudicial to Don *Vasquez*, for King *Emanuel* sent some of his prime Nobility to meet him, receiving him, on his coming to Court, with all imaginable Marks of Favour and Esteem, and rewarded him beyond every thing but his Merit. He created him Count de *Vidiguera*, gave him the royal Arms of *Portugal*, charged with two *Does*, in Allusion to his Name of *Gama*, which signifies a *Dee*; and tho' he brought no great Riches home, bestowed upon him large Appointments. He made also great Presents to all his Officers, nor was there so much as a private Man on Board the Fleet, that did not receive the personal Thanks of this Prince, and with it considerable Marks of his Bounty.

So happy a Conclusion of the first Attempt, naturally paved the Way to a second Expedition, for which the King caused immediate Preparations to be made, but the same Time declared, that Don *Vasquez de Gama* should enjoy in Peace that Glory he had acquired, and not be obliged to hazard his Person again in so long a dangerous a Voyage. It may not be amiss to observe, that this second Expedition met with no Opposition, much more powerful is Success than Reason, and so much greater the Authority of Experience, than all the Arguments in the World. All Expences were now thought trifling, and those who before had treated the Passage to the *Indies* as a Chimera, were now the loudest in applauding it when performed.

5. The Fleet therefore intended for this second Expedition, consisting of thirteen Sail, some of which were large Ships, was so effectually victualled, manned and freighted, as to fill Strangers with a high Idea of the Courage, Power and Wealth of the People inhabiting that Country from which it came. Don *Pedro Alvarez de Capral*, was appointed General and Commander in Chief, and carried with him Priests to instruct the Natives, if they were so inclined; but if not, and determined to make use of Force, he had fifteen hundred chosen Men on Board, which was thought Force sufficient to support him. In the Month of *March*, in the Year 1500, he sailed from the River of *Lisbon*, Experience having shewn, that was much the properest Season of the Year for sailing to the *Indies*. In his Passage keeping out to Sea, in order to avoid the Storms that hitherto had been met with in doubling the Cape, he found himself near an unknown Continent, opposite to that of *Africa*; and as the Coast made a very pleasant Appearance, he thought fit to go on Shore, and took Possession of it on the Behalf of the King his Master, which Country he called the Land of the *Holy Cross*, but it has been since known by the Name of *Brazil*.

This Discovery appeared to him of such Consequence that notwithstanding he had lost five Sail of his Fleet already, he thought fit to send *Gaspar Lamidos* back to *Portugal* with the News, and one of the Natives on Board, as a Proof of this Discovery, and he likewise let twenty condemned Persons who were put on Board his Ship for such desperate Services, in this new found Country, and then prosecuted his Voyage.

In a short Time after he left *Brazil*, he was surprized by a most dreadful Storm, which lasted twenty Days together, in which he lost many of his People, and one of his Ships, on Board of which was the famous *Bartolome Diaz*, who first doubled the Cape of *Good-Hope*, and who, by this unlucky Accident, perished with the rest that were on Board that Ship. The General, notwithstanding this Misfortune, continued his Voyage, and refresh'd at *Mozambique*, where he arrived with no more than six Sail, and those too in a very shattered Condition. The Inhabitants remembering the Disputes they had with his Predecessor, received him, if not with Kindness, at least with Respect, and furnished him with whatever he commanded; he sail'd from thence to *Quiloa*, and then continued his Rout to *Milinda*, where he safely set on Shore the Ambassador of that Prince, whom *Vasquez Gama* had brought over.

He proceeded from thence with a fair Gale of Wind to the *Angedive* Islands, where he refresh'd and reliev'd his Leiture. The *Samorin* having Intelligence of his arrival, sent certain Persons of Distinction to compliment him thereupon, and to invite him to *Calicut*, which Invitation he accepted, provided he had Hostages sent him for Security. This was in itself a pretty bold Demand, but when he came to explain himself as to the Hostages he expected, it appear'd of a much more extraordinary Nature. He demanded the Casual, or Commission of the Customs, and some other of the *Samorin's* Ministers, which that Prince hesitated at first, but at last yielded.

* This Discovery of *Brazil* is a plain Proof, that if *Ferdinand* and *Isabella* had not sent *Columbus* to discover *America* at the same time, it would have been discovered by the *Portuguese*; which shews of how great Importance it is for every Nation that aims at maritime Power, to encourage and promote all possible Schemes for Discoveries, which if they do not immediately succeed, are necessarily attended with their usual Consequences, such as raising up good Officers, and keeping Seamen in Action; so that in Time of Peace, Attention to such Expeditions will procure a sufficient Number of Officers and Seamen fit for the Service of their Country in Time of War, and who, if they are duly paid, and treated, need never be compelled to do their Duty.

it, and to all the other Demands made by the *Portugueze* General. On his Landing, he was received with all imaginable Civility, and immediately admitted to an Audience of the Emperor, at which *Capral*, who was naturally vain, made a pompous Display of his Magnificence. The *Samorin*, to demonstrate the Sincerity of his Professions, made him a Present of a Houfe, by a Deed of Gift, which was ingrossed in Letters of Gold; he permitted him also to fet up the Standard of *Portugal*, to appoint a Factor, or Consul for his Nation, and to open Magazines for the effectual carrying on of Commerce; but all this fair shew of good Intelligence and reciprocal Friendship soon came to nothing.

The *Portugueze* Historians assure us, that it happened thro' the Imprudence of their new Factor, or Consul, whose Name was *Correa*, and who, on some slight Information, acquainted *Capral*, that the *Samorin* intended him some foul Play. The *Portugueze* General, upon this, began to seize the Ships of the *Indians*, and to commit other Acts of Hostility; upon which the Inhabitants, as might be reasonably expected, attacked the *Portugueze* Factory, forced open the Gates, pillaged and burnt the Houfe, and of sixty-six People that were in it, murdered fifty, the rest saving themselves with great Difficulty on Board their Ships. The *Portugueze* General took a very severe Revenge, by burning ten rich Ships that were in the Port, making Slaves of Part of their Crews, and beating down a great many Houfes about their Ears; after which he sail'd away for *Cochin*, which lies thirty Leagues from *Calicut*.

The Prince then on the Throne of *Cochin*, was called *Trinampara*, who having Reasons to be offended with the *Samorin*, received him very kindly, and concluded a Treaty with him, into which the Kings of *Conlan* and *Cananor* desired to be admitted. *Capral* taking great State upon him, did not immediately listen to this Proposal, but offered to carry their Ambassadors, if they thought fit to send any with him, into *Portugal*, assuring them, that his Master would send them speedy and powerful Assistance against the *Samorin*. They readily accepted his Offer, and the General having taken on Board a rich Cargo, paid a Visit to the King of *Cananor*, and having received the Ambassadors of all the three Princes on Board, he in the Month of *January* sail'd from *Cochin*, in order to return to *Europe*.

The *Samorin* fitted out a great Fleet, on Board of which were two thousand Men, and sent it in Pursuit of them, but the *Portugueze* being better Sailors, easily escaped this Danger. In his Passage home, one of his Ships unluckily ran ashore on the Coast of *Melinda*, and *Capral*, to prevent the *Mohammedans* from making any Advantage of this Accident, first nailed his Cannon, and then set the Ship on Fire; notwithstanding which, the King of *Monbaza* found Means to weigh the Artillery, and to render them serviceable, to the great Prejudice of the Christians.

The *Portugueze* General continued his Voyage, doubled the Cape without any great Difficulty, and arrived safely at *Lisbon*, on the 23d of *July*, 1501. He brought Home with him a very rich Cargo, the Ambassadors of three Princes, and a pompous Account of the great Exploits he had performed against the *Samorin*. All which, however, did not procure him a very favourable Reception from his Master, on account of the great Loss he had sustained in this Voyage, and the Number of gallant Men who had perished in it, and who were not to be repaired or replaced, by all the Wealth of the *Indies*.

It seems, Don *Emanuel* had some Foresight of what might happen from the haughty Disposition of this Officer, and therefore had dispatched a Squadron of four Sail to the *Indies*, under the Command of Don *Juan Nova* *Calicut*, a Man of great Prudence and Courage. He missed of *Capral* in his Passage, but arriving at *Melinda*, and there learning what had passed at *Calicut* and *Cochin*,

he continued his Voyage to *Cananor*, and having complemented the King on the Part of his Master, sailed from thence for *Cochin*. He met in his Voyage, a Fleet of upwards of fourscore Sail, which the *Samorin* had sent to attack and destroy him in the Port of *Cananor*. Don *Juan*, notwithstanding the great Inequality of their Force, fought them for a whole Day, and having sunk ten Sail of large Ships, four Barks, and other small Vessels, and killed upwards of four hundred Men, forced them to return with Shame to *Calicut*. After this Victory, he was received with all imaginable Marks of Kindness and Gratitude at *Cochin*, where having at *Lisbure* revivall'd his Ships, and taken in a very rich Cargo, he sail'd for *Europe*.

He doubled the Cape without any Difficulty, and in his Passage from thence touched at the Island of *St. Helena*, of which he made such a Report on his Return to *Lisbon*, as engaged the King of *Portugal* to instruct his Admirals to touch for Refreshments there for the future. But a Squadron of six Sail that were sent to *Brazil* at the same time Don *Juan* was dispatched to the *Indies*, had not the like good Fortune, four of them being lost at Sea, and the two that returned brought little with them except Monkeys and Parrots.

6. The Necessity of sending a greater Force into the *Indies* than had been hitherto employed, was now very apparent, and therefore King *Emanuel* ordered twenty Sail of stout Ships to be equipped for that Purpose, neither did he find it more difficult to furnish so large a Force with every thing necessary, than to fit out the small Fleets he had sent before; for now that there was a Prospect of great Riches being got by this Commerce, he had not only the Command of the Wealth of his own Subjects, but Foreigners also resorted in Crowds to *Lisbon*, some in search of Employment, and others to employ their Money. The Business was next to find a Person fit to be intrusted with so great a Command, and the King, after mature Reflection, determined to engage *Vasquez de Gama* to go thither a second Time. That great Officer was in every Respect as easy and as happy as he could wish; his Reputation was well established, his Fortune larger than his Desires, and the Affairs of his Family in the fairest Situation. But the present Posture of things made his Presence necessary abroad, and from a Sense of this he readily quitted his Retreat, and sacrificed all the Blessings of *Lisbon*, as became a Man of Honour, to the Service of his Country.

In the Spring of the Year 1503, he sail'd from *Lisbon*, doubled the Cape without any remarkable Accident, and arriving at *Quiloa*, forced the King thereof to become tributary to his Master, and to agree to the annual Payment of two thousand Crowns of Gold. He sail'd from thence to *Cananor*, where he set the Ambassador on Shore, made several rich Presents to the King in the Name of his Master, renewed the Alliance made with him, and then sail'd for *Cochin*. While he was there, he received a Deputation from the Christians of *India*, or, as they are commonly called, Christians of *St. Thomas*, to whom he promised all the Assistance in his Power, and that he would leave, as indeed he did, a strong Squadron behind him to protect them. The *Samorin* in the mean time neglected nothing in the Power of a great Politician, or of a puissant Monarch, to destroy his Enemies. He laboured all he could to engage *Trinampara* to betray Don *Vasquez* into his Hands; but that Prince answered, that hitherto the *Portugueze* had behaved towards him with great Honour and Generosity, and that while they continued so to act, he would never abandon them.

The *Samorin* had next Recourse to open Force, and assembling a Fleet of twenty-nine Sail, resolved to attack Don *Vasquez*, when he was ready to return with his Fleet heavy laden, and consequently in a Condition less able to oppose him. When therefore he had Intelligence that the *Portugueze* Admiral was preparing for his Departure, he sent this mighty Force against him. Don *Vasquez de Gama* suffered them to come as near him as they thought fit, and

I think it requisite to add a Note here, in order to inform the Reader, that this is no Remark of mine, but taken from the *Portugueze* Writers, which is an Argument, that in those Days, when a true Spirit of Virtue prevailed, it was held more honourable for a great Officer to serve his Country, than to enrich it; and that *Capral* was blamed, not for his want of Zeal or Courage, for he does not seem to have been defective in either, but for his not being so careful of his People as he ought to have been; for it, and will be, a Maxim in all well-governed States, that he is no Friend to his Country who neglects of its Subjects.

then attacking two of their largest Ships with great Vigor, the Seamen and Soldiers, after a short Resistance, in which they lost three hundred Men, jumped over-board, which struck such a Terror into their Compositions, that they immediately spread all the Sail they could, and bore away in the utmost Confusion. In these two Ships that were taken, Don *Vaquez* found immense Riches; for besides Gold and Silver Plate to a great Value, there was on board one of them an Idol of a most horrid Shape, which weighed sixty Pounds in Gold. In the Head there were two Emeralds for Eyes, more perfect than any that had been seen in *Europe*; and in the Breast there was fixed a Ruby of the Size of a Chestnut; these and other valuable things being taken out, together with a Robe designed for the Idol, embroidered with Pearls, Topazes, and Diamonds, the Ships were fit on Fire.

Vaquez proceeded from thence to *Comorer*, conferred with the King on the Measures necessary to be taken in his Absence, and then leaving behind him six large Ships under the Command of *Vincent Sotrez*, he sailed for *Mozambique*, where having taken in some necessary Refreshments, he continued his Voyage without the least unlucky Accident, till he arrived at *Lisbon*, where he was received with the utmost Joy, and the Tribute of the King of *Cochin*, in a Silver Basin, was carried in Triumph before him.

As soon as *Goma* left the *Indies*, the *Samerin* assembled an Army of 60,000 Men, and marched to attack the King of *Cochin* by Land. The News of this Invasion so frightened the Subjects of that Monarch, that they began to curse the *Portuguese*, and to intreat their King to make his Peace with the *Samerin*, by delivering up such of them as were in his Hands, and renouncing his Alliance with them. *Trimumpara* behaved on this Occasion with extraordinary Firmness, he gave the *Portuguese* that were at *Cochin*, a strong Guard, and, notwithstanding the Cowardice of his Subjects, resolved to put all to the Hazard, rather than break his Faith.

At this Juncture *Vincent Sotrez* arrived with the Ships under his Command, to whom the King applied himself for Relief, and desired he would lend a Part of his Force to assist him in this Extremity. The *Portuguese* Officer was a very brave Man, and understood his Business perfectly; but he loved Money, and had found a very easy way of acquiring it, by plundering the *Mekammedan* Traders; He therefore found out, that by his Instructions he was to act by Sea, and not on Shore, and therefore would not consent to land so much as a single Man. This amazed the King, and enraged the *Portuguese* that were at *Cochin* to the last Degree; but *Sotrez*, without putting himself to any Pain about their Refinements, sailed to the *Red-Sea*, in order to make Prizes, where his own Ship was lost, and he and his Brother drowned.

In the mean time the *Samerin* marched with his Army into the Territories of *Cochin*, where the King being betrayed, they forced a Pass that led to his Capital, by which they imagined they had him intirely at their Mercy. As soon as *Trimumpara* was informed of this unlucky Accident, his first Care was to secure the *Portuguese*, and in order to this, he directed that they should be sent over to the Island of *Viapan*, which lies over-against *Cochin*. This Island was consecrated to the most solemn Mysteries of the *Indian* Religion, and had therefore been hitherto accounted sacred in all the Disputes between Monarchs of that Faith; but it was also a Place of extraordinary Strength, and that not only from its being inaccessible by Nature, but from the Assistance also of Art, and in this Island there were con-

siderable Magazines, and a very numerous Garrison of Troops.

The *Samerin* carrying all before him, and a great many of *Trimumpara's* Subjects having deserted their Master, submitted to that Tyrant, the King of *Cochin* found himself at last obliged to follow the *Portuguese*, and to Shelter in the same Place. The Governor of *Viapan* remained firm to his Master's Interest, and thereby preserved him from the Rage of his Enemy; for the *Samerin* burnt the Town of *Cochin*, several times attacked the Island of *Viapan*, and was as often repulsed with great Loss, at last obliged to abandon his Design, and to return again into his own Dominions, the Winter Season coming on, which it is impossible for an *Indian* Army to keep the Field; but he left a considerable Garrison in *Cochin*, and ordered several Forts to be erected, resolving to return thither again in the Spring.

7. It was now become a settled Maxim in *Portugal* to send annually a Fleet to the *Indies*, and accordingly *Franco Albuquerque* coming with a strong Force into those Seas, and having joined at the *Agueda* Islands the Ships under the Command of *Pedro Azoide*, he sailed directly to *Viapan*, where he comforted the King of *Cochin* on the Part of *Emmanuel* his Master, and assured him that he should receive all the Assistance from him that lay in his Power, which he performed with as much Sincerity as with Readiness he could. In the first place, he drove the Garrison, which the *Samerin* had left in *Cochin* from thence, and having demolished their Forts, brought the King back again in Triumph to his Capital. As this Victory, and the Use made of it, gave the *Portuguese* Admiral a good Title to the King's Favour, he took Occasion from thence to desire the Liberty of erecting a Place of Strength for the Security of his Countrymen, that they might not be exposed to the Dangers as they had lately gone through for the future; Proposal was very kindly accepted, and the King of *Cochin* gave him leave to build a Fort where-ever he thought fit. In Consequence of this Permission, *Franco Albuquerque* made Choice of an Eminence, which commanded both the Town and the Fort, and the King having allowed him to cut down all the fine Palm Trees that were planted round his Palace, he quickly finished the Fortrefs he had marked out in the best manner that such Materials would permit. He likewise built a Chapel for the Performance of Divine Service; and thus as the *Portuguese* Writers themselves confess it, their Nation became possessed of the Dominions both in Spirituals and Temporal of the *Indies*, and the King of *Cochin* without perceiving it, contributed all that lay in his Power to the introducing Strangers as Lords of himself and his Neighbours.

Under pretence of reducing such as had rebelled against the King of *Cochin*, they made themselves Masters of several Countries, pillaged all their Towns and Villages at pleasure, and committed greater Devastations than the *Samerin* himself had done during the late Invasion. In the Progress of these Proceedings *Alphonso Albuquerque* arrived in *Portugal* with an additional Force, he soon added by the Conquests and Alliances of the *Portuguese*. The Lords or Guardians of the King of *Colan*, a very rich and potent Prince, whose Capital lay twenty-four Leagues South of *Cochin*, demanded the Protection and Friendship of *Portugal*, which was immediately granted, and a Colony settled there. The King of *Zanzibar* was soon compelled to submit to the Crown of *Portugal*, and the City of *Brava*, which was a kind of Commonwealth, was obliged to pay an annual Tribute. The King of *Al*

* The Man has a very good Character given him by the famous *Portuguese* Historian *John de Barros*, at least in Point of Courage; but the Love of Money got the better of his Virtue and his Understanding. He had heard of a rich Fleet of Ships in the *Red-Sea*, and he went out in the Mouth of *Man* to intercept them. In van the People of the Country repented to him, that it was dangerous to Sea at that time of the Year, in van his Pilot dissuaded him from his Purpose; he was so possessed with the Desire of being rich, that he had no Regard to the Danger. After he and his Brother's Death, *Pedro Azoide*, upon whom the Command devolved, endeavoured to return with the remaining Part of the Fleet; but finding it impracticable, was forced to retire to the *Agueda* Islands, where he wintered.

† It is not easy to conceive how in a Situation the King of *Cochin* could refuse the *Portuguese* leave to build a Fort in his Dominions, and it must be allowed, that it was an *Indian* Policy not to be justified. He was pressed by two Difficulties equally great; but the Danger from the *Portuguese* was not equally pressing, and therefore he chose, as indeed any other Prince would in his Circumstances, to run the Hazard, which was at the greatest Distance. The *Portuguese* Writers, without any Ceremony avow, that the Design of their General's erecting a Fort was to establish the Dominion over the Natives, to which, however, they had no sort of Title, except what was derived from the People's Consent, or from the Force of Arms. With respect to the Bull, it has been treated with equal and with just contempt by *Francis* and *John* de Barros. With respect to Conversion, it might be easily shown, that Force of any kind is incompatible with the Christian Religion; and that the Bull, being grounded on pure Maxims of Policy, and all that is said of Religion is a mere Pretence, by which the *Portuguese* sought to make their Conquests more palatable.

had Recourse to the *Portugueze* for Assistance against his Neighbour the King of *Mombaza*, which ended in the Reduction of them both. Those great Successes terrified the *Samorin* to such a Degree, that in the most humble manner he sought for Peace; and in order to obtain it, entered into such Conditions as seemed satisfactory to the *Portugueze*, made them Reparation for the Losses they had sustained when formerly settled at *Calicut*, and did every thing for them that they insisted upon.

But as great Prosperity is apt to corrupt the Minds of Men, so the *Portugueze* made a very ill Use of this extraordinary Turn of Affairs in their Favour, since not long after this Peace concluded with the *Samorin*, they took a Ship of his richly laden; and notwithstanding he applied by his Embassadors for Satisfaction, *Francis Albuquerque*, who then acted with supreme Authority in the *Indies*, not only refused him Satisfaction, but treated him with Scorn and Disrespect. This irritated that Monarch to such a Degree, that he determined to renew the War, in order to revenge himself upon these Strangers, and to destroy the King of *Cochin*, who had sacrificed the Freedom of the *Indians* by his indiscreet Concessions to these foreign Invaders.

He kept, however, his Design to himself, and made secret Preparations for War, in order to be ready to fall upon his Enemies as soon as the *Portugueze* Fleet should return to *Europe*. But all the Precautions he used could not hinder *Trinumpara* from gaining early Intelligence of his Intentions, who thereupon applied himself to the *Albuquerque's* intreating them to leave a sufficient Force behind to protect their Countrymen and Allies in the *Indies*. The Request was reasonable in itself, and the King of *Cochin* had the justest Grounds to expect it should have been complied with; but notwithstanding what he could say, *Francis Albuquerque* would not be persuaded to leave him any more than three Ships, and one hundred and fifty Men, under the Command of *Edward Pacheco*, a Man of great Courage and Conduct, and of such Steadiness and Abilities, that he was an Army in himself. This Step once taken, the *Albuquerques* sailed with a rich Cargo for *Europe*, but met with very different Fates in their Voyage, since *Francis Albuquerque* the Uncle perished, with all who were on Board his Ship, none knew where, or how; but *Alphonso*, the most fortunate Commander of his Time, arrived safely at *Lisbon*, with all the Ships under his Command, having acquired as great Fame and Riches as any that had been hitherto employed in the East.

As soon as the *Portugueze* Fleet quitted *India*, the *Samorin* assembled an Army of sixty thousand Men, and a great Fleet, in order to attack *Trinumpara* and the *Portugueze* in his Dominions. The Subjects of that Prince acted as ill on this, as they had done on the former Invasion; that is to say, they abandoned their Prince, and endeavoured to save themselves without thinking of their Country. The King behaved with his usual Firmness and Constancy, disposed all things to the best Advantage, and left the rest to Providence. *Pacheco* and his *Portugueze* gained great Reputation by this War; and it was chiefly by his Assistance, that the vast Preparations made by the *Samorin*, produced nothing but Confusion and Shame to their Author. This Commander built another Fort for the Defence of the Haven, acted with the greatest Alacrity and Courage by Sea or Land, where-ever the common Interest called him; so that when a new Fleet arrived from *Portugal*, and the Danger being over, he testified a Desire of returning home: The King of *Cochin* gave him Letters, testifying how well he had behaved, and how much they were indebted to him for their Security.

At his Return King *Emanuel* paid him the highest Honours, ordered one of the most eloquent Prelates in the Kingdom to write the History of this War, which he transmitted to the Pope, and other Christian Princes, telling them at the same time, that it was as great a Satisfaction to him to have such a Man his Subject, as to be Master of the *Indies*; and to shew that he did not mean to reward the

important Services with Fame only, he bestowed on *Pacheco* one of the noblest Governments in *Africa*. Such was the noble Spirit of this Prince, to whose sublime Virtues *Portugal* owes her Glory, and her *Indies*; a Prince, who knew how to suit the Abilities of Men to the Designs in the Execution of which he employed them, who judged impartially of their Behaviour, never punished with any Degree of Severity, or suffered Envy to mix with the Rewards he bestowed on Men of Merit. Such a Prince was remarkably well served at home, and highly esteemed abroad: His Fortune made him the Delight of his Subjects; his Power rendered him the Terror of his Enemies; his Fidelity gained him the perpetual Confidence of his Allies. But it is now time to pursue our History, and to speak of the first Viceroy sent by the Crown of *Portugal* to direct the Affairs of the *Indies*.

8. The immediate Acquisition of Wealth and Power did not so take up the Mind of this great Prince, as to engage him in an Opinion that all Difficulties were overcome, and that there was nothing now to be thought on but making use of what was already in the Hands of his Subjects; on the contrary, the great things they had performed, inclined him to extend his Plan, and to think of driving the *Mohammedans* entirely out of the *Indies*. It was undoubtedly a great and glorious Design, but at the same time it seemed the Strength of his Kingdom, considered absolutely impracticable. Don *Emanuel* had been informed that there were three great Ports in the East, in which the *Mohammedans* were established, and from whence they carried on all their Commerce to the most distant Parts of the *Indies*. These Ports were *Aden* in *Arabia*, *Ormuz*, in an Island of the same Name on the Coast of *Persia*, and *Malacca*, near the Straights of *Sinagour*. An their Strength was divided, Don *Emanuel* judged it not impossible to make himself Master of all these Places in their Turns, and with this View it was that he began to fit out a larger and better appointed Fleet than hitherto he had sent to the *Indies*.

While he was employed in these Preparations, there happened a new Scene of Affairs in the East, where the *Brammins*, who were about the *Samorin*, shewed themselves able Politicians, by giving him the best Advice that the Posture of his Affairs would admit. They observed to him, that the *Christians* and *Mohammedans* were equally his Enemies, and that therefore the wisest thing he could do was to call in the one to combat the other, that by thus waiting their Forces, they might be so reduced, as that he might be a Match for both. He, listening to their Request, sent for Aid from the Sultan of the *Mamelukes*, who were at that time in Possession of *Egypt*; the News of which greatly terrified all the *Christians* in the *Indies*, and occasioned their sending immediate Advice of it into *Portugal*.

This obliged King *Emanuel* to dispatch his Fleet sooner than he intended, and with a less Force, though it was even now very considerable, consisting of thirteen large Ships, and six Carvels, with a great Body of Soldiers on Board. He made choice of Don *Francis Almeida Count d'Abrantes* to command it, who had served King *Ferdinand of Castile* in his Wars with great Reputation, and gave him the Title of Vice King, and Governor General of the *Indies*. He likewise assigned him Guards for his Person, a certain Number of Chaplains, and whatever else could be thought necessary to give an Air of Grandeur to his Office. On the 25th of *March* 1505, the Fleet sailed from the River of *Lisbon*, and on the 11th of *April* following reached the Islands of *Cape Verde*; from whence stretching too far to the South, in hopes of doubling the Cape with greater Ease, the Fleet ran into such high Latitudes, as that the Seamen had many of them their Fingers frozen; but varying their Course a Point or two to the East, they arrived safely at *Quiloa*, where *Abraham*, the Tyrant of that Country, refusing to pay his Tribute any longer, the Viceroy drove him out, and settled *Mohammed Ancoim* in his Place, building a Fort there to keep the People the better in Subjection.

* This Scheme of Don *Emanuel's* was actually executed in every Branch of it by Don *Alphonso Albuquerque*; but I think it is very questionable, whether the *Portugueze* would not have found their Account much better in making two or three good Settlements in the *Indies*, without endeavouring to distress the Inhabitants, or to deprive them of their Liberty: In Prosecution of which Design, their own Success ruined them, as in the succeeding Part of this Work we shall have Occasion to shew.

Thence he sail'd to *Mombass*, which is a small City, in an Island well fortified with two Citadels, furnished with some Pieces of Cannon, which engaged the King to refuse *Almeida* Entrance, this, however, he forced, by beating their Forts to the Ground, and afterwards took the City by Storm, and made Slaves of a great Part of the Inhabitants. He continued his Voyage to the *Angedive* Islands, which are five in Number, not far from *Goa*, where, according to his Instructions, he built a Fort. He proceeded thence to *Cananor*, where, with the Consent of the King, he built another Fort, and put a strong Garrison into it. On his Arrival at *Cochin*, he found things in a very unsettled Condition; for *Trimumpara*, worn out with Years, had resigned the Crown to his Sister's younger Son *Neubeader*, rejecting the elder, because he had deserted him on the last Invasion, by the *Samorin*, which occasioned great Troubles; but the Viceroy put an End to them, and fixed *Neubeader* firmly on his Uncle's Throne.

About this Time a Squadron of eight Ships was sent out to discover new Lands, by which was found the Island of *Madagafcar*, otherwise called *St. Lawrence*, because it was first seen on the Day dedicated by the Church of *Rome* to that Saint. *Almeida* also detached a Squadron under his Son *Lawrence de Almeida*, on the same Service, who repaired to the *Maldiva* Islands, from whence he was driven by a mighty Tempest to the Isle of *Ceylon*, thought to be the *Zaprehana* of the Ancients; where landing, he took the Inhabitants into the Protection of *Portugal*, and imposed a Tribute on their King; nor was the Viceroy in the mean Time less employed, but defeated the *Calicutians* in a great Battle at Sea; then dividing his victorious Fleet, he committed one Part of it to *Emanuel Puzagne*, and the other to his Son, upon his return from *Ceylon*, appointing the first to accompany the trading Ships of *Cochin* to *Cape Comorin*, for their Security against the Robbers in these Seas, and the other to cruise at large about the Coast for the Defence of the Islands and Ports. It became now an established Rule among these new Inhabitants of the *Indies*, that whosoever came into those Parts, without a Pass from some *Portuguese* Admiral, or Governor of a Fort, should be esteemed as Enemies, and lose both Ship and Goods, whereby they engrossed all the Wealth of the *East* to themselves; and the better to maintain their Authority, King *Emanuel* sent out yearly new Reinforcements and Supplies.

In the Year 1508, fifteen Ships were fitted out, under the Command of *Tristan de Coeba*, with which, repairing to the Coast of *Zangubar*, he assailed the King of *Alinda* against his rebellious Subjects, and burning the Cities of *Hona* and *Brava*, sailed to *Zocotara*, where, reducing the chief Town of the Island, he left a Garrison in it, and made the best of his Way to *Malabar*, where, joining the Fleet of *Almeida*, they repaired against the People of *Calicut*, who were now assisted by a Fleet from *Arabia*, and before *Panan*, one of their Towns, gave them a final Defeat. Not long after they engaged off of *Chaul* near *Bombay*, the Fleet of *Campson* Sultan of *Egypt*, coming to the Assistance of the Enemy, which they entirely routed, and every where came off Conquerors, excepting the aforementioned Son of *Almeida* falling in with a Squadron of *Cambayan* and *Egyptian* Ships, was unfortunately slain with an Arrow, as he bravely defended himself against them. The Body of this young Hero could not be found, but the Fleet returned with the melancholy News, which the Viceroy received with great Constancy of Mind, saying no more, than that his Son could not end his Days more gloriously than in the Service of his Country.

Alphonso Albuquerque was now arrived in the *East* with a strong Squadron from *Portugal*, with which, designing to subdue the Isle of *Ormuz*, at the Mouth of the *Persian*

Gulph, he first reduced the Cities *Cariate*, *Mafate*, *Soh*, and *Orfacan*, lying along the Coasts of *Arabia*, then he sailed to the King of *Ormuz*; after which, defeating the Enemy in an Engagement, in the Port of that City, he landed in the Island, and prepared to invest the Place when the King (called *Zurafadin* II.) gave Leave that the *Portuguese* should build a Fort on the Sea-Coast, and engaged, not only to pay them an annual Tribute, but to defray the Charges of the War. The Time of *Almeida*'s Viceroyship being now on the Point of expiring, he resolved to revenge the Death of his Son, and going off with a Squadron of nineteen Sail, attacked off *India* a great Fleet of *Cambayans*, *Egyptians*, *Calicutians*, and other of the Enemies of the *Portuguese*, by whose Hand his Son fell, and entirely routing them with great Slaughter, subduced all the Coast from *Diu* to *Cochin*, forcing the several Princes to yield themselves Tributary to *Portugal*.

This Commission being now expired, he delivered the Government with great Reluctance to *Albuquerque*, who, having passed the Cape of *Good-Hope*, in his Way homewards, was, with his Companions, unfortunately slain by some Barbarians on the Coast of *Africa*, through his own Impudence; for he would needs go on Shore in search of Provisions and Refreshments, in a Country absolutely unknown, and there some of his Attendants having quarrelled about the Price of Provisions with the Natives, with more Courage than Prudence, ran to their Assistance; but when he saw the whole Country pouring down upon them, he would have retired, and did his utmost Endeavour to make a Retreat to his Ships; but it was too late, the Barbarians discharged on him, and those who were with him, a Shower of Arrows, by which many and twelve experienced Officers were killed upon the Spot, so that he lost not only the Rewards which he might reasonably have expected from his Master, but even was denied a decent Funeral, which, in the Opinion of those who survived him, was a much heavier Misfortune.

9. He was succeeded in his Command in the *Indies* by *Alphonso Albuquerque*, whose Services had already risen much from his Mailer, and whose Character rendered him the fittest of all others to be entrusted with Power in *General*; yet he had not the Title of Viceroy, but of this Title only, though his Authority was as extensive as that of *Almeida*, and his Success in his Administration extraordinary, that it acquired him the Surname of *Grand* *Fernand Coutigno*, Grand Marshal of *Portugal*, who came with a Fleet of fifteen Sail, and with three thousand Men on Board, to put him in Possession of the Government, engaged *Albuquerque* to begin the Exercise of Authority with the Destruction of *Calicut*, which had given them so much Trouble, and which was likely to give them still more, as long as it stood. This Expedition very honourable for the new General, though it proved fatal to its Author; for while *Albuquerque* took the City that commanded the Place, and set fire to the Town, Grand Marshal made himself Master of the Royal Palace, where finding immense Riches, his People fell to plundering, and the *Indians*, taking Advantage of the Distress they were in, fell upon them, and cut them off to a great Number. *Albuquerque* did all that in his Power lay, to prevent *Miskiel*, but without Effect, and in endeavouring to another, he ran a great Risk of being destroyed himself for in his Passage towards the Palace, he received dangerous Wounds, and immediately after, was assailed with a great Stone thrown upon him from the Top of one of the publick Buildings. In this Collision his Soldiers took him up, and carried him on Board his Ship, and then they made a good Retreat, having at this unfortunate Undertaking the Grand Marshal, fourscore Men, and about three hundred wounded.

¹ This was a very deep Question in *Polinicks*, viz. Whether Rebellion in the next Heir deprives him of his Right of Succession? But it does appear, that ever the *Portuguese* considered the thing in this Light, the youngest of the two Nephews seemed to them most in their Interest, therefore it was very natural for them to be in his

² We learn from some of the *Portuguese* Histories, that *Almeida* suffered his Jealousy of *Albuquerque* to carry him too far, as to cause him seized, together with all his Papers, and consigned to the Custody of *Concomer*, where he kept him Prisoner, allowing him only three of his Servants to attend him, and that it was impossible they should have Intelligence of this in *Portugal*, yet it seems they suspected some such Matter, and therefore Brian of great Quality, and a strong Fleet, to regulate Affairs in that Part of the World, without which, in all Probability, there might have been some Difficulty in persuading the Viceroy to part with a Power of which he was so fond.

As soon as *Albuquerque* recovered, he formed a Design of making himself Master of *Ormuz*; and for that Purpose assembled a great Fleet, and a considerable Body of Troops, amongst which were two thousand veteran *Portuguese* that had served long in the *Indies*. But when he was on the Point of sailing, he received such Intelligence as engaged him to alter his Design, and to resolve upon attacking *Goa*, a large and rich City in the Island of *Tiquarim*, with one of the best Ports in the *Indies*. This Island, which is about nine or ten Leagues in Circumference, was esteemed, from its Situation, the most important Post on the Coast of *Malabar*. The King of *Decan* was the natural Lord of it, and the Person who commanded for him there, was one *Idalean*, a Moor by Birth, and a Man of great Courage and Experience. He took all imaginable Care to put the Place into the best Posture of Defence possible; notwithstanding which, the Island was reduced, and the City of *Goa* taken by Storm by the *Portuguese*, assisted by a Fleet and Army of an *Indian* Prince, called the King of *Onor*, under the Command of *Timois*, his General. Don *Alphonso Albuquerque* made his publick Entry into it on the 17th of February, 1510, with great Magnificence; and having settled every Thing there, in the best Order possible, he appointed his Nephew *Antonio de Novogna* Governor of the City; *Gaspard de Payva* General Director of the Commerce, and *Timois*, had the Charge of the Revenues, which amounted to Eighty-two thousand Pieces of Gold per Annum. This Conquest was not easily maintained, for *Idalean* returned with such a Force as recovered the Place, and the new Governor *Antonio de Narogna* was slain in the Dispute, which, however, served only to encrease the Desire of *Albuquerque* to raise the Credit of his Nation, by securing a Country and City of such Consequence, which, after a War of long Continuance, he accomplished; and this City became afterwards, viz. in 1559, the Seat of the Governor, and the See of an Archbishop, and Primate of the *Indies*.

The Conquest of *Goa*, though, in itself, of vast Importance, was far from satisfying the Ambition of *Albuquerque*, whose Mind was continually agitated with the Desires of extending the Power of his Prince, and his Reputation. It was with this View, that he sailed with a great Fleet to the Road of *Malacca*, where he demanded the *Portuguese* Prisoners the King had in his Hands. The *Indian* Monarch put him off with fair Words and Promises, and the General being afraid that he might put the Prisoners to Death, bore with this Treatment for some Time; but, at last, was so provoked, that he made an Attempt on the Place, and actually set it on Fire; upon which the King of *Malacca* immediately sent the before-mentioned Prisoners, and offered to make Peace with the *Portuguese* upon their own Terms. Those prescribed by *Albuquerque* were extremely hard, for he demanded Leave to build a Fort, where he thought fit, a Reparation of Damages done to the *Portuguese*, and a Sum of Money equivalent to the Expence of this Expedition.

The *Indian* Monarch, having consulted with his Council, absolutely refused to yield to them; and thereupon Hostilities were again begun on both Sides, which ended in *Albuquerque's* attacking the City of *Malacca* by Sea and Land with great Fury, and, after an obstinate Resistance, it was taken by Storm, and given up to the Pillage of the *Portuguese* Soldiers; and we may guess at the Riches of the Place by the clear Fifth, which was referred to the King, and which was bought on the Spot by the Merchants for Two hundred thousand Pieces of Gold. The General immediately caused a Fort to be erected for the

Security of the Place, and putting a good Garrison into it, he gave the Command thereof to *Rodriguez Patolino*; He raised one *Utinut*, an *Indian* Lord, who, by deserting the King of *Malacca*, had been very useful to him, to the Post of supreme Magistrate of the *Indians* and *Mobammedans*; and, having received the Compliments of several *Indian* Princes upon his Victory, he prepared to return to *Goa*. Before he quitted the Place a Conspiracy was discovered, in which *Utinut* was principally concerned, who thought to have made himself Master of the Place. As his Letters were intercepted, the Proof against him was clear, and the General ordered him and his Son to be executed, notwithstanding his great Age, and an Offer made him of an hundred thousand Pieces of Gold to spare their Lives. After this, and staying there near a Year, he determined to leave a very brave Man, and experienced Officer Commander of the Forces at *Malacca*, with a sufficient Number of Ships and Men. These Precautions being taken, he sailed for the Coast of *Malabar*; but, in his Passage, met with such a Storm as destroyed the greatest Part of his Fleet, with all the Riches on Board, and it was with very great Difficulty that the General himself escaped.

After a short Stay at *Cosbin*, and putting every thing there in the best Order they could, Don *Alphonso Albuquerque* retired to *Goa*, where Things were in some Contention; but he soon restored them, and humbled all the *Indians* in his Neighbourhood to such a Degree, that the *Samorin* himself sent Embassadors to implore Peace, and to offer him Permission to build a Fort at *Calicut*, wherever he thought fit. The Emperor of *Ethiopia* also sent an Embassador to *Goa*, and from thence to *Portugal*; and, in short, the Terror of the *Portuguese* Arms was now so great, that *Idalean* and the Princes that had given the greatest Opposition to the Settlement of that Nation in the *Indies*, were glad now to atone for their Insurrection, by offering to accept whatever Terms Don *Alphonso* thought fit to prescribe. Such a long Train of Successes, and so splendid a Scene of Prosperity, would certainly have turned the Head of a Man of less Abilities than the Great *Albuquerque*, to whose Capacity the *Portuguese* were more indebted for their Conquests, than to the Armies and Fleets which he commanded.

He had, indeed, all the Talents requisite for a Man in his Station, and with these such a Degree of Diligence and Application, as would have enabled him to have performed great Things, if his Parts had been less shining.

He loved the ancient Frugality of his Country, and never suffered himself to be corrupted by the Power or Wealth that he possessed; and, indeed, he made no Use of either, but for the Service of the Crown. When he saw the Disposition of the *Indians*, to measure every Thing by outward Pomp, he seemed to give into their Notion, and affected, upon publick Days, prodigious Magnificence: But, in the midst of all this, he relaxed nothing of his former Severity, but lived in the midst of all his publick Splendor, as courtely, in respect to his Person, as any private Man. In exacting the Dues of the Crown, he was somewhat severe, but, with regard to his own Fortune, he took so little Care of it, that, except his publick Appointments, he had scarce any thing he could call his own. His Officers were his Children, and he took as much Pains in teaching them their Duty as an affectionate Parent in the Education of his Sons. He overlooked Misdemeanors, but punished Treachery, or Neglect of Duty, with inexorable Severity. He was extremely ready to reward, and all his Discourse at his Table was of the great Actions performed by his Officers, while he was not only silent as to his own,

* While these Disputes lasted, *Sequeria*, a *Portuguese* Officer, had the Command of a considerable Squadron given him, which was to be sent in order to make Discoveries; and as he had taken part with the Victory against the General, he no sooner knew that the latter was involved with the chief Command, than he immediately hastened his Departure. Sailing from *Cosbin* on the 10th of *August*, 1505, he arrived on the Coast of *Malacca* on the 11th of *September*, and was entertained with a Shew of Friendship by the King, who invited him to a grand Entertainment, with Intent to have murdered him, and all who came with him, which *Sequeria* avoided, by pretending Sickness; the King then attempted to surprize the *Portuguese* as they landed to carry on their Commerce, in which he succeeded better, killing some, and making a considerable Number Prisoners. *Sequeria* revenged himself by attacking and plundering several rich Vessels that he met with on the Coast, and then he continued his Voyage to *Portugal*. It was this Act of Treachery that induced Don *Alphonso Albuquerque* to make his Attempt on *Malacca*.

* This Storm happened on the Coast of the Island of *Samatra*, in which *Albuquerque* found a new Opportunity of raising his Reputation. The Ship on which he was aboard, striking on a Rock, the crew hurried him into his Long-boat, and just as they were putting off from the Wreck, the General saw a young Man fall from one of the Mats into the Sea, near his Boat. He flying himself to his Assistance, caught him in his Arms, and thereby preserved his Life at the Hazard of his own.

but would not permit others to commend them. It was a common Saying of his, that he was afraid of nothing but Flattery; and, it was observed, that he never preferred any who attempted to gain his good Graces that way. Let them serve their King and Country, said he, if they would be beloved by *Albuquerque*; and his Actions were agreeable to his Words, for he distinguished none but Men of Merit. It has been well observed by some of the *Portuguese* Historians, that the Vanity of *Almeida* made him affect the State of a Prince, when the Power of the *Portuguese* was but indifferently established; whereas the Modesty of *Albuquerque* was most conspicuous when his Victories had left him nothing to fear, and when the greatest Princes of the East sent their Embassadors to beg his Friendship.

Yet, with all these Qualities, this Hero had his Faults. His Ambition was boundless, and carried away by an extravagant Desire of extending the Dominions of the Crown of *Portugal*, he very little regarded whether the Measures he took for that Purpose, were just or unjust. In his private Life, he was a Man of the strictest Honour; in his publick Character Regard to Truth will not permit us to say so much. What we have farther to relate of his Actions, will fully justify this Remark. He made himself Master of *Goa* without any other Pretence than that it was necessary to the Crown of *Portugal*. He had seized *Malaca* for the same Reason: And now he meditated the Conquest of *Ormuz* from the like Motive, and he effected it in the following manner: He had formerly, that is, before he was declared General of the *Indies*, attempted to raise a Citadel there without being able to effect his Design; but the Power of the *Portuguese* being now so much increased, that all the Commerce of the East depended upon them, the King of *Ormuz* had been obliged to become tributary, because his City and Nation depended upon Trade; other Places could not be rich, but his Dominions, could not subsist without it.

The then King of *Ormuz*, was *Terun-Sbab*, a young Prince of no great Abilities, and of a weak and timorous Spirit. In the Beginning of his Reign, he was entirely governed, as all Princes must be, who have not Parts enough to govern themselves, by an old Minister, whose Name was *Noradino*, a Man of great Cunning, but of no enterprizing Genius, and who, to support himself, and secure the Administration to his Family, brought three of his Nephews to Court, and gave them great Poits in the Government and in the Army. *Hamed*, the youngest of these, in a short Time gained, by his Intrigues, such a Share of Power, that neither the King nor his Uncle, had any more than a Shadow of Authority left. *Don Alphonso Albuquerque* being informed of this, assembled an Army, and gave it out that his Design was to attack *Alen*; but, when at Sea, he directed his Courie to the Coast of *Persia*, and appeared before *Ormuz* when he was least expected. He demanded that the Citadel should be immediately put into his Hands, *Portuguese* Factories settled in the Place, and that the King should absolutely acknowledge himself dependant on the Crown of *Portugal*.

Terun-Sbab, thinking it better to be the Vassal of a foreign Prince, than the Slave of his own Minister, exerted his Authority to lessen his own Dignity, admitted the General into the Citadel, assigned the *Portuguese* some of the best Houses in the Town for their Factory, and ordered their Flag to be displayed upon the Palace. *Hamed* could not help discovering his Impatience, at a Change so sudden and unexpected, to prevent the Effects of which, he formed some Designs against the General's Life; of which *Don Alphonso* was no sooner informed, than he gave Orders to some of his Soldiers to cut him off, which they, without Ceremony performed. If the General had stopped here, it had been well enough, but his Projects

were not of a Nature to be bounded by any thing but the absolute Possession of what he aimed at, and therefore under Pretence that a Fleet was coming from *Egypt*, to make a Descent upon the Island, he demanded all the Artillery of the Place, which, he said, was necessary for preserving it from the Enemy.

Terun-Sbab assembled his Council, who declared, that in the first Place, they knew nothing of any such Design; and in the next, that they thought it very imprudent to comply with the General's Design. The Cowardice of the King, however, got the better of the good Sense of his Ministers, the Artillery was put on Board for the present Service, which the General would never restore; but having made *Pedro d'Albuquerque* Governor of the Citadel, he seized sixteen of the Princes of the Blood, with their Wives and Children, and carried them away with him to *Goa*, that he might have sufficient Hostages for their good Behaviour to him, who, he was conscious, had Reason enough to be displeas'd with his Conduct towards them; and thus, for the present, *Ormuz* was subjected to the *Portuguese*.

A little before the Return of *Albuquerque*, he received magnificent Embassy from the King of *Persia*, who, finding himself in danger of suffering by the new Empire erected by this General in the East, resolved to prevent it if he could, by offering him his Friendship. The General received him with all the Respect due to the Minister of great a Prince, and caused him to be entertained during the Time he staid at the publick Expence, and that with as great Magnificence, as the Circumstances of Time and Place would allow. He likewise made the *Persian* Monarch very valuable Presents, and such as he very little expected; for he sent him some very fine Pieces of Brass Cannon, and various other Utensils of War, together with some able Engineers, to manage them, which he did for two Reasons; first, that he might secure the sincere Friendship of so great a Monarch, which he knew would be of prodigious Consequence, as Things then stood, to the Affairs of *Portugal*; and next, because he was perfectly informed that the Advantages gained over the *Persians* by the *Turks* were intirely owing to their Artillery; and this great Politician very rightly judged, that nothing could serve the Purposes better than keeping the Force of their rival Empires on an Equality.

A short time after the Return of *Don Alphonso d'Albuquerque* to *Goa*, he was seized with an Illness, which in a few Days carried him off at the Age of sixty-three. He was called by the *Mohammedans* *Albuquerque Malanda*, because he was born at *Malinda* in *Africa*, which in all the Eastern Tongues is called *Malanda*; but by the *Portuguese* he was stiled, and that very justly, *Albuquerque the Great*. He was the ablest Statesman, and by far the most consummate General they ever had in the *Indies*, and left the Affairs in the best Situation; and yet he performed all great Actions of his Life with very inconsiderable Force. For with thirty Ships he took *Calicut*, with twenty-one became Master of *Goa*, with twenty-three he surpris'd *Malacca*, and had no more than twenty-two in his last Expedition against *Ormuz*. At the Time of his Death he was meditating two Projects, which would have raised Reputation still higher, if he had lived to execute them; and they are both of them worthy the Character of this illustrious Person, and such as perhaps would never have entered any other Head than his own.

He had so firmly established the Power of the *Portuguese* in the *Indies*, that he saw no Possibility of the Trade being diverted into another Channel, but by the *Turks* who he suspected would make themselves Masters of *Bag* and he very well knew, that by a right Management of the old Channel of Commerce, by the way of *Alexandria*, might be restored, and would then become more considerable than ever. To prevent this, he insinuated to the Emper-

If we consider what Sentiments the *Indians* must have of the Behaviour of the *Portuguese*, we must naturally conclude, that they thought the bloody and as barbarous as the *Turks*; and, therefore, when we hear what the *Portuguese* call Acts of Treachery, we must not absolutely blame them to the Arabian and wased Disposition of the *Indians*, but to their Terror and Apprehension of the *Portuguese*, whose Yoke they did not waste Force they knew not how to resist.

This Country both by its Being and its Grandeur to its Trade, and therefore we often hear it mentioned, to show, that there is no Place so profitable by Situation, that may not be rendered agreeable by Commerce and the Wealth that it brings in, the worth of it is, that Luxury and the consequent Corruption, and it was to the Factions that took Rise from their Wealth and Corruption, that the King and People were obliged to the Destruction of it.

of *Ethiopia*, that for his own Security against such bad Neighbours as the *Turks*, the best Step he could take would be to divert the Channel of the *Nile*, by cutting a Passage for it into the *Arabian Sea* before it reached *Egypt*. If this Design had taken Effect, it must undoubtedly have rendered the greatest Part of *Egypt* uninhabitable, and withal would have rendered it impracticable to renew the old Method of transporting *East-India* Commodities from the *Red-Sea* to *Alexandria*, which was the principal thing he had in View. His other Project was to transport three hundred Horse from the Island of *Ormuz* to the opposite Coast of *Arabia*, which is but seventeen Leagues, and this Party he thought sufficient to plunder the Tomb of *Mohammed* at *Mecca*, and to burn the Relicks of that false Prophet, which he imagined would have various good Consequences. One it would certainly have had, that is, it would have struck all the *Mohammedans* in the East with Terror and Amazement, and have diverted that Concourse of People thither; I mean to *Mecca*, which made the Commerce of *Arabia* famous, and consequently would have promoted in a great Degree his other Design of refusing the Trade of the East out of the Hands of the *Turks*, and other *Mohammedan* Nations.

The Death of this excellent Commander, though at so great an Age, proved some Inconvenience to the *Portugueze* Affairs, and would have proved a much greater, if his Successor had not been at that Time at *Cochin* with a Squadron of ten Sail, which he had just brought from *Portugal*. This General *Albuquerque* left all the Settlements then made in the *Indies* in perfect Peace, and in admirable Order; and he likewise left such a Body of regular Troops as were capable not only of maintaining what was already acquired, but also of adding such Conquests as the King or his Successors should judge necessary. His Funeral was performed with great Solemnity, and his Body interred in a Chapel dedicated to the Blessed Virgin, which himself had built at *Goa*, and which was much enlarged by his Son *Alphonso Albuquerque*, who lived to the Age of fourscore, and gave considerable Assistance to such Historians as have recorded his Father's Actions.

10. The Person chosen to replace this great General was *Lopez Suarez*, who was come for that Purpose with a Squadron of Men of War from *Portugal* to *Cochin*, where he received the News of *Albuquerque's* Death. It seems to have been a Maxim, and indeed it was a very right one, not to leave the same Officer too long in the Possession of so great a Power as it was necessary to vest in the Viceroy, or General of the *Indies*, and without doubt it was owing to this Method, that some of these great Officers were prevented from making an ill Use of their great Authority, and from setting up for themselves, which all things considered, it is a wonder they did not, since with a little Management any enterprising Commander might have secured an *Indian* Island to himself, and have brought the Inhabitants to think it their Interest to defend him. *Suarez* was no sooner entered upon his Administration, but the People of *Aden* sent Embassadors to him to let him know they were ready to comply with his Demands, but he took no notice of their Submission; and having a Design on the *Egyptian* Fleet, which he heard was coming down the *Red-Sea*, he, to keep his People employed till their Arrival, near the Straights of *Babel-mandel*, attacked *Zeila* a Town on the Coast of *Africa*, opposite to *Aden*, and gave the Plunder to his Soldiers and Seamen.

But *Suarez* too late repented him of his Neglect of the People of *Aden's* Officers, for the expected Fleet of *Egypt*

ians never appeared, and that City changed soon after its Resolution of submitting to *Portugal*. To the Loss of this happy Opportunity succeeded another Misfortune; for *Campsen* the Sultan of *Egypt* being overcome by the Emperor *Selim*, and his Dominions becoming part of the *Turkish* Empire, the Coasts of *Egypt* and the *Red-Sea* were much better guarded than before, several new Forts being erected there, and supplied with good Garrisons. In the mean time *Andrada*, who commanded in chief at *Malacca*, made an Expedition for settling of Trade to the Coast of *China*, where he was hospitably entertained for some Months, but his People growing insolent upon his kind Reception, committed several Violences, and he was forced to quit the Country with the Loss of a great Number of his Followers. The *Portugueze* of *India* were now but in an indifferent State, and the new Forts lately finished in *Ceylon*, and the Kingdom of *Cochin*, were scarce sufficient to keep the Inhabitants in their Duty, so that *Suarez* being looked upon as unequal to so great a Charge as the Government of those Acquisitions, was recalled, and *James Lopez* appointed his Successor.

He, on his Arrival in *India*, having quelled some Insurrections there, and overcome the King of *Bintam*, whom he forced to accept a Peace on his Terms, repaired to *Ormuz*, and defeating *Moeri* King of *Bobarim*, an Island in the *Persian* Gulph, reduced it to the Obedience of *Portugal*. *Lopez* was succeeded by *Edward de Meneses* in 1521, who restored the King of *Sumatra*, in the Island of *Sumatra*, to his Dominions, on condition of his paying a Tribute, and giving leave for the erecting a Fort upon his Coast. In the first Year of this Viceroy's Administration died *Emanuel* King of *Portugal*, the greatest Prince that ever sat on the Throne of that Kingdom, who, having reduced to his Obedience not only the Coasts of all *India*, both within and without the *Ganges*, but of the Gulph of *Persia*, and and of the *Red-Sea*, and covering with his Fleets the *Ethiopian* and *Atlantic* Oceans, shut up the Navigation to those Countries from all others, thereby totally excluding the *Venetians* from the Commerce of the East, whose Merchants had ever since the Year 1269, to that Time, wholly engrossed that Trade. He also subdued great Part of the Coast of *Barbary*, making himself Master of *Ajofia*, *Tita*, and *Azammar*, near Cape *Cantim*, and defeated the Forces of the Emperor of *Morocco* in several Rencontres.

He was succeeded by his Son *Jehn III.* about which Time the Viceroy of *India* appointed *Lewis de Meneses*, with a strong Squadron, to keep the People of *Ormuz* in Obedience, and sent *Garcias Henriquez* with another to the Eastward to make farther Acquisitions, which latter sailed round the Islands *Banda Mira* and *Gumanapp*, and proceeding thence to *Tidore*, there fell in with one of the Ships that had been sent out under *Magellan* by the Emperor *Charles V.* to make new Discoveries, which *Henriquez* attacked, and made himself Master of, putting to Death, or making Slaves of all the *Spaniards* on Board. This done, he erected a Fort in the neighbouring Island *Ternate*, and strictly enjoined the Inhabitants not to vend their Spices to any other than the *Portugueze*.

The next Year *Hozer Silveira* being appointed Admiral of the *Indies*, was joyfully received by the Viceroy of *Goa*, from whence he proceeded to *Malacca*, then besieged by *Laqueziments* the King of *Bintam's* Admiral, and having happily raised the Siege, detached *Alonso de Sotya* to the Coast of *Bintam*, which having ravaged, he gained a great Victory over the Ships of *Pabang*, *Patena*, and *Java*, killing great Numbers of the Enemy, and taking several Pri-

* The Fleet with which this Commander sailed into the *Red-Sea* was by much superior to any thing the *Portugueze* had ever been able to put to Sea before that Time, and was intirely the Effect of *Don Alphonso d'Albuquerque's* Prudence and Diligence. It consisted of thirty-seven large Ships, and at the same time he arrived before *Aden*, there was no Force in the *Indies* capable of disputing with him. The Reason that the Inhabitants of that City would then have submitted was, because a great Part of their Walls remained unprepared, so that they were not in a Condition to make any Defence; but when they observed the Slowness of the *Portugueze* General, and that he did not embrace an Offer of such Importance with the Readiness that he ought to have done, they lost no Time in repairing their Fortifications, and putting their City in a Posture of Defence, so as to be no longer under Apprehensions of his Power, and then they treated him with Contempt.

* It appears from hence, that the *Portugueze* were the first who attempted to monopolize the Trade of Spices; at which the Reader may be the more surpris'd, since we do not hear at this Time of any other *European* Nations that traded in those Parts, and therefore this prohibiting the Inhabitants to sell Spices, might appear an unnecessary Precaution. To set this Matter in a true Light, the three following Points must be observed: In the first place, there was a great Trade for Nutmegs carried on throughout all *Asia*, and this the *Portugueze* were desirous of keeping in their own Hands; in the next place, they were very apprehensive of their being carried into the *Red-Sea*, and so through *Egypt* to *Alexandria*, to their great Rivals in Trade the *Venetians*; to prevent which, they kept a Squadron cruising at the Mouth of the *Red-Sea*; Thirdly, they were afraid of the *Spaniards* from the *West-Indies*, the Governors in *America* making frequent Attempts on this Side, in hope of establishing a regular Commerce between the Kingdom of *Mexico* and the *Albacas*; so that it is very plain the *Portugueze* Viceroy had Reason enough to apprehend their having this valuable Commerce taken out of their Hands.

forers; after which, proceeding to *Machau* and *Bachian* two of the *Molucca* Islands near *Tidor*, he plundered them, and carried off a great Booty. The next Year *Vaquez de Gama* was appointed Viceroy of the *Indies*; but as he was in a very advanced Age, it being improbable he should live long, a Commission was made out for *Henry de Meneses* to succeed, in case of his Decease, before the three Years of his Viceroyalty should be expired. There was a third Commission to *Pedro Mascarenbas*, appointing him Viceroy, if *Meneses* should die; and a fourth to *Lopez de Sampayo* to succeed, in case of the Death of *Mascarenbas*. The *Portuguese* by this means were almost secure of providing, that their Acquisitions in *India* should not remain without a Head, and the Event shewed the good Effects of their Care; for *Gama* did not long enjoy his new Honour; but having first defeated the People of *Calicut* in an Engagement at Sea, died within few Months after his Arrival at *Goa*, so that the Viceroyalty devolved upon *Henry de Meneses*.

The Commission by which he was to succeed was sealed up with this Supercription, *Not to be opened till* (which God forbid) *Vaquez de Gama, Viceroy and high Admiral of the Indies shall be departed this Life*. This being now opened by the next commanding Officers in the great Church at *Cochin*, *Meneses*, who was then absent from the Place, was proclaimed Viceroy, whose Administration was likewise of a short Date, and diversified with both good and bad Fortune; for after several Engagements with the *Calicutians* with various Successes, he defeated their Fleet in the Port of *Guleta*, and made himself Master of most of their Ships; soon after which he destroyed a Fleet of *Turkish* Ships off *Dabal*, another of *Meers* off *Zeyla* worsted, that of the Prince of *Patana* and *Loquesimenes* the Admiral of *Bintam*, and then advancing to relieve the *Portuguese*, besieged by the Enemy in the Fortrefs of *Calicut*, he performed the same, but died of a Wound he had received in his Leg by an Arrow in the Year 1526.

This unlucky Accident had very bad Effects on the Affairs of the *Portuguese*, and as these were the Result of the very Precautions that were taken to avoid them, it may not be amiss to examine them more at large. As soon as it was known at *Goa* that *Henry de Meneses* was dead, all the great Officers assembled, in order to open the Billets by which the Successor was appointed; and on opening these, the Authority of Viceroy devolved upon *Pedro Mascarenbas*, who was then at *Malacca*. One of the Officers present, who took upon him to have more Wit than his Neighbours, thought proper to distinguish upon this Occasion between a General present, and a General at a Distance; he said, that the Intent and Meaning of these Substitutions was plainly, that the Government in the *Indies* might never want a Head, and that an absent Head being in Effect no Head at all, it was necessary to open another Billet, in order to procure a Viceroy for the present, till *Pedro Mascarenbas* should arrive from *Malacca*.

This Proposal was far enough from being universally approved by all who were present, because many of them foresaw, that under pretence of providing against a slight Evil, or rather an Inconvenience, they were on the Point of running into a much greater Mischief. However, *Alfonso Mexias*, who first proposed the Opening the other Billet, pressed it with such Earnestness, that at last it was complied with, and the Billet being opened, *Lopez de Sampayo* the fourth, substituted Viceroy, took upon him the Charge, and gave the *Malabarians* a signal Defeat in an Engagement at the Mouth of the *Bacaner*: But *Mascarenbas* highly resenting it, that *Sampayo* should usurp the Viceroyalty out of his Turn, would by no means acquiesce with that Proceeding, but assumed to himself the Title and Office of Viceroy, and being forced to wait the proper Season for coming down to *Goa*, took that Opportunity to repair with a Fleet of nineteen Sail to the Coast of *Bintam*, where he defeated *Lopes de Sampaio*, the Portuguese Admiral, together with the Fleet of *Patana*, which came to their Assistance, when the City of *Bintam* by Storm, he burnt it, and the King dying with Grief at his Success, *Mascarenbas* ap-

pointed another in his Room, on condition that he should maintain no Army nor Fleet without Leave from the *Portuguese*, but commit himself wholly to their Protection. This done, he went with his Fleet to *Goa*, where he defired a Number of Arbitrators might be appointed to judge whether he or *Sampayo* was the proper Viceroy; but the latter at first refused to submit to any Arbitration: Instead of which, contrary to all Reason and Justice, he seized and imprisoned him, supposing that this would put an End to the Controversy, by frightening the Friends of his Competitor into Silence; but in this he took his Measures quite wrong, for this Viceroy instead of lessning the Interest of *Don Pedro*, merited so that at last he found himself under a Necessity of yielding to this Proposition, and thirteen Judges were chosen to decide this difficult Question, which by an Accident that happened in the mean time, was made still more difficult.

For, a fresh Squadron arriving from *Portugal*, brought more of these Billets, with an Order that such of the ones as were not opened, should be suppressed and sent back, and that the Government should be determined by the new Billets; the first of which, by the Advice of *Alfonso Mexias*, the first Mover of all these Troubles, was opened, contrary to the Opinion of the wisest and best Men at *Goa*, who foresaw, that instead of lessning, it would augment the Doubts and Suspicions that had thrown the *Indies* into Factions already. This Billet being in Favour of *Lopez*, he insisted, before the Judges, that both the former Nominations were void, and therefore he insisted only on this last; and they being, for the most part, of his Faction, or else corrupted by *Mexias*, came into it at once, and declared him Viceroy, and to put an end to all Disputes, ordered *Don Pedro Mascarenbas* to return immediately to *Portugal*; with which Arbitration he complied, as plainly perceiving that he could hope for nothing by continuing in the *Indies*, when Things were in this Situation. On his Return to *Lisbon*, he laid the whole Proceedings before the King, together with a Memorial, in which he represented, that as all these Disputes had been occasioned from their not knowing certainly his Majesty's Pleasure, he humbly desired that it might be declared, who it was his Majesty intended to have named Viceroy, that Accidents of this kind might be prevented for the future. The King accordingly heard and decided this Matter with great Justice and Wisdom; for, in the first place, he recalled the Decree of the Arbitrators, and ordered that the present Viceroy, *Lopez*, should pay to *Don Pedro* Two thousand Crowns, as the Profits of his two Years Government, and, at the same time, made a regulation for the future to this Effect, that on the opening of these Billets, Substitution, the Absence of the Person nominated should not prejudice him in any degree, provided the Person named was in any Part of the *Indies* between *Cape Comorin* and *Diu*, which taking in the best Part of the *Indies*, rendered it impossible that any such Accident should hereafter fall out as that which had occasioned all this Controversy.

But as *Don Lopez* had, in other Respects, behaved well, it was judged the reasonablest Course to leave him in Possession of the Government, more especially, since he was obliged to part with all the Money he had hitherto acquired in it. As soon as the King's Orders arrived in the *Indies*, *Don Lopez* executed them in every Respect, and reconciled himself to the Friends of *Don Pedro Mascarenbas*, behaved in every other Circumstance as became a wise Man and a good Subject. But no sooner were these Things over, than new Disturbances broke out, which occasioned fresh Confusions in the *Indies*.

Henry Garcia, who was at that Time Governor of the *Moluccas*, finding Affairs extremely embarrassed by the Wars which his Predecessor had made against the King of *Tidor*, with very little Advantage, thought, on his first coming to his Government, to restore Peace with *Almanzor*, who was then King of that Island, on Condition that he should restore the Artillery Prisoners he had taken from the *Portuguese*, within the Space of six Months, he undertook to do. But

The various Events of these last Wars which proved afterwards so fatal to the *Portuguese*; for it is certain, that if they had not been interrupted, they might have prevailed their Empire in this Part of the World much longer, and much more securely; but when they were interrupted, they were not only interrupted, but they were interrupted for their private Advantage, at the Expense of the publick; for the various Wars which were carried on by the different Princes of the *Indies*, and the Petitions of those Officers and Pilots, which proved the Cause of their being interrupted, were all carried on for their private Advantage.

Face of Affairs in those Parts altering soon after, *Garfias* repented him of the Peace, and resolv'd to renew the War, believing, that if he could reduce this Island, it would very much raise his Reputation; to furnish himself therefore with some Pretence for breaking with the King of *Tidor*, he, before the Time limited was expired, sent to demand the Cannon and Prisoners; to which *Almanzor* modestly reply'd, that he would have delivered them up when the Treaty was made, if it had been in his Power; but that having lent the Cannon to a Prince who was his Neighbour, it required some Time to get them back. He had no little Suspicion however of the Governor's bad Design, that, being at this Time extremely indispos'd, he requested him to send a Physician, whose Advice he might make Use of for his Recovery. *Garfias* accordingly lent one, under whose Direction the King put himself, without the least Reserve, and was by him most basely poisoned. Immediately after the King's Death, *Garfias* sent again to demand the Cannon and Prisoners, and because the People desired a Delay till the King's Funeral was performed; he having all Things ready, expecting the Event, made a Descent upon the Island, attacked the capital City, took it, and plundered it, and treated the People with the utmost Inhumanity*.

As this was done without the least Provocation, in a Time of full Peace, and when there was not the least Intention on the Side of the Natives to renew the War against the *Portugueze*, it caus'd among the People of that Island, and of most of the rest of the *Moluccas*, an implacable hatred against them; soon after which, a Squadron of the Emperor *Charles V.* arriving there, was welcomed by the People of *Tidor*, with all the Marks of Kindness, on account of the *Spaniards* equal Enmity with them to the *Portugueze*, and being received into their Port, they rais'd Works for the Defence of it, in case of an Attack from the Enemy. The *Spaniards*, who were under the Command of *Igniqueza*, alledged, that the *Moluccas* was a Seat of Right to them, as being first discovered by *Columbus*, with a Commission from the King of *Spain*; and the Dispute having been submitted to Arbitration, was determined in their Favour.

On the other Hand, the *Portugueze*, under the Command of *Henriquez*, said, that the unjust Sentence of the *Cajilian* Arbitration had been reverfed by the Judges in *Portugal*, and that those Islands were discovered ten Years before the Voyage of *Magellan* in the *Spanish* Service by *Antony Abreu*, who was sent out to make Discoveries by *Alphonso Albuquerque*, in whose Company was *Magellan* himself, before he had deserted his Country. Thus they disputed with Words for a while, but soon after came to Blows, the People of *Ternate* taking Part with the *Portugueze*, and those of *Tidor* and *Gilolo* with the *Spaniards*. The latter struck the first Stroke, by besieging the *Portugueze* Fortrels in *Ternate*, where, at the first Attack, they took one of the Enemies Ships, and now the *Spaniards* and *Portugueze* had gone near to have attoned for the Mischief they had done to the *Indians* by the Destruction of each other, but that the Emperor being engaged in other Wars in *Europe*, neglected to remove an Acquisition, and for a certain Sum of Money, yielded up his Right in the *Moluccas* to the King of *Portugal*†.

This was look'd upon at that Time as very indifferent Policy, and as the Effects of his not considering attentively the Advantages that might have been deriv'd to him in *Europe*, by the prudent Management of his Affairs in

America, and this because his Thoughts were entirely turn'd on the vain Project of raising an universal Monarchy by Force of Arms, whereas the *Portugueze* wisely contented themselves with pushing on their Conquests in the *Indies*, and employ'd their Riches they deriv'd from thence to secure themselves against their ambitious Neighbours in *Europe*; from which Plan, if she had never varied, she might have escap'd becoming a Province to *Spain*, as the afterwards did, and all the unlucky Consequences that follow'd from that Conjunction*. But it is now time to return from these Reflections to the Thread of our History. Matters being settled in those Islands, the Viceroy *Sampayo*, sent out *John Deza* with a Squadron, to cruise off *Cananor*, and at the same Time, dispatched *Alphonfus Melia* to the *Sunda* Islands, who, just as he had doubled the Cape of *Comorin*, met with some Deputies coming to *Goa*, from the Prince of *Calecutra*, on the Pearl-fishing Coast, with Offers of Tribute and Submission, upon Promise of Assistance against his Enemies the *Calecutians*.

In the mean time, *Deza*, upon his Station, intercepted all Ships passing between *Calecut* and *Cambaya*, to the incredible Loss of the People of both those Places, and landing at *Mangalor*, the Inhabitants deserted the Town, which he plundered and set on Fire; after which, falling in with *Cutial* the Admiral of *Calicut*, he engag'd and defeated him, and carried him Prisoner to *Cananor*; and about the same Time *Anthony Miranda* sailing to the *Red-Sea*, took great Numbers of the *Arabian* Ships, and burnt several along the Shore; *Sampayo* himself, off *Cananor*, destroyed the greatest Part of a Fleet of one hundred and thirty Sail of *Moorish* Ships, bound to *Mecca* with Spices, and then repairing to *Porca* (the Prince whereof was a formidable Sea Rover) he landed there, and took the Town, forcing the Prince to betake himself to Flight, who left such a vast Booty to the *Portugueze*, that the Share of the meanest Sailor came to a thousand Dollars. From thence he sail'd to the Northward, and near the Island of *Bombay*, fell in with a Fleet of the Enemies, under the Command of *Haliffa*, Admiral of *Cambaya*; whereupon proffering a Reward of one hundred Dollars to the first Man who boarded one of the Enemies Ships, he immediately engag'd, and having entirely routed them, committed the Fleet to the Command of *Miranda*, who, soon after the Viceroy's Departure, came to another Engagement with the *Malabarians*, before the Town of *Chaul*, and gave them a signal Defeat, killing great Numbers, and carrying off a rich Booty in Spices to *Cochin*; soon after which, the *Portugueze* reduced the Town of *Tanor*, made the Prince of the neighbouring Country their Tributary, and again routed *Haliffa*, the *Cambayan* Admiral.

In the mean Time, *Nunco de Cunha* set out from *Portugal* with a Commission to be Governor, accompanied by his Brother *Simon de Cunha*, who was constituted Admiral of the *Indies*, and in his Way thither, attempting to put in at *Menbaza*, in order to pass the Winter-Season there, was refus'd Entrance by the King, but forc'd a Passage into the Port, and making himself Master of the Town, gave the Plunder to the Mariners, and set it on Fire. Departing thence early in the Spring, he made the best of his Way to *India*, where he resolv'd to make himself Master of the Town and Fortrels of *Diu*, situate in an Island of the same Name, near the Entrance of the Gulph of *Cambaya*; to which Purpose, repairing thither with the Fleet, upon his Appearance off the Place, he received an

* As soon as this was known to the Viceroy, he sent a new Governor to the *Moluccas*, one *George Monfes*, between whom and *Garfias* there happen'd a long Dispute, in which the latter was first made Prisoner, and afterwards the former: And this, notwithstanding the *Spaniards* were actually possess'd of *Tidor*, and were endeavouring to get the rest of the Islands into their Hands, which shews the Infatuation of the *Portugueze*, who would not avoid quarrelling at that very Juncture, when Union was most necessary, and when not only the Extension of their Commerce, but the very being of it depended thereon, and could not be secur'd without it.

† We use a clear Account of this Matter, and a very good one, in *Sir William Monson's* Naval Travels. The Controversy, says he, to whom the *Moluccas* should belong, continued between the two Crowns of *Spain* and *Portugal*, and the *Spaniards* made fruitless Attempts by Way of the *Streights*, but evermore with unfortunate success. At last *Don John III.* of *Portugal*, and Brother-in-Law to the Emperor, willingly sent him three hundred and fifty thousand Ducats, when he went into *Italy* to be crown'd Emperor, upon Condition the King of *Portugal* should no Way be molested in his Possession of the *Moluccas* Islands, till that Money was repaid; which being never done, the *Spaniards* never since pretended to those Islands.

‡ I mean by this, that if the *Portugueze* had cultivated Manufactures at Home, in order to support and supply their Commerce in the *Indies*, with- out engaging, as *Don Sebastian* unfortunately did, in Wars on the Continent, and in *Barbary*, they must have become one of the principal maritime Powers in *Europe*, and have attain'd to great Wealth and Strength, as would effectually have secured them for ever against the Attempts of *Spain*. But the launching out into wild and fruitless Expeditions, to gratify the Humours of ambitious Princes, will prove fatal to any, but *Cowell*, and most to, to a trading Nation.

Envoy from *Badar* King of *Cambaya*, with Offers of yielding the Fortrets into his Hands, which being accordingly performed, it was committed to the Custody of *Anthony Salavira*.

Not long after, the King of *Cambaya*, at the Instigation of the *Turks*, who were very desirous of getting *Diu* into their Hands, made an Attempt to dispossess the *Portuguese*, and recover the Place; but with an unfortunate Event he, with his *Turkish* Auxiliaries, being entirely routed, most of his Fleet sunk, and himself received his Death's Wound in the Engagement. Soon after this, *Solyman*, the *Turkish* Emperor, sent the *Pascha* of *Cairo* to besiege it, with a Fleet of sixty-two Gallies, six Galleons, and other smaller Vessels, having on Board four thousand Janizaries, sixteen thousand other Soldiers, besides Gunners, Seamen and Pilots, which, on their Arrival before the Towa, were joined by eighty Sail of Ships of *Cambaya*.

The *Turkish* *Pascha* landing his Forces, battered the Fortrets with sixty Pieces of Cannon; but the Governor with great Bravery sustained his Attack till the Arrival of *Garfias de Noronha*, the new Viceroy from *Goa*, to his Assistance, who, by a Stratagem passing thro' the Enemies Fleet with Drums beating and Trumpets sounding, as if they had been some of their *Indian* Allies, the *Turks*, upon Discovery of their Mistake, raised the Siege in the utmost Confusion, leaving behind them their Tents, Ammunition, Artillery, and above a thousand wounded Men, besides the like Number that were out on Foraging; all which fell into the Hands of the *Portuguese*. After the Death of *Badar* before mentioned, *Manual* became King of the *Cambayans*, and *John de Castro* succeeded *Noronha* as the *Portuguese* Viceroy, in which Time the *Cambayans* and *Turks* made another Attempt on *Diu*, but with the like Success as before, *de Castro* routing them both by Sea and Land, with a very great Slaughter, after which, he added several Works to the Place, and raised a new Citadel, in a more advantageous Situation, and of much better Materials than the former.

11. In this prosperous Manner did the *Portuguese* carry all before them in *India*, during the Reign of *John III.* who dying *A. D.* 1557, was succeeded by *Sebastian*, then an Infant. That Prince growing up, was so intent upon his *Indian* Acquisitions, that he resolved on a Voyage thither himself; and it was with Difficulty his Council found Means to dissuade him from it. They did at length prevail on that Point; but could not prevent his undertaking a Design more hazardous than the former, viz. an Expedition against the Emperor of *Morocco*; and he embarking for that Purpose with a great Army, and the Flower of the *Portuguese* Nobility, on Board a numerous Fleet, landed at *Tangier*, and unawakenedly marching up into the Country, gave the *Moors* Battle near *Alcazar*, where he was cut off with the whole Army.

He was succeeded by *Henry* his Uncle, then in an advanced Age, whose Reign is remarkable for nothing but the Dispute about a Successor to him; he dying *A. D.* 1580, *Philip II.* King of *Spain*, who had Pretensions to the Crown, thought it most expedient to end all Disputes by the Point of the Sword; and understanding the great Inclination the *Portuguese* had (through Hatred of a *Castilian* Government, to let *Antonio*, a natural Son of *John III.* upon the Throne, he ordered the Duke of *Alva* to march at the Head of a powerful Army into the Kingdom, who soon reduced it to his Obedience, forcing *Antonio* to withdraw to *England*; from whence, after some unsuccessful Attempts to recover his lost Dominions, he retired to *Paris*, and died there *A. D.* 1595. The rest of the Territories of that Crown fell, at the same time, into the Hands of the Emperor, except the *Azores*, or western Islands, which

were, at length, subdued to *Spain* by a great Victory obtained over a Fleet of *French* Ships sent thither to maintain them in the Obedience to *Anthony*.

As this Subjection of the *Portuguese* to the *Castilians*, was very irksome and odious to them, so was it attended with Consequences very fatal to their Interests; for, upon the first Commotions in the Low Countries, *Philip* judging that one of the best Expedients to quell them, would be, to deprive the Inhabitants of the Advantages they received by Trade with *Portugal* and *Spain*, he prohibited all Commerce between them; for, in those Times, the *Dutch* Ships made no longer Voyages than to these Countries, for the Commodities of *India*, with which they afterwards supplied the Northern Nations of *Europe*. But *Philip's* Designs met with an Event very contrary to his Expectations, though they were laid very deeply, and pursued with the utmost Steadiness, as well as Dexterity. The Conquest of *Portugal*, indeed, carried along with it the Conquest of the Dominions of the *Portuguese* in the *East-Indies*, and seemed to promise the *Spaniards* the entire and quiet Possession of both *Indies*; But the Project began very soon to fail, for, in the first Place, the *Portuguese* Governors paid no more than a forced Obedience to the Crown of *Spain*; and in proportion to the Distance of their Settlements, the Governors were, more or less, circumspect as to their Conduct. On the other hand, the *Spaniards* having many Affairs of their own to mind, and very little, if any, Concern for the true Interests of *Portugal*, the annual Fleets and regular Supplies were neglected, or, when sent, proved very far short of what they ought to have been. A too quick Sense of this Relaxation of Government, induced many who were vested with Authority in the *Indies* to make Use of it purely to serve their private Purposes, without regarding either the publick Welfare of their Country or the particular Benefit of such as were under their Protection.

But what contributed most to the speedy Ruin of their Affairs was, this Act of Policy, by which *Philip II.* prohibited, on their Rebellion, his Subjects in the Low Countries from trading to any Part of his Dominions, by which he absolutely forced them on the Measures, by which they aggrandized themselves at his Expence. If he had avoided this unlucky Prohibition, had treated his new Subjects kindly, and made a reasonable Provision for *Don Antonio*, he might have secured his *Indies*, and all their Wealth, which, well minded, and their Produce properly applied, would, in a short Space of Time, have enabled him to put all his ambitious Projects into Execution. As it was the *Dutch* finding an absolute Stop put to their profitable Trade in *India* Commodities, which hitherto they had bought in the Ports of *Spain* and *Portugal*, resolved, immediately, to try if it was not possible to go and fetch them from the *Indies* directly; whereas, had they been permitted to have purchased them in their accustomed Manner, this Design had never been thought of, but the Commerce of *India* had continued in its old Channel, without Envy or Disturbance.

We have now conducted to its Close, the first Part of this Section, and have shewn how this Navigation was opened, improved, and monopolized by the *Portuguese*; how their Conquests in this Part of the World were made and maintained, and how by entering and pursuing a Scheme of distant Expeditions, the smallest and most considerable of all the Kingdoms of *Europe*, became one of the richest and most potent, having it entirely in her own Power so to have increased her maritime Force as to have had no Cause to dread the Ambition of her Neighbours, or their united Endeavours to her Prejudice. We now to us clear an Explanation of the second Part which within the Compass of this Section we proposed.

This was one of the greatest and most honourable Victories ever gain'd by the Arms of the *Portuguese*; for it was not gained by any and other great Soldiers, or gain'd a General, but equipped with the Art of War, and this Effort was made, but against a numerous and well equipped Army, and it was gain'd with every thing necessary for carrying on the Siege. The Reputation of this Victory was so high, that it was thought the most famous and glorious ever gain'd in *India*, and *Europe*; so that the *French* King, *Francis I.* sent into *Portugal*, to obtain the Honour of this Victory, and to give the Duke of *Alva* a Letter to hang it up in his Cabinet of illustrious Officers.

The Loss of this *Indies* was a great Blow to the *Portuguese*, and the personal Virtues of that Prince rendered him so much beloved by his Subjects, they could scarce be imagin'd to believe (especially as his Body was never found, that he perished in this Attack) that he should die so young, and so suddenly. It is certain, that a Person who called himself *Schubert*, appeared afterwards at *Paris*, where, at the Request of the King of *France*, he was seized, then examined in a full Senate, and defended himself bravely; that he was set at Liberty, and afterwards, at the Request of the *Portuguese*, who imprisoned him first at *Naples*, and afterwards carried him into *Spain*, where he died. Confessing, and owning, that he was no Impostor, but the true King *Sebastian*.

12. It would require much Room, and add very little to the Reader's Satisfaction, should we prosecute the History of the *Portugueze Empire* in the East, through all the Changes and Revolutions to which it was subjected, from the Causes before-mentioned; the rather, because as their Dominions increased, they were obliged to carry on Wars in different Places at the same time, with several Nations, and with great Variety of Success. In order therefore to separate these Subjects, so as to represent to the Reader what is of Importance to be known, and that in the easiest and clearest Method possible, we will consider the most remarkable Discoveries and Settlements of this Nation in the *Indies*, according to the order in which they were made; the principal Events that happened in them during the Time they remained in their Hands, and the Manner in which they lost them, whether to the *Indians* or *Europeans*. By this Division, that Confusion which must necessarily attend the Abridgment of a general History, so pregnant with Events, will be avoided; all the Passages relating to the same Places and Persons, will be ranged together, so as to give Light to each other, and render the Perusal of them easy and entertaining; at the same time, that by being thus digested, every Colony, every Country will have its History preserved in such a Manner, as that it may be easily compared with whatever has been said before, and be with like Facility turned to, when what is hereafter said, may make it necessary.

Before we proceed to these Discoveries and Settlements, it will be necessary to fix the Place from which they were made. *Calicut*, as we have before shewn at large, proved the first Place they visited in the *Indies*, though the first Fortification they built was at *Cochin*, which lies South from it. They were sole Masters of the Commerce on the Coasts of *Malabar* from the Gulph of *Cambayo* to *Cape Comorin* for about one hundred and fifty Years, which determined them to fix the Capital of their Dominions as near as possible to the Centre of this Coast, which was one principal Inducement to their seizing *Goa* in the manner before mentioned. It stands at an equal Distance from *Surat*, and *Cape Comorin*, in a little Island made by the Rivers *Mandao* and *Quari*, about six or seven Leagues in Circumference, and at the Distance of about three Leagues from the Fall of these Rivers into the Sea. The Name of the Peninsula adjoining is *Sajette*, and the Soil is extremely rich and fertile. In the hot Season the Waters are very low, sometimes not above two Feet in Depth; but the rest of the Year they are so high as to afford the largest Vessels an Opportunity of entering the Port of *Goa*, which is one of the safest and most commodious in the Universe.

All the Territories adjacent to this City are held by a Treaty with the King of *Decan*, who by yielding these, purchased a free Trade for his Subjects throughout the *Indies*, in all Commodities except Pepper, with which they were to furnish the *Portugueze* alone. Since this Agreement many Disputes have happened, and when their Power has been great, particularly in 1635, the Viceroys of *Goa* have treated their Neighbours with great Severity. At the Time before-mentioned, they had Intelligence of four *Indian* Vessels bound with Pepper for *Mocha* and *Pessia*, which they chased and took. Their Cargoes, pursuant to the Treaty, were confiscated; yet not satisfied with that, they murdered all who were on Board them in cold Blood, in order to strike a Terror into the Natives. This Behaviour has, as it might well be expected it would, raised a most violent Averſion in the *Indians* against them, which they never fail to discover when any Opportunity offers. There are in *Goa* many superb Edifices, such as the Viceroy's, the Archbishop's, and Inquisitor General's Palaces; but above all, the Churches are exceedingly numerous, and some of them wonderfully rich. In Extent it contains about

ten Miles, taking in all the Fortifications raised round it for its Security, which bend according to the Course of the River, and are so well furnished with Cannon, that hitherto they have rendered it impregnable, though it has been very hard pressed both by *Indians*, and by the *Dutch*. It was from this City, in the Latitude of 15° 20' North, that the *Portugueze* made their Discoveries, and sent most of their Colonies, and having given this short Account of it, we shall next proceed to describe them.

13. The *Maldives* are so situated, that it was impossible the *Europeans* should make many Voyages to, or be long settled in the *Indies*, without being acquainted with them, since the most northern of them lie but fifty Leagues from *Cape Comorin*. They extend from 8° of North Latitude to 4° of South, stretching in Length consequently near two hundred Leagues; but they are not above thirty or thirty-five Leagues in Breadth in any part of the *Archipelago*. Within this Space are contained a prodigious Number of Islands, so that even in the Time of *Ptolemy*, that is, in the second Century, they were accounted 1373; but the Inhabitants maintain, that a small Part of them only were then known, for their Sovereign takes the Title of Sultan of the *Maldives*, King of thirteen Provinces, and of twelve thousand Isles. There is in this, without doubt, a Mixture of that Pomp and Orientation which is so common in the East; but for all that, there are, unquestionably, many more than the Ancients knew any thing of under this Monarch's Dominion. Admiral *Suarez* discovered them in 1507, and he made an Alliance with their King, which was confirmed by *Sequeria*, who demanded leave to build a Fort upon the Island of *Male*, which is the largest of them, and the chief City of the same Name is the Capital of their Monarch.

John Gomez, who was sent thither for this Purpose, met with a favourable Reception, and by dint of Presents prevailed upon the King to agree to his Demand. He built this Fort of Wood, there being neither Stone nor Lime in the Island. It was extremely well situated, and in some measure commanded the Port, so that it might have been of great Service to the *Portugueze*, if he had behaved as became him; but no sooner was the Fort finished, than presuming on the Terror of the *Portugueze* Name, he began to lord it over all the Strangers that traded thither, though his Garrison consisted but of seventeen Men, which occasioned a Conspiracy of the *Mohammedans* against him, who attacked him when he least expected it, and cut off him and all his People to a Man, levelling the Fort with the Ground. The *Portugueze* were never afterwards able to obtain any Establishment in the *Maldives*, which is the Reason that several of their Authors treat them as pitiful Places, and their Inhabitants as a base and barbarous People, contrary, however, as we shall see, to all Reason and Prudence.

It was impossible for them to double *Cape Comorin*, without taking Notice of the noble Island of *Ceylon*, *Ceylan*, or *Ceylon*, called by the Inhabitants *Lancee*, which in their Language signifies the Terrestrial Paradise, or Holy Land, a Name given it by its first King, *Vigia Rajab*, who is supposed to have flourished five hundred Years before Christ: It was afterwards called *Hanara*, or *Tranate*, which is as much as to say the Insular Kingdom; it was also called *Hibenaro*, or the Fertile Land, and *Tenarism*, or the Country of Delight. The *Arabians* call it *Serendib*, or rather *Serendive*. It is by many held to be the largest, and is, beyond Controversy, in itself, the richest and finest Island in the World. The *Portugueze* settled here in 1506, under the Conduct of *Lawrence Almeyda*, who erected a Column with an Inscription, testifying that he took Possession of that Country on Behalf of *Emanuel King of Portugal*, because it had no Master, though at the same time he treated with the Emperor, and promised him the Protection of his

* The *East-Indies* in general are very properly divided into the Dominions of the Great Mogul, and the adjacent Kingdoms on the Continent, the *Peninsula* without, the *Peninsula* within the *Ganges*, and the Islands. The *Portugueze* sailing as they did at their first coming into these Parts on the Coast of *Malabar*, which makes the West Front of the *Peninsula* without the *Ganges*, acquired the happiest Station that could be desired for extending their Commerce, and their Conquests on every Side; and there is Reason to believe, that their fixing as they did the Seat of their Empire on this Side, contributed greatly to the Preservation of their Dominions, notwithstanding all the Efforts made by the *Indians* and the *Mohammedans* to dispossess them.

* There is but one good Description of this prodigious *Archipelago* written by *Francis Pizarro de la Val*, a *Frenchman*, who was a long Time Prisoner in one of these Islands, and which, as it is a Work equally curious and instructive, and at the same time exactly within our Plan, the Reader shall have it at large in the next Section, which will give him an Opportunity of observing how little Cause the *Portugueze* had to treat the Inhabitants of the *Maldives* with Contempt, since it is certain, that they are one of the bravest, and one of the most polite Nations of the East.

Master, in Consideration of 2500 Quintals of Cinnamon to be paid him as an annual Tribute.

In 1520 they built a Fort here, and began to settle, and afterwards obtained an absolute Power over a great Part of the Island, under Colour of the Emperor's Will, who made the *Portuguese* Heirs of his Dominions. The Trade they carried on there was very considerable, and next to the Viceroyship of the *Indies*; the Captain General of this Island, was thought the first Post the King of *Portugal* had to bestow. The Commodities they drew from hence were long Pepper, fine Cotton, Ivory, Silk, Tobacco, Ebony, Mulk, Chrysal, Salt-peter, Sulphur, Lead, Iron, Steel, Copper, besides the three grand Articles, of, Cinnamon, all kinds of precious Stones except Diamonds, and Elephants.

As soon as the *Dutch* came into the *Indies*, they formed a Design of making themselves Masters of so valuable a Place. They made their first Defeat in the Year 1602, and carried on sometimes open Wars, sometimes secret Contrivances against the *Portuguese*, till in the Space of about fifty-five Years, they completely drove and wormed them out of *Ceylon*, making themselves Masters of *Columbo* and *Negombo*, which were the principal Places in the Island and of the strong Forts of *Punto Gallo*, which commands the best Haven in *Ceylon*.

The *Portuguese* held their Establishments here for about a hundred and fifty Years under sixteen Captain-Generals, from Don *Pedro Lopez de Souza*, who was the first, down to Don *Antonio d'Amaral y Meneses*, who was the last. Captain *Ribeiro*, who wrote the History of this Island in 1685, and presented it to the King of *Portugal*, assures us, that the Country was lost through the Covetousness and Pride of the Governors, and the Luxury, Laziness, and Cowardice of the Soldiers, which he charges on the inactive Administration in *Portugal*, that took no care to look into the Management of so considerable a Settlement, and which brought in so large a Revenue to the Crown of *Portugal*, till it was too late. A Circumstance surely that ought to be remembered, and considered by every maritime Power.

14. The Island of *Sumatra*, which extends itself North-west and South-east, fronting the *Peninsula of Malacca*, is divided by the Equinoctial almost into two equal Parts, extending to 6° of Latitude North and South. It is about two hundred and fifty Leagues in Length, sixty in Breadth, and five hundred in Circumference. The *Portuguese* came hither in 1508, under the Command of Don *Diego Lopez de Segura*. They found the Country very desirable, as being extremely rich and fruitful, and under the Dominion of several petty Princes, who were continually at War with each other.

One would have imagined, that this might have afforded an Opportunity to the *Portuguese* of subjecting it entirely, as they did other Parts of the *Indies*; but it happened otherwise; for the People, by their continual Disputes among themselves, were become so well acquainted with the Art of War, that they were not able to make great Impression, but contented themselves with a few Settlements on the Coast, which enabled them to carry on a very lucrative Trade with the Inhabitants, not only in Sulphur, Rice, Ginger, Pepper, Camphire, Cassia, Sandal, and other rich Woods and Drugs; but also in fine Tin, Iron, Copper, Silver, Gold and Diamonds.

The *Dutch* began to enter this Island in 1596, and soon after, as their Power increased, began, as usual, to exclude all other Nations; but the Inhabitants soon shook off their Yoke, and are still in a great measure free. It is for this Reason probably that almost all our *European* Writers condescend in treating these People as the most cruel, barbarous, and perfidious in the *Indies*, without ever considering that these very Epithets may be justly retorted upon those who endeavour to deprive them of their Liberties and their Possessions, without the least Colour of Right.

15. The *Moluccas*, or *Spice Islands*, were not disco-

vered by the *Portuguese* till the Year 1511, and thro' it were, by chance. *Francis Serrano* and *Diego d'Almeida* being sent to make Discoveries, were separated by a Storm; the former penetrated as far as *Ternate*, but the latter discovered only the Island of *Ambon*, and afterwards that of *Banda*. They spent about eight Years in these Discoveries, which cost *Serrano* his Life in his Return. We are indebted to a *Portuguese* Writer, whose Name was *Angelsola*, for a large History of these valuable Islands, which consist, strictly speaking, of no more than five; but whence it is said they received their Name in the original Language of the Inhabitants. They are not out of Sight of each other, and lie all of them within the Compass of twenty-five Leagues. They are famous for producing several sorts of valuable Spices, and are governed by the Kings. Their Coasts are very dangerous, because of Sand and Shelves: They were formerly subject to the *Chinese*, then fell under the *Javanese*, and were afterwards subdued by the *Malayans*; and the *Mohammedans* had begun to settle in them, and convert the Inhabitants to their Religion but a very little while before they were discovered by the *Portuguese*. The History we have before mentioned, equally copious and curious, but much too long to have Place in this Collection; yet we shall extract from them a distinct Account of these Islands, because no other Writer affords us any thing comparable thereto.

Ternate, says he, is eight Leagues in Compass; its Land is high, and they have good Water, but little Provisions, and few Cattle, except Goats. Their chief Riches consist in Cloves: They have extraordinary Parrots, which exceed those of the *West-Indies* in speaking, and many Birds of *Paradise*. They have Almonds, and coarse Tobacco. During their Wars with the *Portuguese*, they burnt all their Clove-trees, retired to the Mountains and Deserts, and forbid selling any thing to the *Portuguese* upon pain of Death, which reduced them to great Extremity. Though they burnt the Cloves in Despair, our Author says, their Ashes did so cultivate the Soil, that it produced them in greater abundance than ever in a few Years. The King of this Island was the most powerful of all the fourteen in the *Moluccas*, and boasted of a divine Extraction, which the silly People firmly believed. He was Sovereign over seventy-two Islands that lay in the Great Archipelago betwixt *Mindanao* on the North, those of *Bima* and *Yea* on the South, and the *Terra Firma of Papua, New Guinea*, on the East, and had his Tribute in Gold, Amber, and Birds of *Paradise*.

Having made these great Conquests over his Neighbours, he called himself Emperor of the Archipelago; where there were many Colonies of Christians; but most of them were destroyed, or apostatized by the Persecution above mentioned. *Angelsola* gives a particular Account of Forces which every Island could raise, and in the reckons them at 120,300 Men that were lifted, besides Multitudes of others, and a great Number of Slaves. Many of these Islands had their particular Kings, but subject to him of *Ternate*, and served under him, to revenge the Death of King *Aerio*, who was treacherously murdered by the *Portuguese*. This great King's Name was *Cacillabu*, *Aerio's* third Son: He allowed the *Dutch* to trade here in 1599, entered into a strict Friendship with them, and entertained them with Fights of Gladiators, after the Manner of his Country. The *Dutch* assisted him to shake off the Yoke of the *Spaniards* and *Portuguese*; and he was victorious over those of *Tidore*. The Place where he kept his Court was *Gammalamma*, on the Coast, consisting chiefly of one Street, their Houbling of Wood and Cane. About a League from hence there is a Town called *Mallaya*, inclosed with Wall and Stone, without Mortar. The Road to *Gammalamma* is not good. There are still some Remains of Churches and other Structures, built by the *Portuguese*. The first the *Dutch* built here was *Verluisco*; the next was the

¹ The Revenue of this Island, while in the Hands of the Crown of *Portugal*, was annually conveyed to *Goa*, on Board a Gallion, under the Command of the Captain of the *Portuguese* Fleet, and the Gallion was thus provided. The Officers were, a Captain, Purser, Miller, Pilot, Boatman, and twenty-five other Officers, and twenty-five *European* Seamen, twenty *Portuguese* Soldiers, and forty common Mariners of the *Indies*, with a *Portuguese* Surgeon, and a *Portuguese* Interpreter, and a *Portuguese* Interpreter, of which, the King allowed annually 480,000 Rees, or 6000 *l.* and as appears from the History of the *Portuguese* Discoveries in the *Indies*, compiled and published by Don *Edward de Moraes*, who was Viceroy there in 1711.

... of Orange, by which they fixed themselves so well, that no European Nation has been able to dislodge them.

Timor is larger than Ternate, is also a particular Kingdom, and produces the same Fruits: It lies a little South-west from Ternate, near the Line. The Spaniards afflicted the Inhabitants against those of Ternate at first, but had War with them at last, and treated them barbarously, till expelled by the League above-mentioned. The Dutch attacked the Spaniards here in 1607, and afterwards without Success; but, at last, took it by the Assistance of the King of Ternate, after an obstinate Resistance, and were kindly received by the King, who allowed them to settle Factories here. The Capital is of the same Name, and has an Harbour about a Stone's Throw from the Shore, dry at Low-water, and defended by a Chain of narrow Rocks, over which the Tide rises from three to six Foot. The Town is very strong by Nature.

Motir, Motil, or Timor, lies between Tidor and Macellan. It was laid waste during the intestine Wars; but the Dutch built a Fort at the North End of it, which encouraged the Inhabitants to return from Gilolo, continuing firm to the Dutch; the Spaniards durst not attack it. Macellan lies just under the Line South from Motir. The Dutch took it from the Spaniards in 1609, and built three Forts here. It is seven Leagues in Compass, and has several little Towns; the Inhabitants were then about Nine thousand: It was reckoned the fruitfulest of the Moluccas, and produced the best Cloves. The Inhabitants were more industrious than their Neighbours. Babian, the last of the proper Moluccas lies South from Macellan, and was a Kingdom. The Country is large and desert; it abounds with Sagu, Fruits, Fish, and many other Sorts of Provisions. It was formerly very potent, and had the best Cloves in the Moluccas, but was ruined by the Idleness of the Inhabitants. They had an Alliance with the Portuguese and Spaniards, who planted Garrisons there, but were dispossessed by the Dutch in 1610, who built other Forts, and obtained a Liberty to trade without paying Custom. The Isle of Labova lies so near it, that they frequently go by the same Name, though each had their particular King. The latter is very pleasant, and abounds in Cloves. The Inhabitants rebelled against the Dutch, but were forced to submit, and have been since kept in Awe by Fort Barnevelt.

The Island of Bouru was formerly subject to the King of Ternate; it is not very considerable; but while in the Hands of the Portuguese, was more considerable than it is at present. But the Island they chiefly depended upon was that of Timor, which is much larger than the other of the same Name before-mentioned, and was extremely fruitful, so that it supplied most of the Moluccas with Provisions. West from thence lies the Island of Solor, in which was a strong Fortrefs, wherein the Portuguese Garrison held out a Siege of two Months against the Dutch Fleet and Army; and, when they surrendered, marched out near one thousand strong. There are many other Islands, which are commonly, since the Dutch Conquest, called the Moluccas, because they make that Word synonymous with the Spice-Islands; whereas the Moluccas, strictly speaking, are no more than the five Islands first described. It was with the Spices they produced, that the Portuguese traded throughout the whole Extent of the Indies; that is to say, from China to the Coasts of Egypt.

16. The Viceroy Lopez Suarez, Successor to the famous Don Alphonso d'Albuquerque, was the first who thought of establishing a Commerce with China; and in the Year 1517, sent for that Purpose Ferdinand Antrada, with a Squadron of eight Ships, laden with Merchandize,

together with Thomas Peters, with the Character of Embassador from Emanuel, King of Portugal. On their Arrival at the Mouth of the River Canton, the Portuguese Ships were stopped by the Chinese, and only two suffered to proceed up the River, on Board one of which was the Embassador, and the Portuguese Commodore Andrada, who was a Man of Quality and of strict Honour, so that he soon gained very much on the Chinese, notwithstanding their natural Aversion to Strangers. By his Civility and polite Behaviour, he first drew them to trade with him; and then, by his Exactness and Probity, brought them to have a Confidence in him; but what had the greatest Effect of all, and might have established the Commerce of the Portuguese to the Exclusion of all other European Nations was, his giving Notice a little before his Departure, that at such a Time he meant to sail, and that if any Body had Demands upon him, or any who belonged to him, they might, before that Time, apply and receive Satisfaction.

This, it seems, was a Thing new to the Chinese, but we had to agreeable, as they made him the highest Proclamations of Friendship, and assured him that they would willingly trade with his Nation, in hopes of meeting with the like just Usage: But this fair Prospect did not continue long; and, as this was the first, it had also very near proved the last Voyage of the Portuguese hither. The Captains of the Ships that were left at anchor at the Mouth of the River, were the Occasion of this, for they landed and fell into Trade with the Natives; but presuming on their Power in the Indies, they began to treat the Chinese in the same manner they had done other People; that is to say, they landed several Pieces of Cannon, and then took what Goods they pleased, and at what Rates they thought fit, committing many other Insolences, such as ravishing Women, and trading with Pirates for such Persons as they had taken Prisoners, of whom the Portuguese made Slaves. The Viceroy of the Province quickly assembled a great naval Force, with which he surrounded the Portuguese Squadron, and had infallibly taken every Ship, if a Storm had not risen, which scattered the Chinese Fleet, and gave them an Opportunity of returning to Malacca with more Profit than Honour. As for the Embassador, Thomas Peters, he, though perfectly innocent, proved the Victim of his Countrymens bad Behaviour; for the Chinese Court having received Advice of what had passed before his Arrival, not only refused him Audience, but sent him back to Canton in Chains, where he was put into the common Prison with the lowest and vilest Criminals, and there spent his miserable Life for several Years; till, at length, worn out with Hardships, he expired in such wretched Circumstances, that he did not leave wherewith to bury him.

It was many Years before the Chinese would suffer the Portuguese to have any Trade with them at all; but, at last, permitted them to send annually some Ships to the Island of Sancban, where they were allowed to erect Tents on Shore, for a very small Space of Time, in which they disposed of their Merchandize. At length, in the Beginning of the sixteenth Century, a favourable Opportunity offered, not only of restoring their Commerce, but of procuring an Establishment in China, which is what no other Nation ever had to boast. The Thing fell out thus; A certain Pirate, whose Name was Yehang Ji Lao, committed prodigious Ravages upon the Coasts, and having at last acquired a great Force, he made himself Master of the little Island of Macao, and from thence not only blockaded up the Port of Canton, but proceeded so far as to besiege the City. The Mandarines, in this Distress, had Recourse to the Portuguese, whose Ships were then at the Island of

* The King of Portugal likewise maintained a Gallion for bringing the Tributes of the Moluccas, officered in the same Manner as that mentioned in the 11th Note; but inasmuch as the Voyage was longer, and there were more Seamen employed, the yearly Expence amounted to 3,292,998 Rees, or 125,120 £. which shows that the publick Revenue was administered here with great Oeconomy in those Times.

* The famous Portuguese Historian, John de Barros, though, otherwise, a very candid Writer, endeavours, as far as he is able, to cover and disguise this Fact; but other Writers, even of the Nation, confess it ingeniously, and speak of it as it deserves. It proved, without doubt, of infinite Importance to their Concerns, as indeed their Pride and over-bearing Temper did in many other Places. It may be justly wondered, that they never employed Force while their Affairs in the Indies were in so flourishing a Condition; but they were restrained from this, by their Fear that the Chinese would revenge any Injuries they did them upon the Christians, which is very probable; and therefore they were in the right to consider that they did, to buy the Truth, the Portuguese seem, of all the Nations in the World, the least fit to have any Correspondence with the Chinese, because of their sagacity and cunning Temper, and of the natural suspicion of the Natives of that Empire.

Saukan. They readily offered them their Assistance, and not only forced *Tchang si Lao* to raise the Siege, but purified him to *Macao*, and there killed him.

The Viceroy having made a faithful Report to the Emperor of this extraordinary Piece of Service, that Prince, out of just Gratitude, published an Edict, by which he granted the *Portuguese* this little Island, with the Power of making a Settlement there, which they joyfully accepted, and built a good Town, which they fortified after the *European* Manner, and furnished it with near two hundred Pieces of Cannon. One would imagine, that this might excite the Jealousy of the *Chinese*, who are justly esteem'd the most suspicious People in the World; but they have provided so effectually for their own Security, that all the Force of the *Portuguese* is entirely at their Devotion, because they have not a Day's Provision but what they received from the *Chinese*, and are so surrounded by their Forces, that it is impossible for them to undertake any thing to the Prejudice of their Empire. The Possession of this Place has been, notwithstanding, extremely beneficial to the *Portuguese*; for, from thence, they carried on for many Years, a most beneficial Commerce with *Japan*, by which *Macao* became one of the richest and most considerable Places in the *Indies*, and many of the Nobility of *Portugal*, who had enjoyed very high Offices, chose, at the Expiration of them, to settle here, where they lived in great Splendor, and at the same Time acquired vast Estates by Trade.

We shall hereafter have occasion to give some Account of the Causes which brought on the total Prohibition of their Trade with *Japan*; but at present, we shall confine ourselves to what relates to the City of *Macao*. In the Year 1639, the *Portuguese* sent thither two large Ships laden with Merchandize, which came to an Anchor in the Road of *Nagazaki*; immediately on which it was notified in Form to the Commodore, or, as the *Portuguese* stile him, the Captain Major Don *Vasco Paglia d'Almeida*, that the Emperor of *Japan*, by his Edict, had totally prohibited all Commerce with the *Portuguese*, and that for these Reasons: First, because, notwithstanding the several Cautions given them, they had still continued to bring over Missionaries into his Country. Secondly, for that they had supplied those that were already there, with Provisions and other Necessaries; and Thirdly, because there were just Reasons to suspect, that they had some Knowledge of, and some Concern in the late Rebellion of the Christians in *Arima*. They had also a Copy of the Emperor's Edict given them, which they were directed to make publick at *Macao*, and to inform the Inhabitants of that City, that these were the last Ships that should ever be permitted to anchor in any Port of *Japan*, of which they were to take Notice, and to remain assured, that if ever they came thither again, they should undoubtedly be treated as Enemies, and put to Death without Mercy.

On their Return to *Macao*, and making Report of these Facts, the whole City was struck with Consternation, being satisfied, that the Destruction of this Trade would prove the Ruin of their City; to prevent which, they resolved to make one great Effort, and to send a solemn Ambassy to justify their Conduct, and if possible, engage the Emperor to recall this Edict, or at least to qualify it so, as that they might on certain Terms have Leave to send some Ships thither. The Difficulty was to find any who would charge themselves with so dangerous a Com-

mission; but at last the following Persons offered, of their own Accord, to run the Hazard, viz. Don *Luis Paebeo*, who had served with Honour as Comander of the Armies in the *Indies*, and who was now twenty seven Years of Age; Don *Roderic Sanchez de Paredes*, Don *Gonzalez Montayro de Carasilbo*, and Don *Simon Lopez Pavia*; all Men of Distinction, and who were mov'd nothing but the Desire of justifying their Nation, and rendering Service to their Country. On the 9th of 1640, the Ship that carried these Ambassadors arriv'd at the Road of *Nagazaki*, and sent an Account to the *Japanese* Governors of the Nature of the Commission, which they were intrusted. Their Ship was immediately seized, and the Ambassadors, and all who belonged to them, except eight Negroe Seamen, were imprison'd on the Island of *Kijau*, till the Emperor's Pleasure should be known. On the return of the Courier sent to Court the News of their Arrival, they were sent for before the Magistrates, who treated them as Criminals, demanding of them, what it was that could induce them, after such Warning as was given them the Year before, to turn thither, in direct Breach of the Emperor's Edict. They pleaded, that they were not at all within the Meaning of that Law, because the Emperor forbid thereby Attempt to trade, which was not their Business, but no Commodities of any sort on Board their Ship, coming thither with the Characters of Ambassadors, which had been always esteem'd sacred. The Magistrates told them, that this would not serve their Turns, but that had incurred the Penalty of the Edict, upon which they were instantly bound and conducted back to Prison.

The next Day, the Ambassadors, and all their Attendants, to the Number of seventy-four, *Portuguese*, *Spanish*, *Chinese*, *Canarins*, and *Indians*, were again carried before the Magistrates, who then told them, it was his Imperial Majesty's Pleasure they should all suffer Death, except sixteen; which Sentence was executed the same Evening which was the 13th of *August*. The next Morning being it was light, the Governor sent for the thirteen that were spared, and having asked them whether they had their Ship burnt, inquired of them, whether they would faithfully report at *Macao*, what they were commanded by the Emperor to say to them on his Behalf. Being answer'd in the Affirmative, they proceeded thus: "We are then to inform your Fellow-Citizens, that here we wards the Subjects of *Japan* will not receive either Money, Merchandize, or Presents, from them any more. You see we have burnt the very Cloaths of those who were executed Yesterday. Let your People use their Ours that fall into their Hands in the same Manner; consent to it, and desire that you would think of no more than if there were not such a Nation as the *Japanese* in the World. This is what we have to say to you."

They then conducted these Mariners to the Place where the Heads of those who were murdered the Day before were fixed upon Poles in three Rows; the four Ambassadors first, the *Europeans* next, and the Strangers last. They likewise shew'd them a great Iron Chest, in which they told them were the Bodies of the Persons executed, and oblig'd them to read a long Inscription, setting forth who they were, on what Account, and by whose Order they were put to Death; which Inscription ended with these Words: "All this is set forth as a Memorial of what hath past, and as an Advertisement for the Time to come."

I have taken all the Care I could to discover whether this Nation had ever any other Settlement in *China* than this at *Macao*, but to no purpose, except that they traded for some Time as other Nations did, at *Canton*, and at *Ning-Po*, which is a very considerable Port in the Province of *Yube-Kiang*, and the first into which *English* Vessels were admitted. But a late Writer, one Captain *Alexander Hamilton*, speaking of this which he calls *Limpoa*, instead of *Limpoa*, by which I find it mentioned by other *European* Writers, gives us the following Story, which I think to be true, and which therefore I shall relate in his own Words: "Here the *Portuguese* were once well settled, and had a numerous Colony of the *Chinese* were Masters of their own Country, and the *Portuguese* of the Sea. It is reported, that they had above one thousand *Portuguese* Miles settled in *Limpoa*, and were governed by their own Laws. Their Trade through *China* and *Japan*, which they carry'd in *Ships*, *Sails*, and *Cloves*, made them prodigiously rich, which brought them into Luxury and Debauchery, and at last was the Cause of their Expulsion from *Limpoa*. They began to be notorious Ravishers of Women. They would go into the Country Villages, and carry off young Virgins by Violence from their Parents, and when they had abused them as long as they pleased, sent them back to their Husbands. Many Complaints had been made, but no redress could be obtained. At length, when a Parcel of *Virgin* Hunters had gone into the Country, upon an Expedition of that kind, the Peasants rebelled, and killed them every Man. This Slaughter made the *Portuguese* very loud in their Complaints, and desired to be done on the Peasants. The Peasants made bold Replications to the Complaints of the *Portuguese*, and desired their Case might be shew'd to the Emperor, which was accordingly done, and the *Portuguese* were order'd to clear themselves of the Crime laid to their Charge; but not being able to do it, were banish'd *Limpoa*, but had Liberty to carry off their Effects; and thus ended the most excellent Colony in the World."

"Henceforward, so long as the Sun shall shine upon the Earth, let not any Christian be so hardy as to set his Foot in Japan; and be it known to all the World, that if King Philip in Person, the God of the Christians, or the great Xaca, one of the first Deities of Japan, shall presume to break this Ordinance, he shall pay for it with his Head." They then gave these poor People an old Ship to return in to Macao, which they chose, rather than to be put on Board any of the five Dutch Ships that were then on the Coast, and offered to set them safe on Shore in that Port.

In the Year 1641, arrived at Macao from Europe Don Antonio Ferrycra, with the News of the Revolution in Portugal, and that Don Juan, Duke of Braganca, had mounted the Throne, and assumed the Title of John the Fourth, to whose Obedience they readily returned, and as a Mark of their Loyalty, presented him with two hundred Bras Cannon, and a vast Quantity of Ammunition. This Monarch, in the Year 1646, thought fit to make another Attempt in Favour of the City of Macao, and sent Don Gonzalo Sogayra as his Embassador to the Emperor of Japan, to inform him, that Portugal no longer continued subject to the Crown of Spain, which as it was the principal Occasion of the Nation's being prohibited all Commerce with the Japanese, he hoped that a good Intelligence would now be restored between the Citizens of Macao and the Subjects of his Imperial Majesty. The Embassador was very civilly received, and an Express sent to Court with the News of his Arrival. About a Month afterwards a Courier arrived with the Emperor's Answer, which was to this Effect; That his Request could not be granted, but that he and all that belonged to him had free Liberty to depart.

In the Year 1685, another favourable Opportunity offered, which the Portuguese, with great Alacrity, embraced: A Japanese Vessel being driven by a Storm from their own Coast, was forced to take Shelter in the Port of Macao, where those who were on Board it met with a very kind Reception, and having been entertained at the publick Expence, till they were recovered from the Hardships they met with at Sea, and were then put on Board one of the best Vessels belonging to the Port of Macao, and sent back to their own Country. On their coming to an Anchor in the Road of Nangazaki, and sending the Japanese on Shore, they received a Message from the Magistrates, imploring, that they were obliged to them for this kind and generous Return, but that for the future they would advise them not to give themselves the Trouble of sending home any more of their People, since it would not answer their Ends. Since that Time the City of Macao has declined very much, and tho' it is at present in a better Condition than it has been, yet it is far from being so considerable as in the sixteenth Century, as we have already shewn the Reader in another Place. But that it may possibly make a better Figure than it does, we shall hereafter render probable, when we come to speak of the present State of the Portuguese Dominions in this Part of the World.

17. In the Year 1521, Magellan discovered the Ladrone Islands, near those which he called the Archipelago of Saint Lazarus, because he discovered them on the Feast of that Saint. The Portuguese arrogate to themselves this Discovery, because he was their Countryman, though in the Service of the Crown of Spain; and on the other hand, the Spaniards challenge the Discovery of the Moluccas, because Magellan went to them from America in their Service; but without doubt this Title was wrong placed, since, as we have shewn, the Portuguese had discovered them long before. It cannot indeed be affirmed, on any good Authority, that the Portuguese had before this time visited the Ladrone Islands; but it is very certain, they made several

Voyages thither afterwards, and did not think them so despicable as they are now esteemed; but on the contrary, drew from thence things of great Value; and the Reason I have mentioned them here is, that I might have an Opportunity of acquainting the Reader, that when this Nation first settled in the Moluccas, they were informed by the Inhabitants, that from these little Islands they were wont to receive considerable Sums in Silver, and the very finest Emeralds they had in Exchange for Spices.

The Portuguese were in hopes of finding, according to this Information, Mines of Silver and precious Stones amongst them; but on the closest Search, could meet with neither, which was the true Reason they never made any Settlements there. But this Account affords us room to conjecture, that before the Portuguese penetrated thus far into the East, there had been some Commerce between these People and the Americans, from whom they might receive both Silver and Emeralds. This is a Point that deserves mature Consideration, because, if there be any Truth in this Conjecture, it will give some Light into the Means of peopling America, which hitherto has perplexed the ablest Enquirers into such Subjects. It is true, that at first Sight there seems to be no great Authority for this Conjecture, since it is founded on the Report of the Inhabitants of the Moluccas, who were, according to the best Accounts we have of them, a rude and barbarous People. Yet let them be ever so rude and barbarous, they could not be mistaken as to a Matter of Fact; they had Emeralds amongst them, and as their Country did not produce them, they must know from whence they had them; and since this could be learned no other way but from these People, there seems to be no Reason why we should not accept of their Account.

The Conjecture, however, does not rest upon this alone, but upon another Fact, which cannot be disputed; and it is this, that there are no Emeralds to be found in any of the Countries in the East-Indies, and yet they were so common there, when the Portuguese came first into those Parts, that they brought considerable Quantities into Europe, from whence grew the Distinction of Oriental and Occidental Emeralds; whereas in Truth there never were any that could be strictly and properly called Oriental, because, as I observe, they are not the natural Produce of any Country in the East; and yet in another Sense they might be very well so called, because they came first to us from the East. I cannot help adding to this Observation another, which is, that there is some Reason to doubt, whether the Inhabitants of the Ladrone Islands were always so rude and barbarous as the Portuguese and Spaniards found them; and my Reason for advancing this is, because I find the best Portuguese Writers agree, that the Chinese had been Masters of the Moluccas, and very probably of these Islands also, as they certainly were of some of the Philippines; and if so, then very probably they were more civilized, while under their Dominion, and grew rude and barbarous, by their being deserted by them, and left to themselves.

This will appear still the more probable, if we consider on the one hand what the Chinese Writers tell us of their Emperors contracting their Dominions from Maxims of Policy; and on the other, what appears very clear to us from what we know with Certainty of their History, which is, that their Empire had been subverted by the Tartars, and consequently their Economy totally disturbed before the Portuguese came into the Indies at all. What I would conclude from hence is, that possibly we may be mistaken in our Notions of these Countries, and that therefore it may be worth while to enquire more narrowly into this Matter, which may possibly lead us to some kind of Evidence of an Intercourse between the East and West-Indies.

* It seems a little extraordinary, that the Emperor of Japan should treat these People with so much Severity, when it appears from this very Account, that Justice is as regularly administered in his Dominions as in any part of the World; but in all human probability, he was induced to use them in this manner by the Representations of the Dutch, as to the Power of the King of Spain, and his Intentions of reducing both the Indies.

† The Fact, that no such thing as a true and perfect Emerald is to be found in any of the Countries on the Continent, or in any of the Islands of the East-Indies, is maintained by the famous M. Tavernier, from whom I think a better Authority cannot be produced. He was indubitably as well skilled in Jewels as any Man of his Time, and had travelled more in the Indies than almost any other Writer, so that to controvert his Authority on this Head, is to refuse the best Evidence that can be produced, in order to conclude, without any Evidence at all, that the Thing is otherwise. It may, and indeed it has been said, that to support this Opinion, we ought to shew, that there has been such a Commerce with America; but there is a Difference between proving a thing, and rendering it probable; and yet in the next Chapter, something farther shall be said in Defence of this Opinion, which will approach very near a Proof.

before either were known to us by the Passages now in use. But let us for the present return to the Discoveries of the Portuguese.

18. In the Year 1525, *Antonio Britto*, and *Garcias Henriquez*, being sent from the *Moluccas*, discovered the great Island of *Celebes*. This *Antonio Britto* was the very Person that had taken one of *Magellan's* Ships, and put all the People that were in her to Death, which had gained him the Reputation of a bold and able Seaman; nor did he lose it by this Expedition, since he actually discovered what he was sent to look for. Other Portuguese Writers say, that he did not go himself, but fitted out Ships for that Discovery, and that they in their Return to the *Moluccas*, saw certain Islands, which they could not reach, to which they gave the Name of the Islands of *Mey*. But when *Antonio Galvano* was Governor of the *Moluccas*, he sent over two of the Natives, who were captured, into that Country, who converted several of the Princes thereof from Paganism to Christianity, and established a good Correspondence between them and the Inhabitants of the Portuguese settled in the *Moluccas*.

This Island of *Celebes* is divided from *Borneo* by the Straights of *Macassar*, and lies at no great Distance from the *Moluccas*. *Argensola* tells us, the Natives are of a white Complexion, and that they were formerly much given to Piracy. That Writer, and some others, give us an odd Account of the ancient Form of Government in this Country, and which seems to confirm what I have before suggested, that there had been great Revolutions in these Parts before they were discovered by the Europeans. What they say on this Subject, reduced into a narrow Compass, amounts to this; that there were originally seven Kingdoms, or Principalities in this Island, the Princes of which met together and chose a Monarch, who had a limited Power over the whole Island, and whom, in case of Tyranny, they who elected him deposed. This does not look like Rudeness or Barbarity, but seems to have been a very rational kind of Policy, instituted for the sake of preserving the Peace of the several Nations inhabiting that Country, and preventing those Wars that must otherwise have kept them in continual Confusion, and into which they actually relapsed, when by some Accident or other this salutary Form of Government fell into Disuse.

The Discovery of so considerable a Country was looked upon, by the Portuguese, as a Matter of great Consequence and Measure were taken to secure the Affections of those whom it was not found easy to conquer; but, on the other hand, capable of being obliged, or rendered useful, as their Allies, by good Usage. The People were much braver, and withal had much better Sense than most of the Indians; and, therefore, after a little Conversation with the Europeans, they began, in general, to discern that there was no Sense or Meaning in their own Religion; and the few of them who had been made Christians by the Care of *Don Antonio Galvano*, were not so thoroughly instructed themselves as to be able to teach them a new Faith. The whole People in general, however, disclaimed their old Superstitions, and became Deists at once; but, not satisfied with this, they determined to send, at the same time, to *Malacca* and to *Achin*, to desire from the one, Christian Priests; and from the other, Doctors of the Mohammedan Law; resolving to embrace their Religion; the Teachers of which came first among them. The Portuguese have hitherto been esteemed zealous enough for their Religion; but it seems that *Don Luis Pereira*, who was then Governor of *Malacca*, was a little deficient in his

Concern for the Faith, since he made a great and very unnecessary Delay, in sending the Priests that were desired.

On the other hand, the Queen of *Achin* being a furious Mohammedan, no sooner received an Account of this Disposition in the People of the Island of *Celebes*, than she immediately dispatched a Vessel full of Doctors of the Law, who, in a short Time, established their Religion effectually among the Inhabitants. Some Time after came the Christian Priests, and inveighed bitterly against the Law of Mohammed, but to no Purpose; the People of *Celebes* had made their Choice, and there was no Possibility of bringing them to alter it. One of the Kings of this Island, indeed, who had before embraced Christianity, persisted in the Faith, and most of his Subjects were converted to it; but still, the Bulk of the People of *Celebes* continued Mohammedans, and are so to this Day, and the greatest Zealots for their Religion of any in the Indies. This was one of the greatest Errors in Policy that ever the Portuguese committed; for if all the Inhabitants of that Island had been made, as they very easily might have been zealous Christians, the Dutch had never become so absolute in the Indies as they now are.

But this Difference in Religion did not hinder them from living in very good Terms with the Portuguese, who established a better Trade here than in any other Part of the Indies; for, finding few rich Commodities, and no Opportunity of encroaching on the Liberties of that Nation, they were glad to treat them as a free People, and the Situation of the Country being extremely happy to that Purpose, made it very soon the Centre of Commerce. The great Island of *Borneo*, abounding in Gold, Diamonds, Pepper, and other rich Commodities, lay but one Day's Sail from them; *Ambony* and the Spice-Islands, not above three or four; the Kingdoms of *Siam*, *Cambaya*, *Cochin*, *China*, and *Yenquin*, the Empire of *China*, and the *Philippine* Islands, none of them above three hundred Leagues. We need not wonder, therefore, that the Port of *Jampouan*, the best in that Part of the World, should be always full of Ships, and the great Towns on the Coast become Places of great Trade, when it was so much the Interest of the Portuguese to promote it. The People themselves were very capable of managing it, being very industrious and as well skilled in Navigation as any of their Neighbours; and though they had not any very rich Commodities, except Gold, and that in no great Quantities, yet they had wherewithal to purchase those of the greatest Value, since the Rice of this Country is esteemed the best in the Indies, as their Cotton is held the finest; with those they traded to the *Moluccas*, and from thence brought such vast Quantities of Spices, that they drove a very considerable Trade in them with the Europeans.

The Reason that this Island is sometimes called *Celebes*, and at others *Macassar* is, because the former which lies in the North-west Part of the Island, and the latter which takes up all the South, were the principal Kingdoms of the Island, and especially the last, the Monarchs of which were very powerful, and frequently made themselves Masters of the best Part of the whole Island. Their Subjects are allowed to be the boldest and bravest of all the Indies, and are likewise remarkable for having a consummate Knowledge in all Sorts of Poisons, which are some of them of so deadly a Nature, that the very Touch, Smell of them, are instantly and infallibly mortal. The Men make use of them to tinge the Head of their Arrows, or rather Darts, which they blow through hollow Trunks, and that with such Force and Dexterity, that

¹ As this Fact is unanimously related by the best Authors on this Subject, it may not be amiss to set it in the clearest Light of which it is capable. Two Brothers, Subjects of the King of *Seppur*, going over to the Island of *Ternate*, saw there the Ceremonies of the Christian Worship, according to the Rites of the Church of *Rome*. They were extremely pleased with the Show, and desired therefore to know more of the Substance, which induced them to apply to the Governor, in order to be informed as to the Notions the Portuguese had of God, the Reasons why they were called Christians, and how themselves might be made so. He readily discoursed with them on these Heads, they were quickly convinced of the Truth of what he said, and so were baptized by the Names of *Anthony* and *Michael*; which, it seems, the Governor made no Scruple of performing with his own Hand, there being, at that Time, no Priest in the *Moluccas*. It is easy to conceive, that these Men, returning into their own Country, might be able to show the Folly and Absurdity of their Idolatry, without being capable of demolishing the Truth of the Christian Faith.

² The ancient Religion of this Country deserves to be taken Notice of, because we shall then evidently see that the People had good Reason as they did. Their Priests told them, that the Heavens were eternal, and the Sun and Moon a God and Goddess, from whose Influence all things proceeded, that they had once a Quarrel, and the Sun striking the Moon, she thereupon miscarried of this World; with abundance of Stories of the same Nature. They taught them likewise the Transmigration of Souls; and that it was unlawful to kill any living Creature to eat, except swine, Birds, because the former was too nasty, and the latter too little for any human Soul to dwell in. But they advised them to sacrifice their Children to the sun and Moon; and, if they had none of these, they sometimes made trees with their Children. No wonder, therefore, that they were ignorant of such a Religion, and of such Practices.

they will hit a small Mark at the Distance of fourscore Yards. They likewise dip the Points of their Daggers in the same poisonous Drugs, and the very Scratch of it, either Dart or Dagger, kills without Remedy. The Women likewise make use of these Poisons to gratify their Revenge; for as they are generally allowed to be extremely constant themselves, so they have very quick Relentments in Cases of Infidelity, especially in regard to *Europeans*, who frequently cohabit with them, and sometimes marry them.

As they were rather the Allies, than the Subjects of the *Portugueze*, so they were much more attached to that Nation than any other *Indians*, and gave a very hospitable Reception to such of them, as on the Declension and Ruin of their Colonies, fled thither for Protection, which was one Reason that the *Dutch* made such a Point of reducing the King of *Macassar*, which they did after a long War in 1667, and prescribed to him very hard Terms, particularly these, that he should deliver up to them the Harbour of *Jompadan*, as too good for any but the *Dutch* to be possessed of; next he was obliged to turn all the *Portugueze* out of his Dominions, which was the more reasonable, because it was intended, that he should never trade with them, or any other *European* for the future; and lastly, he was to renounce all Commerce with the *Spice Islands*, without which his Conquerors could not have monopolized them¹⁹.

This fully proves what has been before observed, that if the *Portugueze* had taken Care to have converted these People to Christianity, and had taught them the Sciences, they would have been of more use to the Crown of *Portugal*, than all the *Indian* Nations that were subjected to it; for they had very right Notions of the Consequences of falling under the Dominion of the *Dutch*, and struggled against their whole Power in the *Indies*, when at its greatest Height, for many Years; and since their Country has been subdued, Multitudes of the *Macassars* have quitted it, and transported themselves to other Places, where they are entertained as Soldiers, particularly at *Batavia*, where they are esteemed by far the best *Indian* Troops in the Service of the States, and some of them likewise are in the Pay of the *Portugueze* Viceroy at *Goa*.

19. The *Sanda* Islands were now entirely open, and it is not easy to conceive, how the *Portugueze* could be so long traversing those Seas, without gaining a proper Knowledge of them; yet it does not appear, that before the Year 1527, they were acquainted with any thing more than the Name of the Island of *Borneo*, and with its Situation, by reason of their frequently passing by its Coasts. About that Time, Captain *Edward Conil* had Orders to examine it more narrowly, and being once acquainted with the Worth of the Country, they made frequent Visits thither. This Island, which is almost of a circular Figure, lies immediately under the Equator; it is about five hundred Leagues in Circumference, and abounds with the richest Commodities, the Hills well stored with Gold, and the finest Diamonds in *India* are found in its Rivers, washed down into them probably from the Hills, by the Torrents that pour into them.

All the Coasts they found inhabited by *Malayan Moors*, who certainly had established themselves there by Conquest, but the original Inhabitants still remain in the Mountains, and are stiled *Beajus*, which in the *Malayan* Tongue, signifies a wild Man, and the *Moors* use the very same Word for the largest Sort of Apes, that are likewise common in this Country, as if they meant to signify,

that the one had as little of Humanity about them as the other, which however is far from being true. The *Moors* are governed by several Kings, the Chief of which are those of *Manjar-Massen*, of *Succadon*, in one of whose Rivers there are excellent Diamonds found; of *Borneo*, and others. The *Beajuses* have no Kings, but only Princes, and other Chiefs. These that are Subjects to the King of *Manjar*, or border upon him, pay a Tribute; but such as live farther up in the Country, and in Places inaccessible to the *Moors*, are absolutely independent, and live according to their own Customs. The *Beajuses* are generally very superstitious, being much addicted to Augury. They do not adore Idols, but their Sacrifices of Sweet-wood and Perfumes, are offered to one only God, who they believe rewards the Just in Heaven, and punishes the Wicked in Hell. They marry but one Wife, and look upon any Breach of conjugal Faith, either in the Man, or in the Woman, as so heinous an Offence, that every one contrives the Death of the Person transgressing, either by themselves, or their Friends; and therefore the Women are very modest and reserved, especially the Maidens, who are not seen by their Husbands till the Wedding-day, when the Women receive their Portion.

They are Enemies to Fraud and Theft, and grateful for Benefits received. Among themselves, they live lovingly and friendly, and therefore, when every Man has gathered what he sowed for his own Use, the rest on the Mountains and Vallies, is in common, without any Distinction of particular Right. They are also well inclined in their Pleasures, and seek Honour in Hunting, at which Sport they endeavour to get some sharp Horns to polish, and wear them as an Ornament at their Girdle. This Girdle is no other than a long Slip of Linnen, which turns between their Thighs to cover their Privities, one End of which hangs down before, and the other behind. The Peasants make a sort of Cloth of the Barks of Trees, which being afterwards washed and beaten, are as soft as Cotton, and those Trees being within the Dominions of the *Malay Moors*, they expose themselves for the Bark to their Tyranny and Insolence. Some of them go naked, and the rest wear a small Doublet made of the same Bark, which they dye of any Colour. On their Heads, to keep off the Heat of the Sun or Rain, they wear a Cap of the Palm-Tree Leaves, shaped above like a Sugar-Loaf, long, and with Flaps hanging down.

The Weapons they use are Knives, made like the Canjiers of the *Moors*, and Zampittes, that is, Trunks about six Spans long, out of which they shoot little wooden Darts, with an iron Head at the one End, and Cartouch, or hollow Paper at the other, blowing into which, they shoot it out with a vast Force, and sometimes the Point being poisoned, the Wound is mortal. They also shoot Birds with Pellets through them. The *Beajuses*, as to their Persons, are of a dark Complexion, well-countenanced and strong. Such is the Account given of them by the *Portugueze* Writers, who, for any thing I know, are the only Authors that can be depended upon in this Particular. Their Countrymen carried on their Trade chiefly with the *Moors*, whom they could never subdue; nor have their Successors, the *Dutch*, been able to do any thing considerable against them, as we have already shewn at large in another Place.

The noble Island of *Java* was sooner visited by the *Portugueze*, on account of the Trouble given them by the Pirates, or Privateers, fitted out from *Bantam*, or as they call it *Bintam*, and other Places in the same Island, which

¹ When our Royal Society was first founded, they sent some Queries to Sir *Philberto Yarnatti*, who resided at *Batavia*, the sixteenth of which ran in these Words, "What Poison is it the King of *Macassar* in *Celebes* is said to have particular to himself, which not only kills a Man immediately, that hath received the slightest Wound by a Dart dipped therein, but also within half an Hour's Time makes the Flesh touched therewith so rotten, that it will fall like Sivel from the Bones, and whose poisonous Steam will soon fly up to a Wound made with an unpurged Dart, if the Blood be only in the slightest Manner touched with a Dart infected with the Poison?" To which he gave the following Answer; "That there is such a Poison in this King's Possession, is most certain, but what it is no Christian ever knew; some say it is the Gall of a venomous Fish, others say it is a Tree, which is so venomous, that those who are condemned to die, fetch the Poison, but not one of an Hundred escapes Death. "Roots of this Tree are held an Antidote against the Poison; but our People, when we had War with *Moffacar*, found no Antidote like to their own, or others Excrements, as soon as they felt themselves wounded, they instantly took a Dose of the same, which presently provoked to vomit, and is by Repulsion (as I conceive) and Sweat, freed the nobler Parts from farther Infection.

² I should not have advanced these Facts on the Hearsay or Report of any Writer whatever, but the Treaty dated the 18th of November, 1667, before my Eyes, and the sixth Article of it begins thus; "They, that is the Regents of *Macassar*, shall turn out the *Portugueze*, and all belonging to them, without Exception; and because we are obliged to believe, that the *English* are great Merchant-makers, and the Authors of the present War, the said Regents shall turn them out also, the first Opportunity, and shall never permit either of those Nations, or their Creatures, to negotiate or trade in *Macassar* hereafter, &c."

induced *Pedro Mascarenhas* to attack *Bantam*, which he took, and plundered, though *George Albuquerque* had attempted it in vain. *Java Major* lies South East from the Peninsula of *Malacca*, having *Sumatra*, *Borneo*, and *Celebes*, lying before it. Authors vary as to its Dominions; but the most moderate allow it nine hundred Miles in Circuit. The Air is generally esteemed more wholesome than in any of the Isles before mentioned, the Country exceedingly fruitful, and the Coast abounding with good Ports. It is not intended here to enter farther into the Description of Places than to render what we have to say as to the History of them, clear and intelligible.

The *Javanese* pretend, that they are descended from the pure and unmixed Race of the old Inhabitants of *China*, who retired thither when their Country was over-run by the *Tartars*; and on this they very much value themselves; but before the *Portuguese* came there, they had not only mixed with other neighbouring Nations, but were also become *Mohammedans*. The whole Island at that Time was cantoned out among a Number of little Princes, some more, some less powerful; but most of them Masters of some Force by Sea. All this corroborates what has been before so often observed, that these Nations did not grow better by their Commerce with the *Europeans*, but were actually declining from what they had been when first visited by them, and have been sinking lower and lower ever since.

The *Portuguese* Generals saw plainly enough, that they had not Force sufficient to keep this Island, and therefore they contented themselves with making a new King of *Bantam*, when they had taken it, and accepted from him an annual Tribute. *Panarutan*, a small City, the Capital of a little Principality of the same Name, and withal a commodious Port, owed much to their Protection, and was raised to one of the principal Marts of the whole Country, where they not only dealt in Rice, Pepper, and other Commodities of the Island, but also in Gold, precious Stones, and Spices brought from other Places, and more especially from the adjacent Islands. But since the *Dutch* became Masters of *Batavia*, and the Emperor of *Malacca*, and the King of *Bantam* have divided the Island between them, this Place is become a Fishing Village, and all its Trade is entirely lost.

20. There is some Dispute as to the Time, and even as to the Person who first visited the Coast of *New Guinea*. Some say, that this Coast was first discovered by *Alvarez de Saavedra* in the Month of *May* 1521, as he was returning to *New Spain* from a Voyage he had made for Discoveries. He fell in with this Continent in the Latitude of two Degrees South, and ran East along by it above five hundred Leagues to the End of the Month of *August*. The Coast was clean, and of good Anchorage: The People black, with curled Hair, naked to the Waist, and covered from thence to their Feet. *Saavedra* having sailed four or five Degrees to the South, returned again unto the Equinoctial, and having passed it, discovered towards the North an Island, on which he bestowed the Name of *Isla de los Pintados*, that is, *The Island of painted People*; for he found the Inhabitants white, and each of them marked in his Body with an Iron. They could not understand the Language they spoke, which was very guttural; but by the Signs they made, they apprehended that they came from *China*.

There came off a Boat full of these People in a hostile manner, threatening the *Spaniards*, and throwing Stones at them; but *Saavedra* would not suffer his People to fire upon them by any means. A little beyond this Island they discovered many others low and flat, covered with Palm-Trees and Grass, so that they made a very pleasant Appearance, and therefore *Saavedra* called them *Los Jardinas*, or the Gardens; they were very full of People, who seemed to them by their Countenances, and the Manner of wearing their Hair, to be descended from the *Chinese*; but by their long Continuance there, were become barbarous, and even brutish, living without Law, that they may live without Labour, clothed only with a white kind of Stuff, which they make of Grass. They eat Cocons instead of Bread, pulling them before they are ripe, and burying them in the Sand, from whence, after some Days, they take them out,

and lay them in the Sun, where they open of themselves. They likewise eat Fish, which they take in a kind of Boat called *Paruos*, made of Pine-wood, which is driven on the Coast at certain times of the Year, they know not from whence, or how. The Tools with which they make the Boats are made of Shells. What appeared to *Saavedra* as most strange was, that these People had never seen, nor had any Notion of Fire, till they came upon their Coast, and then they shewed the utmost Terror and Apprehension at the Sight. *Saavedra* would have returned from hence to *New Spain*, but met with so many Difficulties in his Passage, that worn out with Grief and Care, he died, and his People brought his Ship back to the *Moluccas*.

This gave an Opportunity to the Author we have taken this Account from to learn all those Particulars; and the Writer deserves the more Credit, as he was a Man of Education, and Governor of the *Spice-Islands* for the *Portuguese*. His Name was *Antonio Galvano*, the same who took so much Pains to introduce Christianity into the Isles of *Celebes*, and who has written an exact Account of all the Discoveries made by the *Spaniards* and *Portuguese* both the *East-Indies*, and in the *West*. But we must not apprehend from his Account, that this Southern Continent was absolutely unknown, till this Discovery of it by *Saavedra*; because it is certain from his own Account, that the Inhabitants of the *Moluccas* were very well acquainted with it before the *Portuguese* came amongst them, and carried on a considerable Trade thither; but this Part of the Coast which *Saavedra* failed was unknown to the *Europeans* before. While this *Antonio Galvano* commanded at *Ternate*, there was a famous Pirate, who with a Squadron of *Paruos*, did a great deal of Mischief on the Coast of the Land of *Papua*, which is the Country since called *New-Guinea*, and at last began to threaten the Subjects of the *Portuguese* in the *Moluccas*. To repress the Violence committed by this Rover *Galvano* fitted out some Barks that were sent him by the King of *Tidor*, and having manned them with a few *Portuguese*, and with the Auxiliaries from the neighbouring Islands, he sent them under the Command of *Ferdinand Vinagrez*, a Priest, in Quest of this Pirate, with whom they came up, and after a smart Engagement, in which the Pirate and his Brother were both killed, destroyed some and dispersed the rest of his Squadron.

After obtaining this Victory, he was sent to the Court of *Papua*, where he was kindly received by several Princes and converted some of them and their Subjects to the Christian Faith, which was so great a Satisfaction to the worst Governor, that he instituted a kind of Seminary, in which he bred up abundance of young Men brought from all the Countries, instructing them himself in the Christian Religion, and in all sorts of Literature that were at that Time studied in *Portugal*.

It is observed by the *Portuguese* Historians, that what other Governors increased their Fortunes, this Man died only to increase his Reputation and the Number of his Master's Subjects, by his wife and gentle Government, which had so good an Effect, that Multitudes of *Christians* expelled and banished by *Mohammedan* Princes throughout the *Indies*, repaired to him in the *Moluccas*, where he was so entirely beloved by all the Princes of those Islands, that they joined together in a Representation to the King of *Portugal*, setting forth the many Advantages that would accrue to the *Portuguese*, as well as themselves, if *Antonino Galvano* was continued in this Government for Life; but before this Representation was framed, the Governor of the *Indies* sent *George Castejo* to succeed him, which, in the Space of a few Years, produced such a Change in their Affairs on this Side, that *Maffew*, and other of their Historians, have declined giving us an Account of them.

It was the removing this worthy Man, that hindered all the Southern Continent from being thoroughly known, for, by his Candour, Humanity, and wise Government, established a new Face in that Part of the World, which the *Portuguese* never had any Idea, either before or since; and if he had remained there but a few Years, would have done more towards the Conversion of the Nations by his own Virtue and Piety, than ever could be effected by an Army of Missionaries. But what he

not permitted to effect by his Actions, he has sketched forth in his Writings; so that, from them we learn, this great Southern Continent was, in his Time, well inhabited; and though these Inhabitants might, in some Parts of it, be absolute Barbarians; yet, in others, they were as much civilized as their Neighbours, and had, as we have before seen, not only the Use of Vessels, but some kind of naval Force.

21. The Discovery of the *Philippine Islands*, as they are now called, was, undoubtedly, made by *Francis Magellan*, in the Year 1521; and the first Island in which he landed was *Hummunun*, which is now barren and uninhabited. He took Possession of the Island of *Butan*, by erecting a Cross, as we have elsewhere shewn, on the *Wednesday in Easter-Week*, in the same Year. But these Islands were not settled on the Behalf of the *Spaniards* till the Year 1565, by *Michael Lopez de Legaspi*, a Native of *Mexico*, acting under a Commission from King *Philip II.* in Honour of whom they were called *Philippines*. But with this Conquest and Settlement I have, at present, nothing to do, as intending to speak only of the Discoveries made in these Parts by the *Portugueze*, on whose Behalf *Don Antonio de Gálvano*, in the Year 1538, sent *Francis de Castro* to the Island of *Mindanao*, where he persuaded six of the petty Princes to receive Baptism, with all their Families. This Island of *Mindanao* is the most southern of all the *Philippines*, and the largest of them all, except *Manila*; it extends from 6° of N. L. to 10° 30', and is esteemed three hundred Leagues in compass. There are few Countries in the World better watered; for there are in it twenty navigable Rivers, and near two hundred Rivulets, besides large Lakes, one of which is called *Mindanao*, and gives its Name to the whole Island.

The *Portugueze* found it inhabited by several different Nations, of which, the true original Lords of the Country possessed then, only the Hills and inaccessible Places; being *Negros*, with crisp and curled Hair, like those in *New Guinea*; and, by the way, those were the original Inhabitants of all the *Philippines*. The *Portugueze* and *Spaniards* call them *Negrillos*, a Nation who have sacrificed all the Blessings of Life, and all the Advantages of human Nature, to an enthusiastick Love of Liberty. Those who inhabit one Mountain will have no Intercourse with those who inhabit the next; nay those that inhabit the Middle of a Hill, will murder such as live at the Top or the Bottom of it, if they find them in their District. They have neither Lords nor Laws, but live like Brutes, for the sole Satisfaction of being free. This silly Humour induced them to abandon the Sea-Coasts on the first Appearance of Strangers, which have been since settled by several Nations, some *Mohammedans* from *Borneo*, others a white People, no Body can well say from whence, only the most civilized Inhabitants own, when the *Portugueze* came amongst them first, that these Islands had formerly been under the Dominion of the *Chinese*, and, upon their abandoning them, were left a Prey to any Nation that thought fit to settle in them, and were able to defend themselves from the Blacks in the Mountains.

The Island *Xolo* lies South-West from *Mindanao*, and is governed by a King of its own; it is far from being large, but its Situation between *Mindanao* and *Borneo* makes it the Mart of all the *Moorish* Kingdoms. I do not find that the *Portugueze* ever pretended to settle, much less to conquer these Islands; but they visited them frequently for the sake of Trade, and in those Days there was a greater Commerce in these Parts than can be well imagined; for, while the Trade was open to *Japan*, there came annually two or three Ships laden with Silver, Amber, Silks, Chelms, Cabinets, and other Curiosities, made of sweet-scented Woods, with vast Quantities of Silks, Mullins, Callicoes, Quilts, and Earthen-ware from *China*. For these the Merchants of *Golconda* exchanged their Diamonds; those of *Ceylon* their Rubies, Topazes and Sapphires; from *Java* and *Sumatra* came Pepper, and Cloves, and Nutmegs from the *Moluccas*.

The native Commodities of these Islands were as valuable as any of the rest, since no Country in the World,

NUMB. XI.VII.

Pepp not excepted, abounds with more Gold. In the Mountains they dig but three Foot deep, before they meet with it in red Sand, and where they cannot come at the Mountains for the Blacks, they dig Trenches in the flat Country, and after the rainy Season, they pick the Gold out of the Mud that is left in them. Cinnamon they have as good as any in *Ceylon*; but no Body having any Property in the Trees, they tear and destroy the Bark at all Seasons, which is the Reason the World is so little acquainted with the Cinnamon of *Mindanao*. In the Sea, between this Island and *Xolo*, there is a Pearl-Fishery, inferior to none in the *Indies*, either in point of Colour or Shape. Ambergreese they have in great Plenty and Perfection on their Coast; and Lumps are very often found of twenty or thirty Pounds Weight, nay, and sometimes larger.

It was from their Commerce with *Mindanao*, and the Respect, or, as they call it, Homage, paid to the King of *Portugal* by some of the petty Monarchs of that Country, that the *Portugueze* pretended to maintain their Claim to these Islands against the *Spaniards*, who assume to themselves an exclusive Right over all the *Philippines*; because *Luconia*, or *Manila*, which is the biggest of them, is in their Possession; yet they have fo managed their Affairs, that though they keep these Settlements merely for the sake of Trade, their Government is so ordered, as to lessen that Commerce, which those Islands had before they became Masters of them; and, at the same time, the Royal Revenue is so indifferently managed, as not to defray above Two-Thirds of the Expenses of the Government; though the People are so much harrassed, that they fly to all Parts of *India*, to avoid the Hardships imposed on them at Home.

Father *Naparette*, who was himself a *Spaniard*, and who, in his History of *Luconia*, shews a manifest Partiality for his Country, confesses the Truth of this, and that he never was in any Country of the *Indies*, but he found *Manila Indians* either carried away, or run away from thence; and of this, he says, the *Spanish* Government complained, as being extremely detrimental to that Settlement: But he observes very justly, upon that Occasion, that Complaints lie only against themselves, and their own Conduct: Let them, says he, use the *Indians* well, and they will not run away; let them protect those People as they ought, and no Body will be able to steal them. The Negligence of the *Portugueze*, the Tyranny of the *Spaniards*, and the encroaching Disposition of the *Dutch*, hinder these Islands from being, what they otherwise must be, the Centre of Commerce between the *East* and *West-Indies*; and if a free Trade were allowed in them, each of these Nations would get ten Times as much, and that too with ten Times the Ease with which they get what little they do get by their Commerce here at present.

22. There is not any Passage relating to the Discoveries made by the *Portugueze* in the East, more curious or more extraordinary, than what relates to the finding the Islands of *Javan*, which were discovered about the same Time by two different sets of Adventurers, both, in all Appearance, the pure Effects of Chance. And though, in the Account we have received of both these Discoveries, very little Notice is taken of Dates; yet, from Comparison of Facts, it is pretty evident, that the Persons we shall first speak of, arrived in that Country some Time in the Month of *May*, A. D. 1542. Of the first of these, we have a very large Account, written by *Mendez Pinto*, who was himself the Discoverer; but for many Reasons, we have found it necessary to contract that Account into as few Words as possible, that we may have Room to give the Reader both the Discoveries, and thereby enable him to judge for himself, as to the Controversy that has been raised concerning them.

Ferdinand Mendez Pinto tells us himself, that being in Company with two of his Countrymen, whose Names were *Diego Zeimato*, and *Christopher Borchio*, in *Lampacao*, which is the same with *Malacca*, they then endeavoured to get a Passage to some other Part in the *Indies*, and found it very difficult to do: At last a *Chinese* Corsair offered his Ser-

§ M

vicy,

vice, promising to conduct them to the Islands of *Legu- es*; but when they were at Sea, the Weather proved so bad, and the *Chinese* Captain's Ship so leaky, that there was an absolute Necessity of putting into some Port to refit; and accordingly the Captain bore away for a certain Port in the Island of *Japan*, which our Author tells us was that of *Naygima* in the Island of *Tanuximaa*, where they safely arrived. Before they entered the Port, two Barks came from the Shore to know who they were, and what they wanted? The Captain answered, that they were come from *China*, that his Ship was full of Goods, and that his Intention was to trade, if they might obtain Permission; to which the principal Person in the Barks answered, that the Lord of the Island was called *Nautaquim*, and that if they paid the Port Duties, they might have Leave to Trade. The *Chinese* Captain instantly complied with this Demand; the Patron of the Barks used him thereupon with great Civility, and conducted him immediately into the Harbour.

About two Hours after the Lord of the Island came thither, accompanied by several Persons of Distinction, and some Merchants. At the Sight of the three *Portuguese* he was very much astonished, and demanded immediately who those Strangers were, and of what Nation? The Captain answered, that they came from a great City called *Malacca*, and that they were of a certain Kingdom in *Europe* called *Portugal*. At these Words *Nautaquim* appeared more surprized than before, and at last, turning to those who were about him, he said, let me die, if I don't believe these are the *Chinese*, of whom we read in our old Books that they fly upon the Waters, and make themselves Masters of every rich Country they hear of: We shall think ourselves very happy, if they are content to be our Allies. He then called a Woman, who could speak the *Chinese* Language, in which he was but indifferently skilled, and desired her to ask the Captain with what View he brought these Strangers into *Japan*. The Captain answered very candidly, that he found them at *Macao* much distressed for a Passage to some Port in the *Indies*, and that he, from a Principle of Humanity, took them on Board his Vessel, in hopes that Providence would raise him a like Friend, in case he should fall into the same Distress. This satisfied *Nautaquim* perfectly, so that he made no Difficulty of going aboard the *Chinese* Vessel, with some of the principal Persons about him, and asked the *Portuguese* abundance of Questions, whom he also invited to visit him on Shore, promising to entertain them kindly.

They went accordingly, and carried him a Present, which was very graciously received, and *Nautaquim* entered into a long Conversation with them about their Country, and particularly insisted on these three Points, which he said he had been told by the *Chinese* and *Leguons* in his Country. First, that *Portugal* was bigger than *China*, and richer; the second, that the King of *Portugal* had conquered the best Part of the World; and thirdly, that his *Portuguese* Majesty had better than two thousand Houses full of Gold and Silver. *Pinto* ingeniously owns, that he did not stick exactly to Truth in his Answers, but conceived such as were most likely to keep up the high Opinion that *Nautaquim* had conceived of their Monarch. All the Time they stayed here, they were treated with the utmost Civility and Respect, being permitted to see every thing they desired, and to go where they would. *Zemoto* had a very fine Gun, with which the *Japanese* were extremely taken, inasmuch that they spoke of it to *Nautaquim*, who

desired to see it, and how it was used; which Request his being complied with, he thought himself so much obliged thereby, that he set the *Portuguese* upon one of his own Horses, and obliged him to ride through the Town with a Crier before him, who proclaimed him *Nautaquim*'s Cousin, and admonished the People to consider him such: At his Return he had an Apartment assigned him in the Palace; upon which he made a Present to *Nautaquim* of his Fowling-piece, in return for which, he sent him ready Money a thousand Taels, which make in our Money three hundred and thirty-three Pounds.

The People imitated the Generosity of their Prince, and bought all the Captain's Goods at such round Rates, that for a Cargo which cost him two thousand five hundred Taels, they gave him to the Value of thirty thousand. We need not doubt that People so well entertained, spent their Days there very agreeably, and were not in any great Hurry about their Departure. After a Month's Stay, however, the *Chinese* Captain having visited his Ship, prepared to put to Sea; but before he was ready an Accident happened, which changed the Face of their Affairs entirely. A Boat arrived in the Harbour, having on Board a Gentleman charged with a Letter from the King of *Bungo*, the Lord of the Island, signifying that he was informed that certain Strangers were come into his Dominions, which it was apparent, that the World was much larger than they imagined, and that he desired he would send at least one of these Strangers to discourse with him, the other, because at that Time he was very much indisposed and suffered by repeated Fits of black Melancholy, which oppressed him to the last Degree. The Lord of the Island sent immediately for the *Portuguese*, and having informed them, that the King of *Bungo* was both his Uncle and Father-in-Law, he most earnestly desired that they would grant the Request of that Prince. At the same time, however, he declared, that he could not part with his Cousin *Zemoto*, but that the Embassador might take which of the other two he pleased; but after a little Reflection, fixed upon *Pinto* as the most proper Person to go to *Bungo*, because he was of a brisk and lively Temper, and therefore the most likely to divert him; and at the same time made him a Present of two hundred Taels, as a Compensation for the Trouble of this Journey.

Things being thus regulated, *Pinto* took his Leave of his Friends, and embarked with the Embassador for the Kingdom of *Bungo*, which lies but at a very small Distance from the Island of *Tanuxima*. They arrived, without meeting with any Accident, at the Fortrefs of *Ojura*, where they remained two Days, and then they set out for the Capital, where they arrived the very same Day. The King had sooner Notice of their coming than he immediately sent one of his Sons to complement them, to whom the Embassador delivered a Letter from *Nautaquim* for the King's Father, whose Name was *Orygenoa*, who, as soon as he received it, desired the *Portuguese* to come to him, which he received with all the Respect imaginable. The Question he asked *Pinto* was, whether the Gout, with which he was dreadfully afflicted, was a Distemper known in one of the Countries through which he had passed, and if he had ever heard of any Remedy that would effectually cure it? *Pinto* told him honestly, that he was no Physician, that he had brought with him from *China* a kind of Wax, which had a Quality of relieving the most violent Pains in their Cattle be what it would, but that he had left it in the Island where he first arrived; upon which the King said

* This Island, of which it seems the *Portuguese* had already some Knowledge, pass under different Names; and even at this Day we still find it with many Certainty about them. Some Writers call them the Islands of *Isipia*, others the Islands of *Ryuku*. They believe that they are the Islands, passing the Island of *Formosa* on the South West, the Continent of *China* on the West, the Islands of *Japan* on the North, and the Ocean on the East; on which side they seem to have no Land nearer to them than *America*. The *Japanese* report, that this is the most fertile Coast in the World, and that the Inhabitants are the earliest, happiest, and best conditioned of the Human Race. They are said to be the Prince of the world, so to be one of the principal Lords of the Empire of *Japan*. It may not be amiss to observe, that the *Chinese* were the first Discoverers of these Islands, and that it pretends there is a close Commerce between them and the *Philippine*.

The Island, which *Pinto* calls *Tanuxima*, is, undoubtedly, *Tanuxima*, belonging to the Kingdom of *Formosa*. It lies in the Latitude North, at a very small Distance off the great Island of *Aino*, which is the second in size of those three Islands which are known in *Europe* and *America*. Some of *Japan*, which is not, as we generally apprehend it, the Name of a particular Country, but of a large Archipelago of Islands, the principal one of which is *Ypso*. It is true, that later Authors speak of no such Port as *Pinto* mentions, but that is no just Objection to the Story here, since it is on all Hands allowed, that prodigious Changes have been made in the Names of the principal Ports and Places in *Japan*.

The Cause of the great Insurrection of *Pinto*'s Religion is this; that notwithstanding the Abundance of the People on their first beholding the *Portuguese* and their brought over, they were, however, so ignorant as to comprehend the whole Mechanism of it in a very short time, that they were able to resist it; they had made several of them, and in the Space of a few Years they became very expert in the Trade; which is a Circumstance, that is not, notwithstanding, mentioned by later Writers.

diately dispatched a Messenger thither to fetch it. As soon as it arrived, *Pinto* caused it to be steeped in Water, which he gave the King to drink, and in the Space of a few Days, he found himself so well, that he was able to rise and walk about, which he had not done for two Years.

It is easy to imagine what high Effects so extraordinary a Circumstance as this must necessarily produce, and what Careless were naturally bestowed on a Stranger, who had so suddenly and so unexpectedly performed so great a Cure. The King ordered all the Care imaginable to be taken of him, and the whole Court was employed in contriving how to entertain and divert him; but in the midst of all this Joy and Satisfaction, there happened an unlucky Accident, which had like to have been attended with very bad Consequences. *Pinto* had with him his Gun, which was mightily admired by every Body that saw it, and the Operations of which filled them with Astonishment. The hereditary Prince was so taken with it, that he would needs try to shoot himself, to which *Pinto* would by no means consent, telling him, it was an Instrument to be managed with great Caution, and might do unexpected Mischief in the Hands of a Person who knew not how to manage it. This, instead of satisfying the Prince, made him only the more eager, insomuch that he complained to his Father, and desired he would prevail upon the Stranger to trust him with his Gun; to which the *Portugueze* yielded, and promised to go a shooting with him the next Day.

The young Man was so impatient, that he was up before it was light, and on the sixth of *August* was at *Pinto's* Chamber-door before he was awake. He had too much Manners to disturb him, but unluckily spying the Gun, took it out with him into the Court, and resolved to make a Shot. He put in a double or treble Charge of Powder, to which giving Fire, the Gun burst, cut his right Thumb so that it hung by a Thread, and at the same time a Piece of the Barrel struck him so violently over the Ear, that he fell flat upon the Ground, and those who were about him thought he was killed. The Noise of this Accident was very soon spread over the whole Town, where it was unanimously agreed, that the Stranger's enchanted Instrument had killed the Heir of the Crown. The Noise made round his Apartment awakened *Pinto* out of his Sleep, who coming down without knowing what was the Matter, went directly to the Place where the Accident had happened, and seeing the Prince lying on the Ground, whom he took to be dead, he threw himself on the Body in the utmost Agony. A Moment after came the King, the Queen, and the two Princesses, all of them in a distracted Condition; and as soon as they saw the Prince swimming in his Blood, and *Pinto* lying by him, they immediately concluded that the Stranger had killed the Prince; upon which two Soldiers advanced with their Swords drawn, in order to cut off his Head; but the King called out to them to forbear, since he was determined he would first extort from him the Reason that induced him to commit to vile a Fact.

The Reason of this Stay of Execution was, because a little before a Conspiracy had been discovered, for which several Persons had been executed the Day before; and the King apprehended, without any Reason, that this Action might be an Effect to that Conspiracy. It is not necessary for us to dwell upon all the little Circumstances of this Affair; and therefore it will be sufficient to observe, that when they were on the very Point of torturing *Pinto*, in order to make him confess why he committed this detestable Murder, and who were his Accomplices, the Prince very luckily came to himself, and feeling how things stood, declared, with great Concern, that he alone was in the Fault, and that the Stranger knew nothing of the Matter; wherefore he intreated that he might be set at Liberty, and have leave to come to him, which his Father immediately granted. It was then proposed, that they should send for an old Bonze, who lived at seventy Leagues Distance, to cure the Prince's Wounds, and to try if he could save his Life. The young Man declared against this, and said, he should die before he came, and begged that he might be left in the Hands of the Stranger, who knew best how to cure him. The King thereupon called for him, and asked if he would undertake his Son's Cure, which, if he refused, he should think his Kingdom too small a Re-

ward. *Pinto* declared he could promise for nothing, but that he was willing to do all that lay in his Power, and that he had great Hopes of succeeding.

Upon this the Prince was left in his Hands, but not without a great Struggle on the Part of the Bonzes, who declared, that if the Stranger touched his Wounds, he would die that Night; and that the best thing the King could do was to offer up *Pinto* as a Sacrifice to the Gods, and to send an Express immediately for the old Bonze before-mentioned. The Prince interposed, however, so warmly in Favour of the Stranger, and some of the oldest and wisest Men about the Court thought the young Man's Desire so reasonable, that the King consented to it, and the Prince being carried to *Pinto's* Lodgings, he dressed him as he had seen the *European* Surgeons do, and in one Month's Time there was no other Sign of the Wounds than the Scars they had left, and a little Deadness in his Thumb. The King and the whole Court were quite ravished with Joy at his unexpected Recovery, and besides a thousand Blessings and Thanks, made the *Portugueze* abundance of magnificent Presents; besides fifteen hundred Taels in ready Money, which the King bestowed upon him as soon as the Prince was able to go abroad.

While things were in this Situation, they had Advice that the *Chinese* Ship was ready to sail; upon which *Pinto* desired Leave to be gone, to which the King very unwillingly consented; but as the Stranger insisted upon it, he ordered a Vessel to be equipped, in order to carry him back to the Island of *Tacuxima*, and sent a Gentleman with him, furnishing him also with all manner of Provisions and Refreshments. After his Return to that Island, our Traveller remained there a Fortnight waiting for a fair Wind, and then embarking, arrived safely at *Liamo* on the Coast of *China*. This is, in few Words, the Account given us by *Pinto* himself: Let us now proceed to the other Discovery of this Country made by the *Portugueze*, according to our Promise.

In the same Year 1542, three of the same Nation came by pure Accident into this Country, their Names were, *Antonia Mata*, *Francisco Zeinoto*, and *Antonio Pexota*, who in a Voyage from the Island of *Macassar* to *China*, were thrown upon the Coasts of these Islands, and were exceedingly well received. Amongst other Acquaintance, they entered into a close Conversation with one *Angero*, a Man of a good Family, and considerable Fortune; but who was exceedingly troubled in Mind on account of some Irregularities committed in his Youth, who heard them with Pleasure discourse concerning the Truth of the Christian Religion. About two Years after *Alvarez Vaz*, a *Portugueze* Merchant, came into the same Country, and became very intimate with the same Person whom he persuaded to go to the *Portugueze* Settlements in *India*, in order to be converted and consoled by the holy Discourses of the famous *Francis Xavier*; to which at length he yielded, and having received Baptism at *Goa* in the Year 1548, he the next Year accompanied *Father Xavier* and two other Jesuits in their Voyage to *Japan*, where they immediately entered upon their Mission; by the Progress of which, this Country was made so thoroughly known to the *Portugueze*, that if *Mendez Pinto* had not recorded his own Voyage thither, it is very possible we had never heard any thing of it at all; but that he afterwards visited *Japan* in Company with *Father Xavier*, and after the Decease of that industrious Jesuit, whom the *Papists* esteem the Apostle of the *Indies*, he went thither again as Ambassador from the Viceroy of the *Indies* to the King of *Bungo* in 1556, so that there seems to be no just Grounds for calling any thing that he has written in Question.

The Conversions made in this great Empire contributed not a little to support and extend the *Portugueze* Trade, which was managed with much Facility, and to a vast Profit: For the *Portugueze* being established in *China*, carried from thence vast Quantities of Silk into *Japan*, where as all Ranks of People affect to be clothed in it. There followed a prodigious Consumption, which enriched the *Portugueze* Merchants very soon to a high Degree, tho' it is scarce credible, that as some *Dutch* Writers report, they have sometimes carried home in one small Ship one hundred Tons of Gold. But this prodigious Success proved the

the Cause of their being at last deprived of this lucrative Commerce.

It is not to be expected, that we should enter here into a long and particular Relation of the several Facts which drew upon them, from the Government of *Japan*, that Prohibition of which we have spoken so largely in the Article of *Macao*, and therefore we shall only report in general Terms, and in as few Words as possible, the principal Causes of that Exclusion. The vast Wealth they had acquired corrupting the Manners of the *Portuguese*, made them less cautious than they ought to have been, in their Behaviour towards the *Japonefe*, inasmuch, that instead of the Moderation, Sobriety, and exact Conduct which they at first pursued, they grew proud, insolent and dissolute. This prompted them to change the Places where they were wont to trade, and to prefer such Ports as were in the Dominions of infidel Princes, to those in the Territories of these *Japonefe* Lords, that had embraced the Christian Religion, that they might live as they thought fit, and without being under the Controul of the Missionaries, who took all the Pains they could to oblige their Countrymen to advance the Credit of the Christian Religion by the Regularity of their Lives. These Errors had two very bad Consequences; for, first, they disgusted such Princes as had embraced the Faith; and, secondly, they hardened the Infidels in their Aversion to it.

But it was not only the Corruption of the *Portuguese* Merchants, Officers, and Seamen, that gave Offence to the People of this Empire, the Intrigues of the Missionaries themselves contributed to it as much, or more, by exciting the Jealousy of the Emperor; for where-ever they had converted any of the Princes of *Japan*, they were continually at Court, and instead of minding what was the proper Business of the Church, engaged at every Turn in Affairs of State, making the Direction of Consciences much less their Care than the Direction of Councils, by which they became the Authors of many Troubles, and afforded a Handle to their Enemies of charging them with many more; so that the Emperor of *Japan* began at last to surmise, that there was more of Hypocrisy than Sanctity in their Hearts, and that they were endeavouring, under Colour of saving Mens Souls, to establish a new Government in that Country.

These Jealousies, which certainly were not altogether without Foundation, were extremely increased by two Circumstances; the first was, the Haughtiness and Ill-conduct of such as were sent Embassadors thither, especially after the Union of the Crowns of *Spain* and *Portugal*; for those Ministers were wont to boast of the vast Power of the Catholic King, and of the mighty Extent of his Dominions, of which they affected to convince the *Japonefe*, by shewing the Maps of the *East* and *West-Indies*; and the Imprudence of one of these Embassadors is said to have carried him so far, as that on being asked how his Master had acquired such vast Territories at so great a Distance from his hereditary Dominions, he answered, by sending Missionaries first to convert a Part of the Inhabitants to Christianity, and then sending Troops to assist the new Converts in shaking off the Yoke of infidel Princes.

The other Circumstance was the coming of the *Dutch* Ships upon the Coast of *Japan*; for these People applying themselves entirely to Commerce, and submitting, for the sake thereof, to whatever Terms were prescribed by the *Japonefe*, gained thereby such a Degree of Confidence with their Princes, that it procured implicit Credit to their Representations, as to the ambitious Designs of the *Spaniards* and *Portuguese*. These Remarks will give the Reader so easy a Key to the political Contrivances for first restraining the *Portuguese* Trade to a particular Port, and then shutting them up as it were in a Prison, during their Stay in that Empire, as in the first Chapter of this Work has been largely related, that we need not run here into any Repetitions, but content ourselves with observing, that notwithstanding the many previous Signs which the *Portuguese* had of the approaching Rupture with the *Japonefe*, yet were they to far from taking such Steps, as in common Prudence they ought to have done, for avoiding so great a Mischiefe, that on the contrary, they behav-

ed daily worse and worse, till the Storm came upon them with such a Force, as was not to be resisted.

The particular Relation of the Subversion of Christianity in this Empire, will be found in the succeeding Volume, when we come to treat of the Description of *Japan*; at present we have only to observe, that the *Portuguese* have been deprived of this rich Commerce ever since the Year 1639, and that all the Attempts they have hitherto made to recover it, have proved absolutely ineffectual, nor is it probable, that any they may hereafter make will be attended with any better Success.

23. The Country, or Countries, lying beyond *Japan* to the North-East, or North-West, have been always regarded, at least since Geography has been tolerably understood, as the very Confines of the World, and the Extremities of the Earth, which Countries the *Japonefe* themselves called *Jeso*, or *Jesso*, the *Chinese*, *Yezo*, from whence we have the Word *Jesso*, or *Yezo*, by which, the *English* and *Dutch* Maps they are distinguished. The first Accounts that were received of these Countries were from the *Japonefe* themselves, but according to their Sentiments in such Sciences, extremely dark and obscure. They were not able to say absolutely, whether their own Country was an Island or not; and as for the Land of *Yezo*, they professed the utmost extent of their Knowledge to be that it belonged to the Prince of *Matsunoy*, who was dependant on, and a Tributary to the Emperor of *Japan*. In the Year 1613, Father *Complanca*, who then preached the Christian Religion in *Japan*, hearing that the Prince of *Matsunoy* had sent to *Japan* for a Physician, and a Convert to Christianity, a Man of good Sense, and quick Parts, was pitched upon to go over in that Quality he recommended to him the Care of instructing that People, if a favourable Opportunity offered, in the Christian Faith, which Commission the Physician executed with much Zeal and Fidelity, that he quickly gave Father *Complanca* a good Account of his Mission, attesting him, that he had not only made many Converts, but that he saw the People in general better inclined to the Christian Religion, than could have been expected.

In 1620, Father *Angelis*, who was then at *Tongara*, the most Northern Part of the Island of *Nippon*, to which many Christians had been banished, received Orders from his Superior, to go himself to *Matsunoy*, in order to cultivate the Seeds of Conversion, which the *Japonefe* Physician had sown, and accordingly thither he went the same Year by Sea. He arrived very lately in the Port of *Tzugo*, and from thence travelled through very bad Roads to *Matsunoy*, where he found a vast Number of *Japonefe* and amongst them many Christians. They had been settled there but a few Years, and had been drawn thither by the Discovery of very rich gold Mines in the Neighbourhood of this City, and Mines (if they may be called) of a very singular Kind. There is a great River, which by the City of *Matsunoy*, immensely rich in Gold; those who desire to deal in that Commodity, pass from the Prince such a Part of the River, and then a semicircular Canal, well secured by strong Banks, which, by Sluices, the River is turned, having the Mouth of its Channel as the Adventurers have agreed for, thence they take the Mud, and by frequently riddling obtain vast Quantities of Gold dust, and sometimes Pieces of Gold of a considerable Bigness. When they have finished their Work, and find there is no more Gold to be got, they fill up the Canal, and by that Means the River back into its old Channel, and in the Space of a Year or two, it is found as rich in Gold as ever.

Father *Angelis* informs us, that the Natives of this Country, which we call *Jesso*, call it in their own Language, *Ainemosari*, but were able to give but a very different Account of its Extent or Situation. The People were larger, stronger, and had much better Complexions than the *Japonefe*, and wore Beards that reached their Girdles. They were dressed in long Robes of Cotton, or Linnen, according to their Rank, which were set off with Abundance of little Ornaments. They were Bows, Arrows, Lances and short Swords. In their Religion, their Notions were very obscure and

fused, but the great Objects of their Worship were the Sun and Moon. They talk'd likewise of an invisible King of the Mountains, Forests, Seas and Rivers, but they did not worship him. Their Government was very regular and exact, and themselves the best-natured and best-behaved People the Missionary had ever seen. Their Commerce consisted chiefly in dried Fish, and in a sort of Seal-skins, which they exchanged for Rice, Cotton, Thread, and other Necessaries; for as for Gold and Silver, they made little account of them, but left the Trade in them to the *Japaneze*. On his first going over, Father *Angelis* was inclined to believe, that this Country was the southern Part of *Tartary*; but after he had made a longer Stay there, he in some measure altered his Sentiments, as appears by the following Letter he wrote upon this Subject, which is very curious and entertaining, and is, withal, the utmost that can be said on this Subject, from the Lights given us by the *Portugueze*.

"I am at present persuaded, that the Opinion entertained as to the Country of *Yesso's* being an Island, is not without Probability, and the Reasons upon which I go, are these: In the first Place, it is very certain, that this Country is bounded on the East, and on the South, by the Sea. On the other Hand, the Land of *Tsifoi*, which is the western Extremity of *Yesso*, is likewise bounded by the Sea, where the Currents are so violent, that tho' there is a Country on the other Side the Strait, within Sight, and where they are able to distinguish the Horses feeding, yet hitherto none of the Inhabitants of *Yesso* have passed over thither, because great Quantities of large Canes are driven with prodigious Violence by those Currents, so that if they were to hazard themselves in their small Boats, they must run an apparent Hazard of being over-set and lost. From hence I conclude, that according to all Appearance, *Yesso* hath a fourth Sea on the North, which consequently separates it from *Tartary*. From whence should those impetuous Currents come, but from a Sea to the North of *Yesso*, running East and West, or from West to East, and discharging itself to the South, through the Straits, on the West of *Yesso*, with such Rapidity, as renders them impassable to the People of the Country?"

"The second Reason is, that the Inhabitants of *Yesso* are not under the Dominion of any one Prince, nor have they amongst them any Chief that has a Tract of Country of any great Consequence, that is subject to him; they are likewise far from acknowledging the Supremacy of any Khan of the *Tartars*, or seem to be acquainted with that Title, or with any thing of the like Import; but every Family, or at least every little Village, has a Chief who governs it absolutely, and without acknowledging any Superior, which appears to me a strong Proof, that they are separated by a Sea from all other Countries, since if it were otherwise, they would undoubtedly be governed as those Countries are. I am sensible, that it may be objected against the first Proof I offer, that the Currents of which I am speaking, may possibly be occasioned by the Opening of some great River, which discharges itself into the Sea, somewhat farther to the North, and thereby occasions such an Accession of Water, as in passing thro' those Straights, form such terrible Currents. But after all, I cannot help esteeming it more reasonable to believe, that this Country is bounded on that Side, as well as on the rest, by an Arm of the Sea. At least this is the most common Opinion, and I remember to have seen in *Saüy* an old Map of the World, in which the Land of *Yesso* is laid down as an Island. As to what the Inhabitants of the Country say, I have examined those that came from the East, and others who came from the West, but found 'em all alike ignorant of Geography."

Thus far this Missionary, who is the only *Portugueze* that has wrote sensibly upon this Matter. He does not, however, seem to have been acquainted with one thing, which he might have learned in *Japan*, and that is, that those People distinguish between the Island of *Yesso* and *Oan Yesso*, that is, the higher or upper *Yesso*; from whence it is very plain, that there is both an Island and a

Continent of *Yesso*; but we shall have occasion to resume this Subject, when we come to speak of the Discoveries made by the *Dutch*, on this Side, who were both more capable of making such Discoveries, and more industrious in making them than the *Portugueze*. It may not be amiss to observe here, that the *Japaneze* informed the Missionaries, that there lay North-East from their Country, and to the East of that of *Yesso*, two Islands, of which the smallest, and that at the greatest Distance, they call *Yensima*; that is, the silver Island, and that which is nearest their Continent, *Kiusima*, or the golden Island; but as they have been always very cautious of explaining themselves as to the Situation of these Countries, some Doubts have arisen, whether there were really any such Islands or not.

However, in the Year 1620, a Ship was sent by Order of *Philip II.* of *Spain*, to discover them, but without Success; and the *Dutch* have likewise made an Expedition, with the same View, to as little Purpose. This may seem to justify the Supposition of their being fabulous; but then on the other hand, there are two Circumstances equally strong, that seem to prove the contrary: The first is, that there is such a Plenty of Gold and Silver in *Japan*, as cannot be accounted for from the Mines known to be wrought in that Country, the other, that tho' the Emperors of that Country have granted several Licenses to *Europeans*, and particularly to our Countryman Captain *William Saris*, for making Discoveries to the West and North, yet they have been always extremely cautious of permitting any Strangers to examine their Coasts on the East.

24. The new *Philippine* Islands are a late Discovery, of which we have an Account in the Philosophical Transactions, in a Letter from a Missionary at *Manila*, who tells us, that being accidentally at the Town of *Guivam*, in the Island of *Samal*, he there found twenty-nine Palao or Inhabitants of certain new discovered Islands, who were driven thither by the Easterly Winds, which blew in those Seas from *December* to *May*. They had run before the Wind for seventy Days together, according to their own Relation, without being able to make any Land till they came in Sight of the Town of *Guivam*, an Inhabitant of which being on the Shore, perceived them, and judging from the Make and Size of their Vessels, they were Strangers, and out of their Course, took a Piece of Cloth and made them a Signal of entering the Road he directed; to avoid the Shoals and Banks of Sand they would otherwise have run upon. These poor People were so frightened at the Sight of this Stranger, that they began to put to Sea again; yet the Wind forced them back a second time towards the Shore; when they came near, the *Guivanneze* made the same Signal as before; but seeing they would not mind it, but would unavoidably be lost, he threw himself into the Sea, and swam to one of the little Vessels on purpose to bring them safe into Shore. He was no sooner got to them, but the Women with their Children on their Backs, and all that were in that Vessel, threw themselves overboard, and swam to the other. He seeing himself alone in the Vessel, resolved to follow them, and getting aboard the second, shewed them how to avoid the Shoals, and brought them safe to Land; in the mean time they stood immovable, and resigned themselves up entirely to the Conduct of this Stranger, as so many Prisoners.

The Inhabitants of *Guivam* running to Shore, received them very kindly, and brought them Wine and other Provisions, they eat Cocons very freely, which are the Fruit of the Palm-trees of this Country. Their Pulp is something like that of Chestnuts, only that it is more oily, and it supplies them with a sort of sweet Water, very pleasant to drink; they gave them Rice boiled in Water, which is eat there and all over *Asia* as Bread is in *Europe*; they looked on it with Surprize, and taking up some Grains of it, threw them on the Ground, imagining them to be Worms; upon bringing them large Roots called *Palawan*, they eat greedily of them. In the mean time they brought them two Women that had formerly been driven on Shore on the Coast of *Guivam*, and who understood a little of the Language of this Country; one of the Women found among these Strangers one of her Relations, and, as soon as they knew each other, they fell a weeping. The Inha-

bitants of *Guïam* strove with each other who should entertain these Strangers at their Houses, and furnish them with Provisions and Cloaths, and other Necessaries. Of thirty-five Persons that embarked there remained but thirty, five dying through Want of Provisions and other Hardships, in so long a Voyage; and some time after their Arrival another died.

They related, that their Country consisted of thirty-two Islands, which cannot be far distant from the *Marianns*, as may be judged by the Smallness of their Vessels, and the Form of their Sails, which are very like those of the *Mariannese*. It is likely, that these Islands may be in eleven or twelve Degrees of North Latitude, more Southerly than the *Marianns*, and under the same Degree of Longitude as *Guïam*; for, sailing directly from East to West, they came ashore at this Town. It is likewise probable, that it was one of these Islands that was discovered some Years ago at a Distance, when a Ship belonging to the *Philippines* leaving the common Course, which is from East to West, under the third Degree of Longitude, and running farther to the South-East, first perceived it. Some called this Island *Carolina* in Honour of *Charles II.* of *Spain*, and others the Island of *Saint Barnaby*, because discovered on that Apostle's Day; and it was again seen 1695, by another Vessel, that a Storm had driven out of its Course in going from hence to *Marianns*. These Strangers added, that of the thirty-two Islands three of them were uninhabited, unless with Wild-fowl, but all the rest were well peopled. Upon asking them the Number of Inhabitants, they pointed to a Heap of Sand, to shew that their Number was very great. The Names of these Islands are *Pais Lanulututup*, *Saragan*, *Yaropie*, *Talaysay*, &c.

The three Islands that have nothing on them but Wild-fowl, are *Piculet*, *Hulutan*, *Pagan*. The most considerable of all these Islands is *Lamurec*, where the King of the Country keeps his Court, and to him the Governors of all the other Islands are subject. Amongst those Strangers, there was one of the Governors and his Wife who was the King's Daughter; though they went half naked, yet their Carriage, and a peculiar Air of Greatness, sufficiently distinguished them from the rest. The Husband had his Body painted all over with certain Lines, in such a manner, that they formed several Figures: The rest of the People were also painted in like manner more or less. The Women and Children were not painted at all; there were nineteen Men and ten Women of different Ages; the Make and Colour of their Faces were much like that of the *Philippinese*. The Men had no other sort of Cloaths than a Sash wrapped several times round their Bodies, and covering their Reins and Thighs; they wore on their Shoulders about an Ell and an half of coarse Linnen Cloth, like a Cowl, tied before, and hanging loose behind. Both Men and Women dressed much alike, only that the Women had a Piece of Cloth somewhat longer, that hung from their Waist down to their Knees. Their Language is different from that of the *Philippinese* and *Mariannese*; their Manner of pronouncing comes nearest that of the *Arabs*, and some who understood the Language observed the Women that seemed the most considerable amongst them, had several Rings and Necklaces of Tortoise shells, called here *Caray*; and others made of a Substance much like Ambergreese, but not transparent. The Manner of their living at Sea, which was for seventy Days together, continually driven by the Wind, was thus: They cut out a sort of Net made of a great many Twigs of Trees tied together, with a large Mouth for the Fish to enter in at, and terminating in a Point, to prevent their getting out. The Fish they took after this manner was all the Nourishment they had, and Rain-Water saved in Cocoa-shells, which is the Fruit of the Palm-trees, and of the Figure and Size of a Human Skull.

They have no Cows in their Islands, and at the Sight of them they run away, as they did likewise at the Barking of a Dog; neither have they Cats, Stags, Horses, nor, in general, any Quadruped, nor any Fowl, but Sea-towls, excepting Hens, which they breed up, but never eat their Eggs. Notwithstanding this their Want of every thing, they are very chearful, and contented with their Condition. Their Songs and Dances are exact and regular; when they sing it is all in Concert, every one observing the

same Humour and Gestures, which makes it very agreeable. They were surprized at the Government, Politeness and Manners of the *Europeans*. They admired not only the Solemnities and Ceremonies of the Church in celebrating the Divine Service, but also the Musick, Instruments, Dances, and Arms of the *Spaniards*, and Gunpowder was what surprized them most. They wondered at the Whiteness of the *Europeans*, in respect of whom they were perfectly tawney, as well as the Inhabitants of this Country. It did not then appear, that they had any Knowledge either of a Deity, or that they worshipp'd Idols. Their Life is perfectly savage, minding nothing but eating and drinking, in which they observe no set Time or Place, when hungry or dry, and when they can find any thing to satisfy Nature: Yet they eat but little at a Time, and never enough to satisfy for a whole Day. They shew much Respect and Deference for their Kings and the Governors of Towns, and obey them very punctually. Their Civility and Respect consists in taking hold of the Hand or Foot of the Person they would honour, and gently rubbing his Face.

Amongst their Utensils they had some Saws, not made of Iron, but of a large Shell, called here *Toulobo*, which they rub and whet upon a certain kind of Stone. They were surprized to see the Number of Carpenters they used in building a Merchant-Ship at *Guïam*. They had no Metals in their Country. The Father-Missionary made each of them a Present of a large Piece of Iron, which they received with as much Joy as if it had been made of Gold; and for fear it should be stole from them, they laid it under their Heads, when they went to sleep. They have no other Arms than Lances or Darts, made of human Bones, very well sharpened, and fixed on. They are naturally very peaceable; but if any Quarrel happens amongst them, it is decided with some fifty Cuffs on the Head, which yet very rarely happens; for when they would come to a close Fight, they separate them, and they are soon reconciled again. They are not dull or heavy, but, on the contrary, have a great deal of Liveliness and Courage. They are not so lusty as the Inhabitants of the *Marianns*; yet they are well proportioned, and shaped much like those of the *Philippines*: Both the Men and Women let their Hair grow long, and hang loose over their Shoulders. When they understood that they were to be conducted to the Presence of the Father-Missionary they painted their Bodies all over with a yellow Colour, which is looked upon by them as a great Ornament.

The oldest of these Strangers was once before called the Coast of *Caragan*. They are very expert at diving, they said, that in fishing they took two large Pearls in their Shells, but threw them into the Sea again, not knowing their Value. The New *Philippines* are eighty-seven in Number, and form one of the finest *Archipelagos* in the East, being enclosed on the North and South between the Line and the Tropic of *Cancer*; on the East and West between the *Marianns* and *Philippines*. The Natives of the Islands never offer any Violence to each other: Murder and Homicide are unknown to them; and they have a Proverb amongst them, *viz.* That one Man never abuses another. It is probable, that these Islands may abound with Gold, Amber, and Drugs, being situated nearly under the same Degree of Longitude as the *Moluccas*, whence they have Nutmegs, and other valuable Spices.

Though these People seem barbarous, yet they are amongst them a sort of Politeness and regular Government: every Island obeys his King, who is himself subject to the King of the Country. This Prince holds his Court in the Island of *Fala*, called likewise *Lamurec*. Though these Islands were never heard of in *Europe* till within these few Years, it is a long Time since, from the high Mountains of *Samal*, thick Smoaks were discovered on the Coast, which commonly happen in Summer, when the Islanders set Fire to their Woods and Forests, to clear the Ground: These Smoaks the Fishermen of *Moluccas*, and other Islands, had also observed when far at Sea.

There have been some Objections made to this account by some of our Writers, who have reported very succinctly, and thereby embarrassed themselves by

founding their own Sense of Things with that of their Authors. It has, for example, been questioned, whether there be not Inconsistencies in these Accounts of the *Indians*? It is suggested that, as no *European* ever was in that Country, so the Belief of such an *Archipelago* of Islands cannot be established on any rational Foundation; and that there is a visible Absurdity in the *Indians* being seventy Days in passing from a Country, the Smoak of which was seen from the Mountains of *Mindanao*. This Humour of Reasoning away Facts, is so strong at present, that though I have already taken up more Room than I intended, yet I cannot forbear adding another Relation, with respect to these Islands, of a much later Date, viz. in the Year 1710, because I think it will put this Matter out of Dispute, and because, hitherto, it has never appeared in our Language.

"The Vessel in which we embarked, in order to prosecute the Discovery of the Islands of *Palaos*, was called the *Holy Trinity*, and her Crew consisted of eighty-six Persons: She was commanded by Serjeant-Major, Don *Francis Padilla*, who carried with him the Reverend Fathers *Duberon* and *Carill*, Jesuits, accompanied by Brother *Stephen Baudin*, who were made Choice of to propagate the Faith among these Islanders. It was on the Fourteenth of *November*, in the Year 1710, that I sailed from the *Philippine* Islands, in order to find the Islands of *Palaos*, supposing my Departure to be from the Lat. of 13° 9', and from the Long. of 144° 22', I navigated fifteen Days, as I have marked in my Chart; and, on the Thirtieth of *November*, we discovered Land to the North-East 3° towards the North, having observed 4 or 5° Variation to the East in this Course, the Land lying from us about three Leagues.

"We made Sail again in order to approach nearer, when it appeared, that there were two Islands, which Father *Duberon* thought fit to call the Islands of *St. Andrew*, because, on the Day that we discovered them, the Church celebrated the Feast of that great Apostle. "When we were very near these Islands, we perceived a Boat coming to us, in which were some of the Inhabitants, who cried out, when they were within hearing, *Mapia, Mapia*, which is as much as to say, Good People. A *Palaos*, who had been baptized at *Manila*, and whom we carried with us, shewed himself then, and spoke to them: As soon as they came on Board, they informed us, that these Islands were called *Sonsorol*, and that they were Part of the *Archipelago* we sought for. "They expressed a great deal of Satisfaction and Joy at the Sight of us, which they testified by kissing our Hands, and embracing us.

"These People are extremely well shaped, and of a very robust Constitution; they were naked, except that about their Middle they wore a Piece of Mat. Their Hair was curled; they had very little Beard, and, to defend themselves from the Rain, they wore upon their Shoulders a kind of Mantle, made of a thick sort of Mat, and, on their Heads, Hats of the same sort of Stuff, round which they stuck Birds Feathers upright. "They were extremely surprized to see our People smoke Tobacco; and, of all things, seemed most to esteem Iron; and when ever they saw it, they gazed on it in such a manner as visibly betrayed how much they coveted it: And in case we did not understand their dumb Signs, they made no Difficulty of earnestly and frequently demanding it. In the Afternoon there came off two other Boats, in each of which there were eight Men; as soon as they came near us, they began to sing, beating Time with their Hands upon their Thighs. "When they were on Board, some of them began to measure the Length of the Ship, taking it for granted, that it was made of a single Tree, while others counted our Number of Men. They brought us some Loaves, some Fish, and some Herbs.

"These Islands were all covered with Trees to the Sea-Shore. Their Boats appeared to us very neatly made, in which they made use of Smack-Sails, having a Lee-Board on the other Side the Boat, in order to preserve it from going over. We desired them to shew us which was the Courte to the largest of their Islands, or *Paniquor*, and

"they pointed to the N. N. E. They added, that to the S. S. W. and to the S. S. E. there lay two other Islands, one of which was called *Merieres*, and the other *Poulo*. "When we were very near the Land, I sent my under Pilot to sound, that I might bring the Ships to an Anchor. The Shallop being arrived within a quarter of a League of the Island, there came off three Boats full of People, and some of them going on Board our Shallop, one of the *Indians* took notice there of a Sabre, which, after he had, for some time, considered attentively, he jumped into the Sea, and took it with him. My under Pilot reported, at his Return, that there was no fit Ground for Anchorage, inasmuch as there was a great Depth of Water, and a rocky Bottom all along the Shore. I afterwards sent another Man on the same Errand, who quickly returned with the same Answer.

"All this Time I had made a shift, by keeping under Sail, to stem the Current which ran very strongly to the South-East, but the Wind failing in the Evening, we began to drive at large; the *Indians* then got into their Boats to go ashore. Our Missionaries laboured all they could to keep them on Board, but could not prevail upon them by any Means. They talked with them, however, some Time, on the first Principles of our Religion, and taught them to pronounce plainly the holy Names *Jesus* and *Maria*. We asked them several Questions as to the Bigness of the Island, and the Number of its Inhabitants. They answered, that the Island was about two Leagues and a half in Circumference, and that very probably there might be eight hundred People, who lived chiefly on Cocoa, Fish and Salads. "I observed the Height of the Sun at Noon, and found, that we were in the Latitude of five Degrees sixteen Minutes North, the Variation of the Compass at Sunrise being about 5° to the N. E.

"The Currents carrying us away to the South-East with great Violence, we were not able to recover the Land till the fourth, about Six in the Morning. We then found ourselves at the Mouth of the Channel, betwixt the two Islands. I then sent the Shallop once more to look for an Anchorage; it was to no Purpose, for about 4 in the Afternoon they returned with an Account, that the Coast was an entire Rock, and that it was to no Purpose to let go an Anchor. On the 5th, about 7 in the Morning, the two Fathers came to a Resolution of going ashore, and setting up a Cross. Don *Padilla*, and myself, represented to them the Dangers to which they would be exposed, and how much they had to fear from these Islanders, with whose Temper we were so little acquainted, and how much they might be embarrassed, in case the Currents carried us to such a Distance as might put it out of our Power to send a Boat to bring them off, or to afford them any Assistance. Their Zeal was so warm, that they made little Account of these Difficulties, but persisted firmly in their Resolution, in spite of all we could say. At last, therefore, leaving Brother *Baudin* on Board the Ship, they went into the Shallop, taking with them the Quarter-Master of the Vessel, and the Ensign of the Land Forces we had on Board: They likewise carried with them the *Palaos* I have before mentioned, together with his Wife and Children.

"The two Missionaries being gone, we kept near the Island all Day, by the Favour of the Wind, notwithstanding the Force of the Current; but towards the Evening, the Wind sunk, and we were driven out to Sea. We put out Lights from the Time it was dark, on the Bolt-sprit, and also on the Mizzen-mast, that they might see where we were. During the Night, we had some Gulls of Wind from the North-East, the North-West, the West and South-East, so that in the Morning at break of Day, we found the largest of the two Islands bore from us, N. N. W. distant about 8 Leagues. We endeavoured from that Time to the 9th at Noon, to get as near the Land as we could, but without Effect; nay, the Current drove us still farther and farther, so that I found myself in the Latitude of 5° 28' N.

“ We then held a Council of War, in order to consider what Course we should take. Don Padilla, the Lay-Jesuit, my Sub-Pilot, and myself, were of Opinion, that the wisest thing we could do was to flee for the Island of Panloque, the largest of these Isles, and which was distant from that we had quitted about fifty Leagues. It was about nine o’Clock in the Morning of the 11th, that we discovered that Island; at Noon we were in the Latitude of 7° 14’ North, the Land being about a League off. At Four in the Afternoon came off four Boats, which kept at the Distance of about half a Cable’s Length, and were soon after followed by two other Boats; at last some of the People jumped over-board into the Sea, and swam on Board of us, with Intent, as it appeared, to steal any thing they could lay their Hands on. One of them laid hold of an Iron Chain, and pulled at it, in hopes of breaking it; another caught hold of a Hammock that was hung out to dry, and a third was endeavouring to get in at a Port-hole. Don Padilla considering the Behaviour of these People, thought proper to put the Soldiers under Arms, there being at least four-score Men in these six Boats, and at the same time made a Sign to the Islanders to keep at a Distance.

“ Upon this they began to row towards the Shore; but at their going off, let fly a Shower of Arrows, four of which fell on Board our Ship. Don Padilla then thought fit to order a general Discharge of our Fire-Arms; upon which the Indians jumped over-board, leaving their Vessels, and swimming towards the Shore at a prodigious Rate; but when they found that we gave over firing, they returned to their Boats, re-embarked, and made for the Land as fast as they were able. These Indians were all of them naked, and some had painted their Bodies of different Colours. Their Skin is generally of an Olive Colour; but some were darker skinned than others; they had nothing with them that we saw, but a few Coconas. On the 12th we had little or no Wind, so that it was as much as we could do to continue in our Station, which we did all that Day without approaching near the Land. About four in the Afternoon there came off two Boats, who made Signs, and spoke to us; but, as we had no Interpreter, we were not able to learn what they said. About Nine at Night the Wind blew South-South-East, and the Currents setting strongly to the North, carried us away at a great Rate. I then thought the most prudent thing I could do was to sail between two of these Islands, the Chanel being very open and fair, and about a League over. On the 13th, being to the West of these two Islands, we held a Council, in order to consider what Measures we were to take, and it was very soon resolved to bear away for Sonjorol, in order to learn some News of our Missionaries, and of our Shallop. On the 15th, I found myself abreast of that Island. We lay there the whole Day without so much as seeing a Boat, though we were within Cannon-shot of the Shore. We coasted round the West Side of the Island till the 20th, when a high Gust of Wind from the South-East drove us out to Sea.

“ On the 21st we again drew near the Coast, and by Two in the Afternoon were within three Quarters of a League of the Shore, without perceiving any Boat. In the Evening we were driven to Sea again by an East-North-East Wind, upon which we held another Council, in which, after mature Deliberation on the Circumstances we were in, without a Shallop, in some want of Water, without knowing where to get any, it was resolved to return to Manila, which we did with some Difficulty, being forced to make the Tour of Mindanso, carrying nothing back but the melancholy News of the Loss of the two worthy Fathers we carried out.”

It appears clearly from this Relation, that it was penned by the Captain of the Vessel, though he has not thought fit to inform us of his Name. Better Evidence than this of there being such an Archipelago cannot be desired, tho’ at the same time it must be confessed, that this Account gives us a very different Notion of those People from that suggested by the former Narratives. In 1711 another Attempt was made of this kind, which ended as unluckily, some of the Jesuits intended for the Mission, dying at Sea, and

others perishing in these Islands, as very probably those did that are mentioned in the foregoing Voyages.

25. It has been generally believed, that these Islands of Paloes are near the Philippines, and the same with those which were discovered by a Spanish Captain in the Year 1630, and who in Honour of Charles the Second of Spain, called them the Caroline Islands; but I think these lay more to the South. On the 19th, and on the 21st of June 1720, there arrived in the Island of Guam the largest of the Archipelago called the Marianna Islands, two Boats full of Indians, who said they embarked from an Island called Sarsilep, in order to go to another at a small Distance from it called Uly, and were driven thither by a Storm. A Vessel was fitted out to carry them home, and from the Accounts given by those who were on Board that Vessel it very clearly appeared, that the last named Island was one of those called the Caroline Islands, lying in the Latitude 6° North. It is said, that these Islands belong to a large Archipelago divided like the Maldives into five Provinces, and inhabited by various Nations of very different Colours. Some Negroes, supposed to be of the same Race with the Inhabitants of New Guinea, others tawny, like the Indians in the Philippines, and a third sort perfectly white, supposed to be the Descendants of certain Spaniards, who in the Year 1566 were set on Shore by their Commanders for Mutiny, in a Voyage from New Spain to the Philippines.

While these People were on Shore at Guam, they found some Silver Plate, and after considering it attentively, declared that they had a great deal of that Metal in the Islands, which gave Occasion for the fitting out some Ships from Guam, for the Discovery of those Islands, in the Year 1722; but what the Fate of that Expedition was, nor come to our Knowledge. It is certain, that a very great Discovery might be made on this Side, because, from what is already known, it is very clear, that there is a continued Chain of Islands in the Longitude of about 150° from the Line, or rather from the Continent of New Guinea, which lies in the Latitude of 8° S. to the Islands, that make a Part of the Archipelago of Japan, in the Latitude of 32° N. and as it is certain, that the Inhabitants of the last mentioned Archipelago acknowledge they received great Quantities of Silver from an Island which lies to the East of them, it is not at all improbable, that many rich Metals might be found in some of the many Islands which form the Chain before mentioned.

But this, however, is not the Discovery that I mean, and therefore I shall explain myself a little farther. If Settlement was made on any of these Islands, or in an Island to the East of them, it might afford an Opportunity of visiting the great Continent, if in Truth there be any Continent between America and Asia, or, perhaps, might lead to the Discovery of some considerable Islands between America and Asia, which, from their Situation might well be expected to abound in rich Commodities, but particularly in silver Mines, since it is confessed, that the richest of those hitherto discovered are in the Northern Parts of Japan and of America. It should be objected, that the rich silver Mines of Potosi lie in South America, and answer to that, this makes rather for, than against my Opinion, because they are very near the same Degree of South Latitude that the rich Mines of New Mexico are to the N. that is, a little within forty Degrees. But this is not all, for if any such Islands could be discovered, they would afford us an Opportunity of searching with great Ease for a Passage either to the N. E. or N. W. which a Point of very great Importance, and as such, has been treated very judiciously by Mr. Debbis, in some of his Discourses, which, sooner or later, may very probably produce some such Discovery.

We have now gone through all that we proposed with respect to this Part of our Subject, and the Rights given us by the Expeditions of the Portuguese and Spaniards on this Side. It next remains to shew how that prodigious Power which those Nations had acquired in the East crumbled, and broke to Pieces, notwithstanding the many Advantages they had for preserving it, and what still remains in their Indies under the Dominions of the Crown of Portugal: Which, when we have performed, the Re-

der will have a much more compleat History of the *Portugueze Indies*, and that too in a much narrower Compass than is any where else to be met with. In treating of this Subject, I have, to the utmost of my Power, labour'd to draw together such Circumstances as were most likely to contribute to the Reader's Information, and to connect, with the greatest Propriety, the ancient and modern Commerce in this Part of the World; and, at the same time, I have been very careful to omit nothing that might entertain or divert him. As to the particular Memoirs of the *Portugueze* Governors, their Disputes with the *Indian* Princes, and with each other, they would have swell'd this Section to an enormous Length to a very little Purpose; and besides, the Reader will meet with enough on this head in other Places. I shall pursue the same Method in the subsequent Articles, and shall endeavour to point out briefly and truly the Causes of that strange Revolution which has happened in the *Portugueze* Trade; the rather, because I am convinced the same Causes will produce like Effects, in regard to the Trade of all other Nations.

26. The Care taken by the *Portugueze* to establish themselves firmly in all the principal Ports of the *Indies*, was of great Consequence to them, considering the Circumstances under which they began their Commerce in these Parts; for, at that Time, the *Indian* Princes were engag'd in cruel Wars against each other; and the *Mohammedans* taking Advantage of this War, endeavouring to make themselves Masters of every Country in which they were permitted to trade; so that it must be admitted, the *Portugueze* had, at first, some Reason for making Use of Arms, and insisting on a Fortress where-ever they established a Factory, because the one was necessary for the Security of the other; but in this they were blameable, that they affect'd to govern with an absolute and uncontrollable Power every Country into which they came, instead of cherishing and supporting the *Indians*, as they might have done, to their own great Profit, as well as that of those unhappy People, who, from their own Difficulties and ill Management, became the Prey of every new Invader.

If the *Portugueze* had taken this Step, they had, undoubtedly, secur'd this rich Commerce to themselves; whereas, by their Tyranny they made the Inhabitants weary of them to the last degree, and ready, whenever an Opportunity offer'd, to change their Masters. It must, however, be allow'd, that the Method they pursu'd serv'd to gratify their Vanity exceedingly, inasmuch as for above a Century they govern'd the *Indies* at their Will, and were the sole Lords of that rich and extensive Trade, none of the *Indian* Nations being allow'd to carry on any Trade at all but by their Permission, and under the Sanction of their Passports. They carried this Matter still farther; for, with respect to the richest Commodities, they reserv'd the Privilege of dealing in them to their own Subjects entirely, such as in the Cinnamon of *Ceylon*, the Wild-Cinnamon of *Cashin*, Ginger, Iron, Steel, Lead, Tin, Copper, Planks, Timber for building, all sorts of Arms, Honey, and Pepper. These Regulations, both with respect to Passports and reserv'd Commodities, together with a Power of visiting such Ships as put into any of the Ports under their immediate Dominion, continued in Force for a long Series of Time, and was not totally abolished till the Year 1678, which was One hundred and fourscore Years after their first Establishment in those Parts.

During the best Part of this Time, they dispos'd, as the supreme Lords of *India*, of all the rich Commodities it afford'd, sending home annually fifteen or twenty large Ships, laden with the most precious Merchandize of the East, exclusive of the Profits they made of their Commerce in the *Indies* themselves, and the adjacent Coasts of *Africa*, viz. to *China*, *Japan*, *Perfia*, *Arabia*, *Melinda*, *Molambique*, and *Sofala*. *Lisbon* became, by this Means,

the greatest Port for Trade in *Europe*, to which the Ships of all Nations resort'd for the Commodities and Manufactures of these distant Countries, the best Part of which were paid for in Gold and Silver, and, for the rest, the most valuable Products of these Nations were exchanged; so that the whole of this Commerce was in the Hands of the *Portugueze*, who set whatever Price they thought fit upon what they imported, and sold at excessive Rates to other *Europeans*, what they had purchas'd in the *Indies* for coarse Stuffs, Needles, Knives, Glass-Ware and other Things of very little Value. In consequence of which, they became, by far, the richest trading Nation, and, at the same time, the most potent maritime Power in this Part of the World; and so, for a long Time, they might have continu'd, if, from their own Mistakes and the bad Use they made of their Power and Riches, they had not excit'd other Nations to a Resolution of taking, at all Events, this rich Commerce out of their Hands; a Point that it will become every Nation to consider, that finds itself in the like Circumstances; for Trade is not to be confin'd or monopoliz'd: And tho' the contrary of this may, for some Time, appear true, yet, sooner or later, every Nation that acts as the *Portugueze* did, will be sensible of the same Effects which happen'd to them in the *Indies*.

27. It was towards the latter End of the sixteenth Century, that the *English* and *Dutch* began, as we have before shew'd, to interfere with the *Portugueze* in these Parts, but they very soon, by the Assistance of the Natives, took from them the most considerable Places they possess'd, and some of them they abandon'd themselves. It would take up a great deal of Room, and perhaps answer the Purpose but indifferently, if we should attempt to give a large History of the Man, in which these Places were reduced, and therefore we shall rather take them in the Course of their Situation, by which the Reader will clearly perceive how the Empire of this Nation in the East was broken and dissolv'd.

We have already shew'd how the *Portugueze* became Masters of *Ormuz* on the Coast of *Perfia*, which Settlement they greatly improv'd, though the Island itself is one of the most uncomfortable Places in the World, the Country being without Water, and situated in a Climate where the Heats are in a manner intolerable: Yet in spite of all these Difficulties the *Portugueze* built there a very fine Town, in which the Streets were strait and regular, their Houses very high, finely adorned within, and within richly furnish'd, their Exchange rich and beautiful, their Churches splendid, and their Castle regular, well fortified, and excellently provided with Artillery. *Shah Abbas*, when Monarch of *Perfia*, had an earnest Desire to rid himself of those ill Neighbours; but he wanted a maritime Force sufficient to accomplish his Design, and therefore he apply'd himself to the *English*, who had likewise suffer'd much by the Pride and Avarice of the *Portugueze*, and by their Assistance part of his Forces were transported into the Island of *Ormuz*, which was attack'd both by Land and Sea on the 20th of January 1622. The Defendants behav'd with great Bravery, and good Conduct, and made a noble Resistance; but the *English* having destroy'd their Fleet, which consisted of five Gallies, and twenty-five Frigates, and having also sprung a Mine, which open'd a fair Passage into the Castle, the Garrison thought fit, about the Middle of April, to surrender, which set all the neighbouring Coasts at Liberty, and destroy'd the Power of the *Portugueze* on that Side.

The rich City of *Surat*, formerly a Place of the greatest Trade in the *Indies*, suffer'd severely from the *Portugueze*, who burnt it down to the Ground on purpose to favour the Commerce of their own City of *Diu*, which stands at the Entry of the Gulph of *Cambaya*, and which they had render'd one of the strongest and finest Places in the East, keeping the Monarch of that Country in the most absolute

* If we had pursu'd a strict chronological Method in relating the Loss of the Settlements made by this Nation in the *East-Indies*, we must have proceed'd from one Part of this Country to another, which would have occasion'd great Confusion, without yielding any considerable Advantage; whereas the Method we have now taken by proceeding from West to East, will show the Reader, as he goes along, how these Settlements were made in the very same Order in which we have before shew'd they were acquir'd.

Subjection. But notwithstanding their Policy in this respect, and that they still remained Masters of *Diu*, yet the *Indian Princes* in the Neighbourhood trade freely with all *Europeans*, and *Surats*, which they took to much Pains to destroy in 1520, is now in as flourishing a Condition as ever, and the *Portuguese* are almost the only Nation that are not benefited by its Traffick. On this Coast they were possessed of several strong Places down to *Goa*; of these *Daman* is still in their Hands, and is a Place of pretty good Trade. *Begaim* is lately fallen into the Hands of the *Indians*. *Bombay* they yielded to the *English* on the Marriage of *Queen Catherine* with *King Charles II.* and has continued in our Hands ever since. From *Goa* to *Cape Comorin* they had also very considerable Settlements, of most of which they have been dispossessed by the *Dutch*, who in the Year 1603, becoming Master of *Cannor*, *Cochin* and *Caldan*, soon after deprived them of *Cannor*, which was the first Place they had settled at; and thus we see the State of our Power greatly reduced on the Coast of *Malabar*. Doubling this famous Cape, and proceeding along the Coast of *Ceylon*, we meet first with the Port and Fort of *Negapatam*, which, when the *Portuguese* came first into the *Indies*, was no more than a Village; but they considering the Importance of the Place, fortified it with great Care, and rendered it in every respect very considerable. But after the *Dutch* had deprived them of the Island of *Ceylon*, they did not long let them rest here, but by the Assistance of an *Indian Prince*, besieged and became Masters of that Place in 1638.

From thence all along the Coast, quite up to *Bengal*, the *Portuguese* have lost all Power; and as for Settlements they had none of any great Consequence to lose, having in the Time of their greatest Power contented themselves with a small Fishing-station at *Maichour*, or *St. Thomas*, restraining all the rest of the Coast by their Squadrons, which were continually cruising in the *Bay of Bengal*. On the opposite Side of the Gulph the *Portuguese* had once very great Power in the Kingdom of *Pegu*, in consequence of their assisting the Monarch of that Country against the King of *Siam*, who had invaded his Territories, and would very probably have made him his Tributary, if a Body of *Portuguese* had not come to his Assistance, by whom he was enabled not only to defend himself effectually against his Enemy, but even to pursue him into his own Country.

It is very easy to discern what mighty Advantages might have accrued to the *Portuguese* from this favourable Turn, if they had known how to improve it; but we learn from a late Author, that what might have turned to much to their Benefit, proved, by their own ill Management, the Cause of their Ruin, and that in a very short Space of Time. The King of *Pegu*, it seems, was so sensible of the Service they had done him, in driving the King of *Siam* out of his Country, that in pure Gratitude, he made one *Señor Thomas Pereira*, who commanded the *Portuguese* in the War, Generallissimo of all his Forces, which Preterment made the *Portuguese* so insolent, that in a few Years they became intolerable to all Ranks and Degrees of Persons in *Pegu*. Both Kings grew tired of War, but both were too proud to make Advances towards Peace, so that for many Years they had Skirmishes with small Parties, tho' not let Battles; and where-ever the *Portuguese* Arms went, they had Victory to accompany them. The King of *Pegu*, to have his Forces nearer the Borders of *Siam*, settled his Court at *Martaban*, and kept the *Portuguese* near him, to be ready upon all Occasions, either to repel or assault the *Siam* Forces, as Opportunity served; and *Thomas Pereira* was the great Favourite at Court: He had his Elephants of State, and a Guard of his own Countrymen to attend him.

One Day, as he was coming from Court in State, a large Elephant, towards his own Palace, he happened hear Musick in a Burgher's House, whose Daughter he a very beautiful Virgin, had been married that Morning to a young Man of that Neighbourhood. The General went to the House, withed them Joy, and desired see the Bride. The Parents took the General's Visit for great Honour done them, and brought their Daughter his Elephant's Side. He being smitten with her Beauty, ordered his Guard to seize her, and carry her to his House. His Orders were but too readily obeyed, and the poor Bridegroom, not able to bear his Loss, cut his own Throat; and the disconsolate Parents rent their Clothes, and went crying through the Streets towards the King's Palace, imploring their Countrymen to avenge them the insolent *Portuguese*, the common Oppressors of the Country. Crowds of People came from all Parts of the City to hear and see the Tragedy; their Numbers grew so great, that the Streets were hardly large enough to hold them, and their Noise so loud, that it reached the King's Ears, who sent to know the Cause of their Uproar. The Messenger returning, acquainted the King with what had been transacted, and he, to appease the Tumult, sent the Word, that he would punish the Criminal, and accordingly sent for his General: But he made an Excuse, that he was so much out of Order, that he could not wait on his Majesty till he was better; which Answer so provoked the King, that he ordered the whole Nation to take up Arms, and to make a general Massacre of the *Portuguese*, where-soever they should be found, in City or Country. The King's Orders were put in Execution so speedily, that in few Hours all the *Portuguese* were slaughtered, and a guilty Criminal was taken alive, and made fast by his Heels to an Elephant's Feet, which dragged him through the Streets till there was no Skin nor Flesh left to cover his Bones; which Spectacle appeased the enraged People. There were only three *Portuguese* saved, who were accidentally in the Suburbs, next the River, who hid themselves, till Night favoured their Escape in a small Boat, in which they coasted along the Shore, leading what the Woods and Rocks afforded them, and at length arrived at *Malacca*, to give an Account of this melancholy Transaction.

The Kingdom, or as some called it, the Empire of *Siam*, lies next to *Pegu*, and is a Country of vast Extent, the Monarch of which was too powerful for the *Portuguese* to think of making any great Conquest in his Dominion, and therefore they chose to live with him upon good Terms, for the sake of the vast Trade carried on in his Dominions, which are extremely well situated for Commerce, having on one Side the Kingdoms of *Lao*, *Caiboga*, and *Cochinchina*, and on the other, the Country bordering on the Gulph of *Bengal*. Besides, there annually resorted thither a Fleet of Merchant Ships from *China*, laden with all the rich Goods of that Empire. They continued to hold a fair Correspondence with this Monarch and his Subjects, as long as their Power subsisted in the *Indies*; but by Degrees, the *Dutch* have in a great Measure excluded them from their Influence here, since when they erected their Factory here, and have brought themselves so effectually into the Confidence of this Prince, that he has granted them an exclusive Privilege of purchasing all the Tin in his Dominions, which is a Branch of Commerce of prodigious Importance; the *Portuguese* are not wholly excluded, though their Trade is much fallen from what it was. There are several small Principalities on the Isthmus, before one comes to the Country of *Malacca*, which were all of them formerly under the Power of the *Portuguese*, as appear

¹ This City of *Diu* stands in the Latitude of 21° 20', and is by many supposed to be the *Barisapa* of the *Ancients*. It stands upon an Island a League in Length, and not a third Part of a League in Breadth. The Country about it abounds with all the Necessaries of Life, and the City is as well built, and as well fortified, as any in the *Indies*. It is very famous for the Siege it sustained in 1535, of which we have before given an Account. At present it is in a worse Condition than formerly, both with regard to Wealth and Strength, but to balance this in some measure, it is less exposed to being attacked.

² It is very remarkable, that the *Portuguese* are best respected in those Countries where they had no Fortresses, which shews, that where the *Portuguese* are established their Power, the *Europeans* were under no Necessity of building Forts, but might have carried on their Commerce well without them. There are a great Number of *Portuguese*, or rather Descendants of *Portuguese*, settled in this Country, where they by their Industry and Industry have gained great Estates, both by the Native, and by other *Europeans*, which can be attributed to nothing but their being the first who came to have had a Spirit, and to become as degenerate as the *Strangers* themselves, who are as effeminate a People in the *Indies*.

their retaining still a Mixture of that Language with their own. The chief of these Principalities are those of Liger on one Side, and Quadab on the other; but the People are so barbarous, and perfidious, that the Europeans carry on scarce any Trade with their Coasts.

The great Peninsula of Malacca, at the Time the Portuguese came thither, was subject to the King of Johore, and by what Means the Viceroys of the Crown of Portugal were led to attack, and make themselves Masters of that City, we have already shewn. After it came into their Hands, it changed its Condition entirely, and from being a Place of small Account, in a short Time became famous all over India and Europe, lying almost in the Centre of Trade, brought thither by shipping from the rich Kingdoms of Japan, China, Formosa, Luconia, Tonquin, Cochin-China, Ceylon, and Siam, besides what Johore produced, and Sumatra, Java, Borneo, Mischin, Banda, Amboina, and Ternate, Islands, that abound in valuable Commodities. After Goa and Ormuz, this was by very far the richest City in the Indies, and a great Market for all the different Commodities that the Countries produced. It was the Seat of a Bishop, and the Cathedral Church of St. Paul was extremely fine. They had besides, five other Parish-Churches, and a noble College for the Jesuits, together with a Seminary, in which all new Converts to the Faith were instructed. The Whole was encompassed with a strong stone Wall, regularly fortified with Battions, the Place extremely well peopled, and the Garrison numerous, and well supplied, because the Portuguese considered it as the Eastern Frontier of their Dominions.

In 1602, the Dutch, who were then become very potent in the Indies, attacked and destroyed the Fleet of the Portuguese here, consisting of thirty-four Sail, on Board of which were three thousand Men: but they were not able to take the Place. The next Year, the King of Johore invested it with an Army of sixty-thousand Men, in revenge of what the Portuguese had done against him three Years before, when they took and destroyed his Capital; but, however, he was obliged to raise the Siege with great Loss. But the Dutch, well knowing the Importance of the Place, and the vast Advantages accruing to the Portuguese from its Situation and Commerce, the former affording them an Opportunity of levying 10 per Cent. upon all Vessels passing thro' the Streights, and the latter producing annually a large Revenue, they attacked it in the Year 1640, so vigorously, that they became Masters of it after a Siege of six Months. The Walls and Fortifications they preserved, as also the Church of St. Paul; but most of the other Churches they have destroyed, and the great Hospital they have turned into a Warehouse. The Language spoken here is esteemed the most copious and polite in the Indies, and therefore serves as a kind of general Tongue through all the Islands and Provinces farther towards the East. In the Kingdom of Cambodia, or Cambaya, the Portuguese have still a considerable Trade, and they are likewise well received in Tonquin. As to their Settlements in the several Islands of the East-Indies, in China, and in the Empire of Japan, we have spoke of them sufficiently already, under the Head of Discoveries, and there is therefore no need of our insinuating farther upon them here, as our View, at present, is no more than to shew, how their principal Settlements were lost, and to whom, which having done, it may not be amiss to say somewhat of the Wars carried on against them in these Parts, by the Dutch, and the Pretences they made use of for carrying them on.

28. The Troubles in the Low Countries, which produced a War between the Crown of Spain and the Republick of the United Provinces, began about 1570, and Eng-

land interposing in Favour of the States, their Power increased to such a Degree, that they were not only able to defend themselves against Spain by Land, but to give that potent Monarchy inexpressible Trouble by Sea. But this War seems to have no Relation to Portugal, and we do not hear of their attacking any but the Portuguese Settlements in the East-Indies. In order to resolve this Difficulty, we must remember that the Crown of Portugal was united to that of Spain in 1579, by which means Philip II. became Master of both the Indies, and consequently the States of the united Provinces were as much at War with the Portuguese, who were Subjects to the King of Spain, as with any of the rest of his Subjects; and consequently this gave them a Right to attack the Portuguese Settlements both in the East and West-Indies, which they prosecuted with such Vigour, that they bid fair for becoming Masters of all that the Portuguese had possessed in either Indies.

We have seen what mighty Acquisitions they made in the East; but it is necessary to our Subject to observe likewise, that their West-India Company became in that Space of Time so powerful, as to make almost an entire Conquest of Brazil. It is very evident from hence, that nothing but the Union of the Crowns of Spain and Portugal could have afforded the Dutch either a Pretence for attacking, or an Opportunity of reducing these Countries, both of which in a singular Degree they from this Accident obtained. For as on the one hand, his Catholick Majesty had enough to do in defending his hereditary Dominions before this Accession of the Territories of Portugal, so he was tempted to apply the Revenues of that Crown to the immediate Wants of the Spanish Government, which we may conclude were very great, since on his Death-bed he owned, that the Wars of the Low Countries had cost him five hundred and sixty-four Millions of Ducats, which is upwards of one hundred and twelve Millions of our Money; whence it is easy to perceive, that he could not spare as much as was requisite for the Defence of the Portuguese Territories. On the other hand, the Portuguese themselves, though they had been always distinguished for their Loyalty to their natural Princes, were far enough from shewing so much Zeal in the Service of the King of Spain; and it is very natural, when the Minds of private Men are entirely despoiled of publick Spirit, for the Affairs of the State to fall into Confusion.

But one would have imagined, that after the Separation of Portugal from Spain, which happened in the Year 1640, Things would have taken another Turn; because, with King John IV. the Dutch had no Pretence of making War. To give the Reader a clear Idea of this Matter, we must remember, that the Dutch had taken Brazil from the King of Spain, or rather from the Portuguese, while they were his Subjects; but afterwards that Nation considering this as an Injury not to be born, attempted to drive the Dutch out, notwithstanding the Treaty concluded between the States and the King of Portugal in 1621, which, to say the Truth, had been but indifferently observed on both Sides; that is to say, the Dutch had encroached upon the Portuguese in the East-Indies, and they, on the other hand, gave the Dutch little or no Respite in Brazil, out of which, in ten Years Time, they drove them entirely.

About this Time died King John IV. and left his Son Alphonso VI. a Minor, which Advantage the Dutch took to declare War against the Crown of Portugal, from a Persuasion that this Opportunity of regaining what they had lost in the West, and prosecuting their Conquests in the East-Indies, was not to be lost, the rather, because Portugal was at that Time engaged in a dangerous War with Spain, and the Dutch had lately concluded a Peace with that Crown. It was in consequence of this new War, that

At the Time the Portuguese delivered themselves from the Spanish Yoke, the Dutch were employed, as we have already seen, in reducing the Island of Ceylon, and made use of Abundance of Artifices, in order to prosecute the Advantage they had gained, notwithstanding the Peace concluded between the States General and the Crown of Portugal in Europe; neither did they desist from their Hostilities, even after the Peace was proclaimed in the Indies, but continued to give the Portuguese almost as much Trouble as while the War continued. This they did, under Pretence of being Allies, or Auxiliaries to such Indian Princes as were at War with the Portuguese; and where this Pretence was wanting, they took Care by their Familiarities, to stir up new Wars, and under Pretence of restoring the Indians to their Freedom, carried Things so far as to engage them in long and bloody Wars, which had no other End, than to oblige them to change their Masters, with this Difference only, that whereas the Portuguese endeavoured to keep large Countries, and to oblige the Indian Princes to pay Homage to the King of Portugal, the Dutch contented themselves with the Sea-Coasts, and forbidding these Princes to trade with any other Nation; so that their Slavery was equally great, tho' not always equally apparent, which ever Side prevailed.

the *Dutch* attacked the *Portuguese* again in the *East-Indies*, and even endeavoured to deprive them of *Goa*; but in this they did not succeed: And, on the other hand, the *Portuguese* found Means to traverse all the Attempts that the *Dutch* made to establish a Trade in *China*, as also to raise such a Storm as deprived them of the Island of *Formosa*, which they had conquered, and which was of prodigious Consequence to them.

But, in the mean time, the great Fleets they sent to the *East-Indies*, enabled them not only to extend their Conquests, but in the Year 1661, to defeat the whole naval Power of the *Portuguese* in two general Engagements. But while the Publick suffered excellently from the Consequences of this fatal War, some private Merchants in *Tybon* and in the *East-Indies* fitted out so many Privateers, and of such Strength, that the *Dutch* suffered excellently in their Trade, and therefore both Nations began to be weary of the War, and inclined to a Negotiation. The Crown of *Great-Britain* interposed its Mediation, in consequence of the Marriage between King *Charles II.* and the Infanta of *Portugal*, by which Peace was brought about in the Year 1661, and thereby the *Portuguese* were left in Possession of *Brasil*, and the *Dutch* accepted a Sum of Money as a Satisfaction for their Pretensions.

In the *East-Indies* Things were to remain as they then stood, and both Parties were to keep what, at the Conclusion of this Peace, should be in their respective Possessions; but the *Dutch* kept this no better than they did the former Treaty; but, on the contrary, in 1663, attacked all the Places which the *Portuguese* held on the Coast of *Malabar*, particularly *Cochin*, which they had no sooner taken, than they destroyed all the Wild or Ballard-Cinnamon, which, after the Loss of *Ceylon*, had proved an advantageous Branch of Commerce to the *Portuguese*. There were high Compliments made of this in *Europe* to the States-General, who were either deceived by the plausible Accounts given them by their *East-India* Companies, or pretended to be deceived, that they might, with a better Grace, protract the Negotiation relating to this Affair, and their Subjects in the *East-Indies* had so fortified the Places they had taken, as to put it entirely out of the Power of the *Portuguese* to attempt the Recovery of them.

These Proceedings gave the finishing Blow to the Ruin of the *Portuguese*, who have never since been able to undertake any thing of Consequence; but, on the contrary, have exhausted much of their remaining Strength in defending themselves against their *Indian* Neighbours, who, encouraged by the Progress of the *Dutch*, and excited thereto by some of their Agents, have been since endeavouring to tear from them the small Remains of their Possessions in *India*, and have often kept *Goa* itself blocked up for many Months together; in which, perhaps, they have so much mistaken their own Interest as prejudiced that of this Nation, the Power of which has already so much broken, as not to afford any just Ground of Jealousy either to *Indians* or *Europeans*.

29. We have already, in the Course of this History, pointed out many of the Causes of the Declension of that mighty Power which, in so short a Space of Time, the Crown of *Portugal* acquired in the East; but as this is perhaps the most useful Part of the present Section, it may not be amiss to add a few farther Observations on this Subject, the rather, because the *Portuguese* Authors, who have treated so largely of the Conquests made by their Nation, have been, in a great measure, silent on the Means by which they were lost. One great Cause of their Ruin was, the Circumstances of their Government at home, where, for many Years together, they were engaged in a long, expensive, and dangerous War against the Crown of *Spain*,

in Defence of their Independency, which at once emptied their whole Force, and exhausted their whole Revenue. It is true indeed, that this was rather the Misfortune than the Fault of the *Portuguese*, since it was what they could not avoid; but it was, nevertheless, the great Cause of their Losses in the *Indies*.

We may add to this their sending over Men of a great Quality, as Viceroy to *Goa*, with a View rather better their Fortunes than the publick Service, which the Reason that, of late Years, we hear nothing more of the *Gamas*, the *Albuquerque*, the *Pereyra*, or the *Gonsalves*, but are forced to search for the Names of their Viceroys in the private Registers of the Palace, instead of the publick Records of History: Besides, as these Men have been, generally speaking, too poor to mind any thing, much as including their own Estates; so they have been too well allied to be called to any Account on their Return for their Maladministration in the *Indies*. When the Affairs began first to decline in this Part of the World, was a common Thing for a Governor of *Mosambique*, which was esteemed the first Post after the Viceroyship, and with all the other Governments in the Power of a Viceroy, to bestow on whom he pleased. I say, it has been common for such Viceroys to make, in the Space of three Years, Five hundred thousand Crowns; for whence we may form some Notion of the Profits of a Viceroy. Now as it is impossible such exorbitant Sums should be made any other Way than by oppressing the *Indians*, and taking large Sums from the Merchants, may easily perceive, that all these private Fortunes were made at the Expence of the publick Interest.

The bad Examples of the Governors had a very bad Effect on all the subordinate Officers, so that Pride, Avarice, Luxury, and a pompous Display of Wealth, acquired by illicit Means, took place of that generous Virtue that laudable Ambition, that disinterested publick Spirit, which enabled their Ancestors to lay the Foundation of a large an Empire, with a very inconsiderable Part of the Power, which was in the Possession of those who lost it. The Clergy too, followed the Example of the Laity, instead of promoting, as at the Reformation, the Conversion of the Natives to the Christian Faith, from the religious View of saving their Souls, they now profess that Work from the meaner Motive of making themselves servient to their own Purposes, and enabling them to acquire vast Riches. This Corruption proceeded to farther Degrees, that not only many of the Jesuits at *Goa* engaged in Trade, contrary to the Rules of their Order, and to their Duty as Missionaries, but even defended so low, as to disguise themselves in the Habits of Friars, or *Mohammedan* Monks, that they might have an Opportunity of viewing the Diamond Mines, and purchasing Stones there of extraordinary Value.

But what most of all contributed to corrupt the Inhabitants of the *Portuguese* Settlements, was the little Care taken to prevent their leaving all Things to the Care of the Negroes and other Slaves, and their inter-marrying with the People of the Country, Practices which have been, and will be fatal to all *European* Establishments, because they not only lessen and effeminate the Minds of such as take this Way of Living, but also changes their Views, so that they lose all regard for their Country, and incline to take such Measures as are most likely to preserve them in the Enjoyment of such servile Pleasures. The *Portuguese* at *Goa* have been for more than a Century past much addicted to this gross and sensual kind of Life, provided they might enjoy their fine Houses in the City, and their Country Palaces in its Neighbourhood, and gave themselves no Pain about what happened else where.

The *Dutch*, though their *East-India* Company gained immensely by these Practices, suffered very severely, as a State, from the Jealousy excited in their Neighbours. The *English* had long Experience of a like Disposition towards them; and though the *French* had not, at that time, the Cause of a War to humble them, & they feared it, which was that of 1672, and how far the Causes of that War were connected with the Conduct of the *Dutch* in the *Indies*, may appear from a Fact charged upon them by Mr. *Toussaint*, who, in his Travels, relates, that *Dutch* Merchants at *Gambon* in *Senegal* publicly burnt the Picture of King *Charles II.* in a Fire, partly made of *China* in it, which was a very great Injury never forgot, and which gave a very bad Impression of the *Dutch* to the *Portuguese*, who followed as they could to hinder it. We see the Circumstance to the History of *Albino*, by M. *De La Noue*, who tells us, that the *Dutch* being extremely priced at the *Portuguese* for the *Indies*, discovered this Practice to the Governor of the *Diamond* Mines at *Portuguese*, who caught two of the Parties, and sent them to *Lisbon*, with stones about them to the Value of twenty-five thousand Pounds, and also whipping them, & at last, being the Habit of those holy Men, took such Measures as prevented their carrying on that Trade in the Shape of a

or how great Progress the *Dutch* made in subduing their distant Settlements. The natural Consequence of this was, that when such Settlements were lost, those who were driven from their Habitations, instead of repairing to *Goa*, and taking Arms in the King's Service, for the Recovery of any Part of his Dominions, went into the Territories of some *Indian* Prince, and there, for a pitiful Subsistence, entered into his Pay, or accepted of some low Office in his Court; so that while the Fleets and Armies of *Portugal* grew thin and contemptible, for want of Soldiers and Seamen, there were many thousands of that Nation scattered all over the *Indies*, disgracing their Country by the manner in which they got their Bread, when by a proper Behaviour they might have restored the Affairs of their Prince, as well as their own Fortunes.

One may safely affirm, that all these Mischiefs were at the Bottom owing to the Want of a right Administration in *Portugal*, where, if a Council for the *Indies* had been settled, composed of Men of real Abilities and competent Experience, who had been entrusted with the sole Power of bestowing Places in that Country, and had been charged to look carefully into the Conduct of such as were employed by them, might, before things had gone too far, have restored Discipline in their Colonies, and recalled such as from Discontent or Diffidence in their former Governors had taken Refuge in other Places. But their Attention to other things, and more especially to their Settlements in *Brazil*, which have, indeed, accidentally compensated in some measure their Losses on this Side, hindered them from thinking of their Affairs in the East, till they became past all Hopes, as well as past Recovery. In this distressed and dejected State they lie at present, which, however, must not excuse us from giving the Reader a View of them even in this Condition, because the *Portuguese* are still considered as having some Interest in the *Indies*, though it be in a manner nothing in Comparison of what it was, and is daily growing from bad to worse, so that they really owe what little they still enjoy, to the Want of any Inclination, at least in *European* Nations, to take it from them, which they might otherwise do almost at Pleasure.

20. The Dominions subject to the *Portuguese* Viceroy of the *Indies* are very easily described. The City of *Goa*, of which we have spoken before, is still the Capital, the Seat of the Viceroy, the Archbishop, and the Inquisition, which are heavy Burthens on so exalted an Establishment. In the Neighbourhood of this City, they preserve the Islands of *Salfette*, *Bardes*, *Angedive*, and some others of no great Consequence, farther than that they supply the City of *Goa* plentifully with Provisions, which is hard to say, whether it be an Advantage to that Place or not; and because this may seem a kind of Paradox, I will explain it. As Rice comes in great Quantities, and very cheap, to *Goa*, it encourages the Citizens to keep a vast Number of Servants, especially Negroes, who are content with one Dish of this Food at Noon, and another at Night. If these were kept for any kind of Labour or Manufactures, there would be no great Objection to it; but almost every House-keeper has six, most of them twelve, some thirty or forty, that have no other Business than carrying their Master's Palankin, and Umbrella; so that in Reality they are not kept so much for Service as for State; and thus they rather exhaust than increase the Riches of the Inhabitants.

Diu, which formerly belonged to the Kingdom of *Guzarat*, is the strongest Place they have, and is indeed very well situated for Commerce. It has a very good Port, and while the *Portuguese* had any Fleets of Consequence, they were generally laid up here; and at this City the *Moors* and other Traders in these Seas were obliged to take out their Passports before they proceeded any farther to the East. At present all the Trade, or at least almost all the Trade which was carried on here, is removed to *Surat*, and what little still remains at *Diu*, in the Hands of the *Portuguese*, is carried on under *Gentil* Colours; that is to say,

the *Portuguese* think themselves safer under them than under the Flag of *Portugal*, formerly so much respected in the *Indies*. The Port of *Daman*, on the Gulph of *Camboya*, is yet in tolerable good Condition, though nothing in Comparison of what it was, the old Town being in a manner deserted, and the new not near so well peopled as might be expected from its Extent. There are, however, still some Manufactures carried on here, particularly in Silk, with which they furnish the Market of *Goa*, and thereby enable the Merchants settled there to carry on what small Commerce they have left. *Chaul* stands behind the Mountains on the same Coast, and has a very safe and good Port.

These are all the Places that they have on the *Malabar* Coast, and in other Parts of the *Indies* they have few Factories, and no Establishments at all, except it be in the Islands of *Timor* and *Solor*, not far from the *Moluccas*, which they possess jointly with the *Dutch*, and of which we have already given a large Account in the History of Captain *Dampier's* Expedition to the South. Once in two or three Years they send a Ship from *Goa* to these Islands, the chief Commodities of which are Sandal Wood, much esteemed in *China*, very good Wax, and a sort of Medicine called *Solor* Stones, which are very little, if at all, inferior to the best *Bezoar*. On the Coast of *China* they have the Island and Port of *Micae*, from whence they carry on a considerable Trade to *China* and the *Philippines*.

All that remains under the *Portuguese* Dominion from the *Cape of Good Hope* in *Africa* to the City of *Macao* in *China* is governed by a Viceroy, with the Title of Captain General, who resides at *Goa*, as the Metropolis of *India*. There are six, and sometimes eight *Desembargadores* or Judges that attend the Government as a Sovereign Court or Council, who wear a Gown down to their Heels over a Cassock of the same Length, the Gown with wide Sleeves down half way their Arms. They wear Gollias, and huge Perukes of the *French* Fashion. The chief Court these Gown-men sit in is called a *Relacaon*, which administers Justice in civil and criminal Cases, having Power over all Ministers, and tries all Appeals brought from all Parts of their Dominions. The Viceroy sits as Chief of this Court, under a Canopy. The Gown-men sit on Benches placed on the plain Floor. The Council *De sacada* is like the Court of *Exchequer*, where one of the Gown-men sits as the Viceroy's Deputy. Thus the Pomp and Splendor of this Government is still kept up, though the Extent of it is much lessened, and the Power and Credit of it in a manner decayed. There are still as many Governments as ever, that is, in Title; for otherwise they are of no great Consequence, and those on whom they are bestowed, have the Characters of Generals. There is, for instance, a General of the Gulph of *Ormuz*, who has four Ships under his Command; a General of the North, who directs the small Towns on the Coast of *Malabar*; a General of *Salfette*, who has a Territory of about fifteen Miles, a General of *China*, who is, properly speaking, Governor of *Macao*, and an absolute Vassal to the *Chinese*. There is another General in the Islands of *Timor* and *Solor*, to whom even the *Portuguese* there scarce pay any Obedience, and who lives in a miserable Fort, the Guns of which are in no Condition for Service. There is likewise a General of *Goa*, whose Business it is to take Care of the Channels between the Islands, and to restrain Smugglers.

But the best of all the Governments that still belong to the *Indies*, is that of *Mofambique*, which is an Island situated near the Coast of *Africa*, in the Lat. of 15° South, within half a League of the Continent. They have a strong Fort there, with four good Bastions, which commands the Chanel, and in which there are seventy Pieces of Brass-Cannon; and here there is always kept a good Garrison, and in tolerable Order. The Governor is honoured with the Title of General of the River of *Senna*, where he has his Lieutenant, which Employments was worth to him several hundred thousand Crowns a Year. There

* There is a very wide Difference between these titular Preferments and the Governments formerly in the Gift of the Viceroy of *Goa*, which were five; the first was that of *Mofambique*, which is still in their Hands, and the only one of the old Government that is so; the second was that of *Mafate*, on the *Arabian* Coast, which was of very great Importance, and brought in a large Revenue; the third was that of *Ormuz*, on the Coast of *Persia*; the Captain-General of the Island of *Ceylon* was the fourth, and the Governor of the important Fortrefs of *Malacca* the fifth. Upon each of these General Governments there depended many others of less Consequence, of which these Generals had the absolute Disposal; but those who held them were continued in them for no longer than three Years. And it was for this Reason they were guilty of so much Extortion, looking upon their Governments as Leases for so many Years, in which they were to make their Fortune.

are but a few Houses about the Fort, the Inhabitants keeping their Effects on the neighbouring Continent: But notwithstanding the Narrowness of the Place, there are Monasteries of Jesuits, Dominicans of *St. John de Dios*, besides the chief Church and that of the *Misericordia*. The Merchandize brought to this Place by the Ships of the Company, are bought at a set Price by the Royal Factory, which afterwards send them to *Chelmani*, the Mouth of the River of *Senna* running three hundred Miles along the Coast, in Gallies and small Vessels, because of the Flats from *Chelmani*: the Goods are sent up the River, against the Stream, in Almadies or little Boats, which are ten Days going up, and about five coming down. It is very difficult going up for those who are not well acquainted with the Shallows and Windings of the River, *Cafres*, or *Blacks*, resort to this Port from Provinces and Kingdoms three or four Months Journey distant, to buy or take up Goods upon Trust for so much Gold, which they never fail to bring punctually the next Year, unless Death prevents them. This Trade yields above *Cent. per Cent.* So that the *Portuguese* may be said to have another *India in Africa*. *Senna* is a little Town on the Right-hand of the River, inhabited by fifty *Portuguese* Families, who make it populous enough, by the great Number of *Blacks* they keep. These till the Ground, and dig in the Mines, and by that means maintain their Masters instead of being kept by them.

About fifteen Days Journey from hence lies *Sesala*, where the *Portuguese* have likewise an Establishment, subject however to the General of *Mofambique*, and here a prodigious Trade is driven on, of which the *Portuguese* are, or might be, Masters. It consists chiefly in Gold, of which there are greater Quantities here than in any other Country in the World, since the annual Produce of this Market is computed, by the best Judges, at Forty-six thousand Ounces. There are vast Quantities of *Spanish* and *Canary* Wines, Oil, Silks, Linnens, Cottons, Coral, and other *European* Goods sold here, which are carried by the Inhabitants of the little Kingdom of *Sesala*, through all the great Empire of *Mouomotapa*, which the *Portuguese* stile the Empire of Gold, from the prodigious Quantities of that precious Metal which is brought to them from thence. There are, likewise, some other very rich Commodities brought hither by the Negroes, such as the most excellent Ebony in the World; great Quantities of Ivory, abundance of fine Mats, which are much esteemed in the *Indies*, and a great Number of Slaves; so that *Goa*, and all the rest of the *Portuguese* Settlements, are furnished from hence. One may justly wonder that, considering the Value of this Settlement, and its convenient Situation, the *Dutch* had not made themselves Masters of it long ago, as well as of all the other Places belonging to the Crown of *Portugal* on this Coast.

In the Year 1605, they attempted *Mofambique* with very little Success, which, however, did not discourage them; as it must be allowed, that where there is a Prospect of Gain, the *Dutch* are not easily discouraged: And, therefore, in 1607, they attacked it a second Time with greater Force, but with the same Ill-suck as before, except that they made themselves Masters of a rich *Portuguese* Fleet, which, as some measure, paid the Expence of the Expedition. This rich Trade, however, is much fallen off by the *Arabs* making themselves Masters of *Mozabza*, and other Places, which gives them an Opportunity of supplying the *Africans* with *European* Goods, which they purchase in different Parts of the *Indies*.

As for the Share which the *Portuguese* still retain, the Gold obtained thereby is sent to *Goa* and to *Diu*, where it is coined into small Pieces, called *St. Thomas's*, which are not worth above Half a Crown of our Money; and it is observed that this Coin is of a worse Touch, than is of a baser Alloy than any other in the *Indies*, which is another Sign of a declining Trade; for the *Sutains*, which were formerly coined at *Ormuz*, when in the *Portuguese* Hands, were esteemed the best Gold in the *Indies*; but they are now become extremely scarce; and the *St. Thomas's* are said to be coined in less Quantities every Year.

31. These Possessions are said to produce so little to the King of *Portugal*, that it has been more than once de-

bated in the Council of that Prince, whether it would be for the Interest of the Crown, to abandon them altogether with drawing their Artillery and Effects, and are likewise told, that it is not any political, but purely religious Motive, that has hindered this Measure from being taken, the Priests having suggested that, in that of a Multitude of Souls would be lost to the Church. I shall the less wonder at this, if we consider, that such as are best acquainted with the *East-India* Trade assures us, that a single Merchant and a single Ship of a reasonable Burthen may carry on as great a Commerce as what, at present, subsists between *Lisbon* and *Goa*. This Matter however deserves some Explanation. There are yet a great many Ships employed from *Goa*, *Diu*, and *Daman*, the Coasts of *Persia*, *Pegu*, *Manila*, and *Cbina*, but they are mostly on the Account of *Indian* Merchants, there being scarce a *Portuguese* Trader at *Goa* able to furnish a Cargo of the Value of Ten thousand Crowns; and it is very much doubted, whether, in the whole of their Trade they employ above Two hundred thousand Crowns; that it is not at all strange that, one Year with another there are not above two Ships sent directly from *Goa* to *Lisbon*, and those not a fourth Part so rich as when they usually sent twenty.

Yet there has been a late Regulation made at *Goa* the Preservation and promoting of Trade, which they who understand that Subject well, agree completed Ruin. This is an exclusive Company, which has the Right to the Commerce of *Mofambique* and *Macao*, which Company has taken upon itself the Payment of the Royal Officers, who are also Two-thirds concerned therein, which has given such a Blow to the natural Commerce of *Goa*, that the best Part of the *Indian* Merchants that were hitherto now retired from thence. To say the Truth, it is the great Share the Viceroy, Governors, and other Officers, always took in Commerce, without contributing anything thereto, except protecting the Merchants from the violence committed by themselves on such as did not add them to a Share in their Trade, that first destroyed the extensive Commerce they enjoyed. And, upon this Subject the Wits of the *Indies* have framed a very pretty Allegory. They say, that when the *Portuguese* came first there, they had a Sword in one Hand, and a Crucifix in the other; but that they might fill their Pockets the faster, they quickly dispersed with the first, and soon after laid down the last, by which they have lost all. But though their Power and their Commerce are so much declined, their Pride is as great as ever, insomuch that they refuse the Native of the Country, who are called *Canarins*, the Privilege of wearing Stockings, though they employ them as Physicians, Lawyers, and Merchants, by which many of them are so rich that they keep a Dozen or Fourteen Slaves, are in much better Circumstances than the *Portuguese* themselves.

The Revenues of the Church have suffered very much by this surprising Change in the State, there is little a Monastery that does not receive four or five thousand Crowns out of the Treasury, at the same time the Soldiers starve and mutiny for want of Pay, which is much the harder upon the Government, because the venerated Fathers know very well how to take care of themselves, insomuch that it is affirmed, the *Jesuits* of *Goa* have a better Revenue than the Crown of *Portugal*. It is not easy to know what becomes of the Money Churchmen raise; but it is very evident, that the Wealth they possess, together with the Establishment of the Mission at *Goa*, is such a dead Weight on the Settlement, must sooner or later destroy it. The Wits of the *Portuguese* in *Europe* understand this very well, and would be glad to see some proper Remedy applied, not from Prejudice against the Church or Churchmen, which is enough from being the Vice of that Nation, but from pure Regard to the Crown, and to the Nation; one would think, that the Clergy themselves, instead of being at more, ought to be willing to part with some Portion of what is already in their Hands, in order to make the State more able to protect them in the Possession of the Remainder. Besides, there is nothing clearer, than the creating of religious Houses is directly opposite

very Scheme of planting, and must always ruin the Settlements where it prevails, and consequently the religious Houses themselves, which is certainly an Argument that ought to prevail even with Popish Princes to lay some Restraint on the Missionaries that are sent abroad, unless they prefer the Reputation of Zeal among such as are no competent Judges, not only to Maxims of Policy and good Government, but to the Principles of true Religion. For, if there be any Piety in converting Pagans to the Christian Faith, it follows, that there is still greater Piety in doing this effectually, and in maintaining for ever the Establishments necessary to support them, which Reason and Experience shews, the buckling Monasteries, and maintaining Numbers of idle People in them, will not do, but on the contrary will bring on in time the Destruction of those Colonies, in which this Humour is suffered to prevail.

The very last Advices from this Part of the World inform us, that several Indian Princes were driven from before Goa, which they had blocked up with a numerous Army, by the powerful Succours sent by the present King of Portugal, and by the excellent Conduct of the late Viceroy, who was the Count de Laurical, and who, if I mistake not, was twice in the Indies, and behaved there with great Reputation. Such Expeditions, however, are to be considered as Expedients only, which may for a time preserve that Settlement, but can never restore it, or bring the Affairs of this Nation in these Parts into so good Order, as to make them worth the Attention of a Prince, who has the Honour of his Crown, and the Good of his People, at Heart. It may not therefore be amiss, before we conclude this Section, to consider what is like to be the future Fate of the Portuguese in the Indies, in which, if our Conjectures should be justified by Events, they cannot but do Honour to this Performance.

32. It is morally certain, that the Establishments which the Crown of Portugal still has in the East-Indies might, in the Hands of an active and industrious Nation, turn to considerable Account; for it has been long ago observed by M. Tavernier, that the Port of Diu is as well situated for Trade, and as capable of Improvement, as any in that Part of the World, or more so; and if put under proper Regulations, that is, if made in some measure a free Port, it must necessarily come in for a large Share of that Commerce now carried on at Surat, and in all probability, retrieve much of the Arabian and Persian Commerce that has been so long lost to the Portuguese. On the other hand, as they have still some Factories at Bishnagar and other Places on that Coast, it would be no difficult Matter to re-establish their Commerce in the Heart of India, at the same time that the Port of Macao would furnish them with the Means of supplying the China Market as cheap or cheaper than any other European Nation, because their Colony at Mosambique is so situated, as to serve them for the same Purposes that the Cape of Good Hope does the Dutch, or the Island of St. Helena the English.

But all these Advantages signify nothing in the Hands of those who are so far from possessing the Virtues requisite to such Improvements, that on the contrary, they are not only tainted with, but over-run by such Vices, as must unquestionably overturn the best Establishment in the World. It is necessary to support a Charge of this Nature by Facts, that it may not appear to be the Effects of Fancy, Prejudice, or Misinformation. I shall mention but one, which, as it is very singular in its kind, will at once answer my Purpose, and serve to enliven the Subject. The Portuguese had, in the Close of the last Century, an Offer capable of doing much towards the Execution of such a Plan as this, inasmuch that he was a Man of great Prudence and Virtue; but withal, he had too high a Spirit, which led him to treat the Vices of his Countrymen with such Asperity as drew upon him a disastrous Death, and thereby defeated all the Hopes that had been raised from the great Victories he obtained over the Arabs and Moors, and that

noble Zeal he had upon all Occasions shewn for the Welfare of his Country.

His sharp Tongue, says my Author, had gained him the Ill-will of almost all the Gentry of Goa, and along the Coast; but more particularly of the Family of Melo, which was powerful in Kindred, and great by Birth. His Affronts becoming insupportable, they conspired, to the Number of fifty, to murder him; and having agreed on the Time, Place, and Manner of executing their Design, they made several Loop-holes in the Houses of the Quarter and Parish of St. Peter, that they might shoot him with more Safety. The General, or rather Admiral, persuading himself, that Gentlemen could not harbour Thoughts of taking an ungenerous Revenge, tho' warned to be upon his Guard, because there were treacherous Practices against him, would never admit any Soldiers to attend him, and particularly two Captains that were willing to share in his Dangers. Thus being carried in a Palankin alone, only with one Black that carried his Umbrella, a Shot was made at him from a Houle, which giving him a slight Wound, he leaped out of the Palankin, and taking the Snuff he held between his Fingers, said, *Who is it you aim at? Trifstan de Melo* at these Words coming out of his Houle, answered, *at you*, and fired a Blunderbuss at him. He, with an undaunted Courage, defended it with his Cloak, and bowing his Body; then drawing his Sword, and falling on his Enemy, he struck him five times, but to no Purpose, because he had on a Coat of Mail; whereupon he cleft his Head, and with a back Stroke cut him over the Face, which made him fall; then taking him by the Hair, he set his Feet upon him, and was going to run his Sword into his Breast, but Trifstan begging his Life, he generously granted it, saying, he would not embroil his Hands in such base Blood. In the mean while out came Trifstan's Son, and a Mulatto, (so they call all those that are got between Blacks and Whites) and firing two Blunderbusses, lodged several Bullets in the Admiral's Breast, breaking in Pieces the Cross he wore as a Badge of Knighthood; but still he stood and defended himself, when a Slave came up and run him into the Side with a Javelin; nor did he go unpunished, for the General, with a Back-stroke, ripped open his Belly, whereof he died at Night. *Macbado* being ready to expire, drew near to the Palankin, and setting his Peruke to rights the best he could, laid himself in it. The Murderers fearing he might yet live, one of them, who was a Priest, came with a Blunderbuss in his Hand to make an end of him; but seeing him ready to breathe out his Soul, asked, whether he would make his Confession? The Admiral called him Jew, and bid him go about his Business: Afterwards a Dominican coming to him, he gave Signs of Repentance, and grasping his Hands, died with these Words: *The Blood of Christ save me. They found in his Breast about thirty Bullets; whereupon People admiring his Valour, said, he must needs have more vital Spirits than other Mortals, since there must go so much to the killing him.*

This Murder, foul and detestable as it was, could never be punished, so powerful was the Family concerned in it, and so weak the Authority of the Viceroy, in Matters relating to Justice. It is true, this strange Fact happened fifty Years ago, but things are far from being mended since. Assassinations are still common in this Country, and such as would not expose their own Lives for the Preservation of the Colony are ready, on the slightest Provocation, to command their Slaves to take away the Life of another Man, let his Worth or Dignity be what it will, even at the Altar, and this without the least Apprehension of Justice. We need no clearer Proof than this, that the Minds of these People are totally enervated and corrupted, and that as Cowards, they are cruel and revengeful, which wicked Dispositions arise from a lazy and luxurious Life. We may there-

1 This gallant Man Don Antonio Macbado de Brito, was general of the North, and afterwards Admiral of the Gulph of Ormuz, in which Character he gained immortal Reputation. In the Month of April 1694, he with three Ships only fought fourteen Arabian Vessels of the same Size, in the Bay of Surat, for a whole Day; and when he might have retired safely into the Port of Diu, he anchored close by them all Night, in order to have renewed the Fight next Morning; but the Arabs having had fighting enough the Day before, stole away in the Dark, and recovered their own Coast. Several Boats full of English, French, and Dutch Merchants, went from Surat to see this Battle, and afterwards complimented the Portuguese Admiral on his Victory, little suspecting, that before the End of that Year, a Man, who had done such eminent Service to the Publick, would fall, as he did, a Victim to private Revenge.

fore safely predict, that the Continuance even of that slender Power which the *Portuguese* have still left, cannot continue long, and that for these two plain Reasons: First, because it has been long, and is still in a declining Condition, so that its Force being extremely decayed, and at the same time continually employed in resisting the Efforts of its Enemies, it is impossible in the Nature of Things that it should subsist for any Time: Secondly, the Manners of the People are entirely ruined, so that there is not the least Probability that any such Reformation will ever be effected, as might enable them to make such Use of the convenient Ports of which they are still possessed, as is necessary to revive and restore their Commerce in the *Indies*. I venture therefore to pronounce, that in the Compass of twenty or thirty Years, their Establishments in these Parts will be quite lost, and that in all likelihood, *Goa, Diu, and Daman*, will be lost first, which will necessarily draw after them the Desertion of *Macao*, which cannot long subsist by its own Force, and lies at much too great a Distance to receive any effectual Succour or Support from *Portugal* directly*.

It is indeed possible, that Accidents out of the Reach of human Foresight, may prevent, at least for a Time, the Completion of what I have predicted; but without the Intervention of some such Accidents, it will certainly come to pass, and when it does, perhaps it may not be much to the Disadvantage of *Portugal*; for when Colonies contribute little to the Benefit of a State, and are of no Use in promoting its naval Power, the Loss of them cannot be considered as very detrimental, except to such as are settled in them, which is a Consideration well worthy the Attention of every Colony, since it shews that the Relation between it, and its Mother-Country, is the sole Source of the Welfare of both, and cannot therefore be taken away without hazarding the Destruction of the Colony.

33. The History of the Rise, Progress, and Declension of the *Portuguese* Commerce in the *Indies* was never written before, and therefore I hope will appear the more agreeable and entertaining now. We have here, in a very narrow Compass, presented the whole of it to the View of the *English* reader, with all the Accuracy and Impartiality that lay within the Reach of our Power; and as we have, throughout the whole Section, intermixed our Remarks with the Matters of Fact, we shall be very short in our Observations here. It may not, however, be amiss, to suggest, by way of Conclusion, that though this, with respect to the Circumstances attending Facts, is a particular History, yet the intelligent and judicious Reader will very easily perceive, that, at the Bottom, it contains a general View of the Rise, Progress, and Decay of all Commerce and naval Power, which are at first (at least, generally speaking) the Effects of private Virtues, or, in other Words, are produced by the extraordinary Abilities and unwearied Labours of particular Men in Seasons proper for such Undertakings, and with due Assistance from that State in which such Genii appear.

The advantageous Consequences that arise from Expeditions, beget in the Body of a People a Spirit of Industry and Commerce, which, by giving a new Turn to their Genius, and raising at the same time a virtuous Emulation, in a short Space, shorter indeed than can be imagined, create a naval Force, and thereby establish a new maritime Power. But, on the one hand, the Wealth derived from Commerce, and that wonderful Flow of Success which usually attends a Nation powerful at Sea, very often produces Luxury and Insolence, which naturally lead to the Ruin both of Trade and naval Power. We do not mean, by Luxury, the Possession of all the Riches and good Things of this Life, but the affecting of any thing else. If it were otherwise, we ought not to do up our Commerce at all, because it is the certain Source of Riches and Affluence; but there is a great Difference between possessing and using good Things moderately, and being so bewitched with them as to dedicate our whole Time to their Enjoyment; because, if there were no other Argument to prove this wrong, the Thing proves itself since it is impossible to preserve Pleasure, supposing Happiness to consist therein, if we do not spend a great Part of our Time in thinking of somewhat else.

It was for want of attending to this plain Truth, that the *Portuguese* despised and contemned the *Dutch* on their first Appearance in the *Indies*; they considered their Force as so much superior to that of their Enemies, they never reflected on the Means by which that Force was raised; I mean the Valour, Industry, Patience, and publick Spirit of the first Adventurers, which Qualities being now on the Side of their Competitors, and wanting in themselves, ought to have awakened them to a Sense of their Condition, and to a Return to the Virtues which originally procured, and were alone able to preserve, their extensive Possessions. But continuing they did to provoke on one hand the Natives, and to neglect on the other the necessary Precautions against the *Dutch*, they did the Business of their Enemies, and drew upon themselves that Destruction which could never otherwise have been brought upon them.

I have before observed, that like Causes will, in like Cases, be attended with the like Effects, and therefore there will be no Occasion to repeat these Remarks in the Progress of this Work; though it would have been a great Oversight to have omitted them here, inasmuch as they contribute chiefly to render our Labour useful and important, which otherwise would be no more than an agreeable Amusement. To relieve the Reader however from so serious a Course of Study, we have, in the next Section, given him the Travels at large, of a very curious Discoverer, and the only one who has given us a tolerable Account of that *Archipelago*, which is the Subject of the Performance.

* It is very remarkable, that *Vasquez de Gama*, whose Statue is over one of the Gates of *Goa*, was not only the Discoverer of the Passage to the *Indies* by the *Cape of Good Hope*, but lived to see the Establishments made by his Countrymen in those Parts, carried to their greatest Height; the Time of his Death the *Portuguese* Empire in the East was in its most flourishing Condition. It is likewise remarkable, that the Son of the *Don* *Alfonso de Albuquerque*, who was the Conqueror of *Goa*, lived to see the Declension of their Affairs in the *Indies*, and the prodigious Progress of the *Dutch* at their Expense. The whole Circle therefore of the Discoveries, Acquisitions, and Losses of this Nation, take in no greater Compass than two hundred and fifty Years, which is very little in Comparison to the Time this Trade was held by the *Spaniards*, or the *Portuguese*.

SECTION XXIV.

The Voyage of Francis Pirard de Laval to the East-Indies; his Shipwreck amongst the Maldives, and his copious Account of that Archipelago.

Translated from the Author's Original Voyage, published by himself in French.

1. *An Account of the Design of this Voyage, and the Author's Embarkation for the East-Indies, May 18, 1601.*
2. *The remarkable Accidents which happened in their Passage till their Arrival at the Island of Anabon.*
3. *They double the Cape of Good Hope, and arrive happily on the Coast of the Island of Madagascar.*
4. *They meet with a dreadful Storm there, and lose a great many Men by the Scurvy and Surfeits.*
5. *Proceed from thence to the Comorro-Islands on the Coast of Africa, near Mozambique, where they refresh and rest.*
6. *The Ship on board of which our Author was, wrecked amongst the Maldive-Islands, and himself made Prisoner.*
7. *A general Description of these Islands, their Product, and the People who inhabit them.*
8. *The Division of these Islands into several Provinces, with an Account of the Sea that surrounds them.*
9. *Of the Original Inhabitants of this Country, their Complexions, Stature, Temper, and Manners.*
10. *The vast Fertility of the Maldives, and the Nature of the several kinds of Corn and Fruits produced there.*
11. *Of the Birds, Fowl, Fish, and other sorts of Provisions, and of their prodigious Plenty and excessive Cheapness.*
12. *A very singular Method in use among the Inhabitants for weighing whatever is left in the Sea.*
13. *Their Language, Religion, Temples, Priests, and Form of publick Worship, with occasional Remarks on them.*
14. *Other Ceremonies of their Religion, together with their Feasts and Fasts, and Diversions at such Seasons.*
15. *A large Account of their Marriages, the Manner of their settling Jointures, and their frequent and voluntary Divorces.*
16. *Their funeral Ceremonies, Profits accruing thereby to the Priests, and other curious Particulars relating to that Subject.*
17. *A Description of the Drefs of Men and Women in those Islands, and of the Laws in relation thereto, and other Circumstances.*
18. *Their Customs in Eating and Drinking, Laws for prohibiting of Luxury, and generous Concern for the Poor.*
19. *Superstitious Customs among them in relation to the Killing of Beasts, Use of Baths, Sailing, and other Cases.*
20. *An Account of the Diseases which prevail among the Inhabitants; their Skill in Physick, and other Sciences.*
21. *The Virtues and Vices of the Maldivians, with some curious Particulars relating to their Women.*
22. *A large Account of the Nature of their Civil Government, Power of the King, his Privy Council, Judges, &c.*
23. *Criminal Punishments in Use amongst them; together with the Estate of their Military Establishments.*
24. *A Description of the King's Palace, Habit, Manner of Living, and other Circumstances relating to his Court.*
25. *His State when he appears in Publick, the Queen's Court, and the great Respect paid them by their Subjects.*
26. *The Particulars of the Royal Revenue, the Nature of the Coinage here, and of the Value of their Commerce.*
27. *The Manner of the Author's Escape out of this Country, after he had remained a Prisoner there for several Years.*
28. *The Author's Journey to Bengal, and Return out of the Indies.*
29. *Remarks and Observations on the foregoing Particulars.*

THERE are some Voyages and Discoveries which never lose their Value, because never superseded by any thing more excellent in their kind; and this we may truly affirm to be the Case of that Voyage which we now present to the View of the Reader. It contains a very curious, accurate, and circumstantial Account of Countries and People, who, tho' they lie at the very Entrance of the *Indies*, were never described before, nor has any subsequent Account of them appeared capable of entering into any Degree of Comparison with this which we have before us. Our Author appears to have been a Man of good Sense, and great Observation. He was led to travel from a Humour common enough in Youth; I mean the Desire of seeing new and strange Things; but, at the same time, this Humour of his was regulated by a Disposition not very common in young People, which was that of looking to the Bottom of whatever appeared worthy of Notice, and of labouring to acquire whatever Talents were necessary to make to thorough an Inquisition. It was from these Principles that he derived that Contancy and Resolution which are so conspicuous in the following Relation.

He was, doubtless, in Hopes, when he undertook this Expedition, that all Things would have fallen out favourably, and that he should have been entertained with the Sight of all the Curiosities in the *Indies*, with little Hazard, and some Gain to himself: But when it fell out otherwise, and he found all these Resolutions overturned by the unlucky Accident of a Shipwreck, he did not lose either his Reason or his Spirits; but, on the contrary, determined to make Use of this Accident to further his Design of obtaining a distinct Knowledge of the Places and

People whom it was his Fortune to visit. It was in consequence of these Notions, that he examined carefully, and recorded faithfully what ever came within the Compass of his Notice: And that he might enlarge the Circle of his Understanding, he applied himself with Diligence, first to learn the Tongue of the Country, and next to enter into a free Conversation with regard to their own Affairs of every kind with the People themselves; so that his Judgment always went along with his Curiosity; and we may rest satisfied that he has not reported Things barely as they appeared, but as they were.

After this Account of our Author, it's requisite we should say somewhat of the Time and Manner in which this Voyage was undertaken, and afterwards we shall leave him to speak for himself. The Fame of the *East-India* Commerce in the Beginning of the seventeenth Century, provoked some French Merchants of *St. Malo*, *Laval*, and *Vitre*, to think of sending two Ships into that Part of the World, which Project they executed in the Spring of the Year 1601. The biggest of these Vessels was: the Burthen of three hundred Tun, called the *Croissant*; the lesser of two hundred Tun, called the *Corbin*: The former of these was under the Command of the *Sieur de Bardeliere*, the other under that of *Francis Grout*, Constable of *St. Malo*. They sailed from the last-mentioned Port on the Eighteenth of *May*, 1601, and had not proceeded above ten Leagues out to Sea before their Mizzen-Mast split and broke in the Middle, which, says our Author, was the Beginning of our Misfortunes: And their History he continues thus.

2. On the 21st we fell in with nine great Dutch Boys, each of which saluted us with a Gun, but one of them be-

ing loaded with Ball, bear the Sail of the *Corbin* to Pieces; upon which the Vice-Admiral fired two Guns on the Rigging of the Ship that had injured him; and the Admiral tacking to the Windward of the *Dutch* Admiral, spread all his Sails, and fired a Gun upon them; the *Dutch* Admiral presently struck, and, having informed himself that the Mischance was occasioned by the Oversight of a Gunner that was in Drink, delivered up the Gunner to the *French* Admiral, in order to condign Punishment, and begged he would pardon the Mistake. Our Admiral finding how the Matter stood, said, he desired no further Satisfaction; and having returned the Gunner, entreated the *Dutch* to vouchsafe him a Pardon. How the *Dutch* treated him afterwards I know not; though I do not much doubt but they hanged him up immediately at the Yard-arm; for the *Dutch* observe an exact Discipline among their Ships, and suffer no Mistakes to pass with Impunity; and from thence it comes to pass, that their Navigation is more successful than the *French*.

June the 31 we descried the *Canary Islands* in 28, 29, and 30° N. Lat. The 12th and 13th we came within Sight of the Islands of *Cape Verde*, which run from 20 to 14° N. Lat. On the 29th we were in 5° Lat. and discovered the South-Star, called the *Cross*; at the same time we saw a prodigious Quantity of Flying-Fish, with Wings like those of Bats, which are very plentiful near the Equinoctial Line, whether on the North or South-side. On the 14th of *July* we discovered the unhealthy Coast of *Guinea*, being carried out of our Course in a Calm by the Strength of the Currents. *August* the 24th we crossed the Equator, on both Sides of which, for the Extent of 7 or 8 Degrees, we had very unconstant Weather; the greatest Calms were commonly turned into Thundering and Lighterings (especially when the Sun is near the Equinoxes) and with boisterous Winds, which surprised us so suddenly, that we could scarce get our Sails down in time. The Heat was so great that it melted our Candles and Butter, corrupted our Water, and spoiled our Meat and Fish, though never so well salted.

We frequently saw great Whirl-Winds rising at a Distance, called by the Seamen *Dragons*, which shatter and overturn any Ship that falls in their Way. When these appear the Sailors have a superstitious Custom of repairing to the Prow, or the Side that lies next the Storm, and bearing naked Swords against one another crosswise, from a vain Apprehension of preventing their Approach by that Means. In this Climate the Rains are very dangerous, for if one is wet and does not immediately dry himself, his Body is soon covered over with Blotches, and his Cloaths with Worms. In the Time of a Calm Ships roll prodigiously in those Seas, but when they run with a fresh Gale they are more steady.

August the 29th our Pilot, who was an *Englishman*, discovered Land ten Leagues off; for though we endeavoured to stand one hundred Leagues off to Sea, the Currents drove us towards the Shore. This we found to be the Isle of *Anabon*, possessed by the *Portuguese*, where we took in fresh Water and Fruit, and the Inhabitants, after a Shew of Civility at first, treacherously slew one of our Men, and took five Prisoners. This Island is governed by a *Portuguese* Lord, who had the Gift of it from the King of *Spain*, the other *Portuguese* who inhabit it being only his Factors and Commisaries. The Natives, who are his Slaves, are Negroes, and go naked, covering their Privities with Cotton. Their Women carry their Children upon their Backs, and suckle them over their Shoulders, their Breasts being very long. The Island is situated in 1° 23' S. Lat. and is five or six Leagues in Circumference. It is high, mountainous, and very barren. The Road is on the North-West Side, and is very dangerous, by reason of Flats and Rocks. We lay there six or seven Weeks, and, during that Time, it rained every Day, more or less. The Country produces great Plenty of Fruit and Cotton, in which all the Revenues to the Lord are paid. Their Fish is extraordinary good and very plentiful. At the Distance of a League and a half from *Anabon*, there is a little scorched Island, which bears no Greens, but is so covered with Fowl called *Pegon*, that one cannot walk any where without

treading upon their Eggs. This Fowl is no bigger than a Pidgeon, and the Flesh is Black, but eats admirably well.

On the 16th of *October* we put to Sea again, and on the 17th we made the Island of *St. Thomas*, which lies in 16° S. Lat. at the Distance of six hundred Leagues from the *Cape of Good Hope*. Upon the Atar of a Ship in this Island we found several Letters, among which the *Dutch* had passed that Way. Here we might have fitted our Mizen-Mast, but found no Wood fit for that Purpose. The Air, Fruit, Flesh, and Water of this Island are so healthy, that our Men, who were in such opprobrium with the Scurvy, recovered in the Space of nine Days; the 20th we set Sail, and stood for the *Cape of Good Hope*, and three Days after doubled *Arcebia*, which are 4 Leagues of Shelves upon the Coast of *Brazils*, in 18° S. Lat. seventy Leagues long. The doubling of this Neck is both difficult and dangerous, and in sailing to the *Indies*, an expert Pilot ought to be very cautious in sailing to a just Distance from the *Guinea* Coast, which is very unhealthy, and incommoded with Calms and Currents, and, at the same time, standing off from the *Arcebias*, for the doing of which there is a Room to imagine we reckon a thousand Leagues from the Coast of *Arcebia* to that of *Brazils*. Having doubled this Cape, we continued our Course for the *Cape of Good Hope*, and a few Days we knew that we approached it by the appearance of the Keeds called *Tromba*, and white sea Fowls. Having weathered the *Cape of Good Hope*, we came in Sight of that of *Aguilhas* or *Needles*, which lies fifteen Leagues farther into the Sea, and lies in 35° S. Lat. This Cape derives its Name from the Observation, when a Ship comes before it, the Needle of the Compass points directly northward, without declining to the East or West.

We met *January* the 6th, 1602, with a violent Storm, in which one of our Seamen fell overboard, and his Companion would have jumped after him if we had not prevented him; though, after all, I took his Offer, for the Effect of Wine rather than true Affection; for it is but little Friendship among sea-faring Men. Thus our Course, we steered by the Country of *Natal*, upon the Coast of *Ethiopia*, without any Storm, which was common in those Seas; for between the 33d and 25th of *January* are never, almost, without violent Storms. After we mistook our Course, thro' the Ignorance of the Pilot, on the 4th of *February*, finding ourselves on the Land-side of *St. Lawrence*, tacked about, in order to make the other Side.

February the 7th, having passed that Island, and being to our Wishes, we were surprized all on a sudden by a violent Storm from the South-West, being less acquainted with those Seas than the *Portuguese*, who make it their Provisions for such Accidents. In the Storm it was dark at Noon-Day, that we could not see the Heaven one another; our two Ships were separated, and our Men were tore to Rags, such was the Force of the Rain-Wind, that they wounded our Faces like so many Blows of Whipcord. The Waves swelled so high, and were so in upon the Ship, that we could not stand upon the Deck. In this Place we continued four Days and four Nights, some of the Men that were on Board applied themselves to devout Exercises, while the Sailors redoubled their Curses and Blasphemies. Our ancient Pilot and Seaman testified they never encountered such a Tempest in any Business, they never had been in those Seas, nor swelled higher than elsewhere.

On the 11th the Storm being over, we stood on for *St. Lawrence*, being much disabled. All our Men were now or half dead, and we had not a Man on Board but a Gunner, that had ever been in the *Indies* before. We came within thirty or forty Leagues of the Island, which appeared yellowish and trothy, and was covered with floating Herbs, which continued to appear on our face till the 19th, that we arrived and cast Anchor in *Augustus Bay*, in 23° 30' South Latitude. This Bay is very convenient, having an excellent Ground of Sand. The same Day the *Cross* returned after twelve Days Separation, and was more disabled than

The Seamen being scorbuck, we marked out a Place on the Shore for the Sick, and at the same time a Dutch Ship was forced into the same Harbour by Strels of Weather, which had not one sick Hand on Board. The Natives gave us Cattle, Fowls, Honey, and Fruit, in Exchange for Knives, Scissers, and Trinkets of little Value; but the Place was so unhealthy, that many of our Men died, partly by the Scurvy, and partly by a Phrenetic Fever. We lay directly under the Tropick of *Capricorn*, and the Sun-beams darted upon us almost in a perpendicular Line; some had their Legs scorched, and ulcerated through their Stockings; nay, the extreme Heat would have incommoded us more, if it had not been for the Convenience of a fine River to bathe in, and the Shades of a large Wood. We were posted at the Foot of a great Mountain, which was covered with Infinity of large Lizards that offered no Hurt to any body. The Wood was replenished with an innumerable Quantity of little Monkeys and Apes, which entertained us with a continual Shew of dancing about, and skipping from Tree to Tree. Parrots are there very numerous, and make an agreeable Harmony, with their various and warbling Notes. Not to mention the Indifference of our Men in over-feeding in so hot a Climate, and the pernicious Consequences that attended it: I shall only take notice farther of the unspeakable Uzzasinsels from the Flies by Day, and the Gnats that pelted us by Night, in piercing the Flesh till the Blood came, and an Inflammation issued. This Inconvenience was so cutting, that some crept into Sacks and Bags, leaving only a small Hole to breath through, and all of us were forced to make Fires, and lie down in the middle of the Smoak.

The Island of *St. Laurence* has seven hundred Leagues in Circumference. It lies between 26 and 14° South Latitude. It abounds in Cattle, especially Sheep, which bring forth three or four Lambs at a time; the Cattle are not appropriated, but common to all that catch them; for the Inhabitants, and indeed most of the other *Indians*, chose rather to feed on Fish, Fowl, and Milk. 'Tis common there to see two or three hundred Bulls and Cows in one Herd, and when they come to cross a broad deep River, the Cows raise their Heads upon the Bulls Rumps, and so get over. We anchored at the Mouth of a River that afforded great Plenty of Fish and Crocodiles, and when we killed a Crocodile, and took out its Entrails, we observed, that like Musk they made a very agreeable Perfume in the Air. The Natives are of a tawny olive Colour, inclining to red; they are tall, frail, well made, and not only of a ready Apprehension, but wise; their Hair is long, and wreathed into Tresses. They are naked all over, excepting that their Privities are covered with Cotton Cloth. The Women wear one Piece of Cloth, that covers them from under their Breast to their Girdle, and another that reaches from thence to the Knees, their Heads being bare, and shaved. Their Arms are Darts and Javelins, called *Azagayes*, for the Noise of a Gun frights them exceedingly. 'Tis said that this Island was formerly peopled by the *Chinese*, upon the Occasion of a Ship's being cast away upon that Coast; and indeed they resemble the *Chinese* very much, bating that their Complexion is not near so white, which perhaps may proceed from their going naked, and living in the *Torrid Zone*. At present the Island is very populous, and governed by several Kings that wage War with one another: Some of the Inhabitants are *Mohammedans*, and circumcised, and the rest are *Pagans*. The inland Parts of the Island are in great Want of Water.

5. On the 15th of *May*, having refitted our Ships as well as we could, and provided ourselves with Water, Wood, and Flesh, which after all would not take Salt so well as what we have in *Europe*, we set sail, and steered for the *Comoro* Islands, from the Consideration that our Complement of Men was very short and feckly. The 23d made these Islands, which lie in 12° 30' South Latitude between *St. Laurence* and the Continent of *Africa*, at the Distance of seventy Leagues from *Mozambique*. There are five of them, each of which has a peculiar King, and one of them called *Malail*, being surrounded by the other four. We chose to anchor in its Road; we saw several Villages ashore, the Inhabitants of which used us kindly, and gave us Fruits in Exchange for Trinkets made of Iron. The Inhabitants of

these Islands are *Mohammedans*, being a Meddly of several Nations, viz. *Ethiopiens*, *Cassres*, *Arabians*, and *Portugueses*. They are true Friends to the *Portugueses*, and a cunning, sharp sort of People, that are not fit to be confided in.

When our Men offered to land at a little Village to take in Water, the Inhabitants rose up in Arms, and opposed their Landing, till they sent them five or six Crowns; after which they allowed them to take as much Water as they pleased. All these Islands are extreme fertile in Oranges, Citrons, Coconos, Honey, Betel, and Rice, which we bought up at the easy Purchase of a few Iron-Trinkets and *Flanders* Ware: Flesh, indeed, is as dear there as here, though they have Plenty of Oxen, Cows, and Sheep. They have Barks made altogether out of the Body of one Tree, in which they send their Fruit to *Mozambique* to be exchanged for Cotton, Cloth, Gold, Ivory, &c. One Day we saw a monstrous Fish rise above the Water, which had the Form and Figure of a Man, with a fort of Beard towards the Clin that seemed to be its Fins, and a long scaly Head, terminating in a Point: When we offered to come near him he plunged his Head under Water, and so discovered Part of his Back, which was scaly. We staid a Fort-night in this Road, and the Goodness of the Fruit and the Air cured our Men of the Scurvy to a Miracle; and indeed I have always observed that Citrons, and Oranges, and their Juices, are of sovereign Uses in scorbuck Cafes.

6. *June* the 17th we set sail, and the 24th repassed the Equinoctial Line, standing to the Northward in the Lat. of 5°. We perceived some great Shelves surrounding little Islands, which were the *Maldives*, though most of our Matters and Pilots mistook them for the Islands called *de Diego des Roers*, which we had left eighty Leagues a Stern to the North-West. Our Admiral designed to pass to the North of the *Maldives*, between them and the Coast of *India*; but, on the contrary, we run directly upon them, whereas we ought to have stood an hundred Leagues off them, if we had a Mind to be safe. In fine, such was our Misfortune, that the *Cerber* which sailed a head, struck thrice upon a Rock, at the Distance of five or six Leagues from the Coast of the *Maldives*. In this Disaster we saw a Bark belonging to the Islands, which would not come near us on account of a strict Prohibition in that Country to approach any Ship in Distress without the King's Leave. In the mean time the Sailors eat and drank heartily, and treated their Commanders with Insolence, insulting all those who shewed any Regard for Religion, and loudly proclaiming that, since Death was so certain, they were resolved to render its Approaches easy and soft. This filled me with Horror, and convinced me that most Sailors leave their Souls and Consciences ashore. In fine, after continuing two Days in this deplorable and desperate Condition, we made a shift to reit our Galeon, and haul it over the Flats, and, with infinite Labour and Difficulty, arrived on board of it at one of the Islands called *Pouladon*, which is not a League in Circumference. We had carried some Arms along with us, but the Inhabitants disputed our Landing till we had given up our Arms, and surrendered ourselves at Discretion. There were not above twenty or twenty-five Inhabitants in the Island, but they concerted their Measures so wisely, that they sent off our Boat and all their own, to the other Islands: To prevent any Insurrection from us, they carried us to a Lodge in the Middle of the Island, where they entertained us with some Fruit, Coconos, and Lemons, and rid us of all we had, alledging that it belonged to their King, as being a Wreck. We had a Piece of Scarlet Cloth with us, which we pretended was designed for a Present to the King of the Islands, affirming at the same time, that the whole Cargo of our Ship was for a Complement to him.

Upon this no body dated so much as touch the Scarlet; but, after all, we cut off a Piece of two or three Ells of it, and presented it to the Governor of this little Island, in order to oblige him, and he, who was a very old Man, took it very kindly, conjuring us not to speak of it. Soon after the Governor sent the Master and two Sailors to the King, who resided in the Capital Island called *Male*, and the Master presented him with the Piece of Scarlet.

Immediately the King sent for his Brother-in-law to five what was on Board our Ship, though the Flats were such that no Boat could come near it; yet they found a Way of getting at it by the Means of a Rope fastened at one End to the Ship, and at the other to the Rock; for tho' the Waves washed over them, they had fast hold by the Rope, and so got to the Ship; nay, they are so ingenious, that they took out the very Cannon and the heaviest Goods, and laugh'd at any Advice we could give them. When we left the Ship, we brought with us about a thousand Crowns in several Girdles, and buried it ashore for a common Reserve, to supply our Necessities; but some of our Men being in want of Subsistence, digg'd up the Place, and offered the Natives Pieces of Money for Food, after which the Natives would never allow us Sufferance without Pieces of Money; and in regard that the least Piece in the Bank was worth Twenty-pence, their Provisions were much over valued: Every Seaman bid from his Neighbour what he had got, and would not assist him even at the Point of starving; nay, when any lay very sick the rest came and stiled him before he died.

As for my own Part, I and two more were transported to the Island of *Pandoo*, the Natives of which being acquainted with what passed in the other Islands, and thinking we had Money about us, refused us Sufferance, till we gave them Pieces of Silver; but, in reality, we had none of the Money, and were reduced to great Extremities. In the mean time, I made it my Business to learn their Language, and by being able to discourse with them, insinuated myself into the Favour of the Governor of the Island, who sent me to *Mole* with Recommendations to the King, and both the King and his Queens were so well pleas'd with my saluting them in their own Language, and according to the Customs of the Country, and with the Account I gave them of the Things that were taken out of our Ship, the Manners of the *French Ladies*, &c. that they took particular Care of me in a Fit of Sickness that lasted for many Days: In a Word, I rose, by the King's Favour and Bounty, to a Competency; and having, by Virtue of a long Stay in the Country, an Opportunity to inspect their Constitution, Customs, Laws, &c. am now going to gratify the Publick with what I have learned upon that Subject.

7. The *Mollucces* lie between one Degree N. Lat. and 4° S. Lat. being two hundred Leagues in Length, and thirty-five in Breadth. They are distant from *Spain*, according to the Course of sailing 4500 Leagues. They are divided into thirteen Provinces, called *Atollons*, each of which comprehends a great many small Islands, and is of a circular Form, containing about thirty-two Leagues in Circumference. These Islands are surrounded with a great Ridge of Rocks, which breaks the Shocks of the Sea, and raises prodigious Surges. 'Tis said the Number of Islands amount to 12000, a great Part of which are nothing but uninhabited Hills of Sand; but the Inhabitants inform me, that the daily Incurfions of the Sea-Sand impaired the Number both of the Islands and the Inhabitants, and that the Isles of one *Atollon* were formerly one continued Track of Land. It is plain, that the Seas which divide the Isles of one *Atollon* are so shallow, that, at Low-water one might easily wade over, were it not that the Bottom is rocky and sharp, and apt to wound the Feet, and that those Seas are pestered with Fish called *Palmores*, which break Mens Legs and Arms, and devour 'em. Another great Inconvenience that attends the going into the Water, proceeds from a rough, sharp, porous, hard and ponderous sort of Substance, not unlike white Coral, which they call *Aquicy*, and make use of in boiling it with Cocoa Water, for 'tis that which forms their Sugar or Honey. A great Part of these Islands are uninhabited, and produce nothing but Trees and Grabs, others are only a moveable Sand, without any Green, and others again are overflowed at high Water.

The rest are covered all over with great Crabs called *Coccone*, and Cray-fish, or else with the Fowls called *Penguins*, inasmuch, that one cannot place a Foot in any part without treading upon their Eggs and young ones, or upon the old Birds themselves, which do not fly far upon the Approach of a Man. This Fowl is as big as a *Pid-*

geon, with black and white Feathers, and is excellent Meat, tho' the Natives do not eat it. The uninhabited Islands appear at a Distance as if they were covered with Snow; for the Sand, which is as fine as that of an Hour-Glass, is extrem white, and withal so very hot, to hatch the Penguins Eggs. These sandy Islands afford little or no fresh Water, but the covered Islands, which are inhabited or not, enjoy that Benefit, abating for a few, the Inhabitants of which are forced to have recourse to the neighbouring Islands for Water, and make of certain Inventions for the receiving of Rain Water.

The Water of some Islands is better than that of others: their Well-Water is neither very sweet, nor very wholesome, but it is very plentiful, and very fresh, even within four Paces of the Sea-Side; for they dig not above three or four Feet, and where the Sea makes frequent inundations. This Water is very hot in the Night-Time, and extrem cold in the Day, especially about Noon. To return to the thirteen *Atollons*, the first beginning from the North, is called *Tilla Don Azais*, i. e. the High Point; in ' lies the Head or Cape of the same Name, call'd by the *Portugueze*, *Cabeza des las ilhas*, situated in N. L. The second is called *Milla cone Madons*, the third *Paisypolo*, the fourth *Malafmadon*, the fifth *Aratellon*, the sixth *Male Atellon*, in which lies *Mole*, the head Island; the seventh *Maldices*; the eighth *Poulfifloce*, the ninth *Milique*, the tenth *Nilandus*, the eleventh *Colmadon*, the twelfth *Aleumatis*, the thirteenth *Seuagen*, the fourteenth *Atollon*, the fifteenth *Polo Malubque*; these two being red, and but one, reason of their Smallness. Each *Atollon* is separated from the adjacent Provinces by an Arm of the Sea, which is in some Places narrow, and in others broad. There are only four of these limiting Channels, that being much broader than the rest, are navigable by great Ships, but not without Danger, especially in the Night, by reason of their Flats and Rocks, which are mark'd very exactly in some Sea Charts, which I saw in that Country. The Natives have a wonderful Dexterity in avoiding these dangerous Places: I have seen them sail so neatly, as to run upon rocks on both Sides, without any Damage.

Both the Rich and the Poor are nurs'd to the Sea from their Infancy, and fear not to encounter the most turbulent and foaming Seas, in little Boats and Barks, the Number of which is unaccountable; for the poorest Man that has one, and the Rich have several. They never sail at Night, or out of Sight of Land, unless it be when they undertake some great Voyage; and accordingly, the Provisions they have on Board, are calculated only for a Day. The greatest Part of the Islands comprehend one *Atollon*, are surrounded with a common Flat or Reef that is only passable at one or two narrow Places, which are not easily observed, and for that Reason it is necessary for them to be very expert in the Management of their Boats, or Barks, since the least Slip is certainly follow'd with Shipwreck, and the Loss of their Goods; as for their own Persons, indeed, they have no great Reason to fear for all of them swim admirably well. Notwithstanding that wonderful Dexterity in Sailing, they frequently sink their Barks, which is occasioned by the Currents called *Oyvoceus*, which run East and West, six Months upon the East Coast, and six Months upon the West; but with such Uncertainty, that the Change happens sooner or later, at one Time than another: Though the Winds are frequently fixed, as well in the Currents in East and West Quarter, yet they sometimes shift to the North and East.

8. It is to be observ'd, that the *Atollons* lie all in a Line, the End of the one facing the End of the next adjacent, and that they have two Entrances or accessible Places each Side, which is a wonderful Convenience; for if there was only one Landing place at each End, the Currents of the East and West Currents would break their Communication with one another, or, at least, it would be impossible to practise it at all Seasons. The Necessity of Landing-places in each *Atollon* will be evident, if we consider the following Instance; suppose a Landing-place on the East Coast, almost directly opposite to the Land of the other *Atollon*, and another on the West, opposite that of the adjacent *Atollon*, if the Current runs from

to West, we cannot cross directly from Entrance to Entrance, but set out from the East Coast, which is then the Head of the Current, and taking it Sideway, steer for the West Entry of the other *Atollon*. In order to return; we set out from the East Entrance, and over-thwarting the Current, make to the West Entry of the other *Atollon*. When the Current changes its Course, we observed the same Contrivance in setting out from the Head of the Current, and entering the other *Atollon* at the Place which lies under the Current of these Entrances. Some are broad; and some narrow, but the widest is not above two hundred Paces over, and some of them are less than thirty; each Entrance hath an Island on each Side, and if Cannon were planted on these Islands, it would be easy to hinder any Ships to enter.

Of the Channels that part the *Atollons*; there are only four broad ones, which are navigable by great Ships, and frequently visited by Strangers, when the Currents carry them in against their Will. To begin from the North Side, the first of the four washes the *Atollon* called *Malos Madou*, and it was in this that we were cast away. The second, called *Caridou*, has *Male*, the greatest of all these Islands in the middle of it. The third, called *Adou*, lies to the South of *Male*. The fourth, called *Souadon*, lies directly under the equinoctial Line, and in regard that it is the broadest of them all, being twenty Leagues over, the Natives don't sail upon it without a Compass, though they never use any in the Channels. Besides these, there is a narrow Channel, which separates *Male* and *Pouliston*, in which the Sea appears as black as Ink, but the Water taken into a Vessel, looks like other Water. That Sea boils like Water over a Fire. It swells into great black Surges; but is not moved from one Side to the other, which renders it very terrible. The *Maldives* lie so near the Equinoctial, on both Sides; that their Climate is extremely hot. Their Day and Night are always equal, and their Nights are very cool and dewy, which renders the Heat of the Sun more tolerable, and nourishes exceedingly their Herbs and Trees. Their Winter commences in *April*, and continues till *October*, at which Time the Summer begins, and lasts likewise six Months. In Winter they have perpetual Rains; but no Frost, and the westerly Winds are very boisterous. In Summer their Winds are easterly, with an excessive Heat and no Rain.

9. It is said, that the *Maldives* were in former Times peopled by the *Cingala*, or Inhabitants of *Ceylon*; but it is observable, that the *Cingala* are black and ugly, whereas the Inhabitants of the *Maldives* are handsome, well made, and of an Olive Complexion; though after all, 'tis possible, that the Climate, and Length of Time may have altered the Complexion and Shape to their Advantage; besides; that a great many Foreigners being cast away on their Coast, are blended with them by Intermarriages, and by this Means it comes, that those who live about *Male*, between it and the North Cape, where most Shipwrecks happen, are more polished and civilized than those on the South Coast, who are not only blacker, but much coarser in their Language, Customs, and the Shape of the Body; nay, many of their Women, especially such as are poor, go naked, with only a small Cover for their Privities. This North Side of the Island is not only richer, and more civilized, as being the common Passage for all Ships, but the Seat of all the Nobility and Men of Fortune, and when the King punishes a Criminal with Banishment, he only sends him to the South Parts. The Soldiers are all raised in the North Parts; but after all this Difference, I must say, that the Inhabitants of the South Parts are naturally as lively and quick-witted as those of the North. In general, the *Maldivians* are very ingenious, they apply themselves with great Industry and Success to all sorts of Manufactures, and also to Letters and Sciences, after this Manner, especially to Astrology, which they hold in great Esteem. They are a very wise, cautious People, and very sharp in their Merchandize and Way of Living; they are brave, and well skilled in Arms, and their Policy is very regular.

Their Women are very handsome, abating for their Olive Colour, and some of them as white as the *Eurapeans*. Their Hair is black, which is reckoned a great Or-

namment, and in order to turn it extremely black, several Women keep their Daughters Heads shaved till they are eight or nine Years old, leaving only a little Hair on the Forehead, to distinguish them from Boys, who have none at all: I have seen some Children have half flaxen Hair, which has turned very black by being shaved every eight Days. Both Sexes affect black Hair, but the Women take a Pride in having theirs thick and long, which they wash and dress very frequently. They wash their Head and Hair with Water and Lye made for that Purpose; after which their Hair hangs dishevel'd in the Wind, till it dries, and then they rub and perfume it with an odoriferous Oil, which renders their Head always moist and oily. Both Sexes anoint their Bodies after washing; but the Women wash their Bodies more than once in a Day, their Hair is not washed above twice or thrice a Week. They may wash their Hair when they please, but they are obliged to do it on *Fridays*, which is their Sabbath for the Women, and Festivals for the Men. After the Women have washed, rubbed and perfumed, they stretch all the Hair from before backwards, without leaving so much as one straggling Hair, and tie it behind, in a great Tuft, or Knor, which they enlarge by a Perriwig of Man's Hair, made in the Form of a Horse's Tail; nay, some of them have two such Perriwigs, besides which, they add odoriferous Flowers.

As for the Men, none but Gentlemen, and the King's Officers and Soldiers, are allowed to wear long Hair, and these, indeed, wash, perfume, and dress their Hair after the same Manner with the Women, excepting that they make the Tuft not behind, but on the Crown of the Head, or on one Side, and they wear no Perriwigs. Their Hair grows much faster than ours, by reason partly of the washing and perfuming, and partly of the excessive Heat which occasions thick and strong Hair, and for the same Reason their Hair is black. They have no Combs, but they have Scissors of cast Copper, and copper Looking-Glasses; which they make use of in shaving themselves, with steel Razors made after another Fashion than ours. There are no Barbers in the Country, every one therefore shaves himself, excepting the King, and some Lords; who are served by Persons that are proud of that Honour, without any Prospect of Gain; so that in all those Islands both Men and Women are provided with Utensils for shaving, and are very nice in taking off their Hair, when it begins to be uneasy to them.

The Girls have their Heads shaved once a Week, from their Infancy to the eighth Year of their Age, at which Time their Hair is suffered to grow to its full Length and Dress, for then is the Season here of looking out for Husbands. Before that Age they have no Cloaths, but only a Cloth that hangs down from the Middle to the Knees; and the Occasion of their being clothed afterwards proceeds from the rising of their Breasts, before which, they are looked upon as Children, and 'tis not allowable to discourse to them of Love Matters. The Cloth hangs down from their Middle to the Knees as soon as they begin to go, but the Boys have none till they are seven Years old and circumcised. Their Beards are of two Sorts; Ecclesiastical Persons, and those who have performed Pilgrimage to *Mecca*, wear long Beards, shaving under the Throat, and upon the upper and lower Lips, all round their Mouth. The other sort of People have little Beards, without Mustaches, being shaved round the Mouth, and under the Chin. They are very careful in saving the Parings of their Nails, and the Shavings of their Hair, which they wrap up in Cotton, and bury in their Church-Yards, with a little Water, from a Notion, that they being Parts of the Body, require Interment as well as the Whole, and for that Reason many of them chose to be shaved in the Poreh of the Temples, for they would not for any thing in the World either trample upon these Excrements, or see them thrown in the Fire.

10. In order to give a particular Description of the *Maldives*, we shall begin with their Fertility. It produces great Plenty of *Millet*, called there *Pava*, and another little Grain called *Brinly*, which resembles *Millet*, but is black like Rape-seed. These two sorts of Grain they sow, and reap twice a Year; they make a sort of Meal of them, of

which they make Pottage, with Milk, Cocoa, Honey, as well as Cakes and Fritters. The Country produces likewise several sorts of Roots, which the Inhabitants feed upon, particularly one called *Nelipou*, which grows wild, being round, and as big as one's two Fists. They bruise it upon a rough Stone, and then expose it to the Sun, upon which it turns to a white sort of Meal that eats admirably well in Pottage or Cakes, only it must be very fresh, or it is apt to lie heavy upon the Stomach. Another Root that grows there plentifully, and eats well, is called *Alas*, which must be sown and cultivated, and is commonly as big as a Man's Thigh. Some of these sorts of Roots are red, and others white; the Inhabitants boil them several Ways, and make them the most of their Food, keeping them for a whole Year, for they come to Maturity only once a Year, *viz.* in *September*. They have no Rice but what is exported from the Continent; however they have it pretty cheap, and use much thereof, either boiling it with Water or mix'd with Spices, boiled with Milk and Sugar of Cochoas, with Pullets, Fish, or turned into Meal after drying and bruising, and then made into Cakes and Fritters, with Eggs, Honey, Milk, and the Butter of Cochoas.

This Country is likewise furnished with Herbs and Trees, some of which bear Fruit, and others not; though the Natives eat their Leaves, they being sweet and well tasted. As for Fruit, they have infinite Plenty of Citrons, Pomegranates, and Oranges of *Bananas*, called by the *Portuguese* *Indes* Figs, and by the *Maldives* *Quella*, which is a large, delicious, and nourishing Fruit, inasmuch that it serves the Children instead of Broth. The most profitable Tree, is the Cocoa, or *Indian* Fruit, called by them *Cra*, which is more plentiful in the *Maldives* than any other Part of the World; so that the Inhabitants know how to manage it better than others. This Tree alone might supply all the Necessaries of Life, for it affords Wine, Honey, Sugar, Milk, and Butter; besides that its Kernel may be eat as Bread, of which they have none in that Country. Further, most of their Utensils are made of the Wood, Bark, Leaves, and Nut-shells of this Tree. In fine, the whole Country is shaded, and refreshed with Trees, many of which serve for no other Use but burning; so that there is no Occasion to buy Fire-wood. Besides that, there are whole Islands covered with Trees, from whence they fetch what Fire-wood they please.

It is very remarkable, that though all the thirteen *Atollens* are in the same Climate, and all very fertile, yet they produce such different Commodities that one cannot live without another; for what is plentiful in one, is scarce in another, or, at least, is not so good. This occasions a Necessity of mutual Commerce; and the Inhabitants have likewise so divided themselves, that one Province cannot live without another; for the Weavers repair all to one Island, the Goldsmiths to another, and so on. Now, to render the Communication easy, these Artificers have little Boats with Cheeks, where they work, sleep, and eat, while they are sailing from one Island to another to vend their Manufactures; and sometimes they are a Year out before they return to their fixed Habitation. As for Animals, they have prodigious Numbers of wild Pigeons, which are sold for a Penny a Piece, and the same Price will fetch three Dozen of Eggs; next to Fish, this is the most of their Food. They have a great Plenty of Wild-Pigeons, Ducks, Rayls, Birds resembling Sparrow-Hawks, black and grey Mufkets, living not upon Prey, but upon Fruit, &c. As for domestick Fowl they have none. The Crows are here very troublesome, for they are so numerous and so bold, as to take Things out of their very Houses before the Peoples Faces. Their Bats are as big as Ravens, and their Owls, or Mufkets, bite more severely than in any other Part of the *Indies*.

But they are most incommoded by Rats, Dormice, *Pic* nures, and other sorts of Vermin, which over-run all their Houses, and spoil their Grain, Provisions, Fruit, and perishable Commodities. To obviate this Inconvenience, they build Garretts and Warehouses on Piles, or Stakes, in the Sea, at the Distance of two or three hundred Paces from the Land, and most of the King's Magazines are built after the same Manner. They have no poisonous Animals, except Snakes, of which a very dangerous kind

frequent the Sea. Cats, Pole-cats, and Ferrits, are likewise found there; but there are no great Beasts, either wild or tame, save a few Sheep, and some three or four hundred Cows and Bulls in the Island of *Male*, which belong to the King, and of which they never eat but Festival-Days, and solemn Occasions, for these Kine are imported from the Continent. They have no Dogs, as they abhor them so much, that when the King of *Peragal* sent two as a Present to the King, he ordered them to be drowned immediately. The Sea affords Plenty of sorts of Fish, especially between the *Atollens*, where the Sea is shallow and calm; the Fishery is the most constant Exercise of the Natives, who feed mostly upon Fish when fresh, with Rice, or other Meat fried with the Oil of Cochoas, or boiled in Salt-water, and dried for keeping. They send every Day Ships loaded with Fish for *Sumatra*, *Achen*, and other Places. Many of the Fishermen have lost Arms and Legs that have been bit off by a sort of great Fish frequent in those Seas. This great Plenty of all Necessaries causes an easy Purchase; four hundred Cochoas cost but a *Larin*, which is Eight-pence; the same Price will purchase five hundred Bananas, a dozen Fowls, or three hundred Weight of Roots, or a hundred large Fish, &c.

In fine, there is no Part of the *Indes* where a Stranger can get an Estate so soon as here, for it lies convenient for Trade, and requires but an inconsiderable Charge-Maintenance. The Natives, it's true, don't grow rich, and that I take to proceed from their cheap and easy Living, which encourages them to Negligence and Idleness. *Male*, the principal Island, gives Name to the rest, *Dives* signifying a Cluster of little Islands. This Island stands almost in the Middle, and is one League and a half in Circumference; it is the most fertile of them, the Staple-port and Magazine of all the rest, and the Residence of the King and the Court. By this Means it is better peopled, but, at the same time, it is not so healthy, for which the Natives give this Reason, *viz.* The King and the Court having resided there Time out of Mind, and the Corps of all that died being interred a-part, the whole Surface of the Island becomes a continual Series of Graves, from whence the perpendicular Rays of the Sun extract pernicious Vapours; and accordingly the Weather is here so bad, that the King and Persons of great Quality tend for Water to other Islands.

In all the Islands, even in *Male* itself, there is no Thing as enclosed Towns, but the Houses lie scattered here and there, though not without some Order and Distinction of Streets. The Common-People's Houses are built of Cochoa-wood, and covered with Cochoa-leaves sewed double one within another. Persons of Quality and Fortune have Houses built of Stone taken out of, and raised under the Flats and Rocks. This sort of Stone is very fine and white, and somewhat hard to cut, but when it is wet with Rain, or fresh Water, it loses its Hardness, and last, becomes all over black. The Manner of taking them out of the Sea is very remarkable. There grows that Country a sort of Tree called *Candou*, which it is as our Walnut-Tree, and resembles the *Aspin* in its shining Leaves and Whiteness, but is extremely soft, and bears no Fruit, and is not proper for burning; when it is cut they saw it into Planks like our Fir-Deals. This Wood is lighter than Cork. This premised, we come to show how they draw out the Stone: Being the expertest Swimmers that can be, they dive under Water, and having put upon a Stone fit for their Purpose, fasten a great Cable to it, then they take a Piece of the *Candou*-wood, and boring it, run it along the Cable quite up to the Stone; after this, they run on such a Number of Pieces as will have Occasion for, till the light and floating Wood is up along with it a Stone of 10000 Pound Weight, was by this Contrivance the Natives took up the Cables and Anchors of our Ship that was cast away, and I was Eye-witness to their clearing, by the same means, the Space of fifteen Days, the Harbour of *Male*, which was choaked with great Rocks, so much that no Ships could come in. When the *Candou* wood is once taken up, it must be dried in the Sun before it be used, or else it will not float.

Upon other Occasions they take five or six large Pieces of Wood, and having ranged them all in a Line, raise Planks on them of the same Wood, to sit upon, and so pass from one Island to another: And it is by this Contrivance they generally manage their Fishery. In the Canals that run between the *Atollons* one Man can work these Instruments of Navigation, though they are not proper for the Sea; for they know how to trim their Deal-seats so well, that there is no fear of overfetting; and if that happens, their Plank will always swim: All the Danger lies in disjoining the Pieces; and this sort of Float is called *Candou patis*, from the Wood of which it consists. The Candou-tree has yet another strange Property, namely, that when one Piece of it is struck against another they will extract Fire; and this serves them in the Place of Tinder-boxes.

13. Our Method directs us, in the next Place, to speak of their Language, which lies in two Channels; the first is the *Maldivian*, properly so called, which is very copious; the second is the *Arabick*, of the same Use as *Latin* in a Popish Country, being the Language of their devout Addresses. I pass over the *Cambaya*, *Guzaretta*, and *Portuguze* Tongues, which are derived from their Commerce, and shall only take Notice that, in the Southern Parts they speak a coarse unpolite Language, which, after all, is the common Tongue of these Islands. Their Religion and Ceremonies come next to be considered. All the Inhabitants are *Mohammedans*, and the greatest Part of the Foreigners, *viz. Arabians, Malabars, and Sumarrans*, are the same. Their Temples, or Moschs, are built of good Stone, well cemented, and have a thick Wall. They stand in the Middle of a square walled Inclosure, where they bury their Dead, except those who desire a separate Sepulchre. Their Temples are square, and face the West, as pointing to *Mohammed's* Tomb. They have three Doors, each of which is faced by a broad Wall with Steps, the Bottom and Sides of which are lined with polished and flat Stones, the Floor of the Temple being covered with Mats and Tapestry; whereas the Church-Yard is nothing but Sand. Their Temples are kept so clean, that if they want to spit or blow their Nose, they must either do it in their Handkerchief or get out of Doors.

The Roof or Ceiling of the Temples is of Wood, admirably well polished, and the Walls are waincoted, both of them being firmly joined without Nails, Pegs, or any other visible Artifice. Upon the Walls of the Temples we met with large Tables of Stone, or of Wood, with *Arabick* Inscriptions. They have a particular Place for the King and his Court, and Galleries for the Guards, and separate Apartments for certain Dignities, Qualities, and Ages, inasmuch that any Person who takes up an improper Place, is fined accordingly. They constantly burn Lamps, for which End certain low Trees are consecrated. Some of the Islands have nine or ten Temples; but that in which they solemnize a general Festival is built and supported at the common Charge, under the Name of *Ou coura Mesquite*: Each Mosche has its Priest called *Moudin*, and each Island that has forty Persons above the 15th Year of their King's Age is dignified with a *Catibe* or Curate, who acts as Principal at all publick Exercises, and governs the interior Priests. He pronounces the publick Prayers, and by Sermons and Exhortations explains and recommends the Law of *Mohammed*; under him the *Moudins* teach Children to read and write their Mother Tongue, and that of *Arsona*, for which Service their Parents give them a Reward. Every Day in the Week all above fifteen Years of Age repair, before Break of Day, to the Temple, and declare their Creed, *viz. That the World is flat, and not round, that 'tis surrounded with a Wall of Brass, which prevents it being drowned in the Waters that encompass it: That the Devil, the general Enemy of Mankind, endeavours every Night to break through and undermine this Wall, and that he is not much short of compassing his End when the Day-light arrives.* Upon this Belief they all join in Prayer, at the Break of Day, to prevent the Destruction of the World, which, as they believe, would otherwise ensue.

They repair to the Temple four Times a Day besides, at Noon, at Three o'Clock in the Afternoon, at

Sun-set, and at Ten o'Clock at Night, remaining each Time half an Hour. Those that have no mind to go to Church may say their Prayers at home, or none at all if they please; but if it be known that any Person neglects their Duty of Prayer altogether, no body will eat or converse with him; from whence it comes to pass, that almost all of them, whether Tradefmen or others, spend a great Part of their Time in publick Service. They make use of Beads as well as the *Papists*; but they have no Crosses. Before they enter the Temple they wash their Feet, Hands, Ears, Mouth and Eyes, observing at the same time certain Ceremonies, and pronouncing Prayers suitable to the Sin they repent of. They are so scrupulous, that no Temptation in the World can oblige them to forbear this solemn way of washing, upon the Apprehension that it certainly purges them of all Sin and Pollution. The greatest Indecency of their Worship is, that they wash and bathe publickly and promiscuously, and offer their penitential Prayers with a loud Voice, and so discover to all the World all the secret Transactions of their Lives. At this rate all the secret Adventures of Man and Wife are laid open to the World by the publick Prayers of both Parties; for the Women pray aloud as well as the Men, only they do it in their Houses, in regard that they never go to Church.

14. The Male Children are circumcised when they are seven Years of Age, and upon that Occasion the Parents and Relations divert themselves with Mufick and publick Feasting fourteen Days. They have particular Operators for Circumcisions, who apply themselves to nothing else, and the Ceremony is after this manner: For six or seven Hours before the Circumcision the Child is bathed in the Sea, in order to make the Yard shrink, and to render the Skin soft and tender. When the Hour comes the Child is brought to a Lodge built on purpose, and held by two or three *Moudins* or Priests, who in the mean time chant Verses and Prayers suitable to the Occasion. Then the Operator having drawn over the Peperce, and tied it with a String, cuts it with a Razor; after which he heals it in fifteen Days; before Circumcision they alledge that the Child is innocent, and cannot sin, and for the same Reason they do not cover the Privities of the uncircumcised Children. As for the Girls, their Circumcision consists in drawing two or three Drops of Blood, when they are two Years of Age; but 'tis attended with no Solemnity. When the Children are grown up, they pay a profound Deference to the Operator that circumcised them, and call him Master.

They celebrate several Festivals in the Course of the Year, particularly every *Friday* with them is a Day of Feasting, at which all the Males above fifteen Years of Age are present, but no Females. On the preceding Eve they pray in their Houses, some for their Health, others for the dead, and for that end send for the Priests to their Houses, where an Entertainment is provided, and as the Priests have no Stomach for eating; they choose rather to abstain, for if they come they must eat, though against their Appetite. On *Friday* Morning the publick Crier goes round the Island, with a sort of Bell in his Hand, and a Hammer of Wood to beat it withal: He is assisted by three Trumpeters, who sound often to give the People notice of their Duty. Upon this Warning the People throw aside all Work for that Day, and after washing and bathing, and putting on their best Cloaths, repair to the Temple. In the mean time the King's Musicians play before his Palace on divers Instruments, and soon after the King's four Priests, who are Men of Quality and Learning, and never assist but at publick Solemnities, ascend a high Stone Edifice adjoining to the Temple, where they clap their Hands upon their Ears, and with a loud and fearful Voice cry thrice, *Alla, Alla, aiguebur!* i. e. Great God, and then they add something of *Mohammed*. This done, they repair to the King's Palace, and pronounce the same Words after the same manner. Upon which, if the King has a Mind to be seen, as he commonly is, he sends a Carpet of Silk to be spread on the Place where he means to sit. Then the *Moudins* do the like at the *Catibe's* House, and he comes and waits upon the King, who walks in great Magnificence to the Temple, his Head being covered with a white Veil above a great Turban, so that he cannot see, but is led by one of the *Moudins*. The King comes last to the Church, and immediately says his Prayers.

Prayers; after which the Catibe being mounted on a raised Place at one end of the Temple, takes a naked Sword in his Hand with the Point downward, and flourishing it about, recites his Prayers. In the mean time the People pray without ceasing, putting themselves in various Postures, and observing several apish Gestures.

The Catibe has a new Prayer for every *Friday* in the Year, and when that Year is expired, makes use of the same Prayers for the next. He repeats all without Book, and if he happens to be out in one Word, Syllable, or Letter, the Moudins reprimand him publicly, and the Feast is thought to be ineffectual. This Service lasts about two Hours, and after it is over, the People saluting one another, and the King returning in great State to his Palace, entertains 'em at his own Expence. They observe the like Solemnity on the Day of every new Moon, and rejoice when they see it. Upon this Occasion they clean their Houses, Courts and Streets, garnishing the Entries of the Churches, and the Gates of their Houses with Cocoa Shells cut in the middle, and filled with white Sand, and burning Coals, upon which they burn almost all Night sweet-scented Gums and Woods, at the same time the Insides of their Houses, their Beds, &c. are perfumed after the same manner.

Though the *Maldians* celebrate every new Moon, yet they observe four beyond the rest. Particularly in *December*, or thereabouts, they have a Fast called *Ramedan*, which commences at the new Moon, and lasts till the next new Moon. They take their Measures not from the real Change, but from the Appearance of the new Moon; by which means it so falls out, that some Islands begin the Fast sooner than others. The first Night of the *Ramedan* Feast the Men and Women visit one another apart, and divert themselves with Feasting, Dancing, &c. till 'tis near Day, having prepared themselves for eating by fasting the preceding Day, in which Custom they are so superstitious, that for that Day they will not only avoid the tasting of any, but even the washing of their Mouth, or putting their Fingers therein, or swallowing their Spittle.

The Prohibition of swallowing their Spittle puts them to a great Inconvenience when they are in the Church, because it is not allowed to spit there, and so upon every Turn they are forced to run out of Doors. Nay, such is their Superstition upon the Feast-day, that the Men, who are allowed to bathe, are prohibited to plunge their Heads in the Water, lest some Drop of it should enter their Mouth or Ears; and the Women are forbid to bathe at all. Half an Hour before Sun-set, all above fifteen Years of Age repair to the Temple, and in the Space of that half Hour cleanse their Mouths, and pick their Teeth very nicely, being furnished by the Moudins with Pick-tooths, and other cleaning Instruments made of Cocoa-wood. This done, the Moudin makes his Cry three times, and enters the Temple at the Head of the People, who then say their Prayers, the Women at the same time being employed in saying theirs at home. When that Service is over they feast and make merry with one another. During the *Ramedan* the King entertains all the People at several times, inviting only Persons of the same Quality at a Time; for they are such religious Observers of their Quality, that they will not eat with any Person of a different Rank. The Nobles, &c. entertain their Friends in like manner; and thus do the Men and Boys feast; but the Women, who are not allowed to go to these Feasts, send only Presents at Night one to another.

The Women bathe themselves in the Evening, at which Time the Men are excused to avoid Bathing; during the whole Courte of the *Ramedan* they fast after the above-mentioned manner in the Day time, and avoid Sin and Pollution as much as they can. If any one breaks any one of the Fast-laws, he is obliged to fast as many more after the End of the *Ramedan*. In this Month no body will work for they are ever so poor. The *Pandiare* preaches every Day at Three in the Afternoon in the King's Palace, or in the Church, or in his own House. After the Sermon is over they divert themselves with the Exercise of Arms, and several sorts of Plays, particularly at Foot-ball. At the same time the Women and Girls visit one another, and have particular sorts of Plays and Diversions suitable to their Sex. Intuig's is no other in this Month than in any other, and

the Courtship consists in sending to one another Songs and Verses, inscribed with Bodkins on Cocoa Leaves, which are as white as Paper.

The Youths likewise present their Mistresses with lands of sweet-smelling Flowers, and receive in return Presents of Betel nicely dressed. In fine, they take all possible Measures to heighten their Mirth and Diversion. Three Days before it ends the Bellman and the Trumpet go round the Island, requiring all the Inhabitants, whether Men or Boys, Women or Girls, to send their Names in Writing to the Naybo of their respective *Attollen*, and to pay an Offering of half a Larrin a Head, which the People pay very willingly as a Tribute to God and *Mohammed*. For they imagine that without the paying of that Tax their Fasting would not avail them. In this Tax the Parents pay for the unmarried Children, and for their Servants and Slaves; and if any poor Person has not the Money to lay down, the King, or any rich Person, pays for them very willingly. The Money arising from this Tax is laid in the Hands of four Receivers, one on the Behalf of the King, a second for the Clergy, a third for the new Converts, and a fourth for the Poor. One-third of it goes to Ecclesiastical Persons, another to the Profetes, and the remaining third to the Poor. About *August* and *September* they have a Solemnity of two Days, in which they give about to one another-boiled Wine, with Honey and Curd Milk. This Festival is said to take its Rise from a Miracle that *Mohammed* wrought on that Day.

15. There remains yet another very solemn Night-festival called *Moulude*, which happens about the Month of *October*, being the Night on which *Mohammed* died. In this Occasion they have a large House, or Hall of Wood in several Parts of the Island, which is hung within with the finest and richest Tapestry. The Floor of which is covered with white Sand, and Mats above it, and the Ceiling adorned with white Cotton Cloth, supported with long Strings, that run along it like Stipes. In this great Hall hang up so many Lamps, that 'tis as light as Day, and the Air is filled with the Smell and Smoke of the Perfumes that they burn, which is very fragrant. In the midst of the Hall there is a Table covered with several sorts of Meat and mixed Liquors. The Women do not assist at this Solemnity, but the Men repair there about eight o'Clock at Night, and sit down in Order according to their respective Stations, there being Officers appointed to rank them. All the Night long the Priests and other Ecclesiastical Persons sing what they call the *Psalm* of *David*. When Midnight approaches, the whole Assembly fall down flat upon the Ground, as in an Extasy, and continue in that Posture for some time; after which the Priests and the Catibes start up at a sudden, and all the following their Examples, skip about, and leap upon one another as if they were mad.

The People are served with Betel well dressed, and Drink, by fifty Persons chosen into that Office, which is reckoned very honourable; when the Night is almost over the Priests give over singing, and say Prayers; after which they all go to the Middle of the Hall, where the King stands, and every one takes a Plate of Meat, and some matted Liquors, which they carry home with them in great esteem very much. After their religious Rites, it is proper to subjoin the Ceremonies of Marriage and Funerals. Upon a Design of Marriage they address themselves to the *Pandiare* or Naybes, who, after being sufficiently informed that things really are as they are represented, takes the Hand of the Bride, and asks him if he is willing to take the Woman on the Conditions proposed, and the Woman always being absent, he likewise questions her Parents for their Consent. If they all agree he marries them, and the By-standers to witness their Consent. Then the Company waits upon the Woman home, and several Persons visit her. All the Visitors being entertained with Feasting, Musick, Dancing, &c. the new-married Couple makes Presents to the King, and the Great Lords, and the Bride pays the like Compliments to the Queen, and other Ladies; both make Presents likewise to the Priest; but when the King is married, he does not receive Presents from all his Subjects, viz. Cloth, Turbans, Victuals, Fruit, Flowers, &c. but these Presents, which arise to a great Value, being

new-married Queen. A Man may have three Wives if he can maintain them, but not more; and if all three live in one Island, he is obliged by Law to bestow as many Nights upon one as upon the other. Tho' after all this Law is not observed, and indeed it is a hard Law in that Country, where the Women are so lascivious.

The Bridegroom receives no Dowry with his Wife, and is obliged, not only to be at the Charge of the nuptial Solemnity, and to maintain her, but to settle upon her a Jointure equal to what her Mother and other Ancestors had. They are so nice on this last Condition, that if the Priest apprehends the Husband cannot afford such a Jointure, he refuses to marry them, notwithstanding both Parties require it; but after all, the Bride may renounce either whole, or part of the Jointure, after Marriage, and indeed, that is frequently practised. Brothers and Sisters, first Cousins, and those who by way of Friendship and Intimacy have used to call one another by the Names of Son or Daughter, Father or Mother, Brother or Sister, these, I say, are prohibited to marry. The Males may marry when they will, but a female Orphan cannot marry till she is fifteen Years of Age; indeed, if her Father be alive (for the Mother has no Power) he marries her at ten or eleven Years of Age, and that to the first Suitor, whether old or young, provided his Quality is in some Measure suitable to hers; for they reckon it a great Sin to keep the Daughters unmarried. A Man may turn away his Wife, but unless she consents to the Separation, she may demand her Jointure: Tho' after all, that Demand is seldom made, as being reckoned a mean Action, and a Sign that the Woman fears that her Merit will never procure her another Husband.

On the other Hand, the Woman cannot part from the Husband without his Consent. This sort of Divorce, which is very frequent, must be attested by Witnesses, or they cannot have the Benefit of a second Marriage. The divorced Parties frequently repent of their Separation, and marry again a second, third, or fourth Time; but after three Divorces, such re-marriages are not allowed; tho' such is the Levity of the People, that they frequently desire them, and in order to elude the Law, they have a common Trick of getting some profligate Fellow to marry the divorced Woman, and lie with her one Night without touching her; after which he quits her before Witnesses, and to her is married again to her former Husband. Such is the Frequency of those Divorces, that a Man shall have an hundred Wives, and the Woman look upon the Multitude of separated Husbands as a Point which entitles them to future Marriages. When a Woman is separated from her Husband by Death, she must mourn four Months and ten Days before she can marry again; and if the Separation is accomplished by Divorce, she must remain three Months single before she offers to marry. This Caution is used for fear she should prove with Child by her former Husband.

16. Their funeral Ceremonies are superstitious to a great Degree; in the first Place, the Corps is washed by Persons of the same Sex, who buy that Office of the King, and are paid for their Service; then they are wrapped up in Cotton, and covered with fine white Cotton Cloth, which goes afterwards to the Priest, the Right-hand of the deceased Person being laid upon his Ear, and the Left upon his Thigh. This done, the Corps is laid upon the Right-side in a Coffin of *Candou* Wood, and carried to the Burying-place, by six Relations and Friends, attended by the Women-washers, who cry and howl most hideously. Every Man in his Life-time provides for himself a Burying-place, and all the other Necessaries; nay, they are so superstitious, that they will rather starve than touch the Money they have laid up for that Purpose. Besides the six principal Mourners, the other Relations and Neighbours are present without Invitation, and upon the March from the House of the deceased Person to the Grave, they scatter Shells for the Benefit of the Poor, to whom they likewise distribute Sacks of Rice and Millet, at the same Time they give to the Priest Pieces of Gold and Silver, the Number of which is proportionable to the Estate of the deceased Person, and these Pieces are distributed by the Priest to those who have assisted in praying for the

NUMB. 48.

deceased Person. The Priests sing continually during the whole Course of the Ceremony, and in the Procession, a Person of Quality sprinkles the Assistants with Water made of sweet Flowers.

The Grave is covered with a large Piece of Silk, or Cotton, which, on the Interment, goes to the Priests of the Temple. When the Corps is laid in the Grave, they turn the Face of the deceased Person to the Quarter that faces *Mohammed's* Tomb, and then fill up the Grave with fine white Sand, sprinkling it with Water. When the Ceremony is over, the Relations entertain all the Company with Victuals, and the three following *Fridays* they pray over the Grave, where the Priests sing, eat and pray every Day, till the third *Friday* passes, after which, a general Feast is prepared for the Relations, Friends, and Priests, who pretend, that the Soul of the deceased Person is then conveyed to Paradise. This Feast is prepared every Year, and on *All-Souls* Day they throw fresh white Sand on the Grave, and perfume it with burnt Incense: The Grave is surrounded with woollen Pails, for they reckon it a great Sin to walk over it. They never bury two Corps in the same Place; for they have such a Reverence for the Bones of the Dead, that even the Priests dare not touch them. If a great Lord dies, the Priests sing for him a whole Year, and are entertained every Day with Dishes of Meat and Betel; but if a King or Queen dies, the Ceremony is continued to the Death of the next Successor.

In this Country, the Mourners make no Alteration in their Habit, only they go bare-headed to the Grave, and continue so for a few Days after the Interment. Those who die fighting with Persons of a contrary Religion are buried upon the Spot where they fall, without any Ceremony; and in regard that they are accounted Holy and Happy, neither the Priests, nor their Friends, pray for them. They never transport Corps from one Island to another, and even the King himself is buried where he happens to die. If any Person dies at Sea, they wash the Corps, and put them into a Coffin, which they place upon a Float of *Candou* Wood; within the Coffin they put Silver, in Proportion to his Circumstances, and a written Paper, describing his Religion, and withal, praying those who meet with the Corps to take the Money, and bury it handsomely.

17. We come next to their Apparel: The Men tie about their Privities a great Swath of Cloth, which comes round about, to prevent any Discovery in Working, or walking about; next that they have a Piece of blue, or red Cotton Cloth that reaches to their Knees, and then a larger Piece of Cotton, or Silk, reaching to their Ancles, and girded with a square Handkerchief, embroidered with Gold and Silver, which is spread upon their Backs, and tied before. Above these they have a little Piece of Party-coloured Silk, which reaches only to the middle of their Thighs. At last they gird themselves with a great fringed silk Girdle, the Ends of which hang down before; within this Girdle, on the Left-side, they keep their Money and Betel, and on the Right-side a Knife. These Knives are made of excellent Steel, the Sheaths being of Wood, and the Shafts of Fish-bone, for the Bone of a Land-creature they will not wear. The richer Sort have both their Hafts and Sheaths of wrought Silver. Every one wears a Knife, and esteems it much, as being his only Arms, for none but the King's Officers and Soldiers are allowed to wear any other. These, indeed, have a wrought Dagger at their Side, and when they walk along the Streets, a drawn Sword in one Hand, with a Buckler, or Javelin, in the other. The *Maldivians* place their chief Ornaments in their silver Chams, which hang about their Girdle, and of which every Boy or Girl has more or less, in Proportion to their Means; but 'tis only Persons of Quality and Fortune that shew them openly: In these they place their chief Treasure, and commonly they appropriate them for the Charge of their Funeral.

The common People are naked from the Girdle upwards, except on the Festival-Days, on which they wear Cotton and silk Jerkins and Waistcoats with gilt copper Buttons, the Sleeves of their Coats reach only to their Elbow; for they alledge, that if their Wrists were tied up

8 S

like ours, they could not have the free Use of their Arms. Persons of Quality commonly wear such Coats; but some have a Custom of covering their Skin from the Girdle upwards, with an odiferous Paffe, made of the Powder of Camphire and Sanders, beaten upon a smooth Stone, and incorporated with the distilled Water of sweet-scented Flowers. They make their Wives or Friends anoint their Backs, &c. with this Paint, and draw various Figures upon them; however, they must not appear with that Piece of Poppery before the King, or be seen in his Palace. The Men of this Country wear upon their Heads red or party-coloured Turbans, some of which are of Cotton, for the meaner sort of People, and others of Silk, for the Persons of Quality. The King's Officers and Soldiers have frequently embroidered Handkerchiefs on their Heads, which other Subjects are not allowed to wear. Their Feet are always naked, excepting that within Doors they use wooden Sandals, which they pull off when visited by a Person of superior Rank; often times their Legs are likewise naked.

The Women wear a Coat of Cotton, or Silk, which reaches from their Middle to their Ancles; above that they have a long Robe of Taffaty, or fine Cotton, reaching to their Feet, without any Slit besides the Neck, where it is fastened with two little gilded Buttons. This Robe they pull quite up to suckle their Children. Their Arms are loaded from their Wrist to the Elbow with Bracelets of Silver, inasmuch that sometimes they have three or four Pound of fine Silver upon them; though indeed the poor sort alloy the Silver with Brass. The Women of Quality have many Chains of Gold, or Strings with little Pieces of Gold about their Necks, and rich Pendants in their Ears. They have their Ears pierced when they are young, not only in the Cap, upon which there hangs an Ear-ring, but in twenty-four Places up the Gristle, in which they put as many gilded Nails, with precious Stones or Pearls on the Heads of them. When the Women walk in the Streets they cover their Heads with a Veil, and are very cautious in shewing their Faces before Men, though in the Presence of Women of superior Rank, they take off their Veil. They are not allowed to wear Rings, Jewels, Bracelets, or Ear-rings, or Chains of Gold, till they ask and obtain Leave of the Queen, as the Men do of the King, for the same Privilege, which commonly costs them Money.

The different Quality of the Women is distinguished by the Nature of their Ornaments: for none but Queens and Princesses are allowed to wear Gold-Bracelets, or Gold-Rings on their Arms or Legs; besides, the Queens put Rings on their Fore-fingers, the Princesses and Persons of the first Quality upon their Middle-fingers; so that all other Women have their Rings upon the Ring-finger and Little-fingers, and the Men have theirs upon their Thumb only. If a Man's Wife begins to wear richer Ornaments than she used to do in former Times, the Man's Taxes are raised, unless he be one of the King's Officers, or an Inhabitant of *Mole*, for these are exempted from all Taxes on Apparel; Foreigners and their Wives are also free, for they may wear what they please, as well as the Clergy. The Women place a great Part of Beauty in painting red the Nails of their Fingers and Toes, which they effect with the Juice of a certain Tree. In a Word, they are very handsome, and are very careful in setting themselves off with a genteel Habit, and with frequent washing and perfumeing; Generally speaking their Complexion is an Olive Colour, though some of them are brown, and others very fair.

18. The People of this Country have many peculiar Customs with reference to eating; they reckon it is very dishonourable for a Person of superior Rank to eat with his Interiors; and indeed they seldom regale one another, unless it be at solemn Festivals. If they mean to complement a Friend, they set a covered Table with several Dishes of Meat to that Friend's House, who is thereby much honoured; but, in their own Houses they are cautious of eating in the Presence of others; before and after eating, they say Prayers; and their Table is the Floor, covered with a fine Mat, upon which they sit cross-legged; they feed so nicely that they will not drop one Crumb, nay, not so much as a

Drop of Water, though they wash their Mouths before and after. Instead of Table-cloths and Napkins they use Banane-Leaves: Their Dishes are made of Earth, or of China Porcelaine, which is very common in that Country; gold or silver Vessels being prohibited by Law. They use all round like Boxes, with an earthen Cover, over which they put a Piece of Silk, for the Pismires are there numerous and troublesome that it would be impossible to keep Meat without a Cover upon it; and the People are so nice, that they will not taste any Meat that has been touched by a Fly, Pismire, or any Insect or unclean Thing, but give it to the Fowls. As for the Persons whom they look upon as the Servants of God, they feed to offer them what they will not eat themselves, and certain them with the best Victuals they have. If they see the least Crack in a Dish, they eat no more out of it, being it polluted.

All Spoon-meat they eat with their Fingers, but with so much nicety, that they let nothing fall, that being accounted a very natural Piece of Decency. If they have Occasion to cough or spit at time of eating, they rise from the Table, and walk out; they never feed themselves with their Left-hand, because they make use of it in Washing their Privities. They chuse to begin their Meals with eating a Cocoa-nut half ripe, and drinking the Water of it, which they say loosens the Body. While they eat they are all silent, and make quick Dispatch, for with them it is an unmannerly Thing to be long eating. They use for a Piece of Rudeness and In civility to drink before they have done eating, and even then they drink but once, their Water or Cocoa-wine fresh drawn. They drink of Copper-cups well wrought, with Covers to them: After eating and washing, they serve up a Plate of Betel with Sweet-meats, for the Fruit is served with the Meats. They have no set Meal-times, but eat when their Appetite provokes them; and Victuals is dressed only by Women, for the Men despise the Character of a Cook in such a Manner that they will not converse with a Man who cook, or admit him to a Share of their Exercises, being doomed by his Trade to the Company of Women.

19. When they kill a Beast for Food, they turn their Faces towards *Mohammed's* Sepulchre, and do cut it in the in a particular Place; after which they superstitiously abstain from the touching of it till it is quite dead. Their Betel must be ancient, and the Fathers of Children. When awake out of their Sleep they presently wash their Faces and Faces, and rob them with Oil, and blacken their Lids and Eye-Brows, for before the Performance of their Duty, they must not speak, or bid any one Good-morrow. They are very careful in washing and cleansing their Faces to the end that the Betel and Arca may not more easily imprint their red Colour upon them, which they are very fond of. They are always chewing Betel, and they continually carry about with them in the Place their Girdle, and mutually present to each other upon formal Salutations. They bathe before they enter the Temple, and wash with their Left-hand after natural Evacuations. When they bathe at home, they plunge their Bodies three Times under the Water; and in regard that they always bathe and pray in publick, and that the religious Crimes have peculiar Ceremonies, calculated for the expiation of every Man's Crimes or Misdemeanours are thus exposed to the publick View: When they set out upon a Voyage, they avoid touching or meeting any body, for if any one should touch them, they impute it to the Person who touched them. When they go a fishing they must salute any, or bid them Good-morrow. From Sunday till three or four a-Clock next Morning, they suffer nothing to be carried out of their Houses, but receive all that is brought in.

If they fall out one with another, they never fight if they did all the World would fall upon them. If they are crossed at Sea, they address themselves to the King of Winds, (for they do not call him a God,) and if the Island there is a desolate Bye-place, called *Saer*, those who have escaped Danger make Offerings of Boats and Ships, made on purpose, and loaded with Perfumes, Flowers, and odiferous Woods. They set fire to the Perfumes, and having let fire to the Boats and

them a-drift, so that they float up and down till they are quite burnt; and this they take for a Sacrifice that is acceptable to the King of the Winds. But when they cannot easily see their Boats and Gallies afloat, they kill Hens and Cocks, and throw them into the Sea right after the Ship they mean to sail in. They likewise pay a superstitious Dederence to the imaginary King of the Sea, and dare not spit to the Windward of the Ship, nor look behind them.

All their Boats and Ships are devoted to the Prince of the Winds and Seas, and they keep them as neat and clean as Temples. They place a wonderful Virtue in certain Characters called *Cazole*, which they wear under their Garments in little Boxes, and sometimes under their Arms, Necks, Girdles, or Feet, according to the Seat of the Distemper; for, their imaginary Virtue is said to consist in curing or easing Diseases, procuring Love, Hatred, Safety, or Danger, &c. These they buy of the Magicians, who are their only Physicians. They impute Death, Sickness, and all Affliction to the Devil; and, in order to pacify him, make him Offerings of Flowers and Banquets in a certain Place, where they let them consume, unless some poor body has the Sense to take them. With the same View they offer him Cocks and Hens, which they kill with their Faces directed towards *Mohammed's* Tomb.

20. To give a short Account of their most common Distempers: the first is a Fever, which is dangerous to Strangers. An epidemical and contagious Disease called *Cariadin*, and not unlike the Small-pox, visits them once in ten Years, and sweeps off a great many. They are liable to Disorders of the Eyes; many of them are quite blind, and most of them have little Eyes. When they have Occasion to be long in the Sun, in the Height of the Day, they sometimes lose their Sight when the Sun goes down, and for a Cure of that Infirmary, they take the Liver of a Cock beiled, and after the writing of certain Words and Charms upon it, swallow it just before Sunset; by this Remedy both I and my Companions received a considerable Benefit, though we omitted the magical Part. They are very subject to the Itch, which they heal with the Oil of Coceas, and some of them are covered all over with incurable Tetters, which is owing to their feeding mostly upon Salt-fish, and their pouring salt Water upon their salt Meat.

In the Winter, as they go barefoot, notwithstanding that it rains continually, a sort of Worm breeding in the Mud seizes upon the Soles of their Feet, and the Intervals of their Tots, where they raise Wheals that degenerate into Ulcers, so that they cannot walk; their whole Body is likewise infested with these Worms. Commonly their Spleens are large, and liable to Obstructions, and their Bellies are apt to swell, and be hard, which they believe proceeds from their unhealthy Water. In all external Inflammations, or Aches, they apply Fire, which raises a Scar, and upon that they lay Cotton steeped in Cocea-Oil, which proves very successful; their Ulcers, which happen chiefly in their Legs, are perfectly cured by the Application of Plates of Copper. As for their Wounds, they cure them very dexterously, by the Application of Ointments, without any Bandages or Tents; they are sometimes troubled with Catarrhs, Defluxions, and Pains in the Bones. Venereal Diseases are frequent among them; however, they cure them with China-wood without Sweating, and those Distempers are communicated to them from the *Europeans*. They are altogether unacquainted with the Tooth-ach, which they owe to continual chewing of Betel, for that fortifies the Gums. As soon as the Children come into the World they wash them for a considerable Space of Time, six times a Day in cold Water, and then anoint them with Oil. When they void their Excrements they wash their Privities with Water. An Mothers, even the Queens themselves, suckle their own Children, and besides the Breast-Milk, feed them with a sort of Pap made of Millet bruised, and steeped in Water, and afterwards soaked in Milk and Sugar of Coceas. Though they never fuddle their Children, yet I never saw any of them debilitated, they rock them in Hammocks of Cord, or in little Chairs hang up in the Air, which they swing to and again. At the Age of nine Months the Children begin for to go,

and when they are nine Years old they commence the Studies and Exercises of the Country.

Their Studies consist in learning to read and write, to understand the *Alcoran*, and to know their Duty. They have three sorts of Letters, viz. the *Arabic*, the *Maldivan*, and a third sort, which is commonly made use of in most Parts of the *East-Indies*. Their Lessons are wrote down on white Tables of Wood, which they clean and whiten again after they have got their Lessons by Heart; for durable Writings are on Paper made of the Leaf of a Tree called *Macare Green*, that Leaf being a Fathom and a half long, and a Foot broad. To teach the Children to write, they make use of no Paper, but make Draughts of Letters with a Bodkin upon smooth, plain Boards of Wood, covered with fine white Sand. The Children have such a profound Veneration for their Masters, that they cannot marry them any more than their own Parents. Some of them, especially the *Moulins*, *Nabey*, and *Cattues*, carry their Studies a great Length, and acquire great Skill in the *Alcoran*, and other Treatises of the Law. The Mathematicks are much esteemed in this Country, and especially that Part called *Astronomy*; for they always consult Astrologers, not only upon Nativities and Births, but upon all Undertakings whatsoever, as Travelling, Building, &c.

As for their Exercises, they have Schools for learning the right Use of a Sword and Buckler, of a Bow, of a Gun, and of a Pike; and the Masters who teach them are much respected. They have no sort of Diversions but that of the Foot-ball, which they tovs very dexterously. Many of them apply themselves to Manufactures, for Household-Goods and other Commodities, which they make very ingeniously; but the most universal and the most considerable Exercise they have, is that of Fishing, which is so common an Exercise all over the *Maldivees*, that there's no such thing as a particular Trade of that Nature; for Gentlemen, and even their Kings, pursue Fishing as we do Hunting in this Part of the World. Every Man there enjoys the natural Liberty of Fishing where and for what he pleases. The Fish which are taken in the deep Sea about six or seven Leagues off the Bars of the *Atollons* are large, and of seven or eight sorts, such as *Bonitos*, *Albacores*, *Guilt-heads*, &c. which are all much of the same Taste, and have no more Scales than a Mackerel. The Instruments with which they catch them are a Line of a Fathom and an half of great Cotton Thread tied to a Cane, together with a Hook that in Form resembles the Letter h. The Bait is not fastened upon the Hook, but thrown about into the Sea; for they drag after their Boat a Quantity of small Fish like our Roaches, which are very numerous among the Banks and Sands, and which are preserved alive in Purfets of Cocea-thread; and when they come to the deep Sea they cast these little Fishes about, and throw in their Line. Upon which the great Fishes perceiving an unwonted Quantity of little Fish crowd upon them in Shoals, greedily swallow the whitened Hook, taking it for one of the little Fish. The Fish that swallows the Hook falls off as soon as the Line is brought into the Boat, and so the Line is thrown in again. At this rate they will fill their Boat with Fish in three or four Hours Time, and which is very strange, the Boat is all along under Sail. The Fish thus taken are all black, from whence they are called *Cobolly Massé*, i. e. the *Black-fish*. They have another way of fishing in the Night-time upon the Banks that surround the *Atollons*. At every full and every new Moon they convey themselves to the Banks upon Hurdles, and the Fishing lasts three Days every time. 'Tis performed by Lines of hard, coarse Cotton Thread, some of which are fifty or sixty Fathom long, and are blackened over with the Bark of a Tree that serves instead of Pitch, in order to preserve it from Corruption. At the End of this Line they have a Hook with a Bait fastened upon it, after the same manner as is usual among us: By this means they catch a prodigious Quantity of large red Fish, such as I never saw elsewhere, which eats most deliciously, and is by them called, *The King of the Sea*. In fine, they have such Plenty of several sorts of Fish, and different ways of taking them unknown to us, that 'tis impossible to distinguish them; for besides the Lines above-mentioned, they have all sorts of Nets of Cotton, Twine, Wheel, and other Instruments for Fish-

8
25
22

ing. Upon the Flats near the Shore they catch small Fish like Pilchards with Casting-nets.

At the two Equinoxes they have a general Fishing, which is very remarkable: At these two Periods of the Year, as the Tides flow beyond their wonted Bounds, so they ebb more than usual, and discover several Rocks and Flats, which at other times continue under Water. Upon this Occasion the *Maldivians* pitch upon several dry Corners, which they encompass with Stones raised like a Wall to a great Height, being forty Paces in Circumference, with a Door or Entrance left that is three Paces wide. This done, thirty or forty of them stretch out, all round the Flats, a large wide Circle of the great Cocoa-cords at each Fathom, of which they tie a Piece of Cocoa-shell dried, and that supplies the Place of Cork, making the Line float. Now the Fish inclosed within the Circle are so scared with the Shadow of the Floating-line, as if it had a Net underneath it, that instead of making their Escape by swimming, they fly from it, and, by the gradual Contraction of the Line, are brought into the Inclosure, the Entry of which is thereupon stopped with all Expedition with Faggots of the Boughs and Leaves of Cocoa compacted together of the Bigness of a Man; after all the Sea runs out, and leaves the Fish on the dry Land. This Fishery, which continues fifteen Days together, produces commonly ten or twelve thousand Fish. To conclude, I know of no Place in all the *East-Indies* that can vie with the *Maldives* for a rich and plentiful Fishery.

21. After having thus dispatched the Learning and Exercises of the *Maldivians*, it will now be proper to take a View of their Temper and Inclinations; they are a lively, brisk, and at the same time a sober and wise People, and very discreet in most of their Actions. They love Arms and Exercise, and are not destitute of Courage. They display a great deal of Industry in Arts and Manufactures, and are polite enough in their Manners. They are religious to a very high degree, and superstitious beyond measure, tho' at the same time they are extremely given to Wantonness and Debauchery. Adultery, Incest, and Sodomy, are their common Actions. Notwithstanding the Severity of their Laws, Fornication is accounted no Crime, and a young Woman suffers no Affront for obliging a Friend before Marriage. The Impudence of the Women is unparalleled, and the Men are as vicious as they, though indeed they cannot outdo them if they would. The Men bend all their Thoughts upon their supporting of Nature, and would give their whole Estates for a Receipt to corroborate drooping Lust. Their amorous Feats engross all their Discourses, and their Wives or Whores are their inseparable Companions.

Though they are impudent to the last Degree, yet the Regard they have for their Parents and Relations stifles it in their Presence; and if a Man talks a little jocularly to a Woman before any of her Relations, they will resent it so far as to prosecute him at Law, and oblige him to own in Court, that he takes them for Persons of Honour, unless he declares he did not know of their Affinity to the Lady. A Man must not enter where a Woman bathes, or is present without her Garment; tho' she never takes off the Cloth that supplies the Place of a Petticoat. When a Man is in Company with a Woman, if another Man meets them, he must not ask if she be his Daughter, or Wife, but if she be his Kinwoman, and what Degree of Affinity or Consanguinity she stands in to him: For, if the Woman be really the Man's Daughter, and the other ask if she is his Wife, he will take the Question for an Insinuation of Incest.

As I intimated above, the Women seldom stir abroad in the Days, so that they make all their Visits at Night, being accompanied with a Man who walks before, and when he sees any one approaching, calls out thrice *Gas*, i. e. take care. Upon this Signal the Man betakes himself to the other Side of the Street, without seeming to see or know the Woman: Nay, if one Woman meets another, she takes to the other Side of the Way, and does not salute her unless she be very intimately acquainted with her, the outer Gate of the House being always open till eleven o'Clock at Night, at which Time every body is at home. The Visitors have no Occasion to knock, and indeed the Gates have no Knockers. After entering the Outer-gate, and ap-

proaching to the Door of the Houses, which is always open, and spread with Tapestry of Cotton Cloth, or some other Stuff, they cough once, upon which the People of the House come out. In the Island of *Male* the King's Officers and Soldiers cough frequently, to give Notice to one another in the dark Streets, for fear of receiving mutual Wounds from their Arms, which are always naked in their Hands.

22. We shall in the next place take a View of their Government, which is an absolute Monarchy, for the King is feared and revered by all, and every thing depends upon his Pleasure under him. Each *Atollon* has a Naybe or Governor, who is a Priest, and Doctor of the Law. The Naybes govern the inferior Priests, and are intrusted with the Administration of Justice, and the Management of religious Concerns. The *Cantons* or *Atollons* being subdivided into many Islands, each of these Islands that contain above forty-one Men, is allotted a Doctor called *Cantibe*, who presides there in religious Matters, and rules over the particular Priests of the Mosques. All the Priests are employed in instructing the People in the Law, and live upon a certain Portion of Fruits collected from every Inhabitant, and a Salary allowed them by the King, in proportion to their Dignity.

The Naybes indeed are likewise employed in the Administration of Justice; nay, they are the only Judges both in civil and criminal Causes; and it is for the sake of Justice, as well as the promoting of Religion, that they make four Circuits in the Year, through all Parts within their Jurisdiction. When they go these Circuits they gather their Dues, and receive Presents from an Infinity of Persons, so that the Circuits furnish by this means the best Part of their Incomes. The Naybes, or thirteen Judges, are under the Direction of a superior called the *Pandiaré*, and in *Arabick* the *Cady*, who resides in the Isle of *Male*, and is not only the supreme Judge in all Causes, but likewise the Head of the national Church. He receives Appeals from the Naybes, but does not pass Sentence without taking the Advice of four or five *Moncoris*, i. e. Doctors learned in the Law, and divers other Sciences, who are universally honoured and respected, there being only fifteen in all the *Maldives*. The Judgment pronounced by the *Pandiaré* may be reversed by appealing to the King himself, who upon such Occasions orders Justice to be done by the principal Officers, of whom there are six Counsellors of State.

The *Pandiarés* make a Circuit once a Year through the Isle of *Male*, as every Naybe does in his respective *Atollon*, and condemns all to be whipped that cannot say their Creed and Prayers in the *Arabick* Tongue, and construe them into the *Maldivian*. When he goes along the Street the Women must not shew themselves; for if he spies any unveiled, he orders their Hair to be shaven. Each *Atollon* has, besides the Naybes, a Collector of the King's Revenues. Justice is dispensed in the House of the Naybe, or else at the *Pandiaré's* House in *Male*, and sometimes, in Cases of Moment, in the King's Palace. The Defendant is summoned by Serjeants called *Devaints* to come before the Naybe, by Virtue of a special Letter or Writ from the Naybe; but if he lives out of the Naybe's Jurisdiction, he is summoned by Letters from the *Pandiaré*, which enjoins him to come from any Part of the Realm to the Island of *Male*.

The *Pandiaré's* Writ is served publicly upon the Defendant by the *Calibe*, or Superior of the Island, and if he does not appear at the Place appointed, he is not only excommunicated, and excluded from eating and drinking with his Neighbours, or coming to Church, but seized by a Party of Soldiers. If either Plaintiff or Defendant suspects the Partiality of the Naybe, they have Recourse to the King, who orders the Cause to be tried before impartial Judges. The contending Parties plead their own Causes; in the Business of Right or Title they are judged by the Law; and in Allegations of Matter of Fact the Plaintiff must have them attested by three Witnesses, or else the Defendant's own Oath will bring him off. In administering an Oath the Judge holds up the Book of the Law, and the Evidence is obliged to touch it with his Hand, and that not superficially, but so that every one may observe:

of the Houses, which is always open, of Cotton Cloth, or some other, upon which the People of the Island of *Male* the King's Officers frequently, to give Notice to one another, for fear of receiving mutual injuries, which are always naked in their

next place take a View of their Government, an absolute Monarchy, for the King is absolute, and every thing depends upon him. Each *Attollon* has a *Naybe* or Chief, and Doctor of the Law. The *Priests*, and are intrusted with Justice, and the Management of religious Matters, and rules over the *Mosques*. All the *Priests* are eminent in the Law, and live upon Salaries collected from every Inhabitant, which they pay to the King, in proportion to

are likewise employed in the Admiralty, they are the only Judges both in Civil and Criminal Causes; and it is for the sake of Justice, and the promoting of Religion, that they make their Circuit, through all Parts within their respective Circuits they gather the Presents from an Infinity of Persons, which by this means the best Part of the *Naybes*, or thirteen Judges, are of a superior called the *Pandire*, and who resides in the Isle of *Male*, and is Judge in all Causes, but likewise the *Church*. He receives Appeals from all the *Naybes*, and does not pass Sentence without taking the Advice of the *Moncoris*, i. e. Doctors learned in the other Sciences, who are universally consulted, there being only fifteen in all the Kingdom pronounced by the *Pandire* appealing to the King himself, who orders Justice to be done by the *Prisoners* there are six Counsellors of State. The *Naybe* does in his respective *Attollon*, he whips that cannot say their Creed with a *Tongue*, and confine them into the *Street* the *Women* themselves; for if he spies any unbecoming Air to be shaven. Each *Attollon* has a Collector of the King's Revenues, the House of the *Naybe*, or else at the King's Palace, and sometimes, in Cases of the Defendant is summoned to come before the King by a special Letter or Writ from the King out of the *Naybe's* Jurisdiction, he orders from the *Pandire*, which enjoins every Part of the Realm to the Island of

Justice is served publicly upon the Defendant, or Superior of the Island, and if he is not appointed, he is not only excluded from eating and drinking, or coming to Church, but seized by the King's Officers. If either Plaintiff or Defendant suffers from the *Naybe*, they have Recourse to the King's Cause to be tried before impartial Parties plead their own Cause of Right or Title they are judged in Allegations of Matter of Fact the King attested by three Witnesses, or their own Oath will bring him off. In such Cases the Judge holds up the Book of the Law, and is obliged to touch it with his hand, and to say every one may observe

observe a real Contract. Whatever is adjudged to the Plaintiff, a twelfth Part of it goes to the Serjeant, but nothing to the Judges.

If Women are called as Witnesses, three of them are equivalent to one Man. Slaves can neither witness, nor plead, and the meanest of them, called *Allo*, have but one Wife, whereas the rest are allowed three. By Slaves they understand such only as voluntarily sell themselves, or are imported as Slaves from foreign Places; for a Shipwreck'd Stranger, that was not a Slave before that Misfortune, continues in the Enjoyment of his Liberty. The Punishment of beating a Slave, is half of what they inflict for beating a Freeman.

23. An insolvent Debtor is obliged to become a Servant to his Creditor, but not a Slave, and he and his Children after him continue in the Service till the Debt is worked out. If he thinks himself ill used, he may turn himself over to another Master, provided he lays down the Money due to the former. If a Man be murdered, his Wife cannot prosecute the Malefactor, but the Judge obliges him to maintain her Children, and bring them up to a Trade, till they are of Age, at which Time they are qualified either to forgive, or prosecute the Murderer; for the State takes no Cognizance of personal Injuries unless the Party aggrieved complains of them. The ordinary Punishment for Criminals is Whipping, which, indeed, is very severe, and frequently mortal; but in some Cases they are banished to the southern desert Islands, and in others, they are doomed to the Loss of a principal Member. The Whips are made of Thongs of thick Leather, which are a Fathom long, two Fingers thick, and four Fingers broad, five or six of them being fastened together in a wooden Handle. Whipping is the Punishment for Sodomy, Incest, Adultery, Perjury, and Rapes; but over and above that Punishment, an Adulterer has her Hair cut off; a perjured Criminal pays a pecuniary Mulct for the Benefit of the Poor, and a Ravisher is obliged to give a Dowry to the injured Woman.

The stealing of any thing of Value is punished with the Loss of a Hand, and the disobeying of the Law, with publick Penance; for they are of Opinion, they can never come into Paradise without satisfying the Demands of the Law. The Sentences pronounced by the Judge are executed by the Serjeants, for they have no Hangman or publick Executioner; tho' Death is by Law the Punishment of Homicide, they never condemn a Prisoner to die, unless the King expressly requires it, which seldom happens; and when it does, the King sends his own Soldiers to execute the Sentence, for he reserves the Power of Life and Death to himself; whereas the inflicting other Punishments lies in the Hands of the Judges. Their Tenderness in not sentencing Criminals to die, is grounded upon Pretence of not dispeopling the Country, there being so great a Number of Criminals who justly deserve Death. When the King is personally offended, he makes the Criminal lie upon the Ground, flat upon his Belly, his Arms and Legs being held by four Men, while his Back is soundly beat with a *Bengala* Cane, called *Ratan*, which takes off the Skin, and leaves a perpetual Mark.

Indictments, Depositions, or Sentences, are never put in Writing, being all very short; nay, in civil Matters, the Allegations are never written, unless it be in a Suit for Land of Inheritance, or Cocoa Trees, which are reckoned immoveable; then, indeed, the Judges give Letters sealed with Ink (Wax they do not use) for an Evidence of the Person's Right, to be transmitted to Posterity. The Inhabitants of this Country are divided into four Classes, namely, the Royal Family, Persons invested with Dignities and Offices, the Nobility and Gentry, and the common People. The third Rank is distinguished from the fourth by their Birth, and the Distinction is so nicely kept up, that the latter dare not sit in the Presence of the former. If a Noble Woman marries a Plebeian, she retains her Rank, and upon her Account, the Children are reckoned Noble; but a Woman of the lowest Form cannot enoble herself by marrying a Nobleman.

Besides the Nobles by Birth, there are some enobled by the King, who, upon such Occasions, gives them Letters, entitling them to that Privilege, and sends an Officer round the Island to make Publication of the Promotion,

The first Rank comprehends the King, who is called *Rofquan*, the Queen is called *Reneguellague*, the Princes and Princesses of the Blood are called *Callans* and *Camanaz*, and all who are descended of the King's Predecessors. The next Station is allotted to the great Officers of the Kingdom, particularly to the *Quillague*, or the King's Lieutenant-General, who commands in the King's Absence; the *Eudequerry*, who always attends the King's Person, as chief Counsellor; the *Velanas*, who takes Care of all Strangers, and takes the Rudder off all Ships that arrive, for fear they should set sail without taking Leave; the General of their Forces, called *Dorimenaz*; the *Mangpas*, or Chancellor, who affixes to all Letters the King's Seal, i. e. the Impression of his Name in *Arabic*, engraven on Silver; the Secretary, called *Carrans*, &c. These Officers have, besides the Rents of certain Islands allotted them, the King's Rice for their Provision (which is a great Honour, allowed likewise to the Soldiers) and the Toll of the Ships that trade to the *Maldives*. The Officers and Soldiers are so much esteemed, that a Nobleman is not respected, unless he be an Officer, and a Gentleman will hardly pass for such, unless he be lifted into the King's Service.

The King's Guards consist of six Companies, of one hundred Men each, commanded by the six Counsellors, called *Moscouits*: Besides these, there are ten Battalions, commanded by ten of the Grandees of the Country, which serve the King not in Fighting, but in the Launching of Ships, building of Palaces, and such other Work, being called together by the Sound of a Bell. In five of those Companies none but Gentlemen are received, but the other five take in common People. Slaves are always excluded, as well as those who work in a mechanical Way, as the dressing of Cocoa Trees, &c. and particularly such as serve others, or cannot read or write. Whoever is listed as a Soldier, pays twenty *Larins* to the King, and for ty to be distributed among the Company, in which he is to serve. To conclude; all Offices are bought of the King, and much coveted, on account of the Honour and Power that attends them; but the Persons invested with these Offices can neither sell nor resign them.

24. The Islanders have but one Name, such as *Mohammed*, *Haly*, *Hassam*, *Affan*, *Ibrahim*, and are distinguished by their Stations as Noble, Prebican, &c. added to their Name, and sometimes by the Addition of the Island in which they live. The royal Palace is of Stone, one Story high, and has a great many fine Apartments, without the Ornaments of regular Architecture. It is surrounded with Gardens, in which there are great Fountains and Cisterns of Water walled in, and paved with large smooth Stones, and guarded continually, to hinder People from wading in them, as being solely reserved for the King and Queen's Use. The Palace is divided into several Courts, each of which has a Wall in the middle, paved with fair white Stones; and in one of these Courts the King has two Magazines, one for Ordnance, and the other for Ammunition. At the Palace-Gate there's a Guard, with many Pieces of Ordnance, and other Arms. The Portal is made like a square Tower, and on Festival-Days, the Musicians sing and play upon the Top of it. Passing on from the Gate, you first come to a Hall, where the Soldiers wait, then to another great Hall, where the Noblemen and Gentlemen attend; for none but the Officers of the Household, with the King and Queen's Slaves, or Servants, are allowed to go farther. The Floor of these Halls is raised three Feet high from the Ground, to avoid the Ants, being neatly boarded with Wood, and covered with a sort of party-coloured Mats, which they make in these Islands, and which have several Characters, and other Figures wrought upon them.

The Walls are hung with silk Tapestry as well as the Ceiling, which has pretty Fringes hanging about it. The Noblemen sit down cross-legg'd on the Mats which cover the Floor of the Hall, observing punctually the Order of their Dignities. The Gentry of the Island of *Male*, and the ordinary Courtiers who are obliged to salute the King every Day after Noon, sit in an outer Hall till his Majesty comes forth. The Gentry of the other Islands come likewise to wait on the King in the same Manner, and always bring Presents along with them, for no one salutes the

King without one. The Chambers and inner Apartments are hung with silk Tapestry, and enriched with gold Flowers and Branches of several Colours. The Beds of the Palaces, and those of the great Men, are hung with Cords upon a Beam, supported by two Pillars, and so the Person is rocked to Sleep. It is usual among the better Sort of People, to make the Servants rub and chafe their Bodies when they lie down, and to give them little Slaps, or gentle Blows, with both their Hands, from an Apprehension, that it promotes Sleep, and expels the Spleen.

The King is generally clothed in a fine white Robe, or Coat of Cotton, reaching to the Girdle, or a little lower with white and blue Edgings, and made fast before with massy gold Buttons. Then he has a Piece of red embroidered Tapestry reaching from the Girdle to the Heels, and fastned with a long large Girdle of Silk, fringed with Gold, and a great Chain of Gold before, upon which their hangs a large Jewel, as big as ones Fist, composed of the finest precious Stones; he wears likewise a Knife, made after the Fashion of the Country, and it is richer than ordinary. Upon his Head he has a Cloth of Scarlet, that Cloth being so much esteemed in that Country, that none but the King presumes to wear it. This Cap is laced with Gold, and has on the Top of it a great gold Button, with a precious Stone. The Grandees and Soldiers wear their Hair long, but the King has his Head shaved every Week. His Legs are naked, after the Fashion of the Country, and his Feet is covered with Slippers of gilt Copper, imported from *Arabia*, and made like Sandals, which none besides are allowed to wear, but the Queen and the Princes of the Royal Blood.

25. When the King goes Abroad, the chief Mark of his Dignity is a white Umbrella, which none are allowed to use but Strangers, who may have what they will. Upon the same Occasion he has three Pages near his Person, one carrying a Fan, another his Sword and Buckler, and a third a Box full of Betel and Arequa, which he chews every Hour. He is likewise attended by a Doctor of Law, who reads in his Presence, and puts him in Mind of Religion. This King does not pursue the Diversions of going Abroad, and Fishing, as his Predecessors were wont to do, but shuts himself up in his Palace, and spends his Time in caressing his Queen, giving Audience to his Courtiers, and seeing a great many Mechanicks and Artificers work; for he keeps in his Palace Painters, Goldsmiths, Embroiderers, Cutlers, Joiners, Turners, Armourers, &c. and finds them Work; nay, he works frequently with his own Hands, and looks on it as a Sin to be idle. He is a Man of a lively quick Apprehension, and very curious to learn mechanic Trades. He encourages all Strangers that practise Arts unknown to his People, and makes Enquiry after those that excel in their Way.

On a *Friday* he goes in great Pomp to the Temple, being attended by his Guards, consisting of an hundred Men, and his ordinary Officers, with a complete Band of Musick of Drums, Flutes, and Trumpets. After Service is over, he returns with the same Retinue, the Soldiers leaping all the Way at the sound of Musick, and striking their Swords on one another's Bucklers, and that in such a successive Manner as to avoid Confusion. He is likewise attended, in his Return from Church, by all the People of the Island, and regales with a Dinner the Pandiars, Naybes, Catibes, Moudins, Gentlemen, and Soldiers. After Dinner he hears Causes, and administers Justice. These Islands afford neither Horse nor Beast, and therefore the King walks abroad on Foot, unless he be carried in a Chair upon Slaves Shoulders, which happens but seldom, for he is a brawny strong Man, and chooses rather to go on Foot. In speaking to the King, or Queen, or Princes of the Royal Blood, and in speaking of them they have peculiar Expressions, that they dare not apply to others; as when they say of another Man, he is asleep, in talking of the King, they say, he takes his Rest.

The Queens wear the same sorts of Habits with the other *Maldivean* Women, only their Cloaths are richer. The Noblemens Ladies and Daughters are obliged to wait upon them every Evening: And when the Queens go abroad (which happens but very seldom) all the Women in the

Island run to meet them in their respective Districts Presents of Flowers and Fruits, the She-Slaves give Notice, at a great Distance before them, for all Men get out of the Way upon that Occasion. Four great dials carry over the Queen's Head a Veil of white reaching to the Ground, so that she is not seen. Queens bathe frequently in the Sea, as well as other men, such being the Custom of the Country, which reckon very conducive to Health. For this End have an Inclosure in the Sea, covered with Cotton-Cloth and upon the Shore a little House, with a Fresh-water Bath, which they use as they come out of the Sea. Light is never seen in the Queen's Chambers, or those of the Ladies of Quality, for their only Light is a Lamp burning continually; and the Place of the Room where they usually retire is blocked up with four or five Rows of Tapestry, the innermost of which neither Man or Woman dares to pull up without coughing or hemming, and telling who they are. When they undress, they are off only their Robe, for neither Men nor Women in *Maldivean* dare to throw off the Cloth that is tied round the Middle.

26. As for the King's Revenue, he has many Islands, which are Crown-Lands, besides a fifth Part of all the Grain, Fruits of the Country, and a Tax on dried Fish, Salt, called Bely, and Cords of Cocons, which he lays upon them according to their Circumstances, for he has Taxes paid him in Money, abating what is paid as a chafe for Titles and Offices, or for Licences to wear Apparel. He obliges his People to make him every year as much Cotton-Cloth as cloaths his Soldiers, for he gets them Cloaths as well as Pay. This Revenue is further enlarged by his Claim to the Goods imported by Ships for a Ship no sooner arrives, than the Owners repay him, and give him an Account of their Cargo, out of which he takes what he pleases, at low Rates, and obliges his Subjects to take them of him again at what Price he pleases, by way of Exchange, for such Things as he wants, and often fits out Ships laden with the Commodities of his own Country.

All Wrecks found on the Sea-Shore are immediately brought to the King, for no Subject dares keep that that same is done with Ambergreece, called by the *Indies* Gomen, which is more plentiful here than in any Part of the *Indies*, and which is so narrowly looked upon that whoever appropriates it to his own Use loses a Part. In a Word, whatever the Sea calls upon the Shore of the King's, particularly a sort of Sea-nuts, called Tanacard, as big as a Man's Head, which they fancy to grow on the bottom under Water. The *Portuguese* call them Cocons of *Maldivean*. They are used in Physick, and very dear. Money is Silver only, and but of one sort, called *Larin*; however, all Gold and Silver is current here by Weight, it is all over the *Indies*. Before they take it, it is tried by the Fire, and every Man keeps Weights for that Purpose. There is a sort of Metal called Cabin, resembling much esteemed in the *Indies*, but not current there. Money passes no where in the *Indies* but in the Dominion of the Prince that coined it, having but one sort of Money they are forced to cut it, by which they lose a Part. Instead of small Coins they use sometimes 12000 of which make a *Larin*, and a *Larin* is about eight Sols, being long, like one's Finger folded; the King's Name is set upon those Folds in 24 Letters. Their Gold and Silver is all imported abroad, but in their own Markets they often barter one Thing for another. The *Maldivean* are well frequented with Merchants, and the Commodities they send are chiefly the Cocons, with which they load about a hundred Ships yearly. Of this the Cordage is made, serves all the Ships of *Arabia*, *Malabar*, and all the *Indies*. They make also Oil and Honey of that Tree, by weaving the Leaves of the Tree make Sails. They also little Shells, that contain a Creature in them Bignets of the End of one's little Finger, white, smooth, and glittering. They fish for them but once a Month, three Days before and three Days after the Full-Moon, and so before and after the Full-Moon. The men gather them in the Sands and Flats of the Sea

meet them in their respective Districts with
owers and Fruits, the She-Slaves giving
great Distance before them, for all Men to
Way upon that Occasion. Four great La-
the Queen's Head a Veil of white Silk,

glittering. They fish for them but twice,
e Days before and three Days after the new
to before and after the Full-Moon. The War-
them in the Sands and Flats of the Sea, hand-

ing up to their Middle in Water. These go only to *Ben-*
gal, the Inhabitants of which esteem them so much that I
have seen thirty or forty Ships laden, without any other
Commodity, bound thither. Though in *Bengal* they have
enough of other Metals, yet these Shells pass there as Mo-
ney, and the King and Noblemen hoard up prodigious
Quantities of them, accounting them their Treasure. They
give twenty Measures of Rice for a Fardel of Shells, each
Fardel containing 12000. They have, besides these, a sort
of Tortoise-shell, called *Cambe*, which is black and smooth,
and has many natural Figures; it is found no where but
there and in the *Philippines*, and goes off best in *Cambaya*.
Here they make fine Reed-mats, and Cloths of Cotton
and Silk; in Exchange the Merchants export some Cot-
ton and Silk-Cloths, a sort of Oil, Arac, Iron, Steel,
Pieces of Porcelane, and, in short, all the Necessaries of
Life; yet every thing is cheap, because of the Number
and Frequency of Ships. They import all their Gold and
Silver, which they never send out again, but lay it up
among their Wives Jewels as their chief Treasure.

27. After following our Author through his large De-
scription of the *Maldives*, we are next to recur to his per-
sonal Adventures, in order to acquaint the Reader how he
recovered his Freedom, and escaped from thence to the
Continent of *India*, from whence he returned to his native
Country. The Fact, as he relates it, runs thus; He says,
That in the Beginning of the Month of *February*, 1607,
he dreamed that he was set at Liberty, and found a Pal-
sage home to *Europe*, which made a very great Impression
on his Mind, inasmuch that it induced him to make a
Vow of going in Pilgrimage to the Shrine of *St. James*
of *Galicia*, in order to return God Thanks, if this Dream
should prove true; at the same time, he was exceedingly
perplexed in his Mind, and endeavoured to discover how this
could be brought about. All his Conjectures proved vain
and fruitless; but two Nights after the Thing discovered
itself, by the unexpected News that the King of *Bengal* was
preparing to invade the *Maldives* with a Fleet of sixteen
Sail of large Gallies. On the first receiving of this Intelle-
gence, the King of *Male* issued his Orders for fitting out,
with all imaginable Expedition, the large Ships, and all the
Gallies, Barks, and Vessels in his Dominions; but before this
could be accomplished, the Enemy's Fleet appeared in Sight;
upon which the King suddenly altered his Resolution, and de-
termined to fly to the Southern Islands, in Hopes of taking
Shelter there, till such Time as he could assemble a Force suf-
ficient to expel the Invaders. His best Goods were immedi-
ately embarked, as also his three Queens, each of whom was
carried by a Gentleman in his Arms, as if they had been
Children, covered with Veils of Taffety of different Colours;
as soon as they were on Board the King followed them,
leaving his Capital altogether defenceless, and the Streets full
of Women crying and lamenting the Danger to which
they were exposed. The Enemy no sooner arrived than
they divided their Forces, sending eight of their Gallies in
Pursuit of the King, with whom the Wind failing, they
very speedily came up, engaged his small Fleet, and hav-
ing killed the unfortunate Monarch of the *Maldives*, who
fought very bravely in his own Defence, made themselves
Masters of his Ships, Wives and Treasures. As soon as
these People landed in *Male* our Author surrendered, and
put himself into their Hands, declaring to them in what
Manner he came thither, and how he had remained Prisoner
there for several Years. They treated him very kindly
as soon as they were satisfied that he was not a *Portu-*
guese; for had he been of that Nation they would, with-
out any Ceremony, have put him to Death. The Con-
querors remained about ten Days on the Island, in which
Space they carried on Board their Vessels all the Plunder
of the King's Palace, with every thing of Value they
could find, particularly one hundred and twenty Pieces of
Cannon, and then prepared for their Departure, leaving
every body at Liberty, excepting only the King's Brother-
in-Law, whom they carried with them, and our Author,
who went of his own Accord, and who with some Diffi-
culty got to *Bengal*, where he had leisure to contrive, the
best he could, the Means of finding a Passage back to
Europe. While he remained in *Bengal*, the *Mogul* declar-
ed War against that Prince, who immediately assembled a

prodigious Army, in order to withstand him, amounting,
as our Author was informed, to several hundred thousand
Men, and some thousands of armed Elephants; which
military Preparations did not incline him to remain any
longer than till he found an Opportunity of withdrawing
himself, and this in a short Time he obtained.

28. He retired from *Bengal* to the *Malabar* Coast, in-
habited at that Time for the most Part by Pirates, from
whence he proceeded to *Calicut*, where he remained eight
Months, waiting for a *Dutch* Ship; but at last was per-
suaded by the Jesuits to go to *Cochin*, where, on his first
Arrival, he was imprisoned as a Spy, and suffered great
Hardships. At *Goa* also he was a Prisoner with those who
remained of seventeen *English* taken at the Bar of *Surat*.
The Jesuits had brought one Master *Richards* and four
other *Englishmen* from the *Mogul's* Court; some *Hollanders*
also were there, and they all were Prisoners together; but
the Jesuits undertook for them, and procured their Li-
berty, viz. *Thomas Stevens* an *Englishman*, and Rector of
Margon College in *Salsete*, *Nicholas Trigaut* a *Walloon*;
Stephen Crofs a *Frenchman* of *Roan*, with *Gaspár Albano* a
Spaniard. This *Thomas Stevens* procured the Liberty of
the *Englishmen* also, four of which became Catholics, and
two of them died there. Don *Louis Lorenzo d'Esca-*
bla arrived at *Goa* with the Title of Viceroy to the Peo-
ple's great Grief, with the more desired Don *Andrè Fur-*
tado: Ten Months after his coming four great Carracks
arrived, each about two thousand Tons; five had de-
parted from *Lisbon*, but they knew not what was be-
come of the fifth, which was separated by a Tempest at the
Cape, in each were embarked a thousand Persons, Sol-
diers, Mariners, Jesuits, and other Churchmen, with Mer-
chants and Gentlemen; but when they arrived at *Goa*,
there were not above three hundred in each, by reason of the
Sickness and Miseries they endured in eight Months at Sea
without Sight of Land. These brought an Edict from the
King, forbidding the *English*, *French*, or *Dutch* Commerce
in his Dominions; and if there were any such there, to send
them away, upon Peril of their Lives. On the 26th of
December 1609, he embarked for *Lisbon*, and on the 15th
of *March* 1610, they arrived at the Isle of *Diego Rodrí-*
guez in 20°, about forty Leagues East from *Saint Lawrence*.
After a cruel Storm three five Days together, they reached
the *Cape*, *St. Helena*, *Brossil*, the *Açore*, the *Berlings*, and
having paid his Vow to *St. James* in *Galicia*, he arrived at
Rochel the 16th of *February* 1611. Thus we have brought
this Voyage to a Conclusion without taking in the Author's
Travels through the rest of *India*, which would have swelled
the Section to a great Extent, and would have contributed
little to the Reader's Satisfaction, as containing nothing
which may not be met with elsewhere, in as good, or in a
better Dress, as the Reader will perceive in the next Sec-
tion, wherein we shall give one of the exactest and best
written Voyages to the *East-Indies* that is any where ex-
tant. But with regard to the *Maldives*, *Pirard's* Account
is beyond a Question preferable to any for the Reasons we
have assigned at the Beginning of the Voyage. It may not,
however, be amiss, considering our Author went thither
one hundred and forty Years ago, to conclude the present
Section with some Remarks on the State those Islands are
now in, that we may give the Reader, as near as possible,
a compleat View of the Subject at once, without fatiguing
him with needless and impertinent Repetitions; for want
of which Caution, most of our old Collections of Voyages
swell to such bulky Volumes, and at the same time are, in
many material Points, extremely defective.

29. One would imagine from the Account given us by
this Writer, that in the Course of so many Years as have
elapsed since his being shipwrecked on those Islands, many
of them must have been swallowed up entirely, and many
more rendered uninhabitable and desert, which, however,
does not appear to be the Case. On the contrary, the Island
of *Male*, according to the latest Accounts we have, is in a
better Condition than ever, and the *Dutch* carry on there
a very considerable Commerce, the Natives themselves
also trading in their own Vessels to *Ceylon*, where they are
well used by the *Dutch*, and make a very great Profit of
those little Shells which are called *Cauris*, *Coris*, and by our
Seamen *Cowries*. Of these there are prodigious Quanti-
ties,

ries, not only on the Shore of the *Maldives*, washed thither by the Waves of the Sea, but also dug up in the very Heart of some of the Islands, as being very probably left there at the Time these Lands were deserted by the Ocean. As the Measure of Things, which we call Money, is altogether arbitrary, and depends solely on an Agreement amongst Men, that this or that shall stand for, and be regarded as a common Measure, so in many Countries, both of *Asia* and *Africa*, these Shells, by a certain tacit Agreement, are fixed as such a common Measure, and are consequently esteemed, and have the Currency of Money. It is that gives them a Value even with such as despise those who trade with and receive them as Money, without reflecting, that Shells are to the full as capable of being constituted Money as either Gold or Silver, and without remembering that they are compelled to practise what they themselves so much condemn, and to take these paltry Shells for Money. At *Bengal* two thousand four hundred Cowries were, in the Year 1740, valued at a Rupee, or about half a Crown of our Money.

But the great Use of them is on the Coasts of *Africa*, and particularly on those of *Guinea*, where the Negroes esteem them to the full as much as Gold and Silver, and where they pass under the Denomination of *Baugies*. We may guess at the vast Consumption of this Commodity or Money, by the *French* Merchants in the Kingdom of *Fidab*, who give for a Piece of the common Cloth made by the Natives, commonly eighty Pound Weight of Cowries, and so in proportion for the richer Commodities of that Country, such as Wax, Ivory, Gold, &c. The *Dutch* usually furnish other *European* Nations with this kind of Negroe Coin, if I may be allowed that Expression, and the Reader will easily conceive from thence how beneficial that Trade is which they drive with the *Maldives*. It might be wondered how this Demand for these Shells is kept up upon the Coast of *Guinea*; but in order to account for this, we are to understand that, like Gold and Silver, these are not only the Measures of Commerce among the Negroes, but likewise the highest Mark of their Finery, since they wear them as Necklaces, Collars and Bracelets, strung upon Hair, or Silk, either in single or double Rows, which indeed make an odd, but at the same time no disagreeable Figure on the Necks and Arms of the Natives, the snowy Whiteness of the Shell appearing to great Advantage, when compared with their jet-black Skins.

Heretofore about twelve thousand Pound Weight of Cowries was sufficient to purchase a Cargo of five or six hundred Negroes; but at present the Market is raised, and the Proportion between Man's Flesh and Baubles so altered, that a Ship Load of Slaves cannot be bought for less than twelve or fourteen Tun of Cowries. As there would be a great deal of Trouble in adjusting Payments made in this kind of Money, the Negroes, though so stupid as to sell themselves for Shells, have invented a kind of Copper Baton of such Size and Shape as to hold about one hundred and eight Pounds of these Shells, which is a great Ease to the Merchants. We must not, however, imagine, that these Shells are not to be found any where else but in these Islands, since it is certain, that they are likewise met with on the Coast of the *Philippines*; but these are of an inferior Nature, and much below the Cowries of the *Maldives* in Whiteness and Lustre. The principal Mart in *Europe* for these Shells is *Amsterdam*, where they have of them large Magazines, and where they are purchased both by *French* and *English* Merchants, for the Convenience of exporting them to *Africa*.

But to return to the Trade of the *Maldives*, which is far from being so inconsiderable as some of our modern Writers would have us believe, and that for no better Reason than this, because the *Europeans* have not settled amongst them; whereas from this Account, it is most evident, that it is impossible for them to settle there for a Multitude of Reasons, which must naturally occur to every judicious Reader. But there is notwithstanding a great Trade carried on there, inasmuch that some hundred Sail of Ships are laden annually with the Product of their Cocoa Trees, that is, with the Oil, Honey, Cordage and Sails made from this kind of Palm-Tree, which grows no where either in such abundance, or to such Perfection, as on these Islands; neither

do they want other valuable Commodities, particularly the finest Tortoise Shells in the World, stained naturally with very beautiful Figures, and wrought up by them in Cabinets, Combs, and other Curiosities. But what plainly proves the Riches and Industry of the People is, on the one hand, the Cheapness of Cotton, Silk, Oil, Iron, Steel, Spices, and *China-ware*, with other foreign Goods, which could not be brought about, if their own Manufactures did not enable them to balance the Account with the Foreigners, who import them; and, on the other hand, that Plenty of Gold and Silver which has been always visible in those Islands, and which must have been very soon carried away, if ever the Balance of Trade had been against them.

It seems also to be no small Honour to the Country, that neither the Force of the *Portuguese*, the Ambition of the *English* on their first coming into the *Indies*, or the Frauds of the *Dutch*, have deprived the Inhabitants of these Islands of their Liberty. It is true, that from the Account our Author has given, this does not appear to be a very difficult Matter, since the King of *Bengal* was able to make so great an Impression with so small a Force; but, at the same time, we ought to reflect, that this Conqueror thought fit to abandon the Island of *Male* as soon as he had reduced it, which appears to me a very plain Proof that he thought it impracticable to keep it; and, indeed, where a whole Nation are so much used to live at Sea, as well as on Shore, it will be always found a very difficult, if not impossible Matter, to reduce them. The great Policy of the Legislator of these Islands, whoever he was, very plainly appears in his adjusting so nicely as he has done, the Nature of their Constitution to the Situation of their Country, and that Course of Life, which from thence they are obliged to follow. To this we may justly ascribe the long Continuance of their Monarchy, the Force of which does not seem to be at all impaired by the Settlements made by the *Europeans* in those Countries; but, on the contrary, the People have encreased their Riches, and the King has extended his Power, by falling into Trade with them, which is more than can be said of any other Country in the *Indies*.

It must, however, be allowed, that very few Travellers or Voyage-Writers, have taken the Pains to describe the *Maldives*; so that if we had not this Account of *Pirard's*, we should scarce be able to say any thing about them, the Reason of which is very easily assigned; for these Islands have no Mines, either of rich Metals or precious Stones; nor do they abound with Spices, or any other highly valued Commodities; but it appears very clearly, that notwithstanding the Want of these Advantages, they are much more populous, and enjoy, beyond comparison, more Liberty than those People do who are richer, and consequently more esteemed. But as these Islands lie only in the Entrance of the *Indies*, it must appear requisite to furnish some Descriptions of the principal Places mentioned in the foregoing Histories, by such as have visited them in Person, and that too within such Periods of Time as may afford the greatest Lights to those Histories; from which Consideration we have been led to make Choice rather of Voyages than Travels, because the latter belongs strictly and properly to the succeeding Volume, in which the most curious and best esteemed to all Parts of the *Indies* shall be included: At present we shall give a general Voyage to the *Indies* by a *French* Officer and Commander in Chief, whose Work has been always esteemed more accurate in its kind than any other written by that Officer himself, who, like our *Sir Francis Drake*, was capable of performing every Office in his Ship, and of whom his own Pilot declared, that he was at once the most skilful and the most careful Man in that Profession, with whom he was ever acquainted. His Knowledge, however, was not bounded by his maritime Skill, but, on the contrary, was every Way as correct in other necessary Branches of Science, so that he was as capable of writing the Description, or History of the Countries he visited, as of carrying his Vessel to them.

These singular Properties, and the Consideration that we have not room for a Multitude of Voyages, led to the Choice of this, which may serve instead of many, and which

which the original Publisher, the celebrated Mr. *Thevenot*, declared, he made publick with no other View, than that it might serve as a Model to his Countrymen, not in Point of Science only, but of Method also, esteeming the Author as considerable in that Character as in the Quality of a Commander. This Apology I thought necessary, that the Reader might not suspect me of Partiality, and in the succeeding Sections we shall put that Point farther out of Dispute, by doing the like Justice to *English, Dutch*, and the eminent Sea-Officers of other Nations, who have not only benefited those they served, but have likewise transmitted Testimonies of their Skill to Posterity.

I cannot dismiss this Subject without observing, that it

is to be wished our own Countrymen would be more careful in this Particular, since, as there are not better Seamen, or better Officers in the World, it is very hard their great Actions should not be communicated to the Publick, with all the Advantages that may be derived from Method and Language; both which might be acquired with as little Labour as is requisite to get over the Difficulties in keeping a Sea-Journal; and therefore we may well hope, that in an Age which discovers greater Curiosity in regard to these Subjects, than has been shewn in any other, Gentlemen will have that regard to their own, and their Officers Characters, as not to let them suffer for want of a candid Representation.

SECTION XXV.

The Expedition of Commodore Beaulieu to the East-Indies; containing a curious and accurate Description of the Sea-Coasts and Commerce; as also Abundance of curious Observations on the Manners of the People, the Nature of their Governments, and the Means of establishing Colonies amongst them.

Written by M. *Beaulieu* himself, and published by M. *Thevenot*, in his large Collection of Voyages.

1. An Introduction to the Voyage, with an historical Account of its Author and his Work.
2. Their Departure Octob. the 2d 1619, and Occurrences in their Voyage to Cape Verd, on the Coast of Africa.
3. Remarkable Accidents and Proceedings at Cape Sierra Liona, where they touch'd for Refreshments.
4. Remarkable Observations in these Seas, with the Sentiments of the Author concerning them.
5. A very curious and accurate Description of Table-Bay, under the Cape of Good-Hope.
6. A very candid and circumstantial Account of the Hottentots, their Customs, &c.
7. An Account of some remarkable Letters found there, and the Author's Resolution on reading of them.
8. A Description of several remarkable Animals, and other Curiosities met with here.
9. A very entertaining Relation of what pass'd between Commodore Beaulieu and the Negroes in the Bay of S. Augustine, during his Stay there.
10. A farther Account of this Matter, and of the Close of his Transactions with those People.
11. A succinct History of the Government, Language, Manners, &c. of this Negro Nation.
12. The Author sails along the Coast of Africa, and observes several notorious Errors in the Sea-Charts.
13. A large and curious Description of the Comorro Islands, and their Inhabitants, with his Reception there.
14. Remarkable Occurrences at the Island of Nangasija, and some Remarks on the Arabian Shipping.
15. The Author prosecutes his Voyage for the Cape of Guardafu, and meets with a great Storm in his Passage.
16. An exact Description of this Coast, and of the Difficulties met with in procuring Refreshments.
17. A very singular Method of obtaining fresh Water, which may be of great Use in long Voyages.
18. An Account of the Country about Cape Guardafu, and the Author's Resolution to steer directly for the Coast of Malabar.
19. Their Arrival upon that Coast, and their taking a Moorish Ship richly laden.
20. They double Cape Comorin, and obtain a Pilot, who conducts them to Ticow.
21. Their Arrival there, and the News they received of their Vice-Admiral, and other Transactions.
22. A large Relation of what pass'd during their Stay in that Port, and of the Behaviour of the Inhabitants.
23. A Description of the Country, its Products, and the Nature of the Commerce there, with other Observations.
24. The Author's Arrival at Achen, with a copious Description of that Country and its Commerce.
25. The Author's Audience of the King of Achen, and of what pass'd upon that Occasion.
26. A very curious and exact Account of the State of that Country, the Character of its King and his Subjects.
27. A farther Account of our Author's Proceeding there, and of the many Difficulties he met with.
28. Obtains a Licence to buy Pepper, and yet finds it extremely difficult to procure his Lading.
29. Our Author obtains a Letter from the King of Achen to the King of France, in Answer to one he presented.
30. Other Transactions during the Time of his Stay in that Country, and his Resolution to sail to Queda.
31. Occurrences in his Voyage thither, and his Proceeding there, in order to obtain a Lading of Pepper.
32. A Description of the Island of Pulo Lada, or, Pepper-Land, on the Malaca Coast.
33. A very curious and exact Description of the Manner of cultivating Pepper, and of the Value of that Commodity.
34. A succinct History of the Revolutions of Queda, and of the Reduction of that Kingdom by the Monarch of Achen.
35. The Author's Return to that Country, and the Reception he met with there the second Time.
36. A large Account of what happen'd to the Vice-Admiral, and of the Difficulties the French met with in establishing a Trade in these Parts.
37. The Author presents a rich Diamond to the King of Achen, and obtains from him a Licence to trade at Ticow.
38. A Description of the Island of Sumatra, its Climate, Soil and Produce, with other Particulars.
39. The Islands upon the Coast of Sumatra, and their respective Products, together with an Account of the different Kingdoms in Sumatra.
40. The Character of the People of Achen, their Government, Customs, Laws, &c. as observed by the Author.
41. The military State of that Kingdom, and of the Forces and Power of the Monarch then on the Throne.
42. The Nature of his naval Establishments, and of the Means made use of by him to support them.
43. Of the Riches of the King of Achen, his Houses, Slaves, Revenues, and several Methods of raising Money.
44. The ancient State of the Kingdom of Achen to the Accession of the reigning King's Grandfather.
45. The civil Wars that hap-

pened from that Time, and the dreadful Consequences attending them. 46. *The Manner in which the King of Achen mounted the Throne, and his Character.* 47. *The Author sails for Europe, and meets with a pleasant Passage as far as the Island of St. Helena.* 48. *A Description of the Island of Achen, and a further Account of the Voyage to their Arrival at St. Vincent.* 49. *An exact Description of that Island, its Climate, Soil, Produce, and other Particulars.* 50. *Continuation of the Voyage to the Author's safe Arrival at Havre de Grace, Dec. the 1st 1622.* 51. *Some further Memoirs of Commodore Beaulieu, to the Time of his Decease.*

THE following Voyage was not only undertaken, but written also by one of the best Officers that ever was in the *French Service*, of whose Character and Adventures we shall say somewhat at present, and supply the rest at the Conclusion of the Section. *Augustin de Beaulieu* was descended of a good Family at *Rouen*, which has been always considered as one of the principal Ports in *France*. He addicted himself from his Youth to the Sea, and studied with great Application all the Sciences necessary to make him an able Man in his Profession, and more especially Geography, Astronomy, and Navigation. His first Expedition was to the River *Gambia*, on the Coast of *Africa*, under the Command of the Chevalier de *Brisquille* of *Normandy* in 1612. The Design upon which they went was to erect a Fort, and establish a Colony; but failing unluckily a little too late in the Year, they lost the best Part of their Men before they were able to accomplish any thing, and were therefore obliged to return Home, *re infecta*, after a vast Expence, to very little Purpose.

In this Expedition our Author commanded a Sloop, and tho' he got nothing by the Voyage in Point of Profit, yet he improved himself exceedingly, and established a just Reputation for Courage, Diligence and Application. About the Year 1616, the *French* formed the first Notion of trading to the *East-Indies*, and some Merchants at *Paris* and *Rouen* agreed to furnish a Joint-Stock for that Purpose. They fitted out two good Ships, the Command of the biggest of which the Title of General was given to Captain de *Nett*, who at that Time served the King in the Marine. The lesser Ship was bestowed upon our Author, who had no other Recommendation than his Merit. The Voyage was in all respects fortunate, and well conducted, though in the End it did not turn to any great Account; for the *Dutch* President in the *Indies* having published an Order, requiring all the Subjects of the States-General that were on Board those Ships, to quit them immediately; which Order they obeyed: The two Captains found it thereby out of their Power to bring Home both the Vessels, and therefore, that which had been commanded by Captain *Beaulieu* was sold to a little Prince of the Island of *Java*, and all their Effects brought home on Board the largest; notwithstanding which Misfortune, and the great Expence with which this Undertaking was attended, they managed so prudently, as to make a saving Voyage.

It was his Care and Diligence in this Expedition, that recommended him to that Command of which he has written the following Account. He was extremely careful in the Choice of his Men, that he might not run the risque of failing in this, as he had done in his former Voyage; and that Possenty might be the better for the Pains he was obliged to take, he provided, before he left *France*, all the necessary Instruments of Navigation in the highest Degree of Perfection, and constantly observed the Variation of the Needle every Morning and Evening, on four or five different Compasses, that he might be the less liable to Mistakes. At his return Home, he not only transcribed his Sea-Journal, which is still preserved, but composed likewise the following History of the Voyage from his Papers, with a Design to have committed them to the Press, but by some unforeseen Accidents, and by his premature Death, of which more shall be said hereafter, this was prevented, and these Papers remained for twenty Years afterwards in private Hands, till such Time as the famous M. *Mabizadek de Trevoux* formed his noble Design of publishing a curious Collection of the best Voyages, when these Memoirs were put into his Hands by M. *Dolu*, to whom they had been confided by the Relations of the Author.

That great Man was charmed with the Prefent, and no Wonder, since he seriously professes it appeared to him as perfect a Performance as ever came to his Notice, notwithstanding the Multitude of *Portuguese*, *English* and *Dutch* Memoirs that he had occasion to see, while employed in making that curious and excellent Collection. The principal Reason of his valuing it so much, was the high Character the Author had born in Point of Integrity as well as Abilities; so that as he related every thing that was worth relating in the Course of his long Expedition, all he relates may be very safely depended upon, as being exactly agreeable to Truth, and to the Lights which he received. One may safely affirm, that the Work itself carries along with it enough to justify all that has been said in its Favour, since there are so many visible Marks of the Writer's Sincerity, in those Passages which regard his own Conduct, that the most scrupulous Critick must be obliged to confess, there is not the least Ground to suspect he could entertain any Design of imposing on his Reader. The Variety of Events, the curious Description, the just and weighty Remarks with which it abounds, sufficiently enhance the Value of this Performance, which, therefore, we have given the Reader in his own Words, and must at the same Time own, that it would be scarcely Talk to make Choice of better, since his Style is exactly suited to his Subject; and he relates every thing with so much Modesty and Freedom, that it is hard to determine whether his Memoirs are more instructive or entertaining.

2. I sailed *Octob. 2, 1619*, from *Honfleur* Road with three Ships; the *Montmorancy* of 450 Tuns, carrying 102 Men, 22 Guns, and 20 *Padereroes*, the *Ilepe*, of 400 Tuns, 17 Men, 26 Guns, and 20 *Padereroes*, and the *Hermitage*, an Advice-Boat, of 75 Tuns, 30 Men, 3 Guns, and 8 *Padereroes*, all victualled for two Years and an half. The seventeenth we came in Sight of *Madeira*, and at Night its western Point lay about 7 Leagues off to the S. E. and a quarter East. The 18th we stood South with the Wind at East, expecting by that Course to descry the Island of *Palma*. *Madera* lies very high, but the Weather was, as it is commonly, so foggy, that we could scarce descry it. The Commodore's Ship being deep laden, and embarrassed with an unwieldy Rudder, the two or three Men could scarce manage, we resolved to make the best of our Way to *Cape Verd*, in order to have a new one made, or to put the old one to rights, which was encumbered with too much Wood.

On the first of *November* we made the Coast of *Africa*, between the River *Senegal* and *Cape Verd*, which lies very low, running N. E. and S. W. and is washed by a sandy Sea. Next Day, about Eight in the Morning, we doubled *Cape Verd*, and coasted along the Shore, in order to get into *Ruffique* Road; at which Place, in the Afternoon, we saw three *French* Ships at Anchor, and a small Bark, which had Captain *Drowel's* Equipage on Board, and lay off of that Place waiting for him. In the Evening I call Anchor within a Cannon-Shot of the three Ships, for the Wind being contrary, I could not come up with them, and the rainy Season in that Country was scarce over.

The fifteenth, having resolved to send the Advice-Boat to the *Idol* Islands, to buy up Provisions, I furnished it with *Kassade* and *Knives*, which were proper Commodities for that Place, and reinforced its Complement with Captain *Soyer* and six Soldiers, ordering Captain *Ridel*, who commanded the *Pinnacle*, not to treat with the Natives without *Hofftages*, and withal, not to stay there above three Days at most, but to come with all possible Expedition to rejoin us at *Tagrin*. When she parted from us, we were in the

the Lat. of $10^{\circ} 30'$. From the Time we passed Cape Verd, we had but little Wind, and the Tides run against us W. N. W.

The nineteenth about Noon, we descried the Idol Islands, about eight Leagues off to the E. N. E. and our own Pinnace making into the Shore. These Islands lie in $9^{\circ} 30'$ N. L. They are covered with Wood, and bating *Tagrin*, are the highest Land between Cape Verd and Cape Sierra Liôna. Great Idol being the largest and most southern of those Islands, affords Water, and several Sorts of Fruits and Fowls; but its Inhabitants, who are very numerous, are not to be dealt with without Hostilities. The Lesser Idol affords likewise Water: Besides these two, there are other smaller Islands, which are so inconsiderable, that they are not distinguished by any Name. The Names of these two are taken from a River so called in the Continent, the Mouth of which lies opposite to them about three or four Leagues off. The King of this Country resides up that River; the Natives are Negroes, Idolaters, great Hunters, and Eaters of Elephants. They have no Commerce with the Continent, and it is hard to get ashore upon them, because their Coast lies very high: I believe they put off their Elephants Teeth in the River of *Tagrin*. At Night we lost Sight of those Islands, which are distant 25 Leagues from Cape Sierra Liôna, or *Tagrin*. Next Day we saw, about a Quarter of a League off, several Spouts, or Guts of Wind, whirling about upon the Sea, and forcing up the Water with great Violence, two of which were very formidable. As soon as we perceived them, we furled all our Sails, for fear of any Mischief from them.

3. We arrived November the 23d, at Cape Sierra Liôna, and cast Anchor at *Tagrin*, where several Negroes coming on Board, gave me to understand, that there was an English Vessel about four Leagues off at *Safena*, the Residence of the King of *Tagrin*. On the 28th I caused the Rudder to be taken off the Stern-post, and hauled ashore, where having posted a strong Guard, and fortified the Place with felled Trees, I set the Carpenters to work. Having walked a little further into the Country, I found it very pleasant. At the Bottom of the Creek there was a small Brook of sweet and clear Water, the Banks of which, towards the Sea, were decked with great Quantities of Citron Trees, Willows, and pretty thick Woods. I likewise found some Plains good for Pasture; but the Soil is nothing but Stone, or Iron-coloured Rock. Their Houses are infinitely better than those at Cape Verd. The Natives, who are Negroes, worship little horrible Images resembling Devils, and small Lumps of black Earth in the Form of Sugar-Biscuits, which I understood to be the Nest of Ants. To these they offer Fruits, the Heads of Monkeys, Baboons, and other Beasts.

They call the Idols *Gigris*, which Name I take to be derived from the French; for they commonly salute one another in these Words, *Tout, Haut*; but when they salute a White, they cry *Tu*. As Men, they are a much better sort of People than the other Negroes, though they begin now to improve their Cunning, by conversing with the People of several Nations that touch there. The Place where we lay being the third Creek from Cape Sierra Liôna, is very convenient for taking in Water, Wood, Citrons, Oranges, and Hoops for Water-Casks, which are all to be had for little or nothing. There we had very good Rice in Exchange for equal Quantities of Salt. It affords no Flesh, unless Pulletts, which are very scarce, and has little Accommodation for Hunting; but all its Creeks are well stored with several sorts of Fish.

The Cape lies in 8° of North-Latitude, and the Needle varies there $2^{\circ} 45'$ North-East. One of our Trumpeters that could not swim was unfortunately drowned in a little River near this Place, which was nine or ten Foot deep. 'Tis presumed he was deceived by the extream Clearness of the Water, which represented the Bottom of the River to be nearer the Surface than it was, and that thereupon going to wash himself, but not meeting with the expected Ground, was so frightened with the Surprise, that he neglected taking hold of the Banks of the River, which was not above ten Foot broad. December the 3d two Negroes came on Board, one of whom was armed with a Bow, Arrows, Sword, and Knife; the other, who was the Interpreter, told me, that he who bore the Arms was sent by the King to

acquaint me that the Portuguese up the River had murdered the Captain and the whole Crew of a *St. Malo's* Bark: That his Master was sorry such a thing should happen near his Territories, and that if I had a mind to resent it, he would furnish me with Negroes to conduct me to the Place where the Portuguese had lodged the Bark. This I understood to be about seven or eight Leagues above the *Safena*, whither the *St. Malo's* Captain had gone to buy a sort of Wood not unlike that of *St. Marika*, which in France might be worth eight or nine Livres a hundred Weight.

When I first heard the News, I suspected that the Portuguese, understanding that my Rudder and many of my Men were ashore, had contrived the Message to induce me to send a Detachment out of the Land Guard, and so give them an Opportunity of possessing themselves of the Rudder and Water-Casks that were ashore; but upon second Thoughts, calling to mind the Humour of the Portuguese in that Country, and the Weakness of the *St. Malo's* Ship, I concluded the Account not improbable, and withal saw that the slighting such Intelligence might lessen the Reputation of the French in that Country. At last, having resolved to send out a Detachment, pursuant to the King's Message, the Interpreter, with several other Negroes, offered to go along with my Men to the Place, saying, they would go any where to have an Opportunity of killing Portuguese. To carry on this Affair with more Security, I ordered the Rudder to be brought aboard, for the Carpenter's Work being then finished, there wanted nothing but the Iron-work, which might be done on Board, by setting up a Forge in the Ship.

I reinforced the Land Guard with ten Men, ordering them to plant Barricades of Water-Casks before the principal Avenues of the Place where they lay, and to suffer neither White nor Black to come near them in the Night-time, and got Captain *Pile* to accompany my Men in the Expedition. Accordingly, the next Day I sent up the River our Sloop, with an Addition of ten Men to her Complement, together with Captain *Pile's* Bark manned with his own Men, and the *Hepe's* Long-boat, with twenty Men and four Pack-rovers, all under the Command of Monsieur *Montevrier*. December the 29th, Captain *Datel* of *Dieppe* arrived in the Bay, and I told me, that at the Isle of *St. Vincent* he met a Dutch Ship of four hundred Tons, manned with Dutch and English, bound for *Bantam*, in order to convey thither the News of the Agreement between those two Nations. At Three of the Clock in the Afternoon M. *Montevrier* returned with the *Hepe's* Long-boat, and Captain *Pile's* Bark, our Pinnace not being able to keep up with their Oars, and reported that he had been ten or twelve Leagues up the River, where, finding the River very narrow and rocky, inasmuch that the Bark struck several times, and having no Commission from me to venture the Loss of the Bark, he returned back without meeting any Portuguese, or their Vessels.

4. On the 31st we were in $3^{\circ} 30'$ North-Latitude; after our Departure from *Tagrin* the Weather was various, sometimes stormy, and sometimes very calm, as it uses to be in those Seas, and we found our Rudder much more serviceable than before. January 1st, 1620, at Sun-rising we found the Needle $3^{\circ} 30'$ North-East, and the Latitude $3^{\circ} 5'$ North. The 6th we crossed the Equinoctial Line, and celebrated the usual Custom of throwing Sea-Water upon those who had never passed it. From the third of this Month we had the Wind at South-East and South-South-East, and failed close to the Wind, in order to raise the South Pole, pursuant to the common Course of Navigation. The 24th we were under the Tropick of Capricorn, and the Needle varied 13° to the North-East from our passing the Line; we had the Wind at East and East-South-East. On the 1st of February we began to have the westerly and other variable Winds, being then in 12° South Latitude, and the Needle varying $15^{\circ} 30'$ North-East.

The 3d, being becalmed, I observed at the Sun-rising that the Needle was 13° N. E.; whereas at my last Observation, when I was almost a Degree farther from the antarctick Pole, it was $13^{\circ} 30'$; so that instead of increasing it decreased, upon which I concluded its Variation to be irregular, and that it is not fixed on two Meridians cutting the World in four Parts, as the Portuguese and others imagined.

During

During this Calm we saw two great Fish with long Snouts, or Beaks, which seemed to be of that sort that are known to pierce lined Ships. I could scarce have credited the Story of their penetrating through Ships, if the Governor of *Dieppe* had not shewed me a Piece of the Beak or Horn of such a Fish found in the Side of a *Dieppe* Ship, when it was laid up to be caulked after an *East India* Voyage; the Captain of which had found something strike against his Ship, as he sailed from the Coast of *Bresil* to the *Cape*, but did not know what it was till that Discovery happened. This Piece of Horn resembled the Tooth of a Sea-Horse, only it was flrait all along, and of the Colour of Ivory. Its Thickness was an Inch and half Diameter. It had run five Inches into the Wood, and was broke off, where the Lining joined the Wood, probably by the strugling of the Fish, which could not recover it without breaking. Several Persons have met with the like Adventure in their Voyages: But I shall only mention one more of a *Dieppe* Captain, who upon a Voyage to those Parts had his Boat flayed to Pieces by a Blow from one of these Fishes; for the Fish endeavouring to withdraw its Horn, disjointed all the Planks. Those which I saw on this Occasion seemed to be of the smallest sort, one of them that came just under me appeared to be ten Foot long, besides its Beak. It was a fleshy Fish, though not so big proportionably to its Length as a Porpoise. Its Colour was a dark blue, and its Fins and Tail, which were very large, represented a bright Azure in the Sea. It had a pretty high Lump upon its Back, resembling that of a Rechen, or *Indian* Sea Calf, which sometimes rises above Water. Its Head was not unlike a Porpoise, only it was longer, and instead of a Snout had this Horn, or Bill, which was very sharp at the Point, and almost two Foot long, and as thick as a Boy's Wrist. It is a very stiff and swift Fish, for I have seen it fy at Bonitoes, with which it wages continual War. I have often observed Bonitoes and Albacores wounded by this sort of Fish, and the Sea tingured with the Blood. I am certain there are some of this sort much greater than these I saw this Day, which attack the Whales, and probably 'tis their mistaking a Ship for a Whale that occasions their encountering with a Ship. However, I doubt not but a great Ship may be endangered by the splitting and gassing of its Planks, occasioned by this Fish endeavouring to withdraw its Horn after it has struck.

While the Calm and the excessive Heat continued, we saw a certain white thing about the Bignets of an Ostrich-Egg floating upon the Water, which sunk when the Ship came within fifty or sixty Paces of it; our Pinnace's Crew said they saw a great many of them. It resembled a Man's Head without Hair, and some say they observed two black Eyes and a Mouth upon it: We likewise saw a strange sort of Fish, about as large as an ordinary Lamprey, and equally round, with a large Fin or Crest, which seemed to be above a Foot high over its Head, and sloped in a continued Series down to its Tail. It swims upon one Side, so that the Fin, together with the Body, represents a large Fish in a triangular Form, and it makes its Way by shifting from one Side to the other; but when it catches its Prey, the Fin is straight, and appears above the Water to be of an ashy Colour, though the Body of the Fish is as white and as round as a Tallow-candle.

5. On the Tenth we were in $31^{\circ} 45'$ S. Lat. the Needle varying $12^{\circ} 20'$ N. E. the Twentieth our Lat. was 24° , and the Variation $9^{\circ} 30'$. Here we saw a great deal of Wreck, or Sea-grass, of a reddish Colour, which some say comes from the *Tristan de Acuna-Ilands*. The next Day there happened a violent Storm, the Wind at West, which had almost broke down our Masts, our Topmasts being then out. Such Storms are common, and very violent in those Seas in Winter; but it was then Summer there, and the Autumn was just approaching. On the 8th of *March* our Lat. was 34° , and the Variation no more than 2° , which I took for a certain Sign that we were not above seventy or seventy-six Leagues off of the *Cape of Good-Hope*.

The 11th we saw *Trambis*, or Sea-weeds, about three or four Fathoms long, Cormorants, Sea-Bears, and the Owls called by the *Portuguese* *Alcatras*, which are white

all over, only the Tips of their Wings are black; and all these were certain Signs of our approaching to the Land. We likewise saw innumerable Shoals of Porpoises, and a great many Whales; towards Night we discovered Land, and found the common Navigation to be very just, being then in 33° Lat. which is over-against the Bay of *de S. Idalgna*. We resolved to steer our Course to the *Table-Bay*, which lay from us about twenty Leagues S. E. a Quarter S. in order to take in Fresh-water; but the Wind being contrary, that is, S. and the Tides being N. N. W. we did not arrive at the *Table-Bay* till the 15th at Night, at which Time we call Anchor there, having lost only one Boy in the Voyage. The next Day I sent fifty Men on Shore with Sails to make Tents of; when the Boat returned, they told me they had found several Corpses of dead Men and Cleaths scattered up and down, and a small Fortification of Earth, which we guessed to be built by the *Dones*, for one of the Natives that spoke a sort of Jargon of broken *English*, gave us to understand, though more by his Signs than his Language, that five Ships had failed from thence to the Eastward about three Months before.

The 19th it continued to be very stormy, with a North-East Wind. Some Musquetters, whom we had sent in Quest of a Soldier who had straggled from us, reported, that they had passed along the South-Side of an Inland Mountain, joining to the *Table Mountain*, where they saw an Infinity of very large Baboons and Monkeys; and from thence continued their Course along the declining Part of the Mountains that bound the Western Shore, till they desired the Sea about half a League off, which I took to be another Bay between this and the *Cape of Good-Hope*, that then they turned back, and when they were upon the Mountains, desired the Sea to the Southward, which must be that to the Eastward of the *Cape of Good-Hope*. That they had a plain View of other Mountains, between which and these they were upon, there lay an open Plain about ten or twelve Leagues broad, the Soil of which was very good, and capable of producing several Fruits, the Plain terminating upon the Sea, without any Mountains between *Cape-Falso* and the *Cape of Good-Hope*. That at the Foot of the Western Mountains they met with Woods and large Trees, like Apple-trees, which bore no Fruit, but were very hard Wood; and in the same Place were very pleasant Pastures, and some Cattle, and excellent clear Water.

This Report inspired me with a Curiosity to see the Country; accordingly, the next Day, I walked out by the Back of the *Table Mountain*, and when I was got three Leagues into the Country, observed very good Grounds, sprinkled with Grass and pleasant Flowers, with a small Rivulet of Fresh-water gliding along the Plain, and losing itself in the Sea at the Foot of the Bay, at a Place where there is no great Confluence of Water, which we call the River. This Rivulet rises out of the Mountains that lie between the Point of the Cape and this Bay, and serve for Boundaries to the Western-Sea. I likewise observed that this Rivulet makes several Fens to the Northward, along the Downes or Banks of Sand, that terminate the Bay and to that Place which we call the River, where Barks of fifty or sixty Tun may enter at High water. I returned along the Mountain, and, at the Foot of the *Table Mountain* to the Southward, met with a great many Trees, some of which afford Planks a Foot broad, and eighteen or twenty Foot long, their Trunks being straight like that of a Pear-tree, their Leaves whitish and small; their Bark about two Inches thick and reddish; the Heart of the Wood white and hard, and the whole Tree full of Sap.

I likewise observed Herbs of the same Nature with those in our Country, such as Sorrel, Fern, Broom, &c. From this Mountain I saw *Cape-Falso*, and the Sea that washes the Fall side of the Cape, which forms a large Bay as far as the Cape, where a great many Rocks shoot out into the Sea, that must needs be dangerous to Ships on a Southern Wind. Upon the Side of the Mountains of *Cape-Falso* there runs either a great River, or an Arm of the Sea, that shoals very far up; and I observed the like upon the Inland Side of the Mountains upon the *Cape of Good-Hope*. Upon all these Mountains there are great Quantities of Goats, Fallow-deer as big as Harts, Partridges, and all Sorts of Fowl, Baboons, Monkeys, Lions, white Wolves, Foxes,

ings are black; and all approaching to the Land, as of Porpoises, and a light we discovered Land, in to be very just, being faint the Bay of *de S. L.* Course to the *Table-Bay*, towards S. E. a Quarter S. but the Wind being coming N. N. W. we did not at Night, at which Time only one Boy in the Voy- Men on Shore with Sail's returned, they told me of dead Men and Carcasses, all Fortification of Earth, the *Donet*, for one of the Men of broken *English*, gave his Signs than his I as- from thence to the East-

very stormy, with a North- whom we had sent in- gled from us, reported, South-Side of an Inland Mountain, where they boons and Monkies; and urle along the declining of the Western-Shore, all League off, which I took of the *Cape of Good-Hope*, when they were upon the Southward, which must be of *Good Hope*. That they rains, between which and an open Plain about ten Soul of which was very several Fruits, the Plain any Mountains between *Hope*. That at the Foot et with Woods and large pore no Fruit, but were

Place were very pleasant excellent clear Water. h a Curiosity to see the Day, I walked out by the and when I was got three ved very good Grounds, Flowers, with a small Ring the Plain, and losing the Bay, at a Place where of Water, which we call of out of the Mountains that and this Bay, and ferre ca. I likewise observed Pens to the Northward, ad, that terminate the Bay the River, where Banks of high water. I returned Foot of the *Table* Moun- a great many Trees, some ad, and eighteen or twenty raight like that of a Pear- all; their Bark about two Heart of the Wood white ll of Sap.

the same Nature with those Fern, Broom, &c. From and the Sea that washes forms a large Bay as far as Rocks shoot out into the ous to Ships on a South- e Mountains of *Cape Fish* or an Arm of the Sea, that ved the like upon the In- n the *Cape of Good Hope*: are great Quantities of es, Partridges, and all Sorts ons, white Wolves, Foxes, Par-

Porcupines, Ostriches, and other Animals, unknown to me. In this Day's Journey I saw one of the Natives, they having retired for fear of us.

6. Those who lived towards the Point of the Cape, are the most miserable Savages yet discovered, for they neither sow nor cultivate the Ground; neither do they fish, or venture themselves two Steps into the Sea. They are of a very low Stature, especially their Women, and are so meagre that they always look as if they were dying for Hunger. Their common Food is some white Roots, about the Bigness of Chestnuts, which have a Stalk like a Leek, only a little narrower, and not indented, that bear a white Flower. If they find any Cockle-fish, or Whales, or any other dead Fish upon the Shore, tho' never so much putrified, they throw them upon a Fire, and then feed heartily upon them; nay, when the very Skins, Heads, and Entrails of the Sea-Bears and Penguins, which our Men fed upon, were thrown out of the Tents, and had lain for seven or eight Days, till their Stench obliged our Men to remove their Tents, and feared the Wolves and other Wild-Beasts from touching them: Even then, I say, the Savages would take them up, and after having put them under the Ashes and squeezed them between two Stones, would eat up every Bit of them.

When they meet an *European*, the first Thing they do is, to shew their Stomach, which they throw into their Body, so that makes a Hollow, or great Pit upon their Breast. They have Wars one with another, probably upon account of their Cattle, which they do not eat, unless these are ready to die through Leannets, Age, or any other Accident. They cover their Privities with Sheep's Tails, and wear the Skin of a Sheep, or some other Animal, over one Shoulder, like a Scarf. The better sort have dried Tripe about their Necks, upon which there hangs a little Knife shaped like a Lance, in a Wooden-sheath; and this I take to be the Instrument with which they cut off one of their Testicles at ten or twelve Years of Age, that being a Custom among them, perhaps to qualify themselves for running, in which Exercise they outdo all the Nations that ever I saw.

Some hang upon their Necks a Plate of Copper, as thin as a Teltion, and about a Hand long, and four or five Inches broad; others wear Bracelets, being Pieces of Copper or Iron, with a Hole in the Middle. Those who seem to have some Command over the rest, have commonly a Stick in their Hands, with a Fox's Tail at the End of it. I could not perceive any Religion among them. They marry indeed, and dance, and their common Salutation to us is dancing to a Song, which, from the Beginning to the End, is nothing else but *Hantiou*. Their Arms are an Atlagay, with a weak Sort of a Bow and a Quiver, which they hide under some Bushes when they come to our Tents. They are very apt to steal any thing of Iron or Copper, but Linnen or Cloaths they do not covet.

They are Negroes, and have frizzled Hair, as well as those in *Guinea*, but they wear no Ornament upon it. They have no Cottages to live in that I could perceive; but in the Night-Time they shelter themselves, with their Wives and Children, with Bushes, and have some Skins, stretched like an Umbrella, upon two Sticks laid a-crofs, with one in the Middle to fasten it in the Ground, under which they lie buried in the Sand quite up to their Belly. They are altogether ignorant of Agriculture and the making of Canoes; whereas could they but tack some Pieces of Wood together to convey them to the Islands juft by the Continent, they would find vast Quantities of Penguins and Sea-Bears (which to them are most delicious Food) not only for their own Sufenance, but for Sale among their Neighbours.

This *Table-Bay* lies in 34° Lat. the Needle varying 1° 45' N. W. Its Air is very wholesome. Sometimes you may treat here with the Natives for Beef and Mutton, but that is very uncertain. It is a secure Road to anchor in, and has about six or eight Fathom Water: There is more Rain and Wind in the Bay than ashore, for the high Mountains stop the Clouds and Vapours, which being driven by the Wind, break and fall down in Hurricanes upon

N E M B. 49.

the Bay. The Height of the *Table-Mountain*, from the Sea-Side to the Top, is 1350 Foot perpendicular.

7. Some of our Men going ashore, happened to light upon a great Stone, with two little Packs of pitched Canvas, underneath which we afterwards found some *Dutch* Letters. When we opened them, we found, first, a Piece of pitched Canvas, then a Plate of Lead wrapped round the Packet, under that two Pieces of fresh Cloth, then a Piece of red Frize, all wrapped round a Bag of coarse Linnen, in which were the Letters very safe and dry. They contained an Account of several Ships that had passed by that Way, particularly of an *English* Advice-Boat that was gone to *England* to acquaint the Company with the Injuries the *Dutch* had done them in the *East-Indies*. They also gave Notice to all Ships that passed that Way, to take care of the Natives who had murdered several of their Crew, and stole some of their Water-casks. Farther, they contained Advice that the *Dutch* had besieged *Bantam* with thirty-five Ships, and that the *English* were forced to abandon it for want of Provisions; that the King of *Bantam* and the *Dutch* committed several Acts of Hostilities, and many other Things too long to be inferred.

Having read this Letter, I was at a Loss whether I should go to *Bantam* or not, for I readily imagined that *Bantam* being blockt up by the *Dutch*, they would not suffer us to enter, and far less to traffick ther; since they always endeavoured there to keep the Trade out of our Hands: Besides, I was apprehensive they might carry the Place, in regard that Prince *Mataran*, who called himself Emperor of all *Java*, and alleges, that the King of *Bantam* revolted from him, would readily join with the *Dutch* in reducing the Rebel King. Upon these Considerations I resolved to steer my Course to the Coast of *romantel*, to put off some Goods that were proper for that Coast, and buy up others that should be saleable at *Achen*, and upon the Coasts of *Sumatra* and *Java*; and, a ferial, to take in at *Java* a Ship's Loading of Pepper: after which, if the Siege continued, to have there a Factory with the Pinnace to trade up and down the Coast; but, if the Siege was raised, I designed not to settle any Factory at *Achen*, but to send one of the Ships back to *France*, and the other, together with the Pinnace to *Bantam*, where we might get two or three hundred per Cent. upon the Coast-goods, and there to load the Ship, and leave a Factory, together with the Pinnace.

In the mean time I called to mind that the Directors intended I should go frait to *Bantam*, and send at least one of their Ships back to *France* that Year, which I could not do if I touched upon the Coast of *Ceromandel*: Besides, if the Siege should happen to be raised, I was apprehensive the Company would blame me for not following their Orders; but even that Consideration was counterpoised by this, that I could not at any rate send back one of their Ships that Year, since I could not reach the Coast of *Sunda* till *August*, nor get out from thence till *October* or *November*, by reason of contrary Winds, and upon that Score I should be obliged to spend the whole Year without doing any thing, and eat up all my Provisions, which in that Country are so scarce, that the *English* are forced to spread themselves along the Coast to be supplied; not to mention that I should be exposed to the Discretion of the *Dutch*, who never meant us well. Having maturely weighed all these Considerations, I asked Advice of the principal Deputies, some of which said they would submit to my Judgment, and others told me, that since I had a positive Commission for *Bantam*, and since *Bantam* was a Place of too great Importance to the *Dutch* to be long at Variance with the King, I had best steer my Course thither. These different Opinions put me upon another Expedient of sending the *Hope* to *Bantam*, and giving her Captain, Mr. *Graze*, an ample Commission.

8. On the 3d of *April* we weighed Anchor, and being becalmed, about two Leagues off from the Bay, were driven by the great Waves coming from the South, and the Tides running North upon a little Island, and cast Anchor within a League of it in twenty Fathom Water, the Ground being muddy Sand. The tide lay from us North one Quar-

S X

ter

ter North-East, and the Southerly Waves made us roll prodigiously, so that every thing in the Ship cracked. This Island is almost round, and about a large League in Circumference; within it affords nothing but Sand, and some Bushes, under which the Penguins hatch their Eggs; a great many Rats and Adders live in it, as well as Chamæleons and Lizards. Upon its Rocks, by the Sea-Side, we saw a great many Sea-Bears, which bleat like Sheep, some of which are very large, and have a Skin as thick as a Wolf's, with very soft Hair. Both these and the Penguins taste very rank of Oil, of which a great Quantity might be taken from them if one were at the Pains. They have two Paws before, and two Fins behind; they cannot stay long under Water without taking Air; they live upon Fish, and in the Night-time retire to the Rocks.

The Penguins are Fowls without Wings, which have two Fins, and two broad Paws, upon which they walk upright, and with which they dig the Ground to make their Nests. They are a little bigger than a Cormorant, having a white Belly, a black Back, a very thick Head, and a Bill like a Raven. In the Morning they repair to the Sea, where they swim, and feed upon Fish, and at Night they return to their Nests; they have nothing of the Taste of Flesh, and for my Part I take them to be feathered Fish. While I was ashore there was such a Storm from the South-East, that I could not reach the Ships, but was forced to stay upon the Island all Night, notwithstanding that it was a perfect Calm where the Ships rode; on the 7th it thundered and lightened violently, and the next Day the Westerly Winds began to swell, besides that the Fog was so thick, that we could not see from one End of the Ship to the other: Upon which, having given a Signal for the other Ships to follow me, by the Sound of Trumpets and Drums, I returned founding all the way, and cast Anchor in *Table Bay*. On the 12th we weighed Anchor again, and all that Day but little Wind, and that very variable: However, on the 14th we doubled the *Cape of Good-Hope*, and the 15th were in 36° Latitude.

The Day following we had a violent Storm from the North-East at full Moon, which we foresaw the Night before; for at Sun-setting reddish Rays ascended from the Sun, and underneath him was a Bank of the same Colour; towards the Wind there appeared, as it were, a Circle from the Centre, of which there proceeded great Rays; under the Wind there appeared a great blackish Cloud, and in the Middle of it we saw what the *Portuguese* call the Ox's Eye, which is generally taken notice of as the Forerunner of a great Storm. When the Moon came low, the Sea swelled mightily, and the Storm was indeed very great, notwithstanding that the Air was so clear, that in the Night-time we saw the rising and setting of the Stars. The Storm parted me from the other two Ships till the 17th, that the Wind abated, and became southerly; after which I perceived our two Ships about a League before, and found, to my great Admiration, that none of them had sustained any Harm: However, this wonderful Deliverance made me resolve not to part with the *Hope*, but to go all in Company to *Bantam*, pursuant to my Orders; accordingly I dropped all my former Projects, and sailed East and South-East directly for *Bantam*; but on the 12th of *April*, in 36° Latitude, and 12° North-West Variation of the Needle, a violent Storm overtook us, and not only broke my Bow-sprit, but damaged the Pinnace's Mast; upon which I was obliged to take up my former Resolution of sending Captain *Grave* with the *Hope*, Strait to *Bantam*, designing to carry my own Ship and the Pinnace to *Madagascar*, in order to have them refitted.

9. On the 1st of *May* I parted with the *Hope* in 37° 30' South Latitude, and 18° Longitude, reckoning the *Cape of Good-Hope* for the Meridian. The 17th in the Morning we descried *Tillac* about ten Leagues off, which is a running Coast that appears very high, and that Night had Sight of *Augustine's Bay*.

The 17th we were opposite to the two little Islands of Sand, which lie about three Leagues from the Bay, which having no Trees upon them, lie very low; but in the Night-time the contrary Winds carried us West-North-West, where finding none, and not being able to make the Bay, I resolved to stand for the Islands of *Comorro*. During

the light Quarter of the Moon, in these Seas the Surface is very plain and smooth, and the Air very clear. While we stood for these Islands the Wind turned North, upon which I tacked about for the Bay, and arrived there on the 21st, anchoring in seventeen Fathom Water upon a Clay about a Quarter of a League from Shore. On the 22d I went with two Long-boats, and fifteen Musketeers, to observe the River: Upon our Approach to the Shore we observed nine or ten of the Natives upon a Point of Sand, who made a Signal to come to them: Upon this we went ashore, and though we were armed, they joined and talked with us above an Hour, signifying by their Language and Signs that they were very well pleased with us, and would visit us next Day on Board. They were very curious in observing what Things we had about us, and one of them, who seemed to be a leading Man, spying a Silver Whistle with a Chain to it that my Mate had about him, begged it very earnestly. I ordered the Mate to shew it him, though I was sorry for the Discovery, for fear they should insist upon having that, and no other Commodity, in Exchange for theirs, and for that Reason had cautioned all our Men to hide them. However, they all liked it mightily, and the chief Man among them promised to give for it an Ox, which might be worth twenty Crowns at least: Upon which I made him understand that we could not sell it, because we had Use for it; but if any of them would come aboard, I would shew them things that they would like as well.

Without farther Deliberation, this principal Man and three others embarked with us, desiring that to many of our Men might be left ashore, which I agreed to. In the mean time, at one Cast of a Scan, we drew up an infinite Number of little Fish, resembling Herrings both in Form and Taste; but I could not make any material Remarks upon the River, only that it was very great, and very rapid. The Natives of this Place are the handomest Negroes that ever I saw; they are large, and well shaped, they feed well, and are neither flat nosed, nor thick lipped, neither do they stink like the *Guinea* Negroes. They are very curious in their Hair, which is long, frizzled, raised upwards, and made up in Wreaths at the Top. Their Teeth are very white, even, and small, and they rub them every Minute with a small Piece of Wood; their Garment is a Cotton Cloth all woven, of two or three Colours, with which they cover their Privities, the rest of their Body being naked. As for their Ornaments, he whom we took to be the chief Man, had a large Plate, like a Piece of Bone or Ivory, perfectly white upon his Forehead, a large Ring of Copper at his Ears, about his Neck a Collar of Raffade, besides Glass Beads of several Colours, and a Necklace of fine yellow Amber, which he esteemed very much; the rest had Ornaments corresponding to all his, excepting the Trinkets on his Forehead. As soon as we came on Board of the Ship the Natives were surprized at its Size, and mightily taken with the Sound of the Trumpets and Drums: I presented them with some enamelled Rings, and others of Pearl and false Amber, and entertained them with Discourse till Supper was ready.

But in the mean time they were seized with the Sea-Sickness, insomuch that they would needs go upon Deck, and lie upon a Sail. One of them who was not so sick as the rest, did nothing but jeer his Companions all Night, and imitated every Word that the Men upon the Watch said to one another. In a word, these are very jolly Negroes, and have nothing in them that is brutish; they readily apprehend what is said to them, and in my Opinion are much preferable to all other Negroes. Next Morning, by Break of Day, I went to look for my Guests, and found them upon their Legs, and much better than before: Then I shewed them several little things I thought they would like, such as Coral, yellow Amber cut fine, Raffades of all Colours, (they liked the blue, red and green, but not the white) Knives, Razors, Combs, Iron, Tin Vessels, a Copper Baton, and red Cloth, as well as Cloth of other Colours. They seemed to like every thing, and desired the Gift of them.

But when I spoke of their Beeves, they always came back to the Silver Whistle and the Chain. Finding I could make nothing of them, I sent them ashore again, as well as some of our Men, with several of the above-mentioned Goods,

to try what they could do with the other Natives. One of
 the Natives offered a fat large Ox, with Bunches upon his
 Shoulders (like to those on Camels Backs) in Exchange for
 a Copper Balon; but he that bore the Trinket on his
 Forehead spoke to him, upon which he gave back the Ba-
 lon, and asked for a Silver Whistle with a Chain to it. In
 fine, I found they resolved not to truck with me for any
 thing else but Silver Chains. The next Day, hearing that
 the Natives were come down to Shore with their Cattle, I
 sent our Men ashore with Chains of Steel, Lattin, Copper,
 Jet, and other things resembling Pearl, ordering them to
 conceal the Silver Chain, and not exchange it till they had
 tried if any of the former would do; for I had no mind to
 make them acquainted with that Metal; but after all, they
 gave me to know, that they would deal in no other thing
 but the Silver Chain, and would give no more than one
 Cow for as much of it as would go round the Neck of the
 tallest of them, and meet with two Ends at his Navel.

Being unwilling to part with the Silver Chain, and at
 the same time in great Want of their Cattle, because we
 could not live upon Fish, I resolved to have a Chain made
 of Pewter, by a Goldsmith that we had on Board, and for
 that End melted a Platter, hoping to do as much with a
 Pewter Chain as with a Silver one; for when I offered them
 Silver and Pewter Spoons in a Heap together, they chose
 the Pewter ones, because they were newelt. In like man-
 ner, when I offered them a large Silver Balon, and Silver
 Cups, and even a Chain of Gold, they would give me no-
 thing for them, but still wanted the Chain that was along
 with the Whistle. The next Day they came aboard without
 Hostages, and brought with them some Hens and Ca-
 pons, a pretty deal of Milk, some Peafe, and some Horn
 Spoons, made after their Fashion. These were very fond
 of our red Raffade, but we had but very little of it; how-
 ever, we exchanged what we had at a pretty good rate,
 for they gave us a large Capon, or some such Poultry, for
 every String of it. These Natives lodged all Night on
 Board of us, and were not sick as the others were; they fed
 heartily, and eat a great deal of broiled Fish, and thrice as
 much Bread as any of our Men. The Peafe they fold us
 were white, and as large as a Mufket-Ball, and the best I
 ever saw; they eat them raw, and next to their Milk I be-
 lieve they are their best Food.

10. On the 26th, I sent some red Raffade and the Tin
 Chain ashore, but they quickly perceived that the Chain
 was not the right; they gave us Fowls for half a String of
 Raffade a Piece, as well as a Weather for one String, and
 Affagays and Darts very well made for half a String a-
 piece. These Natives work very prettily in Iron and Cop-
 per, and to my Mind, their Iron, of which they have great
 Plenty, is as good as any in *Spain*. They fold us a small
 Quantity of Rice, which they valued very high. When our red
 Raffade was all gone, I shewed them some red Coral, Chri-
 stal, and other pretty little things, but they did not like
 them. On the 27th they brought down as many Cattle as
 covered a Quarter of a League, and still demanded the
 Silver Chain for an Ox, the red Raffade for their Sheep and
 Pullets, and the Blue for their Milk, of which they brought
 great Quantities for the Silver Chain. I demanded three
 Oxen and a Sheep for two Strings of red Raffade. In the
 mean time their King, or Governor, sent me word to come
 ashore (for I marketed in my Long-boat) and shew him
 the Chain, but I gave him to know that I could not come
 ashore; but if he would be pleased to come on Board, he
 should be very safe, and I would send some of my Men
 ashore for Hostages.

After some Deliberation he came on Board, and I was
 sorry I had no nice thing to present him with; however,
 having four Strings of red Raffade in my Hand, though I
 thought them too mean a Present for him, yet finding he
 looked upon them with an agreeable Eye, I complemented
 him with them, which he accepted with Pleasure, and gave
 me a Sheep for my Recompence. I had a great mind to
 have given him the half of the Silver Chain, which was
 five Foot and an half long, and weighed three Ounces and
 an half; but considering, if I was prodigal of the Chain,
 I should have nothing to fetch Beeves, or else I should be
 obliged to rob the Mates of their Silver Whistles, I put
 it off till the next Opportunity. But some time after the

King reflecting upon the Chain, sent one of the stateliest
 Oxen I ever saw, which we bought for half the Chain; but
 we had a great deal of Trouble in bringing it aboard; for
 though it received in its Head two Pistol-Shot, one Har-
 quebuse, and one Mufket Shot, yet it was so strong, that
 we were forced to stifle it under Water, and give it several
 Blows on the Head with an Axe before we could get it on
 Board: Such an Ox might be worth an hundred Livres in
France. These Oxen are neither high, nor so large as those
 in our Country; but they are short and thick, their Head
 is small, their Neck short, with a large Bump or Lump
 of Fat upon the joining of the Neck to the Shoulder, which
 at a Distance appears as if it were a Burthen tied upon that
 Part. Their Sheep resemble those of *Barbary* as to their
 Head and Wool; but their Ears hang down like a Hound's,
 and their Tail contains ten or twelve Pound of pure Fat,
 which does not disturb the Stomach as the Fat of the Body
 does; their Fowls are large, fat, and well tasted. In a
 word, their Men are in so good a Case, and the Cattle so
 fat, that the Island must needs be a very good Country.
 As to their Fruit, I question whether we were there in their
 Season, at least they brought us none but a little Rice, some
 Beans, and very large white Peafe.

They have a great many Gourds and Bottles made of
 them, in which they put their Milk. The 28th I was to
 see a little Island in the Mouth of the River, and then re-
 turned to the Place of Barter, where the Natives waited for
 us with a great Number of Cattle. This Day I bargained
 to double the Advantage of what I did Yesterday; but
 having allowed some of our Men to go ashore and treat for
 themselves, whether they spoiled the Market by being too
 prodigal of their Commodities, I cannot tell; but so it
 was, that the Natives all of a sudden demanded four Strings
 of red Raffade for a Sheep; whereas they had sold me sever-
 al for two apiece but just before; upon which I called all
 my Men into the Boat, for I always marketed in my Long-
 boat from the Commencement of the Treaty.

I had no sooner recalled my Men, but the Governor of
 the Natives, whom they call *Aurea*, appeared in a Passion,
 and ordered all the Natives to retire. Let our mutual
 Friendship should be thus broke, I made a Signal that I
 would speak with the Governor, upon which he came down
 to the Shore Side, and I going ashore, presented him a Cut-
 las with a Silver Hilt, assuring him that I was his Friend,
 and earnestly desired that I and my Men should live in per-
 fect Amity with him and his People. This done, he ex-
 pressed a great deal of Satisfaction, the Negroes made loud
 Acclamations of Joy, and I causing the Trumpets to found,
 and the Drums to beat, ordered a Party of our Men to
 come ashore, who joined in and shook Hands with the
 Natives; in the mean time the Governor made me sit
 down by him, and admiring the Trumpets and Drums, of-
 fered me an Ox for one of either; but I told him I could
 not part with them. After that we sold the rest of our Silver
 Chains for two Heifers, and a String of Coral Beads for
 an Ox, and then we returned on Board, giving the Na-
 tives to understand, that within four or five Days I should
 be gone, which they heard with Grief. The next Day
 one of our Officers went on Shore and sold four Ounces of
 a Silver Chain for six lusty Oxen, which I ordered to be
 falted.

11. On the 1st Day of *June* I went into our little Skiff
 with twelve Men, designing to reach the Mountains by
 a small Creek, and from thence to descry the Vallies where
 the River runs; but finding the Creek very inaccessible,
 and surrounded with Bushes, steep Rocks, and also Plants,
 I left it, and rowed about half a League up an Arm of the
 River to the Southward, where I found a Landing-Place.
 Having walked up a third Part of the Mountain, I disco-
 vered that the other Arm of the River to the Northward
 was yet greater, for it appeared as broad as the *Seyne* a
 League below *Roan*. Upon the Sea-side, and for two
 Leagues up the River, there is nothing but thick and black
 Woods; but beyond that, there are very pleasant Fields.
 This Bay is so covered with Flats to the North and South,
 that it is only accessible by the N. W. and W. N. W.

I do not believe the great Storms do ever reach it, for
 the Coast does not seem to be much beaten by the Waves,
 and all the fifteen Days I obtained but one Cloud in the
 Zenith;

Zenith; neither is the Heat excessive, being tempered by the Land Breezes, that never fail blowing from the Sun-setting to Ten or Eleven o'Clock in the Morning, and the Sea-gales that blow from that Time to Sun-setting. I found the Air of that Bay very healthy, for we had not one sick aboard, to which the Abundance we had of fresh Meat and good Water contributed not a little. As for the adjacent Country, the Valley is very pleasant, and affords excellent Pasturage, being watered with a large River, which would render the Ground very fertile, if it were cultivated. The Sea swells the Mouth of the River to ten or twelve Foot running Water, so that ordinary Ships might enter it. The Mountains are a dry Rock, the Surface of which looks as if it were burnt. The low Country is clad with an Infinity of Bushes and Shrubs, and the greatest Quantity of Tamarinds I ever saw, as well as with Ebony, and Aloe-Roots.

Their Tamarinds were not then ripe, but I met with another Fruit, almost ripe, that resembled a large Walnut, having a green Rind, which, when I opened it, gave a fragrant Smell, and the Fruit within it was black, and full of little Stones, like *Coffia Fistula*, and the Pulp being of the same Taste and Colour, though not so thick, was, as I take it, of the same Qualities. This Fruit is called Tamborins, and said to resemble Poppy-Heads, but without any Reason. We saw, in the Hands of the Savages, some small Cucumbers, which seemed to be better than ours, which they eat as we do Pears, a great many Gourds, some Beans, very good Peas, and a little Rice, and only one Citron. The Natives are jolly, proper, handsome Negroes, they are very friendly one to another, and obey one Sovereign, called *Aurea*, and he was only his Deputy, to whom I made a Present of the silver Cutlafs, for they told me, with great Concern, that their *Aurea* had been flabbed. I could not perceive them guilty of any bruth or inhuman Action, for they dealt with us very friendly and honestly; they did not steal the least odd Thing, or offer the smallest Injury to our Men.

One Day, when one of our Priests was saying Mass, and had but very few Auditors, twenty-five or thirty of the Natives came about him, and being desired to kneel did so, and behaved themselves very respectfully till the Sermon was over. As for Religion, I could perceive none they had amongst them: Indeed they are circumcised, and though the Institution came to them time out of mind, yet I believe they had it from the *Mohammedans* upon the Coast of *Ethiopia*, who have long had, and still have, Traffick with that Country. Their Language sounds pretty smooth, for they pronounce it very glibly. They do not reckon beyond Ten in Computations, and their ten Numbers are thus expressed in Order, *Iffa, Kewia, Tello, Effad, Liame, Euning, Fruits, Virelle, Sinoy, Fonso*. As for their Women, and their Houses, I saw neither. Some of our Men told me, they left their Women about half a League off in the Woods, and that they saw three or four of them that were very handsome, being covered from their Breast to their Knees with a party-coloured Cloth of Cotton, and having their Ears pierced in many Places, with a great many Ear-rings and Bracelets hanging upon them.

Having refitted our Ships, and furnished ourselves with fresh Provisions, Wood, and Fresh-water, and rode sixteen Days in this Bay, which is a very proper Place for taking in fresh Provisions, and sheltering distressed Ships, and might be made as useful for those who trade to the *Indies* as *Mozambique* is to the *Portuguese*. Having rode, I say, sixteen Days in this Bay, which lies in the Island of *Madagascar* or *St. Laurence*, under the Tropick of *Capricorn*, we weighed Anchor and stood North-West to avoid the Flats; and, having sailed all the Day with little Wind, at Night the Bay lay about ten Leagues off S. E. a Quarter E. at which Time we perceived another Bay about six Leagues off to the Eastward; the Coast runs N. and S. as far as we could see, and appears high, smooth, and all of a Piece, like the Coasts of *Picardy*, *Normandy*, and *Bretagne*.

12. June the 9th we came in Sight of the *Terra firma*, between *Sophala* and *Mozambique*, and, at Night, being in 7° 16' Lat and sailing N. E. a Quarter E. were in Dan-

ger of being cast away, because our Sea-Charts are very defective in those Parts, for the Pinnace being ordered to sail a-head and sound, and, if she apprehended any Danger, to give us a Signal of three Guns; about an Hour and a half before Day, the Signal being given, we immediately tacked about and dropped an Anchor; and when Day came, perceived that if we had gone a little farther we had run our Ship a-ground, for, about a Quarter of a League off there lay a little Island, scarce a Mile in Circumference, covered with Bushes and Greens, having two tall Trees together upon its Western Point, and to the W. N. W. of this Island, which has a long Bar before it; there lies another of the same Bigness very low, and covered all over with Trees.

The Continent lay about four Leagues from the first Island to the S. W. We saw a high and sandy Coast with a woody Country behind it, and to the West we descried a low Land, with large Trees upon it, as if they had been planted in the Sea. I was surprized to see the Continent so near me, taking my Measure from the Sea-Charts; for over Night, when we saw the *Terra Firma*, and the Islands, we took them, according to the Latitude in the Charts, to be what the *Portuguese* call the *Primieras*, and reckoning these three Leagues to the Westward of us, the Course laid down in the Charts from these Islands to a large Flat, lying in 16° 30' about twelve Leagues from the *Terra Firma*, being N. E. and S. W. and the last of the *Primieras-Islands* being placed in 17°, above ten Leagues from the *Terra Firma*, we relolved to land N. E. a Quarter E. thinking to sail nearer to the Flat than the *Primieras-Islands*, but we were mistaken, for the *Primieras-Islands* are not above two or three Leagues from the *Terra Firma*, from which the Coast runs away E. a Quarter N. E. Besides, the Charts have no Flats or Islands along that Coast, unless it be those of *Angosa*, which are placed more to the Southward, viz. 16°; though after all, I saw that Morning a String of Islands distant one from another, and lying 16° 40', which I took for them; so that the Charts misplaced them also two thirds of a Degree. Being at a Loss to know what little Islands these were, and finding the Chart so much out, I relolved to stay there no longer; accordingly I weighed Anchor, and sailed between the two Islands, the Pinnace founding a Head of me.

We sailed close by the Land-Side of the first Island, where we had ten or twelve Fathom Water, with a good Ground of muddy Sand, and no Banks, so that this Side, together with the Bar, affords a very good Road for Ships; then standing E. S. E. with a fresh louthery Gale, we got clear of the second Island, between which and the Continent I doubt not but there is a good Passage, for I observed not any Banks or Shallows. Having passed this second Island, we descried a third of the same Bigness with the former, which convinced me that these were the Islands of *Angosa*. The next Day it was as much as we could do to see the Land to the North-West of us, being then about six Leagues off; but, according to the Charts, we should have been above twenty.

13. The thirteenth we descried one of the Islands of *Comorra*, which is very high, and as conspicuous as *Madzera*. The next Day we perceived another not so high, which is called *Majotta*, and abounds with all sorts of Provisions and Fruits, lying about ten Leagues from the Island that is nearest the *Terra firma* of *Mozambique*, the South Point of which we made the next Day, but could find no Conveniency of coming to an Anchor. Notwithstanding it is inhabited all along the Shore, this last Island is very cool, moist, and full of Verdure, by reason of its Height, which gathers a great number of Clouds that break upon it. It has a great many Brooks of Water running down from the Top, which, in my Opinion, does not spring from the Rock, but are occasioned by the continual Vapours and their Condensation. The sixteenth we made the North Cape, which is fifteen or sixteen Leagues distant from the South. Having doubled the Cape, we perceived a sandy Creek, which appeared like an old ruinous Castle, where two Ships may ride at Anchor, in six Fathom Water, upon a sandy Ground: We thought to have rode there, but the Tide carried us by it.

Having

Having doubled the Point of this Creek we came before an inhabited Place, furnished with Houses like those of our own Country, where we thought to come to an Anchor; but finding no Bottom but from fifty to thirty Fathom Water, upon a rocky Ground, we stood to Sea, despairing of Anchorage upon that Island. In the mean time the Tide carried us Westward along the Coast, to a Point where we came in Sight of a Ship, and having sent out our long Boat with ten Musketeers, we understood it to be a *Macca* Ship of forty Tuns, that upon our Appearance upon that Coast, had run all their Goods on Shore, taking us to be *Dutch* Ships. The Captain shewed me two Letters, one from an *English* Captain called *Martin*, and another from Captain *Bannar*, intimating to all their Countrymen, that they had taken in several Refreshments at that Place, especially Fruits, but little Meat; that they had found no Water there; that linnen Cloth and Paper was a proper Commodity for that Place, and advising them to take Care of disobliging the Islanders, who tho' they appeared friendly enough, were capable to do them a great deal of Injury.

Having asked the *Arabian* Master where I could find the best Conveniency for coming to an Anchor, he told me, the Place of Anchorage lay to the Windward of their Ship, but withal, advised me to fetch a Pilot from the Shore, by reason that the Road is surrounded with Rocks and Banks, and the Inhabitants of the Island being great Sorcerers, and having the Wind at their Command, could, upon Occasion, change it to our Disadvantage. Pursuant to his Advice, I sent my Boat ashore along with him, and in the Afternoon he returned with two of the Inhabitants, who were Negroes, and brought our Ship safe to Anchor before Sun-set. In the mean time I sent the *Arabian* Master back to his own Ship, with full Assurances of the Innocency of our Design, and the friendly Disposition of the *French*, together with a Letter to the same Purpose, addressed in *Spanish* to the King.

On the seventeenth, the King sent some of his chief Favourites to assure us of his Friendship, and Readiness to supply us with the Product of his Country. I acknowledged my Obligations to the Prince, and sent him a Present of a silver-hilted Hanger, a couple of very pretty Knives, a Ream of Paper, and a Looking-glass, which he received with Pleasure, and returned me a Complement of a young Kid and some Fruit. At the same time I desired the *Arabian* Captain, who was then ashore, to buy some Provisions for me, promising to send such Commodities as were proper to be given in Exchange; but the Captain sent me Word, that the Inhabitants of that Island were of such a particular Humour, that they would not strike a Bargain of half a Rial Value in a Day's Time, for that they would not buy half a Yard of Cloth without calling all their Relations and Neighbours to concert the Measures of the Bargain. I was likewise informed by a *Portuguze*, that a *Portuguze* Carrack had been lost upon that Island about three Years before, and by that Means the Inhabitants were so over-trock'd with Rials, that they put no Esteem upon that Coin.

Accordingly I found, that tho' they had vast Quantities of Fruits, they would not sell them to our Men for Money, but only for Paper, white Cloth and Knives; in fine, I perceived, that it would cost me a Fortnight's Attendance to make up two Pipes of Pease, which I wanted, tho' I did not design to stay above three or four Days. The eighteenth, having desired a couple of Ships of that Country, I brought the Cadriains a Board, who acquainted me, that they came from the Island of *Majotta*, were laden with Rice and dried Flesh, and bound for *Monbaze*. Next Day they supplied me with as much Rice, Pease, and hung Beef, as would serve us for four Months, and I was glad of the Opportunity, for I could buy nothing from the Inhabitants without an infinite Loss of Time; besides, I began to suspect the Honesty of their Intentions, for the Day before, when we were founding for Anchorage, some of the Inhabitants gave us a Signal to come to a Place where we spied a long Ridge of Rocks, and had certainly been lost, if we had answered the Signal; and upon that score, I presumed, that the Advantage they had made by the

NUMB. 49.

Shipwreck of the *Portuguze* Carrick tempted them to with us the like Fate.

The twentieth I thought to have taken up some fresh Water on Shore, but finding it blackish, and hard to be put on Board, by reason of the great Waves, and observing withal, that the Ship rode in the midst of Shelves, I dropped that Design, and weighed Anchor on the twenty-first by break of Day. The *Arabian* Captain understanding that I designed to double Cape *Comorin*, had advised me to stop at the Isle of *Soccatora* for six Weeks, to avoid the usual Storms upon the Coast of *Malabar*. I would gladly have taken one of their Pilots along with me, to shew me the Coasting of that Island, but they pleaded the Difference of the Religion, and our Mens eating of Pork, for an Excuse.

24. This Isle of *Nangassja* extends itself from North to South about fifteen or sixteen Leagues, with about three or four Leagues in Breadth. We could observe no Anchorage round it but that where our Ship rode, which lies upon the N. N. W. Point in $11^{\circ} 80' S.$ Lat, but the middle of the Island is in 12° . In that Place we rode at 25 or 30 Fathom Water, upon a Ground of Sand; but within a Pistol Shot of us there lay Flats, which had not above two Feet Water at low Water, and rocky Ground all about. It is a very dangerous Road, and hard to be found by Strangers. Indeed, among many Inconveniencies, it has these Advantages, that the Tide always runs against the Wind, so that the Ships ride easy, and that causes a kind of perpetual Calm at Sea, because the Wind then takes the Land. Besides the Inconveniency of Anchorage, it is likewise a very improper Place to take in fresh Provisions, for its Water is very bad, and the Inhabitants are so over cautious, that they will be two Hours in marketing to the Value of Five-pence; so that *Majotta* is upon that score infinitely preferable to it.

The Island itself affords a pleasant Prospect, especially to the Northward, for on that Side the Mountains rise gradually, being covered with several sorts of Trees, and below, upon a clear Creek of Sand, along the Sea-shore, there stand a great many Houses, sheltered with an infinite number of Cocoa, Orange and Citron Trees. Their Oranges are very small, but very sweet and delicious, resembling both in Shape and Taste those of *China*. The Inhabitants are Negroes, and call their Island *Nangassja*. They are all very zealous *Mohammedans*, and marked with a hot Iron, upon the Temples, and middle of their Forehead. They are neither so handsome, nor so well shaped as the Negroes of *St. Laurence*. The Island is governed by fifteen petty Kings, of whom the King of the Place where is the Anchorage, is the strongest, and best allied. These Kings war with one another, and sell their Prisoners of War to the *Portuguze*, and other Nations.

Their Fighting consists in throwing of Stones, beating one another with Sticks, burnt at the End, and flinging Sand in one anothers Eyes. We saw no Arms among them but what the King had, and those were Fuzes and Pistols, with which the *English* presented him sometime ago, which he valued mightily. They are reckoned great Sorcerers, but are civil and respectful enough to Strangers, unless it be when they see a Stranger stand upright and make Water, for then they ridicule him with a procligious Shouting. The *Arabian* Ships, which they call *Pengays*, are strangely built, for the Planks are neither nail'd nor caul'd, but sewed together with a sort of Thread made of the Rind of Cocoa Tree, and tarred, or pitched above the Seams, so that they are very leaky, and there are always five or six Men employed to heave out the Water; besides, that they always observe the Trade-Winds, so as to sail right before the Wind, for they wont venture to set their Side to the Windward. They are undeck'd, and carry about fifty or sixty Tuns. When we weighed Anchor in this Road, we stood N. N. E. and without the Points of the Land met with violent Tides, bearing to the Westward, i. e. S. S. W. At Night we desired another small Island to the Sea-ward, which must be that called in the Maps *Juan de Castreval*, and lies fifteen Leagues N. E. and a Quarter N. from *Nangassja*.

8 Y

15.

15. The twenty-eighth we crossed the Equinoctial Line, and *July* the first, the Wind blowing very high, we failed fifty-five Leagues in twenty-four Hours, notwithstanding that most of our Sails were furled, which gave me to understand, that upon that Coast the Tides ran rapidly before the Wind. Next Morning we discovered a clear and rocky Coast, with good Ground, a great Way from it, for at three Leagues Distance we had thirty Fathom Water, upon a fine white Sand. On the second of *July* we stood against the Wind, hoping the Storm would abate upon the Change of the Moon; but by our Latitude found, that the Tide and Storm had carried us thirty-eight Leagues, tho' in the Night we stood to Sea, and by Day towards the Land, which seemed very wonderful.

The fourth we made Cape *Orpin*, which in the Maps is placed in ten Degrees Latitude, and dropped two Anchors, the Storm still continuing. The eighth it blew so very hard, that a Man could not walk upon Deck. Upon which we tried all the Inventions imaginable of lowering our Topmast, running out above one hundred and eight Fathom Cable to every Anchor, &c. and our Pilots declared us lost. At the same Time our Pinnace was drove from two Anchors, the Ropes being cut by the Rocks. The fourteenth, fifteenth, and sixteenth, it blew still harder, insomuch that the Pinnace was obliged to quit the Coast, but the seventeenth she returned, and cast Anchor nearer the Shore, at six Fathom Water, upon very good Ground.

The high Winds continued without Intermision till the third of *August*, during which Time we could neither send our Boats ashore, nor hoist up a Sail. However, I resolved to stand for Cape *Guardafu*, in order to consider the State of our Tackling, as well as to take in fresh Water, and receive Directions from the Natives about our Coasting on *Socotera*, where none of us had ever been. With this View I fitted out our Long-boat with Provisions for three Days, ordering the Men, by all Means, to make the Land, and know of the Natives where they might come at fresh Water.

16. They returned on the twelfth, and reported, that they had coasted along the Shore to the Eastward of the Place, where we rode under steep Mountains, on the Tops of which they saw Persons in mean *Arabian* Habits, who seemed to be Negroes, and threw so many Stones on them from the Tops of the Mountains, that they were obliged to steer off; for, notwithstanding all the Signals they could make of Peace and Friendship, the Natives seemed to intimate by their Swords and Mlagays, that if they came ashore, they would cut their Throats. Upon which they steered to that Part of the Coast which was opposite to our Anchorage, where some of them got up the Precipice, by a Gap, and found an open champaign Country, as far as they could see, without any Trees, except it was some withered Bushes, and some Herbs, burnt up by the Sun: They saw likewise two or three of the Natives, who fled further into the Country.

Having lain that Night under the Precipice, they steered next Day two or three Leagues to the Westward, and saw some Natives along the Shore, who marched up Hill as soon as the Boat offered to come near them. After they had doubled the Cape, from which a Ridge of Rocks shoots above half a League into the Sea, and there found a large Bay, three Leagues broad, and shooting very far into the *Terra Firma*, but very shallow; for about two Leagues from the Mouth of it they found but three and four Feet Water, the Ground, Sand and thick Gravel, with a great deal of Wreck, and an Infinity of Fish. In the Bay they found two of the Natives a fishing, who fled as soon as they made up to them. Our Men went ashore there, and met with a great many of the Inhabitants, who, notwithstanding all the Signals they could make of a white Flag, still fled from them, crying aloud, *Alla, Alla, Alla*, or *Mohammed sehabala*, which is the *Mohammedan* Confession of Faith.

Upon the Shore they found an *Arabian* Boat with three Men in it, a little further in the Country they met with a small Tree, and a little Lodge, with two or three very pretty Men in it, which they did not touch. After they had encircled they saw the Natives creep

out again, but could find no Opportunity of treating with them either by Friendship or Force. Upon this unfavourable Report, I resolved to weigh Anchor as soon as the Storm abated. This Anchorage in which we encountered this Season, and which is, indeed, the Winter of that Country, lies in 10° 30' N. Lat. the Needle varying 17° 40' N. W. and the Coast running E. and W. I would not advise any one to pitch upon that Place to lie in till the proper Season of Coasting upon *Malabar*, for not only the Land is desert and inaccessible, by reason of the continual Violence of the Wind, which never varies farther than from S. S. W. to S. W. but it affords no Water, either from Earth or Heaven, as being altogether destitute of Rain.

17. The Storm being abated, we weighed Anchor the seventeenth, and the eighteenth came within a League of Cape *Guardafu*. That Night we tacked about, and stood to the Seas, steering E. a Quarter S. E. and S. S. E. in order to make the Isles of *Carra* and *Maria*, which lie between the Isle of *Socotara* and the Cape, and affords good Water. But missing of them, we returned next Morning, standing for the Cape, and in the Afternoon came into an Anchor within Cape *Guardafu*, in nine Fathom Water, upon good Ground, within one-fourth of a League of the Island, that runs away N. W. a Quarter W. Next Morning I sent one Boat's Crew in quest of some Spring of fresh Water, falling from the Mountains into the Sea, on its S. Side, and another to coast along the Shore, N. W. three Quarters W. which extends to the Mouth of the Red-Sea, in order to find Water, or to speak to some of the Inhabitants. At the same Time I sent out the little Skiff, to try what Conveniency they could have for Fishing.

The Skiff brought back Word, that all along the Shore, for twenty or thirty Paces, the Ground was so rocky, that they durst not venture to bend their Scan. Those who went in Quest of Water to the Southward returned, and gave me an Account that they had travelled four or five Leagues into the Country, which was extremely desert, dry, and insufferably hot, the Sun being in the Zenith of the Horizon, and there being no Shade or Wind. The other Boat's Crew reported, that about three Leagues West-North-West from us they came to a Place which seemed to be pretty green in Comparison of that dry Country, where they went ashore, and meeting with ten or twelve Negroes, asked them where they could have Water to drink? That one of the Negroes asked a Piece of Cotton Cloth that one of the Seamen had, as a Reward for the Discovery, and upon having it, shewed him some Ditches and Wells dug out of the Ground, in which was abundance of Water; and that the said Negroes asked them, if they were *English*, and promised to give them Cattle in Exchange; upon this Report we weighed Anchor, and set Sail for that Place.

The 22d, about Noon, we came to an Anchor at six Fathom Water, bad Ground, about four Leagues from Cape *Guardafu*, over-against some Bushes and Greens, which are not common upon that Coast. Having set thirty Men ashore to dig for Water, I found that the Water, which came in great abundance, after they had digged but one Foot deep, was at first sweet, but after we had filled a Barrel or two, the rest came very salt, insomuch that for twenty-two Tun of Water we were obliged to dig in above seventy Places, which we did in four Hours, the Soil being Sand; while we lay here it was insufferably hot, without any Wind.

18. Cape *Guardafu* lies in 12° Degrees Latitude, the Needle varying 17° 45' North-West; 'tis the highest Land upon all this Coast, and rises to a Precipice. All this Coast is wonderfully desert, scorched by the Sun, insomuch that I do not believe there is a hotter Place in the World. We saw no Appearance of Houses, but there appeared to us some Negro Men wandering upon the Shore, who were so large, that we should have taken them for Rocks, if we had not seen them move. I saw one of their Bows, which by its Largeness and Strength spoke the huge Stature of the Owner. I was mightily surprized to find no manner of Wind when we lay close by this Cape; whereas it had blown very hard but a few Leagues off, in the Latitude of 10° 30'.

The Reason I imagine to be this, the Point of Land lying in 10° 30', being a Peninsula not above three or four Leagues broad, serves for a Shock to heighten and inflame the Wind, which runs along the Coast North-East and South-West; whereas Cape *Guardafu* is very high, and the Wind passing over a long Tract of dry and hot Land, in Conjunction with the Rays of the Sun, does so heat its Surface, that the Wind is wafted above it. The 27th we weighed Anchor, and as we advanced found the Wind grow brisker; after we had sailed about twelve Hours, we fell in with great Tides running out of the *Red-Sea*, and a few Hours after that found the Sea very much troubled, and stained with red Spots; some took it for Flats, but we could discover no such thing by sounding. My Sense of the Matter was, that we then being in the Mouth of the *Red-Sea*, and that being the Day of the Moon's Conjunction, some great Floods joined to the Pressure of the Sun and Moon, occasioned this Violence of the Tides.

Next Day a Consultation of the Pilots being called, it was resolved that we should run seven or eight Days to and again in the Mouth of the *Red-Sea*, for fear the Wind we then had should wait us too soon upon the Coast of *Malabar*; pursuant to this Resolution, we steered North towards the Coast of *Arabia*. August the 31st we came within two Leagues of the Coast of *Arabia*, we were then in 12° 20' Latitude, over-against a Bay, in which, according to the vulgar Maps, there should be some Islands called *Caramberumma*, and *Xael*, which produce great Quantities of Frankincense. I thought to have made *Caramberumma*, but the contrary Winds and Tides prevented me. I understood that there came to that Place every Year a great many *Mobammedan* Pilgrims, some of whom continued there a long Time.

In the Entry of the *Red-Sea*, and along the Coast of the *Coffees*, or *Guardafues*, there is a prodigious Quantity of Fish, especially Thornbacks, some of which are as long as a Boat, and proportionably thick; some of our Men struck at them with a Grapple, but it pierced their Skin no more than if it had been Iron. This Coast of *Arabia* is sandy, and in some Places low; but in the inland Parts there are very high Mountains, which were covered with Fogs all the Time we were there. The Calm obliging me to stay in the Mouth of the *Red-Sea* till September the 10th, I began to be apprehensive we might come too late to double Cape *Comorin*, and for that Reason stood North-East with what East and East-South-East Wind we had, till we fell in with the South-West Winds, and so steered our Course South.

Having called a Consultation of the Pilots and other Officers, in order to determine what Course we should steer to Cape *Comorin*, whether through the Channel of *Mammale*, or along the Coast of *Malabar*, it was alledged, that passing through the Straights of *Mammale* at that Season, would abridge our Voyage; but on the other hand the Tides running South-West, were against us, and to stand to South-East we should be obliged to sail close by the Wind, so that the Ship would make but little Way; and for that Reason it was alledged, that we might sooner make the Coast of *Malabar* than the Latitude of that Channel, and for my part, I was apprehensive of being becalmed on that Coast, upon which we had a hundred and twenty Leagues to sail before we could double Cape *Comorin*. It was likewise alledged, that we could not reach the Latitude of that Channel, which was 9°, without falling in upon the *Tara Firma*, by reason that standing South-East would make more than an East Course; others again pleaded, that South-South-East would do our Business.

In this Difference of Opinions, I resolved to put the Case to a Trial, by standing South-South-East, and remarking from the Latitudes what Way we made: Accordingly we steered South-South-East till the next Day at Noon, and then having taken the Latitude, found that our Way was no better than East-South-East. After this I called together the Pilots again, the Majority of which agreed that we should go directly in quest of the Coast of *Malabar*, in the Latitude of 13° 20'. The chief Reason they insisted upon was, that the Channel of *Mammale* lying in 9° 30', it would be a long Time before we should reach it; besides, that in that Course we should be in Danger of fall-

ing in with the Flats to the Northward of the Channel. Though I was very apprehensive of being becalmed on the Coast of *Malabar*, yet I yielded to the Plurality of Votes, and stood East-South-East.

19. The 26th we came in Sight of the Coast of *Malabar*, which is very high and mountainous; within the Country, the 27th, we descried Mount *Deli*, about eight Leagues off, which lies between *Cranganor* and *Mangolar*, and appears at that Distance like an Island. In that Place the Needle varied 15° 15' North-West; having spied a Galliot about a League off, and the Wind varying about to the North, we gave her Chace, but could not come up with her. The 28th, being becalmed, we saw a Ship two Leagues to the Windward of us, and I sent Mr. *Montourier* with twenty-three Men in the Long-boat, ordering them not to board the Ship, but to command the Captain to send his Pilots and Purser aboard of us, and to acquaint him that I designed them no Harm, but only to know if it was not too late to double Cape *Comorin*; sometime after I saw our Long-boat board the Ship, and some Muskets fired, and after that a Boat came off from the Ship, and made towards us.

The Calm continuing, and the Boat advancing but slowly, I sent our Skiff to know their News, which I was in Pain to hear: Upon its Return I understood that the People in the Boat were five of our Men, three of whom were dangerously wounded. When these came aboard they recounted a tragical Story, viz. that upon their Approach to the Ship, which was a large one, M. *Montourier* gave them Notice to lower their Sails, that they not obeying, he fired upon them two Brass Guns, and a Broad-side of Musket Shot, that thereupon they struck, and told him he might board them if he would; upon which our Men boarded them upon the Quarter-deck, and having killed all the Men aboard, thought themselves entirely Masters of the Ship, when of a sudden sixty or eighty Men started up in the Fore-castle, and with Shields and Hangers in their Hands, fell upon our Men with such Fury, that they obliged them to retire to the Boat. But there happened an unlucky Mischance, the Boat was so belayed that they could not disengage her, so that most of our Men were killed with Pick-axes, Arrows, and Hand-Granades, which were thrown into the Boat, and the rest being forced to leap into the Sea, one of them swam to the *Moor's* Boat, and having cut the Cable, saved himself, and the other four Men, without staying for the rest, who in all probability were drowned.

Next Morning I made all the Sail I could to come up with the Ship, and having boarded it, found no body on Board but fifteen poor old Wretches with white Beards reaching to their Girdle, who with Tears and Lamentations threw themselves at my Feet, and raised my Compassion more than Revenge; besides that, the five Men who were saved, unanimously assured me, that they did not see them in the Engagement. The Account I had from these Men was, that the Ship having carried a Cargo of Pepper to *Mecca*, was upon her Return to *Panama* near *Calicut*, to which Place she belonged, that themselves were poor People coming from *Mecca* to beg upon that Coast, that the Owners of the Ship, in Number eighty, had gone off the Night before in our Boat, with the Gold and Silver, and the Boat being almost over-laden, had left them behind.

Upon the whole, I considered that those poor Men were innocent, and that the Ambition and Avarice of our Men was the Cause of their Death, since the *Moors* had struck, and designed them no Harm, till our Men fell upon them; for these Reasons I spared the poor old Men. I found aboard of the Ship a great Quantity of Salt, Dates, Wine, two Pouchons of Opium, some hundreds of Pounds of Coral, some Cotton Cloth of small Value, Rote-water, and Knives, and I understood from the old Men, that if our Men had not boarded the Ship, the Owners would have furnished me with forty thousand Ducats of *Cairo*, which is a Golden Coin worth about four Livres here.

20. October the 2d we were off Cape *Comorin* in 7° 50', the Needle varying 14° 20', the Tides bearing to the South, having carried us farther off than we designed. After that, being advised by our Pilots to stand for *Yicow* rather than *Aben*, I steered South-East, and South-East a Quarter East. The 11th we had a violent Gulf of Wind, which

lalled

lasted for two Hours, and soon after had another, which broke our Fore-mast, being then in $1^{\circ} 20'$ S. Lat. The 12th being in $1^{\circ} 10'$ S. Lat. we saw a few Land-Fowls, which made us hope to see the Land in a short Time; and most of my Ship's Crew, as well as that of the Advice Boat, being then sick, November the 11th we came in Sight of Land in $1^{\circ} 40'$ N. Lat. but the Frequentness of the Calms, and the Sickness of my Men, retarded me mightily, for the Pinnace had not above two or three Hands fit for Business; and, in our Ship, there were not eighteen that were able to work; besides, both our Surgeons were dead. I desir'd several Ships of that Country under Sail, and put out a white Antient to make them steer towards us; at last, finding they would not come, I sent out my Skiff to speak with one that stood between us and the Shore, and tho' they endeavour'd to run ashore, yet the Skiff came up with them, and agreed to give thirty-five Pieces of Eight for a Pilot to conduct us to *Ticow*.

They were of *Prioman*, a Town about eight or ten Leagues to the Southward of *Ticow*, and told our Men that *Ticow* lay about seven or eight Leagues off, beyond some Islands a-head of us. Our Pilot carried us nearer the *Terra Firma* than we were; and when we came to be off of the above-mentioned Islands, made us put back to Sea. Having pass'd these Islands, we came in Sight of a high Promontory of the *Terra Firma*, which had two Banks, one about half a League before its outmost Point, and another about two Leagues to the S. E. of it; and we had certainly run foul of the last, if one of our Men had not given us Notice of it from the Main-Top-Mast, for we could not spy it upon Deck, and our Pilot had told us nothing of the matter. Having weathered this dangerous Place, and standing S. S. E. we saw another a-head of us, about the same Distance from the last. We steered between these two, which lie S. E. and N. W. sounding all the Way, and had all along sixteen Fathom Water, the Ground muddy, with a little Sand.

The Night overtaking us, we were oblig'd to drop an Anchor between them. This Shoal lies off of a Place called *Pogeman*, just under the Equinoctial, which affords a great deal of Pepper, making a large Creek, the Bottom of which is a low Country, covered with Woods, but in the inland Parts there stands an high Mountain, pointed like a Pike, which is seen above twenty Leagues off, and runs S. E. a Quarter E. Having weathered the Point of this Creek, we desir'd the three Islands of *Ticow*, and, at last, having spent two Months upon a Voyage that is commonly perform'd in eight Days, landed at *Ticow* the 11th of *December*. Between that Time and the 2d of *October* I had lost twenty-five Men, and if the Calm had continued but fifteen Days longer, I believe I had lost all the Men in my Ship.

21. We call Anchor at *Ticow* between the greatest of the Islands and the *Terra Firma*, at four Fathom Water, and the Ground muddy, and sent our Skiff ashore, which brought us one *Pedro*, who had been Interpreter to the *English* Factory in that Place. This Interpreter told me, that the *English* and *Dutch* had been expelled by the King of *Aben* two Months before, and that there was a great deal of Pepper, but we could not buy it without a Licence from the King of *Aben*, who was Lord of all that Coast. He likewise acquainted me that the *Hope*, our second Ship, had touch'd upon the Coast about twenty Leagues off, in the latter End of *July*, and had sent their Long-Boat with fifteen Men to this Place, to take in fresh Provisions, which they wanted mightily. That upon the Boat's Arrival, a *Dutch* Ship in the Road fired upon them, but, upon Complaint, excus'd themselves, pleading that they took them to be *English*. That the fifteen Men having met with a kind Reception, and taken in what Provisions they wanted, set out in search of their own Ship, but could not meet with it; upon which they returned to this Place, where seven of them died in *October*; four went for *Aben* in a *Dutch* Ship, three for *Bantam* in another *Dutch* Ship, and one continued in the Country, and earn'd his Bread by gathering of Pepper.

I was infinitely griev'd to hear that Captain *Grave* had been so inconsiderate as to send his Long-Boat so far from

him, especially when I was inform'd that, among the fifteen Men he had lost, there were two principal Commissaries and a Pilot. Upon farther Enquiry, *Pedro* inform'd me that the Place where the *Hope* had cast Anchor was a great Island, about twenty Leagues to the Westward of that Place; that he was assur'd they had not suffer'd Shipwreck, either upon that Island or along the Coast, since the *Praws* (so the Ships of that Country are call'd) going to and fro had never discover'd any Wreck. That the two Commissaries, before they died, were of Opinion that the Ship had been drove from her Anchors by Storm, and not being able to make her former Station, made the best of her Way to *Bantam*, expecting that I would touch at this Place, according to my Promise, and take up her Men. As to the *Affront* offer'd them by the *Dutch*, he told me, that the *Dutch* knew them to be *French*, having spoken with them before they fired: That the News of the Peace between the *Dutch* and the *English* was arriv'd before this happened: That the *Dutch* had represent'd to the Governor and the Inhabitants of that Place, that the *French* were Robbers, and mean'd only to observe the Landing-place, in order to sack them: That they would not assist our two Commissaries any manner of way, whether in Health or Sickness, nor give the least Relief to any of our Men, bating some few Sailors that they stood in Need of; and that the *English* had serv'd our Men to the utmost of their Power. He added, that the Governor was very sensible of the Malice of the *Dutch*, who meant only to engraft the *Indies* to themselves, and had but lately abus'd the King of *Jacatra*, and usurp'd his Territories, for which Reason the King of *Aben* thought fit to dislodge them from *Ticow*.

As to the Death of our Men, he said, it had been a very sickly Year in that Place as ever was seen; but, after all, the *Dutch* were suspect'd to have shorten'd their Days, considering those who died were the Persons they hated most, and were not the first who had received Poison from their Hands, witness the Death of several *Englishmen*, occasion'd by that Means. I question'd him about the Injury done by the *Dutch* to the King of *Jacatra*, and whether they had laid Siege to *Bantam*; he assur'd me that it was still besieg'd, inasmuch that there was no Commerce nor Traffick with that City; that the *Dutch* had possess'd themselves of *Jacatra*, and expelled the King; that they had raz'd the ancient City, and built a strong Fort and City after the Fashion of their own Country, which they had peopled with all sorts of Nations; and, in fine, that they were at that Time Masters of the Strait of *Sunda*, where no body could sail without their Passport. Having maturely weigh'd all the Particulars of this Advice, I resolv'd to send both to *Aben* and to *Bantam*, at any rate, to have some Account of Captain *Grave* and his Ship, for whose Condition I was greatly concern'd.

22. *December* the 2d the King and Governor allowing me to come ashore, I carried some Presents along with me, without which one will scarce be made welcome in that Country. Upon my landing, the Governor and principal Officers gave me an honourable Reception, under a Roof, or, as they call it, *Baly*. Having told them my Country and Business, they inform'd me that I was free to buy up what Provisions I wanted, provided I paid for them in Rials and Knives, and no other Commodity. But, as for Pepper, and the other Commodities of the Country, they could not dispose of any without a Licence from the King; but if I would go to *Aben* and obtain Leave of the King to erect a Factory with them, they would be glad to deal with us. I ask'd Leave to hire a House in the City, to accommodate my sick Men, and to remain ashore to buy up Provisions; but they reply'd, they could not answer for the Safety of my Men ashore, there being so many Rogues about the Town; but, if I pleas'd, I might leave two Men to buy up Provisions, and that only for the Space of a few Days.

The next Day I sent a Letter to *Aben*, directed for *Monf. Grave*, Captain of the *Hope*, if he was there, having oblig'd the Master of a *Praw* bound thither, by some Presents and Promises of a Reward, to carry it to the Captain. I agreed with the Master of a *Praw* that liv'd at *Ticow*, to give him a hundred Rials to carry one of my Men

Men to *Bantam* or *Jacatra*, in quest of the *Hope*, provided he returned in twenty Days. The Articles of Agreement were drawn up in Writing, and lodged in the Hands of *Pedro*, the *English* Interpreter; and both he and the Master of the *Praw* desired that his Voyage might be concealed from the Governor and Inhabitants of *Ticow*. The Governor having sent me a Buffalo and some Fruit, I went to return him Thanks, and, by Virtue of some Presents I made him, obtained Leave to hire a House, in which I lodged forty-three sick Men, with three Surgeons, a Priest, and three more to attend on them. In the mean time, I had several Presents made me of Fruit and young Kids, particularly from the Governor of *Priaman*, who pressed me earnestly to make him a Visit: I returned him Thanks, together with some Presents, and a Promise to wait upon him the first Opportunity.

The 8th an *Achen* Galliot arriving, assured me that no French Ship had touched at *Achen*; upon which I concluded that our Comfort must, of necessity, be either at *Bantam* or *Jacatra*. The 10th there arrived three Gallies, belonging to the King of *Achen*, with an Elephant and three hundred Men in each of them; and the Inhabitants of *Ticow* acquainted me, that they expected a further Reinforcement of Elephants and Men, in order to carry on a War against a Prince that had revolted against the King of *Achen*. Upon this News, considering I had fifty Men at *Ticow*, and fifty more at the Island, with the Water-Casks, besides eighty ten that were always out with the Skiff; so that I had but few Men left on Board, tho' at the same time, I used to have eighty or a hundred of the Natives on Board, some by way of Visit, and others to sell their Eggs, Fruit, Pullets, Fish, and other Provisions. Upon these Considerations I nailed down the Hatchels, and run a Rail between the great Mast and the Fore-Mast, which was fortified by two great Padereros mounted on Wheels, and five more upon the suttacle, together with a Guard upon the Deck, and two Musketeers, with as many Halberdiers standing at a Door in the said Rail, which I never suffered to be opened but when I received a Visitant into my Cabin; so that two hundred Men upon the Deck could do us no Injury, while our Men were upon their Guard.

The 13th I went ashore, and found my Men recovering by degrees; being to wait upon the Governor to ask Leave to stay fifteen Days longer, he granted my Request, but withal entreated me to go to *Achen*, and obtain a Licence of the King for erecting a *Treub* Factory, which would be infinitely more acceptable to the Inhabitants than that of any other Nation. He likewise advised me not to be jealous of the Inhabitants, or fear any Injury from them, which it seemed I did, since I had made a Fortification in my Ship, and mounted more Guns than before.

I made answer, that my coming so carelessly ashore, and leaving fifty sick Persons in their Hands, was a sufficient Evidence of the Confidence I put in the Natives; that the Design of the Barrier in my Ship, was only to keep out those I did not know from running into my Cabin, that so I might be capable of distinguishing an Orankey, or a noted Gentleman, from a Fisherman; and that I had not mounted so many Pieces of Cannon, if I had not heard that two Dutch Ships were expected here, of whom I had Reason to be jealous. Upon this, he told me, that I had a great deal more Reason to mistrust the Dutch than them, and that, if I pleased, he would forbid the Natives to go on Board of me: But I assured him, they should be at all times very welcome, and that I did not at all mistrust them. After that, I visited the Captains of the three Gallies, who assured me a truth, that there had no French Ships come lately to *Achen*.

23. The nineteenth the King of *Ticow's* eldest Son visited me on Board, with a great Retinue, and I gave him the best Reception I could. That Night the *Praw* I had sent to *Bantam* returned in eleven Days, and the Master made the following Reports. Four Days after they had put to Sea, they arrived at the Port of *Sarabaya*, which lies on the Coast of *Sannara*, in 4° S. Lat. there being a Dutch Ship in the Road. M. *Isaac*, the Man whom I had sent on Board the *Praw*, in quest of the Vice-Admiral,

NUMB. 49.

would needs speak with them, tho' he dissuaded him. The Dutch Captain acquainted him, that *Bantam* was blocked up, so that no Ships of any Nation could get in; that the *Hope*, which was then at *Jacatra*, had been in great Distress upon that Coast, there being only four or five Men on Board, till a Dutch Vessel reinforced her; and that the Streights of *Sonda* were infested with the *Java* *Praws* and *Caracaus*, they having, from the King of *Bantam*, a Sum of Money for every Head they killed, of what Nation soever.

Upon this Advice, M. *Isaac* thought it not safe to go further in a *Praw*, but took the Opportunity of a Vessel, the Master of which promised to land him in *Jacatra* in five or eight Days. The Master of the *Praw* brought also a Letter from M. *Isaac* concerning the foregoing Account. This News vexed me more than the former, for I had positively ordered *Isaac* not to stop for any Ship, but to go strait on. After mature Consideration, we resolved not to go to *Bantam*, where our Ship and Cargo might be in Danger, in a Time of War; besides, that we should be obliged to spend *January* and *February* in going thither, and managing the Traffick of the Place, and *March* would be too late a Season for returning along this Coast to *Achen*. At the same Time we dispatched the Advice-Boat with a Reinforcement of twenty Men for *Jacatra*, in order to assist and supply Captain *Grave*, whom we ordered to return to *France*, if he could get his Lading at *Bantam*, or if he fail'd of it there, to return forthwith to *Achen*, where he would find us.

Ticow lies in twenty Minutes S. Lat. The inland Country is very high, but towards the Shore it falls very low, being covered with Woods, and watered with several little Rivers, which render it marshy. It is chequered, with several pleasant Meadows, well stored with Buffaloes and Oxen, which may be purchased for four or five Rials a-piece. It affords Plenty of Rice, Cattle, Poultry, Ducks, and several sorts of Fruits, such as Durions, Ananas, Potatoes, Mangoes, Pomegranates, Oranges, Citrons, Water-melons, Cucumbers, &c. The Riches of the Country consist in Pepper, which it produces plentifully, and which is much more esteemed than that of *Bantam*; as for other Rarities, Drugs and Manufactures, it affords none. The City of *Ticow* is but a pitiful Place; it lies about half a League from the Sea-side, upon the Shore, opposite to the little Island where the Ships ride; there are some Houses, but both the City and Suburbs do not contain eight hundred Houses, which are built of Reeds, and are neither strong nor convenient: However, the Country is very populous, especially at the Feet of the Mountains, where the Pepper grows.

The King of *Ticow* is subject to the King of *Achen*, who puts in a new Governor every three Years, without whom the King of *Ticow* cannot do any thing of Importance. So the Foreigners have more Business with the Governor than with the King; nay, the very Inhabitants pay more Respect to him, calling him *Bangaram Lima*. The Inhabitants of the City are *Malayans*, and no other Language is spoken all along that Coast. The inland Parts are possessed by the Natives, who disown the King of *Achen's* Authority, having a peculiar Language and King of their own. These are Idolaters, and eat humane Flesh. They have rich gold Mines, but do not know how to manage them, for they only gather the Gold out of some little Ditches, which are not very deep, and out of the Caverns made by Floods. This Gold they exchange with the Dutch, or the Inhabitants near the Shore, for Pepper, Salt, Iron, Cotton, Cloth dyed red, and *Saraw* Pearl, which they esteem mightily; but among the *Malayans* Gold is as dear as in *France*, and in *Achen* it is dearer.

These *Malayans* are all of them very superstitious *Mohammedans*, but withal, great Robbers, insomuch that the People are not safe in their Houses in the Night-time, and far less in the Fields. They are of an olive Colour. Their Women are all kept up, and not suffered to appear in the Streets. From *July* to *October* the Air is very unhealthy, being attended with Fevers that seldom admit of a Cure; insomuch that if it were not for their Pepper, no body would venture to come near them. They gather

8 Z

Pepper

Pepper at all Times, but especially in *December, January,* and *February.* No Trade can be carried on at this Place without a Licence from the King of *Achen*, which they call *Chappa*, or *Coop*, and if you have that, neither the Governor, nor the Kings, can disturb you. For want of it, I could neither sell any Commodities, nor buy any Pepper, excepting about 8000 Pounds that was brought by Night from *Priaman*, and sold me at a reasonable Price.

The *Surat* Commodities go off very well here, as well the *Malaccatan* Commodities. Rials are current enough, but the Money of *Achen* does not pass. All their Money is some small Pieces of Gold that come from the Mine, which they weigh with Scales; and sell their Pepper by Bahars, a Weight containing 115 Pounds *Averdupois*, and the King of *Achen* has 15 per Cent. of all that is sold, that is 7 and an half for the Export of the Pepper, and 7 and an half for the Import of the Rials, or Commodities given in Exchange for it; this Custom is either paid in Commodities, or in Rials, ever valuing the prime Cost. Beside the above-mentioned Imposts for every hundred Bahars, we pay twenty-five Rials to the King of *Ticow*, and a quarter Part to the Weigher, and some inconsiderable Allowance to ten or twelve Persons more. But above all, one must make the Governor his Friend, and have a watchful Eye over all the *Malayans*, who are apt to wet the Pepper, or to put Sand and little Stones among it.

24. *January* the first 1621, having brought on Board my sick Men, who began to recover apace, I weighed Anchor, and steered for *Achen*. The fourteenth we were off of *Barres*, one of the most considerable Places on that Coast belonging to the King of *Achen*, where no Person can traffick without the King's Leave. This Place is half Way between *Ticow* and *Achen*, and affords Plenty of Benjamin, which serves the Natives for Money. It is a pleasant Country, abounding with all sorts of Wines and Fruits, but bears no Pepper. It affords Plenty of Camphire, which is worth fourteen or fifteen Rials the Catti, or twenty-eight Ounces. Rials will scarce pass there, but the *Surat*, or Coast Commodities, go off very well. Both the Inhabitants of the Coast, and the *Dutch* and *English*, buy up their Camphire to carry it to *Surat*, and the Strait of *Sonda*. The twenty-third we descried the high Lands of *Achen*, and the Islands that lie to the Sea-ward of that Road. We stood directly for these Islands, but it was eight Days before we could make them, notwithstanding that we were but four Leagues off; for, wanting a Pilot, we took the Channel that lies nearest the Land, where the contrary S. E. Winds incommoded us very much; at last, with much ado, we weathered them about a League and a half from the Road, which lies opposite to the Mouth of a River, upon which there stands a Fort, very remarkable for its Mosque.

The thirtieth I came to an Anchor jull by an *English* Ship of 600 Tuns, that rode there. Immediately a Boat came off from Shore with several of the King's Officers, and one of his Eunuch's, carrying a Chappe, as they call it, which is a Dagger with a gold Handle and Scabbard, belonging to the King, made use of for a Badge, or Sign, that the Person who bears it is commissioned by the King. After a profound Silence, he who carried the Chappe welcomed me in the King's Name, and ordered me to come ashore with him. Accordingly I made myself ready, but before I could come off, I was obliged to pay the Officers Dues, which amounted to above eighty Rials, besides a great Looking glass for the Eunuch, and another for a Friend of his, and some small ones for his principal Officers. This done, I came ashore, where the Captain of the *English* Ship invited me very kindly to Dinner, and to lodge in his House. I accepted his Invitation to Dinner, and was very handsomely entertained. After Dinner I went to look upon a House, and offered forty Rials a Month for it, but could not have it under fifty-four. In the mean Time, the *English* Captain complained heavily of the King, that he would not let them have the Pepper under fifty-four Rials the Bahar, tho' thirty Rials was as much as it was worth. Finding that I could not speak with the King that Day, and that the King had sent his Eunuch to take for an Emerald I wore on my Finger, and

would not be satisfied with my Promise of bringing it the next Day, I went on Board again.

On the first of *February* I came ashore again, and by the Way met some *Portuguese*, whom the King of *Achen* had laid in Irons, and who told me, that the *Dutch* and *English* had a Design to poison me. I told them, I did not believe the *English* would do me any harm; however, I would be upon my Guard. They replied, that if I went to dine with the *English* Captain that Day, I would never return, and very affectionately begged me to avoid it, because they had no Hopes of being delivered from their Captivity, but through my Means. But after all, pursuant to my Promise, I went and dined with the *English* Captain, Mr. *Roberts*, who treated me very kindly and handsomely, and gave me nothing to eat or drink but what he and the rest of his Company took Part of. After Dinner the Kings Officers came for the Emerald, which I gave them, and told me, I could not speak with the King till the Day after. Then considering that I was troublesome to the *English* Captain, and that it was not my Interest to lodge with him, I agreed to give fifty Rial, a Month for a House.

On the second I was taken with a violent Looseness and Vomiting, and being apprehensive of what the *Portuguese* had told me, took some *Maldiva* Coconos, with *Bezoar*, which in that Country are reckoned a sovereign Counter-poison. Next Day I went ashore, where I met with bad News, viz. that the *Dutch* and *English* had taken the *Hope* off of *Bantam*, and shared the Cargo, and murdered most of the Men, and that they would do as much to me if they were able. This Discovery came from a *Dutchman*, who being disoblige by his Countrymen, had taken Protection under us and lodged in one Apartment of the House I had taken. I was unwilling to take this Man on Board, by reason that in a former Voyage I was challenged at *Bantam* for having *Dutchmen* on Board, and those I had, who were the most useful and necessary Officers in my Ship, were taken from me; but after all, finding that the Fellow was ready to turn *Moor*, and that he spoke the Language of the Country naturally, and might be useful to me as an Interpreter, I told him, if he would lie close, without giving any Notice to the *Dutch*, or *English*, till I was ready to sail, I would do my utmost to convey him on Board; for *Pedro*, the *English* Interpreter whom I had brought from *Ticow*, had then left my Service, being checked and threatened by the *English* Factor for entering into it, and hated by the King's Officers, who upon my scrupling at first to pay the Duties, thought he had suggested to me something to their Disadvantage.

In the mean Time, one of our Men, that had been drinking with the *English* Seamen, pumped out of them, that their Ship, in Company with the *Dutch* Ship, had given Chase, in the Strait of *Sonda*, to a Vessel which they took to be *French*, and the *Dutchmen* falling behind, was mad that he could not come up with her, but their Ship being the better Sailor, made up to them, and found it was an *English* Vessel, upon which they left her; that before I came into the Road, they hearing I had not twenty found Men, had a Design to take me; but finding, upon my Arrival, that I was so strong, they dropped their Design.

The *English* Captain told me, that the *Dutch* Admiral assumed the Authority of King of *Jacara*, and shewed me a sort of Money, half Silver, half Copper, that he had coined in that Country, bearing on one Side a Lion with a Hanger in one Hand, and Arrows in the other, and on the Reverse *Trajellum*, in Roman Letters, with the Date of the Year underneath. The fourth I kept on Board, and received Advice from the Shore, that a Draught was a brewing for me in the *English* Ship. The sixth I was invited to Dinner on Board the *English* Ship, where *Reisenbrant* the *Dutch* Factor was to be present. I returned Thanks for all their Civilities, and promised to wait upon them, if I was not obliged to go ashore to an Interview of the King, or if I was, to send Captain *Riddle* to supply my Place; next Morning I went ashore betimes, and sent my Excuse to the *English* by Captain *Riddle*, whom I acquainted with the Reason of my Absence, and cautioned him to be upon his Guard.

25. As soon as I was ashore, I cleaned and prepared the
Present I designed for the King of *Achen*, and withal,
meaning to oblige him as much as possible, took a blank
Letter which I had by me, with the King's Seal affixed to
it, and having addressed it, To our dearest Brother the King
of *Achen*, sealed it with red Wax, bearing the Impression
of the Arms of *France*. That my Present might not be
unworthy of my Prince, in whose Name I designed to pre-
sent it, I set apart the following things for that Use; the
complete Armour of a Horseman carved and gilded, a *Ger-
man* Hanger, with a carved and gilt Hilt; upon which
hung a Pistol, six Muskets, the Barrels of which were partly
carved, and partly gilt, the But-ends enriched with Mother
of Pearl, two Heads of Pikes enamelled and gilded, a very
large Looking-Glass, which was broken; but I pretended I
had received it entire, and that I durst not but deliver it at
any rate, having received the King's Orders to that Ef-
fect; two large Flasks full of excellent Rose-Water, and
two Piccons of watered Cramble of a Crimson Colour.

The Captain of the *Surat* Vessel came to see it, and told
me it was so magnificent a Present, that it was more fit for
the Great Mogul his Master, than for the King of *Achen*.
The King's Officers came also to our House to take an In-
ventory of what I designed to present to their Master, and
gave me to understand, that they feared the Present I de-
signed was not considerable enough for their Prince, who
was a great Sovereign, and had but few Equals in the *In-
dies*. I replied, that I was not acquainted with the Grand-
eur of the King of *Achen*, and at the same time I knew
the Value of the Present, which did not come from a pri-
vate Man, but from a puissant Prince, and merited a Recep-
tion from any Potentate whatever; and withal, that my
Master had given me nothing else to present. The 8th I
was conducted to an Audience to the King by the Saban-
dar, and four of the principal Orankays, with two Ele-
phants, and that with the following Ceremonies: Upon a
great Elephant sat one of the principal Orankays in a cover-
ed Pulpit, who sent me a great Silver Dish covered with a
Cloth, embroidered with Gold and Silk of divers Colours,
in which I put the Letter, and then gave it to him. By
his Command one of the Orankays mounted the other Ele-
phant, and after him the Sabandar, then I, and after me
another, so that four of us rode upon one Elephant, and I
sat between two Persons.

The other two Orankays rode upon *Arabian* Horses be-
fore the Elephant that carried the Letter. Before them
were fourteen or fifteen Men, each of them carrying a Piece
of the Present covered with yellow Cloth, without which
nothing could be presented to the King; six Trumpets,
six Drums, and six Hautboys led the Van, which sounded
off we arrived at the Castle, about a League off. In the
Rear followed three Sebendars, and all the Officers of the
Albandeque on Foot; when we arrived at the Castle, we
alighted at a great Palace before it, and when we entered
the outer Gate, all the Men were obliged to retire: Then
we passed two other Gates; I was ordered to put off my
Shoes, without which Ceremony I could not have Audi-
ence of the King; some time after the Royal Chappel was
brought, and being first put into my Hands, then raised
above my Head, and re-delivered to him that brought it,
I was ordered to follow it, being accompanied by a Saban-
dar and an Orankaye.

We waited some time at the King's Chamber-Door,
which was covered with Silver Plate: At last an Eunuch
came out, who gave the Sabandar to understand, that tho'
the King was more indisposed that Day than usually, yet,
as I was so near, he should bring me in; upon which I was
led into the Chamber by two Men, one holding me by each
Hand, and set upon a *Turky* Carpet with my Legs acrois,
according to the Custom of that Country. Then the two
Men retired, and I saluted the King in the usual Form,
viz. by joining my Hands, and sitting them up to my
forehead, bowing my Head a little. The Custom does
not oblige one to take off ones Hat, but I being unac-
customed to appear before People of that Quality with
my Hat on my Head, chose to put it off. The King sat
upon a Place about two Foot higher, and informed me by
the Sabandar, that he was infinitely obliged to the King of
France for the Present he had sent him, which he esteemed

more than ten Bahars of Gold. Then he opened the Let-
ter, and gave it to me to interpret to the Sabandar, who
understood a little *Portuguese*: But his Knowledge of that
Language was so very imperfect, and the Style of the Let-
ter so uncommon among them, that I could not make him
understand it; for the very first Word, viz. *Most Illustri-
ous* put him to a stand; upon which I turned it to *dearest
Brother*, which the King liked mightily, saying, that he
knew very well Christian Princes used to usher in their Let-
ters by such Expressions.

At last, since I could not make the Sabandar understand
every Word of the Letter, I repeated the Substance of it
in short, viz. That his most Christian Majesty desired his
Mightiness to grant me a free and undisturbed Traffic in
his Territories, and promised, in like manner, to protect
his High Mightiness's Subjects, if any of them should hap-
pen to come into his Kingdom: That he desired nothing
more than that a Commerce between his Subjects and those
of *Achen* should bring him to the Knowledge of so great a
Prince, and that he had sent him a Present of Arms, a
Pattern of the Manufacture in which his Subjects excelled.

This done, the King acquainted me by the Sabandar,
that I was both welcome and safe in his Territories; that
as to the Business of Trade, the *Dutch* and *English* used
heretofore to have Pepper in his Country at an easy rate;
but now that they had shewn such flaming Ingratitude, in
making War upon the King of *Batam*, who had formerly
vouchsafed them a kind Reception, he had thereupon
caused all the Pepper Plants to be cut down, for fear here-
after they should prove the Occasion of Trouble; that by
this means the Price of Pepper was raised to sixty-four Rials
the Bahar, and that even at that Price he did not much care
to let them have it, knowing them to be an ill sort of
People, that would rob and pillage, and do any thing in
order to engross the Trade of the *Indies* to themselves.

I replied, that the Insolence of that Nation, in offering
to dethrone Kings that have shewn them Civilities, would
be a surprizing Piece of News in *France*; that for my part
I was struck with Amazement to find that a People, who
pretended to nothing but fair Merchandize, and whom the
King of *France* had long protected against the *Spaniards*,
should on this Side of the World slight us, and use all
means to do us Injuries; and that in regard I had no
Commission to use any manner of Violence, or to fortify
any Place, but only to sell and buy in a fair Way, I ought
not to be ranked with a Nation whose very Conversation
I avoided. Upon this the King ordered some Sallad to be
given me in a large Gold Vessel, and a Suit of his Cloaths
laid upon a Silver Platter, which he ordered me to put on.
I having retired to the next Chamber, and put on his Cloaths
above my own, I returned to his Majesty, who told me,
the Arms my Master had sent him would be very service-
able to him in the Siege of *Malacca*, which he had in his
View, and asked me, if I would accompany him thither?
I replied, I should place my supreme Happiness in doing
him any manner of Service: Then he put several Questions
to me about the Age, Puissance, &c. of my Master, and
when I told him that my Master was in Peace with all the
World, particularly with the Grand Seigneur, he said he
would enter into a strict Alliance with the King of *France*:
This done, I was mounted upon an Elephant, and con-
ducted home.

One thing happened upon my first setting out, in order
to an Audience of the King, that I must not omit; just as
I was mounted upon the Elephant, the *Dutch* and *English*
Commisaries, with twenty or thirty of their Dependants,
having hid themselves in a Porch of the *English* Hoole that
was just opposite to mine, seized upon the *Dutchman* I
mentioned above, whom I designed to make use of as an
Interpreter to the King. Being then upon the Elephant, I
could not conveniently get down, but I represented to the
Sabandar the Impudence of those Men, in offering to lay
Hands upon one that was carrying Presents from his Ma-
jesty of *France* to the King of *Achen*, and pressed him to
order the *Dutchman* to be released. The Sabandar replied,
he would take care of it, but could not stop at that Time.
When I had Audience of the King, I importuned the Sa-
bandar to let the King know my Relentment of that Ac-
tion, but he told me it was not a proper Time, and the
King

King perceiving I wanted to say something, asked the Sabandar what it was? who replied, he did not understand me.

Upon this I went next Day and visited the Orankay *Laxemane*, a great Favourite of the King's, and made him a Present of two Arquebuzes, a Piece of watered Camblet, a gilded Head-piece, a Looking-glass, six Ear-pendants, and two Glass Chains. He received me very graciously, and after some Discourse I mentioned to him the Story of the *Dutchman*, whom I pretended to have entertained, because he said he had been formerly under the Orankay's Protection; but the Orankay told me, that if the *Dutchman* said any such thing, he was a Cheat and a Villain. Next Day, to prevent all further Correspondence with the *English*, I shut up the Gate of our House that was opposite to theirs, for they haunted the House perpetually, so that I could not do or say any thing without their Knowledge; besides, they frequently visited my Commissaries and Purfers, which made me suspect that they designed either to do them an Injury, or to pump out of them an Account of my Designs.

26. On the 11th, being called to speak with the King, he shewed me the two Pike-heads I had presented him with, which above the carved Work were at first covered with an Enamel Colour, but the King having given them to one of his own Goldsmiths to be carved and gilded, the Paint went off as soon as the Goldsmith put them in the Fire, so the King wanted to know if I could think of any body that could put them to rights as they were. I told him I knew none; upon which he caused the poor Fellow's Hands to be cut off that had put them into the Fire.

Then the King told me, he heard I had a Goldsmith on Board, and desired I would order him to enamel a large Gold Ring of his that weighed above an Ounce, which he desired to me. This Prince was very curious in all Lapidary and Goldsmith's Wares, for he had above three hundred Gold Rings that wrought daily for him, and he shewed me a great Number of Stones, some set, some not, which for the most part were bored at the Ends, several Necklaces and Chains of large Emeralds, Cufflinks or Garments after their Fashion, embroidered with Jewels, great Vessels of Gold, covered with Jewels, a great many Swords, Hangers, and Daggers, covered all with Jewels, both upon the Hilt and Scabbards, and a vast Number of Gold Clasps to put upon the Cufflinks, and told me that he had above three Bahras of Gold in Cufflinks and Clasps, and that six Days would not suffice for taking a View of all his Jewels and Stones.

Whether he said this out of Ostentation or not I cannot tell; but the greatest Part of what I saw were rather Stones of Shew than Value: Tho' after all, I must own, he shewed me some that were very rich, particularly three Diamonds that might weigh from fifteen to twenty Carats apiece, two very large Rubies, and an Emerald that he got in the Conquest of *Pera*, which was one of the loveliest Stones I ever saw. After that I set our Goldsmith to work for the King, and was sorry I had one on Board, being apprehensive that if the King liked his Work, he would retard us to get his Jewels enamelled.

Having occasion to build a Long-boat to supply that I had left, I went to the Orankay *Laxemane* to desire he would obtain me a Licence for the cutting of Wood in the Islands opposite to the Road, and let me have his Boat, which carried about fifteen Tons, to bring the Wood ashore. He granted my Request, upon the Consideration of paying him twenty Rials a Month for his Boat, which was indeed extravagantly dear; but I was obliged to give it, or else I had not had the King's Licence so easily.

The 19th the King sent a Sabandar to invite me to Dinner; when I came, I found the King in a square Hall, the Floor of which was covered with a *Turkey* Carpet, upon which he made me sit down; and after he had ordered some Sallad to be given me in a large golden Dish, the Cover of which was set all over with Emeralds, and asked some Questions concerning the Grandeur and Puissance of Christian Princes, there came about thirty Women, each of which had a large silver Dish in her Arms, which they set on the Ground on the Carpet; each Dish was covered with a Cloth of Gold, or half Silk, half

Gold, with Jewels, trailing upon the Ground. After these Women had stood for some Time, the King ordered them to set Dinner before me, upon which they uncovered the Dishes, each of which was as big as a large Basin, and together with the Lid were about two Foot and an half deep. Out of each of these Dishes they drew six Plates of Gold, full of Confitures, Meat, and Pasty, after their Fashion; so that, in less than a Minute, I found myself surrounded with golden Dishes, some containing Water, others Sauces, and one, which was very large, full of Rice, besides two other Dishes of *Tombac*, which they esteem more than Gold, containing Rice, (made use of for Bread all over the *Indies*) of which the King ordered me to eat, and I found it very good, for its Taste resembles our March-pane.

After that, by the King's Order, an Eunuch brought me some Drink in a gold Cup, set in a large gold Basin: I drank to his Highness's better Health, and thought to have drunk it up, but the Liquor was so very strong and fiery, that it quickly hauled my Tip, and put me into a great Sweat. The King told me, as I had drank to his Health, I should drink it out; and that if he were to drink the King of *France's* Health he would not leave a Drop of it: But, upon my Request, they exchanged the Liquor for a weaker sort. They pressed me mightily to eat and drink; but, at last, being quite tired by sitting with my Legs a-cross, I prayed the Sabandar to permit me to eat no more; upon which the King ordered all the Dishes to be removed, and bid me drink his Health once more: This done, they brought a very fine Carpet, done upon a Ground of Gold, and laid between me and the King.

Then came fifteen or twenty Women, who ranged themselves by the Wall Side, and each of them having little Drums in their Hands, sung their King's Conquests, making their Voices answer the Drums; after that there came in at a little Door two little Girls, very oddly dressed, but very handsome, and whiter than any I ever saw in so hot a Country. Upon their Head they had a sort of Hat, made of Spangles of Gold, which glittered mightily, together with a Plume about a Foot and an half high, made of the same Spangles. This Hat hung down upon one Ear. They had large Ear-pendants of Spangles of Gold, hanging down to their Shoulders. Their Neck was covered with Necklaces of Gold, and, upon their Shoulders, was a sort of Jacket of Gold, curiously engraven, under which was a Shift, or Waistcoat of Cloth of Gold, with red Silk, covering their Breast, and a very broad Girdle, made of gold Spangles. Their Girdle was tied above the Haunches, from which there hung a Cloth of Gold, with straight Breeches underneath, which were likewise made of Cloth of Gold, and did not pass the Knees, where several Balls of Gold hung upon them.

Their Arms and Legs were naked, but, from the Wrist to the Elbow, were adorned with Bracelets of Gold and Jewels, as well as from the Ankle to the Calf of their Leg. At their Girdle each of them had a Sword the Hilt and Scabbards of which were covered with Jewels, and in their Hands a large Fan of Gold, with several little Balls about it. They advanced upon the Carpet with a profound Gravity, and, falling upon their Knees before the King, saluted him, by joining their Hands, and lifting them up to their Head; then they began to dance, with one knee upon the Ground, making several Motions with their Body and Arms; after that they danced upright with a great deal of Agility and Cadence, sometimes; using their Hands to their Swords, another Time making as if they shot a Bow, and sometimes as if they had a Shield and Lance in their Hands. This lasted about half an Hour; after which they knelt before the King, and, in my Opinion, were pretty well tired, for each of them had above forty Pound Weight of Gold upon her. However, they danced with a very good Grace, and it our *French* Dancing-Masters had seen them, they would have owned their Performance not to have been what we account barbarous.

At last it grew late, and, upon my Request, the King suffered me to go, having first presented me with two hundred Pieces of Gold of his Com, which they call *Mas*, and are worth about Ten-pence a Piece; then the Sabandar

Ground. After these the King ordered them to be uncovered the large Balon, and together with a half deep, six Plates of Gold, after their Fashion, and myself surrounded with Water, others Saug, full of Rice, besides which they esteem more of Bread all over me to eat, and I resemble our March-

er, an Eunuch brought in a large gold Balon of health, and thought to seas to very strong and tip, and put me into a as I had drank to his and that if he were to sh he would not leave a sh, they exchanged the pressed me mightily to quite tired by sitting Sabandar to press me King ordered all the drink his Health upon very fine Carpet, done between me and the

Women, who ranged each of them having little King's Conquels, making alter that there came in y oddly dressed, but very ever saw in to hot a had a sort of Hat, made ered mightily, together an half high, made of ng down upon one Ear. pangles of Gold, hang- their Neck, was covered on their Shoulders, wa, engraven, under which of Gold, with red Silk, broad Girdle, made of ed above the Haunches, of Gold, with straight likewise made of Clifts eets, where several Bells

ed, but, from the Wrist Bracelets of Gold and to the Coll of their Leg, a Sword the Hilt and with Jewels and in their several little Bells about carpet with a profound Kites before the King, and having them up a place, with one Knee Mitions with their Body might with a great deal gitting their Hands to g as if they that a Bow, and Hanger in their an Hour; after which l, in my Opinion, were had above forty Pound ver, they danced with a Dancing-Masters had d their Performance not rous.

my Request, the King presented me with two y, which they call Mas, Peace; then the Sabandar con-

conducted me home by Water, and assured me he never saw the King shew so much Respect to any Stranger, especially in suffering his Women to dance before me; for, during the Entertainment, the whole Company shut their Eyes, it being a capital Crime to look upon the King's Women, though, indeed, I looked upon them very earnestly all the while, presuming that they were not brought thither to make me shut my Eyes. This Prince told me he had above a hundred Bahars of Gold, i. e. 18,000,000 of Livres, besides his Silver, Jewels, and other Treasures, but that he keeps it close, and has no Occasion to spend it. Besides, the Royal Treasure has been handed down from Father to Son; for *Achen* was never pillaged or sacked by any Nation, and the King often boasts that he fears no Prince but the Grand Seigneur, who, according to ancient Prophecy, handed down by Tradition, shall, one Day, conquer that Place.

On the nineteenth of February an Orankay and two Sabandars came aboard in the King's Name, to demand two Swords that I had, one of which I had promised him. Before they boarded me, they were in some Danger in the Mouth of the River, where there lies a very dangerous Bar, especially towards the Evening, when the Sea-Breezes break the Water upon it. I gave them both my Swords, but withal, prayed them to acquaint his Majesty, that I had no more; and it being an unwanted thing in *France* to go Abroad without a Sword, I hoped he would let me have one of them again. Next Day he returned one of them, with a Present of a Dagger made after the Fashion of the Country. He who brought it said, the King liked the one mightily, because it did not bow when they offered to bend it, and that if this had not bowed, I had never seen it again. After that I went ashore, and addressed the King, that he would please to order some of his Officers to make some Overtures about the Price of his Pepper, to the Merchants that were with me. He gave me no Answer to that Point, but asked me what sort of a Ship the *Hope* was, that I had sent to *Bantam*, and what the Cargo might amount to. I answered him as near as I could; upon which he assured me, she was taken by the *Dutch*, and that in a short Time I should have certain Intelligence of it.

He told me withal, that while I continued in his Road, he would secure me from receiving any Injury at their Hands, the *Dutch* and *English* Factory being worth more than my Ship; but that without the Road he would not interest himself in the Quarrel. It seems the King had mentioned the taking of the *Hope* at my first Audience, but the Sabandar did not make me understand it; and indeed, I was at a great Loss both in that and many other things, because I could not make use of an Interpreter of my own, for without a particular Licence from the King it is not to be done. Besides, no Interpreter is fond of appearing before the King, for if he makes but the least Trip in his Discourse, or lays any thing that the King does not like, he is ordered to speak it, he is in Danger of being cut to Pieces.

An Instance of this we have in one *Pedro Lorenzo*, a Native of *Achen*, and defended of a very good Family, who being Interpreter for the *Dutch*, and having spoke something by their Orders that displeas'd the King, was ordered by his Majesty to be cut in two alive, and the Orders had certainly been put in Execution, if the *English* had not interceded very earnestly by their Prayers and Presents on his Behalf. All this while I could do nothing in the Pepper Concern, for no body durst sell a Grain till the King had sold his, and it was not proper for me to press the King much upon it, because he was out of Humour with some of his Grandees, having put three of them to Death for appropriating to their own Use some Jewels they had met with in the late Conquest of *Pera*, and condemn'd the Sergeant-Major for retaining some Booty in the War with *Queda*, who with much Intercession got off for 1200 Rials. Whenever the King was in these Humours, no body durst speak to him, upon any Subject, and the People of that Country imagine, that he is more subject to them about New Moon, than any other Time.

NUMB. L.

27. On the seventh of March, about an Hour before Sun-rising, we had a great Earthquake at Full Moon, which the Natives said, was predicted about four or five Days before by the Cady, or Bishop of *Achen*, whom they believe to be the wisest of Men. I am inform'd, there are commonly three or four Earthquakes in this Place every Year. On the ninth I waited upon the King with some Presents, in order to obtain Leave to buy up Pepper from private Persons, which he would not allow till his own was sold off, which he always kept up half as dear again as the other. The next Time I waited upon him I found him at a Cock-fighting, and laying very high Wagers with his Orankays. Upon my Entrance, he presented me with a Dagger, which had about five or six Livres of Gold about the Handle; but I found him so intent upon his Bets, that it was not proper to mention my Affair at that Time. I could not but take Notice of one Instance of the King's Avarice, and his Readiness to sacrifice all things to his covetous Temper. It was this; One of the Company pitched upon a middle-sized Cock, offering to bet upon his Head against any other of what Size soever. Upon which an Orankay, that had some of the King's Cocks in keeping, presented a very large Cock, and upon this the King betted very high; but the little Cock beat the great one, and so the King lost his Money. Being fretted by the Loss, he asked the Orankay, how it came to pass, that the little Cock had more Strength than the great one? The Orankay answering with all possible Humility, that he could not conceive how it was, the King replied, he could conceive it very easily, that it proceeded from the Cock's being ill fed, and that he had given the Cock's Rice to his Whores, or else eat it himself. This said, he ordered his Right-hand to be cut off, which was immediately put in Execution.

Next Day the Sabandar came to my Houle, and acquainted me, that the King asked for his Pepper 64 Rials the Bahar: I told him, I could not buy it at that Rate. Then he asked me what I was willing to give. I answered, I could not pretend to set a Price upon the King's Goods, but would gladly treat with his Subjects, if his Majesty would give me Leave. Upon which he let me know, that could not be granted till the King had told his. At that Time the King kept up his Pepper at 64 Rials, the private People would have sold it for eight Rials in Gold. The common Value of a Tael is four Rials, but since we arrived in this Place, the gold rose, and the Rials fell; whereas we used to have sixteen Mas for four Rials, now we cannot have above fourteen. This Alteration is occasioned by the King's engrossing all the Gold in his own Hands, coming less Money to circulate among the People, who put it off at any Rate for Gold. Besides, Rials would have no Circulation in that City, were it not for those of *Surat*, and *Ayijapatan*, who supply this Place with Commodities, that they cannot be without, and export nothing but Rials, upon which they gain considerably. Now there being no *Surat* Ship there, at this Time, to take off the Rials, their Value sunk apace, which was an infinite Loss to me, who had nothing else but Rials, at a Time when the *Dutch* and *English* had Gold enough in their Hands. To return to the Sabandar: He told me after all, that the King, out of his particular Affection to me, would perhaps let me have his Pepper at the same Price that the *Dutch* had offered, viz. forty-eight Rials the Bahar. I replied, that the King had given several Instances of his Affection to me, that I would take Care to report to the King of *France* the Respect that his Majesty of *Achen* had shewn to his Letters, and that the Obligation I lay under to the King of *Achen*, would be much strengthened, if he would allow me to take in my Lading at *Ticow*, since I could not do it at *Achen*, where the Pepper was so very dear, unless I had a Mind to return to *France* with half my Lading.

Then the Sabandar asked me, what Present I would make to the King for that Favour, and what I would give him for procuring of it? I told him, I would consider of the Matter, and acquaint him with my Resolutions that Night. Having communicated the Motion to our Merchants, it was unanimously agreed, that *Ticow* would be

9 A

a

a Place of more Profit for us, tho' it cost us 3000 Rials for a Licence to trade there. Thereupon, I sent one to found the Sabandar, in order to know what his Demands might be. The Sabandar told him, the *Dutch* and *English* had offered the King two Ships laden with Goods, for the Privilege of an eight Years Factory at *Ticow*, and that if I would give him four thousand Rials, and make the King a Present of 20,000 Rials, he would procure me a Factory for two Years. Hearing this extravagant Demand, I perceived the Sabandar to be a Villain, and resolved to make my Address to Orankay *Laxemane*. Accordingly I gave him a Visit, and represented to him, that I had been along Time there, without making any Progress in my Business; that the Pepper was so dear at *Aben*, that I could not buy it there without a considerable Loss; that *Ticow* was the most proper Place for me within the King's Dominions. That inasmuch as I could not Trade at *Ticow*, without the King's Licence, I thought it the safest Way to have recourse to him, knowing, that if he favoured me, the King would certainly grant it, and that out of a grateful Sense of such Favours, I would make him a Present of 400 Rials, and another to the King, of four iron Guns, weighing 3500 *l.* each. Upon this he advised me not to desire any such thing of the King, who had a great Affection for me, and was desirous of Lading my Ship with his own Pepper. I replied, that I was infinitely obliged to the King, but could not come up to the Price that the *Dutch* had offered him. Then he told me, that I did not know what the King would do on my Behalf, and that the Guns I mentioned were not a proper Present for the King, who had more already than he knew what to do with.

The twenty-third I interceded with the King for the Redemption of four *Portuguese* Christians, that were his Captives at *Negapatan*. Their Ransom came to 650 Rials, 128 of which I was forced to advance, retaining one of the Men for my Security, the rest of the Money being gathered by a charitable Contribution from the People of *Negapatan*. There were five of those Slaves for whose Redemption I interceded, but the King would needs detain one to bleed him, or any of his Family upon Occasion; for all of them not only knew how to open a Vein, as indeed most of the *Portuguese* in the *Indies* do, but likewise practised some sort of Surgery to earn their Bread in the Time of their Captivity. The Sabandar and an Eunuch came next Day to acquaint me, that the King wanted to speak with me. In Obedience to his Commands I went, and found him very much out of Humour, and giving Orders for torturing five or six Women. To my great Mortification, I saw these poor Creatures tortured in his Presence, to the last Degree, for three Hours, and the King's Wrath increasing in Proportion to their Torment. After the torturing was over, he ordered their Hands and Legs to be cut off, and their Bodies to be thrown into the River. The Occasion of this Execution was as follows:

On the preceding Night there being five or six of his Women in a Room adjoining to his, one of them gave a hideous Scream, upon which the King enquired into the Matter, and at first they all told him there was nothing in it: But after many Threats, she that had cried out, confessed, that some body came in the Night-time, and pricked her in the Thigh with a Dagger, through the Reeds, upon which they lay. Upon which she said, she cried out, and awaked the rest; but the rest did not agree in their Answers, some saying that they heard a Noise, and others that they heard nothing. However, the Dagger was found, but no body would own it. After all, the King having asked them who it was that came with the Dagger, and why they did not tell him the Truth at first, and saying they would give him no Answer, was led into the Suspicion of a Design against his Life, carried on by his own Mother, who, as he imagined, had alarmed these Women, that their Outcry might induce the King to come out of his Chamber, which would have afforded a favourable Opportunity to the Assassins. Thinking to exert a whole Confession of the Matter by Torture, he put all the Women upon the Rack; but their Resolution, Courage, and Constancy, was so much, that notwith-

standing the King's frequent Offers of Pardon, in case they would discover the Plot, and the repeated Intreaties of the Cady of *Aben*, and the whole Court, who begged of them to be kind to themselves, yet they did not shrink or relent. One of them being very old, and swooning away from Time to Time, the King took Compassion upon her, and graciously ordered her to be put to Death. Upon which she assumed a gay Countenance, and thanked the King for his Grace and Mercy, wishing him, in Recompence for his Favour, a long and happy Life of one thousand Years. In a word, all of them stood out undaunted to the last Gasps, and even after their Hands and Legs were cut off, one of them had the Courage to say, that for the Space of ten Years they had longed for this happy Hour, that delivered them from the Drudgery of the Cattle. When the Execution was over, the King asked me what I thought of it? Tho' the Spectacle was very mortifying to me, yet I dissembled upon the Matter, and answered, that without the Execution of Justice no King-dom could subsist.

Then the King told me in a long Discourse, that if the last Night's Action had passed with Impunity, his very Life had been in Danger. That his Orankays were foolish and unthinking Men, who charged him with Cruelty, not considering that it was their Wickedness that drew upon them the Anger of God, who made use of him as an Instrument to punish their Impiety; that they had no Occasion to complain of him, who sulked them to possess their Wives, their Children, and Slaves, and competent Estates to maintain them, who maintained their Religion, and preserved them from the Captivity of neighbouring Kings, and the Robberies of Strangers: That in former times *Aben* was a Nest of Murderers and Robbers, in which the weaker were oppressed by the stronger, and no Man was safe, all of them being obliged to keep off the Robbers with Arms by Day, and barricade themselves in their Houses by Night; whereas at present they had no Occasion neither for Arms in the Day, or Doors to their Houses at Night. That his Nobles hated him because he suppressed Extortion, Massacres and Robberies; that they longed to see up Kings at Pleasure, and murder them when disobliged: That his Mother was in the same Interest, and wanted to make away with him, in order to prefer another that would give way to their Insolence.

This he delivered with so much Vehemency and Passion in his Looks, that all his Courtiers threw themselves upon the Ground, imploring his Mercy, and among them even the Cady, a Man of above eighty Years of Age, for whom every body had a vast Veneration, and who could boast of the noblest Descent in *Aben*. In fine, the Cruelty of this Prince is unparalleled; notwithstanding that all his Tortures could extort no Discovery, yet he imprisoned his own Mother, and put her upon the Rack, and put to Death five of the principal Lords of his Court, whom he suspected of favouring his own Mother. He barbarously murdered his own Nephew the King of *Jabor's* Son, saying, his Mother meant to prefer that young Prince to the Throne. He put to Death the Son of the King of *Banzam*, as well as the Son of the King of *Pan*, who were both his Cousins.

He has not left one of the Royal Family but his own Son, who has been thrice banished the Court, but now begins to return in favour, and is only safe for being more cruel than his Father, and by being hated by all the World. He has extirpated all the ancient Nobility, and raised a new Set of Orankays, who, in my Opinion, would live much happier in a meaner Capacity. In fine, his Cruelty is without a Parallel; he takes Advice of no body, and never lived a Day, while I was at *Aben*, without the Execution of one, and sometimes several of his People.

The 28th the King sent for me to see two Elephants fight: After I came two Elephants were brought into a large Court, each of them having a Cable fastened about their hind Feet; then came several Men with long Pikes, barred at their Heads. The two Elephants fell upon one another with a prodigious Roaring; but all of a sudden the King was taken ill, and the Fight was interrupted on account of that Accident. Having presented the Cinkay *Laxemane* with an enamelled Ring, which he again pre-

elephants fell upon one an-
g; but all of a sudden the
ght was interrupted on ac-
ing presented the *Cinkay*
King, which he again pre-
ented

ferred to his Majesty, I at last obtained leave to buy up
Pepper in the City. Being sensible of this Favour, and
meaning to oblige the King as much as I could, I proferred
to buy six hundred Bahars of his own Pepper; but he re-
plied, he was my Friend, and would not put it upon me,
since it was too dear, in regard he had made an Oath not
to sell it under sixteen Taels the Bahar. Next Day I made
a Publication of the King's Licence, that the Inhabitants
might not scruple to sell their Pepper; but at the same time
the King was buying up Pepper for himself, and the Inha-
bitants feared, that if they sold me any, he would alledge
they had preferred my Custom to his.

To stile this Apprehension, I first bought some of the
Sabandar, thinking his Example would expel their Fears;
but by an unlucky Accident, before he had delivered me
any, the King took him up, and laid him in Irons, for
not having some enamelled Work ready, which he had
committed to his Care to get done by our Goldsmith by a
preixed Day, at which Time he had promised it to a She
Favourite; though after all, it was not the Sabandar's Neg-
ligence, but the Goldsmith's being taken ill, that occasioned
the Delay. After this, notwithstanding I had the King's
Licence, they would not sell me one Bahar, some pretend-
ing they durst not, while the King bought, others refusing
to take Rials, or any other Coin but *Aenas*, which is a Gold
Coin current in the Country. In the mean time I sent *Don*
Francisco Carnero a Portuguese to the Court of the Great
Mogul, by the Way of *Myslipatan*. His Errand at that
Court was to obtain leave from the Great Mogul to settle a
French Factory at *Surat*, the Sovereignty of which belonged
to him.

The Design of that Factory was to render a Factory at
Aben more useful to us; for there being no Access to *Ban-*
tam, there was a Necessity of having a Factory at *Aben*,
since the Rials and *French* Commodities would not be put
off at *Aben* without Loss; whereas at *Surat* the Rials are
pretty high, and some *French* Commodities may be put off
at *Cent. per Cent. Profit*, so that it would be our Interest not
to sail directly from *France* to *Aben*, but to *Surat*, where
we might put off our Commodities at a good rate, and
buy up some Commodities at *Surat*, that the People of
Aben can as little do without as the very Rice they eat;
and this would fetch us the *Aben* Pepper at an easy rate.
This *Carnero* was an everlasting Gamester, and won great
Sums by the Help of some false Dice he had brought from
France with him, particularly from the Sabandar, whose
Losses at Gaming made him very hungry in his De-
mands upon me, and yet I could not take off the *Portu-*
guese from playing with him. One time when *Carnero* was
playing, he happened, by beating his Hand against the
Table, to break one of his false Dice, upon which there
ran some Quicksilver out of it, that quickly slipped thro'
the Chinks of the Table; this put his Company into a hor-
rid Consternation, for *Carnero* quickly hid the Pieces of the
broken Dice, and they imagined there was some Magic
in the subtle Spirit that appeared and disappeared so
suddenly.

On the 15th of *April* I made a Discovery that the King
had played me a Trick, and that no Recommendation or
Presents whatsoever would get the better of his avaricious
Temper; for he only gave me the Licence to amuse me,
and keep me from leaving the Place, as I had threatened to
do before. He knew very well, that his buying of Pepper
at the same time would stifle my Market, and if any one
had told me Pepper, he would certainly have punished
him under pretence of preferring my Custom to his. Be-
sides, the true Reason of the Sabandar's Confinement was
not the Business of the King's, but his misunderstanding the
King's Design, in giving me the Licence; and the Saban-
dar lent to intreat me to intercede with the King that he
might not be disgraced, for that he had exposed his Life to
Danger by doing me Service. Next Day I went to inter-
cede with the King on the Sabandar's Behalf; but he inter-
rupted me, by asking, if I had bought any Pepper? I an-
swered, that I had not endeavoured to buy any, nor would,
till his Majesty's Market was over. Then he laughed, con-
trary to his Custom, and told me, he would sell me some
cheap. I ordered the Interpreter to offer him a Catti, or
thirty-two Rials a Bahar: But the Interpreter durst not men-

tion the Sum, and pretended he did not understand me;
upon which I told it myself in the *Malagas* Language. The
King was silent for some time; after which he gave me to un-
derstand, that tho' he had sworn that whosoever offered him
less than sixty-four Rials for his Pepper should lose his Favour;
yet he would overlook it in me, and that the *English* and
Dutch had offered him forty-eight Rials, and at that Price I
might have what I would. I made answer, that the *Dutch*
and *English* had a larger Purse than I, and dealt in several
Branches of Trade that compensated the Dearth of the
Pepper, and that in fine, I had not so much Money to
give. However, being informed that unless I took some
of his Pepper, they durst not sell me a Grain in the City,
and considering wihal that *Bantam* being blocked up, there
was none to be had but in his Dominions. Upon these
Considerations I offered to take four hundred Bahars at forty
Rials; but the King would not abate any thing of his Price,
saying, he had used me more kindly than the *Dutch*, since
he would not let them have it at the same Price. Finding
him resolute, I offered to take three hundred Bahars at his
Price, provided he would give me a Licence to buy three
hundred more at *Ticow*; at last he agreed to it, and ordered
the three hundred Bahars to be delivered. I pressed him
to sign my Licence for *Ticow* out of hand, in regard he was
about to take Physick for his Illness, so that I could not
have Audience of him for some time; but he told me that
would be over before I was ready to go.

Notwithstanding the King's Orders, it was a long time
before I could get the Pepper which the King had ordered
me, by reason of the Avarice and Villany of his Officers,
who always found out some Trick or other to put off those
they have to deal wihal, till they are sufficiently bribed.
For, besides that they have no Salary, they are obliged to
make the King a rich Present once a Year. As for dealing
with private Persons, I found them all unwilling to take
Rials, and for that Reason employed a Broker to make a
Proposal to the *Dutch* and *English* of giving them my
Rials at the current Price, in Exchange for Gold; but the
Broker acquainted me, that they were so far from listening
to the Proposal, that they had a great Hand in sinking the
Value of the Rials, in order to spoil my Market, and pre-
vent my trading at all. Being disappointed on that hand,
I made my Address to the Orankay *Laxemane*, offering
him the Rials at Ten per Cent. Discount. At first he
agreed; but next Day when I came with the Rials, he
retracted, and said he would give but three Mas and an half
for them; since they went for no more in the City, find-
ing I could not mend myself, I condescended to let them
go; but after all, when I came to deliver the Rials, he
retracted again.

The notorious Perfidiousness of this Nation made me
think of leaving them in Time before the bad Season was
farther advanced. In the mean time the Officer of the
Alfandeque stopped twenty-one Bahars of Pepper for the
King's Duty. It was a great Surprize to me to hear
that the King demanded Duty for the Pepper he had sold
me himself, especially considering that before I made the
Bargain, my Interpreter assured me he never did. But
when I represented the Matter to the Orankay, and de-
sired Access to the King, in order to complain of the In-
jury done me, he told me, that I was obliged to pay Cu-
stom for it, that the *Dutch* had always paid it, and that
such a Complaint would be very disagreeable to the King;
and suspecting that my Interpreter had misinformed me
upon the Matter, would have tied him to a Post, if I had
not brought him off as one of my Domesicks.

At last I found my Interpreter to be one of the Spies of
the *Alfandeque*, and perceived he had discovered all my In-
trigues to the King's Officers. Though this Fellow was
born of Christian Parents, and professed Christianity for
forty Years when among Strangers, yet he instructed his
Children in the *Mohammedan* Religion, a certain Evidence
that he was worse than a true *Mohammedan*, and had neither
Religion nor Conscience. The Duties upon the Pepper
that I was obliged to pay were Seven per Cent. to the
King, Ten per Cent. of the King's Duties to the Officers,
and a Mas for every Bahar to the Weigher. When I paid
this Duty to the Officers they seized upon the Interpreter,
who had made me believe there was none due, and having
tied

tied him to a Post beat him soundly, and made him pay more than he had got in my Service to get clear.

On the 5th of *May* I could have had Pepper enough for eight Taels and a Quarter in Gold, which, as Rials went then, came to thirty-seven Rials and an half; so that the Loss upon Rials was unsufferable. Another Misfortune that galled me mightily was, that their Mas, or Gold Coin, is often clipped by the *Chinese*, and that there are a great many of a false Coin; for at *Achen* they are so nice, that that if the Edge be but any ways shrunk or broke, they will not meddle with it; so that in the Payment of any Sum they will return a third Part, or a half. However, I bargained with one Man for three hundred Bahars at thirty-eight Rials the Bahar. The Chapman I dealt with called himself *Xerif Nepuen of Jesus Christ*; he was a *Mohammedan*, and a great Doctor in the Law of *Mohammed*: He bore the Character of a Prophet, and came to this Place to make some Remonstrances to the King of *Achen*, who was so little moved with his Remonstrances, that he ordered him to keep within Doors, and not to meddle with his Department, so that the Oracle was struck dumb all of a sudden.

When I came to have my Pepper weighed, the Prophet alledged that I bargained with him for thirty-nine Rials, and offered to appeal to the Broker; but I told him roundly, that I had promised no more than thirty-eight, and that my Word was as much to be taken as either his or his Broker's. After some wrangling he yielded; but when we had weighed about one thousand two hundred Bahars, I began to perceive some black Sand among the Pepper, and returned it; he pleaded for his Excuse, that some of his Domesticks had mixed Sand with the Pepper without his Knowledge, and though I might have done him an Injury, in regard that the King of *Achen* cuts off their Hands and Feet, without any Mercy, who are found guilty of that Trick; yet considering his Credit upon the Place, I was willing to overlook it. After that we continued to weigh till I observed the Pepper wet; upon which I stopped, and would have no more, alledging only that his Houle was faulty, and that some Rain had fallen upon the Pepper. What for a Doctor or Prophet this may be I cannot tell; but both he and most of his Followers seem to place their Goodness in cheating a Christian, especially about *Achen*.

29. On the 22d one of our Men washing himself by the Ship's Side, had all the fleshy Part of his Leg, and both his Hands bit off by a great Fish, or Sea-Calf, which the *Portuguese* call *Tiburou*, and immediately expired. By this Time the Pepper was become very scarce; for not only the King continued to buy, contrary to his Promise, but an *English* Vessel that lately arrived from *Surat*, laden with Cotton-Cloth, trucked their whole Cargoe for Pepper, not to mention the *Dutch* and *English* upon the Place, who having the Advantage of Gold and Commodities vendible in that Country, all bought it up underhand.

June the 4th there happened a great Fire in the City, which, in an Hour's Time, consumed two hundred and sixty Houses; and the King caused the Women in whose Houle it began to be impaled alive. On the 10th I had Audience of the King, and represented, that since the Pepper was become very scarce and dear, I wanted to be gone, and prayed that he would allow me to buy three or four hundred Bahars at *Ticow*. The King replied, that I might have some more of his, which he had sold me at a lower Rate than any Body else. I told him that his Pepper was so dear, and the Loss upon it would be so great, that, if I offered to take it at his Rates, it would discourage the *French* from coming again to kiss his Hands. His Majesty replied, that the *French* might hereafter make a more profitable Voyage, by bringing Gold, or Commodities vendible in the Country, that being infinitely more valuable to him than Silver, which he esteemed no more than Dirt. As for the Business of *Ticow* he made me no Answer, neither durst the Interpreter remind him of it, because he thought he did not like the Motion. However, I represented to him, that since I had no more Business in that Place, I hoped he would give me Leave to be gone: Upon which he said, he would first write a Letter to the King of *France*.

On the 15th we had a violent Storm of Wind and Rain from S. W. and W. S. W. commonly for three Days before and three Days after the New-Moon and Full-Moon. We had heavy Rains and Floods, that swelled the River mightily, together with violent Gulls of Wind called *Samatra*. The 19th one of my Merchants died of an uncommon sort of a Dilemper, who, in my Opinion, was poisoned by the *Dutch*. In this Place we lost fourteen Men, most of whom were seized with a violent Vomiting and the Bloody-Flux, which no Remedy could stop. In earnest, this Climate is so much hotter than *France*, that one can scarce avoid Sickness at first: But a regular Diet goes a great Way, if not in preventing, at least in abating the Sickness. For my part, I eat little or no Roast-meat, but mostly Fish, and drank Cider, or, for want of that, fair Water first boiled and then cooled. But the unwary Sailors filled their Bellies with Beef, and drank a great deal of Arrack besides other Liquors, and when they were out of Order, drank Water and slept with their Stomachs, exposed to the Air; by which means the Stomach being at once overcharged, Vomitings and Fluxes ensued. The Cure for this Dilemper is to be let blood, and take some cooling Medicines, and to abstain from Meat, Wine, and Arrack.

The 27th the King sent his Letter for the King of *France* to our Houle, with a great deal of Splendor, the Letter being carried upon a great Elephant by one of the principal Orankays, after which followed three of the principal Officers of the Houle upon another Elephant, with all the Officers of the *Atendague* on Foot. Before the Elephant went four Drums, and four Trumpets, and four large Umbrellas surrounded it. But all this Splendor was to my Cost; for I was obliged to satisfy not only the principal Orankay, who brought the Letter, but all those who accompanied him. The Letter was carried in a silver Basin in a red velvet Bag, with gold Strings, being written in the *Achen* Language in Letters of Gold, upon very smooth Paper, with several Gildings and Colourings round it. The Form of it was thus:

"The Letter of the *Grand Siri Sultan*, Subduer
"and Conqueror, by God's Assistance, of several King-
"doms, King of *Achen*, and by the Divine Favour, of
"all the Countries that lie to the East and West; to the
"Eastward the Kingdom, Territories, and Sovereignties
"of *Debor*, the Kingdom of *Ichor*, with its Lordships
"and Territories; the Kingdom of *Pabam*, the King-
"dom of *Queda*, and the Kingdom of *Pera*, with their
"Lands and Seignories. To the Westward the King-
"dom and Territory of *Priaman*, the Kingdom and Ter-
"ritory of *Ticow*, the Kingdom and Territory of
" *Pajuruna*, to be delivered to the Great and Puissant
"King of *France*. May the King of *France* know, that
"the Letter he sent me by Commodore *Beaulieu* was de-
"livered, and that I have seen all that was written in it.
"And so far as he recommended the said Admiral,
"I have done him a great deal of Honour, both in the
"Matters of Traffick, and in allowing him the Quality
"and Rank of my principal Gentlemen. As for the Of-
"fer made me, in case I have any Business in *France*, I
"send a Memorial by the said Commodore, to shew how
"much I esteem it; saying, further, that if God bring
"this Letter safe to hand, I expect an Answer by the
"Ships that shall come to trade in this Place, which to
"me will be a great Satisfaction. So I pray God pre-
"serve the States of the King of *France*. And since God
"hath made us Kings in this World, it seems reasonable
"we should live in Friendship, and correspond one with
"another. For a Token of Friendship I send eight Ba-
"hars of Pepper, which is the Product of this Country.
"God preserve the illustrious Person of the King of
" *France*." Given in the Month *Rasab* (or *June*) in the
"Year 1030.

On the 28th my Goldsmith asked Leave to stay at *Achen*, promising to find another to supply his Place that would be more serviceable than himself; and though he could not find one according to his Promise, yet, confi-

 Perion of the King of
 th *Rasb* (or *Jane*) in the

asked Leave to stay at
 r to supply his Place that
 himself; and though he
 o his Promise, yet, consid-
 ering;

dering that he was blinded by the Promises of the King
 and the Orankay *Laxamane*, who were mightily taken
 with his Work, and that he had a great Mind to stay, I
 left him in the *English* House, wishing I had never
 brought him from *France*, or turned him off sooner, for
 the King of *Achen* retarded my Affairs upon the Account
 of having more of his Work:

30. On the 1st of July the *Portuguese* Captives and
 some others, having advised me to go to an Isle near
Queda, upon the Coast of *Malacca*, about two hundred
 Leagues from hence, where I might have Pepper cheaper
 than any where else, viz. at sixteen Rials the Bahar, I
 resolved to follow their Advice, considering that I had no
 Prospect of a Licence to trade at *Ticow*; that, here at *Achen*,
 the Dearth and Scarcity of Pepper, the Charge of keep-
 ing House, and living on Shore, the costly Presents and
 Bribes that the King and his Officers exact out of the Profit
 of the Trade, made it impracticable, that I had no Hopes of
 seeing our second Ship or Advice-Boat there, the last being
 gone from me above seven Months, and there being no Possi-
 bility of hearing from *Bantam* or *Jacatra* till *October*, by
 reason of contrary Winds; that the present westerly Winds
 stood fair for *Queda*, and in *October*, when they began to veer
 to the East, they would favour my Return. That tho' the
 King had lately conquered the Place I was bound for, and
 prohibits all Persons to go there without his Consent, yet
 I might manage it so as not to displease him, by pretend-
 ing to be forced in by the Winds which blow right upon
 it. Besides, the *French* had no Factory in *Achen*, and
 he having used me unkindly, I had no great Reason to
 fear his Displeasure.

These Considerations induced me to resolve upon a
 Voyage for that Island, where I might live more securely
 till the westerly Winds were over, as well as make a bet-
 ter Bargain for Pepper. To this End I resolved to give
 two hundred and fifty Rials, by way of Ransom, for two
Portuguese Captives, one of whom having been in that
 Island, would serve for a Pilot, and the other had been a
 Merchant at *Pera*. The Number of my Men being re-
 duced by Sicknesses and Detachments, to a small Comple-
 ment, I likewise redeemed seven more Christian Slaves for
 three hundred and sixty-one Rials, that had formerly
 served the *Portuguese* at Sea. Some *Englishmen* offered to
 serve me, but, not having Leave of their Superiors, I
 rejected them.

The 15th I had Audience of the King, at which time
 the *Dabul* and *Surat* Captains presented their Ladae, i. e.
 a Present of the Commodities of their Country, comput-
 ed to be worth 1500 Rials. After these Captains had so
 done, the King asked me if the King of *France* was
 subject to the King of *England*? I answered, that *France*
 was inferior to none of the Christian Monarchies, having
 continued for 1300 Years under the Government of their
 own Kings, without submitting to any foreign Power
 whatsoever. Upon which he told me he had seen a Letter
 from the King of *England*, in which he assumes the Title
 of King of *France*. But I shewed him how slender a
 Right he had to that Title, which proceeded from a Spite
 that one of our Kings had against his Successor. After he
 had put several Questions about the Grandeur of Christian
 Princes, I humbly requested he would suffer me to put in-
 to *Ticow* for one Month, in order to buy two hundred
 Bahars of Pepper, and to send a Prow from thence to *Ban-
 tam*, to enquire after my two Ships, adding, that such a
 Favour would be a lasting Obligation upon the *French*
 Nation. He answered me very colly, that I might dis-
 course that Subject with the Orankay *Laxamane*. This
 done, I took leave of his Majesty, who wished me a good
 Voyage.

After that I went to wait upon *Laxamane*, who told me
 that the King had sworn never to suffer any Nation to
 trade at *Ticow* after the *Dutch*, and that it was a Sign he
 had no mind to give me a Licence, since he had put it off
 by sending me to him: However, I pressed him to speak
 to the King about it, and let me have his Answer. After
 some Time he sent me Word, that the King would allow
 me to put into *Ticow* for a Month, provided I gave him
 half a Bahar (i. e. 3200) of Rials. At last, being so much
 provoked by the insatiable Avarice and Ingratitude of this

Nation, that notwithstanding all my Presents, gave me
 such Usage, I resolved to steer for *Ticow*, and if they
 would not deal with me in an amicable Way; to stop the
 Ships that were to come from thence, and take out of
 them what Pepper I wanted, allowing for it the Market-
 Price at *Ticow*: But if I could not weather the Point of *Ti-
 cow*, as it was probable I might not, by reason of the violent
 Winds and Tides from the West, I designed to sail for *Pulo
 Lancabny*, or *Pulo Lada*, (so the Pepper-Island near *Queda*
 is called) notwithstanding the King had sent, about two
 Days before, three large Gallies, and thirty Sail of other
 Ships to *Pera*, with Orders to return by that Island, and
 to cut down all the Pepper-plants.

31. On the 24th having taken in seven hundred Bahars
 of Pepper at *Achen*, I set sail for that Road, which lies in
 5° 30' N. Lat. the Needle varying 5° 30' N. W. The
 25th we weathered the Isles of *Gomispala* and *Polloway*,
 which fence in this Road on the North Side. In this Sea-
 son the Trade-Winds blow S. W. with which I endeav-
 oured to double the Cape of *Achen*, in order to reach
Ticow, steering our Course W. N. W. but the Tides still
 bringing me right before the Wind, I was obliged to steer
 directly for *Pulo Lancabny*, though the Calms were so
 great that I could not make it till the Seventh of *August*,
 whereas it is commonly but four Days Sail with that Trade-
 Wind.

The next Day after my Arrival, the Pangoulow, or
 Governor of the Island, came on Board, and told me that
 he would not suffer me to trade with the Inhabitants
 without a Licence from the King of *Queda*, which, he
 doubted not, but I might have, especially if I assisted him
 with some Artillery. On the 12th the Governor, accom-
 panied with two of my Men, (in lieu of whom he had
 left me his own Son, with one of the principal Men of the
 Island, for Hostages) went in Person to acquaint the King
 with my Arrival. At that Time the King of *Queda* had
 retired from *Queda* to *Perleys*, about three Days Journey
 farther into the Country, for fear of the King of *Achen's*
 Army. The 20th I received a Letter from *Sieur d'Espine*,
 (one of our Company that went along with the Governor)
 acquainting me, that he understood the King of *Queda* had
 but little Pepper, and that this Island had not much. To
 my infinite Regret I found this Intelligence too true; for
 I found that we came too late for the last Year's Pepp-
 er, and too early for that of this Year's, which was not gathered
 till *December*. *September* the 2d *Sieur d'Espine* sent me
 Word that he could not come to speak to the King, who
 had retired into the Woods, under the Apprehension that
 we were employed by the King of *Achen* to do him an In-
 jury; but, in the mean time, he had ordered all the Pepp-
 er that could be had to be gathered in, in order to buy
 some Cannon of me, if I would sell them.

Upon this Advice I sent positive Orders to *Sieur d'Es-
 pine* to inform himself particularly of what Quantity of
 Pepper might be expected in that Place; and if it was un-
 der a hundred Bahars, to return immediately, without
 troubling himself about it; or, if it was above that Num-
 ber, to solicit the King to send a Commissioner with full
 Power to treat with me, and that without any Delay.
 The 9th *Sieur d'Espine* returned in Person, and reported
 that the King had but very little Pepper in *Queda*, but had
 a mighty Mind for my Cannon, offering, if I would stay
 till *December* (which is the Season for gathering the Pepp-
 er) to give me twice as much Pepper for my Cannon as I
 had asked; and farther, to furnish me with a thousand
 Bahars more if I had Occasion for them; and if I had a
 Mind to establish a Factory there, to furnish it every Year
 with 2000 Bahars, and exclude all other Nations from
 trading in his Territories. The King sent me a Letter,
 empowering me to trade freely with the Natives, and de-
 siring two of my Cannon for thirty Bahars of Pepper,
 which he said was all he had. In the mean time they had
 detained my Porter at *Perleys*, about seven or eight Leagues
 from this Island, thinking I would come and lie off of
 that Place to establish a Factory in the same: But I un-
 derstood that the Channel between this Island and that at
Perleys was embarrassed with Shelves and Flats; and at
 the same time observed that my Ship did not answer the
 Helm as it used to do; upon which I resolved rather to

continue where I was, threatening to set Sail with the Hostages I had on Board, if they would not return me my Man.

On the first of *October* the Purser was returned, and I delivered them their two Hostages. He reported that the King had only twenty Bahars of Pepper, and desired to pay the other ten in Rials, at the Rate of twenty Rials a Bahar. That the Country was very poor, and the Rice extreme dear. That upon the Arrival of every Praw the People fled into the Country, thinking them to be the Partizans of the King of *Achen*. That about eight or ten Days before, they had received Advice that seventy Sail had arrived at *Pera*, with the King of *Achen's* Army on Board, and by yet fresher Intelligence that the King of *Achen* was dead. Upon this Report, though I had resolved not to let them have any Cannon, because I meant to return by the Way of *Achen*, yet I thought fit to amuse them with fair Words, till I had taken in fresh Water; and with that View sent back the Purser to acquaint them that I was very much disposed to deal with them.

That I could not bring my Ship to *Perley*, because my Rudder was out of Order; and that to shew my Willingness to oblige them, I was ready to send one of my Cannon on Shore, provided they gave me two Hostages to insure the Delivery of twenty Bahars of Pepper within eight Days, or else deliver the Pepper itself. This Offer pleased them so well that they sent me Word there were no Occasion for giving Hostages, or putting a Cannon ashore till the Pepper was got ready, which would be in six or seven Days. In this Place I did nothing to the Purpose, only I caused to be cut down for me a Main-Top-Mast, a Mizzen-Mast, and Bolt-Sprit, which I could not have else where. If I could have stayed there till *January*, I could have loaded my Ship with Pepper at a quarter of the Price it cost me at *Achen*, besides that, at that Time the Trade-Winds came E. and so would have stood fair for returning directly to *France*, but the Men I had were so few, and were so discouraged, that I could not think of waiting.

32. This Island, called by the Inhabitants *Pulo Lancheby*, and by the Natives of *Achen*, *Pulo Lala*, i. e. the Island of Pepper, lies in $6^{\circ} 15'$ N. Lat. the Needle varying $2^{\circ} 30'$ N. W. It has about fifteen or twenty Leagues in Circumference, and is mountainous in some Places, especially where it faces *Pulo Betton*, where it lies three Leagues off to the Westward. In the middle of the Country there is a high Mountain, divided into two by a very narrow Valley, which is not observable but on the South-side. The Pepper grows at the Foot of this Mountain as well as in the intervening Plain, which extends itself three or four Leagues in Length. The Pepper Plants are dressed after the same Manner as our tall Vines. Were this Island more cultivated, it would produce many more than it does, for there are not, at present, above a hundred Persons in the Island, whereas formerly it was inhabited by above seven hundred.

The Soil of the above-mentioned Place is very convenient for all sorts of Druggs, Fruit, Rice, and Cattle, being enriched with excellent Pasturage and plenty of Rivers and Springs. The rest of the Island is covered with very thick Woods in which, especially upon the Mountains, there are some Trees exactly straight, of an incredible Height and proportionable Thicknes. On the South-Side the Shore it is frequently intersected with Arms of the Sea, leaving little Isles and Rocks, covered with Woods. On the North there is a large Island about a League off. On the East it has a Bay, covered with a little Island, in which Ships of two hundred Tuns may ride with Safety, and be sheltered from all Winds. In a Word, there is a very safe Anchorage all round the Island, and any Part of it affords excellent fresh Water. From the Beginning of *July* to the End of *October*, the Winds are there westerly, at which Time it rains very much, and the Climate is unhealthy, as it happens in all other Places of the same Latitude.

33. The Pepper ripens in *November*; its Harvest is from the Middle of *December* to the End of *February*. At present this Island produces every Year 200,000 Pound Weight of excellent, large, and dry Pepper, which is preferable to that of any other Place in the *Indies*. This Island is subject to the King of *Queda*, without whose Per-

mission no Trade can be carried on there. The *Portuguese*, who reside at *Malacca*, come there every Year to trade, and continue there from *December* to *February*. The Commodities they bring are *Guzurat* Pluth, Salt, Rice, and a few Rials, which go all of them well off there, by reason of the Vicinity of the *Chinese*, a good Number of whom are settled at *Patavi*, a Town situated on the opposite Coast.

They sell their Pepper by Measure, and not by Weight, which is better for the Buyer, since, at that Rate, he cannot be so easily injured by wetting it, or deceived by the putting Stones or Sand into it, as they commonly do at *Achen*. They sell it by the *Nali*, which contains sixteen *Gautals*, each *Gautal* containing four *Chuppas*, fifteen *Nali* make a Bahar, which is four hundred and fifty Pound *Averdupois*; so that the Measure in this Island is greater by one quarter than in the King of *Achen's* Territories. The common Price of a Bahar is sixteen Rials. The Pepper-Plants grow in a fat free Soil. They are planted at the Root of every Tree, round which they creep and twirl like *Hops*. The Way is to take a Shoot or Sprig of an old Pepper-Plant, and plant it under some Shrub, taking care to clean the Ground, and weed out all the Herbs about it; it will bear no Fruit till the third Year, after which it bears every year six or seven Pounds Weight of Pepper. Its first, second, and third Years Crops are much at one, but the fourth, fifth, and sixth decrease one third both in the Quantity and Size of the Pepper; and in the seventh, eighth, and ninth, the Pepper becomes very small and scanty; so that after its twelfth Year it bears no more, and a new Shoot must be planted in its Room; for the first three Years the Ground about them must be kept very clean, or they will not bear, and even that requires a great deal of Pains, for the Climate is extreme moist, by reason partly of the Rains and partly of the Dew, which is so great, that if one walks among Trees or Grass before the Sun-rising, they will be as wet as if they waded through Water. When the Plant begins to bear, the Branches of the Tree, through which it creeps, must be lopped off, lest they intercept the Rays of the Sun, which, above all Things that Plant stands most in need of. When the Clusters of this Fruit are formed, Care must be taken to support them with Poles, lest the Weight should draw down the Plant, which of itself is tender enough. Care must likewise be taken that no Buffaloes, or Oxen, or large Animals get in amongst them, lest they should be entangled among the Branches, and so break them.

They must be planted at a convenient Distance one from another, that one may get round them with a Ladder to prune them after their Fruit is gathered, for, otherwise, they would grow too high, and so bear less Fruit. Commonly this Plant has a white Flower in *April*; in *June* this knots, in *August* it is large, green, and strong, and the Natives make use of it for Sallad, or make a rich Pickle of it, and other Fruits in Vinegar, which they call *Achar*, and which will keep for a Twelve-Month. In *October* it is red, in *November* it begins to grow black, in *December* it is all over black, and consequently ripe. This is the most general Method, though, in some Places, it is ripe sooner or later than in others. When the Fruit is ripe, they cut off the Clusters and dry them in the Sun, till the Grain falls off from its Stalk, which it does not in less than fifteen Days, though the Sun is very hot; and during that Time they must be turned from Side to Side, and covered up in the Night Time. There are some of the Grains that neither redder nor blacker, but continue white, which are made use of physically, and sold for double the Price of the other. Of late Years the Inhabitants observing that Foreigners wanted these for the same Use, have found out a Way of whitening the black ones, by taking them when they are yet red, and washing off the red Skin with Water and Sand, so that nothing remains but the Heart of the Pepper, which is white.

By this Account we may perceive the Pepper does not grow so easily as many are apt to imagine, and that the Pepper-Plants require a great many Hands to dress them, which at present is mightily wanted in this Island, both it and the Country of *Queda* being laid desolate by the King of *Achin* within these three or four Years, inasmuch that

the

the King of *Queda* is now obliged to put himself under the
Protection of the King of *Siam*. The Inhabitants are *Ma-*
layans, but not so crafty and roguish as those of *Aben*; their
Habit is the same, but not so rich. They are very
zealous *Mobammedans*, and in their Customs and Way of
Living differ but little from the Inhabitants of *Aben*. They
have a sort of Coin not unlike our *French* Sols, but of a
little better Alloy, which they call *Tras*, and thirty-two of
these make a *Kial*. They reckon by *Taels*, but one of
their *Taels* make four of those of *Aben*.

34. *Queda* is a good marshy Soil, cut by several Brooks,
taking Rise from a large River, in which are many large
and dangerous Crocodiles. In former times the Country
was well peopled, and abounded with all sorts of Provi-
sions, especially Rice and Cattle, and *Queda* was resorted
to by all sorts of Merchants from *Pegu*, *Aracan*, *Bengal*,
Jriffin, the Coasts of *Coromandel* and *Surat*, besides the
Portuguze residing at *Malacca*, and even the Merchants
of *Aben*. The Customs and Imposts at this Place were
very moderate, till the Father of the present King came to
reign, who was a perfidious and cruel Tyrant, and by Di-
vine Vengeance (as the Natives will have it) was carried off
in Captivity by the King of *Aben* about three Years ago.
This Place, to say the Truth, bears several Marks of Di-
vine Wrath; for about four Years before it was subdued,
two-thirds of the Inhabitants, amounting to above forty
thousand Souls, were carried off by a Plague. The next
Year after that a *Murrain* seized upon the Cattle, and car-
ried off all the King's Elephants, and seven-eighths of their
other Cattle. The third Year there was such a Scarcity of
Rice, and all manner of Fruit, that they underwent a ter-
rible Famine.

The Year after that the King of *Aben*, who always lies
in wait to pillage his Neighbours, laid Siege to *Queda*.
The City held out three Months, and then the King with
his Family and Retinue, consisting of a hundred and twenty
Men, retired to his Palace, which he had fortified, and
where he was reduced to the last Extremity of Want, till
about two Months after that the King of *Aben*'s Officers
persuaded him to surrender, by alledging that the King ad-
mired him for his Valour, and would certainly reinstate him
in his Throne, if he trusted to his Clemency. This Siege
was carried on by the *Aben* Army with a great deal of Vi-
gour, inasmuch that they fought when up to the Middle in
Water in Winter; for the King had sent them word that
he would cut them all in Pieces if they did not bring him
the King of *Queda*; at last, having demolished the City
and the Cattle, they carried the King and his Family, and
about seven thousand of the Inhabitants, to *Aben*.

The King of *Aben* gave the Captive King a tolerable
Reception, till he had drained him and his Friends of all
they had; after which he put to Death not only him and
his Children, but the principal Men among the other Cap-
tives, confining the rest to a remote Part of the City, where
most of them were killed by Misery and Want, and the
few Remainder, amounting to about five hundred Souls,
work at present in little Huts one half of the Week, for
their own Maintenance, such as it is, and the other half in
the building the King of *Aben*'s Houses, and manuring
his Grounds. The present King of *Queda*, the Son of
this miserable Predecessor, was shut up with his Father in
the Castle of *Queda* before it was surrendered; but finding
that his Father was inclinable to surrender, and carry all his
Children and Treasures to *Aben*, to procure a better Recep-
tion from the King; he made his Escape privately without
his Father's Knowledge.

35. On the twelfth of *October* I weighed Anchor, and
stood for the Road of *Aben*, in order to try if I could hear
any thing of our Ships; soon after the Tides carried me
upon the Isles of *Pulo Botton* about five Leagues off, where
I was obliged to drop an Anchor to keep clear of a Rock.
These Islands are three in Number, but there are also a great
many small ones. They are inhabited and covered with
Woods, in which there are some Trees fit for Masts of
Ships; they afford good Anchorage all round about, and
the largest of them has good fresh Water upon a sandy
Creek. Next Day we came in Sight of *Sumatra*. The 27th
we came within two Leagues of the Island of *Pooloway*,
and I designed to double it, in order to cast Anchor on the

West Side of the Road of *Aben*, where I might easily get
off, in case the King of *Aben* should use me otherwise than
well.

But the Tides were so strong, and the Winds blew so
hard from West and West-North-West, that I was drove
above six Leagues before the Wind, and obliged to put
into a small Creek of Sand about half way between *Podor*
and *Aben*. That Evening a Prow came up to me with a
Commission from the King of *Aben* to know who I was,
whence I came, and whither I was going; for it seems the
King had heard of a Ship cruising upon his Coast fifteen
Days before I came to an Anchor in this Place. By this
Commissioner I understood that a small *French* Ship had
arrived in the Road of *Aben* about eight Days before. It
happened that the King's Commissioner knew me to be the
Person that had been at *Aben* before, and when he asked
me whence I came, I ordered my Interpreter to say, that
when I went from *Aben* I was bound for *Bantam*, by the
way of *Ticow*; but having lost two of my Masts by a Storm,
I was forced to put into an Island to refit. I designed
to conceal the Name of the Island, knowing that the King
would be angry at my going thither without his Leave, and
to pretend that I knew not the Island, and could meet with
no Inhabitants upon it to inform me; but my Interpreter
precipitately told him, I had been at the Island of *Pulo*
Lambobuy.

Next Day a Prow came on Board with an *Achen-man* in
her that I knew, and he assured me there was a small *French*
Vessel in the Road, and some *Frenchmen* that said they be-
longed to me, adding withal as a Secret, that the King of
Aben detained them there against their Will. In the mean
time I sent my Long-boat on Shore for some fresh Provi-
sions, but the People would sell none, alledging that the
King had prohibited them to sell without his Command.
Upon the whole, I was apprehensive that the King of
Aben might stop our Advice-Boat (for I took the *French*
Ship in the Road of *Aben* to be it) to prevent their coming
to an Interview with me, and thereupon I weighed Anchor,
and stood for the Road of *Aben*; but the Wind being con-
trary, and very high, I was forced to come to an Anchor
at the Point of a large Bay, and sent by Land one of the
Men I had redeemed at *Aben* in a *Moov*'s Habit, to carry
a Letter to the People belonging to the *French* Vessel in
the Road of *Aben*, promising him his Freedom if he
brought me an Answer in two Days; for we were then but
four Leagues off *Aben*, and he knew the Way exactly well,
for which Reason I sent him ashore in the Night-Time,
ordering him to walk it before Day, lest any body should
meet him, or enquire after his Business. The next Day a
large Ship with *English* Colours made up to us, and when
they came within a Quarter of a League, put out their
Long-boat, which brought on Board of me *M. du Parr*,
one of the Men belonging to our second *the Hope*.

36. The State of poor Captain *Grave*'s Affairs, according
to *du Parr*'s Report, was as follows: This great Ship was
an *English* Ship of six hundred Tuns, and thirty-two Guns,
and had on Board Captain *Grave*, the Captain of *the Hope*,
who was very sick, and not finding me at *Aben*, was go-
ing to *Jacatra* to find some Passage for *France*. After the
Hope parted from me, they came to an Anchor at a long
Island about twenty Leagues from *Ticow*, and sent their
Long-boat to *Ticow*. Twelve Days after the Departure of
their Long-boat they stood for *Ticow* themselves to put
ashore *M. Falier* the first Commissary, who was then ill;
but the Winds and Tide being contrary, they not only lost
the Men in the Long-boat, but even those they had on
Board were all sick, except the Captain and five or six
more. In this disastrous Condition they met with a *Dutch*
Ship of one thousand two hundred Tuns, called the *Ley-*
den, and commanded by *William Schouten*, and Captain
Grave went on Board them to desire their Assistance; he
was no sooner on Board, but the *Dutch* Captain sent sixty
Men in two Long-boats to board our Ship, which accord-
ingly they did without any Opposition, and not only plun-
dered the Ship, but used our sick Men most barbarously,
turning them out of their Hammocks, and throwing them
upon the Deck.

In the mean time the *Dutch* Captain having detained
Captain *Grave*, told him both he and his Ship was a good
Prize,

Prize, and if they met with me, they could serve me the same way. Some few Days after this they met another Dutch Ship that had a great many sick aboard, and was going to put them on Shore on the Isle of *Nassau*. Captain *Grave* desired his Men might likewise be set ashore at the same Place for the Recovery of their Health, which indeed they did, but with so much Cruelty, that one would think that Nation had neither Humanity, Hope, or Conscience; for they threw the sick Men like so many Logs of Wood out of the Ship into the Boat, and some they dragged through the Water with a Rope fastened to them, particularly one, who being so dragged, expired immediately upon the Rocks on the Shore. In the mean time the Commissary of the *Loyden* being sensible of his Crime, told Captain *Grave* they were mistaken, and that upon a Review of his Commission he found he had no Authority to take any French Ship, so that he was at liberty to return to his own Ship.

Captain *Grave* considering that he stood in need of their Assistance, answered with a great deal of Complaisance, that the Commissary was not the first who had been mistaken in Matters of as great Consequence, and desired he might have some of their Seamen to man his Ship; the Commissary granted his Request, upon a Prowiso that the Captain should forget what had passed, and give something to that Effect under his Hand. Captain *Grave* receiving this Reinforcement, went on Board of his own Ship; but the Dutch Seamen threatened every Day to throw him and his Crew over-board, and he believed they had certainly done it, if the other Dutch Ship, called the *Horn*, had not been in Company: Sometime after they fell in with three Dutch Ships near *Selbar* upon the Coast of *Sumatra*, one of which having a Flag upon its Mast like an Admiral Ship, Captain *Grave* went on Board of her; but as soon as Captain *Grave* was on Board, that Admiral's Ship fired upon his Ship, in order to make them take down their French Colours; upon which the Captain sent back his Boat with Orders to take them down.

This done, they sailed all together for *Jacatra*, where they arrived in *December*, and Captain *Grave* went to wait upon the Dutch Admiral, and desired he would assist him with some Seamen to conduct his Ship to *Bantam*, pursuant to his Commission. The Admiral promised to assist him, and to allow him to go to *Bantam*, provided he would there buy up all the Pepper he could get at a limited Price, viz. two Rials a Sack, and distribute two-thirds of it to the Dutch and English in that Road. The Captain considering his miserable Condition, was forced to submit, and sign an Obligation of buying fifteen thousand Sacks of Pepper, five thousand of which should be given to the Dutch, and five thousand to the English. In the mean time the Pinnace I had sent in quest of him arrived at *Jacatra*, but the Bargain being struck before its Arrival, Captain *Grave* was obliged to go to *Bantam*: Accordingly he went, and arrived there the End of *January*, where the King gave him a welcome Reception, but would tell him no Pepper under four Rials a Bag.

In the mean Time, the Dutch, contrary to their Promise, sent out armed Barks up and down *Bantam* Road, in Pursuit of the *Javanese*, within Cannon-Shot of their Walls, returned always on Board our Ship the *Hope*, in order to make those of *Bantam* believe, that the French gave Shelter to their mortal Enemies. However, the King of *Bantam* resented it no otherwise than by keeping the Pepper at the first Price; upon which Captain *Grave* resolved to take it at the current Price, and when he had got his Ladings, to return to *France*, he offered Part of what he had got to the Dutch, but they would not have it at that Price: The English, indeed, took 150 Bags of him, but never paid for it. The Dutch and English paying him no Money, he had not enough to pay the King of *Bantam* for the 15000 Bags he had bargained for, and therefore desired he would let him have only 2000 Bags more; but the King refused to let him have any, unless he would take all that he had bargained for.

At last the Commissary of *St. Malo's* Company at *Bantam* supplied him with as much as would complete his Loading, taking the *Hermitage* Advice-Boat as a Pledge for 1500 Rials in Part of Payment. This done, he re-

solved to return directly for *France*, but three Ships that lay just by him commanded him to go to *Jacatra*; accordingly he went, and was there ordered to unlade two Thirds of his Cargo, and notwithstanding that he showed Letters under the Dutch President's Hand, importing, that they would not stand to the first Bargain, yet they arrested the Captain on Shore, and made seven or eight of their Ships ride at Anchor round the *Hope*, and began to unload the Pepper themselves, tho' none of Captain *Grave's* Crew put their Hands to it. In the mean Time Captain *Grave* entered a Protest against the Injustice of the Dutch, declaring, that all Damages issuing from that Action should be put to their Account. Soon after, in a very dark Night, a Prow was seen to come from the Place where the Dutch Ships lay at Anchor, and to make up to the Stern of the *Hope*, near which it continued for a little Time, and after that putting off, one of their Men cried out in the *Malayan* Language, that the *Hope* was on Fire; immediately the Dutch Ships were seen under Sail, having weighed Anchor before, which was a certain Proof that they knew of the Design; and when the President of *Jacatra* received the first Advice that a Ship was on Fire in the Road, he replied, without any Concern, that he knew it was the French Ship. In the mean Time, the French Seamen finding the Fire too far advanced to be extinguished, came off in the Long-Boat, and abandoned the Ship. Next Morning Captain *Grave* sent six Prows to save something in the Ship, but the Dutch kept them off, so that they saved all the Pepper and Artillery, and put them in their own Magazines, and sold the Hulk of the Ship by Beat of Drum.

This done, Captain *Grave* hearing I was at *Achen*, set out for *Achen* in the French Commissary at *Bantam's* Pinnace, and the rest of the Men came in another Bark; but as soon as he arrived there, the Bark, and all that was in it, was stopped by the King of *Achen*, and Captain *Grave* being taken ill, and not meeting with me there, took the Opportunity of returning to *Jacatra* by the English Ships above-mentioned. Having heard this fatal Account of our Affairs, I sent a Boat for Captain *Grave*, and received him on Board. November the fifteenth we weighed Anchor, and making the Road of *Achen*, came to an Anchor among five more Ships that were in that Road, in order to be in a Capacity to force the King of *Achen* to deliver up my Men, if he would not do it with good Will.

Immediately upon our Arrival, the King sent an Eunuch on Board to welcome me, and desire me to come ashore. I made Answer, that I could not trust myself ashore, since the King had imprisoned my Men like Robbers, and seized upon the surry Remains of a burnt Ship, contrary to what might have been expected, after the Services offered him by the King of *France*, and by me in Particular. The Eunuch replied, that the King took them to be Portuguese, that had ravaged his Coasts, and as soon as he was undeceived, had set them at Liberty, and returned them their Money. That it was true, he had hindered them from going on Board the English and Dutch, for fear they should come to any harm from their mortal Enemies, desiring to put them into the Hands of the first French Captain that should have arrived in that Place. To this I answered, that the French were easily distinguished from the Portuguese, and that tho' I understood the King had returned them some Rials, yet he had not returned the Value of 2500 Rials he took from them, in Musk, Jewels, Bezoar, Coral, and other things. The Eunuch told me, the King would certainly pay that.

But after all, I gave him to understand, I was firmly resolved not to come ashore till all my Men were on Board, after which, I would come and receive his Commands. Then they demanded the Duties of the King's Chappel, besides 400 Rials of Anchorage for the King, and 200 for the Officers of the *Assandague*, a late Impostition laid upon all Ships that should come into that Road; but I told them, I did not come to traffick, and therefore would not pay a Farthing. Sometime after the Chappel returned, and brought all my Men on Board; upon which, pursuant to my Promise, I went ashore, when I waited upon the King, who complained heavily that I did not come to see him sooner, and told me, that the Dutch and English

English had spread false Reports, in order to exclude the
French from the Trade of *Achen*. That the Men he had
imprisoned were represented to him as Robbers and Pi-
rates, but as soon as he understood they belonged to me,
he immediately set them at Liberty. That he was afraid
the King of *France* might have taken it ill, if he had put
his Subjects into the Hands of the *English* and *Dutch*,
who were their mortal Enemies, and that he only waited for
the Arrival of a *French* Ship, in which he might send
them Home. But after all, when I thanked him for
sending the Men on Board, he told me, he had only sent
them to visit me, but not to stay with me, for that they
being Ship-wreck'd and lost Men, belonging to him, into
whole Port they came.

This, as I took it, he said to prevent me from asking for
what he had taken from them, the Value of which a-
mounted to very near 2000 Rials. However, I resolved
to play him a Trick for it, and with that View desired M.
Limmony (so the first Commissary of the *St. Malo's* Com-
pany at *Bantam* was called) who was now Proprietor in
the Pinnace, to retire from *Achen* as soon as he could, to
avoid the Danger he might incur through the Insolence
and Perfidiousness of the King. But *Limmony* made An-
swer, that he had some Goods to put off, which would re-
quire some Time, and he being of another Company, I
could not force him to act as I would have had him. Up-
on this Answer I resolved to put in for a Licence for *Ti-
ceow*, and for that Purpose I offered Orankay *Laxemane* a
Diamond if he would procure it me. The Orankay told
me, it might be done, provided I made a Present of some
fine Diamond to the King, who was then passionately fond
of Diamonds.

I shewed him a rough Diamond weighing 12 Grains,
which I designed for the King, and another cut of five
Grains for himself. Next Day he acquainted me, that he
had shewn the Diamonds to the King, but the *English*
having very lately presented him with large ones, he did
not value mine; but after all, that if I could find any ex-
traordinary Rarity, I might certainly obtain my Request.
Upon this Advice, I bought of *Periby* the *Portuguese*,
who was lately returned from *Muslipatan*, two Diamonds,
one weighing 18 Grains, cut *Lozengewise*, and very
prettily set, which cost me 550 Rials, and another of
nine Grains, cut *Pointwise*, which cost me 120 Rials. I
shewed them to *Laxemane*, who advised me to present
them myself; upon which I desired *Qyglin* the Goldsmith,
who was my Interpreter, and who used to speak very bold-
ly to the King, to acquaint him, that I had some Jewels
to shew his Majesty, without telling him whether I meant
to sell them or give them to him.

37. Accordingly, after some Time, the King sent for
me, and desired a Sight of the Diamonds he heard I had.
I shewed him the large one, which he looked upon, and
when he asked the Price of it, I told him, it was at his
Service, if he would allow me to buy 300 Bahars of *Pe-
pper* at *Ticow*. His Answer was, that if the *Dutch* should
offer him 30000 Rials for that Liberty he would not
give it them; but to me he would give a Licence of stay-
ing at *Ticow* twenty Days, provided I gave him another
Diamond like that. I told him, I had none such, nor
could possibly find any. Then he desired I would present
him with a Cannon in the room of it, but I begged his
Majesty's Pardon. Upon which he said, all other Na-
tions had presented him with Cannons, and I ought not to
refuse him. I prayed him to excuse me, in regard I had
so many Enemies, and that there were some Ships near
Ticow. He replied, I need not fear the *Dutch* at *Ticow*,
since they had a Factory at *Achen*, which was more va-
luable than my Ship. After all, finding he was to be sent
upon the Gun, I agreed to let him have it.

Upon which he called for the Orankay *Laxemane*, and
ordered him to give me a Commission to trade at *Ticow*.
After that, he began to question me very particularly concern-
ing M. *Limmony's* Circumstances, the Force of his Ship, the
Value of his Cargoe, and at last, advised me to carry him
and his Pinnace along with me, and not leave him exposed to
the Discretion of the *Portuguese*, *Dutch*, *English*, and
even the *Moor*s themselves, who would be easily tempted
to fall upon to small a Vessel; representing, that his Af-
NUMB. 50.

fection to the King of *France* moved him to give that
Advice; and that tho' M. *Limmony* was not under my
Command, yet out of Respect to my Countrymen and
Acquaintance, I ought to rescue them from the Danger
they were in. December the 5th, having asked *Laxemane*
often for my Commission, and finding he only shuffled
and put me off, I complained of him to the King, who
bid me give him a Diamond, as if that had been agreed to
at first. To make short of my Story, I very soon discovered
that the Orankay *Laxemane* could do nothing, for that the
King dispatched all his Commissions himself, and that the
Delign of turning me over to him, was to worm out of
me another Diamond for the King's own Use. On this
Discovery, I gave him another Diamond that weighed
about 6 Grains, and at last, after many Stops and Delays,
I received out of the King's own Hand a Letter impow-
ering me to traffick in *Ticow* for twenty Days, and order-
ing the King and Governor of that Place to assist me in
carrying on the Trade of *Pepper*, for which I was to pay
the usual Duties.

At the same Time, the King ordered me to pay the
Duty of some Goods that I had bought up in order to sell
at *Ticow*, which I thought to have been excused from, in
regard I meant to put them off within the Territories of
the King of *Achen*: However, I was forced to pay it. I
had frequently desired my Interpreter to desire Restitution
of the King for what he had taken from my Men, but
the Interpreter would not venture to mention it, because
he found it was disagreeable to the King.

After all, I pressed Orankay *Laxemane* to represent my
Request to the King, which at last he did, and then gave
me to understand it was in vain to expect it; that the
King had a Title to all the Goods of those who were ship-
wreck'd upon his Coast, and that the King had been very
favourable in delivering the Men themselves. On the six-
teenth we weighed Anchor, and arrived in the Road of
Ticow, the last Day of this Year. January the first
1622, I shewed the Inhabitants of the Island the King
of *Achen's* Letter, who received it with Pleasure. In this
Place I bought above four hundred Bahars of *Pepper*,
which cost me about 25 Rials the Bahar, including the
Charges of my Commission, and the Presents I made at
Achen. February the 1st we weighed Anchor in the
Road of *Ticow*, in order to return Home, having on
Board 75 Men, all in good Health, and Provisions for
nine Months. But before I proceed farther, I will give
here a succinct Description of the Island of *Sumatra*.

38. The Island of *Sumatra* is larger than *Great Bri-
tain*. It extends 11 Degrees in Length, running S. E.
and N. W. i. e. from the Point of *Achen*, which lies in
5° 30' N. Lat. to the Straight of *Sunda*, the Lat. of which
is 5° 30', so that its Length may be computed 300 *French*
Leagues. Its South End is broader than the North, but
one with another its Breadth will make about 70 Leagues.
The Coast for the most Part lies low, tho' there are very
high Mountains within the Country. Its Vallies afford
excellent Palturags, and are fertile in Rice, and all other
Fruits. It is watered with many noble Rivers, some of
which are very great; for Instance, *Cinguel*, *Baares*, *Deya*,
Achen, *Pedir*, *Jambi*, and *Ripoura*, besides several small
Rivers and Infinity of Brooks, by which Means it is ren-
dered very moist, and in some Places marshy; besides, it
is subject to frequent Rains, for the Equinoctial cuts it di-
rectly in the middle.

It bears very large Trees, which retain their Verdure
all the Year round. The Air is unhealthy for Strangers,
especially near the Equinoctial Line, as in *Ticow*, *Pesfa-
man*, &c. nay, the very Inhabitants of *Achen* don't care
to live in those Places during the wet Season, which lasts
from *June* to *October*, and in which the westerly Winds,
mixed with Whirl-winds, Rains, Tempests, and sudden
Calms, blow upon the Coast. In these Calms, the Air be-
ing unmoved, and the Ground soaked with constant Rain,
the Sun, by its perpendicular Rays, attracts very stinking
Vapours, which occasion pestilential Fevers, that carry
Strangers off in two or three Days, or at least terminate
in obstinate Swellings, and Dropsies. The City of *Achen*,
situate on the North Point, is more temperate. It stands
upon a great River, about half a League from the Sea,

in the midst of a great Valley, that is six Leagues broad. The Soil is very proper for all sorts of Grain and Fruit, but the Inhabitants sow nothing but Rice, which is their principal Food, together with Cocons, with which the Island abounds.

This Place is well stored with Fruit-Trees, which bear in their proper Seasons, for there is not a Month in the Year without some ripe Fruit here. They sow no Pulse or Pot-Herbs, but they have excellent Pasturage, and Abundance of Buffaloes, which they employ in manuring the Ground, and in drawing, or carrying. They have Plenty of young Kids, and Horses of a small Breed, but their Sheep are good for nothing. The Peasants breed up great Number of Hens and Ducks, in order to sell their Eggs. Hunting is a Sport they are much accustomed to, for they have an infinite Number of wild Boars, tho' not so large and furious as they are in *France*, and their Stags and Does are larger than ours. They have but few Hares or Rochucks, but in the Woods, and at the Foot of great Mountains there are Numbers of wild Elephants. Upon the uninhabited Mountains and Hills there are great Numbers of Tygers, some Rhinoceroses, Porcupines, wild Buffaloes, Civet Cats, wild Cats, Monkeys, Adders, large Lizards, and in some Rivers poisonous Crocodiles.

The better Half of this Island is possessed by the King of *Achen*. If you go along the Coast to the Eastward of *Achen*, about 12 Leagues from it you meet with *Pedir*, a large and populous City, and after that *Pocem* and *Dely*; about twelve Leagues to the Westward of *Achen* lies *Daya*, a considerable City, and then the King of *Achen's* late Conquests, viz. *Labo*, *Cinquel*, *Barros*, *Baitam*, *Pajaman*, *Ticow*, *Priaman*, and *Padang*; the other half of the Island is possessed by five or six Kings, who tho' they are Lords of very good Countries, yet if you put them altogether, they are not so considerable as the King of *Achen*. Upon the East-side, near the Equinoctial, lies the little Kingdom of *Andrigreri*, and beyond that *Jambi*, the richest of them all, and a little farther *Palimbac*. To the Westward of *Padang* lies the Kingdom of *Manincabo*, and beyond that *Andripoura*. The rest of the Coast extending to the Straights of *Sunda*, is woody and uninhabited; that Part of the Coast that faces those Straights is subject to the King of *Bantam*.

Thus you have an Account of the whole Coast of *Sumatra*, the Inhabitants of which are *Malayans*, so that they all understand the *Malayan* Language. The inland Parts of this Island is inhabited by *Aberigenes* that speak a different Language from the *Malayans*, and are under the Government of several petty Kings, of which the richest and most powerful is one that resides between *Ticow* and *Manincabo*, as being possessed of all the Places where the Gold of this Island lies.

It is very certain, there is a great deal of Gold to be found in this Island, but the Inhabitants are altogether ignorant of working of Mines, and what they gather, is only in Torrents and little Ditches, that they dig in the Places where the Floods discharge themselves. This Gold the Natives truck with the Inhabitants of *Manincabo* for Rice, Arms, and Cotton Cloth, and with those of *Priaman* for Pepper, Salt, *Sarat* Cloth, and *Muslipatan* Steel. *Ticow*, and the other Kingdoms they have but little Commerce with. As for Strangers, they have no Dealings with them, but murder and eat them where-ever they catch them, as well as their Enemies; for when they are at War with one another, they never ransom Prisoners, but eat their Flesh raw with Pepper and Salt. Tho' they have no Religion, yet they have some Polity relating to Marriage, Justice, and their Duty to their King, which they observe with an inviolable Respect.

39. Upon the West Coast of *Sumatra* there are a great many Isles, some of them large, about eighteen or twenty Leagues off, and others but small, about three or four Leagues from the Continent, which do not belong to any of the abovementioned Kings. Those which are inhabited are possessed by the original Natives, whom the *Malayans* never expelled, because these Islands were not for their Purpose. Upon the South Side of *Sumatra*, in the Latitude of 5° lies the Island of *Engane*, inhabited by barbarous Savages that spare nobody, but massacre all that come upon their Shore, whether white or black. They go

naked with long Hair, and have Canoes, in which they fish. Their Arms are Bows and Arrows. Upon the same Coast, in the Latitude of 3° 30' lies a long Island called by the *Dutch*, *Nassau*, which may contain about fourteen or fifteen Leagues in Length, but is not inhabited; about four or five Leagues from this, near the Equinoctial, we meet with another uninhabited Island about seven or eight Leagues long; then we come to a great Island in the Latitude of 1° 30', called *Montebey*, above twenty Leagues long, the Inhabitants of which are clothed, and trade with those of *Ticow*, though they speak a different Language.

Under the Equinoctial there are twenty or twenty-five Islands, some great, some small, some inhabited, some not. Having crossed the Line, we met with the Island *Pulo Nyas* in 2° North Latitude, which is fifteen or sixteen Leagues long, and inhabited by a good sort of People that hurt nobody unless they be injured, and traffick with the People of *Barros*, and Strangers, to whom they sell their Children and Slaves. In 3° 30' there are several other inhabited Islands, many of which are covered with Palm-trees that bear Cocons, which the Inhabitants of the maritime Towns carry off in their Ships, and make Oil of; others are covered with very high Trees, and differ much from those of *Europe*.

To return from the great Island of *Sumatra*, and take a circumstantial View of what it produces, the Kingdom of *Andrigreri* affords a considerable Quantity of Pepper, but very small. Gold is cheaper there than in any other Country possessed by the *Malayans*.

The Kingdom of *Jambi* produces a great deal of Pepper, which is much better than that of *Andrigreri*. The *English* and *Dutch* have a Factory in it, as well as the *Portuguese* of *Malacca*. The City, which is very unhealthy, lies fifty or sixty Leagues up a River, which one must row up with a Boat. The Inhabitants drive a great Gold Trade, not only with those of *Manincabo*, but with the Natives of the Country. The Kingdom of *Palimbac* abounds in Rice and Cattle, and affords but little Pepper; 'tis a pleasant Country towards the Shore, and is possessed by the King of *Bantam*. *Andripoura* is seated on a rapid River in 3° 30' South Latitude, and furnishes every Year two or three Ships Loading of such Pepper as we have in *Jambi*. The Inhabitants trade likewise in Gold with those of *Manincabo*. Next lies that Kingdom which shoots into the Country, but has some Harbours upon the Sea-side, particularly *Caritanga*, where the *English* and *Dutch* come often; they have little Pepper, but a great deal of Gold, which is not above thirty or thirty-five per Cent. cheaper than in *France*, because they deal with so many Countries in that Commodity; they sell it by the Tael, of which one and a half makes barely two Ounces; it is in Dust, and small Pieces, for they make but few Bars of it.

As for the Dominions of the King of *Achen* the Territories of his principal City is not sufficiently cultivated for maintaining the Inhabitants, so that a great Part of their Rice comes from abroad. In former times it produced a great deal of Pepper; but one of the Kings observing they minded nothing else, and neglected the manuring the Ground, cut down all the Pepper-Plants, so that at present it does not produce every Year above five hundred Bahars of Pepper, and that of the smallest sort. Six Leagues from *Achen*, towards *Pedir*, there is a high Mountain that furnishes great Quantities of Sulphur as well as the Isle of *Peoloway* in the Road of *Achen*, which supplies in a manner all the *Indies* with Sulphur to make Gunpowder. The Territory of *Pedir* being very fertile in Rice, is called the Granary of *Achen*. This Place affords pretty large Quantities of yellow and hard sort of Silk, part of which is by the Natives made into Stuffs that are esteemed all over *Sumatra*, and the rest they sell to the Inhabitants of the Coast of *Coromandel*. At *Dely* there is a Fountain of Oil which is said to be unextinguishable when once it is set on Fire, and with which the King of *Achen* burnt two *Portuguese* Gallies near *Malacca* about eight or ten Years ago.

Daya abounds in Rice and Cattle; *Cinquel* affords every Year a large Quantity of Camphire, which the Inhabitants of *Sarat*, on the Coast of *Coromandel*, buy up very eagerly for fifteen or sixteen Rials the Carr, or twenty-eight Ounces. *Barros* is a pleasant Place seated upon a pleasant River.

River, in an open and well cultivated and champaign Coun-
try, about a League from the Shore. The Benjamin of
this Island is much esteemed, and leaves the Inhabitants for
a Measure in all their Bargains, for they have no other Mo-
ney. This Place affords likewise Plenty of Camphire.
The Camphire of *Bataban* is reckoned the best, but there
is very little of it. *Passaman* stands at the Foot of a very
high Mountain, that may be seen in a clear Day thirty
Leagues off. It has excellent large Pepper, being the first
Place on this Coast where we meet with Pepper-Plants.
Seven Leagues from this Place stands *Ticow*, which is yet
more fertile in Pepper. *Priaman* has not so much Pepper,
but has a better Air, and very well peopled, and plentifully
furnished with all sorts of Provisions, and drives a great
Gold Trade with the Inhabitants of *Manmaba*. The
Dutab had a Factory there for a long time, but the last
Year the King of *Aben* expelled them. *Padang* has little
Pepper, but deals pretty much in Gold, and has the Con-
venience of a fine River, where great Ships may come up
and ride safely. All these Places are well peopled and cul-
tivated, and some of the Inhabitants are rich, and live
happy, by virtue of their Remoteness from the tyrannical
Court of *Aben*.

40. The Inhabitants of *Aben* are a worse sort of People
than those of *Ticow* and *Priaman*, and the other Places
along the Coast; they are proud, envious Men, of no Faith
or Conscience, especially in their dealing with Christians,
treacherous, and given to robbing and poisoning. They
despise their Neighbours, and take all other Nations but
themselves to be brutal; they are very prodigal in their
Cloaths, and would be the same in their Houses, Slaves,
and other things, if the King did not cramp them. They
speak well in their own Language, and some of them set
up for Orators. They are very fond of Similes, and happy
enough in applying them; but the Frequency with which
they use them would be nauseous and impertinent in any
other Country. They compose some Poems and Songs,
and apply themselves to Writing, and the *Arabian* Anti-
metick, which differs but little from ours. Some of them
are very good Mechanics, especially for the building of
Galleys, and they make all sorts of Iron-work as well as
any where else, though they do not work with the same
Facility and Dexterity as the *Europeans*. They work very
well in Copper and Wood, and some of them are skilled in
casting of Artillery.

The King entertains three hundred Goldsmiths in his
Castle, besides a great many other Artisans. Since this
King came to the Throne, the Subjects of *Aben* have got
the Name of the best Soldiers in *India*; for they endure
Fatigue wonderfully, and are excellent Pioneers, as ap-
peared in the Sieges of *Sueda* and *Dely*, the last being a
Place of great Strength, fortified by the Assistance and Con-
tinuance of the *Portuguez*, and defended by a Person of
great Valour and Reputation, which nevertheless the King
of *Aben* took in six Weeks Time by cutting Trenches,
and gradually advancing them. They live very soberly,
and for the most part upon Rice, to which the richer sort
may add a small Matter of Fish, and a few Herbs; and
he must be a great Lord indeed that in a Day's Time eats
a Hen boiled or broiled upon the Coals. It is a common
saying among them, that if there were two thousand Chri-
stians in that Country, all their Beef and Fowls would
quickly be consumed. They pretend to be very strict *Mo-*
ammedans, but are great Hypocrites and Dissemblers,
especially in their Respect to the King, whom they would
see hanged if they could. If they suspect, though with-
out Reason, that any one does not love them, to prevent
his being in a Capacity to misrepresent them to the King,
they'll form an Accusation against him before the King,
and it is the Frequency of these Accusations that makes the
King so cruel; forasmuch as it persuades him that there
are more Conspiracies against him than there are.

In fine, they are such a wicked sort of People, that
it is a common thing among them for one Brother to ac-
cuse another, or the Son the Father, and if you charge
them with Inhumanity, and Want of Conscience, upon
that Score, they'll tell you that God is far from them;
but the King of *Aben* is near at hand. Pursuant to the

Law of *Mohammed*, they marry as many Women as they
are able to maintain, one of which is entitled to a Prefer-
ence before the rest, her Children being reckoned the law-
ful Heirs. They suffer their Slaves and Concubines to go
abroad, but not their Wives; if a Man marries a young
Woman, he commonly pays some Money for her to her
Relations, and allots her a Jointure upon his own Estate.
If a Woman has any thing of her own, she lodges it in
the Hands of her Husband, and takes from him a Note,
entitling her to the Recovery of it in case of Separation, or
bad Husbandry; and if the Husband dies first, this Note,
together with the Jointure stipulated in the Contract of
Marriage, must be first satisfied out of the Goods of the
deceased, to the Prejudice of all Creditors; if the Woman
dies first, the Husband is entitled to all that she brought
him. Man and Wife may separate when they will, pro-
vided they both agree to it; for the Consent of one Party
is not sufficient. In *Aben* Usury is prohibited, and the In-
terest of Money is limited to twelve per Cent. per Annum
without Pledges, whereas in *Bantan* they will give five
per Cent. a Month, and a Pawn besides. If the Debtor
refuse to pay, he is cited before a Court of Justice, where,
if the Debt be made appear, he is condemned to pay it
in a little time, and if he does not pay it in the appointed
Time, he is cited a second time, and must either pay it in
Court, or else have his Hands tied behind his Back with
a Wyth, in which Posture he continues (for no body dares
to untie him) and is obliged to appear before the Court
every Day that it fits, till he satisfies the Debt. At last, if
the Judge perceives that he appears every Day, and is not
capable of satisfying the Debt, he delivers him up to the
Creditor to serve him as a Slave, empowering the Creditor
to carry him home, or sell him, or to do with him as he
pleases, so as he does not put him to Death.

This Court sits every Morning, except *Friday*, under a
great Bali near the great Mosque, and one of the greatest
and richest Orankays presides in it. Under another Bali,
by the Castle Gate, there sits the Criminal Court, in which
several of the principal Orankays preside by Turns. Under
the Cognizance of this Court are all Quarrels, Murders,
Robberies, &c. committed in the City. Any Criminal
may be stopped, or taken up, by a Girl or Child of four
or five Years of Age; for whenever Hands are laid upon
him, he dares not but stand like a Statue, and suffer his
Hands to be tied, in order to be dragged before the Court,
where Justice is immediately put in Execution. I have seen
great lazy Scoundrels dragged in that Fashion by little
Children, and condemned to receive thirty Lashes upon the
Shoulders; but after the Sentence was pronounced, the
Criminal capitulated publicly with the Executioner, and
after some Words gave him twenty Maces in open Court, in
Consideration of being only whipped above his Cloaths.

It is a common Custom in that Place to bargain with the
Executioner for mitigating the Punishment; for there's
never a Day but the King orders a Nose, Eye, Ear, Hand,
Foot, or Testicle to be cut off from some Body or other;
and upon these Occasions the Executioner gets Money for
doing his Business handsomely, and with little Pain; for if
the Criminal does not come up to his Price, and pay him
in ready Money upon the Spot, he will cut the Nose, for
instance, so deep, that the Brain may be seen through the
Wound, or mangle a Foot or a Leg in two or three Pieces,
&c. In all these cruel Mutilations, and even Gelding itself,
scarce any one dies, though some of the Persons thus
maimed are above fifty or sixty Years of Age; and the
only Remedy they use is, to put the wounded Part imme-
diately into Water, and after it has bled a little, wash it
and bind it up with Linnen Cloths. After a Criminal has
thus suffered Justice, whether by the King's Command, or
by the Judge's Sentence, all the Ignominy of his Crime
is wiped off, and if any one upbraids him with it, he may
kill him with Impunity.

There

There is another Court, in which the Cady or Bishop presides, that takes Cognizance of all Infringements upon their Religion. In the Allandague likewise there is a Bali for determining Differences among Merchants, whether Natives or Foreigners, the President of which is the Orankay *Laxemane*, who in a manner governs the whole City. In this Allandague they keep an exact Account of all the Customs, Gifts, Fines, and Commodities belonging to the King, with a particular List of all the Persons Names that buy of the King, or pay the Duty, or make him Presents, to the end they may be capable to give his Majesty a satisfactory Account how every Thing is disposed of; for if their Accounts be perplexed they can expect nothing but Death. Besides these, there are four Officers called *Pangoulov Cavalo*, who take Cognizance of all Things done in the Night-Time, such as running the Goods without paying the Duty, Robberies, &c. Each of these has a quarter of the City under his Jurisdiction. Farther, each of the Orankays hath a Province or Country-District under his Jurisdiction, where he gives Orders, and administers Justice to the Inhabitants.

Some of the principal Orankays residing near the City, are obliged to give Orders for a Watch of two hundred Horse that patrolls every Night in the Country and along the Shore. As for the Castle, or King's Palace, the inner Part is filled with three thousand Women, which he keeps partly for a Guard, and partly for other Uses. These Women come seldom out of the Castle. They have a Market-place of their own, and traffick with one another in such Manufactures as they make. They are ranged under several Captains, and have their Civil-Judges, and Night-Officers as well as the City. None are allowed to enter into their Apartments but the King's Eunuchs, who are said to be in Number about five hundred. Besides these the King has a great many Wives and Concubines; and of these his Wives, twenty are the lawful Daughters of the King's whom he has pillaged. The last Wife that he had by such Means was the Queen of *Pera*, who is said to be very handsome, and from whom he contracted a Disease that is likely to carry him off, unless the Vigour of his Age, which is now in its Prime, be able to overcome it.

By all these Wives he has but one Son of eighteen Years of Age, who is yet more cruel than himself. This Prince has only the Quality of a simple Orankay, and is always confined to the Castle, except when he goes to the Mosque, and then he has a pompous Retinue. Some time ago his Father gave him the Investiture of the Kingdom of *Pedir*; but his Government was so cruel and licentious, that the King called him home and put him to strange Torments; from which Time he hath still kept him with himself. In the great Court, where the King's Apartments are, the Eunuchs keep guard; besides which there are a Guard of an hundred and fifty Slaves at one Gate, and another of the like Number at the other Gate of all. These Slaves are mostly Foreigners taken in young, and bred up in the Exercise of Arms and Shooting. They are confined within the Castle, and allowed to converse with no body; so that the King makes use of them to over-awe his own Subjects, and fright them from treasonable Designs. All the Punishments inflicted in the Castle are put in Execution by these Slaves.

To put the Orankays in the Custody of those Slaves, he ranges them in three Companies, one of which is obliged to keep Guard in the Castle Day and Night, without Arms, in a Court surrounded by Slaves; so that every third Night every Nobleman comes upon Guard; and if any suspicious Plot should be discovered, the King has always a third Part of his Nobility in his Hands. If any of the Orankays fail to observe the third Night, he undergoes the Loss of his Life, together with the Confiscation of his Goods, Wives, Children and Slaves. The Orankays dare not converse familiarly, or have frequent Interviews one with another, for the King suspects all Familiarity among them; so that they never converse together, unless it be upon an accidental Rencontre that they salute each other with a great deal of Complaisance. Whenever they, or any body else, enter the Castle, they are obliged to take off

their Sword, and put it into the Hands of the Guard at the second Gate.

41. The City of *Aben* is more like a Village than a City, being an open Place without Walls, and the Castle is no more fortified than any ordinary Gentleman's House. It has about half a League in Circumference, of an oval Figure, surrounded with a Ditch of twenty-five or thirty Foot deep and broad, the Banks of which are almost inaccessible, by reason of their Steepness and being covered by Thickets. Before the Castle the Earth is call'd in Banks, which serves for a Wall. On the Top of this Bank there grows a great many large Reeds as tall as Ash-trees, and planted so thick that one cannot see through them. It is present Death for any one to touch the least Branch of these Reeds; for the King of *Aben's* Ambassador to *Holland*, upon his Return home, having forgot this Order, and unluckily pulling off a small Twig, was immediately put to Death. These Reeds enjoy a perpetual Verdure, and cannot be set on Fire. I could observe no Flanks or Battions round the Castle but upon the Side which faces the Mosque; I saw the Beginnings of several Ramparts, but nothing yet finished. Before the Gates there are neither Ditches nor Draw-bridges, but on each Side of every Gate there is a Stone-wall about ten or twelve Foot high supporting a Terrace, on which a Couple of fine Brass-Guns are planted. The Gates are as high as the Wall, and are made of a strong sort of Wood, being shut on the Inside with two great Cross-bars fixed in the Wall, besides other Bolts. Through the Middle of the Castle there passes a small River, that descends from the Mountains, the Water of which is very cool, and agreeable. Upon the Banks of this River there are Steps for People to go down and wash themselves.

Before we come at the King's Apartments we pass four Gates, from one of which there runs a high Wall, backed with a Terrace, with several Brass-Guns upon it, within which, as I take it, is the King's Arsenal. This Rampart incloses Part of a very long Court fronting of the Houses, in which I have seen three hundred Elephants at a time. The other Part of this Court is enclosed by four great Pavillions, and a sort of a Stone-Rampart, which commands the Terrace, being fortified with a Parapet. As for the inner Part of the Castle, I can give no Account of it, being denied Access. To conclude, the Fortifications of this Place are inconsiderable, but its Avenues are very difficult, for the Country about it is full of Rivers, Marshes, Trees, and very close Thickets. Where the Rivers enter the Castle, there is a Stone-Fort, consisting of a large Bastion, and two Courtines, with several Guns mounted upon them. Upon the Land-side these Courtines are joined by a Rampart made of Turf, in which there is a Gate, but without either Ditch or Draw-bridge, these being wanting to the whole Fort. The Walls both of the Bastion and Courtines are eighteen Foot broad and twenty foot high. Before this Fort the King has a Pleasure-house, by which there are several Fish-ponds and pleasant Walks, the whole being inclosed with an Intrenchment made of Turf, the Breach of which is ten or twelve Foot high, and moated about, where two or three thousand Men may lie. Before this Intrenchment is a small Fort, covered with Thickets, and ditched about, upon which there are several Pieces of Cannon.

The Country round all these Forts is so full of Marshes, Ditches, and Trees that they call Nippers, that it is almost impracticable to march through it. Passing backward from the Castle along the Shore, we met with several little Forts of Turf, surrounded with Thickets, and placed at a Musket-shot Distance one from another; on each of which there are two or three Pieces of Cannon, but so covered with Bushes that they are not visible. In these Forts there is no Guard by Day, but in the Night-Time the Horse-watch, as before-mentioned, patroll round them; the Western-Shore is more accessible and destitute of Forts. About a Pistol-shot from this Shore is a Canal above forty Foot broad, and very deep, that rises out of the great River, and runs along the Shore to the Side of the Mountains. Having passed that, we met with a plain open Country, free from Ditches and Trenches.

like a Village than a Castle Walls, and the Castle is the Gentleman's Houfe, the Circumference, of an oval of twenty-five or thirty Acres, which are almost all built and being covered with Earth is call'd in Banks, the Top of this Bank there are as tall as Ash-trees, and the Earth is cut up in Banks, such the least Branch of the Embassador to the King forgot this Order, and the King, was immediately put in perpetual Verdure, and to observe no Planks or Battlements Side which faces the Sea of several Ramparts, but the Gates there are neither on each Side of every Gate or twelve Foot high topped with a Couple of fine Brass-Guns as high as the Wall, the Wood, being shut on the fixed in the Wall, besides the Title of the Cattle there is from the Mountain, and agreeable. Upon the Steps for People to go

Apartment we pass four Guns a high Wall, backed with Brass-Guns upon it, within the Arsenal. This Rampart Court fronting of the three hundred Elephants this Court is enclosed by a Stone-Rampart, being fortified with a Parado the Cattle, I can give no account. To conclude, the considerable, but its Avantage about it is full of very close Thickets. Where is a Stone-Fort, consisting of Artillery, with several Guns Land-side these Courtyards of Turf, in which there is a Draw-bridge, these being Walls both of the Bastion at broad and twenty Foot high, has a Pleasure-house, by ponds and pleasant Walks, an Intrenchment made of twelve Foot high, and three thousand Men may be in a small Fort, covered with upon which there are seven

Fort is so full of Marshes, all Nippers, that it is almost through it. Passing East-Shore, we met with levelled with Thickets, and once one from another; on or three Pieces of Cannon, that they are not visible. In the Day, but in the Night, mentioned, patrol round more accessible and distant from this Shore is a, and very deep, that rises along the Shore to the King passed that, we met with Ditches and Trenches

It is computed that *Achen* and the adjacent Places in that Valley, are able to raise 40000 Men; but they have no Fire-Arms or Powder, for the King keeps those up in the Castle, as well as his Artillery. That Prince has above two thousand Brass-Guns in his Gallies, Forts, and two Houses, where they are heaped one above another. He is likewise well furnished with Firelocks, but they are short, and ill mounted.

But his greatest Strength he places in 900 Elephants, which are bred to tread Fire under their Feet, and to be unmoved at the Shot of a Cannon; and likewise to salute the King when they pass by his Apartments, by bending their Knees and raising their Trunks three Times. The King gives a Name to each Elephant, and confers many Honours on such of them as are most stout and docile, for he orders Umbrellas to be carried before them as they pass the Streets, for some six, for others four, and for others two, in Proportion to their Merit. Now there is not a Man in *Achen* besides the King, that is allowed the Privilege of an Umbrella. He matches the Male-Elephants with their Females, and to some that are dearest to him, he allows several Concubines. The Elephants that the King commonly makes use of, have a great deal of Honour paid them, for as they pass along every body hops and makes Way for them; for which Purpose a Boy goes before them with a copper Instrument in his Hand, with which he makes a Noise to give the People Notice. When the Oil drops from their Ears they are furious, and it is not safe to come near them; and at that Time the Boy runs above two hundred Paces before them, to give the People earlier Notice, for they will leap upon a Man strangely; and notwithstanding their huge Bulk, make no more Noise when they walk than a Rat; though, at the same time, upon that marshy hollow Ground, the Trot of a Horse makes the Earth in a manner tremble.

Sometimes the King is out of Humour with his Elephants, as well as with his Subjects, and shews his Displeasure by robbing them of their Wives, Concubines, and other Honours, and inflicting corporal Punishments in the Presence of the rest; for exemplary Correction has the same Influence upon them as upon Men, as appears by the following Instance. The King having ordered the Embarkation of an hundred Elephants for the Siege of *Dilly*, when the Elephants were brought down to the Shore, not one of them would enter the Ship. The King being acquainted with the Matter (which some took to be an ill Omen) came in Person to the Shore, and having checked and chid them with a great deal of Passion, and upbraiding them with the Breeding and Honour he had bestowed upon them, caused one of the principal Elephants to be cut in two before their Eyes, threatening the rest with the same Usage if they did not embark immediately. This done, they embarked very peaceably, and were extremely tractable during the whole Voyage.

There never was a Prince in *Achen* that had such a Dexterity in managing these Animals; he will stand upright upon their Backs while they run a full Speed: For my part, I had rather run ten Stages on Foot than ride four Leagues upon an Elephant, for it is a very uneasy Posture to those who are not accustomed to it, especially if one sits behind, for the Forepart of the Shoulders is the softest. When the King was well, he used to hunt every other Day. In his Stables he has about two hundred Horses, fifty of which might be worth five hundred Crowns a-piece in *France*. All of them have rich and magnificent Trappings.

42. The King of *Achen* is stronger by Sea than any of his Neighbours, for he has about an hundred great Gallies, of which a third Part is much larger than any we build in Christendom. I saw the Keel of an ordinary one that was an hundred and twenty Foot long, all in one Piece. They build their Gallies very prettily in that Country, but they are too heavy, for they are broader and higher than they ought to be; besides, their Rigging is too weak for their Bulk. Their Oars have neither Length nor Weight sufficient, being only Poles, with a Piece of Board at one End. They put but two Men to an Oar, who stand upright when they row. Their Sails are not made like *Mizen-Sails*, but square, like those of a Ship. The Sides or

NUMB. 50.

Planks of these Gallies are six Inches thick; so that considering their Dulness, one of our *European Gallies* might beat ten of them.

They have commonly three good Pieces of Cannon, of which that planted in the *Bourvey* is not less than a Battery-Gun, for some of them will carry a Bullet of forty Pound; Besides these they have several Falconets, which they plant before and abaft. The largest Gallies have commonly six or eight hundred Men. Their Crew consists not of Slaves, but of poor People, that row very well. The King's Wars are not very chargeable to him, for all his Subjects are obliged to march at his Command upon their own Charges, and carry Provision with them for three Months. The King gives them Arms, of which a Register is kept, they being obliged to restore them at their Return. Their Wives, and Children, and their Parents, if they have any, are answerable for their Behaviour; for if they shrink, or give way before the Enemy, not only themselves but these, their innocent Relations, suffer for it. By this means the King has brought them to be good Soldiers, and the Terror of their Neighbours. If they continue above three Months in the Field, the King is at the Charge of Rice to maintain them.

His Gallies cost him as little as his Land Armies, for he divides them among his principal Orankays, obliging them to fit them out, take care of them when they return, and repair them at their own Charges, and orders a certain Number of People to be ready upon the Command of such and such an Orankay, to assist at these Services. The Orankays are very careful of the Gallies, for if these fail, they either lose their Lives, or build new ones in their room. For that reason, when the Gallies come into the River to be laid up, they cleanse the Dock very carefully, and then lay great Pieces of Wood across it, which are ten Feet distant from one another, and lie upon an exact Level, lest the Gallies should bow when they lie upon them. When the Tide comes in the Elephants draw the Gallies up upon these Sommers, which lie above ten Feet from the Ground, that they may get underneath to view and caulk the Ship's Bottom. This done, they run a Dyke of Turf, Stone, and Planks between it and the River, and then fill the Dock with Water, to the upper Surface of the Sommers; this they do, that the Gallies may be refreshed by the Water, but so as not to dip into it, lest Sea-Worms should breed in them. Having laid up the Sails and Rigging, they cover the Masts very carefully with Palm tree Leaves, so that neither Rain nor Sun can hurt them; besides, they have a great Roof that they bring entirely over the Galley. After that, they put Water into it, to the Depth of four or five Feet, to keep the Planks fresh, and prevent their being split by the Heat.

All this is done in five or six Days, and one cannot imagine how well they preserve the Galley, and how readily they launch it again: For, the Dock being full of Water, there is no Occasion for caulking, and the Rigging is at Hand, and the Roof is taken off in a Minute. The Water in the Galley being thrown out into the Dock, augments the Water there, which sets the Sommers afloat, so that they are easily removed; upon which the Water rushing into the River, carries the Galley along with it. Every Morning and Evening, upon the opening and shutting of the Castle Gates, the King causes a Gun to be fired, and if any of the neighbouring Kings should offer to do the like, he would declare War against him, alledging, that being the Inventor of that Custom, he has a Right to engross it, as a Mark of his Grandeur: He prohibits the shooting of Muskets, or Firelocks, in the City, on any other Days but *Mondays* and *Thursdays*.

43. From what has been said, it is manifest, that this King cannot but be very rich, for in War he is only at the Charge of Arms, Powder, Lead, and Rice, which is very inconsiderable, and in Peace he spends yet less; for as to the Maintenance of his Family, he has more Rice, Flesh, Fish, Fowl, Oils, Sugar, and Herbs, paid him by his Subjects, than is consumed in the Castle, and the Surplus is sold in the Market for his Advantage: Besides, he allows his Servants nothing but Rice; if they eat any thing else, they must purchase it by their own Labour and Industry. He amasses together great Quantities of Rice

9 D

every

every Year; for, having large hereditary Countries, he parcels them out among his Subjects to be manured, obliging them to furnish him with a certain Quantity of Rice every Year, whether the Crop be good or bad, and he calculates the Product of his Land so very nicely, that the Farmers cannot be idle if they maintain themselves, and pay the King, who never bates them a Grain. The Rice he puts into his Magazines, and keeps it up till the latter End of Autumn, at which Time it fetches a double Price, and drains all the poor People of their Money; if it be a plentiful Year in *Aken*, he sends it to some neighbouring Country where Rice is scarce.

He has vast Herds of Cattle kept by his Slaves. His Elephant cost him nothing, for he gives them no Rice, only the Trunks of *Banana Trees*, which being cut, a Sprout comes up next Year that bears Fruit. As for his Cocks, they cost him nothing, but the *Orankays* take more Care of them than their own Children. He is at no Charge for his own or his Womens Cloaths, for one certain Day of the Year, all that have any Offices, or Places in *Aken*, are obliged to make him a Present of one or more Garments, according to the Incomes of their Places, or else of Stuffs for cloathing the Women, and every one strives to out-do another in the Magnificence of his Present, in order either to procure a better Place, or to secure what he has. If he does not like the Garments, or Stuffs, he returns them back, and the Officer that gave them is sure to be turned out of his Post, unless he quickly accommodates the Matter by a large Sum of Money; or if he be a Man of Riches, he shall be charged with some Male-Administration in his Office, and perhaps put to Death.

He causes a great many Houses to be built of rough Stone, which cost him but very little, tho' they would be very chargeable to another, because he has such large Numbers of Slaves. Tho' these Houses are reckoned inimitable in that Country, yet they are infinitely short of what we have in *Europe*. His Slaves indeed have a better Life than any Slaves I know, for he does not chain them, unless they endeavour to escape, or to rebel against their Masters; and out of eight Days he allows them four to work at what Work they will for their own Livelihood; and thus the King pays nothing for their Maintenance. He employs them mostly in cutting of Wood, making of Mortar, labouring in the Quarries and Buildings. There are three or four Overseers of their Work, who are maintained by the Slaves; for those who understand any Trade may live very handsomely, and be excused from working for the King, for Five-pence a Day, which is received by Commissioners appointed for that Purpose, and goes towards the Maintenance of the Overseers, the buying of Iron, and all other Materials.

The King gives the Model of his Building himself, and very often, if a Window, or a Door, or any such thing be not exactly to his Fancy, down goes the House, and another must be built in its Place. He appoints them a certain Time in which the Work must be finished, which is commonly but very short; for in the six Months that I was at *Aken*, I saw more Buildings reared up and pulled down again, than I could have imagined to have been done in two Years. These Slaves may redeem themselves, but their Ransom rises according to their Quality. The King is Heir to all his Subjects that die without Male Issue, and if they leave any Daughters then unmarried, he puts them into the Cattle, which occasions his Women to be so numerous. In that Country, Daughters have no Titles to any Heritage; and not only the People of *Aken*, but even all the *Mohammedans* are so loath to part with their Money, and so booyed up with the Hopes of having male Children by one of their many Wives, that they seldom or never give any thing to their Sons-in-Law in their Life-time, and after their Death they cannot have it; nay, even in their Life-time, if the King's Spies observe them, it may do them more Injury than Good.

The royal Treasury is likewise considerably enlarged by the forfeited Estates of those whom he puts to Death every Day; for to prevent their alienating their Estates, or Goods, he takes them at a Surprizal, and has their Wives, Children, Slaves, Cattle, Money, and all sorts of Move-

ables lodged in the Castle before they know their Sentence. While I was there, I saw the Jewels, Gold, Silver, and all the moveable Goods belonging to his Mother, brought in upon the same Occasion. The Persians he thus puts to Death, are commonly the *Orankays*, or great Lords, and that for one of the two Reasons, viz. either their Reputation and Interest among the People, or their Riches; the former giving him Occasion of Jealousy, and the latter awakening his covetous and avaricious Temper.

The King is Heir to all Foreigners that die within his Territories; for as soon as a Foreigner sickens, the King's Officers presently take Possession of his House, and upon his Death, remove his Effects to the Castle, and very often his Servants, Friends, and Slaves, are put upon the Rack, to discover where his Gold, Silver, and Jewels are, or where any thing is due to him; but the *English* and *Dutch* having Factories here, are exempted from this Law, as we were, while we staid there, by the King's Concession. The King has another bad Custom of appropriating to his own Use all the Men and Goods of all Ships that suffer Shipwreck upon his Coast. No Foreigner can enter the Castle without making a Present to the King; it is true I went without any, being allowed the Quality and Privilege of a principal *Orankay*, but at the same Time I never could have Audience upon my own Affairs but when I ushered it in with a Present; nay, if either Foreigner or Native put in any Request to the King, the former is not heard, and the latter is punished; and after all, the Request will not be granted, unless the Present be liked; for I have seen the *Dutch* and *English* Presents frequently returned, and in that Case they were obliged to make more valuable Gifts, such as would please the King, before they obtained their Desire. No Foreigner can enter the King's Chamber without the Chappel, for which he pays a Rial to the Officers that bear it.

When a Ship comes into the Road of *Aken*, none of their Crew must go ashore till the Chappel comes, and till the Duty of that be paid, which amounts to fifty or sixty Rials, according to the Bigness of the Ship, and upon their Departure from the Road, they are obliged to pay about half as much. The *Moors* pay nothing upon the Export of Goods, but upon the Import the Duty is very heavy; for they pay 10 per Cent. in Gold upon the Entry of all Goods which are appraised by the Officers of the *Alfandeqe*, and commonly over-rated 50 per Cent. The *Dutch* and *English* pay as much, but then they pay it in the Commodity itself, and not in Gold. But the greatest Damp upon the Trade in that Place is, that the King engrosses it all into his own Hands; for what Commodities he buys, he must have them under a Market Price, and what he sells rises to 50 per Cent. above it; so that if he continues to carry on his Commerce at this Rate, the *Dutch* and *English* will be obliged to abandon this Place, and it is with that View, as I take it, that he does it; for at present, he is very jealous of their Strength. From what has been said, we may safely infer, that the King of *Aken* is infinitely rich, especially if we consider, that over and above the before-mentioned Articles, he had an opulent Exchequer left him by his Father.

44. To understand how this present King of *Aken* came to the Crown, we must know, that before the Reign of his Grandfather, the *Orankays* being never oppressed by their Kings, nor pillaged by other Nations, were very rich in Lands and Houses, besides Gold and Silver, and gave a licentious Range to their insolent and proud Tempers. In those Days the City was six times greater than it is now, and so crowded with People, that one could scarce pass along the Streets. No City in *India* had so flourishing a Trade. The *Alfandeqe* required no Customs but that of the Chappel; Merchants might unload and load again in 15 Days-time.

The *Orankays* lived in large stately Houses, with Cannon at their Gates, and great Numbers of Slaves, both to serve and guard them. They had magnificent Garments, and pompous Retinues, and were much respected by the People. This Grandeur and Authority of the *Orankays* not only lessened the King's Authority, but was often fatal to his Person, inasmuch that it was a great

they know their Sen- the Jewels, Gold, Sil- belonging to his Mo- Decation. The Persons only the Orankays, or the two Reasons, viz. among the People, or him Occasion of Jeal- covetous and avaricious

stately Houses, with Can- Numbers of Slaves, both they had magnificent Gar- , and were much respected our and Authority of the the King's Authority, but , inasmuch that it was a great

great Matter if a King enjoyed his Crown two Years, and if he did, it was with so much Trouble and Dependence upon the Orankays, that nothing but the Title of his Dignity was left him. Things continued at this rate till the Ex- tinction of the ancient Royal Line, which happened about forty Years ago.

Upon that the Orankays met, in order to chuse a King, but every one affecting the Dignity for himself, they could not agree upon the Matter, and resolved to decide it by Force. In this Ferment the Cady, or Great Bishop, by his Authority and Remonstrances, persuaded them to listen to an Expedient that would remove all their Jealousies; namely, to put the Crown upon the Head of a certain Orankay, who in all these Divisions had not stirred or affected any thing for himself or his Family, but had lived in the Reputation of a wise, experienced Man, being then seventy Years of Age, and descended of one of the noblest Families in *Achen*. The Orankays accepted the Proposal, in regard it did not give them their respective Pretensions, since they only entided him to a Preference by reason of his Age and Prudence. But after all, the old Nobleman desired to be excused, alledging that he had retired for some time from the Affairs of the World, and desired to pass the Remainder of his Life in Peace. Upon this the Orankays fell together by the Ears; but at last, finding that every thing run in Confusion, they endeavoured to threaten the old Orankay into an Acceptance of the Crown; but both their Threats and Intreaties were equally ineffectual.

At last they came all in a Body to his House, the Cady carrying the Crown, and one of the Orankays a naked Sword. There they represented to the old Gentleman that they could not possibly find any other Remedy for their present Calamity, but that of making him King: That as they had frequently importuned him to accept of the Crown, to they came now once more to make the last Offer, and that if he refused it, they were determined to cut him off immediately, to prevent their insulung any longer on an useless Expedient. The old Orankay finding himself in a Dilemma, told them, that tho' he had firmly resolved to finish his Days without the Disturbance of publick Affairs, yet since nothing but his mounting the Throne could prevent a pernicious War, he accepted their Offer with this Proviso, that they should respect him as a Father, and he should treat them as his Children, and they should receive his Correction as from the Hands of their own Father. This said, they all thanked him, promising not only to honour him as their Father, but to respect him as their Sovereign Lord, and invested him instantly with the Royal Dignity.

45. After his Coronation he took Possession of the Castle, and invited all the Orankays to a Feast upon an appointed Day, and made such vast Preparations for their Reception, that the Orankays were struck with Admiration. The Orankays were drawn up in Order in a Court near the King's Apartment, and conducted by the Chappes into a Hall; but as every Man entered the Hall he was immediately seized, and dragged into another Court behind the Build- ings, where the King had caused a deep Ditch to be dug, upon the Brink of which their Throats were cut, and then their Bodies were thrown into it. In the mean time the Musick played, and nothing but Songs and Mirth was heard in the Hall; and the Matter was carried on so warmly, that one thousand one hundred were cut off before those in the Rear could perceive any thing of the Matter; at which Time the small Remainder slipped softly out of the Castle, without knowing distinctly the Occasion of their Mistrust till the next Day that the principal Orankays were missing.

The King having thus cut off all he suspected, and furnished himself with a good Body of Men in the Castle, he published a Declaration, setting forth, that this great Execution was necessary for the Safety of his own Person and the State; that as in former times the Orankays had made and dethroned many Kings at Pleasure, and extinguished the ancient Line, so when they were at the Point of cutting one another's Throats, they could find no other Remedy than that of making him King by Force, in order to use him as they did the former Kings upon Occasion; that since he was King he would not be exposed to the incessant Humours of the Orankays, who, after they had massacred him, would have relapsed into their for-

mer Animosities, and made the People suffer by their Quar- rels; and in fine, that all his Design was to preserve the general Peace, to reign in Equity, and execute severe Ju- stice upon Offenders.

After this Declaration, when he saw that no body stirred, and none came near him to pay him their wanted Respects in the Castle, he demolished all the Houses of the executed Orankays, and lodged their Cannon, Arms and Goods in the Castle. He prohibited any to build with Stone, or to have Cannon or Intrenchments about their Houses; he ordered the Trenches that then were to be filled up, and the Stone Walls to be pulled down. He enjoined, that all their Houses should be but one Story high, and their Walls be made of Mats, as they are at this Day. He conferred the Quality of Orankays upon his Favourites and Abettors, allowing them part of the Lands of the executed Lords. He put to Death the ancient Orankays, and those of the People that testified any Dislike to his Conduct, inasmuch that in the first Year of his Reign he put to Death twenty thousand Persons, and in the second some thousands more.

This Prince reigned a long time, and reduced the City to the Condition that it is now in. He used the *Moorish* Merchants very unkindly, but was extream civil to the *English* and *Dutch*, who settled there in his Time. He brought up this present King, who is the Son of his own Daughter, and for whom he had a particular Love. He died in the Year 1603, aged ninety five Years, leaving be- hind him two Sons, who were already advanced in Years. To the eldest of these he left the Kingdom of *Achen*, and all his Territories along the Coast of *Sumatra* to the West- ward, and to the other the Kingdom of *Pedir*, with the Territories upon the East Coast of *Sumatra*. The two Princes were of too meek and humble a Temper for their Subjects, so that Murders, Robberies, Oppression, and an Infinity of Disorders, reigned in *Achen* for want of a severe Execution of Justice. The King of *Achen* happening to give some slight Rebuke to his Nephew the present King, whom he entertained at his Court, the young Prince made his Escape out of the Castle, and fled to his Uncle the King of *Pedir*, who gave him a very kind Reception. The King of *Achen* desired his Brother to send his Nephew to *Achen*; but his Brother made Answer, that he would not offer Violence to a young Prince whom their Father had recommended to their Care. Upon this the two Brethren declared War one against another, the Forces of *Pedir* being commanded by the Nephew, who is now King. In this War above sixty thousand Men were killed between them, and the Nephew had oftentimes the Advantage: But at last the Forces of *Achen* being more numerous, those of *Pedir* refused to march. Upon which their King was obliged to deliver up his Nephew into the Hands of the King of *Achen*, who immediately put a strong Guard upon him, and laid him in Irons.

Some time afterwards the *Portuguese* made a Descent upon *Achen*, and carried the first Tur Fort at the Entry of the River, but could not master the Stone one. In this Juncture the young Prince desired his Uncle would let him go and fight against the *Portuguese*, remonstrating that he had better die in Battle with the *Cafres* (so they call the Christians) than lie in Chains to no Purpose. The King of *Achen* being at that Time in Conternation, released him, and suffered him to go upon that Design. The young Prince behaved himself with so much Bravery in two or three Engagements with the *Portuguese*, that he acquired a great Reputation among the People of *Achen*.

46. Upon this his Mother being an active ambitious Woman, formed a Design of making him King of *Achen*, and furnished him with large Sums of Money to be distributed among the principal Orankays; with the same View, the young Prince was very familiar in his Conversation, whatever he had was common to his Friends and Courtiers; he refused nothing that was asked of him; in a Word, he shewed himself liberal to the Orankays, affable to the Rich, a Companion to those that professed Arms, and extream courteous to the common People. In the mean time the King of *Achen* died suddenly; at the Hour of his Death the young Prince gets into the Castle, bribes the Guards, makes vast Promises to the Officers, advances a large Sum of Money to the Governor of the Castle, distributes Money among

among the principal Orankays, and threatens the Cady, who scrupled to crown him.

In fine, he managed the Intrigue so happily, that he was proclaimed King that very Night, to the great Joy of all the People who had conceived great Hopes of his Liberality, Courtesy and Familiarity, as well as his Valour. *Padir* being twelve Miles from *Achen*, the King of that Place was quickly acquainted with his Brother's Death, and came the next Day to receive the Investiture of his Patrimony; but as he approached the Cattle with a small Retinue, he fell into the Hands of his Nephew the King of *Achen*, who, forgetting his former Favours, kept him a Month Prisoner in the Cattle, and then, pretending to send him to a more agreeable Retreat, at a Distance from the City caused his Throat to be cut by the Way. Those who put the Crown upon his Head were not better used; for he began with the Maraja, or Governor of the Cattle, who had taken most of his Money, and ended with those that received the last. In a Year's Time they found a great Alteration; for instead of being humane, he was very cruel. Instead of Liberality, he displayed an extreme Avarice, and his familiar, meek Temper, became austere and inexorable.

In fine, he has shed more Blood than his Grandfather did in his whole Reign. He has dispeopled the whole Territory of *Achen*, and drained not only the Natives, but the Foreigners that reside there, of all their Money. It is true, he endeavoured to re-people this City with his Conquests, or rather Ravages (properly speaking) for having ruined the Kingdoms of *Jer. Dibby*, *Piken*, *Queda*, and *Pera*, he transported from thence to *Achen* about twenty-two thousand Persons; but at present there are scarce one thousand five hundred of them left: So that this Policy proved rather for an Influx of his Cruelty, than any other thing; for the People being brought naked to *Achen*, and allowed not a Grain of Rice for their Maintenance, died of Hunger in the Streets. Hitherto this King hath been successful in all his Enterprizes, inasmuch that some take him for a Sorcerer.

For my part I regard him as a Man of great Judgment, one that undertakes nothing rashly, or unseasonably, but after a mature Deliberation, and upon very probable Conjectures. He never assaulted one of his Neighbours but when they were reduced to some Extremity. All his Preparatory Measures are incomprehensible, till the Design is put in Execution; for he never asks or receives Advice of any, and being invested with an absolute Authority, his Commands are immediately put in Execution; so that all this may be done without the Assistance of Devils. Besides, I have often heard that Sorcerers are poor, sorry Wretches; but I am certain that this King is by far greater and richer than any of his Neighbours.

47. *February* the 3d we were in Sight of the Island of *Montabay*, the 5th we came to an inhabited Isle that lies between *Najlaw* and *Montabay*; the 6th we passed between *Najlaw* and another Island not marked in the Charts. This Channel is four or five Leagues broad; all these Islands lie very low, whereas the opposite Coast of *Sumatra* is very high and conspicuous. I would advise all Sailors rather to put into *Sumatra*, than into any of these little Islands; for the former is peopled all along the Shore with Persons acquainted with the Conversation of Strangers, whereas the Inhabitants of these are barbarous Savages, that have no Communication with any other People, and consequently not to be trusted.

April the 20th, in 33° 30' Latitude, the Needle varying 7° 45' North-West, we descried a smooth and uniform, but rocky Coast, upon which we flood to Sea, and next Day encountered a violent Storm, that lasted to the 23d of *May*; the 1st we perceived the Land between Cape *Aguielles* and Cape *Luffe*, and on the 5th we came to an Anchor in *Table-Bay*; our sick Men did not recover at this Place as I expected, either by reason of that extreme Cold, or because I could not take in such fresh Provisions as I had a Mind to, there being some Dutch Ships in the Bay that I mistook. I believe the Cold was the great Cause of it; for all the Dutch Suck died as well as mine. The Wind continued at West-North-West from my first Arrival in this Bay to the 24th, that I weighed Anchor, and passing

by the North-East, was becalmed within Cannon Shot. The 30th we set Sail, the Wind at South-South-East.

On the 21st of *June* we descried *St. Helena*, about fifteen Leagues West-North-West of us: Next Day I came to an Anchor over-against it, and sent our sick Men on Shore, who were something benefited by the Air. This is a very convenient Place for the refreshing Men, not only in regard to the Temperance of the Air, but by reason of the Plenty of young Kids and Hogs, the Facility of coming at good Water, the Conveniency of Fishing in the Road, and upon the Shore, the Abundance of Oranges and Citrons, which are excellent Remedies against the Scurvy, besides several good Herbs, such as Purslain, a sort of Tarragon, in large Quantities, some Fenugreek, Tobacco, and the Herb Mayoc: Not to mention the Partridges, Pigeons, and, as some say, Oxen, that this Island abounds with; for though the Country be mountainous, and very steep, and the Grails withered-like, yet on the Top there's a great deal of Moisture, and there is not a Valley without a Brook or Rivulet, the greatest of which runs in the large Valley, where a large Chapel is built, though it is not above a hundred and nity Paces broad, and one thousand long. At the End of this Valley there's a ragged Cleft Ridge of Rocks, upon which there falls down a Stream of Water from a very high Mountain, inasmuch that it is beat as small as Rain before it falls. This Ile lies in 16° South Latitude, the Needle varying 5° 45' North-East, and always has the Wind South-East.

48. On the 16th of *July* we saw the Isle of *Ascension*, about twelve Leagues North-East of us. It is very high, and its Anchorage lies over-against a sandy Creek. This Island has neither Wood, nor Fresh-Water, nor any Herbs, being nothing but a hard Rock; yet it affords some Hogs, and a great many Fowls, such as can live without Fresh-Water, upon the Rocks, and in the Road it has abundance of Fish and Tortoise. Its Circumference may make about eight Leagues, which is as much as that of *St. Helena's*. It lies in 8° S. Lat. After we had crossed the Equinoctial, we had such Calms and drizzling Rains that most of our Men were seized with Dropsies and Tumours, upon which there ensued great Mortality in the Ship.

August the 6th the Calms and drizzling Rains continuing, there came a sudden Whirl-wind that lasted for two Minutes, and broke all our Sails, carrying the Main-Top-Sail quite off. The next Day we saw some Swallows and Butterflies, which signified that we were near Land. The 13th we saw an Island to the North, in 16° Lat. which we knew to be *Saint Nicholas*, one of the *Cape-Verd* Islands. The 16th we made the Isle of *Saint Vincent*, and cast Anchor at five Fathom Water. The 17th I sent my sick Men ashore, who were very numerous, and in a sorry Condition; but, when they came upon Land, they recovered apace.

49. The ordinary Anchorage of this Island lies in 17° 20' Lat. the Needle varying 2° 15' N. E. It affords at this Season great Plenty of Tortoises, which they call Free-Tortoises, and are distinguished from the others they call Cohouanes, by the Smoothness, Plainness, and green Colour of the Shell, the Largeness of their Body, and the Smallness of their Head, and the Form of their Snout, which resembles the Teeth of a Saw. The Flesh of these eat as well as that of a young Heifer, and some of them are so large that they weigh 300 Pound. They come out in the Night-Time, and lay their Eggs upon the Sand, which they bury a Foot deep. Those who have a Mind to catch them watch them at that Time, and getting behind them turn them upon their Back; after which they cannot turn themselves to get upon their Feet, and so lie there till the Morning. Most of them have 250 Eggs shelled, and as many unshelled in their Bellies, which are very good.

In this Island we met with an Herb that in some measure resembles Spinnage, but it is infinitely better; we used it both in Salad and Soup, and both it and the Tortoise Flesh kept our Bellies open, and cured our Men of great Dropsies, without any other Purgation in eight Days, which perhaps could not be cured in *France* in a Month.

within Cannon Shot, at South-South-East. *St. Helena*, about fifteen Days Next Day I came to an our sick Men on Shore, the Air. This is a very Men, not only in repair, but by reason of the Facility of coming at Fishing in the Road, and of Oranges and Citrons, against the Scurvy, besides him, a sort of Farragon, peck, Tobacco, and the the Partridges, Pigeons, his Island abounds with, nous, and very steep, and the Top there's a great deep Valley without a Brook runs in the large Valley, though it is not above a hundred one thousand long. At the Cleft Ridge of Rocks, am of Water from a very it is beat as small as Rain 16° South Latitude, the the flat, and always has the

the Isle of *Affenhon*, of us. It is very high, off a sandy Creek. This Fresh-Water, nor any and Rock; yet it affords Fowls, such as can live Rocks, and in the Road toise. Its Circumference which is as much as that at. After we had crossed h Calms and drizzling were seized with Dropsies e ensued great Mortality

of this Island lies in 17° 15' N. E. It affords at fishes, which they call Frees from the others they call Plainness, and green Cuts of their Body, and the the Form of their Snout, Saw. The Flesh of these Heifer, and some of them 50 Pound. They come out their Eggs upon the Sand, Those who have a Mind hat Time, and getting beir Back; after which they upon their Feet, and so lie of them have 250 Eggs in their Bellies, which are

n Herb that in some mea- it is infinitely better; we oup, and both it and the open, and cured our Men of other Purgation in eight ot be cured in France in 4 Month,

Month. It is also well stocked with young Kids, but you are not sure of catching them, unless you have Dogs. We saw no Fruit in it but wild Figs, which were all spoiled with Worms. To the Eastward, under a high Mountain, there are vast Quantities of Purlain. Commonly the Water of this Isle is brackish; but upon the S. W. Part of the Bay, where the Anchorage is, there is a small Spring, that if it was cleaned and dug deep, would afford pretty good Water.

It is furnished with a considerable Quantity of wild Pines, which may serve for Firing; besides which it has no Wood, except some Shrubs, that cast forth a white milky Juice, that is very dangerous and painful to the Eyes if it touches them. There is very good Fishing along the Rocks, and especially at a little Rock at the Entry of the Bay, about a quarter of a League from the Anchorage. In two Hours Time seven or eight may there catch Fish enough for two hundred Men. In fine, it is not inferior to *St. Helena* for a Place of Refreshment, except that its Water is not so good. In Comparison of which Defect, it is all over accessible, and furnished with pleasant Walks; whereas the other is the most inaccessible Country I ever saw. This Isle is about nine Leagues in Circumference, and while we were there the Wind was at N. E. it has several pleasant Bays; but that towards the Isle of *St. Anthony* is the best Road for Ships that can be, for we rode at five Fathom Water, on an excellent sandy Ground, and were sheltered from all Winds. We saw neither Men nor Houles, though we travelled over most Part of the Island.

50. After our Departure from *St. Vincent* (which happened September the 15th) we had several violent Storms. October the 12th we descried the *Azores-Islands*, but it was the 17th before we could weather them. The 19th we had a violent Storm from N. W. that broke our Mizzen-Mast, and obliged us to bring our Main-Top Mast upon the Deck. The 30th we were 55° Lat. and had seventy Fathom Water, upon which most of our Pilots agreed that the *Sorlingues-Islands* lay about twenty Leagues to the West of us. November the 3d we descried the *Lizard-Point in England*; and December the 1st came safe to *Harvre de Grace*, having been out thirty-eight Months.

51. The Difficulties our Author met with, and the

Misfortune of losing two of his Ships, did not hinder his making a saving Voyage even of this, which would have proved highly advantageous to his Owners, if the *Ilope* had not been lost, since it is computed that she, at the Time of her being burnt, had on Board a Cargo worth seventy-five or eighty thousand Pound sterling. There are few Pieces that let us more effectually into the Secret of Trade than this, which shows us perfectly the Methods made use of by the *Dutch*, to exclude all other Nations from the Commerce of the *Indies*, and very fully justifies what we have occasionally delivered upon that Subject. It is really wonderful that the Subjects of the States-General should venture, at that time of Day, to treat the *French* in such a Manner, to whom they had not only considerable Obligations for the Countenance they had given them in the Infancy of their Commonwealth; but were also in great Danger from their Power in *Europe*. But however this might affect the States, the *East-India* Company, it seems, gave themselves very little Concern about it; which shows how dangerous it is to leave the absolute Administration of their Affairs in these distant Parts of the World to any Company, without having some Check upon them from the State, which must be answerable to other Powers for the Excesses committed by the Agents of such a Company.

As for Commodore *Beaulieu*, after his Return to *France*, he was taken into the King's Service, and behaved extremely well in the Affair of the Island of *Rbe*, when the *English*, under the Command of the Duke of *Buckingham*, made a Descent upon that Island, and during the long War against the Protestants. This recommended him to effectually to the famous Cardinal *Richelieu*, that he intrusted him with the Command of one of the best Ships employed in the Squadron commanded by the Count de *Harcourt* against the Islands of *St. Margaret*, and *St. Honorat*, in which he likewise behaved with Reputation; as also in the Expedition against *Sardinia*, at his Return from which to the Port of *Toulon*, he was unfortunately seized with a burning Fever, which carried him off in the Month of *September*, 1637, at the Age of 48; so that he may be said to have died in that Season of Life when he was most capable of serving himself and his Country.

SECTION XXVI.

The Remarks and Observations made by John Albert de Mandelsloec, in his Passage from the Kingdom of Persia through several Countries of the Indies.

Translated from the Original, written by himself.

1. An introductory Account of the Author, and of the Design of this Section.
2. His Departure from *Ispahan*, in order to go to *Gambron*, or *Bandar Abassi*.
3. A curious Description of the Ruins of the ancient *Persepolis*, now called *Tehelminar*.
4. The Author continues his Journey to *Laar*, and from thence to *Gambron*.
5. His kind Reception, and generous Entertainment, by the *English Merchants* there.
6. A curious Description of the City and Port of *Gambron*, with the Country adjacent.
7. A concise History of the City and Kingdom of *Ormuz*, and of the Manner of its being annexed to the Empire of *Persia*.
8. An Account of the Author's Passage from *Gambron* to *Surat*, with Remarks.
9. His Arrival at the last mentioned City, and the Reception he met with there.
10. A succinct View of the Dominions of the Great *Mogul*, as they stood at that Time.
11. A Description of the City of *Surat*, with a large Account of the Commerce carried on there.
12. The Author's Journey from thence to *Amadabat*, with his Adventures by the Way.
13. A View of that City, and of the Country adjacent, with various Remarks and Observations.
14. An Account of some memorable Transactions which happened during the Author's Stay there.
15. His Passage from thence to *Canbaya*, with a Description of that City, and its Inhabitants.
16. His Journey to *Agra*, with a large Account of that Capital of the *Mogul* Empire.
17. A very full Relation of the *Mogul's* Court, and of the State of the Empire of *Indostan*.
18. The Author's Journey back from *Agra* to *Surat*, with many curious Particulars.
19. A succinct History and Description of the Kingdom of *Guzurat*, and Provinces adjacent.
20. A compleat View of the Religion, Customs, Manners, &c. of the *Banjans*, or native *Indians*.
21. A Continuation of that Account, together with a Description of the other Nations that now inhabit the *Indies*.
22. Of the Commodities, Manufactures and Commerce of these Countries.
23. Of the great Plenty of all sorts of Provisions, and of the People's Manner of living.
24. Of their Ships, their Trade to the *Red-Sea*, *Persian Gulph*, and Coast of *Malabar*.
25. Remarks upon the foregoing Section.

1. **T**HE Accounts afforded us in the foregoing Sections are excellent in their kind, so far as they go; but as it is necessary to our having a thorough Comprehension of the Affairs and Commerce of *India* that we should proceed still farther, and take a complete View of the several Countries in which this Commerce is carried on, of consequence it becomes as necessary on parting with our old Guides to look out for new. He, with whom we are next to travel, has been allowed to have all the Qualities requisite to such a Guide, that is to say, Knowledge, Diligence, and Fidelity. He was born *A.D.* 1615. of a good Family in the Dutchy of *Mecklenberg*, in the *Lower Saxony*, and received from the Care of his Parents a liberal Education, having before received from Nature an happy and inquisitive Genius. These good Qualities recommended him to the Notice first, and then to the Confidence of the Duke of *Holstein*, in whose Family he lived as a Domestick.

When that Prince formed a Design of sending an Embassy into *Persia*, in order to promote a Project he had formed of establishing an *East-India* Company in his Dominions, our Author was chosen to accompany those Embassadors in a very honourable Quality: But before his Departure, he represented to his Master, that though the Reasons which determined him to send his Ministers no farther than *Persia* were in themselves very just, and well founded, yet it would be extremely requisite to the Accomplishment of his main Design, that a Person of their Retinue should make the Tour of the *Indies*, which was what he was strongly inclined to do, and therefore begged his Permission to grant that Desire, by taking his Leave of the Embassadors when arrived at the *Persian* Court, and pursuing his Travels as Occasion offered.

The Duke's Leave thus obtained, he set out with the Embassadors, in the Year 1636, and accompanied them to *Isfahan*, or, according to the *Persian* Pronunciation, *Sapahan*, the History of which Journey, and of their Negotiation, was written at large by their Secretary, and is esteemed one of the most perfect Works in its kind; for which Reason it will claim a Place in the second Part of our Undertaking. At present we are concerned only with *Mandelsloe's* Account of his Travels, after he left the Embassadors, and prosecuted his intended Design of viewing the Countries of *India*, which he executed very happily, and has no less faithfully recorded.

There have been few Travellers who have set out better furnished than our Author; for he had, previous to his Journey, taken great Pains to acquaint himself with all that had been written of those Countries he was to visit, by the best Auth. is ancient and modern, as manifestly appears by his excellent Performance. But though he was a Scholar, and a Gentleman, yet as the Design he went upon was the Improvement of Trade, he kept that Design constantly in View, and lost no Opportunity of making such Enquiries as might enable him to make a just and satisfactory Report at his Return to the Prince, by whom he was employed. It was with this View that he kept a regular and exact Journal of his Travels, and took Care, in every Place where he came, to make the nicest Enquiries in his Power; and it is for this Reason that his Writings have been so much esteemed, and have been always considered as the most exact and correct Accounts that had been published to his Time.

He began them, as the Reader will perceive, in the Month of *January* 1638, and having happily achieved them, returned safely to the Court of *Germany*, and made his Report of what he had observed in them. At the Close of the next Section we shall say somewhat as to the Consequence of them, and of the Causes which hindered the Projects of the Duke of *Holstein* his Master from taking Effect, notwithstanding they were so wisely laid, and so far as our Author had any Concern in them, happily executed. This much, however, may suffice by way of Introduction, the rather, because the Author himself has been so clear and methodical in his Relation, and has taken such Care to avoid Obscurity on the one hand, and Politeness on the other, that there is no need of detaining the Reader any longer from his Performance, which we shall deliver in his own Words as near as may be.

2. The Embassadors of *Holstein* having left *Isfahan*, and being not long after followed by *Ismael Eschibangisi*, a Native of *Karabuk*, who was sent in Quality of Embassador from the King of *Persia*, to the Duke of *Holstein*; I, according to the Permission I had obtained from the Duke my Master, prepared for my Journey into the *Indies*, and being on the 12th of *January* 1638, introduced to a particular Audience of the Shah, he permitted me, with much Kindness, to kiss the Hem of his Garment. I set out from *Isfahan* the 16th of the same Month, with a Retinue of four Persons, *viz.* a Surgeon, a Footman, a Groom, and one *Persian* Servant, being conducted out of Town by Mr. *Honywood*, the *English* Agent, and several *English* and *French* Merchants. I took my Leave of them a League from thence, and travelled eight more the same Day, to the Village of *Major*, where I stayed the next Day, and continued my Journey to *Kamjiba*, the whole Road being one continued Walk of Trees made by the adjacent Gardens. The Caravanera I lodged in, had nothing but bare Walls, but that wherein I was lodged the next Night, at the Village of *Makhsud*, six Leagues from *Kamjiba*, had convenient Lodging-Rooms and Stables.

The 20th I came to the Village of *Hannabab*, seated upon the Declivity of a very pleasant Hill. The 21st I travelled ten Leagues, in very flowy and windy Weather, and lodged in a Caravanera called *Jurgjiban*. Between this Place and *Surma*, there being neither Village nor Caravanera, I was forced to travel the 22d 12 Leagues, and the 23d was obliged to go 12 more, before I could reach the Village of *Gushi*, where we met with very indifferent Accommodation, scarce meeting with a House we could put our Heads in, or preserve our Horses against the bad Weather. The next Day being the 24th proved rather worse; for being forced to travel 12 Leagues through the Mountains covered with Snow, and that in very bad Weather, we, with much a-do, very late at Night, reached the large and famous Village of *Mesjid Maderre Saaman*, so called from a Sepulchre which is within half a League of it.

This Sepulchre is to be seen within a little Chapel of white Marble, the Tomb itself being erected upon a high Square of Free-Stone, unto which you may go up by Steps on all Sides. The Air and Rain has penetrated through the Walls in several Places, and diverse Pillars round the Structure are almost consumed by Time. Upon the Walls of the Chapel, I found in *Arabian* Characters, these Words, *Mader Suleiman*. The general Opinion of the Inhabitants is, that this is the Sepulchre of *Soleiman's* Mother, but the *Carmelite* Friars at *Sebras* informed me, with much more Probability, that the Mother of *Shah Saaman*, the 14th King of the Posterity of *Soly*, was interred here. *Elnacinus* gives her the Name of *Wallada*, and informs us, that she was the Daughter of *Abbas Abofajim*. He tells us also, that this *Soleiman* lived in the Year 715, and that being a very handsome Person, and viewing himself one Day in a Looking-Glass, he was so taken with his own Person, that he said, he might with the same Right pretend to the Title of the King of Youth, as of the Kingdom of *Persia*; which being over-heard by one of the Ladies of his Seraglio, she answered, that provided it was in his Power to insure to himself any Continuance of what by the Laws of Nature he might not be able to enjoy long, he might justly lay Claim to such a Title. This struck such a Damp upon his Spirits, that he died within a few Days after. We met here with an *Armenian* Caravan.

3. I travelled on the 26th five Leagues to *Siwan*, and the 27th as many more to *Mardisib*, one of the most famous Villages of those Parts, on account of the Antiquities that are to be seen near it, which obliged me to take a full View of them. They are the Ruins of a very ancient Structure called *Tekiminar*, i. e. forty Pillars by the *Persians*, who affirm, that this most magnificent Palace was built by *Szanfarud Pashiba*, Grandfather to *Alexander* the Great by the Mother-Side, tho' some among them make *Soleiman*, others *Darius*, the last *Persian* King, its Founder; but the *Carmelites* at *Sebras* assure me, that it

in having left *Ispahan*, by *Imanuli Eshiban*, was sent in Quality of *Perfia*, to the Duke of *Thou* had obtained from or my Journey into the *January* 1638, intro- of the *Shah*, he permit- to kiss the Hem of his the 10th of the same *Perfians*, viz. a *Chirur- one Persian* Servant, be- *Honywood*, the *English* *Merchants*. I took thence, and travelled *Village of Mejar*, where ended my Journey to *kan-* continued Walk of Trees *The Caravanera* I lodged but that wherein I was *Village of Akabful*, six *venient Lodging-Rooms*

of *Hannabab*, seated *ant Hill*. The 21st I *ow* and windy Weather, *ed Jugjiban*. Between *g* neither *Village* nor *Ca-* the 22d 12 Leagues, and *g*, before I could reach the *with* very indifferent Ac- *with* a *House* we could *or* *Horses* against the bad *g* the 24th proved rather *12* Leagues through the *nd* that in very bad Wea- *g* late at Night, reached *Mejbul Maderre Saia-* e which is within half a

This *pirits*, that he died within *ere* with an *Armenian* Ca-

ve Leagues to *Sizaw*, and *dafib*, one of the most fa- *n* account of the Antiqui- *which* obliged me to take *the* Ruins of a very an- *i. e.* forty Pillars by the *s* most magnificent Palace *Grandfather* to *Alexander* *, tho'* some among them *the* last *Persian* King, *as* *the* *Sibiras* assure me, that

it was the general Opinion of the Learned, that this was the Place where the ancient *Persepolis* had stood, and that these were the Ruins of that famous Palace built by *Cyrus*. The Foundation or Ground-Work on which this vast Structure was erected, is raised twenty-two Geometrical Feet, having at each of its four Corners a Pair of Stairs of white Marble of ninety-five Steps, so flat and broad, that twelve Horses may go up together a-breat. Before you come to the main Body of the Structure itself, you pass through a Square, where you see the Ruins of a Wall, and the Remainders of two great Gates, each of which have a Horse garnished and saddled, after a very antique Manner, carved on one Side, and on the other two Creatures resembling a Horse, except that they have Wings on each Side, and the Head is crowned like that of a Lion.

On the one Side you see the Ruins of nineteen Pillars of white and black Marble, the least of which are eight, and some ten Ells high, without the Bases; but whether they had been intended for the Support of some large Hall, or were built in the open Air, is not to be distinguished at this Time. The Inhabitants therabouts told me, that not many Years before, there were forty of these Pillars standing. As you go on further, you meet with the Ruins of two Rooms indifferently large, as may be judged by the Doors and Windows, but every thing is of the finest Marble. Several Figures of Men of an extraordinary Size are to be seen on both Sides the Doors, some in a sitting, others in a standing Posture, their Hair falling down carelessly over their Shoulders, and their Garments reaching down to their Heels, with very wide Sleeves, and a Girdle round their Waists. They had very long Beards, and round Caps on their Heads. Not far from thence are two other Chambers much of the same Bigness with the former, but so ruined, that nothing but the Doors and Cross-Bars of the Windows are left.

This Structure seems to have had this in common with most of the Buildings of a modern Date in *Perfia*, that it had many Doors, which is done here to give the more free Passage to the Wind to cool the Rooms. Hard by these two last Chambers, you find unknown Characters engraved upon a square Pillar, which have no Resemblance to the Greek, Hebrew, Arabick, or any other Language, being triangular, or rather pyramidal, not unlike Obelisks. There are twelve Lines of them, so well proportioned, and nicely engraven, that they have not the smallest Sign in them of Barbarism. Some believe them to be Telelms, and to contain certain Mysteries; besides these before-mentioned Rooms, there is, upon the same Ground-Work, a large Court of ninety Paces square, with two Gates on each Side, some of which are six, others only three Paces wide. They are of the finest Marble; each of the Pieces are eight Feet long, and three in Breadth; you see also in another Court, very curious carved Work in Marble: Battles, Triumphs, Olympick Games, every thing in its due Proportion.

Upon each of the Gates you find a graceful Person carved sitting with a Globe in the one, and a Scepter in the other Hand, tho' it is certain that the Kings of *Perfia* never sat in that Posture. My Curiosity led me to get up as high, where I saw a King represented paying his Devotions to the Sun, Fire, and a Serpent. As the Inhabitants at this Day carry from thence a great Quantity of Marble to carry on their private Buildings therabouts, this, with the Length of Time, has so defaced, or rather ruined this noble Structure, that it is impossible to determine whether its Architecture was of the Ionick, Dorick, or Corinthian Order; notwithstanding which, even its Ruins are so surprizing, that these would find Work for a very good Painter for above six Months.

If we trace the ancient *Persian* History, we find, that according to *Aelian*, the Grand *Cyrus* laid himself the Foundation, and built a most magnificent Palace at *Persepolis*, as *Darius* did at *Susa*. Perhaps the Ruins belong to the famous Palace mentioned by *Diodorus Siculus*, being encompassed with three Walls of Marble, the first whereof was 16, the second 32, and the third 60 Ells high; and all the Gates and Balcons of Brass, all which, together with the innumerable Treasure it contained, was in a few Hours reduced to Ashes by *Alexander* the Great, at the

Request of a Harlot. Having spent a whole Day in viewing these Antiquities, I continued my Journey the 28th of *January*, and travelled that Day ten Leagues to the City of *Sibiras*. Here I met with four *Carumite* Friars, *Italians*, who were possessed of a goodly Monastery, and had the free Exercise of their Religion allowed them. Not many Years before, the *Portuguze* had here likewise a Convent of *Augustin* Monks, but they were forced thence, as well as all the other *Portuguze*, after the taking of the City of *Ormuz* by the *Persians*.

Sibiras is the Capital City of the Province of *Fars*, situated at the Foot of a most pleasant Mountain, upon the River *Sendimir* (heretofore called *Araxes*) which discharges itself into the *Persian* Gulph. This City lies in 29° 36'. It contains about 10000 Houses; but the Ruins of a great Wall, at two Miles distance from the City, shew its Extent to have been much larger than it is at this Time. It may be truly said, that whatever Nature is able to produce, either for Conveniency or Pleasure, is centred in this Place, and that in great Plenty; as Wheat, Oranges, Lemons, Pomegranates, Almonds, Dates, Pistachoes, &c. The Wine which grows hereabouts is the best in all *Perfia*; which being transported hence all over the Kingdom, and looked upon as the best Entertainment they can give to their Friends: This makes it to be sold at a dear Rate at *Ispahan*, where you cannot have a Pottle of good *Sibiras* Wine under Half-a-Crown. Its Taste is not unlike that of *Canary*, but is more sprightly, and has a more pleasant Flavour; this City being so much celebrated through all *Perfia* for Wine and Women.

The *Persians* are wont to say, that if *Mohammed* had been sensible of the Pleasures of *Sibiras*, he would have begged of God Almighty to make him immortal there.

The Sheep hereabouts are of an ash-grey Colour, with one white Eye, their Wool curled, and their Tails of such a Bigness as to weigh sometimes eighteen or twenty Pounds. The Woods hereabouts afford great Store of Maffick, which is gathered in Dishes fastened to the Tree, and is green at first, but afterwards turns brown. After a Stay of eight Days at *Sibiras*, I left it the fifth of *February*, and proceeded ten Leagues that Day to a *Caravanera*; the sixth I travelled seven Leagues, through very bad Roads; but the Prospect I had of the many Villages, and a vast Number of Date-trees, made me some Amends for the Toil of the Day.

The 7th I travelled ten Leagues to the little City of *Sharim*, seated in the Middle of a Date-wood. The 8th we could make no more than five Leagues, the Ways betwixt the steep Rocks on the one Side, and the Precipices on the other Side being so rough and narrow that one cannot pass them without great Danger, of which I had an Instance in my Passage, for my Horse's Hoof (which I was leading by the Bridle) being filled with Snow, he slipped and tumbled upon me, which forcing me out of the Way, I had infallibly tumbled down the Precipice, had I not by good Luck catched hold of a wild Almond-tree which stood there. I was forced to take up my Quarters that Night at a *Caravanera*, where there was not any Provision either for Man or Beast.

The 9th, after I had travelled three Leagues, I came to a *Caravanera*, where we had the Opportunity of refreshing our Horses, and having gone five Leagues more in the Afternoon, I overtook the *Armenian* Caravan; and, in their Company, rode two Leagues farther to the Village of *Berry*, near which I lodged in one of the best *Caravaneras* I met with in my whole Journey.

The 10th I travelled through very bad Ways, and came late at Night to the City of *Laar*, situated in a spacious Plain at the Foot of a Mountain. There is no Wine hereabouts, but Dates in abundance. The Air is very unwholesome here, and the Water very muddy, which breeds in them that drink it certain Worms, betwixt the Skin and Flesh, of which we shall have Occasion to speak more at large hereafter. They say that this City owns for its Founder *Pilass*, the Son of *Siroos*, whose Successor was *Gorgion Nelsch*, the first King of *Laar*, and that the thirty-second Successor was *Air Lam Khan*, who was dethroned from the Kingdom in 1607, by *Schah Abbas*, King of *Perfia*. It contains about 4000 Houses, built of Brick baked in

in the Sun, but is without any Walls or Gates. The Citadel, which is built by the *Persians*, ſince their Conqueſt, and advantageouſly ſituated upon a ſteep Rock, is very well fortified with a Rampart of Free-ſtone, and commands the whole City.

The Gaſſion at that Time conſiſted of no more than 100 Men, a ſufficient Number to defend it againſt any ſudden Attack. The Way which leads to it being cut out of a Rock, and ſo narrow, that ſcarce two Horſes can go a-breaſt; but they have a Magazine of Arms for 3000 Men: The worſt is, that the Water within the Fort being brackiſh, they muſt, in caſe of a Siege, live upon Rain-Water, which falls plentifully there at certain Seaſons, and is preſerved in Ciſterns. After a Stay of twenty four Hours at *Laar*, I was going to leave it the twelfth, but was ſtopped by the Custom-houſe Officers, who demanded half a *Tumain*, or forty-five Shillings for my Baggage; but having ſent my Letter of Recommendation from the Shah to the Governor of *Gambron*, or Commander in chief of the Citadel, he ordered my Departure without paying any thing; and I went that Day no leſs than fourteen Leagues, which great Day's Journey, together with the muddy Waters I had uſed, and the exceſſive Heat, put me into a violent Gripping and Loofeneſs, which made me continue in this little Village, in hopes of getting a Litter; but no ſuch Thing being to be had, I was forced to get upon the Sumpter-Horſe, where I had a Conveniency made to reſt my Back, and ſo continued my Journey the 9th to a large Village within twelve Leagues of *Gambron*.

The ſame Evening we met here with two *Engliſh* Merchants, one of whom was to ſucceed the *Engliſh* Director at *Iſpahan*, who not only recruited my almoſt loſt Spirits with ſome *Spaniſh* Wine, and other Refreſhments, but alſo gave me Letters of Recommendation to an *Engliſh* Merchant at *Gambron*, deſiring him to receive me into the Houſe of their Company there, and to aſſiſt me in every Thing that might conduce towards the Proſecution of my Journey to *Surat*. They continued their Journey the ſame Evening, whereas my Indiſpoſition detained me till the 22d, when I proceeded fix Leagues to a Caravanſera, where having reſted myſelf a little, till the Heat of the Day was ſome what abated, I travelled three Leagues farther to another Caravanſera, and found myſelf all that Night in a burning Fever; but there being no Stay for me here, I made the beſt of my Way to *Gambron*, where we arrived the 23d of *February*.

The *Engliſh*, *French*, and *Dutch* there, took ſuch effectual Care of my Diſtemper, which was by this Time changed into a Wood-Flux, and accompanied by a violent Fever, that I was pretty well reſtored in four Days, and found myſelf in a Condition to pay a Viſit to the Governor, unto whom I had ſent Shah *Sefi*'s Letters of Recommendation immediately after my Arrival there. He no ſooner heard of my Recovery, but he invited me to Dinner, and entertained me very courteouſly, in Company of ſeveral *Dutch* Merchants. The ſame Evening arrived at *Gambron* a Veſſel from *Surat* of ſix hundred Tuns, belonging to the Governor of *Surat*, that brought hither a certain Dowager Queen, Mother to the King of *Golconda*, who falling in Love with her Daughter, his own Siſter, would have married her; but the Mother reſuſing to conſent to ſuch an inceſtuous Match, had been baniſhed the Kingdom with her Daughter, who came along with her; and as it was reported, is to be married either to the King of *Persia* himſelf, or one of the chief Princes of the Kingdom.

5. *March* the 11th, being the *Naurus*, or New Year of the *Persians*, the Governor invited me again to Dinner upon this ſolemn Occaſion, with ſeveral *Engliſh* and *Dutch* Merchants. The ſame Day returned to *Gambron* Mr. *Chapman*, whom I had met, with the *Engliſh* new Preſident near *Laar*; he brought along with him another *Engliſh* Merchant, with whom, having contracted a familiar Acquaintance before at *Iſpahan*, I was extremely pleaſed to meet in this Place, becauſe the *Dutch*, though in outward Shew very obliging to me, had oppoſed our Negotiation at *Iſpahan*. *March* the 13th I was entreated by the *Engliſh* to take up my Lodgings at the Houſe belonging to their Company, which I did accordingly. The 21ſt, one

Mr. *Hale*, an *Engliſh* Merchant, arrived at *Gambron* with two hundred and thirty-three Bales of Silk, valued at 150,000 Piſtoles, which he had received on Account of the Moiety of the Cuſtom at *Gambron* due to the *Engliſh*, of which I ſhall give a particular Account hereafter.

The ſame Day my Surgeon died of a Fever, the Loſs of whom was no ſmall Affliction to me, he having been a great Traveller, and attained the Knowledge of the *Spaniſh*, *Indian*, *Perſiſh*, and ſome *East-India* Languages. As I was walking abroad one Day to amuſe myſelf a little with ſome *Engliſh*, I met with one of theſe Trees mentioned by *Currius*, the Branches of which ſpring out of the Trunk of the Tree, and bowing down to the Earth, had taken Root there, and growing up aſreſh, had produced a new Tree fifteen or twenty Foot high, which caſting forth other Branches in the ſame manner as before, made rather a ſmall Foreſt than a Tree; that which I ſaw being two hundred and fourteen Paces in Circumference, capable of affording Shelter for two thouſand Perſons. The *Portugueze* call it *Arbo de Reis*, and it is generally known by the Name of the *Indian* Fig-tree, by reaſon of its Fruit, which in Bigneſs, and the Abundance of its Grains, reſembles that Fruit; but its Taſte is more unſavoury, luſcious, and its Colour red; the Leaves of the Tree are like thoſe of Quince Trees.

Near the Head Trunk of this Tree we ſaw a ſmall Chapel, and within the Sepulchre of a certain *Banjan*, we found the Tomb ſtrewed all over with Beans of divers Colours, and ſeveral Lamps, which burn Night and Day, hanging over it under a Canopy. Theſe *Banjans* according to the Opinion of *Pythagoras*, that the Souls of the deceaſed retreat into Beans, which Opinion is generally received among the *Pagans* both in the *Indies* and in *China*. Of the Religion of theſe *Banjans* we ſhall have Occaſion to ſay more hereafter. The Guardian of the Sepulchre treated us with ſome Almonds, Nuts, and Dates. An Envoy from Shah *Sefi* being come to *Gambron* to aſſure the Governor of the Continuance of his Favour, I, in Company with ſeveral *Engliſh* and *Dutch* Merchants, invited for that Purpose by the Khan, ſaw him go unarmed a Mile out of the City, where meeting with the ſaid Envoy, he received the King's Letter, the Garment, and Turbant, with a great deal of Submiſſion.

6. The City of *Gambron*, or rather *Bandar Gambron*, i. e. the Port of *Gambron*, is by the *Persians* and *Arabians* put at 25°, but erroneouſly; its true Latitude, according to the Computation of the *Hollanders*, whoſe Footſteps we follow in this Point being 27°, moſt of the Maps of *Persia* being hitherto very defective, which proceeds from hence, that by placing the *Caffian* Sea too high, they extend the Breadth of *Persia* from North to South, beyond its true Bounds; for they put the City *Reſeb* at 41°, whereas it is in 37°; ſo that the whole Breadth of *Persia* from *Gambron* to *Reſeb* is no more than ten Degrees, which plainly ſhews the Miſtake of *Baterus*, who makes the Extent of *Persia* eight Degrees, whereas, if according to their own Computation, we ſhould grant *Ormuz* to be in 25°, the Breadth of *Persia* could amount to more than 12 Degrees.

It is not many Years ſince this City was a mere Village, inhabited by a few Fiſhermen; but ſince the Reduction of *Ormuz*, the *Engliſh*, *Dutch*, and *Indian* Ships have found out the Conveniency of this Harbour, and the Traders of *Iſpahan*, *Surat*, and *Laar*, bring thither their Silk, and other Manufactures, which they exchange for *European* and *Indian* Commodities. Its Situation is upon the *Persian* Gulph. The Entrance of the *Harvyn*, in which Ships may ſafely ride at Anchor without the leaſt Danger, in five or ſix Fathom Water, being defended by two ſtrong Caſtles, and a ſquare Redoubt. The Cattle is fortified with ſome old round Ballions, but well provided with Artillery. The Houſes of *Gambron* are of Brick, made of a Mixture of liſt Clay, and chopped Straw, and Horſe-dung, whereof having ſet one Layer, they cover it with a Layer of Straw, or Faggots, and ſo alternately, till they have raiſed it to ſix or ſeven Foot high; then they ſet it on Fire, and burn it to Brick. Their Mortar is a Compoſition of the ſame Ingredients, mixed with Salt-water, and ſome Lime, which very ſoon becomes as hard as the Brick itſelf. The Houſes of Note are the Sultan's Palace, an old Ware-houſe,

where

arrived at *Gambron* with
les of Silk, valued at
received on Account of
ron due to the *English*,
Account hereafter.

d of a Fever, the Loss
to me, he having been a
knowledge of the *Spanish*,
Languages. As I was
myself a little with some
Trees mentioned by *Q*,
ing out of the Trunk of
e Earth, had taken Root
d produced a new Tree
hich casting forth other
s before, made rather a
which I saw being two
circumference, capable of
d Persons. The *Portu*-
s generally known by the
reasion of its Fruit, which
us Grains, resembles that
slavory, delicious, and its
Tree are like those of

Tree we saw a small Cha-
of a certain *Banjan*, we
with Beans of divers Co-
h burn Night and Day,
y. These *Banjans* adhere
as, that the Souls of the
h Opinion is generally re-
n the *Indies* and in *Cena*.
we shall have Occasion to
ian of the Sepulchre treat-
s, and Dates. An Envoy
Gambron to assure the Go-
s Favour, I, in Company
Merchants, invited for that
go unarmed a Mile out of
the said Envoy, he received
and Turbant, with a great

er rather *Bandar Gambron*,

egrees, which plainly shews
makes the Extent of *Persia*
according to their own Com-
az to be in 25°, the Breadth
e than 12 Degrees.

his City was a mere Village,
but since the Reduction of
d *Indian* Ships have found
Harbour, and the Traders of
ing thither their Silk, and
y exchange for *European* and
uation is upon the *Persian*
Harv, in which Ships may
the least Danger, in five of
ended by two strong Castles.
Castle is fortified with some
rovided with Artillery. The
Brick, made of a Mixture of
w, and Horse-dung, whereof
ver it with a Layer of Straw,
y, till they have raised it to
they set it on Fire, and burn
a Composition of the same
water, and some Lime, which
the Brick used. The Houses
alace, and the Water-houses, where

where the *English* and *Dutch* are lodged, which are so near
the Sea-side, that at High-Tide the Water comes up to
the very Walls of them. The lower Rooms being em-
ployed for the laying up of their Merchandize, and the upper
for Lodgings, being the most convenient for the free Pas-
sage of the Air. The poorer sort cover their Houses only
with the Sprigs and Leaves of Date-Trees.

The Streets of this City are very narrow, irregular, and
not kept clean, which, together with the excessive Heat of
the Climate, and the Changeableness of the Winds, ren-
ders the Air very pernicious here: For, in the Morning
they are sufficiently sensible of a cold East Wind, which to-
wards Noon changes to the other Extrem, viz. a very hot
South Wind. The waste Wind, which blows towards
Night from the Sides of *Arabia*, continues the Heat of the
Day till Midnight, when a cold North Wind coming from
the Mountains, introduces a sudden Alteration. Besides
this, it rains so seldom here, that in 1632 they ordered a
publick Thanksgiving for a plentiful Shower of Rain, after
a continual Drought for three Years.

This is the Reason that all about the City you see no
Grass, or other Herbs, except what is produced with in-
credible Labour in some Gardens, where they have Gar-
lick, Onions, Chibols, Radishes, and Cucumbers; but
these must be watered twice or thrice a Day. It is the Isle
of *Kismisk* which chiefly furnishes this City with Pulse
and Fruits; it lies three Leagues from *Gambron*, being fif-
teen Leagues in Length, and three in Breadth. In *June*,
and the rest of the Summer Months, this Island produces
Grapes, Damfins, Peaches, Mangoes, Quinces, Oranges,
Lemons, and Pomegranates, both red and white: And in
October, Melons, Citrons, Cucumbers, Radishes, Onions,
Turnips, Almonds, Pistachoes, Apples, Pears, and divers
other Fruits, and that in such Quantities, that they are sold
here at an easier rate than at any other Place in *Persia*;
whence it comes, that the Inhabitants feed for the most part
on Pulse, Fruits, and what Fish the neighbouring Sea fur-
nishes them with, the Meat hereabouts being, by reason of
the excessive Heat, not very well tasted, and of little Nou-
rishment, though otherwise they have sufficient Store of
Cattle, such as Oxen, Cows, Sheep, but especially of
Goats, which are sold at the rate of six or eight Shillings
apiece. They have here also a kind of Rams with four
Horns, but no wild Fowl. Amongst other Fish, Pilchards,
Smelts, Oysters and Crabs are caught here in vast Quan-
tities. Their ordinary Drink is fair Water, which being
brought to the City two Leagues Distant, is very dear
sometimes; they drink also Arrack, or strong Water, made
of Rice or Dates.

Persons of Note, and the best Merchants, have their
Cloaths made after the *Persian* Mode, but the common
People take no more Care than to cover their Privities.
The Women look upon it as their chief Ornament to have
many Rings of Silver, Brads, or Iron, according to their
respective Abilities, about their Arms and Legs. To their
Hair, which hangs down over their Foreheads, they fasten
a kind of Bockin of Silver, gilt, or Brads, and wear in
the left Nostril of their Nose a gold Ring, with a Tur-
quoise, a Granate, or perhaps only a gold Knob enamelled
or plain. Their Pendants are so weighty, as to draw their
Ears down almost to their Shoulders. Their winter Sea-
son being from *October* to *May*, when the Heats are less
violent, this is their chief Time for trading, when the *Pers-*
fians, *Arabians*, *Banjans*, *Armenians*, *Turks*, and *Tartars*,
come hither with the Caravans, which set out at certain
Times from *Aleppo*, *Bagdat*, *Isfahan*, *Shiras*, *Labor*, *He-*
rat, and *Bajfara*, under the Convoy of certain Guards.

The *English* and *Dutch* commonly come hither by Sea,
and besides their ready Money, bring diverse Commodi-
ties both out of *Europe* and the *Indies*, which they ex-
change for *Persian* Tapeltry, raw Silk, Cotton, Rhubarb,
Saffron, and Rose-water, which is made in vast Quantities
about *Shiras*, either by Infusion, which they call *Gullab*,
and look upon it as the best, or by Distillation, and this
they call *Arcka-gull*, i. e. the Sweat of Roses: Both Kinds
are much used all over the *Indies*; where they mix it with per-
fumes, and they use it to sweeten their Rooms with it. Here
are also Abundance of Callicoes made in portable Looms,
which the Weavers fasten to a Tree, or some other Place

without the City, and having finished their Day's Work,
carry it Home again, without any Trouble, being compo-
sed only of Canes fastened to the Woof of the Cloth.

They have here a certain copper Coin which they call
Bejorg, six whereof make a *Pays*, ten *Pays* a *Cbay*, which
is equivalent to Five-pence *English*; two *Cbays* make a
Mamoudy, two whereof make an *Abas*, and three *Abas*'s a
French Crown; an hundred *Mamoudys* make a *Tumain*,
which is worth five *French Pistoles*; but *Spanish Rials*
and *Rix-dollars* are preferred before all the other Coins in
Persia, by reason of the vast Advantage they make of
them in melting them down. As to their Weights, a
Man is six Pounds, a *Mancha* twelve, and the *Manjurats*
thirty Pounds.

The Pearl Trade is also one of the greatest in *Gambron*,
and is carried on near the Isle of *Babram*, six Leagues from
the City. The Fisherman's Head is inclosed in a Bag of
oiled Leather, which has a Pipe reaching up above the
Water to fetch Breath through; he rakes together all the
Shells he can meet with at the Bottom, and having filled
his Bag, which hangs about his Neck, at a certain Signal
given by him, he is drawn up into the Boat, which is wait-
ing for that Purpose.

The Governor of *Gambron* has the Dignity of a *Sultan*
annexed to his Office, and has under him a *Vizir*, or Se-
cretary, and a *Couteval*, or Captain of his Guards; be-
sides these, there is a *Sabandar*, or a Receiver of the Cus-
toms; tho' the *Hollanders*, pursuant to a Privilege grant-
ed them by *Shah Abas*, pay none, and the *English* are so
far from paying any Duty here, that they ought to have
a Moiety of all that is received, but are forced to be
contented with about a tenth Part, the *Persians* thinking it no
Crime to defraud Strangers, especially if they be *Christi-*
ans, when their Prince's Interest is concerned. As the
Persian Horse are incomparably better than the *Indians*,
the *English*, as well as the *Dutch*, pay fifty Crowns Cust-
tom for every Horse they export. However, the *English*
have the Privilege of transporting twelve Horses yearly,
without paying any Custom for them, an indifferent *Pers-*
ian Horse being worth 400 Crowns in the *Indies*. The In-
habitants of *Gambron* are, generally speaking, *Persians*, *A-*
rabians, and *Indians*, who all speak the *Portuguese* Lan-
guage, which was introduced into those Parts whilst the
Portuguese were Masters of *Ormuz*; tho' ever since the
Conquest of it by the *Persians*, they are not permitted to
come to *Gambron*, which is open to all other Nations,
Christians, *Jesuits*, *Pagans*, and *Mohammedans*, being per-
mitted to trade here, which is the Occasion they live in
open Hostility with the *Persians*; take their Ships as Prizes,
and frequently land in the neighbouring Islands: Unto one,
which is about three Leagues off the Continent, the King
of *Spain*'s Subjects are permitted to come and traffick,
paying certain Duties to the Governor of the Castle that
commands the Island.

7. The City of *Ormuz* was seated in an Island of the same
Name, about two Leagues from the Continent, and six
Leagues in Circumference, being composed of nothing
but salt Rocks, not producing the least fresh Water, but
it was the Advantage and Goodness of its Harbour and Situa-
tion, which made it so famous for Commerce, that it was
a Proverb among the *Arabians*, that if the World were a
Ring, *Ormuz* ought to be considered as the Diamond.
According to *Tesira*, *Shah Abas*, a Native of *Arabia*,
having in the tenth Century made himself Master of the
Provinces bordering upon the *Arabian* Gulph, passed over
into the Island, where he built the City of *Ormuz*. *Sba-*
bedin *Mohammed*, of the Posterity of *Mohammed* the 11th
King of *Ormuz*, died 1228, and he who reigned in 1608,
when it was conquered by the *Portuguese*, was named *Saf-*
sedin, a Tributary to the King of *Persia*.

For *Albuquerque* having been sent to visit the Coasts of
Arabia, being informed that the People of *Ormuz* lived
in no good Understanding with their King, by reason of
the Mismanagement of his chief Minister, came the 25th
of *September* before the City; and after having defeated
their Fleet, obliged the King of *Ormuz* to acknowledge
the King of *Portugal* for his Sovereign, to pay a certain
Tribute, and permit *Albuquerque* to build a Citadel where
he should think it most proper, which was performed ac-
cordingly.

condingly, and the Chapel called *Our Blessed Lady of Victory*. The *Moors*, soon after repenting of their Bargain, made several Efforts to rid their Hands of these unwelcome Guests; but they being constantly upon their Guard, not only frustrated all their Designs, but also engrossed all the Commerce of those Parts to themselves, only permitting *Saffeddin* to live in the Isle, at a good Distance from the Citadel. *Shah Abbas* being provoked by their Insolence, and especially by their having given Protection to a certain *Italian*, named *Gabrieli*, who was fled out of *Persia*, engaged the *English* to join with him in reducing this Place, which was attacked and carried in 1622, and put into the Hands of the *Persians*; the Wall of the City being demolished, and *Gambren* raised upon the Ruins of *Ormuz*.

The *English*, as a Reward for their Service, had not only an Exemption from all Duties granted them at *Gambren*, but also a Moiety of all the Customs that should be received there. By this Time an *English* Ship, called the *Swan*, Burthen 300 Tuns, carrying twenty-four Guns, being arrived in the Harbour of *Gambren*, bound for *Surat*, Mr. *Heywood*, the chief Agent for the *English* Company, recommended me to the Captain, to carry me, and delay all my Charges thither; but what proved very vexatious to me was, that out of eight Horses which I had brought along with me, and could have sold for an hundred and fifty Crowns a-piece at *Surat*, I could carry no more than two, being obliged to sell the rest at *Gambren* for half what they cost me.

I embarked the 6th of *April* with Mr. *Manley* and Mr. *Hall*, two *English* Merchants, and went from *Gambren* to *Surat* in thirteen Days; during which Time I was very civilly entertained by the Captain, who resigned his own Bed to me, and being very plentifully provided with Fowl, Mutton, good Sack, *English* Beer, *French* Wine, and other Refreshments: This with the Use of a Puffin made of Cinamon, and the Rhind of Pomegranates, and of a good Quantity of Tea, restored me to perfect Health. The Wind proving contrary that Day, we were obliged to lie at Anchor till the next, when we took our Course towards the Isle of *Ormuz*; but, being surprized by a Tempest from the West, were forced to come to an Anchor in Sight of this Island. The 8th we endeavoured, by labouring with a West-Wind, to pass between the Isles of *Ormuz* and *Kismiseh*, which are four Leagues distant from each other. The same Day one of our Seamen, who died of the Bloody-flux, being thrown over-board, and I being as yet afflicted with the same Distemper, the Sight of it caused very melancholy Speculations in me. The next Night having passed between the two Islands, we coasted it along the Sea-Shore of *Arabia*, which is very safe thereabouts.

The 10th being in the open Sea, we discovered a Pirate, who sometimes came pretty near us, but finding we endeavoured to get the Wind of him, he made towards the Isle of *Secestra*, situate in 21° 40', at the very Entrance of the Red-Sea. To the W. and N. E. it has *Alchinda*, or *Ethiopia*, and to the S. the Continent of *Arabia*, from whence it is not above sixteen Leagues distant. Its Length is about twenty-five Leagues, and the Breadth ten, having very good Harbours and safe Anchorage on all Sides. The Inhabitants, who are governed by a Sultan, under the Jurisdiction of a King of *Arabia*, are of a mean Stature, enclining to Leanness, of a black Complexion, but very hardy. They feed chiefly upon Fish and Fruits; they live very friendly with their Wives, who are chiefly *Arabians*, but do not permit them to be seen by Strangers. As they are very crafty in their Dealings, and adulterate these few Commodities they have, so they are always mistreated of others. They use the Pulse of Dates instead of Bread. The Island affords some Oranges, but none of the best; Tobacco and Citrus, as also some Cocoa-Trees, but the Fruit seldom comes to Maturity, by reason of the fenny Grounds. Their chief Commodity is Aloes, the Juice of which is gathered in Bladders, or Goat-skins dried to the Sun. They are also well stored with the Gum called *Dragon's-Blood*, and keep abundance of Civit-Cats; so that Civit may be bought there for three or four Crowns an Ounce; but the worst is, that they adulterate it with Claws. They have no wild Fowl, and but very little

tame; yet are not destitute of Cattle, such as Camels, Asses, Oxen, Cows, Sheep and Goats, the Hair of which about the Thighs are curled as our Satyrs are painted.

The Residence of the Governor is called *Tamay*, being defended by a Fort not above a Cannon-shot from the Sea-side. They make use of Broad-swords with large Hilt, without a Guard. Their Pointards, which they wear constantly on their Girdles, have Blades of near three Inches broad near the Hilt, but very sharp towards the Points. They also understand the Management of Firearms, but don't keep them well; and are very expert in the Use of their small B. kles, wherewith they defend themselves against their Enemies. They have no other Shipping than a few flat-bottomed Fishing boats. The Torrents which fall down from the Mountains into the Sea, like a River, furnish all the Ships that come into that Road with sufficient Quantities of fresh Water. They eat no Swines Flesh any more than other *Mohammedans*, but have no Mosques, or any other publick Places of Devotion, which consists chiefly in adoring the Sun every Morning, and at the rising and setting of the same, which they repeat three or four Times a Day, besides muttering out certain Words as they make their Reverence.

The 14th of *April* we were in 23° 24'; the 15th at 22° 40', and the 16th at 22° 40'; the 17th at 21° 55', when our Captain fell sick of a Fever. The 18th at 21° 8'; the 19th at 20° 42'; the 20th at 20° 50'; the 21st 20° 50'; the 22d at 20° 18', and the 25th arrived safely in the Road of *Surat*, where we call Anchor within two Leagues of the Shore, because the Captain not intending to stay here, would be sure of the Convenience of going away when he pleased; besides, that from *May* to *September* there is no safe riding at Anchor in this Road, by reason of the frequent Tempests; whereas on the Eastern-Coasts of the *Indies*, in the Gulph of *Bengal* the Season is very fair and calm all that Time; for, it is to be observed, that the Year here has only three Seasons. In the Months of *February*, *March*, *April*, and *May* it is excessive hot; in *June*, *July*, *August*, and *September*, there is nothing else but Rain, with Thunder and Lightning; and the Months *October*, *November*, *December*, and *January* are cold, as far as is consistent with that Climate.

9. *April* the 26th the Captain having sent Advice of his Arrival, the chief Director of the *English* Company at *Surat*, sent two young Merchants on Board to desire us to come to *Surat*; so that after having testified my Acknowledgements to him for his many Civilities by a small Present, I left the Ship the 29th, and no sooner entered the River *Tape* or *Tynde*, upon which *Surat* lies, but we had a very agreeable Prospect to many pleasant Gardens and Summer-houses all white, and surrounded with green Trees. It is so shallow at the Entrance, that it will scarce carry a Bark of seventy or eighty Tun. We landed near the Sultan's Palace, and from thence went straight away to the Custom-house to have our Things searched, which is done with so much Rigour here, that they spare not your Cloaths or Pockets; and what is worse, the Sultan, nay, and chief Custom-house Officers have a Custom to oblige Strangers to part with any thing they like best at such a Price as they please; accordingly the Sultan having seen an Amber-bracelet and a Diamond among my Things, would needs cheapen them both; but I telling him that I was no Merchant, and intended not to sell them, but to keep them for the Sake of those who had presented them to me, I saved my Diamond, but he would needs take the Bracelet, under Pretence that he would restore it to me whenever I should honour him with a Visit.

By this Time the *English* Governor, having sent his Coach, drawn by two white Oxen, I went to the House belonging to their Company; at the Entrance of which I was received by the Director himself and his Deputy, one Mr. *Fleming*; As the Director understood *Dutch* very well, he accosted me in that Language, telling me, that in such a Country as this, he thought all Christians were obliged to give Assistance one to another; but that to me he was obliged to do it more particularly, in return for the Affection I had expressed to some of his Countrymen at *Japahan*. Having returned the Compliment, I was conducted into a Room where a Collation was ready for me,

we were no sooner sat down, but having understood my Intention was to return to *Germany* within twelve Months, he invited me very engagingly to stay with him five or six Months, because no more Ships would come into that Road this Year, advising me to spend what Time I had in viewing the Country, and offering his Recommendation to the *English* Merchants living in those Places thro' which I was to pass.

His engaging Expressions obliged me to choose my Chamber in the same House next to that of the Deputy's; in the Evening several Merchants came thither to conduct me to Supper in a spacious Hall, where I found the Minister and about twelve Merchants more. After Supper the Minister brought me into an open Gallery, where we found the Director and his Deputy taking the Benefit of the cool Breezes of the Sea-Air, which was our ordinary Rendezvous after Supper. At Dinner we had commonly fifteen or sixteen Dishes, besides the Defeat. Every thing was carried on in this House with extraordinary good Order and Decorum. We had Prayers every Day twice, and three Times on *Sundays*. On *Fridays*, after Evening Prayers, we had a certain Club, where we drank our Wives and Friends Healths beyond the Seas in Sack or Punch, being a Mixture of *Aqua Vitæ*, Rose-water, Juice of Citrons and Sugar. At our ordinary Meeting we, as well as the *Dutch*, were entertained with Tea, instead of which the *Persians* use Coffee.

The *English* have a very fair Garden without the City, where we used to take a Walk on *Sundays* after Sermon, and sometimes on other Days. Our Exercise was Shooting at the Butt; and I made a shift to get near five Pounds Sterling a Week among them. We seldom went away without a good Collation, and often bathed ourselves in a Cistern which had five Foot Water. My chief Affliction was, that not understanding the *English* Tongue, I could not converse with any of them to my Satisfaction, except with the President, who spoke *Dutch*. But before I proceed to give you any farther Account of what I observed at *Surat*, and in my Voyage, it will not be beyond my Scope to give you a short View of the Mogul's Country.

10. The Country which properly challenges the Name of *India* (called *Indestan* by the *Persians* and *Arabians*) begins on the West-side from the River *Indus* or *Hindo*, and reaches to the River *Ganges*. It was known among the Ancients by the Name of *Carmania*, and it hath a Haven called *Gueder* in 25°. The *Persians* and *Indestans* themselves have given the Name of *Pangab*, i. e. five Waters, to the River *Indus*, because it is joined by so many Rivers before it discharges itself into the Sea. The first is the River *Buzal* or *Begal*, whose Source is near *Kabul*; the second is called *Chanab*, which rises in the Province of *Qujmir* or *Caljmer*, sixteen Days Journey to the North above *Labor*; the third is that of *Raty* or *Ravee*, which rises not far from *Labor*, and runs by it; the two others, viz. the Rivers *Via* and *Ojail*, have their Sources at a vast Distance, their Confluence being near *Bakar*, which lies at an equal Distance betwixt *Labor* and the Sea. Some Authors have confounded this River with that of *Diul*, and placed it at 24°. The vast Empire of the Great Mogul borders to the East upon the Kingdom of *Mavy*, to the West upon Part of *Persia*, and the South-Sea; on the North-side; it is enclosed by Mount *Caucasus* and *Great Tartary*; and to the South it has the Kingdom of *Decan*, and the Gulph of *Bengal*. It comprehends in all thirty-seven Provinces, which anciently were as many Kingdoms. The Province of *Candabar*, which has given its Name to the Capital City, borders upon *Persia* as the Province of *Cabul* has received its Name from its Metropolis, and borders upon *Great Tartary*. Here rises the River *Begal*, of which before.

The Province of *Mahan*, with its chief City of the same Name, extends along the River *Indus* to the East, as the Province of *Alaca-Cban*, or *Hangi-Cban*, has the same River to the West. *Bachar*, or *Buchar*, lies on both Sides of the River *Indus*. The Province of *Tatta* is a Congeries of many Islands made by the same River. *Sot* is a small Province extending from the Sea-side to the East, as far as the Province of *Guzarat*. The Province of *Silmere* is enclosed betwixt the Provinces of *Serat*, *Ba-*

ebur, and *Tatta*. The Province of *Attaeb* is seated upon the River *Nihal*, and is by it divided from the Province of *Alaca-Cban*; that of *Pangab* is the Chief of all the Kingdom: Its capital City is *Labor*. The Province of *Chifmer*, or *Quexmer*, lies upon the River *Bezai*, or *Badi*, which after it has made a vast Number of Islands in this Province, joins its Current with the River *Ganges*. The Province of *Bankisb* borders to the East upon that of *Chifmer*, and the Province of *Jengopar*, or *Jemipar*, lies between the Cities *Labor* and *Agra*. The hilly Province of *Jenba*, or *Jamba*, borders to the West upon that of *Pangab*. The Province *Dally* lies between that of *Jenba* and *Agra* on the River of *Gemini*, which falls into the *Ganges*; the capital City bearing the same Name with the Province, was formerly the Metropolis of all *Indestan*. The Province of *Bando* lies on the West-side of the City of *Agra*.

The Province of *Malwey*, or *Makwa*, has for its capital City *Katapore*, within half a League of the River *Cepra*, which falls into the Sea in the Gulph of *Cambuja*. The Province of *Chiter* borders to the East upon that of *Candisb*, and to the South upon that of *Guzarat*. It was formerly a very flourishing Kingdom, its Metropolis bearing the same Name with the Province, being sixty Leagues in Compass, which was laid desolate by the Great Mogul *Acobbar*, Great-grandfather of *Shah Chiram*. The Province of *Guzarat* (called *Cambaja* by the *Portuguze*, from its capital City) where they drive a considerable Trade, is one of the noblest and most powerful Provinces in all the Mogul's Country. The Province of *Candisb*, the Metropolis whereof is *Bursampour*, or *Brampour*, is divided into the Country of the Prince of *Partappa*, a Vassal of the Great Mogul, by the River *Tabet*, or *Tapte*, which disembogues in the Gulph of *Cambaja*. The Province of *Berar* extends to the South to *Guzerat*, and the Mountain of *Rana*.

The Province of *Gualor*, or *Guallar*, is famous for the Tower, or Castle, whither the Mogul commonly sends his Prisoners of State, and lays up Part of his Treasure. The Province of *Agra*, and its Metropolis, claims now the Precedency before all the rest. The Province of *Sambel*, or *Sandel*, is divided by the River *Gemini*, which falls into the *Ganges* near that of *Narwar*. At the Confluence of these two Rivers, near the City of *Hallebas*, they make a kind of Isle, which has given the Name of *Deab*, i. e. *inter aquas* to this Province. The Province of *Baker* extends along the western Bank of the *Ganges*, as that of *Narwar* is divided by a very large River, which joins its Current with the *Ganges*. The Province of *Nagrakut*, or *Nakarkut*, is one of the most northern Provinces in the Mogul's Dominions; its chief City bears the same Name, where, in a sumptuous Chapel, the Floor covered with Plates of Gold, is kept the Figure of a Monitor called *Matta*, unto which the *Indians* who flock thither from all Parts, offer a little Snip which they cut out of their Tongues. Near the City of *Kalamaka*, belonging to the same Province, arises a certain Spring out of the Rocks, which casts forth Flames, and for that reason is revered by the Pilgrims that come thither from all Parts. The Province of *Siba* is famous for the Source of the River *Ganges*. Both this and the Province of *Makarkut* are very mountainous, as well as that of *Kakores*, which is divided from *great Tartary* by the Mountain *Caucasus*.

The Province of *Gor*, which is also very mountainous, gives its Rise from the River *Derselis*, which joins its Current with the *Ganges*, as does the River *Kaula*, which divides the Province of *Pitan*, or *Partan*, bordering upon the West upon that of *Jamba*. The Province of *Kandua-na*, which, together with that of *Gor*, are the most northern Provinces of the Mogul's Dominions, extends on both Sides of the River *Inderalis*, the Province of *Perrena* being enclosed between the four Rivers of *Ganges*, *Per-solis*, *Gemini*, and *Kandaeb*, is very fruitful. That of *Jewal* is famous only for its City called *Rejapour*, or *Rejapor*. The Province of *Meuat*, a barren Country, extends from the *Ganges* to the East. That of *Voelja*, or *Vezea*, is the uttermost Province in the East. The Province of *Bengal*, which imparts its Name to the Gulph in which the *Ganges* exonerates its Waters, challenges the first Place among all the rest under the Mogul's Jurisdic-

tion. It is subdivided into several Provinces, the chiefest of which are *Pala*, and *Palan*, which have formerly been dignified with the Title of Kingdoms. *Texeira* mentions a certain Province called *Utrat*, but gives us no more than the bare Name; and what he says of the Kingdom of *Caebe*, viz. that it lies near *Cambaya* to the North, and is famous for the excellent Breed of Race-horses it produces, can be understood of no other than the Province of *Candisck*.

The whole Extent of the Mogul's Territories is from East to West 600 French Leagues, and from North to South 700, its uttermost Frontiers to the South being at 20°, and to the North 43°. The Province of *Guzarat* lies Westward along the Sea-side, in the Form of a Peninsula, having on each Side a Gulph, or Bay, one whereof is eight Leagues broad at the Entrance, and grows narrower and narrower for forty Leagues. Thence it is bounded to the North by the Provinces of *Serat*, *Quisner*, and *Bando*, to the East by those of *Chitor* and *Banab*, and to the South by the Kingdom of *Decan*; tho' its Extent was much larger formerly, yet does it comprehend above 20,000 Cities, Towns and Villages, the chiefest whereof lying near the Sea-side, are *Surat*, *Kroitchia*, *Gandee*, *Goga*, *Cambaya*, *Diu*, *Patapatan*, *Mangelor*, *Gondere*, *Nassary*, *Gandree*, and *Balfara*. It has three noted Rivers, viz. the *Nalabat*, which passes near *Braitsebia*, the *Tapta*, and the *Wafet*; two of the best Harbours of the Indies, viz. that of *Surat*, and of *Cambaya*. For Fertility this Province may also challenge the Precedency before any of the Indies, most of the adjacent Provinces being supplied thence with Fruits and Provisions. Tho' the great Drought in 1640, and the ensuing Rains did almost lay this Province desolate, which however it has sufficiently recovered since; but it is Time to return to our Relation.

11. The *Persian* Servant, whom I had brought along with me from *Isaban*, being born of Christian *Georgian* Parents, had given me some hopes of returning to the Christian Faith, which was the Reason that I treated him with more than ordinary Civility, and allowed him four Crowns Wages per Month; but I was much surprized to understand that the young Fellow, in hopes of getting better Preferment by the Assistance of an Uncle of his, who was Master of the Horse to the Great Mogul, was gone to *Agra*, and could not but be persuaded that his Intention of leaving me thus on a sudden, was in part to betray me into the Hands of the *Indians*, he being not ignorant of what had happened betwixt them and our People at *Isaban*; but I had afterwards great Reason to admire God's Providence in sending him, as it were, on purpose thither to save me; for without him I had certainly been lost at *Agra*, as will appear by the Sequel of this Relation.

In *May* we received News that the Khan of *Candabar* had revolted, and surrendered the Place to the Mogul, who had sent five hundred thousand Crowns as a Reward for him and the Garrison. *June* the 16th we went a Hunting with a *Dutch* Merchant, and another *Englishman*, cross the River to a Place called *Rental*, where the *Dutch* have a Warehouse, and being nobly treated there that Night, went the next Day to a Village called *Bodick*, where we killed divers wild Ducks, and a *Hern*; we saw also a great Number of Deer with gray Skins, but chequered all over with white Spots. Their Horns very fair, and had several Brow Antlers; some were shining to a dark brown, chequered likewise with white Spots, with very fine Horns, and of the Bigness of our Roe-bucks; some are of Opinion, that they are of the kind which produce the *Bezoar*.

All the Fields have a small *Dike* raised about them here to keep in the Water, the Rice requiring abundance of Moisture. Here we also drank some Liquor they draw out of the Palm-tree, by making an Incision in the Bark on the Top of the Tree, unto which they fasten an Earthen Vessel, into which the Liquor distils; it is very sweet, but soon turns sour.

The City of *Surat* lies in 21° 42' upon the River *Tapta*, which arising near *Barampour*, falls into the Sea four Leagues below *Surat*, which is built four-square upon the very Banks of the River. It has no Fortifications on the River Side, but is provided with a good Stone Rampart on the Land-side, and the Castle is all of Free-stone. It has three Gates,

one leading to the Village of *Briou*, the second to *Barampour*, and the third to *Nassary*. All the Houses are flat on the Top, and have generally good Gardens. The Castle has no more than one Gate, which looks into the Great Market-place; not far thence is the Governor's Palace, and the Custom house. The Governor of the Castle has not the least Dependance on the Sultan, whose Business is the Administration of Justice, and to look after the Customs. All Merchandizes exported or imported pay three and an half per Cent. here, except Silver coined or uncoined, which pays no more than Two per Cent. Both the *English* and *Dutch* have very fair Houses called Lodges, well provided with Chambers, Halls, and Galleries.

The Harbour of *Surat* is about two Leagues from the City, near the Village of *Subaby*, where Ships are unladen, and Commodities brought thence to *Surat* by Land-Carriage. The Haven lies in 21° 50' upon the Course of North-East and South-West; the Entrance is narrow, and at high Water not above seven Fathom deep, at low but five: The Harbour itself being not above five hundred Paces broad, a sandy Bottom, with sharp and steep Banks, which are almost dry at low Water; it is, however, safe anchoring here, there being no Danger but from the South-West Wind, except from *May* to *September*, when there is no staying here by reason of the furious Tempests. Most of the Inhabitants of *Surat* are either *Banjans*, *Bramins*, or *Moguls*; the last are more respected than the rest, as being *Mohammedans*, and because they always apply themselves to Arms, as on the contrary, the *Banjans* make Traffick their chief Business, and are much addicted to Religion, of whom we shall have occasion to say more hereafter.

Besides these, some *Arabians*, *Persians*, *Armenians*, *Turks*, and *Jews*, are Inhabitants here, but the most considerable of all Foreigners here are the *English* and *Dutch*, who have their Settlements, Directors, Merchants, and Clerks; especially the *English*, who have made this the chief Place of their Trade in the Indies. All the other Factories they have at *Agra*, *Isaban*, *Muslipatan*, *Cambay*, *Amalabat*, *Brodra*, and *Braitsebia*, having a Dependance on that of *Surat*, and are obliged to be accountable to their chief Director residing in this City; and there is scarce an *English* Ship, which either going, or coming into these Parts, does not touch at *Surat*. The Country round about this City is very delightful, being adorned with a vast Number of Gardens and Fruit-trees, and among the rest, I observed hereabouts one of those Trees, the Branches of which take Root afresh in the Ground mentioned in the Description of *Gambraon*. Among other things, I saw a large Cistern of Free-stone, eight square, having at each Angle a Pair of Stairs, and in the middle of it a most sumptuous Sepulchre, in which the Founder is buried; this Cistern is so large, that it supplies the whole City with Water.

About the 12th of *September* then the Tempest began to cease, two *English* Ships arrived in the Port of *Surat*, called the *Discovery*, and the *Mary*, the first 1600 Tuns Burthen, 28 Guns, and 190 Men; and the second of 1200 Tuns, carrying 48 Guns. We were very generously entertained aboard them for eight Days together, our constant Employment being to go ashore every Day a Hunting, and to return on Board at Night. The 24th of the same Month arrived two other Ships, one a *Dutchman* of 1400 Tuns, bound from *Batavia* to *Holland*, the other an *English* Vessel called the *Swan*. We were likewise very generously entertained on Board them, the *Dutch* Vessel being both the biggest and the best contrived of any Ship that ever came out of *Holland*; with these, and such like Diversifications, I passed my Time pleasantly enough at *Surat*: But understanding it would be several Months before the *English* would be ready for their Departure, I resolved to take the Opportunity of a certain Caravan, sent by the *English* to *Amadabat*, under a Convoy of some *English* Soldiers, to take a View of the Great Mogul's Court.

12. Thinking myself thus sufficiently guarded against the *Rajahpoots*, I left *Surat* the last of *September*, and joining with the Caravan, we took our Way towards *Braitsebia*, crossing the River at the Village of *Briou*. Four Leagues thence, we passed by *Cattobera*, and afterwards by *Lurechijer*, where we killed abundance of wild Ducks,

and other Water Fowl, as also Roe-bucks, Deer, and wild Boars being in such Plenty thereabouts, that one need not be long in want of Provisions, especially at this Time, when we had a good Cook along with us. Before we came to *Broischia* we crossed a deep but narrow River, and were no sooner arrived, but the *English* Secretary invited us to Dinner. The City of *Broischia* lies in 21° 56' twelve Leagues from *Surat*, and eight from the Seaside, upon a River, which coming out of the Mountains, is the common Boundary betwixt the Kingdom of *Decan* and that of *Baldagat*.

As it is situate upon a steep Hill, and provided with Walls of Free-stone, it is accounted one of the strongest Fortresses in the *Indies*. It has two large Gates to the Land-side, and as many lesser ones upon the River. All Merchandizes that pass through it pay two per Cent. It is very well peopled, but for the most Part with Callicoe Weavers, who make the best here of any in the whole Province. The Fields for six or seven Leagues round the City are very flat, which, as well as the Mountains beyond them to the South-West, called *Pundajet*, are fertile in Rice, Barley, and Cotton. These Mountains produce Abundance of Agate, which is so celebrated in *Europe*. Four Leagues below the City the River divides itself into two Branches, which after they have made an Island of two Miles in Circumference, fall into the Sea by two different Channels, eight Leagues beyond *Broischia*. Upon the Way leading to *Cambaya* is the Village of *Jambayjar*, or *Jamboujar*, famous for the great Quantity of Indigo it produces. And in the Way to *Amalabat*, is to be seen the Sepulchre of a certain *Mohammedan* Saint, whither they come in Pilgrimage with Padlocks on their Mouths, and Chains on their Arms, till they have performed their Vows.

We left *Broischia* in the Evening, and travelled all that Night, and Part of the next Day, till the excessive Heat obliged us to seek Retirement near a standing Pool, where we passed the Remainder of that Day, and Part of the Night following. The 17th of *October* we came to *Brodra*, where the *English* Merchants that belonged to our Caravan, and myself, were lodged, and most nobly entertained in the *English* House, and among the rest, had the Diversion of Women Dancers, who being very curious to see my Cloaths made after the *German* Fashion, would fain have had me stripped myself naked, offering to do the same, which I refusing to do, they went away discontented at it. The City of *Brodra* is seated in a large sandy Plain, upon a small River called *Wasset*, about 15 Leagues from *Broischia*. It was built of late Years by *Rajab-gi*, descended from Sultan *Mohammed Bergeran*, the last King of *Guzarat*, out of the Ruins of the old *Brodra*. It is indifferently well fortified after the old Way, and has five Gates, one whereof is dammed up. The City, but especially the western Suburbs, are for the most Part inhabited by Callicoe Weavers, Dyers, and other Workmen belonging to that Manufacture, which are made somewhat narrower here, and the Pieces shorter than at *Broischia*. The Governor of *Brodra* has no less than 120 Villages under his Jurisdiction, sixty-five of which are assigned for the Payment of the Garrison, and the other 135 allotted for Pensions to certain Officers belonging to the Mogul's Court, and by their Assignments his Officers are maintained.

Among these there is a Village called *Sindickera*, which produces every Year 25,000 Pounds of Lacque: This Lacque is a red Gum, which comes from a Tree resembling our Plum-tree, which being dried and beaten to Powder, they give it what Colour they please, and make it into Sticks, to seal Letters with, or for lacquering of Cabinets, &c. This Country affords also Abundance of Indigo. I went the same Day to join the Caravan, which I found at a Corner of a Grove of Cocoa Trees, without the City, and one of the *English* Merchants of *Brodra* would needs accompany us as far as *Wasset*, an old ruined Castle, upon a very high Mountain, where is kept a Garrison of 100 Horse, who are maintained out of the Customs paid there, but we having a Pass from the Mogul, and consequently not thinking ourselves obliged to pay it, this occasioned a Contest between them and us,

NUMB. 51.

which was very likely to have ended in a bloody Engagement; for we forcing our Way, and having crossed the River, where we staid that Night, they would have attacked us, but a *Dutch* Caravan coming to our Assistance, after the Exchange of some small Shot, the Matter was composed, and the Garrison forced to be contented with a Present of three Crowns. Thence we passed two Leagues and a half further through the Village of *Ammonygit*, and three Leagues and a half further, through that of *Sijuntra*, and so to the small City of *Niriad*, or *Niriad*, nine Leagues from *Brodra*.

13. *October* the 12th, after we had travelled 5 Leagues, and passed in our Way by *Canis*, *Batova*, and *Jassampour*, got safe to *Amadu*; but we were met in a Garden within half a League from that City by Mr. *Benjamin Roberts*, the chief Merchant of the Factory there, who carried me in his Coach drawn, after the *Indian* Fashion, by two white Oxen, which were as full of Mettle as the best Horses, into the City, ordering the two *English* Merchants that were my Fellow-travellers to wait there for the coming up of the Caravan. The *English* Factory is a very fair Structure, in the very Heart of the City, fitted with very convenient Apartments, and several Courts for the Dispatch of Merchandize. Mr. *Roberts* gave me a Collation in his own Chamber, which looked into a Flower-Garden, and was very richly furnished. We supped in a spacious Hall, where the *Dutch* head Factor, with some of his Merchants, came to pay us a Visit.

After he was gone, I was conducted by the whole Company into my Lodging-room, which I had chosen myself. Mr. *Roberts* kept me Company there till Midnight, and to give me all imaginable Diversion, sent for six Women Dancers of the Country, telling me, if I liked any thing in them besides their Singing and Activity, I might command it; which Civility I refused with a Complement. They were mightily taken with my Cloaths, and Hair, and would scarce be persuaded that I was not a Woman in Disguise. Two Days after my noble Host carried me in his Coach to view the City. The Market-place is called *Meydan-shah*, or the Royal-market; it is at least 1600 Feet long, and above 800 broad, planted all round with Palm and Date-trees, intermixed with Orange and Citron-trees, of which there is great Plenty in the Streets, the Sight, Smell, and Shadow whereof are very desirable and pleasant. There are besides these four *Bajars*, or publick Places for the Sale of Merchandizes. Not far from the *Meydan* we saw a House built of Brick, which is the King's Palace, the Apartments whereof were sumptuously furnished and adorned with many Pictures, more remarkable for their Diversity of Colours, than any Exactness of Proportion, according to the *Indian* Way. Over the Gate of this Palace was a large Balcony for the Musick, consisting of Violins, Hautboys, and Bagpipes, to play there three times a Day, viz. in the Morning, at Noon, and Night, a Custom observed in most of the *Mohammedan* Countries.

The Walls of the City were tolerably well built, with twelve Gates, and many Towers; but the Ditch, which is 16 Fathom broad, was ruined and dry in several Places. We took also a View of the Castle, which is very large, and built altogether of Free-stone. The chief Temple of the *Banjans* is one of the finest Structures that ever I saw, it being but lately built, and stands in the Centre of a vast Court, surrounded with a very high Wall of Free-stone, about which is Piazzas, divided into Cells, in each of which stands a Statue, either white or black, representing a naked Woman sitting with her Legs under her, according to the Eastern Fashion. Some of these Cells have three Statues, viz. a great one betwixt two little ones. As soon as you enter the Temple, you see two Elephants of black Marble, done to the Life, and upon one of them the Effigies of the Founder, a rich *Banjan* Merchant, whose Name is *Santides*.

The Temple is vaulted, and the Walls adorned with Figures of Men and other living Creatures. There was not the least Thing to be seen within this Edifice, except three Chapels, which were very dark, and were divided only by wooden Rails, wherein were placed Statues of Marble, like those in the Cells, the middlemost having a

9 G

Lamp

Lamp hanging before it. We saw the Priest busy in receiving from such as were performing their Devotions, and who presented him with Flowers, Oil, Wheat and Salt; with the first he adorned the Images, his Mouth and Nose being covered with a Piece of Callicoe, for fear of prophaning the Mystery by the Impurity of his Breath; the Oil was intended for the Lamps; and the Wheat and the Salt for the Sacrifice. He muttered out certain Prayers over the Lamp, and ever and anon put his Hands in the Smoak of the Flame, out of an Opinion they have that Fire having a greater Power of purifying than Water, they may, after this Cleaning, without Offence, lift up their Hands to God.

Amadabat, the Capital City of the Province of *Guzurat*, is seated upon a small River, which, not far from thence, joins its Current with the River *Indus* at 23° 32', eighteen Leagues from *Cambaya*, and forty-five from *Surat*. It comprehends in its Circuit (including the Suburbs) near seven Leagues. Its Streets are very spacious, its private Buildings and Mosques very noble, especially the Governor's House. The Mogul keeps constantly a good Garrison here to bridle the *Baahures*, a sort of People living not above twenty five Leagues distant thence, who make frequent Incursions into the Country. It may be safely said, that there is scarce any Nation in the World, or any Commodity in *Asia* but may be seen in this City, where there is also a vast Manufacture of Silk and Callicoes, as also of Gold and Silver Brocades, but they are slight and dear, which is the Reason the Inhabitants consume mostly *China* Silks, which are both finer and cheaper. At the Time of my being here they had invented a new kind of Stuff of Silk and Cotton with gold Flowers, which was sold at five Crowns per Ell. They also deal much here in Sattins and Velvets, Taffeties, Carpets, Sugar candied, or in Powder, Cummin, Honey, Lacque, Opium, Borax, Ginger, Myrobolans or Indian Plumbs dried and preserved, Praters of all Sorts, Salt Petre, Sal Armoniac, and Indico. They also sell Diamonds here, which are brought thither from *Tifhapour*, and *Ambergreece* and Musk, which they have from *Pegu*, *Bengal*, *Mojambique* and *Cabo-Verde*, and is sold here for eight Crowns per Ounce.

Some would have the *Ambergreece* to be the Seed of the Whale congealed, but without the least Probability; others would make it the Product of certain natural Mines like the *Naphte*, but with as little Likelihood of Truth, it being certain it is found no where but by the Sea Side, and grows like our Mushrooms in the Bottom of the Sea, whence it is torn off and cast ashore. *Peter Van Breuk* assures us, that, in his Time, there was found a Piece of *Ambergreece* at *Cabo-Verde*, near the Mouth of the River *Gambé*, which weighed eighty Pounds, of which he bought a Piece. The Musk is, by the joint Opinion of all Naturalists, the Product of a certain Protuberance or Swelling, rising about the Navel of a certain Animal, which some make only of the Bigness of a Fox, others like a Roe-Buck. Some call this Creature a Gazel. But the greater Conveniency of Taffick at *Amadabat* is, that the *Banjans* have a general Correspondence in all Parts of *Asia*, even to *Constantinople* itself, which makes Trading by Way of Exchange, both very easy and very advantageous. Add to this the Exemption from all Customs of Merchandizes exported or imported, the King's Receiver having no more than Fifteen-pence by Way of Present for every Waggon, and the Liberty allowed to all Strangers to deal in what Commodities they please, except that of the Exportation of Lead and Salt-Petre, without the Governor's Licence, is forbidden, which, however, is obtained by a small Present.

The City of *Amadabat* having under its Jurisdiction twenty-five large Towns and 2098 Villages, its yearly Revenue amounts to above six Millions of Crowns, which the Governor disposes of in maintaining a certain Number of Soldiers for the King's Service, and for clearing the Highways, which are very unsafe hereabouts. The Countrey or his Deputy, commands under him, and has the Administration, as well of the Government as of the Courts of Justice, in Conjunction with the Kadi, or Judge of the Place. Among divers noted Sepulchres which are near the City, is that of a certain Kadi, built by a King of *Guzurat*, in

the Village *Zirketes*, a League and an half from the City. The whole Structure is of Marble, being sustained by an hundred and forty Pillars thirty Foot high, with in which are to be seen the Tombs of three Kings that were buried there: At the Entrance of it is a large Cistern full of Water, the Wall about it having several Windows on all Sides; and about a League thence there is a fair Garden and House, the Work of the Mogul, built in Memory of a Victory obtained by him over the last King of *Guzurat*. About a League and a half on the other Side the City, we were shewed another Sepulchre, erected in Memory of a certain *Moor*, a rich Merchant, named *Hijam Agam*, who, being in love with his own Daughter, and having by fraudulent Means obtained the Kadi's Consent, would have married his Daughter; but she refusing to comply, he ravished her, for which he had his Head cut off; whence it is called to this Day *Betti Coust*, i. e. the Daughter's Shame discovered.

A little Way without the City of *Amadabat*, you may discover the vast Mountains of *Marzo*, extending above twenty Leagues towards *Agra*, and above an hundred towards *Onyon*, where the Rajah *Rana* had his Residence in the Castle of *Gurbitto* among the inaccessible Rocks; so that the joint Forces of the Mogul and the King of *Pattan*, were scarce able to reduce it. The *Pagan Indians* retain still a great Veneration for that Prince, who, as they say, was able to bring 120,000 Horseto the Field. In the Mountain betwixt *Amadabat* and *Trappe* lives such another Prince, who by reason of the Inaccessibleness of the Woods and Defarts, maintains his Sovereignty against the Mogul; and the Rajah *Indes*, tho' he is his Vassal, yet oftentimes refuses to execute his Commands. Among many noble Gardens which are about this City, that of *Sabal-bag*, or the King's Gardens in the Suburbs, called *Bogampour*, claims the Precedency, being enclosed with a noble Wall, within which stands a most beautiful Summer-house richly furnished.

I passed thence over a very fine Stone-bridge, four hundred Paces in Length, into another Garden called *Niccobag*, i. e. the Jewel, which, they say, is the Work of a beautiful rich Lady. The House, as well as the Garden, is not so remarkable for their Bigness, as the most admirable Prospect it has from the Deficent on which it lies into a fine champaign Country. It has a very large Fish-pond, which, during the Winter-season, is supplied with Water by the Rains; but, in the Summer, it is filled out of certain deep Wells, the Water of which is drawn up by Engines turned by Oxen. You can scarce ever come into this Garden but you will find some Ladies bathing themselves there: They would not allow the *Indians* to see them, but gave us the Liberty to come in and talk with them. The whole Country round *Amadabat*, and the City itself, is so full of Gardens and Trees that, at a Distance, it resembles a great Forest. There is among other remarkable Things here, a Walk planted with a double Row of Cocoa-trees on each Side, which reaches to a Village six Leagues from the City; but that which reaches from *Agra* to *Barampour* is an hundred and fifty Leagues in Length, and surpasses this beyond all Comparison.

These vast Numbers of Trees are the Receiptacles of Multitudes of Apes, some of which are as big as Grey-hounds, yet will rarely assault any body unless provoked. They are generally of a brown Colour, inclining to a green, having white long Beards and Eyebrows. They multiply beyond what can be imagined; because the *Banjans*, who are more numerous than the *Mobammedans*, believing the Transmigration of the Soul, and looking upon these Creatures as having the greatest Resemblance in all Respects to Mankind, are so far from killing them that they cherish them. Hence it is that you shall see the Apes come in great Numbers into Peoples Houses; for at one time I remember, I counted no less than fifty in the *English Lodge*; and I used to give some Almonds and Dares to two or three of them, which made them duly attend every Morning at my Chamber-door, in Expectation of their Breakfast, which they would take out of my Hand; sometimes I used to catch hold of one, which made the rest stare till I had let go their Companion.

The Trees also harbour abundance of Wild-Fowl, and an incredible Number of Parrots of all Kinds, the biggest

not by such Examples maintain his Authority, he should not be long Governor of *Amadabat*.

15. *October* the 21st I left *Amadabat*, in the Company of a young *English* Merchant, and travelled that Day to the Garden of *Tschirbag*. The 22d we made seven Leagues to the Village of *Sergoutra* and the 23d five Leagues further to *Cambaya*, where I was very well accommodated at the House of a certain *Mohammedan*, the *English* Head Factor being from home. The City of *Cambaya* lies sixteen Leagues from *Broisfektia*, upon sandy Grounds near the River, which makes there a very great Bay, into which the River *May* discharges itself. The Haven is none of the best; for though at high Water there be seven Fathom Depth, yet at low Tide the Ships are almost swallowed up in Sand and Mud. It has a Wall of Free-stone, with twelve Gates, large Houses, Strait and very broad Streets, and is ten Leagues in Compass. The Inhabitants are *Pagans*, *Banjans*, and *Rashtees*, the last of whom apply themselves to the Exercise of Arms, as the *Banjans* do to Commerce. Their chief Trade is at *Achin*, *Diu*, *Goa*, *Mecca*, and into *Perfia*.

Taking a Walk out of the City, I saw there, among several other very curious Gardens, one, that for its Situation and Prospect to the Sea, and into the fairest champaign Country that could be to the Land-side, deserves the Precedency of any that ever I saw before. It was surrounded by a very high Wall, which had within its Compass two very fine Structures, and in the middle of the Garden was a Sepulchre of a *Mohammedan*, who was the Founder of it. Whilst I was contemplating the Tomb, some *English* Merchants came in to reprove me for the Assiout I had put upon them, as they interpreted it, of preferring a *Mohammedan* House before theirs to lodge in; and as a Reparation, asked me to go along with them the next Morning to a Place where an *Indian* Widow was to burn herself, her Husband, who was a *Rashtee*, having been killed two hundred Leagues from thence.

We went accordingly to the Place of this voluntary Execution near the River-side, where we saw the Woman, who was scarce twenty Years of Age, coming up with so cheerful Countenance as is scarce to be imagined. It is to be observed, that the Governor, who was a *Mohammedan*, and consequently would willingly abolish this barbarous Custom of the *Pagans*, had for a long Time opposed her Resolution, under a Pretence that her Husband's Death might be uncertain at so great a Distance, in hopes that Time might have changed her Resolution; but finding her immovable, he gave at last his Consent. In the Front of the Procession marched the Musick, consisting of Hautboys and Tumblers; these were followed by a great Number of Maids and Women dancing and singing before the Widow, who was dressed in her best Apparel, and had many Rings and Bracelets on her Fingers, Arms and Legs: In the Rear came a confused Multitude of Men, Women, and Children. She had washed herself before in the River, and coming near the Funeral Pile, which was made of the Wood of Apricot-trees mixed with some Sanders and Cinamon, she stopped a little, and looking over it with a great deal of Carelessness, took her last Farewel of her Kindred and Friends. I was very near on Horseback, and the perceiving perhaps by my Countenance that I had Compassion of her, she cast me one of her Bracelets, which I keep to this Day, distributing the rest among her Friends. So soon as she had placed herself on the Pile, and perceiving that they had set Fire to it, she poured a Vessel full of perfumed Oil over her Head, which the Fire taking hold of, burnt her to Ashes immediately, without shewing the least Sign of Reluctancy, whilst all there present filled the Air with their Shouts and Acclamations.

This Custom, it seems, was first introduced into the *Indies*, to prevent the Jealousy of the Women created by Polygamy, which had this dismal Effect, that they used frequently to poison their Husbands, it having been found by Experience, that in one Year there used to be four Men buried to one Woman; to prevent which, it was thought convenient, that a certain Law should be introduced for all Women that would be accounted honest, to accompany their

Husbands at their Deaths, as the only Way to make them careful of their Lives; yet was no Punishment inflicted upon such as did not think fit to comply with this rigorous Institution, except that they were looked upon as infamous ever after.

This Ceremony being over, I paid a Visit to *Myrjag*, one of the chief *Mohammedan* Merchants in that City, unto whom I delivered the Letter of Recommendation from the Director of the *English* at *Amadabat*. As he understood that Language, he complimented me with all imaginable Expressions of Civility, endeavouring to persuade me to remain for some time at *Cambaya*, and proffering in Service in every thing that might tend to my Satisfaction. Whilst I was returning his Civilities, came up to us the King's Lieutenant, or Deputy-Governor, who, with a very engaging Air, entreated me to make him a Visit, which I promised to do. I went home, and had scarce eat my Dinner, when the before-mentioned Merchant sent me two Sheep, twelve Capons and Pullets, besides some Fruits, and a fine Vessel of *Agat*. I sent back the Bearer with a small Present, telling him, that I would return my hearty Thanks to his Master the next Day; but I was scarce got out of my Bed, when he came and told me, that the Fear of parting with me without taking his Leave, had made him come so early. I thanked him, and as a Pledge of the good Will I bore him, presented him with a very fine *English* Pocket Pistol, which he at first refused to accept, excusing himself, that it was not handsome to receive a Present from a Stranger, were it not that his Refusal might be misinterpreted by me to his Disadvantage; upon which Score he could not forbear to accept of what I had been pleased to bestow upon him with so much Kindness.

I thought fit to make particular mention in this Place of these Civilities, to convince the World that Barbarians, which the *Indians* are so often branded with by some Authors, is not so deeply rooted among them, but that they understand and practise Civility as well as some other Nations, who challenge the Preference upon that Account before all others, but fall short in that Sincerity which is natural to the *Indostans*, who are as good Friends to those to whom they have promised their Friendship, as they are irreconcilable to their Enemies. I caused a Box of Beetle to be presented to the Merchant, a Drug as commonly used in the *Indies*, as Snuff is in *Europe*, of which he having taken a little, took his Leave. Soon after, as I was going to call at the Deputy-Governor's House, I met him in the Street in his Coach, and he no sooner espied me, but he obliged me to go back with him to his House, but in one of the most pleasant Parts of the City, he treated me with some Beetle, and some Palm-Wine, and sent one of his Servants to give Orders at the Gates to let me pass unmolested, without paying any Customs.

I staid not above half an Hour, and immediately proceeded on my Journey; but being pretty late before I could reach *Sergoutra*, the *Banjans*, who burn no Lights for fear of hurting the Flies, or other Insects, would not open the Shops to sell us Forage for our Beasts, being a certain Paste of Sugar, Meal, and some Butter, which is used here for want of Oats and Hay; but at last were prevailed on to let us have some, because we threatened to break open their Shops. We travelled five Leagues the next Day before Noon to a great Village, where having baited our Beasts, we continued our Journey to the Garden of *Tschirbag*.

This Garden, which we had occasion to mention before, is looked upon as one of the most considerable of all the Empire, not only in respect of its noble Buildings, and the vast Quantity of excellent Fruits, but especially for the Conquest of *Gazarat*, in Memory of which it was founded; and thence has got the Name of *Tschirbag*, i. e. the Garden of Victory. The Walks of this Garden are planted with Fruit-trees, such as Oranges, Citrons, Pomegranates, Dates, Almonds, and Mulberry trees; besides many of these that bear Mangoes, Cocons, and some that were unknown to us. Having taken a short View of it whilst our Beasts were baiting, we continued our Journey, and came that Night to *Amadabat*. We were not a little troubled in the Way by Apes, of whom I shot two with my Pistol, which so incensed the rest, that about twenty of the largest

16. At *Amadabat* I met with a Caravan of *English* and
Banjan Merchants bound for *Agra*, and being recommended
 to them by the Director of the *English* Factory of *Amada-
 bat*, I set out with them the 28th of *October*. We met in
 five Days Journey with no more than one Village worth
 mentioning called *Paingot*, and came the 6th Day after
 our setting out of *Amadabat* to the small City of *Heribath*,
 fifty Leagues thence; it is without Walls or Gates, which
 have been destroyed by the famous Conqueror *Tamerlane*,
 as well as the adjacent Castle, the Ruins of which are to be
 seen near a high Mountain.

Betwixt this City and that of *Damiges*, which is fifty
 Leagues from *Heribath*, we met a Caravan of *Banjan* Mer-
 chants, who told us, that they had been set upon by two
 hundred *Rahspoots*, who had forced them to pay a hundred
 Rupees; upon which we ordered our Waggons to be fast-
 ened together, and disposed our Guards in such a manner
 as we thought might make them most serviceable; neither
 was it long before we got Sight of fifty of the same Gang
 that were sent without Question to view us; but finding us
 too well guarded, let us go unmolested. We travelled fifty
 Leagues farther before we came to the Village of *Suedeck*,
 which has a strong old Castle. As we were travelling in a
 Bottom ten *Rahspoots* surprized some of our Waggons that
 were got about six hundred Paces before the rest, and
 wounded two *Banjan*s; but two of our Guards being sent
 to their Relief, the Robbers were forced to betake them-
 selves to their Heels, and to leave the Booty behind them.

After this Rencontre we met with no farther Disaster,
 and arrived safely at *Agra*, where I was received with the
 same Civility by the *English* as I had been in all other Places
 through which I had passed. The City of *Agra* is, with-
 out Comparifon, the noblest of all *Indoestan*, and the ordi-
 nary Residence of the Great Mogul. It is seated in 28^o
 on this Side of the Line, in the Province of *Indoestan*, upon
 the River *Gemini*, which joins its Waters with the *Ganges*,
 above the Kingdom of *Bengal*. It being twice as big as
Isaban, a Man can scarce ride round it on Horseback in
 a whole Day. Its Fortifications are of red Free-stone, and
 the Ditch is above thirty Fathom broad; the Streets are
 fair and large, there being some vaulted, which are a Mile
 in Length, and are furnished with Shops of all sorts of
 Trades, each of which have their peculiar Streets and Quar-
 ters assigned them. It contains fifteen Meydans and Ba-
 sars, the most spacious of which is before the Castle; in the
 middle of it stands a high Pole, where the Mogul himself
 shoots sometimes at a Wooden Parrot fastened to the Top
 of it. Eighty Caravanferas are appointed for the Recep-
 tion of Foreign Merchants and their Merchandizes; they
 are provided with noble Apartments, and convenient
 Shops, Vaults, Stables, and other Conveniences.

As the Mogul and the chiefest of his Court are *Mobam-
 medans*, so there are a vast Number of Mosques throughout
 the City, of which seventy are remarkable for their Big-
 ness, and six of them appointed for their Devotions on
 Holy Days; these last they call *Mosqueiladine*. In one of
 these they shew you the Sepulchre of a certain Saint named
Seander, of the Posterity of *Asy*, and in another the Tomb
 of a Giant Saint, being thirty Feet in Length, and sixteen
 in Breadth. This Tomb is surrounded on all Sides with
 little Banners, or Flags, as so many Tokens of his heroic
 Achievements; whence it is, that his Sepulchre is fre-
 quented by a vast Number of Pilgrims, who bring thither
 daily their Offerings, out of which, and the ordinary Re-
 venue belonging to it, are maintained such a vast Number
 of Poor, that in those Respects it is not inferior to the Se-
 pulchre of Sheik *Sefi* at *Ardabil*.

These Mosques, with their adjacent Courts, are so many
 Sanctuaries both in criminal and civil Cases, the Mogul

himself never presuming to take any Criminal, tho' never
 so great an Offender, thence, out of a Veneration all the
Mobammedans have for their Saints. In the City of *Agra*
 are above eight hundred publick Baths, which pay a con-
 siderable Sum yearly to the Mogul; for as Purification is
 one of the main Ingredients of the *Mobammedan* Religion,
 so these Baths are daily frequented by a vast Number of
 People. The great Lords of the Court, who bear the
 Title of *Rajas*, or *Princes*, have many of them, very fine
 magnificent Houses both within and without the City, where
 the King also has many Gardens and Summer-houses to
 retire to upon Occasion; with the Women Dancers, who
 dance before him stark naked.

17. But his Palace, which stands upon the River *Gemini*,
 and is four Leagues in Compass, surpasses all that I
 ever saw of that kind before or since. It is surrounded
 with a Wall of Free-stone, and a broad Ditch, having a
 Draw-bridge at each Gate; the Gate at the West Side lead-
 ing to the *Basar* is called *Cistei*; under this Gate is kept the
 Court of Judicature, and in an adjoining spacious Hall the
 Prime Vizier, or Lord-Chancellor, dispatches all Mat-
 ters relating to Civil Affairs, where the Original Records are
 kept. Immediately within this Gate you come into a very
 spacious Street, with Shops on both Sides, leading directly
 to the Mogul's Palace, the Gate of which is called *Acho-
 barko Desvage*, i. e. King *Achobar's* Gate, through which
 all the great Lords of the Court, except the King's Sons,
 are obliged to go in on Foot; this being the Quarter
 where the dancing and singing Women are lodged.

There is another Gate leading to the River, where the
 Mogul every Morning pays his Devoirs to the Sun at his
 rising. It is on that Side that great Men pay their Res-
 pects to the King from a certain Eminency, where the
 King can take particular Notice of them. The Com-
 manders of Horse also stand on that Side, but at a great
 Distance, at a Place where the Mogul sees the Engage-
 ments every Day betwixt Lions, Elephants, Bulls, &c.
 except *Fridays*, a Day dedicated to their Devotions. There
 is also another Gate, which brings you into the *Quar-
 ter-Hall*; through this Hall is a Passage into a paved Court,
 at the farther End of which you see a Row of Silver Pil-
 lars under a Piazza, where is kept another Guard to prevent
 the common People from entering. Here I met with my
Persian Servant who had left me at *Surat*, he offered me
 all the Service he was able to do me, and would fain have
 brought me within these Pillars, but that the Guards would
 not permit it; this being the ready Way to the Mogul's
 Apartment, where is a Row of Golden Pillars of a lesser
 Size, and within them the Royal Throne of massy Gold,
 enriched with Diamonds, Pearls, and precious Stones; and
 above it a Gallery, where the Mogul appears every Day at
 a certain time to hear and determine the Complaints of his
 Subjects: But this Trial is so dangerous, that if you do
 not prove the Matter of Fact by undemable Evidence, you
 run the Hazard of your Life.

None but the King's Sons, who fan him, and keep off
 the Flies, are admitted within the Compass of those Golden
 Pillars; neither is any other Person admitted into the
 innermost Parts of the Mogul's Lodgings, except the Eu-
 nuchs, who being one thousand two hundred in Number,
 wait on the Ladies of the Seraglio. There is another
 Apartment in the Castle very remarkable for its Tower,
 which is covered with Gold, and the Treasure it contains,
 having eight large Vaults filled with Gold, Silver, precious
 Stones, the Value of which is incalculable. I had it from
 very knowing and very worthy Persons, that Shah *Cheram*,
 who reigned in my Time, had a Treasure which amounted
 to one thousand five hundred Millions of Crowns. I had
 from the same Hands an exact Inventory communicated to
 me of the Treasure which was found at the Death of Shah
Achobar his Grandfather, which I will faithfully communi-
 cate to the Reader.

An Inventory of the Treasure of Achobar (See Achobar in the History of the Mogul Emperors) at the Time of his Decesse.

	Crowns.	Pence.
In certain sorts of Money coined by the special Order of the said Achobar	148,790,000	
In another kind of Money, called from his Name, Achobar Ropies	50,000,000	
In another sort of Money, called Paytes, sixty whereof make a Crown	383,333	19
In Diamonds, Rubies, Emeralds, Saphires, Pearls, and other precious Stones	30,026,026	
In Statues of Gold of divers Creatures	9,503,370	30
In Household-stuff, Gold-Plate, as Dishes, Cups, &c.	5,866,895	5
In Bras and Copper Utensils	25,612	30
In Porcelain, or China Ware, and other Earthen-Vessels, to the Value of	1,253,873	30
In Brocades, and other gold and silver Stuffs, and in Silk and Calicoes	7,654,989	30
In Woolen-Cloths	251,626	
In Tents, Hangings, and Tapestry	4,962,772	30
Twenty-four thousand Manuscripts richly bound, valued at	3,231,865	30
In Artillery and Ammunition	4,287,985	30
His Magazine of Small-Arms, Swords, Bucklers, Pikes, Bows, Arrows, &c.	3,777,752	30
In Saddles, Bridles, and other Gold and Silver Accoutrements to the Value of	1,262,824	
In Covering-Cloths for Horses and Elephants, embroidered with Gold, and Silver, and Pearls	2,500,000	
All which together amounts to	274,113,793	15

This, tho' in itself an immense Sum, yet falls very short of fifteen hundred Millions, which is esteemed the Amount of the Mogul's Treasure at present. Neither is it at all improbable that it may be so; for though it may be true, that the ordinary Revenue of the Crown is not considerably increased, yet by the rich Presents made annually at stated Times by his Grandees, and his being Heir-general to all the Officers in his Service throughout his extensive Empire, there is no Doubt that the gross Amount of his Receipts must be exceedingly augmented since that Time.

As there is no Inheritance of Estates belonging to the Children of great Persons, so they can claim no Share in their Fathers Dignity. The Title of Rajah being no more inheritable there than that of the Khan's in *Persia*, the only Advantage they have is, that they are entrusted with lesser Charges by the Mogul, till, by their Merits, they can raise themselves to the highest Dignity. The chiefest Officers of the Court are the Vizir, or Prime Minister, the chief of the Eunuchs, or Lord High Steward of the Treasury, Principal Secretary of State, General of the Elephants, and Surveyor of the Household-Stuff, Tents, and Jewels. There are constant Members of the Mogul's Privy Council, unto which is also sometimes called the Couteval, who is both Chief Justice, and Commander in chief of the Mogul's Guards. The Council commonly sits in the Night-time from seven till nine.

The Mogul appears every Morning at Sun-rising, and the Lords come to pay their Veneration to him about Noon, when he comes to see the Fighting of the Wild-Beast, and about Evening when he appears at a certain Window to see the Sun-setting. According to the Roll of

the Kingdom, the Provinces of *Candabar*, *Delli*, *Bengal*, *Orixa*, and some others, bringing in a yearly Revenue of Eighty-seven Millions, two hundred and fifty thousand Crowns, the Province of *Guzarat* is able to raise Ninety thousand Horse, *Cambaya* Twelve thousand, and *Cahul* as many; *Orixa* Eighty thousand, and *Delli* One hundred and fifty thousand; besides those of the other Provinces, of which I could learn no Certainty. His Militia is divided into certain Brigades of twelve or fifteen hundred Horse; commanded either by the King's Sons, or the chiefest Lords in the Empire, some of whom have also under their Command certain Regiments of 2000, 3000, and 4000 Horse. Certain it is, that then the present Mogul went in Person into the Field against *Khan-Kabaan* in 1630. His Army consisted of 144,500 Horse, divided into four Brigades, besides a vast Number of Elephants, Camels, Mules and Artillery-Horses. The Arms used in their Camp were mostly Bows and Arrows, a Javelin, which they dart with great Dexterity, a Cymitar, Pointard and Buckler, which hang about their Necks. The Horsemen use no Fire-arms, but their Infantry use the Musquet tolerably well; their Pike-men have Pikes of ten or twelve Foot long, which they dart at the Enemy, instead of opposing the Horse with them as we do in *Europe*, some use Coats of Mail, reaching down to their Knees, but are without Head-pieces. They understand nothing of martial Exercises; the Van or Rear, Front and File, being Things never heard of among them; but fight without any Method or Order. Their chief Trust lies in their Elephants, on the Backs of which are fixed certain wooden Towers, carrying three or four Harquebushs, with as many Men to them, and the Elephants serve them instead of Bulwarks, to hinder the Enemy from breaking in upon them: But the worst is, that these Beasts being terrified by artificial Fire-works, or some other such like Means, make a greater Havock among their own People than the Enemy. They commonly have a great Train of Artillery, and some very large Pieces. They also make Gun-powder, but not so good as ours. Their Copper-trumpets and Timbrels, make a Noise that is not unpleasant in the Field. Their Armies never march above five Leagues in a Day. As in their Encampments they take up a vast Circumference of Ground, so they observe a very good Order in them, every thing being as well regulated there as in a City; and it is observable, that the Mogul and the General of the Army, always have their Tents pitched without the Reach of Musquet-shot from the rest.

His ordinary Guard is 12000 Men, besides the 600 that have the Title of the Guard of his Body, and are always attending his Person. The Mogul sometimes confers the Dignity of Rajah or Prince, upon his chief Vizir, who has the supreme Management of all civil and military Affairs throughout the Kingdom: He is not permitted to take the least Present, but his Clerks are so little conscientious in this Point, that for Money a Man may know every thing that passes through their Hands. The Rajahs and other great Men, pay a most profound Veneration to their Monarch; they never approach or speak to him without many Bows and Reverences, and when they are going away they do it backwards, bowing their Heads down to the Ground, putting their Hands over their Eyes, and afterwards upon their Breasts, to shew their Humility. The Mogul never stirs abroad out of the City or otherwise, without a Guard of ten thousand Men, at the Head of which march one hundred Elephants covered with Scarlet, Velvet, and Brocades, each having two Men on his Back, one who guides the Beast, the other carries a Banner of Silk; upon seven or eight of the foremost are mounted the Musicians, who play upon the Timbrel. The Mogul is either mounted upon a fine *Persian* Horse, or is carried in a Coach drawn by two white Oxen, or carried in a Chair. The chief Men of the Court follow immediately after, and after them the Baggage. He commonly pitches his Tent in the Field, the better to enjoy the Convenience of the cool Air in the Summer, and to choose the warmest Places in the Winter, which is the Reason he commonly leaves *Agra* in *April*, and passes the Months of *May*, *June*, *July*, and *August*, at *Labar*, or in some other northerly Province. The

andabar, Delhi, Bengal, in a yearly Revenue of three and fifty thousand is able to raise Ninety thousand, and *Cabul* as and *Delhi* One hundred of the other Provinces, His Militia is twelve or fifteen hundred the King's Sons, or the of whom have also un- giments of 2000, 3000, that then the present field against *Khan-Kabaa* 144,500 Horse, divided Number of Elephants, The Arms used and Arrows, a Javelin, terity, a Cymitar, Point- about their Necks. The at their Infantry use the Pike-men have Pikes of they dart at the Enemy, with them as we do in Eu- reaching down to their Pieces. They understand e Van or Rear, Front and of among them; but fight Their chief Trust lies in of which are fixed certain or four Harquebuz's, with Elephants serve them in- ae Enemy from breaking s, that these Beasts being s, or some other such like among their own People only have a great Train of Pieces. They also make as ours. Their Copper- Noise that is not unplea- s never march above five Encampments they take and, so they observe a ve- thing being as well regula- s observable, that the Mo- Army, always have their ch of Musquet-shot from

The City of *Agra* is so populous, that it is able to raise two hundred thousand fighting Men. Most of the In- habitants are *Mohammedans*, but there is scarce any Nation in the World but what trade thither, and all Commodities, whether imported or exported, pay *10 per Cent*. Cus- tom. This City has under its Jurisdiction forty small Ci- ties, and three thousand five hundred Villages, its Terri- tories extending above sixty Leagues about. The adja- cent Country is very fertile in Indigo, Cotton, Salt-petre, and several other Commodities. The Festival of the *Nau- rus*, or New-year's-day, is celebrated in this City with a great deal of Ceremony. Before the King's Palace a Theatre, or Scaffold, richly adorned, is erected, surrounded with small Pillars in the Nature of a Balcony, where the King is seated upon richly embroidered velvet Cushions, being attended by his seven Ministers of State, the Empress be- ing not far off in a Gallery where she can see the whole Ceremony, but cannot be seen by any body. Near the King's Scaffold is another erected, painted and embellish- ed with Mother of Pearl, whither the principal Lords come out of their Tents, pitched and furnished with their most precious Moveables, in the outermost Court in the Palace, to pay their Veneration to the King; which done, he leaves the Theatre, and being seated on his Throne, he receives the Presents of his Subjects, and this he con- tinues for eighteen Days successively. Towards the Conclu- sion of these eighteen Days, the King, in return of the Presents the Lords and others have made him, bestows upon them his Presents, which are certain Employments and Honours proportionable to the Gifts he has received from their Hands.

The Mogul's Birth-day is also celebrated here after a peculiar Manner. The Day is begun with all manner of Diversions, which done, he shews himself to the Queen-Mother, if living, in her own Apartments, where the great Lords are obliged to appear, and to bring along with them considerable Presents. After Dinner he puts on the richest Apparel that can be contrived, laden all over with Gold, and precious Stones. Thus he goes into a Tent, and in the Presence of the chief Lords, weighs him- self in a Pair of Scales of massy Gold, the Chains where- of being of the same Metal, are set with precious Stones. He is set in one of the Scales, and in the other are put fe- veral Bags of Silver, one of Gold, some precious Stones, certain Pieces of Silk, Stuffs, Calicoes, Pepper, Cloves, Nutmegs, Cinnamon, Wheat, Pulse, and Herbs, and an exact Account is kept of the Difference of his Weight from one Year to the other. This done, the King gives the Money with his own Hands to the poor *Mohammedans*, and the rest is distributed among certain *Banjans*. Then being seated on his Throne, he orders to be cast among the Lords of his Court, Nuts, Pistachoes, Almonds, and di- vers other sorts of Fruit of Gold, but so slightly made, that one thousand of them scarce weigh thirty Crowns, which tho' it may seem incredible, yet it is certain that it has been tried by Experience, that a whole large Bacon full of this kind of wrought things, have not amounted to above ten Crowns, and it is computed, that all this great Mo- narch bestows upon this Occasion, would not amount to above the Value of one hundred Crowns. The Day is concluded with a great Feast at Court, unto which are in- vited all the principal Lords in waiting, who pass the Night with the Mogul in Drinking.

They also celebrate another Festival, which begins ten Days after the New-moon of the Month of *July*. This is observed to perpetuate the Memory of two Brothers named *Janze* and *Jawze*, who being holy Men or Saints, went on Pilgrimage to the Court of *Coromandel*, and were there killed by the *Brahmans*, and other Pagans. They carry Coffins covered with Bows, Arrows, Turbants, Cymitars, and Garments of Silk, through the City, the People fol- lowing in whole Troops with great Lamentation, some casting their Arms till the Blood issues forth plentifully. In the Evening they make diverse Figures of Straw repre- senting the Persons who murdered them; at these they shoot their Arrows, and at last burn them to Ashes. They perform this with too much Animosity, that no Pa- gan dares to appear about that Time in the Streets. The *Indian Mohammedans* also celebrate the Feast of the Sacri-

fice of *Abraham*. It is held in *June*, when they kill a He-goat, which serves them to entertain their Friends with that Day. The Great Mogul deduces his Off-spring from the famous *Timur*, or *Tamerlane*, in a direct Line, the said *Tamerlane* being descended from the Family of *Zingis- Khan* of *Tartary*. *Shah-Choran*, who reigned at the Time of my Travels into these Parts, usurped the Crown from his Nephew Prince *Polagi*, whom, as we told you, we saw at *Gassnis*.

The Mogul was then about sixty Years of Age. He had three Sons, the eldest was about twenty-five; but his Affections being most for the youngest, he intended to bestow the Crown upon him, and to make the other two contented with the Government of certain Provinces. The Beginning of his Reign had favoured not a little of Cru- elty, and even afterwards he could not but betray his In- clinations, by putting such as were guilty of High Treas- on to unheard of Torments; for the rest, he was of a pleasant Humour enough, taking much delight in Musick, and the Women Dancers dance naked before him. Of these I heard the *English* relate a pleasant Story, that a certain Person of Note belonging to the Court, in whose Conversation the Mogul took particular Delight, being missing at Court, the Mogul asked the Reason of his Ab- sence, and being answered, that he had taken Physick, the Mogul ordered his Women Dancers to go to his House, to strip themselves naked, and to ease themselves before him. The Gentleman hearing of their Coming, and hav- ing got some Scent of what their Errand was, asked them immediately after their coming into the Room, what the King had commanded them to do, and being answered, that they were to ease themselves there, he told them, that they might put the King's Commands in Execution as soon as they pleased; but asking them at the same Time, whether they had any further Commands, they having answered no, he bid them have a special Care not to transgress the Orders laid upon them; for, said he, if any of you piss but one Drop, I will have you all soundly whipped, which put them into such a Fright, that not daring to run the Hazard of the Lash, they returned to the Mogul, who understanding by what Invention the Gentleman had di- verted them from what they were ordered to do, laughed very heartily at his Ingenuity.

His daily Diversions were to see the Lions, Elephants, Tigers, Leopards, and other wild Beasts fight one with another. He also often delighted in seeing Men engage with those savage Creatures, but never forced them against their Will, there being not wanting those, who in Hopes of ob- taining thereby the Mogul's Favour, would hazard their Lives upon that Score. I remember the Mogul on his Son's Birth-day being present at the Combat between a Lion and a Tiger, which were both very much hurt, he ordered Proclamation to be made upon the Spot, that whoever had so much Courage as to fight with one of those Beasts with Sword and Buckler only, should be, if he vanquished, honoured with the Title of *Khan*. It was not long before three *Indians* appeared to accept the Challenge, and having laid by their Coats of Mail, one engaged with a furious Lion, and for some Time made his Party good very courageously, but the Beast pressing very hard upon his Left-hand, in which he held his Buck- ler, the Weight whereof at last forced the Buckler out of his Hand; so that seeing himself in unavoidable Danger of his Life, he thrust a Dagger which he wore in his Girdle into the Lion's Jaws, who thereupon let go his Hold, and was marching off; but the *Indian* followed him, and with a Blow cross his Head, laid him dead upon the Ground. The Acclamations of the People were loud upon this Oc- casion, but the Mogul was so far from being pleased with the Action, that on the contrary, being highly incensed at his having made use of any other Arms except his Sword and Buckler, he commanded the Fellow's Belly to be rip- ed up, and the Body to be exposed to the View of the whole City. The second *Indian* made up with no less Courage than the former, to a Tyger brought in for that Purpose, but this fierce Creature was so dexterous and nim- ble, as to seize him by the Throat, and so killed him. The third *Indian*, tho' a Person of a mean Stature, and worse Aspect, nothing dismayed at the Misfortune of his

Comrade, engaged the same Tyger with unspeakable Bravery, who was for playing the same Game with this, that he had done with the other: But as he was going to fasten on the *Indofan's* Throat, he cut off both his Fore-paws at one Blow, and soon after dispatched him; at which the Mogul was so well pleased, that he presented this Man (whose Name was *Geily*) with a Garment of Brocade with his own Hands, and bestowed the Dignity of a *Khan* upon him.

18. I should not have left *Agra* so soon, had not an unhappy Accident made me alter my first Resolution; for as I was talking one Day in the Streets with my *Persian* Servant who left me at *Surat*, an *Indofan*, of a very goodly Aspect, came up to me, asking me what I had to do in those Parts? to whom I made answer, that I was a Native of *Germany*, whom Curiosity had brought thither. He told me, that unless he was very much mistaken, I was the Person that had killed his Kinsman in the Engagement at *Ispahan*, betwixt the *Indofans* and *Germans*. As I was convinced in my Conscience that he spoke Truth, so I was not a little amazed at it. But two *English* Merchants that were along with him, protesting that I was lately come from *England* by Sea to *Surat*, made me persist positively in it, that I had never set Foot in *Persia*. This would, perhaps, have stood me but in little stead, had not the same Servant declared, and sworn by his *Mohammed* and *Hoffein*, that he knew me, and that I said nothing but Truth: So that with much ado we got rid of the *Indofan* at that Time.

But as his Sight was not very agreeable to me, so I made it my Business to take the next Opportunity of leaving *Agra*, which I did accordingly, taking the Advantage of a Caravan that was going thence to *Laber*, 60 Leagues further into the Country, all which Way we travelled thro' one continued Visto of Palm, Date, Cocoa, and other Fruit-trees, which, with the Company of two *Dutch* Merchants, and some *Banjans*, made this Journey very pleasant, tho' these last were not very well pleased with the Diversion I took in shooting at the Apes, Parrots, and some other Creatures, and among the rest, at a Serpent, a thing much esteemed by them. The City of *Laber* is seated upon the River *Roxy*, one of those that with four more join their Waters with the *Indus*. It lies in 32° 30' having many fair Gardens on the River-side, and the Country about it being fertile in Fruits of all sorts, but especially in Wheat and Rice. The royal Palace, which lies in the middle of the City, is surrounded by a very high Wall, besides that, it contains many other Palaces, belonging to such Persons of Note as generally attend the Mogul, where-ever he goes, and a great many Mosques and publick Baths. I had the Curiosity to go into one of these Baths, which I found to be exactly after the *Persian* Fashion, with several Partitions made half round, within narrow at the Entrance, and wide at the Bottom, each having its peculiar Door, and two Cisterns for receiving the Water, which is let in by brazen Cocks, more or less, according as those who bathe are pleased to order it. After bathing, I was desired to lie down upon a Stone seven or eight Feet long, and four broad, where being soundly rubbed first upon my Belly, and afterwards all along the Back-bone, down towards the Side; the Fellow would have rubbed the Soles of my Feet also, with some Sand, which I not being able to endure, he asked me immediately whether I was a Christian, and I having told him that I was, he gave me the Hair-Cloth to rub them myself.

In this Journey to *Laber*, I rode upon four several Creatures, that is to say, a Camel, a Mule, an Elephant, and an Ox, which trotted so hard, that he carried me six or seven Leagues within four Hours. Having received Letters from *Agra*, that the *English* Director was preparing for his return from *Surat* for *England*, I took the Convenience of a small Caravan of *Indian* Merchants, that were going to *Amadabat*, where I was no sooner arrived, but I understood that he expected only the coming of the Caravans of *Agra* and *Amadabat*, in order to his Voyage to *England*, desiring me to make what haste I could to *Surat*, being very desirous I should be present at the Resignation of his Presidentship, which was to be performed in a few

Days. Whilst I was at *Amadabat*, I saw the *Mohammedans* celebrate a Feast. All the Windows of the Houses round the great Market-place were filled with Lamps, before which stood glass Vessels full of Water, of all sorts of Colours, which afforded a very delightful Prospect at a Distance, and the Night was concluded with Feasting and fine Fire-works, composed of Squibs, Crackers, and many ingenious Inventions of that kind; among the rest, they had retained certain Lamps to Wheels, which being turned round with great Violence, made a pleasant Show.

The Caravan of *Agra* was no sooner arrived at *Amadabat*, but I prepared to go along with them to *Surat*. The first Day we travell'd six Leagues to *Amadabat*, but the next Day the *English* Director and his Deputy, being desirous to be at *Surat*, at the Resignation of the chief Director there, myself and another left the Caravan, taking twenty-four Soldiers along with us for Guards. We crossed the River *Wasset* with our Banners, according to the *Indian* Custom, where Persons of any Note always have Banners, not unlike our Cornets, carried before them. At Night we took our Quarters in the Fort of *Sajapour*, where meeting with the *English* Factor of *Brodra*, we staid in that Place all the next Day, but continued our Journey in the Evening, and were lodged next Night in a Garden, whence we proceeded the next Day to a noted Cistern for fresh Water called *Sambord*, which being at that Time guarded by a Troop of Country People, who pretended to keep us from fetching the Water we had Occasion for, a Dispute arose betwixt them and some of our Soldiers, which at last came to Blows; for whilst our People were drawing up their Water, the Country Fellows wounded five of them with their Arrows, which so exasperated the rest, that they killed three of the Country People.

But before next Day appeared, we met with another Encounter, which was likely to have proved fatal to some of us; for the *Dutch* Caravan (which we had overtaken on the Road) going away about Midnight, we followed soon after, but were not gone far before we heard one of those Trumpeters, who in the *Indies* commonly march before the Caravans found his Instrument in an adjacent Wood; as we had been already forewarned of the *Rajpoots*, who had committed several Robberies, and killed divers Persons hereabouts the Day before, so we did not in the least question, that this was the Signal of our coming given to those Rogues; neither was it long before we found our Guests vented by their coming out of the Wood with Pikes, Bucklers, Bows and Arrows; but the best was, that they had no Fire-Arms. We had scarce Time enough to put ourselves in a Posture of Defence; but the *English* Merchants and I getting on Horseback, we bestowed the four Firelocks we had among those of our Company, who were in a Coach, relieving three Cafe of Pistols for our own Use on Horseback. Our Agreement was not to fire till we were sure of doing good Execution, and the *Rajpoots* gave us a fair Opportunity to employ our Fire-arms to the best Advantage; for as they were coming towards us in a very close Body, we discharged our Firelocks, which were charged with square Pieces of Iron, among them, which made three drop at once; but trulling in their Number, they pushed forward, killed two of our Soldiers, shot an Arrow into the Pommel of my Saddle, and another into the Turban of the *English* Merchant: Nay, they came to near us, that I received two Thrusts with their Halt-pikes upon my Buff Collar, which I was beholden to for my Life at that Time. Nay, two of the *Rajpoots* got hold of my Horse's Bridle, and were just going to carry me off, when the *English* Merchant came in very seasonably to my Relief, so that I made shift to kill one of them by a Pistol Shot, and to get clear of the other. By this time ten Soldiers belonging to the *Dutch* Caravan came in to our Assistance, and the Caravan itself being not much behind, the *Rajpoots* did not think it convenient to stay much longer, but made the best of their way to the Wood, leaving six of their Comrades killed upon the Spot, besides several others desperately wounded, whom they carried off. We had only two Foot Soldiers killed, and about eight wounded Persons. We expected another Visit from them, but we heard no more of them, and so arrived about Noon at *Bretschka*, and travelled eight Leagues more the same Day

I saw the *Mohammedans* of the Houses filled with Lamps, with Water, of all sorts of lightful Prospect at a Judged with Feasting and Libs, Crackers, and mand; among the rest, to Wheels, which being made a pleasant Show. A Caravan arrived at *Amadabat* the next Day. The *Amadabat*, but the next Deputy, being desirous to the chief Director there, van, taking twenty-four. We crossed the River to the *Indian* Custom, have Banners, not un- them. At Night we took *Saipour*, where meeting, we staid in that Place our Journey in the Evening in a Garden, where a noted Cistern for fresh ing at that Time guarded who pretended to keep us Occasion for, a Dispute of our Soldiers, which at our People were drawing Fellows wounded five of us so exasperated the rest, Entry People.

We met with another En- we proved fatal to some of which we had overtaken on Midnight, we followed far before we heard one of *Indies* commonly march be- instrument in an adjacent y forewarned of the *Rogues* Robberies, and killed y before, so we did not in is the Signal of our coming was it long before we found ing out of the Wood with ows; but the best was, that had scarce Time enough to Delence; but the *English* orieback, we followed the ose of our Company, who arce Cafe of Pillots for our Agreement was not to fire Execution, and the *Rogues* ty to employ our Fire-arms they were coming towards charged our Firelocks, which ces of Iron, among them, but trusting in their Num- ed two of our Soldiers, shot my Saddle, and another into rehart: Nay, they came to hruits with their Halt-pikes

I was beholden to for my o of these *Respects* got hold e just going to carry me off, me in very seasonably to my kill one of them by a Pistol other. By this time ten Sol- Caravan came in to our At- being not much behind, the went to stay much longer, ay to the Wood, leaving six on the Spot, besides several whom they carried off. We filled, and about eight wound- other Visit them, but and to arrived about Noon at Leagues more the same Day

to the Village of *Onclaffor*, and the next Day, being the 26th of *December*, to *Surat*.

19. The Day after my Arrival at *Surat*, I was present at the Resignation of Mr. *Mercwald*, the then chief Director of the *English East-India* Company to Mr. *Fremling*, who had been his Deputy before; there were present at it five Consuls, or Head Factors of that Nation in the *Indies*; three Ministers, two Physicians, and twenty-five Merchants. After he had given them Thanks for their Fidelity to the Company, and for the Affection and Respect they had shewed to his Person, he begged of them to continue the same both to the Company and Mr. *Fremling*; and thus with a short Complement he commissioned the said Mr. *Fremling*; after which he gave us a very magnificent Entertainment, there being not any thing wanting that the Season afforded; besides that we had a good Share both of the *English* and *Indian* Musick, as well as the Women Dancers. *December* the 28th the new Sultan or Governor of *Surat* made his publick Entry through that Place, having carried before him a certain Number of *Palanquins*, followed by one hundred and twenty Foot Soldiers, twenty of which carried Banners after the *Indian* Fashion. His Name was *Myrza Mohammed*, and was mounted on a most excellent *Persian* Horse. Almost all the Persons of Note of the Province, and among the rest the chief of the *English* Merchants, conducted him to his Palace. Immediately after the Establishment of the new *English* Chief, the Factors and Merchants returned to their respective Places of Residence, and the two *English* Ships then in Harbour there, called the *Mary* and the *Swan*, were ordered to dispose every thing for their Voyage, the latter being to sail ten Days before the other, and to expect our coming at the *Cape of Good Hope*.

But before we take our last Farewel of *Surat*, it will be requisite we should discharge ourselves of our Promise of giving you some Account of the Province of *Guzarat*, in which it lies. The Occasion of the Kingdom of *Guzarat* being incorporated with the Mogul's Empire, happened thus: *Shah Jahan*, a Favourite of Sultan *Mohammed* King of *Guzarat*, who died 1545, and constituted Guardian to the young King his Son, who was then not above eleven Years of Age, finding himself uneasy in this Station, by reason of the Jealousy of the chief Lords of the Kingdom against him, craved the Assistance of *Achobar* the then Great Mogul, or Emperor of *Indostan*, to maintain him in his Dignity, offering the City of *Amadabat* to him as a Pledge for his Fidelity; the Mogul, willing to accept of so fair an Opportunity, not only possessed himself of *Amadabat*, but also of the whole Kingdom, carrying both the young King and his Guardian away into Captivity. The King being afterwards come to Age of Maturity, found means to make his Escape, and to repossess some Part of his Dominions; but the Mogul was so close upon his Heels, that in less than a Twelve-month's Time he chased him thence, and the King of *Guzarat*, finding himself a second Time fallen into an Enemy's Hands, from whom he expected no good Treatment, cut his own Throat.

Ever since that time this Province is governed by a Sultan or Viceroy, who has an absolute Authority here in managing both the publick Affairs of the Government, as well as all the Revenues thereunto belonging, which are very great, and formerly amounted to eighteen Millions of Gold, besides the Customs of *Brotisbia* and *Bredra*, which produced eighteen hundred thousand Crowns per Annum, the rest arising for the most part out of the third Part of the Arable Lands which belong to the King's Revenues, which are assigned to the Governor for the Maintenance of a certain Body of Horse and Foot, to bridle the Insolence of certain petty Princes inhabiting the Mountains, and to clear the Highways from certain insolent Robbers, who issue forth out of the Woods in Troops of three or four hundred, and make the Roads very unsafe. But as the Number of Troops that are kept thus falls very short from what they ought to be, this, with the absolute Disposal of Justice, which the Governor is intrusted with, gives such an Opportunity of amassing prodigious Wealth as is almost inconceivable. His ordinary Residence is at *Amadabat*, and his Court and Equipage is so splendid as he appears in publick, that scarce any Court in *Christendom* is to be com-

pared with it; but as these Governors are merely depending on the Mogul's Pleasure, so they are sure to make the best Use they possibly can of their Time to enrich themselves at any rate. Hence it is, that he who complains to them first, and knows how to back it with Money, shall seldom go off a loser; neither is any Crime so great, but what may be bought off with Money.

The Cousteval, or Governor's Deputy, has, however, the Privilege of giving Judgment in Affairs of less Moment, and it is he who directs the Brothel-houses, and receives their Taxes; for as they look upon Murder and Adultery (especially if committed with a Woman of Quality) as the greatest Crimes, so they not only allow, but also protect Prostitutes, and that with so much Circumspection, that it is both without Danger and Blame that People frequent those Houses. Having given you before a short Account of those Cities we passed through in our Journey to and from *Agra*, we will here also say something of the rest of the Cities belonging to this Province. *Goga* is an open Place thirty Leagues from *Cambaya*, situated upon the Gulph, where it is so narrow, that it rather resembles a River than an Inland Sea. It is chiefly inhabited by *Banjans*; the *Portuguese* Ships keep there their Rendezvous, in order to convey their Ships to *Goa*. *Pattepatan* and *Mangeral*, two large Towns, nine Leagues from *Goza*, are inhabited by Calico-Weavers; the City of *Diu* lies upon the Southern Frontiers of the Kingdom; the *Portuguese* have three considerable Forts there. The City of *Bisnantagan* contains above twenty thousand Houses, and is consequently one of the biggest of the whole Province. The Fertility of the adjacent Country in Rice, Wheat, Cotton, and Pastures, and its Situation, which is in the Centre of the Province, has raised it of late to what it is, it being formerly but an inconsiderable Village. The City of *Patian* was formerly one of the most considerable of those Parts, having six Leagues in Circumference, and encompassed with a good Wall of Free-stone, which is now decayed in many Places.

Since the Trade of this Place has been destroyed by a certain kind of Thieves, which so infest the Roads thereabouts, that the Merchants durst not venture their Persons and Commodities thither. The Inhabitants live now, for the most part, by weaving Silk Stuffs, and Calicoes; but the last are very coarse. The Governor has his Residence in a very noble Castle; and in the very Centre of the City is one of the most sumptuous Mosques of all the East, the Roof being sustained by one thousand and fifty Pillars, most of Marble. *Cheytepur* is a small City garrisoned only by a hundred and fifty Men for the Security of the Caravans, six Leagues from *Pattan*, and twenty-two from *Amadabat*, situate upon the Banks of a small River. The Inhabitants are *Brijans*, who live on weaving of Calicoes, and making of Cotton-yarn. *Messiana* is an open Place, but maintains two hundred Horse Soldiers in an old ruined Castle, for the safe Passage of the Caravans. Some Calicoes are made here, the Country being very fertile in Cotton. The three small Cities of *Vassari*, *Gandin*, and *Balsara*, are under the Jurisdiction of *Surat*, the first lying six Leagues, the second nine Leagues, and the third fourteen Leagues thence, and all three not above two Leagues Distance from the Sea. Their Trade is in coarse Cottons, which are made in great Quantities here: The Country thereabouts also affords great Plenty of Timber for the building both of Houses and Ships.

20. The Descendants from the ancient Inhabitants of this Province are still *Pagans*, and are called *Hindous*, or *Indou*. The *Mohammedan* Religion was first introduced here by *Tamerlane*, and is since encreased by the great Concourse of Strangers of the same Religion; this Country being inhabited by *Persians*, *Arabians*, *Armenians*, and several other Nations; but you seldom meet with any *Chinese* or *Japanese* here. As most of the *Mohammedans* here profess the same Religion with the *Persians*, so their Language is as current here as the *Indián*. The *Indian Mohammedans* indeed adhere to the Opinion of *Hembili* and *Malcki*, whereas the *Persians* admit of no other Expositions of the *Alchoran* but those of *Haly* and *Tzazerjaduck*, but they both, with the same Zeal, reject that of the *Turkish* Interpreter *Haniff*. They are generally of an

olive or yellowish Complexion, though those to the North are not quite so dark as those living more to the South. The Men are commonly strong and well made, with large Faces and black Eyes. They shave their Heads and Beards, excepting only the *Muslaches*, like the *Persians*; and the *Mohammedans*, are clad after the same Way, except that they pleat their Turbans in a different Fashion; and the *Indians* wear the Opening of their Garments under the Left-arm; whereas the *Persians* wear it under the Right. The former tie their Girdle before with the Ends hanging down, and the latter wind it several Times round the Waist, and twist the Ends within it: To those they fasten their Daggers, which are about a Foot long, broad towards the Handle, and very narrow towards the Point. Some Swords there are worn here, but the Soldiers generally wear Cymitars.

As the *Indian* Horses are not very valuable, and yet very scarce, so their Oxen are frequently used instead of them, which are as swift as Horses, I have seen whole Bodies of these Ox-Troopers. Their Women are short, but well shaped; they wear their Hair hanging down over their Shoulders, and on their Heads a kind of a Cap of Lawn, interwoven with Gold, the Ends of which come down quite to their Knees. The richer sort are very sumptuous in their Apparel, have Pendants of Pearls and Diamonds in their Ears, and very fine Necklaces of Pearls, which make the fairer Show upon their Necks, which are of a brown Complexion. They sometimes also wear Rings in their Nostils. Breeches and Drawers are common to both Sexes, and are generally made of Taffaty or Calicoe, and that of such a Length as they would cover all the Body were it not for certain Strings that are fastened to them, that they can draw them together in Pleats like Mens Boots, though above the Ham they lie close to the Body without any Folds: Over these they wear their Shifts, which, however, reach scarce to the Navel: and over these again a Petticoat of Taffaty or Calicoe, but so thin that you may see thro' it. Their Shoes are flat soled and narrow towards the Toe, and commonly of red *Spanish* Leather. Their Breasts and Arms, as far as their Elbows, are bare, but covered with Bracelets. Women that value their Reputation here, never appear abroad with their Faces uncovered; and those of Quality scarce ever go out of Doors.

The Women of the *Banjans* are clad after a quite different Manner, for they, as they don't have their Heads, so they don't wear their Hair very long; neither do they cover their Faces, but wear Pendants and very rich Jewels, especially in their Ears. Black Teeth are a singular Ornament among them, which is the Reason they call us *European*, in *Dentition*, *Bendia*, i. e. Apes. They also wear no Breeches, but, instead of them, a Piece of Silk, reaching down to their Ham, over which they put their Snocks, and over them their upper Garments, which are fastened round their Waist with a kind of Girdle: Some of them wear small Waistcoats, the Sleeves of which come no farther than the Elbow, being naked from the Brest down to the Navel. During the Summer-season their Shoes are made of Wood, only fastened with Straps to their Feet; but in the Winter they have Shoes of Velvet, Brocade, or gilt Leather, the Quarters of which are very low, that they may put them off and on with more Conveniency; when they are going in, or coming out of a Room, the Floor of which is covered with Tapettry. Children of both Sexes are kept naked till they are five Years old. For the rest, the *Banjans* live with a great deal of Circumspection among the *Mohammedans*, who treat them contemptibly, and much after the same Manner as the *Jews* are looked upon with us, in those Places where they are suffered to live. Notwithstanding which they are more ingenious and crafty than the *Mohammedans*, which is the Reason both the *English* and *Dutch* employ them as their Brokers, it being next to an Impossibility that any Stranger should be able to find out all their Impostures without the Assistance of some of their own Gang.

Their Children, especially their Daughters, they marry at seven, eight, nine, or ten Years of Age, it being very rare that they stay till the twelfth; for as the *Indians* arrive sooner at Maturity than other Nations, they are of Opinion, that if a Maid stays any Time beyond that Age,

she must be subject to some Infirmity. The Day for the Consummation of the Marriage being come, the Parents of both Parties sit round a good Fire in a spacious Room, the Bride and Bridegroom take three Turns about them, whilst the Braman gives them his Benediction. If a *Banjan* Bridegroom happens to die before he has taken his three Turns thus, the Bride may challenge the Privilege of marrying another, the Widows of the *Banjans* being not allowed a second Marriage upon any Account, though their Husbands should chance to die before the Consummation of the Marriage: So that those who cannot dispense with a single Life, associate themselves to the Women-Dancers. The *Banjan* Women are not obliged to burn themselves with their dead Husbands (as the Wives of the *Bramans* and *Rajpoots* are) unless they will do it voluntarily. The Men are permitted not only to marry a second or third Time, but may have two or three Wives at a Time, provided the first or second prove barren; but the first challenges, and retains the Precedency. The Sons only inherit the Father's Estates, but are to maintain the Mother, and are to provide Husbands for the Sisters. As they use neither Baptism or Circumcision, they must be numbered among the *Pagans*: And though they acknowledge one supreme Being, the Creator and Preserver of all Things, yet they pay worship to the Devil, for this Reason, because that God having constituted him to govern the World, he ought to be appeased by Offerings.

The Figure under which they adore him, is to be seen in all their Pagodas or Temples, some of Gold and Silver, some of Ivory, Ebony, and Marble, and others of Wood, or common Stone. The Head, which has four Horns, besides a Triple-crown in the Shape of a Crown, or Mitre, with a grim Countenance, and two great Teeth coming out of the Mouth, like the Tusks of a Wild-Bear, and a great rough Beard all over the Chin. The Arms hang down carelessly on both Sides, and the Breasts are extended as low as the Navel, under which, betwix his Thighs, you see another Head, with two Horns more deformed than the first, thrusting out of the Mouth a very ugly large Tongue: The Feet are like Paws of ravenous Creatures, and behind a Cow's Tail. This Statue is always fixed upon a Stone-table, which is the Altar where the Offerings are made to the Idol. On the Right-side of it stands a Cistern, in which those that come to sacrifice purify themselves beforehand; and on the Left-hand a Chell, into which they put their Offerings, which are always made in Money. There is another Vessel not far from the Cistern, out of which the Braman, or Priest, takes a certain yellow Mixture, made of Water and Sandal-wood, and therewith marks the Foreheads of such as have performed their Devotions. The Braman's ordinary Place is at the Foot of the Altar, but he rises from thence frequently to say his Prayers, and before he goes away, he is sure to purify his Hands, by rubbing them over in the Flame of the Lamps, which are placed before and about the Altar, and furnish their Pagodas with Light, and consequently are kept continually burning, being the chiefest, if not the only Ornaments of these Temples, which look more like Caves and Holes of Darknets than Places of Devotion, there being nothing to be seen on the Walls of them but the Figures of Beasts and Devils: Notwithstanding which these poor Wretches pay their Devotions with more Respect and Zeal than is observed in most Christian Churches.

They are like the *Mohammedans*, much addicted to corporal Purifications, which they seldom fail to use every Morning before Sun-rising. The Bramans deduce their Original immediately from their God *Brama*, and say that they are the Product of his Head, whereas the rest came out of his Thighs, Feet, and other more ignoble Parts. Mr. *Abraham Rogers*, who lived ten Years in the *Dutch* Service, on the Coast of *Coromandel*, says, that the *Bramans* acknowledged for their supreme God, one *Wishu*, or *Etawara*, and that out of his Navel sprung forth a Flower called *Tamara*, which produced *Brama*, the first of all Men: who had Power given him, not only to create the World, but also to settle what Order and Government he thought best. They further say, that this *Brama*, being God,

ity. The Day for the being come, the Parents fire in a spacious Room, three Turns about them, Benediction. dans, much addicted to cer- they seldom fail to see every The *Bramans* deduce their God *Brama*, and say that dead, whereas the rest came other more ignoble Parts. ved ten Years in the *Dutib oman del*, says, that the *Bra-* supreme God, one *Wishul*, or Navel sprung forth a Flower eed *Brama*; the first of all him, not only to create the at Order and Government he ay, that this *Brama*, being God's

God's Vicegerent, has distributed the Administration of the Universe among eight Lieutenants, the chief of whom they stile *Deiwendra*, and say he commands all the rest of the Governors, who govern eight distinct Worlds, such as ours are, all which they are of Opinion swim upon the Surface of the Water like so many Eggs.

They say farther, that there have been divers Worlds before that which is now in being, and others will be after it; though, they tell us, that the World we live in, is to continue a Million of Ages, since that in the Year 1693, there were no more than 4739 Years of the fourth Age of the World elapsed; and that the first Age had lasted 17290 Years. That in the first age of the World all Men were just and good to such a Degree, that the Devil, who was then created, had no Power to injure them; that in the next following Age, the fourth Part of Mankind became depraved; that in the third there was an equal Mixture of good and bad; and that in this last Age of the World, the Number of the good amount only to one fourth of the whole. But let this suffice concerning the Theology of these *Pagans*; we will only add, here, that the *Bramans* have by their Austerity of Life and Abstinence, gained a great Advantage over the *Pagans*, who look upon their Explications of the Mysteries of their Religion as so many sacred Oracles; for which Reason also, generally, they entrust them with the Education of their Children. They are distinguished from the other *Banjans* by a peculiar kind of Linnen Coiffure; besides that, they never cut their Hair, and wear three Strings of Packthread next their Skins coming from their Shoulders cross their Breast to the Waist; and and as this is the Badge of their Order, so they never lay it aside: They believe the Immortality of the Soul, and its Transmigration from the Bodies of Men into those of Beasts, before they can be capable of the Enjoyment of the Blessings of the other World; for which Reason it is that the *Banjans* will not allow the killing of any living Creatures, even down to the Insects; and they are so careful in this Point, that they will not keep any Fire, or lighted Candles in the Night-time, for fear the Flies should burn themselves; and when they do at other Times, they make it in Pits under Ground. Their charitable Inclinations to all living Creatures are so great, that they redeem such Birds as are caught by the *Mobammedans*, to be killed; nay, they have certain Hospitals appointed for sick and wounded Birds.

Among the *Malabars* these *Bramans* are in such Veneration, that they have the First-fruits of all the Brides, and by the richer Sort are invited to perform this Task with very considerable Presents; nay, there is scarce any body of Note there, when he is to be absent from Home for any Time, but recommends his Family, especially his Wife, to the Care of a *Braman*, to supply his Place.

The *Banjans* are accounted to have thirty-eight principal Casts among them, not to speak here of the lesser ones, which are not to be numbered; they have four general Sects, under which all the rest are included, viz. those of *Courawath*, *Samarach*, *Bijnow*, and *Golgay*. Those of the first Sect are very precise in the Preservation of living Creatures, for which reason their *Bramans* have their Mouths covered with a Piece of Calicoe, for fear any Insect should get into and perish in their Mouths; they for the same reason sweep their Rooms continually, and will not sit down before they have looked, for fear of sitting upon them; neither do they keep any Fire or Candle in their Houses. They are distinguished from the others by a white Staff they carry in their Hands, and walk always bare-headed and bare-footed. Their Cloathing is only a Piece of Calicoe coming down from the Waist to the Knee, the upper Part of their Bodies being covered only with a woollen Cloth. They don't believe an infinite Being as the rest do, but attribute the Events of all Things to Chance, and know of no other good Deeds but Fast- ing and Giving of Alms. In Consequence of this Opin- ion, they acknowledge in the Sun, Moon, Stars, the Earth, in all Creatures, nay, in Trees, and in Metals, and all visible Things, the inherent Causes of their Production. They allow two Suns, and as many Moons, which they say relieve each other alternately every Day. They be- lieve nothing of Heaven, or any Mansion of the Blessed,

tho' at the same Time, they acknowledge the Immorta- lity of the Soul, and its Transmigration, which they say, does, after the Separation from the first Body, go in- to another, either of Man or Beast, according to the Be- haviour of the Deceased in this World; they say it always makes Choice of a Female that it may return into the World, though in another Body. Their Temples are all four-square, with flat Roofs open to the East-side, under which are the Chapels of their Pagods, or Idols, raised ten Feet from the Ground, in the Form of a Pyramid, with Stairs leading up to them; on which you see certain Figures of Wood, Stone, or Paper, representing some Persons among them who have rendered themselves famous by their ex- traordinary good Fortune. The chiefest Time of their Devotion is in *August*, when they mortify themselves, espe- cially by Abstinence to such a Degree as would pass for fab- ulous, were it not that even their professed Enemies in the *Indies* have unanimously born Testimony to the Truth of it; that some have been known for the Space of fifteen or twenty- one Days, nay, some for a Month, or six Weeks, not to take any other Nourishment than Water mix'd with the Shaving of a certain bitter Wood. In this Month they have their general Assemblies in their Temples, whither they resort to hear the *Braman*, who sits in the Center of them, and reads certain Legends of the Lives of their Saints. Im- mediately after they come into the Temple they put their Offerings of Money into a copper Basin, placed there for that Purpose, in return of which the *Braman* bestows up- on them the yellow Mark, either on their Foreheads, or Cloaths: Whilst they are hearkeni- g to the *Braman* they are entertained with Music.

If any aged Person dies, they burn the Carcass, but Children which die before they come to three Years of Age are buried. Their Wives are not obliged to burn them- selves with their deceased Husbands, but must live in per- petual Widowhood, and there is none belonging to this Sect, but what is capable of being received into Priest- hood, to reach which he has no more to do, than to change his Habit, vow Chastity, and follow the same Austerity of Life prescribed to their Order. Women are not even ex- cluded from this Function, but they must be above twenty Years of Age, whereas Males may come in at seven, eight, or nine Years of Age; nay, if either of the married Cou- ple embraces Priesthood, the other is engaged to Celibacy for Life. Some of them make a Vow of Chastity in Mar- riage, but this is not so well kept as made. This Sect is an Abomination to the other *Banjans*, to such a Degree, that they will not eat, drink, or converse with them: Nay, if they happen to touch them, they are obliged to a very strict Penance.

The second Sort among the *Banjans*, which consists for the most Part in Locksmiths, Farmers, Carpenters, Tay- lers, and most other sorts of handierast Men, as also some Soldiers, Officers, and Clerks, have scarce any thing in com- mon with the first, except that they allow not the killing and eating of any living Creature, believing for the rest, that the Universe owes its Origin to a first Cause, which also preserves it by certain and unchangeable Rules. They give the Name of *Permissor* to this supreme ruling, and affirm, that it governs the World by three Deputies; the first they call *Brama*, and attribute to him the Manage- ment of Souls, according to the Direction of *Permissor*, in order to their Transmigration into the Body of Men, or Beasts. The second named *Buffiana*, is appointed to instruct the World in their Duty to God, and manages the Wheat, Herbs, and Pulse, in the Fields and Gardens. The third called *Mais*, is the chief Manager of the Dead, being *Permissor's* Secretary, who after having taking an Account of the good and bad Actions of the Deceased, makes a report of it to his Master, who, according to every one's Deserts, sends the Soul into the Bodies of cer- tain Beasts, where they must do more or less Penance, before they can be purified from their Sins. In this kind they look upon the Cow as one of the best, having some thing divine in it above all the rest. They burn the dead Bodies of their Friends, except those of their Children under three Years of Age, whom they bury near some River, or Brook, none of the *Indian* Women accompany- ing their Husbands with so much Cheerfulness in their

last

last Journey, as those of the Sect of *Samarath*; for as they are persuaded, that such as die with their Husbands shall live with them in the other World seven times as long, and enjoy with him seven times more Pleasure there, they are so fond of to plentiful a Blessing, of which they have so tender a Share in this World, that they are ready to sacrifice their Lives in order to attain it.

The Sect of *Bishnow* agrees with the two preceding in this Point, that they do not feed upon any thing that hath Life. They are also much addicted to Abstinence, and keep their general Assemblies in their Temples in *August*, where they sing and dance to a Consort of Musick, consisting of Drums, Pipes, and Copper Basons, before their Pagod called *Ramram*, singing Hymns in his Praise. They represent him with his Wife in Statues, adorned on their Festivals with Gold Chains, and Collars of Pearl and precious Stones, with many Lamps, and lighted Wax Candles before them. This God acts without any Deputies; they feed upon nothing but Herbs, Pulse, Fresh-Butter, Milk and Curds, and are great Admirers of a Pickle made of Ginger, Mangoes, Citrons, Garlick, and Mustard-seed; and their Drink is Water. None but Women or Priests dress their Meats, and use Horse dung mixed with Straw, and made up into a kind of Turf instead of Wood, for fear some small Worms, or other Insects, should be burnt with it. Most of this Sect are Merchants, Factors, or Brokers. They have this Custom peculiar to themselves, that they will not permit their Widows to burn themselves with their deceased Husbands, but oblige them to continue Widows. Not many Years ago the younger Brothers among them were obliged to marry their elder Brother's Widows, to raise up Seed to him; but this is now abolished.

They commonly wash themselves every Morning in some Cistern, or a River, if any be near them, where they wallow and swim in it, whilst the Braman, who stands hard by, mutters out certain Words, and imparts to them his Benediction, and at their coming out gives them the Mark in their Foreheads, or in some other Place; for which he is paid with Wheat, Rice, or Pulse. Those belonging to the Sect of *Corepky* are a kind of Hermits, neglecting all publick or private Affairs, and dwelling in solitary Places, and ruined Houses, or Woods, shun the Conversation of others; they worship a God whom they call *Bruin*, and his Servant *Mees*; but have no particular Temples, or any other publick Assemblies, to perform their Devotions in. As they are forbidden to have any Possessions of their own, so they have nothing but a Piece of Calicoe to cover their Privities; they never speak to any body, or will give an Answer to any, or ask for any thing, though they were in the utmost Extremity, but will take what is given them; they rub their Bodies all over with Ashes, and especially their Hair, which makes them look very strangely. They are in great Veneration among all the other *Banjans*, except the Sect of *Cowrawath*, who abhor them.

They believe that their God is the Creator of all things, which he preserves by his own infinite Power, by which he is able to reduce all to nothing; that he is not to be described under any Shape, being a Light, which, as it is the Cause of the Sun, his Brightness is not to be seen by our Eyes. They differ from all the other *Banjans* in this; that they don't believe the Transmigration of Souls; but that they are immediately, after they have left their Bodies, transferred to God, and united to that infinite Light. They are so strict Adherers to their Rules, that they admit no *Mohammedans* into their Sect, or re-admit such of their own as have been Prisoners among the *Mohammedans* and *Christians*, and have eaten Meat without a most severe Penance, which is, to eat for six Months together Cow-dung mixed amongst their Victuals. Nothing can be conceived more superstitious than the *Banjans* in general; they never stir out before they have paid their Devotions, and if in going out of their Houses they meet with any thing which they look upon as ominous, they return, and undertake nothing further that Day.

The *Kahpoots* are by some reckoned among the Number of *Banjans*, who allow them a Place with those of the Sect of *Samarath*, as believing the Transmigration of the Souls; besides several other things affirmed and maintained by that Sect, they are further of opinion, that the Souls of

Men transmigrate particularly into Birds. Their Widows are obliged to burn themselves, unless the contrary be provided for in the Marriage Contract; for the rest, they are not of that reserved Temper as most of the *Banjans* are, who abhor the Effusion of Blood, even of that of irrational Creatures; whereas these live upon Rapine, eat Flesh, and addict themselves altogether to warlike Exercises; and as they are a daring Generation, so they are employed by the Mogul in his Armies. Some Compassion they have for Birds, which they will feed and cherish. They, like other *Banjans*, marry their Children very young, which, as I have mentioned before, proceeds from hence; that the *Indians* of both Sexes come sooner to Perfection in this respect than any other Nation in the World. There is besides these another sort of *Pagans* in *Guzurat* called *Parfys*, descended from the *Persians* of *Fars* and *Cheerjan*, who left their native Countries in the seventh Century, to avoid the Persecution of the *Mohammedans*. They dwell for the most part along the Sea Coast, and live upon planting of Tobacco, and making of Arrack or Aquaviva out of Teddy; though many of them addict themselves also to Trade. They believe one God, the Creator and Preserver of the Universe, who acts by his own Power, but has committed the Administration thereof to his seven Servants, whom they represent thus: The first named *Hanassla*, has the Government of Men; the second called *Babman*, the Sovereignty over all Beasts and living Creatures; the third *Ardabash*, takes care of the Fire; the fourth named *Sarywar*, has the Charge of Metals; the fifth, whose Name is *Ispander*, takes care of the Earth, as *Awardath* the sixth, doth of the Water; and the seventh called *Ammadath*, hath the Precedency over Fruit-trees, Herbs, and Pulse, yet under God's Direction, unto whom they are accountable for their Transactions.

Besides these seven Head Servants, God, say they, makes use of twenty-six others, each of which has his peculiar Function assigned him. The Business of the first is, to take Possession of the Soul immediately after its Departure out of the Body, which he carries before two Judges called *Meer Rejus* and *Saras*, who taking care to have the good and evil Works put into two Scales, pronounce Sentence according to their Weight, and deliver the Soul up either to the good Angels to be carried into Paradise, or to the evil Spirits to drag them to Hell, where they are to be tormented to the End of the World, which, according to their Opinion, will be renewed in one thousand Years. The fourth, called *Beram*, has the Administration of all military Affairs. The fifth, *Carrasada*, is the Sun. The sixth, *Awa*, the Water. The seventh, *Ader*, manages the Fire. The eighth, *Moko*, is the Moon. The ninth, *Tiera*, or *Rain*. The tenth, named *Gas*, has the Management of Cattle. The eleventh, *Farwarshy*, the Custody of the Souls in Paradise. The twelfth, *Aram*, imports Joy or Sadness to Mankind. The thirteenth, *Goada*, is the head Manager of the Winds. *Dien*, the fourteenth, is he who is to instruct and to infuse into Mankind the Law of God. The fifteenth, *Aprasanteb*, is the Giver of Riches, as *Ajjah*, the sixteenth, has the Disposal of Understanding and Memory. The seventeenth, called *Ajjamant*, is chief President of Commerce; and *Gamigat*, the eighteenth, has the Government of the Earth. The nineteenth, called *Marrisipan*, is Goodness itself. And the twentieth, named *Amiera*, the Manager of ready Money. The twenty-first, called *Hoem*, has the Management of Generation of Men, Cattle and Fruits. The twenty-second and twenty-third, called *Dima* and *Borse*, are looked upon as two Geni appointed to watch all Men; and the three remaining, viz. *Depbader*, *Depbener*, and *Depbaden*, are God's constant Attendants, who employ them in what Affairs he pleases, without Distinction. As the *Parfys* are of opinion, that God has left the Administration of the respective Affairs in relation to their Station to their Disposals, they adore them in case of Necessity. Their Teachers are in much Veneration among them, some of whom engage themselves in Traffick and other Employments.

They have no publick Places of Devotion, but perform the same in their Houses, sitting without any Motion of their Bodies. They have no peculiar Days set aside for their religious Worship, except that they observe particu-

larly the first and twentieth Day of the Moon. Each of
their Months consisting of thirty Days, they add five
Days to the last Month to make up the Year three hundred
and sixty-five Days. Their Teachers are not distinguished
from the rest by their Habit, which they have in common
with the *Parfisi*, and the other Inhabitants of the Country
being known only by a certain twisted Girdle of Wool, or
Camel's Hair, which comes twice round the Waist, and
ties with two Knots behind; this being the certain Badge
of their Religion, and so essential to them, that he who
loses it must not either eat or drink, or flit from the Place
where he is before he has bought another from the Priest.
The Women also are allowed to wear them after the twelfth
Year of Age. They live very meanly in little dark Houses,
poorly furnished, and affect much to live near one another.
They have the Liberty of choosing two of the most con-
siderable Persons of the Nation for their Judges. Fire is
so sacred a thing among them, that they would not exting-
uish it with Water, though the House were in Flames,
looking upon it as the most lively Representation can be
made of the Divine Light; for which Reason it is, that
they will rather smother their Fire with Earth, nothing
being more irksome to them than to see their Fire exting-
uished at any time. They early engage their Children in
Wedlock; but the Marriage is not consummated till
the fifteenth or sixteenth Years of their Age, and in the
mean time they are committed to the Care of their respec-
tive Parents. As they look upon Adultery and Fornica-
tion as the most heinous Crimes in Nature, so they allow
their Widows to marry a second time to prevent them.

They are very particular in their Burials; for so soon as
the Patient is given over, they lay him upon a little Bed of
green Turf, where he yield up the Ghost, which no
sooner happens, than five or six Grave-makers come, take
him from the Bank of Turfs, put a Shroud about him, and
lay him upon an Iron Grate made like a Bier, and so carry
him to their Burying-place, a League without the City,
which is divided by a Wall into three Parts, viz. one for
the Men, the second for the Women, and the third for the
Children. Over their Graves are laid Iron Bars like Grates,
upon which they leave the Corps till the Birds have eaten
all the Flesh, and the Bones drop into the Grave under-
neath. The Friends accompany the Corps till they come
within five hundred Paces of the Grave, where they stay,
and make most doleful Cries, till the Grave-makers have
laid it upon the Grate. A Month or six Weeks after the
Burial they carry the Turfs upon which he died, as things
polluted, to the Burying-place, and every Month entertain
the nearest Friends with a Collation, in Memory of the
deceased.

If any one happens to touch a dead Carcass, or the
Bones of a dead Beast, they are defiled, and must under-
go a Penance of nine Days. They reckon those damned
whose Bones happen to fall into the Water. They are for-
bidden to eat, of any living Creature; yet in Time of
War, they will make now and then bold with a Sheep,
Goat, some tame Fowl, or Fish, and eat it; but never
kill any Camels, Elephants, Horses, or Hares; and as to
the Ox, and Cow, they are so far from killing them, that
they have a Proverb, that they would rather feed upon
the Fells of their Fathers and Mothers, than upon an Ox,
or a Cow. Though they are not forbid the Use of Wine
and Teddy, their Law enjoins them a severe Penance for
Drunkenness, and upon that Score, the drinking of *Aqua
Viva*. They are but middle-sized, but of a much clearer
Complexion than the Natives of the Country, and especially
their Women, who, in this Point, much exceed the
Mobammedan Indostans. The Men have great Beards,
but somewhat round; some cut their Hair, others wear it
without cutting; the first leave only a Lock of an Inch in
Compass, on the Crowns of their Heads. They are very
industrious, and an over reaching Generation; and were it
not for their avaritious Temper, would be much better
natured than most of the *Mobammedans* are. They have
two other sorts of Pagans in *Guzarat*, viz. the *Hindoo*s and
Jenivies; the first are descended from the Province of
Maliban, and the Parts about *Affinean*. They are so far
from being *Banjans*, that they wont admit them to be
present at their Meals, which they eat within a Ring, and

NUMB. 52.

they eat of all sorts of Beasts, except the Ox and Cow.
They apply themselves for the most Part to the Wars.
The *Jenivies* deduce their Origin out of the Kingdom of
Goleonda, being a sort of poor ignorant Wretches, who
pin their whole Faith upon the Sleeves of their Bramans.
Their Belief is, that originally there was but one God;
but as in Process of Time Men deserved well of him by
their great Actions, he communicated to the best of them
some Share of his Power: These are their chief Saints
whom they worship in their Temples.

There is another sort of People here called *Thebers*, be-
ing neither *Mobammedans* or *Pagans*, living without any
Religion; their Employment being the cleansing of Wells,
Sinks, Common-sewers, and the sealing of dead Beasts,
whose Flesh they eat. They are also frequently employed
as Executioners, which is the reason they are avoided by
all other *Indians*, for fear of being defiled by them, and
are not permitted to live any where but in the Suburbs.
As the Religion of the *Mobammedan Indostans*, some few
Points excepted, approaches very near to that of the *Turks* and
Persians, we will not enlarge here upon that Head, but
will proceed to give you some Account of the manner of
Life of these *Mobammedan Indians*, so far as the
same is very different both from the *Turks* and *Persians*.
To begin with their Marriage Ceremonies, they are per-
formed thus; On the Day appointed for the Wedding,
the Bridegroom mounted on a Horse, whose Main and
Crupper are adorned with Flowers, and a Net over his
Head, rides from his House accompanied by his Friends
and Kindred, with a Concert of Musick before him, and cer-
tain Fellows are appointed to cast Squibs and Crackers to
the Bride's House, where having given her the Diversion of Mu-
sick, and Fire-works for half an Hour, he dismounts, and
sits himself down in the House upon Tapestry, laid upon
the Floor for that Purpose; soon after the Bride, with her
Friend the *Molla* and *Kadi*, or Judge of the Place, come in.
The *Molla* having read certain Passages out of the Alcho-
ran, and taken the Bridegroom's Oath, that in case of
Divorce, he will make Provision for his Wife, he gives
them his Blessing and departs. The rest of the Company
who stay behind, are entertained with Beetle and Pills of
Amphion, or Opium, which they use instead of Wine,
and produce very near the same Effect. If the Bride
proves an undefiled Virgin by the Marks upon the Sheets,
the Friends assemble for five or six, and sometimes eight
or ten Days after: But if the Passage be found not so
well guarded as it should be, the Bridegroom takes his
Leave of her, and returns her to her Friends. On the
other hand, if the Bridegroom finds her so strait laced, as
that he cannot enjoy her in three or four Days, and
consequently is suspected of want of Ability, one of the
nearest Kinwomen to the Bride sends him a Distaff, with
this Message, that not being made for Man's Work, she
has thought fit to furnish him with some Womens Busi-
ness. The Marriages of the *Indian Mobammedans* are not
so strict as those of the other *Mobammedans*, who can't be
divorced unless both Parties be heard, and Sentence pro-
nounced by a Judge. But here they may be divorced with-
less Ceremony, upon a bare Averfion, or Distaste, with
this Proviso, however, that pursuant to what they pro-
mise at the Marriage, the Men are obliged to provide
for the Sustainance of their Wives, who, therefore have no
other Dowries here, but as for the Jewels they bring a-
long with them, they cannot reclaim any thing of that
Nature. The Women of any Quality sit but seldom
abroad, and that either in a close Coach, or *Indian* Lit-
ter; and if they happen to ride on Horseback, their Face
is covered with a Scarf, none but the meaner sort, or
common Prostitutes, being to be seen on Foot, and with their
faces bare, in the Streets. The *Indian* Women have generally
a very easy Deliverance, it being a great Rarity to hear of
a Woman that is above two or three Hours in Labour.

Their Children they educate with extraordinary Care in
Schools, where they are taught to read and write; and
such as are not able to do it, they send either into the Wars,
or into the Service of great Persons, where their Allow-
ance is so slender, that they lead but an unhappy Life.
It is generally observed, that the *Indian* Children have a
very tender regard for their Parents, to such a Degree,

that they would starve themselves to preserve them. Most Persons of Note are very careful to build themselves Houses in very handsome Gardens, which serve them and their Families for Sepulchres; these Houses have many small Windows on all Sides. They use the following Ceremonies at their Burials; immediately after the Decease of the Patient, the Kindred with great Lamentations come to ask him what made him die; whether he wanted such and such Conveniencies, which they name to him. This done, whilst the Corps is washed and put into a Coffin, the Friends divert their Sorrow by making good Cheer. Three or four *Mollas* remain constantly near the Body (which is wrapped in a perfumed Sheet) to pray for the Soul, till it be carried to the Burial-place, whither the Coffin with the Corps covered with Calicoe, Velvet, or some other precious Stuff, is carried by ten or twelve Men, the *Mollas* singing all the while their Hymns, and the Kindred accompanying it to the Grave. Here the Body is laid down upon the Right-side, with the Face to the West, the Feet to the South, and Head to the North, the Coffin being covered with a Board, for fear the Earth should defile the Corps. It is let down smoothly into the Grave, whilst the Kindred mutter out certain Prayers, and so return to the House of the Deceased, where the same *Mollas* continue their Prayers for several Days after, during which Time, not a Spark of Fire must be seen in the House. They stile themselves *Mussulmans*, or true Believers, looking upon all other Religions as Hereticks and damnable; but as they have a singular Aversion to Images, so they shew more Hatred to the *Roman Catholicks* than *Protestants*, on the score of their Images.

They are generally of a good Stature, without any natural Defects. They have all lank black Hair, tho' those they call *Megollies* have a clearer Complexion than the rest. They don't admire flaxen Hair, but hate red-haired People, out of an Opinion they have, that they are leprous, a Distemper very common here; one reason of which is, that the Pox being seldom cured as it ought to be, by Degrees affects the Blood afresh, and turns to a Leprosy. The *Mollas* let their Beards grow, but all the rest shave their Beards as well as their Heads, leaving only a Lock on the Crown, by which, they say, *Mohammed* is to pull them up to Heaven. There is no Distinction in the Dress of Men and Women. They make their Garments of Calicoe, Silk, or Brocade, according to the Abilities of those that wear them. They lie close to their Bodies above their Waist, like ours, but grow wider and wider downwards to the Small of their Leg, where abouts their Breeches, which reach to their Shoes, are gathered by a String into many Plats. Their Shoes are of *Spanish* Leather, Silk, or Brocade, with very low Quarters, because they have frequent Occasion to pull them off when they go into Rooms, where the Floors are covered with rich Tapettry. Their Head-dress comes nearer to that of the *Turks* than the *Persians*, being commonly of thin Calicoe, or Silk, interwoven with gold and silver Thread. They lay it by when they go to Bed. They have over their Garments a kind of Cloak to defend themselves against the Injuries of the Season. Their Garments are tied round their Waist with a silk Girdle wrought with Gold, and over this they have a kind of a Sash of fine Calicoe. In these, Persons of Quality wear their Daggers, the Handle and Sheath of which are generally of Gold, and set with precious Stones.

Their Houses are but slightly built, the Walls being nothing but Plaster-work made of a Mixture of Freestone powdered, some Lime, Gum and Sugar, which being very white and smooth, makes no disagreeable Shew at a Distance. They are also indifferently furnished, especially the Kitchens, where, besides a few Dishes and Stoves, you see very few other Utensils; tho' for the rest, the Houses of Persons of Quality are very large, and divided into convenient Halls, Apartments, Chambers and Closets; in the two last of which the Women take great Delight to sit them out with their gold and silver Plate. When they are to receive Visits, they place themselves in the Hall, upon Pieces of Tapettry. They salute each other at their first coming in with their Salam, and an Inclination of the Head, and if the Person be of greater

Quality, they put their Right-hand to their Heads, to shew their Readiness to submit to them. If they are of an equal Condition, no further Ceremony is observed, but a mutual Inclination to their Bodies. Sometimes they touch one another's Locks, adding these Words, *Grânie meus*, be it to you according to the Prayers of the Poor. He who receives the Visit, never stirs from his Place, the Visitors being set on his Right and Left-hand. Their Visits are made with a great deal of Reservedness, no such thing as the least loud Discourse being to be heard, or any Gestures made with their Hands, or Heads. If they whisper to any body, they are sure to hold to their Mouths a Napkin, or some such thing, for fear of offending with their Breath him to whom they speak.

Their greatest Expence is in Cloaths, Eating, and Women; for as by the *Mohammedan* Law, they are all allowed to pursue their sensual Pleasures to the utmost, as far as may be done without Detriment to their Neighbours, they indulge themselves in this Point to the Extent of their Power. They keep a numerous Retinue of Servants, each of which hath his Business assigned him. Their Footmen have great Plumes of Feathers on their Heads, and two little Bells on their Breasts, and are so hardy, that they will travel fifteen or sixteen Leagues a Day, without much Difficulty. They have all their board Wages, and some Vails, but both are so small, that they can scarce keep themselves from starving. The many Women the *Mohammedans* marry, are very chargeable to them, together with their Eunuchs, for they are very extravagant in their Cloathing, Jewels, and Furniture; the chief Amends they have for this is, that each Woman endeavours by all imaginable Art to gain her Husband's Affection and Enjoyment before the rest, there being nothing to be contrived, but what they will make use of to excite him to Voluptuousness. The common handicraft People are but in a very poor Condition here, for as every Piece of Work passes through several Hands before it is finished, they can scarce get Six-pence a Day, and the worst is, that the Children must be bound to no other Trade than that of their Fathers.

Hence it is that they are forced to live upon Bean-flour and a little Rice boiled in Water, in the Nature of a Hasty-pudding, into which they put a little melted Butter, and their poor Houses are huitable to their Way of Living. Merchants live here in Plenty enough, and would be sufficiently happy, were it not for the Danger they lie under of being fleeced by the covetous Governors of the Places in which they live, under some Pretence or other, as soon as they begin to discover their Wealth: So that the only Way to keep any thing, is to appear to have nothing.

21. Though all the *Mohammedans* in the *Indes* profess the same Religion, yet are they distinguished into diverse Sects, such as the *Patans*, *Moguls*, and *Indolans*, besides several others, which, as well as their several Temples, arises more from the different Dispositions of those Countries from whence they came, than from any religious Account. Thus the *Patans*, or *Padars*, are a most daring, cruel, and barbarous Generation, who without any Consideration, will thrust themselves into hazardous Enterprises. The *Moguls*, or *Mogulies*, on the other Hand, deduce their Origin from the Natives of *Great Tartary*, are complaisant and discreet, which gains them great Respect among the other *Mohammedans*. The *Indolans*, or *Industans*, are somewhat barbarous, and though covetous, yet are not crafty enough to deceive without being found out. They are the true ancient Inhabitants of *Grand*, and may be easily distinguished from the rest by their Complexion, which is much more inclining to black than the two former.

There is another sort of People in the Province of *Hawakhan*, who, as they are very hardy and bold, so they are employed chiefly in carrying Merchandizes; they are called *Blottions*, their chief Employment being to let out Camels, and to conduct the Caravans, which they do with so much Fidelity, that they would rather famish themselves, than suffer any thing to be lost. All over the *Mogul's* Country, as well as in this Province, no such thing is to be seen as publick Inns, except that in the Cities, and some Villages, are erected certain publick Buildings out of Charity

Charity

Charity for the Conveniency of Travellers, and these Cara-
vaneras have no other Accommodations but four bare Walls,
and a Covering over Head. They travel with Camels,
Horses, Mules, and Oxen. They make use also of a
certain kind of Coaches, drawn by Oxen, which will tra-
vel ten or twelve Leagues a Day; they are covered with
Velvet on the upper Part, but those for the Women are
so covered on all Sides. Persons of Quality travel for the
most Part on Elephants, or are carried in Palanquines, or
Litters, carried by two Men upon their Shoulders, with a
Bar. They are very careful in breeding up their Ele-
phants. Hawking and Hunting is their chief Sport.
Their Greyhounds are less than ours, but they make use
of tame Leopards, and Tygers in Hunting, which are the
best in the World at surprizing a wild beast, but never pur-
sue it. They catch Water-fowl by the Skin of a wild
Duck, filled with Hay, which being tied to the decoy
Duck, they swim up the Water till they get insensibly
among the reed without frightening them. Their Bows
are made of wild Ox Horns, and their Arrows of Cane,
and they manage them with so much Dexterity, that they
kill Birds flying. Their Games are Chess, and some at
Cards. They are great Lovers of Music, though theirs
be so rough; but judicial Astrology has got such an Af-
cendant among them, that nothing of Moment is to be
undertaken here without first consulting those who profess
it. They are not quite destitute of Books, *Aristotle's*
Works, or at least most of them, are to be met with
here, translated into the *Arabian Tongue*; as likewise cer-
tain Treatises of *Avicenna*, who is in great Request with
them, as being born at *Samarcand*, under the Jurisdiction
of *Tamur*, or *Tamerlane*: Their Writings are not despic-
able, and have something of Rhetorick in them; and their
Annals are so well, and exactly kept, as to furnish suffi-
cient Matter for a good History.

Though their Language be divided into several Dia-
lects, yet it is to be learnt without much Difficulty; they
write from the left-hand to the right; the *Persian* is the
Court Language in *Indostan*, and some have likewise a
Taste of the *Arabick*, which is the learned Language.
The Bloody-flux and Fevers are the most common Diseases
in the *Indies*, against which they use scarce any other Re-
medy but Abstinence. They don't want Physicians, but
have no Surgeons. Their Barbers let Blood, and apply
Leeches, which is all the Operations they use. The Winter
begins in *Guzarat* in *June*, and holds till *September*;
but the Rains are not as at *Goa*. There are but two
Winds which reign on this Coast, *viz.* the North and
South Winds, which blow each for six Months without
Interruption. Their greatest Heat is in *April* and *May*,
and the Beginning of *June*, but the Summers of the Sea-
son is somewhat tempered by the frequent Breezes, which,
however, brings this Inconveniency along with them, that
they raise the Dust to such a Degree, as robs you of the
very Sight of the Sun at Noon-day.

22. The chief Commodities at *Guzarat* are Calicoes,
and silk Stuff, as Satins, Taffates, Potolas, Comerbands,
Orris of Gold and Silver, used for Veils for Women, Bro-
cades, Tapestry, striped Carpets, Quiles, Tents, Bed-
beds, and Cabinets, lacque Beds, Chains, Buttons, and
Rings, of Ivory, Amber, Rock Chryssal, and Agat.

In a Village called *Cheerbee*, near *Amudabat*, is the best
Indigo made. The Herb is like that of a yellow Parsnip,
but somewhat shorter and more bitter. It sprouts forth
into Branches like a Reed, and sometimes rises six or se-
ven Feet high. Its Flower is like that of a Thistle, and
its Seed resembles *Lungwort*; they sow it in *June*, and
cut it in *November* or *December*. It is sown but once every
three Years; the first Year they cut off the Leaves
within a Foot of the Ground, and after they have clear'd
them from the Stalk dry them in the Sun, and afterwards
lay them a soaking in a stone trough, which has six or se-
ven Feet Water in it, stirring it very frequently, till they
think the Water has sufficiently extracted all the Colour
and Virtue of the Herb; then they draw that Water off
into another Vessel, which being well settled all Night,
they take it off the next Day, and the Settlement in the
Bottom is strained through a coarse Cloth, and dried in the
Sun. This is the best Indigo, which is adulterated by the

Inhabitants by the Mixture of a certain Earth of the same
Colour, and some Oil, to make it swim upon the Water,
the Goodness of this Drug being commonly judged by its
Lightness.

The Stalks left the first Year produces Leaves the
next; but these are not to be compared in Goodness to
those of the first, tho' they exceed those of the wild Indi-
go. The second Year is that which produces the Seed;
the Product is never transported beyond the Seas, but
kept by the Country People for their own Dying. The
best Indigo, which they call *Anil*, is inclining to a
let Colour, and has somewhat of that Smell if burnt. They
always let the Ground lie fallow after the three Years are
expired, for twelve Months.

There is also a great deal of Salt-petre vended at *Surat*,
which is made at *Afuer*, sixty Leagues from *Zigra*, out of
the fattest Ground. After it has lain fallow for a confi-
derable Time, they dig certain Trenches, which after they
have filled with salt Earth, they let in as much Water as
is sufficient to reduce it to the Consistency of thick Mud, and
to soak it the better, they frequently tread it with their
Feet. When they judge the Water has dissolved all the
saline Substance that was in the Earth, they draw up the
Water into another Trench, where in some time it thickens,
when they boil it like Salt, skimming it continually, and
afterwards put it into earthen Pots, where the Dregs settle
to the Bottom; they take it out again, and dry it to a
hard Substance in the Sun. Borax, well known for its
Usefulness in refining of Gold and Silver, is found near a
Mountain in the Province of *Purbet*, upon the Borders of
Great Tartary, which Country also produces Spikenard,
Quicksilver, Musk, and Copper, and a certain Colour
which dyes the most beautiful Brown in the World. The
Borax grows like Coral, in the Bottom of the River *Jan-*
kenkar, which coming down from the Mountain, joins
its Stream with the River *Majhoer*, which passes through
the said Province, and furnishes it with this Drug. The
Indostans call it *Jankenkar*, from the before-mentioned
River, and keep it for its Preservation in Bags, made of
Sheep-skins, filled with Oil.

The greatest Part of our *Assafetida* is brought from
Persia; but that which is brought from the Province of
Utrad, in the *Indies*, is preferred before it. There are
two kinds of this Plant; one grows like a Shrub, with
small Leaves like Rue, the other has Leaves as big as
Turnips, and in Colour resembling Fig-tree Leaves. It
grows commonly in sandy and stony Ground. Its Gum
comes forth in the latter End of Summer, and is gathered
in Autumn. The *Banjans* in *Guzarat* are such Admirers
of it, that they use it in their Sauces, and rub their eat-
ing and drinking Vessels with it. There is abundance of
Amphion, or *Opium*, brought from *Ceyro* into *Europe*;
that which comes from the Province of *Gualer* in *Ind-
Jan*, and is vended all over the *Indies*, is only the coagulated
Juice of Poppy, which is gathered by making an Incision
therein, when it begins to be ripe. All the Eastern Na-
tions are so addicted to the Use of it, that those who can-
not come at the Juice, will make and use the Decoction
of Poppy. The *Persians* boast themselves to be the first
Inventors of it. They take every Day the Quantity of a
small Pea of it, made up into a little Pill, not so much
with an Intention to make themselves sleep, as to raise Vi-
gour in them, more especially in the Exercise of venereal
Acts, for which Purpose it is chiefly used by the *Indians*.
They use themselves to it by taking a little and a little by
Degrees, without attending to which it is mortal. It draws
this Inconvenience after it, that it quite stupifies the Sen-
sles, unless they continue it for ever.

Of Lacque we have said something before, and shall
say more hereafter. The Province of *Guzarat* produces
abundance of Cummin, Ginger, and *Mirobalans*, which
they preserve with brown Sugar, besides which they have
several physical Drugs. Diamonds are likewise one of the
chief Drugs of this Province, but not many, yet they
have Abundance of Pearls, Emeralds, Garnets, Agats,
Alabafter, red Marble, and Jasper-stone, which are better
polished here than any where else.

They use but one kind of Weight all over *Guzarat*,
which is called *Mion*, and contains forty *Cers*, in the
whole

whole thirty Pounds and an half, at the Rate of sixteen Ounces in the Pound, a *Cree* containing ten *Peyses*, a kind of brass Money weighing twelve Ounces. Their Ells are of two kinds, the lesser amounts to no more than half a *French* Ell, and a sixteenth Part, and nineteen of their large Ells make thirteen Ells and three Quarters of the same Measure. They have also no more than two sorts of Money, viz. the *Mamoudies*, and *Roupees*; the *Mamoudies* being coined of Silver, of a base Alloy, go no farther than *Surat*, *Brodra*, *Broitschia*, *Cambaya*, and those Parts, and are worth about one Shilling Sterling; but the *Roupees Clagam*, which are worth about a *French* Half-Crown, and made of very good Silver, pass current all over the *Indies*. The *Peyses* we spoke of are their Copper Money, twenty-six of which make a *Mamoudy*, and forty-five a *Roupee*. They count also with Almonds, thirty-six whereof make a *Peysse*, and with certain Shells, found by the Sea-side, eighty whereof make a *Peysse*. They account *Spanish* Pieces of Eight and Rixdollars equivalent to five *Mamoudies*, because they make great Advantage of them in their Mints. The *Persian Larri's*, which are very good Silver, are also much esteemed here. They have a golden Coin called *Xeraphins*, worth about thirteen *Roupees*. The *Gloquins* and *Venician* Decats are current here, and are reckoned to be worth eight and a half, or nine *Roupees*, according to the rising or the falling of the Change.

As there is abundance of counterfeit Money here, and all over the *Indies*, so scarce any Sum is received but in the Shops of the Chargers called *Xaraffa's*, which are at the Corners of every Street. These secure the Receipt of the Money for a small Matter, and are so expert, that no counterfeit Money can escape their Hands undiscovered. Their Way of computing Sums is by *Lacs*, which consist of 100,000 *Roupees*, and two of these *Lacs* make a *Cree*, or *Caroa*, and ten *Caroa's* an *Arab*; a *Theil* of Silver makes eleven, twelve, or thirteen *Roupees*, one *Massas* and an half, a *Theil* of Silver, and ten of these a *Theil* of Gold. No Coin, whether Gold, Silver, or Brass, must be exported out of the Kingdom, on pain of Death. Besides what we have said of the Products of *Guzarat*, it is very fertile in Wheat, Rice, Pease, Beans, Barley, Millet, *Turky* Wheat, Flax, Mustard-seed, Oil, Butter and Cheese, the last of which is somewhat salt and dry. Their Wheat is larger than ours. They don't bake their Bread in Ovens, but upon iron Plates, and the *Barjans* in Frying-pans.

23. Their Beans and Peas are less, but much more delicate than ours, especially their red Chiches, wherewith in many Places they feed their Horses, Oxen, and Buffaloes, instead of Oats, a Grain not much used in the Eastern Parts. They sow in *May*, and their Harvest is in *September* and *November*: They cut no Grass, but consume it green. As the Mogul is the sole Proprietor of all the Lands in his Empire, so the Peasants, when Seeding-time appears, must make their Application to the Governor of the Province, and agree with him for so much Ground as he thinks he is able to sow for that Year, for the Use of which he pays a third Part, and sometimes an half, which is the Reason that most of the Grounds lie fallow, there being but few that think it worth their while to manure them at so an expensive a Rate. Their Gardens are well stocked with Pot-herbs of all sorts, as Lettice, Succory, Sorrel, Parsley, Radishes, Cabages, Cucumbers, Citrils, Garlick, Onions, Parsnaps, and, above all, with the most delicious Melons in the World.

They don't value their Flowers here so much for their Scent as their Colour, the Rose only excepted, the Scent of which is much admired. The Flowers called *Mogaci* and *Scampe*, have also a very agreeable Smell; notwithstanding which they are admired by the Women for their Colour, the first being a delicious white, and the latter yellow: They hold all the Year round, as does the Grass here, unless it be dried up by the excessive Heat of the Summer-heat. Besides their Lemons, Citrons, Pomegranates, and other Trees recently known in *Europe*, they have those called *Anana*, *Bananes*, *Jaccas*, *Cecos*, and *Indian* Fig-trees. They have also a kind of Vines about *Surat*, the Grapes of which are not so big as those of *Persia*, and are sold at a dear Rate.

Their Forests in these Parts harbour, among other Creatures, a kind of Wild-dogs, called *Jacalls*, no body dare hurt them no more than any other Beasts that are yellow or black, under pain of Death, they being reserved for the King's Sport, or the Governor's of the Province. The *Indian* Horses are in no wise comparable to those of *Persia* and *Arabia*, yet they are very careful in keeping them; they commonly feed them with those Pease they call *Chiches*, which they bruise and boil every Morning and Evening, and give them a Palle made of two Pound of Barley-meal, half a Pound of Butter, and as much Sugar.

Their Oxen are not different from ours in Shape, except that they have a large Bunch betwix their Shoulders. The poorer sort of *Mohammedans* eat abundance of Beef and Mutton; but the better sort feed upon Kids, either roasted with a Pudding of Rice, Almonds, and Raisins in the Belly, or stew them with Butter and Pepper. They also have *Persian* Sheep with fat Tails, but they are very rare and used seldom; but at great Entertainments they have Fowls, Capons, Geese, Wild-Ducks, Peacocks, Teal, Partridges, Pidgeons, Sparrows, to which we might add, Eagles, Falcons, Hawks, and other Birds of Prey. They are not destitute of River-fish, such as Carps, Eels, &c. but their Salt-fish is extraordinary good and cheap there, because the *Mohammedans* prefer Flesh before Fish, and the *Pagans* don't eat it at all: They have also Oysters, Crabs, and Prawns. It is observable, that whereas in *Europe* all sorts of Shell-fish are best at the Full-moon, here they are best at the New-moon, and empty at the Full-moon.

24. Their Vessels are generally slightly built, and their great Guns kept above Deck. They seldom venture any farther than to *Java* and *Sumatra*, or to *Aden* and to *Mexico* upon the Red-Sea, whither they go with a vast Number of Pilgrims in the Beginning of *March*, and return not till the Middle of *September*, for fear of the Tempests, which from *June* till that Month are very violent in that Coast, whereas otherwise this Voyage might be performed in two Months. They carry to the Coast of *Aden* Calicoes, Indico, Camphire, Tobacco, Allum, Sulphur, Benjamin, Pepper, and many other Spices, Mirbalans, and many other Preserves; in lieu of which they bring back Coral, Amber, a certain red Dye called *Mallit*, Coffee-berries and Opium; but their best Returns are in ready Cash.

Their Coasting Vessels, which go to *Cambaya* and *Broitschia*, and sometimes to *Possia*, go away in *January* and *February*, and return in *April* or *May*, and bring along with them Brocades, Silk, Stuffs, Velvets, Cambletu, Pearls, Almonds, Rastus, Nuts and Dates, but especially Rose-water. Their Ships that go to *Aden* in the Isle of *Sumatra*, are of two or three hundred Tons Burthen, carrying thither the Products of their Country, in lieu of which they bring back Brimstone, Benjamin, Camphire, Porcelain, Tin, and Pepper: They sail in *May*, and return in *October*. The *Malabars* can also drive a great Trade at *Surat*, *Cambaya*, and *Broitschia*. They bring thither Bark of Cocoa-trees, which is used for making Cordage, the Pith of the same Tree, Aracca and Beile, a kind of Wood which dyes Red, called by them *Parang* and *Harpus*, which they use for caulking their Ships, besides Rice and other Provisions. Thence they exchange for Opium, Saffron, Coral, Calicoes, and other Stuffs. They come to the Coast of *Surat* in *December*, and return in *April*. Formerly the *Portuguzes* used to be the sole Masters of the Trade of *Guzurat*, by means of their Forts at *Daman*, *Diu*, and *Goa*; but since the *English* and *Dutch* have made their Settlements in these Parts, they have been forced to confine their Trade to *Goa*.

25. These Travels and Voyages will sufficiently justify the Character we have given of them and of their Author, in affording a clear, instructive, and entertaining Description of one of the finest Countries in *India*, as well as of the several Nations that inhabit it. There is a Freedom and Plainness in our Author's Style, that as they are intelligible from, so they are the surest and most incontestable Signs of Truth, which, in Works of this Nature, is of great Value.

Labour, among other Created Jacalls, no body daret her Bealls that are yellow they being reserved for the Governor's of the Province, are comparable to those of the very careful in keeping them with those Pease they are sold boil every Morning and the made of two Pound of Butter, and as much

from ours in Shape, except betwixt their Shoulders. They eat abundance of Beef and feed upon Kids, either with Almonds, and Raisins with Butter and Pepper. They eat fat Tails, but they are not at great Entertainments, as Wild-Ducks Peacocks, Parrots, to which we might add other Birds of Prey, and Fish, such as Carps, Beels, extraordinary good and cheap they prefer Flesh before Fish, and they have also Oysters, observable, that whereas in our Country are best at the Full-moon, in theirs are best at the moon, and empty at the

They are slightly built, and their They seldom venture any where, or to *Aden* and to *Mecca*, they go with a vail Numbering of *Marah*, and return home, for fear of the Tempests, they are very violent in that Voyage might be performed to the Coast of *Aden* Tobacco, Allum, Sulphur, and other Spices, Mirabalans, in lieu of which they bring a red Dye called *Misset*, at their best Returns are in

which go to *Cambaya* and *Persia*, go away in *January* or *May*, and bring along with them Stuffs, Velvets, Camblets, Dates, but especially that go to *Selen* in the Isle of three hundred Tons Butther, of their Country, in lieu of which they bring Camphire, They sail in *May*, and return can also drive a great Trade to *China*. They bring thither used for making Cordage, *Arreea* and *Betic*, a kind called by them *Parang* and in making their Ships, besides These they exchange for Dates, and other Stuffs. They return in *December*, and return in *June*, by means of their Forts *at*, but since the *English* and other Elements in these Parts, they their Trade to *God*.

Their Voyages will sufficiently justify of them and of their Author, will tully answer our Intention, and entreat our Descriptions in *India*, as well as of it. There is a Freedom and ease, that as they are invariable and most incontestable signs of this Nature, is of great value

Value than any other Quality whatever. As the Writer often refers to the ancient History of *India*, and the Customs of the People before they were at all intermixed with Foreigners, the former Part of this Work will enable even the unlearned Reader to understand all these Things perfectly, and to reap a new Pleasure from perusing this Performance, as we have placed it, since he is already possessed of all the Lights that are necessary to illustrate it. By comparing the historical Passages that occur in relation to the Mogul Empire with the succinct History we have already given of that Government, these Travels will become a Supplement to that Reign in which the Author visited *Indostan*.

We cannot have a better Account of the general Situation of Trade, or of the particular Circumstances of the fe-

veral *European* Nations concerned in the Commerce of the *Indies*, for the Time in which he wrote, than our Author has given; and, therefore, as his Work is elucidated by what is contained in the preceding Sections, so his Accounts will serve to throw Light upon the following Sections, and deliver the Reader from the Toil of running thro' a dry Discussion of Facts, which, though tedious in itself, would otherwise make a necessary Part of this Performance. As to the References that occur in these and in the subsequent Relation to our Author's Travels through *Persia*, they will be cleared up by recurring to those Travels in the subsequent Volume. At present we shall proceed with his Voyages through and Remarks on the rest of the *Indies*, which will be found no less curious and improving than those we have already perused.

SECTION XXVII.

The remaining Voyages of John Albert de Mandelsloe through the Indies, including, his Descriptions of Countries, historical Remarks upon several Nations, and his Observations on the Commerce of the Portuguese, English, and Dutch at that Time.

Translated from the Author's original Voyage, written by himself.

1. An introductory Account of the Design of this Section.
2. The Author's Departure from Surat in the Year 1639.
3. He arrives in the Port of Goa, and gives us a particular Account of that City, and of the Reception he met with there.
4. A compleat View of the Government, Manners, Customs and Commerce of the Portuguese.
5. Continuation of his Voyage, including an Account of the Malabar Coast, and its Inhabitants.
6. A succinct History of the Island of Ceylon.
7. A particular Description of that Island, and the Commodities it produces.
8. The Informations he received from the Portuguese Jesuits as to the Countries he did not visit.
9. A very large and particular Description of the Coast of Coromandel, together with the Kingdoms of Pegu and Siam.
10. The Kingdoms of Cambodia, Malacca, Patapan, and Johore described.
11. A View of the great Island of Sumatra, and its Inhabitants.
12. A distinct Account of the Island of Java, its several Principalities and their Inhabitants.
13. Of the Islands of Celebes and Amboyna; together with an Account of the Spice-Islands, and their Commerce.
14. An Account of the Philippines, and of the Spanish Government there.
15. The History of Japan, and the adjacent Islands, as delivered to the Author by the Missionaries.
16. A very singular Description of the Island of Formosa, and its Inhabitants.
17. A succinct Account of the mighty Empire of China.
18. The Author's Voyage to the Cape of Good-Hope.
19. Observations made there, and in his Passage to Madagascar.
20. A very full Relation of the Island of Madagascar, and its Inhabitants.
21. An Account of the Portuguese Settlement in the Island of Mozambique.
22. The Author prosecutes his Voyage to the Island of St. Helena.
23. The Author's Observations upon that Island, the Island of St. Thomas, and other adjacent Islands.
24. An historical Account, together with the Author's Remarks on the Portuguese Settlements in Africa.
25. That Subject continued, with a succinct Description of these Colonies at that Time.
26. An Account of Cape-Verd and the adjacent Islands.
27. Remarks on the Azores, Madera, and Canary-Islands.
28. Occurrences in their Voyage from the Azores to the Port of London.
29. Observations made by the Author during his Stay in England.
30. His Return through Holland to Holheim.
31. Remarks and Observations on the before-mentioned Voyages.

THE great Kindness and many Civilities shewn to Mr. Mandelsloe by the chief Director of the *English* Commerce at Surat, naturally inclined him to lay hold of the Offer that Gentleman made him of returning to Europe in an *English* Ship, which he was more readily accepted, because it put it in his Power to execute his Commission fully of gaining the best Intelligence he could as to the Commerce of the East. The *English* Director was to make a trading Voyage, which particularly required his visiting the *Portuguese* Ports, where he had many Affairs to settle; and this could not but be agreeable to a Man who travelled from such Views as our Author had, inasmuch as it gave him an Opportunity of seeing whatever he wished to behold, and afforded at the same time the fairest Occasions for examining all he saw. We shall discern, from the subsequent Section, that he improved these Advantages to the utmost, and that he carried back with him to his Miller the clearest and most circumstantial Account of the *Indies* that had till that Time appeared in Europe.

I cannot but observe, with respect to this Detail of Facts, that he is, of all Writers, the most unsuspected, and therefore the most worthy of Credit. An *English*, a *French*,

or a *Dutch* Writer, can never divest himself entirely of the Prejudices imparted to him by his Country; but this Gentleman could have none of those Prejudices, and therefore we may safely rely upon what he says of any, or of all these Nations. He had not only an Inclination, but an Interest also in pursuing Truth. It was this, and this only, that could recommend him to his Master, and therefore of this he never lost Sight. The *German* Probiety appears so where with greater Lustre than in his Writings; and it was the singular Felicity of this great Traveller, that with a Capacity equal to his Undertaking, he joined a Candour altogether unblemished. Let us then resume the Thread of his Narration, and after travelling with him through *Indostan*, embark with him at Surat for the Voyage of the *Indies*.

2. The *English* chief Director having taken Leave of the Governor of Surat, the First of January, 1639, who received him with extraordinary Civility, and presented him with a Garment of Brocade, besides many other Rarities; and having spent two Days more in taking our Leaves of our Friends, we went on Board the third in Company with the new President, and all the other *English* Merchants, where we feasted for three Days, and at

last failed the Fifth in the *Mary*, and came the same Night in Sight of the City of *Daman*, where we met with one of our Ships that had staid for a *Portuguze* Vessel that was to go with us to *Goa*. The Governor of the City sent us a large Vessel with Wine, and divers Refreshments; for though the City was then besieged by the King of *Decan*, yet the Harbour being open, they had sufficient Supplies brought them by Sea. The Kingdom of *Decan*, or *Cuncam*, by some called *Vishapour* from its capital City, extends all along that Coast from *Indedra*, which is within twelve Leagues of *Goa* to the South, as far as *Siffardo*. The chief maritime Places belonging to it are *Gutapour*, *Rassapour*, *Carrapatar*, and *Dabul*; but *Vishapour* the capital City, lies eighty Leagues from *Dabul*, and eighty-four from *Goa*. This City is about eight Leagues in Circumference, being encompassed with a very high Wall of Freestone, and a broad Ditch, and many Out-works, provided with a thousand Pieces of Iron and Brass Cannon. The Royal Palace is in the very Centre of the City, three thousand five hundred Paces in Compass, being divided from the Body of the City by two Walls, and as many Ditches. The City has no less than five Suburbs, where most of the Merchants live; and in the Suburb *Champour* most of the Jewellers have their Habitations. The Inhabitants are for the most part Natives of the Kingdom of *Decan*, the rest are *Banjans*, *Moguls*, and *Gentives*.

The City of *Dabul* is seated on the River *Helewacko*, in $17^{\circ} 40'$ on this Side of the Line, being one of the most ancient Cities in the Kingdom of *Decan*; but is without either Gates or Walls, defended only on the River-side by two Batteries. As you enter the River, you see to the left Hand a Wood, and near it a Castle, as also a white Tower, which serves for a Pagod; but is a good Direction for Pilots. Its Entrance being none of the best by reason of a long Sand Bank at the very Mouth of it, which at low Water is quite dry; the only safe way to cleave it is to keep to the South Side; there, at low Water, you have five or six Fathom Water, though at the very Mouth you have not above twelve or fourteen Foot; within a League before you come to the River is very safe riding for Ships, though the Road, in the Bay of *Zonquizaro*, four Leagues thence is incomparably better. The Harbour of *Critapour*, the most excellent on all that Coast, lies twelve Leagues thence, the Vessels being sheltered here by an adjacent Island against all Winds. It lies in $17^{\circ} 10'$, and twenty Leagues from *Goa*. Three Leagues from the said Harbour lies the City of *Rassapour*, one of the best maritime Towns of the Kingdom of *Decan*; and nineteen Leagues thence is the Bay of *Wingula*, a very convenient Haven. It lies three Leagues from the *Illas Quemadas*. We will now come to its Inhabitants, which are either *Banjans*, or *Mohammedans*.

The chief Trade of the City of *Dabul* is in Salt and Pepper brought thither from *Oranubammara*. They used formerly to drive a considerable Traffick to *Persia*, and the *Red-Sea*; but they send but few Ships thither now. The ordinary Custom paid here is $31. 10 s.$ per Cent. but the *English* pay only one Moiety of it. Though the greatest Part of the Inhabitants of the Kingdom of *Decan* or *Cuncam* are *Banjans*, yet are they not so averse to Flesh as the others in the *Indies*; for they will feed upon any Flesh, except that of an Ox, Cow, Buffalo, and Swine; for the last they have an absolute Abomination, and the Ox and Cow are in great Veneration with them. In their Life and Conversation, Marriages, Purifications, and other Ceremonies, they follow the Footsteps of the other *Banjans*.

Their Habitations are only Cottages of Straw, the Doors being so low, that one can't go in without stooping. Their Furniture amounts to no more than a Mat to sleep upon, and in the midst of the Hut you see a Hole in the Ground, wherein they beat the Rice. They don't differ in their Habit from the other *Banjans*, except that they wear mostly Wooden Shoes tied up over the Insteps with Leather Straps; but their Children go naked, till they are seven or eight Years of Age. Their Arms are the same with the *Indians*; most of them are Goldsmiths by Trade, though some also profess Physick and Surgery; they have also some Carters, Masons, and Barbers among them.

The chief Commerce of the Kingdom of *Decan* consists in Pepper and Provisions. The first is transported thence

into *Persia*, *Surat*, and *Europe*, as also abundance of Calico; with the latter they furnish the Provinces of *Indostan*, *Golconda*, and *Coromandel*, who fetch good Quantities of Stuffs there. In the Mountains of *Balagatta* much Lacque is made, but does not approach in Goodness to that of *Guzarat*. At *Vishapour* are abundance of Jewellers that deal in Pearls; but they are not so cheap here as in some other Places. The *Portuguze* have a considerable Trade in this Kingdom, its Frontiers reaching within four Leagues of *Goa*. There are a sort of People called *Venfers* in *Decan*, whose chief Business is to buy up vast Quantities of Wheat and Rice here, and then carry it in great Caravans of one thousand Beasts at a time to *Indostan*, and other neighbouring Countries. They carry their Families along with them, their Wives being so expert in managing of the Bow, that they served them for a Guard against the *Raffsoots*, and other Robbers.

Two sorts of Money are current in *Decan*, the *Laris*, or *Laris*, which come from *Persia*, and the *Pagoda*; eight of the first make a *Pagol*, which is equivalent to ten *Laris* of *Dabul*; their Copper Coin is called *Barraques*, nine whereof go to a *Piece*, and eighteen of these to a *Laris*; besides which, each City, nay, each Village of Note, has its peculiar Coin, which, together with the Counterfeit Coin, breeds no small Confusion. Their Weights are the same with those of *Guzurat*, except that twenty *Maons* of *Surat* make twenty-seven in *Decan*, the ordinary *Maon* consisting of forty *Ceres*, and one *Coppoyes* make twenty-seven Pounds, each of which has two Marks; they have a particular Weight for Pepper called *Geony*, weighing twelve *Maons*, four of which make an hundred Weight, and twenty a *Canday*.

The King of *Decan*, or *Vishapour*, is tributary to the Great Mogul, though it be supposed he can raise two hundred thousand Men; and these Kings have had considerable Wars with the *Portuguze*, from whom they took twice the City of *Goa* in 1586; but at last, finding the War destructive to their Commerce, came to a Composition with them, which lasted till 1638, when the *Portuguze* having seized some of the King of *Decan*'s Ships, which, contrary to their Agreement, were carrying Pepper to *Mecca* and *Persia*, they came again to Hostilities. The King of *Decan* is famous for his great Artillery, of which he has more than any of the *Indian* Princes, and among the rest one great Piece of Brass Cannon, the Ball whereof weigheth eight hundred Weight, and requires five hundred and forty Pounds of fine Powder. The Engineer who cast it was an *Italian*.

3. But to return to our Voyage, early in the Morning, *January* the 7th, we came before the City *Baccin* belonging to the *Portuguze*, where we staid some Hours in expectation of a certain Jesuit we were to carry to *Goa*; but he not coming, we continued our Course, but were scarce got a League before we saw a *Portuguze* Frigate come after us; we back'd our Sails till she came near us, and found her to be a Vessel that came on purpose to go along with us under *English* Colours, for fear of being interrupted by the *Dutch*; she brought us some Presents, viz. three Oxen, some Sheep, Oranges, Citrons and Bread from the Governor. The 9th we sailed with another Wind by the Isles of *Bandera* and *Bombay*, which stretched along the Coast from *Baccin* to *Vishapour*; the last has a good Road for Anchorage, and is of a pretty large extent. On the 10th we sailed by *Rassapour* within twenty one Leagues of *Goa*, and in the Afternoon by the City of *Fingola*, where the *Dutch* have a Settlement four Leagues from *Goa*, and in the Evening came in Sight of the Isles about *Goa*, and of two Isles that secure the Harbour. On the 11th we came to an Anchor under the Fort de *Guarda*, which lies not above a Mile from the City of *Goa*; we saw six Gallions and a Carrack in the Haven; soon after came aboard us a *Portuguze* Captain to complement the *English* President in the Viceroy's Name, and immediately after the Commodore of the Gallions. The Harbour of *Goa* was then blocked up by twelve *Dutch* Ships, notwithstanding which we saw coming in a Caravan, consisting of three hundred small coasting Vessels laden with Pepper, Ginger, Cinnamon, Sugar, Rice, Fruits, and Preserves, besides abundance of Provisions.

as also abundance of Cal-
the Provinces of *India*,
who fetch good Quantities

en blocked up by twelve
which we saw coming in a
undred small sailing Vef-
s, Cinnamon, Sugar, Rice,
abundance of Provisions.

The

The *English* President, whose Business here was chiefly
with the Director of the *Exchequer*, went to pay him a
Visit, his Trumpets sounding all the way as he went up
the River, who received him with great Demonstrations
of Friendship, because they had known one another long
before; being carried thence to his Lodgings, he desired,
and had Audience given him immediately by the Viceroy.
His Palace lying on the River-side, we found divers of his
Gentlemen there to receive and conduct us into the Hall of
Audience, in the Anti-chamber of which Palace we saw his
Guards standing in two Files. The Viceroy himself was
dressed in black, and so were all his Courtiers, and at the
coming in of the President rose out of his Chair till the other
was far down: After some stay the President was re-con-
ducted to the Water-side by the same Gentleman that
brought us thither; as we passed along we were shewn
twelve of the Viceroy's Horses, richly accoutered, and a
Biggel, a Creature much about the Bigness and Colour of
a Rain-deer. Its Head like an Horse, its Main like an
Ass, with black cloven Feet, and two black Horns on his
Head.

We had scarce dined when we were crowded with Visi-
tants, most of the Persons of Quality among the *Portu-*
guezs, and the Deputies of all the Monasteries coming to
complement us, the ten Days we staid at *Goa* being spent
in nothing but Feasts and Visits. The most magnificent
Entertainment of all we received from a certain *Portuguze*
Lord, who was then Governor of *Mozambique*; each Course
consisted of four Dishes, but we had so many of them, and
such Variety of Meats, Fruits, and Preserves, that I scarce
ever saw the like in my Life; and to add to the rest, we
were served at the Table by four very handsome *Malacca*
Maids. The 16th we were invited to the professed House
of the Jesuits; it consisted of an hundred and fifty Fathers,
and as many Students; but the Structure, which was four
Story high, and very spacious, could have contained a
much greater Number. We passed through the Hall,
where we found Tables set all along the Walls with Trench-
ers, Drinking-Cups, and Earthen Pots. In the midst of
the Hall we saw another square Table, intended for such
of their Society as were bound over to penance, upon the
account of some Delinquency or other. Towards the
Entry stood a Pillar, from whence issued out a Spout of
Water for the Convenience of washing their Hands; we
were thence conducted into a noble Apartment, richly fur-
nished, and adorned with Tapestry, where a Table stood
ready prepared for us in the midst of the Room, covered
with Fruits and Bread in Porcelain Dishes, which is here
preferred before Silver.

The Father Provincial having placed the *English* Presi-
dent on his right Hand, set down, and so did the rest of
the Company; so that betwixt every two sat two Jesuits to
entertain us. The Meat was likewise served up in Porce-
lain Vessels, as well as the Desert. After Dinner we were
brought into several Chambers to take our Repose, accord-
ing to the Custom of the Country; after which we passed
into another spacious Hall, where we had the Diversion of
Dancing, by certain *Indian* Children brought up in the Ro-
man Catholic Religion; there were among other Shews
an Entry made by fifteen Persons, having in their Hands
some Pieces of a broken Pillar, and divers Garlands of
Flowers, wherewith they adorned the Pillar, after they had
with exact Observance of the Cadence, each in their several
Turning put it together; and soon after we saw at the Top
of the Pillar came out a Tulip, which opening of itself by
Doors, produced the Image of the Blessed Virgin, with
our Saviour in her Arms; besides which, the Pillar opened
in several other Places, and cast forth perfumed Waters;
after which the Dancers took the Pillar to Pieces again, and
carried it off dancing as they had brought it in. We had
another Entry of twelve young Lads, each playing upon a
peculiar Instrument, some Morris-dancers, and the Ball
was concluded with another Entry of twelve Boys dressed
like Apes, who imitated those Creatures in their Leapings
and Gestures to the Life. They farther told us, that they
used these Inticements to bring over the *Pugans* and *Mobam-*
medans to the Church, and to divert their Disciples after
their Studies.

January the 18th we dined with the Jesuits at their Col-
lege called *Bon Jesus*. The first thing we observed in their
Halls were the Pictures of many Princes and Persons of
Quality that had been of this Society, and the History of
their Martyrs; among whom we found those of that Fra-
ternity that were engaged in the Gunpowder Plot in *Eng-*
land; upon which Account they made us an ample Re-
lation of the Sufferings of their Brethren in *Japan*, and the
unheard-of Cruelties exercised against them as well as the
Japanese Christians. Thence they brought us into their
Church, which for its Greatness and Sumptuousness may,
without all Comparison, challenge the Preference before any
Church the Jesuits are Masters of in *Asia*. The high Altar
was one of the most magnificent that ever I beheld of that
kind; but that which was dedicated to *Saint Francis Xavier*,
whom they stile the Apostle of the *Indies*, exceeds the other
in Riches.

Here we saw his Image drawn to the Life, upon Wood,
and they were pleased to tell us, that his Body was yet to be
seen in the same Church as intire as it was the first Minute
after his Death; nay, they farther told us, that the Body of
this Saint being hid in the Isle of *Ceylon*, was discovered by
its odoriferous Scent, which was perceived many Leagues at
Sea; in which the good Fathers were not a little deceived,
since the Scent, which is smell'd at a great Distance from
the Island of *Ceylon*, proceeds from the vast Number of
Cinnamon Trees which are all over that Island. Besides,
that this Story does not agree with what *Maffeus*, one of
their Authors, tells us concerning this Saint, viz. that
having preached the Gospel in the *Indies*, he came to
China, where he died immediately after his landing; and
that the Master of the Vessel having put his Body into un-
slacked Lime, in order to carry his Bones away, this cor-
roding Matter did not exert its Virtue upon it, but the
Body remained entire and uncorrupted, and had a very
odoriferous Smell; whereupon it was resolved to carry it
to *Goa*, which was done accordingly. As we were going
from the Church to the Refectory, they forgot not to en-
tertain us with the Miracles of this Saint, of his raising the
Dead, commanding the Sea and Winds, as well as the
Sun, the last of which he brought back an Hour after
Sun-set.

We saw in the Hall here Tables for above two hundred
Persons, but only the most considerable dined with us, the
rest waited: Our Entertainment was much the same as in
the other College, but we had most excellent Canary given
us; and though these Fathers have the Reputation of ex-
traordinary Sobriety, yet out of Complaisance to our Com-
pany, they were not backward in making the Cup go
round when they perceived we liked the Wine. They also
carried us up into the Steeple, whence we had a full View
of all the City, the Sea, the River, and the adjacent Coun-
try, as far as the Mountains. The next Morning two of
the Fathers came to our Lodgings to shew us the Hospital
which is under the Inspection of the Jesuits. It is a very
large and noble Structure, containing as many Chambers,
Halls and Galleries, as will conveniently lodge and accom-
modate one thousand sick Persons; each Bed is marked
with a particular Number, and such as are not taken up are
distinguished by a particular Mark. The Kitchen and
Apothecary's Shop are well worth Observation. I found
the chief Distempers of the Sick here to be the Bloody-flux
and the Pox. They have this Custom, that as soon as any
Patient is past all Hopes of Recovery, he is shut up in a
private Room with a Priest, that the rest may not be dis-
turbed by the Groans of the dying Person.

Hence we went to the Convent of our Lady belonging
to the *Austin-Friars*, which being built upon rising Ground,
makes a most glorious Shew at a Distance. I delivered to
them the Letters of Recommendation I had received from
their Brethren at *Ispahan*, which made them treat me with
more than ordinary Civilities, shewing me all the rich
Copies and Vellments belonging to the Monasteries, and
offering me all that lay in their Power for my Service.
The President having by this time received nine thousand
Pounds due, and a Promise of the Payment of the rest to
such of the *English* Merchants as were to stay behind at
Goa, he gave a splendid Entertainment to all such as had
shewed

shewed us any Civilities, and after having taken his Leave, the Governor and Commodore of the Gallions sent him a Present of Cinnamon, Canary, Sheep, Fruits, and among the rest a Bottle of Oil made of the Flowers of Cinnamon.

4. On the 20th we left Goa, and upon the River met with an hundred small Vessels which came from the Coast of Malabar; we were no sooner got out of the River, but we made Strait to the Portuguese Fleet, and went aboard the Flag Gallion called *Bon Jesus*, carrying sixty-four Guns, and six hundred Men; she was a very noble Ship, and we were entertained with extraordinary Civility by the Commodore, who shewed us likewise all the other Ships; at parting we had the usual Salute from the whole Portuguese Fleet, as also from the Fort de Guarda. As soon as the President was come on Board, he returned them twenty Guns, which the Commodore answered with as many, and so came to an Anchor in the Road betwixt the Portuguese and the Dutch.

But before we take our Leave of Goa, it will not be amiss to say something of what we found most remarkable in a Place, which is the Capital of all belonging to the Portuguese in the Indies. It lies in the Kingdom of Decan, 15° on this Side the Line, in an Island of the same Name, which is divided from the Continent only by a River. The Portuguese conquered it the 16th of February 1510, but lost it again the 30th of May following, and regained it once more the 12th of November in the same Year, when they took it by Storm. It was at that Time a very considerable Place of Trade, though it has much increased since the Portuguese have been Masters of it. On the South Side is the Island of *Salsetta*, likewise divided from the Continent by a small River, as is the Isle of *Bardes* to the North, where there is safe Anchorage for Ships with all Winds. The Fort de Guarda is built at the Foot of a Rock, upon which is erected a Tower in Form of a Redoubt, which in the Night-time serves for a Beacon to Mariners; from the Mouth of the River to the Harbour is about two Leagues, but it has the same Breadth all along, though in some Places it is so shallow, that in a dry Season there is not above two Foot Water.

The Island of Goa is so barren, that it produces nothing fit for the Sustainance of Men or Beasts, except a few Fruits in the Gardens, and a slender Share of Grass for Lambs and Goats; notwithstanding which, they are so plentifully furnished with Provisions from the two before-mentioned Islands, and the Continent, that in spite of the Blockade of the Dutch, a Hog was then sold for a Crown, six sucking Pigs, ten Poullets, or eight Wild-ducks, for the same Price; but Beef and Mutton is a great Rarity here. There is a Fountain representing *Lucretia*, out of whose Wound issues forth as much fresh Water as supplies the whole City. The Ships provide themselves with fresh Water out of a Rivulet, which coming out of a Rock falls into the other River near the Castle. The City has no other Defence but the River, having neither Gates nor Walls; the Buildings are generally very handsome, and Persons of Note shew a great deal of Magnificence here both in their Buildings and Furniture.

The Inhabitants are of two sorts, either *Castizes*, or *Mojizes*; the first are such as are born here of Portuguese Father and Mother; the second, those who were begotten by a Portuguese, or an Indian. The last are inclining to an olive Colour, and in the third Generation becomes as black as the Natives of the Country, which is also observable in the fourth Generation of the *Mojizes*, though there is not the least Mixture among them. The Portuguese are distinguished into several Ranks; *Titulados* are those in publick Employments; *Fidalgos da casa del Rey*, are Gentlemen in ordinary to the King's Household; *Mocas Fidalgos* are the Sons of the *Titulados*, admitted to Gentility by the King, the *Cavalleros Fidalgos*, and *Escuderos Fidalgos* are King's Gentlemen; those called *Mocas da Camra*, or Grooms of the King's Chamber, pass also for Gentlemen. All the rest are *Hombres*, *Honnados*, and *Soldades*; the first of which are Merchants, and appear as well as any Gentlemen, there being scarce any thing here, except Taylors and Shoemakers, but what are served by Slaves; no Person of quality ever goes on Foot, but either on Horseback, in

a Litter, or Gondola, one Slave among the rest constantly attending him with an Umbrella.

The Portuguese have always had the Reputation of being a very proud Nation; but those of Goa are so to such an Excess both in their Gestures and Actions, as is scarce to be expressed; however, they are very ceremonious to one another, to such a Punctilio, that if for instance in a Visit any thing should be omitted that is judged customary, and belonging to the Person that requires it, such a Stain could not be wiped off without a Cudgeling, or Blood-shed; with the first they are very liberal towards inferior Persons, if they think them to have been wanting in Respect due to those of a better Rank.

The South-west Winds, which begin to blow here towards the End of June, bring the Winter Season along with them, which continues for four Months all along that Coast, from *Diu* as far as the Cape *Comerin*, at which Time the frequent Tempests make the Sea so turbulent, that there are but few Havens where Ships can ride with Safety. This is the more to be admired, inasmuch as in the same Months the Coasts of *Coromandel*, which extend along the same Peninsula on the other Side, and lies under the same Degree of Latitude, nay, in some Places are not above twenty Leagues distant from the Coast of Malabar, is blessed with the most pleasant Season of all the Year.

This is manifest to those who travel from *Cochin* by Land to *St. Thomas*, when they must cross the Mountain of *Galagatta*, which divides this *Demi-Isle* (as the *Appenine Gialy*) and no sooner come to the Top of the Mountain, but they see on one Side a most clear and temperate Air, and the Country on the other Side covered with Waters, by the continual Rains and Fogs. The Ships that go from *Ormuz* to the Cape of *Rossalgate* have made the same Observation; for no sooner have they passed the Cape, but the fair Weather that has attended them thither changes on a sudden into dreadful Tempests, so that it is evident there are but two Seasons in this Country, and the East and West Winds rule alternately once a Day; for the Therenets, or Land-winds coming from the East, blow from Midnight to Mid-day, but don't reach above ten Leagues into the Sea; whereas the Sea Winds coming from the West (called *Virafons*) blow all the rest of the Day.

This so sudden Change of the Season, as well as constant Variation of the Winds, prove the Occasion of many Distempers, especially that called *Mordexin*, which kills without Delay, besides Fevers and Bloody-flux, the only Remedy against which here is Bleeding. The Plague is not so much as known in the Indies; but the Pox destroys a great Number, and above all among the Portuguese; for though the Country itself furnishes them with Remedies against this Distemper, yet the Inclinations betwixt the Sexes are so strong and violent here, that they wont afford themselves a proper Time for the Cure of this Disease, which is thus propagated beyond all Bounds. As the Women in these Parts have an excessive Inclination to white Men, and are always kept under Constraint, they will venture very hard to encompass their Ends; and to pursue this End, frequently make use of the Herb *Doutro*, *Doutro*, or *Datura* (as it is called by the Indians) to stupify their Husband's Senses to get an Opportunity of enjoying what they so much delight in. This Herb, called by the Turks and Persians *Datura*, is a kind of *Stramonium*, according to the *Garfias ab Herbo*, and *Christopher de Aosta*, being somewhat like our Bears Foot, and grows in the Indies in shady Places; of this they extract the Juice, which it is green, or only take the Seed beaten to Powder, and mix it either with Preserves, or in the Drink of those they intend to stupify, which it does effectually for twenty-four Hours after he has taken it, being deprived of all Sensation, though with his Eyes open, unless some cold Water be applied to the Souls of his Feet, which recovers him, as it were, out of a sound Sleep.

Scarce any Portuguese or *Mojize* Women are seen to walk in the Streets, but if they go abroad upon necessary Occasions, they are carried in Palanquins, or Litters, and so closely guarded, that it is impossible to speak to them. They appear abroad richly dressed, in Vests, Suits, and Brocades, adorned with Jewel, though at the same Time

 d, in Veils, Socks, and
 though at the same time
 they

they go at home in their Hair only, with nothing over them
 but a Calicoe Smock, reaching down to the Navel, and a
 painted Calicoe Petticoat. Their Fare is not much better,
 being Rice soaked in Broth, Fish, Mangoes, and such-like
 Food. They have certain black Earthen Drinking-Ves-
 sels called *Gorgollets*, which have Pipes coming up as high
 as the Brim, by which they suck the Water out of the
 Bottles. As Chastity is a Virtue here among the Women,
 produced rather by Necessity than Inclination, so their
 Husbands are extremely jealous of them; notwithstanding
 which, they will contrive all possible means to have their
 Satisfaction, in spite of the Danger that attends it. This
 must be in a great measure attributed to an idle Life, hav-
 ing nothing to do to spend their Time but in chewing
 of Beetle, Cloves, and Nutmegs. A remarkable Instance
 of this Affection is the Love the *Indian* Women bear to the
 Children begotten by a *European*, which is such, that they
 would rather die than part with them.

The Soldiers at *Goa* live at a very odd rate, being not
 listed under any certain Companies, or Officers, unless in
 Time of War; but in Time of Peace at Liberty to seek
 their Fortune where they can, as having no other Pay but
 what perhaps their former Officers allow them voluntarily
 towards their Subsistence, that they may keep them at
 hand upon all Occasions. You shall see ten or twelve of
 them live in a Hut, having not above two or three Suits
 of Cloaths among them all, which they wear by Turns,
 when they go abroad a begging, or seeking their Liveli-
 hood where they can meet with it. The *Portuguese*
 shew a deal of Magnificence in their Marriages and Christ-
 enings. The Bridegroom, accompanied by all his Friends
 and Relations, goes to Church on Horseback, the Bride
 following him in a Litter; both have two Godfathers, who
 presents them to the Priest, after the Benediction is
 given, they return in the same manner to the House; but
 none are permitted to enter with the young Couple except
 the Godfathers, who go all together into a Balcony to give
 the Company Thanks for this Favour. Their Christenings
 are performed with the same Pomp, save that they carry
 also an Ewer with a clean Napkin, a Saltcellar, a Silver
 Basin, surrounded with Flowers, and a Wax-Candle, in
 which is put a Piece of Gold or Silver for the Priest; but
 the Godfather or Midwife are always carried in a Litter.

The *Portuguese* entertain a great number of Slaves of
 both Sexes. These they employ both in their Retinue,
 and about all other Business: As for instance, in selling of
 Fruits and other things, when they will be sure to pitch
 upon handsome Wenches, which draw sooner the Cus-
 tomers to them, and consequently sell at a dearer Rate.
 All that the Slaves get belong to their Masters, even their
 Children, whom they keep, or sell like Cattle, unless the
 Fathers redeem them within eight or ten Days after they
 are born. They keep them at a very easy Rate, their
 Diet being miserable, and their Cloathing being only a
 little coarse Calicoe to cover their privy parts. The In-
 habitants of the neighbouring Country are *Pagans*, and ge-
 nerally *Banjans*, who dwell in straw Huts, with little
 Doors, which serve also for Windows. Their whole Fur-
 niture consists of little Mats made of Rushes, which serve
 both for Beds and Tables, a Drinking-Cup and Pitcher
 made of Fig-leaves, their daily Food being Rice. They
 are so superstitious, that if after they have said their Pray-
 ers, they go abroad and meet with a Crow, they return
 home, and stir no more abroad that Day. Upon the
 Roads they constantly pay their Devotions to the Pagods,
 which the *Portuguese* connive at, their Inquisition going no
 farther than to Christians, or such as have been so.

Their Ceremonies and manner of Living are the same
 with those of *Decan*. One thing is remarkable among
 them, that their Physicians are in so great Esteem at *Goa*,
 that they are generally preferred before the *Portuguese*
 themselves, and are permitted to have their Umbrella's
 carried along with them, a Privilege allowed here to none
 but Persons of Quality. They will not eat with any bo-
 dy except their own Sect, not even in a Journey, though
 they should be driven to the greatest Extremity. There
 lives at *Goa* many *Deccans* and *Canarins*, who keep Shops
 there, and exchange their Provisions and other Commodi-
 ties they bring, for Porcelain, Velvet, Damask, *China* Com-

N O V E M B E R .

modities, Silks and Calicoes. They have also many Jew-
 ellers, Goldsmiths, Gravers, and other Artizans of this
 kind at *Goa*, who exceed all the *Europeans* in that kind.
 The *Canarins* live either upon Husbandry or Fishing.
 Some maintain themselves by managing the Cocoa Trees,
 some by washing and whitening of Calicoes. The Hus-
 bandmen furnish the City with Fowl, Milk, Fruit and
 Eggs. Their Wives are so hardy, that they never make
 use of a Midwife, and are no sooner delivered, but they
 wash the Child themselves, wrap it up in a few Fig-leaves,
 and go about their Business again as before; which makes
 them so strong and healthy, that they frequently live to
 an hundred Years of Age. They are so excellent at Swim-
 ming, that nothing is more common than to see them over-
 turn in their Boats, which hold no more than one Person,
 and swim ashore without any harm or loss of the Boat.
 They burn their Dead, but their Women are under no
 Obligation to burn themselves with their Husbands, but
 only make a Vow of Widowhood. Here are two sorts
 of *Jews*, either born in the *Indies* both by Father and
 Mother-side, or that come hither from *Palestine*, the last
 of which commonly speak good *Spanish*: They enjoy a per-
 fect Liberty of Conscience, and have their own Syna-
 gogues. The *Mohammedans* here deal most in Spices from
 the *Red-Sea*.

The *Portuguese* traffick to *Bengal*, *Pegu*, *Malacca*, *Chi-
 na*, and *Cambaya*, in *Guzarat*. From Seven o'Clock
 in the Morning till Nine, when the Heat begins to encrease,
 you see all Persons of Quality and Gentry meet in the
 Market-place to divert themselves, partly with hearing of
 News, or else to see what is to be bought and sold there.
 Merchants and Trademen have their peculiar Streets, or
 Stations assigned them, according to their different Profes-
 sions; but their greatest Profit is in exchanging and buy-
 ing or selling of Money, especially the *Spanish* Rials, and
Persian Laris; also their Coin is of diverse Sorts.
 Their smallest Money is of Tin, having a Globe on one
 Side, and on the other two Arrows cross-wise. Eight
 of these *Baseringues* make a *Ventin*, five whereof make a
Tange; five *Tanges* make a *Seraphin* of Silver, which makes
 300 *Reis*; six *Tanges* goes to a *Pardai*. The *Seraphin*
 has on one Side *St. Sebastian*, and on the other a Quiver full of
 Arrows. There is also a *Seraphin* of Gold, coin'd former-
 ly at *Ormuz*, the Metal of which exceeds in Fineness any
 other Coin in the *Indies*. They have also *Santemes*
 of six *Tanges*, and *Pagods* of fourteen, fifteen and sixteen
Tanges. Foreigners are obliged to pay eight per Cent. on
 all Commodities exported or imported, but great Modera-
 tions are used in the Taxations; besides, that if a Mer-
 chaunt happen to export the same Commodities for want of
 Sale, they are allowed to export them without paying any
 further Custom. They have also a Way of entering the
 Commodities they buy at *Goa* under the Seller's Name,
 and so they pass Custom free.

The Viceroy who was there at our Time was one Don
Pedro de Silva, who was of no great Aspect, but was for the
 rest served in the same State as a King. This Office is ne-
 ver continued above three Years in one Person, which is
 sufficient to enrich him even to a very high Degree; for
 he has the Management of the King's whole Revenue;
 is at the Charge of keeping his Court, and in the Progress
 he makes once a Year, for sixty or eighty Leagues round,
 he receives vast Presents from the neighbouring Princes
 and Governors; for though he has his Council of State,
 and Courts of Law and Equity, yet is he the sole Judge
 of all civil Causes, unless they be of very great Conse-
 quence, when an Appeal lies to the King; but in criminal
 Causes no Appeal is admitted, if the Person be under the
 Degree of a Gentleman; for these must be sent with the
 Information brought against them to *Portugal*. The Vice-
 roy at his Arrival always lands first in the Isle of *Bardes*,
 from whence he sends his Deputies to his Predecessor, who
 thereupon quits the Place.

5. On the 22d the *English* Director having sent away
 the two Ships that came along with us to *Surat*, to carry
 thither the Money he had received at *Goa*, we hoisted
 sail. In the Evening we saw the whole *Dutch* Fleet under
 Sail, whence we judged that the Admiral, whose Name was
Coulon, would have come on Board us, as he had promised

he would, but we lost sight of them by Night. On the 23d we had sight of them again, and supposed that they steered their Course towards *Ceylon*, to assist the King against the *Portuguese*. About Noon we found ourselves out of sight of the Land, in 13° Lat. We intended to steer for the Coast of *Malabar*, upon Information that an *English* Ship, richly laden, coming from *Bantam*, was taken by these, after a brave Defence, in which it had blown up above 1200 of the *Moors*, after they were entered the Ship. Our Intent was to redeem the Master and the Mate with fourteen Prisoners that were taken aboard her; but coming to an Anchor the same Night in the Harbour of *Cananor*, we found three *English* Ships, the *Dragon*, the *Catherine*, and the *Seymour*, commanded by Captain *Waddel*, a very experienced Sea Officer, who had served at the taking of *Ormuz*, by whom being informed, that most of those Prisoners were set at Liberty, we resolved to leave the Coast of *Malabar*. The City of *Cananor* is inhabited by *Malabars*, a People that inhabit that Coast from the City of *Goa* as far as the Cape of *Comerin*, but the *Portuguese* have a good Fleet at *Cananor*.

All that Tract of Land is very fertile in Spices, but especially in Pepper, which is esteemed better even than that which is brought from *Sumatra* and *Java*. They go for the most part naked, except that they cover their privy Parts, have Holes in their Ears, and are like the *African* *Moors*, except that their Lips are not quite so thick. Their Hair they tie in a Knot upon the Crown of their Heads, and let the Beard grow without any trimming, which makes them appear more like Monsters than Men, neither is their internal Disposition unanswerable to their external Appearance, being in Effect a very uncivilized and barbarous Generation, and making for the most part Profession either of Piracy or Soltery. They are rather fierce than brave, handle their Bows and Arrows, and also their Swords and Bucklers, with sufficient Dexterity. They have their particular King, who being of the Sect of the *Bramans*, is also their High-Priest, and styles himself *Zamorin* or Emperor of *Cananor* and *Calicut*. The *Nyers* are the Gentlemen of the Country, who by their Bracelets and Rings are distinguished from the *Pohya's*, or vulgar sort, these last being obliged to go out of their Way, and pay them a peculiar Respect as they pass by. I was told, that at the Time of the first Settlement of the *Portuguese* in those Parts, the *Nyers* pretended to have the same Honours from the *Portuguese* which these (who were no less proud than the other, refusing to comply with, it was agreed, the Difference should be decided by a single Combat betwixt a *Portuguese* and a *Nyer*, in which the first having got the better, the *Nyers* ever since pay the same Respect to the *Portuguese* as the *Pohya's* do to them.

They have among other Priviledges this, that they may freely enter the Houses of their Comrades, and please themselves with their Wives and Daughters, the Signal being to leave their Sword and Buckler at the Door; which done, nobody, not even the Master of the House, will enter to disturb them; but a *Nyer* will never degrade himself so far, as to have any Commerce with the Wife of a *Pohya*. The *Malabars* use Bockins, with which they write upon the Bark of Cocoa trees; their Characters being quite different from those of the other *Indians*, are understood only by the *Bramans*. The King of *Calicut* never eats or drinks any thing but what has been presented before to his Pagod, or Idol. The Inheritance to the Crown does not fall to the Son, but his Sister's Son, since, as the *Bramans* here have the First-fruits of the Bride's Virginity, the Children are supposed to be begotten by them. As to the City of *Calicut*, Notice must be taken, that there are two of that Name in the same Kingdom of *Cochin*, one whereof is inhabited by *Malabars*, and lies upon a great River; the last of which we now speak, lies upon the Coast, and is under the Subjection of the *Portuguese*, having the Sea to the West, and being surrounded on the Land-side with a Fortiff of certain black Trees, which the Inhabitants hollow out, and make Boats of, and will go with them as far as *Goa*.

The Entrance of the Harbour is rocky and dangerous. The Rains of the winter Season which swells the neigh-

bouring Brooks, forces so much Earth during that Time into the Mouth of the Harbour, that it is stopped up and quite unpassable, till the Wind, which changes with the Season, carries the same into the Sea. The *Portuguese* buy the Pepper here from the King at a certain Rate, who is one of the most potent Princes of all those Parts, being able to bring into the Field 100,000 Men, most *Nyers*, who are obliged to appear in Arms at their own Charge. His Subjects are something more civilized than the other *Malabars*, but observe the same Rule in their Marriages concerning the *Bramins*, and consequently in respect of their Succession. The chief Trade of *Cochin* is in Pepper, Ginger and Cinnamon. The *Malabars* had formerly but one King, till *Sarava Prymal*, who alone commanded on all that Coast from *Goa* to *Comerin*, having embraced the *Mohammedan* Religion, and resolved to spend his Days near the Sepulchre of the Prophet, divided his Dominions among his nearest Friends, under Condition that the Kings of *Cananor*, *Cochin* and *Celan*, should pay Homage to the King of *Calicut*, upon whom for that reason he bestowed the Title of *Zamorin*, or Emperor; but notwithstanding this the King of *Cochin* is much more potent than he.

6. On the 26th we left *Cananor*, and the next Day discovered eighteen Sail of Ships, which, making up towards us, we began to suspect them for Pirates, as indeed they proved. We had just Time enough to put ourselves in a Posture of Defence, when they began to come pretty near us, but did not think fit to attack us till Midnight, when the Moon shined very bright, they surrounded us on all Sides, but were so warmly received, that we sunk two and disabled three or four more, which made them think of retreating. We passed that Night in Sight of the Fort of *Cochin*, and the 28th saw no more than fourteen of these Pirates following us at a Distance; we continued our Course with a fair Gale in Sight of the Cape of *Comerin*, to the S. E. of us, being the most southern Part of the *Indies* known among the Ancients by the Name of *India* on this Side the *Ganges*. The next Night the *Malabars* made a Shew as if they intended to venture the other Brush with us; but a Volley of Shot, though without Bollets, sent them a going, so that we heard no more of them.

The 29th we came within Sight of the Island of *Ceylon*, at the very Point of which we were becalmed for three Weeks. This Isle extends from the South-East to the North-East, between the two Capes of *Comerin* and *Negapatana*, about ten Leagues from the Continent; its Length being sixty Leagues, and its Breadth forty; its Circumference two hundred and fifty; and, according to the Report of the Inhabitants, its Compsals was much larger before the Violence of the Sea carried away a large Part of Land on the Side towards *Comerin*. It is the richest and most fertile of all the *Indian* Islands, which I suppose to be the *Tayrubana* of the Ancients, though I am not ignorant that some of our modern Geographers make it the Isle of *Sumatra*, of which more hereafter. I did not, without Reason, call the Isle of *Ceylon* the richest and most fertile of all the *Indian* Islands, it being unquestionable that it has not only great Plenty of every thing that other Islands produce, but besides this whole Forests of Orange, Lemon, and Cinnamon-trees, which diffuse their fragrant Smell at a great Distance into the Sea. Besides that, there is no precious Stone but what it affords, except Diamonds: Pearls they take there in abundance, but not altogether so fine as those of *Babaram*; in recompence of which it affords the finest Ivory in the World. The first Discovery of it is owing to the *Portuguese* in 1506, when *Laurence*, Son of *Francisco Almeida* made a Treaty with one of the Kings of the Island; since which Time they took Care to fortify themselves in the Town of *Colombo*, but were chased thence, and consequently from the whole Island, by the *Dutch*, in 1657.

The *Dutch* did not trade here till 1602, under the Reign of *Timala Derma Sarada*, King of *Candy*, the most potent, and in a manner the only Sovereign Prince of the whole Island, who ascended the Throne in a very extraordinary manner; for the Throne of *Candy* being become vacant by the Death of *Derma*, who, from

Earth during that Time that it is Ropped up and which changes with the Sea. The Portuguese buy at a certain Rate, who is of all those Parts, being 1000 Men, most Nairs, and at their own Charge. The civilized than the other Rule in their Marriages consequently in respect of the Trade of *Cochin* is in *Pepper*. The *Malabars* had formerly a King, who alone commanded, and resolved to spread the Prophet, divided his Friends, under Condition in and *Cheani*, should pay out, upon whom for that of *Zamorin*, or Emperor; the King of *Cochin* is much more

and the next Day did, which, making up to them for Pirates, as indeed he was not enough to put ourselves they began to come pretty to attack us till Midnight, which, they surrounded us very much, that we sunk more, which made them that Night in Sight of us saw no more than four us at a Distance; we could in Sight of the Cape of the most southern Part of the *Malabars* by the Name of *Malabar*. The next Night the *Malabars* intended to venture the of Shot, though with us that we heard no more

of the Island of *Ceylon*, were becalmed for three from the South-East to the Capes of *Comorin* and *Negapatam* from the Continent; as and its Breadth forty; its and fifty; and, according to its Compa's was much large Sea carried away a large towards *Comorin*. It is the Indian Islands, which of the Ancients, though our modern Geographers which more hereafter. The Isle of *Ceylon* the richest Islands, it being unquestionably Plenty of every thing that sides this whole Forests of trees, which diffuse their into the Sea. Besides what it affords, except in abundance, but not *Spicery*; in recompence of in the World. The first Portuguese in 1506, when made a Treaty with since which Time they in the Town of *Colemba*, but frequently from the whole

ere till 1602, under the *King of Candy*, the the only Sovereign Prince cended the Throne in a or the Throne of *Candy* Death of *Derma*, who, from

from a *Bastard*, was advanced to that high Dignity, the Portuguese took this Opportunity to establish themselves in *Ceylon*; but *Fimala Derma Surinda*, Son of one of the chief Men in the Kingdom, who had been educated among the Portuguese and baptized, and by their Interest advanced to the Dignity of High-Comitable, disliking the Encroachments of a Nation whom he knew would be in a little Time for grasping at all, had so gained the Affection of the Soldiery, that he prevailed with them to kill all the Portuguese in the Town of *Candy*, and to declare open War against them; which, being done, he was by the *Cingalese* declared King. The Portuguese had among them a certain Prince, the next Heir to the Crown, who was baptized, and named *Katbarina*. *Petro Lopez de Souza* being the General of *Malacca* for the Portuguese, resolving to enter the Country with a good Army, strengthening his Interest, brought the said *D. Katbarina* along with him, and having caused her to be declared lawful Heiress to the Kingdom of *Candy*, made himself Master of the capital City of the same Name; but being closely blocked up by *Fimala Derma*, who intercepted his Foragers, and cut off his Provisions, found himself constrained to come to a Battle in 1590, in which he was put to the Rout, himself killed upon the Spot, and *D. Katbarina* taken Prisoner by *Fimala*; who afterwards, to strengthen his Title to the Crown, married her. Four Years after the Portuguese made a second Attempt against *Candy*, but not with much better Success; for though they were not absolutely routed, yet were they so harassed that they did not think fit any longer to continue the War with him.

The Dutch, at their first Settlement, had not much better Fortune; for though the King received in the Year 1604 their Admiral with a great deal of Civility, yet in the next following Year, having commanded their Vice-Admiral with fifty of his Men to be put to Death, the Dutch laid aside their Design of trading there, till having found an Opportunity of gaining the Fort of *Punto de Gallo* from the Portuguese, and fortifying the Harbour of *Negambo*, they began to establish themselves there, and at last accomplished it by taking of *Colombo* from the Portuguese. The King of *Candy* is the most potent and most absolute of all the other Princes in the Isle of *Ceylon*. He takes great Delight, as well in the European Way of Building, as in their Fortifications. The Kingdom is situated all along upon that River, upon which lies the City of *Vintain*, which serves for an Harbour to the King's Ships. The Inhabitants resemble the *Malabars*, but that they are not quite so black. They generally go naked, except that some use Portuguese Doublets. They all wear Pendants in their Ears and Poiniards at their Sides. The Women likewise go with their Breasts uncovered; but for the rest, they are very modest both in their Clothing and Conversation, dressing their Heads much like the European Women, with their Hair close behind, and tied in Tresses. They appear in gold and silver Garments, with Rings upon their Hands, Feet, and Legs, set with precious Stones. They live conveniently enough in their Houses, their Wives being good Housewives, and especially well skilled in Cookery. The *Cingalese* are so much addicted to an idle Life and Effeminacy, that they are neither fit for War nor any thing else.

7. *Ceylon* is, as I said before, beyond all Dispute, the most plentiful Isle of all the *Indies*; nothing can be named either of Provisions or Fruits, but what is very cheap here; though they are *Pagans* they eat of every thing in general, even Pork (abstaining only from the Flesh of an Ox or Cow.) The *Mohammedans* enjoy a full Liberty among them; and the *Pagan* Inhabitants abstain from Wine as well as they. They have a great Veneration for their Bramans; they marry their Maids at ten or twelve Years of Age, and burn their Dead. *Fimala Derma*, whom we spoke of before, had got as much Christianity as could be expected among the *Indian Portuguese*, which he soon laid aside; so that his Successors continued in their Idolatry. Some of the Inhabitants worship the Head of an Elephant cut in Wood or Stone, who, they say, outdo Mankind in Judgment, and therefore pray for Wisdom to them.

They lay up every Day a certain Share of their Provisions in a Basket kept for that Purpose for their Pagods,

and hold it as a Point of Faith, that the World will not perish as long as their grand Temples, which may be discovered at a great Distance at Sea betwixt *Punto de Gallo* and *Monte Callo*, shall remain standing. They have another Opinion concerning a certain Mountain in this Island, named *Pico d'Adam*, where they say the first Man was created, and that the Spring on the Top of the Mountain arose from the Tears that *Eve* shed for *Abel*; and that the Isle of *Ceylon* was the terrestrial Paradise. This Tincture of Christianity gives us sufficient Hopes, that among a People, docile enough in themselves, the Christian Religion might be established, if People were as forward in the Work of Salvation as to gain Riches. There is scarce any other King in the Isle of *Ceylon*, except him of *Candy*, but what pays some small Tribute by way of Acknowledgment to the Portuguese, of which the King of *Mateale* pays no more than fifty Ducats per Annum.

Ceylon affords very good Pepper, but their staple Commodity is Cinnamon. The Kingdom of *Candy* hath certainly both Gold and Silver-Mines, but are not wrought by an express Inhibition from the King; neither must their precious Stones be sold to any but the King; but, as they have such Plenty of them that they are found among the Gravel that is washed down from the adjacent Mountains, and carried along with the Current of the Water; so it is impossible to prevent their being sold underground to Strangers. This Isle also furnishes sufficient Store of Timber and Stone for Building; of Corn, Oil, and Wine, if they would take the Pains to cultivate the Vines, Cotton, divers Roots for the Use of Dyers, Ginger, Cardamom, Mirabolanes, Corcoma, Nutmegs, and divers medicinal Drugs, and of Rice they have such Store that they furnish the whole Coast of *Coromandel* with that Commodity. The Dutch buy the Cinnamon here at the rate of an hundred and twenty-eight Livres the Hundred Weight.

8. While we were becalmed near this Isle, I had the Opportunity of making an Enquiry of our President and some Jesuits, who were on Board us, and had spent most of their Days in the *Indies*, concerning those Parts I had not seen, according to whose Relation I thought fit to insert the following Account. Near the Cape of *Comorin*, along the Coast of *Malabar*, for a Tract of near an hundred and forty Leagues by Sea, extended the Isles (by some accounted One thousand, called *Maldivas* by the Portuguese, having the Cape to the North, some of which being so very low that they are often subject to Inundations, are not inhabited, others are. The *Malabars* are of Opinion that they were torn from the Continent by the Violence of the tempestuous Waves of the Sea, which, in some Places, is at so slender a Distance from the Continent, that a brisk active Fellow might leap over it. The capital City which has given its Name of *Maldivas* to all the Islands is built upon four small Isles, being the Residence of the King, who commands over all the rest, and a Place of good Trade, though they produce naturally scarce any thing but *Cocoas*; but the Industry of the Inhabitants supplies, in some measure, the Defect of Nature here, there being not any Nation in the *Indies* more ingenious in making Garments of Silk and Thread than they. The Coast of *Coromandel* being in the most Eastern Part of the *Indies* this Side of the *Ganges*, is divided from the *Malabar* Coast by the Mountains of *Balagatta*, its Extent being one hundred Leagues along the Coast from *Cape Comorin*, or rather the Point of *Negapatam*, as far as the River *Nagual* and the Town of *Mussipatan*, which, as it has excellent Harbours, and the best Roads for Anchorage in the *Indies*, so it serves for a safe Retreat for such Vessels as are by the tempestuous Winter-season forced from the Coast of *Guzurat* thither, where the Climate and Weather is very calm at that Time.

The Portuguese are Masters of the Town of *St. Thomas*: On this Coast, they say, that when they first possessed themselves of *Cochin* and *Cranganor*, the Inhabitants of this Coast, who were Christians of the *Greek* Religion, implored the Protection of the King of *Portugal*. To back this Tradition, they affirm, that *St. Thomas*, one of the twelve Apostles, after he had taught the Gospel in the Kingdom of *Narfinga*, petitioned the King to give him Leave to build a Chapel

Chapel for the performing of Devotion, which being strongly opposed by the *Pagan* Priests, it happened that a prodigious Piece of Timber being lodged at the very Entrance of the Harbour of the City of *Mallapour*, which hindered the free Passage of all the Ships, a Trial was made by Elephants, and all other Ways, even by consulting the Magicians themselves, to remove it thence, but in vain; whereupon the King issued his Proclamation, by which he offered a considerable Reward to such as would undertake to clear the Harbour. *St. Thomas* offered his Service, referring to himself no other Reward than the Piece of Timber. The Day appointed for this Purpose being come, and the Saint appearing without any other Instrument to effect it than his Girdle, which he fastened to the Beam, all there present laughed at his Endeavours; but he no sooner began to pull than that vast Piece of Timber, which could not be moved before by the Strength of so many Elephants, followed without the least Difficulty; at which the King being surprized to the highest Degree, permitted him to build the Chapel according to his Request, which so incensed the Bramans that they set certain People to murder him whilst he was at his Devotions in the said Chapel. *Maffeus* says, that by the special Command of *Jehn King of Portugal*, the Bones of this Saint was searched for, and found on the Coast of *Coromandel*, and thence transferred to *Goa*, where a very fine Church was erected to his Memory.

On the other hand, both *Rhynus* and *Socrates* affirm, that *St. Thomas* suffered Martyrdom at *Edessa in Mesopotamia*, and that they used to go on Pilgrimage to his Sepulchre there. The Town of *St. Thomas*, though none of the biggest, yet is well built, most of the Houses being of Stone. The Church has no Steeple; it contains about six or seven hundred Inhabitants, *Portuguese*, and *Negizes*, and some *Armenian* Merchants, the *Indians*, *Pagans*, and *Mohammedans*, living at a Place called *Mahapour*, seated upon a Rivulet two Leagues to the North of *St. Thomas*, which was formerly the capital City of the Kingdom, but is now reduced to a very indifferent Condition.

9. From *April to September*, whilst the S. and S. W. Winds blow upon this Coast, the Road here is very safe, but all the remaining Part of the Year small Vessels are obliged to shelter themselves within the River of *Palacaste*, and the greater in the Harbour of *Negapatan*; there is five Fathom Water within Cannon-shot of the Town, but makes a very ill Landing-place, by reason of the Roughness of the Sea. The *Dutch* have considerable Traffick on this Coast, but especially at *Pellapouli*, or *Negapatan*, and at *Palacaste*, where they have the Fort *Gucliria*. This whole Country was formerly divided into three separate Kingdoms, i. e. of *Coromandel*, *Narfinga*, and *Bijnagar*, which is now subject to one Prince, whose Residence is at *Bijnagar*, and sometimes at *Narfinga*. The Kingdom of *Orisa* begins above the Town of *Mushipatan*, extending from the River of the same Name to that of *Guenga*; the *Dutch* include this in the Coast of *Coromandel*. *Mushipatan* and *Colenda* are its two chief Cities; the first is considerable for its Commerce, the last for being the ordinary Residence of its Kings. It produces abundance of Salt, and some Diamonds, among which all that weigh above five Carats belong to the King. To the North of *Orisa* lies the Kingdom of *Bengal*, whence the Gulph, known to the Ancients by the *Sinus Gangeticus*, has got its Name. Their Traffick is Rice, Sugar, Cottons, Calicoes, but especially in Silk, which, for Goodnet, exceeds all others in the *Indies*. Hence also are brought the finest Canes; and they have another sort of Canes, out of which they make Drinking-vessels, and being lacquered, will hold Liquid as well as Cups of Metal. Here grows a certain Tree, the Stalk of which is of the Thickness of a Man's Thumbs, having on the Top a large Button like a Tassel; the Span out and furnishes Materials for an excellent kind of Stuff, much esteemed by the *Portuguese*, who call this Stuff *Herba de Bengala*.

The Inhabitants are *Pagans*, leading a very barbarous kind of Life, Thieving and Adultery being their ordinary Vices, though severely punished. They worship the *Ganges*, out of an opinion, that its Water cleanses them from all their Impurities, which is the Reason that the King

of *Narfinga* sends for the Water he washes himself with from that River. The Kingdom of *Pegu* borders to the East upon *Bengal*, owing its Name to its Metropolis; there the King keeps his constant Residence. *Gespar Balbi* tells us Wonders of this Kingdom, which I had not the Opportunity to see; and since others also have given us an Account of what they themselves have observed well, I will only add, that the City is divided into two Parts, viz. the new and old City; the first of which is inhabited by Merchants, the second is properly the Residence of the King and his Court, which is exactly four-square, surrounded with a broad Moat, in which Crocodiles are kept for its better Security. The Palace Royal is said to be as big as *Venice*, and separated from the City by its peculiar Fortifications, which have no more than two Gates; he keeps above eight hundred Elephants within the Castle, among which those for his own Use pay him Reverence, being trained to it.

If we may rely on *Balbi's* Testimony, this King is next to the Emperor of *China* the most potent upon Earth, being able to bring 1,500,000 Men into the Field, and eight hundred Elephants, who are for the most part maintained at the Charge of his Lords. Among other Idols they have in their Temples, there is one of massy Gold in the Chapel within the Palace, with a Crown set with precious Stones on his Head, and one only of the Bigness of a Plumb on his Forehead, with Pendants of an inestimable Value in his Ears, a Scaf about the Waist, and a Cross on the right Shoulder, and under the left Arm a Chain made all of Diamonds, and other precious Stones. The same Chapel has two Silver Idols of the same Shape, but two Foot higher than the former, with Crowns set with Gems, and a fourth, which exceeds all the rest, besides a fifth made of Copper and Brais, valued at more than the other four. *Pegu* affords more Elephants than all the rest of the *Indies*; they are taken by means of the Females, who entice them out of the Woods into the Stables, where they have Penns that hold but one of these Beasts, where they are kept till they are tamed. The Arms of the *Peguans* are generally Half-pikes made of Canes, short and Broad-Swords and Bucklers, and Helms made of boiled Leather laid double, and gummed over with a certain Gum called *Achran*. The People are *Pagans*, believe one supream God, who has a great many Vicegerents under him, whom they also acknowledge for Gods; and that they are the Authors of all Good that happens to Mankind, as on the other hand the Devil is the Author of all Evil, whom for that Reason they worship, to appease his Wrath. The Day on which they hold their Devotions is *Monday*; they celebrate five Feasts in a Year, called by them *Sapan*. The first, called *Sapan Giacchi*, is celebrated by a Pilgrimage, by the King and whole Court, twelve Leagues out of Town, with the utmost Magnificence. The second, called *Sapan Carana*, is celebrated in Honour of the Statues in the Royal Chapel; as is also the third, called *Sapan Graioma Segianon*; the fourth, called *Sapan Daiche*, is celebrated by the King and Court, by casting Rose-water at one another; and the fifth, called *Sapan Donon*, is a kind of Race of Boats upon the River, in the Presence of the King and Queen.

When the King dies they join two Boats together, and putting a Table in the Middle of one, they lay the Corps upon the Table, under which they make a Fire of Sandal Wood, Storax, Benjamin, and other sweet-scented Woods and Gums, which being sent down the Stream, the Priests attending, rejoice and sing, till the Flesh be burnt to Ashes, which they mix with Milk into a Palle, and so cast it into the Sea at the Mouth of the River; but the Bones they preserve and lay up in a Chapel built for that Purpose. The Priests carry an empty Bottle at their Girdle, are clad in red Vestments, coming down to their Heels, with a Cloak reaching to their Hams, and wear a Hat to shelter themselves against the Sun-beams, their Heads being shaved. They go bare footed, live by Alms, like our Mendicant Friars, eat but once a Day, and sleep in the Forests in hanging Mats fastened to the Boughs of Trees. They lead a very exemplary Life, and on *Monday* Morning early go about to invite the People to their Devotions; and in their Sermons they exhort their Auditors to Modesty. They have no Aversion to those who turn Christi-

ans, but exclaim against the worshipping the Devil, a Custom so deeply rooted among the *Peguans*, that with all their Arguments they are not able to dissuade them from it.

They are in great Veneration among the most sensible Men of the Nation. Their Corps are burnt like their Kings, with sweet Woods, the Ashes cast into the River, and their Bones preserved. *Pegu* has no other Corn but Rice, which it produces in such Plenty, that great Part of it is sent to the neighbouring Provinces. Sodomy was heretofore grown so general here, that one of the Queens of *Pegu*, to obviate this Vice, ordered a small Pin to be fastened betwixt the Skin and the Flesh, by way of Incision; she commanded also, that all the Boys, whilst young, should be painted of a blue Colour on their Posteriors, thereby to create an Aversion to them, as on the other Side, the Women take all imaginable Pains to provoke the Men to Venery. Men and Women delight in black Teeth. The King is sole Heir to all that leave no Children behind them, and even one-third Part of the Estates of those that have Children belong to him. *Pegu* affords no other Spice but Ginger, and scarce any other Commodity is exported, except Rice and Silver, in Exchange for which they bring thither Stuffs and Calicoes, Pepper, Cinnamon, Nutmegs, Opium, and Sandal Wood. They will pledge their Children to borrow Money; but if the Creditor enjoys them carnally, they are free, and the Debt is paid.

Siam, one of the next considerable States in the *Indies*, confines to the North upon *Pegu* and *Ava*, to the West upon *Bengal*, to the East upon *Patana*; whence the Coast, (in which I comprehend the Gulph of *Siam*) runs North to 13° 30', and turning to the South to twelve Degrees, extends at a great Distance from the Sea, making a Semi-circle of four hundred and sixty Leagues. The Country is both very woody and mountainous, except towards the Sea-side, where it is very fertile, and has several convenient Isles and Harbours, besides some Islands in the Gulphs. The River *Menam* may vie for Largeness with any other River of the *Indies*; for though its Breadth is not very great, its Length is such, that hitherto its Source has remained undiscovered. It runs from North to South thro' the Kingdoms of *Pegu* and *Ava*, and afterwards through *Siam*, where it falls by three several Channels into the Gulf of *Siam*: It yearly, like the *Nile*, overflows the adjacent Country for five Months, which renders the Rice-fields very fruitful. Its Eastern Channel, which lies in 13° 30' eleven, is most proper for Navigation, were it not for a Shelf a League in Length, which lying just at the Entrance of it, has five or six Foot Water at low Tide; but at high Water, fifteen or sixteen; and in *September*, *October*, and *November*, seventeen or eighteen Foot; for which Reason it is, that Vessels of any Burthen anchor in the Road two Leagues from the Shelf; but such as may venture over the Shelf with a high Tide, may go freely up the River as far as the Castle of *Bangkok*, six Leagues from the Sea, and thence as far as the City of *Judda*, twenty-four Leagues from the Mouth of the River, except in the before-mentioned Months, when the River is unnavigable.

This Kingdom is very populous, especially those Provinces bordering upon the Seas. The most considerable Cities are *Judda*, or *Ouya*, the Metropolis of the whole Kingdom; next *Cambaya*, *Campaa*, *Stacapura*, *Picebonck*, *Lygor*, *Bordalong*, and *Tanasserim*, where the *Portugueze* drive a considerable Trade; *Bangkok*, *Pippy*, *Mercy*, &c. The City of *Judda* is built upon an Island in the River *Manam*. It is the ordinary Residence of the King of *Siam*, having several very lar Streets, with spacious Channels regularly cut. The Suburbs are on both Sides of the River, which, as well as the City itself, are adorned with many Temples and Palaces; of the first of which there are above three hundred within the City, distinguished by their gilt Steeples, or rather Pyramids, and afford a glorious Prospect at a Distance. The Houses are, as all over the *Indies*, but indifferently built, and covered with Tiles: The Royal Palace is equal to a large City. *Ferdinando Mendez Pinto* makes the Number of Inhabitants of this City amount, improbably, to 400,000 Families. It is looked upon as impregnable, by reason of the over-flowing of the River at

N O V. LIII.

six Months End. The King of *Siam*, who takes amongst his other Titles that of *Precau Salsu*, i. e. sacred Member of God, has this to boast of, that next to the Mogul, he can deduce his Descent from more Kings than any other in the *Indies*. He is absolute, his Privy Counsellors, called *Mandarins*, being chosen and deposed barely at his Pleasure. When he appears in Publick, it is done with so much Pomp and Magnificence as is scarce to be imagined, which draws such a Veneration to his Person from the common People, that even in the Streets, as he passes by, they give him god-like Titles and Worship. He marries no more than one Wife at a Time, but has an infinite number of Concubines. He feeds very high, but his Drink is Water only, the Use of strong Liquors being severely forbidden, by their Ecclesiastical Law, to Persons of Quality in *Siam*. As the Thirds of all the Estates of the Kingdom fall to his Exchequer, so his Riches must be very great; but what makes them almost immense is, that he is the chief Merchant in the Kingdom, having his Factors in all Places of Trade, to sell Rice, Copper, Lead, Salt-petre, &c. to Foreigners. *Mendez Pinto* makes his yearly Revenue rise to twelve Millions of Ducats, the greatest Part of which being laid up in his Treasury, must needs swell to an Infinity in Process of Time.

Each City has its peculiar Court of Justice, from whence an Appeal lies to the chief Court in the City of *Judda*, consisting of a Lord Chief Justice and twelve Judges, and sometimes to the Privy Council itself, if the Parties will be at the Charge of it. They have their Counsellors, Attornies and Solicitors, and the Causes are pleaded in the Presence of both Parties. In criminal Cases they proceed much after the *French* Way; for upon an Information given, the Party accused is committed and examined afterwards, and for want of sufficient Evidence put to the Rack, if there be very strong Circumstances; after which the Judges, either upon Confession of the Fact, or sufficient Evidence, give Sentence, which is confirmed by the King, unless he is pleased to pardon the Offender. Their Punishments are so severe, or rather cruel, that such as are used among us are not so much as known here, for the slightest Crime is thought to deserve Banishment. Theft is punished with the Amputation of Hands or Feet. The common Way of executing Criminals, is to cast them alive into boiling Oil.

They have three sorts of Trials for want of sufficient Evidence, by Fire, Water, and Oil. In the Water-trial both Parties are let down to the Bottom of the River, along a great Pole, and he who can stay longest under Water obtains thereby his Justification, as does he who can hold his Hand longest in boiling Oil, in the Trial of Oil. In the fiery Trial they are to make five or six Steps through a great Fire, very slowly, two Men leaning very hard upon their Shoulders. But that which they look upon as the most dreadful of all is, when, in order to their Justification, they take a Pill of Rice only, over which the Priest has pronounced a certain Malediction: If the Culprit swallow it without spitting, he clears himself to all Intents and Purposes, and his Friends carry him off in Triumph.

The Forces of *Siam* consist chiefly of the Militia of the Country, all Subjects being obliged to take Arms when called upon, so that as occasion requires, he can summon the 100th, the 50th, the 20th, the 10th, or 5th Man, who, as well as the Noblemen with their Attendants, serve at their own Charge as long as the War lasts. The Infantry are pretty well disciplined, but want the Use of Fire-Arms, being provided only with Bows, Arrows, Swords, Pikes, and Bucklers; their Horse are also but indifferently mounted. Their chief Strength consists in their Elephants, which are very well trained to the Wars, and carry each three armed Men. They are not destitute of Cannon, but have but little Skill to manage them to the best Advantage. They have also great numbers of Frigates and Gallies, well provided with Guns, but the Gunners and Marines are so unexpert in the Management of them, that they cannot encounter any *European* Fleet with the least Hopes of Advantage; for which reason, since of late Years the *Siamese* have lived in continual Enmity with the *Portugueze*, they have highly courted the Friendship of

9 N

the

the *Dutch*, who were always ready to give them Assistance against their Enemies. The King of *Siam* knowing that his chief Strength consists in his Elephants, keeps a greater Number than any other *Indian* Prince, the Elephants of *Siam* being both for their Strength and Quickness of Apprehension esteemed above all the rest. They take them after the same Manner as they do in *Pegu*, by sending divers Females into the Forests, who decoy them into the Stables, where they are tamed, either by putting them into Pens exactly fitted to the Hulks of their Bodies, or by tying their Legs to three or four tame Elephants.

It is to be observed, that sometimes they meet with white Elephants in *Siam*, but they are so rare, and so much admired in those Parts, that in 1568, the King of *Pegu* being informed that the King of *Siam* had two white Elephants, he sent an Ambassador to desire he might have one of them, at what Price he would be pleased to set upon it; which the King of *Siam* refusing to accept, the King of *Pegu* entered *Siam* with a vast Army, and conquered it, making the King his Tributary, tho' with the Loss of no less than 500,000 Men. The *Siamse* call the white ones the Kings of the Elephants, and attribute to them something of Divinity; for which reason also the King of *Siam*, when he meets with one, causes him to be served in Vessels of Gold, allows him a good Attendance, and a Canopy to be born over his Body. The King and his Subjects are *Pagans*, and have an infinite Number of Idols, of Gold, Silver, Stone, Wood, and other Materials, some twenty, some thirty, and others forty Feet high. Their Temples have gilt Towers, or Pyramids. Their Ecclesiasticks are composed of a kind of Hierarchy, under the Direction of a High-Priest, residing in the City of *Judda*, where are at least 30,000 Ecclesiasticks, that wear Garments of yellow Calicoe, and have their Crowns shaved. The most learned among them are chosen for Priests to preach in their Temples, and to sacrifice. They are under a Vow of Chastity, upon Pain of Death, but may change their Professions, and marry whenever they think fit. Each Temple has a kind of a Convent to it, for the Entertainment of a certain Number of Priests who attend the Service every Day Morning and Evening.

They live for the most Part upon Alms, like our Mendicant Friars. They have also a kind of religious old Women, but these are not bound by any particular Discipline. They believe one Creator of the Universe, who governs the World by diverse inferior Gods. They say that the Soul is immortal, and after it is purified by passing through several Bodies, is either condemned to eternal Torments, or enjoys Beatitude. They tell you, that this has been transmitted to them by Tradition, Time out of Mind; for the rest, they hold that good Deeds, and especially Charity, are the chief Means to attain Salvation, which is the reason they extend their Charity even to the Beasts, such as Birds and Fish, which they buy to set them at Liberty, as believing the Transmigration of the Soul. This is the Reason why they never condemn any other Religion, or dispute with them: But their Ecclesiasticks preach without Intermision against the old Custom of invoking the Devil, which is still retained among the vulgar sort. They have abundance of Lamps hanging before their Idols in the Time of Service. These they set out with Garlands of Flowers, and in some of them they have certain Days, each Quarters of the Moon, appointed for their general Devotions, and a Lent of three Months.

Their dead Corps they shave, wash and perfume, and afterwards burn them near a Temple, where the Ashes are buried under a Tomb, or Pyramid. The Relations mourn for their Friends by shaving themselves, by giving Alms and Benevolences to the Priests, to pray for them at their Obsequies. The Corps is attended with Musick and Fireworks. The *Siamse* are strong limbed, and well proportioned, but their Courage is not answerable to it, which makes them use their Victims with a great deal of Insolence. They are base, and very crafty in their Dealings. They are so much addicted to Idleness, that they leave all Toils to their Wives and Slaves. They wear a painted Piece of Calicoe from the Middle down to the Knees, tho' the Men have also Shirts with Sleeves hanging down to the Elbows. The Women cover their Breasts with a Piece

of Calicoe fastened about their Necks; there is so little Difference in the cloathing of the People of Quality and those of the inferior Rank, that they are not to be distinguished but by their Train of Slaves. Their Houses are built either of Timber, or Canes, covered with the Leaves of Cocoa-tree, and raised three or four Foot from the Ground; each Apartment has several Windows for the more commodious Passage of the Air; they know of no other Furniture but what is absolutely necessary for their Conveniency in the Chambers and Kitchen.

They feed commonly upon Rice, Fish, and Pulse; their ordinary Drink is Water; but they don't refuse strong Liquors, if they are invited to them. Persons of any Fashion here make no use of Priests for the Confirmation of their Marriages, which, after the Parents Consent is obtained, and Agreement made, they consummate and live together as long as they like one another; and in case of Separation, all the Goods and Children are divided betwixt them, and both Parties are at liberty to marry again; but the Concubines are tied to the Pleasure of their Masters, who consider them no otherwise than as Slaves, their Children having but a slender Share of their Father's Estates, which, after their Death, is divided into three Parts; one goes to the King, the second to the Priests, who are to bear the Funeral Charges, which are very great, and the third to the Children, who have an equal Share, except that the eldest is allowed some small Advantage. People of an inferior Rank purchase their Wives, notwithstanding which both Parties are at liberty to be divorced. They don't take the least Care for the Education of their Children till they are six Years old, when they put them to their Ecclesiasticks to be instructed in Reading and Writing, afterward breed them either to manual Arts, Commerce, or the Court.

The Peasants lead a miserable Life, by reason that Provisions are so cheap here, that they can't gain any thing by their Labour. The chief Trade of the City of *Judda* lies in Stuffs brought thither from *Surat*, and the Coast of *Coromandel*, in all sorts of China Commodities, Precious Stones, Gold, Benjamin, Wax, Copper, Lead, Indigo, Calamba-Wood, Brasil-Wood, Cotton, and Deer-Skins, of which they export fifty thousand every Year to *Japan*; and their Rice is transported in vast Quantities to all the neighbouring Countries. The King himself is a Merchant here, and has his Factors at *Pegu*, *Aca*, *Jangama*, on the Coast of *Coromandel*, and in *China* itself. The Money is very good, being of three different sorts, viz. *Tical*, *Mases*, and *Toanges*; two *Toanges* make a *Mase*, and four *Mases* a *Tical*, which is equivalent to a French Half-Crown; four of these *Ticals* go to a *Tael*, twenty of which make a *Catta* in Silver. Their smallest Silver Money is the *Toang*; but Provisions being so very cheap here, they make use of certain Shells brought thither from *Manilas*, eight or nine hundred of which go to a *Toang*.

The *Portuguese* being sufficiently sensible what prodigious Advantage they were able to reap from this Kingdom for supporting their Tradick to the *Molucco's* and *Philippine* Isles, the Viceroy of *Goa* were always very careful to cultivate a good Correspondence with the King of *Siam*, who in return granted them many Privileges, till such time that the *Dutch* got Footing there at the Beginning of this Age. The *Portuguese* were to alarmed thereat, that they not only obstructed the Trade of the *Siamse* to *St. Thomas* and *Negapatan*, but also attacked a *Dutch* Vessel in the River *Arenam*, which, with some other Outrages, served only to incense the King of *Siam* against them, who ever after encouraged the *Dutch* in their Settlement and Commerce, which is very advantageous to them in respect of the Isles of *Java* and *Sumatra*, of which they are now in Possession.

10. The Kingdom of *Cambodia* borders to the North-West upon the Kingdom of *Siam*, being inclosed by the Sea on the other Side; the capital City is seated upon a River sixty Leagues from the Sea-shore, which rises out of a Lake, as do all the other Rivers of this Kingdom. That which runs by *Cambodia* overflows every Year like the Nile; its first Rise is in the Beginning of June, increasing by degrees to ten or twelve Foot, and in July at *August* it overflows the Country to the degree, that it is quite unnavigable; for which reason it is that the City of *Cambodia*

r Necks; there is so little People of Quality and those are not to be distinguished Their Houses are built either with the Leaves of Cocoa- nut from the Ground; each is for the more commodious- know of no other Furniture for their Convenience in the

India is built upon a rising Ground, having but one large Street. The Trade of the *Portuguese* here consists chiefly in *Malacca* Stuffs, which they exchange for Benjamin, Lacquer, Wax, Rice, Brass Vessels, and Bars of *China* Iron.

The King of *Cambodia* is only a Vassal of the King of *Siam*, being not able to bring above thirty-five thousand Men into the Field. The Nobility or Officers of the Court are divided into four several Ranks, viz. into *Ockinas*, *Terminas*, *Tenimnas*, and *Nampres*; the first of which are the only Men of Consideration, they being admitted into the King's Presence, and he confers with them concerning the Management of publick Affairs. The *Portuguese* are so firmly settled here, that the *Dutch* have never been able to get any Footing. Provisions of all sorts, Ven- tion, Beef, Pork, Goats, Kids, Hares, Cranes, Herons, and in short, all manner of Poultry; as likewise Oranges, Citrons, Mangoes, and Coconas, are sold excellently cheap; there being such Plenty here of every thing, and especially of Rice, that those of *Quinam* alone export yearly two thousand Copangs of Rice, five of which make eight Tons, at seventeen or eighteen *Tayls* the Copang.

That Neck of Land which extends in the Form of a Demi-Island, from the Kingdom of *Siam* to the S. E. to the N. W. of the Equinoctial Line, betwixt the Gulph of *Bengal* and *Siam*, is called the Isthmus of *Malacca*, and contains the Kingdoms of *Jabore* and *Patapan*. This Country was first discovered by the *Portuguese* in 1511, who established themselves there to that degree that no body hath been able hitherto to dislodge them. The City of *Malacca* is situated upon the Strait, which separates the Isle of *Sumatra* from the Continent, at two Degrees thirty Minutes on this Side of the Line, at the Foot of a Mountain, which is wholly taken up by the Town, and is about 1800 Paces in Compass, 600 whereof extend along the Sea-Coast, fortified with a good Wall, as likewise to the River-side, which incloses another third Part of the Town, being strengthened to the Land-side by four regular Bastions; that of *St. Domingo* on the Point of the River-side, that of *St. Jago* on the Sea-shore, and those called *Madre de Dios*, and of *Eleven thousand Virgins*. Betwixt those two the *Jesuits* College, called *St. Paul's*, stands upon the Hill, and upon rising Ground, in the Plain without the City, a Convent of *Jacobins*. The River runs N. W. is very broad and brackish at High-water, but fresh at Low-Tide; there is a Bridge over it.

It rains constantly here two or three Times a Week, except in the Months of *January*, *February* and *March*; the Shore is so muddy that there is no landing at Low-water. The two Isles called *Ilha de Naos*, and *Ilha de Pedra* lie not much above a Cannon-shot from the City, the Chan- nel betwixt these two Islands affording as safe a Harbour for the Gallions and bigger Vessels, as that betwixt the City and the *Ilha de Naos* for the Vessels of a middle Size; but small Barks may enter the River. In the City of *Malacca*, its Suburbs, and adjacent Towns, under the Juris- diction of the *Portuguese*, are computed to be about 1200 Inhabitants, and, among them, not above 300 fighting Men, and scarce 200 *Portuguese*, the rest being either *Mestizes* or *Malayans*. The *Portuguese* are in Possession only of the City of *Malacca*, and its Suburbs to the Town of *Nestra Senhora da Guadalupe*, five Leagues thence upon the same River, the Territories of the King of *Jabor* be- ginning half a League thence. This City being so com- modiously situated for the Trade of *China* and the *Moluc- cas*, the *Portuguese* had, in all Probability, made this one of the chief trading Places in the *Indies*, if the *Dutch*, who besieged it in 1606, and laid great Part of it desolate, had not prevented them; and being by their Settlements in *Ceylon* and *Java*, become Masters of these Seas, quite ruined the Commerce of the *Portuguese* to *China* and the *Moluccas*.

The Kingdom of *Patapan* is not of so large an Extent, but much more populous than that of *Jabore*, the King of *Patapan* being, according to the Computation of the *Hollan- ders*, able to raise 180,000 Men; the capital City bearing the same Name, is seated upon the Sea-side, through its Har- bour be above 2000 Paces thence. The Houses are hand- some enough, being built of Timber and Canes. The Royal

Palace is fortified only with Palisadoes, their great Temples are of Brick. The City is able to raise 10000 fighting Men. The Inhabitants are rather inclining to a brown than olive Colour, generally well shaped, and proud in their outward Deportment, but obliging enough in their Con- versation with their Friends. The Natives are, for the most part, employed in Husbandry and Fishing, and drink nothing but Water; Wine, and strong Liquors, being odious to them. The only Pleasure they delight in is that of Women; so that each Man, besides four or five Wives, maintains as many Concubines as he is able: As they look upon Fornication as a slender Trespass, so they punish Adultery with the utmost Severity, though nothing be more common among them than this Crime.

Their chief Wealth consists in their Slaves, whom they feed at a small Charge upon Rice and Fish. The Foreign- ers are the only People here who apply themselves to Traf- fick and Navigation. The Air of *Patapan*, though ex- ceeding hot, as lying near the Equinoctial, yet is not un- wholesome. They have but three Months Winter, viz. *November*, *December*, and *January*, when it rains without Intermission: The rest, from *February* to *October*, is their Summer. They sow nothing but Rice, and till the Ground with Buffaloes. Fruits are here in such plenty that every Month produces a new kind. Hens lay twice a-day; and Provisions are in such Quantities as cannot be imagined, as Rice, Oxen, Goats, Deer, Geese, Ducks, Hens, Capons; Peacocks, Hares, and all sorts of Venison. Hogs they breed none; but the Forests are full of Wild-Boars, and though they eat them not, they kill them, because they are so pernicious to the Rice. The Tigers, and great Apes, which are in the Forests here, do also considerable Mischief; but the Wild-Elephants do no Damage at all; they hunt them with Tame-Elephants, and whilst they are engaged with them, find Means to tie their hinder Feet together, and afterwards tame them by Hunger.

The King of *Patapan* is a Vassal to the King of *Siam*. *Jabore* is the utmost Point of Land of that Peninsula, called by the Ancients *Aurea Chersonesus*, reaching to the Straights of *Sincopura*. Its chief Towns are *Linga*, *Binam*, and *Carymon*, and its Metropolis is named *Batusabur*, which is however divided into two Cities, situate upon the River *Jabore*, six Leagues from the Sea, the first of which is called *Batusabur*; the second *Cottasabang*; one having about 1300 Paces, the other 500 in Compass. As the Houses are all built of Free-stone along the River-side, and raised on Piles eight or ten Foot from the Ground, they make a glorious Prospect as you come up the River; for this City contains at least 4000 Inhabitants fit for Service in the Army. The King of *Jabore* is Proprietor of all the Grounds which he bestows on any that desire them, to be manured: But though the Grounds are extremely fertile, such is the Slothfulness of the *Malayans*, that they seldom cultivate them. The *Malacca*, or *Malayan* Language, as it is the most elegant of any in the *Indies*, so it has gained as much Reputation there, and is as generally used as the *French* is in *Europe*; and having no Inflections in either Nouns or Verbs, it is not very difficult to learn.

11. We will now look over the Continent to the Isle of *Sumatra*, ten Leagues distant from the *Malacca* Shore; it extends from about 5° on this Side to 6° beyond the Line, containing 165 Leagues in Length, and about 60 in Breadth; so that those who inhabit the Middle of the Island have the Equinoctial Line directly over their Heads; whence it may be easily conjectured, that the Heats are excessive here, which together with the vast Multitude of Lakes, makes the Air very unwholesome: This Defect is recompensed by its vast Riches in Gold, Silver, Copper, Iron, and Brass, (whereof they make as good Artillery here as in any Part of *Europe*) besides Rice, Millet, and Fruits in prodigious Quantities, even in the very Forests. Add to this its Wealth in Diamonds and other precious Stones, and its Product of Silk, Spices, Wax, Honey, Cotton, Camphire, Cassia, and divers other medicinal Drugs. Of white Sandal they have whole Woods, and in the Centre of the Isle is a Burning-mountain, like that of *Vesuvius*, which they say is constantly supplied by a River of Pitch.

The whole Island is divided into ten Kingdoms, of which those of *Achen*, *Peder*, *Pacem*, *Camparum*, *Zande* and *Manambe*, lying on the Sea side on this Side the Line, are only known to foreigners. Those who have travelled thither, more for Profit than Curiosity, having made but little Search into its inland Provinces, of which the *Portuguese* give us an Account only of two, *viz.* that of *Andigidan* and *Arucan*. The *Dutch* have also discovered the Kingdom of *Polybam* beyond the Line, where they have settled themselves at present. The Kings of *Achen* are also Masters of *Peder* and *Pacem*, which includes all the Northern Coasts of the Isle. The City of *Achen* is seated in a spacious Plain, upon a broad, but shallow River, being scarce passable by small Boats. It has neither Fortification nor Gates; their Houses are built upon Piles, and covered with the Leaves of Cocoa-trees. The Royal Palace stands in the Centre of the City, which being well palisadoed and flanked, commands the whole Town, and has seven Gates. The Natives are of an olive Colour, and very flat faced; their Garments are only a Calicoe Gown, a silk Shirt, and a Turban on their Heads of the same Stuff. The King is served by Women and Eunuchs, and is a *Mohammedan*, as well as all the rest of the Inhabitants near the Coast of *Sumatra*. They begin their *Lent* at the New-moon in the twelfth Month, which ends at the same Time in the next. They have no Corn, but Rice in great Plenty, as also Beves, Buffaloes, Goats, and Sheep; the last of which nobody has the Privilege to breed except the King. They abound also in Oranges, Lemons, Bonanas, Tamarinds, Batatas, Radishes, Spinage, and Lettices. Their ordinary Drink is Water, but they make a kind of *Aqua Vita*, or Attack of Cocons.

The Isle of *Sumatra* produces a peculiar Tree called *Singah* by the *Malayans*, and *Arbor triste de Dio* by the *Portuguese*. It is full of Branches with Knots, and sprouts forth two Leaves like Plumb-leaves, except that they are small like Sage, and are covered with a whitish Down: Each of these Leaves hath its Bud, which thrusts forth small Heads, having four round Leaves; each Head produces five Flowers in a Cluster, the fifth being exactly in the Middle; they are as white as Snow, of the Bigness of an Orange-flower, and blow in the Twinkling of an Eye, as soon as the Sun is set; and when it rises again the next Morning, the Flowers, which have continued all Night, drop in an Instant. Thus the Tree continues till Sun-set again, when it opens, and produces the Flowers in the same manner as before, and calls them again at the first Appearance of that Planet, which invigorates all other Vegetables. The Cocons, of which there are four kinds, are very common in this Island. The Tree which bears the Cocoa-Nuts grows very high, but not above a Foot Diameter in Bulk. It has not a Branch but at the Top, where it spreads like a Date-tree, and these don't produce the Fruits, which grow ten or twelve in a Cluster out of the Body of the Tree. The Flower resembles that of a Chestnut. This Tree is of universal Use in the *Indies*. In the *Maldives* Islands they build whole Ships without any thing but what is furnished by the Cocoa-tree. The outward Rind affording them a kind of Hemp for their Cordage and Cables, and the Leaves with Materials for Sails, and the Covering of their Houses; besides that, they use them for the making of Umbrella's, Fans, Tents, Mats and Hats. The Fruit is of the Bigness of an Ostrich's Egg, and the outward Rind, which resembles that of our Walnuts when dried, affords the Hemp we spoke of before. If they gather it before the Nut is come to full Maturity, it affords about a Quart of very pleasant Liqueur, which if kept in the Sun, by degrees turns to a kind of a Kernel, which becomes yellow, and is of a very good Taste, and exceeding wholesome.

Their Toddy, or Palm Wine, they draw from the Tree, whilst it is in Blossom, and pulling off the Flower, they fall it to an Earthen Vessel well stopp'd, into which runs a Liqueur, resembling in Taste and Colour our Whey: This when boiled is called Toddy, and set in the Sun, turns to Vinegas immediately; and if distilled, makes a kind of *Aqua Vita*. The Pith of the Tree, as it is very white, furnishes the *Indians* with Paper. The second kind is called by the *Portuguese* *Arvequeiro*, from the *Arca* it pro-

duces. The Bananas, or *Indian Fig-tree*, is also very common in this Isle; it may rather be called a Shrub than a Tree, as having no Body, but grows to a Man's Height. It brings forth Leaves before it comes to a foot high, but these wither and fall, and others sprout forth in their stead, till such time the Plant arrives at its full Growth, and the Fruit to its Maturity, which is in Shape and Colour like our Figs, being of a yellow green, which being gathered, and hung on a Nail, will ripen in four or five Days. In the Middle of the Leaves comes a Flower of a Violet Colour, of the Bigness of an Ostrich's Egg, whence sprouts forth a kind of a Branch not unlike a Cabbage-Stalk, laden with a Bunch of Figs: One Stalk produces no more than one Bunch (but of near an hundred Figs) at a Time; but being cut close to the Ground, another springs out, and bears Fruit in one Month, and continues to do so through the whole Year. The Leaves of the Tree are six Foot long, and a Foot and half broad, and the Fruit seven or eight Inches long, and as big as a good Cucumber; the Figs are enclosed in Hulks, which are very nourishing, and eat instead of Bread.

The Pepper of *Sumatra* is next to that of *Cocbin*, the best of all the *Indies*; it is commonly planted at the Root of Trees, or propped up with Canes as we do our Hops; the Leaves are not unlike that of the Orange-tree, but somewhat less. The Fruit grows in little Bunches like Juniper-berries. It is green whilst upon the Tree, but grows black after it is dried, which is done in *December* and *January*. The white Pepper does not grow in such abundance here, and *Bengal* is the only Country that produces long Pepper. It is certain, there is more Pepper consumed in the *Indies* than in *Europe*, because the *Indians* put Handfuls of it in their Sauces, but not beaten or ground.

12. The Island of *Java Major* is divided from *Sumatra* to the South-East only by the narrow Strait of *Sunda*: Its Length is fifty Leagues, and some fancied it part of the Continent, which extends to the Straights of *Magellan*, commonly called *Terra Australis*. *Julius Scaliger* was not in the Wrong of it when he called it the Epitome of the World; it being certain, that there is no Animal, Fruit, Metal, or Drug, but what is found here in greater Plenty than in any Part of the Universe.

The Inhabitants deduce their Origin from the *Chinese*; and, to speak truth, their large Foreheads and Brows, and little Eyes, resemble much that Nation. Each Town of Note in *Java* has its peculiar Prince, and now they are all Sovereigns independant one of another. The Kings of *Bantam* and *Pallambuan* are at present the most potent, the last of which has given the Name to the Strait that divides the Isle of *Java* and *Bala*. Ten Leagues to the North is the City of *Panarucan*, near which is a burning Mountain. The King of *Panarucan* and *Pallambuan* are *Pagans*; but the King of the City of *Passuracan*, six Leagues from *Panarucan*, is a *Mohammedan*. Ten Leagues to the West is the City of *Jeartam*, noted for its convenient Harbour upon a River, where the Ships going from the *Moluccas* to *Bantam* commonly touch, to take in fresh Water and Provisions. Upon the same River lies the City of *Gerca*. The City of *Sarabaca* has its proper King, under whose Jurisdiction is also the City of *Brandam*, six Leagues thence to the West. He keeps his Court at *Sidaya*, which is well fortified, but destitute of a safe Harbour. Ten Leagues more to the West lies the City of *Jaboon*, next to *Bantam* the most considerable of the Isle, and five Leagues farther to the North-West the City of *Cajam*. *Mandalitacou* is inhabited only by Fishermen. Five Leagues farther to the West is the City of *Japara*, upon a Neck of Land, which runs out three Leagues into the Sea. Twenty-five Leagues hence, and forty-five from *Bantam*, lies *Mistram*, or *Mistavam*, a great City, and the Residence of a powerful King, who once pretended to the Sovereignty over all the rest of the Island, and still rules himself Emperor of *Java*.

Five Leagues to the West of *Japara* lies the City of *Pata*, and three Leagues farther that of *Daama*, both under the Jurisdiction of the King of *Mistram*, as well as that of *Tagal* in the same Bay. The next is the fair and strong City of *Cbaraboon*, seated upon a River, by which you pass to the Cities of *Daunago* and *Menecador*, and to find the

Fig-tree, is also very com-
be called a Shrub than a

Valley

Village of *Gacon* to the City of *Jacatra*, and thence to *Ban-*
tam, the most considerable in the whole Island, seated at
the Foot of a Mountain about twenty-five Leagues from the
opposite Coast of the Island of *Sematra*. Three Rivers rise
out of this Mountain, two surrounding its Walls, and the
third passing through the Middle of it. The Houses are
miserably built, and the Walls very wretched, as well as
the Gates, though at every hundred Paces provided with a
great Piece of Cannon, which are of little Use in a Place
where the Curtains are not defensible, and have, instead of
Towers, only Scaffolds. The whole City has only three
principal Streets which are not paved, but sandy, the Chan-
nels which run through them being very stinking and foul,
which send forth a very nauseous Smell all over the City.
At each Corner of the Streets stand Guards, as also at the
Prison Gate near the Palace, and each Person of Note keeps
a Guard of ten or twelve, for his own Security, in his Houle.
Their Houles are meanly built, upon Piles; they are com-
monly of Reeds and Canes, and the Partitions all of Bam-
boes, or Canes slit very thin. All the Foreigners here live
without the City, and the Merchants meet daily in one or
other of the three great Market-places belonging to this
City.

The *Bazar*, or Exchange, is chiefly frequented by Fo-
reigners, who meet there at Break of Day, and continue
till nine of the Clock. The second Market-place faces
the Grand Mosque, where the Women buy and sell Pepp-
er, Beetle, Arcaea, Bananas, Melons, Chiches, &c. and
white and yellow Sandal Wood. The Armourers, who
sell Arms, Guns, Pistols, Swords, &c. standing higher up
to the Right; and to the Left, the Confectioners with their
Sweetmeats: Near them is the Place where they sell all
sorts of Beans; and next to that the Onion Market, where
the Cloth-sellers and Usurers have their Meeting. Hard
by this you see the Poulterers, who deal in Geese, Kids,
Pigeons, Parrots, and all sorts of tame Fowl. Thence
you see three several Ways, one leading to the *Chinese*
Shops, the second to the Herb-market, the third to the
Shambles. Among the *Chinese*, to the Right, the Jewel-
lers, who deal in precious Stones, have their Station; and
the *Bengalians* with their Toy-shops, on the Left. The
Sale of all these things lasts only till Nine o'Clock, when
the Markets for all sorts of Provisions are opened before
the Palace, and about Noon the *Chin* Market begins.
The City of *Taban*, or *Tuban*, challenges the next Place
after *Bantam* in the Isle of *Java*, being stronger than all
the rest, and tho' not so large, yet better built than *Ban-*
tam. Its Palace is very spacious, and remarkable for the
many Apartments made here for divers sorts of Beasts that
are kept with more than ordinary Care; such as Elephants,
Fighting-cocks, and Parrots, the last of which are much
more beautiful than those transported into *Europe*, because
they are too tender to endure the Fatigues of so long a
Voyage. Their chief Traffick lies in Pepper, which they
exchange in the Isle of *Baly* for Calicoe, Cotton, and Silk,
and carry those Commodities to *Banda*, *Ternate*, and the
Philippine Isles, to truck for Cloves, Mace, and Nut-
megs.

The Natives live mostly upon Fish. They have no
other Garments but a Piece of Calicoe wrapped round
their Loins, except that the better Sort wear a kind of
loose Camblet Coats, reaching only to their Thighs. They
are great Lovers of Horses, their Saddles being made like
our great Saddles. The Natives inhabiting the inland
Countries of *Java* are all *Pagans*, and believing the Trans-
migration of the Soul, eat neither Fish nor Flesh. To
the South there are a few *Mohammedans* of the *Turkish*
Sect. They have two great Falls, the Chief of which
is upon the 5th of *August*. There are few among the *Ja-*
vans but what have three or four, nay, sometimes ten or
twelve Wives, besides their Concubines, who are obliged
to wait upon the Wives, tho' their Children have the
same Prerogative as the legitimate Off-spring. Their
Children go naked, the Girls having only a Plate of Sil-
ver or Gold to cover their Privities. They marry at
eight, nine, or ten Years of Age. In their Marriages
they use but few Ceremonies; certain Poles are stuck
upon the Wedding-Day before the House of the Bride and
Bridegroom, with Tassels of white and red Cotton, and

after Dinner the Bridegroom goes on Horseback through
the Town, where the Slaves, who are Part of his Dowry,
go to meet him, and bring him some Presents.

Women of Fashion are kept under such Restraint, that
they are not permitted so much as to see their own Sons
in their Chambers; neither does a Man speak, or approach
a Woman of Rank when she goes abroad, but every body
gives her Way, even the King himself. They are known only
by their Retinue, being for the rest clad after the com-
mon Fashion, viz. in a kind of Calicoe or silk Petticoat,
reaching down from the Breast to the middle of the Leg.
They wear neither Stockings nor Head Ornaments, but
tie their Hair upon the Crown, except it be at Weddings,
or any other Solemnity, when they have Coronets on their
Heads, and Rings and Bracelets upon their Fingers, and
about their Arms. They are so much addicted to Clean-
liness, that they never do any thing without washing and
bathing themselves, which is one of their chief Employ-
ments, and which they look upon as a proper Means to
intice their Husbands to Venery, in which they strive to
outvie one another.

In their Courts of Judicature, the Plaintiff and D-fen-
dant are obliged to plead both their own Causes. Their
Punishment of Criminals is to tie them to a Post, and stab
them with a Dagger. Foreigners have this Advantage,
that provided they can make their Peace with the Party
complaining, they may redeem themselves from Death,
except in the Case of premeditated Murder. The King's
Council, which consists sometimes of five hundred Persons,
meet by Moon-light, under a great Tree, where they con-
tinue till the Moon sets. The King, when present, sits in
the Middle. The Natives of *Java* are a proud, perfid-
ious, and cruel Generation, and so stubborn, that such
as know they have deserved Death, will rather be killed
than taken. Their Hair, which is very long, is generally
of a Chestnut Colour. They have broad flat Faces, and
large Jaw-bones and Eye-brows, little Eyes and thin
Beards, are for the rest middle-sized, but very strong
Limbs. They seem not to want Courage, were they bred
up to all the Advantages of our modern Arms; but
they are contented with their Pike, Battle-ax, Broad-
swords, and a Dagger. Their Buckles are of Wood, and
sometimes of hard Leather. They wear also Armour,
the Pieces of which are joined together with iron Rings.
Their Soldiers receive no Pay in Time of Peace. They
have a Way of blowing small poisoned Arrows through
Trunks, by which the Wound is made incurable.

But those inhabiting upon the Strait of *Sunda*, being
transported thither from *Pessercafe*, and living under
their own King, are much more honest and open hearted.
The Grounds of *Java* are either farmed out by the King,
or Lords, to certain free People, or cultivated by Slaves,
and produce Rice, Pepper, and Cocoa. Some Slaves here
take their Masters Trees, and other Commodities, at a cer-
tain Rate, which they sell to the best Advantage they can;
others work abroad for their Master's Profit, at a set Rate
per Diem. Others maintain themselves, and work alter-
nately, six Days for their Masters, and as many for them-
selves. They commonly adulterate their Pepper with black
Gravel, as they do all other Commodities they sell to
Strangers, being very crafty in their Commerce; tho' ve-
ry few rich Merchants venture their Persons on any long
Voyage, but traffick, like our *European* Merchants, by the
Assistance of Factors. Bonds and other Securities are
written upon the Bark of Trees, the Characters being en-
graven with a sort of Bodkin, which is either rolled up af-
terwards, or laid together four-square, betwix two Boards,
which they have a Way to tie neatly together with Pack-
thread; sometimes they use *Chinese* Paper.

They have a Language peculiar to themselves, but the
Malayan is most in use here, and the *Arabian* used by the
Mohammedans. The Traffick of the *Persians* that live
here is precious Stones, Stuffs, and Drugs, and the *Arabi-*
ans and *Banjans* exchange their Commodities chiefly for
China Ware. Those of *Guzarat* live for the most Part
upon Fishing; all those Foreigners are clad after the same
Fashion, in a Calicoe Garment, with a Turban of the
same Stuff. At their Arrival they purchase a Woman,
who is to serve for all Uses. At their Departure, they dis-

pose of her again, but must make Provision for the Children, if they leave any behind. But the *Chinese* are of all Foreigners here the most industrious in their Trading, being looked upon in the same Light as the *Jews* in *Europe*. Their main Business is to foretell and buy up the Pepper in the Country, against the coming of their Fleet to *Bantam* (which consists commonly in ten Ships of 50 Tuns each) in *January*. These bring in a sort of wretched Money called *Pity* by the *Javanese*, and *Cas* in the *Malayan* Language, being a Mixture of Lead and Brass, so brittle, that if they fall upon the Ground they certainly break. They are made in the City of *Chinco* in *China*, having each a four-square Hole in the middle, through which they string them upon Straw. It passed at first very current in *Java*, but since this Business has been discovered, it goes at a very low Rate. The *Chinese* sell their Porcelain here at cheap Rates, and bring also Silk, Satin, and Damasks of their own Manufactory, which they exchange for Pepper, Lacque, Indigo, Sandal Wood, Nutmegs, Cloves, Tonitobels, and Ivory. They have neither Temples nor Priests at *Bantam*, but they have both at *Panayucan*.

Java abounds both in wild and tame Beasts. The Forests are filled with Elephants, Rhinoceroses, Leopards, and Tygers, which make them very unsafe, and is the reason why Frankincense, Mastic, Myrrh, and Benjamin (which is better here than in any other Place) are not gathered in so great Quantities, the before-mentioned Beasts, as well as the Serpents, Lizards, and Salamanders, making the Forests so very dangerous to pass. The Hogs here are without Bristles, but their Bellies hang down to the Ground. The Rivers are very well stocked with Fish, there having been Oysters seen in those Parts that weighed 500 Pounds, which would seem incredible, if there were not to be seen to this Day, two Oyster shells in the Duke of *Helflein-Getter's* Cabinet, which *Olearius*, in 1657, bought of a Sea-Captain's Wife at *Embojfen*, and weighed 462 Pounds. Deer, wild Goats, and Boars, are likewise here in vast Plenty, but are not easily to be taken, by reason of the Unpassableness of the Woods, and the Unskillfulness of the *Javanese* in the Use of Fire-arms. The Rivers feed also abundance of Crocodiles; the *Chinese* tame, fat, and eat them for a peculiar Dainty. Their Civet is not so white, nor well scented, as that of *Guinea*. They have two sorts of tame Fowls, one like those of *Europe*, the other of the *Indian* Breed, wild and furious; some have black Flesh, but notwithstanding this they are very good Food: The Rhinoceros is in the same Esteem with them now-a-days, as the Unicorn was with the Ancients, his Flesh, Horn, Blood, and Teeth, nay, even his Dung, being applied to medicinal Uses.

They have also Ants here of a much larger Size than ours, they spoil every thing they come at. They have a certain kind of these Creatures reddish, and of the Length of a Man's Finger; but these live in the Fields upon the Barks of Trees. Among the Fruit-trees of *Java* the *Arriquet*, which bears the *Araca*, is none of the worst; it is a Species of the *Cocoa*, but less in Bulk, and with narrower Leaves. The Fruit resembles a Date enclosed in a Husk, which falls off when it opens; it is without Taste, but taints the Lips and Teeth of a black Colour. The *Indians*, after they have mixed it with a little Lame, wrap it up in a Beetle Leaf, and so chew it, looking upon it as a good Remedy against the Scurvy. It will cause in such as are not used to it, a Dizziness in the Head, but it soon passes over. The *Mango* is a Fruit growing upon a Tree not unlike our Walnut-trees; it is something like our Peaches in Bigness and Colour, being of a red and green. The Shell incloses an Almond, which is of a grateful Taste when roasted in the Ashes: They pickle them whilst green, and they are accounted a good Remedy against the Worms, and Looseness; the wild ones are rank Poison, which kill without a present Antidote.

The *Ananas* grow on a Shrub with Leaves like a *Semperparvum*, is green at first, but when ripe, turns to the Orange Colour. Its shape is like a Pine-apple, yellow within, but they are dangerous if used in Excess, tho' the Taste is very pleasant; they are not much larger than a good Lemmon. The Stalk is like a Fluff, every one bearing but one at the

Top, it is very apt to over-heat, and occasion Fevers. The Fruit called *Samaca* is also of the Bigness of a Citron, juicy and tart, with black Kernels; the Leaves, which are like to, but something less than the Lemmon-trees, pickled with Salt and Sugar, are accounted a good Remedy in Fevers and Inflammations, as we do our Tamrinds, which also grow in great Plenty here. The *Tabaxir*, i. e. a white frozen Liquor, is found in the Knobs of certain Canes, of the Bigness of a Poplar, with fruit Branches and Leaves not unlike those of the Olive-tree, but somewhat longer; it is like Starch, and in such Esteem with the *Persians* and *Arabians* for the Virtues they attribute to it in the Cure of Fevers and Bloody-fluxes, that they buy it at a very dear Rate. These Canes are so big, that the *Indians* cleave them afunder, and make Boats of them, leaving a Knot on each End. The Isle of *Java* produces also another Fruit called *Durions*, not to be met with any where except here and in the *Moluccas*.

The Tree called *Batan* is of the Size of our Apple-trees; the Blossom of a pale yellow Colour, the Leaves half a Foot long, and three Inches broad, of a very lively green on the Inside. The Fruit, both for its Colour, Bigness, and outward Division, resembles our Melons, but within is divided into four Partitions, which being again subdivided into two or three lesser Cells, contain the Fruit, which is as big as a Pullet's Egg, and of the most luscious Taste in the World. It has a Stone rough, and as big as that of a Peach. It will not keep, and therefore must be used as soon as the outward Husk opens. One thing is very observable, that if you lay but a few Beetle Leaves near a whole Room full of *Durions*, they will all rot immediately; and if you have surfeited yourself with the excessive eating of this Fruit, two or three Beetle Leaves applied to your Breast, or one of the same Leaves eaten, will give you Ease, and you may digest them without any farther Danger. A *Lanter Tree*, another Species of *Cocoas*, has Leaves five or six Feet long, and so smooth, that the *Javanese* use them instead of Paper. *Cubebs* are found nowhere in the *Indies*, but in the Isle of *Java*. They grow upon a Tree not unlike the Pepper, and in Bunches. The *Javanese* hold them in such Esteem, that they will not sell them unboil'd, nor will allow so much as one Plant to be transported into other Places. The *Magellan* is much of the Taste of our Sloes, and grows wild in the Highways of *Java*; and the Herb *Talasse*, bearing neither Flower nor Fruit, is used green in Sauces, its Virtue being to fortify the Stomach: The Fruit *Jaca*, is of the Bigness of a Citrus, having a rough Rind, within which are certain Nuts, the Kernels thereof being roasted, are a present Remedy against a Looseness. It is observable, that this Fruit often changes its Taste; sometimes it resembles a Melon, sometimes a Peach, and at other times a sweet Lemmon. The Nut is as big as a Date, but is not to be used raw, because it occasions Vomiting and griping in the Guts; but roasted, it is both pleasant and good, and reckoned a great Restorative.

On the Side of the Island towards the Strait of *Sunda*, you meet with abundance of wild Cinnamon, but it is never transported into foreign Parts. The *Carcapuli* are a kind of *Indian* Cherries, white, dark, red, and of a Carnation Colour; the Trees and Fruit are like those in *Europe*. The *Coffus Indicus*, called *Pucbo* by the *Malayans*, resembles in every respect, both in Height and Flower, the *European* Elder-tree, wherewith the *Persians* and *Arabians* drive a considerable Trade, as they do also with the *Calamus Aromaticus*. There is a yellow and spungy Matter in its Stalk, which some Women make use of to appease Fits. The *Zerumbor*, called *Canler* by the *Malayans*, is like Ginger, except that it has somewhat larger Leaves; it is preserved, or dried like Ginger, but valued above it. Of *Galanga* there are two kinds, the lesser is brought from *China*, and is preferable to that of *Java*. The Herb grows wild, about two Feet high, with a white Flower, and pointed Leaves; the *Javanese* use both the Root and Herb in their Salads; the first are knotted like Canes, and of a biting Taste, and good Scent. *Benjamin* is a Gum of a Tree resembling a Lemmon-tree; whilst they are young, the Gum is white, but as they grow old, it changes black. It is by the *Moors* called *Lesser Jasy*, i. e. the Juice

heat, and occasion Fevers, of the Bigness of a Citron, the Leaves, which are the Lemmon-trees, pickled in a good Remedy in as we do our Tamarinds here. The *Tahaver*, i. e. and in such Eastern popular, with fruit Branches of the Olive-tree, but some, and in such Eastern with the Virtues they attribute to bloody-fluxes, that they buy Canes are so big, that they and make Boats of them, The Isle of *Java* produces not to be met with any *Solaccas*.

Juice of *Java*. This Isle produces abundance of Sandal- trees, which are of the Bigness of our Walnut-trees, their Fruit resembling our Black-cherries, but is insipid; but the white and yellow Sandal, which are much preferred before the red, grow in the Isles of *Timor*, and *Solor*; of this the *Indians* make a Decoction wherewith they rub their Bodies, looking upon it as a great Restorative. Ginger they have also in abundance here, which they eat, either green, or preserved, but never dried. Anacardium is used by the *Javanese* as an approved Remedy against the Aithma and Worms; they boil it in Milk, or pickle it like Olives. The Wood called *Pala de Cucbra* by the *Portuguese*, of a pale yellow Colour, is used by the *Indi- ans* in Wine and Water, against Fevers and Stings of Serpents.

That by the *Indians* called *Calamba*, and by us *Lignum Aloes*, grows not only in *Java*, but also in *Malacca*, *Sam- baira*, *Cambaya*, and other Places. It is not unlike to, but somewhat bigger than an Olive-tree, and whilst green, has no Scent; but as soon as it dries, its Scent is perceived. Its Goodness is known by its Weight and Colour, which must be brown, from whence it issues an Oil, it held to the Fire; the wild *Calamba* is used chiefly in Funerals, for the burning of the dead Corps of the *Indian* Priests and Princes. Abundance of *Lacque* is sold at *Bantam*; but the choicest comes from *Pegu*. There certain winged Arts suck the Gum of the Trees, which they afterwards cast upon the Boughs, as the Bees do the Honey and Wax; these are cut off, and set in the Sun to dry till the *Lacque* falls off, to which they give what Colour they please, and is used in Seal- ing-wax, and *Lacque* Works of China and Japan. The other Drugs of *Java* are *Pody*, which they use against Winds and Rheums. *Flors*, a Root they dye their Calicoes with. *Canjuapi* is another Root with which they rub their Bodies. *Samparantam* is another Root stronger than Ginger, but bitter. *Pantibu* is accounted a sovereign Remedy against Fevers, and upon that Score sold at a dear rate. *Guta- gambur* is a Fruit resembling Olives, good against the Tooth-ach. *Ganti* is altogether like Ginger, but much dearer; they use it to rub their Bodies with. *Salam* is the Name they give *Mullard*-seed. *Doringi* is given to the Children as soon as they are born. The Root *Gallam*, growing in watery Places, is a great Cooler. The Fruit *Tianco* is taken at all Times whenever they find themselves indis- posed. *Maidian*, *Maya*, and *Corofiani*, are used in their Liquors, as having an intoxicating Quality. *Spodium* is the Ashes of a Tree, wherewith they rub their Bodies. They do the same likewise with the Flower called *Sary*, and the Roots of *Targary*, *Surahan*, and *Sedowaya*, are appropriated to the same Use. *Sambaya* is a Fruit of the Bigness of an Acorn, which being accounted a most sovereign Re- medy against Poison, and especially that of venomous Beasts, is sold at a very high Price. *Jalava* is of the same Use as *Sambaya*. The Herb *Paravas* is cooling, but scarce and dear. *Tomonpute* is a Root used against the Inflammations of the Spleen. The *Conduri* are poisonous Berries, but are used to weigh Gold and Silver.

The *Javanese* being exasperated by the ill Usage they often received from the *Portuguese*, would not for a long time permit any Strangers to have any Settlements there, till at last the Hopes of Gain engaged the Kings of *Ban- tam* and *Jacatra* to let the *English* and *Dutch* set up their Factories there under certain Conditions; which being but ill observed by the *Indians*, the *Dutch* took this Opportunity of fortifying their Settlements at *Jacatra*, and that with so much Expedition, that the *Indians*, finding themselves not in a Condition to force them thence, engaged with the *English* to assist them in the Expulsion of these bold Stran- gers. In the first Sea Engagement, *January* the 2d, 1619, near *Bantam*, the *Dutch* had the worst; upon which the King of *Jacatra*, in Conjunction with the *English*, besieged and attacked their Forts for six Months, till the *Dutch* Fleet being reinforced, obliged the *English* to quit both the Fort and the Straights of *Sunda*, and landing their Men, took the City of *Jacatra* by Storm, and put all to the Sword: The next thing they had to do was to compleat their For- tifications, which they did so effectually, that in a little Time they made them very regular, with four Bastions of

Free-stone well entrenched and pallisadoed, and defended by a proportionable Number of Half-moons, Redoubts, &c.

The King of *Matram* laid Siege to it twice since, viz. in 1628 and 1629, but was forced to raise it as often; since which Time the *Dutch* remain in the quiet Possession of their Traffick here with the *Chinese*, *Japanese*, and *Siam- ese*, and other neighbouring Nations, and receive Ten per Cent. Custom upon all Commodities imported or exported, each Stranger inhabiting in the City of *Batavia* being obliged to pay a certain Monthly Tax proportionable to what Profits they make, which is very great, and conse- quently the Tax not in the least burthenome; for a Porter, who perhaps gets two Rials a Day, does not pay above one and a half in the Month. The City of *Batavia* being for its convenient Situation in a Bay, which is sheltered by many Islands from the Violence of the Winds, one of the best Roads in all the *Indies*, and the chief Place of Com- merce belonging to the *Dutch* in those Parts.

To the North-West from *Java*, betwixt that and the Isle of *Borneo*, lies the Island of *Madura*, subject to its own Prince, whose Residence is in the City of *Araffabaya*; as by reason of its Barrenness, it is a Place of no Trade, they live upon Piracy, especially upon the Coast of *Pegu*. The Isle of *Baly* lying to the East of *Java*, has not above twelve Leagues in Circuit; but to the South jets out a Cape a great way into the Sea. The King resides in the City, bearing the same Name with the Isle; the Inhabitants are *Pagans*, and so superstitious, that they worship the first thing they meet with in the Morning; they are very black, with curled Hair, but wear no Beards, any more than the rest of the Islanders in those Parts, and wear the same Gar- ments; for their Women, who have an Aversion to Beards, oblige them to pull out the Hair by the Roots. They have each several Wives, whence this Isle is so populous, that above six hundred thousand living Souls are accounted within its Compass, though abundance of Slaves are sold from thence every Year.

They live for the most part upon Husbandry and Weav- ing, because they abound both in Cotton and Rice, but allow none to be transported; they are also sufficiently pro- vided with Oxen, Buffaloes, Goats and Hogs, and some Horses, but very small ones. They have whole Forests of Oranges, Lemons, and Citron Trees, which furnish them with vast Stores of Pheasants, Partridges, Peacocks and Turtles, as their Marshes do with Ducks, and other wild Fowl. It produces no other Spice but Ginger; but they have several other Drugs, and a certain Fruit growing in a Shell like a Chestnut, white, and of a delicious Taste; and is besides this an approved Remedy against the Scurvy. All along the Coast the Seas furnish them with incredible Plenty of Fish, which, next to Rice, is their main Subsist- ance. They have but little Commerce with Strangers, except that they send now and then some of their Calicoes in small Vessels to the Isle of *Java*. In this Road most Ships bound for the *Abaluccas* take in fresh Water and Pro- visions, which are to be bought here at a very low rate. They have Iron, Copper, and Gold Mines; but the last are not broke up or wrought, for fear the Fame of their Riches should draw thither some Foreign Nation or other that would without Question reap the Fruits of their Labour. Their King, whose Title is *Quillar*, i. e. High-Constable, is in great Veneration among his Subjects, and governs his Domini- ons by certain Governors appointed for each Province. They persist very obstinately in Paganism, as also in that diabolical Custom of Women burning themselves with their Husbands.

The Isle of *Borneo* lies farther North than *Java*, one of the largest in those Seas, extending six Degrees to the North, though its greatest Part lies on this Side of the Equinoctial Line. Some make it four hundred Leagues in Compass; but the *Dutch* with more probability assign it no more than two hundred and fifty Leagues in Circumference; its chief Places are *Borneo*, *Succidava*, *Lanao*, *Sambas*, and *Bang- bemiffin*. The City of *Borneo* is like *Venice*, built upon divers small Islands, intersested with Channels, there being no Passage there but by Boats, according to the Account the *Dutch* have given of it; it contains about two thousand Houles. This Isle produces the best Camphire, as also Gold,

Gold, and Bezar, which Stone breeds in the Maw of a Sheep, or Goat, within the Substance of which is also found a Tuft of Grass. It is smooth, inclining to a greenish Colour, its Goodness being to be tried by its Weight. In the Country of *Pan*, near *Malacca*, is a certain smooth slippery Stone found in the Gall of certain Hogs, of a reddish Colour, and bitterish Taste, which being steeped only in cold Water, affords a most effectual Remedy against all Poison, and infectious Distempers. The Isle of *Borneo* furnishes also Diamonds, Sapan-wood, used by the Dyers, Brasil-wood, Wax, Pepper, Frankincense, Maltick, and divers other Gums. The Isle is not destitute of good Harbours, among which that of *Borneo*, at the Mouth of a very good River, is the largest and most commodious. Their Cities are not very populous, and their wooden Houses so slightly built, that they remove them at Pleasure. They are accounted very ingenious, but will rather live by Piracy than Industry, unto which they are so much addicted, that their Vessels are seen upon the Coast of *Pegu* four hundred Leagues thence. They use Swords, Bucklers, Lances, Darts, and Pikes. The King and most of the Inhabitants near the Sea-side are *Mohammedans*; but deeper in the Island they are *Pagans*. They are black, and well set, wear Caliceo wrapped about their Loins, like most of the other *Indians*, and Turbans on their Heads.

13. The Isle of *Celebes* lies betwixt that of *Borneo* and *Moluccas*, under the Equinoctial Line. *Mercator* would have it to be one of these Islands called *Sindus* by *Ptolemy*. Its capital City is called *Macassar*, which lies in the most Southern Part of the whole Isle, 5° 17' beyond the Line. The Inhabitants are so industrious, that they leave not an Inch of Ground unmanured, and sow with Rice what they stand not in need of for their Cattle and Cocoa-trees. It is not long since they embraced *Mohammedism*. They much resemble the *Siamese* and those of *Pegu*, especially in their Faces, and are of a comely Stature. The Women dress their Heads like those of *Malacca*, and in the Street have their Breasts open, and Breeches reaching down to their Knees. The North-west Winds, which blow here from *November* to *March*, make the Shore very untale during that Time, and the continual Rains overflow the flat Country, which is the Reason that most of their Houses are built upon Piles, nine or ten Foot above the Ground. There are two Kings more, viz. one of *Tello*, and the other of *Buttergea*, in this Island.

The Isle of *Gilolo*, by the *Portuguese* called *Bato China de Moro*, produces Plenty of Rice, and *Sagu*, Tortoises, &c. The Inhabitants are very well limbed, but barbarous, and not many Years ago were Cannibals. The Island of *Ambeyna* is so near the *Moluccas*, that some have accounted it among their Number; its Circuit is twenty-four Leagues. The chief City has to the North-west of it a very fair Bay of six Leagues, where there is safe Anchorage, and good Shelter for Ships against the Wind; the Bay enters so deep into the Country, and the Sea on the opposite Side cuts so deep within the Land, that the Isle is very near divided into two, there being only a small Isthmus of a hundred and twenty Fathoms left, by which it is joined together. The lesser Part of the Isle wherein is the Castle of *Ambeyna*, contains about a hundred and twenty small Towns, and the greater but four Towns, and about seven Villages. The Inhabitants were heretofore *Savages* and Cannibals, and applied themselves to no kind of Agriculture, which made the Country appear a Wilderness; but of late Years they have applied themselves to cultivating the Ground, which being very fertile, produces great Plenty of Oranges, Lemmons, Cocons, Bananas, Sugar Canes, besides Cloves. They continue still to be ignorant People, the only Skill they shew being in the Management of a Dart, with so much Dexterity, that at sixty Paces Distance they will hit a Crowns-piece. They are famed for their Cakes made of Rice, Amber, and Sugar, which the Inhabitants of the adjacent Islands desire against the Bloody-flux; for their Rice Bread, made in the Shape of our Sugar Loaves; and for their small Gallies, which in Swiftly exceed any in *Europe*.

It was first discovered by the *Portuguese* in the Year 1512, but the *Dutch* having afterwards also got footing there, the *Portuguese* being obliged to spend their Com-

merce, set upon five *Dutch* Vessels in the Port of *Banda*; but being repulsed with Loss, revenged their Disgrace upon the *Ambonians*, who were suspected to favour the *Dutch* in those Parts. *Stephen Verhagen*, two Years after, viz. on the 21st of *February* 1603, landed a certain Number of Soldiers near *Ambeyna*, in order to attack the Castle; but whilst he was landing his Artillery, the *Portuguese* Governour, not daring to stand the Shock, surrendered the Place without a Cannon being shot, though the Garrison consisted of six hundred Men. Before *Mohammedism* was introduced in the Isles of *Java*, *Ambeyna*, and the *Moluccas*, by the *Persian* and *Arabians* trading thither, they were all *Pagans*, some of them continue to still; others, though circumcised, yet persevere in their *Pagan* Superstitions.

Nothing is more frequent here than to worship the Devil, though they are not able to tell you what he is. They affirm him to be an Aereal Demon; whence they give him the Name of *Lambé*, i. e. Air, yet make him subordinate to another called *Lambéla*, as well as to him they call *Tantoy*, who is a Degree lower than *Lambé*. They give them one general Name, viz. *Uto*, i. e. Spirits, and say that they appear to them in human Shape, when they are to produce their Oracles, and reveal unknown things to them. To do this twenty or thirty of them assemble, and by the Help of a small Drum called *Tefa*, some Wax-Candles, and certain Conjurations, as also a Sacrifice of Meat and Drink, make them appear before them. As they are of opinion, that what ill befalls them comes from the Devil, they are very careful not to neglect his Worship; for which Purposes they have Wax-candles lighted in their Houses, where they sacrifice Meat and Drink to these phantastick Beings.

Their Circumcision is also different from that of the *Jetes* or *Mohammedans*; for instead of cutting off the Prepuce, they only slit it, and that not till they are twelve or thirteen Years of Age. Their Marriages are soon made, and as soon dissolved; for every thing being agreed upon, they use no farther Ceremonies, except that the Bridegroom's Father gives a small Present to the Bride, in lieu of which her Father makes the Wedding Feast, where they have their Musick and Dancing. If a Wife have a mind to part from her Husband, she has no more to do than to restore the Present; which done, she pours Water on her Husband's Feet, so intimate, that thereby they are both cleared from all Impurities they have contracted during their Marriage, which is thereby dissolved, and either Party at liberty to provide themselves another Spouse as soon as they please. When they are to take a solemn Oath, Water is put into a Dish, into which having cast Gold, Earth, and a Leaden Bullet, they dip into it the Extremity of a Mucket Barrel, the Point of a Halberd, Sword, Knife, or some other Weapon, and so give the Dish with Water unto him who is to take the Oaths, to put him in mind, that all what has been said, or dipped into the Water, will be instrumental to his Destruction, if he forswear himself. They have among them a certain Gang, who under pretence of Witherah, do Mischief to their Neighbours, either by Poison, or other Means; they are called *Zeragi*; but whenever they are found out, they are sure to meet with very severe Punishment.

The Natives of *Ambeyna* are naturally stupid, timorous, and void of Understanding; they commonly bury their Riches for fear of being robbed; and such is their Superstition, that they are not to be brought up to any Trade. They are so far from any Knowledge, that they have not so much as any Characters among them. All they apply themselves to is Fishing, and cultivating their Gardens, upon the Fruit of which they live very miserably, though it is observable that they are generally strong, and well proportioned. The *Dutch* have three Ports in this Isle, viz. the Port *Gambaya*, or *Vitoria*, and those of *Iken* and *Lauro*.

The Isle of *Banda*, which is three Leagues in Length, and one in Breadth, lies twenty four Leagues from *Ambeyna*, extending from North to South. It has some few Towns, the chief of which is *Nero*. The Inhabitants are a very cruel *Mohammedans*; as they are always at War with some of their Neighbours, so they keep a constant Guard on all their Coasts. Their Arms are a Tymar and wooden Buckler, four Foot long, in the managing of which they are very expert, as being trained up to it from their Childhood.

Fruit the eighth Year, and lasts one hundred Years. The Fruit of it is gathered but once every other Year, because the Inhabitants break off the Buds the first, that they may have a more plentiful Crop the second Year. The Fruit is ripe from *August* to *January*. This Tree affords no Gum, by reason of its excessive Heat, the Fruit being so dry that the Inhabitants, to encrease its Weight, put a Pitcher with Water, within ten Foot of their Clove-Bags, which is sucked up within two or three Days time. The *Chinese* do the same with their raw Silk.

As the *Moluccas* yield more Cloves than any other Islands hereabouts, this has misled some to affirm that they grow only here, it being certain they yield yearly Six thousand Barrels of Cloves, allowing Five hundred and an half to a Barrel; though, at the same time, the Isles of *Ires*, *Myrtarna*, *Cavaly*, *Sabugo*, *Marigoren*, *Gumocora*, *Amboyna*, but especially the Isle of *Varanula*, produce considerable Quantities, but not so good as those of the *Moluccas*. In the Midst of the Island of *Ternate*, is a very high Mountain, full of Palms and other Trees, which has a most miraculous Well on the Top, which is so deep that 500 Fathom of Rope did not reach the Bottom, but to a very fair Spring, the Water of which no body hitherto has ventured to taste, by reason of the sulphurous Exhalations, which, especially about the Equinoxes, issue from the Mountain, and sometimes cast red Stones at twenty Leagues distance. This Mountain is covered with Wood near half its Height, but afterwards is excessive cold, having on the Top a very cold Spring, and a Lake of fresh Water, surrounded by Trees. They know not of any certain Difference of Season in these Islands, except that it generally rains more with the North than with the South-wind.

Serpents they have of thirty Foot long, but not venomous, living for the most part upon Fish. This Island has also a peculiar Creature, called by the Inhabitants *Cufes*, which, as it feeds on Fruits, so it is always seen upon the Trees, its Tail being of such Strength, that it will hang by it to a Branch of the Tree, the better to come at the Fruit; it is in Shape not unlike our Rabbits; its Colour betwixt a Grey and a Red, with thick, curling, and soft Hair, round and fierce Eyes, and very small Feet. As they have scarce any domestick Bird except the Parrot, so their Fowls are full of wild ones. The *Moluccas* produce a certain Wood which burns, sparkles, and flames like common Wood, but consumes not, though you may rub it to Powder with your Fingers. Not far from the Fort of *Ternate* grows a certain Shrub, called *Catepa* by the Inhabitants, from which falls a Leaf, which, by degrees, is supposed to turn to a Butterfly. The Isle of *Tidor* is at least as large and fruitful as *Ternate*, the Inhabitants here being so industrious as to improve the Fruit of the Clove-tree, by pruning and watering it, which, by this means, becomes both fairer and larger than the rest. Here they have also the best white Sandal-wood, and those Birds called *Paxeras del Cielo* by the *Spaniards*, and by us Birds of *Paradise*. After they have catched them, they cut off their Feet close to the Body, so that when the Flesh dries the Skin and Feathers join insensibly together, so that many have been of Opinion these Birds are without Feet.

The *Dutch* are Masters of *Moluyo*, a well fortified Town in *Ternate*, as also of the Fort of *Taluco*, and that of *Morona* and *Tidor*, of the Fort *Barnesvill* in *Bachiam*, and three more in the Isle of *Machiam*, at *Taffaco*, *Tabicalo*, and *Tessiquia*; they have also a Stone-Fort in *Moir*. The Kingdom of *Machiam*, which is governed by its own Sovereign, being so well stocked with Sago that the Inhabitants have sufficient wherewith to subsist without Labour, has made them so idle and careless that they are scarce able to raise 500 fighting Men. The Isle of *Machiam*, which is subject to the King of *Ternate*, is about seven Leagues in Circumference; the *Dutch* made themselves Masters of it in 1601, since which Time they have erected three Forts, the first at *Gueffiqui*, situate upon an Eminence, and strengthened by four Bastions of Stone; as is also the Fort of *Tessiqui* built likewise upon an Ascent at an hundred and fifty Paces from the Sea-shore; it is bigger than the first. The Fort of *Tobillala* has only two Bastions. Besides these five Islands, properly called the *Moluccas*, there are

about seventy-two more subject to the King of *Ternate*, from *Mindanao* on the North Side, and *Bina* and *Corca* on the South, and between the Continent of *New-Guinea* to the East.

14. The *Philippine* Islands, which lie to the North of the *Moluccas*, were discovered by *Ferdinand Magallanus* in 1520, but no Establishment was made there till 1565, when they got the Name of *Philippines* from *Philip II.* then King of *Spain*. The first Settlement of the *Spaniards* was made in the Isle of *Zebu*, and about six Years after that in the Isle of *Lucon*, now called *Manilla*, from its chief City, which is situate in an Isle made by an Arm of the Sea, in the most Southern Part of the Isle, the whole Compaits of which is three hundred and fifty Leagues; it is seventy Leagues from *China* to the North, and two hundred and seventy Leagues to the North-East from *Japan* to the East; it is encompassed by the Ocean, and to the South by the great *Archipelago*, which is divided into five Seas, and stocked with a vast Number of Islands. The Fertility of the Soil, joined to the Industry of its Inhabitants, makes this Island abound in Corn, Rice, Fruits of all sorts, and Drugs; as likewise in Beef, Buffaloes, Deer, Goats, and Hogs. Their Cocoa Wine they keep till it becomes as strong as *Spanish* Wine; their Lemons, Oranges, Figs, and Pears, are the best in the World, and they abound both in Domestick, and Wild-fowl, and Birds. They have a peculiar Way here of killing the Crocodiles, of which they have great Numbers; he who is to engage with this Creature, gantlets his left Arm to his Elbow, having in the same Hand a Truncheon of a Foot long, piked at both Ends, with a Dagger in the other: Thus armed, he goes into the Water up to the Waist, and while the Crocodile is making at him with his Jaws open, he thrusts his left Hand down his Throat, so as to keep them from shutting, and in the mean while stabs him with the Dagger in the Throat, till he drops down dead.

The *Philippine* Islands produce more Tygers, Lions, Bears, and such-like wild Beasts, than *Africa* itself, and abounds in Algalias, which are the Creatures that produce Mulk, and Civet Cats. The *Chinese* drive a vast Trade in this Country with the *Spaniards*, who buy their Calicoes, Silks, Porcelain, Gun-powder, Sulphur, Iron, Quicksilver, Copper, Meal, Nuts, &c. and carry them to the *W. Indies*, where these things are sold at a very dear rate. In the City of *Manilla* resides a *Spanish* Archbishop, who has three Bishops under his Jurisdiction, for the spiritual Government of the *Philippine* Islands; and such is the Influence they have over these ignorant Wretches, that they keep them in Subjection without any standing Forces. The Archbishop is also Viceroy of those Islands, and has the Management of all publick Affairs, in Conjunction with the King's Council appointed in that City, which is very large, and its Houses built of Stone, after the modern Way. Within and about it live above fifteen thousand *Chinese*, and vast Numbers of the same Nation resort thither every Year for the Conveniency of Traffick. So that from *December* to *April* you may see in the Harbour (which is defended by two wooden Forts) near five hundred *Chinese* Junks. This Place is also much frequented by the *Japanese*, but not in near so great Numbers as by the *Chinese*: Notwithstanding which, the *Spaniards* are much more jealous of the first than the last.

15. *Japan* is composed of many Islands, divided by several Arms of the Sea, extended from 31 to 39°, being in some Places scarce ten, in others thirty Leagues in Breadth. On the East Side it hath *New-Spain*, to the North *Tartary*; on the West *China*, and the Sea to the South, with Part of the *Tara Australis*. The whole Empire consists of sixty-six lesser Kingdoms or Provinces, fifty-three whereof are comprehended within the two great Kingdoms of *Meaco* and *Amagune*, nine others within the great Kingdom of *Yimo*, and the remaining four in that called *Niccum*. According to the *Japanese*, they are to this Day uncertain, whether the whole Empire be an Island, or annexed to the Continent; so far as from the Province of *Quanto* to the Borders of the Province of *Zanagui*, is twenty-seven Days Journey to the East-North-East, and then they cross an Arm of the Sea of eleven Leagues broad, which brings them into the Province of *Yezo*, to includ

by inaccessible Mountains, that no body hitherto has been able to discover the Extent of them. The whole Empire of *Japan* being divided into many Provinces, the same are committed to the Government of many Princes and Lords, who have their Secretaries aligned them by the Emperor himself, whole Business it is to have a watchful Eye over them, and to give an Account of their Transactions, and especially concerning their Revenues, which are very great, and according to the Computation of the *Japanese*, amount yearly to eighteen Millions four hundred thousand Kockins (each of which make four *Fremb* Crowns) out of which they are obliged to maintain a certain Number of Forces, both Horse and Foot, for the Emperor's Service, in proportion to their Revenues, which consist chiefly in Lordships and Demesnes. They have Mines of all sorts, &c. so that he who has a thousand Kockins *per Annum* is obliged to maintain twenty Foot, and two Horsemen; by which means the Emperor is able to raise an Army of three hundred and sixty-eight thousand Foot, and thirty-eight thousand eight hundred Horse; besides the hundred thousand Foot, and twenty thousand Horse, he keeps up as a standing Force, which is so much the less to be admired at, since some of these Lords have such vast annual Revenues, that, according to the before-mentioned Proportion, they are obliged to furnish one thousand two hundred Foot, and a hundred and twenty Horse.

All the great Lords of *Japan* have three Names, *viz.* their proper Name that of the Family, and a Surname, which they commonly take from the Province, City, or Cattle they govern. They have also a Custom of changing their Names three in their Life-time, the first, given them in their Infancy, being altered at the Age of twenty-six, and that again at fifty or sixty Years of Age. They have another Custom in *Japan* for the Slaves to offer themselves a voluntary Sacrifice to their Masters whenever they die, which is done by a solemn Engagement, and confirmed by a Bottle of Wine. As this is chiefly done by those Slaves, to put an End to the Miseries they endure in their Life-time, so there have been some who have desired of their Masters to bury them under the Foundation they were going to lay for some considerable Edifice. Their Pagods or Temples are of Wood, about seven or eight Fathom square, and raised three or four Foot from the Ground. They have small Turrets, with Lights in them on all Sides, and within certain Statues, unto whom they address their Prayers. The King and great Lords have many fair Castles belonging to them, among which those that are fortified are garrisoned by the Emperor; but their Cities are generally without any Fortifications, and if some few of them have any, they are only single Walls. Their Cities are built after the same manner, each Street having two Gates, which are shut up, and guarded in the Night-time. They have no Revenues belonging to them, neither pay they any Impositions, except a very inconsiderable Rent for their Dwellings to the Governor, for whose Use they are also obliged to keep a Man at work at certain Times; but this does not happen very often. The Governors having certain Demesnes allotted them for their Revenues, and among others the Advantage of Fishing, especially of the Whale, of which there are taken yearly near three hundred upon the Coast of *Japan*; but they are neither so big, nor so fat as those in the Northern Parts.

Every *Japanese*, of what Condition soever, is absolute Master of the Life of his Slave. They are so cruel in their Punishments, that the least Treasons is punished with Death. Gaining by Money, or killing any Person, though in his own Defence, is capital, and so is Theft, though it were but for a Penny; and in Offences of a more heinous Nature, the Fathers, Brothers, and Children, are put to Death for the Crime of a single Person; nay, the Wives and Daughters, though ever so innocent, are also involved in the same Mistrust; for they are made Slaves, and their whole Substance is confiscated. Thieves are fastened with a Rope of Straw to a Cross, and then the Executioner runs a Pike into the right Side up to the left Shoulder, and again from the left Side up to the right Shoulder; other Malefactors are fastened only to a Post, with their Hands stretched out, and held up by two Persons, and so the Executioner runs them with a Pike through the Neck into

the Heart. Those Crimes which involve the whole Family in the same Punishment, are Extortion, Coining, Firing of Houses, willful Murder, and Ravishing of Women, and are punished by crucifying with the Head downwards, by boiling in Oil or Water, tearing them to Pieces by four Horses, &c. Lying is also capital here, especially if told before a Judge.

Their Princes and great Lords, if guilty of any Crimes, are banished into the Isle of *Taisen Sima*, lying fourteen Leagues from the Province of *Yedo*. It is all Rocks, without any Road or Harbour, producing nothing but Mulberry-trees and Silk-worms, which furnish those miserable Prisoners with Materials for the making of Stuffs, in which they employ their Lives, and are relieved from Time to Time with most miserable Food. It is computed that the Expence the Emperor of *Japan* is at yearly in his Court, amounts to four Millions of Kockins, and five Millions more for his Governors and military Officers. His ordinary Residence is in the Castle of *Yedo*, which is two Leagues in Circumference, and strengthened with a triple Wall, and as many Mounts all of Free-stone. The Gates are covered with strong Iron Bars, and Lodges over them, which contain three hundred Soldiers, for a Guard to each Gate, his own Palace, with the Apartments for the Women; stand in the Centre, and round about it the Houses of the Princes, and other great Lords, all richly gilt, and sumptuously furnished, their chief Emulation being to outvie one another in this kind of Magnificence, which is amongst them looked upon as the greatest Mark of Respect they can pay the Emperor, who never stirs abroad but in the Company of a great Number of those Lords, and their young Kinde, who are the Guard of his Body; and by applying themselves to Musick, Physick, Writing, Painting, or the Management of publick Affairs, render themselves qualified for higher Employments. They are all clad in black, and as they march along the Streets, don't so much as utter a Word.

As the Revenues of the Emperor of *Japan* are so great, that the ordinary Income of two Months is sufficient to defray his whole Year's Expence, his Treasure must be immense, most of which consisting in Gold and Silver, is laid up in vast Chests, inclosed in several Towers belonging to the Castle, besides what is disposed of in the Country. Their Horse are armed with Croselets, Fire-locks, not much longer than our Pistols, with Pikes, Bows, Arrows, and Cymitars. The Foot have only Head-pieces, two Cymitars, each a Musket, Pike, Half-pike, and broad Knife: Each Company consists of fifty Soldiers, a Captain, a Lieutenant, and ten Corporals; five of these Companies make a Battalion, commanded by a peculiar Officer, and ten Battalions a Brigade.

The Emperor of *Japan* has a numerous Council, tho' only four are charged with the Management of all important Affairs, and are to attend daily at Court: Some of these have two Millions of Crowns, others three or four hundred thousand Crowns, others four or five hundred thousand Crowns yearly Revenue; but their Expences are proportionable to their Revenues, being obliged to live at least half the Year at Court in vast Splendor, maintaining perhaps a Retinue of three hundred Persons, and above a thousand in their Families, and that in a Place where Provisions are excessive dear; not to mention the vast Expences they are at in their Buildings, and the Entertainment they are obliged to give the Emperor whenever he is pleased to honour them with a Present, perhaps of a *Prance*, which he has taken in Hunting. As great Persons are not to marry any Wife but what is presented to them by the Emperor himself, so they are put to vast Charge in giving them all the magnificent Entertainment, and all the Enjoyments they can, except their Liberty, which they must resign to their Husbands, and are not permitted to go abroad above once a Year to visit their nearest Relations; notwithstanding the Wives in *Japan* have the Reputation of great Reservedness, and being, beyond all others, faithful to their Husbands, of which many Instances might be alleged, which for Brevity's sake I omit. There are, however, those who ascribe this Reservedness rather to the Severity of their Laws, than their Inclinations, it being certain, that even the least Suspicion of Dishonesty after Marriage,

riage, is punished here with the utmost Cruelty; so that if a Husband finds his Wife locked up in a Room with another Man, he may, without any further Enquiry, kill them both. The better to allay the Heat of Youth, and the Danger arising from thence in respect of Adultery, they have in the Cities, nay, even in most of the Inns upon the Road, certain Prostitutes, who are most of them Slaves, and expose themselves to Travellers for Money; and if a Man will to stay for any Time in a Place, he may hire one of these Concubines from their Masters at a certain easy rate, and keep her for his own Use.

As for their Devotion, it may be said, that they have scarce any at all, the most devout among them seldom praying in publick above once a Month before their Idols, which stand in their Temples; near them are their Sepulchres covered with great Tomb-stones two or three Foot high, and those of Persons of Quality have a little Pillar erected near them, containing their Names, and certain other Inscriptions, in the Nature of an Epitaph. The Ecclesiasticks are divided into twelve different Sects, eleven of which abstain from living Creatures, and from Women. If they break their Vow they are punished with Death. Those of the twelfth Sect are allowed to marry, and eat all sorts of Provisions; the chief of this Sect is the Head of all their Clergy, and their Temples are endowed with many Privileges, and settled Revenues; whereas those of the other Sects are maintained only by Alms. Some among the *Japanese* believe the Immortality of the Soul, and the Rewards and Punishments of another Life for ever; but the most have but little Sense of Religion, that they meet in their Temples to drink, and commit other Debaucheries; whence it is also, that never any such thing is heard of as Controversy about Religion, though they are such irreconcilable Enemies to the *Christians*, that finding Death not to be sufficient to shake their Constancy, they invented many cruel Methodes to make them renounce their Faith, which, however, at last they were not furnished with, unless they could discover another *Christian* to release them from their Torments, which are so various, as would almost fill a Volume.

Their Houses are slightly built, and seldom above one Story high, because the Country is much subject to Earthquakes; they are raised three or four Foot from the Ground, and convenient enough within, being divided into several Apartments, some of which are for the Men, the rest only for the Use of the Women, where the best Part of the Furniture is bestowed; they are also very nice in their Gardens and Orchards; they are very obliging in their Conversation, especially in their Visits, when they present their Guests with Tobacco, Tisue, or Tea, and with Wine, of the last of which they will take a very plentiful Share; but are sure never to quarrel over their Liquors. Except at the Inns, for the Convenience of Travellers, no Drinking-houses are allowed of in *Japan*; nay, not so much as a publick Cook's Shop, it being their Custom to make their good Cheer in their Houses, where, among other things, they entertain one another with their Musick, the chief of which is a kind of Lute, with four silk Strings, which they strike with a Peg of Ivory. Their Wine, or rather Hydromell, is made of Rice, Sugar, and Honey, and is as strong as any Wine whatever. Their Marriages are contracted in consequence of the Agreement of the Relations. The Bride and Bridegroom being not permitted to see one another till it is to be consummated, those of a common Rank may soon be divorced, and if they dislike the Wife, send her back to her Relations; but People of Quality, notwithstanding any Disagreement, maintain them in their Houses.

Their Children they educate with all imaginable Mildness, without any beating, as well at home as at School, where they are not sent till they be seven or eight Years of Age, and when they come to Man's Estate, the Father gives to his Son a certain Part of the House, and of his Equipments, nay, perhaps the whole, reserving only a certain Allowance for his Subsistence to himself; but their Daughters have neither Dowry, nor the least share in their Parents' Estates. They are very nice in Point of Honour, and will never receive any thing from it; and if they are once in the Hazard of the Ruin of his

Family, than break his Promise to his Friends, which is the Reason most of their Delinquents will rather endure the most exquisite Tortures than discover their Accomplices. The *Japanese* having such vast Quantities of all things, seldom deal in any Foreign Commodities, but leave that Commerce to Strangers, especially to the *Chinese*, who bring thither the Product and Manufactures of their Country; though ever since the ancient good Correspondence between those two Empires has been interrupted, the *Chinese* are forbidden by their Kings to send Goods into *Japan*, and therefore are obliged to carry on this Commerce, under pretence of transporting their Commodities to some other Parts of the *Indies*, unto which they are the more encouraged by the vast Hopes of Gain. All Commodities, either imported or exported out of *Japan*, passing free, without paying the least Duty or Custom.

The whole Empire of *Japan* uses but one and the same Language, which is quite different from the *Chinese*, as well as their Characters; as they always use but few Words, they write every thing with Pencils in certain Short-hand Notions in a very little time; their Accounts they keep by the means of certain small Beads, which they thread upon little Stricks like a square Board. They are not destitute of Books nor Librarians, the *Dairo* (who formerly was the sovereign of the Country, and still retains the Supremacy over the Clergy) keeps the publick Accounts, and writes the Chronicles of the Country; neither are any other Persons, except the Gentlemen of his House, and such Lords and Ladies as are descended from his Family, allowed to write Books, which makes them constantly apply themselves to Learning. They have but one kind of Measure; their Gold is of the same kind, but their Silver none of the finest: Of Gold Coin they have three sorts, one whereof is valued at forty-eight Taals, each of which being worth five Crowns Sterling, amount to twelve Pounds Sterling. The second sort are worth each one Taal, and a fifth Part, and the third one Taal, and a sixth Part. Their Silver Coin goes by Weight, being in the Form of Ingots, so divided, that each Piece commonly amounts to fifty Taals. They have also a lesser Silver Coin made in the Shape of a French Bean, which goes likewise by Weight.

The *Japanese* don't geld any Creature, so that they are well stored with all sorts of Cattle, as well as Fowl, and small Birds. They also abound in mineral and hot Waters: There is a certain hot Spring here which spouts forth its Waters duly twice every twenty-four Hours, with such Violence, that though the Water rises amidst the Stones, which are laid on the Top of the Hole to the Height of twenty or twenty-four Foot, it is so hot that it exceeds the Heat of boiling Water, and burns every thing it touches at its first coming out; but being conveyed by certain Pipes into the adjacent Houses, it is reduced to such a Degree of Heat, that it is convenient for Bathing. These Mineral-waters are sufficient Proofs that *Japan* is full of good Mines of all sorts, and Experience confirms it; for they have Gold, Silver, Copper, Tin, Iron, and Lead of their own, as well as Cotton, Flax, Hemp, Silks, and all manner of Provisions in great Plenty. Their Physicians have singular Reputation as to their Ability, but Chirurgery is uncommon among them as yet. They make frequent use of *China* Root and Rhubarb, which, as well as most of their other Medicines, they make into Pills. The *Portuguese* and *Spaniards* found it no hard Matter to settle themselves in *Japan*, and their religious Ceremonies took so well with the Inhabitants, that they were permitted to build divers Churches in the Kingdom; but the *Spaniards* not being able to contain themselves within the Bounds of Modesty, their domineering Temper created such a Jealousy and Aversion in the *Japanese*, that they set upon them, burnt their Ships, and, in 1636, totally banished them the Island, under Pain of Death. The *Dutch* began to trade there in 1611. Some of their Relations affirm the City of *Meaco* to be twenty-one Leagues in Compass, and that the City of *Ossack* and *Bungo* are for their Wealth not inferior to any of the *Indies*.

The Air of *Japan* is very moderate and healthy, but inclining rather to Cold than Heat. They sow in *May*, but do not reap till *September*. They have neither Oil nor Butter, and have an Aversion to Milk, which they consider

derate and healthy, but in-
 eat. They sow in *May*.
 They have neither Oil
 rison to Milk, which they
 confide:

confider as Part of the Blood and the Receptacle of the
 Souls of Beasts. They will not feed upon the Flesh of
 tame Beasts, but are great Lovers of all sorts of Wild-
 Fowl and Venison. Their Cedars are so big here that they
 make Malts of them for Ships. The Complexion of the
 Natives is inclining to brown; and for the rest, they are lusty
 and strong-limb'd, hardy, and patient to undergo any La-
 bour, as well as the Injury of the Seasons, never changing
 their Cloaths either Winter or Summer, and very moder-
 ate in their Diet. The *Japanese* are distinguished into five
 several Ranks; the first is that of the Prince, Lords, and
 chief Officers, both Civil and Military; the second of the
 Clergy; the third of the Gentlemen and Merchants; the
 fourth of Tradesmen and Seamen; and the fifth of La-
 bourers. Once in five Years the Emperor of *Japan* has
 an Interview with the Dairo at *Meaco*, which is very re-
 markable for its Magnificence, and the great Presents made
 to the Dairo, an ample Account of which being to be
 found in the *Dutch* Relation of the Director of the said
 Company in *Japan*, we will pass by the Particulars of it
 here, our Intention being only to give the Reader a short
 Relation of what we have received from very good Hands,
 and leaving the rest to be completed by those who have
 since had the Opportunity of taking a View in Person of
 that Country.

16. After the Banishment of the *Japanese* out of *China*,
 the *Chinese*, to avoid the Penalties inflicted on such as
 should trade with them, made Use of the Isle of *Tayo-
 wang*, whither they carried their Commodities, in order
 to continue their Commerce with those of *Japan*. The
Dutch being excluded from the Commerce of *China*, fol-
 lowed their Foot-Steps, and, in 1633, settled themselves
 in the said Island, as the most convenient Place in all the
Indies for carrying on Trade both with *China* and *Japan*,
 there being a free Passage here all the Year, without be-
 ing obliged to stay for the Monsoons, which, in most other
 Places, last for six Months. The *Dutch*, I say, being sen-
 sible of this Convenience, built immediately a Stone-Fort
 of four Battions on the Downs, within half a League of
 the great Ile of *Formosa*, which is divided from this Ile
 by a Channel only, which, though not very deep, yet af-
 fords a safe Harbour for Ships against any Winds.

For the better Defence of the Entrance of this Channel,
 the *Dutch* have built a strong Redoubt called *Zealand*.
 The Ile of *Formosa* itself is about thirty-two Leagues dis-
 tant from the River of *Chinchen*, and the *Chinese* Island
 called *Quemoy*, extending from S. W. to the N. E. in
 Compass an hundred and thirty Leagues. It is full of Vil-
 lages and Inhabitants, which are not governed by any sin-
 gle Person, but such as they chuse themselves for their
 Magistrates. It has many Rivers full of the best Fish;
 their Forests are well stocked with Wild-Fowl and Veni-
 son, and their Meadows with Cattle, besides Deer, Wild-
 Goats, Hares and Rabbits. Their Forests produce a kind
 of Horses, with Hams like a Deer, called *Oiwang* in their
 Language, the Flesh of which is a great Dainty; as also
 another Creature, not unlike our Bears, but of a very large
 Size, the Skin of which is much esteemed in those Parts.
 Their Grounds are very fertile, but neglected, which
 makes Fruit very scarce, and what they have, not very
 grateful to the Palate. It produces also some Ginger and
 Camamon, and, as the *Chinese* relate, Gold and Silver;
 for the *Dutch* have hitherto found none of these Mines
 worth looking after. The Places in which the *Dutch* have
 their Settlements are, for the most part, along the Sea-
 side.

Its Inhabitants are called *Savage*s, being of a more than
 ordinary Size, black in Colour, all over their Bodies, but in
 their Conversation obliging, benevolent, and good-natured;
 the Women are not so stout as the Men, but inclining to
 Languor, and yet not slothful. They wear a sort of Gar-
 ment round the Middle, by which they bathe themselves
 (which they commonly do twice a day in warm Water)
 dry, as well as the Men, strip themselves stark naked,
 and make no great Account whether they are seen by one
 another or not; for their Ills, they are very constant Friends,
 and religiously observe the Agreements that they make
 with Strangers, Treachery being a Thing abominated
 among them. They neither want Ingenuity or Memory,
 NUMB. 33.

being very docile in any thing they apply themselves to.
 Though their Grounds be very fertile, and able to produce
 much more than they do, they are contented to live up-
 on their small Quantity of Rice, which is raised by the
 Industry of their Wives, who, instead of Ploughs, culti-
 vate and dig the Ground with Spades, transplant and cut
 the Rice; and after having dried as much of it every
 Night in the Chimney-Corner as will suffice the Family
 the next Day, beat it early in the Morning in a Mortar;
 the Mens Minds being wholly taken up with hunting, es-
 pecially till they are forty Years of Age, before which
 Time they seldom mind any thing relating to Agri-
 culture.

They sow also three sorts of Fruits, called by them
Ptingh, *Quach*, and *Taraan*, not unlike Miller; and a cer-
 tain sort of Pulse, resembling our French-bean; some
 Roots they have likewise, which might serve them instead
 of Bread, if they were not furnished sufficiently in that
 respect with Rice. Besides this, they have Ginger, Cin-
 namon, Sugar-canes, Bananas, Lemons, and a great Store
 of Areca, not to mention several sorts of Fruits and Pulse,
 not known in *Europe*. Instead of Cocoa-Wine, of which
 they are destitute, they make a certain Mixture of Rice,
 which, being soaked in warm Water, they beat it in a
 Mortar till reduced to a Paste; this they mix with Rice-
 meal chewed instead of Leaven; and having put it into an
 earthen Vessel, fill it up with Water, which, after it has
 fermented and stood two Months, affords a very pleasant
 Liquor, which is stronger or weaker, according as it is
 kept, and the older the sweeter it is, and may be kept
 good thirty or thirty-five Years. When they go abroad
 hunting, they make use of Snares, small Pikes, Bows, and
 Arrows; their Nets they spread in the open Fields, or
 cross the Highways, and then drive the Wild-Beasts into
 them.

Sometimes the Inhabitants of several Villages make a
 Hunting-Match, and dividing themselves into divers Par-
 ties, armed with Half-pikes and Lances send their Dogs
 into the Woods; by which means having forced the Wild-
 Beasts into the Fields, they encompass them on all Sides,
 sometimes for a whole League, and so with their Pikes
 kill all those that come within the Ring. These Lances, or
 rather Darts, are of Cane, six or seven Foot long, with fe-
 veral Hooks, which, being fastened into the Flesh of the
 Beasts, are not to pulled out; but as the Iron is not well
 fastened to the Wood, but that with the running of the
 Beasts through the Bulges it comes off, a Cord is tied to
 both, and a little Bell to the Iron, so that the Lance annoys
 the Beast, and the Bell discovers its Passage wherever it
 runs. By this Means they catch vast Numbers of Deer,
 the Skins of which they exchange with the *Chinese* for
 their Commodities, they seldom reserving any thing for
 their own Use but the Umbles and the Entrails, which
 they salt and eat half corrupted, being not cleaned of the
 Filth before they were salted.

When one Village happens to be at War with another,
 they first declare it openly against one another, which
 being the Signal to be upon their Guard, they don't attack
 by open Force, but dividing themselves into small Troops,
 perhaps of twenty-five or thirty Men, lie in Ambush near
 the Village they intend to attack till Night, when they set
 upon the Huts, which lie dispersed in the open Country,
 till perhaps they can light upon an aged Man: They kill
 him, cut off his Head, Hands and Feet; nay, if they
 have Time enough, cut the whole Body into small Pieces,
 that every one of them may take home a Piece of it along
 with him, as a Mark of his Bravery; but in the next Vil-
 lage happens to take the Alarm, they are glad to be con-
 tented with the Head alone, or perhaps a good Lock of
 the Hair, which they carry home in Triumph, as an un-
 doubted Sign of their Victory; when they intend to make
 a very bold Attack, they enter the Village by Night, force open
 a Houle, kill all they meet with, and to betake themselves
 to their Heels, for fear of being pursued. When they en-
 gage in the open Field, their chief Aim is to draw one an-
 other into an Ambush; in the Death of one Man com-
 monly decides the Quarrel, that Side which has it him
 retiring immediately. Their Arms are Pikes, but without
 Hooks; their Bows are so large, that they shelter their
 whole

whole Body; but their Swords short and broad. Besides which, they also make use of Knives, or Bayonets, like those of the *Japanese*. Sometimes certain Villages enter into a Confederacy against divers other Villages, in which case they don't choose a General, or any Commander in chief, but such among them as have acquired some Reputation of Courage, by having cut off some of their Enemies Heads, are followed by a certain Number of Volunteers, who go abroad in Parties, and surprize their Enemies.

They commonly engage in War against the Island of *Tajm*; the Inhabitants thereof are so suspicious, that they will not let a Foreigner or others set a Foot on Shore, not the *Chinese* themselves, who come thither to trade with them, but are forced to remain on Board their Vessels, whither these Islanders come to exchange Commodities with them. If they are so happy as to carry off an Enemy's Head, or perhaps only a Lock of his Hair, or a Pike, they carry it in Triumph, as a Sign of their Victory, appoint a publick Thanksgiving-day, sing Hymns, and offer Sacrifices to their Gods. He who has done the Exploit, is looked upon ever after as an extraordinary Man, has particular Reverence paid him by all the rest, and he preserves the Head, or Pike of his Enemy, as a most precious Relick in his Family, which they value beyond any Gold or Silver. No body here claims any Preference above another; more than what is allowed to Age. Each Village being governed by twelve Senators, chosen every two Years out of the most aged Persons, who are not invested with any other Power, or Authority, than that of calling together the whole Village in one of their Temples, and proposing to them what they think necessary to be done, making use of all their Eloquence (of which they have sufficient Share bestowed upon them by Nature) to persuade the Chief of the Families there present, to a Compliance with what has been proposed to them, which they are at Liberty to accept of, or reject, according as they think fit.

The only Power those Senators are invested with, consists in this, that they see the Commands of their female Priests put in Execution, take care that Satisfaction may be given to such as are injured, not by any corporal Punishments, but by enjoining them to give a Piece of Cloth, Deer-skin, some Rice, or perhaps a Pot of strong Liquor, as an Attonement to their Adversaries; for those Magistrates have no Power to punish Murder, Theft, or Adultery. In the first case the Matter is commonly composed by the Mediation of the Relations on both Sides. If any one be robbed, he goes, accompanied by his friends, to the House of him who has stolen his Goods, and with their Assistance forces him to make an immediate Reparation; and what is agreed upon betwixt them, he carries away with him to his own House. In case of Adultery, the injured Husband goes, without any farther Ceremony, to the Dwelling-place of his Wife's Gallant, takes from him two or three pigs, in Satisfaction of the Affront put upon him. We told you before, that there is no Difference of Condition among them, which is so absolutely true, that the very Names of Masters and Servants are not so much as known among them. All the Respect they pay one to another is in regard to old Age, which is in so high Esteem among them, that a young Man meeting an old one, goes out of his Way, and turns his Back to him, till he is passed; nay, such is the Respect the young People show to aged Persons, that they will not relate them easily any thing they desire, tho' it should be to go three or four Leagues upon their Business. Men are forbear to marry till they are at least twenty Years of Age. They don't let their Hair grow below their Ears till after Seventeen, and instead of Stairs, or Razors, make use of a Clipping-knife, with which they cut it upon a Piece of Wood. The Hair of their Beards they draw out with Lead-Pincers.

Men always let their Hair grow, and may marry as soon as they can. The Courtship is performed by the young Man's dancing Relations, whom he sends to the young Woman's Relations, or Friends, to shew them what he intends to bestow upon his Mistress, when it is accepted of, the Match is made, and he may consum-

mate the Marriage the next Day if he pleases. The Presents commonly offered to the Bride consist in some Silk or Calicoe Scarfs the Women wear round the Waist; some Waistcoats, Bracelets of Cane, ten or twelve Rings of Deers Horn, four or five coarse Cloth Girdles, some little Vestments made of Dog's Hair; some *Chinese* Garments, a Bag of Dog's Hair, and four or five Pair of Stockings of Deer-skin, amounting perhaps in all to about 140 Crowns; the poorer sort are content with a Present of a few Bracelets, and two or three Garments, not amounting to above three or four Crowns. When the Marriage is to be consummated, the Bridegroom gets into his Mistress's Father's House by stealth, at Night, and without being seen by any body, and so creeps into her Bed. He continues thus for many Years after, always coming into the House at Night, and going thence in the Morning before Day-light, the Wife living all this while in the Father's House, till her Husband be forty Years of Age, and never see one another by Day, unless she happen to be at Home alone, or else in the Field. The Women are obliged not to bring any Children into the World till they are thirty-five, or thirty-six Years of Age, but destroy all their Children in the Womb, by causing one of their Priestesses to kneel upon their Bellies till they cause an Abortion.

As their Marriages are soon made, so they are as soon dissolved; for if they grow weary of one another, they may divorce; which Liberty is equally allowed to both Parties, with this Difference only, that if the Husband sends away his Wife without any Cause, she keeps the Presents he has given her before Marriage; but if for Adultery, or any other Affront offered to him, she is obliged to make Restitution. No Marriages are contracted among them within the fourth Degree of Consanguinity, or Affinity. Their Houses are generally large, and better built than is common in the *Indies*, with four Doors to each Quarter of the Heavens: Some have two Doors on a Side; they are commonly raised five or six Feet from the Ground, and three or four Stories high. Their Furniture consists in some wild Boars and Deers Heads, or some other Relicks, taken from their Enemies, are their chief Ornaments; the rest consists in Deer-skins, which they use instead of Feather-beds, certain Stuffs with which they cover themselves, a Spade, Pike, Bow, Arrows, a wooden Trough instead of our Dishes, or earthen Drinking-Cup, and a Pot to boil their Rice in, which is their ordinary Food, and this is all. Though they have no certain Days appointed for Devotion, yet they meet at set Times to make good Cheer, especially every Quarter, in their Temples, where the Women also appear in a very odd Dress made of Dog's Hair; for here, instead of Wool, they cut off the Dog's Hair once a Year, and after they have dyed them red, make certain Stuffs of them, which they value as much as we do our finest Velvets.

Their Ceremonies used after the Death of their Friends, are scarce to be paralleled in History; for no sooner is any one dead, but by Beat of Drum, made of the Trunk of a great Tree, they give Notice thereof to the Village, upon which all the People repair immediately to the House of the deceased, and among the rest the Women, after they have plentifully drank of Arrack, fall to Dancing very slowly, upon great empty Chests, which make a wonderful Noise, to express their Sorrow at the Departure of their deceased Friend. Eight or ten Women having thus danced for some Time, with their Backs turned to one another, they give Way to others, who continue the same Exercise, which lasts in all two Hours. The next Day Preparation is made for the funeral Rites, which are performed either by burying, or burning the Corpse, as other Nations do; but by drying it in the following Manner. They raise first of a Scaffold of Canes, five or six Feet high, to which they fasten the Body by the Hands and Feet, and dry it by it, by making a good Fire round about it, which lasts the whole Days; during which Time they fasten the Corpse, and seal upon the Flesh, washing the Body every Day. After the Expiration of the same Days, they put it in another Scaffold, wrapped in a Mat, and cover it with Mats, where it remains till the third Year, then they take out the Bones, and bury them in the same Hole, with the

wear silk. The Women are very magnificent in their Apparel, and wear abundance of Jewels and Pearls. They are very remarkable for their little Feet. They seldom appear Abroad, and when ever they visit their Relations, it is done in close *Palanquins*, or Litters. The *Chinese* are so quick, not only in all sorts of Manufactures, but also in their Way of Trading, that scarce any body is able to over-reach them. Their Money is Gold and Silver, which passes altogether by Weight. They are so careful in providing for the Poor, that in each City a Judge is appointed to provide for the Relief of such as are unable to provide for themselves, and to set to work such as are in a Capacity to get their Bread.

As there are Books extant in *China*, which have been printed above seven hundred Years ago, it is certain that they invented the Mystry of Printing before us, since it was not discovered in *Europe* till 1450. Their Characters are rather Figures, signifying certain Words than Letters, which they write from the Top downwards, not with Pens, but with Pencils, and that on one Side only, their Paper, which they make of the Bark of *Bamboe* Canes, being very thin. The Emperor maintains at his own Charge many Schools and Academies, the oversight of which is committed to Visitors, who, at certain Times, not only examine the Professors and Scholars, and expel such as are not qualified for Studies, but also promote such as have made a sufficient Progress in Learning, to the Degree of a *Letta*, a Dignity like our Doctors. They are very ceremonious and obliging in their Conversation, in which Point they are so nice, that the first Rudiments of Learning given to their Youths, are certain Books of Compliments. Their Entertainments are very magnificent, in which they have this peculiar, that they sit as many Tables as they have Guests. Their Meats are served up either in Plates, or Porcelain. They have small Cups, because they drink often, but no Napkins, and they frequently send Home to their Guests what Meats are left untouched upon the Tables, and are especially careful in entertaining Ambassadors with more than ordinary Respect.

They allow Polygamy, but punish severely Incest, which is forbidden in a direct Line to Infinity, and in the Collateral Line to Sisters and Nieces. The first, however, is the only lawful Wife, whose eldest Son inherits half of the Estate of his Father; but on his Demise, the eldest Son of the next Wife has the same Pre-eminency. Adultery, though it be a capital Crime here, yet is seldom heard of, partly by reason of the great Restraint the Women are kept under, partly because the *Chinese* are so wile, as rather to make the best of such an Accident, by an advantageous Agreement, than to expose themselves, by publishing their own Disgrace. Though the Government of *China* be not only monarchical, but also despotical, yet it is observed, that even in those Nations which enjoy the greatest Degree of Liberty in *Europe*, are much more burthened with Taxes than the *Chinese*, which chiefly proceeds from this fundamental Maxim inprinted in their Kings, that as War is destructive, and the chief means to impoverish a Nation, they ought not to enter upon it, in order to extend the Limits, or make any Conquests; for which Reason it is, that, to avoid all Occasion of Contest with Foreigners, the *Chinese* are forbidden to go out of the Kingdom without Licence from the Emperor, or the Governor of the Province where they dwell.

The eldest Son always succeeds the Father in the Throne, the youngest Sons having only certain Appenages, with the Titles of Kings allowed them; but have not the least Share in the Administration of the Government, being under the Jurisdiction, or rather Inspection of the Governor of the Province where they reside, who pays them their Allowance quarterly. The chief Council of State consists of twelve Counsellors, and a President; besides which, there are in most of the great Cities six Commissioners. The first for the Administration of Justice, the second for the Revenue, the third for the Ceremonies, the fourth for judicial Affairs, the fifth for surveying the publick Structures, and the sixth for Criminal Cases. To prevent the Mismanagement of the Governors, and the Corruption of Judges and other Officers, the King sends every three Years certain Visitors into the Provinces, who, after having taken

an Account of their Transactions, make a faithful Report to the King, who changes the Officers of the Province every three Years, with this Circumspection, that so as never any Officer of Note is sent but into a Province remote from the Place of his Birth. Debtors are punished by most cruel Drubbings, which makes them rather choose to sell themselves to their Creditors, than to undergo this kind of Punishment.

The Prisons, wherewith all the great Cities are provided, are very strictly kept; but at the same time want not any Conveniencies, such as Courts, Gardens, Ponds, Walks, &c. for the Divertissement of the Prisoners, and Drinking-houses, and Cooks Shops, for their Conveniencies. No Sentence of Death is executed without a Warrant from the Emperor, and this must be done in the Presence of the Judge, who are so nice in this Point, that they allow a very considerable Time betwixt the Condemnation and Execution, make divers Visits to the Prisoners, and examine them whether they have any thing to alledge in their Behalf; by which Delays it happens, that more Malefactors die in Prison than are executed. Their ordinary Punishments are Hanging, Impaling, and Burning alive; but the last is only in Cases of High-Treason. Thieves they lay upon their Bellies with their Hands tied back, and so the Executioners beat them with Canes moistened with Water upon the Call of their Legs, with such Violence, that they frequently expire under their Hands.

The *Chinese* are *Pagans*, though some Authors have taken a great deal of Pains to persuade the World that they found some Remnants of Christianity among them, which they say we introduced there by the Apostle *St. Thomas*. They acknowledge the Heavens for the Creator and chief Governor of the Universe, which is managed by a Vicegerent called *Laycan Tzautay*, unto whom they pay the greatest Veneration next to the Sun. The next Divinity is called *Canjay*, unto whom they attribute the Government of all sublunary Things. They allot to these three Divinities as many great Ministers, viz. *Tanquam*, who presides over the Air; *Tziquam*, whose Business is to look after the Generation of Men, and all living Creatures, as well as the Products of the Earth, and *Tzinguam*, the chief Patron of the Sea. They have also three famous Saints; the first called *Sixkia*, Founder of all the religious Orders of both Sexes, of which there are great Numbers in *China*; the other two are Females, called *Quamina* and *Niema*. The *Chinese* are also much addicted to Incantation, and adore the Devil. They believe the Immortality of the Soul, which is communicated to it by Heaven, and that it shall either enjoy eternal Felicity or Torments, according to the good or bad Actions done in this World; for which Reason it is that they assign a certain Place of Abode not unlike Purgatory to the Soul, after its Departure from the Body. There it is purged from its Sins, and, by the Intercession of its Relations and Friends, may be eased in its Sufferings. Many of them also adhere to the Opinion of the Transmigration of the Soul, which they derive from the *Indians*.

Their Orders of religious Men have one General residing in the City of *Auntion*, who has under him several Provincials, and these under them the Superiors and Guardians of their respective Monasteries. They make use of Beads, and keep to their constant Mattins and Offices, not unlike the Monks in *Europe*. The eldest Sons amongst the *Chinese* are not permitted to enter into religious Orders, and such as have, may quit them at Pleasure, and marry, as may all the rest, who have embraced a monastick Life. As to their Funeral Rites, the *Chinese* wash the dead Bodies, put them in a Coffin of sweet Wood well closted, and to keep them upon a Table fifteen Days; during which Time the Priests, who come there to sing and pray over the Dead, are treated with Wine and Fruit; their Business it is to inter them after the Expiration of these fifteen Days, which is commonly done in the Country, near a Pine-tree, and if that be not to be found, they plant one on purpose. Their Mourning is very close, in coarse Cloth, and Hats, with a Cord tied about their Middle: Sons continue this for two Years, and the other Relations proportionably.

The first time the *Tartars* broke through the *Chinese* Wall was in 1206, when they made themselves Masters of all the Country, and remained in Possession of it till 1279, when

when they were not only forced from thence, but also obliged to acknowledge the Sovereignty of the Emperor of *China*. About the Year 1600, seven powerful Colonies of the *Tartars* were joined into one Kingdom under the Name of *Niube*, whose King entered *China*, in 1616, with a powerful Army. Many bloody Engagements happened among the *Chinese* and *Tartars*, especially in 1618, 1619, 1620, 1625, 1627, till at last in 1630, the *Tartars* were once more forced to quit the Possession of *China*, and to content themselves with making Incursions, as they found Opportunity. But in 1641 no less than eight Armies of Robbers appearing at once in the *Chinese* Empire, and the *Grande*s being divided into Factions, some of them called in the *Tartars* to their Aid, and at last betrayed the capital City and the Emperor to them, who was strangled in 1644. Upon which the *Tartars*, having spent some Years in reducing other Provinces, they made themselves absolute Masters of the whole Empire by the Conquest of the City of *Quangbeu*, in the Province of *Quangh*, Nov. 14, 1650. But it is now Time to proceed with our Voyage regularly and circumstantially.

18. We told you how we were becalmed in the Sight of the Isle of *Ceylon*, where we continued till the 20th of *February*, when the North-West Wind obliged us to steer our Course to the South-East. We found ourselves then 2° beyond the Equinoctial Line. I took this Opportunity to ask the Master of the Ship, whether (according to the vulgar Opinion) I might discover both the Poles here; but he sufficiently convinced me, that the Arctick Pole was not to be seen till about six Degrees, and the Antarctic not till eight beyond the Line, and that when you come to 8 or 10° the North-West Wind reigns there constantly for six Months, as the South-East does the other Months of the Year. We saw abundance of Birds, some where like Pigeons, others like Wild ducks, and vast Quantities of certain Birds, called by the *Portuguese*, *Garayos*, being black and white, but larger than our Magpies. Their Tails are divided like a Pair of Taylor's Sheers: All these live upon the flying Fish, who, to avoid the Pursuit of the *Albicores*, *Bonitos*, and *Dorados*, betake themselves to the Air. The *Albicores* are white, and without Scales, and so are the *Bonitos*; but the first exceed the others in Bigness, and have but one Bone from the Head to the Tail, but are not extraordinary Meat. The *Dorado* is like a Salmon, but more delicious, and has smaller Scales. We also took a Sea-Hog (so called from its Snout, which is like that of a Pig) which is seen in great Shoals near the Vessel, are looked upon by the Seamen as the Forerunners of a Storm, which may naturally be accounted for.

The *Dutch*, in their first Voyage into those Parts, opened one of these Fish, and found a great deal of Fat, and a young Pig in the Belly of it. There is another great Fish in those Seas called *Haves* by the *Dutch*, and Shark by the *English*; their Teeth are very close and sharp, and as they delight in Man's Flesh, it often happens, that they snatch a Lamb of any unwary Seaman. Their Mouth being below their Heads, they lie upon their Backs when they are to catch a Prey. That we took had the Heart in the Head, and lived a good while after it was taken. Their Flesh is not fit to be eaten. There are also abundance of that sort of Fish hereabouts, called by the *Portuguese* *Paspuarco*, because they make a Noise like Pigs, and are of the Bigness of a Bream. Tortoises (the Meat of which are as fine as Veal) are in such Plenty here, that the Seamen draw them, at Pleasure, into the Ship with Hooks. *February* the 21st we found ourselves in 1° 20' of the Line, with very rainy and unpleasant Weather, which is common hereabouts. On the 23d one of our Seamen died of the Pox; the 25th we were becalmed; but the next Night there arose a Tempest, which made us continually upon our Guard, for fear of the Favals, or Whirl-winds, which are so sudden here, that the Seamen have scarce leisure to fast their Sails. We could not make any Observation by the Sun till the 5th of *March*, when we were in 8° 6' Latitude, and on the 10th in 10° 14', the Wind at West.

The 12th and 13th it blew a great Storm, with Thunder and Lightning; but what most surprized us was, that though we were in 13°, we found not the least Effects of

the Monsoon, or ordinary Wind of the Season, which is commonly perceived at 8 or 9°, the South Wind blowing so hard, that we were in fear of being forced back to the *Indian Coast*. It was not till *March* the 15th, that we found the Wind changed to the South, when putting out all our Sail, we made two Leagues in an Hour, and took several Dolphins that swam near our Ship. On the 20th we were becalmed in 16°, where we found the Compass decline 30° to the West, and so it continued till the 24th; but as soon as the *Cape of Good-Hope* is doubled, the Loadstone draws towards the East. As we were floating thus up and down the 21st of *March*, our Ship took Fire, by the Carelessness of the Butler, who set Fire to a Barrel of *Aqua Vite*, as he was removing it. Our fresh Water beginning to be scarce, we made use of an Engine to draw fresh Water out of the Sea; but its Taste being somewhat nauseous, it served only for the dressing of Meat.

On the 22d we made, by the Help of the Monsoon Winds, two Leagues an Hour, which continued the 23d, 24th, and 25th. On the 26th the Wind held still fair; but, for fear of a Change, and Want of fresh Water, was resolved to direct our Course to *Maurice* Island, to take in Refreshments there. We discovered the same Night the Isle of *Diego Rodriguez* in 20° 48', which lies sixty Leagues from the said Island of *Maurice*, so called by the *Dutch* from the Prince of *Orange*, who was Admiral of the United Provinces at the Time of their first Voyage to the *Indies*. Its Harbour is very spacious, being able to contain fifty large Vessels, and commodious, by reason of its Depth, which is a hundred Fathom at the Entrance. The high Mountains, which are covered with Trees, may be seen at a great Distance at Sea. The Vallies produce some Fruit, and abundance of other Trees, some of which are those that afford the best Ebony in the World, black, red, and yellow; but the two last are in the greatest Esteem, and the Sea abounds in Fish. The *Dutch* in their Relations speak of a Thornback they caught near this Isle, which found two good Meals for the whole Ship, and Tortoises of such a Bigness, that ten Men might sit on one Shell. The Isle was quite destitute of Inhabitants at that Time; but since 1650, the *Dutch* have erected a Fort there. It abounds in Birds; but is destitute of four-footed Beasts; but as for Fruits and Water, it affords sufficient Refreshment to Ships that are passing that Way.

The Wind continuing fair when we came within Sight of this Island, a Council was called, in which it was agreed not to lose any Time by putting into this Island, but to continue our Voyage, with all possible Speed, to the *Cape of Good-Hope*, to avoid the Danger of being obliged to winter in the Island of *Madagascar*. Accordingly we lost Sight of this Isle the same Day, and passed the Tropic of *Capricorn* *March* the 30th, steering our Course West-South-West. *April* the 1st we found ourselves in 26° 3', and after having made forty Leagues, were becalmed before Night. We saw the next Day divers Whales, and the Weather becoming very stormy, carried us to the West-South-West, our Business being to steer to the South, and consequently to the *Cape of Good-Hope*. On the 5th the Compass still varying, we held our Course still to the West, and though we had not much Wind, made seventy-three Leagues in these two Days from the 9th, (when we were about three hundred Leagues from the *Cape*) we advanced tolerably well, but the 15th it blew very hard, and those Birds, called by the *Portuguese* *Pintados*, which keep within forty Leagues of the Land, and several other Birds, came near our Ship. On the sixteenth these Signs persuaded our Seamen that we were not far from the Shore; the 17th we continued our Voyage with a fresh Gale; but the 18th and 19th we had scarce any Wind, thro' the Roughness of the Sea, which proved an infallible Omen of the Tempest that overtook us the same Night from the South-West in 37° Latitude. As these Storms are unavoidable about the *Cape of Good-Hope*, we took in our Sails.

On the 20th, perceiving the Water somewhat more inclinable to white than before, and a great many Sea-mews, called *Mangas de Vando* by the *Portuguese*, round our Ships, we concluded that there was Ground within an hundred, or an hundred and fifty Fathom, and, upon Trial, found

it at eighty Fathom. We saw also the same Day abundance of Black-Birds, with a small Spot of white on their Breasts: These, according to the Opinion of the *English* Seamen, always foretell a Tempest, which proved true; for, before Night, a Storm arose from the W. N. W. with a very rough Sea, which took our Course out from the Deck, but he was saved by Means of a Rope. The Ground, which fluk to the Plummet, being black at eight-and-thom Depth, we concluded we were not far from the Cape *d'Agulhas*, which is sixty Leagues distant from that of *Good-Hope*. The 23th the Tumpet increasing in 36^o 20' beyond the Line, we were in great Danger of being lost, being forced by the Currents towards the Shore; but the Tempest being somewhat allayed, we escaped the Danger, but were soon after threatened by another, occasioned by a Lamp in the President's Room, which had set Fire to the Waincot. The 26th the Storm continued till two in the Afternoon, when the *Pellepuercos* coming in great Numbers about our Ships, were the Fore-runners of fair Weather, and the N. W. Wind which ensued. On the 27th, in the Morning, it was calm; but, in the Afternoon, we made two Leagues an Hour with a N. W. Wind, taking our Course to the N. N. W. As we saw that Day abundance of Trombas, or a kind of Canes, three or four Foot long, and of the Bignets of a Man's Arm, which float upon the Water, and are met with no where but near this Cape we concluded that we were not far from the Cape of *Good-Hope*; and the 28th discovering the Coast from N. to W. some thought it had been the Cape; but finding Ground at forty Fathom, and in 34^o 40', we were soon convinced it must be the Cape *d'Agulhas*.

The 29th the Wind turning S. E. we steered our Course N. W. along the Coast, and the Wind turning to the N. W. we could advance but a little: We then found ourselves in 27^o, and consequently twenty-four Leagues from Cape *d'Agulhas*. On the 30th the Wind continued against us; but the next Day the Wind turning to the N. E. by E. we sailed along the Coast, and, at last discovered the high Shore, known by the Name of *Cabo Falço* (because it resembles a Promontory) within seven Leagues of the Cape of *Good-Hope*. May the 2^d the N. E. Wind continued, we got Sight of the Cape of *Good-Hope*; but soon after turning about to the N. W. we could not get into the Bay, so we were forced to stand out to Sea, steering our Course to the South. The 3^d the Wind still at N. W. brought along with it a most furious Tempest, notwithstanding which we made the best of our Way to the Coast, the 4th doubled one of the Points of the Cape of *Good-Hope*. Ten Leagues distant from the Bay we discovered the Mountain, called by the *Dutch* the *Table-Mountain*, from its Flattness and square Figure, in 34^o 4', within fifteen Leagues of the Cape. Our Intention was to have got in there, but the Wind proving contrary, we kept along the Coast as well as we could: But the 5th, at Sun rising, we were out of Sight of the Shore, which made us change our Course to the N. E. so that we discovered a Land again about Noon, and in two Hours after, by passing the Isle of *St. Elizabeth*, got into the Bay by Night, where we cast Anchor at seven Fathom Water.

This Cape of the Continent of *Africa*, extending to the South into the Sea, in 30^o beyond the Line, received the Name of *Cabo de Boa Esperanza* in 1493, from *John II.* King of *Portugal*, when the *Portuguese* first went in Quest of the Passage by Sea to the *Indies*; lying as it were at a nearer Distance of about 200 Leagues, betwixt *Europe* and the most Eastern Coast of the *Indies*; ever since which Time this may be the Place where Ships bound to those Parts, take in their Refreshments, Water being very excellent here, and Cattle very cheap, their Oxen being very large, with Bignets on their Backs like those of the *Indies*, and their Sheep very good, with long hanging Fats, and Tails as big and weighty as a good Quarter of Mutton. Neither do they want Wild-Fowl, Deer, Wild-Beasts, or Hinds, Quans, and, among the rest, a kind of Green, with bumps instead of Wings, but their Flesh is not eatable. They have also Dogs, or rather Sea-Bears, Camels, Tigers, Lions and Lynxes. The *Dutch* are used to leave Letters here under a certain Stone near the Harbour, appointing their Countrymen to deliver them to the Merchants, who have Passages in

their Voyages, and what Course they intended to steer.

The Inhabitants are savage, uncouth, and ill-shap'd. They graze their Bales with Iron-Ons, and eat their Flesh raw; nay, they seldom kill any Beasts, but feed upon them when they die of any Disease. Both Men and Women go naked, covering their privy Parts only with a Piece of Skin fastened round their Waist with a leather Girdle; some wrap a Lion's Skin, or Ox Hide, round their Buttocks, drawing their Tail between their Legs; some wear them over their Shoulders down to their Waist only, exposing all the rest to publick View, and disfiguring their Arms, Thighs, and Legs, by making Characters in them by way of Insignia. The Women adorn their Arms and Legs with broad Rings of Iron or Brass. Those living farther up in the Country are no less savage than the rest, with this Difference only, that they live a little better; those near the Sea-side living upon Oysters, Fish, and especially Whales; for they know not what Husbandry is, though their Grounds are excellent. They live in the same Huts with their Cattle, and scarce ever come to the Sea-shore, except when upon the Arrival of foreign Ships, they are to truck their Commodities, which are Ox-hides, Lions, Leopards, Tigers Skins, and Ostrichs Feathers, for Knives, Looking Glasses, Nails, Hammer, and Pieces of Iron. They know not what Religion is, both God and the Devil being equally beyond their Comprehension.

On the 10th we were ready to set sail again out of the Bay; but the Wind proving contrary, we did not go to Sea till the 12th, with a N. E. Wind, steering our Course to the West; but the Wind varying that Day through most of the Points of the Compass, we could not get out of Sight of the Coast, and at Night were surpris'd by a Tempest, which continued till the 17th with such Violence that our Ship had much ado to resist it. The 18th the Sky began to clear up, and the Fury of the Wind being allayed, we found ourselves in 34^o 40'; whence we conjectured that the Tempest had forced us back 25 or 30 Leagues, between *Cabo Falço*, and the Cape of *Good-Hope*. The Night following, there arose such a dreadful Hurricane that we gave ourselves over for lost, being by the contrary Winds forced to Sea. The 19th were not much better; and the 20th we found but little Alteration, though we hoped for some from the Change of the Moon, which happened that Day; but the Storm continued till the 22^d, when the Rains having somewhat abated the Fury of the Winds, we made use of our Sails, steering our Course to the West, as well as we could. On the 23^d we were becalmed in Sight of the Coast to the N. E. of us, and finding ourselves in 37^o 6', we suppos'd ourselves on the Coast between *Cabo Falço* and that of *Agulhas*; but another Tempest arising the same Evening from the W. N. W. we were forced out again to Sea.

The 24th the Wind held still contrary, which grew tempestuous at Night. The 25th in 36^o Lat. we steered our Course with a W. Wind to the S. The 26th the Wind blowing N. E. we made all the Sail we could to the W. but in the Evening the Wind turning to the N. W. brought along with it a most violent Storm, which continued the 28th and 29th; so on the 30th it was resolv'd, that seeing our Ships were not in a Condition to prosecute the Voyage to *England* without manifest Danger, to put into the Isle of *Madagascar*: Pursuant to this Resolution, we tack'd about at two in the Afternoon, in stormy Weather, and a very rough Sea, which continued the next Day till about Noon. June the 1st we made forty Leagues in twenty-four Hours, with a West-Wind, steering our Course to the East. The 2^d, about eleven at Night, the Wind veering about to the S. S. E. the best Wind we could wish for the Prosecution of our Voyage to *England*, we resolv'd to return to the Cape of *Good-Hope*, and to take in fresh Water at the Isle of *St. Helens*. The 3rd we got with the same Wind to 35^o S'. On the 4th the abundance of Birds, called *Mangas de Indias*, and the Trombas or Canes, floating upon the Sea, gave us great Hopes that we were not far from the Cape of *Good-Hope*.

The 6th we were becalmed at forty-three, forty-eight, fifty-four, and sixty-three Fathom Water, and in the Evening the Wind was N. W. but turned the 7th to the W. which, by Night, turned to a violent Storm, and continued the 8th till Midnight, when coming about to the N. we took our Course to the N. W. The 9th the

Winds being much abated, we found ourselves in 35° 30' eleven but in the Afternoon, we were surprized by another Tempest, which putting us in imminent Danger of running upon the Shore, the Master of the Ship, who hitherto had been the chief Instrument of our turning this Way, seeing him under the Necessity of changing his Resolution, declared, that there was no other Way left to save the Ship, than to endeavour to put in at *Madagafcar*; accordingly we changed our Course the 11th with fair Weather; but, about Midnight, were overtaken by another dreadful Storm, which lasted the 12th, 13th, and 14th. It ceased the 15th, and the Wind being W. N. W. we sail'd 33 Leagues in 24 Hours, to the N. E. The 23d at Break of Day, we deserr'd an *Englysh* Vessel, bound to the *East-Indies*, Captain *Hall* Commander, Burthen 500 Tuns, and it was resolv'd that we should make jointly all the Sail we could for *Madagafcar*, Captain *Hall's* Ship being much less than ours, with a S. E. Wind.

The first of *July* he was got out of Sight, and the same Evening we discovered the Coast of *Madagafcar*, so that we were forced to keep continual Watch all the Night, for fear we might come too near the Coast, which is very rocky and dangerous, especially on the Point of the Isle, or might go beyond it, it being almost impossible to make the Bay, if you pass beyond the true Altitude. The second we arriv'd in the Bay of *St. Augustin*, where there is no Bottom till within a Mile of the Shore, where we cast Anchor at twenty-five Fathom Water. The Day after our Arrival, having escap'd so many Dangers, our joy was reliev'd by meeting here, besides Captain *Hall's* Ship, an *Englysh East-Indian*, called the *London*, Burthen 1400 Tuns, commanded by Captain *Willes*, bound for *England*. The third the Captains of these Ships came on Board ours, to consult the best Methods to prevent the being imposed upon by the Inhabitants, in the trucking of what Commodities they had, for their Cattle; accordingly, these Commodities being produced by joint Consent, and committed to the Management of the three Supercargoes, they bought, or rather exchanged every Day four Oxen for forty Pair of brass Bracelets, a Sheep for two, and a Calf for three Pair; and for a brass Ring of ten or twelve Inches about, a fat Ox, worth six or seven Pounds in *England*. The fourth the President and the two Captains went up the River to discover what Cattle was coming down towards the Bay. The sixth the President treated the two Captains and all the Officers of the three Ships aboard ours, and Captain *Willes* did the same some Days after. The 14th Captain *Hall* prosecuted his Voyage to the *East-Indies*, as Captain *Willes* did two Days after for *England*, having supplied us with what we stood in need of for the Prosecution of our Voyage.

The twenty-sixth a certain Tent with Huts being set up for the President and Soldiers near the Sea-side, he took up his Lodgings there. About four Leagues from the Harbour, liv'd a certain Lord, who had three Sons, the eldest of whom was named *Aluffar*: They came all three to pay us a Visit, with a Retinue of one hundred Persons, well armed with Javelins, bringing along with them three hundred Oxen, besides some Sheep, Goats, Poultry, Citrons, and Oranges, in order to exchange them for some of our Toys. After having made a little Halt, the eldest of the three Brothers presented the President with twelve Goats, and his two Wives, each with a fat Capon; in return of which, the President made a Present of three Strings of glass Coral to himself, two to each Brother, and a Bracelet to each of his Wives, which they valued to value at a great Rate. After having fixed a great Pole in the Ground, as a Token of the Amity they intended to preserve with us, which they desired us to maintain also on our Side, they told us, or rather trucked with us for ten fat Oxen, some Sheep, and Poultry; and, amongst the rest, we had a fat Sheep, the Tail of which weighed twenty, or twenty-four Pounds, for seven or eight Grains of Coral, or Agat, and a Capon for three or four Grains of counter'd Coral. We staid here six Weeks, which was spent for the most Part in shooting at Bats, and Fishing with Angle-rods. We had great Store of Fish, and among the rest Oysters, as large and delicious as any in *England*. From the fifth to the eighth of *August* we saw

such prodigious Numbers of Grasshoppers as darkened the Skies, but one small Shower of Rain dispersed them all.

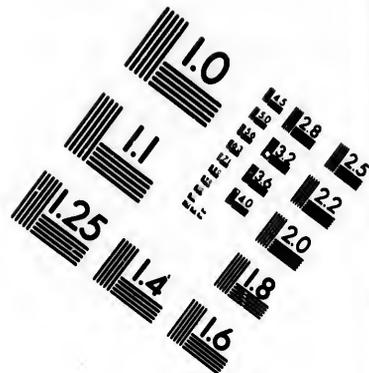

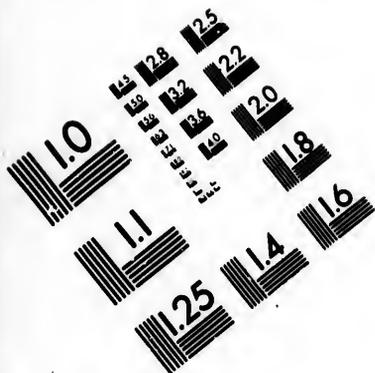

The Inhabitants eat them. The Isle of *Madagafcar*, called the Isle of *St. Laurence* by the *French*, lies in the torrid Zone, extending from North to South from the 10° to the 20°. Its Length being one hundred and fifty, and Breadth one hundred and eighty Leagues, and consequently one of the greatest Islands in the World. It has the Conveniency of diverse good Harbours, such as the Bay of *St. Augustin*, where we lay at Anchor, *St. Jago*, *Anton*, *Gil*, *Antipera*, *St. Julian's*, *St. Mary's*, *St. Sebastian*, *St. Romanus*, and *Manatenga*. Most of their Mountains are covered with Orange and Citron Trees, and the Rocks themselves are a pure white Marble, from whence spring the clearest Fountains in the known World. They have also Ebony, and Date Trees, and a certain kind not unlike the *Brasil* Wood, of which they make their Darts and Lances. These Trees shelter vast Numbers of Ayas and Birds, and among the rest, a kind of Poultry, resembling our Turkeys, being black all over the Bodies, with little white Spots. Their Heads are of a Mixture of blue and red, with yellow Horns on their Foreheads. They feed by Hundreds together in the Woods. Here you meet also with that Gum called *Dragon's-blood*, which they draw out of the Flower of a Tree no bigger than our common Pear-trees, but more Branchy, and not so full of Leaves, which are longer, but not so broad as those of the Laurel.

This Isle also produces some Aloes, but not so good as that of the Island of *Socotra*. They have also Cotton, and some Indigo, but they understand not reducing it into Palle, as the *Judians* and *Indians* do. As they don't apply themselves to Tillage, except it be for a little Rice, Beans, Pumpions, and Melons, so they abound in most excellent Pasture, and consequently in Cattle, in which their chief Riches consist. They have also Citron and Orange-trees, which bear Fruit twice a Year, Date-trees, Cocoa-trees, and Bananas; and there is scarce a House but has its own Bee-hives; for tho' they are ignorant as yet of the Advantages of making Honey and Wax, they make a certain Drink of it, with the Addition of Rice, which serves them instead of Wine. It yields also a Salt, and Salt-petre, and near the Sea side Ambergreese. Some will have it to be rich in gold and silver Mines, but as the Inhabitants value Tin beyond those Metals, they neglect to search after them.

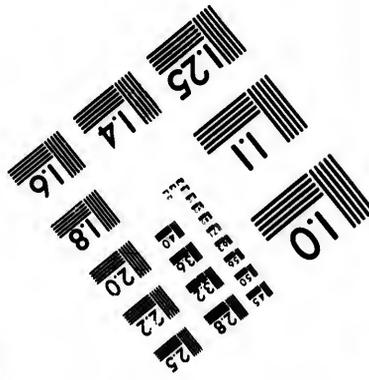

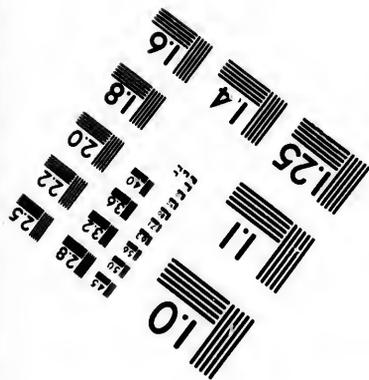

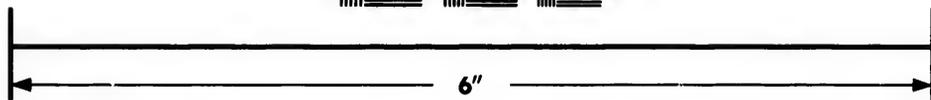

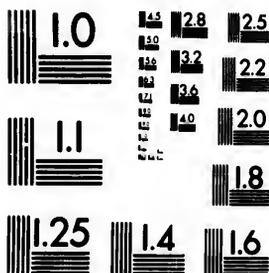

The Isle is very full of Inhabitants, who are well-shaped, for the most Part Negroes; they wear no other Garments but a Piece of printed Calicoe, which they wrap about their Middle, so that one Piece of it hangs down before to the Knee, the other to the Ham, except the little Houks of their Princes, which are of Wood. Their Huts are only made of the Branches of Trees, wherein they have no other Beds or Quilts, but some few Mats to lie upon. They used to make their Fires round about them, to disperse the Vapours which are very pernicious here. Their chief Ornaments are certain Strings of Glass-beads of different Colours round the Waffe, and Bracelets of the same about their Necks, Arms, and Legs. Both Sexes have Holes in their Ears, in which they put large copper, or brass Rings. They have all black Hair, some very much curled, others not, but it is seldom very long; notwithstanding which they tie it up in several Tresses. There is no considerable Difference betwixt the Cloathing of the Men and Women; the last wear sometimes a sleeved Coat, and the Calicoe which covers their middle Parts is somewhat longer than those of the Men.

The Women are very famous for their Fidelity to their Husbands, who place so great a value upon them, that they will scarce undertake any thing of Moment without their Advice. They have two Wives at least, each of which hath her peculiar Hut, and tho' the Husband is very compliant with both, the eldest of the two always claims the Preference. They purchase their Wives from their Parents, or Relations, for some Oxen, Pikes, Darts, or other Arms. Adultery and Fornication are capital; but as there is no Familiarity so great, which is able to raise a Jealousy in them, those things are scarce ever heard of. Some of their young Women came very frankly in-

to our Tent, unto one of whom the President presented one of my Shirts, desiring her to wear it for my Sake. She made not the least Difficulty to receive it, and wore it two Days, after which, she tore it to Pieces, for some other use. Their Men are brave, addicted to martial Exercises, and very dextrous in the Management of their Lances, Darts, and Pikes, which always lie near them, even when they are at work in the Field, being trained up to the use of Arms in their Infancy: Persons of Note seldom stir abroad without having twenty-five or thirty Darts, or small Pikes, carried after them, tied up in a Bundle. Their Bows are four or five Feet long, and the Strings loose. They have a slight of Shooting with great Strength and Activity, and as to their Javelins, they dart them with so miraculous a Dexterity, that they will hit a Bird at forty Paces Distance.

They are divided into several Tribes, or Clans of one hundred, two hundred, or three hundred, each under his own Lord, whom they call *Tschick*. Two of these had their Residence in a Wood not far from our Tent. Their Wars among themselves are commonly occasioned by the want of Pasturage for their Cattle, and the Prince *Massar* told us, that he had joined with two neighbouring Lords, and that they intended to attack some on the other Side the Mountains with five hundred Men, to drive them from their Pasture Grounds, which they stood in need of for their Cattle. This Dignity is not Hereditary, but they govern, whilst they are in the Possession of it, with an absolute Authority. It is not easily determined what Religion they profess. As far as I was able to learn, they believe one God, Creator of Heaven and Earth, who will reward their good, and punish their bad Actions. I remember I saw one among them, whom I supposed to be their Priest, getting up on a Tree, and making his Oration to the People; but as I had not the least Knowledge of their Language, I could not be satisfied of what he said, neither what Difference there was in the outward Appearance of their Priests and Laicks, except that I observed some of them to carry a Piece of a Cow's Tail at the End of a Cane; and I saw one whose Nails on the two Fore-fingers of his Righthand, were as long as the Talons of an Eagle. Each Tribe has its own Priest, who pretends also to Incantations.

21. The Isle of *Mozambique* is not above half a League from the Continent of *Africa*, and remain in the Possession of the *Portuguese*. This small Island is so beneficial to the Governor thereof, that what with the Trade to *Madagascar*, and that of *Soffola*, he commonly amasses a Treasure of 150,000 Pounds Sterling during his three Years Government. This Island was first discovered by the *Portuguese* in 1506, when a whole Boat of Negroes coming on Board the *Portuguese* Vessels, they were very civilly entertained by the Captain, who also gave them diverse little Presents, but they requited his Kindness with a Shower of Arrows, as soon as they were got into their Boat, till the Captain, by a Volley of small Shot, and some Cannon Ball, made them soon give over that Sport. Another *Portuguese* Captain, named *Rodriguez Perera*, being in the same Year driven upon that Coast by Distress of Weather, sent a certain *African* Negroe, who had some Knowledge of their Language, to signify unto them, that he was come thither to settle a good Correspondence and Commerce with them. They seemed to approve of this Proposal, but were no sooner got at some Distance from the *Portuguese*, than they fell upon the *Moor*, with Intention to kill him, which they had certainly done, if the *Portuguese* had not discharged their Fire-Arms upon them, which obliged them to leave the Negroe, and to betake themselves to their Heels, leaving several of their Companions dead upon the Spot.

Perera sail'd thence to another Place upon the same Coast, where having surprized one of their Princes, he carried him on Board, and gave him such kind Entertainment, that in requital for his Courtesy, he offered to shew him a very good Harbour; accordingly he conducted them to a great Bay, at the Entrance of which was a small, but populous Island; but the Inhabitants being terrified at the Sight of these Foreigners, fled into another adjacent Island; so that the *Portuguese*, being become Masters of the small Isle without the least Opposition, they sent to the Inhabi-

tants, desiring them to return to their Habitations, the Occasion of their coming thither being to settle a good Correspondence with them. Upon this, most of them returned, and as a Mark of their Good-will, presented *Perera* with fifty Oxen, and twenty Goats; but being nevertheless willing to be rid of the Strangers, they tempted the Captain with the Hopes of great Riches, which they said he might meet with in the Port of *Matatana*; which was so well approved by him, that he was preparing to go thither, but one of his Ships being soon after forced upon the Coast of the Isle, he retired with the other to *Mozambique*: Another Ship of the same Fleet being driven by tempestuous Weather into the Port of *Matatana*, a Boat of the Country came immediately aboard them, in which the Captain sent the Master of the Vessel, who was well versed in the *African* Language.

The *Moor* making more than ordinary Haste to get ashore with the Master, and the *Portuguese* conceiving some Jealousy at their Behaviour, they pursued them with eighty Men, in their Shallop, but too late, the Negroes having reached the Shore before them. However, after they were landed, they got Sight again of the Master, who told them, he had been treated with much Kindness by their Prince, who was desirous to see the Captain himself, in order to enter into a strict Correspondence with him; which the Captain not unwilling to comply with, went accordingly ashore, where he was kindly received, and magnificently treated by the Prince, according to the Fashion of that Country; but, in the Evening, being ready to return aboard in the Shallop, there arose a violent Tempest, that he durst not venture to commit himself to the merciless Waves in so small a Boat, which continued for four Days successively, and there being no Possibility to get on Board, his Ship's Crew imagining that he had been massacred by these Barbarians, thought it most advisable to save themselves, and to return to *Mozambique*, which they did accordingly. The Captain finding the Ship gone was so discontented, that he died not long after, as did eight others of his Retinue. The rest thinking it better to run the risque of the Sea, than to perish without the least Hopes of Relief, embarked in the Shallop, and having by good Fortune met with a *Portuguese* Vessel, commanded by *John Tomsea*, he carried them to the next *Portuguese* Port in *Africa*. The first Time of the landing of the *Dutch* in the Isle of *Madagascar* happened rather by Chance than any Design, for their Seamen being miserably infested with the Scurvy, so that they were no longer able to manage the Ship, they were forced to seek for Refreshment in this Island, but lost seventy Men out of the four Vessels, of which their Fleet consisted, before they could get at any. These Men were buried in a small Island, which to this Day is called the *Dutch* Church-yard. Some will have the *Madagascarians* to be *Mohammedans*; but certain it is, that in their outward Demeanour they don't shew the least Sign of it.

22. The Winter Season being pretty well over, we began to think of our Voyage; for which purpose having bought, *August* the 19th, of Prince *Massar*, and some other neighbouring Lords, twenty-five Oxen, and a hundred Sheep, we embarked our Baggage the 20th, and the 21st set Sail out of the Bay of *Saint Augustine* with a South-west Wind, which proving favourable all that Night, we soon lost Sight of *Madagascar*.

The 22d, being rejoined by the Monsoon, or Wind of the Season, which happened sooner than ordinary, we briskly pursued our Course to West-South-West, and the 23d the Wind blowing a brisk Gale from the East in our Stern, we sailed briskly a little more to the South, with an Intention to avoid the *Cape of Good-Hope*. The 24th and 25th the Wind was not so brisk, but being seconded by a fresh Gale, the 26th we advanced bravely, and found ourselves that Day in 27° 27' Latitude, and on the 28th in 28° 12'. The 29th we were surprized by the *Travados*, or Whirl-winds, in 31° 15'; but they did not continue long. The 30th it blew altern; notwithstanding which we made the best of our way, and the last of *August* found ourselves in 33° 34'. On the 1st of *September* we made fifty Leagues in twenty-four Hours, tho' the Wind blew very hard; and the 2d we got thirty Leagues far-

to their Habitations, the
r being to settle a good
on this, most of them re-
Good-will, presented Pe-

way, and the last of *August*
On the 1st of *September* we
ur Hours, tho' the Wind
se got thirty Leagues far-

ther, with a South-west Wind. The 3d being becalmed, we killed a Cow we bought at *Madagascar*, and a Goat. In the Belly of the first we found three Calves, and in the last four Kids, from which a Judgment may be made of the Fruitfulness of this Country. On the 6th we were terribly shaken by a most dreadful Tempest, so that our Ship beginning to be leaky, we were forced to pump without Intermission. We found ourselves in 35° Latitude. On the 7th the Wind being tolerably fair, we steered our Course to the West-North-West; though the Sea continued very rough. The 8th and 9th, we had abundance of Rain with a South-West Wind, with which we made four Leagues with a moderate Gale, and seeing many of the Birds called *Mangas de Valudo*, concluded that we were not far from the *Cape of de Aguilas*.

The 11th the East Wind hindered us from making any considerable Progress, and finding a sandy Bottom at twelve Fathom of Water, we were more and more persuaded that we were near the *Cape of Aguilas*. The 12th we were forced to make the best of our way sometimes with a North-North-West, sometimes with a South-West Wind, which continuing in the Afternoon, we continued our Course to the West-North-West, and in the Evening found a yellow Sand at a hundred and ninety Fathom Water. The 13th the Wind being at South-East, we continued our Course to the West-North-West, and finding a Whale floating upon the Water in the Latitude of 35°, we believed ourselves to be in the Height of the *Cape of Good-Hope*, where abundance of Whales are commonly seen. The 14th, at Sun-rising, finding the Declination of the Needle 4° 50', we concluded that we had compassed the *Cape of Good-Hope*; the 15th we had a fair Wind and Weather, and found the Declination of the Compass to be 1° 5', and presently after the Declination of it, near the *Cape of Good-Hope*, is 4°, though sometimes it does not decline so much; and as soon as you have passed the *Cape*, you find the Compass to vary to the East. At 33° 15' eleven lies the Isle of *St. Elizabeth*, not above twenty Leagues on this Side of the *Cape of Good-Hope*, being not above two Leagues from the *African* Coast, on which Side it has a very good Harbour at sixteen Fathom Water.

The whole Coast is but one continued Rock; but the Country is so fertile in several sorts of the best Herbs, that there is sufficient Reason to believe, that if it were cultivated, it would not in its Products be behind the Isle of *St. Helens*; or any other in those Parts. The worst is, that it wants fresh Water, except what is supplied by the Skies when it rains, which makes this Isle not to be much frequented; though they have such vast Numbers of Sea-Wolves here, that in a few Days they may catch as many, that the Fat would freight a Vessel of six hundred Tuns. They call these Creatures Sea-Wolves, though both in Colour and Shape of their Heads they rather resemble our Bears, except that their Snout is not so sharp. They have only two Paws beneath the Breast, by which means they draw the other Part of their Body after them, and that with so much Swiftnes, that the nimblest Man can scarce overtake them. This Beast is very fierce, its Teeth being so close and strong, that it will bite through the Handle of a Partizan. This Isle also produces a kind of Badger, the Flesh whereof is very delicious. The 16th we made the best of our Way with a small Wind at 32°, and the 17th and 18th made sixty-four Leagues with a North-North-West and a South-West Wind, and came the 19th into 29° 16', when with a South-South-West Wind we made forty Leagues to the North-West, and in the Evening found ourselves in 28° Latitude. The 6th of *October* a South-East Wind carried us fifteen Leagues farther to the Isle of *St. Helens*.

23. The Situation of this Island, called *St. Helens* by the *Portuguze*, is in 16° 12'. It is distant from the *Cape of Angola* 350 Leagues; from that of *Good-Hope* 550, from *Brazil* 510. It being very surprizing, that an Island of no more than seven Leagues in Compass should be found at so great a Distance from the Continent. It is so plentiful in most excellent Fruits and all sorts of Creatures, that it surpasses most of the Provinces of *Europe*. Some were of Opinion, that there were neither to be seen when the *Portuguze* first discovered it, and that thole

NUM B. 54.

few Trees and Cattle they brought thither, have received such vast Improvements from the natural good Constitutions of the Ground, that, at present, it is able to supply whole Fleets with Refreshments. Figs, Pomegranates, Citrons, Oranges, Goats, Hogs, *Barbary* Hens, Pheasants, Partridges, Quails, Peacocks and Pidgeons being to be had here at all the Seasons of the Year; not to mention the Fish which are found here in vast Quantities, and Salt sufficient for the Curing them. The Ground naturally produces so many wholesome Herbs that the *Portuguze* frequently leave there their sick Men, which are sure to recover against their coming back again that Way the next Year.

The Mountains of this Isle are so high that they are discovered fourteen Leagues off at Sea. The *Portuguze* thought it a Piece of Prudence not to make any Establishment in this Island, considering the Jealousy which its Possession might raise in other Nations trading into these Parts, which its vast Distance from the Continent would make it very difficult to keep; whereas, its being free, would afford a certain Retreat to all Vessels; and those Refreshments, especially of fresh Water, which they would be obliged to seek for as far as the Coast of *Guinea*, where they must be forced to stay for the Rains, to the great Inconvenience of the Seamen, many of whom must in the mean while perish for want of it. The Fertility of the Isle ought chiefly to be attributed to the daily Showers of Rain which fall there, which, being animated by the Sun-Beams, shining presently after by Intervals, incredibly advances the Maturity of Things in a Climate like this. It has also three Places where Ships may provide themselves with fresh Water, viz. where the three Rivers, which have their Sources among the Mountains, discharge themselves into the Sea. These produce abundance of Snakes, which are eaten by the *Dutch*, who prefer them to Eels. At 190 Leagues to the N. W. of the Island of *St. Helens*, you see the Island of *Ajzenfon*, so called from its being discovered upon *Ajzenfon-Day* by the *Portuguze*, lying 80° 30' S. of the Line. It is a very mountainous Island, affording neither fresh Water, nor any other Provisions, except Fish, of which there is great Store on that Coast. *October* the 17th, the same Wind carried us forty Leagues forward; and the 18th forty-two to the 50.

The Heats were almost insupportable this Day, and we saw Millions of Flying-fish, and great Numbers of the Birds called *Mangas de Valudo*. The 19th the Wind blowing from the S E. we made 40 Leagues to 3° 19' Lat. and the 20th the same Wind continued us 40 Leagues farther to 1° 18' Lat. The same Wind carried us the 21st 35 Leagues, when we passed the Equinoctial Line. At 1° beyond the Line, we discovered the *Cape de Lopez Gonzales*, upon the Coast of *Guinea*, which has a safe Harbour for Ships, which sometimes provide themselves with Provisions here. The Isle of *St. Thomas* is situate under the Line, the Air of which is so unwholesome, and the Heats so excessive, that few *Europeans* live there to fifty Years of Age, tho' some of the Natives arrive to an hundred. Here is a constant Equality of Day and Night throughout the whole Year, and it never rains except in *March* and *September*; the Defect of which is supplied by the Dew, which falls constantly every Night, moistens the Ground, and renders them very fruitful. When it was first discovered, a certain kind of Tree was found here, the Branches whereof were exactly strait. And, formerly, this Isle produced such vast Quantities of Sugar, that above four Ship Loads might be transported thence every Year; but the Worm being got among the Canes, has ever since made such Havock among them, that it scarce affords now Loading for six Ships. Besides which, this Island produces Wheat, Wine, Miller, Rye, Barley, Mellons, Cucumbers, Figs, Ginger, red Parsnips, Cabages, Navews, Lettice, Parsley, and all sorts of Roots, Pulse, and Pot-herbs; and amongst the rest, a certain kind of Mush-rooms, the Rind whereof is black, but the Meat white, and shoot forth divers Branches below. The Inhabitants look upon it as a great Dainty, and, when baked in the Embers, eat them as we do *Cheminus*, but they have a better Flavour. The *Spaniards* have planted some Olive, Peach,

9 S

and

and Almond-trees here: They thrive well enough, but bear no Fruit.

This Isle also affords a sort of Land-Crabs, which live under Ground, and work like Moles; Partridges, Quails, Black-birds, Parrots, and other Birds in abundance. The Sea produces vast Quantities of most excellent Fish, and, among the rest, Whales of a vast Bulk. In the very Centre of the Isle is a Mountain, covered on the Top with a Cloud, which furnishes Water sufficient for the constant watering the Sugar-Canes; and what is most observable is, that the higher the Sun comes above the Horizon; the more Water falls from the Cloud. The Natives are Negroes, but such Foreigners as settle there continue their natural Colour to the third and fourth Generation. They affirm, that Lice and Fleas, wherewith the Negroes are much pestered, never afflict any Stranger. At thirty-five Leagues Distance from the Island of *St. Thomas* to the South, you see another Island, called *Ralles* Isle by the *Portuguese*. It produces such Plenty of Oranges, Citrons, Bananas, Ananas, Ginger, Poultry, Hogs, and other fresh Provisions, that it is one of the most convenient Places for Ships to refresh themselves in its Haven, being very commodious, at ten Fathom Water.

The Isle of *Carisco* lies close to the Continent, and affords nothing but fresh Water. The 25th a S. E. Wind advanced us thirty-two Leagues on our Course to the N. N. W. It was very rainy, and we were frequently troubled with the *Travatos*, or Whirlwinds, which are to often met with on the Coast of *Guinea*, from whence we might be an hundred and fifty Leagues distant. The 26th the Wind continued the same, and we made twenty-five Leagues to the 7° Lat. N. We observed here the Heats to be more intense than we had felt them on the other Side of the Equinoctial, notwithstanding the Sun was 10° farther from our Hemisphere; the Reason of which I conceived to be, that the Sun-beams, which had so lately warmed the Septentrional Hemisphere, had not had sufficient Time to produce the same Effect in the Meridional. The 27th the Wind changing to the N. and by E. we were also obliged to alter our Course, and made only thirteen Leagues that Day. About Noon we found ourselves at 7° 50' Latitude, and it was observable, that the further we steered from the Coast of *Guinea*, the less we were troubled with bad Weather, which had sufficiently afflicted us for some Days past. The 28th the Wind turned to the N. E. which is the ordinary Wind between the 10 and 20°, which afterwards changes, as it does in our Seas. We made thirty Leagues that Day; and on the 29th thirty Leagues more with the same Wind, in 10° Lat. about Noon. On the 30th we made twenty-eight Leagues with the same Wind and Course to 11° 13' Lat. and the 31st twenty-three Leagues with the same Wind, and rainy Weather.

On the 1st of *November* the Wind continued the same, and carried us twenty-six Leagues forward; the 2d we made twenty-four Leagues with the same Wind, steering our Course to the N. W. The 3d we continued our Course with the same Wind, which brought us about Noon into 14° 41', and consequently near the *Cape Verde*, being a Point of Land stretching out into the Sea from the *African* Continent between the Rivers of *Gambia* and *Senaga*: *Ptolemy* calls it *Promontorium Asfirarium*. The Inhabitants here are *Moor*s, large sized, and not ill shaped, but very mischievous and treacherous. They are *Pagans*, worshipping the Moon and the Devil; some among them call themselves *Mohammedans*; but setting aside Circumcision, they have no Marks of that Religion, or any other. They are embroiled in continual Wars with their Neighbours, and very good Horsemen, their Horses, which are very swift, being brought thither from *Barbary*. Their Arms are only Bows and Arrows, and a kind of Lance or Pike, which they manage with marvellous Dexterity. The Privy-parts of their Enemies are the Trophies they most esteem; those they present to their Wives, who make Necklaces of them, and wear them as the greatest Ornament. They allow Polygamy, and their Wives are forc'd to do all their Work, both at home and abroad.

Whilst the Husband is in his Hut he is attended by his Wives, and then goes a hunting, or about some other Sport, at his own Pleasure. Their Women are very hardy; they

are no sooner delivered, but they wash their Children themselves in the Sea or next River. The Men are generally addicted to Drunkenness to such a Degree, that some of them will take off a whole Quart of *Aqua Vite* at a Draught. Their chief Times of Merriment are at the Funerals of their Friends and Relations, where they drink and howl by Turns, and that for four or five Days together, to the Sound of the Drum and Pipe. They believe the Resurrection of the Dead, and say they shall then be white, like the *Europeans*. They have a considerable Trade with the *French*, *Spaniards*, and *Dutch*, in Ox-Hides, Buffaloes, Elks, Elephants Teeth, Wax, Rice, and *Ambergreece*, which is to be found in its Perfection; for here one Mr. *Peter Van Brouck*, a *Dutch* Merchant, bought 1606 Pieces of *Ambergreece* of eighty Pound Weight.

The Discovery of this Coast is likewise owing to the *Portuguese* in the Year 1417; but this first Voyage meeting but with indifferent Success, *Anthony Gonfalez*, in 1441, having discovered the *Cape del Capellero*, carried off certain Negroes, who being sent by the Infant of *Portugal* to Pope *Martin V.* he was willing enough, under the specious Pretence of planting Christianity in those Parts, to grant him all what he should discover on the *African* Coast, under Condition, that after his Death, it should be annexed to the Crown of *Portugal*. The Infant having already discovered the whole Coast betwixt *Cabo de Noam*, and 100 Leagues beyond the *Cabo Verde*, happened to die in 1453; but King *Alphonso*, in 1457, granted all those Conquests to D. *Fernand*, Duke of *Vizia*. His appanage of the Infant, and in 1461, ordered a Fort to be built in the Isle of *Argoin*, for the Security of Commerce. It was in the same Year farmed out to one *Ferdinand Gomez*, under Condition that he should be obliged to discover every Year one hundred Leagues on this Coast; by which means the *Portuguese* had in 1497 discovered the Isles of *Fernando del Po*, *St. Thomas*, *Anno Bruno*, those of *del Principe*, and the *Cape of St. Katharine's*. King *John II.* was no sooner come to the Crown, but he sent, in 1481, *Diego d'Azambuja*, who on the 19th of *January* 1482, made the first Discovery of *Mina*, calling Anchor near a Place called *Aldra de dos Partes*, then under the Command of a certain Princee named *Coramansa*.

This Place, unto which the *Portuguese* gave the Name of *Mina*, from the great Quantity of Gold found there, is situate upon the Coast of *Guinea*, in 5° 40' S. of the Equinoctial Line, between the two Kingdoms of *Aben* and *Carra*, bordering to the N. W. upon *Camana*, and to the N. E. upon *Asuto*, small Countries under the Jurisdiction of those of *Abarambus*. Hereabouts too, viz. within the Compass of fifty Leagues, is managed the chief Trade of all this Coast. They have built a Fort here, upon an Afcant, on a Point of Land which jets out into the Sea, like a Demi-Isle, having on one Side, viz. to the North, the *Ethiopian* Sea, and to the South a small River. The Town, which is situate just below the Foot of the Fort, has about 800 Inhabitants, and its Situation is such, that 1500 Men may maintain it against a considerable Force, being fenny all about, and withal so barren, that the Inhabitants are forced to be supplied with Provisions from *Camana*, and *Asuto*. The Natives here are ingenious enough, and much more pliable than the Negroes, but are extremely ignorant in Matters of Religion, for they adore every thing they see, that is the least surprising to them. At that Time they offered their daily Sacrifices of Water and Meat by their Priests, to a certain Tree, of an extraordinary Bigness, enclosed for that Purpose with a high Wall. They adored the Bones of a Whale, and paid Divine Worship to a certain Rock, because it exceeded all the rest in Height. They are extremely addicted to Divination, and therefore set very high an Esteem upon those who profess themselves Sorcerers, but in Effect are nothing else but Cheats, who improve the Weakness of those ignorant Wretches to their Advantage. They are the most religious People in the World in the Observance of their Oaths, it being their Opinion, that such as violate them, will be snatched away by a sudden Death. And hence it is, that their Law Suits are determined in a few Hours, upon a solemn Affirmation, or Denial of either of the Parties.

ties. All Crimes, even capital ones, may be commuted with Money, unless the same be reiterated several times, by the same Person. They have no other Cloathing but a Piece of Cloth, or an Ape's Skin, wherewith they cover their privy Parts, all the rest of their Bodies being naked. For Ornament sake they wear Bracelets of Gold about their Arms and Legs, and twist their Hair and Beards with golden Chains. They constantly rub their Bodies with Oil, or Fat, to make them shine. Their Wars are no more than confused Skirmishes, without the least Order, or Discipline. They make use of Darts, and short Lances; and for their Defence, cover themselves with the Skins of Tygers, Lions, or Leopards. Their *Indalgo's*, or chief Men, are attended by two Pages when they are going to the Wars, and one carries the Buckler, the other a Stool for his Master to rest himself upon, as Occasion serves. They marry as many Wives as they are able to buy and maintain, the Purchase of a Wife being commonly ten Rials, which paid, the Marriage is consummated without any further Ceremony, except that they get heartily drunk. The Dutch have erected a Fort called *Bourio*, within four Leagues of *Mina*, besides which they have their Factories at *Cara*, *Caramantin*, and *Aidea del Puerto*, whence they return vast Quantities of Gold yearly, having much undermined the Portugueze Traffick with the *Ethiopiens*, by their mild Way of Dealing, and being contented with a much less Profit than the other.

25. King *John* the III of Portugal having refused the Offer made him by *Christopher Columbus*, of discovering the *West-Indies*, bent all his Thoughts upon the Conquests of the *East*; for which Purpose he sent *Diego Can*, and *Juan Alonso de Aviero*, into those Parts. The first directing his Course towards *Mina*, came to the *Cape Lopez Gonfales*, and having afterwards doubled the *Cape of St. Catherine*, entered the River *Zaire*, in 7° S. of the Line into the Kingdom of *Congo*, this Kingdom extending from the *Cape of St. Catherine* to the South of the *Cape de Iedo*, is enclosed on the West Side by the *Ethiopian Sea*, to the South by the Mountains of the Moon, and the *Capes*, as it is to the East by *Mantabas*, and borders to the North upon the Kingdom of *Bemy*, reaching in Length from 20° 30' to the 13° beyond the Line, and consequently near 160 Leagues. It is divided into six great Provinces, viz. *Bamba*, *Soango*, *Sunda*, *Pango*, *Batta*, and *Pamba*. The Province of *Bamba* extends along the Sea-shore betwixt the two Rivers of *Ambriji* and *Coanjo*, its chief City bearing the same Name of the Province, lying twenty Leagues from the Sea-side, betwixt the Rivers of *Lofa* and *Ambriji*. The Province of *Soango* is inclosed betwixt the two Rivers of *Zaire* and *Soango*, reaching from the River *Ambriji* to the Foot of the Mountains, which separates it from the Kingdom of *Soango*.

The Province of *Sunda* is only eight Leagues in Compass, comprehending all the Country about the City of *Congo*, named *St. Salvador* by the Portugueze, to the River *Zaire*. Its Metropolis has given its Name to the Province. The Province of *Pango*, formerly under the Jurisdiction of its own Kings, borders to the North upon the Island of *Sunda*, and to the South upon that of *Batta*; to the West it has the City of *Congo*, and on the East-side is surrounded by the Mountain of the Sun. The Province of *Batta* lies to the North-East, betwixt that of *Pango* and the River *Barbella*, extending to the burnt Mountains. The Province of *Pamba* has for its Metropolis the City of *Congo*, which is built upon a Mountain, at least fifty Leagues from the Sea-side. Another Mountain belonging to this Province, which is above six Leagues in length, is so well stocked with Villages, that its Inhabitants are computed to amount to near one hundred thousand Persons. *Duarte Lopez*, who lived several Years in those Parts, declares, that the Climate here is as agreeable in Winter, as it is in *Italy* in *October*; and that the greatest Inconvenience they are subject to here, are the hot Rains which fall every Day two Hours before, and as many Hours in the Afternoon, during the Months of *April*, *May*, *June*, *July*, and *August*, being their Winter, which begins the 15th of *March*, and ends the 15th of *September*. The Days and Nights here are of a Length, both Winter and Summe-.

The River *Zaire* arises out of the same Lake whence the *Nile* derives its Rise: It is beyond all Question the largest River in all *Africa*; for being joined with the Rivers *Pambo* and *Barbella*, as it passes through the Country, it is at the Mouth, where it disembogues into the Sea at least twenty-eight Leagues broad. The River *Coanjo* is the common Boundary betwixt the two Kingdoms of *Congo* and *Angola*, and the River *Lelanda* abounds in Crocodiles and Sea-horses. This Creature is of a dusky Colour, with very little Hair, its Head is without Ears, broad Nostrils, and in his Jaw two Teeth like the Tusks of a wild Boar; its Hoof has the Shape of a three-leaved Grass, it neighs like a Horse, and will run a great Pace. The hot Rains which fall in the wet Season rendering the Grounds very fertile, they produce Herbs, Corn, and Fruit, in prodigious Quantities. The Province of *Pamba* has divers Gold Mines. All the Forests are full of Elephants of an extraordinary Size, the Teeth having been found to weigh two hundred Pound Weight. They produce also a peculiar Creature called *Zebra*, in Shape not unlike a Mule, but is capable of engendering; It is marked with three Lists round the Back, reaching down to the Belly, of about three Fingers Breadth, of which one is black, the other white, and the third yellow. This Beast is famous for its marvellous Swiftness. They have also a kind of Oxen called *Empalenges*, but somewhat less than ours. Wolves, Foxes, Wild-Bullaloes, Wild-Goats, Deer, and Rabbits, being never brought after here, they are seen in prodigious Quantities, the only thing they hunt being the Civet-Cat, by reason of the great Advantages it affords to the Owners. They abound also with Birds, such as Pheasants, Partridges, Hens, Turkeys, Ducks, Geese, Turtles, Pigeons, Hawks of all sorts, and Eagles. Serpents they have of fifteen Foot long, which will swallow a Sheep at once; and some amphibious Creatures, the Flesh of which is eaten by the Inhabitants; whereas some others are so venomous, that such as are bitten by them infallibly die within twenty-four Hours.

The Mountains of *Pamba* are abundantly productive of Citrons, Oranges, Bananas, and divers other Fruits, as plentifully as in most Parts of the *Indies*; and the Vallies produce a kind of Wheat called *Seuco*, not much bigger than Mustard-seed, which make better Bread than any common Wheat, is reserved for the Use of the better sort, the Poor being here fed with Rice, and *Turky* Wheat. Of *Cocoa-Trees* they have two sorts; some are Date-Trees, the other produce *Cocoas*, and a certain Juice, which is accounted an extraordinary Clearer of the Reins, and consequently a sovereign Remedy against the Gravel. Their Fruits, as well as Pulle and Herbs, are, without Comparison, more excellent here than in other Countries. Their Mountains, which for the most part are covered with Fruit-trees, are green all the Year round; and the Rocks produce white Marble, Alabaster, Jasper, Porphyry, and sometimes Hyacinths.

The Inhabitants are black; but the Women are not so dark as the Men; they have neither such thick Lips, nor flat Noles, as commonly the Negroes have, and their Hair curls naturally. Those of *Bombay* are famous for their Strength. As every Man here is his own Architect and Physician, so their Houses are small, low, and slightly built; they cure Fevers with Powder of Sandal Wood, and Head-ach by Bleeding; and when they are to procure an Evacuation by purging, they do it with a certain Bark of a Tree beat to Powder; they generally appear bare-headed, but such as do not, wear a kind of Hats made of the Barks of Trees, or Nut-shells. Some have a Way of fastening with Pack-thread Plumes to their Hair, and both Sexes have Holes in their Ears, in which hang very weighty Rings of Gold set with Stones. About their Arms and Legs they wear Rings, or rather Plates of Iron, Tin, or Brass; but the better sort are clad after the Portugueze Fashion. They sleep and eat upon Mats spread upon the Ground. Besides the vast Wealth in Gold, Silver, Copper, Crystal, Iron, and other Metals this Country produces; a great Traffick is carried on here in Ivory, Civet, and Slaves, whom the Spaniards and Portugueze employ in their Mines and Sugar-Mills of *Brasil*. They use certain Shells, which they fish out of the Sea near the Isle of
Lunda

Lunda instead of Money, there being a particular Governor appointed there for that Purpose, who has the Oversight of it.

The King of *Congo* governs with an arbitrary and uncontrollable Power, both the Lives and Estates of his Subjects being at his own Disposal; the Provinces are under the Jurisdiction of certain Governors, among whom the *Batta* is the Head and constant chief Minister of State, being of the Blood-Royal, which is the Reason he sometimes eats at the King's Table, (a thing not allowed even to the King's Sons) but never sits down, but stands all the Time. He has alone the Privilege of having the same Pipes and Musicians the King has, and of the Use of the Fire-arms for his Guard, of whom he keeps a good Number, to bridle the Insolence of a certain People living upon the *Nile*, called *Giaquer*, who make frequent Inroads into the Territories, of which Notice is given into the Country by the discharging of a Musket. The Province of *Bombay*, however, is accounted the Bulwark of this Kingdom; for though the Province of *Batta* is able to raise above seventy-thousand fighting Men, whereas that of *Bombay* is only able to raise 40,000, yet are the first not to be compared to the last. They use great broad Swords like the *Swiss*, and handle them with as much Activity as we do our Rapiers. They make use also of Darts, and Bucklers, the last of which are made of the Barks of Trees. They have no Cavalry; their Armies, which are divided into Brigades, consist only of Foot, who engage all at a Time. The General keeps in the Centre, and by the Help of their warlike Instruments, called *Manigio*, gives the Signals to the Commanders when to attack, to retreat, to close, or to open. Their Trumpets are of Wood, and make a most dreadful Noise. Their Drums are made of the Barks of Trees, and are covered with Skin, and are beat with great Ivory Sticks; besides these, they have another kind of Instrument, being only an iron Plate of a triangular Form, which they beat with Sticks; they have also a Way of hollowing the Elephant's Teeth, and then blow them as we do our Bugle Horns; with those Instruments the Commanders of the Army answer the Signal given them by the General.

The *Portuguese* were the first who introduced the Christian Religion here, under the Reign of *John II.* the King, who, as we told you, sent *Diego Can* and *John Alonso d'Aviera*, into those Parts. It was about that Time that *Caramanfo* King of *Congo* sent *Cajala* his Ambassador to the King of *Portugal*, who being baptized there, was sent back with three *Portuguese* Ships, commanded by *Gonzalo de Sonse*; but in touching at *Cape de Verd*, both died there of the Plague. *Ruy de Sonse*, who succeeded in the Command, being forced into the Port of *Vinda*, in the Province of *Songo*, the Governor of the Place, who was Uncle to the King of *Congo*, was baptized with all his Family, whose Footsteps were followed by the King and Queen, being named *John* and *Eleanor*. *Emanuel* King of *Portugal* sent another Squadron thither in 1504; but, soon after the Discovery of the *Indies*, and Prospect of greater Advantages to be reaped from thence, occasioned the Discontinuance of those Voyages to the *African* Coast; the Foundations of Religion were also neglected by the *Portuguese*, which the *Dutch* improving to their Advantages, introduced their Traffick, and with it the Protestant Religion.

We told you before, that *Diego Can* discovered *Congo*; let us now see what became of his Comrade *John Alonso d'Aviera*. He, about the same Time, made a Discovery of the Kingdom of *Boyo*, betwixt *Mina* and *Congo*. Its Length is eighty Leagues, and its Breadth forty. The City of *Angate* is at twelve Leagues Distance from the Sea, and somewhat further in the Country, upon the River called *Rio Vermojo* by the *Portuguese*, its capital City bearing the same Name with the Kingdom. The King of *Boyo* having engaged in a Treaty with *Alonso*, was also baptized; but this Conversion being not founded upon any real Knowledge of the Principles of the Christian Religion, was of no longer Continuance than the Traffick of the *Portuguese* in those Parts, which was neglected as soon as they had made a Discovery of the Passage by Sea to the *Indies*.

26. *Cape de Verde* is by *Ptolomy* called *Promontorium Asfnarium*, and put in 16° 40' on this Side of the Line, whereas, by our own Observation, we can positively affirm it to be in 14° 20', betwixt the two Rivers of *Senaga* and *Gambra*, or *Gambia*, called by *Ptolomy* *Durago*, and *Stabris*, and which, according to his Opinion, are very small ones, the Sources of which are unknown, whereas it is beyond all Question, that they arise out of two Lakes, one of which is by the said *Ptolomy* called *Palus Gbeclaudes*, now the Lake of *Goaga*, and the other that of *Naba*, tho' some of the Inhabitants are of Opinion, that they have their Rise from the *Nile*. It is called the *Cape de Verde*, from the many Trees near it, and their constant Verdure. *Ptolomy* also mentions nothing of these two Rivers falling into the Sea, whereas it has been found since, that the River *Gambia*, after being joined by the Waters of diverse other Rivers, in the Province of *Mandiga*, disembogues into the Ocean in 13° 30', and that the River *Senaga* running directly from East to West falls in 15° 30', into the River *Gony*, which has imparted its Name to that Country we call *Guinea*. As it is certain, that *Ptolomy* had no Knowledge of the Inhabitants betwixt those two Rivers, so we must rely entirely upon the Credit of those moderns Authors who have given us their Relations concerning them.

They tell us, that a certain People called the *Budumays*, inhabit the Eastern Part of it as far as the *Cape de Verde*. The *Foules* and *Berbecines* they place deeper in the Country, upon the River *Banaga* to the North of the *Jaloffe*, some of which are subject to the *Foules*, others to the *Budumays*. It is a plain Country, producing Abundance of Cattle, Wine, Cotton, Wild-Fowl, Ivory, and Hortes, Gold, and Silver; they have none but Iron in vast Quantities: The Air is accounted very whollome, and the Inhabitants near the *Cape de Verde* good Hortemen. They are *Pagans*, and very famous for administering Justice, in publick Affairs, with a great deal of Equity, Prudence, and Secrecy, those that are admitted into their Council, or Courts of Judicature, being generally chosen by their Age and Experience. Tho' they are ignorant of what belongs to martial Discipline, such as is practised in *Europe*, yet is their Manner of disposing and ordering their Forces not to be passed by in Silence; for all such as are able to bear Arms, being divided into certain Regiments under their respective Commanders, have also their particular Divisions or Quarters allotted them; so that in case of Necessity, their Orders for appearing together in a Body being dispatched from one Division to another, the Army is ready in a little Time to be at the Rendezvous appointed, without the Trouble of any new Levies, the Sons succeeding constantly in their Father's Places, if they happen to die, so that their Number is always compleat. They are not altogether ignorant of the Degrees of Nobility and Peasantry; for their Grandees they call *Thubala's*, unto whom they pay more than ordinary Reverence, their King being always chosen out of their Number, but he must be thirty Years of Age at least.

Not long after the Discovery of the Country of the *Jaloffes* by the *Portuguese*, one *Bemi* reigned in those Parts; but being got into the Throne by sinister Means, and forsaken by most of his Subjects, sought for Aid by *John II.* King of *Portugal*, who had him instructed in the Christian Religion, and baptized, and sent him back with a good Squadron of Ships, under the Command of *Pedro Vaz de Cogna*, who had positive Orders to erect a Fort at the Entrance of the River *Senaga*, to facilitate their Penetration deeper into the Country. A Fort was built accordingly, but was by the said *Vaz*. (but for what Reason is unknown) demolished again, and being severely upbraided upon this Account by King *Beomi*, he killed him with his own Hands, and so returned to *Portugal*, where he was never called to an Account for his treacherous Proceedings.

Those Islands which the *Portuguese* call *Ilhas Verde*, and the *Dutch*, Salt Islands, lie directly opposite to *Cape de Verde*, yet so that the nearest of them is seventy, and the most remote one hundred and sixty Leagues distant from the Continent, which makes me imagine, that those who would have them to be *Gorgonides* of *Ptolomy*, are under a Mistake, since it is not very probable, that he,

who

any called *Pramontorium* on this Side of the Line, we can positively affirm two Rivers of *Senaga* and *Solomy Durago*, and *Siabikion*, are very small ones, whereas it is beyond all two Lakes, one of which *Cblondies*, now the Lake *aba*, tho' some of the Inhabitants have their Rise from the *ide*, from the many Trees *Platymyallo* mentions no into the Sea, whereas it has *Gambis*, after being joined Rivers, in the Province the Ocean in 13° 30', and directly from East to West *Sony*, which has imparted all *Guinea*. As it is certain of the Inhabitants must rely entirely upon those who have given us

people called the *Budumays*, far as the *Cape de Verde* place deeper in the Count the North of the *Jaisles*, *Foules*, others to the *Bu* producing Abundance of *owl*, *Ivory*, and *Hories*, one but *Iron* in vast Quantity whollome, and the *ingood* *Horie*men. They administering *Justice*, in deal of *Equity*, *Prudence*, initiated into their Council, generally chosen by their they are ignorant of what which as is practised in *Eu* and ordering their *ce*; for all such as are abletain *Regiments* under their their particular *Divisions* or in case of *Necessity*, their a *Body* being dispatched the *Army* is ready in a *lit* appointed, without the *Sons* succeeding *conf* if they happen to die, to *ap*eat. They are not abt *Nobility* and *Peasantry*, *abala's*, unto whom they *ce*, their King being *al*er, but he must be *th*ry

of the Country of the *Ja* reigned in those Parts; *y* smaller Means, and *for*ight for Aid by *John* II. instructed in the *Chr*ist- sent him back with a the *Command* of *Pedro* Orders to erect a *Fort* *mag*a, to facilitate their *try*. A *Fort* was built *Vaz*. (but for what *Rea*tain, and being severely *ing* *Beomi*, he killed him ned to *Portugal*, where for his treacherous *Pro*

guenze call *libat* *Verde*, *ncely* opposite to *Cape* of them is *seventy*, and *d* sixty Leagues distant *me* imagine, that those *gonides* of *Pro*my, are *very* probable, that he, *who*

who has left us so confused an Account of the *African* Coast, should have any Knowledge of those Isles, at so great a Distance. They are in all ten, extending from the 15° to the 19° of N. L. The *Portuguese* have given them the Name of *Green* *Islands*, either from the *Cape*, or else from a certain Green Weed, called by them *Sargasso*, which is like our *Water-Cresses*; of this you see such prodigious Quantities, floating upon the Surface of the Sea, from the 20° to the 24°, that without a strong Gale, Ships are sometimes stopped in their Passage; but what is most surprizing is, that the Sea having no Bottom here, and this Herb not being seen in any other Part of the Sea, at least not within 150 Leagues of the *African* Shore, how should this Verdure come to this particular Tract! Some alledge, that it is washed from the Rocks in the *West-Indies*, and forced thither by the Winds; but as the N. E. Winds reign here all the Year round, there is but little Probability in this Opinion.

When these Islands were first discovered by the *Portuguese*, they were without Inhabitants, but now produce *Rice*, *Millet*, *Turkey* *Wheat*, *Oranges*, *Citrons*, *Banana's*, *Anana's*, *Potatoes*, *Melons*, *Citrus*s, *Cucumbers*, *Figs*, and *Raisins*, twice a Year. And the three Islands of *Mayo*, *de* *Sab*, and *Boa* *Vista*, have such plenty of *Cattle*, that the *Portuguese* send whole Ships Loads of them thence to the *Brazils*. The considerable Quantity of *Salt* these Islands produce, has made the *Dutch* give them the Name of the *Salt* *Islands*. The *Portuguese* have also taken care to stock these Islands with all sorts of tame and wild *Fowl*, which are multiplied at such a Rate, that they may be had almost for nothing. They have a peculiar kind of Bird here called *Flamenco* by the *Portuguese*. They are as big, and white all over their Bodies, as our *Swans*, but their Wings are of a bright *Red*. *Rabbits* are here in vast Numbers, and the Sea furnishes them with incredible Store of *Fish*, which is the Reason you see here at all Times a considerable Number of *Portuguese* *Fisher-Boats* who carry what they catch to *Brazil*. These Islands are extremely commodious for such Ships as trade to the *Indies*, inasmuch as going thither they take in Refreshments, at a very easy Rate, in the Isle of *Mayo*, and, in their Return, at that of *St. Anthony*, the *Portuguese* Inhabitants being not in a Condition to prevent it. The Isle of *Jago*, as it is the *Chief*, so there the *Governor* and *Archbishop* keep their ordinary Residence: The *Spiritual* Jurisdiction of the last extends not only over these Islands, but also over all the *African* Coasts, as far as it is in the Possession of the *Portuguese*.

27. *November* the 4th we continued our Voyage for twenty-four Leagues with a N. E. Wind, steering our Course to the N. N. W. and found ourselves at 16° 1' Lat. The 8th the Wind coming to the E. N. E. we sailed thirty-two Leagues to 22° 35'. Here we were much pestered with the *Sargasso*, or *Green* *Weed* which we mentioned before, which, upon Examination, I found very like our *Water-Cresses*, only these were of a paler *Green*, and had a small Seed like those of *green* *Goose-berries*. The 11th the Wind turning in the Morning to E. S. E. and soon after to the South, we made but eight Leagues, and were becalmed before *Night*, the Wind at N. W. Our Course was to the W. at 26° 40' Lat. We took that Day a *Hay*, as the *Dutch* call it (a *Shark*) which is accounted a *Rarity* in those Seas, tho' they are frequent in the *Indies*. The 22d the Wind being at W. S. W. we steered our Course for forty Leagues to the N. N. E. in 35° 26' Lat. The 23d a S. W. Wind carried us thirty-four Leagues to the E. N. E. And the 24th thirty-five Leagues further. The 25th we had a N. E. Wind, so steering our Course to the N. E. we made thirty-three Leagues in 38° Lat. The 26th being becalmed, we got but ten Leagues, and the 27th but twelve more, taking our Course E. N. E. in 38° 40' Lat. The 28th the Wind turning to the S. S. E. we took our Course to the E. S. E. for 27 Leagues. And the 29th the same Wind continuing, we made twenty-four Leagues, taking the same Course, and at Noon in 33° 30', got Sight of the Islands of *Cortov* and *Flores*, which some but erroneously number among the Islands called by the *Spaniards* *Azores*, from the many *Hawks* found here.

NUMA. 54.

These are generally called by the *Dutch* *Flemish* *Islands*, because the first Inhabitants of the Isle of *Foyal* (one of the *Azores*) were Natives of the *Low-Countries*, who settled themselves on that little River called by the *Portuguese* *Ribera* *dos* *Flamencos*, and their Posterity live to this Day here, according to the Customs of their own Country. The seven Isles known by the Name of *Azores*, are *Tercera*, *St. Michael*, *Santa* *Maria*, *San* *Georgius*, *Graciosa*, *Pico*, and *Foyal* *Tercera*, being fifteen or sixteen Leagues in Compass, is the biggest amongst them, being a Congeries of Mountains, which make it almost inaccessible, there being no safe Road or Harbour here, except at the City of *Angra*, being the Metropolis of this, as well as the other six Islands, and the ordinary Residence of the *Governors* of those Isles, and of the *Bishops* themselves. This Road is not so safe at all Times, tho' the Port is inclosed like a *Crescent* by two Mountains advancing very deep into the Sea. They call these Mountains *Brazil*, and may be seen thirteen or fourteen Leagues off at Sea. About three Leagues from the City of *Angra*, is a Town called *Villa* *de* *Praya*, the Houses whereof are very well built; but as it is a Place of no Trade, so it is not very populous. The City of *Angra* has obtained its Name from its Situation, in the Form of a *Crescent*, this Word being used by the *Portuguese* to express the Figure of the *New-moon*. It is defended by two Forts, one of which is built upon the Ascent of the Mountain, the other upon one of the Points of Land which cover the Haven, and consequently for the Defence of its Entrance, the opposite Point having too high Towers, whence by a certain Signal they give Notice to the Inhabitants, what Vessels they spy at Sea, and whether they come from *Europe*, or *Brazil* Side.

All those Isles are subject to the Crown of *Portugal* now, though the *Castilian* *Governor*, *Don* *Alvaro* *de* *Vizares*, defended himself very bravely in the two Forts of the City of *Angra*, after the Revolution in *Portugal*, and did not surrender the *Cattle* upon the Mountain till *May* the 6th 1642, after he was reduced to the last Extremity by *Famine*. It is almost surprizing to behold, that the bare Rocks here, which are not so much as covered with *Earth*, should produce good store of *Vines*, which thrive better there than in the *Vallies*, tho' it must be confessed, that their *Wine* does not come near in Goodness to those of the *Maderas*, and the *Canaries*. These Islands produce every thing that is either necessary or convenient for human *Life* (except *Oil* or *Salt*) for they have *Wheat* in Plenty, *Pears*, *Apples*, *Citrons*, *Oranges*, and *Peaches*, in great Plenty, besides *Cherries*, *Plumbs*, *Walnuts*, *Chestnuts*, and *Pot-Herbs* of all sorts. They have also *Potatoes*, but these are more esteemed in *Portugal* than in the Islands; and a peculiar *Shrub*, which growing up to the Height of five or six Feet, spreads its Roots by an infinite Number of *Branches*, as small as the *Hair* of a *Man's* *Head*, of a yellowish Colour. They are used chiefly for their *Quilts* and *Beds* instead of *Feathers*, tho' there is not the least *Question*, but if they were spun into *Thread*, they would afford *Materials* for a very good *Stuff*. *Cattle*, and all sorts of tame *Fowl*, as well as small *Birds*, multiply here beyond what can be imagined; but they have neither *Wild-Fowl* nor *Venison*.

Their *Wheat* is exceeding good, but will not keep, unless it be put under *Ground*; for which Reason, each *Family* has its peculiar *Vault*, the Entrance whereof is no bigger than is sufficient for one *Man*; thence they carry it, after *Christmas*, to their Houses, where they keep it in *Chests* of *Bull-rushes*, the remaining Part of the Year, without ever stirring it. The *Oxen* of the Isle of *Tercera* are the biggest and fairest of all *Europe*, and very remarkable for the excessive Bigness of their *Horns*; they are as tame as our *Dogs*, and will go and come as they are bid. The *Noise* that is perceived when *People* go over the *Rocks* here, sufficiently demonstrates their *Hollowness* within; whence arises the *Earthquakes* which are so frequent in this, as well as the other *Azore* *Islands*: Thus on the 24th of *May* 1614, eleven Churches and nine *Chapels*, besides private Houses, were ruined by an *Earthquake*; the City of *Angra*, and the City of *Praya*, were almost laid desolate at the same Time, and the whole Isle of *St. Michael*

9 T

was

was so terribly shaken by an Earthquake, on the 16th of June 1618, that at some small Distance from the Shore, the Sea opened in a Place where was 150 Fathom Water, and thence thrust forth a small Isle of a League and an half in Length, at least 60 Fathom above the Water. These two Islands have also certain hot Springs, whence, and at some Distance from them, arise sulphurous Vapours. About three Leagues from *Angra*, is a Spring which turns Wood to Stone, as is evidently to be seen by a certain Tree, the Root whereof, as far as it hath been under Water, is absolutely petrified, whereas the Trunk, and all the rest, are not the least changed. The Isle of *Pico* has a peculiar sort of Wood as hard as Iron, red as Scarlet, in which, when cut, appear certain Veins like the watering of a Camblet, of which are made very fine Cabinets, which are highly esteemed in *Portugal*. Cedar is so common among them, that they do not only use it for their ordinary household Stuffs, but also for Fuel; nay, they make whole Waggons and Boats of it. They have scarce any Commodities except Provisions, which they sell to the Ships that touch here to take in Refreshments, as they are going to the *East-Indies*.

The Isle of *St. Michael* is about 20 Leagues long, lying 28 Leagues S. E. from that of *Tercera*. Its capital City is called *Punta Delgada*, its Soil very fruitful, producing more Wheat than they are able to consume. The worst is, that they have no safe Road for Ships to ride in. The Isle of *St. Mary* being not above twelve Leagues in Compass, lies twelve Leagues South from that of *St. Michael*; its Products are Provisions, and Pottery Earth. The Isle of *Gratiola* lies seven or eight Leagues N. E. from that of *Tercera*, its Compass being not above five or six Leagues. It has got its Name from its Pleasantness, and vast Plenty of all sorts of Fruits. The Isle of *St. George*, which is twelve Leagues long and broad, lies eight or nine Leagues to the N. W. from that of *Tercera*. It is well stocked with Provisions, though it be full of Mountains, which furnish them with vast Store of Cedar, which they sell to those of *Tercera*, where it is made into Joiners and Cabinet-makers Works, and transported thence to other Places.

The Isle of *Fayal* being at least seventeen or eighteen Leagues in Circumference, lies seven Leagues to the S. W. off that of *St. George*, being the best of all the *Azores* next to those of *Tercera* and *St. Michael*. Its capital City is called *Vila-Dista*, inhabited chiefly by the Posterity of the *Hennings* we had Occasion to mention before. They send hence abundance of Provisions, but especially Fish to the other Islands. The Isle of *Pico* has its Name from the high Peak or Mountain within it called *Pico*, supposed to be as high as the Peak of the great *Canary Island*, of which I shall hereafter speak. It lies enclosed betwixt the Isles of *Fayal*, whence it is distant three Leagues to the S. E. of *St. George* and *Tercera*, from the first of which it lies four Leagues to the S. W. and from the latter twelve Leagues to the W. S. W. Their Lands are accounted more fertile here than those of any of the other Isles.

The Isle of *Flores*, as we told you, we got Sight of the 29th of *November*, being seventy Leagues to the West of *Tercera*. *Flores* is twenty Leagues in Circumference, and the Isle of *Corvo* is no more than two Leagues Distance to the North: They are both under the *Portuguese*; but their Distance from the *Azores* shews them not to be of their Number. As the *Azores* be very convenient for the Refreshment of the *Portuguese* Ships bound to the *East-Indies* and *Brazil*, they are very careful of their Preservation; whence it is they will allow no Foreigners to view the Coast of the Isle of *Tercera*, for fear they should, by its Weakness, be invited to land and settle there. The Air is very clear and wholesome, but withal very sharp, so that it corrodes Iron, and consumes Stones in a few Years, which is the Reason they use Flint Stones in their Buildings, which having lain for a considerable Time under Water near the Sea-Side, are better qualified than other Stones to resist the Sharpness of the Air.

But before we leave the *African Coast*, it will not be amiss to say something of the *Canary Islands* which lie upon the Coast opposite to *Gibraltar*. The Whollomness of the Air, and the Fertility of the Soil, procured them the Name of the *Insule Fortunatae* among the Ancients, though one

of them is also called *Canaria*, by *Pliny*, *Strabo*, and *Platiny*, which contradicts the Opinion of those who affirm, that those who discovered them in the Year 1342, gave them the Name of *Canaries* from the many Canes found there. They are seven in Number, viz. *Lanzarotta*, *Fortuventura*, the great *Canary*, *Teneriff*, *Gomera*, and *Palma*, extending from East to West, in a manner in a direct Line. *Lewis* Count *Clermons* having in 1348, got a Grant from the Pope of these Islands, set out a Fleet to endeavour the Conquest of them, which was perfected accordingly under the Protection of the King of *Aragon*; but the same being afterwards relinquished by *D. Lewis de la Cerda*, the *Biscayans* and *Andalusians* having sent out some Vessels, surprized the Isle of *Lanzarotta*, whence they brought back so much Wealth, that the King of *Castile* then resolved upon the Conquest of these Islands, which, doubtless, he would have effected, had not the more pressing Wars he was engaged in with his Neighbours, diverted him from that Purpose.

Not many Years after, a *French* Gentleman, named *John de Berbancoart*, having obtained a Commission from *Henry III.* then King of *Spain*, to conquer these Islands, under the Condition that he and his Posterity should acknowledge the Sovereignty of the Crown of *Castile*, he was so fortunate as to make himself soon Master of the five lesser Islands, but could not bring the two great ones under Subjection. However, the King of *Castile*, as Sovereign, having sent thither a Bishop, this occasioned such a Difference between him and *Berbancoart's* Nephew, who had succeeded his Uncle, that the King of *Castile* was forced to send thither one *Pedro Barba*, who having forced the *Frenchmen* thence, gave the Islands, as a Dowry, with his Daughter, to one *Perrera*, who assuming the Name of King of the *Canaries*, left no Stone unturned to make himself Master of them all by the Conquest of the remaining Islands; but finding his Endeavours to prove fruitless, he sold four of these Islands to *Ferdinand*, surnamed the Catholic King of *Aragon*, reserving to himself only that of *Gomera*, with the Quality of an Earl. King *Ferdinand* had the good Fortune to reduce the two great Islands also, which ever since, as well as the rest, have remained under the *Spanish* Jurisdiction.

The great *Canary* Isle is computed to contain above nine thousand Inhabitants, being also the Residence of the Bishop, Inquisitor, and Great Council, which manage the publick Affairs of all the other Isles. Besides that excellent Wine so well known and esteemed in *Europe*, it produces Wheat, Barley, Honey, Wax, and Sugar-Canes, and the Plenty they have of Cattle, makes them trade much in Leather with the *Spaniards*, *English*, *Dutch*, and *Hamburgers*; the first in their Voyages to the *West-Indies*, take most of their fresh Provisions in here. The Isle of *Teneriff* is famous for its Mountain called *El Pico*, being accounted the highest in the World, so that it may be discovered above sixty Leagues at Sea; and on the Top a Man may see all the other *Canary Islands*, though some of them are fifty Leagues distant from this; but it requires three Days Time to get up, which must be either in *July*, or *August*, it being covered with Snow all the rest of the Year, though there falls none in any of those Islands.

The Isle of *Fierro* claims the next Place to that of *Teneriff*, among the *Canary Islands*; it has got its Name from the Drought of the Ground, which being without Water, seems to be of Iron: For, except a few Springs near the Sea-shore, this whole Island is without a Rivulet, Brook, Well, or Spring, against which default provident Nature has blessed this Island with a certain Tree, which has no Resemblance to any other I ever saw, either in *Europe* or the *Indies*, and stands in the very Centre of the Isle. Its Leaves are very long, but narrow, and never cease to be green, neither in Winter or Summer. Betwixt the Branches hang Clouds, which are never dispelled, but are constantly dissolved in a liquid Substance, which hanging to the Leaves, fall from thence as clear as Water into the Cisterns that are made under the Tree on purpose to receive it, and that in such great Quantities, that they are never empty, but provide sufficient Quantities to supply both Men and Beasts.

It is the Opinion of the Inhabitants, and those that have frequently sailed in these Parts, that a hundred Leagues West of the *Canaries* there has been seen a certain Island

called

away upon the Rocks, where they made a Shift to erect a Hut out of some Boards belonging to their Ship. They lived upon the Sea-mews they caught, which they dried in the Sun, and so eat them raw; as also upon certain Eggs they found in the Crevices of the Rocks, which kept them from starving: But their greatest Want was fresh Water, of which they had none but what the Rain helped them to. They continued in this Condition six Weeks; at the Expiration of which the *Englishman*, waking in the Morning, missed his Companion (whom he supposed to be fallen from the Rock through Carelessness) the only Comfort of his Life. In this Solitude, which almost threw him into Despair, especially when the approaching Winter made every thing appear with a more doleful Aspect than before, his Hut being covered with Snow, he made the hardest Shift in the World to sustain himself, till after a miserable Life of eleven Months, some Seamen belonging to a *Flemish* Ship, commanded by Captain *Peckman*, famous for his Art in getting out the great Guns of the *Spanish Armada*, forced upon the Coast of *Scotland* and *Ireland* in 1588, by Tempest, as they were looking for Eggs, discovered this poor Wretch, whom, at last, with many Entreaties, they took into their Vessel, being all black, hairy, and meager, more like a Spectre than a Man; and having given him what Refreshments the Ship afforded, set him ashore at *Derry* in *Ireland*, from whence he afterwards returned into *England*.

A third Relation he was pleased to give us of a most surprising Resolution of four Seamen, who, being taken by the *Algerians*, and one of them being a Carpenter, they resolved to make a small Boat, and venture in it in the open Sea, in order to their Deliverance; accordingly, having secretly made what Preparation they could for the Execution of this Design, they took off five Boards from the Store-Room, two whereof were employed for the Bottom of the Boat, two more for the Sides, and the fifth for the Prow and Poop, their Quilt serving for Towe. The Boat being well pitched, and the appointed Time come, they found that their Boat was so little as not to contain above two, so that two of the Confederates were obliged to stay behind; the other two, being an *Englishman* and a *Dutchman*, persisting in their Resolution to go forward, let it cost what it would; accordingly, having found Means to provide a Pair of Oars, a Piece of a Sail, and a slender Portion of Bread and fresh Water, they boldly put to Sea, having neither Compass nor Astrolabe; so that being overtaken by a Storm, they were forced to go where the Wind would carry them, their chief Business being to call out the Water which continually came into the Boat, and soon spoiled what little Bread they had; which together with the want of Rest, had brought them so low, that they were scarce able to stand on their Legs. In this miserable Condition Chance brought them to the Coast of *Bartary*, where, lighting on some Wood that served them to refit and enlarge their Boat, which they had no sooner done, but being in manifest Danger of being killed by the Inhabitants, were forced to chuse the main Sea a second Time, and, at last, after being tossed up and down in the Sea for ten Days, were cast upon the *Spanish* Coasts near the Cape of *St. Martin*, between *Alicant* and *Valencia*, where, being civilly entertained by the Inhabitants, they after came into *England*.

30. On the 6th I saw the King of *England* touch many Persons that were afflicted with the *Evil*, and the Ceremony being over, my Lord *Strafford* did me the Honour to introduce me to his Majesty to kiss his Hand, and afterwards to the Queen, both their Majesties, at several Times after, being pleased to bestow some Time in hearing my Relations of my Travels, especially of those into *Persia* and *Muscovy*. During my Stay of three Months in *England*, I spent Part of my Time at Court, and the rest in taking a View of what was most worthy of Observation in *London*, and the adjacent Places, such as *White-Hall*, *St. James's*, *Hampton-Court*, *Westminster-Hall*, and the *Abby*, *Greenwich*, the *Tower*, &c. And having by this Time sufficiently recovered myself of the Fatigue of so tedious a Voyage, and received the Money I expected from my native Country, I left *London* on the 20th of *March*, and taking Water for *Gravesend*, went

thence for *Rocheſter*, and coming the 24th to *Dever*, embarked the 28th for *Dunkirk*, where I arrived the same Day. The 26th I continued my Journey thence to *Newport*, where I stayed that Night, and came the next Day to *Bruges*, and the 29th to *Ghent*, where I stayed only to the 21st of *April*, when I prosecuted my Journey to *Brussels*, the capital City of the Province of *Brabant*. After a Stay of two Days at *Brussels*, I came the 6th to *Louvain*, and travelled the same Day four Leagues farther to *Micbelin*; thence I prosecuted my Journey the 6th to *Zhuwerp*, where I stayed two Days, and the 9th and 10th travelled to *Breda*, there, having spent the Remainder of that Day, I made five Leagues the next Day to *Bois-le-Duc*, or *Bolduc*.

The 12th I set forward again for *Gertrudenburg*, whence I took Boat the same Day for *Rotterdam*, where I arrived the 13th, and continued my Journey the same Day for *Delft*, and so farther through the *Hogus*, by the Way of *Leyden* to *Harlem*. This City, which is the biggest next to *Amsterdam*, in the Province of *Holland*, challengeth the Glory of the Invention of the Mystery of Printing by one of its Inhabitants, named *Laurence Coster*, who, in the Year 1420, first made the Characters of Beech-wood, and afterwards having also found out the Ink, that to this Day is used by Printers, he changed the wooden Characters into leaden ones; and having at last made them of Tin, he brought the whole to Perfection in 1440; in Memory of which the Senate of *Harlem* have caused the following Inscription to be set over the House he lived in.

Memorie Sacrum, Typographia, Ars Artium omnium conservatrix, nunc primum inventa circa Annum 1440.

Leaving *Harlem* in the Evening, I came the same Night to *Amsterdam*, of which Place having heard so much in the *Indies*, I resolved to spend some Time in taking a View of it. The first Thing that surprized me the next Morning was, that vast Numbers of People which so crowded the Streets, that a Man could very hardly pass; but when I came to the Port, I stood amazed at the prodigious Number of Ships, which appeared at a Distance no otherwise than one continued Forest, especially when I was informed how many Ships were abroad at that Time, bound to all Parts of the World; and that I saw every Day a considerable Number go to their own, and other adjacent Coasts. The vast Stores brought thither even from all the most remote Parts of the World, especially in the House of the *East-India* Company, made me imagine no otherwise than that all I had seen in my Travels thro' so great a Part of the Globe, was centered in this Place, there being such prodigious Quantities of Spices, Silk, and Porcelain here, that *China*, and all the rest of the *Indies*, seemed to have exhausted their Store-houses, to lay them up in this City.

It was in the Year 1595, that the *Dutch*, by the Encouragement of a certain Merchant, whose Name was *Cornelius Houtman*, and who had lived a considerable Time in *Portugal*, undertook the first Voyage to the *East-Indies* along the *African* Coast; their Design of finding out the Northern Passage having proved abortive. The first Voyage did not answer the Expectation of the Merchants, notwithstanding which they sent eight Ships more thither. In 1598 and 1599, they sent another Squadron, but by different Owners, so that for fear of destroying this so powerful a Trade, a Charter was granted to all the Persons concerned in 1602, for twenty Years, and six Chambers erected, viz. at *Amsterdam*, consisting of twenty Directors, *Middleborough* for *Zeland*, twelve Directors; at *Delft*, and *Rotterdam* for the *Muse*; at *Horn*, and *Enkhuysen* for *West-Friesland*; these four last consisting each of seven Directors. According to the same Charter the City of *Amsterdam* was to defray one-half of all the Charges, and to send eight Deputies to their general Meetings, and those of the *Muse* and *West-Friesland* one half-Quarter each, and to send two Deputies each.

Their original Stock amounted to 6,600,000 *French* Livres, which was improved to that Degree, that in the Year 1613, the Persons concerned had gained two hundred and sixty upon the hundred, and the next Year the Profits were more considerable. The Regularity of the

The Regularity of the
Streets.

Streets and Water-channels, and the Neatness and Splendor of the Bridges and Houses of *Amsterdam* is not to be imagined, except by those who have been Eye-witnesses of it, especially those in the new Town, and many of which ought rather to be called Palaces than the Houses of private Persons. Among the publick Structures the old and new Churches are worth Observation, and if the Town-houle be completed, according to the Draught I saw of it, it will, beyond Question, vie with any of the noblest Structures in the World, and the Exchange of *Amsterdam* surpasses that of *London*, in the Number of People that daily resort thither, as it does that of *Antwerp* in Magnificence; not to mention here the Gates of the City, and its three Sluices, which cannot be matched in the World, the publick School, Colledge, Arsenal, a Play-houle, Anatomy-hall, and other publick Edifices, which deserve the Travellers peculiar Observation. But to come to a Conclusion of my Voyage; after a Stay of eight Days at *Amsterdam*, I took Shipping for *Hamburg* the 23d of *April*, where I arrived safely the 28th, and after I had rested myself there for one Day and Night, continued my Journey to *Gottorp*, which I reached the 1st of *May*, and had the Honour to be admitted to their Highnesses the Duke and Dutcheis of *Holslein*, unto whom I gave a short Account of the Success of my long and toilsome Travels.

31. The Observations published by our Author are of a mixed Nature, part of them from his own known Knowledge, and part from Information. It may be necessary therefore to say somewhat as to the Reasons which induced us to prefer these Observations to those of other Men, who might be Eye-witnesses of all they wrote. In the first place, let it be considered, that it is necessary to give the Reader the most Matter possible in the least Room, and therefore one extensive and well-wrote Voyage answers this End better than several, and at the same time avoids useless and tedious Repetitions. The Merit of the Writer was another great Consideration. It is manifest from the Commission with which he was intrusted, that he was a Man of Abilities, or otherwise he would not have been chosen. It appears from the foregoing Part of his Travels, that his Conduct justified their Choice, and that he made it his Business to bring back into *Germany* the clearest and best Intelligence that could be had, with regard to the Design which his Matter had then in View, and that was the Opening a new Channel of Trade between *Europe* and the *Indies*. The same Reasons therefore that recommended him to, and procured him the Approbation of his Matter, gave his Works a Title to a Place in this Collection, notwithstanding the Objections to which they may seem liable at the first Sight. But farther still; he was not only a Man of great Judgment himself, but of great Experience also; and as he was very capable of distinguishing upon Information what was fit for him to report, and what not, so he was no less careful in seeking his Information from such as had it most in their Power to instruct, and at the same time were least likely to impose upon him. The Advantage he had of consulting the *English* President upon what he was told by the *Spaniards* and *Portuguezes* must have been of infinite Service, by enabling him to correct and explain whatever he received from them; therefore taking all these Advantages together, we may very safely conclude, that there hardly ever was a Voyage Writer better qualified to deliver what was fit for the Publick to see, than our Author.

It remains to give some Account of that Prince, by whose Direction these Voyages were undertaken, the Views he had in causing them to be undertaken, and the Consequences of such extraordinary and hazardous Undertakings so well and happily performed. *Frederick* the third, Duke of *Holslein Gottorp*, was the Son of *John Frederick*, Sovereign of that Country, and the Princess *Augusta*, Daughter to *Frederick* the second, King of *Denmark*. He succeeded his Father in his Dominions in the Year 1616, and having spent a great Part of his Time in improving his Country, settling new Manufactures there, and opening a free Commerce to *Sweden*, *Poland*, and *Russia*, he began about the Year 1630 to think of putting in Execution a Project which had long employed his Thoughts, by which he hoped throughly to people, and greatly to enrich, his new City of *Frederickshadt*. He was led to this by the Incitement of

some Merchants, whom he had drawn to settle in his Country by the great Encouragements he gave them, and who suggested the Possibility of bringing into, and settling the Silk Trade in his Dominions. At first Sight this must appear a very strange, and almost impracticable Project; but when attentively considered, it will appear in quite another Light.

We must in the first place consider, that the Northern Countries of *Europe* were at that Time entirely supplied with all kinds of Silk Manufactures from the Southern Countries, and these at the greatest Distance from them, which was attended with many and great Inconveniencies; besides the capital Mischief of sending annually vast Sums of Money in return for those Manufactures. The only Remedy that could be applied to these Mischiefs was the establishing this Commodity in the North, by breeding and managing Silk-worms there, which was indeed a tedious, hazardous, and in all human Appearance, impracticable Undertaking, or else to sink a Step lower, and be content to import the Silk in the most reasonable Method, and at the lowest Price, so that the manufacturing it might prove sufficiently profitable to the People engaged therein. This Design too, though less difficult than the other, seemed hard enough to compass, since a Voyage from the *Baltick* to the *Mediterranean*, which was the only means whereby either *French*, *Spanish*, or *Italian* Silks could be brought to *Holslein*, must have been necessarily attended with such an Expence, and the Silks imported would have come at so dear a rate, that it would have been impossible, for many Years at least, to have manufactured them to any Advantage. The Commerce of the *Levant*, and the importing Silk from *Aleppo*, or *Smyrna*, must have been attended with still greater Difficulties and Expence, so that on this Side there seemed to be no Hopes of compassing such a Design.

But *Philip Crusius*, who first engaged the Duke to think of this Scheme, immediately obviated these Objections, by shewing that the *Persian* Silks might be had sooner, and at a cheaper rate in *Holslein* than in any of the Countries where they were then manufactured. The Way he propoed was through *Muscovy*, the Frontiers of which are divided from those of *Persia* by the *Caspian* Sea, the Silk Provinces of *Persia* lying on the Coasts of that Sea, so that the transporting them cross the *Russian* Empire could scarce be esteemed a more laborious or difficult Undertaking than the conveying them by Caravans from *Persia* through the *Turkish* Empire to *Smyrna*, or *Aleppo*; and consequently, if this Scheme could be executed, the Ports of *Russia*, which were very near, would serve as effectually for the Silk Manufacture in *Holslein*, as the Ports of the *Levant* for the Southern Parts of *Europe*. These were the Principles upon which *Crusius* went, and on which the Embassy, which Duke *Frederick* sent into *Persia*, was undertaken. Our Author's Journey from *Persia* into the *Indies* was, as we have before represented it, an additional Project to this, of establishing a Silk Manufacture, and the Grounds upon which the Duke went in this were likewise very just and reasonable, as in a very few Words we shall be able to shew. He was informed that a great Trade was carried on between *Persia* and *India* by Land, and therefore he very rightly conceived, that if his first Scheme took place, it might be very practicable to bring the *Indian* Commodities and Manufactures from *Persia* to the Coast of the *Caspian* Sea, and consequently, together with the Silk through *Russia* into his own Dominions.

This, I say, was that Prince's Design, and I thought it the more necessary to insist upon it at large, because there is not a Word dropp'd about it by our Author. On the contrary, his Observations look all another Way, and he seems to have employed himself chiefly in remarking on the *Portuguezes*, *English* and *Dutch* Commerce in the *Indies*, which Observations, as they were fitted to be published to the World, were likewise best suited to correct the true Design of his Voyages. I must take this Opportunity of remarking, that all the Civilities shewn him by Strangers in those Parts of the World, may be accounted for from hence, I mean from their being morally certain, that the better he was acquainted, and the more thoroughly he was informed of the Nature of their Trade, the more impracticable his Matter's Design would appear of interfering therein, by a

direct Navigation to the Indies, which they all along apprehended to be the Duke of *Holstein's* Design, and therefore thought, and very justly too, that a better Method than this could not be devised to defeat it. This likewise accounts for the rendering the Embassadors and our Author's Accounts publick, in which, though all the Transactions are in themselves equally curious and entertaining, yet they make known little or nothing that relates to the Duke's real Projects, and are therefore considered in this Light nothing more than political Amusements.

It must, however, be acknowledged, that all these fine Schemes, though built upon just Principles, and pursued with great Wisdom and Prudence, proved in the End absolutely ineffectual, which was owing to the Wars and other Confusions that fell out soon after, both in *Germany* and *Russia*; in the first of which the Duke of *Holstein* himself had his Share, so that the Event ought not in the least to prejudice our Opinion against the Duke's Design, which has been since revived by other great Princes, and will be some Time or other effectually executed, and thereby a new Turn given to the Commerce of the Indies. The Czar *Alexis Michael*, in the Year 1668, revived this Project, which was then disappointed by the Rebellion of the *Cossacks*, who made themselves Masters of the City of *Astracan*, and thereby cut off for a Time the Correspondence between *Russia* and *Persia*. It was with this View also, that the late Czar *Peter the Great*, who understood all those

Points better than any of his Predecessors, and perhaps better than any other Prince of his Time in *Europe*, made himself Master of all the Provinces bordering on his Side the *Caspian* Sea, and thereby bid very fair for engrossing the whole Silk Trade, that is, so far as it depends upon *Persia*.

I might there put the Reader in mind, that we too have very lately proceeded upon this Plan, and have very happily begun to establish, by the Means of our *Russian* Company, this very Commerce with *Persia* through the *Muscovite* Empire, which is more than sufficient to shew, that the Duke of *Holstein's* Scheme, though it actually failed by unforeseen and unavoidable Accidents, was in its Nature perfectly just, and well founded, since, if it can be rendered useful and practicable to us, it must not only have been more useful, and more practicable to him, who was so near a Neighbour to *Russia*, but all Circumstances considered, the wisest and best laid Scheme for the Improvement of his Dominions, that perhaps it was within the Compass of the human Understanding to invent or contrive. Thus I have done all that lies in my Power to render these Voyages intelligible to the *English* Reader in their utmost Extent, by explaining many things that have hitherto slept in Obscurity, and might possibly have been buried therein for ever, if these Voyages had not been made a Part of this Collection.

SECTION XXVIII.

A Supplemental Account of the Commodities, Manufactures, and Produce of the several Countries of the Indies, together with Remarks on the Nature and Value of that Trade in respect to Europe.

From the Works of *John Baptist Tavernier*.

1. An Introductory Account of the Contents of the Section.
2. A succinct View of the Silk, Cotton, Indigo, Spice and Drug Trade in the Indies.
3. The Nature of the Diamond Mines, the Manner of their working them, and the Value of their Produce.
4. The Mines in the Island of Borneo, the Nature of the Stones found there, and an Account of the largest Diamonds in the World.
5. Of coloured Stones, such as Rubies, Opals, Sapphires, Turquoises, and Emeralds.
6. Of the Pearl Fisheries in the East and West-Indies, and of the Difference in point of Size, Shape and Colour of those Jewels.
7. Of Coral Fisheries, and of the Value of this Commodity in the Indies.
8. Of Amber, Ambergrece, Musk, and other Perfumes.
9. Of the Beazear in Cows, Goats, and Apes, their different Virtues and Values, and of the Porcupine and Serpent Stones.
10. Of the Gold, Silver, and Tin Mines of the Indies.
11. A Description of the Kingdom of Kachemire, called the Paradise of the Indies, and its Produce.
12. Of the Provinces of Multan, Candahar, Cabulistan, and Lahor.
13. Of the Provinces of Haoud and Varad, and of the Fruits and Commodities which they produce.
14. Of other Provinces of the Mogul Empire, and of what is most remarkable in each of them.
15. A Description of the Country of Bengal, one of the pleasantest and most fruitful Countries of the Indies.
16. Of the rich Kingdom of Boutan, its Inhabitants, Commodities, and Manufactures.
17. Of the Power, Splendor, and Magnificence of the Monarch of that Country.
18. Of the Kingdom of Tipta, and of the Gold and Silk Trade carried on there.
19. Of the noble Kingdom of Asem, and of the rich Mines in that Country; as also of Gum Lac, and other valuable Commodities which it produces.
20. Of Tonquin, and its Products.
21. A concise History of that famous Kingdom.

AS we have in the foregoing Sections given great Light into the Commerce of the Indies from Authors best acquainted with them, and of the highest Reputation, so, by way of Supplement to these, we shall add such Chapters of *Mr. Tavernier's* Travels as are fittest to compleat that Design, reserving the rest of his Work for the succeeding Volume, to which it properly belongs. His Character is so well known and established in the World, that it may seem very unnecessary to say any thing of it in this Place, and therefore we shall content ourselves with a very few Observations that seem more immediately requisite, in order to connect what we have taken from him with what we have given before on the same Subject from others. He was not only a Traveller, but a Merchant also, and therefore spoke from a perfect Knowledge and Experience in the Matters of which he writes, and more particularly with regard to the Commodities and

Manufactures of these Countries, in which he dealt for many Years with great Success.

He is more copious, and at the same time not less exact, than any of the Authors who have attempted to point out the Advantages derived from our Commerce in the East, by which I mean in general the Commerce of the *Europeans*. We discover in his Writings a greater Compass of Thought, and a more masterly Turn in his Observations, than in almost any other Book of the kind, which is owing to his having considered these things over and over, in consequence of the several Voyages he had made to the Indies, and the Pains he had taken to make himself Master of every thing that had any Relation to the Disposition of *Indian* Commodities after they were brought to *Europe*. It must be allowed, that this sometimes tempts him to digress a little from his Subject, and run into a general Representation of the State of the same sort of Commerce in other

decessors, and perhaps Time in Europe, made us bordering on his Side very fair for engrossing so far as it depends upon

mind, that we too have an, and have very happy an, of our Russian Comersia through the Muscovy sufficient to shew, that though it actually failed by ents, was in its Nature nce, if it can be rendered must not only have been to him, who was so near Circumstances considered, the Improvement of his within the Compa's of the contrive. Thus I have render these Voyages in their utmost Extent, by witherto sleep in Obscurity, uried therein for ever, if ade a Part of this Col-

duce of the several Value of that Trade

be Silk, Cotton, Indigo; Manner of their work- the Nature of the Stones, such as Rubies, and West-Indies, and al Fisheries, and of the ether Perfumes. 9. Of Porcupine and Serpent tion of the Kingdom of nces of Multan, Can- of the Fruits and Com- of what is most remark- antest and most fruitful mmodities, and Manu- Country. 18. Of the ble Kingdom of Asem, Commodities which it us Kingdom.

in which he dealt for

same time no less exact, e attempted to point out Commerce in the East, ommerce of the Europe- s a greater Compa's of urn in his Observations, he kind, which is owing s over and over, in con- had made to the Indies, himself Master of every e Disposition of Indian ht to Europe. It must empts him to digress a o a general Representa- of Commerce in other Parts

Parts of the World; but still this proves so far from being tedious and unpleasant, that we may safely affirm, there are no Passages in his Writings, either more curious, or more instructive. It was for this Reason that we judge it requisite to give them entire, without venturing to castrate, or interpolate them, which would only distract the Author's Sense, without answering any good Purpose. After an accurate Account of the State of *Mogulistan*, at the Time he travelled through it, he proceeds thus:

2. *Kaschnagar*, a Village in the Kingdom of *Bengal*, sends abroad every Year twenty-two thousand Bales of Silk, every Bale being a hundred Weight, which are bought up, either by the *Dutch*, or Merchants of *Tartary* and *Mogulistan*, to make up their Carpets; some all Silk, and others mixed with Silver and Gold, which being for the most part made in the Province of *Guzerat*, are sold either at *Amadabat*, or *Surat*. The Worsted Carpets are made at *Vissapour*, twelve Leagues from *Agra*; Satins, some plain, others streaked with Gold; Tallies of the same Fashion; Patoles, a very thin Silk Stuff, painted with all sorts of Flowers. The raw Silk of *Kaschnagar* is yellowish, as that of *Sicily* and that of *Persia* is; but they can whiten it with a Lye made of the Ashes of a Tree called *Adam's Fig-tree*, that it shall be like that of *Palestine*. In the Kingdom of *Golconda* are made the painted Calicoes, (Calicuts) called Chinces by the Merchants, but Calmender by the Natives, because they are painted with a Pencil.

There are Chinces made in *Mogulistan*, but they are all printed, and nothing so fine or beautiful as the former. These serve for Coverlets of Beds, Table-cloths, Pillow-biers, Handkerchiefs, but especially for Waistcoats both for Men and Women. The fine Calicut Chinces made at *Brampour* are used all over *Asia* for Ormies, or Womens Veils; the *Basta's*, or Calicuts, painted red, blue, and black, are carried white to *Agra* and *Amadabat* to be dyed; some they dye like watered Camblets, which increase their Price. The white Calicuts are woven in several Places in *Bengal* and *Mogulistan*, and are carried to *Ratossary* and *Baroche* to be whitened, because of the large Meadows and Plenty of Lemons that grow thereabouts, for they are never so white as they should be, till they are dip'd in Lemon-Water: They are of two sorts, wide and narrow, but of various Lengths; some Calicuts are made so fine, you can hardly feel them in your Hand, and the Thread when spun, is scarce discernable. Cotton twined and untwined comes from the Provinces of *Brampour* and *Guzerat*; but the latter is seldom exported, unless it be to *Ormuz*, *Balsora*, or the *Philippine* Isles.

Indigo comes from several Parts of the *Mogul's* Country, but differs in Quality; the best comes from the Territories of *Biaria*, *Indocca*, and *Cosja*, a Day or two's Journey from *Agra*: That which is made flat of this sort comes from *Sarquesse*, a Day's Journey from *Surat*: The Indigo which is made in *Golconda* is inferior in Goodness; as also that which is made up at *Baroche* and *Agra*, tho' this last is most sought for, because it is made up in half Balls. The worst sort is that made at *Bengal*, *Brampour*, and *Amadabat*. It is made of an Herb much like our Hemp, which is sown every Year after the Rains. They cut it three Times every Year; but the first Cutting makes the best Indigo, and the second better than the third: 'Tis known by the Briskness of the Colour. When they have cut it, they call it into Pits half full of Water, which they raise to the Brim, with the Herb put into it, and then pound it about till it becomes as thick as Mud; then they let it settle for some Days, and afterwards drain the Water out of it, which done, they take it up in Baskets, and making it up flat at the Bottom, and sharp at the Top like an Egg, set it in the Sun to dry. Great Quantities of Saltpetre comes from *Agra* to *Patna*; but that which is refined is three Times the Value of that which is not.

Cardamum, which is the most excellent of all Spices, grows in the Territories of *Vissapour*, and because there is no great Store of it where it grows, it is only made use of in *Asia*, at the Tables of the greatest Princes. Ginger grows in the Dominions of the Great *Mogul*, and is brought in great Quantities from *Amadabat*, where it

grows more than in any other Part of *Asia*, and it is hardly to be imagined how much is transported candied into other Parts. Pepper is of two Sorts, the small and the great; the small comes from *Banaw*, *Achen*, and some other Parts of the East, it is seldom or ever carried out of *Asia*, where it is spent in great Quantities, especially among the *Mahammedans*; for there is double the Grain of this small Pepper in one Pound to what is in the great; besides, 'tis not so hot in the Mouth. The great Pepper comes from the Coast of *Malabar*, and some from *Vissapour*. Nutmegs come from the *Molucca* Islands, as also from the Islands of *Banda*; but the biggest grow in the Island of *Danms*. It is observable of the Nutmeg-tree, 'tis never planted; but, when the Nutmegs are ripe, certain Creatures come from the Islands towards the South, and devour them whole, but are forced to throw them up again before they be digested; the Nutmeg then besmeared with a vicious Matter falling to the Ground, takes Root, and produces a Tree, which would never thrive if planted. Cloves grow at *Ambony*, *Ellias*, *Sarem*, and *Bouro*. Cinnamon comes at present from the Island of *Ceylon*; the Tree that bears it is like a Willow, and has three Barks; the two outermost may be taken off, and is the best Cinnamon; the third must not be meddled with, because then the Tree will die, and therefore great Art must be used to take off the two uppermost, lest the third should be hurt with the Knife. The *Hollanders* are at a vast Expence at *Ceylon* to gather their Cinnamon, because the King sends his Forces upon them when they are gathering to surprize them, and take it from them; so that they are forced to have a Guard upon their Workmen of seven or eight hundred Men; and this makes Cinnamon dearer, and so much the more because the *Dutch* have spoiled the Trade for it from the Countries of the *Rajabs* about *Cochin*.

The Drugs brought to *Surat* from all Parts of the *Indies* are Sal-Armoniac, Borax, Gum-Lac, Gum-Lac washed, Gum-Lac in Sticks of Wax, Saffron, Cummin, white and black, Arlet, Frankincense, Myrrh, Gilet, and Bolt; Cassia, Sugar-Candy, Allitun, Anni-feed both gross and small, Ouplot, Cointre, Auzorout, Aloes-Succotrine, Lignum-Aloes, some in great, and others in small Pieces; Liquorice, Vez Cabouli, out of Gum-Lac, the Natives extract that lively Scarlet-Colour with which they paint their Calicoes; and for that end it is carried into *Persia*. That which remains after the Colour is drawn out, is fit only to make Sealing-wax of; and the Women of *Surat* get their Living by cleansing and colouring it for that Use. Powdered Sugar is brought in great Quantities from the Kingdom of *Bengal*, and there is a great Trade for it at *Ougeli*, *Patna*, *Daca*, and other Places. The People of *Bengal* say, that there is no Poison more dangerous than Sugar kept thirty Years. Loaf-Sugar is made at *Amadabat*, where they have the perfect Art of refining it. Opium comes from *Brampour*, where Tobacco also grows in great Quantities, so that the Inhabitants having no Vent for it, let it rot upon the Ground.

3. Diamonds, which are the most precious of all Stones, are found partly in Mines, partly in Rivers. At *Raelconda*, a Town five Leagues distant from *Golconda*, and eight or nine from *Vissapour*, in the Province of *Camatica*, is a Diamond-Mine, discovered not above two hundred Years ago: In it are found the cleanest Stones, with the whitest Water; but being forced to fetch them out of the Rocks with a great Iron-leaver and many Blows, they often flaw the Diamonds, and make them look like Crystal: And this is the Reason there are so many soft Stones found in this Mine, though they make a great Shew. If a Stone be clean, they give it only a Turn or two upon the Wheel, that it may lose as little as possible of the Weight; but if it has any Flaws, Points, or black Specks, they cut it into Facets, and work the Flaw into a Ridge to hide it. The Trade at the Mines is free and just, and transacted without any talking on either Side, the Buyer and Seller expressing themselves by taking each other by the Hands; and so, in the same Place where there are many People, a Parcel of Goods shall be sold seven or eight Times, and no Man know it. At *Gani*, or *Colour*, seven Days Journey from *Golconda* Eastwards, is another Diamond-Mine: It lies

lies between the Town and a Mountain, and the nearer they dig to the Mountain, the larger Stones they find; but there is none on the Top.

This Mine was found not above an hundred Years ago by a Countryman, who digging his Ground to sow Millet, found a large Diamond twenty-five Carrats Weight: Upon this, the rich Men in the Town fell to digging in the Place, and found, as they do still, bigger Stones than in any other Mines, viz. some above forty Carrats, and one of 900, which *Mangimela* presented to *Aurang-Zeb*: But the Mischief of these Stones is, they partake of the Quality of the Soil, and are few of them clean; but some are black, and others red, and others green and yellow. Near *Soumelpour*, in the Kingdom of *Bengal*, is a River called *Gouel*, where there are Diamonds found mixed with the Sand. The Way from *Agra* to this Town, lies thro' *Halabis*, *Banarous*, and *Soumelen*, from whence you pass to the Island of *Rhodas*, which is one of the strongest Places in all *Asia*, being seated upon a Mountain, fortified with six Bastions, twenty-five Pieces of Cannon, and three Motes full of Water, in which are good Fish, to *Soumelpour*, which is a great Town, but the Houses are built of Earth, covered with Branches of Cocoa-trees. The Road from the Fort lies through dangerous Woods, because much pestered with Robbers. The Rajah, in whose Jurisdiction it is, lives half a League from the Town in Tents set upon a rising Ground, at the Foot whereof runs the River *Gouel*, where Diamonds are found. This River descends from the Southern Mountains, and being filled with the great Rains, brings down, in *December*, vast Quantities of Sand, which the People in great Multitudes search for fifty Leagues together, and find all those Points which are called natural Points in it, but seldom find any large Stone.

4. In the Island of *Borneo*, which is the largest Island in the World, is another River, called *Succadan*, in the Sand whereof they find Diamonds, as hard as any in the other Mines; but the Queen of the Mine will permit none to be carried out of it; so that all that come from thence are conveyed out by Stealth. In this Island it is remarkable that the Queen, and not the King, has the Sovereign Command; as have also the inferior Women the Rule over the Men; for the People are so curious always to have a lawful Heir upon the Throne, that the Husband not being certain that the Children she bears are his own, they rather chuse to be governed by a Woman, to whom they give the Title of Queen, her Husband being only her Subject, and having no Power but what she permits him.

At the Mine of *Recolenda* they weigh by *Mangolins*, which are each a Carrat and three Quarters, and pay in new Pagods; as they do also at *Clour*. At the Mine of *Soumelpour*, in *Bengal*, they weigh by *Raks*, which are each Seven eighths of a Carrat, and pay in *Roupees*. The Roads to the Mines, though some fabulous Relations had made them very dangerous, full of Tygers, Lions, and cruel People, are not only free from all Wild-Beasts, but the People are very loving and courteous. The Price of Diamonds are thus to be known: If it be a thick Stone, well squared, and have all its Corners, and the Water be white and lively, without Specks or Flaw, such a Stone is worth an hundred and fifty Livres, or ten Pounds fifteen Shillings Sterling; or of the same Value if it is cut in Facets, which they call a Rose-Diamond, if it be a fair Beak, and of the same Perfection; and if a Stone weighs more Carrats it is rated in Price. Imperfect Diamonds are not above half the Value as perfect. The two biggest Diamonds in the World for cut stones, belong, the one to the Mogul, which weighs Two hundred and twenty-nine Carrats, and fine six-twelfths of a Carrat; and the other to the Duke of *Takany*, which weighs an hundred and thirty-five Carrats, both clean and well shaped. The Mines call a *Diamonda In*, and the *Tures*, *Persians*, and *Arabians*, *Romas*.

There are but two Places in all the East where coloured Stones are found, and they are in the Kingdom of *Pegu*, and Island of *Ceylon*; the first is a Mountain twelve Days Journey or thereabouts, from *Sreri*, towards the North, and is called *Cippana*. In this Mine are found great

Quantities of Rubies, and Espenels, or Mothers of Rubies, yellow Topazes, blue and white Saphires, Jacintos, Amethysts, and other Stones of different Colours. Among those Stones which are hard, other Stones are found of different Colours, but being soft they are of no Esteem. All these sorts of Stones the Natives call Rubies, and they are the only Commodity of the Country, which makes it very poor. From *Ava*, which is the chief Fort of *Pegu*, you must go by Water to *Sreri*, because the Roads by Land are almost impassable, by reason of the Tygers, Lions and Elephants, which abound in the adjacent Woods.

The King of *Pegu* keeps all his choice Stones for himself and Subjects, and suffers few of them more than of three Carrats Weight, that are clean, to be exposed. Rubies are sold by *Raks*, and the Payment is made for them in Pagods. A Ruby of above six *Raks* Weight, is almost invaluable. There are some Rubies, but most of them are Ballies Rubies, and abundance of Ballard-Rubies, Saphires, and Topazes, found in the Mountains, that run from *Pegu* to the Kingdom of *Cambaya*. The other Place where Rubies are found, are in a River in the Island of *Ceylon*, which descends from certain high Mountains in the Middle of the Island; it swells very high when the Rains fall, and when it becomes low again the People make it their Business to search among the Sands for Rubies, Saphires, and Topazes. All the Stones that are found in this River are generally fairer and clearer than those in *Pegu*. In *Hungary* is a Mine of Opals, a Stone no where to be found in the whole World but there. Turquoises are of two sorts, viz. the old Rock and the new, and are only found in *Persia*. The old Rock lies near a great Town called *Micabourg*, and is reserved only for the King's Use, to adorn Hilt of Swords, Knives, and Daggers, instead of enamelling. The new Rock is of a pale Blue, inclining to white, and little esteemed. Emeralds, though said to be Oriental, are not found in any Part of the Eastern Countries, but are brought from *Peru* to the *Philippine* Islands, and so transported into *Europe*.

6. The Fishery for Pearls is in divers Places, as in the *Persian* Gulph, round about the Island of *Bakran*: It belongs to the King of *Persia*, who has a Fort there, and in it a Garrison of three hundred Men. Every one that fishes here pays to the King five *Abassis*, whether he gets any thing or no; and the Merchants pay at a certain Rate for every thousand of Oysters. There is a Pearl-Fishery likewise upon the Coast of *Arabia-Felix*, right against *Bakran*, near the City of *Catifa*, which, together with all the Country, is under the Jurisdiction of an *Arabian* Prince. The Pearls that are taken here, are sold to the *Indians*, who will give a good Price for all, as well the uneven as round ones. All over *Asia* they chuse such as are of a yellowish Water, inclining to white before the pure white; because, they say, they will never change the Colour as the white will, both by Time and constant Wearing. There is a wondrous Pearl in the Possession of *Iman-Heli*, Prince of *Mascate*, which is the best in the World, not so much for its Bigness, for it weighs not above twelve Carrats and one sixteenth, nor for its perfect Roundness, but for its transparent Clearness, for you may see almost through it: The Great Mogul, by a *harjan*, offered forty thousand Crowns for it, but it was not accepted. There is another Fishery for Pearls in the Sea that washes the Walls of *Manar*, in the Island of *Ceylon*; for their Roundness and Water they are the fairest that are found, but rarely weigh above three or four Carrats. There are excellent Pearls of a very good Water, and large, found on the Coast of *Japan*, but are rarely fished for, because Jewels are of so little Esteem among the Inhabitants.

In the *West-Indies* there are several Places for Pearl-fishing, viz. all along the Island of *Culagna*; but the Pearls are small, seldom weighing above five Carrats. In the Island of *Margarita*, a League from *Culagna*, but a larger Island, the Pearls are not found here to plentifully, but are of an excellent Water and very big, some weighing fifty-five Carrats. *Camogatte*, near the Continent, *Kio de la Uacba*, and *St. Martha*, produce weighty Pearls, but ill-shaped, and inclining to a Lead Colour. *Sereb* Pearl and *Bakran*, though a Necklace of them is of Value, yet they

they are not to be compared with the *Eastern or West-Indian Pearl*. These sorts of Pearl do all grow in an Oyster, like Eggs in the Belly of a Pullet, and there are many in some, but none in many others. They fish in the Eastern Seas twice a Year; the first Time in *March and April*, and the second Time in *August and September*, and the Fairs are kept in *June and November*. Before they fish in any Place, they try before-hand whether it will turn to any Account, by sending seven or eight Barks, which are to bring them each a thousand of Oysters, which they open, and if the Oysters per thousand yield five Fanes, or above, as some will yield seven, then they know the Fishing will turn to an Account. They fish in twelve Fathom Water; and five or six Leagues off at Sea: They are guarded by some small Men of War, to defend them from the *Malabars*, to which every Diver pays eight Piasters for their Attendance. The more Rains fall the more profitable the Fishery generally happens to be.

7. Coral, though of little Esteem in *Europe*, yet is much valued in the other three Parts of the World. There are three Places where they fish for it upon the Coast of *Sardinia*, viz. *Arguerrel, Boza*, and the Isle of *St. Peter*. On the Coasts of *Africa* also they fish for it near the Baffin of *France*, and *Tabarqua*, and on the Coasts of *Sicily*, near *Trepano*, but the Coral is small, and ill-coloured. Near *Cape de Quieres*, on the Coast of *Catalonia*, the Coral is large, and of an excellent Colour, but the Branches are short. At *Majorca* and *Corfica* there is a Fishery for it. These Places are all in the Mediterranean-Sea, for there is none at all in the Main-Ocean. Some think that Coral is soft in the Sea, but it is really hard; though it is true, that in certain Months in the Year there is a milky Substance issues from it, and if it falls upon any thing, produces Coral; and there are certain Worms in the Sea that eat it.

They fish for Coral from the Beginning of *April* to the End of *July*, but never above forty Miles from Land, and that in such swift Barks, that no Gallies can overtake them. In *Japan* they value nothing so much as a good Grain of Coral, wherewith they pull the String that shuts their Purfes; and in this they seek to excel one another, so that a Piece of Coral as big as an Egg, fair and clean, without any Flaw, will produce as much as a Man can, in reason, ask for it. The *Portuguese* have sold such Pieces for 20000 Crowns. All over *Asia*, and especially all over the Northern Parts of the *Mogul's* Dominions, and all along the Mountains, as you go to the Kingdoms of *Asem* and *Boutan*, the meaner sort of People wear it for Bracelets and Necklaces.

8. Yellow Amber is only found upon the Coast of *Prussia* in the *Baltick-Sea*, for the Sea throws it upon the Sand, when certain Winds blow. The Elector of *Brandenbourg* farms it out for 20, and sometimes for 22000 Crowns a Year; and the Farmers keep a continual Guard on both Sides of the Sea, that it be not stole. It is nothing else but a certain Congelation made in the Sea like Gum; for sometimes Flies and Gnats are congealed in it. In *China* it is a Custom for the great Lords, at their Feasts, for Grandeur and Magnificence, to set three or four different sorts of Perfuming-Pots on the Table, and to throw into every one of them a vast Quantity of Amber, and the bigger the Pieces the more magnificent is the Entertainment accounted. This Waste of Amber makes it the best Commodity that can be carried into *China*; but the *Hollanders* have engrossed it.

As for Ambergreen, no Man knows what it is, or where, or how it is produced. It is most probable that it must be in the Eastern Sea, though some have been found on the Coasts of *England*, and other Nations of *Europe*. The greatest Quantity of it is found upon the Coast of *Melinda*, at the Mouth of the *Rio de Sena*. A *Portuguese* sailing from *Goa* to *Malacca*, after he had passed the Straights of *Malacca*, found a Piece of thirty-three Pound Weight, and a *Middilburgber* a Piece of forty-two Pound upon the Coast of the Island of *St. Maurice*.

The best sort, and greatest Quantity of Musk, comes from the Kingdom of *Boutan*, and from thence it is brought to *Patna*, the chief City of *Bengal*, where the Natives truck it away with the Merchants for Coral, Yel-

low Amber, and other Commodities, rather than Gold or Silver. It grows in a Bladder on the Belly of a certain Creature, between the Genitals and the Navel, which the People who fell it cut off after it is killed. It looks like clotted Blood when it is new cut off. None of these Creatures have above one Bladder, which is not bigger than an Hen's Egg, and will not yield above half an Ounce of Musk; and sometimes three or four will not yield an Ounce. The Scent of the Beast is so strong, that it makes one's Head ach to come near it. These Creatures must be certainly very numerous, considering the great Quantity of Musk that is to be sold.

9. Bezoar comes from a Province of *Golconda*, towards the N.E. It is found in the Paunch of a Wild-Goat, which brouzes upon a certain Shrub; and having eaten the Buds or Tops of the Boughs, the Bezoar is produced by them in the Maw of the Goat, and is of divers Shapes, according to the Form of the Bud. The Natives, by feeling on the Belly of the Goat, know how many Stones he has within him. The Excellency of the Bezoar is in the Bigness, although the small have the same Vertue with the larger; for if five or six Stones weigh an Ounce, they are worth no more than seventeen or eighteen *Franks*; but if one Stone weighs an Ounce, it is worth an hundred *Franks*; and one of four Ounces and an half was sold for two hundred Livres. In what Part of the Body the Bezoar is bred, none can tell. As well in the *East as West-Indies*, there are great Quantities of Bezoars that breed in Cows, and of a great Bigness, viz. seventeen or eighteen Ounces, but they are little esteemed, six Grains of the former working more powerfully than thirty of this.

The Bezoar that breeds in Apes is so strong that two Grains will work as powerfully as six Grains of Goat's Bezoar, but it is very scarce, as being found only in the Apes of the Island of *Malassar*. The Scarcity as well as Strength, makes it dear, so that a Piece as big as a Nut is worth a hundred Crowns.

The Porcupine-Stone, which is bred in the Head of that Creature, is more precious than Bezoar against Poison: If it be steeped in Water a Quarter of an Hour, it makes the Water as bitter as possible. There is another Stone taken out of the Belly of the same Creature, as good as the other; but being steeped in Water it loses nothing of its Weight or Bulk, as the other does.

The Serpent-Stone, which is about the Bigness of a Pidgeon's Egg, is almost Oval, thick in the Middle, and thin about the Sides. The *Indians* say it is bred in the Head of certain Serpents; but it is more probably a Composition of certain Drugs, because they are to be had of the *Bramins* only: But, however it be, it is of excellent Vertue to drive away Venom from such as are bitten with venomous Beasts; for, being laid to the Wound, it will not come off till it has drawn out all the Poison; and being steeped in Womens or Cows Milk, it recovers its former Vertue, making the Milk like Corruption. There is another Stone, called the Serpent's-Stone with the Hood, because that kind of Serpent has an Hood hanging down behind the Head, in which this Stone is found. It is often found as big as a Pullet's Egg; but it is not found in any less Serpent than of two Foot Length: This Stone being rubbed against another Stone, yields a Slime, which, being drank in Water by the Person that is poisoned, powerfully expels the Venom. These Serpents are found only on the Coasts of *Melinda*: But the Stones are bought of the *Portuguese* Mariners and Soldiers that come from *Mozambique*.

10. Gold is found in the greatest Quantities in the Islands of *Japan*, which lie Eastward of *China*; though some think it's brought from *Formosa* thither. The *Chinese* also exchange a sort of Gold, produced in their Country, for Silver, Weight for Weight, because they having no Silver-Mines, prefer it before Gold, but it is the coarsest of all the Gold. In *Asia*, in the Island of *Celebes*, or *Malassar*, there is found Gold among the Sand of their Rivers. In *Achen*, or *Sumatra*, after the rainy Season, when the Torrents are waded, they find Flints waded down from the Mountains with Vens of Gold in them; and the Inhabitants of the West-side of the same Isle,

bring the *Dutch*, when they lade their Pepper, great Store of Gold, but as bad, if not worse, than their *China* Gold. Towards *Tibet*, which is the ancient *Caucasus* in the Territories of a *Rajah*, beyond the Kingdom of *Kachemire*, there are three Mountains close by each other, one of which produces excellent Gold, the other *Granats*, and the third *Lapis Lazuli*. There is also Gold which comes from *Tipra*, but is as coarse as the *Chinese* Gold; and these are all the Places in *Asia* that yield Gold. In *Africa* Gold is more plentiful than in *Asia*. Out of the Empire of *Monomotapa*, which extends itself as far as *Prester John's* Country, comes the purest Gold in all *Africa*, where they dig it with Ease out of the Earth, not being constrained to dig above two or three Foot deep, and in some Places not inhabited for want of Water. The People find Lumps of Gold upon the Surface of the Earth of an Ounce Weight or more.

The King of the *Abyssins* sent the *Mogul* a natural Tree all of Gold, two Foot four Inches high, and six Inches about in the Stock, with ten or twelve Branches, some half a Foot long, and an Inch about, and some smaller: In some Branches appeared Bunches like Buds, and the Roots were thick and short. The Province where the River *Sena* has its Head, called *Monkaran*, has a King of its own, and is very healthy: There the People find great Plenty of Gold-dust in the Rivers that fall into the *Sena*, but is much coarser than the other. The *Cafres* also of the other Provinces bring great Store of Gold yearly to *Sofala* and *Cbeapen-Goura*, which are under the *Portuguese*, to buy such Commodities as they want, when the Ships come. Some Years there are *Cafres* that come from the *Cape of Good-Hope* to *Sofala*, which is four Months Journey, and bring very fine Gold in Pieces, like that of *Monomotapa*, which, they say, they find in the Mountains by digging ten or twelve Foot deep.

They also bring great Quantities of Elephants Teeth; for they abound so in Elephants, that the *Palladocs* of their Fortrets and Pales of their Parks, are all made of Elephants Teeth. Their usual Diet is Elephants F. sh. In the Kingdom of *Boroë* grows a Root of a yellow Colour, very bitter, and about an Inch thick, which cures all sorts of Fevers by vomiting. There are no Silver-Mines in *Asia*, unless it be in *Japan*. But a few Years since there have been discovered plentiful Mines of Tin at *Dilegora*, *Sangora*, *Bordelen*, and *Bata*, which have qualified the Trade of the *English* thither for that Commodity.

11. The great Extent of the vast Empire of the *Mogul*, as well as the various Temperature and Productions of the Soil and Climate, makes as much Difference between one Province and another, as if they were several Kingdoms; and therefore there can be no way to give an exact Account of all Things remarkable: But, considering the several Provinces distinctly, and what's peculiarly observable in them. We will begin with the Kingdom of *Kachemire*, commonly called the *Paradise of Inaßon*: a Country, tho' mountainous, yet so fruitful, that you would take it for an ever-green Garden, being full of Trees, and Pastures with all sorts of Cattle, as Cows, Goats, Sheep, Horses, Partridges, Hares, Gazels, and the Musk-Animals. There are Abundance of Bees, but no Serpents, Tygers, Bears and Lions. The Fields produce Rice, Corn, Pulse of divers sorts, Hemp, and Saffron, being inter-sected with Ditches, Lakes, and Rivulets, to advantage their Plenty. Up and down every where also are seen some of our *European* Trees, Flowers, and all sorts of Plants, as Apple, Pears, Prunes, Apricots, Nuts, and Vines; and their Gardens are full of Melons, Water-Melons, Sherrets, Berets, Radishes, and all sorts of our Pot-herbs, and some that we have not: But their Fruits are not so many, nor so good as ours.

The People are very industrious as well as intelligent, and make *Pallekes*, Trunks, *Bullheads*, *Standishes*, Boxes, and Spoons, with many other Pieces of handsome Workmanship, finding them all over the rest of the *Indies*; and to some of these they give such a Varnish, with counterfeit Veins, and Gold Streaks, that nothing is finer. They make also a kind of a Stuff an Ell and an half long, and about an Ell long called *Chales*, and embroidered at

each End, for about a Foot, so soft and fine, as is inimitable, though it is attempted at *Paina*, *Agra*, and *Lahor*. The *Moguls* and *Indians*, both Men and Women, wear of them in Winter upon their Heads, and bring them over their Shoulders like a Mantle: They are made of their own Wool, which is finer than *Spanish*, or of the Hair taken from the Breast of a wild Goat in *Great Tibet*, called *Torz*: Some of these are sold for a hundred and fifty *Rupers* to the great *Omrahs*.

The People are of a fair Complexion, and especially the Women, are very beautiful, and of as fair Faces as in *Europe*. Between *Bunbor* and *Kachemire* are some Mountains that seem to part two Worlds rather than two Provinces; for on the one Side it was scorching and hot, as in the *Torid Zone*, and full of *Indian* Plants proper to it; on the other Side it enjoys a temperate fresh Air, and the Soil produced Hyssop, Thyme, Marjoram, and *Rosemary*, Oaks, Elms, Pines, and Plane Trees. Between those Rocks are admirable Cascades of Water, and among others one not to be paralleled, which running in a Channel between the Trees, on a sudden precipitates itself into the Bottom of a steep Rock, with a Noise able to make one deaf like a Cataract. In the Month of *May* here is a Fountain that for fifteen Days regularly flows, and stops thrice a Day, viz. at Break of Day, Noon, and Night: Its flowing fills a Square ten or twelve Foot broad, and as many deep, and then it stinks by Degrees till about the End of the Month, and then quite stops for the rest of the Year. By it the *Gentiles* have a Temple of the Idol *Brava*, and from thence the Fountain is called *Sind Bravi*, i. e. the Water of *Brava*, and hither many Pilgrims come to bathe and sanctify themselves.

In the Royal Garden at *Ablavel* in this Province is a Pond, where are Fishes that will come when they are called, and when you cast Bread to them. The biggest of which have also Rings in their Noses, with Inscriptions on them. At *Baramoulay* is a Mofk, in which is a Tomb of one of their *Friars* or *Saints*, where 'tis said the Sick are cured every Day which flock thither, and eleven *Moulahs*, with one Finger each, lift a huge Stone, which the strongest Man can hardly raise easily: But these things are miraculous only to the credulous and careless; but the bubbling Fountain, which rises gently, and with some little Force, making some small Bubbles, and bringing up Sand with it, which goes away with it again, and the Water becomes still, and so remains awhile without Bubbles, and then rises again, is certain. In the Mountains near this Fountain is a Lake that hath Ice in Summer, and looks like an Icy Sea; and a little farther is a Place, where making a great Noise, will presently cause a Shower of Rain. Among these Mountains live a People which eat no Flesh, counting it unclean, yet they have no Religion.

The City of *Azemer* is famous for the Tomb of *Cogea Mandé*, who was in great Reputation for his Sanctity, and therefore they come from all Places in Pilgrimage to it. It is a fair Building, with three Courts, paved with Marble, and hath in it a Reservatory of Water, walled about; and in the Province adjoining there is a Beast like a Fox in the Snout, but no bigger than a Hare, of the Colour of a Stag, and Teeth like a Dog: It yields most excellent Musk; for at the Belly is a Bladder full of Matter, like corrupt Blood, which is the Musk. They cut off the Bladder for it, but the Beast never lives long after it. There are also Pulletts, whose Skin is all over black, as are also their Bones; but the Flesh is white, and their Feathers of another Colour. The Women of this Country are marriageable at eight or nine Years old, and bear Children at ten; the Children go naked, only with a Bit of Cloth to cover their Privities. The People are rude and uncivil, and the Men great Clowns, and impudent; when they quarrel they make a great bawling, but never come to Blows. There are venomous Scorpions in this Country, and the People have several Remedies to cure the Stinging; but the best of all is Fire; for by applying a burning Coal to it, they draw the Venom out, and perfectly cure it.

The Roads thro' this Country being very stony, they shoe their Oxen, and bridle and saddle them like Horses; and if they be but a little spurred, they go as fast as a good Horse; with them also they draw their Carts and Coaches, for

ft and fine, as is inimi-
atna, Aya, and Labor.

their white Oxen are extraordinary dear. The chief Trade of this Province is Saltpetre, for the Soil being black, affords it plentifully. When it is made they carry it to *Surat* to sell it to the *Europeans*, and others, who buy it to ballast their Ships, and sell elsewhere.

12. In the Province of *Sinde*, which was anciently the Kingdom of *Dieu*, the Inhabitants are wonderfully ingenious in all kinds of Arts, and make abundance of Curiosities, for which they have a great Trade; the finest Pallanquins in *India* are made at *Tata* in this Province, and there is nothing neater, nor more convenient, than the Carriages made here; but their Waggon Wheels are one Piece of solid Timber, like a Mill-stone.

The Province of *Multan* yields Plenty of Cotton, Sugar, Opium, Brimstone, Galls, Store of Camels, which are transported into *Persia*, and other Parts of the *Indies*. It furnishes also all *India* with the finest Bows that are to be seen in it, and nimblest Dancers; the chief Town of it, of the same Name, is the Rendezvous of the *Banjans*, because of the great Trade managed there, which cannot be carried on without them; for though it is known that they make their Profit of every thing, yet most Merchants chuse rather to use them, than do their Business themselves, because they will buy their Goods much cheaper, and they refuse no Service, be it ever so base or vile. The Country of *Candabar* produces abundantly all sorts of Provisions that are necessary for human Life, unless it be on the Side next *Persia*, where it is barren. The Inhabitants are great Lovers of Wine, though they are prohibited to drink it; and if any be found drunk, or doing any scandalous Action in Drinking, they are set upon an Ass, with their Face to the Tail, and led about the Town, and attended by the Officer of the Controul, who beats a little Drum, and all the Children follow him, hooping and hollowing. There are many *Persians* in this Province, but they are poor, and employed by the *Mohammedans* in the meanest Offices. The King of *Persia* will not allow the *Gentile's* Wives to burn themselves in that Part of his Dominions.

In the Mountains of *Cabulistan* grow Mirabolans, and many other sorts of Drugs. The Country also is full of Aromatick Trees, which turn to a good Account to the Inhabitants; as do also the Mines of a certain sort of Iron fit for all Uses. Out of this Province come most of those large Canes, of which are made Halberds and Lances, for they have many Grounds planted with them. They reckon their Months by Moons, and with great Devotion celebrate a Feast called *Houli*, which lasts two Days, first in praying, and making Oblations, and then in dancing in the Streets in Companies to the Sound of Trumpets, making Bon-fires, and destroying the Figure of a Giant. Their Charity consists chiefly in digging Wells, and building little Houles on the Roads for Travellers, and by them is a Place for such as are heavy laden, to put off and take up their Burdens without any Body's Help. This Country supplies the whole *Indies* with Physicians, which are all *Banjans*, and some of them very skilful in Medicines, and among other Remedies make great Use of Burning.

In the City of *Labor* the Great Mogul has a Palace, on one Gate of which is a Crucifix, and on the other the Picture of the Virgin *Mary*. Some have thought them Marks of Christianity, which was anciently professed in these Countries; but it is really nothing but a Piece of Flattery and Hypocrisy of the King *Iehan Guire* to oblige the *Portuguese* to be his Friends. There are many *Gentiles* in this City, who have several Pagods all raised seven or eight Steps from the Ground, and some of them are well adorned. This is one of the largest and most fruitful Provinces in the *Indies*, the five Rivers, which make up the River *Indus*, from whence the Moguls call it *Pangcab*, making it very fruitful; for it yields all sorts of Provisions necessary for Life, as Rice, Corn, and several sorts of Fruits. The Wines made here are pretty good, and in the Towns are not only all sorts of painted Cloths wrought, but all the other Manufactures usually made in the *Indies*.

13. In the Province of *Aloud*, or *Houad*, and *Varad*, or *Varal*, there are many Rajahs that own not the Authority of the Mogul: At *Hogawat* in this Province is the Pagod of the Idol *Matta*, to which the *Gentiles* that come to pay their Devotions to her, are said to sacrifice always some part

of their own Bodies. At *Calamac*, where the *Gentiles* have also another famous Pagod, there is a Spring of very cold Water, which issues out of a Rock that continually belches out Flames, and the *Bramins* make great Advantage of the People who come to see the Miracle. In the Province of *Ouleffer* is the famous Temple of *Jarganate*, where one of the *Faquirs* undertook to measure the whole Kingdom of the Mogul with his own Body, and being about to perform it, was loaded with Charity, and had much Respect given him.

The People of this Country, as well *Mohammedans* as *Gentiles*, are extraordinary voluptuous, have a captious and subtil Wit, and are much addicted to stealing. The Women are very bold and lascivious, and use all Arts to corrupt and debauch young Men, especially Strangers, whom they easily trapan, because they are handsome, and well dressed. In this Province are above twenty thousand Christians, who lived in great Unity under potent Kings; but the Mogul becoming Master of it, and bringing in *Mohammedanism*, a general Disorder, and Corruption of Manners, invaded them.

The Country is full of Torrents, and the People live in much Ease, because it is very fruitful, producing Corn, Rice, Sugar, Ginger, Long-pepper, Cotton, and Silk, with several other Commodities; as also Fruits, especially Anana's as big as Melons, and pleasant to the Taste, having something of the Flavour of the Apricot. In this Province the Mogul hath a Castle, whither he sends such Traitors as are condemned to perpetual Imprisonment, and to that End 'tis always strictly guarded.

14. In the Province of *Malva* are the Territories of *Raja-Rana*, who deduces his Pedigree from *Porus*, tho' he is now tributary to the Mogul. *Ratispore* is the capital City of it, and a Place of great Trade; it stands upon a Mountain, and hath a Castle belonging to it, to which the Grand Mogul sends such Traitors as are condemned to die. They are kept Prisoners for some time, and always some body is present with them, and the Day they are to die they make them drink a great Quantity of Milk, and then throw them down from the Top of the Castle upon the declining Side of the Hill, which is full of sharp-pointed craggy Stones, that tear the Bodies of the Wretches to Pieces before they can reach the Bottom of the Precipice.

At *Chitor*, once a famous Town, but now almost ruined, are the Remains of an hundred Temples, or Pagods, and many antique Statues, to be seen: In this Country are two kinds of Bats, one like ours in *Europe*, but the other is much different: It is eight Inches long, and the Body is covered with yellowish Hair. The Body round, and as big as a Duck's, the Head and Eyes like a Cat's, a sharp Snout like a Rat, pricked black Ears, without Hair, no Tail, two Teats as big as the End of ones little Finger; under the Wings four Legs, Wings almost two Foot long, and seven or eight Inches broad, of a black Skin, like wet Parchment; the two Fore-Legs end in five Talons, like a Man's Hand, and black, and without Hair; but it has Claws instead of Nails, with which it hangs upon the Branches of the Trees. They fly high, and are said to be good Meat.

The Province of *Candish* is the most plentiful for Cotton of any Part of *Indostan*, and of it the People make abundance of Cloth. They paint some, but the white are most valued for the lovely Mixture of Gold and Silver that is in them; for the Rich make their Veils, Scarfs, Handkerchiefs and Coverings of them, but they are dear. Here is also Plenty of Rice and Indigo growing. In the Country of *Balagatz* are a great many Warrs, Manguirs, *Bihova*, *Quilau*, *Caboul*, and other sorts of rare Trees. Here are vast Numbers of Antilopes, Hares, Partridges, and towards the Mountains are Merons, or wild Cows. Towards *Naoponia* grows the best Rice in all the *Indies*; for it has an odoriferous Taste, which that of other Countries has not. Cotton abounds here also, and in many Places they have Sugar Canes, with Mills and Furnaces to make the Sugar. The Ways here are always safely guarded. The Pagods of *Aloa* in this Province are so numerous, and so full of Pillars and Pillasters, and have so many thousand Figures all cut out of the natural Rock, that they may be said to be Works almost surpassing human Force.

In the Province of *Daltabat* are bred the most active Tumblers in the World, who do all the Tricks of ours in *Europe*, and many more; they are as supple as an Eel, and will turn their whole Body into a Bowl, which others may roll about with their Hands; but the most active are Girls, in the Province of *Chitanagar*, which is diversified with Hills and Plains. The Hills afford Iron, of which, at the Town of *Indelvar* chiefly, the People make a great many Swords, Daggers, and Lances, which are vended all over the *Indies*. All the Plains are good Ground, some sowed with Rice, and the rest planted with Cotton Trees, Tamarinds, Warrs, Cadjourns, Manguires, Quielan, and others, and all watered with several Rivers, which turn and wind every Way with fair Tanques, out of which they draw the Water with Oxen; but those Parts are much troubled with Thunder, Lightning, Whirl-winds, Rain, and Hail-stones, as big as Pullets Eggs.

In the Province of *Telenga*, as there are many *Gentiles*, so there are none more superstitious than they. They have abundance of Pagods, with Figures of Monsters, which can excite nothing but Horror instead of Devotion, unless in such deluded Souls. They use frequent Washings; for Men, Women, and Children, as soon as they are out of their Beds in the Morning, go to the River to wash, and the Rich have Water brought them, and so again as often as they eat. Women, who have lost their Husbands, are conducted to the River by their Friends that comfort them, to wash, and so are Women as soon as they were brought to Bed; for in no Country are Women so easily delivered as here. They will eat nothing but what is dressed by themselves, or their own Cast or Tribe, and buy all their Food of the *Banjans*. They drink nothing but Water, wherein they put Tea or Coffee, nor use any Dishes, but Leaves of Trees, for fear any Person of another Religion should have eaten out of it. They eat no Flesh, except it be on a certain Day of the Year, and that very privately; but the *Rajaposts* eat any Fish, or Flesh, except the Cow; they use Fasting very much, their ordinary Fast is twenty-four Hours; and there are a great many that will fast, especially Women, six or seven Days, and some will fast a Month, eating no more than a Handful of Rice a Day, and others will eat nothing at all, only drink Water, in which the Root of *Criata* has been boiled, which is good for many Distempers, and strengthens the Stomach. When the Fast is at an End, the Bramin goes with a Drum to the Houle of the Penitent, and gives him or her Leave to eat. Lastly, in the Province of *Baglana*, and also the People on the Sea-Coast, who are much given to Sea-faring; the *Gentiles* offer many Sacrifices to the Sea, especially when any of their Relations are abroad upon a Voyage. The manner of sacrificing is thus: They make a Veil of Straw about three Foot long, and cover it with a Veil, and carry it down to the Shore, with a Basket or two of Meat and Fruits, there they throw it into the Sea, and having made some Prayers, leave the Basket on Shore, that the Poor and others may come and eat what it contains.

At the End also of *September*, when the Sea, after the tempestuous Season from *May* becomes again navigable, they offer another Sacrifice, but with no great Ceremonies; for they only throw Cocoa-nuts into the Sea, and every one throws one, the Boys plunging themselves into the Sea to catch them, and shewing many Tricks in the Water, which are pleasant to behold. In this Province the *Indians* marry their Children very young, and make them cohabit sooner than in any other Part of the *Indies*; they marry them at four, five, and six Years old, and suffer them to bed together when the Boy is ten, and the Girl eight; but they leave bearing by thirty, and grow extremely full of Wrinkles; and therefore in some Parts of the *Indies* they do not marry till fourteen Years of Age. The Women are very fruitful, because they live very frugally, as well as their Husbands, and their Children are brought up very easily. They go naked till they are about seven Years old, and when they are about two or three Months old they let them crawl about till they are able to go, and when they are dirty, they wash them, and so they come to be as tract as ours, without the Posture of swaddling Bands, or Straps.

15. *Bengal* is one of the most fruitful Countries in the World, superior even to *Egypt* itself. It bears Rice in such abundance, that it not only furnishes its Neighbours, but very remote Countries, such as *Ceylon*, and the *Maldives*; it abounds so in Sugar, that it supplies the Kingdom of *Galconda* with it, as also *Arabia* and *Mesopotamia*, by the Way of *Mecca* and *Bassora*, and *Perfia* itself, by *Banderabush*. The *Portuguese* make excellent Sweet-meats here, with which they drive a great Trade, and the People preserve and candy Pome Citrons, a Root which is long, like *Sarsaparilla*, very delicate Ambals, Anana's, Mirobalans, Lemons and Ginger, great Quantities of which are sent to us in *Europe*. It is true, it does not produce much Corn, because the People feed so much upon Rice; but it produces sufficient for their Use, and to accommodate the Ships of *Europe* with excellent Biscuits very cheap; three or four sorts of Pulse, which, together with Rice and Butter, are the usual Food of the poor People, are there to be had almost for nothing; for a Rupee, which is about half a Crown, you may buy twenty good Pullets, and more, and Geese, and Ducks, in Proportion. Kids and Sheep are very plentiful; and there is such Store of Pork, that the *Portuguese* live on nothing else almost, and the *English* and *Dutch* victual their Ships with it. There is also Plenty of all sorts of Fish, both in the fresh and salt Water, and Want of nothing; for this Reason, together with the Liberty that all Men enjoy for the Exercise of their Religion there, all the Christians are fled thither from all Ports taken by the *Dutch*; so that in *Agouli*, 'tis said, there are eight or nine thousand Christians, and in other Parts of the Kingdom above twenty-five thousand more; it is the general Magazine for Cotton Cloths, and Silks, not only for *Indostan*, but all the neighbouring Kingdoms, and *Europe* itself.

The *Hollanders* transport vast Quantities of both, some fine, and others coarse, both dyed and white into *Japan*, *Europe*, and other Places, besides what the *Portuguese*, *English*, and other Merchants sell elsewhere: 'Tis true, the Silks are not so fine as those of *Perfia*, *Syria*, *Said*, and *Bampt*; but then they are cheaper, and very good of their Price. Saltpetre is found in such Quantities in this Country, that the *English* and *Dutch* load whole Ships full to carry it to many Places of the *Indies*, and into *Europe*. From *Bengal* also there comes Lac, Opium, Wax, Civet, and Long-Pepper; and even their Butter is transported into other Places. The Air, indeed, is not over healthy, especially near the Sea for Strangers, so that of the *English* and *Dutch* many of them died at their first coming there; but now by restraining their Intemperances, and using a little *Bordeaux* Wine, Canary, or Shiras, they preserve themselves tolerably healthy among them. The whole Country is well watered by Channels cut out of the River *Ganges*, which contributes as much to their Commerce as Plenty; it is well peopled, and has abundance of Villages full of *Gentiles*, and the Fields produce, besides Sugar, Rice, Corn, and Pulse abovementioned, Sesamum for Oil, small Mulberries to feed Silk-worms, Anana's, and other Fruit-bearing Trees. In the *Ganges* also are many other fruitful Isles covered with continual Verdure; but towards the Mouth some of them are abandoned, because they were much infested by the *Corsairs* and the *Franks* of *Racen*, so that they have no other Inhabitants but Tygers, Gazals, Hogs, and Poultry. Nature in this Country produces Miracles, as they seem to us far distant. It is not uncommon in rainy Seasons to see Rainbows of the Moon in the Night, when the Moon is at the full, and in some calm Seasons the Bushes will be covered so thick with little stinging Flies, that they seem all on Fire, and there arise frightful Flames in great Globes, which the ignorant look upon as Devils.

16. The Kingdom of *Bentan* is of a large Extent, and it is hard to come to a perfect Knowledge of it, the Merchants that trade from thence into the *Indies* being able to give but a very imperfect Account of it. The Caravan is three Months travelling to *Panura*, setting out at the End of *December*, and in eight Days arriving at *Gerrochepur*, which is the last Town in the Great Mogul's Dominions; and there is a heavy Custom of 251 per Cent. imposed upon

of War. The People are as subject to Wens on their Throats as those of *Boutan*, inasmuch that some of their Women have them hanging down to their Breasts, which proceed from the Badnels of the Waters. There is nothing in *Tippa* which is fit for Strangers.

There is a Mine of Gold, but the Metal is very coarse; and there is a sort of coarse Silk, which is all the Revenue the King has, for he exacts no Subsidies from his Subjects. Only they who are not of the prime Nobility work six Days in the Year in the Mine or Silk-Works. He sends his Gold and Silk into *China*, and for them they bring him back Silver, which he coins into Pieces of the Value of eighteen *Sous*, and others of twenty-two *Sous*. In the Language of this Country he is called *Dieu-Aragari*, which is stamped upon one Side of the Money, and on the other *Chattermani Roy de Tippura*; he also makes thin Pieces of Gold, like the *Aspers* of *Turky*, of which he has two Sorts, four of one making a Crown, and two of the other.

19. The Kingdom of *Asem* is one of the best Countries in all *Asia*, for it produces all Things necessary for human Subsistence, without any Need of foreign Supply. There are in it Mines of Gold, Silver, Steel, Lead, Iron, and great Store of Silk, but coarse. There is a Sort of Silk found under the Trees, which is spun by a Creature like our Silk-worms, but rounder, and which lives all the Year long under the Trees. The Stuffs that are made of this Silk glitter very much, but they fust presently. This Country also produces all sorts of Gum-Lac, of which there are two sorts; one grows under the Trees of a red Colour, with which they paint their Linnen and Stuffs; and when they have drawn out the red Juice, the remaining Substance serves to varnish Cabinets, and make Wax, being the best Lac in *Asia* for those Uses. As for the Gold, they never suffer it to be transported out of the Kingdom; nor do they make any Money of it, but preserve it in Ingots, which pass in Trade among the Inhabitants; but the Silver the King coins into Money of three Drams four Grains Weight, which make twenty-three *Sous*. Tho' their Country is very plentiful in all Things, yet there is no Flesh they esteem so much as Dogs-Flesh, which is the greatest Delicacy at their Feasts, and is sold every Month in every City of the Kingdom upon their Market-Days. They have also great Store of Vines and very good Grapes, but they never make any Wine, but dry the Grapes to make *Aqua Vita*.

They have no Salt but what is artificial, which is made two Ways; first, they raise great Heaps of that green Stuff that swims on the Top of the standing Waters, which the Ducks and Frogs eat; this they dry and burn, and the Ashes thereof being bound in a Cloth in Water, become very good Salt: But the most usual Way is to take the Leaves of *Adam's* Fig-tree, which, being burnt, the Ashes thereof make a Salt so tart that it is impossible to eat it till the Strength be taken away, which they do by putting the Ashes into the Water, and stirring them up and down ten or twelve Days together, and then they strain the Substance through a Cloth and boil it; for, as the Water boils away, the Bottom thickens, and when the Water is all boiled away, they find at the Bottom very good and white Salt. Of the Ashes of the Fig-Leaves they also make a Lye with which they wash their Silks, which makes them as white as Snow; but they have not Leaves enough to whiten half the Silk that grows in their Country.

In the City of *Kemmeroof* the King of *Asem* keeps his Court. This King requires no Subsidies of his People, for all the Mines in the Kingdom are his own; and, for his Subjects Ease, he has none but Slaves that work in them; so that all the Natives of *Asem* live at their Ease, and every one has his House to himself, and in the Midst of his Ground a Fountain encompassed with Trees, and most commonly every one an Elephant to carry their Wives, for they have four Wives; and when they marry them, they say to them, *I take thee to serve me in such a Thing*, and to another, *I take thee to do such a Business*: So that every one of their Wives knowing what she has to do in the House, there is no Difference among them. The Men and Women are generally well complexioned,

only those that live more southerly are swarthy, and subject to Wens in their Throats; nor are they so well featured, and the Women are something flat nosed. In the Southern Parts the People go stark naked, only covering their Privy-Parts, with a Bonnet upon their Heads like a blue Cap, hung about with Swines Teeth.

They make large Holes in their Ears, that you may run your Thumb in, and hang in them Pieces of Gold and Silver; Bracelets also of Tortoise-Shells and Sea-Shells, as long as an Egg, which they saw into Circles, are in great Esteem among the meaner sort, as Bracelets of Coral and yellow Amber are among the richer. When they bury a Man, all his Friends and Relations must come to the Burial, and when they lay the Body in the Ground, they all take off their Bracelets from their Arms and Legs, and bury them with the Corps. In the City of *Azoo* are the Tombs of the Kings of *Asem* and all the Royal Family; for though they are Idolaters, they never burn their dead Bodies, but bury them. They believe that the Dead go all of them into another World, and that they that have lived well in this have Plenty of all Things; but they who have been ill Livers, suffer the Want of all Things, being in a more especial manner afflicted with Hunger and Drought; and that therefore 'tis good to bury something with them to serve them in their Necessity. For this Reason their Kings build themselves, in their Life-times, Chapels in the great Pagods to be buried in, wherein they store up great Sums of Gold and Silver, and other Moveables of Value: Besides, when they bury any of their Kings, they bury with him likewise whatever he esteemed most precious in his Life-time, whether it be an Idol of Gold or Silver, or whatever else, that being needful in this, is also as they think necessary in the Life to come.

But that which favours most of Barbarism is this; that when any King dies, all his best-beloved Wives, and the principal Officers of his House, poison themselves to be buried with him, and to wait upon him in the other World: And they also bury one Elephant, twelve Camels, six Horses, and a good Number of Hounds, believing that all these Creatures rise again to serve the King. 'Tis thought these were the People that first invented Guns, and Powder, and that the Invention spreading itself into *Pegu*, and then into *China*, it from thence became known in the World, and so the *Chinese* were thought to be the Inventors of them. Their Powder is very small and round, like ours in *Europe*, and very strong. As for the Kingdom of *Siam*, and that of *Macassar*, the Accounts already given of them, dispense us from the Necessity of inserting what this Author has written about them. But with regard to that of the Kingdom of *Tunquin*, or *Tonquin*, it is at once so concise and so curious, that it would be unjust to conceal it from the Reader's Notice; and, therefore, with this Description we shall conclude this Part of the Travels of Mr. *Tavernier*.

20. The Kingdom of *Tonquin* is bounded on the East by *Canton*, a Province of *China*, on the West by the Kingdom of *Brama*, on the North by *Junan* and *Quaini*, two other Provinces of *China*, and on the South by *Cochin-China*. The Air is mild and temperate, though it lies in the Torrid Zone, and the Ground so fertile that there is a continual Spring: Frost and Snow are never seen here, and the Gout, Stone, and Pestilence are Strangers in it. The North and South Winds, which continually blow, and divide the Year between them equally, moderate the Heats that they are not troublesome; yet, once in seven Years, they have hideous and terrible Tempests, which make strange Desolations, pulling up Trees, and blowing down Houses. These Exhalations are thought, by their Astrologers, to proceed from the Mines, as is also believed, in *Japan*.

The whole Kingdom is divided into several Provinces, which together contain, as it is said, 20000 Cities and Towns, though many Families, with their Cattle, live always upon the Water in Boats, after the Manner of the *Cochin-Chinese*. The Country is for the most part level, save that in the North there are some Hills. It is watered with several Rivers, some of which carry Vessels of a good Burthen, and so are commodious for Trade. In all this Country grow neither Corn nor Vines, because they never

ly are swarthy, and subject
are they so well featured,
that noted. In the South-

- nor Vines, because they
- never

never have any Rain but in *June* and *July*; but Rice is
produced in vast Quantities, which supplies the People
both with Meat and Drink: They have also good *Aqua*
Vite, or Strong-Waters. Their Fruits are excellent, but
all different from ours. Their Palms bear larger Nuts
than in any Part of *Asia*; they are as big as a Man's
Hand, and shaped like a Cocoa, the Pulp is as white as
Snow, and tastes like our Almonds, and every one yields a
considerable Quantity of Liquor very pleasing to the Pa-
late. The Gogovier, which resembles our Laurel, is of
two sorts, the one bears a Plumb, green without and red
within, but the other a yellower Fruit, which is much
more esteemed. The Papager bears a Fruit like a small
Melon, and the Taste is very delicious. The Arraga,
which grows upright and tall, like the Mast of a Ship,
bears Branches only at the Top, and the Fruit is like a
Nutmeg; they bruise it with Beetle and Chalk, which
they chew to make their Teeth white, Lips vermilion,
and Breath sweet.

They have Figs of two sorts, the one like ours, the
others like those called *Adam's* Figs, as long as a Man's
Finger. They have a Tree like our Willow, called the
Powder-tree, because of the Wood burnt into Charcoal,
they make Gun-powder. The Janbagels grow very high,
and bear a Fruit resembling a Citrul-Cucumber, which
has a Pulp like a Pomegranate, and is very pleasant in the
hot Seasons. Their High-ways are planted with Warr-
trees, which are a great Convenience for Travellers; for
some of them are so big that two or three thousand Men
might shelter themselves under them, some of their
Branches being three hundred Paces long, and supported
at every twelve Foot with under Branches, which, having
taken Root, support them like so many Pillars: The Nuts
of them, which are no bigger than a Walnut, have a Ker-
nel like Millet, which serves only for Food for the Rere-
Mice, which make their Nests there. They have Bodies
as big as a Pullet, and the *Portuguese* prefer them before
it. They have a certain sort of Birds-nests, as big as a
Swallow's, which they dissolve in Water for Sauces to all
their Delicacies; they give a Flavour above all the Spices
of the *East-Indies* put together; they are found only in
the four Islands belonging to *Cochin-China*. The *Tanqui-*
nese also catch abundance of Tortoises in their Seas, which
they not only esteem excellent Food, and think they can-
not treat their Friends as they ought to do without them,
but pickle them up, and send them abroad, which causes
a Trade among them. *Tanquin* affords a mighty Store of
Ananas, and Orange-trees, which are of two sorts, the
one no bigger than Apricots, the other bigger than *Por-*
tugal Oranges, both well tasted alike, and plentiful for six
Months. Their Citrons, which are both green and yel-
low, are too tart to be eaten, but the Juice is made use of
to cleanse Copper, Tin, and Iron, for gilding, as also to
scour Silk, whiten Linnen, and take out Spots.

In *Nagulistan* they will make their Calicuts so white with
the Juice of these Citrons, as to dazzle your Eyes. Great
Quantities of Silk are made in this Country, of which
both Rich and Poor make their Garments; and the *Hol-*
landers transport many into *China*. They have but one
sweet-smelling Flower, called the Bague, which grows
like a Nofegay. They have abundance of Sugar, and eat
very much after their Meals for Digestion, but they eat it
out of the Cane, not having the true Art to refine it. In
this whole Kingdom there are neither Lions, Asses, nor
Sheep, but their Forests are full of Tygers, Harts, and
Apes, and their Fields of Oxen, Cows, and Hogs, Hens,
Ducks, and Turtles, which are the general Provisions of
their Feasts, are numberless. Their Horses are well
shaped, and the King always keeps five or six hundred of
them in his Stables. Their Elephants are of a prodigious
Bigness; there are none so tall and nimble in all *Asia*.
The King keeps five or six hundred of them for his Ser-
vice in his Palace, and Wars. They have no Cats, but
their Dogs destroy their Rats and Mice, which are very
large and mischievous. They have very few Birds, but
such Multitudes of Gnats, that they are very troublesome
at Nights, as well by their Noise as Stinging; they drive
them away by the Smoak of Rice-Chaff: But the greatest
Inconvenience of the Country are the white Emmets, whose

Biting rises Blisters on the Skin; for their Teeth are so sharp,
that they will gnaw a Post in two in a little Time, and eat
a Bale of Silk in twenty-four Hours, as if it were cut in
two.

They have no Mines of Gold or Silver in *Tanquin*, nei-
ther do they coin any Money. The chief Commodities
of this Country are, besides the Silk above-mentioned,
Lignum-Aloes, of which there are some worth a thousand
Crowns the Pound, being oily and good: All the *Moham-*
medans use it to perfume their Boards and Rooms at Vitits,
and therefore the *Portuguese* of *Goa* sent, as a rare Present
to the Emperor of *Japan*, a Piece of Lignum-Aloes six
Foot long and round, worth 54000 Livres. The *Tan-*
quinese are very faithful in their Dealings, very unlike their
Neighbours the *Chinese*, who will cheat you if they can;
and if they are at any Time over-reached, will pay in light
Money, for they are blunt and plain. Having no Money,
they make use in Trade of Ingots of Gold, and Bars of
Silver, which they have from *China* and *Japan* for their
Silks. They are worth from three to six hundred Livres,
and therefore in small Payments they either cut them in
Pieces, or pay in *Spanish* Reals.

The Forces of this King for War is prodigious; his usual
Army is 12000 Horse, 2000 Elephants, as well to carry the
King's and Nobilities Tents and Baggage as for the Service
of the Wars 300,000 Foot and 300 Gallies, and sometimes
the amount is 500,000 Men. The Condition of the Sol-
diers is very toilsome and laborious; they are always upon
the Guard, or attending their Captains in looking after the
King's Elephants, and so breeding them that they need
not be afraid of Fire, or in building Places of Shelter for
the King's Gallies in Winter; yet their Wages are so
small that they cannot maintain their Wives and Families,
but their Wives are forced to follow some Trade to sup-
port them. Their Companies consist of an hundred, or an
hundred and thirty Men, and the Soldiers are obliged
to keep all their Arms very neat and bright. The People
of *Tanquin* are naturally mild and peaceable, submitting
easily to Reason, and condemning the Transports of
Anger, and other Passions.

They esteem the Manufactures of other Countries more
than their own, yet love to live at home, and honour the
Memories of their Ancestors: Their Speech is soft, and
pleasing, they have good Memories, and are fluent in their
Discourse. They have good Poets among them, and their
People generally love Learning; both Men and Women
are well proportioned, but of an olive Complexion, and
therefore much admire the Whiteness of the *Europeans*.
Their Hair is black, and they wear it very long, and well
combed and tied upon the Crown of their Heads, or about
their Necks, to keep it from fluttering into their Eyes. The
blackest Teeth, and longest Nails, they accounted the most
beautiful. Their Habit is grave and modest, being a long
Robe; for both Sexes girt about with a silken Girdle, mixed
with Gold and Silver. The Soldiers wear an upper Gar-
ment, which reaches no farther than the Knees, and Breeches
that go down to the Middle; but have neither Hose, nor
Shoes.

The common People, except where the King's Court is,
work three Months at the King's Palace, and two Months
for the Madarns, or great Lords, the rest of the Year is
left to work for themselves and Families. One Day in the
Year they are obliged to lop Trees to feed the Elephants.
Their Rivers are free from Crocodiles, and other dangerous
Animals, which haunt the Waters of the *Nile* and *Ganges*;
but yet once a Year they overflow their Banks, after the
Rains, with that terrible Violence, that they carry away
whole Towns and Villages along with them.

The *Tanquinese* cannot marry without the Consent of their
Parents; and if they be dead, the Permission of their nearest
Kindred, and the Allowance of the Governor of the Place
where the Marriage is made; for which the Man must pay
a certain Sum limited by Law. The People are very in-
dustrious here, and all the Money the Maids get before
Marriage is to buy them two or three handsome Garments,
a Necklace of Coral, or yellow Amber, and Beads to gar-
nish their Locks, and for their Portions. There is no
Wedding without a great Feast, the poorer sort for three
Days at least, if they are able, and others for nine. The

Laws of the Land permit the Man to divorce his Wife whenever he pleases, which they many times do for slight Causes; but the Woman has not the same Privilege; and if she desires it, obtains it with Difficulty; but the Man is bound to restore the Woman what she brought with her, and keep the Children begotten between them; but now Divorces are not half so frequent as formerly. Adulteresses are punished here very severely, the Offender being cast to an Elephant bred up for that Purpose, who throws them up into the Air, and then tramples them under Feet, till they are dead.

Of all the Eastern People the *Tunquines* are the most sociable, and most frequently visit each other; generally they make their Visits about Noon, with a Train suitable to their Condition; the Princes and Mandarins ride on Elephants, or are carried in Pallenkies, and their Train is of fifty or sixty Persons; the ordinary Gentry, and Officers of the Court, ride on Horseback, and are not allowed above seven or eight Servants to attend them. They chew Beetle continually, where it is to be had, and at their Visits always present their Friends with some at taking Leave; and the richer the Box is, the greater the Present is esteemed. Among the *Tunquines*, it is a great Dishonour to have the Head bare, for they have all Criminals, and if any Person be found without Hair, they apprehend him, and carry him to the Governor, who causes him to be nailed to a Cross immediately. They sit cross-legged, as the rest of the *Athatics*; but instead of Carpets, they use Mats made of Reeds, as fine as Thread, and as soft as Velvet, which they lay upon Beds, not on the Ground, as the *Persians* and other *Indians* do. They are not curious in their Diet, but very neat in dressing it.

The common People are contented with Rice boiled in Water, dry Fish and Eggs for they eat Flesh only at their Festivals) but the great Lords are served every Day with Flesh and Fish; but they know not how to bake any thing. All their Meat is cut in little Pieces, and served up in little lacerated Plates less than our Trenchers. They use no Napkins, or Table-cloths, Knives, Forks, or Spoons; but only two Sticks to take up their Meat; for they never touch it with their Hands. They wash their Hands, Mouths, and Faces, before they sit down to Meat; but never after their Meals. They are usually silent at Table; but if they have a Mind to discourse, the eldest begins first; for they pay much Honour to Age. When they would know whether any Person has eaten sufficiently, they ask him whether he has eaten his Rice, meaning thereby the whole Repast, as the Scripture does by Bread. They never ask any Man how he does, but how he eat his Dinner; for the more a Man eats, the better they suppose him to be in Health. They take much Delight in Comedies, which are usually acted upon the new Moon, and last all Night.

They fit up their Theatres in great Halls, and adorn their Stages with beautiful Machines and Scenes. They have seldom more Actors than eight, either Men or Women, and they are very magnificently clad; they act their Parts perfectly well, and observe an exact Time in their Dancing. Their ordinary Pastimes, and especially for the Lords and Mandarins, are Fishing and Hunting; in the former they take the greater Pleasure, because their Rivers are full of Fish; but they never follow their Sport but upon certain Days, when they may be spared from their Business. The *Tunquines* are Lovers of Learning, and apply themselves to their Studies with Diligence. Their Learning consists in the Knowledge of the Laws of their Country, Mathematics, and Astronomy. They are Admirers of Poetry and Musick, and are accounted the greatest Artists in them of all the People of the East.

To acquire Nobility by Learning, they study hard for eight Years in the Office of a Notary, Proctor, or Advocate; and if upon a strict Examination they are found to understand their Office so well as to answer all Questions about it, their Names are presented to the King, who grants them a Title of the Synde. Having arrived at this Degree, they are ordered to study Musick, Astrology, Poetry, and Mathematics, five Years; and if upon a second Examination they answer all Questions put to them in those Sciences, they are raised to the Dignity of Doucan; after this they must spend four Years more to write and read the *Chien* Character, to wit Numbers of Words, for

to know or write it fully is almost impossible, it is so copious, and to understand the Laws and Customs of the *Chineses*; and after a strict Examination by all the Mandarins of Learning, and Tanfs's, or Noblemen, for eight Days, if they answer well, they arrive at the Degree of a Tanf, and are received into the Rank of the Nobility, and the King gives them certain Towns to take the Rents; but to some more, and others less, according to their Merit, or the Prince's Favour; and the King gives them a Vest of Satin.

Then they go to visit their Towns given them by the King, where they are received in a gilded Branguar, with Musick, and they stay three Months for their Recreation, and then they return to Court to instruct themselves in the Affairs of the Kingdom and Palace, and arrive at the Dignity of Mandarin. In the mean time their Names being written under large Tables, are set upon the Gate of the King's Palace eight Days, that all the People may know who are received into the Rank of the Nobility.

The Physicians of *Tunquin* study Books but little, but spend their Youth in searching into the Virtues of Roots and Simples, and how to apply them to every Distemper, which they judge of by the beating of the Pulse, and its Diversity of Measure, as by the Pulse of the right Hand they guess at the Condition of the Lungs, and by that of the Arm of the Distemper of the Stomach and Kidneys; by the Pulse of the left Hand they judge of the Condition of the Heart; and by that of the Arm of the State of the Liver; and by the Pulse of the Temples, both right and left, they give a most exquisite Judgment of the Kidneys. They carefully count how many times the Pulse of a sick Person beats in the Space of one Breathing, and according to these several Pulses they will tell you which Part of the Body is particularly distempered, whether the Heart, Liver, or Lungs, or whether it proceeds from any outward Cause. They generally give Decoctions of Herbs and Roots, with a little Ginger. They use *China* Ink to stop a Dyentery, and for the Cure of Wounds, and give Powder of Crabs in Dyenteries and Fevers, often in Water, sometimes in Brandy.

They prescribe Tea, which comes to them from *China* and *Japan*, as an excellent Remedy against the Head-ach and Gravel, and with a little Ginger for the Gripping of the Guts. That is accounted the best Tea which colours the Water greenest; for that which colours it red is little accounted of. Against the Afflictions which proceed from bad Airs, and cold Wines, they use a Counter-poison mixed with *Aqua Vita*, in which also they dip a Cloth, and rub the Patient well; but in this they boil a little Ginger, and for a more speedy Cure they sweat the Patient in a Cloud of Frankincense; they never use Blood-letting, and in the Purple Fever they use Fire, and sometimes pricking every Spot. The Spot being burnt will give a Whiff like a Squib, which is an infallible Sign that the Venom is gone out of the Body; but the Physician must take care that it does not enter his own, for then Death certainly follows. If the Spot be pricked to let out the pestiferous Blood, they burn it, and then rub it with Ginger, not permitting the Patient to take the Air in twenty Days, or eat any Flesh, or Butter. These Remedies are effectual to a Wonder, and cure in a short Time.

The Kingdom of *Tunquin* was anciently a Part of *China*, but has been for six hundred Years governed by its own Kings. The first that assumed the Title of King was a Robber, whose Name was *Din*, who heading a great Number of Malecontents, gained many bloody Battles over the *Chineses*, and seized the Province for his Kingdom. The People did not permit him to reign long in Peace; but rising against him, slew him; though he left two Sons, yet they reigned but a few Years successively, and died without Issue. The Kingdom after their Death was mightily distracted with Civil Wars, till the *Chineses* being called in to assist the weaker Party, brought things to a Settlement, and a Mandarin, of the Family of *Lelaquell*, was advanced to the Throne.

He being a valiant and prudent Prince, restored Peace and Order to the Kingdom; and after he was established, built an admirable Palace of Marble of divers Colours, and very large; he left one Daughter to succeed him, and she, to secure herself, married a powerful Mandarin, of the House of *Tran*; but she being disposed, and slain by her

rebellious Subjects, the *Chinese* again seized the Govern-
 ment, and held it twenty Years. They set Governors over
 every Province, and laid heavy Tributes upon the People,
 so that being weary of the Oppression, they joined under a
 valiant Captain of the House of *Lee*, and vanquished the
Chinese in three Battles, seated him on the Throne, and in
 his last of this Race having given an Affront to a great
 Lord of the House of *Marr*, which had formerly enjoyed
 the Scepter, he being assisted by a great Number of Male-
 contents, fought to regain the Kingdom, and in one bloody
 Battle became Master of it.

But he enjoyed it not above two Years, being deposed
 by one of the Family of *Trin*, who refusing to ascend the
 Throne, restored it to the Family of *Lee*, yet reserving to
 himself and Family the whole Command of the Army, and
 Disposal of all the Revenues of the State, and all publick
 Affairs; so that the King, whom they call *Bona*, has the
 Name, Title, and State; but the General, whom they call
Choua, has the Power. The King hears Causes almost
 every Day, but makes no publick Edict, which is of any
 Effect, till it is signed by the *Choua*: He lives shut up in
 his Palace, and stirs not out but upon certain Days; he
 has generally two thousand Soldiers for his Guard, and
 keeps sometimes twenty thousand quartered upon his Fron-
 tiers, especially towards *Cochin-China*, and with them fifty
 Elephants upon the Rivers also of the Kingdom, where
 any Enemy can endanger him; he keeps usually one hundred
 great Gallies, with a vast Company of small Gallies.

The eldest Sons here do not always succeed their
 Fathers in the Throne, but by the Influence of the *Choua*
 and Counsellors, his Creatures, he is obliged to name which
 of his Sons he will have to reign after him, if he has many,
 and him they promise to establish, shutting up all the rest
 in the Palace, as in a Prison, and not suffering them to
 meddle with Affairs of State; yet four times a Year they
 are allowed to go out under an Officer appointed by the
Choua, and have Leave to stay out six Days. On the first
 they are to visit the Temples and Priests, and give them
 large Alms, the next two Days they hunt, and the three
 last fast.

The Kingdom of *Tunquin* is divided into eight large Pro-
 vinces, every one of which has its Governor and Magis-
 trates; but there lies an Appeal from their Sentence to the
 King, his thirty-two Counsellors, and one hundred Assis-
 tants. Their Nobility attain that Degree by Merit only,
viz. by their Valour in the Wars, and Learning; and as
 these latter go through a long Course of Studies, and strict
 Examinations, as is before shewn, so the former are instructed
 in warlike Exercises betimes, *viz.* to handle their Swords,
 to aim with their Bows, to fire a Musket, to ride the great
 Horse, to shoot running, to manage their Zagays, which
 are long Staves checked with Iron like a Half-pike, and
 make all sorts of artificial Fire-works, which they use
 against Elephants in War; for though some Elephants may
 be taught not to regard them, though they go off under
 their Noles or Bellies, yet one in ten cannot be brought to
 it; so that unless their Governors take great Care, instead
 of running upon the Enemy, they will turn upon their Friends,
 and put a whole Army into a dismal Confusion, if not de-
 stroy it, as they did *Aurongzeb's* at the Siege of *Daman*.

21. The Kingdom of *Tunquin* paid a Tribute to the
Chinese till the Year 1667, when the *Tartars* invaded their
 Country, and then they concluded a Peace, on condition that
 they should send every Year an Embassador to *Pequin* to
 do Homage to the Emperor of *China*. They observe an
 exact Order in administering Justice, and regulating Affairs
 all over the Kingdom; they are very exact in punishing
 Murder, and none can escape, but such as have killed one
 that has no Relations to revenge his Death; for the King can
 pardon no Man for this Crime, and all the Favour he can
 show, is to leave him to the Kindred of the Slain.

They take great Care for the publick Good, to repair
 Bridges and Highways, and every Quarter of a League
 there is Water and Fire provided for those Travellers who
 may want them. Though the King has not much Power
 in his Kingdom, yet he is highly honoured by his Subjects,
 and keeps a very splendid Court the first and sixteenth
 Day of every Month: All the Mandarins, except the Ge-
 N E R A L . 55.

neral, who is allowed to send his Deputy, come in their
Chinese Habits to kiss the King's Hand, as the inferior
 Mandarins, who are Governors of Provinces, Justices, and
 military Officers, do the *Choua's* on the first Day of the
 Year. All that desire to see the King, are obliged to put
 on violet Robes, both themselves and their Servants, and
 if they beg any Favour, must carry a Present. On the
 first Day of every new Year the King distributes several
 Largeffes and Gifts to his Courtiers, and the Children of
 such as have done him any important Services, which are
 Panes of Gold worth six hundred Livres each, and Bars of
 Silver, which are worth forty-six Livres each: He also
 releases all Prisoners, both Criminals and Debtors, provided
 their Crimes do not deserve Death, and the Debts do not
 exceed two Bars of Silver.

The three last Days of the Year the four Mandarins,
 who are the chief Counsellors of the State, take Oaths of
 all the Lords and Officers of the Court, and their Wives,
 to be faithful to the King, and discover any Treason against
 his Person and Government, and the Governors of Cities
 and Countries, do the same to the Lords, Gentlemen, Citi-
 zens, and Inhabitants of their Jurisdictions, and every one
 that discovers any Treason, never fails of a Reward, accord-
 ing to his Quality; and mean People are gratified with a
 Reward of fifty Panes of Gold, and five hundred Bars of
 Silver, which amounts to 53,000 Livres; but they esteem
 Nobility above Money. They have a Muster of the Youth
 every Year, and all such as are found not to be of the
 Nobility, or not to have learnt a Trade, are immedi-
 ately enrolled for the King's Service, to be of his Guards,
 or defend his Frontiers. Some will endeavour to get off
 by Money; but if they are discovered, both Officers and
 Soldiers are punished without Mercy; for they hang a little
 Bell about their Necks, and fetter their Arms, and send
 them to the General, who presently orders their Heads to
 be stricken off, or upon Intercession of Friends, they are to
 be hanged, because they are very averse to Bloodshed, and
 believe the Death most honourable that is free from it.

When the King goes at any time out of his Palace to take
 his Pleasure, he is seated upon a most magnificent Pallan-
 quin, carried by eight Men, where he is seen by all the
 People, the Lords and Officers of the Court attending on
 Foot, if he goes no farther than the City; but if he goes in
 the Country, he rides on an Elephant, and the Lords attend
 him on Horseback. When the Queen-Mother, or his
 first Wife goes abroad, they are likewise carried upon a close
 Pallanquin, with Lattice Windows, that they may see, and
 not be seen, and the Maids of Honour follow it on Foot.

The Mandarins, and great Princes, solemnize their
 Birth-days every Year with great Feasting, Pastimes, Co-
 medies, and Fire-works, and at the same time give large
 Alms, especially to poor Widows and Prisoners. When
 the King dies, and leaves several Sons, he is set up whom
 the King has appointed his Successor; and on the third Day
 of his Decease the General, with all the military Mandar-
 ins, Lords of the Council, and Governors of Provinces,
 repair to the Prince's Apartment, where they present him
 with a *Chinese* Habit, and mounting him on an Elephant,
 bring him into one of the great Courts of the Palace, which
 is covered with Cloth of Gold and Silver as a Tent, and
 place him upon a magnificent Throne, where being seated,
 all the Mandarins prostrate themselves to him upon the
 Earth with their Heads downward; in which Posture,
 having lain some time, they rise, and closing their Hands
 together, with their Arms and Eyes lifted up towards Hea-
 ven, they swear to be faithful to him till Death.

The new King, to requite this Loyalty, orders four
 Panes of Gold, and six Bars of Silver, to be given to every
 one; but to the Constable, or General, he gives two Panes
 of Gold, and forty Bars of Silver; and to the President of
 the Council half as many: After these Presents are given,
 several Pieces of Artillery are fired about the Palace, with
 some Volleys of small Shot, by the Soldiers then in Arms,
 which are 30,000 Horse and Foot, the King set upon a
 magnificent Pallanquin, carried by eight military Mandar-
 ins, and eight of the Council, the Constable and chief of
 the Council riding before upon very fine Horses, is carried
 to the Apartments of the deceased King, when the Lords are
 retired, the Princesses, Ladies of the Court, and chief
 Wives

Wives of the Mandarins, come to kiss the King's Hand, and congratulate him upon his Advancement to the Throne; which done, the Lords return to a noble Feast prepared for them after the Manner of the Country. Colt's Flesh, and Dogs, are in most Esteem with them; and the Bird's Nests, which gives their Meat a Taste of almost all sorts of Spices, is their chief Sauce. The Festival is concluded with Comedies, and Fire-works, which last all Night.

The next Day the 30,000 Soldiers are drawn up in the Field, and the King appearing on his War Elephant, in the midst of his Troops, takes an Oath of Fidelity of all the Officers, and then bestows his Gifts upon them, viz. to every Colonel two Panes of Gold, and forty Bars of Silver; to every Captain half as much, and to every Soldier a Month's Pay, which being received, the whole Army discharge three Volleys, and then they retreat to their Huts, where they have a Feast prepared, as the King has also, in a wooden Palace erected for the same Purpose; and so they spend the Night in Feasting, Dancing, and letting off Fire-works. This Ceremony being ended, they set on Fire the Palace and Huts, and the King returning to his Palace, bestows his Liberality on the Comedians and Dancers; then he gives Access to all his People by their Commissioners, viz. to the Merchants and Traders, People of *Checo*, who assure him that their City acknowledge him for their King, and will be faithful to him unto Death; and he gives fifty Panes of Gold, and three hundred Bars of Silver, to the Tradesmen, and then to the Commonalty of the whole Kingdom, whom he discharges from Taxes a whole Year, if they have never taken up Arms against their King, and but six Months, if they have; all Prisoners for Debt, after they have compounded with the Creditors for half, he freely paying the rest.

'Tis said, that the King upon this Occasion sends above 100,000 Beasts to the Temples of the false Gods to be sacrificed for him, besides the Value of one Million of Panes of Gold in Tissues and Silks to adorn the Idols, orange-coloured Calicuts for the Bonzes, and blue Calicuts for the Poor that are kept in the Pagods, as Hospitals. Sometimes after the Ceremony is over, the King, at the New of the Moon, goes to give his Deities Thanks for his coming to the Crown, and remains for a Week with the Bonzes, living in common with them, visiting the Hospitals, to see how the Poor, and especially the Antient, are used; and to them he gives new Alms, and orders the building of a new Pagod in some fair Situation, which he dedicates to some Idol. The second Part of the Moon is spent in seeing the Gallies row one against another, the King and Court having Houses built on the Plains by the River for that Purpose; which Diversions being over, the Captains come ashore to kiss the King's Hand, and they that have behaved most stoutly and nimbly, receive the Marks of his Bounty, and he gives all the Soldiers two Months Pay extraordinary. During seven Days, there are such vast Numbers of Fire-works thrown about, that you would think the Air and Water all on Fire. Then the King returns to his Palace, and spends the other half of the Month with his Princesses, diverting himself and his Ladies with Fire-works, Comedies, and Mummeries.

When the King of *Tunquin* dies, he is presently embalmed, and laid in State sixty-five Days; all which Time his Table is served as if he were alive; and when the Meat is taken from before the Body, half is given to the Bonzes, and the other half given to the Poor. So soon as the King has breathed out his last Gasps, the Constable gives Notice to the Governors of Provinces, and orders them how long they shall mourn. The military Mandarins mourn generally three Years; the King's Household nine Months; the Nobility six; and meaner sort three; and all the three Years there is a Cessation from Divertissements, except those that are used at the King's Buriall to the Throne. All the Meats that are served up to the new King, are varnished with black, and his Train is cut off, and his Head covered with a Straw Bonnet, as are also the Heads of all his Princes and Counsellors of State; nor do they leave this Habit till the deceased King's Body is put into the Galley to be carried to the Interment, and the three Bells, which hang in one of the Towers of the Palace, never cease tolling still the same Time. The third Day after his Death, all the

Mandarins repair to Court, to testify their Sorrow for the deceased King; and ten Days after all the People are allowed to see the Body lie in State, till it be put into the Galley. During the sixty-five Days which the King's Body lies in State, the Constable prepares for the Funeral, which is thus performed: The King and all the Court march on Foot to the Gallies, which they make fourteen Day March, though it is not really above two Days Journey, and all the Way is spread with Violet-coloured Calicuts, which is the King's Colour. The Order of their March is thus: First go the two Officers of the King's Bed-chamber, with Maces of Arms, the Heads of them being full of Fire-works; these proclaim the Name of the deceased King; next go twelve Officers of the Gallies drawing a Tomb, whereon the King's Name is written; then proceeded twelve Elephants, of which four carry the King's Standards; four six-armed Men apiece in Turrets; and four of those the King rode on in his Wars: After these rides the Master of the Horse, with two Pages after him on Horseback; then are led twelve Horses richly harnessed, with Breeches and Saddles; after follows the Mousoleum, or Hearse, drawn by eight Stags, trained up for that Service, every one of them being led by a Captain of the Guard; then goes the new King with his Brothers, if he have any, and the Princes of the Blood, all clad in white Satten, which is their Mourning Colour; they are attended by Musicians, who play upon Flautboys, and other Instruments: After them go six Princesses in white Satten, carrying Meat and Drink for the deceased King; these are attended by as many Ladies of Honour in purple Garments; then go eight Princes of the Royal Blood in purple Garments, with Straw Hats; next proceeded four Governors of the chief Provinces of the Kingdom, carrying on their Shoulders certain Bags full of Gold, and Perfumes hung on Sticks, which are Presents made by their Provinces to be buried with their King's Body, for his Use in the other World; then follow two Chariots drawn by eight Horses apiece, led by a Groom each, in which are two Coffers full of Panes of Gold, Bars of Silver, rich Tissues, and other Riches, to be buried with the King's Body, for his Use in the other Life: Lastly, come a great Croud of the King's Officers, and other Nobility, some on Foot, others on Horseback, according to their Offices and Qualities. When the deceased King's Body is put into the Galley, the new King and the Company return home, and the Calicut being taken up, is given to the Bonzes.

The Galley, wherein is the King's Body, is committed to six of the chief Eunuchs, who are sworn never to reveal the Place where the King is buried. It is attended by three other Gallies; one carries the Lords, and another the Ladies, who are to be buried alive with the King to attend him into the other World; and the third carries the Treasure that is to be buried with the King, for his Use. The King is buried in inaccessible Mountains and Desarts. As for the ordinary Funerals of the *Tunquineses*, they are more or less pompous, according to the Quality of the Person deceased. At their Interments they use great Store of artificial Fire-works, which they use also in their Times of Joy, as well as Grief. They also set upon the Tomb good Store of Victuals, and Sweet-meats, believing that the Dead are better for them; and the Priests, who train them up in the Error, dispose of them before the next Morning. The *Dutch Soldiers* at *Batavia* robbed the Priests of these Dainties several times, but at length paid dear for their Licentiousness; for the Priests finding no Redress by complaining to the Governor, poisoned the Meat and Drink, and so destroyed many of them.

The Religion of the *Tunquineses* is divided into three Sects, the first is derived from an ancient Philosopher, called *Confucius*, whose Memory is famous over all *China* and the neighbouring Countries. Their Doctrine is, that Men are composed of two Parts, one fine and subtle, and the other material and gross. When a Man dies, the subtle Part vanisheth into the Air, and the gross returns to Earth. They use Sacrifices, and worship the seven Planets. Their chief Idols are *Rouma*, *Belelo*, *Ramouu*, and *Brasza*. The Women chiefly worship the *Caddles* *Sotif-bona*; and the King, Mandarins, and learned Men, adore the Heavens. The second Sect was founded by one *Che-*
colent.

calous, an Hermit, and the most of the common People are of this Sect. He taught his Followers the Transmigration of Souls, and enjoined these ten Commands, *viz.* 1. That they should not kill. 2. That they should not steal. 3. That they should not defile their Bodies. 4. That they should not lie. 5. That they should not be unfaithful to their Words. 6. That they should restrain their inordinate Desires. 7. That they should do no Injury to any Man. 8. That they should not be great Talkers. 9. That they should not give Way to their Anger. 10. That they should labour to their utmost to acquire Knowledge.

As for such as design to lead a religious Life, they must renounce the Delights of this Life, be charitable to the poor, overcome their Passions, and give themselves up to Meditation. He taught also, that, after this Life, there were ten distinct Places of Joy and Torment, and that the Contemners of his Law should feel Torments proportionable to their Offences, without any End. That if they endeavoured to fulfil his Law, and failed in any Point, they should wander in divers Bodies for 3000 Years, before they entered into Happiness; but such as had perfectly fulfilled his Law, should be rewarded without suffering any Change of Body. He says of himself, that he was born ten Times before he came to Bliss, because, in his Youth, he, for want of Knowledge, had sinned. This Impostor's Opinions are spread all over the Kingdom of *Siam*, several Provinces of *Japan*, and all *Tunquin*, where he died. The third Sect is that of *Lantou*, a great Magician: He gave out, that his Mother carried him in her Womb seventy Years without losing her Virginity. That by this Miracle, he might gain Credit to his Impostures, he taught most of *Chacabaut's* Doctrine; and, to gain the Peoples Hearts, enjoined the Grandees to build Hospitals in all Cities where there were none before to look after the Sick in them. The *Tunquinse* adore three Things in their Houses, *viz.* the Hearth of their Chimneys, made of three Stones. 2. The Idol *Ticaja*, who is the Patroness of all Handicrafts-Men; and to her they sacrifice when they put a Child to any Trade, that she may infuse an Aptness to learn it. 3. The Idol *Buabin*, to which they pray, and sacrifice when they build an House, that he may not suffer any Misfortune to befall the House they are going to build; but they send for the *Bonzes*; and they stay to offer it, for whom they make great Preparations.

There are some among them that adore the Heavens, others the Moon, and others the Stars. Some adore the Earth in five Parts, and that in five several Colours, *viz.* the Northern in black, the Southern in red, the Eastern in green, the West in white, and Middle in yellow; and others sacrifice to Trees, Elephants, Horses, Cows, and almost all other sorts of Animals. They that study the *Chinese* Characters, sacrifice every five Months to the Souls of the Dead that were never buried, believing that their Understanding shall be more enlightened to apprehend Things. At the Beginning of every Year they have a great Solemnity in Honour of the Dead, who were in their Lives renowned for their noble Actions and Valour, reckoning Rebels among them. They set up several Altars, some for Sacrifices, others for the Names of the Persons they design to honour; and the King, Princess, and Mandarins, are present at them, and make three profound Reverences to the Altars when the Sacrifices are finished; but the King shoots five Times against the Altars where the Rebels Names are; then the great Guns are let off, and the Soldiers give Volles of small Shot, to put the Souls to Flight. The Altars and Papers made use of at the Sacrifices are burnt, and the *Bonzes* and Sages go to eat the Meat made use of at the Sacrifice.

The first and fifteenth Days of every Month, are more especially Holy-days for the Worship of their Gods, and the *Bonzes* and Sages redouble their Prayers, and repeat a kind of Charm six Times. The People on these Days bring Meat and Drink to the Sepulchres of their Kindred, to sacrifice for the Good of their Souls to eat. The *Bonzes*, when they have paid their Worship, fall to, and what they cannot eat give the Poor; for this Greediness the King and Mandarins make no Account of the *Bonzes* and Sages, though they lead austere Lives, and so they are in

Credit only with the common People. In *Tunquin* the great Cities have several Pagods, and every Village and Town almost have one: Every Pagod has, at least, two *Bonzes* and two Sages; but some maintain forty Pagods, and as many Sages, or Sages, who live in common under a Superior, and keep to the Doctrine of *Chacabaut*, and a Goat is the Idol which they adore. They wear about their Necks a Necklace of an hundred great Beads made of Wood: They beg for their Living with great Modesty and Humility, taking no more than is needful; and if they have any thing to spare, they give it to the poor Widows and Orphans that cannot get their Living. Their Orders permit them to marry, but then they must leave their Monastery. They assist at the Funerals of great Men, where they make a kind of Oration, sounding their Trumpets and Corners, while the Bells at their Pagods go at the same time. They have a great Veneration for two Magicians and one Witch.

The first Magician is called *Tay-bow*, who pretends to know the Events of all Things to come; so that when any is about to marry their Children, build an House, buy Land, or undertake any Business of Consequence, they consult him, who, inspecting his Book, makes them believe what he pleases. The other is *They-Pen-Thouy*, to whom they have Recourse in their Sickness: When he is consulted, after several apish Tricks which he acts before the sick Person, to amuse him, he sometimes affirms that the Distemper comes from the Devil, and then he himself and the sick Person, and his Friends that brought him, do Homage to the Devil; but, if he does not recover, all the Friends and Kindred of the sick Person, with as many Soldiers as they can get, surround the sick Person's House, and shoot off their Muskets three Times to drive the Devil away. If the sick Person be a Water-man, or other Person belonging to the Water, then he tells them it is the God of the Waters that is the Cause of the Distemper, and then he orders him to spread Carpets, and furnish Tables in Huts, with all sorts of Meat, on the Banks of the next River, to invite him to his Habitation.

If these Things fail, he sends him to *They-bow*, the chief Magician, to enquire if the Souls of the Dead have caused the Distemper, and if he answers Yes, then the Magician employs his Tricks to get the mischievous Soul into a Bottle, where he keeps it till the Party is cured. The Magicians are called *Baceti*; she keeps a great Correspondence with the Devil, and, to oblige him, offers her own Daughter, if she has one, as soon as she is born. Mothers who have lost their Children, and desire to know the Condition of the Soul, consult her, and thereupon she, by beating of a Drum, pretends to summon the Soul before her, and causes it to tell her the Condition of it. She generally tells them, that the Soul is happy, and bids them be of good Cheer. They have innumerable Superstitions, but the most remarkable are these: The more studious People foretell Things that are to come, by looking in a Mirrour. Others sprinkle the Ashes of their dead Ancestors with *Aqua Vitæ*, and beg of them Health, Honour, and Riches. Others, upon their New-Year's Day, make divers Figures upon their Steps and Thresholds of their Doors to drive away evil Spirits. Others, in travelling, if they freeze but once will return back, and if they freeze twice, pursue their Journey without Fear of Danger. Some, if at going out of their Houses they meet a Woman, retire again for two or three Hours; but, if a Man, it is a good Omen. The first Fruit which they gather in the Beginning of the Year, is the Araguier, and they poison one, and give it to a Child, believing, that in taking away the Child's Life, they shall thrive the better all the Year after.

When the Moon is eclipsed, they say a certain Dragon endeavours to devour her, and, therefore, to assist the Moon, and put the Dragon to Flight, they discharge their Muskets, ring their Bells, beat all their Drums, and make a prodigious Noise till the Eclipse be over, and then they think they have rescued the Moon, and rejoice as much as if they had obtained a great Victory. They divide the natural Day into twelve Hours, and give them the Name of some Beast, as a Tyger, Lion, Bear, Horse, &c. and so the Months and Days have their particular Names. When a Child

Child is born, presently the Father and Kindred go to see the Name of the Beast by which the Hour was called when the Child was born, believing that Animal will prove fatal to it. The present King of *Tunquin* was born in the Hour of the Horse, and he would never give Audience, nor stir out of the House, for fear some Mischief should befall him at that Time. And the same Prince having a Child that died in the fifth Month, which is called by the Name of the Horse, would not suffer him to be buried, but caused him to be burnt, and scattered his Ashes in the Air.

Thus far our Author, whose consummate Knowledge of the Country, People, and Commerce of the *Indies*, enabled him to enter more thoroughly into these Points than it was in the Power of any other Writer to do. His Travels through *Persia*, his several Journeys by Land through the best Part of *Asia*, are no less excellent in themselves, but are referred to furnish another Part of this Work.

But there remains however a Portion of his Labours, which, indisputably, claim our Notice here, inasmuch as they contain whatever is necessary towards understanding the Oeconomy of all the Nations that inhabit *India*, their Manner of Living among themselves, and, with respect to others, the Nature of their Manufactures, the Method of the carrying on domestick Commerce, and, above all, the Relation which the Trades of *India* have to each other; the Routs from their great Cities, the Nature of their Carriages and Caravans; and, in a Word, the Detail of that Industry, which, if I may be allowed the Expression, originally established, and has still preserved the Trade of the *Indies*. I know the Phrase is hard, but I know too that it is not in my Power to explain it better; for it is not the natural Wealth alone of these Countries that have rendered them famous, that have in all Ages attracted the Trade of the whole World to them, and thereby made the Commerce of the *Indies* the great Commerce of the Universe.

It is not, I say, the Wealth alone of these Countries, but the Industry, the Labour, and Address of the Inhabitants, by which we must understand the native Inhabitants, now called *Banjans*; for, as to the *Turks*, and *Tartars*, they have been so far from contributing thereto, that, in fact, they seem to have made it their Business to oppress and cramp this Spirit, by their tyrannical Government. But, it seems, this Spirit of Industry has been too hard, even for their Cruelty, and still subsists to such a Degree, as to excite the Wonder of the best Judges, as well as to outdo every thing of the same kind in other Parts of the World, *China* only excepted. This will manifestly appear from the subsequent Section, from which we may sufficiently gather, what a mighty Figure the *Indians* must have made in ancient Times, before the People were under the Oppression of a foreign Yoke, before their Spirits were broken by the Tyranny of their cruel Masters, and before their Manners were corrupted by the Slavery under which they groan at present.

It is from hence that we are able to distinguish how different a Figure they must have made in those early Times, when their Religion was pure, when their Government, the most exact, and best contrived that ever was established in any Country, was in its full Vigour; when their Laws had their free Course, and the People were made happy, by a constant Obedience, to an excellent Constitution; when every Monarch considered himself as

the Father of his Subjects, and when Subjects obeyed as Children, from a perfect Sense of their own Happiness, flowing from this Obedience; when, in short, every Principality was no other than one large Family well regulated, and when even the minutest Matters fell under the Notice of the Laws, and under the Care of the Magistrates.

For, if even now, when all these Advantages are lost, the Industry of the Inhabitants is so great, their Manufactures so many, and carried on with such Spirit and Diligence, their Trade so extensive and well managed, as not only to employ and enrich themselves, but to draw likewise the Attention of other Nations, and a Concour of Merchants from the most distant Corners of the World, what must it have been in its former flourishing Condition? What must it have been in the Times before described, when they wrought for themselves, and when their Industry procured Happiness; whereas now it purchases a bare Subsistence? This will sufficiently demonstrate to the intelligent Reader, the Truth of an Observation we have so often made, that however Things may have gone in the rest of the World, and how much loever Mankind may have improved elsewhere, they must have necessarily declined here, and the modern *Indies* must, in the Nature of Things, fall as far short of the *Indies* in the ancient and primitive State, as from the vast Advantages which they enjoy above other Countries, they seem still to excel the rest of the World.

We may from hence gather, what solid, what mighty Benefits are derived from a wife and well-settled Constitution, since even the Relicks and Remains of it are able to produce such mighty Effects, as we see amongst the *Indians*; and from thence we may be taught that all Dangers ought to be dared, all Hardships undergone, all Fatigues patiently endured to prevent the Ruin, and avert the Fall of such a Constitution. It is true, these Lessons may be learned nearer home, and there is no Necessity to travel to the *Indies*, in order to acquire this useful Knowledge; but, in the mean time, since we have a natural Propensity to travel, since Books of Voyages are so much read, and so justly esteemed, it is surely right, to make them as useful as possible, by inculcating these Lessons, which ought to be perpetually in our Minds, because, on our Attention to them, depends our Freedom and Felicity. To what Ends do our Merchants visit the most distant Countries, expose themselves to such a Variety of Dangers, and cheerfully undergo such innumerable Fatigues, but that they may bring back sufficient Wealth to live at home in Peace? And, if they act reasonably in this Way, why should we not read to the same Purpose? Why should we not gain, by Experience and Reflection, the true Principles of Patriotism, and a settled Resolution to profit by other Peoples Misfortunes, and avoid, by a timely Consideration of their Miseries, what must, some time or other, make their Case our own. We have, what the *Indians* once had, an excellent Constitution, equally capable of bestowing Freedom and Felicity: It is to this we owe whatever distinguishes us from other Nations, our Liberty, our Industry, our Manufactures at home, our Commerce abroad, and, in short, whatever can render Life desirable, or this World valuable. I cannot help thinking, therefore, that every Opportunity should be sought, or, at least, every Occasion taken for setting these important Points in their proper Light, and thereby recommending, in the strongest manner possible, inviolable Duty to this our beneficent Constitution.

SECTION XXIX.

An Account of the different Routs to all the great Cities and chief Ports in the Indies; the Manner in which the Domestick Commerce of that Country is carried on; the State of its Manufactures, and other curious Particulars.

Taken from the Works of Mr. Tavernier.

- 1. The End and Design of this Section explained. 2. A Description of the City and Port of Surat, with a large Account of its Commerce. 3. That Subject continued and concluded. 4. Of the several Methods of travelling in the East-Indies, of Land-Carriage for Merchandize, and the Expenses of both. 5. Of the Road from Surat to Agra, by the City of Brampour, with a Description of the last-mentioned City. 6. Of several remarkable Curiosities that lie in the Way. 7. Of the Road from Surat to Agra by Amadabat, and of what is worth Notice in that Road. 8. A compleat Description of Amadabat, and of the Trade carried on there. 9. Of the Road from Candahar to Agra, and of the Jew-Brokers in the Indies. 10. Of the City of Caboul, and the Trade of the Provinces depending thereupon. 11. Of the Royal City of Delhi, and of the Road from thence to Agra. 12. A Description of the last-mentioned City, and of the Trade carried on there. 13. Of the Road from thence to Halabas, once esteemed the Capital of India, including a Description of the River Ganges. 14. The Road from Halabas to Patna and Dacca in the Kingdom of Bengal, with a Description of those Cities. 15. Of the Passage from Surat to Goa, with some Remarks upon the last-mentioned City. 16. Of the noble City of Villapour, and the Principality of which it is the Capital. 17. A large Account of the Royal City of Bagnagar, and of the Country round it. 18. A succinct History of the Kingdom of Golconda. 19. The Road from thence to the Port of Madraspatan, with some Remarks on the Trade carried on there. 20. A View of the Country from thence to Madraspatan, now known by the Name of Fort St. George. 21. A Digression concerning Elephants, which contains many curious Circumstances. 22. A Description of the Kingdom of Carnate, and of the principal Places therein. 23. Remarks upon the foregoing Section.

THERE is no Occasion for a long Introduction to this Section, the Subject of it has been already pointed out, and therefore it is only requisite to say, that the Design of the Author therein, was to explain the interior State of the Indies, to shew where Manufactures were settled, how carried on, and after what Manner the domestick and inland Commerce of this Country is managed. In treating of this Subject, every Paragraph presents us with something new, and something useful. This Discourse transports us, as it were into the very Country itself; and, when we have read it, we can no longer consider ourselves as Strangers in the Indies. It would be very happy if we had as clear and as distinct Accounts of every Country in Europe, we should know much more of them then, than we do now; we should enter into all the Particulars of their Condition, and understand perfectly, whatever Relations came from thence. It was for this Reason that I judged it proper, before I proceeded to the last Part of this Chapter, the History of East-India Companies, to close with this the Series of Voyages and Travels unto, and through this Part of the World, and, it is hoped, this Method will be approved.

2. Notwithstanding the Indies stretch themselves beyond the Coast of Persia for the Space of above four hundred Leagues together, from the Ocean to Mount-Caucasus, or Taurus, yet there are not so many Ways into the Indies out of Persia, as there are of travelling into Persia out of Italy, because, that between Persia and the Indies, are nothing but vast Sands and Deserts, where there is no Water to be found; so that you have but two Roads to chuse in going between Ispahan to Agra, the one by Land through Candahar, and the other partly by Land and partly by Sea, taking Ship at Banker, Bassa, or Ormuz. Both these I have described as far as the Limits of Persia reach, and shall only add concerning this latter, that Sailing is not safe at all Times upon the Indian, as it upon the European Coasts; you must observe the proper Seasons, which, being past, there is no venturing. The Months of November, December, January, February, and March, are the only Times in the Year to embark for Surat from Ormuz; but from Surat you must not stir after the End of February; for then the Western Winds that bring Rain along with them into India, begin to blow; but during these four Months, there blows a N. E. Wind,

which carries the Ships from Surat to Ormuz in fifteen or twenty Days; and this Wind veering a little to the North, serves also for those that are bound for Surat; but it takes them up thirty, or thirty-five Days, for which they are made Amends in March and the Beginning of April, for then, the Western Winds blowing full in their Stern, carry them thither in fourteen or fifteen Days.

The Vessels that sail to Surat, which is the only Port in the Empire of the Great Mogul, pass within Sight of Diu, and the Point of St. John, and come to an Anchor in the Road of Souali, which is four Leagues from the Town, and two from the Mouth of the River called the Bar of Surat; for the greater Vessels cannot get into the River of Surat till they have unladen, by reason of the Sands that choak it up; and the Wares to unladen, are carried to the Town, either by Waggon or Boats, because the Customs were often stoken when the Ships unladen generally at Souali; therefore there is now a Prohibition, that none shall come to anchor there but the English and Dutch, who, indeed, lay many Goods Custom free; yet it is made up by the Vessels that come to the Bar from Persia, Arabia- Felix, and all Parts of the Indies. When the Commodities are unladen at Surat, you must carry them to the Custom-house, adjoining to the Fort, where the Merchants pay for all sorts of Wares from 4 to 5 per Cent. unless it be the English and Dutch, who indeed pay less, but are forced to make it up in Presents to the Court and Deputations; and lest any valuable Goods should be concealed, they search every Person in the Ship exactly. Gold and Silver pays but Two in the Hundred, and when it is brought into the Custom-house, the Master of the Mint comes and takes it and coins it into the Money of the Country, which, tho' it be to the Loss of the Merchant, yet can't be avoided as to the Silver; but the Merchants have so many Ways to hide their Gold, that it seldom comes to the Knowledge of the Customers.

If they bring any Money ready coined, out of other Countries, as Pistols, or Albits, out of Persia, they are melted down and refined, to make Rupees, because the Silver-Money of the Great Mogul is finer than any other. The Indian Money is the Silver Rupee, the half Quarter, the eighteenth, and sixteenth Part. The Rupee is as big as the Boss of Persia, but much thicker; it passes commonly for thirty French Sols, or 2 s. 3 d. Sterling. This Money is coined every Year, and the new ones, during the

SECT.

Year they are coined in, are valued at a *Pecca* more than those of the foregoing Year, because the Coiners pretend that the Silver wears daily. They have also another Silver Coin called *Mahmoudi*, which is ten, or about ten Sols and an half, or eight-pence Halfpenny Sterling; but it goes no where but in *Surat*, and in the Province of *Guzurat*. A *Bassis* brought out of *Perfia* goes also in the *Indies*, but for less than in their own Country, viz. at nineteen *Pecca's*, or sixteen *French Sols*, which is one Shilling and Two-pence. The *Pecca* (of which they have half, double, and four-fold) is a Piece of Copper Money as big and thick as a *Rupce*, but in Value about half a *Sous*, or something less than half a Penny *English*. A *Rupce* is worth more or less of those *Pecca's*, according as you are nearer or farther from the Copper Mines. At *Agra* and *Gebanabat* they are worth fifty-five or sixty-five *Pecca's*, and at *Surat* sometimes but forty-six, and sometimes fifty, because it is at a small Distance from the Copper Mines.

Instead of small Money, they use certain Shells, which they call *Coris*, brought from the *Maldives*, of which they give fifty or more for a *Pecca*, or if they are near the Seashore, where they are brought in, sixty. In the Province of *Guzurat*, and the chief Cities whereof *Guzurat*, *Cambaya*, *Bandra*, and *Amadabat*, *Mahmoudi's*, half *Mahmoudi's*, and *Almonds*, are accounted current Money: A *Mahmoudi* is about nine *Sous*, three *Derniers*, or eight-pence *English* in Value. The *Almonds*, which they call *Baden*, are brought from *Ormuz*, and grow in the Delarts of the Kingdom of *Lar*. They give sixty-eight *Almonds* for a *Pecca*, and twenty *Pecca's* for a *Mahmoudi*. There is no tear that the Children should crack these *Almonds*, and so destroy their Money, for they are as bitter as *Colloquintida*. Some Years the *Almond-trees* don't bear, and then their Price is much raised; for then you will not have above forty or forty-four for a *Pecca*. The *Rupce* of Gold is valued in the Country at fourteen *Rupes* of Silver, and the half and Quarter *Rupce* proportionably. Great *Sumas* of Money are reckoned by *Leks*, *Crores*, or *Courors*, *Padans*, and *Nils*; 100,000 *Rupes* make a *Leck*, 100,000 *Leks* a *Courors*, 100,000 *Courors* a *Padan*, 100,000 *Padans* a *Nil*. If you bring Gold into the *Indies* in *Ingots*, or *European Ducats*, you shall always have seven and an half Profit, if you can escape paying the *Customs*; but if you pay them, your Gain is lost.

3. The City of *Surat* lies in twenty-one Degrees, and a few Minutes Northern Latitude, and is watered by the River *Tapy*. It is inhabited by three Nations, as they distinguish themselves, viz. *Moors*, under which Name they comprehend all *Mohammedans*, though they differ in their Opinions, being some *Sunnis*, and others *Shias*, viz. *Moguls*, *Persians*, *Arabians*, and *Turks*; 2. *Heatbens*, who adore Idols, of whom there are several forts; 3. *Perses*, who are also called *Gours*, or *Aech-peres*, i. e. Adorers of the Fire, which was the Worship of the ancient *Persians*. These Men retreated into the *Indies*, when the *Khaliff Omar* reduced the Kingdom of *Persia* under the Power of *Mohammedans*: Among these, indeed, there are some *Franks*, and other *Christians*, but they are not accounted among the Inhabitants, because their Number is inconsiderable, in Comparison of the other Parts. There are some Merchants in *Surat* vastly rich.

One *Vergicora*, a *Banjan*, was reckoned worth at least eight Millions. The City is but of an indifferent Bigness, and 'tis hard to know the Number of the Inhabitants, because the Seasons render it unequal. There are a great many all the Year round; but in the Time of the Monsoon, i. e. the Seasons for sailing, viz. in *January*, *February*, and *March*, it is so full of People, that Lodgings can hardly be had, either in the City, or the Suburbs. The Generality of the Houses are built of Reeds plastered over with Cow-dung; for in all *Surat* there is not above nine or ten good Houses, of which the Chamber, or chief of the Merchants, has two or three, the *English* and *Dutch* also have some of them, and the rest belong to the *Mohammedan* Merchants; but the *Franks* are only allowed to hire Houses, lest if they should have any of their own, they should make it a Fortref.

The *Capuchin* Friars have built them a very convenient Convent, according to the Model of the Houses in *Europe*,

and a fair Church by it; but they purchased the Ground in the Name of one *Cbelie*, a *Maronite* Merchant of *Aleppo*. The Walls of the Town were formerly of Earth, and that very ruinous; but of late they have built them of Brick, a Fathom and an half thick, and fortified them better, to secure it from the Irruptions of the neighbouring *Rajah*. The Castle is built upon the Side of the River, at the South End of the Town, and is so placed, that you must pass by it at your entering into the Town, whether you go by Land or Water; it is a Fort of a reasonable Bigness, square, and flanked at each Corner with a large Tower. The Ditches on three Sides are filled with Sea-water, and the fourth is washed by the River. There are several Pieces of Cannon; but because there are no Platforms on each Wall, they are planted upon wooden Scaffolds. The Governor of it can only command his Soldiers within the Fort; for he has no Power in the City, which has a distinct Governor, who receives the King's Customs, and his Revenues in his Province; but he lays them up in the Castle, till they are sent for by express Orders from Court.

The Streets of *Surat* are large, and even, but not paved; and there is no considerable Building in it. The *Christians* and *Mohammedans* there commonly eat Cow Beef, not only because it is better, but because it is more plentiful than Ox Beef, their Oxen being almost all employed in Plowing, and carrying Burthens. They have also pretty good Store of Mutton, and Abundance of Pullets, Chickens, Pigeons, Pigs, and all sorts of Wild-fowl. They use two sorts of Oil with their Food, viz. of *Crocus*, *Sylvestris*, or wild Saffron, and *Sellamum*. This last is more common, but the first much the best. They eat Grapes from the Beginning of *February* to the End of *April*; but they have no good Taste, and the Wine made of them is sour. They have several sorts of strong Waters, which they draw from Jagery, and the Bark of the Tree *Babore* steeped in Water. They have two sorts from *Palm-trees*, the one called *Cadigour*, and the other the *Cocca-tree*, *Rice*, and *Dates*; but they are none of them so good as *Brandy*. Their *Vinegar* is made of *Jagery*, and decayed *Raisins*, and to their belt they put in a little *Tari*, which is the Juice of the *Palm-trees* abovementioned.

At *Surat* are sold all sorts of Stuffs and Cottons that are made in the *Indies*: All the Commodities also of *Europe* and *China*, as *Porcelain*, *Cabinets*, and *Chests* adorned with *Torquoites*, *Agats*, *Cornelians*, *Ivory*, and other Embellishments. Here are also sold *Diamonds*, *Rubies*, *Pearls*, and all other precious Stones, which are found in the *East*; as also *Musk*, *Amber*, *Myrrh*, *Incense*, *Manna*, *Sal Armoniack*, *Lack*, *Quicksilver*, *Inuigo*, and the *Root Renas*, for dying red. All sorts of Spices, Fruits, and Drugs, which are produced in the *Indies*, and the *Lezants*, and are bought up by Foreign Merchants to transport into all Parts of the World. There are several great Officers at *Surat*, viz. a *Multri*, who inspects and rules all manner of Religion among the *Mohammedans*, and a *Cadi*, to judge of all civil Matters, a *Voca Nevis*, or Secretary of State, who keeps a Register of all that happens to his Province, and gives the Great *Mogul* Notice of all things that happen of Importance, two *Governors*, or *Nabads*, who command one the City, the other the *Castle*, and have no Dependence upon each other, nor encroach upon one another's Offices, or Duties.

The Governor of the Town judges in civil Matters, and commonly renders speedy Justice; but he meddles not with Criminal Causes, for they belong to an Officer appointed on purpose, called *Cotonal*, who is much the same with the *Soubassa* in *Turkey*, and *Doroga* in *Persia*. He orders Criminals to be punished in his Presence, by Whipping or Cudgelling; and this he doth, either in his own House, or in the Street, near the Place where the Fact was done. When he goes abroad, he rides on Horseback, and has several Officers who attend him, carrying *Batoons*, *Whips*, *Lances*, &c. before him; but neither of these Judges can put any Man to Death. The King reserves that Power to himself; and therefore when any Man deserves Death, a *Courier* is dispatched to know his Pleasure, and they fail not to put his Orders in Execution, so soon as the *Courier* is returned. The *Cotonal* goes his Rounds in the Night to

they purchased the Ground, a Maronite Merchant of own were formerly of Earth, late they have built them of brick, and fortified them better, of the neighbouring Rajah. ce of the River, at the South end, that you must pass by Town, whether you go by a reasonable Bigness, square, with a large Tower. The ed with Sea-water, and the There are several Peces are no Platforms on each wooden Scaffolds. , and even, but not paved; miking in it. The *Christi-* mmonly eat Cow Beef, not because it is more plentiful ang almost all employed in ns. They have also pretty undance of Pullers, Chick- of Wild-fowl. They use J, viz. of Crocus, Sylve- mnum. This last is more e belt. They eat Grapes to the End of April; but the Wine made of them is s of strong Waters, which the Bark of the Tree Ba- have two forts from Palm- and the other the Cocoa- are none of them so good ide of Jagery, and decayed put in a little Tari, which pomeventioned.

Stuffs and Cottons that are Commodities also of *Europ-* nets, and Chests adorned belians, Ivory, and other fold Diamonds, Rabies, stones, which are found in r, Myrrh, Incense, Manna, er, Inaigo, and the Root erts of Spices, Fruits, and the *Indies*, and the *Levant*, Merchants to transport into are several great Offices pects and rules all manner *edans*, and a Cadi, to judge is, or Secretary of State, happens to his Province, ce of all things that hap- or, or Nabads, who com- Cattle, and have no De- erroach upon one another's

judges in civil Matters, and ; but he meddles not with to an Officer appointed on much the same with the *Persia*. He orders Crimi- , by Whipping or Cud- in his own House, or in the fact was done. When orbeck, and has several g Baroons, Whips, Lan- er of these Judges can put reserves that Power to y Man deserves Death, a s Pleasure, and they fall n, so soon as the Corner Rounds in the Night to prevent

prevent all Disorders, and if he finds any Man abroad at unseasonable Times, he commits him to prison, and rarely dismisses him without being baltonadoced, or whipped. This Officer is to answer for all the Robberies committed in the Town; but by their Cunning they usually evade it. When any one is robbed, this Officer apprehends all the People of the House, both young and old, where the Robbery has been committed, and causes them to be beaten severely. They are stretched out upon their Bellies, and and two Men lay the Patient with long Whips, till he has received two or three hundred Lashes, and is all in a Gore Blood. If at first he confesses not the Fact, they whip him the next Day, and so for several Days, till he confesses all, or the Thing stolen be recovered again; but he never searches the Houses, or Goods of Robbers.

There is also a *Toursedar*, or *Provoost*, who is bound to secure the Country round about the Town, and to answer for all the Robberies committed there. The Burying-places of *Surat* are without the Town, about forty-three Paces from the *Baroch Gate*. The Catholics have theirs apart, and so have the *English* and *Dutch*, as well as some religious *Indians*. The *English* and *Dutch* adorn their Graves with Pyramids of Brick, whitened over with Lime. The religious *Gentiles* make their Tombs square, and of Plaster, covered, some with a Dome, and others with a Pyramid, a little more than three Foot high. The *Banjans* burn their dead Bodies by the River Side, and leave the Ashes there to be washed away by it, because they account it sacred. They believe that it contributes much to the Soul's Ease of the deceased, to burn his Body immediately after his Death, because they say his Soul suffers after the Separation from the Body, unless it be burnt; but they burn not the Bodies of Children under two Years old, because they hold them innocent; nor of the *Vartia's*, or *Jogies*, who are a kind of *Dervises*, because they follow the Right of *Madeo*, who is one of their great Saints, and who ordered their Bodies to be interred.

The Things most observable about *Surat* are a large Wall built by a *Banjan*, with divers thin Arches over it, to which they go down by certain Stairs; on the Outside is a Figure of a red Face, but the Features are not discernable. The *Gentiles* say, 'tis the Pagod of *Madeo*, and pay a great Devotion to it. Towards *Daman-Gate* begins the loveliest Walk in all the Country, and by it is a great Reservatory of Water called the *Tank*. It has six Angles, and every one of them an hundred Paces long, and it is at least a Musket-shot in Diameter. The Bottom is paved with large Free-stone, and there are Steps all round it in Form of an Amphitheatre, from the Brim to the Bottom, of lovely Free-stone, admirably wrought, brought from *Cambaya*. It was made at the Charge of a rich *Banjan*, whose Name was *Copy*, to catch the Rain-water to supply the Town, and is certainly a Work worthy of a King, being equal to the best of the *Roman* Aqueducts made for publick Use.

About a Quarter of a League from the Reservatory is the Prince's Garden, so called, because it belongs to the Great Mogul's Sister. It is a large Plantation of Trees of several kinds, as Mangoures, Palms, Mirobalans, Warrs, Mastia-trees, and many other Plants and Shrubs, some of them are set in a direct Line, and it is cut into many long and very fair Walks. In the midst is a Building, with four Fronts, having each of them a Divan, and a square Basin full of Water before it, from whence run several little Brooks through the Walks, which make it delightful, but much short of the Royal Gardens in *Europe*.

About a hundred and fifty Paces from the Garden is a Warr, or Tree, which the *Portuguese* call the Tree of Warr; it is very large, and high, being eighty Paces in Diameter; the Branches which have taken Root are so skilfully cut, that one may walk every-where under it. The *Indians* account it sacred, and the *Banjans* have planted Banners on the Top, and higher Branches of it; by it is a Pagod, dedicated to an Idol called *Mameva*, which is thought to be *Eve*. The Soil about *Surat* is brown, and so rich, that they never dung it, but sow their Corn after the Rains in *September*, and reap it in *February*. It bears also Sugar-Canes, Rice, Manguiers, Palm-trees, and many other sorts of Trees, which yield great Profit.

They water their Gardens, but the great Dews yield sufficient Moisture for their Corn-Land. The River *Tapti* is always brackish at *Surat*, so that they use it only for washing their Bodies, which they do every Morning, from a Principle of Religion.

4. In travelling up and down *India*, there are divers sorts of Carriages both for Merchandize and Travellers, and when you leave *Surat*, you must make use of these. For Goods, they make use of Oxen, Camels, or Waggon; upon their Oxen they will lay three hundred, or three hundred and fifty Pounds Weight; and 'tis no wonderful thing to see ten or twelve thousand Oxen at a time laden with Rice, Corn, and Salt, carrying the Rice to the Place where Corn grows, and Corn where the Rice is, and Salt to Places where there are none. These numerous Caravans are very inconvenient to Travellers, because when they meet them, they are forced to stay two or three Days, till they pass by. This is the most speedy Carriage for Merchants Goods, and they commonly make use of it when they are in haste to ship them off at *Surat*. They that drive those Oxen follow no other Calling, nor have any Houses, but carry their Wives and Children along with them.

Some of them have an hundred Oxen of their own, and they have a Captain of the Caravan, who wears a Chain of Pearls about his Neck, and takes as much State upon him as a Prince. All that follow this Trade of Carrying, are divided into four Tribes, called *Manari's*, and consist each of them of an hundred thousand Souls. They live always in Tents, and are maintained by transporting of Merchandize from Country to Country. The first of them carries nothing but Corn; the second Rice; the third Pulse; and the fourth Salt; and they are distinguished by certain Marks made by the Priests in the Face of every one of three of the Tribes, by a different coloured Gum, and some Grains of the thing they carry portrayed in it; the fourth carries a Bag of Salt about their Necks, of eight or ten Pounds, and with it they thump their Breasts every Morning before they say their Prayers, in Token of Repentance. They love their Oxen and Cattle as tenderly as Children, especially if they have none.

Their Women wear only a Piece of Calicut painted, or white, five or six times double, from their Waist downward, and upwards they cut their Bodies into several Forms of Flowers, which they paint in various Colours with Grapes. They have Priests that go along with them, who every Morning sets up an Image of a Serpent in Wreaths upon a Pole six or seven Foot high, and when every one has paid his Adoration to it, their Women going three times about it, they load it upon an Ox appointed for that Purpose for carrying it, and accompany the Caravan; they use Camels sometimes, but very rarely, they being appointed to carry Luggage of great Persons. The Caravan, or Waggon, seldom exceeds two hundred, and is most commonly not above an hundred. Every Waggon is drawn by ten or twelve Oxen, and attended by four Soldiers, which the Person that owns the Merchandize is obliged to pay; two of them march on each Side of the Waggon, over which there is two Ropes thrown across, the Ends whereof they hold in their Hands, that if the Waggon leans too much to either Side in the bad Way, those on the contrary Side may keep it from overturning, by pulling the Ropes with all their Strength. The Manner of travelling in *India* is upon Oxen instead of Horses, so that if any Merchant carries an Horse out of *Persia*, 'tis only for Shew, or to walk in his Hand, or to sell to some *Indian* Prince. Some of those Oxen will pace as easy as our Nags.

They manage them as Horses; but instead of a Bit, they have a Rope drawn through the nostrils Part of the Nose, only that in riding them you must take care that the Horns be not above a Foot long; for if they be longer, when the Flies begin to sting, he will chafe, and toss back his Horns, and sometimes stick them into the Stomach of his Rider. They never shoe them but in rough Places, where the Stones and Heat are apt to waste and chop the Hoofs. They use also little Coaches for travelling, which will hold two Persons; but generally they ride but one in them, when they carry their necessary Cloak-Bag and Provision, for which there is a proper Place under the Coach;

they are drawn by two Oxen, and some of them are so strong, that they will travel upon the Trot twelve or fifteen Leagues a Day, for sixty Days together. When they have got half their Day's Journey, they give them two or three Balls, as big as one of our Twopenny Loaves, of Wheat Flour, kneaded up with Butter, and black Sugar.

The Hire of one of these Coaches is a *Rupce* a Day, or a little more; for from *Surat* to *Agra* is forty Days Journey, and you pay for the whole not above forty-five *Rupces*. They, who have more to spend, may make use of a Palanquin for their Ease, wherein they travel very commodiously; 'tis a little sort of a Coach, six or seven Foot long, and three broad, with Ballisters round about it. It has a kind of Covering over it, of Sattin, or Cloth of Gold, and when the Sun lies upon either Side, there is a Slave goes by the Side to pull down the Covering, and another carries a Targot of Officers, covered with some genteel Stuff, to keep the Traveller from the Heat of the Sun. Three Men, for the most part, apply themselves to each of the Ends, to carry the Palanquin upon their Shoulders, and they go swifter than our Sedan-men, and with more Ease, because they practise it from their Youth: You give to every one four *Rupces* a Month, but if the Journey exceeds sixty Days, they will have five.

Whether it be in a Coach, or a Palanquin, he that will travel honourably in the *Indies*, must take along with him twenty or thirty armed Men, some with Bows and Arrows, others with Muskets, who have every one the same Pay as those that carry the Palanquin. Sometimes, for more Magnificence, they carry a Banner, as the *English* and *Hollanders* do, for the Honour of their Companies. These Soldiers watch and keep Centinel for your Defence, and are mighty careful to give Content, that they may deserve the good Word of the Chief of the Town where you take them; for he is responsible for their Fidelity, and has two *Rupces* apiece of them for his Recommendation. In the Villages where a *Mohammedan* commands, you may have Mutton, Pullets, or Pigeons; but where there are only *Banjans*, there is nothing to be had but Flour, Rice, Herbs, and Milk Meats. In the *Indies*, where the Heats are excessive, 'tis more commodious to travel by Night than Day; and therefore, when you come into any fortified Town, you must be gone before the Sun be set, if you intend to travel the Night following; for the Gates being shut, the Commander of the Place is to answer for all the Robberies committed within his Jurisdiction, and will suffer none to go out, telling them, it is the King's Order, to which he must be obedient. The Measure of Distances in *India* is by Colts, which is a League, and Gos, which is four of our common Leagues.

5. In travelling from *Surat* to *Agra* there are two Roads, one through *Brampour* and *Seconge*, and the other through *Amadabat*. In the first of these you go through *Barnoby*, a great Borough Town, where you ford a great River; this first Day's Journey lies through a Country something woody, yet having many Fields of Rice and Wheat. From *Barnoby* you travel altogether through Woods to *Babor*, a large Village upon a Lake, about a League in Compass. Three Quarters of a League before you come at this Town, you must ford a small River, but with great Difficulty, because it is full of Rocks and Stones, which are ready to overturn the Coach.

From *Babor* the next Stage is through a woody Country to the Inn, *Kerkea*, or *de la Begum*, because it was built by the Charity of *Begum-Sakeb*, the Daughter of the Shah *Jehan*, for the Ease of Travellers, who before were forced to travel to *Navapoura*, which, besides that it was too great a Journey, being upon the Frontiers of those *Rajals*, who often revolt from the Great Mogul. The Caravans were generally abused. This Inn, or Caravantera, is large, and very commodious. In the Road from hence to *Navapoura* you ford two Rivers.

Navapoura is a great Town, full of Weavers; but Rice is the greatest Commodity there; for not only the River that runs through the Country makes it very fruitful in that Grain, which requires Moisture, but the Rice that grows there has a peculiar Excellency, for which it is much esteemed. It is, indeed, less by half than the Grain of the common Rice; but when it is boiled new, Snow is

not whiter, and it smells like Musk. This Property makes the *Indian* Grangers so fond of it, that they will eat no other; and when they would make an acceptable Present to any one in *Persia*, they send them a Sack of this Rice. From *Navapoura* you pass through *Najjarbar*, *Doimedan*, and *Senquera*, to *Tollener*: Here you pass the River that runs through *Barook*, where it grows very large, and empties itself into the Gulph of *Cambaya*.

From *Tollener* your Way lies by *Choupre*, *Senquis* and *Nabir* to *Badelpoura*; here the loaded Waggoners pay the Duties of *Brampour*, but the Waggoners that carry nothing but Passengers pay nothing: And, when this is done, you go on to *Brampour*, which was a great City, but is now very much ruined, and most of the Houses are thatched with Straw. In the Midst of it is the Castle, where the Governour lives. The Government of this Province is a very considerable Command, and is only conferred upon the King's Son, or Uncle; but, since they have understood the Strength of the Province of *Bengal*, which was formerly a Kingdom, that Province is thought the most considerable in all the Mogul's Country at this Day. There is great Trade in this City, as well as in the Provinces adjoining, in Calicuts, of which there are prodigious Quantities made here, clear and white, which are transported into *Persia*, *Turky*, *Muscovy*, *Poland*, *Arabs*, *Grand-Cairo*, and other Places. Some of them are painted with Flowers of various Colours, and the Women make Veils and Scarfs of them, and of some Coverlets for Beds, and Handkerchiefs. They make another sort of Linnen, which they never dye, and hath a Stripe of Gold or Silver quite through the whole Piece, and at each End from the Breadth of one Inch to twelve or fifteen, they fix a Tissue of Gold, Silver, and Silk, intermixed with Flowers; both Sides are alike. Some of these Linnens are made on Purpose for *Sashes*, and are called *Orni*, and contain from fifteen to twenty Ells: Some are of two Ells only, and serve the Ladies of Quality for Veils and Scarfs; and vast Quantities of these Goods are vended into *Persia* and *Turky*. They make also other sorts of Cotton Cloths at *Brampour*, because there is no other Province in all the *Indies* which has greater Quantities of Cotton.

Leaving this City, there is a small River, which, when shallow, is torrid, and, if swelled by the Rains, there are always Boats attending to take over Travellers: And then you come to *Pezinhejera*, which is an Inclosure of Walls and Hedges, in which are fifty or sixty Huts covered with Straw, where live certain Men and Women that sell Rice, Flour, Butter, and Herbs, and make it their Business to bake Bread, and boil Rice to sell to the Travellers; and these Persons cleanse the Hut, they take up and put into it a Bedstead, with Girths to lay a Mattress or Quilt upon, which the Travellers usually carry along with them: This is signified by the Word *Sara*, which is added to such Places. If any Traveller have a Mind to a Fowl, or a Piece of Mutton, any *Mohammedan* in the Place will go to the City and buy it for him: From hence you go forward through *Pander*, *Balkijera*, *Consambar*, *Clemppow*, *Cbarava*, and *Bicbola* to *Andy*, where you pass a River that falls into the *Ganges*, between *Banazon* and *Peins*, and so take the Way by *Onguenas*, *Tiquery*, *Tool-meant*, *Novajera*, *Jebavour*, *Signor*, *Cockaipour*, *Dowray*, *Afarkair*, *Teler*, and *Sankaira* to *Seconge*.

This City is large, and most of its Inhabitants are *Banjan* Merchants and Handicrafts, the Trade passing from Father to Son; and, for that Reason, there are several Houses of Stone and Brick. Here is also a great Trade for painted Calicuts, called *Chintes*, of which the Cloathing of all the meaner sort of People in *Persia* and *Turky* are made: And the same are used in other Countries for Coverlets for Beds and Tables-Napkins. The same sorts of Calicuts are made in other Countries, but the Colours are neither so lively nor lasting, but wear out with often washing; whereas those made at *Seconge*, grow the faster the more you wash them. This arises from a peculiar Virtue of the River that runs by the City when the Rains fall; for the Workmen having made such Prints upon their Cottons as the foreign Merchants give them, by several Patterns, dip them into the River often, and that it fixes the Colours, that they will always hold. There is

ink. This Property makes of it, that they will eat no make an acceptable Present and them a Sack of this Rice, rough *Nassarbars*, *Damadan*, here you pass the River that grows very large, and emp-
ambaya.

es by *Choupre*, *Senquitis* and he loaded Waggon pay the Waggon that carry nothing else, when this is done, you as a great City, and is now of the Houses are thatched it is the Cattle, where the nment of this Province is a and is only confined upon out, since they have under- vince of *Bengal*, which was Province is thought the most ul's Country at this Day. ty, as well as in the Provin- which there are prodigious and white, which are trans- *Muscovy*, *Poland*, *Arabia*,
Some of them are painted ars, and the Women make of some Coverlets for Beds, like another sort of Linnen, with a Stripe of Gold or Sa-
veance, and at each End from twelve or fifteen, they fix a alk, intermixed with Flow-

of its Inhabitants are *Ban*- the Trade passing from Reason, there are several here is also a great Trade ces, of which the Cloth-
people in *Persia* and *Yarid* ed in other Countries for skins. The same sorts of ries, but the Colours are wear out with often wash-
ouge, grow the rarer the es from a peculiar Virtue City when the Rains fall; such Prints upon their s give them, by several iver often, and that so always hold. There is

also made at *Seconge* a sort of Calicut, so fine, that when a Man puts it on, his Skin shall appear as plainly thro' it as if he was quite naked; but the Merchants are not permitted to transport it, for the Governor is obliged to lend it all to the Great Mogul's Seraglio, and the principal Lords of the Court, to make the Sultanesses and Noblemens Wives Shifts and Garments for the hot Weather; and the King and the Lords take great Pleasure to behold them in these Shifts, and see them dance with nothing else upon them. From *Seconge* you go to *Madalki-sera*, and passing thro' *Paulki-sera* and *Chaldolki-sera*, you come to *Callabas*.

6. There is a great Town, which was the Residence of a Rajah formerly, who paid Tribute to the Mogul; but the last Emperor *Aurengzeb*, when he came to the Crown, not only cut off his Head, but the Heads of many of his Subjects, which he caused to be set up in so many Holes dug in the Ground, about the two Towers which stand upon the High-way near the Town. From hence the Way lies to *Ackmate*, and from thence to *Collesar*, whose Inhabitants are all Idolaters. Without the Town, upon the Highway, grows a vast Number of great Trees, which they call *Mangues*, and in many Places near the Trees, are many Pagods, with every one an Idol at the Door: They belong to the *Banjans*. From this Town you travel through *Sanfell* and *Dongry to Gate*. This is a Strait Passage of a Quarter of a League long between the Mountains, and is unavoidable by all that come from the South, as *Surat*, *Gou*, *Visapour*, *Golconda*, *Massepatan*, and other Places, to *Agra*; for there is no other Road but this. At the Entry of it are the Ruins of two or three old Castles, and the Passage is so narrow that two Waggon can hardly go a-breast: Formerly there was a Gate at each End of the Strait, and, at the End, next *Agra*, there are five or six Shops of *Banjans* that sell Flour, Butter, Rice, Herbs, and Pulse. Not far from thence is a Magazine of Rice and Corn, kept by Serpents of thirteen or fourteen Foot long, and of a proportionable Big-
nels.

The People hereabouts get their Living by Passengers, from whom they extort as much as they can, for shewing them the Way, there being none but them that know it, because it lies through intricate Rocks, till they come at the River, which, being torred, the Road leads to *Nadar*, which is a great City upon the Defcent of a Mountain, upon whose Top there is a Fortrefs, and all the Mountain is encompassed with Walls. The greatest Part of the Houses, as in all other Cities of *India*, are thatched with Straw, one Story high; but the rich Mens Houses are two Stories high, and tarraffed. Round about the City are several Ponds to be seen, which were formerly encompassed with hewn Stone, but now are decay'd for want of looking after; but there are still very fair Monuments about them. The River which you pass before you come at this City, encompasses the Mountain like a Peninsula, and, after a long winding Course, falls into the *Ganges*. At *Nadar* are made a great Number of quilted Coverlets, some white, others embroidered with Flowers of Gold, Silk, and Satin. From *Nadar* you go to *Barqu-sera*, and so by *Tote* to *Goualeor*. This is a great City, but ill built, as all the other *Indian* Cities are. It is built on the Side of a Mountain that lies on the West-side of it, and at the Top is encompassed with Walls and a Tower. In the Inclosure are several Ponds, made by the Rains, with which they water their Grounds, sown with Rice, and to raise Corn enough to maintain their Garrison; and, upon that Account, it is esteemed the best in the *Indies*. Upon the Defcent of this Hill, which looks towards the North-East, *Chu-leban* built an House of Pleasure, from which there is a delightful Prospect all over the City: It is so contrived that it may serve for a Garrison. Beneath the House are to be seen several Idols, cut out of the Rocks, representing the Shapes of their Gods; and one of them is of an extraordinary Height.

The *Mohammedan* Princes make this Fortrefs of *Goualeor* a Prison for their great Princes and Noblemen that offend them. *Chu-leban*, who came to the Crown by foul-play, imprisoned all the Princes and Lords he suspected to be Male-contents, in this Castle, but suffered them all to en-
NUMB. I.VI.

joy their Estates. But *Aureng-Zeb* his Son, takes contrary Measures; for, when he imprisons any great Lords, he orders them to be poisoned within ten or twelve Days after; that he may be rid of his Enemies, and yet not be thought a cruel Prince for his bloody Executions. Leaving *Goualeor*, you ford a River called *Lanke*, and come to *Paterki-sera*, where, passing over a Bridge, containing six wide Arches, and which carries you over the River *Quarinado*, you arrive at *Quarraqui-sera*, and so to *Dolpoura*, where there is a River, called *Chamel-nadi*, to which there belongs a Ferry-boat. The River falls into the *Gemena*, between *Agra* and *Hallebas*. From hence you pass to *Minasqui-sera*, where there is a River, called *Jagounagi*, but you do not pass it till you come eight Leagues farther, and then there is a long Bridge built with Stone, called *Quaoulcapoul*. Not far from this Bridge, they view the Merchants Goods, that when they come to *Agra* they may not be cheated of their Duties; and more particularly observe whether there be any Flasks of Wine among the Casks of pickled Fruits. From this Bridge you come to *Agra*, which, from *Surat*, is 339 Leagues, viz. from *Surat* to *Brampour* 132 Leagues, from thence to *Seconge* 101 Leagues, and from thence to *Agra* 106 Leagues. In these two last Stages the Country is full of fine Fields of Corn and Rice, being a lovely Champain, where you meet with very little Wood, and the Villages so thick that you may rest when you please.

7. The other Road from *Surat* to *Agra*, through *Amanadobad*, lies, first, through a Country full of Corn, Rice, Millet, and Sugar-Canes; where, having ferried over the River which runs to *Cambaya* and falls into the Gulph, you come to *Baroche*, which is a great City, and has a Fortrefs belonging to it, but there is no Use made of it at present. This City is very famous for Trade, on Account of the River, which has a peculiar Quality to whiten their Cottons, and which are therefore brought from all Parts of the Mogul's Territories thither for that End; besides, here are made great Quantities of *Bassa's*, or long and large Pieces of Cotton, very fine and close woven; the Price of them is from four to an hundred *Ruppes*. You must pay Custom at *Baroche* for all Goods carried in and out. The *English* President has a very fair House in this City.

In this City are a sort of Mountebanks, who do strange Tricks, viz. They will heat a Chain red-hot, and wind it about their naked Bodies several Times, and though they make as if they felt a great deal of Pain, yet, in truth, they receive no Harm at all: But, what is more miraculous, they will thrust a dry Stick into the Ground, and, in less than half an Hour's Time, make it a Tree of four or five Foot high, bearing Leaves and Flowers as in the Spring-Time. An *English* Minister seeing this Witchcraft, declared it unlawful to be a Spectator of such Delusions, and protested he would not give the Communion to any that should hereafter do it. These Mountebanks wander up and down the Country to shew these Tricks, with their Wives and Children, and get a Livelihood by it.

Those who are curious to see *Cambaya*, leave the direct Road, which goes to *Broudra*, and pass through that City, which is not above four or five Leagues out of the Way, and is the safer Road. *Cambaya* is a great City at the Bottom of the Gulph, on the South of it; it lies in the Province of *Guzerat*, and though it be not so popular as *Surat*, it is as big again. It has very fair Walls about it four Fathoms high, and Towers standing at a certain Distance. The Streets of it are large, and have all Gates at each End, which are shut every Night. The Houses are very high, and built of Bricks, dried in the Sun, and were once furnished very richly after the *Portuguese* Manner, but now many of them fall to Decay. Here it is that they shape those fair Agates, that come from *India*, into Cups, Halfts of Knives, Beads, and other Workmanship. These Agates are fetched out of a Quarry, by a Village called *Minodra*, four Leagues from *Cambaya*, in Pieces as big as a Man's Fist. The Shops here are stored with aromatick Perfumes, Spices, Silken, and other Stuffs. Most Part of the Inhabitants are *Banjans* and *Rashpouts*. The Castle, where the Governor resides, is large, but not
10 B v.17

very beautiful. There are so many Monkeys in the Town that sometimes the Houses are covered with them, and they often do Mischief in the Streets, by throwing down such Things as they find upon the Roofs. The Out-sides of the Town are beautified by a great many fair publick Gardens. Here is a marble Sepulchre, raised by a King of *Guzerat*, in Honour of a Governor of this City, but it is decay'd: It contains three Courts, and, in one of them are several Porphyry Pillars.

Anciently, in this City, there was an Hospital for sick Beasts, but there are only Ruins of it now. The Suburbs are almost as big as the Town, and in them they make Indigo of the same Nature as that of *Sarquesse*. It was famous for Traffick when the *Portuguze* flourish'd in *India*, but now the Trade is almost lost, because the Sea that once came up so near the Town, that little Vessels could anchor by it, is now become half a League distant from it, and near the Coast is so shallow, that great Ships can come no nearer than three or four Leagues. There are great Numbers of Peacocks in the *Indies*, especially in the Territories of *Baroche*, *Cambaya*, and *Broudra*; and in the Day-time they walk about the Fields, but at Night roost upon the Trees: The Flesh of the young ones are white, and well-tasted. In those Parts where the *Mohammedans* govern, you may catch them without Difficulty; but in those Places where there are Idolatrous Rajahs Masters, it is very dangerous to kill them, or any other Bird or Animal; for the *Banjians* count it Sacrilege, and will severely punish any they can seize: They whipp'd a *Persian* Merchant to Death, and took all his Money, to the Value of 300,000 *Ruppes*, for shooting a Peacock.

From *Cambaya* you go through a little Village, where there is a Pagod, where the *Indian* Courtizans make their Offerings; and among divers naked Images, there is one that resembles *Apollo*, with his Privy-parts uncovered. The young Girls, who are trained up to this wicked Art by the old Courtizans, when they are eleven or twelve Years old, surrender themselves up to this Idol, believing that it will bring them good Fortune. And about six Leagues farther you come to *Cridabad*, which is one of the fairest Heufes of the Great Mogul, being in a wide Inclosure, wherein he has vast Gardens and large Ponds, with all the Pleasures and Curiosities whereof the Genius of the *Indians* was capable. And from this Place you travel to *Amadabat*, to which City you come from *Broudra* by *Nerada*.

S. Amadabat, which is probably the *Amadavists* of *Arrian*, is eighty-two Leagues from *Surat*, and lies in 23 Degrees and some Minutes of N. Lat. It is built in a Level Plain, watered by a little River, called *Sakranetty*, which is not very deep, but swells prodigiously by the Rains. Without the Town are many large Gardens inclosed with Brick-walls, and every one of them have a kind of Pavilion at the Entry. By them there is a Reservatory of Water, which has in the Middle of it a lovely Garden, eighty Paces square, into which one enters over a Bridge that has several Paces long, and at the End of the Garden are pretty covers for the groups. Near these you see many Houles, which make a kind of large Village, and a great many Temples, all differently worship'd. From hence you pass through a Street, which leads you into the Town, which is inclosed with stone and Brick-walls, which, at certain Distances, are flanked with great round Towers and Battlements all over: It hath twelve Gates, and is about a League and an half in Length, it you take in the Suburbs.

All the Streets are wide, and the Midan is four hundred Paces in Breadth, and seven hundred in Length, with Trees planted on all Sides. The Gate of the Castle is on the West-side, and there are six or seven Pieces of Cannon mounted. In the Market place are the Tribunal for the Centeval, or criminal Judge; and in the Midan is a very high Tree, which has a Ball fixed on the Top of it, for those to hit who exercise them selves by the using of Bows and Arrows. This Castle is walled about with good Walls, of Free-stone, and is as spacious as a little Town. Near the Midan is a large Palace belonging to the King, which has over the Gate a large Balcony for the Medicans, who play there every six Hours. The Apart-

ments are adorned with Gold Paintings. The *English* Factory is in the Middle of the Town, it is well seated, and hath very fair Courts. Their Warehouses are commonly full of Cloths from *Lahor* and *Delhy*, with which they drive a great Trade.

But the Trade of the City is in Silk Stuffs; Hangings of Gold, Silver, and Silk; but with woollen Grounds, Sappet, Ginger candied and raw; Lac, Cummin, Opium, Tamarinds, Mirabolans, and Hat Indigo: There are many *Molques* great and small in it, but that which is called *Juma-mejid*, or *Fridays* Mosque, because all the devout People of the Town flock together on that Day, is the chiefest and fairest. It hath a large square Cloister, two fine Gates, with high Steeple, from whence the *Muzim*, or Beadles of the *Molques*, call the People to Prayers. It hath several Domes, and two Minarets, and 'tis paved with Marble, so that all together 'tis a pleasant Sight. It is inhabited by many Heathens, as well as *Mohammedans*, who have their Pagods, or Idol Temples there.

The Pagod of *Santidas* was the chief before *Aurangzeb* converted it into a Mosque. It hath three Courts, paved with Marble, and encompassed with Galleries; and into the third none must enter, till they have pulled off their Shoes; the Inside is adorned with *Mosack* Work, and Agates of divers Colours. In it are several Sepulchres of the ancient idolatrous Kings, of *Mosack* Work, which look like little Chapels; but the Tomb of *Cabalum*, whom the *Indians* report to have been a Magician, but the *Mohammedans* believe him to have been a great Saint, is most honoured, being daily visited by a great many out of Devotion. The *Banjians* have a great Veneration for Apes, and there are some that breed them up in their Pagods to worship, and if any one kill any of them, complain of it as a great Injustice. There are three or four Hospitals for Cows, Oxen, Camels, Apes, and Birds, and other sick and maimed Beasts, where they are looked after, and well fed. They buy them from *Christians* and *Moor*s, to deliver them, as they say, from the Cruelty of *Indidek*, and if they are incurable, they keep them there as long as they live; but if they recover, they sell them to *Gentiles*, and none else. This is also very remarkable, that every *Tuesday* and *Friday*, all the Apes in the Country adjoining, come into the City, and lie upon the Tops of Houles, during the excessive Heats. Upon these Days the People never fail to set ready in their Terraces, Rice, Miller, Sugar-canes, and such-like things; for if they do not find Provisions, they will break their Tiles, and do a great deal of Mischief.

About *Amadabat* are a great many Forests, where they catch Panthers, which they tame, and lend to the King for his hunting. From hence you go to *Panjar*, and so by *Mossana* to *Chitpaur*, a very good Town, so called from a fort of painted Calicuts, called *Chittees*, made and sold here. They have an Art here of taming Lions, by tying them in a large Plain, and making them a Sport to the People. Hereabouts it is common to meet the Companies of *Vaquers*, or *Mohammedan* Dervices. They have a Superior, and some Assistants, who have some Cloaths better than the rest, *viz.* some Pills of Calicut about their Middle, to cover their privy Parts, and a Tyger's Skin about their Shoulders; but the rest have only a Cord for their Girdle, and a little Bit of Calicut fastened to it to cover their Privities. Their Hair is tied about their Head like a Turban, and they are armed with Bows, Arrows, and Muskens, Hall-pikes, &c. When they travel, they carry their Luggage, which is some Household-stuff, and a pretty many *Arabian* and *Persian* Books on Oxen. When they come to any Place, the Superior sends some of his Crew a begging into the Towns and Villages, and what Alms they get is presently distributed equally among them, every one of them taking Care to boil his own Rice, and what is over and above, they give to the Poor in the Evening; for they receive nothing for next Day. From *Chitpaur* you pass through *Balampore*, and to through *Dontreer* and *Bargant*.

This Town is in the Territories of a Rajah, to whom you must pay some Duties, and all the Way through these Countries are dangerous to be travelled, because the Rajahs live altogether upon Robberies, and therefore unless you hire

a Rajah, to whom
Way through there
because the Rajahs
therefore unless you
hire

hire many People for a Guard, you will go near to have
your Throat cut; for there is no Likelihood of escaping
these Free-booters. From thence the Way lies through
Bimal and *Madra* to *Chalaur*, an ancient Town upon a
Mountain, encompassed with Walls, and very difficult to
come to. There is a Lake upon the Top of the Moun-
tain, and another below, and between them lies the Road
to the Town. From *Chalaur* you pass on to *Contap*, *Set-*
lana, *Palavafaney*, and *Pipas*, upon whence
to *Mirda*, is three Days Journey, being a mountainous
Country, and belongs to Rajahs, or petty Princes, who pay
Tribute to the Great Mogul; but in Recompence of it,
the Great Mogul gives them Commands in his Army,
which affords them large Appointments. *Mirda* is a great
City, but ill built.

This City having offended the King's Sister, *Begum* the
Wife of *Cha-Eib-Kan*, in not waiting on her, and making
her a Present on her Journey through that Place, and when
she went to marry her Daughter to Sultan *Sujab*, she lost
two hundred Elephants, who tore down their Trees, and
did them incredible Mischief. From *Mirda* the Road lies
through *Borondo*, *Caetcheil*, *Bander*, *Sonnyry*, *Ladona*,
Chajou, *Nowali*, and *Himdo*, to *Baniana*. These two last
Towns are famous for Indigoes Cake, which is round, and
being the best of all the Indigoes, is double the Price. *Ve-*
tapour, a Town famous for weaving Woollen Hangings, is
the next Town, and from thence you go directly to *Agra*,
to which from *Surat* is four hundred and fifteen Leagues,
and thirty-three Days Journey, if they could be equally
divided; but because you stay in some Places, it usually
takes up thirty-five or forty Days.

From *Candabar* there are two Ways to *Agra*, either
through *Caboul*, or *Multan*; the latter is the shorter by ten
Days Journey; but the Caravan never goes that Way, be-
cause it lies almost all through the Desarts, where there is
no Water to be met with for three or four Days together,
so that their most ordinary and beaten Road is through *Ca-*
boul. Now from *Candabar* to *Caboul* is twenty-four Days
Journey, and from thence to *Labor* twenty-two; from
Labor to *Dekhy*, or *Gebanabat*, eighteen, and from thence
to *Agra* six, which with the sixty Days Journey from *Is-
pahan* to *Errata*, and twenty from *Errata* to *Candabar*,
makes in all from *Ispahan* to *Agra* one hundred and fifty
Days Journey; but the Merchants that are in haste ride
three or four in a Company upon Horses, and finish it in
sixty or sixty-four Days at most.

Multan lies in 29° 40' North Latitude, and is the ca-
pital Town of the Province of the same Name, tho' some
Geographers place it in the Province of *Sinde*. It hath
many Towns dependant upon it, as *Caazar*, or *Corhar*,
Coudarvil, *Saudar*, and others. In this City are made a vast
Quantity of Linnen Calicuts, for which heretofore there
was a very great Trade, because it not being far from the
River *Indus*, they could easily transport them to *Tatta*,
where the Merchants of several Countries bought them up;
but because of late the Channel of the River is spoiled in
some Places, and the Mouth is quite flopped up with
Sands, they are forced to send all their Goods to *Agra*, and
so to *Surat*, which so increases the Price by the Carriage,
that the Merchants do not care to deal in them; by which
means the Trade is much lessened there, and the Workmen
have deserted the City, so that the King's Revenues are
much lessened in those Provinces: Yet there is a small Trade
for Sugar, Opium, Brimstone, Galls, and Camels, which
are transported into *Persia*, *Gazna*, *Candabar*, and the *Ind-*
ies, by *Labor*. It furnishes *Indostan* with the finest Bows
that are to be seen in it; and here are bred the great Num-
ber of Dancers of both Sexes that spread themselves all over
Persia.

The Commander and Officers of this Town are *Moham-*
medans, and consequently it may be supposed that most
Parts of the Inhabitants are of the same Religion; yet there
are a great many *Banjans*, who come to trade, and exercise
their Arts, and Brokage, and Usury, in which they much
outdo the *Jews*; for they are so watchful and cunning,
that no Opportunity of Gain slips them; and they have so
wound themselves in all Business, that hardly any body can
be without them. They take Commissions of all kinds,
and though it be known that they make a Profit of every

thing, yet the Merchants chuse to make use of them, ra-
ther than do their Business themselves; for they will buy
cheaper and better than any Man can for himself. They
are of a pleasant Humour, and refuse no Service, whether
honourable or base, and are always ready to satisfy those
that employ them; and therefore every one has his *Banjan*
in the *Indies*, and some Persons of Quality entrust them
with all they have, though they are not ignorant of their
Hypocrisy and Avarice. The richest Merchants of the
Indies are of this Class, or Tribe. They are commonly
very jealous of their Wives, who are fairer than the Men,
though of a brown Complexion, and love to paint. They
have a particular Law amongst them, which permits them
to eat Fowl upon certain Days of the Year, and to have
one Wife among two or three Brothers, and the eldest of
them is accounted the Father of the Children begotten
among them.

9. From *Candabar* you travel to *Cbarisafar*, and then
through *Zalate*, *Betazy*, *Mezour*, and *Carabat*, to *Cha-*
kentour, which is a frontier Town of the *Indies*, and the
Country about it under the Command of several Princes
that acknowledge the *Persian* Emperor. From this City to
Caboul is forty Leagues, and in the whole Journey there is
but three pitiful Villages, where you can rarely get Bread
and Barley for your Horses, and therefore you must carry
Provisions for yourself.

In the Months of *July* and *August* there blows an hot
Wind in these Parts, that takes away a Man's Breath, and
kills him upon the Place. It is the same with that which
blows about *Babylon* and *Moussul* at certain Seasons. In
this Road dwells a certain People called *Agans*, towards
the Mountains of *Balk*; they are a sturdy sort of People,
and great Robbers in the Night-time. These People, as
the rest of the *Indians*, have a Custom to cleanse and scrape
their Tongues every Morning with a crooked Piece of a
Root, which causes them to void a great Quantity of
Phlegm and Rheum, but not to vomit, as it doth the other
Indians; nevertheless, when they come to eat, as soon as
they have swallowed two or three Bits, their Lungs begin
to swell, and they are constrained to go forth and vomit;
after which they return again to their Victuals with a very
good Appetite; should they not do so, they would not live
above thirty Years, and besides, would be troubled with a
Droopy.

Caboul is a large City, the Metropolis of the Province of
Caboulstan, or *Caboul*, and hath two Castles well fortified;
and because several Kings have held their Courts there, and
many Princes have had it successively for their Portion,
there are a great many Palaces in it. It lies in 33° of
North Latitude, the Mountains about it produce Plenty of
Mirabolans, which from thence the Eastern People called
Cabuly, several sorts of Drugs, and some Spices, with
which the Iron Mines in them yield a great Profit to
the Inhabitants. In this Town they maintain a great Trade
with *Tartary*, the Country of the *Uzbeks*, and the *Indies*.
The *Uzbeks* alone sell yearly in this Town above sixty
thousand Horses, and the *Persians* bring hither great Num-
bers of Sheep, and other Cattle, by which means they are
much enriched. Wine is to be had, and Provisions are
cheap, though the Country about it is but cold and barren,
unless in some Places, which are sheltered by the Moun-
tains, being rendered a little more fruitful, by the two Ri-
vers that water it, and which have their Source in the
Mountains.

From this Province especially come the large Canes, of
which they make Halberds and Lances, and they have
many Grounds planted with them. The Inhabitants of
the City and Province are most of them Heathens, and
therefore in all Towns and Villages are many Pagods.
They reckon the Months by the Moons, and with great
Devotion celebrate the Feast called *Houly*, which lasts two
Days, at the full Moon in *February*. At this Feast, they
are all clothed in a dark red, and after they have prayed
in the Temple, and made Oblations, they spend the rest
of the Time in Dancing, by Companies, in the Streets, to
the Sound of Trumpet, visiting their Friends, and eating
together, every Tribe by itself. The Great Mogul's Re-
venue from this Country, is four or five Millions yearly.

From *Caboul* the Road lies through *Bariabe*, *Nimela*, *Aiboua*, *Taka*, *Kiawri*, *Chenar*, and *Novcebar*, to *Aiceb*, a City situate upon a Point of Land, where two Rivers meet together. It is one of the best and strongest Garrisons the Great Mogul has, and no Stranger is permitted to enter into it without a Passport from the King. From hence you pass to *Calapaner*, and so to *Roupari*, *Toulapeca*, *Keralay*, *Zenabad*, and *Imiabud*, to *Lahor*. This City is the Metropolis of a Kingdom, built upon the River *Kasra*, which is one of the five Rivers, which descending from the Mountains, twell the River *Indus*, and give the Name of *Peniab*, or *Five Rivers*, to all the Region they run through.

It lies in 31° 50'; the River having a very flat Channel, is taken off from the Town above a League, and being subject to overflow, does a great deal of Mischief in the Country. The City is large, and extends itself above a League in Length. It was a very pretty Place when the Kings kept their Courts there, having many Mosques, publick Baths, Caravansera's, Squares, Tanques, Palaces and Gardens; but all these, with the greatest Part of the Houses, are fallen to Ruin, by reason of the excessive Rains, which have washed down many of them. The Castle remains still, for it is strongly built. It hath twelve Gates, three towards the City, and nine towards the Country, and the Palace which is within it, has not yet lost its Beauty. There are a great many Pictures upon the Walls, representing the Actions of the Great Mogul, and his Forefathers, all promiscuously painted; and on one Gate is the Picture of a Crucifix, and on another the Virgin *Mary*, not out of any Kindness to the Christian Religion, but to flatter the *Portuguezes*.

The Inhabitants are most of them *Gentiles*, and so there are many Pagods in the Town, of which some are adorned well, and all are raised seven or eight Steps from the Ground. The Province about it is one of the largest and most plentiful in the *Indies*, the Rivers that run through it rendering it most fertile in Rice, Corn, and Fruits. The Wine also is pretty good, and the Sugars the best of all *India*. All sorts of painted Cloths, and other *Indian* Manufactures, are wrought here, and it is said that this Province yields the Mogul a Revenue of thirty-seven Millions yearly, which is a Proof of its great Trade and Fruitfulness. From *Lahor* to *Agra* there is one continued Walk of Trees, called *Achy* Trees, which have long and thick Branches, which cover the whole Way, though these Cities be one hundred and fifty Leagues distant one from the other. It was planted by King *Geburgan*, but is not kept up.

At *Tanjavar*, a Town in this Province, is a Convent of *Gentiles*, who are called *Nairias*, they have a General, Provincial, and other Superiors, and say, that it is above two thousand Years since they were founded; they vow Obedience, Chastity, and Poverty. They obey the least Signal of their Superiors, and will not look a Maid or Woman in the Face. They live on Alms, which is begged of them every Day at the Hands of the *Gentiles* of their Tribes, and will leave nothing till the Morrow. They make but one Meal a Day, and that is about Noon; and though they are never so thirsty, or hungry, must not eat or drink till the same time the next Day.

They wear nothing on their Bodies, but a Cloth to cover their privy Part, which they bring up over their Heads, like a Woman's Coat. The main Part of their Institution is not to do to other what they would not have others to do to them; and they observe it even to the Beasts, which they will never kill. If any body beat them, they do not resist, and if they are reviled, they make no Answer. They employ their Hours wholly in Prayers, and Reading, and so pass the Day with the Sun set; for they never fight a Battle. If any break their Obedience, he is severely punished; and if they break their Vow of Chastity, they are expell'd. They have above ten thousand Monasteries in the *Indies*. Some of them think it incumbent to worship God in part, and have no Idols, or Pagods. There are also many Nuns of the same Order, who live very chastely.

From *Lahor* the Way lies by *Menat-kun*, *Taty-cob*, *Sera-dakur*, *Sera-dakour*, *Sera-dourai*, *Serinde*, *Sera-Mogul*, *Sera-Gulair*, *Dinaraud*, *Sera-Gindak*, and *Grema-*

our, to *Dehly*, or *Gebanabad*. This City is a large Place, and stands near the River *Gemma*, which runs on both Sides of it; and after it has pass'd *Agra* and *Kadion*, empties itself into the *Ganges*. It is divided into three Parts, or Towns. The first is almost intirely destroyed. The *Indians* say it is very ancient, and that it was the capital City of the States of King *Perus*, who oppos'd *Alexander the Great*. The *Indians* say it had fifty-two Gates; and there are still remaining a long Stone Bridge, and a Way, with lovely Trees leading to the second Town, by the Sepulchre of *Cha-Hunayen*. The second Town was at the Conquest of it, beautified with many stately Sepulchres of the *Patan* Kings, and other Monuments, which rendered it a very lovely Place; but *Cha-Jehan*, the Father of *Aurangzeb* the present King, demolished it, and left nothing but a Pyramid, or Obelisk of Stone, which, by its unknown Characters, shews a great Antiquity.

The third Town is joined to the Ruins of the second, and was built by *Cha-Jehan* out of the Ruins of it, and from him it had its Name of *Geban-Abad*. This City lies in an open Champain, upon the Bank of the River *Gemma*, and is encompassed with a single Wall. All the Houses even of private Men consist of great Enclosures, in the midst of which is a Place for Lodgings. The greatest Part of the Lords have their Houses without the City, for the Convenience of Water; for the King chuseth to keep his Court here rather than at *Agra*, for the same Convenience. As you enter into *Gebanabad* from *Dehly*, you come into a long and broad Street, which has Vaults on each Side, where the Merchants keep their Shops. This Street ends in the great Piazza, where the King's Palace stands. There is another Street which leads up to the King's Palace, where the Merchants have, who keep no Shops: The Fortrets of it is half a League in Circuit, and has good Walls, with round Towers in them, and Ditches about them full of Water. The King's Palace, where are all the Ensigns of Royalty, is in this Fort. There is a Place by the Water-side for the fighting of Elephants, and other Exercises. The King's Palace is encompassed with Walls of fair red-cut Stone, with Battlements.

The Gate and first Court have nothing of Magnificence, for the great Lords may enter into it with their Elephants. Out of this Court you go through a long and large Passage, with fair Portico's on both Sides, into a great Court, where the Omrah's, i. e. the great Lords of the Kingdom, keep Guard in Person, having their Lodgings round about the Court, and their Hooves tied at the Doors. From this second Court you pass into a third, through a great Portico, where on the one Side is the Mogul's Wardrobe, out of which he bestows the Calar, or whole Habit of a Man, which he gives to any Stranger, or Subject, in Honour to them. The next is the Place where the Drums, Trumpets, and Hautboys are laid, which are founded when the King goes upon the Judgment Seat, and right forward is the Divan, where the King gives Audience and Sentence. In the Middle of the Hall is the Throne, where the King sits, erected upon a kind of a Theatre. It has a little Bed, with four Columns, a Canopy, Back-piece, Bolster, and Counterpoint, all embroidered with Diamonds, and covered with a Cloth of Gold when the King sits on it. Below the Throne is a Place twenty-four Foot square, encompassed with Balusters, sometimes of Silver, and at other Times Gold Plates. At the four Corners of it sit the four Secretaries of State, who are the only Advocates in all Causes.

Many Lords stand by the *Beketrans*, and some of the greatest, with his Children, stand by the Throne. While the King is on his Throne, none may go out of the Palace, nor any that have Business come nearer than the Chamber in the Middle of the Court, till they are call'd; nor, nor Embassadors themselves. From the Divan the King passes over a Terrace, where the River is to be seen, into the *Haram*. Upon the left Hand of the Court stands a little Mosque neatly built, with a Copolo covered with Lead, perfectly gilt. Thither the King goes every Day to hear Prayers, except *Friday*, when he goes to the great Mosque, which is a very fair one, and raised above the Houses of the City. On the right Side of the Court are the King's Stables, which are full of stately Horses, the worth of which stands the King in three thousand Crowns, and some cost

most part lascivious, are rarely bought up by *Europeans*. They have a Way in this Town of working in Gold, upon Agat, Crystal, and other base Metals, which our Goldsmiths and Lapidaries have not.

13. In your Journey from *Agra* to *Bengal* you come first to *Beruzabad*, then to *Sarail-Haimal* and *Sarail-Sekandria* to *Sauqual*: A League from thence you pass over the River *Sangour* upon a Stone-bridge, where those that are passing from *Bengal* to *Surat* may leave the Road to *Agra*, and ferrying over the *Gemma*, shorten their Journey en Days: But, since some of that Way is very stony, Travellers generally chuse to go by the Way of *Agra*. From this Bridge you go on by the *Cheourabad* and the Town *Serail*, *Chajrada*, and *Serail*, leaning to *Aurengabad*. This is a great Town, the Capital of a Province, but it has no Walls. The Governor, who is a Prince, has his Residence there; and *Aurengzeb* commanded there, as he did at *Candich* in the Reign of His Father: his first Wife, whom he loved dearly, died in this Town, and as a Monument to her, he erected a lovely Mosque, covered with a Dome, and beautified it with four Minarets, or Steeples. It is built of white polished Stone, which looks almost like Marble.

It hath several pretty Mosques, Inns, and Baths. The Buildings are, for the most part, of Free-stone, and pretty high: Before the Doors grow a great many Trees in the Streets, and the Gardens are well cultivated and pleasant, affording the Refreshments of the Fruits, Grapes, and Grass-plats. They have Sheep without Horns, that are so strong, that being bridled and saddled, they will carry Children of ten or twelve Years of Age. It is a good trading Town, and well peopled, with excellent Ground about it. It took its Name, by which it is now called, from the present Monarch *Aurengzeb*, who overcame Sultan *Suyab*, his Brother, who was Governor of all the Provinces of *Bengal*, in that Place. From thence you pass to *Alinchan*, and two Leagues farther pass the *Ganges*, which, though famous in History, is so shallow from *March* to *June* or *July*, when the Rains fall, that it will not bear a Boat.

The Water being drank causeth the Gripes, and therefore the *Hollanders* that live upon the Banks of it, never drink thereof till they have boiled it; but the Natives are so accustomed to it, that the King and Court drink no other, because they account it lighter than any other Water. The Heathen *Indians* account the Water of this River to be sacred, and have many Pagods by it, the fairest in the *Indies*; so that it may be said, that here Idolatry is most triumphant. The two chief Pagods are at the Towns of *Yagumai* and *Benevrou*: Nothing can be more magnificent than they are, by reason of the great Quantity of Gold and many Jewels with which they are adorned. In these Pagods they keep their Festivals many Days together, and many People repair thither from all Parts of the *Indies*, where they carry their Idols in Triumph, and act all manner of Superstitions by the Encouragement of the Bramins, who are numerous thereabouts, and draw much Profit by it. The *Ganges* is full of pleasant Islands, covered with lovely Trees, so that it is most delicious Sailing upon it. In these Islands, and some other Places of *Bengal* is a Bird called *Meina*, whose Colour is like a Black-bird, but as big as a Raven; it will speak like a Starling, and imitates the Neighing of a Horse exactly. This River has received an infinite Number of Brooks and Rivers from the N. E. and W. into it, and discharges itself by several Mouths into the Gulph of *Bengal*, which is eight hundred Miles over, and reaches from the 18 to the 22^o of Latitude.

14. Having passed *Ganges*, you arrive at *Hallahas*, a great City, built upon the Point of Land where *Ganges* and *Gemma* meet; it is the chief Town of a Province that bears the same Name. It was, for a long Time, one of the Bulwarks of the Kingdom of *Patani*, and is the same Town which *Pliny* calls *Chrysobera*. It was subdued to the Kingdom of the Mogul by King *Isbar*, who built a strong Citadel in it strengthened with three Walls, of which the outermost is of a very hard red Stone. It is adorned with a very ancient Obelisk, above Sixty Foot high, that has many Hieroglyphs, but the Letters are not

legible. The Mogul has a fair Palace here, and under it are certain arched Palaces, where the Pagods of *Adam* and *Eve* are kept, whose Religion they pretend to follow. Hither, at certain Times, come an incredible Number of Pilgrims from all Parts of the *Indies* to visit those Pagods, because they say, *Adam* and *Eve* were created here; but, before they approach the Place, which they esteem holy, they all wash themselves in the *Ganges*. The Province of *Hallahas* pays the Mogul yearly fourteen Millions.

At *Hallahas* there are usually Troops of *Faquirs*, who call themselves a religious Order among the *Indians*, and many of them practise the Life of Penitents, forbearing to eat many Days, standing constantly upon a Stone for several Weeks or Months, holding their Arms a-cross over their Heads as long as they live, or bury themselves in a Pit for a certain Time; but others wander up and down the Country like Gypsies, committing Robberies and all sorts of Rogaeries; some of them will threaten to kill themselves, and some of them have done it, unless the *Banjans* would give them what they demand, and so obtain considerable Sums of them; for the *Banjans* abhor Murder, and will give any thing to prevent it. The Penitents are extremely honoured by the *Gentiles*, and the rich think they draw down Blessings upon themselves when they give to them.

From *Hallahas* you pass over a River, where stands a *Deroga* on each Side, to take notice of what Goods are transported, there being due for every Waggon-load, four *Rupees*, and every Coach one, and stop all that travel without a Pass; and they go through *Lake-dol-fera*, *Sadan*, *Sarail*, and *Bourah-fera* to *Benarou*. This is a large City and handsomely built, most of the Houses being of Brick or Stone, and higher than in any other *Indian* City, but the Streets are narrow. There are many Inns in the Town, and among the rest one very large and handsomely built. In the Midst of the Court are two Galleries, where are to be sold Calcuts, Silk, and other Merchandize, and under them are Cellars where the Workmen live. All the Goods are stamped with the King's Seal, before they are exposed to Sale.

The *Ganges* runs by the Walls on the South side, and in it is one of the principal Pagods of the Idolaters. About five hundred Paces from the City northward, there is a Mosque, where are many *Mohammedan* Sepulchres, enclosed with a Garden, but there are Holes through the Walls half a Foot square, for Travellers to look into them. The most considerable is said to be that of one of the Kings of *Boutan*. It is a four-square Pedestal, forty Paces wide, and, in the Midst of it, a Pyramid thirty-two, or thirty-five Foot high, with a great Ball at the Top. All the Fronts are full of the Figures of Animals cut in Stone. It was once very high, but within fifty Years it is sunk above thirty Foot into the Earth. From *Benarou* you pass on to *Baterpou*, and so by *Satragy-fera* to *Manna-by-fera*; in the Road from thence you ford two Rivers called *Carnasa-fou* and *Saad-fou*, and come to *Gourmahad*, which stands upon the River *Gouarsu-fou*. The City stands at the Foot of certain Mountain, near which is a great Lake, and in the Midst of it a small Island, with a fair Mosque built upon it, wherein is the Sepulchre of a *Nikader* Governor, called *Selera-Khan*, who built it for himself when he was Governor of the Province. There is a fair Free-stone Bridge to cross over into the Island; and on the Side of the Lake is a great Garden, in the Middle of which is a fair Sepulchre of the Governor's Son, who succeeded his Father in the Government of that Province. Leaving *Sancrou* you ferry over the River *Sou-fou*, which descends from the northern Mountains: Here all Merchandize pays certain Toll, and so you go on to *Dand*, *Nargur-fera*, and so by *Palka-fera* and *Aga-fera* to *Paina*. This is one of the biggest Cities of *India*, being two Leagues long, and standing on the Banks of *Ganges* westward; but the Houses are no better than in the greatest Part of the other Cities, being covered with Bamboos, or Straw. The *Dutch* Company have an House there because of their Trade in Salt-petre, which they buy up here and refine at *Choupar*, a great Town upon the *Ganges*, ten Leagues distant from *Paina*.

ir Palace here, and under it here the Pagods of *Adam* whom they pretend to follow. There is an incredible Number of *Indies* to visit those Pagods, which were created here; but, which they esteem holy, the *Ganges*. The *Pro-Mogul* yearly fourteen Mil-

Troops of *Faquirs*, who call among the *Indians*, and many Penitents, forbearing to eat any upon a Stone for several Years Arms a-crois over their Heads, bury themselves in a Pit, and wander up and down committing Robberies and all other evil, and will threaten to kill any who come to them, unless the *Banney* demand, and to obtain the *Banyans* abhor Murder, and the Penitents are *Widows*, and the rich think themselves when they give

for a River, where stands a notice of what Goods are every Waggon-load, four and stop all that travel through *Yake-d-l-fera*, *Sadan*, *Barou*. This is a large City the Houses being of Brick any other *Indian* City, but there are many Jews in the very large and handsomely built are two Galleries, where all other Merchandize, and the Workmen live. All the King's Seal, before they

on the South-side, and of the Idolaters. About thirty northward, there is a *Hammedan* Sepulchres, entrance Holes through the walls, and look into them. To be that of one of the square Pedestal, forty Paces a Pyramid thirty-two, or a Ball at the Top. All of Animals cut in Stone, fifty Years it is sunk above from *Banarou* you pass on *by-fera* to *Manaby-fera*, and two Rivers called *Car* to *Gourmahad*, which *son*. The City stands at a lake which is a great Lake, land, with a fair Mosque of a *Nekader* God built it for himself when he. There is a fair tree-land; and on the Side in the Middle of which is a Son, who succeeded that Province. Leaving *Sen sou*, which defends here all Merchandize on to *Dand*, *Nargan-ga-fera* to *Patna*. This *son*, being two Leagues of *Ganges* westward; but the greatest Part of the Bamboos, or Straw. There here because of their buy up here and refine at *Ganges*, ten Leagues di-

The People of this Town having a *Mim Cachi*, or Colonel of a thousand Foot slain for *Solomy*, by his Boy, whom he had forced, he justified the Fact against the Governor, so that he durst not punish him for the Murder, but dismissed him after six Months imprisonment. From *Patna* you sail down the River to *Decu*, passing by several Towns where you lodge at Night; viz. *Sera-Becanour*, which is beyond the River *Pomponou*, which comes from the South, falls into the *Ganges*, *Sera-Enjab*, between which and the City *Alonger* four Rivers, viz. the *Raoa*, *Cbanan*, *Erguga*, and *Aquera*, fall into the *Ganges* on both Sides. Leaving *Monger*, you sail by the Mouth of the *Ganges* at a large River, and arrive at *Zangira*, beyond which the *Konova*, *Tou*, and *Cbanon*, empty themselves into the *Ganges*. And after you arrive at *Baquelapour*, and passing by the River *Catara*, you come to *Pongangol*, which lies at the Foot of certain Mountains which come down to the *Ganges*. Beyond this Place you meet with the River *Mart-Nardi*, and by it sail to *Rage-Mebale*, a City upon the Right-hand of *Ganges*; if you go by Land to it, the High-way is paved with Brick for a League or two before the Town. Formerly the Governor of *Bengal* resided here, partly because it was a Place of great Trade, and partly because it is an excellent Country for hunting, as well as to keep the King of *Aracon* in Awe, and suppress the *Portuguezze* Banditti, who have retired to the Mouths of *Ganges*, and make Excursions far as *Decu* itself.

But the River having left the City above half a League, the Governor and Merchants are removed to *Decu*, which, at present is a large City and full of Trade. From this Town, you come first by Water to *Donapour*, then to *Tautipour*, where there are abundance of Crocodiles in the River; as also at *Accrat*, which is in the Way. The vulgar Report is, that a Musket-Shot will not pierce the Skins of the Crocodiles; but, upon Trial, it is found false. Then you sail to *Doutoudia*, and passing the Mouth of the River *Cbaticeer*, you come to *Dampour*, and so to *Jatrapour*, near which the *Ganges* divides itself into three Arms, and then by *Bagu*, *Maca*, and *Kafata*; having passed the Mouth of the River *Lapico* two Leagues, you arrive at *Decu*. This Town runs altogether in Length; besides, every one strives to have his Dwelling by the Side of the *Ganges*. It is two Leagues long, but the Houses are but forty Huts, made of Bamboos, and daubed over with Earth. The Governor's Palace is a Place enclosed with high Walls, in the Midst of which is a pitiful House, built of Wood: He generally lodges in Tents, which he causes to be set up in a great Court of that Inclosure. The *Hollanders* have here a very fair House, which they have built for the Safety of their Goods, and the *English* have another, but not so handsome. The Church of the *Augustinians* is also of Brick, and is a very stately Pile.

15. There are several Roads from *Surat* to *Goleonda*: As by Sea, by *Goa*, and *Vijapour*, and by *Agra*. These two Roads by Land meet at *Dultabat*, and therefore I will speak first of the Road from *Surat*, as the most common, and then of that by *Goa* and *Vijapour*. From *Surat* you travel by *Cambari*, *Barnoli*, *Bara*, *Nareepour*, *Rinkuli*, *Pipebner*, *Nainpour*, *Patans*, *Secoura*, *Bequela*, and *Difcon* to *Dultabat*. This Town is one of the best Fortresses in the Dominions of the Great Mogul, being seated upon a Mountain every Way steep, the only Way being so narrow, that but one Horse, or one Camel, can go at a Time. This Town stands at the Foot of the Mountain, very well walled, with a natural smooth Rock, and has Battlements and Towers mounted with Cannon; but it is the Citadel on the Top of the Hill that is accounted the main Strength of it; for in it are a great many excellent Pieces of Cannon, and the Cannoniers are generally *English* or *Hollanders*.

From *Dultabat* you go to *Arenabat*, before described, and so through *Pipoli*, *Abar*, *Gusfermer*, *Afin*, *Sorver*, and *Isfona*, to *Nadour*. Here you cross a River, which runs into the *Ganges*, and must pay for every Waggon-load of Goods four *Rupers*, and have a Pass from the Governor. From *Nadour* you travel to *Paranta*, and so by *Kaberi*, *Satupour*, *Satanag*, or *Satanagar*, where you begin to enter upon the Territories of the King of *Goleonda*. The other Road through *Goa* and *Vijapour* to *Goleonda*,

lies thus; you may go from *Surat* to *Goa*, partly by Land and partly by Sea; but the Road being very bad by Land, Travellers generally go by Sea, and hiring an *Almadire*, which is a Bark with Oars, sail by the Shore to *Goa*, and so they pass by these Towns, which are convenient to lodge in, or victual at, viz. *Daman*, *Bosjain*, *Cbaoul*, *Daboul*, *Rajapour*, and *Mingrela* to *Goa*. From *Surat* to *Goa* is two hundred and forty Leagues. The great Danger in this coasting Voyage is, falling into the Hands of the *Malabars*, or *Indian* Pirates, who are furious *Mohammedans*, and very cruel to the Christians, whom they put to barbarous Tortures if they take them, to make them seek their Ransom the sooner. The *Malabars* sometimes carry two hundred, and sometimes two hundred and forty Men, and sail together in Squadrons of ten or fifteen Barks to attack a great Ship, for they care not a Rush for the great Guns: They come on Board of a sudden, and cast such a great Quantity of Pots of artificial Fire upon the Decks, that if there be not a speedy Remedy applied, they do a world of Mischief. Our Seamen generally knowing the Custom of these Pirates, when they come within Sight, shut up the Skuttles, and fill the Deck with Water, to hinder the Fire-pots from doing Execution.

Goa lies in an Island six or seven Leagues about, upon the River *Mandoua*, ten Leagues from the Mouth of the River. This Island abounds in Corn, Rice, and several sorts of Fruit, as Mangas, Ananas, *Adam's* Figs, and Coconas, but all of them are inferior to a Pippin. The Port of *Goa* is very commodious, the City is very large, and the Walls are of good Stone; the Houses for the most part are very magnificently built, especially the Viceroy's Palace; but being closely environed with Hills, the Air is made unwholesome, and so excessively hot, that the Inhabitants are not so many as otherwise they would be. Beef and Pork are the ordinary Diet, and they have Plenty of Poultry and Pigeons; but Fish is scarce, though they are near the Sea: They have abundance of all sorts of Sweet-meats, and great Plenty of good Water. Before the *Dutch* brought down the Power of the *Portuguezze* in *India*, there was nothing to be seen at *Goa* but Magnificence and Riches: They made vast Profits without any Loss, and every Man was a Trader except the Governor. But now the *Dutch* having got the Trade every where out of their Hands, tho' they are still Masters of *Goa*; they have lost their Mines of Silver and Gold, and are fallen from their Splendor. The Natives of the Country, whom they call *Cannans*, or *Blacks*, are not permitted to bear any Offices among the *Portuguezze*, but only in reference to the Law, viz. As Advocates, Solicitors, and Scriveners, and they keep them very much under. If one of them happen to strike a white Man, or *European*, there is no Pardon for him, but his Head must be cut off. The *Spaniards* and *Portuguezze* make use of them to transact their Business, and receive their Money; and many of them by that means are grown very rich, and have many Slaves to attend them in good Habits; but they all, both Masters and Servants, go barefoot; for the *Portuguezze*, though they have been offered great Sums to suffer them to wear Hofs and Shoes, yet will not allow it. They are very courageous, and good Soldiers, and quick and ingenious at learning of Sciences, but they are Idolaters, and worship several sorts of Idols, which, they say, are the Resemblance of several that have done good Works, to whom they give Honour by adorning their Portrait.

There are some of these Idolaters that worship Apes, and have built Pagods to those Beasts. In the Island of *Soffez* there was a Pagod, where the Idolaters keep in a Chest, the Bones and Nails of an Ape that had been serviceable to their Ancestors, by bringing Intelligence when any Prince their Enemy fought their Ruin. The *Indians* came in Procession from several Places to this Pagod, and made Offerings to it; and when the Clergy of *Goa* took away the Tomb, they offered a great Sum of Money for their Relicks; but the Clergy not thinking such gross Idolatry serviceable, caused it to be thrown into the Depth of the Sea. The River of *Mandoua* also is had in as great Veneration by the *Bramins* and the other *Gentiles* as the *Ganges*, and at certain times, and upon certain Festivals, they flock thither from their several Parts to perform their Purifications. The

Town

Town hath good Walls, with Towers, and great Guns, and the Isle is walled round with Gates towards the Land, to hinder the Slaves from running away. The Portuguese have a Viceroy residing here, with an Archbishop, Inquisitor General, and Abundance of Clergymen, as Dominicans, Austin-Friars, Franciscans, bare-foot Carmelites, Jesuits, and Capuchins. The Carmelites are seated in a fine Air, and healthy Ground; the Jesuits have a College, which being dedicated to St. Paul, gives them the Name of *Paulists*, with a Seminary, Professor's House, *Noviciate*, and an House called the *Good Jesus*, where they paint admirably. There are also many fair Churches, and beautiful Palaces.

In this City lies buried *F. Albuquerque*, who conquered it for the Portuguese, and *Saint Francis Xavier*, the famous Indian Missionary. The Hospital of *Goa* was formerly the most famous in all *India*, both in regard that the Revenues were very great, and the sick Persons were very carefully looked after; but since the Change of Government, there is but very bad Accommodations, and several Europeans, who have been put in, have never come out but in their Coffins; but of late they have found out a Way to save some, by frequent Blood-letting, spare Diet, and drinking Cow's Pits.

16. From *Goa* you go to *Bichelly*, which is upon the Continent, and so to *Vishapour*. This City is the Metropolis of a Kingdom of the same Name, whose King is the most potent of all the Kings of *Deccan*, and is therefore called King of *Deccan*, having under him the two Naigues of *Madura*, whose Territories reach to Cape *Cornuro* and *Tanjabar*, who has several Towns on the Coasts of *Ceramandel* tributary to him. It is a great scambling City, above five Leagues in Circumference, fortified with a double Wall, and a great many Cannons mounted, and a flat-bottomed Ditch. The King's Palace is very large, but ill built, and the Access to it is very dangerous, in regard there are an Abundance of Crocodiles in the Ditch, with which it is encompassed; but in the City itself there is nothing remarkable as to the publick Edifices or Trade, tho' in the Suburbs, which are large, there are several Goldsmiths and Jewellers. The King of *Vishapour* hath three good Ports in his Dominions, *Rejapour*, *Dabault*, and *Carapatan*. This last is the best, having fourteen or fifteen Fathom Water near the Land, and upon the Top of the Mountain adjoining a Fort with a Spring of Water in it.

It lies about five Days Journey to the North of *Goa*. The Kings of *Vishapour* and *Golconda* were formerly tributary to the Great Mogul, but now they are absolute of themselves. The present King of *Vishapour*, was only the adopted Child of the former King, who died without Children, he succeeded in his Minority under the Regency of the Queen; but being disturbed by the Revolt of *Rajah Seeragi*, the Son of the late King's Captain of his Guards, he was forced to come to a Composition with him to establish himself, and so lost all the Coasts of *Malabar*.

The great Market, where the King of *Vishapour* sells his Pepper, is at *Relegue*. In the Territories of *Vishapour* is *Mongroa*, a large Town, extended half a League in Length upon the Sea-coast; it is one of the best Roads in all *India*, where all the Vessels that come from *Batavia*, *Japan*, *Bengal*, *Ceylon*, and those that are bound for *Siam*, *Ormaz*, the *Red-Sea*, *Balfara*, &c. both coming and going, anchor and take in Provisions, because there is both excellent Water and Rice. This Town also is very famous for Cardamums, which the Eastern People esteem above all Spices; but not being to be had in any other Country, are very scarce and dear. There is also made great Store of coarse Calcuts that are spent in the Country, and great Quantities of coarse Matting, which serves for packing up of Goods. The *Dutch* have a Factory for Trade and Provisions here, to victual their Ships when they block up *Goa*, which is eight Months in the Year.

17. From *Vishapour* you pass to *Golconda*, which is four hundred Leagues cross the Promontory. The most powerful of the Kings of *Deccan* next to the King of *Vishapour*, is the King of *Golconda*; his Kingdom is bounded on the East by the Sea of *Bengal*, on the West by the Mountains of *Orisa*, on the South by *Bijapur* and *Narsingue*, which belongs to the King of *Japan*, and on the West by the

Empire of the Great Mogul. This whole Kingdom, take it in general, is a good Country, abounding in Corn, Rice, Cattle, Sheep, Poultry, and other Necessaries for human Life, and because there are many Lakes. There are also many Fish, and among others a sort of Smelts, which has but one Bone in the Middle, which is most delicious Food, the Lakes being caused by Nature, and lying in Places somewhat raised, contribute much to the Fertility of the Country, because after the rainy Seasons they let them down by Shuices into the adjacent Fields. The capital City of the Kingdom is *Banagar*; the Persians call it *Aider-abad*, but the most common Name is *Golconda*. It is about fourteen or fifteen Leagues from *Vishapour*, situated in 17th to Latitude, in a very long Plain, hemmed in with little Hills at some Distance from it. The Air is very wholesome, and a great River washes the Wall of it on the South-west Side, which, near to *Maslipatan*, falls into the Gulph of *Bengal*.

The City is well built, and full of Windows. In entering into it, you must first pass through a large Suburb, but the Houses are only built of Earth, and thatched with Straw, so low, and ill contrived, that they can be reckoned little better than Huts. It is at least a League in Length, and in it dwell all the Merchants, Brokers, Handicrafts-men, and all manner sort of People. These Men are allowed to go into the City from ten or eleven in the Morning till four or five o'Clock in the Afternoon with the Foreign Merchants, and then they return to their Houses. In those Suburbs are two or three fair Mosques, which serve for Inns for Travellers, and several Pagods in the Neighbourhood. The Way to the Fortrefs of *Golconda* lies through those Suburbs; out of them you go into the City over a most beautiful Stone Bridge, and enter into a large Street that leads to the King's Palace. On the right Hand are some Houses of the Lords of the Court, and four or five Inns two Stories high, with fair Halls, and large Chambers to let in the fresh Air.

At the End of this Street is a large Piazza on which the Palace fronts, and in the Middle of the Building is the Balcony, wherein the King sits when he pleaseth to give Audience to the People. The Gate of the Palace stands not upon this Piazza, but upon another near adjoining. Through it you enter into a large Court, surrounded with Portico's, within which lie the King's Guards. Out of this Court you pass into another, built after the same manner, and surrounded with several Apartments, with terraced Roofs, on which are very fair Gardens, and Trees in them, of a great Bigness. The whole Palace is three hundred and eighty Paces in Length, and ends in a very lofty Pavillion. The Walls are built of great Stones, and have at certain Distances half Towers. It is very pleasant within, and the Water rises up to the highest Apartments. No Man enters into the Palace without an express Order from the King, who grants it very seldom; so that scarce any body comes near it.

At the End of the Palace is a Building, called the Four Towers, which has the most lovely Outside of any thing in the Town, being adorned with Roses and Fellons pretty well cut. In each Tower is four Galleries, which serve to make the Water mount into a Reservatory on the Top, from whence it is conveyed into the highest Apartments of the King's Palace through Pipes. There are several Meidans in the Town, but the fairest is that before the King's Palace. It hath two Divans, which serve for the Cotual, who has his Prisons under them. The Palace is on the North of it, and there is a Portico over-against it, where the Musicians play several times a Day, while the King is in the Town in the Middle of it; and in Sight of the Palace is a Space for the fighting of Elephants. The City for the most part is inhabited by Persons of Quality, Officers of the King's Court of Justice, and of the Army, and their Houses are pretty enough. Three Miles from the City stands a very fair Mosque, wherein are the Tombs of the Kings of *Golconda*, and about four o'Clock in the Afternoon there is a Dole of Bread and Rice given to all the Poor that come. Upon Festival Days all the Tombs are hung with rich Tapethy, and then they are a most glorious Sight. There are many fair Gardens in the Town, and near it; but their Beauty consists not in Flowers, or Water-

When a Stranger comes to the Gates, a Soldier searches
him, to see whether he has any Salt and Tobacco about him,
that the King may not be defrauded of the Duties, and
then sends to the *Deroga* about his Admission, which causes
a Delay of a Day or two. Sometimes when the King sits
to do Justice, all that have Business stand below, just
against the Balcony; but the People are kept back, with a
Row of Poles about the Height of a Half-pike. Every
Monday the Nobility mount Guard, and continue eight
Days, some of them have five or six thousand Men under
their Command, with ten or twelve Elephants, and thirty
or forty Camels. The Soldiers have no Cloaths, but three
or four Hills of Calicut, with which they cover their Bodies
half Way behind and before. They wear their Hair long,
and tie it on a Knot on the Crown, as the Women do. They
wear Broad-swords like the *Switzers*, which serve as well for
a Thrust, as a Blow, and hang them in a Girdle. Their
Musket Barrels are neater and better than ours, because
their Iron is better. Their Cavalry carry Bows and Ar-
rows, a Buckler, and a Battle-Ax, and a Head-piece, and
Jacket of Mail, which hangs down from their Head-piece
to their Shoulders. There are twenty thousand com-
mon Women allowed by the *Deroga*; they pay no Tax,
but are a Means of spending much *Tari*, which is a sweet
Drink, on which the King lays a severe Imposit. They are
encouraged in their Practices. They are to dance every
Friday before the King's Balcony, if the King be present;
if not, an Eunuch dismisses them. They stand well dress'd
at their Doors in the Day-time, and let up a Candle or
Lamp for a Signal in the Night, to draw in Men who are
not expos'd to Scandal, by conversing with them.

The common People give their Wives great Liberty,
being oblig'd by Promise, at their Marriage, to let them
walk in the Streets, visit their Neighbours, and drink
Tari, a Liquor which the *Indians* love very much.
When any one is found guilty of Theft, he is Pun-
ished by cutting off both his Hands, which is a Punish-
ment us'd almost all over the *Indies*. The Tradesmen
of the Town, and Husbandmen that cultivate the Lands,
are Natives; but the Trade is chiefly maintained by the
English and *Dutch* Factories, who buy up for the Com-
panies Chints, and other Cloths, which they vend in other
Parts of the *Indies*. They bring also from *Mallicatan*,
upon Oxen, Cloves, Pepper, Cinnamon, Silver, Copper,
Tin, Lead, and other Goods, which they know to be most
marketable. All the Men and Women at *Golconda* are well
proportioned, and of comely Stature, and fair enough in
their Countenances; but the Country People are swarthy.
The most current Monies of this Kingdom are the Pagods,
Ruppes, and Pechas, of the Mogul: The Pagods are Pieces
of Gold, of which there are two sorts, the old and the new;
the old are worth five Ruppes, and the new not above four.

The Ruppes and Pechas are all worth more at *Golconda*
than in *Mogulistan*. The greatest Plenty of Diamonds is
in this Kingdom, and therefore it may be called the Coun-
try of Diamonds. The Castle of *Golconda* is two Leagues
from the City; it is of a large Compas, and the Walls of
it are built of Stones, three Foot in Length, and as much
in Breadth; and it is surrounded with deep Ditch, divided
into Tanquies, which are filled with fair and good Water.
All the Strength it has consists in five round Towers, which
have a great many Cannon mounted upon them for their
Defence. It has several Gates, but two only are opened,
and these are guarded by *Indians*. No Strangers may go
in without a Permission from the Governor, unless he be
acquainted with some Officer of the Court. The King has
a large Palace in it, and well situated for a good Air, and
lovely Prospect, and most Part of the Lords have Houses
near it. There are several Bazzars in it, where all things
necessary for Life may be had.

18. The King of *Golconda*, who now reigns, is a Shias
by Religion, and bears the Name of *Abdul-Carrou-Seab*.
He was the Son of a *Bramin* Lady, and succeeded his Fa-
ther, though not the eldest Son, because he was more loved
by the Queen, who caused his Brothers to be imprisoned,
and at last poisoned. He keeps five hundred thousand Sol-
diers in Pay, yet is tributary to the Great Mogul. He

See Chap. 70.

hath only three Daughters, the eldest of which is married
to one of the Kinfmen of the Grand Chiek of *Alacca*,
the second to Sultan *Mohammed*, eldest Son of *Aurouz*,
and the third to *Mirza Abdul-Cassim*, the King's Cousin,
who has Male Children by her. The King of *Golconda* has
several Revenues, for he is Proprietor of all the Lands of
his Kingdom, which he leases out to those that offer the most,
except such as he gives to his Favourites for a certain Term.
The Customs that Men bring Goods that pass through his
Country, and of the Ports of *Melipatan* and *Madraspatan*,
yield him much, and there is hardly any sort of Business
in his Kingdom, from which he does not some conside-
rable Duties by Way of Excise.

The Diamond Mines raise him a great Revenue, and all
such as he allows to dig in them. These that are to-
ward *Melipatan* pay him a Pagod every Hour they work
there, whether they find any Diamonds or not; but his
chief Mines are in divers Places in *Carnate* towards *Tijja-
pour*, where he has six thousand Men continually at work,
who daily find near three Pounds Weight, and no body
digs there but for the King. This Prince wears upon the
Crown of his Head a Jewel almost a Foot long, which is
said to be of estimable Value. It is a Rose of great Dia-
monds, three or four Inches Diameter, on the Top of which
there is a little Crown, and out of it issues a Branch fas-
sioned like that of a Palm-tree; but it is round, and the
Palm Branch, which is crooked at the Top, is a good Inch
in Diameter, and about half a Foot long. It is made up
of Sprigs, which are, as it were, the Leaves of it, and
each of them have at the End a lovely long Pearl, shaped
like a Pear. At the Foot of this Pesty there are two Bands
of Gold in the Fashion of Table Bracelets, in which are
inched large Diamonds, set round with Rubies, which,
with great Pearls that hang dangling on all Sides, make an
exceeding fair Show; and these Bands have Claps of Dia-
monds to fasten the Jewels to the Head. Besides this
Jewel, he hath other considerable Pieces, and such Numbers
of precious Stones, that if there were Merchants who could
give him the Worth of them, he would have prodigious
Sums of Money, and be the richest King in the *Indies*.

The Omrahs are the great Lords of the Kingdom, who
are *Perfians*, and all rich; for they have not only great
Pay of the King yearly, but large Gifts of Lands and Vil-
lages from him, besides the Advantages of the Soldiery;
for they do not list half the Number they have Pay to
maintain. They generally make a very handsome Figure;
for when they go through the Town, an Elephant or two
goes before them, on which three Men, carrying Banners,
are mounted; fifty or sixty Troopers, well mounted and ac-
counted, follow them; and after these Trumpeters and
others playing on Fifes on Horseback; after these comes
the Omrah on Horseback, with thirty or forty Footmen
about him, and his Palanquin carried by four Men, with
other Porters for Change; and all this Pomp is brought up
with a Camel or two, with Men beating on Timbrels on
their Backs. Sometimes the Omrah will take his Palan-
quin, and then his Horse is led.

The Palanquins are sometimes covered with Silver, and
the Bamboos are tipped with Silver at both Ends. They
lie at Ease in them, smoking Tobacco, or chewing Betle,
or Arca, according to the Custom of the *Indians*, who hold
them to be excellent for the Stomach, and the Sweetness
of the Breath. The lesser Omrahs have not so great an
Equipage, but all have a Train proportionable to their Re-
venue. The Winter in *Golconda* begins in *June* with Rains,
and some Thunder and great Winds, and lasts to the End
of *October*, in which time the Air is cold only in the Night
and Morning. The Days are as warm as 'tis in *May* in
France; but the Rains cause prodigious Floods, which
beat down the Houses, and destroy many People. The
hot Season begins in *February*. The Rains make the Land
very fertile; they have abundance of Fruits and Vines, and
two Crops of Rice and other Grains every Year. The
Wines they make are usually white.

19. From *Golconda* there are two Roads to *Melipatan*,
one more direct, which the Merchants usually take, and
the other by the Diamond Mines, called *Coulour*, or *Gani*,
which such Merchants generally travel, whose Curiosity or
Business leads them thither, though it be the farthest Way

by twelve Leagues. In the more direct Road you meet with not above four Towns, besides fifteen or sixteen Villages, viz. *Elmas-kepentch*, *Panguel*, *Sarebel*, and *Ponguet-chopeul*. You pass also several Rivers, the most considerable of which are *Kachna* and *Mowly*. All the Country as you pass this Way is always green and pleasant to the Eye, though the Road be bad, and there grow all kinds of Trees that are in the *Indies*, even Cassia-trees, though they be scarce in other Countries: This Way you come to *Mohipatan* in ten Days. The other Way, by the Diamond-Mines, lies, first, to *Tonara*, where the King has a stately Palace, consisting of four large Piles of Stone-Building, to every one of which belong a large Garden. One of them, on the Left-hand, along the Highway, is much more beautiful than the other three; it is built of Free-stone, two Story high, and has in it several fair Galleries, Halls, Parlours, and Lodging-rooms, which are the Royal Apartments. Before this Building is a large square Piazza; and in the other three Fronts is a great Portal, with a fair large Platform, raised four or five Foot high, and well arched, where Travellers of Fortune are lodged, and over each Portal is a strong Baluster, and a little Chamber for the Ladies.

One of the Buildings belongs entirely to the Queen, and though no body may lodge in it in the Queen's Absence, yet any one may see it, and walk in the Garden, which is a lovely Place, and well supply'd with Water. The whole Piazza is encompassed with several Chambers for the Lodgings of poor Travellers, who, every Day, towards Evening, have an *Alms* bestowed upon them of Rice and Pulse ready boiled; and for this there are alienable Rents settled: But for the Idolaters, who will eat nothing that is powdered by other Hands, they give them Flour to make Bread, and a little Butter to dip it in when it is baked, like a thin Bread-Cake. From *Tonara* the Road lies through *Jatenager*, *Patongi*, *Pengual*, *Nagelpor*, and *Lakabarun*, to *Coulour*, or *Gani*. This last Part of the Way is very rocky, and among these Rocks, where there is any good Earth, you find the Cassia trees, that bear the best, and most laxative Cassia of any in the *Indies*. By *Coulour* runs a River, which falls into the Gulph of *Bengal*, near *Mohipatan*. From hence the Road lies through *Kab-Kab*, *Bazaar*, where you pass the River of *Coulour*, *Inder*, *Numer*, where they must cross a great River upon a flat Boat of Timber, and so by *Nimel* to *Mohipatan*. This is a great City on the Coast of *Coromandel*, lying in the 30th North Lat. It stands upon the Gulph of *Bengal* E. S. E. from *Golonza*; and though it be but small, yet it is well peopled. The Streets are narrow, and it is intolerable hot there from *March* till *July*. The Houses are built of Wood, and all separated one from another, and the Water is brackish, because the Tide comes up to it. There is great Trading in Cloths, because, besides cloths that are made there, a great many are brought from *Tonaras*, which are much finer, and better Colours than those from other Parts of *India*. The Coast is excellent, and the Road for Ships is the best in all the Gulph of *Bengal*, and therefore Ships come thither from all Nations, and go from thence to *Pegu*, *Siam*, *Aracan*, *Bongal*, *Cadon-Gama*, *Mecca* and *Ormuz*, and for the *Indies* of *Madagascar*, *Sunatra*, and the *Manillas*. This Country of *Mohipatan*, as well as the Coast, is full of Idolaters; and the Pagods are so full of lascivious Figures of Monsters, that one cannot go into them without Horror. It is exceeding fruitful, and Provisions are very cheap there: A Sheep is bought for Twelve-pence, a Partridge for a Half-penny, and a Powl for Two pence; and it is the same almost every where upon the Coast of *Coromandel*. From *Mohipatan* to *Gandour* the Way lies thus; you pass *Nahul*, *Wocker*, and *Pistemet*, three small Villages, and the last of them a very proud one, to *Bizouart*, a great Town, where all the Inhabitants, except the Governor, and some of his Domesticks, are Idolaters.

This Town is a very large Pagod without Walls, consisting of ninety-two Pillars of twenty Foot high, which uphold a flat Roof of Free-stone. They are adorned with several emblematical Figures of very ugly Devils, and several sorts of Creatures, some with four Horns, others with many Legs and Tails, other looking out their

Tongues, and others in several other ridiculous Postures: And between the Pillars stand the Statues of their Gods upon Pedestals. The Pagod is build in the Middle of a Court, encompassed with Walls, adorned within and without, with the same Figures as the Pagod, and a Gallery, sustain'd by sixty Pillars, runs round the Wall. You enter into this Court through a Portal, with Niches one above another, supported with Pillars, which have certain *Indian* Characters upon them; but the Priests themselves hardly know the Meaning. By this Town is another Pagod, built upon an Hill, to which there is an Ascent of 193 Steps, every one a Foot high: It is four-square, with a Cupolo at the Top, adorned with Figures, as that at *Bezourat*. In the Middle is an Idol sitting cross-legg'd, after the Manner of the Country; and in that Posture, about four Foot high; upon the Head, is a triple Crown, from which four Horns extend themselves, and it has the Face of a Man turned towards the East. The Pilgrims that come out of Devotion to these Pagods, when they enter, clasp their Hands together, and raise them up to their Foreheads, and then, advancing to the Idol, cry out, *Ram, Ram*, i. e. *God, God*: Then having anointed it with Oil, or besmeared the Face with Paintings, they ring a little Bell that hangs upon the Idol; after which they make their Offerings of Sugar, Oil, and other Eatables, the richer sort adding Pieces of Silver.

These Offerings, though the People are made to believe the Idol takes them, yet maintain the Priests, their Wives, and Children, except that they relieve the poor Pilgrims with them. There is a great Feast made in this Pagod in *October*, for three Days together, at which Time there is a great Concourse of People from all Parts, Leaving *Bezourat*, you cross the River that runs to *Gani*, and three Leagues farther come to a Pagod, built upon a large Plat-form, with an Ascent of fifteen or twenty Steps; in it is the Figure of a Cow of black Marble, and several other deformed Idols four or five Foot high, some with many Heads, and others with many Hands and Legs; and the most ugly are most adored, and receive the most Offerings.

The next Town in the Road is *Kab-Kab*, near to which is a small Pagod, wherein are five or six Idols, well made. And, having passed that, you come to *Candour*, a great City, closed in with strong Walls, with a Ditch, and a Moat, paved at the Bottom with Free-stone. Eastward it stretches out to a Mountain about a League in Compass, and surrounded with Walls with Half-moons: Within them are three Fortresses. From hence you travel to *Capanzur*, and to *Ahanquige*, a very fair Town, where there is a very large Pagod, with abundance of Chambers for the Priests, and several Idols, but they are fallen to Decay, yet are superstitiously adored by the People. You go on to *Nojlepar*, and so over a large River, which is dry in Summer, to *Condicour*, *Dakiye*, *Nolour*, where there are many Pagods; and so crossing a River to *Gandron*, *Serepte*, and *Senegond*, to *Palicate*, to which the Way lies for a League through the Sea.

It is a Fort that belongs to the *Dutch*, that live upon the Coast of *Coromandel*, and within it are usually two hundred Soldiers. It is the chief Factory they have in the *Indies*, where lives the Superintendent of all the rest which are in the Territories of the King of *Golonza*. The Trade managed there by the *Dutch* is in Cotton-Cloth, of which they have large Warehouses. Here also they refine their Salt-petre, which they bring from *Bengal*, and make Gunpowder, with which they furnish their other Factories. The Fort of *Palicate*, called *Guldria*, is at a good Distance from the Town, that it may not be annoyed by Shot from thence. The Battions are well stored with good Guns, and the Sea comes up to the Walls of it. The Governor has fifty Crowns a Month for his Pay, and as many for his Table and Cloths. The current Money here are *Rupes*, and *Pagods*, which last are four Times the Value of the former, *Fanous*, which are half Gold and half Silver, with the same Stamp as the *Pagods*, but the seventh Part of a *Rupce* in Value, and *Gazars*, which are Pieces of Copper as big as *Fanous*, but forty of them are but the Worth of it. The *Dutch* coin this Money. The Water of this Town is fetched out of

other ridiculous Postures: and the Statues of their god is build in the Middle Walls, adorned within and as the Pagod, and a Gallies round the Wall. You a Portal, with Niches one Pillars, which have ceremonies; but the Priests themselves. By this Town is another, to which there is an Aff-foot high: It is four-top, adorned with Figures, and is an Idol sitting cross-Country; and in that Position upon the Head, is a triple extend themselves, and towards the East. The tion to these Pagods, when together, and raise them up ancing to the Idol, cry out, Then having anointed it with Paintings, they ring the Idol; after which they Oil, and other Eatables, Silver.

People are made to believe in the Priests, their Wives, relieve the poor Pilgrims Feat made in this Part together, at which Time People from all Parts, the River that runs to *Gani*, to a Pagod, built upon a of fifteen or twenty Cow of black Marble, and four or five Foot high, thers with many Hands are most adored, and re-

oad is *Kab Kabi*, near to are five or six 100s, well, you come to *Candevur*, ng Walls, with a Ditch, a with Free-stone, East- antan about a League in Walls with Half-moons: . From hence you travel ge, a very fair Town, god, with abundance of veral Idols, but they are ssily adored by the People, o over a large River, *ondicour*, *Dakye*, *Nelour*, nd fo crossing a River to *neppend*, to *Palcate*, to through the Sea.

the *Dutch*, that live upon within it are usually two Factory they have in the stendent of all the rest the King of *Calconda*, the *Dutch* is in Cotton- Warehouse. Here al- which they bring from with which they furnish of *Palcate*, called *Guel-* the Town, that it may hence. The Bathons are the Sea comes up to the fifty Crowns a Month for Table and Cloths. The and *Pagod*, which last former, *Fanous*, which h the same Stamp as the a *Rupsee* in Value, and per as big as *Fanon*, but of it. The *Dutch* coin Town is fetched out of Holes

Holes dug in the Sand, when the Sea is quite out, and it is tolerably fresh.

From hence you go to *Madrepatan*, or Fort *St. George*, which belongs to the *English*, (here is a Convent of *Capuchins*) and so to *Mehapour*, or *St. Thomas's* Town, (where, they say, *St. Thomas* was martyr'd), and the *Sinhis* Priests here, pretend to have the Iron Lance which killed him, the *Jesuits* also have a Church (here) *Serraveron*, and then to *Oudicut*. The Way between those two Towns is through a flat, sandy Country, and on both Sides of it are Copies of *Bamboo's* very high and thick, which breed prodigious Numbers of *Apes*. Those on one Side are inveterate Enemies to those on the other; and it is very good Sport to Travellers to set some Baskets of Rice between them, with Cudgels by them, to make them fight for it, and batter one another with the Cudgels. The Road holds the name to *Naravacon* and *Gazzal*. Hereabouts there are *Gares* and *Strong* Guards at them at every two or three Leagues, who examine all *Pilgrims*, whence they come, and whither they go; so that Men may travel there with their Money in their Hands.

21. The next Place you arrive at is *Coursa*, a celebrated Pagod, where there is little to be had for Man or Beast; but the Country about it being full of Elephants, the King's Officers come thither often to take them. The Manner of hunting them is thus; they cut several Allies or Walks in the Woods where they are, and having digg'd them full of Pits, which they cover with Hurdles and Earth, scare them by hollowing, beating of Drums, and pursuing them with Pikes, with Wild-fire tied to the Ends, in-to those Walks, where, being tumbled into the Holes, the Hunters bind their Feet and Trunks with Ropes and Chains, and so take them; yet some will cleave the Snare, and are ever after so mislittful, that with a Bough they will examine every Step they take; whether there is not an Hole in the Way; and it is almost impossible to take them again. Such as they catch, they couple to two tame ones on each Side, and set six Men about them with lighted Torches at the End of an Half-pike, to talk to them, and give them Meat, which is brown Sugar, boiled Rice and Hay.

If the wild Elephant will not eat, the Men order the tame ones to beat them with their Trunks, and so constrain him to learn Obedience. After an Elephant is tamed, he never meddles with the Female, yet is sometimes taken with a lustful Rage, which never ends but with some Mischief, as the Death of his Rider, or some body else. Though the Elephant's Skin be very hard while he is alive, it is all like melted Glue when he is dead. There are Elephants in several Parts of the *Indies*, as in the Islands of *Ceylon* and *Sumatra*, the Kingdoms of *Cochin*, *Siam*, and *Bantam*, on the Frontiers near the *Great Tartary*; but they are said to be in the greatest Numbers on the Coast of *Melinda*, Eastward of *Africa*, where the *Blacks* of the Countries hunt them to eat the Flesh, but are obliged to give the Lord of the Place the Teeth, inasmuch that there are several Parks impailed with Elephants Teeth a League round.

It is observable of the female Elephant, when she grows hot, that she makes herself a great Bed of Herbs and Weeds, four or five Foot high from the Ground, on which, contrary to the Custom of all other Creatures, she lies upon her Back, in Expectation of the Male, whom she calls to her by a peculiar Cry: And thus they take the Male in *Ceylon*, by a tame Female. This is also peculiar to the Elephants in *Ceylon*, which, though the smallest is the most courageous, yet only the first Elephant which the Female produces has any Tusks. And it is also observable, that the Ivory from *Alexon*, when it is wrought, never grows yellow, as that does which comes out of the Continent and the *East-Indies*, which makes it more esteemed than any other. It is hard to find how long an Elephant will live; nor can the Keepers or Governors of them tell you more than that such an Elephant was their Great-Grandfather's; so that it may be conjectured that they have lived an hundred and twenty, or an hundred and thirty Years. The Great Mogul keeps five hundred for his Household, to carry his Women, their Tents, and Lag-

gage, and about eighty or ninety for his Wars; and to the chief of them he allows five hundred *Rupess* a Month; but, to the rest, from fifty to twenty. The chief have Men to attend them, and fan them, and they are maintained out of it.

22. From *Couron* you pass through *Raglia-Peta*, a large Town, and *Ondecour* to *Outenela*, where there is one of the greatest Pagods in *India*. It is built of large Free-stone, and has three Towers, where there are several deformed Figures of embossed Work. It is encompassed with many little Chambers for the Priests Lodgings. Hard by it is a wide Lake, upon the Banks of which are built several Pagods, eight or ten Foot square, and in every one of them an Idol, representing some Devil, with a Bramin, who takes Care that no Stranger that is not of their Superstition, shall come to wash in, or take any Water out of the Lake: But if any Stranger desires Water, they give it him in an earthen Pot; but if it touches the Stranger's Vessel, they break it; and say, if a Stranger should wash in it, it must be drained. They are very charitable, and will give any thing they have to eat or drink to Persons in Necessity. There are several Women among them, who, having made a Vow to do acts of Charity for seven or eight Years, more or less, sit upon the Road continually for that End, with Fire, Tobacco, Rice boiled with Quicken, a sort of Grain like Hempseed, and Beans, and to every Traveller they give some of their Beans, Rice-water, an Handful of Rice, Tobacco, if they have none, and Fire. Other Women live continually on the Highways and Fields, having made a Vow to eat nothing but what they find undigested in the Dung of Oxen, Cows, and Horses, which they feed with an hard sort of crooked Peas; and these feed the Cattle with Grass all the Day.

From *Outenela* you travel through *Goulupale* and *Gegeron* to *Gandicut*. This Place is one of the strongest Cities in the Kingdom of *Carnate*, being situate upon the Top of an high Mountain or Rock, to which there is but one Ascent, not above twenty-five or thirty Foot broad at most, and in some Places not above seven or eight Foot wide at the most. At the Right-hand of it there is a most hideous Precipice, and at the Bottom of it runs a vast River. Upon the Top of the Mountain is a small Plain, but a Quarter of a League broad, and about half a League long. This is sowed with Rice and Millet, and watered with many little Springs.

The City stands on the South-side of this Plain, and is so encompassed with Precipices, at the Bottom of which runs two Rivers, that it has but one Gate to the Plain-side, and that too fortified with two good Walls of Free-stone. Here is a Pagod, which is said to be the fairest in all *India*, wherein are several Idols, some of Gold, others Silver, and six very large ones of Brass, of which three are set upon their Heels, and three stood, and yet were ten Foot high a-piece. These Statues, when the *Nahab* of the King of *Calconda* took the Cities from its own *Rajah*, he took out of the Pagod to make him some Cannon; but with all the Art the Artificer had, who was a *Frenchman*, he could not melt them, and so he was forced to leave his Work unfinished. 'Tis a Custom in this City never to put any Man in Prison, but as soon as the Offender is taken, he is examined, and Sentence is pronounced upon him according to his Crime, which is immediately executed, and, if he be innocent, he is as soon acquitted and discharged.

The Punishment is generally inflicted at the Discretion of the *Nahab*, or Governor: One that had broken into an House, and killed the Mother and three Children, was condemned upon the Spot to have his Hands and Feet cut off, and to be cast into the Highway, there to end his Days in Misery; another, who had robbed upon the Highway, had his Belly ripped up, and was ordered to be cast upon the Dunghill. In these Parts of *India* they have a very quick Way of sending Letters by Foot Posts, which are more speedy than Horsemen, and the Reason is, because at the End of every two Leagues, there are little Huts, where there are Men always ready to run as soon as any Letter comes.

Middle of every Skain something to add to the Weight, the second is, by not giving good Weight, when the Broker receives it from the Workmen, or Merchant that delivers it. There is but one Cheat in the Quality; that is, by putting three or four Skains of a coarser Commodity than that which is uppermost, into one Mein, which in a great Quantity, mounts high, for there are some Cottons that are worth an hundred Crowns the Mein. These two Cheats being often used by the *Dutch* Company, there is no Way but to weigh your Commodity in the Presence of the *Dutch* Commander, and his Council, and to examine every Mein Skain by Skain; when this is done, they who are ordered to be at this Examination, are obliged to fix to every Bail a Ticket of the Weight and Quality; for if there be a Failure, they who fix the Ticket are obliged to make good what is wanting. I have told you, that when the Workmen have made up the Indigo Paste into Lump, with their Fingers dipped in Oil, they lay them in the Sun a drying. Now those that have a Design to cheat the Merchants, dry them in the Sand, to the End, that the Sand sticking to the Indigo, may increase the Weight. Sometimes they lay up their Paste in moist Places, which makes it give, and consequently renders it more heavy; but if the Governor of the Place discovers the Cheat, he makes them feverely pay for it; and the best way of Discovery is, to burn some Pieces of Indigo, for the Sand will remain.

The Brokers are, as it were, the Masters of the *Indian* Families, for they have all Goods at their Disposal. The Workmen chuse the most aged, and most experienced, who are to endeavour equal Advantages for the whole Tribe they undertake for; every Evening that they return from their Business, and that, according to the Custom of the *Indians*, who make no Suppers, they have eaten some little Pieces of Sweet-meats, and drank a Glass of Water, the eldest of the Tribe meet at the Broker's House, who gives them an Account of what he has done that Day, and then they consult what he is to do next. Above all things they caution him to look to his Hits, and to cheat, rather than be cheated.

We will close this Section with a remarkable Passage relating to our Author's personal History, which is very worthy the Reader's Notice, though it does not immediately relate to Trade, the rather, because the Translation that has been published of his Travels, gives us but a very indifferant Account of it, notwithstanding the Author has taken great Pains to relate it very circumstantially, as he thought it would give a true Picture of the Nation it concerns. In the Month of *April* 1665, he embarked at *Gambron* in *Persia*, for *Surat* in the *Indies*, on Board a *Dutch* Packet Boat; which Opportunity the *English* Agent took to charge him with a large Packet of Letters for the *English* President at *Surat*, in which also were included such as belonged to private Persons in that Factory, and in other Places of the *Indies*. This Circumstance was taken Notice of by one Mr. *Casembat*, a *Dutchman*, who had travelled through *Persia* by Land, and was to go in the same Vessel with our Author to *Surat*, and he communicated this Piece of Intelligence to Mr. *Henry Van-Wuck*, who was then the *Dutch* Chief at *Gambron*, and he immediately formed a Project for stealing this Packet, in order to discover the State of the *English* Affairs; but in the first place went on Board the Ship, and enquired of our Author, if he had any such Packet, who very innocently told him the Truth. After having thus opened the Matter, and observed that the *Dutch* Captain and Pilot were in the Secret, we shall pursue the Account in the Author's own Words: Mr. *Casembat*, says he, having seen the Size of the Packet, gave *Van-Wuck* a Description of it, and so both together they contrived another of the same Form and Bigness, as near as they could. When I came on Board I took the *English* Packet, and locked it up in my *Boucha*, which is the sort of Cloak bag that is used in that Country, and laid it behind my Bolster. There were two Shallops lent on Board us, wherein there were sixty Bags of Silver, containing some fifty, some an hundred *Tomans* apiece. These Bags they unladed very leisurely to gain Time, watching when I should be gone to Bed; but when they saw that I did not go to rest, the *Dutch* consulted together, and agreed to let fall a Bag

of *Tomans* into the Sea, and so came all aboard, sending away a Shallop to *Gambron* for a Diver. When I found that the Vessel would not set sail, till two or three Hours after Day-light, I went to rest, my *Boucha* lying in the same Place half out, and half within side of my Bolster; but when my Servants were gone, and I alone, and asleep in the Cabin, they cunningly stole my *Boucha*, took out the *English* Packet, and left the other, which they had counterfeited, in the Place, being only so many Letters of blank Paper. Coming to *Surat* the 6th of *May* following, I gave the Packet, as I thought, which I had received from the *English* Agent at *Gambron*, to two *Capucin* Friars, to deliver to the President at *Surat*; but when the President came to open the Packet before several of the Company, there was nothing but white Paper made up in the Form of Letters, which when I heard, too much to my Sorrow, I understood the villanous Trick that *Van-Wuck* had put upon me.

I wrote a smart Letter of Complaint to the *Dutch* General in *Bataravia*, but finding no Redress, I was forced to undergo the hard Censure of the *English*, who would not permit me to justify myself. However, as it is rare to see Treachery go unpunished, the Complotters all died miserably, *Van-Wuck* fell into a violent Fever, and being charged with the Theft, thinking to defend himself with an Equivocation, said, that if he took the Cloak-bag, he wished he might die without speaking a Word. In three Days ended his Life, just in the same manner, and at the same time that he had imprecated upon himself; *Bozan*, his Lieutenant, after a great Debauch, going to sleep upon the Terrass of the Cabin, where he lay for Coolness (there being no Balusters) rolling and tumbling in his Sleep, fell down, and the next Day was found dead in the Sea. The Captain, four or five Days after his Arrival at *Surat*, being met in the Streets by a *Mohammedan*, who was jealous of his Wife, and being mistaken by him for one among several *Franks* that had parted them, and kept him from correcting his Wife some few Days before, was stabbed by him in three or four Places with a Dagger, which killed him outright; and this was the End of these treacherous People.

23. We may gather from this remarkable Passage the Reason why our Author had always a strong Dislike to the *Dutch*; for it is not probable, that after such a Transaction, they could either forget him, or he them; but it seems not a little strange, that this Account should be so much softened in the *English* Translation, and no Notice taken that the Person who did him this Injury was the *Dutch* Chief at *Gambron*, to whom he was particularly recommended, and a long Letter likewise omitted, which he wrote to the *Dutch* Governor at *Bataravia*. In a Work like this, where we profess to make a Collection of Voyages and Travels, such Pieces ought to be left out, as refer only to particular Men; but the Rule is certainly otherwise, in Reference to Books that are given to the World as express Translations; for which Reason I am inclined to think, that there is something mysterious in this Omission, and that the Author of the *English* Translation was a better Friend to the *Dutch* than Mr. *Tavernier*, and therefore did not think fit to trust such an unlucky Story as this with an *English* Reader, especially at that Juncture; for this Version of our Author's Travels was published in the Reign of King *Charles II.* not long after the Close of the last *Dutch* War.

I am the rather inclined to think this, because, at the End of the fifth Book of Mr. *Tavernier's* Travels, there is a very curious Relation of a gross Affront offered to King *Charles II.* by the *Dutch* Factory at *Gambron*, who burnt his Picture in the most ignominious Manner, which is also left out in the *English* Translation, and of which the Reader shall, God willing, have an exact Version in the succeeding Volume of this Work. At present, it is sufficient that we mention these things, because they will serve to explain several Passages in the succeeding Section, which contains the Remainder of our Author's *Indian* Observations, together with an Account of his Return by *Bataravia* in a *Dutch* Ship to *Europe*, in which occur a Multitude of curious Circumstances, and many remarkable Passages, in respect to the History and Trade of the *Indies*, that are no where else to be found.

SECTION XXX.

The Conclusion of the Remarks and Observations of Mr. J. Baptift Tavernier in his Travels through the Indies, together with his Account of the Dutch Settlements, and of his Voyage on Board a Dutch Ship from Batavia to Europe.

Written by himself soon after his Return.

1. An Account of the Kingdom of Macassar, in the Island of Celebes.
2. The Grounds of the Quarrel between the King of Macassar, and the Dutch.
3. The Means by which the King was converted to the Mohammedan Religion.
4. The Author's Voyage from Mingrela to the Island of Ceylon, interspersed with curious Remarks.
5. The Author's Departure from Ceylon, and his Arrival at Batavia.
6. The ill Usage the French meet with from the Dutch in the East-Indies.
7. An Instance of their Respect likewise for the English.
8. The Author goes to visit the King of Bantam, in order to sell him some Diamonds.
9. A Description of that Monarch's Palace, and of the Reception our Author met with there.
10. His Return to Batavia, and his Observations in that City.
11. His narrow Escape in his second Journey to Bantam from a Mohammedan Monk that intended to assassinate him.
12. A distinct and impartial Account of the Grounds of the long War between the Dutch and the Emperor of Java.
13. Our Author meets with new Troubles at Batavia.
14. He embarks there on Board a Dutch Vessel, in order to return to Europe.
15. Arrival at, and our Author's Observations on the Country near the Cape of Good-Hope.
16. His Remarks upon the Island of St. Helena, which they touched at in their Passage.
17. Return to Holland, and base Usage by the Dutch.

WE have before given a large Account of our Author's Observations on the Kingdoms in the East-Indies to the very Frontiers of China, of which Empire, it seems, he had likewise collected some very curious Memoirs, though his Modesty would not suffer him to publish them, because there were already several general Histories of that Country written by such as had resided there for many Years, and were therefore likely to be better acquainted with it than he. In order, however, to preserve the best Method possible in his Relations, he passes from the Kingdom of Siam, on the Continent, to the great Island of Celebes, of which he has given us a very copious and very curious Account, much superior to any thing we meet with in the general Histories of the Indies by Portuguese Writers, and therefore it comes in here very properly, as a Supplement to what we have before transcribed from those Writers in the former Sections, and at the same time serves for an Introduction to what the Author says of the Kingdom of that Island, or at least of the principal King, on their side by the Dutch, who are still Masters there, and derive from thence very great Advantages. We may remark amongst these their excluding all other Nations from any Commerce here. But to proceed now to our Author's Narrative, in his own Words.

The Kingdom of Macassar, which is in the Isle of Celebes, is in the large of Southern Latitude; the Heats are excessive all the Day, but the Nights are temperate enough; and though the Soil is very fertile, but the People have not the Art of tilling. The capital City bears the Name of the King's Seat, and is situated upon the Sea. The Port is large, and the Vessels that bring great Quantities of Goods from the adjacent Places pay a Customs. The Islanders have a Custom to poison their Arrows; and the most dangerous Poison which they use is the Juice of certain Trees, in the Island of Borneo, which they will temper so as to sink swift or slow, as they please. They hold, that the King has only the secret Receipt to take away the Force of it, who holds that he has the most effectual Poison in the World, which there is no Remedy can prevent.

One Day an Englishman, in the Hat of Blood, had killed one of the King of Macassar's Subjects, and though the King had pardoned him, yet both English, Islanders, and Portuguese feared, if the Englishman should go unpunished, lest the Islanders should revenge themselves upon some of them, so sought the King to put him to Death, which with much ado being consented to, the King, unwilling to put him to a lingering Death, and desirous to finish the Effect of his Poison, resolved to shoot the Criminal in the Back, whereupon he took a long Trunk and shot him in the Back with the great End of the right Foot, the Place

and the other a Dutchman, provided on purpose, immediately cut off the Member; but for all that the Poison had dispersed itself so speedily, that the Englishman died at the same time. All the Kings and Princes of the East are very diligent in their Enquiry after strong Poisons; and I remember, that the Chief of the Dutch Factory and I tried several poisoned Arrows, with which the King of Acheh had presented him, by shooting at Squirrels, who fell down dead as soon as ever they were touched.

The King of Macassar is a Mohammedan, and will not suffer his Subjects to embrace Christianity; yet, in the Year 1656, the Christians found a Way to get Leave to build a fair Church in Macassar; but the next Year the King caused it to be pulled down, as also that of the Dominican Friars, which the Portuguese made use of. The Parish-Church, which was under the Government of the Secular Priests, stood still till the Dutch attacked Macassar, and compelled him to turn all the Portuguese out of his Dominions. The ill Conduct of that Prince was, in part, the Occasion of that War to which the Dutch were moved to revenge themselves upon the Portuguese Jesuits, who had crossed their Embassy to China: Besides that, they offered great Offences to the Dutch at Macassar, especially when they trod under Foot the Hat of one of the Dutch Envoys, who was sent to treat with the King in Behalf of the Company. Thereupon the Dutch resolved to unite their Forces with the Macassarians that were in Rebellion against their Sovereign, and so revenge themselves at any Rate.

Now, as to the Business of China, it happened thus: towards the End of the Year 1658, the General of Batavia and his Council, sent one of the Chief of the Dutch Company with Presents to the King of China, who, arriving at Court, laboured to obtain the Friendship of the Mandarins, who are the Nobility of the Kingdom; but the Jesuits, by reason of their long Abode in the Country, understood the Language, and were acquainted with the Lords of the Court, lest the Dutch Company should get footing to the Prejudice of the Portuguese, represented several Things to the King's Council, to the Detriment of the Dutch, more especially charging them with Breach of Faith in all the Places where they came.

Upon this, the Dutch Agent was dismissed, and departed out of China without doing any Good. Afterwards, coming to understand what a Trick the Portuguese Jesuits had put upon him, he made Report thereof to the Governor and his Council at Batavia, which so incensed them, that they resolved to be revenged; for, by the Deputy's Account, the Embassy had cost them above fifty thousand Crowns; for which they consulted how to make the Portuguese pay double. Understanding therefore the

Trade which the Jesuits drove in Macao and to the King-
 dom of Macassar, whither, upon their own Account,
 they sent several Vessels, laden with all sorts of Commo-
 dities, as well of India as China. They took this Oppor-
 tunity, and on the 7th of June, 1660, appeared with a
 Fleet of thirty Sail before the Port of Macassar.

The King, thinking himself obliged to make Defence
 against so potent an Enemy, endeavour'd to sustain the
 Brunt of the Dutch, with the Portuguese Ships in the
 Road; but the Dutch dividing their Fleet, Part of them
 fought the Portuguese, the other battered the Royal For-
 tress so furiously, that they carried it in a short Time,
 which so terrified the King, that he commanded the Por-
 tuguese not to fire any more for fear of farther provoking
 his Enemies. The Prince Patinsalva was slain in the
 Fight, which was a great Loss to the King of Macassar,
 who was become formidable to his Neighbours, by the
 good Conduct of that Minister. As for the Dutch,
 they took, burnt, and sunk all the Portuguese Vessels,
 and sufficiently reimbursed themselves for their Chinese Expenses.
 The Thirteenth of June the King of Macassar, whose
 Name was Sumbow, hung out a white Flag from another
 Tower, whence he beheld the Fight, environ'd by his
 Wives. During the Truce, he sent one of the Grandees
 of his Court to the Dutch Admiral, to desire Peace; which
 was granted, upon Condition, he should send an Embas-
 sador to Batavia, expel the Portuguese, out of the Island,
 and not to permit his Subjects to have any more to do with
 them.

Thereupon the King of Macassar sent eleven of the
 greatest Lords of his Court, with a Train of seven hun-
 dred Men; the Chief of the Embassy being the Prince of
 Pitinsalva. The first Thing they did, was to pay two
 hundred Loves of Gold to redeem the Royal Fortress
 again, and the next, submitting to the Conditions which the
 Dutch Admiral had propos'd. The General of Batavia
 sign'd the Articles, which were punctually observ'd; for
 the Portuguese immediately quitted the Country, some
 departing for Siam and Cambaja, others for Macao and
 Goa. Macao, formerly one of the most famous and rich-
 est Cities of the Orient, was the principal Motive that
 inclin'd the Dutch to send an Ambassador into China; for,
 being the best Station which the Portuguese had in all
 these Parts, the Dutch had a Design to win it wholly
 now. This City lying in 22° of N. Lat. in a small Island,
 next to the Province of Canton, which is a Part of China,
 has very much lost its former Lustre.

3. But this was not all which the Jesuits and Portuguese
 Merchants suffer'd. The Chief of the Dutch Factory at
 Mingrela, which is but eight Leagues from this City, un-
 derstanding the bad Success of the Dutch in China, had a
 Contivance by himself to be reveng'd: He heard that
 the Jesuits of Goa, and other Places, drove a great
 Trade in rough Diamonds, which they sent into Eu-
 rope, or else carried along with them when they re-
 turn'd; and that for the more private carrying on of
 their Trade, they were wont to send one or two of their
 Order, that knew the Language, in the Habit of Faquers,
 which consists of a Tyger's Skin, to cover their back Parts,
 and a Goat's Skin to cover their Breast, reaching down to
 the Knees. Thereupon the Chief of the Factory of Min-
 grela, taking this Opportunity, and having Notice that
 two of the supposed Faquers were gone to the Mines,
 to lay out 400,000 Pardos in Diamonds, gave Orders to
 two Men, which he had bribed for that Purpose, that as
 soon as the Fathers had made their Purchase, he should
 give Notice to the Officer of the Custom-house at Bickeli,
 which is a great Town on the Frontiers of those Lands
 that part the Kingdom of Vishapour from the Territories
 of the Portuguese, there being no other Way to pass the
 River which encompass's the Island where the City of
 Goa is built. The Fathers believing that the Custom-
 er knew nothing of their Purchase, went into the Boat to go
 over the River; but, as soon as they were in, they were
 strictly searched, and all the Diamonds confiscated.

To return to the King of Macassar. You must know
 that the Jesuits once offer'd to convert him, and perhaps
 they might have brought it to pass, had they not ne-
 glected one Proposal which he made them; for, at the
 same time the Jesuits labour'd to bring him to Christia-

nity, the Mohammedans us'd all their Endeavours to
 oblige him to take up with their Law: The King, willing to
 leave his Idolatry, yet, not knowing what Part to take,
 commanded the Mohammedans to send for two or three of
 their most able Moulas, or Doctors, from Mecca; and the
 Jesuits he order'd to send as many of the most Learned
 among them, that he might be instructed in both Religi-
 ons, which they both promis'd to do: But the Mohamme-
 dans were more diligent than the Christians; for in eight
 Months, they fetch'd from Mecca two learned Moulas;
 whereupon, the King seeing that the Jesuits sent no body
 to him, embraced the Mohammedan Law. True it is,
 that three Years after, there came three Portuguese Je-
 suits, but then it was too late. The King of Macassar
 being thus become a Mohammedan, the Prince, his Bro-
 ther, was so mad at it, that when the Mosque, which the
 King had caused to be built, was finish'd, he got into it
 one Night, and causing the Throats of two Pigs to be
 cut, he all besmeared the Walls of the new Mosque,
 and the Place which was appointed for the Moulas to
 perform divine Service, with the Blood; so that the King
 was forced to pull down that, and build another. After
 which the Prince, with some idolatrous Lords, stole out of
 the Island, and never since appear'd at Court.

4. I departed from Mingrela, a great Town in the
 Kingdom of Vishapour, eight Leagues from Goa, the 14th
 of April, 1648, and embark'd in a Dutch Vessel bound
 for Batavia. The Ship had Orders to touch at Bokanora,
 to take in Rice; whereupon I went ashore with the Cap-
 tain, to obtain Leave of the King to buy Rice: We
 found him upon the Shore, where he had about a Dozen
 Huts to set up, which were cover'd with Palm-Leaves.
 In his own Hut there was a Piece of Tapestry spread un-
 der him; and there we saw five or six Women, some tan-
 ning him with Peacock-Feathers, others giving him Be-
 teln, others filling him his Pipes with Tobacco.

The most considerable Persons in the Country were in
 the other Huts; and we counted about two hundred Men
 that were upon the Guard, armed only with Bows and Ar-
 rows: They had also two Elephants among them. 'Tis very
 probable that his Palace was not far off, and that he only
 came thither to take the fresh Air. There we were pre-
 sented with Tari, or Palm-wine, but very new, and not
 boiled: It caus'd the Head-ach in all that drank it, inso-
 much that we were two Days before we could recover it.
 I ask'd the Reason why the Wine came to do us so much
 Prejudice; to which they answer'd me, that it was plant-
 ing Pepper about the Palm-trees that gave such a Strength
 to the Wine.

We were no sooner got aboard, but a mighty Tempest
 arose, wherein the Ship, Men, and Goods, had all like to have
 been cast away, being near the Shore; but, at length, the
 Wind changing, we found ourselves, by the Break of Day,
 three or four Leagues at Sea, having lost all our Anchors;
 and, at length, came safe to Port in the Haven of Ponté
 de Gallé, the Twelfth of May. I found nothing remark-
 able in that City, there being nothing but the Ruins made
 by the Underminings and Cannon-Shot, when the Dutch
 besieg'd it, and chas'd the Portuguese from thence.
 The Company allow'd Ground to build upon, to them
 that would inhabit there, and Land to till; and had then
 rais'd two Bulwarks, which commanded the Port. If
 they have finish'd their Design which they undertook, the
 Place cannot but be very considerable. The Dutch had
 made an Agreement with the King of Candy, that he
 should be always ready, with twenty thousand Men, to
 keep the Passages that hinder the Portuguese from bring-
 ing any Succours from Colombo, Negombo, Manar, or
 any other Places, which they possess'd upon the Coast:
 In Consideration whereof, the Dutch, when they had ta-
 ken Ponté de Gallé, was to restore it to the King of Candy;
 which, they not performing, the King sent to know why
 they did not give him Possession of the Town; to which
 they return'd Answer, that they were ready to do it,
 provided he could defray the Expenses of the War.

But they knew, that if he had three Kingdoms more,
 such as his own, he could never have paid so great a
 Sum. I must confess, indeed, the Country is very poor,
 for, I do not believe that the King ever saw fifty thou-
 sand Crowns together in his Life, his Trade being all in
 Can-

Cinnamon and Elephants. As for his Cinnamon, he has no Profit since the *Portuguese* coming into the *East-Indies*; and for his Elephants, he makes but little of them, for they take not above five or six in a Year; but they are more esteemed than any other Country Elephants, as being the most courageous in War. One thing I will tell you hardly to be believed, but that which is a certain Truth, which is, that when any other King or Rajah has one of these Elephants of *Ceylon*, if they bring them among any other Breed in any other Place whatever, so soon as the other Elephants behold the *Ceylon* Elephants, by an Instinct of Nature, they do them Reverence, by laying their Trunks upon the Ground, and raising them up again.

The King of *Achen*, with whom the *Dutch* also broke their Word, had more Opportunity to be revenged upon them than the King of *Candy*, for he denied them the Transportation of Pepper out of his Country, without which their Trade was worth little; his Pepper being that which is most coveted thro' the East, so that they were forced to make a Composition with him. The King of *Achen's* Embassador coming to *Batavia*, was strangely surprized to see Women sitting at a Table; but much more, when after a Health drank to the Queen of *Achen*; the General of *Batavia* commanded his Wife to go and kiss the Embassador. Nor was the King behind-hand with the *Dutch* Embassador another Way, whom the King beholding in a languishing Disemper, asked him, whether he had never any Familiarity with any of the Natives? Yes, replied the Embassador; however, I left her to marry in my own Country: Upon that the King commanded three of his Physicians to cure him in fifteen Days, upon the Forfeiture of their Lives. Thereupon they gave him a certain Potion every Morning, and a little Pill at Night; and at the End of nine Days he took a great Vomit; every body thought he would have died with the working of it; but at length it brought up a Stopple of coarse Hair as big as a Nut, after which he presently recovered. At his Departure the King gave him a Flint, about the Bignets of a Goose-Egg, with Veins of Gold in it, like the Veins of a Man's Hand, as the Gold grows in that Country.

5. On the 25th of May we set sail from *Ponte Gale*. The second of June we passed the Line. The sixth we saw the Island called *Naxos*. The 17th we discovered the Coast of *Samatra*. The eighteenth the Island of *Indragiri*, and the nineteenth the Island *Fortuna*. The twentieth we were in ken of certain little Islands on the Coast of *Java*, among which Islands there are three called the Islands of the Prince. The twenty-first we discovered *Bantam*, and the twenty second we anchored in the Road of *Batavia*. There are two Councils in *Batavia*, the Council of the Count, where the General resides, and where all the Affairs of the Company are managed; The other, which is held in a House in the City, and relates to Civil Government, and decides the petty Differences among the Citizens. All the Kindness I had shewn me here, was to be prosecuted by the City Council, for being suspected to have brought a Parcel of Diamonds for Monsieur *Constant*, my very good Friend, and President of the *Dutch* Factory at *Batavia*; but when they could make nothing of it, they ceased their Suit, ashamed of what they had done.

6. Being so ill treated at *Batavia*, I resolved to visit the King of *Bantam*, to which purpose I took my own Brother along with me, because he spoke the *Mahvan* Language, which in the East is as universal as *Latin* among us. Being arrived at *Bantam*, in a small Bark, which we hired for ourselves, we went first and visited the *English* President, who kindly entertained and lodged us. The next Day I sent my Brother to the Palace, to know when it would be fit for me to kiss the King's Hands. When the King told him, for he was well known unto him, he would not suffer him to return, but sent Orders to fetch me, and to tell me what, that if I had any rare Jewels, I should command him to bring them along with me.

When I saw my Brother returned not with the Persons whom the King sent, I was almost in the mind not to have gone; but remembering how the King of *Achen* had seized the *Sieur Renaud*, for the *French* having set up an *East-India* Company, sent away four Vessels, three great ones, and one of smaller Size, for the Service of the Company. Their

Voyage was the shortest that ever was heard of, arriving at *Bantam* in less than four Months. The King also courteously received them, and let them have as much Pepper as they desired, and cheaper by twenty in a hundred than he sold it to the *Dutch*; but the *French* not coming only for Pepper, sent away the small Ship, with the greatest Part of their Money to *Macassar*, to try the Market for Cloves, Nutmegs, and Mace. The *French* being so soon dispatched at *Bantam*, had not Patience to stay till the Return of the small Vessel which they had sent to *Macassar*; but to pass the Time, must needs run over to *Batavia*, being not above fourteen Leagues off; so that you may be at *Batavia* from *Bantam* in a Tide, with a good Wind.

When they came to an Anchor, the General of the *French* Fleet sent to complement the General of *Batavia*, who failed not to answer his Civility, and invited the Admiral ashore. Moreover, he sent to those that stayed aboard great Store of excellent Cheer, and a good Quantity of *Spanish* and *Rhenish* Wine, with a particular Order to them that carried it, to make the *French* drunk. His Order was so well followed, that it was easy to set the Ships on Fire. According to the private Instructions which they had, so soon as the Flame was discovered from the General's Window, which overlooked all the Road, there was a wonderful pretended Astonishment amongst the *Dutch*; but the *French* Admiral, too truly conjecturing the Ground and Authors of the Treachery, beholding the Company with an undaunted Courage, Come, come, cried he, lets drink on; they that set the Ships on Fire shall pay for them. However, the *French* Ships were all burnt, though the Men were all saved in Boats, which were sent forthwith to their Relief. After that the General of *Batavia* made them great Offers, which they refused, and returned to *Batavia*, in Expectation of their small Vessel. When it returned, they could find out no better Way than to sell Ship, Goods and all, to the *English*, and to share the Money among themselves, every one according to their Condition.

7. But the Trick which they put upon the *English* was far more bloody. The *English* were the first that found out the Danger of sailing from *Surat*, *Mussipatan*, or any other distant Parts to *Japan*, without touching by the Way: Whereupon they thought it convenient to build a Fort in the Island of *Formosa*, which not only saved the Loss of several Vessels, but also brought them in great Gain. The *Dutch*, mad that the *English* were possessed of such an advantageous Situation, being the only Place in all the Island where Vessels could ride with Safety, and finding they could not carry it by Force, betought them of a Stratagem, to which Purpose they sent away two Ships, wherein they stowed the best of their Soldiers, who pretending they had been in a Storm at Sea, put into the Harbour of *Formosa*, with some of their Mails by the Board, their Sails scattered, and their Scamen seemingly sick.

The *English*, compassionating their Miseries, which was only in outward Appearance, invited the chief of them to come on Shore to refresh themselves, which they were ready to do, carrying as many Men as possible they could, under Pretence of Sickness. While the chief of them were at Dinner with the chief of the *English*, they all plied their Cups, and when the cruel *Dutch* saw that the *English* had drank hard enough, taking their Opportunity, they picked a Quarrel with the Commander of the Fort, and drawing their Swords, which they had hidden under their Coats for that Purpose, they easily surprized, and cut the Throats of all the Soldiers in the Garrison; and being thus Masters of the Fort, they kept it soon that Time, till they were routed out by the *Chinese*.

8. Now for the Trick that the King of *Achen* served the *Sieur Renaud*, he having got a good Estate by Jewels, arrived at length at *Achen*, and as it is the Custom for the Merchants to shew the King what Jewels they have, the King had no sooner cast his Eye upon four Rings which the *Sieur Renaud* shewed him, but he bid him fifteen thousand Crowns for them, but *Renaud* would not bate of eighteen thousand. Now, because they could not agree, the *Sieur Renaud* carried them away with him, which very much displeased the King; however, he sent for him the next Day, whereupon *Renaud* returning to him, the King paid him his eighteen thousand Crowns; but he was never

then after that, and it is thought he was secretly murdered
in the Palace. This Story came to my Remembrance,
when I found my Brother did not come along with them
that were sent to fetch me. However, I resolved to go,
taking with me twelve or thirteen thousand Pieces Worth
of Jewels, the greatest Part being in Role Diamond Rings,
some consisting of five, some of nine, and some of eleven
Stones, with some final Bracelets of Diamonds and Rubies.
I found the King with three of his Captains, and my Bro-
ther; sitting together, after the Manner of the East, with
five great Plates of Rice before them of different Colours.

For their Drink they had Spanish Wine, strong Waters,
and several sorts of Sherbets. After I had complimented
the King, and presented him with a Diamond Ring, a blue
Sapphire Ring, and a little Bracelet of Diamonds, Rubies,
and blue Sapphires, he commanded me to sit down, and
ordered me a Glass of strong Water, to whet my Appetite.
The Glass held a Quarter of a Pint, and therefore I refused
it, which the King very much wondered at; but being told,
by my Brother, that I never drank any strong Water, he
ordered me a Glass of Sack. After that he rose up and
seated himself in a Chair, the Elbows of which were gilded,
his Feet and Legs were bare, having a Persian Capot of
Gold and Silk to tread upon. He was clad with a Piece
of Calicut, part whereof covered his Body from his Waist
to his Knees, the rest being wound about his Back and
Shoulders like a Scarf. Instead of Shoes he had a Pair of
Sandals that stood by the Chair-side, the Straps whereof
were embroidered with Gold, and small Pearl. About his
Head he had a thing like a Handkerchief, with three Cor-
ners, bound about his Head like a Fillet. His Hair also,
which was very long, was twisted, and tied together over
his Head; two Persons stood behind him with Fans of
long Peacock Feathers, the Handles of which were five or
six Foot in Length. Upon his right Hand stood an old
black Woman, holding in her Hand a little Mortar and
Pestle of Gold to beat his Beetle in, wherewith he mixed
the Kernel of the Nut of Araqui, and Seed of Pearl dis-
solved. When it was all beaten together, the old Woman
gave it the King over his Shoulders, who, opening his
Mouth, the old Woman fed him, as our Women feed their
Children; for the King had chewed so much Beetle, and
taken so much Tobacco, that his Teeth were all fallen out of
his Head.

9 The King of Bantam's Palace was never built by any
curious Architect: It is a square Place, encompassed with
a great many Pillars, varnished over with several sorts of
Colours, against which the King leans when he sits down.
At the four Corners there are four great Pillars set in the
Earth, at forty Foot Distance one from another, lined with
a Mat made of the certain Kind of a Tree, so thin, that it
looks like a Piece of Linnen, when neither Heat nor Pines
will come near. The Roof was covered with Cocoa Bran-
ches. Not far off, under another Roof, supported by
four great Pillars, he hath sixteen Elephants, the noblest of
all those that are in the King's Service; for he has a fir-
mer Number raised up for War, that are not afraid of
Wild-fire. For his Guard he might not have above two
thousand Men that were drawn up in Companies under the
shade of the next Trees. They are good Soldiers, as well
by Sea as by Land, that *Albanuchan*, and stand not at
all in Fear of Death. His Harem, or the Womens Apart-
ment, was certainly a very fine Place; for when he had
viewed what I brought him, he sent for two old Women,
to whom he gave some of the Jewels to go and shew them
to his Wives. The two Women returned Luck through
a little pitiful Door, the Enclosure being nothing but a kind
of a Wall made up of Earth and Cow dung mixed toge-
ther. Whatever he sent to the Women, they never re-
turned any thing again, which made me believe they
would bear a good Price; and indeed, whatever I sold to
him, I sold to good Profit, and had my Money well paid
me.

After this we took our Leave; but the King obliged us
to come next Day in the Evening, because he had a Desire
to shew us a Turkey Dagger, the Flat whereof being thin
of Diamonds, he had a mind to enrich with more Stones.
Coming to the English House with our Money, they won-
dered that the King had laid out twenty thousand Rupces,
NUMB. LVII.

telling me, they believed it was the best Part of his Trea-
sure. The next Day my Brother and I went to wait upon
him at the appointed Hour, and we found him sitting in
the same Place where he sat before. There was a Moulla
then read to him, who seemed to interpret to him some-
thing of the *Alcoran* in the Arabic Language.

The Lecture being ended, they both rose and went to
Prayers, which being concluded, the King sent for me
the Dagger, and the Hat, which was of Gold; the Top of
the Handle was already set with Diamonds, and the upper Part
of the Cross-bar was cut in Facets, which could not be less
worth than fifteen or sixteen thousand Crowns. They told
me it was presented to him by the Queen of *Borneo*, and
that it was cut at *Goa*, but that he put a far higher Value
upon it than I esteemed it to be worth. The Dagger, as
well as the Sheath, was full of Beazells or Collets, and
therefore desired me to help him to some that might come
at an easy rate. I told him it was impossible to find Stones
that would fit the Beazells, and therefore it was better, when
he had got Stones enough, to fix other Beazells according to
the Proportion of the Stones; to which Purpose he must be
forced to range all his Stones in Wax, and I shewed him
how to do it at the same time; but that was above his Skill,
and therefore do what I could to excuse myself from the
Truth, he would needs oblige me to carry the Dagger to
Batavia; whereupon I took my Leave of the King, and
departed.

10 About eleven o'Clock at Night we embarked for
Batavia, for the Night Winds blowing from the Land,
are the only Winds to serve our Turn, so that we were at
Batavia between ten and eleven the next Morning. There
I stayed twenty Days for the King of *Bantam's* sake,
to make him believe I had fought for that which I knew was
impossible to be found. I had nothing to do all the while,
for in *Batavia* there is no other Recreation but Gaming and
Drinking, which was none of my Business; at that Time
the *Sieur Cam* died, one of the *Indian* Counsellors, who
was sumptuously buried for his good Services done to the
Company; but the People complained heavily of the In-
justice which he had done, as well to the Soldiers, as the
Manners.

Having stayed twenty Days at *Batavia*, I resolved to go
and return the King of *Bantam* his Dagger again, for that
it was impossible to meet with Stones to fit his Beazells.
However, I took along with me some other Stones, which
he had not seen. Coming to *Bantam*, the King caused us
to be lodged in one of his own Houses in the City, which
was made of Bamboos; thicker, in less than a Quarter of
an Hour, the King sent us some Pateches, or sweet Water
Melons, red within like Scarlet. We had also Mangoes,
and a certain large Fruit called Pomponne, red also within,
the Meat of it being soft and spongy, but of an excellent
Taste. Having stayed our Stomachs, we went to wait
upon the King, whom we found in the same Place with his
old Mortar-beater, who every Minute fed him with Beetle
with her Fingers. There were sitting about the Hall five
or six of his Captains, viewing a certain Piece of Fireworks,
as Granadoes, Rockets, and other Devices, to run upon
the Water, which the *Chinese* had brought, who are the
most exquisite at these Works of any People in the World.
When the King was at leisure, I returned him his Dag-
ger, telling him, *Batavia* was no Place to meet with Stones,
and that such as were to be found were valued at double
the Price they were worth; and that there was no Place
where he could fit himself, but at *Calcutta*, or *Goa*, or the
Diamond Mines. Thereupon the old Woman took the
Dagger, and carried it into his Harem; nor did the King
speak a Word more about it, after that I had shewed him
what other Stones I had brought, a Parcel whereof I sold
him for good Profit.

The King ordered us to come the next Day for Pay-
ment. The next Day, about six in the Morning, my Bro-
ther, and I, and a Dutch Chirurgion, were going along a
narrow Way between a River on the one Hand, and the
Pales of a great Garden on the other. Behind the Pales a
rascally *Bantamois* had hid himself, one of those that was
newly come from *Mecca*, and was upon the Design of
Mecca; that is, in their Language, when the Rascality
of the *Albanuchans* return from *Mecca*, they presently
take

take their Cris in their Hands, which is a kind of Poniard, the Blade whereof is half poisoned, with which they run through the Streets, and kill all those that are not of the *Mohammedan* Law, till they are killed themselves.

These Furies think, in so doing, they do God and *Mohammed* good Service, and shall be saved thereby. If any of these Madmen be killed, the Rabble of *Mohammedans* bury them as Saints, and every one contributes towards making them a fair Tomb. Sometimes you shall have an idle Rogue, in the Habit of a Dervich, that will build him a Hut near the Tomb, which he undertakes to look to, and throws with Flowers; and, as his Alms increase, he adds some other Ornament to it; for the fairer and better set out the Tomb is, the more devoutly it is worshipped, and the more Alms it brings in.

I remember in the Year 1642, that at *Suwalli*, which is the Port of *Surat*, it happened, that a Vessel of the great Mogul's returned from *Mecca* with a great Number of *Faquirs* or *Derviches*; for every Year the King lends two Vessels to carry and bring back the Pilgrims, who have their Passage free, and when these Vessels are to go, the *Faquirs* come from all Parts of *India* to embark. These Vessels are laden with very good Commodities, which are sold at *Mecca*, and the Profit is distributed among the poor Pilgrims; but the Principal is brought back for the next Year, amounting to six hundred thousand *Rupees* at least. 'Tis an ill Market when they do not gain thirty or forty *per Cent.* by their Commodities; nay, there are some that produce *Cent. per Cent.* besides that the principal Persons of the Mogul's *Harem*, and other particular Persons, lend very large Gifts to *Mecca*.

11. One of these *Faquirs* returning from *Mecca* in the Year 1642, and being landed at *Sowah*, had no sooner said his Prayers, but he took his Dagger, and ran among several *Dutch* Mariners that were unloading Goods upon the Shore, and before they were aware, this mad *Faquir* had wounded seventeen of them, of which thirteen died. The *Canjare*, which he had in his Hand, was a kind of Dagger, the Blade whereof, towards the Handle, was three Fingers broad, and is a very dangerous Weapon. At length the Centinel that stood at the End of the Tent, where the Governor and the Merchants were, shot him through the Body, so that he fell down dead. Immediately all the other *Faquirs* and *Mohammedans* that were upon the Place took up the Body, and buried it, and at the End of fifteen Days they put him up a fair Monument. Every Year the *English* and *Dutch* pull it down; but when they are gone the *Faquirs* set it up again, and plant Banners over it. Nay, some there are that perform their Devotions to it. But to return to the *Bantam* *Faquir*, that Villain lying, as I said, behind the Pales, as my Brother, and I, and the *Dutch* *Chirurgeon*, came towards him, all three a-breath, he thrust his Pike between the Pales, thinking to have stabbed it into one of our Breasts. The *Dutchman* being next the River, and some what before the rest, the Head of his Pike ran into his Breach; whereupon we both laid hold of the Staff, but my Brother being next the Pales, presently leaped over, and ran the *Faquir* through.

Whereupon several *Chingis*, and other *Holaters*, came and gave my Brother Thanks for killing him; after that we waited upon the King, and told him what my Brother had done, who was so far from being displeas'd, that he gave my Brother a Girdle: For, the King and his Governors are glad when these Rogues are killed, knowing them to be *Desperadoes*, not fit to live. The next Day coming to take my Leave of the *English* President, he shewed me two Strings of Diamonds, and two Services of Silver, which came from *England*; he would have sold them, but I only bought one of the Strings of Diamonds, the other being toul, and for the Silver I would have bought it, had they coined Silver in *Batavia*, as they were wont to do. Formerly the *Dutch* coined *Reals*, *Half Reals*, and *Quarter Reals*, bearing on the one Side the Stamp of a Ship, on the other *V. O. C.* like a Character, signifying *Dutch*, for the *East-India* Company, which they did for the sake of the *Chingis*, who loving Silver better than Gold, carried away all the Silver that was coined at *Batavia* at good Rates; but at length they left it off, finding to few People that made use of Silver.

12. Having taken my Leave of the *English* President, I returned to *Batavia*, where, having little to do, I resolved to give a Visit to the King of *Japara*, otherwise called the Emperor of *Java*. This King was formerly the King of all the Island, till the King of *Bantam*, who was only Governour of a Province, rebelled against him, the *Dutch* being made by the Division of those two Princes; for when the King of *Japara* besieged *Batavia*, the King of *Bantam* relieved the *Dutch*; and when they were attacked by the King of *Bantam*, the King of *Japara* came to their Assistance; and when those two Kings were tog, her by the Ears, the *Dutch* always aided the weakest. The King of *Japara* keeps his Court in a City of the same Name, distant from *Batavia* about thirty Leagues. You may coast along the Shore to it by Sea; but the City stands above eight Leagues up the Land. From the City there is a fine Walk to the Sea, where there is a handsome Port, and fairer Houses than any in the City; and the King would live there if he thought it safe.

The Day before I departed, I went to take my Leave of one of the *Indian* Councillors, and telling him that I was going to wait upon the King of *Japara*, he stood amazed, in regard the King and the *Dutch* were mortal Enemies, of which he gave me this Account. The deceased King, Father to the King that now reigns, since the *Dutch* built their Fort of *Batavia*, would never have any Peace with them; and though that, during the War, the *Dutch* took ten of his Subjects for one of theirs, and offered ten for one in Exchange, yet he would never exchange one upon any Consideration whatsoever, and charged his Son, upon his Death Bed, never to release one. This Ordinary very much troubled the *Dutch* General, and all the rest in *Batavia*, and obliged them how to consult Means to right themselves. Now it is the Custom when the *Mohammedan* King dies, that his Successor sends certain great Lords of his Court to *Mecca*, with Presents, as well to engage them to pray for the Soul of the deceased, as also to give Thanks to God and *Mohammed* for the coming of a new King to the Throne, without any impediment, and to pray for the Blessing of Victory over all his Enemies. But the new King and his Council were at a Loss how to accomplish this Voyage; for, first, the King had none but little Vessels, that were wont only to sail along by the Shore, by reason of the Inexperience of his Seamen; and, in the next Place, the *Dutch* were always plying to and fro about the Mouths of his Havens, to surprize his Subjects, if they stirred out. For the Safety therefore of his Pilgrims, the King, at last, concludes upon making an Agreement with the *English*; for which Reason he dispatched away an Envoy to *Bantam* to the *English* President and his Council, who promised to lend him the biggest Vessel, and the best mounted which the Company had in the *Indies*; in lieu whereof the *English* were to pay but half Customs for all Commodities exported or imported out of his Country; which Treaty being ratified, the *English* furnished him with three stout Vessels mann'd and armed beyond an ordinary Rate.

Thereupon nine of the principal Lords of the Court, and most of the Blood Royal, with a Train of one hundred Persons, embarked themselves in the great Vessel. But all these Preparations could not be carried on so private; but that the *Dutch* had Intelligence of it by their Spies. Thereupon the General of the *Dutch* makes ready three Ships, and lying just in the Strait of *Bantam's* Mouth, as soon as the *English* came up (for they had no other Way) let fly at them to roundly, that the *English*, fearing lest their Vessels should be sunk, struck sail; which the *Java* Lords seeing, called them *English* Traitors, and, drawing their poisoned Darts, cried a *Mocca* upon the *English*, killing a great Number of them before they had time to put themselves into a Posture of Defence; and perhaps there would not have one of them escaped, had not the *Dutch* come on board as they did: Some of the *Java* Lords, and about twenty of their Attendants would take no Quarter, so that the *Dutch* were forced to fight for it, and, at last, they got the better, with the Loss of seven or eight Men.

The *English* Vessel being carried into *Batavia*, the General very civilly sent both the Prisoners and the Vessel home

of the *English* President, having little to do, I took King of *Japara*, otherwise This King was formerly till the King of *Bantam*, a Province, rebelled against by the Division of those of *Japara* besieged *Batavia* the *Dutch*; and when King of *Bantam*, the King of *Japara*, and when those two Wars, the *Dutch* always aided *Japara* keeps his Court in a from *Batavia* about thirty the Shore to it by Sea; the Leagues up the Land, Walk to the Sea, where there Houses than any in the City; if he thought it safe.

I went to take my Leave, and telling him that I was of *Japara*, he stood amazed, *Dutch* were mortal Enemies, of t. The deceased King, *Dutch* built never have any Peace with the War, the *Dutch* took theirs, and offered ten for I never exchange one upon and charged his Son, upon e one. This Obliviousness, General, and all the rest in w to consult Means to right om when the *Mohammedan* ends certain great Lords at ents, as well to engage them deceased, as also to give d for the coming of a new any Impediment, and to rory over all his Enemies. d were at a Loss how to first, the King had none out only to sail along by experience of his Seaman; *Dutch* were always plying to his Havens, to surprize his or the Safety thereof of concludes upon making an for which Reason he dis- *Bantam* to the *English* Presi- mified to lend him the big- d which the Company had he *English* were to pay but mities exported or imported aty being ratified, the En- hout Vessels mann'd and

Principal Lords of the Court, with a Train of one hun- dreds in the great Vessel. ot be carried on to private- ence of it by their Spies. *Dutch* makes ready thro' it of *Bantam's* Mouth, so they had no other Way at the *English*, fearing lest uck fail; which the *Java* b Traitors, and, drawing *Mocca* upon the *English*, before they had Time to of Defence; and perhaps hem escaped, had not the did: Some of the *Java* r Attendant would take were forced to fight for it, ; with the Loss of seven

ed into *Batavia*, the Ge- Prisoners and the Vessel home

home again, withal giving Notice to the King, that he was ready to make an Exchange of Prisoners with him; but the King would not so much as hearken to any such Proposition, returning for Answer, that though the *Dutch* had three Times as many of his Subjects, he would not so much as release one of the *Dutch*; so that the poor *Dutch* were kept Slaves in *Java*, and the *Javaneſe* died miserable in *Batavia*. As to the *Javaneſe*, they are good Soldiers; and, it is reported, that while *Batavia* was besieged by the King of *Bantam* in the Year 1659, a *Dutch* Soldier lying in Ambuscade in a March, a *Javaneſe*, little dreaming that any Body had been there, came to this same Place to discover the Enemy, and was by the *Dutchman* thrust with his Pike into the Body; upon which the *Javaneſe* finding himself wounded, did not strive to pull the Pike out of the Body, but thrust himself farther upon it, to the End he might come at his Enemy, whom he stabbed to the Heart as soon as he came within his Reach.

13. Whilst I stayed at *Batavia*, my Brother died, and it was pretty to consider what the *Dutch* made me pay for his Funeral. The first Expence is for the Fees of those that beg Leave for the Corps to be buried, of whom the more there are, the more honourable the Funeral is esteemed; I sent six, and, to my Wonder, paid for that seventy-two Crowns. The Fee for the Poor is a Right belonging to the Poor, for which I paid two Crowns. There was a Vessel of *Spanish* Wine drank out that cost me two hundred Piaſters: I gave twenty-six more for three *Westphalia* Hams and Neats-tongues, and twenty-two for baked Meats; to the Bearers, I gave twenty Crowns and sixteen for a Place in the Church-Yard, for they asked me an hundred to bury him in the Church. And all these are Fees demanded; so that my Brother's Fimral cost me twelve hundred and twenty-three Livres of *French* Money. Being thus put by the two Voyages which I intended to *Japara*, and *Sunara*, I was advic'd to lay out my Money in Reckonings, or Debentures, of the Servants of the *Dutch* Company, which they that have no Mind to return into their own Country, as being settled in the *Indies*, will sell at an easy Rate, in- so much that for sixty or seventy, you may buy an hundred Piaſters, the Act and Acquittance of the Seller being made and registered by the publick Notary.

Thereupon I bought of one of the publick Notaries, who had Bills in his Hands to the Value of about eleven hundred Guilders, at fourscore and two for the hundred. After that I bought, by means of the Advocate of the Treasury, six thousand Guilders more at seventy-nine for the hundred. But some few Days after, meeting with the same Advocate again, he passed a Compliment upon me, and told me he was very much troubled for those that had bought Debentures, in regard that the General and the Council had commanded him to recall all Debentures that had been sold; for they had considered how sad a Thing it would be for the poor Men to lose so much of their Salaries; I answered him, that, for my Part, I was willing to return mine, provided I might have my Money again.

About six or seven Hours after, I was sent for by the General and the Council; when I came there they asked me why I had not returned my Debentures which I had to the Advocate, who had demanded them by their Order? I answered them, that they were at *Bantam*, whither I had sent them in order to my Passage home, in regard that the *English* President had offered me a Convenience to go along with him. The Council answered me, that the *Dutch* Ships were as good as the *English*, and very certainly assured me, that they would give Orders for a Cabin to myself in the Vice-Admiral; but withal told me, I must deliver up my Debentures before I stirred, assuring me they would give me a Bill to be reimbursed my Money in *Holland*. I thought it very hard, not knowing how to trust them, but seeing the Merchants, Commanders, and all other Persons, clapp'd up, and their Papers taken from them by Force that had bought Debentures, I thought it the best Way to deliver mine, and stand to their Country. I often pressed the General and the Council for my Bill; but, after many Days, the General acknowledged me, that my Bill should be in *Holland* as soon as I. Ther upon desiring the Vice-Admiral, and some others, to

be my Witnesses of what the General promised, I took my Leave of him, very much repenting my going to *Batavia*.

14. The next Day I went on board the Vice-Admiral; and, the third Day after, we set sail, and as soon as we were out of the Straights, we discovered the Island of the *Prince*, from thence, being in the Altitude of the *Cocoa* Islands, we beat about two Days to discover them, but all to no Purpose; thereupon we made directly for the *Cape of Good-Hope*. The forty-fifth Day after we departed from *Batavia*, our Vice-Admiral neglected to put out his Lights, believing all the Fleet had been before at the *Cape*; so that it happened one of the Fleet being behind, and not carrying any Lights out neither, it being a dark Night, fell foul upon us, which put every Man to his Prayers, all the People believing the Vessel had been lost; and indeed had she not been a sound French Ship (as she was esteemed to be) she could never have endured so terrible a Shock. At length we cleared ourselves by cutting off the Yard of the *Maelricht* that hung in our Cordage. The fifty-fifth Day we came within Sight of the *Cape of Good-Hope*, but were forced to keep the Sea, because the Waves rolled so that we were not able to come to an Anchor; not that the Wind was extrem high, but because the South-wind, which had blown, had forced the Water to that Part; when the Sea grew calm we came to an Anchor.

But of all the People that ever I saw in all my Travels, I never met with any so hideous, nor so brutish, as the *Comaucks*, of which I have spoken in my *Perſian* Travels, and those of the *Cape of Good-Hope*, whom they call *Cafres*, or *Hotentots*. When they speak, they make a Noise with their Tongues like the Breaking of Wind backwards; and though they hardly speak articulately, yet they easily understand one another. They cover themselves with the Skins of wild Beasts, which they kill in the Woods in the Winter, wearing the hairy Part innermost, and in the Summer outermost: But there are none but the best sort among them who are thus clad; the rest wear nothing but a nasty Rag about their Privy-parts. The Men and the Women are lean and short, and when they bring forth a male Child, their Mothers cut out the Right-stone, and presently give him Water to drink, and Tobacco to eat. They cut out the Right-testicle, because, they say, it makes them swifter to run. There are some of them that will catch a Roe-buck running. They neither know what belongs to Gold nor Silver; and, for Religion, they have none among them.

15. So soon as we cast Anchor, four Women came on board of us, and brought four young Ostriches, which were boiled for some sick People we had aboard us; after that they brought great Store of Tortoise-shells, and Ostriches-Eggs, and other Eggs as big as Goose-Eggs, which, tho' they had no Yolk, tasted very well. The Birds that lay these Eggs are a sort of Geese, and so fat that they are hardly to be eaten, tasting rather like Fish than Flesh. The Women seeing our Cook throw away the Guts of two or three Fowls, which he was dressing, took them up, and, squeezing out the Ordure, eat them as they were, being highly pleased with the *Agua Vita* which the Captain gave them. Neither Men nor Women are ashamed to shew their Nakedness; for, indeed, they are but a sort of two-legged Beasts.

So soon as a Ship arrives, they bring their Beavers to the Shore, with what other Commodities they have, to barter for Strong-water, and Tobacco, Crystal, or Agar, Beads, or any sort of old Iron-work. If they are not satisfied with what you offer them, away they fly, and then giving a Whistle, all their Cattle follow them; nor shall you ever see them again. Some, when they saw them fly would shoot and kill their Cattle; but, after that, for many Years, they would not bring any more. It's a very great Convenience for the Vessels that touch there, to take in fresh Victuals, and the *Dutch* did well to build a Fort there. It is now a good handsome Town, inhabited by all sorts of People that live with the *Dutch*; and all sorts of Grain which are brought out of *Europe*, or *Asia*, and sowed there, come to greater Perfection than in other Parts. The Country lies in 35° and some few Minutes over; so that

it cannot be said that either the Heat, or the Situation of the Climate, make these *Cafres* so black. Being desirous to know the Reason, and why they stunk so terribly, I learnt it from a Girl, that was bred up in the Fort, who was taken from her Mother as soon as she was born, and was white, like our Women in *Europe*: She told me, that the Reason was, because the *Cafres* rub themselves with a Grease, or Ointment, composed of several sorts of Drugs, wherewith should they not anoint themselves very often, and so soon as they were born, they would become hydrofical, as the *Blacks* of *Africa* and the *Indians* are, or like the People of *Saba*, that never live above forty Years, and are always troubled with one Leg twice as big as the other. These *Cafres*, as brutish as they are, have yet some Knowledge of Simples, which they know how to apply to several Diseases, which the *Dutch* have several Times experienced. Of nineteen sick Persons that we had in our Ship, sixteen were committed to the *Cafres*, being troubled with Ulcers in their Legs, and old Wounds which they had received in the Wars; and, in less than fifteen Days, they were perfectly cured. Every one of these had two *Cafres* to look after him, and according to the Condition of the Wound or Ulcer, they went and fetched Simples, which they bruited between two Stones, and applied to the Sore. As for the other four, they were so far gone with the Pox, that they would not trust the *Cafres* with them, having been given over at *Batavia*, and to they all died between the Cape and *Saint Helens*.

In the Year 1661, a Gentleman of *Brittany*, being at *Batavia*, was so bit by the Gnats in the Night, that his Leg exulcerated presently, in such a Manner as to puzzle all the Art and Skill of the Chirurgeons of that Town. When he came to the *Cape of Good Hope*, the Captain of the Ship sending him on Shore, the *Cafres* came about him, and after they had beheld him, they told him, if he would trust to them, they would cure him; the Captain therefore committed him to their Care, who cured him, and made him a sound Man in less than fifteen Days. When a Ship comes to an Anchor in the Cape, it is the Custom for him that commands the Ship, to give Leave to some Part of the Manners and Soldiers to go ashore to refresh themselves. The sickly have first Leave by Turns, and go to the Town, where they are dieted and lodged for seven or eight Sols a Day, and are very well used. It is the Custom of the *Dutch*, when they stay here, to send out Parties of Soldiers upon the Discovery of the up-land Country, and they that go farthest, are best rewarded. With this Design a Party of Soldiers, under the Command of a Sergeant, far advanced in the Country, and Night coming on, they made a great Fire, as well to keep themselves from the Lions, as to warm themselves, and to lay down to sleep round about it; being asleep, a Lion seized one of the Soldier's Arms, which the Sergeant perceiving, immediately shot the Lion with his Carbuncle; but when he was dead, they had much ado to open the Lion's Mouth to get out the Soldier's Arm.

Thus it appears a vulgar Error, to think that Lions will not come near the Fire. As for the Soldier, the *Cafres* cured him in twelve Days. There are in the Fort abundance of Lions and Tygers Slains; among the rest, there was the Skin of a Horse which the *Cafres* had killed; it was white, crossed with black Streaks, spotted like a Leopard, without a Tail. Two or three Leagues from the *Dutch* Fort, there was a Lion found dead, with four Porcupine Quills in his Body, the third Part whereof had pierced his Flesh; so that it was judged that the Porcupine had killed the Lion. The Skin, with the Quills in it, is kept at the Fort. A League from this Fort is a fair Town, that grows bigger every Day.

When the *Dutch* Company move thence with their Ships, if any Soldier or Mariner will live there, they are glad of it. They have as much Ground as they can manage, where they have all sorts of Herbs, and Pulse, and as much Rice, and as many Grapes, as they can desire. They have also Cucumbers, Beet, Sea-fish, and sweet Water to catch in. Outracks when they please, they get their Necks when they are young, and driving a Stake in the Ground, to the Bottom of the Peg to the stake, and when they are old

enough, they come and take them out of the Nest, from whence it is impossible to fly away. When the *Dutch* begin to inhabit the *Cape*, they took a young Gull from her Mother as soon as she was born; she is white, only her Nose is a little flat. A *Frenchman* got her with Child, and would have married her; but the Company were so far from permitting him, that they took away above one hundred Livres of the Maid's Wages from her, to punish her for the Misdemeanour, which was somewhat hard.

There are great Numbers of Lions and Tygers, which the *Dutch* have a pretty Invention to take; they take a Carbuncle to a Stake driven into the Earth, and lay Meat round about the Gun, which Meat is fastened with a String to the Trigger, so that when the Beal touches the Meat, the String pulls the Trigger, and the Gun goes off, hits the Lion either in the Throat or Breast. The *Cafres* feed upon a Root like our Carrots, which they roast, and make Bread of. Sometimes they grind it into Flour, and then it tastes like a Walnut; for their Food they eat the same Root raw, with raw Flesh, and with the Entrails of Beasts, out of which they only squeeze the Ordure. As for the Bowels of the wild Beasts, the Women wear them dried about their Legs, especially the Bowels of those Beasts their Husbands kill, which they look upon as a kind of Ornament.

They also feed upon Tortoises, when they have to far heated them at the Fire, as to make the Shells come off. They are very expert in darting their *Azagayas*, and those that have none make use of painted Sticks, which they will lance a great way; with these they go down to the Sea-side, and as soon as ever they spy a Fish near the Top of the Water, they will not fail to strike him. As for their Birds, which are like our Ducks, whose Eggs are without any Yolk, they breed in such great Quantities in the Country, that in a Bay, about eighteen Leagues from the *Cape*, you may knock them on the Head with a Stick. The *Dutch* once carried a young *Cafre* to the General at *Batavia*, who bred him carefully up, teaching him to understand the *Dutch* and *Portuguese* Languages perfectly well. At length, being desirous to return to his own Country, the General gave him very good Cloaths, and good Linnen, hoping that he would have lived among the *Dutch*, and have been serviceable to them in the Discovery of the Country; but so soon as he got home, he hung his Cloaths into the Sea, and returned wild among his fellow Natives, eating raw Flesh as he did before, and quite forgetting his Benefactors.

When the *Cafres* go a Hunting, they go in great Numbers together, and make such a prodigious howling and yelling, that they fright the very Beasts themselves, and in that Allright with Fate destroy them; and I have been assured, that their Cries terrify the Lions themselves. The Women are of so hot a Constitution of Body, that at the Times their Monthly Customs are upon them, they happen to make Water, and that an *European* chanced to set his Feet upon it, it causes an immediate Head-ach and Fever, when many times turns to the Plague.

16. Having stayed twenty-two Days at the *Cape of Good Hope*, seeing that the Wind was favourable, we weighed Anchor, and fleeted for *St. Helens*; when we were under Sail, the Mariners cried out, they would sleep till they came into *St. Helens*'s Road; for the Wind is very constant, and carries you in sixteen or eighteen Days to the Road of the Island. All the Trouble that our Mariners had was, that in fourteen Days after our Departure from the *Cape*, they were often forced to the Top-mast Head, upon Discovery of the Island, for as soon as you dit over the Island, the Pilot must take care to steer to the North-side of the Island, because there is no casting Anchor but on that Side of the Island, and that very near the Shore too, by reason of the Depth of the Water, for if the Anchors come not to take hold, the Current of the Water and the Wind carries the Ship quite out of the Road, which there is no recovering again, because the Wind never changes.

So soon as the Ship came to an Anchor, part of the Seamen were sent on Shore to get wild Hogs, of which there are great Plenty, and to gather Sorrel, which grows in great abundance; and indeed they not only eat the Seamen, but all the Pigs, Sheep, Geese, Ducks, and Pullets

them out of the Nest, from away. When the *Dutch* bring a young Gull from her Mother is white, only her Note is like with Child, and would accompany were to far from prey above one hundred Livres, to punish her for the Mistake hard.

Lions and Tygers, which intention to take; they taken a to the Earth, and lay Meat Meat is fattened with a String the Beal matches the Meat, and the Gun goes off, but for Breast. The *Cafros* feed which they roast, and make and it into Flour, and then their Food they eat the same with the Entrails of Beasts, the Ordure. As for the Women wear their dried Bowels of those Beasts their look upon as a kind of Orna-

ment, when they have to tar to make the Shells come off, their *Azagayas*, and those of Sticks, which they will they go down to the Sea to a Fish near the Top of to strike him. As for their whole Eggs are without Quantities in the Countreen Leagues from the *Cape*, Head with a Stick. The General at *Batavia*, asking him to understand the perfectly well. At length, own Country, the General and good Linnen, hoping along the *Dutch*, and have Discovery of the Country; the King his Cloaths into the his fellow Natives, eating quite forgetting his Bene-

fitting, they go in great Numbers howling and yell, calls themselves, and in that and I have been afraid, is themselves. The Women ty, that it at the Times their them, they happen to make chances to let his Feet upon each and Fever, when

two Days at the *Cape of Good* as favourable, we weighed *St. Helena*, when we were made y would sleep till they came Wind is very constant, and n Days, to the Road of the our Mariners had was, that arture from the *Cape*, they hat Head, upon Discovery ceu discover the Island, the the North-side of the Island, but on that Side of the where too, by reason of the t the Anchors come not to Water and the Wind carries which there is no recover- ever changes.

an Anchor, part of the Sea- wild Hogs, of which there r Sorrel, which grows in they not only eat the Sea- Geeks, Ducks, and Pulls aboard

aboard, to feed upon this Sorrel, which purged them in such a manner, that in a few Days they become so fat, that by that Time we came to *Holland* they were hardly to be eaten. That Sorrel has the same Operation upon the Men, who boiling their wild Swines-Flesh, Rice and Sorrel together, make thereof a kind of Potage, so excellent, that it keeps their Bodies open, by an insensible Purgation. There are two Places upon the Coast of *St. Hellens* where Ships may come to an Anchor; but the best is that where we lay, by reason the Ground is very good, and because the Water that falls from the Mountains is the best in the Island. In this Part of the Island there is no Plain, for the Mountain defends to the very Shore of the Sea. It is not so good anchoring in the other Road; but there is a very handsome Plain, where you may grow or reap whatever you please. There are great Store of Citrons, and some Oranges, which the *Portuguese* had formerly planted there; for that Nation have that Virtue, that wherever they come they make the Place the better for those that come after them, whereas the *Dutch* endeavour to destroy all things wherever they set Footing. I confess the Commanders are not of that Humour; but the Seamen and Soldiers are, who cry one to another, we shall never come here any more, and, out of Greediness, will cut down a whole Tree instead of gathering the Fruit.

Some Days after their Arrival, came in a *Portuguese* Vessel from *Guinea*, full of Slaves, who were bound for the Mines of *Ferns*, some of the *Dutch* that understood the Language of the Negroes, told them how miserably they would be used, and thereupon the next Night two hundred and fifty of them threw themselves into the Sea; and indeed, it is a miserable Slavery; for sometimes after they have undetermined some Places for some Days together, the Earth being loose, falls down, and kills four or five hundred at a time; besides that, when they have been mining a-while, their Faces, their Eyes, and their Skins change Colour, which proceeds from the Vapours that arise from those Concavities; nor could they subsist in those Places, but from the Quantity of strong Water which they give both to the Men and Women. There are some that are made free by their Masters, who labour, however, for their Living; but between Saturday Night and Monday Morning, they spend all their Wages in strong Water, which is very dear, so that they always live miserably.

Being ready to depart the Island of *St. Hellens*, the Admiral called a Council, to advise which Way to steer; the greatest Part were for steering more to the West than to the South, because the Sealon for sailing was far spent; and for that, if we steered towards the *West*, we should find the Wind more proper to carry us into *Holland*; but we had no sooner passed the Line, but we found the Wind quite contrary to what the Mariners expected, so that we were forced to steer to the sixty-fourth Degree of Altitude with the Island, and so return by the North into *Holland*.

17. The next Day after the Admiral had called a Council, we weighed Anchor, and set Sail about ten o'Clock at Night. Three Days after our Departure from *St. Hellens*, the Seamen were called very duly to Prayers Morning and Evening, though all the Time we stayed in the Road they never minded any such Matter, which made me wonder to find they should be more devout when they were out of Danger than when they were in Jeopardy. After several Days sailing, we discovered the Coast of *Iceland*, and then the Island of *Terella*, where we joined with the *Dutch* Fleet that stayed for us. Here it is that the Commander in chief calls to an Account all the Mariners for their Misdemeanors during the whole Voyage. Our Ship was bound for *Zealand*, but we were forced to lie out to Sea seven Days before we could get into *Flushing*, before the Sand had changed its Place.

Coming to an Anchor before *Flushing*, two of the Directors of the Company came a-board to welcome us home, and to advise us to lock our Chests, and put our Marks upon them; for all Chests are carried into the *East-India* House, where, when the Owners come for them, they are ordered to open them, lest they should have any contraband Goods therein; thereupon I set a Mark upon my Chests, and went ashore, after I had given a good Character of the Captain,

N O T E. 57.

and his Civility to me all the Voyage, and thence proceeded by Land to *Middleburgh*.

Four Days after I came to *Middleburgh* I went to fetch my Chests, and finding the two Directors there, one a *Zealander*, the other of *Horn*, who came first a-board us, I produced my Keys, and offered the Chests to be opened; but the *Zealander*, more civil than the *Horn*, delivered me my Keys again, and taking my Word, told me, I was free to take away my Goods; and indeed, I have ever observed that the Northern People are always more rude and urgent than the Southern. As for the seventeen thousand five hundred Florins which the General of *Batavia* promised me should be paid me upon my Arrival in *Holland*, I received by many Delays and put-offs, that I was at length forced to commence a Suit that lasted two Years; nor could I get a publick Notary, either at *Amsterdam*, or the *Hague*, that would make me out a Protest, every one fearing the Directors, who were both Judges and Parties. At length, after five Years wrangling and jangling, the Director wrote to my Brother at *Batavia* (for I was then again returned to the *Indies*) that if I would accept of ten thousand Livres, he might receive it for me, which he did, and I was forced to give an Acquittance for the whole.

This is the Return which I made from the *Indies* in the Year 1649, and the only time that ever I returned by Sea, having performed all the rest of my Travels by Land, not counting my short Voyages through the *Mediterranean* for any thing; and as for my first Travels, I performed them all by Land from *Paris* through *Germany* and *Hungary*, as far as *Constantinople*, whither I returned again in the Year 1669. From *Constantinople* I went to *Smyrna*, thence I sailed for *Leghorn*; from *Leghorn*, I travelled by Land to *Genoa*, thence to *Turin*, and so to *Paris*.

The perfect Acquaintance which our Author had with all the Customs of the *Indians*, exposed him to a great Number of Enquiries on his return home; and he was very often pressed, not only by the most considerable of the *French* Ministers, but even by the King himself, to put the Answers he gave to those Enquiries into Writing; and these were afterwards reduced under several Heads, and now make the several Chapters in his Travels; and this Account of them may serve to reconcile the Reader to the seeming Incoherency of those Discourses. Among these there is one more remarkably curious in relation to the Custom that still prevails in the *Indies*, of Women burning themselves on the Demise of their Husbands, and also of Men's submitting voluntarily to Death, upon extraordinary Occasions. This Dissertation, as I judged it, could not but be very agreeable to the Reader, and at the same time instructive. I thought it not amiss to add here at the End of his Travels, the rather, because it has no sort of Connection with any Part of his Relation, but is, as I observed before, a separate Discourse upon that particular Subject, in which he has related what occurred to him thereon during his long Stay in the *Indies*, which renders it more perfect in its kind than any thing I have ever met with on the Subject; and therefore I have given it at large, and entirely in the Words of our Author, which are as follows.

It has been a Custom Time immemorial, among the *Indians*, that a Woman should only marry one Husband, and in case of his Decease, continue a Widow to the Time of her Death. As soon, therefore, as the Master of a Family is dead, his Wife retires to bewail her Husband some Days; after which they shave her Head, and she lays aside all the Ornaments which she had worn during the Time of her Marriage, taking off at the same time from her Arms and Legs the Bracelets which her Husband put on when he espoused her, in token of her Submission, and her being chained to him, and all the rest of her Life she lives slighted and despised, and in a worse Condition than a Slave, in the very House where she was Mistress before. This unfortunate Condition causes them to hate Life, so that they rather chuse to be buried alive with the Body of their deceased Husband, than to live the Scorn and Contempt of all the World; besides that, the *Bramins* make them believe, that in dying after that manner, they shall revive again with him in another World, with more Honour

four and more Advantages than they enjoyed before.

These are the Motives that cause the Women to burn with their Husbands; besides that, the Priests flatter them with Hopes, that while they are in the midst of the Flame, before they expire, *Rain* will appear, and reveal wonderful Visions to them; and that after their Souls have transmigrated into various Bodies, they shall at length obtain a high Degree of Honour to Eternity. However, there is no Woman that can burn with her Husband's Body, till she has the Leave of the Governor of the Place where she inhabits, who being a *Mohammelan*, and abhorring the execrable Crime of Self-murder, is very shy to permit them. Besides, there are none but Widows that have no Children that lie under the Reproach that forces them to violent Deaths: For, as for the Widows that have Children, they are by no means permitted to burn themselves, but quite the contrary. They are commanded to live for the Education of the Children. These Women, whom the Governor will not permit to burn themselves, spend the rest of their Lives in doing Penance, and performing Works of Charity. Some make it their Business to sit upon the Road to boil certain Pulse in Water, and to give the Liquor to Travellers to drink; others sit with Fire always ready for them to light their Tobacco; others make Vows to eat nothing but the ungristed Grains which they find in Cow-dung.

The Governor, finding no Persuasion will alter the Women's Resolution, but more especially, perceiving by the Sign which his Secretary makes him, that he has received the *Cur*, in a sly manner gives the Woman Leave, bidding the Devil take her and all her Kindred. When they have got this Leave, their Musick begins to strike up, and away they march to the House of the Deceased, with Drums beating, and Flutes playing before them, and in that manner they accompany the Person that is to be burnt to the Place appointed. All the Kindred and Friends of the Woman that is to die come to her and congratulate her on the Happiness she is to enjoy in the other World, and for the Honour which the Cast she is of receives by her generous Resolution. She dresses herself as if she were going to be married, and she is conducted in Triumph to the Place of Execution; for the Noise is loud of musical Instruments, and Womens Voices, that follow her, singing Songs in Honour of the miserable Creature that is going to die. The Bramins also accompany her, to give publick Testimonies of her Constancy and Courage, and many of our *Europeans*, are of Opinion, that to take away the Fears of Death, which naturally terrify Humanity, the Priests give her a certain Beverage to stupify and disorder the Senses, which takes from her all Apprehensions of her approaching Death. 'Tis for the Bramins Interest that the most miserable Creatures should continue in their Resolutions; for all their Bracelets, as well about their Legs as their Arms, the Pearls in their Ears, the Tunes of Gold, the Tunes of Silver (for the Poor wear only of Copper and Tin) and these belonging to the Bramins, who take for them among the Affairs when the Party is dead.

I have seen Women burnt in three or four different Manners, according to the Custom of the Country. In the Kingdom of *Goerata*, which is *Bengal* and *Dih*, they let up a high Hill about twelve feet high, upon the Bank of a Pond or River, and a great quantity of Reeds are all sorts of kind Wood, with some very much certain Pots of Oil, and other Drugs, to make it burn more vehemently. The Woman is placed in the middle of the Hill, in a half-lying-down posture, leaning her Head upon a kind of a wooden Bedstead, and leaning her back against a Pillar, to which the Bramins tie her about the Middle, for fear she should run away when she feels the Fire. In this Posture she holds the Body of her deceased Husband upon her knees, chewing Betel all the while; and when the Fire is kindled in this Posture about half an Hour, the Bramins goes out, and the Woman bids them set Fire to the Hill, which is immediately done by the Bramins, and the Kindred and Friends of the Woman, who call also several Pots of Oil and Candies into the Fire, to put the Woman the more out of her Pain. After the Woman is burnt, the Bramins call on the Apes for the Beasts, Priests,

dants, and Rings, whether Gold, Silver, Copper, or Tin, which is all free Booty to themselves.

In *Bengal* they burn the Women after another Fashion. In that Country a Woman must be very poor, that does not accompany the Body of her deceased Husband to the *Ganges*, to wash his Body, and to be washed herself before she is burnt. I have seen dead Carcasses brought to the *Ganges* above twenty Days Journey off from the Place, and smelt them to boot; for the Scent of them has been intolerable noisom. There was one that came from the northern Mountains, near the Frontiers of the Kingdom of *Boutan*, with the Body of her Husband carried in a Waggon. She travelled twenty Days on Foot, and never eat nor drank for fifteen or sixteen Days together, till she came to the *Ganges*, where, after she had washed the Body that stank abominably, and had afterwards washed herself, she was burnt with him with admirable Constancy.

Before the Woman that is to be burnt goes the Musick, consisting of Drums, Flutes, and Hautboys, whom the Woman, in her best Accoutrements, follows, dancing up to the very funeral Pile, upon which she gets, and places herself as if she were sitting up in her Bed; and then they lay a-crofs her the Body of her Husband; and, when this is done, her Kindred and Friends, some bring her a Letter, some Pieces of Calicut, and others Pieces of Silver and Copper, and desire her to deliver them to their Mother, or Brother, or some other Kinsman, or Friend. When the Woman sees they have all done, she asks the Standers by, three Times, if they have nothing more of Services to command her; if they make no Answer, she ties up all she has got in a Piece of Taffety, which she puts between her own Belly and the Body of her Husband, bidding them let Fire to the Pile, which is presently done by the Bramins and her Kindred. I have observed, because there is Scarcity of Wood in *Bengal*, that when those poor Creatures are half grilled, they cast their Bodies into the *Ganges*, where the *Keimans* are devoured by the Crocodiles. I must not forget a wicked Custom practised by the Idolaters of *Bengal*.

When a Woman is brought to Bed, and the Child will not take to the Teat, they carry it out of the Village, and putting it into a Linnen-cloth, which they fasten by the four Corners to the Boughs of a Tree, there leave it from Morning till Evening; by this Means the poor Infant is exposed to be tormented by the Crows, inasmuch that there are some who have their Eyes picked out of their Heads; which is the Reason, that, in *Bengal*, you shall see many of those Idolaters that have but one Eye, and some that have lost both. In the Evening they fetch the Child away, to try whether he will suck the next Night, and, if he still refuses the Teat, they then carry him again to the same Place the next Morning, which they do for three Days together. After which, if the Infant still refuses to suck, they believe him to be a Devil, and throw him into the *Ganges*, or any the next Pond or River. In the Places where the Apes breed, these poor Infants are not so exposed to the Crows; for where the Apes discover a Nest of these Birds, they climb the Tree, and throw the Nest one Way, and the Eggs another. Some charitable People among the *English*, *Dutch*, and *Portuguese*, compassionate the Misfortune of those Children, will take them away from the Tree, and give them good Lactation.

All along the Coast of *Corromandel*, when the Women are to be burnt with their Husbands, they make a great Hole in the Ground nine or ten Foot deep, and twenty five or thirty Foot square, into which they throw a great Quantity of Wood and Drugs, to make the Fire burn more fiercely, when the Fire is kindled, they tie the Body of the Man upon the Brink, and then, presently up comes the Woman dancing, and chewing Betel, accompanied by her Friends and Kindred, with Drums beating, and Flutes sounding; then the Woman takes three Turns round the Hole, and every Time she has gone the Round, she kisses her Friends and Kindred; after the third Time the Bramins call on the Carcase of her Husband, the Woman standing with her Back to the Fire, is pulled in by the Bramins also, and tumbles backward; then her Kin-

ld, Silver, Copper, or Tin, and lives. Women after another Fashion, but be very poor, that does her deceased Husband to be buried to be washed her self in dead Carcasses brought to her Journey off from the Country for the Scent of them has been was one that came from the Frontiers of the Kingdom of her Husband carried twenty Days on Foot, and sixteen Days together, there, after she had washed herself, and had afterwards taken with him with admirable

to be burnt goes the Music, and Hautboys, whom the priests, follows, dancing up and down the gets, and places in her Bed; and then they burn her Husband; and, when this is done, some bring her a Letter, and others Pieces of Silver to deliver them to their Mother, Kinship, or Friend. When all done, she asks them if they have nothing more to say to her; they make no Answer, she then takes a Piece of Taffety, which she puts in the Body of her Husband, which is pre- pared for her Kindred. I have seen a Piece of Wood in Bengal, that they shall grudge, they call them the Remains are devoured, and not forget a wicked Custom in Bengal.

to Bed, and the Child will cry it out of the Village, and when they listen by the side of a Tree, there leave it by this Means the poor Infant by the Crows, in whom their Eyes picked out of them, that, in Bengal, you that have but one Eye, and the Evening they fetch the will suck the next Night, they then carry him again running, which they do for much, if the Infant still refuse to be a Devil, and throw next Pond or River. In these poor Infants are not where the Apes discover a the Tree, and throws the another. Some charitable Men, and Portuguese, take those Children, will take and give them good Lau

mandel, when the Women ands, they make a great Foot deep, and twenty which they throw a great to make the Fire burn andled, they set the Body then, presently upon coming Beetel, accompanied with Drums beating, and a man takes three Turns the has gone the Round, and; after the third Time of her Husband, the Wo- the Fire, is pushed in by backward; then her Kin-

dred and Friends cast Oil, and other combustible Drugs, upon the Fire, to make it burn more vehemently, that the Bodies may be the sooner consumed. In most Places upon the Coast of *Corromandel*, the Women are not burnt with their deceased Husbands, but they are buried alive with them, in Holes which the Bramins make a Foot deeper than the tallest of them, Man or Woman.

Usually they chuse a sandy Place; so that when the Man and Woman are both left down together, all the Company, with Baskets of Sand, fill up the Hole above half a Foot higher than the Surface of the Ground; after which they jump and dance upon it till they believe the Woman to be stifled. When some of the Idolaters upon the Coast of *Corromandel*, are upon the Point of Death, their Friends do not carry them to the Side of a River, or Lake, to cleanse their Souls, but they carry them to the farthest Cow they can find, and laying the sick Party just behind the Cow, they lift up her Tail, and provoke her to piss; if she pisses so that it falls upon the Face of the diseased Person, all the Company are over-joyed, saying, that his Soul is happy; but if the Cow does not piss to wash the sick Party's Face, they burn him with a great deal of Sadness. If a Cow be sick, the Owner must be careful to lead her to a Pond, or River, for, should she die at his House, the Bramins would fine him.

The Rajah of *Valou* having lost this City, and his Life, through the Loss of a Battle gained against him by the King of *Vijapur's* General, he was extremely lamented at Court; eleven of his Wives also were no less concerned for his Death, and resolved to burn themselves when he was burned. The General of *Vijapur's* Army understanding their Resolution, thought at first to divert them by promising them all kind Usage; but finding Persuasion would not prevail, he ordered them to be shut up in a Room. He who had the Order, going to put it in Execution, the Women, in a Rage, told him, that it was to no Purpose to keep them Prisoners; for, if they might not have Leave to do what they had resolved, in three Hours there would not be one of them alive. The Person entrusted, laughed at their Threats: But the Keeper of those Women, opening the Door at the End of the three Houses, found them all stretched out dead upon the Place, without any Mark in the World to be seen that they had any Way hastened their own Deaths.

Two of the most potent Rajahs of *India* came to *Agra* in the Year 1642, to do Homage to *Shah-Jehan*, who then reigned; who, not having acquitted themselves as they ought to have done in the Judgment of the Grand-Master of the King's Household, he told one of the Rajahs one Day, in the Presence of the King, that they had not done well to behave themselves in such a manner towards so great a Monarch as was the King his Master. The Rajah, looking upon himself to be a great King, and a great Prince, he and his Brother having brought along with them a Train of fifteen or sixteen thousand Horse, was nettled at the bold Reproof which the grand Master gave him, and drawing out his dagger, flew him upon the Place, in the Presence of the King; the Grand Master falling at the Feet of his Brother, who stood close by him, he was going about to revenge his Death, but was prevented by the Rajah's Brother, who stabbed him, and laid him athwart his Brother's Body. The King, who beheld these two Murders, one on the Neck of another, retired into his Haram for fear; but presently the Omrah, and other People, fell upon the Rajah, and cut them to Pieces.

The King, incensed at such an Attempt committed in his House, and in his Presence, commanded the Rajahs Bodies to be thrown into the River, which their Troops that they had led about *Agra* understanding, threatened to enter the City, and pillage it; so that rather than hazard the City, the King was advised to deliver them the Bodies of their Princes. When they were to be burned, thirteen Women belonging to the two Rajahs Houses came dancing and singing, and presently got upon the funeral Pile, holding one another by the Hands, and being presently after stifled by the Smokes, fell together into the Fire; presently the Bramins threw great Heaps of Wood, Pots of Oil, and other combustible Matter upon them, to dispatch them the sooner.

I observed a strange Passage at *Pome*, being then with the Governor, a young Gentleman about twenty-four Years of Age, in his own House. While I was with him, in came a young Woman, very handsome, and not above twenty-two Years of Age, who desired Leave of the Governor to be burnt with the Body of her deceased Husband. The Governor, compassionating her Youth and Beauty, endeavoured to divert her from her Resolution; but, finding he could not prevail, with a surly Countenance he asked her whether she understood what the Torment of Fire was, and whether she had ever burnt her Fingers? No, no, answered she more stoutly than before, I do not fear Fire, and so let you know as much, send for a lighted Torch hither: The Governor abominating her Answer, in a great Passion, bid her go to the Devil. Some young Lords that were with the Governor, desired him to try the Woman, and entreated him to call for a Torch, which, with much ado, he did; and a lighted Torch was brought: So soon as the Woman saw the lighted Torch a coming, she ran to meet it, and held her Hand in the Flame, not altering her Countenance in the least, still fearing her Arm along quite up to the Elbow, till her Flesh looked as if it had been broiled; whereupon the Governor commanded her out of his Sight.

A Bramin coming to *Fata*, and assembling all his Tribe together, told them, that they must give him two thousand *Rupces*, and twenty-seven Ells of Calicut, to which the Chief among them answered, that they were poor, and could not possibly raise such a Sum; however, he persisted in his Demand, positively asking them, that he would stay there without eating or drinking, till they brought him the Money and the Cloth. With this Resolution, he climbed a Tree, and sitting in the Fork between the Boughs, remained there without eating or drinking for several Days. The Noise of this Extravagance coming to the Ears of the *Dutch* House, where we lay, we set Sentinels to watch whether it was true, that a Man could sit so long without Victuals, which he did for thirty Days together. The thirty-first Day of this extraordinary Fast, the Idolaters fearing to kill one of their Priests for Want of granting him his Demand, climbed together, and brought him his twenty-seven Ells of Calicut, and two thousand *Rupces*. So soon as the Bramin saw the Money and Cloth, he came down from the Tree, and after he had upbraided those of his Tribe for Want of Charity, he distributed all the *Rupces* among the Poor, reserving only five for six for himself. The Cloth he cut into little Pieces, and gave away, keeping only to himself as much as would just cover his Nakedness; and having made his Distribution, he disappeared on a sudden, and no body knows what became of him, though diligent Search was made after him.

When a *Chinese* lies at the Point of Death, all his Kindred and Friends gather about him, and ask him whether he intends to go? They tell him also, that if he wants any thing, he need but ask; and have, let it be Gold, Silver, or a Woman. When they are dead, they perform many Ceremonies at their Funerals, which consist chiefly in artificial Fires, wherein the *Chinese* are the most expert in all the World; so that he must be a very poor Man that has no Fire-works at his Funeral. Besides that, they put Money in a little Box, and bury it by the Deceased, and leave good Store of Victuals upon the Grave, out of an Opinion that they rise and eat; which the Soldiers of *Batavia* observing, used to fill their Bellies at these Graves every Time they marched their Rounds. But when the *Chinese* perceived it, they poisoned the Victuals, to spoil the *Dutchmens* Feasting. The Townsmen of *Batavia* taking the Soldiers Part, accused the *Chinese* of poisoning several of the *Dutch*; but the *Chinese* pleaded, that if the Soldiers had over-eat themselves, or forsaken themselves upon what was left for the Dead to eat, it was none of their Fault; for that they did not leave this Victuals for their Soldiers: And besides that, among all the Multitudes that they had buried, they never had heard the least Complaint before of any one that ever came to any Harm by eating their Food. Thus the Business was hushed up, nor did the Soldiers dare to punish any more.

That

These are certainly very surprizing and entertaining Passages, which carry in them strong Marks of that Enthusiasm, which is the Characteristick of the Eastern Genus; and which, however wild and extravagant it may appear to us in this Part of the World, has in it, nevertheless, something so striking to such as behold it, even tho' *Europeans*, that they fall into it by Degrees, and are content to adopt the Humour of the *Indians*, under another Name, and for many pretended Reasons. As a Proof of this, we need only remark, that the *Mohammedan* Lords of the Mogul's Court, not only allow, but encourage their Women to die with them, as a Mark of Affection. It is true, that they don't do this publicly, and in the Sight of the Sun, as the *Indians* do; but when a *Mohammedan* Lord dies, his Women, the Night after they have paid their Duty at the Funeral of the Deceased, assemble together in some private Part of his Palace at a Distance from the rest of the Building, and out of the Hearing, as much as may be, of the Servants; and there they set Fire to the Room, having first secured the Doors, and so perish in the Flames. In all Probability, this Custom has been introduced amongst the *Mohammedans* from a Principle of Vanity, flowing from a Desire to shew that they are not less beloved by their *Indian* Wives, than the *Indians* themselves, of which, indeed, it is not easy for them to obtain a stronger Proof than this.

It is likewise indisputably clear, from our Author's Discourse, that the high Spirit and invincible Courage of the *Indians*, both Men and Women, is far enough from being extinguished; but then we ought to make a right Judgment of the Motive from whence this proceeds. In the Men it still rises from Principle and from the Dictates of Reason, whether well or ill employed, I shall not pretend to say: But, in the Women, it is, in some measure, the Effect of Habit, and, in some measure, the Consequence of Despair. They see frequent Examples of Women who end their Lives in this Manner, and are highly applauded for it. This draws them on to merit the same Praises, by shewing the same Intrepidity. On the other hand, they see Numbers of their Sex, who decline this dreadful Trial, reduced to Want and Infamy, and they see no Road open for them to escape both; which, as it were, drives them to this desperate Resolution of destroying themselves; since they seem thereby, of two great Evils to chuse the least, which is a glorious Death, rather than a Life of Misery and Contempt. We may from hence fairly conclude, that if the true and genuine Doctrine of the Christian Faith were infused into the Minds of these People, they might be brought to make as great a Figure in the World as ever their Ancestors did; and how great that was, we have in the preceding Sections, from the Memorials left us in several Languages, very fully shewn.

SECTION XXXI.

Observations and Remarks made during his Residence on the Island of Chufan, on the Coast of China, by Doctor James Cunningham, Physician to the English Factory at that Place.

From his own Accounts.

1. An introductory Account of the Author, and of the Opportunities he had to come to a true Knowledge of the Facts he mentions.
2. An Account of the Voyage to, and a distinct Description of the Island of Chufan.
3. Of the ancient and modern State of the Country, and the coming of the English to reside there.
4. Of their Manner of cultivating Tea in that Island, and of several Mistakes made by F. le Compte, and F. Martini.
5. Of the Chinese Agriculture, and the Manner in which the Inhabitants make Salt in Chufan.
6. Of the famous medicinal Root Hu-chu-u, which prolongs Life, and retards old Age.
7. Dr. Cunningham's Removal to Pulo Condore, with the Rise, Progress, and Ruin of that Factory.
8. Occasion of establishing a new Factory at Pulolout, of which Dr. Cunningham became Chief.
9. The Causes of the total Overthrow of that Factory, and the English Trade to Borneo.

IN the Accounts we have hitherto given of the Discovery, of the past, and present Situation of the *Indies*, we have made Use chiefly of foreign Writers, not that we prefer them to our own Countrymen, who have travelled into those Parts; but because, in a Collection of this Nature, it seemed reasonable to include the Works of such Authors as were least known to the Bulk of our Readers. But, to avoid all Suspicion of Partiality, and that, at the same time, we may shew that we have not been at all negligent in consulting either the old Travellers or the new, of such of the *British* Nation as have visited these distant Climates, we will add a few Instances of their Care and Diligence, in observing and recording what appeared to them most worthy of Notice in the Countries into which they were led, either to satisfy their Curiosity, or in Pursuit of Business.

We will begin with the Remarks made by Doctor *James Cunningham*, Fellow of the *Royal Society*, and Physician to the *English* Factory situate at *Chufan* in *China*. He was a Man distinguished both by his natural Parts, and by the Accomplishments he had acquired, being equally well versed in ancient and modern Learning; and, at the same time, a Person, who, from his own Diligence, had obtained all the Lights that are afforded by Experience. Of these great Qualities he has left us sufficient Testimony, in two Letters of his writing during his Employment in the Service of the *East-India* Company; and which are so much the more valuable, as they plainly manifest an In-

attention not to copy what others had written, or reported, but to set down his own Observations, and thereby describe Things as they appeared to him; nay, and not only so, but to examine and correct the Mistakes of others, which he was the more capable of doing, for two Reasons; first, because he confined himself entirely to what fell under his immediate Inspection: And, next, because he writes on such Subjects only as belonged to his Profession, in which he must, of Necessity, be a better Judge than another Man, however learned or intelligent, who had not made those Things his Study. In this respect, indeed, I must affirm, that the Writers of our own Country are very much to be preferred to those of other Nations, because, if their Relations be less extensive, and possibly also less entertaining; yet they are written with greater Care and Circumspection, as well as a more than ordinary Regard to Truth. This I say in general only, and not with any View to injure or raise the Credit of particular Persons. But, to come to the Point; the first of these Letters was written in the Month of *September*, 1701, to a Member of the *Royal Society*, and follows in the Author's own Words.

2. My last to you was from the Island of *Borneo*, in which I gave you an Account of our Arrival there the 17th of *July*, where we stayed but two Days, the Season of the Year being so far past; and from thence made the best of our Way through the Straits of *Banda*, with favourable Winds and Weather, till we came on the Coast

clear, from our Author's
and invincible Courage of
omen, is far enough from
we ought to make a right
whence this proceeds. In
euple and from the Dictates
employed, I shall not pre-
pen, it is, in some measure,
some measure, the Conse-
quent Examples of Wo-
his Manner, and are high-
ly them on to merit the same
Intrepidity. On the other
their Sex, who decline this
ant and Infamy, and they
escape both; which, as it
erate Resolution of destroy-
ment thereby, of two great
is a glorious Death, rather
contempt. We may from
the true and genuine Doc-
trine infused into the Minds
brought to make as great a
our Ancestors did; and how
preceeding Sections, from
languages, very fully shewn.

in the Island of *Borneo*, in
of our Arrival there the
but two Days, the Season
and from thence made the
Straits of *Banda*, with la-
ill we came on the Coast

of *China* the 13th of *August*, then we had variable Winds which carried us a-bread of *Emoy*, the 19th following, at which Time the North-east Wind setting in fresh, put us in great Fears of losing our Passage; whereupon we were forced to turn it up against Wind and Current all the Way, the Weather so favouring us that we were never but by our Top-sails, else we should have lost more Ground in one Day than we could have gained in eight. The last of *August* we came to an Anchor under the *Crocodile Islands*, both to shelter us from the bad Weather (which is generally expected on this Coast at New and Full-Moon, and has been fatal to a great many Ships) and also to look for Fresh-water, which was now grown scarce with us, not having recruited since we came from the *Cape of Good-Hope*. These are three small Islands, lying in the Lat. of 26° about six Leagues from the River of *Hackien*, on two whereof we found very good Fresh-water, with a convenient watering Place on the S. W. Side of the innermost of the three; and by the Assistance of a few *Chinese* Fishermen, we procured some fresh Provisions from the Main-Land, because we did not think it safe to adventure our Lives thither, lest we should have been brought into Trouble by the Government there.

While we lay here, on the 5th of *September*, we had a sudden short Shift of the Moon from the S. W. the Fury whereof others felt coming up the Coast of *China*, at the same time. The 18th of *September* we put to Sea again, turning to windward Night and Day without all the Islands, which are very numerous along this Coast, to which we were altogether Strangers beyond *Emoy*; and the Hydrography thereof, is hitherto so imperfect, that there was no trusting to our Drafts, which made our Navigation somewhat more dangerous: However, on the 11th of *October* we got into 30°, where we came to an Anchor near the Land, until we found the Way by Boat to *Chufan*, about twelve Leagues within the Islands, from whence we had a Pilot, who carried in safe thither on the Eleventh. Upon this Island the *Chinese* have granted us a Settlement and Liberty of Trade, but not to *Ning-po*, which is six or eight Hours Sail to the westward, all the Way among Islands; this being the largest, is eight or nine Leagues from East to West, and four or five Leagues in Breadth.

About three Leagues from that Point of the Main-land, called *Cape-Tsampe* by the *Portuguese*, but *Ki-tu* by the *Chinese*, at the West-end of this Island, is the Harbour, very safe and convenient, where the Ships ride within Call of the Factory, which is built close by the Shore, on a low plain Valley, with near two hundred Houses about it, for the Benefit of Trade, inhabited by Men whose Jealousy has not, as yet, permitted them to let their Wives dwell here; for the Town where they are is three Quarters of a Mile farther from the Shore, environed with a fine Stone-wall, about three Miles in Circumference, defended by twenty-two square Batisons, placed at irregular Distances, besides four great Gates, on which are planted a few old iron Guns, seldom or never used: The Houses within are very meanly built. Here the *Chumpeen*, or Governor of the Island lives, and betwixt three and four thousand beggarly Inhabitants, most part Soldiers and Fishermen; for the Trade of this Place being newly granted, has not, as yet, brought any considerable Merchants hither. The Island in general abounds with all sorts of Provisions, such as Cows, Bataloes, Goats, Deer, Hogs, wild and tame Geese, Ducks, and Hens, Rice, Wheat, Calavanies, Cole-worts, Turnips, Potatoes, Carrots, Beet-ach, and Spinage; but, for Merchandize, there is none, except what comes from *Ningo-pe*, *Stang cheu*, *Nankin*, and the inland Towns; some of which I hope to see when I have acquired a little of the *Chinese* Language.

Here also the Tea grows in great Plenty, on the Tops of the Hills, but it is not in such Esteem as that which grows on more mountainous Islands. Although this Island is pretty well stowed with People, yet it is far from what it was in *P. Martinus's* Time, where he describes *Chufan*. And this puts me in mind, that the supersti-

tious Pilgrimages there mentioned by him, must be meant of the Island *Pou-to*, which lies nine Leagues from hence: And three Miles to the Edward of this Island, whither, they say, the Emperor designs, in the Month of *May* next (being his Birth-day, and the fortieth Year of his Age) to come to worship in an ancient Pagod there, famous for Sanctity, having sent one of his Bonzes already thither to get all Things in Order. The second Letter, somewhat more copious, and no less curious than the first, our Author wrote to the same Person from *Chufan*, dated *November 22, 1701*, according to his Promise, and to supply the Defects of the first.

3. I formerly told you that the Emperor designed to have come to the Island of *Pou-to* (a Place of great Devotion) to worship in the Month of *May* last, being the fortieth Year of his Age, I should have laid of his Reign. But all Things being prepared there for his Reception, he was dissuaded from his Purpose by some of his Mandarines, who made him believe that the Thunder there was very dangerous. This *Pou-to* is a small Island, about five Leagues round. At the East-End of this Island, famous for the superstitious Pilgrimages made thither for the Space of eleven hundred Years, it is inhabited only by Bonzes, to the Number of three thousand, all of the Sect called *Hefang*, or unmarried Bonzes, who live a *Pythagorean* Life; and there they have built four hundred Pagods, two whereof are considerable for their Greatness and Finery, being lately covered with green and yellow Tiles, brought from the Emperor's Palace at *Nankin*, and inwardly adorned with stately Idols, finely carved and gilded, and the chief whereof is the Idol *Quonem*. To these two great Pagods belong two chief Priests, who govern all the rest. They have several Ways and Avenues cut through the Island, some whereof are paved with Flag-stones, and over-shaded with Trees planted on each Side.

Their Dwelling are the best I have seen in these Parts, all which are maintained by charitable Devotions; and their Junks, which go from *Ning-po* and this Place to *Japan*, touch here both going and coming, to make their Offerings for their good Success. There is another Island called *Kim-Tong*, five Leagues hence, in the Way to *Ning-po*, whither, they say, a great many Mandarins retire to live a quiet Life, after they have given over their Employments. On that Island also are laid to be Silver-mines, but prohibited to be opened.

The rest of the circumjacent Islands are either desert, or meanly inhabited by a few People, but all of them stowed with abundance of Deer; for it is not long since this Island of *Chufan* began to be peopled. 'Tis true, in *Martinus's* Days, about fifty Years ago, it was very populous for the Space of three or four Years; at which Time the Fury of the *Tartarian* Conquest was so great, that they left it desolate, not sparing so much as the Mulberry-trees (for then they made a great deal of Raw-Silk here.) And in this Condition it continued till about eighteen Years ago; that the Walls of the Fort, or Town, which now is, were built by the Governor of *Ting-bai* for a Garrison to expel some Pirates, who had taken Shelter there.

About fourteen Years ago, the Island beginning to be peopled, there was a *Chumpeen*, or Governor, sent to govern it for three Years, to whom succeeded the late *Chumpeen* (who procured the opening of this Port to Strangers) whose Government continued till *April* last, being translated to be *Chumpeen* of *Tien-chang-see*, near to *Pekin*, and was succeeded by the present *Chumpeen*, who is Son to the old *Chumpeen* of *Emoy*. They have no Arts, or Manufactures here but lackered Ware, a particular Account whereof I cannot, as yet, send you. They begin to plant Mulberry-trees to breed up Worms for the Production of Raw-Silk; and they make some Tea, but chiefly for their own Use.

4. The three Sorts of Tea commonly carried to *England*, are all from the same Plant, only the Season of the Year and the Soil make the Difference. The *Bohea* (or *Tea*), so called of some Mountains in the Province of *Taken*, where it is chiefly made, is the very Bud gathered

in the Beginning of *March*, and dried in the Shade. The *Big Tea* is the second Growth in *April*, and *Single* the last in *May* and *June*, both dried a little in Tubs or Pans over the Fire. The Tea Shrub being an Ever-green, is in Flower from *October* to *January*, and the Seed is ripe in *September* and *October* following, so that one may gather both Flower and Seed at the same time; but for one fresh and full Seed, there are one hundred nought. These make up the two sorts of Fruit in *Le Compté's* Description of Tea; as for his other sort, which he calls *Slyme Peafe*, they were nothing but the young Buds of the Flowers not yet open. Its Seed Vessels are really tricapular, each Capsula containing one Nut or Seed, and although two or one Capsula only comes to Perfection, yet the Vestiges of the rest may be discerned. It grows in a dry gravelly Soil on the Sides of Hills, in several Places of this Island, without any Cultivation.

Le Compté is mistaken in saying that the *Chinese* are wholly Strangers to the Art of Grafting, for I have seen a great many of his paradoxical Tallow Trees ingrafted here, besides his other Trees. When they ingraft, they do not slit the Stock, as we do, but cut a small Slice off the Outside of the Stock, to which they apply the Graft being cut sloping on one Side agreeable to the Slice cut from the Stock bringing the Bark of the Slice up on the Outside of the Graft, they tie all together, covering with Straw and Mud as we do. The Commentator, on *Magalhen*, seems doubtful in the Length of the *Cevise* Che or Culbats. Here they have two sorts, one of thirteen Inches, and eventenths of an *English* Inch, which the Merchants commonly use; the other is of the eleven Inches used by Carpenters, and also in Geographical Measures. Though *F. Martini* is censured by *F. Magalhen* for spelling a great many *Chinese* Words with *g*, which the *Portuguese* and others have done with *r*, yet his Way is more agreeable to *English* Pronunciation, only in some Words, the *g* may be left out, as in *Péon*, *Nocem*, &c.

Having made Enquiry about *Martini's* Account of Sowing their Fields at *Fan-tien* with Oyster Shells, to make new ones grow, I was told, that after they have taken out the Oyster, they sprinkle the Shell with Urine, then putting them into the Water again, there grows new Oysters on the fore said Shells. *Martini* says, he could never find a *Latin* Name for the *Tua Megerin* of the *Portuguese*; I am sure its the same with the *Syrenia Arabica flore pleni Alba* in *Parkinson's*. He says also, that the *Kieu-yeu*, or Willow-tree, bears a white Flower like a Cherry-tree; but all that I have seen here, bears a Spike of small yellow Flowers, like the *Julus* of a *Salix*. The Bean, or *Myndarn Brota*, so frequently mentioned in the *Dutch Embassy*, and other Authors, is only an Emulsion made of the Seed of *Salamum* and hot Water.

The chief Employments here are Fishing and Agriculture. In Fishing they use several sorts of Nets and Lines, as we do; but because they have large Banks of Mud in some Places, the Fishermen, to go more easily thereon, have contrived a small Frame, about three or four Feet long, not much larger than a Hen-trough, elevated a little at each End, in which he rests upon one Knee, leaning his arms on a cross Stick, raised to high as his Breast, and putting out the other Foot often upon the Mud, he pushes forward his Frame thereon, and so carries himself along in it.

As to their Agriculture, all their Fields (where any thing is planted) whether high or low, are made into such Beds, as may retain the Water over them when they please. They plow up their Ground with one *Bull-doe*, or *Cow*. Where they are to sow Rice, they prepare the Fields very well, by clearing it of all manner of Weeds, mounding to a Pulp, and smoothing it with a Frame drawn across, on which they sow the Rice, very thick, and cover it only with Water, for two or three Inches high; and when it has grown six or eight Inches long, they dig up the Roots and transplant it, by Tossing a Straw Line, or Ticks, or blown with Water; and when the Field is clear of Weeds, when the Water grows to the height of the *Grout*, they cover turning the Mud with their Hands, in the *Intervals*, where the Rice is sown. Water is very scarce, Barley, Pulse and other

Grains, they grub up some superficial Earth, Grass and Roots, and with some Straw, they burn all together; this Earth being sifted fine, they mix with the Seed, which they sow in Holes, made with a Trait Line, and so grows up in Tufts, as the Rice does, the Field being divided into Beds, and harrowed over both before and after the Seed is sown; this makes them somewhat resemble Gardens. Altho' they meliorate their Fields, where they sow Rice only, by letting the Water on them, yet for other Grains, where Grounds require it, they make use of Dung, humane Excrements, Ashes, &c. In watering their Fields here, they use the same Instrument mentioned by *Martini*, in the Preface to his *Atlas*, being all Wood, and the Contrivances the same with that of a Chain-pump.

Their Method of making Salt is this; all the Shores here being Mud instead of Sand, in the Summer Season, they pare off the superficial Earth, which has been overflowed with the Salt-water, and lay it up in Heaps for use. When they are to use it, they dry it in the Sun, rubbing it small, then digging a Pit, they cover the Bottom of it with Straw, at which, through the Side of the Pit, they pass a hollow Cane that leads into a Jar, that stands below the Level of the Pit's Bottom. They fill the Pit almost full of the fore said Earth, and pour Salt-water on, until it be covered two or three Inches with Water, which drains through into the fore said Jar, and is afterwards boiled into a Salt.

6. If I had not found Notice taken in a printed Newspaper last Year, of a singular Root brought from *China* by *Father Fawancy*, I should not have told you, that I have seen this Root since I came here, and which is called by the *Chinese Hu-chu-u*, to which they ascribe wonderful Virtues, such as prolonging Life, and turning gray Hair black by the Use of its Tea, or an Infusion made of it, which occasions its being sold at a very high Price, inasmuch that they say, that it is to be had from ten Tael to one thousand or two thousand a single Root; for the larger it is, the more is its Value and Efficacy, which is too much Money here to try the Experiment. You have it mentioned in *Cloy's Medicina Sinica*, Number LXXXIV, under the Name of *He-xu-u*, according to the *Portuguese* spelling. It is likewise painted in the 27th Table of those Plants Mr. *Pettiver* had of me. If you will have the Story of its Discovery, which I will not warrant for Gospel, it runs thus:

Upon a time a certain Person going a Simpling among the Mountains, fell by Accident into such a steep Vale, that he could by no means get out of it again, whereupon looking about for something to sustain his Life, in this melancholy Condition, he espied this Root, of which he made Trial, and found that in eating thereof, it served him both for Provision and Cloathing, by keeping his Body in such a Temperature, that the Injuries of the Weather had no Influence upon him during his Stay there, which was some hundreds of Years; till at last an Earthquake happened in that Place, whereby the Mountains were rent, and he found a Passage out to his House, from whence he had been so long absent: But the many Alterations that came to pass there in such a Space of Time would not permit them to give Credit to his Story, till consulting the Annals of his Family, which gave an Account of one of them lost at that Time, they were confirmed as to the Truth of this Relation. With the Leave of our Author, this is no more Gospel with the *Chinese* than with him. It is a Fable, invented for the sake of giving such an Account of the Virtues of this Root, as may make them dwell on the Memory, and that is all.

7. It will be very natural for the Reader to enquire how it came to pass, that from so intelligent and inquisitive a Person as this Doctor *Cunningham* appears to have been, we have received nothing farther than what has been already set down in relation to the Affairs of *China*; and as I have it in my Power to answer that Question very fully, I think it will not be amiss to add some very curious Circumstances relating to so worthy a Man at the Close of this Section, the rather, because if they be not added here, it is very possible they may be ever lost. We are therefore to observe, that the Library established at *Canton* was broke up in the Year 1752, and therefore the Doctor had not much

perficual Earth, Grass and they burn all together; this mix with the Seed, which is a trait Line, and so grows the Field being divided in- h before and after the Seed newhat resemble Gardens. kls, where they sow Rice them, yet for other Grains, y make use of Dung, ku- In watering their Fields ment mentioned by *Martini*, ng all Wood, and the Con- a Chain-pump.

You have it men- *sinica*, Number LXXXIV, according to the *Periplus* in the 27th Table of those. If you will have the Story not warrant for Goipel, it

on going a Simpling among into such a steep Vale, that of it again, whereupon look- can his Life, in this melan- is Root, of which he made g there of, it served him both y keeping his Body in such ies of the Weather had no Stay there, which was some an Earthquake happened in ams were rent, and he found om whence he had been so iterations that came to pa's would not permit them to onfulting the Annals of his ant of one of them lost at as to the Truth of this Reli- r Author, this is no more- ith him. It is a Fable, in ch an Account of the Vir- hem dwell on the Memory,

the Reader to enquire how intelligent and incultious a *Chin* appears to have been, r than what has been already sirs of *China*; and as I have Question very fully, I think very curious Circumstances the Close of this Section, not added here, it is very lost. We are therefore to blished at *Chufan* was broke refore the Doctor had not much

much Time to compleat the Observations he was inclined to make. He removed afterwards to another new Settlement at *Pulo-condore*, which is a small Cluster of Islands, four or five in Number, lying about fifteen Leagues South of the West Channel of the River of *Cambodia*, what Advantages were proposed from this Factory I cannot say; but the Memoirs I have very positively affirm, that the Place, in which it was seated, was very ill choic'd.

The Person who had the Direction of the *East-India* Company's Affairs in those Parts was one Mr. *Katckpole*, and he, according to the usual Custom of the *Indies*, took a certain Number of *Maccassars*, or Soldiers, Natives of that Country, into his Service, by whose Assistance he quickly built a little Fort for the Protection of his People, and procur'd the Necessaries of Life, such as Wood, Water, and Fish, which, as far as I could ever learn, is all that these Islands ever afforded. The *Maccassars* are a brave, industrious, and faithful People, to such as deal well by them; and for these Reasons they are highly esteem'd in the East, more especially by the *Dutch*. It must, however, be allowed, that they are daring, cruel, and revengeful, if once they are provoked. Mr. *Katckpole* had contracted with them for three Years, at the End of which Term they were, if they pleas'd, to receive their Wages and depart. This Agreement, though strictly performed on their Side, was broke by our Director, who kept them beyond their Time, and against their Wills. As this was a great breach in Morality, he added to it as great an Error in Politics; for after provoking these People in such a manner, he continued to trust them with the Guard of his own Person, and the Custody of the Factory, which gave them an Opportunity of revenging the ill Usage they had endured with that Severity, which is natural to barbarous Minds. In short, they rose in the Night, and cut the Throats of the Director, and all that were with him in the Factory, not one escaping.

But some who lodg'd without, hearing the Cries of those who were murdered within, fled out of their Beds to the Sea-shore, where, by a very singular Providence, they met with a Bark completely equip'd, in which, tho' half naked themselves, they put to Sea, and in so good Time, that they escap'd the Rage of the *Maccassars*, who came in Search of them to the Shore just as they weigh'd Anchor. Their Navigation was extremely difficult, inasmuch as they were expos'd at once to incredible Fatigue, and which was harder still to the utmost Extremities of Hunger and Thirst; but with much ado they compleated their tedious Course of one hundred Leagues in this wretched Condition, and came at last into a small Creek in the King of *Jobore's* Dominions, where they were civilly received, and kindly treated.

8. A Year or two after the *East-India* Company thought fit to seate another new Factory on the Coast of the great Island of *Borneo*. On the South End of this Island lies another smaller one called *Puloloni*, which has an excellent Harbour. The Country, however, is but very thinly peopled, as yielding nothing but Rice; but lying at the Mouth of the Rivers, coming out of the Pepper Countries, it is extremely well rear'd for Trade. There is a Channel of the Sea between this Island and that of *Borneo*, about two Miles broad in most Places, in some narrower, and in some wider, having from seven to five Fathom Water all the Way; and on the Shore there are several rising Grounds fit to build on, which made it in the properest Places in this Part of the World for a Factory; and therefore it is to be presumed, such as had the Direction of the Company's Affairs made Choice of it.

One Captain *Bury*, a very ingenious Gentleman, had

the Care of settling this little Colony, in which he acted with much Skill and Prudence; but before the Work was compleated, he died, and the Direction of the Factory fell to Dr. *Cunningham*, who, after the Ruin of the Factory of *Pulo-condore*, came thither. He is said to have minded his Studies so entirely, that he left the Care of the Company's Concerns too much to those that were under him, and it fell out very unluckily both for the Company and himself, that they happened to be People altogether unequal to such a Trull, which proved the Ruin of him, and of the Factory too, which fell out in the following manner.

9. Before the Fort which they were erecting was half finish'd, they began to insult the People of the Country, as they pass'd up and down the River, and among many other Acts of Folly and Weakness, they very imprudently took it into their Heads to search one of the King's Boats, which was carrying a Lady of Quality down the River, which so provoked the *Indian* Monarch, that he vowed the utter Destruction of the *English*; and to effect it, gathered all his Forces, and embark'd them on board his Fleet of *Praws*. The Company had then two Ships in the River, and there were besides two Merchantmen of inconsiderable Force; but, however, this was all they had to trust to, and therefore the People of the Factory receiving Advice of the King's Design, and the Preparations he had made, left their Factory, and went on Board their Shipping, thinking themselves more secure there than ashore.

When all things were in Readiness, the Army came in the Night with above an hundred *Praws*, and no less than three thousand desperate Fellows; some landed and burnt the Factory and Fortifications, while others attacked the Ships which were prepared to receive them. The *English* had made fast Nettings from the Mizen to the Fore-Shrouds, about two Fathoms high above the Gunnel, that they might not be so suddenly boarded by the Enemy, and to have the Opportunity of using their Blunderbusses and Lances before the Enemy could get on their Decks. As soon as they in the Ships saw the Fleet approaching them, they plied their Guns with double Round and Partridge, and made a great Carnage; but all did not deter the Assaultants from boarding, who, when they got as high as the Gun Wall, or Gunnel, were at a Loss how to get over the Nettings, and so were killed with great Ease. Some got in at one of the head Doors of one of the Ships, and killed some *English* in the Fore-castle; but they were soon destroyed. The two great Ships, though in Danger, beat off the Enemy with small Loss; but the little Ships were both burnt, with most of their Men, and one *Dutch* Gentleman, who was obliged to fly from *Batavia* on one of the small Vessels was also burnt in her. His Name was *Haugh Camber*, and had been the Embassador of the King of *Peshu*.

Some say, who were there at the Time of the Engagement, that the *English* killed (in two Hours that the Action was hot) above one thousand five hundred, besides many wounded and maim'd; but the *English* were forced to be gone from their Settlement. The King thought his Revenge had gone far enough, in driving them from their Settlement; and finding the Loss of the *English* Trade affected his Revenue, he let all *English*, who traded to *Jobore*, and other circumjacent Nations, know, that he would still continue a free Trade with the *English* on the old Footing, but would never suffer them, or any other Nation, to build Ports in his Country. Several *English* have been there since, and loaded Pepper, and have been civilly treated; and the *Dutch* sent a Ship from *Batavia* in *Anno* 1712, to trade with them; but the Natives refus'd Commerce with them.

SECTION XXXII.

A succinſt Account of the Adventures of Mr. William Adams, an Engliſhman, who reſided many Years in the Empire of Japan, and was the Perſon who introduced both the Engliſh and Dutch to trade thither.

Collected, as well from his own Letters, as Portuguese and Dutch Writers.

1. An Introduction, in which is contained a View of the Trade to Japan before Mr. Adams went thither.
2. He is entertained as a Pilot on Board a Dutch Fleet intended for the Eaſt-Indies, through the Straights of Magellan.
3. His Paſſage through theſe Straights into the South-Seas.
4. The great Miſeries endured by their Seamen on the Coaſts of Chili and Peru, and their Reſolution to bear away for Japan.
5. The many and great Difficulties they met with in their Paſſage.
6. Arrival on the North Coaſt of Japan, and the Uſage they met with from the Reports ſpread concerning them by the Portuguese.
7. Mr. Adams ſent for, and introduced to the Emperor, who examined him as to his Voyage, and the Deſign of it.
8. He grows into great Favour with the Emperor, and is very happily eſtabliſhed in that Country.
9. He builds a Ship for the Emperor, and becomes a kind of Miniſter of State in his Court.
10. The Account given by him of the Climate, Soil, Produce, People, &c. of Japan.
11. Obſervations upon this Account, including farther Remarks.
12. The Hiſtory of Mr. Adams, continued from Foreign Authors.
13. Influences of his great Power and admirable Conduct during his Reſidence at the Court of Japan.
14. The Turn given thro' his Management to the commercial Affairs of that Empire.
15. Concluſion of this Hiſtory, with ſome Obſervations and Remarks tending to explain the Obſcurities in this Account, and to ſet the Authorities which ſupport it in their proper Light, for the Honour of this Man in particular, and of our Nation in general.

IT is neceſſary, at our firſt Entrance on this Section, to put the Reader in mind of the Method we have purſued through the Courſe of this Chapter, which has been to ſpeak, as Occaſion offered, of thoſe Parts of the *Indies* which were neareſt to us firſt, and ſo to proceed gradually to the moſt diſtant. In regard to Time, it is with me only a ſecondary Conſideration; and this is ſufficient to account for what might otherwiſe paſs for a Miſtake, which is the placing here this Hiſtory of Mr. Adams's Proceeding; tho' in Point of Time, before that of the Gentlemen laſt mentioned, near one hundred Years. Now, as it was impoſſible to report both theſe Accounts without treading on the natural Order, either of Time or Place, we choſe to diſpenſe with the former rather than the latter, and that for this plain Reaſon, becauſe it occasions but one Alteration, whereas had we took the other Method, it would have produced many. We have already, in ſpeaking of the Discoveries made by the Portuguese, mentioned their firſt coming to Japan, and have likewiſe taken notice of the great Pains they took to prevent other Nations from having a Share in the rich Commerce of that new found Country, which, though viſited by them ſo early as *Anno Domini* 1542, yet had they preſerved it entirely in their own Hands, till after the Arrival of the Perſon, whole Memoirs we propoſe to give in this Section, and who ought therefore to be conſidered as the Discoverer of Japan to all the reſt of Europe, as we ſhall ſhew at large at the Cloſe of this Section.

At preſent it is our Buſineſs to obſerve, that there was nothing the Dutch coveted ſo much as an Opportunity of viſiting the *Indies* of Japan, which from the Reports they had received from Portugal in Spain, as well as from their own Settlement, appeared to them a kind of *Indies* in the *Indies*. There are ſome Dutch Memoirs ſtill extant, which ſay, that the Perſons employed by their Eaſt-India Company, obtained an exact Account of the Profits of the Trade from *Minao* to Japan, from the Year 1550 to 1600, from which Memoirs it appeared, that they cleared one Year with another one hundred Tuns of Gold, which was ſufficient to put the Dutch upon endeavouring by all means to gain a Share in to lucrative a Commerce. It may not be amiſs, however, to prevent Miſtakes, to explain this Term of a Tun of Gold, which I take to be entirely Dutch, and therefore, when literally tranſlated into Engliſh, is in danger of remaining as much Dutch as it was before. In the firſt place, a Tun of Gold is not reſtrained at all to that Metal, for if it had, it would not have been uſed here, moſt of the Returns from Japan to *Minao* being made in Silver, neither was it any Reference to the Value of a Tun of Gold, which amounts to ten times the Value of what

is meant by this Expreſſion; for by a Tun of Gold the Dutch Merchants mean one hundred thouſand Guilders, and conſequently the annual Value of the Trade to Japan might be ten Millions of Guilders, or, to keep ſtill to round Numbers, one Million Sterling, a vaſt Sum indeed, and yet ſaid to be much ſhort of the Advantages drawn from thence in the firſt forty Years, after the Portuguese ſettled in that Country.

But, though the Trade of Japan was a thing to deſireable of itſelf, yet the acquiring any Share thereof appeared even to the Dutch themſelves, though they were in thoſe Days equally enterpriſing, and indefatigable, a Deſign thwarted by almoſt inſuperable Difficulties. In the firſt place, the Navigation was difficult and dangerous to the laſt Degree, of which they were made ſenſible, not only by repeated Accounts from the *Indies*, which repreſented the Commerce with Japan as a thing almoſt impracticable on that Account only, but were in a manner convinced of it from Experience, ſince they had ſent a Ship thither *Anno Domini* 1583, with little or no Succeſs. They were in hopes, however, of getting the better of this Evil, by making uſe of Portuguese Pilots, and accordingly in 1586, they ſent another Ship, which was entrusted to the Care of one *Franciſco Pais*, a Native of Portugal, who had not, however, much better Fortune, which diſcouraged them very much, and was probably the Reaſon that they made no farther Attempts for ten Years afterwards.

But this was far from being all; for they very well knew, that when this Difficulty was got over, there were many others, and ſome of them ſtill greater, that were yet to be ſurmounted. As for example, they knew that the *Japaneſe* were a very powerful and a very brave People, the former from Report, but the latter from Experience. For at the Time they beſieged *Mulacca*, then in the Hands of the Portuguese, there was in the Place a ſmall Corps of *Japaneſe*, who came thither to trade, and who, when the Place was inveſted, finding it impoſſible to return home, aſſiſted their Friends in the Defence of it, and that ſo effectually, that it was chiefly by the bold Saltes they made, that the Dutch were at that Time compelled to raiſe the Siege, which they did with great Loſs. They likewiſe knew, that the *Spaniards*, who were at this Time Maſters of Portugal, and conſequently the ſole Poſſeſſors of the Japan Trade, had prejudiced the Inhabitants of that Country againſt them to the laſt Degree, by repreſenting them not only as Rebels to that Crown, but as Pirates and Enemies to Mankind in general; and, indeed, their Behaviour in the *Indies* had been ſuch as gave but too much Colour to that Report. Add to this, that a very great Part of the

Japanese Nation were become Converts to the Popish Religion, and consequently hated them no less as Hereticks, than if they had been Infidels.

Taking these Circumstances therefore together, we need not much wonder that the *Dutch* in some measure despair'd of ever carrying their Point, and establishing themselves as a trading Nation in *Japan*; yet so frail and feeble a thing is human Policy, and so little Certainty there is in the Foresight even of the wisest Man, that notwithstanding all these Obstacles, and contrary to all Appearance, they not only carried the Point, but after contributing as much as in their Power lay, to the Ruin of their Competitors the *Portuguese*; they have secured the whole of this rich Trade to themselves, and that too in such a manner, as that it is not very likely it should be ever taken out of their Hands. All this we may safely affirm, on the Credit of the *Dutch* Writers themselves, is intirely owing, and was absolutely brought about by the Interest and Conduct of one poor *Englishman*, this very *William Adams*, whose Memoirs of this Country, collected from his own Writings, we are now to give the Reader.

The Thing in itself is indeed wonderful, and if it was not supported by the most authentick Evidence, would, to the present Age at least, appear incredible; but as it is supported, it cannot be denied, or even disputed, and therefore it ought to convince us, that there is nothing of this Nature impossible, or impracticable, if Men once set heartily about it; so that we have no Reason to doubt, that if the same Spirit of extending Commerce, which prevailed in this Man's Days, should revive in ours, it would produce like Effects, and discover to us such new Rout's, such unexpected and unlooked for Means of employing our industrious Poor at home, by procuring a Vent for their Manufactures abroad, as would raise this Age as high in the Opinion of Posterity, as the last Age appears, or ought to appear, in ours. But it is now Time to return to our Author, and to attend to those Accounts of *Japan* which have been left us by so able and so experienced a Person, than which there are not perhaps any better to be met with in any Language whatever.

2. In this Business, as we have seen, he was not the Servant of his own native Country, but of *Holland*, being an able Pilot, and very skilful in all Points of marine Knowledge. He was hired by that People to go to Sea with them; his Post was that of Master Pilot, the Management of the whole Fleet (which consisted of five Sail) being left principally to his Care and Prudence. They set Sail from the *Texel* June the 24th, and made it the 21st of *August*, by that Time they reached *St. Jago*, one of the *Cape de Verd* Isles. Here they staid almost a Month; so long, that a good Part of the Fleet was sick with the unhealthy Air of that Place, and they found it too true by Experience (which before the *Dutch* would not believe) that it was a very barren Place as to any manner of good Refreshment. September the 15th they passed the Line, though with Trouble, because of the contrary southerly Winds that then distressed them, and this was the Effect of having leitered away too much Time before they came to attempt it.

They were now carried away to the Coast of *Guinea*, and coming up with *Cape de Lopez Gonzales*, they landed their sick Company there; but this Place denied Relief, as well as the former, and the sick Men were forced to carry their several Wants and Distempers aboard with them again. At the Isle of *Anobon* they met with a little better Entertainment. Here were Bayes, Oranges, and other Fruits; but the Plague of having an unhealthy Climate embittered the Comforts of this Retirement, and the bad Air made them sick, as fall as the good Provisions made them well. The *Dutch* landed a Party of Men, and took the Town, a small thing consisting of eighty Houses, and like to be of as little Profit to the Conquerors, as it was Honour to them. 'Twas towards the Middle of *November* before they got away from thence, to hard is it to leave a good baiting Place, especially when the next is so very uncertain, as it is in the Case of Seamen between *London* and 40 S. E. they had the Winds perpetually at S. E. and S. S. E. but about that Parallel they came up by S. E. and E. S. E. and E.

Their Course was now for the *Magellanick Streights*, and they made it two Months sailing between them and the

Island of *Anobon*; but the Miseries they endured by Hunger in that Time were extream, and in the highest Degrees dreadful: According to Mr. *Adams's* Relation, for a good while they had each Man but a Quarter of a Pound of Bread a Day, with a proportionally small Quantity of Wine and Water; but it came at last to that pass, that they eat the very Skins that covered the Ropes of the Ships, and by this unnatural sort of Diet brought on strange Disorders and Feebleness of Body upon themselves; through all these Difficulties, they made a Shift at last to reach the *Magellanick Streights*, coming into the first Narrow of that Passage, April the 6th; but this was but still out of one Difficulty into another; 'twas only altering the Scene of their Misfortunes, and coming to be miserable in another Place; for the Winter was coming on here apace, the Cold began to be severe and pinching, and the great Snows began too. To make their Circumstances more compleatly dismal, many a time would the Wind have served to have carried them through the *Streights*, but the obstinate General would not embrace the Opportunity, at the Advice of those that persuaded it, and so was the Occasion of the miserable Confinement of the Fleet all the Winter Season.

Here was Firing, indeed, enough for them all about the *Streights*, every Place abounding with Wood; but there was a worse Necessity amongst them, which this would never supply, and the Cravings of the Belly were to be satisfied by another sort of Provision. Here they continued conflicting with Hunger, Distempers, and bad Weather, till September, so that they stood the Shock of the whole Winter at this Place, and endured the Extremities of all the very worst Months of the Year. Abundance of their Men died, being downright starved, and the rest were as near it as they could well be; and now the General, having had enough of the Winter Pleasures of the *Magellanick Streights*, very politickly concluded, 'twas time to go away. His Men were half dead, and the Remainder were almost famished; the dismal Winter spent and gone, and the cheerful Spring coming on, with the returning Sun, he thought it high time to put out to Sea again before the Comfort of the approaching Season forsook them.

3. So the latter End of September they set sail out of the *Streights*, and being got into the *South-Sea*, were wretchedly tossed and beaten about in that turbulent Ocean: In short, a furious Storm scattered the whole Fleet, and drove them to seek their Fortunes, every one by themselves; they had agreed before, in case of any such Distress, that they would stay for one another at some Place upon the Coast of *Chili*, in the Latitude of 46°, and if the rest came not in a Month, then those that were there should go on. Hither Mr. *Adams's* Ship came, according to the Agreement, and stayed the appointed Time. The Natives were civil and friendly to them at first, and bartered Sheep and Potatoes for little Toys, which they gave them; but at last they fell out, removed up into the Country, and came no more to them. Their Company not coming, they went away, touching, as they passed, at the Bay of *Beldivia*, and the Isle of *Meaba*; but not coming to Anchor any where, till they did at the Cape *Santa Maria*, which is about twenty Leagues from the Island of that Name to the Southward.

Here they found a convenient Bay, and good Ground for anchoring; there were considerable Numbers of People that appeared upon the Shore, but their Temper and Dispositions, as they were unknown, so they were now to be tried; but they proved very cross and untoward; for at their first Attempt to land the *Indians* looking upon them as Invaders of the Country, set themselves to oppose them, and poured in a Shower of Darts and Arrows upon the Boats that came up to the Shore; but they being under the Pinch of Hunger, and driven by an absolute Necessity to endeavour some Means for the getting a Refreshment, broke through the Weapons of the *Barbarians*, and landed their Men. Now they made Signs of Peace on both Sides, and a Cessation of Arms being, as it were, agreed on, they came to a Parly in that Language of Signs, and the *Indians* understanding what they meant, brought them Wine and Fruits for the little Commodities the others shew'd them, and then signified to them, that they should now return aboard again; and if they came ashore again the next Day, they should have a farther Supply of Victuals.

16 June

Accordingly, the next Day the Captain landed, with a Score or more of Musketeers, and they had not marched far before a Party of *Indians*, to the Number of a thousand, that lay cunningly intrenched, fell upon them, and cut them all off.

4. This was a terrible Misfortune upon all Accounts, particularly in that this Execution had scarce left them Men enough to do the necessary Office of the Ships. With this Loss they went away from the inhospitable Cape, and came to the Isle of *Saint Mary* itself; here they found their Admirals, but in much the same distressed Condition as themselves, the Natives of the Island of *Mocha* having given them the same rude Treatment that those at the Cape had given the others, only of the two the Admiral had the worst on it, for they had lost more Men by the Darts of the *Indians*, and over and above that, their General himself. Now, to get some Refreshment at this Place was the great Difficulty; 'twas hard to lie still, and furnish on Ship-board, and 'twas as hard to venture on Shore, because they had not Men for it. In short, these two Wants were so great, and so unhappily complicated in their present Circumstance, that for all that appears, if an Accident had not relieved them, they must have concluded upon dying here without any more ado.

But a Couple of *Spaniards* that had a Design to betray them, came aboard (in a seeming friendly manner) for that Purpose, and were so wise as to do it without Pledges, or making any Provision for their safe Return. So when they had seen the Ship, and would have gone back again, they told them no, they were sensible of their ill Design, and would keep them Prisoners (especially since they came of their own Heads too) unless they would promise to furnish the Ship with so much Provisions. One may easily imagine the *Spaniards* were out of Humour upon it, to find themselves taken in such a Trap; but 'twas all one, 'twas to no Purpose to be in a Passion there, and they were forced to submit to those Terms of Deliverance, and glad to escape so too. The *Spaniards* brought in their Provisions according to the Agreement, and now they were once more relieved from a miserable Death.

After this the two Ships set sail in Company for *Japan*, the rest of the Fleet were given over for lost, and one of them they afterwards heard tell into the Hands of the *Spaniards* at *St. Jago*. Besides this, the King of *Spain's* Fleet wanted for them upon the Coast of *Peru*, and had they lighted on them, 'twas very probable they had both followed their Companion in her Fate, since they were in so very weak and shattered a Condition.

5. It was *November* the 29th that they left the Island of *Saint Mary* upon the Coast of *Chili*, and having passed the Line, had a good Wind, and fair Weather for a good while, without any Interruption by Storms and Tempests. In the Latitude of fifteen or sixteen Degrees North, they fell in with some Islands of *Canibals*, or *Men-eaters*, as *Mr. Adams* calls them, without any Scruple, since eight or nine of their Men he believes were devoured by them. These Fellows, it seems, being weary of so long a Voyage, and willing to take up at the next resting Place, put themselves into the Pinnace, and so ran away; but which Way sever the *Canibals* disposed of them, 'tis certain, they never came aboard more. In the Latitude of 27 and 28 the Weather began to change upon them, the Winds that had lain still and quiet to long roused, and blew with a prodigious Fury. They had such a Storm of Wind and Rain, that equalled or exceeded the most violent any Mariner among them had seen.

In this horrible Confusion they lost one another, and the Admiral never came up to them more; but they followed on their Course for *Japan* alone, being still in hopes to meet her in one Part or other of that Island. Certainly, hardly ever any Man performed a Voyage in more Distress. Our Pilot tells us, that they had of all their Number but nine or ten left, that were able to stand, or creep upon their Knees. As for the Captain, and all the rest, they were all at their last Gasp, as it were, and expected to die every Hour: And this was a very dismal Case; for Storms will make the poor Stamen beller and work themselves to the Purpose. But how shall Nature be supported in the mean time, and where shall Men have Strength to do their toil-

some Works, that have not Food to keep Life and Soul together?

6. It was *April* the 19th before they had Sight of the Coast of *Japan*, and by that Time there was but five of their Company that could go, Providence ordering the Matter so for them, that they had then a Prospect of Relief; when Things were run up to the highest Extremity, 'twas near to *Bungo* that they saw this first Island, and were then in about 35° 30'; but *Mr. Adams*, by the way, assures us, that that Coast of *Japan* is falsely placed in all our Maps, Charts, and Globes; for he says, it lies in 35° 30', which makes a considerable Difference from the common Account given by them of its Position. At *Bungo* several Boats of the Natives came up to them, and aboard them too, as they had a mind themselves, and it could be no otherwise, for there was no body to make any Resistance.

The Sailors were all quite spent, and if the *Japanese* would have plundered them, or knocked them on the Head, they might have done it without any Trouble; yet they did them no manner of Harm, as to any Violence, or any sort of Abroad; but they pilfered and stole all that they could lay Hands on; for which some of them payed very dear afterwards. The Vice-King of the Place proved very kind to them, took them into his Protection, and sent a Guard (as soon as they were come to an Anchor in the Port) to see that none of the Merchants Goods were stolen. This would have done very well had it come in good Time; but the Thieves were there before them. However, here they had good Store of Provisions sent them, and a House provided on purpose for them, and, in short, were made very much of, and began in some measure to enjoy themselves, after all the Dangers and Fatigues of the Sea.

But 'twas their ill Luck to meet with *Portuguese* and *Jesuits* here; they were forced to make use of them for Interpreters indeed; but they had far better been without any, and chose rather to have made use of the silent Language of Gestures and Signs, than have made use of such Interpreters as they were: For, these Men gave the Character of them, that they commonly give of their *European* Neighbours (in all Parts of the World where they meet them) that they were Spies or Pirates, and not trading Men, as they themselves pretended; and this set the *Japanese* against them, that *Mr. Adams* tells us he was apprehensive at one time that they should have had the Fate of Pirates in that Country, which is to be set up upon Crosses.

Now, when a Company of poor *Siamen* came to throw themselves upon their Mercy, as it were, in a strange Country, where they were not able to speak for themselves, and where their Liberties and Lives depended entirely upon the Peoples good Opinion of them, to go and serve them at that rate, was an unpardonable Piece of Villary, and an Action to very inhuman and base, as was only fit for *Portuguese* and *Jesuits* to be guilty of; but it was not long before the Emperor, hearing of this Ship, sent for *Mr. Adams*, being the Pilot, to come to him. The Court was then at *Osaka*, which is about eighteen Leagues from *Bungo*. Hither came our *Englishman*, not knowing whether 'twas for Life or Death, to Prison and Punishment, or for their Favour and Enlargement.

7. The Emperor viewed him, he says, with a wonderful deal of Attention; but yet with his mild and favourable Countenance, took off, in a great Measure, from the Dread his Countenance might otherwise have impressed. He asked, by his Interpreters, a World of Questions about the Country *Mr. Adams* came from, the People, their Manners, their Affairs both as to War and Peace, and Products of it in Beasts, Fish, and Fowl, the Trade and Business, and Laws and Government; and, in short, the whole natural and civil History of it. More than this he purged him as to his Religion too, and would needs examine his Faith, asking him what 'twas he believed in? a Question, that if a Man had not known the Emperor's Religion, would almost have made him afraid; the *Jesuits* had set up an Inquisition here, and that he was one of the Tribunal.

But *Mr. Adams* puzzled him ten times worse, when he shewed him the *Magellanick Streets* in his Chart, thro' which he sailed to *Japan*. The Emperor perhaps had a pretty good Opinion of him before, but now he thought him a downright Liar, the Mystery of such a Voyage was

ten times worse, when he
replets in his Chart, thro'
Emperor perhaps had a
fore, but now he thought
tery of such a Voyage was

so incomprehensible, that he had no Faith to bestow upon
it; yet since Mr. Adams affirmed it, and he could not con-
fute him, he entertained it as a Man does all Points of pure
Mytery, with silent Admiration, and humble Submission
of their Reason to the Difficulty, though cramped and tor-
tured with it at the same time. Though his Understanding
was affronted by it, yet his good Nature was out, and he
was very good Friends with Mr. Adams afterwards, as ap-
peared by his holding him in talk till Midnight; He had fe-
veral other Conferences with the Emperor after this, but
was for a considerable Time notwithstanding, kept in
Prison, though he had all Necessaries allowed him, and
nothing like a Punishment, but a large Confinement. The
Portuguese made all the Interest at Court they could pos-
sibly against him, and, by their Agents, were continually
infusing some scandalous Reports of him and his Country in
the Emperor's Ears; but all would not do, and the Prince
was so just and generous as to tell them, that the *English*,
having done him no Mischief, it would not be fair for him
to see them suffer from any in his Country, and that it
would be contrary to all the Laws of Justice and Reason,
for him to suffer an innocent Man to be executed, merely
because his Country and theirs were at War.

8. Mr. Adams's Circumstances now began to mend, and
grew more favourable; his Enemies were quite dilheart-
ened, and the Emperor expressed every Day more and
more good liking to him. In the first place, he freed him
from his Imprisonment, and gave him leave to see his old
Ship's Company, who were surprized with no small Joy at
this, having heard (it is probable from the *Portuguese*, who
intended it should be so) that he had been executed some
time before; But here he found the Ship absolutely plun-
dered, and all his Goods and Instruments gone, and all the
rest had lost what they had as well as he; for being all sick
and weak ashore, the Goods lay ready for a Prey to those
that could be unjust enough to seize them.

When this came to the Emperor's Ear, a Search was
made, in order to the Recovery of them; but being gone
too far out of Reach, he commanded fifty thousand Rials
of Eight to be given them in part of Satisfaction, and to
make sure that this Money should not be either fraudulently
detained by his Treasurers, or converted to any other Use,
he saw the Payment of it himself into the Hands of one
who was appointed to have the Management of their Af-
fairs, and to give it out to them in Parcels as they wanted.
After this the Court removed to *Eddo*, about a hundred and
twenty-two Leagues from *Ojacca*.

The Emperor ordered Mr. Adams to move thitherwards
with his Ship, and here they took the Liberty to petition
him, that they might be perfectly free, and pursue the Design
of their Voyage, in going to trade in some other Parts;
but this would not take, and the Emperor was not disposed
to part with them yet; so they got the Money into their
own Hands, and divided it amongst themselves, every Man
his Share, and then they dispersed themselves about the
Country, chusing those Places to settle in that best pleased
their Fancies; but the Emperor ordered them, besides an
Allowance of Rice, two Pound a Day for every Man, and
over and above, so much yearly as came to eleven or twelve
Ducats: There was no Distinction made between Captains,
Pilots, and common Sailors; but they all fared alike.

9. Thus four or five Years went over their Heads, and
they followed every Man his Business in the Country for a
Livelihood, since 'twas determined that there they must
live and die; but when the Term of Years was expired,
the Emperor sent for Mr. Adams to Court, and the Business
was to make him a Ship. This was not his Trade, as he
told the Emperor, and though he knew how to guide a
Ship at Sea, yet he was not used to the making of them;
but he was so very urgent and pressing to have it done,
that Mr. Adams undertook the Work, and built him a
Ship of about eighty Tun.

When he came aboard it he expressed a wonderful deal
of Pleasure in it, and 'twas a Piece of Service he valued
so much, that the Maker of it rode mightily in his Favour,
by this very Means; besides several very good Presents, his
Pension was encreased too, being made such as came to 70
Ducats per Annum, over and above the former Allowance
of Rice; and these well managed, were a tolerable Liveli-

hood for a single Person in the Country: But that which
recommended him most effectually to the Emperor's Esteem
was his Skill in Mathematical Learning; Mr. Adams had
a good Share of Knowledge in the practical Parts, and was
now honoured with having to great a Prince for his Scholar.
He instructed him in several Points of these useful Arts,
and made him capable of solving to himself that mysterious
Problem of sailing to *Japan* by the *Mogellanick Streights*.
He could please him at any time with describing Geometrical
Figures.

The Emperor was plunged in the Study, charmed and
ensured within the Circles Mr. Adams drew him. This latter
used his Geometry to such good Purpose, that he discover-
ed the true Method of managing his Royal Pupil by it, and
got, as he says, the exact Length of his Foot. His Word
was all in all in any Point of Dispute and Controversy, and
which Side soever Mr. Adams took, the Emperor was always
of the same. He had so great a Stroke now at Court, that
even the Jesuits themselves were willing to make use of his
Interest there, and courted him to be their Patron; and he
declares, that by his means both *Spaniards* and *Portu-
guese* received several Favours from the Emperor, which
they were otherwise in no likely Way of obtaining. Being
in those Circumstances, he thought it not impossible to win
upon the Emperor, so far as to return into his own Coun-
try, and for that Purpose renewed his old Request, pro-
mising to do his utmost for the bringing both an *English*
and a *Dutch* Trade to *Japan*, if he might be suffered to
go home.

But the Emperor was too much pleased with his Com-
pany to hearken to any Proposal about the losing of it.
Mr. Adams should have concealed his Skill in Mathema-
tics, kept his Geometry and Navigation to himself, if he
had intended to have seen his own Country again; he was
too useful a Man to be parted with, and there was no Hopes
of his Liberty, till he had quite lost the Knowledge of all
those Arts that had so charmed the Emperor. In short,
there was no going from him, and his Wife and Children
must be contented without him; yet he procured Leave for
the Captain of the *Dutch* Ship he came in to go, and,
to make his Life as easy and pleasant as might be, the Em-
peror settled a Lordship upon him, in which he had a Com-
pass of Land to manage, and a Parcel of Slaves, to the
Number of eighty or ninety, appointed to do his Country
Work; and this was the Course of our *Englishman's* For-
tune in that Part of the World, as he himself has described
them.

10. As to the State of the Country, and its Affairs, he
does not tell us much; he commends the *Japanese* largely
for their Courtey and good Humour, Valour in War,
Justice in their civil Concerns, and the happy Constitution
of the Government. He believes no People to be Masters
of better Politicks than they in their civil Government, nor
have more Superstition in their Religion. They have va-
rious Sects and Opinions amongst them, and some of them
had embraced Christianity at the Time the Friars and Je-
suits were very diligently at work to propagate it in several
Parts of the Island. So far they had gone in Mr. Adams's
Time, as to have some Churches, and Prospect of a con-
siderable Number of Convents.

The Character he gives of Trade is, that Silks and Cloths
are very vendable Commodities, and that for ready Mo-
ney; and, according to his Relation, the *Japanese* have
wherewithal to be very good Pay-masters, and can afford
to give the best Rates for a Commodity, having Gold and
Silver enough in their own Country, a very happy People
surely, in the common Acceptation of Things, since they
live in a pleasant Country, enjoy the Benefit of a rich Soil,
and have besides Mines, which yield them vast Quantities
of Gold and Silver. If any thing could have contented this
Man out of the Limits of his own Country, and without
the Enjoyment of the Conversation of his Family and
Friends, he might assuredly have met with it in *Japan*,
where the King of *Surunga*, whom he called Emperor,
treated him with extraordinary Kindness, and rewarded the
Pains taken in his Service with a Magnificence truly royal.

He employed Mr. Adams to sail in the Vessel he had built
for him as far as *Eddo*, which our Author tells us was as
far as from *London* to the *Lizard*, or Land's End. As he

succeeded

succeeded happily in this, as well as in other Affairs; he was directed to build a larger Vessel after the European manner, which accordingly he did, with the Assistance of such as were under him, and who, following his Instructions, finished a very good Ship, of the Burden of one hundred Tuns, and that she was in every respect a very compleat Vessel, appears from the Use that was afterwards made of her; for it is fell out, *Annus Domini* 1609, that the Spanish Governor of the *Maxillas*, going in a large Gallion of one thousand Tun to *New Spain*, was driven out of his Course by a violent Storm, which threw him upon the Coast of *Japan*, where arriving in the Night, the Crew, through Ignorance, ran the Vessel on Shore in the Latitude of 35° 50' North, by which unfortunate Accident one hundred and thirty-six Men were drowned, but the Governor with three hundred and fifty more escaped, and applied themselves to the Emperor, beseeching him to have Compassion upon them in their Distress, and to assist them in their Design of proceeding to *New Spain*.

As the *Japanese*, from the Maxims of their Government, were never very desirous of having many Strangers in their Dominions, this Request of the Spanish Governor was very readily complied with, and as soon as Provisions and other Necessaries could be got together, the Governor and his Men were embarked on Board the Ship which *Mr. Adams* last built, in which they safely proceeded to *Acapulco*. In Gratitude for this Favour, this Governor, in the Year 1611, sent another Ship in Exchange, with a great Present, an Indian Ambassador on Board, who had Instructions to thank the Emperor for his Civility, and also to make him a large Present.

It was in this Year also that our Author had an Opportunity, by the Arrival of a Dutch Ship, to give his Countrymen in *England* some Account of his Adventures, and of the Condition he was then in. This Letter he addressed to his unknown Friends and Countrymen, desiring it might be carried either to *Southwark* near *London*, or to *Gillingham* in *Kent*; and in the Beginning of it he takes notice, that he was born at that Town; that at twelve Years old he was bound Apprentice to *Mr. Nicholas Digges*, whom he served twelve Years, and was afterwards in her Majesty's Queen *Elizabeth's* Service, and then spent eleven or twelve Years in serving the Merchants who traded to *Barbary*, till being desirous of visiting the *East-Indies*, he went over to *Holland*, and there entered into the Service of the Dutch.

The Conclusion of his Letter is extremely curious, and therefore I shall give it my Readers in his own Words, that they may better judge of the Genius and Capacity of the Man, who made such a Change in the Affairs of *Japan*, and procured that Settlement for the Dutch, which without his Assistance, it is very probable they had never attained.

" Now, whether I shall come out of this Land I know not; until this present there hath been no Means, but now through the Trade of the *Hollanders* there is Means. In the Year of our Lord 1609, two *Holland* Ships came to *Japan*, their Intention was to take the Carrack that yearly came from *Manila*, and being some five or six Days too late, nevertheless they came to *Formosa*, and came to the Coast to the Emperor, where they were in great Friendship received, conditioning with the Emperor yearly to send a Ship of two, and to they departed, with the Emperor's Pans. Now, this Year 1611, there is a small Ship arrived with Cloth, Lead, Elephants Teeth, Damask, and black Lattices, raw Silk, Pepper, and other Commodities, and they have shewed Cause why they missed the former Year 1610, according to Promise yearly to come.

" This Ship is well received, and with great Kindness entertained: You shall understand, that the *Hollanders* have here an *India* of Money, for they need not to bring Silver out of *Holland* to the *East-Indies*; for in *Japan* there is much Silver and Gold to buy their Tuns in other Places, where Need requireth in the *East-Indies*, but the Merchandise, which is here vendible for ready Money, is raw Silk, Damask, black Lattices, Black and red Cloth of the East, Lead, and such-like Goods. So now understanding by this *Holland* Ship lately arrived here, there is a settled Trade driven by my Countrymen

" in the *East-Indies*, I presume some amongst them, either Merchants, Masters, or Mariners, must needs know me. Therefore I have embolden'd myself to write these few Lines, in short, being desirous not to be over tedious to the Reader.

" This Island of *Japan* is a great Land, and lieth to the Northward in 48°, and the southermost Part of it in 35°, and the Length of it E. by N. and W. by S. (for so it lies) is two hundred and twenty-eight Leagues. The Breadth South and North of it, thirteen Degrees, twenty Leagues to the Degree, is two hundred sixty Leagues, and is almost square. The People of this Island of *Japan* are Good of Nature, courteous above Measure, and Valiant in War. Their Justice is severely executed, without any Partiality, upon Transgressors of the Law. They are governed in great Civility, I think no Land better governed in the World by civil Policy. The People are very superstitious in their Religion, and are of diverse Opinions. There are many Jesuits and *Franciscan* Friars in this Land, and they converted many to be Christians, and have many Churches in the Island.

" Thus, in short, I am constrained to write, hoping by one Means or other, in Process of Time, I shall hear of my Wife and Children, and so with Patience I wait the good Will of God Almighty, desiring all those to whom this my Letter shall come, to use the Means, to acquaint my good Friends with it, that so my Wife and Children may hear of me; by which Means there may be Hope that I may hear of my Wife and Children before my Death. The which the Lord grant to his Glory and my Comfort. Amen. Dated in *Japan* the twenty-second of *October*, 1611."

11. As short as our Author's Description of *Japan* may appear, it deserves some Notice and Explication. There is no doubt, that he extends the Latitude of this Country too high, when he tells us, it reaches to forty eight Degrees; but perhaps he took what he wrote from the Information of the Inhabitants; and might, by his Enquiries, as to the Distance they had sailed and travelled North, be led to take the Land of *Yesso* into his Computation; and if so, we may very easily account for his extending the Bounds of *Japan* into so high a Latitude; neither is he to be blamed; for supposing that Country a Part of the Continent, and of the Empire of *Japan*, since the Natives were at that Time persuaded of both, and consequently in his Circumstances he was not likely to obtain any better Information. The rest of his Account is exact enough, and the whole of it is apparently calculated to invite the *English* thither, by affording them a Prospect of an advantageous Commerce. It is plain likewise, that *Mr. Adams* meant by this all the Service possible to his Country, and if it should be enquired why he introduced the Dutch there first, the Answer is very clear, and very evident, because he had no Means of writing to, or corresponding with the *English*, how much soever he desired it.

It is also very evident, that by his Introduction of the Dutch, he meant to find out some Means of corresponding with his own Countrymen; and indeed, it was a very natural Method, since he came to *Japan* in the Dutch Service, and had no other Way of working his own Deliverance, but by their Means. Another natural and just Observation upon his Letter is, that he speaks very briefly of Facts, and without mentioning any thing to his own Praise; in which, without Doubt, he acted very prudently, and this for two Reasons. In the first Place, if he had given a large and full Account of the Dutch Settlement, and of the Pans it cost him to establish it, it would certainly have hindered his Letter from coming at all to the Hands of his Countrymen, by raising the Jealousy of the Dutch, who were extremely tender of having their Affairs known. This is the more certain, since the latter Part of a Letter which he wrote to his Wife, and which contained a large and more full Account of the Affairs of *Japan*, was actually torn off, and destroyed by those who were entrusted with it. In the second Place, supposing his Letter had been more fortunate, and had come directly to the Hands of the *English*, it would not have recommended him to

them, had he insisted on the Pains and Trouble he had
taken in procuring the *Dutch* a Settlement in that Coun-
try, and therefore the longer, and the more attentively we
consider his Manner of Proceeding, the more certain we
may be, that he acted in this Respect with all the Care
and Precaution, and at the same Time, with all the Up-
rightness and publick Spirit that it was possible.

It is from a just Sense of this, and because I find no-
thing said of him by any of our Historians, or Collectors
of Voyages, besides what they have taken out of his own
Works, that I judged it reasonable in itself, and a thing
that could not but be agreeable to the judicious and intelli-
gent Reader, to pursue the Thread of this Man's History,
by the Help of Foreign Writers, for *Dutch*, *Portuguese*,
and *Spanish* Authors have thought the Actions of this Man
worthy of being recorded, though there is so little said of
them by our own; and indeed, the Affairs in which he
was engaged were of such a Nature, and his Conduct so
extraordinary, that we need not wonder at their taking so
much Pains, the rather, if we consider, that in their Turns
they all felt the Effects of his Management, and of the
Credit he required at the Imperial Court.

12. In order to fit this History in a clear Light, it is
 requisite to go back a little, in order to shew the Reader
 what Mr. *Adams* has concealed, which is, that it was by
 his means that *Dutch* Ships were brought thither in the
 Year 1609, and the Thing happened thus: When he found
 there was no Hopes of procuring his own Liberty, he not
 only applied, as he tells us, for the Discharge of his Cap-
 tain, but of another *Dutch* Officer, supposing that two
 Lives were better than one, in which he judged very right,
 for his Captain was soon afterwards killed, and it was the
 other Officer who carried the News of Mr. *Adams*'s Establi-
 shment in Japan to the *Dutch* Settlements in the *East-Indies*.

It was in Consequence of this, that a Yacht, called the
 Lion, was sent in the Spring of the Year 1609, from the
 River of *Jadore* to Japan. This Vessel arrived on the
 Coast of *Firando* on the first of July, and two Commissioners
 being sent to the Emperor's Court, they, by the Interest
 of Mr. *Adams*, procured all they could desire; and having
 free Liberty given them to trade, sailed on the 3d of Oc-
 tober, arrived at *Bantam* on the last of November, and from
 thence continuing their Voyage home, arrived safely in the
 Texel on the 20th of July 1610. It was on the Report
 they made, that another small Yacht was sent, which ar-
 rived at *Firando* on the 11th of July 1611.

The first thing they did was to have Recourse to Mr.
 Adams; for at their Arrival they found all things went very
 untowardly, at least in their Opinion, who were not at all
 used to that sort of Behaviour which was practised by the
 Japanese; and therefore they absolutely refused to comply
 with what was demanded of them, in giving a List of the
 Merchandize which they brought to the Royal Factor. On
 the other hand, the *Japanese* were but indifferently satis-
 fied with them; for, whereas they expected an annual Ship
 should have been sent, as there was, from *Macao*, there
 was now two Years elapsed, and but a very small Vessel,
 and a Cargo of very moderate Value sent at last, which did
 not at all agree with the Humours of the *Japanese*, who,
 like most of the Eastern Nations, are exceedingly caught
 by Pomp and Shew.

To heal these Breaches, the principal Persons on board
 the Ship went to make Mr. *Adams* a Visit, resolving to be
 wholly guided by his Instructions, because, as the *Dutch*
 Writer of this Voyage informs us, they were very well
 satisfied he had as much or more Interell with the Emperor
 than any of his Ministers or Nobility; and it was purely
 out of respect to him, that after their first Differences with
 the Officer at the Court, they had obtained Licence to make
 their Application to the Emperor. On their coming to
 Court, Mr. *Adams* observed to them, that though their
 Cargo was small, it would be requisite to make consider-
 able Presents, since it depended upon their Behaviour on
 this Occasion, whether the Licence which he had procured
 for them to trade, should be continued, or suppressed. The
 Insight he gave them into the Commodities and Manufac-
 tures of the Country, and the vast Profits that might be
 made, by establishing themselves there, operated so power-
 fully on their Minds, that they came immediately into all

that he proposed, and very wisely resolved not to heed the
 Lulls they might sustain by their first Cargo, provided they
 might secure thereby a second Licence to send an annual
 Ship thither.

On the other hand, Mr. *Adams* had such an Interest with
 the principal Persons, and great Ministers at the Court of
 Japan, that he soon brought them to consider the *Dutch*
 in that Light in which it was most for their Interest that
 they should be considered. There was at that Time a
 Spanish Embassador at the Court of *Japan*, who had a great
 Train, made a splendid Appearance, and took great State
 upon him; for which Reason the *Dutch* Supercargoes were
 very apprehensive that he would get the better of them in
 their Negotiation; but Mr. *Adams* having taken the Affair
 entirely into his own Hands, turned this very Incident to
 their Advantage. He represented to the *Japanese* Mini-
 sters, that this *Spanish* Embassador treated them with an
 Air of Haughtiness and Superiority, and rather dictated to
 them his Demands, than applied to them for their Favour;
 whereas the *Dutch* were absolutely a trading People, no way
 formidable to them in any respect, who desired to have the
 Honour of furnishing the Emperor and his Subjects with
 such Foreign Commodities as they wanted, and were ready
 to submit to such Regulations, and to carry on their Trade
 under such Restrictions, as for the Safety and Welfare of
 the Empire they, in their great Wisdom, should think fit to
 prescribe.

By this means, as the *Dutch* Writers themselves confess,
 Mr. *Adams* wrought so effectually in their Favour, that
 they were every where received, not only with Civility and
 Kindness, but with the greatest Candor and Complaisance,
 while the *Spanish* Embassador, notwithstanding the great
 Figure he made, was not only very coldly treated, and
 made little Progress in his Negotiation, but was likewise
 exposed to Civilities and Affronts.

The *Portuguese* Writers attribute also to our Countryman
 Adams the evil Impressions that about this Time the Em-
 peror began to entertain of their Nation, and particularly
 of the Millionaries, of which, however, we find not the
 least Footstep in either *Dutch* or *English* Author: But, to
 say the Truth, it is probable enough, and what they re-
 port is very consistent with the Notions that are ascribed to
 Mr. *Adams* by the *Dutch* Writers. In short, he did ex-
 press some Dislike to the Jesuits, and when asked concern-
 ing them by the Emperor, he said very freely, that they
 were the Authors of all the Disturbances in *Europe*, and
 that they had been expelled not only *Great-Britain*, but
 France, for this Reason. It is highly probable, that the
 Emperor might from hence take a Resolution of treating
 them in the same manner, for the Security of his own Do-
 minions, but then it must be allowed, he would not have
 thought of taking this Measure, if he had not found their
 Behaviour in *Japan* justify the Character which Mr. *Adams*
 had given him of them: But the *Portuguese* Writers say
 not a Word of the Calumnies spread by their Priests, and the
 Japanese Nobility in their Interest, against the *English*
 and the *Dutch*, representing both Nations as a sort of Pirates
 and Free-boaters, which might not only provoke Mr.
 Adams to make such Returns, but likewise lay him under
 a kind of Necessity of clearing up these Points to the Em-
 peror's Satisfaction. But to return to our Subject:

About the latter End of August 1611, the *Dutch*, thro'
 Mr. *Adams*'s Interest solely, obtained a Licence to trade in
 Japan under the Emperor's Seal, in which, however, that
 Clause was wanting which chiefly induced them to make
 this long Journey to Court, and that was an Exemption
 from being visited by the Inspector of Commerce, by whom
 they had been greatly aggrieved. This Officer, thro' a
 very bad Man, had a very great Interest at Court, his
 Sister being one of the Emperor's Wives; and the *Dutch*
 found, upon Application to the prime Minister, that he was
 so much afraid of offending her, that he durst not so much
 as propose that Clause to the Emperor, which gave them
 great Concern, since without obtaining it, they were not
 much inclined to make use of the Licence.

To obviate this Difficulty, the prime Minister proposed,
 that Mr. *Adams* should draw up a Petition for inserting of
 this Clause, with such Reasons as he thought proper, and
 should take an Opportunity of presenting it to the Emperor

when he was in a good Humour, promising that he would do all in his Power to support it; and assuring him at the same time, that he had written such a Letter to the Inspector, as would prevent their meeting with any Difficulties for the present, advising them to leave the whole Affair to the Management of Mr. Adams, for whose Success he would be answerable; but all he could say had no Effect upon the *Dutch*, they were resolv'd to trust no body, and not to stir from Court, till they had this Clause inserted in their Licence.

To satisfy them therefore, if it was possible, Mr. Adams drew up a proper Petition, and the very next Day presented it to the Emperor himself, whose Consent and Seal he procured; so that by his Interest the *Dutch* obtained, on their first Application, what the *Portuguese* were never able to obtain in the Course of so many Years as they had been settled in *Japan*, which is such a Proof of Mr. Adams's Interest at that Court, as if it was not reported by the *Dutch* Writers themselves, would scarce deserve Credit; but, as it is, I think there can be no sort of doubt raised about it. All Things being thus settled to their Satisfaction, and every thing done for them that they could desire, they returned to *Firando*, and having landed their Goods, and settled a Factory there, they sailed from thence on the 25th of September 1611.

It is of this *Dutch* Ship, and her Reception, that the Author speaks, at the Close of his Letter, in Terms which seem particularly designed to shew his Countrymen how safe a matter it would be for them to establish a Factory likewise in that Empire. I have taken all the Pains I could to discover how the Letters of Mr. Adams were conveyed to the *English*, but to very little Purpose; for all that I have seen upon this Subject is, that they were brought to *Parando* in the End of *Japan*, in the Month of *October* the next Year, that is, *Anno Domini* 1612. There was then there a considerable Number of *English* Ships and Merchants; to which the Letters were read, and it was presently agreed, that such an Opportunity was not to be lost; whereupon Captain *John Saris*, whom the *Portuguese* are pleas'd to call *Sir William Saris*, was order'd to sail in the *Carack*, a large *East Indian* Ship, from thence for *Japan*.

He had on Board him seventy four *English*, one *Spaniard*, one *Japanese*, and five *Indians*; and on the 14th of *January* 1612, he proceeded on his Voyage. On the 11th of that Month he had Sight of the great Island of *Ceibes*, pass'd happily through the *Streights* of *Beaton*, and to wards the End of the Month of *February* reach'd the *Moluccas*: He made some Stay there, though he was but indifferently treated by the *Dutch*. On the 24th of *April*, he observ'd an extraordinary Eclipse of the Moon, about Seven in the Morning, which, he says, lasted three Hours and an half. On the 11th of *June* he pass'd the Troack of *Cavara*, and on the ninth of the same Month had Sight of the Island of *Aino*, which is one of the Islands of *Japan*. On the eleventh he arriv'd at *Firando*, and was very well received; but found it, however, impossible to do any thing, till the King had time to acquaint Mr. Adams with his Affairs, who was then at *Edo*, three hundred Leagues from thence. The Messenger, it seems, did not make to much Haste to be ought to have done; and therefore the King, upon his Return, sent him into Banishment.

On the 24th of *July* Mr. Adams arriv'd, and Captain *Saris* went first with him, about the Means of setting a Factory, and the Prospect there was of making it worth their while. He was told upon this Subject, that the Commerce of *Japan* was that of the rest of the World, was some times more, sometimes less profitable; but that, however, it would be always found worth the seeking, and worth the keeping. Here I cannot but observe, that in Captain *Saris's* Opinion, Mr. Adams had acquired a great Affection for that Country, in which he had now spent near twelve Years. This was a Remark natural enough to make, for one who was not a Christian, either with him, or with the Countreymen of the *Dutch* and *Portuguese* Writers, who, for what Reason I know not, always stile him *Sir William Adams*, as if it had been a Person of great Probity, and unblemish'd Character, and one, whose Candour and Sincerity made him doubly esteem'd, even by such as considered him as their Enemy: But Captain *Saris* seems to have

looked upon him as a mere *English* Pilot, and therefore much his Inferior, without considering that his Circumstances were now very much changed, and that therefore he ought to have been looked upon as a kind of Minister to the Emperor of *Japan*.

He took his Advice, however, and agreed to go with him to the Emperor's Court, to which he was the more readily induced, by the King of *Firando's* offering him all kind of Conveniences for his Journey. He carried with him Presents for the Emperor, the Emperor's Son, their prime Ministers, for the Judge at *Meaco*, for the Admiral, and for the Treasurer; all of which amounted together to the Value of one hundred and eighty Pounds, which was no mighty Sum to expend for procuring the Privileges which he expected; but it will be more agreeable to the Design of this Work, and at the same time will afford more Entertainment to the Reader, to give the History of this Journey as near as may be, in Captain *Saris's* own Words, which I the more readily do, because he has been always considered, and, I think with good Reason, as one of the most sensible of our old Writers, and in whole Travels we find the fewest Mistakes. Thus then he relates the Story of his Journey.

We set Sail from *Firando*, and pass'd by several Islands; the most Part are very well inhabited, and had fair Towns upon them, but the best of Note that we put in at was *Fuacate*, a very large and considerable Place, not much less than *London*; within the Walls very well built, and so even and uniform, that one might see from one End of a Street to another. It has a strong Stone Castle, a good Ditch, and a Draw-bridge, all kept in very good Repair; but no Soldiers, or Ordnance. As for Ordnance, indeed, I did not so much wonder to find none, since there was no such thing at *Firando*; and 'tis a sort of military Furniture that the *Japanese* are wholly without. All along this Coast, and so up to *Ostia*, we found Women that liv'd with their whole Families upon the Water, getting their Livelihood by Fishing, at which they were very great Artificers; but they had two Straps to their Bow, and 'twas next to impossible for the Fish to escape them; for what they miss'd with their Lines and Nets, they would dive for, and catch that Way without fail, and that they would do with ease, to the Depth of eight Fathom. These Women are very easy to be known from all others, for by continual diving, their Eyes were strangely altered, and look'd as red as Blood; and by this Token the diving Women are distinguished in *Japan*.

When we pass'd the *Streights* of *Aomina-foque*, the next Town of note we came to was *Oacea*, nothing inferior to the former in Comparis and Dimensions, and one of the principal Sea-ports of the Empire. There's a River come up to it as wide as the *Nile*, and several very fine Timber-bridges laid over it. It has a Cattle very extraordinary for Bigness and Strength, with very deep Trenches about it, and several Draw-bridges artificially made, and Grates to strongly plated with Iron, as may seem to bid defiance to any Battery in the World. The whole Building of the Cattle is of Free-stone, and the Walls are of the same; but a matter of eleven Yards thick, and put together without any Mortar, or Cement, the Stones being to nicely cut, as to be perfectly close together, and needs no other binding; only if there happens to be a void Space any where, they throw a little Earth to fill up the Crevice; and that's all they do. It is regularly contriv'd, strengthened with Bulwarks, and Battlement, with good Store of Loop-holes for small Shot and Arrows, and various Passages for the throwing out of Stones upon those that should come to attempt it; and one would easily believe it to be a mighty strong and secure Building, without having a particular Account of it, when one hears what use the Emperor puts it to, and with what Importance the Jewel is here kept in safe Custody.

In short, here lives clock'd up in the Castle the true and genuine Heir of *Japan*; here, I say, he lives, but so happy as to be ignorant of his real Quality, Rights, and just Pretensions; though, at the same time, to be so fortunate as to be excluded from them all. The truth of the matter is, the present Emperor is an Usurper, and stepped into the Throne, in a way not only contrary to the

English Pilot, and therefore
 concerning his Circum-
 changed, and that therefore

up in the Cattle, the true-
 here, I say, he lives, but
 at his real Quality, Rights,
 at the same time, to un-
 an them all. The truth of
 mperor is an Uurper, and
 way not only contrary to the
 Law

Law of that Kingdom, but the more secret ones of eter-
 nal Justice and Reason. The old Emperor, when he died,
 left this Son, then an Infant, under the Care and Tutition of
 four principal Noblemen; whereof *Ogoshosamma*, the pre-
 sent Emperor, was one, and the chief. The other three
 Governors, Men of Intrigue and ill Principles, and fonder
 by far of flattering their own Pride, and Ambition, than
 discharging their Duties of a sacred Trust committed to
 them, made Pretensions to the Sovereignty, and put in
 for the Crown themselves.

In Opposition to whom, as also to assert the Rights of
 the royal Pupil, *Ogoshosamma* took up Arms; and having
 inurely routed the other Pretenders, had the supreme
 Power, suddenly clapped all into his own hands; and now
 the charming Opportunity told him, he had as good be
 Emperor himself. All his Competitors were removed
 out of the Way. The true Heir was incapable of un-
 derstanding and redressing his Case. All the Power was
 his own; and he wanted only the Name of an Emperor,
 which was so very small a thing, that he resolved not to
 be without that any longer. The young Prince he kept
 always about him, and in perfect Ignorance of himself,
 and his Relation to the Crown, suffering him to know no
 other, but that he was his Son; all that are about him
 being such as the present Emperor has brought up from
 their Cradles, and so not able to give him any better in-
 formation. And to make all sure, when he was grown to
 Years, he married him to his own Daughter, and so confin-
 ed them to the Castle of *Ofaca*, where they live like
 the Children of an Emperor, as to all Points of State and
 Grandeur, only Liberty; that sweetens all the rest; civil
 Policy is pleased to deny them.

Over against *Ofaca*, on the other side of the River, lies
 another great Town, called *Sacay*, a Place of very great
 Trade for all the Isles thereabouts. At *Yujibini*, to which
 we came next, we found a Garrison of three thousand Sol-
 diers, appointed for the keeping some of these Parts in good
 Order. This Garrison is shifted every three Years; and the
 Change happening when we came thither, we had the
 Advantage of seeing something of the Rules of their mili-
 tary Discipline: they generally march no more than five
 a-breast, and to every ten Files there's an Officer deputed,
 who regulates the March, and keeps all in perfect Order.
 Their Disposition, according to the Quality of their Arms,
 is thus. First of all march their Shot, that is, Calivers,
 for Muskets they have none, neither will they use any;
 then follow Pikés, then Cattans and Targets, Bows and
 Arrows, Waggadaphes or Hooks, and lastly Calivers again
 close the March; and among all these they have no Col-
 ours, Drums, Trumpets, nor any sort of warlike Music.

The *Yaponse* Horses are not large, or high, but of the
 Size of our minding Horses, small headed, and extreme-
 ly full of Mettle; and, in my Opinion, far beyond
Spanish Genets, both in barely Carriage and Spirit. Their
 Soldiers observe very good Order upon the Road, and
 me to exactly governed, that they are as welcome at the
 publick Houses as any Guests whatever; no Man is in
 the least disturbed or incommoded by them; they take
 what they find, as other People do, and pay for it without
 any quarrelling: The Roads are very well furnished with
 Houses of Entertainment; and when there are Soldiers
 upon the March, they provide Victuals for them; so that
 they have, at an Instant's Warning, what they want, and
 at very cheap Rates; a Dinner of good, wholesome Food,
 and enough of it, from two Shillings downward, to one
 Penny.

The Diet generally used through the Country is Rice
 of several Sorts, the white being counted the best; Fish,
 fresh and dried, Herbs, Radishes, Beans, Duck, Teal,
 Pheasant, Partridge, Quail, and Fowls; Of Beasts they
 have all sorts; of Deer, wild Boars, Goats, and black
 Cattle; Cheese also in great Plenty; but Butter they
 make none; neither will they eat any Milk, because they
 esteem it the Blood of the Animal; and, for what Reason I
 know not, they will not touch a Bit of any tame Beasts, tho'
 they have them in abundance. Their Wheat ought not
 to be forgotten, which is as plump, and as good as any,
 but all of the red Colour. We did in our travels buy Rice
 at a Half-penny per Pound; Hens and Pheasants, the

best and fattest, for three Pence a-piece; Pigs, very
 large, for a Shilling; a fat Hog for five Shillings; a good
 Ox for sixteen Shillings; and a Goat at three Shillings.
 The Drinks in request in this Country are only the Spirits
 distilled from the Rice, very strong, and of the Colour
 of Canary, and common Water, which is the common
 Drink of the poorer sort of People, that can't reach to the
 Price of other Liquor. They always drink their Water
 warm, and say that 'tis good to kill the Worms in the
 Maw.

Our Motions being directed to *Suranga*, where the Em-
 peror then kept his Court, by the latter End of this
 Month we had gone as far as our Way lay by Water;
 and now being to finish the Remainder of our Journey
 by Land, we were furnished with Horses, and all Con-
 veniences for that purpose, at the Emperor's Charge.
 I had also a Palankin or one of their Sedans provided for
 me, and a fresh Supply of Men drawn out of every
 Place for the carrying me therein, when I was tired of
 my Horse; and, for the greater State, a Slave appoint-
 ed to run with a Pike before the Palakin. The King's
 Hubbings also went before, and took up our Lodging
 upon the Road. This Part of the Journey was very plea-
 sant and easy; the Way, for the most part, is exceeding
 even and plain; and wherever there was any rugged,
 mountainous Ground, a smooth level Passage was cut
 through it. This road is all along good Sand and Gravel;
 'tis divided into Leagues for the Benefit of Travel-
 lers; and at every League's End are two small Hills
 raised, on either side one, and upon each a fair Pine-
 Tree planted. The Design of which Mark is to make
 Travellers competent Judges of the Length of their own
 Journeys, that they may not be abused by the Hackney-
 men, and those that let out Horses, and so pay for a
 greater Number of Miles than they have rode.

All along the Road you meet with Multitudes of Peo-
 ple passing and repassing, and Towns, and pleasant Vil-
 lages, Farms and Country-houses; and sometimes Tem-
 ples, standing at a little Distance, in shady Groves, with
 the Habitations of the Priests round about them. The
 most unpleasant Sight we had, was the Sight of the Ma-
 lefactors, fastened upon Crosses, near all the great Towns
 where those Executions had been performed. Crucifying
 is a very common Punishment among them at *Japan*;
 and, as they manage it, 'tis some sort of Punishment to
 Travellers too, to pass by a Multitude of noisome, putri-
 fying Carcasses and Bodies; besides the Horror of the
 Sight, to have the Disturbance of the Smell those Bodies
 yield: And we had the worst Trial of all when we came
 to *Suranga*; there were Crosses, Scallops, and Gibbets,
 Heads, Carcasses, and Limbs, hanging about in so many
 Places without the City, that our Pleasure in going along
 was greatly lessened. *Suranga* seems to be as big as *Lon-
 don*, even taking in the whole Compass of the Suburbs:
 The outer Part of it we found entirely taken up by Me-
 chanicks and Artificers of all sorts, who are placed there
 to the Ease and Quiet of the genteeler People, and don't
 care to be disturbed with the Noise and Bustle the others
 make in their Trades.

After a Repose of a Day or two, I went, with all my
 Company in a Body, to the Cattle, to have Audience of
 the Emperor, and to deliver the Presents intended for that
 Court; I was introduced by two of the greatest Men then
 in Attendance, the Emperor's Secretary and his Admiral.
 These led me first into a very fine matted Room, where
 we sat down for some time, according to their Custom,
 upon Mats; then they brought me into a Chamber of
 Prefence, where stood an empty Cha. of State, to which
 I was obliged to do Reverence. After some short time,
 word was brought, that the Emperor was come into the
 Room of Audience, to the Door of which these Courtiers
 brought me, but durst not presume to look in themselves.
 The Custom is, for all the Pretents that are brought to be
 placed in order upon the Mats of that Room into which
 the Emperor comes; and accordingly, when I came in,
 I found them all in a very orderly manner laid before him.
 He received his Majesty's Letter with the Civility of that
 Country, lifting it up towards his Forehead, and then, by
 his Interpreter, bid me welcome: He desired me to go
 and

and see the King his Son at *Edo*, (with all the Necessaries, for which Journey he would take care to furnish me) and by that time I returned, his Letters should be ready for our King.

The Articles relating to Trade and Privilege, which we requested his Majesty's Confirmation of, were all easily granted by him, one only excepted, respecting the *Change*: It was to this Purpose, That whereas the *Chinese* had refused all Trade and Commerce with the *English*, if we could take any of them abroad at Sea, it might be lawful for us to bring them into *Japon*, and make sale of the Goods, so taken, in his Majesty's Dominions. Thus the Emperor granted at first; but his Mind was altered afterwards by a Conference with the Ambassador of *China*, and he refused to allow it. The rest all passed under his Great Seal, which is not of Wax, like ours, but stamped like a Print, and coloured red. The Secretary would take no Present, nor any thing like a Gratuity from us; the Emperor, it seems, had commanded the contrary, and 'twas as much as his Life was worth to do it.

Having seen this Business done, we set out from *Suranga* for the great City of *Edo*, where the Emperor's Son, the young King, keeps his Court: The Country is well inhabited between these two Cities; the Towns and Villages lie thick, and the *Fotoques*, or Temples, scattering up and down in good Numbers too. There's one mighty Image, (which they call *Dabis*; that stands in this Road, at which all the *Japoneze* stop to pay their Devotions, when they go this way. It is made of Copper, all hollow within, tho' very thick: 'Tis in the Shape of a Man kneeling on the Ground, with his Buttocks resting on his Heels, and his Arms extended: He is represented wearing a Gown, and notwithstanding that bending Posture, is twenty-two Foot from the Level of the Ground, and all the Body proportionally large. Some of our Men went into the Body of it, and then fell a hollowing and hooping; the Noise of which, out of the wide Mouth of the Image, was much such agreeable sort of Musick as, I believe, was made by *Phalaris*'s brazen Bull. It stands conveniently to entertain the Devotion of Pilgrims in their Passage to the celebrated Temple of *Tencheday*; for they always make a pause at *Dabis*, but this is but a slight Ceremony.

It is at *Tencheday*'s Temple the great Work is to be done, and the Pilgrims expect to receive the Reward of their Travel. And here one may meet all sorts of People, rich and poor, sound and disordered, continually coming and going thither, and that by Night, as well as by Day, and all the Year round. About the Middle of this Month we came to *Edo*, a City much larger than *Suranga*, nobler in its Buildings, and every way more glorious in its Appearance. The very Tiles of the Houses are gilded, and the Posts of the Doors set off with shining Varnish. They have no Glass-windows, but all of Board, which open in Leaves, and are very delicately painted: There's a Causeway runs thro' the chief Street in the City, which Street is as broad as any in *England*; and a fine River passes along by, or rather underneath the Causeway; at every fifty Paces there's a Well-head substantially titted up of Free-Stone, and provided with Buckets for the People, in case of any Danger by Fire. The Castle of this City is a much stronger and nobler Edifice than that of *Suranga*; and the young King lives in much greater State, and has a more pompous Attendance than the Emperor his Father.

He received us in a very obliging Manner, taking the King's Letters and Presents with a wonderful Satisfaction and Content, and giving us all the Welcome imaginable. He gave us Letters for our King, and a Present of two intricate Suits of *Japon* Armour, nicely varnished, and a long Sword for myself: 'Tis to be noted, that the Cattans are a common wear; but the *Talakes*, or long Swords, are worn only by great Soldiers, and Persons of the best Account. It is said to be no less than twenty-two Days Journey, on Horseback, from this City of *Edo* to the most northern Part of *Japon*, which makes it a Country of a vast Extent. Our Business here being no more than the paying a Complement, which, being done, we had no further Occasion of staying, and having got this Prince's

Letters and Presents for the King of *England*, we went back to *Suranga*, where we arrived again at the End of this Month.

We were not obliged to wait long in this City; for our Dispatches, the Emperor's Letter, and the Instrument, containing our Privileges, and the Terms upon which we were to establish a Factory in *Japon*, being, thro' the Care, Industry, and Interest of *Mr. Adams*, both speedily and effectually dispatched; so that we had no reason to complain either of the Delays or Disappointments that are usually met with at Courts; and of which we understand by Report, that of *Japon* is not more free than others, if one has not a good Agent, as luckily for us we had.

A Translation of the Emperor's Letter, and of the Instrument, containing our Privileges is, for the Satisfaction of the Reader, annexed, and will sufficiently shew how wise and well regulated a Government that is by which they were granted. It is necessary to observe, that tho' this Version is not literal, yet it is very strict, and expresses the Meaning of the Original very exactly, so that the Sense and Spirit of these *Japoneze* Papers may be clearly apprehended thereby.

To the KING of GREAT-BRITAIN.

YOUR Majesty's kind Letter sent me by your Servant Captain *John Saris* (who is the first that I have known to arrive in any Part of my Dominions) I heartily embrace, being not a little glad to understand of your great Wisdom and Power, as having three plentiful and mighty Kingdoms under your powerful Command, I acknowledge your Majesty's great Bounty, in sending me so undervalued a Present of many rare things, such as my Land affordeth not; neither have I ever before seen, which I receive not as from a Stranger, but as from your Majesty, whom I esteem as myself, desiring the Continuance of Friendship with your Highness; and that it may stand with your good liking to send your Subjects to any Part or Port of my Dominions, where they shall be most heartily welcome, applauding much their Worthiness in the Admiral's Knowledge of Navigation, having with much Facility discovered a Country to remote; being no whit amazed with the Distance of so mighty a Gulph, nor Greatness of such infinite Clouds and Storms from prosecuting honourable Enterprizes of Discoveries and Merchandizing, wherein they shall find me so further them, according to their Desires. I return unto your Majesty a small Token of my Love (by your said Subject) desiring you to accept thereof, as from him that much rejoiceth in your Friendship. And whereas your Majesty's Subjects have desired certain Privileges for Trade, and settling of a Factory in my Dominions, I have not only granted what they demanded, but have confirmed the same unto them, under my Broad Seal, for better establishing thereof. From my Castle in *Suranga*, this fourth Day of the ninth Month, in the eighteenth Year of our Day, according to our Computation. Resting your Majesty's Friend, the highest Commander in this Kingdom of *Japon*. Subscribed *Minna Moutono. Yei Ye Teas.*

Privileges granted by *Ogosholamma*, Emperor of *Japon*, unto the Right Worshipful Sir Thomas Smith, Knight, Governor, and others, the Honourable and Worshipful Adventurers to the East-Indies.

I. *Imprimis*. We give free Licence to the Subjects to the King of Great Britain, viz. Sir Thomas Smith, Governor and Company of the East-Indian Merchants and Adventurers, for ever, safely to come into any of the Ports of our Empire of *Japon*, with their Ships and Merchandizes, without any Hindrance to them, or their Goods; and to alide, buy, sell, and barter, according to their own Manner with all other Nations; to tarry here as long as they think good, and to depart at their Pleasures.

II. *Item*. We grant unto them Freedom of Custom for all such Merchandizes, as either now they have brought, or hereafter shall bring into our Kingdoms, or shall

ing of England, we were
 saved again at the End of

long in this City; for our
 and, and the Instrument, con-
 e Terms upon which we
 on, being, thro' the Care,
 Adams, both speedily and
 we had no reason to com-
 Disappointments that are
 d of which we understood
 it more free than others, it
 luckily for us we had.
 or's Letter, and of the In-
 leges is, for the Satisfaction
 ll sufficiently show how wic-
 ent that is by which they
 to observe, that tho' this

lamma, Emperor of Japon,
 Sir Thomas Smith, Knight,
 Honourable and Worshipful
 es.

ee Licence to the Subjects
 ain, viz. Sir Thomas Smith,
 the East-Indian Merchants
 safely to come into any of
 of Japon, with their Ships
 any Hindrance to them, or
 buy, sell, and barter, ac-
 corder with all other Nations;
 think good, and to depart

to them Freedom of Custom
 as either now they have
 bring into our Kingdoms, or
 shall

" shall from hence transport to any foreign Part; and do
 " authorize those Ships that hereafter shall arrive and come
 " from England, to proceed to present Sale of their Com-
 " modities, without coming or sending up to our Court.

" III. Item. If any of their Ships shall happen to be in
 " danger of Shipwreck, we will our Subjects, not only to
 " assist them, but that such Part of Ship and Goods, as shall
 " be saved, be returned to their Captain, or Cape-Merchant,
 " or their Assigns; and that they shall, or may build one
 " House, or more, for themselves, in any Part of our
 " Empire, where they shall think fittest; and at their
 " Departure make Sale thereof at their Pleasure.

" IV. Item. If any of the English Merchants, or other,
 " shall depart this Life within our Dominions, the Goods
 " of the Deceased shall remain at the Disposal of the
 " Cape-Merchant; and that all Offences committed by
 " them shall be punished by the said Cape-Merchant, ac-
 " cording to his Discretion, and our Law, to take no
 " hold of their Persons or Goods.

" V. Item. We will, that ye our Subjects trading with
 " them for any of their Commodities, pay them for the
 " same, according to Agreement, without Delay, or Retu-
 " rn of their Wares again unto them.

" VI. Item. For such Commodities as they have now
 " brought, or shall hereafter bring, fitting for our Service
 " and proper Use, we will, that no Arreil be made there-
 " of, but that the Price be made with the Cape-Merchant,
 " according as they may sell to others, and present Pay-
 " ment upon the Delivery of the Goods.

" VII. Item. If in Discovery of other Countries for
 " Trade, or Return of their Ships, they shall need Men
 " or Victuals, we will, that ye our Subjects furnish them,
 " for their Money, as their Need shall require.

" VIII. Item. And that without other Passport, they
 " shall, and may, set out upon the Discovery of *Yulzo*,
 " or any other Part in or about our Empire.

" From our Cattle in *Suranga*, this first Day of the
 " ninth Month, and in the eighteenth Year of our Day,
 " according to our Computation. Sealed with our Broad
 " Seal, &c. Underwritten

" Minna Moutono Yi Ye Yas."

The *Japone* Language seems to agree with the *Chinese*
 in this, that they express whole Words compendiously,
 by their several proper Characters, not compounding them
 of distinct Letters and Syllables, as tis in other Languages.
 The Character is very different from that of the *Chinese*;
 and they read, beginning at the right-hand, so down-
 wards, perpendicular-wise in the several Lines. They take
 abundance of care to speak and write in the shortest and
 concise manner that can be; they are not given to flour-
 ish and enlarge upon a Subject, but deliver their Minds
 in very pertinent, exact, and comprehensive Terms, con-
 tracting a great deal of Sense into a little Compass: The
 Letters, and the Instrument, were both written in it,
 very fair, after their Manner; and the first Rarities of
 that kind, that our Nation, I believe, ever had.

This was all our Business at *Suranga* finished too.
 Upon which we took Leave of the Emperor and Court,
 and set out for *Firando*. Our Way lay by Land as far
 as *Osaca*; and in passing thither, we took *Meaco* in our
 Way. This is absolutely the greatest City in *Japon*, and
 a Place of mighty Trade. All the Traders dwell in
 a Part of this City by themselves; and all of such an
 Employment in such a Street by themselves. The *Jap-
 onese* think it very uncleanly and irregular, to have Men
 of so many Professions and Businesses mixed and huddled
 together in such a confused manner, as they are in other
 Places. They are for making all of the same Trade (who
 are fittest to converse together) Neighbours to one ano-
 ther; Birds of the same Feather to be all in a distinct
 Flock by themselves, that a Man that looks may know
 where to find them. And the plain Truth on't is, this
 Order is not without its Beauty and Conveniency; and it
 added, methought, a peculiar Grace to the City, which all
 its other Advantages could not have given it.

The most magnificent Temple of the whole Country is
 here at *Meaco*, built of Free-Stone, and as long as St.
 Paul's in London from the Quire, arched, adorn'd with

NUM. 58.

mighty Pillars, and as lofty as that. It has one peculiar
 Altar, at which they make their Offerings of Rice, and
 small Money (called *Cundrier*, twenty of which make a
 Shilling) for the Maintenance of the Bonzees belonging
 to it: And by this Altar stands the great *Idol Mannada*,
 made of Copper, and of the same Form with *Dabir* be-
 fore mentioned, but much higher, reaching up to the very
 Arch. The Temple stands advantageously upon the Top
 of a very high Hill, and upon each Side the Ascent you
 have a long Row of Columns, of Free-stone, about fifty
 in each Series, ten Paces distant one from another, and
 upon the Top of every Pillar is a Lantern, the Lamps in
 which are lighted every Night, and make a very glaring
 Shew. There are several other Temples besides, but this
 vastly exceeds all the rest in all Points of Beauty and Gran-
 deur. It was just finished at our being there, the Founda-
 tion being laid by the famous *Tatefania*, whose Horse
 was kept in an Apartment hard by, and is to be main-
 tained here in a Life of perfect Ease and Rest, as long as
 Nature will allow him to hold it out.

The *Portuguese* Jesuits have a stately College in this
 City, very well furnished with Men of that Society. They
 breed up abundance of *Japone* Youths, reading Philo-
 sophy, and the Popish Divinity to them, making many
 of them Preachers, and, I suppose, Jesuits too. There's
 no doubt but they endeavour to make them as good as
 they can; and, amongst other Arts, teach some of those
 that are peculiar to their Order. They have the New
 Testament translated into the *Japone* Tongue; and be-
 sides this hopeful Fry breeding up in the College, there
 are reckoned five or six thousand that profess Christianity
 in *Meaco*.

While we stayed here we received the Emperor's Pre-
 sents for our King, which were sent after us, viz. ten
 Boobs, or large Pictures, to hang a Room of State with.
 From hence we travelled to *Osaca*, where the Gally that
 set us down before was attending our Return, to transport
 us to *Firando*, and this at the Charge of the brave and
 generous King of that Place. This Prince was extremely
 glad at our Return to his Island, as also of the Success of
 our Affairs at Court, and had carried it with that steady
 and even Hand of Kindness to our Company left there,
 as he did to all of us, when together; but yet the Trade
 amounted to little or nothing. In our Absence the *Jap-
 onese* had been no good Customers, tho' we had come from
 the other End of the World to take their Money. One
 Reason of this was, because it was not yet certain that we
 were to be allowed in the Country; and till the Trade has
 its publick Warrant from the Emperor, as no Stranger
 may offer to sell, so no Native may dare to buy. But
 another thing was this, the most Part of our Commodi-
 ties we intended for these Parts, were broad Cloths,
 (which had not long before been sold here for twenty Rials
 of Eight per Mat, which is two Yards) a sort of Ware
 the *Japone* were now almost out of Conceit with, be-
 cause we did not take care to recommend the Goodness of
 it by our own Wearing. You, say they, cry up your
 broad Cloths to us, and, at the same time hardly wear a
 Rag of it yourselves; but are all for your Silks and Stuffs,
 and any thing in the World, except just what you would
 have us buy of you. And the truth on it is, the *Japone*
 were in the right, and their Objections not easy to be an-
 swered. We ought to be more fond of our own Country
 Commodities, and tell other Nations they are valuable, by
 the Use of them we make ourselves. Foreigners won't be
 so ready to believe us, if they see we don't order our
 Fashions so as to give a Reputation to what we recommend
 abroad in the World; and, for ought I know, other Na-
 tions may tell us, as well as the *Japone*, of not wearing our
 own broad Cloth; may reproach us with the Neglect of
 our own Commodities, and despite them till they see us
 do otherwise ourselves.

This *Firando* is a very good Place for our Ships to put
 in at, with respect to the Point of Victualing, and all
 that; but it is not so proper for Trade, because it lies off
 from the main Island of *Japon*, where are not only most,
 but the most considerable People, capable of giving En-
 couragement to Trade, which, in those little bye Islands,
 is not to be expected. We might, I don't question, be
 welcome

welcome at any of them all, and the Kings of two of these petty Islands gave us a formal Invitation. But there's few of them can afford Business that will turn to account, and defray the Charges of a Settlement: Therefore my Advice is, that our Ships that come to trade here, would not sail to *Virando*, but to *Orieggance*, upon the main Island, and about fifteen Leagues distant from *Eddo*, where they will find very good Riding, and a much greater Prospect of Advantage. This Place indeed is not capable of affording so good an Entertainment as may be desired: Provisions are not altogether so plentiful there as at *Virando*; but that Want may be supplied by a Correspondence with the circumjacent Country.

Christianity makes no considerable Progress comparatively any where in this Empire, but at *Messo* and *Langezarque*, a Town situated upon the Sea coast, about eight Leagues from *Virando*. It had, it's true, gotten footing in *Eddo*; but the Emperor, upon some Pique taken against the Christians, banished them all from thence, and confined them to *Langezarque*; and as a Prevention of its creeping into the Court, and rooting itself any where near him, he made it Death to any who should offer to build a Church, or sing Mass, within ten Leagues of the Place where he resided. This Change was but a very little before our going to *Eddo*; notwithstanding which, the Christian Religion is otherwise indulged. The Christian *Japoneſe* at present have, as far as I see, the same Protection and Privilege with others; and the Jesuits seem to enjoy an unrestrained Liberty in the making of Profelytes. The Foundation of a Factory being now firmly laid in the Emperor's full Grant to that Purpose, we proceeded to build upon it, being the rather encouraged to it, in that we were now assured that *English* Factories were actually settled at *Stam* and *Patana*; as also, that the *Dutch* made something of their Business here; and we had reason to believe we had not a less Share in the Good-will and Esteem of this Country than they. We therefore appointed some of our company to reside here upon this Affair, with Instructions also to make what Discoveries they could upon the Coast of *Ceres*, *Tyghmay*, and other Parts adjoining, against the next Return of the Ships. By exact Observations we made, during our Stay here, we determine the Latitude of *Virando* to be 33° 14' N. and the varying of the Compass 22° 50' Easterly.

Thus far we have followed exactly the Memoirs of Captain *Saris*, who farther reports abundance of Civilities received from the King of *Virando*; together with a Letter, written by that Prince, to our King *James*, expressing a very earnest Desire to render all the Service in his Power to the *English* Nation; and highly commending their Diligence of establishing a Correspondence between their own Country and the *Japoneſe*; for the promoting of which, he professes himself ready to do whatever lay in his Power. Captain *Saris* prosecuted his Voyage to *Bantam*, in the Island of *Java*, without any remarkable Accident; and he commends *Lanſbeten's* Voyages as very sincere, and his Chart as very exact. He arrived at *Bantam* on the first of *January* 1614, and found things there in a very indifferent Condition, owing, as he conceived, to their having too many Factories; however, he got his Loading, and in the latter End of the Month of *May* proceeded for *England*, and arrived safely on the 27th of *September* following at *Plymouth*. He does not appear to have been very sanguine in the Affair of settling a Factory in *Japon*, but seems to have been obliged thereto by his Instructions; yet as he was a Man of great Observation and Reflection, he took all imaginable Pains to have a distinct Account of what Goods were to be sent there, and what might be expected in return. I apprehend, that the true Reason of his Dissidence was, our not having, at that time, an open Trade with *China*, the greatest Profit resulting from the *Japon* Trade, being made on *Chinese* Goods; but however, Time and Patience might have overcome all these Difficulties, and have established us as effectually as the *Dutch*. But the truth of the Matter was, that our People were left under Command, and consequently left fit for living in that Country, and establishing a Trade there.

As a Proof of Captain *Saris's* great Merit in examining every thing carefully, and recording from time to time what Notices he received, I think it may not be amiss to annex to this Account of his Voyage the Report he received concerning the Land of *Jesso*, or *Yedzo*, which was then, and still is, a Place very imperfectly known, and on the absolute Discovery of which, hang many Points of Importance, but more particularly the Decision of the great Point, whether there be, or be not a Passage into these Seas by the North-Pole. I the rather insert this Account, because, for any thing I can perceive, it is as likely to be true as any we have yet received, only I suspect, that either our *Japoneſe* Traveller was mistaken in calling this Country an Island, or else there is both an Island and a Continent of the same Name, which is indeed agreeable to what we find relating to this Country in the best Accounts we have received from *Japon*. I will likewise beg leave to add, that if we reflect on the Stature and Complexions of the Northern *Tartars*, the *Lapllanders* and *Samoelers*, we shall have the less Cause to suspect this Writer, either of Credulity or Fiction.

Intelligence concerning Yedzo, received at the City of Eddo in Japon, from a Japonese that had been raised there.

" This ingenious Traveller says, that *Yedzo* is an Island lying on the North-west side of *Japon*, and about some ten Leagues distant from it. That the People are of fair Complexion, good-natured enough, far more humane in their Temper and Conditions than their outward Aspect and Appearance, being all over rough and hairy, almost like Monkeys; yet their Skin (as before hinted) white and clear. The Weapons used among them are Bows and poisoned Arrows.

" Those in the Southern Parts are very understanding People, and fit for Commerce, having the Knowledge of Weights and Measures, which in the middle Parts of the Island they are entirely ignorant of. Those in the Northern Parts are a People which seem to be distinct from the rest of the Island, and of quite another Race, being to extremely short, that they may be called Dwarfs in a strict and proper Sense, whereas the *Yedzoes* are commonly of the Stature of the *Japoneſe*.

" They have none of them any sort of Apparel but what is brought from *Japon*, and to the most Part of their Rice (if not all they are supplied with) is brought from thence too; but then they have that amongst them which will make other People think it very well worth their while to come and bring them those Necessaries, viz. a great deal of Silver, and a sort of tawdy Gold, in which they make all their Payments to the *Japoneſe* for what they take of them.

" The Commodities mostly transported hither are Rice, Cotton, Cloth, Iron, and Lead; but all things necessary for the Bark and Belly, are the most welcome and acceptable to these People; particularly Rice carried from *Japon* to *Yedzo* has yielded four hundred per Cent.

" The chief Town where the *Japoneſe* reside for Trade is called *Matzuma*, where they have also a Fort, and at least five hundred Families of that Nation constantly dwelling there. In *September* the Natives come down in vast Numbers to buy and lay in their Winter Stores; and in *March* they bring Salmon, and several sorts of dried Fish, besides other Wares, which they barter with the *Japoneſe*. This *Matzuma* is the chief Town for Business known to the *Japoneſe* upon the whole Island, and they have no manner of Concern or Settlement any where but here."

14. When I first entered upon this Subject, I must confess it was not my Intention to have prosecuted it so largely, but upon mature Reflection, that I could never have a more proper Occasion to insert the History of our Access to, and Retreat from *Japon*, which is in itself a very curious Subject, and hath this farther to recommend it, that it was never handled before, I thought I could not do better, than to throw all I have been able to learn upon this Head into this Section; by which means it would be

better understood, and afford a clear Solution to a Question
 never yet answered, *viz.* How being once possessed of
 such a Commerce, we came to lose it? But that we may
 proceed regularly, I shall give the Reader next the Sub-
 stance of a Letter written to Captain *John Saris* by Mr.
Cocks, who was chiefly intruded in the new Factory set-
 tled at *Firando*. This Letter is dated the toth of *Decem-
 ber* 1614, and contains abundance of curious Circum-
 stances that are not to be found in any other Piece that I
 have been able to meet with.

As to the Affairs of *Japan*, the Writer of this Letter
 gives us an Account, that they were at that time in a very
 dismal Condition, a civil War being ready to commence,
 that threatened great Calamities to the whole Country.
 We have heard before, that the right Heir of this mighty
 Empire was shut up in the strong Castle of *Osaca*, where
 'twas designed he should live in perpetual Ignorance of
 himself, and his just Title to the Crown; or, at least, if
 he should by any means come to the Knowledge of his
 true Quality, should by that close Confinement be depriv-
 ed of all Opportunities of giving any Disturbance to the
 present Possessor; but the usurping Emperor's Plot did
 not take the desired Effect: The young Prince came to
 know himself some way or other, and accordingly took
 up Arms to assert and maintain his Right. He converted
 his Prison into a strong Garrison, and instead of other
 Keepers got quickly about him an Army of one hundred
 thousand Men, bold, resolute, hardy Soldiers, most of
 them Out-laws, Exiles, and Malecontents, who flock'd
 in to him from all Parts of the Empire, and will spend
 their blood to set him in the Throne. Besides this Force
 of Men, he had laid in as good a Strength of Provision,
 having furnished the invincible Castle of *Osaca* with Vi-
 ctuals for three Years.

This was the Alarm which the Emperor ever dreaded:
 Nothing could look with a more threatening, malignant
 Aspect upon his State and Power than a black Cloud gar-
 thered about the Castle of *Osaca*. However, to main-
 tain his own Pretensions, he march'd in Person with an
 Army of three hundred thousand Men towards the Prince,
 and some little Bickerings had pass'd between Parties of
 both Armies at the Time of the writing of this; but now
 the whole Empire expected the Result of a pitched Battle,
 in which that Controversy should be solemnly decided,
 which of these two Pretenders should finally wear the Im-
 perial Crown of *Japan*.

It was not long before this that the Emperor declared
 himself a publick Enemy to the Christians, giving Orders
 for the banishing all Jesuits, Friars, Nuns, and their Ad-
 herents, out of *Japan*, pulling down their Churches and
 Monasteries, and to make tire Work with them, not only
 ordering their Banishment, but actually shipping them
 away himself, some for *China*, and others for the *Manti-
 las*: And in a short Space after this Perfector, a very
 great Conflagration happen'd at *Edo*, one of the largest Cities
 of the Empire, occasioned by a most dreadful Tuffon that
 rag'd there. The City was almost demolished by it, a
 great Part of the Buildings being broke down, and the Sea
 breaking in at the same time, threaten'd to swallow up all
 the rest, so that the Inhabitants were forced to quit the
 Place, and run up into the Mountains for Shelter. The
Pagan and the *Christian Japanese* are very contrary one to
 another in their Opinions and Assertions concerning the
 Cause of this horrible Commotion. The latter say, 'tis a
 Judgment from God upon the Nation for the affronts offer-
 ed to the Christian Religion, particularly for the Empe-
 ror's banishing it with all the pious Jesuits that preach'd it,
 as he lately did, so that the Circumstance of the Calamity
 with respect to that Place, clearly (as they say) expounds the
 Cause of it. On the other hand, the *Pagans* say 'tis
 Witchcraft, and that the Jesuits, upon their Banishment,
 fell to conjuring, and rais'd that Storm to plague the Coun-
 try, in Revenge.

At the Time of Captain *Saris*'s being in *Japan*, it was
 thought, that if any other *English* Ship came into those
 Parts the Goods might immediately be sold off, without
 the Formality of carrying another Present to the Emperor;
 but 'twas afterwards found to be otherwise, and every Ship
 that came in was under a Necessity of doing it, paying

its Custom that Way; more than this, they could not have
 Liberty so much as to fit out a Junk, without the Empe-
 ror's Licence was annually procur'd; for 'twas made
 Death for any *Japanese* Mariner to stir out of the Country
 without Leave, only their own Ships might go in and out
 freely whenever they had Occasion.

A good Project was set on Foot for beginning a Trade
 upon the Coast of *China*, at a Town near *Languin*, to which
 Place a Ship might sail from *Firando* with a good Wind
 in three or four Days Time. This was first propos'd and
 undertaken by some considerable *Chinese* then in *Japan*,
 who labour'd very hard in the Matter, and made no Que-
 stion of accomplishing it so far, that three *English* Ships
 should have a Vent for their Commodities every Year at
 that Place. The Endeavours of the *English* Factory set-
 tled at *Firando*, towards a Trade from *Yusima* to *Corea*
 prov'd ineffectual, very little to any Purpose being to be
 done there. There was no Vent for any Commodities, but
 Pepper only, and not much of that, though sold at some-
 thing a better Rate. By all Circumstances, it seems to ap-
 pear, that the *Coreans* are not at all dispos'd to a Corre-
 spondence with them of *Yusima*, since they'll allow them
 but to come into one little Town, and forbid them to go
 without the Walls of that upon Pain of Death, nor so little
 a Way up into the Country, and that the King of *Yusima*
 is no Subject to the Emperor of *Japan*; so that there was
 no Danger of this latter Prince's getting any Footing
 amongst them, by the opening a Correspondence with the
 former.

Yet the *Coreans* are possess'd with such Jealousies and
 Fears of the *Japanese*, as not to indulge any of their Neigh-
 bourhood in any manner of Liberties, by which it may
 be possible to fall on any hold upon them: And the truth
 is, they are not so bold and mistrustful without Cause, if,
 at least, former Attempts upon their Liberty may be a
 Reason why an Adversary that made them should be dis-
 trustful for the future; for *Tai-san*, the Emperor before
 this, did actually make an Invasion into *Corea*, intend-
 ing to carry on his Conquests to the very Gates of *Peking*,
 and surprize the *Chinese* Emperor in his Palace: But he
 was, in the midst of that Career of Fortune prevented, by
 a *Corean* Nobleman, who, to serve his Prince and Coun-
 try in that Extremity, gave the Conqueror his Death in
 a Cup of Poison, dying himself with him at the same
 time. By this means the *Japanese* lost all they had gotten
 in *Corea*, and left *China* to the After-Conquest of the
Tartars, which was very like, at this time, to have fallen
 to their own Share.

Now 'tis very probable, that this is the Reason of the
 horrid and inveterate Prejudices these two People enter-
 tain one against the other. The *Japanese* were the Inva-
 ders of the *Coreans*, and the *Coreans* robbed the *Japanese*
 of a glorious and fortunate Prince. But yet that Prince,
 how dear soever to the *Japanese*, was an Invader of the
 just Rights and Liberties of the *Coreans*; and they had
 no Reason tamely to give away to a foreign Power, that
 pretended to enslave and trample upon them, if they
 could find any Means, either by Force or Policy, to put
 a stop to it. However, it is certain, that the *Japanese*
 mortally hate the *Coreans*, and can never be possess'd with
 Sentiments of Friendship for them as long as the World
 stands, unless the Humour of the Nation strangely alters.
 They cannot, with any Patience, bear the Sight of a
Corean; and those People they take for such cannot walk
 the Streets without a whole Rabble at their Heels, flout-
 ing and pelting them with Dirt and Stones.

Thus it was with Captain *Saris* in several Towns in
Japan, where the People did not know what the *English*
 were; there was hardly any passing along, the Mob being
 so very rude and clamorous: Nay, the very Children had
 it in their Mouths, as well as the rest, *Core, Core, Core*
Hure. You *Corrans* with false Hearts. The *Japanese* are
 the civelitt, and most well-bred People in the World,
 only they cannot be civil to a *Corean*, or any body they
 think to be so. It is said, that there are very large Cities
 in this Province of *Corea*; and also towards the Sea a
 great many Bogs, impassable by Horse or Feet almost, so
 that they use the Sailing-Waggons, which are furnish'd
 with Wheels, as other Waggons are, but much broader and

and flatter, that they may not cut deep into the Mire, and have also Sails like a Ship; by which Contrivance, observing proper Winds, they pass all these Bogs easily. The Country affords Damask, Sattins, Taffeties, and other Silks, as *China* does; but they carry most of their Goods up and down in these Sailing-Waggons.

We have likewise some other Letters of a later Date from the same Factory, but very immaterial, and containing scarce any Circumstances worthy of Notice, except that the *Japense* were very importunate in demanding a Promise, that the *English* would bring no Padres, that is Priests, among them; for the Persecution being, at this time, very great, the common People did not care to run any Hazards, as not knowing how to distinguish between one sort of Christian Priests and another. But the *English* did not give them any trouble upon that head, but, on the contrary, seemed to bend all their Endeavours towards the augmenting the Trade of *China* to that of *Japan*; in which, perhaps, they went too far, and might have done for themselves, and their Country more, if they had attended this Point less; for the *Japense*, who are a very sensible People, considered this extending their Commerce in a bad Light; and, as they were naturally suspicious of Strangers, could not help fearing they would at last employ Force, in case fair means did not succeed. In these Notions they were confirmed, by the News they received, from time to time, of the great Disputes between the *Portuguese*, the *English*, and *Dutch*, in the *East-Indies*; measuring their Force at home, by their Actions abroad, and supposing that they wanted nothing but a specious Pretence to attack the two great Empires of *China* and *Japan*. The last Letter we have is dated from *Firando Marob* the 10th 1619, and in that there are some Particulars worthy the Attention of the Reader.

The Persecution in this Country, which before proceeded no farther than Banishment, and Loss of civil and religious Liberties, has since (as this Letter tells us) run up to all the Severities of corporal Punishment. The Christians suffered as many sorts of Deaths and Torments as those in the primitive Persecutions, and such was their Constancy, that their Adversaries were sooner weary of inflicting Punishments, than they of enduring the Effects of their Rage: Very few, if any at all, renounced their Profession. The most hideous Forms, in which Death appeared, by the Contrivance of their Adversaries, would not scare them, nor all the Terrors of a solemn Execution over power that Strength of Mind with which they seemed to go through their Sufferings. They made their very Children Martyrs with them, and carried them in their Arms to the Stake, chusing rather to resign them to the Flames, than leave them to the Boozes to be educated in the *Pagan* Religion. All the Churches which the last Storm left standing, this had entirely blown down, and demolished, and Heathen Pagods were erected upon their Ruins.

The Dead were persecuted too, as well as the Living, and the Graves were torn open, and the Bodies there inclosed thrown out into some safer Receptacle, so that now, if ever Christianity flourishes again in *Japan*, it must be upon a second Plantation, the first Stock being at this time to be completely pulled up by the Roots. There were other Troubles and Sins besides these in *Japan*; at this Time another dangerous Rebellion was rising at *Trusima*, but the Prince of that Place happening to be at that Time in the Court, the Emperor commanded him, either to write to his Subjects to lay down Arms, or immediately to rip open his own Belly. He chose rather to do the former, and so the tumult was at an End; but he was turned out of that Government, and sent to a Corner of the Northern Part of *Japan*, and the great Castle of *Trusima* (bigger, by Report, than the City of *Redester*) levelled with the Ground, all the Stones being carried away to *Oyaca* to rebuild that noble Piece, which the last Emperor *Ogheosam* destroyed after his routing the Army of the Prince *Fidara*, for it must be noted, though our Author does not expressly tell us of it, that the Emperor spoken of in this Letter was not *Ogheosam*, but some other his Successor, of whom we have no other Account than these Actions of his given us. It is said also, that this Prince *Fidara* was gotten fat out of the great Battle, and lay *inaganto* some where

about *Maso*; but this our Author hardly credits, it having been often reported so before.

Lastly, he gives us an Account of the horrid, barbarous, and cruel Deportment of the *Dutch* towards the *English* then residing in *Firando*; without any manner of Provocation they openly declared War against them, declared they would burn their Ships and Effigies, and destroy their Persons where-ever they could meet them; and this they did solemnly by Sound of Trumpet both ashore and aboard all their Ships; and to be as good as their Word, they broke into the *English* House with all their Force, and had actually sacrificed every Person there, if the *Japense* had not come in and fought vigorously in their Defence; for the Odds were vastly great, and one *Englishman* had at least one hundred *Dutch* to deal with. All this, and much more of this kind, they did; but for what Reason it cannot be imagined, unless because they would be Masters everywhere, and have the whole World to themselves: One Passage only, which shews their Modesty in those Parts of the World, is not to be forgotten; and that is, because it was in the Presence of the great Emperor of *Japan* himself, and all his Court. Our Author being there to do his Duty to the Emperor, upon the coming of the *English* Ships, found in the Presence a certain boasting *Dutchman*, that told the Emperor strange Stories of his own Country, and extolled his King of *Holland* to the Skies, as the greatest and most potent Prince in all that Part of the World, together with a vast deal of such Stuff as that.

But he, who understood the *Japan* Language, tho' the *Dutchman* thought he had not, told him before the Emperor, he need not have told his Majesty so loud a Lye as that, since all the World knew they had no King in *Holland*, but only a Stadt-holder, who did not so much govern the People, as the People govern him; and whereas he had the Forehead to say, that his King, as he called him, held all other Princes in Christendom in Subjection. It was well known, the King of *England* had been his Country's Protector, or they had never been in a Condition to come and make a Noise abroad in the World. The *Dutchman* was, it seems, pretty much confounded to lose his King so all of a sudden; but there was no Help for it, and the *Spaniards* and *Portuguese* that were there at the same time, well knew the Truth of what was said. Upon the whole, our Author adds, that the Company were extremely diverted with this Passage, and that there was old laughing, especially among the *Europeans*, to see the *Dutchman* so bewildered to find out this King, which they very well knew he could never do.

All these Transactions happened during the Residence of Mr. *Adams*, who spent the Remainder of his Days with Honour in *Japan*, where he died in 1620. But with respect to any of the future Actions of his Life, they are not recorded in any of the Writers I have met with; but though there be something very singular in this, yet I think it much more strange, that we have no distinct Account of the Time that the *English* withdrew themselves from this Country, or of the Reasons which induced them to take that Step; but, I think it is pretty clear, that they were rebbed thereto, either by the Frauds, or by the Power of the *Dutch*, for it is clear enough from the Letters which the Reader has already seen, but especially from the last, that these two Nations began to differ with each other as soon as they found that they were become too strong for the *Portuguese*. It was after the Expulsion of this last mentioned Nation, that the *Dutch* found themselves not a little hurt by their own Politicks; for having taught the *Japense* how to be on their Guard against all Foreign Nations, this drew upon them those Hardships which they have laboured under ever since, though they have not spared any Pains to free themselves from such disagreeable Marks of slavish Submission; but as we have already insisted sufficiently upon this Point in another Place, we shall not dwell upon it any longer here.

Before we conclude this Section, however, it will be proper to take notice of a Transaction which is not commonly known, and that is, of an Attempt made by us to recover the Commerce of *Japan* in the Year 1673. It seems to have been undertaken by the *East-India* Company, for the Ship sent for that Purpose sailed from the *English*

or hardly credits, it having

of the horrid, barbarous, Dutch towards the English in any manner of Provocation; they declared they would, and destroy their Persons; and this they did both ashore and aboard all as their Word, they broke their Force, and had actually, if the Japanese had not in their Defence; for the Englishman had at least All this, and much more; what Reason it cannot be would be Masters every-world to themselves; One Modesty in those Parts of Japan; and the rather, because at Emperor of Japan himself being there to do his coming of the English certain boating Dutchmen, stories of his own Country, and to the Skins, as the in all that Part of the of such Stuff as that.

Japan Language, tho' the old him before the Emperor Majesty to lend a Eye as they had no King in Holland did not so much govern in him; and whereas he his King, as he called him, adom in Subjection. It was had been his Country's en in a Condition to come World. The Dutchman founded to lose his King as no Help for it, and were there at the same time, as said. Upon the whole, Company were extremely deat there was old laughing, to, for the Dutchman to ng, which they very well

ed during the I of time of number of his Days with at in 1622. For with Actions of his I. they Arrers I. I. and with, y singular in this, yet I at we have no distinct English withdrew themselves ations which induced them it is pretty clear, that they y the Frauds, or by the ear enough from the Let- e Gen, but especially from began to differ with each at they were become too as after the Expulsion of the Dutch found them- own Politicks; for having on their Guard against all on them those Hardships ever since, though they themselves from such dis- mission; but as we have his Point in another Place, nger here.

on, however, it will be facton which is not con- an Attempt made by us on in the Year 1673. It the East-India Company, e- talked from the English Factory

Factory at Bantam, and arrived before the Haven of *Nangazaki*, which is the only one the Dutch are permitted to resort to, on the 20th of June. As soon as the Ship appeared in Sight of the Port, there came off two Vessels, one carrying a Japanese, and the other a Dutch Flag; but on their coming up to the English Ship, they hailed them in Portuguese, and demanded whence they came? The Captain answered in English, and in Dutch, that he came from England; upon which the Japanese Officer directed him to let go his Anchor, to forbid his Trumpet to play, and to forbear firing his Guns; to all which Demands he readily submitted.

After remaining at Anchor about two Hours, there came off two Boats, in one of which was the Governor, and his Secretary, accompanied by an Interpreter, who spoke Portuguese; and in the other Boat there were four Interpreters, who all of them spoke Dutch. As soon as they came on Board, the Captain conducted them to his Cabin, and when all had taken their proper Places, the Governor asked him very gravely, if he was an Englishman, and what his Business was there? He answered, that he was an Englishman, that he was charged with a Commission from the King, his Master to re-establish the Trade settled by his Subjects fifty Years before in Japan. He added, that he was charged with a Letter from his Britannick Majesty, and another from the East-India Company, addressed to the Emperor of Japan; and at the same time that he said this, he produced a Copy of the Privileges granted to the English by the Emperor, written in Japanese Characters, which the Governor having read, was very importunate for the Original under the Emperor's Seal. The English Captain, however, told him ingeniously, it was not in his Power to produce that, because the Emperor had demanded it should be delivered up at the Time the English quitted Japan, with which they could not refuse to comply. The Governor then put up the Copy of the Privileges, but promised the English Captain, that as soon as an Answer came from Court to his Request, he would deliver it up.

After a short Silence, the Governor asked him, if England was at Peace with Spain and Portugal? What Religion the English were of? If it was a long time since King Charles had married the Daughter of the King of Portugal? and how many Children he had by her? This very plainly shewed, that the Japanese were very inquisitive, and at the same time very well informed as to the Affairs of Europe. The Captain answered, without Hesitation, that the English were at Peace with all the World, that it was true King Charles had married the Daughter of the King of Portugal, but that he had no Children by his Queen; and that as to Religion, the English were such sort of Christians as the Dutch, and not such sort of Christians as the Portuguese, or Spaniards; that the Custom of Europe required Kings to marry Persons of like Rank with themselves, and never the Daughters of their Subjects. To all this he added farther, that he had Presents of great Value for his Imperial Majesty; at which the Governor seemed to be very much pleased, and soon after retired. In about two Hours Time he returned again, and then told the Captain, that if the English would be satisfied with such a Trade as the Dutch enjoyed, very possibly they might obtain it; but then, according to the Custom of the Country, it would be fit for them to lend their Cannon and their Ammunition ashore; after which he would inform the Emperor of every thing, and that after receiving his Imperial Majesty's Answer, if it proved favourable, he was willing to furnish them with a House. The Captain took all this in good Part; he delivered up his Arms and Ammunition, and suffered the Governor, who brought with him a great Number of armed Boats, to station them as he thought fit; which he did, by ranging some a-head, some a-stern, and causing a double Line to anchor on each Side of the Vessel, and all within half Cannon Shot.

This being done, the Governor came aboard again, attended by his Interpreter, who was a Dutchman, and in whom he had a great Confidence, and examined every one of the Ship's Company, particularly first as to his Country, whether he was an Englishman, and not a Portuguese; whether he had ever been in Portugal; or could speak the Language of that Country? and whether he was a Christian.

After the Dutch Form, or the Portuguese? These Questions being all answered, they proceeded next to take an exact Account of all the Bales of Merchandize on board the Ship, and drew up a kind of Bill of Lading with great Exactness. After this the Governor asked, if other Ships did not sail with them from England? what was become of them? how long they stayed at Bantam? and what other Places they had been at in the East-Indies? These Questions being answered to his Satisfaction, the Governor retired for good and all, and carried away with him what had been delivered up to him. On the 30th of the same Month he came on board again, attended by his Secretary and Interpreters. He was received with all imaginable Civility and Ceremony by the Captain, and after they were seated together in his Cabin, he proceeded to make a kind of Discourse to this Effect: That it was true, there had been formerly an English Factory in Japan, that those who composed it had been very well treated, and never had expressed any sort of Dissatisfaction; notwithstanding which, it was now forty-nine Years since any English Ship had entered their Ports, and therefore he would be glad to know the Cause of so long an Absence, as also the Cause of their coming thither again. If we depend upon this Governor's Calculation, it would fix the Time of withdrawing the English Factory to the Year 1624, and then it would appear, that Mr. Adams survived that Event near seven Years; but if that were the Case, it may seem somewhat difficult to account for the English knowing when his Decease happened, unless we suppose that they received the News from the Dutch, which, as it is very probable they might, we may look upon this as a Point settled.

But to return to the Captain, who in answer to the Speech made him by the Japanese Governor, told him, that as to the Cause why the Factory broke up, he could say nothing to it at all, as being totally unacquainted therewith. That as to their long Absence, he conceived it might be produced by that Confusion into which his Country had been thrown by the Civil Wars that happened not long after; that since that Time they had been likewise engaged in two very long and bloody Wars with the Dutch, and that after so long an Intermission, it was a thing extremely difficult to find a Pilot capable of conducting a Ship to their Coast, which in Europe was represented as a very difficult and perilous Voyage. The Governor heard him with great Attention, and asked him, when he had done speaking, whether he had not on Board his Vessel some Person who had made that Voyage before? the Captain answered, that he had not: Why then, replied the Governor, How came you hither? the Captain answered him, that they had some old Charts, which were exact enough for that Purpose, as they had found by Experience.

The Governor seemed mighty well satisfied with so fair and so distinct an Account, and when he returned to the Town, left his Secretary on Board to receive all the rest of the Arms and Ammunition they had, in which he was so exact, that he took away with him some double barreled Fowling-pieces, that were part of the Present intended for the Emperor; but he made a very curious and exact Inventory of every thing that he got into his Hands, and gave a Copy of it, signed by way of Security, to the Captain. After all was over, they parted very good Friends, and the Secretary told him, that so far as depended upon him, nothing should be wanting that might procure him a favourable Answer from his Court; for which the Captain thanked him, assuring him at the same time, that his Nation had an entire Confidence in the Japanese.

On the first of July the Governor and his Interpreters came on Board again, and asked several Questions; and upon this Occasion there happened a Dispute between the Captain and the Dutch Interpreter, who confidently asserted, that the Captain had told him several things which that Gentleman affirmed never entered into his Head. The Governor upon this took a fresh Account of every Man that was aboard, setting down his Name, his Age, his Employment; and when he had done this, he desired the Captain to prepare an exact List of what Commodities every Man had to dispose of, as also of what belonged to the Company; and then took the Dimensions of the Ship, of the Masts, Yards, &c. At his Departure, he charged

the Captain, if he wanted any thing, to make certain Signals, which he mentioned; and at the same time told him, that in case any of his People died, he should make two Signals, and should not throw the Body over till they came and examined it. The Day following the Interpreters, and some Gentlemen of the Emperor's Court, came on Board in the Morning, and asked abundance of Questions, to all which the Captain gave such clear and distinct Answers, that they seemed perfectly satisfied.

They returned again after Dinner, and brought a great Quantity of Retirements, which had been bought by the Captain of the *Dutch* Ships, and at a very high Price, which, however, the *English* Captain received with much Complaisance, and testified his Thanks for them, as if it had been a great Favour; and at the same time desired leave to hoist his Flag, and to sound his Trumpets, which Demands were granted. The following Days were spent much in the same manner; that is to say, the same Persons came on Board, and still asked abundance of Questions, which turned chiefly upon Religion, and the Difference between the Faith professed by the *Portuguese* and *Spaniards*, and that held by the *English* and *Dutch*, which, it may be easily supposed, gave them a good deal of Trouble on both Sides.

At last, on the 28th of *July*, about Ten in the Morning, the principal Secretaries, with abundance of Interpreters, and a large Train of Attendance, came on Board the Ship, in order to inform the Captain that they had received an Answer from Court, and that it was by no means favourable. It amounted, in short, to this, that his Imperial Majesty had declared he could not permit any Commerce in his Dominions to the Subjects of a Prince who had espoused the Daughter of the King of *Portugal*, the principal Enemy of him and his Empire, and that therefore he was to prepare himself for sailing as soon as it was possible.

The Captain represented upon this, that the Season of the Year considered, it was simply impossible for him to stir, and therefore he hoped they would allow him to stay till the proper Season, and the Return of the Trade-Winds, gave him an Opportunity of proceeding thence with Safety. To which reasonable Demand they, without any great Difficulty, consented: The Captain from this took occasion to propose another thing, which, he believed, would have been as readily granted, from the Sorrow and Concern which these good People expressed. In short, the second Favour he asked was this, that since he had spent two Years in his Voyage, and since it was not probable they should ever have an Opportunity of purchasing *English* Commodities again, he might have Leave given him to dispose of his present Cargo: But the Reception given to this Proposition was very different from what he expected; he was told, that none in the Empire durst either adventure to purchase any of the Goods he had on Board, nor so much as to request a Licence for that Purpose from Court, where, when once a Resolution was taken, it was absolutely final, and there was no getting it either reversed or reviewed. To testify, however, their own good Will to the Captain, and to show him how ready they were to do any thing they could to oblige him, they consented that he should purchase Provisions, and whatever other Necessaries he wanted, with Merchandise, and not with Money.

It in the whole Course of these Proceedings the Captain met with many things that surprized him, there was one fell out more strange than all the rest, and it was this, that the *Japan* Government acquainted him with more of the Affairs of *Europe* than he was Master of; for discoursing of the *Dutch* Wars, he enquired how long the *English* had been at Peace with that Nation? and upon the Captain's giving him a clear Answer, and mentioning also the Time of his own Departure from *England*, the Governor replied, then you know nothing of the Attempt made to conquer the *Dutch* by your Master, in Confederacy with the King of *France*, and the Bishop of *Mozyler*, and that they are already Masters of three of the seven Provinces? The Captain assured him, that he did not, and that the News very much surprized him. However, he very easily understood from thence, that he was very little obliged to the *Dutch* for their good Offices in this Negotiation.

Before his Departure, he resolved to make another Trial as to what might be done hereafter; and with this View, he enquired of the Governor, whether, after the Death of the Queen of *England*, it might not be possible for his Majesty's Subjects to obtain Leave to trade in *Japon*? To which the *Japanese* Officer made him this remarkable Answer, that he would not advise the *English* to make such an Attempt; for that as the Sweat once expelled, never found an Entrance again into the human Body, so the Orders of the Emperor once issued, the Matters which occasioned them never more found admittance into his Mind. All the Time they remained in the Port, the Governor, his Secretary, and other Officers, made them frequent Visits, and fatigued them with an infinite Number of intricate, and some of them very impertinent Questions, which gave them a great deal of Trouble; but if we except this, they were in all other things used with as much Kindness and Civility as it was possible. When the Season came that they might depart with Safety, the Governor came on Board, and brought with him all that he had taken from them, except their Powder, which he declared it was not in his Power to put on Board till they were ready to sail; but at the same time he told the Captain, that he would take care none of the *Dutch* Ships should stir out of Port, till he had time to get safe to *Bantam*, because, as he was informed, there was a War broke out between the two Nations.

On the 28th of *August* 1673, the Wind being fair, the Captain received positive Orders to sail without Delay, which accordingly he did, fully persuaded in himself, that if it had not been for the Intrigues of the *Dutch*, he might have succeeded in his Design, and have raised his Reputation by the effectual Execution of his Commission. This is certainly the last Attempt made in our Favour, and in all probability, it is the last that will be ever made, unless a more enterprising Spirit should rise in succeeding Generations than seems to actuate the present Race of *Britons*. In the succeeding Volume we shall insert some farther Accounts of this Country; but before we dismiss this Subject, it cannot but be agreeable to the Reader to see the great Maxim of the *Japanese*, upon which our Exclusion is plainly built, viz. *The Rejection of admitting no Strangers into their Country on any Terms*, explained, and set in a clear Light, the rather, because the Examination of this Point will naturally lead us to explain some others that will render the Connection of this Discourse more easy and obvious than it would otherwise be.

The original Government of *Japon* was by an absolute Monarch, in whose Person were united all those Characters that naturally give a Lustre to a Man in the Eyes of his own Species. He had besides the Regal Dignity, that of head Priest, supreme Legislator and Director of the Forces of the Empire all invested in him; but as here and elsewhere Ability is not always annexed to Blood, so it fell out, that some of these supreme Monarchs, who in their own Language are stiled *Dairy*, which signifies elevated Lord, were in some measure governed by those to whom they intrusted the Command of their Forces; and this prime Minister, and General in chief, had the Title of *Cubo-Sama*, which has very near the same Signification with the *Turkish* Title of *Vizir-Azem*, that is, *most illustrious*, or *most resplendent Lord*; and at length the *Cubo-Sama* became in Fact the Master of the Empire, and the *Dairy* had the Title only, or at the most an empty Shadow of Authority, or rather of Sovereignty.

This Usurpation in the *Cubo-Sama's* began about the twelfth Century, and occasioned great Wars and Disturbances in *Japon*, from whence arose that Multitude of little Kingdoms and Principalities into which this Country was divided, when first it was visited by the *Europeans*. For when the Governors of Provinces saw that the *Cubo-Sama's* had made so free with their Lords and Masters the *Dairy's*, who were, and still are, treated with divine Honours, they thought there might be less Crime in refusing these lawless Ministers, and to set themselves up for Kings and Princes. *Yao-Sama*, which is another Title of Honour, tho' used by most Writers, and particularly by such as I have transcribed in this Section as a proper Name, was the first who formed a Design of making the *Cubo-Sama* as absolute as

ever

olved to make another hereafter; and with this error, whether, after the, it might not be possible to obtain Leave to trade in Officer made him this red not advise the *English* to the human Body, to the Matters which occa- mittance into his Mind. All Port, the Governor, his Se- them frequent Visits, and Number of intricate, and Questions, which gave them we except this, they were much Kindness and Civility alon came that they might nor came on Board, and d taken from them, except d it was not in his Power ready to fail; but at the that he would take care itir out of Port, till he had ause, as he was informed, ween the two Nations.

the Wind being fair, the rs to sail without Delay, persuaded in himself, that es of the *Dutch*, he might nd have raised his Reputa- of his Commission. This ade in our Favour, and m will be ever made, unless d rise in succeeding Gene- e present Race of *Britens*. shall insert some farther Ac- ore we dismiss this Subject, e Reader to see the great ich our Exclusion is plainly sitting no Strangers into their d, and set in a clear Light, ation of this Point will na- others that will render the re easy and obvious than it

Japon was by an absolute united all those Characters a Man in the Eyes of his the Regal Dignity, that of and Director of the Forces m; but as here and elin- enced to Blood, so it fell n Monarchs, who in their, which signifies elevated yerned by those to whom f their Forces; and this chief, had the Title of the same Signification with, that is, *most illustrious*, length the *Cubo-Sama* be- mpire, and the *Dairy* had empty Shadow of Autho-

Sama's began about the great Wars and Distur- ble that Multitude of little y which this Country was by the *Europeans*. For law that the *Cuo-Sama's* and Matters the *Dairy's*, ith divine Honours, they e in resisting these lawless p for Kings and Princes. le of Honour, tho' used y such as I have tran- Name, was the first who *Cuo-Sama* as absolute as ever

ever the *Dairy* had been; but he suffered himself to be di- verted from this Scheme by the Invasion of *Corea*.

His Son, whose Name, according to the *Japoneſe* Chro- nicles, was *Fide-Jori*, succeeded him, and is the young Prince mentioned by Captain *Saris*, whose Tutors rebelled against him, and who was at last deprived of his Empire by that Monarch, who granted the Privilege of settling in *Japon* to the *English*, and whose Name, according to the Chronicles before-mentioned, was *Jef-Jas*, which explains the signing of his Letter, and of the Articles; for as to the Title at the Head of them (*Ogofobamma*) it is a Corruption of the Words *Cubo-Sama*. After the Defeat of the young Prince, who in the Letters herein cited is called *Fidai*, he reigned without any farther Dispute; and all the succeeding *Cubo-Sama's*, whom our modern Writers call Emperors of *Japon*, are his direct Descendants. He was the greatest Politician that ever this Country produced, and his Maxims have been steadily followed by all his Succes- sors.

These Maxims were to reduce all the little Kingdoms into Provinces of his Empire, which he effected, to extir- pate the Christian Religion from a Principle of Policy, that the People might not be induced to take up Arms against their Emperors from a Notion of Religion; and upon the same Principle his Successors expelled all Foreigners, and retrained the *Japoneſe* from going out of their own Country: For, it was the settled Opinion of this new Legislator, that the only Way for him and his Family to reign in Peace, was to exclude all Thoughts of Novelties, and to keep the People closely to their old Laws and Cu- stoms, which he thought were best adapted to the Main- tenance of the Imperial Dignity, and to their own Happi- nefs. It, in Exception to this general Rule, the *Chinese*, and the *Siameſe*, and the *Dutch*, are allowed some kind of Commerce in this Empire, yet it is against the Grain, and contrary to the Maxims of their Policy, as appears plainly by the severe Restrictions under which these Nations are allowed to carry on their Commerce. It is no less certain, that the *Japoneſe* hate and despise those very Nations with whom they trade, for submitting to these Regulations, which were no less intended to exercise, and even to wear out their Patience, who were to be subjected to them, than for their Security and Preservation, by whom, and for whose sakes, they were imposed.

For it is to be observed, that the Inhabitants of this Empire, considered freely, and without Prejudice, are as wise, as quick-witted, as sensible, as generous, and as well bred a People as there are upon the Face of the Earth. They love Freedom, and understand it much better than all other Nations; they consider their Laws as Fences to that Freedom, and therefore never repine at the Severity with which they are executed; but call that Tyranny, which exceeds the Measure of those Laws, because this proceeds from the Prince himself; whereas Severity, in the Execu- tion of Justice, proceeds from the common Depravity of a Nation. In one thing their Law is very remarkable; they have Attainders as well as we; but if a Man expiates his Offence by voluntary Death, his Family suffers nothing in Honour, Person, or Property. This passionate Love of Freedom, joined to their natural Boldness and Contempt of Death, made them love the *English* extremely, of which I can give the Reader a very singular Proof, which at the same time will resolve a Difficulty, that I must confess, when I first entered upon this Section, I thought absolutely beyond the Reach of Solution.

They have amongst them a Title of Honour, which they call *Cami*, which the *Spanish* and *Portuguese* Writers thought equivalent to Knighthood; and the *French*, who only transcribe those Authors, render it by the Word *Chevalier*. This Honour they conferred upon our Country- men *Adams* and Captain *Saris*; and from hence, beyond Question, they came to be styled the *Chevaliers Adams* and *Saris*; and, I conceive, that it was a Distinction no other Foreigners ever attained. It likewise appears by the Que- stions put to the last *English* Captain that was there, that these People were not a little elated at the Loss of the *English* Factory, for which they could never account; but probably understand it to have risen from their Affection to their Brethren the *Portuguese*, in which Error they were,

without doubt, confirmed by the *Dutch*, who have left no Method untried; and, indeed, who can blame them for it, to keep this profitable Commerce entirely to them- selves.

These Observations and Remarks have cost me a great deal of Pains and Trouble; but if they prove entertaining and satisfactory to those judicious Persons, who have hitherto expressed a Regard for this Work, I shall think they are fully repaid; and it is from the Hopes of this that I shall adventure to close this Section with some Thoughts on the Means of recovering this long lost Trade. As we are ex- cluded at present from *Japon*, upon a Principle of Policy only, and not from any actual Misdemeanour, as was the Case of the *Portuguese*, who, under Colour of propagating the Christian Religion, interfered with the civil Concerns of that Nation, and gave their Government a great deal of Trouble, so, I conceive, that the only way to obtain Ad- mission again into *Japon*, is to remove the Prejudices that have been conceived against us.

This too, I apprehend, might be very easily done, if the Government of that Country were apprized of the Change that has happened in our Constitution, by which it is become impossible that any of our Princes should ally themselves by Marriage, either to the Crowns of *France*, *Spain*, or any other Popish Power. I do not pretend to say, that this would afford them any real Security, or that they would be at all in less Danger from us now than they were before; but then, if it be considered, that they were in no Danger then, and are in no Danger now, but that their Apprehensions flow entirely from an ill-grounded Pre- judice, the removing that Prejudice, however ill-ground- ed, may be of Use to us. In the next place, if the *Dutch* have a great Commerce with the *Chinese* at *Batavia*, and are thereby enabled to furnish a proper Cargo for *Japon*, we have a direct Trade to *China*, and consequently lie under no Impediment that Way, as we did at the Time our former Factory was settled there. But it will be said, How shall the *Japoneſe* be informed of this? Can it be ex- pected that the *Dutch* will acquaint them? and if they will not, how are they to be informed? Why, truly, that is the very Question; for, I conceive, that if they were once satisfied in that Point, the rest would very easily follow.

The Means therefore that I would propose, should be the landing in the Northern Part of the great Island of *Nippon*, two or three Persons properly instructed, who, under pretence of Shipwreck, might desire and obtain a Passage to the *Dutch* Port; and as this is the biggest of the three Islands that compose the Empire of *Japon*, I conceive, that in their Passage across it, they might have many Op- portunities, especially if they took Pains to learn the Lan- guage, to inform a People so inquisitive as these are, of the Particulars which it concerns us most that they should know; and if at a proper Season a Ship should be sent from the Coast of *China* to the Port of *Nangazaqui*, to enquire after these People, it might afford us an Opportunity of seeing the Pulses at least of the *Japoneſe* once more.

I foresee a Multitude of Objections that may be made to this Scheme, such as, that it will be found extremely hard, if not impossible, to meet with Persons, either capa- ble, or willing to undertake it. But I have considered these Objections, and I do not think they have much Weight. There are so many People, who at this Juncture, ship themselves for the *East-Indies* in the most low and labori- ous Stations, in hopes of bettering their Fortunes, that I am persuaded, if a Reward of three thousand Pounds, or some such Sum, was promised to be paid immediately on their coming back, there would not want some who would offer themselves for this Service; and then as to their Ca- pacities, they might be tried, and even improved, before they were sent; and they might have such Instructions given them, though not in Writing, for that might hazard all by being found upon them, as might enable them to execute this Commission with great Probability of Success.

That they should at once obtain a Privilege and settled Trade there, is what I am not sanguine enough to expect, nor is it what I mean by the Probability of executing their Commission with Success; but that they might be able to learn some News of the *Japoneſe*, and carry them some News of us, which in Time, and with proper Helps, might

come to somewhat, is what I cannot help thinking very probable; at least it is apparent, that if some Attempt of this kind be not made, we can never hope for any thing; and to del. air in a Matter of Trade, is incompatible with the true Spirit of a trading Nation, and with ours more especially. For after all, what is there in this more extraordinary than what was actually performed by Mr. Adams? He came to *Japon* helpless, and without Friends; his own Merit recommended him, and made him Friends, such Friends as enabled him to do the great Things that he did, Things to the full as great or greater than those we expect from the Persons that should be now sent; and therefore, whoever will have this Method set aside, for want of Probability, is bound to offer a Method more probable, and in that Case I shall most readily submit.

But if, while we consider all Attempts of this sort as chimerical or unpracticable, any other Nation should step in, and either expel the *Dutch*, or share with them in that Commerce, it will be a very high Reflection upon us, who may pretend to it with at least as great, if not greater Hopes than any other. That this Conjecture of some other Nation's making an Attempt of this Nature is not absolutely wild or groundless, may appear from the Endeavours of the *Russians*, who have actually reached in their Discoveries some Islands, the Inhabitants of which make use of Money stamped with *Japanese* Characters; from whence it is with great Probability conjectured, that they are Vassals at least, if not Subjects, to that Empire. There are other Nations too, as will appear by the succeeding Sections, which have found their Way to the *East-Indies*, and the Coasts of *Cosna*, though it was thought they laboured under insuperable Difficulties, and why they should not be able to extend their Commerce farther, and even reach *Japon*, is what no good Reason can be assigned to prove, any more than I apprehend any told Cause can be shewn why we should not endeavour to be before-hand with them in a Point of such Consequence.

But, perhaps, some Critick may demand, how do you know it is of such Consequence? How can you take upon you to assert to confidently Things relating to a Place and People at such a Distance? How can you tell that all these Points have not been long ago considered by better Judges than yourself, and such Projects as you propose upon substantial Motives rejected? or what Reason is there that you should expect the Schemes you form in your Closet should prove for Rules to such as are better acquainted with these Matters than yourself? I am very sensible, that there are a Race of ill-natured People in the World very capable of throwing out such Reflections as these, and I know too, that many of them do it against the Conviction of their own Minds, and merely from a Spirit of Envy. But, however, as such Questions may have a bad Effect on the Minds of a better sort of People, by which I mean Persons of honest Dispositions, and who really wish well to the Publick, and yet are led away by such trite Annuaiverfions, for want of a due Measure of Attention, I think it may not be amiss, for their sakes, to examine such Notions once for all, and to shew, that however specious they may appear at first Sight, they have in reality no Foundation.

In the first Place I must observe, that the Theory of Trade may be as well acquired from Books and Enquiries, as from being actually concerned in it, and that Experience shews us the most extensive Projects; and such as have been attended with the greatest Success have been formed by speculative Men, who, by reasoning upon Facts, have been able to form much better Judgments, with respect to Commerce, than those from whom they received the Facts upon which they argued. But, to come closer to the Point, and by answering these Questions, so far as they regard this Subject, to put an End to this Dispute, since the same Answers will serve with equal Truth and Certainty on any other Occasion. If we know the Situation and Extent of a Country, its Climate, Soil, Product, and Manufactures, we can very easily, and with the utmost Certainty determine, whether it be a Country worth visiting, and what kind of Commodities are like to have vent there. In this there is nothing strange or wonderful, nothing that requires a very extraordinary Degree of Penetration or Sagacity. For, in whatever Climate Men live, they must have Food and Rai-

ment, and in proportion, as they are civilized, they will not only desire the Necessaries, but aspire also to the Conveniences of Life, and what we call the Instruments of Luxury, which may also be suited to their Humours, if we have a tolerable Account of the Manners and Customs of the People.

We know very well what Commodities and Manufactures of ours are taken off in *Spain*, *Portugal*, and Part of *France*; and therefore, when we know that the best Part of the Empire of *Japon* lies in pretty near the same Situation, we cannot be much at a Loss for the Goods the Inhabitants of that Country are like to take off our Hands, in case we had an open Trade with them; but, to be more certain in this Case, we have it in our Power to learn what the *Dutch* carry thither; and upon Enquiry, we shall find, that they are chiefly Scarlet, and other fine Cloths, Camblets, Serges, and our own Kerseys, together with some Silk Manufactures, such as rich Damasks, Brocades, fine Night-Gowns, and in general, a great Variety of Linnen, Woollen, and Cotton Cloths, together with Glais and Stone-Wares, Coral, and many other things. We may therefore with great Confidence pronounce, that if the Way were once opened to us, we might be able to vend a vast Quantity of the natural Commodities and Manufactures of our Country there.

Besides, since the Discoveries made by the *Russians*, it is very certain, that the Countries to the North of *Japon*, particularly the great Peninsula of *Kamtschatka*, which perhaps is the Continent of *Yedzo*, is very thoroughly peopled by Inhabitants that are much inclined to Trade, and who, from the Coldness of their Climate, must necessarily stand in need of our coarser Cloths, and other Manufactures of the like kind.

If the vast Distance between us and them be objected, let us consider how the *Dutch* carry on this Trade, who are not at all nearer them than we; for if they can manage it with Ease, the same Method surely will render it practicable for us. They fit out their Ships from their Settlements in the *Indies*, viz. *Batavia* and *Malacca*; and as we have Settlements in the *Indies* too, our Ships may be fitted out from thence; and if even these Settlements are at too great a Distance, this is no invincible Objection, since there seems to be no Cause why we should not attempt at least to open this Trade from the Coast of *Cheoa*, where we had formerly a Factory in the Island of *Cbusan*, of which I have given some Account, and there is no doubt, but that we might either obtain that, or another more convenient again, if we apply for it.

As to the Sentiments of People who have visited the *East-Indies*, and resided a considerable Time in them, there is no Reason, suppose their Notions contrary to mine (which however is not the Fact) to yield implicitly to them. They may have other Motives for their Opinions, than those which they think fit to discover; and if after all, there should be ever so good Reasons advanced why the *East-India* Company should not endeavour to acquire this Trade, yet I cannot apprehend, that what I have offered, ought to be at all affected thereby, since it is certain, that if the Commodities and Manufactures of this Country are exported, that Exportation must turn to the general Benefit of the Nation. This was the Sentiment of the great *De Witt*, with respect to the *East-India* Company in *Holland*. He made no Difficulty in declaring, that how useful soever that Company might be to the Republick in its Infancy, there might nevertheless come a Time, when the Interests of the Company might clash with those of the State; and if this might be the Case in *Holland*, it may be to elsewhere.

It is very easy to conceive there may be good Reasons to induce even the greatest Companies to limit their Commerce, because this will put it in their Power to manage it the better, and to render it more advantageous; but there never can be any Reason assigned for restraining the Commerce of any Nation. The more of her Commodities and Manufactures a Nation can send Abroad, the more People she must necessarily employ at Home, and the more her Shipping must increase; neither is there any Fear that this should exhaust their People; for while her Trade flourishes, it will never fail to invite Strangers, and

through the Red-Sea by *Alexandria* ceas'd, and was afterwards carried on by the Way of *Trebizon*, *Damascus*, and *Aleppo*, which created the Trade of the three Cities or States of *Venice*, *Genoa*, *Pisa*, &c. And those Goods were not only vend'd in all the Countries bordering upon the *Mediterranean*, but were sent to *England*, *Germany*, and the *Netherlands*, and all over the *Baltick*, which gave Encouragement to the Traffick of *Bruges*, where the Commodities of the North, as Corn, Naval Stores, &c. were lodged in the Summer, and where those Ships took in the Commodities from the *Levant* back again to the *Hans-Towns*; and those Ships that came from the *Levant*, transported the Northern Goods from *Bruges* into the *Mediterranean*.

Such was the Course of the Trade then, and it is very clear from our old Writers, that Spices and other *Indian* Commodities were never totally Strangers in this Island, nor indeed could they, since we had an annual Vessel, and sometimes more from *Venice*, well supplied with such rich Goods; and by this means, though such Commodities might be dear, since it was in the Power of the State of *Venice* to raise them almost to what Prices she would, yet we had them regularly, and in considerable Plenty, by this Method, down to the Reign of *Queen Elizabeth*, when the last great Carack, which came from that Country, was lost upon our Coast, of which *Sir William Monson* was an Eye-witness; and has given of it, as he does of all things, a most clear, entertaining, and instructive Account, which for the Reader's Information, and my own Justification, I shall transcribe, as it gives a clearer, fuller, and more authentick Account of these Points, than is any where else to be met with.

"The *Venetians* engross'd the whole Trade upon those Seas, and furnish'd us with the rich Merchandize of *Turky*, *Persia*, and *India*, at what Rate they pleas'd themselves; and yet this was not all, for they labour'd to make us Strangers to the *Great Turk*, the *Egyptians*, and bordering Countries, and brought them to that Ignorance of our Nation, that they thought *England* to be a Town in the Kingdom of *London*. The *Venetians* sent yearly their *Argosies* to *Southampton*, which Town enjoy'd a Charter from the Kings of this Land, which was wrested out of their Hands by the Earl of *Leicester*, to the utter Decay of that Town; and the *Argosies* since then have become Strangers in *England*, the last whereof took her leave with an unfortunate End, which my Eyes were Witnesses to in the Month of *October* 1587.

"This goodly Ship of one thousand one hundred Tuns, being richly laden with the accustomed Commodities they us'd to serve the Kingdom with, and being come in the Channel, as high as the *Life of Wight*, which Land the *English* Pilot visibly made, this Pilot, call'd *Forster*, who for his excellent Skill, was not long before redeem'd out of the *Turkish* Captivity, by the *Venetians*, to serve in this Voyage. Upon this good Land-fall the Pilot put the Passengers, in hopes, many of them being of great Account and Esteem, the next Morning to harbour them; for Night growing on, he would not hazard to put in with the Shore that Evening; but the Gentlemen being impatient of Delays, and the Land appearing unto them, they thought themselves free from all Danger, which is the common Ignorance of many that know not the Seas.

"But to be short, they compelled the Pilot by Force to put in at the *Needles*, the westernmost Part of the *Life of Wight*. When the poor Man, rather with Persuasions, nor Tears, could prevail, he did his best to enter the Channel of the *Needles*; but such was the Greatnets of the Waves, and the Unwieldiness of the Ship, not answering her Helm, that she struck upon the Shingles, where she, her Goods and Company, except seven poor Creatures, perished. The Sea betwixt the Island and the main Land was criss'd, by her Lads, with several sorts of Merchandize. What was saved was not worth speaking of. I had the Fortune to light on two Butts of Muskadine floating on the Sea, for then was I riding at *Cowes*.

"In the first Ship I ever went Captain of, I found these two Butts of Muskadine, a great Help to us in our Voy-

"age, when we were reduced to Extremity for want of Victuals. About this Time our Merchants of *London* began to take into Consideration these great and inestimable Riches brought into the Land by the *Venetians* and *French*, who absolutely enjoy'd the Trade of *Turky*, and a great Part of the Wealth which came out of *Persia* and *India* was retail'd from them to us. They desir'd how such Commodities might come to our Hands by a more direct Way than to be serv'd as we were at second hand, and therefore resolv'd to make an Overture by Favour of the Queen, and her Letters to the *Great Turk*, for an immediate Traffick from *England* to *Turky*, and his Dominions, and so home again, with Ships of her Subjects, without being beholden to others.

"These Letters were sent by her Majesty, and received with great Humanity and Courteously by the *Grand Seignior*, as appears by his Letters yet extant. He could not give more Respect and Honour to her Majesty, than by shewing a Willingness to embrace her gracious Propositions of Trade; and in Conclusion, Articles were agreed upon, and a Grant of great Privileges and Immunities to her Majesty's Subjects, which have since continu'd, and been peaceably enjoy'd. We may reckon from this Time the Decay of State in Matters of the *Venetian* Trade: For *Argosies*, which were wont to visit us, are now unknown to us, and we possess the Wealth they were wont to reap. The Commodities of *Persia*, and the *East-Indies*, are brought by ourselves in our own Vessels directly out of *Turky*, where we have obtained as great a Freedom as we can desire. Such Places as the *Venetians* were wont to take Freight in their Ships to transport from Port to Port now we absolutely enjoy that Privilege; for all Strangers are more desirous to put their Goods into *English* Bottoms than theirs."

Thus from the Conclusion of this Trade, we may easily conceive both the Nature and the Importance of it, and the prodigious Change it made, as well in the Affairs of the *Venetians*, as in our own, when it came to be carried on by the Subjects of *Great-Britain*: Yet here it will be necessary to distinguish between this and the true Commerce of the *Indies*; for, though we found a Way to free ourselves from this Dependence upon the *Venetians*, yet it was by breaking in upon their *Levant* Trade at first, and not by sailing directly to these Eastern Parts, which was a Work of great Time and Labour, and brought about by a great Variety of Accidents, with the Relation of which the *English* Reader cannot but be extremely well pleas'd, since it will show him the great and speedy Progress of our Maritime Strength and Power at Sea.

3. The first Person, so far as I have been able to learn, that ever propos'd the establishing the *East-India* Trade in *England*, was one *Mr. Robert Thorne*, a Merchant of *London*, who settled at *Seville* in *Spain*, and residing there many Years, gain'd a perfect Knowledge of the Manner in which both the *East* and *West-Indies* were discovered. This very judicious Gentleman, who from his Writings yet extant, appears to have drawn his Knowledge, in an equal Degree, from Books and Experience, apply'd himself about the Year 1527, to his Majesty King *Henry VIII.* to whom he represent'd very fully, yet in few Words, the vast Advantages that would accrue to his Subjects by a direct Commerce to the *East-Indies*; and to put his Proposal to the great Genius and high Spirit of that Prince, he advis'd him not only to encourage this new Navigation, but to attempt it by a new Rout; for as the *Portuguese* had push'd their Discoveries to the East, and the *Spaniards* to the West, so he was ambitious that the *English* Nation should find a Way to the *Indies* of their own, and that by the North.

But it is worthy of Observation, that this Gentleman was so early aware of the insuperable Difficulties that have been found in searching for a Passage to the North-East, and therefore propos'd very sensibly, and for good Reason, sailing directly North, or at least very near it; from which he thought many Advantages might be gain'd, and many Inconveniencies avoid'd. As for instance, he conceiv'd that this might be undertaken at such a Season of the Year, as to enjoy the Benefit of the half Years Day in that Climate; and he thought it absurd and ridiculous to suppose,

to Extremity for want of our Merchants of Londonation these great and ineluctable Land by the Venetians enjoyed the Trade of Turkey, which came out of Persia them to us. They devised to come to our Hands by a served as we were at second to make an Overture by Letters to the Great Turk, from England to Turkey, and again, with Ships of her olden to others.

her Majesty, and received courteously by the Grand Seignors yet extant. He could honour to her Majesty, than embrace her gracious Conclusion, Articles were of great Privileges and Intubjects, which have since decay of State in Matters of Regesses, which were wont to us, and we possess the ap. The Commodities of are brought by ourselves in of Turkey, where we have as we can desire. Such went to take Freight from Port to Port now we ge; for all Strangers are woods into English Bottoms

this Trade, we may easily the Importance of it, and e, as well in the Affairs of when it came to be carried Britain: Yet here it will be this and the true Commerce found a Way to free our- on the Venetians, yet it was ant Trade at first, and not tern Parts, which was a our, and brought about by with the Relation of which be extremely well pleased, and speedy Progress of our at Sea.

I have been able to learn, ng the East-India Trade in borne, a Merchant of Lon- on, and residing there many ledge of the Manner in dies were discovered. This from his Writings yet ex Knowledge, in an equal ence, applied himself about King Henry VIII. to whom few Words, the vast Ad- Subjects by a direct Com- to his Proposal to the hat Prince, he advised him Navigation, but to attempt ortuguese had pushed their Spaniards to the West, fo lish Nation should find a and that by the North- on, that this Gentleman was Difficulties that have been ge to the North-East, and y, and for good Reason, very near it; from which ight be gained, and many or instance, he conceived such a Season of the Year, alf Years Day in that Ch- and ridiculous to suppose, that

that the Seas were frozen under the North Pole, at a time when the Sun, from its long Continuance on the Horizon, must have such prodigious Force. He likewise judged, that whatever Difficulties might occur in the Beginning of such a Passage, they must be quickly and certainly got over, and be fully recompensed, by coming soon on the Coast of Tartary and Japon, and so to China and the Manillas. To say the Truth, if we consider the Time when this Proconful was made, the Sagacity and Penetration of this Gentleman can scarce be enough commended or admired, since it is very certain, that if ever any Discovery is made on this Side, it must be made by this Method.

But, how wise or how practicable soever Mr. Thorn's Scheme might be, I do not find that it was ever considered in any other Light, than as a Project too bold to be put in Execution; and to say the Truth, the first Person that gave us any Light into this Navigation was Sir Francis Drake, in the Year 1578. The very next Year Mr. Stevens went from Lisbon to Goa by the Cape of Good-Hope, and wrote a large Account of his Voyage while he resided at Goa. A. D. 1586, the famous Candishe made his Voyage round the World, which having clearly opened a Passage to these Parts, Captain George Raymond, in a Ship of his own, called the *Penelope*, accompanied by two others, called the *Merchant-Royal*, and the *Edward-Bonaventure*, sailed in the Year 1591 for the *East-Indies*, not with a View to trade, but to cruise upon the *Portuguese*. This Voyage was extremely unfortunate; for Captain Raymond found himself obliged, at the Cape of Good-Hope, to send home the *Merchant-Royal*, with the sick Men they had in the three Ships. Having doubled that Cape, and sailed about sixty Leagues, he was lost in the *Penelope*; so that Captain James Lancaster, in the *Edward-Bonaventure*, was the only one that performed this Voyage, and that too with very indifferent Fortune; for after a disastrous Voyage to the *East*, he was obliged to pass from thence to the *West-Indies*, where having lost his Ship, he with much Difficulty, by the Assistance of a French Privateer he met with in those Parts, returned home.

But in this Space of Time, though no English Ships had been sent to the *Indies* for Commerce, abundance of Englishmen had been there in different Services, and on their return home, gave such an Account of those Countries, and of the Ease with which the English might settle Factories, and establish a regular Trade thither, that many great Men, and rich Merchants, began to entertain a Desire of establishing such a Commerce; and that they might do this effectually, they applied themselves to Queen Elizabeth for a Charter, and she accordingly granted them one, which was dated the 31st of December 1600, in the forty-third Year of her Reign. By this Charter she created them a Body Corporate, by the Title of the Governor and Company of Merchants of London trading to the *East-Indies*; granted them a common Seal, appointed Thomas Smyth, Esq; Alderman of London, their first Governor, and established a Court of twenty Directors to be chosen annually on the first of July, or within six Days after. She likewise granted them Authority to make Bye-laws, allowed them to export Goods Custom-free for four Years, permitted them to export thirty thousand Pounds in Foreign Coin, with Licence to do the same in every Voyage, provided they brought that Sum by their Trade out of Foreign Countries into this Kingdom. This Charter was exclusive, and the Queen bound herself not to grant any Charter to other Merchants for the Space of fifteen Years; but with this proviso, that if within that Space this Charter should appear to be in any respect detrimental to the Publick, it should, upon two Years Warning, under the Privy-Seal become void; but if from Experience it should appear, that this new Corporation was a publick Benefit, then she promised to renew their Charter, with such additional Clauses in their Favour, as should appear requisite.

I have been the more particular with respect to this Point, because I look upon it that there never was any publick Act of this Nature better considered, or drawn with greater Wisdom and Foresight, both for the Benefit of the Adventurers, and the publick Good; by which I mean the Interest of the whole Nation, Circumstances which ought to be equally considered in all such Cases, since whatever the

Design may be of the Persons concerned in such Adventures, it ought to be the Care of the Government, that even these exclusive Companies should be calculated for the common Advantage, and be so guarded, as that Persons concerned therein may never have it in their Power to sacrifice the general Interest of a People to their particular Profit, and private Advantage.

4. It was in Consequence of this Charter, that the Company immediately began to raise a joint Stock for carrying their Project into Execution; and this with such Industry, that in a very short Space their Treasurer had in his Hands seventy-two thousand Pounds; upon which it was resolved to fit out five able Ships to begin their Correspondence in that Part of the World. These were the *Dragon* of six hundred Tuns, Admiral of the Squadron: The *Hector*, Vice-Admiral, of three hundred Tuns: The *Susannah*, of two hundred Tuns: The *Ascension*, of the same Burthen: The *Guest*, a Store Ship, of a hundred and thirty Tuns. The Complement of Men in all their Ships were four hundred and eighty, and the Expence of equipping them amounted to forty-five thousand Pounds, and their Cargo took up the other twenty-seven thousand Pounds. On the 2d of May 1601, they sailed from *Torbay*, and without any considerable Accident continued their Voyage to the *Indies*, where Captain James Lancaster, who commanded with the Title of Admiral, made a Treaty with the King of *Achen*, sent a Pinnace to the *Moluccas*, and erected a Factory in the Island of *Java*; after which the Admiral returned safely, and with good Profit, into *England*.

This was the only Voyage that was undertaken by the Company in the Reign of Queen Elizabeth; but upon her Demise, they found a very kind Master, as well as powerful Protector in her Successor King James, who from his Accession to the Throne, shewed them all the Countenance, and afforded them all the Assistance that they could desire, which, with the Profits of their first Voyage, engaged them to undertake a second in the Year 1604, Sir Henry Middleton, in the *Red Dragon*, having the Title of Admiral, the *Hector* Vice-Admiral, the *Ascension*, and the *Susannah*. These Ships visited the *Moluccas*, and the Island of *Java*, were well received by all the *Indian* Princes, but met with very indifferent Usage from the *Dutch*, who began already to lose all Sense of Gratitude to the Nation that had preserved them, endeavoured all that in them lay to misrepresent the English to the *Indians*, as a cruel, unjust, and ambitious People, who meant not to trade with them fairly for their Commodities, but to seize their Country, and to take them by Force. That this Disposition in the *Dutch* did not take Rise, either from their Hatred or Contempt of King James, but was bred in them by their own Self-love, and Aversion to all other Nations, appears most clearly from the Letter of the King of *Ternate* to King James by Sir Henry Middleton, in which he expressly asserts, that the *Dutch* had used their utmost Endeavours to root out the good Opinion which himself and his Subjects entertained of the English from the Time that Sir Francis Drake had visited their Island; and thus those Disputes began, of which we shall have so much to say in the Course of this Section.

When Sir Henry Middleton sailed from *Bantam*, he received from the King a Letter for his Britannick Majesty, and a Present of Bezoar Stones. In their Passage home they met with the *Hector* beating off of the Cape of Good-Hope, with only ten Men left alive, by whom they were informed of the Loss of the *Susannah*, and in Company with this Ship they arrived safely in the *Dorens*, May 6, 1606. The very next Year the Company undertook a third Voyage, in which three Ships only were employed, viz. the *Dragon*, the *Hector*, and the *Consent*, under the Command of Captain William Keeling. Their Voyage was very successful, especially in the *Moluccas*, where they were, notwithstanding, extremely ill used by the *Dutch*. This did not hinder them, however, from bringing home a very valuable Cargo of all sorts of Spice, with which they arrived in the *Dorens*, May 10, 1610, with this extraordinary Mark of good Fortune, that in their whole Voyage out and home, they lost not so much as a single Man. With this Captain Keeling went out Captain William Hawkins, with the Title of the King's Ambassador

to the Great Mogul, by whom he was very kindly received, and by his prudent Management a good Correspondence was established between the two Courts.

In the Spring of the Year 1602, the Company sent the *Arcton* and the *Union* to the *Red-Sea*, and the Coast of *Arabia*, which, however, proved but indifferent in their Success. In April 1609, Captain *David Middleton*, in the *Expeditio*, was sent by the Company to the *Maluccos*, where the *Dutch* now began to act as Masters, and had a Design of seizing the Captain's Ship, which by his good Management he prevented, and brought home with him a hundred and thirty-nine Tuns of Nutmegs, and the like Quantity of Mace, besides Pepper and other valuable Goods, which I conceive to have been the most prosperous Voyage that had been undertaken by the Company.

The *East-India* Company now began to make a great Figure, to employ a vast Number of Men, and to export large Quantities of *English* Goods and Manufactures, so that they conceived, that though their former Charter was not expired, yet upon due Application his Majesty might be prevailed upon to fulfil the Promise of his Royal Predecessor, inasmuch as they had already fulfilled the Terms upon which that Promise was made, and had rendered it manifest, that the continuing this Corporation would be for the common Benefit of the whole *English* Nation. Upon a Representation to this Purpose, his Majesty was graciously pleased, in the Month of May 1609, to enlarge their first Charter, in the Manner they desired, and to make it perpetual, upon which the Company began to build a very large five Ships, of the Burthen of one thousand two hundred Tuns, which is taken Notice of even by our general Historians, because this was the first great Ship that had been built in this Kingdom, the Custom having hitherto been to buy them ready built in one of the *Hanse Townes*; and it is farther observed both by *John Stowe* and *Sir William Monson*, that the *Zeus of Lubek*, which *Sir John Finkel* built in the *West-Indies*, was the last great Ship which was either built or bought beyond the Seas. They likewise built a new Pinnace of two hundred and fifty Tuns to attend the great Ship; and when both were ready to be launched, the King, the Prince of Wales, and a great Number of the principal Nobility of the Kingdom, went down to Deptford, where they stood on Board the great Ship, and were all entertained in *Cana*, the Dishes and Plates, after the Dinner was over, though then great Curiosity, and of high Price, were left to be taken away by the Servants, or whoever else had a Mind to them.

His Majesty, at the Time of launching the Ship, called it the *Trade to Indoes*, and gave the Pinnace the Name of the *Pepper-corn*. In the succeeding Spring the Company fitted out for their sixth Voyage this new Ship and Pinnace, together with two others, under the Command of *Sir Henry Middleton*, Knight, at the Expence of eighty thousand Pounds. In 1610, they sent a single Ship, and the succeeding Spring three Ships, under the Command of Captain *John Saris*, at the Expence of threescore thousand Pounds.

The *Portuguese* at this Time endeavoured to hinder the *English* from trading on the Coast of *India*, which obliged the Company to be at more than usual Pains and Expence in equipping out their next Squadron, which sailed in the Year 1611, and consisted of four large Ships, of which the biggest was the *Dragon*, commanded by Captain *Thomas Best*, who arrived safely at *Surat* in six Months, and settled a Factory there, which he had hardly come before the Viceroy at *Goa* fitted out a large Fleet to destroy him. It consisted of four great Gallions, and twenty six Gallies, in which were five thousand Men, and one hundred and thirty Pieces of Cannon; but Captain *Best*, though he had with him only a small Pinnace, resolved to maintain his Factory, and in Defence of it, engaged and defeated this *Portuguese* Armada, in which Action they lost twelve hundred Men. After this the *Portuguese* never more disturbed the *English* on that Coast; and as for Captain *Best*, when he had finished every thing to the good liking at *Surat*, he sailed to *Goa*, and having taken a valuable Cargo on Board there, returned safely to *London* in the Month of July 1611.

In this Year Captain *Saris* also returned with a very rich Lading, and *Sir Thomas Smith*, Governor of the *East-India* Company, having represented to the King, that they had left *Mr. Paul Canning*, as their Agent, at the Court of the Great Mogul; but that they conceived it would be for the Benefit of the Company, and for the Honour of the Nation, if his Majesty would be pleased to send a Person of Distinction, with the Title of his Ambassador, to that great Prince; to this his Majesty consented, and appointed *Sir Thomas Roe*, Knight, his Ambassador. The Company also, to shew their Gratitude, fitted out a fine Squadron of four large Ships, under the Command of Captain *Keeling*, who carried *Sir Thomas Roe* safe to *India*, where he prosecuted his Affairs with great Success. The *English* and *Dutch* Companies in the *Indies* were now grown so powerful, that they began to extend the Sovereignty of their respective Countries over several Places in the *Indies*, and the *English* particularly procured from the Inhabitants of the Island of *Banda* a Surrender of themselves to the Crown of *England*, which they did by a formal Instrument, which, however, did not hinder the *Dutch*, who alleged, that they had prior Claims upon those Countries, from endeavouring to make themselves Masters of them. The *English* on the other hand proceeded in extending their Dominions in the *East-Indies*, without considering that they wanted a Force to maintain them, and procured likewise the Surrender of *Lantore* by another solemn Instrument, under the Hands of the Natives, dated the 24th of November 1620.

It is very certain that all this was very well designed, and that the *English* Company, if they had been strong enough, would by this means have procured to themselves a very large Share of the Spice Trade; but as it was, they only opened a Way to their own Destruction. While this was doing in the *Indies*, there was a Treaty carried on in *Europe* for the settling all the Differences between the two Companies, of which, as there is nothing said in any of our general Histories, it is requisite that we should give a distinct Account here.

There had been two Commissions issued by King *James* for Treaties, for the Regulation of these Differences, the one in the Year 1613, when the Conferences were held at *London*, the second in 1615, when the Negotiation was carried on at the *Hague*; but both these proved ineffectual, and therefore a new Treaty was had in the Year 1619, between Commissions appointed by each of the *East-India* Companies, *English* and *Dutch*, under the Inspection and Direction of Ministers Plenipotentiaries from the King of *Great-Britain*, and the States General. The Treaty between the two Companies was concluded on the seventh of July, by which it was agreed, that all past Offences on either Side should be buried in Oblivion, that both Companies should trade free upon their own Stocks, for their own Benefit, but with a mutual Regard to each others Interest; that the Price of Pepper, and other Spices, should be amicably settled between them; that the *Molucca* Islands, together with those of *Banda* and *Amboyna*, should belong to the *English* and *Dutch*; but in such a manner, that the *English* should have but one-third of the Trade, and the *Dutch* two-thirds.

That the Expence of the Fortifications in those Islands should be defrayed by a Duty or Impostion on the Spices exported from them; that a Council of Defence should be erected, composed of Members of both Companies, who should provide such Ships of War as are mentioned in the Treaty, for the joint Defence of both Companies; that the Fortresses erected in those Parts should remain in the Hands of those who are possessed of them; and that such as had been acquired by both Companies, should remain so, and be possessed by them both, and be garrisoned by *English* and *Dutch* Troops, according as this Matter should be settled and adjusted by the Council of Defence before mentioned; that for the future the whole Trade of the *Indies* should be free to both Nations, and that neither should attempt to shut out the other by Fortifications, or Treaties, with the Natives; that to render this Treaty more effectual, his Britannick Majesty, and the States General, should be most humbly desired not to erect any other Com-

panies during the Time fixed for the Continuance of
this Treaty.

That if in any of the Factories of the *Indies* belonging
either to the *English* or *Dutch*, it should fall out by Death
or other Accidents, that none should be left to take
Care of the Effects in the Factory, that then they should
be preserved by, and justly accounted for by the Members
of the other Factory; that this Treaty shall endure for
twenty Years, and in case any Disputes shall arise not-
withstanding thereof, which cannot be either decided or
accommodated by the Councils of the said Companies,
his *Britannick* Majesty, and the States-General, are hum-
bly desired to take the same under their Cognizance, and
finally, to adjust and determine them: All those Articles
were to be faithfully and inviolably observed on both
Sides, according to the Intention of the said Treaty, and
the same to be ratified by his Majesty in one Month.
This Treaty was accordingly ratified by King *James*, on
the 10th. of *July* 1619, under his own Hand, and sealed
with his Broad-Seal: In this Ratification his Majesty promised
not to grant any Charter or Powers to any other Company
during the Continuance of this Treaty.

One would have imagined that all Things must now
have gone on harmoniously and peaceably, and that an
End had been put to all the Disputes between the *English*
and *Dutch* Companies for twenty Years at least: But it
fell out quite otherwise; for the *Dutch* General of the *East-India*
Company having a Fleet of large Ships under his
Command, attacked *Lanore*, and having defeated the
Natives, fired the Town, plundered the *English* Factory,
took away the Cloth, Money, and Bullion, belonging to
the *East-India* Company, together with twenty-three thou-
sand Pounds Weight of Mace, and one hundred and fifty
thousand Pounds of Nutmegs. The *English* Factors that
were settled there, were stripp'd naked, bound, beaten,
thrown over the Town-Wall, and afterwards dragged
through the Streets in Chains. The Factory of *Pooleroon*
had the same Fate; and thus all things were in a worse
State after this Treaty than they were before in the *Indies*.
What seems to be most extraordinary and astonishing is,
that the *Dutch East-India* Company published in *Holland*
a Defence or Vindication of these Proceedings, in which they
allege, that having a prior Right to these Islands, this
could not be taken away by any subsequent Act of the In-
habitants, who were no longer their own Masters; that
this War was prosecuted against the Natives as Principals,
and against the *English* as Auxiliaries only. To this the
English published an Answer, in which they absolutely de-
nied, that the Inhabitants of the Island of *Banda* ever sub-
mitted themselves to the *Dutch*, and insisted on their legal
Title to that Country.

But it does not appear, that the Government ever inter-
fered properly in this Affair, or demanded just Satisfaction
from the States of *Holland*, which might perhaps be owing
to the perplexed Circumstances of our Administration,
and the Differences that had arisen between King *James*
and his Parliament. But if this ill Usage was hard to be
born, there followed soon after much worse, when, to take
from the *English* the small Remains of the Spice Trade,
and to monopolize entirely a Commerce of such Import-
ance into their own Hands, the *Dutch* were guilty of such
unheard of Barbarities in *Amboyna*, as tho' they may be
forgiven, yet ought never to be forgot; and yet we find
them very slightly passed over, even in those Works where
we might reasonably expect the fullest Accounts of them,
which is probably owing to the Inclination some Writers
have to hide the Faults of their Neighbours, and to publi-
sh the Excesses of no Government but their own.

Yet as at the very Time it happened, the *East-India*
Company here took Care to give a full and large Account
of the whole Transaction, from such Authorities as can-
not be questioned, it seems but reasonable that for the
sake of Truth, and the perpetual Preservation of so au-
thentick and curious a Piece, which otherwise as a Pam-
phlet may be in Danger of being lost, as well as for other
Reasons which shall be expressed hereafter, we should in-
sert it entire. It is indeed of some Length, and delivered
in an un-outh and antiquated Style; but however, it is
better it should stand so, than that we should run any

NUMB. 59.

Risque of altering the Facts, by endeavouring to amend
the Language in which they are expressed.

6. *Amboyna* is an Island lying near *Seran*, of the Com-
pats of forty Leagues, and giveth Name also to some other
small Islands adjacent. It beareth Cloves; for gathering
and buying in whereof, the *English* Company, for their
part, had planted five several Factories: The Head and
Rendezvous of all at the Town of *Amboyna*, and therein
first Master *George Muschamp*, and afterward Master *Gabriel*
Townson, their Agents, with Directions over the
smaller Factorles at *Ilitto* and *Larica* upon the same Island,
and at *Lobo* and *Cambello* upon a Point of their neighbour-
ing Island of *Seran*. Upon these Islands of *Amboyna*, and
the Point of *Seran*, the *Dutch* have four Forts, the chief
of all is at the said Town of *Amboyna*, and is very strong,
having four Points, or Bullworks, with their Curtains;
and upon each of these Points six great Pieces of Ordnance
mounted, most of them of Brass. The one Side of this
Cattle is washed by the Sea, and the other is divided by
the Land, with a Ditch of four or five Fathom broad, very
deep, and filled with the Sea. The Garrison of this City
consisteth of about two hundred *Dutch* Soldiers, and a
Company of free Buzghers. Besides these, there is always
a matter of three or four hundred Markiders in the Town,
ready to serve the Cattle at an Hour's warning. There
he also in the Road, divers good Ships belonging to the
Dutch, as well for the Guard of the Place by Sea, as for
the Occasion of Traffick, this being the chief Rendezvous
as well for the Island of *Banda*, as for the rest of *Amboyna*.
Here the *English* lived not in the Cattle, but under
Protection thereof, in a House of their own, in the Town;
holding themselves safe, as well in respect of the ancient
Bonds of Amity between both Nations, as of the strict
Conjunction made by the late Treaty before mentioned.

They continued here two Years conversing and trading
together, with the *Dutch*, by virtue of the said Treaty,
in which Time there fell out several Differences and De-
bates between them; the *English* complaining, that the
Dutch did not only lavish away much Money in Building
and unnecessary Expences upon the Forts, and otherwise,
and bring large and unreasonable Reckonings thereof to
the common Account, but also did, for their Part, pay
the Garrison with Victuals and Cloth of *Coromandel*, which
they put off to the Soldiers at three or four Times the
Value it cost them, yet would not allow of the *English*
Company's Part of the same Charge, but only in ready
Money, thereby drawing from the *English* more than two
Thirds of the whole true Charge. Hereupon, and upon
the like Occasions, grew some Discontents and Disputes,
and the Complaints were sent to *Jaccatra*, in the Island of
Java Major, to the Council of Defence of both Nations
there residing, who also not agreeing upon the Points in
Difference, sent the same hither over into *Europa*, to be
decided by both Companies here, or, in Default of their
Agreement, by the King's Majesty, and the Lords the
States General, according to an Article of the Treaty of
the Year 1610 on this Behalf. In the mean Time, the
Discontent between the *English* and the *Dutch* about these
and other Differences continued, and daily increased, until
at last there was a Sword found to cut in sunder that Knot
at once which the tedious Disputes of *Amboyna* and *Jacca-
tra* could not untie; and this was used in the Manner as
followeth.

About the 11th of *February* 1622, O. S. a *Japonefe*
Soldier of the *Dutch* in their Cattle of *Amboyna*, walking
in the Night upon the Wall, came to the Centinel, and
there, among other Talk, asked him some Questions
touching the Strength of the Cattle, and the People that
were therein. It is here to be observed, that those *Japo-
nese* did for the most Part serve the *Dutch* as Soldiers, yet
were not of their trusty Bands always lodged in the Cattle,
but upon Occasion called out of the Town to assist the
Watch. This *Japonefe* aforesaid, was, for his said Confe-
rence with the Centinel, apprehended upon Suspicion of
Treason, and put to the Torture; thereby he was brought
to confess himself and sundry others of his Countrymen
there, to have contrived the taking of the Cattle. Here-
upon other *Japonefe* were examined and tortured, as also
a *Portuguese*, the Guardian of the Slaves under the *Dutch*.
During

During this Examination, which continued three or four Days, some of the *Englishmen* went to and from the Castle, upon their Business, saw the Prisoners, heard of their Tortures, and of the Crime laid to their Charge, but all this while suspected not that this Matter did any whit concern themselves, having never had any Conversation with the *Japoneſe*, nor with the *Portuguze* aforesaid.

At the same Time, there was one *Abel Price*, Chirurgion to the *English*, Prisoner in the Castle, for offering, in his Drunkenness, to set a *Dutchman's* House on Fire. This Fellow the *Dutch* took, and showed him some of the *Japoneſe*, whom they had first most grievously tortured, and told him, they had confessed the *English* to have been of their Confederacy for the taking of the Castle, and that if he would not confess the same, they would use him even as they had done the *Japoneſe*, and worse also. Having given him the Torture, they soon made him confess whatever they asked him. This was on the 15th of February 1722, O. S. Forthwith, about Nine of the Clock the same Morning, they sent for Captain *Towerſon*, and the rest of the *English* that were in the Town, to come to speak with the Governor in the Castle. They all went, save one that was left to keep the House. Being come to the Governor, he told Captain *Towerſon*, that himself and others of his Nation, were accused of a Conspiracy to surprize the Castle, and therefore, until further Trial, were to remain Prisoners. Instantly also they attacked him that was left at home in the House, took the Merchandize of the *English* Company there into their own Custody, by an Inventory, and seized all the Chests, Boxes, Books, Writings and other things in the *English* House.

Captain *Towerſon* was committed to his Chamber, with a Guard of *Dutch* Soldiers. *Ismael Thomson* was kept Prisoner in the Castle, the rest, viz. *John Beament*, *Edward Colson*, *William Webber*, *Ephraim Ramsay*, *Timothy Johnson*, *John Fardo*, and *Robert Brown*, were sent aboard the *Dutch* Ships then lying in Harbour, some to one Ship, and some to another, and all made fast in Irons. The same Day also the Governor sent to the two other Factories in the same Place, to apprehend the rest of the *English* there, so that *Samuel Colson*, *John Clark*, *George Scarrow*, that were found in the Factory at *Hitte*, and *Isaac Collins*, *William Webber*, and *John Sadler*, at *Larica*, were all brought Prisoners to *Amoyna*, the 10th of February, upon which Day also *John Price*, *John Wakeley*, and *Isaac Lantack*, were apprehended at *Cantonee*, and *John Beament*, *William Griggs*, and *Ephraim Ramsay* at *Laba*, and brought in Irons to *Amoyna*, the 20th of the same Month. In the mean Time, the Governor and Fiscal went to work with the Prisoners that were already here, and first, they sent for *John Beament* and *Timothy Johnson*, from on Board the *Uncorn*, who being come into the Castle, *Beament* was left with a Guard in the Hall, and *Johnson* went into another Room, where, by and by, *Beament* heard him cry out very pitifully, than to be quiet a little while, and then loud again.

At a Case of the Torture, then *Abel Price* the Chirurgion that first was examined and tortured, was brought in to content and accuse him: But *Johnson* not yet confessing any thing, *Price* was quickly carried out, and *Johnson* brought again to the Torture, where *Beament* heard him sometimes cry aloud, then quiet again, then roar afresh. At last, after he had been about an Hour in this second Examination, he was brought forth wailing and lamenting, all wet, and cruelly lacerated in diverse Parts of his Body, and so laid aside, in a Bye place in the Hall, with a Soldier to watch him, that he should speak to nobody. Then was *Ismael Thomson* brought to Examination, not in the Room where *Johnson* had been, but in another somewhat farther from the Hall, yet *Beament* being in the Hall, heard him roar most lamentably, and many Times: At last, in an Hour and half spent in torturing him, he was carried to another Room another Way, so that he came not by *Beament* thro' the Hall. Next was *Beament* carried to the Torture, and asked many things, all which he could not keep quiet, and Pretensions, was made fast to the Rack, a Cloth tied about his Neck, and two Men were set on either Side of Water to be poured on his Head, and when the Governor had look'd him, he

would spare him a Day or two, because he was an old Man; this was all *Saturday's* Work, the 15th of February aforesaid.

On the 16th *William Webber*, *Edward Collins*, *Ephraim Ramsay*, and *Robert Brown*, were fetched from aboard the *Rottterdam* to be examined: At the same time came *Samuel Colson*, *William Griggs*, and *John Clark*, *George Scarrow*, and *John Sadler*, from *Hitte* and *Larica*, and were immediately upon their Arrival, brought into the Castle-Hall, *Robert Brown*, *Taylor*, was first called in, and being tormented with Water, confessed all in order as the Fiscal asked him. Then was *Edward Collins* called in, and told that those that were formerly examined had confessed him as accessory to the Plot of taking the Castle, which, when he denied with great Oaths and Exclamations they made his Hands and his Feet fast to the Rack, bound a Cloth about his Throat ready to be put to the Torture of the Water. Thus prepared he prayed to be respited, and he would confess all. Being let down, he again vowed and protested his Innocency; yet said, that because he knew they would, by Torture, make him confess any thing, though never to false, they would do him a great Favour to tell him what they would have him say, and he would speak it, to avoid the Torture. The Fiscal hereupon said, What, do you mock us? And had up with him again, and to gave him the Torment of Water, which he not able long to endure, desired to be let down again to his Confession: Then he devised with himself and told them, That about two Months and a half ago, himself, *Thompson*, *Johnson*, *Brown*, and *Fardo*, had plotted, with the Help of the *Japoneſe*, to surprize the Castle. Here he was interrupted by the Fiscal, and asked whether Captain *Towerſon* were not of that Conspiracy? He answered, No; you lye, said the Fiscal, did not he call you all to him, and tell you, that those daily Abuses of the *Dutch* had caused him to think of a Plot, and that he wanted nothing but your Consent and Secrecy? Then said a *Dutch* Merchant, one *John Loeff*, that stood by, Did not you all swear upon a Bible to be secret to him? *Collins* answered with great Oaths, that he knew nothing of any such Matter: Then they bade made him fast again; whereupon he then said, all was true that they had spoken. Then the Fiscal asked him whether the *English* in the rest of the Factories were not consenting to this Plot? He answered, No; the Fiscal then asked him whether the President of the *English* at *Javaira*, or *Maller Welden*, Agent in *Bandas*, were not Plotters, or privy to this Business? Again he answered No: Then the Fiscal asked him by what Means the *Japoneſe* should have executed their Purpose? Whereat, when *Collins* stood bawling and devising of some probable Fiction, the Fiscal helped him, and said, Should not two *Japoneſe* have gone to each Point of the Castle, and two to the Governor's Chamber-door, and when the Hourlyburly had been without, and the Governor coming to see what was the Matter, the *Japoneſe* to have killed him? Here one that stood by said to the Fiscal, Do not tell him what he should say, but let him speak of himself; whereupon the Fiscal, without attending the Answer to his former Question, asked what the *Japoneſe* were to have had for their Reward? *Collins* answered 1000 Rials a piece. Lastly, he asked him when this Plot should have been effected? Whereupon, although he answered him nothing, not knowing what to devise upon the sudden, yet he was dismissed, and very glad to come clear off the Torture, though with certain Belief that he should die for this his Confession.

Next was *Samuel Colson* brought in, being newly arrived from *Hitte*, as is before touched, and was the same Day brought to the Torture, who, for fear of the Pain where-with he saw *Collins* come out, in such a Case, that his Eyes were almost blown out of his Head with the Torment of Water, chose rather to confess all they asked him, and to was quickly dismissed, coming out weeping, lamenting, protesting his Innocency. Then was *John Clark*, that came with *Colson* from *Hitte* fetched in, and a little after was heard to cry out again. They tortured him with Water and with Fire, by the Space of two Hours. The Manner of his Torture, which was likewise that of *Johnson's* and *Thomson's*, was as followeth: First, they hoisted

The condition of the English in the Dungeon & their Execution.

him up by the Hands with a Cord, on a large Door, where they made him fast, upon two Staples of Iron fixed on both Sides, at the Top of the Door-Posts, haling his Hands one from the other as wide as they could stretch. Being thus made so fast, his Feet hung two Foot from the Ground, which also they stretched alunder as far as they could stretch, and so made them fast beneath, under the Door-Trees on each Side. Then they bound a Cloth about his Neck and Face so close, that little or no Water could go by; that done, they poured the Water softly upon his Head, until the Cloth was full up to the Mouth and Nostrils, and somewhat higher, so that he could not draw Breath but he must wishal suck in the Water; which being still continued to be poured in softly, forced all his inward Parts to come out of his Nose, Ears, and Eyes, and often, as it were, stifling or choking him; at length took away his Breath, and brought him to a Swoon, or Fainting: Then they took him quickly down, and made him vomit up the Water; being a little recovered, they tied him up again, and poured in the Water as before, often taking him down as he seemed to be stifled. In this Manner they handled him three or four several Times with Water, till his Body was swollen twice or thrice as big as before; his Cheeks like great Bladders, and his Eyes starting and strutting out beyond his Forehead; yet all this he bore without confessing any thing, inasmuch that the Fiscal and Tormentors reviled him, saying, that he was a Devil, and no Man, or surely he was a Witch, at least had some Charm about him, or was enchanted, that he could bear so much; wherefore they cut off his Hair very short, as supposing he had some Witchcraft hidden therein. Afterwards they hoisted him up again, as before, and then burnt him with lighted Candles in the Bottom of his Feet until the Fat dropped out on the Candles, yet they applied fresh Lights unto him; they burnt him also under the Elbows, and in the Palms of his Hands, likewise under the Arm-pits, until his Inwards might evidently be seen.

At last, when they saw he could of himself make no handsome Confession, then they led him along with Questions of particular Circumstances by themselves framed. Being thus wearied and overcome by the Torment, he answered, Yea, to whatever they asked, whereby they drew from him a Body of Confession to this Effect, to wit, That Captain *Towerfon* had, upon *New-Year's-Day* then last past, sworn all the *English* at *Amboyna* to be secret and alliant in a Plot that he had projected, with the Help of the *Japanese*, to surprise the Castle, and to put the Governour and the rest of the *Dutch* to Death. Having thus martyred this poor Man, they sent him out by four Blacks, who carried him between them to a Dungeon, where he lay five or six Days, without any Chirurgeon to dress him, until his Flesh being putrified, great Maggots dropped and crept from it in a most loathsome and noisome Manner. Thus they finished their Sabbath-day's Work; and it growing now dark, sent the rest of the *English* that came that Day from *Hitto*, and till then attended in the Hall, first, to the Smith's Shop, where they were loaded with Irons, and then to the same loathsome Dungeon, where *Clark* and the rest were accompanied with the poor *Japanese*, lying in the Putrefaction of their Tortures.

The next Morning, being *Monday*, the Seventeenth of *February*, *O. S. William Griggs* and *John Fardo*, with certain *Japanese*, were brought into the Place of Examination. The *Japanese* were first cruelly tortured to accuse *Griggs*, which, at last, they did; and *Griggs*, to avoid the like Torture, confessed all that the Fiscal demanded. By and by the like was also done by *John Fardo* and other *Japanese*: But *Fardo* himself endured the Torture of Water, and, at last, confessed whatsoever the Fiscal asked him, and so was sent back to Prison. The same Day also *John Beament* was brought the second Time to the Fiscal's Chamber, where one Captain *Newport*, a *Dutchman's* Son, born in *England*, was used as an Interpreter; *William Griggs* was also brought in to accuse him, who said, That when the Consultation was held for taking the Castle, he the said *Beament* was then present; *Beament* denied it with great Firmness, and deep Oaths; at last, being stretched up, and drenched with Water till his Inwards were ready

to crack, he answered affirmatively to all the Fiscal's Interrogatories. Yet, as soon as he was let down, he clearly demonstrated to Captain *Newport*, and *Jabson*, a *Dutch* Merchant, then also present, that these Things could not be so; nevertheless, he was forced to put his Hand to the Confession, or else he must to the Torture again, which, to avoid, he subscribed, and so had a great Iron-bolt, and two Shackles rivited to his Legs, and then was carried back to Prison.

After this *George Sharrock*, Assitant at *Hitto*, was called in Question, who seeing how grievously others were martyr'd, made his earnest Prayer to God, as since upon his Oath he hath acknowledged, that he would suffer him to make some such probable Lies against himself, as the *Dutch* might believe, and so he might escape the Torment. Being brought to the Rack, the Water provided, and the Candles lighted, he was by the Governour and Fiscal examined, and charged with the Conspiracy. He fell upon his Knees, and protested his Innocence; then they commanded him to the Rack, and told him, unless he would confess he should be tormented with Fire and Water to Death, and then should be drawn by the Knees to the Gallows, and there hanged up. He still persisting in his Innocence, the Fiscal bid him be hoisted up; then he craved Respite a while, and told them, that he was at *Hitto*, and not in *Amboyna* upon *New-Year's-Day*, when the Consultation was pretended, neither had he been there since *November* before, as was well known to sundry of the *Dutchmen* themselves that resided there also with him.

Hereupon they commanded him again to the Rack; but he craving Respite, as before, now told them that he had many Times heard *John Clark* say, that the *Dutch* had done them many unsufferable Wrongs, and that he would be revenged on them; to which End he had once broken with Captain *Towerfon* a brave Plot; at which Word the Fiscal and the rest were attentive, encouraging him to proceed; so he went on, saying, that *John Clark* had entreated Captain *Towerfon*, that he might go to *Maccassar*, there to consult and advise with the *Spaniards* to come with Gallies, and rob the small Factories of *Amboyna* and *Seacan*, when no Ships were there. Here they asked him what Captain *Towerfon* said to this? To which he answered, that Captain *Towerfon* was very much offended with *Clark* for the Motion, and from thenceforth could never abide him. Hereupon the Fiscal called him Rogue, and said he prated all from the Matter, and should go to the Torture: He craved Favour again, and began another Tale, to wit, That upon *Twelfth-Day*, then last past, *John Clark* told him at *Hitto*, that there was a Practice to take the Castle of *Amboyna*, and asked him whether he would consent thereto; whereupon he demanded of *Clark* whether Captain *Towerfon* knew of any such Matter, which *Clark* affirming; then the said *Sharrock* said, he would do as the rest did. Then the Fiscal asked him what Time the Consultation was held? He answered in *November* last: The Fiscal said that could not be, for the Consultation was on *New-Year's-Day*. The Prisoner said as before in the Beginning, that he had not been in *Amboyna* since the First of *December* till now, that he was brought thither; why then, quoth the Fiscal, have you belied yourself? Whereto the Prisoner resolutely answered, that all that he had spoken touching Treason was false, and feigned only to avoid Torment. Then went the Fiscal out into another Room to the Governour, and anon returned and sent *Sharrock* unto the Prison again.

The next Day he was called again, and a Writing presented him, wherein was framed a formal Confession of his last Conference with *Clark* at *Hitto*, touching the Plot to take the Castle of *Amboyna*, which being read over to him, the Fiscal asked him, whether it was true or no? He answered no: Why then, said the Fiscal, did you confess it? He answered, for fear of Torment. The Fiscal and the rest, in a great Rage, told him he lyed, his Mouth had spoken it; and it was true, and therefore he should subscribe it, which, as soon as he had done, he fell presently into a great Passion, charging them bitterly to be guilty of the innocent Blood of himself and the rest, which they should look to answer for at the Day of Judgment;

in *Amboyna*.

Execution.

ment; withal he grappled with the Fiscal, and would have stopped him from carrying in the Confession to the Governor, with whom he also craved to speak, but was instantly laid hold on, and carried away to Prison. *William Webber* being next examined, was told by the Fiscal, that *John Clark* had confessed him to have been at *Ambogna* on *New-Year's-Day*, and sworn to Captain *Towerfon's* Plot, &c. all which he denied, alledging he was that Day at *Larica*; yet, being brought to the Torture, he then confessed he had been at the Consultation at *Ambogna* upon *New-Year's-Day*, with all the rest of the Circumstances in order as he was asked.

He also further told them, he had received a Letter from *John Clark*, after which was a Postscript, excusing his brief Writing at that Time, for that there was then great Business in hand. But one *Kender*, a *Dutch* Merchant, then standing by, told the Governor, that upon *New-Year's-Day*, the Time of this pretended Consultation, *Webber* and he were merry at *Larica*; so the Governor left him and went out: But the Fiscal held out upon the other Point, touching the Postscript of *Clark's* Letter, urging him to shew the same, which, when he could not do, though often terrified with the Torture, he gave him Respite, promising to save his Life, if he would produce the Letter. Then was Captain *Towerfon* brought to the Examination, and shewed what others had confessed of him; he deeply protested his Innocency. *Samuel Celson* was brought to confront him, who being told, that unless he would now make good his former Confession against Captain *Towerfon*, he should go to the Torture, coldly reaffirmed the same, and so was sent away. They also brought *William Griggs* and *John Fardo* to justify their former Confessions to his Face. Captain *Towerfon* seriously charged, that as they would answer it at the dreadful Day of Judgment, they should speak nothing but the Truth: Both of them instantly fell down upon their Knees before him, praying him, for God's Sake, to forgive them; and saying further openly, before them all, that whatsoever they had formerly confessed, was most false, and spoken only to avoid Torment. With that the Fiscal and the rest ordered them again to the Torture, which they would not endure, but then affirmed their former Confessions to be true. When *Celson*, who had accused the Captain before, was required to set his Hand to his Confession; he asked the Fiscal upon whose Head he thought the Sin would lie, whether upon his, who was constrained to confess what was false, or upon the Confrainer?

The Fiscal, after a little Pause upon this Question, went in to the Governor, then in another Room, but anon, returning, said he must subscribe it, which he did, yet withal made this Protestation; Well, quoth he, you make me to accuse myself and others, of that which is as false as God is true; for God is my Witness, I am as innocent as the Child new born. Thus have they examined all that belong to the *English* Company in the several Factories of the Island of *Ambogna*. February the Twenty-first they examined *John Fetheral*, Factor at *Cambello*, in the Island of *Seran*. He confessed he was at *Ambogna* upon *New-Year's-Day*, but for the Consultation whereof he was demanded, he said he knew of no other but touching certain Cloth of the *English* Company that lay in the Factories rotting and worm-eaten, which they advised together how to put off to the best Avail of their Employers. The Governor said, he questioned him not about Cloth, but of Treason, whereof, when he had protested his Innocence, he was for that Time dismissed; but the next Day he was sent for again, and Captain *Towerfon* brought to confront and accuse him, having before confessed somewhat against him; but Mr. *Towerfon* spoke these Words only, O Mr. *Weiberd*, Mr. *Weiberd*, speak the Truth, and nothing but the Truth, as God shall put it in your Heart; so Captain *Towerfon* was put out again, and Mr. *Weiberd* brought to the Torture of Water, with great Threats, if Water would not make him confess, Fire should. He prayed them to tell him what he should say, or to write down what they would, he would subscribe it. They said, he needed no Tutor, they would make him confess himself, but when they had holded him up four several Times, and

saw he knew not what to say; then they read him other Mens Confessions, and asked him from Point to Point, as they had done others, and he still answered, *Yea*, to all.

Next was called in *John Powell*, *Weiberd's* Assistant at *Cambello*; but he proving that he was not at *Ambogna* since *November*, save now, when he was brought thither Prisoner, and being spoken for by one *John Joost*, who had long been well acquainted with him, was dismissed without Torture. Then was *Thomas Ladbroke*, Servant to *Weiberd* and *Powlet* at *Cambello*, at the Time of the pretended Consultation, and serving in such Quality, as that he was never acquainted with any of the Letters from the Agent of *Ambogna*, he was easily and quickly dismissed. *Ephraim Ramsey* was also examined upon the whole Conspiracy, and particularly questioned concerning Captain *Weldon*, the *English* Agent in *Banda*; but denying all, and proving that he was not at *Ambogna* at *New-years-tide*, being also spoken for by *John Joost*, was dismissed, after he had hanged in the Rack a good while, with Irons about his Legs, and the Cloth about his Mouth. Lastly, *John Sadler*, Servant to *William Griggs* at *Larica*, was examined, and being found to have been absent from *Ambogna* at *New-years-tide*, when *Griggs* and others were there, was dismissed.

Thus have we all their Examinations, Tortures, and Confessions, being the Work of eight Days, from the 15th to the 23d of *February*, after which was two Days respite before the Sentence. *John Powell* being himself acquitted as aforesaid, went to the Prison to visit *John Fardo*, one of these that had accused Captain *Towerfon*; to him *Fardo* religiously protested his Innocency, but especially his Sorrow for accusing Master *Towerfon*; for, said he, the Fear of Death doth nothing dismay me; for God, I trust, will be merciful to my Soul, according to the Innocence of my Cause. The only Manner that troubles me is, that through Fear of Torment I have accused that honest and goodly Man Captain *Towerfon*, whom, I think in my Conscience, was so upright towards all Men, that he harboured no ill-will to any Man; much less would attempt any such Business as he is accused of. He farther said, he would before his Death receive the Sacrament, in Acknowledgment, that he had accused Captain *Towerfon* falsely and wrongfully, only through Fear of Torment.

On the 25th, O.S. all the Prisoners, as well the *English* as the *Portuguese* and *Japanese*, were brought into the great Hall of the Castle, and there were solemnly condemned, except *John Powell*, *Ephraim Ramsey*, *John Sadler*, and *Thomas Ladbroke*, formerly acquitted as aforesaid; Captain *Towerfon*, during all his Imprisonment, having been kept from the rest, so that none could come to speak with him, writ much in his Chamber; but all was suppressed, save only a Bill of Debt, which one *Thomas Johnson*, a free Burgher, got of him, by Favour of his Keepers, for an Acknowledgment, that the *English* Company owed him a certain Sum of Money. In the End of this Bill he writ these Words, Firm'd by the Form of me *Gabriel Towerfon*, now appointed to die, guiltless of any thing that can be justly laid to my Charge. God forgive them their Guilt, and receive me to his Mercy. Amen. This Bill being brought to *M. Weldon*, the *English* Agent at *Banda*, he paid the Money, and received in the Acknowledgment. *William Griggs*, who had before accused Captain *Towerfon*, writ the following Words in his Table Book: " We whose Names " are here specified, *John Beaumont*, Merchant of *Lobo*, *William Griggs*, Merchant of *Larica*, *Abel Price*, Chirurgeon " of *Ambogna*, *Robert Brown*, Taylor, which do here lie Prisoners in the Ship *Rotterdam*, being apprehended for Conspiracy, for blowing up the Cattle of *Ambogna*, we being " judged to Death this fifth of *March*, Anno 1622, which " we, through Torment, were constrained to speak that " which we never meant, nor once imagined, the which " we take upon our Deaths and Salvation. They tortured " us with that extream Torment of Fire and Water, that " Flesh and Blood could not endure; and this we take " upon our Deaths, that they have put us to Death guiltless of our Accusation: So therefore that we desire that " they that shall understand this, that our Employers may " understand these Wrongs, and that yourselves would

This Table-Book was afterwards delivered to *M. Wildon*
beforementioned, by one that served the *Dutch*. *Samuel*
Colson also, another that accused Captain *Towerjon*, writ
as followeth in the walle Leaves of a Book, wherein were
bound together the Common-Prayers, the Psalms, and the
Catechism. In one Page thus: "*March* the fifth, N. S.
" being *Sunday*, on Board the *Rotterdam*, lying in Irons,
" understand; that I *Samuel Colson*, late Factor of *Hitto*,
" was apprehended for Suspicion of Conspiracy, and for
" any thing I know must die for it; wherefore, having no
" better means to make my Innocency known, have writ
" this in this Book, hoping some good *Englismen* will
" see it. I do here upon my Salvation, as I hope by his
" Death and Passion to have Redemption for my Sins, that
" I am clear of all such Conspiracy, neither do I know any
" *Englismen* guilty thereof, nor other Creature in the
" World. As this is true, God bleis me, *Samuel Colson*."

On the other Side, upon the first Page of the Catechism,
is thus written; *In another Leaf you shall understand more,*
which I have written in this Book. *Samuel Colson*, In
the Beginning of the Psalms, and in the Leaf so referred
unto, is thus written, viz. "The *Japonese* were taken with
" some Villany, and brought to Examination; being most
" tyrannously tortured, were asked, if the *Engl-
" hand in the Plot, which Torture made them lay yea-
" Then was Master *Thomson*, and Mr. *Johnson*, Mr. *Col-*
lins, *John Clark*, brought to Execution, and were burned
" under the Arm-pits, the Hands and Soles of the Feet,
" with another most miserable Torment, to drink Water;
" some of them almost tortured to Death, and were forced
" to confess that which they never knew, by reason of the
" Torment which Flesh and Blood is not able to endure.
" Then were the rest of the *Englismen* called one by one,
" amongst which I was one, being wished to confesse, or
" else I must go to Torment; withal, caused *M. Johnson*,
" who was before tormented, to witness against me, or
" else he should be tormented again; which, rather than
" he would endure, he said what they would have him
" speak. Then must I confesse that I never knew, or
" else go to Torment, which, rather than I would suffer,
" I did confesse that which, as I shall be saved before God
" Almighty, is not true, being forced, for fear of Tor-
" ment. Then did they make us witness against Captain
" *Towerjon*; and at last made Captain *Towerjon* confesse all,
" being for fear of most cruel Torment, for which we
" must all die. As I mean and hope to have pardon for
" my Sins, I know no more than the Child unborn of
" this Business; written with my own Hand. the fifth of
" *March*, N. S. *Sam. Colson*."*

Yet in another Page were these Words; *I was born in*
New-Castle upon Tyne, where I desire this Book may come,
that my Friends may know of my Innocence. *Samuel Colson*.
This Book he delivered to one that served the *Dutch*, who
sewed it up in his Bed, and afterwards, at his Opportunity,
delivered it to *Mr. Wildon* beforementioned. All these said
Writings are yet extant, under the Hands of the several
Parties well known to their Friends here in *England*.

The twenty-sixth Day of *February*, O. S. the Prisoners
were all brought into the great Hall of the Castle, except
Captain *Towerjon*, and *Emanuel Thomson*, to be prepared
for Death by the Ministers. The *Japonese* now all in ge-
neral, as some of them had done before in particular, cried
out unto the *Engl-
did we ever in our Lives eat with you, talk with you, or
to our Remembrance, see you? The *Engl-
why then have you accused us? The poor Men perceiv-
ing they were made believe each had accused others, before
they had so done, indeed, shewed them their tortured Bo-
dies, and said, if a Stone were thus burnt, would it not
change its Nature? How much more then we that are
Flesh and Blood? Whilst they were all in the Hall, Cap-
tain *Towerjon* was brought up into the Place of Examina-
tion, and two great Jars of Water carried after him; what
he there did, or suffered, is unknown to the *Engl-
it seemeth, they made him then to underwrite his Confes-***

sion. After Supper, *John Powel*, *Ephraim Ramsey*, *Tho-*
mas Laidbrook, and *John Sadler*, who were found not guilty;
as aforesaid, were taken from the rest, and put into another
Room; by and by also were *Samuel Colson* and *Edward*
Collins brought from the rest, into the Room where *Ema-*
nuel Thomson lay: The Fiscal told them, it was the Gover-
nor's Mercy to save one of those three; and it being indif-
ferent to him which of them were the Man, it was his Plea-
sure they should draw Lots for it, which they did, and the
free Lot fell to *Edward Collins*, who then was carried away
to the Chamber, where *John Powel*, and the rest that were
quit, lodged; and *Samuel Colson* back into the Hall. Anon
also *John Beaumont* was brought out of the Hall into the
Chamber, where *John Powel*, and the rest of the acquired
Persons were, and was told, that he was beholden to
Peter Johnson, the *Dutch* Merchant of *Lobo*, and to the
Secretary, for they two had begged his Life. So then
there remained in the Hall ten of the *Engl-
Towerjon* and *Emanuel Thomson* were kept in several Rooms
apart from the rest. To these that remained in the Hall
came the *Dutch* Ministers, who telling them how short a
time they had to live, admonished and exhorted them to
make their true Confessions; for it was a dangerous and
desperate thing to dissemble at such a Time.

The *Engl-
the Ministers that they might all receive the Sacrament,
as a Seal of the Forgiveness of their Sins; and withal,
thereby to confirm their last Profession of their Innocence;
but this would by no means be granted: Whereupon
Samuel Colson* said thus unto the Ministers, You manifest
unto us the Danger of Dissimulation in this Case; but tell
us, if we suffer guiltless, being otherwise also true Believers
in *Jesus Christ*, what shall be our Reward. The Preacher
answered, by how much the clearer you are, so much the
more glorious shall be your Resurrection. With that Word
Colson started up, embraced the Preacher, and gave him
his Purse, with such Money as he had in it, saying, *Domine*,
God bleis you: Tell the Governor I freely forgive him,
and I intreat you, to exhort him to repent him of his bloody
Tragedy wrought upon us poor innocent Souls. Here all
the rest of the *Engl-
Then spake *John Fardo* to the rest, in the Presence of the
Ministers, as followeth: My Countrymen and Brethren,
that are here with me, condemned to die, I charge you all,
as you will answer it at God's Judgment Seat, if any of
you be guilty of this Matter, whereof we are condemned,
discharge your Consciences, and confesse the Truth, for Sa-
tisfaction of the World. Hereupon *Samuel Colson* spake
with a loud Voice, saying, according to my Innocence in
this Treason, so, Lord, pardon all the rest of my Sins, and
if I be guilty thereof, more or less, let me never be Par-
taker of thy heavenly Joys; at which Words every one of
the rest cried out, Amen; for me, Amen; for me, good
Lord. This done, each of them knowing whom he had
accused, went one to another, begging Forgiveness for
their false Accusation, being wrung from them by the
Pains or Fear of Torture; and they all freely forgave one
another; for none had been so falsely accused, but he him-
self had accused another as falsely; in particular, *George*
Starreck, who survived to relate this Night's Passage,
kneeled down to *John Clark*, whom he had accused of the
Tale at *Hitto* abovementioned, and craved Forgiveness at
his Hands: *Clark* freely forgave him, saying, how shall
I look to be forgiven of God, if I should not forgive you,
having myself so falsely accused Captain *Towerjon* and others.
After this they spent the rest of the doleful Night in Prayer,
singing of Psalms, and comforting one another, though
the *Dutch* that guarded them offered them Wine, bidding
them drink lustily, and drive away the Sorrow, according
to the Custom of their own Country in the like Cases, but
contrary to the Nature of the *Engl-
Upon the Morrow Morning, being the Execution Day,
the 27th of February, O. S. *John Poxel* being freed, as
before recited, came into the Room where the condemned
Persons were, and found them at Prayers. They all re-
quested him to relate unto their Friends in *England* the
Innocency of their Cause, taking it upon their Deaths,
that what they had confessed against themselves and others,
touching this Crime, was all false, and forced by fear of**

Torture. The same Morning *William Webber* was called again into the Fiscal's Room, and there pressed to produce the Letter which he had before confessed to have received from *John Clark*, in the Postscript whereof some great Business was intimated: They promised him his Life, if he would deliver, or produce to them that Letter, which, tho' he did not, nor indeed could, yet at last they pardoned him, and sent him to the rest that were saved, and *Sbarrock* with him. That Morning *Emanuel Thomson* understanding that *John Beament* was pardoned, made Means to have him come and speak with him, which with much ado he obtained. *Beament* found him sitting in a Chamber all alone, in a most miserable Fashion, the Wounds of his Torture bound up, but the Matter and gore Blood issuing through the Rollers; he took *M. Beament* by the Hand, and prayed him, when he came into *England*, to do his Duty to the honourable Company his Masters, to *M. Robinson*, and to his Brother *Billinghig*, and to certify them of his Innocence, which, said he, you yourself know well enough.

All things being prepared for the Execution, the condemned were brought forth of the Hall along by the Chamber, where the quit and pardoned were, who stood in the Door to give and take the Farewel of their Countrymen now going to Execution; staying a little for this Purpose, they prayed, and charged those that were saved, to bear witness to their Friends in *England* of their Innocence, and that they died not Traitors, but so many Innocents merely murdered by the *Dutch*, whom they prayed God to forgive their Blood-thirstiness, and to have Mercy upon their own Souls. Being brought into the Yard, their Sentence was read unto them from a Gallery, and then they were thence carried unto the Place of Execution, together with nine *Japonefe* and a *Portuguese*, not the ordinary and short Way, but round about, in a long Procession through the Town, the Way guarded by five Companies of Soldiers, *Dutch* and *Amboynefe*, and thronged with the Natives of the Island; that upon the Summons given the Day before by the Sound of the Drum, stocked together to behold this Triumph of the *Dutch* over the *English*. *Samuel Celson* had conceived a Prayer in Writing, in the End whereof he protested his Innocence, which Prayer he read to his Fellows the Night before; and now also at the Place of Execution, devoutly pronounced the same; then threw away the Paper, which the Governor caused to be brought to him, and kept it. *Emanuel Thomson* told the rest, he did not doubt but God would shew a Sign of their Innocence; and every one of the rest took it severely upon their Death, that they were utterly guiltless; and so one by one, with great Cheerfulness, suffered the fatal Stroke. The *Portuguese* prayed over his Beads very devoutly, and often kissed the Cross, sweating thereupon, that he was utterly innocent of this Treason, yet confessed, that God had justly brought this Punishment upon him; for that having a Wife in his own Country, he had, by the Persuasion of the *Dutch* Governor, taken another in that Country, his first being yet living.

The *Japonefe*, likewise, according to their Religion, shut up their last Act with the like Profession of their Innocence; so there suffered ten *Englishmen*, viz. Captain *Gabriel Towerfon*, the Agent for the *English* at *Amboyna*; *Samuel Celson*, Factor at *Hitto*; *Emanuel Thomson*, Assistant at *Amboyna*; *Timothy Johnson*, Assistant there also; *John Weibrel*, Assistant at *Cambello*; *John Clark*, Assistant, at *Hitto*; *William Griggs*, Factor at *Larica*; *John Parks*, Steward of the Houle; *Abel Price*, Chirurgion, and *Robert Brown*, Taylor. The *Portuguese* also suffered with them, his Name was *Augustin Perez*, he was born at *Bengel*. The Names of the *Japonefe* that suffered were as followeth: *Hitiſa*, *Tſeſa*, *Sinſa*, all born at *Firanda*; *Sidnes Megal*, *Pedro Congie*, *Thomas Corea*, born at *Naganſaque*; *Quandayo*, Native of *Coracis*; *Tſabinda*, of *Tjonkeige*; *Zamboe*, of *Fifſen*. Besides these there were two other *Japonefe*, the one named *Soyſime*, born at *Firanda*, and the other *Saccubo*, of the same Place; the former of which being tortured, confessed both to have been party to this private Treason, and to have offered his Service to the *English* to aid them in taking of the Castle; and the latter confessed to have had Knowledge of the Con-

sultation of the other *Japonefe* to this Purpose; but neither of them was executed, or so much as condemned; the Reason whereof was not known to the *English* that were saved. They had prepared a Cloth of black Velvet for Captain *Towerfon*'s Body to fall upon, which being stained and defaced with his Blood, they afterwards put to Account of the *English* Company. At the Instance of the Execution there arose a great Darkneſs, with a sudden and violent Gult of Wind and Tempeſt, whereby two of the *Dutch* Ships riding in the Harbour, were driven from their Anchors, and with great Labour and Difficulty saved from the Rocks. Within a few Days after one *William Duncken*, who had told the Governor, that *Robert Brown* the *English* Taylor, had a few Months before told him, he hoped that within six Months the *English* should have as much to do in the Castle of *Amboyna* as the *Dutch*. This fellow coming upon an Evening to the Grave, where the *English* were buried, being all, except Captain *Towerfon*, in one Pit, fell down upon the Grave, and having lain there awhile, rose up again stark mad; and so continued two or three Days together, and then died. Forthwith also fell a new Sickness at *Amboyna*, which swept away above one thousand People, *Dutch* and *Amboynefe*; in the Space wherein there usually died not thirty at other Seasons. These Signs were, by the surviving *English*, referred to the confident Prediction of *Emanuel Thomson* above-named, and were by the *Amboynefe* interpreted as a Token of the Wrath of God for this barbarous Tyranny of the *Dutch*.

The next Day after the Execution, being the 28th of February, O. S. was spent in Triumph for the new General of the *Dutch* then proclaimed, and in publick Rejoicing for the Deliverance from this pretended Treason. On the 1st of March, *John Beament*, *George Sbarrock*, *Edward Collins*, and *William Webber*, were brought to the Governor, who told *Beament* and *Sbarrock*, that they were pardoned in Honour of the new General, and *Collins*, that he was to go to *Jaccatra*, there to stand in the Favour of the Governor; so the Governor made them drink Wine with him, and courteously dismissed them, willing them to go and consult with the rest that were saved, who were fit to be placed in the several Factories; which done, and their Opinions reported to the Governor, he accordingly commanded each to his Place, adding, that he would thenceforth take upon him the Patronage and Government of the *English* Company's Business, to which Purpose he had within a few Days past opened a Letter that came from the *English* President at *Jaccatra*, directed to Captain *Towerfon*, being the first *English* Letter he ever intercepted; further saying, that he was glad that he found by the Letter that the *English* at *Jaccatra* were innocent touching this Business. The Governor and Fiscal having just made an End at *Amboyna*, dispatched themselves for *Banda*, where they made very diligent Enquiry against Captain *Weldon*, the *English* Agent there, yet found no Colour or Shadow of Guilt to lay hold on, but at last entertained him with courteous Speeches, professing to be very glad that they found him as well as the *English* at *Jaccatra* to be without Suspicion of this Treason.

Captain *Weldon* perceiving the Disorder and Confusion of the *English* Company's Affairs at *Amboyna*, by Means of this Dealing of the *Dutch*, forthwith hired a *Dutch* Pinnace at *Banda*, and passed to *Amboyna*, where instantly upon his Arrival, he recalled the Company's Servants, which were sent by the *Dutch* Governor to the upper Factories. Having inquired of them, and the rest that were left at *Amboyna*, of the whole Proceedings lately passed, he found by the constant and agreeing Relation of them all, that there was no such Treason of the *English* as was pretended, as also understanding what strict Command the Governor had given to the surviving *English* not once to talk, or confer with the Country People concerning this bloody Business, although the said Country People every Day reproached them with Treason, and a bloody Intention to have massacred the Natives, and to have ripped up the Bellies of Women with Child, and such like stuff, wherewith the *Dutch* have possessed the poor Vulgar, to make the *English* odious unto them. The said *M. Weldon* therefore finding it to suit neither with his Honour nor Profit of the *English* Company his Matters, to hold any longer

Residence

Residence in *Amboy* along with *castra*, whither the *Edward Collins* before Mercy of the Governor came to *Jaccatra* sent forthwith know by what Authority thus proceeded against the *Dutch* Proceedings. The Governor of *Amboy* Lords States-General whom he had lawfully caused, within the Proceeding was *English* executed at own Confessions, *English* President, certified, but recited the bare and Passage of this Actions of six several condemned, and of *Amboyna*. All mined upon their Particulars of Captain *son's* Examination Light, by reason the rest, and each *English* suffered the Fatewel which *John* before the Execution is yet touching the rest. Residence in *Amboyna*, he took the poor Remnant of the English along with him in the said hired Pinnace for *Jacatra*, whither the Governor had sent *John Beaumont*, and *Edward Collins* before, as Men condemned, and left to the Mercy of the Governor. When this heavy News of *Amboyna* came to *Jacatra*, and the English there, the President sent forthwith to the General of the Dutch, to know by what Authority the Governor of *Amboyna* had thus proceeded against the English, and how he, and the rest of the Dutch there at *Jacatra* did approve these Proceedings. The Governor returned for Answer, that the Governor of *Amboyna's* Authority was derived from the Lords States-General of the United Netherlands, under whom he had lawful Jurisdiction both in criminal and civil Causes, within the District of *Amboyna*; further, that such Proceeding was necessary against Traitors, such as the English executed at *Amboyna* might appear to be by their own Confessions, a Copy whereof he therewith sent to the English President, who sent the same back to be authentickly certified, but received it not again. Hitherto hath been recited the bare and naked Narration of the Progress and Passage of this Action, as it is taken out of the Depositions of six several English Factors, whereof four were condemned, and the other two acquitted, in this Process of *Amboyna*. All since their Return into *England*, examined upon their Oath in the Admiralty-Court. The Particulars of Captain *Townerfon's*, as also of *Emanuel Thomson's* Examinations and Answers, are not yet come to Light, by reason that these two were kept a-part from all the rest, and each alone by himself, nor any other of the English suffered to speak with them, except only that short Farewel which *John Beaumont* took of *Thomson*, the Morning before the Execution before mentioned. The like Obscurity is yet touching the Examinations and Answers of diverse of the rest that are executed, being, during their Imprisonment, so strictly looked to, and watched by the Dutch, that they might not talk together, nor mutually relate their Miseries; but because the Dutch defend their own Proceedings by the Confessions of the Parties executed, acknowledging severally under their Hands, that they were guilty of the pretended Crime.

It will not be amiss to recollect and recall unto this Place, as it were unto one Sum and Total, certain Circumstances dispersed in several Parts of this Narration, whereby as well the Innocence of the English, as the unlawful Proceeding against them may be manifested.

First, therefore, it is to be remembered, that the Japanese were apprehended, examined and tortured three or four Days before the English were attacked, and the same as well of their Apprehension as Torture was rief and notorious in the Town of *Amboyna*, and the Parts adjoining. *Thomson* in this Interim, and the very first Day of the Examination of the Japanese, went to the Castle, to ask Leave of the Governor to land some Rice, and brought back the News with him to the English House, of the cruel handling of these poor Japanese. This had been *Item* enough to the English, if they had been guilty, to shift for themselves, whereto also they had ready Means by the Curricurries, or small Boats of the *Amboyners*, which lie along the Strand, in that Number wherewith they might easily have transported themselves to *Seran*, to *Battoun* or *Macassar*, out of the Reach and Jurisdiction of the Dutch; but in that they fled not, in this Case, it is a very strong Presumption, that they were as little privy to any Treason of their own, as suspicious of any treacherous Train laid for their Bloods.

In the next Place, let it be considered, how impossible it was for the English to achieve this pretended Enterprise. The Castle of *Amboyna* is of a very great Strength, the Garrison therein two or three hundred Men, besides as many more of their free Burghers in the Town. What their Care and Circumspection in all their Forts is, may appear, not only from the quick Alarm they took at the foolish Jestling of the poor Japanese, made to the Centinel above recited, but also by that which a little before had happened at *Jacatra*, where one of their Soldiers was shot to Death for sleeping on the Watch. Durlf ten Englishmen, whereof not one Soldier, attempt any thing upon such a Strength and Vigilance? As for the Assistance of the Japanese, they were but ten neither, and all unarm-

ed, as well as the English: For, as at the Seizure at the English House, all the Provision there found, was but three Swords, two Muskets, and half a Pound of Powder; so the Japanese, except when they are in Service of the Castle, and there armed by the Dutch, are allowed to have no Arms, but only a Catan, a kind of short Sword; and it is forbidden to all the Dutch, upon great Penalty, to sell any Hand-gun, Powder or Bullets to the Japanese or *Amboyners*.

But let it be imagined these twenty Persons, English and Japanese, were so desperate as to adventure the Exploit, how should they be able to master the Dutch in the Castle, or to keep Possession when they had gotten it? What Second had they? There was neither Ship nor Pinnace of the English in Harbour. All the rest of the Japanese in the Island were not twenty Persons, and not one English more. The nearest of the rest of the English were at *Banda*, forty Leagues from *Amboyna*, and those but nine Persons, all afterwards cleared by the Governor and Fiscal themselves, from all Suspicion of this pretended Crime, as were also the rest of the English at *Jacatra*.

On the other Side, besides the Strength of the Castle, and Town of *Amboyna*, the Dutch have three other strong Castles, well furnished with Soldiers, in the same Island, and at *Cambello*, near adjoining. They had then also in the Road of *Amboyna* eight Ships and Vessels, namely, the *Rotterdam* of 1200 Tuns, the *Unicorn* of 300 Tuns, the *Freemens* Vessel of 100 Tuns, the *Calk* of 60 Tuns, Captain *Gamal's Junck*, of 40 Tuns, the *Flute* of 300 Tuns, the *Amsterdam* of 1400 Tuns, and a small Pinnace of about 60 Tuns, and all these well furnished with Men and Ammunition. It is true, that the Stories do record sundry valiant and hardy Enterprises of the English Nation, and the Dutch are Witnesses of some of them; yea, have reaped the Fruit of the English Resolution, yet no Story, no Legend, scarcely repeateth any such Hardiness either of the English or others, that so few Persons, so naked of all Provisions and Supplies, should undertake such an Adventure upon a Counter-Party, so well and abundantly fitted at all Points. But let it be further granted, that they might possibly have overcome all those Difficulties, yet to what End and Purpose should they have put themselves into such a Jeopardy? They knew well enough, that it was agreed between both Companies at home, that the Forts in the Indies should remain respectively in the Hands of such as had Possession of them at the Date of the Treaty *Anno* 1619, and that the same was ratified by the King's Majesty and the Lords States-General. They knew likewise, and all the World takes Knowledge of his Majesty's religious Oblivration of Peace and Treaty with all his Neighbours, yea, with all the World. What Reward therefore could these English hope for of their Valour and Danger? Certainly none other than that which is expressly provided by the Treaty itself, that is, to be punished as the Disturbers of the common Peace and Amity of both Nations.

But let these Englishmen have been as foolish as they will in this Plot, as the Dutch will have them, is it also to be imagined, that they were so graceless, as when they were condemned, and seriously examined, and admonished by the Ministers to discharge their Consciences, yet then to persist in their Dissimulation, being otherwise of such godly Behaviour, as to spend the Time in Prayer, Singing of Psalms, and spiritually consorting one another, which the Dutch would have had them bestow in Drinking to drive away their Sorrow? Let *Colson's* Question to the Minister be considered, his, and the rests, Offer and Desire to receive the Sacrament in Sign and Token of their Innocence, their mutually asking Forgiveness for their like false Accusations of one another forced by the Torture.

Thomson's last Farewel to *Beaumont*, *Colson's* Prayer, and his writing in his Prayer-Book *Fardo's* Farewel to *Pezel*, also his conjuring Exhortation to his Fellows to discharge their Consciences, and all their Answers thereunto, craving God's Mercy or Judgment, according to their Innocency in this Cause; their general and religious Profession of their Innocence to their Countrymen at their last parting with them, and finally, their sealing this Profession with their last Breath and Blood, even in the very Article

of Death, and in the Stroke of the Executioner. What horrible and unexampled Dissimulation was this? If some one or more of them had been so fearfully desperate, yet would there not one amongst ten be found to think of the Judgment to come, whereunto he was then instantly summoned, without Effoin, Bail or Mainprize? What! Had they hope of Reprieve and Life, if they kept their Countenance to the last? Yet what Hope had *Thomson* and the rest when Captain *Tower's* Head was off? Nay, what desire had *Thomson* and *Clark* to live, being so mangled and martyr'd by the Torture? They were executed one by one, and every one severally, took it upon his Death; that he was guiltless.

Now to blanch and smooth over all this rough and barbarous Proceeding, it is here given out, that the Governor and Fiscal found such Evidence of the Plot, and dealt so evenly in the Process, that they spared not their own People, having used some of their native *Dutchmen*, partakers of his Treason, in the same Manner as they did the *English*; but this, as well by the Relation here truly and faithfully set down, grounded upon the sworn Testimony of six credible Witnesses, as also by other sufficient Reports of diverse lately come out of those Parts, appeareth to be a meer Tale, not one alledged by any in the *Indies* in many Months after the Execution, but only invented and dispersed here for a Focus, and a fair Colour upon the whole Cause, and to make the World believe, that the Ground of this barbarous and tyrannous Proceeding was a true Crime, and not the unfavourable Covetousness of the *Hollanders*, by this cruel Treachery, to gain the sole Trade of the *Moluccas*, *Banda* and *Ambeyna*, which is already become the Event of this bloody Process. To add hereunto by way of Aggravation, will be needless, the Fact is so full of odious and barbarous Inhumanity, executed by the *Dutch*, upon the *English* Nation, in a Place where both lived under Terms of Partnership and great Amity, confirmed by a most solemn Treaty.

It must be confessed, that this is in all respects a most astonishing and surprizing Relation. That the *Dutch* should be desirous of ingrossing the Spice-Trade, had nothing in it but what might be easily accounted for, because of the former Instances they had given us of their Avarice, that they should make no scruple of attacking and destroying the *English* that were settled in the Spice-Islands, and consequently stood in the Way of their Design, is what might have been expected from their boundless Ambition, by which they were become formidable, even to their own States; but that they should take this Method which was at once the most barbarous, the most provoking, and the most contrary to the solemn Treaty they had made, is strange in the highest Degree. But perhaps it may be accounted still stranger, that when they had done it, they durst justify it, and justify it even here; which however they did, which produced the Account we have given the Reader, as appears from that very Account which the *East-India* Company were not at Liberty to publish till the *Dutch* made this Appeal to the Publick themselves.

After this, indeed, the publishing of their Case could be no longer refused them, especially as what they offered, was supported by the fullest Proofs upon Oath, registered in the Court of Chancery. We see from hence, the great Consequence of the Liberty of the Press: had it been open at that Time, it had been impossible to have hindered the Nation from receiving ample Satisfaction for such a flagrant Injury, such an intolerable Insult. But as it was, we are told, there was a Party in King *James's* Court, that if they did not justify, at least excused this horrid Fact, from the *Dutch* Account of it before-mentioned, which renders it absolutely necessary, that this *Dutch* Account should be likewise given to the Reader, not only to prevent any Suspicion of Partiality, but that all the Circumstances of this Tragedy may appear in the clearest Light, there being some of them which could only be set forth by the *Dutch* themselves.

It may not be amiss, however, to observe previous to the transcribing this *Dutch* Account, that at this Juncture the States were actually demanding and receiving Assistance from the Crown of *Great Britain*, and that too as large in its Nature, and as of actual in its Consequen-

ces, as any which they had received in the Time of Queen *Elizabeth*, and for which the States expressed as much Gratitude and Thankfulness to that Monarch, as ever they did to the Queen, and, as it clearly appears, with just as much Sincerity. I would not, however, be understood to mean, that the Tragedy of *Ambeyna* was acted in consequence of any Instructions from *Holland*, since that would not only be unfair, but untrue; but then the Reason of this ought to be attended to, which was, that the Prince of *Orange* was at the Head of their Affairs, and they could not, under the Eye of their Stadtholder, take any such bloody Resolutions. But in the *Indies* they were at full Liberty, and there therefore the true Genius of the Nation displayed itself; and the *Dutch* Writers, in those very times boast, that the General of the *East-India* Company kept as great a Court, and made in every respect as magnificent an Appearance as the Prince of *Orange* himself, which plainly proves, that as they hated the Government of the Princes of *Orange*, so they were willing that Strangers should take notice of their Independency and Power in another Part of the World; where the Government was in such Hands as they best approved.

These things being remembered, let us now proceed to the *Dutch* Account of the pretended Conspiracy at *Ambeyna*, addressed in a Letter to a Friend of theirs here, under the Title of a true Detail of the News that came out of the *Indies*.

7 "The very Causes and Beginnings through which the Governor and Council established in the Name of the United *Netherlands* in *Ambeyna* came into Suspicion that some was plotted against the Province, did first show in the great Licentiousness of the *Tarnatanes* in *Molouque* and *Ambeyna*, who, contrary to the Contract of Alliance 1606, made with the High and Mighty Lords the States without our Consent and Knowledge, to make Peace with the King of *Fidore*, as also a Truce with the *Spaniards*, their and our ancient Adversaries, by which the said *Tarnatanes* had too much cast off all Respect, which they, both in regard of our Confederacy and manifold Assistance, did owe to this State. The *Spaniard* also was Matter enough at Sea in the *Moluccas*, because the *English* Merchants there in the *East-Indies* were unwilling to furnish us with Ships of War towards the common Defence, as they were bound to do, according to the Treaties 1619, to the Number of ten, through which the Voyages to *Manilla* coming to cease, the Enemy traded there without any Interruption, and procured Power to send Gallies, Ships and Pinnaces to *Molucca*, with great Succours of People and Provision, and that because again through the same Default of the *English* Merchants, there were no Ships of War kept as should have been. The Subjects of the King of *Ternate* began to commit great Insolencies against our Nation, having outrageously assaulted divers of us divers ways, and also slain some, and we, notwithstanding, would not obtain any Punishment upon them; and as one Outrage unpunished provokes more, through Hope of the like Impunity, or other Considerations, so were the said *Tarnatanes* of *Ambeyna* dwelling at *Lobo*, *Cambello*, and those near adjoining Places, proceeded farther, and have armed themselves at Sea, and invading divers Islands and Places standing under the *Netherlands* Governor in *Ambeyna*, spoiling them, and killing our Subjects, and taking others, and carrying them away for Slaves; and, notwithstanding the instant Request of the *Netherlands* Governor, no Satisfaction or Justice hath followed; but the said *Tarnatanes* are yet gone farther, and openly threatened to murder the *Dutch* Merchants, and to spoil and burn the Lodge, or Factory, which our People have many Years these enjoyed, so that our Merchants have taken out the *Dutch* Goods to avoid Damage; and the *Tarnatanes* at *Lobo* did actually set on Fire and ruin the said *Netherlands* Factory.

"In the *Manichels*, an Island being under the Province of *Ambeyna*, they have in like manner shortly after burned the *Netherlands* Lodge, with the Loss of all the Goods therein. The *Netherlands* Governor, that by his Presence and Authority he might cause such Rebellions to cease, and to give Order for Time to come, and

being under the Province
like manner shortly after
s, with the Loss of all the
land's Governor, that by
might cause such Rebel-
for Time to come, and

“ also to seek Satisfaction and Punishment upon the afore-
“ said Insolencies, went towards *Lobo*, with a small Power
“ of Sloops, and coming thereabout, was met otherwise
“ than was wont, by a Navy of Sloops of the *Tarnatans*
“ of *Lobo*, stronger than his were; those by their Confes-
“ sences gave him well to know, how little Reverence
“ they gave the *Dutch* Governor: They braved him with-
“ out any hope of Restitution of any thing to come, so
“ that he was fain to return to his Castle of *Amboyna*. By
“ reason of these things, the said *Tarnatans* became so stout
“ and daring, that they gave out openly, that they would
“ come and spoil our Subjects, by a general Army, with
“ above an hundred Frigates: With these, they said, they
“ would come against *Amboyna*, to make an universal Spoil
“ of our People, through which there came a great Fear
“ upon the *Indians*, standing under the Subjection of the
“ High and Mighty Lords the States, as also over the
“ *Netherlanders*. In the Islands lying far Eastward of
“ *Banda*, it was also said, and the News went currently
“ there, that the *Dutch* were sure enough quit of the
“ Castle of *Amboyna*, and at that Time there was divers
“ secret Correspondencies between the *Indians* and others,
“ which gave us great Suspicion.

“ By this means the *Netherland's* Governor and Council
“ of *Amboyna* were moved to have special Regard, and
“ look narrowly into all things, seeing that it might thence
“ be clearly gathered, that something might be plotted
“ against the State in *Amboyna*, and that the *Indians* of
“ themselves durst not offer to undertake any such great
“ Design without some great Help of some of *Europe*,
“ either of *Spaniards*, *Portuguese*, or some others; and also
“ they understood, that these at *Lobo*, *Cambello*, &c. had
“ great secret Correspondence with the *English* Merchants.
“ When things were in such a State at *Amboyna*, there
“ came forth, and was wonderfully discovered in *February*
“ 1623, a horrible Conspiracy against the Castle and Per-
“ son of the *Dutch* Governor, the whole State of *Amboyna*,
“ and first by the Apprehension of a certain *Japanese*,
“ who, at an unseasonable Time, was often seen upon the
“ Wall of the Castle, where he also over-curiously en-
“ quired of the most unskillful and silliest Soldiers, touching
“ the Setting and Change of the Watch, and what Num-
“ ber of People might be in the Castle, and many other
“ things: Whereupon in the very Act the said *Japanese*
“ was apprehended, and being examined of many Circum-
“ stances, he confessed, that the *Japanese* Soldiers under
“ our Service, had determined to make themselves Masters
“ of the Castle, and that they should have let upon this by
“ the Help of the *English*, who had solicited them unto
“ it; and that he, with all the other *Japanese* in the *Eng-*
“ *lish* Houfe, oftentimes, within three Months before,
“ had conferred with the *English*, touching the Manner
“ whereby they should bring this Treachery to pass. Then
“ all the *Japanese* Soldiers, who were in our Service, were
“ disarmed and imprisoned; and by Examination of them
“ all, it appeared plainly, by an orderly and joint Confes-
“ sion, that all the said *Japanese*, upon the Treaty of *Ga-*
“ *briel Towerfon*, and other *English* Merchants and Officers,
“ agreed to assist the said *English* to betray the said Castle,
“ and to give it over into the *English* Power; and that
“ *Gabriel Towerfon*, and *Abel Price*, an *English* Chirur-
“ geon, and other *English*, dealt often with them, on the
“ Ways and Means how they should work it.

“ The said *Abel Price* being before imprisoned for a foul
“ and execrable Fact, and yet remaining to continue, and
“ although it appeared sufficiently to the Governor and
“ Council of *Amboyna*, out of the Confession of the *Japo-*
“ *nese*, what the said *Gabriel Towerfon*, with his Merchants
“ and other Accomplishes had before resolved to do, and
“ that the Council had sufficient Information to impute
“ them all, yet the General Council would not precipitate,
“ but commanded the said *Abel Price*, then a Prisoner, to
“ come before the Council; and after the Places, Persons
“ and Time nominated to him, where and when he had
“ dealt with the *Japanese* and other *English* about the said
“ Treachery; it was also from him well understood, how
“ he and another *Japanese* had persuaded all the *Japanese*
“ to consent to this Villany; and that consequently the
“ said *Towerfon*, as the first Author, and all the other
N U M B. 60.

“ *English* Merchants, had also Knowledge of the said Treachery. Upon this full and uniform Examination and
“ Confession of twelve Persons, as well of the eleven *Japo-*
“ *nese* as one *English*, the said *Gabriel Towerfon* was called
“ to the Council, and there appearing, the said *Towerfon* call-
“ ed together all his People unto the Castle, upon the Request
“ of the General Council, who were then taken and impris-
“ oned, except the said *Gabriel Towerfon* himself, to whom,
“ at his Request, and in regard of his Quality, being chief
“ Merchant in *Amboyna*, in the Name of the *English* Com-
“ pany, his own Houfe was allotted him for his safe keep-
“ ing and forth-coming; and the said Prisoners were all
“ lawfully and orderly examined; and it appeared by them
“ jointly, according to their own Confession, every one
“ having underwritten it with his own Hand as followeth:

“ *Gabriel Towerfon*, about New-year's-day 1623, hav-
“ ing with him almost all the *English* Merchants of the
“ Foreign Cantore in *Amboyna*, assembled them in his
“ Chamber, and propounded to them, that he had some-
“ thing of great Moment to impart unto them under the
“ Fidelity of an Oath to be taken before, for the keeping
“ secret thereof, and being trusty therein, saying, it is ne-
“ cessary so to be; for if the thing should come abroad
“ which I shall make known unto you, it will cost all our
“ Lives: Whereupon the holy Gospel was produced, upon
“ which every one who was present did swear Secrecy and
“ Fidelity, as was required. Then *Towerfon* opened to the
“ Conspirators, how he had a Way and Means to make
“ himself Master of the Castle of *Amboyna*; and whereas
“ some present made it difficult to do, being too weak for
“ it; the said *Towerfon* answered, that he had already won
“ to his Purpose the *Japanese* Soldiers, who were in the
“ Castle, and that they should execute his Purpose, when
“ the *Dutch*, who were in the Castle, were in their greatest
“ Weakness, and worst provided, or when the Governor
“ should be absent about some Exploit; and that they
“ should wait till some *English* Ships or Ship were in *Am-*
“ *boyna*, whose People he might employ in this Attempt;
“ as also, when all other the *English* Merchants and Slaves
“ of the Foreign Cantore in *Amboyna* should be sent for to
“ the Castle; and said farther, that he knew how to get
“ Men enough, and they should leave this to his Care, and
“ themselves do their best; and that they of *Lobo* should
“ also come to help him, with certain *Correcurries*, &c.

“ Upon which Inducements, all that were present swore
“ to assist *Towerfon* herein, and concerning the Manner of
“ Execution; the said *Towerfon* had prescribed to the
“ *Japanese*, who were in the Castle, that they should send
“ to every Point of the Bulwarks two Men, and the rest in
“ the Court should attend the Governor, and murder him;
“ and that at the Sign which should be given to the *Eng-*
“ *lish*, they should make themselves Masters of every Point
“ of the Bulwark, and kill all who should resist, and im-
“ prison the rest; and further, should take and divide be-
“ tween themselves and the *Japanese* the Goods of the
“ *East-India* Company, except one thousand Rials of
“ Eight, which every *Japan* should have before; and
“ that they should kill the Citizens, who would not con-
“ sent with them, and do them all the Mischief they could;
“ and touching the Time, he had not yet certainly set it;
“ but that there should suddenly be another Assembly of
“ the Conspirators, when *Gabriel Towerfon* would give
“ Orders for all things, and would give a Sign to the *Japo-*
“ *nese*, whereupon, when they shewed it, they should
“ begin the Work within.

“ The said *Gabriel Towerfon* being asked in particular,
“ what moved him to such a wicked Fact? He answered,
“ the Desire of Honour and Profit: Being farther de-
“ manded, who should enjoy the Honour and Profit, and
“ for whom he would have taken the Castle? he answered,
“ that if he did obtain his Desire, he should presently have
“ advertised those of his Nation being in *Batavia*, and
“ called for their Help, who, if they had sent him Suc-
“ cour, he would have kept the Castle for his own Com-
“ pany, viz. the *English* *East-India* Company, and if not,
“ he would have held it for himself, and have endeavoured
“ a Peace with the *Indians*; that so, by the one Means,
“ and the other, he might attain his Purpose. After the
“ Examination of *Towerfon* was ended, the *Dutch* Gover-

" nor in *Ambeyna* upbraided him of his cruel Intention, and asked if this should have been the Recompence of the manifold Honours and Kindnesses he had done to him? Whereunto *Towerson* answered with a deep Sigh, Oh! if it were to be begun it should not be done.

" This voluntary Confession and penitent Acknowledgment, with much Sorrow, was made the Ninth of *March*, being the Day when the Execution should have been done; but the Examination of *Towerson* was ended the Eighteenth of *February*, so many Days before. This is the Substance of the Confession of the ten *Japanese*, of fourteen *English*, and of a *Netherlandish* Merchant, or Captain of the Slaves, who all confirmed these their Confessions with their own Hands. What Crime this intended Prodition was, is hence very many manifest, and undoubted; what Punishment is due to Treachery, according to the Law and Customs of all Nations, is also well known; no true Christian Man will patronage any such horrible Attempt, but will adjudge it worthy of Death, as it was determined upon the Accomplices of the Conspiracy, according to the Order of Justice, as there in *Ambeyna* is executed, according to Desert, by the Governor and Council, in the Name of the High and Mighty Lords the States. Here you have, Sir, the very Substance of the Truth, both of the Fact and Punishment, other than which many Things are spread abroad in *England*, but upon what Pretence or Authority I know not; let the Matter itself speak.

" The first Point which is objected against this Justice done in *Ambeyna* is, concerning the Proceedings which are said to be holden without Formality, and with Inequity, against these Conspirators: Your Majesty, and each reasonable Man, knoweth that every Land hath their Laws, and Ordinances, and their particular Manner of Proceedings, as well in Civil, as in Criminal Causes; *England* here, *France*, *Spain*, *Dutchland*, and all other Kingdoms and Governments have also theirs, which are just and lawful to every one in their Dominion; so that when any one will judge of the Equity or Justice of a Proceeding used in any Land, he must examine the same according to the Laws and Customs of that Kingdom, or Dominion, where the Justice and Proceedings were holden. These Proceedings were holden before the Governor of the *Netherlands*, in the Name of the Illustrious Lords the States, having supreme Power, many Years since, in the Isles of *Ambeyna*, which were conquered in the Name of the said Illustrious Lords the States, from the *Spaniards* or *Portuguese*, who held the Castle in the Name of the King of *Spain*, our hereditary Enemy; therefore they are now possessed in the Name of the Lords the States, and are under their Dominion, by a just and lawful Title of War, according to the Law of Nations. These Justices administered according to the Law of the *Netherlands*, in that Manner as was used in the Proceedings against these Conspirators. I know that the Laws of *England* are diverse from ours in Criminal Cases; yea, and from all the Nations in *Eure*.

" Howbeit therefore no Man hath any Ground of Reason to say that the Proceedings of the *English* Judges against Delinquents are not legitimate, tho' the said *English* Proceedings do vary in the Manner from the Proceedings of *France*, *Spain*, &c. where other Customs are; for that is lawful which agreeth with the Laws of the Land where the Fact is committed. Now then, the *Japanese*'s Soldiers being in the Service of the *Netherlands* Company in *Ambeyna*, are discovered to have conspired against the Castle and the Governor there, under whose Oath and Pay they were; they were apprehended, examined, and convicted of the said Conspiracy. This Proceeding is lawful, and toucheth no Man, because the said *Japanese* knew no other Master than the *Netherlanders*, under whose Oath, Service and Pay they stand. All these Conspirators, with the said *Marinbe*, a Captain

" of the *Netherlands* Slaves, confessed with one Mouth, that they were moved and induced to this Conspiracy by the *English* Merchants resident in *Ambeyna*, whole Names they named. Now, not only the Right of the *Netherlands*, but *England*, and of the whole World, requireth that the Authors, Abettors, and Accomplices of Murder and Treason, should be punished with Death.

" Whereunto, according to the Common Law, as also the particular Laws of every Kingdom or Dominion, the suspected Persons first, and before all, should be imprisoned, not only for preventing the Effect of their evil Purposes, but that they might also receive their deserved Punishment; which Apprehensions could not be done of any other Man than by the Command of the *Netherlands* Governor, to whom it belonged to take Care to see every Act concerning supreme Power to be there observed; and especially the highest *English* Officer there could not apprehend these *English* Conspirators, because all the chief of the *English* Merchants at *Ambeyna*, were themselves of the Conspiracy, and Accomplices of the Fact upon which the Apprehension was made; therefore the Apprehension of the *English* Accomplices must be done by the *Dutch* Governor, who therefore hath therein proceeded according to the Custom of all Nations of the World.

" And that these Apprehensions may be holden more lawful, it appearing out of the written Process, that the said *English* Accomplices were not imprisoned upon the first Suspicions and gross Evidences which were had against them, but then, at last, when all the *Japanese* Soldiers were taken, examined, and convicted, and had discovered, by the uniform Confession of all the eleven. The Names, and Surnames of such *English* as had persuaded, and hired them to this Fact, or such *English*, viz. one *Abel Price*, Barber, was before apprehended as an Incendiary, for burning, and other Violences done upon other Houses, who also was first examined, and first confessed; as the other eleven *Japanese*. That he, by Name *Gabriel Jansen*, and other *English* Merchants, in the foreign Countries of *Ambeyna*, had Knowledge of this Conspiracy, &c. so that it may be seen out of that which were before, that the *Dutch* Governor dealt no otherwise in the Apprehensions and Examinations of the *English* than according to his Place and Power, and that with great Discretion, according to the Laws of the United Provinces. The second Point, which is absolutely dispersed in *England* against this Execution is, that it is said, that it did not appertain to the *Netherlands* in *Ambeyna*, to imprison the said *English*, and to proceed against them, or to punish them; but that it did belong to the Council of Defence, resident at *Jaccarta*, consisting half of *English* and half of *Netherlanders*, according to the Treaty of the Year 1619, made between his Majesty and the Lords the States, between the two *East-India* Companies.

" That I might the better inform myself thereof, I took in Hand, and perused the general Treaty of 1619, with the Explication following thereupon; but I profess, as I think, that every understanding Man must confess, that neither in the said Treaty, nor in the Enlargement, any one Article or Word could be perceived; whereby, according to that which is truly said in *England*, either this, or any such thing, is ordained or decided by the said Treaty, as it ought to have been in so great and important a Point as this Part of Jurisdiction is, I appeal to all wise Men, who I desire may judge of this, whether this Speech of some in *England*, to wit, that the said Council of Defence should alone have judged these Conspirators, be agreeable to the said Treaty, or contrary to the same. I find many Arguments for my negative Opinions, to wit, that before the Treaty of 1619, the *Dutch* in *Ambeyna* administered Jurisdiction and Judicature upon all, and every one, who dwelt in, or under the Jurisdiction of the Castle, as well Inhabitants as Strangers, without Difference; and that in the said Treaty,

confessed with one Mouth, induced to this Conspiracy resident in *Ambogna*, whose not only the Right of the end of the whole World, rebels, and Accomplices should be punished with

the Common Law, as also Kingdom or Dominion, and before all, should be preventing the Effect of it they might also receive; which Apprehensions are more than by the Governor, to whom it be every Act concerning suffered; and especially the could not apprehend these all the chief of the *English*, were themselves of the of the Fact upon was made; therefore the *English* Accomplices must be honor, who therefore hath to the Custom of all Na-

ensions may be holden out of the written Process, and were not imprisoned gross Evidences which were last, when all the *Japanese* and, and convicted, and had Confession of all the eleven of such *English* as had to this Fact, or which *Barber*, was before appearing burning, and other *Barber*, who also was first ed; as the other eleven Name *Gabriel Towerjon*, ts, in the foreign Coun- dge of this Conspiracy, out of that which were be- nor dealt no otherwise in imonations of the *English* and Power, and that with g to the Laws of the econd Point, which is ab- against this Execution is, appertain to the *Nether-* on the said *English*, and to punish them; but that it Defence, resident at *Jac-* *English* and half of *Nether-* y of the Year 1619, made Lords the States, between es.

inform myself thereof, I ed the general Treaty of on following thereupon; that every understanding her in the said Treaty, nor he Article or Word could according to that which is er this, or any such thing, he said Treaty, as it ought d important a Point as this eal to all wise Men, who s, whether this Speech of at the said Council of De- ed these Conspirators, be y, or contrary to the same. my negative Opinions, to ty of 1619, the *Dutch* in duction and Judicature ap- d well in, or under the Ju- well Inhabitants as Sa- and that in the said Treaty,

“ the *Dutch*, with the *English* Merchants, made only a League in the Manner of Commerce and Negotiations of Nutmegs, Mace, Cloves, and Pepper, in some Quantities, without having any further Treaty or Communication in the Land. So that without the Bounds of this common Negotiation, every one remained free and unhindered in the Land by the Right and Possession which either Company enjoyed and exercised severally, according as the same appeareth out of the twenty-third Article of the Treaty, where it is expressly said, that Cattles and Forts shall remain in their Hands who do at present possess them: And out of the thirteenth, fourteenth, and fifteenth Articles of the Treaty, all may see that this Common Council of Defence hath no more Power, save only over the Fellowship of the Treaty, that is, over the Navy of Defence in the Sea, to the Defence of common Merchandize and Liberty of Commerce. And, lastly, to tax the Charges for the Provision of Ammunition in the Forts; neither can any other Thing be sincerely collected out of the said Treaty, so far as I can conceive.

“ Therefore, this second Point is found to be untrue and abusive, being not founded upon the said Treaty, which Treaty, notwithstanding, ought to be the only Rule both of the one and the other Company. Finally, it is given out in *England*, that in the Examination of the Conspirators, there was Excess in the *Netherlands* Judges in the Point of Torture. I acknowledge, that no Argument or Pretext against the Justice of this Execution, hath more moved me in the Beginning, than this Pretence of Excess aforesaid; because this fourth Christian Compassion; although I also judge, that wise Men will not suffer themselves to be too much transported thereby, before the true Reasons do fully appear which should move us thereunto; for I well remember yet, that in the Time of former Mistaking in the *Indies*, many Things were pretended on both Parts; upon which Pretence were great Out-cries on either Side, which yet, by due Examination, were found to be false Pretences of some ill-willers, and Men desirous to wrangle; which Pretences, being thoroughly sifted by the high and much-admired Wisdom of his Majesty, and the Lords the States, were well discovered to be no such Matters as they were made; as it is also undoubtedly believed, that his Majesty and the States will yet further do in this Affair, and to the Cause of the *Dutch* Company may be rightly justified, of which I understand, that the Lords the States have special Regard; and that they have been thoroughly informed what is the very Truth of the Things there past, and of the Execution in *Ambogna* of the *English* Conspirators; unto which End the Lords the States resolved to see and peruse all the Papers and Letters touching the said Proceedings. And now, thereupon, Men speak far otherwise than heretofore; for Pretences and Cavils cannot stand with Truth. And it doth plainly appear, that there is little Truth in the Matter of Torture, reported to be most cruelly inflicted upon the *English* Conspirators, as in *England* it is said; and I have ever suspected this for a Slander; for, I know the *Dutch* Nation doth naturally abhor this kind of Cruelty, and are as much moved to Commiseration as any other People. But whether these evil-minded Men, who have scattered this great Slander in *England*, and have so foully defaced a just Cause, have done it by Occasion of an Use of Tortures in these Lands in some weighty Causes, according to the Custom of most Dominions in *Europe*, I cannot judge.

“ But is that to be censured and judged to be unjust of the whole World, which is repugnant to the Laws of *England* (or any one Nation) where Torture is really used? Nothing to but the Justice or Injustice of a Cause must be determined according to the Laws where it is done, and not of other Lands. If this were not so, why then should not the whole World much more judge that as hard, and a thing unheard of, which in some Causes is used in *England*, according to the Laws there; when they proceeded against some guilty Persons, who being

“ once, and again asked of the Judge, and utterly refusing to be legally tried, is adjudged to be dumb, that is, by Contumacy, whose Condemnation then accordingly followeth, that he is laid upon a Table, or Plank, and another Plank upon him, that his Body is miserably bruised, and so pressed violently to Death. The which, according to the Confession of all Nations, and by the *English* Writers, is judged to be one of the most sharp and severe kinds of Deaths that can be invented; yet cannot such an Execution be called cruel and unlawful, when it is done in *England*, because it is done according to the Laws of that Land, though Strangers shall judge otherwise of it; and in like Manner the *English* Nation cannot complain of the Torture which Evil-willers say was used upon these *English* Conspirators in *Ambogna*, because it was done according to the Laws of this Government, and is not unusual in Cases of Treason, neither with us, nor with any Nation in *Europe*.

“ And for *England* itself, it is well known, and his most excellent Majesty doth acknowledge, by his own princely Pen, that the Rack and the Manacles are the only Tortures that are exercised upon Traitors, to force them to confess what they know to be dangerous to the State; and to lay the Truth, without taking Parts, the *English* Conspirators being affronted with the uniform and written Confessions of the eleven *Japanese*, their Accomplices, which would convince them sufficiently, according to the Laws, and find them guilty of the same Conspiracy, and consequently of Death; if now notwithstanding this, they had persisted in the stout Denial of the Fact, were not this enough to judge them dumb by Contumacy, and so to esteem them worthy of this sore Punishment of pressing to Death as aforesaid? But this Torture of ours, is to be judged far less than that pressing where the Malefactor doth suffer such extream Misery as cannot be imagined, and which is not to be lenient or eased at all, but ended by Death.

“ But to the sufficient Satisfaction of myself, and your Worship, and all Men, and not to speak according to the Sentences and Consciences of others, I have used all Diligence to get into my Hands the written Process concerning the Conspirators in *Ambogna*, which I obtained authentically, and read carefully, and I find, that all by me above said is confirmed, to wit, that the *Japanese* Accomplices were examined and made their Confessions as aforesaid, for three Days, viz. the 23d, 24th and 25th of *February* 1623; and that all this being done and consummated before, then at last is *Gabriel Towerjon*, first with the rest of the *English* Accomplices, imprisoned the said 25th of *February*, when their Examination and Confession began, and continued divers Days, without ever hastening till the 3d of *March*; and the said Examinations and Confessions being to finished, the *Netherlanders* Governor and Council deliberated whether the Punishment might be deferred to any long Time, or referred to any other Place; but it was so concluded, by joint Consent of all, that the said Punishment there deferred, must be executed in the same Place for Example; and that it could not in any wise be delayed without extream Danger, for Reasons there related: And, among others, because the *Tarnatans* and *Indians* about *Ambogna* had, otherwise than they were wont, rebelled; neither could it be further known what great Conspiracy these Conspirators had made with them and others.

“ And touching any extraordinary and cruel Torture, I have accurately looked over every ones Confession; but I find not one Word in any one, which maketh any Mention of such Torture, as is unjustly spoken of in *England*; nay, scarce find any Mention of that ordinary Torture which is in Use, save only these Words; in one Act of the 25th of *February* 1623, viz. the Council being gathered together, have thought meet that all the *English* should be presently examined, one after another, as accordingly it was instantly done, and some of them before any Torture: Others, after a little, or rather a Touch of it, confessed as followeth. Unto which

“ which followeth presently, the particular Confession of every one, subscribed with his own Hand, as aforesaid: So that hence it is manifest, that no extraordinary Torture was used in such Manner as is given out there by those that with us evilly say, that those few that felt any, were only touched (not punished) with ordinary Torture.

“ And thus your Worship hath the upright and impartial Truth of this Business, touching the whole Passage as it proceeded, and the Punishment as it was inflicted, from which some of the *English* were exempted by Favour, that the *English* Goods should not be lost, according as Order had been given to that End. And I find that the Sentence had been given the 9th of *March*, 1623, by a competent Assembly of fourteen Judges, who, as it appeareth in the Sentence, in the doing thereof, did before earnestly call upon the Name of the Lord, that he would please to be President, and predominant in every one of their Hearts, in this sorrowful Assembly, and that he would inspire them only with that which might be judged to be expedient and just, &c. So that out of all that is above-said, nothing else can appear, but that this Business was managed lawfully and orderly, by Men of Honesty and Conscience, against such as had undertaken against the State, against the Wealth, and Advantage of this *East-India* Company, the Lives of their Officers, there placed against the State and Welfare of many, who as little deserved, and as little expected such Wickedness from their friendly Confederates in the same Society of Merchants there residing with them.

“ And now (considering the Premises) I hope it shall be far from every Christian, in anywise, to protect, or excuse this wicked Fact; but rather to mourn and grieve, as we do, for this Conspiracy, and for the Evil the Conspirators have so deservedly drawn upon their own Heads, and to honour them who, in Justice, have punished Villany according to the true Merit thereof; for, we all know, that, without Justice, without Reward of that which is good, and Punishment of that which is evil, no Society of Mankind can consist.

“ And for this Information, which I send in Love and Honour to your Worship, as unto a Lover of Truth, and a Hater of Treachery, you may make such Use as to you shall seem good in any Place where you come, both for Refutation of any thing already reported contrary thereunto, and for Prevention of any further false Rumours or Clamours. And, finally, for the Propagation of that undoubted Truth, which here, to my best, I have endeavoured to discover.

“ And if you shall meet with any thing of Worth, which can be truly avowed to be contradictory unto any thing I have written, I desire to understand it from you, and you to suspend your wise and impartial Judgment, till I have cleared it unto you. Truth remaineth ever the same. So I commend you to the God of Truth, desiring him to give us Minds, not to judge according to outward Appearance, but to judge with righteous Judgment.”

8. It is evident enough, from the Style and Composition of this extraordinary Piece, that it was penned at the Request, and for the Use of some Person of Credit here, who was a great Friend to the *Dutch*, and highly instrumental in preventing the Government from interposing, as they ought to have done, in favour of the *East-India* Company, and obtaining the best; for a full Satisfaction could not be had, for the safe and barbarous Usage of Captain *Townson*, and the rest of the *Englishmen*, who were thus cruelly murdered at *Ambonya*. But it is not so easy to say who this Person was. The Writers of Scandal in those Times, charged this, dissuading the King from interposing, upon two Persons, by Name, viz. the Great Duke of *Buckingham*, and the then Secretary of State Sir *Ralph Winwood*. And I have met with a Book, printed in 1651, in which it is affirmed, that the Secretary received a Bribe from the *Dutch* of 30 or 40000 Pounds for that Service only. I take this to be a horrid Calumny; for having taken some Pains in examining the History of

those Times, of which indeed I once intended to have written, I have met with so many Proofs of the Candour, Integrity, and publick Spirit of that worthy Secretary, that I make not the least Scruple of affirming, that this must be a prodigious Falshood.

As to the Duke of *Buckingham*, his Interest with King *James* was so great, that if he had not been some Way or other appeased, I cannot but think the Massacre at *Ambonya* would not have passed as it did; but, at the same time, I must profess, that I do not believe he was capable of being bribed to such a Behaviour: I rather think he was misled and imposed upon; and I make no question that this very Paper was transmitted to some Person in his Confidence for that Purpose. It is an easy matter to speak ill of the Dead, and too common a Practice to tear those Characters to pieces which are least like to be defended; but this I dare not do: Though, to shew that it is not without Reason, that I suspect the Duke of *Buckingham* to have had a large Share in preventing King *James* from testifying a becoming Repentment upon this Occasion, I will relate a particular Fact that led me into this Opinion. The *East-India* Company, to perpetuate the Memory of this barbarous Transaction, caused the Tortures and Sufferings of the *English* at *Ambonya*, to be very exactly painted, and hung up in their Hall; which Picture, by the Direction of *Buckingham*, was taken down; for which this Reason was assigned, that, as it had not been thought proper to involve the Nation in a War on this Account, it was, by no Means, decent, that such a Picture should remain in publick View; since, at the same time that it exposed the Cruelty of the *Dutch*, it threw some kind of Odium on the *English* Administration.

But tho' these Paintings in Oil were removed, the *East-India* Company could not be drawn, either to forget this Affair, or to suffer the Account that this *Dutch* Agent had published of it, to pass unanswered; and therefore they employed a very good Pen, to shew the Inconveniences of this Relation, and furnished him with all the Materials that were requisite for that Purpose. This Design of his he executed with great Spirit and Diligence, and the Piece itself is so clear a Vindication of the Innocence of the *English*, and so full a Proof of the Cruelty and Barbarity of the *Dutch*, that I have thought fit to insert it for the same Reasons, which induced me to give Place to the other Papers; and I persuade myself that it will be very agreeable to my Readers, to see, at one View, and in so narrow a Compass, all the authentick Evidence that still remains of this cruel, arbitrary, and unjust Proceeding, by which so many brave Men were, at that Time, deprived of their Lives in so ignominious a Manner, and the *English* Nation for ever deprived of so important and valuable a Commerce. This Reply of the *East-India* Company was conceived in the following Terms:

“ The Compiler of this Relation, perceiving that he had an hard Task to make it probable, that eighteen *Englishmen*, Merchants, and their Servants, all unarmed, should, with the Assistance of ten *Japanese*, likewise unarmed, undertake the Surprise of a Castle, so provided every Way as that of *Ambonya*, is before in the Relation of the *English* truly described to be: As also the same Author well weighing, that albeit, all that he was to write of this pretended Conspiracy should be taken for true; yet the Fact would seem very poor to bear so rigorous a Punishment in Persons of that Quality, and of that Relation to those that inflicted it, provides more skillfully than fairly, for both these Points, in the Preamble of this Relation. To this End he rakes and heaps together all the Jealousies and Danagers that the *Dutch* had in the *Indies*; yea, and more than they truly had at, or about the Time of the pretended Conspiracy, and applies them all to the Suspension of this Business, as if all their Enemies were likely to conspire with the *English*; and therefore the Facts, under Colour whereof they were condemned and executed, were possible and probable; and as if the State of the Time had been then so dangerous that every Shadow of Conspiracy was to be exquisitely enquired of, and the least Offence to be severely punished, where-

“ carrying them away for Slaves; yea, burning two of
 “ their Houses, one at *Lobo*, and another at *Municibels*;
 “ for which, when the Governor went out with a Fleet to
 “ crave Justice and Reparation, he was braved by the
 “ *Tarnatanes* with a stronger Fleet than his own; yea,
 “ they threatened to come with a hundred Curricurries
 “ against *Amboyna*.

“ This Dealing of the Author is like the former about
 “ the Treaty of Peace with the *Tidorians*, and Truce with
 “ the *Spaniards*; for when the Governor of *Amboyna* set
 “ forth the Fleet of Curricurries, before the Apprehension
 “ of the *English*, he stood in good Terms with the *Tarna-*
 “ *tanes* at *Lobo*, neither of the Factories here mentioned
 “ being then burnt, or injured; the Governor then went
 “ only, according to his yearly Custom, to visit the Skirts
 “ and Out-parts of *Amboyna*, and had no Affront offered
 “ him. After that upon occasion of a Slave of the *English*
 “ that ran away; and being afterwards laid hold on, was
 “ refused by a reputed holy Man of, or near that Part;
 “ the *English* craved Assistance of the *Dutch* Governor,
 “ who did his best, but was therein abused by those of
 “ *Lobo*; and not only some of his Men outraged by the
 “ *English* Factor, but *M. Beasmont*, to whom this Slave
 “ belonged, was Way-laid by the People of the holy
 “ Man; and instead of him one of the Servants of the
 “ *Dutch* was slain between *Cambello* and *Lobo*. The next
 “ Day also was *Beasmont* himself assailed, and shot in the
 “ Hand by the same holy Man's People, who also a little
 “ before did their best to kill *William Griggs*, another of
 “ the *English* Factors, that finding the said Slave at *Lobo*,
 “ laid hold on him there. Upon this Occasion both the
 “ *English* and *Dutch* left their Factory at *Lobo*, which was
 “ shortly after burnt by the *Tarnatanes*.

“ That other, touching the burning the Factory at
 “ *Municibels*, is more grossly applied than the former; for
 “ that Factory was burnt after the *English* were appre-
 “ hended; besides that, this Author dissembleth, that
 “ there was a vehement and common Suspicion at *Am-*
 “ *boyna*, that this Factory at *Municibels* was burnt, not by
 “ the *Tarnatanes*, but by the *Dutch* Factor himself, who
 “ being there alone, was first said to have conveyed away
 “ the Goods of the *Dutch* and *English* there for his own
 “ Use, and then to have burnt the Factory, laying the
 “ Fault upon the *Tarnatanes*. After this ended, the Go-
 “ vernor of *Amboyna* made out a Fleet of Curricurries to
 “ procure Reparations of these Excesses, and therein, not
 “ going so strong as he might, was braved by those *Tar-*
 “ *natanes* of *Amboyna*, but this was after the Apprehen-
 “ sion and Execution of the *English*, and so is as honestly
 “ applied to move Suspicion in this Place, as the joint
 “ Quarrel of the *English* and *Dutch* with those of *Lobo*,
 “ beginning upon occasion of the *English*; and as the
 “ Burning of the Factory at *Municibels*, done after the
 “ *English* were apprehended and imprisoned. As for the
 “ Threats of the *Tarnatanes* here mentioned, that they
 “ would come with an hundred Curricurries against *Am-*
 “ *boyna*, it is, for ought any of the *English* ever heard, a
 “ mere Fiction; at most, it was a vain Brag, and such as
 “ could not affright the Governor, that knoweth well that
 “ the *Tarnatanes* have no Gun-powder, nor other Provi-
 “ sions, for such an Exploit; and yet are far beyond the
 “ Governor of *Amboyna* for Number of Curricurries, be-
 “ sides the *Dutch* Ships and Castles.

“ The next Cause of Suspicion this Author makes to be
 “ an idle Report in the East Parts beyond *Banda*, uncer-
 “ tain which, or by whom, that the *Dutch* were already
 “ quit of their Castle at *Amboyna*: A poor pretence, and
 “ not worthy to be answered. Yet still farther, discover-
 “ ing what Penury of good Matter this Author had, that
 “ he was fain to borrow such crazy Stuff. But the last,
 “ and that which is expressly applied to the *English* is, that
 “ about this time the *Dutch* understood that those of *Lobo*
 “ and *Cambello* held great and secret Correspondence with
 “ the *English*. How did the *Dutch* understand this? or
 “ why does not this Author express the particular Proof
 “ in a Matter so pertinent? It is true, the *English* had
 “ their Factories at *Lobo* and *Cambello*, but in the same
 “ Houses with the *Dutch*, and for their joint Account, and
 “ had Traffick with the Country People as the *Dutch*

“ had; but what secret Correspondence is this? or what
 “ Danger to the *Dutch*? Was the Burning of the Facto-
 “ ries, which belonged to the *English* as well as to the
 “ *Dutch*, a Note of good Intelligence between the *English*
 “ and the Incendiaries? What was that for Correspon-
 “ dency with those of *Lobo*, when at one time they Way-
 “ laid *M. Beasmont* to kill him, and at another time shot
 “ him in the Hand with an Arrow; offered to kill *Wil-*
 “ *liam Griggs*, and from Time to Time out-raged our
 “ People equally with, and as the *Dutch*? Further, our
 “ People, as well as the *Dutch*, now dissolved their Fac-
 “ tory at *Lobo*, and were come all thence; What Letters
 “ or Messages did they ever send thither afterwards? or
 “ how, or by what means maintained they this Correspon-
 “ dence? Yet this was understood, perhaps, by the Go-
 “ vernor's Dreams; for that, as he afterwards told *Mr.*
 “ *Welden, Hill, and Cartwright*, that came thither from
 “ *Banda*, was a Motive to him to examine the first *Japon*,
 “ which was the beginning of the whole Process.

“ The Author having thus quitted himself in this Pre-
 “ face, proceedeth to the Matter itself, first setting down
 “ the Occasion and Manner of the Discovery of this pre-
 “ tended Plot, and then the Confessions of the *Japone*s,
 “ and of the *English*; but he maketh no mention of any
 “ Torture used upon the *Japone*s that first confessed, nor
 “ of any other Inducium or Presumption to torture or
 “ examine that *Japone*s; but only his curious questioning,
 “ touching the sitting and changing of the Watch, and of
 “ the Number of the Soldiers in the Castle, which shewed
 “ what sufficient Inducium and Cause it was to torture a
 “ Soldier of their own that served them, had Reason to
 “ understand the Course of their Watches, and the Strength
 “ of the Aid he might expect, if any sudden Attempt
 “ should happen in his Quarter, is easily to be judged;
 “ and how this poor Man, and the rest of his Countrymen
 “ were tortured, appeareth in the *English* Relation. Here
 “ also is concealed, by what manner and kind of Questions
 “ this and the other *Japone*s were led along in their Con-
 “ fessions, to make up the Plot just as the *Dutch* had de-
 “ vised it; and also what other Answers they made before
 “ they were thus directed: That they and the *English* both
 “ confessed what the *Dutch* would have them, is no Doubt
 “ nor Wonder, being so tormented, and fired with Tor-
 “ ture, *etiam Innocentes cogit mentiri dolere*. But what
 “ Likelihood or Possibility there is of the Truth of their
 “ Confessions, if yet they confessed, as is here related, may
 “ appear by that which hath already been discoursed in
 “ this Point towards the End of the *English* Relation,
 “ which, for Brevity sake, is here forbore to be repeated;
 “ yet some Circumstances, which the *Dutch* Relation hath
 “ more than the *English*, deserve here to be examined.

“ And first, that of *Abel Price*, the *English* Barber,
 “ who is made the Messenger and Negotiator of this
 “ Practice with the *Japone*s: It is true, that he, and he
 “ alone, of all the *English*, had some kind of Conversa-
 “ tion with some of the *Japone*s; that is, would dice and
 “ drink with them, as he likewise did with other Blacks,
 “ and with the *Dutch* also: But is it credible, that *Mr.*
 “ *Towerfon* would commit any thing of Moment, nay, so
 “ dangerous a Matter as this, to a drunken, debauched Sot,
 “ who also, as the *English* that were there constantly re-
 “ port, threatened to cut his, the said *Towerfon*'s, Throat,
 “ for that he had punished him for his Misdemeanors?

“ Further, this Relation maketh this *Abel Price* confess,
 “ that all the *English* Merchants in the Out-factories were
 “ privy and accessory to this pretended Treason; yet the
 “ Governor and Fiscal, in their own Process, found *John*
 “ *Powel, Ephraim Ramsay*, and two others, guiltless.
 “ After *Price*'s Confession, he sets down the general
 “ Substance of all the Confessions in one Body, where,
 “ first, having assigned *Mr. Towerfon* a Preface to the rest,
 “ to induce them to the Exploit, he tells us, that they
 “ made doubt of the Point of Possibility, as well they
 “ might, knowing the Weakness of their own Part, and
 “ impregnable Strength of the *Dutch*, in Comparison of
 “ theirs; for Satisfaction of which their Doubt, he saith,
 “ *Mr. Towerfon* told them, that he had already won the
 “ *Japone*s within the Castle to his Purpose, and that he
 “ would attempt this Matter, not when the *Dutch* were at
 “ the

"respondence is this? or what
 "as the Burning of the Facto-
 "the *English* as well as to the
 "elligence between the *English*
 "that was that for Correspond-
 "when at one time they Way-
 "im, and at another time shot
 "Arrow; offered to kill *Wil-*
 "me to Time out-raged our
 "as the *Dutch*? Further, our
 "ch, now dissolved their Fac-
 "me all thence; What Letters
 "sent either afterwards? or
 "ntained they this Correspon-
 "dence, perhaps, by the Go-
 "as he afterwards told Mr.
 "gt, that came thither from
 "to examine the first *Japen-*
 "of the whole Process.
 "quitted himself in this Pre-
 "ter itself, first setting down
 "f the Discovery of this pre-
 "Confessions of the *Japense*,
 "maketh no mention of any
 "nese that first confessed, nor
 "Presumption to torture or
 "only his curious questioning,
 "nging of the Watch, and of
 "in the Castle, which shewed
 "d Cause it was to torture a
 "rveil them, had Reason to
 "r Watches, and the Strength
 "Q, if any sudden Attempt
 "ter, is easily to be judged;
 "the rest of his Countrymen
 "the *English* Relation. Here
 "inner and kind of Questions
 "were led along in their Con-
 "de just as the *Dutch* had de-
 "Answers they made before
 "at they and the *English* both
 "uld have them, is no Doubt
 "ted, and feared with Tor-
 "mentiri doler. But what
 "re is of the Truth of their
 "ted, as is here related, may
 "already been discussed in
 "of the *English* Relation,
 "re forbore to be repeated;
 "h the *Dutch* Relation hath
 "e here to be examined.
 "rice, the *English* Barber,
 "and Negotiator of this
 "is true, that he, and he
 "some kind of Conversa-
 "s; that is, would dice and
 "se did with other Blacks,
 "it is it credible, that Mr.
 "ing of Monera, nay, so
 "drunken, debauched, sot,
 "were there constantly re-
 "said *Towerson's*, Throat,
 "s for his Misdemeanors?
 "this *Ard Price* confesses,
 "n the Out-factories were
 "ended Treason; yet the
 "own Process, found *Joh-*
 "two others, guilty.
 "sets down the general
 "in one Body, where,
 "son a Preface to the rest,
 "he tells us, that they
 "possibility, as well they
 "of their own Part, and
 "utch, in Comparison of
 "their Doubt, he saith,
 "e had already won the
 "Purpose, and that he
 "when the *Dutch* were at
 "then

" their Strength, and the *English* at the weakest, but
 " would expect till the Governor should be somewhere
 " abroad upon some Exploit, and some *English* Ships or
 " Ship, at least at *Ambogna*, the People whereof he would
 " use in the Enterprize; likewise he would send for the
 " Factors, and Slaves of the other Factories, and should
 " have a Supply from the *Tarnatanes* of *Lobo* of certain
 " *Curricurris*, &c.

" Here he hath inrolled a goodly Army for this Action;
 " but let us see the Manner how they should have executed
 " their Exploit; and first, for the *Japense* in the Castle,
 " we must believe, if this Author or his Voucher say true,
 " that Master *Towerson* had acquainted those, and won them
 " to his Plot, before he had imparted it to his own Coun-
 " trymen the *English*; and yet in the Acts of the Process,
 " *Emanuel Thomson* is recorded to have confessed, that
 " eight Days after the Consultation, Master *Towerson* told
 " him, that he had then sent out *Johnson* and *Price* to
 " treat with the *Japense*, and win their Consent to this
 " Enterprize; but what could these do, being in all but ten?
 " Marry, saith the Relation by and by, Master *Towerson*
 " had ordained that eight of them should have been be-
 " stowed by two in a Company upon the four Points of
 " the Castle, to kill all those that would resist them, and
 " to take the rest Prisoners.

" It must be therefore here imagined, that the *Dutch*
 " and their Marksmen in the Castle, being three or four
 " hundred, would scorn to take the Advantage of sending
 " forty or fifty, much more of an entire Company, to any
 " Point of the Castle, but would combat with the *Japense*
 " at even Hand, by two at a Time, and so give the *Jap-*
 " *ense's* Respite to kill or take them by two, and by two;
 " a sweet Conceit, and such a Service as perhaps hath been
 " sometimes represented upon a Stage, but never acted in
 " Surprise of a Castle in good Earnest. Thus we see how
 " eight of the *Japense* were to be employed, what should
 " the other two have done? Forsooth, they should have
 " waited in the great Chamber to murder the Governor;
 " yea, but this Relation told us, yet while, that this Plot
 " should have been executed while the Governor was
 " abroad upon some Action. How then should these two
 " *Japense* have killed him in the Castle at the same
 " time?

" But we see how all the *Japense*, that is, all the pre-
 " tended Party of the *English* within the Castle, should
 " have been occupied, who should have opened the Gates
 " to the *English*, and their other Aids? who should have
 " killed the Court of Guard at the Gate? These Parts
 " were left for them that were without, therefore let us
 " take a Review of them what they were. The Relation
 " multereth them to be fourteen *English*, whereof eleven
 " were Merchants, one Steward of the House, one Tay-
 " lor, and one Barber to dress the Wounds; besides, God
 " knows how many Skippers, Slaves, and *Tarnatanes*.
 " First, for the *English* Merchants, of what Dexterity they
 " are to take Forts, is easily judged; and in all the *Eng-*
 " *lish* House, when it was seized by the *Dutch* upon this
 " pretended Treason, the whole Provision was but three
 " Swords, two Hand-Guns, and about half a Pound of
 " Powder; yea, but the *English* Ships would have brought
 " both fitter Men, and better Provision: But how knew
 " Master *Towerson*, that those of the *English* Ships, when
 " they came, would join with him in this Work, being
 " so contrary to the Treaty, and itself so dangerous? or
 " why did he not stay the opening of the Plot, till his
 " Ship or Ships were come, that he might swear the
 " Skippers also, at least the chief Officers amongst them,
 " and take their Advice? Is it possible, that Master
 " *Towerson* was so slight to open this Plot to all the
 " *English* at *Ambogna*; yea, to the Taylor and Barber, so
 " long before it was to be put in Execution, and before
 " he knew the Minds of the chiefest Assistants, of whose
 " Arrival he was so uncertain? Yea, but he was sure of the
 " Slaves of the *English*, and of the *Tarnatanes* of *Lobo*,
 " with their *Curricurris* in *quolibet* Eventum.

" This, indeed, is the Remainder of the Army; let us
 " view them; the Slaves were in all the *English* Facto-
 " ries, just six in Number, and all Boys; the *Tarnatanes*
 " were Enemies as well to the *English* as to the *Dutch*, as

" is before shewed, in Answer to the Preface; when were
 " they reconciled? How came this, that in all the Exami-
 " nations of the *English*, this Point was not lifted, and
 " somewhat confessed of it amidst so many Tortures?
 " There is no Confession thereof in all the Examinations,
 " and Mr. *Towerson* in his expressly denied it, and was
 " pressed no farther. The Truth is, the Governor and
 " Fiscal of *Ambogna* knew, that whatever had been con-
 " fessed in this Point, would not have been believed by
 " their own People there, who knew well enough, that
 " the first Beginning of this Breach with the *Dutch*, and the
 " *Tarnatanes* of *Lobo*, was about the Slave of the *English*,
 " and the Outrages thereupon following were done upon
 " the *English*, as well as upon the *Dutch*. Yet this Au-
 " thor seems to hope, that they may be believed here in
 " Europe, which had no Colour at *Ambogna*.

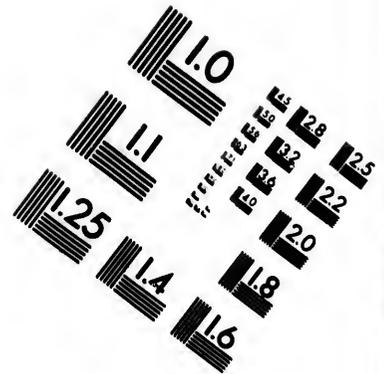

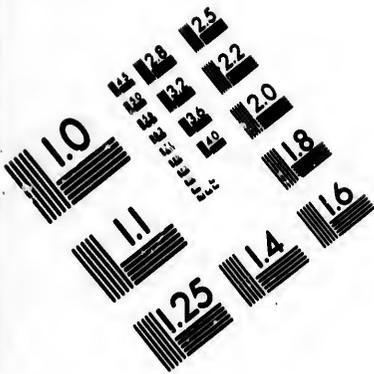

" Concerning the Time of executing this Plot, it was
 " not, as the Relation saith, yet prefixed, but left to the
 " next Meeting of the Conspirators, which should be
 " shortly holden, when *Gabriel Towerson* had prepared all
 " things, &c. Here was certainly a hot Practice of Treas-
 " on, and worthy to be termed by this Author an horri-
 " ble Conspiracy. They met together on New-year's
 " day, and plotted, as is before related; and now it was
 " the five and twentieth of February, and not only nothing
 " done all this Interim, no not so much as a new Consult-
 " ation; but this, forsooth, is the Body and Substance of
 " the unanimous Confession of all the *English* by them-
 " selves, severally subscribed.

" In the next place, the Author relateth somewhat sin-
 " gular in M. *Towerson's* Confession, as that he said he
 " was moved to this Fact by Hope and Desire of Honour
 " and Profit; and being demanded for whom he in-
 " tended this Honour and for whom he meant to hold
 " the Castle? his Answer was, that if he could have com-
 " passed his Projects, he would forthwith have given Ad-
 " vertisement thereof to the rest of his Nation at *Jaccatra*,
 " which now they have christened *Batavia*, and have
 " craved their Aid, which, if they had yielded to him,
 " then he would have held the Castle for the *English* Com-
 " pany, and if not then, he would have kept it for him-
 " self, and have used Means to have agreed with the *In-*
 " *dians*, and so by one Means or other would have com-
 " passed the Enterprize.

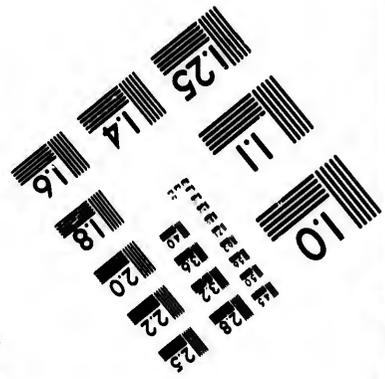

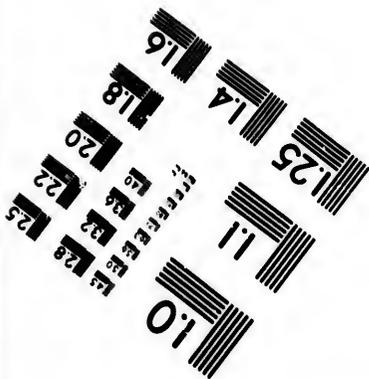

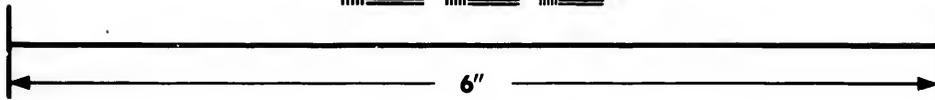

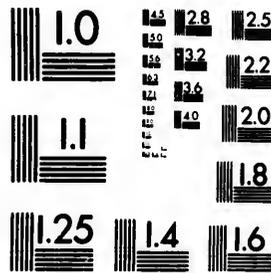

" Here first is to be observed, that he would not, as
 " the Author makes him speak, have sent for Aid to *Jac-*
 " *catra*, until he were first Master of the Castle; and yet
 " in the general Confession before, it is said, he would at-
 " tend the Coming of some *English* Ships before he would
 " adventure upon the Castle. Next, let the ambitions
 " and alternative Resolution here said to be confessed by
 " Master *Towerson* be considered in both the Parts thereof,
 " and it will appear, that no Man in his Wits would have
 " any such Conceit as is here pretended. What Hope
 " could Master *Towerson* have, that the President and
 " *English* Council at *Jaccatra*, living under Command of
 " the *Dutch* Fort there, and altogether subject to them, durst
 " join any such Action, thereby to give Occasion to the
 " *Hollanders* to arrest, torture, and condemn them of
 " Treason?

" Master *Towerson* knew well enough, that about six
 " Months before the General of the *Dutch* at *Jaccatra*
 " had caught a very sly Occasion to entrap the *English*
 " President there, who, having sent out two of his People
 " in the Night to the *English* Cow-house, to see what
 " Watch the Blacks in their Service kept over their Cat-
 " tle, the said two *English* were apprehended by the
 " *Dutch* Soldiers, kept in Prison seven Days, and charged
 " that they had said that they went the round; and one
 " of them being last examined, was told by the Balieu,
 " the Officer of the *Dutch* in criminal Causes, that his
 " Fellow had confessed, that they had said, they went
 " their Round, and that by the *English* President's Com-
 " mission; and if he would not confess the same, he
 " should be tortured; but the Fellow being constant in
 " the Truth, came off at last without Torture: Yet this
 " was Item enough to the *English* President and Council,
 " how the Intent of the *Dutch* was to entrap them upon
 " the least Occasion; and this, and other daily captious
 " Dealings

“ Dealings of the Dutch at *Jaccatra*, which were too long
 “ here to recire, were all advertis’d, from time to time,
 “ to Mr. *Towerfon*, who therefore was sure he could
 “ expect no Assistance from them, that were themselves
 “ in such a Predicament.

“ The other Part of Mr. *Towerfon*’s Resolution is said
 “ to have been to keep the Castle for himself, and to agree
 “ with the *Indians*, in Default of Help from the *Englsh*.
 “ This is yet more improbable than the former: Were
 “ the *Portuguezs* and *Indians* not able to keep out the
 “ *Dutch* from *Ambeyna*, when they had no Footing there;
 “ and shall Captain *Towerfon* with twenty *Englsh* and *Ja-*
 “ *ponese*, without Ship or Pinnace, be able, with the Help
 “ of the poor naked *Indians*, to drive them out, having
 “ three Castles in the Island of *Ambeyna* and at *Cambello*
 “ hard by, all well furnished with Men and Provisions,
 “ besides their Power of Shipping, which makes them
 “ stile themselves Lords of the Sea? And yet how could
 “ Master *Towerfon* hope to win the *Ambeynese* (the *Hol-*
 “ *landers*’ sworn Subjects) to his Side? He might rather
 “ assure himself, that after he had mastered the *Hollander*’s,
 “ if yet that must be believed to be possible, the *Ambey-*
 “ *nese* would have surpris’d him, and cast him out, being
 “ so weakly provided to stand of himself, that so they
 “ might utterly free themselves from their Servitude:
 “ Here also must be remarked, that this Author himself
 “ in his Preamble saith, that the *Indians* themselves durst
 “ not undertake such a great Design as he there seigneth
 “ against the State of *Ambeyna*, without some great Aid
 “ of some Nations of *Europe*, either of *Spaniards* or *Por-*
 “ *tuguese*, or some other; whereby is not only confessed
 “ how weak the *Indians* of themselves are, but withal it
 “ followeth, how small Hope Mr. *Towerfon* might have,
 “ being deserted of his own Nation, as here the Case is
 “ put, to hold the Castle for himself by the Help of those
 “ *Indians*, if yet he could once have won it.

“ In a Word, they that know the Power of the *Dutch*
 “ in *Ambeyna*, and therabouts, and the Weakness of the
 “ poor *Indians*, will judge this Conceit of Mr. *Towerfon*’s
 “ to keep the Castle for himself, to be a mad Plot, and
 “ for which Master *Towerfon* should rather have been sent
 “ to *Bedlam*, or the *Dullen Kist*, as the *Dutch* call it, than
 “ to the Gallows. But this Author hath one voluntary
 “ Confession, upon which he taketh especial Hold, to wit,
 “ that Master *Towerfon*, after his Examination was finish-
 “ ed, being expostulated with by the *Dutch* Governor, and
 “ demanded whether this should have been the Recom-
 “ pence of his (the Governor’s) manifold Courtesies to-
 “ wards him, answered with a deep Sigh, *Oh! were this*
 “ *Master now to do, it should never be done*. This volun-
 “ tary Confession, and penitent Acknowledgment, saith
 “ this Author, was made the Ninth of *March*, being the
 “ Day when the Execution was to be done, and the Exa-
 “ mination of *Towerfon* was ended the Twenty-eighth of
 “ *February*, so many Days before. But how shall we be-
 “ lieve this? Forsooth, he hath it out of the Acts of the
 “ Process of *Ambeyna*; yea, but in these Acts are omitted
 “ many material Passages of these Examinations, as is al-
 “ ready shewed, why may they not then be guilty of Ad-
 “ dition, as well as of such Mutilation and Omission?
 “ But let us peruse the Words of the Act itself, which are
 “ these;

“ We whose Names are hereunto subscribed, do de-
 “ clare upon our Troth, instead of an Oath, that *Gabriel*
 “ *Towerfon*, after that he had been already examined
 “ touching his said Offence; and that the worshipful *Van*
 “ *Speult* had expostulated with him thereupon, asked
 “ him, whether this should have been the Recompence of
 “ his Courtesies from Time to Time shewed unto him
 “ the said *Towerfon*? Thereupon he the said *Towerfon*,
 “ with a deep Sigh, answered him, and said, *Oh! if this*
 “ were to be begun again, it should never be done. *Ac-*
 “ *tum* this Ninth of *March*, in the Castle of *Ambeyna*,
 “ and subscribed,

“ *Harman Van Speult,*
 “ *Lawrence de Maerjebalk,*
 “ *Clement Herjseboom,*
 “ *Harman Crayvanger,*
 “ *Peter Van Zanien,*
 “ *Leonart Clock.*

“ Thus we see the Act itself, and this pretended volun-
 “ tary Confession of Mr. *Towerfon*, which is not deliver-
 “ ed upon the Credit of the Court or Council at *Ambey-*
 “ *na*, but upon the Attestation or Affidavit of the Govern-
 “ nor, and five others, the principal Actors in this bloody
 “ Tragedy; and this not upon their Oath, but upon their
 “ Troth, or honest Word, forsooth, instead of an Oath.
 “ The Time when these Words were uttered by Mr.
 “ *Towerfon*, is not described by the Day when he spake
 “ them, but only by the precedent Act of his Examina-
 “ tion; and yet the Circumstance of Time is not only an
 “ usual and customary Solemnity, and requisite in all such
 “ Attestations, but also in a Business of this Nature alto-
 “ gether necessary, as likewise in this Case that of the
 “ Place was; for if these Words were spoken in the Place
 “ of Torture, or incontinently after the Examination end-
 “ ed, they are by their own Law esteem’d no more vol-
 “ untary, than the Confession upon the Rack itself: Nei-
 “ ther yet doth this Attestation affirm, that this Confes-
 “ sion was voluntary.

“ But this Author, unconscionably reporting the Date
 “ of the Attestation for the Time of the Confession, collect-
 “ it to be voluntary, because, as he saith, it was made
 “ the Ninth of *March*, being so many Days after his Ex-
 “ amination, which was taken the 28th of *February*; can
 “ a Man attest nothing but what was done upon the very
 “ Day when he maketh Affidavit? The Attestation saith,
 “ that these Words were spoken by Mr. *Towerfon*, after
 “ he had been already examined; why may not that rather
 “ have been upon the very Day of his Examination, than
 “ upon the Day when this Act was entered, if yet he ever
 “ spake any such Words, or meant them, as he is here
 “ interpreted, the contrary whereof is the more probable,
 “ by all the Circumstances of this Business truly set down
 “ in the Relation of the *Englsh*.

“ But in that this Author makes so much of this poor
 “ Circumstance of Mr. *Towerfon*’s Profession of Sorrow
 “ for what was done, naming it a voluntary Confession,
 “ it is plain how destitute he was of voluntary Confessions,
 “ and of all true and concluding Circumstances. What,
 “ was there not a Letter, or other Paper to be found in
 “ all the Chests and Boxes of the *Englsh*, so suddenly
 “ seized at *Ambeyna*, *Larica*, *Hitta* and *Cambello*, to dis-
 “ cover this Treason? Nor amongst so many Accom-
 “ plices of diverse Nations, a false Brother to betray the
 “ rest, and to accuse them voluntarily, but the Process
 “ must begin with the Torture, and the Heathens Con-
 “ fessions upon Torture be sufficient to bring Christians
 “ to Torture.

“ That debauched and notoriously infamous Persons
 “ (such as *Price* was) to draw Torture upon the sober,
 “ orderly and pious? And yet this Relation itself con-
 “ fesseth, that *Price*’s Confession was drawn from him by
 “ the Examiners, specifying of Place, Person and Time
 “ unto him; certainly one of their own Nation had Rea-
 “ son to advise that more Advocates might be sent over
 “ to the *Indies* to aid the accused, to make a legal An-
 “ swer; for, saith he, they go to work there so villainously
 “ and murderously, that the Blood of the poor People
 “ crieth to Heaven for Vengeance. But why have we
 “ no Particular of any Man’s Confession but this of *Price*
 “ and Mr. *Towerfon*, and all the rest blended together in
 “ one Body? Did none of all the rest go farther than his
 “ Fellows, or confers more than they? Where is *Star-*
 “ *rock*’s Confession, that he was at *Ambeyna* upon New-
 “ Years-Day, when ten or twelve of the *Dutch* them-
 “ selves witnessed he was at *Hitta*? Where is his Confes-
 “ sion of *Clark*’s Plot to go to *Maccassar*, to deal with
 “ the *Spaniards* there to come and rob the small Facto-
 “ ries? Where is *Collins*’s Confession of another Plot
 “ about two Months and a half before his Examination,
 “ undertaken by *Thomson*, *Johnson*, *Price*, *Brown*, *Var-*
 “ *do* and himself? Where be the leading Interrogatories
 “ that directed them to the Accusation framed by the
 “ *Dutch*, lest otherwise there had been as many several
 “ Treasons confessed as Persons examined? Not a Word
 “ of all this, nor of a great deal more of this kind, which
 “ is here in *England* proved by the Oath of six credible
 “ Persons to have passed in the Examinations, whereby

this pretended voluntary which is not delivered or Council at Amboyna. Affidavit of the Governour and Actors in this bloody Oath, but upon their Oath, instead of an Oath, were uttered by Mr. Price the Day when he spake the Act of his Examination. Time is not only an requisite in all such Cases of this Nature although in this Case that of the Rack itself: Neither the Examination endor'd seemed no more worthy the Rack itself: Neither, that this Confes-

ly reporting the Date of the Confession, collects the faith, it was made any Days after his Expiry of the 8th of February; can be done upon the very Attestation faith, by Mr. Tower-son, after may not that rather is Examination, than entred, if yet he ever them, as he is here is the more probable, and thus truly let down

to much of this poor Profession of Sorrow voluntary Confession, voluntary Confessions, circumstances. What paper to be found in English, so suddenly and Cambello, to distrust so many Accomplish to betray the ally, but the Process of the Heathens Con- to bring Christians

ly infamous Persons are upon the sober, is Relation itself con- drawn from him by Person and Time own Nation had Reason might be sent over to make a legal Answer there so villainously of the poor People But why have we on but this of Price blended together in go farther than his? Where is Star- Amboyna upon New- of the Dutch them- Where is his Confes- affar, to deal with the small Facto- of another Plot re his Examination, Price, Brown, Far- ling Interrogatories on framed by the en as many several ned? Not a Word of this kind, which path of six credible minations, whereby appeareth

" appeareth how faithfully the Dutch at Amboyna have entred the Acts of this Process?

" Well, at last he concludes the Narration of the Confessions with the summing up of the Number and Nations of the Parties that had thus confessed, which he saith, were ten *Japonese*, fourteen *English*, and the *Netherlandish* *Marnico*, or Captain of the Slaves; by which last Words; he would give the Reader occasion to think, that this Fact was so clear, and their own Proceedings so even and just, that they had executed one of their own *Netherlanders* for it; which how true it is, is already declared in the Conclusion of the *English* Relation. The Truth is, this Captain of the Slaves was of the *Portuguese* Race, and born in *Bengal*; his very Name, *Augustin Perez*, sheweth he was no *Netherlander*.

" Having thus finished this Relation, this Author proceedeth to a Disputation, and taking Notice of some Aspersions in *England* cast upon these Proceedings at *Amboyna*, he divideth them into two Heads; the one, that the Process was without its due Formality, the other, that there was Excess and Extremity used against the Conspirators. For the Point of Formality, he first taketh great Pains to prove, that the Formalities of Processes in *Amboyna*, are not therefore unlawful, because they agree not with our Form in *England*; which Labour he might have spared, for no wise Man will deny him this Point; and such as shall be so ignorant as to blame the Dutch for varying from us herein, were not worthy the answering. Herewithal also, he deduceth the Title of the Lords the States-General to the Sovereignty of *Amboyna*, and so the Governor of *Amboyna's* Jurisdiction in Causes as well criminal as civil to be rightly grounded. Thence he concludes, that the *Japonese* being sworn Servants to the Dutch, and in their Pay, were subject to the Jurisdiction of the Dutch Governour. Then he telleth us, that the Author and Accomplices of Murder and Treason, are by the Laws of all Nations to be punished with Death; all which Points may be granted him without any Prejudice to the Cause of the *English* in this Question. At last he comes in Particular to their Case, and affirms, that the Chief of the *English* there might not apprehend the *English* Accomplices of this Conspiracy, because themselves were Accomplices of the Fact; all which also may be granted in this Point of Apprehension and safe Custody; but how it may proceed in the Point of Cognizance, shall be anon in due Place examined.

" In the mean time, this Author, to make the Point of Apprehension clear beyond Exception, saith, that the *English* were not apprehended upon the first Suspicion; when yet there was Evidence and Indicia sufficient to it. But after the Examination of all the *Japonese*, and their joint Confession, that the *English*, whom they specified by Name and Surname, moved and hired them to this Treason: Yea, not until *Abel Price* had also confessed as much, and that all the *English* in the Out-Factories were privy therunto. For Answer hereof, that must be repeated, which hath been upon other Occasions before alledged; that the first Beginning of the Process was by the Torture, there being no sufficient Evidence or Indicum to torture the *Japonese*, that only sought to inform himself of the Course of the Watch, and of the Strength of the Castle, where he himself was a Soldier, and so the whole Series of Examination proceeding from the Confession of one tortured Person, to apprehend and torture another, without other Evidence, though it brought forth more Confessions, and those with Name and Surname, and other Circumstances, according as the Interrogatories or Directories of the Governour and Fiscal led the Prisoners, was wholly against all Laws of Tortures. *Silicet in fabrica si prava est regula prima. Cetera mendose fieri, atque obliqua necesse est.*

" But here must be answered an Objection, that may be made against this from another Part of this Relation; that is, that some of the *English* confessed without, or before Torture. Yea, this *Price* here mentioned, was either not tortured at all, or very lightly; yea, but he was shewed the tortured Bodies of the poor

N U M B. I. X I.

" *Japonese*, martyred with Fire and Water, and told; that unless he would confess that which they told him they had first confessed, he should be tortured as ill, or worse than they. This Fear of Torture is by their own Law equalled to the Torture itself, and consequently the Confession thereupon, made no better Indicum, or Evidence, to bring another Man to the Torture, than the Confession made upon the Rack itself. Again, it must be here remembered, that the very Matter of *Price's* Confession here mentioned; to wit, that all the *English* Merchants of the Out-Factories were privy to the pretended Treason, was confuted by the Process of the Dutch themselves; that found *Powel*, *Ramsay*, and two others of those Factories guiltless.

" Next, this Author taketh Notice of an Objection made in *England* against the Jurisdiction of the Dutch Governour, and his Council at *Amboyna*, over the *English* there, because this Power is by the Treaty of the Year 1619 disposed of, and agreed to consist in the Council of Defence of both Nations at *Jacatra*; for Information in which Point, this Author saith; he hath perused over all the several Articles in the said Treaty, and findeth in the twenty-third Article, that the Fortresses were to remain in the Hands of them that then possessed them; and in the thirteenth, fourteenth, and fifteenth, that the Council of Defence hath no other Power but only over the Fleet of Defence, over the Commerce, and finally, to tax the Charges of Maintenance of the Forts; but he could not see the thirtieth Article, which orders that all Disputes that cannot be decided by the Council of Defence, should be remitted into *Europe*, first, to the two Companies there, and in Default of their Agreement, to the King and States; why then was not this Dispute so proceeded in? There is nothing in the former Articles to limit the Council of Defence; and this general Article appeareth to be added by way of Amplification, to provide for that which was not particularly and expressly cared for in the former; which is most plain by the Words of the Explanation upon this thirtieth Article, agreed upon at the first, and subscribed by the Commissioners on both Sides, *Anno* 1619, where this Course of Proceeding is expressly directed, not only in Disputes about the Meaning of the Articles, but also about any other Matter happening in their commerce abroad; since which also the King's Majesty hath, upon a smaller Occasion than the Life of his Subjects, clearly declared himself in the Point of Sovereignty, that both Nations in the *Indies* should wholly lay aside all Pretence thereof, which Declaration was sent to the Lords States-General, and by them accepted before this bloody Butchery was executed. But if it were granted, that the Dutch were absolute Lords of their Partners the *English* in those Parts, without respect to the Treaty, yet at least the Dutch in *Amboyna* were bound to observe the Laws of the *United Provinces*, for so saith this Author himself. Do these allow to begin the Process as to the Torture, and to bring Persons of honest Fame to the Rack upon others Confession made in the Torture? Do their Laws allow of the leading Interrogatories above-mentioned, to direct the Prisoner what to say, to avoid the Torture, where, in the *United Provinces*, is that drowning with Water in Use? Or the Torture with Fire used to *Jabson*, *Tbomson* and *Clark*? Or especially the splitting of their Toes, and lancing of the Breast, and putting in Gunpowder, and then firing the same, whereby the Body is not left intire, neither for Innocency nor Execution? *Clark* and *Tbomson* were both fain to be carried to their Execution, though they were tortured many Days before.

" Lastly, their Confessions were contradictory, apparently false, and of things impossible to be done, much less practised before by the said Parties, and therefore ought not by their Law to have been believed, nor the Prisoners to have been condemned thereupon, without other sufficient Indicia, or Evidence besides. In the last Place, this Author handleth the Excess of Torture, whereof he taketh Notice, there is much Complaint in *England*,

10 S

and

" and faith, that the Lords States-General took great
 " Care to inform themselves of all the Passages in this
 " Business, and to that End desired to see all the
 " Letters, Pieces, and Papers, that concern this Process,
 " by which it appeareth not that there was any cruel Tor-
 " ture used. But suppose the Acts made no mention of
 " them, is it any marvel that the Authors of this murder-
 " ous and tyrannous Process, being themselves the
 " Persons that also formed the Acts, would omit those
 " things that made against them?
 " It is to be presumed also, that the Acts kept by their
 " People at *Poleway* in *Banda*, have omitted many things
 " of their Process against the poor *Polaroons*, whom in
 " August 1622, being about six Months before this Execu-
 " tion of the *English*, their Governor there used in like
 " Sort as the Governor of *Ambona* did the *English*, and
 " gave him a Model and President of this Process, which
 " it will not be amiss to relate briefly, because this Au-
 " thor in the next Place alledgeth the merciful Disposi-
 " tion of the *Netherlandish* Nation in general, to infer
 " thence, that it is therefore unlikely, that their Govern-
 " ment at *Ambona* was so cruel as is reported in *England*.
 " *Polaroon*, one of the Islands of *Banda*, was in Possession
 " of the *English* at the Time of the Treaty Anno 1619,
 " and by Agreement was to remain theirs.
 " After the Treaty came to the *Indies*, the *Dutch* forbore
 " the publishing thereof in the Islands of *Banda*, until
 " they had taken *Polaroon*; but knowing that it must be
 " restored again, according to the Treaty, they first take
 " all Curks to make the Island little or nothing worth.
 " They demolish and deface the Building, transplant the Nut-
 " meg-trees, pulling them up by the Roots, and carrying
 " them into their own Islands of *Nera* and *Poleway*, there
 " to be planted for themselves, and at least find a Means
 " to dispeople the Island, and to leave it so as the *English*
 " might make no Use of it, worth their Charge of keeping;
 " and that upon this Occasion was a young Man, the Son
 " of an *Orankey*, or a Gentleman in *Polaroon*, that had
 " committed Felony, for which, by the Laws of his Coun-
 " try, he was to die. This Fellow, to save his Life, fled
 " to another Island of *Banda*, called *Refuging*, and there
 " turned Christian; but quickly understanding that that
 " would not make him safe from Punishment, he went
 " back secretly into his own Country of *Polaroon*, and
 " having lurked there for two or three Days, took his Pas-
 " sage for *Nera*, another Island where the *Dutch* have a
 " Fort, and told the *Dutch* Governor, that the *Orankeys*
 " of *Polaroon* had conspired to massacre the *Dutch* as well
 " at *Polaroon* as at *Poleway*, with Help of the People of
 " *Seran*, that should send over thirty Curricuties for that
 " Purpose. Immediately upon this Indicion of this Ma-
 " lfactor certain Prows or Fisher-boats of the *Polaroons*
 " that were fishing at *Poleway* were seized, and the Peo-
 " ple made Prisoners, Command was sent by the *Dutch*
 " Governor to *Polaroon*, that the *Orankeys* should come
 " over to him, that there might be farther Inquisition
 " made of this Matter.
 " The Priest of the *Polaroons* and seventy *Orankeys*
 " instantly took a Prow, or small Vessel of their own, and
 " embarked themselves for *Poleway*. As they were at Sea,
 " and yet out of Sight of the *Dutch* Castle, they were met
 " by a Fishing-boat of *Bandanerets*, and told how all the
 " rest were apprehended, and that if they went to *Pole-
 " way*, they were all but dead Men. Nevertheless the
 " Priest and the rest, although they had Space and Means
 " to have escaped the *Seran*, and other Places safe enough
 " from the *Dutch*, yet were so confident of their Inno-
 " cency, that they would needs go to *Poleway* to purge
 " themselves, where, as soon as they arrived, they were
 " instantly carried Prisoners to the Castle, and withal the
 " Governor, with a Force of two hundred Men, went per-
 " sonally for *Polaroon*, whence he fetched all the rest of
 " the *Orankeys*, and brought them Prisoners to the same
 " Castle: As soon as they were come, they were presently
 " brought to the Torture of Water and Fire, even in the
 " same sort that our People were afterwards at *Ambona*,
 " only herein differing, that of those of *Poleway*, two were
 " so tortured, that they died in their Tortures; the rest
 " being one hundred and sixty-two Persons, were all, upon

" their own forced Confessions, condemned and executed.
 " The Priest, when he came to the Place of Execution,
 " spake these Words in the *Malayan* Tongue: All ye
 " great and small, rich and poor, black and white, look
 " to it, we have committed no Fault; and when he would
 " have spoken more, he was taken by the Hands and Feet,
 " laid along, and cut in two by the Middle with a Sword;
 " forthwith the Governor caused the Wives, Children,
 " and Slaves of those of *Polaroon* to be all carried out
 " of the Island, and distributed in other Islands subject to the
 " *Dutch*, and so have made a clear Country for the *Eng-
 " lish*, where they may both plant and gather themselves,
 " destitute of the Help of any of the Country People,
 " without whom neither the *English* nor the *Dutch* can
 " maintain their Trade in the *Indies*; and yet this is not
 " here recited, to the end thereby to charge the *Nether-
 " lander's* Nation with those cruel Proceedings, but the
 " Persons themselves that have committed these barbarous
 " Tyrannies, who, if we shall believe an Author of their
 " own, are not of the best of that Nation.
 " For the *Majors*, as this Author says, use the *Indies*
 " as a Truck-house, or Bride-well, to manage their unruly
 " and unthrifty Children and Kindred, whom, when they
 " cannot rule and order at home, they send to the *Indies*,
 " where they are preferred to Offices and Places of Gov-
 " ernment; yea, saith he, they prefer such to be Fiscal
 " there as never saw Study nor Law; so that it is no mir-
 " vel, that such Persons proceed not with that Justice
 " and Moderation as is used generally in the *Low Countries*
 " by the Choice of the Nation there; and this agreeth
 " well with the Report of our Merchants of Credit that
 " came lately from *Ambona*, who avers, that excepting
 " the Governor himself, who is well kept in Years of the
 " rest of the Council there, as well the Fiscal as others,
 " there was scarce any that had Hair on their Faces; yea,
 " that most of them are lewd, drunken, debauched Per-
 " sons, and yet must be judges, as well of our *English* as
 " the poor *Indians* there. Now to return to this Author's
 " Proofs, that there was no *Execr* used in the Proceed-
 " ings, at the last he taketh one Argument by way of
 " Comparison from the Law of *England* to preis Men to
 " Death, which, he saith, hath much more Cruelty than
 " their Course of Torture used by the *Dutch* in *Ambona*,
 " and is holden, as well by some Authors of our own Na-
 " tion as others, for damnable. How pertinently is this
 " Matter of pressing alledged for justifying their Tortures,
 " since no Man in *England* is pressed for not confessing,
 " which is the Cause of the Torture with the *Dutch*? But
 " the Cause why any is pressed is, for that he obstinately
 " refuseth the Trial of his Country, and challengeth the
 " Judges as incompetent, which the Law appointeth him,
 " which he doth for the most part to save his Goods, which
 " but by that ordinary Course of Trial cannot be con-
 " ciate; what is this to the Point of Confession? for Re-
 " fusal whereof the *Dutch* use the Torture, and yet no
 " Man blameth them for proceeding according to the Law
 " of their Country therein, nor yet in their Execution,
 " when they break the Legs, Arms and Thighs of the
 " Malefactors, and then set them upon a Wheel on the
 " End of a great Pole, there to languish to Death, an
 " Execution far more direful than the *English* pressing,
 " which is so suddenly done, and so seldom used.
 " But why doth he not name the Author of our own,
 " or foreign Writers, which condemn this kind of Execu-
 " tion? Let him do it yet, and he shall have more Au-
 " thors of his own Country that shall condemn their Course
 " of Tortures, and yet the *English* complain not of the
 " Course in general, but of the unlawful Use of it, con-
 " trary to the Laws even of the *United Provinces*. Lastly,
 " in this Point the Author pretendeth, that little or no
 " Torture was used in this Process. What the Torture
 " was, and in what Degree, appears in the *English* Rela-
 " tion; but he can find little or none mentioned in the
 " Acts. What if he will not find it? or what if their Of-
 " ficers at *Ambona* have concealed it? Shall we not be-
 " lieve those that suffered it themselves? Shall we not be-
 " lieve those that being themselves acquitted, yet heard the
 " Cries, and saw the Bodies of *Johnson*, *Clark*, and *Thom-
 " son*, and have confirmed their Relation by their corporal
 " Oath?

condemned and executed, in Place of Execution, near Tongue: All ye black and white, look on; and when he would strike the Hands and Feet, Middle with a Sword, the Wives, Children, to be all carried out of the Islands subject to the Country for the English gather themselves, the Country People, nor the Dutch can charge the Netherlands Proceedings, but the committed these barbarous Proceedings, of their Nation.

He says, we the Indies manage their unruly, whom, when they send to the Indies, and Places of Government such to be Fictitious, so that it is no more with that Justice in the Low Countries; and this agreement of God that averr, that excepting slept in Years, of the Fiscal as others, on their Faces; yea, ken, debauched Perwell of our English as turn to this Author's used in the Proceedings, by way of Land to press Men to more Cruelty than the Dutch in *Ambonya*, Authors of our own Nation pertinently is this saying their Tortures, and for not confiding, with the Dutch? But that he obstinately and challengeth the Law appointed him, save his Goods, which cannot be confiscated? for Resurrection, and yet no according to the Law in their Execution, and Thighs of the upon a Wheel on the anguish to Death, as the English pressing, seldom used.

Author of our own, in this kind of Execution shall have more Autors condemn their Courts complain not of the awful Use of it, condemned Provinces. Lastly, that, that little or no What the Torture in the English Relation mentioned in the or what if their Obedience? Shall we not be? Shall we not be acquitted, yet heard the *Clark*, and *Thompson* by their corporal Oath.

" Oaths? As for the Act of the five and twentieth of February, which this Author hath here transcribed, it cannot be a true Act: for therein it is said, that that Day all the English were examined one by one, and some before Torture, and some after, confessed the Fact: Whereas it appeareth not only by the English Relation, but by this very Author in the precedent Page, that they were not all examined the same five and twentieth Day of February, but that the Examination continued six Days together, even to the third of March inclusive. How then could the Act of the five and twentieth of February have all their Confessions? By this may appear what Credit may be given to those Acts, or else to this Author.

" Here also by the way, he tells us of the Deliberation of their Council, whether the Punishment of the Fact might be respited, or the Cause removed, wherein it was resolved, that Execution must needs be done in the Place of the Delict for Examples sake, and might not be resisted, for fear lest the Conspirators, as he terms them, might have more Dependencies than yet were known, and in particular the *Tarnatanes*, and other *Indians* about *Ambonya*; a poor Pretext, as if having all the English in Irons aboard their several Ships, they should need to fear their joining with the *Tarnatanes*; but it may be, they feared some English Ships also to come thither, for so they had made their own People believe; and therefore two Ships being detained at Sea, the Dutch and their free Burghers cried out, that there were the English that should have holpen to take the Cattle; but when they arrived, they proved to be two Ships of the Dutch come from *Jaccatra*, wherein was a Letter from the President of the English there to call away Captain *Towerson*, and all the English from *Ambonya* to *Jaccatra*; which Letter was opened and read by the Dutch Governor, while our People were yet in Prison, and not executed, and might well have secured him, that there was no further Danger to be feared of the English Aids of Shipping, whatever the English Prisoners had through Torture confessed. At last the Author comes to the Sentence itself, transcribing out of the Acts of the ninth of March, that the College of Judges being then competent, and calling upon the Name of the Lord to assist them in this mournful Assembly to preside in their Hearts, and inspire them with Equity and Justice, proceeded to Sentence, &c.

" Who knoweth not but the Act may be thus formed, and yet no Prayer at all made? Or, if there were any such Prayer, yet the Proceedings, well weighed, will shew it to be but like *Yezabel's* Fall, the Preparative to the false Judgment against *Naboth*. Neither will the wise and indifferent Judges of this whole Matter conceive the better of the Cause, for the hypocritical Formalities therein observed. Last of all, he concludes his Treatise with a Justification, Yea, an Elogy and Commendation of the whole Proceedings of the Dutch at *Ambonya* against the English, not finding the least to be blamed to the Dutch, but aggravating the Crime of the English very ridiculously, because, forsooth, that this Plot, amongst other Things, was against the great Means of the *Netherlands East-India* Company, as if a Conspiracy to rob them must needs be Treason; or if the Intent only, in any Crime but Treason, were capital. Thus have we examined this strained Justification of that base and execrable Process of *Ambonya*, consisting of a Preamble full of false and forged Suspicions; a Narration of the Fact, fraught with ridiculous Absurdities, Contrarieties, and Impossibilities, and of a Dispute of Impertinences, with Concealment of the main Grounds of the English Grievs: All which verifieth that of *Paganian*, that Parricides are more easily committed than defended." This Answer is so clear and full, and we have already spent so much Time, though I think not more than it deserves, upon this Affair of *Ambonya*, that I am very willing to conclude it, which I shall do with this single Remark, which I conceive has not been made before, and which I persuade myself will set the whole Affair in a much clearer Light than it has hitherto stood in: The Genius of the Dutch Nation, and of their *East-India*

Company, was Gain at all Events, and no Matter at whole Expence. The Genius of the Dutch Government at home, was to live fair with her Neighbours, and by smooth Language, high Professions of Friendship and ready Compliance in Trifles, to secure their Protection, and command their Assistance. It was this Disposition in the latter, that engaged them to make the Treaty with *Great-Britain* in 1619, by which there was a sort of Union made between the two *East-India* Companies.

This was what the Dutch Company disliked, and resolved not to bear, which induced them to frame and execute that barbarous and bloody Contrivance at *Ambonya*, which answered their Ends effectually. For, firstly, it absolutely dipped the States-General in their Quarrel, the first Question in the Dispute being this, whether the Governor of *Ambonya*, by Virtue of the Authority derived to him from them, had any Right to proceed against the English; and next, it totally destroyed all Confidence in the Treaty, and obliged the English *East-India* Company to abandon the Methods prescribed by it, which turned them out of the Spice Trade entirely, the great Thing aimed at by the Dutch, and which they never otherwise could have accomplished.

9. The Death of King *James* happened in a very short Time after this Misfortune, and the Troubles of various kinds, which very early disturbed the Reign of King *Charles I.* put it out of his Power to pursue that Matter as he seems to have intended; for, in the Beginning of his Reign, he granted Letters of Request to the States-General for obtaining Satisfaction, which, however, had not their Effect, neither did the King pursue that Point any farther; the Reason of which I presume to have been this, that, finding other Causes of Complaint against the Dutch, he absolutely determined to lessen their Strength as a maritime Power, the rather, because he found them joining with the French, in order to the Execution of a Scheme which they have had always in View, of dividing the Spanish Low-Countries with France, and then disputing, in Confederacy with her, the Sovereignty which the English claim over the Narrow Seas. This King *Charles I.* saw, and determined to prevent; and in order thereto, found it necessary to fit out a Fleet, which induced him to demand Ship-Money; and that began those Confusions, which ended in the Ruin of our Government, and leaving the Dutch in Possession of all that Trade, which they had acquired at our Expence. This Language may seem new and strange to some People; but it is, nevertheless, Matter of Fact, in Proof of which I shall cite what is said by *Sir William Monson*, who lived at that Time, was an Eye-witness of what he wrote, and understood the Subject as well as any Man that ever lived. This Gentleman, after assigning the Reasons why the King did not resent the Injuries done his Subjects by the Dutch sooner than the Year 1635, when he fitted out a Royal Fleet, under the Command of the Earl of *Lindsey*, and having likewise touched the Reasons which had compelled his Majesty to it, then proceeds thus:

" After much Working, and Embassadors often passing between them and France, at last they concluded on an Offensive and Defensive League, by which France was to declare War against Spain; the Consequences of such a League being dangerous, and an unlimited Ambition never with Safety to be trusted, his Majesty had just Cause to be suspicious of these Innovations; he had Reason to weigh these Things, and to consider why Holland and France should so strictly combine and league together, both of them being Neighbours to him, and why it should be now heightened more than in former Times, when France and England gave a sufficient Relief to Holland by Consent. The King also seeing the ambitious Enterprizes of France, assisted and animated by Holland, to disturb the Christian and peaceable Commonwealth of Europe, and unjustly to seize upon his neighbouring Territories, without Cause given, yea, not sparing, by Treachery and Force, to enjoy the Countries of his weakest and nearest Friends the ancient State of *Lorraine*, which lay in his Way to hinder his unlawful Designs. These were sufficient Motives

" and

“ and Reasons for the King’s Majesty to behold his own
 “ Cafe with an Eye of Prevention; but especially finding
 “ a Combination betwixt *France* and *Holland* to take and
 “ divide the Provinces of *Flanders* betwixt them, and to
 “ possess the maritime Towns, as *Dunkirk*, and others
 “ opposite to *England*. This made his Majesty think
 “ how to quench the Fire that might flame into his own
 “ Houfe. And having Intelligence that they were both
 “ to join in one Fleet, a Thing not usually done by the
 “ *French*; and they making no publick Declaration of
 “ the Design of their Ships, as commonly Princes use to
 “ do in such Cafes, his Majesty could make no less Con-
 “ struction, than that they intended to deprive him of his an-
 “ cient and allowed Prerogative of the Narrow Seas,
 “ which behoved him as much to defend, as his King-
 “ dom; for he that covets the one, will do as much by
 “ the other, if it were in his Power to effect it. Where-
 “ fore his Majesty armed these Ships following to Sea, to
 “ enquire the Reason at their Hands, not intending to injure
 “ any Nation, but to keep himself and Subjects from be-
 “ ing injured, and to cutb the Insolency and Pride of any
 “ People that should go about to infringe his Royal Pre-
 “ rogative.”

It may not be amiss to observe here, that the Word Pre-
 rogative is used in a Sense by this Author, which interests
 the Subject as much as the Prince; for the Prerogative
 here contended for, though nominally in the Crown, was
 virtually in the People of *England*; and it was to main-
 tain their Right that the famous *Selden* was encouraged to
 compose his *Mare Clajsum*, in Answer to *Grotius*’s Book,
 entitled *Mare Liberum*, intended to justify, by Reason, the
 ambitious Projects of the *Dutch*. That this was truly the
 Cafe, and that the King had nothing in View but for the
 Benefit of his Subjects, appears plainly, by the Care he
 took for advancing the Trade to the *East-Indies*, which
 began now to decline exceedingly; for the *Dutch* had so
 frightened them by their Severities, that the Servants of the
East-India Company were afraid to dispute with them, and
 not much inclined to settle in any Colonies there; so that
 by degrees, our Trade would have fallen to nothing, which
 was precisely what the *Dutch* desired, and were, by all
 Means, endeavouring to bring about.

The King, to redress this Evil, and to preserve this
 Trade, as far as it was possible, listened to the Proposals
 made by Sir *William Courten*, and some other rich Mer-
 chants of *London*, for sending a Squadron into those Parts
 to settle and trade, but without Prejudice to the Rights
 of the *East-India* Company; and accordingly by his Com-
 mission, under his Royal Signature, dated the 12th of *De-*
cember 1635, he did grant Licence to the Persons therein
 named, to send a certain Number of Ships into the *East-*
Indies; and they accordingly did send six large Ships, Sir
William Courten himself adventuring One hundred and twenty
 thousand Pounds. These Adventurers had very good
 Success abroad, if they could have found any Way to have
 got their Riches home; but the *Dutch* were too cunning
 for that; for, dreading the Establishment of a free Trade
 between the *English* and the *Indians*, they resolved to take
 Things in the Beginning, and accordingly so way-laid the
Dragon and the *Catherine*, which were two of the largest
 Ships these Gentlemen had employed, that not far from the
Cape of Good-Hope they sunk both the Vessels, and every
 Soul in them, by which a great Number of able Seamen
 were lost, together with a Cargo of the Value of One
 hundred and fifty thousand Pounds.

Neither was this the single Act of this kind, for in the
 Year 1631, the same Proprietors, except Sir *William Cour-*
ten, who was dead, fitted out seven more Ships, which
 likewise sailed to the *East-Indies*, and were again met with
 by the *Dutch*; for in the Month of *January* 1643, the
Henry Bonaventure, laden with Pepper and other *Indian*
 Goods; ran ashore upon *Maurice-Island*, in the Hands of
 the *Dutch*, who, under Pretence of helping the Master
 and Seamen to save the Goods, seized and possessed them-
 selves of Ship, Tackle, Ammunition, Merchandize, and
 Provisions, and converted the same to the Use of the said
East-India Company; and *Adrien Vanderfel*, the Govern-
 nor of the Island, sent away the Master and Mariners with-

out any Manner of Succour or Relief, to the Damage of
 Mr. *Courten*, and the rest of the Interests, the Sum of
 10000 Pounds and upwards. And about the Month of
June 1643, the *Bona Esperanza* making a trading Voyage
 from *Goa* to *Macca*, in the Streights of *Malacca*, was
 violently set upon by two *Dutch* Ships, Men of War (be-
 longing to the said Company) called *Vendillo* and the
Portogallo, whereof Seignior *Fermeren* and Seignior *Gra-*
land, with the Lieutenant of the Fort of *Malacca*, were
 Commanders, who, in a hostile Manner, killed the Ma-
 ster, *Roger Tuckerman*, and divers Seamen were wounded,
 the rest took Prisoners, and robbed them of all their Goods,
 Merchandize, Books of Accounts, Writings, and Papers,
 and afterwards led the Mariners about the Streets of *Bata-*
via in Derision of the *English* Nation; dragging also the
 King’s Colours after them in Triumph, contrary to the
 Laws of Nations and common Amity; all which tended
 to the Damage of Mr. *Courten* and the Interests in that
 Voyage, to the Sum of 75000 Pounds, or thereabouts.

Upon the News of these inhuman Dealings, Mr. *Cour-*
ten was forced to absent himself from the *Exchange*, his
 Bills were protested in *England*, *Holland*, and *Zealand*; so
 he became insolvent, and was out-law’d, with Sir *Edward*
Littleton, in the Years 1644 and 1645, for the Sum of
 Fifty thousand Pounds, or thereabouts. Sir *Edward*
Littleton, being then sequestrated for his Fidelity and Al-
 legiance to his Majesty, and in the actual Service of
 the King, could not appear to prosecute his Action, either
 before the Parliament, or the Courts of *Holland*, for
 Reparation of the violent Injuries aforesaid. Sir *Paul*
Pindar having taken up several great Sums of Money, and
 advanced them to the King’s Use, was with the rest of the
 Commissioners for the contracted Farms of the Customs,
 fined 150,000 *l.* by the Parliament; and also prosecuted at
 Law for the said Debts, whereby he became a Prisoner in
 his own Houfe, and during the late distempered Times
 made incapable to look after his Proportion of the said Da-
 mages from the *East-India* Company of *Holland*.

Thus all this Project for reviving and restoring the *East-*
India Trade came to nothing; but those Merchants, who
 had engaged in them such vast Sums, were utterly beg-
 gared. It is true, that King *Charles I.* interposed in their
 Behalf with the States, which serves rather to shew the
 Care of that Monarch, even in his lowest Circumstances,
 for the Interest of his Subjects, than to demonstrate the
 Justice of the *Dutch*, who with much ado were brought to
 pay 85,000 *Guilders*, which proves that the Charge must
 have been just, though the Satisfaction was almost below
 Notice. While things stood thus in *England*, the *Dutch*
East-India Company carried all before them in the *East-*
Indies, and having none to oppose them, established them-
 selves so effectually, that it was not only impossible for the
English to form any Designs to their Prejudice, but they
 were forced likewise to lay aside all thoughts of recovering
 their just Rights, and to abandon their Affairs as a trading
 Body for several Years. Such were the sad Effects of our
 Confusions at home, with regard to our Trade abroad,
 and this too at such a critical Juncture, when so much might
 have been done for the Service of this Nation.

This is, indeed, a very dark and dismal Scene, the Pro-
 spect of which was never clearly exhibited to the View of
 an *English* Reader; nor should I have dwelt upon it so
 long now, but that at this Distance of Time I suppose all
 Prejudices are worn off, and we may be allowed to judge
 freely of the Mischiefs of the Civil War brought upon us,
 not only by the Confusions and Slaughters it created
 amongst ourselves, but in the Injuries likewise, which by
 its Consequences it drew upon those Branches of our Com-
 merce, which might otherwise have made us the richest
 and greatest People in *Europe*. This is a Consideration
 that ought never to be forgot, because while we retain it in
 our Memory, it is impossible that we should be guilty of
 any such Oversight for the future, or that we should suffer
 ourselves to be betrayed into so fatal an Opinion, as that
 any Advantages that can be procured by the Overthrow of
 one Party, or the prevailing of another amongst us, can in
 any degree compensate the vast Losses we sustain in Trade,
 when by reason of such Disturbances as these Struggles
 create, we are diverted from the Attention we ought
 always

iel, to the Damage of interested, the Sum of about the Month of King a trading Voyage of Malacca, was Captains, Men of War (belonged *Pendillo* and the *Seignior Gea* of Malacca, were killed the Ma- seamen were wounded, of all their Goods, Writings, and Papers, at the Streets of *Batavia*, dragging also the ship, contrary to the ty; all which tended the interested in that nds, or thereabouts. always to pay to our general, lasting, and solid Interest, as to Affairs at Sea, and of Traffick.

These great and necessary Cares can never be prosecuted as they ought, but in Times of full Peace, and perfect Settlement; that is, when the People and the Government look one Way, and have but one View, as they never can have but one Interest. We see how little, during these Distractions, it was in the Power either of the King or Parliament to obtain any Satisfaction for the Losses they sustained from foreign Nations, which being grounded in the Nature of things, must always be the Case whenever any thing of the like kind happens in proportion to the Degree in which it happens; for beyond a Question, the Prosperity of this Nation at home and abroad, depends solely on the Harmony subsisting between the Government and the People, which can subsist no other Way than by the former attending to the Concerns of the latter, with that Diligence and Disinterestedness that becomes those, who for the publick Benefit are entrusted with the Administration of the Concerns of a free People. We have nothing more to add during this Reign, and shall therefore proceed to such Matters as concern this Subject after the Death of the King.

16. The immense Wealth, and great naval Power of the *Dutch*, acquired, as has been before observed, in the Times of our Distractions, and when it was impossible for us to prevent it; encouraged them to think of establishing their own Wealth and Grandeur by a total Suppression of our maritime Force, to which, perhaps, they were tempted, from an Opinion, that the Parliament, or, as it was then called, the Commonwealth of *England*, would scarce adventure upon a War abroad, when she had scarce extricated herself from one at home. But they were mistaken, for the Parliament of *England*, however they came by their Right, or by their Power rather, were determined to make a just Use of it; and this produced the first *Dutch* War, in which they, for the Reasons before assigned, were the Aggressors, but suffered dearly for it in the End, since after repeated Defeats at Sea, and notwithstanding they helped to procure a new Revolution here, by setting up the Protector instead of the Parliament, yet they were forced to submit to a Peace upon the Terms prescribed to them, which was signed at *Westminster*, April the 5th, 1654, and by this Treaty the States were obliged to do that Justice to *Cromwell*, which they had refused to King *James* and King *Charles*.

The twenty-seventh Article of that Treaty being conceived in these Words: "It is agreed as above, that the Lords the States General of the *United Provinces*, shall take Care that Justice be done upon those who were Partakers or Accomplices in the Massacre of the *English* at *Ambogna*, as the Republick of *England* is pleased to term that Fact, provided any of them be living." In consequence of this Treaty, there was a Commission granted on both Sides, which sat at *Goldsmiths-Hall*, in order to hear and determine the Complaints that should be made to them both by the *English* and *Dutch East-India* Companies, and their Determination was to be final. The *English* Company put in a Charge, consisting of fifteen Articles, concluding, that besides the Loss of their Settlements, they had suffered to the Amount of the Sum of two Millions six hundred ninety-five thousand nine hundred and ninety-nine Pounds fifteen Shillings Sterling. The *Dutch East-India* Company on the other hand brought in their Demands, but without entering exactly into Particulars; yet ascertaining in the Close their Expenses at eight hundred and fifty thousand Pounds, which being considered, together with the Evidence offered on the Support of each Side, the Commissioners came to a Conclusion, which they filed a Regulation concerning the Losses and Damages sustained in the *East and West-Indies*, which was signed on the 30th of *August*, 1654.

And in this Paper, after reciting all the Demands before-mentioned at large, they proceed in the following Terms: "All which Complaints and Demands exhibited to us the said Commissioners, by the Deputy of both the *English* and *Dutch* Companies, expressly chose to this Purpose, have been laid before us with a great Number of Documents, Instruments, and Proofs, exhibited as well

"for forming and corroborating their own Demands, as for destroying and reluting those of the opposite Party; and at length the Arbitration of all those Controversies is submitted to us the aforesaid Commissioners by the said Deputies of both Companies. Wherefore we the aforesaid *John Eston*, *William Turner*, *William Thomson*, *Thomas Knotal*, *Adrian Van Zelmoude*, *Christian Van Rodenburgh*, *Levis Houweus*, and *James Oysel*, after having seen, read, examined, and accurately considered all the Documents, Instruments, and Proofs exhibited to us on both Sides, together with all other things which seemed necessary for the Discovery of the Truth; and being desirous to reconcile and to establish a perpetual Agreement between both the Companies aforesaid, by virtue of the Power and Authority to us given and granted by the most high the Lord Protector of the Republick of *England*, *Scotland*, and *Ireland*, and the United and Mighty Lords the States General of the *United Netherlands*, have decided, defined, and determined, and by this our present Award and Arbitration do decide, define, and determine, as follows:

"We make void, extinguish, obliterate, and altogether wipe out and commit to Oblivion (so as never to be revived at any time, and upon any Pretence, by any Person whatsoever) all Complaints, Pretensions, and Controversies mentioned more at large above, and all others whatsoever, which the *English* Company trading in the *East-Indies*, doth or may form against the *Dutch* Company, without excepting any, of whatsoever kind, Nature, or Condition they may be; and particularly we appoint and ordain, that the said *English* Company shall not for the future sue or demand any thing of the said *Dutch* Company in *Persia*, or elsewhere, under the Denomination of the Customs of *Ormuz* and *Gambrou*, so that the *Dutch* shall never be molested, or disturbed by the *English* for this Cause, under any Pretext: Provided nevertheless, that this does not prejudice any Action or Claim, which the *English* Company may enter against the King of *Persia*, or any other Person whatsoever, the *Dutch* excepted. In like manner we make void, extinguish, obliterate, and wholly blot out and commit to Oblivion, so as never to be revived at any time, and on any Pretence, by any Person whatsoever, all Complaints, Pretensions, and Controversies mentioned above more at large, and all others, whatsoever they be, which the aforesaid *Dutch East-India* Company doth or may form against the before-named *English* Company trading in the *East-Indies*, except none, of whatsoever Kind, Nature, or Condition they may be; and moreover we appoint and decree, that the said *Dutch* Company shall yield and restore the Island *Paloron* to the said *English* Company, in the same State and Condition as it is now; provided nevertheless, that it shall be lawful for the said *Dutch* Company to take away and remove out of the said Island all military Furniture, Merchandise, Household-Stuff, and all Moveables, if they happen to have any in the said Island.

"And in the last place we declare and ordain, that the said *Dutch* Company shall pay the said *English* Company 85,000 *l* Sterling to be paid here at *London*, one Moiety before the last Day of *January* next ensuing, according to the *English* Style, and the other Moiety before the last Day of *March* following, according to the same Style; and all Controversies between the said Companies being by this means composed, decided, and determined, to the end that a Stop may also be put to the Quarrels of private Persons.

"We have seen, perused and examined, all the Complaints and Demands exhibited to us in due time, in the Name of some private *Englishmen*, who complain of having received Injury and Damage at *Ambogna* in the Year 1623; and on the other hand, we have heard and considered the Matters which have been alleged and exhibited by the above-mentioned Deputies of the *Dutch* Company in their own Defence; and we the Commissioners aforesaid considering that no one Person besides these under-written has on this Account entered any Actions or Demands before us within the due Time, after which it is not lawful to enter any more, and being

" therefore desirous that no Relicks of Complaint should
 " remain, and that all Cause of Wrangling may be re-
 " moved, after having duly considered and weighed all
 " things, do, by virtue of the full Power and Authority
 " given and granted unto us by the most high Protector,
 " and the high and mighty States of the *United Netber-*
 " *lands*, appoint and ordain, that all Complaint, Action,
 " and Demand of the *English* whomsoever, whether pub-
 " lick or private, on the Score of any Injury or Damage
 " which they pretend to have suffered at *Amboyna* in the
 " Year 1622, the *English* Stile, and 1623, N. S. may be
 " made void, terminated, and committed to Oblivion ;
 " and that no Person, whomsoever he be, shall enter any
 " Action on that Account, or molest, disturb, or vex the
 " said *Dutch* Company, or any *Dutchman* on that Pretext ;
 " and on the other hand, we also decree and ordain, that
 " the said *Dutch* Company shall pay here at *London* before
 " the first Day of *January* next ensuing seven hundred
 " Pounds Sterling to *William Towerfon*, Nephew and Ad-
 " ministrator of the Effects of *Gabriel Towerfon*, late of
 " *Amboyna*, deceased. To *William Casljon*, Brother of
 " *Samuel Coulfon*, &c. Administrator in like manner of his
 " Effects, four hundred and fifty Pounds. To *James*
 " *Bayles*, Administrator of the Effects of *John Powell*, three
 " hundred and fifty Pounds. To *Anthony Ellingbam*,
 " Administrator of the Effects of *William Grigg*, two hun-
 " dred Pounds. To the Administrators of the Effects of
 " *John Weteral*, two hundred Pounds. To *Jane Webber*,
 " Administratrix of the Effects of *George Schurock*,
 " 150*l.* To *John and Elizabeth Collins*, the Children
 " and Heirs of *Edward Collins*, 465*l.* To the Admini-
 " strators of *John Beaumont*, 300*l.* To *Jane Webber*,
 " Widow, and Administratrix of *William Webber*, 200*l.*
 " to *James Baile*, Administrator of the Effects of *Ephraim*
 " *Ramfey*, 350*l.* to the Executors of the Will of *Thomas*
 " *Raddroffe*, 50*l.* and to *Thomas Billingsy*, Administra-
 " tor of the Effects of *Emanuel Thompson*, 200*l.* all
 " which Sums added together make the Sum of 3615*l.*
 " Sterling, to be paid here at *London*, before *January*
 " next ensuing : And, on this Condition, we insist that
 " their Actions, or Suits, be altogether set aside and can-
 " celled, so as never to be revived hereafter, by any Per-
 " son whomsoever."

This Award, or Arbitration, was strictly put in Exe-
 cution as soon as it was made, and ought therefore to be
 considered as decisive against the *Dutch*, who by these
 small and inconsiderable Satisfactions to the Representa-
 tives of those that were murdered at *Amboyna*, clearly ad-
 mitted, and took upon themselves the Guilt of that whole
 Proceeding. After this Treaty, the Affairs of the *East-*
India Company began to recover ; and under the Protec-
 tion of *Cromwell*, there was a Subscription of Eight hun-
 dred thousand Pounds for the carrying on of that Com-
 merce ; but before any great Progress could be made in
 the Execution of these Projects, the Constitution was re-
 stored by his Majesty's happy Return.

11. It was one of the earliest Acts of King *Charles* the
 II'd's Government to give that Satisfaction to the *East-India*
 Company which was requisite, to revive and establish
 its Commerce. This he did, by granting to the Company
 a new Charter, dated the 3d of *April*, 1661, by which he
 not only confirmed the Privileges which they had before
 received, but likewise added others. He enlarged the
 Quantity of Bullion to 50,000*l.* every Voyage, pro-
 vided so much as brought into the Kingdom by the Ex-
 portation of *Indian* Goods. He confirmed their exclusive
 Trade, and gave them Power to license others to trade in
 the *Indies*, as also Authority to settle Civil and Military
 Government, and to make Peace and War with the Indi-
 cles in the *East-Indies* : But still this Charter had the old
 Condition of being made void, if it should be found detri-
 mental to the Nation upon three Years Notice.

As soon as a Negotiation was commenced for the King's
 Marriage with the Infanta of *Portugal*, it was resolved to
 procure a Cession of some convenient Colony in the *East-*
Indies, as Part of her Portion ; and by this Means the
 Island of *Bombay*, which has been so often mentioned,
 came into the Hands of the *English*. It must be owned

that the Soil of this Island is but barren, and the Air far
 enough from being wholesome. But, however, the Situa-
 tion was extremely convenient ; and as it was not in the
 Power of the King, or any of his Ministers, to alter the
 Nature of Things, they were forced to take up with what
 they could get ; and it must be owned that, notwithstand-
 ing some Inconveniences, the obtaining this Island was
 both a convenient, and an important Acquisition, as by the
 Consequences attending it ; and the present Condition of
 that Place did, and doth manifestly and unquestionably
 appear.

Very soon after the Marriage, King *Charles* sent the
 Lord *Marleburgh*, with four or five Ships of War, to take
 Possession of it ; and the King of *Portugal* sent a Viceroy
 to deliver it and all its Royalties, to the said Lord ; and
 Sir *Abraham Shipman* was ordered to be Governor for
 King *Charles*. They arrived at *Bombay* in *September* 1663 ;
 but the Clergy withstood the Crown, and disobeyed the
 Order ; nor would they acknowledge the Viceroy, unless
 he would come into their Measures, which, rather than
 lose his new Dignity, he did, and the *English* Fleet was
 forced to go to *Swally* to land their Men, and get Re-
 freshments. The Governor of *Surat*, in whose District
Swally is, grew jealous of the Numbers and Bravery of
 the *English*, threatened the Factory established at *Surat*,
 if they did not speedily re-embark, which, to avoid, they
 did ; and the Governor allowed them the free Use of the
 Markets ; so that they had no Want of Provisions and
 Merchandize while they stayed there. In *Jan.* 1664 his
 Lordship went back to *England*, carrying two Ships with
 him, and left Sir *Abraham* with the rest to pass the westerly
 Monsoons in some Port on the Coast ; but he being unac-
 quainted, chose a desolate Island, called *Anjadra*, to win-
 ter at. It is so far from any Harbour, that it is even but a
 bad Road for Shipping in those boisterous south-west
 Winds and turbulent Seas : However, he landed all the
 Land-Forces, and built Huts to defend them from the
 Weather. The Island is barren, but has some Springs of
 good Water. It is about a Mile long, and three hundred
 Paces broad. Here they stayed from *April* till *October*,
 in which Time they buried above two hundred of their
 Men.

When the Monsoons were over, the Squadron put to
 Sea, and put into *Bombay*, to try if the Church had con-
 sidered on the Obedience due to the King of *Portugal*'s
 Orders, or if they had a Mind to draw the Arms of *Eng-*
land, as well as their Sovereign, on them. Some of them,
 who had not forgot what Damages *Spain* and *Portugal*
 had sustained by the *English* Fleet in *Cromwell*'s Time,
 advised the Church to obey the King, setting forth the
 Miseries they should be brought into in case of Noncom-
 pliance. At length their holy Zeal abated, and they were
 content to admit of a Treaty ; but before the Treaty was
 concluded, Sir *Abraham* died, and one Mr. *Humphrey Cooke*,
 who was next in Commission, continued the Treaty, and
 article'd, that the Inhabitants should enjoy their Lands
 and Religion under the King of *England*, but sorgot to insert
 the Royalties appending on *Bombay*, which reached as far
 as *Verfua*, or *Sulfer* ; which Omission has been a Bone of
 Contention for both Parties ever since. Mr. *Cooke*, ac-
 cording to the Treaty, took Possession of the Island in the
 King's Name, and forthwith began to fortify regularly,
 and, to save Charges of building a House for the Gover-
 nor, built a Fort round an old square House, which serv-
 ed the *Portuguzze* for a Place of Retreat, when they were
 disturbed by their Enemies, till Forces could be sent from
 other Places to relieve them.

After the Fort was traced and the Foundation laid, Sir
George Lucas arrived from *England* with two Ships ; but
 Affairs being settled before he came, did not stay at *Bom-*
bay longer than *January*, 1666, and left the Government
 of the Island in the Hands of Mr. *Cooke* and his Council,
 the Presidency for the then Company residing at *Surat*.
 Their Trade flourished and increased wonderfully : But after
 the Fort was finished, the King finding that the Charge of
 keeping *Bombay* in his own Hands, would not turn to
 Account, the Revenues being so inconsiderable, he made
 it over to the *East-India* Company in Fee-Tail, which
 continues to this Day. In building the Fort where it is,
 Mr.

Mr. Cooke shewed his Want of Skill in Architecture, where a proper and convenient Situation ought to be well considered; for it is built upon the Point of Rocks that jets into the Sea, where there are no Springs of fresh Water; and it stands within eight hundred Paces of an Hill called *Dungeree*, that over-looks it; and an Enemy might much incommode it from the Hill, as we found by Experience, in Anno 1689, when the Mogul sent an Army on *Bombay*.

As for the Magnitude, Figure, and Materials of the Fort, there is no Fault to be found in them, for it is a regular Tetragon; the outward Polygon is about five hundred Paces, and it is built of good hard Stone, and can mount above one hundred Pieces of Cannon, and that is all that is commendable in it. But had it been built about five hundred Paces more to the southward, on a more acute Point of Rocks, called *Mendham's-Point*, it had been much better, on several Accounts; first, it had been much nearer the Road for protecting the Shipping there; it had been farther off *Dungeree-hill*; it would have had a pretty Spring of good Water, which served the Hospital that was afterwards built there, and the Shipping had been better secured that lay in the little Bay between the Point where the Fort now stands and *Mendham's-Point*. They went about building several other little Forts and Sconces, in convenient Places, to hinder an Invasion, if any of their Neighbours should have attempted one. At *Mafagan* there was one, at *Souree* one, at *Sian* one, at *Mahim* one, and *Werlee* had one, and some great Guns mounted on each of them.

Notwithstanding the Company was at so much Charge in building of Forts, they had no Thoughts of building a Church; for many Years after, Sir *George Oxendon* began to build one, and charitable Collections were gathered for that Use: But when Sir *George* died, Piety grew sick, and the Building of Churches was grown unfashionable. Indeed, it was a long Time before the Island had People enough to fill a Chapel that was in the Fort; for as fast as Recruits came from *Britain* they died in *Bombay*, which got the Island a bad Name. There was reckoned above 5000 Pounds had been gathered towards building the Church; but Sir *John Child*, when he came to reign in *Bombay*, converted the Money to his own Use, and never more was heard of it. The Walls were built by his Predecessors to five Yards high, and so it continued till the Year 1715, that Mr. *Boone* came to the Chair, who set about building it, and in five Years Time finished it by his own Benevolence; and of other Gentlemen, who, by his Persuasions, were brought in to contribute; the Company also contributed something towards that pious End.

About the Year 1674, President *Aungier*, a Gentleman well qualified for the Government, came to the Chair; and leaving *Surat* to the Management of Deputies, came to *Bombay*, and rectified many Things that were amiss, and brought the Face of Justice to be unveiled, which before lay hid in a single Person's Breast, who distributed her Favours according to the Governor's Direction. He erected a formal Court, where Pleas were brought in and debated. But that Method lasted but a few Years: When Sir *John Child* came to the Chair, the Court expired. Mr. *Aungier* advised the Company to enclose the Town from *Dungeree* to *Mendham's-Point*, for securing the trading People from the Insults of their troublesome beggarly Neighbours on the Continent: But his Proposals were rejected, and that necessary Piece of Work was reserved for Mr. *Boone* also. And happy it was for the Inhabitants that the Town was secured by a Wall, otherwise *Connojee Aungarie* would have harassed them with continual Insults, since his War with the *English* began. The Name of Mr. *Aungier* is much revered by the ancient People of *Surat* and *Bombay* to this Day. His Justice and Dexterity in managing Affairs got him such an Esteem, that the Natives of those Places made him the common Arbitrator of their Differences in point of Traffick; nor was it ever known that any Party receded from his Award. There are no Dangers in going into *Bombay* Road, but one sunk Rock, that lies about half a League from the Castle. It is dry at Low-water, and has a Channel within it deep enough for the greatest Ships to pass. I never heard of

any Damage done by that Rock, but to a small Ship called the *Adam*, which, by Carleffies, run on it at Noon-Day, and was lost.

In the Year 1673, the *Dutch East-India Company* having an Eye on *Bombay*, sent a Squadron of Ships, with a little Army to try if they could take it among their other Conquests of *India*; but, on their Landing, met with so warm a Reception, that they were glad to get off with the Loss of two or three hundred of their Men, and so left the *English* in the quiet Possession of it. The Governors proved tolerably good till 1682, that Sir *John Child* came thither. The *India Company* knowing how to make Use of King *Charles's* Necessities, made him some Presents, and he, in grateful Acknowledgment, granted them Power; but they used that Power to their own Destruction, for Mr. *Child's* Pride and Oppressions grew so very intolerable, then even the Gentlemen in the Company's Service, had not the free Exercise of Trade, and much less private Merchants: And he trampling on the established Laws of *England*, and by Advice of his Name-fake, who governed the Company in *Europe*, by imprisoning and murdering their Fellow Subjects, grew hateful to all.

In Anno 1684, he made his Brother-in-law, Mr. *Ward*, his Deputy of *Bombay*, who designed to fish in troubled Waters. Mr. *Child* being honoured with the Title of Baronet, by the powerful Motives of the Company's Money to the King; at the same Time got the Commission of General, which puffed him up so, that he contemned all Laws, human and divine: The military Gentlemen, who had made Contracts in *England* for their Salaries, though paid at 20 per Cent. less; yet, to shew himself a good Oeconomist for his Masters Interests, sent his Deputy fresh Orders to reduce their Pay to 30 per Cent. less than it was before, though it was so small that they could hardly bring both Ends to bear at the Month's End. That hard Pill the Sons of *Mars* could not swallow, and so bent their Minds on a Revolution; and having come to some Knowledge of Mr. *Ward's* Tampering with the *Sevajee* to land on the Island, they detected some Letters of his to that Purpose, which gave them a Ground for a Revolt. The *Sevajee*, indeed, sent a Fleet of eighty Sail of small Vessels to land on the Bay which faces the Ocean; but on their trying to land some Forces, they were warmly repulsed, and lost many of their Men, which made them draw off again in Confusion; and Mr. *Ward* being confronted with his own Letters, and having little to say in his own Defence, was made a Prisoner; and General *Child's* Faction was sent to *Surat* to him.

The Islanders taking the Government of the Island into their own Hands, chose Captain *Kegwine* Major of the Military, to superintend the Military Affairs, and one Captain *Thorburn* to regulate the Civil. General *Child* soon dispatched Letters to *England*, and gave an Account of the Rebellion; and King *Charles* dispatched a Frigate, called the *Pbænix*, for *India*, to demand the Restitution of the Island, and put it again into the Company's Hands. They arrived at *Bombay* in September 1685, and shewed the King's Letter, with a full Pardon to all who yielded Obedience, which the Islanders unanimously did; but for their own Security, drew up some Articles to be signed by General *Child*, and Captain *Tyrell*, who commanded the *Pbænix*; which Articles were, That any Person that had a Mind to go to *England*, should have free Liberty and Passage on board the Company's Shipping; which, being agreed to and signed, Captain *Kegwine* took his Passage on board the first Ship; but *Thorburn* being a married Man, and having a small Estate, as well as a Family on the Island, could not so easily remove, but trusted to the Act of Grace, and the Treaty they had made.

After General *Child* had got the Reins of Government again into his own Hands, he became more insupportable than ever. He erected a Court of Inquisition, and made an old *Greek*, one Captain *Gary*, Judge, who had condemned a Man to be hanged on a *Tuesday*, and the Man suffered according to Sentence: But, on the *Friday* after, the poor dead Fellow was ordered to be called before the Court, but he would not comply with the Orders. Captain *Thorburn* was the first that felt the Weight of Mr. *Child's* Displeasure; he got some Fellows to swear him out

of his little Estate, who brought in forged Bonds for Sums borrowed of one King, whom he never had any Dealings with, and found Witnesses to attest them. All that *Thorburn* had was too little to pay the Sums, for which his Estate was taken from him, and himself put in Prison, without the Permission of one Slave to attend him, or serve him in Prison; his Wife was not permitted to visit him, which hard Usage brought him into a violent Fever, that soon put an End to his Life. About two Days before he died, the Goaler acquainted his Lady with the Danger, and she, with two small Children, went to the General, and, on her Knees, begged that a Doctor might be permitted to visit her Husband; but he was inexorable, and would allow no such Favour, only granted her Leave to be in Prison with him till he died, and she stayed but one Day and Part of a Night, before he expired.

When the Tragedy was over, she was going home to her distressed Family, but found her Slaves and Children removed into a little Out-house of her's, and the Doors of her Dwelling-house shut against her. The Lady had two Sisters married on the Island, and she hoping to find Relief from them, went to see the eldest; but she met her at the Door, and told her she could have no Admittance, her Husband being liable to Prosecution if he admitted her into the Houle, and she believed the other Sister's Husband durst not entertain her in his House. The poor Lady, full of Sorrow and Grief, being abandoned of all her Friends and Relations, went back to her distressed Family, and having no visible Way of Support, had once some Thoughts of putting an End to her Miseries: But her Sisters, unknown to their Husbands, sent her some Relief by a trusty female Slave in the Night, and a Letter, that they desired her to burn as soon as she had read, wherein they promised to be assisting in the Maintenance of her and her Children, till the Almighty should think proper to deliver her out of the Persecution.

The poor Lady had both Beauty and Discretion enough to recommend her to the virtuous Part of Mankind; but none of the Gentlemen that wished her well, durst make Addresses to her; only one who had the Command of a Ship in the *Indian* Merchant's Service, as he had no Dependence on the General and his Masters in *England*, thought he could not well come within the Reach of their Persecution; so he courted her, and married her; but that was thought a capital Crime, and the General acquainted his *Indian* Owners, that without they discharged him their Service, they should also find the Weight of his Displeasure; and accordingly, to avoid Contests with his Excellency, he was discharged; but Grief put an End to his Troubles, for he died within a Year after his Marriage, and left the poor Lady another Child to take Care of, but left her above One thousand Pounds Sterling of Stock for her and her Family's Support.

As the *Phoenix* was in her Way for *India*, she called at the Island of *Yebonna*, and there found an *English* Ship, called the *Bristol*, stopping some Leaks in her Bottom. Captain *Tyrell*, by a dispensing Power from the King of *England*, seized her, and designed to have carried her to *Bombay*, in Company with a small Vessel that he had seized on the Coast of *Madagascar*. The *Bristol* sunk the third Day after they put to Sea, but the other came safe. The *Bristol* Men were looked on as Pirates; and one Mr. *Mews*, a Supercargo, was arraigned before the General's Tribunal, where he himself sat Lord Chief Justice; and after his usual Manner of bestowing opprobrious Names, he condemned Mr. *Mews* to lose all that he had in the World, and One thousand Pounds besides, and to lie in Prison at his own Charge, till the Fine was paid; but Mr. *Vaux*, who was Judge of the Island in petty Affairs, shewed him the Weakness of his Sentence, and persuaded him to set the poor Man at Liberty, and order him a Passage for *England*.

As I have taken these Passages from the Travels of one Captain *Hamilton*, so upon his Credit I must leave them. He had the Reputation of being an honest and a sincere Man, and one so far from being suspected of having but a slender Regard for Truth, that, on the contrary, he was held enthusiastically fond of it, so as to have spoke it upon

all Occasions, and without any Regard to the good old Maxim, *That Truth is not to be spoken at all Times*. I must likewise have Leave to say, that I knew not where else to find Materials for this Part of my Subject, and therefore I chose rather to set these Things down, than to leave so large a Chafin in my Collection. But if there be any Falshoods among these Facts, or any Truths written with a Spirit of Prejudice or Animosity, it is none of my Fault, and quite beside my Intention; besides all this, the Facts related are so notorious, and so very capable of being disproved from their very Nature, at the same time that publick and private Interests were equally concerned to disprove them, that I cannot help thinking their remaining so many Years as my Author's Book has been printed, unquestioned as well as unreputed, is a sufficient Reason to believe that though very extraordinary, they are yet consistent with Truth; and if so, I am very sure that no Facts can better deserve a Place in this History than they do.

The *Dutch* all this time very steadily pursued their Plan of driving us out of the *Indies*. In time of War they attacked us directly, and having a superior Strength, had generally the better of us; but in time of Peace, between the States of the *United Provinces*, and the Crown of *Great-Britain*, they contented themselves with attacking the *Indian* Princes, to whose Dominions we traded, and prosecuting the War against them, till such time as they were obliged, from a Principle of Self-preservation, to purchase their own Peace by excluding us. It was in this manner, and after a long War carried on for that Purpose, that the *Dutch* were so fortunate in the Island of *Java*, as to carry their Point entirely; so that after a long civil War set on foot, and encouraged by them between the old King and his Son, by the Help of the latter in *1683*, the *Dutch* dispossessed the *English* Company of their Factory of *Bantam*, on the West End of *Java*; and the *English* having a mind to regain it by Force of Arms, built several Ships of between sixty and seventy Guns, so that in *1685*, they had a Fleet ready victualled, and manned with seven or eight thousand Men, to the Number of twenty-three Sail of Line of Battle Ships; which Expence, and the continual Craving of the Court, brought their Stock very low, yet since the Maw of the Court was not enough crammed, the King laid Embargoes on the Fleet from Time to Time for nine Months, and then the *Dutch* Embassador had Orders to present his Majesty with one hundred thousand Pounds, if he would command the Company not to use Violence. He snapt at the Bait, and defeated the Design to all Intents and Purposes, which was of infinite Prejudice to the Company's Affairs, gave the *Dutch* vast Advantages, and was highly dishonourable, as well as detrimental to the Nation.

12. Upon the Accession of King *James* the Second to the Throne of *England*, the *East-India* Company found in him a still more powerful Protector than they had done in his Brother, though he granted them a new Charter, dated the 5th of *October*, in the twenty-eighth Year of his Reign, and extended this again by another Charter, dated the 9th of *August*, in the thirty-fifth of it. But King *James* not only extended their Privileges as a Company, but being persuaded that such Prerogatives were necessary to the carrying on their Trade, for the promoting of which he would deny nothing, he in a manner shared his Sovereignty with them, by granting them a Power to erect Fortresses, raise Armies, execute martial Law, and coin Money; all which was with a View to make them equal in Power with the *Dutch*, and to enable them to secure at least a considerable Share of this profitable Trade to his Subjects. Under so gracious and kind a Prince, we need not at all wonder, that the Company extended their Authority very considerably, but the great Misfortune was, that they extended it only over, and not for the Benefit of their Countrymen, as we shall presently see.

The Company having such a Number of great Ships on their Hands, were obliged to send them abroad; but having no Stock to employ them, ordered the Generals and Chiefs of the Factories in *India* to borrow what Sums they could on the Company's Credit from the *Indian* Merchants, to lade their Ships home, which accordingly they did, and

ward to the good old
keys at all Times. I

what they could not lade home, they were to employ by
 Freights in India; and I saw a Letter from the Governor
 of the Company in England, intimating, that when they
 had got as much Credit of the Mogul's Subjects as they
 could, then they would pick Quarrels with the Creditors,
 and put a general Stop to their Trade, which was accordingly
 done; for in 1686 and 87, the Surat Merchants traded briskly
 by Sea to *Mocha, Persia, and Bassora*, to the Westward;
 and to *Bengal, Achen, Malacca, and Siam*, to the East-
 ward. The General granted Passes to all who required
 them then; but about the latter End of the Year 1687, he
 sent many Complaints and Grievances to the Governor of
 Surat, and demanded Redress and Satisfaction.

These Complaints of his were digested into thirty-five
 Articles, most of which related to Mess. Pitt and Boucher,
 who were originally of the Governor's Council, appointed
 him by the Company, Men of fair Characters, and who
 had given him much Trouble, by opposing all his illegal
 and violent Measures, which made him use them so ill, and
 shew withal such an Inclination to use them worse, that to
 preserve themselves from Beggary and Ruin, they retired
 into the Mogul's Country; and Mr. Boucher having, by an
 Application to that Monarch, procured his Licence to trade,
 continued it with great Success; but as for Mr. Pitt, he
 had the Misfortune to be taken by Pirates at Sea, who at
 first would have ransomed him for five thousand Pounds,
 but were persuaded by the Governor to demand twenty-
 five thousand Pounds, so that he remained a Prisoner to
 the Day of his Death; and the Governor required Mr.
 Boucher, who resided at Surat, from the Governor, to-
 gether with his Wife, Children, and Effects; the rest of his
 Demands were alike reasonable, and all of them delivered
 in such Language, as would not become one Gentleman to
 use to another, much less fit from the Governor of a trading
 Company to so great a Prince, as may appear from one of
 them; in which he demands, that the Gates of Surat
 should not be shut, when he went to take his Pleasure, or
 should be opened at his Return, and due Respect paid him
 whenever he thought fit to unbend his Mind, and to amuse
 himself with such kind of Diversions.

These Grievances were the Foundation on which General
 Child built a Quarrel with the Mogul, without ever sending
 them to Court to know the King's Pleasure; but without
 declaring War, seized his Subjects Ships, where-ever they
 were found, although they had the Sanction of his own
 Passes. His Articles of Complaint were but weak Argu-
 ments to support and raise a War that cost his Masters above
 four hundred thousand Pounds before they could get rid of
 it, besides the Loss of their Credit with the Mogul, and
 his Subjects, which to this Time is not quite recovered.
 For by what Rule in Policy could Sir Josiah or Sir John
 Child think to rob, murder, and destroy the Mogul's Sub-
 jects in one Part of his Dominions, and expect the Company
 to enjoy a free Trade in the other Parts? Or how could they
 suppose that he would stand neuter? The General having
 such a great Number of Ships on his Hands, and little
 Employment for them, sent them to *Mocha, Persia, and*
Bengal, where the *Suraters* had sent theirs, under the Pro-
 tection of his Passes. Captain Andrews in the *Ch. II.* went
 to *Mocha*, and set up the King of England's Flag on his
 Factory, and there he seized two English Ships, one from
 England, called the *Streight's Merchant*, commanded by
 Captain Bear, and another belonging to Mr. Samuel
 Whiteborn at *Siam*; she was commanded by one Captain
 Wren, whom they killed in the Cabbin, because he would
 not deliver his Ship up voluntarily; there was but little of
 their Cargoes on Board of the Ships, so they might as well
 have let them alone. However, such doings displeas'd the
 Governor and Merchants of *Mocha*, and they had a Design
 to force Captain Andrews to restore the Ships; but he sus-
 pecting as much, fled on Board, and left his Colours flying
 on the Factory.

He soon after left *Mocha*, and carried his two Prizes
 with him; and Mr. Clive, Supercargo of the *Streights Mer-*
chant, got Bills for his Stock, payable at *Grand Cairo*,
 except about sixty Bales of Coffee, that he carried with him
 to England, where it sold very well, and the Company were
 obliged by Law to make good all his Ship's Cargo pro

NUMB. 61.

rata, as those sixty Bails sold for, which amounted to
 thirty-two thousand Pounds. The *Bristol's* Cargo was also
 made good to her Owners, with the Ship that was taken at
Jobanna by the *Pbanix*, which came to sixty thousand
 Pounds; and the *Little Betty*, that was also taken by the
Pbanix, in her Way to *India*, cost them twelve thousand
 Pounds, though the and her Cargo at *Bombay* were sold for
 less than six hundred Pounds. The Owner of that Vessel
 was one Mr. Hastedwell, a Quaker, and a substantial Mer-
 chant in London, who arrested Captain Tyrell going off the
Exchange. The Captain proffered King James for Hall;
 but the Quaker would not accept of him, yet was content
 to accept of Sir Joseph Herts, who became Ball. The
Charles, Caesar, and Royal James and *Mary*, way-laid the
Surat Shipping, and brought in fourteen Sails to *Bombay*,
 in Anno 1688, and yet no War with the Mogul, only with
 the Inhabitants of Surat, whom he threatened to humble.

In October 1688, he went to Surat Road in the *Royal*
James and *Mary*, with three or four other Ships of Con-
 nenance, to try if he could bully the Governor, and frighten
 the Merchants to a Compliance of losing their Estates; but
 was disappointed in both. He staid there till the Begin-
 ning of January 1689, and then left Surat in a Hull, and
 brought all the English Ships, except the Ship *Adventure*,
 which the *Pbanix* had forced over the Bar, when she was
 lying at the River's Mouth, taking in a Cargo for Eng-
 land, under the Protection of Mr. Boucher's Firmans. How-
 ever, her Supercargo dying, the Ship's Bottom was eaten
 up with Worms in the River, and part of the Cargo re-
 mained many Years in Mr. Boucher's Possession. On the
 General's Passage to *Bombay*, he met with a Fleet of Ves-
 sels that were carrying Corn to an Army of the Mogul's
 that lay at *Dunder-rajab-pore*, about fourteen Leagues to
 the Southward of *Bombay*: That Fleet he also seized, and
 carried into *Bombay*, though against the Opinion of most of
 his Council. Before this Seizure, he asked the Opinion of
 some Sea Officers, and one Captain Hilder being the eldest,
 advised him not to meddle with the Corn Fleet, because it
 would straiten the Army, and force them to look abroad for
 Provisions, where it might be procured, and perhaps
 might affect *Bombay*, which was in a great Measure be-
 holden to its Neighbours for Suttenance and Fire-wood.
 The General insulted him with scurrilous Language, called
 him Coward and Fool, and bragged, that if *Sede Yacoup*,
 which was the Mogul General's Name, should dare to
 come with his Forces to *Bombay*, he would blow him off
 again with the Wind of his Bum. Cowards are generally
 stout when Dangers are at a Distance, and so was our Ge-
 neral, who had never seen a Sword drawn in Anger, and
 who was consequently very ill acquainted with War; and
 when it came to his Door, none was ever so contounded
 or so dejected as he was, as appeared by his Conduct in
 that War, that he so foolishly brought on himself and his
 Country.

When the News came to *Sede Yacoup*, that his Fleet
 with his Provision of Corn and Cloth, were seized, and car-
 ried to *Bombay*, he sent a civil Letter to our General to dis-
 charge his Fleet, protesting, that as he had not meddled
 in the Affairs between him and the People of Surat, he
 would continue neuter, unless he was forced to do other-
 wise. But our General gave him an insolent Answer, and
 the Fleet was unladed at *Bombay*. *Sede Yacoup* sent again
 to desire the Delivery of his Fleet in plain Terms, other-
 wise he would be obliged to come with his Army and quar-
 ter in *Bombay*, where his Provisions were detained; and
 that if his Fleet was not set at liberty before the 15th of
 February, which was near at Hand, he would certainly be
 at *Bombay* the 15th. But still receiving uncivil Answers,
 he performed his Promise to a Tittle; for that very Night
 he landed at a Place called *Soree*, about four Miles distant
 from the main Fort, with twenty thousand Men at his Back.
 Our General's Security had made him neglect providing for
 receiving such Guests, trusting to the Reputation of his
 Forces, which were greater than ever they had been before,
 or ever were since that Time; and he had small Ships
 enough, had they been placed in proper Places, that might
 certainly have hindered his landing, and forced him home
 again; but all those necessary Preparations were neglected,
 to U and

and the *Sedee* landed at Midnight, and the Redoubt, where he landed, fired a great Gun to give the Alarm, and so deserted their Post, and the *Sedee* took Possession of it.

At One in the Morning the Castle fired three Guns to give the General Notice, which brought such Fear on those that lived securely in their Houses without the Castle, that the poor Ladies, both white and black, ran half naked to the Fort, and only carried their Children with them; but they were all obliged to wait without the Wall, till Day-light relieved them. Next Morning the *Sedee* marched to *Masfajun*, a small Fort of fourteen Guns, and about a random Shot distant from the Castle. On the Enemy's Approach, the Fort, though situated on a Point of Rocks, where the Sea defended three Quarters of it, was also deserted in such Precipitancy that eight or ten Chests of Treasure, which generally contain one thousand Pounds each, and four Chests of new Arms, were left behind, though the Seamen that were sent in Boats to bring them off proffered to carry them along with them; but the commanding Officer thought them not fit to be trusted with Money and Arms, and so they were left for a Present to *Sedee Yacoup*, with fourteen Cannon, two Mortars, with some Powder, Shot, and Shells. But why that Treasure, and those Arms and Ammunition were deposited in *Mazagan*, few could account for; and the Reason why they were left to the Enemy was as wonderful: But it is plain, that the old Way of fishing in troubled Waters was known at *Bombay*, and the Officer was never called to account for his Oversight. *Sedee Yacoup*, finding no Opposition, sent a Party of Men towards *Mashim* to plunder the poor Peasants, and to take the Fort, which he thought might be deserted as the rest had been, and was not in the least out of his Conjecture; for the Garrison had embarked in Boats, and came by Sea to *Bombay* before they saw an Enemy; the *Sedee* taking Possession of *Mazagan*, hoisted his Flag there, and made it his head Quarters. The following Day some of the Enemy appeared on *Mazagan Hills*, which grieved our General's righteous Soul to see Infidels come to near him in a hostile manner.

He called a Minion of his own, one Captain *Peau*, who was no better Soldier than himself, and ordered him to take two Companies, each containing about seventy Men, and march to those Hills, and drive the Enemy out of Sight; he ordered one *Monra*, who had been a Soldier at *Tangier*, to be his Lieutenant. In *Tangier* he had received a Wound in his Heel that spoiled his running, and accordingly they marched in good Order within Shot of the Enemy, who showed their Heads above the Surface of the Hill, but did not offer to advance, or expose their Bodies; several Gentlemen Volunteers took their Arms, and accompanied the little Army. The Lieutenant advised the Captain to march up the Hill in Platoons to separate the Enemy's Forces. The Captain, who took it as an Affront to be advised, told his Lieutenant, that when he had the Command in his own Hands, he might use it as he thought fit: But as it was intrusted to him, he would use it according to his own Mind, and so ordered his Men to spread as much as they could; and when they saw the Enemy open in the Plain, to discharge all at once amongst them, which he said would terrify them. *Monra* opposed his Scheme, and told him of the Danger he would bring himself and them into, if the Enemy should attack them, whilst their Arms were reloading; but nothing could dissuade him from his Project, and so commanded his Men to fire, as he had directed. The *Sedees* being ten to one in Numbers, and better Runners than our Men, and better acquainted with close fighting with Sword and Target, took hold of the Opportunity, and advanced with all their Speed, which the Captain perceiving, betook himself to his Heels, and was the foremost Man to the *Portuguese Church*, where he took Courage to look behind him, to see what was become of his Men. Poor *Monra* thinking to stop the Enemy's Carrier by a Part of the Wing that he commanded, found himself deserted by all but thirteen or fourteen stout Fellows, who were soon surrounded by the Enemy, and cut to Pieces. *Peau* had not stopp'd at the *Portuguese Church* had he not found a Party of one hundred Men that lay there ready to support or receive him, as his Case should require. He was a Fellow as well made for running as any that was

ever seen, and was so much in the General's Favour, that he had not so much as a Reprimand for his Cowardice and Misbehaviour. This Relation I had, says Captain *II*, from a Gentleman volunteer, who always kept near the Captain, while he could keep Pace with him.

When the General left *Sarat*, there were several Gentlemen in it, some in the Company's Service, and some private Persons, who were all imprisoned, and put in Irons, except Mr. *Boucher* and his Dependants, who were protected by his Phirmaund. Those imprisoned were severely used, being obliged to pass through the Streets with Irons about their Necks, for Spectacles to please the Mob. Captain *Johnson* and Captain *Yeaman*, though particular Merchants, were obliged to act their Parts in the Tragi-Comedy, and continue Prisoners, where Captain *Johnson* died; but Captain *Yeaman* got his Liberty at the End of the War, which was about the Beginning of June 1690. I will now return back to the Year 1686, when Sir *John Weyburn* was sent from *England* with a Commission of Judge-Admiral from the King, and he had likewise another Commission from the Governor of the Company, which they made him believe was also from the King, to condemn and hang thirteen of the Inhabitants of *St. Helena*, where, in a Tumult caused by the Oppressions of the Governor of that Island, one *Johnson*, the Second, was killed. Sir *John Weyburn* took his Passage to *India* on board the Ship *London*, and in his Way called at *St. Helena*, and hanged up the thirteen proscribed Persons without Form or Process, for which the Company paid dear afterwards; and so had Sir *John*, had he lived. But he finding the illegal Proceedings of Mr. *Child* to be insupportable, and meeting with many Affronts (from that Man without Manners) died at *Bombay* about two Months before the *Sedee* came on it. He was much lamented by all honest Men that knew him. He was Captain of the *Happy Return*, who accompanied the *Gloucester*, when she was bringing the Duke of *York* to *Scotland*, and lost by the Way. It was Captain *Weyburn* that sent his Barge to wait on the Duke, and brought him safe on board the *Happy Return*, who carried him forward to *Scotland*, for which good Service he was knighted; he was ever after a great Favourite with King *James*, who seeing he could not be brought into his Measures, put that Employment on him to dismiss him with Honour: And now the *Sedee* being Master of the whole Island, except the Castle, and about half a Mile to the Southward of the Castle he raised Batteries on *Dungree-Hill*, which overlooked the Fort Wall, and disturbed the Garrison very much; then he put four great Guns in the *Custome-House*, commonly called the *India-House*, and raised a Battery at the *Moodies-house*, within two hundred Paces of the Court, and another in the Lady's House, that he had been to unkind to, so that it was dangerous to go out or in at the Castle Gate, till we got up an half Moon over it. All Men were then pressed into the Company's Service, and our Author among the rest.

We passed, says he, the Months from *April* to *September* very ill, for Provisions grew scarce, by the Addition of three thousand *Servajets* that were employed as Auxiliaries in the military Service of the Company. When the Winter Months were over, in *September* we went to Sea with our small Ships to cruise on the Mogul's Subjects, and had pretty good Success. I was employed in that Service, and had the Command of a small Privateer of seven or eight Tuns, with twenty fighting Men, and sixteen Rowers. In three or four Months I brought nine Prizes into *Bombay*, laden most with Provisions and Cloaths for the Enemy's Army, which was now increased to forty thousand; but we were not allowed any Plunder, but were rather plundered ourselves; for when we brought our Prizes in, our Chests were severely searched, and if we had saved any of our Pay, it was seized for the Company's Use, as Money we had found in the Prizes, which made us careless in pursuing the Enemy at Sea: Except when Hunger pinched we never looked out for Prizes, by which Indifference of ours many of the Enemy escaped that we could have taken. The ill Success we had along with the Enemy made our General sick; and in *December* he dispatched two Factors to the Mogul's Court, with a *Sarat* Merchant called *Ameer Mazani*; he was our Friend, and had some Interest at Court.

Governor conducted him from the Garden (where the Ceremony was performed) into the City, through a great Concourse of People, who welcomed him with Shouts of Joy as he passed through the Streets to the English Factory. After Mr. Vaux had stayed in the City about a Week, he sent to acquaint the Governor of the Necessity he lay under to return back to his Government of Bombay, but the Governor sent him Word, that none but he could be trusted by the King, to see the Performance of the Contract accomplished, and begged he would not think of leaving the City, lest the King should take it amiss, and repent him of the Favours he had shewed to the East-India Company; and so Mr. Vaux was detained a Hostage for his Master's future good Behaviour. Mr. Harris, according to that Company's ordinary Custom, demanded the Presidency from Mr. Vaux, who, to save Contention, gave it to him; though his Mind was so debilitated, that he was but few Degrees wiser than an Idiot; and, in two Years Time, Mr. Vaux was suspended the Company's Service, and left to remain their Hostage at his own Charges; and so he continued till the Year 1697, that, by Accident, he was drowned in Surat River by a Pinnace's overtaking, in which he and his Lady had been taking their Pleasure on the Water.

This Mr. Vaux had been Book-Keeper to Sir *Josiah Child* in England, and for his good Services and Behaviour was preferred by his Master to a Supercargo's Post in a Ship to *China*, which Trade in those Times was the most profitable of any within the Limits of the Company's Charter. In Anno 1684, he was sent thither on board a Ship, called the *Carolina*, commanded by one Captain *Harding*; but Mr. Vaux and *Harding* disagreeing in their Passage to *China*, Mr. Vaux laded the Ship, and sent her back to England, while he himself went a Passenger on board a *Surat* Ship for *Bombay*, where he was entertained in the Company's Service as a Factor, and wrote to Sir *Josiah Child* the Reason he had for leaving the *Carolina*, and his Relolution of Staying in *India*. Sir *Josiah* continued his Esteem for Mr. Vaux, and procured him several profitable Posts at one and the same Time, in the Company's Service; and, amongst the rest, constituted him Judge in Civil Affairs, which brought him both a good Salary and Perquisites.

After he was installed in that Office, Sir *Josiah* wrote him a Letter of Admonition and Reminiscence, wherein, after many Postulates, he put him in Mind of the many Favours he had done him; and that now having the Power of Condemning the Company's Enemies, or such as should be deemed so, particularly those who should dare to question the Company's Power over all the *British* Subjects in *India*; he expected his Orders from Time to Time, should be observed and obeyed as Statute Laws. Mr. Vaux gratefully acknowledged Sir *Josiah's* Favours in his Answer to that Letter, and promised that, as he had put him into the Post of Honour and Profit, he would strive to acquit himself with all the Integrity and Justice he was Master of, and that the Laws of his Country should be the Rules he designed to walk by. In Answer to that Letter Sir *Josiah* seemed to be angry, and wrote roundly to Mr. Vaux, that he expected his Orders were to be his Rule, and not the Laws of England, which were a Heap of Nonsense, compiled by a few ignorant Country Gentlemen, who hardly knew how to make Laws for the good Government of their own private Families, much less for the regulating of Companies and foreign Commerce.

I am, says Captain *Hamilton*, the more particular in this Account, because I saw, and copied both these Letters in Anno 1696, while Mr. Vaux and I were Prisoners at *Surat*, on Account of Captain *Evory's* robbing the Mogul's great Ship, called the *Gunsway*. Having given an Account of some of Sir *Josiah Child's* Reign, I must also mark a few Ships in the Government of some of his Successors, and of the Ways they took to get into the Chair of *Bombay*. I remarked before, that Mr. *Harris* was a very weak and indolent Person, very unfit to govern a Colony and the East-Indies subordinate to *Bombay*; and by that Means, a cunning diligent Fellow, one Mr. *Samuel* had the Rouge of the Government wholly in

his Hands, who shewed that he had malicious Wit and Avarice enough to embroil both his Masters and the private Merchants Affairs in *Surat* in *Harris's* Time; and on *Harris's* Death got into the Presidency, or, rather Tyranny.

The Mogul's Subjects have a good many fine large Ships that trade all over *India*: The Owners of these Ships had a very great Regard for the Courage, Conduct, and Art of Navigation of the English above any other European Nation in *India*. And for these Qualifications the Indian Owners procured English Officers to go in their Ships, and allowed them very handsome Salaries and Indulgencies; the Captains had from ten to fifteen Pounds per Month, Mates from six to nine Pounds; and the Gunners and Boatwains had also good Salaries, besides the carrying of some Goods and Merchandize Freight-free. Mr. *Annsley* thought these Salaries and Indulgencies too great for Seamen; so he went about to reduce them to about one half, and the other Moiety he looked on as his own Due, by Virtue of his Post. Some through Fear and Necessity, complied; others again, who despised both his Power and Tyranny, would, by no means, come into his Measures, and those he looked on as Rebels, and prosecuted them to the utmost of his Power, bribing the Mogul's Governor to plague them; so some were ruined by his Villainy, whilst others had him open Defiance; and we were not wanting on our Side to expose him and his Masters to the Mogul's Subjects, which in the End was the Loss of both their Esteem and Credit among the trading People of that Country. The poorer sort, whose Maintenance depended on their Labour and Industry, losing their Employ in the *Moorish* Merchant's Service, were obliged to fall on new Schemes to support themselves, not very well suited to the Company's Interest; for some went and joined themselves with the Pirates.

The Company in England receiving Accounts from every one that came from *India*, of *Harris's* and *Annsley's* Male-administrations, sent out Sir *John Gayer* to take Care of their Affairs. He arrived in Anno 1694, with the lofty Title of General of all *India*. He continued *Annsley* in the Company's Business till the Year 1700, but divested him of all Power of doing more Mischief; and, in the End, dismissed him the Company's Service. Sir *John Gayer* was a Man not vicious in his Temper, yet he made some Slips in his Government that proved prejudicial to his Character; tho' in Matters of common Commerce, he acted pretty regularly, till a young Lady of about 3000 Pounds Portion made him dispense with the common Methods of Matrimony. This young Gentlewoman was a Daughter of Mr. *Ward's* beforementioned: She had no Relations alive, and unadvisedly married one Mr. *Solomon Lloyd*, a Factor, and the Marriage was clandestine, which was positively against the Statute-Law of *Bombay*, where no Marriage is binding but when the Governor's Consent is tacked to it. This Law Sir *John* had got by heart, and unmarried the poor Factor after Consummation, and married her to his own Son. Another Piece of ill Conduct was, in forcing the *Malacca* Frigate's Men on board against their Wills, to proceed on a Voyage to *China*, notwithstanding their just Complaints against *Edgcombe*, their Captain, whom the Mutineers shot in his Cabin, and then turned Pirates, and infested the Streights of *Malacca*, robbing and plundering all Ships that they could overcome. Captain *Hide*, in the *Darrel*, met them there in her Passage to *China*, and had a sharp Engagement with them, but got clear, with the Loss of sixteen Men killed, and some wounded, which disabled the *Darrel*, so that she proceeded no farther than *Malacca*. And another Fault of Sir *John's* was, in suffering himself and his Lady to be taken Prisoners at *Swally* by the Governor of *Surat's* Order, when he might have avoided that Disgrace by Force or Flight: But it was generally believed that, that was only a Piece of Policy to get to *Surat* in order to employ his Money, which he could do much better there than at *Bombay*. Sir *Nicholas Wast* supplanted Sir *John* in the Government of *Bombay* and in the Presidency. He was a Man of very loose Morals, and his bare-faced Injustice and Prevarications, irritated the Inhabitants and Soldier at *Bombay*, that they seized him,

had malicious Wit and his Masters and the pri- Harris's Time; and on ilency, or, rather Ty-

and sent him Prisoner to *England*. Though his Reign was short, it was very pernicious to his Masters, as well as to particular Merchants under his Jurisdiction.

But to return from this Digression: *Bombay* was governed by a Deputy, since the President was obliged to stay at *Surat*, and of seven or eight hundred *English* that inhabited before the War, there were not above sixty left by the Sword and Plague. Thus *Bombay*, that was one of the pleasantest Places in *India*, was brought to be one of the most dismal Desarts; but the Spirit of Injustice still resided in it; for those who had ventured through the War and Plague in defence of the Island, had not the Liberty of returning home to their own Country, nor to raise their Fortune by private Trade; but all were continued pressed Men, in the Right Honourable the Company's Service, without the Hope of Preferment, which made some Discontents; and even in the Time of War, when Strangers should have been encouraged to have brought Provisions into the Island, the Company's Taxes of five per Cent. were exacted with great Severity; for it was common to see the *Portuguese* Subjects bring twenty or thirty Poultry to the Market, and five of the best taken for the Custom of the Rest.

13. The Desire of continuing this historical Account of the Affairs of *Bombay*, which I take to be very useful and instructive, as well as curious and entertaining, has led me a little out of my Road of Chronology, and therefore I shall be obliged to go back again with respect to the Affairs of this Company, and the political Accidents that have attended them during the Reign of King *William*; but the Reader will not fall into any Perplexity or Confusion from this Method of treating them, because what I have now to say has little or no Reference to the Affairs abroad, and consequently has no Connection with what goes before.

The first Transaction I meet with in this Reign is a Charter of Regulations granted to the *East-India* Company, by their Majesties King *William* and Queen *Mary*, under the Great Seal of *England*, bearing date Nov. 11, 1697. Referring to a Charter of the 7th of *October*, by which it seems their former Charters were confirmed, and by this new Charter they were enabled to take in a new Subscription for seven hundred and forty-four thousand Pounds. The Company was also tied down to make publick Sales by Inch of Candle, to export yearly to the Value of one hundred thousand Pounds of the Manufactures of this Kingdom, and to furnish the Crown yearly with five hundred Tun of the best Salt petre, at the Rate of thirty-eight Pounds ten Shillings per Tun in Time of Peace, and as forty-five Pounds per Tun in Time of War; they were likewise directed to make no Dividend upon their joint Stock, but in Money only. This Charter was to continue for twenty-one Years, provided the Governor and Company complied exactly with the Rules therein prescribed; as also with such other Orders, Directions, Additions, Qualifications and Restrictions as their Majesties, by and with the Advice of their privy Council should think fit to appoint on or before the 24th of *September* 1694, otherwise all their Powers and Privileges might be determined and taken away, by Letters of Revocation.

In pursuance of this Provision, another Charter of Regulations was granted to the said Company, under the Great Seal of *England*, dated *September* 28, 1694, and in the sixth Year of their Majesty's Reign, in which among other things it is prescribed, that once every Year, in the Month of *August*, the Governor and Company should present to the privy Council a true Account fairly written, under the Governor or deputy Governor's Hand; of the Nature, Quantity, Value, and prime Cost of the Manufactures of this Country, by them exported, and from what Place; and this upon the Oath of the proper Officers and Servants of the Company. And; it was further ordered, that none of these Goods should be again landed in *England*, or carried elsewhere, than within the Limits of the Company's Charter. It was also directed, that on the Application in Writing, of any six or more, of the Proprietors, each possessed of One thousand Pounds Capital Stock, demanding a general Court of the said Company to be called; that the Governor, or Deputy-Governor; should be obliged, within eight Days, to call such a Court, which

NUMB. LXII.

should not be adjourned but by the Consent of the Majority of the Proprietors so assembled; and the Company were required to signify their Acceptance of, and Submission to these, and other Restrictions, under Pain of Dissolution.

But, notwithstanding all these Charters and Regulations, which seemed so fully to confirm, and so much to enlarge the Powers and Privileges of this Company, yet were they never so precarious, as at this Juncture; for, on the one hand, their Authority was boldly disputed by such as had an Intention to trade to the *Indies*, without any Regard to the Company's Rights, and who, by them, therefore were stiled Interlopers: And this, upon Pretence that it was not in the Power of the Crown to grant any exclusive Charter. On the other hand, the Government wanted Money, and therefore the Ministers, who should certainly have defended the King's Prerogative, since otherwise it was a high Crime in them to advise him to grant such Charters, struck in with the other Party; and, for the sake of making more Money, and removing the Obstacles in the Way of their own Administration, promoted the Ruin of those Grants and Charters, which they had been most exorbitantly paid for procuring; and upon the Faith of which vast Numbers of Persons had subscribed their Fortunes into the Company's joint Stock. But as it was not to be supposed that any Set of new People would advance two Millions, which was the Sum proposed upon a new Charter, which might prove as precarious as the old one, it was resolved to subject the whole of this Affair to the Cognizance of the House of Commons, in order to have every thing settled and secured by an Act of Parliament. Accordingly, in the Year 1698, this Matter was proposed to the House, not only with the Concurrence of Persons in Power, but backed and supported by all their Interest; so that though it was steadily and vehemently opposed by the Members of the old Company, yet it was to very little Purpose. They followed the Bill however into the House of Lords, and were heard there by their Council, Sir *Thomas Powis*, and Sir *Bartolomew Shower*; who, with much Eloquence and great Strength of Reason, maintained the Cause of their Clients, but without Success; and it was a Point determined, that their Interest should give Way to that which, whether truly or falsely, I shall not determine, was called the Interest of the Publick.

Thus it came to pass that, in the Reign of King *William* the Third, a new Company trading to the *East-Indies*, was incorporated by Act of Parliament, they having advanced the Government Two Millions of Money, for which they, at first received Interest, after the Rate of Eight per Cent. out of the Funds assigned for the same: But that Interest hath been sunk by subsequent Statutes to Six and Five per Cent. After this, the old and new Companies having a due Regard to their own common Interests, for the Prevention of divers Inconveniences that might otherwise have happened, both to themselves and this Nation in general, agreed upon several Articles for the Union of the said Companies in manner following, viz.

It was agreed that the Effects of both Companies should be brought home with all convenient Speed for their separate Accounts, and all possible Provision made for the enabling both Companies to bring home the same with Security; and that neither the Crown nor the new Company, take any Advantage of the old Company, under Pretence of Forfeiture; and that each Company give a Release to the other, and to their respective Factors and Servants.

The old Company's 319,000 *l.* in Funds, upon the Execution of this Agreement, to be immediately united to the Capital Stock of the new Company; and that the old Company purchase of the new Company, to be transferred by three of their Members in their political Capacity, 673,500 *l.* in the capital Stock and Fund of 1,662,000 *l.* with the Benefits to arise thereby; so that the old Company may have 988,500 *l.* in the said Fund; which will make that Company equal to the new in Fund and Title to the Trade, and which Stock of 673,500 *l.* shall be transferred at four several Times, each fourth Part to be paid for at the Time of their Transfer, at 100 *l.* for 100 *l.*

That the old Company's dead Stock at home and abroad, be valued at 33,000 *l.* and the new Company's

10 X

dead

dead Stock both abroad and at home, at 70,000 *l.* and that the old Company, at the Time of transferring the first fourth Part of the said 675,500 *l.* do transfer all their dead Stock, abroad and at home, to the new Company, the new Company paying for one Moiety thereof at the same time 16,500 *l.* and that the old Company shall also pay to the new Company 35,000 *l.* for the Moiety of their dead Stock; and thereupon the old Company shall have, and be entitled to a Moiety of both the said dead Stocks, as Members of the new Company.

The Members of the new Company transferring, shall be entitled to the Arrears of their Annuity until the Time of the several Transfers; after which all Annuities arising by the old Company's 315,000 *l.* shall be paid to such Persons as shall be appointed for that Purpose, by the said old Company for their Use; and the new Company shall have the Benefit of all Money arising before their Agreement, and also 5 *l. per Cent.* on all Ships entered or cleared before the Execution of the said Agreement, each Company is to defist from any separate Exportation.

That, during seven Years, each Company shall have an equal Power in the Administration and Management of the Fund and Trade; and, to that End, twelve Persons shall be appointed by the General Court of each Company respectively, out of the Courts of Committees and Directors of the said Companies, who shall be called in the new Charter, *Managers of the United Trade to India*; and a new additional Stock shall be raised for carrying on the future Trade, and be advanced in such Proportions as the said Twenty-four Managers, or the major Part of them, shall, from time to time, appoint the General Courts or each Company agreeing thereunto.

The old Company, during the Space of seven Years, shall preserve their Stock in their political Capacity; and, for that Time, remain a separate Corporation, so as to transfer and assign in their own Books, as now they do; and, at the End of the said seven Years, the old Company shall transfer and assign in the Books of the new Company their Share in the Fund to their several Members who shall be then entitled to the same; and thereon the said Members of the old Company shall become, and be admitted Members of the new Company *gratis*.

That each Company shall indemnify the other from their respective Debts and Demands, and a proper Provision be made for that Purpose: And, that the new Company, after the executing their Agreement, shall not take up any Money upon their common Seal, or do any other Act, except what relates to their separate Effects as aforesaid, without the Concurrence of the old Company.

A Covenant to be entered into, that his Majesty shall make a Re-grant within ten Days after the making such Assignment as aforesaid; and that the old Company, within one Month after the said seven Years are expired, shall surrender their Charter and Corporation; and also that the King, within ten Days after such Surrender, shall make a new Grant to the same Trustees, and subject to the same Trust of all such Estate and Effects of the old Company as shall come to, or devolve upon the Crown, by reason of the said Surrender.

That immediately from and after the said Surrender, the new Company shall change its Name, and be called the *United Company of Merchants of England trading to the East-Indies*. Nevertheless, the future Management of the said Stock and Trade, after the said Term of seven Years is expired, is to be, according to the new Company's Charter, on the 5th of September, 1698. And for the better attaining the Purposes aforesaid, that there be a Tripartite Indenture, executed by his Majesty and both the said Companies, wherein such Covenants and Provisions may be made as shall be thought reasonable, with proper Releases from his Majesty to each Company; so that as soon as the aforesaid seven Years, allowed for the Convenience of Affairs on both Sides, are expired, the two Companies may be entirely one in Name and Effect.

This, in Truth, was the only Remedy that could be devised for the Cure of so great an Evil, many of the bad Consequences of which were fore-seen before it took Ef-

fect, which, however, proved but few in comparison of what was discovered by Experience. Some there were who imagined that this was a Dutch Design originally, and formed with a View to undermine our national Interest in this Trade to favour their own; and, to speak freely, there are some Circumstances which give some Probability to his Notion; and, perhaps, amongst these Circumstances, there is none stronger than that the Subscription of the Two Millions was chiefly promoted by Foreigners, as we are expressly told by the Author of the *Complete History of England*, in his Account of the Reign of King *William*, who magnifies the Alacrity with which that Sum was subscribed, and seems to think, that twice as much might have been obtained, if the Act of Parliament had extended so far. But it may seem a Paradox to say, that People would venture their Money to hurt the old *East-India* Company: But this is easily solved, by considering that little depended on that Trade where they were to have so large an Interest as Eight *per Cent.* for their Money.

The only Way to form a right Judgment of this Affair is, to take a View of the Situation of Things in the *Indies* after this new Establishment took Place: And of this, in his Account of *Bengal*, the before mentioned Captain *Hamilton* has given us a very full and fair Relation, interspersed with some Concerns of his own, which shews that he was an Eye-witness, and did not deliver any thing from Hear-say. If we wanted other Evidence, I might cite that of Mr. *Larkyer*, who, in his Account of the Trade of the *Indies*, informs us, that the old and new Companies, had each of them a Factory at *Sarat*; and that those that managed them, acted with such Animosity against each other, that it was very hard, even after the Companies were united, to reconcile them. It is extremely difficult to find out, and bring together such Relations as these; but the Desire I have that the Readers should be perfectly acquainted with the State of this Commerce in different Periods of Time, that he may frame the better Notion of what has contributed to promote, and what has occasioned, at any Time, the Decay of this Trade, has encouraged me to take all the Pains I could to range the several Accounts I have been able to collect, in such Order as might make them best understood, and best answer the End that I proposed. It was solely with this View, that I resolved to give the following Passages from Captain *Hamilton's* Travels, which, I hope, will set this Matter in as clear a Light as either myself, or the Reader, could wish. The Country about *Bengal* described, he proceeds a little higher. Up the East-side of *Hughly* River, is *Ponjilly*, a Village where a Corn-mart is kept once or twice in a Week: It exports more Riches than any Place on this River. And five Leagues farther, upon the other Side, is *Yasna* Fort, built to protect the Trade of the River, at a Place convenient enough, where it is not above half a Mile from Shore, but it never was of much Use; for, Anno 1656, when the *English* Company quarrelled with the *Mogul*, the Company had several great Ships at *Hughly*; and this Fort was manned, in order to hinder their Passage down the River. One sixty Gun Ship approaching pretty near the Fort, saluted it with a Broad-side, which so frightened the Governor and his Myrmidons, that they all deserted their Posts, and left their Cattle to be plundered by the *English* Seamen. About a League farther, upon the other Side of the River, is *Governorsport*, where there is a little Pyramid, built for a Land-mark, to confine the Company's Colony of *Calcuta*, or *Fort-William*, on that Side: And about a League farther up, stands *Fort-William*.

The *English* settled there about the Year 1690. After the *Mogul* had pardoned all the Robberies and Murders committed on his Subjects, Mr. *Job Channock*, being then the Company's Agent in *Bengal*, he had Liberty to settle an Emporium in any Part of the River-side below *Hughly*; and for the sake of a large shady Tree, chose that Place, though he could not have chose a more unhealthy Place on all the River; for three Miles to the North-eastward is a Salt-water Lake that over-flows in *September* and *October*, and then prodigious Numbers of Fish resort thither; but in *November* and *December*, when the Floods are dissipated, these Fishes are left dry, and with their Putrefaction affect

the Air with thick stinking Vapours, which the North-
east Winds bring with them to *Fort-William*, that they
cause a yearly Mortality. One Year I was there, and
there were reckoned in *August* about 1200 *English*, some
military, some Servants to the Company, some private
Merchants residing in the Town, and some Seamen be-
longing to Shipping lying in the Town; and before the
Beginning of *January* there were four hundred and sixty
Burials registered in the Clerk's Book of Mortality.

Mr. *Channock* chusing the Ground of the Colony where
it now is, reigned more absolute than a Rajah, only he
wanted much of their Humanity; for when any poor ig-
norant Native transgressed his Laws, they were sure to
undergo a severe whipping for a Penalty; and the Execution
was generally done when he was at Dinner, or near his
Dining-room, that the Groans and Cries of the poor De-
linquent served him for Music.

The Country about being over-spread with *Paganism*,
the Custom of Wives burning with their deceased Hus-
bands is also practised. Before the *Mogul's* War, Mr.
Channock went one Time with his ordinary Guard of Sol-
diers, to see a young Widow act that tragical Catastrophe;
but he was so smitten with the Widow's Beauty, that he
sent his Guards to take her by Force from the Execution-
ers, and conducted her to his own Lodgings. They
lived lovingly many Years, and had several Children; at
length she died, after he had settled in *Calcutta*. But in-
stead of converting her to Christianity, she made him a
Prostitute to *Paganism*, and the only Part of Christianity
that was remarkable in him, was, burying her decently;
and he built a Tomb over her, where, all his Life, after
her Death, he kept the Anniversary-day of her Death by
sacrificing a Cock on her Tomb, after the *Pagan* Manner.
This was, and is the common Report, and I have been
credibly informed, both by Christians and Pagans, who
lived at *Calcutta*, under his Agency, that the Story was
really Matter of Fact.

Fort William was built an irregular Tetragon of Brick
and Mortar, called *Puckab*, which is a Composition of
Brick-dust, Lime, Molasses, and cut Hemp; and when
it comes to be dry, is as hard and tougher than firm Stone
or Brick, and the Town was built without Order, as the
Builders thought most convenient for their own Affairs,
every one taking in what Ground best pleased them for
Gardening; so that in most Houses you must pass thro' a
Garden into the House, the *English* building near the Ri-
ver-side, and the Natives within I and.

The Agency continued till the Year 1705, that the old
and new Companies united, and then it became a split
Government, the old and new Companies Servants gov-
erning Week about, which made it more anarchical than
regular. Sir *Edward Littleton* was Agent and Consul for
the new Company at *Hugly*, when this Union of the
Companies was made, and then he was ordered to remove
his Factory to *Calcutta*, and being of an indolent Indisposi-
tion, had let his Accounts with the Company run be-
hind; he was suspended, but lived at *Calcutta* till 1707;
that he died there. He was the only Precedent, or Presi-
dent, in the Company's Service, that lost an Estate of
seven hundred Pounds per Annum in so profitable a Post in
their Service.

This double-headed Government continued at *Calcutta*
till *January* 1709, that Mr. *Willen* arrived with the Com-
pany's Commission to settle it at *Bombay* and *Fort St. George*,
which were under the Management of a Governor and
Council, which thole of the Direction in *England* took to
be a better way to promote their own Creatures, as well
as their own Interest. His Term of governing was very
short, and he took as short a Way to be enriched by it,
by harralting the People to fill his Coffers: There was one
singular Instance of it. A poor Seaman had got a pretty
Mystic Wite, a little inclined to Lewdness in her Hus-
band's Absence. She entertained two *Armenians*, who
were like to quarrel about sharing her Favours, which
coming to the Governors Ears, he reprimanded them;
however, by the strong Persuasion of five hundred Ru-
pees, paid in Hand by one of them, he awarded him to
have the sole Right to her, and he carried her to *Hugly*,
and bragged openly what his Purchase had cost him, to

the great Credit and Praise of the Governor; and when
the poor Husband returned, he was forced to submit to
lose his Mate under the Pain of Flagellation: Yet he was
very shy in taking Bribes, referring those honest Folks
who trafficked that way to the Discretion of his Wife and
Daughter, to make the best Bargain they could about the
Sum to be paid; and to pay the Money into their Hands.
I could give many Instances of the Force of Bribery, both
here and elsewhere in *India*, but am loth to ruffle the Skin
of old Sores.

About fifty Yards from *Fort William*, stands the Church,
built by the pious Charity of Merchants residing there, and the
Christian Benevolence of sea-faring Men; whose Affairs
call them to trade there; but Ministers of the Gospel be-
ing subject to Mortality, very often young Merchants are
obliged to officiate, and have a Salary of fifty Pounds per
Annum added to what the Company allows them for their
Pains, in reading Prayers and Sermons on *Sundays*.

The Governor's House in the Fort, is the best and
most regular Piece of Architecture that I ever saw in *In-
dia*, and there are many convenient Lodgings for Factors
and Writers within the Fort, and some Store-houses for
the Company's Goods, and the Magazines for their Am-
munition.

The Company has a pretty good Hospital at *Calcutta*;
where many go in to undergo the Penance of Physick;
but few come out to give an account of its Operation:
The Company has also a pretty good Garden, that fur-
nishes the Governor's Table with Herbage, and Fruits;
and some Fish-ponds to serve his Kitchen with good Carp,
Calhops and Mullet.

Most of the Inhabitants of *Calcutta*, that make any to-
lerable Figure, have the same Advantages, and all sorts
of Provisions, both wild and tame, being plentiful, good
and cheap, as well as Cloathing, make the Country very
agreeable, notwithstanding the above-mentioned Inconve-
nencies that attend it.

On the other Side of the River are Docks made for re-
pairing and fitting their Ships Bottoms, and a pretty good
Garden belonging to the *Armenians*. That had been a
better Place to have built their Fort and Town in, for
many Reasons; one is, that where it now stands, the Af-
ternoon Sun is full in the Fronts of the Houses, and shines
hot in the Streets, that are both above and below the Fort,
whereas here the Sun would have sent its hot Rays on the
Backs of the Houses, and the Fronts had been a good
Shade for the Streets.

Most Gentlemen and Ladies in *Bengal* live both splen-
didly and pleasantly, the Forenoons being dedicated to
Business, and after Dinner to rest, and in the Evening to
recreate themselves in Chaifes, or Palankins; in the Fields,
or going to Gardens, or by Water in their Budgeroes, which
a convenient Boat that goes swiftly with the Force of
Oars; and on the River, sometimes there is the Dvention
of Fishing, or Fowling, or both, and before Night they
make friendly Visits to one another, when Pride or Con-
tention do not spoil Society, which too often they do
among the Ladies, as Discord and Faction do among the
Men; and altho' the contempr Fathers of the Colony dis-
agree in many Points among themselves, yet they all
agree in oppressing Strangers, who are consigned to them,
not suffering them to buy or sell their Goods at the most
advantageous Markets, but of the Governor and his Coun-
cil, who fix their own Prices, high or low, as seemeth
best to their Wisdom and Discretion; and it is a Crime
hardly pardonable, for a private Merchant to go to *Hugly*
to inform himself of the current Prices of Goods, altho'
the Liberty of Buying and Selling is entirely taken from
him before.

The Garrison of *Fort William* generally consists of two
or three hundred Soldiers, more for conveying their Fleet
from *Patana*, with the Company's Salt-petre, piece Goods,
raw Silk, and some Ophium belonging to other Merchants,
than for the Defence of the Fort: For, as the Company
holds their Colony in Fee-tail of the *Mogul*, they need
not be afraid of any Enemies coming to dispossess them;
and if they should at any Time quarrel again with the
Mogul, his prohibiting his Subjects to trade with the Com-
pany would soon end the Quarrel.

There

There are some imperious troublesome Rajahs whose Territories lie on the Banks of the *Ganges*, betwixt *Patanah* and *Cossambuzaar*, who pretend to a Tax on all Goods and Merchandize that pass by, or through their Dominions of the River, and often raise Forces to compel Payment; but some Forces from *Fort William* in Boats generally clear the Passage, tho' I have known some of our Men killed in the Skirmishes.

In *Calcutta* all Religions are freely tolerated but the Presbyterian, and that they brow-beat. The Pagans carry their Idols in Procession through the Town. The *Roman* Catholics have their Church to lodge their Idols in, and the *Mohammedan* is not discountenanced; but there are no Polemics, except what are between our High-churchmen and our low, or between the Governor's Party, and other private Merchants, on Points of Trade.

The Colony has very little Manufactory of its own, for the Government being pretty arbitrary, discourages Ingenuity and Industry in the Populace; for, by the Weight of the Company's Authority, if a Native chances to disoblige one of the Upper-house, he is liable to arbitrary Punishment, either by Fine, Imprisonment, or corporal Sufferings. I will give one Instance out of many, that I knew of the Injustice of a Governor of the double-headed Government in *Anno* 1706.

There was one Captain *Perrin*, Master of a Ship, who took up about 500*l.* on Respondentia, from Mr. *Ralph Sheldon*, one of the Governors, in a Voyage to *Persia*, payable at his return to *Bengal*. *Perrin* having dispatched his Affairs in *Persia* sooner than he expected, called at *Goa*, as he came Home, and bought a *Surat* built Ship, very cheap, and carried her to *Calcutta*, and took in a Quantity of Pepper for the *Bengal* Market, and having brought in his other Ship good Store of *Persia* Wines, called at *Fort St. George*, to dispose of what he could there: But finding no Encouragement from that Market, carried it to *Bengal*. On his Arrival, he complimented Mr. *Sheldon* with the Offer of his Pepper and Wine, but he declined meddling with that Bargain, farther than with as much of the Pepper, at the current Price, as would balance his Account of Principal and Respondentia. Accordingly, *Perrin* delivered so much Pepper, and on the Delivery, required his Bond up; but the Governor told him, that he being a Fellow troubled with the Spirit of interloping in buying Goods, and taking in Freight where he could not get them, he would keep the Bond as a Curb on him, that he should not spoil his Markets for the future. Poor *Perrin* used all his Rhetorick to get his Bond up, but to no Purpose, and the Governor moreover gave his Wine a bad Name, so that he could not dispose of that neither; and all this Oppression was in order to frustrate him, that he might be obliged to sell his purchased Ship at a low Price to him, and his Associates, which at last he was obliged to do, holding a Quarter-part in his own Hands, to secure the Command of her to himself, which after all he could hardly do. *Perrin* made his Complaint to me, but I was in no Condition to assist him, because having three or four large Ships at *Bengal*, I was reckoned a Criminal guilty of that unpardonable Sin of interloping. However, I advised *Perrin* to comply with his inexorable Master, on any Terms of Agreement whatsoever, which he endeavoured to do, that he might at least keep the Command of his Ship, where he was so much concerned, and had hardly done it but by Accident. One Day meeting me on the Green near the Fort, he stopp'd me to relate his Grievances, and begged, that if he was turned out of his own Ship, he might have an employ in one of mine, which I promised he should.

Sheldon called us out of a Window, holding a long Consultation, and being impatient to know about what, sent a Servant to call *Perrin*, and he obeying the Summons, was interrogated about what our Discourse was, and he told the Promise I had made him. *Sheldon* told him, that he was as capable to employ him as I could be. *Perrin* answered, that he knew that, but wished that he would be as willing too; to *Sheldon* promised that he should command his own Ship to *Persia*.

But the Wine still lay in fold, though it was scarce then in *Bengal*. Let the Name than give a Bill in *Fort St. George*,

and afterwards in *Fort William*, stuck so fast to it, that none of it would go off at any Price: So I advised him to carry it off in the Night in my Boats on board of one of my Ships, and I would try if I could serve him in selling it, which accordingly he did; and two Gentlemen of the Council being that Season bound for *England*, coming one Day to dine with me, I treated them and the rest of my Company with that *Persia* Wine, which they all praised, and asked me where I got it? I told them, that knowing that good Wine would be scarce at *Bengal* that Year, I had provided a good Quantity at *Surat*, from whence I had come that Season. Every one begged that I would spare them some Chests, which I consented to do as a Favour, and next Day sent them what they wanted at double the Price the Owner demanded for it while he had it, and so got off above one hundred and twenty Chests, which enabled Mr. *Perrin* to satisfy most of his Creditors. *Sheldon* provided a Stock and Freight for *Perrin* to *Persia*, and put on board some rotten long Pepper that he could dispose of no other Way, and some damaged Gunnies, which are much in Use in *Persia* for embailing Goods when they are good in their kind; but, *melius volens*, *Perrin* multi took them, and sign Bills of Lading for good well-conditioned Goods; and yet after he was ready to sail, he had been stopped, if he could not raise the Sum of 2500 Rupees to discharge a Bill that at that Time became due, and was indorsed to *Sheldon*. *Perrin* helped him out of that Difficulty, and took his Bond for the Sum, bearing Interest from the Date at the current Interest of one per Cent. per Month; so *Perrin* proceeded on his Voyage to *Persia*, but called at *Calcutta* in his Way home again, and laid up his Ship there, and took Protection of a *Neyer*, with the full Hand of 11,000 Pounds Sterling of *Bengal* Money, and wrote to Mr. *Sheldon* that he might keep his former Bond, and he would take care of his Part of the Stock in his Hands. He also wrote to me that he would take particular Care to reimburse me, but in a short Time after he died, and his Effects came into the *English* Chief's Hands, who detained them several Years, denying that ever he paid any till Governor *Boone* came to the Government of *Bengal* in 1715, and then he made a lame Account. I have been so prolix and particular in this Story, that it may form an Idea of the Deformity and dismal Image of Tyranny and Villany, supported by a Power that neither divine nor human Laws have Force enough to bridle or restrain. The Company's Colony is limited by a Land-mark at *Governapore*, and another near *Barnagul*, about six Miles distant, and the salt-water Lake bound it on the Land-side. It may contain in all about ten or twelve thousand Souls, and the Company's Revenues are pretty good, and well paid; they arise from Ground-rents and Conflagration, on all Goods imported and exported by *British* Subjects, but all Nations besides are free from Taxes.

It is very clear from this historical Account of the Company's Affairs, and of their Government in *India*, that nothing held them together, but the slender Tie of Self-interest, which obliged such as otherwise hated each other, so far to comply, as to be able to make the *Machane* go on; but still this was doing Things unreasonably, and nothing can be clearer than that the publick Interest must have suffered greatly, while it had no other Support than these left-handed Assurances, from such as wanted its Protection to make their private Fortunes. But we were all this Time engaged in a foreign War, from the glorious Motives of settling the Balance of Power, humbling *France*, and securing the Tranquillity of *Europe*, which so much took up our *British* Heads, that they had scarce Time to think of Trade and Navigation. Yet there is nothing plainer than this to any Man who will study the Interest of this Nation, which one would imagine should be the Science of Ministers, than that an Application to the Extension of our Commerce, is the sole Means of raising the Power and Credit of this Kingdom, which must be rendered considerable Abroad, by its naval Force, and that naval Force cannot be kept up, or increased, any other Way than by promoting a Spirit of Trade and Navigation. However, as the Heads of the Ministry were now turned another Way, the *East India* Company was obliged to think of some Means of obtaining such Regulations in

 they were now turned
 any was obliged to
 such Regulations in their

their Favour, as might be sufficient to remedy the Incon-
 veniences that had resulted from the setting two Compa-
 nies; and in order to obtain such a Law as was requisite
 for this Purpose, they, in the sixth Year of Queen Anne,
 resolved to lead the Government the Sum of one Million
 two hundred thousand Pounds, over and above what had
 been lent already; which Proposal of theirs was accepted,
 and in Consideration thereof, it was agreed, that the Parli-
 ament should give them such Assistance for carrying on
 their Trade, as they required. The Reader will observe,
 that by this Means, the *East-India Company* is to be con-
 sidered in a double Capacity; that is to say, as Creditors
 to the Publick, and as a trading Company. In the former
 Capacity, they have a Security, as other Companies have,
 for the Monies by them advanced, and a proportionable
 Interest thereon; and in their other Capacity, their Di-
 rectors are Trustees for the Company's Trade, the Profits
 of which likewise belong to the proprietors; and from
 hence it appears, that the Dividends upon their Stock are
 compounded of the Interest they receive from the Govern-
 ment, and of the Profits accruing from their Trade to the
 Indies. The first being fixed and invariable, serves as an
 Index to the latter, since at all Times the Interest paid to
 the Company being deducted from the Dividend, paid by
 them to the Proprietors, shews clearly what the Profits
 made by their Trade must be, as we shall farther explain
 in the Course of this History. In the mean Time, let us
 return to this Act of Parliament in the Reign of Queen
 Anne, in order to see what Effects it had upon the Affairs
 of the Company, and what Advantages they received in
 Consideration of this large and necessary Supply for the
 publick Service, and by the Way, let us remark that it was
 her intention to grant a trading Company certain Advan-
 tages, beyond the bare Interest of their Money, because
 they might otherwise have employed it more to their Advan-
 tage. It was therefore enacted, that the *English Company*
 trading to the *East-Indies*, shall advance and pay in
 to the *Exchequer* 1,200,000*l.* on several Days appointed,
 and in case of failure by the said Company, the Monies
 not paid shall be recovered by Action of Debt, and 12
 per Cent. Damages, and the said Company may borrow
 Money by their Common-foal, on Security of their united
 Stock, so as the principal Money at any Time to be ow-
 ing don't exceed 1,500,000*l.* above what might lawfully
 be borrowed thereon before this Act. In case the Govern-
 nor and Company of Merchants of *London* trading to the
East-Indies, and the General Court of the said *English*
Company, whilst they separately continue, &c. shall think
 fit to call in Money from their respective Adventurers to-
 wards raising the said 1,200,000*l.* or repaying the Mo-
 ney borrowed for that Purpose, they are impowered to
 make such Calls accordingly, to make up the said Sum;
 and if any Members shall neglect or refuse to pay their
 Shares of the Monies called in, or which the said Com-
 pany in Pursuance of the Statute of 9 *W. III. cap. 44.* or
 their Charters shall call in for carrying on their Trade (af-
 ter Notice first given on the *Royal-Exchange*) then the said
 Company respectively may stop the Dividends payable to
 such Members, and apply the same towards such Payment,
 until it be satisfied; and also stop the Transfers of the
 Shares of such Defaulters, and charge them with Interest
 at 5 per Cent. till Payment; in neglecting which, in three
 Months, the Company may sell so much of the Defaulter's
 Stock, as will pay the same. The aforesaid Sum of
 1,200,000*l.* shall be deemed to be an Addition of the
 Stock of the *English Company*, and be Tax-free. The
 united Stock of the said *English Company* shall be subject
 to the Debts contracted by the said Company, and Per-
 sons entituled to 7,200*l.* Part of the two Millions, the
 original Stock, who have not united their Stocks to the
 Corporations, and who are authorized to carry on a Trade
 for their separate Use, may hold and enjoy their Trade
 as if the said Act had not been made. But the *English*
 Company may repay the same at the End of three Years,
 together with the Annuities due thereon, and then the
 whole Trade shall be veiled in the said Company. Mat-
 ters in Difference between the two Companies, concern-
 ing an Union between them, are referred to *Sidney Earl*
of Golphoborn's Arbitration, and after the making the said

NUMB. 62.

Award and Surrender of the Charter of the Governor and
 Company of Merchants of *London* trading to the *East-Indies*,
 the Persons who at the Time of the Surrender, pur-
 suant to an Indenture Tripartite, made between the Queen
 of the first Part, the said Governor and Company of the
 second Part, and the said *English Company* of the third
 Part, shall be Directors and Managers of the united Trade
 of the *English Company*, shall be such until new Directors
 are chosen, according to the Charter dated the 5th of *September*
10 W. III. This Act hath also a Provision, that on
 three Years Notice, after a Time limited, and Repay-
 ment of the said two Millions, and 1,000,000*l.* and all
 Arrears then due for the Annuities, which Annuities
 amount to 160,000*l.* per Annum, then the aforesaid Du-
 ties on Salt, &c. and the Benefit of Trade given by this
 and the former Act and Charters to cease. This Provision
 of Redemption is enlarged as to the Time, by Stat. 10 *Ann.*
cap. 28. and by the 29th, the *East-India Company* may
 enter such Goods as they shall import at the custom-house
 by Bills at sight or sufferance, and shall give Security un-
 der their Common-foal for Payment of the Customs and
 Duties as are rated in the Book of Rates, and upon Cos-
 fee, which is to be accertained by the Oath of the Im-
 porter, viz. for paying half thereof at the End of six Cal-
 endar Months, and the other half at the End of twelve
 Months; and the Custom Officers shall grant to the said
 Company such Bills at sight or sufferance, and take Secu-
 rity as aforesaid, and make such Allowances and Deduc-
 tions as are made to other Merchants, paying their said
 Customs at, or before the landing their Goods and Mer-
 chandize; but nothing herein shall extend to alter the Me-
 thod of paying the Duties of 15 per Cent. on Muslins and
 Callicoes, or the Duties upon any other Goods that are to
 be accertained by Sale at the Candle.

16. In the Beginning of the Reign of King *George*
 the First, it was found, that various Attempts had been
 made to discover the Secrets of the Company's Commerce,
 for the Information and Benefit of Foreigners, and there-
 fore a Law was obtained to remedy this Evil, viz. the
 Statute of 5 *K. George I.* which ordains with a View to
 render such Practices impossible. That if any Subjects
 shall fail, or go to the *East-Indies*, or such Places of *Africa*,
 &c. beyond the Cape of *Bona Esperanza*, to the Straits
 of *Magellan*, where any Trade, or Traffick, or Merchandize
 is, or may be used, or had, contrary to the Laws in being,
 or the Tenor of this Act: Every Person so offending,
 shall be liable to the Punishment inflicted by Law for such
 Offence, and it shall be lawful for the united Company of
 Merchants of *England* trading to the *East-Indies*, and their
 Successors, to arrest and seize such Persons, being subjects
 to the Crown of *Great-Britain*, at any Places where they
 shall be found, within the Limits aforesaid, and to send
 them to *England*, there to answer for their Offences, ac-
 cording to due Course of Law. Every Person who shall
 procure, solicit, obtain, or act under any Commission,
 Authority, or Pass from any foreign Prince, State or Po-
 tentate, to sail or trade in, or to the *East-Indies*, or any
 the Parts aforesaid, shall forfeit 500*l.* the said Penalties
 and Forfeitures to be sued for and recovered in any Court
 of Record at *Westminster*, by Bill, &c. one Moiety to the
 Informer, the other to the Crown.

But notwithstanding these Severities, this Law did not
 produce the Effects expected from it; for our *East-India*
 Company having for many Years divided to per cent. up-
 on their Capital, which in most foreign Countries was un-
 derstood to be the Profits of their Trade, it raised such a
 Spirit of sharing in this Commerce, and so many *English-*
men were found ready to join in such Projects abroad, that
 a Company was established at *Ostend*, which made ano-
 ther Act necessary, which passed in the ninth Year of the
 same Reign, by which it was enacted, that if any Subject
 of his Majesty shall contribute to, or encourage the esta-
 blishing or carrying on any foreign Company trading from
 any Part of the *Austrian Netherlands*, to or from the *East-*
Indies, and other Places beyond the Cape of *Good-Hope*,
 described in former Acts for securing the sole Trade thither
 to the united *East-India Company* in *England*, or
 shall be interested in any Share of the Stock or Actions of
 any such foreign Company, or shall make any Payments

10 Y

12

in Money, or by Bills of Exchange, or otherwise, towards promoting or supporting such Company, or the Trade thereof, or shall subscribe to the establishing any other foreign Company, for trading to the *East-Indies*, or be concerned in any Stock therein, &c. the Person so offending shall forfeit their Interest and Share in the Stocks of any such Company, with treble the Value thereof, one Third to the Crown, and the remaining two Thirds to the *East-India* Company, if they inform or sue for the same; otherwise one Third of two such Thirds to the common Informer, recoverable by Action of Debt, &c.

And the Attorney-General, of his own Authority, or at the Relation of the said united Company, and for the Company, may file a Bill of Complaint in the Court of Chancery, or the Exchequer, against any Person, who shall have subscribed or contributed to, or promoted, or any Ways become interested in the establishing, upon such foreign *East-India* Company, or the Stock, or Trade thereof, for the Discovery of his Offence, remitting or waiving the Forfeiture of the treble Value of the Offender's Stock, or Concern in any such Company, and insiling only on the single Value. And thereupon, such Person shall answer to the Bill, and not plead, or demur to the Discovery thereby sought; and in case the single Value only of such Interest or Share shall be decreed to be paid, one third Part thereof shall go to his Majesty, and the other two Thirds to the Company. If any Subject shall have accepted of any Trust, or know of any Interest, Share or Concern, which any of his Majesty's Subjects shall have, or be entituled to, in any such foreign Company, and shall not within six Months after accepting the Trust, or the coming to the Knowledge of any such Interest, &c. truly discover the same in Writing, to the said united Company of *England*, or their Court of Directors, he shall forfeit treble the Value of the Interest, &c. so accepted in Trust, or so known, and not discovered, one Moiety to the Crown, the other to him who will sue for the same, by Action of Debt, &c. or such Offender shall, at the Discretion of the Court where the Prosecution is commenced, suffer one Year's Imprisonment; and Persons that within the Time above limited shall voluntarily come to the Court of Directors, and make a true Discovery in Writing, of the Interest, Share or Concern of any Subjects in the Stock of any such foreign Company, shall receive one half Part of the clear amount of the Forfeitures arising by this Act.

In case any of his Majesty's Subjects (other than such as are lawfully authorized) shall go to, or be found in the *East-Indies*, they are hereby declared to be guilty of a high Misdemeanor, and may be prosecuted for the same, in any Court at *Westminster*, and being convicted thereof, shall be liable to such corporal Punishment, or Imprisonment, or to such Fine, as the Court where the Prosecution is commenced shall think fit; and the Offenders may be seized, and brought to *England*, and any Justice of Peace may commit them to the next County Goal, till sufficient Security be given by natural born Subjects, or Denizens, to appear in Court, &c. and not to depart out of the Kingdom without Leave.

All Offences against this Act, or against 9 W. III. cap. 21. or 5 Geo. I. cap. 21, &c. shall be laid in *London* or *Middlesex*, at the Pleasure of the Prosecutor; and a *Capias* in the said Proofs shall issue upon any Bill, Plaint, Indictment, &c. prosecuted for the said Offences. One could have imagined, that these Laws might have prevented any *English* Subjects from being concerned in Designs so ruinous and destructive, as these manifestly were to their native Country; yet when we come to speak more particularly of this *Orient* Trade, we shall be obliged, tho' unwillingly, to shew the contrary, and that all the Measures that have been since taken in other Countries to lessen the Importance of our *East-India* Company, have been brought about by the Intrigues of such avaricious Persons as were determined to make their Fortunes at any Rate, and upon such interested Views, sacrificed the Welfare of the Nation to their private Advantage.

What humane Measure contributed to this, might be the Part taken by the Company to prevent the Frauds committed by some in their own Service, in order to which,

a Law was passed in the seventh Year of the same Reign, for the better preventing an unlawful, and further securing a lawful Trade to the *East-Indies*, by which it was enacted, that all the Goods shipped on Board any Ship to the *East-Indies* (except Goods of the Company, or such as are licensed by them, and naval Stores, Provisions, and Necessaries for the Ship in her Voyage) and all Goods taken out of such Ship in her Voyage homeward bound from the *East-Indies*, &c. to *England*, before her Arrival here, shall be forfeited, and double Value, and the Master, or Officer of such Ship, knowingly permitting the Goods to be shipped or taken out of such Ship, shall forfeit for every Offence one thousand Pounds, and shall not be entituled to any Wages, &c.

Agreements or Contracts made, or entered into by any of his Majesty's Subjects, or any in Trust for them, on the Loan of Monies, by Way of *Batonary*, upon any Ship in the Service of Foreigners, and bound to the *East-Indies*, &c. and all Contracts for Loading, or supplying any such Ship with a Cargo of any sort of Goods, Merchandize, Treasure or Effects, or with Provisions, Stores or Necessaries, and copartner Ships entered into, relating to any such Voyage, the Profits thereof, and all Agreements for the Wages of any Persons serving on Board any Ship to be employed in such Voyage, shall be void; and every Person, Subject of his Majesty, that shall go to the *East-Indies* contrary to the Laws now in Force, shall be deemed a Trader, and to have traded there, and all the Goods there bartered, or trafficked for, or purchased by any such Person, or found in his Custody, or any other in Trust for him, by his Order or Procurement, shall be forfeited, and double the Value.

And by this Act it shall be lawful for the Attorney-General, or for the united Company trading to the *East-Indies*, at any Time within the Space of six Years, to file in any of the Courts at *Westminster*, Informations against clandestine Traders, and if the Defendants shall be found guilty thereof, the Court shall forthwith proceed to give Judgment against them, &c. Also it is declared lawful for the Attorney-General, at the Relation of the Company, or by his own Authority, to exhibit Bills of Complaint in the Exchequer, against Persons trading, dealing, trafficking, or adventuring to, or from the *East-Indies*, &c. contrary to Law, or against any Person concerned as an Agent, or Factor, or Copartner with such illegal Traders, for discovering of such their trading, &c. and for the recovering of the Duties and Damages, &c. and such Persons shall pay to his Majesty the Customs of the Goods arising or purchased by the said unlawful Trade, and shall answer to the Company 30 per Cent. according to the Value thereof in *England*; and if such Offenders pay the Customs, or the Amount of the same, into the Exchequer, and Damages to the Company, they shall not be otherwise prosecuted by this Act, or any other Statute, for the same Offence; but if a Decree be obtained against the Defendants, they shall pay Costs to his Majesty, and the Relator respectively.

And if such Bills (being exhibited at the relation of the Company) be dismissed by the Court, so that the Parties are acquitted, the Company shall pay every Defendant his full Costs; the Forfeitures and Penalties herein before appointed, or in former Acts relating to the *East-India* Company, may be sued for, not only by the Attorney-General, or the said Company, but also by any Officer of the Customs, such Officer having the Consent and Direction of the Court of Directors of the united Company, as by the Act is particularly required; and one third Part of all such Penalties shall be to the Crown, one other Third to the Company, and the remaining Third to such Officers of the Customs as shall inform and sue as aforesaid. The said united Company shall be allowed to ship out Stores, Provisions, Utenisils of War, and Necessaries for maintaining their Garrisons and Settlements, free of all Duties, so as the Duties, if they had been paid, do not exceed in any one Year three hundred Pounds. No *East-India* Goods to be imported into *Ireland*, or the Plantations, but from *Great-Britain*, on Pain of forfeiting Ships and Goods, &c.

of the same Reign, and further securing which it was enacted any Ship to the Company, or such as Stores, Provisions, and all Goods tameward bound from fore her Arrival here, and the Master, or committing the Goods to shall forfeit for ever shall not be entitled

No Ireland, or the Plan- n Pain of forfeiting,

It is very evident, from the whole Current of this History of our East-India Trade, that such as have been entrusted with the Management thereof, have had continual Difficulties to struggle with; whereas, our Rivals in this Trade, the Dutch, have all along enjoyed the full Protection of their Government; and, at the same time, have been allowed to manage their own Concerns in such a Manner as seemed to them most conducive to their own Interest. But, of late Years, and since our Company have had the Authority of Acts of Parliament to support them, they have, in some measure, gained upon the Dutch, especially in those Countries where both Nations trade freely, and where, consequently, the Success of their Labours must, in a great measure, depend upon the Inclination of the Natives, and that Preference which their good Opinion gives to either Nation.

In the Island of *Sumatra* particularly, the English have extended their Trade with great Success, having not only a good Settlement at *Achen*, but also at the other End of the Island, where their principal Settlement was *Bencoulen*, which first began to flourish about the Year 1685. They had also another at *Sillebar*, where they likewise carried on a considerable Commerce: By Degrees they became so considerable, that several of the little Princes of that Island, chose to put themselves under their Protection, as well to secure themselves from the Power of the Dutch, as that they may receive the Benefits of the English Trade; and have, generally speaking, continued very firm in their Attachment to the Company; though they have been sometimes but indifferently treated. The first Inducement the Company had to fix their Factories and Settlements on this Part of the Island was, the Advantage derived from the Pepper-Trade, carried on from *Lampoun*, which is in the Southern Part of the Island, and about twenty Leagues within the Straights of *Sunda*, very well situated in a deep Bay. Here they had a good Trade for Pepper, till they were deprived of it in 1683, by the Dutch, in consequence of the famous War with the King of *Bantam*, which we have so often had Occasion to mention: For, this Town of *Lampoun* lying opposite to his Territories in the Island of *Jawa*, made likewise a Part of his Dominions; and therefore, when the Dutch brought him entirely over to their Interest, or, in other Words, which however mean the same things, and are the plain English of the foregoing Dutch Phrase, had reduced him under their Yoke, they obliged him to break off all Commerce with the English, which put an End to the Pepper-Trade at *Lampoun*, and forced the Company to remove to the Place before-mentioned.

The Country about *Bencoulen* is mountainous and woody, and in the Heart of the Island there are several Volcano's, which render the Country subject to Earth-quakes, and filled the Air so full of malignant Vapours, that it is very far from being wholesome. We may add to this, that the Town itself stands in a Morass, which obliges the Natives to build their Houses upon Posts, to defend them from the bad Effects of the continual Moisture of the Soil. These Inconveniencies did not hinder the English from making it their principal Residence in this Country, and where, for their greater Security, they erected a Fort, of no great Strength indeed, but which seemed sufficient to answer their Purposes. This Fort was garrisoned with *Bugasses*, which is the Name given to the *Maceffars* when transplanted out of their own Country; and as they depended on these for military Services, so with regard to their Revenues, they confided in the Chief of the *Chinese*, who had the Title of Captain, a Thing customary in all the Settlements where the *Chinese* reside. As for the Natives, they lived, as they had formerly, under the Jurisdiction of their own Princes, called in the *Malayan* Language *Pangarans*, of whom there were two that were particularly under the Protection of the Company. One whose Dominions lay North from *Bencoulen*, and who was stiled *Pangaran-Munco* Rajah; and the other called *Pangarang-Soonge-Etan*, whose Country lay to the South. Though their Territories were not large, yet they were divided into several Districts, each under a Governor, called a *Dupatty*, the Place of whose Residence was, in their Language, stiled their *Dessa*. And these Governors had

under them lesser Magistrates, called *Dattoes*. The Company had also a good Correspondence with the most powerful of the Princes in the inland Parts of the Island, such as the Sultan *Cut-beel*, and several others, which induced them to believe they might take any Measures they thought necessary for the Advantage of the Company, and Ease of the Factory.

It was this that in the Year 1719, engaged the then Chief to think of removing from *Bencoulen*, where, from the Cause before-mentioned, abundance of English People died every Year, and it was with this View that a Place was fixed upon a few Miles distant, for erecting a new Fort and Factory, which was to be called *Marlborough Fort*; and the Ground being traced out, the Work began to be carried on with great Vigour and Spirit. But, it seems, they had not sufficiently consulted the Temper and Disposition of the Natives, who were not at all well pleased with this Design. There had been some little Jealousies and Heart-burnings amongst them before, which not breaking out into an open Quarrel, had been over-looked; but these People considering with themselves that this new Fortification rose apace, and that it looked as if the English were dissident of them, or had a Mind to punish some Offences that they hoped had been forgotten. They from thence grew absolutely disaffected, and meditated nothing less than a total Revolt, and an absolute Destruction of that Power which they now began to dread. They concealed, however, their Sentiments so well, and shewed so little Sign of Unfaithfulness or Resentment, that the English went on without any Apprehension of what was contriving against them, till it was on the Point of breaking out. The remaining Part of this History will best appear, and the Conclusion of this Conspiracy be most naturally made known, from the following Account, written by the Persons principally concerned, to the Company's chief Officer in the *Indies*, which I have therefore chosen to insert, as containing the most remarkable Piece of History within this Period of Time.

To the Honourable Joseph Collet, Esq; President and Governor of Fort St. George, &c.

Honoured Sir,

IT is with the greatest Concern that we acquaint you with the Misfortunes that have befallen us and our honourable Matters Affairs since our Advices by the *Queen* and *George* Brigantine, wherein we did, with too much Confidence, assure you of the perfect Peace and Tranquillity we then enjoyed at *Marlborough-Fort*, which the Satisfaction the Natives seemed to express in our Admiration, gave us but little Reason to imagine would prove of so short a Date. Our Pepper, for some Time after, coming in very plentifully, and we having frequent Promises from them of much greater Quantities ready to be brought out of the Country, we had made a Progress in our Buildings, even beyond our own Expectations; the Foundation of one Gorge and two Curtains of our Fort-walls being laid, and raised in Brick and Chinam a Foot above Ground, and the Earth laid open for a third, in the Space of a little more than a Month; and we had made such Provision for Bricks and Chinam, that we should have had sufficient to compleat the whole, which, at the Rate we had begun, might have been finished in less than twelve Months. Thus we thought ourselves successful in our Undertaking; and it was no small Pleasure to us, to think that, by diligently serving our Masters, it would add to our Credit, and in a more peculiar Manner recommend us to their Favour hereafter: But, in the midst of our Prosperity, all our Hopes were blasted by a secret Combination of the whole Country against us, which they certainly designed to put in Execution whilst we had no Ship in the Road to assist us, the *Merchlapatan* having been at *Bantam* from the 21st of January, but fortunately returned to our Assistance the 18th of March, being but very few Days before this horrid Plot was discovered.

" It was late at Night, on the 23d of *March*, before we
 " had the least Suspicion of any Treachery, when Cap-
 " tain *Gibb* advised the Deputy-Governor, that *Dupatty*
 " *Bencoren* had got together between four and five hun-
 " dred Men in his *Dulan*, and he believed they designed
 " to make War with the Company. The Deputy-Go-
 " vernor immediately dispatched a Letter to him, to know
 " the Reason of his entertaining such Numbers of Peo-
 " ple in his *Dulan*, ordering him immediately to disperse
 " them, and to come himself to the Fort in the Morning,
 " where, if he had any Complaints to make, they should
 " be heard, and he should have Redress; which, if he
 " did not immediately comply with, we should no longer
 " esteem him our Friend, but treat him as an Enemy.
 " Early in the Morning he sent a trilling Answer, assur-
 " ing us of his Friendship; but taking no Notice of dis-
 " persing his People, or coming himself to the Fort, as
 " ordered. Whereupon the Council was immediately sum-
 " moned, and acquainted with what had passed, when it
 " was agreed to send Mr. *Macky*, who was the Dupatty's
 " Friend, to beseech, or confer with him, and persuade him
 " to come to the Fort. About Noon he returned with
 " the Dupatty's Answer, who promised to wait on the
 " Governor the next Morning. In the mean time our
 " *Pangarans* and *Dattoes* were sent for to advise with on
 " this Occasion; who were the Persons that ought to have
 " given us the first Notice thereof; but they seemed to
 " make slight of it, and persuaded us the Dupatty was an
 " honest good Man, and one that would not be guilty of
 " an ill Action against the Company, the People of his
 " *Dulan* being only Friends that he had invited out of the
 " Country to feast with him. This different Opinion of
 " theirs made us jealous of their Fidelity, which made
 " us desire them all to take a fresh Oath of Allegiance to
 " the Company; and the present Deputy-Governor and
 " Council, before we behaved farther with them on this
 " Affair, which they did with much Persuasion consent
 " to, and it was performed by one of their *Padres*; after
 " which *Pangaran Munco Rajah*, undertook to bring in
 " the Dupatty, and do accordingly set out himself for
 " *Benterin*; but not an Hour after he was gone out of
 " the Fort, we were alarmed at the dreadful Sight of the
 " Sugar-Plantations being on Fire, it being then about
 " Six o' Clock at Night.
 " A strong Party was immediately sent out to *Bencou-
 " len*, under the Command of Ensign *Adaire*, with Or-
 " ders to proceed next Morning, on the 25th of *March*,
 " to *Dujan Benterin*, and to engage the Enemy either
 " there, or where he should meet them, using his En-
 " deavour to destroy the *Dulan*, and as many of their Peo-
 " ple as he possibly could: But in this we had no Success
 " for want of the *Pangaran's* Assistance, who had prom-
 " ised to supply him with Sampan's to ferry his People
 " over the Water at *Benterin*, or where he should have
 " Occasion for them; but in this they deceived us; for
 " our Party finding a Body of the Enemy had fortified
 " themselves with a strong Breast-work of Fire-Wood,
 " and some small Guns on the other Side the River, over-
 " against the Sugar-Plantations, and not one Sampan
 " sent by the *Pangarans*, according to their Promise;
 " for want of which he could only come to an Engage-
 " ment across the River, in which Manner they contin-
 " ued till about Four in the Afternoon, when most of
 " our *Buggases*, *Blacks*, and *Chinese* having left the *En-
 " glish*, the Ensign with the rest returned to the Fort
 " about Six in the Evening, having performed but little
 " Execution on the Enemy. By the Account we had from
 " the Ensign, we plainly found that the whole Country
 " were concerned in this Rebellion. The principal Per-
 " sons that he saw and knew amongst them were *Rajah*
 " *Raejong*, *Pangaran Munco Rajah*, under most of the
 " *Dupatties* of the *Dulans* adjacent to us, with many of
 " the Inhabitants and *Bazar* People of *Bencoulen*, who
 " were headed by Dupatty *Benterin* and *Selebrian*; but
 " he could not well guess at their Number, they being
 " hid under the cover of the Trees and Breast-work they had
 " raised of Fire-Wood; and Mr. *Alcock* from *Sillebar*,
 " had given us an Account the same Day, that *Pangaran*

" *Janentially* and his Country also were in Concert with
 " them.
 " On the 26th of *March* in the Morning, the strong-
 " est Party we could muster of *English*, *Buggases*, *Blacks*,
 " and *Chinese*, were ordered out to engage them, under
 " the Command of Mr. *Newcome* and Ensign *Johnson*;
 " but when they came to *Bencoulen* to join the *Buggases*,
 " they were strangely surpris'd to find them refuse to
 " fight without a present Reward; and Mr. *Newcome*
 " was credibly inform'd, that a considerable Number of
 " the *Buggases* were laid in Ambush to fall on the *English*,
 " of which he immediately sent Advice to the Fort;
 " whereupon the Sign was given to recal the Party,
 " which prevented our coming to an Action that Day.
 " The Sultan being examin'd, pretended that a wrong
 " Interpretation was put upon what he said at *Bencoulen*,
 " and would have persuaded us that he had always been;
 " and was still ready and willing to fight for the Com-
 " pany; but our Suspicion of his Treachery made us un-
 " willing to trust him at that Time. About Eleven o'
 " Clock the same Day, *Pangaran Munco Rajah* brought
 " a Token, which, as he said, was from his Uncle *Rajah*
 " *Boojong* from *Singledemend*, to give us Notice that two
 " hundred *Orangoonoes* were come on our Side at *Singledemend*,
 " and desired we would lend the *Malayes* some
 " Weapons to defend themselves. This we had great
 " Reason to suspect was false, *Rajah Boojong* himself be-
 " ing at that Time in Arms against us at *Banterin*; but
 " the *Pangaran* positively affirmed he was then at *Singledemend*,
 " notwithstanding Ensign *Adaire* had seen and
 " spoke to him the Night before at *Banterin*.
 " When we found ourselves to be deeply involved in
 " Trouble on all Sides, that we were betrayed by our
 " *Pangarans*, and our *Buggases* had given us just Cause
 " to suspect their Honesty, so that we had none but the
 " *English*, *Blacks*, and *Chinese* to trust to; the former of
 " which did not exceed one hundred and twenty-five Per-
 " sons in Number both civil and military, and most of
 " them unexperienced or disabled Men; and the latter
 " had given us but small Encouragement to depend on
 " them by their deserting Ensign *Adaire* at *Banterin*.
 " With this small Force, we thought ourselves in some
 " Danger of being overcome; wherefore a General Coun-
 " cil was call'd of all the Company's Servants, and Inha-
 " bitants of the Place, to consult about saving what we
 " could of the Company's Effects, and making some
 " Provision for our Passage, if we should be put to flight;
 " when every one gave their Opinion, that it was for the
 " Company's Interest, as well as for our own Safety, to
 " put on board the Ship *Matchlapatam* the Company's
 " Treasure and Books, with what Stores and Provisions
 " our Time would permit, with all the Expedition and
 " Secrecy it could be possibly contriv'd: After which, if
 " we were oblig'd to it, we might make our Escapes in
 " the best Manner we could, by the Help of the Ship
 " *Matchlapatam*, and what Boats we had by us. The
 " Remainder of that Day was spent in Pursuit of that
 " Resolution, but no Boats could be got off that Even-
 " ing: About Seven o'Clock the next Morning, being the
 " 27th of *March*, the Company's Treasure, &c. as per
 " enclosed Bill of Lading, were sent on board; about
 " Eight, News were sent that both the *Pangarans* with
 " their Wives and Children, were eloped from *Bencoulen*.
 " in the Night-time, and no Account could be given
 " which Way they were gone. About Ten, Sultan
 " *Cuebeel*, who was come from *Bentale* in the Ship
 " *Matchlapatam*, undertook to accommodate Matters with
 " the Country People, provided we would consent to their
 " choosing new *Pangarans*, to which we agreed; but be-
 " fore we could come to a Bechar with them, the *Portu-
 " guezes Padre's* Slave brought News from *Bencoulen*, that
 " the *Buggases* and *Malayes* were risen there, and had
 " cut off the *Padre* and most of the *Portuguezes*, Men,
 " Women, and Children, in a most barbarous Manner.
 " He had hardly done telling his Story, when a large Fire
 " broke out at *Bencoulen*; another near the Fort behind
 " *Canbury Pagar*; another towards *Sillebar*; and soon
 " after, the *Herbage-house* was set on Fire: All this Time

 gory, when a large Fire
 r near the Fort behind
 rds *Sillebar*; and soon
 on Fire: All this Time

" no Enemy appearing, but still fresh Fires breaking out
 " in different Places, which could not have been done
 " otherwise than by our own *Buggass's* or *Malays*, that
 " are in our own Service: No Enemy yet appearing, we dis-
 " charged what few great Guns we had mounted, at the
 " thickest of these Fires, as we thought; in doing of
 " which, one of the Wadd's of our own Guns unfortu-
 " nately fell upon the Tops of the Fort Buildings, which
 " took Fire, and burnt to pieces, that there was no extin-
 " quishing of them: At which Time, we marched out of the
 " Fort in one Body to meet the Enemy. We first passed
 " the Lower Guard; from thence, round the Horse Stable-
 " Hill, to the Hermitage, and so by the China-Town and
 " Brick-sheds, which were all on Fire, but no Enemy
 " to be seen.

" We then came to the Sea-side, where we saw some
 " Thousands of the *Malays*, headed by our Sultan and
 " *Buggass's*; which Train reach'd from *Bencoulen* to
 " *Marlbrough*: Most of the *Chinese* had secured them-
 " selves in Boats, and on board of their own Praw. We
 " had then none left to stand by us but the Blacks: Un-
 " der these Disadvantages, we thought it in vain to haz-
 " ard our Lives any longer, against so numerous an Ene-
 " my; our Fort and most of our Buildings being destroyed
 " by Fire, which put every Man upon saving his Life by
 " swimming, or getting on board the Boats in the best
 " Manner he could: In which Attempt, near Half our
 " People were either drown'd or kill'd by the Enemy,
 " before they could make their Escape. The next Morn-
 " ing, we computed near Three Hundred and Fifty black
 " and white Men, Women, and Children, were saved on
 " board the Ship *Matchlapatam*, Mr. *Newcome's* Barge,
 " and three *Tombongons*, or Boats for going on board
 " Ships; for which Number we had not Water for
 " above five Days, at a Pint a Man each Day. Our
 " first Design was to go to *Bantal*, but both the Wind
 " and Current were so strong against us, that we
 " could not stir that Way, and so it continued 'till the
 " 29th of *March*; till which Time, we remained in the
 " Road, when we were obliged to alter our Resolution,
 " and make the best of our Way to *Batavia*; where, in
 " all Probability, we might sooner arrive, as the Wind
 " and Current were then set; or at some Place where we
 " might get some fresh Water, which we could not expect
 " to be supplied with on the Coast of *Sumatra*, to the
 " South of *Bantal*. After we had supplied each Boat with
 " five Day's Provisions of Water and Rice, we weighed
 " Anchor and set Sail in Company for *Batavia*. On the
 " Second of *April*, we lost Sight of all our Boats: On
 " the ninth, we anchored at *New-Island*, where we wa-
 " tered, and got some Provisions: On the 11th, we
 " weigh'd from thence, and arriv'd at *Batavia* on the
 " Sixteenth.

" On the 18th and 19th, fifty out of our Military,
 " who where sent in Boats to guard the Blacks and Slaves,
 " arriv'd at *Batavia* from *Lampoun*, where they had put
 " in for Water; where the Blacks mutined, and cut away
 " the Rigging of their Boats, which occasioned their driv-
 " ing on Shore: Then the Blacks left them, encouraged
 " by one Serjeant *Thomas Wright*, who also went with
 " them. The rest of our *Europeans*, after being plundered
 " of their very Shirts off their Backs, were at last kindly
 " assisted by them with two large *Sampans*; in which
 " they saved their Lives, and arriv'd at *Batavia*. We
 " met with kinder Usage as to our Entertainment at *Ba-
 "tavia*, than indeed we expected; for they assisted us in
 " transporting one Hundred and Twenty of our People,
 " on their own Ships, to this Place: Seventy of which,
 " had their Passage free, and the Ship's Provision, they
 " working for the same; and for fifty more, we were
 " obliged to pay twenty Rix Dollars each for their Trans-
 " portation; and twenty Rix Dollars each more, to the
 " Captains for their Provisions, in their Voyage. Thirty
 " Persons more came with the Deputy-Governor on the
 " Ship *Matchlapatam*; and seven more are on board the
 " *Madras's* Brigantine, who left *Batavia* in Company with
 " us; so that we had saved one hundred and fifty-seven
 " Persons from the Hands of our Enemies, besides twenty
 " Slaves belonging to the Honourable Company, and
 " private Persons which were disposed of in *Batavia*.

N U M B. 62.

" One of the *Dutch* Ships arriv'd here the 24th Instant,
 " when Mr. *Newcome*, &c. advised the Governor of our
 " Misfortunes, but the Letter we understand is not yet
 " gone from this Place. The *Matchlapatam* arriv'd here
 " Yesterday, and this Day the other two Ships, on which
 " are our whole Complement; and we shall stay here no
 " longer than absolutely necessary, to provide for our Pas-
 " sage to Fort St. *George*; where we hope to arrive soon
 " after this comes to your Hands. The *Madras's* Brig-
 " antine is not yet arriv'd. Whilst we were in *Batavia*,
 " we used all our Endeavours to send some Assistance to
 " *Bental*, tho' we had but little Reason to hope that Place
 " had escap'd the same Fate we ourselves had met with;
 " but in this the *Dutch* oppos'd us in all our Proposals.
 " The Deputy-Governor would have gone himself on the
 " *Matchlapatams*, with as many of our People as he could
 " conveniently carry; but this they would not allow with-
 " out he could take all our People along with him, which
 " was altogether impossible; nor would they supply us
 " with a Vessel on that Occasion.

" We endeavour'd to hire the *Madras's* Brigantine, for
 " that Purpose, but the Master and Supercargoes alledged,
 " she was not in a Condition to proceed. We then pro-
 " posed to the *Dutch*, that we might have four Chests of
 " Treasure, and some Gun-powder to be forwarded to
 " them on the *Amelia*, on her Arrival; but they refused to
 " take Charge of it, as they pretended, left Disputes
 " might ensue: We then requested, to leave it in the
 " Hands of any private Persons; or that we might leave
 " some of our own Servants there, to take Charge of it;
 " but they would not consent to any one of these Proposals,
 " nor suffer the Treasure to be left behind in any manner
 " whatsoever. We had drawn out a Protest against them
 " for this Refusal, but when we were going to deliver it,
 " the *Shawbander*, who had been our Friend, plainly told
 " us, what the Effects of it would be, that the next
 " *English* Ships that fell in there, would suffer for it, in
 " meeting with worse Treatment than ever any had yet
 " done; whereas we ourselves had been civilly treated in
 " all other Respects.

" Upon this, we considered, that the *Amelia* would
 " shortly arrive, for whom we have left Orders to pro-
 " ceed first to *Bantal*, and from thence to Fort St. *George*,
 " with Advice, if she arrives Time enough to get away
 " by the 15th of *June*; if not, to come directly for Fort St.
 " *George*; as also the outward-bound *China* Ships: And
 " probably this Year's Shipping from the West Coast,
 " might be obliged to put in there for Provisions; which,
 " if they should fail of our Company, might suffer more
 " than the Advantage they would reap by our Protest:
 " Upon which Consideration, it was agreed, it should not
 " be deliver'd. This is a true Narrative of our Proceed-
 " ings, since our Troubles commenced; and what we
 " have omitted herein, you will find more particularly in-
 " serted in our Diaries and Consultations, when we come
 " to lay them before your Honour, &c. for your Perusal,
 " which we hope will be sufficient to demonstrate, that this
 " Misfortune is no Way owing to our Misconduct, which
 " we submit to your Honour's favourable Construction,
 " and beg Leave to subscribe,

Honoured Sir,

Your most Obedient, and

Obliged Humble Servants,

Negapatam,
June 28, 1719.

Thomas Cook, *Dept. Governor*,
 Stephen Newcome,
 William Palmer.

" The foregoing is an Account of our proceeding, as
 " it was remitted to the Governor and Council of this
 " Place from *Negapatam*; to which it will not be amiss to
 " add, the Reasons that were the Occasion of this Mis-
 " fortune, which is omitted in the foregoing Narrative:
 " First, it is to be considered, that the *English* had been in-
 " volved in Troubles with the Country Government, both
 " at *Marlbrough* and *Bantal* for some Time before they
 " arriv'd on the Coast; which tho' I was so fortunate as

to bring to a Conclusion, and had for many Months after kept a fair Correspondence with the Natives; still they harboured in their Minds a secret Resentment of the former Injuries they had suffered, which they concealed under a Cloak of Friendship, and seeming Satisfaction of my Administration, till they had brought the whole Country into a Combination, and being sensible how briskly our Fortifications were carried forward, took the Opportunity of Revenge before our Brick-buildings could be finished, and at a Time, as they thought, we should have no Ship in the Road to assist us; but the *Metiklapatam* very fortunately arrived a few Days before they put their Design in Execution. Not long before this Rebellion, a Difference had happened between *Dupatty Benerin* and *See Gibb*, Captain of the *Cinamen*, and Undertaker of the Company's Sugar and Arrack Plantations. The *Dupatty* is one of the second Men in the Kingdom, and Governor of *Dujanor*, a Town of that Name, situate on the Side of the River, opposite to the Company's Sugar and Arrack Plantations. He is a Person well beloved among the Natives, being esteemed a Priest amongst them, and always thought to be a good Friend to the *English*.

The Difference first began by the *Cinamen* killing some of the *Dupatty's* Buffaloes, that had broke through some of their Fences, and done some small Damage to the Plantations, and indeed, the Fences were not so well secured as they ought to have been; and this they affirmed to me they had done, by an Order given them by *Mr. Farmer*, when Deputy-Governor. But considering the ill Consequences that might attend granting such Liberty to the *Chinese*, I immediately forbade them doing the like for the future, and obliged them to make the *Dupatty* Satisfaction for some Buffaloes they had killed, and if the like should happen again, I promised that the *Dupatty* should make good to them what Damages the Plantations appeared to have sustained, provided they kept their Fences in repair. Notwithstanding what I had done in this Affair, some of the *Dupatty's* People, out of Revenge, got into the *China* Compound, in the Night-time, and killed one of *See Gibb's* Slaves, as he was sleeping in his House. The *Dupatty's* Brother was seen, and known to be one of the Company; whereupon he was taken and brought to the Fort, where he was put into the *Cock-house* for about twenty-four Hours, till he could be brought to his Trial; when he was acquitted, without any further Punishment, there being no plain Proof, that he was the Person that actually committed the Murder, though by the Evidences that appeared against him, there was circumstantial Proofs enough to have condemned him. However, out of Respect to the *Dupatty*, whom I always esteemed to be my Friend, and being well acquainted with his Interest, and the Influence he had over the Country People, I thought it convenient to pass the most favourable Construction on this Accusation, which I accordingly did, and made the *Dupatty* and *See Gibb* shake Hands, and promise Friendship to each other before they parted, and so they remained for some Time after, till the *Dupatty* had got his Forces together in his *Dujan*, and then he again renewed this Dispute, resenting the Wrongs they had received from the *Chinese*, as also the Disgrace of having his Brother put in the *Cock-house*, and brought to his Trial, notwithstanding I had been so favourable to him on this Occasion, and under this Presence our Trouble commenced. *Thomas Cook*.

The two following Letters were intercepted by the *English* in the Year 1717, which shews, that the Natives had formed this Conspiracy some Time before it was put in Execution.

"This comes from Sultan *Manjore*, *Raja Guillamat*, *Daitue Pandast*, all the great Men in *Bandat*, *Sapolo*, and the Overseers of Trade in *Bantayan*, and *Tego Loora*; to *Datta Raja Quasso*, with all the *Prateens* and *Lemiceats*, from *Sablai* at *Cottoen*, to *Calaboon*, *Surambe*, and *Malacca*.

"*Raja Quasso's* Letter sent by *Tuan Mallin* and *Dupatty Loora Sambelan*, is received, which we like very

well. We are now assuredly certified the whole Country as far as *Along*, likewise *Tuan De Goeno* with his People, will unanimously join us, and when this arrives, send *Tuan Mallin* into the Country, to advise that we intend utterly to destroy the *English*, and raze the Settlements throughout the whole Coast, because they have broke Faith, and become quite otherwise to what they formerly were. We shall proceed as soon as the Festival is over, therefore would have you *Datto Raja Quasso* dispatch a Messenger with your real Sentiments of this Affair, signifying also how the *Prateens*, and *Lemiceats* are affected." The Answer. "This Letter comes from him that eats nothing, to *Raja Manjora*, and Sultan *Guillamat*, alluring them, that he will gather together all those like himself, with the most valiant Men hereabouts, and match directly against *Benculen*, therefore desires the Assistance of Arms, which yourselves and *Raja Passer* must not fail to send to *Tuan De Goeno*, who is resolved, if the Kings are agreed, to be their Ally, and you may depend on his Fidelity, for he knows not how to tell a Lye: When he comes down from the Country, will bring over to his Interest the People of *Scrangi* to *Benculen*, and *Lont Coxoi*, with those belonging to *Pangarran Munco Annoon*, even as far as *Pellombong*. This is what I promise to do, desiring your Letter in Answer to it. So God bleis and keep you in all your Undertakings; give my Service to *Dattoo Raja Quasso*." Faithfully translated per

Robert Dymond, Linguist.

"Found at *Tanjoong Arang*, up *Sablai* River, by *Orang-kio Bandabarrab Munco Raja*, January the 27th, 1717, while *Mr. Farmer* was Deputy-Governor of the West Coasts of *Sumatra*."

Notwithstanding the Natives had thus driven the *English* from *Benculen*, they suffered them in about a Year's Time to return again, and go on with the Fortifications at *Marlborough* Fort, without Opposition. It is true, there had been some *English* Chiefs sent thither, who were not endowed with so much Discretion as they ought. These Gentlemen, by an imperious and assuming Behaviour, had highly provoked the Natives; but this being very tolerable in comparison of the Tyranny the *Dutch* had exercised in every Place where they prevailed, the *Malays*, upon the Expulsion of the *English*, began to be under terrible Apprehensions lest the *Dutch* should come and settle amongst them by Force, and put an iron Yoke upon their Necks, as they had upon their Neighbours. They soon laid aside their Reluctance therefore, and over-looking the Indiscretions of the *English* Chiefs, gave all Encouragement to our Countrymen to settle among them; and it was very happy for the *English*, that they removed from *Benculen*, for there were buried Multitudes every Year, whereas a late Chief of *Marlborough* Fort assures us, that during the whole Year, they did not bury one Gentleman; such a Difference there is in the Situation of these two Places, notwithstanding they are no more than two or three Miles asunder, and *Marlborough* Fort being much more defensible in its Situation than *Tork* Fort; for at *Marlborough* our People are not so apprehensive of being surprized by the Natives as formerly, if there should happen any misunderstanding between them again. By this Means the *British* Commerce is greatly extended on this Island of *Sumatra*, and with very good Effect.

16. The Company of late Years have been extremely attentive not only to the general Characters, but so far as it has been possible for them to be informed as to the Education, Genius and Behaviour of their Chiefs; by which wise and prudent Conduct, they have given quite a new Face to their Affairs, and if it had not been for the setting up new Companies in different Parts of *Esrope*, by which their Trade has certainly been very much hurt, they must by this Time have been in a Condition to have almost doubled their Dividends; yet I cannot but acknowledge, upon this Occasion, that as these new Companies were erected abroad chiefly from the Opinion that Foreigners entertained of the Profits that were made by our Company,

to the Discovery of this was, in a great measure, owing
 to the factious Disputes that have long reigned amongst
 us; for great Complaints being made of the Decay of our
 Trade, the Ministry caused the Accounts of the Com-
 pany's Sales to be constantly published, which struck For-
 eigners with Amazement, and contributed greatly to the
 forwarding the Projects they had formed of obtaining a
 Share in this lucrative Trade.

At the same time these Designs were vigorously pur-
 sued abroad, there wanted not some Projectors at home,
 who were desirous of laying open the *Indian* Trade; and
 abundance of plausible Things were said upon that Sub-
 ject, which, as it very naturally might, greatly alarmed the
 Company, more especially as it happened at a Time when
 they had Reason to apprehend that popular Opinions
 might prevail to their Prejudice; and therefore it is not to
 be wondered that they entered likewise on their Side, in-
 to such Schemes as were most likely to defeat these Designs,
 and to secure them in the Possession of their Rights and
 Privileges. I shall not take upon me to decide so nice
 and intricate a Question, as whether the laying open this
 Trade would, or would not, have been for the Advantage
 of this Nation; because, on the one hand, I am sensible
 much may be said on both Sides; and on the other, that
 I have not Room to examine here what might be alledged
 on either Side. I confine myself therefore to Matters of
 Fact, and endeavour, with all the Brevity that is con-
 sistent with my Design, of giving as compleat History as is
 in my Power, of our Commerce to the *Indies*, which, so
 far as I know, is a Subject not attempted before, and
 consequently more necessary, which leads me to observe,
 that the Result of the Company's Considerations on this
 Head was, the proposing to such as had the Direction of
 the publick Affairs, a new Agreement with respect to the
 Company's Powers, so apparently beneficial to the Nation,
 as that it might effectually secure them from listening to
 the Proposals that were, or might be made, for laying this
 Trade open, in which, without doubt, such as were then
 entrusted with the Direction of the Company's Concerns,
 did their Duty to the Proprietors, and were so successful
 therein, as to obtain the Concurrence of the Administration;
 and, in consequence thereof, such a Law as they de-
 sired for the preserving the Powers and Privileges of
 their Principals.

At all Events, this was much better for the Nation than
 the Method taken in King *William's* Time upon the like
 Occasion, when the old *East-India* Company found it re-
 quisite to distribute an immense Sum of Money to the
 Ministers and Favourites, to obtain a new Charter, by
 which the Publick did not gain a single Shilling in Re-
 turn for the Advantages that were granted to this Corpo-
 ration. This Observation of mine will be fully justified,
 and the Truth thereof effectually proved from the Con-
 tents of the Act of Parliament before-mentioned, which
 was passed in the third Year of his present Majesty: in
 consequence of the Agreement, of which I have before
 taken Notice, and was intended on both Sides, to be ab-
 solutely final, and, in every Respect conclusive.

This Act therefore, after reciting several Acts, Proviso's,
 Charters and Agreements, &c. relating to the United
 Company of Merchants of *England* trading to the *East-*
Indies, Enacts, That in Pursuance of their late Agree-
 ment, the said Company shall pay into the Receipt of the
Exchequer, on or before a certain Day appointed, the Sum
 of 200,000 Pounds, to be applied towards the Supplies
 granted to his Majesty, for which no Interest shall ever
 be payable to the Company, nor any Addition be made
 to their capital Stock or Debt from the Publick, on Ac-
 count thereof; nor shall the same, or any Part of it, be
 paid to the Company. And after the 29th of *September*,
 1730, the Annuity, or yearly Fund of 160,000 *l.* shall
 be reduced to 128,000 *l.* in respect of the capital Stock or
 Debt of 3,200,000 *l.* which reduced Annuity shall be
 charged on the same Duties and Revenues by the like
 Weekly, or Quarterly Payments, and with the same Pro-
 visions for making good Deficiencies in the said reduced
 Fund, as their present Annuity or Fund is now charged
 on, till some new, or other Provision shall be made by Par-
 liament, with Consent of the Company. But, upon one

Year's Notice to be given by Parliament after the 25th of
March, 1736, on the Expiration of that Year, and on
 Re-payment of the said Debt of 3,200,000 *l.* to the Com-
 pany, and all Arrears of their reduced Annuity of
 128,000 *l.* which shall be due at the End of the said Year;
 then, and from thenceforth the said Annuity, or yearly
 Fund, shall cease, and be no longer payable.

At any Time, on a Year's Notice after the said 25th
 of *March*, 1736, given by Parliament, at the said Year's
 Expiration, upon Re-payment to the Company of any
 Sum, not being less than Five hundred thousand Pounds,
 in Part of the capital Stock of 3,200,000 *l.* and on Pay-
 ment of all Arrears which shall be then due on their re-
 duced Annuity, after such Payments made to such of the
 said Annuity as shall bear a Proportion to the Money so
 paid in Part, shall cease and be abated; and so from time
 to time, upon such yearly Notices and Payment of such
 other Sums in Part of the said capital Stock, till the
 Whole of their Annuity shall be entirely sunk and deter-
 mined. Notwithstanding any such Redemption, all Per-
 sons entitled to any Interest in the said capital Stock in
 Trade, or Money paid in for carrying on the same, or in
 the Factories, Settlements, Lands, &c. belonging to the
 United Company, shall be, and continue a Body politick
 and corporate, &c. and have perpetual Succession; and
 they, and their Successors, shall be capable in Law to pur-
 chase Lands, &c. not exceeding at any one Time the yearly
 Value of Ten thousand Pounds in the Kingdom of *Great-*
Britain, and also to aliene the same; and may also enjoy
 all Privileges, Stocks, and Estates, and Advantages, &c.
 which are not hereby altered as by former Acts or Char-
 ters founded thereon, the Company might hold or enjoy
 the same; and after such Redemption of the said yearly
 Fund or one Moiety thereof, the Company may, at their
 General-Courts, declare how much, and what Share in the
 remaining capital Stock, &c. shall qualify Members of the
 same Company to be Directors, or to give Votes in any
 General-Court. And, notwithstanding such Redemption
 as aforesaid, the Company shall, subject to the Proviso of
 Determination herein after contained, enjoy the whole and
 sole Trade to the *East-Indies*, and have the only Liberty
 of trading thither, &c. And the *East-Indies*, or Islands,
 &c. within the Limits of the said Company, shall not, be-
 fore the said Determination, be failed to by any other of
 his Majesty's Subjects.

And if any of the said Subjects, other than the Factors,
 &c. of the United Company, shall at any Time fail,
 trade, or adventure to or from the *East-Indies*, and Parts
 aforesaid, they shall incur the Loss of all Ships which shall
 be employed in such Trade, &c. and the Goods laden
 therein, and double the Value thereof; which Forfeitures shall
 be sued for, recovered, and distributed, as by the 7 *Geo. I.*
c. 21, is directed, concerning the Penalties and Forfeitures
 mentioned in that Act.

The said Company shall, at all Times hereafter, have
 all the Powers which by any Charters, &c. are granted
 them, and not altered by this Act, freed and discharged
 from all Proviso's of Redemption, &c. as fully as if the
 same were here severally repeated, but subject to the Re-
 strictions contained in the Acts and Letters Patents
 now in Force, and also to the Proviso's following, *viz.*
 Provided that upon three Years Notice to be given by
 Parliament, after the 25th of *March*, 1736, upon the
 Expiration of the said three Years, and repaying to the
 Company of the whole capital Stock of 3,200,000 *l.* and
 all Arrears of Annuities payable in respect thereof; then,
 and from thenceforth the Right, Title, and Interest of the
 said Company, to the whole, sole, and exclusive Trade to
 the *East-Indies*, &c. shall cease and determine. But after
 the Determination of that Company's Right to the sole
 and exclusive Trade to and from the *East-Indies*, the Cor-
 poration, with all, or any Part of their joint Stock, Goods,
 Estates, &c. may trade in common with other the Sub-
 jects of his Majesty trading to and from those Parts.

Any Notice in Writing, signified by the Speaker of the
 House of Commons, shall be deemed a due and proper
 Notice by Parliament, to all the Ends and Purposes for
 which such Notices are directed by this Act to be given to
 the Company. Nothing in this Act shall extend to sub-

ject the Governor and Company of Merchants of England trading to the *Levant-Sea*, to any Penalties and Forfeitures thereby enacted, in respect to their Trade in those Seas; and nothing herein shall restrain or prejudice such Trade or Navigation within any of the Limits of the *East-India* Company, as the *South-Sea* Company are any ways entitled unto.

With this Act I shall conclude the historical Part of this Section, having, as I promised, deduced the Transactions of the *East-India* Company, and with them the Commerce of the *British* Nation to the *Indies*, from the earliest Accounts we have of their trading to this Part of the World, and from their first Establishment in the Reign of Queen *Elizabeth*, down to the present Time; in which Series of Facts, we hope the Reader will find a greater Satisfaction, since it exhibits to him in one View, and considering the vast Variety of Matter in a very narrow Compass, a regular Chain of Events, which demonstrates the vast Importance of this Commerce to the Nation, the Means by which it was at first acquired, the Progress made therein, the Difficulties and Obstructions it has met with, the Methods by which they have been overcome, and the Manner in which the Company has at last acquired a happy and secure Establishment, which we have Reason to hope will last as long as our present excellent Constitution, since it is founded on the same Basis, and is fortified by the strongest Authority that the Laws of this Country can afford.

It remains, in order to conclude the Plan laid down at the Beginning of this Section, that we should present the Reader with a clear and succinct View of the Possessions of the Company in the *Indies*, and the State of their Commerce in those Parts, as it stands at present, which we shall do with all the Brevity possible, and in that Order which seems most natural, both with regard to the Situation of Places, and the avoiding unnecessary Repetitions, having nothing more in View than to state every thing as clearly as it is possible, and to confine ourselves within as little Room as the Pursuit of that Design will allow.

17. We shall begin then with the Port of *Gambroon*, or, as some write it, *Gombroon*, on the Coast of *Persia*, which became famous after the Destruction of the Island of *Ormuz*, and the Ruin of the *Portuguese* Power in the *Indies*. The City was built by the Great Shah *Abas*, from whence it is called by the *Persians* *Bander-Abassi*, that is the Court of *Abas*. It stands in the Lat. of $27^{\circ} 40'$ North, and is looked upon as a Port of the greatest Trade in this Part of the World. We have elsewhere given a large Account of the Situation, Climate, and Condition of the Country in the Neighbourhood of this celebrated Mart, and shall here therefore confine ourselves strictly to what concerns the Commerce of the *English*.

Our first Establishment was about the Year 1613, and the Great Shah *Abas* having, at that Time, Occasion for our Assistance against the *Portuguese*, granted us by Treaties, in Consideration of our Services in that War, half the Customs of this Port, which were duly received for a considerable Time; but, at length, under various Pretences, were reduced to one thousand Tomans a Year, which amounts to Three thousand, three hundred thirty-three Pounds, six Shillings and Eight-pence of our Money; and even this, for forty Years past, has been but very indifferently paid; and at present, as I conceive, we have the Right only, and not the Possession. But the *East-India* Company still maintains a noble Factory here, by which it manages the whole Trade of the Empire of *Persia*, and exports thither a vast Quantity of *European* Goods. In the Year 1720, the Factory suffered severely, and the Confusions induced by repeated Rebellions in *Persia*; but as the Affairs of that Empire are now pretty well settled, there is no doubt that those of the Company will be also restored, and that we shall regain that important Commerce which has been so long carried on here.

The City of *Mocha* stands at the Entrance of the *Red Sea*, in the Latitude of $13^{\circ} 15'$ W. and is a Place of very great Trade, as we have shewn in the former Part of this Work. The *English* are likewise well received here; carry on a great Commerce in Coffee and other Commodities, as well as in all the adjacent Ports of *Arabia*, as has

been already shewn in the foregoing Sections. It is true, that we have been some Times exposed to the Injustice of the *Arabian* Princes, and to the Depredations of Pirates in those Parts; but in this we have only shared the same Fate with other Nations, and perhaps have escaped rather better than they.

We shall next proceed to the *Indian* Coast, where we have either Factories or Forts, and Settlements, at the following Places, viz. *Baroach*, *Swally*, *Surat*, *Bombay*, *Dabul*, *Carwar*, *Tellechery*, *Ajengo*, Fort *St. David*, *Cornmere*, all along the *Malabar* Coast, and turning up to those of *Coromandel*, where we come next to what may be called the Capital of our Possessions in the *Indies*, I mean Fort *St. George*. We have in the Course of this Work, and particularly in this Section, given a large Account of most of the Places before-mentioned; which is the Reason that we have not dwelt upon them here; but as for Fort *St. George*, which stands in the Latitude of $13^{\circ} 20'$ North, it requires a more particular Description for many Reasons, and therefore, I have thought fit to insert a large Historical Account thereof, as well as a clear and circumstantial Description, written by one who was perfectly acquainted therewith, as well as with all the Transactions that occur in his curious Relation, which will contribute to render the History of this Part of our *Indian* Settlements complete, by furnishing as exact an Account of this, as we have here before given of other Places; and therefore cannot but afford the Reader an agreeable Entertainment.

Fort *St. George* or *Madrasi*, or as the Natives call it *China Patam*, is a Colony and City belonging to the *English East-India* Company, situated in one of the most incommodious Places I ever saw: It fronts the Sea, which continually rolls impetuously on its Shore more here, than in any other Place on the Coast of *Coromandel*: The Foundation is on Sand, with a Salt-Water River on its Backside, which obstructs all Springs of fresh Water from coming near the Town; so that they have no drinkable Water within a Mile of them, the Sea often threatening Destruction on one Side, and the River, in the rainy Season, Inundations on the other. The Sun from *April* to *September* scorching hot; and if the Sea-Breezes did not moisten and cool the Air, when they blow, the Place could not possibly be inhabited. The Reason why a Fort was built on that Place, is not well accounted for; but Tradition says, that the Gentleman who received his Orders to build a Fort on that Coast, about the Beginning of King *Charles* the Second's Reign, after his Restoration, for protecting the Company's Trade, chose that Place to ruin the *Portuguese* Trade at *St. Thomas's*; others again alledge, and with more Probability, that the Gentleman aforesaid, which I take to be Sir *William Langborne*, had a Mistress at *St. Thomas's*, of whom he was so enamoured, that it made him build there, that their Interviews might be the more frequent and uninterrupted; but whatever his Reasons were, it is very ill situated.

The Soil about the City is so dry and sandy, that it bears no Corn, and what Fruits, Roots, and Herbage they have, are brought to Maturity by great Pains and much Trouble. If it be true, that the Company gave him Power to settle a Colony in any Part of that Coast that pleased him best, I wonder that he chose not *Cabellan*, about six Leagues to the Southward, where the Ground is fertile, and the Water good, with the Convenience of a Point of Rocks to facilitate Boats landing; or why he did not go nine Leagues farther northerly, and settle at *Policas*, on the Banks of a good River, as the *Dutch* have done since, where the Road for Shipping is made easy by some Sand-Banks that reach three Leagues off Shore, and make the high turbulent Billows that come rolling from the Sea, spend their Force on those Banks, before they can reach the Shore. The Soil is good, and the River commodious, and convenient in all Seasons: Now, whether one of these Places had not been more eligible, I leave to the ingenious, and those concerned, to consider.

However, the War carried on at *Bengal* and *Bombay*, by the *English*, against the *Mughul's* Subjects, from 1685, to 1689, made Fort *St. George* put on a better Dress than

ions. It is true, to the Injustice of Pirates shared the same have escaped rather

Coast, where we settlements, at the *Surat, Bombay, Fort St. David,* and turning up next to what may s in the *Indies*, I the Course of this ven a large Account ed; which is the m here; but as for atitude of 13° 20' scription for many e fit to infect a large clear and circum- so was perfectly ac- ne Transactions that ll contribute to ren- on Settlements com- out of this, as we ces; and therefore reeable Entertain-

as the Natives call ay belonging to the in one of the most ons the Sea, which ore more here, than *Coromandel*: The Water River on its of fresh Water from y have no drinkable ea often threatening er, in the rainy Sea- Son from *April* to Sea-Breezes did not ey blow, the Place Reason why a Fort accounted for; but who received his Or- about the Beginning h, after his Restora- Trade, chose that *St. Thomas's*; others bility, that the Gen- *Sir William Lang-* of whom he was lo there, that their In- and uninterrupted; very ill situated. y and sandy, that it s, and Herbage they eat Pains and much Company gave him re of that Coast that e chose not *Cabelan*, where the Ground is the Convenience of landing; or why he rtherly, and settle at er, as the *Dutch* have ppug is made easy by eagues off Shore, and at come rolling from e Banks, before they good, and the River Seasons: Now, whe- been more eligible, I concerned, to con-

at *Bengal* and *Bombay*, Subjects, from 1685, on a better Dress than he

he wore before; for the peaceable *Indian* Merchants, who hate Contention and War, came flocking thither, because it lay far from those Incumberers of Trade, and near the Diamond Mines of *Golconda*, where there are many Times good Bargains to be made, and Money got by our Govern- ors; the black Merchants resorting to our Colony, to se- cure their Fortunes, and bring their Goods to a safe Mar- ket, made it populous and rich, notwithstanding its nat- ural Inconveniences. The Town is divided into two Parts, one where the *Europeans* dwell, is called the white Town: It is walled quite round, and has several Bastions and Bulwarks to defend its Wall, which can only be attacked at its Ends, the Sea and River fortifying its Sides. It is about four hundred Paces long, and one hundred and fifty broad, divided into Streets pretty regular, and *Fort St. George* stood near its Centre. There are two Churches in it, one for the *English*, and another for the *Romish* Service. The Governor superintends both, and in filling up Vacan- cies in the *Romish* Church, he is the *Pope's* Legate *à la- tere* in Spiritualities. There is a very good Hospital in the Town, and the Company's Horse-Stables are near, but the old Colledge, where a great many Gentlemen Fac- tors are obliged to lodge, is badly kept in Repair. They have a Town-Hall, and underneath it are Prisons for Debtors. They are, or were a Corporation, and had a Mayor and Alderman, chosen by the free Burgers of the Town, but that fevry Way is grown obsolete, and the Governor and his Council, or Party, fix the Choice.

The City had Laws and Ordinances for its own Preser- vation, and a Court kept in Form, the Mayor and Alder- men in their Gowns, with Maces on the Table, a Clerk to keep a Register of Transactions and Cases, and At- tornies and Solicitors to plead in Form, before the Mayor and Aldermen; but after all, it is but a Farce; for, by Experience I found, that a few Pagadoes rightly placed, could turn the Scales of Justice, to which Side the Govern- or pleased, without respect to Equity or Reputation. In smaller Matters, where the Case on both Sides is but weakly supported by Money, then the Court acts judici- ously, according to their Consciences and Knowledge, but often against Law and Reason; for the Court is but a Court of Conscience, and its Directions are very irregular, and the Governor's dispensing Power of nulling all that the Court transacts, puzzles the most celebrated Lawyers there, to find Rules to justify such Conduct.

They have no martial Law, so that they cannot inflict the Pains of Death any other Ways than by Whipping, only for Piracy they can hang, and some of them have been so fond of that Privilege, that *Mr. Yale* hang'd his Groom (*Cross*) for riding two or three Days Journey off, to take the Air; but in *England* he paid pretty well for his arbitrary Sentence: And one of a latter Date, *viz.* the Orthodox *Mr. Collett*, hang'd a Youth who was an Appren- tice to an Officer on board a Ship, and his Master going a pirating, carried his Servant along with him, but the Youth ran from them the first Opportunity he met with on the Island of *Jonkeycloan*, and informed the Mas- ter of a Sloop which lay in the River there, that the Pi- rates had a Design on his Sloop and Cargo, and went armed in Company with the Master, to hinder the Approach of the Pirates, and was the first that fired on them, yet that merciful Man was inexorable, and the Youth was hanged.

The Power of executing Pirates is so strangely stretched, that if any private Trader is injured by the Tricks of a Gov- ernor, and can find no Redress, if the injured Person is so bold as to talk of *Lex talionis*, he is infallibly declared a Pirate. The black Town is inhabited by *Gentous*, *Mohammedans*, and *Indian Christians*, *viz.* *Armenians* and *Portuguezes*, where there are Temples, and Churches for each Religion, every one being tolerated, and every one follows his proper Employment. It was walled in towards the Land, when Governor *Pit* ruled it. He had some Apprehension that the *Mogul's* Generals in *Golconda* might some Time or other plunder it; so laying the Haz- ard and Danger before the Inhabitants, they were either persuaded, or obliged to raise Subsidies to wall their Town, except towards the Sea, and the white Town.

N U M B. LXIII.

The two Towns are absolutely governed by the Govern- or, in whole Hands the Command of the Military is lodged; but all other Affairs belonging to the Company, are managed by him and his Council, most Part of whom are generally his Creatures; and I have been, and am ac- quainted with some Gentlemen, who have been in that Post, as well as some private Gentlemen who resided at *Fort St. George*, Men of great Candour and Honour, but they seldom continued long Favourites at Court. One of the Gates of the white Town looks towards the Sea, and it is for that Reason called the Sea-gate, the Gate-way being pretty spacious, was formerly the common Ex- change, where Merchants of all Nations resorted about Eleven o'Clock to treat of Business in Merchandize; but that Custom is out of Fashion, and the Consultation-cham- ber, or Governor's Apartment, serves for that Use now; which made one Captain *Port*, a very merry Man, say, that he could never have believed that the Sea-gate could have been carried into the Consultation-room, if he had not seen it.

The Company have their Mint here for coining Bullion, that comes from *Europe*, and other Countries, into Ru- pees, which brings them in a good Revenue. The Rupee is stamp'd with *Persian* Characters, declaring the *Mogul's* Name, Year of his Reign, and some of his Titles. They also coin Gold into Pagadoes of several Denomina- tions and Values. There are also Schools for the Educa- tion of Children; the *English* for reading and writing *English*; the *Portuguezes* for their Language, and *Latin*; and the *Mohammedans*, *Gentous* and *Armenians*, for their particu- lar Languages, and the *English* Church is well endowed, and maintains poor Gentlewomen in good Houlewfery, and good Cloaths and Palankines.

The Diamond Mines are but a Week's Journey from *Fort St. George*. Some Customs and Laws at the Mines are, when a Person goes thither on that Affair, he chuses a Piece of Ground, and acquaints one of the King's Of- ficers, who stay there for that Service, that he wants so many Covets of Ground to dig in, but whether they agree for so much, or if the Price be certain, I know not. How- ever, when the Money is paid, the Space of Ground is enclosed, and some Centinels placed round it. The King challenges all Stones that are found above a certain Weight; I think it is above sixty Grains; and if any Stones be car- ried clandestinely away, above the stipulated Weight, the Person guilty of the Theft is punished with Death. Some are fortunate, and get Estates by digging, while others lose both their Money and Labour. The current Trade of *Fort St. George* runs gradually slower. The Trader meeting with Disappointments, and sometimes with Op- pressions, and sometimes the Liberty of buying and sell- ing is denied them: And I have seen, when the Govern- or's Servants have bid for Goods at a publick Sale, some who had a Mind to bid more, durst not, others who had more Courage, and durst bid, were brow-beaten and threatened; and I was Witness to a Bargain of *Surat* Wheat, taken out of a Gentleman's Hands, after he had fairly bought it by Auction, so that many trading People are removed to other Parts, where there is a greater Li- berty and less Oppression.

The Colony produces very little of its own Growth, or Manufacture for foreign Markets. They had formerly a Trade to *Pegu*, where many private Traders got pretty good Bread by their Traffick and Industry, but the Trade is now removed into the *Armenians*, *Moors* and *Gentous* Islands, and the *English* are employed in building and re- pairing of Shipping. The Trade they have to *China* is divided between them and *Surat*; for the Gold and some Copper are for their own Markets, and the Grofs of their own Cargo, which consists in Sugar, Sugar-candy, Allom, China-ware, and some Drugs, as *China-roots*, *Galling- gal*, &c. are all for the *Surat* Market. Their Trade to *Persia* must first come down the famous *Ganges*, before it can come down *St. George's* Channel, to be conveyed to *Persia*. They never had any Trade to *Mocho*, in the Pro- duct and Manufactures of *Coromandel*, before the Year 1713; and *Fort St. David* supplies the Goods for that Port; so that *Fort St. George* is an Emblem of *Holland*,

11 A

supplying

supplying foreign Markets with foreign Goods. The Colony is well-peopled, for there is supposed to be 80,000 Inhabitants in the Towns and Villages; and there are generally about 4 or 500 Europeans residing there, reckoning the Gentlemen, Merchants, Seamen, and Soldiers. Their Rice is brought by Sea from *Ganjam* and *Orissa*; their Wheat from *Sarat* and *Bengal*; and their Fire-wood from the Islands of *Diu*, a low Point of Land that lies near *Matculipatam*; so that an Enemy that is superior to them in Sea-Forces, may easily distress them.

Mr. *Lackyer*, in his Account of this Place, tells us, that the Administration is vested in the Governor and Council, which consists of six grave Merchants in the Company's Service; and though these Officers have but small Salaries, yet their Perquisites and Advantages they derive from Trade, are so considerable as to enable them to make a good Figure while they live there, and carry home, notwithstanding, very large Estates. He seems to differ with other Writers as to the Properties of the Soil and Climate, and therefore it may not be amiss to attend a little to his Account. The Inhabitants, says he, enjoy as perfect Health as they do in *England*, which is plainly discovered in their ruddy Complexions, which few of our other Settlements can boast. The Heats in Summer are the greatest Inconvenience they labour under; yet, I never heard of any ill Effect from them. The delicious Fruits that the Country abounds with, are a great Help in this Extremity; nor are they wanting to themselves in other Respects, Bathings and wet Gouneys being often apply'd with Success to the Relief of the panting. It seldom lasts above four or five Hours in a Day, when the Sea-Breeze coming on, the Town seems to be new born. The Governor, during the hot Winds, retires to the Company's new Garden for Refreshment, which he has made a very delightful Place of a barren one. Its costly Gates, lovely Bowling-greens, spacious Walks, Teal-pond, and Cuniculi, preserved in several Divisions, are worthy to be admired. Lemons and Grapes grow there; but so much Pains is necessary to bring either to Maturity, that a Bunch of one, or a single Fruit of the other, will stand its Owner in five Sailings before it is ripe.

The Governor seldom goes abroad with less than three or four score persons armed, besides his *English* Guards to attend him: He has two union Flags carried before him, and Country Music, enough to frighten a Stranger into Belief the Men were mad. Two Dubashes attend to cool him with Fans, and drive away the Flies, that otherwise would molest him. He is a Man of great Power, respected as a Prince by the Rajahs of the Country; and 's, in every Respect, as great, save that there are for themselves, this has Masters. When a Person of Note dies, the Funeral is solemnized with the greatest Magnificence. The Governor, Council, and Gentlemen of the Town attend, nor are the East Six wanting in their Duty to their deceased Countrymen: The Executors are liberal in all Respects to express a just Concern for their Friend; whence the Ceremony is performed with all that is necessary for the Interment of a Christian. The Burying-Place is at the further End of the Back Town, adorned with many stately Tombs in Honour of the Defunct; some with lofty Spires carved into different Fancies, after the *Indian* Manner. Others, in a lower Sphere, gravely express the Merits of the Person for whose sake they were erected, and all in general have the most curious Workmanship in *India* bestowed on them.

Most of the Powder expended in the Garrison is made on the Place, about a Gun-shot from the Town. It has not the Force of that which comes from *England*, for no other Reason than not well incorporating the Ingredients. They have the finest Salt Petre, and Brimstone, with good Charcoal, which ought to make the best Powder; but for want of skilful Managers and good Contrivances, these Excellences are of no Effect. And, in truth, the Company in other Cases of the like Nature, are very much wanting to themselves. There is not an *English* Carpenter, Smith, Joiner, or other Artificer in the City, who knows half his Trade; whence they are obliged to black Fellows for what they have Occasion for in these Trades; nor is there so much as one Shop of any sort in the *English*

Town, the Benefit of which all the *Dutch* Settlements sufficiently demonstrate; for they are so sensible of it, that they take due Care never to be deficient that way. This is a Thing easily brought to pass by a Body so considerable in the Kingdom. I shall rather admire it has been so long neglected, than offer at the Means for effecting it. However, I wish, for the Honour of the *English* Nation, they would decline sending such diminutive, dwarfish, crooked Recruits, as of late have gone to supply their Settlements. To say no better can be had in Time of War, is an Evazion, my own Experience proves altogether light; for, since it is no matter what Country in *Europe* they are of, let but three Captains be sent to *Ireland*, in less than three Months they could raise a Regiment of picked Fellows, who would be able to do them Service; besides, they look like Men, which is enough for them at *Fort St. George*. Objecting their Religion, looks like Partiality, for the *Tepalses* in *India* are all of the same Principles; our Officers hit none but Protestants to serve in our Troops, wherefore that Country is quite over-run with lusty Men, who are ready to starve for want of Employment.

But, to proceed regularly in our History of the Settlements of this Company. Along the Coast of *Coromandel*, there were formerly several Places along the Coast to the Northward, which had *European* Factories settled in them, but are now neglected and unfrequented. There were also some Places farther up the Country, where the *English* and *Dutch* settled; but the Rajahs, who possessed the adjacent Countries, giving great Interruption to Trade, by their unjust and unreasonable Impositions, obliged them to withdraw their Factories. That of *Matculipatam* was the last they quitted, and, about three score Years ago, was esteemed the most flourishing Colony the *English* had in all *India*; but now their House is deserted, and the *Dutch*, who remained behind them, are preparing to take the same Course. It is not a great many Years ago since the *Mogul's* Viceroy, upon this Coast, offered the Governor of *Fort St. George*, to make him a Present of the Islands of *Diu*, and the Inhabitants were well inclined thereto; but the Governor delayed taking Possession so long, that both the Viceroy and the People changed their Minds; and when he would have erected a Factory, or a Fort there, they would not permit it.

Next to *Matculipatam* is *Narsipore*, where the *English* had a Factory for long Cloth, for the Use of their Factory of *Matculipatam*, when they manufactured Chints there. It also affords good Teak-Timber for Building, and has a fine deep River, but a dangerous Bar, which makes it little frequented. And passing round *Carrango* Point, a little up *Carrango* Bay, is *Angerang*, that has the Benefit of a large deep River, that penetrates far up into the Continent. It has a Bar, soft at the Bottom, and three and an half Fathoms on it at High-Water. Here the best and finest long Cloth is made that *India* affords, and is sold cheap; but the inland Countries lying near the River, are in the Hands of several Rajahs; and each being Sovereign in his own small Dominions, lays such Impositions and Exactions on the Cloth that comes down the River, that they ruin that beneficial Trade of *Angerang*, and make it little frequented. In *Anno* 1708, the *English* from *Vizagapatam* settled there; but whether the Factory was starved for want of Money, or whether the constituent and constituted Chiefs of the Factories disagreed about dividing the Bear's Skin, I know not; but the Factory was soon withdrawn, and the Project lost.

Coasting along Shore, there are several little Ports between *Matculipatam* and *Vizagapatam*, besides *Narsipore* and *Angaran*, but *Wabow* is the most noted, for it produces Rice for Exportation, besides some Cloth, but it is not frequented by Europeans; and therefore I proceed to *Vizagapatam*, a fortified Factory belonging to the *English*. It is regularly fortified with four little Bastions, and has about eighteen Guns mounted in it. It has the Advantage of a River, but a dangerous Bar to pass over before we get into it. The Country about all its Cotton Cloths both coarse and fine, and the best Durra, or *White* Mullins in *India*; but the Factory is generally heat-sick for want of Money to refresh it.

Settlements feasible of it, that that way. This is of considerable has been so long settling it. How-lish Nation, they warlike, crooked their Settlements. War, is an Evathether light; for, pepe they are of, in less than three of picked Fellows, ce; besides, they them at Fort St. kes like Partiality, some Principles; to serve in our te over-run with for want of Em-

In Anno 1709, the Factory drew a War on themselves from the Nabob of *Cbickacul*; for one Mr. *Simon Halcomb*, who had been Chief at *Vizagapatam*, had borrowed considerable Sums of the Nabob, and affixed the Company's Seals to the Bonds he gave for them. Mr. *Halcomb* dying, the Nabob demanded his Money from the succeeding Chief, who would not pay him, alledging that *Halcomb* had borrowed it for his own private Use, and not for the Company's, and that he must get Payment out of *Halcomb's* private Estate, if there was enough found to pay the Debt, otherwise he might get his Money from some inland Rajahs, who stood indebted to *Halcomb*, by his Books of Accounts, in a greater Sum than would pay his Principal and Interest; and that he being the Mogul's General, could compel those Rajahs to pay their just Debts, which they would make over to him; but the Nabob, not caring to enter into a War with his Countrymen on such a Foundation, sent Agents to acquaint the Governor and Council of Fort *St. George* with his Affairs at *Vizagapatam*; they proved deaf to all the Agents Propositions and Arguments, and hardly treated him civilly; so he went back to his Matter with the Account of his bad Success; upon which the Nabob came to a Garden, about half a League from *Vizagapatam*, accompanied with 500 Horse, and 3500 Foot, to demand his Money.

I, says Captain *Hamilton*, being accidentally there in a small *Dutch*-built Ship that I had bought from the *French* on my Credit at Fort *St. George*; and the Factory being but ill mann'd, Mr. *Hosings*, who was then Chief, and my Friend, desired the Assistance of my Arms and Council in that Juncture of Affairs, which I very freely gave him; and being asked in Council what I thought about the Affair, I advised him and his Council to compound the Matter as well as they could, and spin out Time, that we might better fortify the Avenues to the Factory. My Advice of compounding the Matter was rejected, but the other art was followed; so, with seven *Europeans* that belonged to the Factory, and twelve that were with me, and twenty Topazes, and two hundred Natives, most of them Fishers, that lived under the Company's Protection, we fortified some Rocks that the Enemy were obliged to pass within Pistol-Shot of, if they had a Mind to attack us.

We threw up Breast-works between the Rocks, and moored my Ship within Pistol-Shot of the Shore, and had eight Minion-Guns to scour the Sands, if they had attempted to come that Way; and for six Weeks we continued on our Guard, and were often alarmed in the Night, but finding us always ready to receive them, they did not think it proper to force an Entry into the Town. I had the Honour to command all the Out-guards, and the chief with eight *Europeans*, and twenty Blacks, kept the Fort. Thus we continued in perpetual Watching and Alarms, till Reinforcements arrived from Fort *St. George*, and then I left them, and proceeded on a Voyage to *Pegu*. Both Parties being very busy, one striving to get his Money by Compulsion, and the other to save the Company's Money on any Terms, right or wrong. The War being drawn to a greater Length than was imagined at first, and Charges rising higher than was expected, inclined them to make all up amicably, which was at last effected by the Company's paying near the Sum that was at first demanded.

The Nabob, whose Name was *Takerly Cawn*, would hear of no Peace without the Company's Merchant, who was a *Gentow*, called *Agapa*, and a Subject of the Mogul (who was very active in the War, in encouraging the Town's-people to defend themselves and the Company's Interests, and who also had wrote to some neighbouring Rajahs to embroil the Nabob's Affairs in his Absence, in order to divert him from pursuing his Demands on *Vizagapatam*) should be delivered up to him, which at last he was, and was put to a very cruel Death. He was set in the hot scorching Sun three Days, with his Hands fastened to a Stake over his Head, and one of his Legs tied up till his Heel touched his Buttock, and in the Night put into a Dungeon, with some venomous Snakes to bear him Company; and this was repeated till the third Night he ended his miserable Life. But the Company's Merchants,

for the future, will be careful how they espouse the Company's Interest again. There was one *Baily*, a Recruit from Fort *St. George*, on some Discontent deserted the Company's Service, and entered into the Nabob's; but falling into an Ambush, was taken Prisoner by our Men, and was sent to Fort *St. George*, where, for his Desertion, he was deservedly whipped out of this World into the next, and there I leave him.

After the War was ended, and all was quiet, the Nabob returned to *Cbickacul*, but could neither forget nor forgive his Treatment at Fort *St. George* and *Vizagapatam*; but finding by Force he could not get the Factory into his own Hands, without a great Loss of Men and Money, he had Recourse to Stratagem, for surprising it: He came into the Town one Day with one hundred Horse, and some Foot, without advising of his coming, as was usual, at the Town-gate, and before the Chief could have Notice, he was got into the Factory, with twenty or thirty of his Attendants. The Alarm being given a resolute bold young Gentleman, a Factor in the Company's Service, called Mr. *Richard Harden*, came running down Stairs with his Fuzee in his Hand, and Bayonet fixed on its Muzzel, and presenting it to the Nabob's Breast, told him in the *Gentow* Language (which he was Master of) that if any of his Attendants offered the least Incivility, his Life should answer for it. The Nabob was surprisingly astonished at the Resolution and Bravery of the young Gentleman, and fell down to consider a little, Mr. *Harden* keeping the Muzzel of his Piece still at his Breast, and one of the Nabob's Servants standing all the while behind Mr. *Harden* with a Dagger's Point close to his Back; so they had a Conference of half an Hour long in the above-mentioned Posture, and then the Nabob thought fit to be gone again, full of Wonder and Admiration at so daring a Courage.

The next Kingdom to *Golconda*, in which the Places we have been last speaking of, is that of *Orissa*; and proceeding along its Coast, we come to the Mouth of the River of *Ballasore*, where there is a very dangerous Bar, sufficiently noted for the many Wrecks and Losses made by it. Between *Cannaca* and *Ballasore* Rivers there is one continued sandy Bay, where prodigious Numbers of Sea-Tortoises resort, to lay their Eggs, and a very delicious Fish, called the *Pampic*, some in Shells, and are sold for Two-pence a hundred; two of them are sufficient to dine a moderate Man. The Town of *Ballasore* is but four Miles from the Sea by Land, but by the River twenty. The Country is fruitful to Admiration, producing Rice, Wheat, Gram, Doll, Callavances, several sorts of *Peas*, *Annis*, Cummin, Coriander, and Carraway-Seed, Tobacco, Butter, Oil, and Bees-Wax. Their Manufactures are of Cotton in Samis, Casses, Dimities, Mulmuls, Silk, and Silk and Cotton Romals, Gurrals, and Langies; and of *Herba* (a sort of tough Grass) they make *Ging-hans*, *Pinaco's*, and several other Goods for Exportation. The *English*, *French*, and *Dutch*, have their respective Factories here; but at present are of little Consideration; though, in former Times, before the Navigation of *Hughly* River was cultivated, they were the head Factories of the Gulph of *Bengal*.

The Town of *Ballasore* drives a pretty good Trade to the *Maldives*. These Islands have no Rice or other Grain of their own Product; so that *Ballasore* supplies them with all Necessaries they want; and in Return bring Cowries and Cayer, for the Service of Shipping. The Sea-shore of *Ballasore* being very low, and the Depths of the Water very gradual from the Strand, make the Ships in *Ballasore* Road keep at a good Distance from the Shore; for in four or five Fathoms they ride three Leagues off. From *April* to *October* is the Season for Shipping to come into the Bay of *Bengal*; Pilots be ready at *Ballasore* to carry them up the River *Hughly*, which is a final Branch of the famous *Ganges*. The *European* Companies before mentioned, keep theirs always in Pay; but when none of their own Shipping is there, their Pilots have the Liberty to serve other Ships, which is no small Advantage to them. The Sides of the River are over-grown with *Buthes*, which give Shelter to many fierce and troublesome *Tyggers*, which do much Mischief. A good Author says, he knew an *Englishman* that was in the Ship's-beat laden with fresh Water,

Water, lying in the River, waiting the Tide to carry her over the Bar, and this Man had the Curiosity to step ashore, and being a little Way from the Boat, had a Call to ease himself, and had no sooner put himself in a Posture, near the Bushes, but out leaped a Tyger, and caught both his Buttocks in his Mouth, and was for carrying him away; but one of the Seamen in the Boat seeing the Tragedy, took up a Musket, and placed a Bullet in the Tyger's Head, while the Man was in his Mouth helpless. The Tyger immediately let him fall, and skulked into the Bushes, and the wounded Man was carried on board his Ship, where the Surgeon made a perfect Cure of the Wounds.

Piply lies on the Banks of a River, supposed to be a Branch of the *Ganges*, about five Leagues from that of *Ballasore*; formerly it was a Place of Trade, and was honoured with the *English* and *Dutch* Factories. The Country produces the same Commodities that *Ballasore* does. At present it is reduced to Beggary, by the Factories removing to *Hughly*, and *Calacutta*, the Merchants being all gone. It is now inhabited by Fishers, as are also *Angche*, and *Kizgiere*, two neighbouring Islands on the West-side the Mouth of the *Ganges*. These Islands abound also in tame Swine, where they are sold very cheap. There are near these Islands dangerous Sand-banks, that are both numerous and large, and make the Navigation out and into *Hughly* River both troublesome and dangerous; and after we pass these Islands, in going up the River, the Channel for Shipping is on the East-side, and several Creeks run from the Channel among a great Number of Islands, formed by different Channels of the *Ganges*, two of which are more remarkable than the rest, *viz.* *Coxes* and *Sagar* Islands, where great Ships are obliged to anchor, to take in Part of their Cargoes, because several Places in the River are too shallow for such Ships to pass over, when their whole Cargoes are aboard.

There are no Inhabitants on those Islands, for they are frequented with Tygers, that there could be no Security for humane Creatures to dwell on them; nay, it is even dangerous to land on them, or for Boats to anchor near them; for in the Night they have swam to Boats at Anchor, and carried Men out of them; yet among the *Pagans*, the Island *Sagar* is accounted holy, and great Numbers of *Jungies* go yearly thither in the Months of *November* and *December*, to worship and wash in Salt-water, who many of them sail Sacrifices to the hungry Tygers. The first safe Anchoring-place in the River, is off the Mouth of a River above *Sagar*, commonly known by the Name of *Rogues* River, which had this Appellation from some *Banditti Portuguese*, who were Followers of Sultan *Syrah*, when *Emir Jemal, Aurenzeb's* General, drove the unfortunate Prince out of his Province of *Bengal*. For those *Portuguese* having no Way to subsist after their Master's Flight to the Kingdom of *Aracan*, betook themselves to Piracy among the Islands, at the Mouth of the *Ganges*, and that River having Communication with all the Channels from *Xatigam* to the Westward from this River, they used to fall out and commit Depredations on those that traded on the River *Hughly*.

About five Leagues farther upon the West-side of the River of *Hughly*, is another Branch of the *Ganges*, called *Ganga*; it is broader than that of *Hughly*, but much shallower, and more incumbered with Sand-banks. A little below the Mouth of it, the *Danes* have a thatched House, but for what Reasons they kept a House there we are in the Dark. Along the River of *Hughly*, there are many small Villages and Farms interspersed with those large Plains, but the first of any Note on the River-side is *Calaculla*, a Market-town for Corn, coarse Cloth, Butter and Oil, with other Productions of the Country. Above it is the *Dutch* Banks Hall, a Place where their Ships ride when they cannot get farther up for the too swift Currents of the River.

Calaculla has a large deep River that runs to the Eastward, and so has *Juanpardao*, and on the West-side there is a River that runs by the Back of *Hughly* Island, which leads up to *Radingur*, famous for manufacturing Cotton-cloth, and silk *Nomaals*, or *Handkerchiefs*; *Bussantri* and *Fresindi*, or *Gergat*, and *Cobong*, are all on that River, which produce the greatest Quantities of the best Su-

gars in *Bengal*. We are now arrived at the greatest Settlement the Company have on this Coast, which is *Fort William*; but having already given a large Account of this Place, and of such others as are of any Note in its Neighbourhood, we will proceed. The Kingdom of *Dacca* is the first on the Eastern-side of the *Ganges*, next to that lies the Kingdom of *Aracan*, then the Kingdom of *Ava*, which is next to that of *Pegu*; on all which Coasts we have some, but very little Trade; and as to the Islands along the Coast, though well enough situated for Commerce, yet, as they are uninhabited, they do not deserve, or require our Notice.

The next Place on the Continent to the Southward, is *Merjee*, a Town belonging to the King of *Siam*, situated on the Banks of the River of *Tanacrin*, lying within a great Number of small uninhabited Islands. The Harbour is safe, and the Country produces Rice, Timber for Building, Tin, Elephants Teeth, and Agale-wood. In former Times, a good Number of *English* free Merchants were settled at *Merjee*, and drove a good Trade, living under a mild indulgent Government; but the old *East-India* Company envying their Happiness, by an arbitrary Command, ordered them to leave their Industry, and repair to *Fort St. George*, or to seize them, and threatened the King of *Siam* with a Sea-war, if he did not deliver those *English* up, or force them out of his Country, and in *June* 1687, sent one Captain *Weldon*, in a small Ship called *Courtesy* to *Merjee* with that Message; he behaved himself very insolently to the Government, and killed some *Siamese* without any just Cause. One Night, when *Weldon* was ashore, the *Siamese* thinking to do themselves Justice on him, got a Company together, designing to seize or kill the Aggressor; but *Weldon* having Notice of their Design, made his Escape on board his Ship, and the *Siamese* missing him, tho' very narrowly, vented their Rage on all the *English* they could find; the poor Victims being only guarded by their Innocence, did not so much as arm themselves to withstand the Fury of the enraged Mob, so that seventy-six were massacred, and hardly twenty escaped on board of the *Courtesy*; such was the tragical Consequence of one Man's Insolence.

Before that fatal Time, the *English* were so beloved, and favoured at the Court of *Siam*, that they had Places of Trust conferred upon them, both in civil and military Branches of the Government. Mr. *Samuel White* was made *Sherebandaar*, or Custom-master at *Merjee* and *Tanacrin*, and Captain *Williams* was Admiral of the King's Navy; but the troublesome Company, and a great Revolution that happened in the State of *Siam*, made some repair to *Fort St. George*, others to *Bengal*, and others to *Achen*.

Since that Time, Things are quite altered, and the Affairs of the Company being thoroughly settled, all Things are carried on with the utmost Regularity, so that though it has not been found necessary to establish new Factories, or to settle Colonies along the Coasts, which would infallibly have alarmed other Nations, without contributing much to the Service of our own; yet the Commerce of the whole Gulph, from the Mouth of the *Ganges*, to the very Extremity of the Peninsula of *Malava*, is properly provided for, by which Means the Company reaps the Profit, or at least a reasonable Part of the Profit of the private Trade thither, without being put to any unnecessary Expence. As to our Factories on the Island of *Sunatra*, they are now so numerous, that it is conceived we enjoy the best Part of the Traffick which that rich Island affords. Our Factories therein are *Moerbe*, *Bantol*, *Carran*, *Benecker*, *Marlbrough* *Fort*, of which we have spoken largely before, and *Sillebar*, of which we have also taken Notice.

It is true, that the *Dutch*, being Masters of the neighbouring Island of *Java*, have found Means from thence to fix themselves upon Part of this Island, and it is said, they are possess'd of a gold Mine, which they work, but to no great Advantage, at least to the Company. On this Occasion, I cannot help taking Notice, that the Conduct of our *East-India* Company is to the full as commendable in their not endeavouring to follow this Example, since I am satisfied, that Commerce is a much more valuable Thing than Mines of Gold, especially in the Hands of a Company. Because this may seem a Paradox, I think I shall not mis-

pend either my own or the Reader's Time, by endeavouring to explain it. There is certainly no Country in the Indies which abounds so plentifully in Gold as this Island of *Sumatra*, if we except *China* and *Japon*, and that Method must certainly be the best, by which most of this precious Metal can be obtained. But the establishing by Force any Settlements in that Country, is not like to prove the most effectual Means, for many Reasons; for, in the first Place, the Natives will not work the Mines for themselves, and considering it as an intolerable Slavery to work them for others, have an unconquerable Aversion for such as would put them on such Labours; so that from the Time this Method is tried, there is an End of all free Correspondence with the People of this Country.

In the next Place, the Mines are far from yielding in any Proportion to what is expected from them, the Reason of which is not hard to discern; for all the Nations on that extensive Island, being employed in picking out of the Sands and Channels of the Rocks, such Gold as is forced into them by the Torrents, that pass through the Mines, the Quantity of Metal obtained by the Industry of such Multitudes, all working for their own Benefit, must exceed, in a transcendent Degree, what is dug out of a single Mine, under the Discouragements before-mentioned. Several Colonies therefore, in different Parts of this Island, the gentle Usage of the Inhabitants, and the bringing them to consume and esteem *European* Commodities, is the true, safe and certain Means of acquiring peaceably, and by their own Consent, the Gold that is thus gathered; and these three several Advantages arise from proceeding in this Way.

First, the vast Hazard of maintaining an absolute Power over a numerous Nation with a Handful of Men, is avoided. Secondly, an Intercourse is established, by which not only a vast Quantity of Gold is returned to *Europe*; but, which is a thing of no less Consequence, it is returned not by the Labour of *Indian* Slaves, but for Goods and Manufactures belonging to, or wrought amongst ourselves. Thirdly, by this Means a great Quantity of Shipping is employed; whereas the Possession of Gold or Silver-Mines requires only a few Ships, and as it is acquired by Tyranny abroad, so such a Return of this Wealth can only serve to promote Idleness and Luxury at home. From all which Considerations, I conceive the Point I first laid down to be fully established, *viz.* that the Policy of our *East-India* Company, especially if considered in a national Light, is much preferable to that of the *Dutch*; and I make no question, that the Experience of future Times will abundantly justify this Observation. We had formerly Settlements on the Coasts of *Cochin-China*, and in the Kingdom of *Tonquin*, which have been since withdrawn; but we have still an occasional Trade there, and especially in the last-mentioned Kingdom.

As to our Trade to the *Farther* to *China* and the *Mantilla*, I have not much to say of it here. The former is so well known in every Respect, that there is no Need of dwelling upon it; and, as for the latter, there is so little can be laid with Certainty, that I can scarce persuade myself to meddle with it at all: However, for the sake of Method, and that I may not seem to conclude this Matter abruptly, I shall just touch upon both. As to the *China* Trade, it has been found, by Experience, that we manage it as well, or better, at *Canton* than we did formerly at *Amoy*, when we had a Factory in the Island of *Chusan*. To say the Truth, the Affairs of our Company were in so good a Condition thirty Years ago, that we bid fair for monopolizing this Trade; but the high Duties laid upon Teas and other *Chinese* Commodities, defeated our Industry abroad, and gave Encouragement to the pernicious Practice of Smuggling, which, in a very short time, put our Trade in *China* almost on a Level with that of other Nations; but, perhaps, by a right Management, and a due Regard shewn by the Government for the Interest of the Company, Things may be set right again.

As to the *Mantilla* Trade, the *French* say, that we carry on a considerable Part of it under *Dutch* Colours; but I must confess, I believe there is no good Authority for this, though it is very highly probable that something of this sort may be done under *Mexico*, or rather under *Peru*-

guize Colours; but the *Spaniards*, contrary to their Custom in all their other Colonies, have bid open this Trade to all Nations, the *English* and *Dutch* only excepted, which Exception by the Government is of no great Consequence; where it is the Interest of their Subjects, as well as ours, to break through it. But, with respect to *Japon*, which lies still farther to the east, we have, as I have already shewn at large, lost all Correspondence therewith, and whatever Commodities of that Country are brought into ours, we derive from our Trade with the *Chinese* and *Dutch*.

Thus, according to the clearest Lights that I have been able to obtain, I have performed my promise, and given the best Account that was in my Power, not only of the Rise and Progress, but also the present State of our Commerce to the *Indies*, which, I hope, appears to the Reader to be in a much more flourishing State than ever; and that it may still continue, or rather that it may yet improve beyond what it has hitherto done, it is absolutely necessary that three Points should be universally well understood; the first is, that this Trade is highly beneficial to the Nation; the second, that as Things now stand, it cannot be effectually carried on otherwise than by supporting the present Company; and lastly, that the Objections heretofore made, and which are still circulated among the common People, are false and groundless; so that if we should grow careless enough to lose this Trade, it will go near to carry all other Trade with it. We will succinctly demonstrate each of these Points, and so conclude this Section.

First, then, I am to shew that it is a Thing advantageous to this Nation, that the *East-India* Trade should be carried on. If we consider this generally, there is nothing easier, nothing more certainly to be made out than this; for have we not seen that the *Hebrews*, *Tyrrians*, *Egyptians*, *Greeks*, and *Romans* in ancient Times; and that the *Venetians*, *Genoese*, *Portuguese* and *Dutch*, among the Moderns, have all raised themselves to immense Wealth, and to a surprising Degree of naval Power, by being possessed of this Trade? What Need then of arguing to persuade the People of this Country, that what has enriched all others, must be beneficial for them, that what has bestowed the Dominion of the Sea in Times past and present, is necessary to them, and that if in a Matter of this Nature, we are guided by Experience, it is scarce possible that we should be mistaken. But, to defend to Particulars, the *East-India* Trade, I speak in reference to this Kingdom, has all the Marks and Characters of Advantage that any Trade can have.

In the first Place, its Navigation is very considerable; it maintains a vast Number of Seamen, more indeed than can be easily computed: But to place this Point in a proper Light, we must, first of all, consider the Number of Ships that are annually taken up by the *East-India* Company; we must next call to Mind the Number of Seamen continually employed in the *Indies*, in trading from Port to Port; and lastly, we must reflect on the Shipping employed in exporting *East-India* Goods to all the different Parts of *Europe*, and then we shall have a competent Notion of the Value of this Trade in this respect, provided also that we bear in Mind the great Improvement that such long Voyages naturally make in those who are employed in them, and the great Consequences of this to a Country, the Power and Welfare of which depend upon a maritime Force.

In the next Place, there is nothing more certain, than that we derive a great Part of our Wealth from this Commerce, which brings in large Quantities of Gold and other intrinsic Riches immediately from the *Indies* in its ordinary Course. It is no less evident, that private Men make vast Fortunes in the *Indies*, which, sooner, or later, they bring home: And all these Estates are consequently Accessions to the Wealth of this Kingdom. We must add to this the Balance that accrues to the Nation from the exporting of *Indian* Commodities and Manufactures, which is in itself so vast a thing, that it would require Volumes to explain it thoroughly. But this is not my present Business; all I aim at is, to give a general Notion of the Advantages derived to us from this Commerce; and, in order thereto, it is sufficient that I put the Reader in

mind, that there is scarce a Branch of Trade which we at present enjoy, but is some way or other affected by our Imports from *India*, and which, consequently, must so far depend upon them, since, if we had not these Goods, we could not carry them on.

Another great Advantage this Commerce bestows, is the Exportation of our Manufactures, to which the *East-India* Company are bound, by their Charters, with which they not only comply, but have greatly exceeded what was expected from them; and, of late Years especially, have constantly increased their Exportations, so that a great Part of those valuable Effects which they bring home are, strictly and properly speaking, the Produce of the Labour and Industry of our own People. But, besides this, they bring home several raw and unmanufactured Goods, such as Silk, and Cotton, which are wrought up here, and vast Quantities of them exported to our Plantations, by which we obtain a great Part of that prodigious Balance in our Favour which arises from that Trade.

There is yet another Point which I must insist upon, which is the furnishing us for our own Wear, with large Quantities of cheap and beautiful Stuffs, that might enable us, if our Poor were properly regulated, and due Care taken to excite an universal Spirit of Industry, to make and send abroad vast Quantities of woollen Goods: For though it be true, that our own Consumption of those Goods is of great Consequence to such as are employed in the making of them, yet with respect to the Nation, it is of no Consequence at all; for what we gain one by another, is no Accession of Wealth to the Publick, for that must arise from what we draw from other Nations, either by paying for the Goods and Manufactures which we receive from them by what we export to them, or bringing over the Balance in Money; or, which is still better, in such as we can again export, and so add the Freight and Profit upon those Goods to the Balance by which they accrue. If there are not clear and convincing Proofs of the Benefit resulting to us from this Trade, it is simply impossible that we should have any such; and if our Opinions are not to be guided by these, it is not easy to say upon what they must be grounded.

But perhaps it may be expected that I should form some Computation of the Profits arising from the *East-India* Trade, which, I must confess, will be a very difficult thing, and would require much more Room than I have to spare; to which I may add, that this has been already done by Dr. *Davenant* and others, in a Way that will convince any Man who has Leisure, Attention, and Capacity, of the Truth of what they have delivered. However, that I may not seem altogether deficient in what many of my Readers may conceive the most material Point in this Enquiry, I will venture to lay down a Fact, the Pigot of which I am ready to undertake whenever I am properly called upon to do, which, I hope, will satisfy them, and it is this, that the Nation gains *Circ. per Cent.* by all that the *East-India* Company exports: And, indeed, it is my private Opinion, that for every five Pounds which the *East-India* Company employs in that Trade, the Nation gains six Pounds; but how far this may be lessened by the setting up so many different *East-India* Companies in all Parts of *Europe*, is a Consideration of another Nature, and with which therefore I shall not meddle here.

The second Thing I promised was to shew the Expediency of supporting the *East-India* Company, and of leaving that Trade in the Channel it is now in. In the first Place, I must premise, that I am absolutely disinterested in this Matter, and so far from having any Direction or Instructions from, that I have not the least Connection with the Company, or any of its Directors, and am likewise so far from being a Friend to exclusive Companies in general, that I think this the only one that is, or can be beneficial to this Kingdom, for which I shall very freely assign my Reasons. The first is, that the Trade to the *East-Indies* is of such a Nature that it is of the utmost Consequence to the Nation to have, from time to time, distinct Accounts of its State and Condition, which could not be so well, or at least, not so easily received, if it was not managed by a Company. As, on the other hand, the necessary Instructions and Regulations, could not, with

such Facility, be any other Way conveyed. What seems to strengthen and enforce this Opinion, is the Conduct of all other Nations, who whenever they have adventured to interfere in this Trade, have constantly put it under the Management of a Company; and to say the Truth, whoever shall consider how Things are to be distributed in the *Indies*, and what a Connection there is between the Commerce of the several Countries included within the Extent of the *East-India* Company's Charter, will very easily discern, that if the whole were not under the Management and Direction of a Body of Men conversant therein; and not only capable of giving Directions, but properly empowered to see those Directions carried into Execution; it would be impossible, that this Commerce should thrive, or even, that it should subsist.

One may in like Manner conceive, that if the Possession of the Colonies and Forts in the *Indies* were in the Crown, and the Management of the Trade only in the Hands of the Company, it could not but be attended with numberless Inconveniencies, as indeed Experience shewed, in the Reign of King *Charles II.* when *Bombay* came to the Crown, by his Marriage with the Infanta of *Portugal*, and therefore both that Island, and the Island of *St. Helena*, have been granted to the *East-India* Company, for the sake of publick Convenience. We may likewise discover from the Disorders of the *East-India* Company's Affairs in that Reign, and in the Reign of King *James*, that it is very detrimental to this Commerce, and to the Benefits resulting from thence to the Nation, that the Company should be immediately under the Power of the Crown, so as to stand indebted for all Encouragement, and to have no other Resource in case of Grievances, than what they can draw from Royal Power; for this on the one Hand renders Trade precarious, and on the other, interests a great Body of People in the support of the Prerogative, which might be of dangerous Consequence.

The Mischiefs flowing from two *East-India* Companies subsisting at one Time, we have known from Experience, and so great they were, that both Companies became very soon sensible, that nothing but the Union of their Interests, could possibly afford a proper Remedy. Yet I think one may safely conclude, that the leaving this Trade open, which is what has been often contended for, would be a Scheme big with still greater Inconveniencies, because it would be at the Bottom a Multiplicity of Companies, all acting upon separate Interests, which consequently would be perpetually clashing and interfering with each other. But as Things stand at present, and as all other Countries carry on this Trade in this Way, there remains no other for us, and we must either support the *East-India* Company, or resolve to give up our Commerce to the *Indies*, there being no middle Course for us to steer; and it was, without Doubt, from a well Sense of this, that in the two last Reigns, so much has been done by Parliament, in Favour of this Company, and to many new Powers granted them.

I am very sensible, that even these Powers, and indeed, all the Powers with which the Company are intrusted, may be liable to many, and some of them just Objections; but if the Powers of the Board of Trade were enlarged, and its Jurisdiction properly extended, all these Inconveniencies upon which these Objections are grounded, might be easily taken away; and besides, we very well know, that the Courts of Chancery and Exchequer do, and do interpose, as well in Favour of Foreigners, as Natives, whenever the Power of the *East-India* Company, or any of its Officers, is so exercised, as to commit Acts of manifest Injustice.

But at the same Time, that from all these concerning, and, as I conceive, unanswerable Reasons, I am persuaded, that this Trade is best carried on by an incorporated Body. I am very far from contending, that they should act without controul, or that they should not be in all respects subject to whatever Regulations the Legislature shall from Time to Time think fit to enact, for rendering the Commerce they carry on more and more beneficial to this Nation. It is from a due Sense of this, that I could heartily wish, Proposals might be made to the Board of Trade,

conveyed. What his Opinion, is the whenever they have, have constantly put any; and to lay the things are to be distinguished there is several Countries included Company's Charter, whole were not in of a Body of Men capable of giving Directions to see those Directions impossible, that this that it should fulfill.

that if the Possibilities were in the Trade only in the not but be attended as indeed Experience shews II. when *Bombay* with the Infants of Island, and the Island the *East-India* Company. We may of the *East-India* in the Reason of tal to this Commerce, hence to the Nation, early under the Power ed for all Encouragement in rate of Growth Royal Power; for the precarious, and a People in the Sight be of dangerous

to *East-India* Company known to a Expectation both Companies being but the Union of a proper Remedy, that the laying is, but it is contrary, greater Inconvenience, in a Mixture of our Interests, which something and returning and at present, and as ble in this Way, there but either support the live up our Commerce ble Cause for us to from a just Sense of much has been done Company, and to many

these Powers, and in Company are intricate of them just Object of Trade were enforced, all these Injunctions are grounded, besides, we very well and Exchange of, of Foreigners, as *Nations* *East-India* Company, as to commit Acts

all these concerning, I am persuaded, as an incorporated Body, that they should act nor be in all respects Legislative shall from rendering the Commercials to this Nation, that I could heartily the Board of Trade,

for

for opening a direct and immediate Correspondence, either by the *Cape of Good-hope*, or by the *Streights of Magellan*, with the Southern-continent; and in case any Project of that sort should be laid before them, that was thought practicable, I should esteem it highly reasonable, that upon their Recommendation, the *East-India* Company should be obliged to make such an Attempt, or if they refused, that any private Persons might be allowed to undertake it, and have proper Assurances and Encouragements given them by the Publick. For it is, and will be ever my Sentiment, that this, and all other Companies, are but so many Corporations endowed with Powers in Trust for the Publick, for which they are, and must be accountable to the Publick, and also be subject to such Alterations, Extensions, and Restrictions, as may render them most serviceable to the Publick.

I rather insist upon these Points at this Time, because, without some Accession of new Trade, which we may possess as a Nation exclusive of all others, I do not see how it is possible we should maintain our maritime Power at its present Height. As on the other Hand, I can see no reason whatever, why, if any Thing can be done for the Service of the Nation, in this Respect, by opening a Trade to the southern *Indies*, by recovering the Trade of *Japan*, by discovering any Countries to the North of that Empire, or by any other Method whatever, it should be left undone out of Respect to the Powers or Privileges possessed by any Corporation.

I come now to the last Point that I have undertaken to clear, and that is the popular Objections which have been raised against the Commerce to the *Indies*, of which there are many, and some of them so plausible, that Men of great Parts, and good Intentions, have been led away by them. The first of these is grounded upon the Exportation of Bullion, and which, if I conceive it right, is thus stated. The common Measure of all Things in a commercial Way, is Silver, and consequently the great Mark of a Nation's Wealth, is her drawing this common Measure from other Nations; but the *East-India* Trade is carried on by exporting this real and intrinsic Wealth, which never returns, but is employed to bring back Things that are not necessary, but mere Instruments of Luxury.

Before I proceed to the direct Solution of this Difficulty, I must observe, that if we give this Objection its full Weight, it will destroy all Commerce. The Necessaries of Life are in every Country, or at least in every habitable Country, and it is to what some People call Luxury, that all Trade whatever is owing; so that if we admit this Principle, we should not only drink Sage instead of Green-tea, but make use of Honey instead of Sugar. In short, we should endeavour to cultivate and improve the Produce of our own Country, live upon it, and leave all the rest of the World to starve for itself. How just a Maxim this would be, for People who inhabit an Island, and how reasonable it is, for Folks who derive most of the Blessings they enjoy from Trade, and maritime Power, to talk thus, I leave the Reader to judge. But it once we let this Objection to stand as to allow that Trade is a commendable Thing for the very Reason the Objection assigns, viz. that it makes the Country in which it flourishes, Rich; the Trade to the *East-Indies* comes as defensible as any other; For, if exporting of Bullion does not impoverish the Nation, then there is no Force at all in the Objection; and that it does not in this Case, I am very well able to prove. When the first Charter was granted to the *East-India* Company, this Evil was foreseen, and properly guarded against by a Proviso, that the Company should be obliged to bring in as large a Quantity of Bullion as they carried out, in the Interval between the Voyages made, at the Risk of the Company. In reality therefore, there never was any Foundation for this Complaint, that the Quantity of Silver in this Kingdom was diminished by the *East-India* Trade. But by Degrees, and as this Commerce has increased, instead of impoverishing, it has greatly encreased the Wealth of this Nation, by bringing in on one Hand large Quantities of Silver for the *Indian* Merchandize exported, and detaining here on the other as great Sums of Money, that must otherwise have been exported for foreign Manufac-

tures, which would have been worn here, if we had not been better and cheaper supplied from *India*.

Another Objection is, or at least was, that the wearing of *India* Piece-goods hurt our own woollen and silk Manufactures; but this in a great Measure has been cured by the Laws passed for that Purpose. It may not be amiss, however, to observe, that those Manufactures are chiefly to be encouraged, which contribute to Exportation, since it is certain, that the cheaper People can be clothed here, let that clothing come from where it will, the cheaper they can afford to work; and it is the Cheapness of Labour, that is the great Point to be studied in a Nation; for if we can Under-work other Nations, we shall infallibly undermine their Trade, and extend our own; for, as I observed before, private People may be enriched by home Consumption, yet the Publick gets nothing thereby, and this Consideration is sufficient to enable the intelligent Reader, to discern how a Clamour may be raised in Favour of Trades, no Way advantageous to the Publick, and against such Trades as are highly beneficial to the People, and this from confounding the Interest of private Men, or of great Bodies of Men, with the Interest of the Publick, which it requires great Skill, Industry, and Disinterestedness to disentangle, and set in its proper Light. There is besides, a great Disadvantage in arguing on Topics of this Nature, because, while a Man is really pleading for the Publick, he is maliciously misreprefented as an Advocate for the private Interest of that Body of Men whose Cause he espouses, tho' in Truth he does not espouse their Cause out of regard to their private or particular Interest, but merely from a Conviction of Mind, that their Cause is in this respect the Cause of the Publick.

A third Objection is, that even the Exportation of *Indian* Goods is disadvantageous to the Nation, because it lessens, or at least is supposed to lessen the Consumption of our own Manufactures, in those Countries to which the Produce of *India* is exported: A very strong Objection this, in all Appearance, and yet at the Bottom a mere Fallacy, and not at all grounded on Truth. For this Objection supposes what is manifestly false, viz. that it depends upon our Exportation, whether the Inhabitants of those Countries to which we send them, shall wear the Manufactures of the *Indies*, or not; but as it is notorious, that if we did not supply them, they would receive them from the *Dutch*, or *French*, which would have the same Effect as to the Exclusion of our Manufactures; the true State of the Question comes at length to this, whether we shall take their Money, or their Goods for *Indian* Commodities, or whether we shall submit to let them lay out that, or part with those for *Indian* Commodities, which we might supply, to other People?

The Truth of all this, as it will appear to every candid and ingenious Reader, from the Reasons and Arguments already advanced, so, at this Juncture, it must be evident to every Man who has but common Sense, from the Light of Experience; for do we not see, that the *Russians*, *Swedes*, *Danes*, and other Nations, are bent upon establishing a direct Correspondence with *India*, in order to obtain greater Quantities of the Goods of that Country; and does not this manifestly prove, that the Appetites of these People for those Things were so strong, that it was no Way in our Power to check, or correct them?

The Truth of the Matter is, that the sole Objection against this Commerce, that has any Force, lies in this simple Proposition, that it is against the Interest of the western Part of the World, to correspond with the *East*. The Reasons which are brought to prove this, are indeed very plausible. It is said, that the Balance of Trade is against us, that we import the Commodities and Manufactures of the *Indies*, and export Silver to pay for them. That this drains *Europe* to such a Degree, as that since the Discovery of the Passage by the *Cape of Good-hope*, it is demonstrable, that the *Indians* have gained from the *Europeans* upwards of two hundred Millions in Silver, which immense Wealth they possess, while all that we received for it, is long ago lost and consumed. It is contended, even by the warmest Writers in Favour of the *Indian* Trade (tho' I freely own I am of a different Opinion) that this sufficiently proves, that it would be for the

Benefit

Benefit of the western Part of the World, if they had no Commerce at all with the East; and that it would be an Advantage to Europe in general, if the Commerce to the Indies were totally abolished.

Admitting this to be true, what is it to us? We are not yet the Legislators of Europe; we cannot bid the Dutch dissolve their Company, and recall their Subjects from the Indies; we cannot forbid the French to trade thither; and if our Ministers at Stockholm, and Copenhagen, should persuade those Courts not to send any more Ships to China, it is not at all probable, that they would take our Advice. We must be content then, to take the World as it lies before us, and since the Humour of trading to India cannot be extinguished, we, as a trading Nation, must endeavour so to manage that Humour, and our Commerce, as that both may turn to our Advantage.

We must contrive to maintain and support the Acquisitions made by our Company in that Part of the World; we must engage them to take off as great a Quantity of our Manufactures as is possible; we must encourage to the utmost the Exportation of such Goods and Manufactures as the Company brings home, and which is of the greatest Consequence to this Nation; we must, at all Events, and by whatever Means it can be done, prevent the smuggling of Indian Commodities into these Kingdoms; for such as promote that Practice, are the most notorious

Enemies of their Country, and cannot get a single Shilling, without robbing the Nation of five.

Thus I have entirely finished what I proposed with respect to our Commerce, with this Part of the World. I have shewn, that it is the great Wheel which moves all the rest; that we have no reason to be dissatisfied at seeing it managed by an exclusive Company; that by Degrees, and by a Variety of Accidents, this Company is now placed on the best Basis that can be for the Nation; that there is no doubt, their Trade is extremely beneficial; that the Objections against it, are very far from being well founded, and that at this Juncture, it imports us more than ever to be well informed, and clearly convinced as to these Things, because there never was a Conjunction when the thorough understanding of them was of so great Consequence to the Publick. If in the managing so extensive, so intricate, and in some Cases, so invidious a Subject, I shall be thought to have performed well, it is the Height of my Ambition; but if I have failed therein, it will be still my Comfort, that it was my Endeavour. I might with much greater ease to myself have contracted this Section into a narrower Compass, but I have sincerely studied the Benefit of the Reader, and how to render the Time he bestows in the Perusal of this Work beneficial to himself, by inspiring him with such Sentiments as may render him useful to his Country.

SECTION XXXIV.

A Succinct History of the Rise, Progress, and Establishment of the Dutch East-India Company, with a View of the immense Profits arising from that Commerce, and a Prospect of their Affairs, and the Manner in which they are conducted, as well at Home, as in their extensive Settlements Abroad.

Collected chiefly from their own Writers.

1. An introductory Account of the Situation of Affairs in Holland, at the Time their Commerce to the East-Indies was first undertaken.
2. Houtman's Imprisonment in Portugal, proves the Means of their learning the true Route to the East-Indies.
3. The first Voyages made under the Direction of Houtman, at the Close of the sixteenth Century.
4. A new Company of Merchants engage in this Trade with great Success.
5. The States-General and Prince Maurice interpose in Order to put this Company on a proper Establishment.
6. The Dutch East-India Company formed, and Letters Patent dated March the 20th 1602, for twenty-one Years.
7. A great Struggle between the Dutch and Spaniards about the Moluccas, in which the former at last prevailed.
8. An Account of the surprizing Success of the Dutch Company, and of the prodigious Dividends made by them to their Proprietors in a few Years.
9. The Rise of the Company's great Power in the Indies, and the Causes thereof truly assigned.
10. Their Charter renewed and enlarged, with the Consequences arising from thence.
11. The Progress of their Trade in the Indies, and other remarkable Occurrences.
12. The History of this Company continued till the Expiration of their second Charter.
13. An Account of their Affairs to the Year 1660.
14. The Continuation of this History to the Close of the last Century.
15. A concise Deduction of this History to the present Times.
16. A short Account of their present Settlements in the Indies.
17. A curious and particular Relation of the Manner in which they manage their Affairs.
18. Of their Councils and Government in the Indies.
19. The Oeconomy of their Fleets, Squadrons, and single Ships, with other Particulars relating to their naval Concerns.
20. A View of their Management of Orphans Effects, and of the Care taken by them of their Poor.
21. Of the Management of the Company's Affairs in Holland, with a Table of their Dividends, from 1610 to 1717.

THESE could not certainly be any nobler Subject chosen by an Author inclined at once to gratification and to benefit his Readers, than an Inquiry how far the Spirit of Liberty and Trade may be able to advance a People, notwithstanding any Difficulties they may labour under from the Situation of their Country, the Poverty of its Soil, and the Opposition of their Neighbours. Such a Plan as this might enable a Man of common Understanding, quick Wit, an Accompetent Learning, to frame a political System as desired, and at the same Time, no less pleasant and agreeable, than the famous Poems of Homer, which have hitherto been esteemed invaluable, and which are allowed to contain the Principles of another Science, though discovered under the specious

Veil of Fictions. But if the Composition of such a Work be a Task so hard as scarce to be expected, an Author of a cooler Genius than is requisite for such a Performance, might perform something very laudable in this kind, by writing a copious History of the Establishment of the Dutch Republick, which would sufficiently shew, that the Desire of preserving religious and civil Liberty, maintaining the natural Rights of Mankind with respect to Trade, and transmitting the Blessings of an equal and mild Administration to Posterity, are Principles capable of raising such an heroic Spirit in any People, as will enable them to overcome all Difficulties of what kind soever, and that to such a Degree, as to give them a Capacity of changing, at least in Appearance, the very Laws of Nature, so as

to render the meanest Country a Paradise, and the most distressed and dejected of the human Race, the bravest Soldiers, and the most enterprising Seamen.

Such a History would particularly shew, that Providence can conduct, by the most unlikely Means, the noblest Designs to the highest Degree of Perfection, and lay the Ground-work of the most exalted Power and Liberty in the midst of Tyranny and Oppression. For most evident it is, that if the Spaniards had not pursued the most barbarous Plan of Politicks in Reference to their Subjects in the *Low-Countries*, the Republick of the *United Provinces* had never existed, nor had the People of *Holland* ever arrived at any Part of that Wealth, Dignity and surprizing Power, as for the two last Centuries they have enjoyed. It is the peculiar Glory of the Almighty, to produce Order out of Confusion, Good out of Evil, Strength and Happiness out of Weakness and Misery, and of this, no Period of History affords us a more illustrious Instance, than that which is to be the Subject of the present Section. It was the Bigotry of the Spaniards, and their illegal Introduction of the bloody Inquisition into the *Netherlands*, that introduced that Firmness to their religious Principles, and that zealous Concern for the Liberty of Conscience, which has proved the Source of the Grandeur of the *Dutch*. It was the barbarous, as well as arbitrary Government of the Duke of *Alva*, Cardinal *Granville*, and such Ministers of Oppression, that established those Notions of civil Liberty, that enabled the distressed Inhabitants of the *Low-Countries* to establish a Form of Government capable of procuring and maintaining their Freedom; and it was the Measures taken to curb, to distress, and to ruin the little Trade they then had, which forced these People upon those Methods that in a very small Space of Time rendered them the most considerable trading Republick the World ever saw.

It must be allowed, that of all the Monarchs that were ever seized with a Passion for universal Empire, there never was one who seemed to have it more in his Power to gratify Ambition in its largest Extent, than Philip the Second of *Spain*, who was not led thereto by the Encitements of Ministers more capable than himself, but formed his own Schemes, and conducted them with such Wisdom and Policy, that if the End he aimed at had been attainable by human Abilities, one could scarce conceive how he came to be frustrated in his Design. He had gained the Court of *Rome* entirely to his Interest, and was thereby able to bend the predominant Religion in *Europe* to his Purposes. He had the whole Force of the *Spanish* Monarchy, and of the House of *Austria* in *Germany* at his Command; the greatest maritime Power in the World was at his Disposal, a great Part of *Italy* was in his Possession; he had a strong Party in *England*, and a stronger in *France*, and all the Riches in the *Indies* flowed into his Coffers; but what was still of greater Consequence, he had the most able Ministers, and the most experienced Generals, and the best disciplined Troops in the World at his Devotion; all which Advantages were doubled by his Skill in making use of them; for he had a Soul above the Reach of Fortune, and a Capacity more extensive than his Dominions; so that had he undertaken what was in the Power of Man to achieve, he had easily and happily performed it; but as his Project was without Bounds, so the Methods he used, tho' wisely contrived, and generally speaking, well carried into Execution, proved not only fruitless, but so dissipated the Wealth and Strength of his Empire, that as he died himself of Discontent, so he left the *Spanish* Monarchy under an incurable Consumption.

But amongst all the vast Designs which this Monarch formed, that which was best digested, was attended with the worst Effects. He knew, that a Monopoly of Trade, was the first Step to universal Empire, and therefore formed a Plan for fixing the whole Trade of the World to his Dominions. It was with this View, that he set on Foot two Schemes which proved abortive indeed, but which will eternally prove the Strength of that Genius which devised them. The first was the seizing and securing the Sound, or narrow Passage into the *Baltick*, by which he hoped to become Master of all the Trade of the North:

The other was building a City of his own Name in the

Streights of *Magellan*, and establishing such a Colony there, as might put it out of the Power of other Nations to trouble the Commerce of the *South-Seas*, or find a Passage that Way to the *East-Indies*. But failing in these Designs, he turned his Thoughts another Way, and finding that his revolted Subjects in the *Netherlands*, began to make a great Figure in Trade, especially after the Ruin of the City of *Antwerp*, he resolved to cut them short in that, as much as lay in his Power, and being become Master of *Portugal*, he absolutely forbid them all Commerce, not only with the *Indies*, but in the Commodities of the *Indies*, which they had hitherto purchased at *Japan*, and with great Profit to themselves, had distributed to the northern Parts of *Europe*. It was by this Prohibition, expressly calculated for the Ruin of their Trade, that the Inhabitants of the *Low-Countries* were compelled to those Undertakings which have since made them Lords of *India*. If the Spaniards had never forbid them, they had never thought of going thither; if they had remained the sole Carriers of Spices, or even been allowed a reasonable Proportion of that Trade, they had never been the Proprietors of it.

But the making this unexpected Stroke at their Commerce, at a Juncture when they had many rich Merchants amongst them, and their Country swarmed with able Seamen, instead of damping their Spirits, and depriving them of all Hopes, excited them to form a multitude of Projects for averting this Evil, more especially when they found that his Catholic Majesty remained firm to his Point, and actually caused their Ships to be seized, and such as were on Board them to be imprisoned. This convinced them, that they must either abandon all Thoughts of this Commerce, or strike out some new Rout for themselves, which was so much the more difficult, because even while they lived under the *Spanish* Yoke, they had never been permitted to make Voyages to the *Indies*. They derived, however, some Assistance from the Merchants who had settled amongst them, after the taking of *Antwerp*, for they were better acquainted with the *Spanish* Trade, and with the Method used in carrying it on, and it was those People who advised the taking into their Service such Seamen and Pilots as had served under *Sir Francis Drake*, the famous *Candish*, and other *English* Commanders of Note. The Informations gained from these People, gave them such Lights, that by Degrees, their Merchants began to think an *Indian* Expedition practicable, and began likewise to be willing to run the Hazard of such an Undertaking, from the Prospect of the prodigious Profit that must necessarily accrue to them, if they met with Success, which bore scarce any Proportion to the Expence necessary for making such a Trial.

2. Amongst others, *James Falk*, and *Christoffer Reelinius*, the one Treasurer, and the other Pensioner to the States of *Zealand*, in Conjunction with several Merchants, particularly *Balthazar Meuckeren*, *Jacob Janson*, *Charles Dirck Van Or*, and many others, took up a Resolution to open a Passage into the *Indies*, from whence they were unjustly excluded by the Emperor *Charles V.* and *Philip* the Second, King of *Spain*. They conceived, that by steering North-East, they might run along the Coast of *Fertaria*, and to reach *Cathay*, *China*, *Japan*, *India*, and the *Philippine* and *Molucca* Islands: The Execution of this Project was committed to two excellent Mariners, *William Barentz*, and *James Heemskirk*, and afterwards to divers others; but hitherto the Almighty has not favoured the Discovery of that Passage, or of the People that live in those Climates, while they were in quest of this Northern Passage. One *Cornelius Houtman*, a *Dutchman*, happened to be in *Portugal*, and there satisfied his Curiosity by a diligent Enquiry into the State of the *East-Indies*, and the Course that one must steer, in order to come at it. He had frequent Conferences upon this Subject with the *Portuguese*, who gave Notice of it to the Court.

At that Time, all Foreigners were prohibited to make such Enquiries; and upon that Score *Houtman* was put in Prison, and ordered to stay there till he paid a heavy Fine: In order to raise such a considerable Sum of Money, he addressed himself to the Merchants of *Amsterdam*, and gave them to understand, that if they would pay his Fine,

he would discover to them all that related to the *East-Indies*, and the Passage thither: Accordingly they granted his Request, and he performed his Promise.

After mature Consideration of what he had offered, they resolved to erect another Company, called the Company for remote Countries. The Directors of this Company were, *Henry Hudson, Renier Pauw, Peter Hasselaer, John Jans, Charles de Oude, John Peppen, Henry Back, Dirck Van Oo, Govert Pieterz Seem, and Jeroen Grootenhuise*. These Directors considering as yet that 'twas very uncertain, whether the North Passage was practicable, tho' at the same time they were sensible, that it was the shortest and surest Passage, and withal the most healthy, in regard that in it they did not cross the Equinoctial Line: Upon this Consideration, they came to a Resolution *Anno Domini 1595*, to send four Vessels to the *Indies*, by the Way of the *Cape of Good-hope*.

3. *Houtman*, and some others, who had the Command in this Expedition, were ordered to observe the Course they steered very nicely, and to settle with the *Indians* the Commerce of Spices and other Goods, especially in those Countries where the *Portuguese* had no Settlements. They looked upon this Commerce as a very valuable Thing, especially considering that it would save them the Trouble of fetching that sort of Goods from *Portugal*, which they could not do without great Hazard. These Ships returned to *Holland* in the Space of two Years and four Months after their setting out; and though they had made no great Profit of the Voyage, yet their Success animated their Owners, and several other Merchants, to carry on the Design further.

In Effect, a Member of that Company being dead, they presently put into his Place *Gerard Bicker*, a very considerable Merchant. Then they had Advice that some other Merchants of *Amsterdam* designed to set out Ships for *India*. The Names of those Merchants were *Vincent Van Bronckersij, Simon Jansz, Govert Dirrickz, Cornelius Van Campen, Jacob Ibenasz, Elbert Simonz Jonckheyn, and John Haermanz*. The Company, to avoid Animosities, thought it necessary to unite with those Merchants, and, accordingly, the two Fleets, consisting of eight Vessels, joined under the Command of *James Van Neë*, their Admiral, and sailed from the *Texel* *A. D.* 1597.

A Design of the same Nature was likewise set on Foot in *Zeland*, and accordingly *Balthazar Meuckeren*, and *Adrian Hendrickzen Haaf*, with some other Partners, fitted out Ships for the *Indies*. The Inhabitants of *Rotterdam* being spurred forward by such Examples, presently formed a Company, and fitted out five Ships, under the Command of *James M Lu*, with Orders to sail to the *Avancee* Islands, by the Strait of *Magellan*, and the *South-Sea*. In the mean time, the *Amsterdam* Merchants grew better upon the Matter, and the Company before mentioned, without staying for the Return of the Fleet they had sent already, fitted out three Ships more, which put to Sea *May 2, 1599*, under the Command of *Stephen Vander Heyn*. On the 8th of the then next *July*, four of the eight Ships that went out first, arrived in the *Texel*, and after they were unloaded, were immediately sent back again, under the Command of *James Wilckens*.

4. About the same time, several *Amsterdam* Merchants, most of whom were *Brabanters* by Birth, formed another Company, upon the same Design, and fitted out four Vessels, which put to Sea *December 1599*, in Comfort with four of the Company's Ships. Two Years after all these Ships came home with rich Cargoes: But before their Arrival this new Company had fitted out two Ships, which were joined by six more of the old Company, all of them putting to Sea *F. D.* 1601, under the Command of *James Van Neë*, and, in the Process of Time, all of them returned at several Times to their respective Ports. Upon the Consideration of these lucky Adventures, several fresh Ships were fitted out in *Amsterdam, Zealand*, and elsewhere, among other, that in were sent from *Amsterdam*, twelve belonging to the old, and four to the new Company, under the Command of *James Heenskerk*, and *James Grooten*, and five more of the old Company, bound for

the *Moluccas*, under the Command of *Wolpert Harmansz*; all the thirteen set sail from the *Texel*, *April 1601*.

At this, the *Spaniards* were enraged with Anger and Grievance, partly in regard of the Affront they suffered in seeing such petty Merchants compass their Ends in spite of their Teeth; and partly upon the Account of the Loss they sustained, and were likely to sustain hereafter. With this View they fitted out a strong Squadron, in order to surprize the *Dutch* Ships. This Squadron consisting of thirty Men of War, well manned, fell in with eight of the *Dutch* Ships in the Month of *May*, in the Lat. of 14°. The *Dutch* perceived the Inequality of their Number and Forces, notwithstanding that they had some Soldiers aboard: However, they were not daunted, for they fought bravely, and the *Spanish* Admiral was so warmly received, that he thought it convenient to let them pass.

The next Year, three Ships came home from the *Indies* richly laden; they brought Advice, that the King of *Achen* had attempted to seize two of the *Mauclerons* Ships that had set out from *Holland*, *A. D.* 1599, that *Cornelius Houtman*, the Commander, had lost his Life in the Adventure; and in fine, that the Ships had escaped, but that some of the *Dutch* continued Prisoners in the Hands of the King of *Achen*.

Paul Van Caerden, having set out for the *Indies* that same Year, arrived at the Port of *Achen*, without knowing what passed, and there was exposed to the like Danger; for that the King being egged on by a *Franciscan* Monk, who resided there in the Quality of a *Portuguese* Envoy, and had come thither from the *Moluccas* on purpose to wheedle him. The King, I say, thus solicited, set all Instruments at work to seize *Caerden's* Ship; but all his Attempts proved abortive, and the King owned, afterwards, that he was seduced by the *Portuguese*, and accordingly gave a very good Reception to the Fleet commanded by *Laurence Bicker*, which had set out from *Zeland*, *A. D.* 1601: Nay, when the Fleet had taken in its Lading, which was very considerable, he sent some Embassadors with them.

This Fleet putting into *St. Helens* to take in fresh Water, happened to meet with a *Portuguese* Carrack, richly laden, which they took, and brought along with them. The same Year *George Spilbergen* and the Ships he commanded were as favourably treated by the same King of *Achen*. The *Spaniards*, finding themselves inferior in Strength, endeavoured to ruin the *Dutch* by all manner of Stratagems and Tricks; they sent Embassadors to all the *Indian* Kings, to decry the new Adventurers to brand them for Pirates, and Men of no Faith or Honour. In fine, they used all possible Efforts to affect their Ruin, as will appear in the Sequel.

5. The States-General and Prince *Maurice*, having received Advice of what passed, resolved to give Commissions to all Ships that sailed that Way; and indeed the Commanders of the Ships stood in Need of them, in order to stifle the Calumnies of their Enemies. By these Commissions, they were empowered not only to defend themselves, but to attack and commit Hostilities upon all that should disturb their Commerce. The valiant *James Heenskerk*, being clothed with such Authority, sailed with two Ships from *Bantam* in order to have them loaded at *Ioker*, and falling in with a rich Carrack upon her Return to *Maaca*, or *China*, with above seven hundred Men on board, attacked her, and forced the *Portuguese*, after a slender Shew of Defence, to strike, and ask Quarter, which was granted them. This was a Proof, that things were much changed with this Nation, and that the *Dutch* had not to do with those gallant and glorious *Portuguese*, who had spread the Terror of their Name, and the Authority of their Crown over the finest Provinces in *Asia*. Neither had the *Dutch* yet learned to behave with that Haughtiness and Insolence, with which they have since been reproached in this Part of the World. On the contrary, they behaved so kindly to their Prisoners, and transacted every thing in relation to them, with so much Honour, that they obtained ample Testimonials to this Purpose from the *Spanish* Governor in the *Molucca* Islands, as also from him who presided at *Malacca*, by which, as they

 cca, by which, as they
 no

no way diminished their Wealth, they greatly raised their
 Reputation, and wiped off that Imputation of Piracy,
 which, to render them odious, the *Spanish* Government
 had thrown upon them.

This Capture was of prodigious Consequence, because
 it gave them a complete View of the Riches and Commo-
 dities of the *Indies*; so that themselves and their Country-
 men now knew exactly what they were seeking, and could
 form a just Notion of the Value of that Prize, for which
 they drew their Swords. This heightened that Spirit
 which was already sufficiently raised of joining in Adventu-
 res to *India*; and as good or ill Fortune seldom comes
 alone, so, in this Case another Circumstance happened,
 which gave still greater Credit to, and excited warmer
 Hopes from such Undertakings.

At the same time *Oliver Van Noort* returned to *Holland*,
 after a three Years Voyage: He had been fitted out by
Peter Van Beveren, *Hugh Buse*, and *John Hoekbaker*, and
 set sail from *Goeree* September 1598. He made but very
 inconsiderable Returns for the Merchants, but he acquired
 a great deal of Glory, a Share of which redounded to
 his Country; for, at that time, the *United Provinces*
 shared this common Glory with the *Portuguese* and *Eng-
 lish*, That one of their Natives had sailed round the
 World, by the Straits of *Magellan*. We have given a
 large Account of this Voyage in the first Chapter of this
 Work, and therefore need not insist upon it here. It was,
 to be sure, a glorious Undertaking, and the Fame that
 attended it had such an Effect on the enterprising Spirits
 of those Times, that it induced many rich Merchants to go
 and settle at *Amsterdam*, and drew thither the most experi-
 enced Seamen and Commanders from all Parts of *Europe*.

This is what the *Dutch* Writers tell us; and, indeed,
 we follow them entirely in this Account of their Com-
 pany, as being the best instructed, and the most intelli-
 gent Guides. It is, indeed, very possible, and probable,
 that they have represented these Things to their own Ad-
 vantage, for which the judicious Reader will make a proper
 Allowance. But, upon the whole, I believe it would have
 been difficult to have found any where better Materials,
 since, to do them Justice, they have been more careful to pre-
 serve and record the Rise and Progress of this Commerce,
 from the Time it fell into their Hands, than any other
 Nation that was ever concerned therein; and the Pains
 they have taken to insert the principal Successes of their
East-India Company in their general Histories, is what
 can never be too much commended.

6. While their Navigation continued to be thus successful,
 and the Trade of the *Indies* flourished more and more, there
 happened an Accident that discontinued their former good
 Fortune, and threatened Ruin to the whole; I mean the Plu-
 rality of Companies that were then formed, and the sorry
 Understanding that was between them. Oftentimes
 many of them fitted out Ships for the same Port, which
 lowered the Price of their Goods, and discouraged the
 Sailors. The States-General being acquainted with these
 Inconveniences, called a Meeting at the *Hague* of the Di-
 rectors of the Companies, both of *Holland* and *Zealand*,
 and obliged them to unite in one Body for the future, to
 which their High Mightinesses joined their Consent and
 Authority. The Treaty that was then agreed upon was
 confirmed by a Patent from the Sovereign Power, for
 twenty-one Years, commencing from the Date, viz.
 March 20, 1602.

The Patent being given out, the Company became a
 very considerable Body, and made a joint Stock of
 6,000,000 Livres. Upon this Bottom they promised
 themselves great Things, and fitted out a Fleet of four-
 teen great Ships, which put to Sea in June 1602, under
 the Command of *Wybrand Van Warwyck*. The next Year,
 in the Month of February, the Yacht called *Wachter*, re-
 turned, and gave Advice that five of the other Ships
 would be at home very speedily. By this Yacht an Ac-
 count was brought of what passed before *Bantam* between
Wolbarth Harman and his Vice-Admiral, *Hans Bouwer*,
 on one Side, and *Don Andreas Perdo de Mendoza*, who
 had formed a Design to drive the *Dutch* out of the *Indies*.
 In Effect *Don Andreas* was beat, and the *Dutch* Admirals

pursuing their Course to the *Moluccas*, arrived there at fe-
 veral Times one after the other.

The same Yacht brought the News of an Engagement
 at the *Moluccas* between *James Van Nek*, Admiral, and
 three *Portuguese* Ships, which did not turn to his Advan-
 tage; for that, after the Loss of eight or nine Men,
 and some of the Fingers of his own Right-hand, he was
 obliged to sheer off. It was this Vessel likewise that
 brought the first Intelligence of the taking of a *Portu-
 guese Carrack* by *James Heemskirk*. Upon the Arrival of
 this News, another Fleet of thirteen Ships was fitted out,
 and sailed December the 18th, under the Command of *Ste-
 phen Vander Hagen*.

In the Year 1605, the King of *Spain* issued forth a
 severe Declaration, in which he prohibited the Inhabitants
 of the *United-Provinces* to trade to the Dominions of the
 King of *Spain*, or to the *East and West-Indies*, under the
 Pain of corporal Punishment. But the Company was so
 far from being over-awed by this Edict, that it rather in-
 spired them with fresh Courage, and animated them to
 pursue their Design with more Vigour and Diligence. In
 a Word, they presently fitted out a Fleet of eleven Vessels,
 which were fit not only for Traffick, but for warlike Ex-
 ploits, and gave the Command of them to *Cornelius
 Matelief*. This Fleet had scarce put to Sea, when the Di-
 rectors gave Orders for preparing another of eight Ships,
 which were manned not only with a full Complement of
 Seamen, but with Soldiers, that were engaged to stay and
 keep Garrison in the *Indies*, if Occasion required. This
 third Squadron was commanded by *Paul Van Caerlan*.
 Soon after two Ships of the first of these two Squadrons
 came home with a rich Cargoe of Cloves and other Spices:
 They brought Advice that Admiral *Vander Hagen* would
 follow them very quickly; and accordingly he arriv-
 ed the next July, after taking several *Spanish* and *Por-
 tuguese* Vessels, and possessing himself of the Fort of *Am-
 boyna*, the demolishing that of *Tidore*, and entirely dislodg-
 ing those two Nations out of the *Molucca* Islands.

This Expedition gave Rise to a mighty Dispute between
 the *Dutch* and the *English*, upon the Account that the latter
 favoured the *Spaniards*, and by supplying them with Pow-
 der, enabled them to hold out longer. The next October
 three other Vessels arrived in *Holland*, and gave Intelli-
 gence that *Wybrand Van Warwyck* was upon his Way
 home, but was obliged to put in at the Island of *Maurice*,
 because his Ship was leaky, and that he had taken a *Car-
 rack* at *Patana*. This Admiral arrived in the Spring
 1607, but in the preceding Winter the Company had sent
 two Ships more to the *Indies*, under the Command of
John-Jansz Moldie, to whom they owed the taking of
 the Fort of *Tidore*.

7. A Negotiation being then set on Foot for a Peace in
 the *Netherlands*, the Company fitted out a fresh Squadron
 of thirteen Ships, under the Command of *Peter-William-
 sin Verhoven*, who had given a signal Proof of his Cou-
 rage and Conduct in the Engagement at *Gibraltar*, where
 he was Vice-Admiral under the illustrious *James Heemij-
 kirk*. This great Fleet was fitted out with a Design to give
 the World to understand, that no Treaty of Peace should
 tempt the *United Provinces* to drop their Trade to the *In-
 dies*. Immediately the *Spaniards* started a warm Dispute
 in Reference to this Article, which proved the Subject of
 their principal Conferences; upon that the Company gave
 in frequent Remonstrances both to the States-General, and
 to the Mediators, and presented to them written Memori-
 als, in order to make them sensible that there was a
 Necessity of being resolute upon that Issue.

In fine, this Point being looked upon as a principal Ar-
 ticle by both Parties, so that it could not be adjusted, the
 States, upon a final Resolution, made this Proposal, that
 either the *Spaniards* should consent to their *Indian* Trade
 in the Treaty of Peace, or allow it them by a Truce, for
 some Years, or else, that Things should continue beyond
 the Tropick of *Cancer* upon the same Bottom that they
 then stood on, and that either Party should make War
 there, and do what they could for their own Advantage.
 This done, the Truce of twelve Years was accepted and
 concluded, and upon certain Conditions 'twas agreed, that
 both

both the *Portuguese* and the *Dutch* should continue their Trade where they pleased, and live in mutual Peace. This Affair was in Agitation without coming to any Resolution in the Year 1608; at which Time Admiral *Mateijs* returned from the *Indies* with several Ships. This Admiral had laid Siege to *Malacca*, but was obliged to break it up, in order to give Battle to the *Portuguese* Fleet, that came to relieve it; however, he had concluded an Alliance with the King of *Iber*. In the Year 1609, the Company sent a very expert Pilot, called *Henry Hudson*, with a Fly-boat, to find out a North-east, or North-west Passage to *China*, but he returned without bringing his Design to bear. At that Time they heard nothing from the *Indies* since the Arrival of Admiral *Mateijs*, except some Advice by the Way of *England*; but the next Summer, four of their Ships arrived with a large Cargo; they reported, that the *Spaniards* were still possessed of *Ternate*; that the *Dutch* had mastered *Machian* of the *Molucca* Islands, and that they hoped in Time to possess themselves of *Ternate*.

The Truce being concluded and proclaimed in the *Netherlands*, they resolved that a Pinnace should be sent to the *East-Indies*, with a Passport from the King of *Spain*, and the *Archdukes*, to acquaint the *Spaniards* and the *Dutch* with the Treaty: This Project was accordingly put in Execution, and towards the End of the Year, nine Vessels were fitted out under the Command of *Peter Barth*, both the Seamen and Soldiers being allowed to carry their Wives and Children along with them.

It may not be amiss to observe here, that it was by this Truce, the new Republick of the *United-Provinces* came to be owned for a legal and independent State by all the Governments in *Europe*; neither was this Negotiation of less Use in the *Indies*, where the *Spaniards* and *Portuguese* had begun to recover their Spirit, and to distinguish themselves by a vigorous Defence of what they possessed in that Part of the World, against the Attempts of the *Dutch*.

Don *Juan de Silva*, who then commanded for the King of *Spain*, in the *Philippines*, was a Nobleman of such Courage and Conduct, that no Advantages were to be gained while he held the Government. For having received Intelligence, that a *Dutch* Admiral, whose Name was *Wilbert*, was at Sea with a Squadron of four Sail, and had sunk a *Spanish* Gallion richly laden from *China*; not contented with which, they were still cruising for some other Ships that were expected from *China* and *Japan*: Don *Juan* resolved to hazard his own Life to retrieve the Honour of *Spain*, and to free those Seas from such unwelcome Guests. It was with this View, that he embarked his own Guards, and such other Troops as were at *Maula*, on Board such Vessels as could be drawn together on a sudden, and with them he attacked the *Dutch* Admiral with such Fury, that he made himself Master of three of his four Ships, the Admiral himself having his Head taken off by a Cannon-ball in the Beginning of the Engagement, in which he lost one hundred and twenty-five Men. This Battle was fought on the 25th of *April* 1610, and the *Spaniards* following their Blow, made themselves Masters of the Island of *Tider*, and came before that of *Ternate*, while the Inhabitants of the Island of *Banda*, encouraged by these Successes, revolted from the *Dutch*, and having surprized their General, *Peter William Verbeek*, at some Distance from their Fort, killed him, and all that were with him.

Admiral *Paul Van Caerden*, who was then in the *Indies*, thought to put a Stop to these Evils by his Presence, and going on Board a Sloop, with twenty-five Men, proceeded for the Island of *Banda*; but being attacked by a *Spanish* Vessel in his Passage, and his Crew having mutinied, he was taken Prisoner, and the *Spaniards* demanding for his Ransom the Island of *Machian*, 30,000 Ducats in Money, and half a Year's Wages for the Mariners, he chose rather to be carried to the *Philippines*, than submit to such Conditions. This happened on the 25th of *July*, in the same Year, and it was this News that induced the Company to send to strengthen a Fleet as that before-mentioned, under the Command of Admiral *Peter Barth* to the *East-Indies*.

They likewise thought fit to send a solemn Ambassy to the Emperor of *Japan*, at the Head of which were *James Speex*, and *Peter Sagerzen*, who, on the 10th of *August*,

1611, had an Audience of the Emperor at *Meaco*, and obtained very advantageous Terms from that Monarch, notwithstanding all the Opposition that could be given them by the *Spaniards* and the *Portuguese*. But while Things went on thus prosperously Abroad, the *East-India* Company were not altogether free from Difficulties and Discouragements at Home, occasioned chiefly by the Covetousness of some Merchants concerned in their Stock, who had fallen into a Practice of Jobbing, which was attended with many Inconveniencies, so that the Government interferred for the Remedy of these Grievances, which the States General redressed by a Placard published *February* 27, 1610.

In *May* 1611, the Company sent out four Ships more, under the Command of *Lawrence Real*, which were followed by a strong Squadron that put to Sea from the *Texel*, in the next *December*, under the Command of *Adrian Block Martz*, near the *Cape Verd* Islands; this Squadron met with seventeen *Spanish* Men of War, which fell upon them, but were to wantly received, that only four of them were left in a Condition to sail for *Spain* with the News of their Success. When the Directors received Advice of a sharp Engagement, they conceived, that their Ships must needs have received some Damage, and in order to reinforce them, fitted out two other Ships the next *May*, under the Command of *John Peterz Coen*. In fine, the Commerce to *India* became so extensive, that the Forces of the Company grew to that Height, that in the Years 1613, and 1614, they fitted out twenty-seven Ships at several Times, under the Command of several Commodores, particularly *Reyess* and *P'Lam*.

In order to a full View of their great Success, we need only to call our Eyes upon the following List of the Dividends that were made within the Compass of eight Years.

The Dividends made by the *Dutch East-India* Company, viz.

		l.

			} per Cent.

The Company being in such a flourishing Condition, the next Year, viz. 1615, the States joined in sending a strong Squadron to the *South-Sea*, by the Way of the *Magellan* Strait, upon the Prospect of surprizing the *Spaniards*, and weakening them on that Side, after which they might have an easy Passage to the *Indies*. *George Van Spilbergen* was Admiral in this Expedition, of which we have given a large Account in the former Part of this Work. In the mean Time, the War in the *Indies* continued, where the *Spaniards* did all that in them lay to preserve and to augment their Conquests in the *Moluccas*, which appeared to them of the greater Consequence, because of their Situation which was extremely favourable for securing a Communication between the Colonies and Settlements of their Countrymen in the *East* and *West-Indies*.

But the *Dutch* Admiral *Verbergen*, perceiving clearly that Don *Juan de Silva* was under great Difficulties from the Quarrels that continually arose between his Officers and the *Portuguese*, and that the latter was extremely backward in sending Don *Juan* the Succours that he expected, he resolved thereupon to lay hold of this Opportunity of crushing the *Spanish* Strength, and having fitted out a considerable Squadron, he cruized on the Coast of *Malacca* for the *Portuguese* Gallions, that were going to the Assistance of Don *Juan de Silva*. They were four in Number, and had a considerable Body of Troops on Board, but Admiral *Verbergen* nevertheless gave a good Account of them all, for the larg he sink, with all that were on Board her, made himself Master of the second with all her Equipage, and forced the other two on Shore with very little Loss to themselves. This News was brought to *Holland* by a Fleet of four Ships richly laden with Spices, and other Commodities, to the Value of three

three Millions of Ducats, which small Fleet arrived in the Month of *September*, 1616, and soon after the Company received the agreeable News that the King of *Ternate*, and the *English* settled in his Country, had joined the *Dutch*, and had obliged the *Spaniards* to abandon all the Places of which they were Masters in the *Moluccas*, by which that Nation was entirely driven out of the Spice Trade, for which they had formerly struggled so warmly with the *Portuguese*.

o. The Year before this, some Merchants, among whom were *Izaak le Maire*, made the greatest Figure, endeavoured to supplant the Company, and draw some Part of their Commerce into their own Hands, with this View, they resolved to search for another Passage to the *South-Sea*, than that of the *Magellan* Straights, and for that End, fitted out two Ships in *June* 1615, under the Command of *Cornelius William Schouten*, and *James le Maire*. In Effect, those Commanders found out a Passage to the Southward of the Strait of *Magellan*, which they called *le Maire* Strait. By that Passage they entered the *South-Sea*, and sailed as far as the *Moluccas*; but when they came to *Batavia*, their Ships were Ropp'd and sequester'd, upon the Pretence their going upon an Expedition contrary to the Patent given to the Company by the States. At that Time the Company sustained great Losses, and their Trade was much impaired by the Means of some Powders that were imported, and mixed with the Spices by the retail Merchants: This the Company reprobated to the States, and thereupon a Placard was issued, for preventing the like Abuses for the future.

In *June* 1617, *George Van Spilbergen* returned to *Holland*, after two Years Absence, in which he failed round the World. *Cornelius William Schouten*, and *James le Maire*, who had fit out for *Holland* the same Year with himself, returned on Board of him, but *James le Maire* died by the Way, on the 22d of the preceding *December*. The States perceived, that some Potentates were alarmed with the Company's Prosperity, and did their utmost to oppose it, particularly by inveigling their best and ablest Seamen, and drawing them off from their Service. Upon this Apprehension, the States published an Edict, by which the Desertion of Seamen was expressly prohibited. In the Year 1618, and 1619, the Company had very good Fortune, for they received from the *Indies*, at several Times, ten Ships with rich Cargoes, valued at six or seven Millions. This new Progress inspired them with fresh Courage, not only in resisting the *Spaniards*, but in concerting their Ruin by Way of Reprizal. This Work was carried a great Way by the Diligence and Affection of *Lourence Real*, a very knowing and prudent Man. This Gentleman served nine Years in the *Indies*, where the Company honoured him with the most considerable Post, and then he returned to *Holland*, *A. D.* 1620.

The Reader must observe, that all these Facts are taken from the *Dutch* Historians, and placed in that Light in which they represent them, because it would take up a great deal of Room, and oblige us to repeat many Things that have been said before, if we should labour to correct such Deviations from Truth, as from a Propensity towards magnifying the Power of the *East-India* Company, these Writers have now and then thought fit to make.

But with regard to *Izaak le Maire*, it may not be amiss for us to note, that we do not at all depart from the Judgment already given, concerning this Expedition, in the History of the Circumnavigators, but merely insert this, to shew in what Light the *Dutch* Authors would have us consider this Point, out of regard to their *East-India* Company. One Observation we shall take Leave to make by the Way, which is this, that the Treatment given to these Adventurers, has, in all Probability, been sufficiently punished by its Consequences; all that rich Trade that might have been derived from the Discoveries, and the Pursuit of the Discoveries of *Le Maire*, has been totally lost by Neglect, which perhaps has done as much Damage to the *Dutch*, as their *East-India* Company has done them Good. Of this, *Johann de Witt* was aware, and has very wisely remarked, that tho' the Pursuit of such a Commerce might have been beyond the Strength and Power of the *East-India* Company at that Time, yet

NUMB. 63.

there was no good Reason why the States should have abandoned it, or should not have encouraged the setting up a new Company, in order to have made a Trial of what this new Trade would have produced; for if new Trades do not prosper, they occasion only a temporary Loss to private Persons, and none at all to the States; whereas, if they thrive and turn to good Account, they not only produce immense Riches to such as are concerned in them, but prove also a mighty Advantage to the Publick. For new Trades, especially under such a Government as that of *Holland*, bring new People, and increase the Subjects of the State that encourages them, for Wealth is a powerful Attractive; and where Men are sure to be rich and free, there will never be any Want of People.

But the *Dutch East-India* Company began now to feel their own Strength, and, like all other Companies, attended to nothing but the promoting their own Power, which induced them, about this Time, to engage in the War of *Java*, where they had not only the Natives of that Country, but the *English* also to deal with; and by degrees, and their obstinately persisting in their Design, they overcame both, though not without great Difficulty and some Loss, which however was abundantly repaired by the Reduction of *Jacatra*, and the settling their new Colony at *Batavia*, which was done in 1619, chiefly by the great Assistance which the States-General afforded to their *East-India* Company, while ours was slighted and neglected by the Government here, either from a Want of knowing the Importance of that Commerce, or from a Want of Power to afford the Assistance necessary in case they had a just Apprehension of the Value of that Trade: But, however it was, most certainly the Establishment of *Batavia* proved the Basis of such a Power in the *East-Indies*, and gave the Company such an Opportunity of disposing all her Factories and Settlements, in an Order agreeable to that Government which she established in this new Capital, that we may from thence date her Acquisition of that Empire in the *Indies*, which not only renders her superior to all the trading Companies in the World, but in point of Power, Riches, and Dominion, very little, if at all, inferior to the *Dutch* Republick itself.

They began likewise, about this Time, to extend their Alliances in that Part of the World, and to treat with the *Indian* Princes in every Respect as Sovereigns; appointing at the same time Officers, who had not only the Titles of Generals, Commanders in Chief, Admirals, Governors, and such like, but had also the Power, and were essentially such as these Commissions spoke them to be; and were, at the same time allowed such Salaries, and invested with such Authority as did not seem either very agreeable to their Dependency upon the Republick, or consistent with the Modesty and Frugality of the *Dutch* Government at home. This, the States however were content to overlook, because, that such as had the Direction of the Company's Affairs, pretended that these Titles, Revenues, and Commands, were absolutely requisite in the Eastern Part of the World, to preserve the Respect and Obedience of the Natives of those Countries, who were to be wrought upon only by the Splendor of Dress, Equipage, and such like exterior Marks of Superiority. The Truth however seems to be, that the Common-Wealth Party in *Holland*, paying a very unwilling Obedience to their Stadtholders of the House of *Orange*, were not a little pleased to behold a kind of new Republick rising in the *Indies*, independent of these Princes, and where their Relations might be sent to acquire Fortunes, to learn Principles, and accustom themselves to the Discharge of publick Offices, without being immediately under the Direction of these Stadtholders who, by the Necessities of State, were placed at the Head of the Government at home.

Yet the Governor, General, and other principal Officers, always acted under the Prince of *Orange's* Commission as Stadt-Holder, and in most Part of the *Indies* magnified his Power, making the *Indian* Monarchs believe that he was a King, nay, and one of the greatest Kings in *Europe*. But this was only to serve their own Purposes, and to extend their Power the better; for the Directors of the Company continued to administer its Affairs in a manner independent of the Government of *Holland*, and only made use of

11 D

thive

these Commissions, because they could not well do their Business without them.

Two Things especially contributed to their Grandeur, and to their quiet enjoying a Power of such extravagant Extent. The first was the Factions and Divisions that reigned at that Time in *Holland*, which so occupied the Cares of the Government, that they were the less able to look abroad; for it was at this Juncture that those Troubles happened, which cost *Barnveldt* his Life, and the famous *Groenou* and other worthy Members of the State, a tedious Imprisonment. The second Cause was, the vast Riches which flowed in from the *East-India* Trade, and which were evidently of such prodigious Benefit to the *Dutch* Nation in general, as rendered it very improper to take any Measures capable of lessening the Interest or Authority of that Company, by which the Trade was managed, from which such mighty Profits accrued. Besides, it is not at all improbable, that both Parties had their Views upon this Company, and were in hopes of turning that Indulgence which was shewn it to their own Advantage, more especially because the Term granted by their Charter was drawing towards a Cloise, when it might have been practicable to have given it a new Term, and to have remedied all those Inconveniences, which, for particular Reasons, and perhaps from private and very different Views, had been hitherto passed by and over-looked: But, as we shall see hereafter both Parties in the *Dutch* Government were mistaken in their Conjectures, and the Company, instead of losing, or abating any Part of her Powers or Privileges, acquired still greater, and more extensive, by the new Charter which she obtained, as is usually the Case in Countries where Oppositions prevail; and the Government, whatever its Form may be, is not at Liberty to pursue such Measures as are most consistent with her Interest.

But to return from these Reflections to the Thread of our History, as it is taken from the *Dutch* Writers. The vast Success which attended this Company in all its Undertakings, so raised the Spirits, and exalted the Hopes of the States, that they at length began to think of doubling these Advantages, by erecting a new Company, with the same Power of trading to the *West Indies*, which this Company enjoyed in trading to the *East*. But though this was a Project both reasonable in itself, and which had all the Countenance the Governour could give it, yet being secretly opposed by the *East-India* Company, it went on but heavily, and they were forced to make several Alterations in the Charter, before the Capital of this new Company, which consisted of 7,200,000 Livres, could be made up; and the State likewise presented the new Company with three large fine Ships, equally fit for Trade and War.

But while so much Care was taking of the younger Child of the Republick, the elder was very well able to go alone; and there wanted not some who were for hurrying at too great a pace, and sending such Numbers of Ships to the *Indies*, as it the *Dutch* had not sought the Commerce but the Conquest of *Asia*, in which however they were checked, and all Things kept within due Bounds; which however it might dispense arbitrary Spirits, was certainly right in the main.

About this Time the Abuses and unwarrantable Practices relating to the Sale of the Actions or Stock of the Company, began to revive; upon which the States found themselves obliged to renew the Placard of 1610, with a few Amendments suitable to the Circumstances of the Time. In the Year 1621, the Ship called *Geede Vreede*, arrived in *Zealand*, having on board five Children of Kings or Princes, in order to their Education, in the Provinces, and Instruction in the Christian Religion, pursuant to the Tenor of the Letters that were written to the Prince upon that Subject. In February 1622, two Ships more came home with rich Cargoes; they brought Advice that the *Indian* Trade flourished still, that they continued to wage war with the People of *Bantam* in *Java*, and with the *Spaniards* in the *Molucca* and *Manila* Islands, and that they had already possessed themselves of the Island of *Banda*. Soon after there arrived three more, with Advice that the last Ships that went out had arrived safe in the *Indies* in four Months and three Days Sailing.

10. The Company's Patent expired this very Year, viz. 1622, and a Difference arose between the Directors and Subscribers, that might have extended to a great Height, if the States had not interposed. These wise Mediators appealed all by their Prudence. The Directors Accounts were called for, and pursuant to the Measures of Equity and Reason, a Dividend of 25 per Cent. was allotted to the Subscribers, and paid them in Cloves. After that the Company obtained a new Patent for twenty-one Years, commencing from 1623. By Virtue of the Renewal of the Patent, the Company had the Satisfaction to see four Ships richly laden, return in *October*. The Difference between the *English* and *Dutch* that had lain so long in Suffrage, was then accommodated upon the Payment of 800,000 Livres by the *Dutch* to the *English*.

The infinite Advantages that redounded to the Country by the erecting of this Company, could not dissuade the Envious from thwarting it to a flaming Degree: To remedy this, and prevent the other Inconveniences that might happen, the States thought fit on *March* 13, 1623, to add new Clauses to their new Patent, after the Discovery of a new Passage to the *Pacific Sea*, made by *James le Maire*. Their High Mightinesses, in Conjunction with the Company, came to a Resolution to send another strong Squadron that Way to the *Indies*, in order to ruin their Enemies. This Fleet set sail in *April*, under the Command of *James l'Hermitte*; but, before their Departure, two Ships and a Yatch set out for the *Indies* by the common Course. The next *May* two Ships came home, and found a very good Market. The Abuses in the Sale of Actions obliged the States to revive a third Time their Placard upon that Head.

In *September* *John Peter Coen* arrived at *Goeree* with four Ships on the Company's Account, and a fifth, which had straggled from them by the Way, arrived the next *November*. At that time a Handful of Merchants bought up, at one Sale, all the Company's Pepper, the Quantity of which amounted to 19,000 Bales, and the Sum which they paid for it amounted to 4,500,000 Livres, which was certainly a very remarkable Thing. In *May* 1624, the *Hoes* Yatch returned, having sailed to *Batavia* and home again in the Space of nine Months and seven Days. Their Intelligence imported, that all things went well in that Country, excepting that the *English* had raised some Commotions at *Amboyna*, but the *Dutch* used their utmost Efforts to hinder the *Spaniards* to trade in *China*, and hoped for Success; that three or four Ships were taking in their Lading in order to come home; accordingly three homeward-bound Ships arrived the next *September*; and in *May* 1625, another, called the *Heusden*, arrived from *Surat*, which gave Advice that their Affairs were in a pretty good Posture at *Ormaz*, and in the neighbouring Countries, from whence three Ships more returned the next Spring. The *Seboenboven*, an outward-bound Ship for the *Indies*, met with a violent Storm on the Coast of *Spain*, and was cast away off *St. Jago*, where twenty-six of the Men were saved, and carried to *Spain*.

This Affliction was alleviated by the Arrival of two Ships from *Surat* in *February* 1626, and two more soon after, having on board an Ambassador from the King of *Persia*. They brought the News of the Victory obtained over the *Portuguese*, and of the great Commotion in *Surat*, occasioned by the King's Son taking up Arms against his Father, inasmuch that both Armies were in the Field when the Ships came off. Upon this Intelligence they fitted out a Squadron of nine Ships, bound for that Country, under the Command of *Hybrandt*, who fought so bravely at *Sera Leoni* with *Campaen* the Pirate. In *June* two Ships of *James l'Hermitte's* Squadron came home, and before the Year was out, a Ship returned from *Ceramandel*. It was in this Fleet, that the famous Mariner, *William Yfbrantz Bontekos* returned safe to his native Country, whose Adventures, though related by himself with all the Plainness and Simplicity becoming his Condition, yet were long held absolutely beyond the Power of Belief, till, by a careful and strict Enquiry, every Circumstance was verified.

It is true, that a Thing of this Nature does not seem to fall so immediately under the present Section, but, undoubt-

this very Year, viz. on the Directors and to a great Height, their wise Mediators the Directors Accounts Measures of Equity was allotted to the es. edly, it has a very strict Relation to the Business of this Collection, and therefore I shall give as clear an Account of this Man's Misfortunes, as is possible, and in as few Words as I can.

William Bontekoe, Native of the Town of *Horn*, failed on the 28th of September, 1618, from the *Texel*, for the *Indies*, on board a Vessel of eleven hundred Tons, having two hundred and six Men on board, in Company with two Ships of a smaller Size. The Difficulties he met with began very early; for being separated from the rest of his Squadron by a violent Storm, which lasted for several Days, he therein endured such Hardships, and ran thro' such Variety of Dangers, that neither himself nor any of the experienced Seamen he had on board, expected to escape. At length, however, the Violence of the Tempest abated, and they found themselves in the Straights of *Sunda*, where they met with another Accident still more terrible; for one of the Crew going down to pump, at the same time that the Steward went to draw Brandy, it fell out un- luckily, that the former had a Candle in his Hand, out of which a Spark flew into the little Hole which the Steward had pierced in the Brandy-Cask, and that consequently took Fire. The Captain, soon apprised of the Accident, ran down and ordered them to throw Water upon the Cask, which, in their Confusion, they rolled down into the Place where their Smith kept his Coals; but, however, the Water seemed to have put out the Fire: But in about half an Hour they were fatally convinced, that the Coals being covered with the flaming Brandy, had taken Fire. In this Distress, they continued to throw great Quantities of Water upon the Coals, in hopes of extinguishing them, from whence a new Evil arose; the sulphurous Smoak of the Coals coming up through the Scuttles in such thick Clouds, that they were not able to see what they were doing; and, which was worse, they were so suffocated thereby, that they were no longer able to mind what they were about.

In this Distress they were constrained to shut the Scuttles, and to make Holes in the Ship's Sides, thro' which, by the Help of Canes, they continued to pour Water. Captain *Bontekoe* fore-seeing that their greatest Danger lay in the Fire reaching the Powder-room, sent for the Super-cargo, without whose Consent he could do nothing, and endeavoured to persuade him to consent that the Powder should be thrown over-board; but he was not to be moved, alledging, that if they threw over the Powder, and should afterwards be attacked, tho' by a Vessel ever so much inferior to them in Strength, they must be obliged to strike, without making any Defence. By this Man's Obstinacy, they were left in this dreadful Condition, fluctuating between Hope and Despair, the Fire appearing sometimes, and sometimes was so little to be distinguished, that they had Reason to think it had been out. But alas! they were soon convinced of their Mistake, for the Coals lying at no great Distance from a Fire of Rats, filled with Oil; the Fire very soon reached them, and then the Crew began absolutely to despair. Their Case indeed was miserable, beyond Description, for they were out of Sight of Land, the rolling Ocean on every Side, and the Fire immediately under them. It so happened, that their Shallop had been for some Time in Tow, and to make Room for the Men to bring Water to put out the Fire; they had likewise heaved out the Long-boat. The Crew observing this, slipped some to the Fore-castle, and some into the Galleries, from whence they dropped into the Sea, and then swam on Board the Shallop, or Boat; so that while the Captain was using his utmost Endeavours to preserve the Ship, he lost a great Part of his Men.

When he discovered this, he endeavoured to get them on Board again; but finding that impossible, he made all the Sail he could to come up with them, and while he was doing this, the fatal Blow which he expected, took Place, that is to say, the Ship blew up, and he was thrown from the Quarter deck with two great Wounds in his Head, his Body half scorched, and his Legs and Arms broken, that he could hardly move them. However, his being so suddenly plunged into the Water, brought him to his Senses; so that seeing the Mainmast of

the Ship near him, he with much ado got upon it, and by the Help of two Boards, kept himself floating till he was taken up by the Shallop with much Difficulty. It was by this Time Night, and though the Captain, as soon as he came on Board, advised them to keep as near the Wreck as they could, yet they kept rowing all Night long, as if they had been sure of making Land. But when the Day broke, and they saw neither Shore nor Ship, they came to the Captain, beseeching him to tell them what they should do. They were without Sails, without Compass, without Water, and had not above seven or eight Pound of Bisket, but were still rowing as hard as if they had been within Sight of Shore. The Captain exhorted them to Courage and Obedience, and in the first Place made a Review of them, by which it appeared, that there were forty-six in the Shallop, and twenty-six in the Long-boat. He advised them to lay aside their Oars, as serving only to weaken them, and bid them make use of Sails. They asked where they were to be had, the Captain replied, that every Man must pull off his Shirt, that by sewing them together, they might make as good Sails as they could. It was then objected, that they had not either Needle or Thread, but the Captain taught them to supply the first with Nails, and the latter by untwisting the Ropes. While they were at work upon the Sails, he employed the Carpenter in making a *Jacob's Staff*, for taking Observations; and tho' he was so ill, that he could not sit up, yet he made shift to draw a Compass, and a Chart, in which he laid down the Islands of *Sunatra*, *Java*, and the Straights of *Sunda*.

While they were thus at Sea, they got some *Mews*, and some Flying-fish, and when it rained, they collected the Water in their Sails, and preserved it in two or three Casks. But notwithstanding all this, they were in a Fort-night's Time driven to such Necessities, that it was with great Difficulty the Captain prevailed upon them to desist from a Design they had formed of killing and eating two or three Boys they had on Board. It was the 20th of *November*, that the Ship blew up, and on the 3d of *December*, they, with much Difficulty, made an Island on the Coast of *Sunatra*, from whence, with infinite Danger, they reached that Shore, and after running thro' Variety of Perils, in which they were preserved by the wise Counsel of their Captain, they at last passed the Straights of *Sunda*, and arrived safe on the Coast of *Java*, where they were taken on Board the *Dutch Fleet*, commanded by *Frederick Houtman of Alcemaer*, who sailed out of the *Texel* at the same Time with Captain *Bontekoe*.

After he had remained some Time with him, the Admiral sent Captain *Bontekoe* to *Batavia*, to the General *John Peter Coen*, who then commanded in the *Indies*, and who immediately gave him another Ship, as the just Reward of his Toils, and sent him with naval Stores and Provisions to the *Moluccas*. After this, he was employed by the same General in several other Services for the Space of two Years, and then he was sent to *China*, on Board the Fleet of *Cornelius Roggers*, who was entrusted with an Expedition of great Importance, which was to establish a Commerce with the Inhabitants of that Empire, either by fair Means, or by Force; and in case the latter only was found practicable, they were ordered to make themselves Masters of the Island and Fortrels of *Macao*, or one of those Islands on the Coasts of *China*, to which the *Portuguese* had given the Name of *Pisjadores*.

This Expedition, tho' very well concerted, and a Force employed, every Way sufficient for the Execution of it, yet failed by unforeseen Accidents, and the *Portuguese* at *Macao* having repulsed them in their Attempt upon that Place, they were obliged to think of executing the latter Part of their Commission by attacking some of the Islands before-mentioned. This proved a Work of Time, and was likewise attended with innumerable Difficulties, chiefly through the wicked and peridious Temper of the *Chinese*, who were too numerous to be wrought upon to Advantage by Force, and who under colour of Peace, betrayed and murdered such as trusted themselves in their Hands. They likewise frequently endangered the *Dutch* Squadrons by their Fireships, and in fine, gave such Disquiet to Captain *Bontekoe*, that he re- solve-

solved as soon as the Time for which he was engaged elapsed, to return to Europe, nor could all the Offers that were made him either of Power or Profit, induce him to alter his Resolution, or to think of staying in the Indies.

Accordingly, on the 6th of February 1624, he sailed from Batavia, in Quality of Captain of the *Holland*, with two other large Ships, viz. the *Middlebourg* and the *Gouida*; but in their Passage, they met with such a Storm, as carried away the Mainmast of the *Holland*, all the Masts of the *Middlebourg*, and sunk the *Gouida* to the Bottom. In this Distress, Captain *Bontekoe* behaved with his usual Courage and Prudence, by which both Ships were for that Time preserved; for notwithstanding the perilous Distress his own Ship was in, he, with much Difficulty, and yet, without using any other Course than that of Persuasion, prevailed upon his Men to spare their Mizzenmast and Bolt-sprit to the *Middlebourg*, which otherwise could not have been kept above Water. This was on the 22d of March 1624, and having performed this good Office for their Friends and Countrymen, Captain *Bontekoe* bore away with his own Ship for the Island of *Madagascar*, where, in the Bay of *St. Lewis*, he found Means to careen, refit, and repair his Ship, with which he then proceeded for *Holland*.

On the Coast of the Island of *St. Helena*, they met with a Spanish Carrack, so stationed in the Road, as to prevent their watering, which was what they absolutely wanted. Captain *Bontekoe* did all that in his Power lay to have engaged the Spaniards to allow them to put on Shore, and take in Water, but they could not be persuaded by far Means, and thereupon an obstinate Engagement ensued, without any Advantage to either Party; for the Dutch were at last obliged to continue their Voyage, with the little Water they had, and the Carrack was so dreadfully torn in the Fight, that the Spaniards finding it impossible to keep her above Water, took out her Guns and Cargoes, and then let her sink. The remaining Part of their Voyage was not attended with any remarkable Accident, except their being able to perform it with so small an Allowance as a Quart of Water a Day per Man, from the Island of *St. Helena* to the Coast of *England*. At length, on the 13th of September 1625, Captain *Bontekoe* arrived safely at *Zealand*, after having been absent from his Country seven Years, and in that Time run through such a Variety of Fortunes, as scarce any other Seaman ever met with. It may not be amiss, to lose this Account with observing, that the *Middlebourg*, tho' so happily preserved by Captain *Bontekoe*, never returned to *Holland*, but was undoubtedly lost, tho' its impossible to say when or where.

After the *Holland* parted with her, she put into the Island of *Madagascar*, and there buried a Part of her Ships Company, amongst whom was the famous *William Cornelius Sebouten*, who sailed round the World with *James le Maire*, as the Reader has already seen in the large Account given of their Voyage in the first Chapter of this Work. But to return from this Digression to the Thread of our History, which will shew, how as the first Beginning of the Company was fortunate, so in her future Progress her Prosperity has never failed.

11. Their Commerce flourished so much, that they were obliged to enlarge the Number of their Ships every Year, and the Company being sensible, that their Prosperity was chiefly owing to the good Conduct of their Admirals, they solicited *John Peter Coen* to make a second Voyage to the Indies, in the Quality of Governor-General, at last *Coen* consented, and put to Sea in April 1627, soon after the *Rosterdam* came Home, and was quickly followed by four other Vessels, under the Command of *John Willem Verjeeber*, who had sailed from *Holland* with *Merritte*, and arrived at this Port in July. The rich Cargoes of these Ships was scarce unloaded, and lodged in the Warehouses, when *Alexander-Bloek Marissen* was ready to set off with a Squadron of eleven Ships, this being his second Voyage as well as Admiral *Coen's*. He put to Sea in October, and lost two of his Ships in a Storm, but saved the Men and the Cargoes. In the same Month of October, *John Karstenz of Embden*, a Merchant, whose Vigilance and Experience rendered him very famous, return-

ed to the United Provinces, after several Years Administration. He brought with him three rich Ships laden at *Surat*, and had been obliged to put in at *Perryneuck*, where an Embargo was put upon his Ships, for some Time. In June 1628, the Company had the Satisfaction of seeing five other Ships come Home, under the Command of the *Steur Carpentier*, who had been the Company's General in the Indies, and the Cargoes of these Ships were as valuable as that of the former.

Notwithstanding these lucky Adventures, the Company was perplexed by some Accidents, most of which they had no Reason to expect. The English stopped their Ships as often as they had Occasion; and the *Dunkirk* Privateers never failed to give them chase. This obliged them to resolve upon keeping a strong Squadron every Year in the German Ocean, in order to cruise for their homeward-bound Ships, and conduct them safe to their Ports. The first Squadron that cruised the German Ocean was commanded by *John Dierkz Lam*, who had been in the Indies; upon his Approach the *Dunkirk* Privateers retired. The three Ships that I mentioned above as coming from *Surat*, under the Command of *John Karstenz of Embden*, being stopped for some Time in *England*, were afterwards dismissed, and their Arrival inspired the Company with fresh Courage. Soon after their Arrival, a Squadron of eleven Ships set off for *India* in October, under the Command of *James Spex*, who was accompanied by *John Valbeck*, a famous Mathematician.

On the other Hand, the Company had the Mortification of seeing a Ship, called the *Piano*, arrive with the unwelcome News that they had let sail from *Batavia* the fore-going January, in hopes to pass the Strait of *Boj* in Time; but being disappointed, run ashore in the Lat. of 21°, upon the South-side of the *Terra Aogeliamia incognita*; upon which they were obliged to throw overboard a great Quantity of their rich Effects, and to get the Ship afloat again with great Difficulty and Danger. Upon their Way they met with *Bled's* Squadron, which had likewise had very stormy Weather. By this Ship they had Notice, that the People of *Java* had formed a Conspiracy to assassinate *John Peter Coen*, which was discovered by a young Chinese Boy, and thereby the Execution of that detestable Design entirely defeated.

It was within this Compass of Time that those great Discoveries were made by the Dutch Officers on the Southern Continent, of which we have to often spoke. The large Country of *Carpenteria*, now better known by the Name of *Neo-Holland*, was so called from General *Carpenter*, who discovered it in 1628. The western Part of the same Country, which lies to the South of *Java*, was discovered the same Year, on the Behalf of the Company, and from the Name of the Commodore who commanded the Squadron, was styled *Drevelt's Land*. But all the southern Coasts lying towards the Sea, which separates this Continent from that which lies close to the South Pole, was discovered in January 1627, by *Peter de Nevis*, who had then by an Opportunity of bestowing his Name on one of the finest Countries in the World.

All these Discoveries, together with a just Report of their Affairs, the Company received from General *Carpenter*, who returned with five Vessels richly laden. And upon his Report it was that the Directors resolved to send a Squadron of eleven Sail into those Parts, under the Command of Commodore *Francois Pelsiert*, of whom we have elsewhere given a large Account. It may not be amiss to observe, that while the Company was doing all these great Things, their Country was torn with civil Dissentions, chiefly thro' the Ambition of the Prince of *Orange*, who endeavoured to make himself in some measure independent of the States; so that if the Affairs of the Indies had not been under a Direction distinct from that of the Government, it is simply impossible that they should have succeeded as they did, or brought such Advantage to the Dutch Nation.

12. The Year 1629 was as favourable to the Company as those that went before, for they had the Satisfaction of the Arrival of six Vessels, under the Command of three several Commodores, who informed them, that after several dishonourable Attempts, in order to surprize the

Dutch, the King of *Mataram* had at last laid Siege to *Batavia*, and at the End of three Months was forced to break up with the Loss of 16,000 Men. *Peter Vanden Broecke*, who had likewise been long in *India*, and was the first Introducer of Trade upon the *Red-Sea* and the adjacent Countries, returned home the next Year: He brought with him seven Ships, the Cargoes of which were valued at Eight Millions. But these happy Incidents were accompanied with a very disagreeable Circumstance; for of the eight Vessels he commanded, he brought home but six, one being lost by Fire under the *Apores-Ilands*, and the other having straggled from the Fleet; however, the last went round by *Ireland*, and came safe home. *Broecke* acquainted the Company that General *Coen* died suddenly two Days before the Arrival of *James Spex's*, and that *Spex* acted as General by way of Provision. In fine, *Antony Van Diemen* returned in the Year 1631, with seven Vessels, which brought the Company incredible Treasures.

These mighty Advantages enabled the *East-India* Company to prosecute their Designs to their utmost Extent to enlarge their Commerce in the *Indies* by every Method possible, and in order thereto made use, with great Dexterity, sometimes of Force, and sometimes of fair Means, to compass their Ends, and to secure to themselves the largest Share of a Trade, which, by Experience, they found of such wonderful Benefit. It was with this View, that in 1641, they attacked the Importance of *Malacca*, the strongest Place the *Portuguese* had left in the *Indies*, and which was of so much the greater Consequence, because it not only secured their Commerce with the Kingdoms of *Jobore*, *Siam*, and *Pegu*, but also afforded them vast Advantages for the Management of their Trade with *China* and *Japon*; at the same time it made them Masters of that Strait which is of so great Consequence to the Commerce of the *Indies* in general; so that whoever is Master thereof may, in time of War, be in a Condition to give Law to all the Nations that carry on any Trade in that Part of the World.

It was in the same Year that the *Dutch* secured to themselves the entire Possession of the rich Commerce of *Japon*, by the total Exclusion of the *Portuguese*, and all other Christians. We have already mentioned this Matter more than once, and given the Reader such Lights therein as may enable him clearly to conceive how that Matter was brought about, and how far the *Dutch* may be justly charged with contributing thereto. Instead therefore of insinuating farther upon that Matter here, I shall content myself with a single Remark, which I think of some Importance.

It is this, that whatever other Nations, or the *Dutch* themselves, may think of the Benefits accruing from this Exclusion of other Nations; it is however, demonstrable, that they would have carried on a more extensive Trade to that Country, and with much more Ease to themselves, if that Trade had remained on the old Foot; for immediately after the Expulsion of the *Portuguese*, the *Dutch* themselves were obliged to quit the Port of *Firando*, where they had erected a noble Magazine, built all of Stone, and were obliged to shut themselves up in the little Island of *Disma*, where they have ever since been subject to the Caprice of the *Japones*, and exposed to a Multitude of Injuncts and Inconveniencies, which never could have betfallen them but from this Event; so that, though I confess, the *Dutch* are much enriched by the *Japones* Trade, yet, I think, I have Reason to deny that they are at all the better for the Exclusion of other Nations.

13. The Power and Credit of the Company was now grown to such a Height, the Wealth they brought into the Nation was of such Consequence, and so necessary to the State, and the Circumstances of Things were so changed in their Favour, that without any Difficulty, at the Time of the Expiration of their present Charter, they procured the Renewal thereof for the same Term of twenty-one Years, to commence from the First of *January* 1644. And so effectually did their Directors with the Affairs of the Company with those of the Government, that upon the Conclusion of the general Peace, the same Care was taken of their Interests as of those of the Republick, to which the *Spaniards* contented, and thereby relinquished

NUMB. LXIV.

their Right, as they had long before lost the Power of questioning the Conquests of the Company in the *East-Indies*. It was in Gratitude for all these Favours, that the Company entered the same Year into a Project of erecting, at an immense Expence, a Monument to the commercial Fame of the City of *Amsterdam*.

The Occasion was this: The old Town-house, or Guild-hall, which had hitherto served well enough as an Exchange for the Merchants, in which they met to transact Business, was now thought too little, and also too mean an Edifice for a City of such Wealth and Trade. Upon this the two great Companies of the *East* and *West-Indies*, undertook to build a new Stadthouse, the first Stone of which was laid on the 29th of *October* 1648. While this noble Structure was raising, an Accident happened, which rendered it not only convenient, but necessary; for by some Means or other the old Town-house took Fire, and was burnt down to the Ground, which obliged them to hasten the Erection of the new one, which was fit for Use in the Year 1655, and has been ever since considered as one of the finest Structures in the World, in which all the Power of Architecture is displayed to the utmost without, and all the Riches of the most distant Countries in the World are assembled to render it magnificent within. There never was a Time in which the Company were better able to launch into so vast an Expence, her Commerce being now at its greatest Height, and her Power raised to such a Degree, that, from the *Cape of Good-Hope* to the most distant Parts of *China*, there scarce inhabited a Nation which had not learned to respect her, by having experienced the Effects either of her Resentment or Good-will.

Yet all this Power, Wealth, and Trade, did not render such as had the Care of the Company's Concerns at all slothful or negligent; on the contrary, they were always contriving some new Scheme for the Benefit of those by whom they were entrusted; and being very desirous of overcoming those difficulties which had hitherto cramped their Trade in *China*, the General and his Council at *Batavia*, in the Month of *July*, 1655, sent a solemn Embassy, at the Head of which were *Peter Boyer* and *James Keyser*, with rich Presents to the *Chinese* Emperor. He then resided in the City of *Peking*, to whose Presence, after a Stay of eight or nine Months, they were admitted, and from the Civility shewn them at their first Audience, they had great Hopes of Success; but they soon discovered that there were Persons in that Court who traversed all their Designs, and found Means to misrepresent all the Propositions they made. The Chief of their Enemies was Father *Adam Schaal*, a Native of *Cologne* in *Germany*, and by Profession a Jesuit. He had resided in *China* upwards of five and thirty Years, and had wrought himself so highly into the Emperor's Favour, that he raised him to the Degree of a Mandarin of the first Rank, and placed him at the Head of all the Philosophers and Mathematicians in the Empire. This Man, by his great Interell, and Knowledge, effectually baffled the Designs of the *Dutch*, for he represented them as a People without any Lands or Settlements in *Europe*, who lived merely by Peddling and Piracy, and had by Treachery and Cruelty raised themselves a large Empire in the *Indies*, at the Expence of the Natives, and more especially of such Princes as suffering themselves to be deceived by their fair Pretences, had admitted them into their Dominions, and by that Means afforded them an Opportunity of distressing them and their Subjects.

The *Chinese*, who are naturally suspicious, having once got these Notions into their Heads, began to put such Questions to the *Dutch* Embassadors as might best enable them to judge of the Truth of what they had been told: And, upon their asking at how great a Distance the Seat of their Government lay from *China*? they answered, about five thousand Leagues; and being interrogated as to the Power and Strength of the Colony at *Batavia*, they gave such Answers as were true in themselves, and most likely to create Respect: But these were precisely the Things that turn most to their Disadvantage; because they seemed exactly to agree with what Father *Schaal* had laid down. So that towards the latter End of the Year 1657, the Em-

11 E

Embassadors

ambassadors quitted *China*, without being able to make any Progress in the Execution of their Commission; so strong were the Prejudices raised against them, and so great the Apprehensions the *Chinese* had of their Danger, in case these Strangers were admitted to trade in the Ports of their Empire.

But if they were disappointed in their Hopes on this Side, they had better Success in *Japon*, to which Country they sent *Zachary Wagbonaer*, with the Title of Ambassador to the Emperor, with Orders to use his utmost Endeavours to gain a perfect Knowledge of the Policy of that great Empire, and to make himself likewise as agreeable as possible to the Emperor and his Ministers, which Commission he was very capable of performing, being a Man of deep Reach, very great Experience, and extremely courteous and affable in his Deportment. He had not been long however at *Ido*, before a sudden Fire reduced that City to Ashes, which occasioned such Confusion at the Court of *Japon* as induced the *Dutch* Ambassador to return home.

He was scarce arrived at *Batavia* before News came that great Disputes had arisen between the *Japoneze* at *Nangajiqui* and the *Dutch*, who were settled in their Factory there, which alarmed the General and Council so much that they obliged *Mr. Wagbonaer*, much against his Will, to make a second Voyage to *Japon*, where he did not arrive till the Beginning of the Month of *March*, 1659. He found Ways and Means to ingratiate himself with the Emperor and his chief Ministers, and by promising two Things on the Part of the *Dutch*, obtained all that he could reasonably ask in their Favour. The first of these was, that they should give early Intelligence of any Designs that might be formed in the *Philippines* to the Prejudice of the *Japoneze* Empire: The other, that they should forbear taking *Chinese* Ships upon the Coast of *Japon*, because the Emperor allowing them to trade in his Dominions, it was but reasonable that he should be able to protect them.

While these Negotiations were carrying on in the most distant Parts of the East, there arose a new War in *Java*, which threatened Ruin to the *Dutch* Affairs. We have touch'd upon this more than once, but, for the better understanding this History, it will be necessary to give a concise View of the whole Matter from the *Dutch* Histories. The Island of *Java* had been under the Power of a single Monarch, sometimes stiled by the *Dutch* simply the Emperor, and at other Times called King of *Japara*, from whom the Governor of *Bantam* revolted, assumed the Title of King, and was supported in the Quality of an independent Prince by the *Dutch*. It was by the adroit Management of these Divisions that they maintained and supported their own Power; for, whenever the Emperor of *Java* attempted any thing to the Prejudice of *Batavia*, the King of *Bantam* was sure to take Arms in their Favour; as, on the other Hand, whenever the King of *Bantam* took up Arms against them they never failed to have Recourse to the Protection of the Emperor of *Java*. But in the Year 1602, the Emperor being very much embarrassed at home, the King of *Bantam* had hold of this favourable Opportunity to raise a great Army, and to attack the *Dutch*, supposing that for want of the Emperor's Assistance, he should soon be able to make himself Master of *Batavia*, to which he immediately laid Siege. He found himself however extremely mistaken, for the Company was by this time become so potent, that they were able to defend themselves by their own Strength, which they did so effectually, that after the Loss of a great Part of his Forces, the King of *Bantam* found himself obliged to raise the Siege, and to retire precipitately into his own Dominions.

The Emperor of *Japara* had still worse Success; for though he inherited from his Father an invincible Hatred to the Company, yet they made him feel the Effects of their Power, and made him suffer severely for his Obliquity, though they were never able to conquer it, or to bring him either by fair Means or Force, to have any Correspondence with them. Their Disturbances at home did not hinder the Governor and Council from engaging in a foreign War, for the support of one of their Allies, which

was the King of *Bengal*, who was in great Danger of being dethroned by his Brother. At first the *Dutch* only furnished him with Provisions and Artillery, and offered him, in case he was expelled, a Sanctuary at *Batavia*. But afterwards, finding that a considerable Part of his Subjects adhered to him firmly, they sent over Troops to his Assistance, and thereby not only delivered him from the immediate Danger he was in, but restored him to his former Dignity: In Gratitude for this seasonable Assistance, he gave them Leave to erect, not only a Factory, but a Fort at *Hughly*, well fortified with twelve Pieces of large Cannon mounted, and a good Ditch. It was by this Means that they ruined the *English* Trade there, and secured all the Commerce of those Parts to themselves.

Yet these remarkable Instances of good Fortune could not make them forget the Misfortune of their Affairs in *China*, much less incline them to forgive the *Jesuits*, to whom they attributed the Defeat of that Embassy, which cost them an immense Sum of Money, and which, as we have shewn before, ended in an absolute Disappointment. To be revenged on the Authors of this Disgrace, they fitted out a Fleet of thirty Sail, with Orders to sail to the Island of *Macassar*, and to attack the City of the same Name, in the Port of which they knew there was a *Portuguese* Fleet, richly laden, and in which the *Jesuits* were deeply concerned. On the 7th of *June* 1660, the *Dutch* attacked *Macassar* by Land and Sea, and tho' the *Indian* Monarch of that Place defended his Allies with his whole Force, yet the *Dutch* obtained a complete Victory; for they burnt three of the *Portuguese* Ships, sunk two, and took one, so richly laden, that it sufficiently reimbursed the Expence both of the *Chinese* Embassy, and of this Expedition. What was still more honourable for the *Dutch*, the unfortunate King of *Macassar* was obliged to send a solemn Embassy to *Batavia*, and to submit to such Terms as the *Dutch* Governor-General thought fit to prescribe, which were hard enough, since he was obliged, not only to expel all the *Portuguese* in his Dominions, but also to promise, that he would never admit them, or any other *Europeans*, to settle in his Territories; so that we may justly affirm, that never any Expedition was more completely executed, or turned more to the Reputation of the *Dutch* Company than this, which not only humbled their Enemies, but brought vast Advantages to themselves.

But as the greatest Fortune is seldom the most secure, so immediately after this mighty Success, the *Dutch* Company received one of the severest Checks they had ever met with since their Establishment in the *Indies*. They had at this Time a very fine Settlement on the Island of *Formosa*, one of the fairest and most fruitful Countries in the East, abounding with all the Necessaries of Life, producing various rich Commodities, and affording them the Opportunity of carrying on a vast Commerce from thence. They had built for the Protection of their Colony, a square Fort, with large Batteries, and below these, towards the Sea, they had another Fortification, which covered the Palace of their Governor, consisting of two regular Batteries, an excellent Covered-way, and four Half-moons, the whole united to the Fort by very strong Walls defended by a great Number of Cannon, and the whole protected by a numerous Garrison. The Town was long and large, extremely well peopled, and the Inhabitants, from seven Years old and upwards, being charged with a Poll-tax, at the Rate of half a Guilder a Head, produced a Revenue more than sufficient to discharge the Expences necessary for the Maintenance of this important Colony. Such indeed it might be well stiled, since by its Situation, at the Distance only of twenty-four Leagues from the Coast of *China*, and one hundred and fifty from *Japon*, it afforded them the Means of carrying on, with the greatest Ease, a Trade to both that was exceedingly beneficial.

The *Chinese*, in the Year 1653, had had a very deep Design for the Destruction of the *Dutch*, by an universal Conspiracy amongst the Natives, which however had not the designed Effect; for being luckily discovered in Time, it was absolutely defeated. This Piece of good Fortune made those who were entrusted with the Care of this Settlement, more remiss than is usual with the *Dutch*, in so much, that they neglected the Fortifications, and did

ferred their Magazines to grow empty, while by a steady Application to Trade, they were labouring to advance their private Fortunes. At the Time the *Tartars* made their last Conquest of *China*, there dwelt in the *Dutch* Town, upon this Island, a Taylor, whose Name was *Chin-chihung*, by the *Dutch*, and other *Europeans*, called *Iquon*. This Man had a prodigious Spirit, a vast Capacity, and a Courage equally stubborn and enterprising; and, from an unconquerable Aversion to the *Tartars*, got together a few Men, two or three small Barks, and with this Force turned Pirate, or Privateer, which ever you will please to call him. In a short Space of Time, his Power increased to such a Degree, that he became extremely formidable to the *Tartar* Emperor, who finding that his Poible was Ambition, offered to make him King of the two great Provinces of *Canton* and *Fokien*, and sent for him to *Fochou*, where he promised to give him the Investiture of his new Dignity; but instead of keeping his Word, he caused him to be seized, and conducted to *Peking*, where he was soon after poisoned.

This Taylor, who was so near being a King, had a Son, whose Name was *Coxonia*, or *Coxenga*, and who had been Taylor to Mr. *Puttman*, Governor of *Fort Zealand*, and who, on his Father's Imprisonment, took upon him the Command of the Fleet. He at first demanded Succours from the *Dutch*, and promised them great Advantages if he was successful against the *Tartars*, which they refused; and this provoked him to such a Degree, that he resolved to turn his whole Force against *Formosa*, the rather, because he had a good Intelligence from the *Dutch* Town, and knew that their Affairs were in a very bad Condition. He assembled, with this View, a Fleet of six hundred Sail, most of them Frigates of small Force, but near one hundred were stout Men of War, of forty Guns and upwards. The News of those great Preparations reaching the Ears of the *Dutch* Governor, who was at that Time Mr. *Fredrick Cojet*, Successor to *Cornelius Keiser*, he immediately dispatched Advice to *Batavia*, and demanded a speedy Succour, and also to *Japon*, for the Assistance of such *Dutch* Ships as happened to be there. All this, however, was to no Purpose; for before any Relief could come, *Coxenga* sent his Fleet under the Command of his Uncle *Souja*, which appeared before the Place in the Month of *March* 1661.

The *Dutch* Governor sent a Detachment of three hundred and fifty Men to prevent the debarking of their Troops, who behaved as well as Men could do, but to very little Purpose, as we may easily guess, since the *Chin-ese* landed forty thousand Men. They soon cut off the Communication between the Town and the Island, and having made themselves Masters of the adjacent Country, *Coxenga* treated all who had joined the *Dutch*, in the same Manner that *Nicholas Werburgh*, who was Governor in 1653, did such as were concerned in the Rebellion; that is to say, he put them to Death with all the Marks of Shame and Cruelty he could invent, and without the least Regard to Age, Sex, or Quality. After this, he attacked all the Outworks at the same Time, which prevented the *Dutch* from succouring each other; so that these Places were very soon carried, tho' with a vast Effusion of Blood, and the Governor was forced to retire into *Fort Zealand*.

The Conqueror considering the great Strength of the Place, and how unfit his Army was to undertake Sieges, made choice of Mr. *Anthony Handvoeck*, the eldest of the *Dutch* Clergymen, and sent him with his Brethren, two or three Schoolmasters, and some of the gravest Men among his Prisoners, to persuade the Governor to surrender, declaring, that he was content they should retire in Safety from *Formosa*, and that he would not touch the Hair of a *Dutchman's* Head, or one Farthing's Worth of their Goods; but if they refused this Proposition, he would put them all to the Sword, without Mercy. The Governor told those who brought him this Message, that he had all the Sorrow and Concern in the World for their Misfortune, but at the same Time, that there was nothing could induce him to betray his Faith, or to give up the Place he commanded into the Hands of the Enemy. With this Answer they returned to *Coxenga*, who, as soon as he

heard it, caused all his Prisoners to be put to Death, Men, Women and Children.

When this was done, he embarked the best Part of his Army on board three hundred Juncks, a very light Sort of Vessels, with which he block'd up the Port, while he fired upon the Fortrefs from two Batteries of twelve Pieces of Cannon each. While Things were in this Situation, there arrived from *Batavia*, a stout Squadron of nine Men of War, commanded by Commodore *James Cawen*, who immediately made the best Disposition he could for the Relief of the Place. With this View, he landed the Troops he had on Board, and being joined by a Part of the Garrison, marched to attack 6000 *Chin-ese* that were covered by a Redoubt, not yet mounted with Cannon. These Troops being well armed, and compleatly disciplined, received them in Order of Battle; and tho' the *Dutch* fought with great Resolution, and renewed the Attack several Times, they were at length obliged to retire with the Loss of four hundred Men. The Commodore then ordered his Ships to force a Passage into the Port, but the Juncks drawing very little Water, kept close under the Shore, where the great Ships durst not follow them; and in this Attempt the *Dutch* lost two of their best Men of War, of which one run ashore, and had all her Crew, to the Number of three hundred and eighty Persons, killed by the *Chin-ese*, the other was blown up by a Shot fired into her Powder-room.

Commodore *Cawen* perceiving that it was impossible for him to do any Thing more, detached two of his Ships to *Japon*, and having taken on Board two hundred Women and Children that were in the Fort, he sailed back to *Batavia* with the five Ships remaining of his Squadron, and made an exact Report to the Governor of the Council of the State of their Affairs in *Formosa*.

The News was received there with deep Concern, and a Resolution was immediately taken, to send an Ambassy to the Emperor of the *Tartars* in *China*, to inform them, that they were in Danger of losing *Formosa*, on account of refusing to assist this *Chin-ese* in his Rebellion; but not depending altogether on the Success of this Ambassy, they ordered five Ships of War to be equipped, and to sail forthwith to the Relief of the Place. The Governor *Cojet* made so obstinate a Defence, that old *Souja*, the Uncle of *Coxenga*, resolved to raise the Siege without the Knowledge of his Nephew, with, at least, that Part of the Army which he commanded. But tho' he managed this Design with the utmost Secrecy and Caution, yet *Coxenga* came to have a Suspicion thereof; upon which, forgetting the Nearness of his Relation, he caused old *Souja* to be arrested, and put in Irons; after which, notwithstanding he had the Plague and Famine in his Camp, he pushed on the Siege so vigorously, that the Governor found himself obliged to surrender, notwithstanding that the Succours he expected were in Sight.

Accordingly the Place being given up to the *Chin-ese*, he marched out with the Remains of his Garrison, and being taken on Board the Squadron, he returned to *Batavia*, where, instead of having received the Thanks, as he might reasonably have expected of the Governor-General and Council, he was committed to Prison, and kept there a long Time, under Pretence, that he had given up the Place too soon, because the *Dutch* Squadron was in Sight. To say the Truth, we may, in some Measure, pardon the Injustice of this Proceeding, when we consider the Importance of the Place, that the Loss was irreparable, and that, instead of having the *Portuguese* and *Spanish* Trade at their Mercy, their own was now so much expedit, that it was very difficult for them to send their annual Squadron to *Japon*. This Misfortune, however, brought about a Correspondence with the *Chin-ese* Emperor, who consented to give them his Assistance, to restrain the Power of *Coxenga*, to hinder him from pirating in these Seas, and thereby disturbing the Commerce of *China* and *Japon*.

14. It was about this Time, and by the Mediation of King *Charles II.* who had married the Infanta of *Portugal*, that a Treaty of Peace was set on Foot between that Crown and the Republick of *Holland*, which was soon after concluded, to the mutual Satisfaction of both Parties; for the

East-India Company were much too strong for the *Portuguese* in that Part of the World, and had in a short Time, deprived them of their most valuable Settlements; yet, in the *West-Indies* the *Portuguese* were too hard for the *Dutch*, and had not only recovered *Brazil* out of their Hands, but were also in a fair Way of making still greater Conquests; and besides all this, their Privateers were so numerous, that the *Dutch* found their Trade in the *Mediterranean*, and on the Coast of *Africa*, very precarious; so that notwithstanding the Advantages made in the *Indies*, they had no Reason to desire the Continuance of the War.

The Company however, as if they had been really Sovereigns within the Bounds of their Charter, took little or no Notice of the Peace; so that in the Year 1660, they attacked *Coilan* on the Coast of *Malabar*, and having reduced it, they next attacked *Cananor* on the same Coast; of which, tho' with some difficulty, they became Masters; and tho' their first Design was to have demolished the Place, and to have established only a Factory there; yet, on second Thoughts, and when they came to consider the Convenience and Importance of its Situation, they changed their Minds, and determined to repair their Fortifications, and keep it as a Settlement of their own. After the Reduction of *Cananor*, they next proceeded to *Cochin*, a City of still greater Force and greater Consequence, as being a Bishop's See, and a Place of great Trade. The *Dutch* Commodore *Goens* met here with greater Resistance than he expected, and during a Siege of some Continuance, lost a considerable Number of his People; but being resolved to master it, cost what it would, he prosecuted his Attempt with such Steadiness, that at last he prevailed; and the *Portuguese*, who had lost a vast Number of Men during the Siege, were constrained to surrender the City into his Hands.

When he was possessed of it however, he scarce knew how to act, because on the one Hand he saw that the Preservation of it was a Thing of great Consequence; and, on the other, that it would require a very numerous Garrison, and a great Expence, to put the Fortification into a proper repair: He apply'd himself therefore to the General and Council at *Batavia*, who immediately sent him Orders not to spare for any Expence, either of Men or Money, but to push his Fortune to the utmost; and at the same time they sent him this Message, they sent likewise a fresh Squadron and a considerable Body of Troops on board it. This so encouraged Commodore *Goens*, that he marched with his Force by Land to attack the City of *Porca*, which was the Capital of a little *Rajah* or *Indian* Prince, who had been subject to the *Portuguese*: But he not caring to dispute with those who had beat his Masters, offered to become their Tributary, and to pay them the same Obedience which he had formerly done to the Crown of *Portugal*; and this being as readily accepted as offered, put an End to the War on that Side.

The City of *Cranganor* which is situated between *Callicut* and *Cochin*, fell next into his Hands without a Blow; and this in the Space of one Year, the *Dutch* expelled the *Portuguese* out of all the Places they held on the Coast of *Malabar*, and acquired to themselves a Territory of one Hundred and fifty Leagues in Length, with all the Trade belonging to it, and which the *Portuguese* had enjoyed without Interruption from the Time of their first Settlement in *India*. They likewise contracted Alliance with the *Simon of Calicut*, the King of *Cochin*, and other *Indian* Princes.

They also had hold of this Occasion, to send a solemn Embassy to *Arazul*, who had just mounted the Throne of the *Mega*, by whom they were most graciously received, and an Intercourse of Friendship kindled between them: They took the same Method with respect to all the Monarchs and Dominions by on the Gulph of *Bengal*, and with the same Success. It was not long however, before they found some Cause to differ with the King of *Siam*: Upon which they withdrew their Factories out of his Dominions, which so alarmed that Prince, that he immediately sent Deputies to *Batavia*, to know the Cause; which the Council answered to him by a very respectful Letter: On receiving which, he sent an Ambassador to invite them to a Conference at *Amoy*, not only of Redress in

respect to the Grievances they complained of, but of any other that might happen in Process of Time; and the Company accordingly re-settled their Factories at *Siam* and *Ligor*.

Not long after the composing these Differences, there arose fresh Grounds of Complaint, but on the opposite Side; for the Crew of a *Dutch* Bark murdered thirty-five *Siamese* in cold Blood, after having ravished their Wives and Daughters. But before the Inhabitants or their Monarch had Time to complain, the *Dutch* Council at *Malacca* caused the Offenders to be apprehended; four of whom they broke alive upon the Wheel, and five they hang'd; which gave such Satisfaction to the Natives, that they never heard any more of this Matter.

In the midst of all these Successes, they could not forget the Loss of *Formosa*, or the Overtures made by the Emperor of the *Tartars* in *China*, for restoring to them that Place. There was the greater Reason to expect that this Monarch would act sincerely with them, because *Coxenga*, not satisfied with *Formosa* and its Dependencies, had actually made himself Master of several Islands on the Coast of *China*, and some Towns upon the Continent. On the Assurances therefore given them by Mr. *Berel*, who was their Ambassador to the Emperor, they fitted out a great Fleet, consisting of no less than seventeen Sail of large Ships, under the Command of *Balibasar Berib*, with Orders to join the *Tartars*, and to act with the utmost Vigour against *Coxenga*. On his Arrival on the Coast of *China*, he found that Conqueror in Possession of the Island of *Quemoy*, which the *Tartars* with all their Force were not able to take from him. The *Dutch* Commodore observing, that the principal Fortrefs in this Island stood upon the Sea Coast, resolved to try whether it was not possible to take it by Assault; supposing that this would not only strike a Terror into the Enemy, but also raise the Credit of the *Dutch* Army with the *Tartars*; but he quickly found, upon Trial, that the Soldiers of *Coxenga* did not at all resemble any of the *Chinese* that he had seen, for they gave him to warm a Reception, that he was very soon obliged to abandon his Design.

He next determined to attack their Fleet, while the General of the *Tartars* engaged their Forces on Shore; to which the latter consented. This Fleet of *Coxenga's* consisted of Four score large Juncks, and Twenty small ones, all full of Soldiers and Seamen, and very well provided with Brats Cannon. The Battle was very obstinate and bloody, and *Coxenga* distinguished himself as a gallant Soldier, an experienced Seaman, and a great Captain: But the *Dutch* large Ships tore his Juncks to Pieces, so that after an Engagement which lasted for several Hours, he was forced to retire; but he did it in Order and with a good Countenance. The *Tartar* General before the Battle, began to draw up his Forces in a regular Line, and while it lasted, looked on very quietly: After all was over, he expostulated this Matter a little warmly; but the *Tartar* General answered, That he could not prevail upon his Men to fight; but in case the *Dutch* would attack the Enemy a second Time, he believed they would behave better. Admiral *Berib* took his Word, and attacked the Fleet of *Coxenga* a second Time, and routed them entirely: But the *Tartar* General was still a Spectator as before. This Victory however, was of greater Consequence than the former, since it not only cost *Coxenga* all his new Conquests, but his Life.

The *Tartars* laid hold of this Opportunity to demolish the Fortresses they had raised as fast as they left them, and the *Dutch* were very brisk in carrying off whatever they met with that was valuable. After this they made themselves Masters of the Island of *Amoy*, and the Recovery of *Formosa* was looked upon as a Thing certain; yet when they came to attempt it, they were strangely disappointed, for old *Songa*, who had now recovered his Liberty, drew together the Fleet and Army of his Nephew, and disposed every thing in such a Manner that there was nothing to be done but by Force, and even of doing any thing that way there was great Uncertainty. The old *Chinese* however, being a Man of great Wisdom and Experience, was not willing to risk all, if all might be saved without running any Hazard, and therefore had a mind to make Peace

The Son of *Coxonga*, however, having discovered the Design, defeated it, and procuring himself to be elected General, seized the old Man, and sent him a second time to prison, where, in a Fit of Melancholy, he dispatched himself with his own Hands. This young Officer inherited all the Spirit and all the Abilities of his Family, and managed his Affairs with such Courage and Conduct, that the Admiral soon found himself obliged to return to *Batavia* with his Fleet, without being able to execute the Commission he had received, which was the Reason that he met from the General and Council no extraordinary Welcome.

The War in which the States engaged with King *Charles* the Second, retarded in some measure the Progress of the Company in the *Indies*; and when this was finished, they very unexpectedly found themselves a-fresh embarrassed in that Part of the World, by the Inroads and Depredations committed by the King of *Macassar*, as their Writers report; for his Subjects had murdered some of the *Dutch* that had landed in his Dominions, and had likewise plundered several Ships that had run ashore upon the Coasts of his Dominions; but before any Hostilities were committed on either Side, a Treaty was set on Foot, by which the King promised to make full Satisfaction for the Injuries done to the Company; as also to make such Submissions as they should require from him on account of these Disorders.

The Company, however, suspecting the Sincerity of the King's Promises in this respect, thought proper to send their Admiral, *Cornelius Speelman*, who had been Governor of the Coast of *Coromandel*, with a Squadron of thirteen Men of War, and a certain Number of Transports, with eight hundred Soldiers on board, with Orders to see the late Treaty executed according to the Letter in every Article; and he arrived with this naval Force before *Macassar* on the 19th of *December*, 1666. The very next Morning came two Deputies from the King on board, and brought with them a thousand and fifty-six Ingots of Gold, which had been promised in Satisfaction for the Murder of the *Dutch*; and also the Sum of One thousand four hundred and thirty-five Rix-Dollars, in Satisfaction for the Vessels that had been plundered, but at the same time they declared in the Name of the King their Master, that the Submissions required of him were inconsistent with his Dignity; and therefore such as he could not comply with. As this was precisely what the Company expected, and as they were also informed that the King of *Macassar* had sent a large Fleet in order to attack the Island of *Bouton*, Admiral *Speelman* immediately declared War; and having made two Defcents upon the Enemy's Country, carried off an incredible Quantity of Plunder, burned fifty Villages to the Ground, and about an hundred of his Ships in his Ports.

After so signal a Revenge the Admiral sailed from *Macassar* in order to relieve the Island of *Bouton*, which was hard pressed by the Fleet and Army, which the King of *Macassar* had sent against it; Admiral *Speelman* arrived before that Place the last Day of the Year before-mentioned; and on *New-Year's-Day*, 1667, he forced a Passage with his small Vessels into the Haven of *Bouton*, and then proceeded to attempt the Relief of the City, which was besieged by the King of *Macassar's* General, at the Head of ten thousand Men. But the *Dutch* attacking them in their Entrenchments, and finding Means to set their Magazines on Fire, forced them immediately to raise the Siege; which Disaster was followed by such a Prodigious Desertion among the Troops of their Allies, which made up the best Part of their Army, that the Generals of the King of *Macassar* found themselves obliged to enter into a Treaty with the *Dutch* Admiral; and being able to obtain no better Terms, surrendered at Discretion. Thus this War was ended in the Space of four Months, with great Glory to the Company.

The first thing they did was to detain their Prisoners, of whom they sent five thousand five hundred to people a desert Island not far from *Bouton*. Four hundred of them

they kept for Slaves, and five thousand *Bougies*, or Auxiliaries of different Nations, they delivered up to the King of *Palacca*, who had been their faithful Ally during the Continuance of this War. They returned to the King of *Bouton* three hundred Vessels, together with whatever Plunder had been taken from his Subjects by the Enemy, and could be found after their Defeat; the rest of the King of *Macassar's* Junks they incorporated with their own Fleet of Transports, and with an hundred and ninety-five Standards, and all the Arms and Ammunition of the Enemy, with the principal Officers of their Army, whom they kept Prisoners. Admiral *Speelman* returned in Triumph to *Batavia*, where he was received with universal Applause.

The King of *Macassar* however remained still fixed to his Purpose; and notwithstanding all these Losses, absolutely refused to submit to the Terms which the Company prescribed; but knowing, by Experience, that the whole Force of his Island would not be sufficient to protect him from their Relentment, he resolved to employ his Endeavours in persuading most of the little Sovereigns, who were his Neighbours, to assist and support him in his Designs, which he declared to be no less than shaking off the Yoke of the *Dutch* Company for good and all. He succeeded so effectually in making this Alliance, that Admiral *Speelman* was obliged to solicit all the *Dutch* Confederates for their Assistance; and, at last, having drawn together all the Force they could raise, he, on the 8th of *June*, sailed from *Ambogna* with sixteen Vessels, great and small, and fourteen Shallops, on board of which were the Succours furnished by the King of *Palacca* and *Ternate*. He sailed first to *Bouton*, but in his Passage Part of his Fleet was separated, which, however, did not hinder him from landing in several Places on the Coast of *Macassar*, where, notwithstanding the great Inequality of the others in Point of Numbers, he had tolerable Success.

At length, on the 19th of *July*, in the Morning, he attempted to force a Passage into the Port of *Macassar*, but in this he was disappointed; for the King having erected a Royal Fort for the Defence of the Place, the *Dutch*, after twenty-four Hours cannonading, were forced to retire. A few Days after the Admiral was joined by that Part of the Fleet which had been separated from him by the Storm; and, on the Second of *August*, he made a Descent with his whole Force at a Place called *Gliffon*. The Army of the Company consisted of six hundred *Dutch* Troops, three hundred disciplined *Indians* in their Pay, three thousand Men from *Ternate* and *Bouton*, seven thousand *Bougies*, eight hundred Seamen, and two independent Companies, under the Command of the Captains *Joncker* and *Stryker*. But the Forces of the Enemy were incomparably greater; for they amounted to no fewer than twenty thousand Men, under the Command of all the little Kings and Princes that the Monarch of *Macassar* had drawn over to his Party.

Admiral *Speelman* kept the main Body of his Forces near his Fleet, and detached one hundred Men, the bravest and the best armed under his Command, to attack the Castle of *Gliffon* in the Night. The King of *Palacca*, who was intrusted with the Management of this Affair, executed it with such Courage and Conduct, that, by three in the Morning, he became Master of the Place, of which he gave Notice to the *Dutch* Admiral, who immediately sent him such Reinforcements and Supplies as were requisite to preserve it. This was a dreadful Blow to the Enemy; and as the Admiral very justly foresaw, the first thing they did was to attempt the Recovery of it, in which, however, they were so far from succeeding, that after three general Assaults, in each of which they lost a great Number of Men, they were forced to give over that Design; neither was this all, for taking Advantage of the Situation of this Fortrefs, such Multitudes of Bombs and red-hot Bullets were fired from thence into the Enemy's Camp, as threw them into the utmost Consternation and Confusion, which Opportunity was not let slip by the *Dutch* General, who, with the best Part of his Forces, attacked the Enemy's Entrenchments, at the same time that a vigorous Sally was made from the Castle, which obliged the Enemy to quit all their Posts.

General *Speelman* soon after embarked his Forces, and transported them to another Part of the Island, where he committed great Ravages, and destroyed a great Multitude of Villages. As this War was apparently attended with great Loss, and Inconveniences on both Sides, Deputies were at last chosen, to try what could be done towards settling a Peace. The King of *Maccassar* was very unwilling to let these Deliberations be spun out to any length, because he found his *Indians* Alas deserting him by Degrees, and making Peace for themselves on the best Terms they could; which Example of theirs he resolved to follow, by submitting to such Terms as he could get, which were, indeed, none of the most reasonable; and so the Treaty was concluded on the 18th of *November*, 1667; in consequence of which, the Regents of the Island, and all the neighbouring Princes, as well as the King of *Maccassar*, sent a numerous and solemn Embassy to the Governor-General, *Joh. Aartsz. Juicer* at *Batavia*, to make their Submission to the Company.

All this Time the *Dutch* Army and Fleet continued in the Island, and the rainy Season coming on, there ensued such a Mortality among them, as induced the *Indians* to hope they might gain some Advantages over them, by which they were tempted to break the Peace, which they did by massacring a great Number of the dying Soldiers, and two of their Captains; upon which the War broke out again, and continued with as great Violence as ever for two Years; in which Time the Success of Admiral *Speelman* was so great, and the Calamities he brought upon the Natives of *Maccassar* were so many and so heavy, that, at last, they were forced to implore a Peace, to send a new Embassy to *Batavia*, and to make all the Submissions the Company could require; and, after all, they were left to the Mercy of *Speelman*, who, by a new Treaty, concluded on the 15th of *June* 1669, not only renewed the Treaties of the 19th of *August*, 1660, and the 18th of *November*, 1667; but also imposed upon them other Conditions still more grievous and more intolerable. By this Treaty the Company became entirely Mistress of the Commerce of the Islands of *Celebes*, which, though very considerable in itself, was still more so by being taken from the *European* Nations, who under Colour of trading for the Commodities of the Islands, came in for a considerable Share of the Trade in Spices; so that it served likewise to secure to the *Dutch* what was of more Consequence to them than any thing else, their absolute Sovereignty over the *Moluccas*.

I have been the more particular in writing the History of this War from the Memoirs furnished me by the *Dutch* Authors, because it is the last of any Consequence that the Company has carried on in the *Indies*, and has, with respect to the Natives, established their Power so effectually, that there is no great Danger of their being obliged to sustain such another War. Before I part however with this Subject, I shall take the Liberty of making a few Remarks, for the sake of such Readers as seek Instruction rather than Amusement, and are truly desirous of understanding what in this Section I have undertaken to explain.

My first Observation is, that how rude and barbarous soever we may esteem these Nations, yet most evident it is, that the King of *Maccassar* acted like a great and wise Politician; and that the *Indian* Princes, who joined with him, were entirely guided by a Principle of publick Spirit, and a very just and rational Desire of preserving a Balance of Power in those Parts upon which their own immediate Safety and quiet Enjoyment of their Dominions depended. They miscarried indeed, but it was in a noble Cause, and even their Miscarriage sufficiently proves the Rectitude of their Intentions; for since the Conclusion of this fatal Peace, to which they were driven by absolute Necessity, they have lost all Commerce with Strangers, and are, to all Intents and Purposes, the Vassals, or to speak in plain *English*, the Slaves of the *Dutch*. This plainly shews, that the Balance of Power is not such a Chimera as those People would represent it; and my next Remark will make this still more evident.

It is very strange, that while these *Indian* Princes were so fully oblig'd for their own Freedom, but for the Li-

berty of trading with *Europeans*, all the *European* Nations settled in the *Indies* should be quiet Spectators of a War which so much concerned them, without interposing in the least for the Preservation of those who were engag'd in their Cause as much as in their own. If they had stirr'd ever so little, we may easily discern, even from these *Dutch* Accounts, that the King of *Maccassar* and his Allies might have been supported in their Pretensions, and might have been enabled to have thrown off the Yoke of the *Dutch*; so that if Barbarity consists as surely with respect to Nations it does, in political Ignorance, than the *Europeans* in the *Indies* may, with greater Justice, be stiled barbarous than the poor Natives, who certainly did all they could; and the wisest, greatest, and bravest Nations never did more.

My third Remark is, that the *Indians* who joined with the *Dutch*, were Enemies to themselves, and by destroying the Power of the King of *Maccassar*, not only contributed to the Ruin of the only Monarch who understood and pursued the true Interest of the *Indians* in general, but likewise subverted and took away their own Importance: For, while the King of *Maccassar* continued a great and powerful Prince, the *Dutch East-India* Company considered, and must have always considered such Princes as liv'd in Friendship with them in the Light of Allies, and durst never have treated them but as Allies ought to be treated. But when this Power was gone, which made their Friendship so necessary, and of such Importance, they became as much the Vassals, as much the Servants, or, as I call'd them before, the Slaves of the *Dutch*, as that King and those Princes, who by their Alliance, the *Dutch* subdued. This is a very useful and a very important Lesson; for Men are the same in *Europe* and in the *Indies*.

It is now time to resume our History, which leads me to take Notice, that while the *East-India* Company carried all before them abroad, the Republick was exceedingly distressed at home; for now it was that the *French*, jealous of her Power, and the *English*, in Resentment of former Injuries, concurred in that fatal Alliance, which was very near bringing the States as low as when they first shook off the Tyranny of the *Spaniards*; nay, which actually did bring them into such Distress, that it is reported that they had once thought of seeking that Protection from their *East-India* Company, which they had hitherto afforded it, and of transferring that Government to *Batavia*, which they almost despair'd of preferring at the *Hague*.

Providence however interposed, and by touching the Hearts of the *English* Nation with a generous Concern for their Neighbours, whom though they might wish to see humbled, yet they had no Desire, as indeed they had no Interest to see them destroyed, deliver'd them from this Calamity, and rais'd them once more to Power and Freedom.

Yet the *East-India* Company, though it felt but little of this Storm, was not altogether exempt from its Force, since the *French* sent a powerful Squadron into the *Indies*, with a View to have torn from them a Part of their Possessions. This Squadron was commanded by the *Stear de la Hay*, who propos'd first attacking *Ceylon*, with a View to make the *French* Masters of the Cinnamon Trade as once, as the shortest Means of introducing the Commerce of the *Indies* according to the Project of one Mr. *Caren*, a *French* Refugee, who had been long in the *Dutch East-India* Company's Service, understood their Affairs perfectly well, and made his Peace at home by betraying all he knew. This Man embarked on Board the Fleet, and was principally depended upon in the Management of everything. It cannot be denied, that he serv'd the *French* Ministry very effectually; but they had not sufficiently considered the Importance of the Expedition in which they employ'd him, or the Force of the Enemy with whom they had to deal; for if they had, they would undoubtedly have sent a second Squadron to have supported that which Mr. *Hoy* commanded; and this might have been of some Use; but, as it was, it only shew'd the Disposition of the *French*, and serv'd to put the *Dutch* upon their Guard.

In the Summer of the Year 1672, the *French* Fleet appeared on the West-Coast of the Island of *Ceylon*, and immediately landed and attacked the Citadel of *Trinqu-*

male, of which they became Masters; and by fair Pro-
mises, and magnifying the Power of the French King,
drew the Natives to join with them; so that thus far they
had all the Success they could expect. But *Trinquale*
was a Place of too great Importance for the Company to
let it remain long in the Hands of these new Conquerors;
they therefore sent Commodore *Goens* from *Batavia* with
a Fleet of sixteen Sail, all of them large Ships, and well
mann'd. On the first Appearance of this Squadron Mr.
de la Hay retired with his Ships to *Surat*, leaving a small
Garrison in his new Conquest. The Commodore block-
ed up *Trinquale* by Sea, and debarking his Forces, besieged
it at the same time by land; so that he soon recovered it,
together with one hundred and twelve Pieces of fine Bras-
Cannon, which the French had left there for its Defence;
so that here ended their Views upon *Ceylon*, almost as soon
as they began.

But Mr. *de la Hay*, when he came to *Surat*, advised
with Mr. *Caron* about the Measures which they should
next take; and, pursuant to his Advice, resolv'd to at-
tack the Fortress of *St. Thomas*, which about twelve Years
before, the Dutch had taken from the Portuguese; and in
this sudden Attempt they were as successful as they had
been before in surprizing *Trinquale*, and just as unlucky
in keeping it. After leaving a good Garrison here, and
seeing the Magazines put into the best Order possible, the
Steur de la Hay thought proper to return to France with
the only Ship that was left of his Squadron. But it fell
out unluckily enough for him, that even this poor Con-
solation of bringing home a few of the People he had car-
ried out, was denied him; for in the Road of *Lisbon*, his
only Ship was wrecked, by the Malice of his Pilot, as it
was supposed, more than by any Violence of Weather; the
rather because Mr. *Caron*, two Captains, and several other
Officers were drowned in their Endeavour to get ashore
in the Long-boat, which was the Effect, as is supposed,
of some Practices which the Treachery of *Caron* to the
Dutch put them upon taking; but as this is a bare Suspi-
cion, and absolutely destitute of Proof, to insist upon
it farther would be needless.

This was the last Attempt made against the Commerce
of the East-India Company; and during the Remainder
of the Century, they were continually improving and au-
gumenting both their Power and their Commerce; so that
at the Close of it, they were in a much better Condition
than ever; for in the Year 1687, we find that they
brought over One hundred and seventy thousand Pounds
Weight of Cinnamon; and yet they brought over less
that Year than they had done for many Years before,
which shews the prodigious Importance of their being
solely possessed of the Island of *Ceylon*. On the 11th of
August 1698, their Charter was renewed for forty
Years, which gave them such an Accession of Power and
Credit, as rendered them almost as considerable in the
Eyes of all Europe, as they were before in the Indies: And
having said that, it may seem altogether unnecessary to
add any thing by Way of Explanation.

15. We have now conducted the History of this fa-
mous Company, from its earliest Establishment to the Be-
ginning of the present Century; and for what regards the
Transactions thereof from thence to the present Time,
there is so much said in the first Chapter of this Work in
the Account we have given of Commodore *Roggeveen*,
that there seems to be the less Occasion for our insinua-
ting much on that Subject here, therefore we shall content our-
selves with mentioning only a few Particulars that have
not hitherto fallen in our Way; that as far as in our Power
lies, there may be nothing deficient in the treating a Sub-
ject so curious and important in itself, and the Knowledge
of which is so peculiarly necessary to a trading Nation.

In the first Place, though we have mentioned them oc-
casionally before, we will more exactly distinguish the
Dates of the Company's Charters; the rather, because
many of the Dutch Writers are not very exact in that Par-
ticular. The first Charter was dated the 20th of *March*,
1602, and was to continue for twenty-one Years. The
second was granted the Year in which the former expired,
for the like Term, but with this Variation, that it was to
commence from the first of *January*, 1623, so that it de-

termined in 1644, when they procured a new Charter for
the same Term. Their fourth Charter bore Date the 7th
of *February*, 1665, and was to extend to the 31st of
December, 1700; but the Company thought proper in
1698 to obtain another Charter for forty Years, from the
Determination of that which was then in being. And,
again, in the Year 1717, the Company thought it requi-
site to apply for new Favours, but they were not able to
obtain a new Charter, as they expected; however they
procured a Placard, by which the States-General forbade
all their Subjects to send any Ships to the East-Indies, or
any where within the Limits of the Company's Charter:
They likewise prohibited their Interfering in any manner
in the Commerce of the Indies, without the Licence of
the Company first had and obtained for that Purpose; as
also to have any Concern in foreign Companies, or to
serve on board any of their Ships; which Precautions were
thought necessary not only for the East-India Company's
Security, but for the preserving this rich and beneficial
Trade to the Subjects of the Republick.

There happened, about the Time that their Charter
should have been renewed, some Commotions in the
Indies, which had like to have been of very fatal
Consequence to their Establishment; and of which we
have not, as yet, received in Europe any Account of
these Transactions that can be thoroughly depended upon;
all we know of them is this, that the Conspiracy having
been discovered among the Chinese at the very Juncture
that it should have been executed, the Governor was con-
strained to have Recourse to the most speedy Methods for
securing the Safety of the Inhabitants, and preserving the
City and Fortress of *Batavia* from falling into the Hands
of the Enemy. It was in Consequence of this Necessity
that all the Seamen were landed from the Fleet, and had
the Plunder given them of the Chinese Suburb, to en-
courage them to serve the Company effectually, which
they did, by attacking and putting to the Sword the great-
est Part of the Conspirators. By this speedy and severe
Proceeding, the City and the Dominions of the Compa-
ny in the Island of *Java* were preserved, but not without
a vast Effusion of Blood, which was followed by a formi-
dable Rebellion, that was not suppressed for some time.

Such as favoured the Governor and Council of the In-
dies, pretend that all this was owing to the Wickedness
and Treachery of the Chinese, who, notwithstanding the
Mildness of the Company's Administration, had formed
a deep and dark Conspiracy, the Design of which was to
extirpate totally the Dutch that were settled in *Batavia*
and Places adjacent. Such again as are Enemies to the
Governor and his Council, attributed the whole of this
bloody Affair to their Male-administration; and would
have us believe that the Chinese and their Accomplices,
were driven into all they did by the most horrid Oppres-
sions, in order to afford an Opportunity for this falling up-
on and destroying them, and thereby putting it out of
their Power to demand the immense Sums of Money
which were due to them from such as were industrious in
bringing this Calamity upon them. Some again who pre-
tend to speak impartially, without Favour to the Chinese,
or Prejudice to the Governor, give quite another Turn to
this Affair, and tell us that he was so far from being an
Enemy to the Chinese, that he had been rather too much
their Friend; and for the sake of considerable Sums of
Money and several rich Presents that had been made him,
granted them such Liberties as were inconsistent not only
with the Interest, but with the Safety of the Company,
which were the true Causes of their endeavouring to sub-
vert the Government, and to make themselves Masters of
Batavia, and the Country about it, agreeable to the true
Nature of the Chinese, who are known and acknowledged
throughout the East, to be an insolent, ungrateful, and per-
fidious People.

However this Matter might be, it made a prodigious
Noise in Europe; and Baron *Imhoff*, the present Gover-
nor-General, was sent over to *Batavia* to settle the Con-
cerns of the Colony and Company, and to make a very
strict Enquiry into this Affair. The Charter of the Com-
pany, when it was near expiring in 1740, was renewed
only for one Year; but since that Time, all Affairs have
been

been adjusted in the *Indies*, and at Home, to the Satisfaction both of the Company and of the Government, as shall be shewn hereafter. At present, it is our Business to shew, after giving so copious an Account of the Growth and Grandeur of this Company, how its Affairs are conducted, and what Form of Government it is, that has been able, not only to render a Body of Merchants formidable to the greatest Monarchs in the *East*, but to acquire them Dominions very little inferior to any of these Monarchs, and Revenues, Armies and Fleets, superior to most of them; this is a Thing so admirable in itself, and demonstrates so clearly, what it is in the Power of an extensive and well regulated Commerce to do, that I flatter myself my Reader will pay a very strict Attention to the following Account of it.

16. Their whole Business in *India* is divided into Governments and Directions, after the following Manner: I. *Batavia* is the chief and capital, where reside the Governor-General, and Council ordinary of *India*, to whom all the Governments and Directions are subordinate, sending their Accounts to them, the Balance whereof is entered into the Accounts-General of *India*, kept there; besides which, there are several Places immediately under the Government and Direction of the Governor and Council of *Batavia*, viz. *Japon* a Chief-ship, *Tonquin* a Chief-ship, *Maccassar* a Commandant, *Siam* a Chief-ship, *Bantam* a Factory, *Japara* a Factory, *Jambee* a Chief-ship, *Pallambam* a Chief-ship, *Arrakan* a Chief-ship. II. *Amboyna* a Government, under which are several Islands, where they pay a yearly Pension to the Inhabitants, not to suffer Cloves or other Spices to grow. III. *Banda* is a Government, and under it are several Islands, to the Natives of which they likewise pay Money yearly to destroy the Spice. IV. *Ternate* is a Government. V. *Malacca* is a Government. VI. *Zelon*, or *Ceylon*, is a Government, where they have many Factories, and all their Accounts are sent to *Colombo*, the principal Place. VII. *Cochin* is a Government, and under it lies all the *Malabar* Coast. VIII. *Pelicut* is a Government, under which are the Coasts of *Corremandel* and *Pegu*. IX. *Bengal* is a Direction, and under it, all the Factories in that Bay: *Hugly* is the Chief from whence they send their Accounts to *Batavia*. X. *Surat*, another Direction, under which are many Factories. XI. *Perfia* a Direction, the chief Residence *Gombroon*, and under it are *Ispahan* and *Bassora*. XII. *Cape of Good Hope* a Government, and under it, the *Mauritius*, or Island of *Prince Maurice*.

To understand this perfectly, it must be observed, that Governments are when the Places are their own, Directions when they are under a foreign prince, and have no Garrisons. *Batavia* excepted, no Government, Direction or Command, hath Precedence of Place; but the Persons in those Places, and all other Degrees and Qualities take Place according to their Seniority in standing.

This Account sufficiently explains the general Scheme of their Government, from whence we shall descend into Particulars, that it may appear, with how much Wisdom, Justice and Prudence, all things are regulated by this Company, to prevent either Corruption or Confusion, which though it is very probable they may not absolutely do, yet it is very certain, they must do it in a great Measure; for otherwise the Company's Affairs must have fallen long ago into a very distracted State, whereas, we see them at this Day, in as good a Condition as ever.

This I conceive to be especially owing to that Nicety of Judgment shewn in adjusting all their Salaries, and Allowances for Diet, to the several Qualities and Degrees of their Servants, so that none has either so little as to be pinched by Necessity, nor any so much as to set them above the Performance of their Duty, which is, generally speaking, the Ruin of such Governments as pursue a contrary Conduct; for the more easy understanding of this Point, we shall take their inferior Officers first, and so ascend gradually to the Governor-General of the *Indies*. The under-assistant, Scribe or Writer, is the lowest Degree, and is chiefly supplied with Soldiers, taken out of the Guards, from nine to fourteen Guilders *per mensem*. Next is the Assistant at twenty Guilders *per mensem* Salary, and four Rix-dollars Diet. After him the upper-assistant Book-

keeper, or Secretary, from twenty-eight to thirty-six Guilders *per mensem* Salary, and four Rix-dollars Diet. In the fourth Place, the Under-copeman, from thirty-six to forty-five Guilders *per mensem* Salary, and eight Rix-dollars Diet. Then the Copeman from fifty to sixty-five Guilders *per mensem* Salary, and eight Rix-dollars Diet. Next to him, Upper-copeman, from eighty to one hundred and twenty Guilders *per mensem* Salary, and twelve Rix-dollars Diet: Some from the lesser Chambers are sent out at seventy-two Guilders *per mensem* Salary.

At *Batavia* and *Zelon*, where Provisions are dear, they have thirteen Rix-dollars Diet. In the seventh Rank a Commandore has one hundred and fifty Guilders *per mensem* Salary, and twenty Rix-dollars Diet; Commandant, a new Title, somewhat less than Commandore. The eighth, Director, has two hundred Guilders *per mensem* Salary, and thirty Rix-dollars Diet. The Governor has the same, as also a Member of the extraordinary Council of *India*. A Member ordinary of the Council of *India* at *Batavia*, each of them, three hundred and fifty Guilders *per mensem* Salary, and one hundred Rix-dollars Diet; and lastly, the Governor-General of *Batavia* has one thousand two hundred Guilders *per mensem* Salary, and two hundred Rix-dollars Diet, and every Time he goes to the Fleet, one thousand five hundred Rix-dollars Gratuity, which has been usually done upon a Fleet's Departure for *Europe*: But this General has not taken it for some Years past.

All Persons in the Service, whether Merchants, Divines, civil Magistrates, Soldiers or Seamen, are ranked in their Degrees, and take their Places accordingly. The General is allowed Wine, and all other Liquors and Provisions out of the Company's Warehouse, without Limitation. All others, down to the Assistants, are allowed monthly Liquors, Spice, Oil, Wood, Rice, Vinegar, Candles, &c. according to their Quality, very large. The Upper-copeman's Allowance is twenty Canadars of *Spanish* Wine *per mensem*, besides Mum, White-wine, and other Liquors; twenty-four Pounds of Wax for Candles, Corn for Poultry, Rice for Slaves, &c. so that the Diet-money allowed them, is only for fresh Provisions.

Soldiers are ranked in the same Manner, viz. first a common Soldier, or private Centinel, is from nine to fourteen Guilders *per mensem*, as the Under-assistant. Next, Serjeant's Pay and Diet as the Assistant. Then Ensign's Pay and Diet as the Under-copeman. After him Lieutenant's Pay and Diet as the Copeman. The fifth Captain's Pay and Diet as the Upper-copeman; and the sixth Major's Pay and Diet as the Commandore. Military Persons give place to the Civil of the same Rank, viz. a Commandore precedes a Major, and Upper-copeman a Captain, and a Copeman a Lieutenant; but a Major precedes an Upper-copeman, a Captain a Copeman, and a Lieutenant an Under-copeman. There are three Majors in *India*, one at *Batavia*, one at *Ceylon*, and one at *Amboyna*, or *Banda*. They assist the Governor in military Affairs, and have the Command over all other Officers and Soldiers, but have no proper Company of their own. There are not Captains over every Company, but one over two, three, four or five Companies; every Company has Lieutenants and Ensigns, and they often make provisional Officers, who, upon some Merit in Service, do attain to the Pay of such Places.

Seamen are ranked in the same Manner, viz. first a common Seaman, from nine to fourteen Guilders *per mensem*, as a common Soldier; next third Mate, Gunner, Boatswain and Steermans, from eighteen to twenty-four Guilders *per mensem*, and the Assistant-carpenter's Wages from forty to fifty Guilders *per mensem*. The Under-steerman, or second Mate, from twenty-four to thirty-six Guilders *per mensem*, as the Upper-assistant. After them, Upper-steerman or Chief-mate, from fifty to sixty Guilders *per mensem*, in the Under-copeman's Rank. The fifth are Skippers, from sixty to one hundred Guilders *per mensem*, in the Copeman's Rank; and the sixth, Commodores from one hundred to one hundred and fifty Guilders *per mensem*, besides which, they have the Ship's Allowance for Provision, and when in *Batavia*, they have Road-money paid them every Month for fresh Provisions and

eight to thirty-six Guilders per month. In the seventh Rank a third Mate, Gunner, and eight Rix-dollars Diet; Commandant, and twelve lesser Chambers are sent per month.

Provisions are dear, they are sent from the seventh Rank a third Mate, Gunner, and eight Rix-dollars Diet; Commandant, and twelve lesser Chambers are sent per month. The Governor has the extraordinary Council of the Council of India at Batavia has one thousand Rix-dollars Gratuity, and two Rix-dollars per month for a Fleet's Departure for not taken it for some

Merchants, Divines, are ranked in their accordingly. The General and Provisions out without Limitation. All allowed monthly Liquors, Candles, &c. according to the Upper-copeman's Allowance Wine per month, other Liquors; twenty-Corn for Poultry, Rice money allowed them, is

Manner, viz. first a Lieutenant, is from nine to Under-assistant. Next, Assistant. Then Ensign's Lieutenant. After him Lieutenant. The fifth Captain's; and the sixth Major's Military Persons give, viz. a Commandant, a Copeman a Captain, and a precedes an Upper-copeman and a Lieutenant and a Major in India, one at Amboyna, or Batavia, military Affairs, and Officers and Soldiers, their own. There are, but one over two, Company has Lieutenant make provisional Office, do attain to the

Manner, viz. first a Lieutenant, is from nine to Under-assistant. Next, Assistant. Then Ensign's Lieutenant. After him Lieutenant. The fifth Captain's; and the sixth Major's Military Persons give, viz. a Commandant, a Copeman a Captain, and a precedes an Upper-copeman and a Lieutenant and a Major in India, one at Amboyna, or Batavia, military Affairs, and Officers and Soldiers, their own. There are, but one over two, Company has Lieutenant make provisional Office, do attain to the

Fruit; but in other Roads, they are supplied with these things from the Factories on Shore. They have none who have the Title or Pay of Captain at Sea, and the Commodores are very few, sometimes not more than one in India.

The Ministers Pay and Allowance stand thus, viz. first the Predicator, or Preacher's Pay and Diet, the same as the Upper-copeman's. The second Dominees, or Visitors of the Sick, twenty-four Guilders per month, as the Assistant. The Ministers are all sworn not to write of, nor intermeddle with any Matter relating to the Affairs of the State, or Commerce. In all Governments they are allowed a President, and in Batavia two or three to spare, in case of Mortalities. In all Directions they have no Dominees, only read the Scriptures, and printed Forms of Prayer, Mornings, Evenings, and Sundays. With them the Surgeon's Pay is from forty to fifty Guilders per month.

17. In all Qualities from Under-assistant to Upper-copeman, they generally serve five Years, and some but three, as they agree; which Term being expired, if they please, they may quit the Service; but they are usually continued, and upon their Petitions, if they are deserving, and the Company's Occasions require, the Governor and Council entertain them again, to the next Degree they served in before, and for such Terms for Salary, &c. as they find them deserving within the settled Salary of each Degree; but on any Merit in Service, they are often preferred from one Degree to another, though they have not served six Months in a Station; so that upon Account of Merit, some have risen in two or three Years from Assistant to Under-copeman, and others, in as little Time, from Under-copeman to Upper-copeman; in this they have respect to Succession, as if a Chief, or Second of a Factory dies, and the Third performs the Business of the Place to Content, tho' he be but a Book-keeper, for that Service he shall be an Under-Copeman, and Chief of the Place; and as he gives further Content, a Copeman in one or two Years more. Married Persons receive all their Pay in India, and the unmarried but half theirs at an Over-rate: As at Batavia, the Rix-dollar is valued at sixty Stivers, which is worth but forty-eight, and at Polical, the Pagoda is valued at five and an half Guilders, which is really worth but four and half; but this is in a Way of Regulation, as they say, upon Complaint of it to the Governor.

The Company find all their Servants Accommodations for Lodgings, for which, and Warehouses, they have spacious Buildings in all their Factories. All, or most Persons sent out of Europe, are of the Qualities from Assistant to Upper-copeman, seldom in a higher Degree; sometimes they may be of the extraordinary Council: But such, and all others, are left to the General and Council at Batavia, to be disposed of in Employments according to their Qualities or Abilities, who give them Preference as they merit. Such Persons as are of Capacity, may gradually rise by Time of Service to the Quality of Upper-copeman, but they must stand there, and cannot rise higher, till they are made Commandores. When Directions or Governments fall vacant, an Upper-copeman, capable of being made Governor, Director, or Commandore, generally succeeds, and some have been fifteen or twenty Years Upper-copeman, before they have been put into any of those Places: Some stand there, and rise no higher, and many never come to that, but remain in lower Degrees, according to their Capacities.

All Persons in those Degrees or Qualities, precede one another, according to their Seniorities and Standings in the same Degree, or that are of the same Profession. As the first Assistant precedes all others that are made after him; so likewise a Copeman made this Month, precedes him that is made a Month after; but the Profession of the Merchant (or as they commonly term it, the Pen) hath the Preference of all others, and he that is an Upper-copeman in that Quality, precedes all others, whether Preachers, Soldiers or Seamen (as is said before) tho' they may be his Seniors in the same Degree.

All these Salaries and Wages for Merchants, Soldiers, Seamen, and others, go on for their outward bound and home Voyages, and every one has a Copy of his Accounts

NUM. 64.

out of the Book of Wages, every Year, which he keeps, or carries Home with him, or sells to another; and when he returns to the Chamber from whence he was sent, he is punctually paid the Balance of his Account, together with what is due for the Term of the Voyage; and such as have served out their whole Time, and desire to be Freemen in India, sell their Accounts, or send Letters of Procuration Home, upon Sight of which they are paid; so that neither the Company, nor their Servants, have ever any Trouble in adjusting their Accounts.

These Freemen are such as have served out their Time, and are then cleared of the Company's Service, and suffered to live in the Country, or such as of late have been permitted, or encouraged to come out of Europe, on their own Accounts. They are always obliged to have Families, and live in garrisoned Towns, and in their Plantations on the Spice Islands, where they are allowed to trade too and fro in Provisions of all Sorts, and other Commodities, where the Company do not trade, and sometimes where they do trade, with the General's and Council's Licence, even in the Company's Commodities: This being their Policy, that the Benefit of some Trades may not be lost, but referred to the Company, when they are so considerable, as to be worth their minding, or will be at the Charges of a Factory. All Freemen perform the publick Offices of the Towns, and take their Turns to watch and ward as in the Netherlands, none excepted.

18. The first ordinary Council of India is chosen by the Bewinbebers, or Directors, out of such of their Servants, as have served the Company as Governors, or Directors, and none under those Qualities; by which Means their head Council consists of Men of Estates, and Experience in the Business of all Parts of India. The extraordinary Council are also nominated by the Bewinbebers, and they, when they are at Batavia, sit with the General and Council, but have no other Vote than one of Advice. Several of the Directors and Governors are of the extraordinary Council, and there is a late Order, that three of the extraordinary Council shall always reside at Batavia. By another Order of late, all of the ordinary Council are to reside there likewise, and not to remove from thence, but upon Business of great Importance; and the General, and Director-General, are not to remove upon any Occasion whatever.

There are often Boxes sent out of Europe with private Directions, which are sealed, and ordered not to be opened but on extraordinary Accidents, as in case of the General's decease, or other Occasions of great Moment, which keeps the great ones in Awe of each other. The General hath Power in a particular Commission to himself, to send Home any one Person of the ordinary Council when he thinks fit, that shall not behave himself well towards him, and to take to himself what Salaries, and other Allowances he thinks proper, which the great Matzoyer caused to be read on some Clashing of the Council at Batavia.

The General, and all the ordinary Council, the Secretary, the Major, the Upper-copeman, called the two chief Factors, and the Upper-copeman, who keeps the general Books of Accounts, live within the Fort, or Castle, with their Wives and Family, in Apartments fitted according to their Offices and Places. The General and Council are so near together, because of all Letters being opened and read in the Council, that often sits in an Evening, after Prayers, and never nusses upon Sundays, for an Hour to dispatch small Business, Petitions and Complaints, and twice a Week constantly, Tuesdays and Fridays, at Four o'Clock in the Afternoon, about managing the Company's Business. The Secretary has good Accommodation, and large Offices to write in; the Major lives in the Fort to receive Orders from the General, and to assist him in the Government of his Soldiers, and the two chief Factors are near the Second, or Director-General, who has the most laborious Employment, having the Care of all Ships, Goods, Treasures, and Stores, and proposes all Voyages and Cargoes.

These two Upper-copemen, whom they call Factors of the Castle of Batavia, are his Assistants, to examine Accounts, and Advices, and thereupon draw up Lists, and

11 G

Calcula-

Calculations, of the Sorts, Qualities, and Quantities, of the Goods, that are sold at any Place, and to show whether they increase or diminish, with the Loss and Gain thereon, which Notes they send to all the Factories where these Goods are provided. The chief Book-keeper lives in the Fort, because all Registers and Books are kept there, and the Offices for Accounts must be there standing. Every one of the ordinary Council of *India* has his particular Charges and Employments allotted to him, wherein he is most experienced, viz. one is ordered to read, examine, and answer all Letters and Papers from the Government of *Ceylon*. Another the Letters, &c. of the Governments of *Amboyna*, *Banda* and *Ternate*; another, the Coast of *Coromandel* and Bay of *Bengal*; another the Directorship of *Surat* and *Persia*, and another the *Cape* and *Mauritius*; the General only writes Letters to the Company in *Europe*.

Besides which, they have other particular Employments and Places of Trust and Importance at *Batavia*. I. The General proposes and concludes in Council, and directs all Matters of Government to the Council, and superior Officers. He is sworn to be faithful to the States in his Office, and that he will not prefer any one in the Company's Service, for Fear, Favour, or Affection, but only such as are most faithful, most able, and most fit to manage the Business for the Company's Advantage. II. The Director-General, as aforesaid, proposes the Employments and Cargoes of all Ships. He sells, and orders the Disposal of all Goods, Stores and Provisions, has the Charge of the Treasure and Cash, and orders the Receipts and Payments of Money. III. Another is President of the Chamber of Orphans, and the Council, his Assistants, are half Company's Servants, and half Burghers, whose Office and Trust are the same as in the *Netherlands*. They sit once a Week in Council. IV. Another is President of the College of the Rate of Justice, who is always a Civilian. He gives Judgment in all Cases civil or criminal, between the Company and their Servants, or the Burghers. In this Court, the Company's Servants only are of the Council, none of them under the Quality of a Copeman, and they are usually Advocates, or such as have been bred up to the Civil Law. V. Another is President of the College of Scribes and Burgomasters.

He judges in all Cases, civil, military and criminal, between the Burghers and others. The Counsellors, or Judges, who sit with the President at this Court, are three Upper-copmen in the Company's Service, and three of the chief Burghers. Both these Courts sit twice a Week, constantly, and often, as occasion requires, in the Stadthoude, or Town hall. All of the ordinary Council are sworn to be true to the General and the States, to prefer none for Fear, Favour, or Affection, but the fittest and ablest Persons to the Others in their particular Disposals. Below the Second, or Director, is no Precedency of Place, but Employments or Offices are appointed to those who are the fittest for them. The Secretary of the Council at *Batavia*, is a Person of great Ability and Experience, of the Quality of Upper-copeman; he takes Place next to the extraordinary Council, and has the Pay and Allowance of a Commodore. The minor Votes are always carried by the major in Council, the Fiscal hath a double Vote. When signing, none may enter any Exceptions, except the Matter concluded be expressly against the Orders of the Company, and then they may enter Dissent, giving just for the Reason.

Upon extraordinary Occasions, which require Secrecy, a Governor, or Director, may call a Council of any two or three Counsellors, and may act according to their Resolutions. All Persons of the Quality of Copeman, and Upper-copmen, as also Captains and Lieutenants, are capable of being of Council in all Governments and Directions, except *Batavia*. The Seconds of Governors and Directors, as also Copemen, and the Chiefs of subordinate or inferior Governments, are commonly Copemen, and Upper-copmen; but if it so happens, that one of a higher Degree, or Quality, comes to a Place where one of a lower Degree is Chief, he, of the higher Degree takes Place, and gives his Advice in the Company's Busi-

ness, but does not govern or direct in any Affair without special Commission.

In all Governments and Directions, the Consultations are entered in Books, and signed by the Council. The Offices for the Secretary and Accountants, and the Warehouses for the Company's fine Goods and Treasure, are built in the Forts, and Houses, or Factories, and those who officiate in them, must dwell there. In subordinate Factories, they keep no Consultation-books, only Copy-books of Letters, Accounts and Diaries. All Letters and Orders from *Batavia*, are signed by the General and Council, and those to *Batavia*, must be signed by the Governors, or Directors, and their respective Councils; but all Letters and Orders from Governors and Directors to subordinate Factories under them, are signed only by the Governor or Director singly. The Cash at *Pollack*, is at the Disposal of the Governor, to be put into the Hands of an Upper-copeman, that shall be on the Place; and the Sorting of Cloth is done by the Governor, Second, and others, who are of the Quality of Copeman, and Under-copeman, every one setting down his Opinion of the Price of the Goods when forced.

They have Fiscals in their Governments, who are under an Oath to discover and seize all forbidden private Trade, and detect what else may be done to defraud the Company. They are usually of the Quality of Copeman, or Under-copeman, and seldom continue longer than three Years in that Office, except at *Batavia*, where they have two principal Fiscals, of the Quality of Upper-copmen, who continue many Years in that Employ. One of them is called Advocate-fiscal, he makes Enquiry, and takes Cognizance of all Faults, Frauds and Misdemeanors in the Company's Service, in all Parts of *India*, makes and maintains the Processes, and has half of what is recovered thereon, the other half goes to the Company, who gives one Third of it to the Poor, after the Process and Condemnation is paid, before the President of the Council of Justice; so that the Governors, Directors, &c. are not concerned in the Discovery of any private Trade.

The Company sends every Year printed Papers of the News and Affairs of *Europe*, which are dispersed over all their Factories in *India*, by which they are instructed in the Interest and Concerns of the several Powers and are directed to behave themselves accordingly to all *European* Nations in *India*. Also they send Abstracts of the Sale of their Goods, and the Loss and Gain thereon in *Europe*. It is very easy to observe, that all these Regulations are calculated for the Improvement of the Persons in the Service of the Company, for enabling them to discharge their Duties punctually and perfectly, and with such a Measure of Knowledge and Understanding, as may fit them for whatever Places they may be called to serve in.

It is not easy to conceive, what mighty Effects flow from such wise and just Regulations, what Order and Harmony they may beget, and how easily all Things are managed, where so much Care is taken, that every Man shall be acquainted with the Importance of his Station, and with a Probability of his bettering his Circumstances by his discharging his Functions with Diligence. It is by settling these Orders, and taking care they shall be constantly carried into Execution, that we find the *Dutch* are never at a Loss for Men fit to be employed on any critical Occasion, as Ambassadors, Plenipotentiaries, and ordinary Residents in the Courts of *Indian* Princes, whereas other Nations, that carry on other Trade in that Part of the World, are at a Stand in this respect, and in all such Emergencies, are forced to take such as come to Hand, or which is worse, such as push themselves forward, and mistaking Vanity for Talents, get into Employments only to expose themselves, and those under whose Authority they act.

It is a received Opinion, and I believe founded on Reason, that the Capacities of Men are much alike, and that where one makes a Figure by dint of what is called Genius, there are a hundred become able Men from Discipline and Experience. It is therefore extremely commendable in the *Dutch*, that they take so much Pains to propagate real Knowledge among such as are in the publick Service,

and that they do not content themselves with barely qualifying their Under-officers for the Discharge of the Places they are in, but oblige them likewise to take Pains to fit themselves for more important Services. It is one Thing to read News-papers for Amusement, and another Thing quite to oblige People to read them for Instruction; and it is very easy to conceive, that a Person in the *Indies*, who has a good general Notion of the Affairs of *Europe*, and of the Situation Things are in there, will have vast Advantages over another Person of equal Abilities, who has never turned his Thoughts that Way, but has lived all along in an Opinion, that if he did his Business in the Counting-house, his Superiors had no farther Title to the Disposal of his Time, but that he was at full Liberty to employ it in such Amusements or Diversions as best suited his Humour or Disposition.

But to bring these Reflections to a Point, and not to detain the Reader too long upon so grave a Subject, I shall finish them with observing, that whatsoever Company takes Care to give its Servants true Notions of Merit, rewards and encourages Merit, and leaves no other Road open to Preferment; but Merit will be always sure to have more capable Servants, and will consequently have its Affairs better carried on than any other Company, in the Management of whose Concerns Inclination, Interest, or Chance, governs all Preferments. It may be said that these are just and general Observations, very easily made, and which never will be disputed. The Question however is not where these Rules are owned and admitted, but where they are recommended and practised. Since we took Occasion to enter upon these Remarks, not from the general Principles of the *Dutch* Nation, but from the settled and invariable Regulations of their *East-India* Company, which have the Force of Laws to those in their Service.

19. The Government, Order, and Provision for their Ships and Fleets runs thus, *viz.* all their Ships are the Company's own, and the Men belonging to them are all in their Pay, sworn to serve them either by Sea or Land, as Occasion shall require. They have two Persons, who have the Stile of Admirals, and are of the ordinary Council of *India*. For the Care of their Shipping at *Batavia*, they have one called Equipage-master, who is of the Quality and Pay of an Upper-copeman, a seafaring Man, and vulgarly called a Commandore: *P.* hath the Care of fitting all their Ships, and is continually visiting them in the Road, if Occasion requires, and supplying them with what they want.

There is a small Island, about three Miles from *Batavia*, where they have a Fort, which serves them as a Store-house for all Manner of Necessaries for Ships, under the Charge of a Master-Shipwright, who has also Command of the Fort and Island. He is of the Quality of Upper-Copeman, and has large Pay and Allowances. When they send out a Fleet of War on any Expedition, they make a Merchant of the Quality of Upper-Copeman, and sometimes of the extraordinary Council Admiral or General, who has a Council of Merchants and military Officers to assist him, as Occasion requires. The Admirals of the Fleet that go from *Batavia* to *Europe*, are such as have served the Company as Governors, Directors, Commanders, or Upper-copemen, and are willing to go home, they have their Salaries allowed them till their Discharge in *Europe*; and if there be none that return of their own Choice, they appoint at least a Copeman to command, who comes back again, if he thinks convenient.

As to their Admirals out of *Europe*, the Flag is worn by Turns; *Amsterdam* Squadron carries it three Years, and the *Zealand* Squadron every fourth Year. The *Amsterdam* having two Parts of the Stock, the other lesser Chambers add theirs to it, and the *Zealanders* have one Quarter of their own. The Merchant who is sent Admiral, must either take his Passage on the *Amsterdam* or *Zealand* Squadron. If a Copeman, or Under-copeman goes from Port to Port on any Ships, they have the Command of her, and also of the Fleet or all Ships in Company, by the Company's settled Order in their Articles. When there is a Fleet together under the Command of a Commandore, the Council is to consist of Copemen and Skippers. When

a Ship is single, the Council is to be of Copemen, Skipper, Under-copeman, Book-keeper, and Steerinnen, and they are always to steer their Course by the printed Directions, and to set off their Work every Day upon Charts, which are delivered up the very Day when they come to *Batavia* or *Holland*.

There is an Under-copeman, or Book-keeper in every Ship, who keeps an Account of the Ship's Expences, as Stores, Provisions, and Mens Wages, in the Nature of a Purser, and they are to see the Provisions for given out that none be spoiled. These take Place as they are capable of Preferment in their Factories by their Time of Service, and they are often taken out of Factories where they are wanted, and others put in their Places. If he that is upon a Ship, as a Book-keeper, be but an Assistant, he takes Place of the Steerinnen, or next to the Skipper, by Reason of his Office, or, as they in Respect, term it, the Pen. All Chiefs of Factories, &c. have free Power to dispose of their Ships and Men, while they are under their Chief-ship, and, as Occasion requires, in the Company's Service. They may take out Men, Ammunitions, Provisions and Stores, though such Ships come there casually, through Accident or Necessity. Thus every thing relating to this Subject, is so fully and clearly regulated, that Doubts or Difficulties rarely arise.

20. At *Batavia*, and all other Governments, they have a Chamber of Accounts for Orphans and Overseers of the Poor thus provided: There is a President and Master of the Chamber of Orphans at *Batavia* of the ordinary Council, who has for his Council half the Companies, Servants of the Quality of Copemen, and Upper-copemen, and half of the best Burgers, besides a Secretary, and other Assistants. They sit once a Week, and order the Disposal of all Orphans and deceased Mens Estates, as they think fit. At *Policat*, and all Governments under *Batavia*, they have but two Persons of the Chamber of Orphans, and a Secretary to them, all Company's Servants. The Chambers in those Governments are not accountable to *Batavia* or *Europe*; nor do they send Copies of their Books of Accounts to any Place, but always keep them at *Policat*, &c. and the Estates of Persons who decease in any Place under that Government, are under the Charge of that Chamber, whose Wills, Inventories and Accounts, are there registered; for which Purpose they have a particular Chamber in the Fort.

They must keep plain and fair Books of Accounts, Journals, and Ledgers. At *Policat* the Master of the Orphans Chamber, is every three Months to shew the Balance of the Books to the Governor. Those appointed for this Office do continue in it two Years or longer; and when one goes out the other must stay a Year to instruct the next Comer, though his two Years be out.

They are sworn to deal justly, and to keep secret the Concerns of the Chamber.

The Secretary of the Office must give three thousand Pagodas Security for the Performance of his Trust, and and be responsible for all Goods sold at Outcries, for which he receives Three per Cent. upon the Account of the Sale; and by reason he is responsible, he may deny any Man to bid or buy, whom he thinks not safe to trust. The Secretary also enters the Wills, and Inventories, and posts the Journal, which is kept by one of the Masters, and takes Care of the Papers that belong to the Office. The Chamber of Orphans may call whom they will into Council to advise with in difficult Matters; and no Person may deny to come and sit with them, though it be the Governor himself. The Council is allowed Two and an Half per Cent. out of the Estates of the Deceased, for what is received upon the Sale of Goods, but nothing on Money left in Cash, which Two and an Half is equally divided betwixt the President and all the Masters; besides which they have each Money for a Gown yearly, which is charged on the deceased Person's Estate. If any Man or Woman dies, leaving Children under Age, the Chamber of Orphans take Care of the Estate, and provide for their bringing up, till they arise to the Age of Twenty-three Years, and then they receive what their Parents left them, with Interest, and the Enciente thereof. If the

Parents of the Children have any Estates in *Europe*, the Chamber of Orphans where such Persons die, writes for the Effects to be sent to them, which is accordingly done.

The Money the Chamber of Orphans pays into the Company's Cash at *Batavia*, brings in Nine per Cent. and it is often let out to Freemen and others at Twelve per Cent. per Annum, upon good Security; but at *Pelicut* it is usually put into the Company's Stock, at Six per Cent. per Annum. If a Person dies and leaves no Will, or Relation in *India* to inherit, the Chamber of Orphans takes Care of the Estate, and gives the deceased Man's Account current Credit for the same; and there it remains till the right Heir demands it. If any Person dies with a Will, and leaves his Widow in Trust for the Children, tho' their Mother, the Chamber of Orphans may, if they please, require the Estate at her Hands, and keep it for the Children. And if they do allow the Mother to keep the Estate and the Children, they always take a Copy of the Will, and an Obligation from the Mother for the Estate.

The Chamber of Orphans may keep the Estate in their Hands, and manage them as they please; but, for the better Security, it is usually put into the Company's Hands, at the Interest before-mentioned; and they have the Company's Obligation for it. If any Person dies, leaving a Will, and therein does not give such a Proportion of his Estate to his Children as the Law requires, they will not allow of the Will, but require a full Part for the Children. If a Man dies in the Company's Service, the Official is not to touch his Papers; nor is the Chamber of Orphans to admit of any Discovery of his Concerns to the Fiscal. Again, if any Man dies in the Company's Service, and they owe him Money for Wages, the Chamber receives it, and enters it to the Creditor of the Deceased. The Company, besides One third of their Half of the Fiscal's Confiscation, allow also Fines on Offences; and the Confiscations of the Estates of Men executed for the Poor. There are many Overseers and Masters of the Poor at *Batavia*. At *Pelicut* they have but two, and those not of the Masters of Orphans, but others. They have Cognizance of all poor Christians under the Government, whether they be *Dutch*, *Portuguese*, or others, and take Care for their Relief, by making Collections in Churches every Sunday, and Distributions according to their Number and Necessities.

The Poor has always a considerable Stock before-hand, which has been gathered from the Confiscations of private Trade, and charitable Gifts. This Stock they also let out to the Company upon Interest, which they constantly receive, and employ as is found needful; and tho' the Interest of the Stock be sufficient to maintain the Poor, yet they never neglect the weekly Gatherings in Churches, to increase the Stock as much as they can. For, say they, it may happen, that by great Wars and Losses, many may be maimed, made Widows and Fatherless, and then the Principal may not be enough to maintain them. The Overseers, or Masters of the Poor, must keep a fair Book of all Receipts and Payments, that is, an Account of Cash, and an Account of what's paid into the Company's Stock, at Interest, with a Roll of the Names of all Persons to whom they give Alms, and what they give to every one. At *Batavia* there are Collections for the Poor every Sunday, Morning and Evening, in all their Churches.

When the ingenious and intelligent Reader shall have perused and considered this Scheme of *Dutch* Policy in the *Indies*, I am persuaded that he will very easily account to himself, for their having raised so extensive and solid an Empire in this Part of the World. He will see that they excel all other Nations in the *Indies*, not from Accident, Fortune, or a Concourse of lucky Incidents, but from a very wise and well disposed Establishment, and a constant Attention to the Principles on which it is founded. They will see, that how much soever the *Dutch* may be inclined to a Republick, and how steady soever in their Notions of a Common-wealth, yet they have made no Scruple of de-

parting from those Sentiments in the *Indies*, for the sake of complying so far with the Genius of the People in that Part of the World, as to establish such a Power in a single Person, as may contribute to keep up at once the Grandeur and Authority of the Company, and facilitate the Direction of their Affairs. But if the Governor General of *Batavia* has the Splendor, Revenues, and Power of a Prince, he earns them very dearly, by that perpetual Application to Business, which is required from him, and which he has it not in his Power to shake off: The same Thing may be said of the Director-General, and of the Members of the Council of the *Indies*; if they have great Appointments, they have a great deal of Business, and if their Power be large, they are obliged to give a very strict Account of the Manner in which it is used.

These Examples are of inexpressible Consequence, since they oblige all their Officers in their several Stations, to a constant and diligent Attendance, from whence they can never hope for any Dispensation, when they see such as are at the Head of Affairs, tied to a stricter and more laborious Attendance than themselves. The due Care that is taken, that every Man shall have a just Satisfaction for his Pains, a proper Subsistence, and a Certainty of receiving whatever is due to him, without Difficulty or Delay, and without needing the Assistance or Favour of any Man, must be acknowledged a Circumstance of infinite Importance. The Frugality shewn in their military and naval Establishments, and the Care taken to preserve a due Dependence on the civil Government, are Steps worthy not only of Attention but Imitation, because they are equally calculated for increasing and extending, as well as preserving and securing the Dominions and Trade of the Company. The Tenderness shewn for Orphans, and the Security that thus affords to private Men, that their Children shall certainly enjoy the Fruits of their Labour, is both a Spur to Industry, and a Means of promoting Marriages and Settlements, both of the utmost Consequence to their Affairs in the *Indies*, as it serves to increase their Force, without draining their Mother-country. Their Regulations for the Poor are copied from those in *Holland*, and highly laudable they are, in this respect; I mean, in not suffering any Distance of Country or Climate to deprive their People of their Birth-rights, which is the Benefit of their Laws, and to this I suppose it is owing, that the *Dutch* are observed never to lose, or even to impair their Affection for their native Country, which they particularly distinguish, by the tender Appellation of Fatherland, and to which therefore all their Cares are confined, and in which all their Acquisitions center.

To be the better satisfied of this, and to bring this Section to a Conclusion, by what most of all concerns us, the Knowledge of that Profit which accrues to them by the *East-India* Trade, we shall next consider the Oeconomy of this flourishing Company at Home, and demonstrate the Means by which all the Proprietors receive the clearest Satisfaction, that the whole Profits upon their Capital, are fairly divided out to them, and are not put into the Pockets of such as are intrusted with the Direction of the Company's Affairs, as also how the State preserves such an Influence over the Company, as is requisite for its own Security; and finally, how an Estimate may be made of the Wealth brought into the *United-Provinces* by this Company, from the Time of its original Establishment to this Day.

21. The great Power, prodigious Wealth, and vast Importance of this Company to the *Dutch* Republick, has occasioned a great Variety of Treatises on its Form, Constitution, and Manner of Government; so that it is very far from being an easy Task to reduce the Substance of what they had delivered within the narrow Bounds which we are obliged to keep. To begin as methodically as possibly, we will first state the original Stock of the Company, and the Proportions in which it was advanced, and which have never been varied since that Time: A Stroke of Policy of infinite Consequence to them in the Management of this extensive Commerce.

The Capital Stock of the *Dutch East-India Company.*

	Florins.
Amsterdam	3,674,915
Zealand	1,333,882
Delft	470,000
Rotterdam	177,400
Horn	206,868
Enchuyfen	536,775
In all	6,459,840

Those six having advanced this Money, they settled a Chamber in each of the Towns (that of *Zealand* being in *Middleburg*) from whence they chuse the seventeen Deputies, who direct the Affairs of the Company. They meet four Times a Year successively at *Amsterdam*, for the Affairs of the Company, and twice at *Middleburg* alternately; but not at the other Towns. These Deputies are the Sovereigns of this illustrious Company, yet under the Authority of the *States-General*. The seventeen Directors are chosen in the following Manner; eight by the Chamber of *Amsterdam*; four by that of *Zealand*; *Delft*, *Rotterdam*, *Horn* and *Enchuyfen*, one each; and the *Maes*, *Middleburg*, and *Norb-holland*, chuse one by Turns. These seventeen Directors govern the Company, and represent the Sovereignty of the whole Body by Plurality of Voices. They regulate all Affairs of Consequence, as the making of Councillors, Captains, Lieutenants, and equipping of Ships, the Sale of the Goods, the Division of the Profits, and all the particular Chambers must conform themselves to their Orders. They likewise appoint the Time for the Sale of the Goods, one half of which is sold in the Chamber of *Amsterdam*, a fourth in that of *Middleburg*, and a sixteenth in each of the other four Chambers, at the Time by them appointed, to the highest Bidder.

But besides these seventeen Directors, each of the Chambers have more belonging to the same Body: Thus *Amsterdam* has ten more, besides the eight sent to the sovereign Court; and *Haerlem*, *Leyden*, *Utrecht*, *Dort* and *Tergoe*, have each of them one there, as have the Provinces of *Guelderland* and *Friesland*, and *Zealand* likewise, besides their four Directors, have eight or ten more from other Towns of the Province. All the Deputies are to give their Advice in their respective Chambers for the Good and Advantage of the Company; and when any of the Deputies die, the Towns to which they belong, name three others in their Stead, out of which the Magistrates chuse one. This Committee meets twice a Week, and change their President each Month, so that every one presides in his Turn. There are two Advocates belonging to the Company, who make their Report of what is resolved upon to the *Indies*; upon which the Officers of the Company there form their Resolutions, and issue their Orders. There are eight Deputies for the Affairs of the Marine, War, and Building of Ships, four to inspect their Magazines, and the Goods that are sent to and come from the *Indies*, four which take Care of the Money which the Company pays and receives, and the rest take care of the Accounts, and other Affairs relating to Order and Justice, which is done to the meanest Mariner as well as to the greatest Officers.

The whole, though it seems at first sight in a manner independent of the State, is however kept in great Subordination, by Means of the wise Regulations made in establishing the Directors, and the Care taken, that not any two of them shall be related to each other, which prevents Combinations, and all those Practices by which publick Establishments are converted into private Jobs, and what ought to redound to the common Benefit of a Nation, conveyed into the Pockets of a few private Men. Once in three Years the *States-General* demand and receive a strict Account of the Company's whole Transactions, in order to be satisfied, that they keep within the Bounds of their Charter, that they do Justice to their Proprietors, and that they manage their Trade so, as that it may not be prejudicial to the State, which Regulation may be justly esteemed the principal Cause, that hitherto

N 511. 04.

the Affairs of this Company have been so perfectly well conducted.

In order to this Examination, or Controll of the Company's Accounts, the ancient Practice was for the *States-General* to name a Committee of their Members to go to *Amsterdam*, and there examine the Books of the *East-India Company* upon the Spot, which took up a considerable Time, and during that whole Space, this Committee from the *States* had their Charges defrayed at the Expence of the Company. In the Year 1728, the Company thought fit to make a Representation to the *States-General*, setting forth the Inconveniencies and unnecessary Charge this Method occasioned, and therefore praying, that their *High Mightinesses* would consent to its Alteration, and allow the Company to send a Deputation to the *Hague*, in order to lay their Accounts before them, which, after mature Deliberation, was assented to.

The Magazines of the Company are always kept in excellent Order. Such as are entrusted with the Care of them, give large Security, and are liable besides, to the severest Punishments in case they are guilty of any Breach of Trust. The same Degree of Strictness is shewn to all Degrees of Persons in their Service, nor are the Directors themselves exempted, in whom the smallest Fraud would be punished with a speedy and exemplary Justice. This keeps up that Spirit of Care and Diligence which is so absolutely requisite to the right Management of Commerce, and all the Under-officers moved by the Example, as well as constrained by the Inspection of their Superiors, discharge their Duty very exactly; so that the Dock, or Yard, in which their Ships are built and repaired, is kept in as exact Order, as that of any private Man, tho' there are seldom less than twelve hundred Persons employed therein.

They do not however exert the same Authority over the Sailors and Under-servants of the Company, that return from the *Indies*, but on the contrary, allow them all the Liberty they can desire, and suffer them to live in what Manner, and at what Expence they please, which is likewise done from a Principle of true Policy, since it affords them the Means of spending, in a short Time, all that they have acquired in long Service; so that in the Space of five or six Weeks, they are, generally speaking, reduced to their primitive State of Indigence, and consequently are obliged to enter again into the Company's Service for a fresh Term. Thus the Liberty of the Subject is preserved intire, and the Company nevertheless seldom wants a regular Supply of able and seasoned Seamen, which has very good Effects, because Experience shews, that such as are used to these eastern Climates, go many Voyages without Prejudice to their Health, whereas fresh and raw Seamen die in great Numbers, to the vast Prejudice of the State. The greatest Care is taken, that all employed in this Service, both at Home and Abroad, shall be properly qualified for the Stations in which they serve, and therefore it is a Rule, that none shall be admitted into any Office, before they have undergone a proper Examination; and though there may be some Instances where Interest or Favour may have procured Dispenfations in this respect, yet these occur but seldom, and are not therefore of very great Consequence.

In order to have a just Idea of the Manner in which this great Mass of Property is managed, it will be necessary to explain the Meaning of a Term frequently made use of here, and yet but indifferently understood. The Term I mean is the *Actions* of the *East-India Company*. The general Signification of this Phrase, both here and in *France*, is precisely the same with what we call *Stocks*. When therefore it is said, that *Actions* rise or fall, the Meaning is plain and obvious; but then it is absolutely necessary to know the Value of *Actions*, or rather the Value of the *Actions* in a particular Company, before we can form any just Notions of them. The original *Actions* of this *East-India Company* were fix'd at three thousand Florins; that is to say, a Person possessed of so much of the original Stock, was said to hold one *Action*, he who had twice as much two, and so on. This Phrase is still kept up, though the Value is very much altered, since a single *Action* is now worth from twenty-five to twenty-six thou-

11 H

and

land Florins. These Actions vary in their Price, according as the Dividends made upon the Company's Capital rise or fall; but whatever their Price be, a principal Director must have two in his own Possession to qualify him for that Post, and none are capable of giving a Vote in an Election, who are not possessed of one Action at least. The Salaries of the Directors vary, according to the Chambers to which they belong. Those eighteen that are chosen by the City of *Amsterdam*, have three thousand Florins a Year, but there are others that have but twelve hundred.

The Manner of buying and selling *East-India* Stock is very easy and expeditious. When the Parties have settled the Price between themselves, they go together to the *India* House, where the Seller applies himself to the Clerk of the Book in which his Stock is entered, and desires him to transfer so much from his Account to that of the Buyer; which being done, he signs it, and afterwards signs a Receipt for the Purchase-money, and the whole Transaction being performed in the Presence of a Director, he signs the Book likewise; so that there is not a Possibility of any Fraud being committed, yet the whole Expence of this Transfer does not amount to more than seven Shillings and Sixpence of our Money.

The Directors, who have the sole Management of the Company's Concerns, settle not only the Times, but the Quantities and Qualities of the Company's Goods, that are to be exposed in their Sales from the Produce of which their Dividends are wound, and are high and low, according to the Profit made by the Company. This, however, must be understood with some Restriction; for most certain it is, that from their first Establishment to this Day, they have never divided to the full Extent of their Profit, and this for very good Reasons. First, because long Wars, and other chargeable Expeditions, must be defrayed out of this reserv'd Stock, to prevent a great Decrease in their Dividends, which would necessarily occasion a very great Fall of their Actions. Secondly, they have constantly paid the State very large Sums for the renewing of their Charters, and they have likewise paid largely for such other Acts of State as they have procured from Time to Time in their Favour. Thirdly, it has been found requisite for them to keep large Sums in Bank, to answer the Emergencies of the State as well as the Company, in Times of great Difficulty and Danger. Besides all this, they have likewise reserv'd vast Quantities of Spices, and other rich Commodities, that their Sales might not lower the Price of them too much; and upon this Principle, they have sometimes burned great Quantities of Spices. They have also formerly had recourse to another Method for the Benefit of their Proprietors, which has been paying their Dividends in Cloves, Mace and Nutmegs, at a very low Price, by which those who received them, gained very considerable Advantages.

It may, indeed, be surmisd, that these Methods afforded room for the Directors to make great Advantages to themselves, but when it is considered, that their general Accounts, upon the Balance of which their Dividends have been declared, have been every three Years constantly audited by a Committee of the *States-General*, there is no just Reason to apprehend, that any Thing of this kind has been ever practis'd. Thus it clearly appears, that as the *East-India* Company in *Holland*, by a wise and prudent Disposition of their Affairs abroad, have been able to erect and maintain a Sovereignty, very little, if at all, inferior in Power to the greatest Monarchs in *Asia*, without which it would have been impossible for them to have maintained and supported that Commerce which has been the Source of such immense Riches; so, on the other Hand, by their prudent and exact Oeconomy at Home, they have constantly sustained the Reputation of the Com-

pany at the greatest Height, and thereby proved of infinite Advantage to their Country.

This indeed is the main Point, and the Thing which of all others we have labour'd to set in the fullest and strongest Light in this Section. For though it be true, that both the Glory and the Profit accruing from the right Management of the Affairs of this great Corporation, belong to the *Dutch* alone, and not to any other Nation, yet the Example of so extraordinary a Constitution as this is, by which a Body of Merchants have been able to raise an Empire in the *Indies*, and a kind of new Republick in the Bosom of that by which they were erected, is common to all the World, and therefore the entire History of its Rise, Progress, and present Condition, concerns not only all the rest of *Europe*, and in a particular Manner every maritime Power, but ought likewise to be transmitted to Posterity. This, as it inclin'd me to take so much Pains, and to turn over so many Books, in order to bring all that has been said of it into such a Method, as that the *English* Reader might clearly comprehend, not only its past and present Condition, but the Means by which the former was acquired, and the latter is, and probably will be maintained as long as the Republick of the *States-General* shall subsist: So I hope it will merit a Degree of Attention equal to the trouble it has cost, and inspire every Reader with a sincere and hearty Concern to see the Affairs of *English* trading Companies put into a like Train of Management, that as we have not equal only, but greater Advantages for the promoting and supporting an extensive Commerce than the *Dutch*, we may not be always as much behind them in this respect as we are at present.

There remains but one Thing more to compleat the Aim and Design of this Section, and that is, to give an Account of the Dividends which have been made since the Establishment of this Company, which when I began this Enquiry, I thought could not have been brought lower than the Year 1717; but by a diligent Search I have continued them eleven Years further, and have Reason to hope, that in the Appendix to the next Volume, I shall be able to gratify the Reader's Curiosity to its utmost Extent, by bringing them still farther down, perhaps to the present Year. As they stand in the next Page, they will fully answer three very great and useful Ends. In the first Place, they will fully support, and undeniably prove the Truth, not only of the Facts recorded, but also of the Observations made upon those Facts through the Course of this History, and thereby convince the Reader, that it is not an over-weening Passion for Trade, or any particular Fondness for the *Dutch*, that has led me to treat so largely of this Subject, but an honest and laudable Zeal for Truth, and for the Interest of my Country. It will in the next Place shew, what incredible Advantages result from Commerce, when wisely established, and steadily pursued, and how this alone contributes more, not only to the enriching, but to the raising the Power and Credit of a Nation, than all other Methods taken for that Purpose put together; and lastly, it will demonstrate, beyond all Question, the Falseness of that Objection, which, of all others has been thought the strongest against the *East-India* Trade, viz. that it exhaults and impoverishes Nation which carries it on, by exporting annually vast Quantities of Silver; for, if there had been any Truth in this, the Experience of so long a Course of Time, as one hundred and thirteen Years, must have rendered it visible to a Degree beyond all Contradiction; whereas, this Account of the Company's Dividends, is the fullest and most authentick Evidence of the contrary; so that it is to be hoped, we shall never hear that Objection urged again, or if it be, that it will have as little Weight as an Argument built upon Conjecture ought to have, when oppos'd to the Lights of Experience.

Use to the Publick, and of prodigious Benefit and Advantage to private Persons in the same Way.

But then, if we consider it in a larger and more extensive View; and as it hath a Reference to the Commonwealth of *Holland*, and the *Dutch* Nation, we shall find that this *East-India* Commerce has been so far from exhausting and drawing out the Wealth of these Provinces, that, on the contrary, it has brought in a much greater Proportion of Wealth than could have been obtained any other Way. In order to be satisfied of this, we need only consider the original Capital of this *East-India* Company, which consists of not quite six Millions and an half of Florins, that is, to take it in round Numbers, about six hundred and fifty thousand Pounds Sterling; and yet upon this, in the Year 1728, they had divided Eighteen Millions of our Money.

It may, indeed, be objected, that before we can draw any Consequence from this, we ought to know the Quantities of Silver that have, within that Space of Time been exported from *Holland*; because, till these Sums are known, and deducted from the Eighteen Millions, divided amongst the Proprietors, it cannot, with any Certainty, be known how great Profits have accrued to the *Dutch* Nation from this Trade. But, in answer to this Objection, which is the only one that can be made; I say, first of all, that the Dividends made by the Directors of the Company, arise from the Sales by which the Goods brought from the *Indies* on the Company's Account, are thrown into the Hands of private Merchants, by whom the greatest Part of them have been exported into other Countries of *Europe*, and a vast Profit acquired thereby, which Profit is not at all taken Notice of in the Account before stated. I say, in the next Place, that the home Consumption of *India* Goods in *Holland*, bears so little Proportion to the Quantities of those Goods vendid by the Company in their quick Sales, that it is impossible to conceive they can conduce to any considerable Impoverishment of the People; and that there is the highest Reason to believe the whole Eighteen Millions before mentioned has been drawn from foreign Countries into *Holland*, by the Sale of those Commodities; and consequently this Sum at least has been gained, not only by the Company, but by the Nation.

I say, in the third Place, that this is the more credible, because this is so far from being the whole of the Profits which the Company has gained by its Commerce, that there is good Reason to believe it is not much above one half of them; for we must consider that the Company has, at several Times paid for the renewing its Charters and Privileges more than its original Capital; that it has likewise expended, from the Time of its first Establishment, an immense Sum every Year for the building, repairing, and equipping the Ships employed in its Service, and in discharging the Wages due to all who are in its Service, which, with many other Articles, that I need not enumerate, must have arisen from the Gain produced by their Trade. I say, in the fourth Place, that as the Company has very wisely avoided very high Dividends, and has always retained a vast Stock, and an immense Treasure for its Support in case of any extraordinary Emergency, so all this, let its Amount be what it will, is excluded from the before-mentioned Sum of Eighteen Millions, and belongs to a separate Account.

I say, farther, that all the Property of which the Company is possessed in the *East-Indies*, and which is capable of being transferred from thence into *Europe*, ought to be considered as the entire Produce of this Trade, as it never could have accrued to, or have been by any Means in the Power or Possession of the Subjects of the States of *Holland*, but by the Establishment and Management of this Company: So that if we take in all these various Branches, which make no Part of these Eighteen Millions, I believe, there is no reasonable Man, at least no competent Judge of Matters of this Nature, who will not readily allow that they must vastly over-balance whatever Quantities of Silver have been exported by the Company, since its Establishment, for the carrying on of the *India* Trade. So that on the whole, I think, I may very fairly, and with the

greatest Justice conclude, that if this Article of the Trade of *Holland* could be balanced with the utmost Nicety, it would appear, that, at least, this Sum of Eighteen Millions has been gained by the *Dutch* Nation, as well as by the Proprietors of their *East-India* Company.

But if it should be said, that the Wealth of the *Dutch* Provinces does by no Means correspond with this Calculation, and that therefore it is very improbable; my Answer to this is, that in the first Place, this ought to be proved, and in the next, that supposing it could be proved, it is no reasonable Objection to the Truth of what I say, since it is very possible, and indeed highly probable, that a great Part of the Wealth brought into *Holland* by this Commerce, and by the numberless Branches of Trade which depend upon it, may have been in Part dissipated and dispersed by the great Wars maintained by the Republick, and by various other Exigencies of State; so that allowing there were not eighteen Millions in the Hands of all the Subjects of this Republick, yet this does not prove, that they may not have gained so much by this Commerce, because, as I have said before, they may have spent it. I may add to all this, that there is no great Difficulty in setting this Argument in such a Light, as that it may operate strongly in my Favour; for, if we consider the prodigious Sums the *Dutch* Government have levied upon their Subjects, the many and long Wars in which they have engaged, and the great Difficulties and Distresses to which they have been driven, it is as difficult to imagine, how they should have been able to find Money for their Expences, and yet leave their Subjects so rich as they are at present known to be, without admitting such a Profit upon this Trade as it is to believe, that the best Part of these prodigious Expences was taken out of that Wealth which this Company brought in.

That a great deal of Time has been spent in examining and tracing the History of the *Dutch* Commerce in the *Indies* for such a Number of Years, that I have been very large in my Description of its Establishment Abroad, and have bestowed no less Labour in setting forth the Oeconomy of this *East-India* Company at Home, is what I cannot deny; but at the same Time, I must profess, that they bringing such a Multitude of Things into the Compass of this Section, and thereby exhibiting in one View, what it would cost the Reader much Time and Trouble, and I might add, Expence likewise, to pick up, from a Multitude of different Writers, was my sole Motive thereto; and therefore I hope this will be thought a just Excuse for any Inconveniences that may have attended it; the rather, because in the Course of my Enquiries, I have met with such Helps, as I did not, and indeed could have no Reason to expect, which has enabled me to render the Account I have given, much more perfect than at first I had any Hopes of making it. There is no Possibility of judging, on the first laying of a Plan of this Nature, how all the Materials are to be collected, what Space they will fill, or what Accellions may be made to them, while the Structure is erecting; but it is always clear, that an Author, who has a due Regard for his own Reputation, and a just Concern for the Performance of what he has promised to the Publick, will be always attentive to the main Object, and will let Circumstances of smaller Consideration give Way thereto, for which, when all Things have been sufficiently weighed, his Readers will not think that he ought to be blamed.

But if we have dwelt so long upon a Subject so fruitful of Matter as this has apparently been, it will prevent our employing so much Time as we should otherwise have done in accounting for the Endeavours of several other Nations in *Europe*, to share in this Trade, by erecting new Companies for carrying it on, of which it will now be necessary to say no more than what is requisite, to shew how, when, and by whom they were erected, and what their Situation and Expectations are at present, which will conclude all that we have to add concerning the *East-Indies*, as it will also do this our first Volume.

SECTION XXXV.

The History of the French East-India Commerce from its first Original, together with a clear and concise Account of the several Alterations it has undergone; and a full and plain Description of its present Circumstances at home and abroad; interspersed with some curious Remarks on the Nature of the French Government when the Powers thereof come to operate upon Trade.

Collected entirely from the French Writers.

1. *The fruitless Endeavours of Francis I. Henry III. and Henry IV. to engage their Subjects in long Voyages, and the first Appearance of an Indian Trade in that Country.* 2. *The Pains taken in this Respect by the great Cardinal Richelieu, and his noble Plan on that Subject abortive.* 3. *The first effectual Establishment of this Commerce owing to the Wisdom and publick Spirit of M. Colbert, who interested the Crown in this Affair.* 4. *The Protection of the King, the Patronage of that able Minister, and the most zealous Endeavours of the Merchants in France fail in promoting the Interests of this Company.* 5. *After the Decease of M. Colbert it declines continually, and loses all Countenance from the Court, which brings it into a very low State.* 6. *Transition from the Affairs of the Company in France, to the Management of their Commerce in the Indies.* 7. *A succinct History of the Acquisition, fortifying, and erecting a Town at Pondichery, with the Reasons which induced the Company to make it their capital Residence.* 8. *Remarkable Revolutions that have happened to this Place, and to the Affairs of the Company in the Indies.* 9. *A Description of the Fortrefs and Town of Pondichery at it now stands, a Calculation of the Number of Inhabitants, and the Importance of this Place set in a new Light.* 10. *The Condition of the French East-India Company at the Demise of Louis XIV. impartially represented.* 11. *A View of the Regent Duke of Orleans's Scheme for a Coalition of the French Trading Companies for the Improvement of Commerce, and the Support of publick Credit.* 12. *A short historical Account of the China, Senegal, and West-India Companies that were united to the Company of the Indies by the Regent's Edict.* 13. *A perfect Representation of the Nature, Power, Privileges, and Establishment of the present French East-India Company since the Execution of that Scheme.* 14. *A brief Account of the Company's Trade from 1720 to 1741, with an impartial Account of its present State at home as well as in the Indies, and the true Value of its Operations.* 15. *Remarks and Observations on the Facts related in the foregoing Sections, explaining the Nature and Consequences of maritime Powers.*

WE opened the former Section, with observing, that Zeal for Freedom, a due Portion of publick Spirit, and great Industry, were capable of conferring the Blessings of an extensive Trade, even upon Nations labouring under the greatest natural Impediments: But it will be the Business of this Section, to shew, that where Freedom and publick Spirit are wanting, Power cannot supply their Place; and even Industry itself, though it may procure Credit to such a People, will never be able to purchase Wealth. Commerce loves to find its own Channels, and will not submit to any Restraint. Hope will nourish it in the most barren Soil, provided that Hope be cherished by a mild and prudent Government; for Trade is found to be of the same Nature with certain Plants, which, though they become fair and large by Cultivation, yet can never be forced.

There have been few Governments, at least, where the Monarchs affected arbitrary Power, which could boast of being so happy in Ministers as France; neither has this Country wanted some great Princes who have both understood their Subjects Interests, and laboured to promote them: And yet, with respect to the Commerce of which we are treating, both have laboured in vain. The first Monarch of this Country, who strove to excite his Subjects to extend their Commerce, by making long and distant Voyages, was Francis I. who, by his Declarations in the Year 1537, and 1543, exhorted the French Nation to emulate their Neighbours, and to labour to obtain a Share in those important Discoveries, by which they were so much exalted both in Reputation and Riches. Henry III. renewed these Exhortations by an Edict, dated December 15, 1578, but without any Effect.

It was under the Reign of his Successor, Henry IV. one of the wisest, greatest, and which is still a higher Character, one of the best Princes that ever sat upon the French Throne, that this Nation first attempted to share in the Commerce of the Indies. One Gerard le Roy, a Native of the Low-Countries, and who had made several Voyages

to the East-Indies on board the Dutch Ships, came into France, and offered his Service as a Pilot to some Merchants, who were desirous of associating themselves for carrying on that Trade; of which the King having Notice, gave them all the Encouragement they could desire; and by an Arret, bearing Date June 1, 1604, erected the first East-India Company that had been seen in France, and granted them exclusive Privileges for the Term of fifteen Years, which however proved of no Use, either through the Divisions and Disputes which arose amongst the Merchants that composed this new Company, or from their finding it impossible to raise a Fund sufficient for carrying so great an Undertaking into Execution.

But notwithstanding this Company failed, yet Gerard le Roy still continued in France, and still laboured to set on foot an East-India Company, which at length however, he effected, under the Reign of Louis XIII. who granted the Merchants that were engaged in this Project, his Letters patent, dated March 2, 1611, by which they had all the Privileges that they could desire confirmed to them for twelve Years. But, notwithstanding this, they suffered four whole Years to relapse without fitting out to much as a single Ship; and thereupon two Merchants at Rouen petitioned the King, that these Privileges might be transferred to them, offering to fit out a certain Number of Vessels that very Year. But the Company before erected interposed, and declared that this Delay of theirs arose from unavoidable Difficulties, and not from any Design of dropping or abandoning their Project; upon which the King very wisely directed that these Merchants should be associated with the old Company, in order to encrease their Capital, and carry on their Trade the better.

In pursuance of this Resolution, they had new Letters Patents granted, dated July 2, 1615, which were registered in Parliament the Second of September following; and, in consequence of the ample Privileges that they had thus obtained, they began to fit out Ships, and actually

possessed themselves of the Island of *Madagascar*, which was then considered as a very great Thing, and mighty Hopes were conceived therefrom. But this, instead of facilitating their Commerce to the *Indies*, proved the Ruin of it under this Establishment; for, it being found by Experience, that the Profits arising from the Possession and Commerce of this Island, were of very little Consequence, it was too hastily concluded, that the Whole of this Trade would prove as insignificant; and so, notwithstanding all the fair Promises made at the Beginning, this Company, like the rest, sunk, and was totally lost.

2. The great Cardinal *Richelieu* however resolved to revive this Commerce, and undertook it with great Spirit, and consequently with all the Appearance imaginable of Success. The Royal Privileges granted to this new Company were dated the Twenty-fourth of *June* 1642, and contained all that could be thought necessary for promoting the Interest of a Society, under the peculiar Protection of so great a Minister; yet, it fell out unluckily, that he did not long survive this new Grant, which without doubt, was a great Prejudice to the Company's Affairs: However, *Louis XIV.* or rather the Regency, acting in his Minority, confirmed those Privileges by an *Edict* dated the Twentieth of *September*, 1643, and the Company entered into Possession of all the Advantages derived therefrom immediately.

All these it quietly enjoyed for twenty Years; during which Space, this third Company sent every Year a Vessel, but the far greater Part of them were either cast away in their Passage, or lost the best Part of their Crews by the Scourge; so that tho' the Name of an *East-India* Company was still kept up in *France*; yet, in fact, they were possessed of no such Trade, but contented themselves with a Number of fruitless and fatiguing Attempts to settle a flourishing Colony at *Madagascar*; a Design, which, after all, they could never bring to bear. The Time of their Privilege being expired, the Duke de la *Meilleray* thought fit to attempt an *Indian* Trade upon his own Bottom, which, however ended in sending a Ship or two to *Madagascar*, where he got into the Possession of the *French* Settlements, and found them not worth keeping, though it is said that he made this Attempt at a pretty easy Rate, because being Master of the Ordnance, he made so free with the King's Stores, as to send large Quantities of them to *Madagascar*, and placed the same to his own Account. On his Death however, his Son, who was styled the Duke de *Mazarin*, sold his Interest in this Island for about one thousand Pounds of our Money, which proved a great deal more than it was worth.

Thus we have spent our Time hitherto in contemplating the Progress of the *French India* Companies for about threescore Years, within which Space they did nothing; though some private Men from *St. Malo's* sent Ships thither, and found their Trade turn to some Account. This very plainly shews, how little the *French* Government agrees with Commerce, and how difficult her ablest Ministers find it to establish Trade by dint of Power: And yet it must be allowed, that Cardinal *Richelieu* took all the Pains in this Respect that it was in the Power of Man to do; for he sent for Persons who were best versed in this Trade from *Holland*, drew abundance of rich Merchants from various Parts of *Europe* into *France*, drew the Plan for the Establishment of the new Company himself, and engaged some of the principal Persons for Quality and Fortune in *France* to embark in it.

What he conceived would most promote it, proved the Ruin of the whole Design; for there being always some great Nobleman or other at the Head of this Business, such as endeavoured to obtain Employment in the Company's Service, were forced to become his Creatures; by which happy Contrivance there were hardly any employed who had either Merit or Capacity; so that the Merchants and such as were the best Judges of the Means of carrying on such a Commerce with Success, treated the *East-India* Company as a mere Phantom, and never concerned themselves at all therewith: As, on the other Hand, the *English* and *Dutch East-India* Companies were under no Apprehensions about it, but being solely guided by Experience, treated the Affair of a *French East-India* Company with

Contempt; while the rest of the States of *Europe*, seeing that *France*, with all her Power, could make nothing of these repeated Attempts, took it for granted that the *India* Trade was designed by Nature for the maritime Powers, and so never troubled their Heads about it. Thus Things remained quietly in this Situation for the major Part of the last Century; and while *France* gave Law to her Neighbours by Land, she made as inconsiderable a Figure by Sea as any of the little States in *Italy*. But the Scene was soon changed when *Louis XIV.* came to manage his own Affairs, and had taken into his Service such Ministers as were equally capable of undertaking great Designs, and of foreseeing and overcoming all the Difficulties that could possibly be met with in the Execution of them.

3. The famous *M. Colbert*, so much distinguished by *Louis XIV.* and whose Activity and Prudence procured him most of those Successes which distinguished the former Part of his Reign, and rendered him the most powerful Monarch in *Europe*. This active and intelligent Minister, I say, was the Person who conceived the Design of reviving the *French East-India* Company, notwithstanding all the Misfortunes that Scheme had met with, and which had, over and over, disappointed the Skill and Care of all his Predecessors. But before he made his Intentions known to the Publick, he took Care to make himself perfectly well instructed in the Affair he was to undertake, which he did, by drawing to his Acquaintance such Merchants and Seamen as were held to understand this Subject best. It was from them he learned that there were three principal Difficulties in the Way of that Structure, which he laboured to raise, and which, as they had never hitherto been overcome, so it appeared extremely doubtful whether, considering the Nature of the *French* Government, and the Temper of the *French* Nation, it was possible they should be got over.

The first was, the finding a sufficient Fund for the effectually fixing and establishing such a Company, as to which nothing hitherto had ever been done worth mentioning, or that could afford any probable Hopes of Success: The *French* Merchants, being extremely fond of new Projects, were ready enough in promising Subscriptions, but very slow in performing what they promised, and in complying with the Terms of their Contracts, even after they had subscribed. The second Fault was said to be a peremptory Exclusion of Foreigners, notwithstanding it was so evident, that the necessary Funds for the carrying on so extensive a Trade, were not easily, at least, to be found in *France*. The third and greatest Difficulty of all was, the affording such a Degree of Liberty and Independence to this Company as might satisfy both Strangers and Natives as to the Security of their Properties, and put the entire Management of their Affairs into the Hands of such only as were chosen and entrusted by themselves.

All these Things *M. Colbert* weighed in his own Mind, and when he thought he had sufficiently ripened his Project, he reduced it into Writing, but knowing at the same Time, the great Consequence of having the most solid Sentiments helped by a proper Method, and adorned with the Graces of Writing, he communicated his Plan to *Mr. Charpentier*, of the *French* Academy, esteemed one of the best Pens in *France*. This Gentleman having new dressed our Statesmen's Thoughts, by digesting them into their proper Order, and clothed them with the plainest and significant Language; the Scheme came Abroad with all the Advantages that could be desired, and was attended with all the Success that could be expected. As this Paper was esteemed a Master-piece in its Kind, had amazing Effects, and contains Abundance of curious Circumstances, it may not be amiss to give the Reader an Extract of its Contents.

It was in the first Place observed therein, that as former Schemes of the like kind had failed for want of proper Funds, there was no Danger, that any Thing of this Nature should happen here, since, besides the constant Protection and Support which the Government determined to give thereto, the King himself and the greatest, and the wealthiest Persons in the Nation were resolved to furnish such large Sums at the Beginning, as might put it on a

Level,

States of Europe, seeing could make nothing of for granted that the In- for the maritime Pow- Heads about it. Thus Situation for the major le France gave Law to made as inconsiderable a States in Italy. As this Paper was had amazing Effects, r circumstances, it may Extract of its Con-

erein, that as former for want of proper y Thing of this Na- es the constant Pro- ernment determined the greatest, and the e resolved to furnish ght put it on a Level,

Level, at least, with the Dutch East-India Company, at its first Establishment. In regard to any Objection that might be raised from the various Disappointments which had overturned three several Companies already, it was observed, that few, or no Undertakings of this Sort were attended with immediate Success. That the Spaniards suffered greatly in their first Expeditions to America, which, however, did not hinder them from persevering in their Designs by which they had acquired the Empire of the new World. That the English Colony to Virginia had failed four or five Times, and yet was brought to Perfection at last; and that even the Dutch East-India Company, which so much excelled all others, was far enough from being fortunate in its first Beginnings.

These Principles being laid down, it was shewn, that the Island of Madagascar, a considerable Part of which was then in the Possession of the French, was a Country capable of being improved to such a Degree, as to become of more Consequence, and of greater Advantage, than any of the Settlements possessed by the Dutch in the East-Indies. In Support of this, it was said, that no body would deny, that his Settlement was incomparably more commodious and more secure than that of Batavia, in the Island of Java, which the Dutch had nevertheless made the capital Residence of their Company in the Indies. For with respect to the Commodiousness of the Place, the Country of Madagascar was extremely agreeable, the Climate equally temperate and pleasant, and the Soil affording all the Necessaries of Life, in the greatest Abundance, whereas the Territory about Batavia, was so far from being fruitful, that the Company were obliged to procure from distant Places, Rice, fresh Meat, and other Provisions, for twenty-five, or thirty thousand People, which could not but be attended with great Difficulties, as well as with a vast Expence. In respect to Security, it was well enough known, that only a small Part of the Island of Java was in the Power of the Dutch, and that the rest of the Country, which was very large, and very populous, was inhabited by a Variety of Nations, agreeing, however, in the Fierceness and Brutality of their Natures, and in a bigotted Zeal for the Mahomedan Religion, which made them hate and despise all Christians to the last Degree. That the Territories of the Dutch bordered on one Side on those of the King of Mataran, who had more than once invaded them at the Head of an Army of one hundred thousand Men; that on the other, the City of Batavia itself, was but twelve Leagues distant from the Dominions of the King of Bantam, who had likewise shewn himself their powerful and inveterate Enemy; whereas, on the other Hand, the Inhabitants of Madagascar were of a mild and excellent Disposition, and so much inclined to receive the Doctrines of the Gospel, that a Settlement consisting only of one hundred Men, would be in greater Security there, than a like Settlement even of a thousand and upwards in the Island of Java.

That besides all this, by fixing their capital Colony in Madagascar, the French Company would be better seated for Trade than the Dutch in Batavia, because it was equally convenient for carrying on the Commerce of the Red-sea, or of the Gulph of Bengal, and lay at the same Time very properly for the Dispatch of Ships to China and Japan, affording a convenient Place for re-fitting and refreshing in their Return: In Reference to the Execution of a Project which these Arguments were supposed to demonstrate probable and feasible,

It was said in this Memorial, that a Fund of six Millions, or six hundred thousand Pounds of our Money, would be necessary in order to the equipping twelve or fourteen large Ships, from 800 to 1400 Tuns, in order to embark such a Number of Persons for this Island of Madagascar, as might effectually, and at once establish a considerable Colony there. That there was no reason to doubt, that his Majesty would advance a tenth Part of this Sum. That the Nobility and other Persons of large Fortunes, would advance also the Sums requisite to set this Design on Foot, and that as the king was willing to take a tenth Share in the setting out, they had Reason to expect he would concern himself largely in future Expeditions. That as a farther Encouragement, he was willing

to grant the Company an Exemption from half their Duties both Inward and Outward, on all the Goods they exported to, or imported from the Indies; and over and above all this, his Majesty was content to take upon himself all the Loss that might arise for the first eight or ten Years, which was sufficient to shew, how much, and how sincerely he had this great Design at Heart, and how willing he was to contribute to its Success. That as to private Persons, they should be at Liberty to subscribe in what Proportions they pleased; till the Fund was full; after which, no farther Subscriptions should be received on any Terms.

That the king would not only permit Foreigners to take what Share they pleased in these Subscriptions, but to encourage them thereto, would likewise consent, that such as subscribed ten thousand Livres (this was afterwards changed to twenty thousand) or upwards, should thereby acquire the Right of Naturalization, without any farther Ceremony; by which their Relations, tho' Strangers, should be capable of inheriting their Effects in the Kingdom of France; and farther, that in case of a Rupture with the State, to which such Strangers were Subjects, their Effects should never be liable to Confiscation, on any Pretence whatever. That the Affairs of the Company should be managed by their own Directors, chosen from amongst themselves, in whose Hands the Funds of the Company should constantly remain, and that Foreigners should be capable of being elected Directors, provided they were interested in a reasonable Degree in the Stock of the Company, and resided in France. That in Point of Law Suits, the Company should be made as easy as possible, and after being heard, in the first inferior Court, near the Place where the Cause of Action arose, they should be at Liberty to appeal directly to the Parliament.

Such was the Memorial which this great Minister caused to be dispersed through all Parts of the Kingdom of France, in the Month of June, 1664, and upon which, the Edict for establishing the East-India Company, which still subsists, and which bears Date in the Month of August, in the same Year, was founded. We have been the larger and fuller in this Account, because it answers two Purposes; for, first, it clearly explains the Methods taken by this great Minister to accomplish what in his own Opinion appeared to be a most difficult Undertaking, and next, it affords us an easy, and at the same time, a perfect View of the principal Points upon which the present East-India Company's Establishment rests; for, tho', as we shall shew in the Course of this Section, the royal Authority has been often exerted in changing and new modelling, as the Circumstances of Affairs in general, and those of the Company in particular required, certain Articles in this Plan; yet has it been always considered as the Basis and Foundation of their Privileges, and consequently it was necessary to be well acquainted therewith, in order thoroughly to understand the subsequent History of their Transactions.

But first, it will be necessary to observe, that this Edict for the Establishment of the Company, was digested into forty-seven Articles, and that the Value of the original Actions (and by the Way, this was the first Time that Word was used in France) was fix'd at one thousand Livres, and the subsequent Call restrained to five hundred more, which Edict of Establishment was registered in Parliament the 7th of August 1664.

4. As soon as this Edict was published, his most Christian Majesty ordered the Sum of three hundred thousand Livres, to be paid out of the royal Treasury, into the Hands of the Cashier of the East-India Company, and M. Colbert, who had been so warm and so industrious in bringing Things thus far, continued to apply himself with equal Attention to whatever might promote the Concerns of a Society, that he had taken so immediately under his Protection. The Assiduity of a first Minister in France is capable of putting any Thing into Motion, as appeared manifestly upon this Occasion, since in the following Spring, there sailed four large Ships from Brest for Madagascar, all of which arrived safely there on the 10th of July. This new Colony changed the Name of the Place where they were established, from Madagascar to the Dau-

ple's Island, by which last Name it is still known to the French, and according to the Accounts they published of it, ought to be esteem'd a perfect Paradise. In a short Time, however, they began to change their Opinion, either from the natural Levity of that Nation, or because Opportunities presented of extending their Views in the Indies.

Two Persons offered themselves upon this Occasion, to promote the Interest of the new Company; the one was Mr. Caron, who has been already often mentioned. He was a Native of France, but had been for many Years in the Dutch Service, and had been rais'd in that Service to the Rank of President of the Factory of Japan, where, for Reasons which we have assign'd in another Place, he suffer'd severely. And not thinking himself sufficiently compensated for his Sufferings, quitted the Dutch Service, and return'd to France, at a Juncture when a Man of his Ability was much wanted, and therefore he was carelessly and employ'd. The other was Mr. Marcara, a Native of Ispahan, in Persia, and nearly allied to several Persons of great Rank in that Kingdom, as also to some who enjoy'd Governments, and other great Employments in the Indies; he also was employ'd by the Company, and did a considerable Service. In Conjunction with Mr. Caron, he settl'd a Factory at Surat, and by his own Interest purely, procur'd for them an Establishment in the Kingdom of Golconda, in the Year 1669.

But it afterwards fell out, that these two Gentlemen differ'd, and Mr. Caron sent Home heavy Accusations against the Persian, who clear'd himself, however, so effectually, of all that was laid to his Charge, that he was honourably acquitted, and continued in his Employment. It was also in this Year 1669, that the Directors of this East-India Company began to dislike their Settlement in the Island of the Dauphin, which had been always considered as their chief Residence; but now they were desirous of transferring that Honour to Surat, to which the Court of France assented; and that nothing might be wanting for the Support and Encouragement of this Commerce, the Harbour of Port-Louis was granted to them, with all its Dependences, together with full Power to make such Alterations and Improvements as they judg'd requisite, and it was in virtue of this Grant, that they built and established their Magazines at what is now call'd Port-Orient. But notwithstanding all these Acts of Favour, the Affairs of the Company were so far from taking a successful Turn, that it was found, upon stating a general Account, that they were indebted in no less a Sum than four Millions to the Crown, which, however, the King, agreeable to the Promise made them at their Establishment, clearly forgave, and took that Loss upon himself.

About this Time, some private Persons, having inform'd, that they were willing to embark their Fortunes in a Trade to the Indies, provided they might have the Company's Licence; and the Company likewise having signify'd to the King, that it might prove beneficial to them, if they had it in their Power to grant such Indulgences, this Favour likewise was added to the rest, and private Traders were permitted to engage in this Commerce, upon the following Conditions; first, that they should transport themselves and their Effects on Board the Company's Ships, both coming and going. Secondly, that they should pay their Freight and Passage before their Departure. Thirdly, that the Goods they brought Home, Jewels and precious Stones only excepted, should be expos'd in the Company's Sales, and their Produce fairly account'd for. Fourthly, that these Licences should be in Force only for five Years, and fifthly, that if they should be found prejudicial to the Affairs of the Company, the Directors might abridge or cancel them at their Pleasure.

There was yet another, and still more considerable Act of Grace obtain'd by their powerful Protector Mr. Colbert, which was an Exemption from all Dunes on the Goods they brought Home. But notwithstanding these mighty Advantages, and though they scarce ask'd any Thing of their Patron but what was granted, yet their Affairs continued declining, and as he died in 1683, the Spirit of

this Commerce might be said to expire with him. The Body, indeed, of the Company, was kept up, not much perhaps to its Advantage; they had not only a Court of Directors at Paris, but in Imitation of the Dutch East-India Company, Chambers of Direction, at several Ports, a Council in the Indies, and in short, the Appearance and Trappings of a great and powerful Society, when at the Bottom they were distressed and poor, so that upon stating a general Account in 1684, it clearly appear'd, that instead of gaining one Penny by their Commerce, they had actually run out one Half of their Capital, or about three hundred thousand Pounds of our Money.

This was attributed to several Causes, but principally to these three; first, to the War with the Dutch, which last'd from 1672 to 1678, and of which we have spoke largely enough in the last Section. Secondly, to the Negligence and Fraud of the Persons employ'd in their Service in the Indies, who thought, though they were sent by the Company, they had no other Business there, than to mind their own Interests, which they did at the Expence of their Masters, so that some private Fortunes were made, while the Concerns of the Publick were running to Ruin; and lastly, to the Squeeness, Timorousness, or Inability of their Subscribers, who had not paid in, as they ought to have done, to the great Detriment of their Affairs. To remedy these Disorders, and to retrieve, if possible, the Trade of the sinking Company, it was resolv'd to change the System of their Government, to suppress all the little Chambers of Directors, and to put the whole Management of the Company's Concerns into the Hands of twelve Directors residing in Paris, who were each of them to pay in thirty thousand Livres upon the forfeited Actions, and to be allowed reasonable Salaries for the Business they did. It was also resolv'd, that all who had not paid in, should forfeit their Shares to the Company, with a Proviso, that if in two Years, they made good their Payments, they should enter into their former Rights, and have all their Actions restored.

This Regulation was confirm'd by a royal Edict, dated in February 1685, by which the King left the Company free Liberty either to resume the Sovereignty of Madagascar which they had surrendered in 1676, as has been before mention'd, or to leave it as it then was in the King's Hands. As the Company had thus their Option, and were left at liberty to do as they thought fit in this Affair, they, after mature Deliberation, thought proper to adhere to their last Resolution, and to quit this Island intirely to the Crown; which Act of theirs was confirm'd by the King's Arrêt, bearing Date the 4th of June, 1686. All these Regulations at home were supported by an Alliance abroad, which it was hop'd would have had a very good Effect, and totally restor'd the Company's Affairs.

The History of this Treaty will be given in the succeeding Volume, and therefore we shall be very short in what we have to say of it here. The King of Siam, a very powerful Prince in the Indies, had rais'd one Mr. Constance, who was originally no better than a Servant in an English Factory, to the Rank of his First Minister; and he being a bold enterprising Man, took it into his Head that it was very possible to convert his Master and all his Subjects to the Christian Religion, by engaging him in a very close Correspondence with the Court of France; in which last Part of his Scheme he succeeded so well, that not only Missionaries were sent over to convert the Siamese, but a Squadron of Men of War likewise, with some Troops on board, to make the King as absolute as his Brother of France. This rais'd such a Jealousy in the Minds of his Subjects as creat'd a universal Revolt, in which the King was murdered in his Palace; his Prime Minister cut off in the same manner, and the French Garrison in the Citadel of Bankock, after an obstinate Defence, totally destroy'd; and thus ended that Affair, and all the Advantages that were expect'd from it; so that in about two Years time the Company's Affairs were in as bad a Condition as ever, and all the high Hopes they had conceiv'd from the Change of their Administration, and the grand Alliance in the Indies vanish'd into Air, and were blast'd almost as soon as they bloom'd. This fell the heavier upon them, because abundance of new Subscribers had been drawn

drawn in, which increased the Clamour upon their Mis-
carriage, and induced a general Opinion that it was abso-
lutely impossible for the French Nation to carry on a Trade
to the Indies with Advantage.

5. But all these vexatious Circumstances at home and
abroad were nothing in comparison of the Loss of their
generous Protector Mr. Colbert, who was ready at all
times to exert his Influence in their Favour, and whose
Influence was so great that he never exerted it in vain.
There was nothing of Self-Interest or Views of private Ad-
vantage in this Conduct of his; he acted purely from a
Principle of publick Spirit and the Desire he had of con-
tributing to the Glory of his Prince, by pursuing what he
took to be the true Interest of his Subjects. This it
must be confessed were great and laudible Notions, and
such as he carried into Action with surprizing Success;
yet taking all this together, it is perhaps the clearest and
most convincing Argument, that the French Nation are
altogether incapable of carrying such great Designs into
Execution with such Advantage to themselves as accrues
to their less powerful Neighbours, because it is impossible
that Trade should flourish in a Country where its Wellfare
must depend solely on the Will and Capacity of a single
Person.

Accidents are not to be trusted to, especially in Matters
of Property and Things of Importance. Yet what great-
er or more apparent Accident can there be than the rising
of an able, experienced, and honest Minister, in an arbitrary
Government? It is such an Accident as not only seldom
happens, but is very rarely to be expected; and when it
does happen, like every other accidental Good, misleads
unwary Minds, and makes Men mistake for a solid and
certain Foundation, what is in fact no more than a lucky
continuance of Things in the same course; so that such
as are tempted to hazard their Substance in Building upon
such a Basis, are not to be esteemed wiser than if they
were drawn in to contribute to the erecting a large Struc-
ture upon the Ice, because it had been known to remain
firm for nine or ten Weeks.

As these are reasonable and just Principles in themselves,
so in this Case, they were fully justified by Experience.
The Successor of Mr. Colbert was Mr. Pont-Chartrain, a
Man who was far from wanting Abilities, or being destitute
of Probity, but whose Notions with respect to Commerce,
were either crude and indigested, or, which was worse, narrow
and obscure. He was, from the Beginning of his Adminis-
tration, no Friend to the East-India Company, as appeared
very clearly by his crossing every thing they asked, and
countenancing every Attempt that was made against them.
To enter into a long Detail of the Facts necessary to ju-
stify in its largest Extent this Observation, would be at
once tedious to the Reader, and draw me much beyond
the Bounds I have prescribed to myself in this Work,
therefore I shall take Notice of one Thing only, which is
this; the East-India Company finding that all Sorts of
painted Cotrons, gold and silver Brocades, and such other
showy Goods as they imported from India, went off at a
great Rate in France, they struck into that Trade, and
began to make considerable Advantages of it. This
encouraged them to venture upon another Undertaking,
which was the importing vast Quantities of white Cottons,
and causing them to be painted in France after the Manner
of the Indies, which occasioned a prodigious Outcry
among the Manufacturers in France; who set forth, that
the Sale of these Cottons and Silks were excessively inju-
rious to them, and that if they continued, it was impossi-
ble that their Manufactures should flourish.

Upon the Representation of these Things to the Prime
Minister, he took the Thing so warmly, that he immedi-
ately procured an Edict, dated the Twenty-seventh of Ju-
nuary, 1687; by which the importing them was abso-
lutely prohibited. On the Application however of the
East-India Company, and the Interposition of some Friends
at Court, which they had still left, the Execution of this
Law was, in some measure, suspended in Favour of the
Company; that is to say, they were allowed a certain
Space of Time, in which to dispose of the Goods then in
their Hands; as also of such as might be brought from
the Indies within a limited Time: But the great Blow was

NUMB. 65.

not to be parried; and the Edict, which required the de-
stroying all the Molls, and other Urenifils for painting
Linnen in France, was to take Place absolutely on the
First of January 1689. The Company indeed endea-
voured, and by the Help of its Friends made great Ef-
forts to defeat this Design; but, all they could do pro-
ved ineffectual in the main, and procured only a Suspension
for three Months; and, in the mean time, they were obliged
to take back what they had sold to private Merchants, and
to return them their Money. As to the gold and silver
Brocades, and other Indian Silks, they were permitted to
import these to a certain Value, viz. One hundred and
fifty thousand Livres; but this was upon Condition, that
they exported to the Amount of Five hundred thousand
Livres in French Manufactures; and they were afterwards
restrained to the Exportation of such Manufactures only
as would sell to Profit in the East-Indies. The Company's
Commerce was before declining, and they had but this
single Chance of supporting themselves by the Humour
which prevailed of buying these printed Cottons, Bro-
cades, and Silks; so that the Reader may easily judge
that when this Prohibition came to take Place, it gave the
Death's Wound to their Trade.

It must however, be owned, that upon certain Occasi-
ons, they did procure the Dispensation of this Law for a
certain Space of Time, which might afford them a tem-
porary Relief, and just keep them from sinking: But
they had no longer a Power of trading as a Company;
their Factories in the Indies grew low, those who were
employed in their Service lost their Credit, and the French
Flag in the Indies was little regarded, and indeed scarce
known. The Farmers-General of the King's Duties like-
wise attacked the Company; and as their Employments
gave them the Ear of the Ministers, they were almost al-
ways too hard for them; so that by Degrees, the Com-
pany lost the Benefit of most of those great Privileges
which had been procured by Mr. Colbert, and yet with-
out their being taken away; for in France, and perhaps
in some other Countries, Methods are found out for
eluding the Laws by the Manner of executing them, and
without any formal Repeals. Some other Laws were like-
wise made for laying Penalties upon such as dealt in
wrought up, or in any way exposed to Sale any Chints,
or any other painted Cottons; which being executed with
great Severity, put a full Stop to that Branch of Trade,
as the Want of Money had done to most other Branches.
So that between those Oppressions peculiar to themselves,
and the Mischiefs they endured in common with the rest
of the Subjects of France by the long Continuance of the
War, they found themselves in so low a Condition as to be
scarce able to keep up the Appearance of the Company;
and those who had formerly yielded them Assistance at
Court, began to be tired, and listened no longer to their
Solicitations.

There arose likewise a new Spirit in France of curbing
and distressing this almost-broken Company, under Col-
our of augmenting the Revenues of the Crown, and
protecting the Manufactures which afforded Bread to the
People; under Pretence of which, they first restrained the
Company from selling Chints and other Piece-goods to
Foreigners, which was not only a very great Loss to the
Company, but to the French Nation in general, among
whom the Money would have infallibly circulated
for which these Manufactures had been sold; whereas, by
this Prohibition, so much ready Money was kept out of
France, and not a Thread more of their own Manufac-
tures vendid. Afterwards a Duty was laid upon the Raw-
Silk, which they imported: And notwithstanding this
produced a great Sum of Money, yet it was not long be-
fore a Prohibition was applied, under Pretence that the
Company importing every Year seven thousand Pounds of
Raw Silk, did thereby great Damage to one of the staple
Commodities of the Kingdom; whereas, in Truth, the
greatest Part, if not all this Silk, was sold by Strangers;
But it was the Misfortune of the Company, that while
they were distressed and ill treated abroad, on purpose to
drive them totally out of the Indies, they were envied
and persecuted at home, on Account even of that small
Trade which they drove thither; and all this under the
play

11 K

plausible Appearance of publick Spirit, and Concern for the Poor; but, in reality, from private Views and selfish Principles, as will be shewn hereafter.

The Ministers that then governed *France*, were very different from *M. Colbert*; they were unacquainted with the extensive Nature of Commerce, took every Thing that was alleged by the Farmers of the Revenue on one Side, and by the Agents for Manufactures on the other, for granted, and made whatever Orders were desired on either Side; but, as for the Company, their Applications were continually slighted; and the Decay of their Commerce, though produced by these very Measures, was pleaded as a sufficient Excuse for this Treatment, and made a Reason for continuing it. In the mean time all their Settlements abroad were sinking as fast as they could; and the few Servants they had were not so much bound by a Sense of Duty, as fixed to the Places where they resided by the great Debts they had contracted, and which neither they, nor their Masters, knew how to discharge. But as the Scene soon after changed surprizingly, and as this Company has since made some kind of Figure, it will be necessary to enter more particularly into the History of their Settlements in the *Indies*.

6. We have already observed, that when the Company was erected, they placed the Seat of their Government, and proposed to fix their capital Settlement in the Island of *Madagascar*, which, in a warm Fit of Loyalty, they called the Island of the *Dauphin*, and which they represented to the World in the fairest Light possible. They suggested, that the Climate was extremely agreeable, not warmer for two Thirds of the Year, than it is in *France*, during the Spring, and not hotter for the remaining four Months than it is in that Kingdom, during the Summer.

The Country abounding with fine Fruits, wholesome Herbs, and pleasant Roots, producing three Crops of Rice in a Year, and all Sorts of *European* Grain, better in Kind, and more in Quantity, than in any Part of *France*. They added to all this, that there grew Vines there naturally, which bore admirable Grapes, and from which it was very practicable to make excellent Wine. As to Animals, besides black Cattle in Abundance, it afforded several Goats, Swine of several sorts, and many other useful Creatures. In Point of Riches, they affirmed, that there were Mines of Gold, which, by the Way, could never be found, besides Iron, Lead, and other Metals: They with more Truth, asserted, that Cotton, Wax, Sugar, Black and white Pepper, and Indigo, might be raised there to Advantage; that the Country afforded both Mulberry-trees and Silkworms, and that there was great Store of Ebony, and other rich Woods. The Colony they settled there, cut their annualle Sails, and remained for some Years in a very flourishing Situation, sending Home yearly several Ships yearly laden, and would very probably have answered their Expectations, if they could have had Patience.

But after they had once settled Factories in the *Indies*, those who were in the Company's Service, found it so much easier to raise Fortunes for themselves in these Settlements, that by their Representations, they procured the Removal of the Council of the *Indies* to *Surat*, where they built a most noble and convenient House, and added to it Warehouses, Magazines, and other Offices, much superior to the Trade which they had established to support it, and from these excessive and extravagant Expenses their first Misfortunes arose.

7. But after the first *Dutch* War, in which they made themselves Masters of *St. Thomas*, which they lost again to the *Dutch*, the *Sieur Martin* retired to a Place called *Pondichery*, where, by the Leave of the Viceroy of the King of *Visapour*, he settled himself. This was in the Beginning of the Year 1674, and as the Company had at that Time a great Demand for Piece-goods, it was thought they could not establish themselves in a better Place. It was for this Reason, that the *French* Company commissioned *M. Martin* to procure that Place for them, on the best Terms he could; with which Order he complied exactly. This Gentleman appears to be one of the honestest and most capable Person they ever had in their Service, and he procured from the Governor who first gave him

Leave to settle there, a Licence to fortify, and to secure his People and Effects, in the best Manner he could, which he accordingly did, and settled under the Protection of his Factory a little *Indian* Village, of about forty Houses, in which those who wrought for the Company lived quietly and happily.

Things had not remained long in this Condition, before he was threatened with total Ruin; for the famous *Seva-Gi* falling with a vast Force into that Part of the Country, endeavoured to overwhelm him as a Dependent upon his Enemies. However, *M. Martin* supplied by Prudence, what he wanted in Force, and by a timely Application, brought about a Treaty, which was managed on his Side by an *Indian* Priest, which ended in a Licence to trade in his Dominions, for which he paid one thousand six hundred *Ruppes*. This was in the Year 1680, and he had the Year before purchased the Territory of the King of *Visapour*, whose Inheritance it was; so that now he was tolerably secure, only he was apprehensive, that the Son of *Seva-Gi*, who was Sovereign of the Place, might take it amiss, if he presumed to raise a regular Fortification without his Consent, which he obtained in 1689, and then put it in a Posture of Defence. This was a very timely Provision, for the *Dutch* began to be extremely disturbed at the flourishing Estate of this little Colony, and offered very large Presents to the Rajah, in whose Dominions it lay, in case he would dispossess the *French* of *Pondichery*; but the *Indian* Prince, who was also Son to *Seva-Gi*, rejected these Offers with Contempt. He said, the *French* had fairly purchased that Settlement; that they had applied to his Brother for a Protection, for which they paid him a valuable Consideration; and that therefore, all the Money in the World should never tempt him to dislodge them: A glorious Instance of the natural Probity of the unconquered *Indians*, and which deserves more Praise from Mankind, than the most extensive Conquests.

The *Dutch*, however, resolved to carry their Point, and the War having broke out between them and *France*, they made Dispositions for attacking it by Force, which, however, they did not do till the Year 1693, when they came before the Place with a Squadron of nineteen Sail, landed an Army of between two and three thousand Men, with a fine Train of Artillery, and six Mortars. To make their Conquests the surer, they applied to the new Rajah, who was not of the same Temper with the old one, and for the Sum of about twenty thousand Pounds of our Money, purchased the whole District in Property. They then invested and attacked the Place, which after a good Defence, *M. Martin*, who was then Director-General for the *French East-India* Company, surrendered upon very honourable Conditions, on the 6th of September 1693. This Stroke, which seemed to put an End to the Company's Authority in those Parts, proved in its Consequences the happiest Thing that ever befel them. For the *Dutch* were no sooner in Possession of the Place, than they raised new Walls, seven regular Bastions, and whatever else was necessary to render it one of the completest Fortresses in the *Indies*.

In the Year 1669, upon the Conclusion of a general Peace, the Place was restored to the *French*, who thereby acquired the Property of *Pondichery*, and all these fine new Fortifications, and this for so trifling a Sum as five thousand Pounds, which they paid to the *Dutch* Governor, upon his delivering up all that he was possessed of, which probably he would never have done, if he had not been compelled thereto by the Orders of the *States-General*, who, as they were great Gainers by that Peace in *Europe*, would not perplex themselves with the Disputes between the two Companies.

8. As soon as the News of this was brought into *France*, the *East-India* Company received Orders from the Government to put that Place into such a Condition, as that, in case of a second War, they might not lose it so easily as they had done before; and, to enable them to do this, a Squadron was sent from *France*, with two hundred regular Troops, for the Augmentation of the Garrison; several able Engineers, a vast Quantity of military Stores, and whatever else was requisite to secure *Pondichery* from any future Attempts of the *Dutch*. The *Sieur Martin* was again intrusted

to fortify, and to secure
 it in the best Manner he could,
 and to place it under the Protec-
 tion of the Village, of about forty
 Houses, for the Company

in this Condition, be-
 cause of the famous
 Ruin; into that Part of the
 Territory which he had
 obtained in a Dependent
 Manner, supplied by
 the Company, and by a timely Ap-
 plication, which was managed
 with such Success, that it
 ended in a Licence
 which he paid one thou-
 sand in the Year 1680,
 and the Territory of the
 Place it was; so that now
 was apprehensive, that
 the Sovereign of the Place,
 to raise a regular Tur-
 tax, he obtained in 1689,
 a Licence. This was a ve-
 ry great Advantage, and
 began to be extremely
 useful to this little Colony,
 the Rajah, in whose Do-
 main the French of
 Pondichery were also Son to
 the Contempt. He said,
 that the Settlement; that they
 had made, for which they
 had that therefore, all

 Orders from the Go-
 vernor, as that,
 not lose it so easily,
 them to do this, a
 two hundred regular
 Garrison; several able
 Stores, and what-
 ever from any future
 War, Martin was again
 intrusted

intrusted with the Command of the Place, which in the
 Space of four or five Years he so changed, as that it was
 scarce to be known. He not only compleated the Fortifi-
 cations according to his Instructions, and assembled a good
 Garrison of seven or eight hundred Men, but likewise
 built one hundred new Houses, and laid out a regular Plan
 for a large Town, into which, by his own Prudence and
 good Management, he drew within the Space of five
 Years more, fifty or sixty thousand Inhabitants; so that
 in the Year 1710, it was become one of the most con-
 siderable Places in the Indies, in the Hands of the Euro-
 peans; and if the Affairs of the Company in Europe had
 kept Pace at all with the Improvements made by this Gen-
 tleman in the Indies, the French Company might very
 soon have been upon a Level with their Neighbours the
 English and the Dutch.

This, however, was so far from being the Case, that
 both this Gentleman and succeeding Governors, were ob-
 liged to find Ways and Means to support themselves;
 the Factory and the Town, by the Trade carried on in
 it, and by the Industry of the Indians settled there, in
 which they were so fortunate, that while the Company was
 daily declining at Home, every Thing carried the Face
 of Plenty and Prosperity there, and none knew, or felt
 Difficulty or Pain, but the Governor and their Council,
 who yet were never tempted to oppress the People with
 Taxes, or to endeavour to make their own Circumstances
 easier, by laying any Part of the Load upon others. It
 is true, that when the Town grew too large for the old
 Fortification, it was found necessary to surround it with a
 new Wall; but how clear soever that Necessity might ap-
 pear, and however advantageous for the People, yet the
 Governor found it absolutely impracticable to defray the
 Expence without the Assistance of the Inhabitants. In
 order to procure this, he acted with equal Integrity and
 Caution; for, having first ordered the Wall to be marked
 out, and Part of it to be erected at each End, he there-
 by shewed his People at once the Advantages which would
 be derived from such a Fortification, and the Expences
 that would attend it; so that when, in order to compleat
 his Design, he imposed upon the Inhabitants a Tax of
 Two-pence a Month for every Head, they were equally
 satisfied, as to the End for which it was imposed, and the
 Sum that would be raised by this Imposition, and there-
 fore, instead of Murmuring or Complaining, they paid
 it with the greatest Cheerfulness, and gave the Governor
 hearty Thanks for the Care taken of their Interest.

I have dwelt the longer on this Incident, for a very
 particular Reason, with which, when communicated, I
 am thoroughly satisfied, the Reader will be very well pleased.
 The French, who in Europe pride themselves so much in
 the Grandeur and absolute Power of their King, and talk
 in so high a Strain of his Conquests, affect quite another
 Language in the Indies; for they value themselves there
 upon their Justice and Moderation; their having pur-
 chased the small Territory, which they possess; their hav-
 ing lived always upon good Terms with their Neighbours,
 and their establishing so large a Town, and acquiring so
 many thousand of Subjects, purely by the Equity and
 Mildness of their Administration: The Fact is equally
 true and strange, at the same Time that it demonstrates
 that common Sense directs all Nations to think the same
 Way, and that the great Difference of Opinions, and
 what we call the Temper and Disposition of Nations, arises
 purely from Accidents in Education and Government. In-
 dependent of these, Reason, is every where the same, and
 Men think exactly alike, which shews the Reality and
 Certainty of the Laws of Nature, to which all Men re-
 turn of themselves, when the Influence of Power, and
 other accidental Restraints are removed.

9. As we have shewn by what Course of Events this
 Fort of Pondichery is become the chief Seat and capi-
 tal Residence of the French East-India Company, it will
 be necessary to give the Reader a more particular Descrip-
 tion of it, and of the Government established therein. The
 Town then of Pondichery is situated in the Province of
 Gingy, on the Coast of Coromandel, in the Latitude of
 twelve Degrees North, and in the Longitude of one hun-
 dred and fourteen from the Meridian of Paris. It stands

at the Distance of one hundred Yards from the Sea-shore,
 and has nothing more than a Road before it; so that they
 are obliged to carry all their Goods in Boats for a full
 League. The Magazines of the Company, and of pri-
 vate Persons, are both numerous and magnificent, as far
 as any Thing of this Nature can be so; they have a large
 and very beautiful Market-place, six fine Gates, eleven
 Bastions for the Defence of their Walls, a regular Citadel
 well fortified, upwards of four hundred Cannon upon their
 Works, besides a good Train of Field-pieces, Bombs,
 Mortars, and other military Stores in their Arsenal.

The Governor has a very fine House, with convenient
 Offices, and whatever else is requisite for the Service, or
 Credit of the Company. On the West-side of the Town,
 the Company have a very fine Garden, beautifully laid out in-
 to publick Walks, and whatever else may contribute to
 the Satisfaction and Pleasure of the wealthy and better
 sort of Inhabitants: adjoining to which Garden, there is
 a very fine House, richly furnished, made use of for the
 Reception of foreign Princes and Ambassadors, who,
 whenever they resort thither, are treated with infinite Res-
 pect, and all their Expences defray'd by the Company,
 which has been found a very wise and useful Contrivance,
 of much more Consequence to the Interest of their Com-
 merce, than the Expence it occasions. The other pub-
 lick Buildings consist of a large Convent of the Jesuits,
 where they have usually twelve or fifteen Priests, who,
 besides officiating in that Character, likewise teach School,
 and instruct the Children of the Inhabitants in Reading,
 Writing, and the Mathematicks, and whatever else may be
 of Use in civil Life; for, as to the learned Languages,
 they trouble not themselves about them, and indeed, the
 Knowledge of them would be of little Service in this
 Part of the World: There are, besides that of the Jesuits, two
 other Convents, but not so considerable by any Means as
 the former. The Houses of the Town are as regularly
 laid out, as if it had been all built at once, tho' it is now
 near four Leagues in Extent. The Europeans build with
 Brick, but the Indians, and other Nations, use only Wood,
 building in that Manner which we call here in England
 Lath and Plaster. For the latter, they have the best in
 the World, which is composed of all sorts of Shells ground
 to Powder, and wrought up into a kind of Paste, which
 when exposed for some Time to the Air, becomes altogeth-
 er as white, and almost as hard as Stones.

These Houses are one Story only, and are usually eight
 Yards in Front, and six in Depth, and yet there are fifteen
 or twenty People live in them. They are but very indif-
 ferently lighted, so that it is not easy to conceive how they
 are able to dispatch their Business in them. Their Roofs
 are all flat, for the Convenience of lying upon them,
 which they do almost naked, agreeable to the Custom of
 the Country; for Pondichery, lying in the Torrid-zone, is
 extremely hot, tho' otherwise the Climate is found by Ex-
 perience very wholesome. One Thing there is in it very
 singular, and which therefore deserves Notice, and this is,
 that it never rains there, except seven or eight Days at the
 most, towards the End of October, which falls out regu-
 larly, and is therefore the more singular and extraordinary.
 The native Indians, or as they are called here Gentiles, are
 most of them Weavers, or Painters; and tho' the very
 best Workman cannot earn above Two-pence a Day, yet
 upon this he is able to subsist himself, his Wife and his
 Children, their principal Food being Rice boiled in Wa-
 ter, or wrought up into a Paste, and baked upon the
 Coals. The Country round about is extremely well culti-
 vated, and produces Rice in Abundance, so that there is
 hardly a Place in the Indies of greater Plenty, or where
 they have Flesh, Fish and Fowl, on more reasonable
 Terms; and this, notwithstanding they have no other Wa-
 ter than what is derived to them from the over-flowing of
 the Colram, and other great Rivers, which they preserve
 in Lakes, or Ponds, and draw it for Use, through their
 Country, in artificial Canals, after the same Manner as in
 Egypt.

The Governor General for the Company, as he is lodged
 in a fine Palace, so he makes a Figure equal thereto in
 every Respect. He has twelve Horse Guards clothed in
 Scarlet laced with Gold, and an Officer with the Title of
 Captain

Captain who commands them; he has also a Foot Guard of three hundred Men, Natives of the Country, called *Peons*, and when he appears in publick, he is carried in a Palankin very richly adorned with gold Fringe. But all this Pomp and State is displayed only on proper and particular Occasions, upon the receiving of Princes, or Ambassadors, at other Times his Guards are employed in the necessary Service of the Company, and earn to the full the Wages they are paid for, as we have already shewn, there are few Settlements better regulated, or more dexterly governed than this, which the Reader will more easily believe when he is told, that according to the last Account taken of the Inhabitants of this Place, there appear to be in it no less than one hundred and twenty thousand Christians, Mohammedans and Gentiles; a thing altogether incredible, if the Fact was not supported by Testimonies, the Authority of which is not to be disputed.

There cannot be a Place better suited for Trade than this, being in the midst of the *European* Settlements on the Coast of *Ceramandel*, and having all the Bay of *Bengal* open before them; so that here the Company's Magazines are full of all the Commodities and Manufactures, not only of the Coast of *Ceramandel*, but of other Parts of the *Indies*, such as *Bengal*, *Surat*, and the Coast of *Malabar*, as also of such as are imported from *Persia* and the Coast of the Red Sea; and here likewise are their Warehouses for all sorts of *European* Commodities, which are conveniently transported from thence as Occasions require, to all the Markets in the *Indies*. The Staple Trade however of the Place is esteemed to be Piece Goods, of which the finest are made in the neighbouring Kingdom of *Golconda*, and the best painted here; they likewise have great Quantities of Silk raw and manufactured, Gold and Silver Brocades, Perfumes, Spices and Diamonds; in which last Trade they are said to have made a great Progress of late, and for which it is certain they are very conveniently situated, as being at a very small Distance from the finest Mines in the *Indies*, and by having amongst them Persons as well skill'd in Jewels as any in the World. The *French East-India Company* therefore can neither be blamed for their Choice of this Residence, which all things considered is the fittest for them of any in the *Indies*, or for the Pains and Expence they have bestowed about it, amounting in the whole to about eight hundred thousand Livres, or forty thousand Pound Sterling. Since thereby they have rendered it so strong and so commodious, that it might very easily drive ten times the Trade they have ever had in this Part of the World.

10. We are now to return into *France*, and to consider the Situation of Things with respect to the Company, as low as the Demise of the late King *Levis XIV.* The War, as it brought numberless Mischiefs on all other Branches of the *French Commerce*, so it particularly affected the *East-India Company*, and this as much through the wrong Notions that were formed of that Trade at home, as from the Interruptions it met with abroad. The Farmers of the Royal Revenue not only continued their Persecutions, by attacking from time to time the Privileges of the Company, and almost always without Success; But new Enemies were daily arising, that added to the Number of their Hardships and Misfortunes.

The Office of High-Admiral, which had been for a long time suppressed in *France*, was given by the King to his Natural Son, the Count *de Toulouze*, who took Exceptions against two Privileges of the Company. The first granted them the entire Property of all the Prizes taken by Ships in their Service, and the second exempted them from the Rights of the Admiralty, in regard to Wrecks. This occasioned a very long Dispute, which at last ended in a Decision contrary to the Interest of the Company. It appeared clearly from hence, that on the one hand the Company had entirely lost its Credit at Court, and on the other, that their Privileges were far enough from resting on a firm and settled Foundation, since they were liable at every turn, to be subverted and taken away by such kind of Judgments to the Company's Prejudice.

Such a continued Series of Mischiefs and Misfortunes not only crushed the Trade, but broke the Spirits of the Company, and that to such a degree as to oblige them to have recourse to Expedients for their own Support, which were not very advantageous, though at the same time they were highly dishonoured. We have before observed, that in the Year 1682, they had entered into a Scheme for permitting private Trade upon certain Conditions, which we have mentioned; but their Affairs were now fallen into such Disorder, that they were not only content to suffer private Persons to share in their Trade, but even to resign it to them, and that upon very moderate Conditions.

Accordingly, in 1708, they granted Leave to Mr. *Croizat* to fit out two Ships in the Name of the *East-India Company*, upon Condition that he paid them fifteen *per Cent.* upon all the Goods imported under this Privilege, and two *per Cent.* upon all the Prizes they should make beyond the Line with a farther Reservation, that the Company might be at liberty to bring home on board his Ships ten Ton of whatever Commodities they pleased, without paying any Freight. The Reason they assigned for this extraordinary Step was, that their Affairs were become so embarrassed, and the Persons employed in their Service so loaded with Debts, that without the Assistance of this Project they must have been obliged to relinquish their Settlements in the *Indies*. It is reasonable to believe that they found from this Expedient some little Relief, which induced them to extend their Project, and for the Preservation of their Servants in the *Indies*, who by this time were above ten Millions in Debt, they fairly sacrificed themselves.

For in the Year 1712, they entered into a Treaty with some private Traders at *Saint Malo's*, by which they yielded up to them all their Privilege as a Company, upon the best Terms they could obtain, and this with a View to furnish such as were employed by them in the *Indies*, with Sums sufficient to keep under the Interest of their Debts, and thereby prevent all things from falling into Confusion. A miserable Situation this, and yet the Company found themselves unable to undertake any thing upon their own Bottom, so that on the Expiration of their own Privileges, about the Time of this King's Death, they warmly solicited a renewal of them, not from any Hopes of reviving their Trade, but purely with an Intention to renew their Agreement with the Merchants of *Saint Malo's*, that they might gain enough thereby to preserve their Settlements, and not suffer such as they had employed to be utterly undone in their Service.

It is very clear from hence, that the Ruin of the *French East-India Commerce* has hitherto been the Nature of their Government, which is a Point I shall take the Liberty of laying open for the Information and Satisfaction of the *English Reader*. In the first Place, I must observe, that the Edicts for their Establishment, and the extensive Privileges granted by them, though they are in one Sense, necessary to the Birth and Foundation of the Company, yet are hurtful and disadvantageous to it in another. Since though few dare express their Thoughts freely upon the Subject, yet all Men of good Sense cannot help discerning, that in a Country where so much depends upon the Will and Pleasure of the Crown, no Commerce can ever be secure; for as the same Power that gives may take away; so it may likewise alter, abridge, and even destroy by new Edicts, any of those Privileges, though granted and confirmed in the strongest Terms that Words can express.

In the next Place, as the Company must be almost supported by Acts of royal Favours, so the obtaining these must always depend upon the Temper of the Administration, or, in other Words, and in plain Terms, upon the Will of the Prime-Minister for the Time being, which is such a dangerous and precarious Tenure, that no Man, who thinks at all, can believe he has any Property while it depends thereupon. In the third Place, the Mixings of the Government, rendering it absolutely necessary to prefer the Interest of the royal Revenues, upon which the Administration of the Government itself depends, to any other Interest whatever; this is such a Source of Dan-

chiefs and Misfortunes
oke the Spirits of the
e as to oblige them to

ger and Disquiet, as must necessarily banish all Trust and Confidence in the Faith of such a Government. Hence it may be observed, in the fourth Place, that such as are engaged in the Management of a Company's Concerns, under such Circumstances, will look very little farther than the Time present; and, instead of placing their Hopes in the future Success and Prosperity of such a Company's Affairs, will confine their Views to the making the most they can of immediate Advantages, in order to secure (if possible) their private Fortunes, let what will become of the publick.

Lastly, we may easily discover, from these Reflections, how it came to pass, that private Traders in *France*, such as the Merchants at *St. Malo's* were able to encrease their Fortunes, and carry on a Trade to the *East-Indies* with Advantage, under the Authority of a Company that was, in a manner, become bankrupt; and this, notwithstanding they paid considerable Sums out of their Profits for participating in its Privileges; for, as private Men, they could drive a good Bargain with the Company, with some reasonable Assurance of having the Terms of their Contract comply'd with, because made only for a certain Time; enjoying also the full Benefit of those Settlements which the Company had made, without contributing any thing to the Expence which they originally cost, or even to that by which they were supported; so that, considered in this Light, the Company stood between them and the Government, and these private Traders might be said to enjoy in *France* itself, those Advantages that could be expected only in a Land of Freedom, and by the Enjoyment of which solely their Trade became advantageous.

The more we reflect upon these few Observations, the more we must be convinced, that it is not from any Defect in the Country, any Want of Skill or Industry in the People, but for the Want of a right Government in *France*, that her Trade never has been established on a secure and solid Basis. This likewise demonstrates, that however dangerous and destructive the Ambition of this Power may be to her Neighbours, from that arbitrary Force, with which, by the Policy of her Ministers, she has been long armed; yet this, at the same time, is an Evil that preys upon her inward Strength, and keeps her in a continual, though slow Consumption; so that if her Neighbours would but unite among themselves for their own Defence, the arbitrary Disposition of the Court of *France* must necessarily turn upon itself, and sooner or later procure its own Dissolution.

There are, however, certain Seasons, when from a Variety of Accidents, there appears even in such a Government a strong Spirit of promoting the publick Welfare, not from any real Principle of that kind, but to cover some other Design, which could not otherwise be carried into Execution: As for Instance, upon Changes of Administrations, more especially in Minorities, when such as are at the Head of the Government find the Measure of their Power must, in some measure, depend upon the Extent of their Reputation. At such Times as these, I say, there may be a temporary Cessation of those pernicious Notions which infect the Heads and Hearts of arbitrary Rulers, or, which is the same thing to the People, a Suspension of the Practices which flow from them; so that, for some little time, the Government seems to act upon new Principles, and consequently Affairs change their Face in the same Proportion.

This happened to be the Case at the Period of Time when the *French East-India Company* were struggling for a new Grant of the Privileges which they had enjoyed for fifty Years, though sometimes in a larger, sometimes in a less Degree. But the Renewal of these Privileges in that State in which they then stood, was all that they desired, to have them augmented was what they scarce hoped; but to have this done, and their Term rendered perpetual, exceeded the Limits of their Expectations, and was entirely owing to such a Revolution in their Government as has been before-mentioned, and which it is now necessary that we should describe as clearly, and at the same time as concisely as possible.

11. The Duke of *Orleans*, who defeated the old King's Will, and, in some measure established a new Government

in *France*, contrary alike to the Wishes of the most potent of the Nobility, and of the meaner sort of People, found himself obliged therefore to sustain his Authority, by endeavouring to acquire to his Administration such a Reputation as had never attended all the Victories and Power of *Louis the Great*. It was with this View, that from the Time he took the Reins of Government into his Hands, he affected to act on Maxims directly opposite to those of his Predecessors; he declared openly, that the great End of Government was the Good of the People; that it was impossible this should be promoted by being engaged in perpetual Wars, or in continual Quarrels with their Neighbours; that Peace was an universal Blessing, and must therefore be the Interest of *France*, as well as of all other Nations; that Commerce was the natural Produce of settled and quiet Times; and that the Effects of an extensive Trade were more certain Resources of Power and Strength than Conquests, or arbitrary Dominion.

Whether the Duke-Regent was persuaded of the Truth of all this, or whether he pretended only to be so persuaded, is a Point not at all important for us to determine, since it is sufficient for our Purpose that he acted upon these Maxims, whatever he might believe about them; and that by acting upon them, he really carried his Point, and came to be considered as a Prince who had great Notions of Liberty and Commerce. The *East-India Company* therefore, or at least, such as had the Management of the Affairs of the Company, entertained the warmest Hopes of Succour and Protection: For though, before the Death of the late King, they had obtained a Prolongation of their Privileges for ten Years, to be accounted from the First of *May*, 1715; yet this, like most of the royal Favours they had received, was of very little Use, since they had no Funds left for the carrying on their Commerce; and, besides, the Term they now had was so short, that it added very little to their Credit at home or abroad. It was from the Duke-Regent that they expected more solid Assistance, and such Helps from the Treasury as might enable them to revive their Trade.

But the Regent and his Ministers were in Sentiments quite opposite to those the Company had flattered themselves with, and, instead of being at all inclined to part with Money out of the royal Treasury, for other People to employ in Trade, they were contriving how to make Use of the Sound and Reputation of Commerce to fill the King's Coffers, to pay off the Debts of the Crown, and to discharge the Loads which lay heavy on the Government upon the Shoulders of the Nation, by that Series of Contrivances which are still known in *France* by the Name of *the System*. It was with this View that the Regent shewed so much Favour and Kindness to the *West-India Company*, and established its Capital at One hundred Millions, and thereby procured an Opportunity of lessening that immense Quantity of Paper-Money which the long War had made requisite. But when the *East-India Company* came to represent the Condition they were in, and to sue for Assistance and Protection, they soon found that they had to do with those who understood their Affairs to the full, as well as themselves; therefore, instead of governing them as they had done former Ministers, they were forced to put themselves entirely into their Hands, and trust absolutely to their Generosity and Discretion.

The Consequence of this was, very probably, what they had not foreseen, since it proved to be the Dissolution of the Company, or, which is the same Thing in other Words, the Union of it to the *West-India Company*, which had already swallowed up some others. This Edict of Union or new Establishment extinguished the Title of both the Companies, as well as of the rest of the Societies comprised therein, and gave to the whole the comprehensive and significant Title of the *Company of the Indies*. In the Preamble of this Edict, we have an excellent History of the Transactions upon which this Union of the Company was built; for therein it is said, that the King having principally apply'd himself to the restoring the Commerce of the Kingdom, and thereby repairing the Losses and Decays occasioned by a very long and expensive War, and

having already had the Pleasure to see the Circulation of Money was lately quickened by the Establishment of the *West-India* Company, his Majesty had from thence been led to look into the State of the old Companies, erected before his Accession to the Throne; and in particular into the State of the *East-India* Company, which he found to be most deplorable. In the Space of fifty Years they had notwithstanding repeated Assurances from the Crown, managed their Affairs so indifferently, as to be obliged to abandon their Commerce entirely, and to take up with such trifling Advantages as could be obtained by letting out their Privileges to hire.

The King declared, he was satisfied that this did not proceed at all from Disadvantages in the Nature of that Commerce, but from the Mistakes and ill Conduct of such as had been entrusted with the Management of the Company's Affairs, who, in the first Place, had made their Bottom too narrow, and had undertaken the Traffick of the *Indies* upon much too small a Capital. That, in the second Place, to keep up the Credit of their own Administration, and to countenance their taking such considerable Salaries to themselves, they had made large Dividends, where there was no Profits; and having, by this Means, exhausted the Company's Stock, they carried on their Trade by borrowing as much Money as they could at very high interest. That however, the King his Great-grandfather, having always protected and encouraged this Company, and even granted them a new Term towards the End of his Life, they might have enjoyed it, or, at least have drawn all the Profits from it they could, if their Conduct had not become so flagrantly bad, that neither the Glory of the King, nor the Interest of his People, would permit him to overlook it any longer. On the one Hand, there were continual Complaints from the *Indies*, that the Company had borrowed vast Sums of the *Gentles*, without paying them either Capital or Interest, having in the Space of sixteen Years, not sent so much as one single Ship to *Surat*. On the other, the private Merchants carrying on this Commerce in the Name, and under the Authority of the *East-India* Company, were so cramped and oppressed by the Duty of Ten per Cent. and other Gratuities to the Company, that they are unable to pursue their Trade with the same Spirit and Advantages which are enjoyed by the Subjects of other Nations; and, besides, being afraid to go to *Surat*, on account of the Danger they were in of having their Ships seized for the Company's Debts, they found themselves obliged to purchase most of the *Indian* Commodities and Manufactures which they brought into *Europe* from Foreigners, at a very high Price, and this equally to their own and the Nation's Disadvantage.

For these Reasons, and others of the like Nature alleged against the *China* and *African* Companies, his Majesty declares, that the Privileges of all those Companies are, by this Edict of his, dated in the Month of *May* 1719, revoked, extinguished, and suppressed. He granted at the same Time, to the new Company of the *Indies*, an exclusive Privilege of trading from the *Cape of Good-hope*, to the utmost Extent of the *East-Indies*, as also to the Islands of *Madagascar*, of *Bourbon*, and of *France*, the Coast of *Senegal* in *Africa*, the *Red-sea*, *Persia*, the Dominions of the *Mogul*, of the King of *Siam*, and of the Emperors of *China* and *Japan*, as also of the *South-seas*, from the Straights of *Magellan*, or *la Maire*, to the *East-Indies* that Way, forbidding all the rest of his Subjects these several Trades, under Pain of the Confiscation of their Vessels and Effects.

He likewise gives and grants to this Company, the Possessions and Effects of the other Companies, at the same Time charging them, however, with all the just Debts which those Companies had contracted, and were liable to. The better to enable them to discharge those Debts, and to carry on the vast Trade granted them by this Edict, he creates in their Favour, twenty-five Millions of new Actions, to be purchased only for ready Money, on the same Terms that the *West-India* Company possessed one hundred Millions of Actions, and with the like Privileges and Advantages in every Respect. He likewise granted full Licence and Authority to import all

Sorts of Manufactures of Silk, Silk and Cotton, gold and silver Stuffs, dyed Cottons, as also painted and striped, on Condition, however, that none of these shall be vend- ed in his Dominions, but be entirely sold and disposed of to Foreigners; for which Reason they were to be deposited in Magazines under double Locks, the Keys of one to be kept by the Farmers-general, and the other by the Directors of the Company, for the better preventing Frauds and Collu- sions. He likewise grants them Leave to import all sorts of white Cottons, Raw-silks, Coffee, Drugs, Spices, Me- tals, and whatever else the *East-India* Company might have imported under their Privileges.

This Edict had all the Effects, and even more than was expected from it, and such an Eagerness there appeared of subscribing to this Company, that instead of twenty-five, the Subscriptions amounted to fifty Millions, which encouraged the *French* Ministry to venture upon some new Regulations, which were made publick by an Edict of the Month of *June*, in the same Year. The Principal of which was, that they should take off four Times the Num- ber of old Actions, in order to be entitled to the new; so that in order to purchase five thousand Livres of the new Actions, the Subscribers were obliged to take twenty thou- sand Livres of the old ones.

The great End the Government proposed by all this, was, as we have hinted before, to find the Means of call- ing in and suppressing that immense Quantity of Paper- money which was such a heavy Burden on the State; and to this End Annuities to the Value of twenty-five Millions are created, which not answering that Intention, the new Company of the *Indies* offered their Assistance, and un- dertook to discharge them at the Rate of fifty Millions in one Month; so that the whole Load of this Paper-credit, amounting in the whole to near sixty Millions of our Mo- ney, was to be taken away and extinguished, by the End of *July* 1721. In Consideration of the Zeal and publick Spirit manifested by the Company in this Proposal, the King was pleased, by his Arret dated in the Month of *July* 1720, to change the Terms on which the Company held their Privileges, and to declare them perpetual, re- straining himself and his Successors, from ever treating them as other Companies had been treated, in order to their Establishment; and thus this Company acquired that Title by which they are now known in *France*, *The perpet- ual Company of the Indies*, with all the Privileges of the other four Companies confirmed to them for ever. In two Years Time it was settled and declared, that in Con- sequence of the Annuities granted and assigned to the Company from the Crown, they should be able to divide annually the Sum of Ten per Cent. which should be paid duly and exactly for ever; in Consequence of which, the Directors were to be at full Liberty to export and import what they thought proper, without being accountable an- nually to their Constituents, because the Dividend was to be regular and certain, and they were to manage Things so, as that the Deficiencies of one Year might be made up by the Profits of another.

This Course of Management, though it had certainly one great Convenience in fixing and ascertaining the In- terest as the Proprietors were to receive it, yet the Cir- cumstance of not accounting for the Profits, has proved of such ill Consequence, that notwithstanding these Dividends have been all along very duly and regularly paid till lately, yet the Proprietors could never be cured of a Suspicion they entertained, that the *East-India* Commerce has not been carried for their Profit, but in their Name, for the King's, and this has contributed to keep their Actions low, though they had such extraordinary Interest paid them, with such Regularity. The Grounds of this Sus- picion lying in the Annuities paid by the Crown to the Company, which are sufficient for securing such a Divi- dend, without the least Assistance from the Profits of their Trade, made the Thing not altogether incredible, especially when it was perceived, that for twenty Years together, the Dividends remained fixed and settled, though the Trade of the Company has for that Time been appa- rently encreasing.

But to understand this Point perfectly, as well as the true State of the Company's Affairs, and how they came to have

by establishing the *South-Sea* Company. But whereas that Nobleman had very wisely and honestly rejected the remaining Part of the Project, which was cheating credulous People of their Money, by running the Actions or Stock of the new Company to an excessive Rate. This was accepted by the Regent, and made that Part of the Design, which is styled in *France* the System, and which was at once the most iniquitous, and the most infamous Contrivance that ever entered into the Heart of Man.

But as it was necessary, in order to carry this Scheme into Execution, that a new Company should be set up with such Privileges as might create probable Hopes of vast Gain to the Proprietors, this new Settlement was thought of for that Purpose, from whence the Project itself is generally called the *Mississippi* Scheme, tho' that was not the Title of the Company. It cannot be expected, that we should enter here into a long Detail of the Conduct of the Regent's Scheme, because it is not the proper Business of this Section; all that is aimed at herein, is to shew the several Steps by which almost all the foreign Commerce of *France* was thrown into the Hands of the single Company of the *Indies*, which Title, as we have already seen, the Company acquired by the Union of the old *East-India* Company with the *Western* Company, which had before swallowed up several others that have been already mentioned.

The Royal Bank also was united to the Company of the *Indies*, which was the Engine employed for bringing about the great Ends of the System, which being once effected, the Regent and his Ministers began to turn their Thoughts on the Means of recovering the Company from that dreadful Confusion into which it had been thrown by undoing the Execution of a Design equally prejudicial to the general Commerce and private Property of the Inhabitants of *France*, which had very justly overturned and destroyed their Credit, and put it entirely out of their Power to carry on any Part of the Trade, to which they had an exclusive Right. It was therefore high time certainly, for the Government to interpose, and endeavour to remedy some of the many Inconveniencies they had introduced, since the Welfare of the Kingdom was now so closely connected with that of the Company of the *Indies*, as that it was neither in the Power of the Government to neglect the one without neglecting the other, or to separate, as perhaps they would have done those Interests, which by their own Management were so closely united.

To understand this Matter clearly, we must consider the Company of the *Indies* in two very different Lights; that is to say, as a trading Company, and as Creditors of the Government, neither of which Points, if we advert what is daily written about them, seem to be well understood here, and therefore we shall take some Pains in representing them, both to the *English* Reader's View, in Terms that may remove all these Mistakes. In the first Place then, with regard to their Trade, the Company of the *Indies* in *France*, is generally called here the *French East-India* Company; which Title does by no means express the Nature and Importance of their Trade; since they have not only the Commerce of the *Indies*, but likewise that of *Africa* and the *South-Seas* under their Direction, and though it be true, that they are not able at present to exert themselves in carrying on all these Trades; yet it is no less true, that they retain the Power of doing it whenever they are able, and that the *French* Government will most certainly put them upon it as soon as any favourable Opportunity offers.

The Inference I make from this is, that we ought to consider the Company of the *Indies*, as the Center of *French* Commerce, and to look upon the Rise and Fall of the Actions of that Company, as a political, or if you will, as a Commercial Barometer which constantly points out the Condition of the Trade of *France*. I look upon this Observation to be a Matter of great Consequence to us, and it was for the Sake of setting it in a clear Light that I have taken so much Pains to shew how the several Branches of foreign Trafficks came to be thrown into the Hands of a single Company, the chief Motive to which, was undoubtedly this, that the Cares of the Government, with respect to Trade, might be brought into a narrower

Compass, and consequently be attended to with more ease by the Ministers.

For such is the Constitution of the *French* Government, that every Thing in that Kingdom must depend upon it; and we must allow, that Experience has shewn, that some of its Ministers have understood it as well, and prosecuted it better than the ablest Merchants could have done. I do not say this as it what had happened in *France* ought to be a Rule to any other Country, blest with a better Constitution: God forbid it should! But what I say, is, that the Relation between the Government and Commerce of *France*, being rightly understood, it will appear, that the latter is entirely dependent upon the former, and must either prosper or sink, as it is supported by the Crown, and attended to by the Ministers, or as it is neglected by both.

This shews, that a general War, which demands all the Power, all the Revenues, and all the Attention of *France*, must sink and ruin its Commerce, and that to such a Degree, as cannot happen to any other Country, the Constitution of which is not the same with that of which we are speaking. This I am sensible has been often said, but I do not know, that it was ever demonstrated before, and I hope by that Time I have finished this Section, to make this Subject so clear, and so intelligible to every *English* Reader, as that he shall have no sort of Doubt as to the Interest and Policy of the *French* Court on this Head. Thus much as to the Company of the *Indies*, with respect to its Trade; let us next consider it as a Society of the Creditors of the *French* Government.

We have heard, that this Company has for many Years divided Ten per Cent. annually upon their Capital, which, till the present War, and indeed to the present Year, has been justly and regularly paid. But this Interest, or Dividend of Ten per Cent. never arose from the Profits made by the Company, nor in Truth any Part of it, but was paid to the Proprietors, as Creditors of the Publick, out of the stated and settled Funds assigned them for that Purpose, and therefore we can attribute the Lowness of the *French* Actions in Time of Peace, to nothing but their Diffidence of their own Government.

The Reason why the Ministers of *France* have made it their Choice to continue Things in this Situation, seems to have been this, that the regular Payments made by this Company to the Proprietors, might have a double Effect, and sustain at once the publick Credit and that of the Company. The former was necessary to prevent those Confusions ever falling out again, which happened on the Ruin of the System, and which had like to have been attended with the most fatal Consequences to the Nation, from which nothing could have saved them, but the arbitrary Power of the Government, which forced them to bear their Mistortunes till Ways and Means could be found to relieve them. On the other Hand, the regular Payment of these Dividends has been of prodigious Service to the Company in their trading Capacity, in which, to say the Truth, they could not have subsisted without them; because it kept the Proprietors from either requiring, or receiving any general Accounts of their Dealings, which enabled the Directors to do many Things which otherwise they could never have done; and has, in fact, been the sole Support of their Commerce: For, we must observe, that on the founding of this new Company, they had Rights and Privileges given them, without either Powers or Funds to make Use of them. They had the nominal Advantages of several Companies bestowed upon them, but upon Condition that they took likewise the real Load of Debts and Incumbrances for which those Companies stood engaged. They received vast Sums of Money from their Proprietors, but not for their Use as a Company to trade with, but as Agents for the Government, which, very probably, the far greater Part of their Proprietors did not understand; but which they might very easily have understood, if they had considered the Funds out of which their Dividends were paid; for they could never conceive that such a Government as theirs would grant them to high an Interest for Money, without making Use of it.

On the whole therefore, this was one of the great Secrets of the *French* Councils, and the Design of restoring the

led to with more ease

French Government, must depend upon it; has shewn, that some well, and profecuted could have done. I ened in *France* ought est with a better Con- what I say, is, that or and Commerce of will appear, that the former, and null cid by the Crown, and s neglected by both.

one of the great Se- Design of restoring the

the Affairs of the Company, that which, of all others, they have managed with the greatest Address; for by this Means they have gained Time, which, in such Affairs is all Things, and by affording the Company such Sums of Money as could be spared; and at the Seasons they could spare it, they have revived the *East-India* Trade, kept it constantly and regularly on Foot, put all the Company's Debts in a Train of Payment, relieved and replaced all her Factories; and if this War had not broke out as it did, would very soon have placed her, as a Trading-Company, in as fair and good a Condition as, for many Years, she has stood in, considered in her other Capacity as a Corporation of publick Creditors. This has been generally attributed to the wise and peaceable Administration of the late Cardinal *Heury*, but was no otherwise due to him than as he continued the Direction of these Affairs in the Hands of Mr. *Orry*, who has had the entire Management of them for ten Years past; in which Time he has done more Service to this Nation, than all the Statesmen and Generals that have been employed in this Reign; and though it has so fallen out of late, that his Method has been interrupted and thrown into Disorder, yet we shall presently make it appear, from the Consideration of the present State of the Company, that he has overcome the greatest Difficulties, and put her Concerns into such a Channel, as must strike all who attentively weigh the Particulars, which we shall impartially relate with Amazement and Surprise.

But, before I quit this Part of my Subject, I must again remind my Reader, that all this Success has been owing to the Firmness and Steadiness of the Administration, for so many Years, flowing in some measure from the King's Temper, in some measure from the long Life of the late Cardinal, and from a Variety of other Circumstances, that demonstrate the commercial Interest of *France* to be continually liable to Accidents, and to be consequently always in a precarious Condition. I do not say this with any Intention of lessening our Jealousy of the *French* Traffick, which I acknowledge to be extremely reasonable and well founded; but, for the sake of Truth, and that Things may appear to be as they really are, which I think the most likely Way to enable us to judge of what will be most for our Interest and Advantage.

I may likewise add, that by proving, as I have done, that this is truly the Case, it will afford great Encouragement both to the Government and People of *Great-Britain*, to pursue whatever rational Schemes shall be offered for promoting and extending our Commerce, since our Situation is such; that we need only the Countenance of the Legislature, and the Repeal, perhaps, of a very few Laws, which restrain and cramp our Trade, to be able to undertake new Branches of Commerce, which must necessarily increase our Seamen, augment our Shipping, carry off our Manufactures, and by reviving a Spirit of Industry, find Employment for all our People, which would effectually root out factious and seditious Humours, and find something else for the meaner Sort of Folks to do, than to rail at, or resist the Government. But if we neglect the Advantages we have, and the *French* should grow wise enough to resolve upon keeping upon fair Terms with their Neighbours twenty or thirty Years, they may go near to throw us within that Time, that in spite of all the Difficulties they struggle with, their Company of the *Indies* may be put into such a Condition as will enable her to put in for a large Share of that Trade, which by being hitherto engrossed by us and by the *Dutch*, has obtained and secured the honourable Title of a *Maritime Power*, which, as it was acquired by, will certainly be lost with our Trade.

13. The Capital of the present Company of the *Indies*, was, as we have before observed, composed of the original Capital of the *English* Company, and of twenty-five Millions added thereto, upon the Union of the *East-India* Company therewith; but after the Ruin of the System, when all Things fell into Confusion, it was found requisite, in order to restore them, that the King should make a Revision of the Actions possessed by the Proprietors of this Company, in order to distinguish between such as had acquired their Property fairly, and by

NUMB. LXXXI.

Purchase; and such as had thrust themselves into the Company's Books only to serve their own Purposes by stock-jobbing. It was in Consequence of this Revision, that by an Edict in the Year 1723, the King fixed the Actions of this Company to fifty-six thousand, and which formed a Capital of One hundred and twelve Millions; for their Dividend upon which, they had a yearly Revenue assigned them of Eight Millions four hundred thousand Livres. By another Arret in 1725, Five thousand of these Actions were cancelled and burnt; so that the Capital of the Company, by this means, was reduced to Fifty-one thousand Actions, and their Dividends secured by the annual Payment of Eight Millions from the Farmers-general of the Farm of Tobacco, the exclusive, perpetual, and irrevokable Privilege of vending which, was granted to the Company in 1723, and confirmed to them in 1725, together with the Profits arising from the Furs imported from *Canada*; so that the Fund for the Payment of their annual Dividends was as effectually settled and secured, as it was possible a Thing of that Nature could be in *France*.

In the mean time the Commerce of the *Indies* was assigned to them as a collateral Security not to be touched for the present, but to be employed in strengthening and enlarging the Funds for restoring and maintaining that important Trade, discharging all the Incumbrances thereon, and putting it thereby in a Condition to become as certain and indubitable a Security for the Payment of still higher Interest to the Proprietors than they have hitherto received. The Condition of the Company therefore considered in this Light, appears to be such as ought to satisfy all who have rational and moderate Views for the Security and Increase of their Fortunes, since though no more than fifteen hundred Livres have been paid in upon each Action; yet the Proprietors have constantly and regularly received their Interest of Ten per Cent. which is more than they could have made of their Money in any Part of *Europe*, and have still a clear and undoubted Title to the Profits that have arisen, or shall arise from the Commerce of the Company in the *Indies*.

It is indeed true, that, hitherto they have received nothing upon this Head; but to balance this, it is to be considered, that, till within these few Years, this Trade has been carried on in a very languid and negligent Manner; that since it hath been put on a better Foot, they have been obliged to repair the Losses sustained by the Shipwreck of some of their largest Vessels, to pay off abundance of old Debts, to discharge several Annuities, which the Company were obliged to pay, and which have extinguished very slowly, to rebuild and restore several of their Factories, which were in a very bad Condition, to repair many, to build some new, and to equip all the Vessels in the Company's Service, to purchase new Houses for the Establishment of new Factories, and to add proper Ware-houses, and Magazines to these, to lay out upwards of Fifteen Millions for the Improvement and Security of *Louisiana*, to complete the necessary Works at the noble Haven of *Port l'Orient*, and all the lesser Creeks, Docks, and other Places that depend thereupon, and to be at other very considerable Charges and Expences for supporting its Commerce, maintaining its Marine, subsisting its Forces, and keeping every where in good Order its Fortifications.

Whenever these great Expences shall have so far answered their End as to be no longer necessary, and the Affairs of the Company, in Point of Commerce, are in such a Situation as that there is no imminent Danger to be apprehended, but, on the contrary, certain annual Profits coming in, these will be instantly added to the present Income of the Company, who will likewise enjoy all that Stock which has been raising both in *Europe* and the *Indies* for their Benefit. The rising or falling therefore of the Company's Actions, cannot any Way affect its real Security, which depends in the last Place on those settled Funds before-mentioned; and upon this Trade, which, before the present War, was in a very thriving and flourishing Condition. The common Notion therefore which has so long prevailed in *France*, and might be very easily imposed upon Strangers, viz. that the King has

11 M

car-

carried on this Trade for many Years, and after paying a Part of the Profits, suffered all the rest to pass immediately into his own Coffers, or into those of the Directors, is an absurd and ridiculous Calumny, equally repugnant to Reason and to Fact, as well as utterly inconsistent with the express Words, and direct Intention of the eleventh Article of the Edict of 1725, in which, after declaring the Company of the *Indies* to be a Society for promoting the Trade of the *French Nation*, to that Part of the World, under the Protection of the King, and the Administration of their own Directors, his Majesty proceeds thus: "Our Will and Pleasure is, that it shall remain, conformable to its Institution, a Company purely for Commerce, applying itself solely to the Support of that which is confided to its Care, and endeavouring by its Wisdom and Oeconomy, to contribute as much as is possible to the Welfare of our Subjects interested therein; so that the Funds of the said Company of the *Indies*, shall be, and remain for ever employed in the Maintenance of the said Commerce, and to no other End or Purpose whatsoever."

Such is the Description of the Situation of the *East-India Company*, as laid down to us by one of the ablest Pens in *France*, who tells us besides, that both the Security and the Interest of Money placed in this Company, are much better than when employed in the Purchase of Lands in *France*; for, says he, with respect to Security, the Purchaser of Lands has nothing more than his own and his Lawyer's Knowledge to direct him in the Assurance of his Title, and he can very rarely purchase at such a Price as to make more than five *per Cent.* of his Money, after which he runs very great Hazards with respect to bad Tenants, being forced to lay out large Sums in Repairs, besides risking the Inclemency of Seasons, which may put it out of the Power of his Tenants, how honest soever, to pay him punctually his Rent, and to the full; so that he may very often be at a Loss for a Subsistence, and not know where to borrow Money, tho' at the same Time a landed Man of so much a Year; whereas, he who lays out his Money in the Actions of this Company, has double their Interest, paid him regularly and constantly every half Year, without having any Reason to be apprehensive of his Capital, or ever being in Danger of wanting Money by an unlucky Turn of Affairs.

We may easily judge from this Representation of the present State of the Company's Affairs, that they are in a far better Condition, or at least were so at the breaking-out of the present War, than ever, and more likely to produce considerable Profits to the Nation, and to the Company, than ever. But on the one Hand, the natural Impatience of the *French*, unable to bear being put off for above twenty Years together with fair Words and fine Promises; and on the other, their Apprehensions that either the king would never suffer them to enjoy this Commerce at all, or else would deprive them of the Fund they already possessed, and leave them to the precarious Dividends arising from Trade, has constantly kept their Actions, I will not say below the real Value, but much below what they would have been esteemed worth in this, or in any other free Country, especially after remaining for so many Years in so strict and regular a Course of Payment. But their continual Jealousies as to the true Intention of the Crown, and as to the future State of their Affairs, has constantly kept them in a precarious Situation, in spite of the wisest Measures the *French* Ministers were able to take, the large Sums purchased by Foreigners, the frequent Edicts in their Favour; and which is still more extraordinary than all the rest, the regular coming and going of their *East-India* Fleets, and the vast Sums of Money brought in by their publick Sales.

Yet so far was this from contributing to make the People easy, whose Fortunes were engaged in this Undertaking, that they pretended it administered sufficient Cause for all their Apprehensions and Complaints. If, said they, the Commerce of the *Indies* be ours, if all this Money that we receive belong to us, if all the Improvements that have been made for so many Years are legally and indisputably our Property; and if those who direct and manage all these are only Trustees for us, or rather our Ser-

vants, why should we be kept so much in the Dark, why not have it in our Powers to call these People to an Account, or why not receive from Time to Time some Part of the Profits by way of Addition to the Dividends already made us? It was in vain to tell them that all these Precautions were taken for their Sake, that the Company owed its Restoration to this Method of managing their Affairs, that they had visibly overcome by these Means most of those Difficulties which had been found insuperable by former Companies, and that this happy Progress of their Trade ought to make them perfectly content with regard to the Manner in which it was carried on, and give them entire Satisfaction as to the Integrity of such as directed their Affairs.

It was in vain, I say, that these Arguments were used or that Scheme of their Circumstances which the Reader just now perused, submitted to their Consideration, the Proprietors remained firm to their old Opinion, and their Suspicions could never be got out of their Heads, till that very Mischief fell upon them which they had so long apprehended, I mean, the Suspension of their Dividends, which, however, produced that general Account for which they had so long clamoured. But before we come to speak of this, it will be requisite to resume the History of the Company's Affairs in the *Indies*, and to give a succinct View of the real Improvements of their Commerce, which will both support what has been already said, and render the Close of this Section more intelligible.

14. At the Time the Company of the *Indies* was formed in *France*, their Affairs in that Part of the World had taken a very bad Turn; for their sovereign Council, which had been established at *Surat*, was suppressed, most of their Colonies sunk to nothing, many of their Factories in the same State, and the rest declining in such a Manner, as that little better than an entire Extinction could be expected, and that too in a very short Space of Time. This was undoubtedly a very melancholy Situation for the Servants of the Company to be in, who, while they meditated nothing more than how to obtain a Passage Home to *Europe*, and an Indemnification for the Debts contracted in the *Indies*, at least with respect to themselves, were surprized by the Arrival of three Ships, not only laden with the richest Merchandize of *Europe*, but also with very large Quantities of Silver; so that they were immediately in a Condition to discharge a great Part of their Debts, which if it did not restore it, at least revived their Credit, and gave them some Degree of Reputation in the *Indies*. It is requisite, that the Reader should know how this strange Alteration happened, and the Secret is no more than this. When the Regent executed his Scheme, the Company of the *Indies* being the principal Machine made use of, there consequently came into the Hands of that Company a considerable Part of the Plunder of the Publick, which enabled the Directors to fit out these three Ships in the Manner before-mentioned, not only with the Consent, but to the great Satisfaction of the Government, inasmuch as it made a Shew of Trade, and thereby kept up the Spirits of the People, and gave a Reputation to the Company at Home. But this, however, did not last long, for Reasons we shall quickly shew.

This Treasure was not employed in Commerce, but in discharging the Debts contracted by the old Company at *Surat*, at *Cambaya*, at *Bengal*, and other Places; so that the Returns made to *France* were but very inconsiderable, in Proportion to the Cargo sent out. But this was not all; for, before these Returns arrived, the System, as it was called, was entirely over-turned; so that taking all Things together, the Company, in the two succeeding Years, 1721 and 1722, were not able to send so much as a single Ship to the *Indies*, which exposed them to the Contempt and Scorn of the trading Nations in *Europe*, and subjected such as were in their Service in the *Indies*, to the Insults of the *English* and *Dutch*, who did not fail to represent them to the *Indians* as down-right Bankrupts, without either Effects, Money, Credit, or Resources. We may therefore truly affirm, that in the Year 1723, the Affairs of this Company were in the lowest and most deplorable Condition.

The Directors at Home, however, represented their
Difficulties to the Government in the strongest Terms
possible, and at the same Time, shewed, how prejudi-
cial it was to the Glory of the *French* Kingdom, that
Things should remain in this Situation, and that after the
Government had taken the Company under its immediate
Protection, it should be suffered to fall at once into Ruin,
without the least Effort made to sustain it. One would
have imagined, that the more natural Method would have
been to have had recourse, in this Situation of Affairs, to
the Proprietors themselves; but both the Directors and the
Ministry were sensible enough, that this would have been
attended with still worse Consequences, since by laying
open the true State of their Affairs, they would infallibly
have driven their Proprietors to Despair. Instead of ob-
taining a Subscription for putting their Commerce on a
better Foot, the *French* Ministry, sensible of the Truths
contained in this Representation, resolved to take this Op-
portunity, as they were in full Peace, to try what might
be done to retrieve Things in the *Indies*, and prevent the
entire Ruin of the Company, which was then justly appre-
hended. It was from these Considerations, that two Ships
were sent that Year, with an Assurance to such as were in
the Company's Service, that they might rely upon annual
Supplies from *France*, and that therefore they should
order their Affairs accordingly, and put their Debts into
such a Method of Payment, as might discharge them all
by Degrees, and from the Prospect thereof restore their
Credit for the present.

Things went on in this Way for about fourteen Years,
during which Time, sometimes three, sometimes four
Ships were sent every Year, and thereby the Affairs of
the Company were recovered, and restored, though but
slowly. They had still great Difficulties to struggle with;
for, in Proportion as their Commerce revived, their Ex-
pences were enlarged, by their being obliged to re-settle
their old Factories, and to establish new ones; so that in
all this Space of Time, there was very little, if any Pro-
fit accrued from their Trade; on the contrary, they ran
some Years into Debt, but not, however, without some
Prospects of future Advantages. But as the other trading
Nations in the *Indies* were entirely unacquainted with the
Secrets of the *French* Commerce, so judging by Appear-
ances only, they were fully persuaded, that the *French*
Trade was in a flourishing Condition, because they saw it
visibly extended, and the Returns made to *Europe*, far
more regular, and at the same Time, much more consi-
derable than they had hitherto ever been. Yet notwith-
standing all this, if they had gone on in the same Manner,
it would have been many Years before they had been
brought into such Circumstances as to have been able to
support themselves, and carry on their Trade upon their
own Bottom.

But in the Year 1737, M. *Orry de Pulezy*, being at the
Head of the Finances, or Revenues of *France*, which he
has managed with most surprizing Success, the Company
fell naturally under his Care and Protection. He saw
plainly, that greater Supplies were necessary to extricate
them from the Difficulties under which they laboured, and
therefore, having first made a strict Enquiry into the Situa-
tion of their Affairs, and put them into the best Order
possible, he next furnished them with such Sums as were
necessary for enlarging and augmenting their Commerce;
so that in the short Space of two Years, he doubled their
Returns, and in three Years more, brought them to thrice
as much as they had formerly been. By his Management,
their Sales at Port de *Orient*, became regular, and consi-
derable, increasing in such a Manner, that the publick
Sale in the Year 1742, produced twenty-four Millions of
French Livres, or about one Million of our Money; be-
sides which, they reserved in their Magazines, Goods, to
the Value of four Millions of Livres more; and the first
Ships that arrived in 1743, brought Home still a richer
and more valuable Cargo. This sudden and extraor-
dinary Change in the Company's Affairs, alarmed and
amazed all *Europe*, but more especially the Maritime Pow-
ers, who saw with infinite Concern, a Company that but
a few Years before was looked upon as entirely sunk and
destroyed, now rising into as high Credit, as any in *Eu-*

rope; and on the other Hand, this encouraged the nor-
thern Powers to prosecute their Schemes of falling into
the *East-India* Trade, with greater Warmth and Diffi-
gence.

But what was still more extraordinary than all the rest;
the War did not seem to affect the Company so much as
might have been expected, for their Dividends were still
regularly paid, and this kept up their Credit to such a
Degree, that so lately as *Christmas* 1744, their Actions
were at two thousand. But the War with *Great Britain*,
increasing the Expences of *France* on the one Hand, and
lessening her Income on the other, the Secret at last came
out, and Mr. *Orry* was forced to acquaint the Directors
of the *East-India* Company, that the King's Affairs were
in such a Posture as would no longer permit him to sup-
ply the Company in the manner he had hitherto done;
so that now they were to stand upon their own Bottom,
and to carry on their Trade for the future, as well as
they could. This unexpected Stroke demolished the whole
Fabrick which had been raising for so many Years, and
reduced the Actions of the Company to eight hundred;
neither has the Eloquence of Mr. *de Orry*, or the Arts
which the Court has made use of to recover the Propri-
etors from their Fright, been able to carry their Actions a-
bove one thousand, or at least very little above it ever
since.

The main Cause of this was the Propositions made by
Mr. *Orry* to their Directors, that either the Proprietors
should subscribe such a Sum of Money upon their Actions,
or should suffer their Dividends to be postponed for a
certain Time, or that they should come to some Agree-
ment amongst themselves for compounding these two Me-
thods, by advancing some Part in ready Money, and al-
lowing their Dividends to go in discharge of the rest. The
Motive that obliged the Ministry to this Discovery, was
the Necessity of having Money to carry on the *East-India*
Trade, which they knew must be ruined, even by a tem-
porary Stagnation; which Money, since the Crown could
no longer furnish, it was necessary that the Proprietors
should. But to this it was answered, that hitherto the
Proprietors had been no Gainers by that Trade, had no
general Accounts made up to them of it, nor, according
to the Confession of the Directors themselves, were to
have received any such Accounts, if this Accident had not
happened; by which they asserted, that their Properties had
already lost one half of their Value, and might very pro-
bably lose a Part of the other half; so that they were least
in a Condition to pay, when this Demand was made,
which would have been sufficiently grievous, even in the
middle of Peace, and when their Actions were at the
highest.

To this it was replied, that they had no Reason to com-
plain of the King, or of his Ministers, who had hitherto
supported this Trade for their Advantage, without their
contributing to it at all. That if they had received as yet
no Profits from their Trade, it was because no Profits had
accrued from it; and this, not through any ill Manage-
ment in such as were intrusted with their Concerns, or be-
cause this Commerce had not been carried on to great Ad-
vantage, but by reason of that immense Load of Debts
which lay upon them, at their first Establishment, and
which the Profits of the Trade were obliged to pay off,
and the prodigious Expence the Company had been at,
both in *Europe* and in the *Indies*, for putting their Com-
merce on a solid and certain Footing. That to put all
Doubts upon this Subject entirely out of the Question,
and that they might be satisfied of the Truth of these Par-
ticulars, a general Account of their Trade should now be
laid before them, by which they would, in the first Place,
see, that, tho' slowly, it had been continually improving,
and that of late Years especially, it had thriven exceed-
ingly.

In the next Place, they might be satisfied, that even at
present, it was so far from being in a desperate Condition,
that notwithstanding an immediate Sum was necessary for
carrying it on, yet there was no Danger of their being called
upon for another Supply, since what was now asked, would
be sufficient to put the Company into a Condition to main-
tain itself without trenching upon their Dividends, which

should, for the future, be as regularly paid, as ever they had been in Times past. It is from this general Account, that Strangers, as well as the Proprietors of this Company, have come to so distinct a Knowledge of their Affairs; since, had it not been for this unforeseen and unexpected Accident, they would never have let the World into the Truth of an Affair which they had concealed with so much Care for such a Number of Years. We will begin with the Account of the Shipping employed by the Company in the Indies, which will demonstrate the Truth of what has already been advanced upon this Subject, both as to the Matter and Manner of it: But then the Reader is to observe, that the same Number of Ships were sent annually from *Bengal* as from *Pondicherry*, and consequently the Numbers of this List are to be doubled. In the next Place, he is to take Notice, that the Sums set down are the Prime-cost of the Goods in *India*. And, lastly, that the Value of a Pagoda is about nine *French Livres*, or seven Shillings and Six-pence of our Money; by the Help of which Directions this Table will be found to comprehend a short History of the Progress of this Company, to the present Time.

A Scheme of the Commerce of the French Company of the Indies, shewing the Number of Ships returning annually from Pondicherry, and the Value of their Cargoes.

From 1727 to 1742, inclusive.

It would be needless to fatigue the Reader with the rest of this Report, calculated only to shew that the present Stop of their Dividends, was a Measure absolutely necessary for the Company, as well as the State, and alike calculated for the Service of both; since, on the one Hand, it would enable his Majesty to employ, for the pressing Occasions of his Government, those Sums which otherwise the Company might have made use of; and on the other, though it might be a present Inconvenience to the Proprietors to see this Money for their own Service, yet it would entirely take away another Inconvenience to which they had long been subjected, viz. their not having a sufficient Fund of their own to carry on their Trade, which hindered them from receiving general Accounts, or knowing the true State of their Affairs, and when they might expect to have their late and annual Dividends augment-

ed by the Profits arising from their Traffick, which they were now given to understand was a Thing not far off, and ought therefore to console them for the Trouble they were put to by this unfortunate Accident.

I shall not pretend to reason on these Particulars, or to point out the Causes why all these Assurances have given so little Satisfaction: It is sufficient for our Purpose, that the Fall of their Actions has very fully demonstrated the Truth of the Fact, that they have given no Satisfaction, and that the Affairs of this Company are at present in a very lamentable Condition, and are not likely to be in a better, at least, so long as the War continues. Our Business is now to conclude the Section, with a few useful Remarks, deduced from the Facts contained in it, hitherto unpublished in our own, or any other Language, but entirely collected from Memoirs furnished to me by some intelligent and inquisitive Persons, who thought it would be of publick Service, to have the true State and Condition of this *French Company of the Indies* exhibited to the View of the *English Reader*. This likewise must be my Apology for the small Delay which the waiting for these Memoirs has occasioned, and which, I hope, will be fully attoned for by their Publication.

15. After the Reader has perused this History, he will not need many Arguments to persuade him, that Trade, or, at least, the Commerce of the *Indies*, is by no means suitable to the Genius, Disposition, or Condition of the *French Nation*, since he sees not only how often Attempts of this Sort have miscarried, but also how hardly, and with what prodigious Difficulties they have been ever brought to succeed in any tolerable Degree, notwithstanding all the Pains and Assistance the Government has bestowed upon them. In all other Countries, but particularly *Great-Britain* and *Holland*, Undertakings of this Sort have been the Work of private Men in the Beginning, and have never claimed the Aid, or even the Protection of the State, till they were to some Degree of Forwardness, and then only from the Apprehension of this Difficulty, that the Desire of Gain might engage such Numbers of Adventurers in the same Branch of Commerce as might prove prejudicial both to the Publick and to themselves.

But in *France* it has been quite otherwise; private People never did any thing till excited and encouraged by the Government, and then were able to do little more than ruin themselves, by launching out into Enterprizes beyond their Abilities. This evidently demonstrates, that Commerce, at least extensive Commerce, is not the natural Growth of the Climate of *France*; and therefore, though with much Care and Cultivation, it may be brought to some Degree of Perfection; yet it can never be naturalized, or brought to grow spontaneously in that Region, but will be ever drooping and pining, if the Care necessary at the first Raising it, be either through Negligence, or by Accident withdrawn. It may indeed, be said, and the Facts laid down in the foregoing Section, may be brought to prove it, that some great Ministers have shewn Talents equal to, if not exceeding those of Merchants, for extending, maintaining, and supporting Trade; but then the Trade they support must be temporary, and can last no longer than they have Power, which is so precarious a Situation, that no extensive or advantageous Trade can flourish therein.

But this is not the only Contingency neither, for how well soever a Minister may be disposed, it will be impossible for him to act but in favourable Conjunctions, that is to say, in a Time of full Peace, when his Master's Affairs are perfectly well settled, as well as his own Power; for, if there be any thing wanting as to either, it is impossible that the Commerce under his Protection should thrive. What we have seen therefore in this short History of the Company of the *Indies*, proves no more than that once or twice in two or three Centuries, *France* has a Chance of fixing such an Establishment, and that is all. The whole Series of the History of that Kingdom hardly turns out an Instance of so steady an Administration as, from the time of the Death of the Duke of *Orleans*, to that of Cardinal *Fleury*; so that we may look upon the Consequence of this Administration as a kind of Miracle.

All the good Effects however which it hath produced to this Company, are like to vanish into Smoke, by Means of the present War, which has been equally fatal to it at home and abroad: For at home it has occasioned that high Demand for Money, which has brought on the Suspension of their Dividends, and thereby the Ruin of their Credit; and the Blow struck by Commodore *Barnes* in the *Indies*, and the Loss of the Ships taken at *Cape-Breton* has gone so far towards the Ruin of their Commerce abroad, that another such Stroke will go very near putting an End to it: For the *French*, like other People of lively Tempers, are easily discouraged; and if once, after all the Care has been taken of it, their present Company of the *Indies* should fall, they would infallibly despair. This sufficiently shews the Consequence of making a proper Use of our Naval Force in a War with that Crown; since, if we destroy the Commerce of *France*, we must necessarily enlarge our own. There is so much the more Force in this Argument, because Trade in that Kingdom is a new Thing; a Thing, which, as we have abundantly shewn, they have nursed with the greatest Care, and yet have raised with the utmost Difficulty; so that if it can be overthrown, they are set back for twenty or thirty Years at least, which is a Thing of far more Consequence to us than all the Conquests we can gain upon the Continent.

To say the Truth, our Title to *Maritime Power* is that which we ought chiefly to regard; and as it is impossible to succeed in all, if we engage in too many Designs at once; so, if we fix our Attention upon this, and pursue it with Vigour, we shall find that it will have a better Effect, both with Regard to ourselves and our Allies, than if we diverted our Views to other Objects, which, at first Sight, may appear of equal Importance. The Truth of this will be clearly discerned, if we consider that the encreasing of our Naval Power will render us more formidable than any thing else, and the recovering and extending our Trade, prove the surest Means of bringing in Riches. The former will render us most dreadful to our Enemies, as the latter will make us most useful to our Friends. While we are able to carry Terror into the most distant Parts of the World, our Foes can never be out of our Reach; and

while we can, without empowering ourselves, grant timely and suitable Assistance to our Allies when attacked, there is no Danger either of the disturbing domestick Quiet, or losing the Balance of Power. For whatever speculative Politicians may pretend, we must derive our Title to both from the Superiority of our Fleets, and the Wealth of our Subjects. Arbitrary Governments may attain Strength and Influence from other Maxims, but a free People never.

It is our peculiar Happiness, that the Glory of the Crown, and the Interest of the People, depend upon the very same Thing; so that whatever advances one, must necessarily enlarge the other; and what diminishes this may, sooner or later, destroy that. In *France* the Government is obliged to take unwearied Pains for the Encouragement and Protection of Commerce. In *Great-Britain*, again, this may be entirely spared; for, provided the Government does not oppress Trade, private Men will carry it on with all the Success that can be wished for; and the less the Hand of Power meddles therewith, so much the better. This shews, at once, the Difference between our Constitutions, and the Excellence of that under which we live. It is to this Constitution that we owe, our Trade being natural to our Island. It is to their living under a different Constitution, that the *French* feel, by Experience, the Difficulty of carrying on Commerce to any Advantage. If ever our Trade fails, it must be owing to ourselves; if ever theirs flourishes, it must be the Effect of Accidents, or rather of Miracles. In short, nothing but Tyranny, under the Mask of Corruption, can possibly hurt the Commerce of this Nation; whereas nothing but the wise and gentle Administration of despotick Power, can possibly raise the Trade of that. These Reflections shew sufficiently what we have to hope, and they have to fear. They arise naturally from the Subject; they are of the greatest Consequence to my Readers, and if by Dint of these Reasons, founded upon Facts, I shall be able to impress them as strongly upon their Minds as they deserve, my End will be fully answered. In the mean time, having executed all that was proposed in this Section, I shall proceed with as much Brevity as is possible, to finish the few that remain, in order to make this Volume compleat.

SECTION XXXVI.

A succinēt, but compleat History of the Rise, Progress, and Suppresson of the Imperial Company of the Indies, established at Ostend, by the late Emperor Charles VI.

Collected from private Memoirs, as well as publick Histories and Acts of State.

1. *The first Grounds and Beginning of this Trade from the Austrian-Netherlands to the East-Indies, and the Difficulties with which it was attended from its Infancy.* 2. *The Plan of its first Charter, and the Motives which induced the Court of Vienna to consent to its Establishment, set in a true Light.* 3. *An Account of the Reasons alledged by the States-General for its Abolition, and an Extract of the Memorial presented by their Minister on that Subject to the Court of Vienna.* 4. *The Use made of that Memorial by the English East-India Company, to obtain an Act of Parliament to prevent the Subjects of Great-Britain from having any Concern in the Capital of that Company.* 5. *An Abridgement of the Imperial Letters Patent for the Establishing of the said Company, with a concise Account of the Priviledges granted to the Proprietors.* 6. *The Apprehensions raised by this Establishment, in Great-Britain and Holland, and the Methods used to overturn it.* 7. *The Kings of France and Spain also take Umbrage at this Company, and publish their Disapprobation of it to all Europe.* 8. *The Emperor and the King of Spain being suddenly reconciled, conclude a Treaty of Commerce, by which the Ostend Company obtains the Protection of both Monarchs.* 9. *An excellent Memorial of the Dutch East-India Company, demonstrating the Incompatibility of this Treaty of Commerce with the Emperor's Title to the Netherlands.* 10. *The Grounds of the Treaty of Hanover concerted for the impeding the Execution, and defeating the Views of that of Vienna.* 11. *The Substance of M. Vander-Meer's Memorial to the King of Spain, in Defence of the Rights of the Maritime Powers.* 12. *A succinēt Detail of the remaining Part of this Dispute, and the Conduct of their High-Mightinesses.* 13. *The Letters Patents of the Ostend Company are suspended, by which the Commerce of the East-Indies is secured to the Maritime Powers.*

1. **A**S soon as those Provinces which were formerly titled the *Spanish Low-Countries*, were yielded to the late Emperor *Charles VI.* by the Treaty of Peace concluded at *Rastatt*, all the rich Merchants

in the several Cities of *Flanders* and *Brabant*, set their Heads at Work, to find out Ways and Means by which their Commerce might be extended through the Authority and Influence of their new Master. One of the first

Things that occurred to them, was the opening a Trade to the *East-Indies*, for which they thought their Country, at least, as well situated, as either *Great-Britain* or *Holland*. In order to make Trial of this, they first of all formed a private Company, without Patent, Charter, or even Licence from the Imperial Court, which, notwithstanding, was thought to have advised them to this Method, and furnished them with Passports. They had, however, but very indifferent Success at the Beginning, one of their Ships being taken on the Coast of *Africa*, richly laden, on the 5th of *December*, 1718, by the *Dutch*.

This Accident had very probably dashed their Hopes in the very Beginning, if they had not been encouraged by *Vienna*, with a Promise of Letters Patent, and Leave immediately given them to take in Subscriptions. The Emperor went yet farther, and demanded Satisfaction of the *States-General* for this Insult offered to a Vessel provided with his Passport; but before that Complaint was well laid before them, a fresh Occasion afforded room for another, the *Dutch* having seized a second Ship, and shewing very little Inclination to give Satisfaction for either. Upon this, the Merchants at *Ostend* applied for Commissions, that in case of any farther Insults, they might, at least, be in a Condition of defending themselves. This being looked upon as a very reasonable Request, was readily granted them, and in Consequence thereof, one of their Vessels, well armed, took a *Dutch* Ship, and brought her into *Ostend*. The *States* did not fail to make loud Complaints of this to the Governor-General of the *Austrian Low-Countries*, who answered, that the Merchants of *Ostend* had done no more than they were entitled to do by virtue of his Imperial Majesty's Commission, in order to obtain Satisfaction for their Losses.

This gave so much Credit to the new Company, that in the Year 1720, they equipped five large Ships for the *Indies*, and the Year following, they fitted out six more, three for *China*, one for *Mota*, another for *Surat*, and the Coast of *Malabar*, and the sixth for *Bengal*. This irritated the *Dutch* to such a Degree, that they immediately seized a Vessel richly laden by the Merchants of *Bruges*, and ordered her Cargo to be sold, notwithstanding the Applications of the Imperial Ministers at the *Hague* to prevent it. This Misfortune was followed by another, an *English* Privateer taking very soon after on the Coast of *Madagascar*, an *Ostend* homeward bound Ship, very richly laden from the *Indies*, which so discouraged the new Company, that they ordered a new Ship they were then fitting out, to be laid up.

But in the Months of *May* and *June* 1722, they received two Ships from the *Indies*, and in the Month of *September*, two more, the Cargoes of which being exposed to Sale, went off at so good a Rate, that they found themselves not only indemnified for all their Losses, but likewise in a Condition to carry on their Commerce with greater Spirit and Success than ever. The only Thing they wanted, was a legal Establishment; for, tho' the Imperial Court had for a long Time flattered them with the Hopes of Letters Patent, yet they had hitherto delayed them, to avoid a down-right Quarrel with the Maritime Powers.

2. After the Arrival, however, of these last mentioned Ships, the Company having Money in their Hands, and very powerful Friends at the Court of *Vienna*, resolved to neglect nothing that might put their Affairs on the best Foundation possible, and with this View, they sent some of their Directors to Court, very well furnished with Instructions, as also with other Credentials, no less necessary at that, and most other Courts, viz. Bills for considerable Sums of Money. These Gentlemen managed their Affairs with such Diligence and Prudence, that they obtained a Promise of a Charter as extensive as they could wish, or any Company in *Europe* had ever received, the Plan of which was immediately drawn, and gave them entire Satisfaction.

This Charter was to have consisted of several Articles, importing first, that the Directors should be fixed to the Number of Eight, to be chosen out of the wealthiest,

most reputable, and best experienced Merchants in the *Low-Countries*; that they should be allowed four thousand Florins a Year Salary; that none of them should continue above six Years, or be capable of being re-chosen, till they had been a full Year out of Office. Secondly, That a general Court of the Proprietors should be held every Year for the Choice of Directors, when the Company should name twenty-four, out of which List the Emperor should choose Eight. Thirdly, That the Court of Directors, the Treasury, and Books of Account belonging to the Company, should remain the first three Years at *Amsterdorp*, and the next three Years either at *Ghent* or *Bruges*; but that their Sales should be constantly made either at *Ostend* or *Bruges*. Fourthly, That the Company's Capital should consist of ten Millions of Florins, and should be divided into ten thousand Actions, of one thousand Florins each. Fifthly, the Prizes which the Vessels in the Service of the Company should take in Time of War, were to belong entirely to the Company, and were to be sold, and disposed of for their Profit. Sixthly, All the Ammunition, Provisions, Artillery, and naval Stores, requisite for the Forts and Factories of the Company, were to be exempted from all kinds of Duties and Impositions in their Passage through the Territories, either of his Imperial Majesty, or of any of the Lords, or Ecclesiastical Communities in the *Low-Countries*. Seventhly, That all the Goods transported on Board the Ships of the Company, should pay for all Customs and Duties Inwards and Outwards, four per Cent. and no more, till the Expiration of the Month of *September* 1724, and from that Time six per Cent. for ever.

The Emperor likewise promised, in which he also kept his Word, to send a Person vested with a public Character to the Great *Mogul*, in order to settle an Alliance with him, and to return him Thanks for the Permission he had granted the Company, not only to erect a Factory, but also a Fort, to protect their Commerce in his Dominions. The Prospect his Imperial Majesty had of enriching his Subjects in the *Low-Countries*, and augmenting the Revenues he drew from thence, by fixing so extensive and profitable a Commerce there, engaged him to assure the Agents of that Company of still greater Favours. He even intimated, that he would remit all Customs and Duties for three whole Years, and would likewise make the Proprietors a Present of three hundred thousand Florins in ready Money, to indemnify them from any Losses they might sustain on the first Establishment of their Commerce.

When all this good News came at once into the *Austrian* Netherlands, it raised such a Spirit, not only among the Merchants, Bankers, and other Persons concerned in Trade, and in Money; but also among the Nobility and Gentry who had Fortunes and Estates in this Part of the World; that they shewed an eager Inclination to exert themselves to the utmost in the Support of the new Company, of the Success of which, there seemed to be now no longer any Doubt. It may not be amiss, however, to observe, that it was not the Inhabitants only of these Provinces, and other Subjects of his Imperial Majesty, that encouraged this Undertaking, but Strangers also, particularly the *English*, *French* and *Dutch*, who were chiefly concerned in the Shipping, and in the Management of the Company's Affairs, notwithstanding that they very well knew, they could never prosper, but at the Expence of their native Countries, and of the Establishments for the same Commerce long ago erected in them, and which hitherto had been carried on with so great Profit and Reputation.

3. We need not wonder, therefore, that the erecting this new Company at *Ostend*, should occasion, as it did, such Noise and Opposition throughout all *Europe*, so as to render the Subject of this Section as remarkable a Part of the general History of this Age, as any that finds a Place therein; but it must, however, seem a little strange at first Sight, that the warmest Friends, and most faithful Allies of his Imperial Majesty, should be the most violent in this Opposition. One would have imagined, that the Emperor had the same Right in his Dominions, that other Princes and States have in theirs; and that how con-

ed Merchants in the allowed four thousand them should continue being re-chofen, till vice. Secondly, That should be held every when the Company which Lift the Empe- That the Court of of Account belonging the first three Years at rs either at *Ghent* or constantly made either at the Company's Ca- of Florins, and should ons, of one thousand hich the Vessels in the ke in Time of War, any, and were to be Sixthly, All the Am- naval Stores, requi- the Company, were to ies and Impositions in s, either of his Impo- rs, or Ecclesiastical Seventhly, That all e Ships of the Com- and Duties Inwards and ore, till the Expira- , and from that Time

He all Customs and Du- ld likewise make the dred thousand Florins from any Losses they ment of their Com-

once into the *Austri-* spirit, not only among Persons concerned in ong the Nobility and es in this Part of the Inclination to exert port of the new Com- re seemed to be now e amifs, however, to nts only of these Pro- mperial Majesty, that Strangers also, parti- eb, who were chiefly the Management of ding that they very e at the Expence e Establishments for in them, and which great Profit and Re-

re, that the erecting occasion, as it did, out all *Europe*, to as as remarkable a Part as any that finds a seem a little strange ls, and most faithful ld be the most vi- have imagined, that his Dominions, that ; and that how con- trary

rary soever the erecting such a Company in the *Low-Coun- tries*, might be to the Interests of other Nations concern- ed in the same Trade, they could, however, have no just Claim to demand, or expect, that his Imperial Majesty should forego such apparent Advantages for their Sakes, or, in plain Terms, hinder his own Subjects from becom- ing rich, that theirs might remain so. Yet this was, in plain Words, the Case, and the Maritime Powers declared, in express Terms, that they expected his Imperial Ma- jesty should do this, and that he was bound by Treaties to comply with their Demands.

The *States-General*, who thought themselves most ag- grieved, were both the earliest and the loudest in their Com- plaints; and as it is impossible to give the *English* Reader a fuller, or clearer Account of the Grounds upon which they were founded, than by laying before him the Mem- orial presented by *M. Bruyninx*, Envoy from the *States-General* to the Court of *Vienna*, which contains the Sub- stance of all that was alledged against the Emperor's Right of establishing such a Company, we have, with this View, made as short and succinct an Extract of that very long Memorial, as is consistent with the Design of preserving its Sense and Spirit.

We must at the same Time observe, that tho' the *States-General* themselves were very ready and willing to take this Step, which they very well knew was absolutely neces- sary for securing the Commerce of their Subjects; yet they were not a little quickned therein by the Application of their own *East-India* Company, who, as they felt the Danger most, bore it with the least Patience, and there- fore pressed this Application might be made in Time, before the Letters Patent for this Company were actually granted, or while they might be revoked, with a better Grace, because of their turning less to the Disadvantage of the Subscribers to the Company's Capital, before their Money was actually paid, or vested in Merchandize. Ac- cordingly, on the fifteenth of *March* 1723, *M. Bruyninx*, by Order from the *States-General*, actually presented to the Ministers of his Imperial Majesty his famous Memo- rial, which was to the Purpose following, *viz.*

" Their High-Mightinesses, who have the Honour to live in good Correspondence and Amity with his Imperial Ma- jesty, having nothing more at Heart than the Continuance of the same good Correspondence and Amity which has at all Times subsisted between his Imperial Majesty and this State, and between the Subjects of both Parts, can- not behold, without extream Grief, that the Inhabit- ants of the *Austrian* Netherlands, Subjects of his Im- perial Majesty, are undertaking Matters no Ways con- sistent with the good Correspondence and sincere Ami- ty; but are extremely prejudicial to the State, and con- trary to this Treatie concluded between his Imperial Majesty and their High-Mightinesses. Their High- Mightinesses have the more Reason highly to complain in this Matter, because the Instances that have been made, and from Time to Time reiterated on their Part, to obtain proper Redress, have not only been fruitless, but his Imperial Majesty's said Subjects in the *Austrian* Netherlands, extend even daily their Enterprizes, in which they seem encouraged and confirmed, by their obtaining of his Catholick and Imperial Majesties, as their High Mightinesses have been informed, a Licence to sail from the *Austrian* Netherlands to the *East-Indies*, particularly from *Ostend*.

" Their High-Mightinesses foreseeing the unavoidable Troubles that must attend this Affair, if his Catholick and Imperial Majesty should, contrary to all Expecta- tion and Equity, permit his Subjects of the *Austrian* Netherlands to proceed in their Undertakings, with re- spect to Navigation and Trade to the *East-Indies*, con- trary to the Tenor and Letter of Treaties; and if Op- position should be made to their High-Mightinesses, in case they attempt to make Use of their Right obtained by Treaties. But their High-Mightinesses being de- sirus of nothing more than to prevent such kind of Troubles, could not in the present Juncture avoid making such Representations to his Imperial Majesty, that by the Treaty concluded in 1648, at *Munster*, be- tween his Majesty the King of *Spain* then reigning, and

his Successors on the one Part, and their High-Mighti- nesses on the other Part, Commerce and Navigation to the *East* and *West-Indies* were regulated and limited with regard to the Subjects of *Spain*, upon the Foot they then were established, without Power of farther Extension, and with regard to the Subjects of this State, it was agreed, that the former should refrain from Places which the latter possessed.

" These Articles have always been religiously observed, and the Inhabitants of the *Spanish-Netherlands*, at present *Austrian*, have never been permitted or tolerated to trade to the *Indies*. The said *Netherlands* being fall- en under the Dominion of his Catholick Imperial Ma- jesty, have not thereby acquired larger Privileges than before; nor can it ever be imagined that their High- Mightinesses, who have made such signal Efforts, con- tributed so much to the Recovery of the *Spanish Ne- therlands*, and so many other Parts of the *Spanish* Mo- narchy, in Favour of his Catholick and Imperial Ma- jesty, pursuant to their Engagements on that Behalf, could possibly, by entering into those very Engagements, depart from, or ever intend to depart from their Cha- racters, and their Right of maintaining themselves therein to Perpetuity, obtained by the said Treaty of *Munster*; or that his Catholick and Imperial Majesty had any Intention in recovering the said *Netherlands*, to make Alterations in the said Treaty, much less design, contrary to the Stipulation therein so plainly expressed, to cause any Prejudice to the State, in a Point so es- sential and important to them, upon which it was so strongly insisted in the Negotiations at *Munster*, and without which that Treaty could not have been con- cluded.

" Moreover, it is expressly stipulated by the twenty- sixth Article of the *Barrier* Treaty, that Commerce and all Things relating to it, should remain, to all Intents and Purposes, upon the same Foot it was established at the Treaty of *Munster*, and in the Manner expressed in the Articles of the said Treaty; inasmuch that the said Treaty of *Munster* is evidently confirmed by the Treaty of the *Barrier*, even at the Time his Catholick and Imperial Majesty was already in the Possession of the said *Netherlands*; as likewise by the Guaranty of his *Britannick* Majesty.

" And whereas the Right of the States in this Particu- lar, is so manifest, that their High-Mightinesses have the utmost Grounds to expect, from the so much re- nowned Friendship and Equity of his Catholick and Imperial Majesty, that he will not favour, or tolerate any Prejudice to the said Right of the State. They therefore amicably require that the Patent, which is said to have been granted for Navigation and Commerce of the *Austrian-Netherlands* to the *Indies*, may not be pub- lished, but withdrawn, or at least rendered ineffectual, and that such Orders may be given by his Imperial Majesty, that such kind of Navigation and Commerce, whether with Patents or without, may entirely cease, and that the Treaties in that Respect may be executed, &c."

4. This Memorial was no sooner transmitted to *Eng- land*, than it was translated, and printed by Order of the *East-India* Company, who directed that it should be given to the Members at the Door of the House of Commons, in order to quicken them in their Proceedings on a Com- plaint already exhibited to them on the Subject of this new Company, of which the Subjects of *Great-Britain* had the very same Right to expect the Abolition that the *States-General* had expressed.

The Method they took had, in every Respect, the wish- ed for Effect; for this Memorial, which so thoroughly explained the Thing, had so good an Operation on the Members of the House, that, upon the 30th of *April*, 1723, *Sir Nathaniel Gold* reported from the Committee appointed to enquire into the Nature of a Subscription said to be carried on by several of his Majesty's Subjects, to promote an *East-India* Company now erecting in the *Aus- trian Netherlands* the Matter, as it appeared to them, and the Resolutions of the Committee thereupon as follows, *viz.*

1. That it is the Opinion of this Committee, that several Subjects of *Great-Britain* have been concerned in promoting and carrying on a Trade from the *Austrian-Netherlands* to the *East-Indies*, and negotiating and establishing of a Company for that Purpose, to the great Prejudice of the Trade of this Kingdom.

2. That it is the Opinion of this Committee, that the House be moved for Leave to bring in a Bill, effectually to prevent his Majesty's Subjects from subscribing, or being concerned in encouraging or promoting any Subscription for an *East-India* Company in the *Austrian-Netherlands*, and for the better securing the lawful Trade of his Majesty's Subjects to and from the *East-Indies*.

The first of the said Resolutions being read a second Time, was agreed unto by the House *Nemine contradicente*, and it was also unanimously ordered, that Leave be given to bring in a Bill effectually to prevent his Majesty's Subjects from subscribing, or being concerned in encouraging or promoting any Subscription for an *East-India* Company in the *Austrian-Netherlands*, and for the better securing the lawful Trade of his Majesty's Subjects to and from the *East-Indies*.

This Bill afterwards passed into a Law, under the Title of, "An Act for preventing his Majesty's Subjects from subscribing, or being concerned in, or encouraging or promoting any Subscription for an *East-India* Company in the *Austrian-Netherlands*, and for the better securing a lawful Trade of his Majesty's Subjects to and from the *East-Indies*." We have already, in the thirty-third Section of this Work, given the Reader an Account of the Scope and Contents of this Law, upon which, therefore, it is not necessary that we should dwell longer here; only we shall observe, that, henceforward, the Maritime Powers looked upon themselves as equally obliged to prosecute this Affair with Vigour, and to oblige his Imperial Majesty to abolish the new Company in the *Netherlands*, as a Sacrifice necessary to preserve the Friendship of his ancient Allies.

5. But, notwithstanding the joint Solicitations of the *English* and *Dutch* Ministers, the Emperor seemed more and more determined to maintain his Point; and therefore, in the Month of *August*, 1723, actually granted his Letters Patent to the *Ostend* Company, though with some Variations from the Plan before laid down. In the Preamble to these Letters, the Emperor not only took all the Titles of the Head of the House of *Austria*, but likewise those of the King of *Spain*; and, in particular, styled himself King of the *East* and *West-Indies*, of the *Canary-Islands*, &c. with a View, probably, to grace this new and ample Grant to the *Ostend* Company, which was established for thirty Years, with Licence to trade to the *East-Indies* and *West*, and on all the Coasts of *Africa* on this Side, and on the other Side the *Cape of Good-Hope*, observing the usual Customs.

The Capital however of the Company was, by these Letters, reduced to Six Millions of Florins, and the Number of their Actions to Six Thousand; but, in other Respects, they had all the Powers and Privileges laid down in the first Plan, and many more: For they were permitted to build Forts and Castles in whatever Parts of the *East-Indies* they should think fit; as also to furnish them with all kind of Arms, Artillery, and Ammunition that they thought convenient. They were likewise allowed to build and equip Ships of what Size and Strength they thought proper, in any of the Ports of his Imperial Majesty's Dominions in the *Low-Countries*, *Italy*, or elsewhere; as also to make Leagues, Treaties, and Alliances with the Sovereign Princes and States of the *Indies*, in the Name of his Imperial Majesty, with this Restriction only, that they should not make War on any Potentate whatever, without the Leave of his Imperial Majesty, and his Successors, first had and obtained.

In Consideration of all which Grants, Privileges, Benefits, and Advantages, the said Company bound themselves to offer as a Homage to his Imperial Majesty, his Heirs, Successors, on every Succession, a Golden-Lion, crowned of the Weight of twenty Marks, holding under his two Fore-Paws, the Arms of the Company, which were a Spread-Eagle, display'd with the terrestrial Globe

between his two Heads, surmounted by an Imperial Crown. Lastly, his Imperial Majesty undertook to protect and defend the said new Company against all who should unjustly attack them; and should, even in case of Necessity, employ the whole Force of his Dominions to support and maintain them in the full and free Possession of the Enjoyment of the Commerce and Navigation granted them by these Letters, and obtain for them full Damages and Satisfaction from any Nation, State, or Potentate, that should presume to trouble or disturb them; and should likewise, for the future, provide, in every Respect, for their Safety and Welfare, by any Treaties, Alliances, or Leagues, into which his Imperial Majesty, his Heirs, or Successors should hereafter enter with any Powers whatever. Such was the Rise, and such the Establishment of this famous Company at *Ostend*, from which both the Company and his Imperial Majesty, promised themselves so many and so great Advantages.

6. As soon as these Letters Patent were published and registered in the Sovereign Courts of the *Austrian Low-Countries*, the Directors taking Possession of their Offices, held soon after their first General-Court, in which it was resolved, that the Books of the Company should be opened at *Antwerp* on the Eleventh of *August*, which was accordingly done, and that with such Success as surpris'd all *Europe*; for, the next Day, by Noon, the Capital was entirely subscribed, and by the End of the Month of *August*, the Stock of the *Ostend* Company was 15 per Cent. above Par. The Affairs of this new Society were no less flourishing in the *Indies*, where the Persons they employ'd, being most of them such as had served before, either the *English* or the *Dutch East-India* Companies, found Ways and Means to settle Factories with amazing Facility and Success, and to push their Trade in such a Manner as very evidently shew'd, that if the Interests of such as oppos'd this Company, did not get it suppress'd in *Europe*, their Efforts in the *Indies* would do little, unless they had Recourse to open Force.

The *Dutch East-India* Company was so far convinced of this, that, in less than a Fortnight, they presented two Memorials to the States General, in which they scarce kept any Measures, but plainly intimated, that as the Establishment of this Company was in direct Violation of Treaties, so they ought to be left at Liberty to act, as if those Treaties no longer subsisted, and do themselves that Justice by Arms, which it was every Day more and more apparent, could not be obtained any other Way. The States however were, by no means, inclined to break absolutely with his Imperial Majesty, if by any Methods possible they might avoid it, and therefore still continued their Applications at the Court of *Vienna* in Conjunction with *Great-Britain*, in order to obtain the Revocation of the Authority by which the new Company acted, or at least a Suspension of it, and in the mean Time, they made such Laws at Home, in Favour of their own *East-India* Company, as they thought requisite, to prevent any of the Subjects of their High-Mightiness from having any Concern, either in the Capital of the *East-India* Company in the *Netherlands*, or in the Management of their Affairs in the *Indies*.

As on the other Hand the *Dutch* Company, tho' they did not proceed to direct Acts of Violence, took such Methods in that Part of the World, where their Power is so great, and so extensive, as gave this new Society infinite Trouble, by cramping their Trade, and rendering it in a great measure precarious, in which they were so well seconded by the *English*, that nothing but the Activity and Abilities of the Persons concerned in this new Trade, and their finding themselves in a manner desperate, in case it did not succeed, could have kept it on foot in spite of the Difficulties and Inconveniences which they every Day experienc'd.

7. But it was not only *Great-Britain* and *Holland* that exerted themselves with so great Vigour against this new Establishment for *France*, likewise began to take Umbrage at a Scheme which threatened direct Destruction to that Establishment of the same kind, which she was endeavouring to erect, and therefore his most Christian Majesty's Council published a Declaration, dated the 16th of *August*

ed by an Imperial

August 1723, by which all the Subjects of the Crown of *France* were forbid to interell themselves in any manner whatever in the Capital of the *Ostend* Company, under pain of forfeiting three thousand Livres for every Act of Offence, besides incurring the Confiscation of whatever they should subscribe into the Capital of the said Company, and in case of a second Offence, the same Fine and Forfeiture, together with Banishment for three Years. By the second Article of this Declaration, his most Christian Majesty directed, that in case the Effects his Subjects might acquire by intersting themselves in the Stock of this new Company, could not be reached, so as to make them liable to the Confiscation before mentioned, then their Effects and Fortunes in *France*, should be liable to the like Seizures and Forfeitures, until the Sums in which they were so concerned in the *Austrian* Company should be raised and levied, and all this in the short, summary, and extraordinary Method described by the Royal Ordinance of 1670. By the third Article all Seamen, Manufacturers, Tradefmen, and in general all the Subjects of his most Christian Majesty were strictly prohibited and forbid to enter, in any Manner or Quality, into the Service of the said *Ostend* Company, on Pain of Imprisonment and Forfeiture of all their Effects. By the fourth Article, all Persons whatever were prohibited from inviting, inliting, inrolling, or otherwise entering into the Service of the said Company, any of the Subjects of his Most Christian Majesty, in Quality of Officers, Soldiers, Seamen, or in any other Quality or Manner; as also to sell, or buy, or lend, or equip any Vessel for the Service of the said Company, on pain of the Pillory for the first Offence, and of being sent to the Gallies for the second, besides the Confiscation of all that should be thus bought or sold, and a Fine of Three thousand Livres each on both the Buyer and Seller.

His Catholick Majesty likewise joined heartily with the Maritime Powers in this Affair, as appears plainly from a Representation presented to his *Britannick* Majesty by the *Spanish* Minister on the 26th of *April*, 1724, conceived in the clearest and most express Terms, and demonstrating fully the Injustice and Illegality of this new Establishment, by proving it utterly inconsistent with the Treaty of *Munster*, by which the Crown of *Spain* engaged not to disturb the Navigation of the *Dutch* to their *East-Indies*, in Consideration of a reciprocal Engagement on their Side, not to disturb the Commerce of the Subjects of the Crown of *Spain* in that Part of the World. It was by these reciprocal Stipulations, that the Subjects of the Crown of *Spain* in the *Low-Countries*, were restrained from trading to the *East-Indies*: And it was under these Restrictions, that the *Spanish Low-Countries* were yielded to the Elector of *Bavaria*; and by *France*, with his Consent, to the House of *Austria*, upon express Condition, that this House should hold them in the same Manner, and under the same Restrictions as they had been held by the Crown of *Spain*; for which their High Mightinesses likewise engaged: So that if the *Ostend* Company might be legally established, it would turn as much to the Detriment of *Spain* as to that of the States-General, contrary to the plain Meaning and Intention of all these several Treaties and Alliances made, as is most apparent for establishing and securing the Tranquillity of *Europe*; but, by this Construction, if it could be put upon them, rendered hurtful and ruinous to all Parties (save the Emperor alone) and destructive of themselves.

Such was the Representation of the Marquis *de Pozzo Bueno* at the Court of *London*; and so clearly was his Catholick Majesty convinced, that the Establishment of the *Ostend* Company was utterly inconsistent with his own particular Interest, and with the general System of the Affairs of *Europe*.

8. But, in much less than a Year, the whole Face of Affairs was changed; his Catholick Majesty saw, or was persuaded by his Ministers to think he saw, his Interests in another Light; and he no sooner took this in his Head, than the general System of Affairs in *Europe* must change likewise, and every State and Power therein, alter not only their Notions and Maxims, but their Politicks and Conduct. To explain this, we must observe, that for

twenty-five Years together *France* had been struggling to set *Philip V.* on the Throne of *Spain* and the *Indies*, notwithstanding the Pretensions of the House of *Austria*; in maintaining which, almost all the rest of *Europe* was engaged, and even at this very Time a Congress was sitting in the *Low-Countries*, and endeavouring to adjust and settle amicably the Disputes between his late Imperial Majesty *Charles VI.* and this same Prince *Philip V.* in whose Quarrels so many Princes and States had almost ruined and exhausted their Subjects.

Yet such was the Obliviousness of both these Princes, that all the Methods their best Friends could employ, proved ineffectual for procuring a Reconciliation; when, of a sudden, they took a surprizing Resolution, not only of reconciling themselves, but of doing it at the Expence of their Friends; and as such violent and unnatural Motions generally exert themselves with extraordinary, not to say extravagant Force, so they not only concluded a Peace, but likewise a Treaty of Commerce, dated at *Vienna* the first of *May*, 1725; by which his Catholick Majesty sacrificed the Interest of *France*, to whom he owed his Crown; and his Imperial Majesty those of his Allies, to whom he was under so many, and so great Obligations, that they were scarce to be enumerated or computed. It was one great Design of this new and amazing Treaty of Commerce, to fix and establish the *East-India* Company at *Ostend*; not only by his Imperial Majesty's Authority, whose Interest visibly led him thereto, but also by that of his Catholick Majesty, to whose Interest it was directly repugnant, and, that as appears by the foregoing Declaration in his own Sense and Judgment, expressed in the clearest and most direct Terms.

This shews how weak and ridiculous a Thing it is, at least for free Governments, where it is always understood, that Power is to be solely exerted for the common Benefit of their Subjects in general, to interell themselves in the Support of any particular System which must always depend on the Wills and Inclinations of many arbitrary Princes, who, without any Regard to the Principles upon which such Systems are founded, or to the Obligation they are under to such free States as risk the Wealth and Well-being of their Subjects for the establishing and maintaining such Systems, think themselves at Liberty, not only to alter and change, but to subvert and overturn them whenever they see, or imagine they see, that greater Advantages are to be obtained by such Actions, how unjust or unworthy soever, than by steadily adhering to their Allies. Such ever has been, and such ever will be the Fate of these Kind of Engagements, fatal to those who, from Principles of Probity and good Faith, constantly and justly observe them, and profitable only to those who keep their Promises, and observe their Treaties no longer, than till they can have their own Price for breaking them.

A Lesson this, that Reason has always, and Experience often taught us, though we have most unaccountably neglected to learn, or, at least, to practise it; but a Lesson never dictated to us in stronger Terms than by this singular Treaty of *Vienna*, by which two Princes, who owed their Power and Territories to the Friendship and Faith of others, gave up their Benefactors from a Prospect, and, as it proved a false Prospect, too of particular Advantages to themselves. However, upon the Conclusion of this Treaty, the *Ostend* Company seemed to be fixed upon so firm and solid a Foundation, that both Enemies and Friends concluded, that they were not to be moved or shaken, much less ruined and dissolved by any thing less than a general War: A Thing hard and difficult of Digestion to the *Maritime Powers*, who were very unwilling to pull down the Work of their own Hands, and to destroy that Bulwark which with so much Difficulty, and such vast Expence of Blood and Treasure, they had erected for their own Security.

As, on the other Hand, they were no less unwilling to see the Commerce of their Subjects torn away by the Violence of a Prince who had never been invited with this Power of ruining them, but by the Pains they had taken for his Preservation. But, to return from these Reflections, which, however, are very well worthy the Notice and At-

tion of the *English* Reader, and to return to Matters of Fact, and the Methods employed by the Maritime Powers, in Conjunction with *France*, which now, out of regard to its own Interest, very heartily joined them, for the pulling down this Edifice, which while it stood, threatened its Neighbours with the Loss of those Advantages that had for so many Ages rendered them considerable, and by maintaining the Wealth of their Subjects, and the Naval Power of their respective Governments, had placed them in a Condition to hold the Balance of Power, and to prevent the Madness of ambitious Princes from reducing the Inhabitants of *Europe* into that abject State of Slavery, which renders *Asia* the most despicable, tho' in itself the richest, most populous, and most delightful Quarter of the Earth.

9. The *East-India* Company in *Holland*, were so much alarmed at this Accident, and so terrified with the Thoughts of seeing this new Company almost in its very Dawn, on a better Foot than themselves, that they could not forbear once more representing their Apprehensions to their High-Mightinesses, which they did in a Memorial so closely worded, and in which all the Facts concerning this important Affair, are so fully and clearly set forth, that for the sake of avoiding Variety of Abstracts, we will give the Substance of these various Treaties therein to the Reader.

The Directors of the *East-India* Company in this Country, having observed their Commerce in the *East-Indies* decline from Time to Time, ever since it hath been attempted in the *Spanish*, now *Austrian* Netherlands, to carry on a Trade in the *Indies*, have presented several Memorials to your High-Mightinesses, shewing, That the said *Netherlands* have no Right by Treaties to this Navigation and Commerce; that they never could claim it under the Kings of *Spain*, and that consequently they have it neither by virtue of the said Treaties, nor of these that have been made with his Imperial Majesty, and his Predecessor the Emperor *Leopold* of glorious Memory. The rather, since the chief Aim and Tendency of these Treaties and Negotiations was, that in the Countries and Dominions which his Imperial Majesty might acquire by virtue of the grand Alliance with *England* and this *State*, nothing should be attempted that might be more prejudicial to these two Nations, than if the said Countries had remained in the Hands of *Spain*. It was therefore very wisely stipulated by the Barrier Treaty, that his Imperial and Catholic Majesty should possess the *Spanish* Netherlands, in the same Manner as the Kings of *Spain* his Predecessors had done, and that their Commerce should be carried on in the Manner stipulated by the Treaty of *Munster*. But though the Directors could have heartily wished they had not been obliged by fresh Incidents to trouble your High Mightinesses again by new Writings, seeing they flattered themselves, that his Imperial and Catholic Majesty would forbear carrying on that Commerce any farther to their Prejudice.

Yet they have seen with Grief, first, That the private Navigation begun some Years ago at *Ostend*, has been changed into a formal Company trading to the *East-Indies*, and authorized by an ample Patent; and secondly, That all sorts of Means are now used to improve and maintain this Company by Treaties with other Powers, to the great Prejudice of the Rights and Privileges the *East-India* Company in this Country has formerly obtained, as it evidently appears to the said Directors from the Treaty of Commerce lately concluded between his Imperial and Catholic Majesty, and the King of *Spain*, where it is said in the first and third Articles, "That the Men of War, and the Merchants Ships belonging to their said Majesties, or to their Subjects, shall be freely admitted to all the Ports, Coasts, Countries, and Provinces on either Side, without asking any previous Permission, which extends also in a special Manner to the *East-Indies*, where they may ask for every Thing necessary for Navigation, with this singular Restriction, with respect to the *East-Indies*, that it shall not be allowed to carry on any Commerce in each others Dominions, and that the Men of War, especially in those Countries, shall behave themselves so, as not to give to the *Spaniards* any Cause of Fear or Suspicion." This inco-

ver said, in the thirty-sixth Article of the said Treaty, "That his Imperial and Catholic Majesty's Ships and Subjects, shall be allowed to import into, and sell in all the King of *Spain*'s Dominions, all sorts of Fruits, and Effects and Merchandizes, brought by them from the *East-Indies*, provided it appear by Affidavits of the Deputies of the *East-India* Company established in the *Austrian* Netherlands, that the same came from the conquered Places, Colonies or Factories of the said Company; in which case they shall enjoy the same Privileges granted to the Subjects of the United Provinces by the Treaty of *Munster* in 1648, both with respect to the *Indies*, and any other Thing applicable to the said Treaty, and which shall not be contrary to it, any more than to the present Peace." Which by the forty-seventh, or last Article of the said Treaty, is moreover extended. "To all what the *British* Nation has stipulated in their Favour by the Treaties of 1667, 1670, 1713, and last of all, by a certain Treaty and Convention, the Day and Date whereof are not expressed, inasmuch as it may be applicable to the Emperor's Subjects." Moreover, "To all what has been granted to the States of the United Provinces, not only by the Treaties of Peace of 1648, but also by the Treaty of *Munster* in 1650, and the Treaty of Peace 1714." With this Addition, "That all these Treaties shall serve as a Rule in doubtful Cases, or such as are omitted, or not plainly expressed in the present Treaty between their said Majesties."

Upon which doubtful Cases, and which are passed by in Silence, it may be pretended and established in the first Place, that his Catholic Majesty has been willing to grant to the Imperial Subjects by the second Article, free Access to all the Countries, Sea-ports, and Places of his Dominions, seeing that neither in that Article, nor in the whole Treaty, any express Restriction, or Exclusion are found, which are inserted in all other Treaties of that Nature, to wit,

That this is only to be understood of those Countries and Places which the King possesses in *Europe*, or these where other Nations have always had a free Commerce, as it appears by the fourth Article of the Treaty of *Truce* concluded by the King of *Spain* and this *State* in 1609, where it is said, "Which the said Lord the King understands to be restrained and limited to the Kingdoms, Countries, Dominions and Lordships, which he holds and possesses in *Europe*, and other Places and Ports where the Subjects of the Kings and Princes his Allies trade." Moreover, by the Treaty of *Munster*, in the fifth Article it is said, "That the Directors and Commissioners of the *East* and *West-India* Companies shall have free Access and Commerce in all the Countries within the King's Dominions in *Europe*, but all the States Subjects are not to frequent the *Castilian* Places in the *East-Indies*." And lastly, by the thirty-fourth Article of the Treaty concluded at *Utrecht* in 1713, between his present Catholic Majesty and this *State*, wherein it is expressly said, "Tho' it be mentioned in several of the foregoing Articles, that the Subjects on either Side may freely come to, frequent, stay, sail to, and trade in the Countries, Lands, Cities, Ports, Places and Rivers, belonging to the abovesaid respective contracting Parties; yet it is to be understood, that the said Subjects are only allowed that Liberty in their reciprocal Dominions in *Europe*, since it is expressly agreed, that as to the *Spanish* *West-Indies*, it shall not be allowed to sail to, or trade there, but pursuant to the thirty-first Article of the said Treaty." On the other Hand, the like unlimited Terms are again to be met with in the thirty-sixth Article of the above-mentioned Treaty, between their said Majesties, wherein it is stipulated, "That the Emperor's Subjects shall be allowed to import into all the Countries and Dominions belonging to the King of *Spain*, without any Distinction, all sorts of Effects, Fruits and Merchandizes, from their Colonies and conquered Places in the *East-Indies*, provided they have the necessary Affidavits required by the said Article; in which Case they shall enjoy all the Privileges granted to the Subjects of this *State* by the King of *Spain*'s Letters Patent in 1663."

Although

Although the Directors of the *East-India* Company in this Country do not know of any other Priviledge, but that which allows them to import the Products and Merchandizes from the *Indies*, into the Dominions the King of *Spain* possesses in *Europe*, or in such Places where all other Nations have a free Trade, and that indeed by certain Letters Patent issued by the King of *Spain* in 1663, it was enjoined, that at the entering of those Products and Merchandizes into such of his Majesty's Dominions where their Importation has always been allowed, Affidavits should be produced, to make it appear, that they are brought from the Countries, Colonies and conquered Places our *East-India* Company is possessed of in the *East-Indies*, to the End they might be distinguished from the Merchandizes brought from the *Portugueze East-Indies*, *Spain* being then at War with that Nation. Yet your High Mightinesses Minister then residing at *Madrid*, strenuously opposed it, in the Name of the *State*, and having represented to his Catholic Majesty, the Impossibility of complying with this Demand, it was dropped in all Appearance, since they never heard, that the like Affidavits have been afterwards required in *Spain*, for the Produces and Merchandizes brought from the *East-Indies*.

But as these Things have in all likelihood been interpreted according to the ancient Practice, or that they might be susceptible of such a Construction from preceding Acts and Treaties, the Directors glance upon them occasionally, to shew only, that the implicit Meaning and Intent of these Articles is altogether unknown to them, or at least does not appear so clear as what is established in the above said second Article, wherein, " The said free Access, and Resort to all his Catholic Majesty's Ports and Places is expressly extended to the *East-Indies*." Which the Directors do not remember to have been granted in such a Manner to any Nation whatsoever, and especially to the Subjects of this *State*, since by the fifth Article of the Treaty of *Munster* so often quoted, it is expressly stipulated, " That the Subjects of this *State* shall forbear frequenting the *Casilian* Places in the *East-Indies*." This has been strictly observed ever since by the *Spaniards*, as it appears by a particular Case, the Directors had the Honour to lay before your High Mightinesses, by their Memorial in the Year 1720, viz. " That in 1687, a Ship belonging to their Company, having on Board two Friars, who had been ship-wrecked on the Coast of *China*, and having at their earnest Request carried them to the *Phillippine* Islands, the Captain of that Ship only demanded, on this Occasion, a small Provision of Water, which he wanted, by Reason he had gone so much out of his Way; but instead of granting him this, or any other Favour, they ordered him forthwith to retire."

Hence it is manifest, how far the King of *Spain* was from designing, that his Sea-ports and Places in the *East-Indies*, which extended no farther than the *Phillippine* Islands, otherwise called *Manillas*, should serve for Staples, or Places of Refreshments to the *East-India* Ships, of this *State*, as knowing very well what might be the Consequence of it; but the Directors think they have a more particular Reason to complain of the said thirty-six Articles, because the King of *Spain* grants thereby to his Imperial and Catholic Majesty's Subjects, not only all that has been granted, but moreover yielded to the Inhabitants of this *State*, by the Treaty of *Munster*, both in regard to the *Indies*, and otherwise, which they take to be directly contrary to the fifth Article of the said Treaty of *Munster*, by which it is stipulated, " That the *Spaniards* shall continue their Navigation within the same Limits, as at the Time of that Treaty, without extending it any farther in the *East-Indies*." As on the other Hand, it was stipulated by the Treaty of *Utrecht*, in 1714, between his *Spanish* Majesty and this *State*, " That the Navigation and the Trade in the *East* and *West-Indies*, belonging to the Lords the *States-General*, shall be carried on in the same Manner as it had been practised hitherto." Which proves evidently, that no Change ought to be made on either Side, with respect to this Navigation, whether it be by their own Subjects, or those of another Power, nor comprehended in the fifth Article of the

Treaty of *Munster*, seeing the tenth Article of the Treaty of *Utrecht* says moreover, " That the Prerogatives relating to the Navigation and Commerce in the *East-Indies*, expressed in the fifth Article of the Treaty of *Munster*, shall only concern the two high contracting Powers, and their Subjects, namely, *Spain* and this *State*, and no others."

So that the true Meaning and Intent of these Words appear plain and manifest by the Report of the Plenipotentiaries at the Congress at *Utrecht*, inserted in the Verbal and the Notes, or Resolutions of your High Mightinesses of the Fourth of *January*, 1714, in the same Terms: " First, upon the fifth and sixth Articles of the Treaty of *Munster*, which the said Plenipotentiaries looked upon as deserving some Remarks, as being applicable to others, saying, that the *States* and their Inhabitants ought indeed to enjoy all the Advantages stipulated by this Treaty, but that the other Nations, and particularly the *Hans Towns*, shall not partake of the same." A convincing Proof that the Exclusion, or Non-admittance of other Nations from enjoying what has been agreed upon by the fifth Article, about the Navigation and Commerce of the *East-Indies*, was the only true Aim of that Treaty; which having been thus inserted at the Request and Influences of the *Spanish* Plenipotentiaries, and agreed to by both Parties, it is not allowed to either of these two Powers to transfer this Right by Treaty, or make another Nation partake thereof without the Concurrence and Consent of the other Powers comprehended in the same Convention, and concerned therein. Besides that, after the King of *Spain* had once yielded in Favour of the Inhabitants of this *State* the Part of the *Indies*, which the privileged *East-India* Company possesses, with Promise that the *Spaniards* should not extend themselves on that Side, he has no Right to make over a second Time to other Nations, what his Majesty had formerly desisted from by so solemn a Treaty, and which he has always left to the privileged *East-India* Company of this *State*, or to such who having been formerly his Majesty's Subjects, are also comprehended in the Article of Exclusion. Neither is he entitled to tolerate publicly, that the Districts yielded, and which have been peaceably enjoyed without any Lett from the *Spanish* Subjects, but frequented by Men of War and Merchants Ships, that Forts, Colonies, and Factories for Trade be set up there, and generally to do every thing that could be done had there been no Treaty, to the great Prejudice and impairing, if not entire Extinction of the Prerogatives of this *State* formerly stipulated and obtained.

And, forasmuch High and Mighty Lords, as the Directors of the *East-India* Company in this Country are more and more confirmed in what they did foresee long ago; that in Case the *East* and *West-India* Company erected in the *Austrian-Netherlands*, will thus carry on their Navigation and Commerce, within the Limits of the Grant made to the *East-India* Company of this Country, and disturb the Commerce every where in the *Indies*, the Consequences of this Affair will every Day grow more important; and seeing, besides, that this Navigation and Commerce, with the Grant relating thereto, is now of late confirmed on the Part of the King of *Spain*, by an important Treaty, and highly prejudicial to the Commerce of the *East-India* Company of this Country; and that, in some Respects, the *Austrian* Company is favoured more than the Inhabitants of this *State*, they could not forbear representing at this Juncture their Grievances, most humbly beseeching your High Mightinesses to take them into your serious Consideration, and that you would be pleased, according to the Importance of this Affair, to use the most effectual Means, as well at the Court of *Vienna* as at that of *Madrid*, and elsewhere, where it might be of any Service to have the said Grievances redressed, and that Navigation entirely put down, hoping withal, and expecting that it will not be taken amiss, that, seeing they cannot acquiesce to the new Grant and Treaty, they stick close to the ancient Treaty, and apply the same as a Rule, not only in Cases that are doubtful, or omitted, but in all other Cases.

10. In this Memorial we see, at one View, and in the most exprestive Terms possible, the Nature of those Grievances under which the Maritime Powers laboured from this Treaty of Commerce concluded at *Vienna*, and the Reasons which induced them to hope that they would be redressed. We see plainly that there could be nothing in Nature more flagrantly injurious to the Maritime Powers than the several Clauses in this Treaty, of which they complained, nor any thing more plain or self-evident than the Rights upon which they insisted, of which the States-General were so sensible, that they resolved to repeat their Applications at the Courts of *Vienna* and *Madrid*, in order to obtain Satisfaction and Redress. They were strongly seconded by the Courts of *London* and *Paris*, who, in the mean time however, considering how little Advantage had hitherto been obtained by the slow and pacifick Measures, resolved, if possible, to quicken them by some Step of another kind, which might convince both the Emperor and the King of *Spain*, that they were not to be frightened with high Words, or to be persuaded out of their Properties, by the Parchment Agreements of other Princes.

They took Advantage therefore of the Disposition the King of *Prussia* was in, who saw with some Displeasure the exorbitant, and as he conceived, Anti-constitutional Power of the Emperor in *Germany*, the Consequences of which he thought might be fatal to the Prerogatives of himself and of other Princes, with which Notions striking in, they concluded a defensive Treaty at *Hanover*, dated *September* the 3d, 1725, which Treaty was to subsist for fifteen Years, and to which the States-General were to be invited to accede. Tho' there is not the least mention in this Treaty of the *Ostend* Company, yet in the second Article it being provided that the contracting Powers guaranty not only each others Dominions, Countries and Cities, as well in as out of *Europe*, but also all their Rights, Privileges and Advantages, particularly those relating to Trade, it was well enough understood, that under this Phrase particularly the *Ostend* Company was included, since it was impossible it should continue to subsist, and the contracting Parties to this Treaty reserve their Rights and Privileges relating to Trade. As soon as this Alliance was concluded, it was not only made known to the States-General at the *Hague*, but they were likewise invited and pressed to come into it, as the most effectual, and indeed the only way of procuring what they of all other Powers were most interested to procure, viz. the Abolition of the new Company.

For while the Emperor and the King of *Spain* continued to closely united, and the rest of the Princes of *Europe* unconnected by any counter Alliance, it was most evident, that they had it in their Power to give Law, and to do what they pleased; which Power it was likewise very visible they intended to use for many Purposes, absolutely irreconcilable to the Interest of other Princes and States, more especially in the Case of this Company, which stood now upon such a Foundation as might have enabled it, in the course of a few Years, to have sustained itself against any Force that could have been brought to disturb it; of this we may be easily sensible, if we consider that never any Establishment of this kind was possessed of equal Advantages, or supported by the Authority of two such Potentates. Neither for the Time it continued did ever any Company run into such an extensive Trade, or make so rapid a Progress as this of the *Austrian* Netherlands. So that unquestionably had it been left to itself, or been opposed only by the dilatory Methods of Memorials and Applications, it would have risen to such a Height as must have astonished those, who from narrow and particular Views, treated it as a political Chimera.

But the *Dutch* however, though they could not help acknowledging in general Terms the Wisdom and Prudence of the Treaty of *Hanover*, yet they did not immediately accede to it, but on the contrary, resolved to try once more the Force of Applications at the Court of *Madrid*. It was with this View that they directed *Mr. Vander Meer*, their Ambassador at that Court, to present a Memorial, in order to demonstrate the Injustice that was done them by this late Treaty with the Emperor, which Memo-

rial was actually presented on the 4th of *Nov.* 1725, and as it is in itself one of the most instructive, as well as one of the plainest Papers that appeared in this whole important Controversy, in which the whole commercial Interest of *Europe* were at Stake, we shall, omitting those Parts of it which are purely Matters of Form, insert, as the best Account that can be given of this Matter, and therefore the last Paper which we shall mention upon this Occasion. But it may be proper to put the Reader in Mind, that tho' *Mr. Vander Meer* presented this Memorial only in the Name of his Masters the States-General, yet it contains likewise the Grounds of Jealousy and Dissatisfaction given to *Great-Britain*, and therefore concerns us as much as it did them; and it is very possible there may come a Time when these very Points may as much concern us again. The Arguments we used were these that follow.

11. Treaties being understood to be the Basis and Foundation of the Union of Nations and Potentates, it seems just, that each Party should make it an inviolable Law, not only to forbear all open Infracton of them, but likewise not to alter them in any manner, nor permit their Ministers to make use of Subterfuges for explaining the Tenour and Articles of them in another Sense than what was intended at the Time of these mutual Conventions. It is with these Notions of good Faith that their High Mightinesses have always rigorously executed all they have stipulated, without infringing or altering in the least Point any Article whatsoever; making it a strict Rule to themselves, to redress any Abuse, and give Satisfaction for it upon Complaint made, and causing such of their Subjects to be severely punished who presume to deviate from the literal Observations of their Orders; and as for entering into Engagements with other Powers to the Prejudice of their Allies, whatever Solicitations have been made to them, they have given evident Marks to your Majesty of their perfect Attachments to your Interests, by refusing generally all the Advantages that were offered them if they would have gone into the *Quadruple Alliance*.

My Masters flattered themselves, Sire, that after such real and such particular Regards, they should find in your Majesty's Person, not only an Ally, but a sure Protection against all those who should attempt any Invasion in the Treaties to their Prejudice. Nevertheless they have now the Grief to see Things bear quite another Face, and that far from being supported by your Majesty in their manifest Rights, in relation to their Commerce to the *Indies*, they find in your Royal Person the Protector of a Company, whose Commerce cannot subsist without ruining that of their High Mightinesses Subjects and People; and to whatever Evaluation your Majesty's Ministers may have recourse, when they insinuate that nothing has been granted to the Emperor which is not conformable to all the ancient Treaties, it is easy to demonstrate that it cannot be without a strained Construction, contrary to the Expressions of the Articles; for by taking them literally, and in the Sense they were penned, it is obvious to every Eye how wide this new Treaty of Commerce is from the Aim of those who (after such cruel Wars, and so much Blood shed for maintaining the Rights of the Republick, as well with respect to their Navigation to the *Indies*, as to their Commerce in general) did at length conclude the Treaties of *Munster* and *Utrecht*.

I come, Sire, to these Demonstrations, by the second and third Articles of the Treaty of *Vienna*, all Men of War, or Merchant Ships, belonging to his Imperial Majesty, and his Subjects, are allowed to enter all the Towns and Ports of the Dominions of *Spain* (those of the *East-Indies* included) there to take in Refreshments, Provisions, and generally whatever they may want for continuing their Voyages, with this sole Restriction, that they shall not trade, or traffick there. In the thirty-sixth Article of the same Treaty, it is said, that the Subjects of his Imperial Majesty may import and vend in the Territories and Dominions of *Spain*, all the Goods, Merchandizes, and Products, which they shall bring from the *East-Indies*, provided they shall produce a Certificate from the *India* Company of the *Austrian* Netherlands, that those Merchandizes, or Products, are of the Growth of their Colonies and Conquests; giving besides, to these Subjects

of the Emperor, all that was yielded to the *Dutch*, by the Treaty of *Munster* in 1648, and afterwards by particular Grants in 1663, and by the Treaty of *Utrecht* in 1714.

The forty-seventh Article of the same Treaty of *Vienna*, grants likewise to the said Subjects of the Emperor, all that the *English* obtained in 1667, 1670, 1713, and lastly, by a certain Treaty, or Convention, the Date of which is not specified, with this Addition, that in Cases doubtful, or not sufficiently clear, those Treaties should serve for a Basis, and Foundation, nor is it explained, that the Entrance of the Emperor's Subjects into the Dominions of the Crown of *Spain*, ought to be understood to comprehend only the Ports, Towns and Harbours, of your Majesty in *Europe*, and not those of the *Indies*, which Restriction is most expressly specified in the Treaties made with their High-Mightinesses, my Masters.

So that, under this Pretext, the Subjects of his Imperial Majesty would enjoy much greater Advantages than any other Nation; for never was any Person permitted to frequent, in any Manner, under any Pretence whatever, your Majesty's Ports and Towns in the *Indies*. And for a Proof that this is observed with extraordinary Rigour, on the Part of *Spain*, it may suffice to relate, that in 1687, a Ship belonging to the *Dutch East-India Company*, having taken on Board two Monks, who had been ship-wreck'd on the Coast of *Cuma*, and having at their Intreaty carried them to the *Philippine Islands*, the Captain, on that Occasion, desired the Governor of the Country, to allow him to take in a little Water, of which he had not Store sufficient, because he had gone far about, to carry those two Monks whither they had desired, which had retarded his Voyage; but far from obtaining his Request, he received Orders to retire immediately, without being allowed the least Refreshment, which (setting aside the Ingratitude of the Governor) is an evident Proof, that the Kings of *Spain* have never understood; that the resorting to Ports of their Dominions, ought to comprehend their Towns and Harbours in the *Indies*; wherefore this Article being granted to the Emperor's Ships, is manifestly opposite to the Treaty of *Munster*, as is also the thirty-sixth Article of the said Treaty of *Vienna*, by which (besides what has been already alledged above) your Majesty gives to his Imperial Majesty's Subjects, not only all that was granted, but even yielded to the Inhabitants of the Republick, by the Treaty of *Munster*, as well with respect to the *Indies*, as otherwise, which is also directly contrary to the sixth Article of the said Treaty of *Munster*, where it is said, that the *Spaniards* should limit their Navigation within the Bounds it was at the Time of the Treaty, without extending it further in the *Indies*, and this was confirmed by that of *Utrecht*, in 1714.

These Articles prove evidently then, that no Change ought to be made in that Navigation, the one Side, or the other, whether by the Party's own Subjects, or by those of any other Power, who is not comprehended in the fifth Article of the Treaty of *Munster*, considering further, that the tenth Article of that of *Utrecht* declares, that the Prerogatives, with respect to the Navigation and Commerce of the *East-Indies*, comprized in the said fifth Article of the Treaty of *Munster*, shall have Place solely in what concerns the two high Powers contracting, and their Subjects (that is to say, *Spain* and the Republick) not others. Accordingly, the true Sense and Meaning of these Words appear clearly, by the Report of the Plenipotentiaries at the said Congress of *Utrecht*, inserted in the Journal, which is among the Acts of the Negotiations, where it is said, concerning the fifth and sixth Articles of the Treaty of *Munster*,

That the Intention of your Majesty's Plenipotentiaries was, that the *States-General* of the United-Provinces, and their Inhabitants, ought of Right to enjoy the Advantages stipulated by that Treaty, but that other Nations, and particularly the *Hanse Towns*, ought not to enjoy them, a certain Mark, that the Exclusion (or Non-Admission) of other Nations to the Enjoyment of what is settled by the fifth Article touching the Navigation and Commerce to the *East-Indies*, was the only Aim of that Treaty. And seeing those Conventions were inserted at the

NOV. B. LXVII.

Requisition and Instance of your Majesty's Plenipotentiaries, and were agreed to on both Sides, one of the two Powers ought not to transfer his Right by a particular Treaty, or let another Nation participate therein, without the Consent and Concurrence of the other Power, who is so particularly interested in the said Convention. Besides, *Spain* having yielded to the Republick, that Part of the *Indies* which it now possesses, with a Promise, that the *Spaniards* should not extend themselves on that Side; that Crown has no Right to yield a second Time to other Nations, what it desired from, and yielded by so solemn a Treaty in Favour of the Republick.

How is it possible then, that your Majesty's Ministers should permit those Articles to be infringed, by giving an authentick Permission to the *Ostend Company*, and by bestowing on them Priviledges, which there would have been no Right to grant, had that Part of the *Netherlands*, which they inhabit, remained under your Majesty's Dominion. And seeing that the Kings of *Spain* had anciently the Power, and were in the Possession of excluding all the Subjects of their Dominions (except those of *Spain*) from the Navigation to the *Indies*, the Inhabitants of the *Austrian Netherlands*, who at that Time were their Subjects, were excluded, and it was only by the Treaty of *Munster*, that the United-Provinces obtained the Prerogatives they enjoy, with the mutual Conditions, that the Division of the *Indies* being made, the two Parties were obliged to abstain from the Navigation within each others Liberties.

Whence it follows, that the Republick having engaged, that her Subjects should not navigate in the *Spanish Indies*, she at the same Time acquired the Right of excluding all the Subjects of the Dominions of *Spain*, and consequently those of the *Spanish Netherlands*, from the Navigation within their Limits. For the rest, the Cession which was made of the said *Netherlands* to the Emperor, being such, that his Imperial Majesty should possess them under the same Conditions the Kings of *Spain* had done; it is clear, that these Countries, by changing their Master, could not acquire any Right prejudicial to the Republick, and contrary to all the Treaties.

Besides the express Terms of the thirty-first Article of the Treaty of *Utrecht* are, that your Majesty promises and engages, not to permit any foreign Nation whatsoever (and for any Reason, or under any Pretext whatsoever) to send Ships, or to trade in the *Spanish Indies*; but that on the contrary, your Majesty obliges yourself to maintain Things on the same Foot they were during the Reign of King *Charles II.* and conformable to the fundamental Laws of *Spain*, which absolutely prohibit, and interdict all foreign Nations from entering and trading into those *Indies*, in which even the *States-General* had engaged to support and maintain your Majesty against all those who should have attempted the contrary. Whether therefore the Subjects of the *Austrian Netherlands* be considered as having been formerly Subjects of the King of *Spain*, or whether they be considered as Foreigners, nothing does authorize the granting them Priviledges opposite to the Tenor of the mutual Treaties and Conventions between your Majesty and the Republick.

All these Considerations, Sire, are reducible to the four following Heads, viz. I. That by the Treaty of Commerce between your Majesty and his Imperial Majesty, the Emperor's Subjects are permitted to trade in the *Indies*, which is entirely contrary to the Aim and Intention of the Treaties of *Munster* and *Utrecht*. II. That by the said Treaty of Commerce, the Emperor's Subjects have acquired Permission to enter and frequent your Majesty's Towns and Ports in the *Indies*, under Pretext of taking in Refreshments there, &c. a Thing which has always been refused to the Ships of their High-Mightinesses, and consequently, by virtue of the Treaties, cannot be granted to other Nations to their Prejudice. III. That your Majesty supports and authorizes the Establishments of a Company formed by the Inhabitants of a Country which have heretofore been under your Dominion, is specifically under the Prohibitions which were stipulated with regard to all the Subjects of the Crown of *Spain* (the *Spaniards* excepted) which is very different from the Tenor of the Treaties, wherein it is declared, that your Majesty will not only

11 P

hindr

hinder all foreign Nations from trading in the *Indies*, but likewise that you will support their High-Mightinesses in all their Rights and Prerogatives in that respect; and Lastly, That your Majesty and their High-Mightinesses standing engaged to assist each other mutually for hindering any other Nation from going to Trade in the *Indies*, it is evident, that neither of the two contracting Parties could have a Right to alter, or desist from those Articles, without the Participation and Consent of the other Party interested.

Sire, all the Considerations above-mentioned, do, at this Time, form just Ground for the Complaints of their High-Mightinesses, my Masters, who cannot sufficiently wonder how your Majesty's Ministers (without making due Reflections on the manifest Contradiction between the Treaty of *Vienna* and those of *Munster* and *Utrecht*) could venture to grant so considerable Advantages to the Subjects of the *Austrian* Netherlands, to the great Prejudice of their High-Mightinesses, and if one may be allowed to say it, even to the great Prejudice of your Majesty, and of your People, who, if that continue, will in Time see themselves frustrated of the Advantages of their own Commerce, by that very Company which is now so signally protected. Their High-Mightinesses most earnestly entreat your Majesty, therefore, by my Mouth, to be pleased to order, that the most serious Regards, and the most suitable to the Importance of the Case, may be had to the present Remonstrances, well weighing how far these Contradictions to the Treaties of *Munster* and *Utrecht*, may in Time lead to all Consequences, and create Troubles in *Europe*.

Their High-Mightinesses are thoroughly perswaded from your Majesty's Zeal and Piety, that it was not your Intention to over-turn the Rights and Prerogatives of the Republick, founded on such authentick Treaties, so that they can impute only to your Majesty's Ministers, the Attempts made against them by that of *Vienna*. But if your Majesty has not the Goodness to apply in Time the necessary Remedy, this Republick will find themselves frustrated of all the Advantages they had acquired at the Expence of so much Bloodshed, for the Support of its Navigation; whence it is easy to conclude, Sire, that Commerce being in general Part of the Basis and Foundation of the State, their High-Mightinesses can never desist in the least from the mutual Conventions of the Treaties of *Munster* and *Utrecht*.

They therefore flatter themselves, that your Majesty will be pleased to cause the Articles of the Treaty of *Vienna*, which are contradictory thereto, to be reformed, and will provide, that the *Ostend* Company may not in any Manner, nor under any Pretext, go, and navigate in the *Indies*, to the End, their High-Mightinesses, my Masters, may easily and calm the alarmed Minds of their People, who look upon this Treaty of *Vienna*, as the entire Subversion of the Rights and Prerogatives of their Commerce, and claim the Performance of the Treaties of *Munster* and *Utrecht*.

12. This Representation, however, though extremely clear and plain, had none of the Effects that were expected from it. Their Catholick Majesties had formed to themselves very extensive, but at the same Time very groundless Expectations from the Treaty of *Vienna*, and were therefore obstinate in their Resolutions of supporting it at all Events. The *Ostend* Company was visibly of no Advantage, but in its Consequences, very likely to prove a great Prejudice to the *Spanish* Trade, but the Reason which induced the Court of *Madrid*, notwithstanding, to consent to the Support of it, was, the Assistance she expected from the Emperor, in the Execution of a favourite Design of her own, which was the recovering the Fortresses of *Gibraltar* from the Crown of *Great Britain*.

But the great and all-powerful Motive which induced *Spain* to act as she did, was, the vain Hopes of obtaining the Hearts of the House of *Austria*, the present Emperors and Queen of *Hungary*, for Don *Carlos*, the eldest Son of the Queen of *Spain*, and at present King of the *Sicilies*. This Notion, tho' very indifferently founded, made such an Impression on the Minds of their Catholick Majesties, that nothing appeared to them in the Light of an Inconvenience, which they apprehended might contribute there-

to, and this it was that engaged them to comply so readily with whatever his Imperial Majesty demanded, and even induce them to make such Dispositions as looked like engaging in a War with the *Hanover* Allies. The Emperor, also, on his Side, shewed as great Obstinacy, and indeed, with more Reason; for all the Articles of the *Vienna* Alliance, were entirely in his Favour, and the establishing the *Ostend* Company, in the Manner he designed, was a Point of such infinite Consequence, both with respect to Honour and Interest, that we need not at all wonder he pushed it in the Manner he did, or that he laboured, by several Negotiations in the North, to engage most of the Crowns there in the Support of his Schemes, in which at first he had extraordinary Success, but by Degrees, the Aspect of Affairs was changed, by Measures which we shall next explain.

13. The *States-General*, seeing how little they were able to effect by Memorials and Representations, and beginning to feel daily more and more the bad Consequences of the Establishment of the *Ostend* Company, with regard to their Commerce in the *Indies*, took at last a Resolution of acceding to the Treaty of *Hanover*, notwithstanding all that their Imperial and Catholick Majesties could do to hinder it. They did accede accordingly, which very clearly demonstrated to the Courts of *Vienna* and *Madrid*, that it was impossible to prosecute their Designs farther, without running the immediate Hazard of a War. *Spain* seemed resolved to run this Risque, and actually committed Hostilities against *Great Britain*, by besieging *Gibraltar*, with very little Effect however, and without any Assistance from the Emperor, who, on his Side, was unable to make the necessary Provisions for a Rupture, without the Assistance of such Supplies in Money from *Spain*, as at that Time she could not afford. The Court of *France* remained also steady to her Engagements, and appeared to be willing to enter into a War against *Spain*, in Conjunction with the Maritime Powers, that this Court began to dislike exceedingly the Situation she was in, and to wish for a Peace upon reasonable Terms.

The Court of *Vienna* too perceiving that *Spain* began to open her Eyes to her own Interest, and having never had really any Inclination to comply with that Marriage, which their Catholick Majesties had so fondly set their Hearts upon, thought likewise of a timely Return to her old Friends, and those Engagements which had been formerly productive of so many Advantages. Things being in this Situation, it was not long before Preliminaries were settled, in which there was an Article that took away for the present those Apprehensions that the Settlement of this Company had raised.

It was some Time before it could be so worded, as to satisfy all Parties; but at length, the Preliminaries being absolutely settled and signed at *Paris*, on the 10th of *May*, 1727, the first Article of them ran thus; "His Imperial and Catholick Majesty having no other View than to contribute to the publick Tranquillity of *Europe*, and observing that the Commerce of *Ostend* has given Birth to Jealousy and Uneasiness, consents that there shall be a Suspension of the Charter of the *Ostend* Company, and of all Traffick between the *Austrian* Netherlands and the *Indies*, during the Term of seven Years." By the fifth Article of the same Preliminaries it was agreed, that the Ships which sail'd from *Ostend* before this Convention, the Names whereof were to be given in a List on the Part of his Imperial Majesty, were to be permitted safely to return home, and in case any of them should be taken, it was agreed, that they should be, *bona fide*, restored with their Cargoes.

It is unnecessary to pursue the political History of this Point any farther, since by this Suspension the *Ostend* Company was in fact destroyed, and tho' some Sales were afterwards made with considerable Advantage to the Proprietors, yet they lost the Power of continuing their Commerce, and the Maritime Powers carried their Point. Thus ended this troublesome and perplexed Affair, which had very near given Birth to a general War, and by which, as it has been very plainly and fully proved, that if his Hands had not been tied by Treaties, his Imperial Majesty might in a few Years have restored the Commerce of the *Austrian* Netherlands,

Netherlands, and made the little Port of *Ostend* of more use to his Dominions than hitherto *France* has been able to make the many Parts in her Dominions, which is a Point worthy of our Consideration, and indeed, of that of all *Europe*, to whom the raising a new Maritime Power would be found a thing of great and dangerous Consequence, more especially in the Hands of a Prince otherwise powerful on the Continent.

But before we quit this Subject, it will be requisite to take Notice of some few Points, which rendered it so absolutely necessary to consider this Matter, and to consider it so largely as we have done in this Section. In the first Place let it be observed, that a stronger Proof there cannot be of the Importance of the *East-India* Commerce, than that all *Europe* should be thus as it were in Arms upon that Subject, and having felt so lately the Mischiefs of a general War, should notwithstanding hazard the breaking out of another about the settling the Right of this Commerce. It is impossible to conceive how this should have been reconcileable to the Wisdom of their Councils any other way than by supposing it was a Thing self-evident to them, that the Trade of the *Indies* was the great Wheel which moved the whole commercial System in *Europe*. It was in this Light, and in this Light only, that the pulling down the *Ostend* Company could be looked upon as an Enterprize equally great and glorious, as the pulling down universal Monarchy. To say the Truth, when closely considered, they came to be the same thing; for the sole Reason which induced *Spain* to depart from her own Interest, so far as to countenance this Company, was the Hopes she entertained of seeing a Prince of her Blood Heir of the *German* Branch of the House of *Austria*, to whom she could not grudge a Share in the Commerce of the *Indies*.

But tho' her Hopes were vain, because very probably the late Emperor never intended any such thing; yet that would not have lessened the Value of the Present he made him; for if the *Ostend* Company had been once effectually established, the whole *East-India* Trade, in less than a Century, would have been confined to the *Austrian* Netherlands, and perhaps, the greatest Part of the Trade in *Europe* must have followed it. In order to explain this, we must remember, that the *Austrian* Low-Countries are in themselves much finer than the Provinces which compose the *Dutch* Republick, and much better situated for Trade. Their Sales of *East-India* Commodities would have brought prodigious Sums of ready Money into those Provinces, and this must have revived and restored those Manufactures, which formerly flourished here more than in any Part of *Europe*, which would have immediately secured to them all the Commerce of *Germany*, and by Degrees that of the North. In such Circumstances, what should have hindered their attempting and acquiring the Fisheries, and by opening the Ports of *Trieste* and *Fiume* on the *Adriatick*, what could have prevented their engrossing the *Italian* Trade? It may be said, that all these are Suppositions; but what then, they are reasonable Suppositions, and which is much more to my Purpose, they were such Suppositions as induced the late Emperor to establish this Company, and to struggle so hard as he did for the Maintenance of it, nay, what is still more, the *Dutch*, who beyond a Question, were the best Judges in the World of what might be done, and what could be done, thought all these Suppositions both possible and practicable, which induced them to act in the Manner they did. Take then all this together, and it will appear a very strong, and not to be refuted Argument, that the Trade of the *East-Indies* is in itself the Foundation of Commerce, and Maritime Power, at least in the Hands of such as know how to manage it, and have it in their Power to manage it as they would do; which, I think, fully justifies the Pains I have taken upon this Subject, and all that I have advanced in this Section.

The Desire I have of making every thing as clear and plain as it is possible, induces me to think of resolving a

Question that will naturally arise in the Mind of an inquisitive Person upon this Occasion, and it is this: How it should come to pass that the Emperor, or rather the Subjects of the Emperor in the *Low-Countries*, should, in so short a Space of Time, and having no better a Port than *Ostend*, be able to erect and establish a Company capable of carrying on immediately such a Commerce in the *Indies* as alarmed and astonished the Maritime Powers beyond any thing that *France* had been able to do in a much longer Space of Time, with the utmost Assistance the Court could give, and that Assistance too under the Direction of her ablest and greatest Ministers, who scarce ever failed in any thing else. This, without question, is a very difficult Point for common People to get over; but to such as are well acquainted with the Situation of the several Countries, the Genius and Disposition of their Inhabitants, and the Nature of the Governments under which they live, it carries in it little or no Difficulty at all.

For, in the first Place, the *Austrian Low-Countries* are better seated for Trade, the People, generally speaking, are not only more inclined thereto, but are also better qualified for it, since they are not only sober and frugal, but diligent also and industrious. Their Country is rich and fruitful, their Towns large and populous; many of them still have, and all of them once had noble and flourishing Manufactories. Add to all this, that though the *Flemings* have lost much of their ancient Freedom, yet they still retain more of it than the *French*, and it will be no difficult Matter to conceive how this Affair happened. In few Words, the Cause was this: *Flanders* was, for several Ages, the Center of the Commerce of *Europe*; among such a People therefore Trade might be easily revived. In regard to *France*, the Cause was quite otherwise; they never knew the Blessing of a flourishing Trade, or that kind of Government, under which extensive Traffick can only rise and spread. But, to return to what is more immediately our Province, and to inform the Reader of the Consequences that attended the establishing this new Company, notwithstanding its Suspension; and in consequence of that Suspension, its Dissolution.

The great Struggle which this Company occasioned divulged the Advantages of the *East-India* Trade throughout all *Europe*; and in every Nation inquisitive and publick spirited People began to look seriously after this political Philosopher's Stone, which they heard was universally confessed to be the grand Source of Riches, Commerce, and naval Power. One would have thought that the Ruin of this Company would have damped at least, if not destroyed this Desire of establishing a Trade to the *Indies*. So far from it however that the Fall of the *Ostend* Company actually encreased it, and that for these three Reasons; First, it sent abroad abundance of active and intelligent Persons who had been employed by this Company, and were, of all others, the most likely and the most capable of setting on Foot, and of conducting Projects of this Nature in other Places. Secondly, the great Success this Company had, during the short time it continued, was a very strong and prevailing Argument to persuade the setting up a Company in any other Place, and an Argument which the Persons I have just mentioned, knew how to represent in the fairest Colours possible. Thirdly, as the Fall and Ruin of this Company was owing entirely to the Treaties subsisting between their Imperial and Catholick Majesties and the Maritime Powers, which, not extending to other Princes and States, it might well encourage them to hope for equal good Fortune, and to apprehend fewer Inconveniencies. Such were the Motives that determined the *Dutch* and the *Sweeds*, one to revive, and the other to erect Companies of this kind, of which, as they are still subsisting, we are bound, from the Nature of the Subject, as well as by the express Terms of our Plan, to give the Reader a satisfactory Account, which is all that remains for us to do in reference to this Compleat History of the Commerce of *Europe* with the *Indies*.

SECTION XXXVII.

The History of the Danish Commerce to the East-Indies, their Establishments there, the Decay of their Old Company, and the Motives which induced them to set up a New One.

Interperfed with Original Papers and Memoirs.

1. The Danes anciently very powerful by Sea, famous for maritime Expeditions, and always remarkable for keeping up a considerable naval Force in the North.
2. Their first Voyages to the Indies, their Establishment on the Coast of Corromandel, their Fortrefs and Town of Tranquebar, or Trincombar, and the Fate of their Colony there.
3. An Account of their long War with the Rajah of Tanjour, the Siege of Tranquebar, the Intrigues of the Dutch to the Prejudice of the Danes, and the Relief of that Town by the English, thro' the Generosity of Mr. Pitt, Governor of Fort St. George.
4. The History of the Danish Colony, continued down to the Time of the New East-India Subscription at Hambourgh on the Fall of the Ostend Company.
5. An impartial View of the new Establishment, or the Incorporation of the New Company at Altena, with the Old East-India Company at Copenhagen.
6. Objections raised against that Establishment, and the Probability of its succeeding in its Commerce.
7. Answers to these Objections, and a farther Account of the Privileges and Immunities granted to the incorporated Company by his Danish Majesty.
8. The Opposition made to the New Company (as it was called) at Altena by the Maritime Powers, Memorials presented on this Subject to the Court of Denmark, and Issue of that Dispute.
9. The thorough Completion of this Scheme under the Auspice of the present King (then Prince) of Denmark, and Progress of this incorporated Company, from its Foundation to the present Time.

THE Danes were anciently as remarkable for a Naval Force as any Country in the North, which manifestly appears, not only from their Chronicles, but ours. It was by this Means that they became Lords of almost all the Countries round about them, and were to formidable by their Fleets as to undertake various Expeditions into remote Countries. Thus, under the Name of Normans, they conquered a Part of France, and even settled themselves in the Kingdom of Naples. It is true, that the naval Concerns of Europe were then in a Condition very different from what they are now; yet this, instead of lessening, will, to a Man of good Sense and Consideration, rather increase the Difficulty; for if we find it so hard with all the Advantages we enjoy to transport a small Body of Troops to the opposite Part of the Continent, what must we think of the Danes landing such numerous Armies in this Island, in France, and in other Countries.

These Facts are not to be disputed, and, at present, it is not my Business to account for them; all I aim at is, to shew that the Danes had many Ages ago a great Maritime Power, and I believe Experience will shew, that where once a Nation has been possessed of such a Power, and escapes being conquered by her Neighbours, she generally preserves somewhat of her ancient Spirit, which exerts itself, more or less, as Occasions offer, and is never totally overwhelmed. If the Danes had applied themselves more to Trade, and less to foreign Conquests, they would have made a much more considerable Figure in Europe than at this Time they do, since it is certain that their being driven out of Sweden and Part of Norway, exhausted them extremely, and the Civil Wars in their own Country proved another great Cause of weakening their Force.

Yet they have never been totally deprived of Maritime Power, or of a Maritime Spirit, but have frequently shewn an Inclination to attempt considerable Discoveries in the Northern Parts of the World, to establish Colonies and Forts in those Parts, and have even made very long Voyages, with a View of extending their Commerce, if not with all the Success they could wish, yet with more than some of their Neighbours; and have been also more tenacious of what they acquired, as if they meant to retain their distant Conquests, till such a Government arose at home, as by giving the Attention to Trade, and just Encouragement to those who endeavoured to promote it, might enable them to furnish an Establishment to greater Advantage. By this Means they have been, and still are, in a Condition to contribute, in any Opportunity that offers, and will, in all Probability, sooner or later, distinguish

themselves as much by Commerce as ever their Forefathers did by Courage and Force, as from the Contents of the present Section, we shall evidently make appear.

It was very early in the last Century that the Danes thought of attempting a Trade to the East-Indies; and about the Year 1612, King Christian IV. granted his Protection to a Company established at Copenhagen, for carrying on a Commerce from thence to the Indies. The Capital of this new Company consisted of two hundred and fifty Shares, of the Value of One thousand Rixdollars each, and about four Years afterwards they fitted out some Vessels for the Indies, with such Success that they established themselves on the Coast of Corromandel, at no great Distance from the French Settlement at Pondicherry. The Name of this Place is very differently written; the Portuguese and Indians call it *Tranquebar*, the English Sailors *Trincombar*, but I take the true Name of it to be *Tranquebar*.

It is situated fifteen Miles to the Northward of Negapatam, and enjoys a considerable Trade. The Danes have built here a regular Fort, faced with Stone, and surrounded with a deep Mote, which makes it esteemed one of the strongest Fortresses in the Indies. The Town also, which is about two Miles in Circumference, is surrounded with a noble Wall, faced with Stone, having large Batteries at proper Distances, mounted with Cannon. The Houses which the Danes and other Europeans inhabit, are of Brick or Stone, built all upon a Floor, but commodious enough; the Streets are wide and straight, and paved on the Sides with Brick; but the Houses of the Indians are very mean, having Clay-Walls, and thatched Roofs, as in most other Towns of India. The Garrison is not answerable to so large an Extent of Ground, consisting only of one hundred and fifty Europeans, or thereabouts, and some Indians, who are only fit to oppose Soldiers like themselves. In the long Space of Time however, that the Danes remained here, they collected together a great Number of Indian Subjects, who live very happily, and even grow rich under their Protection. They have likewise taken Care to make Profits to the Lutheran Religion of a great Part of those who live among them, and they have thereby bound them more effectually to their Service; so that their Colony is very considerable, and grows more to every Day, and this chiefly for the following Reason, that it supports it self, and pays the Danish Company Ten talents of Rixdollars a Year, by Way of Tribute.

Their Trade in this Part of the World has suffered various Alterations, being sometimes better and sometimes worse, according to the Revolutions that have happened in that Part of the World, and the Accidents which befall the Company in *Europe*. However, as far as I am able to judge, it was most considerable about twenty-four Years after it was first settled; for then, I find, a very eminent *Dutch* Writer comparing the *Danish* Trade to that of the *English*, and affirming that the former, with a little Application, might be made as considerable as the latter. The Reader will observe, that this was said in the Time of our civil Wars, when, as we have shewn, in our History of the *English* Company, their Trade declined exceedingly; so that it is not at all improbable, that this Observation might be then true. It is, notwithstanding, certain, that the Trade of the *Danes*, was rather profitable to private Persons, such as the Governor of *Tranquebar*, and the principal Merchants employed there, than to the Publick; and the Reason was plainly this, that they seldom received any considerable Supplies from *Denmark*, and as seldom sent home Ships laden with the Commodities and Manufactures of the *Indies*; so that they subsisted chiefly by the Trade they carried on with their Neighbours and into different Parts of *Asia*, since they sometimes sent Ships as far as *Covina*, from whence they obtained considerable Returns.

But they had from their first Establishment very great Difficulties to struggle with, being very often engaged in Wars with their *Indian* Neighbours, and very seldom upon good Terms with the rest of the *European* Nations settled in *India*, who, though they affected to despise and contemn the *Danes*, and to treat their Trade as very despicable and inconsiderable, yet they could not help envying them even the little Trade they had, to which, perhaps, the convenient Situation of their Fortresses might, in some measure, contribute, from a Persuasion that, in other Hands, it might become a much greater Consequence, more especially with regard to the Diamond Trade, for which, without doubt, it stands as well, or better, than any of the *European* Factories in that Part of the World.

But the most considerable War in which they were ever engaged, was towards the latter End of the last Century, when this Fortress very narrowly escaped being taken, of which, as it is the most remarkable Transaction of which I can obtain any Account, I think it will not be amiss to insist upon it a little more largely, the rather, because it was the principal Occasion of the old *Danish* Company running into Debt, and bringing their Affairs into a worse Condition than they ever were before.

3. The Ground of the War was this; the *Danish* Colony lying on the Frontiers of the *Indian* Rajah of *Tanjour*, the *Dutch* stirred him up to attack and destroy it, promising him considerable Assistance under Hand, and to give him a Tun of Gold, which, as we have elsewhere shewn, amounts to above Ten thousand Pounds of our Money, for the Place when taken. That this was a very base and barbarous Design, an *English* Reader will very readily allow; but it was, nevertheless, very well contrived, and had very near taken Effect, for the *Indian* Prince was very brave in his Person, esteemed by his Countrymen a good Officer, and had, without doubt, Troops enough to have done his Business, if he had not been prevented by the Interposition of Mr. Pitt, who was at that Time Governor of *Fort St. George*, who very generously assisted the *Danes*, from a Principle of Humanity, which ought to be applauded.

We have, by this Means, a tolerable Account of the whole Transaction, which I shall give in as few Words as possible. When the Prince of *Tanjour* had resolved upon this Enterprize, he assembled the whole Force of his Dominions, and marched directly towards *Tranquebar*, in order to attack it. The *Indians* were to extremely cautious, that they began to open their Trenches above a Mile from the Town, and carried on two Attacks; the Earth being a dry Sand, they drove down the Bodies of Cocoa-nut Trees, instead of Stakes, both on the Inside and on the out, and filled up the Space between them with Sand, so that their Trenches were almost as thick as a Town-wall,

NUMB. 67.

and very high, so that they were perfectly covered from our Fire. They had about twenty or thirty thousand Men employed in this Siege, and with incredible Labour and Patience, in about five Months Time, they brought down their Trenches within Pistol-Shot of the Walls, and with their Batteries, had almost ruined one of the Bastions, when the *English* Reinforcements arrived. The *Danes* expected every Day an Assault, and were preparing to move their Effects into the Fort and quit the Town; and indeed they gave the Enemy very little Disturbance, as far as I can learn, in carrying on their Works, for the Garrison did not consist of more than two hundred *Europeans*, as many *Indian* *Portuguese*, and about a thousand Blacks; and, besides the Fort they had to defend, the Circumference of the Town-wall was not less than a Mile and an half. It was faced with Stone indeed, but had no Ditch, and therefore the *Danes*, to prevent the Enemy's scaling it, had set high Pallisadoes upon the Top of the Ramparts.

A Day or two after the *English* arrived, a Sally was resolved upon, and about Sun-rise in the Morning, a Detachment of the Blacks marched out of a Bastion, and were followed by the *English*; but the Blacks were no sooner out of the Gates, than they opened to the Right and Left, and made Room for the *English* to advance, never intending to engage themselves. A Body of the Enemy moved out of their Trenches to oppose our Troops, and came on in tolerable Order with their Broad-swords and Shields, without shooting an Arrow, or firing a Piece. They were all decently clothed in white Vests and Turbants, and seemed determined to engage our People hand to hand, in the Plain between the Town and the Trenches. The *English* Officers were in some Pain, seeing this Body of *Indians* advance with that Resolution, knowing their Men were several of them new raised, and mixed with *Portuguese*, on whom there is very little Dependence: But our great Guns from the Walls, beginning to play upon the Enemy, put them into Confusion, and they retired to their Trenches, with much greater Hast than they came out. And our Men advancing, while they were in that Conferration, drove them still farther. But there being no Preparations made for levelling the Trenches, and the Day growing hot, the *English* retired into the Town, and the Enemy returned into their Works, without any great Loss on either Side.

A few Days after, it was resolved to make another Sally, with the greatest Part of the Garrison, and accordingly they marched out at the great Gate, which faced their principal Attack; the Black Soldiers, according to Custom, retired under the Walls almost as soon as they were out, to make Room for the *Europeans*. The Enemy kept close in their Trenches fring at us; but between the two Attacks upon the Plain, there stood a considerable Body of Musketeers and Pike-men, against whom the *English* Commander thought fit to advance; but he had not marched many Paces, before an unlucky Ball wounded him in the Middle of his Foot, which compelled him to quit the Field.

The next Officer thereupon took upon him the Command of the *English*, and led them towards the Enemy, who were drawn up in the Plain; that Body retreating, drew the *English* so far from the Town, that they were intercepted by the *Moorish* Horse; and the *Danes*, whom the *English* expected to have supported them, never advanced a Step. In this Exigency, the *English* Officer resolved to throw himself into the Enemy's Trenches, finding it impossible to retreat into the Town over the Plain; and having thrown some Granades into the Trenches, the *Indians* were so complaisant as to quit them, and make Room for the *English*, who marched quite along them towards the Town, till they came to the End of the Works; but here, they were met by the *Moorish* Horse; yet upon making one general Fire, in which great Execution was done, the Horse scoured off, and left the *English* at Liberty to march on to the Walls, where they found the *Danes* drawn up in perfect Security.

In this Action, the *English* were one half of them killed or wounded. Among others, one of the Granadeers,

a drunken Shoemaker received twelve or fourteen Wounds, and yet was brought alive into the Town and recovered. It was by this featonable Assistance afforded them by the English, that the Danes preserved this Town and Forts; for soon after, the Rajah of *Tanjour*, growing weary of a War, that harassed his Subjects, and brought himself no Advantage, retired into his own Territories, and left the Danes at Liberty to pursue their Trade as before.

4. They have since that Time remained in quiet Possession of this Place, and carried on the little Trade they have in Quiet. Besides the Town of *Tranquebar*, and the Forts of *Danebourg*, which is a regular Citadel, with four strong Bastions, they have a small District of Country dependent upon them, the Inhabitants of which, partly *Moor*s, and partly *Indians*, are their Subjects, and for the Education of their Children, they have built and endowed a publick School, where they are taught all Kinds of useful Knowledge; and the Danish Missionaries being compleat Masters of the *Malabar* Tongue, preach in all the neighbouring Countries, and make many Converts. They have formerly built very good Ships here, which they not only employed in their own Commerce, but also let them out to their Neighbours upon Freight, which if it did not turn to a very great Account, it at least enabled them to subsist, and not only to keep what they had got, but also to enlarge and improve their Colony. I must not, however, forbear mentioning another Method by which some of their European Neighbours suggest, the Danes made use of to better their Fortunes, and that is, their allowing their Ships to cruize, not only on the Infidels, but also on the Shipping of some Christian Nations, which, if true, it must certainly have been a most illegal and unwarrantable Practice.

But we must not yield too easy to a Belief to such kind of Accusations, since it is very certain, that those who framed them, were strongly prejudiced against the Danes, and from thence inclined to speak ill of them, whether with, or without Foundation: and not only to speak ill, but also to use them ill, when it lay in their Power, as is evident from the Behaviour of the Dutch, not only in raising the War before mentioned, but in their Behaviour towards the People of *Tranquebar*, when in that distressed Situation; for the Enemy being possessed of the Springs by which the Town was furnished with Water, they sent Deputies to desire the Assistance of their Neighbours the Dutch, who, instead of complying with so necessary and reasonable a Demand, first whipped their Messengers, and then sent them back without Water. We may therefore justly suspect the Testimony of such People as were capable of an Action of this Nature towards their fellow Creatures, when in such Distress. On the Whole therefore, I think, instead of wondering, that after above one hundred Years Possession of this Place, and of some other little Factories about it, they should be considerably in Debt, which is no more than what has happened also to their Neighbours, we ought rather to wonder, that the Danish Company were able to go on at all, especially since they received so little Assistance from Home, and had nothing to depend on but their own Industry in the Indies, and the small Revenue arising from their Territories there.

5. We are now to open a new Scene, by relating what chiefly gave Occasion to this Section, I mean the establishing what its Enemies thought fit to call a new *East-India* Company in *Denmark*, the Occasion of which was this: Upon the Ruin of the *Osford* Company, a *Dutchman*, whose Name was *Jobua van Asperen*, who had been concerned in that Affair, went to *Copenhagen*, where he applied himself to King *Frederick* the IVth, a Prince of great Goodness and Virtue, and who had nothing more at Heart than promoting the Welfare of his Subjects by all the Means that lay in his Power. The Scheme proposed by *M. Asperen* to his Danish Majesty, had a very fair Appearance, and great Probability of Success; he observed, that there was a great Spirit raised of opening a new Trade to the Indies; that many People, who were very well versed in that Trade, had engaged in the Service of the *Osford* Company, the Success of which would unquestionably have answered their Expectations, if they could have carried it on; that the Causes of its Ruin were

such, as could not attend that Project in any other County, but least of all in *Denmark*, which had enjoyed an uninterrupted Commerce to the Indies for above a Century; that therefore there was nothing farther necessary to render the Danish Company as flourishing as those of *England* and *Holland*, than to increase its Capital, by opening a new Subscription upon advantageous Terms.

By the Force of these Arguments, the King was prevailed upon to suffer his Scheme to be put in Execution, and that it might be done more conveniently, the Danish *East-India* Company was transferred from the City of *Copenhagen*, to the Borough of *Allena*, a Place belonging to the Crown of *Denmark*, but situated close to the rich and free City of *Hamburg*, and therefore made Choice of, upon this Occasion; in order to induce Foreigners to engage in this Undertaking, his Danish Majesty thought fit to grant a new Charter, dated in *April* 1728, for promoting the Commerce of the said Company to the Indies, *China*, and *Bengal*, the chief Articles of which were these, *viz.* The new Subscribers shall have an equal Share and Right with the old Members, in all the Concessions, Obediences and Privileges granted to the said Company by his present Majesty and his august Predecessors. And likewise in all the Ports, Settlements, Revenues, Houses, Magazines, Ships, Effects, and in short, whatever the Company is possessed of at this Day, or may acquire in Time to come. The old Shares, or Actions, which are in Number two hundred and fifty, of one thousand Rixdollars each, shall subsist and remain as they are, and will have the same Rights as the new Shares. The Directors shall declare, and affirm upon their Honour, that all the Debts of the Company do not exceed one hundred and sixty thousand Rixdollars in Specie. The united Company are obliged to discharge and pay the said Sum of one hundred and sixty thousand Rixdollars, upon Condition that the old Shares shall have no Dividends till the Year 1733.

Though there is no Question, that the Accounts of the Company are just, and that their Debts do not exceed the said Sum of one hundred and sixty thousand Rixdollars, it is nevertheless stipulated, That if the said Debts should appear to exceed the said Sum, the old Shares shall be answerable for the Overplus, and that the new Subscribers shall not be obliged to contribute thereunto. Each new Share shall be one thousand Rixdollars in Bank, or Specie, whereof twenty per Cent. shall be paid upon the Account of *M. Alexander Bruguer*, Banker at *Hamburg*, or in the Manner prescribed in the Project published by the Company at *Copenhagen*, December 16, 1727. If there was any absolute Necessity to make a further Call the present Year 1727, the same shall not exceed five, or ten per Cent. at the farthest. The Call for the next Year shall not exceed twenty, or twenty-five per Cent. The Remainder of the Subscription shall not be called in without the Resolution and Determination of a general Court of the Company. If the entire Sum of the said one thousand Rixdollars, for the new Actions, is not paid in the Year 1738, the Proprietors of the old Shares shall have an Interest at the Rate of five per Cent. allowed them, for the Sum they have paid more and above the new Subscribers. There will be no other Actions than Shares of one thousand Rixdollars, and half Shares of five hundred Rixdollars each. Every Subscriber shall be allowed to take Shares for the Bearer, signed by the Company, and such as please, may have them inscribed in the Company's Books. There shall be paid for each Transfer two Rixdollars to the Company, and half a Rixdollar to the Poor. The Creditor of the Company are allowed to take new Actions for the Sums due to them, provided they discount on the said Debts thirty per Cent. for the present Year, for each Share, and twenty-five per Cent. for the next. The Shares they shall purchase on this Condition, shall have the same Dividends as the other new Actions. The said Shares shall not be liable to any Seizure, or Stop, upon any Account whatsoever, as it is declared in his Majesty's Oxyroy.

The Directors shall yearly communicate to the Subscribers, an exact and particular Account of the Affairs of the Company. The Dividend shall be regulated upon the said Account, in a general Court of the Company, by the Majesty

Majority of Voices. The Directors are not allowed to un-
dertake any Trade but the Commerce in the *East-Indies*,
upon the Company's Account, without the Consent of
the Members thereof. And leis still shall they dispose of,
or lend the Company's Money to any Person whatsoever,
for which they are to be answerable in *solida*, in their own
Name and Estate. They shall take an Oath of exact Ob-
servation of this Article, and for a faithful Administration
of the Affairs of the Company, for the common Benefit
and Advantage of the Members thereof. All the Mer-
chantizes which shall be sold in any other Place than *Co-
penhagen*, shall be paid in the Bank at *Hamburg*, to one
or more Merchants, and most substantial Traders, for the
Company's Account. These Merchants shall be chosen,
and appointed in a general Court, by a Majority of Voices,
and in no other Way, upon any Pretence whatsoever.
The said Merchants, or Cashiers, shall pay no Money,
but upon Orders, signed by three or four of the Direc-
tors at least. The Money to be paid this Year, shall be
at the Disposal of the present Directors, till the new ones
to be added to them are chosen. The Money arising by
the new Subscriptions, shall be laid out, in sending Ships
to *Tanquebar*, *Bengal* and *China*, and for no other Use
whatsoever. No more Money shall be kept in Cash, than
what will be necessary for the fitting out and sending of Ships,
as in the preceding Article. A general Court of the
Company shall be called as soon as possible, in order to
elute four new Directors, out of the new Subscribers, who
may be all Foreigners, &c.

6. Upon the Publication of these prodigious Advan-
tages, granted to the new Company for carrying on a
Trade to the *East-Indies* from *Denmark*, there followed a
great Contentment in *Holland*, where they began to sus-
pect, that all the Pains they had taken in destroying the
Old Company, was merely thrown away, and that this
new Establishment in *Denmark*, would prove as prejudi-
cial to their Interest, as the former, which they had so
much dreaded. They began therefore at *Amsterdam*, *Rot-
terdam*, and all the great Cities in the United-Provinces,
to decry the new Company, and at the same Time, they
formed a Process against *M. Van Asperen*, whom they
condemned and executed in Effigy. But they soon found,
that this did not answer their Purpose, and therefore they
had recourse to other Methods.

They discovered that this Gentleman had written in very
strong Terms to his Friends, both in *Holland* and in *Great-
Britain*, to solicit them to subscribe into the Capital of the
Company at *Altena*, upon which they had recourse to the
Answers of these Letters, which they framed in the best
Manner they could, for the answering their own Ends, and
then caused them to be published in all the *English* and
Dutch News-Papers, that they might the more effectually
spread their Objections to this new Company, and thereby
depress the Labours of *M. Van Asperen*, and the Direc-
tors, to procure Subscriptions. In these Writings they
insinuated, that the old *East-India* Company in *Denmark*
was actually become Bankrupt, and that there was but
very little Reason to confide in the Priviledges granted to
the new. But it will be best to give these Objections in
their own Words, that the Reader may judge of them
with a greater Certainty, and therefore we will make as
true an Extract of them as possible, reducing their Ob-
jections under four Heads, concerning which they express
themselves in the following Manner. The Reader is to
observe, that these Objections are delivered as from a Cor-
respondent of the Projectors, in Answer to what he had
written in the Favour of the Company at *Altena*.

First, That these Articles, tho' to Appearance suffici-
ently inviting, are not to be depended upon under arbi-
trary Governments, especially as long as the Words *Visa*
and *Liquidation* are in Memory; and all agree, that the
Reason why other Nations lodge large Sums, and contin-
ue them in the Funds of free Governments, is, that they
are secure by the established Laws of those Countries. Se-
condly, That they think the Word and Honour of two
Directors, as expressed in the last of the thirty-eight Ar-
ticles, to be a slender Security, or Guaranty for the old
Company's Debts, being no more than one hundred and
sixty thousand Rixdollars in Specie, more especially, when

they reflect, that one of the two Directors, tho' now a
Count, and honoured with a white Ribband, is the same
individual Person, who, during the late War with *France*,
became a Bankrupt, for upwards (as was then said) of six
Millions of Florins, and fled by Way of this Country in-
to *England*, for Protection; but so soon as the Queen was
apprized of his Situation, that he was not persecuted by
the Court of *France*, as he pretended, but prosecuted by
his fair Creditors, for large Sums he had defrauded them
of, and brought away with him; the good Queen, tho'
at War with *France*, and altho' he had been naturalized
in *Scotland*, before the Union, withdrew her Protection
from him; whereupon he came over here again, and set-
tled at *Vianen*, where it Cost him, as you may remember, a
great Sum of Money for a Protection; but he was so closely
followed by his numerous Creditors, with the Assistance
of the *States-General*, that not finding himself safe any longer,
he fled into *Denmark*, where he found both Protection
and Honour. Now, say the People here, and in *Eng-
land*, this same Man being the Author, Prompter, and
principal Manager of this new Scheme, we will never ven-
ture our Money in such Hands, to make a Jobb for him.
Thirdly, I find it objected here, by all who know the
East-Indies, that there is a great Demand upon the old
Company in *India*, and particularly in the Bay of *Bengal*,
for a large Ship which they formerly seized, with a full
Lading, bound to *Surat*, carried her off, and sold both
Ship and Cargo at *Tanquebar*, for which the *Moor*s drove
them off, and they have not appeared there since. This
Debt alone has been computed at three hundred Rixdol-
lars in Specie, seven Years ago, and will be demanded by
the Government, and must be paid with full Interest up-
on Interest, at the Rate of twelve per Cent. per Annum,
according to the Custom of the Country, before they will
be permitted to trade again in that Port, and this Account
is confirmed to be true by several Persons here and in
England, that have resided in *Bengal*, some of them at
the very Time when the said Ship was taken and carried
off.

Fourthly, 'tis objected, That there can be no Profit
made equal to the Hazards a Man must run of various
Kinds, besides these before mentioned. And thus having
freely given you the unanimous Opinion of all that I have
talked with, or wrote to on this Subject, which is exactly
agreeable to my own Way of Thinking, I hope you will
not give yourself, nor me, any further Trouble on this
Subject; and, before I conclude, as you have been my
old Friend and Acquaintance, I cannot help saying, I wish
you would retreat in Time, and endeavour to obtain For-
giveness for the Injuries you have endeavoured to do your
own native Country, in Defiance of the Laws in being;
for nothing can be plainer, than that this new Scheme is
principally intended for Stock-jobbing, and to draw the
ready Money of other Nations into *Denmark*, at all Events;
but when it comes to be underflood, that all, or most of
the Profits, that can be made on this Scheme, belongs to
Foreigners, whenever they want to call the Profits and
principal Money Home, I leave you to judge of the
likelihood there is, that publick Faith will be maintained:
You cannot forget what was done in *Mississippi*, when they
found the Money was going out of the Kingdom.

It was hoped, that by the publishing these Objections,
Subscriptions would have been stopped, and that the new
Company of *Altena* would have sunk of itself, or, to speak
with greater Propriety, would never have made any con-
siderable Figure, or have been capable of carrying its Plan
into Execution, or of sending so much as a single Ship to
the *Indies*; but it fell out quite otherwise, notwithstanding
what was published on this Subject in *England*, *France*,
and *Holland*.

7. As soon as this was perceived, and it was certainly
known that the Danish *East-India* Company was actually
preparing to send Ships to the *East-Indies*, agreeable to
their Plan, and to the Power given them by their Charter,
a Resolution was taken by the Maritime Power, to act in
Concert in this Affair, and to endeavour to deprive the
new Company of their sole Support, which was his *Dan-
ish* Majesty's Charter of Incorporation. It was with this
View that Orders were sent to the Ministers of *Gr. Br.*

Britain

Britain and Holland at the Court of *Denmark*, to act jointly in this Affair, and to use their utmost Industry to procure the Repeal of the Powers granted to this Society; and, in consequence of these Instructions, those Ministers soon after drew up, and presented the following Paper to the Court of *Denmark*.

“ His Majesty, the King of *Great-Britain*, and their High Mightinesses the States-General of the United Provinces, fore-seeing the Injury the transferring the *East-India* Company from *Copenhagen* to *Altena*, will do to the Commerce of their Subjects; and perceiving, with Concern, that almost at the same Instant they are making so great Efforts to stop the Progress of the *Ostend* Company, the King of *Denmark*, their good old Friend and Ally, is setting up another equally prejudicial to their Subjects, have ordered the subscribing Ministers, to make most humble Representations to his *Danish* Majesty, hoping, from his Majesty's Friendship, that, as soon as he shall be informed of the Uneasiness this Novelty gives them, he will withdraw the Privilege lately granted to that Company, and leave it on the ancient Foot as it has always subsisted at *Copenhagen*; accordingly the subscribing Ministers desire your Excellency to make a Report thereof to the King, and to procure them a favourable Answer.”

Done at *Copenhagen*, July 31, 1728. Signed,
Glenorck,
Affmællst.

8. The King of *Denmark* and his Council, did not at all relish this Memorial, to which however an Answer was given, whereas his *Danish* Majesty insisted that the Maritime Powers had totally mistaken the Point; because it never was the King's Intention to erect a new Company, or to transfer that which had now subsisted above an hundred and ten Years from *Copenhagen* to *Altena*. That this appeared clear from the very Project of Incorporation, which granted no new Power to the Company, but barely confirmed the old ones. That the Voyages proposed directly for *Cobina*, could not be esteemed an Infraction of Treaties, any more than the Voyages formerly made by the Company's Ships from *Tranquebar*. That farther still, his *Danish* Majesty was not restrained by any Treaty whatever, from maintaining and supporting the Commerce of his Subjects to the *Indies*, either from their Establishments in that Part of the World, or directly from *Copenhagen*. That the Law of Nature and Nations, not only gave him a Right, but made it his Duty to promote the Welfare of his Subjects, and to extend their Trade as far as it was in his Power. And

that, finally, as he did not endeavour to encourage this Commerce with any View of injuring the *East-India* Companies in *England* or *Holland*, but purely with a Design to benefit and enrich his own Subjects, he could not discern how this should expose him to the Dislike or Resentment of any other Power whatever.

How clear and full soever this Answer might seem to the Court of *Denmark*, it was far enough from giving any Satisfaction to *Great-Britain* and *Holland*; and therefore a fresh Memorial was drawn up, to shew the Insufficiency of this Answer, and the Right which the Maritime Powers had to expect, that his *Danish* Majesty should comply with their Demands, and withdraw his Protection from this Company. This Memorial was delivered by the Earl of *Chesterfield*, and the Deputies from their High Mightinesses the States-General, to Mr. *Groys*, his *Danish* Majesty's Minister at the *Hague*, in the Summer of the Year 1728, from which Time to the present, I do not find that any farther Applications have been made on this Subject, or that the Rights of the *Danish East-India* Company have been farther controverted.

9. It is, however, certain, that the Opposition made by the Maritime Powers to the Establishment of this Company, and their absolutely forbidding their Subjects to have any Share or Concern therein, affected the new Subscriptions to such a Degree, that they did not, by any means, answer the Expectations that were formed of them, when Mr. *Fan Asperen's* Scheme was first published; but they so far answered, as to enable the Company to enlarge her Commerce, and even to enter into a direct Trade from *Copenhagen* to the *Indies* and *Cbina*, in which they were chiefly encouraged and supported by the Prince Royal of *Denmark*, now King *Christian VI.* under whose Auspice they have flourished ever since.

By the Advantages derived from his Favour, their Affairs are now in so good a Posture, that there seems to be no Doubt of their being able to pursue their Trade constantly, and with considerable Advantage both to the Proprietors of the Company's Stock, and the *Danish* Nation in general; for their Fund is considerable, their Credit good, their Ware-houses, Magazines, Yards, and Docks at *Copenhagen* in perfect Order, and their Sales are very large and regular, inasmuch as they generally send two or three Ships annually to the *East-Indies*, and receive as many, with rich Cargoes from thence: So that, on the whole, we may venture to assert, that this Company is effectually established, and that, in a very few Years, they will have a considerable Share in the Trade to the *East-Indies*.

SECTION XXXVIII.

A succinct History of the Swedish East-India Company.

Including an Extract of the Royal Charter.

1. *The Crown of Sweden far less considerable at Sea than the Danes, yet in some Measure a Maritime Power, and always ambitious of a direct Trade to the East or West-Indies.*
2. *The Rise of the present Company, properly that of Henry Koning, but commonly stiled, The Gottenburgh-Company, and an Abridgment of its Charter.*
3. *The Progress and present State of this Company, with some Remarks.*

1. **T**HE *Swedish* Nation, though not formerly distinguished by any great Share of Maritime Power, have nevertheless, always preserved the Character of skilful and intrepid Seamen, as appears both from their own and foreign Histories, more especially those of the *Danes* and the *Hanse Towns* in *Germany*, with whom they were engaged in frequent Disputes, that were, generally speaking, determined by naval Engagements. It does not, however, appear, that the *Swedes* had ever any Thoughts of carrying on a Trade to the *East-Indies* to the Time of the famous *Gustavus Adolphus*, the Glory

of their Country, and the most finished Hero of his Age. This great Prince, whose ruling Passion was the Welfare and Reputation of his Subjects, formed the Project of establishing a Trade to the *East-Indies* from *Sweden* directly, to which he invited his Subjects, by Letters Patents, under his Broad-Seal, dated at *Stockholm* the 14th of *June*, 1626: But the War in *Germany* prevented the Prosecution of that Design, which seems to have died with that glorious Monarch who formed it.

His Daughter, the celebrated *Queen Christina*, equally remarkable for her Love of Learning, and Contempt of

as *Christina*, equally
ng, and Contempt of
Grav-

Grandeur, which she manifested by resigning her Crown to her Cousin *Charles Gustavus*: Tho' she did not prosecute her Father's Project, yet shew'd the same Willingness he had done to encourage and extend the Trade of her Subjects; and therefore formed, and carried into Execution a Scheme for establishing a Colony in the *West-Indies*, which, in some measure, was brought to bear. The Place they fixed on was that Part of *North-America*, now in our Possession, and tiled the Province of *New-Jersey*, where they established three Towns, *Christina*, *Elisburgh*, and *Gottenburgh*, out of which however they were soon worked by the *Dutch*, who bestowed upon this, and the adjacent Country, the Name of *New-Belgia*; so that the Design of fixing a Trade in this Part of the World from *Sweden*, was overturned almost as soon as it was formed.

We hear very little from this Time of any Attempts made by the *Swedes* in regard to Commerce, which might, very probably, be owing to the Wars, in which the Monarchs of that Country were engaged for many Years after, and which in a manner disabled both them and their Subjects, from thinking of, or, at least, undertaking any thing of this Kind; so that all *Europe* was surpris'd at the News of an *East-India* Company being set up in *Sweden*, about fourteen Years ago.

2. It was the Ruin of the *Ostend* Company, that produced this Establishment, of which one *Henry Koning* was the chief Author, a rich Merchant, and one who had a true Notion of the *East-India* Commerce. He represented to the Ministry, that this was a very favourable Time to undertake a Thing of this Sort; that there were a Multitude of Places in *Africa* and the *Indies* neglected by the *Europeans*, who had constantly followed one the other, and had scarce ever undertaken to strike out of the common Road; that, besides all this, there were Numbers of Persons, that, by the Dissolution of the Imperial Company of the *Netherlands*, were thrown out of Business and Bread, and, which was worse, deprived of the Means of returning into their own Country, by the Steps taken to hinder the *Ostend* Society from carrying on their Trade; that, consequently, there could be nothing easier than to procure proper People for carrying this Commerce on, and fixing it in such a Manner as not to be liable to any Hazard, either of Loss by Trade, or Opposition from other Powers.

This Proposition being maturely considered, it was resolv'd to authorize this *Henry Koning*, to associate such Persons as should be willing to contribute to his Designs, and to grant them the following Privileges, by Virtue of a Charter, dated *June 14, 1731*. The King thereby concedes to *Henry Koning* and his Associates, the Liberty of navigating and trading to the *East-Indies* for fifteen Years, from beyond the *Cape of Good-Hope* to the Islands of *Japan*, where-ever they shall think proper or convenient, with this Restriction only, that they shall not trade in any Port belonging to any Prince or State in *Europe*, without their free Leave and Consent first had and obtained. The Ships employ'd in this Commerce, shall constantly take in their Lading, at *Gottenburgh*, to which Port they shall return with all the Merchandize they bring home from the *East-Indies*, and shall there cause the same to be publickly sold, as soon as conveniently they can. The said *Henry Koning* and Company, shall pay to the Crown of *Sweden*, during the said fifteen Years, One hundred Dalers per *Loth* for every Ship they employ or freight, such Ships being measured before their Departure from *Gottenburgh*; which Money is to be paid within six Months after the late Return of the said Ship from the *Indies*; and they shall likewise pay two Dalers per *Loth*, in full Satisfaction for the Town Duties.

The said *Henry Koning* and Company, may employ, equip, and arm as many Vessels as they shall think proper, provided that those Vessels are built or bought in *Sweden*, and whatever else is necessary for equipping and furnishing them be had in the *Swedish* Dominions. But in case this should be found at any Time impracticable, then the Company may provide themselves with Ships, or whatever else shall be needful, from their Commerce where-ever they shall think fit, provided always that they give

N O T E . 67.

the Preference to, and promote as far as in them lies, the Building, Manufactures, and Produce of *Sweden*. The said Ships shall carry the *Swedish* Flag, and shall be furnished with Passports under the King's Hand, as also from the Republick of *Algiers*. The said Company shall be at Liberty to raise what Sum they think fit for the carrying on their Commerce, by a voluntary Subscription, or otherwise, as they think proper; and such as shall become Subscribers, shall be obliged to pay in their Money at the Times prescribed, on Pain of forfeiting their Interest in the said Commerce.

The Company may transport what Ordnance, or small Arms they think proper, as also Silver coined, or uncoined, *Swedish* Money only excepted; and may likewise bring from the *Indies* what kind of Goods or Manufactures they think fit, without any Restriction whatever; the Vessels of the Company, when freighted, ready to sail, shall not be stopp'd, or hindered on any Pretence whatever; nor shall they, at their Return, be impeded from entering into the Port to which they are consign'd. The Goods of the said Company may be transported at their Pleasure, from Place to Place, within his *Swedish* Majesty's Dominions, being first furnished with proper Passports, without paying any other Duties than those before stipulated. The Captains of the Company's Ships, shall have the same Power for maintaining Discipline amongst their Crews, as the Captains of the King's Ships; and with respect to Trade, they shall conform to the Instructions given by *Henry Koning* and Company, provided always those Instructions are not repugnant to the Privileges granted by this Charter.

The Seamen and Soldiers entered on Board the Company's Ships, shall not be liable to be prest'd into the King's, or any other Service; and on the other Hand, it shall not be lawful for the Company to take into their Service, any who shall have deserted that of the Crown. The Seamen and Soldiers belonging to the Ships in the Company's Service, and deserting from it, may be apprehended and detained; but according to the usual Forms of Law, and by the Hands of the proper Officers. The Ships belonging to the Company being returned, and having landed the Merchandize on Board them, the said Goods shall be Duty free, excepting only a very small Acknowledgment to be paid upon removing them.

The Persons acting under this Charter, shall constantly chuse out of their own Number, at least three Directors, who shall be all Men of distinguished Probity and known Abilities, of which the said *Henry Koning* shall be one; and in case of his Demise, the Members of the Company are directed and empowered to make Choice of another Person in his Stead, provided always, that these three Directors shall be Natives of the Kingdom of *Sweden*, at least naturalized *Swedes*, Protestants, and resident in the King's Dominions, unless necessarily absent in foreign Parts, for the Service of the Company; in which case the Proprietors may substitute another Director at Home. The said *Henry Koning*, and his Associates, may make such Regulations for the Management of their Commerce, as they shall think proper, provided they be agreeable to this Charter.

They shall render a faithful Account to all the Persons interested, as well of the Profit and Loss, as of the Capital of the said Company; but they shall not be obliged to discover the Names of their Subscribers, or the Sums they subscribed; nor shall they be obliged to produce, or suffer their Books to be inspect'd on any Pretence whatsoever. In case any of the Directors shall find, that the rest betray their Secrets, or are guilty of any other Fraud or Misdemeanour, they may apply to the Board of Trade for Justice and Reparation, and upon due Proof, such Offender shall be suspended or degraded from his Office of Director, and the Company shall be at Liberty to chuse another in his room.

In like Manner, if any of the Proprietors shall find, that the said *Henry Koning*, and the rest of the Directors betray their Trust, or are guilty of any Fraud, they may make the same Application, and obtain the same Redress. The said *Henry Koning* and Company, may employ what Number of Super-cargoes, Officers, Mariners or Soldiers, they shall think fit, either *Swedes* or Foreigners, who, on their being so employ'd, shall enjoy the same Privi-

ledges, as if they were born *Swedes*; and the Money employed, either by Natives or Foreigners, in the Capital of this Company, shall not be liable to any Stoppage or Seizure.

Such Persons as are interested in, or employed by the Company, shall be naturalized according to their respective Qualities, upon their applying themselves to the King for that Purpose. The said *Henry Koning* and Company, and such as are authorized, or employed by them, in case they are molested, or disturbed in their Commerce, by any Person, or in any Part of the World whatever, shall have full Power from his Majesty, to obtain ample Justice and Satisfaction, by all convenient Methods; and shall be at Liberty to oppose Force by Force, and to consider such Disturbers as Pirates and Enemies to the publick Peace.

His Majesty will grant them these Powers, especially in such Commissions as their Captains shall receive; and in case, notwithstanding they should be attacked, and suffer any Injury, or Injustice from any Nation whatever, in the carrying on of this Commerce, his Majesty, upon due Information thereof, will grant them his high Protection, and endeavour to procure for them speedy and ample Satisfaction, either by way of Reprizal, or otherwise. The rest of the Subjects of the Crown of *Sweden*, are expressly prohibited, and forbid to engage in, or interfere with the Trade of the said Company, under Pain of his Majesty's high Displeasure, and the Confiscation of their Vessels and Effects. The King promises to alter, or augment these Privileges, upon Application from the Company, as often, and in such Manner, as shall be found necessary for promoting the Trade to the *East-Indies*, and the Interest of the Persons concerned therein. This Charter is said to be granted by the King in the Senate, which Phrase I take to be pretty much the same with ours, of the King, by and with the Advice of his Privy-Council.

I have dwelt the longer upon this Charter of the *Swedish East-India* Company, because I have heard it admired as one of the best drawn, and best contrived Pieces of its kind, more especially, because all the Powers therein, are such as, strictly speaking, concern Commerce Abroad, and are not calculated to give the Company, or its Directors, too much Power at Home, because it subjects them to the Board of Trade, or, as it is called in *Sweden*, the Colledge of Commerce, which consists of the President of the Treasury, and four Counsellors, who hear and determine whatever comes before them in a summary Way, according to the Laws of the Kingdom, and the general Maxims of Equity. There were great Expectations formed of this Company for various Reasons; First, Because they had all the Powers granted them that they could reasonably expect, or desire. Secondly, Because they were not limited in their Capital, but allowed to raise such Sums, and in such a Manner, as they shall esteem most for their Benefit. Thirdly, From their being prohibited from interfering with the Commerce of other Nations, and thereby running themselves and their Country into Difficulties and Disputes. Fourthly, From their having the King's Protection secured to them, in such a Manner, and for such Purposes, as might serve to answer all good Ends, without involving the Crown of *Sweden* in any Controversies with the Maritime Powers, or any other of her Allies. And, Lastly, Because from the Nature of the present Constitution in *Sweden*, there seemed to be as high Security for the Properties of such as interested themselves in this Affair, as in any other Country whatever.

These Expectations were likewise heightened by the Company's Meeting with no Disturbance, or Opposition from foreign Powers, who neither knowing who the Subscribers were, or to what their Subscriptions amounted, were the less alarmed by this new Company, and besides, seeing themselves secure from any Apprehensions of their interfering with the Trade already established in the *East-Indies*, found it more difficult to assign any rational Cause of Complaint, to which we may add, that the Company going on very slowly at the Beginning, and being a long Time before they completed their Subscriptions, or prepared to fit out Ships for the *Indies*, it was generally believed, both in *England* and *Holland*, that the Design

would come to nothing, and the Company would vanish of itself.

5. But though the Author of this Design, *M. Henry Koning*, and his Associates, were not hasty in equipping Ships for the *Indies*, yet they took care to provide themselves in every respect with what might be found necessary for carrying on their Scheme with Success. They built, for this Purpose, two very large and strong Ships, one called after the King, *the Frederick*, the other by the Name of the Queen, *the Ulrica*. These they furnished in such a Manner, as to be equally fit for Trade, or for Defence. They made Choice of such Supercargoes as had not only established Characters both for Honesty and Abilities, but were likewise well versed in the particular Business in which they were to be employed, and Men of Experience in the Trade to *China*; they proceeded with no less Caution in the Choice of their Officers and Mariners; and tho' they spent full two Years in making Preparations, yet that Loss of Time was very well compensated by the Exactness with which those Preparations were made; so that at the Time their Ships left the Harbour of *Gottenbourg*, they were as well equipped, and in all respects as completely furnished for an *East-India* Voyage, as any that were employed in that Trade by the Maritime Powers, and the same Care and Diligence they have used ever since; so that it may, with great Truth be said, that as scarce any Company was better established at first, so the Affairs of none have been hitherto better conducted.

Their first Voyages, though not attended with so much Profit as might have been expected, were however tolerably successful, and the Company established their Factory on the River of *Canton* in *China*, with the Consent of the *Chinese*, who seem to be very well pleased with their new Comers, and every Way disposed to favour and promote their Trade; so that they were very soon on the same Footing there with other *European* Nations. At Home, indeed, they met with some Difficulties; for the Company being obliged to make Use of a great many Foreigners in all Capacities, for the better carrying on of their Trade, and there being no Nation in *Europe* naturally more jealous of Foreigners than the *Swedes*, this occasioned a great Clamour, especially among the common People, which, however, was in some Measure got over, by publishing an Order, that at least Two-thirds of the Mariners should be for the future Natives of the Kingdom; and as the Execution of this Order was apparently attended with Difficulties and Inconveniences, it convinced even the Vulgar, of their first Mistake, and that the Company had done no more than what they were warranted to do by their Charter, and what the Circumstances of their Affairs, more especially at the Beginning, rendered not only expedient, but necessary.

Since that Time, the *Swedish* Company have been very regular, both in fitting out their Ships, and in their Returns, which, by being sold to Foreigners, have brought in great Sums of Money to the Kingdom; yet, inasmuch as a great Part of this Money has been exported again, for the carrying on this Trade, a new Complaint has been created thereby, in respect to the Silver carried to the *East-Indies*. We need the less wonder at this in *Sweden*, because, tho' the Trade of the Kingdom is not large, yet it produces annually a considerable Balance in ready Money, as is known experimentally here, since it is known, that Two-thirds of the Trade we carry on thither, is managed with ready Money only, and it is also pretty much the same Thing with other Nations who trade thither, the *French* only excepted, who have a Balance in their Favour from the *Swedes*, which, however, has gradually grown less and less, in Proportion as they have taken more naval Stores of late Years, than they did formerly, and as their Subsidy-treaties bring in considerable Sums to *Sweden*, or at least keep the Money there, that would otherwise be employed in discharging the Balance of Trade; so that the *Swedes* being used to see great Sums of Money brought in by every other Branch of Commerce, and being not to immediately acquainted with the Profits arising from this, are the less disposed to consider it as advantageous.

Upon these Grounds, a Report has been lately raised, as if the Privileges of this *East-India* Company would be suffered to expire next Year, when their Charter determines, which, no doubt, would be agreeable, not only to the *French* and *Danes*, but to the Maritime Powers, who find this Company detrimental to them, by the Sale of its Commodities from the *Indies*, over all the *North*, tho' they do not interfere with them much, by their Manner of carrying on their Trade in the *East*. The Company, however, are said to have prepared a very long and curious Representation to the Senate, in order to ward off this Blow, and to procure the renewal of their Privileges for fifteen Years more, in which they insist, that this very Application is a sufficient Motive for obtaining their Request, and satisfying all who are to be satisfied, by reason of the Advantages resulting from their Commerce.

For, as they observe, very little, and indeed, scarce any of the Returns made by the Company have been dif-

posed of in *Sweden*; so that if the Proprietors of the Company are Gainers thereby, as they must be, or they would not be desirous of having their Charter renewed, this Gain, whatever it is, must be drawn out of other Countries, and as the Proprietors reside in *Sweden*, must consequently be so much clear Gain to the Nation. What the Issue may be of this Representation, and how far the Senate may be prevailed upon thereby, Time will shew; but we may venture to affirm, that if popular Notions should get the better upon this Occasion, and the *Swedish* Company shall be suffered to expire with their Charter next Year, it is highly improbable, that any Attempt of this sort should be again made in that Country, where, at the Beginning, it can only be undertaken by Foreigners, and where, after such an Example as this would be, no foreign Merchants would be so indiscreet as to undertake it, for fear of being treated a second Time in this Manner.

C O N C L U S I O N.

AFTER having thus deduced the History of the *East-India* Commerce from the earliest Accounts that are preserved of it, down to the present Times, and pursued it through all the several Nations among whom it has flourished, there is nothing now left for me to do, but to perform the Promise I made of shewing, that the common and received Notion, that, taking all Things together, this Commerce is highly prejudicial to the *Europeans* in general, is very ill grounded, and no better than an erroneous Opinion, taken up for Want of thoroughly examining, or, at least, of perfectly understanding the Subject. But to place this Matter in a clear Light, it will be first of all necessary to state the Objection fully and fairly, that it may appear we know what we are about, and do not pretend to judge of what we have not thoroughly considered.

The Objection then, when set in the strongest Light, will stand thus. It is an incontestable Maxim with respect to Commerce, that Silver is the only true and certain Measure of Wealth; and as we export yearly vast Quantities of Silver from *Europe* for *Indian* Goods and Manufactures of little intrinsic Value in themselves, and which are all in a short Time consumed here, it follows that the Trade from *Europe* to the *Indies*, must be a losing Trade to the former, since we export Bullion and import Bubbles; wherefore, if the *European* Princes and States would seriously and impartially consider this, instead of encouraging the setting up new *East-India* Companies, they would abolish the old, and secure the Wealth of their Subjects, by banishing a Commerce so destructive as this is, out of their Dominions. Thus then is the Objection that I am to overturn, and, I must confess, that so far as I am acquainted with the Matter, I am the first who have thought it possible to overturn it; but, however, no Truth is less a Truth for being new, and the Argument from Authority against Reason and Experience, is so little agreeable to the Genius of the present Times, that if I have the latter in my Favour, I have no great Reason to be in Pain about the former. But, however, to make the Road the easier, it may not be amiss to premise somewhat as to the Origin of this Notion.

When some ingenious Persons undertook the Defence of the *East-India* Commerce in particular Countries, and found themselves pressed with the first Part of the Objection, that the Nation was impoverished by the Exportation of Silver, they, to shorten the Dispute, agreed that this might be true, as to the Commerce to the *Indies* in general, and yet was no sufficient Argument to prove this Trade prejudicial to any Nation in particular, because, if that Nation, by exporting to others a certain Proportion of their Returns from the *Indies*, brought in from the Balance of that Trade, a much greater Quantity of Silver than they carried out, then it was plain, that tho'

Europe in general might lose by this Trade, yet it might, and indeed must be, highly beneficial to the particular Nation by which it was carried on; because it proved the Means of producing a Balance in her Favour, which otherwise she could never have obtained. I do allow, that in arguing thus, they argued very right; but, I presume to say, that, in giving up this Point, they did what was frequently done, that is, they argued right from wrong Principles; and, as I do not blame them for taking this Method, because, with respect to their Subject, it was the shortest and most expeditious Method they could take; so, I hope no body will blame me, if, after taking so much Pains, and entering so deeply into the general History of this Commerce, I declare absolutely, that this Point ought not to have been given up, and that there is no better Foundation for asserting, that the Trade to the *Indies* in general is prejudicial to *Europe*, than for maintaining that it is disadvantageous to those particular Nations, such, for Example, as *England* and *Holland*, and who manifestly owe their Wealth and Maritime Power to their Success in this Trade.

In the first Place then, I say, that it is the same thing with regard to *Europe*, as with regard to any particular Nation in *Europe*, as to the total Balance of Commerce; and if a losing Commerce be absolutely requisite on one Side to produce a lucrative Commerce on the other, then the Loss sustained by that Commerce, is no good Argument against it. But most evident it is, that since the *Europeans* have carried on an extensive Trade to the *East-Indies*, their Manufactures, Shipping, and Commerce in general, have been very much extended; so that from the time the *Portuguese* discovered the Passage by the *Cape of Good-Hope*, the Face of *Europe* has been entirely changed, and we have grown infinitely more considerable in comparison of other Parts of the World, than we were before. But, to come closer to the Objection as to the Point of exporting Silver. If the Commerce to the *East-Indies* has drained us of many Millions of intrinsic Wealth, as I readily admit it has, I desire to know how we came by them? The Answer will be at every Reader's Tongue's End, from *America* and the *West-Indies*. But then, give me Leave to ask again, How came we to find out these? The Answer to this will unriddle the whole Mystery, since every Body knows it was by searching out a new Passage to the *East-Indies*. If therefore, by carrying on the Commerce of the *East-Indies*, we have fallen upon another Commerce, which not only supplies Silver sufficient for the *East-India* Trade, but likewise brings in annually an immense Treasure besides, what Pretence is there for saying that *Europe* in general has been, or ever can be, a Loser by carrying on this Trade? It appears from hence, that Providence excludes these narrow Notions, and by dividing the Treasures of this World in such a Manner as to make

to make

make Commerce the Interest of all Nations, has provided effectually against this supposed Evil of trading till we have nothing left to trade with.

But, besides this, we owe many other great Advantages to this Commerce in the East. For, in the first Place, it is the great Support of the Maritime Power of *Europe*; it makes us Masters of all other Parts of the Globe, who, if it had not been for this Maritime Power, might, long ago, have been Masters of us. Let any Man consider the wide Difference, in Point of Dominion, Number of Subjects, and whatever else contributes to Grandeur, between the little Republick of *Holland* and the great Empires of *Turky*, *Persia* and *India*; and remember that this Commerce has rendered a Company in that little Republick, formidable to all these great and mighty Empires, and capable of maintaining herself, and protecting her Concerns against them all. And then let me ask him, does not this plainly shew the Importance of this Commerce, and that it was a very wise and right Thing to promote and encourage it: Can there be a clearer and stronger Demonstration than this, from Reason or from Experience? Or might we not safely rest the Point here, without running into any farther Considerations? I dare say, every rational and intelligent Reader, will confess, we might; and yet, for the better explaining the Matter, I am content to go still a little farther.

The only Answer that can be given to this, or, in other Words, the only Means left for supporting this Objection, is, to suppose, that instead of two or three, all, or the greatest Part of the Nations in *Europe*, should fall into this Commerce, by which Means the Exportation of Silver would be extravagantly increased, and, consequently, the *Indies* be vastly enriched at the Expence of *Europe*. At first Sight this seems to be very clear and plain, but closely considered, the Supposition is very fallacious; for, if the Powers at present interested in this Commerce, bring home as much of the *Indian* Goods and Manufactures as serve all *Europe*, then there is already as great an Exportation of Silver as could happen, if this Supposition took Place, and the only real Consequence that could happen from the Extension of this Commerce would be this, that the present Possessors of the *India* Trade would be

deprived of their Profits, and every Nation would import as much as suited itself, and no more. This, I say, will be the only Consequence, with respect to the Evil apprehended; but other Consequences there might, and would be many, but particularly these. The rising of such a Spirit of Trade would necessarily produce new Discoveries, inasmuch as it would beget new Maritime Powers. The *Southern-Indies* would be then explored, as well as the *East*, and those Countries that are now hid from us, would become as well known as the Coasts of *Malabar* and *Ceylon*. Various Nations would, in this Case, either find or force a Trade to *Japon*, and the Countries beyond it. The *Dutch East-India* Company would be obliged to open her secret Reservoirs, and indemnify herself by a Trade to *New-Guinea*, for the Losses sustained by other Nations interfering in her Trade to the *Indies*. And thus, instead of weakening, or impoverishing *Europe*, this very Thing will prove the Means of making her infinitely richer, greater, and more powerful than she now is, and might take away the Temptations which mislead her Monarchs into quarrelling and destroying each others Subjects about Provinces, scarce worthy of being compared to the mighty Empires, that by the Help of Commerce and Maritime Power, they might share among themselves.

It is one Thing to consider the Trade of a particular Nation, to argue in Favour of it, and to point out the Means of protecting or improving it, and quite another to launch out into such wide Enquiries as these. The former may, indeed, must, be conducted by the narrow and confined Notions of human Policy; for the Advantages of particular Societies must result from the Contrivances of particular Men. But when we quit these, and consider Things only in general, the Scene changes, the Prospect enlarges, and we find ourselves lost in the View of those prodigious Benefits, which the Wisdom and Goodness of an infinite Being has placed within the Reach and Capacities of human Kind. These, though we discern, it is impossible we should comprehend, and therefore we ought always to suspect such mean and narrow Principles as would persuade us, that right Measures may be pursued too far, or that the earnest Prosecution of Good should run us upon Evil.
