Opportunity of supplying myself with such Necessaries as we wanted; and therefore asked the Mate, If I could have any Planks or Nails out of the Wreck? He told me, that the Ships in the Road to Leeward had got every thing that could be saved out of her. But, when I came to enter the Road, all the Ships that were there, being thirteen in Number, opposed it, from a Supposition, that I was a Free-booter; but, being convinced, the Commandore, and the rest of the Masters, came on board, and made their Excuses, promising I should have whatever I wanted. But, after all, I was able to obtain nothing more than two or three Sheathing-boards, and a few Tons of Salt. A little before we arrived here, my Gunner, whose Name was *Turner Stevens*, very gravely proposed to me, and the rest of the Officers, cruising in the Red Sea: For, said he, there can be no harm in robbing those *Mahomedans*: The poor *Spaniards* they are good Christians, and it would, doubtless, be a Sin to injure them. Upon which, I immediately ordered him into Confinement. After this, he, in a very outrageous Manner, threatened to blow up the Ship. Therefore, for these, and many other Reasons, I discharged him, at his own Request, being very glad to see every body else as well pleased as myself at his Departure: I also left my chief Mate here, at his own Desire, having been guilty of several Misdemeanours; but particularly, the Night after we anchored, he had the Impudence to quarrel with Mr. *Brooks*, the first Lieutenant, and to fight with him; which caused no small Disturbance on board; for which I corrected him, and was very well satisfied to find him so inclinable to leave us, he having been a very troublesome Person. On the 18th, we weighed from the Island of *May*, and arrived the same Day in the Road of *Porto Praya*, on the Island of *St. Iago*, which is the chief of the *Cape de Verdes*, and had Abundance of fair Promises from the commanding Officer; which ended, however, in nothing more than getting a little Provisions: And here I sold our small Prize for 150 Dollars to the Governor (Captain *Betagh* affirms, the Purchase-money was but eighty Dollars); and finding, after repeated Experiments, that there was no sort of Dependence to be made on this *Portuguese* Officer, I resolved to quit this Island without Delay; the rather, because I had thought of another Place, where I had Hopes of obtaining whatever was necessary for our Passage into the South Seas. The Place I intended for was the Island of *St. Catharine's*, on the Coast of *Brazil*, in the Latitude of 20° 30' South; which, according to the Account given of it by Mr. *Frezier*, abounds with all the Necessaries of Life, and with such Conveniences especially as are requisite in long Voyages. On the 20th, we sailed from *St. Iago*, from whence we had a very bad Passage, being twenty-one Days before we crossed the Equinoctial: While we were between the two Trade-winds, we had generally little variable Breezes all round the Compass, sometimes great Squalls of Wind and Rain, with Thunder, Lightning, &c. and, in short, the most uncertain Weather imaginable. We were fifty-five Days in going to *St. Catharine's*, during which, little remarkable happened; except that, on the 4th of June, we made *Cape Frio*, bearing West seven Leagues distant at Noon, Latitude, per Observation, 23° 41' South; and, on the 5th in the Afternoon, we saw a Ship stemming with us, whom we spoke with. I ordered the five-oar'd Boat to be hoisted out, and sent Captain *Hatley* in her, to inquire what News on the Coast; and gave him Money to buy some Tobacco; for the *Sucefs* had got our Stock on board of that, as well as other Things, which created a West-country Famine among us. When *Hatley* returned, he told me, she was a *Portuguese* from *Rio Janeiro*, and bound to *Pernambuco*; that he could get no Tobacco; and had therefore laid out my Money in unnecessary Trifles, viz. China Cups and Plates, a little Hand-nest of Drawers, four or five Pieces of *China* Silks, Sweet-meats, Bananas, Plantains, and Pomplings, &c. I gave him to understand, that I was not at all pleased with him for squandering away my Money in so silly a Manner: He answered, "That he thought what he did was for the best; that he had laid out his own Money as well as mine, and, in his Opinion, to a good Advantage; and that, to his Knowledge, the Things he bought, would sell for double the Money

" Money they cost, at the next Port we were going to." However, I assured him, I did not like his Proceedings by any means: The Account which Captain *Belagb* gives of this Matter, is very different. He asserts, that Captain *Sbevocke* ordered Imperial Colours to be hoisted, and then obliged the *Portuguese* to bring to: Captain *Halley*, going aboard with a Boat's Crew, armed each Man with a Cut-las, and a Pair of Pistols, put the *Portuguese* Captain in such a Fright, that he not only sent all Sorts of Refreshments, but a dozen Pieces of Silk, flowered with Gold and Silver, worth about three Pounds a Yard, several Dozens of China Plates and Basons, a Japan Cabinet, and three hundred Moldores in hard Gold, ninety-six of which were afterwards found upon *Halley* when taken Prisoner by the *Spaniards* in the *West Indies*, where this Fact, having to strong an Appearance of Piracy, had like to have cost him his Life.

3. On the 23d of *June*, they anchored before the Island of *St. Catbarine*, where, says Captain *Sbevocke*, the first thing I did, was to send the Carpenter ashore, with all the People that could be useful to him, in felling of Trees and sawing them into Planks: The rest of the Crew were employed in other necessary Services: And, in the mean time, the Captain of the Island, and the rest of the Inhabitants, came off every Day with fresh Provisions; which was a very great Convenience, because it hindered our People from breaking in upon their Sea-stores, while they continued in this Harbour. I purchased likewise 21 Black Cattle, several Hogs, and 200 large salted Drum-fish; together with 150 Bushels of a sort of Meal which the *Portuguese* call *Farinio de Fao*, which is the Flour of Cafsador-root, as fine as our Oatmeal; a very hearty Food, and prepared with very little Trouble. I likewise bought 160 Bushels of Calavances, some with Money, at the Rate of a Dollar a Bushel, and some with Salt, exchanging one Bushel for another; adding to all this a very necessary Article; which was, a good Quantity of Tobacco. The Account given by Monsieur *Frezier*, of this Island, is very exact, except in two Particulars: The first is, that he takes no notice of an Island lying between that of *Gall*, and the Continent of *Brazil*; the next, a Reef of Rocks, which is a very material Omission. In all Descriptions of this Kind, Care should be taken to set down every thing plainly, so as to prevent any Doubts from arising in the Minds of such as are to make use of these Descriptions, especially with regard to Roads, Anchoring-places, and where Water is to be taken in. For want of Accuracy in this respect, such as have no other Guide but their Books and Charts, which was our Case, are liable to run into dangerous Errors, and such, perhaps, as admit of no Remedy; and, for this Reason, where-ever I venture upon any Descriptions, I shall be more careful to lay down what may be of Use, than to entertain the Reader with Matter of Amusement. But, to return from these Reflections, to that which occasioned them. In order to arrive at the Anchoring-place, you must continue to sail in the Chanel between *St. Catbarine's* and the Continent, till you come within or near two small Islands, which, as yet, have had no Name given them: Over-against the Northernmost of these is the Watering-place on *St. Catbarine's*, near to the Entrance of a small Salt-water Creek; opposite to which, you may come-to in six or seven Fathom very safely, the Bottom being a fine grey Sand. The Island of *St. Catbarine's* is about eight Leagues and an half in Length, but, in Breadth, nowhere exceeds two Leagues; and the Chanel, between it and the Continent, so narrow in one Part, as not to be much above a Quarter of a Mile in Breadth: It is all over covered with inaccessible Woods, so that, excepting the Plantations, there is not a clear Spot upon it. The least Island about it is in the same Manner, abounding with a great Variety of Trees, and Undergrowth with Brambles and Thorns, which hinder any Access; and the main Continent of *Brazil* may be justly termed a vast continued Wilderness. The *Sassafras*, so much esteemed in *Europe*, is so common there, that we laid in a good Quantity, instead of other Wood, for firing. They have there great Plenty of Oranges, both China and Seville, Lemons, Citrons, Limes, Bananas, Palm, Cabbage, Melons of all Sorts, and *Potatoes*. They have the Sugar-cane very large and good,

but make little or no Use of it for want of Utensils, so that the little Melasses and Rum they have they sell very dear. As to their Game, there is hardly any to be had, although the Woods are full of Parrots, which are good Eating, and are always seen to fly in Pairs, notwithstanding there may be some hundreds in a Flock, Maccaros, Cockatoos, Plovers, and a great Diversity of other Birds, of curious Colours, and peculiar Shapes, particularly one somewhat larger than a Thrush, which has a Spur in the Joint of each Wing. The Flamingoes are very often seen here in great Numbers; they are of a very fine Scarlet, and appear extremely beautiful when flying; they are about the Size of an Heron, and not unlike them in Shape. 'Tis quite otherwise with the Fishery; for, as they have abundance of several Sorts of good Fish, so they have almost every-where the best Conveniency for haling the Seyne. All their Bays and Creeks are very well stocked with Mulletts, large Rays, Grunsters, Cavallies, and Drum-fish, so called from the Noise they make, by which they are followed to Shore-water, and taken; some of which are twenty or thirty Pounds Weight, and their Scalls are almost as big as a Crown-piece; the *Portuguese* call them *Moroos*. You may go up three or four Miles into the salt-water Creek before-mentioned, to be near the Watering-place, where each Rock, Stone, and even the Roots of the Mangrove-trees, afford a delicious Sort of small green Oysters: Likewise, among the Rocks by the Sea-side, you find what is commonly called the Sea-egg; in its outward Form, it nearly resembles a Dockbur, excepting that they are generally three or four times as big, and are of a Sea-green or deep-purple Colour; but, in the Inside, they are divided in Partitions, like Oranges; each Partition contains a yellow Substance, which is eaten raw, and, in my Opinion, exceeds all the Shell-fish I ever tasted; they have Prawns of an extraordinary Size; and, in our Nets, we sometimes caught the Sea-horse. On the Savannas of *Brazil*, on the Continent, over-against the Southernmost Part of *St. Catbarine's*, they have great Numbers of Black Cattle, some of which we were sufficiently supplied with from thence, and which we bought at a very reasonable Price. The Character of the *Portuguese* of this Island is, that they are a Parcel of Banditti, which come for Refuge here from the neighbouring and more strictly govern'd Colonies of *Brazil*: *Emanuel Manja*, who was what they called the Captain of the Island, was still their Chief, as much as in *Frezier's* Time; however, for my Part, I own but do them the Justice to say, that they traded with me very honestly, and were very civil to every one, but those who gave them those gross Affronts hereafter mentioned. They enjoy the Blessings of a fertile Country, and a wholesome Air; and stand in need of no Necessaries, except Cloathing. They have Fire-arms sufficient for their Use; and, indeed, they have need of them very often; for they are greatly troubled with Tygers; but Use has made them easy under that Inconveniency; yet, in their Houses, they are obliged to keep a great many Dogs, to destroy those venomous Creatures, who oftentimes make a prodigious Havock amongst them. I have been told, that a Tyger has killed eight or ten Dogs in a Night; but, if it be Day-light, they seldom escape from them; for they then assist the Inhabitants a kind of Diversion, and an Opportunity to destroy them effectually. In short, nothing is more common, than to see the Prints of Tygers Paws upon the sandy Beach: As to their fine Dwelling-houses, mentioned by Monsieur *Frezier*, none of us could see any such things, nor have they any Place worthy the Name of a Town, nor any Fortification of any kind, except the Woods, which are a certain Retreat and Security against any Enemy that may attack them. As to the *Indians* of those Parts, I cannot say much of them, having never seen above two or three of them.

4. There happened, during the Stay we made at *St. Catbarine's*, some Passages worthy of Notice, of which therefore I shall give a concise Account: On *July 2*, we saw a large Ship at Anchor under *Parrots* Island, about five Miles below the Place where we lay; upon which, after taking the necessary Precautions for securing the Watering-place, and what we had ashore there, I sent my Launch, well manned and armed, under the Command of a Lieutenant

to know what he not to go on board and the Lieutenant merely one of our Squadron, commanding Officers and Sea Number of about the *Spanish* Servant, having of a Rupture being pleased with this with the Manner Lieutenant had board the Straggle that *M. la Jonque* next Day, he went with an Invitation was extremely we heard, that *Halley* 100 Moldores, and Boat's Crew, in mind into this as been found guilty tain such Proof as telt against him; in the South Seas vile Actions to utmost Danger of *Portuguese*; which prevent or punish, Favourite with my Captain, with several on board to dine my Boatfain, which, with the easily quelled: A quiet, made a very Madness of their B that, the next Day all the Blame upon alleging, that he was continually in of whom, he pret went, upon all Oct On the 15th, we fast Mouth; who, as for again: Which filled sions of her being c immediately; and weighed, and fell d next Morning, and Guns. Three *French* him; but I had tw man, in lieu of the *Jonquire* the Justice every respect, as be a Man of Honour. again under *French* men of *St. Mala*, c commanded by M Coasts of *Chili* and law coming in before This Gentleman about scurlous Manner, ca under a foreign Cro he being one of *Ma* South Seas was, to Interlopers: Which were not above two that escaped falling in ll legal Prizes. He Character; and after takes in his Book; believe, because I wa ter Design of deprivi

to know what she was; but with a strict Injunction to him not to go on board. About Noon, the Launch returned; and the Lieutenant reported, that she was the *Ruby*, formerly one of our Men of War, but now one of *Martinet's* Squadron, commanded by one M. *la Jonquiere*; that his Officers and Seamen were, most of them, *French*, to the Number of about 420; and that, tho' she was actually in the *Spanish* Service, yet they had not the least Design to molest us, having quitted the South Seas, upon a Report of a Rupture between *France* and *Spain*. I was very well pleased with this Information; but by no means satisfied with the Manner in which it had been obtained, because my Lieutenant had disobeyed my Orders, and had been on board the Stranger. It appeared, however, afterwards, that that M. *la Jonquiere* was a Man of strict Honour. The next Day, he sent me an Assurance of his good Intentions, with an Invitation to dine with him; which I accepted, and was extremely well entertained. About this time I first heard, that *Hatley* had plundered the *Portuguese* Captain of 100 Moidores, and had distributed Part of them among his Boat's Crew, in order to engage them to Secrecy. I examined into this as strictly as possible, with Intent, if he had been found guilty, to have delivered him up to the Captain of the *Portuguese* Island; but, not being able to obtain such Proof as was necessary, all I could do was to protest against him; which Protest I gave to Captain *Clipperton* in the South Seas. The same Man committed to many vile Actions on the Island, that our People were in the utmost Danger of their Lives, from the Repentment of the *Portuguese*; which ill Conduct of his I was neither able to prevent or punish, because he was now become the greatest Favourite with my mutinous Crew. On July 6. the *French* Captain, with several of his Officers and Passengers, came on board to dine with me. While they were in the Ship, my Boatwain, whose Name was *Hudson*, raised a Mutiny; which, with the Assistance of the *French* Gentlemen, was easily quelled: And M. *la Jonquiere*, when things were quiet, made a very handsome Discourse to them on the Madness of their Behaviour; which had good an Effect, that, the next Day, they appeared very submissive, and laid all the Blame upon the Boatwain; who excused himself, by alleging, that he was mad with Drink, beseeching me at the same time, that he might have Leave to go home in the *French* Ship; which I readily gave him, knowing him, by Experience, to be a very dangerous Fellow, and one who was continually incensing the People against their Officers, of whom, he pretended, there were too many; and was wont, upon all Occasions, to style them the Bloodsuckers. On the 15th, we saw a large Ship lying in to the Harbour's Mouth; who, as soon as they discovered us, turned out again: Which filled M. *la Jonquiere* with such Apprehensions of her being our Confort, that he resolved to be gone immediately; and accordingly, when Night came on, he weighed, and fell down the Harbour, and went to Sea the next Morning, and, at his Departure, saluted me with five Guns. Three *Frenchmen* belonging to me went away with him; but I had two *Frenchmen*, and one *Moravian* *Irishman*, in lieu of them. On the Whole, I must do M. *la Jonquiere* the Justice to say, that he behaved towards me, in every respect, as became a Gentleman, a good Officer, and a Man of Honour. On the 25th, the large Ship appeared again under *French* Colours. She was called the *Wife* *Solomon* of *St. Malo*, of forty Guns, and about 160 Men, commanded by M. *Duain* *Girard*, and bound to the Coasts of *Chili* and *Peru* to trade, and the same Ship we saw coming in before, and had spoken with the *Ruby* at Sea. This Gentleman abused M. *la Jonquiere* to me in the most scurrilous Manner, calling him Renegado, for having served under a foreign Crown against his own Countrymen; for he being one of *Martinet's* Squadron, their Business in the South Seas was, to sweep those Coasts clear of the *French* Interlopers: Which they did very effectually; for there were not above two or three, out of twelve or thirteen, that escaped falling into *Martinet's* Hands, who made them all legal Prizes. He likewise gave M. *Frezier* a very bad Character; and asserted, that there were many gross Mistakes in his Book; which, however, I did not absolutely believe, because I was a little suspicious of his having a sinister Design of depriving me of the Lights this Book affords:

NUMB. 14.

And indeed I found him, in every respect, a very subtle mercenary Man, full of Conceit and Vanity. I made, however, what Uses of him I could, by purchasing Cheefe, Butter, Nails, and other Necessaries; which made me conceive myself in a pretty good Capacity for finishing the Voyage, which was now upon my Hands. This Success abroad did not hinder our having great Storms at home; for my Crew, being informed, that the People on board the *Duke* and *Duchess* had been but indifferently used with respect to their Prize-money when they came home, resolved to secure themselves in time; and, by the Advice of one *Matthew Stewart*, who was chief Mate, drew up a Paper of Articles relating to Plunder, and sent me a Letter, signed by them, in which they insisted on its being made the Rule of our Voyage. I took some time to consider of this, which did not please them; and therefore they drew up a Letter of Attorney to this *Matthew Stewart*, and sent him to solicit an Answer, or rather my Consent, to their Demands; which, finding my Officers equally cold in advising or acting with me, I laboured to decline. But, after some few Days Murmuring and Uneasiness amongst themselves, and no Work going on, the Ship's Company came all on the Quarter-deck to me in a mutinous Manner, desiring to know my final Resolution, saying, that I knew theirs, which was that they would stand by; telling me, that they knew how to provide for themselves, without running such certain Hazards for uncertain Gain; and clamoured, in a most outrageous Manner, against Mr. *Godfrey*, who was our principal Agent, and against one of the chief of the Gentlemen Owners, saying, They had been well informed what a Pay-master he would make, if their Fortunes should fall into his Hands, with a thousand scurrilous Expressions; which astonished me. In short, finding them deaf to any thing I could urge against them, and so perversely obstinate in requiring me to comply with them, by signing their Articles; and considering the Prospect I had of meeting Captain *Clipperton* in the South Seas, when they must be again reduced, and made subject, to their first Articles, or, at least, under the same Restriction with those under his Command; and verily believing, that the Consequence of my Refusal, in this Particular, would be no less than their running away with my Ship, and following the old Gunner's Scheme (It must certainly have been something like; for I could not think of any other way they could have of providing for themselves, as they called it); therefore, upon these Considerations, both myself, and all my chief Officers, thought it more advisable, for the general Good, to sign, rather than to suffer them to proceed in such piratical Manner. As soon as they had gained their Point, they expressed a great Satisfaction; and promised me, that they would always be ready to hazard their Lives on any Undertaking, that I should think conducive to attain the Ends we were fitted out for. However, upon the Whole, tho' it may be called a desperate Remedy, when one was not certain what might be the Consequence of it, it ought to be looked on as applied to a desperate Disease, and as the only Means left to prevail on them to go on quietly in our Expedition; for the most favourable Conjecture that could be made, in case of my not condescending to their Request, was, that they would have certainly deserted, and have left me and a few others here, to have ended so promising an Undertaking in this Port. But to go on with our Voyage: August 3. there came in the *St. Francisco Xavier*, a *Portuguese* Man of War, of forty Guns, and 300 Men, from *Lisbon*, bound to *Macao* in *China*, commanded by Captain *Riviere*, a *Frenchman*. I made no doubt, but that Captain *Hatley's* Affair would be reported to this Gentleman by some of the Inhabitants; and therefore told him, that I expected he would go and vindicate himself to the *Portuguese* Captain, to prevent any Disturbances that might arise by the Account of his Mismanagement on board the *Portuguese*, which we met at Sea; to which he readily replied, that he would. Therefore, to give him an Opportunity of doing it, I sent a Compliment by him to M. *Riviere*, to whom he acquitted himself so well, as to give that Gentleman Satisfaction. On the 6th, three of my Men deserted; and, having Intelligence, that they had been seen at our Tents, I sent one of my Mates in the Pinnace after them, with Orders to go no farther than the Tents, but to return without Loss of Time;

3 F

for

for I was heaving up my Anchor, with Design to fall below the Road that Night, that I might be in Readiness the next Morning: But, missing them at the Place they were sent to, they thought fit to go up to the *Portuguese* Plantations, which were two Leagues farther. It being Midnight, the Inhabitants were apprehensive it was *Hatley*, who was come to take his Leave of them in the Manner he had threatened. However, they suffered them to go up to their Dwellings, to search for those they wanted; but my Men, finding a different Reception from what they used to meet with, suspected some Malice against them, and therefore made their Way to the Boat. In the mean time, some of the *Portuguese* had placed themselves in Ambuscade, to destroy them as they returned to the Water-side. No sooner had they got into the Boat, than they heard them rushing from the Woods, crying, *Kill the Dogs! kill all the English Dogs!* This Outcry was followed by a Volley of Small-arms; which wounded three, two through their Thighs, and another through the Arm. After this, they discharged several times; but did no further Damage. The Wounded sustained a great Loss of Blood, being long before they got aboard; for they were above three Leagues distant from the Ship. This Accident obliged me to weigh again the next Morning, and return into the Road, to try to punish those, who had been concerned in this Barbarity. With this View, I sent a Letter by *Hatley* to the Captain of the *Portuguese* Man of War; but, at his Entrance into the Ship, he was furiously assaulted by *Emanuel Manfa*, the Captain of the Island, crying out, That this was the Rogue, who had committed so many Insolences towards them; who had burnt one of their Houses, and had made it a common Practice to reproach him with the Name of *Querno*, i. e. Cuckold. Upon his Exclamations, the Ship's Company sided with *Manfa*, and mobbed *Hatley*, and would have certainly used both him, and his Boat's Crew, very severely, had not the Captain, and his Officers, with much Difficulty, prevented it; for they were exasperated to that outrageous Height, that it is more than likely they would have murdered him, had they not been hindered. The *Portuguese* Captain wrote me a Letter, to excuse what had happened, and to desire, that I would come aboard; which I did, and was very kindly entertained, receiving eleven Guns at parting. The next Morning, *M. la Riviere* came aboard, with his chief Officers, to breakfast with me, and fell a Tide's Work down the River with us. At his going away, I could give him but three Guns, having only four mounted, the rest being struck down into the Hold, to ease the Ship, and make her stiff when we came to Sea. We were now ready to depart, and I had made the Ship perfectly fit to go thro' the tempestuous Navigation we were to expect in sailing to the Southward. I had made our Stern as firm as possible, covering it intirely with thick Plank; and had only left two small Skutles to give Light into the great Cabin, and had furnished ourselves with Plank to build an Awning; but chose rather to set it up at Sea, than make a longer Stay here.

It is proper to take notice, that Captain *Betagh*, in his Account, gives a very different Turn to every one of these Facts; for he asserts, that Captain *la Jonquiere* could not speak one Word of *English*; and that they had not five People in the Ship who could speak *French*: So that, had he really harangued the Company of the *Speedwell*, his Eloquence had been all thrown away. He asserts, that all the Business of *Matthew Stewart* the Mate was the Captain's own Contrivance. He charges him likewise with breaking or reducing many of the Officers; denied, that he purchased a third Part of the Provisions he mentions; and positively affirms, that it was Lieutenant *Randal*, and not *Hatley*, who burnt the House on *St. Catharine's*, and thereby exasperated the *Portuguese* to such a Degree, that they would have been glad of any Opportunity to have cut off his People as they went ashore. But the worst of all is the Story he tells us of the Money, which purchased those Provisions at *St. Catharine's*, which, as it rests intirely on the Credit of *Mr. Betagh*, I shall give it you in his own Words, tho' I do not mean to perplex my Reader with many such Anecdotes: A *Creolian Spaniard*, says he, belonging to one of Captain *Jonquiere's* Lieutenants, having robbed his Master of 100 Quadruples, each of which is four Pistoles, absconded

into the Woods, designing to take his Passage with us round *Cape Horne* to his own Country again. *La Jonquiere*, and his Lieutenant, applied to *Sbelvocke*, desiring, that, in case he should be found, and the Money upon him, he would secure him, and take it from him, giving *Sbelvocke* Directions how to remit the Money to *France*, on his Arrival in *Europe*: All which he faithfully promised to perform. As soon as the *Ruby* sailed, the Fellow appeared to our Men at the Watering-place, with one Moiety of the Money in his Pocket, designing, I suppose, to pay for his Passage with it; but *Sbelvocke*, not content, ordered him to be seized to the Geers, where he was whipped and pickled; which was repeated every Monday for a Month. But the Fellow, who had run the Risk of hanging for it, and knew the Value of Money as well as the Captain, stood the Lash, without confessing he had any more: So he remained on board, and had his Passage. He attributes the Civilities of *M. la Jonquiere* to his having a great Sum of Money for the King on board a Ship, which was cruded likewise with twenty Priests; and, out of 400 Seamen, he had not sixty that were able to walk the Deck: Which was owing to his doubling *Cape Horne* in the Winter, and being furnished with but indifferent Provision, because the *Spaniards* know not either how to cure, or to pack it.

5. On August 9. we took our Departure from the Northernmost Point of *St. Catharine's* in the Latitude of 27° 20' South, 50° Longitude West from the *Lizard*. From thence to the 19th, we had showery foul Weather. I kept the Lead constantly going on the Coast of *Patagonia*, and met with regular Soundings; and, from the Latitude of 40° to that of 50° 30' South, we frequently saw Shoals of Seals and Penguins, and were constantly attended with Pintado-birds, about the Bignets of a Pigeon. The *French* call them *Damiers*, because their Feathers, being black and white, are disposed in such a Manner, as to make their Backs and Wings appear chequered, like a Draught-board. These were accompanied with Albitrosses, the largest sort of Sea-fowls, some of them extending their Wings twelve or thirteen Feet: And, whilst we had the River of *Plate* open, the Sea thereabouts was covered with prodigious Quantities of large Sea-weed, which often incommoded us, it being impossible to avoid running sometimes amongst it; which gave us much Trouble to clear ourselves of it, and at the same time deadened our Way: But, as we went Southward, we were freed from this Inconveniency; after which, we had, on the Surface of the Water, abundance of Things, like white Snakes. We took some of them up; but could not perceive there was any Life in them, nor were they formed into the Shape of any kind of Animal, being only a long Cylinder of a white sort of Jelly, and may probably be the Spawn of some of the large kind of Fish. As we advanced to the Southward, I observed, that most of my People's Stomachs increased; which was to be attributed to the Sharpness of the Cold, and was a Circumstance that had been observed before. This occasioned Disputes in all Quarters of the Ship, and even at my own Table, where Captain *Betagh* of the Marines insisted on an Augmentation of Provisions in such coarse Terms, and with such Circumstances of Disrespect, that I thought it necessary to confine him, till he wrote me a submissive Letter; and then I restored him. But, however, this Squabble occasioned my being obliged to grant the People an extraordinary Meal every Day, either of Flour or Calvances; which at once reduced our Stocks of Provisions, Wood, and Water, which, as I then foresaw, proved afterwards a great Inconveniency. But to return to our Voyage, and such Occurrences as were remarkable therein: I think, tho' it has not hitherto been noted, it is a Matter not altogether unworthy of our Observation and Reflection, that the Whales, Grampuses, and other Fish of a monstrous Bulk, are in such Numbers on the Coast of *Patagonia*, that they were really offensive to us very often: for they would come so close to us, as almost to stifle us with their Stench when they blew; and would be so near to us, that I have thought it impossible to escape striking upon them on every Scud of a Sea. I am a Stranger to the *Greenland* Fishery; therefore cannot say, whether a Trade might not be carried on here. I may venture to affirm, that it is a safer Navigation; and I am apt to believe, that there is a greater Certainty of succeeding. September

September 19th he discoloured a found twenty-six but did not depart At six the next day no Sight of Land had; which I did very near the Edge of this Bank-shoal, being like the Tops of Colours from what I had my Course for I approached the Coast Weather. On the Mountains of the intirely covered with us was at least eight but, before we could Mist returned: I then brought-to, easy Sail to the South very clear, when about five Leagues of *le Maire*. We were of the most desolate be conceived, several of Mountains one Snow. Before we we had not been the Currents, from the of the River of *Plata* with incredible Rapidity we had gained formerly flacked. We then Fathom, a rocky Opportunity to make We had a clear View uncomfortable Land with Snow to the very Likeness of an These Straights see Map of them, being Leagues wide, and Northern Tide rather which had brought in their Remarks, and all, to see how fast sailing we had a fresh the same time, we cannot judge this Hour. In short, we Hour's time. Upon there arose such a storm so lofty, that we all Poop-lanterns into the most violent Manner her Helm; but, as put through the Streets North-west, within the Morning, had a After we had got we and brought them all our Bows, and make had found it very cold now began to feel the Winds of themselves, but they were always which, continually be the Masts, and in manner, made our Sea accustomed to the think it tolerable We all; for it was coming together lying to the stocks of prodigious Now we began to sit of our Awning red without it. The

September 19th about Midnight, I perceived the Water to be discoloured all at once; whereupon we founded, and found twenty-six Fathom: Which done, I stood off to Sea; but did not deepen our Water in the running of five Leagues. At six the next Morning, we had thirty Fathom; but had no Sight of Land, tho' some were of Opinion, that they had; which I did not depend upon. This Bank must be very near the Entrance of the Straights of *Magellan*. On this Bank-hole, we saw great Numbers of Blubbers, appearing like the Tops of Umbrellas, curiously streaked with all sorts of Colours; which were a Species intirely different from what I had ever seen before. From hence I shaped my Course for the Straights of *le Maire*; and, as we approached the Coasts of *Terra del Fuego*, met with very foggy Weather. On the 23d, the Fog clearing up, we saw some Mountains of stupendous Height on *Terra del Fuego*, intirely covered with Snow. The nearest Point of Land to us was at least eight Leagues distant, bearing South-west; but, before we could make any further Discovery, the Mist returned: Therefore I stood off for some time, and then brought-to. At four the next Morning, I made an easy Sail to the South-eastward, and, at Day-light, it proved very clear; when I found I had fallen in with the Land about five Leagues to the North-westward of the Straights of *le Maire*. We had now a full, but melancholy Prospect of the most desolate Country (to all Appearance) that can be conceived, seeming to be no other than continued Chains of Mountains one behind another, perpetually hid by the Snow. Before we came on the Coast of *Terra del Fuego*, we had not been sensible of any Help or Hindrance by any Currents, from the Time that we had got to the Southward of the River of *Plate*; but, this Afternoon, we were hurried with incredible Rapidity into those Straights; and, just as we had gained somewhat more than Mid-passage, the Tide slack'd. We then founded, and had but twenty-seven Fathom, a rocky Bottom. At the same time, I took an Opportunity to make what Observation I could of the Place. We had a clear View of *Staten-land*, which yields a most uncomfortable Land-schape of a surprising Height, covered with Snow to the very Wath of the Sea, and bears more of the Likeness of an huge white Cloud, than of firm Land. These Straights seem to answer very well to Mr. *Frezier's* Map of them, being about seven Leagues through, six Leagues wide, and lie almost North and South; but the Northern Tide rushed upon us with a Violence equal to that which had brought us in. It prevented my making any further Remarks, and afforded Matter of Astonishment to us all, to see how fast we were driven out again, notwithstanding we had a fresh fair Gale at North-west, and when, at the same time, we went six Knots by the Log; by which I cannot judge this Tide to run less than ten Knots in an Hour. In short, we were quite carried out in about an Hour's time. Upon the shifting of the Tide to Windward, there arose such a short Sea, which, at the same time, was so lofty, that we alternately dippe'd our Bowprit and our Poop-lanterns into the Water. Our Ship laboured in the most violent Manner, and did not answer the Guidance of her Helm; but, at Midnight, the Tide shifted, and we put through the Straights, steering South, with a brisk Gale at North-west, without seeing the Land distinctly; and, in the Morning, had a very good Oiling to the Southward. After we had got well to Sea, we unlocked our Anchors, and brought them ast, and got in our Sprit-sail-yard, to ease our Bows, and make every thing as snug as possible. We had found it very cold before we came this Length; but now began to feel the Extremity of it. The bleak Westerly Winds of themselves would either be sufficiently piercing; but they were always attended either with Snow or Sleet, which, continually bearing on our Sails and Rigging, had eased the Masts, and every Rope, with Ice, and had, in a manner, made our Sails almost useless to us. So much were we accustom'd to the most severe Storms, that we used to think it tolerable Weather, if we could bear a reefed Main-sail; for it was common with us to be two or three Days together lying to under bare Poles, and exposed to the strokes of prodigious Seas, much larger than any I ever saw. Now we began to be thoroughly sensible of the Benefit of our Awning; and indeed we could have scarce lived without it. The Winds reigning thus tempestuously,

without Intermision, in the Western Board, we were driven to the Latitude of $61^{\circ} 30'$ South. Add to this, our Misfortune of having continual misty Weather, which laid us under hourly Apprehensions of running foul of Islands of Ice; but, thank God, we escap'd that Danger, though we had many Alarms by Fog banks, and other false Appearances. Notwithstanding we had the Days very long, yet it was very seldom that we could get a Sight of the Sun; so that we had but one Observation of the Variation in all this Passage, which was in the Latitude of $60^{\circ} 37'$ South, 5° to the Westward of the Straights of *le Maire*, where we found it $22^{\circ} 6'$ North-east. On *October 1*, at seven in the Evening, as they were furling the Main-sail, one *William Camell* cried out, That his Hands and Fingers were so benumbed, that he could not hold himself; but, before those that were next him could come to his Assistance, he fell down, and was drowned. The Cold is certainly much more insupportable in these, than in the same Latitudes to the Northward; for, altho' we were pretty much advanced in the Summer-season, and had the Days very long, yet we had continual Squalls of Sleet, Snow, and Rain; and the Heavens were perpetually hidden from us by gloomy Clouds. In short, one would think it impossible, that any living Creature could subsist in so rigid a Climate; and indeed we all observed, that we had not had the Sight of one Fish of any kind, since we were come to the Southward of the Straights of *le Maire*, nor one Sea-bird, except a disconsolate black Albitros, which accompanied us for several Days, hovering about us, as if it had lost itself; till Mr. *Hailey*, observing, in one of his melancholy Fits, that this Bird was always hovering near us, imagined, from its Colour, that it might be an ill Omen; and so, after some fruitless Attempts, at length shot the Albitros, not doubting that we should have a fair Wind after it. On the 22d about eight at Night, our Fore-top-mast was carried away; and we rigged another the next Morning. We kept creeping very slowly to the Northward, having, from that time we pass'd the Straights of *le Maire*, met with contrary Winds, and the most uncomfortable Weather; under which nothing could have supported us, but the Hopes of coming speedily into a warmer and better Climate.

6. We cheer'd our Spirits as well as we could with these Expectations till the 14th of *November* at Noon, when we first saw the Coast of *Chili*; and here again we found ourselves under very great Difficulties; for our tedious Passage, and extraordinary Consumption of Provisions, had reduced us to such an extreme Necessity of Water and Wood, as well as dry Food, that every body saw the Necessity of our repairing to some Place where, we might supply ourselves with all we wanted; but, where this Place was to be found, was the next Question, and that none of the easiest to resolve. I thought first of *Narborough's* Island; but, when we came thither, we found the Road so unsafe, that I was forced to fail for the Mouth of the River *St. Domingo*, on the Continent; at the Entrance of which, we found twenty-eight Fathom Water; but, as we advanced, we found it shoal from eighteen to less than five Fathom, as fast as a Man could heave the Lead: Being therefore unwilling to run too great a Risk in a Place so unfrequented, and being only a single Ship, I instantly stood out to Sea again, where, meeting with windy, rainy, and thick Weather, we were blown farther to the Northward than we designed. In this Distress, a *Frenchman* I had on board, whose Name was *Joseph de la Fontaine*, propos'd going to the Island of *Chiloe*, which lay a little to the Northward, and where he assur'd us we could not fail of meeting with whatever we wanted, there being, as he asserted, no Place in the South Seas capable of accommodating us so well in all respects. He told us farther, of his own Knowledge, having been there, that the Towns of *Clacao* and *Calibuco*, the first on the Island, and the second on the Continent, were rich Places; that the former was the usual Residence of the Governor; and that, at the latter, there was a wealthy College of Jesuits; and that there were considerable Magazines, which were always well-stocked with Provisions of all Kinds. At the same time that he acquainted me with this, he insinuated the same Account, with some Additions, into his Shipmates, who, with one Voice, concluded, that, if I pass'd

by this Island, our Expedition might probably end without doing any thing; since it was likely, that Captain *Cliperton* had already alarmed the Coast, the natural Consequence of which must be, an Embargo laid on all Ships trading to Leeward. Yet it was not without mature Deliberation, that I formed a Resolution of going to *Chiloe*, and could not but think myself happy in having so good a Prospect, in this Exigence, of preventing such Evils as might, in all Likelihood, have ensued. The chief Thing that encouraged me to make an Attempt at *Chiloe*, was to get such an additional Supply of Provisions, as should (in case the Coasts were already alarmed) enable us to retire to some obscure unfrequented Island, there to remain till the *Spaniards* should imagine we had abandoned their Seas, and then to come upon them again, where they had not the least Apprehensions of being molested by us. On the 30th, we entered the Chanel that divides the Island of *Chiloe*, and the Continent of *Chili*, and stood in for the Harbour, under *French* Colours, with Intent to surprize and attack the Towns of *Chacao* and *Calibuco*; but, when we came into the Chanel, our Pilot seemed to be as much a Stranger to it as myself; and the Wind beginning to blow fresh, and thick Weather coming on, I anchored at ten in the Morning in thirteen Fathom, between the Point of *Caralambo*, and a small Island called *Pedro Nunez*. Immediately after we had come to the Windward, the Tide made out with a prodigious Rapidity, which instantly caused a great Sea; and the Wind increasing, made the Chanel all about us appear like one continual Breach. In the mean time our Ship laid a great Strain on her Cable, which parted at two in the Afternoon. We could have no Hopes of recovering our Anchor, because the Buoy had been flayed and sunk an Hour or two before we had been thus forcibly set adrift. In short, I did not think it safe, or prudent, to hazard the Loss of another Anchor, where there was nothing to be looked for but Misfortunes; and therefore directly crossed the Chanel for the Island of *Chiloe*, in a boisterous Gale, thick rainy Weather, all surrounded with flaming Shofes, and in a manner lost in a Navigation unknown to any of us: When we had advanced within a Mile of *Chiloe*, we ranged along-shore to the Southward, in hopes to discover the Town of *Chacao*: We passed by two commodious Bays, but had nothing like a Town appearing near them; and at length came about a Point of Land, which is to be known by an high Rock, like a Pyramid, which almost joins to it. Having rounded this Point, I found myself intirely out of the Tide, and commodiously sheltered from all other Inconveniencies; and therefore anchored over-against a Cross which was fixed on the Northern Side of the Harbour, and had just Day-light enough to direct us to a Retreat from the Dangers we might have been exposed to amongst such Variety of violent Tides, unfrequented Chanels, and foul Weather. In order to execute my Design effectually, I sent the next Morning my second Lieutenant in my Pinnace, well manned and armed, to look for these two Towns; and, at the same time, Captain *Hatley* went in the Launch, to find out, if he could, a Watering-place, nor was it long before he returned with an *Indian*, who had shewn him as convenient a Place as he could desire, where he might at once get both Wood and Water without any great Trouble, even under the Command of our Cannon, and out of all Danger of being surprized; upon which I sent some Hands into the Launch with Casks immediately to be filled, and People to cut Wood, well armed, with an Officer of Marines, and ten Men, to be on the Guard. The *Indian* gave us Hopes of a sufficient Supply, but came in the Evening to my People who were ashore, to acquaint them, that the Country was forbidden to bring any thing to us. The Pinnace not being yet returned, this Information made me apprehend, that the Enemy had taken her, and had by that means learnt what we were. This gave me inexpreffible Concern, inasmuch as I knew not which way to act; for, being in an absolute State of Uncertainty, I was more at a Loss, and more confounded, than if I had been sure that the Pinnace had been in the Enemies Hands, for then there had been but one Way left for me to take; which was to have proceeded by Force, and to have been contented with what, by this means, we could have ob-

tained. On the 31 of *December*, about seven in the Evening, a *Spanish* Officer, in a Boat towed by eight *Indians*, came on board from the Governor, to know what we were. As I intended to pass upon him for a *French* Captain, who was well enough known in those Seas, at least by Name, I ordered, that none should appear upon Deck but such a spoke either *French* or *Spanish*, that this Officer might see or hear nothing which might give him just Grounds to suspect the Truth of that Account which I thought proper to give him. This Precaution was taken as soon as the *Spanish* Boat appeared in Sight: As it drew near, I hoisted *French* Colours; and, when the Officer came on board, I told him, that my Ship was the *St. Rose*, homeward-bound; that my Name was *Janis le Breton*; and that all the Business I had upon this Coast, was to intreat the Governor to spare me what Provisions he could with Convenience afford. The Officer heard me with great Civility, and seemed to yield an implicit Credit to all I said, staid on board all Night, and went off the next Morning, in all Appearance, very well pleased. On the 5th in the Morning, two Boats lay towards us, full of armed Men; who, after taking a View of us, went to a small Island in the Mouth of the Harbour; upon which, I ordered all my Men to put on their Grenadiers Caps, and spread themselves upon the Deck, in order to appear as terrible to them as possible. On the 6th, we saw a white Flag flying on Shore; on which I sent away my Launch, completely manned and armed, to the Place where the Flag was; but they found none to treat with them, nor any thing there except a Letter, which was made fast to the Flag-staff, and a Dozen of Hams lying close by. This Letter was from Don *Nicolas Salvo*, Governor of the Island, who first intimated, that he much doubted, whether the Ship was the *St. Rose*; next, he complained of the Behaviour of the People in the Pinnace; and, lastly, he desired me to quit the Coast. To this Letter I returned an Answer in the properest Terms I could devise. Early the next Morning the white Flag was hoisted again; and, on sending ashore, I obtained an Answer, couched in civil Terms indeed; but, at the same time, refusing me absolutely any Refreshments, which was what I wanted; and intimating, that I should restore the *Indians* taken by my Pinnace; when, in Fact, I knew less of the Pinnace than he did, and was really of Opinion, that he had the People in his Hands, of whom he pretended to complain. As I was now in Despair of ever seeing my People, which were absent in the Pinnace, and being as much at a Loss to know how or whereabouts *Chacao* was situated, as I was the first Day I came here, because we had no Draught of this Island that I could depend on, I determined to alter the Style of my Letters, and try what could be done by breaking with him, being determined, by some means or other, to make Amends for my Loss of Time in coming hither, by such a Recruit of Provisions as could be got, though even in the most hazardous Manner, since it was impossible I should proceed without it. In pursuance of this Resolution, I wrote him a very brisk Letter; in which I told him, that Provisions I was determined to have; by fair Means, if I could; but by other Means, if they could not be had that Way; adding, in order to strike a Terror, that it did not bring down all the Forces of the Country upon the Coast, it should not deter me from the Prosecution of my Design; and this Letter was conveyed in the same manner with the former. But, by this time, beginning to doubt, whether much was to be got by a Negotiation with the Governor, I the next Day dispatched my first Lieutenant, Mr. *Brocks*, in the Launch, with nine-and-twenty Men, completely armed, and ordered him to bring on board all the Provisions he could meet with. In a short time after he was gone, there came a Boat, with a Message from the Governor, signifying, that, if I would send an Officer to *Chacao*, he would treat with me. But, I gave him no Answer, that I would treat no-where except on board my own Ship; and farther gave him to understand, that it was now too late, since I had already dispatched eighty Men to take all they could find. In the Evening the Launch returned, and brought with her a large Piragua, which was taken, and were both laden with Sheep, Hogs, Eggs, Barley, and green Pease and Beans; and, soon after, the

Pinnace arrive that I had no time. The C through fever with great D did by makin feventy Leagu could have ut Numbers to when there wa *Spanish* Sergeant of Violence, a and as some of this Addition, shore, whom t The Officer had Reason for not Sight of the P and that in the in the Boat, to this strange M vourable Oppor sized, of reduc before it in fort Governor was been for a who Force of the Isl *Indians*, who w that there were) the Island; au nion; but both in their City, I where the poor mages; upon th to their Towns, what we wante which, in the Seq fell in coming h which Purpoe, I played in bringi Decks full of live and such Quantit *Indian* Corn, that I tation, we had a we brought from with the Effects of my Departure. I for my own Credit properly seconded any exact Descript as I had a very with it, I think it scription of it in my

7. *Chiloe* is the si of *Chili*; and, tho is considered by the and for which they when strange Ships they did not confi which, for this Par dinary; at which th has gone through th Place it is. The S South, is, from No Length, but in Br It is watered by few of useful Trees; as you are near it, whe Farms and Plantat stances from one a Grounds. Within contains more Island which are said to ha le. Among these, tents, so violent, th would advise all S to keep the Island-f Northernmost Point c at a pretty good I Numb. 14.

Pinnace arrived, with all their Crew; but were so terrified, that I had no Hopes of their being fit for Service in a little time. The Officer told me, that he had fought his Way through several Canoes of armed *Indians*, and that it was with great Difficulty he got clear of them; which he did by making his Passage round the Island, which was seventy Leagues. This nothing but an Excess of Terror could have urged them to, even if they had had such Numbers to encounter as they reported; but, especially, when there was but one Boat of unarmed *Indians*, with a *Spanish* Sergeant, who came off to them without the least Shew of Violence, as the Governor mentions in his first Letter, and as some of themselves afterwards confessed; but, with this Addition, that there were great Numbers of People on shore, whom they were apprehensive would follow them. The Officer had no Excuse, nor could he allege any better Reason for not returning on board as soon as he had got a Sight of the Town, but that the Tide hurried him away; and that in the Fright he had forgot, that he had a Grappling in the Boat, to come to with, till the Tide had shifted. By this strange Mismanagement of theirs, I missed a favourable Opportunity, which otherwise I should have seized, of reducing the Town of *Chacao*. Had I appeared before it in forty-eight Hours after my Arrival, when the Governor was totally unprovided, whereas now he had been for a whole Week together mustering the whole Force of the Island, and had brought together (as the *Indians*, who were on board my Pinnace, told me, that there were) near a thousand armed *Spaniards* on the Island; and my *Frenchman* was of the same Opinion; but both agreed, that, if I would let them alone in their City, I might do what I pleased in the Country, where the poor *Indians* must bear the Weight of all Damages; upon this, I laid aside all Thoughts of going to their Towns, under Hopes of furnishing myself with what we wanted from the *Indian* Plantations and Farms, which, in the Sequel, afforded us, what I proposed to myself in coming hither, a competent Stock of Provisions; to which Purpose, I kept one of my Boats continually employed in bringing Provisions. By the 16th, we had our Decks full of live Cattle, Poultry, and Hams in abundance; and such Quantities of Wheat, Barley, Potatoes, and *Indian* Corn, that I was satisfied: On a moderate Computation, we had added four Months Provisions to the Stock we brought from *England*; so that I was very well satisfied with the Effects of our Stay at *Chiloe*, and prepared for my Departure. I might certainly have done much more for my own Credit, and my Owners Profit, if I had been properly seconded by my Officers. As I do not know of any exact Description of this Island in our Language, and as I had a very good Opportunity of being acquainted with it, I think it my Duty therefore to give the best Description of it in my Power.

7. *Chiloe* is the first of the *Spanish* Possessions on the Coast of *Chili*; and, though it produces neither Silver nor Gold, is considered by them as a Place of very great Consequence; and for which they would be under much greater Concern, when strange Ships enter the Ports or Harbours of it, if they did not confide in the Number of its Inhabitants, which, for this Part of the World, is really very extraordinary; at which the Reader will the less wonder, when he has gone through this Description, and finds how fine a Place it is. The Body of this Island, lying in 42° 40' South, is, from North to South, about thirty Leagues in Length, but in Breadth not above six or seven Leagues. It is watered by several Rivers, and produces several kinds of useful Trees; and yields an agreeable Prospect when you are near it, when one sees the great Number of *Indians* Farms and Plantations, which are dispersed at small Distances from one another, among the Woods, on rising Grounds. Within it is formed an Archipelago, which contains more Islands than are well known; the least of which are said to have many Inhabitants, and abound in Cattle. Among these, there are very uncertain Tides and Currents, so violent, that it is by no means safe to venture near. I would advise all Strangers, who go in at the North-end, to keep the Inland-side of the Chanel aboard, giving the Northernmost Point of *Chiloe* a good Birth; that is, keeping at a pretty good Distance; which done, run along shore

to Southward, and you will pass by two Bays, which seem to be commodious; but hold your Way till you come to a Point, almost contiguous to which is a high Rock, somewhat like a Pyramid; pass between this Rock and a small high Island, which you will see near it, and run a little Way directly up the Harbour, which looks like the Entrance of a River, and you will have a safe Port to drop your Anchor; but, in going in, take care that you do not fall under five Fathom Water from the Shore; for the nearer you advance to the small Island before-mentioned, the less Water you meet with; therefore keep your Lead going, and be bold with the Shore towards the North Side of the Harbour; when you are in, you will have the greatest Depth, but the Southernmost Side is Shole. My Pilot carried me a contrary Way to what I have now directed; for he advised me to keep to the Main-land of *Chili*, which I did till I had got the Length of the Point of *Carchapo*, having to the Southward of me several small Islands, which you will see as soon as you have the Chanel open. This proved a frightful and unfortunate Passage to me, since the Loss of my Anchor here was one of the greatest Damages I could have sustained: In short, if any Ship should be by Necessity, or otherwise, driven to this Island, I have given the safest Instructions they can follow. The Soil is very fertile, and produces all sorts of our *European* Fruits and Grains, together with fine Pasture-lands, where-with they graze great Numbers of Cattle, particularly Sheep. The Air is wholesome, it being situate in a temperate Climate: But I think it reasonable to conclude, that their Winter Season is very rigid, the Island being bounded on the West by an immense Ocean, without any other Land to screen it from the cold moist Vapours, which are brought thither by the Violence of the tempestuous Westerly Winds, which, for the Generality, reign in these Latitudes; all which must render it an uncomfortable Place in the Winter Months; forasmuch as it is to be considered, that the same Parallels of Latitude to the Equator are much more cold, than they are to the Northward. They have abundance of very handsome middle-sized Horses, which are said to mount with great Dexterity; and have likewise a Creature, which they call *Guanaco*, or *Carneros del Tierra*, i. e. the Country Sheep; these partake very much of the Resemblance of a Camel, but are not near so large: They have long Necks, and I have seen of them between five and six Feet high; their Wool (which is no other than a fine sort of Hair) is extremely fine; they smell very rank, and move with a very slow majestic Pace, which hardly any Violence can make them quicken. Nevertheless, they are of great Service at the Mines in *Peru*, where they are employed in carrying the Ore, &c. Their Flesh is very coarse, which we experienced by some of them we had salted for our future Use: Besides these, they have *European* Sheep, and great Numbers of Hogs, but are not overstocked with Black Cattle. Here is no want of Fowl, both wild and tame: Of the wild there are several sorts peculiar to the Country; and, in particular, a sort of small Geese, which are found on the Banks of their Rivers, which not only afford an agreeable Prospect of their beautiful Whiteness, but are also of an excellent Taste: As to their tame Poultry, they are of the same kind with ours. The Inhabitants are almost, in all respects, the same with those on the main Continent of *Chili*. They are of a moderate Stature, of a deep olive-coloured Complexion, and have coarse shaggy black Hair, and some of them have Countenances by no means disagreeable: They seem to be naturally of a fierce warlike Disposition; but the common Oppressions of the *Spaniards*, and the Artifices of the Jesuits, who are Missioners in those Parts, have sufficiently curbed and broken their Spirits. Monsieur *Frezier* gives us an Account, that the *Indians*, inhabiting the Continent to the Southward of this Island, are called *Cbonos*; and that they go quite naked; and that, in the inland Part, there are a Race of Men, of an extraordinary Size, called *Cacabuts*; that these, being in Amity with the *Cbonos*, have sometimes come with them to the Dwellings of the *Spaniards* at *Chiloe*. He adds, he was credibly informed, by several who had been Eye-witnesses, that some were about nine or ten Feet high: But I had a Sight of two, one whereof was a *Cacique*, who came from the Southward of

the River *St. Domingo*, who seem'd to me to differ little or not at all from the *Cibilians* as to their Persons; as to their Habit, they are decently clad, in what they call *Poncho Montana*, and *Poulains*: The *Poncho* is a sort of square Carpet, with a Slit cut in the Middle of it, wide enough to slip over their Heads; so that it hangs upon their Shoulders, half of it falling before, and the other behind them; under this, they generally wear a short Doublet on their Heads. They have the *Montera*, which is a Cap made almost in the same manner with those of our Postillions; and on their Legs they sometimes have the *Poulains*, which are a sort of knit Buskins, without Feet to them; in short, their Appearance bears little or no Likeness to the Savage. Their Habitations are better than are commonly made use of by such a sort of People, being indifferently large, and firmly built with Plank, but have no Chimneys: Their Houses are very black and sooty within-side; they inclose some of their Grounds with Palisadoes. Notwithstanding a sufficient Plenty of every thing necessary for a comfortable Subsistence, the Inhabitants are debarred, in some measure, from tasting of the Fruits of their Labour, particularly in the Article of Bread; for, not having the Conveniencies for grinding and preparing their Wheat, they are put to the miserable Shift of making Cakes of the Sea-weeds, which, however, through Use, are esteemed by them, and were not disapproved of by several of my People, who eat some: Besides this, they have their Maize, or *Indian Corn*, which they manage in several manners to answer the End of Bread; and add to all this, their Abundance of Potatoes, and other Roots. As to Liquors, these *Indians* have not been contented with the Produce of Brooks and Springs, like many Nations of their Complexion; but have found out a Means of making a Liquor called *Chicha*, of the *Indian Corn*: In this they, doubtless, followed the Footsteps of their near Neighbours on the Continent of *Chili*; but their Drunken-bouts being generally the first Rise of Seditions and Revolts, the *Spaniards* take care to set Bounds to them in that Particular, as much as they possibly can. Their Arms are of several Sorts; those that have no *European* Weapons, retain their own, such as Pikes, Darts, &c. They are particularly dextrous in throwing a slinging Noose, at the End of a long Thong of Leather, wherewith they are sure of catching an Ox, Horse, &c. or any thing, even in its full Career; this they call a *Lays*. In short, by all I could see of these, and hear of the *Cibilians*, they seem to resemble them in almost every respect; and there can be no Wonder at that, when one considers their close Neighbourhood with the Mainland of *Chili*. They make use of small Drums, some of which I have seen; they are very small, and the Heads of them made with Goats-skins with their Hair on, and make a sad dull Sound. They carry on a small Woollen Manufacture, consisting in Carpets, and Necessaries for Apparel before-mentioned. They likewise export Cedar, both in Plank, and wrought in Boxes, Chests, Escritoires, &c. wherewith they supply all *Chili* and *Peru*. As to their *European* Trade, they have none; but the *Spaniard*, who came from the Governor, told me, that the People of this Island wonder'd, that trading-ships never put in here: For, said he, we have a great deal of Money amongst us; and have here a safe Port, free from the Dangers incurred by going to Leeward, where they are in perpetual Uneasiness for fear of the Men of War; whereas Business might be done, and all be over, before they could be advic'd of it at so great a Distance as *Lima*, could be there fitted out, and come so far to Windward. It has been observ'd of the *Indians* of *Chili*, that, in two Articles in their way of Living, they differ from all other Nations that have yet been heard of. The first is, that they have no Notion of a superior Being of any sort, and of consequence pay no Worship to any supreme Power: And the second is, that they are such Enemies to civil Society, that they never live together in Towns and Villages; so that the Country seems to be thinly inhabited, tho' it is very populous; for they live dispersed in Farms at a good Distance one from the other, every one having their Plantations; so that almost every Family enjoys the Necessaries of Life of their own manuring and feeding: However, though they are thus scattered, they are not wholly independent; for they have

all of them a Chief of their particular Tribe or Clan, who is called a *Cacique*; and his Dwelling is conveniently situated amongst them, for the more speedy summoning them together on Affairs of Importance; which he does by sounding a sort of Horn, which heard by his Vassals, they repair to him without Delay. The *Cacique* commands them in War, &c. and has an absolute Power of executing Justice amongst his Subjects, who are likewise his Relations, he being only the Head of a Family, all the inferior Branches of which adhere to the Interest, and obey the Commands of their Lord, whose Authority is hereditary. In all these respects, the Inhabitants of this Island resemble those of the neighbouring Part of the Continent, excepting that their *Caciques* are, in some measure, stript of their real Authority by the Tyranny of the *Spaniards*; who, having these People in a more secure Subjection than those on the Continent, keep them in the most laborious Slavery by their Menaces, and hard Usage; whilst the Missionaries blind them with the superstitious Dust of an imperfect Conversion to Christianity, of which none of them know any more, than that they were baptized, without learning for what End; so that their Devotion consists of mere Idolatry to the Image of the Cross, or any of the Saints. The *Spanish* Clergy take no Pains to undeceive them; but probably think they have gain'd their Ends, if their Ignorance contribute towards the making them contented under the Rigour of the *Spanish* Government. Thus the common Sort being deluded, and the *Caciques* having changed their lawful Prerogative for the vain Ostentation of being allowed to wear a Silver-headed Cane, which puts them upon the Rank of the *Spanish* Captains in outward Appearance, they are become a miserable Prey to the Will of their despotic Masters. The *Spaniards*, notwithstanding all this, have sometimes stretch'd their Administration to so great a Height, that the *Indians* have been oblig'd to defend themselves, and have begun to think, that Death is preferable to their Slavery; for Mr. *Frezier*, in his Voyage, has given us an Account of what happened at the Time that he was at the South Seas, wherein the *Indians* killed fourteen or fifteen of the *Spaniards*, who took a sufficient Revenge; for, in Return, they massacred 200 of them, going into the very Islands to destroy them; which struck such a Terror to those poor People, that they were oblig'd to sit down quietly under their Misfortune: And, though the *Spaniards* are but badly equipped with Arms, they have never dar'd to take such Advantages over their Oppressor as they daily might, since the Number of Whites is but inconsiderable, when compar'd with the Multitude of the Natives; and to which they might be encouraged by the indolent Neglect of the *Spaniards*, who suffer what little fortified Places they have in this Island to run to Ruin; so that any *European* Power might, with Ease, possess themselves of it; which might be of the greatest Consequence, since it is capable of affording a Subsistence to a very numerous Colony, which might be of unpeakable Detriment to the Inhabitants of *Chili* and *Peru*. In regard to ourselves, of what Benefit (in case of a War with the Crown of *Spain*) the taking of this Island might be, I leave to more penetrating Judgments to consider; and shall only add, that the Artifices of the Missionaries are the chief Security of the *Spaniards* in this Place, as well as of most of the rest of their Settlements in *South America*. Their Embarkations are particular in this, that, for want of Nails, and other Utensils, they sew their Boats together very artificially with Oziers: They are compos'd of three Pieces, viz. the Sides and the Bottom, each of which is an intire Piece of Timber; and row in the same manner that we do, with more or fewer Oars, according to their Bigness. Our Business being now over, I propos'd to sail from hence for the Island of *Juan Fernandez*.

It is now requisite to take notice of what Captain *Frezier* says, as to some of the Points mentioned in the foregoing Part of the Relation: He admits, that there were Differences between him and Captain *Shelvocke* on the Subject of eating; and he gives this Reason for it, that *Shelvocke* drank hard, and had a very thin Stomach; whereas he himself think other People, who had a better, were downward Gluttons: And, upon this falling-out, he was order'd to Confinement, and such a Confinement, as might very easily

induce him to take any Step, that was thought necessary to procure his Enlargement; for he was laid at his full Length on the Arms-chest at the Bulk-head in the Steerage, and confined just there; and, what with the Height of the Chest, and the Bedding, the upper Deck was so very close, he had hardly Room to lie extended upon it, there being no Possibility of sitting up; so that his Victuals were brought him there: And, when he offered to make Water upon Deck, the Centinel was always close at his Heels, with a drawn Sword. And thus he continued twelve or fourteen Days, nobody daring to speak to him, except Mr. *Kendric*, who, before this, was also turned out of the Mess. Upon this Occasion it was, that he wrote a Letter to Captain *Shelvocke*; but he asserts, that it was not the Letter that the Captain has produced in his Book; and avers, if such a Letter could have been produced, as it might have been, had the Copy in the Book been printed from the Original, he would acknowledge every Title of the Charge, and submit to be thought as bad a Man by the Reader, as the Captain was pleased to represent him; which, to me, I own, appears a very fair Proposal. As to the Scheme of going to *Chiloe*, he represents it as the Captain's own, calculated purely to avoid meeting Mr. *Clipperton* at *Juan Fernandez*; and asserts, that the People, generally speaking, were against it. He says, that this was a Port known to nobody; and that its being unfrequented was a Proof, that it was a dangerous and difficult Navigation; which was often represented to Captain *Shelvocke*, but to no manner of Purpose. All these Difficulties and Dangers they experienced in the End; for they were no sooner entered, but they found themselves surrounded with terrible Breakers; for such were the Uncertainty and Rapidity of the several Tides or Currents meeting there, as at once to astonish and baffle the most judicious Mariner to describe them. They were first taken under the Bow with a Current setting from the Lee of one Island, then immediately under the Quarter with another; so that the Ship could not answer her Helm. At last, the most powerful of these Currents horsed her away on the West Shore into four Fathom and an half, where the Torrent ran with such Impetuosity, and the Ground was so foul, that the Sand appeared on the Surface from the Bottom; all which together afforded a dismal Prospect. However, the Anchor brought her up, which if they had not let go when they did, every Man must inevitably have perished; for, had she touched the Bottom, there she must, in a Moment, have broken to Pieces, or overset by the Strength of the Current. He ridicules the whole Affair of changing the Ship's Name, and assuming the *French* Captain's, as a very poor Contrivance, which had little or no Effect; for the *Spanish* Governor was not so easily cheated, but had the worst Opinion of the Person he dealt with, for endeavouring thus to impose upon him. And, as to the sending Men ashore to exercise, he represents that as very little better than a formal Design of throwing them into the Hands of the *Spaniards*. As to the Project of seizing *Chiloe*, he will not allow it any kind of Merit, because of the dangerous going in, which must expose Ships of any Size to the utmost peril. Such is the Commentary of *Betagh* upon this Part of the Voyage. Let us now return to the Text of Captain *Shelvocke*, and the Prosecution of the Voyage from this Island of *Chiloe* to the Bay of *Conception*; after which we shall hear Captain *Betagh* again.

8. I was determined, says he, to go from hence to the Island of *Juan Fernandez*, as my Instructions directed; and should certainly have done so, but that the Ship's Company were unluckily possessed with an Opinion of mighty Advantages that might be obtained by a short Trip to the Bay of *Conception*. This was put into their Heads by the *Frenchman*, who persuaded us to go to *Chiloe*; and, tho' that Expedition was not over-advantageous, yet, as it failed either through the Faults of our own People, than from any Mistakes in the *Frenchman's* Information, which, on the whole, had answered tolerably well, the Crew were still inclined to credit him; a thing natural enough in a strange Part of the World, where we knew not well what Course to take, and where he, who had never so little more Knowledge than the rest, was sure to be esteemed much wiser than he really was. But the Secret, by which this Man captivated our Company to such a Degree, was this: He flat-

tered them with the Hopes of making their Fortunes in a very short Time, and at a very small Hazard. He premised, that he had been there before, and therefore knew what he said; and next laid it down as a Fact absolutely certain, and not all to be controverted or called in question, that there were always five or six Sail of Ships in the Road of *Conception*, and others daily coming in and going out; that they had very often, both Ways, considerable Sums of Money and Plate, and other valuable Things, on board; that, tho' they were large Ships, they had little or no Force; and that there was no Fortification to protect them, so that, if there were twenty Sail, we could not meet any Opposition in the taking them all; that their Cargo consisted chiefly of Corn, Wine, Brandy, Flour, Bread, jerked Beef; that the Ships bound to *Conception*, always bring Money with them to purchase their Cargoes, besides the Booty that might be got from rich trading Passengers, who carry on a considerable Commerce between this Port and *Buenos Ayres* over Land; and that we could not fail of having the Ships ransomed, that should fall into our Hands, at very great Rates; inasmuch that, if we could but get into *Conception* before they had any Knowledge of us, it was past all Doubt, that we should make our Fortunes. He therefore advised them to endeavour to prevail upon me to make the best of my Way thither: For, tho' it was certain, the Governor of *Chiloe* would send our Defetter to *Conception* with all imaginable Dispatch; and that, since it would be two or three Months Journey by Land, he would infallibly convey him by Sea in some small Vessel; and that, if they arrived at *Conception* before us, the rest of the Coast would, in a very small time, be universally alarmed; by which means we should not have an Opportunity left of meeting with any thing, till they had imagined, that we had abandoned their Seas; as every-body, in those Cases, are fond of delivering their Sentiments, and as it is impossible to keep a Ship's Company in so much Awe, in so remote a Part, as in short Voyages near home, every one of my Ship's Company, who could say any thing at this Juncture, did not fail to speak their Minds somewhat insolently. One *William Morbuz*, who was one of those I had out of the *Ruby*, and had been in these Seas several Years, took upon him to tell me, that it could not signify much, if we arrived two or three Days sooner or later at *Juan Fernandez*; that I was a Stranger here; but that the *Frenchman* and himself were so well acquainted, that every body hoped I would be advised, and go to *Conception*: And begged I would not put a mere Punctilio of Orders in the Balance against such a Prospect, nay, Certainty of Success, if we were so happy as to arrive there in time. In short, they all together assured me, that they had the Proprietors Interest in View, as much as their own; and that they would perish, before they would injure them in any respect: But at the same time told me, that, if I had not Success in my Proceedings, nobody could be blamed, but myself; intreating me not to lose this Opportunity, wherein they were resolved to stand by me, and the Gentlemen in *England*, with all Fidelity. In our Way to *Conception*, we made the Islands of *Mocho* and *St. Mary* on December 23. and, the same Evening, arrived in the Bay of *Conception*; but could not be certain, that we saw any Ship in the Road: And therefore I immediately gave Orders to man and arm our Boats, to go up in the Night to surprise whatever Vessels might be there; with strict Orders, if they found any thing too strong for them, to make it their Business to prevent the Ships sending any thing ashore, till the Wind permitted me to work up to them; which I endeavoured all Night long, but to very little Purpose: For, at Day-light, I could discern nothing above us. Captain *Hatley* returned about Noon in the Pinnace, and informed me, that he had taken a Ship called the *Salidad d' Auday*, which was the only one there, that was about 150 Tons Burden; and, being lately come from *Baldovia*, had nothing on board, except a few Cedar-planks; that there was nobody on board of her except the Boatswain, an old Negro, and two *Indian* Boys; and that he had left Mr. *Brooks* the first Lieutenant in Possession of her, with Orders to bring her down the first Opportunity. In his Return to my Ship, he took a small Vessel of about twenty-five Tons, near the Island *Quiriquice*, (which lies in the Harbour) where she had been to take in

Peas, Cherries, and other Fruits, for the *Conception* Market. This Vessel belonged to a Priest, who had been gathering Fruits, and was now made a Prisoner in her; for, having the Curiosity to advance too near my People, in order to discover what they were, he and his Cargo unluckily fell into their Hands, together with four or five *Indians*. Immediately after they had taken this, there was another small Boat, which came in between the Island of *Quriquine* and *Talgauana*. I perceived by my Glafs, that she passed within less than Pistol-shot of my Pinnace, and yet Captain *Hatley* did not engage her; for which he made no other Excuse when he came aboard, but that he did not mind her, tho' his Boat's Crew all agreed, that she was full of Men. On the 26th about Noon, Mr. *Brooks* brought down the Ship they had taken, and anchored about half a Mile short of us. The Boatwain of her had not been aboard of us above two Hours, before he gave an Information of a Vessel laden with Wine, Brandy, and other valuable Things, bound to the Island of *Chiloe*, lying at Anchor in the Bay of *Herradura*, about two Leagues to the Northward of us. Upon this, I ordered Mr. *Randall*, second Lieutenant, with the Boatwain of the *Salidad*, with twenty-five Men, to go thither in the *Mercury*, as we called our Fruit Bark, with positive Orders not to set a Foot on Shore, or make any hazardous Attempt. But, the next Evening, they returned with a dismal Story; viz. that they went into the Bay, and found the Vessel haled dry ashore; upon which the Officer ordered his People to land, and bring away what they could out of her, whilst himself, and three or four more, kept the Bark aloft. When they came up to her, they found her empty; but, at the same time, seeing a small House just by the Vessel, they began to be of Opinion, that the Cargo was lodged there: Upon which, the Officer immediately ordered them up; so away went the poor Fellows, with nobody at the Head of them, without any Regard to Order, every one endeavouring to be foremost: But their Career was soon stopped; for they had no sooner got upon the Bank, than they discovered the Enemy rushing furiously upon them. Some of our Seamen were of Opinion, that they might have made a safe Retreat, if they had not been allied in the very strange Manner in which they were attacked, by having a Number of Horses come up without Riders; but, as soon as they heard those behind them, my People blistered themselves, in order to make the best of their Way to the *Mercury*; by which means, all, except five, escaped; and these five were taken after they were gotten into Shore-water. It was very fortunate for them, that, by some Accident, their Vessel was aground; for otherwise they must have been all cut off. As it was, the *Spaniards* thought fit to retire as soon as they were within Musquet-shot, and our People then found it no difficult matter to get their Vessel afloat again. The Water being now very low, they were obliged, as they went out, to keep near to a Point of Land, from whence the *Spaniards*, under the Shelter of the Wood, galled them; the Wind being fair, they soon passed it, and, being all close in the Bottom of the Bark, they had only one Man wounded, who was shot through the Thigh. They told me, they perfectly saw the Manner how the *Spaniards* came down upon them; viz. that they were preceded by twenty or more Horses abreast, linked to each other, these were two deep; then came the Enemy mounted, and lying upon their Horses Necks, driving the others along, and were not once seen to sit upright in their Saddles, except when there was no Danger, or to fire their Musquets. When they had got near my People, they threw out Lines, with Nooses at the End of them, to catch them; and, accordingly, *James Daniel*, one of my Foremast-men, was snared, after he had run a good Way into the Water, but was dragged out again after the Rate of ten Knots an Hour. In short, they are universally dextrous at this; for I have seen a *Spaniard* bring a Man up by the Foot as he ran along the Deck; and, they say, they are sure of any thing they sling at, at the Distance of several Fathoms. These Misfortunes and Disappointments made my Crew extremely uneasy, and might have had very bad Consequences, if, when we least expected it, we had not been agreeably surpris'd by the Sight of a large Ship, which we saw coming about to the Northernmost Point of the Island of *Quriquine*. It being

almost dark, she could not perceive what we were, so that they stood in without Fear or Apprehension. This sudden Appearance put us into no Hurry; for we were always clear, and ready for Action; our Launch was immediately manned to intercept their going ashore, or going to Sea again, and my Cable was ready to slip, if there had been a Necessity for it. As soon as she had approached us near enough, I hailed her; to which they returning no Answer, I fired into her; which was no sooner done, than I ordered the Launch to put off directly: The Enemy, upon this, shortened Sail, but kept fast their Anchor; and, just as I was going to slip my Cable, the Launch came up with her, and gave her a Volley of Small-arms, and they instantly came to, and called for Quarter. It was about two o'Clock in the Morning before my Boat returned to inform me of any News of her, when they brought with them the *Spanish* Captain, and some of the chief Passengers, who acquainted me, that their Ship was called the *St. Fermin*; that she belonged to, and came last from *Callao*; that she was about 300 Tons Burden, and had a very small Cargo on board, which consisted of Sugar, Melasses, Rice, coarse *French* Linen, and some Cloths and Bays of *Quito*, together with a small Quantity of Chocolate, and about 5 or 6000 Dollars in Money and wrought Plate. I sent Mr. *Hendry*, the Owners Agent, on board of her in the *Mercury*, to inspect her Lading, and to order every thing he could find valuable out of her; and the Ship's Company sent their Agent likewise: In the Afternoon they returned, and brought all the Bales, Boxes, Chests, Portmanteaus, &c. that were in her; and also all the Rice, with a large Quantity of Sugar, Melasses, and Chocolate, and about 7000 Weight of very good Rusk, with all the other Valuables and Stores. Don *Francisco Iarragan*, who was the Captain, intreated the Liberty to ransom this Ship; which I willingly consented to, and gave him Leave to go in his own Launch to *Conception*, with a Merchant, who was likewise a Prisoner, to raise the Money: In the meantime we were busy'd in searching our Vessels, that nothing might be concealed; and every body was strictly looked after, by People appointed for that Purpose, who examined the Pockets, &c. of all such who at any time came from on board the *St. Fermin*; and our Carpenter was employed in making a slight Deck over the *Mercury*, it being probable, that she would be of great Use in coasting along shore. On the 30th, a Boat came aboard from the Governor, with a Flag of Truce, and an Officer, who acquainted us, that two of the People taken in the last Skirmish were alive, but much wounded; he likewise brought a Present of seven Jars of very good Wine, and a Letter from the Governor Don *Gabriel Cano*, in which he demanded a Sight of my Commission, the sending thence *Joseph de la Fontaine*, who had been Servant to Captain *la Jonquire's* Mate, and some other Things, that I thought unreasonable; with a Promise, that, in case I complied with them, he would enter into a Treaty. To cut Matters short, I resolv'd to send Captain *Betagh* to the Governor, in order to treat by Word of Mouth. In the mean time I received other Messages, and other Letters, from the Governor; and, at last, a formal Treaty was begun, which I demanded 16,000 Dollars for the Ransom of the *St. Fermin* alone, and they offer'd 12,000 for both the Ships and Bark: And, while Things remained in this Situation, the Governor employ'd all his Skill and Care to draw together such a Body of Men, as might not only fire him from any Apprehensions of our attempting any thing ashore, but likewise enable him to make some Attempt upon us; so that, finding all his *Spanish* Punéto's to be an entrap and abuse us, I first set Fire to the *Salidad*; and then, having first given them Time to comply with the Proposal I made, I next set Fire to the *St. Fermin*, as I had threaten'd to do, having taken care beforehand to be in Condition to quit the Bay of *Conception* immediately: Captain *Betagh*, in his Remarks, asserts positively, that *Captain Hatley* chased the Bark, which Captain *St. Fermin* was suffered to escape, till he was within the Reach of the *Mercury's* Guns upon their Platform. He informs us likewise, that the Cargo of the *St. Fermin* was worth about 100,000 Dollars, and that the five Men out of the *Mercury* were attempting to take an empty Ship.

9. On the 7th Captain, to Juan the Sea was perfect was occasioned by which, for any of next Day Mr. *Steele* count of the Prize for the Owners, to Plunder was sold a extravagant Prize that whatever was on board upon *Frederick*. This might have had not referred *ibarine's*, telling enough in these, upon which they acquiesced in *Betagh's* Motion. calculated, they deride: According Plunder, after the in Money or Goodness, we saw the little Body of it bore West Meridian Distance of 12° 30' North, per Amplitude standing off and on fishing, who, not that *Clipperton* had stop her Leaks, with Fish, of which we were At length, going off, thing that might in some of my Men as was the Name of *Cut* out under it, upon was agreed on, by Actions being thus it was evident, he never party, or join with confirmed in the *Conception* directly made the best of the additional Stock Condition as to Proceed On the 21st, having went along-shore, the *Maries*, with eight *Mercury's* Crew; and then in for the Land, which being discovered from Officer have a Copy necessary Instructions of the land of *Copriapo*, to be *Bustic's* was to look it is called *Gallera*; near and from whence the Quantities, in small Vantages, that, being they could have no Self in the Ship came in and lay-to to the So perceived by the Porting in this Posture of athwart the Mouth of space to fish between after saw a Sail crowding to be too big for the 7 Officer told me, that could see no Shipping, sensible of his Error, which was about fix Miles, ordered him to be ready The next Morning, as we returned with not taken on the Island *Mercury* had looked and saw nothing; but, and to come off to the bottom of the Bay, till Numb. XV.

9. On the 7th of January 1720. I failed, says the Captain, to Juan Fernandez; and, on the 8th, we observed the Sea was perfectly red; the Spaniards say, that this was occasioned by the Spawn of Camarones, or Prawns; which, for any thing I know, may be a Mistake. The next Day Mr. Steward, the Ship's Agent, took an Account of the Prize; and I ordered Mr. Hendrie, the Agent for the Owners, to take an Account on their Behalf. The Plunder was sold at the Mast, by the Ship's Agent, at very extravagant Prices. Captain *Belagb* insisted positively, that whatever was not entered in Bills of Lading, or put on board upon Freight, ought to be considered as Plunder. This might have occasioned very bad Consequences, if I had not referred them to their own Articles at *St. Catharine's*, telling them plainly, that they had gone far enough in these, and that they should not exceed them; upon which they acquiesced, not a Soul seconding Captain *Belagb's* Motion. The Account being taken, and Shares calculated, they demanded a Division; which I could not refuse: Accordingly each Man had, for Prize-money and Plunder, after the Rate of ten Pieces of Eight per Share, in Money or Goods. On the 11th, at six in the Morning, we saw the Island of Juan Fernandez; at Noon, the Body of it bore West South-west, distant five Leagues; Meridian Distance from *Conception* 275 Miles West; Variation, per Amplitude, 6° 23' East: To the 15th, the Ship standing off and on the Shore for my Boats, which were a fishing, who, not having hitherto discovered any Marks, that *Clipperton* had been here, sent the *Mercury* ashore to stop her Leaks, while the Boats we employed in catching Fish, of which we salted as many as filled five Puncheons. At length, going on shore to make a nicer Search for any thing that might inform us of some News of my Comfort, some of my Men accidentally saw the *World Magee*, which was the Name of *Clipperton's* Surgeon, and Captain *John* cut out under it, upon a Tree, but no Directions left, as was agreed on, by him, in his Instructions to me: His Actions being thus grossly repugnant to his Instructions, it was evident, he never meant I should ever keep him Company, or join with him again. However, being by this confirmed in the Certainty of his Arrival in those Parts, I directly made the best of my Way from hence, being, with the additional Stock of Fish caught here, in a pretty good Condition as to Provisions, and having all our Casks filled. On the 21st, having a Design to look into *Copiapo*, as I went along-shore, I sent Mr. *Dodd*, second Lieutenant of Marines, with eight Men, as a Reinforcement to the *Mercury's* Crew; and the next Evening they left us, steering in for the Land, whilst I kept the Offing, to prevent our being discovered from the Shore. I took care to let the Officer have a Copy of my Commission, together with all necessary Instructions; and appointed the *Moro*, or Head-land of *Copiapo*, to be our Place of meeting again: Their Business was to look into the Harbour of that Place, which is called *Caldera*; near to which there are some Gold Mines, and from whence they export that Metal in considerable Quantities, in small Vessels; and the *Mercury* had this Advantage, that, being built in the Manner of the Country, they could have no Suspicion of her. The next Day myself in the Ship came in Sight of the Head-land of *Copiapo*, and lay-to to the Southward of it, that I might not be perceived by the Port, which lies to the Northward. Lying in this Posture over-against a small Island, which lies athwart the Mouth of the River *Copiapo*, I sent the Pinnace to fish between the Isle and the Continent, and soon after saw a Sail crowding towards us; she at first appeared to be too big for the *Mercury*, but proved the same. The Officer told me, that he had looked into the Port, but could see no Shipping there; upon which I made him sensible of his Error, and sent him to the right Place, which was about six Leagues to the Northward of us; and ordered him to be ready to look into *Caldera* by Day-light. The next Morning, as soon as they were gone, the Pinnace returned with nothing but a few Penguins, which they had taken on the Island, which abounds with them; the *Mercury* had looked into the *Caldera* the next Morning, and saw nothing; but, instead of making use of the Land-ward to come off to me, they kept along-shore, in the Bottom of the Bay, till the Sea-breeze came in so strong,

that they were very near losing their Vessel on a Lee-shore, and could not come to me till the Morning; by which they hindered me almost a whole Day and Night's sailing, which was more than our Circumstances could dispense with. On the 27th, I sent Mr. *Brooks*, the first Lieutenant, and Mr. *Rainer*, first Lieutenant of Marines, to relieve Mr. *Randal*, and Mr. *Dodd*, in the *Mercury*. I had fitted her up with a Gang of Oars; and, upon Trial, they gained Way, after the Rate of three Knots, which might render her extremely beneficial and useful to us in a Calm. February 5. I dispatched Mr. *Brooks* a-head, to discover if there were any Shipping at *Arica*, in the Latitude of 18° 20' South. The next Day, at one in the Afternoon, (after having ranged along-shore by the Breaks of *Pisagua*, *Camarones*, and *Vitor*) I had a Sight of the Head-land of *Arica*, and the Island of *Guano*, with a Ship at Anchor on the Northern Side of it, and saw the *Mercury* standing out of the Bay; by which I judged the Ship was too warm for her, and therefore made all possible Haste to get up to her with my Ship. When we came into the Port, we found the Ship had been already taken, and that the *Mercury* was accidentally adrift. This Prize was called the *Refario*, of the Burden of one hundred Ton, laden with Cormorants Dung, which the Spaniards called *Guano*, and make use of it for manuring the Land which produces the *Cod-pepper*, of which they make a vast Profit in the Vale of *Arica*. There was not in this Ship one white Face, except the Pilot, whom I resolved to send ashore, to see if the Owners would ransom the Ship, knowing that the Cargo was worth Gold to them, though it was downright Dung to us; and the Event verified my Conjecture.

10. The next Morning I received a Letter from the Owner, wherein, after insisting pitifully on his Distress and Poverty, as well as his having a large Family to provide for, he promised to meet us at *Hilo*, or at *Quaco*, in order to treat for a Ransom: This Letter was signed *Miguel Diez Gonzales*. Soon after, we took a small Vessel, of ten Tons Burden, with a Cargo of dried Fish and *Guano*, lying within a Mile of the Town. By this Time all the adjacent Country was in Arms, and drew down in great Numbers to the Coast, well mounted and armed, and, to all Appearance, well disciplined. However, to make Trial of their Courage, and, indeed, to give my own People Spirits, by shewing them what sort of an Enemy they had to contend with, I ordered the *Mercury* and Launch to advance towards the Shore, as if I had really intended to make a Descent, though the Landing-place is altogether impracticable there, at least to *European* Embarkations. I likewise cannonaded the Town very briskly, and, though the Balls did not do Execution, yet they ploughed up the Sand before the *Spanish* Line of Horse, and threw it all over them; but neither this, nor the Approach of my Small-craft, made any sort of Impression, but they remained firm, and shewed, at least, the Countenance of as good Troops as could be wished for, to my very great Disappointment, since it shewed my People, that the *Spaniards* were far from being such Cowards as they were represented. The Merchant that wrote to me in the Morning, came on board as soon as it was dark; and, having Reason to believe him perfectly honest, but frightened in his Circumstances, I agreed on restoring to him his Ship, and six Negroes, for 500 Pieces of Eight, with this Reservation, that I would have every thing out of her that might be useful to us. In short, he was so punctual, and so expeditious, that at ten the next Night he brought the Sum agreed for; viz. 1300 Dollars Weight in Ingots of Virgin-silver, which the *Spaniards* call *Pinnas*, and the rest in Pieces of Eight; for which I restored him his Ship and Negroes. This Gentleman made a great Inquiry after *English* Commodities, and offered great Prices for them, complaining, that the *French* only supplied them with paltry Things, and Trifles, for which they ran away with many Millions; and asked, Whether all the *English* Merchants were asleep, or grown too rich, since, notwithstanding their Ports were not so open as in other Parts of the World, yet they knew how to manage Matters very well; and that their Governors, being generally *Europeans*, whose Stay in the Country seldom exceeds above three

Years, they made use of any Means to improve their Time; and that there were Ways of gaining them so far, as to make them act very obligingly: Much more he said, as to the Blindness of the *English*, who had suffered the *French* Pedlars to carry on, uninterrupted, the most considerable Branch of Commerce in the World. Before he took his Leave, he desired me to carry his Ship to Sea with me two or three Leagues, and then turn her adrift: The Intent of which was, to deceive the Governor, and the King's Officers: And told me farther, That if I would meet him at *Hilo*, which was about twenty-five Leagues to the North-westward, he would purchase what little coarse Merchandize we had, which might be done there with all imaginable Privacy: The Matter also of the small Boat came off upon a Balle, which is an old Sort of Embarkation, made of two large Seal-skins, separately blown up like Bladders, and then made fast, and joined together by Pieces of Wood; on this he brought off two Jars of Brandy, and forty Pieces of Eight, which, considering his mean Appearance, was as much as could have expected. One Part of his Freight was valuable, which was a good Parcel of excellent dry'd Fish.

Captain *Betagh*, in his Remarks, is very severe on almost every one of the Transactions mentioned: In two long Paragraphs, he defends himself from the Imputation of Mutiny, by absolutely denying the Facts Mr. *Shelvocke* produces in Support of it. He observes, that Captain *Clipperton*, during his Stay at the Island of *Juan Fernandez*, did every thing that became him, in order to secure the Company of his Consort, by buying a Bottle, with Instructions, at the Foot of the Cross, erected on that Island; and if this, by an unforeseen, unavoidable Accident, was afterwards discovered to, and taken away by the *Spaniards*, that was none of *Clipperton's* Fault; and, as the Fact was known to Mr. *Shelvocke* before he wrote, he ought to have forbore any Reflections on that Subject. Then, as to the Attack on *Arica*, he puts it in this Light: The Captain, says he, went on board the *Mercury*, accompanied by Mr. *Stewart*, three more Officers besides myself, and a few Men; brought the *Speedwell* and *Mercury's* Broad-side to bear on the Town; he began to cannonade it, which really had no other Effect, than to scare away the Women and Children; for the Men, contrary to our Expectation, assembled on the naked Beach, and suddenly erected a good Breast-work of Stones, and what Rubbish they could find, gallantly standing our Fire; but the Swell giving us some Motion, we could not bring our Guns to bear, so as to dislodge any of them. Mr. *Shelvocke*, being tired with destroying his Ammunition, sends an *Indian* Prisoner, under a Flag of Truce, to demand of the Town what they would please to give to be rid of us; and, though he says nothing of this, the *Indian* leaped out of the Boat, swimming through the terrible Breakers, which made Landing there impossible, delivered his Message, and returned faithfully the same Way to the Boat, with their Answer; viz. That they cared not a Fig for any such *Barracks*, that is, Drunkard, the most contemptuous Name they can make use of. Upon which, our Captain called for his Pinnace, and, taking *Stewart* with him, went aboard in a Pet, but left the rest of us to unmoor the *Mercury*, and carry her out into the Road: At his getting into the Boat, the Inhabitants gave us a regular Hedge-fire, and three Huzzas, or Horse-laughs. The Number of *Spaniards* which assembled on this Occasion, might be about five or six hundred. It is certain, that these Accounts are very different, and yet I am very far from conceiving them irreconcilable. Mr. *Betagh* tells us very truly what he saw, and what his Opinion was; but, as to Captain *Shelvocke's* Design, nobody could let us into that but himself; and he owns it very fairly; and, at the same time, frankly acknowledges, that he was disappointed, and that the *Spaniards* behaved in a manner very different from what he expected; in which his Antagonist also agrees. We are now to take a View of the Town of *Arica*, at the time these Gentlemen were there, and, to be sure, nothing is more useful, than such accurate Descriptions, drawn by Eye-witnesses, because they shew us, how Things alter in that Part of the World, and hinder Posterity from thinking they are to find every Place in the

South Seas in the same, or a better Situation, than it was fifty or an hundred Years ago.

11. The Port of *Arica*, which was formerly so famous for the great Quantities of Plate continually shipped off there, is now much diminished in its Riches, and appears to be no other than an Heap of Ruins, except the Church of *St. Mark*, and two or three more, which look tolerably well: That which helps to make it look the more desolate is, that the Houses below are covered only with Mats. This Town, being situated on the Edge of the Sea, in an open Road, has no Fortification of any kind to defend or command the Anchoring, they thinking it sufficient, that Nature has provided for their Security by the great Breach of the Sea, and the rock Bottom near the Shore, which threatens inevitable Destruction to an *European* Boat, or any other Embarkation, but what is contrived for that Purpose. To obstruct the Landing of Enemies, the *Spaniards* had made Intrenchments of unburnt Bricks, and a Battery, in the Form of a little Fort, which flanks the three Creeks; but it is built after a wretched manner, and is now quite falling to Ruin, so that the said Village deserves nothing less than the Name of a strong Place, given it by *Dampier*, because he was repulled there in the Year 1680. The *English* being convinced of the Difficulty of landing before the Town, landed at the Creek of *Chacota*, which is to the Southward of the Head-land, whence they marched over the Mountain to plunder *Arica*. The Earthquakes, which are frequent there, at last ruined the Town; for what bears the Name of *Arica* at present, is no more than a Village of about 150 Families, most of them Blacks, Mulattoes, and *Indians*, and but few Whites. On the 26th of November 1605, the Sea, being agitated by an Earthquake, suddenly flooded, and bore down the greatest Part of it: The Ruins of the Streets are to be seen to this Day, stretching out near a Quarter of a League from the Place where it now stands. What remains of the Town, is not subject to such Accidents, because it is seated on a little rising Ground at the Foot of the Head-land. Most of the Houses are built with nothing but Faicines, of a sort of Flags or Sedge, called *Totori*, bound together, standing Endways, with Leather Thongs, and Canes, crossing them; or else they are made of Canes set upright, and the Intervals filled up with Earth. The Use of unburnt Bricks is reserved for the stateliest Houses, and for Churches; no Rain falling there, they are covered with nothing but Mats, which makes the Houses look as if they were Ruins when beheld from without. The Parish-church is handsome enough, being dedicated to *Saint Mark*. There is a Monastery of seven or eight Mercenarians, an Hospital of the Brothers of *St. John of God*, and a Monastery of *Franciscans*, who were coming there to settle in the Town. After having destroyed the House, they had half a Quarter of a League from it, though in the pleasantest Part of the Vale, yet near the Sea. The Vale of *Arica* is about a League wide, next the Sea, all a barren Country, except the Place where the old Town stood, which is divided into little Meadows of Clover-grass, some Spots of Sugar-canes, with Oats and Cotton-trees intermixed, and Marshes full of the sedge used, as above, to build Houses. It is thrust in to the Eastward. Growing narrower that Way, a League up, is the Village of *St. Michael de Sapa*, where they begin to cultivate the Agi, that is, *Guiney* Pepper, which is found throughout all the rest of the Vale; and there are several scattered Farms, which have no other Product but that Pepper. In that little Space of the Vale, which is very narrow, and not above six Leagues long, they tell us of it to the Value of above 80,000 Crowns. The *Spaniards* of *Peru* are so addicted to that Sort of Spice, that they address no Meat without it, though so very hot and biting, that there is no enduring of it, unless well used to it, so as it cannot grow on the *Puna*, that is, the Mountainous country, abundance of Merchants come down every Year and carry away the *Guiney* Pepper that grows in the Vales of *Arica*, *Sama*, *Taena*, *Loacamba*, and others ten Leagues above whence it is reckoned, there is exported to the Vales above 600,000 Pieces of Eight, though sold cheap. Considering the Smallness of the Place, it is hard to believe that such vast Quantities should go from thence, and

cepting the Vales up, that there is produced by means of the Sun and before, is a great Part in such a manner for one of all Sorts, but particularly to know how to manage and fit to be trained is, not in a fair Disposition of to them, may rather than they lay about Guanaco Birds-dun Hollow of a Man add a little more they add a good because it never Salts it contained. Plants, as has been it is laid down a ment, the Necessity the Difference of the Guana, or *De Arica* make use of *Indians* of *Peru*, called *Luque*; and, by the Country Sheep-tion to their Bodies, a Sheep's Head; the Middle, thro' which any that offend the Faces, it makes a red an itching: Their like the Camels, would well enough on the Back: The plain what is wanted four Feet, to four a hundred Weight with wonderful Gravity no beating will make impossible to make lie down till it is taken Food is a Sort of except that it is at the End; it is called with nothing else; they are Creatures called *Feet*, like Sheep, yet to carry Ore to the Mountain out any Guide to the load. Above the them sure-footed at use of it to hold of Scent, and even of Rustic, in Spots, and that of the Vicunna like the Llamas, excellent lighter; their Wool valued. They are so as deserves to be driven them into some Corra's salt across, the with Bits of Wool vicunna, coming to the tion of these Bits of go any farther, so that then the *Indians* End of Leather Thongs with them, they leap Vicunna follow them more corpulent; they another Sort of black *Alpague*, whose Wool Legs are shorter, and has some Resemblance *Indians* make several them carry a Burden

cepting the Vales, the Country is every-where so parched up, that there is no Green to be seen: This Wonder is produced by means of that Bird's Dung, which, as was said before, is brought from *Iquique*, and fertilizes the Earth in such a manner, that it yields four or five hundred for one of all Sorts of Grain, Wheat, *Indian Corn*, &c. but particularly the *Agri*, or *Guiney Pepper*; when they know how to manage it right: When the Seed is sprouted, and fit to be transplanted, the Plants are set winding, that is, not in a straight Line, but like an S; to the end that the Disposition of the Furrows, which convey the Water to them, may carry it gently to the Foot of the Plants; then they lay about each Plant of *Guiney Pepper*, as much *Guanan Birds-dung*, above-mentioned, as will lie in the Hollow of a Man's Hand: When it is in Blossom, they add a little more; and, lastly, when the Fruit is formed, they add a good Handful, always taking care to water it, because it never rains in that Country; otherwise, the Salts it contained, not being dissolved, would burn the Plants, as has been found by Experience. For this Reason it is laid down at several times, with a regular Management, the Necessity whereof has been found, by Use, and the Difference of the Crops produced. For carrying of the *Guana*, or *Dung*, to the Lands, they generally at *Arica* make use of that Sort of little Camels, by the *Indians* of *Peru*, called *Llamas*; by these of *Chili*, *Cbille huque*; and, by the *Spaniards*, *Carneros de la Tierra*, or the Country Sheep. Their Heads are small, in proportion to their Bodies, something resembling both an Horse and a Sheep's Head; the Upper-lip, like an I hare's, is cleft in the Middle, thro' which they spit ten Paces from them against any that offend them; and, if that Spittle falls on their Faces, it makes a reddish Spot, which is often followed by an Itching: Their Necks are long, bowing downwards, like the Camels, towards the Fore-part of the Body, which would well enough resemble them, if they had a Bunch on the Back: The Figure I here insert, may serve to explain what is wanting in Description; their Height is from four Feet, to four and an half. They generally carry only an hundred Weight, and walk, holding their Heads up with wonderful Gravity and Majesty, so regular a Pace, that no beating will make them go out of it. At Night it is impossible to make them move with their Burden; they lie down till it is taken off, to go and graze; their common Food is a Sort of Grass somewhat like the small Rush, except that it is a little finer, and has a sharp Point at the End; it is called *Jébo*. All the Mountains are covered with nothing else; they eat little, and never drink, so that they are Creatures easily kept. Though they have cloven Feet, like Sheep, yet they make use of them in the Mines to carry Ore to the Mill: As soon as loaded, they go without any Guide to the Place where they are used to be unloaded. Above the Foot they have a Spur, which makes them sure-footed among the Rocks, because they make use of it to hold or hook by. Their Wool has a strong Scent, and even disagreeable; it is long, white-grey Rustic, in Spots, and very fine, though much inferior to that of the *Vicunnas*. The *Vicunnas* are shaped much like the *Llamas*, except that they are much smaller and lighter; their Wool being extraordinary small, and much valued. They are sometimes hunted after such a manner, as deserves to be related: Many *Indians* get together to drive them into some narrow Pals, where they have made Corals fast across, three or four Feet from the Ground, with Bits of Wool and Cloth hanging at them; the *Vicunnas*, coming to pass them, are so frighted at the Motion of these Bits of Wool and Cloth, that they dare not go any farther, so that they press together in a Throng, and then the *Indians* kill them with Stones made fast at the End of Leather Thongs. If any *Guanacos* happen to be with them, they leap over the Corals, and then all the *Vicunnas* follow them. The *Guanacos* are larger, and more corpulent; they are also called *Viscachas*. There is another Sort of black Creatures like the *Llamas*, called *Aipeques*, whose Wool is extraordinary fine, but their Legs are shorter, and their Snouts contracted, so that it has some Resemblance of a human Countenance. The *Indians* make several Uses of these Creatures; they make them carry a Burden of about 100 Weight; their Wool

serves to make Stuffs, Cords, and Sacks; their Bones are used to make Weavers Utensils; and, lastly, their Dung serves to make Fires to dress Meat, and to warm them. Before the last Wars, the *Armadilla*, a little Fleet, composed of some Ships of the King's, and of private Persons, resorted every Year to *Arica*, to bring thither the *European Commodities*, and *Quicksilver*, for the Mines of *La Paz*, *Oruro la Plata*, or *Chiguizaca*, *Potosi*, and *Lipes*, and then carried to *Lima* the King's Plate, being the fifth of what Metal is drawn from the Mines; but, since no more Gallions came to *Porto-Bello*, and the *French* have carried on the Trade, that Port has been the most considerable Mart of all the Coast, to which the Merchants of the five Towns above, being the richest in Mines, resort. It is true; that the Port of *Cobija* is nearer to *Lipes*, and *Potosi* than *Arica*; but, being so desert and barren, that there is nothing to be had for Men or Mules to subsist, they chuse rather to go some Leagues farther, and be sure to find what they want; besides that it is not a very difficult Matter for them to bring their Plate thither privately in the Mafs, and to compound with the *Corregidores*, or chief Magistrates, to save paying the Fifth to the King.

12. As soon as I got out of the Road of *Arica*, says Captain *Shelvocke*, I shaped my Course for the Road of *Hilo*, in Sight of which we came in the Afternoon, where we saw a large Ship, and three small ones, at Anchor: The great Ship immediately hoisted *French Colours*, and proved to be the *Wife Solomon*, of forty Guns, commanded by Mr. *Dumain*, who was now resolved to protect the Vessels that were with him, and obstruct my coming in. It being dark before I could get into the Road, I sent my third Lieutenant, Mr. *La Porte*, who was a *Frenchman*, to let him know who we were; but my Officer had no sooner got into the Ship, than they tumbled him out again, calling him Renegade; and sent me Word, that, if I offered to anchor there, they would sink me. Mr. *La Porte*, upon this, told me, that, to his Knowledge, the *French Ships* had often taken *Spanish Commissions*, at such times as there were *English Cruisers* on those Coasts; as a Recompence for which Service, they had great Liberties allowed them in the way of Trade. He farther assured me, that he could plainly see, that Mr. *Dumain* had double-manned his Ship with the Inhabitants of the Town, who were partly *French*; and that, in short, he designed to be with me as soon as the Wind came off shore. While we were talking this Matter over, the *Frenchmen* fired several Guns at us, to shew they were ready, and designed to be with us speedily. I must confess, this heated me not a little; and the first thing that occurred to me, was turning the *Mercury* into a Fireship, by the Help of which I might, without any great Difficulty, have roasted this insolent *Frenchman*. But, reflecting on the Situation of Things at Home, and fearing that, however unwarrantable his Conduct might be, my attacking him might be thought as unjustifiable, I thought it best to stand out of the Harbour, which accordingly I did. On *February 12*. the Moiety of the Money taken at *Arica* was divided amongst the Ship's Company, according to the Number of their Shares. On the 22d, we found ourselves in the Height of *Calao*, which is the Port of *Lima*; upon which I tumbled all my Sails, to prevent being seen, resolving to get away in the Night; because, if we had been discovered from thence, we were morally certain of being pursued by some of the *Spanish Men of War* that are always in that Harbour. On the 26th, the Officers in the *Mercury* desiring to be relieved, I spoke to Captain *Hatley*, whose Turn it was to command her. As this Gentleman had been for a long time Prisoner among the *Spaniards*, he knew the Country perfectly well; and, having travelled between *Lima* and *Pavia* by Land, he had observed several rich Towns; which put it into his Head, that something might be made of cruising along that Coast, as far as the Island of *Lobos*, which lies in the Latitude of 7° South; and I, as it was very natural for me to do, approved of this Proposition, the rather because it was extremely probable they might meet with some of the *Fanama* Ships, which always fall in with the Land, in order to receive the Benefit of the Land Winds. As the whole Ship's Company seemed to be extremely delighted with Captain *Hatley's* Project, I judged it requisite to augment

their Complement of Men, put a Month's Provision on board, mounted two Quarter-deck Guns on the *Mercury*, lent Captain *Hatley* my Pinnace, gave him a Copy of my Instructions; though it was very likely, that I should have frequent Sight of the *Mercury*, between the Time of our Separation and our coming to the Island of *Lobos*, where was our Rendezvous, and not above sixty Leagues from us. As soon as every thing was ready for their Departure, Captain *Betagh*, whose Turn it was to relieve the marine Officer in the *Mercury*, being unwilling to go, went amongst the People; and, with a frightful Countenance, told them, that he, and the rest that were to go with him, were sent for a Sacrifice. Upon this, I address'd myself to the Ship's Company; telling them, that I did not know what this ungovernable Fellow meant by this Uproar; and appeal'd to them all, if it had not been customary with me to relieve the Officers in this manner, ever since we had this Vessel in Company; and asked them, if ever they heard me call upon any particular Person by Name to go on any Enterprize, but left it to every Man's Choice to go out of the Ship upon any Service; and, in a Word, desired to know who among them were of *Betagh's* Opinion: Upon this, they with one Voice declared, that they had never entertain'd any such Thought; but, on the contrary, I should find them obedient to any Commands I should lay upon them. This done, I order'd the *Mercury* alongside, and acquainted her Crew with the Speech *Betagh* had made in the Ship; and desired to know, if any of them were under any Apprehensions of being sold or sacrificed: At which they set up an Huzza, and begged that they might go on the intended Cruise in the *Mercury*. Accordingly, *Hatley* and *Betagh* went on board of her, and put off from us, gave me three Cheers, and stood right in for the Land. I think it will not be altogether improper to take notice of their Proceedings after they left me, as I have been inform'd by themselves and by Prisoners; viz. The very next Day they took a small Bark, laden with Rice, Chocolate, Wheat, Flour, &c. and the Day following another; on the 4th Day, they became Masters of a Ship of near 200 Tons, 150,000 Pieces of Eight. Plunder'd with this Success, *Betagh* prevail'd on *Hatley*, and the greatest Part of the People with them, not to join me again; telling them, that they had sufficient to appear like Gentlemen as long as they liv'd, but that it would be nothing when the Owners Parts were taken out, and the Remainder divided into 500 Shares: And therefore he thought, since Fortune had been so kind to them, they would be highly to blame, if they did not lay hold of this Opportunity of going to *India*; since they had Provisions, and every thing they could wish for in their Voyage, and the Happiness, into the Bargain, of having a Gentleman amongst them, Captain *Hatley*, who was, doubtless, able to conduct them to some Part of the Coast of *Astia*. This was soon resolv'd on, and they fell to Leeward of the Place of Rendezvous. But *Hatley*, sighing within himself the vast Run, and the many Hazards of the Undertaking, and knowing well what Treatment he should find in *India*, if his Treachery was discover'd, could not readily determine what he had best do in this Case, but kept hovering on the Coast; and, in the Interm, some of his Crew went away with his Boat to surrender themselves to the Enemy, rather than be concern'd in such a piratical Action. But *Betagh* and his Gang still kept *Hatley* warm in Liquor, and, in the End, brought him to a next Resolution of leaving these Seas. But no sooner had they clapp'd their Helm a-weather, than they saw a Sail standing towards them, which, in short, prov'd to be a Spanish Man of War, who caught them, and spoil'd their *India* Voyage. The English were treated very indifferently; but *Betagh*, who was of their Religion, and of a Nation which the Spaniards are very fond of, was made an Officer, and us'd very respectfully. On the 29th, in the Morning, we saw a Sail at Anchor in the Road of *Guambao*; at 11, we came up, and anchored along-side of her: There was no body on board of her but two Indian Men and a Boy: She was call'd the *Carnostia*, of about 100 Tons, and had nothing in her but a little Timber from *Guanaul*, from whence the lately came. By these Prisoners I was inform'd, that there was a rich Ship in the Cove of *Payta*, who put in there to repair some Damages

she had sustain'd by a Gale of Wind: Upon which I immediately went to Sea; but, in purchasing the Anchor, the Cable parted, and I lost it. I took my Prize with me, the being new and well-fitted, and like to sail well: I call'd her the *St. David*, and design'd to have made her a complete Fireship as soon as the *Mercury* join'd us, who had Materials on board of her for that Purpose. The next Day I look'd into *Cheripe*, from whence I chased a small Vessel, of which when I came within half Cannon-shot, the Crew ran her on shore. The next Morning, finding myself in the Neighbourhood of the Island of *Lobos*, where I had appointed our Rendezvous with the *Mercury*, I sent Mr. *Randall*, my second Lieutenant, ashore, with two Letters in two Bottles, directing Captain *Hatley* to follow us to *Payta*, towards which Port I now made the best of my Way; and, on March 8. found myself before it; and sent Mr. *Randall* to look into the Cove, in order to bring us an Account what Ships were there, that we might know what to think of the Information we had received.

There is scarce a Circumstance in all this Account, which Captain *Betagh* does not only dispute, but deny. As to the *Mercury*, on board which they were sent to cruise, he observes, that she was a flat-bottomed Vessel, that would neither row nor sail, and, in short, an absolute Lighter. He says next, that the Course they were directed to steer, was exactly in the Tract of the Enemy; so that he really judg'd it to be the Captain's Design he should be taken: And he likewise admits, that, upon his hinting this to the Purser, Captain *Shelzoche* call'd up all Hands, and discomfited them in the manner before-mentioned. With regard to Prizes, he admits the taking of two, one a Bark, the other an old English Pink, bound from *Panama* to *Lima*; which, instead of having 150,000 Dollars on board, after they had examin'd her very closely, did not appear to have on board her so much as a single Half-crown, the Vessel being bound in her Ballast with a small Parcel of Peillary Ware from *Panama* to *Lima*; whereas, had she been going from *Lima* to *Panama*, she might probably have had a considerable Sum on board. We went into this Prize immediately, leaving only a Hand or two to take care of the *Mercury*, says Captain *Hatley*; and we were soon after taken by one of the Spanish Cruisers, call'd the *Brilliant*, of thirty Guns, as we were plying between *Lobos* and *Cape Blanco*, having been twice on shore in this Island, without being able to discover any Signs of our Captain's having been there, much less meeting with any Instructions to take him at *Payta*. As to the persuading Captain *Hatley* to go to *India*, and all that depends upon that Story, Captain *Betagh* denies it utterly; affirms, that, though he was brought up a Papist, he became a Protestant so soon as he came to Years of Discretion; that he never was in the Spanish Service; tho' he owns he was very kindly treated by Don *Pedro Miranda*, Admiral of the South Seas, on account of Mr. *Betagh's* having some Knowledge of *St. Charles Wager*, to whom Don *Pedro* thought himself especially oblig'd. As the Author of this History, I do not pretend to enter at all into the Discussion of these Points: I only report Facts as I find them, and leave entirely to the Reader's Judgment, who was, and who was not, in Fault. I proceed now with the Voyage, as it is represented by Captain *Shelzoche*, whom we left beating up for *Payta*.

13. On the 21st, says he, I came within seven Leagues of the Place; and, steering directly for it, enter'd the Cove of *Payta* about four in the Afternoon, with French Cannon, there being a small Ship in the Harbour, of which Mr. *Brooks*, my first Lieutenant, soon became Master, being sent in with the Launch well manned for that Purpose. About 7 in the Evening, I came to an Anchor about three Quarters of a Mile from the Town: The taking of *Payta* being in the Scheme of our Voyage treated as a Matter of great Importance, I consult'd my Officers concerning the properest Methods of doing it. The Town appear'd to be indifferently large and populous; and it was very probable there might be some Land Forces, to defend a Place so well known as this, which is the Rendezvous of Ship coming from *Panama* and *Calao*: However, I find'd but forty-six Men at two of the Clock the next Morning, leaving Mr. *Collifca*, the Master, and some others, not

look after the Negroes we had, who ought not to be trusted with the Ship by themselves, but also to bring the Ship nearer in, that we might the more expeditiously embark what Plunder we might get. Being now ashore, I marched up to the great Church without meeting any Opposition; and, indeed, found the Town intirely deserted by the Inhabitants. At Day-light, we saw great Bodies of Men on the Hills on each Side of us, who, I expected, would have paid us a Visit, but found, as we marched up the Hill towards them, we drove them before us. All this time, we took no Prisoners, except an old Indian and a Boy, who told me, Captain Clipperton had been here, some time before, to set Prisoners ashore; who assured them, that he would do them no Injury, nor give them any Trouble. But the Inhabitants, not thinking fit to trust him, had removed their Effects up the Mountains, amongst which was Part of the King's Treasure, amounting to 400,000 Pieces of Eight, which would have been a fine Booty, had Captain Clipperton thought fit to have accepted of it; since it is certain, he would have met with no more Difficulty in subduing this Place, than I did: But suddenly, upon hearing a Gun fired, I halted; and, Word being brought me, that the Ship was ashore, I hurried off with some Precipitation, carrying with us the Union Flag, which I had caused to be planted in the Church-yard ever since Sun-rising. As we re-embarked, the Enemy came running down the Hills hallowing after us: When I came on board, I found her intirely aloof, but within her Breadth of the Rocks; the Water being smooth, I soon warped her off again; after which, we returned to take Possession of the Town in the manner we had done before, and the Spaniards as peaceably retired up the Hills again. But this Accident being happily over, the Remainder of the Day was spent in shipping off what Plunder we had got, which consisted in Hogs, Fowls, brown and white Calavances, Beans, Indian Corn, Wheat, Flour, Sugar, and as much Cocoa-nut, as we were able to stow away, with Pans and other Conveniences for preparing it; so that we were supplied with Breakfast-meat for the whole Voyage, and full of Provisions of one kind or other. In the Afternoon, there came a Messenger to know what I would take for the Ransom of the Town and Ship; to which I answered, that I would have 10,000 Pieces of Eight, and those to be paid within twenty-four Hours, if he intended to save the Town, or Ship either. At eight, the next Morning, I received a Letter from the Governor, signifying, that, as I wrote in French, neither he, nor any about him, could understand the Contents; but, if I would let him know my Demands in Latin or Spanish, I should not fail of a satisfactory Answer. In the Afternoon, I sent one of the Quarter-deck Guns ashore; which, being mounted at our Guard, was fired at Sun-set, Midnight, and Break of Day. The next Morning early the Messenger returned, and brought with him the Captain of the Ship I had taken; and, as soon as I had heard of their Arrival, I went on shore to know what they had to propose. I very soon understood from them, that the Governor was determined not to ransom the Town at all Events; and that he did not care what I did to it, provided the Churches were not burnt: To which I answered, that I should have no Regard to Churches, or any thing else, when I set the Town on Fire; though, in fact, I never designed to destroy any Place consecrated to Divine Worship. As for the Captain of the Vessel, I told him plainly, that, if he did not ransom her immediately, he might expect to see her in Flames. This seemed to make as great an Impression upon him as I desired; and he promised, in three Hours time, to be down with the Money. As soon as I had given these People the Hearing, I caused every thing to be taken out of the Town that could be of any Use to us; and, when this was done, I ordered it to be set on Fire in two or three Places at once; and, as the Houses were old and dry, the Place became a Bonfire instantly. In the midst of this Conflagration, the People on board my Ship made continual Signals for me to come on shore, and kept firing perpetually towards the Mouth of the Harbour. As I could only guess, from these Appearances, that something extraordinary had happened, the sole business left for me to take, was to get on board as soon as

NUMB. 19.

I could, which accordingly I did, in a Canoe; with only three Men aboard with me.

14. It was evident enough to me, before I reached my Ship, what had thrown my People into such a Panic; for I saw a large Ship lying, with her Fore-top-sail a-back, with her Spanish Flag flying at her Top-mast-head; at which Sight two of my three Men were ready to faint; and, if it had not been for my Boatwain, I doubt whether I should have got on board the Ship. When I looked back to the Town, I could not help wishing I had not been so hasty, since, had the Spanish Admiral acted with Vigour, he had taken the Ship long enough before I could have gotten on board. In Justice to Mr. Coldsea the Master, I must observe, that he fired so smartly on the Spaniard as he came in, that he put him upon taking those Precautions, which, had he known our Strength, were very unnecessary; and, as this took up Time, it gave me an Opportunity of coming on board. In the mean time, my Officers ashore were so unwilling to leave behind them a Gun we had mounted in the Town, that they spent so great a Space in getting into the Boat, that I began to be much afraid the Enemy would have attacked us, before the Launch could have rowed aboard. But he was not in such an Hurry, thinking that I could not well pass by him, and therefore suffer'd my Men to come off, who were about fifty in Number; but was within less than Pistol-shot of us, before they had all got into the Ship. Upon which, we cut our Cable, and, our Ship falling the wrong Way, I had but just Room enough to fall clear of him. Being now close by one another, his formidable Appearance struck an universal Damp on every one's Spirits. Some of my People, in coming off, were for jumping into the Water, and swimming ashore, as some actually did; But now, when they saw a fine Europe-built Ship of fifty Guns, the Disproportion was so great between us, that there could be no Hopes of escaping him, being under his Lee. I endeavoured to get into shole Water; but he becalmed and confined me for the greatest Part of an Hour, handling me very roughly with his Cannon; but made little Use of Small-arms. He never had Patience to let us be quiet along his Side; but, whenever he was ready with his Fire, he gave his Ship the Starboard-helm, to bring as many of his Guns as he could to bear on us, and, at the same time, kept me out of the true Wind. We made the brittlest Returns we could; but the Misfortune was, that, in the precipitate Confusion in getting off from the Town, most of our Small-arms were wet; so that it was late before they were of any Use. There was, during this, a confused Scene ashore, of the Town on Fire, and the People, who had flocked down the Hills to extinguish it, some of whom answered the End of their coming, whilst others were employed in beholding the Engagement. I was long in Despair of getting away from the Spaniard, and could foresee nothing, but that we should be torn in Pieces by him, unless we had an Opportunity of trying our Keels with him whilst our Masts were standing. I expected every Minute they would board us; and, upon hearing an Hallowing amongst them, and their Forecastle full of Men, I concluded they had come to a Resolution of entering us: But I presently saw the Occasion of these Acclamations was, their having shot down our Ensign-staff, upon which they were in hopes we had struck; but I soon undeceived them, by spreading a new Ensign on the Mizzen-throwds; upon Sight of which, they lay as snug as before, and held their Way close on our Quarter. Intending at last to do our Business at once, they clapped their Helm a starboard, in order to bring their whole Broadside to point on us; but their Fire had very little Effect, and it muzzled themselves; which gave us an Opportunity of getting away from them. This was certainly a lucky Escape, after an Engagement for about three Glasses with an Enemy so much superior; for he had fifty-six Guns, we but twenty mounted; they had 450 Men, we, on our Part, did not exceed seventy-three, and eleven Negroes and two Indians included in that Number: He had further this vast Odds over us, of being in a settled Readiness, whilst we were in the utmost Distraction. Add to all this, our Small-arms being useless, by being wet; and, in the Middle of the Engagement, One-third of my People, instead of fighting, were hard at Work to make a further Preparation for an

obstinate Resistance; particularly the Carpenter, and his Crew, were busied in making Ports for Stern chase Guns, which (as it happened) we made no Use of. Yet we were not altogether unhurt; the Loss of my Boat and Anchor was irreparable, and may be said to be the Cause of that Scene of Trouble, which followed; for we had now but one Anchor, that at *Payta* being the third we had lost; and were intirely destitute of a Boat of any kind. I have been since informed, that we placed some Shots very well, and that we killed and wounded several of the Enemy.

It is a very different Account that Captain *Betagh* gives of this Matter, of which, however, he tells us, he was extremely well informed; because, in the first Place, he had the Story fresh at *Payta*, within a Day or two after the Thing happened, and was afterwards on board the *Peregrine* at *Lima*, by which means he was an Eye-witness of the Force of the Ship. Instead of fifty-six Guns, he insists, the carried but forty; and, instead of 450 Men, he is clear, that 350 were the most that ever were on board, and these such a mixt Crew of ignorant Wretches, that twenty expert Seamen, in his Opinion, had been more than a Match for them. As for the Commander, condemned he, whom Captain *Shelvocke* calls an Admiral, he was a *Creeolian*, a mere fresh-water Man, who never saw any Action before: And, as for the People aboard him, they were composed of Negroes, *Mestizos*, and *Indians*; besides which, there were not above a dozen white Faces in all: For this Ship was designed to carry the late Viceroy Prince *Santo Bueno*, his Family, and Retinue, to *Acapulco*; but, in the mean time, being ordered a short Cruize on the Coast, she failed so heavy, that the *Spaniards* never expected the would be of any Use against the *English* Privateers, and, for that Reason, put all their able-bodied Men aboard the other three Cruisers the *Zelestin*, *Brilliant*, and *San Francisco*, which were light Ships, and good Sailors. The *Peregrine* was so unable and unwilling too, that, if she had not found the *Speedwell* in Harbour, she would never have followed her to Sea; for it was related at *Payta*, the first Fire from the *Speedwell* terrified the Enemy so very much, that they could not tell whether they were dead or alive. They all immediately ran from their Quarters, and the very Steersman, who had the Helm, quitted it; so that the Ship, which was then close-haled standing in, came with her Head-staits in the Wind, and muzzled herself; that is, she lay bobbing up and down, with her Sails flapping against the Mast; nor could it be otherwise, where there were only a few good Officers among a mere Mob of black People, scared out of their Wits. The Commander, and his Officers, did all they could to bring them to their Duty: They beat them, swore at them, and pricked them in the Buttocks: But all would not do; for the poor Devils were resolved to be frightened. Most of them ran quite down into the Hold, while others were upon their Knees, praying the Saints for Deliverance. The *Speedwell* did not fire above eight or nine Guns, and, as these were found sufficient, Captain *Shelvocke* had no Occasion to waste his Powder. But it is plain the *Peregrine* might easily have run him aboard, if there had been but a few good Seamen to stand by the Bowlines and Braces. However, this Panic of theirs gave *Shelvocke* a fair Opportunity to get his Men aboard, cut his Cable, and go away right afore the Wind. Thus, he assures us, was the Truth of the Matter. But to return to the Captain, and his Relation:

15. In the Evening, I, with much-ado, slipped away from the *Brilliant*, the Admiral's Consort, on board of which was *Betagh*, who desired he might have the Honour to board me first; and this Escape I made with Difficulty enough, and found myself, when at Liberty, in a very uncomfortable Condition; for we had not the least Hopes now, or at least any Certainty, of meeting with the *Success*; so that we had little Good to expect from Friends. As to our Enemies again, I was informed at *Payta*, that they had laid an Embargo of five or six Months; so that we had nothing to expect on that Side. A third Misfortune was, that I saw our Prize, which I intended for a Fireship, taken by the *Brilliant*; and therefore had all the Reason in the World to expect, they had perfect Information of all our Designs. Add to these Mischiefs, that I had but one Anchor, and no Boat at all; and it will not be wondered, that I gave up

all Views on the Town of *Gutaqui*, where I proposed to have made an Attempt, having certain Intelligence, that several Ships of considerable Value lay in that River, by dint of the Embargo, which, if I had been better provided, would, in this Case, have done me a Service. In this Situation, I called my Officers together; to let them know, that it was my Sentiment, that we had much better go to Windward, since, in spite of all their Embargoes, the *Spaniards* must carry on their Trade with *Chili*; after which, I proposed watering at *Juan Fernandez*, and then cruising over the whole Season on the *Conception*, *Valparaiso*, and *Coquimbo* Traders, amongst whom we should be stocked with Anchors, Cables, Boats, and a Vessel to make a Fireship of; on which I mightily depended, since I could see but little Probability of joining the *Success*. I also proposed, before I left the Coast of *Chili*, to make the Town of *la Serena* or *Coquimbo*. This being universally approved of, we got our Tacks aboard, and stretched to Windward. My Intention, after this, was for the Coast of *Mexico*, there to run to the Height of the *Tres Marias* and *California*, as the most likely Place to meet the *Success*; both of which Places would have been commodious, the first for salting Turkes, and the last for Wooding and Watering. There I should also be ready in the Season to lie in the Track of the *Manilla* Ship; which if I should have the Fortune to meet, (having a Fireship) I would have tried what I could have done with her; but, if I could not have prevailed, I must have contented myself with cruising on the *Peruvian* Ships, which bring Silver to *Acapulco*, to purchase the *Indian* and *Cinese* Commodities, which the *Manilla* Ships bring thither. On the 26th, we secured our Masts, and bent a new Suit of Sails, and stood to the Southward, expecting to gun our Passage in about five Weeks. The Day after, the Carpenter began to build a Boat to water the Ship. On the 31st, as we were pumping the Ship, the Water came out of the Well, not only in a greater Quantity than usual, but also as black as Ink; which made me judge, that some Water came at our Powder; and accordingly, going into the Powder-room, I heard the Water come in like a little Shower, which had quite spoiled the greatest Part of our Powder; so that we only saved the Quantity of six Barrels, which I ordered to be stowed away in the Bread-room. It pleased God, that we had fair Weather; otherwise it would have been an hard Matter for us to have kept ourselves above-water. We found the Leak to be on the Larboard-side, under the lower Cheek of the Head, occasioned by a Star, which had lodged there; which, falling out, left Room for a Stream of Water. We brought the Ship by the Stern, and, with great Difficulty, stopped it securely. At the time, we had a huge Stock of Provisions, and every one lived as well as he could have wished, each Man having a Quart of Chocolate, and three Ounces of very good Ruff, for Breakfast every Morning, and fresh Meat or fresh Fish every Day, of which we had such a Plenty about the Ship, that we could almost always take our Choice of Dolphin or Albicore. On May 6, we made the Westermost of the Islands of *Juan Fernandez*, the Body of it being North-east by North, distant twelve Leagues; and, the Day after, the Carpenters completed the Boat, which would carry three Hogheads. On the 11th, we saw the great Island of *Juan Fernandez*, bearing East half South, by Observation the Body of it lying in the Latitude of 33° 25' South: A joyful Sight at that time, tho' so unfortunate to us afterwards. In Captain *Betagh's* Account, the going to *Juan Fernandez* is represented as a direct Design to lose the Ship, and to cruise for the future in a Bottom, to which, in their Judgment, the Owners had no Title. I must, for my own Part, acknowledge, that I cannot understand it, because, in a Bark built out of the Remains of the *Speedwell*, they were as much in an Owners Bottom, as in the Ship herself; and, if they could imagine this would be observed by taking and cruising in another Ship, then he might as well have quitted the *Speedwell*, under Pretence of the Leak, and gone to Sea in a Prize, without the hazardous Experiment of the Shipwreck. Captain *Betagh* mentions the Suspensions of the Seamen, as direct Evidence of the Design, that they looked for it, and expected it would fall out, as it really did. It is also suggested by Captain *Betagh*, that abundance of Things of Value were brought on board

without their knowing it, nor comprehend it, nor carry a vast very plan to me Ship, who, if he would not have the Captain's Relation; but could have depended; which was a Row for a few twenty Tuns of anchored in Long being made fast gave us an Oppon and aboard. The Sea; but had no together, during On the 25th, an upon us, and bro in a few Hours, this, there being of avoiding immer posed in our Behal Length farther to where we did, we as the touched the some Part or other the Shocks the ha have thrown us a mast, Fore-mast, In short, Words dition we were in, unfortunately Ship ers came to bea some Necessaries of Fire, wrapped the round it, and, nor slept very soundly in doing what we were so scattered them together: So ing any thing, but they were employ Preparations to sett destroyed, and eve Cask of Beef, an washed whole on t all forts irrecovera been of Use to us. I should have obser to the Gentle Chest in the great of the Bread-room took some P. ins in Tent, and at leng not half a Mile fr within a Stone's-ca hand, and Trees People settled wit and, having a cold and theirs, and oth Sea-lions, whist them, under the ourselves, as well approaching Win Evening in makin which my Officers selves quietly in times bewailing c pair; at other tim something might first with the Carp make Brick witho furly Humour, whom I found as could do for us in the building of a oped he could do

without their knowing how; which is another thing I cannot comprehend; for Captain *Shelvocke*, and his Son, could not carry a vast Quantity on shore themselves; and it is very plain to me, that there was not a single Man in the Ship, who, if he had been trusted with so dark a Secret, would not have discovered it. But to proceed with the Captain's Relation: I plied, says he, off and on till the 21st; but could not get so much Water as we daily expended; which made me think it requisite to anchor in the Road for a few Hours: And, in order to it, I prepared twenty Tuns of Casks to raft ashore, then worked in, and anchored in forty Fathom Water, and made a Warp, which was of the Length of three Haufers and an half, which, being made fast to the Rock, kept the Ship steady, and gave us an Opportunity of haling our Raft of Casks ashore and aboard. The next Morning, we were ready to go to Sea; but had no Opportunity of doing so for four Days together, during which we anchored in the same Manner. On the 25th, an hard Gale of Wind came out of the Sea upon us, and brought in a great tumbling Swell; so that, in a few Hours, our Cable parted: A dismal Accident this, there being no Means to be used, or the least Prospect of avoiding immediate Destruction. But Providence interposed in our Behalf so far, that, if we had struck but a Cable's Length farther to the Eastward or Westward of the Place where we did, we must have inevitably perished. As soon as the touched the Rock, we were obliged to hold fast by some Part or other of the Ship, otherwise the Violence of the Shocks she had in striking might have been sufficient to have thrown us all out of her into the Sea. Our Main-mast, Fore-mast, and Mizzen-mast, went all away together. In short, Words are wanting to express the wretched Condition we were in, or the Surprize we were under of being unfortunately shipwrecked. In the Evening, all the Officers came to bear me Company, and to contrive to get some Necessaries out of the Wreck; and, having lighted a Fire, wrapped themselves up in what they could get, lay round it, and, notwithstanding the Coldness of the Weather, slept very soundly. I would have set the People to Work in doing what we proposed the Night before; but they were so scattered, that there was no such thing as getting them together: So that all Opportunities were lost of regaining any thing, but some of our Fire-arms. But, while they were employed in building Tents, and making other Preparations to settle themselves here, the Wreck was intirely destroyed, and every thing that was in her lost, except one Cask of Beef, and one of *Farina de Pao*, which were washed whole on the Strand. Thus were our Provisions of all sorts irrecoverably gone, and whatever else might have been of Use to us, except what I have already mentioned. I should have observed, that I saved 1100 Dollars belonging to the Gentlemen Owners, which were kept in my Chest in the great Cabin. The rest, being in the Bottom of the Bread-room for Security, could not be come at. I took some Pains in finding a convenient Place to set up my Tent, and at length found a commodious Spot of Ground, but half a Mile from the Sea, and a fine Run of Water within a Stone's-cast of each Side of it, with Firing near at hand, and Trees proper for building our Dwellings. The People settled within Call about me, as well as they could; and, having a cold Season coming on, some of them thatched theirs, and others covered them with Skins of Seals and Sea-lions, whilst others got up Water-butts, and slept in them, under the Cover of a Tree. Having thus secured ourselves, as well as possible, against the Inclemency of the approaching Winter, we used to pass our Time in the Evening in making a great Fire before my Tent, round which my Officers in general assembled, employing themselves quietly in roasting Crayfish in the Embers; sometimes bewailing our unhappy State, and sinking into Despair; at other times feeding ourselves up with Hopes, that something might be done to set us afloat again. I consulted first with the Carpenter, who answered, That he could not make Brick without Straw, and walked away from me in a surly Humour. From him I went to the Armourer, whom I found at the Wreck, and asked him, What he could do for us in his Way, that might contribute towards the building of a small Vessel. To which he answered, He hoped he could do all the Iron-work, that was necessary for

such a thing; that he had, with much Labour, gotten his Bellows out of the Wreck, with four or five Spadoes, which would afford him Steel; and that there could be no want of Iron along the Shore; and that he did not doubt, but we should find a great many useful Things, when we came to set to work in good Earnest; and desired I would, without Loss of Time, order some Charcoal to be made for him, whilst he set up his Forge. Upon which I called all Hands together, and gave it them as my Opinion, that there was a great Probability we should be able to effect the building a Vessel to transport us; but that it would undoubtedly be a laborious Task, and would require the utmost Endeavours from them all; and put the Question to them, Whether we should make a Beginning, or no. To which they, with one Voice, consented, and promised to be extremely diligent in Work; and begged me to give them Instructions how to proceed. I then ordered those, who were wooding before the Ship was lost, to bring in their Axes, that I might send them to cut Wood to make Charcoal, while the rest went down to the Wreck, to get the Bow-sprit ashore, of which I intended to make the Keel; and prevailed on the Carpenter to go with me, to fix on the properest Place to build upon. In a Word, the People found a great many useful Materials about the Wreck, and, amongst the rest, the Top-mast, which, being made fast to the Main-mast, was washed ashore, and, tho' of no small Weight, would not, at this time, have been exchanged for Gold.

16. On June 8. we laid the Blocks to build upon, and had the Bow-sprit ready at hand. The Carpenter, suddenly turning short upon me as I stood by him, swore an Oath, He would not strike another Stroke upon it; that he, truly, would be nobody's Slave; and thought himself now upon a Footing with myself. I was at first angry; but at last came to an Agreement to give him a four Pistole Piece as soon as the Stern and Stern-post were up, and 100 Pieces of Eight when the Bark was finished; and the Money to be committed to the Keeping of any one he should name till that time. Upon this, he went to work on the Keel, which was to be thirty Feet in Length, her Breadth by the Beam sixteen Feet, and seven Feet deep in the Hold. In two Months time we made a tolerable Shew, which was, in a great measure, owing to the Ingenuity of *Poppleston* my Armourer, who did not lose a Minute's time from the Work of his Hand, and Contrivance of his Head. This Assiduity of his, I dare say, was greatly owing to the just Sense he had of our forlorn State, with which he seemed to be much affected. This Man made us a little double-headed Maulet, Hammers, Chisels, Files, and a sort of Gimblets, which performed very well; nay, he even made a Bulk-mould, and an Instrument to bore our Cartouch-boxes, which we made of the Trucks of Gun-carriages, which washed ashore (these we covered with Seals-skins, and contrived so as to be both handy and neat): And had enabled himself to perform any Iron-work the Carpenter wanted; and did not only do us this Service in his Way, but also began and finished a large serviceable Boat, which was what we much stood in need of. But I must observe, that, in the Beginning, the People behaved themselves very regularly, half of them working one Day, and half another, and seemed to be easier and easier under our Misfortunes every Day. They treated me with as much Regard as I could wish, and, in a Body, thanked me for the Prospect they had of a Deliverance. I never failed to encourage them by such Stories of Things or Actions that I heard to have been done by the Number of Men in Distresses of this kind; and always pressed them to stick close to the Work, that we might get the Bark ready in time; and told them, that, to our Comfort, we had three of the best Ports in *Chili* within 120 Leagues of us. This instilled new Life into them; and they often declared, that they would do their utmost to finish her with all Expedition, which was a most agreeable Hearing. But, instead of enjoying Peace long, we became a Prey to Faction; so that it was a Miracle, that we got off from this Place by any Endeavours of our own: For, after they had gone through the most laborious Part of the Work, they intirely neglected it; and many of my Officers deserted my Conversation, to herd with the meanest of the Ship's Company. I was now confirmed in the Suspicion I had

some time before, that there was a black Design in Embryo; for, when I met by chance any of my Officers, if I asked them, What they were about, and why they would act so contrary to their Duty, as to divert the People from their Work, one would answer, That he did not know whether he should go off the Island, or no, if my Bundle of Boards was ready; and others told me, That they did not care how Matters went; they could shift for themselves, as well as the rest. And, when I spoke with the meaner Sort, some would be furly, and say nothing; others would be Slaves to nobody; but would do as the rest did. In the Midst of these Confusions, I ordered my Son to secure my Commission on some dry Place of the Wood or Rocks, if such could be found; for I well remembered how *Dampier* had been served in these Seas. At length I, one Afternoon, missed all the People, and could see nobody, but Mr. *Adams*, Surgeon, Mr. *Hendry* the Agent, and my Son, and Mr. *Dodd*, Lieutenant of Marines, who, for some Reasons best known to himself, had feigned Lunacy. I could not devise what could have become of them all; but at Night was informed, that they had assembled at the great Tree, to consult together; where they had formed a new Regulation, and new Articles, whereby they excluded the Gentlemen Adventurers in *England* from having any Part of what we should take for the future; and divested me of the Authority of their Captain; and had regulated themselves according to *Jamaica* Discipline. The chief Officers, among the rest, had chosen one *Morpheu* to be their Champion and Speaker. This Man addressed himself to those that were present, to acquaint them, "That they were now their own Masters, and Servants to none; that altho' Mr. *Shelvocke*, their former Captain, took upon him to command them to do this and that, &c. he ought to be made sensible, that, whoever was their Commander now, it was their Courtesy that made him so; but that, however, Mr. *Shelvocke* might have the Refusal, if the Majority thought fit, but not else. But, at the same time, observed to them, that my Command was too lofty and arbitrary for a private Ship; that I should have continued in Men of War, where People were obliged quietly to bear all Hardships imposed upon them, whether right or wrong." To which some present, who had a Regard for me, answered, "That they never knew or saw me treat any body unjustly or severely; and that, however rigid I might be, they had nobody else to depend on; and that they would all do well to consider, how many Difficulties I had already brought them through; that, supposing we were preserved out of the Hands of our Enemies, how many more were to come, no one could tell; that, if they expected or intended to return to *England*, it could be by no other Means than taking a Turn round the World; and that, in that Case, there was none capable to undertake the Care of them, but myself: And reminded them of my Commission, and the Respect due to me upon that, besides the Protection they would receive from it, should they fall into the Hands of the *Spaniards*." This had some Effect on the meaner Sort; but they were diverted from the Thoughts of returning to Obedience by the chief concerned, who were no less than my first Lieutenant *Brooks*, &c. who had made the fore-mentioned *Morpheu* his Confident, even on board the Ship; for having served as Foremast-man the Voyage before he was made my Lieutenant, he had contracted a mighty Liking to the Forecastle Conversation: And, besides this, they were again supported by Mr. *Randall* my second Lieutenant, who was *Brooks*'s Brother-in-law, and others, who, forgetting all the Obligations they owed to the Gentlemen in *England*, and all the Respect due to me, were now running into Ingratitude, and into an irrecoverable Damage to their Characters and Interests. The first and most remarkable Outrage committed by this Gang of Levellers, was on Mr. *la Perre* my third Lieutenant, whom *Morpheu* assaulted in a barbarous Manner, and knocked him down on the Beech, whilst Mr. *Brooks* stood by an Eye-witness of this Brutality. I expostulated with him upon his Conduct warmly; but with very little Effect: So that I saw plainly, that there was an End of all regular Authority amongst us. Very soon after, the Affair came to be fully explained; for the Men framed a new Set of Articles, by which they put themselves upon the

Jamaica Discipline, declaring, that, as I had been their Captain, so they were content I should be their Captain still; and, as a further Mark of their Regard, they were willing to allow me six Shares; whereas, according to the *Jamaica* Model, I ought to have only four. Upon the same Plan, many of my Officers were reduced; for Instance, Mr. *Perit*, Mr. *Dodd*, and Mr. *Hendry*, were declared Middle-men: And to this Scheme their superior Officers readily consented; so that there was no hindering it from being carried into Execution. Only Mr. *Coldfa* the Master maintained a kind of Neutrality, and neither promoted nor opposed the Designs, that were going forward. In this Distress, I thought it lawful, and even necessary, to comply with their Demands; and therefore, in Conjunction with the rest of my Officers, I signed those Articles: And thus I thought I should have been able to have got them to work hard on the Bark, that was to carry us off; but I soon found, that I was sure to be mistaken, whenever I entertained any good Opinion of them. Instead of listening to my Advice, which, at the same time, was intently calculated for their Service, they broke into another Mutiny at the great Tree, where they came to a Resolution to demand what little Money I had saved for the Owners, which amounted to 750 Pieces of Eight in Virgin Silver, a Silver Dish weighing 75 Ounces, and 250 Dollars in ready Money; with which I was obliged to comply, and was then treated worse than ever, having only the Relic of the Fall, when they had chosen the best, being glad, after an hard Day's Work, to dine upon Seal; while Mr. *Morpheu*, and his Counsellors, feasted on the best Fish the Sea afforded. The next Stroke of their Insolence was, to get the Arms out of my Hands, of which I had hitherto taken the greatest Care, because, having but one Flint to a Mullet, and but very little Ammunition, I foresaw, that, if this was wasted, we must be undone: All which I represented to them, when they made their Demand, but to no manner of Purpose; for they not only took the Arms, but, as I imagined, they squandered away the little Powder, and the few Bullets we had left, in killing Cats, or any thing else that came in their Way, and they could fire at. This is a concise History of our Transactions in the Island of *San Fernandez*, from May 24. to August 15. and, I believe, the impartial Reader will agree, that no Man could suffer more than I did, lead a worse Life, or have a more uncomfortable Prospect.

The Account Captain *Betagh* gives, is so diametrically opposite to what we have already had from Captain *Shelvocke*, that, to shew my Impartiality, I am obliged to repeat what he has delivered. All his People, says Captain *Betagh*, have assured me, and many others, that there was no Wind at all when the Ship was lost; for, as Captain *Shelvocke* very well knew, that if he should be caught by a Gale in that perilous Road, and so poorly furnished with Ground-tackle, they must inevitably have perished, by reason of the prodigious Breaks the Sea makes in any thing of Weather against the sunk Rocks and Stones all along the Shore, he therefore took care to secure all their Lives by destroying, his Ship in fine serene Weather; which the ingenious Captain performed by bringing a Spring on his Cable, with which he stove his Ship's Broadside against the Swell, and kept her in that Position while the Cable was torn asunder. Mr. *Dodd*, who did not pretend to be a Seaman, asserted, that, about three Hours before the Ship went ashore, some Hands were at work on the Quarter-deck, haling in an Hauser, which was made fast to the Cable; and that he inquired of *Gilbert Henderson*, the Gunner, what that was for. *Henderson* answered him, that, if he would be rightly informed, he must go and ask the Captain. To confirm this, several of his People made Affidavit, that it blew no Wind at all; that every Soul of them got commodiously on shore; and that it is their Belief, he lost the Ship on Purpose: And it is remarkable, he made not one Trial to prevent it. As soon as the Cable parted, Mr. *la Perre*, his third Lieutenant, seeing immediate Ruin, cry'd out, Set the Forefall, hoping thereby to do some good; and, while *Edward Phips*, and others, were actually upon the Yard, *Shelvocke* hastily ordered them down, and, taking the Helm in his Hand, said, Never mind it, Boys; stand all fast; I will lay her on a

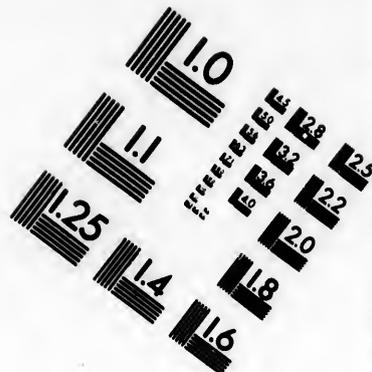

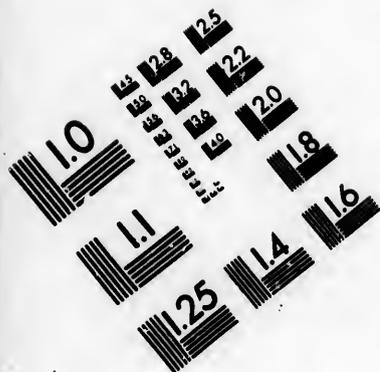

Feather-bed; his great luck, other thing; this; That, *Shelvocke* was considerable Gaining manner: A Value of every and the remain to the whole, out of which *Holley*, as few Marines, twenty companies, the company, and there were now Captain was to This, I say, in this Proposition think an Example pose a *Spanish* fifty Pounds; the Owner, the Ship consequently, the Pounds; But, a Share would be therefore, the C Pounds. As *Betagh* says, that Captain *Betagh* brated the 10th having got the upon that Occa them. But, as this must have it was the eight Stocks, which It is impossible Cause, since the and no absolute so that all I can Sides have stated the Captain's Re 17. On the 17 at Sea put us into the Bay, I ordered the Negroes and under the Land, ming off to her. be a Man of War. came to seek us were about, and have the whole I was not long away large, and thing of us. Cr under Arms, and some measure, of old them, I was order: To which as for their own told them, that it required ev their best Endeav balling against ghly prejudicial could be gone, a to be Slaves great deal of V considerate, and s and that, (as ways one of the d so willfully which was likely Reason to rec an the ill Conse dities, and the ets of Advanta tion and Inter te to them in a

Feather-bed, which, as it proved a very hard one, shewed his great Indifference as to the Fate of the Ship. Another thing Captain *Belagh* inflicts peremptorily upon, is this; That, by the Change of Circumstances, Captain *Shelvocke* was so far from losing, that he was a very considerable Gainer; and this he demonstrates in the following manner: According to the original Articles, half the Value of every Prize was to be set aside for the Owners, and the remaining Part divided into Shares, in Proportion to the whole Ship's Company, which made them 650; out of which the Captain was to have sixty; Captain *Hatley*, as second Captain, thirty; Captain *Belagh*, of the Manned, twenty; and so on from the Alteration of Circumstances, the lessening the Number of the Ship's Company, and the Reduction of the Officers that still survived, there were now less than fifty-two Shares; out of which the Captain was to have six, according to the new Regulation. This, I say, is Captain *Belagh's* manner of demounting this Proposition; but, upon considering it attentively, I think an Example will make it much clearer. I will suppose a Spanish Prize taken of the Value of six hundred and fifty Pounds Sterling; then half of it belonging to the Owners, the Shares are plainly worth ten Shillings apiece, consequently, the Captain's sixty Shares come to thirty Pounds; But, according to the new Rule of dividing, each Share would be worth twelve Pounds ten Shillings; and, therefore, the Captain's six Shares were worth seventy-five Pounds. As to the getting Possession of the Arms, Captain *Belagh* gives a very strange Account of it; for he says, that Captain *Shelvocke*, for certain Reasons, celebrated the 10th of June as a Festival; and that the Men having got the Arms, with his Consents, to fire Volleys upon that Occasion, they absolutely refused to part with them. But, according to Captain *Shelvocke's* Relation, this must have happened long after the 10th of June, since it was the eighth before their Bark was put upon the Stocks, which gave Occasion to all the subsequent Disputes. It is impossible to say any thing as to the Merits of this Cause, since there are positive Assertions on both Sides, and no absolute Evidence, or authentic Proof, on either; so that all I can do is, to report the Facts fairly, as both Sides have stated them; which having done, I return to the Captain's Relation.

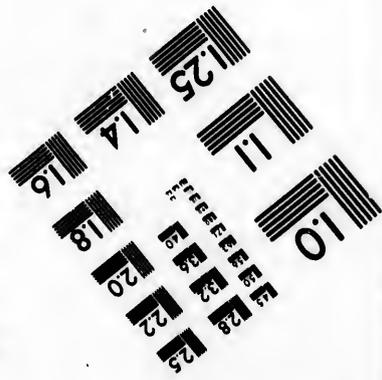

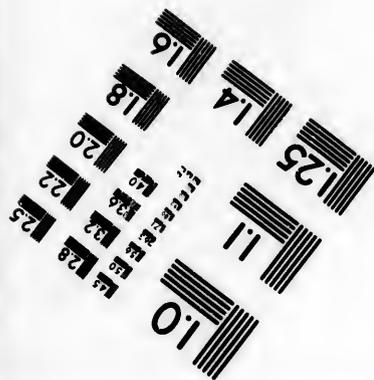

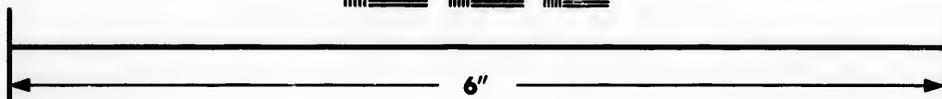

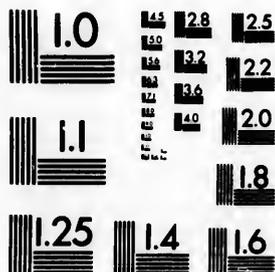

17. On the 15th of August, the Sight of a large Ship at Sea put us into the utmost Confusion. Before he crossed the Bay, I ordered the Fires to be put out, and confined the Negroes and Indians, lest the Ship should be becalmed under the Land, and any of them should attempt swimming off to her. I conceived it impossible, that the should be a Man of War, which, having Advice of our being lost, came to seek us; yet I knew, if she discovered what we were about, and the Wreck on the Shore, we should soon have the whole Force of the Kingdom of *Orin* upon us. I was not long under these Apprehensions; for the kept way large, and at too great a Distance to perceive any thing of us. On this Occasion I got most of the People under Arms, and was glad to see so many of them, in some measure, obedient to my Command. I, upon this, told them, I was pleased to see their Arms in such good Order: To which they answered impertinently, That it was for their own Sakes. But, before they were dispersed, I told them, that the Necessity of our Affairs was such, that it required every one to give their Assistance, and use their best Endeavours, to get the Bark afloat, instead of balling against their Captain, which would in the End be highly prejudicial; that, if we were discovered, all Hopes would be gone, and we could reasonably expect no other, than to be Slaves in some of the Mines; that we had still a great deal of Work, and never above ten of the more considerate, and commonly but six or seven, who attended; and that, (as they knew) to shew an Example, I was ready to be one of the Number. But they were so obstinate, and so wilfully insensible of the impending Destruction, which was likely to fall upon us, that the more I made use of Reason to reclaim them, the more I remonstrated to them the ill Consequences that would attend their continual obstinacies, and the more I encouraged them by future Prospects of Advantage, the more they ran into a confused Distraction and Interruption of any thing that might be of Service to them in any respect. The next Day they divided

amongst themselves, upon this Question, Whether the Bark should be carried on, or whether they should build two large Shallops, and set what was done of the Bark on Fire. The Favourers of this new Design, who were headed by *Morpheus*, and his Friend, aimed at a Separation by this Means, and did not doubt they should have their Ends, considering the great Influence they had as yet had over their Fellow-sufferers; but, as this must be carried by a Majority of Votes, according to their own Articles, they assembled before any Tent to debate this Matter; which they did in a noisy clamorous Manner on both Sides. But, in order to come to a Conclusion, I positively assured them, that Boats would be impracticable; because our Tools, and Materials too, were almost worn out and gone; therefore it was in vain for them to dispute about it. The Workmen, and a considerable Majority of the rest, sided with me in the Behalf of the Bark; but, at Night, the Carpenter said me Word, that if I did not deliver him the Money agreed at the Beginning, notwithstanding the Terms for the Payment of it were not executed, I should not see his Face again; so I was obliged to raise the Money for him. The most provoking Part of this Proposal was, that the Fellows who took upon them to harangue and scold first, were those who had never done an Hour's Work since we had been cast away; but, not gaining their Point, they openly declared I should not be their Captain, and that none but *Brooks* should be their Commander; which was (perhaps) what that young Man aspired to, and had long expected, if one may draw reasonable Conclusions from his Deportment to me; and he, undoubtedly, might have been their Commander, had it not been for the People of the Boatman's Tent, who, although they were fond of thinking themselves their own Masters, and would not submit to regular Command, yet had that Respect left, as not to give their Consents, that I should be left on the Island. I must own, that it was a thing very indifferent to me, had I not thought, that I acquitted myself of my Duty, in doing what in me lay, to hinder so many of his Majesty's Subjects, entrusted under my Care, from becoming Vagabonds. To complete our Divisions, there arose a third Party, who resolved to have nothing to do with the other two, purposing to stay on the Island. These were the Number of twelve, who had separated from the rest, and never appeared, except in the Night, when they used to come about our Tents to steal Powder, Lead, and Axes, and, in short, whatever else they could lay their Hands on. But in a little time I found means to manage them, and took all their Arms, Ammunition, and the rest of their Plunder from them; and threatened, that, if they were found within Musquet-shot of our Works or Tents, they should be treated as Enemies. A little afterwards, these Divisions so weakened the Power of the whole Body, that by degrees they began to listen to what I said; and I prevailed so far, as to get most of them in a working Humour. Mr. *Brooks* came now with a feigned submission, to desire he might eat with me again; but, in the main, did not lessen his Esteem for *Morpheus*: However, his Dissimulation proved of singular Service, in contributing to the finishing the Bark, which claimed the Assistance of all our Heads and Hands; for, when we came to plank the Bottom, we had very vexatious Difficulties to encounter with; for, having no Plank, except Pieces of the Wreck's Deck, we found it so dry and stubborn, that Fire and Water had hardly any Effect in making it pliable, and fit for Use; it rent, and split, and flew, like Glass; so that now I had substantial Reasons to believe, that all our Labour was vain, and that we must quietly sit down with the disagreeable Hopes of being taken off by some Spanish Ship some time or other, and, after all our Troubles, be led to a Prison to reflect on our past Misfortunes: However, by constant Labour, and Variety of Contrivances, we in the End patched her up, in such a manner, that I dare say, the like was never seen; and I may safely affirm, that such a Bottom never swam on the Surface of the Sea before. September the 9th, the Boat that I have already mentioned to be begun by the Armourer, was launched; and, being now in a way of completing our Bark, there yet remained unconsidered, and undetermined, what Provisions we could get to support us in our Voyage: This was as necessary to be looked into, as the finishing our Em-

barkation, the one being usefess without the other; and all the Stock we had, was one Cask of Beef, five or six Bushels of Farina, or Cassiaid Flour, together with four or five live Hogs. I made several Experiments to save both Fish and Seel, but it was impossible to be done without Salt: At length, we luckily thought on a Method of curing the Conger-eel, by splitting them, and taking out the Backbone; then dipped them in Sea-water, and, lastly, hung them up to dry in a great Smoke. But no other Fish could be preserved after that manner: Therefore the Fishermen were ordered to make it their Business to catch what Congers they could; and now several of the People, who had not yet struck a Stroke, began to repent of their Folly, as they grew weary of living on this Place; and offered their Service to go a fishing, with some foolish Excuse or other, for being so long idle, and asked my Pardon, promising not to lose a Moment for the time to come. The new Boat, being sent to try her Fortune, returned at Night, and brought with them a great Parcel of Fish of several Sorts; amongst which were 200 Eels, which was a good Beginning, and every Tent took their Proportion of them to save and cure, and the Boat was haled up every Night, and a strict Watch was kept over her, to prevent any making their Escape. Having this Conveniency of a large Boat, I desired Mr. Brooks, our only Diver, to try what he could recover from that Part of the Wreck which lay without: He accordingly went, and could find but one small Gun, which he weighed, and brought ashore, together with two Pieces of a large Church Candlestick, which was a Part of the Gentlemen Owners Plate. Our Boat was daily employed in fishing, the Armourer constantly supplying them with Hooks, and there was no want of Lines, which were made of twisted Ribband, of which a great Quantity was driven ashore. In the mean time, those who were ashore made Twine-stuff for Rigging, &c. and patched up the Canvas for Sails; the Cooper completed his Casks, and, in a short time, we had Malts on-end, tolerably well rigged, and made a good Figure. But, notwithstanding this Shew, I had a Damp upon my Spirits, when I reflected within myself on the certain and unavoidable Difficulty we should find in calking her tight, which was like to prove a very ugly Piece of Work, where one had had Seams, wretched Tools, and indifferent Artifts to deal with, which was our Case: However, when we had done it, and came to put it in the Water, to try the Fitness of our Work, it was followed by an universal Outcry, A Sieve! a Sieve! And now every one appeared truly melancholy and dejected, inasmuch that I was afraid they would not have used any farther Means; but, in a little time, by incessant Labour, we brought her into a tolerable Condition, and, having repaired the Ship's Pumps, I contrived them to fit our Bark: This, they cry'd, was a poor Dependence; but I desired them to have Patience, and continue their Aid, in doing what more could be thought of, and prepare to launch her, and then we should be better able to judge what we might expect before we ventured to Sea in her; and that, in the mean time, the Cooper should make a Bucket for each Man, if his Materials would hold out. This being approved on by all, we agreed to put her in the Water the next Spring-tide, which fell out the 5th of October 1720, by which time we had faved 2300 Eels, weighing, one with another, one Pound each, and about sixty Gallons of Seels Oil, to fry them in. Thus, with what I mentioned before, was all our Sea-stock. The appointed Time being come, we were all ready; but, in launching her, as she fell from the Blocks, that which was to receive her abast gave way, and down she settled, and stuck fast, our Launch being with the Head towards the Sea. I thought we were irretrievably spoiled now; but, when we came to make Purchases to raise her again, happily found she did not hang so heavy as I dreaded; by which means we got her clear off, and saved the same Tide. As she went off, I named her *The Recovery*, though I was sadly afraid of hearing ill News from those afloat in her. All Things, however, answering pretty well, we resolv'd to run the Hazard of going off in her; and, with that View, made all possible Dispatch in getting Things on board: After all, a dozen of our People chose to remain on shore, rather than run the Hazard of going to Sea in such a Vessel; and sent me Word,

when I pressed them to it, That as yet they did not think themselves sufficiently prepared for the other World; and with them remained about as many Negroes and *Indians*. When we first came on shore, the Weather would not permit us to go a fishing, so that we were then constrained to live upon Seels; the Entrails of which, I must confess, are tolerable Food; but the constant and prodigious Slaughter we made of them, frighted them from our Side of the Island. Such as eat Cats, which I could not do, declared them to be sweet nourishing Food. When we were able to fish, we were in a great measure delivered from these Hardships; but some of our mischievous Crew, for what Purpose it is impossible to say, set the Boat adrift, and so she was lost. We were then reduced to the Necessity of making Wicker-boats, covered with Sea-lions Skin, which did well enough on the Coast; but we durst not venture with them into the Bay, and, consequently, were worse provided with Fish than we need have been. We fry'd our Fish in Seel-oil, and then eat it, without Bread, Salt, or any thing to relish it, except a little wild Sorrel. We slept under as indifferent Covering as ever People had, our Habitations being partly covered with the Boughs of Trees, and partly with Seel and Sea-lions Skins, which were often torn away in the Night by sudden Flaws of Wind from the Mountains. It is certain, that, take it all together, a most wretched Life we led; and therefore there is nothing more astonishing, than that the Sense of common Misery did not oblige us to live in Unity, and in a friendly Correspondence; which might have lessened many of these Inconveniencies, and have rendered the rest tolerable. Some Men, however, are of such boisterous and unruly Tempers, that neither good Usage can oblige, or Hardships compel them to a reasonable Behaviour.

18. This Island of *Juan Fernandez* has been so often described, that I shall give the Reader only my particular Remarks as an Eye-witness, intending thereby to represent the State of the Island as we left it. It lies in the Latitude of 3° 30 South, at the Distance of about 90 Leagues West from the Continent of *Chili*. It may be about three Leagues long, and two broad, made up intirely of Mountains and Valleys; so that there was no walking a Quarter of a Mile upon a Flat. The Anchoring-place is on the North Side of the Island, which is distinguished by a Table-mountain, with a high sharp Peak on each Side. It is not safe to anchor in less than forty Fathom Water; and, even there, Ships are very much exposed to sharp Gales from the North, which blow frequently, and do sometimes a great deal of Mischief. To say the Truth, there cannot be a more unpleasent Place to anchor in; for the Bay being surrounded with high Mountains, there is a constant Succession of dead Calms, and of sudden stormy Gulfs of Wind. But it is now time to confine ourselves to the Land, and describe what is met with on shore. It enjoys a fine wholesome Air, inasmuch that, out of seventy of us that were on it for the Space of five Months and eleven Days, not one had an Hour's Sickness, notwithstanding that we fed on such foul Diet without Bread or Salt; so that we had no Complaints amongst us, except an incessant craving Appetite, and the want of our former Strength and Vigour. For my own Part, I must acknowledge the Bounty of Providence, that gave me Strength to cope with such Vexations as I met with; for, although I lost much of my Flesh, I became one of the strongest and most active Men on the Island: From being very corpulent, and almost crippled with the Gout, I walked much, and worked hard every Day, without being in the least afflicted with that Disorder; and may say, that, if it had not pleased God so to have enabled me, we might probably have remained there for Years to come, since it is a Place little frequented by the *Spaniards*. The Soil is fruitful, abounding with various sorts of large and beautiful Trees, mostly aromatic; the Names of those we knew were the *Pimento-tree*, which bears a Leaf like a Myrtle, but somewhat larger, with a blue Blossom; their Trunks are short and thick, and their Heads very bushy, and as round and regular as if they were kept so by Art. There is another Sort, much superior in Bulk to the former, which I take to be somewhat like that which affords the Jesuits Bark. On the Tops of some of the Mountains are Plains covered with Groves of the *Italian Laurel*, mentioned by *Frezier*

in his Description of *Chili*; these grow up in a strait slender Body, from which sprout small irregular Branches, from the Root to the Top, bearing Leaves like the Laurel, but smaller. Palm-trees are likewise found in most Parts of the Island, growing in smooth Joins like a Cane, some thirty, some forty Feet high: The Head of them is like that of a Cocoa-nut-tree, except that the Leaves of them are of a paler Green, and bear large Bunches of red Berries, bigger than a Sloe; they taste like our Haws, and have a Stone as big as that of an Heart cherry. That which we call the Palm-cabbage, is the very Substance of the Head of the Tree; which being cut off, and dismembered of its great spreading Leaves, and all of it that is hard and tough, you find inclosed a white and tender young Head, with its Leaves and Berries perfectly formed, and ready to supply the Place of the old one. When in Search of them, we were obliged to cut down a lofty Tree for every one we got. One good Quality belonging to the Woods which cover this Island is, that they are every-where easy of Access, there being no Undergrowth, except in some of the deepest Valleys, where the Fern grows exceeding high, and of which there are even large Trees, with Trunks of good Substance. Some of the *Englisb*, that have been here formerly, have sowed Turneps, which have spread very much; as have also two or three Plantations of small Pompons; but my Men had never Patience to let any of these come to Maturity. We likewise found Plenty of Water-creffes, and wild Sorrel: There are some Hills remarkable for a fine red Earth, which I take to be the same with that of which the Inhabitants of *Chili* make their Earthen-ware, which is almost as beautiful as the red *China*. The Northern Part is very well watered, by a great many Streams which come down the narrow Valleys: This Water keeps well at Sea, and is, I dare say, as good as any in the World. Down the Western Peak, contiguous to the Table-mountain, fall two Cascades, at least 300 Feet perpendicular, close by each other, about twelve Feet in Breadth, which probably supply most of the other Runs of Water: What with the rapid Descent of these Waters, and the Palm-trees which grow up close by the Edges of them, adorned with vast Bunches of red Berries, it yields as agreeable a Prospect as can be. We should have had no want of Goats in the Mountains, could we have conveniently followed them; and Cats are also numerous; they are, in Size and Colour, exactly the same with our House-cats; those who eat them have assured me, that they found a more substantial Relief from one Meal of them, than from four or five of Seal or Fish; and to their great Satisfaction, we had a small Bitch, which would catch almost any Number they wanted in an Hour or two. The *Spaniards*, before they settled in *Chili*, left a Breed of Goats here, and have since endeavoured to destroy them, by leaving another Breed of Dogs, but with no great Effect. There are not many sorts of Birds; but the Sea, on the Coast, abounds with a greater Variety of all sorts of fine Fish, than almost any I know: As for the Seals, and Sea-lions, so much has been said of them by others, that I need not dwell upon them. The former are called by the *Spaniards Lobos de la Mar*, from their Resemblance of a Wolf; but the *Dutch* call them Sea-dogs. My Opinion is, that they may very probably be called Sea-wolves, their Heads resembling that Creature: They have a fine iron-grey Fur, and are of the Bigness, when full grown, of a large Mastiff: They are naturally furlly, and fearful on the Approach of any body: They have two Fins, which compose their Tails, with which they make Shift to get along much faster than the Lions, which are very large unwieldy Creatures, but withal prodigiously full of Oil.

19. *October* 6. in the Evening, we departed, with nothing to subsist at Sea with but the smoked Congers, one of which was allowed to each Man for twenty-four Hours, one Cask of Beef, and four live Hogs, which had fed all the time on the putrefied Carcasses of the Seals we had killed, with three or four Bushels of Meal. We were upwards of forty crowded together, lying upon the Bundles of Eels, in no Method of keeping themselves clean; so that all our Senses were as much offended as possible. There was not a Drop of Water to be had, without sucking it out of the Cask with the Barrel of a Mucket, which was made use of by every body promiscuously; and the little unfavoury

Morsels we daily eat, created perpetual Quarrels, every one contending for the Frying-pan. All the Conveniency we had for a Fire, was only a Half-tub filled with Earth, which made it so tedious, that we had a continual Noise of frying from Morning to Night. I proposed that we should stand to the South-east, toward the Bay of *Conception*, that being nearest to us. Every Day, while the *Sea-breeze* continued, we were hard put to it; for, not having above sixteen Inches free Board, and our Bark tumbling prodigiously, the Water continually ran over us; and, having only a grating Deck, and no Tarpawlin to cover it, except the Bark's Top-sail, which was but thin, our Pumps would but just keep us free; notwithstanding which, I was uneasy by bearing away, *Conception* being our chief Dependence. On the 10th, at four in the Morning, we fell in with a great Ship; and, by the Moon-light, I could plainly see she was *Europe* built. We were obliged to act in such a manner, as the Nature of our Case required, which was desperate: Therefore I stood for her; and, we being rigged after the manner of the Small-craft of the Country, they did not regard us till Day-light; which coming on, before we could get quite up with her, they discovered the Brownness of our Canvas, and immediately suspected us, wore Ship, and haled close on a Wind to the Westward; then hoisted their Colours, and fired a Gun, and crowded away from us, and left us behind them at a great rate; but, it falling calm two Hours after, we had recourse to our Oars, and approached them with tolerable Speed; and, in the mean time, overhauled our Arms, which we found to be in a very bad Condition, One-third of them being without Flint, and but three Cutlasses; so that we were not at all prepared for boarding, which was the only means we could have of taking any Ship: We had but one small Cannon, which we could not mount, and therefore were obliged to fire it as it lay along the Deck; and, to supply it, we had no more Ammunition than two Round-shot, a few Chain-bolts, and Bolt-heads, the Clappers of the *Speedwell's* Bell, and some Bags of Beech-stones to serve for Partridge. In four Hours we came up with them, every one seeming as easy in their Minds, as actually in the Possession of her; and were only sorry, that she was not deeper laden than she seemed to be: But, as we advanced nearer, I saw her Guns, and Pattereroes, and a considerable Number of Men on the Deck, with their Arms glittering in the Sun. The Enemy desired us to come on board them; and, at the same time, gave us a Volley of great and small Shot, which killed our Gunner, and almost brought our Fore-mast by the Board. This unexpected Reception staggered a great many, who before seemed to be the forwardest, that they lay on their Oars for some time, notwithstanding that I urged them to keep their Way; but, recovering again, rowed close up with them, and engaged them, till all our small Shot was expended, which obliged us to fall a-stern to make some Slugs: In this manner we made three Attempts, without any better Success. All the Night we were busied making Slugs, and had provided a large Quantity the next Morning, when we came to a final Resolution, of either carrying her, or of submitting to her; and accordingly, at Day-break, I ordered twenty Men, in our Yawl, to lay her athwart the Hawse, whilst I boarded her in the Bark: The People in the Boat put off, giving me repeated Assurances of their good Behaviour; but the very Instant we were coming to Action, a Gale sprung up, and she went away from us. This Ship was called the *Margaretta*, and was the same which had been a Privateer belonging to *Saint Malo*, and mounted forty Guns all the last War. In the Skirmishes we had with her, we had none killed, except *Gilbert Henderson*, our Gunner; and three wounded, which were Mr. *Brooks*, first Lieutenant, thro' the Thigh, Mr. *Coldsea*, the Master, thro' the Groin, and one of the Fore-mast-men in the Small of his Back: Two of these did very well; Mr. *Coldsea*, indeed, lingered in a miserable manner for nine or ten Months afterwards, but at length recovered. Our Condition now grew worse and worse: The Seas being too rough for our uncomfortable Vessel, I proposed that we might get into fair Weather, but to take *Cochimbo* in our Way, to try what could be done there. This was agreed on; but, the very Morning we expected to go into *Cochimbo*, there came on a very hard

hard Gale of Wind, which lasted four Days; during which time we had no Hopes of living; we were obliged to scud under bare Poles, having our Yawl in Tow, and having but a short Scope of Boat-ropes for her. The excessive Fright of this Storm made many of the People form a Resolution of going ashore the very first Opportunity they could lay hold on: I had no room left to give them further Hopes, till at length, calling to mind Mr. Frezier's Account of the Island of *Iquique*, I mentioned the Surprizal of that Place, it being but a small Lieutenantcy, and where we might, in all Probability, get some wholesome Provisions, and a better Bottom than our own. Every one approved of this; and the Sun shining upon us, and lying dry again, it infused some Vigour into us, and we directed our Course for that Island. The Evening after we saw *Iquique*, which appeared no other than as a white Rock, at the Foot of the High-land of *Carapucbo*. It was Sun-set before the Boat departed; which, endeavouring to land under the Cover of the Night, had like to have been lost among the Breakers. At last they heard the Barking of Dogs, and saw the Light of some Candles; but, having experienced the Hazard of Landing in the Dark, made their Boat fast to a Float of Sea-weeds, for want of a Grappling: In this Posture they remained till Day-light, and then rowed in between the Rocks, and were received by some *Indians* on the Shore, with an ignorant Welcome: Being ashore, they went to the Lieutenant's House; and, finding it locked, broke it open, and romaged the whole Village, and found a Booty, more valuable to us at present, than Gold or Silver, which consisted of sixty Butshels of Wheat-flour, 120 of Calavances and Corn, some jerked Beef, Pork, and Mutton, 10,000 Weight of well-cured Fish, a good Number of Fowls, some Rusk, and four or five Days Eating of soft Bread, together with five or six Jars of *Peruvian* Wine: and Brandy; and had the good Fortune to find a Boat near the Shore, to bring off their Plunder, which otherwise would have been of little Use to us, our own Boat being laden with Men. Meanwhile we, in the Bark, were carried away to the Northward, by the Current, out of Sight of the Island; and they, not having laden their Boats before the Heat of the Day, had a laborious Task to row off their heavy-laden Boats; whilst we were under the melancholy Apprehensions, that our People, not finding any thing considerable, had taken it into their Heads to stay ashore, and desert us: But these Clouds dispersed, when, towards the Evening, I perceived two Boats approaching us very fast, and discovered them as much burdened as they could safely be. Words cannot express the Joy that reigned among us when they came aboard: The Scene was now changed from Famine to Plenty; the Loaves of soft Bread were distributed, and the Jars of Wine broached; but I took care they should drink moderately of it, each Man having no more than half a Pint: And, after living a Day or two on wholesome Diet, we wondered our Stomachs could digest the rank nauseous Eels fried in Train-oil; and could hardly believe, that we had lived on nothing else for a Month past. I was assured, by my second Lieutenant, that the *Indians* did not express any great Concern at what happened, but seemed rather to be pleased at our plundering the *Spaniards*; so natural it is for bad Masters to find Enemies in their Servants.

This little Island of *Iquique* lies in the Latitude of 19° 50' South: It is about a Mile and an half in Circumference, and half a Mile, or thereabouts, from the Main-land of *Peru*, the Chanel between full of Rocks. It is of a moderate Height, but the Bulk of it is entirely composed of Cormorants-dung, which, as I have before observed, is made use of for manuring the Land, which produces Cod-pepper. In Colour it is exceeding white; so that Places covered with it appear, at a Distance, like Chalk-cliffs. The Smell of it is certainly very offensive, and, in all Probability, very unwholesome; but the Gain that is made of it very considerable, since several Ships load here every Year, and carry it to *Arica*. There are no Inhabitants on it but Negro-slaves, who clean and prepare it in large Heaps near the Shore, ready for Boats to take it off. As to the Village, where the Lieutenant resides, that is on the Continent, close by the Sea-side; it consists of about sixty scattered ill-built Houses (which hardly deserve that Name)

and a small Church; there is not the least Verdure to be seen about it, nor does it afford the least Necessary of Life, nor even Water, which they are obliged to fetch from the *Quebrada*, or the Break of *Pisagua*, in Boats, ten Leagues to the Northward. Being, therefore, a Place so miserable, we may conclude, that the Advantage accruing to them by *Guano*, or Cormorants-dung, is the only Inducement to bring Inhabitants to this Place. This last Inconvenience was what, I suppose, led them to the Contrivance of building their Habitations on the Main-land; which, though it is a Situation as hideous as can be imagined, and not wholly out of the Stench of the offensive Vapours of the Isle of *Iquique*, yet is not quite so suffocating. But although the Land is so desolate and forbidding, the Sea affords two or three sorts of excellent Fish, of such Kinds as I never saw before; one of them is like a large Silver Eel, tho' much thicker in proportion to its Length; these and the rest are equally delicious. They cure them in a cleanly manner, and export great Quantities of them by the Ships which come from *Guano*. By two *Indian* Prisoners we were informed, that the Lieutenant of *Iquique* had a Boat at *Pisagua*, which was sent for Water, of which as we began to stand in need, I sent Mr. *Randall*, second Lieutenant, in quest of her; but this failed; and though they missed the Vessel, they landed in a dangerous manner, on a sort of a Float called *Balfes*, much in Use on this Coast; they brought off only a few Bladders of Water, and three or four *Balfes*, very artificially sewed, and filled with Wind, made fast along-side one of another: On these the Rowers sits, looking forward, with a double Paddle; and, as fast as he can perceive the Wind to escape from under, he adds a Supply, by a Contrivance for that Purpose. These are the chief Embarkations made use of by the Fishermen, and are serviceable for landing on this Coast, which has hardly one smooth Beach from one End to the other of it. We should have looked into the Port of *Arica*, but that we heard there was a Ship of Force there. We continued our Course to *Le Nasco*, of which Port we met with a large Ship, about two Hours before Day-light. It was ten in the Morning before we came up with her, tho' we rowed very hard; and after a brisk Dispute, which lasted six or seven Hours, and then the Sea-breeze coming in very strong, we were obliged to leave her. This Ship was called the *St. Francisco Palacio*, of 700 Tons, eight Guns, and ten Patereroes, a great Number of Men, and well provided with small Arms; although she was so deeply laden, that, as she rolled, the Water ran through her Scuppers, over her, upon Deck; so that the had more of the Remembrance of an ill-contrived wooden Cattle, than of a Ship, according to the Fashion of building at present in *Europe*. It was our ill Fortune to meet two of the best equipped Ships, in the Private Trade, at that time, in the South Seas. In this Action, we had not above twenty small Arms that were of any Use, which was the Effect of their inconsiderate Proceedings on *Juan Fernandez*; but, notwithstanding this, they were so impatient, that some of them were resolved to go and surrender immediately to the Enemy. To prevent this, I ordered four Men, I thought I could trust, into our two Boats, to put it out of their Power; but those two that were in the best Boat deceived me, and went away with her; and my first Lieutenant, and *Morpheu*, made a Party to go away with the only Boat we had left; which they had certainly effected, but that it blew so hard the next Day, as to hinder them from executing their Design; the Knowledge of which I was forced to dissemble, as I was conscious I had not Power enough to punish them.

20. We stood, the Day following, into the Road of *Pisco*, where we saw a very fine Ship, and resolved unanimously to board her. We first ordered our Boat to intercept theirs, which they missed: But we kept our Resolution nevertheless; and, to our great Satisfaction, when we came to board, the Captain, and all his Officers, met us with their Hats off, beseeching us to grant them good Quarters; which we readily did. She was a good Ship, of about 200 Tons, called the *Jesu Maria*, almost laden with Pitch, Tar, Copper, and Plank; but nothing else. The Captain offered 16000 Dollars for her Ransom; but I could not comply, the *Recovery* being disabled in her Masts by boarding; and not only so, but I was hindered by the Consideration,

tion, that now we might have Room enough to enjoy ourselves, some Cleanliness at least, an Article we had been perfect Strangers to ever since we had departed from the Island of *Juan Fernandez*. We therefore made the utmost Dispatch in getting every thing out of the Bark. The *Spanish* Captain informed me, that the *Margaretta* had been arrived some time at *Calao*, where she had given a full Account of us; that the Captain, and three Men, were killed in the Action; and that the Priest, and several others, were wounded; and that she was now ready to put to Sea again, with an Addition of ten Guns, and fifty Men, to cruise for us; and that the *Flying Jibb*, a Frigate of twenty-eight Guns, was already out with the same Intent; and that there was Advice sent both Ways along-shore, and Commissions to equip what Strength they had to catch us. All the Night, they were upon the Watch at the Town, making a Shew, by the continual firing of Guns, to give us an Earnest of what we must expect, if we should attempt a Descent. Having cleared our Bark the next Morning, we gave her to the *Spanish* Captain; and, as soon as the Breeze sprung up, we weighed, and went to Sea, and, in going out, met with our Boat, that had left us. They edged towards us, imagining we were *Spaniards*; by which means we got them again. The two Fellows were almost dead, having neither eat nor drank any thing for three Days past, and had just been ashore on a small Island near this Harbour, to kill some Seals, to drink their Blood. They had no Excuse, but that they fell asleep; and that the Breezes had waked us in the Bark away from them. We had not much time to observe the Place, which, however, upon a transient View, appeared to us very pleasantly situated among Orchards and Vineyards. After we left it, we proceeded along the Coast very cautiously, as knowing, that we were now almost in the Mouths of our Enemies, and that the least Act of Indiscretion must throw us into their Hands. We ventured, however, to look into the Roads of *Guanabaco*, *Malabriga*, and *Cheripe*; but, seeing no Shipping in them, passed on between the Island of *Lobos de Tierra* and the Continent. On November 25, we found ourselves near the Saddle of *Payta*; and I immediately bethought me, that, tho' our Force was much diminished since we last took it, yet we might, without any Hazard, surprize them in the Night. Accordingly, we endeavoured to get in with the Ship, till, it growing calm, it was thought better to defer it till the Morning, since our being in a *Spanish* built Ship, would be sufficient to deceive the Inhabitants, and make it impossible for them to suspect us. In the Morning, the People ashore, observing the Patigue we underwent in making so many short Trips to gain Ground to Windward, sent off a large Boat, full of Men, to help us to bring in our Ship, and inquire News of us. As soon as we saw them making towards us, I ordered, that none should be seen, but such as wore the *Spanish* Complexion and Dress, who were ready to answer such Questions as they asked in hailing us, and give them a Rope to make fast their Boat when they clapped us aboard, while some should be concealed under the Gunnel, with Musquets ready to point into their Boat, and command them in as soon as they had made themselves fast. This Stratagem had its Effect. I examined the Prisoners of the Condition of the Town, which, they assured us, was very poor at present, there being neither Money nor Provisions in it; and shewed me a small Bark on shore, which Captain *Clipperton* had sent in a little while before, with some of his Prisoners; upon which every thing had been again removed into the Country. This unwelcome News did not hinder us from keeping on our Way, with our *Spanish* Colours flying, till we came to the Anchorage. I sent Mr. *Brooks*, as soon as our Anchor was down, with both the Boats, and twenty-four Men, no more of them appearing than those that rowed, and two or three sitting in each, the rest, with their Arms, lying in the Bottoms of the Boats; so that, when my People landed, they found the Children playing on the Beach, who immediately took the Alarm, and ran away at the Sight of armed Men. In an Instant, the whole Place was in a Consternation, and happy was the Man who could make his Escape, the Town being left desolate, and the Enemy being too nimble of Foot for ours to overtake them. They ransacked *Payta*, and, upon a strict Search, found, that our Prisoners had not deceived us in saying the Place was

poor; for they could find nothing but a few Bales of coarse Cloth, about 500 Weight of dried Dog-fish, two or three Pedlars Packs, and an inconsiderable Quantity of Bread and Sweat-meats: So that we had but small Employment for our Boats. But, though we had so little Success in our Land Enterprize, we took a Booty as we lay at Anchor in the Ship; which was a Vessel with about fifty Jars of *Peruvian* Wine, and Brandy. The Master of her told me, that he was come by Stealth from *Calao*, there being Orders, that none but Ships of some Force should stir out. He told me the same Story that the Captain of the *Jesus Maria* had before, and gave me to understand, that it would be next to impossible for me to get off from the Coast without being taken. But to return to the Town: My People were in no great Hurry to quit it, and, it being now dark, some of the *Spaniards*, who were lurking about the Out-skirts of the Town, hearing so many Small-arms fired in the Road, instantly concluded, that our Ship was attacked, and were in hopes, that some of their Men of War were come again to deliver them from the Hands of their Enemies. Upon these false Surmises, they began to assemble together; and, being apprised of the small Number of *English* ashore, who did not exceed eighteen, came down the Hills in a great Fury. At first my People, not doubting they were in Earnest, took Refuge in the biggest Church, resolving to defend themselves there; but at length they marched out, and formed themselves into a Line, kept their Drum beating, and, one of them firing a Musquet at random, they spoiled the *Spaniards* Jest, heard no more of them, and embarked very quietly. From hence we directed our Course for the Island of *Gorgona*, in the Bay of *Panama*; and, in our Passage thither, built a Tank, or wooden Cistern, to hold ten Tons of Water. In our Way, we made the Island of *Plate*, Cape *St. Francisco*, and *Gorgonella*, or *Little Gorgona*; and, on December 2, arrived at the Island of *Gorgona* itself, where we had the Advantage of filling our Water-cask in the Boat, the Water running in small Streams into the Sea; and cut down our Wood at High-water-mark: So that, in less than forty-eight Hours, we did our Business. From this Place we hurried away, for fear of those who might be in quest of us; and, having got out of the Track of the Enemy's Ships, consulted on the properst Method of proceeding: And then the Majority were for going directly for the Coasts of *Asia*. Upon which, we changed our Ship's Name from the *Jesus Maria* to the *Happy Return*, and applied all our Endeavours towards quitting these Coasts; but the Winds and Current were contrary; and some against this Motion did so much Damage clandestinely to our Tank, that the greatest Part of the Water leaked out, so that this, with continual contrary Winds, and dead Calms, which had detained us, till our Provisions were much exhausted, rendered us incapable of undertaking so long a Run: Therefore, to furnish ourselves with what we wanted, I proposed a Descent on *Rio Lejo*, in the Latitude of 11° 50' North, on the Coast of *Mexico*; but, in our Way thither, we accidentally fell in with Cape *Burica*, in the Latitude of 8° 20' North; and then, on second Thoughts, judged it would be safer for us to make some Attempts on the Island of *Quibo*, in the Latitude of 7° 30' North, where, by Captain *Rogers's* Account, I guessed there were Inhabitants, who lived plentifully on the Product of that Island.

Captain *Betagh*, in his Remarks, gives us quite a different View of every Transaction: He asserts, of his own Knowledge, that the *Margaretta*, instead of being a forty Gun Ship, carried only thirteen Guns; and further asserts, that the Commander of her, who was a *Frenchman*, told him, they had not above a dozen Cartridges of Powder on board, and two or three Small-arms belonging to the Passengers, with only Stones and Ballast for Shot. He likewise assures us, that they suffered no other Hurt, than a Negro being wounded in the Cheek; and that a Man stood by the Colours, ready to strike them, in case Captain *Shelvocke* had boarded her; but that it was the Captain, and not the Men, who thought it best to sheer off, without making such an Attempt. He admits, however, that Captain *Shelvocke* did his utmost Endeavour to take the other great Ship; but that, his Bark being too slight, he failed. He likewise acknowledges, that the Captain was in the right not to ac-

cept the 16000 Dollars offered him for the *Jesus Maria*; because it gave him an Opportunity of cruising in the South Seas, or of going to *Asia*, whenever he thought it necessary. But let us now return to the Voyage:

21. On *January 13. 1721*, we entered, says the Captain, between the Islands of *Quibo* and *Quivetta*, in twenty Fathom Water, over-against a sandy Bay, which promised us great Conveniences for Wooding and Watering. I therefore sent the Boat thither to view it, who reported, that there was a good close Harbour a little to the South; and that they saw no Signs of Inhabitants, except three or four Huts by the Water-side, which, they supposed, had formerly been made use of by Pearl-fishers, there being great Quantities of Mother-of-pearl-shells about them. I considered the Matter attentively, and at last resolved not to shut myself up in a close Harbour, for fear of bad Consequences. As soon as Day broke the next Morning, we saw two large Boats rowing in for *Quivetta*, one of them having *Spanish* Colours flying; which gave me some Apprehensions, that they might have some Intelligence of, and intended to attack us. It may not be amiss to inform the Reader here, that the *Mulatatoes* on the Coast of *Mexico* are remarkable for their Courage, and have sometimes done very bold Actions in such small Embarkations as these. However, as to the People we had to do with, they continued their Course, till we saw them go into a small Cove on the Island of *Quivetta*; which gave us very great Satisfaction, as it convinced us, that they had no Thoughts of attacking our Ship. The Tables were now turned, and, from contriving how to defend ourselves, we began to turn our Thoughts on the Means of engaging them; and, after a little Debate, whether it would be prudent for us to attack them in our Boat, it was resolved, on all Hazards, to go after them in our Yawl; which Enterprize was commanded by *Mr. Brooks* first Lieutenant, who found them all ashore, brought away their *Piraguas*, and two Prisoners; the one a *Mulatto*, the other a *Negro*. The rest fought for Refuge in the Woods. We took all their Provisions, which consisted of a little Pork, and some green, ripe, and dried Plantains. There was a large Quantity of the latter, which, being pounded, made a grateful Flour to the Taste, indifferently white; and, all together, made up a Month's Bread. The *Mulatto* mortified us very much, by telling us, that a Vessel, laden with Provisions, had passed very near to us in the Night; but, to make amends, promised to conduct us to a Place, where we might supply ourselves without Hazard, provided we were not above two or three Days about it; wherefore we were very brisk in getting our Wood and Water. On *January 16.* we weighed from hence for *Mariato*, that being the Name of the Place we were bound to. In going out from *Quibo*, we were in imminent Danger of being horrid by the Current upon two Rocks, lying at a small Distance from one another off the Northernmost Point of *Quivetta*; but, having cleared them, we steered through *Canal Bueno*, or the *Good Channel*, so called, from its Safety, being free from dangerous Sholes and Rocks. It might as properly be called the *Streights of Quibo*, which forms the Western Side of it, extending about eight or nine Leagues North and South. Over-against the South Entrance of these Streights, at the Distance of a League from Point *Mariato*, which is the Westernmost Point of the Gulph of *St. Martin*, lies the Island of *Sebaco*, which is, to the best of my Judgment, about ten Leagues in Circumference. I ran along the South End of it, and found every Point flat at least a League from the Shore; and, on the 19th in the Evening, we got safe in between *Mariato* and the Island of *Sebaco*, and anchored in six Fathom Water, over-against a green Field; which is Instruction sufficient, there being but that clear Spot thereabouts. Our Pilot desired we might be going at least three Hours before Day-light, and that then we should be in good time at the Plantations. Accordingly, I went at two the next Morning in our own Boat, and ordered the two Lieutenants in the two *Piraguas*, leaving my Son, and a few with him, to take care of the Ship. Our Pilot, having us in Charge, carried us up some Part of the River of *St. Martin*, and, out of that, into several Branches of very narrow Creeks, amongst many Groves, where we had not Room to row. I could by no means approve of this Navigation, and there-

fore kept a strict Eye upon our Guide, and was ready to suspect, that he had no good Design in his Head. We landed just at Day-break, and, when we came on the Bank, found ourselves in a fine Savannah or Plain; and, after a March of about three Miles, came to two *Fatin-houses*; But those belonging to them made their Escape, except the Wife and Children of one House. We had the Satisfaction of seeing, that this Place answered the Description that had been given us of it, being surrounded by numerous Herds of Black Cattle, Hogs, and plenty of Fowls of all sorts, together with some dried Beef, Plantains, and *Indian* Corn; and, for the present, we were entertained with a Breakfast of hot Cake and Milk: A Diet we had been long unacquainted with. When it was broad Day, I saw our Ship close by us; upon which I asked our *Mulatto*, How he came to bring us so far about? Who answered, That there was a River between us; and that he did not know, whether it was fordable, or not. I therefore sent some to try, who found it was not above Knee-deep: Wherefore, to avoid carrying our Plunder so far by Land and Water, I ordered, that our Boats should row out of the River of *St. Martin*, and come to the Beach over-against the Ship. We had not been long here, before we had the Master of the Family in Custody, who brought Horses with him, and desired we would make use of him in any thing he could serve us. This Offer was kindly received; and I presently employed him to carry what I thought fit to our Boat. This done, he went among his Black Cattle, and brought us what Number I thought we could save; for we had but little Salt, and I could not afford Water to keep them alive when we came to Sea; so that, as soon as they were on board, they were killed, and their Flesh preserved by cutting it into long Slips, of the Thickness of one's Finger, and then sprinkling it with so small a Quantity of Salt, that we did not use above four or five Pounds to 100 Weight. Having let it lie together two or three Hours, we hung it up to dry in the Sun two or three Days successively; which perfectly saved it, which could not have been done in any other way, by any other Quantity of the best Salt. As we had now done all we proposed, we departed from hence the next Morning, with our Decks full of Fowls and Hogs, amongst which one had his Navel on his Back; which, the *Spaniards* say, when wild in the Woods, is a terrible Creature to meet with, altho', at their full Growth, they are but small. We returned by the same Way that we came, through *Canal Bueno*, and made a Stop at *Quibo*, to complete our Water; and, when we failed, gave our two Prisoners the largest *Piragua*, that those still remaining at *Quivetta* might return from whence they came. But I must here inform my Reader, that the Wine and Brandy we had taken, had worked so briskly with my Ship's Company, as to divide them into two Parties, inveterate to the last Degree one against another, who used to be so firmly united at first; inasmuch that I have had, in one Night's time, the Ringleaders of both of them desiring me to espouse their Cause, both assuring me, that the other had a Design on my Life; and urged me to take the Opportunity to murder those, who were not of their Faction. It is even unaccountable to myself, how the Mischief was diverted; for I could use no Means, but speaking calmly to them on both Sides, and suffer them (indeed it was out of my Power to hinder it) to get drunk as often as they would; and, in that Condition, they have often, all together, been skirmishing with each other; and I have had, more than once, my Cleaths almost torn off my Back in endeavouring to part them. It was happy, that this Trade did not last long; for, while they had any thing to drink, I judged it unsafe to lay my Head on my Pillow; which almost wearied me out of my Life. But their free Access to the Liquor shortened the Term of this miserable Way of passing our Time; and tho', while it held, it was attended by some vexatious Consequences, yet it had this one good Effect, that it helped off with the liquid Evil at a great rate. Necessitous Hunger obliged them to act jointly and vigorously together at *Mariato*; but, after having glutted themselves a Day or two, they relapsed again, and were as distracted as ever, though now in the midst of a moderate Plenty. My Land, as well as Sea-officers, were now obliged to learn, at least, how to steer, in order to take their Turns with the Seamen.

Such was the Pass they had now brought themselves to; for, by sinking my Authority, they had absolutely lost their own, and were even in a worse Situation than I; inasmuch as the Crew, for their own sakes, were obliged to have recourse to me upon all Emergencies, obeying me punctually while those lasted, and abusing me plentifully as soon as they were over.

22. On the 25th of January in the Morning, we discovered a Sail about two Leagues to the Leeward: We gave them Chace till such time as we discovered they were *Europe* built; and then, fearing she might be one of the Enemies Men of War, I clapped on a Wind, and in half an Hour it fell calm. We soon after saw a Boat rowing towards us, which proved the Pinnace of our Comfort the *Success*, commanded by their first Lieutenant Mr. *Davison*. This Interview amazed us both; he was surpris'd to find me in such a Condition, and I no less at finding him in those Seas. I entertained him with a Rehearsal of our Misfortunes, which had happened in the long Interval, since we were separated near the Coast of *England*, till our present Meeting; and he, on his Part, entertained me with remarkable Incidents which had fallen out with them; particularly, that about a Twelvemonth before they had taken a new *French* Brigantine, and put their Officers and Ship's Company's Plunder on board of her, which they valued at 10,000 Pounds Sterling; that their second Captain Mr. *Mitchell* was intrusted with the Command of her, and was ordered to go with her to some Island on the Coast of *Mexico*, and there to stay till Captain *Clipperton* joined him with his Ship; but that they never could find the Island since, and therefore judged, that poor *Mitchell*, and his Men, were either starved, or murdered by the *Spaniards* or *Indians*, who are very dexterous at that kind of Work, or that he had perished with the Island, which Captain *Clipperton*, and some others, were of Opinion was sunk, since by all their Endeavours, they could not find it out. Startled at so improbable a Conjecture, Mr. *Davison* continued, that I need not be surpris'd at it, since such Submersions were very common on the Coasts; and began to tell me of a dreadful Instance of it on the Coast of *Peru*, which had happened a little before; for, says he, my Captain, having a Desire to look into the Road of *Cherripe*, when we arriv'd there, we found the Town, and a great Part of the Land, which formed the Road, intirely under Water; but, I undeceived him in this, by telling him, how lately we had seen that very Place. The Truth of it is, that Captain *Clipperton*, though he was reputed to be well skilled in this Navigation, was always unfortunate in finding out any Port, &c. and, left his continual Blunders should be imputed to his Ignorance, he always found out some Expedient to evade any Suspicion of his Inability. The Story of Captain *Mitchell*, who was a very worthy Man, and an expert Sailor, is, in all its Circumstances, very tragical; there was always a Jealousy between him and his Captain, who ordered him to a Place (and pretended to give him infallible Directions to find it) which never could be found afterwards, and, it is my Opinion, never was above Water; and the unfortunate Gentleman, without doubt, perished in some obscure miserable Manner, in the Quest of a Place that was never yet, and perhaps never will be, discovered. In our Discourse, I asked Mr. *Davison* the Value of their Booty, who assured me, that it did not exceed 70,000 Dollars, but that they had lost great Opportunities: That in *October* 1720. they were in the Bay of *Conception*, and had the Misfortune of leaving three laden Ships behind them, and missed a fourth, that was coming into the Bay, which was so near as to hail them, talk to them, and was becalmed by them; and that, though it was probable, that their Launch would have taken them all four, yet, through their Captain's Defiance to Advice, they took none of them; and that, moreover, they had never cleaned their Bottoms, notwithstanding they had it several times in their Power to do it; and that this Negligence had like to have cost them dear; for, in their Return from *Conception*, they looked into *Copumbo*, where they saw five Ships at Anchor, three of which let slip after them, and near'd them apace; but, by the Favour of thick Weather, and a hard Gale of Wind, they got clear of them: And further, that off the Port of

of *Calao*, they fell in with the *Flying-Job*, a Frigate, which by unpardonable Mismanagement on the Part of *Clipperton*, got safe from them, although deeply laden with a valuable Cargo. Such was my Discourse with Mr. *Davison*, when a Gale sprung up, which interrupted us, and I bore down upon the *Success*, and went on board of her. I gave Captain *Clipperton*, and Mr. *Godfrey*, the Agent General, the whole History of my Voyage hitherto, and expected that I should have been treated by them as one belonging to the same Interest, but found I was mistaken; for they were unwilling to have any thing to do with me, since my Ship was lost. However, I conceived, he would not be so inhuman as to deny me the Supply of such Necessaries as I wanted, and he could conveniently spare. The Answer was, That I should know more of his Mind the next Day. Amongst other Discourse, he told me, that he was just come from the Land of *Cocos*; that his People were sickly, and at very short Allowance: Whereupon I offered my Service to pilot him to *Mariato*, which was not above thirty Leagues distant from us, where he might have refreshed his Company, and supplied himself with what he would. But this was not accepted, he being resolv'd to make the best of his Way to the *Tres Marias*, where he said there was Turtle enough to be had; so I left him for that Night. The next Morning, as I was going on board of him again, with some of my Officers, he at once spread all his Canvas, and crowd'd away from us who were in the Boat; upon which I returned to our Ship again, and made Signals of Distress, and fired our Gun several times, which was not regarded by him, till his very Officers exclaimed at his Barbarity, and at last he brought-to. When I had sailed up with him, I sent Mr. *Brooks*, first Lieutenant, to know the Reason of his abrupt Departure, and to tell him, that we stood in need of several Necessaries, which I would purchase of him: Upon these Terms he spared me two of his Quarter-deck Guns, sixty round Shot, some Musquet-balls and Flints, and a *Spanish* Chart of the Coast of *Mexico*, and Part of *India* and *China*, an half Hour and an half Minute Glass, a Compass, and about 300 Weight of Salt; but, all the Arguments I could use, could not persuade him to spare us the least thing out of his Surgeon's Chest for the Relief of Mr. *Coldsea*, our Master, who was still very ill of his Wounds received in the Engagement with the *Margareta*, about three Months before. We returned, for what we had of him, some Bales of coarse Broad-cloth, as much Pitch and Tar as he would have, some Pigs of Copper, and I gave him a large silver Ladle for a dozen of Spadoes. When this was concluded, I asked him if I could be of any Service to him; and assured him, that I had a pretty good Ship under Foot, though the mauld but a poor Figure; and believed that I could hold him Way, and that he knew that our Cargo was pretty valuable. To which he answered, That, if I had a Cargo of Gold, he had no Business with me; and that I must take care of myself. Mr. *Hendry* the Agent, Mr. *Rainer*, and Mr. *Dodd*, Lieutenants of Marines, seeing but little Prospect, that we should ever get Home, and being weary of the hard Work that was imposed on them, desired I would let them go on board the *Success* for a Passage to *England*; which I having consented to, they went on board accordingly, and *Clipperton* left us to shift for ourselves near the Island of *Cano*. Having this Supply, I was for going to the Southward into the Bay of *Panama*, to try our Fortunes there; but the Majority oppos'd me through Fear, and were for going to the *Tres Marias*, to salt Turtle there, and then stretch over for *India*. We directed our Course thither, but the Wind near the Land continued reigning in the Western Board; and the Coast of *Mexico* lying nearest North-west by West, and South-east by East, we crept to Windward, but very slowly, and at so tedious a Rate, that we began again to be very short of Provisions before we had got the Length of *Rio Lejo*; which renewed our Design of landing there, which had been laid aside on our Supply got at *Mariato*. But this Intention was no sooner return'd, than frustrated; for we were blown past it by a *Tegoantepaque*, for so the *Spaniards* on this Coast call a violent Gale at North-east.

As we continued our Voyage along-shore, we a few Days alter met the *Success* in quest of *Sonfonate*, where they expected to receive the Marquis of *Villa Roche's* Ransom, who had been for some time Prisoner on board of them. We ranged close under their Stern, and asked how Captain *Clipperton*, and the rest of the Gentlemen, did; but it was not thought proper to return us any Answer: So, without any Concern, he steered one Way, and we another. After this, calm and contrary Winds, and unaccountable Currents, reduced us to a small Allowance, which we were obliged to diminish daily; and should have been in worse Distress than ever, had it not been for the Turtle which we from time to time took on the Surface of the Water. We had continual Look-outs for them, and they were easily known, at a great Distance, by the Sea-birds which perched on their Backs; so that, upon Sight of these, we laid aside the Advantages we might have made of the Wind, to embrace any Offer of prolonging our Provisions. Upon the Whole, though we lost some of our Way in Pursuit of them, yet they had a worse Consequence, for the Dressing them made a great Consumption of Water; and this Relapse into a State of Famine, threatening us with certain Perdition, if Means were not timely used to avoid it, made me propose the Plundering some small Town as we coasted along-shore. *Guatulco* was the nearest to us of any; but, the very Morning that we were standing in for it, we saw a Sail a considerable Way to Leeward of us: We thought it more proper to take this Ship, than to venture ashore, and therefore bore down to her, which, in the End, proved to be the *Success*; I forgot to mention the Signal that was agreed on between us at first, in case of our meeting at Sea, which was, to clew up the Main-top-gallant-sail, and fire a Gun to Leeward. This Signal I made, as soon as I thought we were near enough for him to perceive it; whereupon he haled on a Wind, and did not so much as lay-by a Moment for us to come up with him; so that we were now so far to the Leeward of our Port, by bearing down to him, that it was needless to have beat up against the Wind for an Uncertainty. This brought us down to a small earthen Plate of Calavances for twenty-four Hours, which not being sufficient to keep us alive, we had recourse to the Remainder of our smoked Congers, which had for some Months been neglected, and had been soaking and rotting in the bulge Water, and was certainly as disagreeable Food as could be tasted.

Under these calamitous Circumstances did we meet the *Success* a fourth time, near the Port of *Angels*, in 16° 50' North Latitude; and, after having made the appointed Signal, stood to near to one another, that a Biscuit might have been tossed from Ship to Ship, but did not exchange a Word; for Captain *Clipperton* had ordered all his Officers, and Ship's Company, to take no Notice of us; which, I presume, was the greatest Indication of an inhuman Disposition, who could unconcernedly see us wandering up-and-down an inhospitable Coast, in want of every thing necessary to keep the Sea; nor was the Faultiness of our Ship all, but we had also our Provisions to seek; and, where to find any, none of us could tell; for all of the Coast that we had seen, was so wild and open to the Sea, that it would have been impossible for us to have landed, which, indeed, nothing could have urged us to, but the Extremity of Want we were in at this Time. And so truly sensible was *Clipperton* of the Difficulties and Hazards we had to cope with, if my Design was for going to *India*, that he said, that the Child that was born the Day before, would be grey-headed with Age before we should arrive there; intimating, by that Expression, that it was impossible for us to do it: Notwithstanding which, he could see us on the Brink of undergoing the greatest Severities our ill Conduct could load us with, and not lend us a helping Hand to deliver us from impending Ruin, although he could foresee no means by which we might avoid a lingering Death by Sea, or throwing ourselves upon the barbarous *Indians*, or *Creolian Spaniards*; who, if we had escaped the Fury of the Surf on the Strand, might have put an ignominious End to our Lives, they having been rarely known to give any Quarter.

On *March* 12. being off the Port of *Acapulco*, towards the Evening, we saw a Ship between us and the Shore: I bore down to her; till, perceiving her to be a large *Europe* built Ship, with *Spanish* Colours flying, I concluded that she was the *Peregrine*; who, as I have been informed, was to have carried the Prince of *St. Bueno* to this Port, in his Way to *Spain*. With these Suspicions, I haled again on a Wind; which he seeing, pulled down his *Spanish*, and hoisted an *English* Ensign, and made the Signal agreed on between *Clipperton* and me for knowing one another; as also his old Signal to speak with me, as fixed amongst other Signals between us before we came out of *England*. Notwithstanding which, I should hardly have trusted him, had we not been so near *Acapulco*; whither, I thought, *Clipperton* might have come with a Resolution of cruising for the *Manilla* Ship, and wait for her coming out of that Harbour; and, thinking herself too weak, was now willing to reinforce herself with what Strength I could assist him: So that, making no doubt but it was he, I bore down upon him; and, being come along his Side, he sent Captain *Cooke*, his second Lieutenant, in his Yawl, with an obliging Letter to me; wherein he informed me, that he was cruising for the homeward-bound *Manilla* Ship, and desired I would assist him in the Enterprize, and come on board him the next Morning, to consult on the proper Methods of attacking her; and proposed an Union of our two Ships Companies. I was very well pleased at this Offer; and, without Hesitation, returned him Word, that I would be with him early. In the mean time, I read over his Letter to my People publicly, and exhorted them seriously to consider the great Benefits that would accrue to us, on all Sides, from it. Upon which, they all expressed the utmost Willingness to join in such an Undertaking: But, as *Clipperton* had used us so unhandsofly, they desired I would get some Security for their Shares, signed by Captain *Clipperton*, Mr. *Godfrey*, the Agent, and the rest of their Officers. So I went on board, according to Appointment, with Mr. *Brooks* and *Randall*, my Lieutenants, and was received with a seeming unreserved Civility; and, all Animosities being, as it were, lost in Oblivion, nothing now appeared among us but a perfect Harmony. I first told Captain *Clipperton*, and Mr. *Godfrey*, that my Officers, &c. expected such a Paper from under their Hands, as should intitle them to such Shares, as were allowed them by the Owners Articles: To which they answered, that it was but reasonable that they should be satisfied in that; and immediately drew up an Instrument tully worded, and signed it; which was all my People desired to make them easy. We then proceeded upon our main Business; and, after a mature Deliberation, it was thought most advisable, that I should send the greatest Part of my Men on board the *Success*, as soon as we saw the *Manilla* Ship come out of *Acapulco*, and leave only a Boat's Crew with me to bring me away, in case I should have Occasion to make use of mine as a Fireship, or a Smoker, as we proposed, if we found them too hard for us; and it was determined to board her at once, because otherwise we should have had much the worst of it, on account of their superior Weight of Metal, and the better Capacity of their Ships to bear a Cannonading. *Clipperton* assured me, he was certain of the Time she would sail from this Port, which the *Spaniards* say is always within a Day or two after *Passion-week*, of which we had a Fortnight yet to come. Before I returned to my own Ship, I acquainted Captain *Clipperton* with our Shortness of Water: Upon which he told me, that he had eighty Tons, and that he would spare me as much as I would have, or any thing else his Ship afforded. I had now the Pleasure of enjoying my Command in as regular a manner as ever, every one, from the highest to the lowest, expressing the Satisfaction they had in the Prospect before us. But *Morpheu*, the Ringleader of all our Disorders, fearing my Repentment would fall heavily upon him, after all, thought it was his best way to insinuate himself into the Favour of the Captain and Officers of the *Success*; which he did effectually, by an humble submissive outward Deportment, and prevailing Presents. In short, he had his End, and left me to go on board there on *March* 14. in the Evening; and, the next Day, Mr. *Raver*

came on board of us to visit his old Ship-mates, and to stay with us all Night. I constantly kept reminding *Clipperton* of our want of Water, and he as often promised to supply us with a large Quantity at once. Thus we cruised in good Order, and with a great deal of Hope, until *March 7*. the Time appointed for me to suffer the most prodigious Piece of Treachery that could be committed. But, in order to give my Reader an exact Account of the Circumstances of it, I must inform him, that we used to cruise off-and-on the Shore at such a convenient Distance, as not to be discovered from the Land: At the same time it was next to impossible, for any Ship to stir out of the Harbour of *Acapulco* without our seeing them; and we, not failing so well as the *Success*, it was *Clipperton's* Custom to shorten Sail for us, particularly in the Night, and shew us Lights on all necessary Occasions: But, towards this Evening, he stretched a-head of us about two Leagues, and I could not perceive, that he so much as lowered a Top-gallant-sail for us to come up with him: However, I kept standing after him, till we were almost on the Breakers of the Shore; which of consequence obliged us to tack, and stand out to Sea. The next Morning we had no Sight of any Ship near us, which laid me under the most terrible Apprehensions, considering the sad Condition we were in for want of Water, and the vast Distance we were from any Place where we could expect to get any; having now no Choice left, but either to beat up 200 Leagues to *Tres Marias*, or to bear away for the Gulph of *Amapala*, at a much more considerable Distance. I was afterwards informed, by some of Captain *Clipperton's* Officers I met with in *China*, that he committed this Cruelty absolutely against the Will, and even against the repeated Remonstrances, of his Officers, who abhorred such an Act of Barbarity. I was likewise informed by some *Spaniards* from *Manila*, that the *Acapulco* Ship sailed about a Week after we left the Cruise: This Ship was called the *Santo Christo*, carried upwards of forty Brass Guns, and was exceedingly rich; so that I leave the Reader to judge, how the Thoughts of such a Disappointment must affect me.

These several Interviews with Captain *Clipperton* are the most important Circumstances in the History of this Voyage, and therefore deserve to be very seriously examined. We have stated them in the former Section in quite another Light, and from unexceptionable Authority, that of an impartial Person, who had no particular Prejudice to Captain *Sbelvocke*, and who was far enough from being blind to *Clipperton's* Errors. From the Consideration of this, Captain *Beaugh*, speaking of *Sbelvocke's* Account of the Loss of Captain *Mitchell* in the *Chicly*, makes the following very judicious Observations. The Journal, says he, (meaning Mr. *Taylor's*) tells us how he was fitted out, and whither bound; that his Cargo was 10,000 Pounds Value. It is impossible then, supposing a real Misunderstanding, that *Clipperton* would pay so dear to get rid of this Gentleman: It is certain, he never embarked his Men in Lighters, or in empty Prizes, with any Design to make away with them, as *Sbelvocke* served us. Captain *Mitchell* was put aboard a clean Ship, well manned, and provided with Stores and Necessaries, and a valuable Parcel of Goods, to dispose of, at *Brasil*, for the Owners Advantage, in order to secure them something; and it is true, that neither he, nor the twenty-three Men with him, were ever yet heard of: But how was *Clipperton* chargeable with that? or what Excuse can Captain *Sbelvocke* make for these impious Reflections, but a sort of Pleasure he has in being revenged on the Memory of the Dead! Thus far *Mitchell* may be accounted for: The Journal tells us, that, being obliged to Wood and Water, he touched to the Northward at Port *Velaz*, where, it is very probable, he and his Men became a Prey to the Enemy; for the same Article mentions, that several of *Clipperton's* Men saw some Shirts, and other Things worn by the Natives, which, by the Marks in them, convinced them *Mitchell* had been there. As to all that is said from *Darison's* Conversation, we are to consider, that this Man was dead before it was published, and therefore could not confirm or disavow it. It likewise appears from the Journal, that Captain *Clipperton*, and his Company, looked upon *Sbelvocke*, and his, as Persons on a different Footing: And, indeed, how could

they think otherwise? Does not Captain *Sbelvocke's* own Account speak it? And might he not very well apprehend, that Captain *Clipperton* might fear the Corruption of his Crew, by their associating too freely with Men who had given such Evidence of their bad Principles. As to their adjusting all Differences, and consorting together again, let us hear what Captain *Beaugh* says on it. As to the Remarks, says he, that Captain *Sbelvocke* has made upon this Transaction, and the Pains he has taken to represent *Clipperton* as a Monster, they do not deserve any Regard. The Journal says, the Proposal to *Sbelvocke* was this; That if he and his Crew would refund all the Money shared amongst themselves, contrary to the Owners Articles, and put it in a Joint-stock, then all Faults should be forgot, both Companies unite, and proceed to cruise for the *Acapulco* Ship: The very next Article in the Journal is, that, not hearing from Captain *Sbelvocke*, and the Time for the *Acapulco* Ship setting out for *Manila* being several Days past, resolved in Council to make our best Dispatch for the *East Indies*. Here is the plain true Account of the Affair, and how the Treaty broke off. But *Sbelvocke* has laboured hard to pervert the Truth of this Fact, as he has done all the rest, thinking to gain Pity from Mankind, by telling what he suffered through the Deceit of *Clipperton*, never expecting that these Things would be refuted and cleared up. Besides, there may be other Reasons assigned for *Clipperton's* sudden Separation, though not entered in the Journal; for he knew, before he left *England*, that the *Spanish* Fleet were all taken and destroyed by Admiral *Byng*, and therefore a Peace was probably concluded, being two Years past; and might think *Sbelvocke*, who had not made his Fortune while the War lasted, and had really ruined the Project, ought, of the two, to be the Sufferer: It is very likely *Clipperton*, for these Reasons, did not care to embarrass his Ship just upon the Point of his leaving the South Seas; but, on second Thoughts, concluded, it was better to keep what he had got. These, I say, are very fair Conjectures; but the Reason, mentioned in the Journal above, is sufficient of itself; for *Sbelvocke* thought the Conditions proposed by *Clipperton* were too strict: He did not care to refund what he had unlawfully shared, which, doubtless, he ought to have done; and, for the Neglect of which, it is evident, the whole Affair ended. Discussing this Business has taken up a great deal of Room, though I have been as concise as possible; but it is some Comfort, that we have now, in some measure, arrived at the End of these Disputes, and may pursue our Relation without any farther Interruptions. We will therefore resume the Captain's Narration, and take notice of that Change of Fortune he met with, at a time, when, in his own Opinion, his Affairs were most desperate; which shews, that, in these Seas, Men never want Resources, if there be any Degree of Courage and Conduct in their Commander.

23. In the Situation we were in, all Things were to be hazarded, and any Experiment to be tried, which had the least Appearance of succeeding. We continued our Course therefore, under all the Inconveniences that perhaps any Ship's Company ever endured, distressed for Provisions, weak in point of Number, and so far from being united, that the Sense of common Danger could not restrain us within the Bounds of common Civility to each other, though all Things depended upon right Behaviour. The Winds and Weather, however, continued so favourable to us, that on the 30th of *March* we found ourselves before the Port of *Sanjonnate*: It was about Sun-set when we looked into this Harbour, where we discovered a Ship of good Size, lying at Anchor: Upon this, as it was a fine Moon-light Evening, I sent my first Lieutenant, with some of our best Hands, in the Yawl, to see what she was. The Boat had not been long gone before we heard two Guns fired; and soon after my Lieutenant returned, and reported, she was a stout large Ship, with one Tire of Guns at least. We little regarded her Strength, or our own Weakness, believing our Necessities would make us a Match for her; and therefore I continued plying in all Night, and prepared to engage her. At Sun-rising, the Land-breeze blew so fresh off from the Shore, that we worked in but slowly; in the mean time, we received all

their Fire upon every Board we made, without making them the least Return, and their Boat was employ'd to transport Soldiers from the Shore to the Ship. They hoisted a Jar, of about ten Gallons of Powder and Match, at each Main and Fore-yard-arms, and Bowprit-end, to let fall on our Decks, if we boarded them; which Contrivance, if it had taken Effect, would have soon made an End of both Ships, and those that were in them. Seeing them so desperate in their Preparations to receive us, I could not but expect a warm Dispute; but, as our Cafe would not admit any Neglect of what offer'd, though at ever so hazardous a Rate, their Contrivances for Defence did not much dismay us. About eleven in the Morning the Sea-breeze came in, and, that I might make our small Force the most beneficial to us, I order'd our three Guns to be brought over on the Side we were like to engage them; and, being within less than Musquet-shot, discharged them: The Sea-breeze freshing ran us upon them very fast, whilst our Small-arms were effectually employ'd to break the Powder-jars before we actually boarded them; which we did without Delay; and, after the Exchange of a few Shot, when aboard of each other, they submitted. This Ship was call'd the *Sacra Familia*, of three hundred Tons, six Guns, and seventy Men. She had a great Number of Small-arms, Grenade-shells, and Shot; they had been for some time before arriv'd from *Calao*, with Wine and Brandy; but had now nothing in her but fifty Jars of Gunpowder, a small Parcel of Rusk, and jerked Beef: In short, she could hardly be said to be worth the Trouble we took, or the Risque we ran; but she having the Character of being a better Sailor, and visibly better fitted than ours, I chang'd Ships, and we all went on board our Prize, which had been equip'd in the warlike Manner we found her, and commission'd on Purpose to take us, if she should chance to meet us in her Way. Our Small-arms (to do Justice to my People) were handled with the greatest Dexterity; but, being employ'd mostly in shattering the Powder-jars, that the combustible Matter in them might fall into the Water, there was none killed but the Boatwain, and only one slightly wounded; but, if our Small-arms had not been so usefully diverted, there could not have fail'd of being a considerable Slaughter amongst them; on our part, we did not receive the least Damage. The Merchant we had taken in this Action, seem'd to be inclinable to purchase the *Jesus Maria*, which we had quitt'd; and, when he heard, that her Cargo consist'd of Pitch, Tar, and Copper, he immediately consented to my Demand, and went ashore to raise the Sum. We had so little Provisions to spare, that we could not afford to keep any Prisoners in Possession; and therefore dismiss'd all the Whites, *Indians*, &c. detaining only the Negroes; and, that we might lose as little Time as possible, we set immediately to work, to over-haul our Rigging and Sails, that we might get our Ship ready for the Sea: But I was interrupt'd in this, by a Letter which came from the Governor of the Place in the Evening, which none of us could understand: But, by the Messenger that brought it, we found it was some Account of a Truce on foot between the Crowns of *Great Britain* and *Spain*; and that the Governor request'd me to stay five Days, that he might thoroughly satisfy me in it, by shewing me the Articles of Accommodation. I thought this very odd; and told the *Spanish* Gentleman, that it was not a peaceable or friendly Reception I met withal; and asked, how they came to arm themselves in so desperate a Manner, and why the Governor did not chuse to send a Flag of Truce to me with this Information, before we engag'd, having the whole Morning beforehand; and why these Articles were not on board the Ship, she coming from *Lima*, from whence they said they receiv'd these Papers: And proceed'd to tell him, that it was very strange to me, that none of the Officers we had taken Prisoners, should know any thing of the Matter: But that, notwithstanding all this, I had such a Regard for the very Name of Peace, that I would stay fifteen Days, if the Governor would supply us with Water and Provisions; and that, if he did not, I could not pretend to make above Twenty-four Hours stay here. I sent him also a short Answer to his Letter, excusing myself, on account of our understanding *Spanish* but indifferently; in which I told him,

that if, as he suggest'd, there was a Peace concluded between their *Britannic* and *Catholic* Majesties, I was ready, on due Proof, to act as he expect'd; but, in the mean time, I hop'd, that as we were now Friends, he would permit me to have such small Refreshments as we wanted from his Port. The Governor, upon the Receipt of my Letter, express'd great Satisfaction, and seem'd to make no Difficulty of granting my Request. Our Boats therefore, went on shore every Morning with their Flag of Truce. We receiv'd, for the first four Days, eight small Jars of Water; and, on the 5th, they reduced us to five Jars; and, during the whole time, had but one small Cow, which was attend'd by a Boat full of Men; amongst which were two Priests, who, with a Shew of Friendship, brought with them a Paper in *Spanish*, which they call'd the Articles of Peace, so wretchedly written and blotted, that, had it been *English*, we should have been puzzled to read it. I therefore desired the Priests to translate it fairly into *Latin*, which they promised to do; they took the Papers with them, and, for my farther Satisfaction, told me, that the Governor would send for some *Englishmen*, who liv'd at the City of *Guatemala*, if I would continue in the Road three Days longer: To which I answer'd, that he might take his own Time. In two Days after this, when the Boat went ashore as usual, the Governor order'd them to be made Prisoners as soon as they land'd. I was all the Day in Suspense, not being able to guess what could detain them on shore; but was far from imagining, that the Governor would make such a Breach in the Laws of Nations. But, in the Evening, I was astonish'd to see only two of my Boat's Crew, in a small leaky Canoe, with two Letters, one from the Governor, the other from Mr. *Brooks*, my first Lieutenant: The Governor in his required me to deliver up the *Sacra Familia*, and surrender myself, and that otherwise he would declare us Pirates: And Mr. *Brooks* in his told me, that all he could learn, since he had been a Prisoner, was, that the Governor was endeavouring to bully me. The Governor propos'd two Ways of conveying us out of the *Spanish* Dominions; the one to *Vera Cruz* by Land, or to *Lima*, in *Peru*, by Sea. These Offers I equally disliked; for I did not like a Journey, of 1300 Miles at least, through such a Country of barbarous People, nor yet a Voyage to *Lima*, under their Conduct. My two Men, who brought these Letters, told me, that *Frederic Mackenzy* had let the Governor into the Secret of our Necessities, and of my former Design of getting Water on the Island of *Tygers*, in the Gulph of *Amapala*, which he said he would take care to prevent, if we dar'd to attempt it; and believ'd, that he had us now safe enough, knowing that we had no other Boat left but a very small Canoe. Notwithstanding this, and though I saw there was no relying on the Honour of these People, I was willing to come to a farther Treaty; but I knew not how to communicate my Mind to the Governor, since it would have been an unreasonable Request in me, to have desired any of my Men to carry a Message to a Place where they were to be made Prisoners: But the two who brought the Letters off, voluntarily offer'd their Service, and a third went with them to throw out the Water; and I sent a Letter by them, in *French*, to this Purpose: "If I could be assur'd of a safe and sure Conduct for ourselves and Effects to *Panama*, and from thence, by the Way of *Portobel*, to some of the *British* Plantations, we would come to a farther Treaty; which, if he intend'd, he must signify by firing two Guns, and by sending my People, and the usual Supply, otherwise Necessary would oblige me to sail that Night." But I receiv'd no manner of Answer to this; therefore I weigh'd before Day the next Morning, and lay-to in the Bay till ten of the Clock, expecting I should hear from the Shore; but nothing appearing, I made Sail, leaving behind me the *Jesus Maria*, a much more valuable Ship than the other. The Actions of this Gentleman shew'd there could be no Peace: However, I instantly order'd a formal Protest to be drawn up against him.

24. When we got out to Sea, we reduced ourselves to a Pint of Water for twenty-four Hours, and directed our Course for *Amapala*, which was about thirty-five Leagues to the South South-east of this Place, in order to get

Water

Water there on the Island of *Tygers*. The Loss of my Officers and Boat's Crew sensibly diminished the Number of white Faces amongst us, and our Strength would have been so much weakened by it, that we should never have been able to have managed this great Ship, with her large heavy Cotton Sails, if we had not taken our Negro Prisoners along with us, who proved to be very good Sailors. The Loss of our Boat was a great Inconveniency to us; but, as I thought of only taking Water enough to *Panama*, where we were fully bent to surrender ourselves, if it was really Peace, I thought we could make shift with her to get such a Quantity as we should want in two or three Days time. The Winds being favourable, we arrived there in ten Days following: As soon as we entered the Gulph, we found ourselves in the midst of several small Islands, amongst the rest the Island of *Tygers*, where we expected a Supply of Water: But our Expectations proved vain; for, after an hazardous and fruitless Search for it, not only on that, but some of the greenest of the other Isles, there was not the least Drop of fresh Water to be found on any of them. Surrounded on all Sides with unhappy Circumstances, we weighed our Anchor on the 13th of *April*, before Day-break; and, having now open Sea before us, I brought my People in general to an obdurate Resolution, not by any means to surrender on this Part of the Coast, let the Consequence be ever so miserable. Upon this unanimous Agreement, having not forty Gallons of Water in the Ship, and no other Liquids, we came to so small Allowance as half a Pint of Water for twenty-four Hours; and even this Allowance was rather too large, considering that there was no Place that we knew of, where we could get any, nearer than the Island of *Quibo*, which was about two hundred Leagues Distance from us; and we were forty-three in Number, reckoning our Negroes. Thus resolved, we shaped our Course for *Quibo*; but, having very uncertain Winds and Weather, were thirteen Days at this Allowance; during which time, there is none, that has not experienced it, can conceive what we suffered in a sultry Clime, by the perpetual Extremity of Thirst, which would not permit us to eat an Ounce of Victuals in a Day. We constantly drank our Urine, which, though it moistened our Mouths for a time, excited our Thirst the more. Some attempted to drink large Quantities of the Sea-water, which had like to have killed them.

We were, however, unexpectedly assisted; for, on *April* the 25th, we came up with the Island of *Cano*, in the Latitude of 9° North, which, by the Verdure of it, promised to yield us Water, if we could get our Canoe ashore. Under Hopes of Succour from this little Isle, we came to an Anchor on the North-west Side of it, and it was as much as we could do to hand our Sails, stop the Cable, &c. We soon began to imagine that we could see a Run of Water; but, at the same time, dreaded the dangerous Surf, which broke on the Beach all round those Parts we had seen of it. Nevertheless, Mr. *Randal* was sent with some Jars, to try what could be done; but they not returning till it was very late at Night, I was fearful they were lost, or that, not finding Water there, they were gone to the Continent; but, to my unspeakable Satisfaction, they came aboard with their Jars filled. Any one may guess the Excess of Joy which there must naturally be amongst Men who were thus opportunely delivered from the Hands of Death; but, as they did not bring above sixty or seventy Gallons of it, I took care to restrain them from the Use of it, allowing to each Man only a Quart to be immediately distributed to them. What made me the more strict in this was, that Mr. *Randal* assured me, that the Breakers were so hazardous, that he believed we should not be able to get any more; but that very Night we chanced to have a Shower of Rain, which we made the best Use of, by catching what we could of it in Sheets, Blankets, &c. During this Thirst, we constantly wished for rainy Weather, and had often good Reason to expect it by louring black Clouds, which seemed every Minute to be ready to discharge their Burdens; yet never did before to any Purpose. Being willing to make another Essay the next Day, I sent the Boatswain, and some with him, to make a second Attempt; but, after having been quite round the Island, and waited the whole Day in Search of a smooth Beach, he

could not see one Spot where he might venture on shore. Therefore, thinking we had a Stock sufficient to carry us to *Quibo*, which was about thirty Leagues from us, I weighed the next Day, and, in ranging near the Island, saw a smooth Beach, which induced me to send the Boat a third time, that we might be provided against such contrary Currents or Calms as we might meet with in our Way: Accordingly they went and filled nine Jars; which done, we held our Way to the South-eastward, and in a few Days arrived at *Quibo*, and anchored at the same Place where we had been twice before.

Captain *Betagh* is very severe in his Reflections on Mr. *Shelvocke's* Management at *Sanjonnate*, where he says expressly, that he got rid of six more of his People; after which, he explains his Meaning, and vindicates his Assertion thus: I don't expect, says he, the World will judge of this Affair as I do, because those who are ignorant of the Circumstances of these Things, and unacquainted with *Shelvocke's* personal Behaviour, cannot make a proper Censure. When a Man dies in a Course of Physic, who knows whether it is Chance or Design in the Doctor? The Patient is gone by legal Prescription: So here, a Gentleman is clearly ordered ashore into the Enemy's Hands, and, if he never returns, who can say it is a Design, or Accident? Thus much is certain, they went without a Hostage; though *Shelvocke* always had strong Notions of the *Spaniards* Resentment, and their manner of Revenge, especially in *Mexico*, where the *Indians* are the cruellest People alive; and, while he was speaking of *Mitchell's* Story, we find him quick enough to leave it past Doubt, that he and his Men perished in some obscure Manner; and yet he must now send a young Gentleman ashore into the Clutches of this Enemy, at a time, when he knew the whole Coast was exasperated, and himself destitute of all common Necessaries, with a very indifferent Force, and, consequently, not able to resent any Affront, much less to avenge himself on the Governor, in case he detained *Brooks* and his Men. *Shelvocke*, immediately before and after this, acted in an hostile Manner on that Coast; and, even in their View, he took this Ship, called the *Holy Family*, where the Boatswain lost his Life, so that, if poor *Brooks* and his Men were sacrificed by way of Atonement, it is no severe Suspicion. He adds to this some other Circumstances to support the Opinion he has given; but as these are not at all material to the History of the Voyage, I shall not dwell longer upon them, but proceed.

25. We pursued our Business of wooding and watering in this Island pretty cheerfully, and yet without being in any great Hurry, for several Reasons; but the principal was, that as we were now within fourscore Leagues of *Panama*, it was very requisite to deliberate seriously on our Scheme of surrendering there to the *Spaniards*, since we all knew, that this Step once taken, there would remain no room for Deliberation afterwards. We considered, that the very Situation of this Place afforded us many Advantages; for *Panama* is by no means strong towards the Sea, and, therefore, having a good Ship, we thought it would be no difficult Matter to settle the Terms of the Treaty while we continued at a Distance. We likewise reckoned upon some Assistance from the South Sea Company's Factors who were settled there, who might have interceded for us; and, in case a Peace was concluded, procure us a safe and speedy Passage to *Europe*. But, as there was something exceedingly disagreeable in the Notion of a Surrender, especially to such kind of Enemies as the *Spaniards*, it cannot be wondered, that we were not much in a Hurry about it, especially as we were here a little at Ease, and enjoyed a great many Conveniences that we had been Strangers to a long time before. The free Use we made of the excellent Fruits of this Island brought the Flux amongst us, which, though in the main, I believe, did little Hurt, but served rather to preserve us from the Scurvy; yet it weakened us very much, and interrupted our Work for two or three Days; which time we spent in Consultations about our future Conduct, whenever it should please God we should put to Sea again; but our Views were so different, and our Minds so distracted, that we could come to no Resolution, but that of continuing

timing here, till we saw what might happen, and in hopes of meeting with something to our Advantage.

It may not be amiss to enter into a particular Account of so remarkable a Place as this, because hitherto our Travellers have scarce vouchsafed to take notice of it, as if there was not as much Reason to give Descriptions of Places where good Settlements may be made, as where good Settlements are made. This Island of *Cobos* or *Quibo* is almost in the same Parallel of Latitude with *Panama*, and is about nine Leagues in Length, and four in Breadth, of a moderate Height, covered all over with inaccessible Woods, always green; and though it was, perhaps, never inhabited, yet it abounds with *Papas*, *Limes*, and some other Fruits I never saw before, which are near as good, though wholly neglected, as those that have the greatest Care taken of them in some other Islands in as promising a Latitude; from whence we inferred, that the Soil is fruitful: And, if ever it be inhabited, and cleared of the Incumbrances of Woods, with which it is choaked at present, it might be made productive of every thing our best Islands yield in *America*. But the *Spaniards* having so much more on the Continent than they know what to do with, and it being Prudence in them not to send away Colonies from amongst them to people Islands, which might weaken their Force on the Continent, and knowing they are secure from the Attempts of an *European* Nation to settle on them, who might, by that means, annoy their Coasts, it lies neglected; though I cannot help thinking, being a very considerable Pearl-fishery, it would be worth while to make a small Settlement here: But the Pearl-fishers, not being able to dive with their *Piraguas* in the time of the *Vandevals*, which is a black stormy Season, for four or five Months in the Year, beginning about *June*, and ending in *November*, and being withal so near the Continent, and *Panama* in particular, which must be the Market for a Commodity of that Price, they have not yet thought it worth while; so that all the Settlement they have here, are a few Huts scattered up and down in several Parts of this Island and *Quivira*, made use of by the Divers at the Season they come hither, to open the Oysters, eat, and sleep in. The sandy Beach is covered with Shells of fine Mother-of-pearl of all Sizes; and, in going no farther than up to the Middle in the Sea, you may reach large Oysters from the Bottom. This pleased us at first, not so much from the Hopes of finding any valuable Pearl in them, as to eat them; but, when we came to make Trial, we found, that Nature had not ordained this Fish to be at once Riches and Food; for they are tough as so much Leather, and by no means palatable. As to any other sorts of Fish, as we had no *Seyn*, I cannot say much of them, nor give any Account of their various Kinds; but only take notice, that we used to observe a large Sort of flat Fish, that often jumped a great Height out of the Water. These are reported to be very destructive to the Pearl-divers; for, when they return up again, if they take not great Heed, these wrap their broad Sides about them, and keep them in their mortal Embraces, till they are drowned: Therefore, to prevent this, the Divers always carry a sharp-pointed Knife, and, upon Sight of any of these as they look upwards, they carry the Point of it above them, and, by that means, stick it into his Belly, and hinder him from his mischievous Intent. There is yet another thing, which must make Diving here a Matter of great Danger, since the Sea hereabouts is dreadfully pestered with *Alligators*, one of which, some of us fancied, we saw swimming under the Water near *Point Mariato*, which is but a few Leagues from hence. There is a great Variety of Birds, and also great Numbers of black *Monkeys* and *Guanocs*, who mostly frequent the Streams of fresh Water. There are some *Guanocs* here of an extraordinary Size, mostly of brownish-yellow Streaks about the Head, and in other Places grey, with black Streaks, &c. There cannot be a more convenient Place for Wooding and Watering; for the fresh Water runs in several Streams, larger and smaller, on the Sand of the Beach; and Wood grows within less than twenty Yards of the Sea-side. Having got clear of this Place, and nothing thought of but our speedy Return, we met with strong Currents against us, together with contrary Winds and Calms, which detained us several Days under the Mountains of *Guanabo*. On the 15th of *May*, a small Bark, taking us for *Spaniards*, bore

down to us. The Master of her was mightily surpris'd, when he found his Mistake; but soon recovered, when he learned we were bound for *Panama*; and readily offered to pilot us thither; but had heard of nothing like a Truce. He belonged to, and was bound for, that Port. This Vessel was called the *Holy Sacrament*, and came last from *Choripi*, laden with dried Beef, Pork, and Hogs. He desired I would take her in tow, complaining, that the Currents drove him off Shore; so that he could not fetch the Land, tho' he had constant Sight of it; and that, by this means, all his live Cattle were almost dead for want of Water; and that she was, at the same time, so leaky, that his People were no longer able to stand at the Pumps. Upon the hearing of this, I took her into tow, and kept the Master of her on board, sending some of my Hands to assist them; and spared them as much Water and *Indian Corn* as I could. It may appear strange, that this Opportunity of supplying ourselves with Provisions did not make an Alteration in our intended Proceedings; but every one was so tired of the Sea, so worn out by a continual Want of all Necessaries, and disheartened by our perpetual Misfortunes, that they were willing to embrace any Opportunity of going ashore at any rate. Indeed, as to myself, I was glad, that this Bark fell into our Hands; because, if we found the Governor of *Sayonates* News to be false, we might be thoroughly enabled, by this Help, to go to *India*. To this End, I designed to anchor a great Way short of the Town, and keep Possession of the *Holy Sacrament*, in case the President should not have complied with such Terms as I esteemed safe and honourable; and then we should have it in our Power to restrain ourselves, by keeping out of their Hands. But, all this while, we had not determined who should be the Person intrusted with the Flag of Truce; for my People, having known so much Treachery acted amongst themselves, were apprehensive the Person sent would only make his own Case good to the Governor, and not return again. Therefore, after all, my Son was thought the properest to go, as being sure of his Return, if it was purely for my sake. This, and many other Objections, were started, that could not be so easily removed; notwithstanding we kept on our Way, fixed in our Resolution.

On the 17th, another Bark came down upon us, stood pretty near us, and then sheered off again. Upon which, I sent *Mr. Randal* in our Canoe, to inform them of our Design; but they no sooner saw him approaching them, than they hoisted *Spanish* Colours, and fired. The next Morning, we looked into the Bay, to see if he had lain at Anchor there all Night; and, as soon as she saw us coming, she renewed her Fire. Upon which, at his own Request, I sent the Master of our Bark, with four Negroes, in a Canoe, with a Flag of Truce, to inform them of our Intentions. A Gale of Wind interrupted this Dispute, and at last forced the Canoe we sent on shore, without Danger, I dare say, to their Lives; for they seemed to make this their Choice. On the 19th, we saw a Sail a-head of us, standing along-shore: Upon which, we let go the Bark we had in tow, and spread all the Sail we could; so that, by Night, we were at a considerable Distance from our Bark, which had four of our own People, and five *Spaniards* in it. I was for lying-by in the Night, that our own Vessel might come up; but my Company differed from me, and it was carried by a great Majority, that we should continue to croud Sail all Night; so that, by Day-break on the 26th, we were within less than Gun-shot of the Chace. I immediately ordered our Colours to be spread, fired a Gun to Leeward, and sent a Man upon our Poop to wave a Flag of Truce; but they, upon the first Sight of our *English* Ensign, fired at us, and so continued to do, with their Decks full of Men, hollowing, and abusing us with the grossest Appellations. Notwithstanding this, I made no Return, until I came close upon their Quarter, and then sent one of their Countrymen to the Bow-sprit-end, to inform them in *Spanish*, that we were bound to *Panama*; and desired to treat peaceably with them; and hoped, at least, that they would have some Regard to the white Flag, which they saw flying: But still they continued their Fire, and *Horachets*, and *Peros Inglezes*, i. e. *Drunkards*, and *English Dogs*, was all we could get from them: And perceiving, that the more compliant our Deportment was, the more

inhumanly

inhumanly they insulted us, I conceived it full time to begin with them, and therefore met them with our Helm, and soon convinced them of their Error, and, in a Word, gave them so warm a Reception, that they sheered round off from us. We just missed getting hold of them; but, it falling almost calm, we continued our Engagement for the Space of two or three Hours, at the Distance of Musquet-shot: But at length a Breeze wafting us nearer to them, we found, as fast as we approached, their Courage cooled. But their Captain, still bravely persisting, and encouraging them, and exposing himself in the most open Manner, was at length shot through the Body, and dropped down dead. Upon this, they immediately, with one Voice, cried out for Quarter, and put an End to our Dispute. We commanded them to hoist out their Launch; but they answered, That their Tackle, and all their Rigging in general, were so shattered, that they could not possibly do it in any time. Therefore we hoisted out our Canoe, which we had taken out of the *Holy Sacrament* the Day before; and Mr. *Randall*, and two or three more, went in her on board the Prize. They found all the Prisoners in the most submissive Posture, asking Mercy; which they could have no great Cause to expect, after their direct Breach of the Laws of Arms and Nations. Mr. *Randall* sent away the most considerable of the Prisoners, who informed me, that their Ship was called the *Concepcion de Recova*, belonging to *Calao*, but came last from *Guanabaco*, of the Burden of 200 Ton, laden with Flour, Loaves of Sugar, Boxes of Marmelade, Jars of preserved Peaches, Grapes, Limes, &c. mounted six Guns, and had seventy odd Men, well provided with Small-arms, &c. and was, in particular, one of those Ships, which were fitted out in an extraordinary Manner, and commissioned to take us; so that she was the second of those warlike Merchant-ships that we had taken. In this Engagement, the *Spanish* Captain and a Negro were killed, and one or two slightly wounded; but their Rigging, Masts, and Sails, were much disabled, particularly their Fore-mast, which, by a Shot that passed through the Body of it, was much shattered. On our Part, there was little or no Hurt done, except to our Gunner, who was slightly wounded in the Forehead by a Pistol-ball, and our Main-mast, which had a small Piece carried out of the Side of it. We had now about eighty Prisoners of all Colours, and not above twenty-six of ourselves. When the *Spanish* Gentlemen came on board, they would not give me Time to ask them, how it came to pass, that they would not hearken to our peaceable Offers; but fell to excusing themselves, and laying all the Fault upon their dead Captain *Don Joseph Desjoris*, who vowed in a Passion, that we should have no Terms, but his own; and that he would take us by Force. And indeed it is my Opinion, that this was the Inclination of all of them, till they found our Strength; and then, seeing their own Case desperate, would have been for a Parly. Amongst our Prisoners, we had several of Note, particularly *Don Baltazar de Abarca Conde de la Rosa*, an *European* Nobleman, who had been for some time Governor of *Pisco*, on the Coast of *Peru*, and was now upon his Return to *Spain*; and Captain *Morell*, who had formerly been taken by Captain *Rogers*, &c. All of them were treated with the utmost Civilities, which they wondered at; because, from a Prejudice they had against our Cruisers, and from a Self-conviction of their own Behaviour towards their Prisoners, they could not expect but to have been dealt with very roughly.

In this Situation, we were in the very Track of all the Shipping bound to *Panama*, not above thirty Miles from that Place, few in Number, and Part of us sick; all which Considerations moved us to be as expeditious as possible in examining the Contents of our new Prize the *Concepcion*; and, tho' the best Part of the Work was done by our Prisoners, yet it took us up full two Days. We were, by this means, as well as by faint Winds, and stark Calms, hindered from rejoining our Bait, till the 22d. As we bore down towards her, and came pretty near, we were extremely surpris'd to see, that the only came to, and fell off, altho' all her Sails were set; and what amazed us most was, that we saw nobody stirring in her. As soon as we came up with her, I sent the Boat on board; and the Officer, that went in her, immediately called out to me, that there was no Soul in her;

but that her Decks and Quarters were covered with Blood. This was a melancholy hearing, since it plainly appeared, by many Circumstances, that the *Spanish* Crew had murdered those of my People, who were sent to assist them: A cruel Return for our Civilities and Services to them! It seem'd strange to me, that our Men should run the least Hazard of exposing themselves to be thus butchered; for they were four in Number, completely armed, and there were but five of the *Spanish* Crew, two of whom were Boys. These vile Wretches doubtless took the Opportunity of the *English* being lost in Sleep, and then murdered them, not doubting but they should meet with Thanks and Encouragement for so foul a Barbarity. The Names of those thus destroyed were *John Giles*, *John Embin*, *John Williams*, and *George Chappel*. But it is very probable, that these Murderers paid with their Lives for those they had taken away; for, being above four Leagues from the Land, and having no Boat, they probably jumped into the Sea on the Appearance of our Ship, thinking they should meet immediate Death, if they had fallen into our Power, as a just Reward of so horrid a Crime; which they themselves were so sensible of, that they endeavour'd to hide the Deck, which was dyed with Gore all over, by throwing the Flocks out of Beds over it; so that, till they were removed, the Blood was not to be seen. This tragical Accident was the Cause of a general Melancholy amongst us, and spoiled the Satisfaction we had enjoyed a Day or two past, on account of our late Prize. Our Prisoners, seeing such an universal sudden Change in us, began to be alarmed, and looked at each other, as if they all expected to undergo the same Fate our unhappy Companions had met with. This made me fearful, on the other Side, lest their dreadful Apprehensions of our Revenge upon them, should stir them up to offer at some desperate Attempt upon us, they being eighty in Number, and we not above seventeen on board at that time, and, when we were all together, not above twenty-five, that could stand on their Legs: Therefore I was directly forced to shew some Heat, in ordering all our Prisoners to go into the Stern-galley, (which was very large) except the Nobleman, and some of the chief of them, whilst we kept Guard in the great Cabin. The *Spanish* Gentlemen, who were not confined, in a very moving Manner, lamented to me the unhappy Deaths of my Men, and their own hard Fate, in having been, in some measure, Eye-witnesses of this bloody Murder; and let fall some Expressions, whereby I perceived, that they were afraid, that I intended to shew some Severities towards their People on this Occasion. Having a good Interpreter between us, I assured them, that, if I had so revengeful an Inclination, the Laws of my Country would restrain me from putting it in Execution; that I acted by virtue of my King's Commission, who, in his Orders, forbade, in the strictest Manner, all Acts of Inhumanity or Oppression towards our Prisoners; which Assurance, I desired, might make them perfectly easy: And they solemnly promised, that, if it was possible any of those Murderers could be found living, the two Kingdoms of *Peru* and *Mexico* should be alarmed to bring them to Justice; and begged of me to think myself secure as to themselves, and the rest of their Countrymen my Prisoners, who would sooner suffer any thing, than harbour any Thought, that might be prejudicial to our Lives and Liberties, even though they should have the most encouraging Opportunity of putting it in Execution; and assured me, on their Honour, that they thought they should never be able to make a just Return for the generous Entertainment they had met with from me. Notwithstanding this, I took some Measures to secure our Prisoners of the meaner Sort; and then haled the *Holy Sacrament* along-side of us. She was half-full of Water, and the greatest Part of her dried Beef was wet, and spoiled; but all that was not damaged we took out, together with some live Hogs, and then gave her to *Don Baltazar de Espina*, who, by the Death of Captain *Joseph Desjoris*, became Commander of the *Concepcion*; and, that Night, kept a stricter Watch than we had before, tho' none of us had had scarce any Sleep since we had taken this Ship. The next Day, being as willing to get rid of them, as they were to have their own Ship restored to them, and pursue their Voyage, I delivered the *Concepcion* into the Possession of *Don Baltazar de Espina*, &c. after having

taken out of her twelve Months Provision of Bread, Flour, Sugar, and Sweetmeats, and a like Proportion for the *Succets*, which I expected to find at the *Tres Marias*. I likewise took away their Launch, and their Negroes, to assist us in the Management of our Ship, knowing, that we could not well hold out much longer, if the Work was not made easier; and, since we had a large Ship, and a Run of 175° to fail, I thought we could do no other, than reinforce ourselves by the Assistance of these Blacks, who are commonly good Sailors in those Parts; and indeed, as it afterwards happened, we should never have reached the *Cnasts of Asia*, or any other Land, without them.

The most important and remarkable Part of Captain *Betagh's* Book is that which has Relation to the Circumstances mentioned in the foregoing Paragraphs, every one of which he either controverts or denies. He thinks, that the Sailing to *Panama* is a full Proof, that the Men set on shore with Lieutenant *Brooks* at *Sanfennate* were sacrificed; because, says he, had the Captain intended them fairly, he would have gone to *Panama* at once, where he was sure of a better Reception than in any other Port of the South Seas. He next remarks, that the Captain got rid of four of his Men more, by putting them on board of the Bark, out of pure Civility, as the Captain calls it; upon which Mr. *Betagh* is extremely severe: But then the Reader is to consider, that the Justice of his Observation depends on the Truth or Falshood of Captain *Shelvocke's* Relation; for if we take the Thing upon his Stating, that he actually informed the Captain of the Bark of his Intention to surrender, and put his Men on board purely to assist in working the Vessel, then there is nothing absurd or ridiculous in Captain *Shelvocke's* stiling this a Piece of Civility, which aggravated the Cruelty of the *Spaniards*, in killing the Men that were put on board: But if these Men had Possession of the Bark, as a Prize, that will alter the Case, and justify Mr. *Betagh's* Reflections. I must confess, it seems very probable, that the *Spaniards* considered the Thing in this Light; for otherwise, why did the Master of the Bark, and those who were with him, run themselves on shore, when he sent them into the Bay of *Panama* in a Canoe? Or, why does Captain *Shelvocke* blame his Men for not taking sufficient Precautions? If they were put on board out of Civility, they were to trust the *Spaniards*; if they did not, it is plain they were in Possession, and the Bark was their Prize. For my own Part, I take the Truth of the Matter to be this: The Captain of the Bark understood her to be a Prize; and, after he got ashore, procured sufficient Assistance to retake her; but, doubting whether he should be able to get into Port before *Shelvocke's* Return, he carried off his own Crew, and murdered the *English*. This, I say, is my Notion of the Matter; and I leave it intirely to the Reader's Consideration, whether 'tis probable or not. But we are now come to a Matter of far greater Consequence, indeed a Matter which gives us the greatest Light into the true Scheme of, at least, the latter Part of the Voyage; and therefore I shall give it in Mr. *Betagh's* own Words, from whom we have this Information. It is, indeed, a very extraordinary Piece of secret History, and worthy the Reader's Attention; the rather as it seems to be supported by Evidence, and explains abundance of dark Things in the preceding and in the subsequent Part of this Expedition, and is intirely different from any thing that is to be met with in the Conduct of Captain *Clipperton*, who is loaded with so many heavy Charges by Captain *Shelvocke*. Thus speaks Captain *Betagh*: "This being the great Crisis of Captain *Shelvocke's* Voyage, I shall be more particular in relating the Affair of this last Prize, which will open the most notorious Scene of Deceit that has appeared yet. This Ship was called the *Conception*, Don *Stephen de Ricova* Commander, bound from *Calao* to *Panama*, having on board several Persons of Distinction, particularly the *Comde de la Rosa*, a *Spanish* Nobleman, who had been some time Governor of *Pisto*, and was now going to *Spain*, laden with Flour, Sugar, Marmalade, Peaches, Grapes, Limes, *et cetera*. Now, be it known to all Men, that that *et cetera* was an hundred and eight thousand six hundred and thirty-six Pieces of Eight; and *Shelvocke* little thought, when he took

this Prize, or compiled his Book, that I, of all Men, should have this exact State of this Affair: He often said, he would never give the Gentlemen Owners a fair Account; and I have often promised, in this Treatise, to prove that he did say so; and now we have both made our Words good, I have not only an authentic Account, but I will declare also how I got it. When I was carried Prisoner to *Lima*, I had Leisure enough to reflect on my Misfortunes, how likely I was to be ruined, and the Owners to be cheated; so that, to prepare them in Defence of their Rights, I wrote over to one of them the Substance of what had occurred to me; how *Shelvocke* had mismanaged, how arbitrarily he had acted in Defiance of their Articles, and what his private Intentions were in the future Part of the Voyage. As soon as I came to *London*, which was in *October* 1721, I confirmed the Purport of my Letter, with several new Circumstances; for all which Performance of my Duty, I do suppose my Name has met with so much Reproach in Captain *Shelvocke's* Book; but, besides my Advice, the Gentlemen had many Proofs from other Prisoners, and other People. Eleven Months after, being *August*, Captain *Shelvocke* himself arrived, and waits immediately on the said Gentlemen, to compound in the Lump for all his Transactions, not owning any thing of this Prize, which he had unlawfully shared, and every thing else, among three-and-thirty of them. Instead of promising the Matter, the Gentlemen read him a Letter, secured him, and the same Day had him confined in *Wood-Street Compter*. A few Days after, his Pupil, *Stewart*, arrived at *Dover*, and was seized by the honest Warden of the Cattle, according to Directions, who faithfully secured his Book of Accounts, and brought it, with the Prisoner, to the Owners, from whom I had the Book, and copied the Dividend, which is as follows:

Names	Quality	Number of Share	Dollars	Engl. Money
<i>George Shelvocke</i>	Commander	6	1135	2642 10 0
<i>Samuel Randall</i>	Lieutenant	2	4718	
<i>John Rayner</i>	Capt. Marines	2	4718	1100 17 4
<i>Blowfield Caldwell</i>	Matter	2	4718	each.
<i>Nicholas Adams</i>	Surgeon	2	4718	
<i>Matthiew Stewart</i>	First Mate	2	3775	
<i>Monieur Leposte</i>	Second Mate	2	3775	
<i>George Hayhal</i>	Boatwain	2	3775	880 16 8
<i>Robert Davenport</i>	Carpenter	2	3775	
<i>William Clark</i>	Gunner	2	3775	
<i>James Daniel</i>	Midshipman	1	2830	
<i>David Griffith</i>	ditto	1	2830	
<i>Christopher Hasckin</i>	ditto	1	2830	
<i>Oliver Lefevre</i>	Sail-maker	1	2830	
<i>John Dayde</i>	Surgeon's Mate	1	2830	660 0 0
<i>William Morgan</i>	ditto	1	2830	each.
<i>John Popplewe</i>	Armourer	1	2830	
<i>James Mayst</i>	Cooper	1	2830	
<i>John Pearson</i>	Carpenter's M.	1	2830	
<i>Geo. Shelvocke, jun.</i>		1	2830	
<i>William Clement</i>	Able Seaman	1	1887	
<i>John Norris</i>	ditto	1	1887	
<i>James Montville</i>	ditto	1	1887	
<i>Georg Gill</i>	ditto	1	1887	440 7 0
<i>Peter Fere</i>	ditto	1	1887	each.
<i>John Smith</i>	ditto	1	1887	
<i>Edward Atcock</i>	ditto	1	1887	
<i>John Thersaid</i>	ditto	1	1887	
<i>John Thersaid</i>	Barber	1	1887	
<i>William Burrows</i>	Old Seaman	2	1452	330 6 10
<i>Daniel de Donald</i>	ditto	2	1452	each.
<i>Richard Croft</i>	ditto	2	1452	
<i>John Rabins</i>	Grommet	2	943	220 4 0
<i>Benedict Harry</i>	Cook	2	943	each.
33		52	9804	2300 15 0

"Here the Reader perceives the Sum Total of this Dividend to be short of what I said the Capture amounted to; but, in order to set that Matter right, there is a secret Article of 627 Quadruples of Gold, which *Shelvocke* graciously shared among private Friends; each of which Quadruple, or double Doubleton, is worth sixteen Dollars, or Pieces of Eight;

And makes } Dollars { which, at 4 s. 8 d. l. s. d.		
in whole } 10,032 { each, makes } 2340		
which being added to the } 98,604 1/2 { — or — 23,007 15 6		
makes } 108,636 1/2 { — or — 25,348 11 6		

“ All which Money *Shelvocke* has the prodigious Modesty to conceal; and only says, the Prize was laden with Flour, Sugar, Fruit, &c. *Stewart's* Book mentions the 627 Doubloons, but not a Word how they were divided; so that we must imagine them to be sunk among both the *Shelvocks* and *Stewart*; for, as *Stewart* was Agent, Cashier, and Paymaster, it was an easy Matter to hide a Bag of Gold from the Public, and dispose of it afterwards in a Committee of two or three.”

26. It was not only an Act of Generosity towards our Spanish Prisoners, but an Act of Prudence also with regard to our own Conduct, the parting, as we did, with the *Conception*, and all on board her. They were but three Days in our Possession, and in that time treated with so much Humanity, that we had the uttermost Reason to believe they retained a grateful Sense of our Kindness. The great Point now to be managed, was to obtain the Consent of my People to sail as far North as *California*, before our intended Voyage to the *East Indies*, for which, if we were not in as good a Condition as we could wish, we were, at least, in a better than we were before, or than, all Things considered, we had any Reason to expect, since we had a good Ship, fifteen Guns, Ammunition enough to supply them, and a reasonable Quantity of Provisions. We still wanted, however, somewhat to complete our Wood and Water for so long a Voyage; so that the procuring this was naturally our first Care. The Ship's Company thought of going to the Island of *Quibo*, which was, indeed, the nearest Place to us: But the going thither was attended with two great Inconveniences: Of these, the first was the Danger of the Road; which, as the Roriny Season was coming on, and we were but very indifferently provided with Ground-tackling, must have exposed us to many Dangers: The second, that, as the Island of *Quibo* was at a very fine Distance from *Panama*, we had Reason to fear the *Spaniards* would send a Ship of War from thence in Search of us; which would have put an End to all our Designs, since we had now no further Hopes of there being a Peace, and consequently had laid aside all Thoughts of Surrendering. Upon these Considerations, it was determined to ply up to *Cano*; where, having a good Boat, we soon did our Business. In our Passage thither, the Sweetmeats of all kinds were divided among the Men; but one of the Men complained he had a Box of Marmalade he could not stick his Knife in, and desired it might be changed: I opened it, and found a Cake of Virgin-silver in it, moulded on purpose to fill such Boxes; and, being very poisonous, was of near the same Weight of so much Marmalade, the Weight being 200 Pieces of Eight: In overhauling the rest, we found five more: This was a Contrivance to defraud the King of *Spain* of his Fifths, which he lays a Claim to in all the Silver taken out of any of the Mines in *Peru*. We, doubtless, left a great many behind us; so that this Deceit served them in a double Capacity, of wronging their King, and blinding their Enemies. An Affair, as vexacious as this, fell out on board a Prize the *Success* had taken, where they found a very considerable Quantity of Pinas, or Virgin-silver, in the Form of Bricks, very artfully plaistered over with Clay, and tied in the Sun: As they never burn their Bricks in that Country, they took them to be really such; and therefore threw a great Number of them overboard, as so much Rubbish, and made no Discovery till the four or five last Pieces. How true this is, I can't say; but it was reported to me as Matter of Fact by several of the Officers belonging to Captain *Clipperton*. I must observe here, that every thing taken in the *Conception* was divided according to the Articles last settled at the Island of *Juan Fernandez*; or, in other Words, according to the usual Custom of Privateers, which gave me six Shares only instead of sixty; and they refused to allow me an hundred Pounds, which I had laid

out of my own Money for necessary Supplies at the Island of *St. Calbarine's*. I found myself also under many other Difficulties as to the Course we were to steer, because the Ship's Company were well enough informed, that, in order to go to the *East Indies*, there was no Necessity of running farther to the North than the Latitude of 13°, and therefore I was obliged to insist, in the best manner I could, on the Advantages that might be drawn, with respect to cleaning and refitting our Ship, from the favourable Situation of *Porto Seguro* in *California*; and it was not without a great deal to do, that I induced my People to listen to this with a Degree of Patience. At last, having brought them to my Purpose, I weighed from *Cano*, and steered Northward, having favourable Winds for forty-eight Hours, and afterwards inconstant Gales, and very bad Weather, which induced me to think of getting farther out to Sea, in hopes of meeting there with more settled Weather, which, in our Circumstances, was a Point of the utmost Importance. This Design I immediately put in Execution, and found, that, at sixty Leagues Distance, we had Winds variable, and between seventy and eighty Leagues Distance they settled at East North-east and North-east: Therefore I kept this Distance from the Land, till we had run the Height of 20° North; and were not, in all this Passage, in the least sensible of any Currents, being also intirely out of the Way of the frightful Riplings, and Overfalls of the Water, which we frequently met withal nearest to the Land, which alarmed us in the Night, when we have been becalmed in deep Water; for we frequently heard a Noise, as of the Fall of Water passing through a Bridge, a considerable time before it came to us, which afterwards passed by us at a very great Rate: All the Effect it had on the Ship, was to make her answer in r Helm wildly, if we had any Wind; but when it has happened, that we have met these moving Waters very near the Shore, we could not perceive, that we either gained or lost any Way by them, though we have continued in them for a Quarter of an Hour together. I have observed these Overfalls both to come from the Westward and Eastward; but, by getting out to Sea, we were not only clear of these Inconveniences, but were also out of the Way of the black Season; which began to be fixt on the Coasts; for, at *Cano*, in going thither, we felt very hard Gulls, with black rolling Weather, frequent and violent Thunder and Lightning, attended by heavy Showers of Rain. In this Passage, we were continually accompanied by vast Shoals of Fish, such as Dolphin, Bonita, Albicore, and Angel-fish, which are in Shape like Salmon, and have Scales like them, but a Tail like the Dolphins; and also nearly resemble them when in the Water, they appearing in all the beautiful Colours that the Dolphin has; and as for eating, are by much the best Fish that swim near the Surface. We were almost continually plagued with Flocks of these sort of Birds, so well known to Seamen by the Name of Boobies; and their Dung, which stinks intolerably, proved a Nuisance not to be described, notwithstanding all the Pains we could take to keep the Yards, Tops, and Decks clean. In the Beginning of *August*, we reached the Island *Tres Marias*, but could see no Sign of Captain *Clipperton's* having been there; and were also disappointed in our Hopes of finding Water; since, on the strictest View we were able to take of all three Islands, nothing like a Spring was to be discovered in any of them, notwithstanding what some former Writers have said of their meeting there with Water in abundance.

27. After having spent about three Days in searching of these Islands, I thought it best to stand over for the Main-land of *California*, as well for procuring what was wanting in our own Ship, as in Hopes of meeting once more with the *Success*. Accordingly, on *August 11*. we made that Coast; and the Inhabitants, as soon as they discovered us, made Fires on the Shore as we ran by them: Towards the Evening, two of them came off to us on a Bark-log, but were a long time before they would accept of our Invitation to come into the Ship; at length, after a great many Signs which we made to them, they ventured; when, in a Moment, seeing the Whites and our Blacks promiscuously stand together, they, with angry Countenances, separated them from us, and would hardly suffer them

them to look upon us: They then made Signs to us all to sit down; which done, one of them put himself into strange Postures, and ran from one to the other of us, talking to us with great Vehemence, and seemed to be in a perfect Transport of Ecstasy, continually singing or speaking, and running about so fast, till he was quite out of Breath. The Night coming on, they were for departing, and we gave them a Knife or two, an old Coat, and some other Trifles, which pleased them very well; and they, by Signs, gave us repeated Invitations to go ashore with them. On the 13th, at Day-break, we found ourselves near *Puerto Seguro*; some of the Natives came out on Bark-logs to meet us, whilst others got upon the Tops of the Hills and Rocks near the Sea-side, making Fires for us: There was an universal Joy spread through them; those that were near the Rocks to see us, came in running up-and-down to one another; and those that came out to see us on Bark-logs, paddled with all their Strength, impatient to have a nearer View of us. Our Anchor was no sooner down, than they came off to us in Crouds, some few on their Bark-logs, but most of them swimming, talking and calling out to one another in a confused Manner; our Ship was in an instant full of these swarthy Gentry, quite naked; amongst the rest was their King, or chief Man, whom we could not distinguish by any particular Ornament, nor by any Deference that was paid to him; the only Ensign of Sovereignty which he bore about him, was a black round Stick, made of an hard Wood, of about two Feet and an half in Length; this being observed by some of my People, they brought him to me; upon which, he concluding that I was the Chief in the Ship, in a very handsome manner delivered his black Sceptre to me, which I immediately returned to him. This Man, notwithstanding his savage Appearance, had a good Countenance, and his Behaviour had something noble. I soon found a way to regale them; for we had a great Quantity of Sweetmeats: I therefore ordered what deep Dishes I had to be brought upon the Deck; the Jars were broached, and the Dishes filled with the choicest of *Peruvian* Conserve; they were every one accommodated with Spoons, and, though they could not sit regularly to their Entertainment, because of their Numbers, who had all an equal Welcome to the good Cheer, yet, as we kept continually replenishing their empty Dishes, they were all satisfied with as much as they cared to eat: Their Food they liked extremely well; and the Spoons, which were mostly Silver, they returned with great Honesty, which they would doubtless have done, had they been Gold, the Value of those Metals being unknown to them. Having thus commenced a Friendship with them, I sent an Officer ashore to view the Watering-place; and, to make him the more Welcome, I sent with him some coarse blue Baize, and some Sugar, as a Present to the Women, amongst whom it was to be equally distributed. The King, seeing our Boat ready to put off, was for waiting on her with his Bark-log, but I intreated him to take a Passage in our Boat; which he seemed to be mightily pleased with. The Remainder of the Day was spent in an Interview between us and our wild Visitors, who behaved themselves in general very quietly and peaceably. The Officer returning with an Account of his civil Reception, we prepared our Casks to send ashore the next Morning. Indeed, from some Accounts which I had read concerning these People, I apprehended no Molestation from them in wooing and watering; though, at the first View, the Country and Inhabitants would dissuade me from venturing freely amongst them; they even appeared so terrible amongst our Negroes who had been born in *Guinea*, that one of them, who had been sent with the Officer on shore, was afraid to stir from the Boat, and all the while kept an Ax in his Hand to defend himself from any that might attack him: But this Dread proceeded from the Contempt which the two first that came off to us had expressed towards our Negroes, in separating them from the Whites. As soon as the Night approached, all the *Indians* swam ashore again, so that we had the Pleasure of a clear Ship to rest ourselves in after the Fatigues of the Day.

The next Morning by Day-break our Boat went ashore with those designed to cut Wood, and fill Water; and, before the Sun was up, we were again crouded with our

former Guests, who seemed as if they were never tired with gazing at us, and our Ship. But, that nothing should be wanting in us to keep up the Amity we had already contracted, I ordered a great Boiler to be carried ashore, with good Store of Flour and Sugar, and a Negro Cook, to be continually boiling Hasty-pudding for the numerous Spectators on the Beach; and it really behoved us to keep in their Favour, since, whether in the Ship, or on the Strand, we were wholly in their Power; those on shore being perpetually surrounded by Multitudes, and we in the Ship were from Morning till Night so incommoded by them, that we could hardly move fore and aft through the Crouds of them that were staring at us. They at first were idle: Lookers on, till their natural Compassion for the few Men, whom they saw rolling of great Casks of Water over the heavy Sand, in the sultry Heat of the Day, induced them to help us, together with the kind Treatment they met with from us, and the particular Readiness of their Chief to serve us, by shewing his People a good Example; for, after Mr. *Randall*, my Lieutenant, took up the first, he took up the second Log of Wood, to carry to the Boat, and was immediately followed by two or three hundred of them, so that they eased my Men of a great Fatigue, and shortened the Time we had Occasion to stay at this Place: They likewise rolled our Cask down to the Boat, but always expected a white Face to assist them, who, if he did but touch it with his Finger, was sufficient Encouragement for them to persevere in their Labour. We even found Means to make them, who used to be all Day on board, useful to us; for when we came to heel the Ship, we crouded them all over on one Side, which, together with other Shifts, gave us a very considerable Heel, while we cleaned and paid our Bottom with Pitch and Tallow; and so tractable were they, that they would sit very quietly on the Side they were bid to go to, till we ordered them to disperse themselves, that we might bring the Ship upright again. Thus they repaid our Civilities by their Services, and every Day they seemed more and more fond of us. When our Boat went on shore in the Morning, there was a constant Retinue waiting for our People on the Beach, and particularly those, who, by a better Dress, they guessed to be above the common Rank; these they always received with such formal Ceremonies, as could not be expected in such a Place; for, as soon as they came out of the Boat, they were immediately laid hold on by two *Indians*, who led them between them, and were followed by a great many Couples, Hand-in-Hand; thus they led them up to the River, and then left them to their own Liberty, to proceed in the Direction and Execution of their Business. By this time the Rumour of our Arrival was spread through all the neighbouring Parts; and some of different Clans, from those who inhabited the Land about this Bay, came daily to view us; those who came from any Distance in the Country could not swim; and, that they were different from those we had first seen, appeared by the Manner of painting themselves, and other little Distinctions, which were visible amongst them; but they all united amicably to assist us, and hardly any were idle but the Women, who used to sit in Circles, on the scorching Sand, to give Attendance for their Share of what was going forwards, which they used to receive without any quarrelling amongst them about the Inequality of the Distribution, although some, who had no Spoons, fared but poorly; but, at last, there were few of them that had not something to serve them to eat their Spoon-meat, encouraged thereto by our constant Supplies of it, with which we fed several Hundreds every Day. Thus, by a mutual Exchange of good Offices one toward another, they thought themselves happy in us, and we thought ourselves fortunate in meeting so timely and necessary Assistance; for it is probable, that my Men might have contracted a dangerous Sickness by working so laboriously in the Heat of the Day, after being in a manner worn out by what they had already undergone. Having already completed our Business in the Space of five Days, we, on the 18th of *August*, prepared for our Departure, and employed the Morning in making a large Distribution of Sugar amongst the Women; and to the Men we gave a great many Knives, old Axes, and old Iron, which we had taken in our Prizes; these were

the most useful Things to them, and of which they stood most in need. In Return, some of them gave us Bows and Arrows, Deer-skin Bags, live Foxes and Squirrels, &c. That we might appear as awful to them as possible, I ordered five Guns to be fired on the loosing our Top-sails; the Noise of which mightily frightened them; and, upon seeing our Sails loosed, there was an universal Damp upon their Spirits, which might be easily perceived by the lively Sorrow that was painted in all their Countenances; Their Women were all in Tears, when my People had executed their Orders, and were coming off to the Ship; and a great many of the Men staid in the Ship all the while we were purchasing our Anchor, and did not offer to stir till we were under Sail; and then, with the most dejected Aspects, leaped overboard. That Evening we took our Departure from Cape *St. Lucas*, in our Way to *China*.

23. After making some Stay in *California*, and having so thorough an Acquaintance with its Inhabitants, it is but natural for me to attempt, as others have done, to give some Account of it, the rather, because great Things have been expected from a perfect Knowledge of its Extent and Boundaries; though, for my Part, I must confess, I believe such a Discovery would produce few real Advantages, how much Satisfaction soever it might give to the Curious. The *Spaniards*, whose Interest and Opportunities are greater than ours, or, indeed, than any other Nation in *Europe*, have, of late especially, been extremely negligent in this respect. Their annual *Acapulco* Ships are often obliged to run into high Latitudes for the Benefit of Westerly Winds; and, in doing this, have sometimes had Soundings in their Passage, which certainly afforded a great Probability of finding Land, tho' I never heard, that they pushed any such Discovery. However, for this, and many other Reasons, I am inclined to think, that *America* and *Asia* are joined by some Tract of Land to the Northward. Leaving, however, these Conjectures to be supported or confuted by future Discoveries, I shall confine myself to Facts, and report only what I have seen or known, for the Information of the present Age, and of Posterity. The Eastern Coast of that Part of *California*, which I had a Sight of, appears to be mountainous, barren, and sandy, and very like some Parts of *Peru*; but, nevertheless, the Soil about *Puerto, Segura*, and (very likely in most of the Valleys) is a rich black Mould, which, as you turn it fresh up to the Sun, appears as if intermingled with Gold-dust; some of which we endeavoured to wash and purify from the Dirt; but though we were a little prejudiced against the Thoughts that it could be possible, that this Metal should be so profusely and universally mingled with common Earth, yet we endeavoured to cleanse and wash the Earth from some of it; and the more we did, the more it appeared like Gold. In order to be further satisfied, I brought away some of it, which we lost in our Confusions at *Cobna*. But, be that as it will, it is very probable, that this Country abounds in Metals of all Sorts, though the Inhabitants had no Utensils or Ornaments of any Metal whatsoever; which is no wonder, since they are so perfectly ignorant in all Arts.

This Soil produces Plenty of Wood; but the Trees are very small, hardly deserving a better Name than that of *Bushes*: But Woods, which are an Ornament to most other Countries, serve only to make this appear the more desolate; for the Locusts swarm there in such abundance, that they don't leave a green Leaf on the Trees. In the Day-time, these destructive Insects are perpetually on the Wing, roving in Clouds, and are extremely troublesome by flying in one's Face: They are in Shape and Bigness exceedingly like our green Grasshoppers, but differ from them in their Colour, which is yellow. No sooner had we come to an Anchor, than they came off in such abundance, that the Sea about us was strewed with their dead Bodies. Thus, by the incessant Ravages of those Locusts, the Prospect of the Country thereabouts is stripped naked, notwithstanding the natural Warmth of the Climate, and the Goodness of the Soil. I don't know, that any of our former Navigators have observed this in their Accounts of this Place; and therefore am persuaded, that they are

troubled with this Plague only at this Season of the Year; and, in Confidence of this, I gave them a large Quantity of Calavances, and shewed them how to sow them. But, if I should be mistaken in my Conjecture, and these Vermin infect the Country the whole Year round, the sowing these, or indeed any other kind of Vegetable, will be of very little Use. The Harbour of *Puerto Seguro* was so called by Sir *Thomas Candish*: It lies about two Leagues to the North-east of Cape *St. Lucas*; and is, when you are in it, a very safe and good Port, and extremely convenient for Privateers that are cruising for the *Manilla* Ship. The Watering-place is on the North Side, in a small River, which there empties itself into the Sea, and may be known by the Appearance of a great many green Canes, which grow in it, and which always preserve their Verdure, because the Locusts will not touch them, which is owing to something in those Canes noxious to that Insect.

It is now requisite, that I should enter on a particular Description of the People of this Country, for various Reasons, but particularly these: That hitherto they have been little known, have been sometimes misrepresented, and have been particularly considered by me, in Lights, which, very probably, no other Man will enjoy, as it is certain no *Englishman* ever had them before me. The Men are all tall, srait, and well-set, have very large Limbs, with coarse, black, shag Hair, which does not reach down to their Thighs, as a late Navigator reports in his Voyage, nay, descends hardly down to their Shoulders. The Women are of a much smaller Size, their Hair much longer than the Mens, with which some of them almost cover their Faces. Some of both Sexes have good Countenances, but of a much darker Complexion than any *Indians* I saw in these Seas, being of a deep copper Colour. Such is their Simplicity, that the Men go quite naked, without the least thing to cover them, and wear nothing but a few Trifles, which they look upon as Ornaments; such as a Band or Wreath of red and white Silk-grass, which some wear round their Heads, adorned on each Side with a Tuft of Hawks Feathers; others have Pieces of Mother-of-Pearl, and small Shells, tied in their Hair, and hanging about their Necks; some have a large Necklace, of six or seven Strings, composed of small red and black Berries; some are scarified all over their Bodies; others use a kind of Paint, some besmearing all over their Faces and Breasts with black, and others are regularly painted all over, from the Face to the Navel, with black, and from thence, down to their Feet, with red. The Women, on the contrary, wear a thick Fringe of Silk-grass, reaching from their Middle down to their Heels, and have a Deer-skin carelessly wrapped over their Shoulders; some of the better Sort have the Skin of a large Bird wrapped about them in the same manner. From what I have been relating, the Reader may reasonably conclude, that nothing can be more savage: But there is a wide Difference between what one would upon the first Sight expect to find from them, and what they really are; for all that I could discern in their Behaviour towards one another, and their Deportment towards us, they are endued with all the Humanity imaginable; for, all the time we were there, and constantly among so many Hundreds of them, there was nothing to be perceived but the most agreeable Harmony, and most affectionate Esteem for one another, insomuch that when any of us gave any thing that was eatable to any one of them in particular, he always divided it into so many Shares as there were Persons about him, and commonly reserved the least for himself: They seldom walk single, but go most by Pairs, Hand-in-Hand: They appear to be perfectly meek; and there is no Indication of Cruelty in either their Aspects or Actions: They, indeed, seem to be pretty haughty towards their Women; which, perhaps, may proceed from too great an Opinion of the Superiority of their own Sex. They lead a careless Life, and have every thing in common, searching for nothing beyond the necessary Supports of Life; by which means they are free from the anxious Troubles to which those are subject, amongst whom Luxury and Pride have got any Footing. They never offered to pilfer or steal any of our Tools, or other Utensils,

which might have been of Service to them: So strict was their Honesty in this particular, that some of my Men, who had been cutting Wood all Day, and were coming on board in the Evening, forgetting that they had left their Axes in the Wood; it being observed by one of the *Indians*, he immediately spoke to the King; who sent him into the Woods to fetch the Axes; which he did, and delivered them to my People, with an apparent Satisfaction, that they did not go away without them.

In a Word, they pass their Lives in the pure Simplicity of the earliest Ages of the World, before Discord and Contentment were heard of amongst Men. They, as yet, have never been tainted with the Conversation of other Nations, which might have perverted their Morals; and have never been irritated by the Oppressions of a Conqueror, who, by exercising Cruelties over them, might have taught them to delight in Barbarity, as happened to the *Indians of Mexico and Peru*, who doubtless had their Propensity to Inhumanity greatly augmented by the *Spaniards*, who shewed them an horrid Example, by their continual Butcheries of the *Indians*. Hitherto the *Californians* may be said to act according to the Dictates of Nature, whilst we act contrary to Reason. One of our late Navigators has represented them as idle and lazy, and jealous of their Women; alleging, that he could never have a Sight of any, but such as were old. I cannot tell how that Gentleman, and his People, treated them; but we found, that they are not so by Inclination, but rather from their being under no Necessity of doing any thing laborious. And, as to their Women, we have had the Company of some Hundreds of young and old every Day, who never made any Scruple of appearing amongst us; nor did the Men shew the least Discontent at it: And I may venture to say, that we engaged them so far by trifling Presents and Entertainments, that nobody, upon those Terms, need want their Assistance for the future, tho', perhaps, scarce any may have so much Provisions to spare, as I had at that time, to regale them.

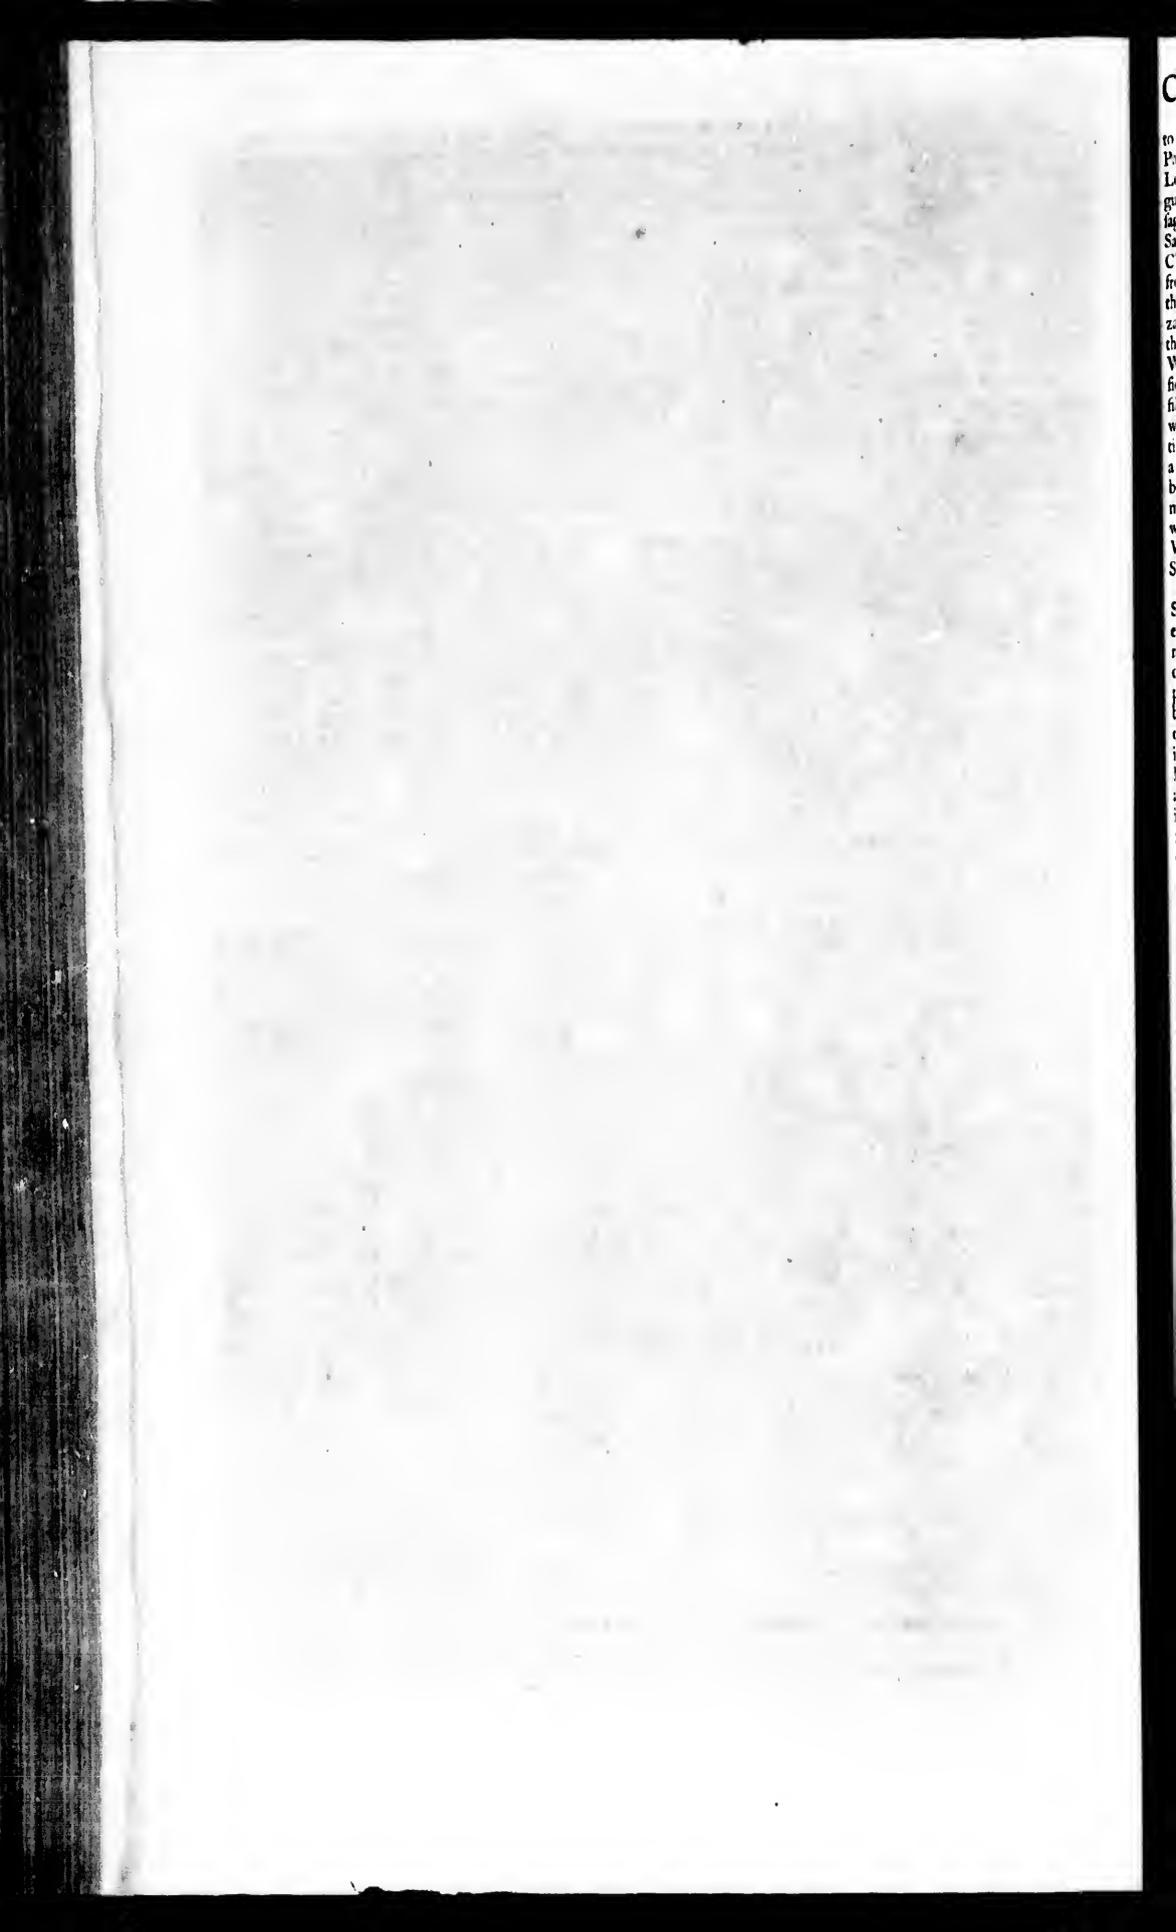

I must not omit one thing, in which they would always have the Mastery of us; and that was in taking Snuff, which they would never permit any of us to use, but immediately, upon seeing us take a Pinch out of our Boxes, they would run to us, and, with great Earnestness, twist it from between our Fingers, and throw it away. What could be the Ground of this Aversion, I cannot conceive, except that some of them had suffered Death or Sicknes by taking some particular Thing up their Noses. They likewise would never suffer me to look through my Prospective, imagining, that there was something extraordinary in that Piece of Wood, that I had so often recourse to it to look on the Shore; which I did to observe how the Work went on on the Beach, they not apprehending, that it was possible that my Eyes could receive any Assistance by it. Their Language is guttural and harsh; they talk a great deal; but we never could so much as understand one Word. I had once some Thoughts of bringing some of them away with me, especially the youngest, that they might learn our Language, and give us some Information of their Country; but, as we could not make them understand us, we must have seemed to them to have taken them away by Force; which perhaps would have exasperated them: And as this would have been of ill Consequence to such Ships as may have Occasion to go thither for the future, I therefore laid aside all Designs of that kind. Their Manner of living in their Dwellings is very mean; for they can scarce shelter them. And, as to their Diet, I believe it is mostly Fish, which they frequently eat raw: They sometimes bake it in the Sand. They seldom want plenty of this, because the Men, being expert Harponiers, go out to Sea on their Bark-logs. On these they venture out, rowing with a double Paddle, and, with their Harpoons, (which are made of a sort of hard Wood) strike the largest *Albicores*, and bring them in. This was surprising to us, who had often experienced the Strength of that Fish; for, tho' we frequently got hold of them with very large Hooks, made fast to Night-trang-ropes, we were obliged to bring the Ship to, in order to get them in, and that by the Help of nine or ten Men; which is as much as they can sometimes do: So that one would imagine, that, as soon as the *Indians* had struck one of those on his light Embarkation, it would run away with him, and his Bark-

log; but they have some Slight in their Way of managing them, that their Resistance and Struggling is in vain. There are hardly any Birds there, except a few Pelicans. When they want to drink, they go up to their Middle in the River, and there take up the Water between their Hands, or stoop down, and suck it up.

Thus, between Hunting, Fishing, Eating, and Sleeping, their Time is divided, which, between their Exercises, and the Sparingness of their Diet, is prolonged to a great Extent; and many of both Sexes live to a very old Age, as their grey Hairs, and extraordinary Wrinkles, testify. Their Bows are about six Feet in Length; and their Arrows seem to be somewhat too long for their Bows. Considering they have not Tools requisite to make such Things, it must take them up a great deal of Time. Their Bow-strings are made of Deer-sinews; and their Arrows are composed of an hollow Cane, Two-thirds of their Length; and the other, next the Point, is of an heavy kind of Wood, headed with a Piece of Flint, and sometimes Agate, the Edges of which are cut in Teeth, like a Saw; and the Point is very sharp. They made no manner of Shew with their Arms to us; and it was rare to see any in the Hands of the Men. The Women commonly go out with them in the Woods, in Search of Game; which is their chief Employment. They have need of some Arms to defend them against the wild Beasts; for I saw some of the Men, who had received great Hurts from them, particularly one old Man, who had his Thigh almost torn in Pieces by some Tyger or Lion; and his Thigh, tho' quite healed, was frightfully scarred. It is impossible for me to say any thing particular concerning their Government, except this, that it is not very strict or rigorous. When their King went abroad, he used to be attended by a Train of a great many Couples, Hand-in-Hand. In this Manner was he coming out of the Woods the first Morning after our Arrival, when, perceiving one of my Officers cutting down a Tree, with Silver Lace on his Waistcoat, he judged him to be better than ordinary, and immediately took an Opportunity of shewing both his Authority, and his Civility, by ordering one of his Attendants to take the Ax from him, and work in his stead. In short, in every respect, they seemed to enjoy perfect Tranquillity, to the Happines of which nothing could be added, but the true Knowledge of God, and the right Way of worshipping him.

As remarkable Accidents naturally strike the Spectator in such a manner, as to create deep Impressions, I cannot conclude this Description of the Country and People of *California*, without taking notice of a Circumstance in relation to their Fishing, which surpris'd me very much; and, as it is a remarkable Instance of their Agility in the Water, and will convey a clearer Idea of their Manner of Fishing, than can be given any other way, I lay it before the Reader, to whom, I persuade myself, it will be very agreeable: It happened one Day whilst I was there, that a monstrous kind of flat Fish was sunning himself on the Surface of the Water, near the Shore. Some of the *Indians*, seeing it, went into the Water, to the Number of twelve, and surrounded him; which, upon finding himself disturbed, dived; and they went down after him; and it was with much Difficulty that he got from them the first time. In an Hour afterwards, he came again; and sixteen or seventeen of the *Indians* swam off, and encompassed him, as before; and, by tormenting him after their Manner, they, by their Art, insensibly drove him ashore; for all their Strength, put together, was certainly inconsiderable to his, when in the Water. When his Belly touched the Ground, the Force, with which he struck the Beach with his Fins, is not to be expressed, no more than their Agility about him, who were endeavouring to kill him, for fear the Surf should let him afloat again. They at length dispatched him by the Help of a Dagger, which my Lieutenant *Randall* lent them, who was standing by. They loon cut him in Pieces, which were distributed to all that came. The Fish, by the nearest Computation, was fourteen or fifteen Feet broad, but not so much in Length. Notwithstanding he was of the flat Kind, he was very thick, and had an hideous large Mouth. But it is now time to return to our Voyage.

29. On August 18. 1721, we sailed from *Puerto Seguro* for *Canton* in *China*, as the Place where it was most likely

to find *English* Ships, on board which we might secure our Passage home. Our Ship was in a very bad Condition, the Length of our Voyage considered, since our Sails and Rigging were so thin and rotten, that if, in this very long Passage, any Accident had befallen us, either in our Masts or Sails, it would have gone very hard with us, having no Change of either, and being at such a dreadful Distance from any Place, where we might hope for Relief; but, as this was a Case of Necessity, we were obliged to run all Hazards, and to endeavour, by Care and Industry, to supply those Deficiencies, which were not to be remedied any other Way: And, as we had already happily got over many Difficulties, that seemed unformountable in their Prospect, it filled us with Hopes, that we should likewise get over these, which, with the pleasing Expectation of reaching our native Shore, gave us Spirits enough to undertake so tedious a Navigation in so weak and comfortless a Condition; for, besides the bad State of our Ship, we were now so thinly manned, that, without the Assistance of our Negroes, it would scarce have been possible for us to have managed the Vessel, there not being now thirty white Faces amongst us: So much had untoward Accidents reduced our Crew!

On the 21st, we discovered an Island, bearing West South-west, 110 Leagues distant from Cape *St. Lucas*: I endeavoured to get in with it, but could not approach it nearer than the Distance of two Leagues; and, the Night coming on, and it blowing very fresh, I did not think it proper to lose so much Way, as we might in the Night, by lying-by, or plying in, for it. I judged it to be seven or eight Leagues in Circumference; on the South-west of it there appeared a large Bay, with an high Rock in the Middle of it. This Isle my People called *Shelvocke's* Island, after my Name. From hence we steered down gradually, into the Parallel of 13° North, but had our Way stopped for two or three Days by Westerly Winds, which none could ever have expected in such Latitudes, and at a Distance of 5 or 600 Leagues from any Land. We grew impatient at such an uncommon Delay, and began to dread meeting with many such contrary Winds in this Passage; we made several Conjectures on what might be the Cause of it, but none that were very probable; but the Trade-wind prevailing again, we kept in the Tract of 13° North, except when we judged ourselves to be near the Shoals of *St. Baribolomew*, and then haled a Degree more Northwardly, and so continued for a Run of about sixty or seventy Leagues. A Fortnight after we had left *California*, my People, who had hitherto enjoyed an uninterrupted State of Health, began to be afflicted with a Sickness which particularly affected their Stomachs, which was, undoubtedly, owing to the Quantities of Sweetmeats they were continually devouring; and also to our common Food, Puddings made of very coarse Flour, and Sweetmeats, and salt Water instead of fresh to moisten them; and dried Beef, the best Part of which was destroyed by Ants, Cockroaches, and other Vermin. We could not afford fresh Water to boil the Kettle once in the whole Passage; so that this way of living brought the Scurvy and other Disorders upon us, which was a very melancholy State. This Sickness increased upon us every Day, insomuch that, out of our small Number, we buried two in one Day, which were *John Popplestone*, the Armourer, and the Carpenter's Mate; besides whom, the Carpenter, Gunner, and several others, together with some of our best Negroes, died.

We now laboured under the greatest Misfortunes that could happen to us, the greatest Part of my People being disabled, and my Ship being very leaky; and we had just at this time the ill Luck to have one of our Pumps split, and rendered useless: Under these unhappy Circumstances we were pushed forward by favourable Gales, till we came within eighty Leagues of *Guam*, one of the *Ladrone* Islands, where we met with dismal Weather, tempestuous Winds, varying round the Compass: This was the more frightful to us, as we were not in a Condition of helping ourselves, there not being above six or seven that were able to do any Work, though Necessity obliged even those that were extremely low and weak to lend what Help they could. These boisterous Gales had raised a Sea, wherein our Ship laboured so much, that the Knee of her Head, and the whole Beak-

head, became loose; so that the *Bowsprit* fetched away, and played with the Motion of the Ship, continued so to do all the rest of the Time we were at Sea: Our *Main-mast* stood for some time without Shrouds on the Larboard-side, till we could unlaid our best Cable to make more, having knotted and spliced the old ones, till our Labour was in vain. In the midst of this I was taken violently ill, and had no Expectation of living much longer, till the Gout, seizing me, gave me some painful Hopes of the Continuance of my Life. In the Beginning of *October*, we made the Island of *Guam*, 100 Leagues short of Captain *Rogers's* Account, who makes 105° Difference of Longitude between this and Cape *St. Lucas*, and we did not make quite 100°. We passed between the forementioned Isle and *Serpaina*, and saw several flying Procs, but none came near us that Day: We had heavy squally Weather, which obliged me to keep the Deck, where, in the Rain, I caught a Cold, which threw me into a worse Condition than before, in which I continued all the Time I was in *China*. The Island of *Guam* appears very green, and is of a moderate Height; the Prospect of Land was very agreeable to us, after having run so great a Length; and we could, with the greatest Pleasure, have stopped to have purchased some Refreshments of Fruits, such as Lemons, *Seville* Oranges, &c. which would have been very good for such of us as had the Scurvy: But tho' we were upon the Point of perishing, we dared not venture in, for fear the Inhabitants should take the Advantage of our Weakness, to make some Attempt upon us. The Night after we had seen the Island of *Guam*, we had our *Main-top-sail* split, which, as it happened, proved no Loss of Way; for, during several Days afterwards, we had such Weather, that we could bear no more than our lower Canvas, which sufficiently tried the Strength of our Ship, which was now very much impaired. I shaped my Course from *Guam* for the Island of *Formosa*, to which we had a very long Voyage, and of course a very melancholy one, since the Sickness increased daily; so that, by *November* 3. when we had Sight of that Island, the Ship and Ship's Company were both in a manner worn out. The next Day, we doubled the South Cape of that Island, and passed within a League of the Rocks of *Vele Rete*, and by them were sensible of a very strong Current. The Inhabitants of the Island of *Formosa*, from the Time they had Sight of our Vessel, made Fires continually along the Coast; but we were so weak, that we did not think it prudent to put into any of their Harbours. We directed our Course from thence for the neighbouring Coast of *China*; and, on the 6th, found ourselves at the Mouth of the River *Loma*, where we had twelve Fathom Water. Here we saw abundance of Fishing-boats, but, the Weather proving hazy, we could not plainly discover whereabouts we were; and therefore used all the Methods we could devise, to get some of the Fishermen on board, who might pilot us to *Macao*; but, as we neither understood them, nor they us, we soon found that was impracticable; and therefore were forced to keep the Land close aboard all Day, and come to an Anchor every Evening; which was a mighty Fatigue to our Ship's Company, who were so universally down with the Disorder reigning amongst us, that it was as much as we could do to find any body to steer the Ship: Thus we were four Days lost in the Mist, and surpris'd at the Sight of a great many Islands, which were omitted in our Charts, on some of which we saw large Fortifications: This made us believe, that the Current had carried us to the Southward of our Port, and suggested to us every thing that might cast us down; for, though the Sea was covered with Fishing-barks, we could not find any of them that could set us right, or give us any Directions we could understand. On the 10th, towards the Evening, as we were passing thro' a very narrow Chanel, between a Couple of Islands, a Fisherman that was near us, observing, by our manner of working, that we were afraid to venture thro', made Signs to us with his Cap to bring to, till he came up with us: When he came, he seemed to understand, in general, that we inquired of him about the Situation of *Macao*; and therefore made Signs to us, that he would conduct us thither, if we would give him as many Pieces of Silver, as he counted little Fish out of his Basket, which amounted to forty: We accordingly counted out forty

Dollars in an Hat, and gave them to him; upon which he came into the Ship, and took us in Charge, and carried us through the narrow Chanel, and, at Sun-set, brought us to an Anchor: The next Morning we weighed again, and kept the Main-land of *China* close aboard; and, at Noon, he brought us abreast of *Pulo Lantoon*, from whence we could see two *English* Ships under Sail, who were passing by the Island of *Macao*, in their Way from the River of *Canton*. They took no Notice of us, and kept on their Way: This made us very uneasy, fearing that we should miss of a Passage to *England* this Season. The next Day, in the Afternoon, we anchored in the Road of *Macao*, near the Entrance of the River of *Canton*, which we never should have found out by any of our Charts. I much admire at the Incorrectness with which these Coasts are laid down to the Eastward of *Pulo Lantoon*; for there runs a Cluster of Islands, extending upwards of twenty Leagues, which are not in the least taken notice of by our Hydrographers; nor did I ever meet with any Navigator that knew any thing of them. The Coast of *China*, near them, is rocky, mountainous, and barren; but, as to the particular Situation of these Isles, my Sickness hindered all the Observation I should have made of them. *Macao* being a Place where Ships always stop for a Pilot to carry them up the River of *Canton*, I sent an Officer with a Compliment to the Governor, and with Orders to bring off a Pilot with him; but I heard nothing of him till the next Morning, which gave me many disquiet Apprehensions.

Early the next Morning, there came off a great many of the *Success's* People; I was amazed at the Sight of them, and was at first very glad to see them; but my Mind changed a little when I heard their Story; wherein they acquainted me, that their Commander *Clipperton* had let me designedly; that they went directly to *Guam*, one of the *Ladrones* Islands, where they were very well refreshed and supplied with Provisions; that their Captain there sold the Governor a great Quantity of Powder and Shot, and several other valuable Things; and permitted the Marquis of *Villa Roeba* to go ashore, with Mr. *Godfrey* the Agent, and a marine Officer, who went to settle the Accounts. As soon as they were landed, and the Boat came off again, Captain *Clipperton* weighed with his Ship, in order to attack a Ship of twenty Guns from *Manilla*, which had lain quietly in the Road with them all the time till now: In approaching her, he ran his Ship upon the Rocks, and soon found the Enemy was prepared; for they had raised two Batteries, of half the Ship's Guns, to receive him. I am almost ashamed to relate this Man's Behaviour in this Skirmish; for *Clipperton*, perceiving his Case desperate, and the Loss of his Ship past Redemption, had recourse to his Case of Brandy for a Supply of Spirits, to animate him in making a vigorous Defence; but he took so abundantly of that intoxicating Cordial, that he, in an instant, became dead-drunk, tumbled down on the Deck, and snored out his Time in a beastly Manner, whilst his first Lieutenant, *Davison*, undertook the Command of the Ship, which he bravely executed till he was killed. He was succeeded by Captain *Cooke*, their second Lieutenant, who made a gallant Resistance, and got the Ship afloat again, after she had lain on the Rock forty-eight Hours, all which Time *Clipperton* had been lost between sleeping, and drinking as fast as he waked; so that he did not recover himself, till they were out at Sea. Thus they lost their Prisoner the Marquis de *Villa Roeba*, and also Mr. *Godfrey*, the Agent-general, and one of their Marine Officers; which gave the Ship's Company such a Dislike of *Clipperton*, that they would not suffer him to have the Command of them, but locked him up in his Cabin, and intreated Captain *Cooke* to take the Command of the Ship. They endured bad Weather between *Guam* and *Amoy*, in *China*, whither they got with much Difficulty: There they made a Dividend of all they had taken, half to the Owners, and half to the Ship's Company. From thence Captain *Clipperton* designed for the Straights of *Malacca*; but his People, fearing he had no good Intention in his Head, would go no farther than *Macao*, that being a Christian Port. They told me, the Gentlemen Adventurers in *England* were much obliged to the Governor of this Place; who, being informed that *Clipperton* could not be prevailed on to remit their Effects

Home in the *English* Ships lying at *Canton*, obliged him to send what belonged to them in one of their own Ships, which was ready to depart for *Lisbon*: There he sold his Ship the *Success* for about 1000 *l.* Sterling. I must observe on this Passage, that whatever these Officers told him, in Excuse of themselves, the Facts were quite otherwise, as appears in the foregoing Section; where it is fully shewn, that Captain *Clipperton* sent the Money to the Owners of his own Motive, and would have brought the Ship Home, if he had not been hindered. But to return to the Captain's Relation. On the 12th, about Noon, a Pilot came off to us, and we immediately weighed, and entered the River of *Canton*, being assured, that there still remained some *European* Ships at *Wampo*, where they lie in this River, about ten Miles short of the City of *Canton*. We were four Days plying up to the Road, between the lower Bars; where, finding the *Bonetta* and *Hastings*, two *English* Indian Traders, I anchored, and sent an Officer, to desire them to instruct us how to behave ourselves in this Port, and to acquaint me with the Customs of it: To which they answered, that since the *Calogon* and *Francis*, two *European* *English* Ships, were lying at *Wampo*, they would advise me to send up to their Factories at *Canton*, to acquaint them of our Arrival, and the Reasons which obliged me to come thither: Which I accordingly did the next Day, and borrowed one of their Flags the next Day, to hoist in our Boat, without which we should have met with great Trouble from the *Hoppomen*, or Custom-house Officers. I sent, by my Officer, Letters to the Captains of the *English* Ships, signifying the Necessity which forced me into these Parts; and desired they would, as far as in them lay, succour and protect us, assuring them, that I acted by virtue of his Majesty's Commission, which I also sent to them, that they might peruse it. I weighed the next Morning, and worked up to *Wampo*, where I found, besides two *English* Ships, three *French* ones, viz. the *Galatea*, the *Prince of Conti*, and the *Maur*; and also one *Offender*, and a small Ship from *Manilla*. Here I was in Hopes that all my Troubles would have ended, and that I should have had full Leisure to refresh myself after so many and great Fatigues: But I soon found, that these Expectations were very ill-grounded; and that, after all the Perils from which I had escaped, I was to fall into that which is least to be endured, I mean Perils amongst false Brethren.

30. A most unlucky Accident, which happened the very same Evening that we anchored at *Wampo*, gave Birth to my Troubles in *India*, though, with respect to me, it was not only unforeseen, but absolutely unavoidable, and the pure Effects of that Engraving, which possessed all the Ship's Company, to get out of this Part of the World at any rate. If there had been any Government among the *English* settled here, so as that my Authority might have been supported, undoubtedly this unlucky Business never would have fallen out; but, as it was, it could be imputed to nothing, but the Want of such an Establishment. The Thing, in few Words, fell out thus: One of my Men, whose Name was *David Griffith*, being in a Hurry to remove his Effects on board the *Bonetta's* Boat, in which he was, happened to be chased by an *Hoppo* or Custom-house Boat. The Fellow, being a little in Liquor, and fearing they would take what Silver he had from him, fired a Musquet at them, and killed an *Hoppoman* or Custom-house Officer. Early the next Morning, the Corps was laid at the Door of the *English* Factories; and there were *Chinese* Officers lying in Watch for the first *Englishman* that came out. It happened, that a Supercargo belonging to the *Bonetta* was one of the first; and they immediately seized on him, carried him away, and afterwards led him about the Suburbs of *Canton* in Chains. All that could be said or done by the most considerable of the *Chinese* Merchants, who were Correspondents with the *English*, availed nothing. In the mean time, my Man, who had committed the Fact, and another, were put in Irons on board the *Francis*, which was *chopped*, that is, seized, till the Man guilty of the Crime was delivered to them; and, when he was put into their Hands, and carried to *Canton* in Chains, the Supercargo was released. I had not been here many Days, before I was deserted by all my Officers and Ship's Company, who were continually employed in removing their Effects from on board my Ship, to some of the

European, contrary to my Knowledge, then confined to my Bed. My Officers were engaging the Indian Gentlemen in their Interest, and had left my Son, with a few Negroes, to look after my Ship, and defend my Effects, which I thought on the Brink of falling into the bottomless Pit of Chinese Avarice. In short, the Ship's Company had so many Ways of disposing of their Effects, that it was impossible to oblige them to do what I should have thought Justice to the Gentlemen in England. In few Words, they were all soon recovered of their Illness, by the Assistance they met with, and were become their own Masters. There were no Magistrates to appeal to onshore, that would have done me so much Service, as to have obliged them to keep to their own Ship; and my Brother Officers, commanding the English Ships, could not, through Fear of a Misrepresentation of their Actions to the India Company by their Supercargoes, afford me such an Help, as, perhaps, they would have been inclined to, through a Sense of their Duty. But the Gentlemen, who presided over the Trade, so little regarded it, that they had a mind to refuse me a Passage in one of their Ships; and, in Effect, I was treated by them, as one Enemy would treat another in a neutral Port; for as such they looked upon me, for offering to come within the East India Company's Limits, without considering the Necessities that forced me to commit that Trespass.

The Captains Hill and Newsham, when they came to see me, were astonished at the ruinous Appearance of my Ship, and could scarce think it was possible he should have undertaken so long a Stretch. The Rottenness of our Corlidge, and the Raggedness of our Sails, filled them with Admiration and Pity of my Condition; in short, that, at their first Visit, when I had given them a short History of my Voyage, and desired they would receive my Officers and Ship's Company, with their Effects, they answered, That, since they plainly saw my Ship was in no Condition to stir any farther, upon Payment of our Passages, they would entertain us, as soon as we pleased. This I depended upon, and expected no further Trouble, than to remove ourselves at any time; but I found that I had, through Ignorance, applied to the wrong Persons; for the Supercargoes were angry, that I had not sent to them, who, when absent, are the chief Men, tho' they are only Passengers when aboard; so that I was quite neglected, and the English Captains ordered to fall down with their Ships five or six Miles below us. Thus I left destitute, in the Company of five foreign Ships, who, seeing that my own Countrymen were so careless of me, were so kind as to offer me their Service, and assisted me with what they could: And, had it not been for them, I do not know but that I might have suffered to the last degree; for I was under perpetual Apprehensions, that the Chinese had a Design to seize my Ship. When the Murder of the Custom-house Officer was, in a manner, forgot, there was an outrageous Action committed by what they call a Little Mandarin, who, at the Beginning of these Troubles, had Warrants given him to take all the English he should meet; which he neglected, till all was over: But, passing by the European Factories, he ordered his Attendants to seize on all the English they saw in the Shops thereabouts; and accordingly they took nine or ten, as well French as English, and carried them away, with Halters about their Necks, to the Chantock's or Victory's Palace in the City. Upon this, there was Application made to the Hopps; who represented Matters to the Chantock in favour of the injured Europeans: Upon which, the Mandarin, who was guilty of this Violence, was sent for; and he, being unable to vindicate himself, was degraded from his Post, bamboo'd, which is a severe Punishment used in most of the Eastern Governments, and rendered incapable of acting again; and the Europeans directly discharged. However, in the mean time, the English seem to me to be tyrannized over by the Chinese, and exposed to the Caprices of every Magistrate; which made me the more urgent to be on board one of the European Ships: And, as I had now discovered my Mistake in addressing the Captains, which had disgusted the Supercargoes, I sent a Letter to them, not to desire, but to demand, a Passage for me, my Officers, and Ship's Company; which, I was sensible, they could not refuse: And indeed they did not; but their Condescension was accompanied with a Charge to the India Captains, not

to receive any thing belonging to us, except it was assigned to the East India Company in England. I was now informed of the Hopps's Demand for Anchorage in the River. I had been long in Suspense upon that Head, and all along apprehended, that I should have some extravagant Exaction imposed upon me: And indeed so it happened; for they demanded 6000 *Tabel*; and, to quicken me in the Payment of it, and to shew me they were in Earnest, there was a Penalty annexed to this Extortion, of 500 additional *Tabel*, for every Day we failed in the Payment. In short, there was no means by which I could evade this unconscionable Imposition. In vain I shewed the Hopps my Commission, which was also read in the Chinese Tongue to him; and to as little Purpose did I also remonstrate, that I came with no other Design, than to obtain a Passage home in one of our Country Ships, my own being incapable of going farther. It was insisted upon, though it was but a Day before I could possibly send that Sum up, I should add 500 *Tabel* for Neglect of Payment; so that they received from me 6500 *Tabel*, 2166 *l.* 13 *s.* 4 *d.* Sterling; which was about six times as much as the *Cadogan* paid, which was the largest English Ship there, and measured a third more than mine. I soon after sold her for 2000 *Tabel*; which Money, and the rest of my Effects, were assigned to the India Company: And I prevailed with most of my Officers and Ship's Company to take their Passages in the English home-ward-bound Ships.

It cannot be expected, considering the short Stay I made here, the bad State of Health I was in, and the Troubles I met with during that Space, I say, these Circumstances being considered, it cannot be expected, that I should be able to give any tolerable Account of this Place, from my own Observation; and, to copy others, would be inconsistent with the Design of this Work. I shall content myself therefore with observing, that, at the time I was there, the English had no settled Factory at Canton, but were only permitted to hire large Houses, or, as they are called in the Language of the Country, *Hongs*, with convenient Warehouses adjoining, to receive their Goods before they are shipped off; and, when this is done, they pay the Proprietors their Rent, and take other Warehouses, if they think proper, the next time they have Occasion for them. The Business I had to transact kept me, notwithstanding the utmost Diligence I could use, in a constant Hurry, till the Ships were ready to depart, which was in December 1721; at which time, heartily tired of the Country, and the Usage I had met with, I sailed in the *Cadogan*, Captain John Hill, in Company with the *Francis*, Captain Newsham, who, sailing better than we did, left us as soon as we got out to Sea. Captain Hill, finding his Ship very tender, put into *Batavia*, to bring her into a better Trim. At *Batavia* we continued about ten Days; but I can give no particular Description of this Place, being, at that time, not able to stand on my Legs, and was abroad but twice in a Coach to take the Air two or three Miles out of the City; in which little Tour we had a great Variety of very beautiful Prospects of fine Country-seats and Gardens: And indeed every thing round us carried a Shew of the greatest Industry. As to the City itself, the Buildings are, in general, very handsome, which form very regular Streets, having Canals running through most of them, with Trees planted on each Side of them; so that this City may be justly called a fine Place. But, I confess, the Sight is the only Sense that is gratified here; for, when the Tide is low in the Canals, they smell very offensively, and breed great Numbers of Muskitoes; which are more troublesome here, than ever I felt them in any other Part of the World. A great Part of the Inhabitants of *Batavia* are Chinese, who are remarkable there for wearing their ancient Chinese Dress, with their Hair rolled up in such a manner, that there is no great Difference between the Mens Appearance and the Womens: Ever since the Revolution in China, the Tartarian Dress has been imposed upon the whole Kingdom, which was not effected without great Bloodshed; for many of the Chinese were so superstitiously fond of their old Modes, that they unaccountably chose the Loss of Life, rather than the Loss of their Hair, it being the Tartarian Custom to shave their Heads all over, except the Crown, from whence hangs a long Lock, which they plat in much such a manner as we

do a Thong. The *Dutch* have laid hold of this superstitious Folly of those *Chinese*, who live under their Protection, and exact from all the Men a Poll-tax, of a Dollar a Month, for the Liberty of wearing their Hair, which, if they contented themselves with a Dollar a Year, would amount to a considerable Revenue.

While we were at *Batavia*, Captain *Hill* was informed, that there were several Pirates in these Seas: He therefore joined the *Dutch* homeward-bound Fleet in *Bantam* Bay. The *Dutch* Commodore promised to assist Captain *Hill* in Wooding and Watering at *Mew* Island, the Water at *Batavia* being very bad. We met the *Francis* in the Straights of *Sunda*, who, we imagined, had been a great Way a-head of us. Upon our joining Captain *Newsham*, the *Dutch* made it a Pretence to leave us before we had got the Length of *Mew* Island; and Captain *Newsham* also deserted us the same Evening; so that we were left by ourselves. We continued at *Mew* Island six or seven Days, during which time several Boats came from *Prince's* Island, and brought us Turtle, Cocoa-nut, Pine-apples, and other Fruits: Some of these informed us, that there had been two or three Ships at this Island a few Days before us, which gave us some Uneasiness, not knowing what they could be: Some of the People, having seen some wild Cattle grazing near the Island, went on shore to kill them; but, before they had advanced near enough, they discovered a small Tyger, and a Tract of an old one, upon which they retired to the Boat. From *Mew* Island we had a very pleasant Passage to and about the Cape of *Good Hope*, which, in my Opinion, was greatly owing to Captain *Hill's* good Conduct, in coming in with the Land becalms; I mean, upon the Eastermost Part of the Bank, and keeping a moderate Distance from the Land; I cannot be positive, but I think we never exceeded a Degree, generally less, and sometimes even made the Land. The three Voyages I have been this Way, I had the good Fortune of being with Gentlemen who proceeded in the same manner as Captain *Hill* did, and with the like Success. The small Experience of my own before, and an Instance or two in this last Passage, makes me of Opinion, that there is too much Caution used in coming in with the Land in Soundings; for it is known, that the severest Gales in this Part reign from the North-west to the South-west; the first Quarter blows off from the Land, and the other is a bold Wind on the Coast; and it is certain, that the Wind out of the Sea has scarce ever been observed to blow strong for any time, and never home to the Shore. This I have been informed of, both by *English* and *Dutchmen*, of greater Experience than myself in those Parts of the World. I don't remember, that, in all the time we were approaching the Cape of *Good Hope*, we took in our Top-sails above once for a Squall, which was over in an Hour's time; and another time, being threatened by the Appearance of bad Weather, Captain *Hill* made all the requisite Preparations to receive it; which done, he stood in for the Land, under Hopes of avoiding the seemingly approaching Storm; and he was undoubtedly right in his Judgment; for, in a few Hours, we had fair Weather, a favourable Gale, and all our small Sails set; and, at the same time, there remained a great Appearance of foul Weather to the Southward, and so continued to do for several Days afterwards. This I should not have observed, did not what I am going to relate evidently demonstrate, that it blows hard Westerly some Distance from the Land, when you have fair Weather nearer the Shore. I have observed before, that the *Francis*, and *Dutch* Ships, had seven Days Advantage of us, by leaving us in the Straights of *Sunda*; notwithstanding which, we gained the Cape as many Days before the *Francis* did, altho', at the same time, she sailed very considerably better than we; and, as to the *Dutch* Ships, there was no Shew of their Arrival when we left the Cape. The Officers of our Ship, by comparing their Accounts with some of the Gentlemen belonging to the *Francis*, found that she had suffered a great deal of bad Weather; whilst we, who were within ten Leagues, or thereabouts, to the Northward of them, or nearer Shore, enjoyed fine pleasant Weather, and fair Wind, continually, till we arrived in *Table Bay*, which we did the latter End of *March* 1722. This I should think of sufficient Weight to induce others to pursue

the same Tract. We found here Governor *Roos*, in the *London East Indiaman*, and others, bound for *England*. From the Cape of *Good Hope* we had an agreeable Passage to *St. Helena*, and from thence to *England*. We made the Land's End the latter End of *July*; and, being come into the *British* Chanel, met with brisk Gales from the Western Quarters, with thick foggy Weather. The 30th, in the Evening, we anchored under *Dungeness*; and, the same Night, some of the Supercaergoes and Passengers, and myself, hired a small Vessel to carry us to *Dover*, where we arrived early the next Morning, and, the same Day, proceeded towards *London*, where we arrived the 11th of *August* following. This ended a long fatiguing Voyage, of three Years, seven Months, and eleven Days, after having sailed considerably more than round the Circumference of the Globe; and having undergone a great Variety of Troubles and Hardships, both by Sea and Land, and made some Discoveries, which, it is hoped, are worthy the Notice of the Curious.

31. As we have been obliged to take up a great deal of Room in giving the Reader the History of this Voyage, we shall be as succinct as possible in our Remarks upon it, though there are many Things which might justly a fuller and more copious Criticism on the Captain's Conduct. It is very clear, from the Whole of this Relation, that the Captain's Work was intended to be what we have represented it, viz. An Apology for his own Behaviour; which was occasioned by a Law-suit commenced by the Proprietors against him upon his Return home. This created a great Noise in the World, and People gave their Opinions very freely, without, perhaps, entering into the Merits of the Cause. Captain *Sbelvecke*, therefore, wrote this Book to bring the Affair before the Public, and to leave, for the Judgment of Posterity, his State of his own Case. It must be confessed, that he has put it into a very fair Light, and shewn a great deal of Skill and Address in finishing, to the very utmost, such Parts of the Pétition as are likely to strike the Reader most, and to give him strong Impressions in the Captain's Favour. Such are the Mutinies that fell out in the Beginning of the Voyage; the tedious, troublesome, and melancholy Sojournment in the Island of *Juan Fernandez*; the Diligence, Skill, and Care, he shewed in getting a Bark framed out of the Wreck, and carrying off in it such a Body of People, altho' against their Consent, at least without their Assistance, and many more, which the Reader will easily discern, wit out our pointing them out. But Captain *Bettagh*, being returned from the *Spanish West Indies*, thought it requisite, for his own Justification, to attack Captain *Sbelvecke's* Account almost in every Part of it, as we have already shewn; all which Remarks tend to support a Charge which falls naturally under the three following Heads:

The first is, that the Disputes which happened amongst the Crew were of his own contriving and fomenting; in Proof of which, he alleges, that *Matthew Stewart*, who was at the Head of all these Mutinies, was absolutely *Sbelvecke's* Creature. He takes notice likewise, that this seditious Temper of his Crew serves for a general Excuse for every wrong Step taken through the Voyage. It was an Attempt of his Men to return to *England*, that made him do many strange Things at first setting out. At *St. Catharine's*, he says, that they forced him to sign the new Articles, or else they would have run away with the ship. Going into *Clovel*, he says, was the Men's Fault, where they narrowly escaped a Shipwreck. At going into *Conception*, a little to Leeward, he says the same. At *Fernandez*, he says, they forced him to divide the Owners Money, and enter upon the new *Jamaica* Discipline. Upon meeting *Clipperton*, he says, it was his Men who demanded a Confirmation of the first Articles with the Owners, after they had twice made new ones for themselves. When he left the four Men aboard the Bark, where they were murdered, he says, his People would not let him bring-to till she came up; yet it was these very Men, that professed themselves willing to obey him in every thing, when he put Captain *Hayley* on board the *Morary*, and treated with Scorn the Objections made to his Conduct, though founded in a Desire of preserving them from the bad Effects of it: It was these Men, also, who thanked

him for their Preservation at *Juan Fernandez*; though, if some of them may be believed upon their Oaths, they might, with full as much Reason, have thanked him for their Shipwreck; and, after all, it was these very People that made him a Present of an Island in his Passage home, and obstinately persisted in calling it by the Name of a Captain they neither loved nor feared. Is not this very strange, and does it not prove, that these Accounts are very inconsistent, and, consequently, deserve no great Credit? This, I say, is Captain *Betagh's* way of Reasoning; of the Justice of which, the Reader will decide as he sees Cause.

The second Head of the Accusation is, as to the Money taken in the *Conception*, and sunk in the unaccountable Article of an *Ecceitra*. This was not only a Fraud upon the Owners, but a Fraud, that, after all his Quarrels with them, he durst trust to his whole Ship's Company, which seems to speak a greater Confidence in them, than might be expected from the Character given them in the Captain's Book. If he really thought the Loss of his Ship put an End to the Claim of his Proprietors, why did he conceal the taking of this large Sum of Money, since, if he believed his own Notion rightly founded, the owning it could do him no hurt? On the other hand, when he had concealed it, what Hopes could he have of its remaining a Secret, unless, notwithstanding all he has said of his Crew, he was satisfied they would not make any Discovery of this important Point? The passing over of which gives a great Jealousy, that other Matters are not very fairly stated. To which may be added, the palpable Misrepresentations of the unfortunate Captain *Clipperton*, and the suppressing the true Cause of his leaving them; viz. because Captain *Shelvocke*, and his Company, would not comply with their original Articles, and, consequently, were no longer to be considered as Men acting on the same Bottom with those in the *Success*, who had made these Articles the constant Rule of their Conduct.

The last, and by much the worst, Head of this Accusation is, that of sacrificing his People, that he might manage his own Designs more easily, gain greater Sums on the sharing of Prizes, and keep the Secrets of his Administration in fewer Hands. There is something so barbarous in this Supposition, that one would be tempted to think it incredible, if one had not Captain *Shelvocke's* Authority to the contrary, who, by blaming Captain *Clipperton* for this very Behaviour, admits, that there are many English Captains capable of such things. A Circumstance shocking to every honest Mind. Captain *Betagh*, in order to support this heavy Charge, produces the following Account of what became of the People who were originally put on board the *Speedwell*, under the Command of Captain *Shelvocke*, being in all 106 Men. Out of these, says Mr. *Betagh*, there were turned ashore, at *St. Iago* and *St. Catherine's*, before we got into the South Seas, eight, *Andrew Pedder*, chief Mate; *Henry Chapman*, third Mate; *Charles Turner*, Gunner; *Henry Hudson*, Boatwain; *William Parsons*, and *William Coen*, Boatwain's Mates; *George Lints*, and *Charles Perry*, Seamen. Commanded ashore near *Conception*, in *Chili*, where they were murdered, three, *John Eady*, Midshipman; *John Daley*, and *George Alogue*, Marines. Sent a cruising, to be taken Prisoners, fifteen, *Simon Hatley*, second Captain of the *Speedwell*; *William Betagh*, Captain of Marines; *Gilbert Hamilton*, Ensign; *John Sprake*, second Mate; *Nicolas Lanning*, Boatwain; *Christophers Pressick*, Surgeon's first Mate; *Robert Cobbs*, Sergeant of Marines; *Matthew Appleton*, *Marion Hayden*, *Richard Bond*, *Richard Glays*, *John Painter*, Seamen; *John Wilson*, *John Nicholson*, and *Thomas Barret*, Marines. Ordered on a Cruise, in a Bark, with one Week's Provision, and obliged then to surrender on the Coast, eleven, *James Hopkins*, third Mate; *Robert Rawlins*, Midshipman; *William Dolson*, *Thomas Wilkinson*, *Edward Oving*, *John Bone*, *Charles Weatherly*, *William Kitching*, *Richard Croft*, *John Guaiter*, and *John Gandy*, Seamen. Left on *Fernandez*, eleven, besides thirteen Indians, *John Wisdom*, *Joseph Monro*, *William Blew*, *John Kiddleclay*, *Edmond Hayes*, *Daniel Harvey*, *William Giddy*, *John Robinson*, *Thomas Hawkes*, *James Row*, and *Jacob Bowden*, Seamen. Left in a Prize, and murdered,

four, *John Giles*, Serjeant of Marines; *John Einlin*, Seaman; *John Williams*, Marine; *George Chapple*, a Lad. Sent ashore, into the Hands of the Enemy, without a Hostage, and never since heard of, six, *Edward Brook*, first Lieutenant; *William Tandy*, Midshipman; *Frederic Mackenzie*, *Robert Bowman*, *Richard Phillips*, and *John Poulton*, Seamen. Begged their Passage with *Clipperton*, to be freed from *Shelvocke's* Tyranny, three, *James Hendrie*, Agent for the Owners; *Thomas Dodd*, Lieutenant of Marines; and *William Morpew*, Midshipman. Died four, *Richard Arcott*, in the *Speedwell*; and *Edmund Phillips*, in *Shelvocke's* Bark; *William Cambell*, drowned, going round *Cape Horn*; and *Richard Hannab*, drowned, going to the Wreck from *Fernandez* Island. Defeated at *St. Catherine's*, three, *Abraham Dutour*, *Antony Wood*, and *William Leveret*. Staid on board the *Ruby*, at *St. Catherine's*, two, *William Mariner*, Sailmaker; and *Lawrence Lancette*, of the Carpenter's Crew. Lost ashore at *Paya*, *Richard Bazin*. Defeated at *Chiloé*, *Robert Morris*. In all seventy-three. Staid with *Shelvocke*, and divided all, thirty three; which, taken together, makes the Total of the Ship's Company one hundred and six.

It is certain, that all these Instances are far enough from being positive Evidences of the Charge before-mentioned; but it must be at the same time allowed, that they are abundant Instances of Carelessness and Indiscretion: For, after an Officer had once met with such a Misfortune as losing a Part of his Crew, either by sending them on shore, or exposing them in Prizes, it ought to have rendered him excessively cautious for the future; more especially when Captain *Betagh* had told him, in the Face of his Men, that the true Design of putting him on board the *Mercury* was to get rid of him. Upon the Whole, the Affair had to indifferent an Aspect, and the Proprietors thought themselves so much injured by the Loss of all the Expences they had been at in fitting out these Ships, that they took every Method possible to embarrass and distress Captain *Shelvocke* on his Return. He was, at the same time, attacked by the Spanish Minister, who presented to the late King *George I.* at *Hanover*, a Memorial, complaining of his attacking and taking a Spanish Ship worth 100,000 Pieces of Eight, in Breach of the Treaties between the two Crowns. But, after all, there does not seem to have been any just Foundation for this Complaint, the Spaniards themselves having been the Aggressors; and there is no Law so cruel as to oblige a Man to suffer his Crew to be killed, and his Ship beaten to Pieces, rather than dispute the Power of those, who are inclined to so barbarous an Action. The then Administration seem to have been sensible of this; for we do not find, that they directed any Prosecution against the Captain for this Conduct, as at that time they certainly would have done, if they had conceived him punishable by Law. As to the Disputes between him and his Owners, I know not how they ended; but, very probably, in a Way little satisfactory to either, since such Prosecutions as they carried on must have given Mr. *Shelvocke* a great deal of Trouble, at the same time that they could not in the least contribute to the repairing of their Loss. The worst of it was, that the Issue of this Voyage gave the Public a bad Idea of all Expeditions to the South Sea, and induced many to suppose, that whatever Offers were made of that kind on the Disputes that happened afterwards between us and Spain, were calculated purely for the private Advantage of the Persons by whom they were propounded: And I doubt, that somewhat of this sort still prevails; for otherwise, surely something had been undertaken before this time by Privateers in the South Seas.

It cannot be denied, that this was, almost in every respect, an ill-conducted, as well as an unsuccessful Expedition; and yet, if we examine Things closely, we shall see, that there is no Reason to be discouraged by the Unluckiness of this Attempt. There is a Light, in which this Voyage may be viewed, that will afford quite another kind of Prospect. It is a Fact not to be controverted, that the *Speedwell* made her Voyage round *Cape Horn* into the South Seas, and took afterwards abundance of Prizes on the Coasts of *Chili*, *Peru*, and *Mexico*, without the least Assistance from her Comfort. This then furnishes us with the following Observations, that it is possible for a Ship of 200 Tons, with 100 stout Men

on board, under proper Officers, to make such an Expedition into their Seas, as may prove very advantageous to them, and to their Owners; for, according both to Captain *Shelvocke* and Captain *Betagh's* Account, the Expence of this Ship did not much exceed 6000 *l.* and the Profits of their Voyage, if prudently and honestly managed, could not have amounted to less than 50,000 *l.* If therefore we consider this Case as it is now stated, instead of frightening, it ought to encourage us to Undertakings of a like kind; for, if such a Ship, so indifferently manned, subject to perpetual Mutinies, and without any just Regard to the true Interests of the Voyage, could perform so much, and the principal Officers on board her come off so well, it is a natural Conclusion, that a Ship of the same Force, well manned, and properly commanded, might do much more, and return safe. If we suffer our Opinions to be governed purely by Events, we may come to fancy, that the greatest Naval

Power in the World can perform little by Sea, because, perhaps, some Instances may be given in some certain Period of Time, wherein something like this may have happened; but, alas! this is a very wild Way of Reasoning, and we may, with the same Justice, imagine, that, because a stout Man does not resent a Scratch on the Forehead in his Sleep, he could not avenge himself, if awake, upon the feeblest of his Enemies. To say the Truth, it is such Notions as these that keep us asleep. One such Expedition, as that of Captain *Rogers*, proves more in favour of our sending Ships to the South Seas, than ten such unlucky Adventures as this can prove against it; for these only shew, that, when Commanders disagree, and their Men become mutinous, Mistake follows upon Mistake, till all falls to Ruin. Which is a Lesson that may be learnt, without going to the South Seas; and therefore concludes nothing as to the Point in question.

SECTION XIX.

Captain BETAGH's Observations on the Country of Peru, and its Inhabitants, during his Captivity.

[By Way of APPENDIX to the former Section.]

1. *The Reason of adding this Relation to the foregoing Voyage.* 2. *The Manner of the Captains Hatley and Betagh's being taken by the Spaniards.* 3. *Are sent to Lima.* 4. *Observations on the Pedlars, or Travelling Merchants, on that Road.* 5. *Arrival at Lima; and Captain Hatley's Misfortune there.* 6. *Condition of the English Prisoners in those Parts.* 7. *Description of the City of Lima.* 8. *Account of the Government of that City.* 9. *The excessive Gallantry of its Inhabitants.* 10. *Their public Dissension.* 11. *The Backwardness of the Spaniards in making Discoveries in America.* 12. *The principal Mines in Chili and Peru.* 13. *The Manner of Working these Mines.* 14. *Some Remarks on their Produce, and of its different Value at different Times.* 15. *Observations on the Trade of Chili.* 16. *A short History of the French Interlopers.* 17. *The Author's Return to England.*

1. **A**FTER having given the Readers so much dry and unpleasant Matter from Captain *Betagh's* Book, I think it but Justice to him, and to myself, to extract, from the same Performance, what may serve to justify the Character I have already given this Work, and which, I really think, it deserves. The Time he lived among the *Spaniards*, and the Manner in which he was treated by them, gave him such an Opportunity of not only acquainting himself with their Manners and Customs, but with their Genius, and Maxims of Government, as no *Englishman*, of late Years, can pretend to; and the lively Manner, in which he tells his Story, gives it so much Beauty and Spirit, that, I think, I cannot do better, than to keep as near his own Words as possible. And, as to its finding a Place here, the principal Motive that determined me was, its coming in more naturally as a Supplement to Captain *Shelvocke's* Voyage, to which there are frequent References, than it would have done any-where else.

2. It was, says he, in the Beginning of the ever-memorable Year 1720, and about the Middle of *March*, when Captain *Shelvocke* sent *Hatley*, and the rest of us, to seek our Fortunes in the Lighter called the *Mercury*. Himself, in the *Speckuel*, went to plunder the Village of *Poyta*, where we might easily have joined him, had he imparted his Design to us. However, we had not cruised long in Sight of *Cape Blanco*, before we took a small Bark, with a good Parcel of Chocolate and Flour. There was an elderly Lady aboard, and a thin old Frier, whom we kept two or three Days; and, after taking out what we wanted, we discharged the Bark, and them together. Soon after this, we took the *Pink*, which *Shelvocke* calls the rich Prize. She had no Jealousy of our being an Enemy, but kept her Way, till, seeing the *Mercury* standing towards her, she began to suspect us. About Noon, she put the Helm hard-a-weather, and crowded all the Sail she could afore the Wind; and, being in her Ballast, this was the best of her Sailing, which also proved the greatest Advantage they could give us; for, had she held her Wind, we, in our flat Bottom, could never have come up. About ten at Night, with rowing and hard sailing, we got within Shot of the Chace, and brought

her to, being pretty near the Shore. They were about seventy Persons aboard, thirty of whom were Negroes. *Hatley*, upon going aboard, leit myself and *Preffick*, with four more Hands, in the *Mercury*, where we continued two or three Days, till an heavy Shower of Rain spoiled all our Bread, and other dry Provisions. It was then time for us to get aboard the Prize; which we did, sending three Hands to take care of the *Mercury*.

We stood off-and-on the said Cape seven or eight Days, expecting to meet the *Speckuel*; and there we let aboard the *Spanish* Captain, the Padre, and some Gentlemen Passengers: At last we spied a Sail plying to Windward. Not doubting it was the *Speckuel*, or the *Success*, we stood towards her, whilst the edging towards us, about ten in the Morning, we were got near enough to discover she was a Ship of War, as she proved, tho' neither of these we wished for. The Master of our Prize had before informed us, that he met the *Brilliant* cruising for our Privateers, which, till now, we intirely disregarded. Upon this, Captain *Hatley* advising with me what to do, we concluded, that some Advantage might be made of the Information given us by the *Spaniards*; that, as the *Brilliant* had spoken so lately with the *Pink*, probably there would not be many Questions asked now: Upon which, *Hatley* and I dressed ourselves like *Spaniards*, and hoisted *Spanish* Colours; we confined our Prisoners in the great Cabin, suffering none of them but the *Indians* and Negroes to appear upon Deck, that the *Pink* might look as she did before: In which Contrivance we had succeeded, but for the Obstinacy of *Joh Sprake*, whom we could not keep off the Deck. As the Admiral came up, he fired a Gun to Leeward: Hereupon we lowered our Top sail, making easy Sail till we got alongside of him: Their first Question was, If we had heard any thing of the *English* Privateer? We answered, No: The next was, How it happened we were got no farther in our Way to *Lima*? We answered, By reason of the Currents: They asked us two or three more Questions, which we still answered in *Spanish*. They seemed thoroughly satisfied, and were getting their Tacks aboard in order to leave us, when *Sprake*, and two or three more of our Men

appeared on the Main-deck; a *Frenchman* aboard the Admiral, looking out at the Mast-head, cried out, seeing their long Trowsers, *Par Dieu, Monsieur, ils sont Anglois*; they are *Englishmen*: Upon this they immediately fired a Broadside into us, with round and Partridge-shot, by one of which *Hatley* was slightly wounded in the Leg.

3. As soon as we struck our Flag, the Enemy sent for all the *English* on board, and ordered two of their own Officers into the Prize. The *Spanish* Admiral then bore directly down upon the *Mercury*, and fired into her five-and-twenty Guns at least, which bored her Sides through and through; but, such was the Construction of that extraordinary Vessel, that, though full of Water, there was not Weight enough to sink her, and the three Men who were in her escaped unhurt. Don *Pedro Miranda*, the *Spanish* Commander, ordered these three Men into his own Ship, in which he intended to sail to *Paya*: As for me, he gave Directions, that I should be sent forty Miles up the Country, to a Place called *Piura*; and was so kind as to leave Mr. *Preffick*, the Surgeon, and my Serjeant *Cobb*, to keep me Company: As for Captain *Hatley*, and the rest, they were ordered to *Lima* by Land, which was a Journey of four hundred Miles; for that poor Gentleman had the Misfortune to be doubly under their Displeasure; first, for returning into those Seas after having been Prisoner so long, and being so well used amongst them; and next, for the *Capt. Eric* Basinck, I mean the stripping the *Portuguese* Captain, a good Quantity of whose *Moultres* were found about him. The Design of the Admiral, in this, was, to have that Affair teach'd to the Bottom, and the Guilty severely punished, without exposing the Innocent to any Danger. Here, therefore, I shall take my Leave of Captain *Hatley* for the present, and proceed to the Observations I made on the Road, as the Admiral was so good as to send me up into the Country till his Return from his Cruise to *Paya*, when, as I shall inform the Reader in its proper Place, I again rejoined him.

As the Weather in this Part of the World is much too hot to permit People to labour in the midst of the Day, the Custom is to travel from six in the Evening till eight in the Morning. My *Indian* Guide set me on the best Mule he had, which not caring to follow Company, I led my Fellow travellers the Way till ten o'Clock, while Day-light lasted. I observed the Country one open Plain, with *Indian* Plantations, regularly enough laid out on each Side of us. This champagne Country is from thirty to one hundred Miles broad, and extends three hundred Miles along-shore; for I was moving to the Southward, having the *Cordiller* Mountains on the Left Hand, and the great Ocean on the Right. If this Land was well watered, as the Soil is pleasant and fertile, it might be as fine a Country as any in the World; but Travellers are here oblig'd to carry Water for their Mules, as well as themselves. At the Approach of Night we were puzzled in the Way; I often found myself stopped by great Hills of Sand, and my Mule as often endeavour'd to pull the Reins out of my Hand; which proving troublesome, the *Indian* advis'd me to throw the Reins on the Mule's Neck; and, as soon as that was done, the Creature easily hit the Way. These Sands are often shifted from Place to Place, which I take to be occasion'd by the strong Eddies of Wind reverberated from the Mountains. At Night we rested a little at an old empty House in a Coppice, about half Way, which the Guide told us was built by the Inhabitants of *Piura*, for the Accommodation of the Prince *St. Bueno*, Viceroy of *Peru*, when they met him at his Entrance on his Government, and regaled him. At seven in the Morning we arriv'd at *Piura*, being an handsome regular Town, situate on the Banks of the River *Collan*. The *Indian* conducted us to the House of an honest *Spanish* Gentleman, and his Wife, who having received his Charge, the Guide returned to *Paya*. In a Quarter of an Hour's time, the Town's-people flock'd in to see the Rarè-shew; and, instead of being us'd like Prisoners at Discretion, we were entertain'd with Respect and Civility, which we were not sure to meet with. Our Landlord, I should say, Keeper's Name, was *Don Jeronimo Baldivieso*: He had five Daughters; upon the Sight of whom, and their beneficent way of receiving us, we hop'd our Time would slide easily

MEM. XVII.

away, and our Captivity prove no-way disagreeable. I began now to be sensible of the Admiral's Favour, in ordering us to this Place; for he had such Interest in all the Kingdom of *Peru*, that, for his sake, we found very good Treatment. After we had refresh'd ourselves, according to the Custom of the Place, with Chocolate, Biscuit, and Water, we were divert'd with the Sound of a *Wesb* Harp in some inner Apartment: The Artist had good Command of it; for I heard Parts of several famous *Italian* as well as *English* Compositions; and, upon inquiring, found, that all the honest *Spaniard's* Daughters had learn'd Music, and sung or play'd upon some Instrument or other. Though, at first, this seem'd a little unaccountable to us, yet I afterwards found, that Music was common in *Peru*; for the *Italian* Party having a few Years before prevail'd at the Court of *Madrid*, the last Viceroy, Prince *St. Bueno*, who was an *Italian*, had brought a great many Musicians of that Country along with him, which has now spread Music every-where; and it is as good in *Peru*, as in *Old Spain*. I rather take notice of this, because, by our being Lovers of Music, and behaving peaceably and civilly to the Inhabitants, we pass'd our Time very quietly and cheerfully, being expos'd only to one Inconvenience, which last'd so long as we remain'd here: This was, the daily assembling of the People to stare at us, which myself, and my Serjeant *Cobb*, bore pretty well; for, being us'd to exercise in Public, we could turn to the Right and Left without being much incommoded: But our Companion Mr. *Preffick*, being a graver Man, at first hung down his Head, and was very melancholy; but, by degrees, he grew better acquainted with the People, and found Reason to like them so well, that, when we were to remove, we had much to do to make him change his Quarters.

4. Almost all the Commodities of *Europe* are distributed through the *Spanish* *America* by a Sort of Pedlars or Merchants, on Foot, who come from *Panama* to *Paya* by Sea, and, in their Road from the last-mentioned Port, make *Piura* their first Stage to *Lima*, disposing of their Goods, and lessening their Burdens, as they go along. Some take the Road through *Caxamarca*, others through *Truxillo*, along-shore from *Lima*: They take their Passage back to *Panama* by Sea, and perhaps carry a little Cargo of Brandy with them: At *Panama* they again stock themselves with *European* Goods, returning by Sea to *Paya*, where they are put on shore; there they hire Mules, and load them, the *Indians* going with them, in order to bring them back; and to these Traders keep in a continual Round, till they have got enough to live on. Their travelling Expences are next to nothing; for the *Indians* are brought under such Subjection, that they find Lodging for them, and Provender for their Mules: This every white Face may command, being an Homage the poor *Indians* are long accus'd to pay; and some think they have an Honour done into the Bargain, except, out of Generosity, they now-and-then meet with a small Recompence. In the *British* and *French* Nations, a Pedlar is despis'd, and his Employment look'd upon as a mean Shift to get a Living; but it is otherwise here, where the quick Return of Money is a sufficient Excuse for the Manner of getting it; and there are many Gentlemen in *Old Spain*, who, when their Circumstances in Life are declining, send their Sons to the *Indies* to retrieve their Fortune this way: Our Lodging was in an Outhouse purposely for these travelling Merchants. According to the *Spanish* Custom, we had our Dinner sent to the Table under Cover, where *Don Jeronimo* and we eat together, while the good Lady of the House, and her Daughters, sat together in another Room. This is the Practice at all Meals; and, if any strong Liquors are drunk, it is then. In all our Conduct, I think the good *Spaniard* was never disoblig'd, except once, when he saw me drinking a Dram with the Doctor at a little Victualling-house. As nothing is more disagreeable to the *Spaniards* than Drunkenness, I had much ado to make Amends for this Step towards it; though they admit of Gallantry in the utmost Excess; so that it is only changing one Enormity for another. After we had pass'd about six Weeks at *Piura*, our *Indian* Guide came again to conduct us to *Paya*, the Man of War being returned. When we were

upon the point of taking Leave, our Surgeon was missing, which retarded us a Day longer. They had concealed him in the Town, and designed to keep him there, as he was a very useful Man; and if he could have had a small Chest of Medicines, he might soon have made a handsome Fortune. However, the next Day we mounted our Mules, and parted with great Reluctance, especially with our kind Host *Don Jeronimo*, and his Family. We went aboard the *Brilliant* at *Paya*, which, having done nothing at Sea, made a sort of cruising Voyage to *Calao*, the Port of *Lima*. The Civility I received from the Admiral or General of the South Seas, as he is there called, is what I have already mentioned. I shall here only add one Circumstance to the Honour of *Monsieur de Grange*, a Captain under the General. As soon as we were taken by the *Brilliant*, as aforesaid, this Gentleman, seeing the Soldiers had stripped us, being the Conquerors useful Perquisites in all these Cases, he generously gave me an handsome Suit of Cloaths, two Pair of silk Stockings, a Hat, Wig, Shirts, and every thing according; so that instead of suffering, I was, in reality, a Gainer by this Accident.

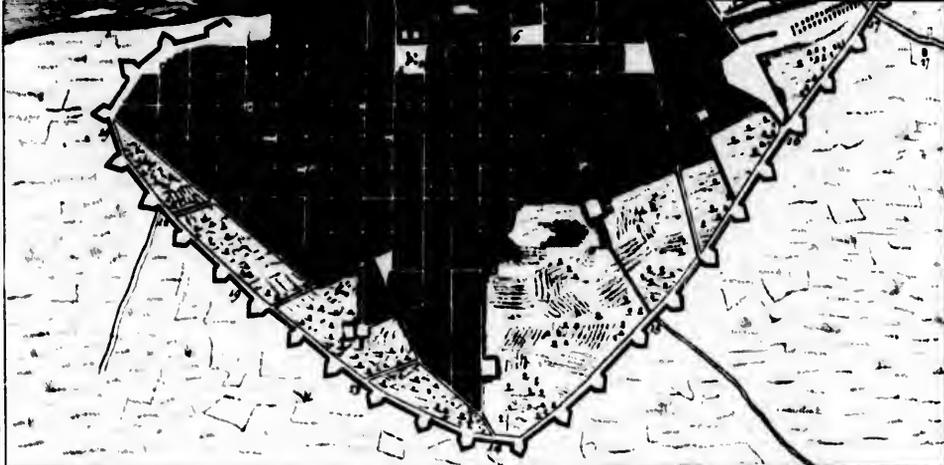

5. Our Voyage to *Lima* took up about five Weeks; and, as soon as we arrived there, we were immediately sent to the same Prison in which the Ship's Company were confined, who were sent hither before us, *Mr. Hatley* only excepted; who, for the Reasons before-mentioned, was confined by himself, and very roughly treated. In a short time after our Arrival, Commissioners were appointed to hear our Cause, and to determine, whether we should be treated as Criminals, or as Prisoners of War: The Reason of this was, the Charge brought against us for Piracy, not for what we had done in the South Seas, or, at least, not for that only, but upon a Supposition, that we plundered the *Spaniards* there, because none but *Spaniards* were to be met with, having used the like Violence, as their Charge set forth, against other Nations, before our Arrival in these Seas: Which would have shewn a piratical Disposition through our whole Conduct. And of this they thought they had probable Proof, since, by the *Moidores* found upon *Hatley*, it appeared they were taken from the Subjects of a Prince in perfect Amity with the Crown of *England*: But, it was happy for us, that the Viceroy, *Don Diego Morfilio*, who was an Archbishop, and in the Decline of Life, was pleased coolly to discriminate the Affair, and, finding really but one of us guilty, would not sign any Order for shedding innocent Blood: As for *Hatley*, some were for sending him to the Mines for Life, others for hanging him; but the several Accounts of Captain *Skelvocke's* vile Proceedings contributed to his Deliverance, the Truth of which here were enough of our People at *Lima* to witness; for, besides Lieutenant *Serjeantson*, and his Men, who were brought hither, came the Men who *Skelvocke* sent with *Hopkins* to shift for themselves in a poor empty Bark, who, for want of Sustainance, was forced to surrender to the *Indians*; so that the Court believing *Skelvocke* more a Principal in that piratical Act than *Hatley*, and supposing we had been plagued enough before we came hither, they thought fit to let us all go by degrees: *Hatley* indeed was kept in Irons about a Twelvemonth, and then was allowed to return to *England*. I was much more happy in this respect, since my Imprisonment lasted but a Fortnight; which was owing to the Interposition of Captain *Fitzgerald*, a Gentleman born in *France*, who had a great Interest with the Viceroy, and who, upon his becoming Security for me, permitted me to have the Liberty of the City, provided I was always forthcoming when I was called for. As I was now pretty much at Ease, I began to look about me, and to inform myself of what was passing in this Part of the World.

6. Among the first of my Inquiries, was that after the Condition of other *English* Prisoners, in the Place; and, upon asking for *Mr. Serjeantson*, and his Men, who were here before us, I understood, that most of them had taken up the Religion of the Country, had been christened, and were dispersed among the Convents in the City. The first that I saw, had got his new Catechism in one Hand, and a Pair of large Beads dangling in the other. I smiled, and ask'd the Fellow, how he liked it. He said, very well; for, having his Religion to chuse, he thought theirs better than none,

since it brought him good Meat and Drink, and a quiet Life. Many of *Skelvocke's* Men followed this Example; and I may venture to say, this was as good a Reason as most of our People could give for their occasional Conformity. It is here reckoned very meritorious to make a Convert, and many Arguments were used for that End; yet was there no Rigour shewn to bring any of us over. Those who thought fit to be baptized, had generally some of the Merchants of *Lima* for their Patrons or Godfathers, who never failed giving their Godchildren a Suit of Cloaths, and some Money, to drink their Healths. About this time, four or five of *Clipperton's* Men, and as many of *Skelvocke's*, got Leave from their Convents to meet together at a Publick-house kept by one *John Bell*, an *Englishman*, who had a Negro Wife, that, for some Services or other, had got her Freedom. The Design of this Meeting, was to confirm their new Baptism with a Bowl of Punch: The Consequence of which was, they all got drunk, and quarrelled; and, forgetting they were true Catholics, mistook an Image of some honest Saint, that stood in a Corner, for one of their own Company, knocked him down, and demolished him. I, missing the Fellows for a few Days, inquired at *John's* House what was become of them: He told me the Story, and said, they were all put in the Inquisition; for, the thing having taken Air, he was obliged to complain of it, or go thither himself; but promised, that, underhand, he would endeavour to get them released; which, I found afterwards, was done in five Days, so that they had time to repent, and be sober. *Bell* said, if the Men had still remained Heretics, this Drunken-bout had not come within the Verge of the Ecclesiastical Power; but, being Novices, and just admitted into the Church, they were the easier pardoned, as their Courage upon the Saint was no Proof of their Relapse into Error, or an Affront to the Catholic Faith, since done when they were all disordered in Liquor. At length, about a dozen Men in both our Ships, being well instructed, were discharged from the Cloysters, and sent to *Calao*, to help to careen and fit out the *Flying-sib*, then designed for *Europe*: Here they entered into a Project to run away with the *Margarita*, a pretty sailing Ship, that lay in the Harbour, and go upon the Account for themselves, which differs nothing from Piracy; but, not knowing what to do for Ammunition, and a Compass, they applied to *Mr. Serjeantson*, telling him, they had a Design to steal away by Land to *Panama*, where, being an *English* Factory, they might have a Chance to get home; that they had got half a dozen Firelocks, with which they might kill wild Hogs; or get some Game, as they went along, if he would be so kind as to help them to a little Powder and Shot, and a Compass to steer their Way through the Woods. The Fellows, by begging, and making Catholic Signs to the good People at *Lima*, that they were poor *English* newly baptized, had got together some Dollars, which they desired *Serjeantson* to lay out, who, not mistrusting the Plot, took their Money, and bought them what they wanted. Thus furnished, one of them came to me at *Lima*, and said, there was an Opportunity offered to make my Fortune, by running away with the *Margarita* at *Calao*, if I would embrace it: Whereupon he told me the Story, and that *Sprake* was to have the Command, as being the only Artist among them. I answered, that it was a bold Design; but, as Captain *Fitzgerald* had engaged for my Honour, I was obliged not to meddle with it. In a few Days the Plot was discovered, their Lodgings were searched, their Arms taken away, and they put in Prison. The Government was greatly provoked, and had near determined their Execution, when an Order came to release all but *Sprake*, who, being the Projector, was kept in Irons two or three Months, and then let at Liberty. If this shews the restless enterprising Temper of our Seamen, it proves, at the same time, that the *Spaniards* in *Peru* are by no means so cruel, either in Religious or State Prosecutions, as in *Europe*; though I am inclined to think, that the Conversion of these People, such as it was, operated greatly in their Favour: It may be also, that they were some way influenced by Fear, since the *English* Privateers were still upon the Coast; and, in case they had received Intelligence of these People being severely dealt with,

with, might have revenged it on some of their Prisoners. But it is to little Purpose to employ one's Thoughts in attempting to discover the Motives of an Act of Spanish Policy, since, whatever those Motives were, the Act in itself was compassionate and good.

7. The Dominions, which the Spaniards possess in America, are so large, and so valuable, that there is no Doubt, if they were properly governed, they might render that Monarchy equally formidable in Europe, and the Indies. The long Stay I made in Peru, the present State of which there are few Opportunities of knowing in this Part of the World, afforded me the Means of examining with Leisure and Attention their Manner of Living, the Form of their Government, the Nature of their Amusements and Diversions, which, in this Country, take place of Business, and furnished me with many Opportunities of inquiring into those Things very minutely, which did not fall immediately under my Observation as an Eye-witness: And of these I shall endeavour to give the Reader as clear, as distinct, and as accurate an Account, as is in my Power, with the greatest Regard to Truth, and constantly distinguishing between what fell immediately under my Knowledge, and what was derived to me by the Information of others. This was certainly the best Use I could make of that Leisure I enjoyed, while a Prisoner in the Hands of the Spaniards; and may possibly contribute more to the Service of my Country, than if I had employed myself in Privateering on the Coast. I shall begin with the Description of the Place, where I spent most Part of my Time, and which, as it is the Centre of the Spanish Government in these Parts, enabled me to gain a greater Insight into their Affairs, than if I had passed my Days in any of their Ports, or in an inland City, less frequented. The Liberty I was allowed, and the kind Usage I received, made this still the more easy; and therefore it may be depended upon, that what I offer the World is a fair and genuine Representation of Matters of Fact, and not a fine-spun Story, framed from Conjecture and I hear-say. If, after all, the wide Difference between the Manners of these People and those in the Northern Part of Europe, should give it an Air of Extravagance, I must desire the Reader to reflect, that this is not owing to me, but to the Subject. A Man, who undertakes to describe Things he has seen, must describe them as they are, without Regard to the Appearance they may make in the Eyes of others. But to come to the Point: The great and rich City of Lima is the Metropolis of Peru, and the Seat of an Archbishop. It is a regular-built City, the Streets all straight and spacious; so that you go through it any Way, without turning a Corner. It is composed of little Squares, like St. Iago, the Capital of Chili; which was copied from this. It stands in an open Vale, having only a gentle Stream to water it, and which divides it, as the Thames does London from Southwark, allowing for the great Disproportion. The Port of Lima is at Calao, seven Miles below it. The Houses are only one Story high, of twelve or fourteen Feet, because of the frequent Earthquakes in that Country. There are about eight Parishes, three Colleges for Students, twenty-eight Monasteries of Friars, and thirteen Monasteries of Nuns; so that the Religious take up a fourth Part of the City. However, by the quick Flow of Money, and the vast Sums bequeathed, being the Effects of Celibacy, they are all well endowed and supported; besides which, there are two Hospitals for the Sick, Poor, and Disabled, and where several of our Men were kindly looked after. The Length of the City, from North to South, is two Miles, the Breadth one and an half, the Wall, with the River, making a Circumference of six Miles. On the East Part of the Stream lies the other Part of the City, being joined by a very handsome Stone Bridge of seven Arches. I computed that there were 60 or 70,000 Persons in Lima, all Sorts and Colours included; and I do not wonder at any Multiplication in a City, which is the Centre of so much Affluence and Pleasure; for, besides the natural Increase of the Inhabitants, all Ships that trade that Way, whether private or public, generally leave some Deserters, who chuse to stay behind, from the Encouragement all white Faces meet with. Of all Parts of the World, the People here are most expensive in their Habit. The Men dress as they do in England, their Coats being either of Silk, or fine English

Cloth, and Hair Camlets, embroidered, or laced with Gold and Silver; and their Waistcoats commonly the best Brocades. The Women never wear Hoops or Stays, only a stitched Holland Jacket next their Shifts. They generally throw over their Shoulders a square Piece of Swan-skin Flannel, intirely covered with Flanders Lace; besides the Silver or Gold Lace round the Petticoat. When they walk out, the Creolian Women are veiled, but not the Mulatto; and, till the Age of thirty or forty, they wear no Headcloaths, their Hair being tied behind with fine Ribbons: But the Pride of the Sex appears chiefly in Mechlin and Brussels Lace, with which they trim their Linen in a most extravagant Manner, not omitting their Sheets and Pillows, besides the outward Covering of the Mantle aforesaid. Their Linen is doubly bordered with it, Top and Bottom, with Ruffles of four or five Furlenbos hanging down to the Knee. Then, as to Pearls and precious Stones, which they wear in Rings, and Bracelets for the Neck and Arms, they are very extravagant, tho' the Value is hardly equal to the Shew they make.

8. The Viceroy has an handsome Palace in the great Quadrangle of the City, which I take to be near as large as *Lincoln's Inn-Fields, London*. His Salary is ten thousand Pounds a Year; and his Perquisites double that Sum: And though his Government expires at three, four or five Years End, as the King pleases, yet, it is supposed, he makes a good Fortune for Life; for he has all Places in his Gift, both in the Government and Army, throughout Peru, except particular Persons are sent or nominated by the King. The judicial Court consists of twelve Judges, not to mention the inferior Officers, Council, and Solicitors: Here all Causes should come to be decided, but they are too often determined beforehand in Favour of the Party who gives most Money; and tho' these vast Dominions abound in Riches, yet there is not abundance of Work for the Lawyers, because the Statutes are few and plain, which is certainly happier than a Multitude of Laws explaining one another, till they are so intricate, that the Issue of a Cause depends more upon the Craft of a Solicitor and Advocate, than the Truth of the Case. Besides all this, a Multiplication of Laws begets an Infinity of Attorneys and Counsellors, who live high and great upon the Distresses of other People, and as often argue a Man out of his Right as into it. These Hardships are past retrieving; because every Magistrate knows his Reign to be but short, and, if he don't make a Fortune he is laughed at; so that they wink one at another; and the great Distance between Peru and Spain, is a Reason the King's Orders are seldom regarded, being two Years going backward and forward; whence arise many clandestine Doings; for, according to Law, the King should have a twentieth Part of the Gold, and a fifth Part of all Silver; but there are vast Quantities that never pay Duty, carried privately over the Continent the North Way, as well as the South, by trading Ships; and tho' there are prodigious Sums allowed for the Militia, Garrisons, and Repairs of Fortifications, yet it is not One-half applied: From all which it is easy to imagine, what immense Revenues would come to the Treasury at Madrid, if his Catholic Majesty was but faithfully served.

The Country in Peru is naturally subject to Earthquakes; at Lima they had two great ones about fifty Years ago, which overturned Houses, Churches, and Convents; and, in the Reign of Charles II. the late King of Spain, there was an Earthquake near the Equinoctial Line, that lifted up whole Fields, and carried them several Miles off: Small Shocks are often felt without doing any Harm; and I have been two or three times called out of Bed when such a thing has happened, tho' we have heard no more of it; but, upon these Occasions, the Bells always toll to Prayers. Notwithstanding this Country, especially nigh the Coast, has suffered much by Earthquakes, yet their Churches are lofty enough, and neatly built: That Part of their Architecture, which requires most Strength, is generally finished with burnt Bricks; but their Houses are all built with Bambo, Canes, and Bricks, dried only by the Weather, which are durable enough, because it never rains: The Covering is a Matting with Ashes upon it, to keep out the Dew, which is all the Wet they have. The small River of Lima is mostly Snow-water, descending from the neighbouring

Mountains, which are covered all the Year with Snow, but partly dissolved in the Summer Season, which is from *September to March*. One would expect it much hotter thereabouts than it is, there being no Proportion between the Heat of this Climate in *America*, and the same Degree of Latitude in *Africa*: For which there are two Reasons; the one is the cool Temper of the Air, proceeding from the congealed Snow on the Mountains, which diffuses itself every Way; the other is the Humidity of the Vapours, which hang over the Plains, and which are so frequent, that, when I came first to *Lima*, I often expected it would rain. These Vapours are not so coarse, low, and gloomy, as our Fogs; nor separated above, like our Summer Clouds; but an Exaltation between both being spread all round, as when we say the Day is overcast: So that sometimes a fine Dew is felt upon the outward Garments, and discerned by the Eye upon the Knap of the Cloth. This is an happy Convenience at *Lima*, the People being thus freed from One-half of the Day from the Sun; and, tho' the Afternoon be Sun-shine, 'tis very tolerable, being mixed with the Sea Breezes, and not near so hot as at *Lisbon*, and some Parts of *Spain* in *Europe*, which are thirty Degrees further from the Equator. The want of Rain in this Part of the Continent obliged the poor *Indians*, before the Conquest, to make Drains and Canals, for bringing down Water from among the distant Mountains; which they have done with such great Labour and Skill, that the Valleys are properly refreshed, producing Grass, Corn, and Variety of Fruits, to which the aforesaid Dew may also a little contribute; and therefore this shews, that there is no judging from Circumstances, whether a Country be habitable or not, since, in this respect, nothing would seem more conclusive, than the absolute want of Rain. A *Spanish* Historian has given us the natural Cause of this perpetual Drought: He observes, that the South-west Winds blow upon the *Peruvian* Coast all the Year round, and the Ocean is therefore called *Pacific*, because the Winds never disturb the Waters: These easy Gales always bear away the Vapours from the Plains, before they can rise, and form a Body sufficient to descend in a Shower; but, when they are carried farther and higher, they grow more compact, and at length fall, by their own Weight, into Rain. They have Plenty of Cattle, Fowl, and Fish, and all Provision common with us, except Butter, instead of which they always use Lard; they have Oil, Wine, and Brandy enough, though not so good as in *Europe*. They drink much of the Jesuits Herb Camini, brought from *Paraguay* by Land; for all *East India* Tea is forbid: They make a Decoction of it, and suck it thro' a Pipe; it is generally here called *Mattea*, being the Name of the Bowl out of which they drink it. Chocolate is their usual Breakfast, and a Grace-cup after Dinner; sometimes they drink a Glass of Brandy for Digestion, but scarce any Wine at all. In the Kingdom of *Chili* they make a little Butter, such as it is; and their way of doing it is remarkable: The Cream is put into a Sheep-skin, and kept on Purpose for that Use; two Women lay it on a Table, and shake it between them, till it comes.

9. The *Spaniards* are no Friends to the Bottle; yet Gallantry and Intrigue are here brought to Perfection; for they devote so much of their Time to the Service of the Fair Sex, that it is unmannerly not to have a Mistress, and scandalous not to keep her well. As for the Women, they have many Accomplishments, both natural and acquired; their Conversation is free and sprightly, their Motion graceful, their Looks winning, and their Words engaging: They have all a delicate Shape, not injured with stiff-bodied Stays, but left to the Beauty of Nature; so that there is no such thing as a crooked Body among them. Their Eyes and Teeth are particularly excellent; and their Hair, being generally of a dark polished Hue, is finely combed, and platted and tied behind with Ribbands, but never disguised with Powder; for the Brightness of their Skins round the Temples appears very well shaded through the Hair, like Light through a Landscape. Tho' Amours are universal at *Lima*, yet the Men are careful enough to hide them; for no indecent Word or Action is allowed in public: They have two Seasons for these Entertainments; one is at the *Sejla*, or Afternoon's Nap, which is commonly with the Mistresses; the other is in the Evening, cross the Water,

in Calashes, or at the great Square in the Town, where the Calashes meet in great Numbers towards the Dock; these are slung like our Coaches, but smaller, and many of them fit only for two, sitting opposite: They are always drawn by one Mule, with the Negro Driver upon his Back; and it is usual, among those Calashes, to observe several of them with the Windows close up, standing still for half an Hour together. In these Amusements, they have several Customs peculiar to themselves: After Evening Prayers, the Gentleman changes his Dress from a Cloak into a Montero, or Jockey-coat, with a Linen laced Cap, and a Handkerchief about his Neck instead of a Wig: If he wears his Hair, it must be tucked under a Cap, and that flap all down; so that it is an universal Fashion to be disguised some way or other; for those who have no Mules, are ashamed to be thought virtuous, and must be in some Mask or other to countenance the Way of the World. But, as all this is Night-work, they have an established Rule to prevent Quarrels, which is, never to speak or take Notice one of another, whether they are going in quest of, or visiting their Ladies; so that, in short, the Forepart of the Night is a Masquerade all the Year round. Among the Rank of People who do not keep Calashes, there are several Points to be observed, particularly when they take the Evening Air; one Couple never walks close upon the Heels of another; but, to prevent the publishing any secret Whispers, each Couple walks at the Distance of twelve Yards at least; and if any Lady drops a Fan, or any thing, by Accident, a Gentleman may civilly take it up; but he must not give it to the Lady, but the Gentleman who a with her; for the may be the Sister or Wife of him that takes it up; and, as the Women are all veiled, these wise Laws are invented to prevent any impertinent Discoveries. A Freedom of that kind is looked upon as the highest Air-front in all Gallantry, and merits a drawn Sword through the Liver: They are so careful in these Rules, that if any Man sees his intimate Friend any-where with a Woman, he must in no wise take notice of him, or speak of it afterwards: Things of this Nature are all done with the greatest Gravity imaginable, and the Practice of Gallantry becomes, by this means, decent, soft, and easy: But, notwithstanding the Commerce of Love is here so regularly settled, yet there are Jealousies now-and-then subsisting, which sometimes have ended fatally. There was a Story of this sort pretty fresh when I was at *Lima*: A young Lady had for some time, as she thought, been the sole Sovereign of her Lover's Heart; but, by Chance, she found him in Company with another Woman; and, as our immortal *Shakespeare* has it, "Trifles, light as Air, are, to the Jealous, Cause firmations strong," she waited therefore no further Proof of his Infidelity, nor expected any Excuse for the Wrong done her; but suddenly drew his Dagger, and dispatched him. She was soon brought to Trial; and, when every one expected she would pay the Forfeit of her Life, her Judges gave it this Turn, that it was not Malice, but Excess of Love, that prompted her to the rash Deed: She was therefore acquitted; but some nice Casuists thought she should, in Honour, have hanged herself. How agreeable were these Practices are to the *Greco Spaniards*, yet they cause an Inconvenience to Society; for the Men are so sensibly raken up with these sort of Matters, that the Women engage most of their Time, and spoil public Conversation. For this Reason, there are no Taverns or Coffee-houses; so that the Men are only to be met with at their Offices, or at Church. The same Inconvenience, in a greater or less Degree, attends this Propensity to Gallantry, where-ever it prevails; and may be justly considered as the Bane of Industry, corrupting the Minds of both Sexes, and infilling the basest Principles of Indolence and Debauchery.

10. It is chiefly owing to this effeminate Disposition, that all manly Exercises, all useful Knowledge, and that noble Emulation, which inspires Virtue, and keeps alive Respect to the public Good, are unthought of here: For, as there is naturally a great Mixture of Phlegm and Stubbornness in *Spanish* Constitutions, so whatever settles amongst them into a Custom, obtains the Force of an inviolable Law; and, however absurd, however contrary to Religion or Virtue, however noxious to Society, or fatal to private Peace, is not to be touched out by Art or Force. The

Amusements, therefore, that serve to relax the Labours of the Industrious in other Countries, and yet keep alive the Vigour and Activity of Body, and of Mind, are never known in *Peru*; and whoever should attempt to introduce them, would be considered as an Innovator, which, among *Spaniards*, is a frightful Thing: Nor would they suffer themselves to be convinced, that martial Exercises, or literary Conferences, are preferable to Intrigues. They have, however, a sort of Playhouse, where the young Gentlemen and Students divert themselves after their Fashion; for what Performances they have in the Dramatical Way are so mean, that they are hardly worth mentioning, being Scripture Stories interwoven with Romances, and, which is still worse, with Obscenity.

It was at this Theatre, that two *Englishmen*, of Monsieur *Martinet's* Squadron, fought a Prize a little before I came to *Lima*: They first obtained Leave of the Viceroy to exercise at the usual Weapons; and, after the Shew-day was fixed, most of the Time was taken up with preparatory Ceremonies, to bring, as we phrase it, an House; preceded by Beat of Drum, in their *Holland* Shirts and Ribbands, saluting the Spectators at the Windows with a Flourish of the Sword; so that, by the extraordinary gallant manner of the Thing, the whole City came to see the Trial of Skill: Some gave Gold, but few very less than a Dollar: When the Company, Male and Female, were close packed together, the Masters mounted the Stage; and, after the usual Compliment, peculiar to the *English* Nation, of shaking Hands before they fight, they retired in great Order, and stood upon their Guard. Several Bouts were played without much Wrath or Damage; but the Design of this Meeting being more to get Money, than Cuts or Credit, one of the Masters had the seasonable Fortune to receive a small Hurt on the Breast, which, having bled his Shirt, began to make the Combat look terrible; upon which the Company fearing, from such a dreadful Beginning, that the Zeal of the Champions might grow too warm, and conceiving, till they were reconciled, no Man in the House was safe, unanimously cried out *Basta, Basta*, which signifies *Enough, Enough*; and so the House broke up. The Sailors, finding this a better Prize than any they ever met with at Sea, humbly besought his Excellency to grant them a Licence for another Trial of Skill; but the Viceroy, and all the People, were against it, from a religious Objection that could never be got over; and that was, lest the Fellows should kill one another, and die without Absolution. One cannot help observing, when so fair an Opportunity offers, that the public Diversions of any Place always show the Temper of a People; whence appears the Danger of introducing, under the Notion of Elegance, the Amusements of a dejected or an effeminate Nation, because, in time, they every-where produce the same Effects; that is to say, they mould those, amongst whom they are introduced, into the same Temper with those from whom they are derived; and I dare say, if Gallantry prevailed here as much as in *Peru*, we should soon grow as much out of Love with Prize-fighting, and with whatever else had any Affinity with Labour or Danger, as they: So natural it is, for the Love of Pleasure to dastardize the very bravest People.

11. A further Instance we have of this Deficiency of Spirit in the *Spaniards*, from their Carelessness with respect to those Countries and Islands yet undiscovered, in the Neighbourhood of their vast Dominions in *America*; notwithstanding the Assurances they have had, that some of these Countries are richer, and of much greater Consequence, than those they have already conquered or settled. The first *Spanish* Governors of *Mexico* and *Peru* were not of this indolent and uninspiring Temper; but bestowed great Care and Pains in endeavouring to obtain the most perfect Knowledge possible of the Places bordering upon those under their respective Governments; but now that generous Thirst of Fame is absolutely extinguished, and the *Spanish* Governors, instead of aiming at new Discoveries, content themselves with plundering their Fellow-subjects, that are settled in the old. The Regions which lie North of the Kingdom of *Mexico*, are known to abound with Silver, precious Stones, and other rich Commodities; yet the *Spaniards* not only decline their Conquests on that Side, but discourage, as

much as they can, the Reports spread of the Wealth and Value of those Countries. Upon the same Principles, they give no sort of Encouragement to attempt penetrating into the Heart of *South America*, whence the best Part of the Riches of *Peru* is known to come; the Mountains, which are at the Back of the Country, being extremely rich in Gold; and the Regions on the other Side towards the North Seas, known to be inhabited by Nations that have abundance of that valuable Metal; though, for fear of being oppressed by the *Europeans*, they conceal it as much as possible. If this proceeded from a Maxim of true Policy, viz. that of being content when they have enough, and applying themselves to govern well what they already possess, it would be extremely commendable, and would certainly contribute to the Safety, Peace, and Continuance of their Empire in those Parts. But while it appears plainly, from the Conduct of their Viceroy and other Officers, that they have nothing in View but accumulating Wealth, at the Expence of those they should protect, it is natural for the People to wish, that they would apply themselves to Discoveries, which would afford the Governors means of making their Fortunes, without distressing such as are already Subjects to the Crown of *Spain*.

But, of all the Discoveries that have ever been talked of amongst the *Spaniards*, that which has made the most Noise, is the Island or Islands of *Solomon*. These are supposed to be the same with those discovered by the famous *Ferdinand de Quirós*: He reported them to be excessively rich, as well as extremely populous; and desired, by repeated Memorials, that he might be authorized, by the Crown of *Spain*, to proceed in, and finish that Discovery; but, as all his Instances were neglected, in the Space of a few Years it became a Question, whether there really were any such Islands or not; and the Treating this Matter as a Romance, was, for some time, a political Maxim with the Viceroy of *Peru*; and perhaps, by degrees, the very wisest People in *America* would have been brought over to this Opinion; but it so happened, that, towards the latter End of the last Century, such Discoveries were made as to the Reality of these Islands, that *Don Alvaro de Miranda* was sent in the Year 1695, upon discovering them, in which he miscarried; but, in the Search, met with four Islands, between 7 and 10° of South Latitude, wonderfully rich and pleasant; the Inhabitants of which were a better looking People, and far more civilized, than any of the *Indians* upon the Continent. This occasioned a good deal of Discourse at that time; but the Disturbances that followed soon after, took up Peoples Thoughts to such a degree, that all Hopes of finding, or even endeavouring to find, these happy Islands, were intirely laid aside.

Yet, while I was in *Peru*, this Attempt was renewed again, though to very little Purpose, by an odd Accident. Before I enter upon this, I must be obliged to say something of the Person employed in the Discovery: Among the rest of the *French* Traders or Interlopers, that were destroyed by *Martinet's* Squadron, there was one Mr. *Thaylet*, with whom I was well acquainted at *Lima*, who lost all his Effects: But even this hard Usage could not drive him out of *Peru*; he came thither to make a Fortune, and he did not, by any means, care to return home a Beggar. He had formerly commanded several good Ships, and was an expert Artill. He offered his Service to the Government, and this Offer of his was very kindly received. The first Affair of Importance in which he was employed, was an Expedition to the Island of *Juan Fernandez*, in order to find there the Bottle, with the Instructions, which Captain *Clipperton* left behind him for Captain *Sbetvoeke*, when, in pursuance of his Instructions, he touched at that Island, and cruised in its Neighbourhood for a Month. Of this the Viceroy was informed by one of *Clipperton's* Men, that was taken Prisoner; which Information immediately produced a Resolution to send for those Instructions, in order to prevent the *English* Privateers from joining; and a more proper Man for such an Expedition could not have been found than Mr. *Thaylet*, who, in point of Ingenuity and Practice, was a much more capable Man than most in the *Spanish* Service. This Circumstance of sending for the Bottle is the most authentic Testimony that can possibly be expected to the Truth of *Thaylet's* Journal, and the History already given of *Clipperton's*

person's Proceedings. I might add, that it is as direct a Refutation of all that Captain *Shelbocke* has advanced upon this Subject; so that it is impossible for any Man, who considers it, to believe what he charges Captain *Clipperton* with to be true; or to dream, that it ever was the Intention of *Clipperton* to desert *Shelbocke*. It might also be observed, that the latter does not so much as pretend to have left any Instructions for *Clipperton*, in case he should come to any of the Places where *Shelbocke* had touched; the Inference from which is very easy.

While Mr. *Thaylet* was gone upon his Cruise, a Spanish Ship arrived at *Calao*, the Master of which reported, that, being driven out of his Course, he had made the Islands of *Solomon*. This occasioned much Discourse on that Subject, and the comparing all the different Accounts that had been given of these Islands, and their Inhabitants, which appeared to be clear, so probable, and well connected, as scarce to leave any Doubt of the Veracity of such as pretended to have made this Discovery. In the Midst of the Discourses raised by this Accident, another Ship arrived, with the like Account, attended with Circumstances, which rendered it evident, that there could not be any Fraud or Collusion in the Case; but that both had, by pure Accident, been driven upon the same Island. This was very lucky for Mr. *Thaylet*, since, while he was employed in one Expedition, another was thus unexpectedly provided for him. On his Return with the Instructions, and the two Men who deserted there, the Viceroy, willing to encourage him, thought of this short Expedition for him in the same Vessel, being an English Ketch of about sixty Ton, and in which he had served Captain *Martinet* as a Tender; for the Intelligence he had received of *Solomon's* Island made his Excellency curious to pursue the Discovery. He therefore ordered the Ketch to be fitted out for two Months, under *Thaylet's* Command; who accordingly sailed into 10° South, in which Latitude the Island was said to lie. He cruised thereabouts till his Provision was very high expended, and returned, without Success. However, as the same Account came by two different Ships, who touched there, the Spaniards verily believe there is such a Place; for the Men reported, that the Natives, as to their Persons and Behaviour, were much like the *Indians* on the Continent; that they had Gold and Silver Things among them; but that their Language was strange and unintelligible. The Reason why Mr. *Thaylet* could not meet with *Solomon's* Island, might be from the Uncertainty of the Latitude, and his Inability of making further Search, being provided only for two Months; for I have been informed in *London*, that the said Island or Islands lie more Southerly in the *Pacific Ocean*, than where they are laid down in the *Dutch Maps*; and the two Spaniards, who had been there, were only small trading Vessels, carried thither by irregular Currents; and could give no certain Account of the Latitude, because they kept no Reckoning. And thus ended all Thoughts of prosecuting this Discovery at that time.

12. As the Riches of *Peru* consist chiefly in their Silver Mines, I shall endeavour to treat of these, not only from my own Experience, but from the best Lights I have been able to derive from the strictest Inquiry I had it in my Power to make from others. There are two Sorts of Silver Mines, the one where Silver is found scattered about in small Quantities; the other, where it runs in a Vein between two Rocks; the one excessively hard; and the other much softer: And it is these last, which best deserve, and are generally distinguished by, the Name of Silver Mines. This precious Metal, which is, in other Countries, the Standard or Measure of Riches, is, in *Peru*, the Riches of the Country, considered in another Light, I mean that of a natural Commodity; for, throughout the Whole of that vast Country, there are almost every-where Silver Mines to be met with, of more or less Value, according as the Ore produces more or less Silver, and can be wrought at a greater or less Expence. There are some, but not a great many, Mines to the Northward of *Lima*; but, to the South, they are very numerous. On the Back of the *Andes*, there lies a Nation of *Indians*, called *los Plateros*, or the *Plate-men*, from the vast Quantities they possess of Silver; but the Spaniards have very little Communication with them. The best part of the Mine-countries are to the South of *Cusco*, from thence

to *Potosi*, and so to the Frontiers of *Chili*; and where, for the Space of 300 Miles, there is a continued Succession of Mines, some being discovered, and others deserted, every Day.

It is a common thing for the People here, as well as elsewhere, to complain of the present Times, and commend the past, as if heretofore there were infinitely greater Quantities of Silver dug out of the Mines than at present: And, perhaps, with regard to particular Mines, it may be so; but, upon the Whole, doubtless the Quantities of Silver that are annually obtained in the Spanish West Indies abundantly exceeds what was formerly exported from thence. As to the Names of those, which have been most remarkable, or are so at present, in the Country of *Peru*, they are these; viz. the Mines of *Loxa* and *Camora*, *Cuenca*, *Puerto Viejo*, *St. Juan del Oro*: These are wrought at present. Those of *Oruro* and *Tiitiri* are neglected. Those of *Poro* and *Plata* filled up. At *Potosi* there are a great Number of Mines. And those of *Tomina*, *Cboacia*, *Atacama*, *Xuani*, the *Calchaques*, *Chafes*, *Iquique*, &c. are all wrought with more or less Profit; and this according to the Skill of their Proprietors, or of such as have the Direction of these Works. It is generally believed, and there seems to be some Reason for it, that Experience has taught the Creolians here a perfect Acquaintance with Minerals, and the Art of treating them, so as to obtain the largest Profit. But, however, when one considers their Ignorance in other Arts, their going on constantly in the same beaten Track in this, together with their vast Waste of Quicksilver, one is almost tempted to believe, that our European Miners might manage their Works to still greater Advantages. This seems the more probable, when one reflects, that this Knowledge of theirs is not at all founded upon Principles, but is, properly speaking, an Art built upon accidental Discoveries, in which there is little of Accuracy, and abundance of Uncertainty; which will be more evident to the Reader, when he has perused and considered the following Account of the Manner, in which the Silver is extracted from the Ore at the Mines.

The most perfect Silver that comes from thence, is in that Form which the Spaniards call *Pinnas*, which is a Lump of Silver extremely porous, because it is the Remainder of a Paste, made of Silver-dust and Mercury; and the latter being exhale, leaves this Remainder of the Mass spongy, full of Holes, and light. It is this kind of Silver that is put into different Forms by the Merchants, in order to cheat the King of his Duty, though that is but very moderate; and therefore all Silver in this Condition, if found any-where on the Road, or on board any Ship, is looked upon as contraband Goods, and is liable to Seizure. In regard to the Art of Refining, therefore, I am to shew the Progress of the Ore from the Mine to this kind of Mass or Cake: After having broken the Stone taken out of the Vein of Ore, they grind it in their Mills with Grind-stones, or in the *Ingenios Raales*, or Royal Engines, which consist of Hammers or Pounders, like the *French* Plaster-mills. They have generally a Wheel of about twenty-five or thirty Feet Diameter, whose long Axle-tree is set with smooth Triangles, which, as they turn, hook or lay hold of the Iron Hammers, lit them up to a certain Height, from whence they drop at once at every Turn; they generally weigh about 200 Weight, and fall so violently, that they crush and reduce the hardest Stones to Powder by their Weight alone. They afterwards fit that Powder through Iron or Copper Sieves, to take away the finest, and return the rest to the Mill. When the Ore happens to be mixed with some Metals, which obstruct its falling to Powder, as Copper, then they calcine that in an Oven, and pound it over again.

In the little Mines, where they use none but Mills with Grind-stones, they, for the most part, grind the Ore with Water, which makes a liquid Mud, that runs into a Receiver; whereas, when it is ground dry, it must be afterwards steeped, and well moulded together with the Feet for a long time. To this Purpose they make a Court or Floor, where they dispose that Mud in square Parcels about a Foot thick, each of them containing half a *Caxon* or Chest, that is, twenty-five *Quintals*, or 100 Weight of Ore; and these they call *Cuerpos*, that is, Bodies. On each of them

they throw about 200 Weight of Sea or common Salt, more or less, according to the Nature of the Ore, which they mould, and incorporate with the Earth for two or three Days. Then they add to it a certain Quantity of Quick-silver, squeezing a Purse made of a Skin, into which they put it, to make it fall in Drops, with which they sprinkle the Body or Mafs equally, according to the Nature and Quality of the Ore. They allow to each Mafs ten, fifteen, or twenty Pounds; for, the richer it is, the more Mercury it requires to draw to it the Silver it contains: So that they know not the Quantity, but by long Experience. An *Indian* is employed to mould one of these square Parcels eight times a Day, to the end that the Mercury may incorporate with the Silver. To that Effect they often mix Lime with it, when the Ore happens to be greasy, where Caution is to be used; for they say, it sometimes grows so hot, that they neither find Mercury nor Silver in it, which seems incredible. Sometimes they also strew among it some Lead or Tin-ore, to facilitate the Operation of the Mercury, which is slower in very cold Weather, than when it is temperate; for which Reason, at *Potosi* and *Lipes*, they are often obliged to mould the Ore during a whole Month, or a Month and an half: But, in more temperate Climates, the Amalgama is made in eight or ten Days.

To facilitate the Operation of the Mercury, they in some Places, as at *Puno* and elsewhere, make their *Buiterans* or Floors on Arches, under which they keep Fires, to heat the Powder of the Ore, for twenty-four Hours, on a Pavement of Bricks. When it is thought, that the Mercury has attracted all the Silver, the Elayer takes a little Ore from each Parcel apart, which he washes in a little earthen Plate, or wooden Bowl; and, by the Colour of the Mercury found at the Bottom of the Bowl, knows whether it has had its Effect: For, when it is blackish, the Ore is too much heated; and then they add more Salt, or some other Drug. They say, that then the Mercury *dispara*, that is, floats or flies away. If the Mercury is white, they put a Drop under the Thumb, and, pressing it hastily, the Silver there is amongst it remains sticking to the Thumb; and the Mercury slips away in little Drops. In Conclusion, when they perceive, that all the Silver is gathered, they carry the Ore to a *Bafon*, into which a little Stream of Water runs, to wash it, much in the same Nature as I shall shew they wash the Gold, excepting that this being only a Mud without Stones, instead of an Hook to stir it, an *Indian* stirs it with his Feet, to dissolve it. From the first *Bafon* it falls into a second, where another *Indian* is, who stirs it again, to dissolve it thoroughly, and loosen the Silver. From the second it passes into a third, where the same is repeated, to the end that what has not sunk to the Bottom of the first and second, may not escape the third.

When all has been washed, and the Water runs clear, they find at the Bottom of the *Bafons*, which are lined with Leather, the Mercury incorporated with the Silver; which they call *Lapella*. It is put into a woollen Bag, hanging up, for some of the Quick-silver to drain through. They bind, beat and press it as much as they can, laying a Weight upon it, with flat Pieces of Wood; and, when they have got out as much as they can, they put the Paste into a Mould of wooden Planks, which, being bound together, generally form the Figure of an octagon Pyramid, cut short, the Bottom whereof is a Copper-plate, full of little Holes. There they stir, in order to fatten it; and, when they design to make many *Pinnas*, as they call them, that is, Lumps of various Weights, they divide them with little Beds or Layers of Earth, which hinder their coming together. To that End the *Pella* or Mafs must be weighed, deducting two-thirds for the Mercury that is in it; and they know, without a small Matter, what net Silver there is. They then take off the Mould, and place the *Pinna* or Mafs, with its Copper Base, on a Trivet, or such-like Instrument, hanging over a great earthen Vessel full of Water, and cover it with an earthen Cap or Covering, which they again cover with lighted Coals; which Fire they keep for some Hours, that the Mafs may grow violent hot, and the Mercury that is in it evaporate in Smoke; but that Smoke having no Passage out, it circulates in the Hollow that is between the Mafs and Cap, or Covering, till, coming down to the Water that is underneath, it condenses, and sinks to the

Bottom again, converted into Quick-silver. Thus, little of it is lost; and the same serves several times: But the Quantity must be increased, because it grows weak. However, they formerly consumed at *Potosi* 6 or 7000 Quintals or hundred Weight of Quick-silver every Year, as *Acofia* writes; by which a Judgment may be made of the Silver they got.

When the Mercury is evaporated, there remains nothing, but a spongy Lump of contiguous Grains of Silver, very light, and almost mouldering, which the *Spaniards* call *la Panna*, and is, as I observed, a contraband Commodity from the Mines, because, by the Laws of the Kingdom, they are obliged to carry it to the King's Receipt, or to the Mint, to pay the fifth to his Majesty there. Those Masses are cast into Ingots, on which the Arms of the Crown are stamped, as also that of the Place where they were cast, their Weight and Quality, with the Fineness of the Silver to answer the Measure of all Things, according to an ancient Philosopher. It is always certain, that the Ingots, which have paid the fifth, have no Fraud in them; but it is not so with the *Pinnas* or Masses not cast. Those who make them, often convey into the Middle of their Iron, Sand, and other Things, to increase the Weight; so that, in Prudence, they ought to be opened, and made red-hot at the Fire, for the more Certainty; for, if falsified, the Fire will either turn it black, or yellow, or melt it more easily. This Trial is also to extract a Moisture they contract in Places where they are laid on purpose to make them the heavier. In short, their Weight may be increased one-third by dipping them in Water when they are red-hot, as also by separating the Mercury, with which the Bottom of the Mafs is always more impregnated than the Top. It also sometimes happens, that the same Mafs is of different Fineness. The Stones taken from the Mines, the Ore, or, to speak in the Language of *Pera*, the *Mineray*, from which the Silver is extracted, is not always of the same Nature, Consistence, or Colour. There are some white and grey, mixed with red or bluish Spots, which is called *Plata Blanca*, or white Silver. The Mines of *Lipes* are most of them of this sort. For the most part there appear some little Grains of Silver, and very often small Branches, extending along the Layers of the Stone. There are some, on the other hand, as black as the Dross of Iron, in which the Silver does not appear, called *negrilla*, that is, blackish. Sometimes it is black with Lead, for which Reason it is called *Plomo ranco*, that is, coarse Lead, in which the Silver appears as if scratched with something that is harsh; and it is generally the richest, and got with least Charge, because, instead of moulding it with Quick-silver, it is melted in Furnaces, where the Lead evaporates by dint of Fire, and leaves the Silver pure and clean.

From that Sort of Mines the *Indians* drew their Silver, because, having no Use of Mercury, as the *Europeans* have, they only wrought those whose Ore would melt; and, having but little Wood, they heated their Furnaces with Ylo, and the Dung of Llamas, or Sheep, and other Beasts, exposing them on the Mountains, that the Wind might keep the Fire fierce. This is all the Secret the Historians of *Pera* speak of, as of something wonderful. There is another Sort of Ore like this, as black, and in which the Silver does not appear at all; on the contrary, if it be wetted, and rubb'd against Iron, it turns red; for which Reason it is called *Rubisco*, signifying the Rudeness of the Dawn of the Day. This is very rich, and affords the finest Silver. There is some that glitters like Tale or Hinglafs; this is generally naught, and yields little Silver; the Name of it is *Zorche*, the Peel, which is of a yellowish Red, is very soft, and broken in Bits, but seldom rich; and the Mines of it are wrought on account of the easiness of getting the Ore: There is some green, not much harder than the last, called *Cobrisso*, or copperish; it is very rare: However, though the Silver generally appears in it, and it is almost mouldering, it is the hardest to be managed, that is, to have the Silver extracted from it; sometimes, after being ground, it must be burnt in the Fire, and several other Methods used to separate it; doubtless, because it is mixed with Copper. Lastly, there is another Sort of very rare Ore, which has been found at *Potosi*, only in the Mine of *Cotamiso*, being Threads of pure Silver, intangled

Or wound up together like burnt Lace, so fine, that they called it *Arana*, Spider, from its Resemblance to a Cobweb.

The Veins of Mines, of what Sort soever they be, are generally richer in the Middle, than towards the Edges; and when two Veins happen to cross one another, the Place where they meet is always very rich. It is also observed, that those which lie North and South, are richer than those which lie any other Way. Those which are near Places where Mills can be erected, and that are more commodiously wrought, are often preferable to the richer, that require more Expence; which is the Reason, that, at *Lipes*, and at *Potosi*, a Chest of Ore must yield ten Marks, of eight Ounces each Mark, of Silver, to pay the prime Charges; and, at those of the Province of *Tarama*, five pay them. When they are rich, and sink downwards, they are subject to be flooded; and then they must have recourse to Pumps and Machines, or else drain them by those they call *Cocabones*, being Passages made in the Side of the Mountain for the Water to run out at; which often ruin the Owners, by the excessive Expence they insensibly draw them into. There are other ways of separating the Silver from the Stones that confine it, and from the other Metals that are mixed with it, by Fire, or strong separating Waters, made use of at some Mines, where other Means fail, and where they make a sort of Ingots, which they call *Bollos*; but the most general and useful Method is to make *Pinnas* or Masses, above-mentioned, which are preferred to other Forms, on account of their easiness in making, and that they save Fire, and other Ingredients; which is a thing of great Consequence in Works of this Nature, where, to save in the Expence, has the same Effect as finding the Mine.

13. It is very natural to suppose, that, in Mines, as well as other Things, there happen great Variations in their Products, and in the Value of the Product. The Mines which very lately yielded most Silver, are those of *Oruro*, a little Town eighty Leagues from *Arica*. In the Year 1712. one so rich was found at *Ollacben*, near *Cuzco*, that it yielded 2500 Marks, of eight Ounces each, out of every Chest, that is almost one fifth Part of the Ore; but it has declined much, and is now reckoned but among the ordinary Sort. Next to these are those at *Lipes*, which have had the same Fate. Lastly, those at *Potosi* yield but little, and cause a vast Expence by reason of their great Depth. But, notwithstanding the Mines here are far diminished in their Product, yet the Quantity of Ore that has been already wrought, and run many Years upon the Surface, is thought capable to yield a second Crop; and when I was at *Lima*, they were actually turning it up, and new-milling it, with great Success; which is a Proof, that these Minerals generate in the Earth like all other inanimate Things; and it is likewise certain, from all Accounts of the *Spaniards*, that Gold and Silver, as well as other Metals, are continually growing and forming themselves in the Earth. This Opinion is verified by Experience in the Mountain of *Potosi*, where several Mines have fallen in, and buried the Workmen, with their Tools; after some Years, they have dug the same Place, and discovered many Bones, and Pieces of Wood, with Veins of Silver actually running through them. These Mines belong to him who first discovers them: He immediately presents a Petition to the Magistrates to have such a Piece of Earth for his own; which is no sooner done than granted: They measure eighty *Spanish* Yards in Length, and forty over, which is about 1200 Foot in Length, and 100 in Breadth; and yield it to the Discoverer, who chuses what Space he thinks fit, and does what he pleases with it. Then they measure just the same Quantity for the King, which is sold to the best Bidder, there being many who are willing to purchase a Treasure which may prove inestimable. If any other Person has a mind to work Part of the Mine himself, he bargains with the Proprietor for a particular Vein. All that such an one digs out is his own, paying the King's Duty, which is for Gold a 20th Part, and for Silver a 5th; and some Landlords find such an Account in letting out their Ground, and their Mills, that they live upon the Profit.

At *Copiapo* there are Gold Mines just beyond the Town, and all about the Country likewise, which have brought many Purchasers and Workmen thither, to the great Damage of the *Indians*; for the *Spanish* Magistrates take away not only their Lands, but their Horses, which they sell to the new Proprietors, under Pretence of serving the King, and improving the Settlements: There is also a great deal of *Magnet* and *Lapis Lazuli*, which the *Indians* know not the Value of: And, some Leagues in the Country, there is plenty of Salt and Saltpetre, which often lies an Inch thick on the Ground. About an hundred Miles East, upon the *Cordelier* Mountains, there is a Vein of Sulphur two Feet wide, so fine and pure, that it needs no cleaning. This Part of the Country is full of all Sorts of Mines; but, in other respects, is so barren, that the Natives fetch all their Subsistence from *Cochimbo*, and that Way, being a mere Desert for 200 Miles together; and the Earth abounds so much with Salt and Sulphur, that the Miles often perish for want of Grass, and sweet Water. There is but one River in 200 Miles, which the *Indians* call *Anaculua*, or *Hypocrite*, because it runs only from Sun-rise to Sun-set: This is occasioned from the great Quantity of Snow melted from the *Cordeliers* in the Day time, which freezes again at Night, where the Cold is often so great, the People's Features are quite distorted. Hence *Chili* takes its Name, *Chile* signifying Cold in the *Indian* Language; and we are certainly informed by the *Spanish* Historians, that some of their Countrymen, and others, who first traded this Way, died still with Cold upon their Mules; for which Reason the Road is now always lower towards the Coast.

The Mine Countries are all so cold and barren, that the Inhabitants get most of their Provision from the Coast; this is caused by the Salts and Sulphurs exhaled from the Earth, which destroy the Seed of all Vegetables. The *Spaniards* who live thereabout, find them to stink, that they drink often of the *Mattea*, to moisten their Mouths. The Mules, that trip it nimbly over the Mountains, are forced to walk gently about the Mines, and stop often, to fetch Breath. If these Vapours are so strong without, what must they be within the Mine itself, where, if a fresh Man goes, he is suddenly benumbed with Pain? And this is the Case of many an one; but this Distemper seldom lasts above a Day, and they are not so affected a second time; but Vapours have often burst out so furiously, that Workmen have been killed on the Spot, so that one way or other Multitudes of *Indians* die in their Calling. An Observation occurs here to my Memory, that, upon the Road to *Piura*, at Night, when we lay down to sleep, our Mules went eagerly to search for a certain Root, not unlike a Parsnep, though much bigger, which affords a great deal of Juice, and, in such a sandy Plain, often serves instead of Water: But, when the Mules are very thirsty, and they cannot easily rake up the Root with their Feet, they will stand over it and bray, till the *Indians* come to their Assistance. One would wonder, that, throughout all this Part of the World, that Portion of the Country should be best inhabited which is most barren and unwholesome, while those Spots, that seem to vie with Paradise itself for Beauty and Fertility, are but thinly peopled. Yet, when one considers, that it is not the Love of Ease, but the Thirst of Wealth, that draws People hither, the Difficulty is very easily solved; and we see at once, how much the Hopes of Living rich, gets the better of the Hopes of Living; as if the sole End, for which a Man was created, was to acquire Wealth, at the Expence of Health and Happiness.

It is generally understood, that Silver is the peculiar Wealth of *Peru*; and the *Spaniards* usually talk, as to Gold Mines, of those that are to be found in *Chili*; but, notwithstanding this, there are one or two Wishing-places for Gold in the South Part of *Peru*, near the Frontiers of *Chili*. About the Year 1709. there were two surpassing large Lumps of Virgin Gold found in one of these Places, one of which weighed thirty-two Pounds complete, and was purchased by the Count de *Moncloa*, then Viceroy of *Peru*, and presented to the King of *Spain*; the other was shaped somewhat like an Ox's Heart; it weighed twenty-two Pounds and an half, and was bought by the *Corregidor* of *Arica*.

Africa. To find these Lavadotes, or Washing-places, they dig in the Corners of a little Brook, where, by certain Tokens, they judge the Grains of Gold to lie. To assist in carrying away the Mud, they let a fresh Stream into it, and keep turning it up, that the Current may find it along. When they are come to the Golden Sand, they turn off the Stream another Way, and dig with Mattocks; and this Earth they carry upon Mules to certain Basons, joined together by small Channels; into these they let a small Stream of Water, to loosen the Earth, and carry all the gross Part away. The *Indians* standing in the Basons, and throwing out all the Stones, the Gold at Bottom is still mixed with a black Sand, and hardly to be seen, till it be farther cleared and separated, which is easily done. But these Washing-places differ; for, in some, there are Gold Grains as big as Bird-shot; and in one, belonging to the Priests near *Valparaiso*, some were found, from two or three Ounces to a Pound and an half Weight. This Way of getting Gold is much better than from the Mines; here is no need of Iron Crows, Mills, or Quicksilver; so that both the Trouble and Expence are much less. The *Crolians* are not so curious in washing their Gold, as the People in *Europe*; but great Plenty makes them careless in that and many other Articles.

15. It would be needless to attempt in this Place a Description of the large Kingdom of *Chili*, because it has been already done by many Authors: All that is designed here, is to give such a Representation of it, as may enable the Reader to comprehend the Nature of its Trade, the Manner in which it is connected with the general Commerce of *Peru*, by which the Wealth drawn from it is transmitted to *Europe*. It is in Length, from North to South, about 1200 Miles, the Breadth of it very uncertain; the Air is very temperate and wholesome, unless rendered otherwise by pestilential Exhalations, that are most common after Earthquakes, to which this Country is very subject. The Winter Rains, during the Months of *May, June, July, and August*, are excessively heavy; but then, for eight Months together, they have, generally speaking, fine Weather. The Soil is prodigiously fertile, where it admits of Cultivation; such Fruit-trees as are carried thither from *Europe*, come to the greatest Perfection; so that the Fruit is coming forward all the Year; and it is common to see Apple-trees in that Situation, which we so much admire in Orange-trees; that is to say, with Blossoms, Apples just formed, green Apples, and ripe Fruit all at the same time. The Valleys, where-ever they have any Moisture, wear a perpetual Verdure; and the Hills are covered with odoriferous Herbs, very useful in Physic. There are Trees of all sorts, and fit for every kind of Use; inasmuch that, independent of its Gold Mines, *Chili* might be well accounted one of the richest and finest Countries in the Universe. And, indeed, there are some Places in it, which are as beautiful as any thing the warmest Imagination can paint: For instance, the Town of *Cochimbo*, in Lat. 30° South, a short Mile from the Sea, standing on a green rising Ground, about ten Yards high, which Nature has regularly formed like a Terrace, North and South, in a direct Line, of more than half a Mile, turning at each Side to the Eastward. The first Street makes a delightful Walk, having the Prospect of the Country round it, and the Bay before it; all this is sweetly placed in a Valley ever green, and watered with a River; which, taking its Rise from among the Mountains, flows through the Vales and Meadows, in a winding Stream, to the Sea.

But notwithstanding all these Advantages, this vast Country is very thinly inhabited; inasmuch that, through its whole Extent, there are scarce five Towns that deserve that Appellation, and but one City, which is that of *St. Lago*; throughout all the rest there are only Farms, which they call *Ejencias*, so remote from one another, that the whole Country, as I have been informed from good Hands, cannot raise 20,000 Whites fit to bear Arms, and particularly *St. Lago* 2000; the rest are all *Mestizos*, *Nulatos*, and *Indians*, whose Number may be three times as great, without including the friendly *Indians* beyond the River *Bibio*, who are reckoned to amount to 15,000, whose Fidelity, however, is not much to be depended on. The Trade of this Country is chiefly carried on by Sea, and is,

at present, rather in a declining than flourishing Condition. The Port of *Baldivia* was formerly very famous, on account of the very rich Mines of Gold that were in its Neighbourhood, which are now, in a great measure, disused; so that it is only kept as a Garrison, and serves in this respect to *Peru*, as the Fortresses on the *Barbary Coast* do to *Spain*, viz. to receive Malesactors, who are sent thither to serve against the *Indians*. All the Trade of that Town consists in sending ten or twelve Ships a Year to *Peru*, laden with Hides, tanned Leather, salt Meat, Corn, and other Provisions, which are to be had here in great Plenty.

The Port of *Concepcion* is more considerable, by reason of their Commerce with the *Indians*, which are not subject to the Crown of *Spain*. These *Indians* are of a Copper Colour, have large Limbs, broad Faces, and coarse black Hair. The Nation of the *Puelches* differ somewhat from the rest, because amongst them there are some pretty white, and who have a little Colour in their Cheeks, which is supposed to be owing to their having some *European Blood* in their Veins, ever since the Natives of this Country revolted from the *Spaniards*, and cut off most of their Garrisons. They preserved the Women, and especially the Nuns, with whom they cohabited, and had many Children, who have a sort of natural Affection for their Mother Country; and, though they are too proud to submit to the *Spaniards*, yet they are not willing to hurt them. These People inhabit that Ridge of the Mountains which the *Spaniards* call *La Cordillera*; and, as the Manner of Trading with them is very singular, it may not be amiss to give an Account of it.

When the *Spanish* Pedlar, or walking Merchant, makes a Tour into this Country, he goes directly to the Cacique, or Chief, and presents himself before him without speaking a Word: The Cacique breaks Silence first, and says to the Merchant, Are you come? Then he answering, I am come. What have you brought me? replies the Cacique, I bring you, rejoins the *Spaniard*, Wine (A necessary Article) and such a thing. Whereupon the Cacique falls not to say, You are welcome. He appoints him a Lodging near his own Cottage, where his Wives and Children, bidding him welcome, each of them also demand a Present, which he gives, though never so small: At the same time the Cacique, with the Horn-trumpet which he has by him, gives notice to his scattered Subjects of the Arrival of a Merchant, with whom they may trade: They come and see the Commodities, which are Knives and Axes, Combs, Needles, Thread, Looking-glasses, Ribbands, &c. The best of all would be Wine, were it not dangerous to supply them therewith, to make them drunk; for then they are not safe among them, because they are apt to kill one another. When they have agreed upon the Barter, they carry the Things home without paying; so that the Merchant delivers all without knowing to whom, or seeing any of his Debtors: In short, when he designs to go away, the Cacique orders Payment by founding the Horn again; then every Man honestly brings the Cattle he owes; and, because these consist of Mules, Goats, and especially Oxen and Cows, he commands a sufficient Number of Men to conduct them to the *Spanish* Frontiers. By what has been said may be observed, that as much Civility and Honesty is to be found among these People, whom we call Savages, as among the most polite and well-governed Nations.

That great Number of Bulls and Cows, which are consumed in *Chili*, where abundance are slaughtered every Year, comes from the Plains of *Paraguay*, which are covered with them. The *Puelches* bring them through the Plain of *Tapapapa*, inhabited by the *Pehobiquies*, or unconquered *Indians*, being the best Pass to cross the Mountains, because divided into two Parts, of less difficult Access than the others, which are almost impassable for Mules. There is another, eighty Leagues from *La Concepcion*, at the burning Mountain, called *Silla Pelada*, which now and then calls out Fire, and sometimes with so great a Noise, that it is heard in the City; that Way the Journey is very much shortened, and they go in six Weeks to *Buenos Ayres*. By these Communications, they generally make good all the Herds of Beeves and Goats, which they slaughter in

Chili by Thousands, for Tallow and Lard, made by trying up the Fat and the Marrow of the Bones, which, throughout all *South America*, serves instead of Butter or Oil, not used by them in their Sauces: The Flesh they either dry in the Sun, or in the Smoke, to preserve it instead of salting, as is used in *France*. These Slaughters also afford the Hides, and especially the Goat-skins, which they dress like *Morocco* Leather, by them called *Cordovanes*, and sent to *Peru* to make Shoes, or for other Uses. Besides the Trade of Hides, Tallow, and Salt-meat, the Inhabitants of *La Concepcion* deal in Corn, with which they, every Year, lade eight or ten Ships, of forty or fifty Tons Burden, for the Port of *Calao*; besides the Meal and Biscuit they supply the *French* Ships with, that take in Provisions there to proceed to *Peru*, and to return to *France*. All this would be considerable for so fine a Country, since, if the Land were well improved, it is so extraordinary fertile, and so easy to till, that they only scratch it with the Plough for the most part, made of one single crooked Branch of a Tree, drawn by two Oxen; and, though the Grain is scarce covered, it seldom produces less than an Hundredfold: Nor do they take any more Pains in procuring their Vines to have good Wine; but, as they know not how to glaze the Jars they put it into, they are fain to pitch them, which, together with the Taste of the Goat-skins, in which they carry it about, gives it a Bitterness like Treacle, and a Scent, to which it is hard for Strangers to accustom themselves. The Fruit grows after the same manner, without any Industry, on their Part, in Grafting: Apples and Pears grow naturally in the Woods; and, considering the Quantity there is of them, it is hard to comprehend how these Trees, since the Conquest, could multiply, and be diffused into so many Parts, if it is true, there were none before, as they affirm. The Mines of *Quilegoza* and *Quilacura* lie within four Leagues of this Port, and afford vast Quantities of Gold; and the *Estancia del Re*, or King's Farm, which is also at no great Distance, is by very far the most plentiful *Lavadero*, or Washing-place, in all *Chili*, where there are sometimes found Lumps of pure Gold of a prodigious Size. The Mountains of *La Cordillera* are reported to be a continual Chain of Mines, for many hundred Miles together; which is so much the more probable, because, hitherto, scarce any of these Mountains have been opened, but vast Quantities of Metals have been found in them, particularly Copper, remarkably fine, of which all the Artillery in the *Spanish West Indies*, or at least in the South Seas, are cast.

There is another considerable Port in *Chili*, and, indeed, the most considerable of them all, which is that of *Valparaiso*, which is esteemed one of the best Harbours in the South Seas. It lies upon a River, fifteen Leagues below *St. Iago*, the Capital of *Chili*. To this Port all the Riches of the Gold Mines behind it, and on every Side, are brought, particularly from those of *Tiltil*, which are immensely rich, and lie between this Port and the City of *St. Iago*. The Gold here is found in a very hard Stone, some of which sparkles, and betrays the inclosed Treasure to the Eye; but most of it has not the least Sign of Gold, but appears to be an hard harsh kind of Stone, of very different Colours, some white, some red, some black. This Ore, broken to pieces, is ground in a Mill, by the Help of Water, into a gross Powder, with which Quicksilver is afterwards mixed: To this Paste they let in a sharp Stream of Water; which having reduced it to a kind of Mud, the earthy Particles are carried off by the Current, and the Gold and Quick-silver precipitated, by their own Weight, to the Bottom: When this Mud has settled a little into a sort of Paste, they put it into a Linen Bag; strain it very hard, by which Operation the Mercury is driven out, or at least the greatest Part of it; and the Remainder they evaporate by the Help of Fire; so that they have all the Gold together in a little Wedge, like a Pine-apple, and thence it derives its Name of *Pinna*. In order to clear the Gold from the Silver it is first impregnated with, the Lump must be run; and then they know the exact Weight, and the true Fineness; it is not done any otherwise there. The Weightiness of the Gold, and the Facility of its making an Amalgama, or Paste, with the Mercury, makes the Dross immediately part from it: This is an Advantage the Gold-miners have

over those of Silver; they every Day know what they get; whereas the others sometimes do not know it till two Months after, as has been said in another Place. According to the Nature of the Mines, and the Richness of the Veins, every Caxon, or fifty Quintals, that is, Hundred-weight, yields, four, five, or six Ounces: When it yields but two, the Miner does not make good his Charge, which often happens; but he has also sometimes good Amends made him, when he meets with good Veins; for the Gold Mines are, of all Mines, those which produce Metals the most unequally. They follow a Vein, which grows wider, then narrower, and sometimes seems to be lost in a final Space of Ground. This Sport of Nature makes the Miners live in Hopes of finding what they call the Purse, being the Ends of Veins, so rich, that they have sometimes made a Man wealthy at once: And this same Inequality sometimes runs them; which is the Reason, that it is more rare to see a Gold-miner rich than a Silver-miner, or of any other Metal, though there be less Expence in drawing it from the Mineral, as shall be said hereafter. For this Reason, also, the Miners have particular Privileges; for they cannot be sued to Execution on civil Accounts; and Gold pays only a twentieth Part to the King, which is called *Cose*, from the Name of a private Person, to whom the King made the Grant, because they used before to pay the fifth, as they do of Silver.

On the Descent of this Mountain, there runs, during the Winter, or rather during the rainy Season, a pretty brisk Stream of Water, which, passing through the Gold Ore, washes away abundance of that rich Metal, as it ripens and breaks from its Bed: And therefore, for about four Months in the Year, this is accounted one of the richest *Lavaderos* in *Chili*; and very well it may, since there are sometimes found Pellets of pure Gold, of the Weight of an Ounce. At *Palma*, which is but four Leagues from *Valparaiso*, there is another rich *Lavadero*; and every-where, throughout the Country, the Fall of a Brook, or Rivulet, is attended more or less with these kind of Golden Showers, the richest of which fall into the Laps of the Jews, who farm or purchase abundance of Mines and *Lavaderos*, which are wrought for their Benefit by their Servants. The Soil about this Port is excellent rich and fruitful; so that forty Ships a Year, from hence to *Lima*, laden with Corn; and, notwithstanding their prodigious Exportation, that Commodity is so cheap here, where Money at the same time is so plenty, that an *English* Bulhel may be bought for less than three Shillings; and it would be much cheaper still, if all the Country could be cultivated; but, as they have dry Weather for eight Months together, this is impossible, except where there are Brooks, or little Rills, running from the Mountains through the Vales.

But before we close this Subject, it may not be amiss to observe, that there is a great Trade carried on through all *Chili*, from the North Seas, by the Way of *Buenos Ayres*, by which they receive some *European* Goods, and a very large Balance of Silver in Return for their Commodities. This is, perhaps, the greatest Inland Commerce in the World; for the Road, from *Buenos Ayres* to *Parisi*, is 1500 Miles; and, though the Distance from *Valparaiso* be not above 160 Leagues more, yet it is crossed with greater Difficulty than all the rest; because they are obliged to pass that Chain of Mountains so often mentioned, called by the *Spaniards* *La Cordillera*, which Passage can be attempted only during the three first Months in the Year, when the Passages are open, and the Merchants come from *Mendoza*, which is an Inland Town, about 300 Leagues from *Buenos Ayres* to the City of *St. Iago*, which lies at the Opening of the Passes from the *Cordilleras*. This Journey through the Mountains takes up six or seven Days, tho' not above sixty Leagues; and the Passengers are obliged to carry with them not only Provisions for themselves, and their Attendants, but Provender likewise for their Mules, the whole Road being a continual Tract of Rocks and Precipices, and the Country round about so excessively barren, and withal so exposed to Snows in the Winter, that there is no living in it. The Journey, however, from *St. Iago* to the Mines, and from thence to *Valparaiso*, is equally safe and pleasant; and the Merchants have nothing to trouble them; but the Fear of staying too long, and losing their Passage

Home through the Mountains; in case of which, they must be obliged to stay at least nine Months longer than they intended. The Reader will observe, that this Journey, from *Buenos Ayres* to *Valparaiso*, is directly athwart the whole Continent of *South America*; which is a clear Proof of the mighty Extent of the *Spanish* Empire, which reaches here from Sea to Sea. On the Whole, though a very great Part of the Country be absolutely desert; and, in some Places where it is inhabited, the People do not acquire great Fortunes; yet, unquestionably, the *Spaniards* settled in *Chili* acquire annually immense Riches; since, as we observed before, the Country is very thinly peopled, and all the Gold that is drawn from the Mines, or *Lavadores*, must be divided amongst them.

Yet it is agreed, that a great Part of the Inhabitants do not seem to abound in Wealth; which, however, may be very well accounted for, if we consider, that such as deal in Cattle, Corn, and the other Product of the Country, acquire but moderate Fortunes; and such as are concerned in Mines are frequently ruined, by launching into too great Expences about them. But, after all, such as are easy in their Circumstances, and, in consequence of that Ease, retire to *St. Iago*, live in such a Manner, as sufficiently demonstrates the Riches of *Chili*, since all their Utensils, even those that are most common, are of pure Gold; and it is believed, that the Wealth of that City alone cannot fall short of 20,000,000. Add to this, that the Gold Mines are continually increasing, and it is only for want of Hands that they are not wrought to infinitely more Advantage, those already discovered, and neglected, being sufficient to employ 40,000 Men. It may be likewise observed, that the Frauds practised for deceiving the King increase daily; and, as they measure the Riches of the *Spanish West Indies* by the Standard of the King's Revenue, this must necessarily make them appear poorer than they really are. We have an Instance of this in the Mines of *Potosi*, which are said to yield less Silver than they did formerly; yet, on a Computation for fifty Years, the King's annual Revenue from those Mines has amounted to 220,000 *Pesos* of thirteen Rials and a quarter each; which shews, that the annual Produce of these Mines, for which the legal Duty is paid, amounts nearly to 2,000,000 Pieces of Eight *per Annum*; and we may boldly assert, that the King does not receive above half of what is due: And from this Example we may judge of the rest.

16. As the Policy of the *Spaniard* consists chiefly in endeavouring, by all Ways and Means possible, to restrain the vast Riches of those extensive Dominions from passing into other Hands, so the Knowledge that other Nations have of the mighty Wealth of these Countries, on the one hand, and of the great Demand for *European* Manufactures among their Inhabitants, on the other, has excited almost every Nation in *Europe* to practise all Methods possible, in order to gain a Share in them; and thus with so good Effect, that it is very doubtful, whether any considerable Part of the Riches in the *West Indies* centres among the Inhabitants of *Old Spain*. This will appear very plainly to the Reader, if he considers, that, in the first Place, the very Trade carried on from *Spain* is of much greater Consequence to Foreigners, than to the *Spaniards* themselves; for, as there are few Commodities, and scarce any Manufactures in that Country, the *Spanish* Merchants at *Cadiz* make up their Cargoes out of what they purchase from other Countries; or rather, the Merchants at *Cadiz* are barely Factors for the *English*, *French* and *Dutch*, whose Goods they send to *America*, and pay them out of the Returns made by the Plate Fleets. We are likewise to consider, that *Spain* itself is a Country very ill provided with some of the Necessaries, and most of the Conveniences, of Life; so that prodigious Sums of Money are annually exported to obtain these.

But, besides such Drawbacks as those we have mentioned, to which the *Spaniards* would willingly submit, there are many others, which they are forced to endure: For Instance, all the Negroes they employ in their Plantations, where every kind of Labour is done by this sort of People, all these Negroes, I say, are purchased from Foreigners, particularly the *English* and *Dutch*, at a very large Expence every Year. Add to this, that, under Pretence of humbling them with Negroes, there is a clandestine Trade

continually carried on from one End to the other of their Coasts upon the North Sea.

But, in the South Seas, they were pretty safe from every thing, but the Depredations of Pirates, till the late general War on account of the Succession to the Crown of *Spain*; which created a new kind of contraband Trade, unknown to former Times, I mean, that of the *French* Interlopers, who carried vast Quantities of Goods directly from *Europe* into the South Seas, which, till then, scarce any other Nation had attempted. This was always looked upon with an evil Eye by the Court of *Madrid*, as being directly repugnant to the Interest of *Spain*, and the Maxims of their Government; but, as there were many Circumstances at that time, which rendered this a kind of necessary Evil, the *Spaniards* were forced to submit to it, I mean by *Spaniards*, the Inhabitants of *Old Spain*; for, as to the *Creolians*, if they had *European* Goods, and at a cheaper Rate, it would not give them much Concern who took their Money for them. The History of these *French* Interlopers is, in itself, so important, as well as curious, and is, at the same time, so very little known in *England*, that there is good Reason to believe, it will prove acceptable, and be well received; the rather because it is composed of such Remarks, as fell immediately within my own Sphere of Observation, and as to the Truth of which I am myself a competent Witness: So that every thing may be taken for certain, that I advance. I may have Leave also to put the Reader in mind, that, having a great Intimacy with most of the Officers I mention, this enabled me to come at many Particulars, which another Man, in my Situation, would have been absolutely unacquainted with. But to come to Matters of Fact:

The Town of *St. Malo* has always been noted for good Privateers: They annoyed the *English* and *Dutch* very much in their Trade during the whole Reign of *King William*, and Part of *Queen Anne*; and, tho' some religious-headed People fancy, that Money got by Privateering won't prosper, yet I may venture to say, the *St. Malomen* are as rich and flourishing, as any People in *France*. It has thrived so well with them, that all their *South Sea* Trade is owing to their Privateering; and, in the late War, they were so generous, that they made several free Gifts to *Lewis XIV.* And tho' our *English* Admiralty always kept a stout Squadron cruising in the *Atlantic Ocean*, yet we never took one of their *South Seamen*: And my Reason for it is this; they kept their Ships extremely clean, having Ports to cateen at, which we did not think of; for, in the Year 1709, when I belonged to her Majesty's Ship the *Leo*, being one of the Convoys that Year to *Newfoundland*, we saw upon the Coast a fifty-gun Ship, which we chased, and soon discovered she was *French* built; but the crowded Sail, and left us in a very little time. She had just been cleared at *Placentia*: And we might well wonder to find such a Ship in that Part of the World; but were afterwards informed by *French* Prisoners, that she was a *Frenchman*, and bound to *St. Malo*, with two or three Million of Dollars aboard; and was taken so trim, that she trusted to her Heels, and valued nobody. By their going so far to Westward, and Northward withal, they had the Advantage of Westerly Winds, which seldom failed of sending them into Soundings at one Spirt, if not quite home. But, since *Placentia* has been yielded to *Great Britain*, they now make use of *St. Catharina*, the *Island Grande* on the Coast of *Brazil*, and *Martimco* in the *West Indies*.

This Trade succeeded so well, that they all fell into it, sending every Year to the Number of twenty Sail of Ships. I saw myself eleven Sail together on the Coast of *Chili* in the Year 1721, among which were several of fifty Guns, and one that could mount seventy, called the *Flores-de-Luce*, formerly a Man of War. This being contrary to the *Affiento* Treaty between *Spain* and *Great Britain*, Memorials were frequently presented at *Madrid*; and the King of *Spain*, willing to keep to his Engagements with *England*, resolved to gratify the *British* Court, by detroying the *French* Trade to the *South Sea*. His Catholic Majesty knew there was no Way to do this, but by a Squadron of Men of War; he knew also, that few of his own Subjects were acquainted with the Navigation of *Cape Horn*, or could bear the extreme Rigour of the Climate; therefore was obliged to make

make use of Foreigners for this Expedition; and three of the four Ships that he sent, were not only manned with, but commanded by, *Frenchmen*. The first was the *Glaucoster*, of fifty Guns, and 400 Men, formerly an *English* Man of War; the second was the *Ruby*, fifty Guns, 350 Men, another *English* Ship; the third was a Frigate of forty Guns, and 200 Men; the fourth was the *Leon Franco*, a *Spanish* Man of War of sixty Guns, and 450 Men, all *Spaniards*. Monsieur *Martinet*, a *French* Gentleman, was Commodore of this Squadron, and commanded the *Pembroke*; M. *de Jonquiere* had the *Ruby*; the rest I do not recollect. The *French* performed their Navigation well enough, and got round the Cape, tho' it was in the Middle of Winter; but the last of the four, manned by the *Spaniards*, after several Attempts, could not weather Cape *Horn*, but was forced back to the River of *Plate*, where, at last, the Ship was unfortunately cast away. It looks as if, by this Expedition, an Experiment was made to see, if the *Spaniards* were hardy enough to go through this terrible Navigation; but, as they have little or no Trade into any cold Climates, and must do hard Work, it is no Wonder they failed in that Point. The *Biscaguers*, indeed, are too ill fitted enough; and, if the *Leon Franco* had been manned with them, she had certainly doubled the Cape with the other three Ships; but the *Spaniards*, in general, even for a long time, their Possessions in *America*, are grown to be almost insensible, that it would be hard to find an enterprising Company able to perform that Navigation.

The principal Advantage of the Trade of *Chili* this Way is to manifest, that his Catholic Majesty is obliged by Treaties to that out all Nations, as well as the *English*, though he makes nothing of it himself; and it is very rare, that a *Spanish* Ship has gone by Cape *Horn*: From hence only the extraordinary Price all *European* Goods fetch at *Chili* and *Peru*. I have been told at *Lima*, that they are often sold at 500 per Cent. Profit; and, I may say, the Goods that are carried from *France* by Cape *Horn*, are in themselves 50 per Cent. better than those that go in the Flota of *Callao* or *Antibagena* or *La Vera Cruz*; because the former are delivered fresh and undamaged in six Months, whereas the other are generally eighteen Months before they can come to *Chili*; so that the *French*, during the importing Trade, made their Markets, furnished themselves with Provision, and got Home again in twelve or fourteen Months time. When *Martinet* arrived at *Chili* in the Year 1717, with the King of *Spain's* Commission to take of duty all his Countrymen that were trading clandestinely, he soon found Employment for his three Ships, the fourth being lost, as I have observed; and of fourteen Sail of *St. Malouen*, there was but one escaped him, the being land-locked in a little Creek, where she lay hid, till he was got to Leeward; after which she weighed, and came away with half her Cargo unfold. Though all this was to execute the Orders of his Catholic Majesty, and doing a sensible Pleasure to the *British* South Sea Company, yet the Circle *Spaniards*, especially the trading Part of them, found themselves almost ruined by it, because it hindered the Circulation of Money, and spoiled Business, so that they could not bear the Sight of the *French* Men of War, though they liked the *French* Merchants well enough; On the other hand, the *French*, imagining they had done the *Spaniards* effectual Service, expected, no doubt, civil Treatment in Return, while they staid among them. But, as soon as *Martinet* brought his Prizes into *Callao*, and the *Frenchmen* had received their proper Shares, they, forgetting the old Antipathy of the *Spanish* to the *French* Nation, gave themselves extravagant Airs ashore by dancing and drinking; and this still incensed the *Creolians* more against them, who called them Cavaleros and Renegades; for falling foul on their own Countrymen. From one thing or other, their mutual Quarrels grew to high, that the *Frenchmen* were forced to go in Parties about *Lima* and *Callao*, the better to avoid public Outrages and Affronts. At last, a young Gentleman, who was English on board the *Ruby*, and Nephew to Captain *Jonquiere*, was shot from a Window, and the Malfactor took Refuge in the great Church at *Callao*. *Martinet*, *Jonquiere*, and the other Captains, joined in a Petition to the Viceroy, that the Murderer might be delivered to Justice: But the Viceroy, being an

Archbishop, would by no means violate the Rights of the Church to humour any body: Upon which they ordered all their Men on board by public Beat of Drum, and brought their three Ships, with their Broadside, to bear on the Town of *Callao*, threatening to demolish the Houses and Fortifications, unless the Assassin was delivered up or executed. All this Blustering could not prevail with the Viceroy to give them any Satisfaction, though they had several other Men killed beside that Gentleman.

At last, *Jonquiere*, unwilling to use Extremities, and no longer able to bear the Place where his Nephew was murdered, obtained of his Commodore *Martinet*, that he might make the best of his Way home. About this time, many Fathers, and many rich Passengers, were got together at the Town of *Concepcion*, intending, when this Squadron came by, to take their Passage to *Europe*; for they knew, that all Ships bound to Cape *Horn*, must touch at *Concepcion*, or thereabouts, for Provision: Herein *Jonquiere* got Heart of his Commodore, having now the Advantage of so many good Passengers in his Ship; for, as the King of *Spain* has no Officers at *Concepcion* to riggle the Money shipped there, so it is unknown what vast Sum those Passengers and Missionaries put on board the *Ruby*. By this Opportunity, the Padres and others gained two great Advantages; first, they were spared the Trouble of a Voyage to *Panama* or *Acapulco*, and thence traversing the Continent to *Porto Bello*, or *La Vera Cruz*, where they must have had their Coßers visited, to see if the Indulto to his Majesty was fairly accounted for; and then they saved every Shilling of that Indulto, or Duty, because the *Ruby* touched first in *France*, where no Cognizance at all was to be taken of the Affair; so that as they saved one Moneys of the Duty payable in *America*, they likewise got clear of the other payable in *Spain*; because the Ship arrived in *France*, where they put all the Money on shore. There was on board the *Ruby*, besides these Passengers Money, a considerable Sum arising to his Catholic Majesty for the Confiscation of the thirteen Interlopers taken by this Squadron; all which together, I was well informed, amounted to four Million of Dollars aboard that Ship. What a fine Booty then we missed through *Sketeen's* villainous Conduct! For, when this same Ship the *Ruby* touched us in the Harbour of *St. Catherine's*, *Jonquiere's* Company, as I said before, were so infirm, that he had not more than sixty found Men out of four hundred, so that he really was afraid of us, and would not even find his Boat ashore to the Watering-place, where we kept Guard, and our Coopers and Sailmakers were at Work, till he had first asked our Captain Leave: Nor is this at all strange; for, understanding we had a Comtort, he was ready in Pain all the time he was there, lest the *Savages* should come in.

After Captain *Martinet* had cleared the Coast of *Peru* and *Chili* of his Countrymen, he sent Express with the News, to *Madrid*, his Brother-in-Law Monsieur *de Grange*, who came by Way of *Porto Bello*, *Jamaica*, and *London*. Upon delivering his Message, the King asked him what he should do for him: *De Grange* humbly begged, that his Majesty would please to give him the Command of a Ship to go round Cape *Horn* again. He accordingly had the *Zelrin* of fifty Guns; He came first to *Callao*, where the Ship was getting ready; but was surprised to find a cold Reception from the *French* Merchants, and other Gentlemen of his Acquaintance residing there; for, as there were Merchants of several Nations interested in the Ships taken and confiscated as aforesaid, they unanimously looked upon him, and all the *French* aboard that Squadron, as their Betrayers, for serving a foreign Power to the Prejudice of their own Countrymen; and, while he expected a valuable Cargo configned to him, being what he aimed at, he found himself quite disappointed; for no Man would give him the Value of a Dollar with him. Captain *Intergal*, who was then at *Callao*, seeing this, made him a considerable Proposal for the Privilege of going his next Office, and to take aboard what Goods he could procure in his own Name. *De Grange*, being a little embarrassed, accepted the Offer, and obtained at Court a Commission for him as second Captain. Accordingly they manned the *Zelrin* chiefly with *French* and some *English* Seamen; and got very well

round the Cape, when our two Privateers, *Success* and *Speedwell*, were known to be in the South Sea, this same Ship *Zelein* was one of those Ships commissioned by the Viceroy of Peru to cruise for us. *Fitzgerald* sold his Goods at Lima to great Advantage, where he continued, while *de Grange* served as Captain under the Admiral *Don Pedro Miranda*, who took myself, and the rest of us, Prisoners. The *St. Malo* Merchants, though great Sufferers by so many Confiscations, were not much discouraged; for, in the Year 1720. we found the *Solomon* of *St. Malo*, carrying forty Guns, and 150 Men, at *Hilo*, on the Coast of *Chili*, with several small *Spanish* Barks at her Stern. She sold her Cargo in six Weeks time, got a fresh Supply of Provision, and left the Coast without Interruption; for by this time *Martinez's* Squadron was all come away.

The *Solomon's* good Success gave such Encouragement, that they immediately fitted out fourteen Sail together; all which arrived in the South Sea in the Beginning of the Year 1721. three of whose Commanders, having the best Acquaintance among the Creolians, quickly sold their Cargoes, and returned Home: About this time the People of *Lima* judged the *English* Privateers were gone off the Coast, at least, that no more Hostilities would be committed, because of the Truce made between the two Crowns; whereupon the three *Spanish* Men of War, fitted out to cruise on us, were ordered against those fresh Interlopers. I was on board the Advice-boat, called the *Flying-Jib*, in Company of the said three Men of War, when they came up with the eleven Sail of *St. Malo* all together, on the Coast of *Chili*; and, instead of firing upon them, the *Spaniards* joined them like Friends. The *French*, expecting to be attacked, kept all together in a Line, and dared the Men of War to begin. This to me seemed new, that three such Ships, purposely fitted for this Cruize, should, on their own Coast, decline doing their Duty; for, had they proved too weak, they had Ports of their own under their Lee. In short, the Men of War contented themselves to watch the others Motion, keeping them always in Sight; and, when any of the *French* Ships steered to the Shore, the *Spaniards* sent their Pinnace, or Long-boat, with the *Spanish* Flag hoisted; the Sight of which effectually deterred the Creoles from treating or trading with the *French*. Thus they made shift to hinder all these Ships disposing of their Goods, except they were met by chance at Sea, and sold some clandestinely. At length, being tired out, the *Frenchmen* got Leave to take in Provision, and went Home with at least half their Goods unsold. Notwithstanding all this, and the severe Edicts against it in *France*, I know they still continue the Trade, tho' privately; nor is it probable they will ever leave off to lucrative a Commerce, except some other Power prevent it.

17. I shall now return to my own Affairs, and the manner of my Return from that Part of the World: A plain Relation of which will be a sufficient Refutation of what Captain *Skelvocke* has been pleased to deliver to the World in his Book upon this Subject. I have acknowledged the kind Reception I met with from the Admiral of the South Seas, and the Reason of his treating us so civilly. In eleven Months time that I continued at *Lima*, I think it is but Justice to mention the several Favours I received, particularly from Don *Juan Baptista Palacio*, a Native of *Peru*, and Knight of the Order of *St. James*, who came weekly to the Prison while we were there, and gave Money to all of us, according to our several Degrees. Captain *Nicholas Fitzgerald* procured my Inlargement by becoming Security for me, gave me Money, and furnished me with Necessaries thenceforward to the time of my Departure; and gave not only me, but twenty more, a Passage to *Cadiz* in a *Spanish* Advice-boat, called the *Flying-Jib*; Mr *Prestak*, our Surgeon's Mate, acted as Surgeon in her, receiving Wages; and so did all our Men, being released from Prison to assist in navigating the Vessel home. For my part, as I was well treated, I would not eat the Bread of Idleness, but kept my Watches, as other Officers: And, pray, where is the Harm of all this? Though *Skelvocke* had the Stupidity to call it Treason; and it must appear a very malicious Charge, as well as an ignorant one, that a Man has been driven amongst the Enemy, he must be called a Traitor for being used kindly, and accepting

his Passage back again; that, because I was not murdered there, I ought to be executed at home! This is *Skelvocke's* great Christianity, and good Conscience! But, to return to what I was saying: On my Arrival at *Cadiz*, Captain *John Evers*, of the *Britannia*, gave me his Table, and my Passage to *London*; where, upon my Arrival, and the Representation of my Hardships, the following Persons of Honour and Distinction were pleased to express their Concern for my Sufferings, by making me a Present each of ten Guineas; viz. *Edward Hughs*, *William Sloper*, and *Alexander Straban*, Esquires; *Samuel Winder*, *Beak Winder*, *Henry Neal*, and *John Barnes*, Merchants; *Humphry Thayer*, and *Thomas Strathfield*, Druggists. This afforded me the Satisfaction of seeing, that such as were the best Judges, had a proper Idea of the Miseries I had sustained, and approved of the Manner in which I behaved, the only Consolation which I could receive in the Circumstances in which that unfortunate Voyage left me. The fair Account I have given of Facts, the Detail of my Proceedings in the *Spanish West Indies*, and the Account of what I observed worthy of Notice during my Stay in those Parts, will, I hope, acquit me in the Opinion of every candid and impartial Reader, from the Aspersions thrown upon me in *Skelvocke's* Book; and acquire me, what every Man would wish to have, the Approbation of him, to whom, of his own free Choice, he submits the Censure of his Actions.

As we have already given the Reader our Remarks on the Voyages of *Clipperton* and *Skelvocke*, we shall not detain him very long in our Remarks upon Mr. *Betagh's* Narrative, which contains, however, some things of such Importance, that they cannot be slipped over without Reflection. In the first Place, let it be observed, that he has fully shewn us the Navigation round *Cape Horn* is no such dangerous, no such wondrous Voyage, as some People would make it. If twenty Ships from *St. Malo* could perform it in one Year, and not a single Vessel either shipwrecked, or put back, what should hinder, not an *English* Fleet, but an *English* Fleet, from doing the same, if the Service of the Nation required it? Must it not inspire Strangers with a very indifferent Opinion of the Skill and Courage of *English* Seamen, when they hear, that our stoutest Ships take Shelter, like the *Spaniards*, whom we so much despise, in the River of *Plate*, or in the Ports of *Brazil*, and relinquish, as impracticable, a Voyage which a *French* Privateer can make at Pleasure? Will it not affect the Heart of every *Englishman*, who has not lost all Jealousy for his Country's Honour, when he thinks of this? And can he be blamed, either for thinking, or expressing his Sentiments, by any who have the least Concern for their Country's Glory? Could *Drake* and *Candish*, in an *English* Bark, do more than an *English* Man of War can now? What Days then were those of *Elizabeth*, and how just that ignominious Sarcasm of a *French* Wit; *That the English of the present Age are no more comparable to their Ancestors, than the Italians to the old Romans!* Happy, happy, for us, that we have still a SEAMAN left, who has wiped off this Reproach, and shewn, that the Race of Heroes is not extinct; that we have a *Drake* and *Candish* (I will not add more, for Fear of offending his Modesty) in Admiral *Anson*, that great, that fortunate Commander, who enjoys this singular Felicity, in an Age of Sloth, Luxury, and Corruption, that his EASE is the Result of his LABOUR, that his TITLE is the Reward of his MERIT, and that his WEALTH does HONOUR to his COUNTRY!

But to return from so pleasing a Digression, to what is more immediately our Subject. We see, from Captain *Betagh's* Account, with how much Ease the *French* carried on a prodigious Trade to the South Seas, at a Time when the Appearance of an *English* Ship there was considered as a Prodigy. Had the *French* any more Right than we, or can the Catholic King give them a better Right, if he would? If the preserving to *Spain* an exclusive Right to the Riches of *America* be, as sometimes it has been, asserted to be the common Interest of all the *European* Powers, but especially of the *English* and *Dutch*, How come the *French* to invade it without exciting that Jealousy, the Fear of which is pretended to be a Motive sufficient to hinder us from making such an Attempt? Are the Riches of the *Indies*, in

French Hands, less dangerous to the Peace of *Europe* than in ours? Would they more affect the Balance of Power, would they create greater Cause for the States of *Europe* to be uneasy? Surely not. It is plain, that *France* does not seek Wealth with a View to make her People rich and happy, but from quite a different Motive, to extend the Power of her King, to increase the Number of his Subjects, and to gain an Influence destructive to the Freedom of other Nations. If the Wealth of the *Indies* must, by the Violence of War, or any other Accident whatever, be diverted from falling into the *Spanish* Coffers, why should it not come immediately into the Hands of the *English* and *Dutch*?

Amongst them it would not be expended to the Detriment of others, but for the general Good of their Subjects: It would be spent in improving their native Countries, in converting every Waste, every Common, into a rich and plentiful Field of Husbandry of some sort or other, and in making the Owners of Land at Home, the better for what was acquired at their Expence Abroad. The Maritime Powers have often supported, but never attempted to subject, their Neighbours; it is not agreeable to the Maxims of their Government; nay more, it is absolutely repugnant to those of their Interest. Such States as depend upon Commerce, must always desire to see other Nations as free as themselves; because there can be no Safety nor Profit in dealing with Slaves. Such as send their Goods into Countries under arbitrary Government, run a double Hazard, that of feeling the Weight of such a Government, and of meeting with no Returns, if they should escape the first Danger. It is impossible, that Slaves should be rich; Captain *Betagb's* Remarks are a Proof of it: He shews us, that the hapless *Indians* of *America* are miserable in the finest Climate, starving in the richest Soil, and indigent amongst Mines of Gold and Silver, where they work, nay, work themselves to Death, for the Benefit of others. He shews you, that this is the Result of the Tyranny of the *Spanish* Government; but I will shew you more, the *Indians* in *America* are what *Europeans* must be, if the Influence of *France* prevails.

Of all Nations, therefore, the *French* have the least Title, though hitherto they have had the best Luck, in becoming Interlopers in the South Seas. My Arguments have the same Weight, whether it be War or Peace. We are wanting to ourselves, if, while we contend with them in *Europe* for our Liberties, we suffer them to draw from the *West Indies* the Means of Oppressing. They have, since the present War began, had recourse to the old Method: The *St. Malomen* are again abroad; and it is the great Scheme of the *French* Ministry, to supply the vast Expences of the present War, from the same Source which supplied the last; which renders our Attention to this Account so much the more necessary. But, in a time of War, we have it certainly in our Power to deprive them of this, as of most other Resources. We can send our Frigates thither, as well as the *Saint Malomen*; and we might make it worth the while of our Merchants to send Ships laden with proper Goods under their Convoy. This would have a double Effect; it would annoy the Enemy, and enrich our own People: It would answer the Question that the *Spanish* Trader put to Captain *Shelvocke*, viz. Whether the *British* Merchants were all asleep, or too rich to mind Trade any longer, that they suffered the *French* Pedlars to run away with the Wealth of *Chili* and *Peru*? It was a wide and well-put Question; for when we are at War with *Spain*, when all the Effects of Treaties are suspended on her Side, it is certainly not lawful only, but a Piece of Justice due to ourselves, to repair that necessary Loss of Trade, which is the Consequence of a *Spanish* War, by protecting another sort of Trade, a Trade in the South Seas on *English* Bottoms.

In time of Peace we have a Title, by Treaties, that never can expire, or lose their Force, to exclude the *French* from all Commerce in the South Seas: I say, that these Treaties can never expire, or lose Efficacy, because, when his Catholic Majesty shall disclaim those Treaties, he must, at the same time, renounce his Title to the Crown of *Spain*, at least with regard to us, and the rest of the contracting Powers in the Treaty of *Utrecht*. It is by the Concessions

made in that Treaty, that he is known to, and acknowledged by, us, and the other contracting Powers, for King of *Spain*; and whenever he breaks through these Concessions, or attempts to rescind them, he loses all Title to his Crown under that Treaty, which is the very Title that he professes to hold by, and without which he would be no more than a Viceroy to his Neighbour and Nephew the King of *France*. It is for this Reason, and because, as prudent Men, they cannot help foreseeing to how low a State there Country must be reduced, that the *Spanish* Grandees always insist upon the same Point. For tho' *Spain* should lose the Money equally both ways; that is to say, should have the same Balance of Trade against her by the ordinary Method of sending Goods from *Cadiz*, and by the extraordinary Method of their being carried by the *French*, with the Permission, or at least by the Connivance, of the *Spanish* Court; yet *Spain* would greatly suffer by such a Commerce: Because, in the first Place, tho' she is not absolute Mistress of the Money, she still enjoys the Influence that results from the Distribution of it, which, to People in the Condition the *Spaniards* now are, is of very great Consequence; to say the Truth, it is of the last Consequence; for Influence is a Species of Power, and almost the only Species of Power the *Spaniards* can manage with Effect; and there is Reason therefore to believe, that whenever this Crown is in Earnest inclined to a Peace, she will not hesitate a Moment at renewing this Exclusion of the *French*, which is as much her Interest, as it is ours, and a Point of such Consequence to other *European* States, that it never can be given up, while they are resolved to maintain their Liberty and Independency.

I know very well, that it may be objected, that the *French* Trade to the South Seas ruined itself; that is to say, the *French* Interlopers sent such vast Quantities of *European* Goods into the *Spanish West Indies*, that at last they would not sell for prime Cost; and that this induced the *French* Court to comply with repeated Remonstrances from that of *Spain*, and to concur in prohibiting this illicit Trade. But this is very fallacious Reasoning; for, let us consider first, what it was induced the *French* to overtrade themselves; and this, on all Hands, is allowed to be the prodigious Gain of the first Traders. These then were all safe; the *French*, as a Nation, had possessed themselves of so many Millions of Silver, in Return for Goods and Manufactures; that is to say, they were possessed of an immense Mass of solid, intrinsic, and permanent Treasures, instead of the Bubbles, Laces, and other Bubles, they had sent abroad. This was their Profit, and we know how much they must be the better for it. Let us next consider their Loss: They exported a vast Quantity of the same kind of Goods, and received for them no more than they were worth. This might, and possibly did, affect the Merchants; but the *French* Nation gained as before, not so much indeed, but still it was Gain. The Goods were converted into Silver; and those who were employed in making up these Goods, remained possessed of what they received for them: Will any Man say, that this was not a mighty Advantage to *France*? Did it not make the People in general richer? Did it not make Money circulate? Did it not put it in the Power of the *French* King to raise Taxes? And, which is of the greatest Consequence to us, and to them, did it not contribute to the Support and Improvement of the *French* Manufactures, and the sinking and destroying that of this Nation, with which the *Spaniards* in *America* would have otherwise been, by the War of *Cadiz*, supplied? This plainly shews, what a prodigious Benefit resulted to *France* by this Trade, and how great a Loss we suffered thereby; for tho' it be certainly true, that the *Spaniards* in *America* will always prefer *English* Goods, when they get them, yet this Preference is out of the Case, when the Market is only stocked with *French*. Besides, when Things came to that Pass, which the *French* complain of, that their Goods produced little or no Profit, we suffered much more than they; for the *Spaniards* had their Hands full of *French* Goods, for which they had paid at some Rate or other, because brought in *French* Bottoms to their very Door; while our Goods, by the Way of *Cadiz*, and upon which the *Spaniards* received Freight, lay rotting in our Factors Warehouses, and would fetch no

Price at all. It must be confessed, that these Reflections have not much to do with the Voyage round the World; but they have a very near Relation to the great End of all our Reading, all our Study, all our Endeavours, I mean the Service of our Country. I look upon it as the strongest Recommendation of Captain *Betagh's* Book, that he neglects no Opportunity of reporting what may be useful, amongst the many Things he tells us that are curious and entertaining. There is an Air of Sincerity in what he says, that must affect every Reader; and the Readiness with which he acknowledged the Obligations he received, is sufficient to convince us, that he was far from being of a surly, or an envious Disposition. The Civilities he received from the *Spaniards*, are very handsomely repaid by the Candour with which he owns, and the Gratitude he expresses for them. His Account of their Conduct at Sea appears perfectly just and natural; he commends the Generosity of their Officers, and censures that want of Skill and Courage, which are the Reproach of their Seamen in the *West Indies*. His Characters of the *French* are equally curious and pleasant; and, I dare say, he has done them all the Justice they deserve, by representing them as the most self-interested People in the World.

I had well-nigh slept over a very useful and important Hint, given by *Betagh* in his Account; which, however, deserves particular Notice. It is, as to the great Use the *French* made of *Placentia*, while it was in their Hands, by carrying in thither their Homeward-bound South-Sea-men to clean and caren them; so that afterwards they were in no Pain for the *English* Men of War that might be upon the Coast. This shews the Usefulness of the *French* Settlements in those Parts in a new Light, and fully informs us of the Importance of defending *Newfoundland*, and *Noxa Scotia*, at any rate, as the only means of hindering them from practising the same Thing again. One cannot help wondering, on the Perusal of the Naval History of *Great Britain*, to find this Excuse of clean Ships perpetually offered, to save the Reputation of our Cruisers, either in single Ships or Squadrons: And, indeed, Mr. Secretary *Burdett* tells us plainly, that the Reason why our Men of War seldom did what was expected from them, was owing to their being foul Ships, whereas the Enemies Vessels were always clean. In the Course of that War, there was scarce an Instance of any of these *St. Malo* Ships taken; which is very surprising, since the Fleets, from most of our Colonies, fell often, either in whole, or in part, into the Enemies Hands.

But if these lucky Escapes of theirs depend, as they certainly do, on their Ships being cleaner, and in better Trim, than ours, then it is plain this Advantage may be taken from them, if we can prevent their getting into any Ports, where they may clean or caren. *Placentia* is at present in our Hands, and cannot be lost, but through the want of Attention. We have, most certainly, a Naval Power sufficient to protect all our Colonies; and, at the same time, to spare Ships enough to cruise off the Island of *St. Catharines*, or the *Rio Grande*, on the Coast of *Brazil*, in order to prevent the *French* from careening there, where they meet with much less Conveniency, than in any Ports of their own. In the Month of *January* last, they lost one of their best outward-bound Ships, at the Mouth of the last-mentioned River; she was called the *Marchioness d'Antin*, sailed from *Cadiz* last *October*, and was lost on *New Year's-day*; her whole Crew, consisting of 400 Men, were drowned, together with twenty-four Jesuits, and fourteen Missionaries, that were on board her, the Value of her Cargo being about a Million of Pieces of Eight. She was one of the first *French* Ships licensed by the King of *Spain* since the present War began. A small Squadron, cruising here at the proper Seasons of the Year, might be sure to meet with the *French* Ships, going out or coming home; and either way they must prove rich Prizes, since *European* Goods come to a quick Market on the Coast of *Brazil*, and the taking such an Interloper, saves a Voyage to the South Seas.

As I have mentioned the Loss of this *French* Ship in her Voyage from *Cadiz* to the South Seas, it may not be amiss to inform the *English* Reader of the Distinction between the *St. Malomen*, that proceed with Licences, and the Inter-

lopers. There is a regular and constant Correspondence carried on between *St. Malo* and *Cadiz*. The *French* Ships carry thither all sorts of Goods of the Manufacture of that Kingdom, from the rich Brocades of *Lions* and *Tours*, to the slight Stuffs of *Amiens*. All these are sent to the *West Indies* in the regular Way; and, in about eighteen Months, the *St. Malomen* carry home the Return from *America*, consisting of Gold, Silver, Cochineal, Indigo, Dying-woods, and other rich Commodities, to the Amount of from seven to twelve Millions, or 600,000 *l.* of our Money. In times of War, the *Spanish* Merchants are glad to employ some of these *St. Malomen*, which are always stout large Ships, and well equipped, to go to *Buenos Ayres*, or any other Port, with a Cargo from *Cadiz*; and these are the licensed Ships. But, as this Intercourse gives the Captains of these *St. Malomen* a perfect Knowledge of the *West India* Commerce, they frequently go thither, without Licence, on their own Account; and this is what is properly called Interloping.

There are, however, a third Sort of Ships that go from this Port; viz. such as are fitted out directly from *St. Malo* for the South Seas, by Permission of the *Spanish* Court, which is but rarely granted, as being directly against Treaties. There has been of late, indeed, a Scheme projected in *France* for establishing an *Affiento* Company at *St. Malo*, to whom the Commerce of our South Sea Company, as settled by the *Utrecht* Treaty, is to be transferred; but, perhaps, before the End of the War, we may oblige the *Spaniards* to think of some other Expedient. All this, however, contributes to shew, how fast the *French* are growing upon us in this Branch of Trade, and how much it improves and increases their Seamen, at the same time that it raises their Reputation for maritime Skill, while there are Hundreds of People, at this single Port, capable of carrying a Ship round *Cape Horn*, which, to the *Spaniards*, and some other Nations, appears so frightful a Navigation. But the best way, beyond Question, to deal with the *St. Malomen*, is to send some Men of War, or Privateers, into the South Seas, with Tenders, laden with Goods and Provisions, which must necessarily produce great Returns from their Trade, and their Prizes, at the same time that it would facilitate the making Discoveries in these Seas, and exercise our Sailors in a sort of Navigation, which, through Disuse, is almost forgotten; for, by an unaccountable Piece of ill Luck, since our creating a Company for carrying on that Commerce, there has scarce been an *English* Ship, except those mentioned in the two last Sections, seen in the South Seas; so that there are various Reasons for renewing this kind of Navigation, which could not be any-where so properly laid open, as at the Close of these Remarks of Captain *Betagh*, who seems to have had the same thing in View, and to have written them with no other Design, than to induce his Countrymen to struggle for a Share in that Trade; with the Value of which, and the Possibility of improving it, his long Stay in those Countries had made him so perfectly acquainted.

We have now run intirely through the History of the Circumnavigators, so far as they have been hitherto published in our Language; having also made use of such foreign Assistance as was necessary to render them more complete. The regular Order in which they lie, enables the Reader to take in at once the Whole of this kind of History, so as to be able to digest and compare their Discoveries, and proportion the Praises due to every one of those great Commanders. He will, doubtless, make many Observations that have escaped me; but there are some few, relative to this general History, which incline me to conclude this Section, with recommending them to his Notice: In the first Place, I think it very memorable, that this Art of sailing round the Globe, was not, as some other Arts are, the Effect of a lucky Accident, and struck out by Chance, but proceeded from the judicious Observation of that great and wise Man *Columbus*, who, for practical and useful Knowledge, was scarce ever equalled, and never exceeded. *Mogellan*, who perfected what the other had begun, and passed through that Strait, which will preserve his Memory as long as the World lasts, did not proceed by Guess, or at Random, but pursued his Discovery with fewer Difficulties than some have met with, who have followed him.

All these Discoveries had something in them noble and surprising; they excited a generous Emulation among all great Minds of that Age all Europe over; inasmuch that we every-where hear of Attempts of that kind, since to that we may refer the Attempts for finding a North-east and a North-west Passage to the Indies, which, in Fact, would have proved but a new Route for a Circum-navigating, being all founded on the same Principle, that there are Passages from one Ocean to the other at both Poles. While this Spirit prevailed, the Practice of Navigation grew to Perfection, and these long Voyages were performed more happily, than they have been since; the Reason of which I take to be this, that, in those Days, Men of great Abilities made such Voyages in Person; whereas they now content themselves with forming Systems in their Closets: And, except the late famous Professor Halley, we have scarce heard of any Man of acknowledged Capacity, who has ventured on a long Voyage, merely to compare the Notions derived from Theory with the Result of Practice.

After the establishing the Trade of the *English* and *Dutch* to the *East Indies*, exclusive Companies came in, which put a Stop to Discoveries, and to the nobler Expeditions in Search of new Lands, as the great *de Witte* long ago observed in his admirable Maxims of the Policy of *Holland*. From this time Disputes about Trade commenced; and, instead of extending their Commerce, by finding out fresh Markets, all the great Maritime Powers have been employed in circumscribing each others Trade, and even in ruining one another. This Evil, indeed, has been accidentally productive of fresh Discoveries, by the Means of Privateers, who, not by Design, but through Force, have become Circum-navigators; which is the Reason, that most of their Discoveries have been lame and imperfect, as being made by Men more intent on Plunder, than on acquiring Fame, or on rendering Service to the Public. By degrees, this Humour of confining Trade to particular Nations, and to particular Companies of Men in each of those Nations, has increased to such a Degree, that Proposals for new Discoveries have fallen into Dispute, and such

as turned their Heads that way treated as Projectors; which, with us, is looked upon as only a softer Name for Madmen.

We have a notable Instance of this in the Conduct of the *French Court*, about the Year 1666, when they rejected an Offer made them by two of their own Subjects, for the Discovery of *Hudson's Bay*; by which Accident that rich Trade fell into our Hands, and has been a Bone of Contention between the two Nations ever since. There is, however, Reason to believe, that this kind of Temper is wearing out; and that, in most trading Nations, the true Spirit of enlarging Trade, by the finding new Markets, begins to revive. The late Czar *Peter* was the first that endeavoured to promote the Commerce, not only of his own Subjects, but of Mankind in general, by causing a strict Search to be made into all the hitherto unknown Countries, bordering upon his wide Empire, of which we shall have occasion to treat in another Place. His Example excited a like Disposition in the *Swedes* and *Danes*; and here, in our own Country, some Projects of the same Nature have been better received, than formerly they were.

But the latest and most remarkable Voyage that has been for Discoveries, is that which will be the Subject of the next Section, performed by the Direction, and at the Expence, of the *Dutch West India Company*; which is a very singular Instance of a right Application of a Company's Powers; and it would be a very happy thing, if some great Companies, in another Country, would follow their Example. Most certain it is, that, in all Countries, this was the original Motive to their Institution, as appears by Charters, and other public Acts; and, indeed, many of them profecuted this Design for some time, and made considerable Progress that way, till the Love of Money, and Over-sollicitness of Power, and the Desire of providing for their own Dependents at the public Expence, got the better of those old-fashioned Principles, and taught Men to vermish, with fair Pretences, the Pursuit of private Advantage, tho' at the Expence of the common Good.

SECTION XX.

*An Account of Commodore Roggewein's Expedition, with three Ships, for the Discovery of Southern Lands, under the Direction of the Dutch West India Company, * from an original Journal.*

1. An Account of the original Scheme of this Voyage, and the Discoveries proposed thereby.
2. The Fleet sails from the Texel, July 16. 1721.
3. Account of their Passage to the Island of Teneriffe.
4. The same continued till their Arrival on the Coast of Brazil.
5. Description of the City of St. Sebastian, of the Country round it, and Things remarkable therein.
6. Other Occurrences in the Voyage.
7. Discoverers of a new Island, called *Belgia Australis*.
8. Passage through the Straights of *Le Maire* into the South Sea.
9. Adventures in those Seas, and Description of the Island of *Juan Fernandez*.
10. Reflections on the Nature and the Importance of the intended Discoveries, with the Reasons which render it probable, that such Discoveries may be made.
11. Discovery and Description of a new Island, with an Account of its Inhabitants.
12. Arrival at *Badwater Island*, and Discovery of five other Islands.
13. Shipwreck of the African Galley.
14. Discovery and Description of nine new Islands.
15. Resolution taken to quit this Coast, and the Reasons for and against it.
16. Continuation of the Voyage to *New Britain* and *New Guinea*.
17. Five new Islands discovered and described.
18. Description of *New Britain*, and of several Islands in its Neighbourhood.
19. Unlucky Dispute with its Inhabitants, and the Consequences of that Dispute.
20. A large Account of that Country, and its Inhabitants.
21. Description of the Islands of *Moa*, and *Arimoa*, with an Account of their Inhabitants.
22. Discover an Archipelago, to which they give the Name of the *Thousand Islands*.
23. Description of the Islands *Boro* and *Baton*.
24. Arrival at the Island of *Java*, and Description of the Coast.
25. Three Vessels seized at *Batavia*, and their Companies made Prisoners.
26. The present State of *Batavia*, with a large Account of its Inhabitants.
27. The Manner in which the Affairs of the Dutch Company are administered in the East Indies.
28. The Distribution of their Government into all its Parts, Ecclesiastical, Civil, and Military.
29. Farther Description of *Batavia*, and the Island of *Java*.
30. Description of the Island of *Ceylan*, or *Ceylon*, its Government and Inhabitants.
31. The present State of *Amboyna*, with an Account of the Clove Trade.
32. The Island of *Banda*, its Government and Inhabitants, described.
33. A distinct Account of the four Governments of *Macassar*, *Ternate*, *Malacca*, and of the Cape of *Good Hope*.
34. Description of the four Divisions of *Coromandel*, *Surat*, *Bengal*, and *Persia*.
35. The *Commanderies* of *Malabar*, *Gallo*, *Java*, and *Bantam*, described.
36. An Account of

* There is not any Account of this Voyage in our Language.

the Residences of Cheribon, Siam, and Moca. 37. The State of the Company's Commerce in the Island of Borneo, and in the Empire of China. 38. The Author's Arrival at the Cape of Good Hope, with a Description of the Country belonging to the Dutch East India Company. 39. Departure from the Cape of Good Hope, and Occurrences in the Voyage. 40. Description of the Island of St. Helena, and the Ascension. 41. The Author's safe Arrival in the Texel, July 11. 1733. 42. An Account of a Suit commenced between the East and West India Companies, on account of this Voyage, and the Issue of it. 43. Remarks on this Expedition.

1. **T**HERE is, perhaps, no Country in the World, where Commerce is either more honourable, or more profitable, than in *Holland*, or where, at the same time, there is a greater Respect shewn to it by the Government; for, as the Republic chiefly subsists by Trade, every thing that relates to it, is considered as an Affair of a public Nature, which deserves the quickest and strictest Attention. The great Companies in *Holland*, are, as in other Parts of *Europe*, destructive to Trade, considered in some Lights; but very necessary to it, when considered in others. The *West India* Company was originally erected in the Year 1621. and held, by an exclusive Charter, the Commerce on the Coast of *Africa*, from the Tropic of *Cancer*, to the Cape of *Good Hope*; and, in *America*, from the South Point of the *Newfoundland*, by the Straights of *Magellan*, or of *le Maire*, to the supposed Strait of *Anian*, including both the North and South Seas. The Directors were divided into five Chambers, and consisted, in the Whole, of Seventy-two Persons, out of whom eighteen were again chosen for the Administration of the Company's Affairs, to whom a nineteenth was added by the States General. The Affairs of this Company were once in so flourishing a Condition, that they were not only on a Level, but, in some measure, superior to the *East India* Company, which was owing to the happy Success of their Affairs at Sea; for, in the Year 1629. their Admiral, *Peter Haines*, took the *Spanish* Plate Fleet, which was immensely rich, and brought it into *Holland*. They made themselves Masters of the greatest Part of *Brazil*, and were so considerable, that the great Count *Maurice* of *Najac* did not think it beneath him to accept of a Commission from this Company, to be Governor General of *Brazil*; which, however, after it had cost them immense Sums to defend, they at last lost.

The Term of their Charter was limited to twenty-four Years, which, in 1647. being expired, was renewed for twenty-five more; during which time, their Affairs grew very perplexed, so that towards the Close of that Term, they were content, that it should be dissolved; and, in the Year 1672. a new Company was erected, with pretty near the same Powers, by Letters Patent from the States General; which Company has subsisted ever since with great Reputation. The Capital of this new Company consists of six Millions of *Florins*, which make about six hundred thousand Pounds of our Money; and the Limits of their Authority are, the Coasts of *Africa* and *America*; that is to say, all the Establishments of the *Dutch*, in those Countries, are under their Direction; so that whoever proposes any new Scheme, for the Improvement of Commerce in these Parts, must necessarily apply himself to that Company.

It was this that induced Mr. *Roggevein*, a Gentleman of great Parts and Penetration, to frame a Project for the Discovery of that vast Continent, and the many Islands which are supposed to lie in the Southern Part of the Globe, and of which the World has hitherto had but very imperfect Notices from others; which Project, together with the Reasons in Support of it, and a Plan for carrying his designed Discovery into Execution, he presented to the *East India* Company in 1696. by whom it was very well received, and he was assured of having all the Assistance he could desire or expect, as soon as the Affairs of the Company would permit: But the Disturbances that soon after followed, put a Stop to the Company's good Intentions; and, before any thing could be done, Mr. *Roggevein* breathed his last. He was a Gentleman of the Province of *Zealand*, who, from his Youth, had addicted himself to mathematical Studies, and had a true Zeal for the service of his Country; of which he gave many Proofs, and perhaps none, that, in his own Judgment, was so

great as the Framing this Scheme; at least, we have Reason so to believe, since, upon his Death-bed, he recommended it to his Son, and exacted from him a Promise, that, at a Time convenient, he would endeavour in Person to execute what himself had proposed. The young Gentleman, after his Father's Decease, applied himself to his Studies with the utmost Vigour, and made so happy a Proficiency in them, as to qualify himself for the Post of Counsellor in the Court of Justice at *Batavia*, whither he went, and resided there many Years.

2. After his Return from the *East Indies*, in which he had acquired an handsome Fortune, he bethought himself of performing the Promise he made his Father on his Death-bed; and, in the Year 1721. presented a Memorial to the *West India* Company, sitting forth, that, at such a Time, his Father had proposed discovering the Southern Continent and Island; which Proposal they had been pleased to accept, and he was now ready to perform. The Company received this Memorial with the same Readiness they did his Father's; and, as their Affairs were now in better Order, they acquainted Mr. *Roggevein*, that they would immediately give Directions for equipping such a Squadron as might be necessary for executing his Design. It consisted of three Ships; viz. The *Eagle*, of 36 Pieces of Cannon, and 111 Men, commanded by Captain *Job Cofer*, on board of which embarked the Commodore: The *Tientoven*, of 28 Pieces of Cannon, and 100 Men, commanded by Captain *James Boeman*: The *African* Galley, of 14 Pieces of Cannon, and 60 Men, commanded by Captain *Henry Rossmbalt*. This small Squadron sailed from the Port of *Amsterdam* the 16th of *July*, in the same Year; and arrived happily, in the Space of 36 Hours, in the *Texel*. Before we proceed farther, it is requisite, that I should acquaint the Reader, that we stand indebted for the Journal of this Voyage to the Gentleman who commanded the Land Forces that were on board the Commodore, whose Name I am not at Liberty to mention, or that of another Person, who made the Voyage, and from whom I have received considerable Assistance. The Nature of the Expedition is sufficient to recommend it to the Perusal of the Curious; and the many remarkable Particulars it contains, with regard to the State of the *Dutch* Company's Affairs in the *Indies*, will, I dare say, justify what I think myself obliged to say of it; that it is at once as instructive and as entertaining a Piece in its kind, as I ever perused.

3. As soon as the Ships could be provided with every thing necessary for so long a Voyage, they sailed, which was on the 21st of *August* 1721. with a fair Wind; which, however, changed the next Day, and obliged them to spend three Days beating through the Chanel. They continued their Course to the South-west, in order to gain the Coast of *Barbary*; but were prevented by a great Storm, which did them much Damage. To this succeeded a stark Calm; during which, the Waves ran Mountain-high, as having not yet lost that Agitation into which they had been put by the late high Wind. This brought upon them new Mischiefs; one of their Vessels lost its Main-top and Mizzen-mast, and, in the Commodore, the Main-sail Yard came down, with such Force, as wounded several People upon Deck, and all this from the Rolling of the Ship; so that our Author concludes, that, in the *Spanish* Seas, there is infinitely more Danger from the sudden Calm, which usually follows a Storm, than from the wildest Tempest; inasmuch that he positively declares, that, in the *Baltic*, and other Northern Seas, in which he had often sailed, he never met with any Tempest comparable to this; which he attributes to the Deepness of the Sea, supposing, that the greater the Mass of Water, the longer, when once put in Motion, that Motion lasts. But, as this is a Conjecture only,

only, I presume to offer the Reader another Reason; which is, the Nearness of the Shores, or opposite Coasts, in the *Mediterranean*; for, as we see in a Basin that has been stook, the Motion of the Water remains after the Basin stands still; so it is plain, that the Violence of the Motion is greater in proportion to the Smallness of the Vessel, because the Strokes from the opposite Side are repeated quicker, and the Water has less room to play.

After two Days the Wind freshened, and they began to recover the Fatigues they had sustained: During that Space of Time, they continued to steer South-west, in hopes of gaining the *Canaries*; and diverted themselves with observing the Manner in which the Flying-fish endeavours to escape its Enemies, the Albicore and Bonitos. The Flying-fish is not much bigger than an Herring, and the Fins it flies with, are, for Strength and Texture, not unlike the Wings of a Bat. The *Dutch* Sailors esteem them very good Food, and, therefore, are never better pleased, than when they meet with Plenty of them. The Bonito is a Fish about two Feet long, of a greyish Colour, and finely streaked from Head to Tail; the Flesh dry, hard, and of a disagreeable Taste. The Albicore resembles the Bonito in every respect, except its Size; for the Albicore is, generally speaking, five or six Feet long, and weighs sometimes 150 lb. They saw likewise some Water-fowl, and particularly Teal, which the Seamen always account a Sign of the Land's being near.

At last, finding themselves in the Latitude of 28°, they expected they should have seen very soon some of the *Canary* Islands; when, of a sudden, the Man at the Mast-head informed them, that he discovered a Sail, which carried *English* Colours. As soon as they drew near enough to discern her Motions, they perceived that she struck her Colours, and bore away from them. In about an Hour's time she appeared again, with four Sail more in her Company, which sometimes carried white, and sometimes black, and, at last, red Colours; which gave Reason to suspect, that they were Pirates. The Commodore immediately made the Signal for a Line of Battle; all Hands were employed in making a clear Ship, in filling Grenades, and preparing every thing that was necessary for the ensuing Engagement, in which they were so lucky as to have the Advantage of the Wind. The Pirates, observing this Disposition, immediately put themselves in a fighting Posture; and began by striking their red, and hoisting a black Flag, with a Death's Head in the Centre, a Powder-horn over it, and two Bones across underneath. They likewise formed a Line; and, in an Hour's time, the Action began. The Pirates fought briskly for some time, supposing them to be Merchantmen; but, after a Dispute of two Hours, and perceiving that the Commodore sought to board the Vessel with which he was engaged, they spread all the Canvas they could, and crowded away as fast as possible. The *Dutch* Commodore cried out, as soon as he saw them bearing away, *Let the Rascals go*: In which he strictly obeyed his Instructions; for all the *Dutch* Ships, belonging to their *East* and *West* India Companies, have strict Orders never to give Chase, but to pursue their Course. It is true, that sometimes their Captains neglect this Order; but it is at their Peril, and they are always made answerable for the Consequences on their Return home.

This unlucky Accident cost the Squadron a great many Men. In the Commodore they had four killed, among whom was a Quarter-master, and nine wounded; and there were seven killed, and twenty-six wounded, in the other two Ships. The Carpenters likewise found themselves fully employed in stopping Leaks, and repairing the Damage they had received. As soon as this was done, which was by the 15th of *November*, they continued their Voyage, and arrived in Sight of the Island of *Madeira*, which afforded a beautiful Prospect at a Distance. There is good Anchorage on its Coasts, where Wood and Water may be conveniently taken in; but, notwithstanding this, the *Dutch* *East* and *West* India Ships rarely touch there. In the Neighbourhood of *Madeira*, they saw a desert Island, which is much frequented by the Pirates, who wood and water there, and obtain other Refreshments. They had likewise a Sight of the Pike of *Teneriff*, at the

Distance of about twenty-five Leagues. This is generally esteemed the highest single Mountain in the World, which is the Reason that Geographers place there the first Meridian; a Custom, however, from which many of the Moderns vary, but with which the Globe and Map-makers in *Holland* constantly comply, believing, that, from the Regularity, they derived great Advantages. On the other hand, the *French* and *English*, of late Years especially, incline to fix the first Meridian in their respective Maps at *Paris*, or at *London*; which creates great Confusion in the Longitude of Places, when this Distinction is not previously taken notice of by the Writers who make use of such Maps. King *Lewis* the XIIIth of *France* endeavoured to prevent this Inconvenience by an Edict, dated *April* 22, 1634, by which he directed the first Meridian to be placed in the Island of *Fero*, the most Westward of the *Canaries*.

From these Islands they continued steering South-west, for those of the Cape de Verde, of which they had likewise a Sight. This Cape Verde, or Green Cape, is a Point in *Africa*, or rather a Mountain, shooting forth into the Sea, which *Protony* calls *Aslinarium*. It was discovered by the *Portuguese* in the Year 1474, in the Reign of *Alphonso* the Vth; it is bounded by the two Rivers *Gambia* and *Sanega*, formerly called *Stachiris* and *Garcia*. To the West Side of it there is an Island full of an infinite Number of Birds, whose Eggs are commonly gathered by the Mariners. This Cape is a dangerous Landing-place, because of a great many Rocks about it sunk under Water, therefore it is better to land three Leagues off it, though in a Place uninhabited, and which affords nothing but Wood and Stones. The Continent is peopled by Negroes, who trade with all Nations, and speak several Languages, especially *French* and *Portuguese*. The most Part of them go naked, having only a Piece of linen Cloth about the Middle, to cover their privy Parts: But the Noblemen and Grandees clothe themselves a little better; for they wear a long Garment of Calico, made like a Woman's Skirt, and striped with Blue: They hang little square leather Bags upon their Arms and Legs, but we could not learn of them what they put in these Bags: They wear Necklaces made of Sea-horses Teeth, with glass Beads between; on their Heads they wear a Cap of Calico, striped with Blue. They are a pudent and wise People, employing themselves in cultivating the Ground, which bears good Rice, and other Things, sufficient to maintain them: The richer sort among them keep Cattle, which are very dear in the Country, because there are but a few. Here are a great many good Blacksmiths; for Iron is much valued among them; and you find long iron Bars, forged like spears, which serve them for fishing, and ploughing the Ground: They make likewise several Sorts of Weapons, as Arrows, Darts, Javelins, &c. They have little or no Knowledge of Almighty God, except some of them, who converse with Christians. In general, what Religion they have, comes nearest to the *Mohammedan*; for they are circuncised. They are very lascivious Men, and may have as many Wives as they please, and Women are seldom satisfied with one Husband; but, above all, they love Strangers very passionately. The *Portuguese* who live there are free, and trade with all Nations, but have no Authority or Power, but over their Slaves and Servants. The Country is altogether under the Subjection of the Governors of each Town or Village, who row in little Boats to the Ships when they arrive, to make them pay the Custom.

They had at this time only a Sight of those People in their Boats; for, having the Advantage of a strong North-east Wind, they continued their Course for six Weeks, without coming to an Anchor, or handling a Sail. In this long Passage they had some Days in which the Heat was almost insupportable; and the Crew began to murmur excessively, on account of their being at short Allowance for Water, of which, they said, they had too little to sustain Life, especially considering the hard Labour they were obliged to undergo. This short Allowance produced soon after a very extraordinary Accident: One of the Swabbers, being exceeding thirsty, got down into the Hold, and pierced a Cask, which very unluckily proved to be Brandy, instead of Water; at which he pulled so heartily, that he

soon intoxicated himself to a degree of Madness. This Liquor made him quarrellome, and in this Condition he ran directly into the Cook-room, where he threw down a Pan of Grease; The Cook, not dreaming that the Fellow was drunk, laid in a pretty quick Tone, *You Rascal, I have a great mind to break your Neck. Say you so?* replied the Swabber; *and I will cut your Throat, if you speak another Word,* drawing his Knife as he spoke to him, and rushing upon him without the least Notice. Some of the Crew gathered about immediately, and endeavoured, as soon as it was possible, to get the Knife out of the Fellow's Hands, which at last they did, but not before he had drawn it twice or thrice across the Cook's Face. For this they drubbed the Fellow heartily, which he repented to such a degree, that, as soon as he got loose, he took up a Knife, and gave himself three or four Stabs in the Belly. The utmost Care was taken of him, till his Wounds were cured, in order to make him a public Example to the Ship's Crew, that such Accidents might be prevented for the future. After his Recovery, he was treated in the following manner. In the first Place, he was declared infamous at the Foremast, he was then thrice Keel-haled; then he had 300 Strokes upon the Buttocks; and, last of all, his Right-hand was fastened to the Mast with his own Knife. When he had stood in this Condition some Minutes, he was carried to the Fore-castle, and chained; where, for a certain Number of Days, he was allowed only Bread and Water, and, after all, put in Irons, till he could be set on shore in the first barren uninhabited Island they came to.

There happened nothing very remarkable besides, in this Passage, except that they saw several of the *Cape de Verde* Islands, in some of which, it is said, it never rains; and yet the Dew falls so copiously, that the Soil produces abundance of Herbs, and excellent Fruits. I cannot, adds the Author, say much as to this, but I think it so much the more probable, because we are acquainted with other Countries, where, it is certain, it never rains. For Instance, about the *Rio de Lagoa*, on the Coast of *Africa*, near the Tropic of *Capricorn*, where the *Christians*, who inhabit in that Neighbourhood, never remember to have seen Rain. In like manner, it never, or at least very rarely, rains in *Peru*, from *Cape Blanco* to *Coquimbo*. In *Egypt* also it rains very seldom; which, in my Opinion, is owing to the North-east and South-east Winds blowing constantly in their Turns. These Winds, as I apprehend, do not bring Vapours to humel, as those that attend a West Wind, but rather such as fall in Dew. It is very rare, on this Side the Line, that a South-east Wind brings any Rain; and, on the other Side, the North Wind blowing along the Line is warm, and has exactly the same Effects that a South Wind has with us. It is also observed throughout all *Africa*, that the Monsoons reign constantly the whole Year through; that is to say, the North-west blows six Months, and the other six Months the South-east; and it is also observable, that it is the West Wind that brings Rain. This Rain is often intermixed with Thunder and Lightning; from all which it seems reasonable to infer, that the South-east blowing constantly towards the North Pole, and the North-east blowing as constantly towards the South Pole, is the true and certain Cause why in some Parts of the World it never rains. But to leave these Speculations, which are, however, far from being useless, let us now return to the Thread of our Relation.

4. They continued their Voyage, till they approached the Line: The frequent shifting of the Wind incommoded them exceedingly; their Thirst increasing excessively at the same time, many of the Ship's Crew were down of the Scurvy; and when they met, as they sometimes did, with a Calm, when the Heat of the Sun was greater than ordinary, some of the Crew were quite distracted, others fell into high Fevers, and some had Fits like the Falling Sickness; most of them lost their Appetite through an excessive Thirst. Their fresh Water, as it grew low, not only stunk abominably, but was also full of Worms: Their salt Provisions were, in a manner, quite spoiled, and served only to turn their Stomachs, and increase their Drought. It is generally said, that, of all Torments, Hunger is the greatest; but these People apprehended that Maxim to be ill founded; and that, instead of Hunger, we ought to

infer Thirst, if we would be thoroughly acquainted with the utmost Misery incident to human Nature. About this time, their Cares were somewhat diverted, by an Accident which very much surpris'd them: They observed often, towards Evening, that the Sea appeared to be all on Fire, as if covered with flaming Brimstone: They took up several Buckets of Water when it was in this Condition, in order to examine it more closely; they then found it to be full of an infinite Number of little Globules, of the Size, Form, and Colour of Pearls: They observed farther, that they retained their Lustre for some time after they were held in their Hand; but that, when pressed between the Fingers, they discovered themselves to be nothing more than an earthy fat Substance like Mud: The most experienced Mariners on board confessed, that they had never seen any thing like it; and withal owned, they knew not what to make of it. The Author says, that he leaves it to such as are skilled in Physics, to explain and account for this Phenomenon; and, in order to give them some Assistance, he delivers this as his own Opinion, *viz.* that these Globules contain nothing, either of Sulphur or Salt-petre, as at first Sight they seemed to do; but are, in reality, nothing more than the phlegmatic and grosser Part of the Salts contained in the Water, concreted by the excessive Heat of the Sun in a calm Weather, and again broken and dispersed among the Water, by the Motion of the Winds and Waves; to which, perhaps, the Current of the Coast of *Guinea*, in the Height of which they saw the same Thing, might in some measure contribute.

At length they passed the Line, with the Loss only of a single Man, who died of an high Fever. When they arrived in the Latitude of 3° South, they met with the true Montoon, before which they bore away at a great Rate. In the Latitude of 5° , they had the Sun directly over their Heads; which casting then no Shadow, they were for some Days without making an Observation. In the Latitude of 6° South, they caught a great Number of *Dorados* and *Dolphins*. Our Author says, that, strictly speaking, these are the same Fish; that the *Dolphin* is the Male, and the *Dorado* the Female. There are some of them six Feet in Length, but not at all proportionable in Bulk; they appear in the Water excessively beautiful, their Skins shining as if streaked with Gold, but they lose all these fine Colours as soon as they are taken out of that Element. Their Flesh is very sweet and well-tasted, so that the Seamen always feast, so long as Plenty of this Sort of Fish is to be had. They likewise saw abundance of Sharks, many of which were ten Feet long; the Flesh of these Creatures is hard, stringy, and of a very disagreeable Taste; notwithstanding which, the Seamen very frequently hang them up for a Day or two in the Air, and then eat them; which Compliment the Sharks never fail to return, it, by any Accident, a Seaman comes in their Way, either dead or alive, and seem to attend their Ships for that Purpose.

They now drew near the Coast of *Brasil*, and passed by, though at a pretty good Distance, some of the uninhabited Islands that lie on the Coast, such as *Trinity Island*, and some others. Their Design was to have anchored at the Coast of the Island *Grande*; but, finding they were past it, they continued their Route, till they arrived off *Porto*, in the Latitude of 24° South, where they came to an Anchor. As soon as they arrived in Sight of *Porto*, some of the Ship's Company, of whom our Author was one, got into the Shallop, in order to go ashore, as well for the sake of getting Water, Wood, and other Refreshments, as in order to bury one of their Seamen. Before they could get on shore, they saw a Body of *Portuguese* well armed, moving along the Coast, and who appeared to have no other Design than to keep them from landing; and, as they drew nearer, they beckoned to the *Dutch* to keep off, threatening to fire upon them, if they attempted to land: But, upon shewing them the dead Body, they suffered them to land, and even shewed them a Place where they might inter it.

As the *Dutch* were very desirous of gaining some Intelligence, they asked a good many Questions about the Country; to which they could obtain no other Answer than this, that *Porto* was an Advance-port to *St. Sebastiao*,
out

not marked in the Chart; and that they were Inhabitants of *Rio Janeiro*, which lay about eight Miles off. The *Dutch* endeavoured to persuade them to go on board their Vessel; but they refused, fearing that they might be Pirates. This, to say the Truth, was no unreasonable Supposition, since such Vessels frequently appear on the Coast; and, under Pretence of getting fresh Water, land and pillage any of the little Towns that are near the Sea. About six Months before their Arrival there had been one there, the Crew of which were preparing to make a Descent; when, unluckily for them, a *French* Ship of Force arrived, and with one Broadside sunk her to the Bottom. It was believed she had near seven Millions on board her; and, as she sunk in thirteen Fathom Water, they had sent for Divers from *Portugal*, in order, if possible, to recover Part of her Treasure. Another, not long after, had the same Fate upon that Coast: However, with the warmest Intreaties, and the strongest Assurances possible, two of them were prevailed upon to go on board the *Dutch* Ship, where they were very kindly received, had Presents made them of Cloaths, which induced them to promise they would carry the whole Squadron into a safe Port; and they were as good as their Words, which was extremely acceptable to Men in their Condition, almost worn out with Fatigues, and, in a manner, destroyed for want of Liquids.

5. This Harbour of *Porto* affords good Anchorage, from six to eight Fathom Water. In entering it on the South-west, they had the Main-land on the Right, and a large Island on the Left. All the Coast, along which they sailed, appeared to be very high Land, intermingled with Mountains and Valleys overgrown with Shrubs. *Porto* lies in a pleasant Situation, but there were no Inhabitants there at this time. The Fish and Tortoises caught here were of an exquisite Taste, and very nourishing; so that most of the People, who were ill of the Scurvy, which, at the Time of their Arrival there, might be about forty, recovered very fast. After staying there two Days, in which Time they supplied themselves with Wood and Water, they weighed Anchor, and continued the same Course to the South-west; After sailing about six Leagues, and seeing many small Islands at a Distance, they found themselves in the Road of *St. Sebastian*. At the very Instant they entered the Mouth of the River, there arose a Storm, which blew with such Violence, that, for fear of being driven on the Rocks, they were forced to drop their Anchors, and wait the Return of the Tide. The next Day they weighed, entered the Port, and came to an Anchor before the Town; which they saluted three, with seven, five, and three Pieces of Cannon, but without receiving the least Answer, either because the *Portuguese* Guns were not in Order, or because the People were not very well pleased with their Arrival, as shrewdly suspecting, notwithstanding they hoisted a *Dutch* Flag, that they were very little better than Pirates. In order to remove these Doubts, the Commodore wrote a Letter to the Governor; informing him who they were, and desiring that he would furnish them with Cattle, Herbs, Fruits, Wood, and Water, for ready Money. He likewise desired, as a Matter of Favour, that his Excellency would be pleased to allow them a few Huts on shore, for the Refreshment of their sick Men. The Governor returned for Answer, that nothing of this Sort was in his Power, as he was subordinate to the Governor of *Rio de Janeiro*; that, however, he would dispatch an Express thither immediately, and hoped they would allow him Time to learn the Sense of his superior Officer. The *Dutch* Commodore was very far from being satisfied with this Answer; and gave the *Portuguese* Governor to understand, that, as he was very willing to deal with him for Money, so, if he could not obtain what he wanted by fair Means, he should be obliged to take it by foul, how much soever against his Inclination; but, having learned that there was a *Franciscan* Monastery in the Town, at the same time that he dispatched this Message, he sent to acquaint the Fathers with his Arrival, accompanied with a Present.

It happened very luckily for them, that, in this Monastery, there was one Father *Thomas*, a Native of *Ulrecht*, who immediately came aboard with several of the Monks. This honest Father was so delighted at the Sight of his

Countrymen, that he declared he should now die in Peace, having, for twenty-two Years, earnestly wished to enjoy this Satisfaction. The Commodore made him exceedingly welcome, and gave them whatever they desired for the Use of their Monastery. The Prior, who was of the Number of those that came on board, desired the Commodore to have Patience a little, till the Return of the Priests from *Rio de Janeiro*; and promised that he would use his utmost Interest with the Governor, in order to engage him to comply with the Commodore's Demands; so that they parted on both Sides very well satisfied with each other. In the mean time, the *Portuguese* came down in great Bodies, well armed, to the Coast; and posted themselves particularly in those Places where it was believed the *Dutch* Shallop might attempt to put her Men on shore. On the Approach of the Shallop, the *Portuguese* thought fit to fire upon them, by which one of the *Dutchmen* was dangerously wounded in the Shoulder; Thereupon the Boat's Crew returned the Compliment, by a general Discharge of their small Arms, by which two of the *Portuguese* were laid on the Ground; at the Sight of which, the rest made a precipitate Retreat, and the *Dutch*, landing immediately, filled what Water they had Occasion for, and then returned on board.

On the Report of what had happened, the Commodore made the necessary Dispositions for the Attack of the Place, and stationed his Ships accordingly: The smallest was ordered in as near the Town as possible; the *Tartar* was ordered to watch the Coast; and the Commodore anchored as near as could be to the Convent, as if he had intended to set it on Fire, or beat it down to the Ground: All this, however, was designed only to fright the *Portuguese* into a better Behaviour; and it had the designed Effect; for the Deputy-Governor soon after came on board, and entered into a Treaty, by which the *Portuguese* granted all that had been desired; but, at the same time, expressed a great Diffidence of their being paid for what they furnished; because, having lately treated with a *French* Ship in the same manner, the Captain, at his Departure, threatened to beat the Town about their Ears, in case they insisted on being paid according to his Promises when he came in. The Sick, being landed on the Island, were furnished daily by the *Portuguese* with Beef, Mutton, Fowl, Herbs, Fruits, and whatever else they wanted. The Ship's Company also, having Leave to go ashore, contracted Acquaintance among the *Portuguese*, from whom they obtained Sugar, Tobacco, Brandy, and whatever else they desired, in Exchange for *European* Goods, notwithstanding the Governor had prohibited any kind of Commerce, on the severest Penalties. Thus, in a very short time, the Scene was effectually changed, and the *Portuguese* so well satisfied as to the Honesty and good Intentions of the *Dutch*, that they brought back, or their own Accord, all the rich Effects that had been carried out of the Town, when their Ships first appeared before it. The *Portuguese*, however, complained bitterly of the Usage they met with from the *French*; who, according to their Accounts, frequently came before the Place with their Ships, took whatever they pleased by Force, and plundered the Houses, in which they were permitted to lodge their Sick; which induced the *Portuguese* to believe, that all the *Europeans* would treat them in the same manner.

The Town of *St. Sebastian* is situated in the Latitude of 24°, and in the Longitude of 60°; it is a Place of moderate Extent, indifferently fortified, being surrounded with Palisadoes, and furnished only with a few Pieces of Cannon. The Church, however, is a very beautiful Building, the Palace of the Governor very magnificent, and the Houses of the Inhabitants, such as are commonly met with in the *Indies*. The *Franciscan* Monastery stands on the South Side of the Town, and is the Habitation of about thirty Monks, who live there very commodiously, and behave themselves as become Persons of their Profession. The Prior shewed the Commodore, and the rest of the Officers, an Idol, which had been worshipped by the ancient Inhabitants of the Place. This was the Statue of a Creature half Tyger, half Lion, about four Feet high, and one and an half about. They were told, that this Statue was of massy Gold; but the Author suspected, that it was

only gilt: The Feet of this Creature resembled the Paws of a Lion; his Head was adorned with a double Crown, in which stuck up twelve Indian Darts, one of which, on each Side, was broken in the Middle; behind his Head, on each Shoulder, there was a large Wing, like that of a Stork. In the Inside of the Statue was that of a Man; completely armed, after the manner of the Country, having at his Back a Quiver of Arrows, in his Left Hand a Bow, and in his Right a Shaft. The Tail of this monstrous Idol was very long, and turned three or four times round the Body of the armed Man: The Inhabitants of the Country, who worshipped so frightful a God, called this Statue *Nasil Liebma*. The Dutch looked upon it with Astonishment, and saw, with great Pleasure, a numerous Collection of European and American Curiosities that were in the Possession of the Monks. The Port, or rather the River, of *St. Sebastian*, is three or four Leagues in Length, and about one in Breadth. On the North-east lies a very fine Island, of about four Miles round, and on every Side of it lie smaller Islands. The Haven, as well as the Town, is called *St. Sebastian*. The Country of *Brasil* is, as all the World knows, very large, and very rich, in so much that the King of *Portugal* is said to draw as great Riches from thence, as the King of *Spain* from all the rest of *America*; and this may very well be, since his Catholic Majesty is content with a very small Part of the Gold and Silver found in his Dominions, whereas the King of *Portugal* sweeps all. The Province of *Brasil* extends South, East, and North: The Capital of this Country is *Bahia*, or *St. Salvador*, *Stara*, *Olanda*, *Rio de Janeiro*, *St. Vincent*, &c. This Country was discovered about the Year 1500; but then it is to be considered, that, even to this Day, they have not penetrated much above eighty Leagues within Land. The Soil is good, and the Country would, doubtless, produce Corn and Wine sufficient for the Use of its Inhabitants at least, if, from a Principle of Policy, the People were not hindered from cultivating their Grounds, and constantly supplied with these necessary Commodities from the *Portuguese*. The principal Rivers in this Country are, *Tapuca*, *Janeiro*, *Patipa*, *Dajpedres*, *San Francisco*, *Parayba*, &c. It is the common Opinion of the *Portuguese* here, that the ancient Inhabitants were *Antropophagi*, or Man-eaters; and it is even said, that human Flesh was sold in their Markets as common as Beef or Mutton; but of this there is no authentic Proof. Those of the Natives the Dutch saw were large Men, of a dark Complexion, thick-lipped, flat Noses, and very white Teeth. The *Portuguese* here are very numerous, as well Natives of the Country, as those that flock over hither from *Portugal*, from time to time, in order to repair their broken Fortunes. Among other Riches, the Author assures us, that, a little before their Arrival, the *Portuguese* had discovered a Diamond Mine not far from *St. Sebastian's*, of which, at that time, they were not in full Possession, but were meditating an Expedition against the *Indians*, in order to become the sole Masters of so valuable a Prize; and, with this View, they invited the Dutch to join with them, promising them, in case they succeeded, a Share in the Riches; by which Insinuations nine of their Soldiers were tempted to desert: The Author says, that he does not know whether they were so lucky as to succeed; but, in all Probability, they did; because, since that time, great Quantities of Diamonds have been imported from *Brasil* into *Europe*. It is said, that they are found on the Tops of Mountains, amongst a red kind of Earth, which holds a great deal of Gold, washed out of it by great Rains, and carried down by the Torrents into the Valleys, where the Negroes are employed in washing it.

Brasil abounds with all Sorts of Birds, Fish, and Beasts, tame and wild. They have Tygers there, that do a great deal of Mischief: There are likewise abundance of Elephants, the Teeth of which are of great Value; neither is there any Country, where Serpents, and other venomous Creatures, are more frequent, or of a larger Size. The Popish Religion prevails as far as the Power of the *Portuguese* can extend it. There are, however, vast Numbers of the native Inhabitants, who are yet unsubdued, live in their old idolatrous Religion, and are so cruel and vindictive, that, if a Christian unluckily falls into their Hands,

the best thing he can expect, is to have his Throat cut; for very often they put them to Death by intolerable Tortures. The Air of the Country is extremely wholesome, though, at some certain Times of the Year, it is excessively hot. The Author experienced the Excellency of the Climate by his speedy and perfect Recovery from the Scurvy, and other Distempers; and it had the like Effect on the rest of their sick People. There are vast Numbers of a venomous Kind of Mosquitoes about *St. Sebastian's*, which sting People to such a Degree, that they are all covered over with Blisters. An Accident of this Kind happened to their Pilot, who, having drunk too freely of the Rum made in that Country, slept afterwards in the open Air, and had his Face, Arms, Head, and Legs, so stung, that his Life was in the utmost Danger; and it was not without abundance of Care, and after a long Space of Time, that he thoroughly recovered. The Dutch Commodore; while they remained here, obliged his People to observe a very strict Discipline; and, upon Complaint being made, that some of his Sailors were too familiar with some of the *Indian* Women, he caused them to be severely chastised; and would never afterwards permit them to go on shore. But, how well soever the Dutch and *Portuguese* might agree, the Governor was far enough from being satisfied with his new Guests: He had learned from some of the Deserters, that the Design of their Voyage was to make Discoveries towards the South, which displeased him very much; and therefore he practised every Art he could devise to hinder and distress them: With this View, he furnished them with Provisions only from Day to Day, to prevent their adding to their Sea Stores; he likewise talked of five or six Men of War coming from *Rio de Janeiro*, in order to put the Dutch in Fear of being attacked: To carry this as far as it would go, he actually sent for the only Ship that was then there, to come to *St. Sebastian's*. The Commodore understood the Meaning of all this very well, and took no notice of it, complying exactly with the Terms stipulated by the Treaty with the Deputy-Governor, saving Part of his fresh Provisions daily, and salting them, cleaning and repairing his Ships one by one, taking on board Tobacco, Sugar, and whatever else he wanted, till he thought himself in a Condition to continue his Voyage; and then he fully satisfied the Governor in Fire-arms, Hats, silk Stockings, Linen, Stock-fish, and other *European* Commodities, for whatever he had received; and made him a very considerable Present besides. The Governor, in Return, sent him some Black Cattle, and a Certificate of his honest Behaviour, to be made use of in *Europe*: And, all Things being thus settled, to the mutual Satisfaction of all Parties, the Dutch Commodore sailed with his Squadron, keeping still to the South-west; and, finding a desert Isle, about three Leagues from the Coast, he set on shore there the Swabber, who had attempted to murder the Cook, according to the Sentence that had been passed upon him, as has been before related.

6. After leaving the Coast of *Brasil*, the Commodore proposed visiting the Island of *Stakes Magdeland*, so called from its first Discoverer, who, about one hundred Years ago, saw a Light in that Island, which is said to be situated in the Latitude of 30° South; but did not go on shore. As the Situation of this Island must have been very advantageous, and in a good Climate, the Commodore intended to settle a Colony there, for the Service of such Ships as should afterwards be bound to the Southern *Indies*; that, by this means, they might obtain Wood, Water, and other Refreshments, without being obliged to touch at any of the Countries subject to the *Portuguese*. He found it, however, absolutely impracticable, because, in spite of all the Pains he could take, he never could discover that, or any other Island, in or near the Latitude of 30°; which obliged him to change his Course, and to steer towards the *New Islands*, so called by the Dutch; but, by a *French* Privateer, that first discovered them, named *St. Lewis*. The Squadron prosecuted its Voyage very happily, by continuing always within 40 and 50 Leagues of the *American* Shore, by which they enjoyed the Benefit of the Land and Sea Winds; whereas, if they had kept farther from Land, they would have infallibly fallen in with the *West* Monsoon.

On the 21st of *December*, when they were in the Latitude of 40° South, they were surpris'd by an Hurricane, attended with Thunder and Lightning. All they could do was to furl their Sails, and lie at the Mercy of the Wind and Waves: The Sea ran to very high, that they expected every Moment to be swallowed. In this Storm they were separated from the *Tienhoven*, and did not meet with her again till three Months afterwards. The Violence of the Hurricane lasted about four Hours, but was not intirely over in some Days. It was very happy for the Commodore, that, in spite of the prodigious Force of the Wind, his Mats stood firm. These Hurricanes are extremely dangerous, and Ships often founder through their Violence. They are far more frequent in the *West*, than they are in the *East Indies*. They happen usually at one Season of the Year, particularly when the West Monsoon reigns, which is from the 20th of *July* to the 15th of *October*. For this Reason, on Coasts where they are frequent, Vessels often continue in Port, till they imagine they have nothing of this kind to fear. But, as Storms of this sort are not exactly periodical, and as there are some Years in which happen no Hurricanes at all, Ships trusting to such Calculations, or to certain pretended Prognostics, are very often caught. In the *Mediterranean* they have a kind of Hurricane, which returns every Year at the same time, or very near it. In the Neighbourhood of the *Ganges*, they have annually eight Hurricanes, as the most experienced Mariners report. They call this kind of Storms here, as well as in the *Mediterranean*, by the Name of the *Elephant*. Such as sail to *Japan*, are often expos'd to such rough Encounters; and, therefore, the Voyage to that Island is justly reputed the most hazardous of any in the *Indies*. It is reported, (but I do not assert it) that Ships have sometimes spent three Years in the adjacent Seas, without being able to hit their intended Port. The ordinary, or at least the usual, Sign of an Hurricane, is very fair Weather, and so dead a Calm, as that not a Wrinkle can be discern'd; then a Cloud, about the Size of a Man's Hand, rises in the Air, very dark; and, in a little time, the whole Sky is covered. The Wind then begins to blow from the West, and, in a small Space of Time, whisks round the Compass, swelling the Sea to a dreadful Height; and, as the Wind blows now on the one Side, and then on the other, the Shock of the contrary Waves beats the Vessels so forcibly, that they very rarely escape Shipwreck. Such as perceive the Cloud early, cannot do better than to get out to Sea. It is very remarkable, that, as Ships approach either Pole, those Hurricanes are less frequent, so that, in an higher Latitude than 55°, they are not to be feared. It is true, that the Winds towards the Poles blow with greater Force, and the Air is more sharp and piercing; but then contrary Winds are not so often met with, or, to speak with greater Propriety, the Wind does not move so rapidly round the Compass. The Winds also in that Quarter sink more gradually than under the Tropics, where they suddenly swell to the greatest Height, and then as suddenly cease to blow. The Cause, possibly, of this Difference may be, the Warmth of Air between the Tropics, and the constant South or North Wind under the Pole. It is likewise observed, that this Hurricane rarely happens in the middle of the wide Ocean, but chiefly on the Coasts of such Countries as abound with Minerals, or at the Mouths of great Rivers. Another surpris'ing Phenomenon at Sea is, what they call a Whirlwind, and which, in some Countries, is call'd a Siphon. These are occasioned by the Sun, and are distinguished from other Winds by a kind of spiral Motion, which carries up into the Air whatever comes within the Circle of their Force. It sometimes happens, that they carry Fish, Grats-hoppers, and other Things, very high in the Air, where they appear like a thick Vapour or Cloud. The English fire at a Whirlwind, in order to stop its Progress: and it has they often succeed; and, the circular Motion ceasing, all that it had taken up, falls of itself, and the Sea becomes presently calm. But it is time to leave this Digression, and to return again to the History of our Voyage.

As soon as the Hurricane was intirely over, the Commodore, and his Comfort the *African Galley*, continued a South-easterly Coast, till, by the Assistance of the

Land Winds, they were in the Height of the Straights of *Magellan*.

7. There they discovered an Island of near 200 Leagues in Circumference, and at the Distance of about fourscore Leagues from the Main-land of *America*; and, as they saw no Smoke, nor any Boat, or other Embarkation, on the Coast, they concluded that it was uninhabited. A *French Privateer* discovered the West Coast of it, and call'd it the Island of *St. Lewis*; but the *Dutch*, observing its many Capes, fancied them to be so many different Islands; and therefore bestowed on them the Name of the *New Islands*. This Squadron first discovered the Island all round, and particularly the East Coast of it; the first visible Points of which they nam'd the Points of *Reynolds*, because they were first discovered by a Captain of that Name, who commanded the *African Galley*; the uttermost Eastern Point they call'd *New-Year's Cape*, because discovered upon that Day: This Island lying in the Latitude of 52° South, and in the Longitude of 95°, they call'd it *Belgia Australis*, because, whenever it comes to be inhabited, such as dwell thereon will be strictly and properly Antipodes to the Inhabitants of the *Less Countries*. The Land appeared extremely beautiful, and very fertile: It was chequered with Mountains and Valleys, all of which were clothed with very fine Strait Trees. The Verdure of the Meadows, and the Freshness of the Woods, afforded a most delightful Prospect, inasmuch that all the Ships Companies agreed, that, if they had landed, they should have found excellent Fruits: But the Commodore would not allow them to land, for fear of losing Time; and, from an Apprehension, that any Delay might hinder his getting round *Cape Horn*, he therefore chose to defer a thorough Examination of this new Country, till he should return from the Discovery of the Southern Continents and Islands; but that, alas! however reasonable, prov'd, as in the Sequel we shall see, a vain Expectation, because he was oblig'd to return home with his Squadron by the *East Indies*. This fine Island, therefore, is like to continue still, in a great measure, unknown; and the Commodore regretted excessively his not laying hold of that fair Opportunity of spending a few Days there, which, perhaps, might have produced the fixing a Colony on that Island; from whence, without doubt, many other considerable Discoveries might, in a short time, have been conveniently made.

8. Quitting this Island, they returned to the Mouth of the Straights of *Magellan*, in order to wait there for a Wind favourable to their Navigation; and, in a few Days, a very luckily chang'd; for, if it had continued to blow from the West, they could not possibly have obtained their Passage into the South Seas. Thus they were resolv'd to attempt by the Straights of *Le Maire*, because this last Passage is infinitely more commodious than that of *Magellan*, where the Sea has but a small Depth, and the North and South Currents, by their meeting, occasioned constant rough Seas. Add to this, that the Bottom is rocky, and affords no good Anchorage; and that the Flaws from the Mountains on both Sides endanger all Ships that venture into these perilous Straights: But, having, as is before observ'd, a fair Wind, they continued their Course to the South, in order to pass the Straights of *Le Maire*. In their Way they saw abundance of Whales, and other large Fish of this kind: Amongst the rest, they were follow'd for a whole Month by that kind of Fish which the *Dutch* Sailors call the *Sea Devil*. They took the utmost Pains to catch it, but to no Purpose. It has a large Head, a thick Short Body, and a very long Tail, like that which Painters bestow on the Dragon. Arriving at length in the Height of 55°, they began to conceive they could not be far distant from the Mouth of the Straights, and immediately after they saw *Stateland*, which makes one Side of them. The Fury of the Waves, and the Clashing of contending Currents, gave such terrible Shocks to their Vessels, as made them reel in such a manner, that they expected every Moment their Yards would have broken, and their Mats come by the Board. In this Situation they would have been glad to come to an Anchor, especially when they found, by sounding, that the Bottom was very good; but the Weather was so rough as not to permit it.

They passed the Streights, which are about ten Leagues in Length, and six over, where they are the broadest, with a Swiftness not to be expressed, which was owing to the Force of a Current. These Currents without the Streights, joined to a strong West Wind, carried them out a great Way from the Coast of *America*; and, that they might be sure to get round *Cape Horn*, they sailed as high as the Latitude of $62^{\circ} 30'$. There, for three Weeks together, they sustained the most dreadful Gulls of a furious West Wind, accompanied with Hail, Snow, and the most piercing Frost. They were very apprehensive, lest the Violence of the Wind might, while they were enveloped with thick Mists, have driven them upon Mountains of Ice, which must have exposed them to certain Shipwreck. Whenever the Weather was a little serene, they had scarce any Night at all; for, being the middle of *January*, the Summer was at its Height in that Climate, and the Days at their utmost Length. These Mountains of Ice, of which they were so much afraid, were visible from the Height of *Cape Horn*; and are certain Proofs, that those Southern Countries extend quite to their Pole, as well as those under the North; for, without Question, such vast Hills of Ice cannot either be produced in the Sea, or formed by the common Force of Cold. It must therefore be concluded, that they are occasioned by the Violence of Currents, and of sharp piercing Winds, blowing out of Gulphs, or the Mouths of large Rivers. It is, on the other Side, no less certain, that the Currents discerned in this Ocean proceed all from the Mouths of Rivers, which, rolling down from an high Continent, fall into the Sea with such Impetuosity, that they preserve a great Part of their Force, even after they have entered it. The great Quantity of Birds that are seen here, is an additional Proof, that Land cannot be far off.

It may be demanded, whether this Continent is inhabited or not: For my Part, says the Author, the Affirmative seems the most probable to me. It may, possibly, be asked, how it can be imagined, that Men should live in such a Climate as that of 70 Degrees, where the Winter is so very long, the Summer so short, and where, for a great Part of the Year, they must be involved in perpetual Night? To this I answer, that such as dwell here, come hither only in the fine Season, in order to fish, and retire on the Approach of Winter, as many of the Subjects of the *Russian Empire*, and the Inhabitants of *Davis's Streights*, who, after they have throngly provided themselves with Fish on the Coasts of a frozen Climate, retire farther within Land, and eat, during the Winter, in their Cabins, the Fish they have taken in the Summer. I say farther, says he, that if the People, who are to be met with in *Greenland*, and *Davis's Streights*, are to be relied on, they inform us, that the Country is inhabited, even to the Height of 70° in Winter as well as Summer; and what is practicable in one Country, cannot justly be reputed incredible when supposed in another. The contrary Winds having driven these *Dutch Ships* 500 Leagues from the Continent, the Commodore believed, that he was now beyond *Cape Horn*, and therefore steered North-east and by North, in order to fall in with the Coast of *Chili*. After continuing this Course for three Weeks, and seeing no Land, they began to conclude, that they had not doubled *Cape Horn*, but had stood away Northerly too soon. On the 10th of *March*, however, being in the Latitude of $37^{\circ} 30'$, they discovered, to their great Joy, the long wished-for Coast of *Chili*, and soon after anchored on the Coast of the Island *Mocha*, which is three Leagues from the Continent. They were in hopes of finding on this Island, at least, a Part of the Refreshments they wanted, but more especially fresh Meat and Herbs; but, to their great Surprise, were disappointed, by perceiving it intirely abandoned, and that all its Inhabitants had transported themselves to the Main-land. They saw, however, upon the Island, a Multitude of Horses and Birds; and, in two Cabins near the Shore, they found some Dogs. Upon a farther and closer Search, they discovered the Wreck of a *Spanish Ship*, from whence they concluded the Dogs had got on shore. As to the Horses, they concluded, that they were left there to graze, and that their Owners came at certain times from the Main to take them up, as they

had Occasion for them. They killed abundance of Geese and Ducks; and, after having traversed every Part of the Country, finding the Coast extremely rocky, and no Place where they could anchor with Safety, they resolved to put to Sea again without Delay.

9. But, before they executed this Resolution, the Commodore held a Council with his Officers, in order to consider how they should proceed, and what Course was to be taken next; in which it was determined to continue, for some time, on the Coast of *Chili*, in hopes of meeting with some Port where they might anchor with Safety, and get some Refreshments. This Resolution, however, they afterwards laid aside, because they perceived the *Spaniards* every-where upon their Guard, and their Coasts to well provided, that it would have been dangerous for them to have made any Attempt. They likewise observed, that, notwithstanding the Country of *Chili* appeared extravagantly high at a Distance, yet, as they sailed along-shore, they discovered it was not higher than the *English Coast*, and that they had been led into this Mistake by the prodigious Height of the Mountains behind it; the Tops of which were hid in the Clouds, and covered with perpetual Snows. After much Deliberation, the Commodore and *African Galley*, which no Storms could ever separate from him, steered West North-west for the Island of *Juan Fernandez*, at the Distance, as they apprehended, of about ninety Leagues. As they had a favourable Wind, they made Way at a great Rate, so that on the 4th Day they had Sight of the Island, but could not come to an Anchor in the Road, by reason of its falling calm.

The next Day, when they were just ready to go in, they saw, to their excessive Surprise, a Ship riding there. At first Sight, they conjectured, that she was either a *Spanish Ship* of Force, or a *French Interloper*; but, upon more mature Consideration, they concluded, she must be a Pirate. While they were consulting what was best to be done, they saw the Shallop, belonging to the Ship, in the Road, making towards them, with a *Spanish Flag*; upon which they prepared for an Engagement; but their Amazement was not to be described, when, on its nearer Approach, some of the Sailors cried out, That it was the Shallop of the *Tienboven*, their Comfort, separated from them three Months before in the Storm, and which they concluded had been buried in the Waves. Captain *Beerman* himself was in the Shallop, who, upon this Occasion, shewed how well he deserved the Trust that had been reposed in him; for, by the Commodore's Orders, in case of a Separation, this was to be the first Place of Rendezvous; and, after cruising for six Weeks, they were to repair to the Height of 28° South Latitude, and to cruise there for the same Space of Time; but, in case they failed in meeting the Commodore in both Places, they were then to open their sealed Instructions, delivered with their Commissions, and to pursue them exactly. As soon as Captain *Beerman* was on board, he made the Signal agreed on with his own Ship, in order to acquaint them, that these two Ships were their Comforts; so that, entering into the Harbour, they saluted each other reciprocally with five Pieces of Cannon. As soon as they had Leisure to enter into Particulars, the Captain gave them an Account of all that had happened since their Separation. He acquainted them with the Dangers he had run through in passing the Streights of *Magellan*, what Storms and Tempests he had met with on the Coast of *America*; and, in the End, freely acknowledged, that he concluded the Commodore, and the *African Galley*, were both lost in the Hurricane, and never expected to see them more. He likewise told them, that his Ship was in a very bad Condition, and that he arrived in this Road only the Evening before. After hearing this, the Captains dined very cheerfully together on board the *Tienboven*, where they commiserated their past Misfortunes, and rejoiced at their present Meeting in Safety. As there still continued a dead Calm, it was impossible for them to come to an Anchor in the Place where they intended, and therefore they were obliged to remain that Night in four-score Fathom Water; but the next Day they got up close by the *Tienboven*, where they anchored in forty Fathoms Water, that Vessel lying within Musquet-shot of the Shore.

As soon as the Ships were brought to an Anchor, they hoisted out their Shallops, in order to send the Sick on shore, as well as to look for Provisions and Refreshments: And as soon as the Men landed, who were appointed to take a View of the Island, and amongst whom the Author was one, they began to consider the properest Method for collecting together what might be necessary towards forming Cabins or Huts for the Use of the Sick: Accordingly they got together a great Quantity of Oat-straw, with which they thatched the Huts, that were soon run up with green Boughs. This may reasonably surprise the Reader, who probably might not expect to hear of Oats in an uninhabited Island: And, indeed, the Author does not pretend to account for their coming there; for he says plainly, that it was a Doubt with him, whether they grew there of themselves, or had been sowed. He speaks likewise of Mustard-seed and Turneps, but complains that the latter were very bitter. In the Course of these Voyages, we have met with several Descriptions of these Islands of *Juan Fernandez*: and therefore we shall dispense here with some of the *Dutch* Author's Remarks; but there are others of too great Importance to be slighted, especially when we consider the Design with which they were made. According, therefore, to this Writer, the largest Island of *Juan Fernandez* is one of the finest and best situated Countries in the World, the Climate equally pleasant and wholesome; the Air so temperate and sweet, as to restore Health to the Sick, and give a constant Flow of Spirits to those that were well; which the Author himself experienced by recovering here from a bad State of Health, and a Complication of Distempers. The Hills are covered with tall Trees of different kinds, fit for all sorts of Uses; and the Valleys are so fruitful, as to produce, with a very little Cultivation, all the Necessaries of Life.

Here an abundance of little Rivers and Brooks, the Banks of which are covered with wholesome Plants; and the Waters that run from the Mountains, though not in the least disagreeable to the Taste, are so charged with mineral Particles, that they never corrupt. On the East Side of the Bay there are three Mountains, the middlemost of which resembles the *Table* at the Cape of *Good Hope*: Behind these, there are many other Mountains, that rise to a prodigious Height, and are generally covered with a very thick Mist, especially in the Mornings and Evenings: Whence our Author conjectures, that these are mineral Exhalations; and that, in these Mountains, rich Mines might be found, which is an Observation that I have not met with before. He concludes his Description with this Remark; that, in order to give a just Idea of the Island to his Reader in a few Words, he cannot think of a better Expedient, than telling him, that the Country resembles, in all respects, that about the Cape of *Good Hope*, where, every body knows, the *Dutch* have one of the finest Plantations in the World, and the greatest Plenty of all *European* and *Indian* Fruits. He speaks much, as all our *English* Writers do, of the vast Plenty of wild Goats here; but adds, that they were so unable to catch them by hunting, and so much at a Loss how to come at their Bodies when shot, that, during the Time they stayed here, they scarce tasted them. But the Truth seems to be, that an unlucky Accident, which befel one of their Ship's Stewards soon after their Arrival, frightened them from this sort of Sport; for this Man, rambling towards Evening among the Mountains, pitched suddenly from the Top of a Rock, and was found next Morning beat to-pieces.

Our Author mentions not only Sea-lions and Seals, which are called Sea-calves, but Sea-cows also of an enormous Size, some of them weighing, as he assures us, near a thousand Weight; and adds, that this Creature is well known in *Guinea*, where they not only eat the Flesh, as sweet and well-tasted Meat, but believe it also exceedingly wholesome. The same Notion prevails likewise among the Inhabitants of the Isthmus of *Darien*, who esteem this Food a kind of universal Medicine. He mentions the Plenty and Excellency of the Fish on that Coast with Admiration; and informs us, that, during their short Stay there, they caught and cured many thousand of them, which proved extraordinary good, and were extremely serviceable during the rest of their long Voyage. They took

so much Time also, as to examine very closely the *Spanish* Wreck before-mentioned, but to very little Purpose; for all that was any way valuable had been taken out of her as soon as she was cast away. I cannot help interposing an Observation here, the Truth of which will be obvious to every attentive Reader, viz. that our Author was mistaken in thinking this a *Spanish* Wreck; since, without Question, it was the Remains of the *Specker's*, Captain *Shelbocke* lost here exactly a Year before: However, the *Dutchmen* did not altogether lose their Labour, since some of the Sailors, by diving, recovered several Pieces of Silver Plate.

The *Dutch* Commodore, having attentively considered the advantageous Situation, and the many Conveniences this Island afforded, immediately conceived a Design of settling it, as the most proper Place that could be thought of, for affording Shelter and Refreshment to Ships bound, as he was, to Southern Lands: And he was encouraged particularly to persevere in this Design, from the Consideration of the Island's Fertility, which, as our Author observes, allowed them no Reason to doubt, that it would afford sufficient Subsistence for 600 Families at least: However, this, like the Settlement of *Belgia Australis*, was put off to their Return; by which Accident it happened, that neither of these Islands was settled at all. It must be allowed, that both these Projects of the *Dutch* Commodore were every way wise and prudent, and shewed how fit a Man he was to execute what his Father had designed; for, by the Help of these two Colonies, undoubtedly the Southern *Indies* had been, by this time, effectually discovered. The former Settlement would have afforded a proper Place for Ships to careen in, and rest, after so long a Voyage as from *Europe* to the Straights of *Magellan*; and the latter would have furnished them with all imaginable Conveniences for repairing whatever Injuries they might have received by so hazardous a Passage as the round *Cape Horn*. I therefore venture to pronounce it the best-laid Scheme for promoting Southern Discoveries, that ever yet entered the Head of Man; and I make no manner of Question, that whatever Nation shall revive and prosecute Mr. *Reggewin's* Plan, will become, in a few Years, Matter of as rich and profitable a Commerce, as the *Spaniards* have from their own Country to *Mexico* and *Peru*, or the *Portuguese* to *Brazil*.

10. As they were now ready to enter on the Discoveries, the Hopes of which had brought them into those Seas, it was but natural for the Commodore, and his principal Officers, to lay before the Ship's Company a Part of the Reasons, which induced them to believe their Pain and Labour would not be thrown away. Our Author has preserved the Substance of those Discourses, which are, beyond Question, the most valuable Part of his Book, inasmuch as they distinguish between Wanderers or Adventurers, who know not what they seek, and such as have a real Title to the honourable Name of Discoverers, as going in actual Search of what their prudent Foresight has shewed them might be found; and also plentifully reward their Trouble in finding. The main End proposed, in such States as subsist by Commerce, with regard to Discoveries, is the finding such Countries as may take off their Commodities, and be in a Condition to furnish them with what may be more valuable in Return. It is agreeable to Reason, and justified by Experience, that Countries excessively cold are generally barren; and that those which are immoderately hot, are not the most fruitful: It follows therefore, that the middle Climates are, by the Laws of Nature, the most fruitful. In order to distinguish those, we are to remember, that, in the Height of 66° 30', the Days are twenty-four Hours long; and consequently the middle Climate, which Geographers have distinguished in their Tables for the fifth, will be found in the Height of 38°. If this appears agreeable to Reason, it seems to be put out of doubt, when we join the Arguments derived from Experience; for it must be allowed, that such Provinces of *Barbary*, *Perfia*, *Synus Chaldaea*, and *Indostan*, as well as the Islands *Candia*, *Cyprus*, and *Japan*, which lie all in this Climate, that is to say, from the thirtieth to the thirty-sixth Degree of Latitude, are the richest, pleasantest, and most fruitful Countries in the World. The same thing is remarkable in the Country

of *Canaan*, where the Province of *Gahlee* was esteemed the fairest, and most fruitful, because situated farthest to the North, and consequently nearest to that Latitude we recommend.

In the New World again, the Provinces of *Carolina*, *Florida*, *New Mexico*, and *California*, all lying in the fifth North Climate, are comparable, in point of Beauty and Fertility, to any Part of the known World; and it is certainly a great Fault in their Inhabitants, not to have cultivated those Countries as they deserve. In *South America*, again, the Provinces in this Climate equal in Beauty, and in Riches, any Countries hitherto discovered. The Cape of *Good Hope* is so charming a Place, that there are very few Countries that equal, and none that surpass it. The Air there is exceedingly wholesome; the Soil produces, in abundance, Wine, Corn, and the most excellent Fruits; they have likewise such infinite Quantities of Cattle, tame and wild Fowl, that the People live, as it were, in Paradise. The Country of *Chili* is likewise considered as one of the finest in the World; and the City of *St. Iago*, its Capital, stands in the Latitude of 33° 40' South. The *Spartans* would have us believe, that there is nothing equal to it; and it is, at the same time, certain, that the Provinces behind it, and which extend quite to the North Seas, are almost incredibly fruitful.

Such as are acquainted with different Climates will readily agree with me, that the Heat is much greater in the Island *Ceylon*, and on the Coast of *Malabar*, than in the Countries situated under the Torrid Zone, and in the first Climate. On the other Side it is certain, that the Kingdom of *Bengal*, and the County of *Surat*, is still much warmer than *Malabar*, as being in the third Climate, whereas *Malabar* is in the second. The Warmth of the Air, and the Fertility of the Soil, increase from *Surat* to *Delli*, which is the Capital of the Dominions of the *Great Mogul*, the former lying in 21, and the latter in 30° Latitude. The Heat is much greater at *Gambon*, which is seated on the Gulph of *Baljora*, than at *Surat*, the former being in the fourth Climate. All that I have advanced is so clear, and without so certain, that it is not liable to the least Objection: From these Remarks, founded upon Experience, we may justly infer, because we can invincibly prove, that the fifth Climate is superior to the rest, and the Countries seated therein, the best and the most fertile; if it was not so, the Heat under the Torrid Zone would be absolutely insupportable, the Earth would be burnt up, and incapable of producing any thing for the Nourishment of Man, or the Subsistence of Beasts. On the other hand, the Northern Countries, even in the midst of Summer, would have so little Heat, that they would produce nothing: We see, however, that in our Northern Regions, such, for Instance, as *Sweden*, *Poland*, and *Liconia*, the Force of the Sun produces, in a Fortnight or three Weeks, as great Effects, as in two or three Months in the Countries under the Line itself: The Reason is plainly this, that in the Northern Countries, the Nights being extremely short, the Earth has not time to cool, but remains continually heated, and that, to a Degree, sometimes as vehement as under the first Climate: But this does not last long; for as soon as the Rays of the Sun begin to fall obliquely, the Nights grow long, which is the Reason, that, in these Countries, neither Plants nor Fruits ever arrive at full Maturity.

The Countries in the sixth Climate are less fertile than those in the fifth; and, for the same Reason, the seventh, eighth, and ninth Climates yield to the sixth; and thus the Richness and Fertility of the Soil constantly and regularly diminishes to the twenty-fourth Climate, under which is the *Laplands*, the Extremity of *Russia* and *Siberia*. To conclude, if a Traveller had a mind to put this to the Test, by making a Voyage through all the different Climates of the Earth, he would certainly find the Position before him down, viz. that the most fruitful, the most delightful, and, of consequence, the most desirable Countries, lie in the fifth Climate, certain and incontestable. Such a Journey would lead him to *Yvre* in *Syria*, the Country about which all Writers agree to be the most delightful; thence he ought to proceed to *Tonis*, and along the Coast of *Babylon*, celebrated likewise for the Whollomeness of the Air, and the Fertility of the Soil: He must take the Cape

of *Good Hope* also in his Passage, where he would find a Country lovely beyond Description; lastly, he must proceed to *Nankin*, and the Province of *Honan*, in *China*; but if he would save himself this Trouble, let him examine the Accounts of those who have been in these Countries, and he will no longer have any Doubts.

11. The Dutch Commodore, when he quitted the Island of *Juan Fernandez*, proposed to visit that Part of the Southern Continent, which was reported to be discovered by Captain *Davis*, in the Year 1680. Our Author gives us but a dark Account of this Matter; and therefore I shall insert, as it is very short, Mr. *Wafer's* Story of this Discovery. He was a Man of Sense and Knowledge, and actually on board Captain *Davis's* Ship, when the Discovery was made. "We steered, said he, from the *Gallapagos* Islands, South and by East, half Easterly, until we came to the Latitude of 27° 20' South; when, about twelve Hours before Day, we fell in with a low sandy Island, and heard a great roaring Noise, like that of the Sea beating upon the Shore, right a-head of the Ship: Whereupon the Sailors, fearing to fall foul upon the Shore before Day, desired the Captain to put the Ship about, and to stand off till Day appeared; to which the Captain gave his Consent: So we plied off till Day, and then stood in again with the Land, which proved to be a small flat Island, without the Guard of any Rocks: We stood in within a Quarter of a Mile of the Shore, and could see it plainly; for it was a clear Morning, not foggy nor hazy. To the Westward about twelve Leagues, by Judgment, we saw a Range of High-land, which we took to be the Islands; for there were several Partitions in the Prospect. This Land seemed to reach about fourteen or sixteen Leagues in a Range; and there came great Flocks of Fowls: I, and many more of our Men, would have made this Land, and have gone ashore at it, but the Captain would not permit us. The small Island bears from *Copayapo* almost due East, 500 Leagues; and from the *Gallapagos*, under the Line, 600 Leagues." We see by this, that Mr. *Roggevein's* Scheme was built, not only on a rational Conjecture, but, as far as might be, on the Lights afforded by Experience. He thought he had good Grounds to believe, that there was a Southern Continent; and this Account of *Davis's*, for under his Name it has always gone, and in the Maps we find it marked by the Name of *Davis's* Land, shewed itself Part of it; which therefore he meant first to examine.

In their Passage, the first Land they saw, was that of the lesser Island of *Juan Fernandez*, which lies about ten Miles from the great one, appears lower, and less fertile, at a Distance; but, as our Dutch Discoverers had not an Opportunity of landing, we cannot depend much upon their Account of it. As they had now the Benefit of the South-east Monsoon, they quickly arrived in the Latitude of 28 Degrees, and in the Longitude of two hundred and fifty-one, where they expected to have met with *Davis's* Land, of which also they had the greatest and most probable Hopes, when they perceived abundance of Fowls flying, and observed also, that the Wind shifted often, both which are looked upon as certain Signs of Land. Some of the Company battered themselves that they saw it; but, to the great Grief, and no small Astonishment, of the Commodore, no such Land was to be found. Our Author thinks, that either they passed it, or that there is no such Country. I must own, that I do not wonder they missed it; for whoever considers Mr. *Wafer's* Description attentively, will see that they sought it near ten Degrees too far to the West. Our Author observes afterwards very sensibly, that, as these Southern Countries lie East and West, or to the East and to the South west, this Situation renders it almost impracticable to discover them; for a West North-west Wind carries a Ship by them at some Distance, and a North-west Wind bears a Ship quite away from them; so that, while these Winds reign, the Search must, humanly speaking, be absolutely vain. The Consideration of this will sufficiently explain the Accounts hitherto given us of these Southern Countries; they are seen, as it were, accidentally, and by chance; when looked for, they are not to be found. This, to such as are inadvertent, brings

former Discoveries into Doubt, and even into Contempt; but a little Thought, and a small Acquaintance with the Nature of such Things, will let us right again; and we need only consider the Course that Captain *Dutch* steered, in order to be satisfied, that his was a true Discovery, and that, by the true Course, this Country might be found again. But to proceed with our Voyage:

The *Dutch* Commodore sailed West twelve Degrees, having the Sight of a vast Number of Birds, which attended them, till they arrived on the Coast of a small Island, about sixteen Leagues in Extent: which Island, as they discovered it on *Easter-day*, which fell that Year on the 17th of *April*, they called *Pasch* or *Easter Island*. The *African* Gallies, being the smallest, and withal the best Sailer in the Squadron, went first to examine this new Country, and reported, that it seemed to be very fertile, and withal well inhabited too, since they had seen abundance of Smoke in all Parts of it: which gave great Joy to the Commodore, who immediately resolved, that the whole Squadron should go in. The next Day they spent in looking for a Port; and, when they were about two Miles from the Shore, an *Indian* came off to them in his Canoe. They made Signs to him to come on board; which he very readily did, and was exceedingly well received. As he was naked, the first Present they made him was a Piece of Cloth to cover him. They gave him likewise Pieces of Coral, Beads, and other Baubles, all which, together with a dried Fish, he hung about his Neck. His Body was painted all over with all kind of Figures; his natural Complexion appeared to be a dark-brown, and his Ears excessively large and long; so that they hung down upon his Shoulders, occasioned, no doubt, by the wearing of Ear-rings so large and heavy, as to extend them in this Manner, which is a thing likewise practised by the Negroes in the *Megal's* Country, who make their Ears large and long by the same Method. He was tall, well-made, robust, and of a very happy Countenance. He was brisk, active, and appeared to be merry, by his Gestures and Manner of speaking. They gave him a Glass of Wine to drink, which he threw away in a Manner that surpris'd them. Our Author thinks, he was afraid of being poisoned; but, perhaps, being used to Water, the Smell of a strong Liquor might offend him. They next clothed him from Head to Foot, and clapped him an Hat on; with which he was not at all pleas'd, but seem'd to be awkward and uneasy. They gave him Victuals, which he eat heartily; but could not be persuaded to use either Knife or Fork. They then order'd their Music to play; with which he was extremely well pleas'd, and, whenever they took him by the Hand, would leap and dance. As they found it impossible to come to an Anchor that Day, they thought proper to send off the *Indians*, allowing him, however, to keep what he had got, in order to encourage others; but, what is really surpris'ing, the poor Creature had no mind to go. He look'd at them with Regret; he held up both his Hands towards his native Island, and cried out in a very audible and distinct Voice, *Oderrega! oderrega! oderrega!* They had much ado to get him into his Canoe; and he made them clearly comprehend, by his Signs, that he had much rather they would have carried him in their Ship.

They imagin'd he call'd upon his God, because, when they land'd, they saw abundance of Idols erected on the Coast. The next Morning by Day-break, they enter'd a Gulph on the South-east Side of the Island; and many thousands of the Inhabitants, as our Author says, came down to meet them, bringing with them vast Quantities of Fowls and Roots. Many came on board them with these Provisions. As for the rest, they ran to and fro from Place to Place, like wild Beasts. As the Ships drew nearer, they crowd'd down to the Shore, in order to have the better View of them; and at the same time lighted Fire, and offer'd to their Idols, probably to implore their Protection against these Strangers. All that Day the *Dutch* spent in loading their Ships. The next Morning very early, they observ'd the People prostrated before four Idols towards the rising Sun, and offering them in Burnt Offerings. All the necessary Preparations were made for a Defeat, when the friendly *Indian*, who had been with them before, came to board a boat alone, and brought with him abundance of his Countrymen, who, to make themselves welcome,

took care to load their Canoes with plenty of living Fowl, and of Roots shell'd after their Manner. There was, amongst this Troop of *Indians*, one Man perfectly white, in whose Face hung round white Pendants, as big as one's Fist. He had an Air extremely devout, and seem'd to be one of the Priests. One of the *Indians* was, some way or other, (that are our Author's Words,) shot dead in his Canoe by a Musket. This unlucky Accident threw them into such a Consternation, that the best Part of them flung themselves at once into the Sea, in order to get the sooner ashore. The rest, who remain'd in their Canoes, rowed with all their Force, in order once more to attain a Place of Safety.

The *Dutch* presently follow'd them, and made the long without-Port Defeat with 150 Soldiers and Seamen. Amongst these were the Commodore in Person, and the Author, who command'd the Land Forces. The People crowd'd so hard upon them, that they thought themselves oblig'd to make way by Force, especially as some of them were so bold, as to lay hold of their Arms. The *Dutchmen* fired therefore, which dispers'd them, and frighten'd them almost out of their Wits; and yet, in a few Moments, they rallied again. They did not, however, advance quite so far to their new Guests as before, but kept at the Distance of about ten Yards, supposing that there they might be safe from the Musquets. It happen'd, says our Author, unfortunately, by this single Discharge, a great many were killed, and, amongst them, the poor *Indian*, that had been twice on board; which gave them great Concern: Yet these good People, continues he, brought us, in Return for the dead Bodies we had given them, vast plenty of Provisions of all Kinds. Their Consternation, however, was very great, and they howl'd, and made dismal Lamentation. That they might leave, however, no Means untried to pacify these Invaders, they all, Men, Women, and Children, presented themselves before them, with the Branches of Palm, in Token of Peace. In short, they endeavour'd to testify, by the most humble Postures, how desirous they were to mollify and make Friends of these Strangers. They even shew'd them their Women, gave them to understand, that they were totally at their Disposal, and that they might carry as many of them on board their Ships as they pleas'd.

The *Dutch*, soft'n'd with such Tokens of Humility, and deep Submission, did them no further Harm; but, on the contrary, made them a Present of a Piece of painted Cloth sixty Yards long. They gave them likewise a good Quantity of Coral-beads, and small Looking-glasses, with which they were extremely well pleas'd. As they now saw, and were fully convinc'd, that the *Dutch* intend'd to treat them like Friends, they brought them at once 500 live Fowls, which, by the way, differ'd nothing from the Barn-door Fowls of *Europe*, accompanied with a great Quantity of red and white Roots, and Potatoes; which these *Indians* use instead of Bread. They gave them likewise some hundreds of Sugar-canes, and a great Quantity of Pisces. There are a sort of *Indian* Figs, as big as a Gourd, and covered with a green Rind. The Pulp of these Figs is as sweet as Honey: There grow sometimes 100 of these Figs upon a single Bough. The Leaves of this Tree are six or eight Feet long, and about three Feet broad. It is said, that of these Leaves our First Parents made the Covering they us'd after their Fall; but this our Author takes to be a mere Conjecture, without any other Foundation than this, that these Leaves are the largest and strongest of any hitherto found, either in the East, or in the West. They saw in these Islands no other Animals, than Birds of all Sorts; but they thought it probable, that, in the Heart of their Country, there might be Cattle, and other Beasts, because when they shew'd the *Indians* some Hogs aboard their Ships, they gave them to understand by Signs, that they had seen such Animals before. They make use of earthen Pots to dress their Meat in, as the *Europeans* do. It appear'd to the *Dutch*, that every Family or Tribe amongst them had its separate Village. The Huts or Cabins, of which these Villages are compos'd, may be from forty to sixty Feet long, and six or eight Feet broad. They are made by a certain Number of Poles thick upright, and the Spaces between them fill'd up with a kind of Loam, or soft Earth, cover'd at Top with Palm-leaves. As for their

Dut of Subsistence, they draw it intirely from the Earth. Every thing with them is sown, and raised by Cultivation.

All their little Plantations were flaked out, and very neatly divided. At the Time the *Dutch* were there, almost all their Fruits and Plants, Herbs and Roots, were in full Matuony; and our Author assures us it was his Opinion, that, if they had searched the Country thoroughly, they should have found abundance of good Things. In their Houses, however, they had not many Moveables, and those they had were of no great Value, except some red and white Coverlets, that served them, when walking, for Cloaths, and, when sleeping, for Quilts. This Stuff was as soft to the Touch as Silk, and, in all Appearance, was absolutely of their own Manufacture. These Islanders were, in general, brisk, slender, active, well-made People, and very swift of Foot. They were, in point of Temper, of a sweet, agreeable, and modest Disposition, but extremely nimorous and faint-hearted. Whenever they brought the *Dutch* either Hovels, or any other kind of Provisions, they hastily threw themselves on their Knees; and, as soon as they had delivered them, retired as fast as their Legs could carry them. They were, generally speaking, of a brown a Complexion as *Spaniards*. There were, however, some amongst them almost black, and others again white. There was yet another kind of People, whose Skins were perfectly red, as if they had been burnt by the Sun; their Ears hung down to their Shoulders; and some of them had white Balls hanging at them, which they seemed to consider as a great Ornament.

Their Bodies were painted all over with the Figures of Birds, and other Animals; and some were much better painted, than others. All their Women, in general, had an artificial Bloom upon their Cheeks, but of a Crimson far surpassing any thing known to us in *Europe*; nor could the *Dutch* discover what it was, of which this Colour was composed. On their Heads they wore a little Hat made of Reeds or Straw, and had no other Covering than the Quilts before-mentioned. Their Women were none of the modestest; for, our Author says, they beckoned them into their Houses, and, when they sat by them, would throw off their Mantles. It is very singular, with regard to these Islanders, that they saw nothing that had the Appearance of Arms amongst them; but, whenever they were attacked, they fled for Shelter and Assistance to their Idols, Numbers of which were erected all along the Coast. These Statues were all of Stone, of the Figure of a Man, with great Ears, and his Head covered with a Crown, the Whole very nicely proportioned, and so highly finished in every respect, that the *Dutch* stood amazed. Round these Idols there were Palfadoes of white Stone, at the Distance of twenty or thirty Yards. There were many of the Inhabitants, who seemed to be more frequent and more zealous Worshippers of these Idols, than the rest; which made the *Dutch* believe they were their Priests: And they were the rather inclined to think so, because they had many other Marks of Distinction; such as large white Balls hanging at their Ears, and their Heads clean shaven. These Priests wore a kind of Bonnet of black and white Feathers, which exactly resembled those of a Stork; which induced the *Dutch* to conceive, that, when these Birds leave *Europe*, Part of them, at least, take up their Residence here.

However, says our Author, upon more mature Reflection, I am convinced, that these Conjectures are not well-founded. It is true, continues he, that, if the Storks sought only a warm Climate, they might certainly find it here, since this Island lies in the Height of $28^{\circ} 30'$. But Experience shews us the contrary, this Bird being in *Europe* about the Beginning of the Spring. For my own Part, my Opinion is, that, when the Stork quits *Europe*, she flies to some Place under the South Pole. The principal Motive, if I may be so allowed to speak, which can induce this Bird thus to change her Climate, is her Fear of not finding in *Europe* her proper Food beyond the Autumn; and therefore she goes in Search of a Country, where she may find the Spring, at her Arrival, just begun, and be in no Fear of meeting with Food for half the Year. It may be therefore, that, when the Stork leaves *Europe*, she goes in Search of Food into some Climate under 40° or 50° of South Latitude, either in Countries totally unknown, or in that Land, which

was discovered by *Hernando Gallego* in the Year 1595; and that she remains there till Autumn, and then returns to *Europe* again. *Epiphanius*, *Heidelin*, *Guicciardin*, *Munster*, and other learned Men, have written very ingeniously upon this Subject; but, perhaps, none of their Conjectures were at all better founded than those of our Author. These Speculations appear to many light and trivial Things; but, with respect to natural Knowledge, there is such a Connection between seeming Trifles and Things of real Importance, that it is no easy Matter to say, which are Trifles, and which not. The Loadstone is a sufficient Proof of this. Perhaps, if we thoroughly understood the Nature of Birds of Passage, we might be led thereby to Truths of great Consequence, that now lie hid, and out of Sight. But to return to the People in *Pasch Island*:

The *Dutch* could not distinguish among these Islanders any Appearance of Government or Subordination, much less any Prince or Chief, who had Dominion over the rest. On the contrary, they all spoke and acted seemingly with equal Freedom. The old People among them wore on their Heads feathered Bonnets, which looked like the Down of Ostridges, and had Sticks in their Hands. They observed, indeed, in particular Houses, that the Father of the Family governed it, and was, with the greatest Readiness, obeyed. The Author thinks, that this Island might be settled to great Advantage, inasmuch as the Air is extremely wholesome, the Soil very rich and fruitful, proper for Corn in the low Lands, and, where it rises high, might be improved into Vineyards, which, supposing it possible, would be of infinite Consequence to such as took this Island in their Way, when bound to discover distant Lands in the Southern Part of the Globe. They had doubtless made much greater Discoveries with respect to this Island, and possibly with regard to the Continent, from which, there is Reason to believe, it cannot be far distant, if they had not been obliged to leave it suddenly, and when they least expected it. The thing happened thus:

They had been in the Evening on shore, and the Commodore, on the Report of the Officers, determined to land the next Morning, with a Force sufficient to make a strict Examination of the whole Island; but, before Morning, there arose so strong a West Wind, as drove them from both their Anchors; so that they were obliged to put to Sea, to avoid being shipwrecked; which, however, our Author thinks, would have been no great Misfortune, since, if their Vessels had been lost, they might have passed their Days quietly and happily among the *Indians*, and have converted them to Christianity. After this Misfortune, they cruised some time in the same Latitude; and, having sought in vain to discover *Davis's Land*, they at length resolved to bear away to the *Bad Sea of Schooten*, steering still a West Course, in hopes of discovering some new Country. In this, the Author thinks, the Commodore was to blame; for he is of Opinion, that, instead of steering West, they ought to have steered South, because they soon fell in with a South east Wind, which blew very strong; so that thenceforward they saw no more Birds, which, he thinks, was a certain Proof, that they were driven farther and farther from the Land they were seeking; whereas, if they had sailed South-west, they could not, in his Opinion, have failed of falling in with the Southern Continent.

12. After leaving the Island of *Pasch*, they were not long before they found themselves in the Height of that Island called *Badwater*, discovered by *Schooten* in the Year 1615, and to which he gave that Name, because all their Springs were brackish. They were in hopes of discovering at this Height some Part also of the Southern Continent; but, by changing their Course, they ran three hundred Leagues out of their Way, and at least one hundred and fifty Leagues farther than *Schooten*. That famous Seaman says, in the Account of his Voyage, that he gave one Day Chace to a small Vessel, that bore away from him directly South; from whence he concluded, and with great Reason, that there must certainly be Land on that Side. Indeed, from all the Lights that Reason and Experience afford, I am more and more confirmed in my Opinion, that there is a Tract of Land on that Side, extending above two thousand Leagues: In order to come upon which Coast, the proper Course from *Europe* is certainly South South-west;

but

but from *America* the best Course would be North-east, or North-east and by North. In this wide Sea the *Dutch* Commodore sailed upwards of 800 Leagues without discovering Land; and, though he frequently varied his Course, steering now this Way, and then that, yet it was all to no Purpose, till, arriving in the Height of $15^{\circ} 30'$ South Latitude, they discovered a very low Island, the Coast of which was covered with a very yellow Sand. As they saw in the midst of it a kind of Pond or Lake, the principal Officers of the Squadron were unanimously of Opinion, that it was the same Island *Sebastien* had discovered, and to which he had given the Name of the Island of *Degs*; and, for that Reason, they did not think fit either to go on shore there, or to examine it more particularly. Our Author, however, is clearly of Opinion, that *Sebastien* never saw this Island, which is in the Latitude of $15^{\circ} 45'$ South, and in the Longitude of 280° . As he conceived this to be absolutely a new Discovery, he bestowed on the Island the Name of *Carl'shoff*, i. e. *Charles's Court*: He describes it to be a low flat Island, about three Leagues in Extent, with a Lake in the Middle. After they left this Island, the Wind began to come about to the South-west; which was a Sign, that they were near some Coast, that altered the Current of the Air.

This sudden Change drove their Vessel in the Night amongst some small Islands, where they found themselves not a little embarrassed. The *African* Galley then led the Squadron, as being the Ship that sailed best, and drew the least Water; but, notwithstanding all the Care her Crew could take, she soon found herself in such imminent Danger among the Rocks, that she began to fire Gun after Gun, as Signals of her Distress. The *Tienboon*, which was the farthest from her, fled towards her with the utmost Diligence; and so did the Commodore, who found himself, sooner than he expected, along-side with her, which alarmed his own Ship's Company very much; but, upon heaving the Lead, and finding no Bottom, they grew tolerably easy, and thought of nothing but saving their Friends. In order to this, they immediately sent out their Shallop, to discover the Situation of the *African* Galley was in, which, at first Sight, discovered no Hopes of disengaging her, since she stuck fast between two Rocks; so that it was impossible to get her off, or to do any further Service, than to save the People that were in her. In this they succeeded tolerably well, though many of the *African* Galley's Crew were miserably bruised by the Shocks the Vessel received before she settled on the Rocks. There was but one poor Man lost, and he was a Sailor on board the *Tienboon*, who, being too eager in saving his Friends, dropped over-board, and was drowned. The Islanders, roused by the prodigious Noise that this Accident made, kindled a great many Fires upon the Hills, and came down in Crouds to the Coasts. The *Dutch*, not knowing what their Design might be, and considering the Opportunities, which the Darknels of the Night, and their own Confusion, might give to any who thought fit to attack them, fired upon them without Ceremony, in order to have as few Dangers as possible to deal with at one time. In the Morning, as soon as it was Light, they had a clear Prospect of the mighty Danger all their Ships were in the Evening before; for they found themselves environed on all Sides by four large Islands, facing towards the Sea, with a continued Chain of steep Rocks, and so close to each other, that they could hardly discern the Channel by which they entered: They had, therefore, all the Reason in the World to be thankful to the Divine Providence, which had so wonderfully preserved them in the midst of so much Danger. It must be observed, that the Commodore only entered this rocky Bay, at the Mouth of which the *African* Galley was shipwrecked, and where the *Tienboon* remained to assist in saving her Crew.

13. The Danger was not altogether over as soon as discovered, since it cost the *Dutch* Commodore no less than five Days to extricate himself out of this unfortunate Situation; during which time, his Ship's Company were absolutely ignorant of the Fate of the *African* Galley, and of her Crew: At last, the Shallop of the *Tienboon*, having sailed quite round the Islands, came to inform them, that

only one Man was lost; that the Crew got safe on shore; and that, after once firing upon them, the Inhabitants of the Island had retired into the Heart of the Country as expeditiously as they could. As soon as the Commodore was safe, he sent his Shallop, with a Detachment of the Ship's Company, to bring off the People that had been left on shore. They accordingly brought the Crew of the *African* Galley on board the Commodore; when, upon murthering them, it appeared, that a Quarter-master, and four Seamen, were missing. Upon Inquiry, it was found, that these Men made it their Choice to stay in the Island; for, having quarreled amongst themselves, when they first got on shore, they mutinied against their Officers, who had interposed to prevent their killing one another with their Knives; and, Captain *Rosenball* having threatened them with Death whenever he got them on board the Commodore, they fled into the Country, in order to escape Punishment: The Commodore, however, was unwilling they should be lost; and therefore sent our Author, with a Detachment of Soldiers, to bring them away. The Deferters, having Sight of the Shallop, as it approached the Shore, fired from behind a Coppice, so briskly, that they durst not land: Rowing, however, to an open Place, they got on shore; and, marching towards the Wood where the Deferters were, they called to them without firing, assuring them, that they had nothing to fear, that the Commodore had promised them an Indemnity, and that they might safely depend upon his Word. But the Deferters' Guilt made them deaf to all Intreaty, so that our Author's Eloquence was intirely thrown away, and he very wisely chose to leave them where they were, rather than hazard his own, and the Lives of the People under his Command, in attempting to reduce desperate Men, who, by thus rejecting all Hope, sufficiently shewed, that there was nothing they any longer feared.

All these Islands are seated between 15 and 16° of South Latitude, and at the Distance of twelve Leagues West from that of *Carl'shoff*, each of them being four or five Leagues in Compass. That on which the *African* Galley was shipwrecked, they called *Mischievous* Island; the two next to it, the *Brothers*; and the fourth Island, the *Sigh*. All four Islands were covered with a Verdure inexpressibly charming, and abounded with fine tall Trees, and especially Cocos. The Herbs that grew here were so refreshing and medicinal, that the Ship's Crew, many of whom were ill of the Scurvy, were surprisingly recovered by them: They found there likewise a prodigious Plenty of Mussels, Cockles, Mother-of-pearls, and Pearl-oysters, which gave Reason to hope, that a very advantageous Pearl-fishery might be settled here. These Islands are extremely low, so that some Parts of them must be frequently overflowed; but the Inhabitants are well provided against such Accidents, since they have not only good Canoes, but stout Barks, with Cables and Sails. The *Dutch* likewise found upon the Shore Pieces of Ropes, that seemed to be made of Hemp. The Inhabitants of the Island, upon which the *African* Galley was lost, were of an extraordinary Size, inasmuch that the *Dutch* had never seen Men so tall: One of the Seamen asserted, that he measured the Print of one of their Feet in the Sand, and that he found it twenty Inches. All their Bodies were painted of all Sorts of Colours: They had fine long black Hair, or the most part; but some of them had brown, inclined a little to red. They were armed with Pikes or Lances of eighteen or twenty Feet long. They had nothing soft or agreeable in their Countenances, but fairly spoke their Temper in their Looks, which were fierce and cruel. They marched in small Bodies of fifty or an hundred, and made Signs to the *Dutch*, when they saw them, to come to them; but to soon as they saw them advancing, they retired adwairt the Island, on purpose to draw them into some Ambuscade, which might give them an Opportunity of revenging the Loss they sustained by their firing upon them when they were shipwrecked. As the Commodore saw there was no going any good with them, and found the Coasts of all the Islands excessively rocky and foul, he was resolved to leave them, in order to seek some other Country, where, with less Hazard, he might meet with more

Refreshments, of which his Company stood in great need ; for they were now so eaten up with the Scurvy, that not a Day passed but some of them died.

14. The very next Morning after they weighed from *Mischievous* Island, they saw, at the Distance of eight Leagues to the West, a new Island, which they called *Aurora*, because, in the Commodore's Vessel, they discerned it as the Day broke. The *Tienboven* was nearer it, and, indeed, so near it, that, if the Sun had rose half an Hour later, the must have had the same Fate with the *African* Galley, since they were but a Cannon-shot from the rocky Shore, when the Danger was perceived. The Commodore immediately made the Signal to tack, which was done with great Difficulty, and the Ship, with much ado, escaped. The Fight into which this put the Mariners, soon after produced a Mutiny ; in which the Seamen insisted, one and all, that the Commodore should immediately return, or that, at least, he should give them Security to pay them their Wages, though they should be so unlucky as to lose their Vessel. To lay the Truth, this Demand of the Seamen was very just and reasonable. They were every Day exposed to the most excessive Fatigues in these stormy and unknown Seas ; and, at the same time, ran the Hazard of losing, in a Moment, all the Reward they were to expect from their Labours, since the Custom of *Holland* is, that the Seamen lose their Wages whenever the Ship is lost. The Commodore listened to their Complaints with an Humanity worthy a Man of Honour, and immediately took an Oath, that whatever happened to the Ships, they should receive their Wages to the last Farthing. He kept it too with the utmost Exactness ; for though the *African* Galley was lost before, and both the other Ships were condemned at *Batavia*, yet every one of their respective Crews had their Wages paid them to the full, as soon as they arrived at *Amsterdam*.

The Island of *Aurora* was about four Leagues in Extent, the Country covered with a charming Verdure, and adorned both with high Trees, and smaller Wood. But, as they found all the Coast rocky and foul, they left this Island too without landing, after having taken only a Prospect of it at a Distance. Towards Evening, the same Day, they had Sight of another Island, which, for that Reason, they called *Vesper*. It was about twelve Leagues in Circuit, the Ground very low, but, withal, covered with fine Grass, and stored with great Plenty of various Sorts of Trees. They continued their Course still, steering West, to the Height of about 15° ; and the next Morning they discovered another Country, which, seeing covered with Smoke, they concluded was inhabited, and therefore made all the Sail they could, in hopes of meeting with Refreshments ; and, as they approached the Country nearer, they saw some of the Inhabitants diverting themselves on the Coast in their Canoes. They perceived likewise, by degrees, that what they had taken for one Country, was, in reality, abundance of Islands crouded close to each other ; among which they had now entered so far, that they found it a very difficult thing to extricate themselves. In this Situation, they sent a Man to the Top-mast Head, to discover a Passage out ; and, as the Weather was perfectly serene, they had the good Luck to get once more into the open Sea, without any Accident ; tho', in passing by several Ranges of steep Rocks, they had Reason to consider this as a very great, as well as fresh Deliverance. There were six of these Islands, exceedingly beautiful and pleasant to the Eye, and which, taken together, could not be less than thirty Leagues in Circumference. They were situated twenty-five Leagues West of *Mischievous* Island : The *Dutch* gave them the Name of the *Labyrinth*, because they had been obliged to tack several times to get clear of them.

As it was very dangerous to anchor on the Coast, and as, besides, none of the Inhabitants came to meet them in their Canoes, or on the Shore, they did not think fit to make any Stay. They still continued a West Course, and, in a few Days, discovered another Island, which appeared at a great Distance very high, and extremely beautiful ; but, on a near Approach, they found no Ground for Anchorage, and the Coast appeared so rocky, that they were afraid to venture any closer : They therefore manned each

of their Shallops with twenty-five Men, in order to make a Descent. The Inhabitants no sooner perceived their Design, than they came down in Crouds to the Coast, in order to oppose their Landing. They were armed with very long Pikes, and gave them speedy Demonstrations of their knowing how to use them to the utmost Advantage. When the Shallops were pretty near the Island, they found the Shore so steep, and full of Rocks, that it was impossible to land ; upon which, the best Part of the Sailors threw themselves into the Sea, with their Arms in their Hands, and some Baubles, fit for Presents, tied upon their Heads, while the rest kept a constant Fire from the Boats, in order to clear the Shore, and facilitate their Landing. This Expedient succeeded to their Wish, and the Seamen got on shore without any considerable Resistance from the Inhabitants, who, frightened by the Discharge of their Fire-arms, quitted the Coast, and retired up the Mountains, but came down again as soon as the *Dutch* ceased firing. When those who were landed had advanced in Sight of the Islanders, they shewed them their Looking-glasses, Strings of Coral, &c. The People came up to them without the least Fear, took their Presents, and suffered them to search where they pleased for Herbs and Salading for the Sick : Of these they found such Plenty, that, in a very little time, they filled twelve great Sacks, six for the Commodore, and as many for the *Tienboven* ; for, when the People once saw what they were about, they not only shewed them the best Sorts, but assisted in gathering them. They saw in this Island prodigious Quantities of Jasmin, which was then in full Flower. They carried their Cargo of Greens immediately on board, which were much more acceptable to the Sick, than if they had brought them so much Gold and Silver.

The next Morning a greater Body of Men were ordered on shore, as well to gather Herbs, as to try to make farther Discoveries. The first thing they did, was to make a Present to the King, or Chief, of a considerable Quantity of all Sorts of Trinkets, which he received indeed, but with such an Air of Indifference and Disdain, as did not seem to promise any great Good with respect to their future Commerce. It is true, that, in Exchange, he sent the *Dutch* a considerable Quantity of Cocoa-nuts, which were very agreeable to them in their present Circumstances. This Chief, or Prince, was distinguished from the rest of the Inhabitants by the Ornaments he wore, consisting of various Things of Pearl, to the Amount of about 600 *Dutch* Florins in Value. Their Women seemed to admire the white Men very much, and almost flitted them with Carresses ; but this was all a false Shew of Love, which these Traitoresses employed to lull the *Dutch* into Security, that the Plot, laid by their Men, might succeed more effectually ; and, if they had executed it with the same Subtlety with which they contrived it, they had certainly cut off every *Dutchman* that came on shore.

The thing happened thus : When the *Dutch* had filled twenty Sacks with Greens, they advanced farther into the Country, till such time as they came to the Top of certain steep Rocks, which hung over a large and deep Valley, the Islanders going before and behind them, of whom the *Dutch* had not the least Suspicion : But, as soon as they thought they had them at an Advantage, they quitted them on a sudden, and Thousands came pouring out from Caves and Holes in the Rocks ; the Sailors immediately formed themselves, and stood upon their Defence : The Chief, or Prince, then made a Signal to the *Dutch* to keep off ; of which they took no notice, but still continued to advance in a Line : He then gave the Signal of Battle to his own People, and it was followed by a prodigious Shower of Stones : The *Dutch*, in Return, made a general Discharge of their Fire-arms, which did great Execution ; and, amongst the first that fell, was the Chief. The Islanders, however, were so far from flying, that they continued throwing Stones with greater Fury than before, so that most of the *Dutch* were soon wounded, and, in a manner, disabled, which made them retire behind a Rock ; from whence they fired, with such Success, that great Numbers of the Islanders were killed ; yet they obstinately maintained their Ground, and the *Dutch* were forced to retreat, having some killed, and a great many wounded, who, by

reason of their feebler Habit of Body, died not long after, notwithstanding all the Care that could be taken of them. As soon as they had disengaged themselves from the Enemy, they retired, and carried the Sacks of Herbs they had gathered, on board their Ships; where the Report they made of what had befallen them, affected their Ship's Company to such a Degree, that when a Motion was made for landing again, there was no body could be brought to bear the Thoughts of it.

To this Ill, before the happening of this unlucky Accident, they had given the Name of the Island *Recreation*, on account of the Herbs and Sallading they found there. This Island is situated in the Height of 16° South Latitude, and in the Longitude of 285°: It is in Extent about twelve Leagues, the Soil extremely fertile, producing great Quantities of Trees, but more especially Palms, Coconos, and Iron-wood; the *Dutch* thought they had Reason to believe, that, in the Heart of the Country, there were rich Mines, and other valuable Things; but, as they were not at Liberty to make a very strict Search, our Author says he cannot positively affirm it. The Inhabitants were Men of a middle Size, robust, active, and seemed to be very well exercised in their sort of Discipline; their Hair was long, black, and shining, owing principally to a joining it with Oil of Coconos, which is practised by other *Indian* Nations. They were painted all over like the Natives of the Island of *Pasch*. The Men cover the Middle of their Bodies with a kind of Net-work, which is drawn between their Legs, and tucked up behind. As for the Women, they were intirely covered with a kind of Mantle of their own Manufacture, which, to the Sight and Touch, had a near Resemblance to Silk; and they wear about their Necks and Wrists, by way of Ornament, long Strings of Pearl. As the Anchorage was every-where bad, and the rocky Shore of this Island so excessively steep, as not to permit, from the Sea, any View of the inner Part of the Country, the Commodore thought proper to sail, without farther Loss of Time, as knowing, that it was to no Purpose for him to remain longer, since the Men absolutely refused to attempt going on shore any more, because those who had been wounded in the late Skirmish, were dropping off daily.

15. The Commodore, before his Departure, thought fit to hold a Council of War, in which he communicated to his Officers the Contents of his Instructions; which were, that if, in the Latitude and Longitude they were now in, they could make no Discovery of Importance, he should return Home. There were some of the Council who were very much alomthed at this Order, and could not forbear telling the Commodore, that, being advanced so far, and having met with so great Encouragement, it would betray a great want of Spirit, if they did not proceed. To this he answered, that they had been already out ten Months; that they had still a long Voyage to make to the *East Indies*; that Provisions began to grow very short; and, above all, that their Crew was already so much diminished, and those who survived in so weak a Condition, that, if twenty more should die, or fall sick, there would not be enough left to navigate both Ships; not to mention other Reasons of equal Importance.

The true Secret, however, says my Author, of this sudden Change, was the great Desire, that some of the principal Officers had to get to the *East Indies*; for they were afraid of missing the Monsoon, in which case they must have remained still six Months longer in the *South Seas*. Thus, says he, all our grand Design was at once defeated and overturned, after our having taken such incredible Pains to succeed, and after meeting with so many Omens of success. Some Officers, however, opposed this Motion to the very last; and, foreseeing the Difficulties that must attend it, earnestly persuaded the Commodore to attempt rather wintering in the Countries mentioned by *Viridand de Queros*, from which, as they shewed him, they could not be above an hundred and fifty Leagues. But when they found he was inflexible, a new Dispute arose about the Passage home: Those who had the Good of the Voyage only at Heart, insisted positively, that it was wrong to think of going by the *East Indies*, since it was directly contrary to the Design of their Instructions; that, by con-

tinuing the first Course, they must necessarily fall in with some Island or other, where they might land, take in Refreshments, and stay till their sick Men recovered; That, in this case, they ought first of all to erect a Fort for their own Security against the Natives: in the next, to treat those People with all imaginable Gentleness and Candour; that, by this means, they should infallibly engage them to trade and converse with them, which would enable them to learn their Language, and carry Home a clear, distinct, and full Account of the Country in which they had lived. They further represented, that, if this Proposal was complied with, they should have it always in their Power to return Home, by steering an East Course, and, by taking time, perfect effectually the Discoveries they were sent to make.

These Reasons were heard with Patience and Civility, though they had not the Weight that they deserved; and, on the Whole, a Resolution was taken to continue their Course towards *New Britain* and *New Guiney*, and thence by the Way of the *Moluccas* to the *East Indies*, where they were in hopes of procuring not only a Supply of Provisions, and other Necessaries, but of Seamen also, in case they should be in so weak a Condition, as not to be able to navigate their Ships back to *Europe*. By this Resolution, our Author says, an End was put to all Hopes of visiting the Land of *de Queros*, which, it was the Opinion of the best Seamen on board, they might certainly and easily have discovered. This Opinion of theirs was grounded upon three Reasons: First, that the Situation of this Country is better laid down, than those of most new-discovered Countries, which are not as yet thoroughly known. Secondly, that the Islands they had hitherto met with, agreed, in every respect, as to their Situation, Inhabitants, and Produce, with the Descriptions in *de Queros's* Memorials. And lastly, because the Wind plainly blew off some Continent, or very large Island, and would therefore have been extremely favourable to their Design, if they had thought fit to prosecute it. Our Author takes Occasion here to enter into a large Discourse on the Certainty of such a Southern Continent, the Advantages that would probably result from the Discovery of it, and the Means most likely to effect that Discovery, the Substance of which we shall endeavour to give the Reader in as few Words as it is possible.

It is very certain, that the Discovery of *Terra Australis incognita* is considered, by many wise and knowing People, as a kind of Philosophers-stone, perpetual Motion, or, in plain *English*, as a Chimera, fit only to take up the empty Brains of wild Projectors. Yet this seems to be no sufficient Reason, why such as are competent Judges of the Matter in Dispute, should decide, peremptorily, that there is no such Country; or, if there be, that it is not worth the finding. These sort of hasty Conclusions are extremely fatal to Science in general, and to the Art of Navigation in particular. To say the Truth, all Notions built upon Conjectures only, however beautifully ranged in a System, serve only to puzzle and mislead People. The Discovery of all Parts of the World seems to be, at once, the Business and the Glory of Man. It is the peculiar Privilege of our Species, that we can traverse this Globe by Land and Water, and thereby become intelligent with respect to all the various Scenes of Wisdom, which the World's Creator and ours has displayed therein. This is sufficient to shew, that there cannot be any thing more noble, or more worthy of a great Mind, than the improving, either in Theory or Practice, the Disposition of this terraqueous Globe, the Harmony of its Parts, and their Relation to each other. Whoever employs any Part of his Time in this Way, will discern that there is wanting to the Eye a Southern Continent, in order to give one side of the Globe a Resemblance to the other. This is the first Argument, that there is such a Southern Continent; the next, that Experience confirms this Notion; the Fowls, the Winds, the Currents, the Ice, beyond *Cape Horn*, all confirm this Opinion, that there is Land towards the Southern Pole. We are to consider again, that those who have numberless Voyages to the *East Indies*, and a great many round the Globe, yet we have few, very few, into that Ocean, in which this Continent is supposed to be; and that those Voyages, serve all, in some measure, to confirm

Opinion; because, in every one of these Voyages, some Land or other was discovered, either Continent or Island. Now it is certain, that Islands, great and small, are seldom, if ever, at a very great Distance from a Continent; and therefore, where there are many Islands, it is at least a very probable Sign, that there is some Continent not far from them. Thus much as to the Certainty of the Thing, that there really is such a Country.

With regard to the next Point, Whether it is worth the Discovery? this requires a much more ample Inquiry. It is obvious, in the first Place, that the Discovery of all new Lands has a natural Tendency to the Increase of Commerce; of which we have an Instance in the Whale-fishery on the Coast of *Greenland*, and the Trade carried on in *Hudson's Bay*; but, with respect to the Lands we are now speaking of, we have as much Certainty as the Nature of the Thing will admit, that they are really as rich and plentiful, as any Countries on the Face of the Globe, without Exception. We have already proved, that the fifth Climate is, according to the Laws of Nature, the most fertile, as well as the most wholesome; and it must on all Hands be allowed, that a great Part of the *Terra Australis* lies under that Climate. *Ferdinando de Quiros*, in his Memorials, calls it a fourth Part of the Globe, and with good Reason; for, from the Western Point of *New Guinea*, to the Eastern Extremity of the Country discovered by *Hernando Gallego*, there is a Space of 2000 Leagues, a great Part of which has been, and the rest may be, certainly discovered. But, of all Proofs that can be offered in such a Case, those are certainly the most convincing, that are taken from Facts. Now *de Quiros*, and *Torres*, who actually visited those Islands, which, by their first Discoverer *Abel Tasman*, were called the Islands of *Sclanion*, not only report, that the Country is beautiful in Prospect, and exceedingly fertile in its Produce, but that it abounds also with every thing that has hitherto been accounted Riches, such as Gold, Silver, Precious Stones, and Spices.

It is true, that they acknowledged they visited only the Coast; but this rather fortifies than lessens their Testimony; for those Parts of the Coasts are often the most pleasant, yet they are seldom the richest Part of a Country. It is owing to Accident, and the Curiosity of such as report these Things, that we have ever heard of these Countries; and it is chiefly the Effect of the Impatience of Discoverers, that we are not better acquainted with them. A Man cannot be expected to describe a Country he has only galloped through; and it is the same Thing with regard to Discoverers, who pretend to give distinct Accounts of Countries, without visiting any Part of them but their Ports: Yet such People may have Leave to say, that they have seen, and later Experience seems to confirm, the Relations of *de Quiros* and *Torres*, with this Difference only, that they remained longer on shore, and were consequently more capable of entering into Particulars.

All who have visited these Southern Countries agree, that there are in them three different sorts of Inhabitants, viz. the Olive-coloured, the Black, and the White. *William Schouten* observes, as a kind of Prologium, that amongst a great Number of Blacks, he saw one perfectly white Man. The Spanish Historian *Herrera* tells us, that, on the Eastern Point of *New Guinea*, and especially about *Maire de Deo*, the Inhabitants are all white, though that Country received its Name from its Inhabitants appearing to be Negroes. Our Author confirms all this of his own Knowledge, and carries it still further; for he says, he saw not only yellow, Black, and white People, but a fourth Sort likewise, who were red: He adds, that, having inquired of such as had lived some time in *New Guinea*, about the white Men, which *Herrera* mentions, he found the Fact to be true, though these People could give but a very indifferent Account of them. In this, however, they all agreed, that these white People had very little Conversation or Commerce with the Blacks: That they wore a different Dress, resembling that of the oriental Nations, wore long Bards, and had not either Hols or Ornaments to their Temples. They likewise assured him, that the Language of these white People differs greatly from the Languages spoken by their Neighbours. In the Memorial of *de Quiros* it is said, that the Inhabitants of the Islands

he visited were prone to Idolatry, which is very agreeable to the Account that has been given of the People in *Pasib* Island.

As to Government, *de Quiros* reports the People he saw to have lived under a Republic, which agrees with the Situation of Things in that Island which has been last mentioned: With respect, again, to Food and Provisions, *de Quiros* affirms, that he found, in those Countries he visited, such Plenty of Cattle, Hogs, Goats, and Powl, that the People had not only wherewith to live in Plenty themselves, but were able, without diminishing that Plenty, to supply their Neighbours. *Schouten* affirms the same Thing with respect to the Islands he saw, and so do other Travellers; and our Author rightly observes, that the Size, the Strength, and the Activity of the People they saw in the Island of *Pasib*, made it sufficiently evident, that they lived upon nourishing and succulent Food. *De Quiros* informs us, that the *Indians* made a very sweet, solid, and nourishing Bread of three sorts of Roots. It appears from this Voyage, that they met, in almost all the Islands they discovered, with different kinds of Roots, which served instead of Bread, and were very pleasant and wholesome. Some of them, our Author says, were very like Beet-roots; but whether it was of these Roots that the Inhabitants made their Bread, he does not pretend to say: They had likewise Plenty of Potatoes, which were very good in their kind. As to Plants, Herbs, and Flowers, we find in *de Quiros's* Memorial, that the Countries, in which he was, abounded with them, as well as with Sugar-canes, which are indeed plenty in most warm Countries, and of which there was such abundance in the Islands visited by our Author in this Voyage, that the People often brought the *Dutch* more than they wanted, or could tell what to do with, and therefore they returned them; and as to other Fruits of different sorts, some known, some unknown, but all excellent in their kind, the Plenty of them has been already mentioned more than once.

Both our Author, and all former Travellers, agree, that these Southern *Indians* are not only much pleased with, but tolerably skilled in, Music. *Abel Tasman*, whose Discoveries from the original *Dutch* shall hereafter find a Place in this Work, heard an Horn sounded among the *Indians* he conversed with; and *Schouten* says, that, at an Entertainment made by two *Indian* Kings, at which he was present, there was a Person sent for to play upon the Flute. Utensils in their Houses were, according to *de Quiros*, most of them made of Earth; and, as we have seen before, our Author found it so likewise. *De Quiros* absolutely affirms, that they made use of Vessels, tolerably well built, for the Carrying on of Commerce between their Islands, of the Truth of which our Author says he was an Eye-witness; and *Schouten* in his Voyages confirms this, by telling us, that he took a Vessel with a considerable Stock of live Provisions on board, which must therefore have been intended for a Voyage of some Length. Our Author not only maintains the Truth of this from his own Knowledge, but adds farther, that they examined the Sails of some of these Vessels, and found them as good as if they had been made in *Holland*; the Thread of them resembling Hemp, and the Canvas surpassing, in all respects, any thing of that kind made in *Java*, or the *Indies*. We find, in *de Quiros's* Memorial, an Account of a very fine Gulph, in the Latitude of 15, where Ships might anchor very commodiously: He thought fit to call it *Gulph de Philippe*, where, according to him, Ships might anchor safe from Winds, inasmuch as it ran twenty Leagues up into the Country. *Hernando Gallego* writes, that, in his Passage from *New Guinea* to the Straights of *Magellan*, he was driven, by a West Wind, to a Country lying to the South, which he looked upon as cut off from the Continent: This very probably might be the Gulph mentioned by *de Quiros*. *Abel Tasman* reports, that he found, in the Southern Continent, a large and spacious Gulph, very commodious for Shipping; *William Schouten* and *Herrera* make frequent mention of Havens and Rivers in these Southern Countries; and *Dampier*, as we shall shew elsewhere, actually saw some of these. It, therefore, we consider all the Circumstances that have been mentioned, the Credit of the several Authors who report them, their ap-
page 2

parent Connexion, and Impossibility of making Forgeries tally so exactly, we must conclude, that there is very full Evidence in Support of both these Positions; viz. that there is a great Continent, and many Islands, to the South of and that this Continent, and those Islands, are very probably rich and well-peopled, to which if a Trade could be opened, it might, nay, must, be very commoious, and produce as great or greater Advantages, than those which have resulted from the Discoveries of *America*.

It is indeed astonishing, that, considering even the imperfect Accounts that have been had of these Southern Lands within the last and the present Century, no *European* Potentate ever seriously undertook the Conquest of them. It is true, that many Expeditions have been made for discovering, but not one for making a Settlement. There never yet was fitted out any Squadron strong enough, either in Ships or in Men, to attempt penetrating into the Heart of any of these Countries. The *English* and the *Dutch* have contented themselves with running along the Coasts, without ever venturing to make a Descent, either for fear of being overpowered by the Inhabitants, or in Apprehension of wanting Provisions in their Return, in case they amused themselves too long in this Part of the World. Such are the Reasons assigned by our Author for the Mistrriage of the Design in which he was concerned, as well as of all the rest upon that Plan. He concludes his Discourse with laying down certain Maxims, which, he thinks, if steadily pursued, would greatly contribute to, if not absolutely effect, this useful and important Discovery. In the first Place, says he, such a Design is not to be undertaken with one or two Ships, but with a Squadron, and those too of several Kinds; some Ships of Force, some Tenders, all well provided, and victualled for a long Voyage. Secondly, says he, the Ship's Company ought to be composed chiefly of good Seamen; whereas hitherto the Majority of the Crews of such Vessels have consisted of Soldiers, or of mere Land-men of some sort or other. He gives this Reason in Support of the Maxim he lays down: In such a Voyage, it is natural that both Sorts should decrease; but the Consequence is, by no means, equal: For, if there be Seamen enough left, they can always fight; but, let there be ever so many Land-men, they cannot work the Ship in Time of Danger. His third Maxim is, that, some Months after fitting out the first Squadron, there should be another sent after them, which, as he observes, would prevent the bad Effects of the Scurvy, and of corrupt Provisions, since it would give an Opportunity of shifting Crews, and prevent either Squadron remaining too long at Sea without a convenient Supply. In the fourth Place, he says, that, as it is impossible to foresee the Accidents that may happen in a Voyage, a certain Place of Rendezvous should be fixed before the first Squadron sails, and the Captain of each Vessel strictly enjoined to repair thither, and continue there for a certain Time, in order to wait for his Consorts. The last Rule he lays down is this, that whoever is trusted with the chief Command of such an Expedition, should not be limited or restrained by his Commission, but that much should be left to his Discretion; because otherwise he will either be at a Loss when to follow what the Circumstances of the Voyage direct; and when to adhere to his Orders; or else, for his own Security, he will only consider the latter: Whereas the Success of the Design must always depend on his judging and acting rightly with regard to the former. In all Probability, the true Reason, why none of the Princes of *Europe* have hitherto undertaken any thing in this Affair, as if they were in Earnest, is, that they all wait till some one shall begin, who having opened a Way at his own Expence, they may be able to follow him with more Certainty, and less Danger: Yet what Reason is there, in this Case, to hope, that the first Discoverer should be less tenacious of his Rights, than the *French* are of theirs in *Canada*, the *Spaniards* in *Peru*, the *Portuguese* in *Brazil*, the *English* in *Virginia*, and the *Dutch* at the *Moluccas*? The Law of Nations gives an exclusive Right of Trade to the first Discoverer; and an Attempt to violate this would be considered as an open Rupture. The great Point then is to be the first Discoverer, the lawful Lord and Proprietor of this new Trade; which must very

soon render the Power possessed of it, if properly managed, the most considerable Maritime Power in *Europe*.

16. When the *Dutch* Commodore quitted the Island of *Recreation*, he steered a North-west Course, pursuant to the Resolution of the last Council, in order to attain the Height of *New Britain*. The third Day after they sailed, they discovered in the Latitude of 12° South, and in the Longitude of 290, several Islands, which appeared very beautiful at a Distance; and, as they came nearer, they plainly discerned, that they were well planted with Fruit-trees of all Sorts; that the Country produced Herbs, Corn, and Roots, in great plenty, laid out, towards the Coast, in large and regular Plantations. As soon as the Inhabitants discerned the Ships, they came in their Boats, and brought them Fish, Cocoa-nuts, *Indian* Figs, and other Refreshments; in Return for which, the *Dutch* gave them, a usual, small Looking-glasses, Strings of Beads, and other Trifles.

It quickly appeared, that these Islands were very fully peopled, since many Thousands of Men and Women, the former, generally speaking, armed with Bows and Arrows, came down to the Shore to look at them. They saw, amongst the rest, a very majestic Personage, whom, from the Dress he wore, and the Honours that were paid him, they easily discovered to be the Prince or Sovereign of this Nation. He presently stepped into his Canoe, accompanied by a fair young Woman, who sat close by his Side. His Canoe was immediately surrounded by a vast Number of other Vessels, that crowded about it, and seemed intended for a Guard. All the Inhabitants of these Islands were white, and differed nothing in their Complexion from *Europeans*, except that they were a little sun-burnt. They seemed to be a very harmless good sort of People, very brisk and lively, treating each other with visible Marks of Civility, and discovering nothing that was wild or savage in their Behaviour. Their Bodies were not painted like those of the other *Indians* they had seen, but very handsomely clothed from the Girdle downwards with a sort of Silk Fringes, very neatly folded. On their Heads they wore Hats of a very neat kind of Stuff, and very large, to keep off the Sun; and, about their Necks, they wore Collars of very beautiful and odoriferous Flowers. The Country itself appeared exquisitely charming, every one of the Islands being agreeably diversified with Hills and Valleys, as lovely as Imagination can paint. Some of them were ten, some fifteen, and some again twenty Miles in Compass. They thought fit to call them *Bowman's Islands*, after the Captain of the *Tienboven*, who first discovered them. It appeared, that each Family or Tribe had its particular District, and composed of separate Governments, all of them being laid out into fair regular Plantations, after the same manner with those of the Island of *Pajob* before described. Our Author says, that it is a Point of Justice due to these Islanders to acknowledge, that they were, in all respects, the most civilized and best disposed People they met with in the South Seas. Instead of shewing any Terrors or Apprehensions at their Arrival, they expressed the utmost Joy and Satisfaction, treated them with a Kindness and Respect not to be described, and manifested the most sincere and not deep Concern, when they perceived, that, in spite of all their officious Diligence, these New-comers were not like to stay amongst them.

It seems the *Dutch* themselves felt many of them a like Concern, and would have been extremely well pleased to have made a longer Stay in so plentiful a Country, and among so kind a People; the rather because it was morally certain, that, by the Help of the vast abundance of good Provisions, with which these Islanders willingly furnished them, all their sick People, in a Month's time, would have perfectly recovered. Add to all this, that these Islands had one Convenience superior to those they had before met with; viz. that there was exceeding good Anchorages along their Coasts, where they rode in fifteen or twenty Fathom Water in the greatest Safety. So many advantageous Circumstances ought certainly to have prevailed on the Commodore, and his Officers, to have remained there; but their Heads were so full of an *East India* Voyage, and they were so extremely fearful of missing the East Monsoon, that

they could not be brought, by any means, so much as to hear of that Proposal; Yet this un luckily Precaution of theirs, which hindered them from viewing these Islands, was built upon a false Foundation, since, as they afterwards discovered to their Cost, they were two Months too early, instead of two Months too late, for that Trade-wind, in hopes of meeting with which, they had abandoned a Discovery, that would, in all human Probability, have amply rewarded their past Pains and Labour; and, which was still worse, by this indifferet and hasty Departure, they sacrificed the Health and Strength of their Crew to such a Degree, that they found themselves weakened, as to be scarce in a Condition to navigate their Ships; which once put them on thinking of a very desperate and dangerous Expedient, *viz.* that of burning one Vessel, in order, with less Difficulty, to manage the other. All such Inconveniencies had been avoided, if, embracing this Opportunity, offered them by the Favour of Divine Providence, they had been content to stay in a Place of Safety, Plenty, and Pleasure, till their sick People had recovered, instead of wilfully seeking new Dan-ers, with which they were so little able to encounter.

17. Weighing from *Bowman's Islands*, they continued their Course towards the North-west, which gained them, the next Morning, the Sight of two Islands; which they took to be the Island of *Cocos*, and *Traitors Island*, so called by *William Smeaton*, by whom they were discovered. Captain *Bowman* would very willingly have approached them more nearly; but the Commodore would not permit him. The Island of *Cocos*, at the Distance they saw it, seemed very high Land, and about eight Leagues in Compass. The other appeared to be much lower, the Soil red, and without Trees. This last Island, they believed, lay in the Latitude of 11° South; but our Author ingenuously owns, that they failed at too great a Distance to be able to give any good Account of them. They soon after saw two other Islands of very large Extent, one of which they called *Tienboven*, and the other *Groningen*; which last, many of their Officers were clearly of Opinion, was no Island, but the great South Continent they were sent to discover; with respect to which, however, our Author suspends his Judgment, because the Proofs on neither Side seemed to him convincing. As for the Island of *Tienboven*, it appeared to be a rich and beautiful Country, moderately high, the Meadows exceedingly green, and within-land adorned with Trees. They coasted along the Shore for a whole Day, without coming to the End of it. They observed, however, that it extended in the Form of a Semicircle towards the Island of *Groningen*; so that, after all, it is very probable, that these two Countries, that were at first taken for Islands, may, in Reality, be Lands contiguous to each other, and both of them Parts of the *Terra Australis incognita*: Yet our Author acknowledges they found, in that Neighbourhood, Islands of 150 Miles in Circumference; which agrees very well with the Account given by *Dampier*, who affirms, that he found a Strait between *New Guinea* and *New Britain*; and, if so, this must be considered as an Island. A great Part of the Company were for anchoring on the Coast, and making a Descent; but that was now become a very disagreeable Motion; and, to be rid of it the more easily at present, the Officers, who were so fond of going to the *East Indies*, suggested, that it must, at this time, be attended with great Danger, since, if the Party landing was cut off, they should not then have Men enough left to carry their Ships home.

They were oblig'd therefore to continue their Course, how disagreeable soever that Measure might be to the Majority of the Company, who, as they came out to make Discoveries, were unwilling to go home with imperfect Stories. It was not now doubted but that they should very soon see the Coasts of *New Guinea*, or of *New Britain*; but, after sailing for many Days without seeing any Land at all, they began to be fatished of the Vanity of these Calculations; but, at the same time, could not help murmuring a little at their Effects, which were very dreadful, since the Scurvy began to carry off three, four or five of their best Hands every Day: So that, though they had already returned three Ships Companies to two, they more than once deliberated, whether it might not be expedient to burn one

of the remaining Vessels; and the only Argument that restrained them from doing it was, that, in case any Accident befel one, there was still a Possibility left of escaping with the other. There cannot be any thing more terrible than the Account our Author gives of the Miseries they endured; but, at the same time, it is too curious, and too important, to be omitted.

At this time, says he, there was nothing to be seen on board but sick People, struggling with inexpressible Pains, and dead Carcases, that were just released from them, and from which arose so intolerable a Smell, that such as yet remained hard were not able to endure, but frequently swooned with it. Cries and Groans were perpetually ringing in their Ears; and the very Sight of the People moving about was sufficient to excite at once Terror and Compassion; for some of them were such perfect Skeletons, that their Skins seem'd to cleave to their Bones, in which sad Circumstances they had this Consolation, that they felt no Pain, but consumed and extinguish'd like the Snuff of a Candle. Others, again, were swelled and puff'd up to a monstrous Size, and were tormented with such violent Pains, as threw them frequently into a furious kind of Madness. Others were worn away by the Dysentery, and bloody Stools, while many suffered the most excruciating Pains from the Rheumatism; and others dragged their dead Limbs after them, the Feeling of which had been taken away by the Palsy. To all these Diseases of the Body, there were likewise added many Distempers of the Mind: An Arabaptist of about twenty-five Years old cried, without ceasing, for twenty-four Hours before he died, *Baptize me! baptize me!* When the Captain was told of it, he answered in a very quick Tone, *If he had a mind to have passed through that Ceremony, he should have thought of it before he embarked;* adding with a Sneeze, *The fellow knows well enough we have no Parsons here.* When the poor Man was told this, he remained quiet, and died with great Resignation. There were two Papists on board, the one a *French*, the other a *Dutchman*, who gave what little Money they had to their Friends, beseeching them, that, if ever they returned to *Holland*, they would lay it out in procuring a certain Number of Masses to be said for the Repose of their Souls, to the Honour of *St. Anthony of Padua*. But they were not all of so religious a Disposition; on the contrary, many of them would not hear any thing that had the least Savour of Religion, for some time before they expired. Our Author assures us, that he saw some, who neither eat nor drank for four-and-twenty Days before they died; and some, again, were carried off so suddenly, that, in the midst of their Discourse, they stopped short, and were found to be dead. All these different Kinds of Sickneses our Author attributes chiefly to their bad Provisions, their salt Mears being corrupted, their bread full of Maggots, and their Water stinking to an intolerable Degree. In such Circumstances as these, Medicines, at the most, could only defer Death, but could never work a Cure. The only effectual Remedy was fresh Meat, Herbs, and Water. Even such as were reputed in Health were low, weak, and much afflicted with the Scurvy. Our Author tells us, that tho' he was as well as any body, yet he had the Scurvy to such a degree, that his Teeth were all loose, his Gums torn and inflamed, and his Body covered with Spots of different Colours. At last, however, it pleas'd God to put a Period to their Miseries, by giving them a Sight of the Coast of *New Britain*, the Joy of which fill'd their Sick with new Spirits, and encouraged such as were able to move, to hope they might yet return to their native Country; whereas, if they had been oblig'd to continue many Days longer at Sea, they must certainly have perished, as well through Despair, as through the many Miseries they suffer'd, of which tho' he has given us a long and melancholy Account, he yet assures us, that it is but a faint Description, and tells very far short in expressing the manifold Distresses to which they were expos'd.

18. The Country of *New Britain*, as well as the rest of the Islands in its Neighbourhood, is very high Land, many of the Mountains hiding themselves in the Clouds; but, for the Sea-coasts, they are equally fertile and pleasant, the Meadows wearing a perpetual Verdure, and the Hills being covered with various Sorts of Fruit-trees. It lies in the Latitude

tude of between 4° and 5° South; so that, in point of Situation and Appearance, there could not any Country promise more, than this did. The *Dutch*, therefore, after some Consultation, resolv'd, at all Events, to go on shore, tho' there certainly were some very strong Arguments against it; for they were now weakened to such a degree, that they could scarce, out of both Ships, spare Men enough to man a Boat, and leave a sufficient Number to navigate one Ship, supposing that they should consent to give up all Hopes of carrying home the other; but the Passions of the Ships Companies were so strong for going on shore, and their Necessities so great, that, on the Whole, it appear'd absolutely requisite to venture a Descent, let the Consequences of it be what they would.

Accordingly, our Author was order'd into the Shallop, with a certain Number of Men, with Instructions to go on shore at any rate, by fair Means, if possible, and with the Consent of the Inhabitants, for whom they carried a great Quantity of Trifles by way of Present; but, if this had no Effect, then they were to make use of Force, since the Circumstances they were under made it as eligible to die by the Hands of Barbarians, as to perish piece-meal through Want and Diseases. The nearer they drew to the Coast, the more they were pleas'd with it, since it gave them a View, and that a very near one, of all the Refreshments they could wish for. The Inhabitants also came down in Crowds; but not in a Manner that added at all to their Satisfaction: For they were well arm'd with Bows, Arrows, and Slings, demonstrating sufficiently by their Gestures, that they were not at all pleas'd with these New-comers; and that they did not intend, by any means, to let them land peaceably. As the Shallop drew nearer the Shore, the Inhabitants threw themselves into a frantic Despair, made frightful Faces, howled, tore their Hair, and, as if they had borrow'd Courage from the quick Sense of their Distress, hurried off in their Canoes, in order to meet that Danger, which they saw was unavoidable.

19. The *Dutch* continued to make the best of their Way towards the Land; which when the *Indians* saw, they discharged a Flight of Arrows, which was followed by the Javelins they had in their Hands. This was succeeded by a prodigious Shower of Stones, discharged from their Slings; and as there needed no more to convince the *Dutch*, that they had nothing to trust to but Force, they fired upon them without ceasing; and this with such Effect, that many of them were killed, and the rest terrified to such a degree, that many of them threw themselves out of their Canoes into the Water, and the rest were at last oblig'd to follow their Example; for such was their Confusion, that they were no longer able to distinguish the proper Channels, by which they might safely have returned with their Canoes, but ran them on the Rocks and Shoals that lay before their Coasts. This almost took from the *Dutch* all Hopes of following them; and, while they were thus embarrass'd, there arose a most violent Storm, of that Kind which the *Dutch* Seamen style a *Traffat*, and which commonly springs in the midst of a Calm, when the Air is perfectly clear and serene; and, by its Violence, frequently brings the Masts by the Board, and carries the Sails into the Air, if they are not furled in an Instant. This Storm forc'd the Ships out to Sea, and left the poor People in their Shallop, without Relief, and almost without Hope. They ran suddenly on a Bank of Sand, where they were beaten with such Violence by the Winds and Waves, that there seem'd to be no Means of Safety left; but, as Despair usually gives Men Spirits and Strength beyond what they have at other times, they had the good Fortune to drag their Vessel safe to Land, where, by the Favour of Divine Providence, all of them got on shore, fatigued indeed to the last Degree, but without any other Hurt.

The first thing they did was, to endeavour to find out some Place of Retreat, where they might be safe from any sudden Attack of their Enemies; but, before such a Place could be found, the Night drew on, and they were forc'd to content themselves with getting together, where they were, as many Pieces of Wood, and broken Branches of Trees, as possible, in order to dry and warm themselves. When they had, by this means, made a pretty good Fire, their Spirits began to revive, and they had Time to look

about them. The Light of the Fire enabled them to discover several Cabins and Huts in the Neighbourhood of the Place where they had taken up their Abode; nor was it long before they went to examine what these contained; but without finding any of the Inhabitants; and as for Utensils or household Goods, they had none. All that the *Dutch* met with, worth taking away, were a few Nets, curiously wrought. They saw likewise aundance of Cocoa-trees; but, as they had brought no Hatchets, they were not able to come at any Fruit, and had consequently a very comfortable Night, during which they were perpetually disturb'd by the frightful Noise, that the Inhabitants made in the Woods, whence they naturally apprehended they were every Moment coming to attack them.

20. This Country appears to be exceeding fertile, especially in all sorts of Fruits. The Mountains, that are very high, promise Mines of all kinds, since there are hardly any Countries in this Climate, the Mountains of which do not produce Metals. As for the Inhabitants, they are a tall well-made People, perfect Mulattoes in point of Complexion, with long black Hair, that curls down to their Waists. They are extremely vigorous and nimble, and so dextrous in the Use of their Arms, that no Doubt can be made of their living in a perpetual State of Warfare. It has been long question'd, even with the most experienced Navigators, whether this Land ought to be accounted a Continent, or an Island; and perhaps the Point is not yet clear, since the Discoveries made by these *Dutchmen* are, in that respect, very inconsiderable. The Islands near the Coast are, in a manner, numberless; so that it was with great Difficulty that they obtained a Passage through them. It may not be amiss here to observe, that this Account agrees exactly with that of *Dampier*; so that I make no Question, that the Place, where our Author landed, was the same to which *Dampier* gave the Name of *Slingers Bay*, from the Dexterity of the Inhabitants in the Management of that Instrument.

But I do not think, that either his ill Success, or their ought to hinder the Prosecution of so important a Discovery, since it is certainly very possible for Ships to reach this Country, without meeting with their Misfortunes. The Coast of *New Britain* is now very well known from their Accounts, and so accurately laid down in our Charts, that there is no sort of Danger of an able Seaman's missing them; and, if a small Squadron failed from hence directly for that Coast, there is all the Probability in the World, that we should very soon be Masters of a Country, little, if at all, inferior to the *Dutch* Spice Islands. As for our *Dutch* Discoverers, they no sooner heard the Signal made by their Ships, which was a little after Midnight, than they hasten'd on board; and the next Morning they sail'd, making their Way as well as they could through that numerous Archipelago before-mentioned. The Misfortunes that had befallen them on shore made such an Impression, that they call'd this Part of the Country *Stormland*: Yet they immediately resolv'd to venture on a Defect the next Opportunity that offer'd, since they had not ten Men in both Vessels, that were in perfect Health; and their Stockfish, upon which they had liv'd for some time past, was now so full of Worms, and stunk to such a degree, that, instead of eating, they could not come near it. The Officers could not now pacify the Men with Stories of the *East Indies*, for they declar'd absolutely, that any Death on shore would be more welcome, than living longer at Sea in such a Condition. And in this Situation they were, when they arriv'd in the Height of 21° South Latitude, where they expect'd to find the Islands of *Moa* and *Srimoa*, discover'd by *Sebastien*.

21. They had Reason to commend the Care and Exactness of that able Seaman, since they quickly discover'd both those Islands, and immediately resolv'd to attempt gaining some Relief from *Srimoa*, which is the biggest of the two. The Inhabitants no sooner saw them approach, than they came out to meet them in their Canoes; of which they had a prodigious Number. These People were all arm'd with Bows and Arrows, even their Women and Children. They brought with them Cocoa-nuts, *Indian* Figs, various kinds of Roots, and other Refreshments, and row'd directly on board the Ships, without the least Sign of Fear or Distrust. The *Dutch* offer'd them in kind of Trifles as they had

on board, by way of Present; which they received kindly: But, when they showed them more of these, and gave them to understand, that they were that sort of Merchandize, which they intended to barter with them for Refreshments, they contented themselves with turning them over, and looking at them, without expressing any Intention to deal. They returned, however, the next Day, with great Quantities of the same kind of Things they had brought before, when the *Dutch* endeavoured to persuade them to bring some Hogs on board; but, as they conversed only by Signs, the *Indians* mistook them so far, as to bring them the next Day two or three Dogs; which proved an inexpressible Disappointment. Our Author was, at this time, again in a very bad State of Health; but the Refreshments procured from the Island of *Arimoa* had so good an Effect, that, in a little time, he found himself much better; and assures us, that, if he could but have had Liberty to have gone on shore for two or three Days, he should have found himself perfectly recovered. The Islanders did all that in their Power lay to persuade them to take this Step, and never came on board without inviting them on shore; but, inasmuch as they were now extremely weakened, and, for some Days before their Arrival, had thrown over-board regularly four or five of their People a Day, it was thought too great an Hazard to run, the rather, says our Author, because, in the midst of all their Civilities, there was something in the Air, the Look, and the Language, of these People, that seemed to favour of Perfidy: But he afterwards seems to assign a better Reason for this Precaution; for he tells us, that the Island of *Arimoa* was extremely populous; which might well render them afraid of venturing ashore.

They observed, however, that as soon as these Islanders went on board their Vessels, they took in their Hands a Stick, with a Piece of some white Stuff fixed to it; which they guessed to be in the nature of a Flag of Truce; and from thence, very probably, conjectured, that they were in continual War with some Nation or other, most likely with their Neighbours the Inhabitants of the Island of *Moa*; in which Conjecture they were soon confirmed, when they observed, that none of their Canoes ever went ashore on that Island, but, on the contrary, passed it with visible Precipitation. These Remarks furnished them with a new Scheme for acquiring speedily a considerable Stock of Provisions: They were satisfied, that the Island of *Moa* was but thinly peopled, tho' as pleasant and fertile as the other; and this engaged them to attempt, by a sudden Descent upon that Island, to carry off at once what might enable them to prosecute their Voyage, without Danger of falling into the Distresses, which they had so lately endured. This Project was very bold in itself, and required a great deal of Prudence in the Conduct of it: It was therefore thought expedient to land in different Places; but at the same time Orders were given, that one Party only should advance into the Country, and that the others should join as soon as possible, in order to be at hand to support them. This Scheme they carried into Execution as happily as they could wish; for though, as soon as they began to fell the Cocoa-trees, the *Indians*, who lay in Ambuscade behind the Bushes, discharged a Shower of Arrows at them, yet they were so fortunate as to escape unurt; whereas the Discharge of their Small-arms had abundance of the Natives dead on the Ground; which so frightened the rest, that they took Shelter immediately in their Canoes, and afterwards endeavoured, by Cries and Shouts, to alarm the rest of their Countrymen, and bring them to their Assistance: But it was in vain; for the *Dutch* had posted themselves so judiciously, as to be able to attack them in flank and Rear, in case they had descended from their Mountains. However, as they remained some time, the *Dutch* had Time given them to bring away 300 Coconuts; with which Booty they returned safe on board their Shallops, and soon after rejoined their Ships, very well satisfied with their Expedition.

The Cocoa-tree is a Species of the Palm, which grows in most Places in the *East* and *West* Indies. It is large, fruitful, and grows narrow insensibly from the Bottom to the Top. The fruit hangs to the Trunk by Bunches, united by a Tendril, not unlike the Twig of a Vine, but stronger. Its Flowers are yellow, like those of the Chestnut. The Threads or Bunches hang up towards the Top. As it bears Bunches

of Fruit every Month, there are always some full ripe, others green, and some just beginning to tutton. The Fruit is triangular, of a greenish Hue, and of different Bigness; viz. from that of an ordinary Ball, to the Size of a Man's Head. It is covered with two Rinds, the outer composed of long, tough Threads, of a Colour between red and yellow; the second Shell is as hard as a Man's Skull. Within these there is a thick, firm, white Substance, which, in Taste, resembles a sweet Almond. The Inhabitants of the Countries, where these Trees grow, eat them with their Victuals, as we do Bread; and draw, by pressing, a Liquor, which, in Taste and Consistence, resembles Almond-milk. This Milk, being exposed to the Fire, changes into a kind of Oil, which they use, as we do Butter, in their Sauces, and also in their Lamps. They likewise use it medicinally, and often rub their Bodies with it. Besides this white Substance, that is found in the Nut, there is, in the Middle of it, a considerable Quantity of a clear, bright, cool Liquor, which, in Taste, resembles figured Water. They draw likewise from the Tree itself a Liquor, which the *Indians* call *Sura*. This is what the *Europeans* style Palm-wine. It is of a very agreeable Taste, and tells but little short of *Spanish* white Wine, except in keeping; for, in about two Days time, it turns sour. They then expose it to the Sun, and, by this Method, render it excellent Vinegar. As the *Sura* is very strong and heady, they, generally speaking, temper it with that fresh clear Water, which is drawn from the Nut. In order to extract this Wine, they cut one of the largest Twigs at the Distance of about a Foot from the Tree, and hang to it either a Bottle, or a Calabash. This Wine, when boiled, produces another, which the Natives call *Orragua*, and, by distilling it, they acquire a strong Water or Spirit, which they style *Arae*, and which many People prefer to that of the same Name made in the *East* Indies, and which is so well known, and so much esteemed, in *Europe*.

They found in this Island likewise a vast plenty of Pomegranates of a most excellent Taste, as well as Pistans, or *Indian* Figs, which have been before described. These Refreshments were of prodigious Service to them; and our Author declares, that, without them, the Whole of both Ships Companies must have infallibly perished. They were no sooner on board their Vessels, than they began to make the necessary Preparations for quitting that Place. While they were doing this, the Islanders from *Moa* came off in about 200 Canoes, all laden with Provisions of different Kinds, which they exchanged with them for various Sorts of Merchandize. This the *Dutch* understood as intended purely to prevent a second Descent; and therefore, though they received them kindly, and treated them fairly in the Purchase of their Cargo, yet they suffered only a few of them to enter their Ships; and, when they attempted to rush on board by Crowds, they fired upon them; upon which they all ducked their Heads, and, as soon as they had raised them up again, broke out into a loud Laugh. The Exchange was no sooner over, than they weighed Anchor, and parted with their *Indians* in pretty good Terms. One thing, our Author remarks, as very singular; viz. that, while they remained here, such of their Sick, as had any Strength left, recovered wonderfully; and such as were quite exhausted, died.

22. After leaving the Islands of *Moa* and *Arimoa*, they continued their Voyage through a Sea so very full of Islands, that, finding it difficult, if not impossible, to count them, they contented themselves with imposing on them the general Name of *Thousand* Islands. The Inhabitants of these Countries were Negroes, of a short squat Make, and their Heads covered with thick curled Wool. They were a bold, mischievous, intractable Race of Savages. They went all naked, Men, Women, and Children, having no other Ornament than a kind of Belt, about two Fingers broad, composed of Teeth; and they likewise wore Bracelets of the same. Some of them wore on their Heads light Straw Hats, mingled with the Feathers of the Birds of Paradise. It is said, that these Birds are found no where but in these Islands. There are indeed some, that go under the same Name, found on the Coast of *India*; but they differ very much from these in their Plumage. Such of these Islands as are situated near the West Point of the Continent of *New Guinea*,

ney, are still called the *Ilands of Popoes*, as the Continent itself was called the *Land of Popoes*, before *Schooten* imposed that upon it which it now bears, to which he was principally induced, by it lying in the same Latitude with *Old Guiney*.

Whenever the Inhabitants of those *Ilands* go to *Ternate*, *Banda*, *Ambeyna*, or any of the *Moluccas*, in order to expose to Sale their Merchandizes, such as salt Pork, Amber, Gold-dust, &c. they likewise carry with them some of these Birds of Paradise. They constantly sell them dead, affirming, that they always find them so, and that they are absolutely ignorant whence they come, or where they breed. Thus much is certain, that this Bird is always seen very high in the Air. It is extremely light, inasmuch as it consists chiefly of Feathers, which are excessively beautiful, and render it one of the greatest Curiosities in the World. The Plumage of its Head are as bright as Gold; those of its Neck resemble a Drake's, and those of its Tail and Wings are very like a Peacock's. As to the rest, in its Beak and Form it comes nearest to a Swallow, except that it is somewhat bigger. Such as deal in them would persuade Strangers, that they have no Feet, and that, when they sleep, they hang themselves by their Feathers to the Branch of a Tree; but the Truth of the Matter is, that these Traders cut them off, in order to render their Birds more wonderful. They likewise tell another pretty Tale to heighten the Value of their Birds; which is this, that the Male has a Cavity in his Back, where the Female lodges her Young, till they are able to fly. To give a greater Appearance of Truth to these strange Stories, they cut off the Legs so close to the Body, that, when the Flesh begins to dry, the Skin and the Feathers unite so perfectly, that it is simply impossible to perceive the least Scar. They likewise assert, that these Birds are continually flying; that they live by the Birds and other Insects they catch in the Air. The Feathers of the Male are brighter, and more beautiful, than those of the Female. In the Eastern Languages this Bird is generally called *Mucedata*, that is to say, the Bird of God. There are a great many of them sent to *Batavia*, where, generally speaking, they are sold for three Crowns apiece. The *Moors*, the *Arabians*, and the *Persians*, esteem them mightily. They make use of their Feathers to adorn their Saddles and Horse-furniture; and, to heighten their Lustre, they intermingle them with Pearls and Diamonds. They wear them likewise in their Turbans, more especially when they go to War, from a superstitious Notion, that they are a kind of Charm, capable of securing them from Wounds. The Shah and the Great Mogul thought it formerly the highest Mark of their Esteem to present any of their Favourites with one of these Birds.

The Inhabitants of the *Thousand Ilands*, besides their Girdle, have another Ornament, which consists in a Bit of Stick, of the Size of a Tobacco-pipe, and of the Length of one's Finger, which they run through the Gristle of their Noses, which they look upon as a means of making them appear fierce and terrible to their Enemies; in which they resemble some *Europeans*, who, for the same Reason, are equally fond of *Mustaches*. These Islanders, our Author assures us, were the very worst People they met with in the South Seas. As to the neighbouring Continent of *New Guiney*, it appeared to them a very high Country, extremely full of Plants and Trees, so that, in sailing 400 Leagues along the Coast, they did not observe one barren Spot; whence our Author thinks it extremely probable, that this Country abounds with many precious Commodities, such as rich Metals, Spices, &c. the rather, because hitherto none of the Countries, discovered in that Parallel, are deficient in these sorts of Riches. He adds, that Persons worthy of Credit assured him, that some of the free Burgesses in the *Moluccas* go annually to *New Guiney*, and there exchange small Pieces of Iron for Nutmegs, *Schouten*, and other Navigators, have conceived very high Ideas of this Country, and have represented it as one of the richest and finest in the World: But they were not able to penetrate far into it; neither is it to be expected, that this should ever be done with a small Force, since it is extremely populous, the People of a very martial Disposition, and generally speaking, well-armed.

The Officers of the *Dutch Squadron* were at this time under some Doubts, whether they should continue their

Course as *Dampier* did, or whether they should pass by the *Ilands of Ternate*, *Tidore*, and *Bacon*, as the best dangerous Passage. To gain Time, however, they made Choice of the first, because otherwise they must have coasted round the *Ilands* last-mentioned, in order to come at the *Moluccas*. These three *Ilands* of *Ternate*, *Tidore*, and *Bacon*, are each of them governed by its respective Monarch. The *Dutch East India Company* allow each of these Princes a kind of annual Tribute, on condition that they cut up by the Roots all the Spice-trees that grow in their Dominions. The rest of the Kings of the *Moluccas*, to the Number of one hundred, are all dependent upon these three great Princes. It is said, that, from these *Ilands*, the three *Magi*, or wise Men of the *East*, of whom the Scripture speaks, went to *Jerusalem*, and thence to *Bethlehem*, there to adore the Infant *Jesus*: And they further assure us, that all the little Princes of the *Moluccas* were antiently famous for their Skill in Astronomy; in which Art, they followed principally the *Greeks* had down by the *Egyptians*; and it is farther said, that some Monuments, some Remembrance, of this Fact are still preserved in their old Books; the Leaves of which were made of Barks of Trees.

On the Feast of the *Holy Epiphany*, the *Dutch Sailors* carry a Star, by way of Compliment, to these three Kings; who, in Return, make them very valuable Presents, and treat them very splendidly. But as, on the one hand, this is a very superstitious Custom in its Nature, so it is no less scandalous on the other, from the Manner in which it is performed, as resembling much more a Pagan Revel, than a Christian Feast. The King of *Ternate* has embraced the Christian Religion; but the other two Princes are still Pagans. Our Author adds, that some *Malayan* Priests, who had studied at *Mecca*, assured him, they had seen in the Library of that City a Chronicle, in which mention is made of the three Kings of the *Moluccas*, and in which it is expressly said, these three Kings, many Years ago, made a Voyage by the Way of *Aralia* to *Judaea*, on account of an extraordinary and miraculous Appearance in the Heavens; and that, some time after, they returned all three safely to their own Dominions. The Author submits this Story to the Reader's Judgment, to which I also recommend the following Memorial relating to the State of the Spice *Ilands*, at the Time they fell into the Hands of the *Dutch*.

As to the *Iland of Banda*, the Country is very lush, and yet fruitful as well as populous. The Government is a kind of a Commonwealth, in which the Affairs are managed by Mohammedan Clergy, who are mighty strict and severe. There are not, in the whole *Iland*, above 12,000 Souls, and about 4000 fighting Men. The People of this Country live to a great Age. The *Dutch*, when they first came, saw a Man that was 130 Years old, and several above 100 Years of Age. The Men are always walking Abroad, and the Women at Home at work; for, besides the Household-work, they employ themselves in drying of Nutmegs, and shelling them. This admirable Fruit, which is so much valued, grows in no Place in the World, but we know of, but in the *Iland* of *Banda*, and in a few other small neighbouring *Ilands*, namely, *Oratua*, *Gamanasa*, *Wayer*, *Pulo Wai*, and *Pulo Rien*. This Tree bears three times in the Year, viz. in *April*, *August*, and *December*: *April* Nutmegs are the best; and the Crop in that Month is more plentiful than in the other two. This Tree is much like a Peach-tree, only the Leaves are shorter and rounder; the Fruit is at first covered with a thick Shell, like a Walnut-shell; when it ripens, that Shell, growing ripe, opens itself; and then you see a fine smooth Skin, or Peel, which covers the Nutmeg; and that Skin is the Flower of it, or Mace; next to that thin Skin you find another, which is harder and blackish, and much like Walnut-shells; and, when you open this large Shell, you see the Nutmeg. Mace is at first of a fine leaflet colour; but, when it is ripe, it falls off the Shell, and assumes an Orange colour, as you see it here in *Europe*. They preserve whole Nutmegs with Sugar, which makes the best Sweetmeats in the *Indies*, and are much esteemed. The Inhabitants of *Banda* call Nutmegs *Palla*, and Mace *Baza Palla*: There are two Sorts of Nutmegs; some a long, and are called Males; others round and reddish, which have a

better Taste than the former, and are filed *Malis*. No Fruit in the World is better to strengthen the Brain, and the Memory, to warm the Stomach, to sweeten the Breath, and provoke Urine. It is a sovereign Remedy against Wind, Looseness, Head-ach, Pain of the Stomach, Heat of the Liver, and Stoppage of the Womb. Oil of Nutmegs is an admirable cordial Medicine. Mace is an effectual Remedy against the Weakness of the Stomach; it helps Digestion, confirms ill Humours, and drives out the Wind: It keeps above nine Years good. A Plaister made with Mace and Nutmegs beaten to Powder, diluted with Rose-water, and applied to the Stomach, strengthens it mightily. As this precious Fruit is peculiar to this Isle of *Banda*, and the adjacent Islands, the Merchants of *Java*, *Malacca*, *China*, and from all the Parts of the *Indies*, come to *Nera*, and other Towns of *Banda*, to buy Nutmegs and Mace. As soon as these Merchants are arrived in the Island, they buy a Wife to keep their House, and dress their Victuals, as long as they remain there, which may be two or three Months; and, when they go away into their own Country again, they give the Liberty to their Wife to go where she pleases. This may appear a very strange, and even incredible Custom; but whoever is acquainted with the *East Indies*, will be satisfied as to the Truth of it, since the same Custom prevails in some other Places.

As to the next valuable and admired Spice to the Nutmegs, viz. Cloves, we know not what immense Sums the People of *Holland* make of this profitable Fruit, which are so much esteemed throughout *Europe*, and for which the *Spaniards* and *Portuguese* struggled so long, and to so little Purpose. This valuable and noble Spice grows nowhere else but in the Island of *Ambonya*, and the *Molucca* Islands, which are five in Number, and the Islands of *Moa*, *Comoro*, *Cabel*, and *Marigeran*. The *Indians* call Cloves *Calisfar*, and the Inhabitants of the *Moluccas* call them *Choke*. The Trees which bear Cloves, are much like our Laurel-trees; only the Leaves of the Cloves are a little narrower, and resemble the Leaves of Almond and Willow-trees. The very Wood and Leaves taste as strong as the Cloves themselves. These Trees bear a great Quantity of Branches and Flowers, and each Flower brings forth a Clove. The Flowers are at first white, then green, at last they grow red, and pretty hard, and are properly the Cloves. While they are green, they have a Smell so sweet, and so comfortable, that it is beyond all the Smells in the World. When they are dry, they are of a yellow Colour; but, when gathered, they assume a smoky black. They don't gather them one by one, as they do other Fruit; but they tie a Rope to the Bough, and so strip it off by Force. That hurts the Tree for the next Year, but the Year after it bears a great deal more. Others beat the Trees with long Poles, as we do Walnut-trees; and the Cloves fall down, and commonly the Tree bears more Fruit than Leaves. They grow with little Stalks, hanging on the Tree like Cherries; they fell them with these Stalks, Dirt and Dust together, to the *Indians*: But the Cloves that are transported to *Holland* are clean, and without Stalks. If you leave them on the Tree without gathering them, they grow thick, and are called the Mother of Cloves. The *Javanese* value these more than others; but the *Dutch* chuse rather to buy the least.

They never trouble themselves to plant a clove-tree; for the Cloves that fall on the Ground produce enough of them, and the Rain makes them grow so tall, that they bear Fruit when they are eight Years old, and continue bearing for above 100 Years. Some are of Opinion, that clove-trees do not grow well on the Sea-side, or when they are too far from the Sea: But many Seamen, who have been in the Island, assure me, that they grow very well every-where, whether a great Way off the Sea, upon Mountains, in the Valleys, or near the Sea-side. They ripen from the latter End of *August*, to the Beginning of *January*. Nothing groweth about them, no Grains, Green, or Weed; for their Heat draws in all the Nourishment and Moisture of the Ground. Cloves themselves are very hot; if you lay a Sack of Cloves upon a Vessel full of Water, you will find, in a little while, some of the Water waited, but the Cloves are not the worse for it. Leave a Pitcher full of Water, in a close Room where you clean Cloves,

NUMB. 19.

and the Heat of the Air will confine all the Water in two Days time, though the Cloves are removed. *China* Silk hath the same Virtue; for, if you lay it in a Room one or two Feet above the Ground, and water the Flour all over, provided the Water don't touch the Silk, the next Day the Silk will have sucked in all the Water. The *Indians* use that Trick to make the Silk heavier. They preserve Cloves in Sugar, and they are extraordinary good; they also pickle them; and many *Indian* Women chew Cloves to have a sweet Breath. They distil Clove-water out of them when they are green, which has an excellent Smell; the Water is admirable to strengthen the Sight, by pouring a Drop or two into the Eyes. Powder of Cloves, laid upon the Head, cures the Head-ach; if taken inwardly, it provokes Urine, helps Digestion, is good against a Looseness, and, drank in Milk, will procure Sleep.

As to the Inhabitants of the *Moluccas*, they are very lazy, and love so much their Ease and Pleasure, that they are seldom at Work; for their Slaves and Servants do all the Work: They live upon the great Quantities of Cloves that grow there; for they have no other Trade, and no Manufacture. They have no household Implements, but earthen Pots and Pans, and some Mats, upon which they sit and lie. Their Slaves build Houses of Timber and Rushes, with nothing else, not so much as a Nail in them: Their Cloaths are decent, and pretty well made, of light Stuffs, and cheap: But the Country is so hot, that they have no need of warm Cloaths to defend them from the Cold. The young Men wear upon their Head Pieces of Calico, made in Tresses, and woven in the Figure of a Crown; and, in the Holidays, they adorn them with Flowers. The Men perfume their Cloaths to please their Wives, of which they have as many as they please, and are so jealous of them, that they invite nobody into their Houses, and they never see them before they are married. The Women are of a middle Size; their Hair is tied up in Tresses about their Heads: They are of a pleasant and merry Humour; and, though they are kept very strict, they are very brisk, and not at all scrupulous; they spin Cotton, and weave Calicoes. The poorest Sort sell dry Fish, Fowls, Bananas, Sugar-canes, and other Commodities; in the Market, you seldom see any other Women abroad. The Inhabitants of the *Moluccas* are the best Soldiers of all the Islands; they scorn to fly before their Enemies, and will fight with great Courage: They think it a great Honour to die in Fight, and to resist their Enemies to the last Extremity. They have no Money; for all their Riches consist of Cloves, and with which they may purchase all Necessaries. Their Language is different from that of the other *Indians*, and they have the same Characters for Writing as the *Arabians*. So much at present for the Produce and Inhabitants of the *Moluccas*, at the Time when they fell under the *Dutch* Dominions. Hereafter we shall have Occasion, or rather be obliged, to resume the Subject, and speak of the same things again, as they now stand.

23. They steered their Course along-shore, and through an innumerable Chain of small Islands, that are extended between the West Point of *New Guinea*, and the Island of *Gilolo*. They made this Passage with the utmost Hazard, and saw, therefore, with a Joy mixed with Astonishment, the Island of *Bouro*, in the Latitude of 2° South, the most West in Country in which the *Dutch East India* Company maintain a Factory. This Island of *Bouro* is, for the most part, pretty high Land, and abounds every-where with Trees and Shrubs of various Kinds. As soon as they arrived upon the Coast, they were spoken with by a small Vessel, on board of which were two white Men, and several Negroes, who examined them very categorically, to whom they belonged, from whence they came, and whither they were going. To which they answered, that they came from the Coast of *New Guinea*, and were bound for *Batavia*; but very wisely concealed their belonging to the *West India* Company, because they knew, that the *East India* Company permitted no Vessels, but their own, to sail upon that Coast, and had even given Orders for attacking any strange Vessels that should appear there: Yet, in spite of these Precautions, the *English* sometimes find their Way through this Channel, to the Company's no small Displeasure, notwithstanding

withstanding they keep Ships cruising here in both the Mountains, in order to preserve, what of all Things they most affect, their Monopoly of Spices. In former times, when they were not so strict, there is the greatest Reason in the World to believe, that the *English* found Ways and Means to share with them in this Trade by means of this Passage, since it is certain, that they carried large Quantities of Spices into *Europe*, while the *Dutch* never could divine whence they had it.

The Inhabitants of this Island told them, that they had abundance of Clove-trees grew in their Country, but that a Detachment of Soldiers, in the Service of the Company, came every Year, and grubbed them up, as they did in the rest of the *Molucca* Islands, because the Company thought *Ambonya* produced sufficient for maintaining their Commerce. This Island of *Bouro* is about forty or fifty Leagues in Circumference; the Country is indifferently fertile, and the *Dutch* were formerly, in a great measure, Masters of it, having a very strong Fort there, of which, however, the Inhabitants, after a long Siege, made themselves Masters, and demolished it, after having put all the Garrison to the Sword. At present, therefore, the Company content themselves with sending an annual Detachment to root out the Clove-trees, for which the Natives receive some kind of Present. The two white Men who were on board the *Dutch* Bark, were the first Christians our Voyagers had seen in the Space of ten Months; that is, from the time they quitted the Coast of *Brazil*, to their Arrival here.

I cannot help observing in this Place, that if any Dependence can be had, either on what our own Discoverers say, or on what our Author asserts, as to the Produce of *New Guinea*, it seems to be an unaccountable Neglect in us not to establish a Colony there, since we should then infallibly share in the Spice Trade, without breaking in upon the *Dutch*; for, if the free Burgesses of *Ambonya* can trade for Nutmegs with the Inhabitants of *New Guinea*, why may not we? The settling a Colony there, would give us the same Rights that the *Dutch* have in the *Moluccas*; though, I hope, we should never practise so tyrannical a Custom, as that of forcing People to destroy the Gifts of God, in order to enhance the Price of them, to enrich a particular Company, in a particular Nation; than which, there cannot be a plainer or a more direct Violation of the Laws of Nature; which, whatever some self-interested Writers may pretend, can never be justly superseded by the Politics of Man, on any Pretence whatever. If Force conveys a Right of depriving Mankind of Cloves, the same Force, in a higher Degree, might justify the depriving them of Fire, Air or Water.

They continued their Course through the neighbouring Islands, in order to reach the Coast of *Baton*, in hopes of meeting there with the Refreshments, of which they were now in extreme Necessity. In a short time, they arrived in the Height of 4° South Latitude, and sailed for a whole Day along the Coasts of that Island, without perceiving any Sign of that Strait, for which they sought. At last they found they were eight Leagues past it, which our Author attributes to the Management of the principal Officers, who were in such an Hurry to get to the *East Indies*, that they very little regarded the inexpressible Miseries, to which, by their treacherous Conduct, the poor Men were exposed. To conceal this, however, as much as possible, and to put on an Air of public Spirit, they pretended to attempt bearing up for that Port, when they knew the thing to be absolutely impracticable, considering the Force with which the Monsoon blew. There were now no further Hopes of finding any Strait, where they might get Refreshments short of the Island of *Java*; for, where-ever they attempted to anchor, they very well knew their Ships must have been confiscated, in consequence of Maxims inviolably observed by the *East India* Company. All the Men therefore on board both Ships, but especially the sick and the feeble, cast a languishing Look on that fertile Country they left behind them, presaging in their Minds the melancholy Effects, which must necessarily attend a Measure so pernicious.

The Situation of this Island of *Baton* is remarkably advantageous. It lies from the fourth to the sixth Degree of South Latitude, and is in Extent nearly equal to that of *Bouro*.

It is extremely fertile in Rice, enjoys an extraordinary plenty of Cattle and Fish, and would produce a great Number both of Clove and Nutmeg-trees, if they were permitted to grow. The King has a very strong Fort, on which the *Dutch* Standard is displayed, tho' there is no *Dutch* Garrison; and indeed there is no Need of one. The *Dutch* Company content themselves with sending thither every Year certain Deputies, to see the Spice-trees destroyed; and, in Consideration of his submitting to this, the Company pays the King a considerable Sum in ready Money. This Nation is, of all others, the most faithful to the *East India* Company, having not only assisted them in expelling the *Portuguese*, but also against the Inhabitants of the *Moluccas*, whenever they have attempted to take up Arms against them; and, by this means, have rendered that Company intirely Masters of the Trade of this Part of the World; in Consideration of which, the Inhabitants of *Baton* enjoy many Privileges, which are denied to all other *Indian* Nations: As for Instance, whenever they enter any Fort belonging to the Company, in whatever Country it be, they are permitted to keep their Arms; which is not allowed even to the Inhabitants of the Country where the Fort is situated, and who consequently ought to be considered as the Subjects of the Company.

Some time ago, the King of this Island sent his eldest Son as his Ambassador to the Governor-General of the *Dutch East Indies* at *Batavia*. He was received with all possible Marks of Distinction, and the Company piqued itself on paying him all possible Honours; yet it would not have been easy to have distinguished this young Prince to have been an *Indian*, if he had not worn a Turban of three Rows high, richly embroidered with Gold and precious Stones. The rest of his Dress was intirely *European*; and it was observed, that, instead of a Cutliss, he wore a Sword, which no *Indian* had ever done before. His Train was extremely numerous, all of them dressed after the *Indian* Manner. Twelve of these went armed, each with a Cuirass and Buckler, having also a naked Sword in his Hand, which rested on his Shoulder. Our Author observes, that he should not have taken notice of this Ambassador, or of his entering into *Batavia*, if it had not put him in mind of a very remarkable Accident, which happened about that time; and this was a prodigious Mortality amongst Men and Beasts, which carried off 500 of the Attendants of this young Prince, and, in the Course, it destroyed no less than 150,000 Persons in one Year's time. This Mortality was occasioned by a malignant or pestilential Fever, with which the *Europeans*, the Natives of the Country, the *Chinese*, the *Negroes*, and, in short, all the various Nations which inhabit *Batavia*, were attacked. The Author himself had a Touch of it, but escaped. This epidemic Disease prevailed not only through the *Dutch* Plantations, but spread itself also over the Kingdom of *Bengal*, and through all the Dominions of the Great Mogul, where it made incredible Ravages; yet it was felt in the most extreme Degree in the Island of *Java*, where the Inhabitants, who went out of their Houses in perfect Health, fell down dead in the Streets by Heaps. It was observed, that this Malady raged in all the Western Countries; and the Cause of it was supposed to be an excessive Drought; for, as there had no Rain fallen during the Space of two Years, it was conceived, that the Air was overcharged with mineral Vapours. But to return from this Digression to the Thread of our Relation: The *Dutch* Commodore, having left the Coasts of *Baton*, and passed thro' the Channel of the *Moluccas*, arrived, after his Crew had suffered inexpressible Miseries, which carried off the greater Part of them, on the Coast of the Island of *Java*, towards the Close of the Month of September 1722.

24. He anchored immediately with his two Ships in the Road of *Japara*, and saluted, according to Custom, both the City and the Fort. They quickly hoisted out three Shallops, in order to go ashore at *Japara*; and, on their Arrival, were surpris'd to find, that, on shore, it was *Saturday*, tho', at quitting their Ships, they conceived it to be *Friday* Morning. The first Step the Commodore and his Officers took, was to pay a Visit to the Person who resided there on the Part of the Company, in order to acquaint him with their Reasons of coming thither. This Gentleman happened to be one Ensign *Kuyser*, a very civil

well-behaved Man; who instantly assembled a Council, to consider what Measures were to be taken upon this Occasion. They were all extremely moved at the Recital given by the Commodore of the Misfortunes they had met with; and pitied him, his Officers, and Ships Companies, exceedingly.

To say the Truth, there never was seen a Ser of Men more worthy of Compassion. There were no more than ten Persons in tolerable Health left, among which our Author was one; and no less than twenty-six were down of Sickness, by which they had lost, in the Course of their Voyage, exclusive of those who were killed in their several Engagements with the *Indians*, no fewer than seventy Men. As soon as they had notified their Arrival, their next Care was to get their sick Men on shore; which was performed with all the Diligence and Tenderness imaginable, by flinging them in their Hammocks into their Shallops. There were, however, four amongst these poor People in so very low a Condition, that it was not thought possible to move them, and therefore they were left on board; the very Thoughts of which, after their Companions were removed, killed them. Such as were carried ashore were lodged in an Island, under Tents set up for that Purpose; where they had every Necessary afforded them, that the Country produced; and yet, after all the Care that could be taken, many of them laid their Bones in this Island.

Mr. *Kuster* did not fail to send an Account of their Arrival to the Commandant of the Coasts of *Java*, who instantly transmitted it to Mr. *Swaarstekroon*, who was at that time Governor-General of the *East Indies*. The Answer he gave was extremely favourable. He promised to assist them with every thing in his Power; and, if I mistake not, says our Author, he promised to supply us with Provisions and Men; asking, that we had nothing to do but to get to *Batavia* as soon as we could. While they waited for the General's Answer, and the Recovery of their Sick, they passed their Time very agreeably; for their Countrymen, having a true Sense of the Miseries they had endured, did not fail to use every Means to make them forget them; which very soon had its Effect: Inasmuch that our Author observes, their Seamen, in a very few Days, were as frolic and gay, as if they had made the most pleasant and most fortunate Voyage in the World. He adds, that it shocked him extremely to see those, who, but a few Days before, were weeping, sighing, praying, and making the warmest Protests of their leading new and regular Lives, if God, in his great Mercy, would be pleased to save them, running headlong into the greatest Extravagancies. Their whole Time, says he, was now spent in Swearing, Drinking, and in passing whole Days and Nights in debauched Houfes. This, however, he attributes, in a great measure, to the bad Example of those, among whom they lived, all the lower sort of People at *Japara* being as profligate and lewd, as it is possible to conceive a People; inasmuch that the first Question many of them asked of Strangers arrived from *Europe*, whether they have not brought some new Oaths over; and whether they cannot teach them a more lively and extravagant Method of Swearing.

The Town of *Japara* is seated at the Bottom of a Mountain of a moderate Height, is of a middling Size, and inhabited chiefly by *Javaneſe*, *Chinese*, and *Dutch*. When it was in the Hands of the *Portuguese*, it was much more considerable in Extent, than it is at present. The *East India* Company, before they got Possession of *Jacatra*, fixed here the principal Magazines for their Merchandize, and it was their chief Factory, on which all the Factories on the Island of *Java* were dependent; but that Establishment was sunk long since, the Factory being transferred to *Samaran*. The Port of *Japara* is equally safe and commodious; and there is a Fort, built mostly of Wood, erected on the Top of the Mountain, at the Foot of which the Town is seated, that commands the whole Road. This is called the *Invincible Mountain*, because, when the *Portuguese* were Masters of the Place, the *Javaneſe* were constantly defeated in all the Attempts they made to get it into their Hands.

The King of *Japara*, generally speaking, resides at a Place called *Katajura*, which lies twenty-nine Leagues up the Country, where the *Dutch* have a strong Fort, and a good Garrison; which serves not only to secure their Con-

quest, but, at the same time, for a Guard to the King. This Prince is a *Mohammedan*, and, according to the Practice of most Eastern Monarchs, is constantly served by Women, of whom he takes as many as he pleases, either as Wives, or Concubines. Some of his Priests are obliged to go every Year in Pilgrimage to *Meccha*, in order to make Vows there for the Safety and Prosperity of the King and Royal Family. His Subjects are extremely faithful, and, to the last degree, devoted to his Service. The principal Persons in his Court are obliged, as often as they have an Audience, to approach him creeping on their Knees; but, in Time of War, this slavish Custom is disused. Such as commit the slightest Fault are poinarded on the Spot with a little Dagger, called a *Krid*; and as this is almost the only Punishment in Use amongst them, so the slightest as well as the greatest Faults are, among these People, capital. The Natives of this Country are, for the most part, of a very brown Complexion, tolerably well-shaped, and have long black Hair; which, however, they often cut. Their Noses are flat and broad, and their Teeth excessively bad, which is owing to their Betel and Fausel, which they are chewing continually.

The Fausel is a kind of Nut, not much unlike, yet something smaller than the Nutmeg, without Taste, and yielding, when chewed, a red kind of Juice. It is this very Juice that the *Indians* make use of in painting the Chintz, which we admire so much in *Europe*. The Tree, that bears this Nut, is very strait, and resembles, in its Leaves, the Cocoa-tree. The Betel is a Plant, which produces long rank Leaves, which, in their Shape, resemble those of the Citron; in Taste, they are of an agreeable Bitter. The Fruit it bears grows in the Shape of a Lizard's Tail, about two Fingers Breadth, long, of an aromatic Flavour, and, in its Smell, extremely grateful. The *Indians* carry with them continually the Leaves of Betel; and, at all Visits, they are presented in Ceremony. They are almost perpetually chewing them; and, as the Taste of them is very bitter, they, for the most part, qualify them with Araca, Fausel, or the Powder of calcined Oyster-shells. Thus prepared, they have a very agreeable Taste. After they have chewed all the Juice out of them, they spit forth the dry, hard Mass. There are some again, who mix their Betel-leaves with Lime, Amber, and Cardamom-seeds; others again with *China* Tobacco. Abundance of *Europeans* are got into the Way of chewing it to such a degree, that they cannot leave it off, tho' it has been very fatal to some of them, since the *Indians* are so very skilful in preparing Betel, that it shall do a Man's Business as effectually as a Pistol or a Dagger. The prevailing Diversion among these People is what they call their *Tandakes*, which are, in Fact, a kind of Comedies. The Women, who act in these sort of Shews, are very richly dressed; but the Entertainment consists chiefly in Singing and Dancing, accompanied by their Music, which, after all, is not very extraordinary, or very pleasant, at least to *European* Ears. They have no other Instrument than a kind of little Drums, which they beat dextrously enough. As for their Dancing, it is generally of the Grotesque kind, in which, without Doubt, they are excellent, throwing their Bodies, with inexpressible Agility, into all sorts of Postures, and expressing by them the Passions of the Mind so comically, that it is simply impossible to avoid laughing. These *Indians* practise also the Wardance, in which their King, and his Grandees, often take a Share. They likewise amuse themselves, like the *English*, with Cock-fighting; and lay such considerable Sums, that they are very often beggared.

This Country abounds with all the Necessaries of Life: Here are horned Cattle, Hogs, and an amazing Quantity of Fowls. The only Thing that is scarce here is Mutton, and that is chiefly occasioned by the Richness of the Pasture, where the Sheep burst with Fating: As to wild Creatures, they have Buffaloes, Stags, Tygers, and the Rhinoceros, which Animal the *Indians* hunt chiefly for its Horn, of which they make Drinking vessels, that are valued at a very high Rate, from a Notion that they will not hold Poison, but instantly break as soon as it is poured into them. The high Price of these Vessels, instead of proving their Virtue, serves only to shew, that the *Javaneſe* are strongly given to this infamous Practice of Poisoning. The Land is every-
where

where extremely fertile, producing in vast abundance Pepper, Ginger, Cinnamon, Rice, Cardamoms, &c. Of late Years they have planted Coffee there with great Success, inasmuch as they hope, and not without Reason, to render it the principal Commodity of the Country: As to Fruit-trees, such as Coconuts, Figs, &c. they grow every-where; and, as they are green throughout the Year, and constantly planted in Rows along the River-sides, here are the most beautiful Walks in the World. Sugar-canes abound in Java. Their Vines bear Grapes seven times a Year, but they are fit only for Raisins, and not for Wine, because the Climate ripens them too hastily. The Sea, and all the Rivers, furnish them with an infinite Variety of the finest kinds of Fish; so that, take it all together, one may safely affirm of Java, that there is not, under the Canopy of Heaven, an Island more plentiful, or more pleasant.

After refreshing themselves at *Japara* for about a Month, they began to think of continuing their Voyage to *Batavia*, in order to reap there the Fruits of the Governor-General's fine Promises: When all Things were ready, they spent about two Days in taking Leave of their Friends, who gave them all sorts of Provisions, and much more of every kind than was necessary for so short a Voyage. At last they quitted, not without a sensible Regret, a Place where they had been so kindly treated, where all their Wants had been so generously relieved, and where, after so many Hardships, so many Sufferings, they had spent a few Weeks in Peace and Plenty. They steered, in sailing from hence, a West Course for about seventy Leagues, and then, with as fair a Wind as they could wish, entered the Road of *Batavia*; where, as soon as they had saluted the Fort, they anchored close to the Ships that were lading for their Voyage Home, believing that now all their Pains were over, and that themselves would be speedily the Companions of the Ships that were homeward-bound; but they soon found, that the most flattering Hopes are not always the best grounded!

As soon as the Commodore saw his Ships safely anchored, he went with his Captain to his Shallop, intending to have gone to *Batavia*; but before they had rowed well from the Ship's Side, they saw the Shallop of the Commandant of *Batavia* rowing towards them, with the Fiscal on board, and some other Members of the Council. These Gentlemen bid the Commodore go back, which he did without the least Hesitation; and by that time both Shallops were within hearing of the Ship, the Fiscal proclaimed aloud the Governor-General's Sentence of Confiscation. At this time both the *Dutch* Vessels were so blocked up by large Ships of the Harbour, that it was impossible for them to escape; and not long after arrived some Hundreds of Soldiers, who took both the Ships, and their Companies, into their Custody. The Commodore, taught by so many, and those too such unexpected Disasters, began to repent extremely that ever he had proposed returning by the Route of the *East Indies*; but it was a little of the latest, the thing was now over, there was no calling Time back, the Discovery had been neglected, and that Neglect justly punished by the Sentence of the *East India* Company, however unjust in itself. By this Sentence, both Ships were declared good Prize, the Goods on board them confiscated, and to cut Matters short, and prevent any Trouble from Representations or Memorials, every thing was exposed to public Sale, and disposed of to the best Bidder. As for the Crew of both Ships, they were divided, and put on board several Ships that were homeward-bound. But enough on this melancholy Subject: Let us now proceed to something more instructive, and more entertaining; that is to say, the Observations made by our Author on the State of Things in the *East Indies*, during the Time that he staid there.

26. The City of *Batavia*, in the Island of *Java*, lies in the Latitude of 6° South, and is the Capital of all the vast Dominions belonging to the *Dutch East India* Company. It serves also for the Emporium, where all the Merchandize and Riches which that great and wealthy Company possess are laid up. It fell into the Hands of the *Dutch* in the Year 1618, and was till that Time known by the Name of *Jacatra*: Soon after it came into their Possession, they built, in the Neighbourhood of the old City, a Fort, which they called *Batavia*. By that time it was well finished, the Natives of the Island, animated and assisted by the *English*,

attacked it several times, but always without Success, and to their own great Loss. The last time they kept it blocked up for some time, till the *Dutch* were succoured by a powerful Squadron from *Europe*, under the Command of Admiral *Koen*. Then it was that Affairs began to change their Face; the Siege was immediately raised, and the Islanders obliged to retire with the utmost Precipitation. The *Dutch*, thus delivered from their Enemies, had time to look about them; and, having considered the excellent Situation of the Fort, and the many Advantages resulting from it, they immediately resolved to build a Town near it. It was, with this View, that they demolished *Jacatra*, and, upon its Ruins, erected that famous City, which, from the Name of their Fort, they called *Batavia*. This City arrived at Perfection in a very short Space of Time, by the extraordinary Diligence with which it was carried on, notwithstanding the many Obstacles it met with on the Part of the two Kings of *Matarana* and *Biantam*; the former of whom besieged it in 1629, and the latter in 1649.

It is surrounded by a Rampart, of one-and-twenty Feet thick, covered on the Outside with Stone, and fortified with twenty-two Batteries. This Rampart is environed by a Ditch, about forty-five Yards over, especially when the Tides are high in the Spring: The Avenues to the Town are defended by several Forts, each of which is well furnished with excellent Brass Cannon. Among these Forts, there are six, which deserve to be particularly mentioned, viz. *Ansoel*, *Anke*, *Jacatra*, *Ryswyk*, *Noordwyck*, and *Sybock*. The Fort of *Ansoel* is seated on a River of the same Name, Eastward from the Sea, and at the Distance of about twelve hundred Yards from the City: It is built intirely of square Stone, and is always provided with a strong Garrison. The Fort of *Anke* is on a River of the same Name, to the Westward of the Coast, and distant from the City about 500 Yards; built like the former, of square Stone intirely. The Fort of *Jacatra* lies also on a River of the same Name, is exactly like the other two Forts, and is at the Distance of about 500 Paces from the City. The Road thither is between two Rows of very fine Trees, regularly planted, with very fine Country-houses and Gardens on each Side: The other three Forts are built in the same manner, and of the same Materials, lying all on the Land-side of the Town, and at a very small Distance from it. By this means the two first serve to secure the City on the Side of the Sea, and the other four defend its Entrances on the Land-side; and, at the same time, protect the Houses, Plantations, and Gardens, of the Inhabitants. By these Dispositions it is easy to comprehend, that no Enemy can ever surprize this City; because, on whichever Side they should attack it, they would be sure to meet with a strong Resistance. They take, besides, another Precaution, which is, not suffering any Person to go beyond these Forts without a Passport.

The River, which preserves its ancient Name of *Jacatra*, passes through the midst of the Town, and forms fifteen Canals of running Water, all faced with Free-stone, and adorned with Trees that are evergreen, and which consequently afford a most charming Prospect. Over these Canals there are fifty-six Bridges, besides those which lie without the Town. The Streets are all of them perfectly straight, and, generally speaking, thirty Feet broad; the Houses are built of Stone, after the manner of those in *Holland*; and are most of them very high, because the Place has not of late Years been exposed to Hurricanes. The City is about a League, and an half in Circumference; it is surrounded with a vast Number of Houses; so that there are, at least, ten times the Number of Houses without the City that there are within it; and therefore, strictly speaking, they ought to be regarded as its Suburbs. This City has five Gates, including that of the Fort, near to which there is a Barrier, which is regularly shut at nine a Clock in the Evenings, and at which there is posted, Night and Day, a strong Guard of Soldiers. There were formerly six Gates; the last, being called *Speelman's* Gate, because built by Governor *Speelman*, who died *January* 11. 1634, has been walled up since. There is a very fine Town-house, and four Churches for the Use of the Reformed Religion, that is to say, the *Calvinists*. The first of these was built in the Year 1640, and is called *Koninklijk*, i. e. *Cross Church*:
The

A Prospect of the Town of BATAVIA.

Vol. I. page 28.

A View of the Citadel of BATAVIA.

The second was built in 1670. In both these they preach in Dutch. The third belongs to the Protestants Portuguese: And the fourth to the Malaysans. Besides these Churches, there are abundance of other Places of Worship for all sorts of Religions.

They have likewise in this City a *Spin-Hays*, or an House of Correction, in which Women, who behave loosely, are confined; an Orphan-house, a Magazine of Sea-stores; many for Spices, Wharfs, Cord-manufactures, and many other public Buildings. The Garrison consists commonly of betw. 2 and 3000 Men. Besides the great Number of Forts before spoken of, there is the famous Citadel of *Batavia*, which is a very fine, regular Fortification, situated at the Mouth of the River, facing the City, and flanked with four Bastions, two of which command the Sea, and the other two the Town. This Citadel hath two great Gates, the one called the *Company's Gate*, which was built in 1626, with a Bridge of square Stone, consisting of fourteen Arches, each twenty-six Yards long, and ten feet broad: The other called the *Water-Gate*, built in 1630. All the Keepers of the Magazines have their Lodgings in the Citadel, along both Sides of the Curtain. There are, besides, two Posterns, one in the East Curtain, the other in the West, which are never opened, but for the Service of the Garrison. It is in this Citadel that the Governor-General of the *Indies* has his Habitation. His Palace is built of Brick, two Stories high, with a most noble Front, after the *Italian* manner. Over-against this Palace is that of the Director-General, who is the next Person to the Governor: The Counsellors, and other principal Officers of the Company, have also their Apartments there, as have likewise the Physician, the Surgeon, and the Apothecary. There is a little Church, which was built in 1644, remarkably neat and light. There are, besides, in the Citadel, Artisans and Magazines, furnished with Ammunition for many Years; in a Word, this Citadel is the general Factory, where all the Archives are kept, and where all the Affairs of the Company are transacted.

The City of *Batavia* is not only inhabited by Dutch, but also by a vast Number of *Indians* of different Nations: The former, that is to say, the Dutch, are all of them either free Burgesses, or in the Service of the Company. There are likewise abundance of *Portuguese*, *French*, and other *Europeans*, established here on account of Trade. These *Portuguese* are, for the most part, Descendants of those who lived here formerly, or at *Goa*; and who, finding their Accounts in living under so mild a Government, did not think fit to remove, when the Sea Coasts of the Island of *Java* were reduced under the Dominion of the *East India* Company. They are, at present, at least a far greater Part of them, of the Established, that is to say, of the Protestant Reformed Religion. As for the *Indian* Inhabitants, they are *Javanese*, or Natives of the Country, *Chinese*, *Malayans*, *Negroes*, *Ambonese*, *Armenians*, Natives of the Isle of *Bali*, *Mardhyers*, *Macassars*, *Timors*, *Bengis*, &c. There cannot be any thing more curious, or any Spectacle more entertaining, than to see, in so large a City, such a Multitude of different Nations living, all of them at their own Dwellings, after their own manner. One sees every Moment new Customs, strange Manners, Variety of Habits, and Faces of different Colours, viz. black, white, brown, olive-coloured: Every one lives as he pleases, every one speaks his own Tongue. Notwithstanding such a Variety of Customs, so opposite to one another, one observes an Union very surprising among these Citizens, which is purely the Effect of Commerce, which is the common Soul that actuates this great Body of People; so that they move uniformly and harmoniously in every respect, and live easily and happily under the gentle and prudent Laws established by the *East India* Company. With regard to Liberty of Conscience, all the Inhabitants of this City enjoy it, let them be of what Sect they will; only they have not the public Exercise of their Worship. It is not permitted here, any more than in the *United Provinces*, that Priests or Monks should walk the Streets in the Habits of their respective Orders; yet all are allowed to live there in Peace, except the Jesuits; and they are excluded, not on

NOV. 19.

account of their Religion, but for fear of their Intrigues, and their exciting Troubles and Disturbances here, as they have done in most Places where they are already established. As for the *Chinese*, as their Religion is an Abomination, they are not allowed a Pagoda in the City, but they have one at a Place about a League off, where they likewise bury their Dead.

Every *Indian* Nation at *Batavia* has its Chief, or Head, who takes care of its Interests; but he has not the Power of deciding any thing that is at all considerable; and his Function, properly speaking, regards only the Affairs of their Religion, and any slight Controversies that may arise among his Countrymen. In order to give a clear Idea of the Manner in which these People live at *Batavia*, it will be proper to say somewhat of each of these *Indian* Nations, and of their different Manners of employing themselves. The *Javanese* addict themselves chiefly to Agriculture, Fishing, and Ship-building. They wear, generally speaking, no other Habit than a kind of short Petticoat, reaching to their Knees, all the rest of their Bodies naked: They have likewise, across their Shoulders, a sort of Sash, or Scarf, in which hangs a little short Sword: On their Heads they wear a little Bonnet: Their Cabins are remarkably neater than those of other *Indian* Nations, built of split Bamboos, with a large spreading Roof, which hangs over the House, and under which they sit and take the Air.

The *Chinese* Inhabitants are very numerous; it is reckoned, that, in the City and Suburbs, they are at least five thousand. These People seem naturally born for Trade, Enemies to Idleness, and who think nothing hard or laborious, the Performance of which is attended with a Certainty of Gain. They can live upon a very little, are bold, enterprising, have a great deal of Address, and are indefatigably industrious. They have a Penetration and Subtily very extraordinary, inasmuch that they seem to make good their own Saying, that the *Dutch* have one Eye, and they have two; but, with all this, they are deceitful to the last Degree, take a Pride in imposing upon those who deal with them, and boast of that Cunning, of which they ought to be ashamed. In Husbandry and Navigation they very far surpass all other *Indian* Nations. Most of the Sugar-mills in *Batavia* belong to them, and the Distillery of Arrack is intirely in their Hands. They are the Carriers of *Alfa*; and the *East India* Company itself frequently makes use of their Vessels. They keep all the Shops, and most of the Inns, in the City; and are likewise the Farmers of the Duties, Excises, and Customs. The *Chinese* are, generally speaking, well-made Men, of an olive Complexion, their Heads very round, their Eyes small, and their Noses short and flat: They do not cut their Hair, as those who remain in *China* are obliged to do, since the *Tartars* became Masters of their Country. As often as any come from *China*, they immediately suffer their Hair to grow, as a Token of their Freedom, and curl and dress it to great Advantage; their Priests only excepted whose Heads are always close shaved.

These People are always bare-headed, with an Umbrella in their Hands, to keep off the Sun; they likewise suffer their Nails to grow to an immoderate Length, which gives them a prodigious Dexterity in Slight-of-hand, an Art of great Extent, and of considerable Consequence, as it is managed by these People. Their Dress differs pretty much here from what they wear in their own Country: Their Robes are very ample, and their Sleeves, which are of Cotton-cloth, very large; underneath they have a Pair of Breeches, which reach to their Ancles; they wear no Shoes, but a kind of little Slippers, and go without Stockings intirely. Their Women also wear very long Cotton Robes, are very brisk and lively, and withal very impudent, and extravagantly debauched. The *Chinese*, in general, have not the least Notion of any Distinction of Meats; on the contrary, they eat, without Ceremony, the Flesh of any Animal that comes to land, let it be Dog, Cat, Rat, or what it will.

They are prodigiously fond of Shews, and of Entertainments. The Feast of their new Year, which they celebrate in the Beginning of *March*, lasts commonly for

a whole

a whole Month. During this time, they do nothing but divert themselves principally in Dancing, which they do in an odd Way, running round to the Sound of Basses, Flutes, and Trumpets, which makes none of the most agreeable Concerts. They make use of the same Music at their Comedies, and other theatrical Diversions, of which they are very fond. Yet there is no great Matter in this Comedy of theirs, which is, in Fact, a Mixture of Play, Opera, and Pantomime; for they sometimes speak, sometimes sing, and sometimes the whole Business of the Scene is performed by Gesture only. They have none but Women-players, who are bred up to this Trade from their Infancy; but many of them set the Parts of Men, and, for that Purpose, change their Dress, and disguise themselves. Whenever a Comedy is acted, the City receives the Sum of fifty Crowns for a Licence. They erect their Theatres in the Streets, before the House of him who is at the Expence of the Play, which turns intirely on the Exploits of their ancient Heroes, and the austere Lives of their old Saints. The Funerals of the *Chinese* are very remarkable, as well as very rich, and very pompous. Their Tombs are very magnificent, and the funeral Processions very solemn and grand, at which sometimes no less than 500 Persons of both Sexes assist. The Women, upon such Occasions, are all clad in White. At their Funerals they not only make use of musical Instruments to heighten the Show, but also of coloured Umbrellas and Canopies: It is under one of these Canopies their principal Idol is plac'd, whom they call *Jochye de Batavia*, of which we shall have Occasion to give a large Account.

The *Chinese* here follow the Religion of their Country, and have, at a Place about a League's Distance from the City, a *Pagoda*, where they assemble for the Exercise of their Religion. They are, perhaps, the greatest Idolaters, and the most ridiculous in their Opinions, of all the *Indian* Pagans, since they openly profess, that they worship and adore the Devil. This does not proceed from their not knowing, or not believing in, a God, but rather from mistaken Notions in their Belief about him. They say that God is infinitely merciful and good; that he gives Men all they possess out of his mere Mercy, but that he never does them any Hurt; and that, therefore, there is no need of worshipping or praying to him, but to the Devil, who is the Author of all Mischiefs, and with whom they are willing to live upon good Terms, and to omit nothing that may intide them to his good Graces. Such are the fundamental Principles of their Religion at *Batavia*: How they refine or disguise them at home, falls not under our Consideration here. It is the Devil they endeavour to represent by the Idol we have before-mentioned; in whose Honour they have frequently great Feasts and Rejoicings. The *Chinese*, like the *Javaneze*, are extravagantly addicted to Gaming, and laying of Wagers; and this Humour drives them sometimes, especially at the Cock-matches on the new Year's Feast, into downright Madness: They will then not only lose all their Money, Houses, and Goods, at Play, but will likewise stake their Wives and Children; and, after these are lost, their Beards, their Nails, and the Winds; that is to say, they bind themselves not to shave their Beards, to cut their Nails, or to go on board of any Ship to trade, till they have paid what they have lost. They come by this means the most miserable Creatures in the World; and, when in this Condition, are forced to let themselves out to hire, as the Slaves of some other *Chinese*. Under such Misfortunes, they have but one Resource, which is this; that some of their Relations, either here, or in *China*, will, out of mere Tenderness and Compassion, pay what they have lost; and then they enter into Possession as before. The *Malayans* that live at *Batavia*, employ themselves chiefly in Fishing: Their Vessels are very neat and shewy, and their Sails very ingeniously made of Straw. They are a most wicked and profligate People, and one often hears of their committing Murders, for very trifling Gains. They profess the *Mohammedan* Religion, but are absolutely void of Morals; so that, instead of making a Scruple, they make a Merit, of cheating or Churlishness. The last Captain or Chief they had, was publicly whipped and branded for his Frauds and Villanies; his Goods were con-

fiscated, and himself banished to the Island of *Ceylon*. Since that time they have been ashamed to chuse another Chief. The Habits they wear, are either Silk or Cotton-stuff. The Men wear a Piece of Cotton-cloth about their Heads, with their black Hair tied up in a Knot behind. The Negroes who live at *Batavia*, are most of them *Mohammedans*. They come most of them from the Coast of *Bengal*, dress in the same manner as the *Malayans*, and live also in the same Quarter. Some of them work at mechanic Trades, others are a kind of Pedlars: The most considerable of them trade in Stone for building, which they bring from the neighbouring Islands.

The *Amboyneze* addict themselves chiefly to building of Houses with Bamboos, the Windows of which are made of split Cane, very neatly wrought, in different Figures. They are a very bold boisterous People, and so turbulent, that they are not suffered to live in the City, but have their Quarter near the *Chinese* Burying-ground. They have a Chief, to whom they pay deep Submission; and he has a very magnificent House in their Quarter, and well furnished, after their Manner. Their Arms are, for the most Part, large Sabres, and long Bucklers. The Men wear a Piece of Cotton-cloth round their Heads, letting the two Corners of it hang down behind, and adorn this kind of Turban with abundance of Flowers. The Women wear a sort of Habit close to their Body, wrapping a Cotton Mantle round their Shoulders, which leaves their Arms naked. Their Houses are built of Boards, covered with Leaves, are two or three Stories high, and the Ground-floors, particularly, divided into several Apartments. The *Mardiyehs*, or *Topasses*, are Idolaters, composed of divers Nations of *Indians*, and are of different Trades and Professions; being furnished with Passports from the Company, their Merchants carry on a great Commerce in all the neighbouring Islands. Some of them are Gardeners, others breed Cattle, and some Fowls. The Men generally dress after the *Dutch* Fashion; but the Women go like other *Indians*. They dwell both in the City and Country. Their Houses are much better than those of the rest of the *Indians*, built, generally speaking, either of Stone or Brick, several Stories high, and very neat.

There are also at *Batavia* some of the *Macassars*, so famous for their little poisoned Arrows, which they blow through a Trunk. This Poison is made of the Juice of a certain Tree which grows in the Island of *Macassar*, and in the *Bougi* Islands; they dip the Points of their Arrows in this Juice, and then let them dry; the Wound they give is absolutely mortal. The *Bougis* are the Inhabitants of three or four Islands near that of *Macassar*; and, since the Conquest of this last Island, have settled themselves at *Batavia*. They are very hardy and very bold Fellows, for which Reason the Company use them as Soldiers. Their Arms are Bows and Arrows, Sabres and Bucklers. The *Armenians*, and some other *Asiatics*, that reside in *Batavia*, come thither purely on the score of Trade, and stay no longer than their Occasions call them. The Natives of the Country who are established in the Neighbourhood of *Batavia*, and for a Tract of about forty Leagues along the Mountains of the Country of *Bantam*, are immediately subject to the Governor-General. The Company send Drossards or Commissaries amongst them, who administer Justice, and take care of the public Revenues. The principal Men amongst them resort at certain times to *Batavia*, in order to give an Account how these Commissaries behave.

27. The City of *Batavia*, and all the Dominions which the Company possesses in the *East Indies*, are governed by two supreme Councils, one styled the Council of *Admirals*, and the other the Council of Justice. They are both of them fixed in this City of *Batavia*, as the Capital of all the Countries under the Dominion of the Company. To the first of these Councils belong all Matters of Government, and the Direction of public Affairs; and to the latter, the Administration of Justice in all its Branches. The Governor-General always presides in the first mentioned Council, which is ordinarily composed of eighteen or twenty Persons, who are called Counsellors of the *Indies*. It very rarely happens, that they are all at *Batavia* together, because they are usually provided with some of their

of the seven Governments, which are in the Company's Disposal. This Council assembles regularly twice a Week, and extraordinary, as often as the Governor-General pleases: They deliberate therein on all Things that concern the Interest of the Company: They likewise superintend the Government of the Isle of *Java*, and whatever depends upon it: If the Affair be of very great Importance, the Approbation and Consent of the Directors of the Company is likewise necessary. It is also from the Council of the *Indies* that Orders issue, and Instructions are sent, to other Governments, which are implicitly obeyed. In this Council, all Letters directed to the Governor-General, or to the Director, are read, debated, and Answers agreed on by a Plurality of Voices.

The Council of Justice is composed of a President, who is usually a Counsellor of the *Indies*; eight Counsellors of Justice, a Fiscal, or Attorney-General, for Affairs of Government, another Fiscal for maritime Business, and a Secretary. The President is, by his Office, Keeper of the Great Seal. All the Counsellors of this College are Doctors of the Civil Law. The first Attorney-General has a Vote as well as the other Counsellors, and has the third of all Fines under an hundred Florins, and a sixth Part of the Fines that are above that Sum. The Duty of his Office consists in taking care, that the Laws are strictly observed, and in preferring Informations against such as presume to break through them. The other Attorney-General, or Fiscal of the Sea, takes the like Care with regard to Frauds committed in Commerce, Acts of Piracy, or whatever has a Tendency to disturb the settled Rules in maritime Affairs. There are, besides these two sovereign Boards, the Council or Tribunal of the City of *Batavia*, composed of nine Aldermen, including the President, who is always a Counsellor of the *Indies*, and a Vice-President: The Bailiff of the City, and the Commissary of the Country adjacent, have likewise Seats in that Assembly, and, with a Secretary, make up the Board.

The Governor-General is the Head of the Empire which the Company has established in the *East Indies*; he is, in Fact, the Stadtholder, Captain-General, and Admiral. He is, by his Office, President of the Council of the *Indies*, in which he has two Votes. He has the Key of all the Magazines, and directs every thing relating to them, without being accountable to any body. He commands by his own proper Authority, and every body is bound to obey him; so that one might safely say, his Authority equalled, and even surpassed, that of several of the Kings of *Europe*, if he was not accountable for his Conduct to, and liable to be removed by, the Directors of the Company at home. In case, however, of Treason, or any other enormous Crime, the Council of Justice have a Right to seize his Person, and to call him to an Account. The Manner of his Election is as follow: As soon as a Governor-General is dead, or resigns his Charge, the Council of the *Indies* assemble, and chuse another, by a Plurality of Voices. As soon as this is done, they write to the Directors of the Company at home, desiring them to confirm and approve of their Choice: They write likewise, for the same Purpose, to the States General, their High Mightinesses having reserved to themselves this Power of confirming or excluding a Governor-General in their Charter. It is usual, however, for the States, and for the Directors, to approve of the Governor-General that is chosen, and to send him his Letters Patent, conformable to the Desire, in that respect, of the Council of the *Indies*. Yet some Instances there have been, of the Directors rejecting the Governor thus elected, and sending another.

The Company allow their Governor 800 Rixdollars a Month, and 500 more for his Table; and pay, besides, the Salaries of such as compose his Household. But these Appointments make but a very small Part of his Revenue, the legal Emoluments of his Office being so great, that, in the Space of two or three Years, he is able, without oppressing the People, or burdening his Confidence, to raise an immense Fortune. As he is Head, and, in a manner, Sovereign, of the Countries belonging to the Company, it has been found requisite, in Compliance with the Mode of

the Eastern Countries, to allow him a Court, and most of those Honours which are paid to Crown'd Heads. Whenever he stirs out of his Palace, in order to go to his Country-seat, he is preceded by the Master of his Household, at the Head of six Gentlemen on Horseback, with a Trumpet; two Halbardiers on Horseback go immediately before his Coach; on the Right, he has his Master of the Horse, at the Head of six Halbardiers, on Horseback; then follow the other Coaches, which carry his Friends and Retinue; and the Whole is closed by a Troop of Horse, consisting of forty-eight Men, commanded by a Captain, and three Quarter-masters, and preceded by a Trumpet richly clothed.

If this Office be extremely considerable by its Revenues, its Power, and the Honours annexed thereto, it is likewise extremely fatiguing. The Governor-General is employed, from Morning till Night, in giving Audience to such as have Business with him, in reading of Letters; and in giving Orders for the Company's Service; so that he spares but one Half-hour for Dinner; and, even at Table, dispatches such Affairs as are extremely pressing. He also receives all the *Indian* Princes, and their Embassadors, who come to *Batavia*, and of whom there are many that arrive every Year.

After the Governor, the Director-General has the greatest Authority, and is the second Person in the Council of the *Indies*. This Employment demands likewise a great deal of Care and Attention; he who is invested with it, has the Buying and Selling all the Commodities that enter into, or go out of, the Company's Magazines: He it is, who orders what Sorts, and what Quantity of each Sorts of Goods shall be sent to *Holland*, or elsewhere; he has the Key of all the Magazines; and every Officer in the Company's Service makes a daily Report to him of the State of every thing under his Charge. In a Word, he has the supreme Direction of whatever relates to the Company's Commerce, as well at *Batavia* as at other Places; and the Members of all the Factories belonging to the Company are accountable to him for their Conduct in their respective Stations.

The third Person in the Government is the Major-General, who, under the Governor, has the Command of all the Forces. The Number of regular Troops in the Service of the *East India* Company throughout the *Indies* may be about 12000, exclusive of the Militia, who are also very well disciplined, constantly arrayed in Time of Danger, and who are about 100,000 Men. In fine, the military Strength of the Company by Land and Sea, Officers, Soldiers, and Seamen, included, may be about 25,000 Men. For the Support of its Commerce, the Company keeps in constant Pay 180 Ships, from thirty to sixty Pieces of Cannon; and, in case of Extremity, are able, at any time, to fit out forty of a larger Size.

Some Months before the Arrival of our Author at *Batavia*, a very extraordinary Affair happened there; that is to say, a Plot was discovered, and exemplary Justice done on the Traitors. This Affair deserves to be the more taken notice of, because it has been since found no more than a Branch of a great and general Conspiracy, for the intire Subversion of the *Dutch* Government, which was with Difficulty prevented, some Years ago, by the general Massacre of all the *Chinese* at *Batavia*. The Fact with which we are at present concerned, happened in the following Manner: There was one *Peter Erberfeld*, who had framed a Design, in Conjunction with a great many *Javanese*, and other *Indian* Chiefs, to surprize the Citadel and Forts of *Batavia*, to massacre the Governor, and all the Counsellors, together with such as were in the Service of the Company, and, finally, all the Christians in the Isle of *Java*, in order for ever to extirpate the Colony, and put an End to the Power of the *East India* Company in these Parts. This detestable Design was discovered on the very Eve of its Execution; *Peter Erberfeld*, and the chief of his Accomplishers, made Prisoners, put to the Torture, and, on their own Confession, received Sentence, as appears from the following Record of their Conviction, which is drawn up in the clearest and most significant Terms.

Sentence against Peter Erberfeld, and his Accomplices, pronounced at Batavia, April 8th, 1722.

Forasmuch as Peter Erberfeld, Burgess, born at Batavia, of a white Father, and black Mother, of the Age of fifty-eight or fifty-nine, *Catadia*, otherwise called *Reading*, *Javan de Cartajawa*, *Maja Praja de Cbias*, Sergeant of *Javaneze*; *Sana Suta Calia Wangsu de Badong*; and the Person called *Anga Tjira de Bagall*, both *Javaneze*; *Laveeb de Sunbowen*, a *Malayan*, heretofore a Slave in the *Chinese* Hospital, and some time since made free; *Jap Kiko*; *Cartanaja de Pacalongan*; *Anga Sarana de Batong*; *Canta Sinia de Cberibon*; *Singa Ira*; *Marangie de Bengal*; *Sarapata de Indermajo*; *Majai Diaja de Banjermeas*; *Wambia Dia de Pamelang Pandjang*; *Wicia Sufa de Banjermeas*; *Cama Wangja Baspa Mulut de Saraja*; and *Singa Patria* (Chief) of *Sikias*; together with the Wives of the sixteenth, nineteenth, and thirteenth Criminals, all Prisoners at present, and in safe Custody; have confessed and acknowledged before the Court of Justice established at Batavia, that they have been engaged in, and throwing aside all Fear of God, and of Justice, have managed a most execrable Conspiracy against the City, Citadel, and Colony of Batavia, tending to defeat and put an End, by the Assistance of certain *Mohammedan* Princes, and many of the Chiefs of the neighbouring People, such as *Javaneze*, *Baleyan*, and *Malayans*, and others, to the Possession and Government of the *East India* Company: We are the more astonished at this horrible Contrivance, because this Company has never ceased to govern with all possible Mildness and Tenderness, under the Auspices of their High Mightinesses the States General of the United Provinces, all the People under their Obedience, *Mohammedans* as well as *Pagans*, without Distinction of Religion; and protected them against all and every one, who sought to trouble or molest them; so that there was the greatest Reason to believe, that the Establishment of the *East India* Company at Batavia should last long, and not the least Reason to apprehend any thing from those, who were enjoying the Streets of Peace and Tranquillity under its Wings. Nevertheless the aforesaid Criminals have acknowledged, that, in order to carry their detestable Scheme into Execution with as much Success as they could desire, they had agreed upon the following Methods, that is to say, first, and above all things, to massacre the *Dutch*, and other *Europeans*, and consequently all *Christians*, without sparing to much as one, in hopes that, upon this Blow being struck, all the Nations in the flat Country, in the Island of *Java*, and all Foreigners residing at Batavia, or living in the Neighbourhood, such as *Chinese*, *Negroes*, *Macassar*, &c. would immediately have joined the Rebels, or at least have implored their Clemency; and, in case any had opposed them, they were likewise to have been murdered without Mercy.

During the first Attack of the Conspirators, Peter Erberfeld was to have commanded, and given Orders in Quality of Chief; and the other, named *Catadia*, as his Lieutenant, or Person next to him in Power; and, in order to acquire the greater Authority and Respect, the former was immediately to have assumed the Title of *Tjowang-Guthi*, which is as much as to say, great Lord, or supreme Governor; and the latter the Name of *Reading*, which implies as much as Prince. This dangerous Conspiracy was concerted in the House of Erberfeld, situated without the City, at one Corner of the Road which leads to *Jacatra*, where one turns off to go to the *Portuguese* Church; and their Assemblies usually held in a Room on the Ground-floor. The Conspirators likewise met often at a Country-house of his, situated on the *Sander*, from whence they carried on a Correspondence with several *Mohammedan* Princes, and many Chiefs of the *Indian* Nations, whom they had found Ways and Means to draw over to their Party. The Letters upon this Subject were written by the second, third, fourth, and fifth, of these Criminals; who also read those they received in Answer, because the first-mentioned Peter Erberfeld was not able either to write or read the Languages they made use of: And it was likewise the same Criminals that were charged with the Care of delivering those Letters, or causing them to be deli-

vered, to those to whom they were addressed, and of receiving their Answers.

The Accused have likewise acknowledged, that some of them dispersed themselves through different Quarters of the flat Country, in order there to sell or distribute amongst the Inhabitants a kind of *Diamats*, or little Stamps, marked with certain Characters, which were to frighten those, who carried them about them, from Misquiet-shoes, or Wounds from Swords or other Weapons; and that the said Stamps were fabricated by the second, third, fourth, and fifth, of the said Prisoners. The Conspirators had agreed, that the first Attack should be made on the House of the Governor-General, and on the Residences of the Council, and other Magistrates, in the Citadel, and in the City, so as to massacre all the principal Persons of the Government, which had it been effected, would certainly have contributed very much to the Success of their Enterprize. The first, second, and third, of the Criminals were to have had the Command in the Attack of the Citadel; and the fourth, fifth, and sixth, that of the Town. The Attack was to be made on *Monday's-day*, as soon as ever the Gates were open. The Rendezvous of the Conspirators was fixed for the Evening, that should have preceded the Attack, at an House of the principal Conspirator Erberfeld, situate, as is before-mentioned, in the Road to *Jacatra*, in order for them to confer together, and to slide away from thence, some into the Citadel, and some into the Town.

To prevent all Misintelligence among themselves, and that the Affair might be conducted with the greatest Order possible, they agreed beforehand on this Regulation; viz. that Peter Erberfeld, as soon as the Massacre was over, should assume the Title of *Gusti*, or King, as well in the City, as in the Citadel; and that the second Criminal *Catadia* should have the Title of *Reading*, or Prince, in the low Country without the City, quite to the Mountains. As to the rest, they were to have the Title of *Pangraen*, or Princes, and were to be established *Mantries*, or Chiefs, and Counsellors to the King: They were also to execute, in their several Districts, the Function of *Tommegans*, that is, Generals, in Conjunction with *Singa Patria*, who had been actually established, by the Company's Authority, Chief of *Sikias*. The Conspirators had moreover agreed, that, after the Execution of their Designs, the Chief Peter Erberfeld was to take into his Service a College or Board of twelve young Men, each of the Age of twenty, or thereabouts, to be drawn out of the Families of the principal Conspirators; which twelve Persons were to have been sent to the Princes and Chiefs of the *Mohammedans*, in order to have settled the Duties and Customs they were, for the future, to pay at Batavia; all which appears clearly from the intercepted Letters, to which the Confession and Deposition of the five principal Criminals are agreeable in every respect.

Conformable to this detestable Plan, the Conspirators had taken sufficient Precaution for securing to themselves the Means necessary to assist and support them after the Massacre was begun, by a Body of 17,000 Men, drawn from several Places in the Neighbourhood of Batavia, and, for the most part, named by the Prisoners. According to their Scheme, this Body was to have been divided into several Detachments, all of which were to have been ready to march at a certain Time. The Signal being given, each of these Detachments was to have put itself in Motion, and, by the high Roads, as well as by private Ways, to have advanced, and taken Possession of all the Gates, to hinder so much as a single Person's escaping, that the News of this bloody Action might be the longer before it reached *Holland*. With this View, and for the better Execution of their Project, the Conspirators had already secured, by the Distribution of the *Diamats* before-mentioned, 1000 Men. *Maja Praja* had undertaken to send as many; and 2000 had Orders to descend from the Mountains of the South, and to join those, who were hid in the Neighbourhood, in order to the Perpetration of this horrible Design, on *January 2, 1722*.

The whole Scheme was entirely foiled three Days before the intended Massacre, Peter Erberfeld having discovered all things, and given his Orders for the Execution

of it in the following Manner; viz. 800 Men were to have posted themselves at *Croto* on the *Mill River*, beyond the advanced Guard of the Fort *Ryzyrk*; 2000 Men were to have marched into the Country of the Chief *Peter d'Alida*, particularly to *Grogol*, and the Places in its Neighbourhood; and another Body of 1000 Men was to have defiled to *Mangadova*, *Piefang*, *Batu*, and the Places in that Neighbourhood. To these several Bodies it was agreed that all the rest of the Conspirators should have joined themselves from the different Retreats in which they were concealed, in Places adjacent to *Batavia*, that, by the Junction of so great a Force, they might have executed their Schemes in their full Extent, and maintained themselves in Possession. In case they had succeeded in their Design, they were to have been, as their own Letters sufficiently shew, supported and sustained by another Body of upwards of 10,000 *Balejans*, whom they had engaged to pass the Mountains on the Side of *Cadiri*, by *Maturin* on the South Side, and by *Campongbaru*, in order to have taken Post on the Mountain of *Guru*. In case it should have so happened, that the Inhabitants of *Campongbaru* had refused to submit, the *Balejans* had Orders to put them all to the Sword, and to march immediately towards the City, to have completed the Massacre of all such as should have opposed them, and totally to have exterminated the Christians, that the Company might not only have been deprived of their Dominions for the present, but prevented from ever recovering them, or carrying on the smallest Commerce in these Parts.

Peter Erberfeld had been solicited, for two Years together, to enter into this wicked Design, by the second Criminal *Cutadia*, who had spent six Years in framing it; during which time he had been continually travelling up and down the Country, and fixing secret Correspondencies for the bringing about his Purpose; and, if he did not carry things soon into Execution, it was for no other Reason, but because he had a mind to see what Turn the War of *Java* would take, and he might make an Advantage of it. The Prisoner *Maja Praja* was of very great Use to the Rebels, having had an Opportunity of informing himself very exactly as to the Forces of the Company, and their Resolutions, while he lived heretofore as Clerk with *Mr. John Mantien*, who was Major in the Company's Service. The Prisoners *Tomboain*, *Grambrek*, and *Mitas*, had also a perfect Knowledge of all these villainous Designs, and contributed all in their Power towards carrying on this Conspiracy, having often assisted at the Deliberations, that were held at the House of *Peter Erberfeld*, as is before-mentioned.

All the Points of this Conspiracy, however abominable and amazing, are but too well established as Facts, by the Proofs that have been obtained; nay, some of the Chiefs were so audacious, as to divulge their Design, believing, no doubt, that they had taken their Measures so effectually, that it was not possible for them to miss of Success. Of this, it is certain, the Company had felt the sad Experience, it, through the Mercy of the Divine Providence, always watchful over the Elect, this terrible Conspiracy had not been travelled; inasmuch that every Circumstance was discovered, and all the Accomplices secured, without the least Emotion happening amongst their numerous Adherents. The Enormity of this Design becomes to much the deeper, when it is considered, that the Conspirators had fixed on a *Friday* for the Execution of their Design, which is the *Mohammedans Sabbath*, on which it is not lawful for them to shed human Blood; inasmuch as they ought then to be taken up with the Acts of their Religion: But they thought, no doubt, they should be able to expiate this Sacrilege, by the butchering such a Number of Christians.

That which is most abominable in this execrable Affair falls upon *Peter Erberfeld*, who is, or at least has always given himself out to be, a Christian; and yet has forgone himself to such a degree, as to put himself at the Head of a Body of Rebels and Assassins, who were to have cut the Throats of his Superiors, and of his Brethren, at the same time that he was guilty of the blackest Ingratitude, since his Father was heretofore a Member of the Provin-

NUMB. XX.

cial College, and a Captain of Horse. In spite of all these Circumstances, which ought most certainly to have restrained him within the Bounds of his Duty towards his lawful Sovereign, he has been wanting therein to such a degree, as to form the most barbarous and wicked Design, that was ever heard-of, consisting, as himself has confessed, in a fixed Resolution of butchering, without Distinction, every Christian in the Island of *Java*, in order to make himself Master of the City and Citadel of *Batavia*. He ought, however, to know, that Heaven never suffers such flagrant Offences to remain unpunished, but exposes such as are guilty of them to the severest Chastisements.

We the Judges having heard and examined the Information preferred *ex officio* by *Henry van Steel*, Drossard of the flat Country, against the before-mentioned Criminals, who have confessed the Whole, and submitted themselves voluntarily to this Conclusion; it is therefore concluded, Regard being had to the before-mentioned Crimes, and all the Circumstances relating to them, and we hereby conclude and decree in Justice, in the Name, and on the Part, of their High Mightinesses the States General of the United Provinces, that we condemn the before-mentioned Prisoners, with the Approbation of the Governor-General *Mr. Swaardekroon*, and of the Counsellors of the *Indies*, to be transported to the Place before the Citadel, where it is usual to execute Criminals, there to be delivered into the Hands of the Hangman, in order to receive their respective Punishments in the Manner following: The two Criminals *Erberfeld* and *Cutadia*, otherwise styled *Rading*, shall be extended and bound each of them on a Cross, where they shall each of them have their Right Hands cut off, and their Arms, Legs, and Breasts, pinched with red-hot Pincers, till Pieces of the Flesh are torn away. They shall then have their Bellies ripped up from Bottom to Top, and their Hearts thrown in their Faces; after which, their Heads shall be cut off, and fixed upon a Post, and their Bodies, being torn in Pieces, shall be exposed to the Fowls of the Air without the City, in whatever Place the Government shall please to direct.

The other four Criminals *Maja Praja*, *Sana Suta*, otherwise *Wangsa*, *Suta Yffira*, and *Layek*, are to be each of them bound upon a Cross, and have their respective Right Hands cut off, their Arms, Thighs, and Breasts, pinched, their Bellies ripped open, and their Hearts thrown in their Faces, and their Limbs exposed upon a Wheel in the usual Places, there to become a Prey to Birds. The other ten Criminals shall be each of them tied upon a Cross on the Scaffold, and, in case there be not Room on the Scaffold itself, on a Place near it, where they shall be broken alive, without receiving the *Coup de Grace*. They shall be afterwards carried to the ordinary Place of Execution, and there exposed on a Wheel, and guarded so long as they shall live there; and, after they expire, be left a Prey to the Birds. The other three, *Tomboain*, *Grambrek*, and *Mitas*, are condemned to be each of them tied to a Stake, and there strangled, till they are dead. Their Bodies shall be then carried, like the rest, to the common Place of Execution, and there exposed on Wheels, for the Nourishment of the Birds. We likewise further condemn the said Criminals to the Costs and Expenses of Justice, and to the Confiscation of half their Effects: This being paid, renouncing all further Pretensions. Done and decreed in the Assembly of my Lords the Counsellors of Justice, this *Wednesday* the 8th of *April*, all the Judges, except *Mr. Craivanger*, being present. This Sentence was executed as pronounced, on *Wednesday*, *April* the 22d, 1722.

In Process of Time, there were abundance of their Accomplices discovered, and, one after another, executed. The House, in which *Peter Erberfeld* lived, was pulled down, and razed to the Ground; and, on that Side of it, which looked to the great Road, a Column of Infamy was erected, on the Chapter of which was placed a Death's-head. There was also a Table placed on the said Column, on which was engraved in five different Languages; viz. in *Dutch*, *Portuguese*, *Malayan*, *Javaneze*, and *Chinese*, the following Inscription: In this Place heretofore stood the House of that unworthy Traitor *Peter Erberfeld*, on which Spot no other House shall stand hereafter for evermore. It was

never certainly known how this Treason was discovered: Some say, that it was owing to a Slave; others, that it was betrayed by a Woman. There are some likewise of Opinion, that one or other of the Conspirators themselves revealed it. But that which has the most Appearance of Truth is, that the Government received its Informations from the King of *Bantam*; for it is certain, that *Peter Erberfeld* wrote to him, not only every Circumstance of his Conspiracy, but informed him likewise, that, when he had extirpated the Christians, he intended to attack the Emperor of *Java*. The King of *Bantam*, perceiving by this the daring and ambitious Spirit of the Man, began to think, that his own Safety was, in some measure, concerned; and that there could not be a better or shorter Method taken to prevent his having it in his Power to do Mischief, than to discover his Schemes immediately to the Company. It is also remarkable, that *Mr. Vanden Beseb*, Minister at *Macassar*, who wrote a Poem on this Conspiracy, insinuates, that the Discovery was owing to the Friendship of a great Monarch.

28. The Ecclesiastical Government at *Batavia* consists generally of eleven Persons, all Ministers of the Reformed Religion; viz. five for the two *Dutch* Churches in the City, and that in the Citadel, besides the Minister that resides in the Island of *Onrust*; three *Portuguese* Ministers, and two *Malayans*. The five last likewise are *Dutchmen* by Birth, though they preach in the *Portuguese* and *Malayan* Tongues: And as it is necessary, that the State should be very well informed of whatever passes amongst their Clergy when they meet together, the eleventh Person is a Deputy on the Part of the Government, who is to see, that they undertake nothing prejudicial to the Civil Government, or inconsistent with the Laws, which the Company has prescribed. Besides these Ministers, the Consistory is composed of eight Elders, and twenty Deacons. One great Branch of their Business is, to send Ministers into other Governments, where, after a certain Term of Years, they are relieved, and return either to *Batavia*, or to *Holland*, to enjoy in Peace the Fruits of their Labours. Our Author tells us, that there came home with him a certain Preacher, who had made so good Use of his Time, that, on his Return, he bought a noble Fief, and of a Pastor immediately became a Man of Quality.

In other little Places, they have no ordinary Minister; but one is sent thither regularly every three or four Years, to baptize, marry, and give the Lord's Supper; which is so much the more necessary, because the Synods have taken a Resolution not to permit any Religion, but the Reformed, to make any Progress in the Dominions of the *East India* Company.

The *Lutherans*, for a long Space of Time, have warmly solicited for a Church at *Batavia*, but have been constantly refused it, though certainly their Demand was equally just and reasonable, especially in a Place where *Mohammedans* and *Pagans* are freely tolerated in the Exercise of their Religions; nay, and even the *Chinese*, who, as we before observed, worship the Devil himself. This Ecclesiastical Council have also dependent, upon them, the Consolators of the Sick, Schoolmasters and Catechists. Of these last the Company have a great many in their Service on board their Ships, whose Duty it is to say Prayers constantly every Day, and to instruct such as embrace the Christian Religion. These Catechists are, for the most part, Natives of the Country; and, as they speak several Languages, they are the better enabled to give the necessary Instructions, and to teach the Confession of Faith to so many different Nations; who, after being converted and baptized, are to receive the Communion. For the better Preservation of Uniformity, there is an annual Visitation made by the Ministers of all the new Converts.

In consequence of these Regulations, the Reformed Religion makes a great Progress, especially among the Negroes, of whom our Author says he has seen 150 at a time who demanded Baptism; which, however, is not rashly granted, since all who receive it are obliged to be well instructed, and to be able to make their Confession of Faith before it is bestowed; and in this the *Dutch* are so strict, that they do not dispense, in this Particular, even with Princes and Princesses themselves. It is well enough known, that the *Chinese* are so obstinately addicted to their *Great Confucius*, as not to be over-ready to embrace any other

Religion; yet there are, from time to time, some of them who abjure their Idolatry, and embrace the Protestant Faith. Our Author, however, seems to doubt a little the Sincerity of these Confessions, from an Apprehension, that the *Chinese* are seldom sincere in any thing; and, as a Reason for his Suspicion, he tells us, that a *Chinese*, having renounced his Superstition, made use of this remarkable Phrase; At present I am going to embrace the Religion of the Company.

As to the Military Establishment, it is pretty much the same in the *East Indies* as in the *United Provinces*; the Troops in the Company's Service being as regularly paid, and as well disciplined, as those in *Holland*. The first Officer, in Command, in Time of Peace, has, strictly speaking, no higher Rank than that of Major, under whom are Captains, Lieutenants, and Ensigns; But, when the Troops are in the Field, the Lieutenants and Ensigns are at the Head of Companies, the Captains lead Brigades, and the Major, as a Major General, commands in chief. All the Forces, as hath been before observed, are under the immediate Command of one of the Counsellors of the *Indies*; the Natives of the Country are under the Command of their own Officers, who are capable of rising to the Rank of a Captain, but not higher. The Burgesses of *Batavia* choose also their own Officers, as high as the Rank of Captains of Horse and Foot: They are under the Command of a Colonel, who is also one of the Counsellors of the *Indies*, and, at the same time, President of the Council of War.

The Maritime Force, in the Service of the *East India* Company, is regulated on the same Foot, and on the same Maxims, as their Military Establishment; that is to say, there are no Officers wanting necessary to the Preservation of good Discipline; nor are there any honoured with high Titles, merely to secure large Appointments to them, without any Benefit to the State. The whole Fleet is under the Direction of one Officer, who has the modest Title of Commander, or Commodore; he has under him a Vice-Commander; and, besides these, there are no Flag-officers, but every Captain has the Command of his Ship. When their Vessels are in the Harbour of *Batavia*, the Captains are obliged to repair every Morning to the Commander, or Commodore, in order to make Report to him of the State of their Vessels, and to receive his Orders: Yet, even the Commander of the Fleet does nothing of Consequence without the Consent and Approbation of the Governor-General, to whom, in fact, all the Officers of the Company, Civil, Military, and Marine, are accountable; so that it plainly appears, the *Dutch* are forced to retain the Stadtholdership, or Government of a single Person, in the *Indies*, though they have thought fit to rid themselves of it at Home; and, indeed, without such an Establishment, it is not easy to conceive, how their Affairs in the *Indies* could be so well carried on as they are.

29. The Country about *Batavia* is inexpressibly beautiful, inasmuch that one may safely aver, Nature and Art seem to strive which shall have the greatest Share in adorning it. The Air is sweet and mild, the Land fertile, and finely diversified with Hills and Valleys; and all these are improved by regular Plantations, beautiful Canals, and whatever else may contribute to render a Country pleasant and agreeable. But to step a little out into the Island: *Java* may be about 300 Leagues in Circumference, divided into abundance of Kingdoms and Principalities, all of them dependent on the Emperor, who resides at *Kattajora*. We must, however, except out of the Number of these tributary Princes the Kings of *Bantam* and *Japara*, who do not acknowledge his Authority. The Country produces, not only all Things necessary for the Subsistence of Man, but also large Proportions of those valuable Effects which form the Commerce of the Country. It is divided by many Rivers, Woods, and Mountains, in all of which Nature has very bountifully bestowed her Treasures. It is certain, that in some Parts of the Island there are Gold Mines: The Regency at *Batavia*, in hopes of profiting by them, wrought for some Years the Mountains of *Parang*; but so fell-out, that the Marcassites were not fully ripened, so that, after all, the Company were at the Expence of a Million to no Purpose. Such as had the Direction of this Enterprize were very much censured, and the Works have

been long since discontinued. There are People, however, who are thoroughly persuaded, that the Natives of the Country find, in many Places, considerable Quantities of Gold, which Places, however, they carefully conceal from the *Eurepeans*. During the last War in *Java*, which lasted from the Year 1716 to 1721, the Inhabitants of some Parts of the Country were so often, and so miserably, plundered, that they were reduced to absolute Beggary; yet it was observed with Astonishment, that, in the Space of one Year's Peace, these very People grew excessively rich, and had not only great Quantities of Gold in Dust, but also in Ingots.

The Mountains in this Island are many of them so high, as to be seen at the Distance of thirty or forty Leagues. That which is called the *Blue Mountain*, is by far the highest of them all, and seen the farthest off at Sea. They have frequent and very terrible Earthquakes in this Country. There happened one when our Author was there, which frightened him to such a degree, that he did not recover it in a Week. It began about eight of the Clock in the Morning, and shook the City, and Places adjacent, to such a degree, that the Fall of the Houses was expected every Moment. The Waters in the Road were excessively agitated, insomuch that their Motion resembled that of a boiling Pot. In some Places the Earth opened, which afforded a strange and terrible Spectacle. The Inhabitants are of Opinion, that these Earthquakes are caused by the Mountain *Parang*, which is full of Sulphur, Salt-petre, and Bitumen, which, taking Fire by their intestine Commotions, cause a prodigious Struggle in the Bowels of the Earth, and of consequence an Earthquake; and they assure us, that it is very common, after such an Accident, to see a large Cloud of Smoak hanging over the Top of the Mountain. About thirty Years ago, General *Ribeck*, who then commanded in the Island, went, with a considerable Number of Attendants, to the Top of that Mountain. On his Arrival there he perceived a large Cavity in the Mountain, into which he caused a Man to be let down, that he might examine the Inside. The Man, when he returned, reported, that the Mountain was hollow within; that he had heard a most frightful Noise of Torrents of Water on every Side; and that here-and-there he had seen Flames burst out, so that he was absolutely afraid of going far, from an Apprehension of being either stifled by the Vapours, or of falling through some of the Chasms.

It is certain, that the Waters in the Neighbourhood of this Mountain are very far from being wholesome, and that even those that come to *Batavia* are impregnated with Sulphur. Those who drink much of them contract various Disorders, but chiefly a Dysentery: Yet this Water, being boiled, is freed thereby from all those sulphureous Particles, and does no sort of Hurt, though drank ever so copiously. The Fruits and Plants in this Island are in their Kinds excellent, and almost out of Number. That, however, which is, or ought to be, esteemed most, is the Cocoa, which, as a Fruit, has been already described, and therefore shall be considered here purely as a Tree. The Bark of it is reduced into Threads, of which they make very good Cordage, and particularly Cables. The Timber is equally fit for building Ships and Houses, which are covered with Leaves of the same Tree. It is said, that when the Father of a Family in this Country has a Child born, he orders a Cocoa-tree to be planted, that it may know its own Age; for this Tree has a Circle rises annually on its Bark, as on the Horns of a Cow, so that its Age is known by Inspection; and if any body ask the Father how old his Children are, he sends them to his Cocoa-trees.

There are abundance of Woods and Forests scattered over the Island, in which are all kinds of wild Beasts, such as Buffaloes, Tygers, Rhinoceroses, and wild Horses; and they likewise abound with an infinite Variety of Serpents, some of them of a prodigious Size. Crocodiles are prodigiously large in *Java*, and are found chiefly in the Mouths of Rivers; for, being amphibious Animals, they delight most in Marshes and Savannahs. This Creature, like the Tortoise, lays its Eggs in the hot Sands, without taking any farther Care of them, and the Sun hatches them at the proper Season, when they run instantly into the Water. Some small time before our Author came to *Batavia*, a Crocodile was taken in a River's Mouth to the Eastward of

the City, which was upwards of thirty-three Feet in Length, and proportionably big. There is, in short, no kind of Animal wanting here: Fowls they have of all sorts, and exquisitely good, especially Peacocks, Partridge, Pheasants, Wood-pigeons; and, for Curiosity, they have the *Indian Bat*, which differs little in its Form from ours, but its Wings, when extended, measure a full Yard, and the Body of it is of the Size of a Rat.

They have Fish in great Plenty, of different Sorts, and very good; so that, for the Value of Three-pence, there may be enough bought to dine six or seven Men. They have likewise a Multitude of Tortoises, the Flesh of which is very little inferior to Veal, and there are many who think it better. As the flat Country abounds in this manner with all sorts of Provisions, there are daily great Quantities brought to *Batavia*; and, to prevent any Danger of Scarcity, the Vessels belonging to the Company are continually employed in bringing, from the most distant Parts of the Island, Provisions, Spices, and other Necessaries, such as Indigo, Rice, Pepper, Cardamoms, Coffee, &c. There are also laid up, in the Magazines at *Batavia*, all the various kinds of rich and valuable Commodities, not of *Java* only, but all the *Indies*, ready to be transported thence, either to other Ports of the Company's Dominions, or in the Ships that return annually to *Holland*. These may be, in some measure, compared to the Flota and Flotilla of the *Spaniards*; and therefore of these we shall give a very clear and distinct Account.

These Ships sail from *Batavia* for *Holland* five times a Year: The first go in the Month of *July*, and this Squadron consists of four or five Sail, which touch in their Passage at the Island of *Ceylon*: The second, making a Fleet of sixteen or twenty Sail, leave *Batavia* in the Month of *October*; they formerly did not sail till the Month of *December*, but that Regulation is changed, and they sail now constantly in the Month of *October*: The third Squadron, of six or seven Vessels, sails in *September*; the 4th, of four or five, in *January*; and the last Vessel, in the Month of *March*, but not till the *Chinese* Fleet is arrived, which brings the Tea; and of this the best Part of the Cargo of the homeward-bound Vessel is made up; and, therefore, this is commonly called the Tea Ship; the common People likewise call it the *Book Ship*, because it brings the current Account of the Company for the Year, by which they see the State of their Trade in the *Indies*. It is to be observed, that all these Vessels, laden with the Riches of so many Countries, sail from the same Port of *Batavia*. The Ships from *Mocta*, which bring home the Coffee, are the only Vessels in the *India* Company's Service allowed to proceed directly home, without going to *Batavia* at all. Such is the State of *Batavia*, and the Island of *Java*; such the domestic Economy of that great Company in its principal Plantation. We will now look abroad, examine the Extent of its Dominions, the valuable Commodities they produce, and the Means by which the Company governs to wide an Empire, and manages so extensive a Commerce.

30. The first and the best Government, after *Batavia*, is that of the Island of *Ceylon*. The Governor, who resides there, is usually one of the Council of the *Indies*; and his Council, appointed to assist him, is framed in the same manner with that of *Batavia*; the single Difference is, that the latter are not quite so great Men as the former. Tho' the Governor of *Ceylon* is dependent on the Council of the *Indies* at *Batavia*, he is, however, at Liberty to write directly to the Directors of the Company in *Holland*, without asking the Permission of the Governor-General, and without being obliged to give him any Account of their Conduct in that respect. This singular Prerogative has had very bad Effects, because it has frequently tempted the Governors of *Ceylon* to endeavour to withdraw themselves from the Obedience of the Company, in order to become absolute Sovereigns of the Island. There have been many Examples of this kind, but it will be sufficient to dwell here on the two last, which have made so much Noise in *Europe*.

These *Indian* Commotions were owing to the Tyranny of two Governors, who immediately succeeded each other, the one named *Vuyl*, and the other *Vestryns*. The whole Transaction fell out thus: As soon as Mr. *Rumpf* left his Government of *Ceylon*, Mr. *Vuyl*, his Successor, began to

act the Barbarian towards all those who were not so lucky as to be in his good Graces: He persecuted the *Europeans* as well as the *Indians*, and was alike terrible to all. As he had, from the Beginning, this Project in his Head, of rendering himself an independent Sovereign, he pursued it steadily, and by the Methods that were fittest for accomplishing his Purpose. In the first Place, he thought it necessary to rid himself of the richest Persons in the Island, and of such as were of the greatest Reputation for Wisdom, Experience, and Penetration. In order to save Appearances, and play the Villain with an Air of Justice, he thought it requisite to forge a Plot; and caused Informations to be preferred against such as he intended to ruin, for being in a Conspiracy to betray and deliver up the principal Fortresses in the Island to some foreign Power: Which Scheme of his served him doubly; for, in the first Place, it seemed to manifest a great Zeal for the Company's Service; and, in the next, it gave him an Opportunity to convict those he hated of High Treason, which deprived them at once of Life and Fortune.

To manage this more effectually, he thought it requisite to change his Council, and to bring into it such as he could depend upon. The Confiscation of the Estates and Effects of a Number of innocent Persons, whom he condemned and murdered under colour of his Attention to the public Welfare, put it in his Power to oblige many, and to raise a vast Number of Creatures. To make this short History the more intelligible, it will be proper to give the Reader the Character of the Man. Mr. *Vaisij* was born in the *Indies*, of *Dutch* Parents; he had naturally a strong Capacity, which he had improved by an assiduous Application to his Studies. His dark Brow, and cloudy Air, sufficiently shewed the Cruelty of his Disposition, and that Flintiness of Heart, which distinguished him from other Men. He loved and protected the *Indians*, either from a natural Inclination, as they were his Countrymen, or because he thought them less capable of penetrating, and less willing to traverse, his Designs. In order to gain them inirely to his Devotion, he preferred them as often as any Vacancies which fell in his Government would permit; and this in direct Opposition to the repeated Instructions of the Company, directing him to bestow the principal Posts in the Island on *Dutchmen*, or other *Europeans*.

This did not proceed from an absolute Diffidence, in the Company, of the *Indians* in general, which they neither had, nor ought to have, since Experience has taught them, that there are, amongst the *Indians*, Persons of as much Probity, and approved Fidelity, as among the *Dutch* themselves: And our Author assures us, of his own Knowledge, that some, with whom he had occasion to contract Acquaintance, distinguished themselves towards him by indubitable Marks of sincere Friendship, and the greatest Uprightness in their Conduct. He adds farther, that the last time he was in the *Indies*, the General who commanded all the Forces, in the Service of the Company, was an *Indian* born: His Name was *Dirk de Cloon*, a Man of very great Capacity, an excellent Officer, and of acknowledged Virtue and Merit; of which his rising to that high Post, though not a *Dutchman* born, ought to be considered as the most convincing Proof. But to return to Mr. *Vaisij*, and his Transactions, which brought upon him such a Reward as every Traitor ought to meet with.

He carried on his Designs, for a long time, with the greatest Dexterity and Cunning, acquiring by Gifts, and other Artifices, a prodigious Number of Dependents, who were ready to support him even in the blackest of his Designs. This, however, he could not do without giving Umbrage to some of the Company's faithful Servants, who sent over to *Holland* such clear and perfect Informations of his Behaviour, as gave sufficient Light to his real Intentions, in spite of all the hypocritical Arts he made use of to conceal them. At last, therefore, the Company sent Mr. *Versluis* directly to *Ceylon* to succeed him, with Orders to send *Vaisij* Prisoner to *Batavia*, where he was called to an Account for his Conduct. As soon as he came thither, abundance of Informations were preferred against him, for a Variety of Crimes, of a private as well as public Nature; into all which the Council of Justice caused the strictest Inquisition to be made, and took care to be furnished with

every kind of Proof. In fine, after abundance of Examinations and Interlocutories, he freely confessed, that he had caused nineteen innocent Persons to be most cruelly put to Death; adding farther, that as he had, to keep up a Show of Justice, put them all to the Torture, so, by the Severity of this Proceeding, he had extorted from every one of them a Confession of Crimes, none of which had ever so much as entered into their Heads. Such flagrant Offences certainly deserved the severest Punishment the Laws could inflict! The Sentence passed upon him was to this Effect: That he should be broken alive upon the Wheel, his Body immediately quartered, and, those Quarters being burnt on a Pile of Wood, the Ashes to be put in a Cask, and thrown into the Sea, as unworthy of any other Interment: Which Sentence, without the least Mitigation, was put in Execution within a few Days after it was pronounced. Such was the deserved End of the Traitor and Tyrant *Vaisij*; but, sure, the Reader will be astonished to hear, that the next Instance to be produced of a like, and, perhaps, of a worse Conduct, is that of his Successor *Versluis*, who was sent expressly to amend what the other had done amiss, and to make the People forget, by a mild and gentle Administration, the Excesses committed by his Predecessor.

This Man had by no means the Cruelty of *Vaisij*; and therefore he shed no Blood, strictly speaking; but he acted as despotically and tyrannically as the other, though with much more Subtilty, and under a fairer Appearance. The great Point he aimed at, was not the absolute Possession of the Country, but the Possession of all that was valuable in it. As soon as ever he was settled in his Post, he raised the Price of Rice, which is the Bread of that Country, to such an extravagant Height, that, in a very short time, the People were not able to purchase it, so that they were by degrees reduced to Beggary and Starving. Their humble Representations of the great and general Misery which reigned among all Ranks of People throughout the whole Island, made no manner of Impression upon him; but all things went on from bad to worse, till an Account of his Conduct was sent over to *Holland*. The States General were no sooner informed of the Distress the Inhabitants of *Ceylon* were in, than they immediately appointed a new Governor, one Mr. *Doembourg*, and gave him particular Instructions to repair past Errors, and to treat the Subjects of the *East India* Company with all the Tenderness and Indulgence possible, that they might be convinced, their Grievances proceeded from the Wickedness of particular Men, and not from any Disposition in their Sovereigns to Oppression.

On the Arrival of Mr. *Doembourg*, Things took a very new and unexpected Turn; for *Versluis*, after begging the whole Nation, took it into his Head, that they would defend him against his Masters, and therefore absolutely refused to surrender the Government; and had even the Insolence to fire upon the Company's Ships, as they rode at Anchor in the Road of *Colombo*. But all this signified nothing; Mr. *Doembourg* landed; his Authority was immediately acknowledged by all in the Company's Service, and by the People. He instantly caused *Versluis* to be arrested, and sent Prisoner to *Batavia*, where a long criminal Prosecution was carried on against him, but with indifferent Success; for he had taken care to cover himself so effectually, that it was found almost impossible to obtain other than circumstantial Proofs: At last, he thought proper to lay down a very large Sum of Money, which was to attend the Event of the Suit; and he was set at Liberty, that he might be the better able to defend himself. Our Author says, he has no Account of the Event of this Affair; but, at the Time he wrote his Book, there were new Disturbances and Complaints in *Ceylon*; of which Country he has given us the following Description.

Of all the *Asiatic* Islands, *Ceylon* is, perhaps, the finest, and most fruitful: It lies to the South-east of the Peninsula of *India*, beyond the *Ganges*, and separated from the Coasts of *Ceromandel* by the Straights of *Chilo*, or of *Manar*. Its Situation is between 6° and 10° of North Latitude, and 121° and 123° of Longitude, so that it contains about fifty-five Leagues in Length from North to South, and thirty from East to West. It is a Speech

delicious, that many have believed it the Seat of the terrestrial Paradise; and it is certain, that the Inhabitants generally believe this, which they pretend to prove, by shewing, at this Day, the Tomb of Adam, and the Print of his Foot, on the Mountain called the *Pike of Adam*, which is one of the highest Mountains in all the *Indies*. On another Mountain there is a salt Lake, which the Inhabitants affirm was caused by the Tears shed by *Eve* in her hundred Years weeping for the Death of *Abel*. With regard to the Tomb, the People of *Ceylon* are sure, that there is nothing more certain, than that the Father of Mankind lies interred in it: This they think is put out of Dispute by the Epitaph, which, however, nobody can read. Abundance of curious Travellers have seen and copied the Letters, but to no manner of Purpose; for the Learned, in all Nations, have declared themselves at a Loss for the Sense of it, and the oriental Critics as much as the rest: Whence our Author infers, that we ought to suppose it written in the primitive Language of Mankind, spoken all the World over, before the Confusion of Tongues at *Babel*. Some learned Men are of Opinion, that this primitive Language consisted in the five Vowels, a, e, i, o, u, in which is contained the Name of the living God, viz. *IEOVA*, and of which five Vowels it is impossible to compose any other Word, in any Language whatever. It is said, that the late Mr. *Muller*, who was Provoit of *Stettin*, and justly famous for his great Learning, was very well versed in this sort of Science, and that it was his Opinion, the Mysteries of all Languages might be discovered by the Help of these Letters. It is also certain, that Mr. *Muller* offered to discover this Key to all Languages to the States General of the *United Provinces*, for a certain Sum of Money. Undoubtedly, if we had this Key, it would be of great Advantage in respect to our Commerce with the Eastern Nations; but this Affair of the Purchase being drawn out to a tedious Length, that great Man died before any thing could be done in it, and so this important Secret was buried with him.

I have attentively considered the Epitaph in Question, says our Author; and it seems to me, that it ought to be decyphered, in the same manner that is used in reading *Roman* Inscriptions. If I had, continues he, the Science, and the Key, of Mr. *Muller*, I flatter myself, that I should be able to discover the Sense of it. It does not, however, appear, that this Epitaph has any Relation whatever to our first Parent; and, if it was made for any other Person who was interred there, the Opinion of those, who hold that Paradise was seated in this Island, falls of itself to the Ground; for we know, that the Angel of God drove *Adam* and *Eve* out of Paradise after their Fall. *Adam*, therefore, could not possibly die, or be buried, there, unless we should say, that Paradise was no more than a District, or little Country, in this Island. Some Historians, such as *Munster*, and others, assure us, that *Adam* and *Eve*, after their Fall, went to dwell in the Neighbourhood of *Damascus*: They shew, to this Day, at the Distance of two Leagues from that City, the Place where *Cain* slew his Brother *Abel*. *Damascus*, say they, signifies a Place of Blood; which Name was given to this Country to perpetuate the Memory of this first Murder, agreeable to what God said to *Cain*, *The Voice of thy Brother's Blood crieth unto me from the Ground, which hath opened her Mouth to receive thy Brother's Blood from thy Hand*. Most Travellers to oriental Countries have remarked, in their Itineraries, that *Adam* was buried in the Mountain of *Gelgotha*; and that, on the Passion of our Lord, the Rocks being rent, there was found in the Cliffs of them the Skull of our first Parent. *Epiphanius* seems to have been of that Sentiment, when he says, that *Adam*, being driven out of Paradise, went to live in the Neighbourhood of *Jerusalem*; and that dying there, he was buried in the Mountain *Gelgotha*, where his Skull was afterwards found; and that, for this Reason, the Mountain was in succeeding Times called *Calvary*: But this Opinion, says our Author, appears to me to be ill-founded; for the Earth being overturned, and broken to Pieces, in most Parts, by the Deluge, we must necessarily suppose, that the Tomb of *Adam*, wherever it was placed, could not retain its first Situation. It seems to me, therefore, continues he, that the Epitaph

found in the Island of *Ceylon* regards *Noah*, or some of his Family, who established their Dominion in this Island, and who, for that Reason, by a Figure natural enough in any oriental Language, might be styled the Father of Mankind.

This Island was discovered in the Year 1509, by *Juques Lopes de Signairo*. The principal Places therein are *Jafnapatam*, *Trinkenemall*, *Materolo*, *Punta de Galo*, *Columbo*, *Nijembo*, *Sciavaca*, and *Candy*. The *East India* Company are possessed of the whole Coasts of the Island, and ten or twelve Leagues within Land, and of most of the Towns before-mentioned. The *Portuguese*, who were formerly established here, had built abundance of Forts for their own Security, so that it was a very difficult Matter to dislodge them; but, when once the *Dutch* had contracted a secret Alliance with the King of *Candy*, who was Sovereign of the Island, they suddenly found themselves attacked on all Sides, by Land, and by Sea, and were by degrees driven totally out of all their Possessions: As the *Dutch* have ever since taken a great deal of Pains to keep up a good Correspondence with that Monarch, they have obtained from him almost whatever they demanded. The Company send every Year an Embassador to him with various Presents; in Return for which, his Majesty sends the Company a Cabinet of Jewels, of so great Value, that the Vessel which carries it home, is looked upon to be worth half the Fleet. The Governor-General takes care himself to have it so packed up among the rest of the Merchandize, that not only none of the Ship's Company, but even the Captain of the Vessel that carries it, knows not whether it be on board his Ship or no; which shews not only the immense Wealth the Company draws from her Dominions in the *Indies*, but the wise and prudent Measure she employs to secure the Riches she obtains.

The two principal Places in this Island are, *Punta de Galo*, and *Columbo*. This last Place is the Residence of the Governor, and his Council; and the other is properly no more than the Port of that City. The Air of *Ceylon*, though very hot, is, notwithstanding, esteemed to be very wholesome. The Country abounds with most excellent Fruits of all Kinds. They have likewise great Plenty of Rivers, and Sea-fish of various Sorts; Fowls, wild and tame; as also Animals, particularly Elephants, much larger than in any other Country of the *Indies*, Tygers, Bears, Civet-cats, Apes, &c. But that for which the Island is most famous, is its Cinnamon, which is esteemed by far the best in all *Asia*. The *East India* Company have at present the Monopoly of that, as well as all other Spices, and furnish therewith all other Parts of the World.

Cinnamon is, properly speaking, the inner Bark of a Tree, which resembles an Orange; the Flowers of which differ but little from those of the Laurel-tree in their Size and Figure. There are three Sorts of Cinnamon; the finest, which is taken from young Trees; a coarser Sort, taken from the old ones; and wild Cinnamon, which grows not only here, but in *Malabar*, *China*, and, of late Years, in *Brazil*. The Company likewise drives a great Trade in the Oil which is drawn from this Spice, and which is of very great Value. The Company gains also very considerably by the precious Stones that are found in this Island, which are Rubies, Sapphires white and blue, Topazes, &c.

There is likewise established on the Coast of the Island *Manar*, and of *Tokecorin*, a fine Pearl-fishery, which brings in a prodigious Profit. This is let twice a Year to Farm to certain Negro Merchants. The Oylers in which the Pearls are found, lie at the Bottom of the Sea. This Fishery is carried on only in fair Weather, and when the Sea is extremely calm. The Diver has a Cord which passes under his Arms, and is fastened to the Boat; he has a large Stone fixed to his Feet, that he may descend the quicker, and a Sack or Bag about his Waist, into which he puts his Oylers as fast as he finds them. As soon as he is at the Bottom of the Sea, he takes up as many as lie within his Reach, and puts them into his Bag as fast as possible. In order to ascend, he pulls strongly a different Cord from that which is tied about his Body, upon which Signal, those left in the Boat draw him up as fast as they can, while he endeavours to rid himself of the Stone at

his Feet, that he may rise the faster. When these Boats are full of Oysters, the Negro Merchants carry them all over the Coasts, and sell them at so much an Hundred. This kind of Trade is very hazardous for those who purchase the Oysters, since sometimes they find Pearls of great Price, and sometimes none at all, or those that are but of little Value.

The Company draws also a considerable Profit from the Manufactures of Muslin, Chintz, and other Cloths: Yet the greatest Part of the Mullins sent into Europe come from the Coast of Malabar. The Inhabitants of the Island of Ceylon are called *Cingolefians*. They are, generally speaking, very tall, of a very dark Complexion, their Hairs excessively large; which is owing to the Ornaments they wear in them, that are very large, and very heavy. They are Men of great Courage, live very hard, and therefore make good Soldiers. They are, generally speaking, of the *Mohammedan* Religion; but there are also amongst them Idolaters, who worship Cows and Calves. They do not pay great Respect to the *Dutch*; but treat them rather with Contempt, and scornfully stile them their *Coast-keepers*. But the *Dutch* do not trouble themselves much about this, but, like good Politicians, take all the Care in the World to keep up a perfect Correspondence with the King of Causly, that he may never be tempted to quarrel with, and refuse them his Assistance; which would effectually destroy the most valuable Part of their Commerce. This, however, his Majesty might do, if he thought fit, without being under any great Apprehensions from their Power, since his Dominions are separated from theirs by a large rapid River, and by Forests so thick, that it is simply impossible to penetrate them. The Inhabitants of this Island are particularly remarkable for their great Skill in taming Elephants, which they use as Beasts of Burden in time of Peace, and, in time of War, make them very serviceable against their Enemies.

31. The second Government the Company has to bestow, is that of *Ambony*, one of the *Moluccas*. This Island was formerly the Seat of the Governor-General, before the building of *Batavia*, and was transferred to that City, on account of its advantageous Situation, in the midst of all the Company's Settlements; whereas *Ambony* lay too far to the East. Besides, the Island of *Java* was infinitely more fertile than *Ambony* in all Things necessary for Life; so that there was no Necessity of searching for Provisions in other Places; which is a thing they were obliged to do, while the Government-General remained fixed at *Ambony*. This Island, however, is one of the biggest of the *Moluccas*. It is situated in the Archipelago of *St. Lazarus*, between the third and fourth Degree of South Latitude, and 145° of Longitude from the *Canary Islands*, and distant 120 Leagues to the Eastward of *Batavia*. This Island was conquered by the *Portuguese* in 1519; and they built a Fort there, not only to bridle the Inhabitants, but with a View to keep such a Force, as might subject all the adjacent Islands. This Fort, however, was taken from them by the *Dutch* in 1605; but they did not render themselves entirely Masters of *Ambony*, and the adjacent Countries, till the Year 1627.

This Conquest put the Clove-trade wholly into their Hands, not only without a Partner, but without a Competitor also. These Islands are stiled the *Gold Mine* of the Company; and so indeed they have prov'd, if we consider how vast a Profit they draw from them, and how little Fear there is of their being ever exhausted. To convince the Reader of this, we need only observe, that a Pound Weight of Nutmegs, or of Cloves, costs the Company, in Fact, not much above an Halipeny; and every body knows at what Rate they are sold in Europe. This Island of *Ambony* is the Centre of all this rich Commerce; and, to keep it more effectually in her Hands, the Company takes care to have all the Clove-trees in the adjacent Islands grubbed up, and destroyed; and sometimes, when the Harvest is very large in *Ambony*, Part of the same is burnt likewise. A few Days after the Fruit is fallen from the Tree, they collect the Cloves together, and dry them before the Fire on Hurdles; by which means they lose the beautiful red Colour they derive from Nature, and change into a deep-purple, or rather a black; which is, perhaps, occasioned by their being sprinkled with Water. It is pretended, that this Sprinkling

is necessary to hinder the Worm from getting into the Fruit; but it is thought, a better Reason may be assigned for it, which is, the adding Weight to the Cloves.

It is at least certain, that such as are sent for this Commodity in the Company's Ships, practise a Fraud of that Nature, in order to conceal their Thefts; for, having taken out a certain Quantity of Cloves when first received on board, they place two or three Hogheads of Salt-water amongst them, which, in the Space of a few Days, is drawn in, and sucked up, by the Cloves; so that, upon opening of the Hogheads, they are found quite empty, while the Vessels that contain the Cloves, have recovered their former Weight. By this Contrivance, a Captain of a Ship, and a Merchant or Supercargo, agreeing together, find a Way to cheat the Company of this rich Merchandize with great Facility. However, this Practice, tho' easy and expeditious, is wofully extremely dangerous; for as the Company never waxes Spies, so, whenever a Man is detected in a Fraud of this sort, it infallibly costs him his Life: Of which there are abundance of Instances; inasmuch that it has given Occasion to call the Cloves by the Name of *Galgenskruid*, i. e. the Gallows-herb; that is to say, the Spice that brings a Man to an ill End. The least private Trade in Cloves is looked upon as so flagrant a Contraband, that the Company will rather spare a Man who has broken all the Ten Commandments, than one who has cheated them of Five Pounds of Cloves.

Of this I will give the Reader, says our Author, two Instances, that tell within the Compass of my Knowledge. There was a certain Provost, or Executioner, whose surname I have forgot, but his Christian Name was *Joachim*, and he was a Native of *Lubeck*, who, out of Malice, shot a Neighbour of his through the Head. There was, at the same time, a *German* Apothecary, whose Name was *Gunter*, who dealt in aromatic Oils, and had found a Way to cheat the Company of a Parcel of Cloves; they were both condemned at the same time, *Joachim* to be shot, and poor *Gunter* to be hanged. In pursuance of their Sentences, they came together to the Place of Execution; and after the usual Time allowed for Prayers was over, Mr. *Gunter* was fairly trussed up, and *Joachim*, who was upon his Knees, expecting the Bullet, had his Eyes unbound, and was sent home in one of the Company's Ships. The last time, continues he, that I was in the *Indies*, there were no less than twenty People at a time taken up for Frauds of this kind. I cannot tell, says he, what became of them; but this I am very clear in, that if there was as plain Evidence against them as against the Apothecary, they certainly met with his Fate; nor would they have been spared, if there had been twice the Number.

The King of *Ambony* receives an annual Pension from the Company, and has, besides, a Guard of European Soldiers maintained at their Expence. The Inhabitants of the Island are of a middle Stature, and of a very black Complexion. They are all of them very lazy, and have much of them a strong Propensity to Thieving; some of them, who are very ingenious, have a singular Art of working up the Cloves, while they are green, into abundance of various Toys, such as Ships, Crowns, little Houses, &c. which are usually sent home to Europe as Presents, and are esteemed of great Value. Such of the *Ambonyes* as are subject to the King, profess the *Mohammedan* Religion; but there are, besides these, a great Number of *Idolaters* in the Island, who live in the Mountains, and acknowledge no Master. They consider themselves as free; but the King and the Company look upon them as Savages; and as they are frequently guilty of Robberies and Murders, so wherever there is any of them caught, they are condemned to perpetual Slavery, employed in the hardest kind of Work, and are treated with the utmost Rigour. There subsists on this account, an Hatred not to be expressed between them and the rest of the People of the Island, with whom they are in perpetual War, and to whom they very rarely give any Quarter. Their Arms are a Sword, a Buckler, and a kind of Pike or Javelin.

As to the Force which the Company has in *Ambony*, it consists principally in the Garrison they have in their Fort, which is very numerous, composed of their best Troops, kept constantly in excellent Order. The Fort

self is so strong from Art and Nature, that it is, in a manner, impregnable; and so effectually commands the Harbour, that it is simply impossible for a Vessel to go in or out without being sunk by the Cannon of the Fort, if the Governor should give Orders for that Purpose. One would imagine, that so rich a Commerce, as that of Cloves, might be a sufficient Return for the Expence the Company is at about this Island: But such is their Care to improve every thing to the utmost Advantage, that, of late Years, they have caused Coffee to be planted in *Ambogna*, which is like to turn to great Account. Under the Government of Mr. *Barnard*, however, there was a Discovery made of a Commodity more valuable than Coffee or Cloves; for, through his Vigilance, it was found out, that in some of the Mountains there were considerable Quantities of Gold-dust washed down by the Torrents; and this Discovery, it is said, he pursued with such Effects, as at last to find out the Mine; so that the Wealth of these *Indian* Countries is continually growing, when in the Hands of those who know how to make the best Use of every thing; and, without doubt, if the *Dutch* had suspected, that, besides Sugar, Gold and Diamonds might have been found in *Brasil*, they would not have so easily parted with that Country to the *Portuguese*, who yet, perhaps, do not draw near so much Riches from thence, as the *Hollanders* would have done, had it been continued in their Possession.

But as the Thing then stood, and they knew of no other Wealth than what arose from Sugar, Tobacco, and Dying-woods, they preferred the Trade on the Coast of *Gua*, because there they were sure to meet with Gold. In Process of Time, perhaps, the same Thing may happen with regard to *Terra Australis Incognita*: For though, at present, it is scarce thought worth minding or discovering more perfectly, hereafter, when Accident shews it to be richer than People are at present inclined to believe it, we shall see the Discovery of it prosecuted with the utmost Diligence, upon the good old Principle of, Who could have imagined so fine a Country should have been so long neglected? There is one Thing more to be taken notice of, before we leave *Ambogna*; and that is, a red kind of Wood, which is found in this Island, which, beside the Beauty of its Colour, is exceedingly firm and durable; and, which is still more extraordinary, is naturally embellished in its Grain with abundance of beautiful Figures. With this Wood they make Tables, Cabinets, Ekeritoires, and other Pieces of Furniture, of which Presents are made to the principal Persons of the Government, and the rest sold all over the *Indies* at a very extravagant Rate; so that this Article is to be added to those we have already mentioned of the Riches of *Ambogna*.

32. The third Government of the *Indies* is that of the Island of *Banda*, situated twenty Leagues from *Ambogna*, and to the South of the *Moluccas*. The Governor is, generally speaking, an eminent Merchant, who resides at *Nera*, which is the Capital of the Country; and he has, under his Jurisdiction, several other small Islands that lie in this Neighbourhood: The Council of this Government is settled on the same Foot with that of *Ambogna*. In some of the Representations sent home to, and published by, the *East India* Company, this Island is set forth as a Place very expensive to the Company; and it is particularly remarked, that it is so thinly inhabited, as to take off very little of their Goods; and, at the same time, so barren, as to require great Supplies of Provisions: But all this is pure Artifice; though *Banda* is a very small Island, in Comparison of *Ambogna*, as not containing above twelve Leagues in Circumference, yet it certainly produces as great Profits to the Company.

This arises from the important Commerce in Nutmegs, which grow there in such prodigious Quantities, as to enable the *Dutch* to supply all the Markets in *Europe*. The Tree which produces this excellent Fruit, very much resembles a Pear-tree, but its Leaves are like that of a Peach, except that they are smaller. The Nutmeg, when ripe, is pretty much of the same Size as a Walnut, and is covered with two Skins or Shells; the first is very tough, and of the Thickness of a Finger, which falls off of itself, as the Fruit ripens. When it is candied, it has a very fine Taste. The second is of a red Colour, and has a very fine Smell: On the Opening of this, the Fruit appears with a little

Flower at the Top, which is very beautiful. They gather the Nuts, and dry them; but, in the first Place, they are thrown into Quick-lime; for otherwise Worms would breed in and destroy them. There are several Islands in the Neighbourhood of *Banda*, in which Nutmegs would grow, if the Company did not take care to have them destroyed every Year, which, at first Sight, may seem somewhat extraordinary; since one would imagine, that their being thoroughly rooted out once, might prevent their growing again: But this Difficulty is easily solved, when it is known, that the Birds carry them annually into all these Islands; whence the *Dutch* till them, properly enough, the Gardeners of the Spice-trees.

It is not agreed how this is performed by the Birds, tho' all Travellers allow, that it is performed by them. Mr. *Tavernier* tells us, that the Nutmeg being ripe, several Birds come from the Islands towards the South, and devour it whole, but are forced to throw it up again before it be digested: That the Nutmeg then, beinereared with a viscous Matter, falling to the Ground, takes Root, and produces a Tree, which would never thrive, if it was otherwise planted. Mr. *Thevenot* again informs us, that the Tree is produced after this manner: There are, says he, a kind of Birds in the Island, that, having picked off the green Husk, swallow the Nuts, which, having been some time in their Stomach, they void by the ordinary way, and they fail not to take Root in the Place where they fall, and in time grow up to a Tree. This Bird is shaped like a Cuckoo, and the *Dutch* prohibit their Subjects, under Pain of Death, to kill any of them.

There are, among the Inhabitants of this Island, a sort of free Burgesses, who are called *Perkiniers*; and these People have the sole curing of the Nutmegs, which they furnish to the Company in what Quantities they think proper to demand, for which they receive a very moderate Gratification, and yet live much at their Ease. There grows here, as well as at *Ambogna*, a sort of Tree called *Calipute*, from whence they draw a very rich and salutary Oil, which is sold at a very high Price. The Island of *Banda* is so well fortified, that it is thought to be impregnable; yet, to prevent any Accident that might happen, in case an Enemy should get into the Port under *Dutch* Colours, there is always a large Squadron of small Vessels plying round the Coast, which, upon the first Appearance of a strange Ship, immediately surround her, and examine whence she comes, whither bound, and of what Strength.

The Garison is numerous, but in a much worse Condition than any other in the Company's Service, which arises from the Want of Victuals, the Island being of a barren, sandy Soil, producing very little Food of any sort, which is the Reason that the Soldiers eat Cats, Dogs, and any other Animals that come to hand. The rest of their Provisions is the Tortoise, of which they have a reasonable Plenty for about six Months in the Year; and, after this, they think themselves very happy, if they are now-and-then able to get a little sorry Fish: They make their Bread of the Juice of a Tree, which resembles, when first drawn, the Grounds of Beer; but, when dried, it grows as hard as a Stone; yet, when put into Water, it swells and ferments, and so becomes fit to eat, that is, in a Country where there is nothing else to be got. As for Butter, Rice, dried Fish, and other Eatables, they are all sent thither from *Batavia*, and come much too dear for the Soldiers to have any great Plenty of them. To speak the Truth, as the Inhabitants are none of the happiest, so, to do them but Justice, they may be said to live full as well as they deserve, since there is not, and perhaps there never was, an honest Man upon the Island.

The Natives were such a Race of cruel, perfidious, and intractable People, at least as the *Dutch* say, that the Company was forced to root them out for their own Security, at least in a great measure, and to send a *Dutch* Colony into the Island; but then it is such a Colony, as hath not much mended the Matter, being composed intirely of a rascally good-for-nothing People, that, not being able to live any-where else, were content to come, or otherwise were sentenced to be sent, to starve here. The best of it is, that their Misery is of no long Date; for, in a very short time, they are carried off by the Dry-gripes, or Twit-

Twisting of the Guts, which is the epidemic Distemper of the Country. It is for this Reason, and because young Fellows that are wild, are sometimes sent thither by their Relations, that the *Dutch* at *Batavia*, generally speaking, call *Hanla* The Island of Correction. The only People who live tolerably there are the Negroes, who were settled in it before the *Dutch* Conquest, and have lived there quietly ever since.

33. The Island of *Celebes*, or *Maceassar*, is considered as the fourth Government in the *East India* Company's Disposal. It lies between *Borneo* and the *Moluccas*, at the Distance of about 160 Leagues from *Batavia*: Its Form is in a manner circular, and its Diameter about 130 Leagues. It is called, and with great Reason, the Key of the Spice Islands. At the Time our Author was there, Mr. *Arwijn* was sent thither Governor, for the second time, to his Misfortune: for in a Fortnight after he arrived, he was poisoned in a Dish of Coffee, which Act of Villainy was supposed to be committed by one of his Slaves. The Form of Government here is pretty much the same as in the other Islands. Since the Time the *Dutch* drove the *Portuguese* out of these Islands, they have taken care to fortify themselves effectually on the Sea-coast, and have always a very numerous Garrison in the Fort of *Maceassar*, where the Governor resides; which is so much the more necessary, because this Island is very populous, and the People are, beyond Comparison, the bravest and best Soldiers in the *East Indies*. This Nation for a long time gave the *Dutch* inexpressible Trouble, and rendered their Commerce very precarious: Yet, at last, they were totally subdued, and stand at present as much in Fear of the Company as any other Nation: The Expence, however, of maintaining the Troops that are here, and the other Charges of the Government, are so large, that, till very lately, the Company were no great Gainers by their Conquests, though the Slave-trade is there very beneficial.

The Reason that the Company laid out such large Sums, and took so much Pains to possess themselves of this Island, was in order to render it a Bulwark to the *Moluccas*: For before the last War of *Maceassar*, which ended in the complete Ruin of the Power of the Prince of that Country, he found Means to procure great Quantities of Mace, Nutmegs, and Cloves, which he sold to the *English*, and other Nations, at a much more reasonable Rate than the *Dutch* Company; and therefore they ought, in good Policy, to have supported him. The Island is very fruitful, especially in Rice, which is a Commodity of great Value in the *Indies*. The Inhabitants are of a middle Stature, of a yellow Complexion, but of good Features, and are extremely brisk and active. They are naturally Thieves, Traitors, and Murderers; and that to such a Degree, that it is not safe for any Christian to venture, after it is dark, without the Wall of the *Dutch* Forts, or to travel at any time far into the Country, for Fear of being robbed and murdered, than which nothing is more common. Yet there live, under the Protection of the *Dutch* Forts, abundance of the Natives, who are free Burgesses, and carry on a considerable Trade; as do also the *Chinese*, who sail from hence in their own Vessels into all Parts of the Company's Dominions, deriving immense Wealth from their extensive Commerce.

The inland Country is under the Dominion of three different Princes, who, very happily for the *Dutch*, live in a constant bad Intelligence with each other; and, if it were not for this, they might at any time drive the *Dutch* out of the Island. One of these Princes is also styled the Company's King, because he lives in a good Correspondence with them, and promotes their Interest as far as lies in his Power. They make him, from time to time, Presents of Gold Chains, Coronets of Gold set with precious Stones, and other Things of Value, in order to keep him steady to his Alliance, and prevent his coming to a good Understanding with the other two Monarchs, which might be attended with Consequences very fatal to their Power and Commerce. Some little time before our Author's Arrival at *Batavia*, there happened an extraordinary Event, which, it was thought, would give a great Turn to the

Company's Affairs; and this was the Discovery of a rich Gold Mine, which was conceived to be of so great a Consequence, that not only a great Number of Workmen, but a Director, was also sent from *Batavia* to carry on the Work there: But how far this has been attended with Success, our Author was not able to say, and perhaps it is a Secret that never will be known in its full Extent; since it is a Maxim with the *Dutch East India* Company, never to boast of her Power or Riches, but rather to lessen both in the Representations she makes from time to time to the States General: Which is a Caution very necessary to be known and remembered, in order to have a just Notion of those Accounts, which do not state the Affairs of the Company as they really are, but as they would have them understood to be, the better to intitle themselves to the Favour and Protection of the State.

The Island of *Ternate* is the fifth Government in the Company's Disposal, and is the most distant of all the Factories they have in the East; for which Reason they consider it as a kind of Frontier. The Governor is a Merchant, and has a Council, as other Governors have, of whom we have spoken before. This Island is one of the *Moluccas*, of a considerable Extent, and, as we observed before, the King of *Ternate* is the best Ally the Company have. His Country would abound with Cloves, if, at the Request of the Company, he did not cause them to be rooted out every Year, for which the Company pay him an annual Pension of 18 or 20,000 Rixdollars. He has a numerous Life-guard, a very strong Fort, in which there is a strong Garrison, maintained by the Company. The Kings of *Tidore* and *Bacian* are his Tributaries. He has concluded a perpetual Alliance with the Company, by which he has obliged himself to assist them against all their Enemies, which he performs very punctually; as, on the other hand, the Company treat him with the utmost Respect, and afford him whatever Assistance he stands in need of at any time. The Island in general is fruitful, abounding in all Sorts of Provisions, and whatever else a requisite to make Life easy and happy: Yet, after all, the Commerce of it is not very considerable. It is true, the Company dispose there of great Quantities of Cloth, and of such Goods as they receive from *Guinea*: But, notwithstanding this, the Tortoise-shell, and other Commodities, they receive in Return, hardly amounts to as much as a necessary to defray the Expences of the Government; but there is a great Appearance, that the Factory in this Island will for the future turn to a better Account, because some Years ago there has been discovered there a Gold Mine, much richer than any in the *Moluccas*.

As to the Inhabitants, they are a middle-sized People, strong, active, and, generally speaking, more faithful than any of their Neighbours, and much better affected to the *Europeans*. In point of Religion, they are most of them *Pagans*, or *Mohammedans*; and of late, indeed, abundance of them are become Christians, which is, perhaps, in some measure, owing to the King's declaring himself of that Religion, which, in the *East Indies*, and, perhaps, in some other Countries, is a Point of great Consequence towards the Conversion of the People. The Inhabitants of *Ternate* make a kind of Palm-wine, which is excessively strong; they call it *Seggeweer*; a very small Quantity of it will intoxicate a Man, and, therefore, it is in high Esteem: There are likewise found here a kind of Bird, the most beautiful that can be seen; their Feathers are of all Sorts of Colours, and so finely diversified, that it is not possible to conceive any thing more charming; they are commonly sent to *Batavia*, where they sell at a very great Price, not only on account of their Rarity, and of their great Beauty, but of their Docility likewise; for they are taught to sing finely, and to imitate the human Voice. There are brought likewise from this Island abundance of the Birds of *Paradise*, of which we have spoken largely before; but it may not be amiss to add here somewhat to the different Kinds of these Birds. The first Sort are the common Birds of *Paradise*, of a yellow Colour, and their Bodies very small, commonly about eight Inches long, exclusive of the Tail, which is half a Yard, and sometimes

more. The second Sort are the Red, the third the Blue, and the fourth the Black. These last are by far the most beautiful, and the most esteemed, inasmuch that they like them commonly Kings of the Birds of Paradise. On their Heads they have generally a Crown, or Tuft of Feathers, which they suffer to lie flat, or raise it up at Pleasure, in the same manner with the *Cadocus of India*, which is a Bird entirely white, of the Size of an ordinary Pullet, with a yellow Crown upon its Head. I saw once, says our Author, at *Bantam*, one of these black Birds of Paradise, which was exquisitely beautiful, and which was a Present to the King.

The sixth Government bestowed by the Company in the Indies, is that of the Cape of Good Hope. The Governor is always one of the Counsellors of the Indies, and has a Council to assist him in the Administration of Affairs, as the rest of the Governors have, who are appointed by the Company. The Cape is situated on the Coast of *Tessres*, and is the most Southern Point of the Continent of *Africa*. In the Year 1498, it was discovered by *Pascuez de Gama*; and, in the Year 1653, it was taken from the *Portuguese* by the *Dutch*. It is justly esteemed one of the most important Places in the Hands of the Company; though it is certain, that the Profits they draw from it, are not comparable to those which arise from some of the Islands in the *East Indies*; and formerly Things were in a worse Situation, the Revenues arising from that Settlement, falling short of its Expence. Yet it would be impossible for them to carry on their Trade to the *East Indies*, if they were not possessed of this Place; because, at the Cape, and only at the Cape, they can meet with fresh Water, and other Refreshments, in their outward and homeward-bound Voyages, which are absolutely requisite, especially for such as are taken up with the Scurvy, who seldom fail to be recovered by the Helps they meet with here. There is such an abundance of all sorts of Provisions at the Cape, that, notwithstanding the vast annual Demand for them, both by outward and homeward-bound Ships, yet there is never any Scarcity arises; but all Ships, that put in there, meet with the Succours they expect, at a moderate Rate.

Neither are the Refreshments met with at the Cape confined to any particular Sort, as in most other Places; for here are Beef, Mutton, Fowl, Fruit, Herbs, Wine, and, in short, whatever is requisite either to recover the Sick on shore, or to recruit the Ships Stores for the Maintenance of the Men at Sea. In order to have a just Notion of the great Importance of this Place, it will be proper to observe, that, in the Space of a Year, at least forty outward-bound Ships touch there from *Holland* alone; and in these there cannot be less than 8 or 9000 People. The homeward-bound Ships from the *Indies* cannot be fewer, in the Space of a Year, than thirty-six; and on board these there are usually 3000 Souls, not to speak of foreign Vessels, that likewise put in here, and have also all kinds of Refreshments furnished them freely, and at reasonable Prices. This must appear very surprizing, when one attentively considers what vast Quantities of every sort of Refreshments such numerous Fleets must require. But this is not all, these Ships do not enter the Port, and sail again directly when they have received the Refreshments of which they stood in need, but continue there for some time; inasmuch that there are always Ships in the Road, except in the Months of *May*, *June*, and *July*, when the Road is dangerous, on account of the North-west Wind, which blows with the utmost Violence during these three Months.

The seventh and last Government is that of *Malacca*; which City is the Capital of a small Kingdom of the same Name, the Inhabitants of which are called *Malayans*. The Governor here is a Merchant, and the Establishment pretty much the same with those in the other Governments. The Kingdom of *Malacca* makes the South Part of the Peninsula of *India* beyond the *Ganges*, and is divided from the great Island of *Sumatra* by a Streight, which bears the Name of the *Streights of Malacca*. The *Dutch* conquered this Place from the *Portuguese* in 1641, and have maintained themselves in the Possession of it ever since. The City is large, and drives a great Trade, in consequence of its excellent Situation, which renders it the Store-house and Magazine of all that Part of *India*. It is likewise the Rendel-

vous of all the homeward-bound Ships from *Japan*, who here make a Distribution of their Merchandizes, and send them, in different Assortments, to all the Company's Settlements throughout the *Indies*. There is one great Inconveniency at *Malacca*, and that is, the Scarcity of Provisions; and even what is to be had consists only of different kinds of Fish.

The Princes, who govern the adjacent Countries, are, as well as their Subjects, most notorious Pirates, and disturb the Trade of the whole *Indies*. They are particularly Enemies to the Company, and lose no Opportunity of doing her Subjects all the Mischief in their Power. They have, however, met with several severe Checks from the *Portuguese*, who were formerly established here, as also from the *Dutch*, who have succeeded them, which, by degrees, has so broken their Power, that, at present, they are less able than ever to do Mischief. Our Author tells us, that, some Years before he wrote his Book, he had Orders to cruise in those Seas in a small Ship, mounted with fourteen Pieces of Cannon, in order to protect the Trade from Pirates. He had not been long in his Station, before he met with one of these Corsairs; but, before he could engage her, she was joined by two of her Consorts. This, however, did not hinder him from attacking them. They made an obstinate Resistance; so that the Fight continued for two Days, till, in the End, he sunk two of them, and the third escaped. On board one of these Vessels there were three Commanders, that were Brethren, who were taken up alive, and carried Prisoners to the *Dutch* Settlements, where they were adjudged to lose their Heads; which, being fixed on long Poles, were set up in *Chiribon* in the Island of *Java*, to terrify others from acting as they had done.

The Inhabitants of *Malacca* are of a very dark Complexion; but are brisk, active People, and, withal, great Robbers and Thieves. Some of them are Idolaters; but, generally speaking, they are *Mohammedans*. It may not be amiss to add here the Manner in which the *Dutch* became Masters of this Place: They were informed, that great Disputes subsisted between them and the King of *Jobore*; from which they immediately conceived Hopes of reducing it. With this View, they fitted out for the *Streights of Malacca* from *Batavia* a strong Fleet, with a great Body of Land-forces on board; and at the same time struck up an Alliance with the King of *Jobore*, offensive and defensive, as long as the Sun and Moon gave Light to the World: On which, the King of *Jobore* assisted the *Dutch* with 20,000 Men, and laid Siege to the Fort by Land, while the *Dutch* distressed it by Sea; and yet, for all that the Fleet and Army could do, they could not have taken it by Force, but by reducing them by Famine; which would have taken up a great deal of Time: So what they could not effect by Force, they did by Fraud. They heard, that the *Portuguese* Governor was a sordid, avaricious Fellow, and much hated by the Garrison; so the *Dutch*, by secret Conveyances, tampered with him by Letters, promising him Mountains of Gold, if he would contribute towards their reducing the Fort. At length the Price was set, and 80,000 Pieces of Eight were to be the Reward of his Treachery; and he was to be safely transported to *Batavia* in their Fleet, and be made a free Denizen there: So he sent secret Instructions to the *Dutch* to make an Attack on the East Side of the Fort, and he would act his Part; which was accordingly done. He then called a Council, and told them, he had a mind to circumvent the *Dutch*, by letting them come close to the Fort-walls, and then to fire briskly on them from all Quarters, and destroy them at once. So the *Dutch* made their Approaches without Molestation, and placed their Ladders. The Garrison sent Message after Message, to acquaint the Governor of the Danger they were in for want of Orders to fire, and fallly out on the *Dutch*, as was agreed in Council; but he delayed so long, till the *Dutch* got into the Fort, and drove the Guard from the East Gate; which they soon opened, to receive the rest of their Army, who, as soon as they were entered, gave Quarter to none that were in Arms; and, marching towards the Governor's House, where he thought himself secure by the Treaty, they forthwith dispatched him, to save the 80,000 Dollars.

The *Portuguese*, to shew their Zeal to Religion, while they were Masters of *Malacca*, had no less than three Churches and a Chapel within the Fort, and one without. That, which the *Dutch* now use for their Worship, stands conspicuously on the Top of an Hill, and may be seen up or down the Streights at a good Distance; and a Flag-staff is placed on the Steeple, on which a Flag is hoisted on the Sight of any Ship. The Fort is both large and strong, the Sea washing the Walls of one-third Part of it, and a deep, rapid, but narrow, River the West Side of it, and a broad, deep Ditch the rest of it. The Governor's House is both beautiful and convenient, and there are several other good Houses in the Fort, and in the Town without the Fort; but the Road is at too great a Distance to be defended by the Fort, the Shallowness of the Sea obliging them to lie above a League off; which is a very great Inconvenience: For, in 1709, the *French*, coming into the Streights with a Squadron of three or four Sail, and seeing a large Ship in the Road newly arrived from *Japan*, stood in to the Road, and had certainly carried her out, if the Wind had not failed them about Musquet-shot from her. At *Malacca* the Streights are not above four Leagues broad; for tho' the opposite Shore on *Sumatra* is very low, yet it may easily be seen in a clear Day; which is the Reason the Sea is always as smooth as a Mill-pond, except it is ruffled with Squalls of Wind, which seldom come without Lightning, Thunder, and Rain; and tho' they come with great Violence, yet they are soon over, often not exceeding an Hour.

The Country produces nothing for a Foreign Market, except a little Tin and Elephants Teeth; but several excellent Fruits and Roots for the Use of the Inhabitants and Strangers, who call there for Refreshment. The *Malacca* Pine-apple is accounted the best in the World; for, in other Places, if they are eaten to a small Excess, they are apt to give Surfeits; but those of *Malacca* never offend the Stomach. The Marigollane is a delicious Fruit, almost in the Shape of an Apple; the Skin is thick and red; being dried, it is a good Astringent; the Kernels (if I may so call them) are like Cloves of Garlick, of a very agreeable Taste, but very cold. The Rambosian is a Fruit about the Bigness of a Walnut, with a tough Skin, beset with Capillaments; within the Skin is a very savoury Pulp. There is an high Mountain to the North eastward of *Malacca*, that sends north several Rivers, of which that of *Malacca* is one; and all of them have small Quantities of Gold-dust found in their Channels. The inland Inhabitants, called *Menacaboes*, are a barbarous, savage People, whose greatest Pleasure is in doing Mischief to their Neighbours; which is the greatest Reason why the Peasants about *Malacca* sow no Grain but what is inclosed in Gardens, with thick-set prickly Hedges, or deep Ditches; for when the Grain is ripe in the open Plains, the *Menacaboes* never fail of setting Fire to it, in order to consume it. They are much whiter than their neighbouring *Malayans*, who inhabit the low Grounds; and the King of *Jobore*, whose Subjects they are, or at least ought to be, could never civilize them. We have now passed through all the seven Governments, which are in the Gift of the *Dutch East India Company*, which are a kind of Principalities, since, with the Advice and Assistance of his Council, every Governor is a kind of Sovereign, and acts without Controul, throughout the whole Extent of his Jurisdiction.

34. The Company, as it carries on a great Trade throughout all the *Indies*, has taken care to establish Settlements or Factories in all the Countries, where their Affairs require it; and in each of these Factories or Settlements there is a Chief, with some Title or other, with a Council to superintend, as well the Affairs of Policy, as those of Commerce. The Directories of *Coromandel*, *Surat*, *Bengal*, and *Persia*, are all of them of great Consequence, and the Direction of them attended with great Profit. The Directors have, within the Extent of their respective Jurisdictions, the same Power with the Company's Governors. The sole Distinction between them is, that the Director cannot execute any criminal Sentence in the Country where he resides, but must cause it to be done under the Company's Flag, so that all Criminals are here executed on board a Ship. The Directory of *Coromandel* is the first of the four, and has the Fort, and Factories belonging to the *Dutch*, upon that Coast,

within its Jurisdiction; for, in *Coromandel*, the *English* and *Danes* have a Share, and have built several good Fortresses for the Protection of their Trade.

The Company have, notwithstanding, a very considerable Interest in this Part of *India*: Besides *Negapatan*, which lies on the Southernmost Point of *Coromandel*, and the Port of *Guelhia*, in which the Director resides, they have the Factories of *Gueenapatnam*, *Sadrestpatnam*, *Malispattam*, *Prelicol*, *Daskorum*, *Benlispattam*, *Nagernany*, and *Goleonda*. The whole Extent of the Coast, from *Negapatan* to *Malispattam*, may be about 100 Leagues. The *Dutch* Director is a principal Merchant: He has a Council about him; and, if he discharges his Office with Reputation, he is commonly, after a few Years, chosen one of the Counsellors of the *Indies*. This is a very wise Provision in the Management of the Company's Affairs, that the Honour and Rank of a Counsellor of the *Indies*, tho' a Post of much less Profit than that of a Director, or a Governor, makes it aspired to by such, as are already in much more profitable Employments; for it is not a very extraordinary thing in the *Indies* for a Governor or Director to heap up, in the Space of a few Years, an Estate equal to the original Capital of the *East India Company*, that is, six Millions of Guilders and an half, which amounts to upwards of half a Million Sterling. Our Author says, it was well known in his Time, that Messieurs *Dybbek*, *Heimann*, *Szenaradekroon*, *Patras*, and *van Cloon*, acquired prodigious Fortunes in the Time that they were Directors or Governors. There are also some Places at *Batavia* so very profitable, that, when the principal Merchants are possessed of them, they often decline the Dignity of Counsellor of the *Indies*, because, however great and honourable it may be, the Profits that attend it are but small, in comparison of what may be gained in some of these lucrative Employments. Those in *Batavia*, that bring in most, are the *Sabandar* or Chief of the Custom-house; the Fiscal of the Sea; the Proffier of the low Countries: All which bring in prodigious Wealth.

Heretofore the Country of *Coromandel* being divided into a great Number of Principalities, these little Princes or Chiefs had such high Duties, and, in other respects, gave such Interruptions to Trade, as made the *Dutch* very uneasy; but, after the War of *Goleonda*, which cost the Company a great deal of Money, but ended at last to their Advantage, these Princes grew more tractable than formerly. At present, the Kings of *Bijnagar* and *Harjanga*, who are the most powerful in *Coromandel*, live on pretty good Terms with the *Dutch*, and other *Europeans*. The great Trade carried on here is in Cottons, Mullins, Chintzes, and such kind of Goods; in Exchange for which the *Dutch* bring them Spices, *Japan* Copper, Steel, Gold-dust, Sandal-wood, Siampan-woods. The Inhabitants of the Country are some of them Pagans, some *Mohammedans*, and not a few Christians. During the East Monsoon, the Weather is exceedingly hot; yet the Country is very fertile in Rice, Fruits, Herbs, and whatever else is necessary for the Support of Man. All the Manufactures of this Country are transported in the Company's Ships to *Batavia*, from whence they are sent home to *Holland*, and thence distributed throughout *Germany*, and the North.

The second and third Directories are fixed, the former at *Ouglia* on the *Ganges*, thirty-six Leagues from the Mouth of that River; the other in the City of *Surat*, both in the Territories of the Great Mogul. Those two Places are the most considerable for Trade in all *Afia*. The *Dutch*, *English*, *French*, and other *Europeans*, traffick to both, and have erected Ports and Magazines for their Security and Convenience. The best Part of the Trade is carried on by Negro Merchants, who deal in all sorts of rich Goods; such as Opium, Diamonds, rich Stuffs, and all kinds of *China* Cloths. The Empire of the Great Mogul is of a prodigious Extent, and the Countries under his Dominion are esteemed the richest in the World. The Air is tolerably pure; and yet the Head-ach, and a kind of malignant Fever, are common here. The latter generally attacks Strangers, and is a kind of seasoning Sickness, in which, if the Patient escapes the third Day, he, generally speaking, recovers.

Most of the Inhabitants of this Country are tall, black, robust Men, and of a gay, lively Disposition. In point of Religion, they are many of them Idolaters, more of them

Mohammedans, and some of them Christians; but, after all, that of Mohammed is the prevailing Religion. As for the Idolaters, they are split into abundance of Sects, some of which believe firmly in the Metempsychosis, or Transmigration of Souls; and, for this Reason, they will not take away the Life of any living Creature, nor excepting Insects; inasmuch that they dare not kill a Flea or a Fly. They even establish Hospitals for the worn-out Oxen, and old Cows, where they are fed and attended, till they die of Age and Diseases. These People are, in general, very indolent; but, withal, covetous, false, and perfidious to the last degree. They have one Custom amongst them, which is equally singular and barbarous; and that is, laying Ambuscades to entrap and make Slaves of each other; in which whenever they succeed, they sell the poor Captive to a foreign Merchant, and commonly at a very low Rate. They employ themselves, when they reside in Towns, in the Silk, Cotton, and Linen Manufactures; and, in the Country, they cultivate their Plantations with the utmost Diligence and Care: So that they annually transport prodigious Quantities of Grain from hence to *Batavia*.

The *Great Mogul* is one of the richest and most powerful Princes in the World, has always a numerous Army on Foot, and a most magnificent Court; the Directors of *Bengal* and *Surat* know perfectly well how to deal with him, and by making shewy Presents, to extract Diamonds and other precious Stones in Return. *Surat* is a Town of no great Antiquity, scarce one hundred Years old at this Day, but very large, and immensely rich. It is in Companies about five Miles within the Walls, and the Number of Inhabitants are computed at 200,000. The *Moorish* and even the *Indian* Merchants are many of them prodigiously rich. The former addict themselves chiefly to the Diamond Trade, which is very precarious; for sometimes a small Stock produces an immense Fortune, whereas, at others, a Man wastes immense Sums without finding Stones of any great Value; for, at the Diamond-mines, they purchase so many Yards Square, at a certain Price, and pay the Slaves who dig and sit the Earth, and take whatever Stones are found in that Spot; which sometimes are of great Value, and sometimes are but small, and so few of them, as not to quit Costs: Other *Moorish* Merchants deal largely in foreign Trade; and, as the *Mogul* is a very easy Master, so there are some of them that arrive at prodigious Wealth, and carry on such a Commerce as can scarce be credited in *Europe*. About twenty Years ago there died a *Moorish* Merchant at *Surat*, who fitted out annually twenty Sail of Ships, from three to eight hundred Ton; the Cargoes of which ran from ten to twenty thousand Pounds, and he had always Goods in his Magazines equal in Value to what he sent abroad. The Customs of *Surat* amount every Year to upwards of 160,000 Pounds, and, as the Merchants pay there at a Medium three per Cent. the Value of the Goods amount to upwards of 5,000,000 Pounds.

The fourth and last Factory under a Director is that at *Gambroon*, or *Bandar Abassi*, on the Coast of *Persia*. The Director is a principal Merchant, and has always a Council, and a Fiscal to assist him. As this City stands on the Gulph of *Balgora*, and is the only Port which the *Persian* Monarch hath on the *Indian* Sea, it lies at a great Distance from *Batavia*, which is one Reason why this Direction is not so much sought as others: But there is another more potent Reason, which is this; that the Heat is greater there than in any other Place in the World, and the Air excessively unwholesome. To balance these Inconveniences, the Director of *Gambroon* has an Opportunity of making, in a short time, a vast Fortune; so that some who have been in that Direction four or five Years, have acquired such Estates, as rendered it unnecessary for them to concern themselves any farther in Commerce. There are several other *European* Nations settled there besides the *Dutch*; but they have by far the best Factory, and have fortified it so effectually, that though the Highlanders in its Neighbourhood, who are a Crew of bold and barbarous Robbers, have often attacked, yet they never could master it. The King of *Persia*, who reigned at the time our Author was there, came sometimes to *Gambroon*, and distinguished the *Dutch* from other Nations by the many Marks of his

Favour, and by granting them many Privileges: Some time before he had sent a Present to the *Dutch* Governor-General at *Batavia*, of a Gold Saddle, very richly wrought, and adorned with precious Stones, desiring, in Exchange, an *European* Habit for himself, and another for his Queen.

This City is but a disagreeable Place to live in, since, in *August*, it is so intolerably hot, that there is no bearing it; and, in the Winter, it is so very cold, that they not only wear *English* Cloth, but line it with Furs. They have here Black-cattle, Sheep, Goats, Fowl, and Fish, very good in their Kind, and tolerably cheap: They have likewise Grapes, Melons, and Mangoes, in the utmost Perfection: They have likewise excellent Wine, esteemed, by the best Judges, superior to that of all other Countries; and, as a Proof of this, it is asserted, that it will bear four times its Quantity of Water, and still preserve a very rich Flavour. The intestine Wars in *Persia* ragged to such a Degree, when our Author was in the *Indies*, that it was thought requisite to leave a Ship constantly at *Gambroon*, to carry off the Factory, in case it was in Danger.

Another Inconveniency to the Commerce on that Coast, was the Multitude of Pirates swarming in those Seas, which were chiefly *Europeans*, who, after running away with their Owners Ships, subsisted by robbing all other Nations. Amongst these, our Author informs us, was the *Hare*, a stout Ship sent from *Batavia* to *Persia*; the Crew of which mutinied in the Voyage, and forced their Officers to turn Pirates. These Fellows, after committing abundance of Ravages on this Coast, failed for the *Red Sea*, where they attacked and plundered many of the *Arabian* Pirates; at last, finding themselves short of Provisions, and not daring to put into any Port, they resolved to return; but, finding themselves short of Water also, they resolved to supply themselves in a neighbouring Island: With this View they hoisted out the Shallop, into which most of the Rebels crowded: This gave an Opportunity to the Officers who were left on board, to resume their Authority; so that, making themselves once more Masters of the Ship, they cut the Cable, and brought her safely into the Harbour of *Gambroon*. By this means the Ship and Cargo was preserved to the *India* Company, or rather restored to them. Such of the Mutineers as were brought in, were hanged; and the Officers, who had given this convincing Proof of their Integrity, were nobly rewarded, and intrusted with the Care of the Ship back to *Batavia*, where she arrived safely.

In the Year 1701, the *Ballowches*, who had rebelled against the Schah, attempted, with a Body of 4000 Men, to make themselves Masters of the *English* and *Dutch* Factories at *Gambroon*; but were beat at both Places; but the *Dutch*, having a Warehouse at some Distance from their Factory, in which were Goods to the Value of 20,000 Pounds, it fell all into the Enemies Hands. A short time after this, the famous Rebel *Meriweys*, made himself Master of *Ispahan*, where he plundered both the *English* and *Dutch* Factories; taking from the former Goods to the Value of half a Million Sterling; and, from the latter, Effects to the Value of 200,000 Pounds. Having finished the Account of the Directorates, we shall proceed next to the lesser Settlements.

35. As it is requisite to have a Subordination in Commands, the *East India* Company have thought fit to establish, in such Places as were not thought of Consequence enough to require either a Governor or a Director, another principal Officer, with the Title of Commander, or Chief. If the Person, vested with this Authority, be a Merchant, he is accountable for his Conduct to the civil Government; but, if a Captain, then he is under the military Establishment. A Commander, or Chief, hath pretty near the same Authority with a Governor, that is to say, in Conjunction with his Council, except in criminal Cases; for a Commander, or Chief, cannot execute any capital Judgment, till it has been reviewed and confirmed by the Council of *Batavia*. The Commander at the Port of *Cochin*, on the Coast of *Malabar*, was Captain *Julius de Golnitz*, a Native of *Mecklenburg*, at the time our Author was at the *Indies*, from whom he received great Civilities. *Malabar* was the first Country the *Portuguese* discovered in

the *East Indies*, and in which they fixed themselves: They were not able to do this without a great Effusion of Blood; nor were they many Years in Possession, before they were driven out by the *Dutch*. These last Conquerors found it a very difficult Matter to support themselves against the Natives, who attacked them with great Spirit, and had at first so much Success, that, if it had not been for the Courage and Conduct of Major *John Bergman*, they had infallibly been driven out of this Country, which, however, with much ado, he preserved.

The Coast of *Malabar* hath in Extent about an hundred and fifty Leagues, and is in Breadth about twenty. The Climate, though very warm, is very wholesome; the Soil also is fertile in Rice, Fruit, and all Sorts of Herbs. This Country is divided into abundance of small Principalities; among which, the following have the Title of Kingdoms; *viz. Canaron, Calcut, Cranganor, Couchin, Calicoulang, Poracoulang, and Travankor*. As the Capital of the *Dutch* Possessions in this Country is the City of *Couchin*, we shall particularly describe that little Kingdom. It reaches from *Chirwa*, about twenty-four Leagues to the Southward; and, on the Coast, is divided by the Rivulets that run from the Mountains of *Gatti*, into a Multitude of small Islands; and these Rivers have two great Mouths, or Outlets, one at *Couchin*, and the other at *Cranganore*. The first Europeans that settled in *Couchin* were the *Portuguese*, and they built a fine City on the River-side, about three Leagues from the Sea; but the Sea gaining on the Land yearly, it is not now above one hundred Paces from it. It stands so pleasantly, that the *Portuguese* had a common Saying, That *Cenna* was a Country to get Money in, and *Couchin* was a Place to spend it in; for the great Numbers of Canals formed by the Rivers and Islands, made Fishing and Fowling very diverting, and the Mountains are well stored with wild Game. On the Inside of *Baypin* Island, there is an old Fort, built by the *Portuguese*, called *Pallispore*, to inspect all Boats that go between *Cranganore* and *Couchin*; and, five Leagues up the Rivulets, is a *Romish* Church, called *Varapoli*, served by *French* and *Italian* Priests; and, when a Bishop comes into those Parts, it is the Place of his Residence. The *Padre*, Superior of *Varapoli*, can raise upon Occasion 4000 Men, all Christians of the Church of *Rome*; but there are many more *St. Thomas* Christians, that do not communicate with those of *Rome*. About two Leagues farther up, towards the Mountains, on the Side of a small, but a deep River, is a Place called *Firdalge*, where the Inhabitants of *Couchin* generally assemble to refresh themselves in the hot Months of *April* and *May*. The Banks and Bottom of the River are clean Sand, and the Water so clear, that a small Pebble-stone may be seen at the Bottom in three Fathom Water.

The Water of this Country, from the Sea Coast to *Cranganore* to *St. Andreas*, which is about twelve Leagues, has a very bad Quality of causing in the Drinkers of it swelled Legs; some it affects in one Leg, and some in both, so that their Legs are above a Yard about the Ankle; it causes no Pain, but itching; nor does the thick Leg feel heavier than the small one, to those who have them. But the *Dutch* at *Couchin*, to prevent that Malady, send Boats daily to *Varapoli*, to lade with small portable Casks of ten or twelve *English* Gallons, to serve the City. The Company's Servants have their Water free of Charges, but private Persons pay Sixpence per Cask, if it is brought to their Houles; and yet, for all that Precaution, there are both *Dutch* Men and Women troubled with that Malady, and no means has been yet found to heal or prevent it. The old Legends impute the Cause of these swelled Legs to a Curse *St. Thomas* laid upon his Murderers, and their Posterity, as the odious Mark they should be distinguished by. But *St. Thomas* was killed by the *Tilingue* Priests at *Mallispore*, on *Cormandel*, above 400 Miles distant from this Coast; and the Natives there have no Touch of this Malady.

Couchin is washed by the greatest Outlet on this Coast, and, being to near the Sea, makes it strong by Nature, but Art has not been wanting to strengthen it. The City built by the *Portuguese* was about a Mile and an half long, and a Mile broad. The *Dutch* took it from the *Portuguese*

about the Year 1662. when *Heitloff van Ghonz* was General of the *Dutch* Forces by Land, and Commodore of a Fleet by Sea. The Intolence of the *Portuguese* had made several neighbouring Princes become their Enemies, who joined with the *Dutch*, to drive them out of their Neighbourhood; and the King of *Couchin*, particularly, assisted with 20,000 Men. The *Dutch* had not long invested the Town, before *van Ghonz* received Advice of a Peace concluded between *Portugal* and *Holland*; but that he kept a Secret to himself. He therefore, having made a Breach in the weakest Part of the Wall, proceeded to a furious Assault, for eight Days and Nights, without Intermission, and relieved his Assailants every three Hours; but the *Portuguese*, keeping their Men continually fatigued, and on Duty all the while, and finding the City at last in Danger of being taken by Storm, capitulated, and delivered up the Place. In the Town there were 400 *Topasses*, who had done the *Portuguese* good Service, but were not comprehended in the Treaty: As soon as they knew of that Omission, and the Cruelty and Licentiousness of the *Dutch* Soldiery in *India*, they drew up on a Parade within the Port that the *Portuguese* were to go out at, and the *Dutch* to enter in; and swore, that if they had not the same Favours and Indulgence that were granted to the *Portuguese*, they would massacre them all, and set Fire to the Town. The *Dutch* General knew his own Interest too well to deny what they desired; and offered, moreover, to take those, who had a mind to serve, into *Dutch* Pay, which many of them accepted. The very next Day after the *Dutch* had Possession, came a Fugate from *Goa*, with the Articles of Peace made with *Holland*; and the *Portuguese* complained loudly of the General's unfair Dealings; but were answered, that the *Portuguese* had acted the same Part towards the *Dutch*, at their taking *Fernambuco* in *Brazil* a few Years before. The *English* had then a Factory in *Couchin*, but the *Dutch* ordered them to remove, with their Effects, which they according did, to their Factory at *Pennam*.

As soon as the *Dutch* became Masters of the City, they thought it was too large; and so contracted it to what it is now, being hardly One-tenth of what it was. It is about 600 Paces long, and 200 broad, fortified with seven large Bastions, and Curtains so thick, that two Rows of large Trees are planted on them for Shade in the hot Season. Some Streets built by the *Portuguese* are still standing, with a Church for the *Dutch* Service, and a Cathedral, now turned into a Warehouse. The Commander's House, which is a stately Structure, is the only House built after the *Dutch* Mode, and the River washes some Part of its Walls. Their Flag-staff is placed on the Steeple of the old Cathedral, on a Mast of seventy-five Feet high, and a Staff at the Top of it about sixty Feet; and the Flag may be seen above seven Leagues off. The Garrison generally consists of 300 effective Men, and from *Cape Comerin* upwards. They are allowed in all their Forts and Factories 500 Soldiers, and 100 Seamen, all Europeans, besides some *Topasses*, and the Militia. They have their Store of Rice from *Barfalore*, because the *Malabar* Rice will not keep above three Months out of the Hulk, but in the Hulk it will keep a Year. The Country produces great Quantities of Pepper, but lighter than that which grows more Northerly. Their Woods afford good Teak for building, and Angelique and Pawpaw for making large Chests and Cabinets, which are carried all over the West Coasts of *India*. They have also Iron and Steel in Plenty, and Wax, for exporting. Their Seas afford them abundance of good Fish of several Kinds, which, with those that are caught in their Rivers, make them very cheap.

Cranganore lies a League up the River from the Sea, and the *Dutch* have a Fort there. This Place is remarkable for having been formerly the Seat of a Jewish Government, that Nation having been once so numerous there, that they could reckon at above 80,000 Families, but at present are reduced to 4000. They have a Synagogue at *Couchin*, not far from the King's Palace, about two Miles from the City, in which are carefully kept their Records, engraven on Copper-plates in Hebrew Characters; and when any of the Characters decay, they are new cut; so that they can shew their History from the Reign of *Yehoshaphat* to this present time. Mynchaet 245 *Revis*

about the Year 1695, had an Abstract of their History, translated from the *Hebrew* into *Low Dutch*. They declare themselves to be of the Tribe of *Manasseh*, a Part whereof was, by that haughty Conqueror *Nebuchadnezzar*, carried to the most Eastern Province of his large Empire, which, it seems, reached as far as Cape *Comerin*, which Journey 20,000 of them travelled in three Years from their setting out of *Babylon*. When they arrived in the *Malabar* Country, they found the Inhabitants very civil and hospitable to Strangers, giving them Liberty of Conscience in religious Matters, and the free Use of Reason and Industry in Economy. There they increased in Numbers and Riches, till, in Process of Time, either by Policy or Wealth, or both, they came to make themselves Masters of the little Kingdom of *Cranganore*; and there being one Family among them, much esteemed for Wisdom, Power, and Riches, two of the Sons of that Family were chosen, by their Elders and Senators, to govern the Commonwealth, and reign jointly over them. Concord, the strongest Bond of Society, was in a short time broken, and Ambition took Place; for one of the Brothers, inviting his Collegue to a Feast, and picking a Quarrel with his Guest, barely killed him, thinking by that means to reign alone. But the Deceased, leaving a Son of a bold Spirit behind him, revenged his Father's Death, by killing the Fratricide; and so the State fell again into Democracy, which still continues among the *Jews* here. But the Lands have many Ages since returned back into the Hands of the *Malabars*, and Poverty and Oppression have made many apostatize. Between *Cranganore* and *Cochin*, there is an Island called *Baybin*, that occupies the Sea-coast. It is four Leagues long, but no Part of it is two Miles broad. The *Dutch* forbid all Vessels or Boats to enter at *Cranganore*, and at *Cochin*: The Channel is about a Quarter of a Mile broad, but very deep, though the Bar has not above fourteen Feet Water at Spring-tides.

The Inhabitants of this Country are many of them Idolaters, over whom their Bramins, or Priests, have a very great Authority, of which they make a very bad Use. Amongst other odd Customs, they have introduced one that is very whimsical: When any Man marries, he is absolutely forbid to bed with his Wife the first Night; and this Function is to be performed in his stead by one of the Bramins, or, if there be none at hand, by some other Man. This was formerly a very considerable Advantage to such Foreigners as were settled here, the *Malabars* making Choice of them, rather than their own Countrymen; and on such Occasions they made very large Presents, which sometimes amounted to 5 or 600 Florins: But, of late Days, this Source is quite dried up; for the Bramins are become so very religious, that they take care never to be out of the Way when this Part of their Duty is to be performed: To say the Truth, they push this Matter to such a Length, and frequent the Womens Company so much, that there is no body, of their Religion, that can pretend to know with Certainty his own Father. It is for this Reason, that, by a standing Law of the Country, neither Sons nor Daughters ever inherit, but the Nephews and Nieces, that is to say, the Sisters Children of the Person deceased, as certainly of his Blood; which Rule is observed in the Order of Succession established in their Royal Families, and is a glaring Proof of the strange Effects of senseless Superstition.

The next Commandery is that of *Gallo*, on the Island of *Ceylon*, at the Distance of twenty Leagues from *Colombo*, which, as we have before shewn, is the Capital of that Island. *Gallo* was the first Place taken by the *Dutch* from the *Portuguese*, and, at this Day, is a Place of very considerable Trade; the Commander of which, however, depends on the Governor of *Ceylon*, and can do nothing without his Approbation. About the Year 1672, the late King *Leuis XIV.* fitted out a Squadron of eight Sail of Frigates, which were to have made themselves Masters of this Place. One Mr. *John Martin*, who had served the *Dutch East India* Company many Years, and had quitted their Service upon some Disgust, was the Author of this Project; but, finding, when the King's Orders came to be opened at Sea, that another Man was to have the Government of it, in case the Place was taken, he took such Me-

thods as rendered the Expedition fruitless, Mr. *van Goffe*, who then commanded the *Dutch* Fleet, soon arrived upon the Coast; and the *French*, not thinking themselves strong enough to venture an Engagement, retired without so much as attacking the Place. They went then to *Trankamala*, and anchored in that Bay, desirous to force that small Garrison to surrender; but this vigilant *Dutchman* was soon after them with his Fleet, and forced them to fight disadvantageously in *Trankamala* Bay, where the *French* lost half their Fleet, either sunk or burnt; with the rest they fled to *St. Thomas*, on the Coast of *Coremandel*, intending to settle there; but *van Goffe* was soon amongst them there also, and seized their Ships, many of their Guns being dismounted, and carried ashore: But, finding they could do no Good against so powerful and vigilant an Enemy, they treated and capitulated with the *Dutch* to leave *India*, if they might be allowed Shipping to carry them away; which the *Dutch* agreed to, and allowed them their Admiral's Ship, *le Grand Breton*, and two more, to transport themselves whither they pleased: But Mr. *Martin* was carried to *Batavia*, and there confined for his Life-time, with an Allowance of a Rixdollar per Diem.

The third Commandery is that of *Samaran*, in the Island of *Java*; and he who is appointed Commander there, has the Direction of all the Factories in that Island, except such as depend immediately on the Government of *Batavia*. Within his Jurisdiction lies *Katajura*, which is the Residence of the Emperor of *Java*: And here it may not be amiss to take notice of the Cause of the last War, which has been more than once mentioned by the Name of the War of *Java*. It broke out in the Year 1704, when Mr. *John van Horn* was Governor-General, upon this Occasion. The Emperor dying, there were two Competitors for the Succession, one of which was the Brother, the other the Son, of the Emperor deceased; the *Dutch* sided with the former, but the latter had the Affections of the People, and drew over to his Party a great Number of *Indian* Soldiers, who had served the *Dutch*, and, being well disciplined, behaved gallantly on all Occasions. This War lasted twenty Years, and gave the *East India* Company so much Trouble, that, in all Probability, they will not very readily be drawn into an Affair of this kind again.

At *Bantam*, on the same Island, the Head of the Factory has the Title of a Chief. There is a very strong Fort there, and a numerous Garrison, to keep the People in Awe, who are very mutinous, and far enough from being well affected to the *Dutch*. The King has also a Fort, at the Distance of some hundred Paces from the Company's Fort, in which he has also a stout Garrison for the Security of his Person. The only Commodity of the Country is Pepper, of which they are able to export annually ten thousand Tons. The Bay of *Bantam* is very safe and pleasant, in which are many Islands that still retain the Names given them by the *English*, who had formerly a very fine Factory at this Place, from which they were expelled in 1683; The *East India* Company oblige the King to furnish them with a certain Quantity of Pepper; in all other respects they treat him kindly enough, because, as our Author observes, it is their Interest so to do; he is the Sovereign of a great Country, very well peopled; and his Subjects are a very hardy, enterprising Nation, perfidious, revengeful, and naturally hating all Christians to the last degree.

Our Author tells us, that, in his Time, a Lieutenant and twenty Men were surprised by them, and entirely cut off; which occasioned the sending such a Reinforcement, as rendered the Garrison of the Fort at *Bantam* strong enough to command all the Country in its Neighbourhood; which was the more necessary, because *Bantam*, by the Height of its Situation, commands the Streight between the Islands of *Java* and *Sumatra*. Our Author observes, that the last King of *Bantam* died at the Age of one hundred, and was succeeded by his Son, who was then a young Man. He discovered, while Prince, an Inclination to Piracy; and actually fitted out some Vessels on that Account. Our Author saw him, after he was King; and found him a very agreeable Man in his Person and Conversation, though his Character was extremely bad: He was excessively debauched; and, not being content with keeping upwards of 500 Concubines, committed Incests with his Sisters-in-law, and even

with his own Daughters. The Governor-General at *Batavia* admonished him often upon this Subject, representing to him, that such a Course of Life was utterly unbecoming a Prince, and was what no Law or Religion could tolerate. To this the King answered; that he knew of no Laws that could bind him, who gave Laws to others, and was therefore himself above them. He once demanded of the Governor-General an *European* Woman, promising to make her his Wife; which was refused him; however, a Picture was sent him of an *European* Lady at full Length.

He professed himself of the Religion of his Country, that is to say, a *Mohammedan*, to which Law his Subjects are, generally speaking, great Bigots; and therefore hated him extremely on account of his loose Behaviour. It was not only in point of Women that he acted in so vile a Way, but his Conduct throughout was so mean, so base, and so unbecoming a Prince, that, knowing how much he was despised and abhorred, he kept always in his Fort, trusting his Safety intirely to his Guards and Fortifications: Yet, in the midst of these, he met with the just Reward of his Crimes, that is to say, a sudden Death; but whether violent or not, our Author has not thought fit to explain. He says, that the Country of *Bantam* is very fertile, abounding with Cattle, Rice, and Fruits; and adds farther, that, in the Heart of the Country, there are frequently found precious Stones of great Value, of which, however, the *Dutch* rarely get Possession, the People fearing, that this may tempt them to extend their Conquests, by which they are but too much oppressed already.

The second of the Chief's resides at *Padang*, on the Coast of *Sumatra*, otherwise called the *Gold Coast*: This Chief has his Council and Fiscal like the rest; and it is usually considered as a very profitable, as well as honourable, Employment. *Sumatra* is a very large fine Island, which is separated from the Continent of *Asia* by the Straights of *Malacca*, and is justly esteemed one of the richest and noblest Countries in all the *Indies*. The *Dutch* have a Factory at *Pullambam*, which lies about eight Leagues from the Sea, on the Banks of a very large River, which empties itself into the Sea by four different Channels. The great Trade carried on there is that of Pepper, which the *East India* Company would monopolize in the same manner they do Cloves, Cinnamon, and Nutmegs; in order to which, they are at a very great Expence for keeping several armed Barks, cruising at the Mouth of this River, to prevent what they are pleased to call Smuggling. It must be allowed, that they have made a Contract with the King, to take off all the Pepper in his Dominions, at the Rate of ten Pieces of Eight for a *Bahaar*, or 400 Poun^ds, which is a very fair Price: They have, however, a saving Clause in their Contract, by which it is provided, that half the Purchase of the Pepper shall be taken in Cloth, at such a Rate, as greatly reduces the Value of their Cargoes; and it is for this Reason, that the *Dutch* are so much afraid of Smuggling: Yet, in spite of all their armed Barks, it is a thing notoriously known, that, for a thousand Florins to his Majesty of *Pullambam*, and as much to the *Dutch* Chief, a Cargo of a thousand *Bahaars* of Pepper may be carried off the Island without any great Trouble.

The Country is mountainous, which is not looked upon as a great Inconvenience, since almost all these Hills are known to abound with Gold, Silver, Lead, and other Metals; and the Company is possessed of some Mines of Gold, which are very rich, and great Care taken both to secure and conceal the Profits that are made of them. There are likewise great Quantities of Gold-dust found in all the Rivers and Rivulets of this Country, especially during the Time that the West Monsoon reigns, because then the Torrents roll from the Mountains with great Rapidity. Here is abundance of Copper, of which they make good Guns; several sorts of precious Stones, and a Mountain of burning Brimstone, which continually blows out Flame like Mount *Gilboa* in *New York*; 'tis said here is also a Fountain of Balm: It bubbles with Spices and Silks; but the Air is not very wholesome, especially for Strangers, because there are so many Rivers, Standing waters, and thick Forests in it. There is no Wheat, or any other sort of Corn, that grows in *Europe*; but there is Plenty of Rice, Millet, and Beans, which afford good and sufficient Nourish-

ment for the Inhabitants. It produces likewise abundance of Honey, Bees-wax, Ginger, Camphire, *Cassia* Pepper, &c. white Sanders, and especially Cotton, of which the Inhabitants make their Garments.

This Island is of very great Extent, according to the best Accounts, upwards of 400 Leagues in Circumference. The greatest and most powerful Monarch in the Island is the King of *Achem*, or, as it is written in the *Indies*, *Acheen*. It was formerly governed always by a Woman; and Queen *Elizabeth*, of *England*, entertained a close Correspondence with the Queen of *Achem*, who was living in her Time. It is not above forty Years since the Government fell into the Hands of a Man; and several Attempts have been made since to restore the old Constitution, under which the People were much happier than any of their Neighbours. It is, to this Day, a free Port, to which *English*, *Dutch*, *Portuguese*, *Chinese*, and, in short, all the Nations of *Europe* and *Asia*, trade with Safety. The Goods which are brought thither are rich Brocades, Silks of all sorts, Mullins of all sorts, Raw Silk, Fish, Butter, Oil, and Ammunition, for which they are paid chiefly in Gold, the great Commodity of the Country, and remarkably fine.

There is no Country in the *Indies*, where, during the Western Monsoons, the Rains fall with greater Violence, or are attended with more terrible Storms of Thunder, Lightning, and Earthquakes, than in *Sumatra*; but the People, being used to them, are not much alarmed, but bear them patiently, and are seldom heard to complain of the Climate. These People are, generally speaking, *Mohammedans*, and are very expert in making all sorts of Gold Plate with few Tools, and yet with such inimitable Dexterity, whatever is of their Workmanship, sells at a very great Rate throughout all the *Indies*. The Company sends every Year a great Number of Slaves to work in their Gold-mines. The Kings, in that Part of the Country, are very rarely upon good Terms with the *Dutch*; and our Author tells us, that, when he was in the *Indies*, one of those Princes, who was styled King of the Mountains, because he was Master of most of the Countries where the Mines lay, quarrelled with the Company, and drew all his Subjects out of their Service. The principal Places, where Gold is found by the Natives of the Country, are *Trien* and *Maninabo*. The Method they take in coming at it is this: They dig, at the Bottom of the Mountains, Ditches, where the Water being stopped when rolling down the Sides of the Mountains in the Winter, they, in the Summer, draw it off; and, by washing the Mud which remains at the Bottom, obtain from thence considerable Quantities of Gold-dust. It is generally believed amongst such as are best acquainted with the Commerce of the *Indies*, that this Island furnishes annually 5000 Pound-weight of this precious Metal; yet very little, if any, of this Gold is ever brought to *Europe*, the *East India* Company employing it in other Places, where Gold is valuable, and where they can purchase other Commodities, which turn in *Europe* to a better Account.

There is a Project with respect to this Island, which has long employed the Thoughts of the Company; and that is, procuring Ships to be built here, for which, it is certain, there are great Conveniencies, since the Wood of this Island is so firm and durable, that Ships of it would last forty or fifty Years; whereas those that come from *Europe* are, generally speaking, worn out in twelve or thirteen. Before *Padang* and *Pullambam* before-mentioned, the *Dutch* have a strong Fort, and great Factory, at *Jambie*, and another at *Stack*; which last Place is exceedingly unwholesome, occasioned by a very odd Accident: It stands on the great River *Andragbara*, into which, at a certain Season of the Year, there come vast Quantities of Shads of a very large Size, one-third of which is owing to their Roes, which are accounted a great Delicacy; and therefore, after taking their Ours, the rest of the Fish is thrown away; and, lying in great Heaps, corrupt, and exhale pestiferous Vapour, that infect the Air. The Persons therefore that are sent to *Stack*, are much of the same Stamp with those that are sent to *Banda*, that is to say, Men of abandoned Characters, and dissipated Fortunes.

On the Banks of the River *Bancalis*, they have another very considerable Factory, which produces a large Profit from the Sale of Cloth and Opium, that are constantly paid for in Gold-dust. This was discovered, about forty Years ago, by a Factor in the Company's Service, who, after he had carried it on privately for about ten Years, and acquired by it upwards of a Ton of Gold *per Annum*, which is a *Dutch* Phrase, that implies as much as 10,000 *l.* Sterling, he resolved to secure what he had got, by making a free Discovery of this Branch of Commerce to the Company. There are likewise several *Dutch* Plantations on this Island, which are, all together, comprehended under the general Title of the West Coast. There subsists in *Sumatra* a very powerful and warlike People, who have no other Name, than that of the *Free Nation*, and are equally averse to the Yoke, either of the Monarchs of the Island, or of the *Euro-peans*, having always valiantly defended themselves against both. All the Inhabitants of *Sumatra* are much more inclined to the *English* than the *Dutch*, perhaps because they are not under their Power; but the latter take all the Pains they can to prevent it, and to force the Natives to deal with none but themselves. There is one strange Effect, that very probably flows from the great Commerce of Gold in this Island; which is this, that, for twenty or thirty Years past, the Chiefs at *Padang* have been so unlucky, as to have their Honesty always suspected. This is chiefly owing to their Management of the Mines, that do not turn greatly to the Account of the Company, while all their Officers get immense Estates out of them; a thing the Council at *Batavia* can neither understand, nor digest. For this Reason, they change the Chief very often, but to very little Purpose; and, when our Author was in the *Indies*, they sent from *Batavia* an Order, not only for arresting the Chief of *Padang*, but all his Council also, on a Charge of Mal-administration; but, as he soon afterwards left the Country, he could not give us any Account of the Issue of that Prosecution.

The third Chief resides at *Japan*. He is always a principal Merchant, and is assisted by some Writers in the Company's Service. The Profit, which they formerly made by this Establishment, was very considerable, amounting frequently to 80 or 100 *per Cent.* but is now sunk to such a degree, that they rarely make above eight or ten. This great Diminution is chiefly owing to the Practice of the *Chinese*, who, for some time past, have purchased all sorts of Goods proper for that Market at *Canton*, and have exported them from thence to *Japan*. It is also said, that they have contracted with the *Japanese* to furnish them with all sorts of Merchandize at the same Price as the *Dutch*. Another Cause is a Practice established by the *Japanese* themselves; which is that of fixing the Price of all sorts of Goods. We will give you, say they, so much for this, and so much for that; and, if you do not like what we offer, there are your Goods: take them home again. It is very possible, that this Nation was suggested to them by the *Chinese*, who were treated in the same manner formerly at *Batavia*. The Governor-General *van Zuel* thought proper to set a Price on all sorts of Silks, and other Goods, the *Chinese* brought to *Batavia*; and, at the same time, fixed the Rate of the Commodities and Manufactures, which the Company were to give in Exchange. This the *Chinese* looked upon as a prodigious Hardship, and a thing altogether incompatible with the Nature of Commerce. They represented this in the strongest Terms to the General; but to no manner of Purpose. They then addressed themselves to their Sovereign, and complained of this Innovation so warmly, that, after various Expotulations with the Governor to no Effect, the Commerce between the two Nations was broken off; and Things continued in this Posture till the Death of Mr. *van Zuel*. But his Successor Mr. *Scaardekroon*, pursuing quite different Principles, restored all Things to their former State, and put their Commerce on the old Foot again. But to return to *Japan*:

There is no Place in the *East Indies*, where the *Dutch* are so little Authority, and where their Establishment is so little Consequence, as here in *Japan*. They have, it is true, a little Trade allowed them to themselves, where they have Warehouses for their Goods, and a few ordinary Houses, in which such Persons live as are in the Company's Service. But then this Island is, in effect, a Prison, in

which they are shut up for Life, or at least for the Time they stay here, and are not so much as allowed to pass the Bridge, that joins this Island to the City of *Nangazaqui*. The only Shadow of Liberty that is left them, consists in the Chief's going once a Year, attended by two or three other Persons, to the Court of the Emperor, in Quality of Embassador, in order to renew the Treaty of Amity and Commerce, which subsists between that potent Monarch and the Company. One great Reason that is assigned for the holding the *Dutch* to such hard Terms is, their having attempted some Familiarities with the *Japanese* Women; but the true Reason is a well-grounded Suspicion, that the *Dutch* have an Inclination to fix themselves there by Force, of which they have, more than once, given some remarkable Tokens, the last of which fell out not many Years ago, and is like to be ever remembered.

It is to be observed, that the *Hollanders* have been more obliged to Foreigners for maintaining their Commerce in *Japan*, than in any other Place. They owe their original Establishment there to the Care of one Mr. *Adams* an *Englishman*, as shall be largely shewn in the next Chapter; and they had well nigh brought about what they have been so long aiming at, the establishing a Fort on their Island, by the Contrivance of a *Frenchman*, who was at the Head of their Factory. This Gentleman's Name was Mr. *Carron*, a Person of great Parts, and who, in several Journeys he had made to the Emperor's Court, had found means to ingratiate himself with that Monarch, by entertaining him with Accounts of the State of *Europe* at that time; which that Prince, and indeed all the *Japanese* Emperors, are curious to know. Having by this means frequent Access to the Imperial Presence, he, presuming on his Credit with the Emperor, begged his Permission to build a House on the little Island where their Factory stood, on his Masters Account. Which Request the Emperor granted. Accordingly the Foundation was laid very large for an House. However, the Building went cheerfully on, till it grew into an handsome Fortification, of a regular Tetragon. The *Japanese*, being intirely ignorant of the Art of Fortification, had not the least Suspicion of Deceit, but suffered them to finish it. When it was finished, Mr. *Carron* advised his Masters at *Batavia* of the Progress he had made; and desired, by the next Shipping, to have some Cannon sent him in Casks filled with Rubbish, such as Oakum or Cotton, the Casks to be well-bound with iron Hoops, and the Heads securely fixed in, with some Casks of the same Make filled with Spices; which Advice was accordingly followed. When the Shipping arrived, the Lading was landed, according to Custom; but, in rolling the Casks, one of them, that had a Brass Gun, had the Misfortune to have one of its Heads fall out; and the Chea was, by that Accident, discovered. This put a Stop to all Commerce, till the Emperor's Pleasure was known. This Affair gave the Emperor a very bad Impression of the *Dutch*, and of all who were employed by them. He would not, however, prohibit Trade; but gave Orders to put any *Dutchman* to Death, who should presume to stir out of the Island; and directed, that Mr. *Carron* should be sent to answer for this Fault to *Jeddo*, where his Imperial Majesty resided. On his Arrival, and being interrogated there, he was able to say nothing in Excuse, when the Emperor reproached him with abusing his Kindness; for which he had his Beard pulled out Hair by Hair; and then, being dressed in a Fool's Coat and Cap, was expedit, in that Condition, throughout all the Streets in the City: After which, he was sent back to his Factory, with Orders to return in the first Ship that was sent to *Batavia*.

Many *English* Writers call the Island, upon which the *Dutch* Factories stand, *Nangasack*; but this seems to be a Corruption of the Name of the City, which is properly called *Nankesaki*, and the Island where the *Dutch* reside *Desima*. This Island is divided from the City by a small Stream of salt Water, of about forty Feet broad; over which lies a Bridge, about fifty Feet broad; at one End of which there is a Draw-bridge, of which the *Japanese* are Masters, and over which the *Dutch* dare not pass without Leave from the Governor of the City; neither dare any of the *Japanese* converse with the *Dutch*, excepting only the Merchants, and the Factors, who have a Li-

ence for that Purpose. The Island, for the Security of the Factory, is palisaded quite round; and there are four great Streets that go across it, with large Magazines or Warehouses on both Sides, and a spacious Market-place over-against the Bridge, where, at certain times, the Town's-people have Leave to trade with them. The Dutch are not even Masters of their own Ships; for, as soon as any one of them enters the Port, the *Japanese* instantly take Possession of her, take out all the Arms and Ammunition, which they carry ashore, and lay up safely, in order to return, when the Ship is ready to sail; they exact likewise a strict Account of the Number and Quality of all the Men on board of her, and even cause them to be mustered by a Commissary of their own, in order to be satisfied, that the Account they had before taken was true. After taking these Precautions, we need not wonder at a Proverb they have common amongst them; viz. *The Dutch have more Cunning than all the Nations of the West, but the Japanese are still more Cunning than they.*

Japan, with the neighbouring Islands under its Dominion, is said to be near as big as *Great Britain*; it is in Length, from North-east to South-west, near 300 Leagues, and the Mean of its Breadth about 160 Miles; it is well peopled, and produces all Things necessary for human Sustainance in great Plenty; yet the *Dutch*, in their Island, pay a round Price for every thing they have, and purchase even the Wood they burn by Weight. Their Mountains are very rich in Gold, Silver, and Copper, which last is the very best in the known World; their Porcelain, or *Japan* Earthen-ware, is finer than *China* Ware, but much thicker and heavier, and the Colours brighter, and it sells much dearer, either in *India* or *Europe*, than what is made in *China*; but their Tea is not near so good. Their Lacked or *Japanned* Ware, is, without any doubt, the best in the World: the best Sort will hold boiling Water without Detriment to it. They abound in Silks, both Wrought and Raw, much stronger than what *China* produces. Their Houses are for the most part built of Wood; but the Emperor's Palaces are built of Marble, and are covered with gilded Copper. Their Gilding is very durable, and can withstand all Winds and Weather many Years. The City of *Jeddo* is their Metropolis, and its Magnitude may be guessed by a Fire that happened in it about the Year 1660. which consumed, in eight Days that it raged, about 120,000 Houses, besides above 500 Temples.

Their Religion is purely *Pagan*, and *Amida* is their favourite God, but his Habitation is a great Way off; for they report, that a Soul is three Years in continual Travel before it can reach Paradise, which is only the Suburbs of Heaven: However, when they once get thither, they are pretty sure of going to Heaven, and they live pretty quietly in Paradise, because not one of their Friends dares come thither to disturb any of them. They have several other Gods, and each of them has his Adorers and Devotes. One is represented as having three Faces, and he is believed to be the Father of the Sun, Moon, and Stars. Every God has his particular Paradise, but none is nearer than three Years Journey: Some of their Zealots cut their own Throats, to get an easy Passage to some of them; and others hang themselves, for the same Purpose. They carry their Idols in Procession on Horsecback, with instrumental and vocal Music, to entertain them. They make many Feasts and Sacrifices to their Idols, but they are only fed with the Smoke; the Votaries eat the Meat. The *Japanese* are strict Observers of moral Rules, and particularly in Commerce, inasmuch that a Merchant of Reputation, in his Payments, puts up 5, 10, or any decimal Number of *Cupangs* (which is a broad oblong Piece of Gold of twenty Shillings Value there) into a silk Bag; and, putting his Seal on the Bag, passes current for what the Seal mentions, for several Generations, without so much as looking what is in the Bag; and Gold is so plentiful and cheap, that a *Cupang* of twenty Shillings, in *Japan*, passes current in *Batavia* for thirty-two Shillings; and, when the *Loon* is slumped on it by the Company, it passes for forty Shillings Sterling.

They are likewise exact Observers of Justice, and rigorous in punishing of Crimes. To a Man of Distinction, convicted of a capital Crime, the Emperor sends a Letter,

that on such a Day, and such an Hour, he must be his own Executioner, on Penalty of exquisite Torments, if he survives the appointed Time; so that the common Custom is, that the Delinquent sends for his nearest and best Friends, to a sumptuous Feast, on the Day set him; and, after the Feast is over, he shews them the Emperor's Letter; and, while they are reading it, he takes a Dagger, that he has about him for that Purpose, and with it slabs himself below the Navel, and rips himself up to the Breast-bone. The inferior Sort are forced to submit to Hanging, Beheading, or Throwing over a high Precipice; and, for small Faults, Whipping and Stigmatizing are common Punishments. This Severity seems to shew, that the Statesmen and Lawgivers of this Country, who ought to be best acquainted with the Genius of the People, are satisfied, that nothing but penal Laws, strictly executed, can contain them within due Bounds.

It is certain, that the Government of *Japan* would be well enough pleased to encourage a free Trade with all the Nations, if it was not constrained by two Considerations: The first is, the Dread of having their Religion insulted, which, from a misguided Zeal, was very frequent, while there were any Christians among the *Japanese*. The other is, their Aversion to strange Customs, or any Innovation in the Manners of their People, from which they apprehend the worst Consequences. When the *Dutch* were first established here, the then prime Minister of *Japan* gave their Embassador this Account of the Matter: We do not condemn your Customs, or censure your Way of Living; but we are determined to preserve our own: We know very well the Advantages that result from the System of Government established amongst us, and we will not run the Hazard of a Change: We know too, that great Revolutions are brought about by imperceptible Degrees, and, therefore, we are resolved to cure the Itch of Novelty by the Rod of Punishment. Upon this Maxim that Law is founded, by which no *Japanese* dares leave his Country; and, if he does, he must never return. They are so wedded to their own Customs and Opinions, and so jealous of having new or foreign Customs introduced, that they will not send Embassies to other Kings or States, or suffer their Merchants to have Commerce out of their own Dominions; only they send some small Jonks, or Vessels, in Summer-time, to the Land of *Yedso*, about fifty Leagues from the North-end of *Japan*; and it is reported, they bring much Gold from thence: But, whether that Country is Part of their Dominions, or not, is not easy to say; but it is also reported, that the Natives of the Country are robust and uncivilized; and that they speak the *Japan* Language.

Our Author affirms, that the *Dutch* have actually surrounded the Coast of *Japan*, and are satisfied, that it is an Island; and he farther assures us, that they have but one good Port, all the rest of their Coasts being so guarded by Reef Rocks, and Shole-water, that they have no Reason to fear Invasions. He observes likewise, that, in point of Military Discipline, they very far exceed the *Chinese*; and that their People are, by no means, of so base and effeminate a Temper, as most of the Inhabitants of that great Empire. He adds, that the Government is perfectly uniform, and well settled; for tho' several Countries bear the Title of Kingdoms, yet all their Monarchs are under the strictest Subjection to the Emperor, and the Laws of the Country prevail every-where, so that there cannot be said to be any Diversity of Interests.

There is likewise a very strict Regard had to private Property, the Father transmitting to the Son, not only his patrimonial Estate, but what he has acquired by his own Industry, which is certainly one of the best Methods for preventing the Desire of Change. The *Japanese* are not only a very subtle and crafty People, but have also a surprising Quickness of Parts. The Emperor, though he resides at *Jeddo*, which is thirty Days Journey from the Port, by the quickest Conveyance in Use in that Country, has, notwithstanding, Intelligence, in the Space of two Days, of the Number and Force of all Ships that come. This is performed by Flags and Beacons. As for a Ship arriving, they examine, as we before mentioned, the Strength of the Vessel; of which Report Flag-staves

to the Governor, he orders the Beacon to be fired; or, it there be two Ships, two Beacons; and, at the same time, hoists a Flag, the Colour of which intimates the Force of the Ship. This Signal, as soon as discerned, is repeated from every Hill and Eminence, till it reaches the Gates of *Yedo*; so that the Emperor, and his Council, have time to deliberate on the Measures proper to be taken. The Forms observed in Business are wonderfully exact; and the Emperor's Orders or Edicts signified in Terms equally expressive, and full of Dignity, having very little of that Bombast and swelling Style, which is common in oriental Courts: Yet, in the midst of all these Marks of good Sense, and quick Parts, their Religion is the idlest and most ridiculous than can be imagined; of which the Author gives us one Proof, that is really astonishing. There is a tutelary God to every Family, whose Idol is placed at the Top of the House, and he has Instructions given him to keep off Sickness, Misfortunes, and every evil Accident; and when any of these fall out, they take down their Idol, and whip him, for not having performed his Duty. Such strange Effects has Superstition, where-ever it prevails.

The History of *Japan* will naturally fall into our second Book; but, having to fair an Opportunity at present, it appears reasonable to gratify the curious Reader with a Paper which has fallen into our Hands, containing a much clearer, and more distinct, Account of the *Dutch* Commerce in this Empire, than is any-where to be met with in our own, or perhaps in any other Language.

An Inquiry into the Nature of the Dutch Commerce at Japan.

IT is natural for a Person of a curious Disposition, to desire perfect Information as to those Points, that seem doubtful or obscure in most of the Relations that have been published as to distant Countries; and I must confess, that it seems to me the most easy and certain Method of acquiring Satisfaction, to dispose those Doubts and Difficulties into Questions, the Resolution of which may effectually clear them; and to propose those Questions to such as have had Opportunities of informing themselves sufficiently, in respect to the Matters under Consideration. I cannot give a stronger Instance of this, than by mentioning what has occurred to me, upon reading the Accounts that have been hitherto printed of the *Dutch* Commerce in *Japan*, which are, in my Opinion, so indistinct and confused, as well for want of Order in those Relations, as for want of the necessary Circumstances which might enable one to connect their several Parts together, supposing one inclined to take so much Pains, that I presume you will admit the following Queries to be reasonable, as I hope, from your Indulgence, to be delivered from the Incertainty I am under, as to the Subjects at which they point. A long Introduction would be unnecessary, and the Trouble my Questions will give you, restrains me from adding any thing farther than this Explanation of my Request, that it extends only to the *Dutch* Commerce in *Japan*; and that I do not expect any further Account of that Empire, than is absolutely necessary to settle my Notions of the Commerce.

1. *What is the Extent, and what the true Boundaries, of Japan?* It is not possible to answer this Question very precisely, because we have not any Accounts that can be absolutely depended upon, as to the Countries that lie to the North of *Japan*; but, with respect to the End proposed by your Questions, it may be answered in a manner perfectly satisfactory. The Empire of *Japan* is composed of three large Islands, surrounded by a great Number of smaller Islands of different Sizes, some inhabited, and some desert. The most Southern of these Islands, is that which some Writers call by the Name of *Bungo*, or, according to the *Portuguese*, *Nimo*. This Island extends from South to North, about sixty Leagues, and from East to West about forty. It is on the West Coast of this Island, that the *Dutch* Factory have their Residence, which I shall more particularly describe hereafter. To the East of this Island lies the second of these Islands, which is called *Sikokj*, which, in the Language of the Country, implies a Place that is square; which is a good Description of the Island, inasmuch as it is very near a

Square of sixty Leagues. The great Island of *Japan* is separated from both these, by a narrow and a rocky Chanel. This Island, which the Natives call *Nippon*, extends from East to West 260 Leagues, and is in Breadth, from North to South, from 60 to 100.

These three Islands make up what may be properly styled the Empire of *Japan*. They extend from 31° to 42° North Latitude, and from 157° to 175° Longitude, placing the first Meridian in the Island of *Fero*. On the North of *Japan* lies the Land of *Yesso*, and Part of *Tartary*, *China*, and *Corea*, on the West; *California*, and the rest of *America*, on the East; the *Philippines* on the South-east; and the Sea of *China* on the South. The common Opinion, that it is equal to *Great Britain*, may be pretty near the Truth in one Sense, though not in another; and it is requisite to distinguish these Senses. The whole Empire of *Japan*, to speak strictly, all the three Islands, are pretty near the Size of the *British* Islands, that is to say, with *Ireland* included; and the Island of *Japan*, distinctly considered, is somewhat bigger than *Great Britain*, strictly taken, without any of its adjacent Islands. As to the Countries dependent on *Japan*, they are, besides the adjacent Islands, many of which are very rich and well cultivated, 1. The Islands of *Rinku*, which belong to a Prince who is subject to the Emperor, and so are reputed to belong to *Japan*. 2. *Yosfu*, which is Part of the Peninsula of *Corea*, and belongs likewise to one of the Princes of this Empire. 3. The Island of *Yesso*, making Part of the Dominions of a third tributary Prince. This Island, however, is to be distinguished from the Land of *Yesso*, which lies still farther North; and, whether it be Island or Continent, I cannot take upon me to determine.

2. *What are the Commodities or Manufactures of this Empire, that make its Commerce so valuable?* The Commodities of *Japan* are fewer than one would imagine, considering that it is an fertile a Country, and the People as industrious, as any in the World. The Reason of this is, because they chuse to deal with Strangers for ready Money, that is to say, for Silver, which is at once a Commodity, and the Measure of all Commodities here. They have great Quantities of Gold, but the Exportation of it is forbid, under the severest Penalties. Sulphur also abounds in this Country to a prodigious degree, so that vast Quantities are annually disposed of, without any Danger of exhausting their Stock. But the grand Commodity in point of Value, next to Silver, is Copper, of which they have likewise prodigious Quantities, which, at the same time, is by much the finest in the World; they formerly sold it with a great Mixture of Gold, but they have now found a Way to extract that; yet their Copper remains still in very high and just Repute. They have very fine Pearls, and great Quantities of Mother-of-pearl, which they do not much esteem. Ambergris, and other rich Drugs, are likewise to be met with; there is also very fine Silk of several sorts, which they sell very reasonably; though, at the same time, they purchase *China* Silk, which is not so good as their own; but, in all Probability, this is with a View to some Manufacture, for which it is more proper.

All sorts of Cabinet-work, and Lacker'd-ware, they make in the utmost Perfection, and export vast Quantities of it; as they do likewise of their Porcelain, or Earthen-ware. This was formerly much finer, and much stronger, than it is now made; and therefore the old *Japan* Ware is very valuable, even in the Country. I will give you an Instance of the *Japanese* Sagacity on this Subject. The *Dutch* were very inquisitive into the Cause of it; and were answered, *That they put more of Mens Bones into it formerly than they did at present*; by which they gave them to understand, that it was formerly made with greater Care and Labour than at this Day; which has, however, been so far mistaken, as to create an Opinion among idle People at *Batavia*, that human Bones enter into the Composition of their Earthen-ware. I ought to add, to this List of the Commodities and Manufactures of *Japan*, their Tea, which some esteem much better than that of *China*, which is, however, only true upon the Spot; for, as its Flower is more delicate,

so it is sooner lost when the Herb comes to be transported; and therefore, however some sorts of *Japan* Tea may be valued in the *Indies*, we never can expect to see them in equal Perfection here in *Europe*.

III. *How is the Commerce of Japan carried on among themselves? and what foreign Commerce had they, before this Country was discovered by the Inhabitants of Europe?* It is extremely difficult to say any thing on this Head worthy your Notice, and at the same time to say it with Certainty; but, as I am well aware of the Contradictions you have met with in many Books upon this Subject, I will endeavour to shew you the Source of them in few Words: In all that has been written upon this Head, it is on the one hand asserted, that the *Japanese* have a great Contempt for Trade and Tradesmen; and on the other, that no Nation in the World has such wise Regulations in respect to Commerce, as are to be found amongst them. To reconcile this Contradiction, I must observe to you, that the single Maxim on which the Government in *Japan* proceeds, is this, that Commerce is a Proof either of Poverty, or of Covetousness; and that the greatest Happiness a Nation can possess is, to have all within themselves. In regard to the Empire of *Japan*, this is strictly true: They derive from the Bounty of Providence, and from their own Industry, not only all the Necessaries, but also all the Conveniences, all the Elegancies, of Life; and therefore they are absolutely content, I mean, such as have the Administration of the Government are content, with what they possess.

This appears, by their neither sending or receiving Embassadors in the manner that other Nations do; and tho' formerly the Government so far complied with the Desires of such as were of a mercantile Genius, as to permit them to trade in certain Countries, under abundance of Restrictions, yet they have since thought fit to revoke these Licences, and their Subjects now carry on no foreign Trade at all, at least with the Permission of the Government. As to their inland Commerce, it is, and always was, very great; but they have so strong a Notion, that Buying and Selling corrupt the Morals of Men, incline them to Fraud, to Covetousness, and, above all, to Lying, that they have not only the severest Laws for punishing these Vices, but have likewise contrived some very singular Methods for preventing them; particularly these:

In the first Place, to prevent any Deceit in measuring, there is a Steel-yard fixed at the End of every Street, by which all Commodities are measured; and it is the same with regard to Weight and liquid Measures, none, but those authorized by the Government, can be used. They have public Fairs, at certain Seasons in the Year, in all the great Cities, to which Merchants bring their Goods, in such Proportions as they are enjoined by Law; and these are sold, not by the Merchants themselves, but by Officers appointed by the State, to the best Bidder: Yet this is not managed by Auction, from an Apprehension, that this might create Jealousies and Hatred among such as bid against each other; to prevent which, every Man writes in a little Note what he is willing to give, and his Name. The Officer, having collected these Notes, which are all sealed, opens them; and, having declared the highest Bidder, delivers him the Goods, and burns all the Notes. In case of any notorious Fraud, they not only condemn the Parties that are guilty, but their whole Families, and even their Neighbours; which puts every Man so much upon his Guard, that there are very few Instances of Deceit happening throughout this extensive Empire.

It is not the Government only, but every private Man, that coins Money; but he must carry it to the Master of the Mint, who sees that it is fine, and of its proper Weight; which he attests by his Stamp: But, if it wants half a Grain, he cuts it in two, and returns it to the Owner. As for large Sums, they are paid in Purfes, containing about 100 Cupangs, which are carried likewise to the Officer of the Mint, who tells and weighs the Pieces, and then claps his Seal upon the Purse, with a Character importing the Value contained therein. This once done, the Purse passes from Hand to Hand for twenty Years; or, so long as the Impression remains fair, nobody disputes its Value. As to the foreign Commerce, of old it

was only with their Neighbours the *Chinese*; and I shall have Occasion to explain it to you hereafter. At present, I hope, I have satisfied you as to this Question.

IV. *Why are all Nations prohibited from trading here, except the Dutch and the Chinese?* This does not proceed, as is generally imagined, from any Prejudice against other Nations, or from any Prepossession in favour of the *Chinese* or *Dutch*, but from Reasons that I shall lay before you as succinctly as I can. The *Japanese* do not seek foreign Commerce at all; but, on the other hand, it is a Maxim of their Policy not to refuse it to any Nation, provided they find their Goods in their own Vessels to *Japan*, and submit to the Regulations, which, for its own Security, the State has established. Their Commerce with the *Chinese* is so old, that it is beyond Memory; and I shall shew you hereafter, that nothing has been able to bring them to prohibit it.

The *Portuguese* came thither about the Middle of the sixteenth Century, and were received with all the Kindness and Civility consistent with the Constitution of the Empire, and the Genius of the Nation. Some time after, the *Spaniards* from *Mexico* found their Way thither, as the *English* likewise did, after they settled in the *East Indies*. It was owing to the Intrigues of the Priests, who put their Converts upon Conspiracies, Seditions, and Rebellions, that Christians in general were forbidden to trade to *Japan*; and as the *Dutch* had not intermeddled in any sort with these Disturbances, they were permitted to carry on their Trade under the ancient Regulations. This Prohibition happened in the Year 1636, and was entirely owing to the Bigotry and ill Management of the Clergy, who brought an Odium on Christianity, that will hardly ever be effaced. Yet, after all, I must own, that, in my Opinion, the Patience and Perseverance of the *Chinese* and *Dutch* are the best Reasons that can be assigned for their maintaining themselves in this Commerce, from which other Nations are excluded, not because they are hated by the *Japanese*, but because they are incapable of submitting to those severe Rules, which are now imposed upon Strangers, many of which took Rise from that unfortunate Extirpation of the Christian Religion in *Japan*. It is no less true, that the *Dutch* themselves, though not excluded from Trade, were nevertheless extremely hurt by that Accident, since they were removed from the Settlement they had first obtained, and where they were much easier than they are at present; which shews you, that it was not their Interest to procure the Banishment of other Nations, since, instead of turning to their Advantage, it has done them inexpressible Mischief.

V. *In what State are the Chinese in Japan, and what Commerce do they carry on?* As the *Chinese* are by far the most docile and tractable People in the World, they are, without Question, the fittest to deal with the *Japanese*; because, whatever new Regulations are made, whatever fresh Hardships are laid upon them, they submit without repining, and appear content, let their Usage be what it will. In ancient times the *Japanese* had a great Trade with *China*, in which a Multitude of People were employed; but, in one of the *Chinese* Sea-ports, where a few *Japanese* were settled, the Natives having practised a little of that Fraud, which is inseparable from the *Chinese*, these Strangers applied themselves to the Magistrates for Redress; but, finding none, they redressed themselves, by sacking the Town. As soon as the Emperor of *China* was informed of this, and that, tho' the Place was very populous, it had been destroyed by a very Handful of *Japanese*, he resolved at once to be rid of these People, and erected where the City had stood a Column of Marble, on which the Edict of Banishment was engraven, threatening at the same time Death to any *Japanese*, who should dare to land in his Dominions; forbidding at the same time all his Subjects to carry on any Trade with these Islanders; which Prohibition remains in Force to this Day; and the *Chinese* always declare at home, that they are bound to forego other Market, when they fit out their Junks for *Japan*.

Yet the *Japanese* never prohibited Trade with *China*; but suffered them to come freely into their Country, as they did before; so that the Difficulties the *Chinese* now labour

under are not the Effects of their own, but of the Christians ill Conduct. They are tied down to trade to one single Port, which is that of *Langi Sakie*, in the Latitude of $36^{\circ} 6'$ North, and in the Longitude of 151° . They have, during their Stay, an Island assigned them, as well as the *Dutch*, and are subjected to many other Rules. They sail from *Canton* about the first of May, and, having always a fair Wind, they arrive at the Coast of *Japan* before the End of the Month. They dare not approach the Shore nearer than three Leagues, where they wait the coming of the Custom-house Officers on board, to whom they make the strictest Declaration that can be of their Strength and Cargo: After which, a *Japanese* Pilot takes Charge of the Ship, and carries her into Port, where all the Goods are immediately lent on shore into the public Warehouses. The *Japanese* Officers meet, and fix a Day for the Sale of their Goods, of which they give a public Notice through the Country; but make no mention of the Matter to the *Chinese*, who have indeed little or nothing to do with the Affair. During this Sale, the *Japanese* Merchants bring the Officers Notes of the Goods they want, and the Money they are content to give. The highest Bidder has the Preference; and, before the Goods are delivered, his Note is shewn to the *Chinese*, to whom they belong; who never scruples the Price, be it what it will. Thus the Sale is quickly over; the *Japanese* have the Goods, and the *Chinese* their Money; but not quite so easily as may be expected: For tho' the Officers receive all in Cash, yet they pay them above 60 per Cent. in Goods, and these too of their own chusing, which are generally Copper, and three or four sorts of dried Fish. The rest they have in Money, which they lay out in Porcelain, Pearls, fine Steel, wrought Copper, and a kind of Camphire, which is much esteemed in *China*. Generally speaking, the *Chinese* Merchant leaves his Money in the Officer's Hands; and, having purchased what Goods he wants, draws on him, payable at Sight. There is nothing paid to the Emperor by way of Custom; the only Duty he imposes is a Right of Pre-emption, which extends to a few fine Goods: Yet there is something equivalent to a Duty in *Japan*; for, as the Officers furnish the Magazines, they are paid for them at a very high Rate; which is equivalent to an Inport.

Of late Years, there have been great Alterations made with respect to their Commerce: They are, in the first place, limited to seventy Junks; and there must not be above thirty Men employed in each. The Quantity of Goods likewise is fixed, which they must not exceed, and which is reported to be double what they allow to the *Dutch*. Their Quality also is prescribed, and even the Price fixed. They are obliged to depart as soon as their Sale is over; and none of them are allowed to remain, as the *Dutch* do, in *Japan*. In some respects, indeed, they seem to be better treated; but then they only seem to be so: For instance, they are allowed to buy Provisions, and to deal with whom they please; whereas the *Dutch* have no sort of Correspondence, but with those who are appointed to furnish them with Necessaries. This arises from their Apprehension of the *Dutch* on one Side, and from their absolute Contempt of the *Chinese* on the other; which appears by the Officers Behaviour towards both Nations. Such as transact Affairs with the *Dutch*, behave to them with the utmost Civility; but those that have to do with the *Chinese*, use them like Slaves; and, if ever they offer to complain, answer them with their Canes. All this, however, they endure, because their Profit is large; for, in the first place, the Price fixed on their Goods is much above their Value, and, in the next, they gain extravagantly upon some of the Goods they purchase in the Country, tho' by others they lose.

They leave *Japan* about *October* 10. in order to return to *Canton* in the first Week of *November*, that they may be there before the Ships sail for *Europe*, since otherwise the best Part of the Profit of the Voyage is lost, because most of their Cargo lies, in that Case, upon their Hands a full Year. Thus you see what a mighty Advantage the Merchants in the *East Indies* derive from the Trade-winds, which carry them to *Japan* at the proper Season, and bring them back at the proper Season like-

wife. According to the best Computations that can be made at *Batavia*, the *Chinese* gain annually by the Trade of *Japan* eleven Million of Guilders, which make one Million Sterling. This, I hope, you will consider as a full Answer to your Question, tho' it is certain I might have insisted upon many other Particulars; but, as I conceive you aim chiefly at a Comparison between the Commerce of the *Chinese* and of the *Dutch*, I have insisted only on such Circumstances, as were necessary for that Purpose.

VI. *What is the true Name, Extent, Situation, and Produce of the Island, in which the Dutch have their Factory? and in what manner do they live there?* The *Dutch* were formerly settled in the Island of *Piranda*; and the Island in which they are now settled, is properly called *Desima*. It is, strictly speaking, an artificial Island, which was raised on purpose to confine the *Portuguese* in the Year 1635. This is generally reported to have been drawn upon them by the Intrigues of the *Dutch*; and, if the Fact be true, they have suffered very justly for their Contrivance. This Island is a kind of Oblong, joined to the City of *Nangasacki*, which is situated in the Latitude of 33° North, by a stone Bridge, with a wooden Draw-ledge at the End. Where the Bridge joins the City, there is a strong *Corps de Guard*, where a considerable Number of Men are posted Night and Day. At the Entrance from the Bridge there is a large stone Pillar, upon which hang, in several Fables, the Emperor's Edicts for the Regulation of the *Dutch* Trade; and three high Posts are set up in the Sea, to mark the Places where the *Dutch* Ships are to anchor, to prevent their coming near the City. The Island is palisaded round, like a Park, and those Palisades spiked. It is not, in its greatest Extent, above 240 Paces in Length, and not above eighty broad. There is a Street across it, with Houses, or rather Huts, on both Sides, the lower Story of which serves for a Warehouse; and the upper for the Lodging-rooms of such as reside there.

There is, in this little Spot, a very convenient House for the *Chinese* Director of Trade, who comes thither when the Ships arrive; besides another handsome House for the *Japanese* Magistrate, who always resides there, which has likewise its Garden: For it is to be observed, that, in all their great Cities, the *Japanese* have a particular Magistrate in every Street, who is called the *Otona*; and they look upon the Island of *Desima* as nothing more than a Street added to their City of *Nangasacki*; and therefore there is an *Otona* here, as well as in other Streets. Another Proof that this belongs absolutely to the Natives, and is not at all conveyed to the *Dutch*, is, that these last are obliged to pay a very high Rent for their little wooden Houses to those who were originally at the Charge of building them, when the *Portuguese* were sent thither. By this Account of the Island, you will easily perceive, that it produces little or nothing, and that there is no Room to plant any thing in, if they were permitted to do it by the *Japanese*, which they are not, but are furnished from Day to Day with all the Necessaries of Life at a very high Price, and by such only as have this Monopoly put into their Hands by the Governor.

The *Dutch*, resident in this Island, seldom exceed the Number of forty-five; and the *Japanese* oblige them to change their Chief every Year, although, after he has been absent two Years, the same Person may be sent again; so that commonly there are three Persons, who have this Post by way of Rotation; viz. one resident in the Island, another on the Road, and a third repoling at *Batavia*, till his two Years are expired. On the Whole therefore, tho' the *Dutch* have taken all the Pains they can to make this Place as convenient as possible, yet, in spite of all their Care, it is a very indifferent Abode, and very little resembles any of their other Settlements in the *East Indies*. They are also much restrained in their adding any thing either to their Houses, Magazines, or little Wharfs for landing their Goods, since they cannot build, or make the least Alteration, without first delivering a Petition, with a Plan annexed, to the *Otona*, by whom it is transmitted to the Governor; so that it is sometimes a full Year before they can obtain this Permission; and even then there is an Inspector appointed to see, that in nothing

nothing they exceed their original Plan: Yet, if they really had any kind of Fort on this Island, it would not put them out of the Power of the *Japonefe*, who are a very warlike and powerful People, and who, on the least Appearance of Force, would not fail, first to prohibit all Commerce with the *Dutch*, and next employ the whole Strength of their Empire to drive them out of their Factory.

VII. *What are the Restrictions the Dutch usually labour under here in the carrying on of their Commerce?* In the first place, they are forbidden to send any Ships hither, that have any Figures whatever at their Sterns, because the *Japonefe* consider these as Insults on their Religion, some of these Figures having accidentally resembled their Idols. They are restrained from sending Goods beyond the Value of 380,000 Taels or *Tayales per Annum*. As soon as their Ships arrive, they fall immediately under the Power of the *Japonefe*, who take all their Cannon, Small-arms, Sails, Cordage, and spare Anchors, into their Possession. The Crews of these Ships are confined to the Island, as well as the People of the Factory, unless they have a Licence granted them to go into the City; and even this is restrained to four at a time. The Prices of their Goods are set by the *Japonefe* Directors of Trade, as are likewise the Prices of the Goods they take in Exchange; and Sales are made when and how they please.

It is true, they are allowed to send the Chief of their Factory, with two or three Attendants, to *Jeddo*, to pay their Respects to the Emperor; but, in their Journey, they always travel under the Escort of a *Japonefe* Guard, who will not suffer them to make any Excursions into the Country by the Way, or to visit any great Lords or Princes. They are under the same, or greater, Restraints during the short Stay they make at *Jeddo*, where they have little other Business, than to deliver their Presents to the Emperor, and to particular Princes and Grandees of his Court; to renew the Treaty of Commerce, which, being a Thing of Form, is speedily dispatched; and then they are ordered to return, having a Guard about them while they remain there, and another to escort them back. After their Sales are over at their Factory, and the Wind is fair for their Return home, they have their Cannon, Small-arms, Sails, Anchors, and Rigging, restored to them, and are directed to depart without Delay; with which they are obliged to comply. It is to be observed, that most of these Restrictions have been but lately imposed, that is to say, within these last fifty Years, since the great Troubles in *Japan*, wherein 400,000 Christians lost their Lives, and the Empire ran the utmost Hazard of being overturned; which is the true Cause why the *Japonefe* have Strangers, and the Religion of Strangers, in such Abhorrence; for, before that time, the *Dutch* had great Privileges, and were in high Credit; whereas now they are exposed to new Hardships every Day, which they know not how to avoid, and to which they find it very difficult to submit.

VIII. *What Number of Ships are employed in this Trade? of what Force? when do they sail from Batavia? at what Time do they return? and what are the computed Profits of the Voyage?* The *Dutch* send annually four Ships from *Batavia* to *Japan*, of between thirty and fifty Pieces of Cannon; but they are indifferently armed, for two Reasons: First, because there is little or no Danger in these Seas; and, secondly, that they may give the less Suspicion to the *Japonefe*, who do not care to see Ships of great Force upon their Coast. These Vessels are laden with such *European* and *Indian* Goods, as are in Demand at *Japan*; such as *English* and *Dutch* Cloths, Camblets of all sorts, Brocades Gold and Silver, very rich Silks of all Colours, and especially crimson, and white raw Silk, raw Cotton, and spun Cotton, Paperies, Lead, Steel, and Sublimated Sugars of all sorts, Spices of all kinds, *Morocco* Leather, and all sorts of Skins, particularly Buck and Doe, of which they carry a prodigious Quantity, and about half the Quantity of Ox-hides. They sail with this Cargo about *June 20*, and the first Land they make is usually the Island of *Polimon*, which is in the Latitude of 2° 50' North. There they take in Water, and other Refreshments; and then continue their Voyage to *Japan*,

where they generally arrive in the Beginning of *August*, and find every thing ready prepared for them; so that their Goods are quickly got on shore, and brought into their Warehouses, fortified, and fitted for Sale. The Merchants likewise are summoned from the adjacent Countries, and have Catalogues given them of the Goods brought by the last Fleet; so that every thing is over by the latter End of *October*, and the Ships are ready to sail very early in the next Month, when the *Japonefe* never fail to press them to be gone. Of all the Restrictions that Trade labours under at present, the *Dutch* are made most uneasy by their having their Quantity of Goods limited; and of this therefore they complained bitterly to the Officers, and at last to the Emperor himself.

The *Japonefe* treated them, on this Occasion, with great Address: They told them plainly, that they knew and understood the thing to be an Hardship; and at the same time insinuated, that it did not proceed from any Disaffection of, or Disrespect to, the *Dutch*, but was done purely to justify the same Restraint on the *Chinese*, the Number of whose Junks increased every Year; and as there were frequently *Tartars* amongst them, they could not help suspecting, that they might have some worse Design than getting Money by Trade; but, for fear of bringing that Evil upon themselves, which they were labouring to avoid, they thought it necessary to lay this Restraint on the *Dutch*, as well as the *Chinese*, that the latter might have the less Reason to complain. They promised likewise, that this Regulation should be very tenderly executed, so as to give the *Dutch* very little Trouble; in which respect, it is said, the *Japonefe* have been as good as their Words, as indeed they are in every thing; for, abating their particular Customs, and the Warmth with which they are attached to them, there is, perhaps, no Nation in the World more just, more reasonable, or even more civil to Strangers.

The *Dutch* took Advantage of this Stroke of Policy at *Japan*, to make a new Order for the Regulation of their own Affairs; and a very wise one it was. They are very sensible, that People do not settle in the *Indies* to make Observations in Natural History, but to acquire Fortunes; that Men submit to the Hardships they endure, for the sake of purchasing future Ease; and that the Navigation in the Seas of *Japan* is so perilous, that it is but reasonable, even the Seamen should find an extraordinary Account in it. Upon these Motives they have thus settled the Commerce of *Japan*: Goods to the Value of three hundred thousand Taels are sent on the Company's Account, and the other eighty thousand is allowed in private Trade, in the following Proportion; *viz.* Forty thousand Taels on the Account of the Government; General and Council at *Batavia*; ten thousand on the Account of the new Chief, who goes on board the Fleet; eight thousand on the Account of the Chief who is to come Home; and twenty-two thousand for the Officers and Seamen; so that every Captain has eleven hundred Taels on his own Account, and every Seaman twenty. If any of these People have not Money to furnish their Share of the Cargo, it is either advanced on their Wages, or they are allowed to dispose of their Right to some one richer than themselves. Thus every Man is interested in the Branch of Trade in which he is employed, and finds his private Account in the punctual Discharge of his Duty.

In their Return, they touch again, towards the End of the Month of *December*, at the before-mentioned Island of *Polimon*, where all the Gold is put on board one Ship, that sails immediately for *Batavia*; but the rest continue their Voyage to *Malacca*, where an Assortment is made out of the Goods they bring home for the several Markets of the *Indies*. It is allowed, that the Commerce of *Japan* is very much sunk, in point of Profit, to what it was; and it is likewise true, that great Losses are frequently sustained therein; but, after all, it is still very considerable; so that, on the best Computation that can be made, it produces annually to the Company better than five Million of Guilders, or half a Million Sterling, exclusive of the great Advantages that result from the Distribution of the Effects brought from

Japan over all the *Indies*, which may perhaps amount to as much more.

I foresee an Objection, that must naturally arise in your Mind, to this Account, grounded on the settled Report of all Writers on the Affairs of *Japan*; viz. that Gold is a contraband Commodity; which is true, and of late Years so is Silver also, and Persons are severely punished, who attempt to transport either out of the Country: Yet, as the *Japanese* are a wise People, and know that every thing has its proper Value, so in Consideration that the *Dutch* trade with them on their own Terms in every respect, they grant them Licences, at the Return of every Fleet, for a certain Quantity of Gold, and perhaps are not very exact in seeing that Licence complied with: There is another Thing which I ought to explain, and that is, the Value of the *Tael* or *Tayal*, which, by the way, is both a Weight and a Coin, the Value of which the *Dutch* estimate at three Guilders and an half; and I take it to be very near the *English* Noble, or the Third-part of a Pound Sterling. I must likewise observe, that the Presents sent to the Emperor, and his Ministers, are not comprehended in the Company's Allowance: And I must add to this, that the *Japanese* Courtiers have a very singular Custom, which is, that they never accept a Present from a Man they don't intend to serve; nor will they receive them at all, if above the usual Value, from an Apprehension that something extraordinary may be expected. They are likewise very candid and open, love to be dealt with freely, and condemn the *Chinese* as a fraudulent deceitful People, whom, therefore, they use with the utmost Indignity; whereas, if an *European* does nothing to forfeit his Honour, he is sure of being treated amongst them with the utmost Friendship and Esteem; but he is not to expect, that they should enter with him into any Secrets of their Government, for that is a Subject on which they are remarkably reserved.

IX. How comes it to pass, that the *Dutch*, who assume so despotic a Power throughout the East *Indies*, submit to such slavish Restrictions as are put on them by the *Japanese*? and, particularly, how comes it that they deny their being *Christians*? I must confess this Question a little surprises me; because I very little imagined, that one, who so judiciously distinguished the Errors and Confusions into which Voyage-writers too frequently fall, should himself follow them in a Mistake like this. The *Dutch* do, in *Japan*, what every Man ought to do who resides in a foreign Country; that is to say, they submit to the Laws, and, as far as they are able, avoid giving Offence. In other Countries of the *Indies*, they live as their Circumstances permit; that is, they are Masters in some, Subjects in others, and Strangers and Sojourners in the rest. As to their Conduct in *Japan*, it is far from bringing upon them any Discredit; they never sought, either under Pretence of Trade or Religion, to return Evil for Good, or to disturb those, from whom they received Protection. The *Portuguese* were, in some measure, in Possession of the Trade when they had first Access to *Japan*; and if the *Dutch* procured Leave to share in that Commerce, it was certainly what they had a Right to ask, and the Emperor of *Japan* to give: Yet it was not without much Difficulty, and all imaginable Opposition from the *Portuguese*, that they procured it.

As to the Hardships and Restrictions under which they labour, they are partly old, partly new: As to the old ones, they arose from the Constitution of the Empire, which no Strangers had a Right to alter. That the *Dutch* submitted to these, could give no just Grounds for Reproach; because the *Portuguese*, who were as jealous of their Honour, as any Nation, had submitted to them before, without incurring any Reflection. As to the new Restrictions, they arose from the Seditions and Rebellions of the *Japanese* Papists, with which the *Dutch* had nothing to do; and if they suffer for the Precautions, that the bad Conduct of these Converts rendered necessary, it ought to be esteemed rather their Misfortune, than their Fault, that they have been obliged to submit to Hardships they did not deserve to have imposed upon them: Yet, to shew you, that the *Dutch* have done nothing more in this than other Nations would do, I must observe to you, that all

NUMB. 21.

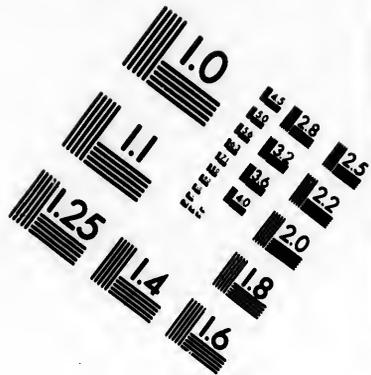

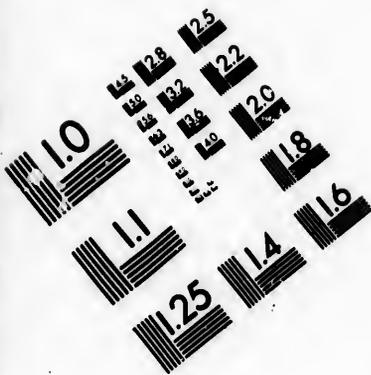

the Nations, excluded by the Edict against the *Christians*, have solicited to be restored, and to trade upon the same Terms with the *Dutch*: And it is to their want of Success in this Application, that you ought to attribute the Reflections you have heard, on the Meanness and Pusillanimity of the *Dutch*, in bearing with the *Japanese* Impositions. As to the common Imputation of their denying themselves to be *Christians*, I flatter myself, that I shall be able to shew you the Folly of it. The *Japanese* are much too wise a Nation to give any Credit to such an Assertion, if the *Dutch* had been wicked enough to have attempted to impose on them by it. The Truth of the Matter is this: The *Dutch*, at the Time of the Persecution, declared, that their Intention in coming to *Japan* was purely for the sake of Trade; and that they did not pretend to trouble the Peace of the Empire, as the *Portuguese* had done: They farther allege, and certainly with Truth, that their Religion differed in many respects from that of the Papists. Now I cannot see, what there is blameable in such a Conduct; and, on the Whole, you will find, that, instead of denying themselves to be *Christians*, they only avowed themselves Protestants. As a Proof of this, give me Leave to put you in mind of the Instructions given by *Lewis XIV.* to the *Sieur Francis Carron*, when he intended to have sent him on an Embassy to the Emperor of *Japan*; wherein he directs him to assure that Monarch, that, though his most Christian Majesty was of the same Communion with the *Portuguese*, yet many of his Subjects were not, but of the same Religion with the *Hollanders*; and that, if his Imperial Majesty would admit the *French* to trade in his Dominions, he would take care that Trade should be managed by such of his Subjects as were of that Religion.

This I think so full an Answer, in every respect, to your Question, that, I hope, it will intirely cure you of your Prejudice in that respect, and bring you to acknowledge there is nothing, either of Wickedness or Blasphemy, in their avowing they trade with the *Japanese* as *Hollanders*, without drawing Religion at all into the Question: After all, the *Dutch* certainly found their Account, and, perhaps, always will, in their Commerce to *Japan*, notwithstanding the new Restrictions; though I think it very doubtful, whether any other Nation would or not; and for this plain Reason: The greatest Part of the Cargoes they send to *Japan*, are the Produce of their own Dominions in the *East Indies*; as, on the other hand, the principal Markets to which they carry the Commodities of *Japan*, are likewise within their own Dominions, or at least Places where they have Factories. Thus, I hope, I have fully answered all your Queries, and set the Nature of the *Dutch* Commerce, in this Country, in a true Light. It would have been much easier for me to have written a Volume upon this Subject, than to have confined myself within so narrow a Compass; but I find you are no great Friend to voluminous Writings, neither indeed am I. Your Questions are certainly very plain, and very pertinent, expressing fully, though in few Words, what it is you want to know. If my Answers shall be so happy as to appear satisfactory to you, and supply that Knowledge which you have sought for elsewhere in vain, they will make ample Amends for the Pains they have cost me. At all Events, I am confident you will esteem them, as the Marks of that sincere Friendship which their Author has for you; and will therefore pardon whatever Mistakes your Penetration may discover.

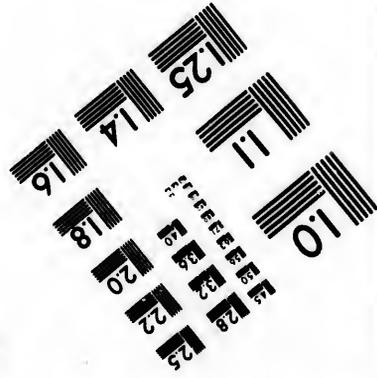

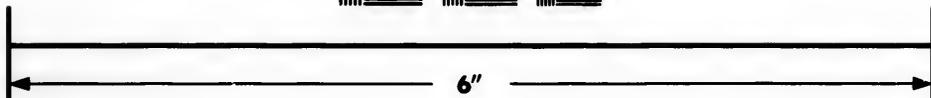

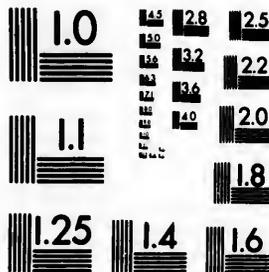

36. The *East India* Company have established three Factories; the Heads of which have the Title of Residents, who correspond directly with the Governor-General of *Batavia*, and are not dependent on any Governor or Director whatever, as other Factors, who have the Title of Residents, are. The first of these independent Residents is fixed at *Cberibon*, on the Coast of *Java*, at the Distance of forty Leagues from *Batavia*, where the Company carries on a very advantageous Commerce in Coffee, Cardamoms, Indico, Cotton, &c. The Land is as fertile in Rice, and other Provisions, as perhaps any Country in the World. It is of considerable Extent, and the People who inhabit it are under the Dominion of four great Lords, who were formerly styled *Pangerans*; i. e. Princes; but are now styled

Sultans,

Sultans, *i. e.* Kings, though their Authority is not much extended in consequence of their new Titles. There is one of them who is particularly called the *Company's Sultan*, because he is always attached to the *Dutch* Interest. To say the Truth, they might be all four very properly called the *Company's Sultans*, since they are under her Protection; and are delivered from all Apprehensions from the King of *Bantam*; who was heretofore continually at War with them, and had undoubtedly reduced them under his Subjection, if the *Company* had not assisted them, and driven the *Bantamse* out of their Territories. These Princes have, since that time, as well out of Gratitude for Favours past, as in Expectation of constant Protection for the Time to come, granted the *Company* great Privileges in their Dominions; amongst the rest, that of erecting a Fort at *Ceribon*, where they have a Garrison of sixty Men, as well as a Factory, very well situated, and in perfect good Order.

About half a League from this Fort are the Tombs of the Princes of *Ceribon*, in a vast Temple, erected probably for that Purpose: They are three Stories high, and are built of various Kinds of fine Stones. It is said, that these Tombs contain immense Riches, which, though left unguarded, the Princes are in no Apprehension should be carried away, from a Persuasion, that they are protected in some supernatural Way; and they report many Instances of Persons who have dropped down dead on approaching the Places, where those Riches are hid, with a thievish Intent. There are many People who believe, that the *Javanese* Priests, who are *Mohammadians*, have a Power of causing sudden Death by their Incantations: Our Author intimates some Doubt of this, and yet tells us some very odd Stories, of his own Knowledge; such as, that these Priests are able to enchant Crocodiles and Serpents, making the former go in and out of the Water at their Pleasure; and the latter remain in what Posture they please. If this was really the Effect of any supernatural Power, and not produced by some natural Cause, concealed by the Priests from the People, one would think they might have delivered their Princes from the *Bantamse*, without leaving them to seek Assistance from the *Company*: However that be, here are a Multitude of these Priests maintained about this Temple, many of whom have gone in Pilgrimage to *Mesba*, for which Reason they have much Respect paid them. The whole Body of this Priesthood is governed by one sovereign Pontiff, who is more revered than the Sultans themselves. Our Author tells us, that there was formerly a very considerable *English* Factory at *Ceribon*, with a little Town belonging to it; but that the Persons belonging to the Factory intriguing with the Natives Wives, this provoked the People, that, in one Night's time, they massacred them all, and destroyed the Town. It is very probable, if we could come at the Truth of this Story, that they were put upon this cruel Action by some of their Christian Neighbours.

The second Resident has the Direction of the *Company's* Affairs in the Kingdom of *Siam*, and has an Assistant or Book-keeper under him. The *Company* carry on a very considerable Trade here, in Tin, Lead, Elephants Teeth, Gums, Lark, Wool, and other Commodities. The King of *Siam* is a very considerable Prince, and his Territories are near three hundred Leagues in Extent; and, as he is himself much addicted to Commerce, he suffers all Nations to trade freely through his Dominions: Ships, however, of any great Burden, are obliged to come to an Anchor, at the Distance of thirty-six Leagues from his Capital, because the River *Menan*, upon which it stands, is so rapid, that they could not get up without great Difficulty. This River, like the *Nile*, and many others in the *Indies*, overflows its Banks at a certain Season, so that for half the Year the best Part of the Country is under Water; and, for this Reason, the Houles are all built upon Posts.

The Capital of this Country is a very large City, consisting of at least 50,000 Houses; and, as our Author reports, of 30,000 Temples: The People are all *Pagans*, and are famous for a certain Maxim they have, that all Religions are good, provided they tend to the Honour of God. They think, however, their own the best; though, upon

some Occasions; they are ready to own, that the God of the Christians is most powerful, because the Head of their principal Idol has been twice beat to-pieces by Thunder. This Statue is, perhaps, the biggest in the World, and the *Dutch* call it in Derision *The great Blackhead of Siam*. He is represented sitting, with his Legs under him, like a Taylor; in which Position he is seventy Feet high, and every Finger of him as big as a Man: At three Leagues Distance from the Capital there is a Temple, prodigiously large, in which there is an Idol, not quite so tall as the former. The Priests tell the People, that this is the Wife of the other; and that once in seven Years she goes to visit him, or he goes to visit her. They likewise persuaded them, that this enormous Statue, as well as the other, was all of solid Gold; but the last Clap of Thunder that fell upon it, detected this Part of the Cheat, and shewed it to be no more than Brick and Lime, very artificially gilded over.

One may justly wonder, that this did not put an End to the Adoration of so wretched a Deity; but, where Superstition prevails, the plainest Proofs very seldom produce any Effects. It is, however, proper to observe here, that our Author's Account sets us perfectly right as to this Matter, which has been strangely embarrassed by the Account given by the Jesuits, who attended the Embassador sent to the King of *Siam* by *Lewis XIV.* They give us a large Description, both of the Temple and the Idol; but, it seems, they swallowed the Story of the *Javanese* Priests; for, after talking of the prodigious Size of the Statue, and asserting, that one Foot weighed one hundred and twenty-five Pounds, they inform us, with great Astonishment, that this monstrous Idol is all of pure Gold; and then enter into a Computation as to the Value of the God of *Siam*, which they very judiciously fixed at twelve Millions and an half of *French* Money. At the same time they acknowledge, that it is not easy to conceive, how this Mass of Gold was got together, since, at the Time they were there, the *Siamese* were not prodigiously rich: But the Thunder-clap has solved all these Doubts, and shewn us, that there is no Reason to give Credit to the wonderful Stories that are told by *Indian* Priests, to magnify the Power of their Gods, or the Wealth of their Worshipers.

As for this Kingdom of *Siam*, it seems to be a perfect Land of Wonders; for our Author tells us, that they shew there a Gallows of a prodigious Height, made of a Wood as hard as Iron, which they affirmed to be the individual Gallows that *Haman* was hanged upon: And this Story, no doubt, is as true as the former; and the Gallows is much the same with that recorded in the Book of *Ezber*, as the gigantic Idol was pure Gold. I am, however, inclined to believe, that the *Jews* might formerly erect this Gallows in Memory of that of *Haman*; whence the Mistake might arise. The Country of *Siam* is very rich and fruitful, and there is a considerable Trade carried on by the *Chinese*. Our Author justly observes, that the *Dutch* have great Privileges here, and are considered as the most favoured Nation; and he has likewise assigned the true Cause of this, which, he says, was the bad Behaviour of other Strangers, meaning very probably the *English*, who, he says, lost their Credit with the Natives, by their being too familiar with their Women. The Truth of the Matter is, that, since the great Revolution which happened at *Siam*, a little after the Departure of the *French* Embassadors, the *Dutch* grew into Credit with the new King, because the *English* were intrusted with the best Places in the Government, civil and military, by his Predecessor, whom he had murdered. It was not, therefore, consistent with his Policy, to have any great Correspondence with the Nation that he knew was not well affected to his Title: The Favour he shewed the *Dutch*, became a Rule to his Successors, and they have been very much careful ever since. They have a Factory about a Mile below the City of *Siam*, on the Side of the River, which enables them to collect great Quantities of Deer-skins, which are annually sent to *Japan*; and this Commerce, together with that of Tin, of which there is great Abundance, and very fine, in this Kingdom, makes the *Company* take more Pains to oblige the King of *Siam*, than most of their Neighbours. The *Siamese* themselves are much addicted to Trade.

Trade, and the *Chinese* who reside there more; so that they annually send Ships to *Japan*; which, the Difficulty of the Navigation considered, is not a little extraordinary. They boast of having had the Use of the Compaſs above 1000 Years before it was discovered in *Europe*; but the *Jesuits* have observed, and it is true, that the Compaſs with them, as with the *Chinese*, is very imperfect; which, I presume, is owing to the Regularity of the Trade-winds, which renders an accurate Division of the Compaſs leſs neceſſary among them, than with us.

The third Reſidency is fixed at *Mocha*, where the Reſident is always a Merchant, who has under him two Factors or Book-keepers, as Aſſiſtants; but, as they have all the Titles of Reſidents, there have been, of late Years, ſuch Diſputes amongſt them, as prejudiced the *Dutch* Trade exceedingly; and therefore our Author tells us, that they were, in his Time, all three ſent for to *Batavia*, in order to give an Account of their Conduct, and that the Point of Precedency might be better ſettled for the future. This Country is under the Government of an *Arab* Prince, who has the Title of *Immaum*, or King, who resides at a Place 200 Miles Eaſt from *Mocha*. The Sea-port of his Dominions was formerly *Aden*; but, that being very inconvenient, he removed it fifteen Leagues farther to *Mocha*; which was then but a Fiſhing-town. It is ſituated cloſe to the Sea, in a large, dry, ſandy Plain, that affords neither Fruits, nor Water, except what is brackiſh, and ſo unwholſome, that ſuch as are forced to drink it have long Worms bred by it in their Legs and Feet; which are equally troubleſome and dangerous. They are ſupplied, however, with very good and wholſome Water from *Mefa*, which lying at the Diſtance of twenty Miles, and the Water coming by Land-carriage, makes it as dear to the Inhabitants, as Small-beer in *England*. The Town of *Mocha*, notwithstanding this great Inconvenience, is large, indifferently fortified, and makes a fine Appearance from the Sea. The Buildings are lofty, and make a much better Shew without, than within. Their Markets are well furniſhed with Proviſions, ſuch as Beef, Mutton of Sheep and Goats, Lamb and Kid, Camel and Antelope Fleſh, common Fowls, *Guiney* Hens, Partridges, and Pigeons. The Sea affords Variety of Fiſh, but not well-taſted; which proceeds from the extreme Saltness of the Sea-water, and the Nature of their Aliment. The Town is well furniſhed all the Year round with good Fruits, ſuch as Grapes, Peaches, Apricots, and Quinces, of which they make Marmelade, both for their preſent Uſe, and Exportation, tho', near the Town, there is not a Tree or Shrub to be ſeen, but a few Date-trees; and they ſeldom have more than two or three Showers of Rain in a Year, and often no Rain for two or three Years. But, amongſt the Mountains about twenty Miles off, ſeldom a Morning paſſes without a moderate Shower; which makes the Valleys very proliſic in Fruit and Corn, ſuch as the Soil will bear; but they have no Rice, tho' plenty of Barley and Wheat.

Since the *Immaum* made *Mocha* the chief Port of his Dominions, and withal a free Port, it is become a Place of great Trade; for, beſides the *Dutch* Factory, there is one alſo belonging to the *Engliſh Eaſt India* Company; as alſo a Trade from *India* carried on by *Engliſh* free Merchants, *Portugeſe*, *Banyans*, and *Moors*, and by Veſſels from *Baſſora*, *Perſia*, and *Muskat* in *Arabia Petraea*. The Country of itſelf produces very few valuable Commodities, beſides Coffee, and ſome Drugs; ſuch as Myrrh, Olibanum or Frankincenſe from *Coffin*, and *Aloes Soccotrina* from *Socotra*, liquid Storax, white and yellow Arſenic, ſome Gum Arabic, and Mummy, with ſome Balm of *Gilead*, that comes down the *Red-ſea*. The Coffee-trade brings in a continual Supply of Silver and Gold from *Europe*, *Spaniſh* Money, *German* Crowns, and other *European* Coins of Silver; alſo *Zequina*, *German* and *Hungarian* Ducats of *European* Gold; and from *Turkey* *Ubramies* and *Mograbies*: For it is a Point ſettled here, that, notwithstanding other Goods and Merchandize may be bought and ſold on Credit for a certain Time, Coffee is always bought for ready Money. The *Europe* Shipping lade yearly at *Mocha* about 20,000 Tons, rather more than leſs; and the other Nations about 20,000 Tons more. The whole Province of *Belleſaker* is planted with Coffee-trees, which are never ſuffered to grow above four or five Yards high; and the Bean or

Berry grows on the Branches and Twigs, firſt green, then red; at laſt a dark-brown Colour. The Berries cling to the Branches, like ſo many Inſects; and, when they are ripe, they ſhake off.

The *Dutch* have here, as in moſt other Places in the *Indies*, a great Advantage over other Nations, by their being poſſeſſed of the Monopoly of Spices, which are conſumed here in great Quantities, and conſequently enable them to come at Coffee at much eaſier Rates than their Neighbours: Yet this Trade of theirs at *Mocha* is continually ſinking, on account of the vaſt Quantities of Coffee cultivated in their own Colonies, eſpecially at *Batavia*, *Amboyna*, and the Cape of *Good Hope*: Yet the *Dutch* themſelves acknowledge, that there is no Compariſon between the Flavour of the Coffee raiſed in their own Plantations, and that which is brought from *Mocha*. Our Author obſerves, that *Arabia the Happy* is divided into abundance of ſmall Principalities, under the Jurisdiction of independent Princes, ſtiled *Emirs*, by which he means independent of each other; for they all pay a kind of Homage, tho' little or no Obedience, to the Grand Signor. He likewiſe takes notice of a vulgar Error as to the Colour of the *Red-ſea*, which, he aſſures us, is not at all red; but derives that Appellation from ſome Parts of its Bottom being of that Colour. In the next Chapter, however, we ſhall ſhew, that this is a Miſtake likewiſe; and that the Reaſon of this Name is the bad Verſion of its *Hebrew* Denomination, firſt given into by the *Greeks*, and through them propagated amongſt other Nations. Theſe Reſidents are the laſt Officers in the Direction of the Affairs of the *Eaſt India* Company; and this Account of the Diſtinction of their Factories is ſo much the more valuable, as it affords us a clear Notion of every Branch of their Commerce through the *Indies* at this Day, except in the Iſland of *Borneo*, and in the great Empire of *China*, where they have no Factories; but content themſelves with trading to both Places, as other Nations do: And of the Nature of this Commerce our Author has likewiſe given us an Account, which is far from being the leaſt curious or inſtructive Part of his Work.

37. The Iſland of *Borneo* is, in point of Extent, the largeſt in the *Eaſt Indies*, and perhaps in the World. Some Writers ſay, that it is 600 Leagues in Extent; but the *Dutch* tell us, that it is not quite ſo big. It is divided into abundance of little Principalities, of which the moſt powerful is the King of *Banjaar-Maſſeen*; and, after him, the Princes of *Borneo* and *Sambas*. The Air of *Borneo* is reckoned very unwholſome; which is occaſioned by the Country's being low in ſome Places, and marſhy. The Iſland is but thinly peopled, though it abounds in very rich Commodities. When the *Dutch* firſt ſettled in the *Eaſt Indies*, they were very ſolicitous about eſtabliſhing their Factories in *Borneo*; and accordingly they fixed them at the City of that Name, at *Sambas*, and at *Succadano*; but they ſoon found, that there was no ſuch thing as dealing with the Inhabitants, who are certainly the baſeſt, cruelleſt, and moſt perfidious People in the World. The *Dutch* therefore quitted the Iſland, and, though invited thither ſeveral times ſince, have abſolutely reſuſed to return.

An *Engliſh* Factory, that was, in ſome meaſure, ſettled at *Banjaar-Maſſeen*, under the Direction of one Mr. *Cunningham*, was obliged to withdraw, and at the ſame time glad to eſcape; which has frighted the *Engliſh* away alſo. The Story is very remarkable, and worth the Hearing: It ſeems, the Place fixed on for the Factory was very ſtrange choſen, ſince it lay in the Mouth of a River, where ſome of their Buildings had Beams tied together in the Water for their Foundation; and the very belt of them were built upon Poſts, or rather upon Piles. Theſe Habitations of theirs, ſorry as they were, had not yet attained their utmoſt Perfection, when the Quarrel happened between them and the *Banjaareens*. The Chief, Mr. *Cunningham*, was a very honeſt, worthy Gentleman, bred originally to Phyſic or Surgery, who fell accidentally into Trade, and was now advanced to a Poſt, in which he knew not well how to act. He left therefore the Management of all Things to ſuch as were under him; and theſe happened unluckily to be ſtill leſs capable than himſelf. In ſhort, they began to refrain the Natives in their Trade, before they had a Gun mounted, ſtopping their Boats, and ſearching them; and, amongſt the

reſt

rest, one which was going to the King's Court with a young Lady on board. This incensed the King of *Banjaar* to such a degree, that he ordered 5 or 6000 of his Subjects to attack and destroy the Settlement; of which Mr. *Cunningham* having Notice, he abandoned it the Day before the Night in which the Attack was to be made, retiring with his People on board of four Ships that were accidentally in the River. The *Banjaarans* did not fail attacking these Ships; but were so warmly received, that near 1500 of them were killed in the Action: Notwithstanding which, they burnt the two smallest, and killed several People who were on board them. Mr. *Cunningham*, however, and the rest of the Gentlemen of the Factory, made their Escape on board the other two Ships; but left the best Part of their Effects behind them.

The King afterwards invited the *English* to trade in his Port, but declared he would never suffer them to have another Factory; and there is not now any *European* Settlement in the whole Island. The Commerce of *Borneo* consists in as rich Goods, as any in the *Indies*. At *Sambas*, and *Succadana*, they deal in Diamonds, of which there is a Mine in the Heart of the Country. These Stones are generally from four to twenty-four Carats; and there are some found of thirty and forty Carats; but the whole Trade does not amount to above 600 Carats in a Year. They always sell these Stones for Gold, though that likewise is the Commodity of the Island; and there is a very considerable Trade for Gold-dust carried on at *Pabang*, *Saya*, *Calantan*, *Seribas*, *Catra*, and *Melanouba*. *Bezoar*, of the finest sort, is another Article in their Trade, not at all inferior in its Value to the former. *Japan* Wood, fine Wax, Incense, Mastic, and several other rich Gums, are also met with here; but, after all, the staple Commodity of the Island is Pepper, of which there is as much, and as good, as in any Part of the *Indies*. Our Author mentions another very valuable Drug met with in this Island, which is a Stone he calls the *Porkstone*, valued at so high a Rate, as to be worth no less than three hundred Crowns apiece. The *Indian* Physicians, it seems, are of Opinion, that, by exhibiting to their Patients the Water in which this Stone has been steeped, they can infallibly discover whether they will live or die. It is a Pity he has not given us a further Description of this Curiosity, or told us what his Sentiments are of its Virtues, since Credulity is so common in the East, that there is no taking Facts of this kind upon Trust.

Before the *Portuguese* discovered a Passage to the *Indies* by the Cape of *Good Hope*, the *Chinese* were in Possession of all the Trade of this Island; and, since the *Europeans* have declined settling there, it is, in a great measure, fallen into their Hands again. The Places where they are settled, besides *Banjaar-Masseen*, are *Mampua*, *Teya*, *Lando*, and *Sambos*, where they carry on a great Commerce, and furnish the Inhabitants in Return with Silks, Chintz, Calicoes, and, in short, all the Manufactures of *China* and *Japan*. It has been suggested, and with great Shew of Reason, that a more valuable Trade might be established in this Island of *Borneo*, than in any Part of the *East Indies*, because there arrive here annually large Fleets of *China* Junks, laden with all the Commodities of that Empire, which might be purchased as cheap, or cheaper, than in *China* itself, for Reasons, with which the Reader shall soon be made acquainted. There come likewise annually, from the Island of *Celebes*, small Vessels, which, in spite of the Vigilance of the *Dutch*, bring considerable Quantities of Cloves, Nutmegs, and other Spices; which is the Reason, that the *Dutch* are not able to sell any great Quantities of these Goods in their Traffick with the Inhabitants: Yet they frequently send Ships hither to load with Pepper, and endeavour to keep up a good Correspondence with the Kings of *Borneo* and *Sambas*; for, as to the King of *Banjaar*, he has declined having any thing to do with them.

It is not a little strange, considering the mighty Sway the *Dutch East India* Company have in that Part of the World, that they should have no Factory or Establishment in *China*. They have, indeed, formerly sent Embassadors thither, under Pretence of demanding Leave to trade freely; but that was with a Design only to gain a greater Insight into that Commerce; and, in consequence

of the Discoveries made thereby, they have been led to decline it. While they were possessed of the famous Island of *Formosa*, they carried on a direct Trade to that Empire with great Profit; but, since they were expelled from thence in the Year 1661, they have not been able to make this Trade turn with any great Profit: Yet, since the setting up of the Imperial or *Offend* Company, they have tried to send Ships thither from *Holland* directly; but even this, as our Author informs us, has been to no great Account, their Profit having been seldom larger than twenty-five per Cent. which, considering the Hazard of the Voyage, and other Inconveniencies, was not looked upon as any considerable Return. There have been several Reasons assigned for this, some of which it may be proper to mention. It is, in the first place, very much doubted, whether in any Place, where both Nations are on a Level, the *Dutch* are able to deal with the *Chinese*, who are certainly the cunningest Traders in the World. It is, in the next place, suggested, that the *Chinese* are less inclined to deal with them than other *Europeans*; and, when they do, always hold them to harder Terms. It has been likewise remarked, that the Port-charges, and the Presents they make, strike very deep into their Gains: But these seem to be very superficial Conjectures, and not to reach the Truth in any degree.

But that the *Dutch* do not affect any Settlement in this Empire, may be very well accounted for, from the two following Causes, which are certainly very weighty. The first is, that, being at so great a Distance from *Batavia*, and in a Country where it is easy to consign their Effects to *Portuguese*, *English*, and other foreign Merchants, the Officers mind their own Concerns more than the Company's; of which a convincing Proof has been had, by the *Portuguese* vending their Pepper at a greater Advantage than the *Dutch*, though they bought it at an high Price at *Batavia*. But the second Cause is still more important: There is a prodigious Trade carried on by the *Chinese* to *Batavia*, which, though it is a Voyage of 700 Leagues, the *Chinese* make in their Junks in the Space of six Weeks, sailing from *Canton* in the Beginning of *December*, and arriving in the Middle of *January*. The Company, in the first place, have a Duty of four per Cent. on all the Goods they bring, which are Gold, Silks of all sorts, Tea, Anniseed, Mulk, Rhubarb, Copper, Quicksilver, Vermilion, *China*-ware, &c. for which they receive in Exchange Lead, Tin, Pepper, Incense, Camphire, Cloves, Nutmegs, Amber, and abundance of other Things, on all which the *Dutch* set their own Prices, and consequently buy much cheaper than other Nations can purchase the same Goods in *China*: They have also found by Experience, that a direct Trade between *Holland* and *China* lessens very much this more profitable Commerce at *Batavia*. Neither is it there only that they have an Opportunity of dealing with the *Chinese*, but in many other Parts of the *Indies*, where, when the *Chinese* Merchants have completed their Sales to the Natives, they are very glad to part with the Remainder of their Commodities at a very easy Rate to the *Dutch*. Thus it clearly appears, that the *East India* Company are able to send Home vast Quantities of *China* Goods, without carrying on a direct Trade with that Country, either from *Holland* or *Batavia*.

I cannot say how far Things may be altered since our Author wrote; but this is certainly a very fair, and a very sensible, Account of Matters, as they then stood. Here he finishes his Remarks on the Oeconomy of the *Dutch East India* Company, which is certainly, in all respects, the clearest and best that is hitherto extant, in order to resume the Thread of his Narration, and to prosecute his Voyage Home from *Batavia*, as he was obliged to make it on board one of the Company's Return-ships, pursuant to the Order of the Governor-General and his Council, when Commodore *Roggewein's* Vessels were seized and condemned.

38. There happened nothing remarkable in our Author's Voyage from *Batavia* to the Cape of *Good Hope*, worthy of Observation, except their meeting with a violent Storm in the Height of *Angola*, on the Coast of *Africa*; by which they were very near being driven upon the Rocks which infest that Coast; and had a Sight of the Remains of the *Sonnenberg*, a Ship belonging to the *East India* Company,

which had been wrecked there a little before. They had no sooner Sight of the Cape, than they discovered in the Road abundance of *Englib* and *French*, as well as *Dutch* Ships, some of which were outward, some homeward-bound. Ships enter this Bay on the South-east, and pass out of it to the North-west. A little before you reach its Entrance, appears a small Island, which is called the Island of *Sels*, where the Company have always a Guard posted, composed of a Serjeant, and a small Number of Men: They are employed here in drawing of Whale-oil, and raking Oyster-shells, to make Lime. Into this Island Maf-factors are generally banished from the Cape, and, indeed, from most Parts of the *Indies*; where, besides the Punishment of being thus separated from their Friends, they are put to the hardest Labour, according to the *Dutch* Maxim, That the worst kind of Work is best done by the Idle. As soon as the Serjeant saw what Number of Ships the Fleet consisted of, he hoisted a Flag, and fired as many Pieces of Cannon as there were Ships, to give Notice to the Commander of the Cape.

The Bay is very fine and large, having an oval Form, and entering two or three Leagues within-land, so that it may be in the Whole about nine Leagues in Circuit, and is certainly capable of holding one hundred large Ships very commodiously; yet it must be allowed, that the Anchorage is not every-where alike good; and, near the Shore, there is some Danger. The Middle of this Bay is commanded by a very strong Fort, which is a regular Pentagon, each of its Bastions mounted with twenty Pieces of heavy Cannon. The Fort, and the Town, are both situated on the Edge of a Plain, about three Leagues in Extent, lying at the Bottom of three very high Mountains; the first of these is called the *Lion Mountain*, because it has a great Resemblance to a Lion couching upon his Belly; the next is the *Table Mountain*, which is much higher, and very like a Table, so that in a clear Day it may be seen twenty Leagues off; the third is called the *Devil's Mountain*, and is not so remarkable as either of the former. The Houses of which this Town is composed are very neat and agreeable, but not above two Stories high, because of the furious South-east Winds that sometimes blow here.

The *East India* Company, about 1650. bought from the *Hollants* a certain District of their Country, which they took care should be immediately planted, and well inhabited, for the Conveniency of their Ships outward and homeward-bound. The People who dwell at the Cape, and on the Coast, are for the most part Christians, and are called *Africans*; those who inhabit the Country farther within-land are called Peasants. They are all of them either *Europeans*, or descended from *Europeans*. There are some of them who are settled three hundred Leagues from the Coast; notwithstanding which, they are all obliged, once a Year, to appear at a Place called *Stellenbeek*, where the Drossard, or Magistrate of the Country, resides. The Design of this is, that they may pass in Review; for the Peasants, as well as the Townsmen, are formed into Companies, commanded by proper Officers. After the Review is over, they return to their respective Dwellings, and generally carry home with them such Tools as they have occasion for in their Country-work. These People cultivate their Ground, and sow Rye, Barley, Beans, &c. They likewise plant Vines, which produce very fine Grapes, of which they make excellent Wine. There are some of these Peasants that are in very happy Circumstances, having, besides large and well cultivated Plantations, great Quantities of Sheep and Cattle. Amongst other Colonies, there is one at the Distance of eight Leagues from the Town, which is intirely composed of *French* Refugees, who have there a large Tract of Country, very well cultivated; the Place where they live is called *Drachonstein*, and they are allowed Churches and Ministers of their own Country. Part of the Inhabitants of the Town are in the Service of the Company, and the rest are free Burgesses. They have their proper Magistrates, who decide Causes of small Consequence, and regulate any little Disputes that happen amongst them; but, as to Matters of any Importance, they are carried before the Governor, and his Council, who determine them finally, and without Appeal. It is pretty

NUMB. 21.

much the same thing in the flat Country; where the Drossard terminates all Things of small Consequence; but, whenever there happens any thing of Importance, it is always carried before the Governor, and his Council, by whom it is finally determined; and all their Sentences, in civil and criminal Affairs, are executed without Delay. As for the military Establishment, it is exactly on the same Foot here as at *Batavia*; that is to say, the Officer, who commands in Chief, has the Rank and Pay of a Major; but he does the Duty, in all respects, of a Major-General. The Officers under him are Captains, Lieutenants, and Ensigns, who take care to keep their Companies always complete, and perfectly well disciplined, so that, in case of an Attack, they can draw together at least five thousand Men, well armed, and as good as any regular Troops, every Peasant knowing whither to repair, in order to range himself under his proper Standard.

It is not easy to describe the Adroitness with which these Peasants handle their Fire-arms. It is, indeed, an Exercise in which, from their very Infancy, they are constantly employed; and it is almost incredible, with what Boldness they attack the fiercest Beasts. There are many of them who will not shoot a Lion sleeping, because that, say they, shews neither Skill nor Courage: When therefore they find a Lion asleep, they first throw Stones, and wake him, never offering to fire, till he is upon his Feet. There happened, as our Author tells us, a very singular Accident, upon such an Occasion, a little before his Arrival; which fell out thus: Two Peasants went to hunt together; one of them saw a Lion, which he fired at, but missed him; the Lion immediately flew upon the Man, who, that he might be more at Liberty to defend himself, threw his Gun away; the other Peasant, hearing the Report, made all the Haste he could to the Place, where he found his Countryman and the Lion close engaged: The poor Fellow, in the Zeal of his Heart, caught up the Gun, and, with half a dozen sound Blows on the Lion's Head, laid him dead upon the Spot; the other Peasant, turning his Head, and seeing his Gun broke to-pieces, began to complain very loudly; asked his Companion, why he did not stay till he was called; and talked of making him pay for his Gun, insinuating upon it, that he could have killed the Lion without any Help. This, says our Author, is an Instance of the Intrepidity of these People with regard to wild Beasts; and, no doubt, a notable Instance it is, if our Author was but sure of his Fact. It was formerly, continues he, looked upon as a Wonder, if a Man killed a Lion; but now the thing is so common, that they make no more of killing a Lion, than we do of shooting a Hare.

The Country round about the Town is full of Vineyards and Gardens; the Company have two, which are, perhaps, the finest in the World; the one lies at the Distance of two hundred Paces from the Fort, between the Town and *Table Mountain*. It is about 1400 Paces in Length, and 235 in Breadth; a fine Rivulet from the Mountain runs through the midst of it. It is divided into Quarters, and they cultivate there, with the utmost Success, the Fruits and Flowers of all the four Parts of the World. The other Garden is at the Distance of two Leagues, in that which is called the *New Country*, and is likewise kept in the best Order that can be by the Slaves of the Company, of which there are seldom less than five hundred. The Country hereabouts is mountainous and stony, but the Valleys are very agreeable, and exceedingly fertile. The Climate is the best in the World; for Cold and Heat are never felt here in any intolerable Degree, and the People live to great Ages without Diseases, which are never known, but when produced by Intemperance of some kind or other: The very Mountains, besides contributing to the Whollomeness of the Place, are supposed to be full of Gold, and other valuable Metals: Some Assays have been made, but as yet no Mines have been discovered in such a Situation as would permit the Working of them to Advantage.

The late Mr. *van Steel*, who was Governor of the Cape, travelled the Country, and examined it with great Care and Attention. He caused Gardens to be laid out, and Pleasure-houses to be built, in several Places; but the Peasants, who were employed in building, and cultivating these Gardens,

dens, sent over a Complaint to the Company, alleging, that it was prejudicial to their private Affairs, and put it out of their Power to maintain their Families. Upon this, the Governor was recalled immediately. His Discourses, however, were of very great Consequence; inasmuch as they made known, not only the inner Parts of the Country, but the Nations that inhabit them. These, so far as they are yet discovered, consist of seven different People, all comprehended under the general Name of *Hottentots*. The first of these, and the least considerable, are without a Chief, live in the Neighbourhood of the Cape, and are most of them in the Service of the Company, dwell with Townsmen, or are employed by the Peasants and Farmers, who busy them in cultivating their Lands. The second inhabit the Mountains, or, to speak with greater Propriety, live in the Caverns of the Mountains. They are Thieves and Robbers by Profession, and draw their Subsistence intirely from plundering the peaceable *Hottentots*, with whom they are in continual War. There is one thing, however, that is very singular with respect to this thievish Nation; which is, that they never rob or molest a Christian. The third Nation is called the *Little Macqua*; the fourth the *Great Macqua*; the fifth the *Little Kricqua*; the sixth the *Great Kricqua*. These Words *Macqua* and *Kricqua* signify King or Chief. They are constantly engaged in War with each other; but, when any Nation is in Danger of being totally ruined, two or three Nations immediately join them; for the Balance of Power is a Maxim as well understood and supported by the *Hottentots*, as by the Nations of *Europe*.

Part of these *Hottentots* have submitted themselves to the *Hollanders*, and are therefore stiled the Company's *Hottentots*. The *Dutch* send annually about fifty or sixty Persons to trade with these *Hottentots*, who purchase their Cattle, and give them in Exchange Arrack, Tobacco, Hemp, and such Seeds as they have Occasion for, by which means a good Understanding is preserved. These *Hottentots* of the Company are very often attacked by the other Nations; and, when they find they have so far the worst of it, that they are no longer able to defend themselves by their own proper Force, the King purs himself at the Head of a small Body of Troops, and marches down to the Cape, to demand Assistance. As soon as he arrives there, he goes to the Governor, with the principal People of his Nation, with the commanding Staff in his Hand, which was given him by the Company, and has their Arms upon it; and, holding it out towards the Governor, desires he would grant him Succours. If the Governor does not think fit to grant him his Request, but contents himself with giving him good Words, he, without more ado, throws his Staff at the Governor's Feet, and tells him in bad *Dutch*, *Voor my, niet meer Compagnies* *Hottentot*, that is to say, *for me, I will be no more the Company's* *Hottentot*. The Governor, however, generally sends an Escort of Troops home with him; for it is the Interest of the Company to be upon good Terms with this sort of a Prince, because he is always ready to do for them whatever they desire of him.

These People are certainly very stupid, and very brutal: They rub their Bodies all over with old Grease, which has a very bad Smell; so that you may nose them at a considerable Distance. Their Children are born perfectly white; but, by their being constantly rubbed with Grease, and exposed to the Sun, they grow, by degrees, brown, and almost black. When a Woman is brought-to-bed of Twins, one of them is immediately condemned to Death, and is tied to a Tree, where it continues, till it expires. Some of them have a Custom of taking out one of the Testicles of their Male Children, as soon as they are able to bear it, in hopes that, by this Method, they may prevent, when they come to be married, their begetting Twins; and this is a Custom of which they cannot be broken, notwithstanding Experience shews them, that it is to no manner of purpose. They seem, for the most part, to have but little Religion: Yet they frequently look up with Admiration to the heavenly Bodies, saying, *He that governs them is certainly a Being of infinite Power and Wisdom*. In many respects they are more like Beasts than Men. They are very disagreeable in their Persons, and are, in short, take all things together, (these are our Author's Words) one of the meanest

Nations on the Face of the Earth. Their Complexion is dark, occasioned, as has been before observed, by their rubbing themselves with Grease, and being exposed continually to the Sun, when they are young. They are short, and thick-set; their Noses flat, like those of a *Dutch Dog*; their Lips very thick, and big; their Teeth exceedingly white, but very long, and ill-set, some of them sticking out of their Mouths, like Boars Tusks. Their Hair is black, and curled, like Wool. They are very nimble, and they run with such Speed as is almost incredible. They are generally covered with a Sheep-skin, having each a Quiver of Arrows on his Back, and his Bow in his Hand. As soon as they come within Sight of an Enemy, they set up a most dreadful Cry, leaping and dancing at the same time in the most frightful Postures. The seventh Nation is that of the *Cassres*. These are properly the *Antropopagi*, who have made so much Noise in the World. The *Hottentots* are exceedingly afraid of them, and take all the Care they can to keep out of their Way, for fear of being roasted or boiled, if they should be taken Prisoners. This abominable Nation would never enter into any sort of Commerce with the Christians; but, on the contrary, take all the Pains they can to intrap them, in order to murder, and, as is generally believed, to eat them. It is indeed reported, of late Years they are grown somewhat more tractable, and entertain some sort of Trade with such as will venture to have any Dealings with them. They are a very potent, and a very warlike Nation, being all of them strong, well-made Men; and tho' their Hair is curled and black, like that of other Negroes, yet they have better Faces, and a much more manly Appearance.

At the Distance of about eighteen Leagues from the Cape, there is another Port, called the *Bay of Saldenty*, which is, in all respects, an infinitely better Harbour than that of the Cape, except one, and that is in point of Water; but this single Exception is sufficient to render it unfrequented. As to the Animals of this Country, they are many of them as remarkable as in any Places in the World. The Lion is very common here, and, in hard Winters, will venture very near their Habitations. It is thought, this Creature is reputed the King of Beasts, because he never eats a Man alive, but beats his Breath out with his Paws before he tears him. He roars, and shakes his Mane terribly, before he attacks a Man; and, if he does not give these Signals of his Rage, there is no Danger in passing him. Tygers and Leopards are also very common, and do a prodigious deal of Mischief. It is pretty probable, that these Creatures would be much more numerous, if it was not for a Race of wild Dogs, that are also bred in this Country, and hunt in Packs; which renders them so bold, that they frequently weary, and then worry a Lion: Tygers, Leopards, and Wolves, they often destroy; and, which is very wonderful, they will suffer a Man to take their Prey when they have killed it. Panthers are never afraid at the Sight of them; but rather rejoice, because they are sure, that no wild Beasts are in that Neighbourhood. Elephants are common here, and of as large a Size, as in any Part of the World, being frequently from twelve to fifteen Feet high, or better, their Teeth weighing from 60 to 120 Pounds. The Rhinoceros also is often met with. He is somewhat less than the Elephant, but stronger. His Skin is prodigiously thick, and so hard, that scarce any Weapon will pierce it. He has a Snout like an Hog, upon which grows a solid Horn, from twelve to twenty Inches in Length; which is very much valued, because it is esteemed an excellent Medicine in Convulsions. But there are two Animals peculiar to this Country, and which therefore deserve Notice: The one is a wild Ass, which resembles the tame one in nothing, but its long Ears. He is of the Size of an ordinary Horse, and is the most beautiful Creature in the World. His Hair is very soft, and, from the Ridge of his Back down to his Belly, falls in Streaks, that form so many Circles. He is a brisk, lively Beast, and runs more swiftly than any Horse. It is very difficult to take him alive; and, when taken, it is impossible to break him: Notwithstanding which, they sell at a prodigious Rate, and one of them is thought a Present fit for a sovereign Prince, on account of their Rarity, and exquisite Beauty. The other Creature, found in no other Country than this, is by the *Dutch* called the *Struckungsem*, of

Sinking-hadger. He is of the Size of an ordinary Dog, and, in his Make, resembles the Ferret. When pursued, either by Man or Beast, he retreats but slowly; and, when the Enemy draws near, discharges from his Belly a Wind so intolerably stinking, that Dogs tear the Ground, and hide their Noses in it, to avoid the Smell. When killed, they stink so abominably, that there is no approaching them; but they must be left to consume where they fell.

Our Author says, it would be impossible for any Man to describe all the Creatures that are seen in the vast Forests of *Africa*; because the very Inhabitants acknowledge, that they see every Year new Animals that are utterly unknown to them, for which they assign this Reason; that, in the middle of Summer, when the wild Beasts are almost raging mad with Thirst, they resort in Multitudes to the Rivers of Salt, of the *Elephants*, and of *St. Johns*, where the Males of one Species, mixing with the Females of another, produce these strange Beasts that look like a new Species. The *Hottentots*, subject to the Company, frequently carry the Skins of these Monsters to the Governor of the Cape: Our Author assures us, that he saw the Skin of one killed not long before: It was of the Size of a Calf of six Months old; there seemed to have been four Eyes in the Head, which resembled that of a Lion; but the Hair was perfectly smooth and sleek, and of a dark-grey Colour: It had Tusks like a Boar, and its fore Legs resembled those of that Creature, but the hinder Part of it was like a Tyger.

As for the different sorts of Birds in this Country, they are in a manner infinite; and though it is not often observed, that they mingle Species, yet there have been remarked some Bastards amongst them. The largest and the strongest Birds are to be found in *Africa*; amongst the rest the Ostrich, which is looked upon as the biggest of all; they are commonly seven Feet high. The Beak of the Ostrich is short, and pointed, and his Neck extremely long: The Feathers of the Male are white and black only; but those of the Female mingled grey, white, and black: Those of the former are most esteemed, because their large Feathers are better spread, and their Down much softer. This Bird is prodigiously swift of Foot, so that they hunt them with Spaniels: They make use of their Wings, not to fly, but to assist them in running, especially when they have the Wind with them. The common Opinion, that they can digest Iron, is absolutely false, and without Foundation; they swallow Pieces of Iron indeed, but it is only to bruise the Meat in their Stomachs, as other Birds swallow Stones. There is another Particularity often mentioned with regard to this Bird, that is not found true, with respect to those in the Neighbourhood of the Cape; viz. that they leave their Eggs uncovered upon the Sand, and take no Care of their Young; whereas, on the contrary, they hide their Eggs in the Sand, and are so tender of their Young, that, though they are naturally timorous, yet, if one of them is missing, they become so furious, that it is not safe to go near them. There are abundance of Eagles of all sorts about the Cape, which are very bold, and frequently do a great deal of Mischief: They are not excessively large, and yet are incredibly strong, inasmuch that they very frequently kill and devour their Cattle as they return Home from Work; and when they have not an Opportunity of attacking an Ox singly, they come in great Flocks, of 60 or 100 at once, and single out a Beast, as it feeds, among the Herd; and, falling upon it all together, kill and devour it. There are likewise many other Birds of Prey, which are not worth mentioning, because they are common in other Countries; but the following Story is extremely remarkable, inasmuch as it relates to a kind of Bird, unknown even in that Country, where the strangest Things are scarce thought Prodiges.

There was seen, says our Author, some Years ago, upon *Table Mountain*, a Bird, the Body of which was as big, or bigger, than that of a Horse, covered with grey and black Plumage; his Beak was long and crooked, like that of an Eagle, and his Talons like those of the same Bird, but of a most dreadful Size; he sat upon that Mountain, and hovered over it for a long time together; and the common People were, in a manner, persuaded that it was a Griffin. It frequently carried off Sheep and Calves; and, at last, began to destroy Cows; upon which, Orders were

given to destroy it: It was accordingly shot; and, the Skin being stuffed, was sent Home as a Curiosity to the *East India Company*. There has been nothing like this Bird seen since, and the oldest People at the Cape do not remember to have heard or seen of any thing like it before. There is so strong a Prejudice against whatever appears marvellous in the Relation of Travellers, and they are so often suspected, either of feigning what they never saw, or of exaggerating what they have really seen, that it is dangerous for a Man to report Things much out of the Road of common Observation: Yet, when Facts are so well attested as this is, a Traveller is certainly justified in relating them. Our Author does not say, that he saw the Skin of this monstrous Bird, but he had the Relation from Persons of Credit at the Cape; and the Circumstance of the Skin being sent Home to *Holland*, is so strong a Confirmation of the Truth of what was reported, that, I must confess, I think the Fact far from being incredible.

Africa has been always famous for its Serpents; and of these there are such Numbers in the Neighbourhood of the Cape, that many of them are without Name: They are most of them extremely venomous; and the Inhabitants would suffer by them much more than they do, if they had not a specific Remedy for their Bites, that is not known in *Europe*. This is the Serpent-stone, which is allowed to be factitious, and is brought hither from the *East Indies*, where the Brachmans, or, as some call them, the Bramins, have the Secret of composing them, which they conceal so industriously, that hitherto no *European* has been able to discover them: It is of the Bigness of a Bean; in the Middle it is white, but the Outside is of a fine Sky-blue. The Method of using it is this: When a Person is bit by any kind of Serpent, this Stone is applied to the Wound, not by a Bandage, or by placing any Plaster over it, but barely holding it till it fastens of itself, which it will soon do, and then sticks fast: The Part immediately begins to swell, and becomes inflamed; and the Stone itself also swells, till it is so full of the Venom, that it drops off: It is then put into warm Milk, where it soon purges itself, and resumes its natural Colour: It is then applied again to the Wound, where it sticks till it is full a second time, and so on, till all the Venom is exhausted, on which a Cure immediately ensues. There is something extremely wonderful in this; and yet the Truth of the Fact is known to all the Inhabitants of the Cape, and confirmed by the Testimony of Writers of unquestionable Credit. There are some who pretend to have discovered the Ingredients of which this Stone is composed; but the Account they give is very far from being satisfactory; because they make the Basis of the Remedy to consist of a Stone taken out of a Serpent's Head, which, hitherto, the ablest Anatomists have not been able to find. The true Stone is very commonly met with in the *East Indies*, where the *Dutch* call them *Slang Steenen*, and the *English* Snake-stones.

All the Mountains of this vast Country are full of Minerals, and of Crystal; they contain likewise Things of much greater Value, if they could be come at; but the Natives are so much afraid of being made Slaves in the Mines, that they take all imaginable Pains to conceal them. There is, particularly, a Mountain which lies at the Distance of 500 Leagues from the Cape, that is very famous for the Metals supposed to be contained in it; this is called the *Copper Mountain*, from the great Quantity of Copper found in it, which is said to be mingled with Gold. Some *Europeans* took it into their Heads to follow some of the Natives of the Country, who were suspected of going to that Mountain in order to gather Gold. The Scheme had an Air of Probability in it; and, if it could have been as easily executed, as it was well contrived, it might have produced a very valuable Discovery; but, as it fell out, they paid very dear for their Curiosity, since the *Hottentots* no sooner discovered their Design, than they fell upon them, and massacred them all, which put an End to their Inquiries ever since. The Company are so tender with respect to their Subjects, and so unwilling to risk a Revolt in this Part of their Dominions, that they have even neglected a Gold Mine much nearer the Cape, the Marcellites of which gave great Hopes of its holding a great deal of Metal. It is not, however, impossible that there may be another

another Reason for acting in this manner; which is their Apprehension, that if a Gold-mine should be wrought at the Cape, it might tempt other Nations, the *English* and *French* particularly, to undertake something to their Prejudice; whereas, in the Circumstances under which Things are now settled there, the *Dutch* Colony at the Cape is so far from being a Grievance, that it is really an Advantage to other Nations, as well as their own. In other respects, they encourage all Sorts of Discoveries: A few Years ago there was found out, in a Mountain very near the Town, a Cavern, where the *Hottentots* find that Venom in which they dip their poisoned Arrows. There have been likewise found, at the Distance of about twenty Leagues from the Cape, some hot Baths, the Waters of which, being impregnated with Particles of Steel, have been known to cure many Diseases. There is great Reason to believe, that considerable Improvements may still be made here for the Advantage of the Inhabitants, and of the Company, who, as they are not great Gainers by this Establishment, otherwise than as it affords Refreshments to their outward and homeward-bound Ships, would be glad of any Means that might increase the Value of their Settlement, consistent with their Maxim of Government, and with that Indulgence which it is requisite to shew the *Hottentots*, who are, perhaps, of all Nations of the World, the most tenacious of their Liberty, and the most desperate in their Repentment of any Attempt made to its Prejudice. It is now time to leave this delicious Country, where the Climate is allowed this peculiar Advantage, that it not only agrees with the Fruits and Herbs of different Countries, but even gives them greater Perfection than ever they attain where they naturally grow.

39. Towards the End of the Month of *March* 1723. their Ship being revictualled, and ready to sail, a brisk South-east Wind carried them out of the Bay. Their Fleet consisted of about three-and-twenty Sail, the best Part of which belonged to the Company; the rest were *India* Ships, that were also homeward-bound. They steered their Course for the Island of *St. Helena*, where they arrived in three Weeks: When they thought they were pretty near the Island, the Commodore thought proper to detach two Ships, to discover whether there were any Corsairs upon that Coast; for a little before, they had seen and give Chace to a Pirate, and therefore apprehended there might be more upon that Coast. As they drew near it, the Commodore fired a Gun, as a Signal for the Line of Battle; which is, in all Cases, a very useful Precaution, though it stood them here in little stead, because, as it fell out, there were no Pirates on the Coast.

The Island of *St. Helena* lies in the Latitude of 16° 15' South, about 550 Leagues from the Cape of *Good Hope*, 500 Leagues from the Coast of *Brazil*, and 350 from *Augusta*, which is the nearest Land. This Island is about seven Leagues in Circumference, covered with rocky Hills, which, in a clear Day, may be seen forty Leagues off at Sea. It is really surprising to see so small an Island in the midst of the Ocean, and at so great a Distance from Land, with so deep a Sea round it, that there is scarce any Anchorage to be found. The *Portuguese* first discovered it, and that to their Cost, having one of their large *Indian* Ships wrecked here; of the Remains of which they built a Chapel, which, though long since decayed, still bestows its Name on the finest Valley in the Island. They planted Lemons, Oranges, and Pomegranates, over all the Country, and left there likewise Hogs and Goats, together with Partridges, Pigeons, and Peacocks, for the Convenience of such Ships as should touch there; but they did not think fit to plant it, because they were afraid some other Nation would dispossess them. There was an Hermit who chose to live here by himself, killing the Goats for their Skins, which he sold as Opportunity offered, when the Ships came in; but the *Portuguese* removed him, as they did afterwards some Negro Slaves, who settled in the Mountains. It is at present possessed by the *English*, who have a good Fort here, and are so well established, that it is not likely any other Nation should disturb them. The Valleys are exceedingly beautiful and fertile; the Weather indeed is sometimes very hot, but even then it is very cool upon the Mountains, so that they never can want a Place

of Refreshment. There is not any Country in the World better watered, the Rivulets running from the Tops of the Hills into the Sea, which is never at a great Distance, with Streams as clear as Crystal; nor can there be any thing more pleasant, than to behold the Seamen, fatigued with a long Stay in hot Climates, refreshing themselves here by washing themselves in the Brooks. Here are Mustard-plants, Parsley, Sorrel, Purslain, Winter-cress, and other Herbs, exceedingly good for the Scurvy: Neither is the Island destitute of Trees, though none fit for Timber, but for Fuel only. All Sorts of Refreshments are to be had here in Plenty, and on reasonable Terms; and, though there were formerly Disputes between the *English* and *Dutch*, about the Possession of the Island, yet the former now treat the latter very kindly whenever their Ships put in here, and furnish them with whatever they want.

They sailed from hence for the Island of *Ascension*, which lies in 8 Degrees South Latitude, about 200 Leagues North-west from *St. Helena*: It is about the same Bigness with the other Island, but the Shore is excessively rocky, and the Country absolutely barren; here are neither Grass nor Trees, but the Surface of the Land looks as if rent asunder; from whence some have conceived, not without great Shew of Reason, that here has been formerly a Volcano, or fiery Mountain. There is indeed a pretty high Hill in the Middle of the Island, on one Side of which Water has been found. At certain Seasons of the Year, the Country is almost covered with Sea-fowl; but what chiefly engages Ships to put into the only Harbour in the Isle, is the great Plenty of excellent Tortoise, which, when they come ashore in the Night to lay their Eggs, the Sailors turn upon their Backs, till they have Leisure to carry them on board. It is wonderful, that these Creatures will live above a Month without any other Subsistence than what they derive from their sprinkling a little salt Water on them three or four times a Day. The Reason of keeping them so long is, that the Seamen are never weary with eating them, persuading themselves, that they make a perfect Change in the Juices, and free them intirely from the Scurvy, and other Diseases of the Blood, which as they are justified by Experience, it seems but reasonable to give Credit to their Report. As this Island of *Ascension* is most certainly a very indifferent Habitation, it is a thing very common to leave Malefactors here, when they do not care to put them to Death, as happened not long ago to a *Dutch* Book-keeper, who was convicted of Sodomy; but, whether this be not a worse Punishment than Death, considering the Miseries that must be endured in one of the hottest Climates in the World, on a Place that does not afford the least Shelter, the Reader will determine. However, as it has less the Appearance of Severity, and there is a Possibility, that the Criminal may be taken off by some other Ship, this Practice, especially for such flagrant Crimes, does not deserve to be condemned.

After leaving this Island, they began to approach the Line, which they passed without feeling an excessive Heat, because, as the Sun was turning then towards the North, they had the Benefit of pretty brisk Winds, which moderated the Weather exceedingly. They now likewise began to see at Night the North Star, which they had not done for a Year and an half; and it is not to be expressed, how much the Seamen were rejoiced by this Incident.

They soon found themselves in the Latitude of 18° North, in that Part of the Sea, which is, generally speaking, covered with Grass, so that at a Distance, it really looks like a Meadow. This Grass has a yellowish Cast, and is hollow within, and, when hard pressed with the Finger, yields a clammy viscous Juice. There are some Years in which none of this Grass appears; and others again, in which it abounds, and is found in prodigious Quantities. Some imagine that it comes from the very Bottom of the Sea; because Divers report, that, in some Places, the Bottom of the Sea is covered with Grass and Flowers: Others again believe, that this Grass is driven from the Coasts of *Africa*; but our Author says, that he disapproves both these Notions; and, for these Reasons: First, if it came from the Bottom of the Sea, why should it not have the same Appearance elsewhere? For, if the Report

of Divers be of any Weight, there are such green Banks in various Places; and, therefore, one would imagine, that, where-ever such Grass was found, it would float, as it does here. On the other hand, if it came from the Coast of Africa, it would be seen in different Parts of the Sea, and especially near that Coast; which, however, is contrary to Experience, whereas the Weeds in this Sea have been remarked by almost all who have published their Voyages through them. But, that he might not seem to destroy without building up, he delivers it as his Opinion, that this Grass comes from America, and particularly from the Gulph of Babama, where it is known to grow in abundance; and where, when it comes to Maturity, it breaks, and so is carried away by the Current.

This Notion of our Author's is liable to some Objections; however, it is much more probable than either of the other. To say the Truth, there is nothing more difficult to account for, than the Motion and Course of Currents, which, in some Places, run six Months one Way, and six another; in some again they run constantly one Way, and never shift at all; and there are Instances where they run one Way for a Day or two after Full-moon, and then they run strongly the other Way till near the Full-moon again. It is commonly observed by Seamen, that in Places where the Trade-winds blow, the Currents are generally Influenced by them, and move the same Way with those Winds, but not with equal Force in all Places, neither are they so discernible in the wide Ocean, but chiefly about Islands; where the Effects of them are more or less felt, according as they lie in or out of the Way of the Trade-winds. It would be no small Advantage to Navigation, if sensible Men would take notice of, and inquire into, the Reason of these sort of Appearances; because it is certain, that, besides the Satisfaction necessarily resulting from the Discovery of Truth, there are unexpected Advantages that arise from such Inquiries: To be convinced of this, we need only look into old Books of Voyages, where we find many more Wonders than in those of a later Date; not because the Course of Nature is at all changed, but because Nature was not then so well understood. A thousand Things were Prodiges a Century ago, which are not at all strange now; and the Storms about the Cape of Good Hope, which make so terrible a Figure in the Histories of the Portuguese Discoveries, are known to have been the Effects only of endeavouring to double that Cape at a wrong Season of the Year.

It is certain, that both in the East Indies, and in the West, the Natives are able to foretel Hurricanes and Tornadoes, not by any great Skill they have, but by barely observing, that they are usually preceded by such and such Signs; which Signs when they see, it is natural for them to expect a Storm. There is very often so little Connection between the Sign, and the Thing signified, that Men who value themselves on their own Wildom, are apt to slight such Warnings, as impertinent and insignificant. But it would be better to inquire diligently into Facts, and neither receive nor reject them hastily. When once it is settled, that Things happen in this manner, or in that, it is time enough to inquire why they happen so: As in the present Case, the Matter of Fact is clearly laid down, that in the Latitude of 18° North, the Sea between Africa and America is frequently covered with Weeds, there is good Reason therefore to inquire, whence these Weeds come. I cannot forbear putting the Reader in mind, upon this Occasion, of a Circumstance that seems strongly to confirm the Conjecture of our Author: The famous Discoverer Columbus, in the first Voyage he made for the Discovery of the new World, met with this Grass and Weeds floating upon the Sea, without which he could never have persuaded the Seamen to have continued the Voyage; and it is very remarkable, that, by pursuing their Course through these Weeds, they arrived in the very Place he mentions, that is to say, in the Gulph of Babama. But it is now time to prosecute the Voyage, and to follow our Author home.

40. As they sailed farther Northward, they were overtaken by hard Gales of Wind, which are usual at that Season of the Year, especially in those Seas, by which they were driven into the Latitude of 37°, and within Sight of two Islands, which proved to be those of Flores and Corvo. Their fresh Provisions being now pretty well spent, this Accident, though it delayed Time a little, could not be considered as a Misfortune. Their Stay there, however, was very short, being only three Days in the larger Island, which was sufficient for their procuring the Refreshments they wanted, as well as to take a View of the Country.

Corvo and Flores are two of the Islands which the Spaniards call *Azores*, that is, *The Islands of Hawks*, because, at the Time they discovered them, they found a great many Hawks in them. The Dutch call them the *Vlaamische Eilanden*, i. e. *Flemish Islands*, because the first Inhabitants of the Island Fayal, which is one of the nine Islands, were Flemings. The Race of its first Inhabitants is perpetuated to this Day in that Island, and you may know them by their Air and Shape, which resemble those of the Flemings. They dwell upon a little River, running down a Mountain, which the Portuguese called *Ribera dos Flamenas*, the River of the Flemings. The Names of the *Azores* Islands are, *Terçera*, *St. Michael*, *Santa Maria*, *St. George's*, *Grattoja*, *Pico*, *Fayal*, *Corvo*, and *Flores*. *Terçera* is the chief of them; it is fifteen or sixteen Leagues in Circumference, being high, and so steep, in many Places, that it is almost impregnable; and, besides that, they have built Forts in the Places where it is accessible. There is no Harbour or Road wherein the Ships can enjoy Shelter, but before the capital City, called *Angra*, which hath a Port of the Figure of an Half-moon, and therefore called the *Half-moons of Angra*: Upon the two Ends of the Half-moon are two Mountains, called *Brafsis*, which shoot forth into the Sea, and appear afar off, like two small Islands. These two Mountains are so high, that, being at the Top of them, you may see at any time ten or twelve Leagues; and, when the Weather is fine and clear, above fifteen Leagues off.

Angra hath a fine Cathedral Church, and is the Residence of a Bishop, a Governor, and the Council, which governs all the Islands. Three Leagues distant lies another Town, called *de Praya*, or the *Town of the Shore*, because it is situated near a great Shore, which the Ships can never approach, so that the Town is without any manner of Trade, and very desert, tho' pretty well built and walled about. The Inhabitants live upon the Fruits that grow upon the Island; for it is very fruitful and pleasant, full of fine Corn-fields. The Wine is but small, and will not keep long; therefore the richest Inhabitants provide themselves with *Madeira* and *Canary* Wines. The Island is so plentiful in Flesh, Fish, and all other Sorts of Victuals, that even in the Time of Scarcity there is enough for the Inhabitants. But they want Oil, Salt, Lime, and Potters-wares, which are imported from other Places. They have abundance of Peaches, Apples, Pears, Oranges, and Lemons; all Sorts of Herbs, Plants, and, amongst others, the Herb called *Batatas*, which grows like the Stock of a Vine, but the Leaves are not like them. Some of those Roots weigh a Pound, more or less: They have so great Quantities of them, that the Rich slight them, though they are of a good sweet Taste, and very nourishing. You find also another Root in this Country, as big as a Man's two Fists, covered with Filaments of Gold-colour, and as smooth as Silk: They make Beds thereof; but curious and skillful Workmen would certainly be able to make fine Stuffs of it.

One sees but very few wild Fowl or Birds, except Canaries, Quails, tame Hens, and Turkey-cocks, which are very numerous: You meet with several Places very hilly, and so full of very thick Woods, that you can hardly travel through them: But that which makes travelling very difficult, is, that you find very often Rocks a League or half a League long, which are so ragged, and so sharp, that you can hardly walk upon them without cutting your

¹ It may not be amiss to observe, in Support of our Author's Assertion, that, in the old Portuguese Maps and Voyages, this Part of the Ocean is called *Mar de Sargasso*, i. e. *The Sea of Creffers*; for *Sargasso* signifies *Creffers*, or rather *Water-creffes*, which the Weeds, with which it is spread, nearly resemble.

Shoes off your Feet: At the same time, it is very remarkable, that those Rocks are so full of Vines, that in the Summer-time you cannot see them; because they are covered all over with Vine-leaves. The Vines spread their Roots through the Crags or Chinks of the Rocks, which are so small, that it is a Wonder how they find any Nourishment there; and yet, if you plant a Vine in the other good Ground of this Country, it will not grow. The Corn, and other Fruits, of that Island, will not keep above a Year; nay, if you keep the Corn above four Months, without burying it under-ground, it will rot, and be spoiled: To prevent this, each Inhabitant has a Pit out of the Town, which is round at the Top, and large enough to let a Man in: The Head is covered with a Stone, and locked up. Some of these Pits are so large, that they might contain two or three Laits of Corn, a Last containing 108 Bushels of *Amsterdams* Measure, and each Bushel weighs forty Pounds, or more. They put their Corn in those Pits in *July*, and cover the Stone with Earth, to preserve it the better, and at *Christmas* they take it out; though some keep it longer, but it is then as good, and as fine, as when put in the Pits.

The Oxen in that Island are the largest and the finest that can be, equal to any in *Europe*; their Horns are monstrous wide; every one hath his Name, like our Dogs; and they are so familiar, that when the Master calls one of them by his Name, though he is amongst a thousand others, he will presently come to him. One would think, that the Ground of that Island was hollow; for, when you walk upon the Rock, it sounds: And indeed the thing is probable enough; for the Island is much subject to Earthquakes. You find in many Places of the Island of *St. Michael* Holes, or Cracks, out of which there comes a great Smoke, and the Ground all about is burnt: But this is no uncommon thing in most of those Islands; for all of them have Mountains of Sulphur. Here are Fountains so hot, that you may boil an Egg in the Water. Three Leagues off *Angra* is a Fountain which changes Wood into Stone; and there was formerly a Tree to be seen, the Roots of which, being in that Water, were stony, and as hard as Flint. This Island produces excellent Timber, especially Cedar, which is so common, that they make Carts and Waggon of it, and even burn it. The Island of *Pico*, twelve Leagues distant from *Tercera*, produces a Sort of Wood called *Texo*, which is as hard as Iron, and looks red and shining when it is worked. It hath also this good Quality, that it is better and finer when it is old; which makes it so precious, that nobody dares cut it, but for the King's Use, and by virtue of a special Order from the King's Officers.

The chief Trade in the Island of *Tercera* consists in Wood, of which they have a great Plenty: The Fleets of *Portugal* and *Spain*, which sail to the *East Indies*, *Brazil*, *Cape Verde*, *Guiney*, and other Countries, landing in for that Island to take in Refreshments, bring a good Trade, not only to the Inhabitants of *Tercera*, but likewise to those of the neighbouring Islands, who sell to the *Portuguese* and *Spaniards* their Manufactures at good Prizes. Seven or eight Leagues South-east of *Tercera* lies the Island of *St. Michael*, about twenty Leagues in Length; it hath several Towns and Villages. The capital City is named *Ponta del Guda*, which drives a more considerable Trade in Garden-wood than *Tercera*, because there is a greater Quantity of it here than in any of the other Islands; for it produces above two hundred thousand Quintals every Year: Here are also arable Lands, which produce such abundance of Corn, that they transport it to the other Islands; but it affords no Harbours, nor Rivers, nor Shelter, for Ships. The Island of *Santa Maria* is but twelve Leagues South of *St. Michael*, and is ten or twelve Leagues in Circumference. They trade only in Earthen-ware, which they transport to the other Islands; but they have Plenty of all manner of Provisions. Seven or eight Leagues North North-west of *Tercera*, is the little Island of *Gratijsa*, not above five or six Leagues in Circumference, and very plentiful and fruitful.

The Island of *St. George* is about eight or nine Leagues North-west from *Tercera*; it is twelve Leagues in Length, and two or three in Breadth. This is a wild mountainous

Country, and bears a little Wood: The Inhabitants subsist by tilling the Ground, and keeping Cattle; and they have abundance of Cedar, which they export to *Tercera*. Seven German Leagues South South-west of *St. George's*, you find the Island of *Fayal*, which is seventeen or eighteen Leagues in Circumference, and is the best of the *Azores*, next to *Tercera*, and *St. Michael*; it affords abundance of Fish, Cattle, and other Commodities, which they export to *Tercera*, and the other Islands; they have likewise plenty of Wood. The chief Town is called *Villa Doria*. Most of the Inhabitants of this Island are Natives of the *Low Countries*, but they speak now the *Portuguese* Tongue. They love the *Flemings* naturally, and use all Strangers very kindly. Three Leagues to the South-east of *Fayal*, and four Leagues to the South-west of *St. George's*, and twelve Leagues to the South-west and by West of *Tercera*, lies the Island of *Pico*, so called from a Mountain in it named *Pike*, some being of Opinion that it is higher than the Pike of *Teneriff*, in the *Canaries*. The Inhabitants cultivate the Soil, and keep Cattle, to subsist on. This Island hath Plenty of all Sorts of Provisions, and yields the best Wine in all the *Azores*: It is about fifteen Leagues in Circumference. From *Tercera*, to the Island of *Flores*, which lies to the West, they reckon seventy Leagues; and about a League to the North of *Flores*, you find the small Island of *Corvo*, not above two or three Leagues in Circumference. These two Islands are accounted now amongst the *Azores*, and are under the same Governour. *Flores* is about seven Leagues in Circumference; it produces Wood, and a vast Plenty of all Provisions. The Winds are so strong, and the Air so piercing, especially in *Tercera*, that they spoil and consume, in a short time, the Stones of the Houses, and the very Iron. They have a sort of Stone, which they find within the Sea-mark, and which is harder, and resists the Sharpness of the Air better, than the other Sorts; and for that Reason they build the Fronts of their Houses with it.

41. On their entering the *Spanish* Seas, the *Weather* proved so bad, that the *Advice-Ship* lost her Rudder. This Accident obliged them to go through the Channel, in order to purchase a new one on the *English* Coast. The *French*, *Danish*, and other Ships, generally take this Route; but the Ships belonging to the *Dutch East India* Company are obliged to sail round the Coast of *Ireland*, from an Apprehension, that in case they met with stormy Weather in the Channel, they would be obliged to put into some *English* Port, which might be attended with many Inconveniencies. Such Ships, however, as have sustained any Damage at Sea, are permitted to pass through the Channel, provided they are not in a Condition to keep the Sea long enough to go round the *Tribb* Coast, as was the case of the *Advice-Ship* before-mentioned: After three Weeks Sail, during which time they were involved in continual Mists and Fogs, they had Sight at last of the *Orkney* Islands, where some *Dutch* Ships were still employed in the Herring Fishery. In the Latitude of 60° , they met with some Ships that were waiting for them, which conveyed them to the Coast of *Holland*, where every Ship entered its destined Port in Safety; and those on board which the Prisoners were, came into the *Texel* the 11th of *July* 1723, and five Days after arrived at *Amsterdam*, the very same Day two Years that they sailed on this Voyage.

42. Upon the Return of the Squadron, the Situation of Affairs was much altered; for the *West India* Company immediately commenced a Suit, in Behalf of themselves, and of the Persons employed on board the Squadron under their Protection, in order to obtain Satisfaction for the Injustice done them by the *East India* Company. They set forth in the Memorial they presented to their High Mightinesses the States General, that these Ships had been fitted out in pursuance of the Powers granted to the Company by the States; that they were not so much fitted out with a View to the Profit of the Voyage, as from the Regard had to the Advantages that might result to the Public from their Discoveries; that, though it was true, these Ships had not perfected, as indeed it could not be expected, the Design on which they were employed, yet they had made great Progress therein, and such as gave Hopes of arriving in time at all that was proposed by this Expedi-

dition; that, in doing this, they had spent a great deal of Time, consumed the best Part, if not all, of their Provisions, and had endured incredible Hardships; which had induced them, or rather obliged them, to think of returning Home by the Way of the *East Indies*; that they had no Design, and, in fact, were in no Condition, to carry on any sort of Trade in those Parts; but sought merely to meet with some Refreshments, and to obtain such Assistance amongst their Countrymen, as, in Quality of Subjects of the States of *Holland*, they had a Right to demand; that, immediately on their Arrival at *Batavia*, without any Hearing, their Ships and Cargoes were condemned and sold, and the few Men that had survived the Hardships they had endured, not in the Company's Service only, but that of the Public, had been sent Home as Criminals, Prisoners, in the *East India* Company's Ships, notwithstanding that the Governor-General, and his Council, were well apprised of the Nature and Circumstances of the Case: That such a manner of Proceeding is extremely dangerous, not only to the *West India* Company, but to the State, and to the Public, since it plainly discourages Industry, new Discoveries, and the Extension of Commerce. Therefore it is absolutely requisite, their High Mightinesses should interpose in the present Case, as well for the settling this important Point, with regard to Futurity, as for the sake of redressing the *West India* Company, the Officers, and Seamen, that have been thus injured, and giving that Satisfaction to Seafaring People in general, which was so apparently necessary to free them from the Apprehensions of being punished by a Company Abroad, for performing what was looked upon to be their Duty at Home.

The States General immediately directed the *East India* Company to put in an Answer to this Memorial, that they might in the first place see, whether they would avow the Fact; and next, whether any Reasons could be alleged to justify it: The *East India* Company did not at all hesitate in declaring her Approbation of what has been done by the Governor-General, and his Council, in the *Indies*. In their Memorial, which contained an Answer to what had been alleged against them, they pleaded, that the *East India* Company, in *Holland*, was originally erected for securing the Commerce in that Part of the World to the Subjects of the States General, trading under the Limitations of their Charters; that this End had been most effectually answered through the prudent Management of the Company, to the Envy of all *Europe*; that it had been impossible to do this, or to maintain the Power of the Company in that Part of the World, but by the strict Execution of the exclusive Clauses in their Charter: That the Ships of the *West India* Company were no more privileged than any other Ships in this respect; and that, if the *East India* Company had invaded the Bounds granted to the Company that now complains, they would have taken the very same Course that the *East India* Company has lately done for the Maintenance of their Rights, with equal Reason: That the Discoveries their Ships were intended to make, were within the Bounds assigned the *West India* Company; and their Officers directed, by their Instructions, to proceed no farther than a certain Latitude, and to return through the Straights of *Magellan*; with which Instructions if they had complied, this Event could not have fallen out, and consequently there could have been no Occasion given for this Complaint: That the Officers of the *East India* Company, in the *Indies*, could not act in any other manner, than as the Instructions, grounded on the Company's Charter, direct; and consequently could not, in the present Case, have done otherwise than they have, without being wanting in their Duty to the Company: That, to have prevented any thing in this nature, if the *West India* Company had foreseen the Necessity of their Ships returning by the *East Indies*, they ought to have applied to the Company for their Licence, and for Instructions, in their Behalf, to the Governor-General and Council in the *Indies*; that, for want of taking these Precautions, the Ships of the *West India* Company, when in the *East Indies*, could not be known or considered in any manner different from other Ships; but, upon committing any Offence, were liable to the same Punishment that would have been inflicted upon

private Traders: That the very setting forth of this to be an extraordinary Case exculpates the Officers of the *East India* Company, who have no Power of taking notice of any extraordinary Cases, but must act in all according to the ordinary Rules prescribed by their Instructions; that if they should either have Power allowed, or should assume to themselves a Power, of acting otherwise, it would be attended with very dangerous Consequences, rather more than less prejudicial to the public Welfare, than what has happened in the present Case; that, in reality, there is nothing very prejudicial, much less iniquitous, in the Fact now under Consideration, since the Seizure is of no great Value to the *West India* Company, and, with respect to the Public, will be so far from preventing Discoveries, that it must prove a Means of promoting them, by obliging such Officers, as may be hereafter sent upon Designs of this Nature, to pursue their Instructions close, without framing Expedients to themselves, from a Presumption, that to a Case which they think extraordinary, the settled Laws of their Country must give way: That, upon the Whole, they submit it to their High Mightinesses, whether the Charter of the *East India* Company, being an Act of State, ought not, as such, to be considered as a Law to their Subjects; and whether, if it be not so considered, the Charter can be of any Use to the Company at all; whether, if the Rules of the Charter be considered as a Law by the Officers of the Company in the *Indies*, they have, in this Case, done any more than was their Duty; and whether, if either they, or the Company, should be punished for doing their Duty, it would not be, in Effect, doing the very Thing that is here complained of as an Hardship. It must be allowed, that this Defence of the *East India* Company was very plausible, and carried in it a great Shew of Reason.

But, according to the Custom of *Holland*, these Memorials, after having been considered, were remitted into the Hands of the proper Officer, who was appointed to draw up, not only the Judgment given in this Case, but the Reasons upon which that Judgment was given, which were in Substance these: The *East India* Company was erected at a time when the Maritime Power of the State was in its Infancy, and that of their Enemies the *Spaniards* very great in those Parts; and that, consequently, what might be very right, and very requisite, in such a Situation, ceases so to be, when the Circumstances of Things are absolutely altered, as at this Day: That it is not a Thing to be taken for granted, that the great Power, and extensive Dominion, of the Company in the *Indies* is equivalent to the Power and Dominion of the States themselves, with respect to the general Good of their Subjects; because this is a Fact which has been doubted by many, and absolutely contradicted by some of the greatest Statesmen in *Holland*: That, as to the Right of the *West India* Company, to do the same Thing in the same Case, it proves nothing; because it is a Maxim, from which the States will never depart, that neither of these Companies have acquired, by their Charters, a Privilege of doing Wrong. That the Instructions of the *West India* Company to their Officers, to proceed to a certain Latitude, and return to the Straights of *Magellan*, is a clear Proof, that they had not the least Intent of breaking in upon the Privileges of the *East India* Company, or of sending Ships into their Limits; and if the Officers did not obey these Instructions, it cannot be imputed as a Fault to the Company, who gave them, or as a Crime to the Officers, who would have obeyed them, if they could, but were compelled, by that Necessity which supercedes all Laws, to return as they did: That the Governor-General and Council of the *Indies* might very easily distinguish between Ships coming to trade, and Ships that sought a Passage Home; especially, since it was apparent, by the Condition they were in at their Arrival in the *East Indies*, that they really were in no Circumstances of Trading; that their Necessities were such as they set them out to be; and that they were willing to submit to whatever Regulation the Officers of the *East India* Company thought fit to prescribe, for preventing any Inconvenience from their remaining in those Seas. The Officers of the *East India* Company are still Subjects of the States of *Holland*, and are not at all bound to execute the Instructions of the Company to the Prejudice

of the Public; and therefore they must have a Power of distinguishing in such Cases, to prevent their being good Servants to the Company, at the Expence of being bad Subjects to the Republic. That it was simply impossible the *West India* Company should demand a Licence for what they endeavoured to prevent; and that their Instructions, in this respect, are incontrovertible Proofs of their Desire to avoid any Disputes with that Company. Besides, the discovering of new Countries is a Point of evident Advantage to the whole Community, and ought by no means to depend on the Will or Pleasure of any Company whatever, since the Benefit of the Whole ought always to take Place of the Privileges granted to any Part of a People. The Officers of the *East India* Company were the proper Judges of this, and ought to have made the Distinction as Subjects of the State of *Holland*; for they otherwise might expect the same thing with respect to Ships of War; and, under colour of supporting the Privileges of the Company, erect a new and independent Sovereignty in the *Indies*. This intirely destroys the Notion of great Inconveniences that must arise from the Officers of the Company assuming to themselves such a Power; because, if they have not such a Power, they are not at Liberty to distinguish between the Obedience they owe the Company, and their Duty to the Public. That this Method of treating these Ships will contribute to the promoting Discoveries, or to any other good End whatsoever, is a Thing not to be presumed upon the Company's Assertion, since the contrary is much more probable. This forces one to observe, that there is no Point, in which the private Interest of this or any other Company more plainly interferes with that of the Public, than in this of discovering Lands hitherto unknown; for, as this would infallibly contribute to the Extension of Commerce in general, so it is no less plain, that it would hurt the Interest of the Company in particular; especially, if it be true, that the Countries, made known by this Voyage, abound with Spices, and other rich Commodities of the *Indies*. It is this Reflection that ought to incline us to suspect, that the coming into those Seas was not the only Crime that drew on the Persons on board the Ship so heavy a Punishment, but rather that it was aggravated by the Reports received of their Discoveries; and, if so, it very much imports the State to prevent Things of this nature, since, as the *East India* Company cannot prevent other Nations from attempting such Discoveries, the plain Consequence of this Conduct of theirs must be, placing the rest of the Subjects of this State in a worse Condition, than if they were the Subjects of any other Power, which is a Thing that ought by no means to be permitted. As to the Value of the Ships, and their Cargoes, it cannot alter the Case at all; for, whether it be great or little, Satisfaction ought to be made for what has been unjustly taken away; and, as to the sending home the Men on board these Ships as Prisoners, it has evidently the worst Tendency that can be; because, while they were in the Service of the Public, they were especially under its Protection; so that, to pass by such an Act with Impunity, will be to sacrifice the Honour of the Government, and the Safety of the Nation, to the Prerogatives of a Company misunderstood. Besides, should this Sentence of the Governor-General and Council of the *Indies* be supported here, as the Memorial from the Company desires, it would undoubtedly occasion frequent Mutinies, since a Ship's Company could not promise themselves Protection from their Obedience to their Officers lawful Commands, but must stand exposed to the arbitrary Censures of another Authority, with the Customs of which they cannot be acquainted. On the Whole, therefore, we ought to conclude, that, in this Case, the Governor-General and Council of the *Indies* have exceeded the Bounds of their legal Authority, and done what cannot be justified by the Company's Charter, which consequently cannot be weakened in any respect, by the setting this Sentence aside, and redressing the Parties injured; which ought, therefore, to be done immediately, and in an exemplary manner; that the *East India* Company, and their Officers, may, for the future, learn to make such Distinctions as are requisite for the Security of Commerce in general, and for the Safety of the Subjects of this State in particular.

Accordingly their High Mightinesses the States General ordered and decreed, that the *East India* Company should furnish the *West India* Company with two new Ships, completely rigged in every respect, better than those which they had condemned and confiscated; that the former should likewise pay to the latter the full Value of their Cargoes, so soon as that Value could be fixed and ascertained; that, with respect to the Crew of both Ships, the *East India* Company should pay them their Wages, to the Time of their Return to *Holland*; that, moreover, the said Company should pay all Costs of Suit, besides a certain Sum to the public Use, for having thus abused their Authority. Such was the End of this important Controversy, and such the wise and equitable Decision of the States General, on this Dispute between the two Companies; which has been the more largely insisted upon, because, though it fell out in *Holland*, yet the Point in Debate concerned equally some other Countries; to say the Truth, every Country, where there is any exclusive Company established: And I cannot but be persuaded, that every impartial Reader, who considers the Reasons on both Sides, as they have been before clearly stated, will be of Opinion, that their High Mightinesses distinguished very justly between the particular Advantages resulting to a Company established by their Authority, and the common Benefit of all their Subjects, for the maintaining and promoting of which their own Authority is established. There is one Thing more I must observe upon this Sentence, and it is this; that the State have given both Companies a Rule, by which they ought to regulate their Conduct for the future; and have thereby, in all Probability, prevented such Excesses, as by this Sentence they punished: And yet, perhaps, this Accident hindered the Prosecution of the Discoveries which this Voyage had so happily begun.

43. The Remarks that I shall make upon this Voyage shall be confined to a few Heads, and those of such a Nature, as may contribute at once to the Reader's Amusement and Information, as well as to the clearing up some Points, that may seem a little obscure in the foregoing Voyage. In the first place, it is worth observing, that the *West India* Company in *Holland* hath been long in a declining Condition; which, instead of despiriting the Directors, has engaged them to turn their Thoughts on every Method that could be imagined for the Recovery of their Affairs. There is so wide a Difference between our Companies, and those in *Holland*, that it may not be amiss to give a concise Account of the flourishing State of this Company, the rather, because it will shew what great Things a Board of Merchants, for such the Directors generally were, can manage. It appears by the Books of the Company, that, in the Space of thirteen Years, that is to say, from 1633 to 1656, they fitted out to Sea eight hundred Ships, either for War or Trade; and that the Expence of Building, Equipping, and Seamen's Wages, of these, cost them forty-five Millions of Florins; and that, in the same Space of Time, they had taken from their Enemy five hundred and forty-five Vessels, valued, in the Whole, at sixty Millions; besides which, their Spoils amounted to thirty Millions at least: But the greatest of their Exploits was, that of seizing the Spanish Flota at the *Havanna*, by their Admiral *Peter Heyn*, by which they gained seven Millions of Pieces of Eight in Money, and in Ships, Brass Cannon, and other military Stores, above ten Millions: Such were the flourishing Times of the Company. The Causes of their Decay seemed to be principally these: First, their Emulation of the *East India* Company, which induced them to make the Conquest of *Brazil* from the Crown of *Portugal*: This they achieved at a vast Expence; and then appointed Count *Maurice of Nassau* Governor-General, who managed their Affairs with great Skill and Prudence. But then, secondly, the Desire they had of managing all Things themselves, and their repining at the Expence of that Prince's Government, was another Cause of their Misfortunes; for the Merchants, who had conducted their Affairs with great Wisdom and Capacity, while they confined themselves to Commerce, and a Maritime War, shewed themselves but indifferent Statesmen; and, in a very short time, lost all that Prince *Maurice* had acquired, bringing, withal, such a Debt

a Debt upon the Company, as, in the End, compelled them to consent to a Dissolution.

The new *West India* Company, warned by the Example of their Predecessors, have kept more within Bounds, and have certainly managed their Affairs with great Oeconomy and Prudence. In the Year 1714, they formed a Project of a very extraordinary Nature, which, if it had taken place, might very probably have transferred the whole Commerce of *Europe* to the *Dutch*. This consisted in the Uniting of the two Companies, I mean, those trading to the *East* and *West Indies*. In order to this, they offered to transfer all that they possessed in *Africa* and *America* to the *East India* Company, in Consideration of about 120,000 *l.* Sterling; which Sum the Proprietors of the present *West India* Company were to have accepted in *East India* Stock; and nine Directors were to have been added to the present College or Board of *East India* Directors, for the Management of this additional Trade. At the same time they offered a Calculation, by which it appeared, that the Funds of the *West India* Company, which, according to this Project, were to be transferred to the *East India* Company, would more than defray all the Expence, that this Conjunction would create. The Benefits that would have arisen from this Incorporation of the two Companies into one were many and great, and, which, perhaps, is of no less Consequence, equally visible and certain; for, as Things now stand, the *West India* Company purchased the *Couris* and *Beifes*, which are a sort of Shells that pass for Money thro' all the Slave Coast of *Africa*, from the *East India* Company, who, on the other hand, purchased from the *West India* Company a great Part of the Gold they bring from the Coast of *Guinea*. This kind of Traffick, by this Scheme, would be intirely in the *East India* Company, who would immediately ingross the Slave Trade into their own Hands. By the erecting Fortresses, and raising Settlements in several Parts of *Africa*, which would be easy for them, tho' the Circumstances of the *West India* Company would never permit them to attempt such things, such a prodigious Wealth would accrue, on the one hand, by saving the Expences of bringing home from the *East Indies* Commodities fit for the *African* Trade, and from *Africa* Goods proper for the *East Indies*, which, according to this Plan, might be transported directly in both Cases, without ever coming to *Europe* at all; and, on the other hand, by enlarging the Commerce both Ways, the Power and the Influence of the Company would be so increased, that it would be simply impossible for other Nations to contend with them in either Trade. These Settlements in *Africa* would also be attended with another extraordinary Advantage, that of discovering several rich Mines of Gold; of which whatever Informations the *West India* Company may have had, they never could attempt to work them, because, knowing their own Weakness, they were apprehensive, that such an Attempt, instead of proving advantageous to them, might have induced other Nations to have attacked them, and thereby have exposed their Country to the Loss of what might be certainly gained, if undertaken by so powerful a Body as the *East India* Company. The Commerce of the Grain Coast of *Guinea*, tho' of no considerable Value to the *West India* Company, would prove of incredible Advantage, when in the Hands of the other Company; because the Grain transported from *Africa* is, a great Part of it, consumed in the *East Indies*, and is so necessary a Commodity there, that the *East India* Company would have it in their Power to raise and fall the Price of Pepper, as they thought fit; which would enable them to bring about what they have so long endeavoured, the getting into their Hands the Monopoly of that, as well as other Spices; which, perhaps, will never be attained by any other Means. The proper Commerce of the *West Indies* also would become infinitely more considerable under their Management, than it would be any other way; and this especially by erecting Magazines for *East India* Commodities in the Island of *Curaçao*, from whence they might be easily sent into the *Spanish West Indies*, and would produce a mighty Profit, though sold at a much lower Rate than the same kind of Goods, which are annually brought into that Country by the *Manilla* Ship.

How it came to pass, that this Proposal was rejected, does not concern my present Purpose; and therefore I shall only

observe, that, after this Proposition was rejected, the Directors of the *West India* Company very wisely turned their Thoughts another Way. It is very probable, that the Encouragement they gave to Mr. Roggewein's Proposition might be, in some measure, owing to the ill Treatment, which this Project had received: For what was more natural, after failing in their Scheme of uniting their Company to that of the *East Indies*, than to aim at coming in for a Share of these Commodities, so necessary for their Commerce, by some other Way? And what Way so proper as that proposed by this Voyage, which would, in effect, have put the most valuable Part of the *East India* Trade into their Hands? And this too accounts for the extraordinary Heat and Violence of the *East India* Company against those, who were concerned in this Discovery.

The Reader will easily recollect an Instance of the same sort of Spirit, which they had shewn long before, in the Case of *James le Maire*; and what Pains they took to discredit his Discoveries. Here we see the true Secret of that Dispute, which was so warmly managed by both Companies, and so wisely decided by the States General. When the *East India* Company persecuted and destroyed *le Maire*; the Government did not interpose, because, at that time, the Maintenance of the Power of the *East India* Company was of the highest Consequence to the States; but such as were concerned in that Expedition appealed to the Public against the Injustice they had received, and were heard with all the Favour they could expect: But, by degrees, as the Government of *Holland* became more settled, and especially since such have had a Share in the Administration of public Affairs as were well acquainted with Trade, the Concerns of the *East India* Company are considered in a new Light.

That consummate Statesman and Patriot, *John de Witte*, was the first who explained the Matter clearly; and his Words are so applicable to this Subject, that I cannot forbear citing them, as most worthy of the Reader's Attention: "When the *East India* Company, says he, had attained to a certain Extent of Power and Grandeur, their Interests came not only to clash with, but grew absolutely opposite to, those of their Country: For whereas the Advantage of the *Dutch* Nation consists in the Increase of their Manufactures, Commerce, and Freight of Ships, the Interest of the Country inclines them to promote the Sale of foreign Manufactures, and that with the least Traffick and Navigation that is in their Power. Hence it is a settled Point, that, if the *East India* Company can gain more by importing *Japan* Cloths, *Indian* Quilts, Carpets, Chintzes, than raw Silk; or if the Company, by creating a Scarcity of Nutmegs, Mace, Cloves, Cinnamon, and other Spices, can raise the Price of them, so as to gain as much by 100 Tons, as they would otherwise get by 1000; we are not to expect, that they should import those raw Silks, or be at the Expence of transporting 1000 Tons of Spice, tho' the former would assist our Manufactures at home, and the latter increase our Navigation."

This is so plain, and agrees so evidently with the Interest of all Nations, as well as of *Holland*, that it is impossible for any unprejudiced Person not to discern, that all exclusive Companies destroy, instead of promoting, the Commerce of the Countries where they are established. The same great Writer observes, that the more any Company extends its foreign Conquests, the more of their Stock must, of Necessity, be spent for the Preservation and Defence of such Conquests; and consequently the greater their Dominions; the less the Company is able to mind the true Interest of that Trade, for the promoting which they were erected. The Reader, from the large and accurate Account, which we have lately given him of the State of the *Dutch* Company's Affairs in the *East Indies*, will the more readily enter into, and see, the Justice and Force of this judicious Observation.

This leads me to remark, that, in all Countries where such Companies are already established, the only Method that can be taken to prevent the Consequences that must attend them, is to play one Company against another: that is to say, the State ought always to encourage and protect that Company, which is most inclined to promote national

Commerce, and the Exportation of the Goods and Manufactures of the Country in which it is settled. We have seen what Advantage the *Dutch* draw from having a Company-King amongst the *Indian* Princes of every Island; and therefore we cannot be at a Loss for the Benefits, that must result from the having the Nation's Company amongst those exclusive Companies, erected in every Nation. Upon this Principle it was that the States General, in the present Case, so much favoured the *West India* Company; for a little Attention will shew, that, in this Instance, they were the Nation's Company; that is to say, by endeavouring to discover new Countries, which must have been attended with an Increase of Commerce, and of Shipping, they pursued their Country's Interest, as well as their own. And, as this is a Point that deserves to be illustrated, give me Leave to suppose, that, in consequence of this Voyage, a Settlement had been made in *Easter Island*: In order to support this, another Squadron must have been sent, together with a fresh Supply of People for the Colony; and, in Process of Time, as their Trade and Discoveries increased, annual Squadrons would have gone, and returned; which must have been highly advantageous to *Holland*. Besides, it is a great Matter to revive a Spirit of Trade and Discovery; for let any one consider how soon all the Continent and Islands of *America* were as well known as they are at present, after they were first found by *Columbus*, and he will be at no Loss to discern the Probability of establishing a large Trade in those Southern Countries, which are so imperfectly known at present.

Add to this, that there cannot be a more true or certain Maxim than this; that tho' particular Persons, and especially Companies, gain most by old and settled Trades, yet a new Commerce contributes most to the enriching of a People, because it increases the Number of Workmen in all Manufactures at home, occasions the building new Ships, heightens the Number of Seamen, and, in one Word, enlarges and strengthens that Spirit of Industry, which is so necessary to the Well-being of a trading Nation. Another Reason that might possibly engage the States to favour the *West India* Company in this Design, was the Tendency it had to promote that kind of Navigation, which, for this last Century, has fallen almost into Disuse; I mean, the Navigation round Cape *Horn* into the South Seas, upon the Discovery of which our Ancestors piqued themselves with so much Justice. The more one reflects on this, the more one is amazed at the Indolence of the present Age, especially considering the ill Consequences that plainly result from it already. The Storms about the Cape of *Good Hope* were not more terrible to our Ancestors, in the very Dawn of Navigation, than the Doubling Cape *Horn* is to some People at this Hour, after so many Voyages have been made round it, and that too by their own Countrymen, as well as others. Captain *Cowley* passed it twice, *Dampier* thrice, *Clipperton* as often; and yet now, after twenty Years Disuse, it is become a greater Bugbear than ever. It was therefore high time for the *Dutch*, who saw the *French* yearly bringing large Sums out of the South Seas, to try, whether their Subjects could not be as fortunate, without engaging in a contraband Trade with the *Spaniards*.

It is a great Pity, that we can't have Commodore *Roggeveen's* Proposals to the *West India* Company, in which, no doubt, there are abundance of curious Particulars; but, as this is not to be hoped for, we must content ourselves with endeavouring to supply this Deficiency, by attending closely to his Voyage.

We see, that, before he thought of Refreshment, he stretched as far as the Coast of *Brazil*, and did not loiter away his Time at the Cape de *Verde*, or any other Islands: And this was certainly the right Way; for a Voyage to the Coast of *Brazil* is undoubtedly no very hard or difficult Navigation, as the former Voyages, especially those of *Dampier* and *Funnel*, plainly shew. But the *Dutch* Commodore took no small Pains to discover some Island upon that Coast, where a Settlement might be made, that his Countrymen might, for the future, have a Place of their own, without troubling the *Portuguese* at all. When this was found impracticable, his next Care was, to reconnoitre the Island of *St. Lewis*, which had never been thoroughly discovered before; and therefore he thought he had a Right to impose

on it a new Name; which he did: And, if he had settled on it also, as he proposed, it had certainly answered the End of his Voyage effectually; for the Climate and Soil appear to have been such, as leave no Room to doubt, that, if the *Dutch* had fixed there, and been well supported, they might make it as commodious a Place as the Cape of *Good Hope*, which had been lighted, as not worth inhabiting, by other Nations, tho' it is now acknowledged for one of the finest Countries in the World. He formed the same Project with respect to *Juan Fernandez*, which is certainly one of the wholsomest and pleasantest Islands in *America*, and from whence, if it was once settled, the discovering of the Southern Continent and Islands must with Ease follow. To say the Truth, I think the first Error that he committed was the postponing these Settlements, but more especially the last, because the Benefits that must have resulted from it are apparent.

We have so many Accounts of the Beauty and Fertility of that Island, that, I think, it may be laid down as an undeniable Truth, that a Proposal for settling it would not meet with many Difficulties, either here, or in *Holland*. In both Places People are to be met with, who, either for the sake of getting Bread, or from the Hopes of acquiring a Fortune, would readily consent to visit the most unwholesome Countries, and to remain in the worst Climates. There would not therefore certainly be wanting enough to offer themselves, upon proper Encouragement, to go and reside there, and the Expence of fortifying the Island, and providing them in every respect with what they wanted, would require no great Sum: Yet, whatever Nation shall take this Step, and be at the Expence, will have it absolutely in their Power to prosecute this Scheme of Discovery; after which, perhaps, it may be time enough to think of settling the Island of *St. Lewis* on the other Side of the Cape. The raising a Fort, and putting in Order the Plantation of the Island of *Juan Fernandez*, might employ the first Year, whenever this important Design is properly pursued; and, if two or three small Vessels were left with the Inhabitants of that Island, they might, by the Arrival of a new Squadron the next Year, be able to report somewhat as to the Probability of a Discovery from thence; because there are undoubtedly several Islands, which lie at no great Distance from thence; and all of them in so good a Climate, that no Hardship need be feared in endeavouring to discover them. In consequence of their Report, and of the Assistance received from the new Colony, where the Sick might be put on shore, and their Places supplied by fresh Men, a great Part of the South Continent might be discovered in one Summer: For, when the Seamen were once secure of a good Retreat, as the Island of *Juan Fernandez*, well settled, would be, they would not be uneasy, or afraid of wanting Provisions, if they cruised a few Weeks, more or less, in the South Seas. Besides, there would be no Occasion for reducing them to short Allowance; and, while they lived in present Plenty, and without Apprehension of future Wants, they would certainly be in sufficient Spirits to undertake any thing their Officers could reasonably expect from them.

The Voyages of *Sebovten* and *Dampier*, as well as that which occasioned these Remarks, plainly shew, that it is the Dread of so long a Run as to the *East Indies*, which intimidates the Sailors in these Seas, and occasions such frequent Mutinies, such perpetual Dissensions, as must necessarily impede, and even defeat, the best-laid Project for Discoveries. Add to all this, that, in two or three Years time, there is the highest Probability, that the Produce of the Trade that might be established in these Southern Islands, would not only defray the Expence of the Undertaking, but make considerable Returns; and then all Difficulties would be over. There would be enough struggling to share in the Advantages of a Commerce so long neglected; but the Settlement at *Juan Fernandez* would prevent this, and secure, for at least thirty or forty Years, the greatest Part of the Profits to the original Proprietors.

This, or something like it, was undoubtedly Mr. *Roggeveen's* Plan; and it must certainly add some Degree of Credit to his Scheme, that it was twice approved by the *West India* Company in *Holland*, the Directors of which are always Men of Business, and of distinguished Abilities, and who undoubtedly would not have been at so great an Ex-

gence as this Voyage cost them, if they had not been perfectly well satisfied, that the Design was rational in all respects, and practicable in its nature; nor could they be at all displeas'd with the Report of this Voyage, which, tho' not very successful upon the Whole, yet was so in Part, and has given six or seven new Lights, as render it sufficiently evident, that there wants nothing but Perseverance to perfect all that was propos'd. How it fell out, that this Design was abandoned, notwithstanding these Probabilities in its Favour, I cannot pretend to say; but whoever reflects on the Advantages that are now derived from our Plantations, on the Difficulties that attended planting them, on the many Mischiefs in planting them, and the plausible Discourses made against planting them at all; I say, whoever reflects naturally upon this, will readily confess, that no conclusive Argument can be drawn from the *Dutch West India Company's* neglecting this Design. It may, perhaps, be the Result of a Timidity in the Directors, who are afraid to launch out Money on a Project that has once miscarried; for it is not in all Countries that Directors despise the Opinion of their Constituents, or of the World, and follow their own, and their own Interest too sometimes, at other Peoples Expence. But I rather think the *East India Company* have found Ways and Means to engage them to desist from what to them appeared so dangerous to their Commerce. I mention this purely as a Conjecture, of which I neither have, or pretend to have, the smallest Proof. But when we consider, that, in fact, this is a Project for bringing the Commodities of the *Indies* into *Europe* by a new Route, we need not wonder, that every *East India Company* is alarmed at it; because, for the very same Reasons that the *Venitians* were beat out of the *East India Trade*, by the Discovery of a Passage round the Cape of *Good Hope*, the present Companies must lose their Trade, if a better and more commodious Passage can be found. It was the Sense of this, that stirr'd up all the Endeavours that have been made to discover a Passage by the North-east, and by the North-west; and therefore, if it should once appear, that the Passage already found by the South-west will co as well, and that as great Returns may be made in fifteen, or at least in eighteen Months, as in three Years by the other, it must certainly fall into Disuse.

I know it may be objected, that the Hardships that have been lately sustain'd in passing *Cape Horn*, are sufficient to answer all I have said; but I think, on the contrary, that I have much more Reason to assert, that what I have said ought to destroy the Notion of these Hardships. I am very far from denying the Matter of Fact; but if People go at a wrong Season of the Year, embarrass'd with Things that are not necessary, and destitute of those that are, they may well enough fall into such Distresses, and yet other People take the same Route without feeling them. Let any Man read *Frezier's* Voyage, and I think he will be satisfied, that it is very possible to get into the South Seas without being destroyed by the Scurvy; for I don't remember, that he makes any great Complaints about the Matter. But, to put the Thing out of Dispute, let us but recollect, that *Jagues le Maire* pass'd through the South Seas into the *East Indies*, without so much as losing a Man; and we must be convinc'd, that the same is practicable now. I believe there are few Voyages, in which the Sailors met with more Hardships, than in that of which we are speaking; But from whence did they proceed? Why, our Author has very fairly and honestly told us, from the private Views of the principal Officers, who were in a Hurry to get to the *East Indies*; for otherwise they might have met with Refreshment enough; So that it was not the Prosecution of the Discovery that brought upon them such Hardships, but it was their own ill Conduct that defeated the Discovery, and brought Discredit on the Voyage. But if Mr. *Roggewein's* Plan was to be executed in its full Extent, that is to say, if the Ship employ'd for making this Discovery sail'd at the proper Season of the Year, which appears to be about the Beginning of *November*, refresh'd at the Cape of *Verdé* Islands, proceed'd from them to the Island of *St. Cataline's*, and so double *Cape Horn* early in the Year, they might reach *Juan Fernandez* in very tolerable Condition; much more, if proper Settlements were made with

a View to this Discovery; in which Case, I make no doubt but, in twenty Years, all the Difficulties of this Navigation would be as much forgot, as those of the Cape of *Good Hope* are already.

I must confess, that I have taken a great deal of Pains upon this Subject, from an earnest Desire, that this Scheme of discovering these Southern *Indies*, might appear in its true Light to the *British* Nation, and in order to shew how possible it is for us to reap the Benefit, not of the Discoveries only, but of the Errors and Oversight of other People. We are daily complaining, though I hope without Reason, of the Decay of Trade: We are daily repining at the Restrictions on our Trade, for which, without doubt, there is more Reason; since it is visible, that the Commerce between our own Island, and that of *Barbadoes*, employs five times the Number of Ships that are in the Service of all our exclusive Companies put together: But Complaints are effeminate Things; we ought to behave like Men, and endeavour to find Remedies, if we really think ourselves aggrieved. If, as many People say, most Trades are overstock'd; or if, as most People say, the most beneficial Branches of Trade are cramped by the before-mentioned Restrictions; it is undoubtedly our Business to find out new Trades, if it be possible; or, at least, it is worth our while to make some Attempt, where, as in the present Case, there is a probable Prospect of Success. For this Purpose, there never was a Season more convenient than the present; the War has destroyed some Branches of our Trade, and suspends many others: Yet the War affords us fairer Opportunities for undertaking any Expeditions like this, than we could have in a Time of profound Peace.

We have now no Reason to be complainant to the *Spaniards*, or to be afraid of the Resentment of our Neighbours, in case we should take Possession of *Juan Fernandez*, and settle it: In short, we have nothing to fear, but all Things to hope, all Things to expect, if we are not wanting to ourselves, and more inclin'd to complain of what we have not, than industrious to acquire what we might have with very little Trouble. There may, indeed, be objected to all this, that the Discoveries hitherto made consist but of small Islands, or of Continents not thoroughly examined: Yet this Objection proves nothing, if it be certain, that such of these Islands as have been examined are well inhabited; and that the Continents not examined are so situated, as to justify the Observations made by our Author in this Voyage; because, in this Case, the Objection amounts to no more than this, that it is in vain to attempt to discover Countries, where there is no Certainty of gaining great Advantages: And what is this but saying, in other Words, that we ought not to attempt Discoveries at all?

If the World had been always of that Mind, both the *East* and the *West Indies* had still remained undiscovered. What Prejudice would have result'd from thence to *Europe*, may appear from the Consideration of the different Circumstances of Things since the Discovery of those Countries, which have undoubtedly occasioned not only a mighty Increase of Shipping amongst the Nations possess'd of Plantations in those Parts, but also of domestic Industry; and whatever increases the Manufactures of a Country, increases the Wealth of its Inhabitants; or, take it in another Light, and it plainly increases their Happiness, by enabling them to purchase, by their Labour, the Necessaries and the Conveniences of Life, which otherwise (that is, without Trade) their Labour would not procure. To be more effectually convinc'd of this, we may compare the present State of those Countries, that actually carry on a large Commerce in those Parts of the World, and the Countries which have no such Commerce. For Instance, What is the Reason, that *Great Britain* and *Holland* make so much a greater Figure in *Europe*, and that their Subjects are so much richer, than those of *Sweden* or *Denmark*? Does it not plainly result from the great Commerce of the former, compar'd with that of the latter? Is not this the Opinion of the ablest Judges? And is it not confessed by the *Swedes* and *Danes* themselves, who are now making great Efforts, in order to obtain a Share in the Commerce of the *East Indies*, and have actually made some Progress in their Design? Let us consider, therefore,

that, if other Nations proceed, and we stand still, they will certainly overtake us; and, before they do this, our Trade must necessarily decay, and fall off.

To prevent this, the safest, plainest, and most speedy Method is, to endeavour to make new Discoveries, that is, in effect, to endeavour finding out new Markets. If there be so large a Tract of Country, as our Author supposes, and so many Islands undiscovered, in the South, they must be worth the discovering, for these Reasons: If any of these Countries are absolutely uninhabited, we are at least sure that they lie in such a Climate as gives us Hopes of their producing the richest Commodities, or a Certainty of our being able to produce them, by raising new Colonies and Plantations. We shall very soon be satisfied of this, if we reflect on the Advantages derived from the settling the small Island of *Barbados*: And, if the Profits arising from Sugar are so large, what might be expected, or, rather, what might we not expect, from a Country of the same Extent, which would produce Cloves, Nutmegs, or Cinnamon? It is true, that formerly the Power of the *Dutch* might have been apprehended, who have shewn a very stubborn Resolution of keeping these rich Commodities intirely to themselves: But at present there can be no such Fear, because our maritime Power is sufficient to protect any just Pretension; and, on the other hand, we ought not to suspect, that our Governors would have such a Complaisance for any foreign Interest, as to sacrifice to it our own. On the other hand, if these Southern Countries are inhabited by Savages, there is a great Probability of our obtaining the most valuable Commodities, either in Exchange for the Necessaries of Life, or for those Trifles, which we know, by Experience, such Savages naturally admire.

But it may be, and indeed is, far more probable, that there are civilized Nations in many, or at least in some, of these Countries; and with them, no doubt, we may carry on a very advantageous Trade: For the Commodities of one Part of the World are always considered as Rarities in another Part; and, as Rarities, they will naturally fetch an high Price: So that if we can but once esta-

blish a Trade, and a Trade at so great a Distance, it must turn much to our Benefit.

Upon the Whole, therefore, the only Point that remains to be settled, is, the producing such further Evidence as may beget a clear and full Persuasion, that there really is a vast Tract of Country, though hitherto but imperfectly discovered, in the South. In order to do this, and to confirm what the Author of this Voyage has asserted upon that Head, I cannot think of a better Method, than adding two Voyages, by way of Appendix to this; the rather, because they will contribute, both to explain what he has laid down only in short and general Terms, and also complete what we have to deliver with regard to the immediate Subject of this Book; viz. *the Progress that has been made in the Circum-navigating of the Globe*: Besides, both these Voyages are not only curious in themselves, but have this farther to recommend them; that the former never was published in our Language before, and the latter so imperfectly, that this new and full Translation which we give our Readers, becomes so much the more valuable. It is a Thing that has been often, and indeed justly, complained of, that in the largest Collections of Voyages, in our Language, there has been little more than perpetual Repetitions, while abundance of important Pieces, published in other Countries, have been neglected, either through want of Care, or want of Information. But we may safely assert, that nothing of this sort can hitherto be imputed to us, since we have faithfully executed the Plan we laid down, and have given our Readers not short imperfect Abridgments, or loose and unconnected Relations, but a regular Series of all the Voyages that have hitherto been made round the World, with the Addition of such scarce and curious Accounts, as was requisite to render the Discoveries mentioned in them as perfect as it was possible: And the same Spirit, the same Diligence, shall, with the Blessing of God, appear as fully in the remaining Part of the Work. It is indeed a kind of Respect which is due to the World, a thing every way incumbent upon us, considering the kind Treatment we have received, and the Encouragement afforded us, by the Public.

SECTION XXI.

The Voyage and Shipwreck of Captain FRANCIS PELSART, in the Batavia, on the Coast of New Holland, and his succeeding Adventures.

[From the Collections of M. Thevenot.]

1. *A short Account of the Design of this Voyage.* 2. *Captain Pelsart, in the Batavia, shipwreck'd on the Coast of New Holland.* 3. *Obliged to leave his People on three desert Islands, in order to go in Search of Water.* 4. *Account of the Coast, and its Inhabitants.* 5. *He is obliged to proceed to Batavia, in order to obtain Succours.* 6. *The Difficulties and Dangers he met with in his Passage.* 7. *The Supercargo, in his Absence, forms a Conspiracy, and murders a great Part of the Crew.* 8. *The Supercargo is defeated, and made Prisoner.* 9. *Captain Pelsart returns from Batavia, and defeats the Mutineers.* 10. *Is obliged, for his own Safety, to execute them all; and returns afterwards, with his Ship's Company, to Batavia.* 11. *Remarks upon the Voyage.*

IT has appeared very strange to some very able Judges of Voyages, that the *Dutch* should make so great Account of the Southern Countries, as to cause the Map of them to be laid down in the Pavement of the Stadt-houfe at *Amsterdam*, and yet publish no Descriptions of them. This Mytery was a good deal heightened by one of the Ships, that first touched on *Carpenter's Land*, bringing home a considerable Quantity of Gold, Spices, and other rich Goods: In order to clear up which, it was said, that these were not the Product of the Country, but were fished out of the Wreck of a large Ship that had been lost upon the Coast: But this Story did not satisfy the Inquisitive, because not attended with the Circumstances necessary to establish its Credit; and, therefore, they suggested, that, instead of taking away the Obscurity, by relating the Truth, this Tale was invented, in order to hide it more effectually. This Suspicion gained Ground the more, when it was known that the *Dutch East*

India Company from *Batavia* had made some Attempts to conquer a Part of the Southern Continent, and had been repulsed with Loss; of which, however, we have no distinct or perfect Relation, and all that hitherto has been collected in reference to this Subject, may be reduced to two Voyages; the first of which is to be the Subject of this, and the other of the succeeding Section. All that we know concerning the following Piece, is, that it was collected from the *Dutch Journal of the Voyage*. And, having said thus much by way of Introduction, we now proceed to the Translation of this short History.

2. The Directors of the *East India Company*, animated by the Return of five Ships, under General *Carpenter*, richly laden, caused, the very same Year, 1628. eleven Vessels to be equipped for the same Voyage: Amongst which, there was one Ship called the *Batavia*, commanded by Capt. *Francis Pelsart*. They sailed out of the *Taxel* on the 28th of October 1628; and, as it would be tedious and trouble-

some to the Reader to set down a long Account of Things perfectly well known, I shall say nothing of the Occurrences that happened in their Passage to the Cape of Good Hope; but content myself with observing, that, on the 4th of June in the following Year 1629, this Vessel, the *Batavia*, being separated from the Fleet in a Storm, was driven on the *Abralles* or Shoals, which lie in the Latitude of 28° South, and which have been since called by the *Dutch* the *Abralles* of *Frederic Houtman*. Captain *Pelsart*, who was sick in Bed when this Accident happened, perceiving that his Ship had struck, ran immediately upon Deck. It was Night indeed; but the Weather was fair, and the Moon shone very bright; the Sails were up; the Course they steered was North-east by North; and the Sea appeared, as far as they could behold it, covered with a white Froth. The Captain called up the Master, and charged him with the Loss of the Ship; who excused himself by saying, he had taken all the Care he could; and that, having discerned this Froth at a Distance, he asked the Steersman, What he thought of it; who told him, 'I hat the Sea appeared white, by its reflecting the Rays of the Moon. The Captain then asked him, What was to be done; and in what Part of the World he thought they were. The Master replied, That God only knew that; and that the Ship was fast on a Bank hitherto undiscovered. Upon this, they began to throw the Lead, and found, that they had about forty-eight Feet Water before, and much less behind, the Vessel. The Crew immediately agreed to throw their Cannon overboard, in hopes, that, when the Ship was lightened, she might be brought to float again. They let fall an Anchor, however; and, while they were thus employed, a most dreadful Storm arose of Wind and Rain; which soon convinced them of the Danger they were in; for, being surrounded with Rocks and Shoals, the Ship was perpetually striking.

They then resolved to cut away the Main-mast; which they did: And this augmented the Shock; neither could they get clear of it, tho' they cut it close by the Board, because it was much entangled with the Rigging. They could see no Land, except an Island, which was about the Distance of three Leagues, and two smaller Islands, or rather Rocks, which lay nearer. They immediately sent the Master to examine them, who returned about nine in the Morning, and reported, that the Sea, at High-water, did not cover them; but that the Coast was so rocky, and full of Shoals, that it would be very difficult to land upon them. They resolved, however, to run the Risk, and to send most of their Company on shore, to pacify the Women, Children, sick People, and such as were out of their Wits with Fear, whose Cries and Noise served only to disturb them. About ten o'Clock, they embarked these in their Shallop and Skiff; and, perceiving their Vessel began to break, they doubled their Diligence. They likewise endeavoured to get their Bread up; but they did not take the same Care of the Water, nor reflecting in their Fright, that they might be much distressed for want of it on shore; and what hindered them most of all was, the brutal Behaviour of some of the Crew, that made themselves drunk with the Wine, of which no Care was taken. In short, such was their Constition, that they made but three Trips that Day, carrying over to the Island 180 Persons, twenty Barrels of Bread, and some small Casks of Water. The Master returned on board towards Evening, and told the Captain, that it was to no purpose to send more Provisions on shore, since the People only wasted those they had already. Upon this, the Captain went in the Shallop to put things in better Order; and was then informed, that there was no Water to be found upon the Island. He endeavoured to return to the Ship, in order to bring off a Supply, together with the most valuable Part of their Cargo; but a Storm suddenly arising, he was forced to return.

3. The next Day was spent in removing their Water, and most valuable Goods, on shore; and afterwards, the Captain in the Skiff, and the Master in the Shallop, endeavoured to return to the Vessel; but found the Sea run so high, that it was impossible to get on board. In this Extremity, the Carpenter threw himself out of the Ship, and swam to them, in order to inform them to what Hardships those left in the Vessel were reduced; and they sent him back, with Orders for them to make Rafts, by tying the

Planks together, and endeavour, on these, to reach the Shallop and Skiff; but, before this could be done, the Weather became so rough, that the Captain was obliged to return, leaving, with the utmost Grief, his Lieutenant, and seventy Men, on the very Point of perishing on board the Vessel. Those who were got on the little Island were not in much better Condition; for, upon taking an Account of their Water, they found they had not above forty Gallons for forty People; and on the larger Island, where there were 120, their Stock was still less. Those who were on the little Island began to murmur, and to complain of their Officers, because they did not go in Search of Water in the Islands that were within Sight of them; and they represented the Necessity of this to Captain *Pelsart*; who agreed to their Request; but insisted, before he went, to communicate his Design to the rest of his People. They consented to this; but not till the Captain had declared, that, without the Consent of the Company on the large Island, he would, rather than leave them, go and perish on board the Ship. When they were got pretty near the shore, he, who commanded the Boat, told the Captain, that, if he had any thing to say, he must cry out to the People; for that they would not suffer him to go out of the Boat. The Captain immediately attempted to throw himself overboard, in order to swim to the Island. Those who were in the Boat prevented him; and all that he could obtain of them was, to throw on shore his Table-book, in which he wrote a Line or two to inform them, *that he was gone in the Skiff to look for Water in the adjacent Islands.*

He accordingly coasted them all with the greatest Care, and found, in most of them, considerable Quantities of Water in the Holes of the Rocks; but so mixed with the Sea-water, that it was unfit for Use; and therefore they were obliged to go farther. The first thing they did was, to make a Deck to their Boat, because they found it was impracticable to navigate those Seas in an open Vessel. Some of the Crew joined them by that time the Work was finished; and the Captain having obtained a Paper, signed by all his Men, importing, that it was their Desire, that he should go in Search of Water, he immediately put to Sea, having first taken an Observation, by which he found they were in the Latitude of 28° 13' South. They had not been long at Sea, before they had Sight of the Continent, which appeared to them to lie about sixteen Miles North by West from the Place where they had suffered Shipwreck. They found about twenty-five or thirty Fathom Water; and, as Night drew on, they kept out to Sea; and, after Midnight, stood in for the Land, that they might be near the Coast in the Morning. On the 9th (of June) they found themselves, as they reckoned, about three Miles from the Shore; on which they plied all that Day, failing sometimes North, sometimes West, the Country appearing low, naked, and the Coast excessively rocky; so that they thought it resembled the Country near *Dover*. At last they saw a little Creek, into which they were willing to put, because it appeared to have a sandy Bottom; but, when they attempted to enter it, the Sea ran so high, that they were forced to desist.

On the 10th, they remained on the same Coast, plying to-and-again, as they had done the Day before; but the Weather growing worse and worse, they were obliged to abandon their Shallop, and even to throw a Part of their Bread overboard, because it hindered them from clearing themselves of the Water, which their Vessel began to make very fast. That Night it rained most terribly, which, tho' it gave them much Trouble, afforded them Hopes, that it would prove a great Relief to the People they had left behind them on the Islands. The Wind began to sink on the 11th; and, as it blew from the West South-west, they continued their Course to the North, the Sea running still so high, that it was impossible to approach the Shore. On the 12th, they had an Observation, by which they found themselves in the Latitude of 27°. They sailed with a South-east Wind all that Day along the Coast, which they found so steep, that there was no getting on shore; inasmuch as there was no Creek, or low Land, without the Rocks, as is commonly observed on Sea-coasts; which gave them the more Pain, because within-land the Country appeared extremely fruitful and pleasant. They found them-

selves,

seves, on the 13th, in the Latitude of 25° 40', by which they discovered, that the Current ran to the North. They were, at this time, over-against an Opening; the Coast lying to the North-east; they continued a North Course, but found the Coast one continued Rock of a red Colour, all of an Height, against which the Waves broke with such Force, that it was impossible for them to land.

4. The Wind blew very fresh in the Morning on the 14th; but, towards Noon; it fell calm; they were then in the Height of 24°, with a small Gale at East; but the Tide still carried them farther North than they desired, because their Design was to make a Descent as soon as possible; and with this View they sailed slowly along the Coast, till, perceiving a great deal of Smoke at a Distance, they rowed towards it as fast as they were able, in hopes of finding Men, and Water of course: However, when they came near the Shore, they found it so steep, so full of Rocks, and the Sea beating over them with such Fury, that it was impossible to land: Six of the Men, however, trusting to their Skill in Swimming, threw themselves into the Sea, and resolved to get on shore at any Rate; which, with great Difficulty and Danger, they at last effected, the Boat remaining at Anchor in 25 Fathom Water. The Men on shore spent the whole Day in looking for Water; and, while they were thus employed, they saw four Men, who came up very near; but one of the *Dutch* Sailors advancing towards them, they immediately ran away as fast as they were able, so that they were distinctly seen by those in the Boat. These People were black Savages, quite naked, not having so much as any Covering about their Middle. The Sailors, finding no Hopes of Water on all the Coast, swam on board again, much hurt and wounded by their being beat by the Waves upon the Rocks; and, as soon as they were on board, they weighed Anchor, and continued their Course along the Shore, in hopes of finding some better Landing-place.

On the 15th, in the Morning, they discovered a Cape, from the Point of which there ran a Ridge of Rocks a Mile into the Sea, and behind it another Ridge of Rocks: They ventured between them, as the Sea was pretty calm; but, finding there was no Passage, they soon returned. About Noon, they saw another Opening; and the Sea being still smooth, they entered it, though the Passage was very dangerous, inasmuch as they had but two Feet Water, and the Bottom full of Stones; the Coast appearing a flat Sand for about a Mile. As soon as they got on shore, they fell to digging in the Sand; but the Water that came into their Wells was so brackish, that they could not drink it, though they were on the very Point of choaking for Thirst: At last, in the Hollows of the Rocks, they met with considerable Quantities of Rain-water, which was a great Relief to them, since they had been for some Days at no better Allowance than a Pint apiece; they soon furnished themselves in the Night with about eighty Gallons, perceiving, in the Place where they landed, that the Savages had been there lately, by a large Heap of Ashes, and the Remains of some Cray-fish.

5. On the 6th, in the Morning, they returned on shore, in hopes of getting more Water, but were disappointed; and, having now Time to observe the Country, it gave them no great Hopes of better Success, even if they had travelled farther within Land, which appeared a thirsty barren Plain, covered with Ant-hills, so high, that they looked, afar off, like the Huts of Negroes; and, at the same time, they were so plagued with Flies, and those in such Multitudes, that they were scarce able to defend themselves. They saw at a Distance eight Savages, with each a Staff in his Hand, who advanced towards them within Musket-shot; but as soon as they perceived the *Dutch* Sailors moving towards them, they fled as fast as they were able. It was, by this time, about Noon; and, perceiving no Appearance either of getting Water, or entering into any Correspondence with the Natives, they resolved to go on board, and continue their Course towards the North, in hopes, as they were already in the Latitude of 22° 17', they might be able to find the River of *Jacob Remmescens*: But the Wind veering about to the North-east, they were not able to continue longer upon that Coast; and therefore, reflecting that they were now above one hundred Miles from the Place where they were shipwrecked, and

had scarce as much Water as would serve them in their Passage back, they came to a settled Resolution of making the best of their Way to *Batavia*, in order to acquaint the Governor-General with their Misfortunes, and to obtain such Assistance, as was necessary to get their People off the Coast.

6. On the 17th, they continued their Course to the North-east, with a good Wind, and fair Weather; the 18th and 19th it blew hard, and they had much Rain; on the 20th, they found themselves in 19° 22'; on the 22d, they had another Observation, and found themselves in the Height of 16° 10'; which surpris'd them very much, and was a plain Proof, that the Current carried them Northwards at a great Rate; on the 27th, it rained very hard, so that they were not able to take an Observation; but towards Noon they saw, to their great Satisfaction, the Coasts of *Java*, in the Latitude of 8°, at the Distance of about 4 or 5 Miles. They altered their Course to West North-west; and, towards Evening, entered the Gulph of an Island, very full of Trees, where they anchored in eight Fathom Water, and there passed the Night; on the 28th, in the Morning, they weighed, and rowed with all their Force, in order to make the Land, that they might search for Water, being now again at the Point of perishing for Thirst. Very happily for them, they were no sooner on shore, than they discovered a fine Rivulet, at a small Distance; where, having comfortably quenched their Thirst, and filled all their Casks with Water, they, about Noon, continued their Course for *Batavia*.

On the 29th, about Midnight, in the second Watch, they discovered an Island, which they left on their Star-board; about Noon, they found themselves in the Height of 6° 48'; about three in the Afternoon, they passed between two Islands; the Westernmost of which appeared full of Cocoa-trees. In the Evening, they were about a Mile from the South Point of *Java*; and, in the second Watch, exactly between *Java* and the Isle of *Princes*. The 30th, in the Morning, they found themselves on the Coast of the last-mentioned Island, not being able to make above two Miles that Day. On July 1. the Weather was calm; and, about Noon, they were three Leagues from *Duwart-ink-swegh*, i. e. *Tewart-the-way Island*; but, towards the Evening, they had a pretty brisk Wind at North-west, which enabled them to gain that Coast. On the 2d, in the Morning, they were right-against the Island of *Tepars besters*, and were obliged to lay at Anchor till eleven o'Clock, waiting for the Sea breeze, which, however, blew so faintly, that they were not able to make above two Miles that Day; about Sun-set, they perceived a Vessel between them and *Tewart-the-way Island*; upon which they resolved to anchor as near the Shore as they could that Night, and there wait the Arrival of the Ship. In the Morning, they went on board her, in hopes of procuring Arms for their Defence, in case the Inhabitants of *Java* were at War with the *Dutch*. They found two other Ships in Company, on board one of which was Mr. *Ramburg*, Counsellor of the *Indies*; Captain *Pelfart* went immediately on board his Ship, where he acquainted him with the Nature of his Misfortune, and went with him afterwards to *Batavia*.

7. We will now leave the Captain soliciting Succours from the Governor-General, in order to return to the Crew, who were left upon the Islands, among whom there happened such Transactions, as, in their Condition, the Reader would little expect, and perhaps will hardly credit. In order to their being thoroughly understood, it is necessary to observe, that they had for Supercargo one *Jerem Cornelis*, who had been formerly an Apothecary at *Hartbeek*. This Man, when they were on the Coast of *Africa*, had plotted with the Pilot, and some others, to run away with the Vessel, and either to carry her into *Dunkirk*, or to turn Pirates in her on their own Account. This Supercargo had remained ten Days on board the Wreck, not being able, in all that time, to get on shore. Two whole Days he spent on the Main-mast, floating to and fro, till at last, by the Help of one of the Yards, he got to Land. When he was once on shore, the Command, in the Absence of Captain *Pelfart*, devolved of course upon him; which immediately revived in his Mind his old Design, inasmuch that he resolved to lay hold of this Opportunity, to make him-

self Master of all that could be saved out of the Wreck; conceiving, that it would be easy to surprize the Captain on his Return; and determining to go on the Account, that he was to say, to turn Pirate in the Captain's Vessel. In order to carry this Design into Execution, he thought it necessary for them to rid themselves of such of the Crew, as were not like to come into their Scheme; but before he proceeded to dip his Hands in Blood, he obliged all the Conspirators to sign an Instrument, by which they engaged to stand by each other.

The whole Ship's Company were on shore in three Islands, the greatest Part of them in that where *Cornelis* was; which Island they thought fit to call the Burying-place of *Batavia*. One Mr. *Weybbays* was sent with another Body into an adjacent Island, to look for Water; which, after twenty Days Search, he found, and made the appointed Signal, by lighting three Fires; which, however, were not seen, nor taken notice of, by those under the Command of *Cornelis*, because they were busy in butchering their Companions, of whom they had murdered between thirty and forty; but some few, however, got off upon a Raft of Planks tied together; and went to the Island where Mr. *Weybbays* was, in order to acquaint him with the dreadful Accident that had happened. Mr. *Weybbays* having with him forty-five Men, they all resolved to stand upon their Guard, and to defend themselves to the last Man, in case these Villains should attack them. This, indeed, was their Design; for they were apprehensive both of this Body, and of those who were on the third Island, giving Notice to the Captain, on his Return, and thereby preventing their Intention of running away with his Vessel. But, as this third Company was by much the weakest, they began with them first, and cut them all off, except five Women, and seven Children; not in the least doubting, that they should be able to do as much by *Weybbays*, and his Company; in the mean time, having broke open the Merchants Chests, which had been saved out of the Wreck, they converted them to their own Use; without Ceremony.

8. The Traitor, *Jerom Cornelis*, was so much elevated with the Success that had hitherto attended his Villainy; that he immediately began to fancy all Difficulties were over; and gave a Loose to his vicious Inclinations, in every respect. He ordered Clothes to be made of rich Stuffs, that had been saved, for himself and his Troop; and, having chosen out of them a Company of Guards, he ordered them to have scarlet Coats, with a double Lace of Gold or Silver. There were two Ministers Daughters among the Women, one of which he took for his own Mistress, gave the second to a Favourite of his, and ordered that the other three Women should be common to the whole Troop. He afterwards drew up a Set of Regulations, which were to be the Laws of his new Principality, taking to himself the Stile and Title of Captain-General, and obliging his Party to sign an Act, or Instrument, by which they acknowledged him as such. These Points once settled, he resolved to carried on the War. He first of all embarked on board two Shallops twenty-two Men, well armed, with Orders to destroy Mr. *Weybbays*, and his Company; and, on their miscarrying, he undertook a like Expedition, with thirty-seven Men; in which, however, he had no better Success; for Mr. *Weybbays*, with his People, though armed only with Staves, with Nails drove into their Heads, advanced even into the Water to meet them, and, after a brisk Engagement, compelled these Murderers to retire.

Cornelis then thought fit to enter into a Negotiation, which was managed by the Chaplain, who remained with Mr. *Weybbays*; and, after several Comings and Goings, from one Party to the other, a Treaty was concluded upon the following Terms; *viz.* That Mr. *Weybbays*, and his Company, should for the future remain undisturbed, provided they delivered up a little Boat, in which one of the Sailors had made his Escape from the Island in which *Cornelis* was with his Gang, in order to take Shelter on that where *Weybbays* was with his Company. It was also agreed, that the latter should have a Part of the Stuffs and Silks given them for Clothes, of which they stood in great Want. But, while this Affair was in Agitation, *Cornelis* took the Opportunity of the Correspondence between them

being restored, to write Letters to some *French* Soldiers that were in *Weybbays's* Company, promising them six thousand Livres apiece; if they would comply with his Demands; not doubting but, by this Artifice, he should be able to accomplish his End.

His Letters; however, had no Effect; on the contrary, the Soldiers, to whom they were directed, carried them immediately to Mr. *Weybbays*. *Cornelis*, not knowing that this Piece of Treachery was discovered, went over the next Morning, with three or four of his People, to carry to Mr. *Weybbays* the Clothes that had been promised him: As soon as they landed, *Weybbays* attacked them, killed two or three, and made *Cornelis* himself Prisoner. One *Wouterlofs*, who was the only Man that made his Escape, went immediately back to the Conspirators, put himself at their Head, and came the next Day to attack *Weybbays*, but met with the same Fate as before; that is to say, he, and the Villains that were with him, were soundly beat.

9. Things were in this Situation, when Captain *Pelsart* arrived in the *Sardam* Frigate: He sailed up to the Wreck; and saw, with great Joy, a Cloud of Smoke ascending from one of the Islands; by which he knew, that all his People were not dead. He came immediately to an Anchor; and having ordered some Wine and Provisions to be put into the Skiff, resolved to go in Person with these Refreshments to one of these Islands. He had hardly quitted the Ship; before he was boarded by a Boat from the Island to which he was going; there were four Men in the Boat, of whom *Weybbays* was one, who immediately ran to the Captain, told him what had happened, and begged him to return to his Ship immediately, for that the Conspirators intended to surprize her; that they had already murdered 125 Persons, and that they had attacked him, and his Company, that very Morning, with two Shallops.

While they were talking, the two Shallops appeared; upon which the Captain rowed to his Ship as fast as he could, and was hardly got on board before they arrived at the Ship-side. The Captain was surprized to see Men in red Coats, laced with Gold and Silver, with Arms in their Hands. He demanded what they meant by coming on board armed. They told him he should know, when they were on board the Ship. The Captain replied, that they should come on board, but that they must first throw their Arms into the Sea; which if they did not do immediately, he would sink them as they lay. As they saw, that Disputes were to no Purpose, and that they were intirely in the Captain's Power, they were obliged to obey. They accordingly threw their Arms overboard, and were then taken into the Vessel, where they were instantly put in Irons: One of them, whose Name was *John Bremen*, and who was first examined, owned, that he had murdered, with his own Hands, or had assisted in murdering, no less than twenty-seven Persons. The same Evening *Weybbays* brought his Prisoner *Cornelis* on board, where he was put in Irons, and strictly guarded.

10. On the 18th of *September*, Captain *Pelsart*, with the Master, went to take the rest of the Conspirators in *Cornelis's* Island. They went in two Boats. The Villains, as soon as they saw them land, lost all their Courage, and fled from them. They surrendered without a Blow, and were put in Irons with the rest. The Captain's first Care was to recover the Jewels which *Cornelis* had dispersed among his Accomplices: They were, however, all of them soon found, except a Gold Chain, and a Diamond Ring; the latter was also found at last, but the former could not be recovered. They went next to examine the Wreck, which they found staved into an hundred Pieces; the Keel lay upon a Bank of Sand on one Side; the fore Part of the Vessel stuck fast on a Rock; and the rest of her lay here and there, as the Pieces had been driven by the Waves, so that Captain *Pelsart* had very little Hopes of saving any of the Merchandise. One of the People belonging to *Weybbays's* Company told him, that one fair Day, which was the only one they had in a Month, as he was fishing near the Wreck, he had struck the Pole in his Hand against one of the Chests of Silver; which revived the Captain a little, as it gave him Reason to expect, that something might still be saved. They spent all the 19th in examining

examining the rest of the Prisoners, and in confronting them with those who escaped from the Massacre.

On the 20th, they sent several Kinds of Refreshments to *Wybbays's* Company, and carried a good Quantity of Water from the Isle: There was something very singular in finding this Water; the People who were on shore there, had subsisted near three Weeks on Rain-water, and what lodged in the Cliffs of the Rocks, without thinking, that the Water of two Wells, which were on the Island, could be of any Use, because they saw them constantly rise and fall with the Tide; from whence they fancied, they had a Communication with the Sea, and consequently, that the Water must be brackish: But, upon Trial, they found it to be very good; and so did the Ship's Company, who filled their Casks with it.

On the 21st, the Tide was so low, and an East South-east Wind blew so hard, that, during the whole Day, the Boat could not go out. On the 22d, they attempted to fish upon the Wreck; but the Weather was so bad, that even those, who could swim very well, durst not approach it. On the 25th, the Master, and the Pilot, the Weather being fair, went off again to the Wreck; and those who were left on shore, observing that they wanted Hands to get any thing out of her, sent off some to assist them. The Captain went also himself, to encourage the Men; who soon weighed one Chest of Silver, and some time after another. As soon as these were safe ashore, they returned to their Work; but the Weather grew so bad, that they were quickly obliged to desist, tho' some of their Divers from *Guzzarat* assured them, that they had found six more, which might easily be weighed. On the 26th in the Afternoon, the Weather being fair, and the Tide low, the Master returned to the Place where the Chests lay, and weighed three of them, leaving an Anchor, with a Gun tied to it, and a Buoy, to mark the Place where the fourth lay; which, notwithstanding their utmost Efforts, they were not able to recover.

On the 27th, the South Wind blew very cold. On the 28th, the same Wind blew stronger than the Day before; and, as there was no Possibility of fishing on the Wreck for the present, Captain *Peljar's* called a Council, to consider what they should do with their Prisoners; that is to say, whether it would be best to try them there upon the Spot, or to carry them to *Batavia*, in order to their being tried by the Company's Officers. After mature Deliberation, reflecting on the Number of the Prisoners, and the Temptation that might arise from the vast Quantity of Silver on board the Frigate, they came at last to a Resolution to try and execute them there; which was accordingly done: And they embarked immediately afterwards for *Batavia*.

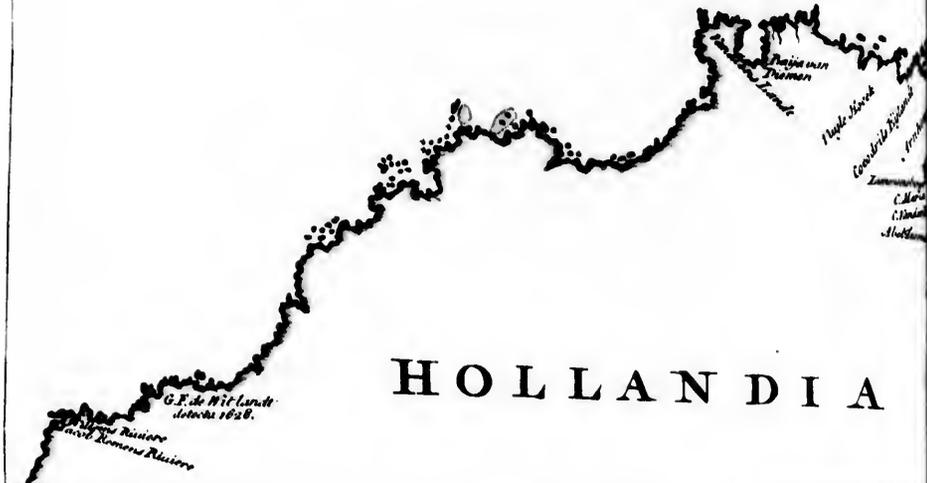

11. As this Voyage is, of itself, very short, I shall not detain the Reader with many Remarks; but shall confine myself to a very few Observations, in order to shew the Consequences of the Discovery made by Captain *Peljar's*. The Country, upon which he suffered Shipwreck, was *New Holland*, the Coast of which had not, till then, been at all examined; and it was doubtful how far it extended. There had, indeed, been some Reports spread with relation to the Inhabitants of this Country, which Captain *Peljar's* Relation shews to have been false; for it had been reported, that, when the *Dutch East India* Company sent some Ships to make Discoveries, their Landing was opposed by a Race of gigantic People, with whom the *Dutch* could by no means contend. But our Author says nothing of the extraordinary Size of the Savages, that were seen by Captain *Peljar's* People; from whence it is reasonable to conclude, that this Story was circulated with no other View, than to prevent other Nations from venturing into these Seas. It is also remarkable, that this is the very Coast surveyed by Captain *Dampier*, whose Account agrees exactly with that contained in this Voyage. Now, though it be true, that, from all these Accounts, there is nothing said, which is much to the Advantage, either of the Country, or the Inhabitants, yet we are to consider, that it is impossible to represent either in a worse Light, than that in which the Cape of *Good Hope* was placed, before the *Dutch* took Possession of it, and plainly demonstrated, that Industry could make a Paradise of what was a perfect Purgatory, while in the Hands of *Hottentots*. It therefore the Climate of this

Country be good, and the Soil fruitful, both of which are affirmed in this Relation, there could not be a proper Place for a Colony, than some Part of *New Holland*, or of the adjacent Country of *Carpentaria*. I shall give my Reasons for asserting this, when I come to make my Remarks on the succeeding Voyage. At present, I shall confine myself to the Reasons, that have induced the *Dutch East India* Company to leave all these Countries unsettled, after having first shewn so strong an Inclination to discover them; which will oblige me to lay before the Reader some Secrets in Commerce, that have hitherto escaped common Observation, and which, whenever they are as thoroughly considered as they deserve, will undoubtedly lead us to as great Discoveries as those of *Columbus* or *Magellan*.

In order to make myself perfectly understood, I must observe, that it was the finding out of the *Moluccas*, or Spice Islands, by the *Portuguese*, that raised that Spirit of Discovery, which produced *Columbus's* Voyage, which ended in finding in *America*, tho', in fact, *Columbus* intended rather to have reached this Country of *New Holland*. The Assertion is bold, and, at first Sight, may appear improbable; but a little Attention will make it so plain, that the Reader must be convinced of the Truth of what I say. The Proposition made by *Columbus* to the State of *Genoa*, the Kings of *Portugal*, *Spain*, *England*, and *Fraunce*, was this, that he could discover a new Route to the *East Indies*; that is to say, without going round the Cape of *Good Hope*. He grounded this Proposition on the spherical Figure of the Earth, from whence he thought it self-evident, that any given Point might be sailed to through the great Ocean, either by steering East or West. In his Attempt to go to the *East Indies* by a West Course, he met with the Islands and Continent of *America*; and, finding Gold and other Commodities, which, till then, had never been brought from the *Indies*, he really thought, that this was the West Coast of that Country, to which the *Portuguese* sailed by the Cape of *Good Hope*; and hence came the Name of the *West Indies*. *Magellan*, who followed his Steps, and was the only Discoverer who reasoned systematically, and knew what he was doing, proposed to the Emperor *Charles V.* to complete what *Columbus* had begun, and to find a Passage to the *Moluccas* by the West; which, to his immortal Honour, he accomplished.

When the *Dutch* made their first Voyages to the *East Indies*, which was not many Years before Captain *Peljar's* Shipwreck on the Coast of *New Holland*; for their first Fleet arrived in the *East Indies* in 1596, and *Peljar* lost his Ship in 1629; I say, when the *Dutch* first undertook the *East India* Trade, they had the Spice Islands in View; and, as they are a Nation justly famous for the steady Pursuit of whatever they take in hand, it is notorious, that they never lost Sight of their Design, till they had accomplished it, and made themselves intirely Masters of these Islands, of which they still continue in Possession. When this was done, and they had effectually driven out the *Englisch*, who were likewise settled in them, they fixed the Seat of their Government in the Island of *Ambony*, which lay very convenient for the Discovery of the Southern Countries; which therefore they prosecuted with great Diligence, from the Year 1619, to the Time of Captain *Peljar's* Shipwreck: that is, for the Space of twenty Years.

But, after they removed the Seat of their Government from *Ambony* to *Batavia*, they turned their Views another Way, and never made any Voyage expressly for Discoveries on that Side, except the single one of Captain *Tejman*; of which we are to speak in the next Section. It was from this Period of Time that they began to take new Measures; and, having made their excellent Settlement at the Cape of *Good Hope*, resolved to govern their Trade to the *East Indies* by these two capital Maxims: I. To extend their Trade over all the *Indies*; and to fix themselves so effectually in the richest Countries, as to keep all, or, at least, the best and most profitable Part of their Commerce to themselves. II. To make the *Moluccas*, and the Islands dependent on them, their Frontier; and to omit nothing that should appear necessary to prevent Strangers, or even *Dutch* Ships, not belonging to the Company, from ever navigating those Seas, and consequently from ever being acquainted with the Countries, that lie in them. How well they have pro-

This Map is very exactly copied from the Original and therefore the Dutch Names have been preserved that if hereafter any Discoveries should ever be Attempted all the places mentioned may be readily found in the Dutch Charts which must be procured for such a Voyage. The Reader is desired to observe that nothing is marked here but what has been actually discovered which is the reason of the white space between New Holland and New Zealand and again between New Zealand and New Guinea which make the south and East sides of Terra Australis; It is also requisite to observe that the Country discovered by Ferdinand de Quirous lies according to his description on the East Side of this Continent directly Opposite to Carpentaria which if attentively considered will add no small weight to the Credit of what he has written about that Country and which has been very rashly as well as very unjustly treated by some Critical Writers as a Fiction; whereas it appears from this Map of Actual Discoveries that there is a Country where Ferdinand de Quirous says he found one: And if so why may not that Country be such a one as he describes? In Tasman's Voyage we have shewn why he did not make this Matter more plain.

It is impossible to conceive a Country that promises fairer from its Situation than this of Terra Australis; no longer incognita, as this Map demonstrates, but the Southern Continent Discovered. It lies Precisely in the richest Climate of the World. If the Islands of Sumatra, Java, Borneo, abound in Precious Stones and other valuable Commodities, and the Moluccas in Spices; New Guinea and the Regions behind it must by a parity of Reason be as plentifully endowed by Nature. If the Island of Madagafcar is so Noble and plentiful a Country as all Authors speak it, and Gold, Ivory and other Commodities are common in the Southern part of Africa from Melinda down to the Cape of Good Hope, and so up again to C. Gonzalez; here are the same Latitudes in Carpentaria, New Holland, and New Zealand; If Peru overflows with Silver, if all the Mountains of Chili are filled with Gold, and this precious Metal & Stones much more precious are the product of Brazil this Continent must be the source of them.

profecuted the first Maxim, has been very largely shewn in the foregoing Section, wherein we have an ample Description of the mighty Empire in the Hands; at this Day, of their *East India Company*. As for the second Maxim, the Reader, in the Perusal of *Funnel's*, *Dampier's*, and other Voyages, but especially the first, must be satisfied, that it is what they have constantly at Heart, and which, at all Events, they are determined to pursue, at least, with regard to Strangers; and, as to their own Countrymen, the Usage they gave to Commodore *Roggewein*, and his People, is a Proof, that cannot be contested.

These Things being considered, it is very plain, that the *Dutch*, or rather the *Dutch East India Company*, are fully perswaded, that they have already as much, or more, Territory in the *East Indies*, than they can well manage; and therefore they neither do, nor ever will, think of settling *New Guinea*, *Carpentaria*, *New Holland*, or any of the adjacent Islands, till either their Trade declines in the *East Indies*, or they are obliged to exert themselves on this Side, to prevent other Nations from reaping the Benefits, that might accrue to them by their planting those Countries. But this is not all; for, as the *Dutch* have no Thoughts of settling these Countries themselves, they have taken all imaginable Pains to prevent any Relations from being published,

which might invite or encourage any other Nation to make Attempts this Way; and I am thoroughly perswaded, that this very Account of Captain *Pelsart's* Shipwreck would never have come into the World, if it had not been thought it would contribute to this End; or, in other Words, would serve to frighten other Nations from approaching to inhospitable a Coast, every-where beset with Rocks, absolutely void of Water, and inhabited by a Race of Savages more barbarous, and, at the same time, more miserable, than any other Creatures in the World.

This Reflection accounts for our publishing a Voyage, that has neither Beginning, nor End; a Voyage, which seems to give so little Light, and which serves only to present to our View a Scene of Blood and Confusion. But this Voyage, short and imperfect as it seems to be, shews us how large a Country *New Holland* is, and how conveniently situated, with respect to the Trade of the *East Indies*. But whatever there may be dark or obscure in this Section, will be fully cleared up in the next, and this Subject set in so full a Point of View, that it will be impossible to throw any Clouds over it for the future, or to persuade the World, that the Thoughts of discovering a Southern *Indies* are visionary, or the Means necessary to be taken for the perfecting that Discovery impracticable.

SECTION XXII.

The Voyage of Captain ABEL JANSEN TASMAN, for the Discovery of Southern Countries, by Direction of the Dutch East India Company.

[Taken from his original Journal.]

1. *The Occasion and Design of this Voyage.* 2. *Captain Tasman sails from Batavia, August 14. 1642.* 3. *Remarks on the Variation of the Needle.* 4. *He discovers a new Country, to which he gives the Name of Van Diemen's Land.* 5. *Sails from thence for New Zeland.* 6. *Visits the Island of the Three Kings; and goes in Search of other Islands discovered by Schouten.* 7. *Remarkable Occurrences in the Voyage.* 8. *Observations on, and Explanation of, the Variation of the Compass.* 9. *Discovers a new Island, which he calls Pylhaart Island.* 10. *And two Islands, to which he gives the Name of Amsterdamburg and Rotterdam.* 11. *And an Archipelago of twenty small Islands.* 12. *Occurrences in the Voyage.* 13. *He arrives at the Archipelago of Anthonng Java.* 14. *His Arrival on the Coast of New Guinea.* 15. *Continues his Voyage along that Coast.* 16. *Arrives in the Neighbourhood of Barning Island, and surveys the whole Coast of New Guinea.* 17. *Comes to the Islands of Jama and Moa.* 18. *Prosecutes his Voyage to Ceram.* 19. *Arrives safely at Batavia, June 15. 1643.* 20. *Consequences of Captain Tasman's Discoveries.* 21. *Remarks upon the Voyage.*

THE great Discoveries that were made by the *Dutch* in these Southern Countries, were subsequent to the famous Voyage of *Jaques le Maire*, who, in 1616, passed the Straights called by his Name. In 1618, that Part of *Terra Australis* was discovered, which the *Dutch* call *Concordia*. The next Year, the Land of *Edeles* was found, and received its Name from its Discoverer. In 1620, *Batavia* was built on the Ruins of the old City of *Jacatra*, but the Seat of Government was not immediately removed from *Ambogna*. In 1622, that Part of *New Holland*, which is called *Lewin's Land*, was first found; and in 1627, *Peter Nyets* discovered, between *New Holland* and *New Guinea*, a Country, which bears his Name. There were also some other Voyages made, of which, however, we have no sort of Account, except that the *Dutch* were continually beaten in all their Attempts to land upon this Coast. On their Settlement, however, at *Batavia*, the then General and Council of the *Indies* thought it requisite to have a more perfect Survey made of the new-found Countries, that the Memory of them at least might be preserved, in case no further Attempts were made to settle them; and it was very probably a Foresight of few Ships going that Route any more, which induced such as had then the Direction of the Company's Affairs to wish, that some such Survey and Description might be made by an able Seaman, who was well acquainted with those Coasts, and who might be able to add to the Discoveries already made, as well as furnish a more accurate Description, even of them, than had been hitherto given.

N. M. B. XXIII.

This was faithfully performed by Captain *Tasman*; and, from the Lights afforded by his Journal, a very exact and curious Map was made of all these new Countries. But his Voyage was never published intire; and it is very probable, that the *East India Company* never intended it should be published at all. However, *Dirk Rembrautz*, moved by the Excellency and Accuracy of the Work, published in *Low Dutch* an Extract of Captain *Tasman's* Journal, which has been, ever since, considered as a very great Curiosity; and, as such, has been translated into many Languages, particularly into our own, by the Care of the learned Professor of *Gresham College* *Dr. Hook*, an Abridgment of which Translation found a Place in *Dr. Harris's* Collection of Voyages. But we have made no Use of either of these Pieces, the following being a new Translation, made with all the Care and Diligence that is possible.

2. On August 14. 1642, I sailed from *Batavia* with two Vessels; the one called the *Heemskirk*, and the other the *Zee-Haan*. On September 5. I anchored at *Maurice Island*, in the Latitude of 20° South, and in the Longitude of 83° 48'. I found this Island fifty German Miles more to the East than I expected; that is to say, 3° 33' of Longitude. This Island was so called from Prince *Maurice*, being before known by the Name of *Cerne*. It is about fifteen Leagues in Circumference, and has a very fine Harbour, at the Entrance of which there is 100 Fathom Water. The Country is mountainous; but the Mountains are covered with green Trees. The Tops of these Mountains are so high, that they are lost in the Clouds, and are frequently covered

covered by thick Exhalations or Smoke, that ascends from them. The Air of this Island is extremely wholesome. It is well furnished with Fish and Fowl; and the Sea on its Coasts abounds with all sorts of Fish. The finest Ebony in the World grows here. It is a tall, strait Tree, of a moderate Thickness, covered with a green Bark, very thick, under which the Wood is as black as Pitch, and as close as Ivory. There are other Trees on the Island, which are of a bright Red, and a third Sort as yellow as Wax. The Ships belonging to the *East India* Company commonly touch at this Island for Refreshments, in their Passage to *Batavia*.

I left this Island on the Eighth of *October*, and continued my Course to the South, to the Latitude of 40° or 41° , having a strong North-west Wind; and, finding the Needle vary $23, 24$, and 25° to the 22d of *October*, I sailed from that Time to the 29th to the East, inclining a little to the South, till I arrived in the Latitude of $45^{\circ} 47'$ South, and in the Longitude of $89^{\circ} 44'$; and then observed the Variation of the Needle to be 26 Degrees 45 Minutes towards the West.

As our Author was extremely careful in this Particular, and observed the Variation of the Needle with the utmost Diligence, it may not be amiss to take this Opportunity of explaining this Point, so that the Importance of his Remarks may sufficiently appear. The Needle points exactly North only in a few Places, and perhaps not constantly in them; but in most it declines a little to the East, or to the West, whence arises Eastern and Western Declination: When this was first observed, it was attributed to certain Excavations or Hollows in the Earth, to Veins of Lead, Stone, and other such-like Causes. But when it was found, by repeated Experiments, that this Variation varied, it appeared plainly, that none of those Causes could take place; since, if they had, the Variation in the same Place must always have been the same, whereas the Fact is otherwise.

Here at *London*, for Instance, in the Year 1580, the Variation was observed to be $11^{\circ} 17'$ to the East; in the Year 1666, the Variation was here $34'$ to the West; and in the Year 1734, the Variation was somewhat more than 1° West. In order to find the Variation of the Needle with the least Error possible, the Seamen take this Method: They observe the Point the Sun is in, by the Compass, a. y. time after its Rising, and then take the Altitude of the Sun; and, in the Afternoon, they observe when the Sun comes to the same Altitude, and observe the Point the Sun is then in by the Compass; for the Middle, between these two, is the true North or South Point of the Compass; and the Difference between that and the North or South upon the Card, which is pointed out by the Needle, is the Variation of the Compass, and shews how much the North and South, given by the Compass, deviates from the true North and South Points of the Horizon. It appears clearly from what has been said, that, in order to arrive at the certain Knowledge of the Variation, and of the Variation of that Variation of the Compass, it is absolutely requisite to have, from time to time, distinct Accounts of the Variation, as it is observed in different Places: Whence the Importance of Captain *Tasman's* Remarks, in this respect, sufficiently appears. It is true, that the learned and ingenious *Dr. Halley* has given a very probable Account of this Matter; but as the Probability of that Account arises only from its Agreement with Observations, it follows, those are as necessary, and as important, as ever, in order to strengthen and confirm it.

3. On the 6th of *November*, I was in $49^{\circ} 4'$ South Latitude, and in the Longitude of $114^{\circ} 56'$; the Variation was at this Time 26° Westward; and, as the Weather was foggy, with hard Gales, and a rolling Sea, from the South-west, and from the South, I concluded from thence, that it was not at all probable there should be any Land between those two Points. On *November 15*, I was in the Latitude of $44^{\circ} 33'$ South, and in the Longitude $140^{\circ} 32'$. The Variation was then $18^{\circ} 30'$ West, which Variation decreased every Day, in such a manner, that, on the 21st of the same Month, being in the Longitude of 158° , I observed the Variation to be no more than 4° . On the 22d of that Month, the Needle was in continual Agitation,

without resting in any of the eight Points; which led me to conjecture, that we were near some Mine of Loadstone.

This may, at first Sight, seem to contradict what has been before said down, as to the Variation, and the Cause of it: But, when strictly considered, they will be found to agree very well; for when it is asserted, that Veins of Loadstone have nothing to do with the Variation of the Compass, it is to be understood of the constant Variation of a few Degrees to the East, or to the West: But in Cases of this Nature, where the Variation is absolutely irregular, and the Needle plays quite round the Compass, our Author's Conjecture may very well find Place: Yet it must be owned, that it is a Point far enough from being clear, that Mines of Loadstone affect the Compass at a Distance; which, however, might be very easily determined, since there are large Mines of Loadstone in the Island of *Elba*, on the Coast of *Tuscany*.

4. On the 24th of the same Month, being in the Latitude of $42^{\circ} 25'$ South, and in the Longitude of $163^{\circ} 50'$, I discovered Land, which lay East South-east, at the Distance of ten Miles, which I called *Van Diemen's Land*. The Compass pointed right towards this Land. The Weather being bad, I steered South and by East along the Coast, to the Height of 44° South, where the Land runs away East, and afterwards North east and by North. In the Latitude of $43^{\circ} 10'$ South, and in the Longitude of $167^{\circ} 55'$, I anchored on the first of *December*, in a Bay, which I called the Bay of *Frederic Henry*. I heard, or at least fancied I heard, the Sound of People upon the Shore; but I saw nobody. All I met with, worth observing, was two Trees, which were two Fathoms, or two Fathoms and an half, in Girth, and 60 or 65 Feet high from the Root to the Branches: They had cut with a Flint a kind of Steps in the Bark, in order to climb up to the Birds-nests: These Steps were the Distance of five Feet from each other; so that we must conclude, that either these People are of a prodigious Size, or that they have some way of climbing Trees that we are not used to: In one of the Trees the Steps were so fresh, that we judged they could not have been cut above four Days.

The Noise we heard resembled the Noise of some sort of Trumpet; it seemed to be at no great Distance, but we saw no living Creature notwithstanding. I perceived also, in the Sand, the Marks of wild Beasts Feet, resembling those of a Tyger, or some such Creature; I gathered also some Gum from the Trees, and likewise some Lack. The Tide ebbs and flows there about three Feet. The Trees in this Country do not grow very close, nor are they incumbered with Bushes or Underwood. I observed Smoke in several Places; however, we did nothing more than set up a Post, on which every one cut his Name, or his Mark, and upon which I hoisted a Flag. I observed that, in this Place, the Variation was changed to three Degrees Eastward. On *December 5*, being then, by Observation, in the Latitude of $41^{\circ} 34'$, and in the Longitude 169° , I quitted *Van Diemen's Land*, and resolved to steer East to the Longitude of 195° , in hopes of discovering the Islands of *Solomon*.

5. On *September 9*, I was in the Latitude of $42^{\circ} 37'$ South, and in the Longitude of $176^{\circ} 29'$; the Variation being there 5° to the East. On the 12th of the same Month, finding a great rolling Sea coming in on the South-west, I judged there was no Land to be hoped for on that Point. On the 13th, being in the Latitude of $42^{\circ} 10'$ South, and in the Longitude of $188^{\circ} 28'$, I found the Variation $7^{\circ} 30'$ Eastward. In this Situation I discovered an high mountainous Country, which is at present marked in the Charts, under the Name of *New Zealand*. I coasted along the Shore of this Country to the North North-east, till the 18th; and being then in the Latitude of $49^{\circ} 50'$ South, and in the Longitude of $191^{\circ} 41'$, I anchored in a fine Bay, where I observed the Variation to be 9° towards the East.

We found here abundance of the Inhabitants: They had very hoarse Voices, and were very large-made People. They durst not approach the Ship nearer than a Stone's Throw; and we often observed them playing on a kind of Trumpet, to which we answered with the Instruments that were on board our Vessel. These People were of a Colour
between

between brown and yellow, their Hair long, and almost as thick as that of the *Japonefe*, combed up, and fixed on the Top of their Heads, with a Quill, or some such thing, that was thickest in the Middle, in the very same manner the *Japonefe* fastened their Hair, behind their Heads. These People cover the Middle of their Bodies, some with a kind of Mat, others with a sort of Woollen Cloth; but, as for their upper and lower Parts, they leave them altogether naked.

On the 19th of *December*, these Savages began to grow a little bolder, and more familiar, inasmuch that at last they ventured on board the *Heemskirk*, in order to trade with those in the Vessel: As soon as I perceived it, being apprehensive that they might attempt to surprize that Ship, I sent my Shallop, with seven Men, to put the People in the *Heemskirk* upon their Guard, and to direct them not to place any Confidence in those People. My seven Men, being without Arms, were attacked by these Savages, who killed three of the seven, and forced the other four to swim for their Lives; which occasioned my giving that Place the Name of the Bay of *Murderers*. Our Ship's Company would, undoubtedly, have taken a severe Revenge, if the rough Weather had not hindered them. From this Bay we bore away East, having the Land in a manner all round us. This Country appeared to us rich, fertile, and very well situated; but as the Weather was very foul, and we had at this time a very strong West Wind, we found it very difficult to get clear of the Land.

6. On the 24th of *December*, as the Wind would not permit us to continue our Way to the North, as we knew not whether we should be able to find a Passage on that Side, and as the Flood came in from the South-east, we concluded that it would be the best to return into the Bay, and seek some other Way out; but, on the 26th, the Wind becoming more favourable, we continued our Route to the North, turning a little to the West. On the 4th of *January* 1643, being then in the Latitude of $34^{\circ} 35'$ South, and in the Longitude of $191^{\circ} 9'$, we failed quite to the Cape, which lies North-west, where we found the Sea rolling in from the North-east; whence we concluded, that we had at last found a Passage, which gave us no small Joy. There was in this Straight an Island, which we called the Island of the *Three Kings*; the Cape of which we doubled, with a Design to have refreshed ourselves; but, as we approached it, we perceived on the Mountain thirty or five-and-thirty Persons, who, as far as we could discern at such a Distance, were Men of very large Size, and had each of them a large Club in his Hand; they called out to us in a rough strong Voice, but we could not understand any thing of what they said. We observed, that these People walked at a very great Rate, and that they took prodigious large Strides. We made the Tour of the Island; in doing which, we saw but very few Inhabitants; nor did any of the Country seem to be cultivated: We found indeed a fresh-water River; and then we resolved to sail East, as far as 220° of Longitude; and from thence North, as far as the Latitude of 17° South; and thence to the West, till we arrived at the Isles of *Cocos* and *Horne*, which were discovered by *William Schouten*, where we intended to refresh ourselves, in case we found no Opportunity of doing it before; for, though we had actually landed on *Van Diemen's Land*, we met with nothing there; and, as for *New Zealand*, we never set Foot on it.

In order to render this Passage perfectly intelligible, it is necessary to observe, that the Island of *Cocos* lies in the Latitude of $15^{\circ} 10'$ South; and, according to *Schouten's* Account, is well inhabited, and well cultivated, abounding with all Sorts of Refreshments; but, at the same time, he describes the People as treacherous and base to the last Degree. As for the Islands of *Horne*, they lie nearly in the Latitude of 15° ; are extremely fruitful, and inhabited by People of a kind and gentle Disposition, who readily bestowed on the *Hollanders* whatever Refreshments they could ask. It was no wonder therefore, that, finding themselves thus distressed, Captain *Tasman* thought of repairing to these Islands, where he was sure of obtaining Refreshments, either by fair Means, or otherwise; which

Design, however, he did not think fit to put in Execution.

7. On the 8th of *January*, being in the Latitude of $30^{\circ} 25'$ South, and in the Longitude of $192^{\circ} 20'$, we observed the Variation of the Needle to be nine Degrees towards the East; and, as we had an high rolling Sea from the South-west, I conjectured there could not be any Land hoped for on that Side. On the 12th, we found ourselves in $30^{\circ} 5'$ South Latitude, and in $195^{\circ} 27'$ of Longitude, where we found the Variation $9^{\circ} 30'$ to the East, a rolling Sea from the South-east, and from the South-west. It is very plain, from these Observations, that the Position laid down by *Dr. Halley*, that the Motion of the Needle is not governed by the Poles of the World, but by other Poles, which move round them, is highly probable; for otherwise it is not easy to understand, how the Needle came to have, as our Author affirms it had, a Variation of near 27° to the West, in the Latitude of $45^{\circ} 47'$, and then gradually decreasing till it had no Variation at all; after which it turned East, in the Latitude of $42^{\circ} 37'$, and so continued increasing its Variation Eastwardly to this time.

8. On the 16th we were in the Latitude of $26^{\circ} 29'$ South, and in the Longitude of $199^{\circ} 32'$, the Variation of the Needle being 8° . Here we are to observe, that the Eastern Variation decreases; which is likewise very agreeable to *Dr. Halley's Hypothesis*; which, in few Words, is this: That a certain large solid Body contained within, and every way separated from, the Earth, (as having its own proper Motion) and being included like a Kernel in its Shell, revolves circularly from East to West, as the exterior Earth revolves the contrary Way in the diurnal Motion: Whence it is easy to explain the Position of the four magnetical Poles which he attributes to the Earth, by allowing two to the Nucleus, and two to the exterior Earth. And, as the two former perpetually alter the Situation by their circular Motion, their Virtue, compared with the exterior Poles, must be different at different times; and, consequently, the Variation of the Needle will perpetually change. The Doctor attributes to the Nucleus an *European* North Pole, and an *American* South one, on account of the Variation of Variations observed near these Places, as being much greater than those found near the two other Poles. And he conjectures, that these Poles will finish their Revolution in about seven hundred Years; and, after that time, the same Situation of the Poles obtain again, as at present; and, consequently, the Variations will be the same again over all the Globe; so that it requires several Ages before this Theory can be thoroughly adjusted. He assigns this probable Cause of the circular Revolution of the Nucleus; That the diurnal Motion, being impressed from without, was not so exactly communicated to the internal Parts, as to give them the same precise Velocity of Rotation as the external: Whence the Nucleus, being left behind by the exterior Earth, seems to move slowly in a contrary Direction, as from East to West, with regard to the external Earth, considered as at Rest in respect of the other. But to return to our Voyage.

9. On the 19th of *January*, being in the Latitude of $22^{\circ} 35'$ South, and in the Longitude of $204^{\circ} 15'$, we had $7^{\circ} 30'$ East Variation. In this Situation we discovered an Island, about two or three Miles in Circumference, which was, as far as we could discern, very high, steep, and barren. We were very desirous of coming nearer it, but were hindered by South-east and South South-east Winds; we called it the Isle of *Pysbaart*, because of the great Number of that Sort of Birds we saw flying about it; and the next Day we saw two other Islands.

10. On the 21st, being in the Latitude of $21^{\circ} 20'$ South, and in the Longitude of $205^{\circ} 29'$, we found our Variation 7° to the North-east. We drew near to the Coast of the most Northern Island, which, though not very high, yet was the larger of the two; we called one of these Islands *Amsterdam*, and the other *Rotterdam*. Upon that of *Rotterdam*, we found great Plenty of Hogs, Fowls, and all Sorts of Fruits, and other Refreshments. These Islanders did not seem to have the Use of Arms, inasmuch as we saw nothing like them in any of their Hands: While we were upon the Island, the Usage they gave us was fair and friendly,

friendly, except that they would steal a little. The Current is not very considerable in this Place, where it ebbs North-east, and flows South-west. A South-west Moon causes a Spring-tide, which rises seven or eight Feet at least. The Wind blows there continually South-east, or South South-east, which occasioned the *Heemskirk's* being carried out of the Road, but, however, without any Damage. We did not fill any Water here, because it was extremely hard to get it to the Ship.

On the 25th, we were in the Latitude of $20^{\circ} 15'$ South, and in the Longitude of $206^{\circ} 19'$. The Variation here was 6 to the East; and, after having had Sight of several other Islands, we made that of *Rotterdam*: The Islanders here resemble those on the Island of *Amsterdam*. The People were very good-natured, parted readily with what they had, did not seem to be acquainted with the Use of Arms, but were given to Thieving, like the Natives of *Amsterdam* Island. Here we took in Water, and other Refreshments, with all the Convenience imaginable. We made the whole Circuit of the Island, which we found well stocked with Cocoa-trees, very regularly planted; we likewise saw abundance of Gardens, extremely well laid out, plentifully stocked with all kind of Fruit-trees, all planted in straight Lines, and the Whole kept in such excellent Order, that nothing could have a better Effect upon the Eye. After quitting the Island of *Rotterdam*, we had Sight of several other Islands; which, however, did not engage us to alter the Resolution we had taken of sailing North, to the Height of 17° South Latitude, and from thence to shape a West Course, without going near either *Traitors* Island, or those of *Horne*, we having then a very brisk Wind from the South-east, or East South-east.

I cannot help remarking upon this Part of Captain *Tajman's* Journal; That it is not easy to conceive, unless he was bound up by his Instructions, why he did not remain some time either at *Rotterdam* or at *Amsterdam* Island, but especially at the former; since, perhaps, there is not a Place in the World so happily seated, for making new Discoveries with Ease and Safety. He owns, that he traversed the whole Island; that he found it a perfect Paradise; and that the People gave him not the least Cause of being dissident in point of Security; so that, if his Men had thrown up ever to sight a Fortification, a Part of them might have remained there in Safety, while the rest had attempted the Discovery of the Islands of *Solomon* on the one hand, or the Continent of *De Quiras* on the other; from neither of which they were at any great Distance: And, from his neglecting this Opportunity, I take it for granted, that he was circumscripted, both as to his Course, and to the Time he was to employ in these Discoveries, by his Instructions; for otherwise, so able a Seaman, and so curious a Man, as his Journal shews him to have been, would not certainly have neglected to fair an Opportunity.

11. On *February 6*, being in $17^{\circ} 19'$ of South Latitude, and in the Longitude of $201^{\circ} 35'$, we found ourselves embarrassed by nineteen or twenty small Islands, every one of which was surrounded with Sands, Shoals, and Rocks. These are marked in the Charts by the Name of *Prince William's Islands*, or *Heemskirk's Shallows*. On the 8th, we were in the Latitude of $15^{\circ} 29'$, and in the Longitude of $190^{\circ} 31'$. We had abundance of Rain, a strong Wind from the North-east, or the North North-east, with dark, cold Weather. Fearing therefore that we were run farther to the West, than we thought ourselves by our Reckoning, and dreading that we should fall to the South of *New Guiney*, or be thrown upon some unknown Coast in such blowing, misty Weather, we resolved to stand away to the North, or to the North North-west, till we should arrive in the Latitude of 4° , 5° , or 6° South; and then to bear away West for the Coast of *New Guiney*, as the least dangerous Way that we could take.

It is very plain from hence, that Captain *Tajman* had now laid aside all Thoughts of discovering farther; and, I think, it is not difficult to guess at the Reason: When he was in this Latitude, he was morally certain, that he could, without farther Difficulty, sail round by the Coast of *New Guiney*, and so back again to the *East Indies*. It is therefore extremely probable, that he was directed, by his Instructions, to coast round that great Southern Continent already discov-

ered, in order to arrive at a Certainty, whether it was joined to any other Part of the World, or whether, notwithstanding its vast Extent, viz. from the Equator to 43° of South Latitude, and from the Longitude of 123° to near 190° , it was, notwithstanding, an Island: This, I say, was, in all Appearance, the true Design of his Voyage; and the Reason of it seems to be this, that, an exact Chart being drawn from his Discoveries, the *East India Company* might have perfect Intelligence of the Extent and Situation of this new-found Country, before they executed the Plan they were then contriving, for preventing its being visited, or farther discovered, by their own, or any other Nation: And this too accounts for the Care taken in laying down the Map of this Country on the Pavement of the new Stadthouze at *Amsterdam*; for, as this Country was henceforward to remain as a kind of Deposit, or Land of Reserve, in the Hands of the *East India Company*, they took this Method of intimating as much to their Countrymen; so that, while Strangers are gazing at this Map as a Curiosity, every intelligent *Dutchman* may say to himself, *Behold the Wisdom of the East India Company! By their present Temper, they support the Authority of this Republic abroad; and, by their extensive Commerce, enrich its Subjects at home; and, at the same time, shew us here, what a Reserve they have made for the Benefit of Posterity, whenever, thro' the Instigations to which all Subjunct Things are liable, their present Sources of Power and Grandeur shall fail.*

I cannot help supporting my Opinion, in this respect, by putting the Reader in mind of a very curious Piece of ancient History, which furnishes us with the like Instance in the Conduct of another Republic. *Diodorus Siculus*, in the fifth Book of his *Historical Library*, informs us, that, in the *African Ocean*, some Days Sail West from *Libya*, there had been discovered an Island, the Soil of which was exceedingly fertile, and the Country no less pleasant, all the Land being finely diversified by Mountains and Plains, the former thick clothed with Trees, the latter abounding with Fruits and Flowers, the Whole watered by innumerable Rivulets, and affording so pleasant an Habitation, that a finer, or more delightful Country Fancy itself could not feign: Yet he assures us, the *Carthaginians*, those great Masters of maritime Power and Commerce, tho' they had discovered this admirable Island, would never suffer it to be planted; but reserved it as a Sanctuary, to which they might fly, whenever the Ruin of their own Republic left them no other Resource. This tallies exactly with the Policy of the *Dutch East India Company*, who, if they should, at any time, be driven from their Possessions in *Java*, *Ceylon*, and other Places in that Neighbourhood, would, without doubt, retire back into the *Meluccas*, and avail themselves of the Security of this noble Discovery, which lies open to them, and has been hitherto close shut up to all the World beside. But to proceed:

12. On *February 14*, we were in the Latitude of $10^{\circ} 30'$ South, and in the Longitude of $193^{\circ} 35'$. We had hitherto had much Rain, and bad Weather; but this Day, the Wind sinking, we hailed our Consort the *Zee Maan*; and found, to our great Satisfaction, that our Reckonings agreed. On the 20th, in the Latitude of $13^{\circ} 45'$, and in the Longitude of $193^{\circ} 35'$, we had dark, cloudy Weather, much Rain, thick Fogs, and a rolling Sea; on all Sides the Wind variable. On the 26th, in the Latitude of $9^{\circ} 38'$ South, and in the Longitude of $193^{\circ} 43'$, we had a North-west Wind, having every Day, for the Space of twelve or thirteen Days, rained more or less. On *March 2*, in the Latitude of $9^{\circ} 11'$ South, and in the Longitude of $192^{\circ} 46'$, the Variation was 10° to the East, the Wind and Weather still varying. On *March 8*, in the Latitude of $7^{\circ} 46'$ South, and in the Longitude of $190^{\circ} 47'$, the Wind was still variable.

13. On the 14th, in the Latitude of $10^{\circ} 12'$ South, and in the Longitude of $186^{\circ} 14'$, we found the Variation $8^{\circ} 45'$ to the East. We passed some Days, without being able to take any Observation, because the Weather was, at that time, dark and rainy. On *March 20*, in the Latitude of $5^{\circ} 15'$ South, and in the Longitude of $181^{\circ} 10'$, the Weather being then fair, we found the Variation 9° Eastward. On the 22d, in the Latitude of $5^{\circ} 2'$ South, and in the Longitude of $178^{\circ} 32'$, we had fine fair Weather, and the Benefit of the East Trade-wind. This Day, we had $8^{\circ} 24'$

of Land, which lay four Miles West. This Land proved to be a Cluster of twenty Islands, which, in the Maps, are called *Ambong Java*. They lie ninety Miles, or thereabouts, from the Coast of *New Guinea*. It may not be amiss to observe here, that what Captain *Tasman* calls the Coast of *New Guinea*, is, in reality, the Coast of *New Britain*, which Captain *Dampier* first discovered to be a large Island, separated from the Coast of *New Guinea*.

14. On the 25th, in the Latitude of $4^{\circ} 35'$ South, and in the Longitude of $175^{\circ} 10'$, we found the Variation $9^{\circ} 20'$ East. We were then in the Height of the Islands of *Mark*, which were discovered by *William Schouten* and *James le Maire*. They are fourteen or fifteen in Number, inhabited by Savages, with black Hair, dressed and trimmed in the same manner as those we saw before at the *Bay of Murderers* in *New Zealand*. On the 29th, we passed the *Green Islands*; and, on the 30th, that of *St. John*; which were likewise discovered by *Schouten* and *le Maire*. This Island they found to be of a considerable Extent; and judged it to lie at the Distance of 1840 Leagues from the Coast of *Peru*. It appeared to them well inhabited, and well cultivated, abounding with Flesh, Fowl, Fish, Fruit, and other Refreshments. The Inhabitants made use of Canoes of all Sizes, were armed with Slings, Darts, and wooden Swords, wore Necklaces and Bracelets of Pearl, and Rings in their Noses. They were, however, very intractable, notwithstanding all the Pains that could be taken to engage them in a fair Correspondence; so that Captain *Schouten* was at last obliged to fire upon them, to prevent them from making themselves Masters of his Vessel, which they attacked with a great deal of Vigour: And very probably this was the Reason, that Captain *Tasman* did not attempt to land, or make any farther Discovery. On April 1. we were in the Latitude of $4^{\circ} 30'$ South, and in the Longitude of $171^{\circ} 2'$, the Variation being $8^{\circ} 45'$ to the East, having now Sight of the Coast of *New Guinea*; and, endeavouring to double the Cape, which the *Spaniards* call *Cabo Santa Maria*, we continued to sail along the Coast, which lies North-west. We afterwards passed the Islands of *Antony Caen*, *Gardener*, *Island*, and *Fishers Island*, advancing towards the Promontory called *Sruis Hook*, where the Coast runs South, and South-east. We resolved to pursue the same Route, and to continue steering South, till we should either discover Land, or a Passage on that Side.

It is necessary to observe, that, all this time, they continued on the Coast, not of *New Guinea*, but of *New Britain*; for that Cape, which the *Spaniards* called *Santa Maria*, is the very same that Captain *Dampier* called Cape *St. George*; and *Caen*, *Gardener*, and *Fishers* Islands all lie upon the same Coast. They had been discovered by *Schouten* and *le Maire*, who found them to be well inhabited, but by a very base and treacherous People; who, after making Signs of Peace, attempted to surprize their Ships: And these Islanders managed their Slings with such Force and Dexterity, as to drive the *Dutch* Sailors from their Decks: Which Account of *le Maire*'s agrees perfectly well with what Captain *Dampier* tells us of the same People. As for the Continent of *New Guinea*, it lies quite behind the Island of *New Britain*; and was therefore laid down, in all the Charts before *Dampier*'s Discovery, at least 4° more to the East than it should have been.

15. On April 12. in the Latitude of $30^{\circ} 45'$ South, and in the Longitude of 167° , we found the Variation 10° towards the East. That Night, Part of the Crew were wakened out of their Sleep by an Earthquake. They immediately ran upon Deck, supposing that the Ship had struck. On heaving the Lead, however, there was no Bottom to be found. We had afterwards several Shocks; but none of them so violent as the first. We had then doubled the *Sruis Hook*, and were, at that time, in the *Bay of Good Hope*. On the 14th, in the Latitude of $5^{\circ} 21'$ South, and in the Longitude of $166^{\circ} 57'$, we observed the Variation to be $9^{\circ} 15'$ to the East. The Land lay then North-east, East North-east, and again South South-west; so that we imagined there had been a Passage between those two Points: But we were soon convinced of our Mistake, and that it was all one Coast; so that we were obliged to double the West Cape, and to continue creeping along-shore, and were much hindered in our Passage by Calms. This Description agrees

NUMB. 23.

very well with that of *Schouten* and *le Maire*; so that probably they had now Sight again of the Coast of *New Guinea*.

It is very probable, from the Accident that happened to Captain *Tasman*, and which also happened to others upon that Coast, and from the burning Mountains that will be hereafter mentioned, that this Country is very subject to Earthquakes: And, if so, without doubt, it abounds with Metals and Minerals; of which we have also another Proof, from a Point in which all these Writers agree; viz. that the People they saw had Rings in their Noses and Ears, tho' none of them tell us of what Metal those Rings were made, which *le Maire* might easily have done, since he carried off a Man from one of the Islands, whose Name was *Mafes*, from whom he learned, that almost every Nation on this Coast speaks a different Language.

16. On the 20th, in the Latitude of $5^{\circ} 4'$ South, and in the Longitude of $164^{\circ} 27'$, we found the Variation $8^{\circ} 30'$ East. We that Night drew near the *Brandade Island*, i. e. burning Island, which *William Schouten* mentions; and we perceived a great Flame issuing, as he says, from the Top of an high Mountain. When we were between that Island and the Continent, we saw a vast Number of Fires along the Shore, and half-way up the Mountain; from whence we concluded, that the Country must be very populous. We were often detained on this Coast by Calms, and frequently observed small Trees, Bamboes, and Shrubs, which the Rivers on that Coast carried into the Sea; from which we inferred, that this Part of the Country was extremely well watered, and that the Land must be very good. The next Morning, we passed the burning Mountain, and continued a West North-west Course along that Coast.

It is remarkable, that *Schouten* had made the same Observation with respect to the Drift-wood forced by the Rivers into the Sea. He likewise observed, that there was so copious a Discharge of fresh Water, that it altered the Colour and the Taste of the Sea. He likewise says, that the burning Island is extremely well peopled, and also well cultivated. He afterwards anchored on the Coast of the Continent, and endeavoured to trade with the Natives; who made him pay very dear for Hogs and Cocoa-nuts, and likewise shewed him some Ginger. It appears from Captain *Tasman*'s Account, that he was now in Hast to return to *Batavia*, and did not give himself so much Trouble as at the Beginning about Discoveries; and, to say the Truth, there was no great Occasion, if, as I observed, his Commission was no more, than to sail round the new-discovered Coasts, in order to lay them down with greater Certainty in the *Dutch* Charts.

17. On the 27th, being in the Latitude of $2^{\circ} 10'$ South, and in the Longitude of $146^{\circ} 57'$, we fancied that we had a Sight of the Island of *Moa*; but it proved to be that of *Jama*, which lies a little to the East of *Moa*. We found here great plenty of Cocoa-nuts, and other Refreshments. The Inhabitants were absolutely black, and could easily repeat the Words that they heard others speak; which shews their own to be a very copious Language. It is, however, exceedingly difficult to pronounce, because they make frequent Use of the Letter (R); and sometimes to such a degree, that it occurs twice or thrice in the same Word. The next Day, we anchored on the Coast of the Island of *Moa*, where we likewise found abundance of Refreshments, and where we were obliged, by bad Weather, to stay till May 6. We purchased there, by way of Exchange, 6000 Cocoa-nuts, and 100 Bags of Pyfanghs, or *Indian* Figs. When we first began to trade with these People, one of our Seamen was wounded by an Arrow, that one of the Natives let fly, either thro' Malice or Inadvertency. We were, at that very Juncture, endeavouring to bring our Ships close to the Shore; which so terrified these Islanders, that they brought, of their own Accord, on board us the Man, who had shot the Arrow, and left him at our Mercy. We found them, after this Accident, much more tractable than before in every respect. Our Sailors, therefore, pulled off the iron Hoops from some of the old Water-casks, stuck them into wooden Handles, and, filing them to an Edge, sold these awkward Knives to the Inhabitants for their Fruits.

In all Probability, they had not forgot what happened to our People on July 16. 1616. in the Days of *William Schouten*:

Schooten: These People, it seems, treated him very ill; upon which *James le Maire* brought his Ship close to the Shore, and fired a Broadside through the Woods. The Bullets, flying through the Trees, struck the Negroes with such a Panic, that they fled in an instant up into the Country; and durst not shew their Heads again, till they had made full Satisfaction for what was past, and thereby secured their Safety for the Time to come; and he traded with them afterwards very peaceably, and with mutual Satisfaction.

This Account of our Author's seems to have been taken upon Memory, and is not very exact. *Schooten's* Seamen, or rather the Petty Officer who commanded his Long-boat, insulted the Natives grossly, before they offered any Injury to his People; and then, notwithstanding they fired upon them with Small-arms, the Islanders obliged them to retreat; so that they were forced to bring the great Guns to bear upon the Island before they could reduce them. These People do not deserve to be treated as Savages, because *Schooten* acknowledges, that they had been engaged in Commerce with the *Spaniards*; as appeared by their having iron Pots, glass Beads, and Pendants, with other *European* Commodities, before he came thither. He also tells us, that they were a very civilized People, their Country well cultivated, and very fruitful; that they had a great many Boats, and other Small-craft, which they navigated with great Dexterity. He adds also, that they gave him a very distinct Account of the neighbouring Islands, and that they solicited him to fire upon the *Arimeans*, with whom it seems they are always at War; which, however, he refused to do, unless provoked to it by some Injury offered by those People. It is therefore very apparent, that the Inhabitants of *Moa* are a People with whom any *Europeans*, settled in their Neighbourhood, might without any Difficulty settle a Commerce, and receive considerable Assistance from them in making Discoveries. But, perhaps, some Nations are fitter for this kind of Expeditions than others, as being less apt to make use of their Artillery and Small-arms upon every little Dispute; for as the Inhabitants of *Moa* are well enough acquainted with the Superiority which the *Europeans* have over them, it cannot be supposed, that they will ever hazard their total Destruction by committing any gross Act of Cruelty upon Strangers, who visit their Coast; and it is certainly very unfair, to treat People as Savages and Barbarians, merely for defending themselves when insulted or attacked without Cause. The Intance Captain *Tasman* gives us of their delivering up the Man who wounded his Sailor, is a plain Proof of this; and, as to the Diffidence and Suspicion which some later Voyagers have complained of, with respect to the Inhabitants of this Island, they must certainly be the Effects of the bad Behaviour of such *Europeans* as this Nation have hitherto dealt with; and would be effectually removed, if ever they had a settled Experience of a contrary Conduct. The surest Method of teaching People to behave honestly towards us, is to behave friendly and honestly towards them; and then there is no great Reason to fear, that such as give evident Proofs of Capacity and Civility in the common Affairs of Life, should be guilty of Treachery that must turn to their own Disadvantage.

18. On the 12th of *May*, being then in the Latitude of 54° South, and in the Longitude of 153° 17', we found the Variation 6° 30' to the East. We continued coasting the North-side of the Island of *William Schooten*, which is about eighteen or nineteen Miles long, very populous, and the People very brisk and active. It was with great Caution that *Schooten* gave his Name to this Island; for, having observed that there were abundance of small Islands laid down in the Charts on the Coast of *New Guiney*, he was suspicious, that this might be of the Number. But, since that Time, it seems a Point generally agreed, that this Island had not before any particular Name; and therefore, in all subsequent Voyages, we find it constantly mentioned by the Name of *Schooten's Island*.

He describes it as a very fertile and well-peopled Island: The Inhabitants of which were so far from discovering any thing of a savage Nature, that they gave apparent Testimonies of their having had an extensive Commerce before he touched there, since they not only shewed him various Commodities from the *Spaniards*, but also several Samples

of *China* Ware: He observes, that they were very unlike the Nations he had seen before, being rather of an Olive-colour, than black; some having short, others long Hair, dressed after different Fashions: They were also a taller, stronger, and stouter People, than their Neighbours. These little Circumstances, which may seem tedious or trifling to such as read only for Amusement, are, however, of very great Importance to such as have Discoveries in View; because they argue, that these People have a general Correspondence: The Difference of their Complexion must arise from a mixed Descent; and the different Manner of wearing their Hair is undoubtedly owing to their following the Fashion of different Nations, as their Fancies led them. He farther observes, that their Vessels were larger, and better contrived, than their Neighbours; that they readily parted with their Bows and Arrows in Exchange for Goods, and that they were particularly fond of Glass and Iron-ware, which, perhaps, they not only used themselves, but employed likewise in their Commerce. The most Western Point of the Island he called the Cape of *Good Hope*, because, by doubling that Cape, he expected to reach the Island of *Banda*: And that we may not wonder, that he was in Doubts and Difficulties as to the Situation of these Places, we ought to reflect, that *Schooten* was the first who sailed round the World by this Courte, and the last too, except Commodore *Roggeveen*: other Navigators chusing rather to run as high as *California*, and from thence to the *Ladrone* Islands, merely because it is the ordinary Route.

In the Neighbourhood of this Island *Schooten* also met with an Earthquake, which alarmed the Ship's Company exceedingly, from an Apprehension, that they had struck upon a Rock. There are some other Islands in the Neighbourhood of this, well peopled, and well planted, abounding with excellent Fruits, especially of the Melon Kind. These Islands lie, as it were, on the Confines of the Southern Continent, and the *East Indies*; so that their Inhabitants enjoy all the Advantages resulting from their own happy Climate, and from their Traffick with their Neighbours, especially with those of *Ternate* and *Ambonya*; who come thither yearly to purchase their Commodities, and who are likewise visited, at certain Seasons, by the People of these Islands in their Turn.

19. On the 18th of *May*, in the Latitude of 26° South, and in the Longitude of 147° 55', we observed the Variation to be 5° 30' East. We were now arrived at the Western Extremity of *New Guiney*, which is a detached Point, or Promontory (though it is not marked to even in the latest Maps). Here we met with Calms, variable and contrary Winds, with much Rain: From thence we steered for *Ceram*, leaving the Cape on the North, and arrived safely on that Island: By this time Captain *Tasman* had fairly surrounded the Continent he was instructed to discover; and had therefore nothing now farther in View than to return to *Batavia*, in order to report the Discoveries he had made.

On the 27th of *May*, we passed through the Straights of *Boura*, or *Bouton*, and continued our Passage to *Batavia*; where we arrived on the 15th of *June*, in the Latitude of 6° 12' South, and in the Longitude of 127° 18'. This Voyage was made in the Space of ten Months. Such was the End of this Expedition, which has been always considered as the clearest, and most exact, that was ever made, for the Discovery of the *Terra Australis Incognita*, from whence that Chart or Map was laid down in the Pavement of the Stadt-houfe at *Amsterdam*, as is before-mentioned. We have now nothing to do, but to shut up this Voyage, and our History of Circum-navigators, with a few Remarks; previous to which, it will be requisite to state clearly and succinctly the Discoveries, either made or confirmed by Captain *Tasman's* Voyage, that the Importance of it may fully appear, as well as the Probability of our Conjectures, with regard to the Motives that induced the *Dutch East India* Company to be at so much Pains about these Discoveries.

20. In the first place, then, it is most evident, from Captain *Tasman's* Voyage, that *New Guiney*, *Carpentaria*, *New Holland*, *Antony van Diemen's Land*, and the Countries discovered by *de Queros*, make all one Continent, from

from which *New Zeland* seems to be separated by a Strait; and, perhaps, is Part of another Continent, answering to *Africa*, as this, of which we are now speaking, plainly does to *America*. This Continent reaches from the Equinoctial to 44° of South Latitude, and extends from 122° to 188° of Longitude, making indeed a very large Country, but nothing like what *de Quiros* imagined; which shews how dangerous a thing it is to trust too much to Conjecture in such Points as these. It is, secondly, observable, that as *New Guiney*, *Carpentaria*, and *New Holland*, had been already pretty well examined, Captain *Tasman* did directly to the South of these; so that his first Discovery was *Van Diemen's Land*, the most Southern Part of the Continent on this Side the Globe; and then, passing round by *New Zeland*, he plainly discovered the opposite Side of that Country towards *America*, though he visited the Islands only; and never fell in again with the Continent, till he arrived on the Coast of *New Britain*, which he mistook for that of *New Guiney*; as he very well might, that Country having never been suspected to be an Island, till *Dampier* discovered it to be such in the Beginning of the present Century. Thirdly, by this Survey, these Countries are for ever marked out, so long as the Map, or Memory of this Voyage, shall remain. The *Dutch East India Company* have it always in their Power to direct Settlements, or new Discoveries, either in *New Guiney*, from the *Moluccas*, or in *New Holland*, from *Batavia* directly. The Prudence shewn in the Conduct of this Affair, deserves the highest Praise. To have attempted heretofore, or even now, the establishing Colonies in those Countries, would be impolitic, because it would be grasping more than the *East India Company*, or than even the Republic of *Holland*, could manage: For, in the first place, to reduce a Continent, between three and four thousand Miles broad, is a prodigious Undertaking; and to settle it by degrees, would be to open, to all the World, the Importance of that Country, which, for any thing we can tell, may be much superior to any Country yet known. The only Choice therefore that the *Dutch* had left, was to reserve this mighty Discovery till the Season arrived, in which they should be either obliged by Necessity, or invited by Occasion, to make use of it. But though this Country be reserved, it is no longer either unknown or neglected by the *Dutch*, which is a Point of very great Consequence. To the other Nations of *Europe*, the Southern Continent is a Chimera, a Thing in the Clouds, or at least a Country about which there are a thousand Doubts and Suspicions; so that to talk of discovering or settling it, must be regarded as an idle and empty Project: But, with respect to them, it is a thing perfectly well known; its Extent, its Boundaries, its Situation, the Genius of its several Nations, and the Commodities of which they are possessed, are absolutely within their Cognizance; so that they are at Liberty to take such Measures as appear to them best, for securing the eventual Possession of this Country, whenever they think fit. This Account explains at once all the Mysteries which the best Writers upon this Subject have found in the *Dutch* Proceedings. It shews why they have been at so much Pains to obtain a clear and distinct Survey of these distant Countries; why they have hitherto forbore settling, and why they take so much Pains to prevent other Nations from coming at a distinct Knowledge of them: And I may add to this another Particular; which is, that it accounts for their permitting the Natives of *Ambosna*, who are their Subjects, to carry on a Trade to *New Guiney*, and the adjacent Countries; since, by this very Method, it is apparent, that they gain daily fresh Intelligence, as to the Product and Commodities of those Countries. Having thus explained the Consequence of Captain *Tasman's* Voyage, and thereby fully justified my giving it a Place in this Part of my Work, I am now at Liberty to pursue the Reflections with which I promised to close this Section, and the History of Circumnavigators; and, in doing which, I shall endeavour to make the Reader sensible of the Advantages that arise from publishing these Voyages in their proper Order, so as to shew what is, and what is yet, to be discovered of the Globe on which we live.

21. In speaking of the Consequences of Captain *Tasman's* Voyage, it has been very amply shewn, that this

Part of *Terra Australis*, or Southern Country, has been fully and certainly discovered. To prevent, however, the Reader's making any Mistake, I will take this Opportunity of laying before him some Remarks on the whole Southern Hemisphere; which will enable him immediately to comprehend all that I have afterwards to say on this Subject.

If we suppose the South Pole to be the Centre of a Chart of which the Equinoctial is the Circumference, we shall then discern four Quarters; of the Contents of which, if we could give a full Account, this Part of the World would be perfectly discovered. To begin then with the first of these, that is, from the first Meridian, placed in the Island of *Fero*: Within this Division, that is to say, from the first to the ninetieth Degree of Longitude, there lies the great Continent of *Africa*; the most Southern Point of which is the Cape of *Good Hope*, lying in the Latitude of 34° 15' South: Between that and the Pole, several small, but very inconsiderable Islands, have been discovered, affording us only this Degree of Certainty, that, to the Latitude of 50°, there is no Land to be found of any Consequence. There was indeed a Voyage made by Mr. *Bevet*, in the Year 1738, on purpose to discover, whether there were any Lands to the South in that Quarter or not. This Gentleman sailed from *Port P'Orrient* July the 18th, 1738; and, on the 11th of *January* 1739, discovered a Country, the Coasts of which were covered with Ice, in the Latitude of 54° South, and in the Longitude of 28° 30'; the Variation of the Compass being there 6 Degrees 45 Minutes to the West.

In the next Quarter, that is to say, from 90° Longitude to 180°, lie the Countries of which we have been speaking; as that large Southern Island, extending from the Equinoctial to the Latitude of 43° 10', and the Longitude of 167° 55', which is the Extremity of *Van Diemen's Land*.

In the third Quarter, that is, from the Longitude of 150 to 170°, there is very little discovered with any Certainty. Captain *Tasman*, indeed, visited the Coast of *New Zeland*, in the Latitude of 42° 10' South, and in the Longitude of 188° 28': But besides this, and the Islands of *Amsterdam* and *Rotterdam*, we know very little; and therefore, if there be any Doubts about the Reality of the *Terra Australis*, it must be with respect to that Part of it which lies within this Quarter, through which *Seboven* and *le Maire* sailed, but without discovering any thing more than a few small Islands.

The fourth and last Quarter is from 270° of Longitude to the first Meridian; within which lies the Continent of *South America*, and the Island of *Terra del Fuego*; the most Southern Promontory of which is supposed to be *Cape Horn*; which, according to the best Observations, is in the Latitude of 56°, beyond which there has been nothing with any Degree of Certainty discovered on this Side.

On the Whole, therefore, it appears, there are three Continents already tolerably discovered, which point towards the South Pole; and therefore 'tis very probable there is a fourth, which if there be, it must lie between the Country of *New Zeland*, discovered by Captain *Tasman*, and that Country which was seen by Captain *Sbarpe* and Mr. *Wafer* in the South Seas; to which Land therefore, and no other, the Title of *Terra Australis Incognita* properly belongs. Leaving this, therefore, to the Industry of future Ages to discover, we will now return to that great Southern Island, which Captain *Tasman* actually surrounded, and the Bounds of which are tolerably well known.

In order to give the Reader a proper Idea of the Importance of this Country, it will be requisite to say something of the Climates in which it is situated: As it lies from the Equinoctial to near the Latitude of 44°, the longest Day in the most Northern Parts must be twelve Hours, and in the Southern about fifteen Hours, or somewhat more; so that it extends from the first to the seventh Climate, which shews its Situation to be the happiest in the World; the Country called *Van Diemen's Land* resembling in all respects the South of *France*. As there are in all Countries some Parts more pleasant than others, so there seems good Reason to believe, that within two or three Degrees of the Tropic

Tropic of *Capricorn*, which passes through the Midst of *New Holland*, is the most unwholesome and disagreeable Part of this Country; the Reason of which is very plain: For in those Parts it must be excessively hot, much more so than under the Line itself, since the Days and Nights are there always equal; whereas, within three or four Degrees of the Tropic of *Capricorn*, that is to say, in the Latitude of 27° South, the Days are thirteen Hours and a half long; and the Sun is twice in their Zenith, first in the Beginning of *December*, or rather in the latter End of *November*; and again when it returns back, which occasions a burning Heat for about two Months, or something more; whereas, either farther to the South, or nearer to the Line, the Climate must be equally wholesome and pleasant.

As to the Product and Commodities of this Country in general, there is the greatest Reason in the World to believe, that they are extremely rich and valuable, because the richest and finest Countries in the known World lie all of them within the same Latitude. But to return from Conjectures to Facts. The Country discovered by *de Quiros*, makes a Part of this great Island, and is the opposite Coast to that of *Carpentaria*. This Country, of which we have given a large Account in the tenth Section, the Discoverer called *la Australis del Espiritu Santo*, in the Latitude of 15° 40' South; and, as he reports, it abounds with Gold, Silver, Pearl, Nutmegs, Mace, Ginger, and Sugar-canes, of an extraordinary Size. I do not wonder, that formerly the Fact might be doubted, but at present I think there is sufficient Reason to induce us to believe it: For Captain *Dampier* describes the Country about Cape *St. George* and Port *Mountainque*, which are within 9° of the Country described by *de Quiros*; I say, Captain *Dampier* describes what he saw in the following Words: 'The Country hereabouts is mountainous and woody, full of rich Vallies, and pleasant fresh-water Brooks; the Mould in the Vallies is deep and yellowish, that on the Sides of the Hills of a very brown Colour, and not very deep, but rocky underneath; yet excellent planting Land; the Trees in general are neither very strait, thick, nor tall; yet appear pleasant and pleasant enough: Some of them bear Flowers, some Berries, and others big Fruits, but all unknown to any of us; Cocoa-nut-trees thrive very well here, as well on the Bays by the Sea-side, as more remote among the Plantations. The Nuts are of an indifferent Size, the Milk and Kernel very thick and pleasant. Here are Ginger, Yams, and other very good Roots for the Pot, that our Men saw and tasted; what other Fruits or Roots the Country affords, I know not. Here are Hogs and Dogs; other Land Animals we saw none; the Fowls we saw and knew were Pigeons, Parrots, Cocoadores, and Crows, like those in *England*; a sort of Birds about the Bigness of a Black-bird, and smaller Birds many. The Sea and Rivers have Plenty of Fish; we saw abundance, though we caught but few; and these were Cavallies, Yellow-tails, and Whip-wreys.'

This Account is grounded only on a very slight View, whereas *de Quiros* resided for some time in the Place he has mentioned. In another Place Captain *Dampier* observes, that he saw Nutmegs amongst them, which seemed to be fresh-gathered; all which agrees perfectly with the Account given by *de Quiros*. Add to this, that *Schooten* had likewise observed, that they had Ginger upon this Coast, and some other Spices; so that, on the Whole, there seems not the least Reason to doubt, that if any Part of this Country was settled, it must be attended with a very rich Commerce: For it cannot be supposed, that all these Writers should be either mistaken, or that they should concur in a Design to impose upon their Readers; which is the less to be suspected, if we consider how well their Reports agree with the Situation of the Country; and that the Trees on the Land, and the Fish on the Coast, corresponding exactly with the Trees of those Countries, and the Fish on the Coasts, where these Commodities are known to abound within-land, seem to intimate a perfect Conformity throughout.

The next Thing to be considered is, the Possibility of planting in this Part of the World; which, at first Sight, I must confess, seems to be attended with considerable Difficulties with respect to every other Nation except the *Dutch*,

who, either from *Batavia*, the *Moluccas*, or even from the Cape of *Good Hope*, might with Ease settle themselves where-ever they thought fit. As, however, they have neglected this for above a Century, there seems to be no Reason, why their Conduct in this respect should become the Rule of other Nations; or why any other Nation should be apprehensive of drawing on herself the Displeasure of the *Dutch*, by endeavouring to turn to their Benefit, Countries the *Dutch* have so long suffered to lie, with respect to *Europe*, waste and desert.

The first Point, with respect to a Discovery, would be, to send a small Squadron on the Coast of *Van Diemen's Land*, and from thence round, in the same Course taken by Captain *Tajman*, by the Coast of *New Guinea*; which might enable the Nations that attempted it, to come to an absolute Certainty with regard to its Commodities and Commerce. Such a Voyage as this might be performed with very great Ease, and at a small Expence, by our *East India Company*, and this in the Space of eight or nine Months time; and, considering what mighty Advantages might accrue to the Nation, there seems to be nothing harsh or improbable, in supposing that, some time or other, when the Legislature is more than usually intent on Affairs of Commerce, they may be directed to make such an Expedition at the Expence of the Public. By this means all the back Coast of *New Holland*, and *New Guinea*, might be thoroughly examined; and we might know as well, and as certainly, as the *Dutch*, how far a Colony settled there might answer our Expectations. One Thing is certain, that to Persons used to the Navigation of the *Indies*, such an Expedition could not be thought either dangerous or difficult; because it is already sufficiently known, that there are every-where Islands upon the Coast, where Ships, upon such a Discovery, might be sure to meet with Refreshments; as is plain from Commodore *Roggeveen's* Voyage, made little more than twenty Years ago.

The only Difficulty that I can see, would be the getting a fair and honest Account of this Expedition, when made for private Interest is so apt to interfere, and get the better of the public Service, that it is very hard to be sure of any thing of this sort. That I may not be suspected of any Intent to calumniate, I shall put the Reader in mind of two Instances: The first is, as to the new Trade from *Russia*, for establishing of which an Act of Parliament was with great Difficulty obtained, though visibly for the Advantage of the Nation: The other Instance is, the Voyage of Captain *Middleton*, for the Discovery of a North-west Passage into the South Seas; which is ended by a very warm Dispute, whether that Passage be found or not, the Person supposed to have found it maintaining the Negative.

Whenever, therefore, such an Expedition is undertaken, it ought to be under the Direction, not only of a Person of Parts and Experience, but of unspotted Character, who, on his Return, should be obliged to deliver his Journal upon Oath; and the principal Officers under him should likewise be directed to keep their Journals distinctly, and without their being inspected by the principal Officer; all which Journals ought to be published by Authority as soon as received, that every Man might be at Liberty to examine them, and deliver his Thoughts as to the Discoveries made, or the Impediments suggested to have hindered or prevented such Discoveries; by which means the Public would be sure to obtain a full and distinct Account of the Matter. And it would thence immediately appear, whether it would be expedient to prosecute the Design or not.

But if it should be thought too burdensome for a Company in so flourishing a Condition, and consequently engaged in so extensive a Commerce as the *East India Company* is, to undertake such an Expedition, merely to serve the Public, promote the Exportation of our Manufactures, and increase the Number of industrious Persons, who are maintained by foreign Trade. If this, I say, should be thought too grievous for a Company, that has purchased her Privileges from the Public, by a large Loan at low Interest, there can certainly be no Objection to the putting this Project into the Hands of the *Royal African Company*, who are not quite in so flourishing a Condition. They have equal Opportunities for undertaking it, since the Voyage might be with much Ease performed from their Settlements

Settlements in ten Months; and if the Trade was found to answer, it might encourage the settling a Colony at *Madagascar*, to and from which Ships might, with the greatest Conveniency, carry on the Trade to *New Guiney*. I cannot say how far such a Trade might be consistent with their present Charter; but if it should be found advantageous to the Public, and beneficial to the Company, I think there can be no Reason assigned, why it should not be secured to them, and that too in the most effectual manner.

A very small Progress in it would restore the Reputation of the Company, and in time, perhaps, free the Nation from the annual Expence she is now at, for the Support of the Forts and Garrisons belonging to that Company on the Coasts of *Africa*; which would alone prove of great and immediate Service, both to the Public, and to the Company: To say the Truth, something of this Sort is absolutely necessary to vindicate the Expence the Nation is at; for if the Trade, for the Carrying on of which a Company is established, proves, by a Change of Circumstances, incapable of supporting that Company, and thereby brings a Load upon the Public, this ought to be a Motive, it ought, indeed, to be the strongest Motive, for that Company to endeavour the Extension of its Commerce, or the striking out, if possible, some new Branch of Trade, which may restore it to its former Splendor; and in this as it hath an apparent Right, so there is not the least Reason to doubt, that it would meet with all the Countenance and Assistance from the Government, that it could reasonably expect or desire.

If such a Design should ever be attempted, perhaps the Island of *New Britain* might be the properest Place for them to settle. As to the Situation, Extent, and present Condition of that Island, all that can be said of it must be taken from the Account given by its Discoverer Captain *Dampier*; which, in few Words, amounts to this: 'The Island which I call *Nova Britannia*, has about 4° of Latitude, the Body of it lying in 4°, the Northernmost Part in 2° 30', and the Southernmost in 6° 30'. It has about 5° 18' Longitude from East to West; it is generally high mountainous Land, mixed with large Valleys, which, as well as the Mountains, appeared very fertile; and in most Places that we saw, the Trees are very large, tall, and thick. It is also very well inhabited, with strong well-limbed Negroes, whom we found very daring and bold at several Places: As to the Product of it, it is very probable, this Island may afford as many rich Commodities as any in the World; and the Natives may be easily brought to Commerce, though I could not pretend to it in my Circumstances.' If any Objections should be raised from *Dampier's* Misfortune in that Voyage, it is easy to shew, that it ought to have no manner of Weight whatever, since, though he was an excellent Pilot, he is allowed to have been but a bad Commander: Besides, the *Roebuck*, in which he sailed, was a worn-out Frigate, that would hardly swim; and it is no great Wonder, that in so crazy a Vessel the People were a little impatient at being Abroad on Discoveries: Yet, after all, he performed what he was sent for; and, by the Discovery of this Island of *New Britain*, secured us an indisputable Right to a Country, that is, or might be made, very valuable.

It is so situated, that a great Trade might be carried on from thence through the whole *Terra Australis* on one Side, and the most valuable Islands of the *East Indies* on the other. In short, all, or at least most, of the Advantages proposed by the *Dutch West India Company's* joining with their *East India Company*, of which a large Account has already been given, might be procured for this Nation, by the establishing a Colony in this Island of *New Britain*, and securing the Trade of that Colony to the *African Company* by Law; the very passing of which Law would give the Company more than sufficient Credit, to fit out a Squadron at once, capable of securing the Possession of that Island, and of giving the Public such Satisfaction as to its Importance, as might be requisite to obtain further Power and Assistance from the State, if that should be found necessary. It would be very easy to point out some Advantages peculiarly convenient for that Company; but it will be time enough to think of these, whenever the *African Company*

shall discover an Inclination to prosecute this Design. At present I have done what I proposed, and have shewn, that such a Collection of Voyages as this, ought not to be considered as a Work of mere Amusement, but as a Work calculated for the Benefit of Mankind in general, and of this Nation in particular, which it is the Duty of every Man to promote in his Station; and whatever Fate these Reflections may meet with, I shall have always the Satisfaction of remembering, that I have not neglected it in mine, but have taken the utmost Pains to turn a Course of laborious Reading to the Advantage of my Country.

But, supposing that neither of these Companies should think it expedient, or, in other Words, should not think it consistent with their Interest, to attempt this Discovery, there is yet a third Company, within the Spirit of whose Charter, I humbly conceive, the Prosecution of such a Scheme immediately lies. The Reader will easily discern, that I mean the Company for carrying on a Trade to the South Seas, who, notwithstanding the Extensiveness of their Charter, confirmed and supported by Authority of Parliament, have not, so far as my Information reaches, ever attempted to send so much as a single Ship for the sake of Discoveries into the South Seas, which, however, was the great Point proposed when this Company was first established. In order to prove this, I need only lay before the Reader the Limits assigned that Company by their Charter, the Substance of which is contained in the following Words.

'The Corporation, and their Successors, shall, for ever, be vested in the sole Trade into and from all the Kingdoms and Lands on the East Side of *America*, from the River *Oronoco*, to the Southernmost Part of *Terra del Fuego*, and on the West Side thereof from the said Southernmost Part of *Terra del Fuego*, thro' the South Sea, to the Northernmost Part of *America*, and into and thro' all the Countries, Islands, and Places within the said Limits, which are reputed to belong to *Spain*, or which shall hereafter be found out and discovered within the Limits aforesaid, not exceeding 300 Leagues from the Continent of *America*, between the Southernmost Part of the *Terra del Fuego* and the Northernmost Part of *America*, on the said West Side thereof, except the Kingdom of *Brazil*, and such other Places on the East Side of *America*, as are now in the Possession of the King of *Portugal*, and the Country of *Surinam*, in the Possession of the States General. The said Company, and none else, are to trade within the said Limits; and, if any other Persons shall trade to the South Seas, they shall forfeit the Ship and Goods, and double Value, one-fourth Part to the Crown, and another fourth Part to the Professor, and the other two-fourths to the Use of the Company. And the Company shall be the sole Owners of the Islands, Forts, &c. which they shall discover within the said Limits, to be held of the Crown, under an annual Rent of an Ounce of Gold, and of all Ships taken as Prizes by the Ships of the said Company: And the Company may seize, by Force of Arms, all other British Ships trading in those Seas.'

It is, I think, impossible for any Man to imagine, that either these Limits should be secured to the Company for no Purpose in the World; or that these Prohibitions and Penalties should take place, notwithstanding the Company's never attempting to make any Use of these Powers: From whence I infer, that it was the Intent of the Legislature, that new Discoveries should be made, new Plantations settled, and a new Trade carried on, by this new Corporation, agreeable to the Rules prescribed, and for the general Benefit of this Nation; which, I apprehend, was chiefly considered in the providing, that this new Commerce should be put under the Management of a particular Company. But I am very well aware of an Objection that may be made to what I have advanced; viz. that, from my own shewing, this Southern Continent lies absolutely without their Limits; and that there is also a Proviso in the Charter of that Company, that seems particularly calculated to exclude it, since it recites, That

'The Agents of the Company shall not sail beyond the Southernmost Parts of *Terra del Fuego*, except through the Straights of *Magellan*, or round *Terra del Fuego*; nor go from thence to any Part of the *East Indies*, nor return

to Great Britain, or any Port or Place, unless through the said Straights, or by *Terra del Fuego*: Nor shall they trade in *East India* Goods, or in any Places within the Limits granted to the united Company of Merchants of England trading to *East India* (such *India* Goods excepted, as shall be actually exported from Great Britain, and also such Gold, Silver, wrought Plate, and other Goods and Commodities, which are the Produce, Growth or Manufactures of the *West Indies*, or Continent of *America*): Neither shall they send Ships, or use them, or any Vessel, within the South Seas, from *Terra del Fuego* to the Northernmost Parts of *America*, above 300 Leagues to the Westward of, and distant from, the Land of *Chili*, *Peru*, *Mexico*, *California*, or any other the Lands or Shores of Southern or Northern *America*, between *Terra del Fuego* and the Northernmost Part of *America*, on Pain of the Forfeiture of the Ships and Goods; one-third to the Crown, and the other two-thirds to the *East India* Company.

But the Reader will observe, that I mentioned the *East India* and *African* Companies before; and that I now mention the *South Sea* Company, on a Supposition, that the two former may refuse it. In that Case, I presume, the Legislature will make the same Distinction that the States of *Holland* did, and not suffer the private Advantage of any particular Company to stand in Competition with the Good of a whole People. It was upon this Principle that I laid it down as a thing certain, that the *African* Company would be allowed to settle the Island of *Madagascar*, tho' it lies within the Limits of the *East India* Company's Charter, in case it should be found necessary for the better carrying on of this Trade. It is upon the same Principle I lay this Southern Continent lies within the Intention of the *South Sea* Company's Charter, because, I presume, the Intent of that Charter was to grant them all the Commerce in those Seas, not occupied before by *British* Subjects; for, if it were otherwise, what a Condition should we be in as a Maritime Power? If a Grant does not oblige a Company to carry on a Trade within the Limits granted to that Company, and is, at the same time, of Force to preclude all the Subjects of this Nation from the Right they before had to carry on a Trade within those Limits, such a Law is plainly destructive to the Nation's Interest, and to Commerce in general. I therefore suppose, that, if the *South Sea* Company should think proper to revive their Trade in the Manner I propose, this Proviso would be explained by Parliament to mean no more, than excluding the *South Sea* Company from settling or trading in or to any Place at present settled in, or traded to, by the *East India* Company: For, as this Interpretation would secure the just Rights of both Companies, and, at the same time, reconcile the Laws for establishing them to the general Interest of Trade and the Nation, there is the greatest Reason to believe this to be the Intention of the Legislature. I have been obliged to insist fully upon this Matter, because it is a Point hitherto untouched, and a Point of such high Importance, that, unless it be understood according to my Sense of the Matter, there is an End of all Hopes of extending our Trade on this Side, which is perhaps the only Side, on which there is the least Probability that it ever can be extended: For, as to the North-west Passage into the South Seas, that seems to be blocked up by the Rights of another Company; so that, according to the Letter of our Laws, each Company is to have its Rights, and the Nation in general no Right at all.

If therefore the settling of this Part of *Terra Australis* should devolve on the *South Sea* Company, by way of Equivalent for the Loss of their *Affiento* Contract, there is no Part of Question but it might be as well performed by them, as by any other, and the Trade carried on, without interfering with that, which is at present carried on, either by the *East India* or *African* Companies. It would indeed, in this Case, be absolutely necessary to settle *Juan Fernandez*, the Settlement of which Place, under the Direction of that Company, if they could, as very probably they might, fall into some Share of the Slave-trade from *New Guinea*, must prove wonderfully advantageous, considering the Opportunity they would have of vending those Slaves to the *Spaniards* in *Chili* and *Peru*. The settling of this Island ought

to be performed at once, and with a competent Force, since, without doubt, the *Spaniards* would leave no Means unattempted to dispossess them: Yet, if a good Fortification was once raised, the Passes properly retrenched, and a Garrison left there of between 3 and 500 Men, it would be simply impossible for the *Spaniards* to force them out of it before the Arrival of another Squadron from hence. Neither do I see any Reason, why, in the Space of a very few Years, the Plantation of this Island should not prove of as great Consequence to the *South Sea* Company, as that of *Curacao* to the *Dutch West India* Company, who raise no less than 60,000 Florins per Annum for licensing Ships to trade there.

From *Juan Fernandez* to *Van Diemen's Land* is not above two Months Sail; and a Voyage for Discovery might be very conveniently made between the Time that a Squadron returned from *Juan Fernandez*, and another Squadron's Arrival there from hence. It is true, that, if once a considerable Settlement was made in the most Southern Part of *Terra Australis*, the Company might then fall into a large Commerce in the most valuable *East India* Goods, very probably Gook, and Spices of all sorts: Yet I cannot think, that even these would fall within the exclusive Privilege of their Charter; for that was certainly intended to hinder their trading in such Goods as are brought thither by our *East India* Company; and I must confess I see no Difference, with respect to the Interest of that Company, between our having Cloves, Cinnamon, and Mace, by the *South Sea* Company's Ships from *Juan Fernandez*, and our receiving them from *Holland*, after the *Dutch East India* Company's Ships have brought them thither by the Way of the Cape of *Good Hope*. Sure I am they would come to us sooner by some Months by the Way of *Cape Horn*. If this Reasoning does not satisfy People, but they still remain persuaded, that the *South Sea* Company ought not to intermeddle with the *East India* Trade at all, I desire to know, why the *West India* Merchants are allowed to import Coffee from *Jamaica*, when it is well known, that the *East India* Company can supply the whole Demand of this Kingdom from *Mexico*? If it be answered, that the *Jamaica* Coffee comes cheaper, and is the Growth of our own Plantations, I reply, that these Spices will not only be cheaper, but better, and be purchased by our own Manufactures; and these, I think, are the strongest Reasons that can be given.

If it be demanded, what Certainty I have, that Spices can be had from thence, I answer, all the Certainty that, in a thing of this Nature, can be reasonably expected: *Ferdinand de Quiros* met with all sorts of Spices in the Country he discovered; *William Shelton*, and *Joaquẽ de Maire*, saw Ginger and Nutmegs; so did *Dampier*; and the Author of *Commodore Roggeveen's* Voyage asserts, that the first *Burgesses* of *Ambosna* purchase Nutmegs from the Natives of *New Guinea* for Bits of Iron. All therefore I contend for is, that these Bits of Iron may be sent them from *Old England*.

The Reason I recommend settling on the South Coast of *Terra Australis*, if this Design should be prosecuted, from *Juan Fernandez*, rather than the Island of *New Britain*, which I mentioned before, is, because that Coast is nearer, and is situated in a better and pleasanter Climate. Besides all which Advantages, as it was never hitherto visited by the *Dutch*, they cannot, with any Colour of Justice, take Umbrage at our attempting such a Settlement. To close then this Subject, the Importance of which alone inclined me to spend so much of mine and the Reader's Time about it:

It is most evident, that, if such a Settlement was made at *Juan Fernandez*, proper Magazines erected, and a constant Correspondence established between that Island and the *Terra Australis*, these three Consequences must absolutely follow from thence: I. That a new Trade would be opened, which must carry off a great Quantity of our Goods and Manufactures, that cannot, at present, be brought to any Market, or, at least, not to so good a Market, as it there was a greater Demand for them. II. It would render this Navigation, which is, at present, so strange, and consequently so terrible to us, easy and familiar; which might be attended with Advantages that cannot be foreseen, especially since there is, as I before observed, in all Probability,

another Southern Continent, which is still to be discovered. III. It would greatly increase our Shipping and our Seamen, which are the true and natural Strength of this Country, extend our naval Power, and raise the Reputation of this Nation; the most distant Prospect of which is sufficient to warm the Soul of any Man, who has the least Regard for his Country, with Courage sufficient to despise the Imputations that may be thrown upon him as a visionary Projector, for talking so much Pains about an Affair, that can tend so little to his private Advantage. We will now add a few Words, with respect to the Advantages arising from having thus digested the History of Circum-navigators, from the earliest Account of Time to the present; and then shut up the Whole with another Section, containing the last Circum-navigations by Rear-Admiral Anson, whose Voyage has at least shewn, that, under a proper Officer, *English* Seamen are able to achieve as much as they ever did; and that is as much as was ever done by any Nation in the World.

It is a Point that has always admitted some Debate, whether Science stands more indebted to Speculation or Practice; or, in other Words, whether the greater Discoveries have been made by Men of deep Study, or Persons of great Experience in the most useful Parts of Knowledge. But this, I think, is a Proposition that admits of no Dispute at all, that the noblest Discoveries have been the Result of a just Mixture of Theory with Practice. It was from hence, that the very Notion of sailing round the Earth took Rise; and the ingenious *Genoise* first laid down his System of the World, according to his Conception; and then added the Proofs derived from Experience. It is much to be deplored, that we have not that Plan of Discovery, which the great *Captain Columbus* sent over thither by his Brother *Bartolomew* to King *Henry VII.* for, if we had, we should certainly find abundance of very curious Observations, which might still be useful to Mariners: For it appears clearly, from many little Circumstances, that he was a Person of wonderful Genius, and, until bad Usage obliged him to take many Precautions, very communicative.

It was from this Plan, as it had been communicated to the *Portuguese* Court, that the famous *Magellan* came to have his just Notions of the Possibility of sailing by the West to the *East Indies*; and there was a great deal of Theory in the Proposal made by that great Man to the Emperor *Charles V.* Sir *Francis Drake* was a Person of the same Genius, and of a like general Knowledge: And it is very remarkable, that these three great Seamen met also with the same Fate; by which I mean, that they were constantly pursued by Envy while they lived, which hindered so much Notice being taken of their Discourses and Discoveries as they deserved. But, when the Experience of succeeding Times had verified many of their Sayings, which had been considered as vain and empty Boastings in their Life-times, then Posterity began to pay a superfluous Regard to whatever could be collected concerning them, and to admire all they delivered as oraculous. Our other Discoverer, *Candish*, was likewise a Man of great Parts, and great Penetration, as well as great Spirit; he had, undoubtedly, a mighty Genius for Discoveries; but the prevailing Notion of those Times, that the only Way to serve the Nation, was plundering the *Spaniards*, seems to have got the better of his Desire to find out unknown Countries; and made him chuse to be known to Posterity, rather as a gallant Privateer, than as an able Seaman, though, in Truth, he was both.

After these follow *Schouten* and *Le Maire*, who were fitted out to make Discoveries; and executed their Commission with equal Capacity and Success. If *Le Maire* had lived to return to *Holland*, and to have digested into proper Order his own Accounts, we should, without Question, have received a much fuller and clearer, as well as a much more correct and satisfactory Detail of them, than we have at present: Though the Voyage, as it is now published, is, in all respects, the best, and the most curious, of all the Circum-navigations. This was, very probably, owing to the ill Usage he met with from the *Dutch East India Company*; which put Captain *Schouten*, and the Relations of *Le Maire*, upon giving the World the best Information they could of what had been in that Voyage per-

formed. Yet the Fate of *Le Maire* had a much greater Effect in discouraging, than the Fame of his Discoveries had in exciting, a Spirit of Emulation; so that we may safely say, the Severity of the *East India Company* in *Holland* extinguished that generous Desire of exploring unknown Lands, which might otherwise have raised the Reputation, and extended the Commerce, of the Republic, much beyond what they have hitherto reached. This is so true, that, for upwards of one hundred Years, we hear of no *Dutch Voyage* in Pursuit of *Le Maire's* Discoveries; and we see, when Commodore *Roggeveen*, in our own Time, revived that noble Design, it was again cramped by the same Power that stifled it before; and, though the States did Justice to the *West India Company*, and to the Parties injured, yet the Hardships they suffered, and the plain Proof they gave of the Difficulties that must be met with in the Prosecution of such a Design, seem to have done the Business of the *East India Company*, and damped the Spirit of Discovery, for, perhaps, another Century, in *Holland*.

It is very observable, that all the mighty Discoveries that have been made arose from these great Men, who joined Reasoning with Practice, and were Men of Genius and Learning, as well as Seamen. To *Columbus* we owe the finding *America*; to *Magellan* the passing by the *Streights*, which bear his Name, by a new Route to the *East Indies*; to *Le Maire* a more commodious Passage round *Cape Horn*, and without running up to *California*; Sir *Francis Drake* too hinted the Advantages that might arise by examining the North-west Side of *America*; and *Candish* had some Notions of discovering a Passage between *China* and *Japan*. As to the History we have of *Roggeveen's Voyage*, it affords such Lights, as nothing but our own Negligence can render useless. But in the other Voyages, whatever Discoveries we meet with are purely accidental, except it be *Dampier's Voyage* to the Coasts of *New Holland* and *New Guinea*, which was expressly made for Discoveries; and in which, if an abler Man had been employed in Conjunction with *Dampier*, we cannot doubt, that the Interior and Exterior of those Countries would have been much better known than they are at present; because such a Person would rather have chosen to have refreshed in the Island of *New Britain*, or some other Country, not visited before, than at that of *Timor*, already settled both by the *Portuguese* and the *Dutch*.

In all Attempts, therefore, of this sort, those Men are fittest to be employed, who, with competent Abilities as Seamen, have likewise general Capacities, are at least tolerably acquainted with other Sciences, and have settled Judgments, and solid Understandings. These are the Men, from whom we are to expect the finishing that great Work, which former Circum-navigators have begun; I mean the discovering every Part and Parcel of the Globe, and the carrying to its utmost Perfection the admirable and useful Science of Navigation.

It is, however, a Piece of Justice due to the Memory of these great Men, to acknowledge, that we are equally encouraged by their Examples, and guided by their Discoveries. We owe to the being freed, not only from the Errors, but from the Doubts and Difficulties, with which former Ages were oppressed: To them we stand indebted for the Discovery of the best Part of the World, which was intirely unknown to the Antients, particularly some Part of the Eastern, most of the Southern, and all the Western Hemisphere: From them we have learned, that the Earth is surrounded by the Ocean, and that all the Countries under the Torrid Zone are inhabited; and that, quite contrary to the Notions that were formerly entertained, they are very far from being the most sultry Climate in the World, those within a few Degrees of the Tropics, though habitable, being much more hot, for Reasons which have been elsewhere explained. By their Voyages, and especially by the Observations of *Columbus*, we have been taught the general Motion of the Sea, the Reason of it, and the Cause and Difference of Currents in particular Places; to which we may add the Doctrine of Tides, which were very imperfectly known, even by the greatest Men in former Times, whose Accounts have been found equally repugnant to Reason and Experience.

By their Observations, we have acquired a great Knowledge as to the Nature and Variation of Winds, particularly the Monsoons, or Trade-winds, and other periodical Winds, of which the Antients had not the least Conception: And, by these Helps, we not only have it in our Power to proceed much farther in our Discoveries, but we are likewise delivered from a Multitude of groundless Apprehensions, that frightened them from prosecuting Discoveries. We give no Credit now to the Fables, that not only amused Antiquity, but even obtained Credit within a few Generations. The Authority of *Pliny* will not persuade us, that there are any Nations without Heads, whose Eyes and Mouths are in their Breasts, or that the *Arimaspi* have only one Eye fixed in their Forehead, and that they are perpetually at War with the Griffins, who guard hidden Treasures; or that there are Nations that have long hairy Tails, and grin like Monkeys. No Traveller can make us believe, that, under the Torrid Zone, there are a Nation, every Man of which has one large flat Foot, with which, lying upon his Back, he covers himself from the Sun. In this respect we have the same Advantage over the Antients that Men have over Children; and we cannot reflect without Amazement, on Mens having so much Knowledge and Learning in other respects, with such childish Understandings in these.

By the Labours of these great Men, in the two last Centuries, we are taught to know what we seek, and how it is to be sought. We know, for Example, what Parts of the North are yet undiscovered, and also what Parts of the South. We can form a very certain Judgment of the Climate of Countries undiscovered, and can foresee the Advantages that will result from Discoveries before they are made; all which are prodigious Advantages, and ought certainly to animate us in our Searches. I might add to this, the great Benefits we receive from our more perfect Acquaintance with the Properties of the Loadstone, and from the surprising Accuracy of astronomical Observations; to which I may add the physical Discoveries made of late Years, in relation to the Figure of the Earth; all of which are the Result of the Lights which these great Men have given us.

It is true, that some of the zealous Defenders of the Antients, and some of the great Admirers of the Eastern Nations, dispute these Facts; and would have us believe, that almost every thing was known to the old Philosophers and not only known, but practised, by the *Chinese*, long before the Time of the great Men to whom we ascribe them. But the Difference between their Assertions and ours is, that we fully prove the Facts we allege, whereas they produce no Evidence at all: For Instance, *Albertus Magnus* says, that *Aristotle* wrote an express Treatise on the Direction of the Loadstone; but nobody ever saw that Treatise, nor was it ever heard of by any of the rest of his Commentators. We have, in our Hands, some of the best Performances of Antiquity in regard to Geography; and any Man who has Eyes, and is at all acquainted with that Science, can very easily discern, how far they fall short of Maps that were made even an hundred Years ago. The celebrated *Vesputius*, and the rest of the Admirers of the *Chinese*, who, by the way,

derived all their Knowledge from Hearsay, may testify, in as strong Terms as they think fit, their Contempt for the Western Sages, and their high Opinion of those in the East; but all they prove to us, that their favourite *Chinese* made any Voyages comparable to the *Europeans*, before the Discovery of a Passage to *Cina* by the Cape of *Good Hope*, they will excuse us from believing them. Besides, if the Antients had all this Knowledge, how came it not to display itself in their Performances? How came they to make such Difficulties of what are now esteemed Trifles? And how came they never to make any Voyages, by Choice at least, that were out of Sight of Land? Again, with respect to the *Chinese*, if they excel us so much in Knowledge, How come the Millionaries to be so much admired for their superior Skill in the Sciences? But to cut the Matter short, we are not disputing now about speculative Points of Science, but as to the practical Application of it; in which, I think, there is no doubt, that the modern Inhabitants of the Western Parts of the World excel, and excel chiefly from the Labours and Discoveries of these great and ingenious Men, who applied their Abilities to the Improvement of useful Arts, for the particular Benefit of their Countrymen, and to the common Good of Mankind; which Character is not derived from any Prejudice of ours, either against the Antients, or the oriental Nations; but is founded in Facts of public Notority, and on general Experience, which are a kind of Evidence not to be controverted or contradicted.

We are still, however, in several respects, short of Perfection; and there are many Things left to exercise the Sagacity, Penetration, and Application of this, and of succeeding Ages: For Instance, the Passages to the North-east and North-west are yet unknown; there is a great Part of the Southern Continent undiscovered; we are, in a manner, ignorant of what lies between *America* and *Japan*, and all beyond that Country lies buried in Obscurity, perhaps in greater Obscurity than it was an Age ago; so that there is still Room for performing great Things, which, in the Consequences, perhaps, might prove greater than can well be imagined. I say nothing of the Discoveries that yet remain, with regard to inland Countries, because these fall properly under another Head, I mean that of Travels. But it will be time enough to think of penetrating into the Heart of Countries, when we have discovered the Seacoasts of the whole Globe, towards which the Voyages, recorded in this Chapter, have so far advanced already. But the only Means to arrive at these great Ends, and to transmit to Posterity a Fame approaching, at least in some measure, to that of our Ancestors, is to revive and restore that glorious Spirit, which led them to such great Exploits; and the most natural Method of doing this, is to collect and preserve the Memory of their Exploits, that they may serve at once to excite our Imitation, encourage our Endeavours, and point out to us how they may be best employed, and with the greatest Probability of Success; which, as it has been the principal and particular Design of this Chapter, so it shall be, God willing, prosecuted with like Diligence and Attention, to the very last Chapter of this Work.

SECTION XXIII.

An Account of the Expedition of GEORGE ANSON, Esq; in the Centurion, as Commodore of a Squadron of British Ships, round the World.

1. The Occasion of this Voyage, and the general Expectation raised thereby in the Nation.
2. The Strength of the Squadron, and the Preparations made for the Voyage.
3. Departure from St. Helen's, Sept. 14. 1740.
4. Arrival at Madeira, Transactions there, and Occurrences in the Voyage, till their Arrival at the Island of St. Catharine's.
5. Account of that Island, and of what happened worthy of Notice in their Passage to St. Julian's.
6. Occurrences in their Voyage to the Streights of le Maire.
7. The Hardships they sustained in doubling Cape Horne, and their losing Sight of the best Part of the Squadron.
8. A great Storm, in which they lost Sight of the Wager.
9. Proceed with great Difficulty to the Island of Juan Fernandez.
10. Arrive at, and refresh themselves in, that Island.
11. Are joined there, after a long Scene of Hardships, by the Gloucester.
12. Account of the principal Transactions during their Stay at, and cruising off that Island.
13. A Digression, containing the History of the Shipwreck of his Majesty's Ship the Wager, and the Consequences that attended it.
14. An Account of such Prizes as were taken in the South Sea, after their Departure from Juan Fernandez.
15. The Town of Payta surpris'd and plundered.
16. Joined by the Gloucester from Juan Fernandez.
17. Occurrences in their Voyage from Payta to Acapulco.
18. Account of what pass'd during the Time they cruised off that Port.
19. Their Departure from Acapulco, in order to proceed to the East Indies.
20. Are forced to destroy the Gloucester, and take her Crew on board the Centurion.
21. Prosecute their Voyage to the Ladrone Islands.
22. The Ship forced from her Anchors, and the Commodore left on Shore.
23. Arrive safely in the Road, to the great Joy of those left on the Island.
24. Refresh themselves there, and prepare to continue their Voyage.
25. Leave the Ladrone Islands, and steer for the Coast of China.
26. Arrival at Macao, and Reception there.
27. Transactions that happened during their Stay in that Port.
28. Proceed on a Cruize in Search of a Manila Ship.
29. Engage and take her.
30. Return with the Prize to Macao.
31. Sail from thence for the River of Canton.
32. The Commodore visits the Chinese Viceroy, in order to obtain Leave to repair and revictual the Ship.
33. An Account of what pass'd during their Stay in China.
34. Prosecute their Voyage from Canton to the Coast of Java.
35. Proceed from thence to the Cape of Good Hope.
36. Take in Refreshments there, in order to their Return home.
37. Occurrences in their Passage from thence.
38. Arrive safely at St. Helen's, June 15. 1744.
39. Remarks upon the Voyage.
40. The Conclusion of the first Chapter.
41. A complete Table of Circumnavigators.

IT is a Thing that has been generally taken for granted, ever since Spain has been possessed of her American Dominions, and made use of the Riches she derived from thence, to disturb the Peace, and invade the Liberties, of her Neighbours, that the best way to reduce her Strength, and to prevent the bad Effects of her evil Intentions, would be to attack her in the South Seas. This was pursued with great Diligence, and in some measure with Success, in the Reign of Queen Elizabeth: And in that of her Successor, when a new Quarrel broke out with that Crown in the Year 1624, the first Thing thought of by our Patriots, who were equally willing to humble the King's Enemy, and save the Nation's Money, was an Expedition to the South Seas, at the Expence of, and for the Benefit of the People; which Scheme was intituled, *The West India Association*.

It may be thought I look a great Way back, when I offer to the View of the Reader, the Reasons which were suggested in Parliament for the Support of that Scheme; but whoever considers, that it is not only the most effectual, but the safest Method to instruct the present Age from the Sentiments of the last, will readily enter into the Reasons, why I produce upon this Occasion the Speech of an eminent Patriot, in which the Nature and Scope of that Association, as well as the Motives upon which it was grounded, are very fully and pathetically set forth; and this in such Terms, as, if the Reader was not told, that this was a Speech to Sir Dudley Digges, then in the Chair of a Committee of the whole Houle, by Sir Benjamin Rudyard, he might mistake it for a Speech made a few Years since; so agreeable it is, in its Language and Sentiments, even to our present Occasions.

SIR,

I do profess, that as my Affection, my Reason, and my Judgment, go strongly with the Scope and Drift of this Proposition, so shall good Part of my poor Fortune, when it comes to Execution. For, to my Understanding, there was never propounded in Parliament, a Design more proper for this Kingdom, nor more pregnant

Numb. XXIV.

with Advantages to it, whether we consider the Nature of our Situation, or the Quality of our Enemies Forces. As we are an Island, it concerns our very Being to have Store of Ships to defend us, and also our Well-being by their Trade to enrich us. This Association for the *West Indies*, when it shall be regulated and established by Act of Parliament, and thereby secured from the Violence and Injury of any intruding Hand, will certainly give many Men Encouragement and Confidence, voluntarily to bring in large and liberal Contributions towards so noble, so profitable an Enterprize: So that, in short, we shall see many new Ships built, many brave Men employed, and enabled for the Service of their Country; none of this Money shall be carried out of the Kingdom, but laid out for Shipping, which is the Defence of it, and bestowed upon our own Men, who must be fed and maintained, though they stay at home. For this we shall reap the Fruit of whatsoever Benefit Plantation, Traffick, or Purchase, can procure us, besides Honour and Security.

Now let us a little consider the Enemy we are to encounter, the King of Spain. They are not his great Territories which make him so powerful, and so troublesome to all *Christendom*; for it is very well known, that Spain itself is but weak in Men, and barren of natural Commodities; as for his other Territories, they lie divided and asunder, which is a Weakness in itself. Besides, they are held by Force, and maintained at an extraordinary Charge; inasmuch as, although he be a great King, yet he is like that Giant who was said to have an hundred Hands, but he had fifty Bellies to feed; so that, ratably, he had no more Hands than another Man: No, Sir, they are his *Mines* in the *West Indies*, which minister Fuel to feed his vast ambitious Desire of universal Monarchy. It is the Money he hath from thence which makes him able to levy and pay Soldiers in all Places, and to keep an Army continually on Foot ready to invade and endanger his Neighbours; so that we have no other Way, but to endeavour to cut him off at the Root, and seek to impeach or to supplant him in the *West Indies*; by

4 R

by Part of which Course, that famous Queen, of glorious Memory, had heretofore almost brought him to his Knees: And this our Undertaking, (if it pleases God to bless it) must needs affect it sooner and quicker, the whole Body of the Kingdom being united, and concurring in a perpetual Supply to this Action, so that he will have no free Time given him to rest.

Moreover, this will be a Means, not only to save, but to fill his Majesty's Coffers, enabling the People to give him liberally and often. The King's Ships will have little to do but to guard the Coasts; for the Sea War will chiefly be made at the Charge of the Subject. Thus I doubt not, but that, in a short time, both King and People shall be safe at home, and feared abroad. To conclude, I shall be very glad to hear any Man make Objections against this Design, so that he do it with an Intention to refine and perfect the Work; but, if any shall speak against it, with a Mind to hinder and destroy it, I must intreat him to pardon me, if I do scarce think him to be a good *Englishman*.

That Project had the same Fate with most other bold and honest Projects in that Reign, which was, that, after being talked of a little, it sunk into Oblivion. Our next Disference with *Spain* was under *Cromwell's* Protectorate, who encouraged *Father Gage* to publish his Account of the *Spanish West Indies*; which was the Foundation of his Attempt upon *Hispaniola*, and the Conquest of *Jamaica*; but I do not know of any Design formed by him to attack the *Spaniards* in the South Seas: After the Restoration, we were upon very good Terms with *Spain*; as it was certainly our Interest to be: Yet King *Charles the Second* did not neglect this Navigation absolutely, but sent Sir *John Narbrough*, one of the best Seamen this Nation ever bred, in the *Sweepstakes*, in the latter End of the Year 1669, by the Way of the Straights of *Magellan*, into the South Seas: To say the Truth, our Privateers, under the Command of the Captains *Sbarpe*, *Davis*, *Swan*, &c. were continually in these Seas, during all that Reign, and the next; so that our Seamen were no Strangers, in those Days, to any of the Passages into the South Seas; and, as the Reader may have already observed from the Voyage of Captain *Cowley*, it was no unusual Thing for the Traders of *London* to fit out Ships for those Parts; whether with a View to Traffick or Privateering, is, at this Distance of Time, a Point not easy to determine. But, whatever Purpose they were sent upon, thither they went, and no Complaints were ever heard of, with respect to extraordinary Hardships in the Voyage; which is sufficient to shew, how much depends upon keeping all Branches of Navigation open, in order to be constantly in a Condition to secure and extend our Trade, and to preserve our Reputation as a maritime Power.

After the Revolution, several Proposals were made in relation to the establishing a Commerce in the South Sea, which were received with Approbation; and it is certain, that King *William* gave Instructions to Admiral *Benbow*, when he went last to the *West Indies*, to inquire how far any of these Projects were feasible. After the breaking out of the last general War, all the World expected, that the first thing the maritime Powers would have done, would have been sending a Squadron to these Seas, either for the Service of the Prince, whom they owned for King of *Spain*, or for their own Advantage. The People of this Nation, in particular, were so desirous of seeing the War carried on this Way, and on this Side, that, to give them Hopes, and, at the same time, to shew that the Legislature approved their Sentiments in this respect, a Bill was brought into, and passed by, the House of Lords, for the better carrying on the War, by Sea and Land, in the *West Indies*; which, however, was lost by a kind of ministerial Craft, in the House of Commons; and soon after all Designs of that Nature were laid aside, for Reasons, with which, as yet, the Public has never been made acquainted: The only Expedition, during the whole War, was that of the *Duke and Duchess*, under the Command of Captain *Rogers*, at the Expence of some private Merchants of *Bristol*. On the Change of the Ministry, a prodigious Clamour was raised upon this Head, and, all of a sudden, a Resolution was taken to secure all the Advantages that could be withed for

to this Nation from the Trade of the South Seas; which ended, however, only in erecting a Company with that Title. The Nation very soon became sensible, that this would by no means do; and therefore, as soon as our Disputes with the King of *Spain* came to an Height, in the late King's Reign, a Design was immediately set on Foot for sending Privateers once more into that Part of the World; which ended in the Expedition of Captain *Wetche*, and Captain *Clipperton*, of which we have given a large Account.

By this short Deduction of Facts, I think it demonstrably proved, that, in the Judgment of this Nation, the most probable Way of humbling *Spain*, in case of a War, was to send a Squadron into the South Seas: And I will venture to say, that there is one Reason why this is now become more expedient than ever; which is, that we are now no longer at Liberty to send Ships thither in a Time of Peace, as we were before the South Sea Company was erected. It is not, therefore, at all strange, that as soon as the present War broke out with *Spain*, the general Voice of the People dictated such an Expedition; or that, when they saw it resolved on, and a Squadron actually equipped for that Service, they testified very loudly their Approbation of the Scheme: And, I believe, my Readers will easily give Credit to the Assertion, when I affirm, that, during the Time this Squadron lay at *Portsmouth*, there was a most general Expectation of its performing Things of the highest Consequence for the Service of Great Britain, and reducing the Enemy to Reason.

2. It was in the midst of Summer, in the Year 1740, that this Squadron was formed at *Portsmouth*, at the same time that a great Embarkation was carrying on for the *West Indies*; by which the Siege of *Caribagena* was afterwards undertaken, which turned the Eyes of the whole World upon that Sea-port: At *London*, everybody spoke of the intended Expedition to the South Seas, as a Design that must necessarily be attended with Consequences highly advantageous, if properly conducted; of which there was not the least Doubt made, when Captain *Anson* was named to the Command; because he had shewn himself, upon all Occasions, an Officer equally vigilant in his Duty, and moderate in the Exercise of Power; more ready to correct by his own Example, than by any other sort of Reproof; and who, in the Course of his Service, had acquired the Respect of the Officers, and the Love of the Sailors; Qualities that rarely meet in one Person, and Qualities, which, without the least Contradiction, were ascribed to him.

It was intended, that a considerable Body of Land-forces should serve on board this Squadron; and accordingly 500 Invalids and Marines were embarked, under their proper Officers, to be commanded in Chief by Lieutenant Colonel *Crasheade*, now Governor of *Landguard Fort*. There were several Accidents which concurred to hinder the Departure of this Squadron for some time; but at last, every thing being in perfect Order, and their Equipage in every respect complete, the Commodore gave his Orders for the Officers and Seamen to repair on board, and that every thing should be ready for sailing by the Middle of *September*; and accordingly upon the 16th of that Month he fired a Gun as a Signal to unmoor. The Squadron then consisted of the following Ships of War, and other Vessels; viz.

Ships.	Commanders.	Gun.	Men.
<i>Centurion</i>	Commodore <i>G. Anson</i> , Esq;	60	513
<i>Gloucester</i>	<i>Norris</i>	50	370
<i>Severn</i>	<i>Legge</i>	50	370
<i>Pearl</i>	<i>Mitchell</i>	40	270
<i>Wager</i>	<i>Kidd</i>	18	140
<i>Trial Sloop</i>	<i>Murray</i>	16	90

Tenders.

Ann Pink;
Industry, which was to go only to a certain Latitude.

3. On *September 18*. 1740, the Commodore fired a Gun as a Signal to weigh; and, by ten in the Evening, the whole Squadron was under Sail. It was observed at that time, that they sailed at a different Season of the Year

from some, who had gone that Voyage before. Captain Rogers, in the *Duke*, sailed from *Bristol* in the Month of *June* 1708; Captain *Clipperton* in the Month of *February* 1719: Yet, perhaps, there was not so much in this Circumstance as some People imagine; since Sir *John Narborough*, who was an experienced Seaman, failed for the Straights of *Magellan* on the 26th of *September* 1669; and other Instances might be given of great Officers, who chose this Season of the Year.

They continued their Course, without meeting with any Accident of Importance, till, on *October* 28. they came to an Anchor in the Road of *Funchal*, off the Island of *Madeira*, where they found two Privateer Sloops, who saluted the Commodore with nine Guns; and were answered by seven. As this was a proper Place for taking in Water, Wines, and other Refreshments, the Squadron made some Stay, tho' it was late in the Year. On the 30th, they celebrated the Anniversary of his Majesty's Coronation; and, in the Beginning of the succeeding Month, got every thing on board as fast as possible, that they might be able to sail without Delay.

4. While they continued in *Funchal* Road, Captain *Norris*, of the *Gloucester*, who was in a very ill State of Health, obtained Leave to return home; which occasioned some Alteration in the Command: For Captain *Kidd*, of the *Wager*, was made Captain of the *Pearl*, Captain *Mitchell* was removed from the *Pearl* into the *Gloucester*, Captain *Murray* succeeded Captain *Kidd* in the *Wager*, and Lieutenant *Cheap* was made Captain of the *Trial* Sloop. They had notice here of ten Sail, supposed to be Spanish Ships, which were cruising on and-off to the Westward; but one of the Privateers, which was dispatched by the Commodore to look for them, returned without seeing them.

On *November* 5. they left the Island of *Madeira*, and proceeded on their Voyage, the *Gloucester* having the *Industry* Tinker in Tow. On the 17th, they lay-to, to unlade the *Industry* Tender; which took up two or three Days, and then she was discharged. They had, all this time, very pleasant Weather; and, on the 28th, passed the Line with a fair Wind. On the 30th, being in the Latitude of 4° 25' South, they observed with great Astonishment, that the Sea glittered, and appeared like Fire, in the Night; which, however, is a Phenomenon not very unusual in those Seas. In the Beginning of the Month of *December*, the Crew began to be sickly; which they attributed chiefly to the heavy Rains they met with after they passed the Equinoctial. On the 13th of that Month about Noon, they crossed the Tropic of *Capricorn*; and, on the 19th, had Sight of the Island of *St. Catharine's*.

On the 20th about Noon, they came to an Anchor; and the next Day, sailing nearer to the Fort, came to an Anchor again, and saluted the Governor with eleven Guns. This Island, which lies upon the Coast of *Brazil*, in the Latitude of 27° 30' South, is very convenient for the Refreshment of such Ships as are bound to the South Seas; for it abounds with Oranges, Lemons, and other Fruits of that kind, Cabbage and Banana trees, with excellent Potatoes, fresh Water every-where in plenty, and vast Quantities of Herbs, which seldom fail to relieve the Sick. The Governor owns the Authority of the King of *Portugal*; but, in other respects, the Island produces no great Advantage to that Crown. As soon as the Squadron had anchored, the Commodore ordered a Tent to be set up for the Use of the Sick, who were furnished with fresh Provisions, and whatever else was requisite for People in their Condition; and in the mean time the Rigging was overhauled, the *Trial* Sloop had her Masts taken out, repaired, and fitted up again; and all the Ships took in Wood, Water, and Provisions, with all the Expedition possible.

5. On *January* 18. 1741, about nine in the Morning, they sailed from *St. Catharine's*, the Governor of the Fort saluting them with eleven Guns; and the Commodore returned the like Number. Notwithstanding the Care taken of the *Trial* Sloop at the Island of *St. Catharine's*, she was still in a very crazy Condition; and on the 24th, the Head of her Main-mast being carried away, and her Fore-mast sprung, the *Gloucester* was forced to take her in Tow. On *February* 8. the Men were put to short Allowance, having two Quarts of Water a Day. On the 11th, they had Sight

of Land, which appeared low, flat, and sandy. On the 13th, they found themselves off *Cape Blanco*, which appears, at a Distance, like a long Table, the adjacent Country flat and low. For several Days afterwards, they saw abundance of Penguins, a Bird we have before described, and other Water-fowl. On the 17th in the Afternoon, a Sail appearing, the Commodore made a Signal for the *Gloucester* to chase; which the accordingly did, and, coming up with her about eleven, found her to be the *Pearl*, which had been separated from the Squadron by an hard Gale on the 22d of the last Month. She had been chased on the 7th by five large Spanish Men of War, and escaped from them in the Night. Having thus rejoined the Squadron, they sailed along-shore in Search of the River of *St. Julian*. The next Day, they anchored on the Coast in thirty-three Fathom Water, and sent in a Boat nearer the Shore to look for the Harbour. They had observed, for several Days, that the Sea was discoloured in many Places, and looked like Blood; a thing often observed before, and usually attributed to a kind of Shrimps or Cray-fish. The Land appeared rocky and barren, with several white Cliffs. They saw likewise a Mountain about eight Miles distant, lying South-west by West, shaped like a Sugar-loaf, and is called *Woods-hill*; which is looked upon as the Mark of the Harbour of *St. Julian*. The next Day, they entered the Harbour so famous for having received the Squadron commanded by *Magellan*, when he first discovered a Passage this Way into the South Sea, and for the Stay made here by Sir *Francis Drake*, in his Voyage round the World, as well as for the Mutinies of both their Crews in this Harbour.

6. Port *St. Julian*, on the Coast of *Patagonia*, lies in the Latitude of 49° 11' South, and in the Longitude of 80° West from *London*. There is a Bar before the Harbour, where, at Low-water, there are not above ten Feet Water. The Harbour's Mouth is in the Middle of the Bay, which cannot be discovered without, because of one Point thrusting in the other. Just without the Bar, lies a small flat Island, about a League from Land, which *Drake* called the *Island of true Justice*, because he there tried and executed Mr. *Doughby*. Over-against this Island, the Land is high; two Leagues farther to the South, it is low, and runs into a great Plain and Beach lying South South-west and North North-east. At the South End of this Beach are high round Hills; but the Sea-side is a steep white Cliff, moderately high, with a black Streak in it. The Hill over this Cliff rises, as is before observed, in the Form of a Sugar-loaf, having some black Bushes on the Sides, tho' there is neither Tree nor Bush to be seen in the Neighbourhood. In the Middle of the Harbour, there is from seventeen to nineteen Feet Water, the Bottom a fine black Sand. The Flood runs here South South-west, and the Ebb North North-east, at the Rate of two Miles and an half in the Hour. The Commodore hoisted his Long-boat, and sent on shore two Lieutenants, with a Detachment, to examine the Country, and to go to the Salt-ponds, which lie about a League to the North-west; in which Expedition they employed two Days, and then returned with a considerable Quantity of Salt; but without seeing any Inhabitants.

As this was the first Land they had touched at since their Departure from *St. Catharine's*, and Captain *Kidd* of the *Pearl* dying in his Passage, he was succeeded by Captain *Murray* out of the *Wager*; who had for his Successor Captain *Cheap*, who commanded the *Trial* Sloop; and his Lieutenant, Mr. *Sanders*, was appointed Commander of the *Trial*. There was a Report at this time in the Squadron, that Captain *Kidd* should say upon his Death-bed, That this Voyage, in which they had engaged with so much Cheerfulness, and such high Expectations of acquiring immense Fortunes, would, in the End, produce Poverty, Vermin, Famine, Death, and Destruction. I am persuaded, from the Language, as well as the Spirit, of this pretended Prophecy, that it could never fall from the Lips of a Gentleman bred in the Service. An English Officer knows his Duty too well to make the Increase of his Fortune the Cause of his serving his Country cheerfully; and would never breathe Discontent amongst his Sailors by any such Declaration. I am therefore convinced, that this was afterwards invented by such, as wanted an Excuse to colour their own

own bad Behaviour; but, no doubt, the circulating such Stories had a very ill Effect on the Minds of the Seamen, and, by depressing their Spirits, contributed to produce the Mischief, that they seem'd to predict. The Squadron remain'd here about a Week, in which time they overhask'd and repaired their Rigging, supplied themselves with Salt, and received their Proportion of Stores out of the *Trial* and *Ann Pink*; but, as they were not able to meet with Water on that Coast, their Allowance was reduced to a Quart a Man, and three Pints for the Sick.

On the 27th, the Squadron fail'd; and the *Gloucester*, not being able to purchase her Anchors, cut, and put to Sea, leaving her belt Bower, and a third of a Cable, behind. On *March* 4. they had Sight of Cape *Virgin Mary*, at the Entrance of the Straights of *Magellan*, bearing South-west by South. On the 6th, they first saw *Terra del Fuego*, an high rocky Shore, full of Precipices, the Tops of which were covered with Snow.

7. On the 7th, at five in the Afternoon, the Signal was made to lie-to; and, at four in the Morning, the Commodore fired ten Guns, as a Signal to make Sail. About seven, they had Sight of the *Three Brothers* on *Terra del Fuego*, at the very Entrance of the Straights of *le Maire*. At ten, they enter'd the Straights, with a brisk Gale, and a strong Current setting in. Cape *Diago* on *Terra del Fuego* bore North-west by West, distant three Leagues; and the opposite Cape of *St. Antonio* on *States-land* East North-east. Having the Wind and Tide with them, they were, by two in the Afternoon, quite through the Straights; so that a finer Passage was never made. These Straights of *le Maire* lie in the Latitude of $55^{\circ} 45'$ South, in a manner, due North and South. They are between seven and eight Leagues wide; and the Passage through is very little more. The Land on both Sides consists of high craggy Rocks, covered with Snow. The opposite Capes, on the South Side of these Straights, are Cape *Gonzales* on *Terra del Fuego*, and Cape *St. Bartolomew* on *States-land*. The Weather now began to grow extremely cold; and, as they had hard Gales, and a rolling Sea from the South-west, both Ships and Men suffer'd exceedingly, more especially the *Gloucester* and the *Wager*.

On the 27th, the *Gloucester* made a Signal of Distress, having broken her Main-yard; on which the Commodore ordered two Carpenters and a Smith, from the *Pearl*, to assist in repairing it. On the 31st, her Main-yard broke again; and, on *April* 1. the Commodore ordered the Carpenter of the *Wager* on board her. On the 3d, she shipped a Sea, that washed the Barge off the Boom, stove the Pinnacle, and fill'd her Long-boat full of Water, by which she suffer'd very much. On the 7th, a like Accident happen'd to her. On the 8th, the *Wager* lost her Mizzen-mast; and, upon a Roll of a Sea, all her Chain-plates broke to Windward. On the 9th, the *Ann Pink* made a Signal of Distress, having broke her Fore-stay, and damaged her Bow-sprit.

8. On *March* 10. being in the Latitude of 54° South, they had Sight of two Islands, which bore from them North North-west, about the Distance of eight Leagues. They lost Sight this Day of the *Severn* and the *Pearl*; which Ships pass'd the Straights of *le Maire*, and took Shelter on the Coast of *Brazil*. On the 12th, they had very hard Gales at West; and, between six and seven in the Morning, a prodigious Sea broke into the *Wager*; which carried Mr. *Bulkeley*, the Gunner of the Ship, who was standing upon Deck, over the Wheel, bulg'd the Cutter, and fill'd the Long-boat full of Water. The Boatswain was for heaving the Cutter overboard; but the Gunner insisted upon having the Captain's Directions, who was sick in his Cabin. He order'd her by all means to be sav'd; which was accordingly done. The Carpenter of the *Wager* was all this time on board the *Gloucester*. On the 13th, the Commodore being then on the Weather-quarter of the *Wager*, bore down under her Lee, in order to speak with Captain *Cheep*; and accordingly the Captain being brought upon Deck, the Commodore ask'd him, If the Carpenter was return'd from the *Gloucester*. The Captain answer'd, No; and I am surpris'd Captain *Mitchell* should detain him, when he knows I must want him about my Mizzen-mast. The Commodore told him, He would speak with the *Gloucester*, and order him on board. He then ask'd the Captain, Why he did

not set the Main-top-sail, and make more Sail. Captain *Cheep* answer'd, My Rigging is all gone, and broke fore-and-aft; and my People almost all taken ill, and down; but I will set him as soon as possible. The Commodore desired he would, and make what Sail he could after him. On the 14th, the Carpenter return'd from the *Gloucester*, it being the only Day in a Fortnight a Boat could live in the Sea. As soon as the Carpenter came on board, he waited on the Captain; who order'd him to look on the Chain-plates and Chains, and to give his Opinion of the Mast's going away. The Carpenter look'd as order'd, and told Captain *Cheep*, That the Chain-plates were all broken. The Captain shook his Head, and said, Carpenter, That is not the Reason of the Mast's going away. The Carpenter, as the Mast was gone, not caring to charge it on any one's Mismanagement, or to occasion any Uneasiness about what was now past Prevention, fitted a Cap on the Stump of the Mizzen-mast, got up a lower Studding-sail-boom of forty Feet, and hoist'd a Sail to keep the Ship to. This Day, they saw Land in the Latitude of $54^{\circ} 5'$, which, without doubt, was the *Black Cape* on the Coast of *Terra del Fuego*. For some Days after this, the Weather was moderately good; and, having long enough doubled Cape *Horne*, there seem'd to be no great Danger of parting Company.

9. On *April* 19. there were some hard Gales; and they lost Sight of the *Gloucester* and *Wager*, the latter of which they never saw again; a very strange Accident, considering they had now better Weather than at any time since their passing the Straights, and were but at a moderate Distance from the Island of *Juan Fernandez*. But we shall hereafter resume this Subject, tho' a very disagreeable one.

They were now extremely afflicted with the Scussy aboard the *Centurion*. On board the *Gloucester*, the People were in a miserable Condition, there being so many confin'd to their Beds, that they had scarce enough to do the Business of the Ship, and at the same time to extremely pester'd with Rats, that they could hardly sleep, their sick Men having their Toes eaten off; and, as there were ten or twelve died a Day, their Corpses were dreadfully disfigur'd by these rapacious Enemies. On *May* 16. they had Sight of Land, which bore East North-east, which they took to be the Island of *Socora*. The next Morning, it blowing so hard, and the Wind frequently veering, a Consultation was held, in which it was very prudently resolv'd to bear away for the Island of *Juan Fernandez*, in order to refresh and rest. About two in the Afternoon their Fore-stay blew from the Stay; and soon after, the Fore-sail split to Pieces. About Noon, they saw several high Mountains, covered with Snow; and the next Day at ten, having then moderate Weather, they saw them very plain; and then they seem'd to them to be Islands.

On the 21st, the Ship's Company of the *Gloucester* were reduced to a Pint of Water per Day, except the Sick, who were still allow'd a Quart. On the 23d, the high Land bore East South-east, distant about two Leagues, in the Latitude of about 48° South, a strong Current setting hereto the Westward. On the 23d, they had little Wind in the Morning; but, towards Night, hard Gales, a very great Sea, and a violent Swell; which did much Damage to their Rigging and Sails. They likewise shipped a great Sea, which distress'd them exceedingly, being now in a most deplorable Condition, not a Top-sail-yard in the Ship, nor a Carpenter, whose Health would permit him to work, in order to repair them; so that they were forced to mend a Sprit-sail for a Top-sail, the Ship at the same time very leaky, and not Men enough in Health to work her. On the 30th, they sav'd a Butt of Rain-water. On *June* 1. they sav'd a Puncheon, which was of great Service for the Relief of their Sick. The Weather was so moderate during the succeeding Week, that the few Men who were well had not so much Fatigue as before; and on the 8th, about four in the Afternoon, they saw, to their great Joy, the Island of *Juan Fernandez*, their first Place of general Rendezvous, lying West by South, at the Distance of about thirteen Leagues. On the 9th, fresh Gales, and cloudy, with some Showers of Rain, and a great Sea, the Body of the Island being then distant about four Leagues.

10. On the 10th, about two in the Afternoon, they anchored in twenty Fathom Water, under the Land. The

first thing they did was to fend their Boats on shore, with Spars and Sails to make Tents, or at least a kind of covered Huts, for the Conveniency of the Sick; in the fixing of which the Commodore not only gave his Directions, but assisted in Person, and furnished whatever was thought requisite for People in their Condition by the Surgeon, out of his own Stores; for, as his Temperance had preserved his Health, it now furnished him with the additional Pleasure of supplying the Sick with what another Man would have spent at his own Table. The Ship's Company was, indeed, in a most dreadful Condition: Out of upwards of 500, which were on board the *Centurion* when they left *England*, there were not now 200 left; and the far greatest Part of these in a most miserable Condition, into which they were reduced by the Scurvy; a Disease so much the more terrible, as it produces various, and yet alike frightful, Symptoms in different Constitutions. Some who were frized with it lost the Use of their Limbs, and of their Senses; so that it was difficult to distinguish, except by their low moaning Noise, whether they were alive or dead. It affected others, by disordering their Brains, and this even to a degree of Madness; which made them terrible to others, as well as useless to themselves. A third sort had their Spirits greatly depressed, a general Lassitude, accompanied with a Shortness of Breath; and it was observed, that these were soon carried off. It seems unworthy of an Historian to lay down Facts of this Nature, without inquiring a little into their Cause; for to talk of the Scurvy, as a Disease acting such different Cruelties on the Bodies of Men, may excite the Compassion, and raise the Admiration, of Readers; but will hardly, I think, satisfy their Judgments. The very learned *Ramazzini*, as well as other Physicians, have accurately treated this Disease; and therefore, from them, I shall borrow the Helps necessary to explain it.

The Scurvy, then, may be defined to be an ill Habit of Body, occasioned by the manner of living at Sea, and shewing itself according to the natural Habits of those upon whom it seizes. To enter more particularly into the Matter: The Air, to which Seamen are continually exposed, is always salt and moist, and, in the Climate of which we are now speaking, exceedingly quick and cold. Their Diet, for the most part, is salt Meat, which they are not able to dilute with sufficient Quantities of Liquor, and which they have broken and uncertain Rest; from all which, as also from other intervening Accidents, such as being often wet, and exposed to the cold Night Air, they contract the ill Habit of Body, of which we are now speaking. For this fit and moist Air, entering the Blood, will render it viscid; and the Bittern in the Salt which they eat, will heat and rarely this viscid Blood, and thereby increase its Celerity. By this means very large Globules will be forced into the Capillary Vessels, where they must remain, till either the Quickness of the Circulation removes the Obstruction, or the Efforts made by Nature for that Purpose break the Vessels. Hence it is, that the Diseased are troubled with Spots, and Itchings in the Skin; for extravasated Blood turns first of an high Red, then livid, then black. It putrefies likewise, which occasions the Rottenness of their Gums, stinking Breath, and loose Teeth. Wandering Pains, irregular Pulses, and inexpressible Faintness, are Symptoms that arise from the same Cause; which, as I observed before, operates severally according to the Difference of Constitutions. In the End they are usually carried off by a Dropsy, attended with Ulcers in their Legs, and very frequently with a voracious Appetite; which agrees exactly with what is reported by those who made this Voyage, viz. that, upon opening the Bodies of those who died on board the *Centurion*, they found their Blood dried up, the Vessels full of Water, and their Bones, when the Flesh was scraped off, quite black.

As to the Remedies which are fittest for this Disease, they are easily discovered, but then they are not so easily applied. Good Air, fresh Provisions, great Plenty of Greens, and Abundance of thin Liquors, together with due Exercise, and natural Rest, quickly complete the Cure. But to what Purpose should a Man talk of these at Sea, where none of them are to be had, and where the very Mention of them must be exceedingly disagreeable, for that very Reason? The only thing to be thought of there, is how to prevent

the Scurvy; and, in regard to this, much may be done. In the first Place, Cleanliness is a matter of great Consequence; Sir *John Narbrough* tells us, that he defended his Crew, in a great measure, from this dreadful Disease, and that for many Months, in these Seas, by a very easy Precaution; for he obliged every Man to wash his Mouth, Face, and Hands, before he received his daily Allowance of Bread, and appointed a Man to see it performed. Exercise is another excellent Thing; for, while People are brisk and active, this Distemper cannot lay hold on them. The same judicious Commander tells us, that twelve of his Crew fell lame with Cold, their Legs and Thighs turning as black as an Hat. These made use of Bathing and Stuping, which, instead of relieving, increased the Symptoms; while, at the same time, those who were able to stir, and to do their Business, felt no sort of Inconvenience from the Climate, but enjoyed as good Health, and had better Stomachs than in *England*. Thirdly, Vinegar, and all other Acids, either as Food or Physic, are great Preservatives; to which if we join abstaining as much as possible from salt Meats, and spirituous Liquors, I believe it will not be easy to add any thing very considerable upon this Subject. But to return to the Island of *Juan Fernandez*.

After they had been some time on shore, and had fed on fresh Provisions, Greens, Roots, and whatever else the Island afforded, enjoyed the Benefit of wholesome Air, and daily Exercise, with the sovereign Relief of good Water in great Plenty, they began to recover their former Health and Strength, and to take a great deal of Pleasure in their present Habitation; which I shall not describe, because we have spoken already very fully of it. I shall only observe, that the Account given us by these People, and the Advantages of this Island, sufficiently justify what I have advanced, as to its making a commodious Plantation; and this is one Reason why I do not chuse to say any more of it, lest it might be thought I put my own Sentiments into other Mens Mouths. While they remained here, every thing was conducted with the utmost Regularity and Decorum; and the utmost Pains taken to repair and refit the Ship, as well as to refresh and recover the Men.

On the eleventh, came in the *Trial Sloop*, in a most miserable Condition, the Vessel scarce able to swim, and hardly Hands enough to work her; having buried more than half her Crew since she left *England*. They sent her on board, as soon as she dropp'd Anchor, a convenient Supply of Water and fresh Provisions, which were very acceptable. The Commodore was in great Pain for the rest of his Squadron, whom he daily expected at this Rendezvous, according to their Instructions, but saw nothing of them for the Space of a Fortnight. On the twenty-seventh they had Sight of the *Gloucester*; on which the Commodore ordered the First Lieutenant on board, in the Cutter, with a Supply of Fish and Water; a very seasonable Relief to People who had been for some time at so short an Allowance, as a Pint of Water a Day to each Man; and reduced to so low a Condition, that the Captain found it absolutely necessary to detain the Lieutenant, and his Boat's Crew, in order to assist him in working the Ship.

11. Never certainly was a Ship's Company more distressed than the *Gloucester's* at this Time; for upon sending, on the twenty-eighth, the *Trial's* Boat, with another Lieutenant, and a small Crew, Captain *Mitchell* thought proper to detain them, in order to work his Ship, which was about four Leagues from the North End of the Island, and continued driving in this manner for a whole Week. They then attempted to tow her into the Harbour, but to no manner of Purpose; for on the tenth of *July* she drove, in spite of all that could be done, quite out of Sight: On the sixteenth she was again within Sight of the Island, fired two Guns, and made a Signal of Distress, having then but one Puncheon of Water left; the Commodore sent a Boat on board, with two Hogheads of Wine, nine Puncheons of Water, and other Refreshments. On the nineteenth she was blown off again, and driven to the lesser Island of *Juan Fernandez*, in the Latitude of $35^{\circ} 55'$ South, about 20 Leagues South South-west of the great Island. The *Spaniards*, when they speak of them both, call them the Islands of *Juan Fernandez*; but, to distinguish them, they call the larger *de Tierra*, and the lesser *de Fuera*. The *Gloucester* attempted to send

her Boat ashore, in order to get Water, having Sight of several Rivulets, but to no Purpose; for the Wind blowing strong from the Shore, occasioned such a Surf, as rendered it impossible for them to land: However, their Expedition was not altogether ineffectual, since the Boat returned with a large Supply of Fish.

On the 23d they made the larger Island of *Juan Fernandez* again, and about 11 in the Morning came to an Anchor. The Commodore then sent off his Boat, with a Lieutenant and a Crew sufficient to assist the *Gloucester* in Mooring. They had been now above a Month plying in Sight of the Island, and from the Time they left Port *St. Julian's* had buried 254 Men, and had now but 98 left, of whom not above seven or eight were able to assist in working the Ship; they were, besides, so distressed for Water, that for a Month before they made the Island of *Juan Fernandez*, they were reduced to a Pint a Day, and had not enough, even at that scanty Allowance, to serve them a Week longer. However, when her Crew once got on shore, and had the Conveniency of Tents, and such Refreshments as the Island afforded, they recovered space; which was especially owing to the Commodore, who supplied the Sick, as he had done his own People, with Wine, and other Necessaries, from his private Stores. The Beginning of the Month of *August* they spent in repairing and rigging their Ships, and in clearing the Hold of the *Gloucester*; where they found a great many of her lower Tier of Water-casks half filled with Sea-water and Ballast; which was occasioned by the Rats eating Holes in them. On the 5th the Commodore detached the *Trial's* Sloop to the Island of *Fuera*, to see if any of the rest of the Squadron had put in there, and the returned on the 21st, but without any Intelligence. The rest of this Month, and the Beginning of the next, was spent in getting on board Water, and other Necessaries, that the Ships might, as soon as possible, be in a Condition to put to Sea.

12. On *September 7*, about eight in the Morning, a Sail appeared in the Offing; upon which the Commodore slipped his Cables, and gave her Chace. The next Day, they lost Sight of her; but soon saw another Sail, which they chased and took, and returned with her on the 14th to the Island of *Juan Fernandez*. The Prize was called the *Camilla*, and had on board, amongst other things, 140,000 Pieces of Eight. The *Ann Pink* being condemned as useless, her Ammunition, and eight of her Guns, were put on board the *Spanish Prize*, which was fitted up with all the Care and Diligence imaginable, to supply her Place. On the 18th, the *Trial Sloop*, being intirely refitted, was ordered to Sea, with Directions to cruise in a certain Latitude, till joined by the Commodore. The *Spanish Prisoners*, to the Number of twenty-eight, were put on board the *Gloucester*; and Captain *Mitchell* had Orders given him to refit as soon as possible, and follow the Commodore, who was resolved to lose no Time in pursuing his Instructions. Captain *Mitchell* was likewise directed to take out the Masts of the *Ann Pink*, and set her on Fire; which Precautions being taken, the Commodore sailed, with his Prize, from the Island of *Juan Fernandez*, in order to cruise on the *Spanish Coast*.

On *October 3*, a little after Noon, they had Sight of two Ships, and, on giving Chace, came up with them, when they proved to be the *Trial Sloop*, and a Prize she had taken. The Prize was a fine, new, strong Ship, fit, in every respect, for a Privateer; and, as the *Trial* had sprung her Fore-mast and Main-mast in chasing her, the Commodore condemned the Sloop, and commissioned the Prize. In this Ship were taken, besides other Merchandize, 144 Ounces of Gold, 722 Ounces of Silver, and two Chests of Church-plate, very finely wrought, besides other Things of Value. On the 4th, the Men being already turned over to the Prize, and all things of Value taken out of the *Trial Sloop*, she was destroyed; but not set on Fire, to avoid alarming the Coast. On the 6th, the Articles of War were read to the Ship's Company; and from thence to the 26th, the Commodore continued cruising, with his two Prizes, on the Coast of *Peru*, where we will leave them for the present, in order to give an Account of the Shipwreck of the *Wager*; which is a Point, however disagreeable, of so great Importance, that, I think, it cannot be omitted.

13. The Account given by the Gunner and Carpenter, which is already in every body's Hands, deserves to be read with the utmost Attention, the rather because I do not find, that any Part of their Narrative is contradicted, notwithstanding it is certain, that some Advices have been received from the Captain, who is since arrived safe in some of the *Spanish Settlements*. I have made all the Use of it I could, as well as of other Informations I have received, in order to give a short, plain, and, as far as I have any Lights, a true Account of the Matter. The *Wager* separated from the Commodore on *April 19*, in the Evening, when the Weather was much better, than it had been for a Month before. Immediately after this Separation, the Mischief that afterwards broke out so violently, began to work, the Steward taking upon him to shorten Provisions, and to behave in such a manner, that the Captain ordered a Case of Pistols to be delivered to every Officer on board the Ship. I must confess, it seems very clear to me, that there were two sinister Designs formed on board the *Wager*; the one, if we may credit the Accounts we have had, of the Captain, to go upon the *Spanish Coast* without the Commodore; and the other, of the Crew to do what they pleased. The first appears from hence, that the Captain denied the Rendezvous was at the Island of *Juan Fernandez*; and pretended, that it had been altered at *St. Julian's* to an Island in the Latitude of 44° South; which was the only Excuse he made for continuing his Course, at the apparent Hazard of the Ship, and of all their Lives.

That the Reader may perceive this the more clearly, I am obliged to give him a Conversation, which happened between Captain *David Cheap* and Mr. *Buckley* the Gunner, a few Evenings before the Ship was lost, which explains the whole Affair, and is thus related by the Gunner: 'The Captain sent for me into his Cabin, and the first Word he said was, Gunner, What Longitude have you made?' I told him, 28° 30'. What Distance do you reckon yourself off the Land? I answered, About sixty Leagues; but, if the two Islands we saw were those laid down in your Chart to lie off *Breker's* Streights, and the same Current continues, with a Western Swell, we cannot be above a third Part of the Distance off the Land. The Captain made Answer, As for the Currents, there is no Account to be given for them: Sometimes they set one Way, and sometimes another. I said, Sir, very true; but, as the Ship has been always under reef Courses, with the Mizzen-mast gone, the mist wholly drive to Leeward, and nigher the Land than expected. The Captain then told me, I suppose you are not acquainted with my Rendezvous for the Island of *Nosra Signora di Socora*, in the Latitude of 44°. I replied, Sir, the Ship is in a very bad Condition to come in with the Ice-shore; and, if it is possible to bring the Ship to an Anchor, we shall never purchase it again. The Captain answered, I do not design to come to an Anchor; for there are no Soundings, until you come within seven Leagues of the Land. I purpose to stand off-and-on twenty-four Hours; and, if I do not see the Commodore, or any of the Squadron, in that time, we will go for *Juan Fernandez*. To this I said, Sir, the Ship is a perfect Wreck, our Mizen-mast gone, with our standing Rigging fore-and-aft, and all our People down; therefore I cannot see what we can do in with the Land. The Captain's Answer was, I do not signify; I am obliged and determined to go for the first Rendezvous. I find it is a thing taken for granted by those, who have given an Account of this Voyage, that the Captain really had Instructions to sail to the Islands, which, however, I very much doubt: For it does not appear, that the Commodore ever went thither, or thought of sending thither, to see if any of the Squadron were there, which he certainly would have done, if it had been the last Place of Rendezvous.

On *May 14*, at half an Hour past four in the Afternoon, the Ship struck on a sunk Rock; and the Crew, to their great Sorrow, nothing but Rocks round them. She struck a second time, which broke the Head of the Tiller; and in a short time after the Struck, Tiller, and grounded between two small Islands, about five Leagues distant from the Main, and not above a Musquet shot from the Shore. They immediately launched the Barge, and

and Yawl, over the Gunnel, cut the main and Fore-masts by the Board, and the Sheet Anchor from the Gunnel. The Captain sent the Barge ashore, to see if the Place was inhabited; but, the People not returning on board as directed, the Lieutenant was sent in the Yawl, with Orders to bring off the Barge: This he sent off, but stayed ashore himself. As soon as the Barge came on board, the Captain was perswaded, being very ill, to go ashore; which he did, accompanied by the Land Officers, Mate, and Midshipmen. The Officers remaining on board were the Master, Boatswain, Gunner, and Carpenter: Upon the principal Officers leaving the Ship, several of the Sailors fell to broaching the Wine, breaking open Cabins, and doing every thing that might be expected from Wretches mad and drunk. The Vessel being bulged in the Midships, the rest of them went on shore. The Island they found uninhabited, and nothing in it for Subsistence except Celery, which grew wild, Mussels, Limpets, and other Shellfish, and some wild Fowl. A Spirit of Mutiny soon shewed itself amongst these unhappy Men; for, on the 16th, the Boatswain being on board the Wreck, made a signal for a Boat to come on board; but, finding no Appearance of any, he brought a Quarter-deck Gun to bear on the Captain's Hut, which grazed over it, without doing any other Damage. As soon he came ashore, the Captain set this Truck him a Blow with his Cane, that knocked him down; and he lay motionless, and, to Appearance, dead, for some time. When he came to himself, and saw a Pistol cocked in the Captain's Hand, he presented his naked Breast to him; but the Captain only told him, He deserved to be shot; and said no more then. This is a Demonstration of the Temper they were in on all Sides. If they had taken due Care, they might certainly have made them lives very easy in the Place where Providence had placed them; for, besides that they were visited by the *Indians*, who behaved very well towards them, they got abundance of things out of the Ship, and of such things as they cannot help wondering how they came there; viz. several Chests of Wax-candles of all Sizes, Bales of Cloth, Blankets and Shoes, with some Clocks, and other mercantile Wares, with which, says my Author, the Ship was thronged.

But, instead of taking the best Measures possible for their own Security and Preservation, they were continually contriving each other's Destruction. They had not been on shore above three Weeks, before eleven of them formed a Design of blowing up the Captain, the Surgeon, and a Lieutenant of Marines, in their Tent. On this Design being discovered, they deserted; but the Train they had laid for executing their villainous Purpose was found, and appeared a clear Testimony of the Truth of the Fact. Soon after, a Disturbance happened, in which Mr. *Henry Cozens*, Midshipman, was shot by the Captain on *June 10.* and, on the 24th, he died. At this time, there were forty-five Sailors dead since the Ship struck, and 100 still remained upon the Island. It happened, that a Midshipman on board the *Barge* had borrowed from Captain *Cheep* Sir *John Narborough's* Voyage to the South Seas; which falling into the Hands of some of the Officers, they immediately formed a Design of lengthening their Long-boat, and endeavouring to slip through the Straights of the Coast of *Bresil*, thro' the Distance of 600 Leagues. It was certainly a very bold Design, and a very strong Testimony, that *English* Sailors have Spirit enough to undertake and execute any thing, that is in the Power of Man.

As soon as this Resolution was taken, they drew up the following Paper, which was signed by the Carpenter, and two Officers and Seamen, as also by Captain *Pemerton*, and two Lieutenants of Marines: 'We, whose Names are under mentioned, do, upon mature Consideration, as we have met with so happy a Deliverance, think it the best, surest, and most safe Way, for the Preservation of the Body of People on the Spot, to proceed through the Straights of *Magellan* for *England*: Dated at a desolate Island, on the Coast of *Patagonia*, in the Latitude of 47° South, and West Longitude, from the Meridian of *London*, 81° 40', in the South Seas, this second Day of *August*, 1741.' This Paper they carried to the Captain, and laboured all they could to engage him to comply with their Desire; which, however, had little

Effect; for he made abundance of Objections, suggesting to them, that they were not above one hundred Leagues from the Island of *Juan Fernandez*; that they were but at a small Distance from the Island of *Chiloe*, allowing, however, that it was not likely, that they should find the Commodore at the first-mentioned Place; because, as he affirmed, he was positively instructed to attack *Baldroia*, a Port of *Chili*; nor that it was probable they should do any Good at *Chiloe*. In all this, however, he only temporized; for, when they pressed him for a direct Answer, he flatly declared, that he was not resolved to go that Way. This produced new Disorders and Seditions; till at last they resolved to rid themselves of the Captain's Authority altogether: And, to do this, they could not find a better Pretence than to make him Prisoner for the Murder of Mr. *Cozens*; which accordingly they did on the 9th of *October* in the Morning, seizing him in his Bed: Upon which Occasion the Captain behaved with great Spirit and Firmness, declaring absolutely, that it never was his Intention to comply with their Design of going through the Straights of *Magellan*, and that he was prepared for any Fate that might befall him; only he seemed to resent the Conduct of his Officers, who had put themselves at the Head of the Mutineers.

One cannot help being surpris'd at so odd a Transaction, or forbear wondering to see, that the greatest Hardships, the most intolerable Distresses, cannot alter the Frame of the human Mind, or change, for any Length of Time, the Disposition of the Man. Captain *Cheep* had governed despotically on board, without ever consulting his Officers, or taking Pains to gain the Affection, as well as to secure the Obedience, of his People. He affected the same Manner of acting, when shipwrecked on a desert Island; and, instead of encouraging the People to live peaceably and harmoniously together, and to concur in every thing necessary for the common Good, he shut himself up in his Tent; issued his Orders from thence, with great Looseness of Mind; and, while he was careless of the common Safety, shewed an excessive Jealousy of his own Authority. It was this kind of Management that put the other Officers upon contriving how to return home, without waiting for their Captain's Directions: So natural it is for People, in all Cases, to believe they are released from the Duty of Obedience, when their Governors forget to protect them.

The Scheme of passing through the Straights of *Magellan* took Rise from the Accident I have before-mentioned; and, I must confess, I think it a Misfortune, that they happened to meet with that Book; for, if their Minds had not been prepossessed with a Notion, that this was the only Way by which they could return, they might, undoubtedly, have found a nearer Passage; for, in the Latitude of 50° South, there is a Gulph, on the Coast of *Patagonia*, which runs very far within-land, from whence they might have rowed up the *Rio de la Campana*, which falls from a great Lake in the Heart of the Country; out of which there runs another River, that falls into the North Sea, not far from Port *St. Julian*; which Passage may be about fourscore Leagues, or at most one hundred, and would have saved them all their tedious Voyage through the Straights of *Magellan*, and from thence along the Coast of *Patagonia*, to that very Port of *St. Julian*. But the former Passage being once proposed, and the Captain endeavouring rather to shew them, that this was impracticable, than to point out any other shorter or better Passage, the Dispute served only to divide and distract them, and to create such Difficulties in carrying on the important Affair of lengthening their Long-boat, upon which, at all Events, their Safety depended, that the Carpenter, who had the Direction of it, ran mad with repeated Disappointments; and it was with very great Difficulty that the Design was at last accomplished, and their new Vessel finished in such a manner, as to be able to put to Sea.

I am very sorry, that I am obliged to make these Reflections, which seem to bear hard upon an unfortunate Gentleman, for whom I have the greatest Tenderness and Compassion: But the Reader will find them fully justified hereafter, when he takes a View of the Commodore's Conduct in the same Circumstances: When he sees him,

like

like Captain *Cheap*, and with a smaller Number of Men, on an uninhabited Island, in a much worse Situation, he will there see, that the Commodore lost nothing of his Authority, but was regarded as the Father of those on Shore, whose Officer he had been at Sea. We may then behold him giving his Orders in that desert Island with the same Firmness of Mind as on board his Ship, and those Orders obeyed with equal Readiness, because encouraged by his own Example. There, indeed, Mr. *Anson* was an absolute Monarch, and governed by no other Rule than that of his Will, because his People were sensible; from long Experience, that he had nothing in View but their Good; and therefore they knew no Interest, but that of obeying his Directions. He found himself under no Necessity of talking of his Commission, and the Laws of the Navy, because he derived his Authority from an higher Source, the Affection of his Ship's Company. In a Word, his Virtues secured him, not only from Sedition, but from the very Suspicion of it; and those who shared with him in that Danger, instead of reflecting on the Accident with Horror, still remember with Delight that Picture of primitive Government, in which superior Abilities gave a kind of divine Right to Empire. But to return to that Scene of Confusion which we left so lately.

After seizing their Captain, and finishing the Vessel, in which they were to embark, the Crew of the *Wager* thought of nothing but getting on board their Sea-stores, and leaving the dismal Place of their Confinement; but, before they did this, they thought fit to draw up a kind of Instrument of Deposition; which, because I believe it is the first of its kind, and as singular in its Form as in its Matter, I shall give it the Reader in their own Words: Whereas Captain *David Cheap*, our Commander, in his Majesty's Ship the *Wager*, never consulted any of his Officers for the Safety and Preservation of the said Ship, and his Majesty's Subjects thereto belonging; but several times, since the unhappy Loss of the said Ship, he has been solicited, in the most dutiful Manner, promising him, at the same time, to support his Command, desiring no more than to go off Heart and Hand from this Place to the Southward; which he gave his Word and Honour to do; and, being almost ready for sailing, did apply to him some few Days past to draw up some proper Articles, in order to prevent Mutiny, and other material Things, which we thought necessary to be agreed to before we went off; but he, in the most scornful Manner, hath rejected every thing proposed for the public Good: And as he is now a Prisoner, and the Command given to the Lieutenant, upon his Approbation of the following Articles: First, as we have no Conveniency for dressing Provisions on board the Vessel for a third Part of the Number to be carried off the Spot, therefore have this Day served out, to every Man and Boy, twelve Days Provision for them to dress before we go off: And also it is agreed, that whoever is guilty of defrauding another of any Part of his Allowance, on sufficient Proof thereof, the Person found guilty, without any Respect of Person, shall be put on shore at the first convenient Place, and left there: Secondly, in regard to the Boat's going off with us, we think proper to allow one Week's Provision for each Man appointed to go in them, in order to prevent Separation from each other, which would be of the worst Consequence of any thing that can happen to us: To prevent which, we do agree, that, when under Way, they shall not separate, but always keep within Musquet-shot, and, on no Pretence or Excuse whatsoever, go beyond that Reach: The Officer, or any other Person, who shall attempt Separation, or exceed the above-mentioned Bounds, shall, on Proof, be put on shore, and left behind: Thirdly, it is agreed, in order to suppress Mutiny, and prevent Broils and Quarrels on board the Vessel, that no Man shall threaten the Life of another, or offer Violence in any Shape; the Offender, without any respect of Station or Quality, being found guilty, shall be put on shore, and left behind: Fourthly, we do agree, whatever Fowl, Fish, or Necessaries of Life, we shall happen to meet with in our Passage, the same shall be divided among the Whole; and if Captain *David Cheap* shall be put on board a Pri-

soner, it shall not be in the Lieutenant's Power to release him. These Articles were signed by the Lieutenant, Master, Boatwain, Gunner, Carpenter, Purser, three Midshipmen, and about forty other People.

When this Resolution, or rather this Revolution, was intimated to Captain *Cheap*, by Mr. *Bulkeley* the Gunner, he delivered himself to this Purpose, in the Hearing of most of the Ship's Company: I am to be carried Prisoner to England; Gentlemen, I shall never live to see England, but die by Inches in the Voyage; and it is surprising to me, to think what you can expect by going to the Southward, where there are ten thousand Difficulties to be encountered with: I am sorry for many brave Fellows should be led to go where they are not acquainted, when, by going to the Northward, there is the Island of *Chiloe*, not above ninety Leagues, where we need not fear taking Prizes, and may have a Chance to see the Commodore. To this the Gunner made Answer; Sir, you have said, that we shall be called to an Account for this in England: I must tell you, for my Part, had I been guilty of any Crime, and was sure of being hanged for it in England, I would make it my Choice to go thither, sooner than to the Northward: Have not you given your Word and Honour to go to the Southward? It is true, there is a Chance in going Northward, of delivering us from this unhappy Situation of Life to a worse, viz. a Spanish Prison. The Captain then said no more, but, Gentlemen, I with you well, and safe to England. In this unlucky Situation, Captain *Cheap* determined to try, whether it was not possible to obtain an Alteration in the Resolution of the People, at least with regard to himself, especially as it went no farther than desiring he might not be obliged to make a Voyage against his own Judgment; but be left on that Island, to take what Course for his own Safety he should think fit.

This Demand of his does not seem to have been relished by the Commander of the Land Forces, who thought, that, as they had confined Captain *Cheap* for Murder, they were bound to justify that Act by bringing him home to be tried for it; but the rest of the Crew thought otherwise, for Reasons that will soon appear: They consented therefore to the Captain's Request; and, at the same time, declared, that if there were any who had a Mind to stay with the Captain, they were at full Liberty to pursue their own Sentiments in that respect; and went farther, by offering the Barge and the Yawl for the Service of such as accepted of this Proposal, that they might not be destitute of the Means of getting off the Island, if the Captain should make any Proposal for that Purpose. I do not pretend to decide so intricate a Question, as who was in the Right, or who in the Wrong, in the Management of this Affair. I have already intimated, that, possibly, there might be Faults on both Sides: But this, I think, I may have Leave to say, without Fear of Contradiction, that, as Things then stood, there was a great deal of Humanity and Good-nature in this Part of the Seamen's Conduct, who left their Commander the same Liberty they took themselves, and did not pretend, after depriving him of his Command over them, to take from him also the Command over himself. It rarely happens, that a Man, long vested with Power, and who has any Virtues, gains no personal Friends; and Captain *Cheap*, how unlucky soever he might be in his Conduct as a Commander, had, as a Gentleman, too many good Qualities to be totally deserted, tho' there were but two who at first embraced this Proposition of staying with the Captain, viz. Lieutenant *Hamilton* of the Marines, and Mr. *Elliot* the Surgeon of the Ship, who chose rather to share any Hardship with their Officer, than be guilty of so mean an Action as deserting him in his Distress. As I cannot pretend to censure the Conduct of the Ship's Company, for doing, what, perhaps, Nature obliged them to do, so I cannot forbear commending the Honour and Fidelity of these Gentlemen in remaining with their Friend. There is a wide Difference between abetting the Abuses of Power, and preserving Respect to the Officer who is thought to abuse it; and though no Ties of personal Friendship ought to induce any Gentleman to be an Instrument in the former, yet they may well justify the latter.

On the 12th of *October* the Ship's Company launched their new Vessel, which they called the *Speedwell*, and began to get on board their Provisions. The Captain on his side now turned his Thoughts to providing for his own Security; and therefore desired, that the Question might be asked of the Deferters, whether they would follow his Fortunes, and endeavour to proceed to the Northward? which was accordingly done, and eight of them readily embraced the Proposal; upon which the Ship's Company agreed to make a proportionable Division of military Stores and Provisions, for the Use of the Captain, and those who staid with him: And, at the same time, to keep up that Appearance of Regularity that had hitherto been preserved in their Proceedings, they drew up another Paper, containing the Motives to their Conduct, in the following Words: 'These are to certify the Right Honourable the Lords Commissioners for executing the Office of Lord High Admiral of Great Britain, That we whose Names are under-mentioned, do beg Leave to acquaint your Lordships, That Captain *David Cheap*, our late Commander in his Majesty's Ship *Wager*, having publicly declared, that ... will never go off this Spot, at his own Request desires to be left behind; but Captain *Pemberton*, of his Majesty's Land-Forces, having confined him a Prisoner for the Death of *Mr. Henry Cozens*, Midshipman, with Lieutenant *Hamilton* for breaking his Confinement, did insist on delivering them, upon the Beach, to the Charge of Lieutenant *Beans*: But he, with his Officers and People, consulting the ill Consequences that might attend carrying two Prisoners off in to small a Vessel, and for so long and tedious a Passage as we are likely to have; and as they might have Opportunities of acting such Things in secret, as may prove destructive to the whole Body; and also, in regard to the chief Article of Life, as the greatest Part of the People must be obliged at every Place we stop, to go on shore in Search of Provisions; and there being now no less than eighty-one Souls in this small Vessel, which we hope to be delivered in: We therefore, to prevent any Difficulties to be added to the unforeseen we have to encounter with, think proper to agree, in order to prevent Murder, to comply with Captain *Cheap's* Request. The Surgeon also begs Leave to be left with him. Dated on board the *Speedwell* Schooner, in *Cheap Bay*, this 14th Day of *October*, 1741.'

This Paper was signed by the Lieutenant, Master, Boatman, Gunner, Carpenter, Surgeon's Mate, and two Master's Mates, as well as by Captain *Pemberton*, and the Surgeon of the Land-Forces. It was signed the very Day that the People embarked; and as we are now come to that Point, it will be necessary to give a distinct Account of their Embarkation. The Number of Persons engaged in this bold Design of passing through the Straights of *Magellan* in Boats was eighty-one, of whom fifty-nine took their Passage in the *Speedwell*, twelve in the Cutter, and ten in the Barge; but however it was not long before some of them changed: For those who were in the Barge altered their Sentiments in a Day or two, and returned to Captain *Cheap*; so that now the Expedition was reduced to two small Vessels, with seventy-one Men on board. In the very Entrance of the Straights of *Magellan* they found themselves obliged to abandon the Cutter: This was on the 2nd of *November*, and gave those who were in the *Speedwell* inexpressible Concern; however, on the sixth they met with her again, and took her in Tow, but that very Night she broke loose, with one *James Steward* in her, and was never seen more.

This Accident, and some Disputes that arose among themselves, occasioned such Feuds and Animosities among our Adventurers, that a Party took it into their Heads to be set ashore; to which the rest, finding themselves exceedingly crowded, readily agreed; but at the same time insisted upon having a Certificate from them, that this was not an Act of Compulsion, but the Result of their own Desire. And this Certificate, as I have hitherto given all their Papers, I think it also necessary to transcribe. 'These are to certify the Right Honourable the Lords Commissioners for executing the Office of Lord High Admiral of Great Britain, &c. That we whose Names are under-mentioned, since the Misfortune of losing the Cutter,

'have considered the Inconveniencies and Difficulties to be attended, where so great a Number of People are to be carried off: Therefore we have requested, and desired of the Officers and Company remaining of the same Vessel, to put us on shore, with such Necessaries of Life, as can be conveniently spared out of the Vessel. We of our own Free-will and Choice do indemnify all Persons from ever being called to an Account, for putting us ashore, or leaving us behind, contrary to our Inclinations. Witness our Hands, on board the *Speedwell* Schooner, in the Lat. 50° 40' South, this 8th Day of *November*, 1741.' This was signed by *Matthew Langley* Gunner's Mate, and ten more, who were landed on the Coast of *Patagonia*. The Scheme they went upon was the finding the Cutter; or, if they did not succeed in that, making a Canoe themselves, in order to return to Captain *Cheap*.

It is impossible to describe the Miseries they endured in their Passage thro' the *Straights*, where, from time to time, they went ashore, to shoot and fish, but with very little Success: They likewise saw the *Indians*, who inhabit the Country, frequently, but could obtain very little Assistance from them; and yet, in the midst of all this Misery and Distress, they made a Market of each others Necessities; so that, by the 15th, Flour was sold amongst them at twelve Shillings a Pound in the Morning, and before Night at a Guinea; and in the mean time many perished, for want of having Money or Effects, to purchase what was necessary to sustain them. By the End of the Month there were six or eight dead of mere Hunger; and one Thing *Mr. Bulkeley* informs us of, that is very singular, *viz.* that all these People grew light-headed a little before their Death; and, losing all Sense of their Misery, laughed and jested till the very Moment they expired. On the 6th of *September* they went ashore on the South Side of the *Straight*, and purchased from the *Indians* two Dogs, three Geese, and a Piece of a Seal. These *Indians*, as they describe them, are People of a middle Stature, and well shaped. Their Complexion of a tawny Olive-colour; their Hair exceeding black, but not very long: They have round Faces, and small Noes, their Eyes little and black; their Teeth are smooth and even, close set, and of an incomparable Whiteness; they are very active in Body, and run with a surprising Agility; they wear on their Heads white feathered Caps, their Bodies are covered with the Skins of Seals, and Guanoocs or *Indian* Sheep: As for the Women, they fled at the Sight of them, so that they were able to give no Description of them.

On the 7th they entered *Fresh water Bay*, where they filled one Cask with Water. On the 8th they arrived at *Elizabeth's Island*, where they met neither with Wood nor Water, as they expected. On the 11th they ran the Boat on Shore; and after they got her off, were so fortunate as to meet with fresh Water, with which they filled all their Casks at once. The same Day they saw *Cape Virgin Mary*, which is at the opposite Extremity of the *Straights*, through which they had now passed in about a Month; the Length of them, according to their Computation, being 116 Leagues. On the 12th, having doubled the Cape, and steering along-shore, they saw three Men on Horseback, riding towards them; when they were over-against them, the People stopp'd, and made Signals, waving their Hats, as if they desired to speak with them; upon which they edged close to the Shore: Here they saw seventeen more; five of them only were on Horseback, and rode in a Line before, and the rest were on Foot, and had a considerable Drive of Cattle: They anchored within a Mile of the Shore, and the People still continued riding along the Beach, waving white Handkerchiefs to them, and making other Signs, by which they invited them on shore, to which they were well enough inclined, and did all they could both that Night and the next Morning to compels it; but to no manner of Purpose, the Wind blowing so strong, that they were obliged to quit the Bay.

On the 16th they arrived at *Penguin Island*, and proceeded from thence to *Port Desire*, where they met with Seals and Fowl in abundance. The Carpenter being on shore here, found a Parcel of Bricks, some of which had Letters cut in them: Upon one, these Words were very legible, "Captain *Straiton*, 16 Cannon, 1687:" Which they conceived

conceived to be the Token of a Wreck; and I conjecture, that so many Pieces of Cannon were buried thereabouts, and that these Bricks were placed as a Mark to find them by. They discovered *Pecker's Well*, as described by Sir *John Narbrough*, and furnished themselves with Water. Here there arose new Disputes among the People; for those who were able to assist in working the Vessel, would needs put the Marines to half their short Allowance, that is to say, when they received a Pound of Flour, they insisted, that twenty of their Number should receive but half a Pound. On the 26th of *December* they sailed out of Port *Desire* Harbour, steering East North-east. On the 28th they divided all their Flour, which amounted to three Pounds and an half a Man. On the 10th of *January* they made a kind of Review of their Company, which was now reduced to forty-three, and of these only fifteen were able to stand; and that very Evening, just as they lay the Shore, they lost one of their Number, Sergeant *Ringal*. All their Provisions consisted in a small Quantity of stinking Seale, and eighty Gallons of Water.

The next Day they put into a Bay in the Latitude of 38° 40' South, which they thought fit to call *Seal-water Bay*, the Weather being tolerably fair. As they had now nothing on board the Vessel to eat, and but one Cask of Water, so that there was a Necessity of getting on shore, though the Surf ran so high that it was impossible to get the Vessel near it, it was at last agreed, that such of the People as could swim, should attempt it, for their own Sakes, as well as the common Benefit; and accordingly fourteen of them leaped into the Water, and all, except a Marine, got safe on shore. They threw over to them four Quarter-casks, with two Fire-locks tied on each Side, with a small Quantity of Ammunition. When the People landed, they discovered a large flat Beach, without so much as a Bush growing on it. There were, however, thousands of Horses and Dogs running in Drove, and abundance of Seale and Parrots on the Rocks. They soon shot a good Number of the former; and, finding one of their Quarter-casks leaky, they broke it to Pieces, in order to make a Fire, by which they dressed their Supper. As for the poor People in the Boat, they were near enough to see the Quarters of Seale which their Companions had provided for them; but the Sea ran so very high, that it was impossible for them to reach it. At last, they proposed getting one of their People to swim on shore, having no more than two in the Boat who were able to swim; but the one would not run the Hazard, and the other was so weak, that, rather than suffer him to attempt it, they tore an old Seale-skin off the Hatch, where it had been nailed for some time, and, having burned away the Hair, chewed the half-broiled Leather, in order to assuage, in some measure, the Violence of their Hunger. The next Morning, the People on shore shot a Horse, and a wild Dog; the former was branded on his Left Buttock, which showed plainly, that they were turned loose here by the Inhabitants to feed, and were taken up again, as occasion required. At nine in the Morning they veered in the Boat near Shore, and made a Stage to hale up the Seal. The People on shore sent them, with much Difficulty, three Casks of Water; upon which they sent on shore an empty Quarter-cask, and two Breakers: Soon after seven of the People came on board with the Seale and Horse; and the Wind blew so hard soon after, that they were obliged to put to Sea, and leave eight of their People on shore.

On the 14th, the Sea was so high, that it broke the Rudder-head; by which they were so endangered, that it was found absolutely requisite to get out to Sea, without staying any longer for the People on shore, though they were still in Sight. To justify their Conduct in this respect, as well as to ascertain the Motives which induced them to act in this manner, they drew up the following Paper: 'There are to certify the Right Honourable the Lords Commissioners for executing the Office of Lord High Admiral of Great Britain, &c. That we, whose Names are under-mentioned, having nothing left on board the Vessel but one Quarter-cask of Water, were obliged to put in to the first Place we could for Subsistence, which was in *Fresh-water Bay*, where we came came to an Anchor as near as we could, without endangering the Vessel, hav-

ing no Boat on board, and a large Surf on the Shore; Therefore Mr. King the Boatswain, Mr. Cummins the Carpenter, and Lieutenant *Ewers*, with eleven of the People, jumped overboard, in order to swim ashore, with three Casks for Water; in which Attempt *James Greenham* was drowned in the Surf off the Shore. The Sea-breeze, coming on, prevented the People getting on board the same Night; therefore, on *Wednesday* Morning, it being then calm, they brought to the Beach the Casks, filled with Water, with Seale, and other Provisions, in great Quantities; which we haled on board. The Boatswain, Carpenter, Lieutenant *Ewers*, and three of the People swam off; but the Sea-breeze coming in, and the Surf rising, the rest were discouraged from coming off. We haled a good Birth off the Shore, where we lay the Remainder of the Day, and all the Night. The Greatness of the Sea broke off our Rudder-head, and we expected every Minute the Vessel would founder at her Anchor. *Thursday* Morning, we saw no Probability of the People coming aboard; and the Wind coming out of the Sea, and not one Stick of Fire-wood in the Vessel to dress our Victuals, and it being every Man's Opinion that we must put to Sea, or perish, we got up a fluted Cask, and put into it all manner of Necessaries, with ten Small-arms leashed to the Cask, and a Letter, to advise them of our Danger; which Cask we saw them receive, as also the Letter that was in it. They then fell on their Knees, and made Signals, withing us well; at which we got under Sail, and left our Brethren, whose Names are under-mentioned. Dated in *Fresh-water Bay*, on board the *Speedwell* Schooner, on the Coast of *South America*, in the Latitude of 37° 25' South, Longitude from the Meridian of *London* 65° West, this 14th Day of *January* 1741-2. This was signed by the Lieutenant, and the rest of the Officers on board; and the Persons listed above were eight private Sailors.

They were left in that Part of the Southern Continent, which, in the *Spanish* Maps, is styled the Country of the *Pampas*. It is of very large Extent, reaching from the Bay of *St. Matthias* to the Frontiers of the Province *Patagonia*, 120 Leagues directly North and South, and is about one hundred, or something more, from East to West. The *Spaniards* are not indeed possessed of it; but the Natives do not hinder them, either from driving their Cattle thither, or from passing through it with their Caravans. It cannot therefore be supposed, that these eight Seamen ran any greater Hazards, or met with any more Difficulties, than the People did at Sea, but had rather an easier Time of it; one thing only excepted, which was, their being left in an Enemy's Country; since the Place, on which they were set on shore, was not above twenty Leagues from the Town of *Buenos Ayres*.

The *Speedwell* continued steering along-shore till they had passed the Mouth of the River of *Plate*, and fell in with the Coast on the other Side, where, in the Evening of the 19th, they anchored in a fine sandy Bay, probably near the Mouth of that River, and soon after saw two Men coming towards them on Horseback. This was a joyful Sight to them, since it gave them some Assurance of meeting with Refreshment, and they had not, at this time, a single Drop of Water on board. On the 20th the Gunner and Carpenter went on shore, and, as the former spoke *Portuguese*, he entered into Discourse with the People, who came down on Horse back on purpose to talk with them. These Folks told them early that they were *Spaniards* and Fishermen; adding, that the Town they belonged to lay two Days Journey from thence, and that the Name of it was *Monte Video*; which, according to the best *Spanish* Maps I have seen, lies about forty Leagues up the River *Plate*, in the Latitude of 32° 30' South. These People invited our unhappy *Englishmen* to their Caravan, which was about a Mile off, where they entertained them with Jerk-beef, that is, Beef dried in the Air, roasted and boiled, with very good white Bread. The first thing they thought of was to purchase some Provisions; but the People had none to supply them with, except six-and-twenty Loaves of white Bread, of the Size of Two-penny Loaves in *England*, for which they demanded four Guineas; and I Hunger obliged the *English* to comply

but he who seemed to be the Chief of the *Spaniards* declared to them, at the same time, that they risked their Lives for this Money; and that they should be inevitably hanged, if it was known, that they had supplied them. Mr. *Cummins* afterwards parted with his Firelock, and some Ammunition, in hopes of a Supply of wild Fowl; but, finding Reason to suspect, that the *Spaniards* intended some foul Dealing, they got hastily on board, and continued their Voyage to *Rio Grande*.

On the 23d, died Mr. *Thomas Clerk*, who had been Master of the *Wager*; as did his Son on the Day following: And, on the 26th, died *Thomas Maclean*, Cook on board the same Ship, at the Age of eighty-two, probably of Want; for they had now nothing but a little Water to sustain them. On the 28th, they entered *Rio Grande*; and a *Portuguese* Boat coming off, they surrendered to them. The Governor of this Place treated them in a manner, which deserves to be perpetually remembered: He went on board the *Speedwell*, and examined every Part of her, inquired into every little Circumstance of their Voyage, embraced them with the utmost Affection, assured them of all the Relief in his Power, sent the Sick to the Hospital, took the Lieutenant of the *Wager*, and the Land-officers, to his own House, and ordered the Commandant to see, that the rest wanted nothing. This was acting like a Gentleman, an Officer, and a Christian; and is such a Testimony of the Faith and Honour of the *Portuguese*, as the *English* Nation ought never to forget. Having conducted them hither, we shall only observe, that, of seventy-one who made this perilous Voyage, there were living, on the 28th of *January* 1742, only thirty Persons; and some of them died afterwards. As for Mr. *Bulkeley* the Gunner, and Mr. *Cummins* the Carpenter, of the *Wager*, from whom we have this Account, which seems to be written with great Candour and Plainness, they procured a Passage to *Portugal*, and from thence to *England*, arriving at *Spithead*, *January* 1. 1743. It is now Time to return to the Commodore, whom we left cruising in the South Seas, in order to insert this History of the Shipwreck of the *Wager* in its proper Place.

14. On *October* 20. 1741. the Commodore, with his two Prizes, were off the Islands of *Lobos*, in plain *English*, *Sole* Islands; for the *Spaniards* call the *Seles Lobos*, from their Notion, that this Creature resembles a Wolf. There are two of those Islands, called, in order to distinguish them, *Lobo de Setavento*, or the *Leeward Island of Seles*, and *Lobo de Barlevento*, or the *Windward Island of Seles*. The former of these is, in the *Spanish* Maps, laid down in the Latitude of 6° 25' South; and the latter in 6° 33'. On the 23d, the *Agua de Setavento*, or *Leeward Needle-point*, which is an high white Land, bore from them, North-east by East, seven Leagues. The next Day, about two in the Afternoon, they saw a Sail; to which they immediately gave Chace, and came up with her about six in the Evening, and took her. She was bound to some Port to the Southward, with Plank and Iron; and so little Notion had the *Spaniards* of any *English* Ships being in those Seas, that the Captain had his Wife, and two Daughters, on board.

The Commodore ordered them into his own Ship, and, during the Time they continued his Prizes, entertained them constantly at his Table, taking care to have the Women treated with such Respect, as well as Decency, as made a great Impression, not only on them, but on the Captain, who gave the Commodore a very distinct Account of the Situation of things in that Part of the World, and particularly of the little Town of *Payta*, on which the Commodore had a Design; a Place often taken by our Privateers, and last of all by Captain *Sbelvocke*, in the Month of *May* 1720; but, according to the Captain's Account, was now pretty well recovered, and the People in tolerable Circumstances: Therefore it was resolved to prosecute this Design. At the time this Resolution was taken, they were about sixty Leagues West South-west of the Place; and, notwithstanding they made all the Dispatch in their Power, it was *November* 9. when they arrived within ten Leagues of that Port, when the Saddle of *Payta* bore North North-east, in the Latitude of 5° South.

15. On the 10th, a little after Noon, Preparation was made for attacking the Place, from which they were not distant above five Leagues and an half. Mr. *Brett*, second

Lieutenant of the *Centurion*, was intrusted with the Command of sixty-seven Men, embarked in three Boats; one of eighteen Oars, the other two of eight Oars each, having the *Spanish* Captain with him as a Guide. They kept under-shore during the first Part of the Evening, and, about ten at Night, entered the Port, and landed safely, without being perceived either by the Ships or Fort. They marched directly towards that little Fortrel, which they might have taken by Surprize, and without Loss, if they had proceeded with any Regularity: But that was what their Officer could not prevail upon them to do; for they no sooner saw a few People moving about, than they began to fire upon them; which if they had not done, they might have marched up to the Walls without Disturbance. Their Fire having alarmed the Place, and the Garison in the Fort, the latter made several Discharges of their Small-arms; by which they had one Man killed, and six or seven wounded. This did not at all discourage the Sailors, who immediately pushed forward, and very soon forced the Gates of the Port; upon which the *Spaniards* fled, and abandoned the Place, which, in itself, was not very defensible, the Works being in a very indifferent Condition, and the Cannon they had there, which were not above three or four Pieces, honey-combed to such a degree, that they were not fit for Use.

The People of the Town, who were most of them in their Beds, no sooner heard this Noise of firing, than they got up, and made all the Haste they could to the Mountains, half-dressed and half-naked. The Governor was amongst the first who provided for Safety by Flight; and his House, which was the best, and the best furnished, in the Place, was one of the first that was plundered, the Sailors being allowed to act as they thought fit, for some Hours. There were some rich Clothes and Household-stuff found in the Place; but no plenty of Provisions: Hogs, in no great Quantity, and abundance of Poultry, were all they met with, and not more Water than was necessary to wash their down, which was preserved in Jars by the People in the Town for their own Use, as having no fresh Water in the Place. The Report of this Place being grown excessively rich again did not appear to be extremely well founded, since the Silver found here did not amount to above 130,000 Pieces of Eight, exclusive of two Chests of Plate and Jewels. Several Messages were sent to the Governor, requiring him to ransom the Town, which otherwise would be burnt: But he would listen to no such Proposal; and therefore, having kept Possession of it for three Days, and rickled it effectually, it was judged proper to set every thing on fire, except the Churches, and burn it down to the Ground; which was easily done, since the Houses were equally dry and slight; so that, when once lighted, the Town presently blazed from one End of it to the other. The Place is far from being considerable either by its Trade, its Strength, or its Situation. All that can be said of it is, that it affords a convenient, and, for this Part of the World, a safe Port, where Ships may anchor before the Town in about ten Fathom Water. This is very commodious for such Vessels as are bound either to or from *Panama*, especially as they keep here constantly Magazines pretty well filled with Provisions, which, however, are brought thither from other Places; for the Country about *Payta* affords but little. There were, at the time the Town was taken, five Sail of Ships in the Harbour, and one at Anchor in the Road. The former they destroyed; and the Lieutenant of the *Trial's* Prize was put into the latter, which, however, they did not keep above a Fort-night.

On the 13th, all things of Value being on board, and the Town in Flames, they quitted *Payta*, having first given the *Spanish* Captain a Certificate, that whatever Assistance they received from him was by Compulsion, and having made him a considerable Present for the Pains he had taken.

16. On the 18th, at three in the Afternoon, they saw the *Gloucester*; which joined them about nine, the Ships saluting each other with mutual Huzzas. The *Gloucester* sailed from the Islands of *Juan Fernandez* on *October* 1. and, on the 21st, being off the Islands of *Lobos*, they discovered a small Vessel; to which they two Lieutenants, and seven Men, in the Barge, gave Chace, and soon came up with, and made Prize of her. She had in her eight Men and a Boy, and appeared to be laden with Cotton; but, upon a

strict Search, they found, under the Bags which were filled with that Commodity, several Jars stuffed with Rags, amongst which was a Parcel of Gold, which fell very little short of 120,000 Pieces of Eight, a very considerable Purchase, considering the Vessel was no better than a Bark of the Burden of about four Tons. On the 26th they took another Prize, which was larger, laden chiefly with *Pifaya* Wine; but the likewise had some Plate on board: On the 10th of *November* they chased a third Ship, but lost Sight of it the next Day. They likewise affirmed, that, in passing by *Pasta*, they saw a great Smoke; but there being some Doubt, whether this might not be a Fiction contrived to give them a Title to Part of the Plunder, the Commodore thought fit to order the Officers Journals to be brought on board, and sealed up, directing them to keep their Journals for the future in other Books.

On the 19th in the Evening they passed *Cape Blanco*, in the Latitude of $4^{\circ} 22'$ South. On the 20th they burned one of their Prizes, and on the 21st another. On the 22d in the Morning they saw the Island *La Plata*, which lies in the Latitude of $1^{\circ} 5'$ South. This Island is at the Distance of four Leagues from *Cape St. Laurence*, on the Main; and, when seen at a Distance, looks like two Islands. It is about two Leagues in Compass, very rocky, sprinkled here-and-there with Trees, and affording no other Refreshments, save Water and Wild-fowl. On the 22d, it was resolv'd to discharge the *Spanish* Prisoners, being then about seven Leagues from Land. They were, therefore, to the Number of twenty, put on board a *Spanish* Launch, with an Hoghead of Water, and twelve Species of Beef and Pork. The same Day they passed the Line the second time. On the 27th, the second Lieutenant of the *Gloucester*, and the rest of the Crew which were on board the Prize, returned, after having taken every thing out of her that was of any Value, and afterwards, sitting her on fire, left her burning.

17. On the 3d of *December* they passed by the Island of *Quibo*, so often visited by the Privateers, when in these Seas. On the twelfth in the Afternoon they saw a Sail, and gave Chase; but, upon coming up with her, found her the *Gloucester*; at this time they lived pretty much upon Turtle and Bonitos. On the 6th of *January* they saw the Island of *Cocos*, so called by the *Spaniards* from its abounding with Cocoa-trees, leaning North by West about seven or eight Leagues. On the 29th they found themselves off the *Volcano of Colima*; it appears with two sharp Peaks, that are constantly smoking: The Country about it is wonderfully pleasant; and, on the Mountain itself, there are large Herds of Cattle grazing, and fine Plantations of Cocoa. On the 30th they had Sight of the high Land of *Acapulco*, which is very singular, having an high round Hill next the Sea, and four Mountains, rising gradually behind it, higher and higher; and on the highest, there is sometimes Smoke seen.

On the 12th of *February* they saw a prodigious Number of Water-snakes, with black Backs, and yellow Bellies; and the same Day observed a great Fire on shore, bearing North-east by East, in the Latitude of $17^{\circ} 37'$ North. The Commodore ordered his Boat out several times to make Discoveries, but without meeting with any thing remarkable till the 20th, when the returned with three *Spanish* Prisoners, that he had surpris'd in the Night, as they were fishing off the Harbour of *Acapulco*. After examining these Prisoners, it was resolv'd to cruise for some time in that Neighbourhood, in hopes of meeting with something of Consequence. They were now on the Spot where *Drake*, *Cadiz*, and, of late Years, *Rogers*, had signalized themselves by taking the famous annual Ship which passes between this Port and the *Manilas*; full-fraught with Expectation, and exceedingly desirous of shewing, that, in point of Industry or Courage, they fell nothing short of those fortunate Commanders. While they cruised here, their Boats supplied them plentifully with Turtle, of which, and of the best Kinds too, there is always abundance in these Seas. It appears to have been a very wholesome, as well as pleasant Food; for we do not now meet with any Complaints of Sickness, or Scurvy; And hence I am led to believe, that Captain *Rogers* was

under some particular Prejudice against this kind of Diet, since he tells us, that, while his Sailors fed on it here, they were faint and weak, though their Spirits were good.

18. There is no Port in the *Spanish West Indies* more famous than this of *Acapulco*; and, to say the Truth, considered as a Port, there are very few better; for it is inclosed, in a manner, all round by high Mountains, which defend them from Winds; and the Water being everywhere alike deep, the Vessels, when they are once in, are fastened to the Trees on shore. At the very Mouth of the Harbour there lies an Island, about a Mile and an half in Length; and beyond it another smaller Island, called by the Inhabitants *El Grifo*, which is seldom taken notice of by our Writers of Voyages: The Position of the great Island leaves two Channels, by which Ships enter the Port; one, which is the smallest, at North-west; and another, which is much larger, at South-east; but both Channels are deep, and free from Shoals, so that with a proper Wind Ships enter the Harbour with the utmost Safety. They enter with a Sea-wind, and go out with a Land-wind; but as these regularly succeed each other every Day and Night, this creates no Inconvenience.

The Town of *Acapulco* stands in a deep Bay on the North-west Side, opposite to the Mouth of the Port; and at the End of the Town is a Platform, well supplied with Cannon; and, on the East Side, between two Hills, stands the Castle or Fort, which is a Square, regularly fortified with forty-two Pieces of Bras Cannon, carrying Balls of 35 Pounds Weight. The Governor of this Port is at the same time *Judice Major*, or first civil Magistrate in the Place, so that his Employment is thought to produce him 20,000 Pieces of Eight a Year; and the *Contador*, who is in the Nature of a Director of the Customs, has a good a Place. After all this, the Town of *Acapulco* is a very poor one, consisting of between two and three hundred low thatched Houses, inhabited mostly by *Mulattos* and *Negroes*; for the *Spanish* Merchants seldom, or indeed never, reside there but at the Fair; because from the Beginning of *November*; to the End of *May*, this Place is very unwholesome. This is generally attributed to its Situation; for, being intirely surrounded by high Mountains on the East, the Air is pent in; and, lying as it does, in a South Latitude, it is extremely hot and close, so that what contributes to the Safety of the Port, renders the Town unhealthy.

Wood and Water are plenty here; but, in other respects, the Country is barren, so that it is very dear living at *Acapulco*; or at least it would be thought so, if it was not for the immense Sums that are dealt for during the short time the Fair lasts, which seldom exceeds a Fortnight or three Weeks. This Place is likewise very subject to Earthquakes, which is the Reason that the Houses are so low, and so slightly built, being composed of Mud, Wood, and Straw. There are, however, two Monasteries, which make a tolerable Figure; and an Hospital, which is very rich. The Fair is held from the latter End of the Month of *January*, when the *Manila* Ship arrives, to the Middle of *February*. We have already given a large Account of the Nature of that Commerce and Navigation, and therefore we shall confine ourselves at present to what immediately concerns the Place.

It is not easy to conceive how strange an Alteration the Fair makes at *Acapulco*; for, as soon as it begins, the Place, from an inconsiderable Fishing-town, becomes as considerable a Mart as any in the World; which will be easily conceived, when we consider, that all the rich Commodities of the *East Indies* are landed there from on board the *Manila* Ship; the Duties of which seldom amount to less than an hundred thousand Pieces of Eight; and that, to purchase these, there are not only brought all the valuable Commodities of *New Spain*, but an immense Sum, in ready Money, by the *Lima* Ship, which rarely falls short of two Millions. There are, at this time, all Sorts of Diversions, and every thing wears the Face of Magnificence, or rather of Profusion. The meanest Porter gets at least a Piece of Eight *per Day*; many of them three or four: Every Hovel is filled with rich Goods, and those who own them, pay extravagantly for Warehouse-room: Even the most melancholy Subjects furnish Occasion here for *Pomp*.

and for Expence; and as rich Merchants frequently dye during the Time of the Fair, or in their Passage from *Peru*, or from *Amanilla*, their Funerals are solemnized with great Magnificence, and large Alms are then given to the Hospital, and to the Monasteries, the Curate of the Place being seldom contented with less than 500 Pieces of Eight for his extraordinary Trouble; by which Instance we may guess at the rest.

Besides all this, there is a prodigious Trade carried on a little after the Fair is over, at *Porto del Marques*, a very fine Harbour, lying about two Miles East from *Acapulco*, where there is very good Anchoring, and Wood and Water in Abundance. The *Peru* Ships generally resort hither, to dispose of their contraband Commodities to the Merchants of *New Spain*; and tho' this is prohibited under very severe Penalties, and both the Governor of *Acapulco* and the Contador are instructed to use their utmost Diligence to suppress it; yet such Magic there is in a Purse of Double Dubloons, properly applied, that the Officers sent to inspect this Port, are never able to see any Ships in it. When the Fair is intirely over, *Acapulco* sinks into its primitive State of a Fishing-town; the Governor himself, the Contador, and the rest of the King's Officers, retiring to Places of more Health, and greater Conveniency; which is the less regarded by the Government; because there is little or nothing left in the Town, to tempt Foreigners to attack it at any other Season.

All the *Indian* Commodities that are not sold to the Merchants of *Peru* at the Fair, are carried over Land either by Horses or Mules, but chiefly by the latter, to *Mexico*; and from thence, if they are intended for *Europe*, are transported in the same Manner, that is, by Land, from thence to *La Vera Cruz*, where they wait the Arrival of the Gallions. In this manner the *Spaniards* unite, and, as it were, engross the Trade of both *Indies*; and hence, whenever any *English* Ships are in these Seas, they are apt to spend so much Time in the Neighbourhood of a Place so famous for its Riches, from a Presumption that if they have but Patience, they must sooner or later meet with something that will reward their Labour. This at present was the Case of the *Centurion* and the *Gloucester*, who continued plying on the Coast, and endeavouring to obtain the best Intelligence they were able, but to very little Purpose; because the Fair was now over, and little or nothing to be done in those Parts.

On the 20th, they had Sight of an high Point of Land, called by the *Spaniards*, *Cocquetan*: On the first of *March* the ship's Company were put to the Allowance of two Quarts of Water a Man per Diem. During the rest of that Month they cruised still upon the same Coast, exercising the Men duly, sending their Boats from time to time on the Coast, to make Discoveries, and at the same time making Preparations for their long Stretch to the *East-Indies*. On the 6th of *April* the Commodore sent his Boat to search the Coast, for some Harbour where they might anchor in Safety; and on the 7th the Boat returned, and on the 8th conducted the Commodore, the *Gloucester*, and the *Trial*, into a convenient Bay, where they moored in eleven Fathom Water. On the 9th the *Gloucester's* Second Lieutenant, with fifteen Men, and the Second Lieutenant of the *Centurion*, with four Men, were sent to make Discoveries.

On the 10th the Lieutenant of the *Centurion* returned, and reported, that they had marched seven Leagues thro' the Woods, without meeting with any thing worth Notice, except a Man asleep on the Ground, with an Horse and Gun by him; who, awaking at their Approach, leaped upon his Horse, and fled as fast as he was able, leaving his Gun behind him, which they brought on board with them. The Lieutenant, being apprehensive, that the People under his Command might be surpris'd, if they attempted to penetrate further into the Country, thought proper to return; but to render his Expedition as useful as possible, he wrote a kind of Advertisement in *Spanish*, promising the Inhabitants ample Satisfaction for any Provisions they should bring or send to their Ships; and having nailed several of these Papers to the Trees, he returned back to the Coast. This was certainly a very well judged, and a very prudent Consequence; but, however, it produced no Effect; and therefore the Commodore very wisely judged, that no more Time was to be lost in preparing for their Departure; and

therefore gave Orders for burning the *Trial's* Prize, and the other two Prizes, that he might be able to reinforce the two Ships with the Men that were on board them; which was the more necessary, since the Crew of both Ships, after this was done, fell short of the full Complement of a Fourth Rate, so much were they reduced by Sicknefs and Fatigue; and on the 29th, having taken in Water, and other Refreshments, they unmoored, and prepared to sail.

19. On the 30th they sailed for *Acapulco*, in order to cruise near that Port for their Boat, which was still absent, and had been so above a Month; and the *Gloucester* was ordered to keep in close to Land, and make false Fires; but these Precautions proved vain, though continued for three Days together. The Commodore therefore thought proper, on the third of *May*, to send a Flag of Truce to the Governor of *Acapulco*, with a Proposal of releasing three for one, in case the Boat and Crew were fallen into his Hands: But the Governor returned Answer, that he had not seen either Boat or Men. The next Day the Commodore sent ashore nine Prisoners to *Port Marques*, that in case his Men fell into the *Spaniards* Hands, they might be the better treated, for the sake of those who were thus dismissed. On the 5th, about two in the Afternoon, the *Gloucester*, being nearest the Land, saw a Boat coming off, which they judged at first to be a Boat from the Governor of *Acapulco*; but as it drew nearer, they discovered it to be the Boat belonging to the *Centurion*. When the poor People that were in it, came to the Side of their own Ship, they were scarce known by any of the Crew, being mere Skeletons, and so weak that they could not get up the Ship-side, so that they were forced to hoist them in. During the Time they were separated from the Ship, they were driven to the last Extremity for want of Water, being glad to drink Turtle's Blood to quench their Thirst; which they had done for twelve Days. They never expected to see the Ship again, and had given themselves over for lost, knowing they must either be starved to Death in their Boat, or become Prisoners and Slaves under cruel Masters, which to them was as dreadful as Death; but this Day proving fine and clear, they happily saw the Ship, and put off. At eight the next Morning they sent ashore a *Spanish* Launch with forty Prisoners, and at the same time the *Gloucester* sent another with eighteen; each having a sufficient Quantity of Provisions and Water to serve them till their Arrival at *Acapulco*, which was now distant about thirty Leagues. On the 7th they sprung their Fore-mast: The Remainder of the Month there happened nothing extraordinary, the Weather being moderate, and the Wind fair: On the 15th the *Gloucester* fired a Gun, as a Signal of Distress, having sprung her Main-mast; upon which the *Centurion* sent her Boat and a Carpenter on board; the next Day they sent two Carpenters more, who on the 23d cut the Main-mast within twenty-six Foot of the Deck. On the 26th the *Gloucester* reared her Main-top-mast for a Main-mast, and on the 27th the *Trial's* Fore-top-mast for a Main-top-mast.

On the 29th they fixed the *Trial's* Main-top-mast for a Jury-mast, and rigged it. July the 12th they were distant from *Acapulco* 1404 Leagues: On the 29th, about ten in the Morning, the *Gloucester* fired a Gun, as a Signal of Distress, having her Fore-top-mast rolled to the Board, and the Cap split in two being rotten: The Fore-top-mast sprung in three Places by the Fall, and broke the Fore-yard in the Slings, which was likewise decayed. The Foretop-gallant-mast sprung, and the Fore-fail, Fore-top-fail, and the Top-gallant-fail, split all to Pieces; half the Top broke, and also the Cross-trees: Whereupon they sent to their Assistance a Lieutenant, with some Carpenters and Men, who hung both the Yard-arms of the Fore-yard, and the Remainder of the Fore-top-mast, that was not fit for Use, overboard, and assisted in fixing and rigging another Fore-yard. The next Day the *Centurion* was forced to take the *Gloucester* in Tow, and continued Towing her, till on the tenth of *August* she slipped the Cable by which they towed her, together with her Fore-top-mast and Jib. The next Day in the Evening her Top-mast and Jury-mast were carried away.

On the 12th, her Mast came again by the Board, and her Mizzen was split, and blown from the Yard: Part of it took the Compass's Chett, in which were two Azimuth Compasses,

Compasses, and carried it overboard; at the same time they were obliged to employ all Hands in pumping the Ship: The 13th the Weather proved very bad, and about eight in the Evening the *Gloucester* bare down upon the Commodore, firing two Guns, and hoisting a Signal of Distress: They desired the Commodore would lend his Boat on board, with a sufficient Number of Hands to assist them in pumping, there being now seventeen Feet Water in the Hold; but the Commodore could not comply with their Request, because it was as much as his Crew could do, to keep their own Ship free. The next Day he sent his Cutter, with a Carpenter, to assist the *Gloucester*; and, in the Evening, sent his Boat, to fetch away her Sick.

20. On Sunday August 15. about eight in the Morning, Captain Mitchell sent his Lieutenant on board, with the following Paper, addressed to the Commodore, and signed by himself, and all the Officers on board of his Ship: 'We the Captain and Officers of his Majesty's Ship the *Gloucester*, having held a Consultation on August 15. 1742, concerning the Condition of the said Ship, we think it impossible to save her from sinking, and his Majesty's Subjects belonging thereto from perishing, for the following Reasons: She having sprung a Leak, and gaining on us, tho' we have been constantly pumping her; her Stern-post likewise being very loose, and working at every Reel of the Ship; she having also two Beams broken a-midship; all which the Carpenters report to be irreparable here; and she having no Masts left, except the Fore-mast, Mizzen, and Mizzen-top-mast, or any spare Masts left fit to put up; her Knees and Clamps are all worked quite loose, so that her Quarter-deck is ready to drop down; and she having but seventy Men, eighteen Boys, and two Prisoners, left, including Officers, out of which Number only sixteen Men and eleven Boys are able to keep the Deck, and they are very infirm; all the rest, being fifty-six, and seven Boys, (including Carpenters) are incapable of Duty, being greatly afflicted, and very lame, with the Scurvy; For these twenty-four Hours, Officers, Men, and Boys, without Distinction, have worked at the Pumps incessantly; and are so fatigued, that they can stand no longer; and they having still seven Feet Water in the Hold, the salt Water being yet over the Caulks, so that they cannot get at the fresh Water to drink: We therefore beg you would consider our melancholy Situation, and appoint us such speedy Relief, as our present unhappy Circumstances require.'

The Commodore took all imaginable Care to be perfectly informed of the Facts mentioned in this Representation by his own Carpenters; and, on the 16th, employed all the Boats in saving what Stores could be got out of the *Gloucester*; which took up the best Part of the Day. About six in the Afternoon, Captain Mitchell, having received the Commodore's Order for that Purpose, sent all his People on board the *Centurion*, remaining himself in the *Gloucester*, with a Boat's Crew only, preparing every thing necessary for destroying her; and, at eight, pursuant to the Commodore's Direction, he set her on fire, and, about six the next Morning, she blew up. They were then in the Latitude of $14^{\circ} 15'$ North, *Acapulco* being now distant 2168 Leagues.

21. On the 17th, they discovered in the *Centurion* a Leak in the Fore-hold, on each Side of the Stem. They were, at this time, in very great Distress, their Rigging much worn, their Ship leaky, their Water so exhausted, as to be reduced to half a Pint a Day, and their Crew so sickly, that they had thrown overboard ten Men in two Days; but, in this Distress, the Commodore supported their Spirits, by continually encouraging them by his Practice, as well as Discourses, taking a full Share of their Hardships, and giving, at this time, a Pipe of *Madeira* Wine out of his own Stores, that their Water might go the further. The Weather continued tolerable fair for the next ten Days; but the Crew were as sickly as ever.

On the 21st, died Mr. Edmund Wellbank, Surgeon of the *Gloucester*; and ten Men more in four Days. On the 23d, they lost five Men more; and, about eight in the Evening of the same Day, saw, to their great Joy, two Islands; one bearing West half South, the other South-west $\frac{1}{2}$ West, distant about ten Leagues. On the 24th,

nine of their People, and an *Indian*, died; and the nearest of the Islands bore then West by North, distant about a League. The Commodore dispatched a Lieutenant in the Cutter, to discover the Shore. He returned in the Evening, and brought sixty Cocoa-nuts; but could not find any Anchoring-place, or fresh Water. There died on the 25th six Men. The next Day in the Afternoon, they saw three Islands; one bearing North-east by North, another due East, the last East by South, at the Distance of about five Leagues. On the 27th at Noon, they saw another Island South-east, distant about nine Leagues. In these two Days, they lost thirteen of their Crew.

22. On the 28th, they made the Island of *Tinian*, which is one of the *Ladrones*, or, as the *Spaniards* call them, *Marian* Islands, which lies in the Latitude of $14^{\circ} 58'$ North, and $223^{\circ} 25'$ Longitude West from *London*. At three in the Afternoon, the Commodore sent his third Lieutenant on shore in the Cutter. This Island is uninhabited, and for that Reason the Commodore made Choice of it to anchor at, and refresh his People; but it happened, at the Time of their Arrival, the Governor of *Guam* had sent a Bark thither with twenty-four Men, to kill Cattle, and to bring off Fruits, for the Use of his Garrison. These People, seeing a Ship, immediately sent an *Indian* Proce, or, as the *Spaniards* write it, *Parao*, a kind of Vessel we have often mentioned before, on a Supposition, that it must needs be the *Acapulco* Ship. This was about six the next Morning; and, as soon as they discovered their Mistake, they used their utmost Endeavour to return to the Island: But, it being calm, the Commodore sent the Pinnace to tow her on board; which she did, and afterwards made herself Master of the Bark; which proved an acceptable Prize, being laden with Cattle, Hogs, Fowls, Cocoa-nuts, Oranges, and Limes.

The first thing that was done, after the Ship was anchored in twenty-two Fathom Water, was to send ashore Tents, or rather Materials for making them, for the Use of the Sick, who were next carried on shore, wrapped up in their Hammocks, to the Number of 224, of whom eight died within a few Hours after they were landed. On the 31st, they moored the Ship with a Cable each Way, in *Timas* Road; which afforded them Leisure to look about them, and to provide all Things necessary for their Refreshment. It will be necessary here to give some Account of these *Ladrones* Islands; the rather, because, though we find them often mentioned in the foregoing Voyages, as indeed they must be in all Voyages round the World, which have been seldom performed without visiting them, yet are they so situated, on the Edge, as it were, of *Asia*, that hitherto neither general nor particular Geographers have given us any accurate or distinct Account of them; which, to say the Truth, is no easy Matter to do, since it requires a great Application to Maps and Charts, and to the Relations published by all who have sailed through these Seas for two Centuries past.

These Islands were first discovered by the famous *Ferdinand Magellan*, as we have already related in its proper Place; and he, from the thievish Behaviour of the Inhabitants, bestowed on them the Name of *Islas de las Ladrones*, i. e. *The Islands of Thieves*. He likewise called them *Islas de las Velas*, or, *The Islands of Sails*, alluding to their Proce, which were a kind of Vessels he had never seen among other *Indians*, and their manner of sailing had surpris'd him. When the *Spaniards* came afterwards to settle the Island of *Guam*, for the Convenience of their Navigation between *America* and the *Philippines*, they gave a new Name to those Islands, viz. *Islas de Maria Ana*, in Honour of *Mary-Anne of Austria*, then Queen of *Spain*; from whence our modern Writers have derived the corrupt Name of the *Marian Islands*. These Islands make a Part of those that are stiled the *Archipelago of St. Lazarus*, because they were discovered on the East of *St. Lazarus*. They are, strictly speaking, situated between the $10^{\circ} 00'$ of North Latitude, and the Tropic of *Cancer*; and, according to the best Maps, are laid down thus; 1. *Bani*, in the Latitude of $10^{\circ} 00'$ North: 2. *Batto*, $10^{\circ} 40'$: 3. *St. Iago*, $11^{\circ} 15'$; between this Island, and that of *Guam*, lie the Shoals of *St. Rose*, which Captain *Danpierre* passed, when he sailed with Captain *Swan* in the Latitude of 12°

Boat.

10^o: 4. *Guam, Guana, or Iguana*, 13° 30' this is the largest of these Islands, and the Seat of the Spanish Government: 5. *Serpana, or Rotta*, 14° 5' which is also fettered by the Spaniards: 6. *Aguigan*, 14° 40': 7. *Tinian*, 16° 58'. This I take to be the last of the *Mary-Anne Islands*; for, if I apprehend the Thing right, the general Name of all these Islands is the *Ladrons*, and they are distinguished into the Southern, or *Mary-Anne Islands*, of which we have spoken; and the Northern Islands, or *Islands of Gancy*, of which we are now to speak: 1. *Zeligen, or Sipan*, 15° 20': 2. *Amathan*, 16° 10': 3. *Sarigan*, 16° 30': 4. *Guagan*, 17°: 5. *Amelagan*, 17° 30': 6. *Pagan*, 18° 40': 7. *Agnigan*, 19°: 8. *Sanglan*, 20°: 9. *Mang*, 21°: 10. *Urac*, 21°: 11. *Tarelbon*, 22°. From this to *Japan* there is a continued Chain of Islands, lying almost all of them in the same Longitude, viz. of 160°; supposing the first Meridian to be placed in the Island of *Fera*.

The Soil of all these Islands is pretty much alike; viz. a red dry Mould, very fruitful, especially if it be carefully cultivated; in which Case, perhaps, there would not be finer Countries on the Globe: As to the Climate, it is very healthy, as well as very pleasant, in the dry Season, which lasts from *October to June*; but in the wet Season the Air is thick and hazy, which inclines the People to Fevers; yet the Rains there are not heavy, or of long Continuance; and as the East Winds generally reign here, they cool the Air prodigiously, and render the Country very pleasant. The *Cocoas* in the *Ladron Islands* are esteemed the best in the known World, and they grow in all the Islands in the utmost Plenty: *Oranges* they have in like Abundance, exceedingly wholesome, and of a very high Flavour: *Limes* are also the natural Product of these Islands. They are, properly speaking, a sort of *Crab-Lemon*, and grow upon a kind of thorny Shrub, of which, in some of our Plantations, they make very convenient Hedges. The Fruit is like a *Lemon*, but smaller, has a thinner Rind; and the Juice is rather of a sharper Taste. The eating freely of this Fruit is one of the quickest, and at the same time one of the pleasantest, Remedies for the *Scurvy*. There are two Trees common in all these Islands, and said to be peculiar to them, and to some of the *Philippines*; these are the *Rima* and the *Dacdu*.

The *Rima*, or *Bread Fruit*, grows upon a Tree somewhat larger than our *Apple-tree*, which bears a broad dark-coloured Leaf, with five Indentures on each Side: The Fruit hangs on the Boughs like *Apples*, and is of the Size of a *Penny-loaf*, with a thick tough Rind, which, when full ripe, turns yellow. The Natives gather it before it is quite ripe, and bake it till the Crust is pretty black; then they rap it, and there remains a pretty Loaf, with a tender yellow Crust, and the Crumb of it soft and sweet as a new-bak'd Roll, without any Seeds or Stones. This Fruit the Inhabitants enjoy for about seven Months, during which they never eat any other Kind of Bread; but they are obliged to bake it every Day; for when it grows a little stale, it becomes harsh and husky, somewhat like the *Potatoe-bread* made in the *West of England*. There is, however, a Remedy for this, which is cutting the Loaf into Slices when it is new, and drying it in the Sun, by which it is changed into the pleasantest Rusk that can be eaten. The *Dacdu* resembles the *Rima* very much, both in its Size and Leaves; only these latter are longer, and not so much indented: The Fruit is pretty near the Size of the *Bread Fruit*, but shaped like a *Melon*; it contains in its Pulp thirteen or fifteen Kernels, or Seeds, of the Size of a small Chestnut, which, when roasted, are full as pleasant.

The Natives of these Islands are *Copper-coloured* like other *Indians*; have long black Hair, small Eyes, high Noles, Lips pretty thick, and Teeth indifferently white: They are a large, well-limb'd, active, and robust People. To all Appearance, they are civil, courteous, and submissive; but are said to be of a cunning, treacherous, and cruel Disposition: They are extremely dextrous in the Management of their Vessels, which they stile *Paraos*, and the *Dutch*, and other *Europeans*, *Prows* or *Prots*, and are esteemed the best sailing Vessels in the World. We have described them before; but as I am told the following is a very exact and accurate Account of these singular Vessels, I believe it will not be disagreeable to the Reader; and the

rather, because from these Vessels the Islands were called by *Magellan, De las Velas*, i. e. of Sails, which are not used by the *West-Indians* in their Canoes.

The *Parao* or *Proe* is built sharp at both Ends, the Bottom of one Piece, like a little *Canoe* very neatly scooped, and left of a good Substance. This Bottom serves for a Keel; it is from twenty-five to thirty Feet long, the under Part round, yet inclining to a Wedge, and smooth, and the upper Part almost flat, having an Hollow about a Foot broad: From hence both Sides of the Boat are turned up round, very neatly; one Side of the Vessel is quite flat, the other as other Vessels are, with a pretty full Belly. In the Middle it is about four or five Feet broad, aloft, or more, according to the Length of the Boat; the Mast stands exactly in the Middle, with a large Yard like a *Mizen-yard*; one End of it reaches to the End or Head of the Boat, where it is placed in a Notch, made there to keep it fast; the other End hangs over the Stern. To this Yard the Sail is fastened. At the Foot of the Sail there is another small Yard, to keep the Sail out square, and to roll it up when it blows hard; serving instead of a Reef, to take up the Sail to what degree they please, according to the Strength of the Wind. On the Belly-side of the Boat, parallel thereto, and at seven Feet Distance, lies a Log shaped like another small Boat, of a light Wood, almost as long as the great Boat, but not above a Foot and an half wide at the upper Part, and very sharp at each End. There are two Bamboes, of about eight or ten Feet long, and as big as a Man's Leg, placed over the great Boat's Side, one near each End of it, add reaching about six or seven Feet from the Side of the Boat, by the Help of which the little Boat is made firm to the other: These are generally called by the *Dutch*, and by the *English* from them, *Out-layers*: The Use of them is to keep the great Boat upright; because the Wind here is, in a manner, constantly East, and, if it were at West, it would be the same Thing; for the Range of these Islands where their Business lies to and from, being mostly North and South, they turn the flat Side of the Boat against the Wind upon which they sail; and the Belly consequently, with its little Boat, is upon the Lee; and the Vessel having an Head at each End, so as to sail with either of them foremost, they need not tack about, as all other Vessels do, but each End of the Boat serves for Head or Stern, as they please. When they ply to Windward, and have a mind to go about, he that steers, bears away a little from the Wind, by which the Stern comes to the Wind, and now becomes the Head, only by shifting the End of the Yard. This Vessel they steer with a broad Paddle instead of a Rudder, with great Dexterity.

Some Travellers have reported incredible Things, as to the Sailing of these *Proes*: Captain *Edward Cooke* speaks of twenty or thirty Leagues an Hour; but if what another Writer reports may be depended upon, viz. that one of these Vessels being dispatched Express from *Guam*, to *Manilla*, which is 400 good Leagues, performed the Voyage in four Days, it will be sufficient to raise our Admiration, and justify the Character given to these Vessels, for swift Sailing upon a Wind. In many other Places of the *East-Indies* they make use of *Proes* with Bellies or Boats on both Sides; but the *Proe* we have described, is peculiar to the *Ladrons*. Before the *Spaniards* made any Settlement on these Islands, the People lived, in their Way, very happily; every Man having his *Proe*, which tho' furnished with Mast, Sail, Yard, Tackle, Halliards, and Helm; he steered with one Hand, and with the other hoisted, lowered, or trimmed his Sail, having one of the Tackles fastened to each Foot, so as to veer out, and hale to, as Occasion required.

Fishing was, in a manner, their sole Occupation; and in that too they are equally skillful and dextrous: Their Hooks are made of a large Bone, with a small one fixed in it; and with these they take *Dolphins*, and other Fish, upon the Banks or Shoals. One Fish there is peculiar to this Coast, which the Sailors call a *Yellow-tail*, about twelve Inches long, and three in breadth, having a small long Head, with a large Mouth and Eye, and a Fin on his Back, which extends quite to his Tail. His Body is of a dark Yellow, his Belly of a fine Silver, his Sides streaked from Head to Tail with two Stripes of Blue, and three of Yellow; his Fins and Tail of a bright Yellow. So

So much for these Islands. Let us now return to the Ship's Company of the *Centurion*, on shore at *Timian*. The sick People, having fresh Meat in plenty, Abundance of Greens, and as many Oranges as they pleased, recovered surprisingly. In the mean time, the Carpenter was employed in stopping the Leak, which, notwithstanding all his Care, was very indifferently done. That no Time might be lost, Provisions and Water were every Day carried on board, and the Ship washed and scrubbed; and every thing being in good Order by the 19th of September, they began to lash the Guns, and to prepare for their Departure, which was retarded by an extraordinary Accident, that happened on the 22d.

They had all that Day had Gales, and a great deal of Rain: About seven in the Evening they parted with the small Bower, and brought up and rid by their best Bower; when a great Sea, running at their Stem, (staved the Long-boat against the Rails of the Gallery, so that she was over-
set, with a Man in her, who with much Difficulty was saved, but the Boat was lost. At eleven they parted with their best Bower, and were forced to let go their Sheet-anchor, veering almost two Cables Length. Upon this they heaved the Lead, and, finding they were out of Soundings, fired four Guns, and made a Signal of Distress, but to no Purpose; for those on shore could afford them no Assistance; so that they were soon driven out to Sea. There were at this Time 60 Hands on board, and the Commodore and 110 Men left upon the Island. It is not easy to conceive how much this must have alarmed those who were thus left, with little Hopes of getting off, in a small uninhabited Island, seated, as it were, in the Extremity of the World, where they were, in a manner, surrounded by Enemies, and had nothing to trust to, but their own Efforts to escape.

This is the Scene which we mentioned, as a Parallel to the Shipwreck of the *Wager*; and, in one respect, the Distress of the *Centurion's* People was the greater of the two; for they had not the Benefit of a Wreck, from whence Sea Stores and Materials might be fetched at Will; all was gone with the Ship, and in her their ablest Hands. Such was the Matter of Fact; let us now see what were the Consequences, and how the Commodore and his People behaved in so uncomfortable a Condition.

23. As soon as the Ship was out of Sight, and every body seemed to be under Apprehensions from the Foulness of the Weather, that the Crew would not be able to bring her back into the Road, an universal Astonishment appeared in every Countenance. The Commodore however encouraged them to pursue their Labours, notwithstanding the Ship's being driven off the Island, assuring them, that if the Ship did not return, they would not be wholly useless; which gave the People great Spirits, foreseeing that the Commodore had already formed some Project for getting off the Island. In a Day or two after, the Commodore explained himself more fully, telling the People, it would be very practicable to saw the Bark, which they had taken when they first came to the Island, and lengthen it, to such a Degree, as might render it a fit Vessel to carry them to some of the *Philippines*, and from thence to *Cbina*. When, by this Discourse, he had banished Despair, he entered into a regular Deduction of whatever would be requisite for such a Voyage; and, having assigned a certain Number of Men to every kind of Work, he not only took upon himself the Trouble of surveying them, but wrought, with his own Hands, amongst those he overlooked; so that his Example was at least equal to the Addition of a considerable Number of Hands; for, seeing the Commodore always busy, there was no Man had a Desire to be idle. This Industry of theirs had all the good Effects that could be wished for, since, at the same time it kept them to their necessary Business, it diverted their Thoughts, and preserved their Spirits, in a regular Motion; and this too was greatly forwarded by the personal Behaviour of the Commodore, who was always serene, always easy, gave his Orders cheerfully, pursued his Plans steadily, so as to be equally in a Condition of supplying the Ship with what was wanting to complete her Stores, in case she returned, or to finish, in a few Days, the Lengthening of the Barge, whenever they set about it, having a

considerable Quantity of Wood cut down and sawed for that Purpose.

But it is now time to follow the Ship, and to give some Account of the Hardships and Difficulties the People underwent who were on board her. On the 23d the Wind continued to blow very hard, so that one of their fore Shrouds broke, as did one of the Straps of their Bobstay, which they spliced as well as they could, and the next Day got up a Pair of Preventer-shrouds for the Foremast. On the 25th they had fresh Gales, and a rolling Sea. In swaying up the Main-yard, one of the Men being upon it to secure the Slack-jeer, some of the Tackle broke; upon which, down it came, and, in the Fall, the poor Man's Arm was caught in a Block, and broke all to-pieces; by which Accident, and the Fever that followed it, he died in a few Days. The same Day they swayed up the Fore-yard. All this time the Sheet-anchor was out, the People on board not having Strength to get her up; and, at the same time, the Ship made a great deal of Water; but, on the 26th, the Weather being moderate, they heaved the Sheet-anchor, and secured it. On the 27th they got up the Rigging, and bent another Top-sail. On the 28th the Ship was so full of Water, that they were obliged to pump every two Hours. It was the 9th of October, in the Afternoon, before they could discern the Island of *Timian* from the Mast-head, which then bore South South-east, distant six Leagues. On the 10th in the Morning, they had a clear View of three of the *Ladrome* Islands, viz. *Zeipaa*, which bore North-east, distant six Leagues; *Aguiguan*, South-east, distant four Leagues; and *Timian*, South South-east, distant three Leagues. On the 11th in the Afternoon, they let go their Sheet-anchor, which was the only one they had left, in twenty-seven Fathom Water; and the next Morning sent their Boat ashore, with their empty Casks, for Water, exceedingly rejoiced at the Thoughts of seeing once again their Companions, and their Commander.

24. On the 12th in the Morning, Lieutenant *Gordon*, of the *Marines*, being by Accident on an Hill, saw the Ship in the Road, and carried the first News of it to the Commodore, who received it with the utmost Satisfaction, and immediately gave his Orders for sending Water on board, and for dispatching, with the utmost Diligence, whatever was necessary for their speedy Departure from the Island. They enjoyed, while they staid here, all the Conveniences they could well wish for. Cattle they had in abundance, which cost them no more than shooting them, and bringing them down to their Tents. They had Hogs also in as great Plenty, and most excellent in their kind, as feeding upon solid and nourishing Fruits. Fowl also they had as much as they could wish; besides Fowls, but not in so great Plenty. One Inconvenience they were exposed to, almost as soon as they were settled on the Island; and that was the Plague of Flies, which was really greater than could well be imagined. The Reader will remember, that *Scooten* and *Le Maire* met with the same Inconvenience in an Island in the South Seas, which they from thence called *Fly Island*: And Captain *Dampier* represents the Coast of *New Guiney*, which is the nearest Continent to this Island, as pestered with Flies, to such a Degree, that the Inhabitants are almost blinded by them. But, as I do not find any Complaint of this Nature in the Voyages of such as have touched at the Island of *Guam*, I am inclined to believe, that only such of the Islands as are uninhabited are exposed to this Inconvenience. Perhaps the Opening the Country, by cutting down the Woods, and the Smoke of many Fires, might contribute to the Destruction of these Vermin. Their Habitations were none of the best; but yet, through the Care of the Commodore, their Huts were as well disposed, and as effectually secured, from the Weather, as it was possible; so that, in the Space of less than two Months, the Crew that landed there in so weak and so distressed a Condition, recovered their Health and Spirits, and moved very briskly about their Business.

They observed, during their Stay, that the Tide fell strong, between this Island and *Aguiguan*, at South South-east, and North North-west, and runs longer and stronger to the Southward, than to the Northward, making a great Sea when it sets against the Wind, and rises about eight

Feet perpendicular along-shore; at the Quarter of the Moon it rises higher by two Feet than at the Full and Change; contrary to the common Phenomenon of the Tides, it rises more or less also, according to the Strength of the Winds blowing into the Bay, by two or three Feet. The Flowing at Full and Change is about eight Hours. These Variations, with respect to Tides, do not at all affect, much less destroy, the modern Doctrine on that Head; because the same Variations, or others analogous to them, are observed where-ever there is a Cluster of Islands, and even upon our own Coast, particularly at the *Orkneys*, the *Western Islands*, and those of *Scilly*. On the eighteenth they had the Misfortune to lose a Raft of Casks, consisting of twelve Buts, and three Puncheons; notwithstanding which, they completed the Watering of their Ship the next Day, when a Man from every Mess was sent into the Woods to get Oranges, and whatever else they wanted of Fruits, and other Refreshments. On the 21st they sent two *Indians* on shore: Two other *Indians* having swam away from them the Day before, set the Bark on Fire, and removed every thing from their little Settlement on board the Ship.

25. On the 22d of *October*, about five in the Afternoon, they weighed from the Island of *Tinian*, and made sail for *Macao*. The Weather continued fair during the rest of the Month, but *November* entered with Storms; so that on the 2d they had very foul Weather, being then off the South-east Point of the Island *Formosa*, which lies in the Latitude of 21° 20' North. The next Day they saw Fires on that Island, bearing North-east, distant about fifteen Leagues. On the 4th they had an hard Gale, which broke the Main-top-sail Stay. The next Day they had Sight of the Coast of *China*. On the 6th in the Morning, they had Sight of *Pedra Blanca*, bearing West, half South, ten Miles; it is so called from the white Rocks lying off it: These appear, when off at Sea, just against the Cape; but, being, when nearer Shore, either Eastward or Westward of the Cape, they appear, at first View, like Ships under Sail; but, coming still nearer, they are like two high Towers, being slender, high, and steep, on all Sides, and are about half a Mile from the Cape. The Cape is in Latitude 21° 06', and is about the Height of *Becky-head* in *England*. It is a full Point, with steep Rocks towards the Sea; then it gradually falls away on each Side, with a gentle Descent, appearing very pleasant, and covered with fair lofty Trees. On the 8th they came to an Anchor in eighteen Fathom Water, and took two *Chinese* Pilots on board, to carry them to *Macao*, for which they were to receive thirty Dollars. On the 11th, about nine in the Morning, they ran a-ground near that Island, and it was the 13th in the Afternoon before they got the Ship off, and anchored her safely in five Fathom Water. They moored the next Day, in the best manner they were able, letting go their Sheet-anchor to the South, and their best Bower to the Northward; this was composed of two *Spanish* Anchors: lashed and hooped together with two Guns, having lost their own Anchor, when blown out of *Tinian* Road; and this being done, they saluted the Governor of *Macao* with eleven Guns, and he returned the like Number.

26. The Commodore, considering the Condition of his Ship, and the Difficulty he was under of procuring what he wanted in that Port, found it absolutely necessary to go to *Canton* in Person, in order to obtain Leave for heaving down the Ship, and such Assistance as could be afforded him by the *English* Factory. He went ashore accordingly on the 16th, and was saluted at his Landing by the Fort with eleven Guns, which the *Centurion* returned; and from thence the Commodore continued his Route to *Canton*, where at first he met with a very indifferent Reception, because the vulgar *Chinese*, having never seen an *European* Man of War in their Seas, took it for granted, that he was a Pirate; and therefore treated him, and the People who were with him, as they passed the Streets, with reproachful Language, calling them Thieves, Robbers, and Pirates, in bad *Portuguese*, as well as in their own Language: This, however, the Commodore did not regard, but prosecuted the Business he came about with the utmost Vigour. The Day after the Commodore's Departure, a *Chowpan*, or *Chinese* Guard-boat, anchored close by the

Centurion, to observe her Motions. On the 1st of *December* arrived a Boatswain, with a Long-boat and Anchor from the Commodore, of which they were in great Want, their own having been staved, as has been already mentioned, in the Road of *Tinian*. They sent, by the Commodore's Orders, a Mate, and six Men, to attend him at *Canton*, and a Supply of 1000 Dollars, for purchasing Sea-stores.

By this Time the Commodore had made an Agreement with the *English* Factory for fresh Provisions, which were regularly supplied during the Time the *Centurion* lay in the Harbour of *Macao*; and the People on board were constantly employed in repairing and refitting the Ship, as fast as their present Circumstances would allow. On the 5th of *December* the following Account was taken of the Treasure brought on board from the *Gloucester*, when, at the Request of her own Officers, she was destroyed; viz. N° 1. A Box of Gold: 2. A Box with 4000 Dollars: 3. A Box with 3000 Dollars: 4. A Box of 3000 Dollars, a Box of Jewels, and a Bag of bits: 5. A Box with 1255 Dollars, and 49 Pounds of loose Plate: 6. Seventeen Pounds of loose Plate, *Avoirdupois* Weight. On the 8th they received in a Boat belonging to the *Defence*, an *English* Ship then in those Parts, a Cable, and other Necessaries, from *Canton*; and the same Day two Ships, one a *Dutch*, and the other a *Swedish East-Indiaman*, pass'd by them, Homeward-bound. They received, on the 9th, Orders from the Commodore to get ready for Sailing, and on the 11th they began to get their Water on board, and to fit their Ship: On the 12th they found their Main-mast sprung in two Places, two Feet above the Partition on the Lower Deck: On the 13th three *Dutchmen* came on board, and entered themselves; and on the 15th the Commodore returned from *Canton*, bringing with him a considerable Quantity of Stores, necessary to put the Ship in a sailing Posture.

Immediately after his Return, the necessary Orders were given for dispatching the Repairs; in Obedience to which, the Carpenters were employed in finishing their Masts, the Sail-makers in repairing their Sails, the Butchers in salting Pork, and the rest of the Ship's Company in watering and getting ready for Sea. A Spectacle that surprised the *Chinese*, and increased the natural Jealousy they have of all Foreigners.

27. In order to be thoroughly satisfied, and agreeable to the *Chinese* Custom, of knowing to the utmost Certainty the Burden and Force of all Foreign Ships, the principal Mandarin at *Macao* determined to pay the Commodore a Visit, which he did on the 18th, and, having received all the Satisfaction he could desire, was very elegantly entertained, and at his Departure saluted with eleven Guns. The next Day Captain *Mitchell*, who had commanded the *Gloucester*, went on shore in the Barge, in order to take his Passage home, with the Consent of the Commodore. The Order for heaving down was not yet expedited, and all that could be done was to get on board dry Provisions and Stores, of which they received more or less every Day. On the 23d the *Princess Mary*, a Ship in the *East-India* Company's Service, sail'd for *England*, and saluted the Commodore with eleven Guns, who returned five. On the 25th two *Danish* Ships pass'd by, who likewise saluted the Commodore with eleven Guns, and had nine returned. On the last Day of the Year their Long-boat returned from *Canton*, with an Anchor, Hand-pump, and other Necessaries. The Commodore began the Year with distributing Part of the Plunder-money taken at *Praya*, that the Officers and Seamen might have something of their own, to furnish themselves with Conveniencies.

On the 7th of *January* came the Order for heaving down their Ship, and they immediately began to unmoor, weigh'd the Sheet-anchor, and warped over to the Northward for that Purpose. The Commodore contracted for 100 *Chinese* Workmen to assist, and two Junks to hold the Stores, and other Goods, that were taken out of the *Centurion*; he caused likewise a Tent to be erected on an adjacent Island, and placed a Guard there, for the Security of the Effects that were put on shore; he likewise hired thirty *Chinese* Carpenters; and, having lost no Time, by the End of the Month of *March*, the Ship was perfectly repaired;

and, by the 6th of *April*, completely rigged; and the same Day they began to unmoor. On the 7th in the Afternoon the Commodore went ashore, to take his Leave of the Governor of *Macao*; who, upon his coming off, saluted him with thirteen Guns. The next Day a Mandarin, and seven *Chinese*, in a Junk, anchored close by the *Centurion*, who pretended to give the Commodore Advice to make Halte, because the *Tuffoon* Season was advancing; but the Commodore very well understood the Meaning of the Message, and that they were only desirous of being rid of him, for fear of his interrupting their *Manila* Trade. This appeared more clearly on the 13th, when the Mandarin sent a Message, insinuating upon his immediate Departure; to which the Commodore answered, that he would sail when he thought proper, and not before.

On the 17th a *Swedish* Homeward-bound *East-Indiaman* anchored near them, which saluted the Commodore with 16 Guns, who returned 15; and soon after went on board the *Swede*, where he was entertained with all imaginable Respect, and saluted again at his Departure with 16 Guns. The Commodore, finding the South West *Monsoon* setting in, and that it would be dangerous for him to sail for *Europe* before the Month of *October*, determined to take this Opportunity of sending home Captain *Saunders*, in the *Swedish* Ship, with an Account of his Proceedings, for the Satisfaction of the Government; and, in the mean time, resolved to cruise for the *Acapulco* Ship, which he had certain Intelligence was very soon expected at *Manila*.

The City of *Macao*, which in the *Chinese* Language signifies a *Port*, stands on the Point of an Island, called *Heibent*, in the Province of *Canton*. The Form of this Point of Land is very singular; it resembles a Man's Arm bent, the Shoulder-part being joined to the Island, and the rest surrounded by the Sea: The Haven is very safe and commodious, and the City was formerly very rich and splendid. It belongs, as it always did, to the *Portuguese*, who settled here by Permission from the Emperor of *China*: They have a Governor of their own, and live under their own Laws; but are, notwithstanding, subjected to the *Chinese*, to a Degree of Slavery. The Customs of the Port belong to the Emperor, who has an *Heppo*, or Commissioner of Revenue, here, as in other Ports of his Dominions, and a Mandarin, who directs Civil Affairs; neither is it possible for the *Portuguese* to shake off the Yoke, because they are every way surrounded by the *Chinese*, and have not a Day's Provision but what they draw from the Country. While the *Portuguese* were in Possession of the Trade to *Japan*, this Place was in a very flourishing Condition, and one of the most considerable Cities in their Possession; but since their Expulsion from that Island, their Trade has declined here, tho' it seems now to be in a better Condition than it was some Years ago; and there are a considerable Number of *Portuguese* Ships that come hither annually from their Settlements in the *West-Indies*.

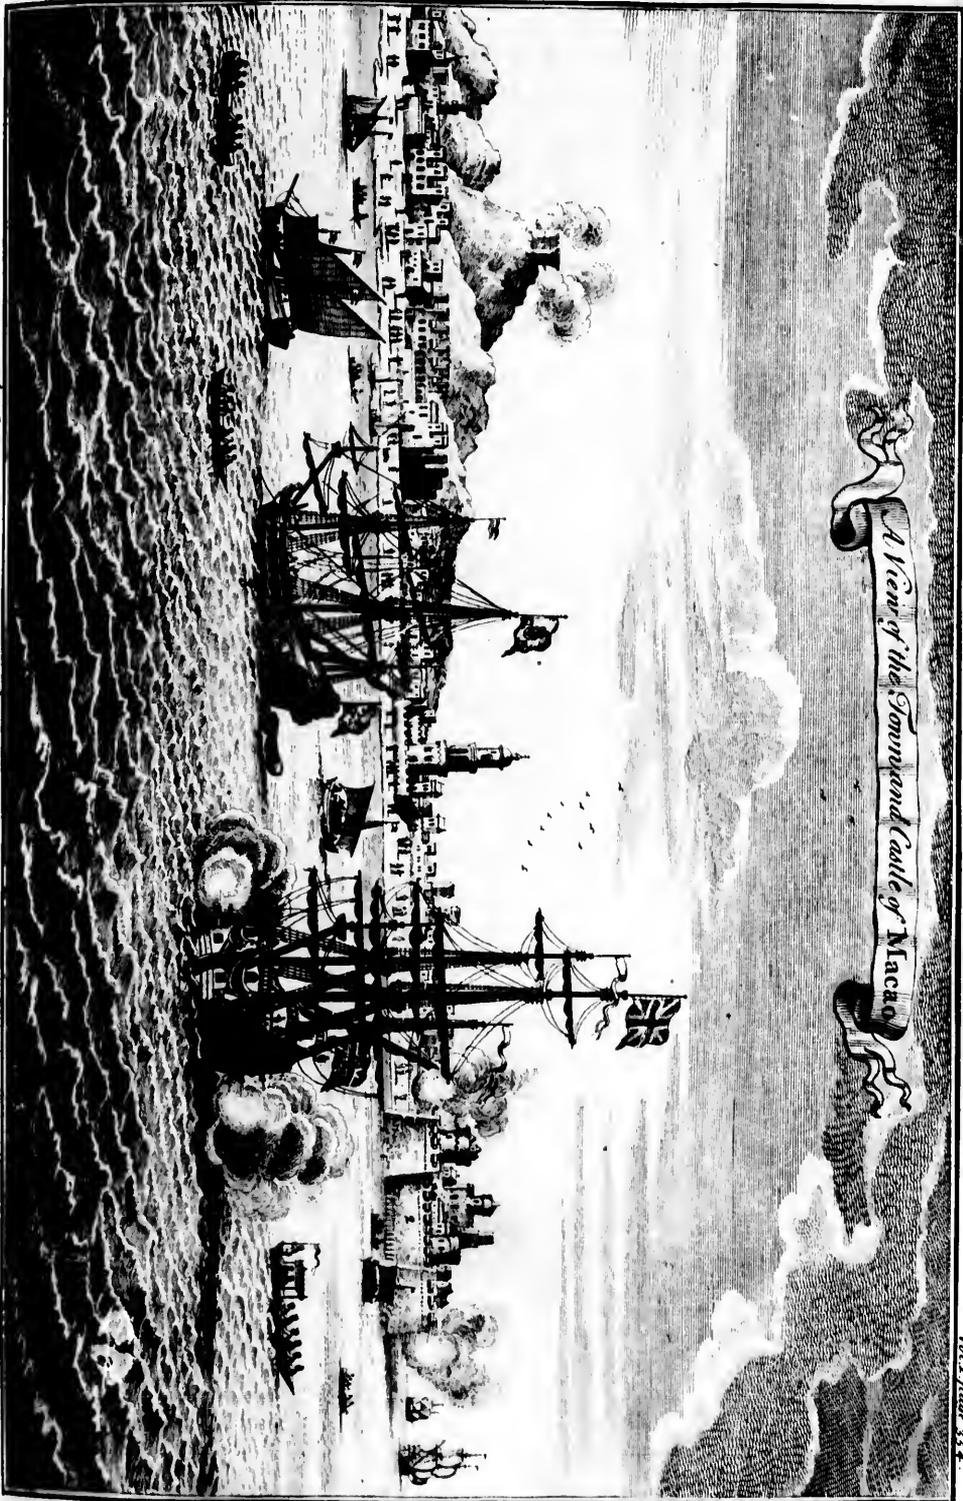

But the *Chinese* drive a much more considerable Trade from hence, especially to *Manila*, where they vend a vast Quantity of rich Goods, at a very high Price, to the *Spaniards*, who pay for them all in ready Money; that is to say, in Pieces of Eight, or in Silver Bars, which they bring from the *West-Indies*. This, however, seems to be a great Slip in their Politics; which may be the more easily apprehended, if we compare it with the prudent Management of the *Dutch*, who carry on likewise a great Trade with the *Chinese* at *Batavia*; where, notwithstanding, they never suffer them to deal for ready Money, but for Spices, and other *Indian* Commodities, and for the Manufactures of *Europe*; so that the same Commerce which exhausts the *Spaniards*, enriches the *Dutch*, who make the *Chinese* their Carriers at an easy Expence; whereas the *Spaniards* export immense Quantities of *Chinese* Goods in their *Manila* Ships to *Acapulco*, and bring from thence the Silver of *Mexico* in Return, the best Part of which comes, sooner or later, into the Hands of the *Chinese*; so that here, as well as in *Europe*, the *Spaniards*, thro' their own ill Management, are only Factors for other People, and have no more than a transitory Possession of that prodigious Wealth they draw from their *Indies*. It is no Wonder therefore, that the *Chinese*, who are, without question, as cunning and as self-interested a People as any in the World, were very much disturbed at Commodore *Anson's*

lying so long in this Port, especially after the Arrival of a Ship from *Manila*, which happened a little before his Departure, and informed the *Chinese* thoroughly of the Apprehensions they were under from the *Centurion's* being in their Neighbourhood.

There is one Thing which has been before laid down in point of Fact, that seems to require some Explanation; and that is the Caution given by the *Chinese* Mandarin to the Commodore, in relation to the stormy Season. We have already spoken in other Places somewhat of this Subject; but here it will be necessary to discuss the Matter more at large, in order to settle this Point: With respect to the Weather in *China*, *Monsoon* is an *Indian* Word, which, strictly speaking, signifies no more than a strong Wind; and is applied to the stated Trade-winds no otherwise than as they are remarkably strong, as well as steady; which Observation will hereafter appear to be of much greater Use, than at first Sight may be imagined. The *Monsoons* are distinguished into the East *Monsoon*, and the West *Monsoon*: The former sets in, to the North of the Line in the Month of *September*, and blows till *April*, bringing usually fine, fair, and constant Weather; whereas the West *Monsoon*, which blows from *April* to *September*, is usually accompanied with heavy Rains, and dreadful Storms; which shews the Reason that induced the Commodore to remain in this Part of the World, till the East *Monsoon* was well set in. It is not to be supposed, that the Change of these Winds is a Thing very regular or exact, or that the Succession of them is immediate; but it is to be understood, that the Months of *April* and *September* are the shifting Months, and that there is some Variation of Winds, before the *Monsoon* becomes fixed and steady. Thus much, however, is certain, that the Alteration of these Winds is as constant as the Change of the Year; and that all the Navigation of the *Indies* depends upon them.

All who are concerned in Trade wait for these Changes, and complete their Cargoes, and fit out their Ships, agreeable to these Seasons, taking such Measures to dispatch their Business, in the Places to which the Ships are consigned, as to take the Benefit of the next or contrary *Monsoon*, which brings them back again; neither is it easy to conceive, how the Trade of *India* could be carried on, but for these regular and constant Winds. A Coasting Trade, indeed, might be practicable, from Places near each other, by the Help of Sea and Land-breezes; but Voyages of considerable Extent could by no means be carried on by the Help of such Land and Sea Winds; or, if they were, they might take up three or four Years, instead of six Weeks. At the Change of these Trade Winds there are frequently great Storms, which are also called in the *Indies*, *Monsoons*; being that Word in its natural and strict Sense, for a high or strong Wind; and therefore this Distinction is very necessary to be observed, in order to prevent our confounding one *Monsoon* with another.

But the Winds mentioned by the Mandarin, were *Tuffoons*, or, as some write them, *Typhons*; because the *Greek* Word *Typhon* signifies a violent high Wind. It would be at least a tedious and perplex'd, and, perhaps, after all, a dry and useless Inquiry, should we endeavour to shew, that the *Chinese* Term of *Tuffoon* is derived from, or is no better than a Corruption of, the *Greek* Word *Typhon*; and as it is more agreeable to our Purpose, we will endeavour to explain the Thing, without troubling ourselves about the Name. *Tuffoons*, then, are a particular Kind of violent Storms, which happen usually in the shifting Months, but especially *April*, on the Coast of *China*. They commonly happen near the Full or Change of the Moon, and are usually preceded by very fair Weather, small Winds, and a clear Sky: These Winds veer from the true Trade-wind, and usually shift almost round the Compa's. Before the Storm comes on, there appears a dark thick Cloud on that Point from which the Storm will blow; as suppose it be from the N. E. which Cloud hangs always near the Horizon, the upper Edge of it being of a dark Flame colour, which grows brighter and brighter, and then fades to a whitish glaring Cloud. This is a very awful and terrible Spectacle, inasmuch as it lasts sometimes for twelve Hours before the Storm comes on: When that Cloud begins to move, the Wind presently follows it, and blows with an

dible Violence at N. E. for about twelve Hours, accompanied with most horrid Claps of Thunder, large flying Sheets of Lightning, and a prodigious Rain. This furious Wind does not die by Degrees, but sinks almost all at once; then follows a dead Calm for about an Hour, till the Wind rises from the opposite Point at the S. W. and then it blows, thunders, lightens, and rains, with as much Violence, and for about the same Time, as it did before.

Varenius, who is justly esteemed for his excellent Writings on this Subject, has given us a large Description of this Kind of Storm, which, because it is more general, the Reader may perhaps be well pleased to see. A *Typhoon*, says he, is a strong swift Wind, blows from all Points, wandering about all Quarters, and generally comes from above. This is frequent in the Oriental Seas, especially in the Seas of *Siam*, *China*, and *Japan*, and between *Malacca* and *Japan*. It breaks out violently, almost from the Western Point, and turning round the Horizon with a rapid Force, performs the Revolution in twenty Hours; till, growing stronger and stronger, raising those Seas, with its strong Whirling about, to a great Height, every tenth Wave rising above the rest, which dashing against one another with great Force, the Seamen lose all Hopes of their Lives; for which, and other Storms, sailing from *India* to *Japan* is very dangerous; so that if one Ship in three gets safe there, it is look'd upon to be a prosperous Voyage. The *Typhoon* rages most in Summer, and more than can be conceived by those who have not seen it; so that it is no Wonder the Ribs of the strongest and largest Ships should be loosened; you would think the Heavens and the Earth were turned to their antient *Chaos*. It rages not only at Sea, but also on Land; and overturns Houses, and pulls up Trees by the Roots, and carries great Ships a Quarter of a Mile from the Sea. The Cause of it, no doubt, is, that the Wind rushing to a certain Point is obstructed, and returns on itself, and is thus turned round; as we see in Water, that turns round about in a *Vortex*, when it meets with an Obstacle; or it may come from furious Winds meeting one another, which renders the Sea plain, and dashes against the Ships between them.

28. On the 19th of *April* 1743, they sailed from *Macao*; and, on the 3d of *May*, saw the Southernmost Part of the Island *Formosa*, lying East by South, at the Distance of ten Leagues, which afforded them a very pleasant Prospect. This Island, in the best Maps we have of *China*, is laid down from the Latitude of 22° to 25° 10' North, and in Longitude, from 3° 20' to 5° 30' East from *Peking*. Its nearest Distance from the Continent is about thirty Leagues; it is about seventy Leagues in Length, and twenty in Breadth. The *Spaniards*, who first discovered it, called it, from the fair Prospect it affords at Sea, *Formosa*; but the *Chinese* call it *Tai-uan*; which our Seamen, spelling according to the Pronunciation, write *Tey-uan*. It is, in all respects, a very fine Island, situated in a very wholesome Climate, finely diversified by Hills and Valleys, Plains and Woods, well watered, and affording not only the Necessaries and Conveniences of Life, but also very rich and valuable Commodities; such as Gold in great Plenty, Raw Silk, Sugar, Copper, finer than in *China*, but coarser than that of *Japan*, with Abundance of Drugs.

The Natives differ much from their Neighbours the *Chinese*, and the Inhabitants of the *Philippines*, in their Complexions, Stature; and Make, for they are, generally speaking, a low squat People, with large Heads, low Foreheads, hollow Eyes, their Cheek-bones remarkably high, large Mouths, short flat Chins, with little or no Beard; their Necks small and long; their Arms and Legs long, small, and ill-shaped; their Feet very long and broad, and, generally speaking, they are Baker-kneed. The *English* and *Dutch* had Factories there till about the Year 1678, when the Province of *Fokien* having submitted to the *Tartars*, who were then about subduing that Island, they directed the *Europeans* to remove their Settlements to the Continent; upon which the *English* withdrew their Factory to *Amy*; but the *Dutch*, having a good Fortrefs, and a numerous Garrison, sustained a long Siege, and sold their Settlement very dear, the *Tartars* having several Thousands of Men, before they became

Masters of it; and, since that time, the Government of it is annexed to the Province of *Fokien*, and no Strangers are suffered to trade thither.

On the 6th in the Morning, they were in Sight of the *Babee* Islands, which are five in Number, lying in the Latitude of 20° 25'. Three of these Islands are pretty large; that which lies most to the West is the biggest of the three, being about seven or eight Leagues long, and about two wide, lying almost North and South, the Land high, flat, and even on the Top, with steep Cliffs against the Sea. The other two Islands are about four or five Leagues to the Eastward of this, being between three and four Leagues long, and a League and an half wide, stretching North and South; and are very mountainous, with many steep Precipices. The two small Islands are flat and even; only one of them hath a steep rocky Hill: The Inhabitants live in small Villages, built on the Sides and Tops of these rocky Hills, and consist of several Rows of Houses, one over another, on these steep Precipices: They go to the first Row up a wooden Ladder, and so with a Ladder up to that above it, there being no other Way to ascend. The Plain on the first Precipice is so wide, as to have Room for a Row of Houses that stand all along on the Edge or Brink of it, and a very narrow Street running along before their Doors: Between the Row of Houses, and the Brow of the next Precipice, the Plain is, in a manner, level to the Top of the Houses below; and the rest are pretty near the same Order and Proportion. The common Ladder to each Row or Street comes up at a narrow Passage, left purposely about the Middle of it; and the Street being bounded with a Precipice also at each End, it is but drawing up the Ladder, if they are attacked, and then there is no coming at them from below; and, that they may not be assaulted from above, they take care to build on a Hill, the Backside of which hangs over the Sea, or on some high, steep, perpendicular Precipice, altogether inaccessible.

The Men are generally employed in Fishing, and take their Sons with them, but their Daughters live at home with their Mothers; and, when they are grown up, they send them to their Plantations to dig Yams and Potatoes, of which they bring home on their Heads, every Day, enough to serve the whole Family; for they have no Rice or Maize. Their Plantations are in the Valleys, at a good Distance from their Houses, where every Man has a certain Spot of Land, which is properly his own; this he manages for his own Use, and provides enough, that he may not be beholden to his Neighbours. Both Men and Women wear very large Ear-rings, made of yellow Metal, which they call *Bullawan*, i. e. Gold, and very probably it is so. They are very ingenious in building Boats, having some that will carry forty or fifty Men; these they row with twelve or fourteen Oars of a Side. In regard to their Manners, they are a neat, sober, civil, industrious, quiet, honest People, just to each other, and equally courteous and generous to Strangers.

They are very moderate in their way of living, contenting themselves usually with Fish and Roots. As for their Drink, it is commonly Water; yet they have a better sort of Liquor amongst them, made of the Juice of Sugar-canes, which they boil, and put some Blackberries among it; when it is well boiled, they put it into a great Jar, and let it stand three or four Days to ferment; then it settles, and becomes clear, and is presently fit to drink. It is an excellent Liquor, very much like *English Beer*, both in Colour and Taste; it is very strong and wholesome. They have no sort of Coin, but barter small Pieces of yellow Metal, wrapped up in Plantain-leaves, for what they want. They are great Admirers of Iron, and will fill a good fat Goat for an iron Hoop; and a large Hog, of seventy or eighty Pounds Weight, for two, three, or four Pounds of Iron. They will also give several Jars of their favourite Liquor for old Nails, Spikes, or Bullets.

This Account is intirely taken from Mr. *Dampier*, who, for any thing we know, is the only Author that has given any Description of them: He was there with Captain *Swan* in the Year 1687, or rather in Captain *Swan's* Ship, for his Crew had then left him behind, and it was his Sailors that bestowed upon them the Name of the *Babee* Islands, which

which they have since retained, even in the best Maps; and it is really wonderful, that, considering so much Notice has been taken of his Description, no Attempt has been hitherto made, either to settle in them, or trade with their Inhabitants. They had, towards the Middle of the Month of May, very stormy Weather, with much Rain. On the 21st they saw Cape *Spiritus Santo*, on the Island of *Samar*, which is one of the *Philippines*, and lies to the South-east of *Manilla*. They exercised their Small-arms on board constantly, when the Weather would permit; and kept cruising in the Way of the *Acapulco* Ship to the 18th of June, without meeting with any remarkable Accident.

29. On the 21st in the Morning they saw the Land, bearing South-west, at the Distance of about seven Leagues; and about seven o'Clock they first discerned a Ship, bearing South-east, which proved to be the Gallcon they had so long expected. As soon as the Commodore was informed of it, he came upon Deck, and the first Glimpse through his Perspective, shewing like two Ships, he said, very coolly, to the Sailors who were near him, My Lads, we will fight them both. As the crew nearer, they saw their Mistake; and that, in reality, there was but one Ship. The Commodore then gave Orders for making all Things clear, that they might be in a better Condition to chase and fight. The *Spanish* Commander, however, did not give them much Trouble in this respect, but bore down upon them before the Wind; and, when she was come within a Mile of the *Centurion*, brought-to, in order to engage. In a little time after she fired a Gun, which was answered from the *Centurion*, by firing a Gun to the Leeward. At about half an Hour after ten the Enemy hoisted *Spanish* Colours, and a red Flag, with the Arms of *Spain* at her Main-top-mast-head; and then they began to fire random Shots, before they came to a close Engagement. At half an Hour after twelve o'Clock the *Centurion* hoisted her Colours, and fired a Shot at the Chace, which she returned. They then came close a long-side of each other, Yard-arm and Yard-arm, when the Attack began with all the Fury imaginable.

The Commodore remained, during the whole Action, upon the Quarter-deck, with his Sword drawn, and gave his Directions with the greatest Calmness imaginable. The Honourable Mr. *van Keppel*, Son to the Earl of *Albemarle*, gave his Orders between Decks; which were executed punctually, and without the least Confusion. As they had not a very large Stock of Ammunition, Instructions were given not to waste it by firing any Guns without Probability of doing Execution; and therefore they fired but four Guns at a time, which generally went through and through the Enemy's Ship; and, as the *Spaniards* had near six hundred Men on board, there was hardly a Shot that missed them. They made use, during the Engagement, of an excellent Point; which was, making the usual Signal to board, by lashing their Sprit-sail-yard fore-and-aft, which made the *Spaniard* imagine the Commodore had his full Complement of Men; and, what confirmed them in this Opinion, was his shewing his whole Force, consisting of 227 Men, on one Side, which he had an Opportunity of doing by their engaging Yard-arm and Yard-arm; whereas, if they had fought Broadside and Broadside, he would have wanted Men to have managed his Guns. This surpris'd and intimidat'd the Enemy, who, being inform'd of the Condition they were in at *Timian*, thought themselves sure of taking them; which was what induc'd them to bear down as they did before the Engagement. The Commander of the *Spanish* Ship, *Don Hieronimo Montero*, a *Portuguese*, behaved very bravely; and, for the first Hour, fired very briskly; but afterwards the Ship lay like a Log in the Sea, and fired only now-and-then. The Action lasted an Hour and twenty Minutes. A *Spanish* Officer, who was order'd to strike the Colours, and who stood very near them, refus'd to do it for some time; but at last they were struck.

Upon this the Commodore order'd his Cutter to be hoisted, the rest of the Boats being rendered unserviceable in the Engagement, and sent on board Lieutenant *Summarse* to take Possession of her; but, there being little Wind, she fell on board the *Centurion*, but, in a little time, they got clear. When the Cutter returned, she brought

the Governor of *Guam*, the Pilot of the *Spanish* Ship, and some of the principal Officers and Passengers: As for the *Commodore*, he had received two Wounds, and it was not thought safe to remove him; but Orders were given for taking all imaginable Care of him on board his own Ship.

In this Action the *Centurion* had only two Men killed; viz. *Thomas Richmond*, who had his Head shot off, and *George Walton*: Lieutenant *Brett*, and fifteen Men, wounded. They had fifteen Shot through the Hull of the Ship; their Fore-mast, Main-mast, and Bow-sprit, wounded, and their Rigging very much shattered. In taking the Prize, they expended fifty hundred Weight of Round-shot, four Rounds of Grape, and four of Double-headed, and twenty-four Barrels of Powder. The *Spanish* Gallcon was called *Nuestra Señora del Cabo Donge*: She could mount sixty Guns, but had only forty-two actually mounted, seventeen of which were Brads, and twenty-eight *Patereroes*; each of which, that is of the *Patereroes*, was loaded with seventy Musquet-balls, or what was equivalent to them, rusty Nails, Flint-stones, and Slugs; they likewise fired abundance of Chain-shot, some Double-headed, with barbed Points, which with us are esteem'd unlawful. She had fifty-eight Men killed, and eighty-three wounded. To prevent their being intimidat'd by so great a Loss, the Commander order'd twenty Men to be employ'd, during the whole Action, in throwing the Dead over-board, and in washing the Deck, that the Blood might not be perceived. She had 150 Shot through her Hull, many of which were between Wind and Water, which made her very leaky; her Masts were in a very bad Condition, and her Rigging tore all to-pieces, so that they were oblig'd to send Blocks and Coils of Ropes on board, to repair it as soon as she was taken. The Cutter and the Long-boat of the Prize were for some time employ'd in bringing on board the Prisoners, to the Number of three hundred; and Lieutenant *Summarse*, with fifty Men, were left in Possession of the Prize, together with two Surgeons, to assist the Wounded. They found, on the first Search, on board the Ship, one hundred and twelve Bags and five Chests of Dollars, and one Bag of Plate.

On the 22d five of the Prisoners died, on board the *Centurion*, of their Wounds; the two next Days were employ'd in bringing on board great Part of their Riches. On the 25th one hundred of the Prisoners were put into the Hold of the *Spanish* Ship. The same Day *Don Hieronimo Montero* came on board the *Centurion*; and, when he saw how inconsiderable their Force was, he could not help expressing the greatest Fury and Passion at being taken by such a Handful of Men, and those too in such Condition; for many, though they had Spirit enough to fight, were almost eat up with the Scurvy, and a great Part of the Crew were, in a manner, perfect Boys. On the 26th more Money was brought on board; so that it was now comput'd they had had a Million two hundred thousand Pieces of Eight from on board the Prize, and a great deal more was brought on board the next Day.

On the 29th Mr. *Philip Summarse* was appointed Captain of the Prize, his Commission bearing Date from the Day she was taken; and, as soon as he received it, the new Captain saluted the Commodore with eleven Guns, which was answer'd by three; but the Prize was in so bad a Condition, that they were oblig'd to take her in Tow. The same Day they remov'd fifteen Bags of Dollars, some Plate, and three small Casks of Virgin-silver, on board the *Centurion*, so that they had now every thing of Value out of the Prize, amounting, in the Whole, to 1,313,843 Pieces of Eight, and 35,682 Ounces of Plate and Virgin-silver. On the first of July they had Sight of the *Bajice* Islands, and the next Day found themselves off the Island of *Manila*, for which their Prize was bound.

The proper Name of this Island is *Luconia*, but it is frequently call'd *Manila*, from its Metropolis of that Name. It is the largest of the *Philippines*, and one of the very best Countries subject to the Crown of *Spain*. It affords all Sorts of Corn, Fruits, and Roots, in prodigious Plenty, and Fleth and Fish, in as great Abundance as can be wish'd; besides all these Advantages, which make it a delightful Country to live in, it may be justly con-

sidered as the best situated Place for Trade in the *East Indies*, or perhaps in the Universe. The Commodities of this Island are Iron, Steel, Gold, but not very fine; Wax, Rice, Sago, Saffron, &c. to which we may add a vast Quantity of Deer-skin, and Buffalo-hides, which, by the Help of the *Chinese*, they send yearly to *Japan*. The City of *Manila*, which is wonderfully well seated in the Latitude of 14° 15' North, is the Seat of an Archbishop, and of the Viceroy; and they both live here in the utmost Splendor. The City itself is large and populous; the Streets wide and handsome; the public Buildings very magnificent; the Suburb of the *Chinese* is very large, and full of People, who are very industrious, and carry on a prodigious Trade, notwithstanding the *Spaniards* harass them with heavy Impositions. The Port is one of the best in the World, being at once extremely safe, and very capacious, at the same time that it is so well situated as to command equally the Trade both of the *East* and *West Indies*.

There is another Advantage, which the *Spaniards* possess and improve here beyond any thing they do in other Parts of their Dominions; and that is, abundance of fine Timber, fit for Ship-building, and which is employed in the Construction of those vast Gallies which carry on the Trade between this Port and *Acapulco*. It is likewise certain, that the *Spaniards* build other Vessels here for their *East India* Trade; and, though it must be granted, that they do not make the utmost Use that might be made of these Advantages, yet it cannot be denied, that they make more Use of them here, than in any other Parts of their Dominions. They admit *Mohammedans* and *Chinese* to trade here, though they are no-where more precise in the Exclusion of *Europeans*. The *Mohammedans* are allowed the Exercise of their Religion; but the *Chinese* are forced to counterfeit Christianity, which they will do very dexterously, to promote their Commerce. This is the bright Side of the Prospect; but, perhaps, it may not be amiss to view it a little in the Shade. The Island of *Luconia* is very large; some say, not less than four hundred Leagues in Circumference, and, at the same time, is extremely populous. The *Spaniards* are possessed only of the Coast, and have not more determined Enemies in the World than the Inhabitants of the inland Parts, who, as they are equally active and warlike, give them a great deal of Trouble, fortifying all the Entrances into their Country with a sort of Retrenchments made of Bamboos, or split Canes, which defend them from the Attacks of the *Spaniards*, and yet leave them secret Passages, by which they tally out, and make dreadful Excursions.

There have been likewise many civil Commotions even in the *Spanish* Settlements, owing chiefly to the Oppressions of their Viceroy, or Captain-General, and to the Intrigues of the Clergy. In the Year 1719 the latter stirred up the People against the Viceroy, who had behaved very ill in his Government, and actually killed him in his Palace. It is therefore easy to judge, why the *Spaniards* are so apprehensive of *Europeans* carrying on any Commerce here, since they are equally in Danger from the Natives on the one hand, and from the Discontents of their own People on the other. Yet, in spite of all their Care, the *Portuguese* share in the rich Commerce of this Island, and the *Spaniards* were frequently forced to employ them in military and maritime Affairs, for which they are much better than their own People. But those they most dread are the *Dutch*: And, it is for this Reason; that, though Nutmegs and Cloves actually grow here, as well as Pepper and other Spices, yet neither the *Spaniards*, nor the Inhabitants, take any Care to cultivate them, merely from the Apprehension of its tempting their Neighbours to extend their Conquests on this Side. It is very true, that the *Dutch* can scarce draw together a Force sufficient to execute such a Design, but they know so well how to excite the *Indian* Nations against each other, and, by their Assistance, have brought about elsewhere such surprising Revolutions, that it would be certainly a dangerous thing to provoke them, by interfering, in any Degree, with that darling Article of their *Indian* Commerce, the Monopoly of these Spices. But to proceed with our Voyage.

NUM. 25.

On the 9th of *July* in the Afternoon, being then within Sight of the Coast of *China*, they discovered a Sail; to which they gave Chace, sending for all their People from on board the *Centurion's* Prize, excepting the Captain and nine Men, who had likewise Orders to quit her in case of an Engagement. The next Morning they saw her again, when she appeared to be a large Ship under *French* Colours. They continued the Chace all that Day, and the next Morning, but, finding they did not gain much upon her, and, considering they had not Water for above three Days, and so great a Number of Prisoners to guard, they resolved to prosecute their Voyage to *Macao*. On the 11th in the Afternoon, a Boat came on board them with two *Chinese* Pilots, one of which was taken on board the *Centurion*, and the other sent on board the Prize. The next Day several Boats came off from *Macao*, in order to tow them into the Road, where they anchored in six Fathom Water, the City bearing South-west, at the Distance of about two Leagues: When the Boats that had towed them in returned, they sent ashore by their seventy of their *Spanish* Prisoners, whom they set at Liberty.

31. As the Commodore had before experienced many Inconveniences from lying a considerable time in the Road of *Macao*, he was resolved not to remain there, but to proceed through the Cluster of Islands, that lie in that Gulph, to the River of *Canton*, or, as the *Chinese* call it, *Quang-tong*; which accordingly he did, and anchored, on the 14th of *July*, off an Island, which is called the Island of *Tygers*, at the Mouth of the Harbour. On the 15th, the Commodore sent a Lieutenant, with nineteen Men, in his Barge, up to the City, with a Letter addressed to the Viceroy, acquainting him with the Reasons which obliged him to enter his Port, intimating his Design to pay him a Visit, and desiring a Supply of Provisions and Stores. On the 16th, two *French* Ships entered the Road; upon which, the Commodore put his own Ship, and his Prize, in a proper Posture to receive them, in case they had acted as Enemies; but, upon his sending his Pinnace on board, they assured the Officer who commanded her, that there was no War declared between the two Crowns when they left *France*, which was about the Middle of *December*. On the 17th, they moored in the Mouth of *Quang-tong* River, at the same time that the *Harrington East Indian* came to an Anchor there, and saluted them with twenty-one Guns; which Compliment they returned with nineteen. The next Morning the Lieutenant returned in the Barge, and brought with him a Supply of fresh Provisions, but no Licence for proceeding up the River, as was expected; and from him the Commodore received Notice, that a Mandarin, of considerable Rank, would be very quickly sent from the Vice-King, to acquaint him with the Resolutions he had taken in reference to his Letter.

Upon this, every thing was put in order for the Reception of this *Chinese* Officer, who arrived on the 20th, attended by twelve *Chiampan*s. He desired that the Commodore would spare the Ceremony of saluting him, because his Guns being large, the Noise would disturb him extremely. He assured him, that the Vice-King would take very kindly a Visit from him and the Captain of the other Ship; presented him with a Licence for a daily Supply of fresh Provisions; but intimated, at the same time, that the usual Duties, according to the Size and Measurement of his Ship, would be expected, as they made no Distinction in *China* between Merchantmen and Kings Ships. The Commodore replied, that the King of *Great Britain's* Ships of War were never treated on a Level with trading Vessels in any Port; and that he was absolutely restrained, by his Instructions, from paying any Acknowledgment for Leave to anchor in any Harbour whatever. The Mandarin behaved very civilly and politely, seemed to be extremely well satisfied with the Reception he met with, and promised, at his Departure, to hasten the Licence for proceeding up the River; for want of which, they had not hitherto been able to pass the Bar. On the 22d, they sent more of their Prisoners on shore.

On the 24th, two *Dutch* Ships anchored near them from *Batavia*; and the next Day arrived a third, which saluted them with fifteen Guns; to which they returned thirteen. On

On the 27th the Licence arrived, and the next Day they sailed over the Bar, and anchored in five Fathom Water. The next Morning they sent the General of the *Spanish* Ship, the rest of the Officers, and all the Prisoners, except the Second Mate, some Carpenters, and ten or twelve more Men, who might be useful in refitting their own Ship, on board two *Chinese* Junks, to *Macao*. On the 29th, they weighed, and stood up the River, and came to an Anchor over-against the Custom-House; and now, having no further Occasion for the *Chinese* Pilots, the Commodore discharged them. The whole Month of *August* was employed in purchasing Stores and Provisions from several Ships in the River, as was also that of *September* in making such necessary Repairs as their Circumstances would permit. The 11th of *October*, being the Anniversary of his Majesty's Coronation, they dressed their Ship, displayed their Colours, and fired twenty-one Guns.

On the 12th, the Commodore being informed, that a Ship belonging to the *East India* Company, called the *Hastingsfield*, was arrived on the Coast of *China*, in a very distressed Condition, occasioned by her meeting with a Tufsoon about thirty Leagues to the Westward of *Macao*, in which the lost her Main-mast, Fore-mast, Bow-sprit, and had her Quarter and Gunnel broke, he immediately sent the Long boat belonging to the *Harrington*, another *East-India* Ship, with an Officer and thirty Men well armed, with twenty Swords, as many Bayonets, and Cartridge-boxes, together with an Anchor, and a seven Inch and half Halber, for the Use of that Ship. He was the more anxious about this Affair, from an Apprehension, that the *Spanish* Prisoners he had lately discharged, and sent to *Macao*, might, on seeing her in this Distress, attempt something to her Prejudice: So careful was the Commodore, on every Occasion, to shew his Concern for whatever related to his Country, and so willing was he to contribute, so far as lay in his Power, to protect the Commerce of his Majesty's Subjects; which gained him the universal Esteem and Affection, not only of all in the *East-India* Company's Service, but of such *Europeans* also as were at this Time at *Canton*; of which they gave the most signal Testimonies, whenever any Opportunity offered, and particularly on the following Occasion; in which the Commodore acted with all the Piudence, Dexterity, and Presence of Mind, that so nice and delicate a Conjunction required: And, no doubt, his Behaviour will be esteemed a fit Precedent in succeeding Times, in case any of his Majesty's Ships of War should hereafter have Occasion to visit this, or any other Port in *China*.

32. The Ship being now almost in a Condition fit for Sailing, and nothing wanting but a sufficient Stock of Provisions and Naval Stores, for which, notwithstanding the most pressing Instances had been made, no Licence could be obtained, tho' all the Favour asked, was to purchase them for ready Money; the Commodore resolved to make a Visit in Person to the Vice-King. But as it was impossible to foresee what Accidents might attend his putting himself absolutely in the Power of the *Chinese*, who had hitherto shewn no great Regard to his Representations, he very wisely provided for the worst, by granting a Commission to Mr. Brett, whom he appointed Captain of the *Centurion*, with strict Injunctions, that, in case he should be detained on shore by the *Chinese*, he should immediately destroy the Prize, out of which all the Treasure had been taken, and proceed with the *Centurion* without the Mouth of the River, and out of the Reach of the two Forts, that, at all Events, the Ship might be safe.

These Precautions taken, the Commodore acquainted the Captains and Supercargoes of the *English*, *Swedish*, and *Danish* Ships, that were in the Harbour, of his Design; and that he would be glad of their Company, to attend him to his Audience of the Vice-King. Accordingly, on the 13th at Nine in the Morning, they came on board his Ship; and, about Four in the Afternoon, the Commodore, with Captain *Sumnare*, and Lieutenant *van Keppel*, with the Captains and Supercargoes, put off in the Barge, which was rowed by eighteen Seamen, all chosen Men, and in new Cloaths. They were immediately joined by the Boats of all the *India* Ships in the River, the Crew of the *Centurion* giving the Commodore three Cheers as he went off,

and saluting him with 19 Guns. When he landed, his Officers, and those who accompanied him, marched in a solemn and regular Procession towards the Viceroy's Palace, the Commodore himself being carried in a Chair: His Attendants also were properly marshalled, and the whole Ceremony conducted with as much Decency, and even with all the Magnificence, that their Circumstances would allow. As the *Chinese* are extravagantly fond of Pomp and Shew, and as the Officers were all of them very richly dressed, and all their Attendants in new Cloaths, the Ceremony had a very proper Effect, and all the Spectators regarded it with Silence and Respect.

On their Arrival at the Vice-King's Palace, they found 10,000 Men under Arms before it, the Windows, Galleries, and Battlements, all thronged with People belonging to his Court. The Commodore, and those who accompanied him, were immediately conducted into the great Hall of the Palace; and soon after were admitted to the Presence of the Vice-King, who appeared on this Occasion with all the Pomp imaginable, being attended by the Mandarins of his Council. He received the Commodore with the utmost Civility and Politeness, and gave him a grand Entertainment, consisting, after the *Chinese* Manner, of a Multitude of small Dishes, filled with different Sorts of minc'd Meat; after which, and a proper Interval between, there followed a rich Dessert of dried Fruits and Sweetmeats; and, after that, Tea. The Vice-King likewise readily granted all that the Commodore desired, and made him some Presents, as a Testimony of his Respect. The Commodore had also provided suitable Presents for the Vice-King, who told him, with all the Civility imaginable, that it was contrary to the Custom of his Country, and incompatible with the Office he held, for him to receive them; and therefore hoped he would excuse his Refusal.

Such was the Issue of this Audience, with which the Commodore had all the Reason in the World to be satisfied, having succeeded therein to the utmost Extent of his Wishes, and much beyond the Expectation of all the *Europeans*; who gave it as their unanimous Opinion, before the Commodore's Departure, that the Port Duties would be insisted on, there having been hitherto no Instance of their being ever dispensed with. The Success of this whole Affair was entirely owing to the personal Conduct of the Commodore, who had thoroughly studied the Genius and Disposition of the People he had to deal with; and by his Wisdom, Moderation, and Discretion, overcame all the Difficulties, which the most experienced People in that Country thought insurmountable; and by his Firmness, and Presence of Mind, asserted the Honour of his Master, and of this Nation, among the most cunning and subtle People in the World. He returned with the same State and Ceremony from this Audience, with which he went to it; and the News of his happy Success, when brought to his Ship, was received with all possible Marks of the most sincere Joy.

The first Thing that was done after his Return, was to take an Account of, and to pack up in the properest Manner, the Treasure taken out of the Prize; and the Carpenters were ordered to prepare proper Receptacles for its Security: A certain Number of *Chinese* Carpenters were likewise taken into Pay, in order to forward the Repairs. In the Beginning of *November*, they began to take in Provisions and Sea-stores, and sent a great Quantity of Iron, and other Goods, on board the *Harrington*. On the 7th, the Men returned that had been sent to assist the *Hastingsfield*; and, having reported, that they had brought her into the Channel, the Launch was sent with a proper Crew of Men, in order to assist in bringing her up. The next Day, the *Hastingsfield* passed by them, and saluted the *Centurion* with 21 Guns, and received 19 in Return. On the 10th, they completed their Watering, and the rest of the Month was spent in receiving all sorts of Provisions and Sea-stores from *Canton*. On the 28th, a most dreadful Fire broke out in the Suburbs of that City, by which 350 Houses were consumed; as were likewise the Factories belonging to the *Swedes* and *Danes*. By the Close of the Month, the best Part of their Stores were on board; and they began to think of disposing of all Things for their Departure.

1 The Old King's Palace. 2 The Young King's Palace. 3 A Chinese Tower. 4 The Land Gate. 5 The Fort.
 6 The Banqueting House. 7 The Place of Exercise for the Tartars. 8 The Quarters for the Tartars.
 9 The City Wall. 10 The Armoury. 11 The Vice Roy's Palace. 12 The Watergates. 13 Floating Castles

After relating so many Transactions in the Port of Canton, it may be expected, that we should enter here into a particular Description of it, that the Reader may the better apprehend what we have delivered with relation to this Voyage: But, that we may preserve as great Propriety as possible, and that Regard which is due to the general Method of this Work, we shall confine ourselves at present to the Province of *Quang-tong*, and the Capital thereof; and not run out into a Description of *China* in general, or of the *Chinese* Nation, because we shall be obliged to treat these Subjects largely in another Place. The Province of *Quang-tong* lies in the South Part of the Empire of *China*, and is one of the most beautiful and fruitful Countries of that noble Empire. It is bounded on the North-East by the Province of *Fokien*; on the North by that of *Kiang-si*; on the West by that of *Quang-si*, and the Kingdom of *Tong-king*; and on every other Side by the Sea. Before we speak of the Division of this Country, it is absolutely necessary to observe, that the *Chinese* divide each of their Provinces into certain Districts, in each of which there is a City of the first Order, which, in their Language, is called *Fou*. This Division seems to resemble that of our Ridings in *Yorkshire*: These are again sub-divided into Districts, which have each of them a City of the second Order, which they call *Tchou*; and these again, which seem to resemble our Hundreds, into lesser Parts, the Head of which is a Town of the third Order, called by them *Hien*; which Divisions answer to our Tythings. In every Province therefore there is a Metropolis, a certain Number of Towns of the first Order, equal to the Districts; and so of the second and third.

The Province of *Quang-tong* is divided into Ten *Fou*: The first of which is that which the *Europeans* call *Canton*, and which the *Chinese* write *Quang-tchou-fou*; which is at once the Metropolis of the Province, and the Head of a District; in which there is one City of the second Order, and sixteen Towns of the third: The whole Province comprehending ten Cities of the first Order, and eighty-four Towns of the second and third. The Country is finely diversified into Mountains and Valleys; the latter so fruitful, that they produce two Crops of Corn every Year. There is no Province in *China* that abounds in richer Commodities than this, in which are found Precious Stones of all Sorts, fine Pearls, Gold, Quicksilver, Copper, Iron, Steel, Tin, Saltpetre, Sugar, Silks, Ebony, and other rich Woods. There is likewise a prodigious Quantity of all Sorts of fine Fruit, and the Sea on its Coast abounds with a Variety of fine Fish, and with Tortoiseshells of a prodigious Size, of the Shells of which the *Chinese* make all Sorts of Toys. The supreme Governor of this Province, or, as the *Chinese* call him, *Tjong-tou*, has also the Province of *Quang-si* under his Jurisdiction, and therefore his ordinary Residence is at *Tchou-king*, which is the City of this Province nearest to *Quang-si*; and he resides there, that he may attend with the greater Facility to the Affairs of both Provinces.

The City of *Canton*, which is one of the richest and best peopled in the whole Empire, stands on the noble River *Tchou*, which rises in the Province of *Quang-si*, and falls into the Ocean a little below this City, where it is wide enough to admit Ships of large Burden, notwithstanding the many Canals that are cut from it into the adjacent Provinces. The Mouth of it, which the *Chinese* call *Hou-men*, or the *Gulph of Tygers*, is commanded by two Forts, that are, however, of no great Strength; but serve well enough to defend the City, and the Country adjoining, from the Ravages of the *Chinese* Pirates, for which they are chiefly intended.

When the *Tartars* invaded and conquered *China*, this City made a noble Defence: The Siege lasted for nine Months, and the *Tartars* lost 100,000 Men; and it might have held out much longer; for there was a numerous Garrison, and no Want of Provisions, the Port remaining open. But the *Chinese* Governor was strongly inclined with the Views of his Country, Cowardice and Cunning; and, apprehending that his Family, if the City should be taken, would be exposed to the Fury of those barbarous Enemies, he made a private Treaty with the *Tartars*, and most peculiarly opened two Gates in the Night, by which the

Tartars entered Horse and Foot, and burnt and destroyed every thing without Mercy.

The Walls are pretty high towards the River; but on the East Side, as the Ground is hilly, the Walls are lower: The whole Extent of them is about ten or twelve Miles, but then there are large Spaces, on the East and South Sides especially, in which there are only Gardens and Summer-houses. There is a large Building of Timber on the highest of the little Hills to the East, that stands close to the Wall, and bears the Name of the *King's Banqueting-house*: It is four Story high, supported with great Fire-Mills, very finely painted with Vermillion and Japan, and gilded, as are all the Walls and Ceilings within it: From it may be had a very fair Prospect of the City and Suburbs. The Suburbs are so large, that some of them look like Cities; half the Number of Houses built in the Garden-plats would fill them up, and all other vacant Places in the Town. There are many stately Buildings in the City of *Canton*, and above a dozen triumphal Arches in several Places of the City, and a great Number of Temples well flock'd with Images. The *Italian* Church makes an handsome Figure, but the *French* Chapel is but mean on the Outside. At present this great City is so divided, that it forms, as it were, three different Towns, each of which is surrounded with Walls, with Gates, at proper Distances, and all together they make a Sort of a long Square. The Houses of private People are but very indifferent; but the Palaces of their Mandarins are large and beautiful, with spacious Courts. Their Streets are very long, strait, and neatly kept. All the Houses that front towards them, have Shops, before which there stands a Pedestal, on the Top of which there is a Board painted or gilt, with the Tradesman's Name, or Sign, with the Names of two or three of the principal Commodities in which he deals; and at the Bottom are generally these two Words, *Pou-bou*; which is as much as to say, that this Tradesman never cheats; or, to translate it literally, the Inscription may be thus read, *Pou-bou, i. e. No Fraud*. This double Row of Sign-posts, if we may be allowed so familiar an Expression, has a very good Effect on the Eye, and may be justly reckoned not only the chief Beauty of this Place, but of all the great Cities in *China*.

The Streets of *Canton* are, in the Day-time, continually croudd. Persons in easy Circumstances are carried about in Chairs; but the ordinary Sort of People, and especially the Porters, for, by the way, there is no other Carriage in Use here but Mens Shoulders, are very poorly dressed, their Legs and Feet quite naked, and their Heads uncovered, if it be fair Weather; but, if it be very hot, they have monstrous large Straw Hats, to defend them from the Heat of the Sun. In the Night, however, this, like all the other great Cities of *China*, is as still and quiet as any of our Country Villages; which is owing to the Strictness of their Government, every Street having a Barrier at the End of it, which is locked every Evening, soon after the City-gates are shut, so that every body must take care to be at home in good Time. The River is covered on both Sides with an infinite Number of Vessels of all Sizes, most of which belong to Fishermen, and are their sole Habitations. Every Bark lodges a Family, so that this may be considered as a Kind of floating Town. The poor People who live in these Vessels, go out early every Morning to fish, or to work in the Rice-fields, which, as we before observed, produce two Crops every Year. As to the Number of People in *Canton*, all Writers agree, that it is very great. The *French* Missionaries say, that it is as large and as populous as *Paris*, and then tell us that it contains a Million of Souls; which Accounts, to such as are Judges of these Matters, do not seem to agree. A *British* Subject has made another, and more reasonable Computation, founded on the Consumption of Rice in that City; in respect to which he argues thus: There are 10,000 Peculs of Rice daily used in *Canton*, and it is known by Experience, that a Pecul of Rice will last a Person, one with another, three Months; so that if this Computation be just, the Number of People in the City may be about 900,000; and this is certainly a prodigious Number, considering how many great Cities there are in *China*.

The same Person who made this Computation, informs us, that the Province of *Canton* pays yearly to the Emperor 1,200,000 Peculs of Rice, and 20,000 Peculs of Salt; out of which is served to the Military, who are reckoned 80,000, continually kept in the Emperor's Pay, 32,000 Peculs of Rice, and 8000 Peculs of Salt; the rest is sold in Markets, at the common Price of five Maices a Pecul; which may amount to 446,000 Tayals; which is appropriated towards the Payment of the Military Expence, which may amount to 1,000,000 of Tayals yearly. The Customs on Merchandize, and Poll-money, amount to prodigious great Sums, all which are gathered according to the Book of Rates, and sent to the Treasury of the Province, for the Use of the Emperor; which makes the Emperor's Treasury always full.

Canton is the Port of *China*, in which not only the best Part of the *European* Trade is carried on, but that also from which the *Chinese* themselves carry on most of their Foreign Trade, which is very considerable. In the Month of *March* they send annually a Fleet to *Cochin China*, laden with very rich Goods, mostly of their own Manufactures; from whence they bring in Return different Assortments of Goods, most of which they export again to *Japan* or *Batavia*; their Vessels return towards the latter End of *July*. Their Commerce to *Camboys* is carried on by an annual Fleet, which sails in the Month of *January*. The Returns they bring from thence are Sapan-wood, Elephants Teeth, Lack, dressed Hides of all Kinds, together with the Skins of Birds, and their Feathers on them; as also Abundance of Drugs. From *Canton* to *Tonquin* is a Voyage of ten Days, or a Fortnight; they sail in *January*, and return in *July*: They bring from thence Raw Silk, which is very good; Mudies, which is a Sort of Stuff made of the Bark of Trees; Wrought Silks, Calicoes, and Cinnamon, but it is not very strong.

The Ships destined for *Siam* sail about the Middle of *November*; they usually spend a Month in their Passage, but they do not return to *Canton* till towards the End of *July*. The Commodities they bring from thence are most of them exported again, either in gross, or manufactured. Their Commerce with *Batavia* is very extensive; the Ships engaged in it usually sail in the Beginning of the Month of *December*, and arrive there in *January*; they leave *Batavia* again in the Beginning of *June*, and reach *Canton* in the Month of *July*: The Distance between these Ports is usually reckoned 700 Leagues. As they pay the *Dutch East-India* Company Four per Cent. for all they bring in, and make their Returns almost intirely in Goods, they pay no Duties outwards. The Goods they export are usually, fine Gold, Tutenague, Gold Wire, China, Earthen-ware of all Sorts, Quicksilver, Tea of all Sorts, Wrought Silks of different Kinds, Copper, Aniseed, Vermilion, Musk, Rhubarb, Borax, Glafs of different Sorts, vast Quantities of Raw Silks. They bring from thence, in Return, Lead, Tin, Pepper, Camphire, Perfumes, Coral, Mats of different Sorts, Myrrh, Nutmegs, Cloves, Amber, Sugar-candy, and a vast Quantity of Drugs.

We have already given an Account of the great Commerce they carry on in *Japan*, and have more than once mentioned their Trade to *Manila*. This City lies at the Distance of two hundred Leagues from *Canton*, and the *Chinese* Junks go thither in *March*, and return in *July*. They export almost all the Commodities and Manufactures of *China* thither; and bring back Pearls, Sapan-wood, Hides, and Silver. The *Chinese* send annually a great many Ships to *Achin*, or, as they pronounce it in the *Indies*, *Atcheen*: Each of these Ships is manned by five or six *Europeans*; the rest of the Ship's Crew are *Moors*, or, as they call them in the *Indies*, *Lascars*. The Super-cargoes, or Merchants only, are *Chinese*. The Season of their Sailing is towards the End of *October*, that they may arrive in the Beginning of *December* at *Achin*, and have time enough to proceed from thence to the *Maldives*. This is a very rich Commerce, and care is taken to afford their Goods in such a manner, as that they may suit the Markets of *Surat*, *Achin*, and the *Maldives*. It is to be observed, that, throughout all the Trade they carry on in the *Indies*, the *Chinese* mingle *European* Commodities with their own;

and, where-ever they traffick, they are sure to be considerable Gainers.

As to their Trade with the *Europeans*, we shall hereafter be obliged to speak of it very copiously, and explain the different Circumstances that have attended it in this Empire. At present, we shall conclude our Account of the Trade of *Canton*, by observing, that, besides all this foreign Trade, they carry on a prodigious Commerce with the Inhabitants of the different Parts of their own Empire, and this in several Ways; for the Inhabitants of this City are exceedingly industrious, very ingenious, and, without, have the Advantage of working after *European* Models; so that there is a prodigious Quantity of all Sorts of Goods manufactured in the City and Suburbs, and exposed to Sale in their Shops, where they are bought by those who come from other Provinces, to vend their own Commodities to the *Europeans*.

The Merchants of *Canton* also, as they have the Convenience of excellent Water-carriage, not only to *Peking*, which is the Capital of the Empire, but likewise into most of the Provinces, freight abundance of small Vessels, and some of a considerable Size, with their Goods, and dispose of them every-where to great Advantage. Add to all this, that they carry on a large Commerce by Sea with the Island of *Hainam*, which is situated about ninety Leagues to the South-west of the River *Canton*; which, because it is less known, deserves a more particular Explanation. The Word *Hai-nan* signifies in *Chinese* the South of the Sea, which shews the Situation of the Country. This Island is about seventy Leagues from East to West, and about forty-five from North to South; the North Part of the Island is a Plain, for about fifteen Leagues from the Shore; then the Mountains begin, which extend themselves into the Southern and Eastern Parts. The *Chinese* are possessed only of the Coast of this Island; the interior Part of the Country being still in the Hands of the Natives, who, from the Height of their Mountains, and the Thickness of their Forests, have hitherto escaped the Yoke both of the *Chinese* and *Tartars*. That Part of the Country which is possessed by the *Chinese*, is pleasant and fruitful, but, at certain Seasons of the Year, is not very wholesome; and, therefore, though it is almost the only Place to which Ships can sail at any time of the Year, yet they usually send their Vessels thither in the Month of *November*, laden with the Goods and Manufactures of *Canton*; for which they receive in Exchange fine Gold, of which there is Plenty in the Island, *Agua* Wood, and other rich Commodities, which they vend throughout all Parts of the Empire, and even export to *Japan*, with large Profit.

On the Whole, therefore, their various Branches of Commerce being considered, there is nothing incredible in what our Travellers relate, of there being seldom less than 5000 Sail of trading Junks, besides smaller Vessels, lying continually in this Port. The ancient *Chinese* Emperors were extremely jealous of Foreigners, and put them under almost as many Restrictions as the Monarch of *Japan*; and, before the *Tartars* had completed their Conquest of *China*, they were likewise in much the same Disposition. But the late, and the present Emperor, have acted in quite another manner, and have opened their Ports of *Canton* and *Amy* to all Nations; but still continue to impose high Duties, and to put the Merchants under various Restrictions, conformable to the Genius of the *Chinese* Nation, and the Maxims of their Policy. We cannot form a better Idea of the Nature of their Government, than from the Description given of it, by an Author perfectly acquainted therewith, in a single Line: *The Empire of CHINA says he, is a City of 1200 Leagues in Extent*. By which he meant, that the Whole of this vast Country is as exactly regulated, and the Inhabitants as effectually restrained within the Bounds of their Duty, as if the Whole was but one City, and under the Eye of the same Magistrates.

But, notwithstanding the vast Extent of the City of *Canton*, and the prodigious Number of its Inhabitants, we are not to imagine, that it is the only considerable Place in the Province; or that the other Cities, and great Towns,

are inconsiderable in respect to it; for the contrary is strictly true. As a Proof of this, I must observe, that, within four Leagues of this City, there lies the Town of *Po-chan*, to which, during the Troubles at *Canton*, occasioned by the Revolution in *China*, abundance of Tradesmen and Manufacturers retired; since which, it is become so considerable a Place, that it is no less than three Leagues in Circumference; and, in point of Riches, Trade, and even in the Number of its Inhabitants, it is very little, if at all, inferior to *Canton* itself. The other Cities of the Province are also large, well peopled, and have a great Trade; and all the adjacent Country is thick-set with fine Villages; and not the Fields only, but the Mountains, and every Spot of Ground, are laid out and cultivated to the best Advantage. In a Word, the View that is afforded to a judicious Spectator, in passing up the River of *Canton*, is sufficient to afford him a competent Idea of the Wealth of *China*, and the Wisdom of its Government; for, wherever he casts his Eyes, new Scenes of Industry present themselves to his View; every thing is improved to the best Advantage, and he finds himself absolutely at a Loss to decide, whether the Fertility bestowed by Nature, or the Accessions made thereto by the Labour of the Inhabitants, ought most to be admired. But it is now time to return to the History of this Voyage, from which we have made a long, but, we hope, not an unpleasant Digression. When we come in the second Book, to treat expressly, and at large, of this noble Empire, we shall endeavour to gratify, in their utmost Extent, the Expectations raised in our Readers by this short Account of *Canton*; in which, perhaps, we may have the Assistance of the Observations made by the most intelligent Persons concerned in this Expedition, who had, to be sure, great Opportunities of making themselves perfectly acquainted with the State of the Country, and the Manners of the People. In the mean time let us proceed.

On the 4th of *December*, the Commodore returned from *Canton*; and, on his Arrival on board his Ship, was saluted by all the *European* Vessels in the Harbour, except the *Fremb*. The next Day he gave a grand Entertainment to the Gentlemen who had attended him when he had his Audience of the Vice-King; and, having taken a Survey of the Ship, the Sea-stores, and Provisions, and given his Orders for completing whatever was wanting, he declared his Resolution to return home immediately; and accordingly all the necessary Dispositions were made for sailing: And, on the 7th, they weighed, with their Prize, and began to fall down the River of *Canton*, in which they had lain from the Middle of the Month of *July*.

34. On the 10th, they warped over the Bar, and sent their Boats a-head to tow: The same Afternoon, a *Swedish* homeward-bound Ship, lying there at Anchor, saluted the Commodore with sixteen Guns, who returned fifteen. The next Day they passed *Lin-tin* Bar; and, on the 12th, sent the Pinnace, and the third Lieutenant in her, to *Macao*. The next Day they anchored in the Road of that Place in five Fathom Water, where they cleared the Prize of the Powder, dry Provisions, and Water, that was on board her, and then sold her to the *Portuguese*. On the 16th in the Afternoon they sailed from *Macao*; the next Day they had brisk Gales, with Rain. They now found the Ship leaky, and that to such a Degree, that the Water gained seven Inches in two Hours, which it was judged was owing to their Gun-ports not being calked. The next Morning they split their Fore-sail, and were forced to bend another. On the 18th in the Afternoon, the Water gained considerably, and the Weather continued very indifferent for several Days together. On the 22d, they fell to foundering, as being then entered the Sea between *Malaca* and the Island of *Borneo*, and found from sixty-four to fifty-three Fathom Water. The two next Days they continued foundering, and had from thirty-five to twenty-five Fathom Water.

On the 26th, they had Sight of some of the Islands on the *Malaca* Coast, and continued steering through them with great Danger, as having a narrow Channel, with Shoals on both Sides; for the Island of *Langen*, which lies to the South of the Straights of *Sincapour*, immediately under the Equinoctial. On the 29th in the Morning, the Souther-

most of the *Seven Brothers*, which are so many small Islands lying off the Coast of *Sumatra*, bore East South-east, at the Distance of six Leagues: At two that Afternoon, they passed the Straights between *Sumatra* and *Banca*. The latter is a small Island, about fifty Leagues in Length, and twenty in Breadth; the most Southern Point of which lies in the Latitude of 3° South, and is undoubtedly the most conveniently situated of any Island in those Seas; which has made the *Dutch* often regret their not fixing the Centre of their *Indian* Trade in some Place on that Island rather than at *Batavia*; because they might easily have planted the whole Island, and have kept it intirely in their own Hands; whereas it is impossible for them to think of doing this in the Island of *Java*.

On the 29th they entered, and the next Day they passed through the Straights, between the Islands of *Sumatra* and *Borneo*; and had the Island of *Lucapara*, which lies without the Straights, bearing directly South. On the last of *December*, that Island bore North-east, at about four Leagues distant; and, on the 2d of *January*, they anchored on the Coast of *Java*, off the High-land of *Bantam*, at the Distance of about forty Miles from *Batavia*. There were two *Dutch* Ships in the Road, on board of which the Commodore sent his Pinnace; and those who were on board her reported, on their Return, that eight *Dutch* Ships, homeward-bound, were expected from *Batavia*, in order to pass the Straights of *Sunda*. On the 3d, about six in the Morning, they weighed, in order to pass through the Straights; and, at four in the Afternoon, saw *Prince's Island*, which was to be the Rendezvous of the *Dutch* Fleet, lying South-west by South: The next Day at Noon the Island bore West, and they sent their Boat on shore, in order to find the Watering-place.

35. On the 4th, they anchored in forty-five Fathom Water on the Coast of *Prince's Island*; and, the same Evening, five *Dutch* Ships came to an Anchor there, which were homeward-bound. While they were getting their Wood and Water on board, they felt the Shock of an Earthquake, which lasted about a Minute. The same Day there arrived two more *Dutch* Ships from *Batavia*, which were Part of those that were expected; and, on the 7th, there arrived three more. On the 8th, they completed their Watering, and received some Cordage from a *Dutch* Ship. On the 9th in the Morning, they unmoored, and made Sail, with five *Dutch*, for *Europe*. On the 15th, they had Sight of the South-end of *Christmas Island*.

On the 18th, they had very bad Weather; by which, about eight in the Morning, their Main-sail was split, and blown from the Yard; and from thence, to the 22d, they had hard Gales, dark Weather, and much Rain; but very moderate Weather for the next Week. On the 2d of *February*, their Fore-trussel-trees broke. On the 25th, they had very hard Gales, and much Rain: About six in the Evening their Main-sail and Mizzen were split. On the 28th, the Main and Fore-top-sail split, which they handed; and, having mended, set them up again. On the 8th, they tacked, and stood to the North. On the 5th of *March*, they saw the Continent of *Africa*, bearing from North-east to North North-west. On the 11th, having little Wind, and fair Weather, about six in the Evening, they saw the Head-land of the Cape of *Good Hope*, bearing North North-east, distant about ten Leagues; and, about Noon the next Day, the Cape was distant about five Leagues.

36. On the 12th in the Afternoon, they anchored in *Table Bay*, at the Distance of somewhat more than a Mile from the Shore. They found riding here the *Salisbury*, Captain *Burroughs*, and the *Warwick*, Captain *Mijner*, belonging to the *East-India* Company, who saluted them with eleven Guns each; they answered them both with nine: Here were likewise five Sail of *Dutch* Ships, whose Commodore saluted them with eleven Guns, and they returned nine. At Three in the Afternoon they warped farther into the Bay, and moored with their best Bower. At Six, one of the *Dutch* Ships failed out: At Ten, they struck the Main and the Fore-yards, it appearing very likely to be a wet Night. About Midnight, their best Bower Cable broke, with the Halter that was bent to the Stream Anchor; so that they rode all Night by the Sheet Cable.

Cable. In the Morning they struck the Top-masts, in order to get the Fore and Main-top-gallant Yards down, and began to untrip the Fore-masts, in order to fit new Truffel-trees: Sent their empty Calks for Water in the *Warwick's* Long-boat; and, at Eleven, received on board, by the *Salisbury's* Boat, fresh Provisions, such as Beef and Mutton, for the Ship's Company. The *Dutch* Commodore fired the Morning and Evening Gun; and on the 18th, in the Evening, they received on board an Anchor, 3860 lb. Weight, and a Cable of nineteen Inches and a half about, and 120 Fathom long; bent the Cable to the Anchor, to make it ready for Use. At Four in the Morning they weighed, and warped in towards the Fort, and then new moored, having the following Bearings; the Castle and Town S. W. and the Body of *Penguin* Island N. W. the Water Fort S. W. distant three Quarters of a Mile.

On the 14th, the Commodore went ashore in the Barge; at his passing by the *Salisbury* and *Warwick*, they saluted him with eleven Guns. The next Day they began to unrig the Fore-mast, and over-hale their Rigging, and began to clear the Hold, that they might get at their Ground-tier. On the 16th in the Morning, they set up a Tent for the Use of the Coopers on shore, and sent their Cask by the Launch to be trimmed by them. In the Afternoon, two *Dutch* Ships anchored there, which had been five Months coming from *Spithead*; and, at Nine, came in and anchored the *Margarit*, Captain *T. Hays*, which had been twelve Weeks coming from *Holland*. They sent the Launch to seek the best Bower Anchor, which the Cable parted from on *Sunday* Night last, the Buoy being sunk or lost, that hook'd the Cable. Their Carpenter found four Shot holes within the Lining, under the Fore-chains, above the Water, and took abundance of small Shot out; which they believed was the Occasion of the Ship's being so leaky at Sea. This Day they sent all their sick People on shore.

On the 18th, at three in the Morning, they received from the Shore, by two *Dutch* Boats, eighteen Coils of Ropes, and a Remnant of white Rope for a Tiller-rope, with other Stores. At Noon, they sent a large *Dutch* Boat to weigh their best Bower. They brought the Anchor on board, and the Cable, being near a whole one. On the 19th in the Afternoon, they heeled Ship to the Starboard, and then scrubbed it, and paid it with Tallow and Lime; then heeled the other Way, and scrubbed: But the Scabreeze came in, and caused so great a Swell, that they could not make an End. The next Day, two *Dutch* Ships anchored there, one of which had accompanied them from *Java*; the other was outward-bound, and had spent three Months in coming from *Spithead*. On the 22d, there anchored another *Dutch* Ship outward-bound, which had been five Months in sailing from the *Texel* thither. That Day and the next, they sent their Launch several times for Water; but could get none, the Pipes being stopped: But that Evil was soon remedied, and the Launch came off in the Night, with ten Casks filled; and, in two or three Days, they made a great Progress in their Watering. On the 25th, a *Dutch* Ship anchored there from *Amsterdam*.

On the 26th, another arrived. The next Morning, about six o'Clock, the *Dutch* Commodore struck his Flag, and the other *Dutch* Ship hoisted it at the Mizzen-top-mast, and, about seven, sailed for *Batavia*. On the 27th, the *Windogster* anchored in the Bay, and saluted them with eleven Guns. She had been thirteen Months from *England*, and six Weeks in her Passage from *Frynambuca* on the Coast of *Brasil*, into which Port she had been obliged to put, in order to repair some Damage she had received at Sea. This Day, they received the Commodore's live Stock, and a small Quantity of Wine for his Sea-store. The next Day, they sent on shore 5000 Dollars; and, on the 29th, received on board thirteen Calks of dry Provision. On the 30th, the Commodore and Captain *Bret* came on board, and they began to prepare for their Departure, having spent about three Weeks at the Cape; which gave them an Opportunity of observing the mighty Advantages that the *Dutch* make of that Settlement, which had been slighted by us.

They were very kindly and hospitably treated, and had Leave to purchase whatever Stores or Provisions they had

Occasion for. Such as live in this Country have things very cheap, as well as very good; but Strangers pay a pretty high Price for Liquors and Provisions, which is occasioned by the high Duties imposed by the *East India* Company. This is a thing, of which *Englishmen* are often apt to complain; but, perhaps, without any great Reason, since the *Dutch East India* Company have no other Way to indemnify themselves for the great Expence they are at in the Support of this Settlement, which carries on little or no Trade, except this; and therefore there is no Wonder, that they make use of every Method possible, in order to make it turn to their Advantage. The Town at the Cape is pretty large, consisting now of 400 Houses and upwards; and yet there are but few Publick-houses or Places licensed to sell Liquors by Retail. In these Houses Strangers drink the Cape Wine at about six Stivers a Quart, at least one half of which is paid for Excise, and so in proportion for other things. The Inhabitants purchase both *Indian* and *European* Commodities at a cheap Rate from the Sailors, which they vend again, with great Profit, to the Farmers and Planters, who have no Opportunity of making any such Bargains, the nearest of their Plantations being twenty Miles from the Sea-coast.

Our People can by no means be reconciled to the *Hottentots*, but look upon them as the basest and most brutal People in the World; which is chiefly owing to their ill Smell, occasioned by their greasing themselves continually: Yet this is not a Custom peculiar to the *Hottentots*, but is used by most of the Negroes on the Coast of *Guinea*. It is true, that the latter, generally speaking, make use of Oil, which is less offensive; but, when they cannot get that, they, like the *Hottentots*, content themselves with fish Grease and Kitchen-stuff, as they can purchase from the *Europeans* who trade with them. This Custom likewise prevails in the *East Indies*, particularly on the *Malacca* Coast; but more especially in the Islands, as for Instance, at *Samatra*, where the Natives grease themselves as much, and smell to the full as strong, as the *Hottentots*. The *Jamaeque* likewise practise the same thing; and so do the People of the *Philippines*, and of the Spice Islands; but then they commonly make use of Cocoa-nut Oil, which is far from being disagreeable. In one respect, however, the *Hottentots* excel them all; for they are particularly careful to grease and smut their Faces; which is what the *Indians* never do. This Custom of anointing is not altogether unknown to the *Americans*, tho', generally speaking, they rather affect painting their Bodies, perhaps from the same Cause (as the *Hottentots* and *Indians* anoint themselves, in order to defend their naked Bodies from the Inclemency of the Weather).

It is plain therefore, that, even in this respect, the Manners of the *Hottentots* are not much grosser, or more barbarous, than those of other Nations; and a nearer Inspection would have shewn us, that, notwithstanding their Guts and their Grease, these poor People are endowed with Qualities, that would not at all discredit even the politest Nations. For instance, the *Hottentots* are exceedingly sincere; they profess the utmost Readiness to assist such Strangers as come amongst them, and they are never known to falsify their Professions. The *Hottentot* is not Master of much Eloquence, even in his own Language; but has a strict Regard to the Truth of what he delivers in any Language, even that of Nature, I mean, by Signs; which is a Matter of great Consequence among an untaught, and, as we affect to call them, a barbarous People. There was another Quality extremely conspicuous in the *Hottentots*, which ought to have secured them from our Contempt, and that is, their generous Love of Liberty: The *Hottentot* will rather die than be a Slave; and what could a *Roman*, what could an *Athenian*, do more? I know it may be said, that this proceeds from Laziness: But I cannot allow that; for the *Hottentots* will work for the *Dutch* for Substitution, tho' not at Slaves. They claim a Right of judging what and how much is necessary for their Maintenance, and, having acquired this, they are content. I do not pretend to say, that they reason right about the Necessaries of Life: Indeed, who does? But I say, that they have true Notions of Liberty, which consists in doing what we think fit ourselves, and not what is imposed upon us by others.

There is yet a third Quality most eminent in the *Hottentots*, for which they have been unjustly, shall I say, or barbarously, reproached by other Nations; the Quality I mean is, the Love of their Country. *Hottentots* have been carried off very young, both by the *English* and the *Dutch*, educated in *Europe*, and accustomed to our Manners; and, upon their being carried back, have immediately renounced all the Advantages they had over their Brethren, and became mere *Hottentots* again. This appears to us in the Light of Brutality; but, let it appear in what Light it will, it shews their Love of their Country, and of their Countrymen: And the same Affection is most evident in every Part of their Conduct; for, when an *Hottentot* has acquired Provisions by his Labour, he will share them with any *Hottentot* who is in Want; and no Alteration of Circumstances, no Change in Situation, can make an *Hottentot* forget that he is an *Hottentot*, and that every *Hottentot* is his Brother: Noble and generous Sentiments, in spite of their Grease and Sheep-skins!

I must observe, that their Virtues are as little controverted as their Habit, and therefore I can never be brought to think, that People who possess them, and are so tenacious of them, that even the Conversation and Example of the *Europeans* cannot despoil them of these Qualities, ought to be represented as almost on the Level with Beasts. Drunkenness, and other Vices, with which they are reproached, they have been taught by the *Europeans*; but who taught them their Virtues? or who has the Courage, who has the good Sense and Justice, to admire them? Some of the *Dutch* Writers have, and have, I am sorry to say, been laughed at for their Pains. I would not be thought a Lover of Paradoxes, or a Person who would pique myself on contradicting the common Notions of Mankind: I should not have taken these Pains, at least in this Place, to vindicate the *Hottentots* purely to amuse or entertain the Reader; but I am led to it from an *Hottentot* Principle, that of Love to my Country.

This absurd, this unreasonable Aversion to the Sheep-skins and Grease, to the untoward Appearance, and uncouth Manners, of the *Hottentots*, lost us the valuable Settlement at the Cape. There were many Attempts made by the *English East India Company* to form a Plantation here; but in vain. Those who were sent reported, that the Country was only fit for *Hottentots*; and that there was no living in it, or with them: Yet we see at this Day, that there is not a finer, more fruitful, or more pleasant Country in the World; and that the *Dutch* are so far from thinking a Correspondence with the *Hottentots* inconvenient, that they have all along treated them with Justice and good Manners. They purchased from them the Country which they have cultivated; and the King of the Company's *Hottentots* is a free and independent Prince. It is therefore of great Importance for us to rid ourselves of these narrow and ridiculous Notions, and to eradicate that foolish Principle of making those Humours, which we are wise enough to condemn at home, the Standard of Right and Wrong abroad.

We often assert, and I believe justly, that the Knowledge, Learning, and Lights, of the present Age are superior to those of the past. Let us use them then; let us transmit the Fruits of them to Posterity; let us exceed, at least let us equal, our Ancestors, by shewing them one Plantation, besides *GEORGIA*, the Work of ONE Man's Virtue, settled in our Time: Let us shew, that our Discoveries are not confined to Speculation; but that we are able to execute, as well as to talk or write; let us join the Industry, the Activity, the public Spirit, of the last Age, to the Learning and Lights of this; let us amend our Errors, as well as decay them; and let it be the Study of those, who enjoy Power, or who aspire to it, to convince their Countrymen, that they have nothing in view, but their Good. Without this, all our Application to the Sciences, all our Discoveries, all our Improvements, will do us no Good. We shall be, like the *Athenians* in the Decline of their Republic, celebrated for our Knowledge, and despised for our Vices: We shall live upon what was transmitted to us by the Care and Courage of our Forefathers, and leave to Posterity the Admiration of our Abilities in Theory, and Weakness in Practice. But, in the midst of their Reflections, our Po-

sterity must admit, that some Men are free from the Infection; and, while they read in our Annals too many Instances of naval Misfortunes, they will be obliged to confess, from the History of this Voyage, that there was one Man, who, in spite of the greatest Difficulties and Discouragements, did not miscarry.

On *April 1, 2*, they received the rest of the dry Provisions and naval Stores, which the Commodore had purchased; and, having reviewed their Store of Water, found it consisted of 108 Tons of Water; and that they were, in every respect, furnished with what was necessary for their Return to *England*, the Ship being in a much better Condition than when she sailed from the River of *Canton*, the Men in good Health, and the Ship's Company recruited by such able Seamen, as the Officers could meet with at the Cape, and, in a Word, every Precaution made use of, that could possibly contribute towards making the Remainder of the Voyage safe and easy; and, every thing being thus in Order, on *April 3*, the Commodore gave Directions for sailing the next Morning as early as possible.

37. They began therefore to unmoor about four o'Clock, and at eight they weighed, and turned out of the Bay. The *Salisbury*, *Warwick*, and *Winchester*, saluted them each with eleven Guns; and they returned nine. The *Dutch* Commodore saluted with nine, and had seven returned. As we have often mentioned these Salutes, it may not be amiss to observe, that they are regulated by the Commodor's Instructions, which direct, 'That if Merchant-ships, whether Foreigners, or belonging to his Majesty's Subjects, salute the Admiral of a Fleet, they shall be answered by six Guns less. When they salute any other Flag-ship, they shall be answered by four Guns less; and, if they salute Men of War, they shall be answered by two Guns less. If several Merchant Ships salute in Company, no Return is to be made, till they have all finished, and then by such a Number of Guns as shall be thought proper; but, tho' the Merchant Ships should answer, there shall be no second Return. All Salutes are to be made with the Guns of the Upper-deck.'

By Noon, the Island of *Penguin* bore North-east by East, and the *Sugar-loaf* South-east, distant ten Leagues. On the 5th, they began to serve two Quarts of Water a Day to each of the Ship's Company. On the 10th, they exercised their Guns and Small-arms; and, on the 11th, they did the same. On the 15th, they had Sight of the Island of *St. Helena*, bearing North-east, at the Distance of eight Leagues. On the 20th, about two in the Morning, they saw a Light, which they took to be a Ship steering West by North, and therefore made a clear Ship. On *May 3*, in the Afternoon, they hoisted out the Cutter, and scrubbed the Ship between Wind and Water.

On the 4th, they exercised their great Guns and Small-arms. On the 5th, they sprung their Main-top-mast and Trussel-trees. On the 6th, they repaired this Damage. On the 18th, the Wind being fair, they hoisted the Cutter, to scrub the Ship. On the 21st, they had a large Swell from the North North-west; saw abundance of Weeds floating on the Sea, of which we have given a satisfactory Account in a former Section. On the 29th, about four in the Afternoon, their Fore-top-sail was carried away; which obliged them to get in their Sprit-sail-yard, and make it serve for a Top-sail-yard; and at the same time set their Fore-top for a Sprit-sail-yard. On the 30th in the Morning, they had a very hard and sudden Squall of Rain and Wind, which carried away their Top-sail-yard, and split the Sail; upon which they clued up all their Sails.

On the 31st, they had a great Swell from the North-west, which sprung the Fore-top-sail-yard; which obliged them to unband their Sails, get them down, and double-reef the Top sail. On *June 5*, they hoisted out the Cutter, to scrub the Ship between Wind and Water; and, on the 6th, about five in the Morning, they discovered a Sail steering North by West; upon which they made a clear Ship, and gave Chace. About ten, they came up with her, fired a Gun, and she brought-to. She proved a homeward-bound Merchantman from *Cape Fare* in *North Carolina*, laden with Tar and Rosin. The Commodore had sent his Cutter on board, to inquire whether War was broken out with *France*,

or not; but they were unable to resolve the Question. The three next Days, they had moderate Gales, and thick, foggy Weather.

38. On June 10. the Weather was dark and cloudy; and, on the 11th in the Morning, they discovered a Sail to Windward, fired a Gun, and brought her to. The Commodore then ordered his Cutter to be hoisted out, and sent his Third Lieutenant in her, to learn News: She proved to be a Ship bound from Rotterdam to Philadelphia, with 200 Palatines on board, who were going to settle in Pennsylvania. They informed the Lieutenant, that there was a French War; and that the British Chanel swarmed with Men of War and Privateers, both English and French. At Nine they bent their Cables, hoisted the Launch over the Side, and lashed her there.

On the 12th, they had moderate and cloudy Weather: About one in the Afternoon, they saw three Sail to the E. N. E. distant about five Leagues; upon which they made a clear Ship, and ordered every Man and Boy to his Station; and then gave Chace. They came up with two of them about Three in the Afternoon; these Vessels came from Dublin: They continued to chafe the Third, but they tack'd, and stood to the North; and the Commodore, finding that he could not come up with her, gave over the Chase.

At four the next Morning they founded, and had fifty-three Fathom Water; at Noon they had Sight of the Lizard, bearing North half West, at the Distance of eight Leagues. About one of the Clock, they saw two Sail, distant about three Leagues, and gave Chace, and came up with them about Three, when they proved to be the Salamander Privateer, and a Martinico Ship, she had taken in Tow. They confirmed the Intelligence they had received of a French War. In the Evening, the Lizard bore N. W. and the Stars N. E. by E.

On the 14th, in the Morning, they saw the Island of Portland bearing N. E. by E. and in the Evening they had Sight of the Isle of Wight: On the 15th, about half an Hour after eleven o'Clock, they came to, and anchored within their best Bower, in ten Fathom Water, in London-Bay: About Four the next Morning they weighed, and made Sail, and at Ten arrived at St. Helen's; the Crew being not a little rejoiced at the Sight of their native Country, after they had been absent from it near four Years; in which they had experienced every Kind of Hardship, to which the Life of a Seaman is expos'd, and having run thro' a surprizing Variety of Dangers to the last: For it is to be remembered, that they arriv'd at a Juncture when Things were in the greatest Confusion, and when the French had the best Part of their Naval Force at Sea, and even cruising upon our Coasts. The Commodore immediately wrote to his Grace the Duke of Newcastle, his Majesty's Principal Secretary of State, to acquaint him with his Arrival, and with the most material Occurrences, from the Time of his former Dispatch by Captain Saunders; which Letter, or at least an Extract from it, was published in the London Gazette, and occasion'd as great and general Joy throughout the Nation, as can well be imagin'd: And, in order farther to indulge the Pleasure of the People, the Treasure taken in the Acapulco Ship was carried in the most public Manner through the Streets, in thirty-two Waggon, to the Tower, in the same Manner as the Silver formerly taken by Admiral Blake, when he burnt the Spanish Gallions, had been; I must confess, in my Judgment, with much better Reason.

39. As I opened this Section with a Piece of ancient History, I shall open these Remarks with observing, that, notwithstanding this Expedition was not attended with so great Success in the South Seas as was expected, yet the Nation in general is very far from believing, that it ought to deter us from the Thoughts of such Expeditions for the future; since it appears plainly, that, if the Commodore's whole Squadron had got round with him into the South Seas, he would have been able to have performed much greater Things than any of our Commanders have hitherto done in those Parts. Neither is it at all clear, that the Spaniards are in a better Condition, their Coasts better fortified, their Garrison more numerous, or the Country in any respect better provided, than when our Privateers had for-

merly so great Success there. The Sacking of Paita proves the contrary, since it was actually in a worse Condition, when taken last, than when Captain Shelbocke took it, and less capable of making any Resistance.

It this Expedition had never taken place, we might have been told, that it was impracticable; that the Spaniards were grown wiser; that all their Ports were well fortified; and that to attempt any thing would be only sacrificing the Lives of such as were employ'd in the Expedition. But we now know the contrary; that the Spaniards are actually as unguarded, and as little apprehensive as ever; and, perhaps, the Fate of this Undertaking may have made them less so; so that if a new Project of the same Kind was to be put in Execution, either at public or private Expence, there seems to be a moral Certainty, that it would succeed.

The Scheme which Commodore Anson was sent to execute, was certainly well laid; and if the two Ships that repass'd the Strights of Le Maire, and thereby expos'd themselves to greater Dangers, than they could have met with by continuing their Voyage, had either proceeded with the Commodore, or had followed him to the Island of Juan Fernandez, he would have had Men enough to have undertaken somewhat of Consequence either in Chili or Peru, since he would have had 900 or 1000 Men under his Command: Or, if even the Wager had join'd him, he must have had Men sufficient for the Centurion and Gloucester; and, consequently, would have been in a better Condition than the Duke and Duchs's were, who gain'd such immense Wealth in these Seas. But that he was join'd by none of his Squadron at the Place of Rendevou, except the Gloucester and the Trial Sloop, is a Thing that never happened before; and will, very probably, never happen again.

As to their Hardships in this Passage, we ought not to consider them as Reasons sufficient to deter us from making any Attempt on that Side again; because, in the first Place, they may be easily guarded against, by going at a better Season of the Year, with fewer Incumbrances, and touching at proper Places by the Way: And, in the next Place, we ought to consider, that the French have sent Ships thither, by Leave from the Court of Spain, since; and, beyond Question, we are as able Navigators as the French: Besides, if we suffer ourselves to be discouraged by the Accidents that befel this Squadron, we shall absolutely lose the Knowledge and Practice of this Navigation, and Dispair of ever sending a Ship into the South Seas again; for, if we send no Ships in the time of War, there are many Reasons, and, which is more persuasive than any Reason, there is Experience, to induce our Belief, that we shall never send any Ships at all; and, consequently, there is an End of all Hopes, either of Conquests, or of Discoveries, on this Side; that is, on the Side, where either, or where both, ought to be made, with greatest Advantage to this Nation.

Yet the Reasons that formerly made such Undertakings expedient, still subsist in their full Force: The Spaniards derive that Wealth, which makes them, and their Allies, so formidable in Europe, from hence. It is as much in our Power, as it ever was, to distress them here; and the Spirit of availing ourselves, by distressing our Enemies in this way, was never stronger than it is now. There is another Argument that ought to prevail with us to prosecute Expeditions of this Kind, deriv'd from the Success the Commodore met with in his last Cruise. If we undertake any Design in another Part of the World, and fail in it, there is an End, and we must absolutely sit down with the Loss; but here, if we fail in one Place, we may succeed in another, and one rich Prize will indemnify the Public, at least for their Expenses; so a Million brought home in Silver, will at any time compensate the Nation for the Loss of two or three Ships; because the Expence of rebuilding them, or at least the greatest Part of it, goes entirely amongst ourselves. At all Events, it is better to hazard our Ships, nay, and our Men too, where something is to be got, than where nothing is to be had. Our Men have been destroyed, and our Ships worn out, in Services where not a Shilling ever redound'd to the Public. But the same cannot be said of this. It has actually brought a very large

Sum of Money into the Kingdom, and has shewn us the Way by which we may bring more.

Another Squadron may meet with the *Acapulco* Ship in the South Seas, or with the *Lima* Ship, in her Passage to *Acapulco*: There wants only Care, Diligence, and an experienced Commander, to make a Part of the Expences of the War come this Way out of our Enemies Pockets; for, as to the Spirit and Courage of the *English* Seamen, they are as great as ever they were, and there wants nothing but Actions, that may be attended with proper Encouragement, to make this evident to the whole World. The present War was undertaken for the sake of our Trade; and our Fate, in the present War, I mean our Fate at Sea, will determine the Fate of our Trade. We have been extremely fortunate in making Prizes, both from the *French* and *Spaniards*, in the North Seas: There wants nothing to complete our good Fortune, but to be as successful in the South.

Another Expedition might be, probably would be, attended with fewer Difficulties; at least, it is certain, that it might be undertaken at a much less Expence; and then, beside all the Advantages resulting to such private Persons as become Proprietors, there would this inestimable Advantage accrue to the Publick, that we should once more have a Number of able Mariners, well acquainted with the Navigation of the South Seas, which we never can have by any other Means.

Heretofore the whole Trade of *Europe* was in the Hands of the Maritime Powers; but, at present, not only the *French*, but many other Nations, are putting in for a Share, as appears by the great Number of *European* Ships that Rear-Admiral *Anson* met with in the Ports of *Macao* and *Canton*; which is a Circumstance that deserves to be attentively considered. This therefore is a Time, if ever there was a Time, that we ought to exert ourselves, and endeavour to strike out some new Branch of Commerce, into which our Neighbours cannot so readily fall. History affords us no Instance of a Maritime Power that remained long at a Stay. If we do not go forward, we must necessarily go backward; and, as we are rivaled in almost every known Branch of Commerce, except that to our own Plantations, it is not our Interest only, but absolutely necessary to our Safety, to support and extend these; and, if it be possible, open some new Channel, both for the Benefit of this Country, and of our Plantations; which never can be done, if we do not encourage long Voyages, and the perfecting ourselves in every kind of Navigation.

But I would not be understood to lessen at all the Miseries and Misfortunes of such as were employed in this Voyage: The contrary, I think, indeed, will appear from the History I have given of it. All I endeavour, all I aim at, is, to convince the Reader, that the Difficulties and Discouragements met with in this Voyage, are not sufficient to ground a decisive Opinion by the Few, in Opposition to the Sentiments of the Many, that all Attempts on this Side should be abandoned; and I really think, that the putting the Difficulties and Discouragements of the *Centurion's* Company in the strongest Light, will serve my Purpose much better than lessening or extenuating them.

For if, after being ruined by Storms, Diseases, and Handships, they landed, rather Skeletons than Men, on the Island of *Juan Fernandez*; if, after their long Cruise in the South Seas, their Distresses came to be as great when they took Shelter in the Island of *Tinian*; if the King at *Macao* was attended with many Inconveniences; if the Taking the *Spanish* Galleon be a Thing almost incredible, considering the small Number of Men, and the Condition they were in, that attacked her in the *Centurion*; if the Difficulties they afterwards met with in the River of *Canton*, and the Hazard run by the Commodore in visiting the Viceroy, and thereby putting himself into the Hands of such a People as the *Chinese*, who could not but be dissatisfied with his Proceedings, are Circumstances that still aggravate the Matter; if so perilous a Navigation as that from *Canton* through the Straights of *Sunda*, and thence to the Cape of *Good Hope*, with little or no Refreshment, and a Crew that wanted it so much, is still more amazing;

and if the bringing home the Ship from thence, with a Company composed of so many different Nations, in the Middle of a *French* War, and without the least Assistance from home, swell the Whole into a kind of Miracle; What does all this prove? Why, since all this was, under God, intirely owing to the Prudence, Moderation, and wise Conduct, of the commanding Officer, it certainly proves, that, if a right Choice be made of Commanders, there are no Difficulties that may not be overcome; and, therefore, this Voyage ought not to discourage us at all.

For, I presume, that, with the Help of Rear-Admiral *Anson's* Example, there are many Officers who would undertake and execute such an Expedition, to the Honour of their Country, and to the Advantage of those who employed them, supposing them to be employed by private Persons. This is the Use, the right Use, that might be made of this Expedition; an Expedition difficult, dangerous, and, in a manner, impracticable, considered in one Light; but an Expedition equally glorious and successful, when considered in another: An Expedition, that has demonstrated, to the whole World, that a Train of unforeseen and disastrous Accidents may be remedied, and even turned to Advantage, by an honest, skillful, brave, experienced, and well-meaning Officer: An Expedition, which shews, that there are no Hazards, no Difficulties, no Distresses, capable of depressing the Courage of *English* Seamen, under a proper Command: An Expedition, that makes it evident, that Discontent, Sedition, and Mutiny, do not arise from the restless Tempers, intractable Dispositions, and unruly Behaviour, of *English* Sailors, but purely from the want of Prudence, right Management, and, in short, from want of Experience and Capacity in such as are intrusted with the Command of them: An Expedition, in a Word, that puts it beyond all Doubt, that the *British* Nation is, at this Day, capable of undertaking as great Things, and of performing them as successfully as ever their Ancestors did; and, consequently, an Expedition that must convince us, and not us only, but all *Europe*, that if our maritime Force be not employed in Undertakings of the most important Nature, it is not owing to the Degeneracy of our Seamen, not to be imputed to our want of able or daring Commanders, but to some other Cause, which it is not my Business, which, indeed, surpasses my Abilities, to find out.

But the Nature of my Subject, the Thread of this History of Circumnavigators, the Principles upon which I have all along proceeded, rendered it necessary for me to give an Account of this Expedition, and such an Account as the Reader has received: In which, with the greatest Sincerity, and with the strictest Regard to Truth, I can aver, that I have censured without Prejudice, and commended from no other Motive than the Desire of doing Justice; have delivered all Things, as they appeared to me, and as I think they ought to appear to Posterity, without Favour or Affection, and without the least Influence, either of Hope, or of Fear. This I think necessary to say, both for my own Satisfaction, and for the Information of the impartial Reader; the only Person that I shall ever study to please.

40. We are now at the Close of this Chapter, in which we have completed that History which we proposed as the Subject thereof, and to which we gave the Preference, as it is general, and relates to the whole World; and, for the same Reason, the remaining Chapters of this Book refer to the Heads next in Importance; *viz.* the Discovery, Settlement, and Commerce, of the *East* and *West* *Indies*. It is true, that all the Circumnavigators did not propose, and that several of them made no Discoveries; but, notwithstanding this, all their Voyages are of great, though not of equal Importance, down to the very last; for, by comparing *Magellan's*, which was the first, with *Mr. Anson's*, we shall find them differ in many respects, especially in the Conclusion, that of *Mr. Anson's* being by far the longest of the two. Some of them again took quite a different Route: As for Instance, *Le Mare* and *Roggeveen*, who never ran at all into the higher Latitudes, but sailed directly through the South Seas to the Coast of *New Guinea*, and thence to the Island of *Java*, which is a much shorter Course than that from *California* to the *Philippines*:

Ippines: And from hence it very clearly appears, that the Passage to the *East Indies* by the South Seas is shorter than that by the Cape of *Good Hope*; of which the Reader will be convinced, by considering the following Particulars: Captain *Woods Rogers*, in the *Duke*, sailed from the Coast of *Ireland*, and doubled Cape *Horne* in four Months, that is, from *September* to *January*; and *le Maire* passed from the Islands of *Juan Fernandez* to *New Guiney* and the *Molucas* in three Months; so that this Voyage takes up but seven in the Whole: Whereas the *Dutch*, while the chief of their Colonies was fixed at *Ambona*, thought it a good Passage thither from *Holland*, if performed in ten or eleven Months.

It is by comparing these Routes, as laid down in the general Map of the two Hemispheres, that we learn how far the World is already discovered, and how much of it remains yet to be discovered; what we owe to the Spirit and Industry of those great Men, whose History we have recorded, and what remains yet to exercise the Spirit and Industry of our own and of succeeding Times. We see, by comparing the old World with the new, how many and how great Countries this Scheme of Circum-navigation has actually brought to Light, and that too in a very short Space; that is, in the Compaſs of two hundred and twenty-two Years, which is the Distance between the Return of *Magellan's* Ship, and our last Circum-navigator *Anſon*. All that has been discovered within that Space of Time lay hid, not from the Vulgar only, but from the wisest and most knowing Part of Mankind, for five thousand five hundred Years. This is the fairest and fullest Proof that can be given of the Importance of these Voyages, not to this or that Country, but to the whole human Species.

We may likewise observe, that the Attempts that have been made to discover a North-east and a North-west Passage are, in effect, no other than Attempts to discover a new Route of surrouncing the Globe, either of those Passages answering the same End as that by the Way of Cape *Horne*, the very Probability of any such Passages depending on there being such a Passage already discovered towards the South; and, without doubt, if ever any such Passages should be found out, they would open a new Field of Discovery, and new Channels of Trade, exceedingly convenient for the trading Nations in the North of *Europe*.

It is for this Reason, that, as *Sir William Monſon* long ago observed, the *Spaniards* have always been extremely jealous of their finding out such Passages, because the Navigation that would be established by them, must be fatal to their Empire in *America*, or to their Possessions in the *East Indies*: For, if there should be a Passage found into the South Seas by the North-west, it would afford a very short and easy Cut to our Squadrons into the very Heart of the most valuable of their Possessions in *North America*, I mean the Kingdom of *New Mexico*, which might be then attacked both by Land and Sea. On the other hand, if a Passage should ever be found to the North-east, it is impossible they should long continue Masters of the *Philippines*. It is true, that very great, and, as they are now thought, insurmountable Difficulties have been measured in attempting Circum-navigations by either of those Passages; but, when it is considered, that the Passage to the South was for so many Ages concealed, discovered at last with so much Difficulty, and so few Voyages made thereby, as this Chapter shews there have been, there seem to be no just Grounds for concluding, that no such Passage ever will be found, especially if it be considered, that it is not now the Interest of the *Spaniards* only, but of some other Nations, to prevent the Discovery of such Passages, as far as it lies in their Power.

But at the same time we ought to reflect, that the *Russians*, *Swedes*, and *Danes*, who formerly carried on little or no Trade, are, at present, exceedingly bent on extending their Commerce, and have each of them an Interest in discovering such Passages, if any such there be: If, I say, we reflect upon this, it is impossible for us to imagine, that there is less Hope at present, than there was formerly, of succeeding in some such Attempt. This, if ever it should be brought about, would afford Room for a new History of Circum-navigators, as useful and as curious, as that delivered in this Chapter. But even this Discovery, instead of diminishing, would add to, the Glory and Reputation of

those great Men, of whom we have been speaking; because they must be still regarded as those who first led the Way, who first shewed such a Passage round the Globe to be possible and practicable, tho' by another Course. This is what, in Justice, Posterity must acknowledge, even if it should so fall out, that, by the Facility or Conveniency of those new-found Passages, the Navigation by Cape *Horne* should hereafter fall into Disuse.

It is from these stupendous Voyages, that not only the greatest Discoveries have been made in general Geography, but from which all future Discoveries must be expected; and therefore this ought to be considered as one of the strongest Arguments for enforcing and encouraging Voyages. It was from their being confined to short Trips by Sea, I mean in point of Space, though, from their Want of Skill, the Antients made them long enough in point of Time, that they fell into those gross Errors, which were so unworthy of their Science and Penetration in other respects; so that it may be well affirmed, that if we compare what is now known, with what the greatest Men had before described, we shall find more than a new World has been, in two Centuries, discovered: By which Discovery such capital Truths have been set in so clear a Light, as to make even the common People wiser than the most Learned in former Ages.

For Instance, almost every one has right Notions now of the true Figure and Magnitude of the Earth, whereas there was a time when both were unknown to such a Degree, that the Belief of the *Antipodes* was accounted and punished as an Heresy. Every one then conceived his own Country to be the Middle of the Plain of Earth, and that the utmost Limits of it, which touched the Vault of Heaven, were the Sea, into which the Sun, Moon, and Stars, descended, when they set; and out of which they ascended again, when they rose; and hence it was, that the utmost Extent of Land seemed to be no more than what an active and vigorous Conqueror might, in a little time, be able to over-run and vanquish. How wild and ridiculous forever this may seem, it was, however, the Principle upon which all great Heroes acted: As for Instance, *Alexander* imagined he had penetrated to the utmost Bounds of the Earth, when he had but touched the Borders of the *Indus*: He fancied, from some Circumstances relating to the River *Indus*, which resembled those of the *Nile*, that he had found the Source of that River in the *Indies*; and actually fitted out a Fleet on the *Indus*, which he fancied might have proceeded to *Egypt*; and when he discovered his Error in this respect, by his Fleet's falling into the *Persian Gulph*, he fell into another and still greater Error; which was, that all must be Sea beyond; and that, consequently, he had reached the very Limits of the World. As wise and knowing a People as the *Romans* were, they fell into the same Error, with respect to the *Northern Ocean*; and fancied that beyond the Extremity of *Scotland* lay that boundless Sea, which terminated the World.

These were the Consequences of being confined to short and limited Navigations; and, though it is simply impossible, that Mankind should ever fall into the same Errors again, yet it is highly probable, that if this known Route of Circum-navigation be not frequently pursued, and all Attempts for finding new Routes should cease, we shall again relapse into Errors of as dark and dangerous a Nature. As it is, we have, from these Discoveries that have been already made, a much nobler, as well as a much wider Field opened for the Exercise of enterprising Spirits; and though there are now no Hopes left for any Conqueror, how daring, how ambitious, how potent soever, to make himself Master of the whole Globe, which, perhaps, is no small Benefit to Mankind; yet we have better, and more elevated Hopes, of discovering and settling a Correspondence with every Part of the Universe; a Scheme more extensive, as well as more rational, at the same time that it is as conducive to the general Good of the human Species, as the other was to their Misery. This is a Point that I once or twice touched before, referring, however, to a more full Explanation of it for the Conclusion of this History. Add to all this, that, from Circum-navigations only, we can expect the absolute Solution of those great Difficulties that yet remain in the Science of Navigation; such as

Instance, as the Variation of the Needle, the perfect Knowledge of the Longitude, and the exact Description of the true Form of the Earth; for, though we know with Certainty, that it is spherical or globular, yet it is no less certain, that we have not as yet a clear, distinct, and demonstrative Notion of its true Form; though there are strong Reasons to believe, that, what Sir *Izaak Newton* advanced upon this Subject, is the Truth, or, at least, very near the Truth. What has been hitherto advanced with respect to the Variation of the Needle, and the Causes thereof, appears, from Experience, very uncertain and unsatisfactory. If, from Observations already made, any probable System should be hereafter formed, the Truth of them can be established, or their Fallhood fully detected, by such Voyages only. If we do not keep up, and even extend, the Knowledge we have of the Countries about the South Pole, as well as of those about the North, we can never hope or expect to come at Truth, either in regard to this, or to the Longitude; which, notwithstanding what some great Mathematicians have peremptorily determined, may have a nearer Relation to each other, than we can imagine.

I know it may be said, that all those Things, and particularly the Figure of the Globe, upon which, perhaps, they are all founded, are to such a Degree certain, as to serve the Uses of Navigation, so far as the Accuracy of that Art is hitherto practised; but yet, if that Art may be carried to a much higher Degree of Perfection, as in the Opinion of the learned Judges it certainly may, by the Prosecution of such Inquiries as have been mentioned, why should they not be prosecuted, or why should we either decline or circumscribe that Method by which alone they can be prosecuted to Advantage? It is certain, that, besides the Points already touched, there are many others, which we are content to believe certain, though some Doubts have been moved about them, not without great Appearance of Reason; And, as I am now taking my Leave of Things of this Nature, I will take the Liberty of mentioning one. It is supposed, that, the Longitude and Latitude of Places being once certainly and accurately determined, they can never alter, whatever Variation or Deviation may happen to the celestial Bodies. Yet this has not only been doubted, but the very contrary of it has been asserted, first by the famous *Joseph Scaliger*, in the Year 1610; and afterwards by a learned *Frenchman*, Mr. *Peter Petit*, who wrote an express Treatise upon it, affirming, that, after a certain time, the Latitude and Longitude of Places on the Surface of the Earth have a sensible Change: And, to confirm this, he has compared many Observations, recorded by the Antients, of the Latitude of several Places, particularly *Paris* and *Rome*, with modern Observations of the Latitude of the same Places; from whence it appears, that there are very considerable Differences between them; which Differences he ascribes to the Variation of the Poles of the Earth. It is very certain, that such Differences there are, and smaller Differences between the Observations of modern Travellers; but I pretend not to determine, whether they are thus occasioned. *Scaliger* indeed says, that, after a certain time, the Positions of Dials will alter, and become false, as if they had been removed, and placed in a wrong Latitude. But, if all this should be true, I am very sensible, that the respective Position and Distance of Places towards each other would still remain the same, and the Description of Places on the artificial Globe remain true and unaltered, though new Meridians, and new Parallels, might be drawn over them. I only mention this, to shew, that there are still many Things to be inquired into; and that, though we may exceed the Antients, yet we have not carried Navigation, either to its utmost Degree of Perfection, or even to that Degree of Perfection, of which, from former Discoveries, it appears capable of being carried: And from hence I infer the Necessity of pursuing long Voyages, and of persisting, in order to farther Discoveries, in that Course by which so much already has been discovered.

But it may be demanded, Who is it that you oppose? Who has written against long Voyages? Who has endeavoured to hinder, or circumscribe them? Or why do you take so much Pains to establish a Thing, that nobody has controverted? Such Questions as these are common, in the modern Way of Reasoning; and this is called holding a

Man to a Point, to which if he cannot give an Answer, he is immediately condemned as unreasonable and chimerical. Now I very readily own, that I know of none who have opposed what I labour to establish. But if the Reader will weigh what is laid down in the Remarks on the last Section, and will reflect on what I have there said, as to the Impediments that stand in the Way of discovering the Southern Continent, he cannot be at a Loss for the Reasons that induced me to labour this Point with so great Diligence; because he cannot but perceive, that we are circumscribed on every Side by the highest Authority; in so much that, except in Time of War, and by Ships of War, there is no making any Discoveries, unless under the Direction of certain Persons, who have an Interest in avoiding, and even in preventing, Discoveries. I might carry my Observations on this Head a great deal farther; but, as I have already carried them far enough to justify my Conduct in this respect, I am content to say no more of it.

But there is one Thing, that, before I conclude this Chapter, it is requisite that I should suggest to the Reader; and it is this; That we can only circumscribe ourselves. Other Nations will, and, indeed, have a Right to take what Liberties they please; so that there is just Reason to fear, that if we go on in this Method, or if we do not very soon alter it, we shall see that Spirit of Discovery, that Genius for Commerce, and that Skill in Navigation, for which we have been, and are yet famous, transferred elsewhere; for though we may limit the Inclinations, and damp the Desires of our own People, yet we have no Power over Foreigners, much less over the Designs of Providence. An Instance will make this evident beyond Contradiction: We have taken all imaginable Pains, to secure to ourselves the Trade of the *East-Indies*, by Laws made in favour of the *East-India Company*: The *Swedes* and *Danes*, however, trade freely within the Limits of that Company, by which they not only supply themselves and their Neighbours with *Indian* Commodities, but likewise some of our nearest Neighbours, and even the Inhabitants of the Northern Part of our Island. But, perhaps, if other Measures had been taken, this Mischief might have been prevented.

In order to monopolize Trade, we must leave it free: This may seem a Paradox, if not a Contradiction; but Reason and Experience shew us, that it is a Truth. Where-ever Trade and Navigation are encouraged, they will prosper; where-ever they meet with Restrictions, they will remove, or die. If we would embrace the Trade of the World, we must encourage Trade more than any other Nation in the World; if we would maintain and increase our Maritime Power, we must extend our Discoveries, in order to make way for that Increase. It is a Maxim insisted upon by some Political Writers, and, I believe, they are not in the Wrong, viz. That a Nation may gain by Trade, though the Persons concerned in that Trade are Losers: But how long can this last? If we to manage Matters, that a great Number of Merchants over-trade themselves, or, to express it with greater Propriety, are disappointed in their Expectations from Trade, the natural Consequence is, that they will, or rather must, decline Trade, which will ruin our Navigation.

But, if new Discoveries could be made, new Channels would be opened, new Expectations raised; and this political Maxim would be verified in its utmost Extent; for tho' such private Persons as might first engage in these new Trades, might possibly be no Gainers by them, yet the Nation would; for, in time, those Trades must be established, and the Number of Shipping requisite to carry them on would be plainly a new Acquisition to our maritime Force. I know of no Method more likely to revive and restore such a Disposition amongst us, than this of recording the Exploits of eminent Seamen, that the present Age, and Posterity, may have before their Eyes Examples of those shining Virtues, which demand not only their Applause, but their Imitation; Virtues which have not only raised the Maritime Powers to that Height of Grandeur, which they enjoy at present, but have been likewise of such eminent Service to the whole Race of Mankind, by extending and promoting the most useful Kinds of Knowledge, and by contributing to polish and civilize the most distant and barbarous Nations, uniting thereby in friendly Correspondence

such as are sever'd by Situation, and thereby spreading the Beams of Knowledge, where-ever the Sun spreads his. These are things so certain, and so apparent, that it is impossible they should admit of any Dispute; or that any Man should have his Country's Interest so little at Heart, as not to wish, that they were daily and hourly inculcated, in order to wear off that Rust, which, for half an Age past, has been growing upon us.

But tho' many of these Remarks are obvious enough, and notwithstanding our first Collectors of Voyages, such as *Hackluit* and *Purchas*, took care to insert the History of Circum-navigators down to their own Times in their Works, yet our modern Collectors have totally omitted this; or else inserted such Voyages promiscuously, and thereby destroyed that Connection, which is absolutely necessary for their being thoroughly understood. Some foreign Writers, indeed, have given us Lists of Circum-navigators, and intimated the Usefulness of a general History of them; and the Reason, as I conceive, that this Project was by them never carried into Execution, is this, that most of those Voyagers were *Englishmen*, and consequently it was not so easy for them to give the History of their Proceedings, very few of their Journals having been translated. It was from a just Sense of this,

that I thought it necessary to open our Collection, by supplying so great a Defect, and giving a regular History of all the Voyages that have been undertaken, of this kind, in all Countries, and in all Ages, interspersed with such other Voyages, as seem'd to be naturally Supplements to these, and necessary to be read with them, to complete the Discoveries that are mentioned in them.

41. In order to render the Whole as perfect as it is possible, and to give the Reader an Opportunity of reviewing at once this Series of Voyages, in the Order of Time in which they were made, I thought it would be proper to conclude this Chapter with the following Table, which exhibits at once, and in the narrowest Compass possible, the principal Contents of this whole Chapter; from whence it appears, that there have been but fifteen Circum-navigations performed. Of these the first was by a *Spanish* Crew, under the Direction of a *Portuguese*; five have been undertaken by the *Dutch*; and the other nine have been performed by *Englishmen*: And of these Captain *William Dampier* and Captain *John Clipperton* went each of them twice round the World; which is, I think, what no other Country has to boast.

A Complete Table of all the Circum-navigators, the Ports from which they sailed, the Dates of their respective Voyages, and their Returns.

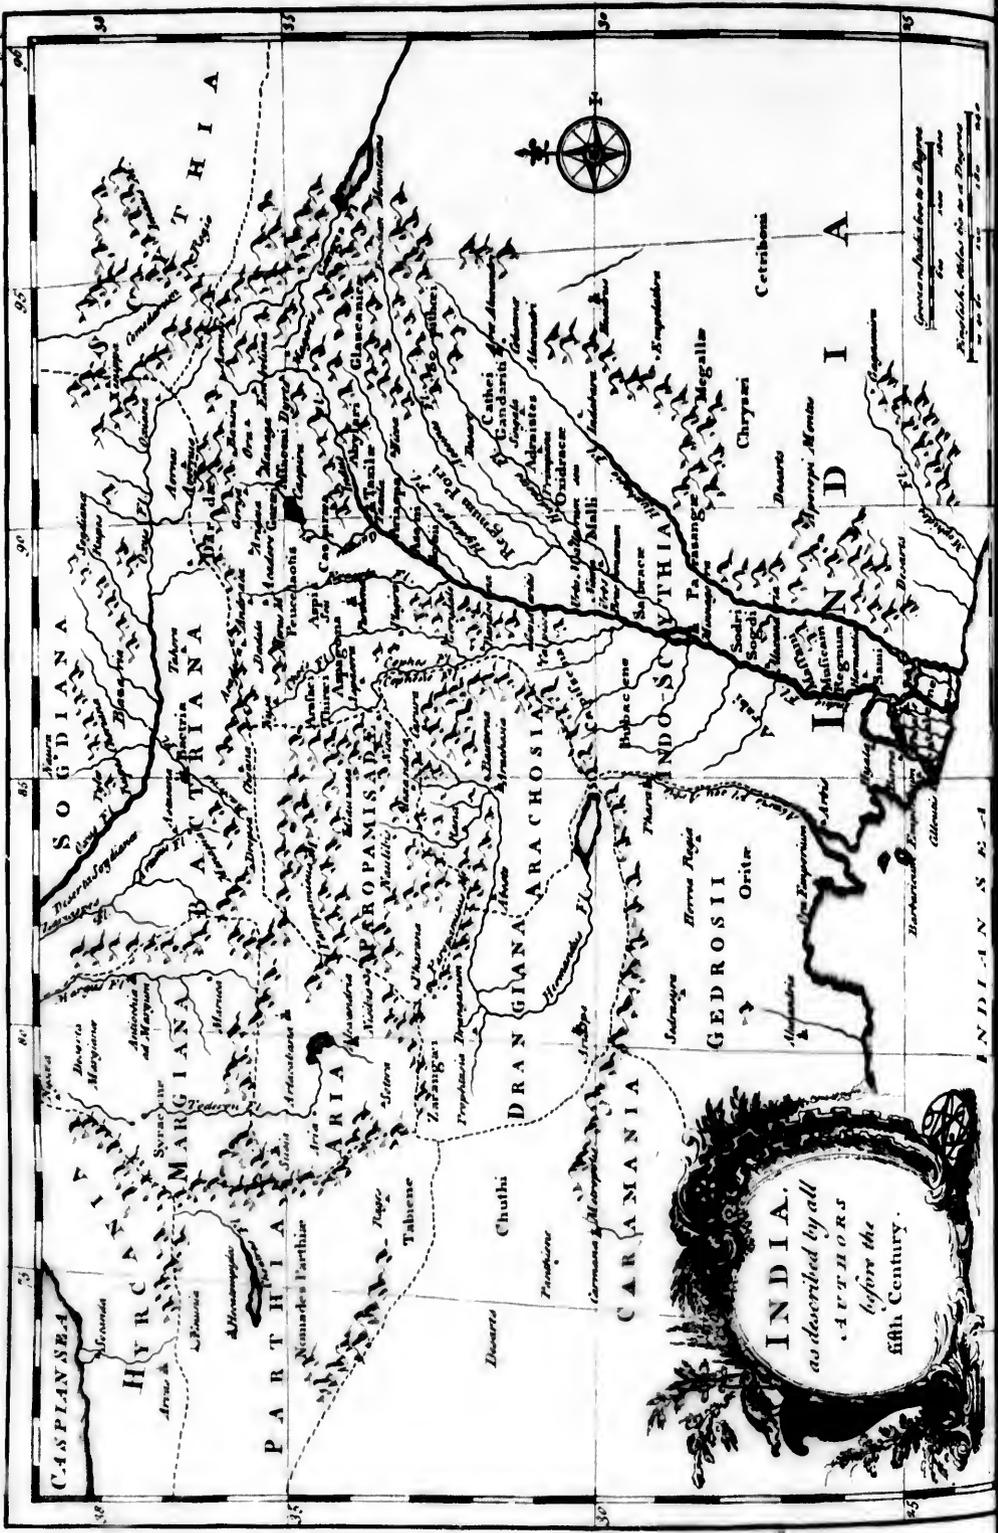

I. <i>Ferdinand Magellan,</i>	from <i>Seville</i> in <i>Spain,</i> Aug. 10. 1519.	returned <i>Sept.</i> 8. 1522.
II. <i>Sir Francis Drake,</i>	from <i>Plymouth Sound,</i> Dec. 30. 1577.	returned <i>Sept.</i> 16. 1586.
III. <i>Sir Thomas Candlish,</i>	from <i>Plymouth,</i> July 25. 1586.	returned <i>Sept.</i> 9. 1588.
IV. <i>Oliver van Noort,</i>	from <i>Goeree,</i> Sept. 13. 1598.	returned <i>Aug.</i> 26. 1601.
V. <i>George Spilbergen,</i>	from the <i>Texel,</i> Aug. 8. 1614.	returned <i>July</i> 1. 1617.
VI. <i>William Schouten and Jomele Maire,</i>	from the <i>Texel,</i> June 24. 1615.	returned <i>July</i> 1. 1617.
VII. <i>The Nassau Fleet,</i>	from the <i>Goeree,</i> April 29. 1623.	returned <i>January</i> 21. 1626.
VIII. <i>Captain Cowley,</i>	from <i>Acbamack</i> in <i>Virginia,</i> Aug. 23. 1683.	returned <i>October</i> 12. 1686.
IX. <i>Captain William Dampier,</i>	from <i>Acbamack,</i> Aug. 28. 1683.	returned <i>September</i> 16. 1691.
X. <i>Captain Dampier and Mr. Funnell,</i>	from the <i>Downs,</i> Aug. 9. 1703.	returned <i>August</i> 1706.
XI. <i>Captains Rogers and Courtney,</i>	from <i>Bristol,</i> June 15. 1708.	returned <i>October</i> 1. 1711.
XII. <i>Captain John Clipperton,</i>	from <i>Plymouth,</i> Feb. 15. 1719.	returned <i>June</i> 1722.
XIII. <i>Captain George Shelvoke,</i>	from <i>Plymouth,</i> Feb. 15. 1719.	returned <i>August</i> 1. 1722.
XIV. <i>Commodore Roggewein,</i>	from the <i>Texel,</i> July 17. 1721.	returned <i>July</i> 11. 1723.
XV. <i>George Anson, Esq;</i>	from <i>St. Helens,</i> Sept. 12. 1740.	returned <i>June</i> 15. 1744.

CHAPTER II.

Comprehending the DISCOVERY, SETTLEMENT, and COMMERCE of the EAST-INDIES.

SECTION I.

An Account of the NATURE and IMPORTANCE of this Design, with a Regular PLAN of this Part of the Work.

1. *The Copiousness as well as Curiosity of the Subject, has occasioned a Multitude of Books upon it.*
2. *Yet there is no complete System hitherto published.*
3. *The Difficulties that occur, with respect to the Credit due to the Antients.*
4. *The like, or greater, Difficulties met with in the Writings of the Moderns.*
5. *The Materials from which this Work is to be collected.*
6. *Preliminary Considerations.*
7. *The Manner in which the ancient History of the Indies will be treated, to the Time of the Romans.*
8. *It is proposed to give a Summary of what the best Greek and Latin Authors have left us on this Head.*
9. *A distinct Account will next follow, of the Alterations to which this Commerce has been subject.*
10. *The Rise, Progress, and Declension, of the Portuguese Empire in the Indies will be considered.*
11. *The Expeditions, Settlement, and present State, of the English Factories to be set in a clear Light.*
12. *As also the Power and Occasion of the Dutch East-India Company, and the Disputes we have formerly had with the Dutch in these Parts.*
13. *The Origin, Alterations, and present State, of the French East-India Company explained.*
14. *And an Account given of the Ostend, Swedish, and Danish Companies.*
15. *The Whole to be concluded with Observations on the Consequence of the East-India Trade to Europe in general.*

 HERE are few Subjects more instructive, or more entertaining, than that of the History of the Indies, or which have exercised the Pens of more able Men. To say the Truth, there is something in it capable of entertaining every Genius. Such as are fond of Antiquities, had an Opportunity afforded of exercising their Abilities in the most curious Researches; for though it is evident, from the Situation of this Part of the World, that *India* must have been peopled very early; yet it so falls out, that there is scarce a Country on the Globe, the ancient History of which lies buried in so great Obscurity. The Lovers of Natural History found, in all Ages, the largest Field open to their Inquiries in these Regions, where every Animal, every Tree, every Flower, every Root, was a Curiosity. Such, again, as delighted in speculative Studies, in the quiet Pleasures of Philosophy, and in the Examination of the Efforts of the human Understanding, found sufficient Employment in tracing out the Opinions, Manners, and Course of Life, of the *Brachmans*, or *Indian Philosophers*, the oldest Sect in the World, and, in every respect, the most singular, and the most extraordinary; while those, who were charmed with a Variety of striking Events, Invasions, Battles, Revolutions, and the like, met with all they could desire, in exploring the *Indian History*; which abounds with a greater Diversity of such Events than any other. Lastly, the Lovers of Navigation and Commerce were attached to this Subject, from the Consideration of its peculiar Advantages; for never any Traffick made to considerable a Figure as that of the *Indies*; never was any Country so highly renowned for the Riches of its native Commodities, for so many and so valuable Manufactures, or for such a Spirit of Industry and Trade amongst its People; and this in all Ages, from the earliest to the present Times.

We need not wonder, therefore, that such a Multitude of Books have been written on those Topics that we have mentioned, or that so many able Pens should have been employed upon each of them. The Difficulty does not lie in making Guides for our Journey, but in distinguishing enough to many, which has the properest Talents for con-

ducting us, and how far we ought to follow him. This is an Evil, indeed, common to all curious and useful Subjects; on which there are naturally many more Books produced, than on such as are less pleasing, less instructive, and less agreeable, either to the Writer or the Reader.

2. But there is one Thing very singular with regard to this Subject: We have not so much as a single Treatise, that embraces it in its full Extent, that takes in the intire History of the Antiquities, Revolutions, Customs, Manners, and Trade of the ancient *Indians*; their Correspondence with *European Nations*; the Losses and Revivance of that Correspondence in several Periods; the Civil, Natural, and Commercial History of the *Indies*, before and since the Discovery of the Passage thither by the Cape of *Good Hope*; and the Rise, Progress, and present Situation, of the Settlements of *European Nations* in the *Indies*. This, I say, in its full Extent, and with due Regard had to the Importance of the Work in general, and the Connexion of its several Parts, is what, in the Midst of so many Books, so many Collections, such a Multitude of general Histories and Abridgments, is no-where to be found.

Yet I should think myself very happy, if I could as easily supply the Defect, as I can point out the Causes of it, which seem to me to be principally these: In the first place, almost every Writer, who has meddled with these kind of Subjects, has a particular Genius, which determines him to this or that Part of them. One has a Relish only for ancient History, and amuses himself with examining and comparing the Fables and Fragments he collects out of old Authors. Another is struck with Curiosities, and he, perhaps, spends many Years in compiling whatever is to be met with in relation to Natural History. A Third has a Taste only for Travels and Voyages, which leads him to collect these; without ever considering, that, in all such Works, there must be many dark and unintelligible Passages, if the Reader is not furnished with other Lights than such Sort of Books will afford, to enable him to understand them.

Another Cause is, the not fully comprehending the Subject, but believing that a General History of the *Indies* may be written from the Memoirs of this or that particular

Nation,

Nation, such as the *Portuguese*, the *English*, or the *Dutch*; of which many Instances might be given: And yet, when these Books are compiled, though they afford excellent Materials for such an History, they are nothing less than General Histories themselves.

A third Cause is, that Love of Amusement which prevails at present in the World, and inclines them to encourage that Sort of writing which is pleasant and entertaining; but at the same time leaves the Reader very little wiser than he was before; which is the Reason that many modern Voyages and Travels are written with such a Spirit of Indolence and Gaiety, and are so inaccurate in point of Dates and Facts, that we are sometimes apt to mistake them for fictitious Adventures and Romances. I could likewise support this Remark by Abundance of Instances, but that I am sensible my own and the Reader's Time may be much better employed; and that the Fact is so well known, that I am in no Danger of being called to an Account for the Assertion.

There are several other Causes that might be added; but, as most of them will occur to an intelligent Reader, I chuse to leave them to his Observation, rather than dwell too long on an Introduction to a Subject so copious in itself, and which will require so much Time, and so much Room, to handle as it ought to be handled; even though all imaginable Pains be used to bring it within Compass, by giving nothing but what is curious and solid, and that in the fewest Words possible.

3. There is nothing more common in some Books relating to the *Indies*, than to meet with violent Invektives against the Ignorance, Credulity, and Folly, of the Antients, as if they had had no Opportunity of knowing any thing with relation to this Country and People, and had therefore delivered to Posterity an Heap of indigested Fables of their own Invention. In some other Books, again, we find this absolutely contradicted; the Accounts of the Antients commended and supported; and those who have treated them with Contempt, represented as weak Men, and incompetent Judges. When Books of both Sorts fall into the Hands of an *English* Reader, he knows not what to think, or whom to believe: He doubts of every thing; and as he meets with strange Stories, and seemingly extravagant Relations, in all the Voyages and Travels to this Part of the World, he is apt to suspect the Whole, and to believe that very little Credit is due to any of them. In order to clear up this, and to afford him a reasonable Satisfaction, he is usually turned over to the voluminous Collections of *Eden*, *Hacklutt*, and *Purchas*. If he has the Patience to run through these, and Abundance of Patience it requires, his Difficulties are rather increased than relieved; and, for want of knowing the true Characters of the Writers preserved in those Collections, and the not meeting with many ancient Writers, whose Names are mentioned in other Accounts, he is more at a Loss than ever.

4. In the Histories of the Discoveries made by the *Portuguese*, they are usually treated in such a manner, that, at first Sight, one would be tempted to imagine, none of the Countries mentioned in them were at all known to the *Europeans*, before the Passage was found by the Cape of *Good Hope*; and yet, upon a closer Inspection, the contrary is very visible. This, again, gives the inquisitive Reader a great deal of Uneasiness: He is sensible, that, before that Passage was found, abundance of *Indian* Commodities were transported into *Europe*, some of them in greater Perfection than they are now. He is anxious to know when that Correspondence began; how, and by whom, it was carried on; what were the Advantages and Disadvantages that attended it; and the Reasons why it was discontinued; none of which are to be found in those Historians, who, full of a Desire to magnify their own Country, carry the Conquests and Discoveries of the *Portuguese* to the utmost Height, and leave the Report of other Nations Success, in Maritime Affairs and Commerce, to their own Writers.

The *English* and *Dutch* pursue pretty much the same Track; and tho' they sometimes run out violently against the Pride, Luxury, and Tyranny, of the *Portuguese* in the *Indies*, yet they omit many curious Particulars, in relation to the Decline of the *Portuguese* Empire, which may be

with Care collected from some of the Writers of that Nation. Thus we have only partial Representations, and such as, instead of instructing us, as to the true State of Things, shew us only such Pictures as, for the Honour of their respective Countries, these Writers have fondly, to the highest Degree their Abilities would allow them.

5. The Sense that many able Authors of Voyages and Travels have had of these Imperfections and Difficulties, and the Desire they had to remove them, has engaged them in frequent Censures, long Disputes, and tedious Digressions; which render their own Works heavy and tiresome, and, at the same time, very indifferently answer the End for which they were intended. I would not have the Reader imagine, that I am giving him a bad Opinion of other Peoples Books, that I may recommend my own; for, in Truth, there is nothing farther from my Intention than such a Conduct. I am very sensible, that there are Abundance of excellent Writers on each of the different Parts of the Subject which I am to handle; and I freely profess, that I have no Hopes of succeeding, but from the Use I make of their Labours. But what I would shew him is this, that how excellent soever these may be, take them separate, and with regard to the Designs by them respectively proposed, they cannot, however, even by the most laborious Course of Reading, be brought to answer the End of such a general and connected History, as has been mentioned.

They are, indeed, Materials for such a Building, and Materials without which it would be Madnets to attempt raising such a Structure; but still they are Materials only, and must be drawn together, and properly framed, before they can become Parts of such a Building. It is very happy for the Reader, as well as for me, that there are such Plenty of excellent Materials; and it will be very easy for him to decide how well they are ranged, and how far they occupy their proper Places. These Materials are to be collected from Writers of different Ages, in different Languages, and who wrote with very different Purposes: The great Difficulty therefore lies, in making these serve an End which none of them ever proposed, and to unite them in such a manner, as that the Piece may be whole and intire, without any Mark of Patchwork.

In order to this, the Deficiencies of some must be supplied from the Abundance of the others: The true Sense of the Antients must be collected from the best Commentaries of the Moderns; where any thing is dark, it must be explained; and where great Writers have erred, from their Fondness for particular Opinions, their Errors must be set right with Candour and Decency. When, after all the Care that can be taken, no Materials can be found, that must be fairly confessed, and the Reader plainly told, what is known, and what is likely to be buried in perpetual Obscurity. This may, indeed, seem to injure the Beauty, and destroy the Symmetry of our Work; but it is much better, that the Things should be left so, than that, after the Manner of *French* Historians, we should supply Facts with Inventions, and so build up a regular History, deficient in nothing but Truth; which ought to be the Foundation of all History, and without which it is mere Romance.

6. But to descend from Generals to Particulars, and to represent, in few Words, what the Reader is to expect in this Chapter, as we did in the last, and to secure him from any Apprehension of our forgetting, that this is a Library of Voyages; and, therefore, ought to consist principally of these; we will enter into an express Detail of the capital Points that are to be treated in the ensuing Sections. It is the more necessary for us to do this, because, without considering them as the Parts of the same Work, they might appear, at least many of them, to be placed in a wrong Order of Time; whereas, when the Design of this Chapter is fully disclosed, I hope it will appear, that they are digested in the most natural Order, and so, as that they explained and enlightened each other. This is certainly the great Use of Method; without which, it is simply impossible, that there should be any Peripetuity; and yet it is not impossible, that a Writer, by adhering too closely to Method, may fall into that very Error which he endeavours to avoid: And, therefore, as the End is always to be preferred to the Means, I shall in this, as in the former

Chapters, prefer the Reader's Satisfaction to the strict Pursuit of my own Notion; and, where-ever it is necessary, shall, without Scruple, join Things together, that, perhaps, a strict regard to Method might have disposed in different Places. I shall likewise take the Liberty, where I find it requisite, of referring the Reader to what has been delivered in the foregoing Chapter, rather than run the Hazard of tiring him with needless Repetitions; and, as, in the Voyages I have already given him, I have been very copious in my Remarks, so, in these that are to follow, I shall be more concise, in order to bring my Matter within due Bounds. These Preliminaries being settled, I proceed, as I promised, to the Plan of what I propose in this Chapter.

7. In the first place, I shall treat of the State of the *Indies*, from the earliest Ages, to the Foundation of the *Perſian* Monarchy; and, though, in doing this, I am sensible that I cannot give the Reader any more than a few capital Facts, in a long Series of Ages, yet, as these Facts are absolutely necessary to the understanding what follows, I persuade myself, that he will regard them as I do, in the light of a necessary Introduction, I shall then proceed to the History of the *Indies*, so far as it can be discovered from the Histories that has been left us of the *Perſian* Empire, through which the Riches of the *Indies* were first made known to the *Europeans*.

Having proceeded through these dark Periods, we shall arrive at a clearer Account of Things, deduced from the Expedition of *Alexander* the Great, after the Destruction of the *Perſian* Empire, into the Countries of which we are speaking. This will lead us into an Explanation of the Politics of that mighty Conqueror, who, to the Possession of many large and fruitful Provinces, intended to have secured to the Empire that he erected, all the Advantages accruing from the rich Commerce of the *Indies*.

We shall likewise examine how far this glorious Design was prosecuted by his Successors; how, through their Quarrels and Disputes, it sunk into Oblivion, until it was revived by the *Ptolemies* in *Egypt*, who thoroughly understood the Plan of *Alexandra*, and improved it to great Advantage. After the Destruction of their Monarchy, we shall give a succinct Account of the Uses made by the *Romans* of their Conquest of *Egypt*, and of the Light they obtained from the *Greeks*, and other Nations, with regard to the Trade of the *Indies*, and in what manner they improved them.

8. In consequence of this Chain of History, which will afford us an Opportunity of explaining to the Reader the Characters of those Writers on whose Authorities the Antients chiefly depended, we shall be at Liberty to lay down the Substance of what they knew and believed, with respect to the Country, Inhabitants, and Commodities, of the *Indies*. We shall shew, from the best Writers of Antiquity, how far their Acquaintance with the *Indies* reached; in what Particulars they had right Notions, where they erred; and whence their Errors arose. We shall shew what they have delivered with respect to the Religion of the *Indians*; their Policy; the Division of their States; their Customs and Manners; together with the Animals, as described by them; and all the other Productions of that Country. In doing this, the utmost Care shall be taken to cite exactly the Authorities on which the several Facts we report are grounded; and, as Occasion requires, we shall shew how far they are confirmed or contradicted by the Moderns; and, by this Means, we shall bring a Multitude of curious and instructive Passages into a very narrow Compass.

The Reader will then see, in one View, the true State of the Case, with respect to the Antients; and be able, with Certainty, to judge for himself, with respect to the Justice of those Censures, and the Value of those Panegyrics, which are before-mentioned. He will then see how far the Credulity of the Antients really extended, with what Caution their Works ought to be read, and what Credit is due to the surprising Relations that are met with in them. He will likewise see the Nature and Extent of their Commerce; the Manner in which they managed it; the Advantages they drew from it; and how it sunk and rose, according as the Countries, in which it was settled, were

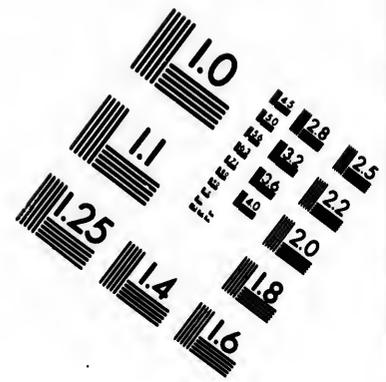

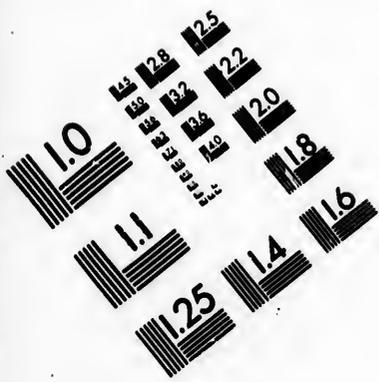

blest with a wife and prudent Government, or cursed with a bad one. This will afford him an Opportunity of comparing, in his own Mind, the State of Commerce in those Days, with the Condition in which he sees it; and will enable him to pronounce boldly, that Justice, Equity, and a due Regard to the natural Rights and Liberties of Mankind, are the sole Means by which Nations are distinguished from each other; and that Power, Wealth, and Happiness, are not attached to Extent of Dominion, or Multitude of People, but, where-ever there is a wise Administration, may be enjoyed.

9. We shall then resume the historical Part of our Discourse, and treat of the Correspondence between the Subjects of the *Constantinopolitan* Empire, and the Inhabitants of the *Indies*; which will appear to be of more Importance than has been hitherto imagined. We shall next descend to a regular Account of the Alterations which happened by the Declension of that Empire, in the Management of that Trade, which threw it into different Channels, and into the Hands of several Nations. This will bring us to those Voyages and Travels that have been hitherto accounted the earliest that were made into the *Indies*. The most valuable of these we shall give the Reader at large, with a fair and clear Account of the Characters of their Authors: And, in order to make their Relations perfectly intelligible, we shall, in a previous Section or two, give a succinct Account of the Revolutions that happened in the *Indies*; without knowing of which, the Accounts given by these Travellers would be exceedingly obscure. But, by pursuing this Method, every thing will fall into its proper Place; and, before the Reader meets with these Relations, he will have acquired the Lights necessary to the perfect Understanding of them; and will likewise discern, how these Voyages and Travels, dark and imperfect as they were, kindled that Spirit of Inquiry, and exhibited that generous Thirst of opening a shorter Passage to these rich Countries, which made Way for the Discoveries of the *Portuguese*. He will likewise see, how far the Accounts given us by these Travellers agree with those of the Antients, and how far they are supported or confuted by later Experience. He will likewise form a Judgment of the Value of such Pieces, and see how far they are still useful, notwithstanding the subsequent Lights we have received; and from thence he will have a just Idea of the Value of such Collections, as contain these, and little else.

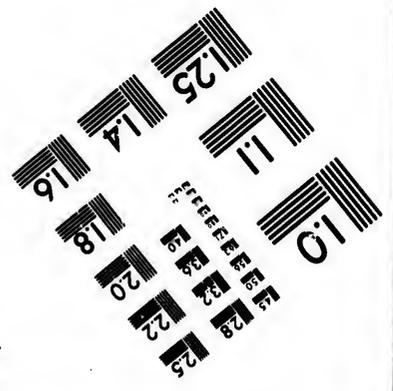

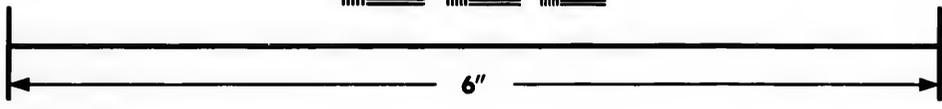

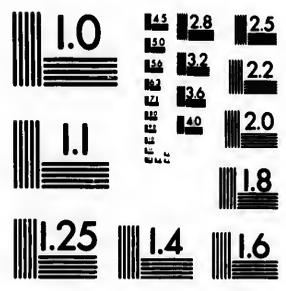

10. After passing through these dark and troublesome Stages, we shall reach that famous Period, in which the Passage by the Cape of *Good Hope* was discovered, which transferred the Commerce of the *Indes* from the *Italian* Republics to the *Portuguese*. We shall then relate, as briefly as it is possible, the Progress of the *Portuguese* Conquests; exhibit the Nature and Extent of their Empire in the *Indies*; give the Characters of the principal Persons concerned in establishing it; shew of how great Consequence it was to *Portugal*, and what Effects the annexing, for a time, that Kingdom to the *Spanish* Monarchy, had upon the Affairs of *Europe*. We shall next endeavour to point out the Means by which the Empire of the *Portuguese* began to decay; trace out the Circumstances that concurred to its Destruction; and conclude with a Representation of the present State of their Affairs, and of the Remains of the great Power in the *Indies*, which are still in their Hands.

11. The Voyages made by our Countrymen into this Part of the World will next demand our Care; and here the Reader will observe, that, for the sake of being clear and perspicuous, we were obliged to dispense with Method; for otherwise some of our *English* Travellers ought to have been mentioned, not only with, but even before those, who visited these Parts in the 12th and 13th Centuries. After a very short Account, as indeed no other can be given of these old Voyages, we shall explain the Causes that led our Countrymen to engage in Expeditions to the *East Indies* during the Reigns of *Henry VII.* *Henry VIII.* *Edward VI.* and the Queens *Mary* and *Elizabeth*; by this means our History will be conducted as low as the Establishment of that Kind of Trade, which we carry on to the *Indies* at present; of the fixing of which we shall give a distinct Account, and insert, in their proper Places, such *English* Voyages, as

are likely to give Satisfaction to the Reader. We shall also enter, as far as is necessary, into the Disputes that have happened, in these Parts, between us and the *Dutch*; and particularly the famous Affair of *Ambogna*, by which we lost the Spice Trade; an Affair, which, though it has been long ago forgiven, ought never to be forgot, any more than the Arts and Contrivances by which we were expelled from *Bantam* in the Island of *Javan*, and other Parts of the *East Indies*. These things being dispatched, we shall examine the present State of the *British* Empire in that Part of the Globe, and give a particular Description of the Situation and Consequence of each of our Factories, concluding with some Remarks on the Nature and Value of the *East India* Trade with regard to this Nation, more especially with respect to the great Exportation of Bullion, which it occasions. By this means we hope to render our Work equally agreeable and useful to the Subjects of these Kingdoms, by setting in a true Light this important Branch of our Commerce, and demonstrating the Necessity we are under, of maintaining and supporting it, in order to bring the general Balance of Trade in our Favour.

12. The first Voyages of the *Dutch* to the *East Indies*, and, in consequence to those Voyages, the Establishment of their *East India* Company, a Specimen of the most important Expeditions made under their Direction, and the Account which they have been pleased to give us of their Proceedings at *Ambogna*, will fall here into their proper Place. To these we shall add an Account of the Economy of this Company at home, and the Manner in which their vast Stock is managed for the Benefit of the Proprietors; for, as to their Settlements in the *Indies*, there has been already so copious and so accurate a Description given of them in Commodore *Roggewein's* Voyage, that we shall be under no Necessity of laying any thing more on that Head.

13. The *French East-India* Company comes next to be considered; a Company not formed, like the rest, in consequence of Voyages made at private Expence, and in Compliance with the Genius and Desires of the People; but springing from a political Principle, projected by Ministers, and settled, according to their good Pleasure, by the Power of the Crown; and this, too, after numerous Efforts, and repeated Disappointments. We shall insist the more particularly on the Rise and Progress of this Company, or rather enter into a Detail of the several *East India* Companies formed in *France*, in order to shew how hard it is to force the Spirit, and model the Inclinations, of a People after the Will of the Government, even when the Will of the Government is, in some measure, right, and agreeable to the Interests of the People. We shall particularly describe the Methods, by which the two great Ministers, *Richelieu* and *Colbert*, obliged the *French* Nation to think of settling themselves effectually in the *Indies*; and we shall render it evident, that nothing but the steady Care and constant Attention of their Successors, to the Principles by them laid down, overcame those Obstacles that at first seemed insurmountable, and at last brought this Project to bear, and put the Affairs of the *French East India* Company into a flourishing Condition.

We shall lastly give a full and distinct Account of that Company, in respect of its Economy at home, as well as its Settlements abroad; and the Effects, which, in time, and by the Continuance of its Trade, it may have in regard to the general Commerce of the *Indies*, and the Trade of *Europe*. These, we have Reason to believe, will be so much the more acceptable to our Readers, because they are absolutely new, and have not hitherto been treated, at least, clearly, methodically, and from authentic Memoirs, in our Language.

14. It was the Success of this last, as well as of the *English* and *Dutch* Companies, that raised, about twenty Years ago, so strong a Spirit of Trading to the *Indies*, throughout all *Europe*, and which first displayed itself in the Attempt made to settle a Company for that Purpose at *Oslen*, under the Protection of the late Emperor *Charles VI.*

We shall give a succinct Account of the Origin, Progress, and Declension, of that Company; and shall shew the Consequences that might probably have attended its Establishment, if it had not been opposed so vigorously by the maritime Powers. This will naturally bring us to the Companies that have been since erected, or rather revived, in *Sweden* and *Denmark*, with greater Success, than could well have been expected, and which, prosecuted with the same Diligence and Attention that have hitherto been bestowed upon them, must necessarily be brought to that Perfection, which has been thought incompatible with the Genius of those Nations, the Nature of their Governments, and the Strength of their maritime Force. We shall likewise take notice of of the Trade carried on to *Cbina* by the *Russians*, and the Conveniencies they have for establishing and extending it, together with some Thoughts on the Consequences of our new Trade through *Muscovy* to *Persia*, and the vast Regions of *Great Tartary*, which may possibly be improved into a Commerce of as great Consequence, or, at least, of as great Profit, as that which we now carry on to the *Indies*.

15. In the Conclusion of the Chapter we shall compare the old and new Trade to the *Indies*; examine the Advantages and Disadvantages of both, and the Consequence of this Commerce to the Eastern Nations, and to the People of *Europe* in general. From which it will appear, that the Prejudices entertained against this Trade, on account of the great Exportation of Silver which it occasions, are but differently founded; and that the necessary Attendances upon this Commerce, provided it be properly managed, will much more than balance this Inconvenience, and prove the means of enriching *Europe* in a much higher Degree, than it is supposed to be impoverished by the sending out such Quantities of Bullion.

Such is the Plan of this Part of our Work, which, tho' very extensive, is, however, so regular, that, by the Perusal of this Section, the Reader cannot but be convinced, the Subject could not have been treated in less room to any Purpose. The Importance of it is so great, that it may well justify the Labour and Pains that it will cost in the Execution; and every Part of it will be so curious and entertaining, as well as useful and instructive, will comprehend the Substance of so great a Number of valuable Books, and convey so large a Proportion of practical Knowledge, in comparison of the Bulk of the Chapter, that there is the greatest Reason to believe our Readers will not think their Time at all mis-spent in its Perusal.

It is but a very few Years ago, that the Disputes about this Commerce to the *East Indies* divided and distracted all *Europe*: And it is very easy to foresee, that, in the Course of a few Years, the same Disputes must necessarily be revived with as great Warmth as ever; especially if there be any Truth in what some People have furnished in *Holland*, as to the Intention of the King of *Prussia* to establish a new *East India* Company at *Amsterdam* in *East Frisia*. If this should ever take Effect, it would create greater Apprehensions, especially in the *Dutch*, and with more Reason, than the Attempt made to fix such a Company at *Oslen*, because, from the Situation of that Port, they would have much greater Reason to fear the Ruin of a great Part of their Trade in *Germany*.

Upon these Motives we have been led to handle this important and interesting Subject in all its Branches, every Section of which will be a complete Treatise in its Kind; and its Relation to, and Connexion with, the rest of the Work will immediately appear, by referring to the Scheme of the Whole, as it is in this Section delivered. We have now nothing more to add, but an Assurance, that the same Diligence shall be used in rendering every Part of the Chapter as perfect as possible, that we hope is discoverable in this large and particular Account of the whole Design, intended as well to manifest the Attention shewn in composing it, as to give such a Key to the whole Chapter, as may serve the Purposes before-mentioned.

SECTION II.

The History of INDIA in the Earliest Ages.

1. *The Tradition of the Indians concerning Bacchus.* 2. *The Egyptians transferred their Reports to Osiris.* 3. *Semiramis attacked the Indians, and was repulsed.* 4. *The Invasion of India by Sesostris.* 5. *The Indians had their Hercules as well as the Greeks.* 6. *M. Huet, Bishop of Avranches, had no just Grounds to suppose the antient Indians descended from the Egyptians.* 7. *The Argument drawn from the Confession of the Indians to Alexander the Great, examined and confuted.* 8. *A Summary of Matters of Fact, which may be collected from this fabulous History.* 9. *The Usefulness of these Inquiries to the thorough understanding of this Subject.*

AS we have very confused and indistinct Accounts of the first Settlements of almost all Nations, it is no Wonder, that we should have many absurd and unintelligible Fables as to the Settlement of the *Indus*; especially if we consider how remote these Countries lie from those which produced the Historians, from whom all our Accounts are derived. The first *Indian* Monarch, or Conqueror, of whom any mention is made in History, is the God *Bacchus*, or *Dionysus*, who is reported to have led an Army out of *Greece* as far as the *Indies*, which he conquered, and taught the Inhabitants the Use of Wine, and built the City of *Nysa* *. There is, however, good Reason to believe, that *Bacchus*, or *Dionysus*, is only a *Greek* Name for that *Indian* Prince who first civilized the People of that Country; for one of the most valuable Writers of Antiquity, *Diodorus the Sicilian*, explains the History thus, and tells us, that the *Indians* themselves related the Matter in the following Manner.

That *Bacchus* was a Native of their Country, and the first who found out and taught the way of pressing Grapes, and making Wine; that he likewise employed himself in pruning Fig-trees, and other Fruit-trees, of a larger Size; in which he likewise instructed his People, established a little Principality in the Country of *Nysa*, and called his Capital *Nysa*, from the Name of his Nurse. The *Indians* had likewise a Tradition, that he was a great Conqueror, and a Lawgiver, built many stately Cities, instituted divine Worship, and erected every-where Courts of Justice: They say further, that, after ruling over all *India* for the Space of fifty-two Years, he died in an extreme old Age, and left his Dominions to his Children, by whom they were enjoyed for many Generations; till at length, several Revolutions happening, many of the Cities became free, and set up such Forms of Government as seemed most agreeable to the Inhabitants. All this is reasonable enough; as is also the latter Part of the Story, which is, that, after his Death, he was revered as a God ^b.

2. In the antient History of the *Egyptians* we are told, that *Osiris*, the great Conqueror of that Country, having first added *Ethiopia* to his Dominions, passed over from that Country into *Arabia*, and marched from thence into *India*, where he taught the Inhabitants the Use of Wine, and founded the City of *Nysa*; from whence it is plain, that this *Osiris* is the same with *Dionysus*, or *Bacchus* ^c. There seems to be no great Difficulty in accounting also for this Story, since it is a Point universally agreed among the Learned, that the *Egyptians*, in order to fortify their favourite Opinion, that they were the most antient Nation in the World, and that all Arts and Sciences were derived to other People from them, were accustomed to transfer whatever they learned relating to the Actions of antient Princes in other Countries, to some of their own Monarchs; and thus, it is highly probable, they delivered what the *Indians* reported of their first Lawgiver, as if performed by *Osiris*. The *Greeks*, who most certainly borrowed their Learning from the *Egyptians*, and, in Imitation of them, endeavoured to establish a Notion of their own Antiquity, adjusted these Accounts to the *Grecian Bacchus*; whence arises all that confused and fabulous History, reported by several *Greek* Authors, upon this Subject, and with which we should not have meddled at all, but that it will be found necessary to explain some Passages in *Alex-*

ander's Expedition, which is a thing of the utmost Consequence with respect to the *Indian* History.

3. The *Affyrian*, which was the first of the great Empires erected after the Flood, was governed, after the Death of *Ninus*, by his Widow *Semiramis*, who founded the antient *Babylon*. This great Princess, after the Conquest of *Bactria*, resolved to undertake that of *India*. The Reasons that moved her to this Resolution, were the Reports she had heard of the Fruitfulness of the Country, and the Riches of its Inhabitants; but, as she foresaw, that this Enterprize would be attended with many and great Difficulties, she spent no less than three whole Years in preparing for it. In order to this, she ordered a prodigious Army, drawn out of all the Provinces of her extensive Empire, to assemble in *Bactria*: She likewise directed the Inhabitants of *Phoenicia*, *Syria*, and *Cyprus*, to send her a sufficient Number of Shipwrights to build two thousand Ships, or rather large Barks, which were so contrived, as that they might be taken to-pieces, and carried, according to her Project, from *Bactria* to the River *Indus*, where she understood the *Indians* had a considerable Naval Force.

But, as she was apprehensive, that her Troops might be struck with a Panic at the Sight of the Elephants, which the *Indians* used in War, or, rather, apprehending that the *Indians* themselves would place all Confidence of Victory in their armed Elephants, she contrived certain Machines, made of the Skins of Oxen sewed together, and carried by Camels, which resembled Elephants, in order to take from the *Indians* their Notion of Superiority in this respect. All Things necessary being provided, she marched out of *Bactria*, with an Army, that the *Greek* Historians have, by their Relations, rendered less formidable than incredible; for they report, that it consisted of 3,000,000 of Foot, 200,000 Horle, 100,000 Chariots, and 100,000 mounted on Camels.

Stabrobates, who was at that time King of the Countries that border on the River *Indus*, as soon as he had Intelligence of this formidable Invasion, prepared to defend his Country, and his Subjects; and, with this View, assembled a prodigious Army, augmented the Number of his Elephants, and caused four thousand Boats to be built of Cane, which is not subject either to rot, or to be eaten by the Worms, to encounter the *Affyrians* on the River, having his Army and Elephants drawn up on the Shore ready to support them. The Fleet of *Semiramis*, either because her Vessels were stronger, or better manned, proved victorious, a thousand of the *Indian* Boats being sunk, with all who were on board them, and a vast Number of *Indians* taken Prisoners. Upon this, the *Indian* King abandoned the opposite Shore, and left the Enemy a free Passage, in hopes of attacking them with better Success by Land. *Semiramis*, as soon as the *Indians* withdrew, converted her Fleet into a Bridge of Boats, over which she marched her whole Army, with the counterfeit Elephants in the Front.

When the *Indians* were informed by their Spies, that the *Affyrians* had a great Number of Elephants, they were amazed at it, and in great Confusion; but they soon recovered their Spirits, when, by the Desertion of some of the Troops of *Semiramis*, they came to understand the Truth. A Battle soon after followed, in which the *Affyrians* had at first the Advantage, but at last the *Indians*

* *Tabl. Geogr. pl. l. xv. Indus. Sicul. lib. iii. Cicero de Natura Deorum, lib. iii.*

^b *Diodor. Sicul. lib. iii. cap. 4.*

^c *Cicero*

prevailed, and *Seniramis* was totally overthrown, and soon obliged to fly, with a very small Retinue, escaping with great Difficulty back into her own Dominions. Authors have varied in their Accounts of this Transaction, which is largely related by *Diodorus*, who had it probably from *Ctesias*, who drew his Accounts from the Oriental Writers themselves. There is not certainly any great Weight to be laid upon a Fact, the Credit of which can hardly be ascertained, and some Circumstances of which have visibly the Air of Fable ⁴.

The citing, however, this Passage, to prove that the *Indians* were a civilized and powerful Nation, is, perhaps, going no further than the Laws of Reason and Probability will allow: There is, indeed, great Difficulty in attempting to settle the Time when this Transaction happened; but, according to the Chronology of *Capellus*, who seems to have studied the Point very carefully, it must have fallen out about the Year of the World 1970 ⁵.

4. The next Invasion of *India* is reported to have been by *Sesofaris*, or *Sesoftris* King of *Egypt*, who was one of the greatest Princes that ever ruled in that Kingdom: He is reported to have made use of a Fleet of 400 Sail, which he drew together in the *Red-Sea*; and is likewise said to have invented long Ships, or Ships of War, probably, when he first laid the Scheme of this Invasion, which he executed with equal Success and Deliberation, leaving behind him, as the *Egyptians* say, Monuments of his Conquests, where-ever he came. He is said to have penetrated through *India* to the Sea which separates *China* from *Japan*: Not that the Antients were acquainted with that Sea, but they report that he went much further than *Alexander* did; past the *Ganges*, subdued all *Asia*, even to the Ocean: And, if so, his Conquests must have extended to the Sea before-mentioned ⁶. He spent nine Years in this Expedition, behaving very kindly towards the Nations he conquered, and exacting from them no other Tokens of Obedience, than sending annually certain Presents into *Egypt*. The same Chronologer we have before mentioned, places the Reign of this King, or rather his Expedition into *India*, in the Year of the World 3023 ⁷. The *Ethiopians* also are said to have invaded *India*; but the Circumstances of that Invasion are so obscure, that we shall not trouble the Reader with an Account of it.

5. As to what some of the Antients report concerning *Hercules*, and his being in the *Indies*, it is more than probable that it is derived from a Tradition of the *Indians* themselves, who had an *Hercules*, as well as *Bacchus*, of their own, concerning whom they affirmed, that he excelled all other Men in Strength and Courage; that he cleared both the Sea and Land of Monsters, and wild Beasts; and that, having many Wives, he left behind him a numerous Offspring, all of them Sons, among whom, when they were grown up, he divided *India* into equal Parts, making each of them King or Sovereign of the Country which he assigned him. They likewise assert, that he founded many Cities, the most famous of which was called *Pabbotbra*, in which he built a stately Palace, strongly fortified, and surrounded with deep Trenches, into which he let an adjacent River, and thereby rendered the Place, in a manner, impregnable. After his Death, this *Hercules* of *India* was honored as a God: His Posterity reigned for many Ages after him, and performed many glorious Actions; but it is remarkable, that the *Indian* Traditions agree, that this *Hercules*, and his Posterity, never engaged in any foreign Expeditions, or sent forth Colonies into distant Countries, but contented themselves with the Possession of their own Dominions, and that plentiful Region of which they were Natives ⁸.

As dark and obscure as the Times which fall under this Period were, it is most evident that all the old Accounts represent the Country very truly, as abounding with all the Necessaries of Life; watered by many Rivers, several of which had the same Property with the *Nile*, viz. Overflowing the adjacent Countries at a certain Season of the Year, and thereby rendering them wonderfully fruitful. These ancient Accounts also, among many Fables, report some Facts truly, with respect to the Commodities

of *India*, which they represent as consisting chiefly in Gold, precious Stones, and Spices; neither are they much in the wrong with regard to Fruits, which they affirm to be larger, and more nourishing, than in other Parts of the World.

What they report of the People also, is, in many respects not credible only, but highly probable; for they observe, that tho' *India* was divided into a Multitude of little Principalities, and those inhabited by different Nations, yet they were all Natives of *India*, and not at all intermixed with Strangers, it being a constant Maxim of their Policy neither to send out nor receive Colonies, but to live quietly under their own Laws, and according to their own Customs, shewing thereby a great Dread and Dislike of Strangers, which, as the Reader will observe, has been, in all Ages, the great Characteristic of the *Indian* Genius. They further allege, as a Reason why *India* was never exposed to Famine, as *Egypt* and other rich Countries were, that there was a Law inviolably observed by all the *Indian* Nations, that, even in time of War, the Persons and Properties of Husbandmen were sacred; so that, in all the warlike Expeditions they made, they never did any Hurt to their Enemies Country, either by burning the Corn, or cutting down the Trees.

6. It must be owned, that it is very difficult to distinguish the ancient Accounts of *India* from those of later Times, because all the original Authors are long ago perished; yet, I think, there is good Ground to believe, that the Ancient *Egyptians* might have received from the *Indians* some Account of what had formerly pass'd in their Country, since it is a Point out of Dispute, that the *Egyptians* were the first People that had any Commerce with *India*, as the learned Bishop *Huet* has very justly observed: But whereas he, and other learned Men, have inclined to an Opinion that the *Indians* were, in a great measure, descended from the *Egyptians*; and that *Osiris* not only conquered that Country, but left several Colonies there; I cannot help differing from them intirely, because this is very inconsistent with that Principle of the *Indian* Policy, of neither admitting Strangers to settle amongst them, nor sending out Colonies themselves: And, as we may easily avoid this Contradiction, by supposing that the *Egyptians*, according to their common Custom, translated what they had heard of the *Indian Bacchus*, to their *Osiris*, I look upon this as the more rational Sentiment, leaving the Reader, however, to decide as he pleases.

As to the Conformity of Manners between these two Nations, on which that learned Prelate insists so much, it appears, to me, to prove nothing: For, either the Conquest of *Osiris* was general, or particular: The former the *Egyptians* themselves never pretended; and from the Situation of *Nysa*, granting the Story to have any Truth, it is plain, that his Conquest did not extend far. If, then, he penetrated only into the Frontiers of *India*, and there established his Colonies, how can we imagine, that the Manners of the *Egyptians* should extend themselves over all the *Indian* Nations, since it is a thing out of Dispute, that the *Indians*, in general, lived in Obedience to the same Laws, as appears from their Custom of sparing Husbandmen? Indeed, I think it would be no difficult Matter to prove, that tho', in some respects, the Manners of the ancient *Egyptians* and *Indians* might agree, yet, in others, they differed widely; and, even as to the Agreement of their Manners, I can see no Reason why this should not rather be attributed to the Likeness of their Countries, than to these Colonies of *Egyptians*, of the Existence of which it is impossible to afford any satisfactory Proof.

7. I am very sensible, that it may be objected against my Notion, that the *Indians* were a pure and unmix'd People: That they themselves confessed the contrary, when *Alexander* the Great invaded their Country: For *Strabo* tells us, that when this Conqueror advanced towards *Nysa Acuphis*, at the Head of thirty Deputies, came from that City, on an Embassy to *Alexander*, into whose Presence being admitted, he made the following Speech: 'The Inhabitants of *Nysa* intreat, O King, that in Reverence to *Bacchus*, you would leave the City free, and the In-

• inhabitants to govern by their own Laws; for, *Dionysus*, after he had conquered the *Indians*, and was about to return to the *Grecian* Sea, built this City for those Soldiers who were unserviceable for War, as a perpetual Monument to Posterity, of his Expedition and Victory, as your Majesty has built *Alexandria* at Mount *Vaucasus*, and another in *Egypt*; and many others, some finished, and others in Building, having now performed much more than our *Dionysus* did: And he called the City *Nysa*, from his Nurse, so named, and the Country *Nysa*; and the Mountain, which hangs over the City, he was pleased to call *Meros*, because, according to the Fable, he was cherished in *Jupiter's* Thigh. Since that Time we have dwelt in *Nysa*, as a free City, and have lived at Ease under our own Laws. And that this Place was built by *Bacchus*, this one thing may be a Demonstration; That Ivy grows no-where in *India*, but in this City.²

This may, indeed, as at first Sight it does, look like a conclusive Proof; but, I presume, when closely examined, it will have a quite different Appearance; for, in Answer to this, I observe, that, instead of proving the Conquest of *Ofiris*, this really proves the direct contrary; viz. the Conquest of the *Grecian Bacchus* exploded, as absurd and unsustainable, even by the wisest of the *Greeks* themselves. But whoever considers the Character of the *Indians*, the Turn of this Speech, and the Prayer of *Aeuphis*, at the Close of this Address, must easily discover, that the whole is no more than an artful and well-turned Compliment, calculated to lay hold of the Conqueror's Vanity, and thereby procure a Confirmation of the City's Liberties, as accordingly it did. All, therefore, that this Fact absolutely proves, is no more than this, that in the Time of *Alexander*, the *Indians* were excessively tenacious of their Liberties, passionately fond of their own Country and Customs, and very adroit in contriving the Means to avoid the Change of them. On the Whole, the Story of *Ofiris* is unsustainable, and the pure Effects of *Egyptian* Vanity; that of the *Grecian Bacchus* ridiculously absurd: But, if we admit the Reports of the *Indians*, as to their own *Bacchus*, or *Hercules*, mixed, no doubt, with Fables also, to have given Occasion to the *Egyptian* Story, as that did to the Fiction of the *Greeks*, we shall free ourselves from all Difficulties, and open a Passage to the true History of this Period, short and obscure indeed, but, however, worthy of Notice. Thus it runs.

8. The Country of *India* was very early peopled after the Dispersion of Mankind; and, being in itself exceedingly fruitful and pleasant, it soon began to grow populous, after a certain great Prince had introduced Religion, and Civil Policy, by which the People, who before lived like Savages, were formed into Societies, and taught to improve, and be content with, the happy Country they possessed. The Situation of most of their great Cities upon Rivers, and the Property of most of those Rivers to overflow at certain Seasons of the Year, obliged them to contrive, improve, and addict themselves, in an extraordinary degree, to Boat-building, and the Art of Navigation; which, as it enabled them to carry on a great Commerce amongst themselves, in a Country very extensive, and every-where very plentiful, so it furnished them also with a very considerable maritime Force, especially for those Times, capable of resisting the whole Force of the *Assyrian* Empire. This steady Resistance proceeded chiefly from their generous Notions of Liberty, concerning which, the best Writers of Antiquity tell us, that as the *Indians* had Laws peculiar to themselves, widely different from those of all other Nations: So this was the Foundation of all their Laws, being the fundamental Maxim of their Policy, laid down by their first Legislators, and from which they never departed; viz. That none among them should be a Servant, but that every one, being free, and equally intitled to the Benefit of the Laws, should, from that Consideration, be the more ready to venture their Lives in Defence of these Laws, and for the Preservation of their common Liberty.

It was the Knowledge the World had of this, that produced so violent a Passion in all the great Conquerors of Antiquity, to pretend to some Conquest over the *Indians*;

as will be fully shewn, when we come to treat of the Motives which induced *Alexander* the Great to undertake his Expedition into that Country. In these early Times, the *Egyptians* were almost the only Nation that had any Commerce with the *Indians*, which they carried on by Sea; and this it was that gave them an Opportunity of imposing, for many Ages, upon the rest of their World, by their Fictions, in relation to the Conquest of *Ofiris*: But when the *Greeks* came to be better acquainted with the *Indians*, they discovered the Falshood of these *Egyptian* Fables, and brought to Light, in some measure, the true History of these People, as derived from their own Traditions. And it is for this Reason, that I esteem the Accounts given us by the *Greek* Historians, as more antient in themselves, tho' later known to the World, than the Stories delivered by such Writers as copied the *Egyptian* Records.

9. The looking back so far into these fabulous Histories, is, indeed, very laborious, and at first Sight appears a little unnecessary; but when we consider how many great Men have employed their Thoughts upon this Subject, we ought, in Justice to their Abilities, to suppose they saw some Reason for taking so much Pains. It is, indeed, no difficult Thing to discern that Reason, which was the Desire of coming at Truth, or, at least, as near it as possible, by putting Things into a proper Method. Such as have neglected these antient Accounts, and have begun their Histories of the *Indies* much lower, have been obliged to insert many Things, necessary to explain the Transactions they record, quite out of the Order of Time; and in such a manner, that they have rather perplexed than enlightened their Relations: For that the antient *Indians* were a very wise and powerful People, whose History therefore deserved to be recovered as much as any other, appears from very different Quarters.

For Instance, when the *Chinese* Antiquities came to be looked into narrowly, it appeared that their Learning, which has made so much Noise in the World, was really derived to them from the *Indians*; their great Philosopher *Confucius* owning, in his Writings, that he had been assisted by the Lights he drew from the Philosophy of the *Brachmans*.³ The Truth of this is also manifest, by comparing what the *Greek* Writers have left us, in relation to the Doctrines of those *Indian* Philosophers, with what the Jesuits have been pleased to publish from the Works of that great Author of *Chinese* Learning. It was from the *Indians* also, that the *Chinese* derived what they knew of the Art of Navigation; and if they improved that Art to a greater Degree than the *Indians*, and made longer Voyages, this ought to be attributed to the different Geni of the People. Amongst the *Indians*, Liberty was the ruling Passion. They sought the Conveniencies of Life, it is true, by the Assistance of their Maritime Force; but they fought them among themselves, and never affected Conquests or Commerce without the Limits of *India*; which, in this Period of Time, ought to be confined within the Rivers *Indus* and *Ganges*. The Name of *India* is certainly derived from the first of these Rivers, which, being near *Persia*, was thereby first known to the Western Nations. But the ruling Passion among the *Chinese*, I mean amongst the People in general, seems to have been always the Love of Gain; which naturally led them to foreign Commerce, and foreign Conquests. It is true, that the wisest Men, and greatest Politicians, of that Empire, have been always of a different Sentiment; and have frequently remonstrated to their Emperors, the Folly and Danger of affecting to enlarge their Dominions by offensive Wars. This is plainly the Consequence of their having derived the fundamental Maxims of their Learning from the *Indians*, who went upon that equitable Principle of being free themselves, and leaving others free also.

Hence arose that great Number of Republics mentioned by the *Greek* Writers, as subsisting in *India*, when *Alexander* invaded it; and hence the many Restrictions of Regal Power, in such Places as were still governed by Kings; of which we shall find a Multitude of Instances in the succeeding Section. If the Appearance of *India* at present differs so widely from what it was represented formerly, we shall

² Dodr. Scab. lib. 2. p. 88. Strabo. Ctesias.

³ Histoire du Commerce des Indes, p. 373. discern

discern the Occasion of this Difference; and, consequently, the Credit due both to ancient and modern Accounts: For it will appear in the Course of this Work, that most of the despotic Governments that now subsist in the Indies, are the Effects of Foreign Conquests; and that the ancient Principles of Liberty, and assigning proper Bounds to Sovereign Power, are still sufficiently visible among the un-

mixed Nations of India. These are Motives sufficient to justify Inquiries of this Nature; especially when they are regularly made, confined within due Bounds, and applied chiefly to the Explanation of those Points, which make it worth our while to inquire into the Transactions of past Times, in Countries at such a Distance.

SECTION III.

The History of this Commerce in the Hands of the Idumeans, Israelites, Tyrians, &c. with some Account of its Profits.

1. *The Manner in which the Phœnicians became acquainted with this Commerce through the Idumeans.*
2. *Are intrusted with the Management of it by the Israelites.*
3. *Different Opinions as to the Situation of Ophir.*
4. *Advantageous Consequences of this Commerce to the Jews.*
5. *They are totally deprived of it, under the Reign of Ahaz, by the Assyrians.*
6. *The Tyrians aim at the monopolizing the Commerce of the Indies.*
7. *The extraordinary Means they made use of to open a new Route from those Countries.*
8. *Become thereby exceedingly rich and powerful, as well as very formidable to their Neighbours.*
9. *The City of Old Tyre taken by Nebuchadnezzar, and New Tyre erected on an Island at a small Distance.*
10. *An Account of the Troglodytes, and of the Nature of their Commerce.*
11. *Observations on the Profits of this Trade in those Times, and on the Nature of the Proofs brought to support those Observations.*

1. **T**HE whole Trade of the ancient World seems to have been divided between the Egyptians and the Phœnicians. The former had engrossed to themselves the Eastern Commerce, and the latter extended their Navigations more to the West. It is certain, that never any Country was better situated for Trade than Phœnicia, and the two great Cities *Sidon* and *Tyre*, the famous Ports thereof, which make so great a Figure in ancient History. *Sidon* stood on the Sea-shore, having behind it a fine Plain, which reached as far as Mount *Libanus*, or rather *Anti-Libanus*. The ancient *Tyre* stood also upon the Continent, was founded by the *Sidonians*, and came afterwards to make a greater Figure than *Sidon* itself.

The Inhabitants of these two Cities prosecuted Trade, and every thing that had any relation to Trade, with the utmost Diligence. The Mountains behind them furnished excellent Timber, and this enabled them to perfect the Art of Ship-building. They also made great Discoveries in Astronomy, and were particularly skilful in applying it to Navigation. They must have had early some Intelligence of the Indies, if there be any Truth in what is reported of *Hercules* of *Tyre*, that he penetrated into those Countries; for it is certain, that this Hero, who was called *Malcaibus* in the *Punic* or *Phœnician* Tongue, lived three hundred Years before the famous Expedition of the Golden Fleece: And therefore there is good Reason to doubt, that his *Indian* Expedition is a Fable; but a Fable that might be thus far founded in Truth, that the *Greeks* might endeavour to express thereby the *Phœnicians* being taught that Commerce by *Hercules*, their tutelar Divinity.

We shall however endeavour to give a clearer and more probable Account of the Manner by which they came to this Knowledge. All the rich Commodities they brought from the West by their Shipping, they distributed thro' the East by Caravans; which was and is the Method by which all Inland Commerce is carried on in the East; and this occasioned a Correspondence between them and the *Idumeans*, or *Edomites*, who were then a very powerful Nation, and possessed of very extensive Dominions.

2. These *Idumeans*, who in the Scriptures are called the *Children of Edom*, were possessed of that Side of the *Arabian* Gulph which is opposite to *Egypt*; and from them that Gulph received the Name of the *Red Sea*, by a mistaken Etymology: For the *Greeks*, finding this Gulph called the *Sea of Edom*, and inquiring what *Edom* signified, were told that it meant *Red*, from whence they called this the *Red Sea*; though, properly speaking, the *Red Sea* is that Part of the Ocean which divides *Asia* from *Africa*. Upon

that Gulph the *Idumeans* had two Sea-ports, *Elath* and *Esfingeber*; from whence they carried on a Trade by Sea, to *Arabia*, *Persia*, and *India*; and through them the *Phœnicians* came first to be acquainted with this Commerce, into which, however, they were more freely admitted by the *Israelites*.

For when King *David* had made himself Master of *Idumea*, and thereby obtained the Ports before-mentioned on the *Arabian* Gulph, he immediately resolved to establish a Maritime Power, and to carry on from thence that beneficial Trade which had been before driven by the *Idumeans*; which he did with great Success, as appears by the vast Quantities of Gold he brought in one Voyage from *Ophir*. His Son *Solomon*, who was a greater Politician, and who had both Leisure and Inclination to cultivate the Arts of Peace, resolved to make the best Use possible of those Havens; and therefore went in Person to *Elath* and *Esfingeber*, where, under his own Eye, those Ports were fortified, and Abundance of Vessels put upon the Stocks. Those who were chiefly employed by him, both in building and navigating his Fleet, were the Subjects of his and his Father's faithful Ally, *Hiram* King of *Tyre*: And by this means the *Judians* became acquainted with the Navigation to the *Indies*, in which they were ever afterwards employed.

3. I shall not enter very deeply here, into the famous Question, Where *Ophir* is situated? because, perhaps, that will be always a Question; and I would not take Things for granted, and then reason upon them, when I know that possibly they may be disputed. Yet it may not, perhaps, be amiss to mention some of the Opinions, which have been supported by the learned Men of the last and present Age. In the first place, let it be observed, that though it be said, that the Fleets of *Solomon* were three Years in making a Voyage to *Tarshish*, yet there is no Time fixed for the Voyage to *Ophir*; from whence the Commodities that were brought, are said to be Gold, Almug trees, and Precious Stones. *Eupolemus*, an old Author, quoted by *Eusebius*, asserts, that *Ophir* was an Island in the *Red Sea*. *Josephus* says, that the Country of *Ophir* yielded such vast Quantities of that precious Metal, as to be called from thence the *Land of Gold*. By the Help of these Marks, different Authors have found it in different Places.

Some will have it to be the little Island of *Zocotora*, on the Eastern Coast of *Africa*, at a small Distance from the Straights of *Babelmandel*; others imagine that it was the Island of *Ceylan*; others again contend for *Sofala* in *Africa*. The famous *Franciscus Valentius* would have us rest satisfied, that *Ophir* was no other than the Island of *Hipponia*, the

* Strabo. Diodor. Plin.
Pomp. Hæzeret. lib. ix.

* Strabo, lib. xv.
Antiquit. Juda. lib. viii.

* 1 King. ix. 25. 2 Chron. viii. 18. and ix. 10. 21.

* Apud Es.

Discovery of which was revived by *Columbus*. The *Spaniards* give the Name of the Islands of *Solomon* to certain Countries in the *South Seas*, very rich in Gold, and which could never since be found; because they imagined the Fleets of *Solomon* came thither.

But there are two Opinions infinitely more probable than any of these: The one is, that *Ophir* was the Southern Part of *Arabia*, concerning which we are told by an ancient Geographer, that two Nations called *Alileans* and *Cassanbrians*, who inhabited thereabouts, had Gold in so great Plenty, that they would give twice its Weight for Iron, thrice its Weight for Brass, and ten times its Weight for Silver. This Gold they found in Pieces amongst the Sand, sent very large, and the smallest of the Size of Olives, which needed no refining. The other Opinion places this rich Country in *Malacca*: This, I must confess, appears the most reasonable to me of them all; for *Malacca* is a Peninsula in the true *Red Sea*; which answers well enough the Description given by *Eupolemus*, and at the same time agrees exactly with what we are told by *Josephus*, having been known to Antiquity by the Name of the *Golden Chersonese*. But there is another Circumstance, that is still more remarkable: At the Distance of twelve Leagues from *Malacca*, there is a very high Mountain, which by the Natives is called *Ophir*, and which is reported to be, or rather to have been, very rich in Gold, though at present they only work some Tin-Mines that are there.

As to this Circumstance of Gold Mines wearing out, it is highly probable, and very agreeable to the Lights we receive from Experience, as to the Nature of that Metal; for the richer the Mines, the sooner they are exhausted, and the longer they are in recruiting; which, very possibly, is the Cause not only of our not finding Gold in such Countries as were famous for it among the Antients, but also of our not finding it any-where in the same Proportion that they did. This Subject I shall endeavour to set in the clearest Light possible, when I come to treat of the Riches found in *Peru*, when it was first discovered, and which were far superior to what it has produced since. But where-ever *Ophir* was, the *Phoenicians* employed by *Solomon* navigated his Ships thither, and acquired thereby a distinct Knowledge of this Course; which brought them, as shall be afterwards shewn, to a perfect Acquaintance with the *Indians*, and, in time, to the Monopoly of the Trade of them. In the mean time, let us proceed in our History of this Commerce, while in the Hands of the *Israelites*; who prosecuted it from this Time forward very constantly, sometimes with more, sometimes with less Advantage, according to the different Administrations they were under.

4. Upon the Division of the Kingdom, the Province of *Idumea* remained annexed to the Kingdom of *Judab*, or *Juda*, the Princes of which carried on this Trade with great Success from the Port of *Esfongeber*. What the Reasons were that determined the *Jewish* Monarch to prefer that Port to *Elath*, History hath not informed us; but we have a very good Account of the Causes which induced them to slight it. *Jebofapbat*, King of *Judab*, thought fit, from political Considerations, to strike up a close Alliance with *Abaziah* King of *Israel*, very probably, because allied to the King of *Sidon*; and his Country, lying nearer to *Phœnicia*, he had many Seamen of that Nation in his Service, and so came to admit him into a Share of this Trade, for the carrying on of which they fitted out a joint Fleet at *Esfongeber*.

This Fleet consisted of ten Sail, which were shipwrecked on a Ledge of Rocks, which lay before that Port, and from which Ridge of Rocks it received its Name; for, *Esfongeber* signifies the *Back-bone*; and the Rocks were in that Form covered by the Sea at High-water, and sticking up with various Points in a Line, when it was low. This Accident brought such a Discredit on that Haven, as it never recovered: And therefore, when *Jebofapbat* had fitted out, in the succeeding Year, another Squadron of Ships, it was from *Elath*; and he would not suffer his

Neighbour, the King of *Israel*, to have any Concern therein at all.

His Successor *Jeberam* lost both Ports by the Rebellion of the *Edomites*; and by this means the *Jewish* Commerce, in the *Red Sea*, suffered an Interruption of some Years: But *Uzziab*, in the Beginning of his Reign, recovered *Elath*, and fortified it again, well knowing its Importance; and from thence carried on that advantageous Trade, which had been the great Source of the Riches which the *Israelites*, and afterwards the *Jews*, possessed: For tho', as I observed, they did not carry it on always with the same Success as in the Days of *Solomon*, yet, when they carried it on at all, it brought in such constant Supplies of Gold, and other rich Commodities, that, notwithstanding the Misfortunes they met with, and the prodigious Sums extorted from them by several Eastern Conquerors, yet they quickly recruited again; and, as appears from the Sacred Writings, grew very rich in every small Interval of Peace, till they lost this Trade altogether; and then they sunk into the lowest degree of Poverty and Distress, having no way to supply extraordinary Demands; but out of the dead Stock of the Treasures they had saved in better Times.

5. This Misfortune befel them in the Reign of *Abaz*, against whom two powerful Princes confederated themselves; viz. *Rezin* King of *Damascus*, and *Pekeb* King of *Israel*, who, in a short time, conquered almost all the Kingdom of *Judab*; by which means, *Elath* fell into the Hands of *Rezin*, who immediately established there a Colony of *Syrians*, in hopes of transferring that profitable Commerce to his own Subjects, which seems to have been the great Point he had in View, when he began this War: But *Pekeb* King of *Israel*, aiming at the total Destruction of the *Jewish* Monarchy, shut up *Abaz* in his Capital, and besieged him there. On the Retreat of *Rezin*, the King of *Judab* ventured a Battle, in which he was totally defeated; lost the City of *Jerusalem*; and had an infinite Number of his Subjects, with all the Riches of his Kingdom, carried away by the victorious *Israelites*.

In this Distress, he took all the Gold and Silver, which, out of respect to Religion, the Enemy had left in the Temple, and sent them to *Tiglaib-Pileser* King of *Affyria*, the most powerful Monarch in those Parts, to procure his Assistance. This Prince, who was excessively ambitious, seeing so fair an Opportunity offer of enlarging his Dominions, immediately closed with his Proposal; attacked first *Rezin* King of *Damascus*, whom he deprived of his Dominions; and then fell upon *Pekeb* King of *Israel*, from whom he took the best Part of his Territories also; which, however, instead of proving an Advantage to *Abaz*, was in Truth, a greater Misfortune than any he had yet suffered.

For the *Affyrian* Monarch forced him to pay such heavy Impositions, under colour of reimbursing him for the Expenses of a War entered into on his Account, that they equaled, if not exceeded, the Ravages committed by his former Enemies, and reduced the People of *Judea* into the most deplorable Circumstances. These Mischiefs affected not only the People of that Age, but their latest Posterity; for now they had so powerful a Neighbour, who, at the same time, was so tyrannical a Master, that they neither knew how to bear his Yoke, nor had Strength enough to shake it off; and, which was the greatest Mischiefe of all, this powerful Prince, under colour of his Right of Conquest, kept *Elath*, and thereby deprived the *Jews* of their *Indian* Commerce, by which they had recovered from all former Oppressions, and which they never afterwards had the least Share in: So that here end all our Concerns with them.

6. The *Tyrians* were, by this time, become the most potent Maritime Power; and, having all along been employed in these Voyages to *India*, wanted only an Opportunity of possessing themselves of some Port, capable of being made the Emporium of this Commerce, in order to

¹ Kings xxii. 48. ² Chron. xx. 36. 37.

³ Kings xxii. 49.

⁴ Kings xvi. 6.

gain it wholly to themselves. This, considering their Situation, and the Means by which that Trade had hitherto been carried on, was exceeding difficult; for the *Egyptians*, and their Neighbours the *Ethiopian*s and *Troglodytes*, were absolutely possessed of one Side of the *Arabian* Gulph; and the other was now intirely in the Hands of the *Affirians*, and *Arabians*; so that there seemed to be no Possibility of their attempting any thing to Purpose, without a Land Force, which they had not, tho' their Power was so great by Sea.

This the Reader will more easily and fully comprehend, if he considers, that they had the whole Country of *Palesine*, and that of *Idumea*, between them, and the *Arabian* Gulph; and that, on the other hand, they had the whole Continent of *Africa* to sail round, in case they attempted to enter the Red Sea by another Navigation, supposing them to have, at that time, a Notion of the Possibility of such a Passage, which, I must confess, I do not believe they had. But whichever way we take the Case, their Design seems to have been obstructed by insurmountable Difficulties, which, however, did not deter them from attempting, or hinder them from achieving what appeared to them a Point of so great Consequence; which is a clear Proof, that a Spirit of Commerce is capable of undertaking and executing as great Things as a Spirit of Ambition, or the Thirst of Conquest.

7. They considered, that the Isthmus between the *Arabian* Gulph, and the *Mediterranean*, was very narrow; and that if they were in Possession of any Port, on the Side of the Isthmus next them, it would be no difficult Matter to transport by Land the Merchandize of the *Indies* thither. Such a Port they found, as if it had been prepared by Nature to facilitate the Execution of their Project, the Name of which was *Rhinocorura*, or *Rhinocolura*, situated not far from Mount *Cafus*, in the Confines of *Egypt* and *Palesine*.

The Occasion of founding this City, and Port, was very extraordinary. Some Ages before *Athanes*, King of *Ethiopia*, having defeated *Amosis* King of *Egypt*, and reduced his Country under his Dominion, caused all the Thieves and Malefactors in *Egypt*, who, by their own Law, should have been put to Death, to be assembled together; and, having cut off their Noses, that they might never escape from the Place to which they were banished, directed a Town to be built for them here, which, from the Loss of their Nose, was called *Rhinocorura*, and there he fixed them. A dreadful Situation it was, in the midst of Deserts; the Country about it excessively barren, the Soil full of Salt, and all the Waters in their Wells brackish and bitter: Yet these People, being once established, and knowing it was a Thing impossible for them to escape, applied themselves, with such Diligence, to cultivate this inhospitable Territory, that, at last, by dint of Labour, they got the better of Nature, and procured for themselves a tolerable Dwelling, which, in Process of Time, was much improved by their Posterity.

Such was the Situation of *Rhinocorura*, when the *Tyrians* cast their Eyes upon it, for the Staple or Mart of *Indian* Commodities. It quickly appeared how wisely they had taken their Measures, and how practicable this Method was, which at first seemed full of Difficulties. To understand this perfectly, it is necessary to consider the Form of the *Arabian* Gulph, which, running up between *Arabia* and *Egypt*, shoots out into two Points, almost at the Top; and thereby forms two lesser Bays, or Gulphs, with a Tract of Country between them. This lesser Gulph, on the *Arabian* Side, or more properly in the Country of *Idumea*, is, by ancient Writers styled *Sinus Elanticus*, or the *Elantic* Gulph, from the Port of *Elath*, or *Elan*, as the *Greeks* called it, that stands upon it. Whereas the Port of *Estongeber* stood on the Point of Land, that, by running out into the *Arabian* Gulph, produced these smaller Gulphs. This running-in of the Sea straightens the Isthmus so much, that the Land-carriage from *Elan* to *Rhinocorura* could not much exceed forty Miles. At this last-mentioned Port, the *Tyrians* had their Magazines, in which all these rich Goods were laid up: And, as Occasion required, and

they could be brought with Advantage to Market, they transported them from thence to *Tyre*; and they were there either sold to such foreign Merchants as resorted to that great Emporium, or else were again exported into the West, by the *Phœnician* Fleets; that is, the Shipping net of *Tyre* only, but also of *Sidon*, and all their Colonies.

8. It was this extensive Commerce, that raised *Tyre* to such a Height of Glory, and enabled her to maintain herself, for upwards of eight hundred Years, in so great Power and Splendor: Yet we are not to conceive, that *Sidon* was absolutely eclipsed by this Colony of hers; for the contrary appears, both from sacred and profane Writers: These Cities stood but sixteen Miles distant from each other, under different Governments, but united by a strict Alliance. Each of them had its Prince; but these Princes were far from being absolute Sovereigns; they were only Heads of two potent Republics, who were contented to allow them all the Pomp of Princes, provided they governed by Law, and administered the public Affairs in such a manner, as that every Man's Property might be safe. It was from this Mildness of their Government, that their Trade was so extensive; and it was in consequence of this extensive Commerce, that many private Men amongst them, lived in all the Affluence of Princes; and that the State arrived at so great Power, as, besides establishing so many considerable Colonies, to keep on Foot a constant Standing Army, composed of different Nations, for their own Defence.

At last, when the famous King of *Affyria*, *Nebuchadnezzar*, had over-run all the Kingdoms in his Neighbourhood, he found himself unable to reduce this City of *Tyre*, till after thirteen Years Siege; which is the strongest Testimony, that a Spirit of Liberty, joined to the Advantages of Commerce, is capable of supporting a very small State, against the Force, even of the greatest Empire, which seldom last so long as such Republics. It is from the Description we have of this Siege, by *Nebuchadnezzar*, in one of the Prophets, that we derive the Knowledge we have of the Wealth and Grandeur of this City, which are there painted in the most lively Colours; and with such a Multitude of Circumstances, in relation to the different Places with which the Inhabitants of *Tyre* carried on their Commerce; the vast Variety of their Exports and Imports; their wonderful Skill in Ship-building; that mighty Magnificence in their private Houses, and public Edifices; their great Wisdom, in leaving to the other Cities of *Phœnicia* their proper Manufactures, and a convenient Share of Commerce; that it is impossible to conceive a better regulated Policy, or a Government in which Things were more prudently, or more happily conducted: For it was the Envy of their Prosperity, which no Policy could prevent, that drew on them their Destruction.

9. This Siege of *Tyre*, by *Nebuchadnezzar*, was ended, in the Year of the World 3427, when he became Master of that Place. But such was the Spirit, such the Industry, such the Constancy of the *Tyrians*, that they preferred themselves, and their Republic, in spite of this Misfortune; for, as soon as they perceived, that it was impossible their City should escape being taken, when so great a Force was so long employed against it, they provided, in time, for the worst that could happen; and, by transporting their Effects to an Island, which lay at the Distance of half a Mile from the Mouth of their Harbour, preserved the greatest Part of them in a new City, which they erected there; and which, as *Nebuchadnezzar* had no Maritime Power, lay out of that Conqueror's Reach.

This was that *Tyre*, which makes so great a Figure in the ancient Historians; the Inhabitants of which preferred all the Trade they had carried on, whilst seated on the Continent, as well as the Port of *Rhinocorura*; and consequently, the Trade which they had established to the *Indies*, as we shall hereafter have Occasion to show more at large. But it was necessary, first of all, to run thro' the History of *Phœnicia*, before the City of *Tyre* was removed to an Island, to avoid that Confusion in Chronology, into which the Reader might easily have fallen, if the different

^a *Diodor. Sicul. lib. i. Strabo, lib. xvi.*

^b *Ezechiel xxvi. xxvii. Strabo. Plin.*

Routes and Stages of this Commerce had not been properly distinguished.

10. The *Phœnicians* did not only carry on a direct Trade to the *Indies* by the Way of the *Arabian Gulph*, but also with the *Ethiopians*, and other Nations, seated on the other Side of the Gulph, especially the *Troglodytes*, of whom we meet with many fabulous Accounts in ancient Writers; but what is known of them with any Certainty, may be reduced to what follows: The *Troglodytes* were seated on the *African Side* of the Bay, and towards the Bottom of it: They were divided into two different Sorts of People.

One Sort of them lived like the *Tartars*, in Tents, and subsisted chiefly on their Cattle; the others lived in Caves and Rocks by the Sea-side, where they chiefly supported themselves by fishing. The former Sort were a bold and hardy Race of People, exceedingly jealous of their Freedom; and had a singular Custom amongst them of voluntarily putting an End to their Days, when either Age or Infirmitie made Life uneasy to them, or rather made them useless to Society; and, if any of them, through Fear, delayed this too long, his Neighbour might put him in mind of the Law, and of what, amongst them, was esteemed his Duty; and if, after being thus admonished, he did not comply with the Custom of his Country, he was put to Death by the rest: And it was, by pursuing this strange Maxim, that these *Troglodytes* were always a robust active People, and had none aged, sick, or infirm, amongst them.

Such, again, as subsisted by fishing, purchased the Hides of their Countymen Beasts by way of Barter; and, with these, they traded on the opposite Coast, for such Goods as they afterwards sold to the *Phœnician Merchants* in the *Red Sea*, for such iron Instruments, and other Things, as they had Occasion for.

There is one Thing to be observed in regard to this Period of History; which is, that such Nations as engaged in Commerce in these distant Parts of the World, took abundance of Pains to represent the Inhabitants in a terrible Light; for which, no doubt, they had many Reasons; but principally these: First, that it enhanced the Value of their Commodities; for, where People run such Risques, not only from the Seas and Winds, but also from their Commerce with such Barbarians, it was natural for them to expect large Returns to balance these Inconveniences. Secondly, by spreading these Reports, they deterred other Nations from endeavouring to interfere with them in so hazardous and dangerous a Traffick.

It was the more easy for the *Phœnicians* to impose these Stories on the rest of the World, because the *Greeks* were naturally credulous, and delighted both in inventing and improving Fables; so that whatever they were told by the *Phœnicians*, they not only believed themselves, but took the utmost Pains to make these Stories circulate, by dressing them out to the best Advantage. This very clearly appears from the Works of the *Greek Writers* that are yet extant, in which we find a Multitude of these marvellous Circumstances, told with the utmost Gravity, often accompanied with many Arguments, to enforce the Belief of such extraordinary Relations: Which had, for many Ages so great an Effect, that the most absurd and improbable Fictions were received implicitly; which, no doubt, contributed greatly to hinder the Desire of making Discoveries; and was the essential Reason, why, till the Time of *Alexander the Great*, even the most learned People in the World were so little acquainted with the true State and Condition of Countries at a Distance.

11. It is very evident, from the Facts laid down in this, as well as in the former Section, that, even in the earliest Ages of the World, Wealth was chiefly acquired by Commerce; and that such Nations as encouraged Trade, were much more considerable, acquired more solid Strength, and maintained their Freedom much longer than those that depended intirely on strong Fortresses, and numerous Armies. It is certain, that we are in no Condition, from

these scattered Circumstances, that seem accidentally to have escaped Oblivion, of computing, with any Exactness, the Profits that accrued from the *Indian Trade* in these early Ages. It is, however, sufficiently clear, that it must have been prodigiously large; for, in one Voyage, *Solomon* is said to have acquired four hundred and fifty Talents of Gold; which, according to the common Computations, made considerably above three Millions of our Money: And that the like Profit accrued from other Voyages, appears very plainly, both from the mighty Gifts bestowed by *David*, *Solomon*, and the *Jewish Princes*, for the Building of the Temple, and from the Observation made by the Historians on the Reign of *Solomon*, that he exceeded all the Princes of his Time in Wealth, as well as in Wisdom, so that he made Silver to be at *Jerusalem* as the Stones of the Street, which is a metaphorical Expression to denote its great Plenty. There is another Circumstance which seems strongly to confirm the Truth of this Observation, which is, the Proportion, which, in those Days, there was between Gold and Silver, in point of Value; viz. fifteen to one: So that Silver must have been much more plentiful then, than it is now, when the Proportion is as thirteen to one. And there seems to be great Reason to believe, that the bringing in such vast Quantities of Gold as these Voyages produced, was a new thing; and, from the Thread of the History, it likewise appears, that this vast Flow of Wealth did not continue long, but sunk considerably after the Death of *Solomon*.

The immense Profits of this Trade are not only mentioned by the *Jewish Writers*, but by the *Greeks* also, and particularly by *Diodorus Siculus*, who relates at large the Manner of working Gold-mines on the Borders of *Ethiopia*; and takes notice also, that Gold was found in great Plenty in different Parts of *Arabia*; which Country, during this Period, and long after, was regarded as a Part of *India*. It would be an easy Matter to collect a Multitude of Circumstances from ancient Writers, to prove the vast Riches that these Nations were possessed of in those Times. But, as that would detain the Reader too long, and lead us, besides, into an unnecessary Digression, I shall content myself with a single Instance, that arises immediately from the Subject of this Section; viz. the Colossus of Gold, which *Neluchadnezzar* set up after the Conquest of *Syria* and *Palmyra*; which demonstrates his having acquired prodigious Treasures by plundering these Countries, in which, as the Reader has seen, the Riches, derived from the Commerce, had for many Ages centred.

It is impossible to suspect the Truth of these Relations, without overturning the Credit of History in general; for it is not the Writers of this or that Nation, who have recorded these Facts, but the Writers of all Nations are agreed as to the Truth of them. For, after the Destruction of the *Assyrian Monarchy*, the *Perians* became possessed of them; when the *Perian Empire* was overturned, they fell into the Hands of the *Macedonians*; and when the Kingdom of *Macedon* was conquered by the *Romans*, they became Masters of these Treasures; as in the Course of this Work we shall particularly shew. Now to believe, that all the Historians of these different Countries should concur, at different Times, and with very imperfect Accounts of what each other had related, in endeavouring to impose upon Posterity, is a much more incredible Thing than the Fact it would disprove.

The Source of their Riches we have already shewn; neither is it difficult to account for the Scarcity of Gold and Silver in succeeding Times. For, first, the Supplies from the rich Mines discovered by *Solomon* began, in a great measure, to fail in the next Place, these Treasures, which, for many Ages, were confined to a few Countries, were, after the Ruin of the *Roman Empire*, dispersed all over *Europe*, and amongst many Nations, that had very little Gold or Silver amongst them before: Besides, the burning of Cities, and great Devastations of Countries, which followed from the *Furians* of the *Goths*, *Vandals*, *Huns*, and other barbarous Nations in the West, and of

^a *Diodorus Siculus*, lib. iii. c. 2. *Strabo*, lib. xvii. p. 798. *Plin. Hist. Nat.* lib. v. Where this Image, with its Pedestal, is said to be ninety Feet high: But we read, in *Diodorus Siculus*'s second Book, that this Image alone was forty Feet high, and contained a thousand *Babylonish* Talents of Gold, which amounts, at the lowest Computation, to three Millions, and an half of our Money.

^b *Strabo*, *Plin. Hist. Nat.* lib. xvii. *Ptolemy*, *Plin. Hist. Nat.* lib. v.

^c *Diodorus Siculus*, lib. iii. p. 122.

^d *Diodorus Siculus*, lib. iii. p. 122.

^e *Diodorus Siculus*, lib. iii. p. 122.

the *Saracens*, *Turks*, and *Tartars*, in the East, having wasted and destroyed a great Part of the Gold and Silver with which the World before abounded; this induced that great Scarcity of both, which afterwards ensued, and which the Mines of *Mexico*, *Peru*, and *Brazil*, have not as yet been able fully to repair.

I might add to all this a new Series of Facts, in relation to the immense Wealth, and prodigious Revenues, of the Eastern Monarchs, even at this Day, and particularly the amazing Plunder of the *Mogul's* Treasury by *Thomas Kouli Kan*, but a very few Years ago; which, as they would demonstrate, that there are still as great Funds of real Wealth in those Countries, would certainly be a rational Argument, that there might be formerly those excel-

five Profits drawn from the Commerce of *Arabia* and *India*, which the Authors cited in this Section report. But it is now time to resume the Thread of our Narration, and to shew, how a great Part of this Trade came to be diverted into a new Chanel by the Rise of the *Persian* Empire, which is to be the Business of the next Section: And, by the Prosecution of this Method, we shall acquire new Lights, and greater Certainty, with regard to the Matters of Fact laid down in this; for, as the *Persians* were nearer Neighbours to the *Indians*, and, in the Progress of their Conquests, became Masters of a Part of their Country, so they drew from thence, in Proportion, much greater Advantages than their Predecessors had done.

* See *Frazer's* accurate Account of that Expedition.

SECTION IV.

Of the Indian Commerce under the Persian Empire.

1. The Rise of the Persians, from a small Province, to the Empire of the East.
2. On the Destruction of Babylon, all the Money and Gold Plate received by Darius.
3. The Conquest of Egypt by Cambyses, which ruins their Indian Traffick.
4. Darius Hyllaspes sends Scylax, a Greek, down the River Indus, into the Ocean.
5. Undertakes and completes the Conquest of the Indian Provinces adjoining to Persia.
6. Nerves, the last of the Persian Monarchs that minded Maritime Affairs.
7. This Conduct considered and accounted for.
8. The Indian History of Ctesias, what it sees, and what Degree of Credit it deserves.
9. Other Accounts of the Indies within this Period.
10. The singular Voyage of Iambulus from Ethiopia to the Indies.
11. A great Mixture of Truth with these extravagant Reports.

1. **T**HE great Conquests of *Nebuchadnezzar*, instead of establishing his Empire, proved the Ruin of it; for his Son behaved so ill, and treated his Neighbours so haughtily, that he first raised that Spirit which produced the Ruin of the *Assyrian* Monarchy. This proceeded from the close Conjunction of the *Medes* and *Persians*, Nations that lay immediately behind his Dominions, and were at that time very little known in the World, and for whose antient History we are still much at a Loss. We know, however, that *Persia*, in these early Ages of the World, was but a very small Part of that Country which now passes under that Name. It was, properly speaking, no more than what is now contained in the Province of *Lora*, bounded on the North by the Kingdom of *Media*, of which *Partbia* was then a Province; on the East, by *Carmania*; on the South, by the *Persian* Gulph; and, on the West, by *Susiana*; and, even within these narrow Bounds, there were many different Nations, so that the exact Seat of the original *Persians* can hardly be assigned.

But their Monarch *Cyrus*, who destroyed the *Assyrian* Empire, extended not only his own Authority, and the Power of the *Persians*, over all his Neighbours; but likewise the very Name of *Persia*, which has comprehended, ever since, a very large Tract of Country, of which *Proper Persia*, as before described, makes only a small Province: For the *Persia* of the Antients, after the Reign of *Cyrus*, was bounded on the North by the *Caspian* Sea, and Part of *Syria*: On the East, by the *Indian* Nations: On the South, by the *Indian* Ocean, and *Persian* Gulph: On the West, by the Rivers *Euphrates* and *Tigris*, an high Ridge of Mountains, and the River *Araxis*, which falls into the *Caspian* Sea. The antient *Persians* were certainly a very brave and warlike People, for which they were extremely well fitted, by their hardy and laborious Course of Life. There is scarce any Instance in History, of an Empire so quickly raised, as this of the *Persians*, which was originally designed, and absolutely perfected, by one Man.

Cyrus was the Son of *Cambyses*, according to *Xenophon*, King of *Persia*, but, according to other Writers, a Nobleman only of that Country, by *Mandana*, Daughter of *Ahyages*, King of the *Medes*, to whom the *Persians* were then Tributaries. He was of a martial Spirit, and had what is great Wisdom, that, being employed by the King of *Media*, his Uncle, as General of his Army, he,

in the Space of twenty Years, intirely conquered *Lower*, *Upper*, *Asia*, and all the Dominions of *Nebuchadnezzar*, whose Grandson *Nabonadius*, was killed at the taking of *Babylon*, in the Year of the World 3460, or thereabouts; and thereby established the *Persian* Empire: For he soon after succeeded his Father, and his Uncle, in both their Kingdoms; and thereby attained to the largest Sovereignty that hitherto had been erected in the East.

2. It was absolutely necessary, to state the Beginning of this Empire clearly; for, having so much to say of the Successors of *Cyrus*, who first brought the *Indians* to the Sight and Acquaintance of the *Europeans*, it was requisite, that the Nature and Extent of their original Dominions should be known. *Cyrus* delivered up the *Babylonish* Empire to his Uncle *Darius*, King of the *Medes*, who did not long survive it; but, during the time he did live, *Cyrus* made an Expedition into *Syria* and *Egypt*, both which Countries became tributary to him; by which he gained, at once, a great naval Force: For the *Phenicians* finding that he had required nothing from them detrimental to their Interest, or Commerce, but, on the contrary, was willing to regard them as his Allies, willingly accepted this Condition, and assisted him and his Successors with their Fleets, as long as the *Persian* Empire lasted.

Amosis, King of *Egypt*, submitted, on the same Principle of yielding a titular Homage to the *Persian* Monarch, and reserving to himself the Obedience of his Subjects, and the full Possession of the Kingdom; which was, at that Time, accepted by *Cyrus*, who sought to settle the Empire as soon as possible; and therefore required no hard Conditions from any. While *Cyrus* was thus employed abroad, *Darius* the *Mede*, who resided at *Babylon*, caused all the immense Treasures of the *Assyrian* Kings to be coined into Money, which, from him, received their Name; and the Pieces of Gold were called *Daries*, and Half-daries, which were not much unlike our *Guineas*, but the *Darie* weighed but two Grains more, but in Value it came nearer the *Jacobus*, because the Gold had scarce any Alloy: And this continued to be the current Money of the East for many Ages.

Some of the greatest Writers of Antiquity assert, that the last Expedition of *Cyrus* was against the *Massagetian* and *Scythian* Nation, governed by a Woman; and that in this Expedition he was killed: But *Xenophon* asserts, that he died peaceably in his Bed, surrounded by his Friends. And

* *Xenophon Cyropædia*, lib. 1.

† *Suidas* in voc. *Sagætes*.

‡ *Herodotus*. *Diadema Sicula*. 73^{vo}.

what seems to confirm this last Opinion is a Fact, in which all Writers agree, that his Body was interred at *Pasagarda* in *Persia* ^a.

3. On his Demise, his Son *Cambyses* succeeded, from whom *Amasis*, King of *Persia*, withdrew his Obedience; which produced a War, in which *Cambyses* became victorious, chiefly by following his Father's Maxims: For, upon this Occasion, he made use of the Fleets of the *Phœnicians*, who furnished him with as great a Force as he could wish; probably, because they were desirous of getting rid of these Rivals in Trade, which effectually answered their End, since the *Egyptians* never after recovered their Freedom, nor were permitted to meddle with the *Indian* Commerce. This *Egyptian* War gave Occasion also to a Treaty between this *Persian* Emperor, and the King of that Part of *Arabia* which lies between *Palestine* and *Egypt*, who, in Consideration of a Subsidy paid him by *Cambyses*, furnished his Army with Water, which enabled him to march thro' the Deserts without any Difficulty ^b.

His Success in this Expedition, engaged him in another against the *Ethiopians*, in which, however, he was very unfortunate, losing the best Part of his Army, and being obliged to retire, without doing any thing considerable. He had an only Brother, whose Name was *Smerdis*; and him, from an ill-grounded Jealousy, he caused to be murdered: The Fact was done privately, which gave an Opportunity to one of the Magi, of the same Name, to personate that Brother, and excite a Rebellion. *Cambyses* returned into *Persia*, and, going to attack the Rebels, had the Misfortune, as he was mounting his Horse, to have his Sword fall out of the Scabbard; by which he received a Wound in the Thigh, and died of it in a few Days. *Smerdis* enjoyed the Empire for some time; but the Cheat being discovered, he was cut off by the Princes of *Persia*, and *Darius*, the Son of *Hystaspes*, who was Governor of *Persia*, was raised to the Throne, in the Year before *Christ* 521: And, to give an Air of hereditary Right to his Family, he married *Atossa* the Daughter of *Cyrus* ^c.

4. This *Darius* was a Prince of great Capacity, and great Ambition. He had always abundance of Strangers about his Court, especially *Greeks* and *Phœnicians*, whom he employed preferably to his own Subjects, in many of his Designs. He was particularly studious in the Enlargement of his Dominions; and, having already extended them as far as the Borders of *Scythia*, he formed a Design of invading and subduing the neighbouring Nations of *India*: But, before he proceeded on to so hardly an Undertaking, he was determined to be better acquainted with that Country than other Princes had been; and therefore, in the thirtieth Year of his Reign, he ordered a Fleet to be built at *Casparys*, a City on the River *Indus*, but on the Frontiers of *Scythia*; and employed one *Scylax*, a *Carian* by Birth, of the City of *Caryandia*, to sail down the River into the Southern Ocean; and then to return, by steering Westward; giving him Orders to make the best Discoveries he could, as to the Strength and Riches of the Countries on both Sides of the River, as also of the Sea-coast, that he might be well apprised of the Force necessary to execute this Design, and of the Value of the Conquest, when made ^d.

This, I take to have been the first regular Expedition that was ever made against the *Indians*; and, without doubt, it was very wisely contrived. This great Prince had been before disappointed, in an Expedition he had made against the *Scythians*, from which he narrowly escaped; but, having conquered *Thrace*, in which were the richest Silver Mines then known in the World, he was very desirous of being Master also of those Countries, in which Gold was found. And this appears to have been the principal Motive to his undertaking the Conquest of the nearest Part of *India*.

5. *Scylax* executed the Commission, with which he was intrusted, with equal Skill and Fidelity: And, having passed down the River *Indus* into the Ocean, he returned by the Streights of *Babelmandel*, and the *Red Sea*, landing on the Coast of *Egypt*, near the Place where the Town of *Suez* now stands, and from whence *Necho* King of *Egypt* had formerly sent a Fleet, manned by *Phœnicians*, to sail

round the Coasts of *Africa*. This Voyage *Scylax* performed in thirty Months; and, going from thence to *Susa*, where *Darius* then kept his Court, he made a full Report to him of his Discoveries; and laid before him a Plan for the effecting his designed Conquest. In order to this, it was requisite to have a considerable Naval Force, and that, too, manned by Persons of Experience: And therefore *Darius* made use of the *Lyrians*, who were best acquainted with that Navigation, and, with their Assistance, brought a numerous Fleet upon the Coast, at the same time that he entered the Country with a great Army by Land.

An Expedition, undertaken with so much Care and Precaution, could hardly miscarry ^e. In short, the *Indians* were subdued, became Tributaries to the *Persian* Emperor, and promised to furnish him with a considerable Body of Troops, whenever they were required to do so: And, besides this, they paid him yearly 360 Talents of Gold; that is, a Talent for every Day, the *Persian* Year consisting then of 360 Days only. The *Euboic* Talent, according to which this Tribute was to be paid, was, by the lowest Computation, worth upwards of 3000 *l.* of our Money; and, consequently, this Tribute amounted to 1,095,000 *l. Sterl.* which is one of the Proofs, we promised to give, of the Wealth of this Country; and how great an Accession of Power the bringing in such an annual Supply of Riches must create, at a Time too, when Money had as great an Influence as at this Day, we may easily conceive. There is no doubt, that this Conquest made way also for a much freer Commerce among the Subjects of the *Persian* Provinces bordering upon *India*, and their Neighbours the *Indians*, than in former Times; which greatly contributed to the Advantage of all the Subjects of that Empire, even those who lay at the greatest Distance from the *Indies*. We need not only consult the *Greek* Historians, to be thoroughly persuaded of this, who every-where complain of the Force of the *Persian* Gold, the Influence of which had more dreadful Effects, than all the military Power of that mighty Empire ^f.

6. *Xerxes*, the Son and Successor of *Darius*, spent the greatest Part of his Reign, in Contentions with the *Greeks*; and, raising, on this Occasion, many puissant Armies, he demanded, and obtained from the *Indians*, a Body of Troops, which served in several Expeditions. He was a Prince of great personal Abilities, and seems to have had better Notions of the Consequence of a Naval Force, than any of his Successors: For he intended to have sent *Saraspes*, his Sister's Son, with a Fleet, to have surrounded *Africa*; but, being occupied by other Affairs, he let fall that Expedition, and with it seems to have sunk all Thoughts of making a Figure on this Side: For, notwithstanding that *Persia* is exceedingly well situated for Trade, and that these Emperors might easily have made it the Centre of all the Commerce of the East, yet, turning their Thoughts intirely towards *Europe*, they neglected what might have been so very advantageous ^g.

Nay, they carried their Indifference, in this respect, to a Degree much beyond Negligence; for they made it a Maxim of their Policy, to hinder, as far as they were able, all Navigation on the *Persian* and *Indian* Coasts, by choaking some of the principal Rivers. But, on the other hand, they encouraged the Commerce of their Subjects with the *Indians* by Land, persuading themselves, that, by this Management, they should secure to their Subjects the Possession of the immense Wealth they drew from the *Indies*; and, at the same time, prevent any Invasions by Sea. It is highly probable, they were led to take such Measures, by the frequent Rebellions of the *Egyptians*, who, they apprehended, might be too powerful for them by Sea, in case the free Navigation of those Coasts had been allowed them: And this accounts for the little Knowledge the *Greeks*, and all the rest of the World, had of the *Indies*, notwithstanding that a Part of them was actually become a Province of an Empire, with which they were so well acquainted ^h.

7. It is very difficult, notwithstanding these Reasons, to comprehend how the Spirit and Genius of this Empire

ⁱ *Herodot.* *Ctesias apud Athenæum*

of inquiring into the Accounts, which, in earlier Times, the *Egyptians* had received of the *Indians*. They had likewise a very strict Intercourse with the *Tyrians*, who still preferred, in virtue of their strict Alliance with the *Perfians*, that Commerce which they had settled with the *Indies*, in the manner we have described in the last Section: And, as in this Period of Time, the *Greek Learning* was at the greatest Height, and as many of their Philosophers and learned Men travelled into the most distant Countries, purely for the sake of Information, we cannot doubt, that so curious and so useful a Subject escaped them.

It is, however, true, that some of them took such a Method in relating their Discoveries, that it is not easy to discern, whether they intended to write Histories or Fables; of which we have Instances in the Fragments that still remain of *Solon*, the great Law-giver of *Athens*, who was also a great Traveller, and spent a long time in *Egypt*; who brought home from thence an Account of a Discovery, made by the *Egyptians*, of an Island, in a far distant Climate, equally rich, fertile, and pleasant, and remarkable for the singular Manners of its Inhabitants. *Plato*, the most celebrated Philosopher of *Greece*, took Occasion from hence, to compose a fine Dialogue upon this Subject; in which he introduces *Solon*, and an *Egyptian Priest*, discoursing upon this Discovery; and therein gives us a long and entertaining Account of this new Island of *Atlantis*; but, in such a manner, that it has been, to this Day, a Question, whether the Whole be not an elegant Fiction. *Xenophon*, who was one of the gravest Historians, and, without Controversy, one of the best Writers among the *Greeks*, has also given such a Turn to one of his best Performances, I mean his *Cyropædia*, that Posterity has been at a Loss to know, whether it was to be understood as a History, or a Romance; and the latter Opinion seems to have prevailed.

Yet, it is highly probable, that there is a great deal of Truth, mixed with Fables, in both these Works; and that their Authors, though they had chiefly in View instructing their Readers in moral Philosophy, might, notwithstanding, insert many Matters of Fact, as they really happened: But how to distinguish these, is a Question not easily answered. There is, however, extant, in a *Greek Historian*, the History of a Voyage, undertaken in a singular Manner, and as surprisngly executed; which is related in a plain and simple Style; and, as it seems to have been the first ever made to the *Indies*, of which we have any distinct Account, I shall give it the Reader as near as possible in the Words of the Author; the rather, because, though it is very curious and entertaining, yet I do not remember to have seen it in any of our Collections of Voyages, at least in its full Extent; and, without taking in all its Circumstances, it is impossible for the Reader to apprehend it clearly, or to pass a right Judgment upon it.

10. There was one *Iambulus*, who, from his Youth, was addicted to Learning: His Father was a Merchant; and, after his Decease, he applied himself, with great Diligence, to the same Profession. This Man, travelling into *Arabia*, in order to purchase Spices, was there taken Prisoner, with all his Company, by a Party of Robbers. At first, he, and one of his Companions, were employed in keeping Sheep; but they were soon after carried off by the *Ethiopsians*, inhabiting the Coast, who conveyed them into their own Country, in order to serve a very extraordinary Purpose. For these *Ethiopsians* had a Custom, which had then subsisted six hundred Years, and was originally derived from the Direction of an Oracle, to expiate the Sins of their Nation once in an Age, or Generation, which with them comprehended the Space of thirty Years, by exposing two strangers, in the following manner.

They prepared a little Vessel, well built, and extremely well equipped, with Provisions for six Months, on board of which the Men were put, at a certain Season of the Year, with Instructions to steer directly South, in order to arrive at a certain fortunate Island, inhabited by a kind and hospitable People, with whom they might live happily all the rest of their Days. The Oracle declared, that, if these

Men succeeded in their Voyage, the Country would enjoy Rest and Quiet for many Years; but, if, frightened by the Dangers of the Sea, they should return, it was ominous to *Ethiopia*; and, therefore, they threatened *Iambulus*, and his Companion, with the severest Punishments, in case they did not prosecute their Voyage. When the Season of the Year came, the *Ethiopsians* celebrated the Festival of Purification with most splendid Sacrifices; and then, having crowned each of them with Garlands, they put *Iambulus*, and his Companion, on board the Vessel that had been prepared for them, and obliged them to put to Sea.

They were four Months to's'd by the Winds and Waves, before they arrived on the Coast of the Island to which they were bound; at length they reached it safely. In its Form it is almost round, being about five thousand Stadia in Compass, containing about five hundred of our Miles, if we allow six hundred Stadia to a Degree. As soon as they came within Sight of Land, the People on the Island crowded on the Shore, to behold them: And, when they landed, Multitudes came from all Quarters, to gaze on, and admire them, wondering how they came thither; but treating them with the utmost Kindness and Civility, and offering them, with the greatest Readiness, whatever their Country afforded.

These People differed not a little from other Nations in their Appearance, as well as in their Manners; for they were all of a pretty equal Size, each of them about four Cubits, or six Foot high. They bent and turned their Bodies with such Agility, that their Bones seemed, to our Travellers, as flexible as the Sinews of other People: Their Bodies were very tender; notwithstanding which, they were so strong, that whatever they grasped, could not be forced out of their Hands. On their Heads, Eyebrows, Eye-lids, and on their Chins, they had Hair; but the rest of their Bodies perfectly smooth. They were handsome, and well-shaped; only the Holes in their Ears were much wider than those of other Men, and had fleshy Protuberances in them. Their Tongues were very singular, being by Nature somewhat divided, and cut in their Infancy to the very Root; so that they seemed double; which enabled them to imitate the Notes, and even the Chatterings, of Birds: And, if our Travellers say true, they could discourse with two People at once.

This Island is situated in a most excellent and moderate Climate, lying very near the Equator; so that the People are neither scorched with Heat, nor pinched with Cold, enjoying, at once, all the Seasons, without any Division, like ours, of Spring and Harvest; so that, as *Homer* sings,

*Here ripe and green, at once, their Fruits appear,
And Figs and Grapes are gather'd through the Year.*

The Days and Nights are there always of equal Length, neither is there any Shadow at Noon-day, because the Sun is directly in the Zenith. They are divided into Tribes, according to their Kindred, and into distinct Societies; yet so, as there are not above four hundred admitted into any one Tribe. They live in Meadows, where they are plentifully supplied with all things necessary for Food, by what the Earth produces; for the Fertility of the Soil, and the Temperature of the Air, are such, that Corn grows there of itself.

Plenty of Calamus, probably Maiz, grows there, whose Fruit is like to white Vetches: When they have gathered it, they steep it in hot Water, till it puffs up to the Bigness of a little Egg; then bruising it, and rubbing it in their Hands, they knead it into Dough; and so bake and eat it, being exceeding sweet and delicious Bread to the Taste. There are there both hot and cold Baths, which are for the curing and preventing of Dilempers, being exceeding sweet and pleasant. They are learned in all Sorts of Sciences, especially in Astrology. They use eight-and-twenty particular Letters, for the expressing what they mean, composed of seven Characters; each of which is varied four Ways. They live long, without ever being sick, and commonly to one hundred and fifty Years of Age.

⁹ *De Insul. Atlantide.*

¹⁰ *Diador. Scæv. lib. ii. cap. 4. p. 66.*

Such as are lame, or have any other Weakness or Infirmity of Body, according to the severe Law of their Country, are put to Death. They write not cross the Sheet, as we do, but begin at the Top of the Leaf, and go, in a direct Line, down to the Bottom. They have a Law, that they may live to such a certain Number of Years, when, tho' scarce expired, they dispatch themselves by a strange kind of Death; for there is an Herb of such a Nature, that grows among them, upon which, if any one lies down, he silently passes away, and dies without any Sense of Pain, as if he were in a sweet Sleep. They never marry, but make use of Women promiscuously; and breed up the Children, so begotten, with equal Care and Affection to one, as well as to another: The Children, while they are Infants, are often changed by the Nurses; so that they cannot be known by their Mothers: And therefore, by that means, there being no Ambition among them, they live in great Concord and Amity, without any Seditions or Tumults.

There are Beasts among them very small, but of an admirable Property as to their Flesh, and the excellent Virtue of their Blood. Their Bodies are round, and something like to a Tortoise, divided by two Streaks, which run down the Back: At each End of every Streak, they have an Eye, and a Mouth; so that they have four Eyes to see with, and four Mouths to feed with: But the Meat they eat, is conveyed through one Throat, and thence into the Belly, the common Receptacle of all; and so, in like manner, they have but one Gut, and the rest of the inner Parts: They have many Feet, placed round their Bodies, and make use of them to go on what Side they will. There is this wonderful Virtue in the Blood of this Creature, that it presently, in an Instant, closes all Wounds in every Body that has still Life in it; and if a Hand, or any other Member, that is not vital, be cut off, by the Application of this Blood, while the Wound is yet green, it heals up again.

There are certain great Birds kept by each Tribe, on purpose to try the Tempers of their Children; for they let them, when young, upon those Birds; and if, in flying in the Air, they sit fall, and without Fear, they bring them up; but, on the contrary, if their Hearts fail them through Cowardice, they cast them away, as unworthy of living any longer, and unfit for any Exercise of the Mind. The antientest Man of each of these Tribes commands, as a King, over the rest; but when he has accomplished the Age of one hundred and fifty Years, he is obliged to kill himself, and the antientest, next to him, succeeds in the Principality. The Sea that washes the Coast of this Island is very stormy and tempestuous, but the Water of it is not salt; yet, by reason of this Agitation, the Tides rise high, and are very irregular; the Concellations about the North Pole are not visible here.

It is necessary to inform the Reader, that there seems to be here a Chain in the Relation; at least, so many Commentators think. But, perhaps, the Reader may be of a different Opinion, and believe, that the Author is only a little abrupt in his manner of Expression. He goes on thus:

These Islands are seven in Number, equal in Bigness, and of the same Distance from one another, and the same Laws and Customs are used in all of them; and, though these Islands afford Plenty of Provision, out of the natural Growth of the Country, to all the Inhabitants, yet they use them not luxuriously, but are frugal, and take only so much as will serve their Turns: They do indeed dress for themselves Flesh-meat, and all Sorts of Victuals, both roasted and boiled; but for Sauces, and other delicate Inventions of that Kind by Cooks, and the various Tastes and Savours contrived for curious Palates, they are altogether ignorant of them.

They worship, in the first place, the whole Frame of Heaven, because it comprehends all Things; and, next to that, the Sun, and then all the celestial Bodies. By various Ways of Fishing and Fowling, they catch Fish and Fowl of all Sorts. There are among them abundance of Fruits, Vines, and Olive-trees, whence they draw great

Quantities of Oil and Wine. There are here very great Serpents, which yet do no Harm to any body, nay, their Flesh is good Meat, and sweet. They make their Garments of a soft fine Cotton, contained in certain Reeds and Canes. This Cotton they dye with the Shell-fishes called Ostresses, made up in Balls, and mixt and wrought amongst the Wool; and so, with great Pains, make themselves Garments of a purple Colour. The living Creatures here are of such different Natures from all others, that, should we mention them, it would seem incredible, because they are unusual.

Their way of feeding is according to a prescribed Rule; for they do not eat all Sorts of Meats together at one and the same time, nor always the same; but, upon some certain Days, Fish; upon others, Fowl; sometimes the Flesh of Land-cattle; at other times Olives; and, on other Days, very low Diet: They help each other in their Callings by Turns; some employ themselves in Fishing, others in Manufactures, and some in other Things, useful and profitable to the Commonwealth. Some exercise public Offices, except those who are grown old. Upon their Festival-days, and invoking their Gods, they celebrate their Praises in Songs; especially the Sun, to whom they devote themselves, and their Island. Their Deal they carry to the Sea-shore, at the Fall of the Tide, covering them with a little Sand, that, at the time of full Sea, Heaps of Sand may be raised higher upon them. These Canes, whence they gather Fruit to eat, are about an Inch in Thickness. They affirm, that, towards the Full of the Moon, they increase; and, towards the New-moon, they proportionally decrease. The Water of their hot Springs is sweet and wholsome, and ever continues warm, never growing cold, unless it be mixed with Wine, or cold Water.

After *Iambulus*, and his Companion, had continued in this Island seven Years, they were compelled to depart, as Persons of a vicious Life, and not to be broken of foreign Customs. Their Ship therefore being again fitted out for them, and well furnished with Provisions, they were constrained to put to Sea; and, after continuing their Voyage for above four Months, they fell, at length, upon the sandy Shallows of *India*, where his Companion was drowned, and himself was afterwards cast ashore near certain Village, and carried away by the Inhabitants of the Place, to the King, then at a City called *Pelimbethra*, or *Pelimbethra*, many Days Journey distant from the Sea; where he was kindly received by that Prince, who had a great Love for the *Greeks*, and was such as in the liberal Sciences. At length, having obtained Provision from the King, he still sailed into *Perfia*, and from thence first arrived in *Greece*. It was *Iambulus* himself, who committed the Substance of this Account to Writing; and thereby communicated to the World many Particulars in relation to *India*, which were absolutely unknown before.

In the celebrated Collection of Voyages by *Samuel Ramusio*, this Voyage of *Iambulus* is inserted at large; and I have been very careful in comparing the Translations. As it is the Custom of that Writer to interpolate the Relations he meets, by Discourses of his own; in which, without Doubt, he has given the highest Praises of his Capacity, as well as Diligence, so in that, upon this Voyage, it has been peculiarly careful, not trusting to his own Judgment alone, but having recourse to a *Portuguese* Gentleman of his Acquaintance, who had been long in the *Indies*, was perfectly acquainted with the Navigation in those Seas, the Seasons of the Year, and the Customs and Manners of the People, to whom he read over his Translation of this Voyage, in order to have his Opinion as to the Place, and, as to the Adventures that are mentioned in it. On this Examination it appeared clearly to them, that the Desire of pleasingly suspending the Reader had produced some extraordinary Passages in this Narration; but that, in the Whole, it was highly probable the essential Part of it was true; and so much the more probable, because, considering the Lights they had in those Days, it was not possible for any Man to feign it.

As the Design of *Iambulus's* Voyage was to purchase Spices in *Arabia*, it is very likely he failed down the *Red Sea* to the famous Mart of *Zeyla*; and in going to, or returning therefrom, might fall into the Hands of some of the wandering Inhabitants of that Country, who have always subsisted by Plunder: The Circumstance of his being employed with his Companion to keep Sheep, is highly probable; for, according to the best Accounts we have of those Nations, that was the only Service, in which they were like to employ them: While they were thus occupied, the second Misfortune befel them of being stolen off the Coast by *Ethiopian* Privateers; which was also no unusual Thing in those Days, especially among the *Traglozytes*, who enriched themselves by this Practice: After he was taken by these People, he was carried into the maritime Parts of *Ethiopia*; which is a very general Expression, the Sense of which is not easily fixed.

Our *Portuguese* Traveller thought, that *Iambulus* might very probably be carried as far as the Kingdom of *Magadava*, which lies within two Degrees of the Line, and on the other Side of *Cape Guardafuy*; which, I must confess, is possible, without supposing these Pirates, in their little Bark, to have passed the Straights of *Babelmandel*, or to have doubled the Cape; because they might have landed in the Gulph, and have carried him and his Companion by Land. Here then we are to place the Scene of the next Transaction, and the turning these poor Men a-drift into the Ocean, at the Season of the Year when the Trade-wind was like to carry them directly to the *East-Indies*. Our *Portuguese* seems to be of Opinion, that this Island, to which they were driven after a Voyage of four Months, must be the great Island of *Sumatra*, which lies immediately under the Equinoctial, and extends itself five Degrees on each Side the Line; so that, if *Iambulus*, and his Companion, came on shore in the South Part of that Island, the Description he has given of the Climate, the Length of Days, and the not seeing any of the Northern Constellations, would be very exact*. Our *Portuguese* is the rather inclined to embrace this Opinion, because of the Circumstances that attended his Return, in which he spent four Months, before he reached the Continent of *India*. He supposes therefore, with great Probability, that he landed near the Mouth of the *Ganges*, and so came to the City of *Palmboetra*, which was there situated, a Place very famous among the Antients, and which, as we have before informed the Reader, was supposed to be built by the *Indian Hercules*. It must be allowed, that these Reflections are very curious, and very judicious, as well as the Observation of the same Gentleman, that it is not probable *Iambulus*, and his Companion, should be able to navigate their small Bark to any of the Islands of the *Moluccas*.

Yet, after all, some Objections may be raised against this Account, that are not easily answered; for, in the first place, as to their Passage, they must have necessarily passed through that great Chain of Islands, called the *Maldives*; and it is not at all probable, that in their Circumstances they should continue their Voyage any farther than the first Land they met with: But if we pass by this Difficulty, and suppose that they fell through the Southern Passage, in the Latitude of three Degrees, and so had no Sight of any of those Islands, but fell directly on the South Point of *Sumatra*, yet this brings us under a new Difficulty; for the first thing we meet with, in the Voyage of *Iambulus*, is the Figure of the Island, upon which he and his Companion landed: And, as to this, he tells us expressly, that it was round, or at least, very near it, than which nothing can be more irreconcilable to the Figure of the Island of *Sumatra*, which is very long, and very narrow: And, though we should endeavour to help this, by supposing *Iambulus* took this upon Trust from the Natives, yet it is very difficult to conceive this for two Reasons; First, because it is no way probable that a Nation so just and prudent, as he describes the People among whom he lived to be, should impose upon them in this respect, to no Purpose; and next, we can hardly think he should live there seven Years without discovering the Falshood of this Report, the Island being no-where above seventy Miles broad.

There is another Circumstance no less destructive of this Supposition; which is, the Vicinity of this Island to the Coast of *Malacca*, which does by no means agree with what is related by *Iambulus*. I must own, that if we should suppose *Borneo* to be the Island he has described, it would be attended with as great, or rather, with greater Difficulties; for they must then have passed in their little Bark the Straights of *Sunda*; and there is no assigning any Reason why they should continue their Voyage to *Borneo*, and leave the Islands of *Sumatra* and *Java* behind them: Besides, the Navigation from *Borneo* back again, would have been much more difficult and perplexed than that from *Sumatra*.

Perhaps, after all, the Island of *Java*^b is liable to fewer Objections than either *Sumatra* or *Borneo*, if we can suppose, that they could make so long a Passage in such a Vessel: And indeed this seems to me the greatest Difficulty of all; and therefore I should rather incline to think, that this Island was one of the *Maldives*, though I do not deny, that there might be many Objections raised also against this Opinion. The intelligent Reader will from these Remarks, however, be the more able to settle his own Opinion of this Matter; and I dare say, will not think it reasonable to conclude the whole Voyage a Fiction, because it is not easy, at this Distance of Time, and for the Want, perhaps, of some necessary Circumstances, to decide with Certainty, what Island it was where *Iambulus*, and his Companion, made their Residence for so many Years.

11. We have given the Whole of this Relation, that it might be the better understood. It is generally taken for granted, that the Island here described is that which in antient Authors is called *Taprobana*; of which Island, supposing them the same, we have a very copious Description in the Natural History of *Pliny*^c: In which Description of his there are Abundance of curious things; but, I must confess, it is by no means clear to me, that this Island has any thing to do with that Relation. In the first place, they differ in Size; for, whereas this is said to be five thousand Stadia in Circuit, the Island, described by *Pliny*, is affirmed to be ten thousand Stadia long, on that Side which fronts the Continent of *India*: But, what has greater Weight with me, this Description agrees as little with what we are told by *Strabo*^d, the most accurate of the antient Geographers: And there is one Circumstance which plainly shews, that this Island cannot possibly be esteemed the same with *Taprobana*; and that is, its being so far distant from any other Land, whereas *Taprobana* was within Sight of the Continent of *India*.

The only Reason I can conceive, why this Island should be esteemed the same with that, is, because of the Election of their Kings, which is thus related by *Pliny*^e: Their Monarch is elected by the Voice of the whole Nation, wherein they generally govern themselves by these Qualities, which they esteem absolutely necessary in their Prince; viz. That he be old, of a mild Disposition, and without Children; for, if he afterwards begets any, he is immediately obliged to abdicate; which Precaution is taken to prevent the Crown from becoming hereditary. There is likewise a Council of thirty Persons assigned him by the People; neither can any Man be condemned but by the Majority of this Council: Yet, even after this, he may appeal to the People, who appoint seventy Persons to sit in Judgment upon the Party accused; and if, upon hearing the Cause, he is acquitted, then all the Members of the Council of Thirty are instantly degraded, and are ever after esteemed infamous. If their King is guilty of any Offence, he is punished with Death; they do not, however, stain their Hands with his Blood; but, refusing to speak or look upon him, they deliver him up to be torn to-pieces by Tygers and Elephants: What occurs in *Pliny's* Description of that Island, in respect to its Produce and Inhabitants, is still more extravagant than what is reported in the foregoing Relation, which, however fabulous in some Circumstances, seems in others conformable enough to Truth.

For, as to the Soil, Climate, and Produce, there is nothing that surpasses Belief; and, as to the rest, they were,

* A Circumstance that shews it, must have been to the South of the Line.

NUM. 27.

probably, thrown in to comply with the Humour of the Age, and to make this Story agree with other Accounts of the *Indies*: Take it all together, it is an excellent Specimen of the Relations published by Travellers in those Days; and is, perhaps, the only one that is to be met with.

It is much to be regretted, that we have none of the *Phœnician* Accounts, or even so much as Extracts from them, preserved by any Authors; for as they were perfectly well acquainted with these Seas, and carried on a constant and extensive Trade with the *Indians*, it is highly probable, that whatever they wrote upon the Subject, must have been curious and exact, at least in Comparison of what we have received from the *Greeks*, who frequently contradicted each other. Some indeed have conjectured, that there never were any Writings of that Sort published by that Nation, because they looked upon themselves to be concerned, in point of Interest, to conceal what they knew, from an Apprehension, that divulging their Observations might be fatal to their Commerce. This indeed has an Air of Probability: And yet, if we consider how difficult a thing it is to preserve this kind of Knowledge, without committing it to Writing, I think it is much more likely, that they had some Memoirs of this Kind amongst them.

However that may be, certain it is, that the *Persians* never acquired any great Skill in maritime Affairs, but left the Management of them intirely to the *Phœnicians*, who adhered steadily to the *Persian* Emperors till the Death of *Artaxerxes Menem*; for then, finding themselves oppressed by the *Persian* Governors, and dreading the Cruelty of *Ochus*, who succeeded his Father in the Empire, a great Part of them revolted, the *Sidonians* being the chief in that Enterprize: But the *Tyrrians* still adhered to the *Persians*, who had been always very kind to them: Yet, in all Probability, the chief thing that determined them upon this Occasion to divide themselves from their Countrymen, was their Concern for their *Indian* Trade, which they could not possibly have carried on but under their Protection, because the Passage of the *Isthmus* was always in their Power.

Ochus marched with a great Army, in order to lay Siege to *Sidon*. The Inhabitants prepared to receive him, and took all the necessary Precautions for making a most vigorous Defence. The Place was well fortified; they had a numerous Garrison, and a Fleet of no less than one hundred Gallies, well manned, in their Port: But, foreseeing that, if they should be very hard pressed, many might endeavour to make their Escapes, by the Assistance of the Ships, which would expose them to certain Ruin, they caused them all to be set on Fire, that every Man's private Interest might engage him to do his Duty to the Public. They had also a Body of *Greek* Mercenaries, under the Command of one *Mentor*, upon whom they chiefly depended. In all human Probability, they might have defended themselves well enough, if their King, whose Name was *Tennes*, had not agreed with *Mentor*, to betray them to the *Persians*; which was executed in such a manner, that the Enemy was within their Walls, before they knew any thing of the Matter. When the *Sidonians* found themselves thus betrayed, every Man retired to his House, and set Fire to it; by which means the whole City was con-

sumed, and in it forty thousand People. *Ochus* put their King to Death, as he deserved, and sold the Ashes of the Town for a vast Sum of Money, on account of the prodigious Quantities of Gold and Silver that the Inhabitants had amass'd.

After the Destruction of *Sidon*, the *Persian* Emperor undertook the Reduction of *Egypt*, where *Nectanebus* had made himself King, and had about him a very formidable Army. The great Difficulty was to march the *Persian* Troops into that Kingdom, on account of the sandy Deserts on its Frontiers. The *Tyrrians*, however, conducted him, and his Forces, by the Way of their Colony of *Rhinocorura*, tho' not without some Loss, into the Kingdom of *Egypt*, which he speedily reduced, *Nectanebus* retreating in time into *Ethiopia*, carrying with him a vast Quantity of Treasure: *Ochus* caused all the rest, that could be collected, to be transported to *Babylon*. As he was naturally cruel, he punished the Rebellion of the *Egyptians* with great Severity; and, having been informed, that the *Egyptians* were wont to call him the *Royal Ass*, by way of Contempt, he caused the Ox, which they worshipped as a God, and which they called *Apis*, to be sacrificed to an *Ass*, and afterwards gave his Flesh to be eaten by his Attendants. This provoked *Bagoas*, an Eunuch, and his first Minister, that he soon after poisoned him, caused another Body to be laid in the Royal Tomb, and, having cut his Master's Body to-pieces, fed his Cats with it. This wicked Minister set his Master's youngest Son upon the Throne, whose Name was *Artaxerxes*, putting all the rest of his Brethren to Death; and, finding that the young Prince began to suspect him, he soon after destroyed him, and his whole Family.

Such was the miserable State of this Empire under the Government of Strangers and Eunuchs, when the last Emperor mounted the Throne. He was of the Royal Blood, though not the immediate Son of any of the former Emperors; and his Name *Codomanus*, while in a private Station; but, upon his being raised to the Empire, he assumed that of *Darius*. He was the handièst and bravest Man in his Dominions, and endowed with all the Virtues worthy of a Prince, which soon gained him the Love of his People to such a Degree, that the *Trans* *Bagoas*, fearing he might be punished for what was said, attempted to poison him; but *Darius*, suspecting his Design, obliged him to drink the Poison he had prepared, which soon dispatched him.

If the great and good Qualities of a Prince could have preserved an Empire to over-run with Corruption, *Darius* might have died in Peace; but his Virtues came too late to save his Country. That War was already concerted, which proved his Ruin, before the Diadem was fixed upon his Head; and he was scarce seated on the Throne, before his Empire was invaded by the *Macedonians*, who, not satisfied with its extensive Dominions, penetrated beyond them into the *Indies*, and thereby opened the Way to a more perfect Knowledge of those Countries than hitherto had been attained, as shall be shewn more largely in the succeeding Section.

SECTION V.

An exact Account of Alexander's Conquest of the Persian Empire, and, more particularly, of his Indian Expedition, and the Consequences he intended to have drawn from thence.

1. The State of the Persian Empire, and that of the Kingdom of Macedon, compared.
2. An Account of the Battles of Granicus, Issus, and Arbela, by which the Persian Empire was overthrown.
3. Alexander, having attained the Power, affords the Manners of the Persian Monarchs.
4. His Motives to the undertaking an Expedition into India.
5. His besieging the Rock Aornus, and contriving to excel Hercules, who formerly attempted it.
6. His Victory over Porus, and Design of passing the Ganges.
7. His Artifices, in order to deceive and amuse Posterity.
8. His Retreat out of India, and the Circumstances that attended it.
9. His Army suffers exceedingly, in marching through Gedrosia, until his Arrival on the Coast of Caratiana.

Caramania, where he celebrates new Games for his Deliverance. 10. A Review of his Indian Expedition and Discoveries. 11. His Conferences with the Brachmans, and high Esteem of their Wisdom. 12. The Character of Calanus the Indian, and the remarkable Manner of his Death. 13. The exalted Reputation of Dindamis, and the Condescension of Alexander towards him. 14. A Copy of that Philosopher's Letter to Alexander, containing an Abridgement of the Moral Philosophy of the Brachmans. 15. The Return of Alexander into Persia, and the Measures taken by him for establishing his Empire. 16. His Entrance into Babylon, in Contempt of the Prejages of his Soothsayers. 17. His Death in that City, and the memorable Circumstances attending it. 18. The Minutes of his great Designs, as set down in his Pocket-Book, examined and explained. 19. The true Character of Alexander, drawn from his public and private Life. 20. His Memory still glorious in the East. 21. An Application of his Discoveries to the Design of this Work.

AS the Wealth and Luxury of Persia seemed to fit that Empire for Destruction, at this Juncture, by spreading a total Corruption of Manners throughout all Degrees of its Inhabitants, insomuch that the whole Continent of Asia was infected with the Vices that naturally flow from Prosperity misapplied; so there was a Power growing in Europe, by almost imperceptible Degrees, which, at the very time Darius Codomanus ascended the Throne, had projected the Destruction of him and his Empire. This was lodged in the Monarch of the little Kingdom of Macedonia, remarkable only for the Poverty and Hardiness of its People. It had been tributary to, and dependent upon, the Persian Empire, from the Time that Xerxes invaded Greece. All its Princes had been remarkable for a kind of tricking Policy, which enabled them to keep fair with their Masters the Persians, on the one Side, and their Brethren the Greeks, on the other.

The sudden, and extraordinary Rise of this little, and hitherto contemptible State, was intirely the Work of one able Prince; indeed, take him in all Lights, the ablest Prince mentioned by Antiquity. This was Philip, the Father of Alexander, who not only found his hereditary Dominions small and poor, but also in a weaker and more distressed Condition, than they had been in the Days of his Predecessors: Yet, in the Space of little more than twenty Years, he made himself intirely Master of Greece; so that, much against their Will, the Greeks were obliged to elect him Captain-General against the Persians; and he was actually preparing to undertake the War, when he was assassinated in his own Palace, at Pella in Macedonia, much about the same Time that Ages was poisoned by Rogans: So that these Competitors for Empire, Alexander and Darius, arrived at the Sovereignty both at a time^a.

They were each of them Princes of great Courage and Abilities, but as opposite in their Dispositions, as in their Fortunes. Darius was mild, and too ready to listen to whatever Advice was given him. Alexander, on the other hand, was fierce and positive; was willing to hear what others said, but could seldom be prevailed upon to follow any but his own Notions. Darius was inclined to Moderation, and capable of yielding, with a good Grace, to what the Necessity of the Times required. Alexander acted as if Fortune had been his Slave, and discovered most Confidence in Times of greatest Danger: In a word, Darius had all the Qualities of a good, and Alexander all the Talents requisite to form a great Prince. Such were their Characters, and their Fortunes proved suitable^b.

Immediately after his Accession to the Throne, the Macedonians found himself engaged, first, in a War with his Northern Neighbours, and, soon after, with his Countrymen the Greeks. He finished both with that Rapidity agreeable to his Character; and, in the second Year of Darius determined to pass the Hellespont, and attack the Emperor of Persia in his own Dominions. The Strength with which he attempted this, was very inconsiderable: His whole Force consisted but of thirty thousand Foot, and five thousand Horses; and all the Treasure he possessed, amounted to no more than seventy Talents, which comes to between fourteen and fifteen thousand Pounds of our Money^c.

The Generals of Darius's Army, in the Beginning of the War, disputed with him the Passage of the River Gra-

nicus, with one hundred and fifty thousand Men; but they were beaten: And by this single Victory he gained all Lesser Asia, and the Treasury of the Persian Monarchs at Sardis. The next Year he prosecuted his Conquests with the utmost Vigour, and marched directly towards Darius, who had been assembling, with the utmost Diligence, the whole Force of his Empire, in order to meet him. A second Battle ensued at Issus, in the Straights of Cilicia, where Darius was defeated, though he had an Army of six hundred thousand Men; and soon after the City of Damascus surrendered, in which were Darius's Treasures of War. The next thing Alexander undertook was the Siege of Tyre, in which he vanquished Nature, as well as Art; for he caused a Causeway to be run out into the Sea, by which he joined the Island the City was built upon, to the Continent. After the taking of Tyre, he marched into Egypt, which he easily subdued, from the natural Fickleness of the People, and their great Aversion to the Persians. While he was in that Country, he gave Directions for building the new City of Alexandria, of which we shall have Occasion to speak hereafter, because it was one of the greatest Designs he ever formed, and the best executed^d.

The next Spring he returned again into Asia, and marched directly towards Babylon; in the Neighbourhood of which, Darius had drawn together a new Army of above a Million strong. Alexander passed the Tigris, and came up with the Persians near the little Village of Guagamala, where a decisive Engagement ensued, in which, with 50,000 Men, he beat Darius in an open Plain, where the Enemy had all Advantages, and he none. This Battle, which most Historians call the Battle of Arbela, determined the Fate of the Persian Empire; for Darius then fled into Media, and left Babylon, with all his Treasures in it, to the Conqueror. Alexander marched directly into Persia, made himself Master of Susa and Persepolis, the Capitals of the Persian Empire; the latter of which he burnt^e.

Early in the Spring he pursued Darius, who was soon after seized and murdered by his own People; and thus, in four Years time, the Persian Monarchy was intirely overthrown, and Alexander had nothing now left to employ his Arms, but the Reduction of the Northern Provinces, and the punishing those Traitors who had so barbarously destroyed their Master in his Distress; which he performed very honourably, and therein shewed himself worthy of that Fortune which had hitherto attended his Arms. But, after this, turning his Force against the Scythians, Dabans, and Massagets, he found amongst them a more vigorous Resistance than from all the Persian Empire besides; so that this War employed him a whole Year, and, very probably, he had not made an End of it so soon, if the Fame of his Generosity had not done him as much Service as the Reputation of his Victories: And, indeed, it will be always found, that brave Men yield soonest to virtue, than they can be subdued by Force^f.

3. In this Account of the Destruction of the Persian Empire, and the great Achievements of Alexander, I have been as concise as it was possible, intending it only as an Introduction to what is the proper Business of this Section, the Expedition of this great Conqueror into the Indies, at which we are now arrived. But, first of all, it will be necessary to lay something of the Province of Sog-

^f Arrian, lib. iii. Diod. Sicul.

diana, where *Alexander* passed the Winter, in which he projected his Conquest of *India*. This Frontier Province of the *Persian* Empire lay upon the Eastern Side of the *Caspian* Sea, between the River *Oxus* on the South, and the River *Orsartes* on the North. The last of these *Quintus Curtius*, and *Arrian*, called *Tanais*, very erroneously; for the River *Tanais* is much more to the West, and dischargeth itself not into the *Caspian*, but into the *Euxine* Sea, and is the same which we now call the *Don*. This Error is taken notice of by *Pliny*, who has let us into the Cause of it, which was, the Vanity of the *Macedonians*, who, by giving false Names to Rivers and Mountains, thought to make Posterity believe they had extended their Conquests into Places where they never set their Feet.

The chief City of this Province was *Muracanda*, a Place ten Miles in Circuit, the same that is now called *Samarcand*, and is the Capital of the *Usbeck Tartars*. In this City *Alexander* spent Part of his Winter; and there, in one of his drunken Entertainments, he murdered *Clitus*, a brave old Soldier, fitter to conquer Countries, than to flatter Conquerors; for the want of which courtly Vice, he paid with his Life. From hence *Alexander* removed into *Bactria*, and took up his head Quarters at *Nantaca*, where he married a *Persian* Wife, and spent the best Part of his Time in bringing most of his Officers to follow his Example, and in the Feasts and Entertainments which followed upon these Marriages. This was the first Step to his *Indian* Expedition, which he had already contrived in his own Mind, without communicating it to any.

His Courage was to be sure as great as ever appeared in Man, and yet his Conduct was equal to his Courage; for this always furnished him with Expedients so much the more effectual, as they were altogether unsuspected. By these Marriages he proposed to himself two great Ends: The first was, to blend the *Persian* and *Macedonian* Interests, in such a manner, that he might be sure to leave all safe behind him: The other to engage his *Macedonians*, in some measure, to forget their Country, and be the more willing to follow him, where-ever he thought fit to lead: But, at the same time, that he formed this Project, he foresaw the Possibility of its failing him, and therefore he set on foot other Schemes, to which, whenever they did fail him, he might have recourse.

These were, the appointing the principal Nobility of *Persia* Governors of Provinces and Cities, and the ordering thirty thousand young Men, of the best *Persian* Families, to be disciplined after the *Greek* Manner, that, on certain Occasions, they might serve as Hostages for the Fidelity of their Countrymen; and that, on other certain Occasions, they might be a Check on his *Macedonians*. For, by a failing, incident to great Princes, he began now to dislike the Manners of that Nation to which he owed all his Victories; and, considering himself as a mighty Emperor, disdained those Freedoms which were agreeable to the little King of *Macedon*.

4. But, after all, these wise Precautions were taken, in favour of a very idle Expedition, which took Birth from an Accident I should be ashamed to mention, but that it is so necessary for conducting the Thread of my History, that I cannot omit it. *Olympias*, the Mother of *Alexander*, was a Woman of Gallantry; of which his Father *Philip*, for some political Reasons, did not think fit to take the severe Notice that it deserved: And therefore, to cover some unlucky Circumstances that attended the Birth of *Alexander*, it was given out, that *Jupiter* had been familiar with his Mother. In the earlier Part of his Life, *Alexander* treated this ridiculous Story, as it became him, with Contempt; but now, his Vanity having got the better of his Understanding, he was desirous it should be believed. He had read, in the old *Greek* Fables, that two of the Sons of *Jupiter*, *Bacchus* and *Hercules*, had each of them made an Expedition into *India*; and he had a mind, not only to be on a Level, in this respect, with his Brethren, but to out-do them: And this was the true Source of this hazardous Undertaking.

To pave the Way to it, he began to affect the Honours

that were paid to the *Persian* Kings, which was a kind of Acoration suitable enough to the slavish Manners of their Subjects, but utterly irreconcilable to the manly Freedom of the *Greeks*. This Innovation produced an Action much more cruel than the Murder of *Clitus*: For *Callisthenes*, the Kinman of his Master *Arjfolle*, a grave and wise Man, who had accompanied him in all his Expeditions, having taken upon him to expose the Absurdity of this Behaviour, he caused him, under colour of a Conspiracy, which he pretended was formed against him, to be put to Death. By removing him out of his Way, he got rid of all Opposition; and, if the rest of his *Macedonians* did not concur with his Flatterers, they were at least wise enough to hold their Tongues; to which they were the more inclined, when, by levying new Troops, he had swelled his Army to 120,000 Men.

The *Indians*, having, by this Time, got hold of the Story of this third Son of *Jupiter*, had many of them Adreils enough to secure their Safety, by falling in with his Folly: And it was upon this Occasion, that they pretended to believe the Fable of the *Grecian Bacchus*, which we before relatd, and consulted. Such of them as did not, or could not, prostitute their Understandings in so gross a manner, he subdued by Force of Arms. Amongst these was the Nation of the *Affacans*, who had lost their Freedom, if it had not been for the Complaisance of their Queen *Cleopbis*, the handsomest Woman in that Part of *India*, who, by admitting *Alexander* to her Embraces, redeemed her Kingdom; but such was the stubborn Vice of her Subjects, that, notwithstanding they reaped the Benefit of this Treachery on her Honour, yet they ever afterwards remembered it, to her Disgrace; and never called her by any other Appellation, than that of the *Royal Whore*. By this Prince's own Conqueror had a Son, who bore his Father's Name; and of the Posterity of this *Indian Alexander*, *Marco Polo*, whose Travels we shall shortly give our Readers, affirms there were some Princes remaining, at the Time he visited these Countries. Such were the Transactions with which this great Design, of penetrating to the utmost Limits of the World, began.

5. As it was the fabulous History of *Bacchus* and *Hercules* produced this Resolution in *Alexander*, to invade and conquer *India*, so he chose to carry on the War after a new manner, and as if his Army had been dressed rather for the Stage than the Field; for the Shields of his Soldiers were adorned with Silver Plates, the Bridles of their Horses were studded with Gold, and, in short, all their Armour was beautified and enriched with these precious Metals; an Humour the more singular, since it was known, that the *Indians* set a less Value on such Finery than any other Nation.

The only Place that gave him any Difficulty in this Year's War, was the famous Rock of *Aornus*, excellently high, and the River *Indus* running by it. A Report was current in *Alexander's* Army, that *Hercules* had twice attempted this Post, but in vain: The Honour therefore of the third Son of *Jupiter* was very nearly concerned; but he proceeded very prudently for its Preservation. He found, after filling up all the Ditches, and taking every Method that the Practice of the Art of War had taught him, the Place was truly impregnable; and that, if he depended on Force, he was likely to be foiled as well as *Hercules*; and, therefore, he turned this Siege, after it had cost him Abundance of Men, into a Blockade, leaving, however, one Passage by which the Besieged might escape, presuming that, when they were half-starved, they would take this Road, and leave him their Rock, which he had such a Mind to: In which Scheme he succeeded, and triumphed at once over the *Indians* and *Hercules*.

In the mean time, *Hephestion* and *Perdiccas*, who had the Direction of the *Phoenicians*, who were employed in building him a portable Fleet for passing the several Rivers of the *Indies*, had finished their Task, and provided him with a sufficient Number of Boats, so framed, as that they might be taken to pieces, and so transported over-land from one River to another: And, now having all Things

^a Diodor Sicul. lib. xvii. Arrian, lib. iv. Quint. Curtius, lib. viii.

^b Laertius in vita Arjfolle. ^c Arrian, Quint. Curt. Ptolemae in A'andria

^e Diodor Sicul. lib. xvii. ^f Quae sunt in Persia

in Reins, he entered in earnest upon his great Work, which was to be begun by the Passage of the River *Indus*.

6. This Expedition was undertaken in the eleventh Year of his Reign over *Macedon*, in the fifth of his Empire, and three hundred and twenty-seven before *Christ*. He passed the River without the least Resistance, and as soon as he was on the other Side, had Notice that an *Indian* Prince was advancing towards him, with a numerous and well-disciplined Army. This was *Mopbis*, the Son of the King of *Taxila*, who had before submitted to him in the Name of his Father, who was then living; but, being now dead, *Mopbis* reigned in his own Right. The Appearance of this *Indian* Prince was so formidable, that *Alexander* was afraid of being surpris'd; and, therefore, hastily put his Troops into Order of Battle. But *Mopbis* presently undeceiv'd him, by advancing with a small Retinue; and, making his Submission to *Alexander*, deliver'd up his Dominions, which he received again, with Leave to assume the Title of *Taxiles*, which was common to all the Monarchs of that Country, with such mighty Gifts besides, that *Melager*, one of his *Macedonian* Captains, could not help telling him, that he was glad to see he had met with a Man in the *Indies* worthy of receiving a Present of a thousand Talents at once^a.

Ambifanus followed his Example; but *Perus*, whose Dominions lay beyond the River *Hydaspes*, prepar'd to defend himself to the last Extremity; and drew together a mighty Army to hinder his Passage of the River: *Alexander* advanced towards him; and with great Difficulty, and no small Loss, forc'd the Passage of this River, and afterwards defeat'd *Perus*, who was grievously wounded in the Side; but, being charmed with the Spirit and Courage of the Man, he restor'd to him his Dominions, and even augmented them. In Memory of this Victory, he built a City call'd *Nicera*, and another as a kind of Monument for his Horse *Bucephalus*. As this Country abound'd with Timber, he order'd a great Number of new Ships to be built for the Establishment of a Maritime Force, as well for the perfecting, as protecting his Conquests: He pass'd, next, the River *Acophis*; and, having subdued all that lay between it and the River *Hydrates*, bestow'd it upon *Perus*^b.

He invaded and destroy'd the *Cathreans*, who had a Custom of causing Wives to be interred with their Husbands; and, having taken the City of *Sangala* by Storm, he bestow'd it on some *Indians*, who had submitted to him, and liv'd under a free Government. He next attack'd *Sephates*, the Prince of a People call'd by the same Name, who were reputed the handiempt Nation in the World: But that Prince soon made his Peace, and entertain'd *Alexander*, and all his Army, for many Days together. *Hephestion* return'd to him here, after having subdued several Princes, and their Dominions: From thence *Alexander* march'd into the Dominions of King *Phryges*, who submitted to him, and receiv'd, as other Monarchs had done, his Kingdom, with large Presents besides.

He then pass'd the River *Hypophis*, which was seven Furlongs broad and six Deep, the Stream prodigiously rapid; and from hence he intend'd to have march'd to the *Ganges*; but, first of all, thought it requisite, to inquire of his *Indian* Confederates, the Situation and Condition of the Country through which he was to pass: They inform'd him, that, for twelve Days March from thence, there lay a Desert, which was bounded by the *Ganges*; and that, on the other Side that River, there were many potent Nations; but, particularly, the *Gangaride*, whose King *Ambriames*, had an Army of twenty thousand Horse, two hundred thousand Foot, two thousand Chariots of War, and four thousand Elephants. The Report of this, the Remembrance of their late Engagement with *Perus*, and a Storm of Rain, Thunder, and Lightning, which had lasted for above seventy Days, so dispirited his *Macedonians*, that they declar'd, without Ceremony, they were weary of marching eight Years together, and of being put continually upon new Labours, without any Prospect of Rest or Peace. *Alexander* thought to have quieted these Complaints, by giving them Leave to plunder some *Indian*

Nations^c that refus'd to submit: But this had not the desired Effect; they were still as angry, and as much dispos'd to Mutiny, as ever; to which, perhaps, they were artfully excited by the *Indians*, who were desirous of being rid of them.

7. In order to make the last Effort, he prepar'd an Oration; and when they return'd to the Camp, laden with Plunder, he first distribut'd Corn to their Wives, and Money to their Children; and then address'd himself to them in a long Speech, in which he said all that could be possibly contriv'd to inspire them with a Resolution of still following his Fortunes, and attacking the *Gangaride*. His Eloquence, however, avail'd him no more than his former Bounties: The *Macedonians* were absolutely tired out; and besides, the Methods practis'd to draw them thus far, deterr'd them from the Thoughts of going farther. For, first of all, the Fables he had spread concerning the Expeditious of *Bacchus* and *Hercules*, fill'd them with Apprehensions, that they were to be led beyond the Limits of the World, and be expos'd to Dangers, beyond the Reach even of their Imaginations; and, on the other hand, they did by no means approve of this new Way of conquering Countries, to give them back again with Interest: And, therefore, *Cavus*, in the Name of the Army, plainly told *Alexander* their Mind; which agreeing so little with his Inclinations, he retir'd to his Tent, where he remain'd three Days close shut up, and would not see even his most familiar Friends. At the End of that Time he came out, and, making a Virtue of Necessity, told his Soldiers, with a good Grace, that since they were unwilling to follow him, he had taken a Resolution to return: But there was another Reason that contribut'd not a little to his taking this Resolution; and it was this: He had sacrific'd for the Passage of the River, and his Priests, on the Inspection of the Entrails, declar'd them unlucky^d.

Now having conduct'd his Affairs so long by Oracles, and such-like Inventions, he durst not proceed to an Expedition, which seem'd to be against the Will of the Gods; and thus he was intangled in his own Superstitions, and oblig'd to desert by the very Arms which he employ'd with a View to force his Army to move on. Yet, in spite of this Disappointment, he was still so addict'd to Fables, that he chose to give the Air of Romance to his own Actions, rather than trust his Glory to a fair and impartial Recital of them. To this Purpose he caus'd twelve large Altars, of fifty Cubits Height, like Towers, to be erect'd near the River; whereon he sacrific'd according to the *Greek* Custom, and celebrat'd Games in the adjacent Country: After this, he caus'd a Ditch to be made, sixteen Feet broad, and ten Feet deep, whereon, of the Earth that was dug up, he rais'd a considerable Wall, making the Compass of his Camp three times larger than it was. He command'd the Foot, that each in his Tent should get two Bedsheads of five Cubits each in Length, and the Horsemen to make theirs with the Mangers of their Horses, as big again as they were; he caus'd Arms, Bridles, and other Things to be fram'd after the same Proportion, to amuse Posterity with a false Appearance of the gigantic Proportion of his own Person, and of the Persons of his Followers^e.

Thus this *Indian* Expedition end'd in the same kind of Follies with which it began; and had no other Effect whatever, than making these Countries, and the Nations who inhabit'd them, and who hitherto had been known to the rest of the World, only by idle and fabulous Reports, more truly represent'd; and yet even this was, in a great measure, prevent'd by the extravagant lying Reports of his Followers, occasion'd, no doubt, by their earnest Desire of gratifying the Ambition of their Master, who lov'd to have his Exploits painted beyond, that is, in plain Terms, at the Expence of Truth.

8. When he came to execute his design'd Retreat, he dispos'd of the Government of the Provinces he had conquer'd, and so pass'd on to the River *Hydaspes*, where he expected to find his new Fleet, which, however, was not perfectly complete, which oblig'd him to stay some Time in the Neighbourhood; so that there he was join'd by six

Alexand. c. Diodor. Sicul. lib. xvii.

thousand Horse, and thirty thousand Foot, that had marched thither out of Greece; and met also with other Supplies. His Ships, when finished, consisted of a thousand Sail; of which two hundred were Ships of War, and eight hundred were Transports².

He then divided his Army, going on board the Fleet with one Part of it, and ordering the rest, under the Command of *Craterus* and *Hephestion*, to march along the Bank of the River down which he sailed, to the Junction of the *Hydaspes*, and the *Aefines*, reducing all the Country in his Passage, particularly the *Oxydracians*, and the *Mallians*; and so proceeded to the River *Indus*. Among the rest, the *Brachmans* suffered by his Fury; for their King, whose Name was *Sambus*, having first submitted to him, and opened the Gates of his City, afterwards revolted, which cost his Subjects dear; for many Thousands were slain, and a much greater Number sold for Slaves. Yet we are informed by *Plutarch*, that many who were destined to Destruction, were preserved, on their answering, to the Satisfaction of *Alexander*, certain Questions in Philosophy, which he caused to be proposed to them³.

While he was engaged in this War with the *Brachmans*, *Alexis* King of *Pattalona*, an Island at the Mouth of the *Indus*, came and submitted himself, whom he received very graciously, directing him to provide all Necessaries for his Army, because he meant speedily to visit his Country. When the Fleet, however, had fallen as low as this Island, they found it abandoned, the People having retired into the Mountains, whither *Alexander* sent Messengers, to persuade them to return. He had now spent ten Months in his Voyage, and found himself and his Fleet in a very indifferent Condition; that Side of the Island near which he lay, being, in a great measure, destitute of Water, which obliged them to send People on Shore, to sink Wells, who were cut off by the *Indians* that fled to the Deserts. At this Island the River *Indus* divides into two Branches, both of which retain that Name, till their Fall into the Ocean: And thro' the Branch on the Right-hand, *Alexander* resolved to pass into the Sea. But the Day after he left the Island, there arose such a Tempest, as distressed them exceedingly; which obliged him to shelter himself again upon the Coast, and to send for Pilots from among the Natives; for this proved a Navigation which none of his People understood. When they resumed their Voyage, they met with new, and still greater Difficulties: For the Tide rising exceedingly high, as it always does there, all the Country near the River was quite overflowed, except some Hills, the Tops of which appeared like so many Islands in the Water; to which the *Macedonians*, leaving their Boats, swam for their Preservation, not being at all acquainted with the Nature of Tides, but supposing this some extraordinary Accident; for their Heads were so full of Fables and Wonders, that every thing appeared to them miraculous. When the Water ebb'd, some of their Vessels were left on dry Ground; some were overwhelmed, and sunk; others turned Bottom upwards. On the Return of the Tide, those that stuck in the Mud were got off, without Hurt; but the rest were either dashed to Pieces, one against another, or perished in different Ways, to the Terror of *Alexander*, and all who were about him⁴.

After this unlucky Accident, collecting his Navy as he could, and repairing as many of the Vessels as were yet in a Condition for Service, he detached two of the best to examine another Island that lay lower, which the *Indians* called *Giluta*, and he thought fit to name *Scillastis*, by which he must of Necessity pass, in his Voyage to the Ocean. On their Return, and reporting, that there was in this last Island, a very commodious Harbour, he ordered the Fleet thither; but proceeded himself, without further Delay, down the Channel, that he might be satisfied whether his Fleet could pass safely, that Way, into the *Indian* Sea, or not. At the Distance of about 200 Stadia, he discovered another Island; and then returned to the Fleet, where he sacrificed to the Gods after a certain Manner; and then, going back to the Island, he sacrificed after another Manner to other Deities; affirming that he was so directed

by the Oracle of *Jupiter Ammon*. When he came to the Mouth of the *Indus*, he offered up Bulls to *Neptune*, by crowning them with Wreaths, and then throwing them, bound, into the Sea; made great Feasts for his Friends; and threw a golden Phial, and certain gold Cups, into the Sea; beseeching the Gods to be propitious to the Fleet, that he intended should speedily sail under the Command of *Nearbus*. He likewise erected Altars to *Theis* and *Oceanus*, offering magnificent Sacrifices, and beseeching those Divinities, that after him no Mortal might pass the Bounds of his Expedition⁵.

Then returning up the River to *Pattala*, he there found Part of his Forces, which had marched by Land. Judging this City to be extremely well situated for a Port, he directed *Hephestion* to make an Haven there, and to construct Wharfs, and whatever else was necessary for Shipping; and, having given these Instructions, he sailed down the other Chanel of the *Indus*, which brought him first to a large Lake, where he left most of his Forces; and, having with him no more than thirty Vessels, passed this Way into the Ocean. The Design of this Voyage was, that he might be able to judge, whether this or the other Chanel would afford the safest Passage for his whole Fleet; and, being convinced, that the Left-hand Chanel was the best, he returned the same Way, causing Wells to be dug all along upon the Coast, that those on board the Fleet might not be distressed in their Passage for want of Water.

When he returned to *Pattala*, he sent Part of his Army to dig more Wells; and, proceeded a second time as low as the Lake before-mentioned, where he ordered several Havens to be made, and Magazines to be erected, for the Use of his Shipping, and leaving also a Garrison for the Defence of these Works, together with Provisions sufficient for eight Months, he prepared for his Return to *Persia*, leaving the Care of the Fleet to his Admiral *Nearbus*, to whom he gave Instructions, when the Season of the Year would permit, to sail down the Left Chanel of the River *Indus* into the Ocean; and, sailing along the Coast, to proceed up the *Persian* Gulph, and so to the Mouth of the *Euphrates*⁶.

It is very plain, from this Relation, that, notwithstanding all the Pains he had taken, and the pompous Accounts given of his Fleets, he was very indifferently furnished with Seamen; and therefore we need not at all wonder at the mistaken Notions, which some Writers tell us he conceived, concerning this River. But there is one thing very commendable in this Expedition; which is, the personal Pains he took to be informed of all Things, that he might be the better able to frame a Judgment of what might be expected from the Building of Cities, settling Colonies, and establishing a constant Commerce between them, and other Parts of his Dominions. This was a Labour truly worthy of a Prince, or, to carry it much higher, worthy of *Alexander*.

9. After he had thus settled all Things behind him, he passed through the Country of the *Arctas*, who fled on his Approach into the Mountains, so that he passed the River *Arctas* without any Opposition, and so came into the Territories of the *Orissæ*, where he began to destroy the Country, on account of their joining with the *Gedrosians*; but, upon their Submission, he treated them kindly, and left there a considerable Body of Horse and Foot, to wait the Arrival of his Fleet, and with Orders to build a new City. In his Passage through the Country of the *Gedrosians*, greater Loss happened to him, than in all his Expedition through *Assa* besides; because, what for want of Water, by Excess of Heat, ill Diet, and Hunger, he carried not out the fourth Part of those Forces he brought into *India*: Yet was not this Loss sustained through Ignorance: For, some tell us, he knew of the Danger very well; but, hearing this Country had been formerly invaded, both by *Senarionis*, and *Cyrus*; and that the former was forced to fly but with thirty Attendants, and the latter with only seven; he had an earnest Desire to pass through it, and, in the Glory of his Adventure, to excel them⁷.

⁸ *Curt. Plutarch.*

Aftcr incredible Fatigue undergone for fixty Days, he came to *Pura*, the chief City, where he refreshed his Army, and thence marched towards the Borders of *Caramania*. Here he received News, that *Philip*, Governor of the *Oxydracians*, and of other *Indians*, was killed by the mercenary Soldiers; but that his Death was revenged upon them by the *Macedonians*: Whereupon he wrote to *Taxiles* and *Eudemus*, to take care of the Country, till such Time as he could send one to succeed *Philip*. When, after all these Dangers, he arrived safely in the Province of *Caramania*, he received Complaints of many of his Governors, that, supposing he would never return, had behaved tyrannically; whom he punished for their Offences very severely. He likewise celebrated, as the Custom of those Days was, Games, and exhibited Plays, by way of Thanksgiving, to the Gods, for having preserved him, and his Army, in the Midst of so many Dangers. And while he was thus employed, *Nearchus*, the Admiral of his Fleet, arriving on the Coast, and hearing that his Master was only five Days Journey from him, thought proper to go thither, with a few Attendants, in order to report to him what had happened in his Voyage. On his entering the Theatre, the *Macedonians*, surpris'd and overjoyed at the Sight of him, set up a great Shout, expressing thereby their dreadful Apprehensions of being obliged to serve by Sea, which they looked upon as little better than being destined to certain Death. But, as for *Alexander*, he was extremely pleas'd at the News he told him; and so far from being surpris'd at the strange Things he related, that from thence he conceived a Design of sending a Fleet from the Mouth of the *Euphrates*, which, passing round the whole Continent of *Africa*, should have entered the *Mediterranean* by the Straights of *Gibraltar*, then called the Pillars of *Hercules*: For which Expedition he caus'd great Preparations to be made, as we shall see in another Place; when, for the sake of enriching this Collection, with so curious, and so authentick a Piece, we shall give the Reader the whole Voyage of *Nearchus*, as near as may be, in his own Words; and shall, at the same time, enter into the Discussion of the true Designs of *Alexander*, with regard to Navigation and Commerce; Points in which he shew'd a greater Superiority of Genius, than in all his Conquests, which, exclusive of those Views, were so many Outrages on the Rights of Mankind. At present we will take a View of his *Indian Expedition*; and see how far it contributed to his own Benefit, or to that of others.

10. It is, in the first Place, observable, that however weak, and contrary to good Sense, that Humour of *Alexander's* might be, which led him to assume the Honours of a God; to boast of being the Son of *Jupiter*; and to attempt not rivalling only, but excelling, his Brethren *Bacchus* and *Hercules*; I say, how wild or extravagant soever this might be, in one Sense; yet it was attended with many good Consequences, especially to the *Indians*, who knew how to turn this Foible of his to their own Advantage; that is, to the Preservation of their Liberty, which seems to have been the only Point they had in View. We have already had an Instance of this, in the artful Speech of *Acuphis*, at the Head of the Deputies from the City of *Nysa*. but it may not be amiss to add some farther Particulars relating to the same Adventure.

When these Embassadors were introduced to *Alexander*, they found him standing in his Tent, completely armed, with a few Officers about him, and without any of that Pomp or Splendour, which used to distinguish the Monarchs of those Times. They were a little alarmed at this Appearance, and afraid of meeting with a rough Reception; but their Countenances soon alter'd, when *Alexander* commanded one who was near him, to fetch a Cushion; on which, as soon as it was brought, he very civilly desired *Acuphis* to sit down. The old Man, overcome with Tenderness, on this extraordinary Mark of Distinction, cried out, *What is it, O King, that my Countrymen can do, to merit your Friendship? Let them, said Alexander, make Use of thee for their Governor, and send one hundred of their best Citizens to remain with me, as Hostages for their Fidelity.* This Answer shews the Wisdom and Pen-

etration of *Alexander*, who thought to secure his own Purpose, by paying this Compliment to *Acuphis*. But the quick Reply of that sensible old Man does Honour to the Wit and Spirit of the *Indian Nation*: *I shall govern them with more Ease, O King, said he, if I send you, instead of the best, so many of the worst of my Subjects.*

The Behaviour of *Mopbis*, afterwards called *Taxiles*, has been already related; but the Motives which induced him to deliver up his Kingdom to *Alexander*, deserve our Notice: They are contained in the following Speech he made to him at the Time of his Submission: 'To what Purpose, *Alexander*, should we make War upon each other, if thy Design of coming into these Parts be not to rob us of our Water, or our necessary Food, which are the only Things that wife Men are indispensably oblig'd to fight for? As for other Riches and Possessions, as they are accounted in the Eye of the World; if I am better provided of them than thou, I am ready to let thee share with me; but, if Fortune hath been more liberal to thee than me, I will not decline thy Favours, but accept them with all the thankful Acknowledgments that are due to a Benefactor.' This Compliment was extremely grateful to *Alexander*, who, after embracing, made him this Answer: *Do not imagine, Taxiles, that these soft Expressions, and so polite a Behaviour, shall hinder our coming to an Engagement: No, you are not like to escape by changing the Nature of the War; for I will not be conquer'd even in Complaisance.* It was upon this Occasion that he made him a Present of a thousand Talents, which displeas'd the *Macedonians* so much, but which, however, gain'd him the Friendship of the *Indians*.

These are certainly Instances of the good Sense, great Prudence, and generous Spirit, of these People. As to their Bravery, and excellent military Discipline, the following Instances will be sufficient to satisfy the Reader as to both. Such of the free Cities in *India*, that is, such as lived under a Republican Government, did not practise these Arts to secure, but hired Soldiers to defend their Liberties; which they did so effectually, that, when *Alexander* had granted them an honourable Capitulation, he was tempted to break it, and open a Passage to farther Conquests, by thus dispensing with his Word; which, however, less'n'd his Reputation exceedingly, and induced others to defend themselves with incredible Obstinacy. The Courage of *Porus*, the military Skill he shew'd in the Disposition of his Forces, and the dear-bought Victory which *Alexander* obtained over him, were very fully set forth by the Pen of *Alexander* himself, in the Epistles he wrote upon that Subject; and the Request, which he made to *Alexander*, *that he might be treated like a King*, will, probably, be remembered and admir'd to long as the Light of History remains unextinguish'd. But it may not be amiss to observe, that in this hard-fought Battle *Porus* had no Advantage of Numbers; the Force he brought into the Field did not exceed twenty thousand Foot, and two thousand Horse; and it was the Use he made of these, that struck the *Macedonians* with such a Dislike to the *Indian War*, that all the fine Speeches of *Alexander* could not inspire them with Courage enough to attempt the Passages of the *Ganges*.

It was in his Battles and Sieges in *India*, that *Alexander* received most of his Wounds. In other Countries he fought for Fame and Victory, but it was in *India* only that he fought for his Life. In a word, all his Conquests here were either obtained by the Admiration of his Virtue, or by dint of superior Force. It must be likewise observ'd, that the *Indians* were never charg'd with Infidelity to him, but maintained their Promises with the strictest Honour; and, therefore, when the *Greek Mercenaries* had murdered *Philip*, he recommended the *Macedonians* he had left in *India* to the Care of *Taxiles*, and never had any Reason to distrust his Friendship. These are solid and incontestable Proofs of the Civility, Wisdom, and Virtue, of the *Indians*, who, though they abounded with Riches, us'd them with Discretion and Moderation; and who appear, in all the Accounts we have of *Alexander's Expedition*, to have been a People well governed, obedient to their Laws, and

^a *Plutarch, in Alexandro.*

^b *Id. ibid.*

^c *Strabo. Arrian. Diodor. Sic. Justin.*

^d *Arrian, lib. vi. Quint. Curt. lib. ix.*

alous of those Advantages that were the Result of their respective Constitutions, which, duly considered, will appear the highest Character that any People can deserve.

11. I have purposely omitted speaking hitherto of the *Indian* Philosophers, and of the Treatment they met with from *Alexander*, because I thought, both with respect to him and them, it was a Subject that required particular Consideration. These Men had the Misfortune to incur his Displeasure; and, in consequence thereof, to be very severely treated for doing their Duty, and acting as it became Men to act, who professed themselves Lovers of Wisdom. In short, these *Indian* Sages, instead of courting this victorious Prince, or endeavouring to gain his Favour by persuading the People to submit to him, exerted all their Eloquence, and all their Influence, to incite their Countrymen to behave with Courage and Firmness in the Defence of their Liberties; and this it was that exposed them so much to his Resentment.

We have already given an Account with what Severity he treated *Sambus*, who was their Prince, and his Subjects; and we have likewise taken Notice, that *Plutarch* informs us, that many of them preserved their Lives, by the satisfactory Answers they gave to the Questions that Conqueror proposed to them. As this Passage has a nearer Relation to the Subject of this Chapter, than most of the Adventures of *Alexander*, it cannot be disagreeable to the Reader, if we treat it at large. In the midst of the Violences that were committed, on account of the Revolt of the *Brachmans*, *Alexander* thought fit to make a Trial of their bested Wisdom, by sending for ten of them into his Presence, whom he commanded to answer such Questions as he proposed to them, threatening such as answered amiss, with Death; and, appointing the eldest of them to be the Judge, he asked the first, 'Which, in his Opinion, were more numerous, the Living, or the Dead?' The *Brachman* answered, 'The Living; for the Dead are not.' He asked another, 'Which of all Animals was the most subtle?' 'That, said the *Brachman*, whatever it be, with which Mankind are not yet acquainted.' Of another, he demanded, 'What the Arguments were, by which he persuaded *Sambus* to revolt?' 'But one, returned the *Indian*; I told him he ought either to live free, or to die in the Endeavour to live so.' Another was required to tell him, 'Whether Night, or Day, was oldest?' 'Day,' answered the Philosopher, by one Day, at least.' But perceiving that *Alexander* was not satisfied with this Answer, he added, 'You ought not to wonder, Sir, if strange Questions meet with odd Replies.' One of them he asked, 'How a Man might become exceedingly beloved?' His Answer was, 'If he be very powerful, and, at the same time, be not very much feared.' To another this Question was proposed, 'How shall a Man act, to be thought a God?' 'Let him do, replied the *Brachman*, what by no other Man can be done.' The last of them, being asked, 'How long a Man ought to desire Life?' answered, 'Till Death shall become more eligible.'

When all had answered, *Alexander* commanded the Judge to give Sentence. 'All I can say, replied the old Man, is, that every one has answered worse than his Fellow.' 'That is false, said *Alexander*; and thou shalt die first, for having passed to soul a Sentence.' 'Not so, Sir, replied the *Brachman* very coolly, if you mean to keep your Word; for you said he should die first who answered worst; which I have not done, because you have not hitherto asked me any Question.' The King, surprised at their Firmness, as well as pleased with the Quickness of their Parts, and the shrewd Answers they had given him, not only dismissed them without Injury, but made them very considerable Presents.

It is to be remembered, that, in those Days, the common Method of putting Wisdom to the Test was by asking difficult Questions; as the common Method of Teaching was by short Sentences, which the *Greeks* called Aphorisms, and we Proverbs, taking that Word in its strictest and gravest Sense, which, even vulgarly used, im-

plies a Saying grown into Credit, by the Experience of its Truth. In this, undoubtedly the *Brachmans* were much happier than most other Philosophers, that hitherto have escaped Censure, the wisest Men, in all Ages, having afforded them a just Tribute of Applause; which seems to have been chiefly derived from this Maxim, which regulated their whole Conduct, viz. to reserve speculative Doctrines for their private Conversations, and to teach the People such Things only as regarded the right Use of Life. It was owing to this Regulation, that the *Brachmans* themselves maintained their Characters unspotted; and that the *Indians* in general, of every Rank, were Men of Principle, and acted, on all Occasions, as became them. We shall have another Opportunity of describing more largely the Learning of these Sages, and their Manner of Living: At present, all I aim at, is to represent truly their Conduct, with respect to *Alexander*, and his Behaviour towards them, as a Point very curious and entertaining in itself; and which is of no small Consequence to this History.

12. It was a Custom, inviolably observed amongst the *Brachmans*, never to visit any Man, let his Rank be what it would; and that upon this Principle, that others had need of them, and they of none. In their Schools or Assemblies they spoke freely; but one thing they required of their Disciples, as well as practiced themselves, which was, to appear quite naked; and in this respect they were so strict, that when *Alexander* sent *Onesicritus*, who was a Philosopher himself of the Sect of the Stoics, to hear one of them, who had the highest Reputation, the *Brachman* ordered him to strip, and hear what he had to say, naked; otherwise he would not open his Mouth, if he came from *Jupiter* himself. Thus the Story is told by *Plutarch*; but *Onesicritus* himself told it in another Manner.

He said, that he found fifteen of these *Brachmans* sitting together, at some Distance from the Town; to whom having told his Message, one of them, having considered his Garb, could not forbear smiling, and then proceeded thus: There was a Time when Corn and Flour was as plenty as the Dust that covers the Earth; when the Fountains ran, some with Milk, some with Water, some with Honey, some with Wine, and some with Oil: But when, through Plenty and Luxury, Men grew vain and proud, the great God took away those Benefits; and decreed, that the Necessaries of Life should be obtained by Labour: Then Temperance, and other Virtues, produced once again Plenty of all Things; but now, that this Plenty seems to have begotten Vanity and Pride again, we are in Danger of being reduced once more to Poverty and Want. He therefore who would hear me, must throw off his Clothes, and be naked on the Stones, as we do.

The Name of this *Indian* Philosopher was *Splinter*; but, when he became better known to the *Macedonians*, and they observed that he saluted them always with the Word *Cale*, which, in the *Indian* Tongue, signifies *God*, *Jupiter*, they called him from thence *Calanus*. It was *Taxile* who prevailed upon him to visit *Alexander*, and to converse with him; and, by degrees, he became more tractable. He was an old Man, and naturally of a severe Disposition, but withal very communicative; and, when he saw that *Alexander* delighted in philosophical Discourses, he no longer shunned his Company, or thought it a Disgrace to attend him.

On the contrary, when he left *India*, he followed him into *Persia*, where he made him, and the *Macedonians*, as they had been long Admirers of his Virtue and Wisdom, Witnesses also of his Death: For, being upwards of seventy-three, and being attacked by a Lockness, he took a Resolution of putting an End to his Life; from which *Alexander* laboured to dissuade him, by representing, that Medicines, and a proper Diet, might produce a Cure. The Philosopher answered, that possibly it might be so; but that, according to the Custom of his Brethren, he looked upon this as a Summons from Nature; and that it became a wise Man not to wait, till the Force of his Reason

was destroyed, or, at least, weakened by long Sickness; but rather to die while he had the full Use of his Faculties, and was capable of making his Death as useful to his Disciples, as the Doctrines and Example of his Life.

When Alexander saw, that his Resolution was not to be altered, he gave Instructions for performing his Request; and committed the Care of erecting the funeral Pile, to *Ptolemy* the Son of *Lagus*, who was afterwards King of *Egypt*. When all things were ready, the King gave Orders, that he should be preceded by his Guards of Horse and Foot; and caused not only Spices and Perfumes to be scattered over the Pile, but likewise directed it to be adorned with several Gold and Silver Vessels. *Calanus*, being very sick and weak, was brought thither on Horsecback, with all imaginable Splendor: But, before he mounted the Pile, he followed the Horse the King had given him, upon *Lyftrachus*, one of *Alexander's* Captains, who had been his constant Disciple; and, in like manner, distributed all the Gold and Silver Plate among his Friends; then, singing Hymns of Praise to God, for the Blessings bestowed upon him, he ascended the Pile; and, having decently composed himself on the Bed, which lay on the Top of it, he continued unmoved, and without varying his Posture when the Fire reached him; and so was consumed in the Sight of the whole Army. *Plutarch* reports, that when he embraced and took Leave of the *Macedonians*, he desired them to pass that Day in Mirth and good Fellowship, with the King, whom he doubted not to see again, in a little Time, at *Babylon*.

Strabo observes, that Writers differ very much, as to the Circumstances attending this extraordinary Fact; but, as to the Fact itself, there never could be any Doubt about it, because it was done publicly, and in the Sight of the whole Army; all their Trumpets sounding, and the Soldiers, with the loudest Acclamations, commending the high Courage, and steady Bravery, of the old Man. *Alexander* himself pronounced his Elogium, in these few Words: '*Calanus* hath vanquished greater Enemies than I; for, whereas I warred with *Darius* and *Porus*, *Calanus* hath overcome both Pain and Death.'

Returning from the funeral Pile, *Alexander* invited many of his Friends, and principal Officers, to Supper; and proposed a Drinking-match, in which the Victor should be crowned. *Promachus* drank eighteen Quarts of Wine, and won the Prize, which weighed a Talent, from them all; but he survived his Victory but three Days; and was followed, as *Chares* says, by one-and-forty more, who died of the same Debauch, by reason of the severe Frost, which happened at that Time.

This was certainly a very odd Conclusion of a Scene so solemn, as that of the Death of *Calanus* had been: And one cannot help admiring the Inconstancy and Inconsistency of human Nature, when one reads such strange Relations as these, which would be certainly incredible, if daily Experience did not shew us, that Mankind are still the same; and that the greatest Vices, and the greatest Virtues, the noblest Sentiments, and the weakest Conduct, are very often observed in the same Man.

13. The History of *Calanus* is extremely famous, because all the Writers of the Life and Actions of *Alexander*, have mentioned it. But with respect to others of the *Brachmans*, to whom he applied himself, they are more faint; and, even in what they do report, there is such Diversity and Confusion, that it is extremely difficult, if not impossible, to come at the Truth. As to one Fact, however, they all agree; *viz.* that *Dindamis*, or *Dandamis*, was esteemed the chief of all the *Brachmans*, as much excelling the rest in Years, and in Wisdom. He it was, that when *Onesicritus* came to them, with a Message from *Alexander*, reproved *Calanus* for giving him too rough an Answer; and, having conferred with the *Greek* Philosopher for some Time, on the Doctrines delivered by *Socrates*, *Pythagoras*, and *Diogenes*, the *Indian* readily confessed, that they appeared to him to be very wise Men: In one thing only, said he, I blame them; which is, that they prefer Law and Custom to Nature, which if they

did not do, they would never be ashamed of going naked, as we do. Yet this *Dandamis* was more steady in his Resolution than *Calanus*; for he absolutely refused to visit *Alexander*, upon any Terms: And when his Messenger told him, that their King was the Son of *Jupiter*; that he was Master of the World; and would reward him with great Gifts, if he listened to his Proposal; but would otherwise cause him to be fastened to a Cross; he answered roundly, that he did not believe he was the Son of *Jupiter*; neither did he conceive, that he really possessed any thing; for if he did, he would be satisfied, and not give himself, or the rest of the World, so much Trouble: That, as to his Gifts, he neither needed nor desired them: And that even his Threats made no Impression; for, said he, if he should put me to Death, he will only release my Soul from this old decrepit Body, which will then pass into a freer and purer State: So that I shall suffer nothing by the Change.

This very plainly shews, that they over-rate this Matter, who suppose, that *Alexander's* professing himself the Son of *Jupiter*, was a Stroke of refined Policy, made use of for no other Reason, than to facilitate the Conquest of the *Indies*: Since there are two Things certain; one, that he assumed this Title long before he thought of conquering the *Indies*; the other, that the *Indians* never believed it. They some of them, indeed, seemed to believe it; and, by returning him Fable for Fable, saved themselves, and their Cities, from Destruction. But we shall soon see, that what the *Greek* Writers have reported, in relation to their Notions of Divinity, is, in most respects, very superficial; and, in many, absolutely false. *Alexander* himself was so thoroughly persuaded of this, and had so high an Opinion of the Wisdom of the *Brachmans*, that instead of resenting the Answer which *Dandamis* had sent him, he admired the Courage and steady Resolution of the Man: Nay, he carried his Admiration so far, as to write to this *Brachman*, acquainting him, that he had heard so many extraordinary Things, in relation to the Doctrines of their Doctrine, and their singular manner of Living, that he was desirous of learning, from him, what their Notions were, and what their manner of Life; since, if he found that Excellency in them, which was reported, he was content to become his Disciple.

14. This Condescension of *Alexander*, as it was very singular, so it had as remarkable an Effect; for *Dandamis* no sooner received the King's Letter, than he wrote him a long Epistle, so curious in itself, so full of extraordinary Facts, and withal so agreeable to his Character, that, I conceive, the transcribing it will afford no small Satisfaction to the Reader, inasmuch as it contains a clearer and better Account of those Philosophers, than, for any thing I know, is yet extant; and, therefore, though the Epistle be long, I shall give it the Reader intire, without the least Variation: Thus then it runs.

Alexander, the Desire you discover of being acquainted with Wisdom, inclines me to think, that you ought to be already ranked among wise Men. There is nothing that hinders me from regarding you as such, but your immoderate Passion for subduing Mankind, and commanding the Universe. The true Philosopher learns to conquer himself, and submit to the Law of Reason without Reluctance. But your Character, and, above all, your immoderate Ambition, is an invincible Obstacle to this. You desire to be instructed as to our Manners and Customs; I dare not undertake this, because I am conscious to myself, that I have not a Talent for speaking; and that your Course of Life, and the continual Exercise of Arms, will not allow you Time to hear me. Yet I will not wholly refrain, since you so earnestly desire it. But do not expect, that I should flatter you; we are a plain Sort of People, and know not how to colour or disguise Things.

The Life of the *Brachmans* is equally pure and simple. That Pleasure which seduces the rest of Mankind, has no Charms for us. Reason is the sole Guide of our Desires: Always satisfied with the State we are in, we

• never so much as mourn at any Accidents that befall us.
 • Indifferent to Nourishment, we know not so much as what
 • Delicacy means: Our Tables are only furnished with such
 • Roots and Herbs as the Earth produces in herself, with-
 • out Trouble, without Toil; and hence it is, that we
 • know nothing more of Diseases, than what we are taught
 • by the Pains and Complaints of others. That pure Joy
 • which reigns in our Breasts is never disturbed, but by the
 • Sense we have of other Peoples Miseries.

• An absolute Equality renders every one of us inde-
 • pendent, and banishes from amongst us Envy, Jealousy,
 • Ambition, and Malice. We have no Courts of Judi-
 • cature, because we do nothing that is amiss; and our
 • strict regard to Justice hath exempted us hitherto from
 • those severe Laws, by which Crimes are punished among
 • other People. We are even afraid, that the introducing
 • of them should awaken the Notions of those Evils
 • which they are intended to prohibit. The sole Law
 • amongst us is, not to violate the Laws of Nature. By
 • avoiding all Reproach, we are not exposed to the Necessi-
 • ty of pardoning others, in hopes of being treated by
 • them with the like Indulgence: Much less do we pur-
 • chase Pardon or Impunity by the Force of Money; a
 • sort of Tenderness produced by Avarice, and which
 • renders the Judge more guilty than the Criminal.

• Amongst us, Idleness is most rigorously chastised.
 • We dread Pleasure as the Source of Weakness. We
 • love that Sort of Labour which exercises the Body, but
 • we detest that which springs from the Desire of Gain.
 • Our Occupations tend only to procure the Necessaries of
 • Life. We abhor all other Views, and regard them as
 • the Fountain of Evils. In our Fields we have neither
 • Bound nor Limits, nor any thing that can constitute Prop-
 • erty. We are convinced, that this is an Usurpation
 • directly contrary to the Laws of Nature; every one
 • therefore takes where he pleases, what the Earth boun-
 • tifully produces for the Service of All. We let the Birds
 • fly quietly in the Air; the Bulls feed peacefully in the
 • Fields; and the Fish are unmolested by us in the Waters.
 • We possess all that we can wish; because we desire no
 • more than we want. There is nothing we dread so
 • much as that insatiable Desire of acquiring Property,
 • which creates a thousand Wants in the Heart of Man;
 • and renders him daily poorer and poorer, in proportion
 • as his Wealth increases.

• We warm ourselves in the Sun-beams. The Dews
 • refresh us. We wash in the Rivers. We eat the Herbs
 • and the Roots, which the Earth produces. The Earth
 • gives for our Bed. Cares never disturb our Sleep. Peace
 • of Mind preserves our Thoughts always free. Our In-
 • dependence delivers us from Fear, and from Subjection,
 • of every kind. We look upon each other as Brethren,
 • whom Nature has made equal, and as the Children of
 • the same Supreme God our Father, who ought therefore to
 • share alike the Inheritance he has given us. We are
 • ignorant amongst us as to the Art of destroying Forests,
 • and breaking Rocks to-pieces, to build Houses, while
 • Nature has formed Caves for that Use. There we nei-
 • ther fear Winds, Rain, Cold, Heat, or Tempests. These
 • natural Habitations are our Dwellings while we live, and
 • serve us for sepulchres after Death.

• We avoid in our Dress, whatever has the least Appear-
 • ance of Softness or Luxury. Leaves, or the Bark of
 • Trees, cover what in Decency should not be exposed.
 • Our Women are not allowed to adorn themselves like
 • the rest of their Sex; and, even if they were permitted,
 • their Sentiments would hinder them from making use of
 • that Permission; persuaded, as they are, that vain and
 • gaudy Attire is rather troublesome than ornamental;
 • and that all the Art in the World cannot add to Beauty,
 • or supply the want of it. All such Pains, therefore, are
 • either thrown away, because they do not correct Defects;
 • or criminal, because they would improve the Work of
 • an All-wise Creator. Such as our Women are by Na-
 • ture, they merit all our Affection; and we never hear
 • of any amongst us the Crimes of Incest, Adultery, or other
 • Filthiness which dishonour Nature, and violate the
 • Laws of God.

• Peace and Quiet rule always our Society. The
 • Thought of killing a Man fills us with Horror.
 • We never provoke Strangers. We know not how to handle
 • Arms. It is Mildness, and not Force, by which we
 • maintain a good Understanding with our Neighbours.
 • Fortune alone is our only Enemy; with her only we cer-
 • tainly contend, and, generally speaking, she blows the seeds of
 • Fall before us. Attentive as we are to do nothing that
 • may expose us to Mischance, we have few Evils which we
 • can justly complain of. Death troubles us only when we
 • are taken off immaturely; otherwise the Father at-
 • tends not the Funeral of the Son, and we consider it as the
 • Will of Nature. Whenever it befalls us, we never attempt to
 • raise pompous Monuments, which seem to insult the Re-
 • licts which they cover. For what more vile, and
 • wretched, than the miserable Remains of a dissipated
 • Corpse, destroyed by the Flames, that it might not pol-
 • lute the Earth!

• Be not displeas'd, if these first Strokes of our Penance
 • disgrace thee. With what Ravages hath thou not dis-
 • solated the Universe? Madly fond of Riches, and famish'd
 • with Ambition, how much Blood has been shed by thy
 • Hands, or, which is the same thing, by thy Orders?
 • Thou tear'st Children from their Parents, deprav'st
 • Men of funeral Rites, thou violat'st Tombs; thou art
 • eager in endeavouring to reach the rising Sun, as if thou
 • meant'st to stop his Course. Thou overturn'st Thrones;
 • thou draw'st after thee captive Kings to adorn thy
 • Triumphs. Of Citizens thou delight'st to make Slaves;
 • and, from a like Inconstancy, thou sett'st Slaves at li-
 • berty. Thou persecut'st thyself thou hast taken Towns,
 • when thou hast bribed their Governours with Money.
 • Without doubt, hereafter, thou blatter'st thyself thou
 • shalt be able to corrupt the Prince of Hell.

• I forbear to set thy Image before thy Eyes, that I may
 • proceed in the Account I am giving you of our Manners.
 • We know nothing of those tumultuous Assemblies, show-
 • Games, those Spectacles, which are your supreme Delights.
 • Of what Use would your Comedians be in the
 • midst of a People who most heartily despise the Per-
 • fection, and who do nothing that can furnish a Subject
 • for Rhetoric? Amongst us, there are none of those sad
 • Scenes proper to form your Tragedies. The *Dramatis*
 • *Personae* would tremble at the Sight of young Men expos'd
 • to wild Boats, or at the Sight of strong holy Men,
 • who, in cool Blood, beat and wound each other for the
 • Diversion of such as look on. Heaven is to us the
 • noblest Spectacle; we admire, we rejoice at the Order,
 • the Economy, the Regularities of its Motions; we are
 • ravish'd in contemplating the Sun, mounted on his pe-
 • riple Car, and travelling through the Realm of Night,
 • till he returns, at the End of the Year, to the Point
 • from which he set out. From the Heaven, we turn our
 • Eyes to the Earth, and behold there the Spectacle of
 • Nature; all whose Works appear to us equally lovely,
 • admirable, and incomprehensible. The Notes of the
 • Birds, the murmuring Streams, the Flowers, nay a
 • single Leaf of a Flower, sufficiently employ our
 • Thoughts, and absorb our Attention.

• Content with what grows in our own Country, we
 • never think of looking elsewhere, for the Rarities of other
 • Soils, and other Climates. Nothing strikes us so much
 • as what is our own. We despise all the Flowers of your
 • Eloquence; we condemn it as a pernicious Art, which
 • too often teaches Men to employ their Talents in giving
 • Fallhood the Air of Truth, protecting Crimes, accusing
 • Innocence, and sometimes justifying Parricide. All our
 • Eloquence consist in being sincere, and in never telling
 • an Untruth.

• This is a short Account of our Manners; this is a
 • succinct Detail of our Doctrines. It is a Maxim
 • among the *Brachmans*, never to justify their Sacrifices
 • with Blood by the Slaughter of innocent Victims; they
 • adorn not their Temples with Gold or Silver Plate, or
 • with the Lustr of Precious Stones. They look up to
 • this as insulting the Divinity, as if we meant to give
 • him what he has not, or as if we intended to show our-
 • selves as powerful as he, by affecting to display our

Riches in his Sight. God requires of us, that we should worship him with Purity, and not with Blood; and will accept only the Prayers and Humiliation of Men. He is that Word by which he has created the visible World, by which he preserves, governs, and causes it to subsist. He is a pure Spirit, and requires therefore no other Offerings from us than our good Works, our Virtues, and our Praises.

As I have thus given you a Sketch of our Religion, compare it, I beseech you, with your own; or, at least, permit me to make a Comparison. I can, by no means, suffer that astonishing Blindness, which allows you to pretend to draw your Original from Heaven, and to make so free, as you do, with the Supreme Being. You have no Idea of Grandeur, but as it consists in an illustrious Blood; you desire thereby the Nobility of your first Birth, by referring all Things to the Flesh, in which you place all your Dignity: You make it the sole Object of your Attention; you nourish it with Delicacies; you love no thing else; and, which is a much greater Crime, you think it worthy of being presented in Sacrifice to the Supreme Being. You know not the one God, who is; and you adore a Multitude of Gods, that are not; you place many of these in Heaven, and yet assign them the Direction of several Parts of your Body: *Minerva* resides in the Brain, as in the Seat of Wisdom; *Juno* governs the impetuous Motions of the Heart; *Mercury*, your God of Eloquence, dwells on the Lips; *Mercules* gives Force to your Limbs; *Cupid* inspires you with Sentiments of Tenderness; *Bacchus* gives you Taste: Your Aliments are under the Care of *Ceres*; *Venus* procures Fruitfulness; *Jupiter* opens the Organs of Respiration; and *Apollo*, so famous for his Address, conducts your Fingers in playing on musical Instruments.

What Divinities are here! how narrow are the Bounds of their Power, inasmuch that they either will not, or cannot, change their reciprocal Functions! Their Opposition is manifest, even from the very Worship you pay them. You must offer a Bull to *Jupiter*; a Peacock to *Juno*; a wild Boar to *Mars*; a Goat to *Bacchus*; a Swan to *Apollo*; a Dove to *Venus*; an Owl to *Minerva*; Cakes to *Ceres*; and Honey to *Mercury*: *Mercurus* will have Branches of Poplar to adorn his Statues and Altars; *Cupid* will have none but Roses. You dare not change so much as the Order of these Ornaments, without running the Hazard of being disgraced with them. Now, do but consider the Contradiction of these Characters; and how they all seem to have entered into a League, to torment you. One calls you to War; another to Pleasures: This to the Toils of Commerce; and that to the Delights of good Cheer. All of them command you to do what they like: They invite, they press, they solicit you; and they never allow you any Peace, till you have obeyed them. Are such Gods as these capable of promoting human Felicity? Speak But the Truth, and you will own, that they are your own Passions canonized.

You may discover yourself also, in the Divinities with which you have filled your Hell: It is easy there to find your own Crimes under honourable Symbols. The *Eruminides* are your fallacious Thoughts; *Typhloene* is the Reproach of a Conscience loaded with Crimes; *Tantalus* your insatiable Covetousness. *Cerberus* expresses the Punishment due to Ill-speaking; *Hydra* is your Vices rearing, as often as they are cut off. *Phoebus* himself, thrown down from Heaven, reaches that you are degenerated, like him, in forgetting that sole Being to whom you owe your Original. O unfortunate Nations! whose Religion is your Crime, while living; and your Punishment after Death!

Alexander gave no Answer to this Letter; neither did he apply himself any more to the Brahman, but a confused sort of Pride and Impiety; and desisted that Wisdom, which he would not take the Pains to understand. But it is now Time to return to that Conqueror's Expedition, and to attend him back to *Persia*, as we followed him to the *Indus*.

15. His Admiral *Nearchus* having informed him, that the Season was very favourable, and that there was no Danger in sailing to the *Euphrates*, he ordered *Hephestion*, with a great Part of the Army, to embark; and with the Remainder marched on to *Pisagada*, where he heard the Complaints that were made to him of the ill Conduct of his Governors in his Absence, and punished them very severely; and, having made *Peucestes* Governor of *Persia*, he advanced to the *Passigris*, where a new Bridge had been thrown over the River, for the Passage of the Landforces, and where, at the same time, *Nearchus* arrived with the Fleet, and that Part of the Army which had been embarked on board it, after they had been six Months at Sea: And on this Account *Alexander* instituted new Games, and sacrificed according to the Custom of the *Greeks*.

When he arrived at *Susa*, he married *Statira* the Daughter of *Darius*; bestowed most of the *Persian* Ladies on his *Macedonian* Captains; and made a magnificent Entertainment on account of their Marriages, at which there were 9000 Guests, to every one of which he gave a golden Cup: And that they might have nothing to embitter their Mirth, he paid all their Debts; and, suspecting that out of Shame they might not give a fair Account, he directed the Sum total to be brought him, without inquiring into each Man's Account. *Plutarch* says, that this amounted to 9870 Talents; and other Authors agree with him in that Account: But *Arrian*, the most exact Writer of his Memoirs, affirms that their Debts came to 20,000 Talents.

Here he likewise punished, with great Severity, such as had been guilty of Oppression and Corruption during his Absence; and rewarded others, who had behaved well. To *Peucestes*, *Leonatus*, *Nearchus*, *Oxyeritus*, *Hephestion*, and others, he gave golden Crowns. At the same time he mulcted the 30,000 young *Persians*, who had been trained in the *Macedonian* Exercise, and expressed great Satisfaction as to their Behaviour. He likewise ordered all the Invalids in his Army to prepare for their Return into *Greece*, promising to provide for them generously at their Departure; in which he certainly meant them well: But the *Macedonians*, who were now grown peevish and disaffected, put a bad Construction upon it; and, running into a Mutiny, cried out, that now he had worn them out in his Service, he was weary of the Sight of them, and did not care to look upon the Halt and Maimed, who had lost their Health and their Limbs in his Battles. They therefore desired he would discharge them all, and make use of his dancing Boys to conquer the rest of the World; or, if he found them insufficient, he might have recourse to his Father *Ammon*.

Alexander was greatly provoked, ordered thirteen of the Ringleaders to be immediately drowned in the River, and for three Days admitted none of them to his Presence; which threw them into Despair, and brought them to make the deepest Submissions: Upon which, after a gentle Reproof, he was reconciled to them, and gave the Charge of the Invalids to *Craterus*, ordering every Man to have his Arrears paid him, with Money sufficient to bear the Expence of his Journey, and a Talent besides. He likewise bestowed on *Craterus* the Government of *Macedon*, and ordered that *Antipater* should come over, with fresh Recruits, from *Greece*; sending him Instructions likewise, to pay the utmost Honour to his Invalids; and to take care, that at all public Shows, and in the Theatres, they should have the first Seats, and be allowed Chajlers of Flowers. He likewise directed, that the Children of such as had lost their Lives in his Service, should have their Fathers Pay continued to them.

When he came to *Pebotana* in *Media*, he celebrated new Games, having just received a Supply of 3000 Performers from *Greece*. But, in the midst of these Rejoicings, his Favourite *Hephestion* died: Upon which he put the whole Empire into Mourning; ordered the sacred Fire of the *Persians* to be extinguished; and, being informed that the *Cessii*, who lived in the Mountains, and had never been subdued by the *Persians*, refused Submission to him, he resolved to divert his Grief, by an Expedition into that

^a *De Ind. lib. vii. Arrian. Quint Curt.*

^b *Plutarch. Quint Curt. Plutarch. in Alexandri.*

^c That is, at the lowest, 1,000,000 of our Money, or 100,000,000 at the highest.

^d That is, as the *Persians* call it, the sacred Fire.

Country; which he reduced, notwithstanding it was the Winter-season, and very cold, in forty Days, ordering the whole Nation, without Distinction of Sex or Age, to be put to Death, styling this Cruelty a Sacrifice to *Hephestion's* Ghost.

He was now in the Neighbourhood of the *Hyrcanian*, or, as it is at present called, the *Caspian Sea*; and therefore he gave Directions, that a great Quantity of Timber should be cut down in the adjacent Mountains, and a Fleet built, on board which he intended to have gone himself the next Summer. In the mean time he resolv'd to proceed to *Babylon*, where he had ordered the Embassadors from foreign States to meet him, and where he intended to erect a most magnificent Monument to the Memory of *Hephestion*; for the Expence of which, he had destined 10,000 Talents; and declared besides, that he expected he should be worshipp'd as an Hero, or Demi-god.

16. When he drew near the City, *Narribus*, in whom he had great Confidence, inform'd him, that he had met with some *Chaldean* Soothsayers, who were in great Reputation, and who had declar'd, that the King's Entrance into that City would be fatal to him: He had the same Intimations from other Hands; to which, probably, he would have listned, but that the *Greek* Philosphers, who were about him, took Pains to persuade him, that it was unworthy of a great Prince, and unbecoming a wife and brave Man, to listen to such Stories. His Priests than suggest'd, that it would be best for him to enter the City on the West-side, with his Face towards the East; but, upon Trial, this was found impracticable. *Alexander* did not however, sthey, upon this Occasion, that Firmness and Steadiness which some have reported; but, on the contrary, had a thousand Doubts and Fears, as was evident from the Time he spent without the City, removing his Tent from Place to Place, and betraying strong Apprehensions of his being deserted by the Gods, and betrayed by his Friends: So that he fell, at once, into such black Fits of Despair and Suspicion, as terrified all who were about him.

At last, he recollected himself, and determin'd, without further Delays, to enter the City: To which he was chiefly mov'd by two Reasons; one, that he might shew his Contempt of these Predictions, to the foreign Embassadors before mentioned; the other, a Conjecture, that the *Chaldeans* might have some private Reasons to endeavour to prevent his entering *Babylon*. After he had taken this Step, he gave Audience to all the Embassadors who came from the different Parts of the known World: Some from the Sea-coasts of *Africa*, as far as the *Atlantic* Ocean; others from the *Uracians*, *Elvians*, and *Sythians*. Some of the Nations of *Italy* sent to compliment him; such as the *Bruttii*, *Lucani*, and *Tusci*: There came likewise from *Sicily* and *Sardinia*; and even from the *Gauls* and *Celts*. There are some Writers, who pretend that the *Romans* also sent Embassadors upon this Occasion; but they are Writers of no great Credit: For *Polemy* the Son of *Lagrus*, and *Strabo*, who constantly followed him, and who kept Memoirs of every thing that happened in those Days, say no such thing: And, as *Strabo* very well observes, the Story is not probable in itself; for, as the *Romans* were at that time perfectly free, and the Republic excessively jealous of their Liberty, it is a Thing incredible, that they should pay such an extraordinary Mark of Respect, as this, to a foreign Prince; and more especially to one who set up for universal Monarchy, and pretended to lord it over the whole World. It is certain, however, that he considered this Concourse of foreign Ministers, as the noblest Incident of his whole Reign, as he judg'd it the strongest Proof of his being become formidable to People even at the greatest Distance.

To keep up, therefore, this Reputation, and to have his great Officers in Action, which was a Maxim he constantly pers'd, he set on Foot three vast Designs at once. The first of these was the perfect Discovery of the *Hyrcanian*, or *Caspian* Sea, the best Part of its Shore being hitherto unknown, notwithstanding the many great Rivers

that fall into it; and this it was that tempt'd *Alexander* to make a perfect Discovery of its Bounds, and to reduce all the Nations that inhabited on its Borders, under his Dominion. His second Design was, the establishing a great Fleet in the *Indian Ocean*; for which Purpose he caus'd forty-seven large Ships, according to the Notion of those Times, to be built by the *Phoenicians*; then taken to pieces, and brought to *Thapsacus*, and from thence to *Babylon*. The Use he intended to make of these Ships, was to examine the *Indian Coast* thoroughly, and to take a perfect Account of the Places where convenient Ports might be made; as also to acquire perfect Intelligence as to the Nature and Value of *Indian* Commodities. But, as he knew, that Ships were of little Use, unless they were conducted by able Seamen, he intrust'd *Myndus* of *Carmania* with five hundred Talents, and sent him into *Persepolis*, to contract there with a sufficient Number of *Indian* Pilots, and able Seamen, to navigate that Fleet. And, to shew how little Regard he had to the Maxims of the *Persian* Policy, he order'd all the Impediments to the free Navigation of the *Euphrates* and *Tigris* to be remov'd, that Fleets might pass these Rivers as easily as ever.

His third Project was the Conquest of *Arabia*, to which he was excited by various Motives; the first of these, as we find it in *Strabo's* History, is very remarkable. He was inform'd, that the *Arabians* worship but two Gods, *Heaven*, and *Bacchus*; the former, because it contains the Sun and Stars; the latter, on account of his Victories in *India*: *Alexander* therefore had a mind to make their third Deity, and to force them to the same Submissi- on that had been paid him by the *Indians*. Another Reason was, the Desire he had of being Master of their Riches; for, at that Time, the *Arabians* had Abundance of Gold, and possess'd all the Spices and rich Perfumes that were known to the World. A third Reason was, the Situation of the Country, which lay in the Middle of his new Conquests; so that, without this Accession, he judg'd them to be incomplete. But, that he might be perfectly satisfied, both as to the Extent and Worth of the Country against which he was next to lead his Armies, and that he might know how to dispose of his Maritime Force to the best Advantage, he thought proper to send three of his ablest Officers, with a large Ship, to examine the Coasts. The first of these was *Arctius*, who, in a Vessel of thirty Oars, proceeded out of the Mouth of the *Euphrates*, and discover'd, at the Distance of one hundred and twenty Stadia, an Island, which was a Temple sacred to *Diana*. This Island, by the Command of *Alexander*, was call'd *Iovius*. He also discover'd another, and a larger Island, at the Distance of a Day and a Night's Sail from the River's Mouth, the Name of which was *Tylus*. It was not overgrown with Wood, as the former, but a well inhabited and well-cultivated Country: But farther he durst not proceed. But *Androsthenes*, who had a Ship of the same Burden, sail'd farther, and examin'd Part of the maritime Coast of *Arabia*. *Heaven* excell'd them both; for he sail'd quite round the *Clerjense*, into the *Arabian* Gulph, and so to the opposite Coasts of *Egypt*; and, on his Return, gave a full Account to *Alexander*, of the Extent of the Country, which he affirm'd to be very near as big as that Part of *India* which they had discover'd.

The King was very well satisfied with these Accounts; and therefore gave Directions for making all the necessary Preparations for the Invasion of *Arabia*. He likewise order'd an Haven to be made at *Babylon*, and sail'd himself down the *Euphrates*, and into the *Pallucopa*, which was a Channel cut from the former River; the Passages of which he open'd, and caus'd a new one to be cut toward the Lakes; and, having thus pass'd as far as the Frontiers of *Arabia*, he order'd a new City to be built, as a Monument of his coming into these Parts. On his Return to *Babylon*, he derided the *Chaldean* Soothsayers on the Fallhood of their Prophecies; because he had not only enter'd *Babylon*, but had left it, made a Voyage, and return'd thither again without meeting with any unlucky Accident.

As he had now conquered his Apprehensions in respect to the Fatality of the Place, he began to be extremely pleased with the convenient Situation of this City, and to think of making it, at least for the present, the Seat of his Empire; for which Reason, he gave Directions for repairing some, and erecting other, public Buildings. While his Thoughts were thus occupied, he spent the Evenings in feasting; and, having sat up one Night till it was late, he was invited, as he was going to Bed, to pass another Hour with one *Medius*, a *Thessalian*; which he unluckily complied with; and there drank so hard the remaining Part of the Night, that it threw him into a Fever. The next Day he bathed, and remained in the Bath-chamber all Night. The Day following, which was the 19th of the *Macedonian* Month *Desius*, he thought himself better, and sat heartily at Supper; but had a restless Night. On the 20th he sacrificed, and, in the Bath, heard *Nearchus* read the Journal of his Voyage, and heard him finish it the next Day: But then, his Fever prevailing, he grew extremely ill, and continued so till the 28th in the Evening, when he expired. These, and some other Passages relating to his last Illness, are taken from his Diary, written with his own Hand; for in this he was extremely exact, setting down every thing of Moment that happened till within a Day or two before his Death. These Passages we find transcribed in *African* and *Plutarch*.

One thing, however, was so remarkable in his Conduct, even in his last Moments, that it ought not to be omitted. When he was very near his End, he asked some who were about him, *Whether they thought they should have such another King?* As they remained all silent, and made him no manner of Answer, he proceeded. *You are ignorant of that, said he, and so am I; but this I can foresee, nay, I almost see it with my Eyes, that Macedonia will overflow with Blood before this Controversy can be decided, and that my Funeral will be celebrated by sanguinary Disputes.* When he was asked to whom he bequeathed the Kingdom, he answered, *To the most worthy;* and, when *Perdiccas* demanded, *At what time he would have divine Honours paid him,* he replied, *Whenever you are all happy*.

At the Time of his Decease, he was in the thirty-third Year of his Age, in the thirteenth Year of his Reign over *Macedon*, and in the eighth of his Empire; and this great Event, according to the best Chronologers, fell out in the 33d Year before the coming of *Jesus Christ*.

It has been already observed, that this great Prince was exceedingly exact in committing to Writing whatever occurred to him of Importance, and this to the very last. When he was dead they examined his Table-book, or, as the Antients called them, his Commentaries; and therein they found these five Schemes mentioned, as necessary to be put into Execution, for establishing and securing the Empire. I. That a thousand long Ships, of a larger Size than any that were then in Use, should be built in *Phoenicia*, *Syria*, *Cilicia*, and *Cyprus*, in order to subdue the *Carthaginians*, and others inhabiting the Sea Coasts of *Africa* and *Spain*, together with the adjacent Islands, as far as *Sady*. On this Head, it is natural to observe, that *Alexander* had chiefly in View, in the bringing this Project to bear, the establishing a maritime Power not to be disputed with; which was, in Truth, the Thing, of all others, he most affected, as well knowing, that, without maritime Power, the widest Empire is a Prison, the Keys of which are in the Hands of whatever State is Mistress of the Sea.

II. That a plain and direct high Road should be made through the Coast of *Africa* to the Pillars of *Hercules*. This was properly added to the former, as conducive to the same Design; for, without such a Road, neither the Dominion of those Coasts could be secured, or the Communication necessary for a free and universal Commerce be kept open. Such a Road would, he foresaw, prove so useful, and, in a short Space of Time, be found so convenient, especially in the Hands of so wise a People as the *Greeks*, that it would prevent the Country, through which it passed, from falling under the Yoke of barbarous Masters,

and thereby preserve the Empire, into whose Hands soever it fell, in a great measure, entire, as affording the Means of keeping regular Garrisons in convenient Stations, and facilitating the March of such Bodies of Troops as might be necessary for suppressing Rebellions, so as to reach any Part of that great Space of Country in a very short time.

III. That six magnificent Temples should be built, and the Sum of fifteen hundred Talents be laid out on each of them; another Stroke of the same Policy, in order that the Concourse of People to these Temples should maintain Society and Acquaintance, prevent the Revival of Barbarism, and inure all Nations to the Love of a free and general Correspondence, by the mingling frequently in the Celebration of the same sacred Rites. This was very consonant to his own constant Practice of keeping up a great Spirit of Religion in his Army; in which he found his Account, and had the Priests, in every Part of his Dominions, intirely devoted to his Service, which was the surest Means of keeping the People quiet: Yet it does not appear, that he was a Bigot, or aimed at obliging all Nations to follow his Sentiments in Religion, but rather the contrary; for he left the *Jews*, *Persians*, *Indians*, and *Egyptians*, the free Exercise of their respective Forms of Worship, though they were all directly repugnant to his own.

IV. That, in convenient Places, Arsenals and Havens should be constructed for the Reception and Security of the Royal Navy. It is clear from hence, that he intended his Empire should be protected and defended by a Naval Force. It was exactly conformable to his Behaviour in the *Indies*, and at *Babylon*, where he neglected nothing, spared no Pains, either of his own, or of his Army, to discover every Corner where he came, to examine the Rise and Course of Rivers, their Mouths, and the Means of rendering them serviceable by the Construction of proper Harbours and Fortresses to protect them. This appeared likewise and useful to his *Macedonians*, who had always an Eye to their own Country, and considered all their Conquests as Acquisitions to that little contemptible State. But *Alexander* had other Thoughts, and other Views, as his Intent was not only to conquer the best Part of the Universe, and to keep it when conquered, but to reduce it under a regular Form of Government, so beneficial to all his Subjects, that they might find their private Interests deeply concerned in maintaining the public Regulations he meant to have established.

V. That all the new Cities he had founded, should be planted with Colonies; and that People should be for that Purpose transported out of *Europe* into *Asia*, and out of *Asia* into *Europe*, to the end first, by reciprocal Marriages and Intermixtures, Peace and Concord might be established between the two great Continents of the World. This was the Point to which the other Projects tended; this was the Centre of his Designs, and the grand Object of all his Contivances. The Consideration of this Proposition explains his whole Conduct, and serves as a Key to every one of his particular Schemes. It was in order to this, that he was so careful in subduing all the barbarous Nations in his Return from *India*; that he took so much Pains to have the Coasts of *Persia*, and the *Persian* Gulph, so accurately examined; that he determined to reduce *Arabia*, that all the Sea Coasts on that Side might be in his Possession; that he thought of discovering and surrounding *Africa*; and, in fine, that he framed, on the other hand, a Resolution of examining the Coasts, and subduing the Nations that bordered on the *Hyrcanian* Sea.

He was not of the narrow Spirit of his Countrymen, who would have subjected all the World to *Macedonia*, but had a Soul as capacious as the World he fought to conquer. He did not, as many have imagined, rush on from Victory to Victory, from Conquest to Conquest, without knowing what he would be at, or when he would be contented; but proceeded uniform, and on a regular Plan, which he laid down early, as we shall shew when we come

^a *Plato de Alexandro*. He died, according to the best Calculation that can be made, about the latter End of May.

^b *Diador. Sicul. lib. vii. Quint. Curt. lib. x. cap. 7. Justin. c. 7. Trogus. c. 7. Strabo. lib. xii. Dion. Nepos in Lam. vi.*

^c *Diador. Sicul. lib. vii.*

to speak of the Foundation of *Alexandria*; and pursued steadily to the very Day of his Death, as appears by his attending, when he was so near it, to the Journal of *Nearchus*, whose Voyage had so close a Relation to his grand Design. As, in laying open this System of Policy, I have followed evidently the Minutes of this great Monarch, the Reader can entertain no doubt of the Truth of what I say. Indeed I might have collected much of what is here delivered from other Steps of his Conduct; but then my Conjectures might have been disputed; whereas now, I have given unquestionable Authority for every Title I have advanced.

19. *Plutarch*, in his two learned Orationes on the Fortune and Virtue of *Alexander* the Great, has given us abundance of fine Thoughts on these Subjects; and many of our modern Writers have, with infinite Industry, collected, from his Life, all the different Indications of his Virtues, and of his Vices. I must confess, that I do not think the true Character of *Alexander* can be this way reached; for his Virtues and Vices were most of them constitutional, and appeared accidentally, as they were by different Occasions struck out. His sole Principle of Action, his ruling and sovereign Passion, was the Conquest of the known World; from a Notion, that, under his Direction, Mankind might be new-modelled, and his Empire so constituted, as to maintain and support itself. In all human Probability, he originally either derived this Notion from the Lectures of *Aristotle*, or gathered it from the Works of *Homer*. But, however he came by it, there is no Question to be made, that he had formed an Idea of this Empire before he quitted *Macedon*; and this is the true Sense of the Answer he made one of his Captains when he divided all Things amongst them, What he kept for himself? Hope, returned he; that is, the Hope of this Empire, the very Thought of which made him regard his hereditary Kingdom, and all his former Conquests, as nothing.

It was this that induced him to reject all the Propositions made him of Peace; for, according to his Scheme, there could be no Peace, till he was Master of all. This led him to destroy the City of *Tyre*, that he might put an End to their Monopoly of Trade, which was directly opposite to the System he had formed, and was endeavouring to carry into Execution. It was this that induced him to stay so long in *Egypt*, which has been censured by so many Writers; because they did not enter into his Plan, or conceive the ultimate View of all his Conquests. It was this that led him to the hazardous Expedition to the Temple of *Jupiter Ammon*, and the sole Reason why he affected to be thought the Son of that God, from a Notion, that the Sovereign of the Universe should not be considered as the Offspring of a Man.

By degrees, however, this grew upon him; and what at first was a Principle of Policy, at last became a Foible. He found his *Macedonians*, whenever they were out of Humour, ready to rally him on that Subject; and this was a Rally he could not bear, because he really believed it necessary to the Support of his Designs; and therefore he took several Methods of inculcating this into them; not that he ever proposed they should believe it, but that they might be silent on this Head, and leave it to such as had a Capacity for Fables. But he erred egregiously, when he imagined it would pass upon the *Indians*, who were really too subtle for him in that Point, and turned the Fable upon himself.

It was this that induced him to comply with the Manners of the *Persians*, a thing detested by his *Macedonians*, because they did not understand it; for he did not fall into this from a Spirit of Luxury, or from a Desire of leading the same effeminate Life, which the *Persian* Monarchs had done; but with a View to conciliate the Affections of his new Subjects, and because he thought the *Persian* Manners more agreeable to his System, than those of the *Macedonians*. The Truth of this may be fully shewn from two Actions of his Life, which most Writers have related without Reflection, as if they had been Acts of Passion, or of

Madness. He selected thirty young Men, of the great Families in *Persia*, to whom he gave the Title of *Hyppomachs*, i. e. his Children, and allowed them the Honour of leading him; which threw the *Macedonians* into that violent Mummy, when he actually disbanded them, upon which they spent two Days and a Night in Tears before his Tent, till at last he was reconciled to them; and, upon this Reconciliation, he wept himself, and, with great Tenderness, told them, they were all his Kinmen, and allowed as many of the private Men, as pleased, to kiss him; which plainly shewed, that his former Intention was not the Effect of Pride, but of Policy; and did all that was in his Power to make them conceive and enter into his Sentiments, that there might be an End of these peevish Disputes for the future. But after this, when *Cassander*, the Son of *Antipater*, who was just come from *Greece*, had Audience of him at *Babylon*, and could not help laughing when he saw the *Persians* adore him, this threw *Alexander* into such a Transport of Passion, that, taking him fast by the Hair, he beat his Head against the Wall; not that he really delighted in these Honours, so much from Vanity, as from a Persuasion, that keeping up this Decorum was absolutely necessary to his new Character.

To say the Truth, if there was a Difference between the King of *Macedon*, and his Subjects, there was as wide a Difference between the Monarch of that little Country, and the Sovereign of the World.

But to conclude, though there were other Conquerors, as well as *Alexander*, who had Notions of becoming Lords of the Universe, yet in this he was singular; viz. that he entered into the Spirit of the Character, and sincerely and earnestly endeavoured to behave as it would become such a Monarch to do. He threw off all Partiality for his Country, or that Family; and as he affected to rule Mankind, so he made the Interest of Mankind his Care. When he built *Alexandria* in *Egypt*, he intended to make it the Centre of Commerce; he cast his Eyes upon *Babylon*, for the Seat of Government; and seems to have reserved *Greece* for the Theatre of Arts and Sciences, which he thought were best understood by the *Athenians*: And thus he intended to have made one Part of the World useful to the other; and, by inspiring the *Greeks* with the Love of Commerce, and the Barbarians, as they were then called, with an Inclination for the *Greek* Literature, and behaving with equal Kindness to all Nations, when their Affairs led them to his Court, he thought to have blended the human Species in such a manner, as to have worn off their narrow Principles, and to have inspired them, by degrees, with Sentiments like his own.

It was this that made him so desirous of faring out new Countries; not that he would spoil and plunder the Inhabitants; for his Army, when it had conquered the *Indies*, were in Debt; but that, by acquiring new Subjects, he might make a greater Number of Men happy. To sum up all in a Word, other great Conquerors have had the Possession of the World in View, as well as he; but *Alexander* was the only Prince that ever thought of acquiring a Title to that Possession, by making it the Interest of all Men, that he should govern and command them.

20. It is not to be doubted, that the Conquests made by *Alexander* were long remembered, tho' they were not long maintained, in the *Indies*; for, upon the first Division of *Alexander's* Dominions, his Captains, who could scarce agree in any thing else, were unanimous in their Resolution of giving up their Provinces to *Taxiles* and *Porus*, because they knew not how to keep them. *Plutarch* reports, on the Credit of some Writers, who composed Memoirs of *Alexander's* Life, that long after his Decade, the *Indian* Princes came to sacrifice on the prodigious Altars he left behind him. This however, does not seem probable, but looks like a *Greek* Fiction, since no Author of unquestionable Credit ever reported, that the ancient *Indians* sacrificed at all, at least in the Sense of the *Greeks*: For, to say the Truth, that was repugnant to their religious Principles.

e *Plutarch. in Alex. and c.*

But there is better Authority for a Fact of a greater Weight, viz. that if the *Macedonians* had complied with the Request of their King, and had passed the River *Ganges*, they had very probably succeeded in their Expedition, notwithstanding the Force of the *Gandaride*, who was prepared to oppose him; for their King *Xandrames* was hated and despised by his Subjects, for this Reason: His Mother, who was the lawful Queen of that Country, had fallen in Love with a Barber, whom she first raised to great Employments, and then gave him an Opportunity of murdering the King her Husband, which made way for him to marry her, and to become the Guardian of the King's only Son, who was a Child; and soon after pur out of the Way, by the same vile Hands that had been intruded in his Father's Blood. This successful Traitor had a Son by the Queen, who was the King before-mentioned, whom some Writers call *Xandrames*, and others *Agrammes*, who was hated and contemned for his mean Original, and for his low and vicious manner of Living: So that, notwithstanding his potent Army, he would have been scarce able to have withstood *Alexander*, whose Manners would probably have been more agreeable to the *Indians*.

At least, this was the Sentiment of a great Prince, who afterwards ruled in this Country, and held a fair Correspondence with the *Greeks*. His Name was *Andracottus*; and we may guess at his Power, by the Present he made to *Satacus*, of 500 Elephants. This Prince, at the Head of an Army of 600,000 Men, conquered the best Part of *India*; and had a great Effecm for the Memory of *Alexander*, whom he had seen when a Boy.

The Eastern Histories are full of the Exploits of our great Conqueror; but very few of them, at least, that have reached us, in this Part of the World, are to be depended upon: For they are written in a poetical Strain, and are so wittily mixed with Fictions, that they can be of no Use to such as desire to be acquainted with Facts, and not to be entertained with romantic Adventures. There may be, and doubtless there are, some valuable Histories of those Times, in the *Arabic* and *Indian* Tongues; but we have hitherto had no Accounts of them, because few Men of great Learning travel into the *Indies*; and those of another Stamp are better satisfied with these kind of Books, as full of marvellous Stories; and consequently more entertaining. It is, however, clear, even from these fabulous Writings, that the Glory of this Monarch still survives in those Parts: And, as we shall see hereafter, in the Works of our ancient Travellers, the Tradition of his Victories was very strong, when the *Europeans* first visited the *Indies*. And therefore, to avoid Repetitions, and to prevent this Section from swelling to any greater Length, to them we shall refer our Readers.

21. In order to apply what has been already said, and to justify our introducing the History of *Alexander* the Great here, it is necessary to consider him as a Traveller, who, by his Expedition into this Country, made it much better known than it had been before his Time. *Xenophon* contended the *Indies* with a Province of that Name, between the *Euxine* and *Caspian* Seas; from whence, very probably, those Embassadors came, to whom *Cyrus* returned certain Disputes between him and his Neighbours. But nothing was more common, than to confound *Ethiopia* with the *Indies*, and even with *Egypt*: So that, as *Arrian* tells us, *Alexander* himself, when he first came to the River *Indus*, wrote a Letter to his Mother, in which he told her, that he had actually discovered the Sources of the Nile; which sufficiently discovers how little Acquaintance the Ancients then had with those Countries.

It is to be observed, that *Alexander* entered them from the Northern Provinces of *Persia*, passing through the Country of *Paropamisus*, so called from the neighbouring Mountains, which the *Macedonians* thought fit to call *Caucasus*; and here he caused a City to be built, which he named *Alexandria*. In this Country lay the Region of *Caspene*, the Capital of which was *Capissa*, a City that had been ruined by *Cyrus*. *Babacene*, which was reduced by *Polyperchon*, lay not far from hence. The City of *Nisa*, from whence *Scyphus* came Embassador, was seated

on the *Copbes*, the first River in the *Indies* passed by the *Macedonians*; tho' some do not reckon that, but the *Cboaspes*, the first *Indian* River. Between these, lay the *Aracofians* and *Tyræans*. Advancing still towards the East, he met with the *Aprians* and *Aspagonians*, the little River *Evaxpla* terminating that Country. From whence he marched among the *Dardians*, a very numerous Nation: He likewise approached the City of *Pucela*; and then, falling into the Country of the *Assaceni*, took their Capital *Massaca*, where he was wounded. Turning then towards the South, he reduced *Ora*, the Rock of *Aornus*, and *Ebolima*, which lay near the River *Indus*. From that River to the *Hydaspes*, lay the Dominions of *Taxiles*, the Countries inhabited by the *Ariasprians*, the *Sobeans*, the *Afenians*, the *Sibes*, and the *Mallians*; in whose Territory *Alexander* caused the City of *Nicea* to be built, as a Monument of his many and rapid Victories.

On the other Side of that River, he erected *Bucephalis*, in Memory of his Horse, which had served him many Years, and died of old Age, near this Place; all the Country hereabouts being within the Dominions of the brave *Porus*, which extended as far as the River *Aefines*. Between this last-mentioned River, and the *Hydrates*, the Country was barren and uncultivated, as being inhabited by *Brachmans*, who had, however, a large and flourishing City on the other Side the *Hydrates*. Between that and the *Hypbesis*, lay the Territories of the *Sophites*, *Catbeans*, *Pharaseans*, *Phegelians*, *Oxydracians*, and other Nations. This River *Hypbesis*, which some Authors call *Hypotes*, and also *Hypans*, was the Eastern Boundary of the *Macedonian* Empire; for they never passed that River, but in order to erect the Altars, and other Monuments of their having encamped there, which have been so often mentioned, and which were erected in Imitation of *Hercules*.

It is intirely owing to *Alexander's* Expedition, that we know any thing of the ancient State of these Countries; and, as to what lay between the *Hypbesis*, and the *Ganges*, we know little of them, except that *Arrian* has mentioned two Cities, *Minageria* and *Barygana*, which, he says, were very opulent, and Places of great Trade. All that vast Country, which is at this Day so famous, and so well known, from the Junction of those Rivers, quite to the *Indus*, as well as the lower Part of the Peninsula, were absolutely unknown to them, except a few Nations, whose Names the Reader will find in the Map: They called the rest of the Inhabitants by the general Name of *Indo-Scythians*. All this Country is what we now call *India*, on this Side the *Ganges*: It contained in the whole 118 Nations, or Provinces; some of which were pretty large: As, for Instance, the Kingdom of *Porus*, which contained 300 Towns; but others, again, were very small, some of the *Indian* Princes not having above two Towns belonging to them, and those, probably, not very large. Within this Space, there were not fewer than forty Rivers, most of them navigable, and all running into the *Indus*; which must have been very large, since the *Hydaspes*, which was only one of the Rivers that fell into it, is said to have been twenty Stadia, which is a full League, in Breadth.

Let us now endeavour to fix the Bounds of the *Indies*, as they appear from this Description: On the North, they were separated from the Country of the *Scythians* by a Ridge of Mountains, which the *Macedonians* called *Caucasus*, that *Alexander* might have the Honour of reaching them, as well as *Hercules*. On the East lay the *Ganges*. As to the Western Bounds, one knows not well what to say to them, since the oldest Writers certainly take in *Arabia*, with a View, no doubt, to give an Air of Probability to what they relate of the Conquests of *Bacchus*, *Hercules*, *Osiris*, and *Sesftris*; but, with regard to the Expedition of *Alexander*, the Western Limits of the *Indies* ought certainly to be placed at the River *Arbis*, or *Arabis*. On the South, they were bounded by that Part of the Ocean, into which the *Ganges*, and the *Indus*, discharged themselves.

As to the Cities that were built by *Alexander*, and on most of which he bestowed his Name, there are so many of them, that it is very difficult to describe them. That

which lay farthest North, was built upon the River called *Tanus*, by the *Macedonians*, but falsely, as has been before observed; and was, without Doubt, intended to facilitate the Expeditions he intended to have made for the Discovery of the *Caspian* Sea, and the adjacent Countries: To the South of this stood another City of *Alexandria*, upon the River *Oxus*; another on the River *Orchus*; and a third on the River *Margus*. All these were to the North of Mount *Paropamisus*; to the South of which lay two other Cities of the same Name; one near the Mountains, and another in the Country of *Aria*. On the River *Indus* stood another *Alexandria*; and, in his Return from the *Indies*, *Alexander* directed a City of this Name to be built in the Country of *Gadrosia*.

In all these Cities he left *Grecian* Colonies, in order to establish an intimate Correspondence between them and his *Indian* Subjects, that he might have a more perfect Account of all these Countries; and might know the better how to regulate his future Undertakings: Yet, how wise soever his Proceedings in this respect might be, they were intirely overturned by his Death, which gave the *Greeks*, who were weary with living in those Cities, an Opportunity of forsaking them; and the Inhabitants of those Countries, who were as weary of their Neighbourhood, an Occasion to recover their Freedom: So that all the fine Plan he had formed for the perfect Settlement of this Part of his Dominions, was quickly overturned and destroyed: And, which is not a little singular, the very Method he employed for making this Part of the World better known to the *Greeks*, proved the Means of leading them into new Mistakes about it, since such of his Soldiers as lived to return home, instead of giving a just and fair Relation of their Adventures, in the Country through which they had travelled, amused themselves with contriving idle and extravagant Fictions, as irreconcilable to each other, as all of them were to Truth. We may easily guess to what a

Height the Invention of his Soldiers rose, from a Passage that happened in his Life-time; for *Craterus*, one of his principal Officers, in a Letter to his Mother *Antipatris*, which was extant in the Days of *Strabo*, gave an Account of his arriving, with *Alexander*, on the Banks of the *River Ganges*; of the Breadth and Depth of which River he reported boldly whatever he had heard, or came in his Head, since it is most certain, that he was never there, nor, indeed, near the *Ganges*.

Strabo therefore, who was a very learned, and a very judicious Writer, treats the Stories of these Men, that had descended to him, as equally incredible and absurd; and particularly mentions three of those Authors, who, with some People, were even then in great Credit, viz. *Daimachus*, who is first named, not in Order of Time, but as the greatest Liar. *Megasthenes*, who was employed in an Embassy to *Andracotus* before mentioned, and to other *Indian* Princes; whereas *Daimachus* was sent to his Son *Alitrochades*: These both reported such Things of *India*, as were not to be endured, much less believed; such as that there were Nations that wanted Mouths; others Noses: Some with one Eye; and others with prodigious large Feet: Nay, they talked of Pygmies that were not above three Spans high; with Abundance of such-like strange Stories, of which the Reader may find a large Account in *Pliny*. The third Author in this Catalogue is *Onesimus*, who was employed by *Alexander* in Maritime Affairs, who, tho' addicted to Fables, did not go quite so great a Length as the other two. But the Credit of *Nearchus* remains unimpeached, in a great measure: And therefore, as we have his Journal still preserved by *Arrian*, it is requisite, that it should follow, as a Supplement to this Section, and a Specimen of the Journals that were written in this Period of Time; from which the Reader will be able to form a Judgment of their Author's Knowledge and Abilities.

SECTION VI.

An Account of the Voyage made by the Fleet of Alexander the Great, under the Command of Nearchus, from the Mouth of the River Indus, up the Persian Gulph, for the Discovery of the Coasts, and their Inhabitants.

[From the Journal of *Nearchus*, preserved by *Arrian*.]

1. *The Reasons that render the inserting this Voyage necessary; with some Observations on the Translation of it in Ramusio's Collection, and the Extract published by Purchas.*
2. *The Design of Alexander in this Expedition explained, and the Manner in which Nearchus came to be intrusted with the Command of it.*
3. *The Fleet sails from the Mouth of the River Indus, to the Island of Crocala.*
4. *Continues this Voyage, and are exceedingly distressed by hard Weather.*
5. *Arrive at the Mouth of the River Tomarus, and disperse the Barbarians that endeavoured to hinder their landing.*
6. *Remarks made in this Voyage by Nearchus, and a Justification of these Remarks.*
7. *Obliged to make a Descent, in order to obtain a Supply of Provisions by Force.*
8. *That Part of the Persian Coast, inhabited by the Ichthyophagi, i. e. Fish eaters, accurately described; together with the Customs and Manners of the Inhabitants.*
9. *The Amusement of the Macedonians at the Sight of Whales in those Seas, and the Prudence of Nearchus on that Occasion.*
10. *Arrive at a Port, within five Days Journey of the King's Camp, to which Nearchus repairs, and is most honourably received by Alexander.*
11. *Resumes the Command of the Fleet, and prosecutes his Voyage through the Persian Gulph.*
12. *Brings the Fleet safely to the appointed Rendezvous, and is magnificently rewarded by Alexander for his Diligence.*
13. *The Sentiments of ancient Writers in respect to this Voyage, and the Character of Nearchus.*
14. *Remarks, which prove the Necessity and Utility of preserving such ancient Voyages.*
15. *Some Observations on the State of the Commerce of the Indies within this Period, and on the Manner in which, by the Consequences of this Voyage, it might have been affected.*

IT has been before observed, that *Alexander* the Great is considered, in this Work, as a Traveller, as well as a Conqueror. Had he only overturned the *Persian* Empire, and established that of the *Greeks*, he might have merited some Notice in a Collection of this Nature; but we should never have taken the Pains to have followed him so closely in his Travels, or to have examined the Principles of his Policy: But as these were different,

indeed widely different, from those of most great Conquerors, and tended solely to unite the human Species, and to promote and extend the Intercourse of distant and different Parts of the World with each other, it became absolutely necessary to set these Designs, and the Progress he made in them, in the fullest Light possible; the rather, because the best Geographers, the most accurate Historians, and the ablest Philosophers of Antiquity, acknowledge them-

elves indebted for almost all the Knowledge they acquired of this Part of the World, to the Expedition of *Alexander*, and the Consequences of that Expedition: Among these, the most remarkable was the Voyage of *Nearbus*, from the Mouth of the River *Indus*, along the Coast of *Persia*, through the Gulph of the same Name, to the Mouth of the River *Euphrates*.

This Voyage *Nearbus* not only conducted in Person, but wrote also a very accurate and distinct Account of it, which, in his own Words, is in a great measure preserved in the *Indian History of Arrian*; is frequently quoted by *Strabo* and *Pliny*; and was indeed considered, by all the great Writers of Antiquity, as the most curious and authentic Piece of its kind that was then extant. It was for the same Reason, that the judicious and industrious *Ramus* inserted it in his Collection; and our voluminous Collector *Samuel Purchas* has an Extract of it in his Work, but abridged, mangled, and interperfed with many of those Impertinencies, with which most of his Relations are filled.

One thing I must observe, even with regard to *Ramus*, the ablest Man, beyond Comparison, that ever undertook a Labour of this Kind; and that is, that he has not observed any Order of Time in his Collections, which, as I apprehend, is of the utmost Importance to the Understanding the History of Discoveries: And it was for this Reason, which, I doubt not, the Reader will approve, that I rather chose the hard and laborious Method laid down in the first Section of this Chapter, than the easier Way of adding Voyage to Voyage without any Connection; which might have indeed entertained, but never would have answered the End of Instruction so well as the Track we are now in.

2. We are told by *Nearbus* himself, that when *Alexander* had, with so much Pains and Labour, sailed down the River *Indus* to the Southern Ocean, he was extremely desirous to pursue his Navigation along the Coasts of *Persia*, and so into the Gulph, through which was then called, as the same Writer expressly tells us, *The Red Sea*; but was checked in this Design from an Apprehension, that, in so long a Voyage on an unknown Coast, where many unforeseen Difficulties might be met with, and his Fleet be exposed to many Hazards, some unlucky Accident might happen, that might tarnish the Glory of his former Successes, and expose him to a Reverse of Fortune, which, of all things, he most feared. He therefore determined to intrust the Command of his Fleet to some experienced Officer, rather than make the Expedition in Person: But, as he informed *Nearbus*, he not only found the Choice of such an Officer extremely difficult; but, what gave him most Pain, those on whom he had cast his Eyes for this Service, endeavoured all of them to decline it; some through Fear, others through Laziness, and others again from an earnest Desire of returning to their own Country; which gave him Reason to doubt, that an Expedition, the Consequences of which he foresaw were of the last Importance to his System, might be absolutely overturned.

Nearbus, touched with the Concern which *Alexander* shewed upon this Occasion, frankly offered him his Service. 'I, O King, said he, will undertake the Direction of the Fleet; and, if Providence second my Desires, will conduct it, and the Soldiers embarked thereon, if this unknown Sea be navigable throughout, and the Industry of Man can overcome the Hardships that may be met with therein, safe to the Coast of *Persia*.' *Alexander*, at first, refused to accept this Offer; told him, he was unwilling to expose one, for whom he had so great a Regard, in so dangerous an Enterprize: But, when he saw *Nearbus* fixed in his Resolution, he, at last, complied, applauded his Magnanimity, and immediately declared him Admiral and Commander in Chief of his Fleet.

The News of this Choice quieted the Minds of the Soldiers and Sailors, who were to be employed in the Expedition; for, well knowing the King's Tendernefs for his Friends, and how high *Nearbus* stood in his Esteem, they conceived, that this Voyage would not be attended with the Difficulties they had figured to themselves; and therefore resumed their Spirits, and began to prepare for it with great Alacrity. They were likewise mightily encouraged

by the Pains the King himself took in sailing down both Channels of the *Ganges*, and by his magnificent Sacrifices to the Gods of the Ocean for their Safety. This sufficiently shews, that what *Alexander* did on this Occasion; proceeded not from a superstitious Nature, but from a refined Policy; for he well knew, that, to excite and strengthen the Courage of such as are to encounter them; is the same thing as lessening the Dangers to which Men are exposed.

3. *Nearbus* followed in this the Example of his Master; for, as soon as the Season of the Year would permit, that is, in our Author's own Words, when the *Etesian* Winds cease to blow, or, in our Language, when the Monsoon sets in, he weighed Anchor on the twentieth of *August*, when *Cephalodorus* was *Arcon* at *Athens*, and in the eleventh Year of *Alexander's* Reign, having first sacrificed to *Jupiter* the Saviour, and celebrated Gymnastic Games. The first Day he sailed lower towards the Mouth of the *Indus*, to a Place called *Stura*, at the Distance of about 100 Stadia, where he remained two Days; the third Day he weighed from thence, and proceeded thirty Stadia down the River, to a Place called *Caumana*, where he observes the Water remained salt, even after the Ebb; which shews in how low a State Navigation was in those Days.

They sailed thence to *Coreatis*, at the Distance of about twenty Stadia; but here, or at least when they weighed from hence, they met with great Difficulties; for, seeing that the Mouth of the River was, in a manner, blocked up with Rocks, the Coast steep, and the Sea running high, they were afraid to make much Way; but, at last, finding the Rocks soft, they cut a Channel five Stadia in Length, through which, with the Assistance of the Tide, the Fleet passed safely into the Sea. They then sailed one hundred and fifty Stadia, and discovered a sandy Island, called *Crocala*; on the Coast of which they remained another Day: The Coast opposite to this Island was inhabited by the *Arbians*, an *Indian* Nation, so called from the River *Arbis*; which, running through their Country, falls into the Sea, dividing their Territories from those of the *Orians*.

Sailing from *Crocala*, they had on their Right Hand a Mountain called *Irus*, and, on their Left, a low marshy Island; which stretching towards the Shore, made a narrow Gulph or Bay. In this Arm of the Sea, they found a very safe and convenient Port; which, because it was large and fair, *Nearbus* thought fit to call *Alexander's* Haven. Against the Mouth of this Haven, at the Distance of about two Stadia, lay an Island, which was called *Bibaſta*; but all the adjacent Country was comprehended under the Name of *Sangada*: The Island before-mentioned rendered the Port perfectly secure, which was a great Comfort to the *Macedonians*; because the Winds were now exceedingly high and tempestuous. *Nearbus*, that he might secure the Forces under his Command from any Attempts of the *Barbarians*, caused the Camp, in which they lay on shore, to be secured by a good Retrenchment, well lined with Stone; and here he lay twenty-four Days.

It is very easy to account for this Accident, which happened at the Time of the Year when the Monsoon is not thoroughly set in, when there are commonly Storms in these Seas; and it is likewise no difficult Thing to apprehend, how *Nearbus*, and his Scamen, came to be so extremely timorous and cautious; for, in the first place, they were sailing through Seas absolutely unknown to them; in the next place, the Shape and Size of their Vessels rendered them unfit to live in a rough Sea; and, which was, perhaps, the greatest Inconvenience of all, they had no Stock of Provisions, but depended intirely on what they could, from time to time, get on shore: While they lay in this Camp, the Seamen took abundance of Water-mice, and Oysters of a very large Size, called *Solenes*; and found the Water, when they attempted to drink it, very salt.

4. The Wind being allayed, *Nearbus* again weighed Anchor; and, having made about sixty Stadia, found himself on a sandy Coast: An Island that lay near it, and was desert, formed a tolerable Port; the Name of which Island was *Doma*; but no Water being found on the neighbouring Coast, they were forced to go to a Meadow at the Distance of about twenty Stadia, where there were good Springs. The next Day, having sailed till it was Evening, and having

made about three hundred Stadia, they anchored, and found Water about eight Stadia distant from the Shore. Thence they sailed to a desert Place, called *Saala*; and, in their Way, passed over two Rocks, or rather between them, so that the Oars struck against them; and, having sailed three hundred Stadia, they arrived at *Merantobaris*: This they found a large, round, deep, and safe Port, the Entrance into which was narrow, and called in the Language of the Country, *Womens Haven*; because the Nation inhabiting the Coast had, in former Times, been governed by a Woman.

Having passed the Rocks, they found themselves now in a wide rolling Sea; having all that Day an Island on the Left, between which and the Continent the Sea made a narrow Strait or Gulph, so that it looked like a Canal cut by Art; they proceeded that Day seventy Stadia. The Shore of this Island appeared covered with tall and thick Trees, which afforded a pleasant Shade. They passed, the next Day, through a narrow Chanel, occasioned by the Ebb; and, after sailing one hundred and twenty Stadia, arrived at the Mouth of the River *Arbis*; where they found a very large and convenient Port, but the Water was so brackish, that they could not drink it: They continued, therefore, their Passage up the River about forty Stadia; and there they came into a Lake; and, having taken in Water, fell down the River again.

The Island that lies before the Port is very large; and on the Coast there are very fine Oysters, and almost every other kind of Fish, in great Plenty, and excellent in their kind. Here ended the Country of the *Arbians*, who are the last of the *Indian* Nations: They inhabit one Side of the Mouth of this River, and the *Oritians* the other: Sailing from the Mouth of the River *Arbis*, and coasting along the Country of the last-mentioned People, they came, at last, to *Pagala*, at the Distance of two hundred Stadia, and moored close by a Rock. In the mean time, some of the People went on shore for Water, which being brought on board, they weighed early in the Morning, and made that Day three hundred Stadia, arriving in the Evening at a Place called *Cabona*; they anchored at a good Distance from the Shore, because it was extremely rocky.

In their next Day's Courſe, having very bad Weather, two of their large Ships foundered, and a lesser Bark was also lost; but, being pretty near the Shore, the People escaped by Swimming. In the middle of the Night they put into *Cocala*, having sailed about two hundred Stadia; and, for fear of farther Accidents, they anchored at a considerable Distance from the Coast.

5. As the Soldiers and Sailors both were extremely fatigued with the Dangers through which they had lately passed, he thought proper to suffer them to go on shore, in order to recover their Strength and Spirits, fortifying his Camp, for fear of the *Barbarians*, with a good R trenchment. *Leonatus* was then here, to whom *Alexander* had committed the Care of reducing the *Oritians*, whom he had just defeated in a great Battle, wherein they lost six thousand Men and all their Chiefs; and for which Service *Leonatus* afterwards received from his Master a Crown of Gold.

There was likewise in this Neighbourhood a Magazine of Corn, which had been erected by the King's Command; and from whence the Fleet was furnished with ten Days Provisions, the Vessels that had suffered by the late Storms being repaired, and such as were weary of the Voyage left on shore: Their Places were supplied by such of *Leonatus's* Army as were willing to go in their room; so that the Men being in good Heart, and the Ships in tolerable Condition, they put to Sea with a fair Wind, and proceeded for the Space of five hundred Stadia, when they arrived at the Mouth of a River, called *Tomerus*.

There was a kind of Lake near the Mouth of the River, and on the Coast the People lived in little Huts or Cottages; who, at the Appearance of so unusual a Sight, assembled in great Numbers on the Shore: They were armed with Lances of about nine Feet long, the Heads of which were not of Iron, but hardened in the Fire, and sharpened so as to serve instead of Iron: These they shook at the *Macedonians*; and seemed to threaten and invite them to fight. Of these *Barbarians* six hundred formed

themselves into a kind of regular Body, and seemed to dispose themselves in such a manner, as if they intended to hinder them from coming on shore. *Nearchus*, having considered their Disposition attentively, ordered the Fleet to draw so close to the Land, as that their Javelins might reach the Enemy. He rightly foresaw, that, though the Lances of the *Barbarians* might serve them well enough in a close Fight, yet it was simply impossible they should be able to use it at a Distance, because their Weight rendered them unwieldy, and not at all fit to be thrown. When the Fleet had brought to at a proper Distance, *Nearchus* directed the lightest-armed Soldiers, and those who could swim best, to hold themselves in Readiness, and, on a Signal given, to throw themselves into the Water; giving them, at the same time, a strict Charge to wait for each other, and not to attempt setting Foot on the Shore, till they were drawn up in order of Battle, three-deep, and then to rush on the Enemy at once with a loud Cry.

The Soldiers in each Ship executed his Orders exactly, threw themselves into the Sea, swam towards the Shore, and, being drawn into a Phalanx, rushed upon the Enemy at once with loud Shouts: At the same Instant, those on board rent the Air with their Acclamations, and threw a large Flight of Darts and Javelins from their Engines. The *Barbarians*, amazed at the Splendor of their Arms, the Suddenness of the Attack, the vast Number of Arrows and other Weapons that fell amongst them, who were half naked, and not in a Condition to resist, fled as fast as they were able. In their Flight many were killed, many taken, and some few escaped to the Mountains. Such of them as were made Captives had not only their Heads, but their Bodies, covered with long Hair, and their Nails prodigiously long and sharp, so that they made use of them to cut Fish, and even soft Wood; such as was harder, they cut with sharp Stones; for they had not the Use of Iron: All the Cloathing they had was a kind of Mantle, made either of the Skins of wild Beasts, or of large Fish. *Nearchus* ordered such of the Ships as had suffered by bad Weather, to be drawn on shore, and refitted. On the sixth Day, he prosecuted his Voyage; and, having sailed three hundred Stadia, came to a Place called *Molaba*, which was the last Port in the Country of the *Oritians*: This Nation, in their Habit and Arms, resemble the *Indians*; but differ from them in their Laws, and in their Language. The Length of their Voyage, from the River *Arbis*, was a thousand Stadia; but, in the Whole, about sixteen hundred.

6. In sailing on the Coast of *India*, *Nearchus* observed that the Shadows of the People did not fall one Way; but where the Country ran out into the Southern Ocean, the Shadows fell also Southward; but at Noon there was no Shadow at all. The Stars also, that before appeared very high, were now either scarce seen, or were depressed towards the Earth; and such as had been always conspicuous, were now observed to rise and set. I do not, says *Arrian*, dissent from this, because at *Siene* in *Egypt*, at the Summer Solstice, there is a Place shewn, where the Sun, at Noon, casts no Shadow; and in the Island of *Mora*, at the same time of the Year, there are no Shadows. It is therefore, very probable, that the *Indians*, who live under the same Latitude, should have their Shadows cast the same Way, especially towards the *Indian* Ocean, and where the Country runs out most towards the South.

This Observation of *Arrian's* is very judicious; and the Fact, as it is stated by *Nearchus*, may be very probably true, since that Part of *India* he speaks of, lies immediately under the Tropic of *Cancer*, where, when the Sun is in their Zenith, Bodies cast no Shadow; otherwise their Shadows must fall to the North: But such as live to the South of the Tropic, at that Season of the Year, when the Sun is to the North of them, have their Shadows on the South. It must, however, be allowed, that if *Nearchus* was an Eye-witness, the Mouth of the *Indus* is laid down, even in the best Maps, a little too far to the North; which, I think, is agreeable to some modern Observations: But we shall have Occasion to treat of this Matter more at large, in another Place.

In the mean time, we will proceed with the Voyage before us. Beyond the *Oritians*, within-land, inhabit the *Gedrosians*;

Gedreftans; in passing thro' whose Country *Alexander* lost more People, than in all his *Indian Expedition* besides. The *Gedreftans* inhabit likewise that Country, within-land, on the Maritime Coasts of which, dwell the *Icthyophagi*, that is, the *Fish-eaters*, on whose Coasts they sailed; and weighing Anchor on the first Day, at the second Watch, they sailed 600 Stadia, before they arrived at *Bagisara*, where they found a very convenient Harbour for the Fleet. The City of *Pasira* lies 60 Stadia within-land; and the adjacent Country is inhabited by a Nation of the same Name.

The next Day they sailed very early; but, meeting with a rocky Promontory, which ran a great Way out into the Sea, they were obliged to sail round it; and, on their sinking Wells on the Shore, they had a great deal of Water, but brackish: That Day they remained at Anchor, the Shore being unsafe. They came the Day following to *Colta*, at the Distance of 200 Stadia; and, sailing the next Morning early, they made that Day 600 Stadia, and anchored off *Calama*, where they found a few Palm-trees, with green Fruit upon them. There lay an Island 100 Stadia from the Shore, called *Carnine*, where *Nearcus* was very hospitably entertained by the Inhabitants of the Village, who presented him with Sheep and Fish. The Flesh of their Sheep had a fishy Taste, like that of Sea-fowl, and for the same Reason, because they feed on Fish; for in that Country they have no Grass.

The next Day they proceeded 200 Stadia, and found a Village, at the Distance of thirty Stadia from the Shore, which was called *Cyfa*, but the Coast is called *Carbis*. Here they met with some small Fishing-boats, but at the Sight of the Fleet they fled. There is no Corn to be met with on this Coast; but some of the People, going on Shore, caught a few Goats, which they brought on board: They then doubled a Promontory, which ran 150 Stadia into the Sea, on the other Side of which they met with a safe Port, where there was great Plenty of Water, and a Village inhabited by Fishermen. The Name of this Port was *Mofarno*. Here *Nearcus* met with one *Hydraces*, a *Gedreftan* Pilot, who, at his Request, sailed with them, and promised to carry them safely to *Carmania*. All the Coast from hence to the *Perfian* Gulph is much better known, and the Sailing much less difficult.

The Fleet weighed from *Mofarno* in the Night; and, having sailed 750 Stadia, arrived at *Balorum*; from whence they proceeded to *Barna*, which lies at the Distance of 400 Stadia from thence; and here they found Plenty of Palm-trees and Gardens. In these Gardens there was Abundance of Myrtle, of which, and of other Flowers, the People made Garlands: And this was the first Place in which they found Trees cultivated, and People who were civilized. From thence sailing 200 Stadia, they came to *Dendrobefa*, where they did not go on shore. Weighing from hence in the Night, they continued their Voyage to the Port of *Cephanta*, at the Distance of 400 Stadia. This Town likewise was inhabited by Fishermen, who had some small pithy Boats, which they did not row, after the *Grecian* manner, with Oars, but with Paddles: In this Place they met with Plenty of Water, very good.

In the first Watch of the Night, they weighed from thence; and arrived, after passing 800 Stadia, at *Cyiza*; but the Shore being extremely steep and rocky, they remained on board their Ships. Sailing from thence 500 Stadia farther, they arrived off a small Town, standing upon an Hill, not far from the Shore. *Nearcus* thought it probable, this Country was cultivated; and *Archias*, the Son of *Anaxidius*, a *Pellæan*, a Person of Distinction amongst the *Macedonians*, gave it as his Opinion, that they should possess themselves of the City; for the Inhabitants refused to part with Corn: Yet the taking of it appeared impracticable, because they had not Leisure to besiege it. On the one hand, however, they were in great Want of Bread; and, on the other, they had good Reason to believe the Place was not destitute of Provisions, because they had met with some full Ears of Corn, swimming in the Sea, not far from the Coast. After considering the Matter maturely, it was resolved, that the Fleet should proceed, or, at least, seem to do so; and *Nearcus* having given

Archias necessary Instructions, in his own Ship, cast Anchor before the Town, in order to manage the Business.

He accordingly approaching, as near as he could, to the Town, and speaking to the Citizens on the Walls, in a friendly manner, in order to obtain Refreshments, they brought him some Cakes, made of Fish dried and baked [for these, being the last of the *Icthyophagi*, did not eat their Fish raw, as the rest did]; some Dates, and other Things, which, with them, were esteemed Rarities; which when they had kindly accepted, *Nearcus* desired to see the Town; and, as they did not refuse him, he, and those who were with him, went into it, leaving two Archers at the Gate: Then himself, and two others, with the Interpreters, mounted the Walls on that Side; and having given the Signal to *Archias* that was agreed between them, the State of Things was easily underflood, as soon as that Signal appeared; and the *Macedonians* immediately ran their Ships close in to the Shore, and began to make a Defcent: Upon which the Inhabitants took Arms. *Nearcus* then commanded the Interpreters to make Proclamation, that, if they would save their City, they must furnish the Army with Corn. At first, they denied they had any Corn, and endeavoured to force them from the Walls; but *Nearcus*, and his Archers, letting fly among them, they were soon forced to retire; and now, finding that the City was taken, they were forced, as Suppliants, to apply to *Nearcus*, and beseech him, that, accepting all the Corn they had, he would be pleased to spare the Place.

Hereupon *Nearcus* gave Orders to *Archias* to secure the Walls and the Gates, himself sending others thro' the City, to see that they fairly brought forth what they had. The People shewed them a great Quantity of Meal, made of dried Fish ground, but very little Bread-corn. After they had taken as much as they thought might serve them, they sailed to a Rock, which the Inhabitants called *Bagia*, and held it sacred to the Sun. Weighing from thence, in the middle of the Night, they sailed 1000 Stadia to *Talmena*, a very safe Port, well secured from all Winds. Thence they sailed 400 Stadia to *Canosida*, a deserted City, in the Neighbourhood of which they found a Well, near which grew some wild Palm-trees, the tender Tops of which they cut down, and eat; for they were, by this time, again in great Want of Provisions. All the next Day and Night they continued their Voyage, under the great Inconvenience of perpetual Hunger, being still on a barren Coast, where *Nearcus* would not suffer them to Land, for fear, in this desperate Condition, they might be tempted to desert their Ships.

8. They continued their Voyage, therefore, 750 Stadia to *Canate*; but, finding the Landing difficult, they proceeded still 800 Stadia farther, to a Place called *Trofos*. On this Shore there were some small, pithy Villages, the Inhabitants of which had quitted their Houses: However, they found in them a little Corn, and some Dates. The People had also left behind them seven Camels, which they immediately killed, and eat. They put to Sea again, by Break of Day; and, having rowed 300 Stadia, they arrived at *Dagafra*, which was inhabited by Shepherds; and, continuing their Voyage the whole Day and Night, without Intermission, after a Run of 1100 Stadia, found themselves clear of the Country of the *Icthyophagi*, but in extreme Want; for, even there, they could not go ashore, because the Coast was rocky and steep.

The Length of this whole Coast, which they had now sailed, was about 10,000 Stadia; and tho' the People are called *Icthyophagi* from their eating Fish, yet they can scarce be stiled Fishermen, few of them having any Boats, or knowing how to go out, and catch Fish, but taking them on the Strand, as they are left by the Tide: Some of them have Nets, that will extend two Stadia, which are made of the Leaves and Boughs of Palm-trees, wrought in an awkward manner: With these they spread the Shore about the time of Ebb, and so catch a vast Quantity of Fish, of all Sizes. The small ones they eat raw, as soon as they are taken out of the Net; the larger and firmer Fish they dry in the Sun, till they grow perfectly hard, and then grind them into Meal, of which they make Bread: Some of them, likewise, fry this Meal into a sort of Pancakes:

cakes? They feed also what Cattle they have with this sort of Fish-meal; for they have no kind of Grass in all this Country.

There are, likewise, found, upon this Coast, vast Quantities of Crabs, Oysters, and other Shell-fish. The Soil of itself produces Salt, and the People themselves have an Art of making Oil. They build their Houses in this manner: Those who are in the best Condition, make use of the Bones of Whales, that are thrown on shore, instead of Beams; and of the largest Bones they make Doors. The poorer Sort make use of the small Fish-bones, to build their Huts; for the Whales, and other large Fish, which are bred in these outer Seas, are of a much larger Size than in our inner Seas.

9. *Nearbus* likewise tells us, that, sailing from *Cyiza*, about Break of Day, he saw a great deal of Water thrown up out of the Sea to a considerable Height: Being very much struck at this strange Appearance, he inquired of the Pilots, and other knowing Seamen, what it meant; who told him, that the Water was spouted up by Whales; at the Hearing of which his Men were frightened, so that they let the Oars fall out of their Hands. *Nearbus*, however, encouraged them as much as he could, advised them to row towards these Creatures briskly, and as if they were going to an Engagement, making all the Noise they could, both by shouting, and with their Oars.

The Men, reluming their Spirits upon this, began, on a Signal given, to row with all their Force; and, as they drew near the Whales, shouted as loud as they were able, sounded their Trumpets, and beat the Water with their Oars with all the Force they had. The Whales, who were just under their Prows, frightened at the Noise, sunk at once, and rose a good Way behind the Ships, blowing up the Water again with prodigious Force. The Seamen, seeing themselves thus unexpectedly delivered from so great a Danger, loudly applauded the Boldness and Dexterity of *Nearbus*.

Sometimes the Whales, running in too near the Shore, are left upon it by the Ebbing of the Tide; and sometimes, being thrown thereon by Storms, their Flesh corrupting by the Heat of the Sun, the Bones are left dry upon the Shore, which these People gather carefully, in order to make use of them in building their Houses. The largest Bones they make use of for Rafters; those of the Jaws they convert into Doors, and of the smaller Bones they make their Utensils.

While *Nearbus* and his Fleet were on the Coast of the *Icthyophagi*, he discovered an Island, which lay at the Distance of about one hundred Stadia from the Continent, which was absolutely uninhabited. This Island, those who dwelt on the opposite Coast called *Nojila*, which they believed sacred to the Sun; adding, that it was inaccessible to Mortals; and farther, affirmed, that, in case any Man was so imprudent as to set his Foot upon it, he was never seen more: An Instance of this the Pilots mentioned to *Nearbus*, of a Ship, manned by *Egyptians*, which, for this impious Attempt, had vanished from the Sight of Men. This, however, did not deter *Nearbus* from going in Person, with one of his Ships, to view this Island, or from putting the Reporters of this Fable intirely out of Countenance by landing upon it; which he did. There was also another Fable related of this Island; which was, that a certain Sea-nymph, or Goddess, dwelt there, who inticed Men on shore, and, after criminally conversing with them, changed them into Fish; but the Sun obliged her to quit the Place, and to restore the Men, whom she had thus changed into Fish, to their former Shape.

Some of these *Icthyophagi* were brought to *Alexander*. These People inhabit the Coast only; but, within-land, inhabit the *Gedresians*, in a Country barren and sandy, where *Alexander* and his Army suffered great Hardships. When the Fleet had quitted this Coast, and were arrived on that of *Carmania*, they were obliged to come to an Anchor without landing, the Coast being so rocky and steep, that they durst not approach it. They sailed from thence, not directly West, but rather West and by North, and so reached that Part of *Carmania* which was a more fruitful and agreeable Country than those they had left, and

abounds in Grass, and where they found fresh Water in Plenty.

10. When they came to *Badis*, on the Coast of *Carmania*, they found all Sorts of Refreshments, except Oil; and, sailing eight hundred Stadia farther, they came upon a desert Coast, where a Promontory appeared, that ran far out into the Sea, and was about a Day's Sail. Such as were acquainted with the Coast, said, it was a Promontory of *Arabia*, called *Macota*, from whence Cinnamon, and other Spices, were sent into *Affyria*. While the Fleet lay at Anchor, and had this Promontory in Sight, there arose great Disputes; for *Onesferitus* would have had the Fleet sail thither, to avoid the Hardships and Difficulties they might meet with in the Gulph; But *Nearbus* was of a contrary Opinion, and affirmed, that *Onesferitus* had quite misunderstood the King's Design; for it was not, said he, because *Alexander* could not have safely led the Army intirely by Land, that he put a Part of them on board the Fleet, but because he would have all these Coasts, Ports, and Islands, thoroughly examined, and the Gulph likewise sailed through, that it might be known what Cities there were near the Sea, what Countries were fertile, and what desert. He was not therefore for changing their Course now, when they were in a manner at the End of their Labours; and therefore he was not for steering on the Side of the Promontory, for fear it might bring them on a bad Coast, especially as they were not now in want of any thing necessary for continuing their Voyage.

The Opinion of *Nearbus* prevailed; and, in my Judgment, says *Arrian*, it was by following his Advice that the whole Fleet was saved; for the Coast beyond that Promontory was absolutely desert, and afforded no Water. The Fleet therefore, weighing, proceeded seven hundred Stadia along the opposite Coast, which was called *Neoptana*; and, continuing their Voyage early the next Day, after sailing one hundred Stadia more, arrived at the River of *Anamis*. The Name of the Place in which they now were, was called *Harmozia*, since called *Ormuz*, where they found abundance of wild Fruit, and were pretty much at their Ease. There most of the Men went ashore to refresh themselves after all the Hardships they had gone through; and some of them, rambling up and down, met with a Person dressed after the *Grecian* Manner, and who spoke *Greek*; which at once surpris'd and overjoyed them exceedingly: And, upon inquiring who and what he was, the Man answered, that he belonged to *Alexander's* Army, and that the King was encamped not far from thence. They presently conducted this Man to *Nearbus*, to whom he told the same Things, and that the King was encamped no farther from him than five Days Journey. *Nearbus* also conferred with the President of the Province about the Security of the Fleet, after the taking the proper Measures, for which he agreed to go with him to the King.

The Day following, by that Time it was Sunnif, *Nearbus* caused such of the Ships as were in bad Condition, to be drawn on shore, in order to their being repaired; and, resolving to leave a great Part of the Troops on shore, he took care to fortify the Place with a strong Retrenchment, and a deep Ditch, so that both the Ships and Men might remain as safe as possible. In the mean time, the President of the Province, knowing that the King was under the utmost Concern for this Fleet, took a short Cut to the Camp, in order to inform him of their safe Arrival. This News was received by *Alexander* with the greatest Joy imaginable, though he could not help doubting the Truth of it: And his Doubt still grew upon him, because some who were sent with Carriages, to meet *Nearbus*, and bring him to Court, returned after they had went a little Way, without finding him; and others who had a greater Respect for him, continuing their Journey, did not return at all: At last, the King losing all Patience, and his Concern being doubled by this short Glamm'ing of Hope, ordered the President to be committed to safe Custody, for having reported false News.

In the mean time, some of those who had been dispatched to meet and conduct *Nearbus* to Court, actually met with him upon the Road, accompanied by *Archies*, and five or six more; but they were all so altered, both

in their Persons and Garbs, that they had not the least Knowledge of them; but, upon their Inquiry about the King's Camp, told them, where it was; and were then for pursuing their Journey: *Archieus*, however, turning to *Nearbus*, told him, that he apprehended these People were come in Search of them; and that, considering the Condition they were in, they might not know them; which *Nearbus* also thinking not unlikely, they inquired of them, whither they were going; and he received for Answer, that they were going in Search of *Nearbus*, and thof: under his Command: Upon which he replied, I am *Nearbus*, and the Person here with me is *Archieus*; do you conduct us to the Camp, that we may give the King an Account of the Fleet. Upon which they immediately took them up in their Carriages, and returned towards the royal Camp.

Some of the Number, however, being desirous to become early Messengers of such important Tidings, hastened to the Camp, and informed the King, that *Nearbus* himself, and *Archieus*, with five more, were at hand; but that, as to the Army and Fleet, they were able to learn nothing. *Alexander*, from this Account, collected within himself, that *Nearbus* and *Archieus*, with the five Men that attended them, had in some wonderful Manner escaped the general Ruin, but that, as for the rest of his Fleet and Army, they were, beyond Question, lost and destroyed; the Thoughts of which gave him greater Sorrow than the Joy of beholding *Nearbus* and *Archieus* could overcome. They soon after arrived; and *Alexander* himself could scarce know them, they were so overgrown with Hair, looked so ill, and were in so bad a Dress, which confirmed the Notion he had conceived of the Loss of the Fleet: He embraced *Nearbus* however, and, with many Tears, congratulated him on his Arrival.

At last, moderating his Transport, he said, It is true, the Sight of you *Nearbus*, and *Archieus*, who return safe and sound, moderates, in some measure, my Concern for the Loss of the Fleet; but tell me, How did they perish? *Nearbus*, catching the Words out of his Mouth, replied, the Fleet and Army are safe, O King; and we come only as Messengers of the good News. Then *Alexander* burst out again into Tears at this unexpected Account of their Safety; and, with much struggling, demanded in what Port they were. *Nearbus* informed him, that they were at the Mouth of the River *Amnis*; and that he had caused the Ships to be drawn on shore, in order to their being refitted. Now, by the *Grecian Jupiter*, cried the King, and by the *Libyan Ammon*, I swear, this News gives me more Joy than the Conquest of all *Asia*. He likewise caused the President of the Province to be discharged from his Confinement. The King, in Gratitude for the Preservation of his Forces, ordered Sacrifices to be offered to *Jupiter* the Saviour; to *Hercules*, and to *Apella* the Deliverer from Misfortunes; as also to *Neptune*, and all the Sea-gods: He likewise celebrated new Games, ordered pompous Shews, accompanied with Music, in which *Nearbus* was Chief, all the Army presenting him with Garlands, and with Flowers. When these Rejoicings were over, the King said to the Admiral, Henceforward, *Nearbus*, you shall never go on any laborious or dangerous Service: I will immediately appoint another Admiral, who shall bring the Fleet safe to *Susa*. Not so, O King, cried out *Nearbus*: To follow and to serve you in every Degree, is my Desire, and my Duty: But if, for what is past, you decline to gratify me, let not that be done you spoke of; but let me rather continue in my Command, till I have brought your Ships safe to *Susa*; nor, after running through so many and great Hardships in the Execution of the Charge with which you intrusted me, now, when the Matter is easy, and in a manner accomplished, let another take the Glory of performing it out of my Hands.

To this *Alexander* readily assented, and dismissed him again to his Command, with a small Guard, because he was now to travel through a Country inhabited by Friends. Yet it was not without great Difficulty that *Nearbus* once more reached the Sea Coast; for the Barbarians had taken up Arms, and possessed themselves of all the strong Places and Passes in *Carmania*: For the King had caused the former Governor to be put to Death, and *Thiopolenus*,

whom he had appointed his Successor, was not as yet firmly fixed in his Government. Thrice, therefore, in one Day, *Nearbus*, and his Guard, engaged for many different Bodies of Barbarians who attacked them.

At last, however, *Nearbus* safely, though after struggling with many and great Difficulties, reached the Fleet and Army. The first Thing he did on his Arrival, was to sacrifice to *Jupiter* the Saviour, and to celebrate Games. These divine Rites thus taken care of, the Fleet weighed Anchor, and sailed to a desert barren Island, and thence to another large and well-inhabited Island, three hundred Stadia distant from the Port they had left. The Name of the desert Island was *Organa*; that of the last-mentioned Island *Oaracha*: This last was a fine Country, abounding in Corn and Palm-trees: It was in Length eight hundred Stadia, and the Governor of it, whose Name was *Mazenes*, offered, of his own Accord, to accompany *Nearbus*, and to pilot him to *Susa*. In this Island, it is said, they shew the Tomb of *Erybrus*, who first governed this Country, and from whom that Part of the Ocean was called the *Erybreaus*, or *Red Sea*.

11. They sailed from hence two hundred Stadia, when *Nearbus* thought proper to put in with his Fleet at another Port in the same Island, from whence they had the Sight of another Island, about forty Stadia distant from the great one, which was sacred to *Neptune*, and reported to be inaccessible. They sailed again about Day-break; but the Sea ebbing lower than usual, three of their Ships were left upon the Strand; and it was with great Difficulty that the rest, getting clear of that rocky Coast, once more gained the open Sea. At the Return of the Tide, however, the three Ships before-mentioned floated again, and the next Day rejoined the Fleet. Having continued their Voyage 400 Stadia, they put into a Port in an Island distant 300 Stadia from the Continent. They weighed from thence early in the Morning, and, leaving an uninhabited Island, called *Pylosa*, on their Left, they anchored before *Sidodones*, a very small City, in want of every thing, except Water and Fish; for Necessity, and the Barrenness of their Country, make them likewise *Ichthyophagi* against their Wills.

Thence, having taken in Water only, they proceeded to *Tarsia*, a Promontory running out into the Sea, distant from the last-mentioned Place 300 Stadia. Thence they sailed 300 Stadia farther, to the Island of *Catea*, which is desert and marthy, reported to be sacred to *Mercury* and *Venus*. Into this Island, every Year, the Inhabitants of the adjacent Coast have a Custom of sending Sheep and Goats, which are dedicated to *Mercury* and *Venus*, and run there wild. This Place belongs to *Carmania*; and from hence the Province of *Persia Proper* begins. The whole Length of the Coast of *Carmania* is 3800 Stadia; the *Carmanians* resembling in their Manners and Customs, the *Persians* their near Neighbours, are armed in the same way, and make use of the same Methods in carrying on their Wars.

The Fleet, sailing from hence, came to *Ilan*, on the Coast of *Persia*, before which Port there lies a small barren Island, called *Caicandrus*: To reach this Port, they sailed 400 Stadia from their former Station. Early the next Morning they weighed Anchor, and proceeded to another Island, well inhabited, and on the Coast of which, as well as in the *Indian Sea*, *Nearbus* affirms, that they fish for Pearl. Having doubled a Promontory upon this Island, by sailing about forty Stadia, they anchored on the other Side. They proceeded next to a certain high Mountain, called *Oebus*, where they found a very safe and commodious Port, in which they anchored, the adjacent Coast being well inhabited by Fishermen. Weighing from hence, after a Passage of 450 Stadia, they came to *Apojanos*, where they found abundance of Ships in the Harbour, the Town lying about sixty Stadia from the Sea. Thence they sailed, in the Night, to a Bay, adorned with abundance of beautiful Villages on its Shore; and, after coasting 400 Stadia, they came to an Anchor at the Foot of an high Mountain, covered with Palm, and other Fruit-trees, common in *Greece*. Sailing from thence, they passed along a well inhabited Coast, called *Gozana*, for the Space of 600 Stadia, the Fleet anchoring at the Mouth of a certain

certain River, or rather Torrent, called *Aren*, in a very inconvenient Place, the Bottom being soft, and unfit for Anchorage, and the Mouth of the River very narrow.

They sailed from thence to another River, called *Sitacus*, distant 800 Stadia; but here likewise they found very indifferent Anchorage; and, indeed, *Nearchus* complains, that the whole Coast is very indifferent, being in some Places intolerably stony, and in others a loose Slime, to a great Depth. Here they took in a great Quantity of Corn, the King having directed considerable Magazines to be raised there for the Use of the Army and the Fleet. They remained here twenty-one Days in the Whole, refitting such Ships as were in a bad Condition, and rebuilding others. Sailing from thence, after a Passage of 750 Stadia, they came to a well-built and well-inhabited City, called *Hieratis*; and anchored in a Port, made by Art, called *Hieratensis*.

The next Day they weighed, as soon as it was Light, and continued their Voyage to the Mouth of a Torrent called *Padargus*. The Whole of this Country is a Peninsula, laid out in regular Plantations of Fruit-trees, of all Kinds; and the Name of this Peninsula is *Mesambria*. Sailing from *Mesambria*, after a Voyage of two hundred Stadia, or thereabouts, they arrived at *Taoce*, on the River *Granidis*. About two hundred Stadia within-land, from the Mouth of this River, stands the Capital of *Persia*. In this Navigation, *Nearchus* informs us, they met with a dead Whale thrown upon the Shore, which some of his Sailors had the Curiosity to measure, and found it fifty-five Cubits long: On the Skin of which they found Oysters, and other Shell-fish sticking, as also Sea-weed. They likewise saw many Dolphins upon this Coast, which were of a much larger Size than those in our Seas.

12. They proceeded thence two hundred Stadia, to the Mouth of the River *Regonis*, where they found a very convenient and safe Harbour, at the Distance of two hundred Stadia from their former Station. Sailing from hence four hundred Stadia, they came to the Mouth of another River, called *Brizania*. Here they found the Coast very unfit for Anchorage; and for want of a proper Acquaintance with the Tides, some of their Vessels were left ashore at the Ebb, but were easily got off again at the time of Flood, and continued their Voyage to the Mouth of the River *Arestis*, where they came to an Anchor. This, *Nearchus* assures us, was the largest of all the Rivers that ran into this Sea. It was also the Boundary of the Province of *Persia Proper*; the *Susians* inhabiting on the other Side. Amongst these last-mentioned People, there were a free Nation, called the *Uxians*, which inhabited the Mountains, and committed frequent Robberies on such as dwelt in the flat Country.

The whole Extent of the *Persian* Coast reaches four thousand four hundred Stadia. This Province is divided, as the Inhabitants report, into three Parts, which differ from each other in Soil and Climate. That Part of it which lies along the *Red Sea*, is sandy and barren, arising from the excessive Heat; but the County that lies more to the North, enjoys a temperate and pleasant Climate; the Soil exceedingly fruitful, affording fresh and beautiful Meadows, that are very well watered, abounding with Vines, and all kind of Fruit-trees, except Olives. In this Country there are very fine Gardens, watered by Streams exquisitely clear and pleasant; on the Banks of which are all kinds of Fowl; and Horses, and other Cattle, are found here in Abundance; and some Part of the Country also is woody, and very fit for Hunting. The most Northern Part of *Persia* is very cold, and the Snows lie long upon the Mountains. *Nearchus* tells us, that some Ambassadors from the Borders of the *Euasine* Sea coming, in a short Space of Time, to *Alexander* in *Persia*, he was, at first, much surpris'd, till they explained to him how the Country lay, and that the Distance was not so great as he had hitherto imagined.

As the *Uxians* before-mentioned infest the Country of the *Susians*, so the *Mardians*, another thievish Nation, are fitted to the Mountains of *Persia*; and the *Cassians*, who likewise practise the same villainous Trade, inhabit among the *Medes*. This last-mentioned Nation *Alexander*, this Winter, contrary to all Expectation, subdued; built Cities in their Country; and oblig'd such as inhabited them,

to apply themselves to Agriculture, and other honest Professions, that they might live comfortably themselves, and not be any longer terrible, or troublesome to their Neighbours.

From hence, *Nearchus* tells us, he is not able to write any thing with Certainty, except as to the Ports they met with, and the Length of their Navigation, because all that Coast is extremely foul, and rocky: So that there is no entering its Ports, but with the utmost Danger. When, therefore, they sail'd from the Mouth of this River, which is the last in *Persia Proper*, they took care to furnish themselves with Water for five Days, their Pilots having inform'd them, that the Coast along which they were next to sail, was absolutely dry and barren. When they had sail'd five hundred Stadia, they came to an Anchor at the Mouth, or rather Fall, of a certain Lake, abounding with Fish, which was called *Cataderbis*. There lay immediately before this Port, a small Island, called *Margislae*. Weighing from thence early in the Morning, they corrected their Course through a Chanel so narrow, that they were forced to sail in a Line. This Chanel was marked with Stakes set upright in it, as in the Isthmus between the *Leucadian* Islands, and the Coast of *Acarantia*; there are the like Signals, or Beacons, to prevent the Ships from running upon the Shores. There is, however, this Difference between these Coasts, that the Shores, in the Neighbourhood of these Islands, are all of them sandy; so that whatever Vessels run ashore, they are sure to float again on the Return of the Tide; whereas here the Mud is so thick and deep, that Vessels left upon it are as sure to be lost, sinking by their own Weight, beyond the Possibility of weighing them; besides, that it is impossible to reach any Vessel in such a Situation, in order to use the proper Means for getting it out. Through this difficult Chanel, and by so hazardous a Navigation, they row'd for 600 Stadia, without being able to find any Port into which they could put, with Safety; and therefore they were oblig'd to take what Refreshment they could, on board their Ships.

All that Night they continued their Course, and all the next Day, till it was Evening, having made, in that time, nine hundred Stadia; arriving then at the Mouth of the River *Euphrates*, and at a Port in the Province of *Babylonia*, called *Deridosis*, where there is a great Trade carried on of Frankincense, and other Aromatics brought thither from *Arabia*. *Babylon*, according to the Computation of *Nearchus*, stands at the Distance of three thousand three hundred Stadia from the Mouth of the River *Euphrates*.

While they were here, they received an Express from *Alexander*, who was arriv'd at *Susa*; upon which, *Nearchus* steer'd back to and then up the River *Tigris*, that he might the more easily reach the King's Army. When they weigh'd, they had the Country of the *Susians* on their Left; and, proceeding in their Voyage, arriv'd at a Lake, into which runs the River *Tigris*, which rising in *Armenia*, passes by the City of *Ninus*, heretofore a great and flourishing Place, and rolls on through the Country, which, because it lies between it, and the *Euphrates*, is call'd *Mesopotamia*, i. e. Between Rivers. From this Lake to the River itself, the Distance is about six hundred Stadia; and near it stands a Town of the *Susians*, call'd *Agas*, from whence the City of *Susa* is distant five hundred Stadia. The whole maritime Coast of this Country, to the Mouth of the *Pasitigris*, extends about two thousand Stadia.

Then sailing along a pleasant and fruitful Coast, six the Space of one hundred and fifty Stadia, they came to an Anchor, in order to wait the Return of the Messengers sent by *Nearchus*, to learn where the King then was. The Day they sacrific'd to all the saving Powers; celebrated Games; and the whole Fleet indulg'd themselves in every Method they could devise, that might expiate their Joy. But afterwards, being inform'd, that *Alexander* was approaching with his Army, they again return'd their Voyage, and arriv'd at the Bridge, which, by the King's Command, had been lately built over the River, for the Conveniency of marching his Army to *Susa*. There both Armies join'd, and *Alexander*, as well in regard to the Victories gain'd by his Land-forces, as in Gratitude for the Success and Safety of his Fleet, and those on board it,

offered magnificent Sacrifices, and celebrated Games. During these Rejoicings, where-ever *Nearbus* went through the Camp, the Soldiers covered him with Garlands and Flowers. *Alexander* himself also, as a Mark of his Favour, and by way of Distinction, honoured *Nearbus*, and *Lennatus*, by presenting to each of them a gold Crown; to the former, on account of his good Service on board the Fleet; to the latter, by reason of the Victory obtained by him over the *Oritans*, and other barbarous Nations, in their Neighbourhood. Thus the Reader has received a full Account of the Manner, in which his Fleet and Army returned safe to *Alexander*, from the Mouth of the River *Indus*.

Here, properly speaking, ends the Voyage of *Nearbus*, as it is perceived by *Arrian*, in his *Indian History*; which serves as an Appendix to his noble Memoirs of the Life of *Alexander the Great*. A Work highly, and very justly, commended both by ancient and modern Writers, for its Elegance, and excellent Method; but more especially for the strict regard the Author every-where pays to Truth. His *Indian History* is written with the like Care; in which he professes to have read, with the utmost Diligence and Circumspection, the Works of *Onesicritus*, and *Megasthenes*, as well as those of *Nearbus*.

As to the first of these, I mean *Onesicritus*, he was the Captain of *Alexander's* own Ship, and wrote a large Account of the *Indies*; from which, in the Beginning of his History, *Arrian* has taken many Things, but with great Caution, on account of the bad Character he had, as a fabulous Writer: And here, by the way, it may not be amiss to take notice of one of *Arrian's* Observations: He says, that *Ctesias the Cnidian* asserted *India* to be as big as all the rest of *Asia*: In which he erred; for *Onesicritus* accounted it to be no more than the third Part of *Asia*. In this, however, there is good Reason to believe, that *Arrian* himself is mistaken; for both of his Authors might have been in the right. *Ctesias*, who wrote from the Memoirs he collected in the *Persian Court*, meant very probably the whole Continent of *India*, from the River *Indus* to the Sea of *Japan*; and, on the other hand, *Onesicritus* could only speak of that Part of *India*, which was known from *Alexander's* Expedition: And, taken in this Sense, the Account given by each of these Authors, may be pretty well reconciled to Truth; and their Opinions, instead of contradicting, appear, thus considered, very agreeable to each other. This shews how unsafe a Thing it is to run down Authors at random; and, by burying their Reputation under a heavy Load of Censure, to pave the Way for the Destruction also of their Works, as has happened in the Case of *Onesicritus*, and many other Authors. But *Megasthenes* was still lower in the Esteem of *Arrian*, who therefore borrows from him but sparingly; whereas he has given us the *Indian Expedition*, by *Nearbus*, at full Length, and, as near as might be, in his own Words: But of his Credit, we shall have an Opportunity to say more hereafter. At present, therefore, let us confine ourselves to the Author who has preserved this noble Fragment of Antiquity; I mean *Arrian*, whom we have so often quoted, and on whose Credit this Part of our Work must depend.

He was a Man of distinguished Quality, as well as excellent Learning, a Native of the City of *Nicomedia* in *Bithynia*, flourished under the Emperor *Adrian*, and was by him made Governor of *Cappadocia*: He was an excellent Philosopher, as appears by the four Books, that are still left, of his Commentaries upon the Works of *Epictetus*: He wrote also, besides his Memoirs of the Life of *Alexander the Great*, a large History of the *Partians*; of which there are now only a few Fragments left: He published likewise historical Collections in relation to the *Bithynians* and *Mians*, as we are informed by *Photius*, who cites the former; but these are now lost, as the *Indian History* was supposed to be, till, by the Industry of some learned Critics, it was discovered, that what had been long regarded as the eighth Book of the Life of *Alexander*, was, in reality, this *Indian History*: And so, undoubtedly, it is; for whoever is acquainted with ancient Authors, and has read the Works of *Xenophon* and *Arrian*, will easily discern, that the former served for a Model to the latter; and that the Expedition of *Alexander* (for so *Arrian* mo-

destly intitles his History) was, in reality, a Copy of the Expedition of *Cyrus*, written by *Xenophon*; and, for that very Reason, divided into no more than seven Books.

But as his *Indian History* had so near a Relation to that Work, it was joined to it as a Supplement; and, at last, through the Ignorance of Transcribers, came to be reckoned a Part of it, and was called the eighth Book, directly contrary to the Intention of its Author, as appears, both from the Beginning, and the End of it. He wrote also, in ten Books, the History of what followed after the Death of *Alexander*, which, to the irreparable Damage of the learned World, have wholly perished. We have, however, still remaining a *Periplus*, or Description of the *Euxine Sea*, addressed to the Emperor *Adrian*, which the learned Mr. *Dodwell*, with great Probability, conjectures to have been written about the Year of *Christ* 137. There is also a *Periplus of the Red Sea*, which goes under his Name, and, as a Work of his, has been translated by the learned *Boutigny Kamufio*, and inserted in his excellent Collection.

Yet many great Critics have been of Opinion, in which was none of his, but belonged to an Author of great Antiquity. Mr. *Dodwell* has very fully proved the former, and denies the latter with good Reason, having shewn as clearly, as a thing of that Nature can be shewn, that the Author of that Work lived much later than *Arrian*. It may not be amiss to add one Observation more, before we quit this Subject; which is, that we have given a Place here to the Voyage of *Nearbus*, as it is taken from his own Work; for, otherwise, it must have come in later; and this naturally leads us to say something more as to the Character of this original Author.

Nearbus, the Son of *Androtimus a Cretan*, attended *Alexander* in his *Indian Expedition*, and behaved with so much Fidelity, giving, at the same time, such Instances of his Capacity, that when *Alexander* settled the Embarkation of his Forces, and appointed *Onesicritus* Commander of his own Vessel, he made *Nearbus* his Admiral, and *Euagoras*, the Son of *Eucleon a Corinthian*, Secretary to the Fleet. There is very great Reason to believe *Nearbus* had been the King's old Servant, since it appears, that, before the *Asian Expedition*, he was settled at *Amphipolis*, on the River *Strymon*, one of the most considerable Places in the *Macedonian Dominions*; where, very probably, he had been employed in the Sea-service; otherwise one can hardly suppose, that *Alexander* should give him the Command of his Fleet.

How well he performed that Service, the Reader is able to judge from his own Relation; and, that he might be able to judge of it, was one great Reason of our giving it a Place here. That his Master was extremely well satisfied with his Conduct, appears not only from the Praises and Rewards he bestowed upon him, but also from his listening to this very Journal, in the very last Moments of his Life. After the Decease of *Alexander*, when the Provinces of his great Empire were divided, he had *Lycia* and *Pamphylia* assigned him.

It is not very clear what other Books he wrote; but as to this Journal, it is very evident, that it was composed immediately after his Return from the Voyage, and while things were fresh in his Memory: Neither does it to me appear probable, in the least, that he should either attempt or desire to impose upon *Alexander*, who does not seem to have sought Entertainment from such Expeditions so much as Instruction. It is true, that *Strabo* sometimes questions the Credit of our Author, and has even treated this Journal with some Severity, particularly with regard to what is related of the Whales, which to him appears incredible; but I doubt very much, whether it will appear in that Light to such as Experience has rendered better Judges, since it is very certain, that there are Whales in these Seas, and that the Size he speaks of is far from being extraordinary. Another Observation of *Strabo's* is, that *Nearbus* was rather terrified with his own Fears, than with real Danpers; to which it may be answered, that, as those Seas were then unknown, the Coast extremely bad, and the Vessels, of which the Fleet was composed, very indifferent, there is nothing astonishing in what our Author says of his Apprehensions. In respect to what other Authors

thors have cited from him that is manifestly fabulous, they ought not to prejudice his Authority in our Opinion, because the Books are not now extant, from which they cite them; and therefore, it is impossible for us to judge with what View he wrote, or in what Manner he told them. On the Whole, the Advantage of reading so curious an History, in the Words of its original Author, is certainly very considerable, and may very well justify both my Pains, and the Reader's Patience; and I make no manner of Doubt, that the Navigation of *Alexander's* Admiral will afford as great Pleasure to the intelligent Reader, as the Adventures of any modern Traveller whatever.

Besides, he gives the *English* Reader an Opportunity of judging of the Credit and Value of this Performance, the only one of its kind that is preserved intire; which he could not have done from any Extract whatever, much less from the very lame one of *Purchas*, which is as dry and insipid as the Voyage of *Nearchus* is curious and entertaining. After these Reflections, I hope it will not be amiss to add two short Observations on the Behalf of our Author: The first is, that some Writers, who cite him, such as *Mela*, *Pliny*, and *Solinus*, are remarkably fond of Fables; and, therefore, it is very possible they may relate from him Stories that he did not believe, any more than the Tale of the Island of the Sun, for the very inserting of which, in his History, he is censured by *Arrian*. On the other hand, there are some Authors so fond of criticizing, that they frequently condemn what they do not understand; and, without doubt, the Geography of the Antients was too imperfect, that even the best Writers amongst them were very indifferent Judges of what might be true or false in such Relations.

14. It is not only our Curiosity that is gratified by the Reading of such antient Voyages as these, but they add likewise very much to our Knowledge, and particularly to that sort of Knowledge which is, or ought to be, most sought for, in Collections of this kind. We learn, for Instance, from this Voyage of *Nearchus*, the true State and Condition of maritime Affairs at that time. We plainly discern, that their Vessels drew very little Water, that they were managed chiefly by Oars, that they neither carried, nor were capable of carrying, any considerable Quantity of Provisions, but that they trusted chiefly for Ships, either to Magazines erected on shore, or, where these were wanting, to what they could obtain by making Descents. We learn from hence, what Services these Vessels were fit for, and for what they were unfit, and, in short, what they could, and what they could not, perform; and from hence we are enabled to form a true Judgment of the Conduct of their Commanders. It is certain, that this seven Months Voyage was in itself no great Affair, and might have been performed with Ease in the very worst sort of Ships that are now in Use: But when, from this particular Account, we become perfectly acquainted with the manner in which it was performed, we cannot be surpris'd, either at the Concern that *Alexander* was under about the Success of this Expedition, or the Apprehensions of *Nearchus*, since both of them were very rational.

In regard to *Alexander*, it is apparent, that he had but a very dark and confused Idea of the Nature of this Voyage, when he thought of sending his Fleet this Way into the *Persian* Gulph. He judg'd, agreeable to Truth and good Sense, that such a Passage there was, and that it might be practicable; but it was impossible for him, or any Man, to foresee the Dangers with which it might be attended; since it is plain, that if any great Part of these Coasts had been either absolutely uninhabited, or if the Inhabitants had been numerous and hardy enough to have prevented his People from landing, they must have perished; and the same thing might have happened, if they had met with very high Winds; or, for a long Space of time, a rocky and impracticable Shore, as appears from the Difficulties of that kind with which they actually encountered: And of this *Alexander* himself was so sensible, that, upon the News of *Nearchus* and *Arctias's* coming to meet him in *Carmania*, he took it for granted, that the Fleet had perished, and that these People had luckily made their Escape. But then, in the midst of these Inconveniences, we must allow, that, with regard to surveying

a Coast, and performing what *Alexander* expected to be performed, his Fleet was every way sufficient, under the Care of so prudent and experienced an Officer as *Nearchus*, who, in the first place, took care to be perfectly acquainted with his Master's Design, and then spared no Pains to accomplish it intirely. It was for this Reason that he so often landed his Troops, that he might be the better acquainted with the Country on the Coast of which he sailed, and be the more able to answer any Questions that *Alexander* might ask about it.

At the same time that he did this, he took all the Precautions possible, by fortifying his Camps on shore, to secure his People from the Effects of their own Indiscretions, or the bold Attempts of the Barbarians. We learn from hence another Advantage that these People had, which arose from every Man's being both a Soldier, and a Seaman, and from the Capacity of their Officers to act with equal Abilities on board, and on shore; all which were of the utmost Consequence in an Expedition of this Nature. There could no Comparison be made, no true Judgment formed, of the Merit of the famous Men who are mentioned in those Days, if we were ignorant of these Circumstances. We must, in that Case, certainly, either set them too high, or too low, in our Esteem; whereas we have it now in our Power to frame as true Notions of their Behaviour, as if they lived in or very near our own Times.

We can likewise judge exactly of their Deficiencies, and our own Advantages; we can account in our own Minds for the small Progress that was made for so many Ages in Discoveries and Navigation, at the same time that we read of so many and so great Fleets; because we are perfectly convinced, that, though their Ships might serve indifferently for fighting, and be capable enough of waiting Troops backwards and forwards, from one Coast to another, yet they were absolutely unfit for long Voyages, and even, in point of Trade, could do very little in Comparison of ours; because even their largest Ships were of little Burthen. It helps us likewise to account for another thing, that might otherwise seem very surpris'ing; I mean the Number of Ships, that antient Historians tell us, were either built or drawn together, in very short Spaces of Time, for the Execution of sudden Expeditions: For when we are satisfied, that in those Days they called such Vessels Ships as were not much better than our Long-Boats, the Wonder ceases. Nay, when it is farther said, that these Fleets actually performed great Services, we are able to understand that too; for where the Force on each Side is the same, the Event will be determined in Disputes between them, in the same manner as it would be, if the Force on each Side was to be increased in equal Proportions. Such are the Advantages that result from the perusing of this Voyage: It remains to connect this Section with the next, to shew what Benefits they were that *Alexander* propos'd therefrom.

15. The Concern shewn by *Alexander* for this Voyage, and the Success of it, is, generally speaking, referred to his Vanity, or his Ambition: Yet, if one considers it attentively, it is easy to perceive, that there must have been some other Motive. He told *Nearchus*, when he first talk'd to him of the Expedition, that he would have undertaken it himself, but for certain Reasons; one of which was, that he thought it extremely hazardous; and was apprehensive, if it miscarried, that it might be fatal to his Glory. This was reasonable enough; but it does not by any means prove, that his Vanity only led him to this Expedition. The contrary is very evident: He conceiv'd, that this Navigation along the Coast might be useful to himself; but he bestow'd all the Honour of it where it was due; that is, on his Admiral: But it was an usual Thing with him, to conceal his true Designs, under the specious Cover of aiming at a superior Degree of Reputation; and assigning no other Reason, even for the most hazardous Attempts, than that they were for his Glory. But if we look closely into his Conduct, we shall find, that his ruling Maxim was the Care of keeping what he got; and this, he knew, could not be done but by a Maritime Force. It is true, that he establish'd Colonies and Garrisons, from the Rivers that run into the *Calpian* Sea, to the very Mouth of the *Indus*: But he easily foresaw, that to secure those Gar-

tions, and to awe so vast a Country, it was necessary to have a Fleet: And he likewise very well knew, that he could make no Use of this Fleet, without being perfectly acquainted with the Coast upon which it was to act. And this was the sole substantial Reason, why he made such a Point of this Expedition. Most of the Historians, and even *Arrian* himself, suggests that he made that ruinous March through *Gedrosia*, that he might surpass *Semiramis* and *Cyrus*: But I think they were mistaken; and that the true Cause of his marching through that Country was, that he might not be at too great a Distance from his Fleet. It must, at least, be allowed, that this was a better Reason; and the Care he took in sending Provisions to the Coast, as soon as he had any, is, I think, a clear Proof, that this was his Reason. I do not depend, however, on that alone, but on a Multitude of Circumstances, that, when collected together, and coolly considered, put it beyond Dispute. He was no sooner informed by *Nearchus*, of the Discoveries he had made, than he immediately took the necessary Measures for having a potent Fleet in the *Indian* Ocean. It was for this Reason, that he ordered a great Number of Ships to be built by the *Panicians*, and brought by Land to *Thapsacus*. This was a City that stood on the River *Euphrates*, from whence they were to fall down to *Babylon*, where he likewise caused a Haven to be made for their Reception, and went in Person from that City, down the *Pallogopa*, that he might see every thing disposed, for rendering their Passage safe and easy, into the *Persian* Gulph. At the same time, he projected the Circum-navigation of *Arabia*; and, very probably, the first Service he intended to have put this Fleet upon, was the sailing round into the *Arabian* Gulph, while he marched with an Army by Land, from *Chaldea* into that Country. When he had subdued *Arabia*, he might, and certainly would, have transferred all the Trade of that Country, and of the *East Indies*, to his new City of *Alexandria*: And it appears also, that he had taken the most effectual Measures for making it the Centre, also, of the *African* Trade. This Scheme of his was afterwards pursued, and, in some measure, perfected, by the *Ptolemies*, Kings of *Egypt*. So much at present for this Part of his Project: Let us turn our Eyes now to some other of his Designs. There was actually preparing, at the time of his Death, a large Fleet, which was to have been employed in the *Hyrcanian*, or *Caspian* Sea; and there needs but a little Attention to discern, that when he had perfected these two Designs, all that vast Country which he had subdued would have been effectually in his Power, because those Provinces are bounded on the South by one Sea, and on the North by the other. But this was not at all: He had formed another Design, which would have united them to his other Dominions; for he was extremely inquisitive as to the *Pontus Euxinus*, or *Euxine* Sea; and in Time would have had a Fleet there too: So that we need but cast our Eyes upon any Map of

these Countries, to be satisfied, that he had framed and digested, in his own Mind, the easiest and most probable Method for maintaining all his Conquests. We can hence, also, perfectly well account for his being so suddenly charmed with the Situation of *Babylon*, the City in the World the best suited for becoming the Head of such an Empire. It is true, that they are vast and prodigious Designs; but then we are to consider, that they were the Designs of a Man, who had made himself Lord of the best Part of the known World, before he was Thirty; which puts me in mind of what *Lorenzo Gracian*, a Spanish Writer, tells us of this Conqueror, 'The Heart of *Alexander*, says he, was an Arch-Heart, in a Corner of which the World had a left Room for many more.' It is a bold and extravagant Thought; but it is not easy to avoid Sentiments of this Sort, when one has long and attentively considered the Actions of this Man. After all, tho' his Empire perished with himself, or, at least, was split into a Multitude of Pieces, soon after he expired; tho' he did not live to perfect his Schemes; and tho' hardly any of his Successors understood them; yet it has so fallen out, that from the Wisdom he shewed in contriving, and the right Methods he took for perfecting them, all the Projects of Trade, and all the Discoveries that have been made since, are, in Truth, owing: For the *Ptolemies* first fixed the *Indian* Trade to *Alexandria*; the *Romans*, when they became Masters of *Egypt*, pursued it the same Way; when the Subjects of the *Constantinopolitan* Empire found a Way to come at a Part of this Trade, by the *Euxine*, or, as we now call it, the *Black Sea*, it was no more than a Branch of one of his Projects; and the same thing may be said of the new Trade by *Astracan*. It is true, indeed, that he knew of no such Place; but it is as true, that he meditated a Design for establishing a Commerce, by the means of the *Caspian* Sea, with the Northern Part of the *Indies*, thro' the Country of the *Usbeck Tartars*, whose Capital *Samarcand*, how little soever known to us, was once his Winter Quarters. All this will be more plainly made out in the Sequel of this Work: In the mean time, what has been already said, will sufficiently shew, that as the Study of History answers many other Purposes, so it may be made to answer the noble Purpose of promoting extensive Commerce, which is the greatest Benefit that can accrue to Mankind. This, I think, is a sufficient Apology for the Pains I have taken to explain and vindicate the Character of this great Prince: For, sure it cannot be better vindicated, than by shewing, that, in the midst of his Conquests and Victories, he did not, as some Writers would persuade us he did, forget that he was a Man; but, on the contrary, kept constantly in View a Character much superior to that of the Conqueror of the World; I mean that of being a Friend and Father to Mankind; a Title which, whoever will weigh the Nature and End of all his Designs, can never see any Reason to refuse him.

SECTION VII.

The History of the Seleucidæ, Kings of Syria, who were the immediate Possessors of Alexander's Indian Conquests.

1. The Disturbances which happened on Alexander's Death, and the Division of his Empire.
2. The Establishment of Seleucus Nicator, in Syria, and the Rise of a new Monarchy in India, under Sandracottus.
3. The absolute Loss of the Indian Provinces, and the new Policy of the Syrian Princes.
4. Of the Successors of Seleucus, and the Declension of their Affairs in the East.
5. The Attempt made by Antiochus the Great to recover India, and his Treaty with Saphagatenus.
6. A View of the probable Causes of this ill Management, in the Monarchs of Syria.
7. The Wisdom and Magnanimity of the Indian Princes, and the Manner in which they preserved the Correspondence, after throwing off the Dominion, of the Greeks.

THE Death of *Alexander* was succeeded, as he foresaw it would, by Seditions among his principal Commanders; and, in consequence of which, the Division of his Dominions; in sharing of which they were so much taken up, that for several Days his Body lay neglected. At last it was agreed they should be

parted, in the following manner: *Cassander*, the Son of *Antipater*, had *Macedon* and *Greece*; *Lysimachus* had *Thrace*, and the adjacent Countries; *Ptolemy*, the Son of *Lagus*, *Egypt*, *Lybia*, *Arabia*, and *Cele-Syria*; and *Seleucus* all the rest.

¹ *Diod. Sicul. lib. xviii. Arrian, lib. vii. Strabo, lib. xv. Justin. lib. xlii. Plutarch. in Alexandro.*

By this Division, all the Schemes of *Alexander* were totally defeated; for every one minding his own Interest, there soon arose four Kingdoms out of *Alexander's* Empire: So that, tho' the Dominions of the *Greeks* subsisted, yet the Form of his Monarchy, was lost within seventeen Years after his Decease; and there was only an empty Form of it preserved during that Space: For tho' these great Officers contented themselves, during that Time, with the modest Name of Governors, yet they had, in effect, as much the Power of Kings, as after they assumed the Title.

It is not my Business to pursue their History farther than it concerns my Subject: And therefore, I am first to speak of *Seleucus*, within whose Division the *Indian* Provinces lay; and then I am to shew by what means *Ptolemy*, and his Successors in *Egypt*, transferred the Trade of the *Indies* intirely to their own Dominions, by pursuing a Part of that vast Plan which *Alexander* had laid down, when he proposed the Limits of the World to become those of his Empire: And this will at once answer the End of this, and the next Section, and preserve a proper Connection between the several Periods of general History, which I am constrained to touch in the Progress of this Work; and without a due Conception of which, the *Indian* Story can never be thoroughly understood.

2. It is observed, that the Follies of great Princes are much oftener copied than their Virtues. The Humour that possessed *Alexander*, of being thought of divine Original, was still stronger in *Seleucus*, and the Story he published more improbable and absurd. It was, in few Words, this. His Mother *Laudice*, being the Wife of *Antiochus*, one of *Philip's* Captains, pretended she dreamed that she had conversed with *Apollo*, and conceived by him; and that he gave her a Ring, on the Stone of which an Anchor was engraved, and directed her to bestow it on her Son, when he came to be a Man. This Son was *Seleucus*, said to have been born with an Anchor on his Thigh, by which also the whole Race of the *Seleucidae* were distinguished, and which was supposed to give them a Title to the Dominion of the Sea, for the sake of which, perhaps, the Story was invented. However that might be, it was affirmed that this Ring was actually found in the Bed of *Laudice*; and that she delivered it to *Seleucus*, when he went to the *Persian* War, assuring him that he was not the Son of *Antiochus*, but of *Apollo*. This Notion he took care to inculcate amongst his Soldiers, as much as possible, and to keep up the Credit of it as far as lay in his Power, affected always a great Attention to Naval Affairs.

But this was after he had established himself in the Kingdom; for, immediately after *Alexander's* Death, he found himself fully employed in securing his Share of his Master's Territories from being torn from him by the Ambition of his Colleagues.

It was during these early Disputes, that the *Indian* Provinces were irrecoverably lost. This Blow was given to *Alexander's* Empire by *Andracottus*, whom we have formerly mentioned, and whom *Justin*, and other Authors, frequently call *Sandracottus*. He was not of Royal Extraction, but he must have been the Son of some Person of Distinction, since, being a Youth in *Alexander's* Camp, he, some way or other, offended that Monarch to such a Degree, that he ordered him to be slain; which severe Sentence he escaped, by speedy Flight. It was on this Occasion, that an odd Accident inspired him with the Hopes of acquiring the Regal Dignity: Being excessively tired with the Heat of the Weather, and hard Travelling, he lay down in a Wood, to sleep; and a Lion having gently licked the Sweat off his Body, till he awakened, then left him without doing, or endeavouring to do him, the least Hurt. He gathered about him, soon after, a Crew of Outlaws, and began to make Inroads on the *Macedonian* Colonies. He saw the Disposition of the People was absolutely repugnant to the Yoke of *Greek* Slavery; and therefore, under Pretence of restoring Liberty, he very artfully brought them into Subjection to himself.

As this was an Age when Prodiges had great Effects, *Andracottus* produced an Elephant, of a very unusual Size, which, he assured the People, came, of its own Accord,

out of the Woods, and behaved towards him as tamely as if it had been long disciplined. This Story served his Purpose very extensively; for it encouraged the People every-where to rise; and induced them to accept of him for their Chief: So that, in a very short Space, he cut off all *Alexander's* Garrisons, and those who commanded them, breathing, where-ever he marched, the strongest Passion for Liberty; and enlarging, by Degrees, both his Forces and Dominions, till he was become much too potent for any of his Neighbours, and durst avow publicly his Design, not only of throwing off the *Greek* Authority, but of erecting a new and powerful Empire in the *Indies*.

As soon as *Seleucus* found himself well fixed in the Possession of his Dominions, he determined with himself, to recover the *Indian* Provinces, and to repress the Pride of this new Conqueror, who was the first Stranger that had attempted to reject the Government of the *Greeks*. But his Endeavour came too late; *Andracottus* was become, by this time, much too powerful to apprehend anything from one of *Alexander's* Successors. Instead therefore, of abandoning his new Conquests, he was no sooner apprised of *Seleucus's* March into the Northern Provinces, than he began to assemble a numerous Army, in order to march towards, and give him Battle. *Seleucus* had been hitherto extremely fortunate, and was now at the Head of a great Body of excellent Troops, flushed with Conquest; yet when he heard, that *Sandracottus* was moving towards him, with a well-disciplined Army of 600,000 Men, and a great Number of Elephants; and that, instead of inclining to part with what he had already obtained, he demanded that all the Country, to the River *Arbis*, should be restored to the *Indians*, to whom it formerly belonged, he paused a little, and shewed an Inclination to treat.

On the other hand, the *Indian* Prince, being, by the standing Maxims of their Policy, restrained from attacking a Foreigner, that did not act offensively against him, readily listened to the Proposal; and gave *Seleucus* to understand, that he had no Quarrel or Aversion to the *Greeks*, but fought only for the Preservation of that Freedom, which the *Indians* held dearer than their Lives. An Incident happened, at this time, which contributed not a little to the bringing this Negotiation to an amicable Conclusion, viz. the Apprehensions *Seleucus* was under, from the Power of *Antigonus*, which had united the other Kings against him, with whom *Seleucus* was inclined to confederate himself; and was, therefore, very desirous of getting this *Indian* War well off his Hands. After some time spent, therefore, in Conference, they came, at last, to this Agreement, viz. that *Seleucus* should give up all the Frontier Provinces, between the Rivers *Arbis* and *Indus*, to *Sandracottus*; and that he, on the other hand, should deliver five hundred of his disciplined Elephants, to *Seleucus*: And this being complied with by both Parties, *Sandracottus* was left in quiet Possession of his Kingdom, and *Seleucus* marched Westward again with his Army, strongly reinforced by those five hundred Elephants.

It is impossible, from the few Circumstances that are left us by ancient Writers, to pretend to fix the Boundaries of this *Indian* Monarch's Territories, or to say, with any Degree of Certainty, of what Nation he was King: It is, indeed, certain, that he made Choice of the chief City of the *Prafsians*, for his Capital; but I do not think it probable, that he was first King of that People: On the contrary, it seems most likely, that having first got together an Army, composed of such as *Alexander* had driven out of their Countries, he became strong enough, by Degrees, to reduce all the Countries between the Rivers *Indus* and *Ganges*, and many also, on the other Side of the last-mentioned River; and then fixed the Seat of his Empire at *Palimbotra*. It is true, that *Megasthenes* reported, that *Sandracottus* was the hundred and fifty-third Monarch, from *Bacchus*; and that those Princes had reigned for the Space of six thousand and forty-two Years; which is very improbable in itself, and not at all agreeable to the other Lights we have from History.

As for this City of *Palimbotra*, which, in many Authors, is called *Paltbotra*, it stood at the Confluence of

^a *Justin*, lib. xv. c. 4.
^b *Megasthenes* ap. *Strabo*.

^c *Strabo*, lib. v. p. 724. *Justin*, lib. xv. c. 4. *Plutarch*, in *Alexandro*.

^d *Strabo*, lib. xv.

the Rivers *Erannobos*, and *Ganges*, and was the most famous City in the *Indies*. *Megasthenes*, who had been often there, affirms that it was eighty Stadia in Length, and fifteen in Breadth; surrounded with a Ditch, of a prodigious Breadth, and forty-five Foot deep: There were five hundred and seventy Towers on its Walls; and it had forty-four Gates. *Ptolemy* calls it, *The Royal Palibotra*; and places it in the Latitude of 27°: And *Strabo* tells us, that, from this Royal City, the King was frequently called *Palibotrus*; which is probable enough, since it is plain, that such a Custom prevailed in the *Indies*, from the Instance of *Mopbis*, who, on his Accession to the Kingdom of *Tosula*, assumed the Title of *Taxiles*.

The City of *Palibotra* is frequently mentioned, with Marks of the utmost Admiration, by many antient Authors; and continued, to the Time of *Pliny*, to be considered as the Metropolis of *India*. There is good Reason to believe, it is the same with the modern City of *Halabas*, in the *Mogul's* Dominions, situated on the Confluence of the Rivers *Gemna*, and *Esprates*, and agreeing, in other respects, to the foregoing Description. *Megasthenes*, who was employed in several Negotiations, at the Court of *Sandracottus*, represented him as a Prince no less conspicuous for his Virtues, than formidable for his Power; as one who ruled with the utmost Regard to Equity and Justice, and kept even his Soldiers to such strict Discipline, as that an Army of four hundred thousand Men, could march thro' a Country, without harrassing, or destroying it. He must, indeed, have been a Prince of singular Abilities, who, from such small Beginnings, would raise up so potent an Empire, and leave it, at his Decease, to his Son. The Name of this Successor of his, was *Alirechades*; and we read in *Pliny*, that the Standing Forces of this Monarch were six hundred thousand Foot, thirty thousand Horse, and nine thousand Elephants.

3. By this Treaty, made with the *Indian* Prince before mentioned, *Seleucus* absolutely abandoned all the Conquests that *Alexander* had made on that Side, within less than twenty Years after his Death; and they were never afterwards recovered. It was this Prince, who in his Transactions with the Kings of *India*, made use of *Megasthenes*, whom we have so often mentioned; and it was, by being thus employed by *Seleucus*, that he acquired the Knowledge requisite for the writing of his Book, which is long ago perished, tho' there are still some Fragments preserved. He is censured as a fabulous Writer, by most of those who cite him; and, in the Beginning of the 15th Century, it came into the Head of an *Italian* Monk, whose Name was *Zonias*, of *Viterbo*, to counterfeit the Book of which we have been speaking, notwithstanding that he knew so little of it, as to mistake the Author's Name, whom he calls *Megasthenes*; into which Mistake he was led, by the *Latin* Translation of *Josephus*. His Master *Seleucus* was a very wise, as well as fortunate Prince; but his Reign was so much troubled with Wars, that he had scarce Leisure to think of any thing else.

There is, however, one Circumstance in his Reign, that must not be forgot, which was his building *Seleucia*, on the River *Tigris*, at the Distance of forty Miles from *Babylon*, in order to make it the Seat of Government, for the Eastern Provinces of his Empire: And in this he, and other Successors of *Alexander* the Great, affected to copy their Master; and none of them with better Success than *Seleucus*: For his new City, which stood on the West Side of the River, soon drew most of its Inhabitants from *Babylon*, which sunk so low, as to be turned, by the *Partian* Kings, into a Park for wild Beasts. By Degrees, however, its Name was transferred to *Seleucia*: And this is the *Babylon* that we find afterwards mentioned by Historians. It may not be amiss to observe here, that the new *Babylon* is now sunk as low as the old: For the Caliph *Almansur*, observing, on the other Side of the River *Tigris*, a very beautiful Spot of Ground, on which there was nothing but the Cell of a *Christian* Monk, and a little Garden, he thought the Situation so pleasant and commodious, that in the Year after *Christ* 762, he built there a new City, which he

made the Capital of his Dominions; and called it, from the old Monk, *Bagdad*, i. e. the Garden of *Dad*; which is the modern *Babylon*, and the very Place which is now besieged by *Thomas Kouli Kan*: And this Remark will be found of great Use, in the Perusal of the remaining Part of this Work; and therefore I introduced it here. The same *Seleucus Nicator* was also the Founder of *Antioch*, on the River *Orontes*, about twenty Miles above its Fall into the *Mediterranean* Sea; which continued, for many Centuries, the chief City of the East: And so, indeed, it well deserved to be, for its convenient Situation, lying at an equal Distance from the two great Cities, of *Constantinople* in *Europe*, and *Alexandria* in *Egypt*, about 700 Miles from each of them.

He, and his Successors, had Fleets, both in the *Caspian* and *Black* Seas; but the Accounts we have, of the Voyages made in both, by their Direction, in *Pliny*, are so obscure, and, in Truth, so absurd, that it would be to no Purpose, to trouble the Reader with any Account of them. We have, indeed, a better Character given us of one *Patrocles*, whom they employed to inquire into the Government and Trade of the *Indies*, and who wrote a Book upon this Subject, often cited, and much commended by *Strabo*; but it is long since lost, tho' from his Account of it, most certainly it deserved a better Fate.

4. This *Seleucus Nicator*, or the Conqueror, who was the first Monarch of *Syria*, and of whom we have hitherto been speaking, reigned thirty-three Years; and, on his Death, was succeeded by his Son *Antiochus Soter*, i. e. the Saviour, which Surname he obtained by defeating the *Gauls*, who broke into lesser *Asia*, and threw all that Part of the World into Confusion: He reigned nineteen Years; most of which were spent in War; and was succeeded by his Son *Antiochus Theus*: In the eleventh Year of whose Reign the *Partians* and *Babrians* revolted, which cut off from him most of the Eastern Provinces, and, with the Rebellion of his Son, perplexed his Reign so much, that he had not Time to look into the domestic Oeconomy of his Empire, which he enjoyed fifteen Years; and was then succeeded by his Son *Seleucus Callinicus*, who, in the Beginning of his Reign, was involved in a War with his Brother; which gave an Opportunity to *Arfaces*, the new King of *Partbia*, to add *Hyrcania* likewise to his Dominions; which, however, *Seleucus* endeavoured to recover, and marched with a great Army into *Partbia* for that Purpose, but with no great Success. In the sixteenth Year of his Reign, he invaded *Partbia* a second Time with worse Fortune than before; for he was defeated and taken Prisoner by *Arfaces*, and, having lived in Confinement three Years, died of a Fall from his Horse.

He was succeeded by his Son *Seleucus Ceraunus*, i. e. the Thunderer, an odd Surname for a weak and pusillanimous Prince, who, after sitting three Years on the Throne, and doing nothing remarkable, was poisoned by some of his Ministers, leaving behind him no Issue; after his Death, succeeded *Antiochus* the Son of *Seleucus*, when the Kingdom of *Syria* was in the most distressed Condition imaginable, distracted at home, and embroiled abroad.

5. This *Antiochus* merited the Title of Great; for, though at his Accession to the Kingdom, which happened in the Year 222 before *Christ*, he was but sixteen Years old, yet he discovered a Spirit worthy of his Crown, and capable of restoring the Glory of his Country. In the Beginning of his Reign, he sent *Molan* and *Alexander*, two Brothers, one into *Media*, and the other into *Partbia*; but they, despising the King's Youth, set up for themselves, and seized the Countries they were sent to govern: These Rebels defeated two Armies that were sent against them; but King *Antiochus* himself, marching first into *Media*, there defeated *Molan*, who killed himself in Despair: His Brother *Alexander*, finding it impossible to resist, destroyed his Mother and all his Family, and then killed himself; by which means these two Provinces were again restored to the *Syrian* Empire. Encouraged by this Success, he, in the eleventh Year of his Reign, attacked *Arfaces*, King of *Partbia*; and, after a long War, concluded a Peace with

¹ *Arrian*, in *Indic*.

him,

him, by which he yielded up *Parthia* and *Hyrcania*. He did this, that he might be more at Leisure to recover the Eastern Provinces; and with this View he invaded *Bactria*, which had been long torn from the Dominions of the Successors of *Alexander*. *Eutbydemus* was then King of that Country, a very wise and potent Prince, against whom *Antiochus* carried on the War with great Vigour, but with little Success; so that, after his utmost Efforts for the dispossessing him of that Country, finding that he made but little Progress therein, by reason of the Valour and Vigilancy of those he had to deal with, he grew weary of the War; and, therefore, admitted Ambassadors from *Eutbydemus* to treat of an Accommodation.

By them *Eutbydemus* complained of the Injustice of the War which *Antiochus* had made against him, telling him, that he was not of those that had revolted from him; and that, therefore, he had not, on this Account, any Right of War against him: That the Revolt of the *Bactrians* from the *Syrian* Empire had been made under the leading of others before his Time: That he was possessed of that Country, by having vanquished and driven out the Descendants of those Revolters, and held it as the just Price of his Victory over them. He farther ordered it to be suggested to *Antiochus*, that the *Scythians*, taking the Advantage of the War, in which they were now wasting each other, were preparing a great Army to invade *Bactria*; and that, therefore, if they continued any longer their Contention about it, a fair Opportunity would be given those *Barbarians* to take it from both. This Consideration, added to the Desire which *Antiochus* before had to get rid of this tedious and troublesome War, brought him to agree to such Terms as produced a Peace; for the confirming and ratifying of which, *Eutbydemus* sent his Son to *Antiochus*, who took such a Liking to the young Man, that he gave him one of his Daughters in Marriage; and, for his sake, allowed the Father to take the Style and Title of King of *Bactria*; and then, having received from him all his Elephants (which was one of the Terms of the Peace) he marched over Mount *Caucasus* into *India*; where, having renewed his League with *Sappogajenus*, the King of that Country, and received so many Elephants from him, as, when added to those he had from *Eutbydemus*, made up their Number an hundred and fifty, he marched from thence into *Arachosia*; and from that Country into *Drangiana*; and from thence into *Carmania*, settling, as he went, all those Countries in due Order under his Obedience.

This was the last Expedition, of any Consequence, that was ever undertaken by any of the *Grecian* Princes in *Syria*; and, therefore, this is the last of these Princes that I shall mention. But, that we may not conclude his Reign abruptly, let us continue it as concisely as may be to its Close. After having wintered in *Carmania*, he returned through *Persia*, *Babylonia*, and *Mesopotamia*, unto *Antioch*, after having been seven Years absent from thence in this Expedition. By the Boldness of his Attempt, and the Wisdom of his Conduct through this whole War, he gained the Reputation of a very wise and valiant Prince, which made his Name terrible through all *Europe* as well as *Asia*; and thereby he kept all the Provinces of his Empire in thorough Subjection to him. And thus far his Actions might well have deserved the Name of the Great, which was given unto him, and he might have carried it with full Glory and Honour to his Grave, but that he unfortunately engaged in a War with the *Romans*.

This was intirely the Effects of his Vanity, for which he paid very dearly; for it proved the Ruin of his Affairs, and brought upon him a Train of Misfortunes, that followed him to his Grave. The true Design of this War was to have torn away a Part of the Kingdom of *Egypt* from *Ptolemy Epiphanes*, a Child under the Guardianship of the *Roman* Republic. It was upon this Occasion that he abandoned all Thoughts of the East, and laboured incessantly to raise a large maritime Force in *Europe*; yet, notwithstanding he succeeded in this, and had also *Hannibal*, the greatest General of his Age, to assist him, his Affairs grew

daily worse and worse; and, being, at last, routed in several naval Engagements, and in a decisive Battle at *Magnesia*, he found himself in so great Distress, that he was constrained to accept such a Peace as the *Romans* thought fit to grant him; and thereby gave up all *Asia*, on the other Side Mount *Taurus*, and paid the Expences of the War, which were settled at fifteen thousand Talents, or three Million six hundred thousand Pounds of our Money; which extremely sunk his Reputation, and wasted his Treasure, involving him, besides, in such a Train of disgraceable and successful Enterprizes, that, at last, robbing the Temple of *Jupiter Belus* in the Province of *Elymais*, in order to obtain Money to pay the *Romans*, this occasioned an Insurrection which cost him his Life.

His Successors pursued his Maxims of Policy; neglected their Eastern Provinces, on which Side they might have acted with Advantage; and, opposing the *Romans* from the Dread of their Power, drew it upon them to such a Degree, as to lose all their great Dominions to that Republic, and her Confederates.

6. It is not easy to conceive an Empire better situated for Commerce, than that of the *Seleucide*, at the Death of its Founder *Seleucus Nicator*; for they had the Eastern Provinces of *Alexander's* Empire to the Frontiers of the *Indies*, the *Red Sea* on one Side, that is to the South, the *Caspian* Sea on the North, and the *Mediterranean* open to another Part of their Dominions. It is very evident, even from the dark Accounts of *Pliny*, that the first Monarchs of this Family were very desirous of keeping up a maritime Force, and making Discoveries in the *Caspian* Sea; but the Wars and Confusions that followed the Loss, first of *Bactria*, then of *Parthia* and *Hyrcania*, and, at last, of *Persia*, discouraged these Princes, and indeed took from them the Means of pursuing that Plan.

It is likewise evident, that *Seleucus* was extremely fond of another of his Master's Maxims, which was that of building new Cities; and of these he left a great Number of his own, his Wives, and his Mother's Names, besides those we have already mentioned: And this Practice of his grew into a Humour with his Successors, who were everywhere erecting new Cities at the Expence of old ones. Their Conduct differed widely in this from that of *Alexander*, who never affected to ruin old Cities, but built new ones in proper Places and for proper Purposes, leaving Colonies of *Macedonians*, where he intended they should serve for Garisons; and using all Means possible to invite Strangers of every Country, and of all Religions, to settle in them, where he intended them for Ports.

And as these Princes erected new Cities on very different Motives, so the Consequences that attended them were very different likewise; for many of the Cities, built by *Alexander*, increased and became famous on account of the Prudence he had shewn in the Choice of their Situations; whereas the others, that were most of them the Effects of Vanity, unpeopled and destroyed each other; and so, instead of remaining Monuments of the Power, became Instances of the Folly and Weakness of these Princes.

7. It was natural for me to begin the History of *Alexander's* Successors with that Family, which, at first, were in Possession, and always claimed a Right to his *Indian* Conquests; which, as we have shewn, they quickly lost by their own ill Management. It may not be amiss, however, to observe, that, from the Facts mentioned in this Period, the Steadiness of the *Indians*, in respect to their Maxims of Policy, very plainly appears. *Sandracetes* raised himself suddenly to an amazing Height of Power, and from a private Person, hiding himself in the Woods for the Preservation of his Life, rose to a Degree of Power, capable of resisting the whole Force of the Kings of *Syria*, when in the Zenith of their Glory: Yet he contented himself with restoring the antient Bounds of *India*, and even parted with five hundred Elephants for that Purpose; but he never thought of foreign Conquests, or was drawn by Motives of Ambition or Vanity, to weaken his Forces, by extending his Dominions. On the contrary, we find *Megasthenes*, who was an Eye-witness of what he wrote, in

^a Justin. lib. xxx. c. 1.

c. 27.

sisting on the strict Discipline of his great Armies, on the Frugality of that Prince's Court, and on his strict Adherence to the Manners and Customs of his Country. We find the same Principles as steadily pursued by *Sapthagenus*, who was King of that Part of *India*, which was threatened, rather than attacked, by *Antiochus* the Great: He likewise parted with his Elephants to preserve Peace, tho' he appears to have been so well prepared for War, that even that potent and fortunate Monarch of *Syria* chose rather to compromise the Differences between them amicably, than to hazard the Ruin of his Army by an Engagement.

These *Indian* Princes had nothing in view, but securing their Dominions, and maintaining their Subjects in Peace and Quiet. On the other hand, the *Syrian* Kings were fond of making a Shew of their Power in these Countries,

by keeping up a Corps of Elephants in their Armies, preferring thus the Shadow to the Substance, and seeking rather to spread a false Opinion of their Grandeur in the West by this Display of their Elephants^b, than to maintain it in the East, by a constant Attention to the Preservation of those Provinces, which, by the Conquests of *Alexander*, were derived to them. But, though the Dominion of the *Greeks* was lost on this Side, yet their Commerce with the *Indians* was, in a great measure, preserved by the wise Conduct of the Successors of *Alexander* in another Part of his Dominions^c; of which we are next to speak, and which will bring us to a Conclusion of this Part of our Subject, by leading us to the same Point which closes this Section; viz. the Falling of that Part of *Alexander's* Empire into the Possession of the *Romans*.

^c The *Ptolemies*, who most of them cultivated maritime Power and Commerce.

SECTION VIII.

The History of the Greek Empire in Egypt, under the Ptolemies; the Establishment of the Indian Commerce, at Alexandria; and the Consequences of that Establishment, to the Reduction of the Kingdom of Egypt into a Province, by the Romans.

1. The Settlement of Egypt, on the Death of Alexander the Great, under Ptolemy the Son of Lagus, afterwards King, and surnamed Ptolemy Soter.
2. The Character of that Prince; his perfect Acquaintance with, and earnest Inclinations to execute, the Designs of Alexander.
3. An Account of the Foundation, Peopling, and Adorning Alexandria, the Capital of the Greek Empire in Egypt.
4. The erecting the Pharos or Light-house there, and other Methods used to render the Port of that City safe and commodious.
5. An Account of the Museum, and Library of Alexandria.
6. And of the Serapeum, and additional Library, which was destroyed by the Arabians.
7. The stupendous Vaults, Cisterns, and other subterraneous Conveniences of that City.
8. The Accession of Ptolemy Philadelphus, and the Maxims of his Government.
9. His Care in settling the Commerce between Egypt and the Indies, the Source of the immense Wealth of that Country for many Ages.
10. The Methods used by him, to secure the Intercourse between the Red Sea, and the Nile, described at large.
11. An Account of the extensive Dominions, vast Power, and prodigious Revenue, of Ptolemy Philadelphus.
12. A succinct History of the Reign of Ptolemy Euergetes.
13. The Improvements made in the Commerce to the Indies, under Ptolemy Philopater, and succeeding Princes.
14. Declension and Ruin of the Greek Empire in Egypt.
15. Instances of the vast Profits accruing to the Egyptians, by their Indian Trade.
16. Situation of that Commerce, at the Dissolution of that Empire.
17. The Reduction of Egypt, by Augustus, under the Roman Empire.

IT is a Thing agreed, by all the Writers of the Life of *Alexander*, that none of his Commanders stood in higher Favour with him, or in greater Credit with his Army, than *Ptolemy*, called from the Name of his Father, *Ptolemy Lagus*^a. The King had raised him, merely from the Esteem he had of his Merit; and, at the time of his Master's Decease, he was one of the most considerable Officers in his Troops, tho' in the very Flower of his Age: For at the Juncture, when the Division of the Provinces was made, and he had *Egypt* assigned him, *Ptolemy* did not exceed forty-five. He went thither immediately; had the Province delivered up to him quietly; and held it thenceforward, to the Day of his Death, with all the Advantages it naturally possessed, and all that could be added to it, by his Valour and Conduct. It was not long before some of those, who conferred upon him this Dominion, moved by Envy and Ambition, would have deprived him of it: But he was so prudent a Statesman, so great a Captain, and so gracious a Master, that his Army, and his Subjects, adhered to him steadily, and enabled him to resist effectually all the Attempts that were made to his Prejudice.

A Rumour prevailed thro' the *Macedonian* Army, that where *Alexander's* Body was intomb'd, that Country should enjoy Peace and Felicity beyond any other. *Ptolemy*, knowing how great an Effect such superstitious Opinions have upon the Minds of the Vulgar, contrived, under colour of conveying it to the Temple of *Jupiter Ammon*, to get the Corpse of his Master into *Egypt*, where it was first deposited at *Memphis*, and was afterwards transported to

Alexandria, where it remained, and gave Credit to *Ptolemy*, in all his Undertakings^b.

After the first Disputes, which followed after that Conqueror's Decease, and the second Partition of the Provinces, *Ptolemy* had a larger Share; and, behaving much more kindly to the Soldiers, than the other Princes did, had always a numerous, and well-disciplined Army; by the Help of which he added *Cale-Syria*, *Phœnicia*, *Judea*, together with *Cyrene*, and *Lybia*, to his Dominions; which rendered him, if not the most powerful, at least, the best established of all *Alexander's* Captains; which appeared by the People, or rather Army's giving him the Title of King, at a Time when his Arms were not very successful, as if they intended to suggest they would either restore his Fortune, or share it. He did not, however, assume himself the Character of an independent Prince, till nineteen Years after the Death of *Alexander*, and the Extinction of his Family; that is to say, in the Year before Christ 304^c.

2. There is great Probability, that *Alexander*, who had so much Affection for *Ptolemy*, confided to him some of his principal Designs. To which Opinion I incline, for two Reasons: The first is, that *Ptolemy* himself wrote a kind of Military History of that Prince, on the Credit of which *Arrian*, from whom we have the best Account of *Alexander's* Projects, chiefly relies: And the second, that *Ptolemy* not only executed several Schemes that his Master had left unfinished, but appeared to act, in all Things, upon the like Principles, especially in protecting to the utmost, and using all his Endeavours for the Good of his Subjects, which gained him so high a Character, that when

^a *Arrian Strabo Justin. Plutarch. Curt.*

^b *Di. dor. Sicul. lib. xviii. Strabo. lib. xvii. p. 705.*

^c *Diad Sicul. lib. xx. Justin. lib. xv.*

his Affairs took once a wrong Turn in Syria, Thousands followed him into *Egypt*, chusing rather to live under him in any Condition, than to submit a second time to *Antigonus*.

He likewise imitated his Master, in his Care of having a Maritime Force, which he chiefly maintained by the Kindness he shewed to the *Rhodians*, and others, who, in those Days were esteemed most skilful in whatever regarded Navigation or Commerce. He was also very accessible by, and made large Presents to such Strangers, as, being civil-treated in their own Country, came to take Shelter in *Egypt*; by which he gained Multitudes of industrious, and of mercantile People especially, who were better satisfied under his mild Administration, than with the Haughtiness of his Rivals, and the many Revolutions, which, thro' the Abuse of their Authorities, happened frequently in Places under their Dominion.

But what principally manifested his Attention to the Designs of *Alexander*, was his extraordinary Application to finishing and adorning his new City of *Alexandria*, which *Ptolemy* not only performed successfully, and peopled it abundantly, but made it the Capital of *Egypt*, and the Seat of his Empire, as it continued (with continual Improvements and Augmentations) under his Successors. This City, as the Residence of that Monarch, who restored the antient Commerce of the *Indies*, by the Route of the *Arabian* Gulph, and as being itself the great Staple of that Commerce for many Centuries, it will be requisite for us to describe; and that more largely, and with greater Regard to antient Writers, than is usual with modern Collectors of History, because it has a very near Relation to our Subject, and will enable the Reader to understand the more clearly what follows.

3. While *Egypt* continued a Province of the *Persian* Empire, she was always oppressed and exhausted. The Monarchs of *Persia* were so jealous of the *Egyptians*, that they reckoned their Poverty a profitable Thing to the Empire, as tending to keep them quiet, and within the Bounds of their Duty: And it was for this Reason, that they discouraged, as much as possible, any Settlements on the Coast of the *Red Sea*; and were far enough from promoting their Traffick in the *Mediterranean*. But *Alexander* was of quite another Disposition, and no sooner possessed himself of this noble Country, than he began to consider how it might be best improved, and in what manner his Power might be employed, in restoring its antient Wealth and Splendor.

In his March to the Temple of *Jupiter Ammon*, in *Lilya*, he took notice of a Space of Ground, lying along the Coast, and directly opposite to the little Island of *Pharos*; which he judged a very convenient Situation for a City, as having the *Mediterranean* in Front, the Lake *Marcotis* behind, and the River *Nile*, and the *Red Sea*, on one Side of it. After considering the Thing a little, he entered so thoroughly into all Advantages that might be derived from these Circumstances, and foresaw so exactly all that afterwards this City arrived at, that, postponing his Journey for the present, he resolved, without Delay, to cause the Outlines of the City to be drawn, under his own immediate Inspection, and to call it *Alexandria*.

His first Care was for Health: And, hearing the gross Air, from the neighbouring Marshes, was looked upon as unwholesome, he so contrived the Streets, that they received the *Etian* Winds quite through them; which so purified the Air, and purged the Vapours, that the Inhabitants found the Situation healthy, and the Breezes pleasant. He provided next for Strength; and laid down the Plan in such a manner, that there were only two Roads to it, each of them very commodious; but so situated, one towards the Sea, and the other by the Lake, that a small Body of Forces might be able to defend it, in any time of Danger. It was laid out in the Form of a Soldier's Coat, being about thirty *Stadia* in Length, and ten in Breadth: There ran through the midst of it a fine open Street, one hundred Feet in Breadth, wherein the principal Buildings for public Uses were to stand: And he likewise caused the Foundations of a Royal Palace to be marked out; and then, committing the Care of building this City to

Dinocrates, a famous Architect, he continued his Expedition into *Lilya*.

Some Writers, indeed, say, that it was not till after his Return from the Temple of *Jupiter Ammon*, that he built this City; which is very easily accounted for, since it is certain, that, upon his Return into *Egypt*, he visited the rising City; and was extremely pleased at the Progress that had been made, and at the Beauty of the Port; which, when fenced with a Wall, and cleaned, appeared to be one of the most capacious in that Part of the World. It may seem somewhat extraordinary, that the antient *Egyptian* Kings, who were so much famed for their Wisdom, should not discover a Port that lay so conveniently for embracing the whole Trade of the *Mediterranean*: But the Truth is, that they were well enough acquainted with it, and actually built a Town called *Rhacotis*, in its Neighbourhood; not with any View to the making use of the Port, but quite the contrary, with Intention to have filled it up, and spoiled it, from the Fear they were under of the *Greeks*, whom they considered as a needy, and, at the same time, an enterprising Nation, who were ready to improve any Opportunity that offered, of bettering their own Condition, at the Expence of their Neighbours.

When the Form and Extent of the new City was fully settled, *Alexander* took care to people it, by granting extraordinary Privileges to such as should inhabit it. These Inhabitants were of three Sorts: 1st, *Macedonians*, who had the highest Privileges; and in this Rank also, the *Jews* were enrolled, which, as their Affairs were in a distracted Condition at home, drew Multitudes of them thither. 2^d, The Mercenaries, who were old and unfit for Service, and were desirous of obtaining a Settlement. 3^d, The native *Egyptians*, who, tho' the least favoured with respect to Immunities, yet being offered much more advantageous Conditions in this new City, than they had in any of their own, resorted thither in Crouds: So that, in a short time, the Place was not only built, but thoroughly inhabited; which was greatly promoted by the Care that *Alexander* took, even when at the greatest Distance, for the Improvement of this favourite Colony.

4. At the Time that *Ptolemy* came to take Possession of his Province of *Egypt*, he found *Alexandria* in a very flourishing Condition; for which Reason he chose it for the Capital of his Dominions; and, all his Life long, studied to adorn it, and increase the Number of its Inhabitants. His long Reign of 39 Years gave him various Opportunities of fulfilling his Intentions, and of executing, in that City, what *Alexander* had proposed to have done throughout his Dominions, as we shall shew as successively as may be: His first Care was, to establish a great Maritime Force; in which, notwithstanding the many Checks he met with in his Reign, he succeeded beyond any of the Successors of his Master; and, at the time of his Decease, might be said to be Master of the Sea. It was this that occasioned his enlarging and improving the Port of *Alexandria*, which, even in its Beginning, alarmed the *Carthaginians* so much, that they sent one *Hamilcar*, who was surnamed *Rhodanus*, to the Court of *Alexander* the Great, to get certain Information as to the Designs of that wise Prince, with respect to this new Port, and the Communication they suspected he meant to open between it and his Dominions on the East.

Hamilcar was instructed to pretend, that he was an Exile from *Carthage*, and came to seek Refuge in the King's Court, where he was to endeavour to insinuate himself into his Confidence, in order to execute his Commission the better; and, under the Protection of *Purmenis*, he succeeded perfectly: But, after the King's Death, returning home, and making a Report of the Possibility of uniting the Eastern and Western Commerce of the World at *Alexandria*, his Countrymen, displeas'd with his Discoveries, or thinking it dangerous to let a Man live, who knew so much, by an extraordinary Stroke of Republican Gratitude, they put him to Death, as the shortest Way of securing themselves from the Mischiefs he might do them.

The Marble Watch-Tower or Light-House Erected by PTOLEMY SOTER on the Island of Pharos near the Port of Alexandria with the Causeway carried through the Sea to the Continent.

Yet, upon mature Deliberation on what was suggested to him by the ablest Seamen of those Times, *Ptolemy* was concerned, that two Things were wanting, to render this capacious Port of his perfectly safe, and easy of Access; viz. a fort of Mole, which might defend it from Winds; and a Watch-tower, that might shew the true Entrance of the Port at Sea; and for both these Inconveniences he found effectual Remedies. The Island *Pharus* lying three Quarters of a Mile distant from the City, he determined to build a Watch-tower thereon, and to run a Causeway from the City to the Island, which would secure the Ships in the Port from the Fury of the Winds: But his Endeavours, in this respect, were so often crossed by Wars, and other Accidents, that it was at the very Close of his Reign these noble Designs were completed; but then they had this Advantage, that they were absolutely perfect in their Kinds; so that they were esteemed for many Ages after, among the Wonders of the World.

The Watch-tower, or Light-house, was a large square Building, composed of fine, white Marble, and the Height of one hundred and thirty-five Feet, on the Top of which Fires were constantly maintained, for the Direction of Ships upon the Coast. The Expence of this Tower amounted to eight hundred *Alexandrian* Talents, or upwards of three hundred and thirty thousand Pounds of our Money. The Architect who built it, was *Softratus* of *Cnidus*, who barely endeavoured to usurp the Honour of it with Posterity, to himself, by this fraudulent Device: The Inscription ordered to be set on it, being, *King Ptolemy, to the Gods the Saviours, for the Benefit of those who pass by Sea*; instead of *Ptolemy's* Name, he carefully graved his own, in the solid Marble; and then filling up the Hollow of the engraved Letters with Mortar, wrote upon it what was directed: So the Inscription which was first read, was according as it was ordered, and truly ascribed the Work to *King Ptolemy*, its proper Founder; but, in Process of Time, the Mortar being worn off, the Inscription then appeared to be thus, *Softratus, the Cnidian, Son of Dexiphanes, to the Gods the Saviours, for the Benefit of those who pass by Sea*; which, being in lasting Letters, deeply engraved into the Marble Stones, lasted as long as the Tower itself. This Tower has been demolished for Ages past.

As for the Mole, or Causeway carried through the Sea, and by which the Island of *Pharus* was joined to the Continent, it was called in *Greek*, the *Heptastadium*, or Road of seven Stadia, because that was the Length of it. This stupendous Work, no way inferior to the celebrated Light-house, was performed by *Dexiphanes*, the Father of *Softratus*, about the same time that *Softratus* finished the Tower; and seems to have been the more difficult Undertaking of the two. They, being both very famous Architects, were both employed by *Ptolemy Soter*, in the Works which he had projected, for the beautifying, adorning, and strengthening the City of *Alexandria*: The Father having undertaken *Heptastadium*, at the same time that his Son did the Tower, they finished both these Works at the same Time; that is, about the Time that *Ptolemy Soter* associated his Son *Philadelphus*. Those who attribute the making of the *Heptastadium* to *Cleopatra*, follow *Annius Marcellinus*, whose Relation concerning it cannot be true; for it contradicts *Cæsar's* Commentaries, and many other Authors, that are credited in this Matter.

Thus, with infinite Industry and Care, as well as at a vast Expence, this wise and powerful Monarch secured to his Capital two excellent Ports, that were equally valuable for their Extent, their Safety, and the Commodiousness of them. Neither is this Account to be at all doubted, from what modern Travellers have said, as to the Difficulty and Danger of the little Port at *Alexandria*, because, without question, it is very much altered from what it was, by the Ruin of the Watch-tower, and many other Buildings, which have been demolished, and the Materials thrown into it; and by the Shoals occasioned by the Lodging of Sand and Mud in these Ruins: So that the Embarrasments and Difficulties, with which it is now attended, are not to pro-

perly chargeable on the Port itself, as on the Ignorance, Malice, and Laziness, of its present Possessors; by which I mean the *Mohammedans* in general, who, since it has been in their Hands, have taken as much Pains to ruin and demolish it, as if the Destruction of such a noble Work was likely to raise their Fame as high, as that of those who erected it.

5. But *Ptolemy*, knowing well that neither Government nor Commerce could flourish where Learning was not encouraged; and being desirous to execute, as far as he was able, the several Projects formed by his Master, in favour of this single City; he erected, for the Service of the Sciences, as great, as beautiful, and as expensive a Building as that of the *Pharus*, which rendered the Port of *Alexandria* at least equal, if not superior, to any in the World. This large and elegant Structure, was called the *Museum*, furnished with every thing that could make it commodious, or pleasant, to those who were to dwell in it. Here he placed the learned Men, whom the Fame of his many Virtues, his Love of Learning, and his fine Taste in almost every Branch of it, drew to *Alexandria*, from all Parts. The *Museum* stood in that Part of *Alexandria* which was called *Bruchium*, and very near the Royal Palace; where the Philosophers walked, conversed together, read their Lectures, and were splendidly entertained, in all respects, at the public Expence.

Here also, for their particular Conveniency, he founded that famous Library, the Reputation of which will last, as long as there are Books: For the supplying of this great Repository of Learning, he exerted all his Power, and dispensed no small Part of his Treasure, seizing every Foreigner's Books, as soon as he came to *Alexandria*; and, causing them to be transmitted to the *Museum*, they were fairly copied by the Scribes, whom he maintained for this Purpose, the Original safely laid up in the Library, and the Copies returned, with a proper Gratitude, to the Owners of the Books. Besides this Library, there was another, which was called its Daughter, and of which we shall presently have Occasion to speak.

At present, we will confine ourselves to this; and, having given the History of its Rise, we will also say somewhat of the Manner, in which it was destroyed. This unlucky Accident happened when *Julius Cæsar* was at *Alexandria*, and carried on a War there against the *Egyptians*, when a Fire that happened in the Royal Quarter of that City, burnt down the best Part of the Palace, and with it the Library, and in it four hundred thousand Volumes; which was such a Loss to the learned World, as could hardly be repaired. The learned Men, who lived in the *Museum*, were treated with the utmost Generosity and Respect; and had for their President, a Person equally distinguished in point of Quality and Literature; so that he might seem alike worthy of being at the Head of the King's Council, and the Superior of such an Assembly of Men of Letters. The Dignity and Reputation of this Society preserved it in all Changes and Revolutions of Government, as long as a Taste for Learning remained unextinguished, the *Roman* Emperors being no less careful, in the Choice of those whom they appointed Presidents of this *Museum*, than the *Egyptian* Princes themselves.

6. The last Branch of *Alexander's* Policy extended to Religion; and this also *Ptolemy* took care to comply with in a most extraordinary Manner: He gave out, that he had a Vision, while he was employed in the enlarging and adorning *Alexandria*, of a very beautiful young Man in a flowing Robe, and of divine Aspect, who admonished him, if he desired the Safety and Well-being of this City, about which he took so much Pains, to cause his Image to be transported from *Pontus*. At first, the King pretended not to mind this Dream; but, soon after, the same young Man appeared again, but in a much worse Humour; so that *Ptolemy* found himself obliged to inquire out this new Deity, who proved to be *Serapis* that was worshipped at *Sinope*, whither Embassadors were immediately dispatched to procure this Image from the King of that Country. But three Years being spent in fruitless Sollicitations, a Fa-

* Plutarch. in

mine

mine, which afflicted the Country, came very seasonably to procure a happy Period to their Negotiation: For the People of *Sinope*, finding themselves hard pressed by Want, joined with the Embassadors of *Ptolemy* in their Intreaties, that *Serapis* might be exchanged for a large Supply of Corn; which was at last yielded to, and the so much desired Image transported with great Pomp to *Alexandria*.

There King *Ptolemy* to welcome the new Guest, raised for him, in the Suburb *Bucotit*, a most glorious Temple, stiled *Serapeum*, allowed to have surpassed all the Structures of its kind, except the Capitol at *Rome*. It is very easy to discern from the Circumstances of this Story, and the Answer given by the Oracle of *Apollo* at *Delpbos*, when consulted on this Expedition (*viz.* That there were two Statues at *Sinope*, one of *Serapis*, the other of *Proserpina*; and that they should be careful to bring only the former); that the Whole was no more than a political Contrivance to answer various Purposes. In the first place, it filled the Minds of the People of *Alexandria* with enthusiastic Confidence, as if a new God, from the most distant Part of the World, was come to take Charge of them. Next, by the Novelty of the Thing, it drew Numbers of superstitious People to worship him. And, lastly, it highly raised the Reputation of *Ptolemy* himself, who appeared an extraordinary Favourite with the Gods, from this surprising Instance of the Condescension of *Serapis*. Thus we discover, by a due Attention to these little Circumstances, the greatest political Art in this seeming superstitious Weakness of this Prince, an Art which served him to much the more effectually, for its being so studiously covered, and which he seems to have derived from his Master, who was very seldom superstitious, but to serve a Turn. It was in this *Serapeum* that the lesser Library was erected; in which, after that, near the *Museum*, was full, such other Books as came to hand, were, from time to time, reposit: This then is the Library of which later Authors speak; and, for the Number of its Books, became, at last, more considerable than the first Library: The End of this most noble Collection was as unhappy, and much more to be lamented, than the former; because it was not burnt by Accident, but by Design.

For at the Time the *Saracens* became Masters of *Alexandria*, which was in the Year 642, *Johannes Grammaticus*, the famous *Aristotelian* Philosopher, addressed himself to *Anrus Ebnel As*, who commanded the *Saracen* Army; and desired, that he would spare the Library for his sake, and bestow it upon him, for the Improvement of the Sciences: The General answered, That he would readily do it, if it depended upon him; but that it was too important an Affair to be decided by any but the *Caliph*, who was, at that time, *Omar*, to whom it was accordingly made known: And the Answer he gave was this; That, if these Books were in their Contents agreeable to the *Khoran*, there was no need of them; and, if on the contrary, they contained Things repugnant to that Book, they ought not to be preserved: By which judicious Sentence the noblest Collection that ever the World saw, in all Sciences and Languages, was destined to the Uses of the *Bagnios*, which were heated with them for six Months.

Such was the End of the second Library of *Alexandria*; and the same barbarous Power, I mean, that of the *Mohammedans*, has almost buried in Ruins the very City itself: Most of the Palaces are intirely destroyed; the Walls themselves have not escaped; but some of the Towers, which were built like Bastions, have, even to this Day, baffled the Fury of these Enemies to all Taste and Politeness: And these Towers, all built with Marble, and in each of which there are many Apartments finely laid out, serve as Witnesses to the Truth of those Facts, which, with respect to the Magnificence of this City, are recorded by the best Authors of Antiquity.

7. Yet one Particular there is, relating to this once glorious Place, the Truth of which, perhaps, no historical Evidence could have established; and which, for their own Conveniency, the *Turks* have left intire to testify for itself. The antient City of *Alexandria*, like most of the Cities of

Egypt, was destitute of fresh Water; and, lying at a Distance from the *Nile*, a Canal was dug from thence, about eighteen Leagues in Length, to supply it; but as the Waters of that River rose but once a Year, high enough to fill that Canal to any considerable Depth, the whole City of *Alexandria* was vaulted, and those Vaults sustained by Rows of Pillars of the finest Marble; so that, in fact, the City under-ground was more curious, and perhaps as expensive, as that above.

Some of this Vaulting was walled up so closely as to serve for a Cistern, Part of which came under every House; and, at the Time of Year when the *Calix*, for so the Canal from the *Nile* was called, was full to the Top of its Banks, the Head was broken down, and a sufficient Quantity of Water let into the Cistern to supply the City, till the River overflowed again: And by this singular Contrivance, either of *Alexander* or his Architect *Dinocrates*, the City in general, and every House in particular, was supplied with fresh Water, without the Trouble of going to fetch it out of Doors. This Cistern the *Turks*, for their own Use, have preserved; and the Place is now furnished with Water by the same means. It is farther said, that there are abundance of fine Streets, and many curious Buildings, still preserved in this subterraneous City; but the Jealousy of the *Turks* is so great, that they very seldom permit Christians to visit them: Such were the Wonders of this Capital of the *Greek* Empire in *Egypt*, and such the Care of *Ptolemy*, to complete therein the great Designs of its Founder.

Let us now return to the proper Business of this Section; and, after so copious a Description of the Staple of the *Indian* Trade, shew how it was brought thither. The Reader is sufficiently acquainted with the Method by which the antient *Egyptians* carried on their Trade to the East: It is, therefore, sufficient to say, that *Ptolemy Soter*, i. e. the Saviour, restored that Trade; from which, during the whole Continuance of the *Persian* Empire, the *Egyptians* had been debarred; and by this means, but more especially by their Trade to *Arabia*, his Subjects, even in his Time, and before the vast Improvements made by his Successors, of which we shall give a distinct Account, became immensely rich. Of this we have a most extraordinary Instance in the Procession made at the Coronation of his Son *Ptolemy Philadelphus*, whom he associated in the Government two Years before his Death, as we find it preserved in *Athenæus*, but the Story is much too long to insert here.

Yet *Ptolemy Soter*, in the midst of his Power, and in the midst of this Affluence of his Subjects, preserved an honourable Poverty; and was profuse in nothing but public Ornaments, and in such Expenses as turned to the Benefit of his People, with whom he often eat, and from whom, when he gave public Entertainments, he was wont to borrow Gold Plate for the Service of the Day. This great, this excellent Monarch, the most fortunate of all *Alexander's* Captains, and whose Virtues were still more resplendent than his Fortune, died in Peace, and covered with Glory, at the Age of Eighty-four, and after a Reign of forty Years; leaving an Example of Prudence, Justice, and Clemency, behind him, which none of his Successors inclined to follow.

8. *Ptolemy Philadelphus*, the Son of *Ptolemy Soter*, came to the intire Possession of the *Egyptian* Monarchy, to which his Father had annexed *Phœnicia*, *Cæle Syria*, *Arabia*, *Lilya*, *Ethiopia*, the Island of *Cyprus*, *Pamphylia*, *Gilicia*, *Lycia*, *Caria*, and the *Cyclades*, in the Year before *Cornelius* 283. He received the Surname of *Philadelphus*, or Lover of his Brethren, by way of Irony, and because he was, in reality, very unkind to them, and is even said to have put two to Death. This giving Nick-names to their Princes, was a Liberty always taken by the *Egyptians*, and is thus far useful to History, inasmuch, as it generally let us into the true Character of the Man in a Word. The Reason of his Unkindness to his Brethren was, because he supplanted them; for he was the Son of *Ptolemy Soter*, by *Berenice*, who came into *Egypt* as the favourite Attend-

ant on *Eurydice*, the Daughter of *Antipater*, and the Wife of *Ptolemy Soter*, who had a Son by her, called *Ptolemy Ceranus*, i. e. the Thunderer, who retired into voluntary Banishment on his Father's associating his younger Brother in the Government.

Ptolemy Philadelphus, soon after his Father's Decease, espoused his Sister *Arinoe*, according to the Custom of the Egyptian Monarchs; and, having a high Spirit, prodigious Parts, and infinite Application, though of an infirm Body and tender Constitution, he governed his Dominions with great Reputation, proceeding intirely on his Father's Plans, as his Father had done on those of *Alexander*. He endeared himself exceedingly to his People, by the Moderation of his Government, by his Love of Peace, and by his Readiness to undertake whatever might be for their Advantage; which induced him to keep up all his Father's Institutions, and to be particularly careful about the Maintenance of a maritime Force, and securing and extending the Trade of *Egypt*. His Reign was not wholly without Troubles; for *Magas*, whom he had appointed Governor of *Cyrene* and *Libya*, revolted from him, and seized those Countries. This *Magas* was, in fact, his elder Brother; for he was his Mother's Son, by *Philip a Macedonian* Captain, to whom she was married before King *Ptolemy* took her. *Magas* was not satisfied with barely seizing the Provinces that were committed to his Trust, but actually invaded *Egypt*, and shewed a strong Inclination to have dethroned his Master.

But *Ptolemy Philadelphus* was not a Prince so easily driven from his Dominions, as he imagined, but, on the contrary, shewed, on this Occasion, as much Prudence and military Skill as was possible; and, in all probability, had crushed the Rebellion in the Beginning, if, in his March again *Magas*, he had not discovered a private Conspiracy in his Army, which obliged him to retire back into *Egypt*, when he had the Rebel almost at his Mercy. This Conspiracy was hatched among the *Gauls*, of whom about four thousand served as Mercenaries in his Army, who designed to have made themselves Masters of *Egypt*. *Ptolemy* drove those Traytors into an Island in the *Nile*, where he kept them so close blocked up, that most of them were starved, and the rest cut each other's Throats, that they might be the sooner out of their Misery. But, after this, the Times grew more peaceable; and, that they might be so at home, *Ptolemy* thought fit to prevent the *Syrians*, who were meditating an Invasion on his Dominions, by causing frequent Defcents to be made upon theirs; which, at least, kept the War at a Distance, and served also to employ such restless Spirits as might have bred Commotions in a Time of profound Peace.

9. But this War did not take up the Attention of *Ptolemy Philadelphus* to such a Degree, as that he was not able to pursue the Designs, to which his Inclinations led him. On the contrary, he busied himself, during his whole Reign, in improving the Library which his Father had left; in collecting Statues, and other Curiosities, throughout all *Greece*; and in adorning the City of *Alexandria* with many stately Buildings. But that which he set his Heart most upon was, what is the proper Subject of our Inquiry, viz. the Establishment of the Trade to the *East Indies* in such a manner, as that it might never in succeeding Times be separated from his City of *Alexandria*. In this Design he behaved with so great Prudence and Discretion, that it not only drew thither, during his own Life-time, a much greater Mass of Treasure than any other King had enjoyed for many Ages; but, likewise, laid his Scheme so deep, and executed it with such Judgment and Precaution, that the *Indian* Trade remained, as he designed, fixed to *Alexandria*, notwithstanding all the Revolutions in the Government of *Egypt* for upwards of one thousand seven hundred Years; and thereby made it, during that Space, the richest Country in the World, notwithstanding the Oppressions to which it was subject during that Space of Time.

I cannot help remarking here what, for any thing I know, has not been remarked before, that this is a convincing Proof of the Truth of the *Jewish* History; for, as *Solo-*

mon; who first gained that Trade to his Country, was beyond comparison the richest Monarch that ever reigned in it; so was *Ptolemy Philadelphus* the most wealthy of all the Egyptian Princes, as we observed before, and as we shall hereafter prove at large; and, as the *Indian* Trade, while the *Jews* preserved it, enabled them in a very short Space of Time, to overcome all their Losses; so the same Trade kept the Kingdom of *Egypt* full of Gold and Silver, in spite of all the Methods taken to drain it; and this to such a Degree, as to countenance the Opinion of the Philosophers, Stone being no Secret to its Inhabitants, because, without the Art of transmuting other Metals to Gold, it was thought impossible to account for the immense Quantities of that Metal, which, from time to time, were drawn out of that Country, though it had scarce any Mines discovered in it.

But their Philosophers Stone was, in reality, nothing more, than the Monopoly of this Trade, which, as I have said, they, for so many Centuries, enjoyed, and which was abundantly sufficient to account for that extraordinary Opulence, which so astonished former Ages, and is in Danger of appearing fabulous in ours; This makes it extremely necessary to give a full, as well as distinct Account of the Methods taken by *Ptolemy Philadelphus*, for bringing about so great a Design, which had such extraordinary Consequences, and which lasted so much longer, than any other Establishment of the same Sort, that ever was made, before, or since. It was to render this more clear and intelligible, that I entered into so large a Description of the ancient *Alexandria*; as for the same Reason I dwelt so long upon the Projects of *Alexander* the Great, from which this was derived, and which, there is great Reason to believe, had been meditated by *Ptolemy Soter*, though he did not live to execute it; and, from the Account we have given of the Reign of that Prince, the intelligent Reader may perceive, how possible it might have been for *Alexander* to have brought all, or, at least, the greatest Part, of his vast Designs to bear, if he had lived to the Age of *Ptolemy Soter*; since he contrived them so much earlier in his Life, and was possessed of so much greater Power, to have enabled him to carry them into Execution.

Ptolemy Philadelphus, having considered the Difficulties that attended the Commerce of his Subjects in *Arabia* and *India*, for want of proper Ports in the *Arabian* Gulph, resolved first to remove that Difficulty; which was the easier for him to do, because he was absolutely Master of all the West Coasts, almost to the very Mouth of the Gulph. But inasmuch as Experience had taught the Sea-faring People, that the upper Part of the Gulph was extremely dangerous, as well by reason of the uncertain Winds, as because the Coasts were shallow and rocky, he therefore chose to place the new City, which he erected, and to which he gave his Mother's Name of *Berenice*, much nearer the Mouth of the Gulph, and on the Side of an Isthmus, or Promontory, which shoots there into the *Red Sea*. This was a very fine City; but they are misled, who have taken it for a commodious Sea-port. It was designed for an *Emporium*, or Staple for *Indian* Commodities; and the Reason of building it there was, because the Country round about it afforded Water; but the Port was distant one thousand eight hundred *Stadia*, and was called *Myos Hormus*, that is, the Port, or Station of the Mouse; but it was afterwards called, the Port of *Venus*: And it was from hence that the Trade was carried on to *Arabia* and the *Indies*. *Ptolemy* also directed various Towns to be built between *Berenice* and *Coptos* upon the *Nile*, which was distant from it about two hundred and sixty Miles. The Merchants therefore conveyed their Goods, first of all, from *Myos Hormus* to *Berenice*, (though that was back again) probably by the Help of flat-bottomed Vessels; whence the Opinion grew, that *Berenice* was the Sea-port; to the contrary of which I am led, from the not finding the Stages between *Myos Hormus* and *Berenice*, whereas we have two Routes still preserved from *Berenice* to *Coptos*; which shew, that the former was the Place to which these Goods were transported immediately from *Myos Hormus*, and that from thence they

^a *Jovin. lib. xvi. c. 2. Apian. in Syriacis. Pausanias in Atticis.*

Diogenes Laertius in Demetrio Phalerico.

^c *Pausanias in Atticis.*

^d *Suidas, in verbo Chamaica. Orosius, lib. vii. c. 16. Synchis.*

were conveyed to the Nile, as it was found for the Convenience of their Owners.

This was all done by Land Carriage, that is, on the Backs of Camels, the Journey being divided into eleven Stages, none of which exceed twenty-seven Miles. At *Coptos* the Merchants had other Magazines, in which their Goods were laid up, till they thought fit to send them down the Nile, directly to *Alexandria*. But the Country between *Coptos* and *Berenice* being an absolute Desert, not only without Villages, or Houses, but even without Water, *Ptolemy* caused a Canal to be cut directly between the two Cities, on each Side of which there were Villages, and in all of them Inns, for the Entertainment of Passengers; to that from a wild, uncultivated Country, as it had been for many Ages before, he rendered it practicable, at least, if not pleasant; and thus a new, safe, and commodious Route was opened to the *Indies*, by the Care and Industry of this wise Prince. But as the *Arabian* Seas were always subject to Pirates, and as this rich Trade was very likely to tempt them to disturb it, he took care to have a maritime Force in the *Red Sea*, always capable of protecting it.

The more we consider the Method he took to accomplish his Design, the greater Opinion we must necessarily have of this Monarch's Capacity: A Prince of his Prudence, or less Circumspection, would, undoubtedly, have placed the Port higher up in the Gulph, and nearer to the Nile; but *Ptolemy* knowing, that it was in his Power to remedy any Inconvenience that might occur in the Land Carriage, at the same time, that it was out of the Reach of human Skill, to devise any Means for securing Ships from the Hazards to which they must be exposed, by sailing along a Coast full of Rocks and Shelves, he, with much Sagacity, chose a Port at so great a Distance, because it was capacious, safe, and convenient; and appointed the City of *Berenice* for the Magazine of the Merchants, that there might never be any great Quantity of Goods as *Myos Hormus*, to tempt the Inhabitants of the adjacent Countries to endeavour surprizing them, either by Land or Sea. It is certain, that a shorter Road might have been found to the Nile, if the Length of that had not had its Advantage.

All the Country between *Coptos* and *Berenice* was, by this means peopled, that had lain waste before: And it is very easy to discern, that the cultivating a Desert is as much an Acquisition of Country, as the Conquest of a Tract of Territory of the same Extent. By this means he also augmented the Number of his Subjects, who were to find their Account in this Trade; and, by peopling the Frontiers of his Dominions, he effectually secured them from the Insults of the barbarous Nations in that Neighbourhood; and fixed this Trade intirely to his own Subjects, without whose Help and Assistance it could not be carried on. The same Reasons determined him to fix the Mart of *Indian* Commodities at *Alexandria*, rather than at the Ports he had on either Mouth of the Nile, though the Passage thither would have been shorter, and, in all Appearance more convenient. But he very prudently foresaw, that whatever Expences fell upon this Merchandize, from the Length of its Carriage, must be paid by such Foreigners, as purchased *Indian* Goods at *Alexandria*, and therefore must be so much clear Gains to all such of his Subjects, who were concerned, in any manner whatever, in this Commerce.

Besides, there was no Port in his Kingdom that stood so convenient for the Trade of the *Mediterranean*, as this of *Alexandria*; and as for the Trade of the East, while he was sure, that it could not be taken from him, or broken in upon by others, there was no Danger of its being at all hurt by the Length of the Passage. Add to this, the great Advantage that resulted from having all the rich Commodities of the East exposed to the View of the Merchants, who came to *Alexandria* on other Accounts, from the West; since, by this means, those Commodities were not only exported, but the Fame and Reputation of them spread, even to the most distant Parts of *Europe*, and thereby fresh Customers brought from all Quarters.

And, as he thus projected to draw all the Trade of the East and West into his Kingdom, so he provided a very great Fleet for the protecting of it, Part of which he kept in the *Red Sea*, and Part in the *Mediterranean*. That in the *Mediterranean* alone was very great; and some of the Ships of it of a very unusual Bigness; for he had in it two Ships of thirty Oars of a Side, or of twenty Oars, four of fourteen, two of twelve, fourteen of eleven, thirty of nine, thirty seven of seven, five of six, seventeen of five, and of four Oars, and three Oars of a Side, he had double the Number of all these already mentioned; and he had, over and above, of the smaller Sort of Vessels, a vast Number: And by the Strength of this Fleet, he not only maintained and advanced the Trade of his Country, but also kept most of the Maritime Provinces of *Leffer Asia*, that is, *Cilicia*, *Pamphylia*, and *Caria*, and also the *Cyclades*, in thorough Subjection to him, as long as he lived.

All the latter Part of the Reign of *Ptolemy Philadelphus* was a Scene of Joy and Triumph. *Magas*, who had torn from him the Provinces of *Cyrene* and *Lipsa*, growing old and infirm, listened to the Dictates of Nature, after having to long followed the Sentiments of Ambition; and when he drew near his End, bequeathed his only Daughter *Berenice* to the Son and Successor of *Ptolemy*, and with her his Kingdom. His War with *Antiochus* ended much to his Honour; that is to say, in a Peace upon his own Terms, which he made so much the more moderate, as he had the Power of making them otherwise. On the concluding this War, he gave his Daughter *Berenice* in Marriage to *Antiochus*; and out of Affection for her, commanded the Fleet in *Perion*, that carried her to *Seleucia*, on the *Orontes*; and, which was a Mark, perhaps, of Luxury, as well as Tenderness, he ordered Vessels to be so stationed, as that the might regularly receive, in *Syria*, the Water of the Nile, and not be obliged to drink any other.

Philadelphus had not, perhaps, the military Virus; and, having been born in *Egypt*, wanted somewhat of his Father's Severity of Morals; but, in other respects, he was, at once, the wisest, the most powerful, and the most amiable of Princes. He was, with all this, a Politician of the first Order; he despised Cunning, and hated Ambice: He was his own Prime Minister, and laid that virtuous Plan of Empire, which established such a Force, as sufficed for many Ages, the Follies and Vices of his Successors. His Dominions were very extensive; and it does not appear, that he had any Thrill of enlarging them, at the Expense of his Neighbours. On the contrary, the first Maxim of his Politics was the acquiring Subjects rather than Territory; and he acquired them by the plain and simple Method, of studying their Good. He encouraged Industry, and created it: He employed his vast Power in making his own People happy, and not in subduing other Nations: He marched an Army, indeed, to the Frontiers of *Ethiopia*, not so much with a View of conquering the barbarous Nations that infested his Frontiers, as to civilize them; and it was this Army he employed, in opening that famous Canal we have before mentioned, from *Coptos* to *Berenice*. Other Expeditions he trusted to his Generals, but this he conducted in Person, and directed the building all the Towns in the Neighbourhood of the *Red Sea*.

He cultivated, with the utmost Affluity, all the Arts of Peace; he enlarged the famous Library of his Father; continued, and increased the Pensions given by him, to learned Men, with whom he conversed familiarly, and heard the Advice they gave him, tho' delivered with the utmost Freedom. It was by this means, that he drew Men of distinguished Parts from all Countries; and acquired such extraordinary Accounts of the Commerce, Learning, Arts, and Manufactures of foreign Nations, as enabled him to improve every thing in *Egypt* beyond all his Predecessors. He was indefatigable, in his Application to the Affairs of Government, and to his Studies.

He kept up also his Father's Custom, in conversing kindly with all Ranks of People; and thereby secured the

universal Affection of his Subjects. His Sister *Asinæ*, whom he married, tho' older than himself, was extremely dear to him, inasmuch that her Death grieved him to such a Degree, as to occasion his own. It may not be amiss to observe, that, among the learned Men he had about him, there was one *Dinocrates*, a famous Architect, who, to make his Court to the King, proposed the building a Temple to *Asinæ*, the Dome of which was to be composed of polished Loadstones; by which it was projected, that the Image of *Asinæ*, made of burnith'd Steel, should be sullain'd; and from hence all the Notions of this Sort, that have been published to the World, are derived. But tho' this Temple was begun under the Direction of *Dinocrates*, yet it was never completed; for both the King and the Architect died, before it was rais'd to any considerable Height.

This Monarch left behind him many shining Marks of his Wisdom and Policy, and amongst these several new Cities, but exactly on *Alexander's* Plan; that is to say, not from the Vanity of being a Founder, but because he discerned the Usefulness of such Cities, in the Places where he built them: As, for Instance, having considered the Situation of *Palestine*, and how much the Trade of that Country might be improved, by the Construction of a proper Port upon its Coast, he directed a commodious Situation to be sought out; and in the Country of *Ace*, at no great Distance from *Tyre*, he built a new City, adorned with a fine Haven, which, after his own Name, he called *Ptolemæis*; which remained, for many Ages after, the most famous Port on that Coast. He likewise built, or rather rebuilt, a City on the East Side of the Country of *Palestine*; which City is often mentioned in the Sacred Writings, by the Name of *Rabab of the Children of Ammon*; but he called it, from his Surname, *Philadelpia*. I have mentioned these Instances, because they have some relation to my Subject; and there is very great Reason to believe, that they were founded with a View to the *Indian* Commerce.

This may, at first Sight, seem very extraordinary; but I later myself, that when I have explained the Reasons that have led me to this Notion, the Reader will not judge them improbable. In the first Place, let it be remembered, that the Whole of this Commerce had been carried on, till the Destruction of *Tyre* by *Alexander* the Great, from the Port of *Rhinocorura*, which lay on the same Coast, to the South-west of *Ptolemæis*. After the Ruin of *Tyre*, this Trade was revived by Land; and Caravans pass'd directly from the *Persian* Gulph, to the City of *Tadmor*, or *Palmyra* in the Desert, of which we shall speak hereafter. Now the Journey would have been shorter and easier, by much, from the *Arabian* Gulph to *Philadelpia*; to which *Ptolemæis* would have served for a convenient Port, the whole Length of the Land-carriage, from the *Arabian* Gulph to *Philadelpia*, not exceeding six hundred Stadia; and the Distance between *Philadelpia* and *Ptolemæis*, not being half so much; whereas, from the nearest Part of the *Persian* Gulph, it was thirteen hundred Stadia to *Palmyra*, and six hundred more from *Palmyra*, to the Sea-coast. We might be, in a manner, clear as to this Point, if we could be certain, that *Ptolemy* really rebuilt the ancient Port of *Ephesus*, on the *Red Sea*, and called it *Berenice*, from the Name of his Mother, as some Writers say he did; but, I must confess, they seem to be mistaken, and to mean the *Berenice* before described, on the other Side of the Gulph; and therefore I lay no Stress upon this Argument.

It remains that we say something, as was before promised, of the Grandeur and Wealth of this Monarch, whose Civil and Military Establishments have been preserved to us, for the very same Reason that I insert them here, because they appeared worthy of being transmitted to Posterity, and of being remembered for ever. He maintained constantly an Army of three hundred thousand Foot, twenty thousand Horse, two thousand armed Chariots, and three hundred Elephants, besides Arms in his Magazines, for three hundred thousand more. His Fleets, taken together, consisted of fifteen hundred Ships of War, and a thousand Transports belonging to them. His annual

Revenues were fourteen thousand eight hundred Talents; which makes, according to the lowest Computation of *Egyptian* Talents, two million eight hundred and three thousand six hundred Pounds: And he is said to have left in his Treasury seven hundred and forty thousand Talents, which amounts to a prodigious Sum, not less than one hundred and ninety Millions of our Money, which must have accrued to him from the Trade of the *Indies*; a great Part of which might probably be carried on, at least during his Reign, for the Advantage of the Crown; since, besides the before-mentioned Revenue in Money, he received a great Quantity of Corn, and other Commodities, from his Subjects, in order to make their Taxes the more easy. He died in the sixty-third Year of his Age, and in the thirty-eighth of his Reign, in the Year before Christ 347.

11. He was succeeded in his Throne, by his Son *Ptolemy Evergetes*, who found himself immediately engaged in a War with *Syria*, where his Sister, and her Son, had been lately murdered: In this War he was so successful, that he led his Army to the Banks of the River *Tygris*; plundered all the Treasures of the *Syrian* Kings; and recovered, amongst other valuable Effects, that had been carried out of *Egypt* by *Cambyses*, when he made the Conquest of that Country, Abundance of *Egyptian* Idols, which he brought back, and restored to their Temples; and this being an Act extremely agreeable to his Subjects, they gave him, upon this Occasion, the Surname of *Evergetes*, which signifies the Benefactor.

We have already observed, that he espoused *Berenice*, the Daughter of *Magas*, King of *Cyrene*, a very beautiful Woman, who made a Vow, that she would consecrate her Hair, in case he returned victorious from that Expedition: And therefore, on his coming back again with Safety, and full Success, for the fulfilling of her Vow, she cut off her Hair, and offered it up in the Temple which *Ptolemy Philadelphus* had built to his beloved Wife *Asinæ*, on the Promontory of *Zephyrium*, in *Cyprus*, by the Name of the *Zephyrian Venus*. But there, a little after, the consecrated Hair being lost, or, perchance, contemptuously flung away by the Priests, and *Ptolemy* being much offended at it, *Conon* of *Samus*, a flattering Mathematician, then at *Alexandria*, to salve up the Matter, and also to ingratiate himself with the King, gave out, that this Hair was caught up into Heaven; and he there shewed seven Stars, near the Tail of the Lion, not, till then, taken within any Constellation, which, he said, was the Queen's consecrated Hair; which Conceit of his other flattering Astronomers following, with the same View, or, perhaps, not daring to say otherwise, hence *Coma Berenices*, i. e. *The Hair of Berenice*, became one of the Constellations; and is so to this Day.

This seems to have been the only War, at least, of any great Consequence, undertaken by this Monarch, except the Expeditions made by his Order, into *Arabia*; the greatest Part of which, I mean on the Coast opposite to that of *Egypt*, along the *Red Sea*, he reduced under his Dominion; as he likewise did the remaining Part of the *Ethiopian* Coast: So that he was Master of both Sides of the Shore, to the very Extremity of the *Arabian* Gulph, over-against the Southern, or *Indian* Ocean. It is unlucky for us, that we have no distinct Account of this Conquest, or of the War which occasioned it; so that we can only conjecture concerning it, that as the Inhabitants of that Coast were always infamous for Piracies, and as the *Indian* Trade, now settled through the *Arabian* Gulph, made it of vast Importance to the *Egyptian* Princes, to have these Plunderers effectually removed, it was thought this could only be done by erecting Cities, and reducing the Inhabitants to a civilized Life. This is the more probable, because *Erastosthenes*, who was his Library-keeper, and in high Favour with him, wrote an excellent Book, in relation to the *Indies*, which is often mentioned by *Strabo*, but is long since perished.

Ptolemy Evergetes caused likewise several Cities to be built, on the *Egyptian* Side of the Gulph, in order to make

that Part of his Dominions more secure; and for the same Reason that his Father also had erected Fortresses on the Frontiers of *Ethiopia*, viz. that he might hunt Elephants, of which he had always many in his Service. An ancient Writer observes, that *Ptolemy Philadelphus* was reputed the first Prince that had disciplined Elephants; which, he thinks, is to be understood either of his being the first Greek Prince that had those Animals in his Army; or else, that he was the first of *Alexander's* Successors that used them: For, as he observes, before the Conquest of the *Indies* by *Alexander*, *Porus* had many Elephants trained to War, in his Army: But, without doubt, the true Sense of this Assertion is no more than this, that *Ptolemy Philadelphus* was the first of the Western Princes, who brought Elephants into the Field, of his own; for those that *Seleucus*, and the rest of the *Syrian* Monarchs had, were obtained from other Princes; whereas *Ptolemy* had them of his own, taken and tamed by his Officers. This *Ptolemy* the third, or *Ptolemy Evergetes*, reigned twenty-five Years; and died in the Year before Christ 221. He was the last of his Race that governed with any Temper, or Virtue, all that succeeded him giving themselves up to unbounded Luxury and Vice.

13. On the Death of his Father *Ptolemy Evergetes*, *Ptolemy Philopater* mounted the Throne; to which he is supposed to have made his Way, by poisoning that Prince: But it is certain, that he murdered his Brother *Magas*, and soon after *Cleomenes*, King of *Sparta*, who had taken Refuge in his Dominions, and had been in great Favour with his Father. This *Ptolemy* was likewise charged with the Murder of his Mother; and through his whole Reign gave signal Proofs of a base and barbarous Disposition, which, probably, induced the Governor he had placed in *Syria*, whose Name was *Theodotus*, to give up the best Part of that Country to *Antiochus*, who, likewise, prepared to invade *Egypt*; but, being hindered from the Prosecution of that Design, by domestic Troubles, he was forced to content himself with reducing *Phladelphia*, which, as we have before shewn, was a new City built by *Ptolemy Philadelphus*, in *Arabia*.

This gave the *Egyptian* Monarch time to breath; and, finding that it was impossible for him to continue his idle and luxurious Course of Life, without running the Hazard of losing his whole Dominions, he assembled an Army of seventy thousand Foot, five thousand Horse, and seventy-three Elephants; and marching with it through the Deserts which separate *Egypt* from *Palestine*, encamped at *Raphia*, where he was met by *Antiochus*, with an Army little inferior to him in Foot, and superior in Horse and Elephants. Here *Ptolemy* ran a great Risk of being killed by *Theodotus*, who deserted from him, and who, being well acquainted with the *Egyptian* Manner of encamping, went, with two of his Friends, in the Dusk of the Evening, directly to *Ptolemy's* Tent, with a settled Design to have killed him; but, not finding him there, he murdered his chief Physician, and two other Persons, who were in the Tent; and, in the Confusion this occasioned, made his Escape. Soon after, this Quarrel was decided by a Battle, in which *Ptolemy* was victorious: And it is very remarkable, that his Wife *Aspinor*, who was also his Sister, remained by his Side, during the whole Engagement. By this Victory he recovered all his Dominions; and might, if he had pursued his Advantage, have deprived his Enemy of most of his; which he neglected, that he might return home the sooner, to a Life of Ease and Pleasure: And during the rest of his Reign, which lasted sixteen Years, he continued in a constant Course of Debaucheries, which carried him to his Grave.

He was succeeded by his Son *Ptolemy Epiphanes*, a Child of five Years old, of whom the *Romans* undertook the Guardianship, and thereby preserved his Kingdom. This young Prince followed his Father's Steps very exactly; and thereby provoked the *Egyptians* to endeavour to depose him; which, however, he escaped: And, thinking to mend his Affairs, by entering into foreign Wars, one of his Favourites poisoned him, when he had sat on the Throne

twenty-four Years. He was succeeded by his Son, *Ptolemy Philometor*, a Child, who, when he grew up, showed little Spirit, that the *Egyptians* set up his Brother *Ptolemy Physcon*: Upon which Civil Wars ensued, and the Kingdom had been conquered by *Antiochus*, but that the *Romans* again interposed; and new Disturbances breaking out, *Philometor*, who was banished his Kingdom, to move the Compassion of the Senate, travelled from *Brundisium* to *Rome*, on Foot; and the next Year *Physcon* came thither on the same Errand. The former of these Princes was of a generous and beneficent Disposition, but the latter of a base and barbarous Temper; and yet the *Romans*, from a Principle of Interest, protected him. He was succeeded by his Son *Ptolemy Lathyrus*, who was a very bad Man, and continually embroiled with his Subjects, who, for some time, expelled him, and set up his Brother *Alexander*; but afterwards restored him, and he held the Crown, in all, from his Father's Death, thirty-six Years.

He was succeeded by his Daughter *Berenice*, who thereupon took the Name of *Cleopatra*; for, as the Kings of *Egypt* were called *Ptolemies*, so the Queens were commonly called *Cleopatras*. After this great Confusion followed, till, in the Year before Christ, the *Egyptians* set *Ptolemy Auletes*, who was the Bastard Son of *Lathyrus*, upon the Throne: He had his Surname of *Auletes*, which signifies the *Piper*, from his Fondness for Music; and is remarkable only, for giving *Julius Caesar* six thousand Talents, that he might remain in quiet Possession of his Kingdom; in which the *Romans* maintained him by Force, when he had lost the Affections of his Subjects. After a Reign of fourteen Years, he died, and left the Kingdom to his eldest Son and Daughter; for he had two Sons, and two Daughters; but the eldest of his Children was his Daughter *Cleopatra*, so famous, or rather infamous, in History, for her Amours, first with *Caesar*, and then with *Anthony*; which Excesses were not only fatal to herself, but to her Country.

It is easy to conceive, that, under such a Race of Princes, nothing is to be expected from the obscure Histories that are left us of their Times, in relation to the Commence of the *Indies*, in any Degree comparable, to what has been related of the Reigns of *Philadelphus* and *Evergetes*; but, from the Fragments of *Agatharshides*, who was Tutor to one of the *Ptolemies* that yet remain, we gather, that the Commerce was, by them, not only maintained, but extended; and the Reason of this was plain, because it brought in vast Quantities of Gold, precious Stones, Spices, and other rich Commodities, especially agreeable to Princes of a luxurious and dissipating Temper. Thus, for Instance, when it was once known, that in a rocky Island, in the *Arabian* Gulph, which was called *Ophides*, or *The Serpents Island*, from its being over-run with those venomous Creatures, there were many bright *Opazes*. Orders were immediately given for cleaning it; and a certain Number of People settled there to find and dig out those precious Stones for the King alone.

In the Days of *Ptolemy Philadelphus*, Care would have been taken to cultivate and improve this Island; so that, at least, the People, who were thus employed, might have been plentifully subsisted: But a contrary Policy now prevailed; the Island was left naked and destitute of all Plums, and the People on it supplied, at stated Times, with Provisions by the King's Ships; and, all this, to secure the Monopoly of these precious Stones, which, in those Days, were highly valued. Again, on the Discovery of Gold Mines on the Frontiers of *Ethiopia*, these were not left to the Industry of private Persons, or leased out by the Crown; but Multitudes of People, condemned on frivolous Pretences, were hurried away thither; and, being guarded by Bodies of Soldiers, of different Nations, that they might have no Opportunity of conversing with them, they were compelled to work in the most slavish Manner; and, this too, without any Reprieve or Relief, till they perished under such intolerable Hardships.

The Trade, all this Time, was carried on in the same Manner as before; annual Voyages were made to the Port of *Arabia*, where the *Indian* Merchants resorted, and the

¶ *Commodities*

Commodities of *Europe* exchanged, at a very high Rate, against the richest Goods brought from the Countries on both Sides the *Ganges*. For the *Indians* had now settled at *Patala*; improved the Haven which *Alexander* had made there; and, having got a Relish for Trade, exported, in their own Bottoms, the valuable Commodities of their fruitful Regions. Yet, there might be, also, somewhat of Policy in this; for the *Indians*, dreading all Intercourse with Strangers, in their own Country, might take up this Commerce, that by carrying all the Riches of the East, thus, to the Doors of the *Egyptians*, they might prevent their making long Voyages, and keep them at a Distance from their own Coasts; in which, in a great measure, they succeeded.

But, on the other hand, while the *Ptolemies* built new Cities, and extended their Dominions on the West Side of the *Red Sea*, the *Arabians*, on the East Coast, recovered their former Freedom; and, with it, their accustomed嗜 to Piracy, which they practised very successfully; and, very probably, might, in time, have rendered the Commerce of the *Red Sea* altogether impracticable, if it had not fallen into the Hands of such, as knew better how to support it, than a Race of Female, or, which was worse, effeminate Princes, incapable of taking right Measures themselves; and, who were often put, by the Parasites they had about them, on Measures much worse than they would otherwise have taken. This Mischief, however, must have lasted some Ages before it could have increased to such a Height; since it is evident, that, at the Destruction of the Kingdom, their Affairs were in a tolerable Posture on this Side; many new Cities erected on the Coast of the *Red Sea*; the Canal to *Berenice* kept in good Repair; and, such other Steps taken, as might conduce to preserve so valuable a Branch of the Revenue.

14. The true Source of the Declension of the Power of *Egypt* was, the ill Management of that immense Wealth, which, otherwise, must have turned to so great Advantage. The Maxims of *Ptolemy Philadelphus* were buried in Oblivion; their Dominions, on the other Side the *Mediterranean*, neglected, and lost by Degrees; their military and naval Establishments much lessened; those that were kept up, rather maintained for Slew and Ornament, than for any real Service; all Ranks and Degrees of People corrupted in their Morals; so that the Courtiers studied only how to oppress, with Safety; and the People, having wholly extinguished all Principles of Loyalty, obeyed no longer than an Opportunity offered of Rebelliing. The Kingdom had, undoubtedly, been conquered more than once by the *Syrian* Monarchs; particularly, by *Antiochus* the Great, if it had not been protected by the *Romans*; who, certainly, afforded them these Succours, rather from Maxims of Policy, than Magnanimity; and, by sending sometimes Tutors, at others, Embassadors, and, very frequently, Bodies of Troops, into *Egypt*, acquired a perfect Knowledge of the Country, the Temp'r and Manners of the People, the Nature of their Commerce, and the Means of getting all into their own Hands. Upon the Accession of *Ptolemy Lathyrus*, they had a fair Opportunity of seizing the Kingdom; which they omitted, because the *Romans* were then powerful; and the *Romans* very wisely judged it requisite to be rid of that Enemy first, well knowing, that the Distractions in *Egypt* would continue; and that future Opportunities would not be wanting, after their Reduction of the best Part of *Asia*, to seize *Egypt*, when they should be in a better Condition to keep it. Some of the Ministers under the *Ptolemies* were sensible enough of this Design, and would have taken Measures to prevent it, by restoring the old Economy; and, as they never wanted the Means of raising Armies, that is, Money, they would have soon put their Masters into a Condition of being independent of the *Romans*, if those Princes, who were intirely given up to Luxury and Pleasure, had not opposed such an Application of their Wealth, as contrary to their own Inclinations, which were to squander it away in the most foolish and profuse Manner; and often removed these Ministers by Poison, that they might not be troubled

with Advices, with which they were determined not to comply.

Cleopatra, the last Queen of *Egypt*, and whose Name makes such a Figure in the *Roman* Histories, though a very lewd, was far from being a weak Woman. She was, at the Decease of her Father, about seventeen and her Brother *Ptolemy*, to whom she was married, much younger; so that she had the whole Power in her Hands; and, being in Possession, not only of *Egypt*, but of the Remains of the Empire of *Ptolemy Philadelphus* in other Countries, she took care to acquire their Languages; and, besides *Greek*, which was her Mother-Tongue, and *Latin*, in which she was early instructed, she was able to converse with the *Ethiopians*, *Troglodytes*, *Jews*, *Arabians*, *Syrians*, and *Persians*, without the Help of an Interpreter; so, that if her Virtues had corresponded, in any Degree, with her Parts, she might have preserved, and been a Blessing to her Country.

At her Accession to the Throne, she was under the Guardianship of the *Romans*, and had actually a Body of their Forces about her Person; but the Confusions that arose in that Republic, from the Disputes between *Pompey* and *Cesar*, might have afforded her an Opportunity of rendering *Egypt* independent, if she had known how to use it: But she was wholly intent on what she considered, as her private Interest, which was, the ruling without a Companion, and keeping *Ptolemy* as much in Subjection, when he grew up, as while he was a Child. This produced a Civil War; and *Ptolemy* and *Cleopatra* were, each of them, at the Head of an Army, when *Pompey*, after the fatal Battel of *Pharsalia*, endeavoured to take Refuge in *Egypt*, where *Ptolemy*, who had nobody to advise him but the Eunuch who had bred him up, and the Pedant who was his Preceptor, took the vile Resolution of making his Court to *Cesar*, by murdering that great Man in his Distress, which was accordingly performed. Soon after this *Cesar* arrived at *Alexandria*, with no greater Force than 800 Horse, and 3200 Foot; his Errand thither was Money; for, as we observed before, *Ptolemy Auletes* was his Client, had given him 6000 Talents in Hand, to procure the *Romans* Consent, that he should remain King, and a Bond for 4000 more, with Money he now came to receive; and, accordingly, it was collected for him: And *Pothinus*, the Eunuch, *Ptolemy's* first Minister, had a mind to have been rid of him too; and, in order to exasperate the *Egyptians* to such a Height, as might serve his Purpose, he not only stripped the Temples, but obliged the King, and all the great Officers of the Court, to drink out of earthen Vessels, pretending that all the Plate was melted to pay *Cesar's* Debt. But *Cesar* himself took a Step, which provoked the *Egyptians* more than all this; for, as soon as he came to *Alexandria*, he sent his Rescripts to *Ptolemy* and *Cleopatra*, commanding them to disband their Armies, and submit their Disputes to his Decision, which was a Strain of Authority that equally surprized and enraged the *Egyptians*. Yet *Cesar*, as soon as he knew it, found Means to quiet them, by declaring, that he did not do this from any Power in himself, but from the Title he derived under the Will of *Ptolemy Auletes*, who leaving his Children to the Guardianship of the *Romans*, and he being then their Consul that Trust devolved upon him. *Cleopatra*, being informed of *Cesar's* Character, quitted her Army, came privately in a little Boat to *Alexandria*, there caused herself to be packed up in her Bedding; and, being carried on the Back of one of her Servants, was introduced into *Cesar's* Apartment, and laid down at his Feet. He was much moved by her Tears and Intreaties, but much more by her Beauty; and she was so complaisant to him, that this Interview produced a Son, which secured her his Interest so effectually, that, instead of acting as a Judge, he became apparently an Advocate for *Cleopatra*; which induced *Ptolemy*, though in the Hands of *Cesar*, to send Orders to *Abdallas*, who commanded his Army near *Pelufium*, to advance towards *Alexandria*, and attack the *Romans*; which was accordingly done. But though they were five to one, they failed in

* *Diader Sicil. in excerptis Valisii*, p. 294.
Cicero lib. 11.

† *Ptolem. in Canone. Ptolemaeus in Antioch.*

• *Ptolemaeus in Pompeio. Apian. de Bellis*

their Design of crushing *Cæsar*, who drove them out of the City without Loss. They next attacked his Fleet with some ill Success, which, however, so provoked *Cæsar*, that he directed all the Ships of War in the Haven of *Alexandria*, to be instantly burned; and, this being executed precipitately, some of them drove on Shore, and set the adjacent Houses likewise on Fire; and the Flames communicating the Conflagration, to the Quarter called *Brauchium*, it was, in a manner, wholly destroyed; and therewith, the famous Library, first erected by *Ptolemy Philadelphus*, before mentioned.

Now it was that the Force of *Egypt* appeared; and, in all the Campaigns made by *Cæsar*, History acquaints us with none in which he was in so much Danger, or obtained Victory upon harder Terms; and, if the Fear of their King's being destroyed, who was all this time in *Cæsar's* Camp, had not restrained those in Arms, and their Attachment to *Cleopatra*, hindered a great Part of the *Egyptian* Nation's taking Arms, this War had preserved *Rome's* Freedom, and their own, by the total Overthrow of *Cæsar*, in spite of all his Valour, and military Skill, of both which, however, he gave abundant Instances. The War at last terminated in a decisive Battle, fought by the *Egyptians*, to prevent *Cæsar* from receiving Succours; and by *Cæsar*, that he might obtain them; in which he prevailed; and King *Ptolemy*, endeavouring to make his Escape in a little Boat, was overtaken, and drowned, after a distracted Reign of between four and five Years; and, upon that, *Cæsar* declared *Cleopatra* Queen of *Egypt*, and joined with her her younger Brother *Ptolemy*, who was then but eleven Years old: As for her Sister *Arctinoë*, who was now fallen into his Hands, he carried her to *Rome*, and led her in Triumph, leaving, however, at his Departure from *Alexandria*, a Body of *Roman* Troops for the Security of the Queen's Person, and maintaining her Authority. Here then, properly speaking, ended the *Greek* Empire in *Egypt*; though it was not as yet reduced into a Province.

15. The Reader must be undoubtedly satisfied, even from this short View of the History of *Egypt*, that the Treasures of that Country must be in a manner inexhaustible, that could sustain the Negligence and Dissipation of ten such Princes as followed *Philopater*, for there were fourteen *Ptolemies* in all; and, at the Death of *Philadelphus*, there were, in the *Egyptian* Empire, no less than 33,333 Cities. It is true, that, by degrees, the Power of *Egypt* sunk; prodigious Sums of Money were from time to time exported, from the Folly and Weakness of their Princes, who sought that Assistance from their Wealth, which they ought to have found from their Subjects; and who foolishly fancied they could purchase Quiet, when they would not be at the Pains to secure it by a just Administration; but even at last, and when their Affairs were in the worst Situation, one of their Princes could give, in a single Bribe, 6000 Talents, which amounted to 1,542,000 Pounds of our Money, and his Bond for 2000 Talents more. At the very last, in the several Battles fought by Sea with *Cæsar*, they lost 110 Ships of War, and had still a Fleet left much superior to that of the *Romans*, in the Number and Force of Ships, if they had been as well manned.

These are as strong Proofs as can possibly be alleged of the Wealth and Power of the Government of *Egypt*, even when the Government was at the worst; and yet then it was the Public only that was distressed: The People of *Egypt* were immensely rich, as very plainly appeared, by the vast Revenues which the *Romans* drew out of that Kingdom when they had reduced it into the Form of a Province. It may be indeed objected, that *Egypt* was in itself a Country exceedingly rich; that it was regarded, for many Ages, as the Gem of the World, or, to speak with greater Propriety, of the *Roman* Empire; and, that it may be reasonably supposed, especially considering the Industry of the People, that a great Part of their Wealth was derived from thence: But when, on the other hand, it is considered, that the *Egyptians* had very few native Commodities of great Value except Corn, and that they stood in need of almost all kinds of Timber and Metals,

of Wine, Fruits, and a great Variety of other Things, which, according to the Humour of those Times, were not only esteemed Conveniences, but Necessaries; when, I say, this is considered, it will appear extremely probable, that the best Part of that Profit, which should have returned to the *Egyptians*, from their own peculiar Trade, was swallowed up by their Demand for foreign Goods and Manufactures, and especially during the latter Part of this Period, when, in proportion as their Luxury increased, those Demands must become greater.

It must also be considered, that when I speak of the Wealth of *Egypt*, I do not mean by it, that Affluence, which private Men might have enjoyed in their own Houses from their particular Fortunes, resulting from their own Industry and Oeconomy; but I mean their intrinsic Riches of Gold and Silver; in which I have shewn, that they abounded, more than any other Nation within this Period: And, I hope, I have likewise shewn, that the best Part of this intrinsic Wealth must have been derived from their *Indian* Trade; because there was really no other Way, by which they could acquire it. I do not however deny, that a great Part of this Gold and Silver might be returned into *Egypt*, by their Balance of Trade from other Nations, even from such as had much less than themselves; yet a this Balance of Trade was created, as *Strabo*, *Mela*, *Pomponius*, and many other ancient Writers agree it was, by their Sale of *Arabian* and *Indian* Commodities, then the Fact is worth me, and I have fully made out all that I intended, or that could be expected from me, upon this Subject. I might, indeed, have spared myself a great deal of this Trouble, by insinuating on the single Fact of the Treasure annually by *Ptolemy Philadelphus*, and have left the rest to the Reader's Observation; but I chose to make the Thing as plain as I could; and indeed I had no other Reason for insinuating so long upon the *Egyptian* History, every Circumstance which, however, will serve to elucidate the following History of the Trade to the *East Indies*.

16. There is the greatest Reason to believe, that one principal Motive which induced the *Romans* to be so solicitous about the Acquisition of *Egypt*, was the getting this valuable Trade into their Hands, as well as securing the mighty Empire they had before obtained on the Side, and making sure of a Country so fruitful in Corn, and upon which they, in a manner, constantly depended for Provisions. Indeed, those, taken together, were the chief, at least, if not the only Motives, that determined them to convert it into a Province: For if any thing less than the absolute Possession of it could have contented them, they might have had it without extinguishing the Race of the *Ptolemies*, who, for so many Generations, had been absolutely dependent upon them, and held that Kingdom only by Permission.

It may be added to this, that the annexing *Egypt* to the *Roman* Dominions, was the First Fruits of their Change of Government; for so long as the Republic continued, there remained a Kind of Modesty, which hindered them from seizing the Territories of their Allies, especially of such as considered their Families and Estates to merit Protection, which was expressly the Case of *Ptolemy Auletes*, and his Children. But when the whole Power of *Rome* was engrossed into a single Hand, all these Considerations ceased, and the Desire of augmenting the Authority, and increasing the Wealth, depending on that Dominion, came to take Place. That this was really the Fact, will be rendered clear in the next Section, in which we shall shew, that the first Schemes, formed by the *Romans*, after taking Possession of *Egypt*, were relative to the securing this Commerce, and even improving it; and therefore it is necessary to shew the State in which it stood at the Juncture, and in what manner this great Revolution happened, which shrank the extensive Empire of *Philadelphus* into a Province; a Province, indeed, always respected as the first and most considerable of the Empire, to which it was joined, and always treated with particular Distinction, but still a Province, governed by the Laws, and subject to the Impositions prescribed by foreign Matters, to whose Use the best Part of the Wealth, acquired by its Inhabitants,

was converted; and who, consequently, reaped, for the future, all the Benefit accruing from the whole Commerce of the Red Sea.

In order to comprehend this perfectly, it is necessary to observe, that tho' the Route, opened by *Philadelphus*, for carrying on the Trade of the Indies, was absolutely new, yet there had been, of old, a Canal cut from the River Nile to the Red Sea, for the Convenience of Commerce; and this had been afterwards preserved, cleaned, and perfected by the Greek Princes, that is, by the *Ptolemies*. This cut ran across the narrowest Part of the Isthmus, which was about sixty-two Miles, though some Authors make it more, and some less. This Canal had been first attempted by *Sesstris*, but not perfected; the Design was afterwards resumed by *Darius*, and brought to Perfection by *Ptolemy Philadelphus*. This Canal was one hundred Feet broad, and thirty deep; but it was managed by a sort of Sluices, by which the Waters of the Nile were raised, so as to afford a Passage for Vessels into the Red Sea, without letting any salt Water into the Canal, for fear of spoiling the River, which the Egyptians valued above all things. When the new Canal was made from *Coptos* to *Berenice*, this fell into Disuse, and was considered only as a Repository of fresh Water, a thing extremely requisite for such as travelled through the sandy Country that was adjoining, in order to pass round the Head of the Egyptian Gulph. There was another Road, which passed within two Miles, of Mount *Cafus*, and, after a Passage of about sixty Miles fell into the former Road. And there was, besides, a third, which was a shorter Road, through the Mountain, but without Water all the Way. These three Roads terminated at the City of *Arfinoe*, which stood near the Head of the Gulph, on the Egyptian Side; and were extremely convenient for the Intercourse which the Egyptians had with the Inhabitants of *Arabia the Stony*, and the Countries to the North of that Region, particularly *Palmyra*.

In the Time of the old Egyptian Kings, and before the Conquest by the Persians, the little Ports, or rather Creeks, at the Head of the Gulph, were made use of for Ships, that were designed to pass down the Red Sea, and to trade on the Coast: But after *Ptolemy Philadelphus* had opened the commodious Port of *Myos Hormus*, afterwards called the Port of *Venus*, these Creeks were very little used, though, as we shall have Occasion to shew hereafter, they have since been brought into Use again. The Egyptians had also Towns on their own Side of the Red Sea, from *Arfinoe* to *Ptolemis*, which were one thousand one hundred and eighty-two Miles distant from each other; but this last-mentioned Place was built purely for the sake of hunting Elephants, by the Command of *Ptolemy Philadelphus*: And between *Ptolemis* and *Berenice*, there were several Ports; of which, however, the Egyptians could make no Use, in regard to their Indian Trade, because they were separated from the Nile by an high Ridge of Mountains, over which the Carriage, by Camels, must have been very difficult, if not impracticable; and the chief Use that was made of these Ports, was, to shelter the Ships, that passed up or down the Arabian Gulph, in case of any unforeseen Accidents.

Timotheus, who was Admiral of the Fleet, which *Ptolemy Philadelphus* kept in the Arabian Gulph, sets down the Length of it to be four Days Sail, and the Breadth about two; but the Navigation was always dangerous and perplexed, on account of the Badness of both Shores; however, the Egyptians were so well acquainted with it, that, as we shall see hereafter, *Cleopatra*, in the Time of her utmost Distress, had Thoughts of drawing her Fleet thro' the old Canal, into the Red Sea, in order to have made her Escape that Way, from the Romans, and to have taken Shelter either in *Arabia Felix*, or perhaps on the Coast of *Persia*, where her Subjects likewise traded. Such was the State of Things, and such the Condition of the Egyptian Settlements, at the Time that a Period was put to the Greek Monarchy in that Country, with an Account of which we are to close this Section; and we shall then enter on the Improvements made by the Romans, in the next, which

concludes the ancient History of the Trade carried on by the Europeans, through this Country, to the East Indies.

17. *Cleopatra*, Queen of Egypt, reigned over that Country quietly, for the Space of near five Years, after she was settled in the Possession of the Kingdom by *Julius Cæsar*; but at the End of that Time, her younger Brother, being grown up to the Age of fifteen, began to expect, that some Regard should be shewn to him, beyond the bare Outside, and useless Compliments of Majesty; which struck *Cleopatra* in such a manner, with Suspicion, that she caused him to be poisoned, to prevent any future Disputes; and thereby eased herself of all her Family, except her Sister *Arfinoe*, who had retired, after being led in *Cæsar's* Triumph, into the Upper Asia, where, tho' she lived privately, she could not escape the malicious Notice of her Sister, who soon after plotted and accomplished her Destruction. In the Commotions which followed, upon the Murder of *Cæsar*, she carried herself with so much Doubletness and Dissimulation, that *Cassius* intended to have deposed her, for not granting him Assistance; and after the Defeat of the Forces commanded by him and *Brutus*, *Antony* entertained some Notions of the same Kind, on Account of the Respect she had shewn to the other Party: But upon *Cleopatra's* coming to *Tarsus*, in order to give an Account of her Conduct, he was so captivated by her Wit and Beauty, that he became an absolute Slave to his Passion for her; which not only ruined both him and her, but proved also the Destruction of the Egyptian Monarchy, and of the Roman Liberties, which, if she had not been subdued by *Augustus*, might, very probably, have been preserved.

Blinded by this Passion, he followed her to *Alexandria*, where he lost a great deal of Time; and when he returned into Italy, found his Affairs in such a Situation, that he was content to marry *Octavia*, the Sister of *Augustus*, that he might be reconciled to him. But this Agreement did not last long; for, being still enamoured of *Cleopatra*, he managed Affairs in the East with such Indiscretion, and treated his Wife *Octavia* so ungratefully, that it produced a new Quarrel with her Brother; which he so little regarded, that he declared *Cæsarion*, the Son which *Cleopatra* had by *Julius Cæsar*, King of Egypt and Cyprus, in Conjunction with his Mother: And whereas he had himself three Children by her, viz. *Alexander* and *Cleopatra* at one Birth, and *Ptolemy*, whom he surnamed *Philadelphus*, at another, he, at the same time, gave unto *Alexander Armenia, Media, Partbia*, and the rest of the Eastern Countries, from the *Euphrates* to *India*, when they should be subdued; and to *Cleopatra*, the Twin-Sister of *Alexander*, *Lybia* and *Cyrene*; and unto *Philadelphus*, *Pænicia*, *Syria*, *Cilicia*, and all the Countries of Lesser Asia, from the *Euphrates* to the *Hellepont*; and conferred on each of them the Title of King of Kings: And, about the same time, he also gave unto *Cleopatra* the Name of *Isis*, and assumed to himself that of *Osiris*; appearing in Public with her in the same Dress with which the Images of these Deities were clothed, in their respective Temples.

In these Kind of Polices, he wasted his Time in such a manner, that his Competitor had Leisure to assemble a very great Force, both by Land and Sea; which, if he had been attentive to his own Concerns, *Antony* might have prevented. When Things were in this Situation, *Augustus* procured a Decree of the Senate of Rome, for declaring War against *Cleopatra*; and thus all the Western Part of the World armed on his Side; as all the East engaged in Favour of *Antony*. When they began the War, the Forces of the latter were much superior to those of the former; for he had with him an hundred thousand Foot, twelve thousand Horse, and a Fleet of five hundred Ships of War; whereas the Army of *Augustus* consisted only of eighty thousand Foot, twelve thousand Horse; and his Fleet of no more than two hundred and fifty Ships. But here, again, the Inactivity of *Antony* proved fatal to him; for he delayed attacking his Enemy till the next Spring, before which many of his Friends deserted him.

The best Part of the succeeding Year was spent in a

lingering Kind of War, till towards the latter End of the Mouth of *August* both Armies and Fleets were in Sight of each other. *Antony*, with his Forces, encamped in the Neighbourhood of *Asium*, a small City of *Epirus*, lying on the South Side of the Mouth of the *Ambracian* Gulph; and *Augustus* was on the other Side, with his Army and Fleet, at the Distance of about a Mile from each other. *Cleopatra* was with *Antony*, and prevailed upon him to try his Fortune by Sea; and accordingly, on the second of *September*, in the Year before Christ thirty-one, a decisive Engagement ensued, in which *Antony* was far from having the worst, till *Cleopatra*, with the *Egyptian* Squadron of sixty Sail, deserted him; and he forgot his own Interest so far, as to follow her: Notwithstanding which, his Fleet continued the Engagement till Night, when they were intirely beaten; and, in a few Days after, his Army deserted to his Rival^a.

As for *Cleopatra*, she sailed directly to *Alexandria*; but, fearing that her Subjects would not receive her, if acquainted with the true State of her Affairs, she entered the Harbour, with all her Ships adorned, as if they had carried the Victory: And having, by this Artifice, got into full Possession of the City and Kingdom, she caused such of the Nobility of *Egypt*, as she most suspected, to be put to Death; and then it was, that she formed the Project of putting all her Treasures on board her Ships, and drawing those Ships thro' the Canal before-mentioned, into the *Red Sea*; which Design was prevented by the Vigilance of the *Romans*, who prevailed with the *Arabians* on the opposite Side of the Gulph to burn those Ships; which wholly disappointed her Design^b.

Antony was at that Time absent, and seemed to be endeavouring to collect new Forces; but he soon abandoned that Project, and followed *Cleopatra* to *Alexandria*, where he fell into the same lazy and luxurious Life he had led before. All his Hopes lay, now, in endeavouring to soften *Augustus* by Submissions; and, with this View, both he and *Cleopatra* sent to the Conqueror, offering to resign all they yet possessed, and to lead a private Life, in whatever Place he thought proper to assign them. To *Antony's* Proposals no Answer was made, but *Cleopatra* was flattered with Hopes, that she might not destroy, or make away with, her Treasures: And these tallacious Hopes led her to the greatest Baseness, that of betraying *Antony*, by giving up *Pelusium*, which was garisoned by her Forces, to *Augustus*, on the first Approach of his Army. *Antony* would then have put himself on board his Fleet, which was still numerous, in order to have fought another Battle; but, as soon as they were drawn into a Line, most of his Ships went over to the Enemy. His Land Forces acted by him in the same manner, thro' the Insinuation of *Cleopatra*; which drove him into such a Fit of Despair, that he threw himself upon his Sword, chusing rather to die by his own Hands, than to fall alive into those of his Enemy^c.

A little before this Accident happened, *Cleopatra* had retired to a magnificent Monument, which she had caused to be built for herself, near the Temple of *Isis*; and thither she removed the best Part of her Treasure, shutting up herself therein, with only two of her Maids, and one of

her Eunuchs, expecting, in that Solitude, whatever might befall her^d.

Upon the coming of *Augustus* to *Alexandria*, all *Egypt* submitted to him; and he took all the Precautions possible, for settling and preserving it; and, amongst these, we are to reckon his putting to Death *Cesarion*, which he did for two Reasons; first, because he had been declared the lawful Heir of *Julius Caesar*, which might have awakened new Troubles in *Italy*; and next, because of his Defect from the *Ptolemies*, which might have given him a Claim to the Kingdom of *Egypt*. He likewise put to Death *Antyllus*, the eldest Son of *Antony* by his first Wife, tho' he had married his own Daughter: As to the Reason of which, History is silent^e.

Cleopatra remained, all this time, shut up in her Tomb; for *Augustus*, having now made sure, both of her Person and her Treasures, neglected her; which she perceiving, and being likewise informed, that he intended to carry her, in three Days time, to *Rome*, in order to grace his Triumph, she caused herself to be bit by an Asp, a Kind of Serpent found only in *Egypt* and *Libya*; the Bite of which induces a Lethargy, which brings on Death without Pain, in about three Hours time. Such was the End of this Princess, in the thirty-ninth Year of her Age, and in the twenty-second of her Reign, accounting it from the Death of her Father *Ptolemy Soter*; and in her ended the Royal Race of the *Ptolemies*, after they had governed in *Egypt*, from the Death of *Alexander* the Great, two hundred ninety-four Years^f.

The Senate and People of *Rome* were so well pleased with the Conduct of *Augustus* in this Affair; for he spent but a single Month, in the Subjection of this whole Kingdom; that they decreed the Name of this Month to be altered, and that, instead of *Sextilis*, it should be called *August*, as it has been ever since. They likewise decreed, that the Day, on which *Augustus* had entered *Alexandria* should, in all succeeding times, be accounted fortunate; and that a new Era should take Place in *Egypt* from that Time, as it did; and derived its Name from the Victory at *Asium*, tho' it did not commence till near a Year after, being fixed to the twenty-ninth of *August*, in the thirtieth Year before Christ, because on that Day *Cleopatra* died, and, the *Macedonian* Empire ending in this Country, that of the *Romans* commenced^g.

By this Era, all publick Transactions were computed in *Egypt*, so long as it remained a Province of the *Roman* Empire, which was six hundred and seventy Years. While *Augustus* staid at *Alexandria*, he visited the Tomb of *Alexander* the Great, and saw his Body, which lay embalmed there, in a Case of Glass: It had formerly been kept in a Case of Gold; but that being stolen by *Sелеucus Cebicene*, who had married an *Egyptian* Queen, this of Glass was provided in its stead. But *Augustus* would not be persuaded to see the Sepulchres of the *Ptolemies*, nor to visit the *Egyptian* *Apis*, telling those who would have had him done it, that he worshipped the immortal God, and not Beasts^h. At the Close of the Month of *August*, when he left this Country, he appointed *Cornelius Gallus* the first Governor of the Province.

SECTION IX.

The History of the Indian Trade, as carried on through Egypt by the Red Sea, under the Romans; the Manner of its Establishment; the Profits drawn therefrom; and the Discoveries made in Consequence of this Commerce.

1. The Romans little addicted to Maritime Affairs before the second Punic War, and incited thereto chiefly by the Desire of destroying Carthage.
2. The Progress of their Naval Power, till they became Masters of the Sea.
3. The extraordinary Establishments of Augustus, for the Support of the Maritime Force of the Roman Empire.
4. His Maxims for the Government of Egypt, considered as inviolable Laws by the succeeding Emperors; and contributed greatly to the Preservation of the Province.
5. An Account of the Expedition of Ælius Gallus into Arabia, the many Difficulties he met with therein; and the Consequences which it produced.
6. The Ethiopians invade Egypt; are repulsed by Publius Petronius, the Roman Prefect, who penetrated as far as Nepata, the Capital of Ethiopia.
7. The Fame of Augustus reaching the Indies, Ptolem sends Ambassadors to desire his Friendship.
8. The History of this Commerce continued to the End of the Reign of Vespasian, including the Embassies of Indian Princes.
9. An exact Description of the annual Fleets sent within this Period, to the Indies; the Nature of their Voyages; the Ships employed in them, and the Profit.
10. Observations upon the State of that Commerce, within this Period; and on the Objections raised against it by Pliny.
11. Of the new Channels of Trade opened from Egypt by the Romans, within the Compass of this Period; and the Advantages derived from them.

1. THAT we may fully enter into the Wisdom of that Policy shewn by the Romans, in the Management of the Affairs of Egypt, and more especially of the Trade to the Indies, which they improved to the highest Degree possible, considering the State of Maritime Affairs in those Days, it will be necessary to say something of the Rise and Progress of their Naval Power, which did not make any great Figure in the World, till the Beginning of the second Punic War. Before that Time, they had shewed a very trivial, or scarce any, Attention thereto, either because they were then wholly occupied in extending their Dominions by Land; or, that the first Mistortunes they had experienced on their own Coasts, disgusted them in respect to a Trade, where all Things are exposed to Chance, and where there is perpetual Danger: But as their Genius led them to persevere, in Support of whatever they once discerned to be certainly and inconceivably useful, they no longer abandoned Maritime Affairs, when they found, that it was possible to reconcile them with their Views and Interests: And one may safely say, that it was to Carthage, the Haughtiness and Obstinacy of which gave them so much Trouble, that they were chiefly indebted for this Obligation.

When therefore the Senate of Rome took, at last, the fatal Resolution of razing that City to its very Foundations, the Consul C. M. Figulus made the following Harangue, by their Order, to the Carthaginians: 'It is the Sea, the mighty Power you have acquired thereon, the Treasures you have drawn from thence, that have hastened your Fall. It is the Sea, and the Powers that you possess thereon, that tempted you to seize Sardinia, Sicily, Spain; that seduced you to break your Treaties of Peace; to pillage our Merchant Ships; and to endeavour to hide your Crimes, by drowning those you found on board them. In one Word, it has been your perfect Knowledge of Maritime Affairs, made you regard nothing else; and led you to place your Glory in committing such mischievous Acts, as hitherto we have not been in a Condition, nor had the Power, to punish.'

2. I shall not pretend, here, to run into a Detail of all the Expeditions entered into by the Romans, after the Punic Wars; and in which they shewed so extensive a Capacity, in the Conduct of their Arms; so perfect a Preference of Mind, in all Danger; and an Industry so happy in gaining the Hearts of all People, and making themselves willingly obeyed by those, whom they had rendered their Subjects by Force. I shall only observe, that as all their Enterprises had some great End in View, so they never failed to keep great Fleets at Sea, under the Command of able and experienced Captains. The Love of Glory,

amongst them, was the universal Passion; and this it was, that induced them to think, that there was something low and indecent in all kind of Commerce. But Sentiments so rigid softened by Degrees; and these very Romans, who would appear to conquer, merely to have an Opportunity of giving Examples of Probity, Disinterestedness, and Moderation, began, at length, to vanquish, in order to procure the Delights and Commodities that they wanted; and that they might adorn Italy with the Spoils, and render her opulent, at the Expence of other Nations.

The Ruin of Carthage, which, however, was purchased by Rivers of Blood, subjected to Rome all the rest of Africa; which was of infinite Advantage, by securing to that proud City a constant Supply of Corn; and the burning of Corinth, which followed afterwards, finished the Demolition of Greece, and threw her into a Slavery so much the more galling, as for so long a Tract of Time she had been used to command.

With respect to the Conquests made by the Romans in Asia, they proved the Source of such immense Riches, as were little known to former Times; and, with these Riches, were introduced at Rome, and all the principal Cities of Italy, refined Luxury, a studied Elegance, which diffused itself through all; and was alike visible in Buildings, Furniture, Dress, Gardens, and all the Appurtenances to the Table. The Love of Pleasure, that Pomp which strikes the Eye, and that Magnificence which captivates the Mind, banished the antient Severity of Manners; and the Romans became now more rich, more polite, more voluptuous; disdained the humble Poverty of their Ancestors, and began to form new Notions of Virtue.

In this, undoubtedly, they were happy beyond all other Nations, that every new War not only led to new Conquests, but taught them likewise fresh Improvements in the Arts of Military and Naval Armaments: And thus one Victory, by the Care and Skill they discovered in improving it, became the Means of obtaining many more. Thus, for Instance, when Lucullus triumphed over Mithridates, he caused to be exposed, amongst the rest of the Spoils he had taken from him, one hundred and ten Prows of Gallies, sheathed with Copper. It is well known, that this it was, that heretofore constituted the great Force of Ships of War, and rendered them terrible in the Day of Battle: And as these Prows were easily taken off, they were, in the Day of Triumph, carried before the Victor; who, besides, had his Temples adorned with a Crown, or Circle of Gold; on which were embossed the Prows and Poops of Gallies, intermingled one with another, which Crown was titled *Navale*, or *Rostrale*.

^a Poly. Ægypt. lib. xxviii. Liv. Epitom. lib. Mix. Flor. lib. ii. Orofius, lib. iv. Eutrop. lib. iv. ^b It is evident from this Speech, that the Carthaginians were long Masters of the Sea, and that Rome was but lately so. ^c Liv. Epitom. li. Florus, lib. ii. Pomponius in Asiat. Plin. lib. viii. c. 2. Tacit. lib. x. c. 2. ^d This Naval Crown Augustus bestowed on Agrippa, for his eminent Services performed at sea.

3. It was, however, reserved for the Fortune and Wisdom of *Augustus*, to unite all those Advantages, and to reduce the Maritime, as well as the Civil Affairs of the *Roman* State into a regular System. This he was enabled to do by the Fulness of his Power, as it was from the evident Advantages, derived from the prudent Use made of his Power, that the *Romans*, under his Government, so little regretted the Loss of their Freedom; for these Benefits were then present, and the Evils afterwards felt, were only foreseen. This Maritime System of *Augustus*, consisted in keeping always three numerous Squadrons, and those too, in every respect, well equipped, in constant Readiness to put to Sea for any Service, and in any Quarter of the *Roman* Dominions, where they might be wanting. The first of these Squadrons was stationed at *Fregius* in the *Narbonnesian* *Gaul*, which was to restrain the Inhabitants of the *Spanish* Coasts, and of those Parts of *Provence* and *Languedoc*, which are washed by the *Mediterranean*. The second was at *Cape Messina*, for the Security of the Navigation, in that which was called the *Lower*, or *Etrurian* *Sea*: The third at *Ravenna*, for scouring the *Upper* *Sea*, which is, by us, commonly called the *Airiatie*.

Besides these two last Squadrons, he kept, as we are informed by *Vegetius*, always quartered near the Capes of *Messina* and *Ravenna*, a certain Number of Soldiers, ready to embark at a Minute's Warning, who are called *Classarii*, or *Marines*. Their Duty was to serve at Sea, in which they were continually exercised; and this, for any thing we know, was the first regular Institution of Seamen among the *Romans*: For so, in Fact, these People were; and ought, therefore, rather to be styled *Mariners* than *Marines*, in the modern Acceptation of that Word. Before this Time, Soldiers and Seamen were the same thing amongst the *Romans*; or, in other Words, Soldiers handled the Oar, when put on board their Ships; hung their Shields along the Sides of their Vessels; and resumed the Use of them, and of their Swords, whenever an Opportunity offered for the making a Descent. But now this Discipline was, in some measure, altered, and these *Classarii* were particularly destined to serve on board these Squadrons, in both Capacities; that is, as Seamen, and as Soldiers: And therefore, in the strict and natural Sense of the Word, they may be, very properly, called *Marines*.

There is another Point of this Emperor's Discipline, which demands our Notice, because it regards our Subject more nearly than any of the rest. He was sensible, that a great Part of the *Roman* Provinces remained, in a manner, hid and undiscovered; by which the Inhabitants were injured, and the public Revenues suffered. He, therefore, equipped Ships for making Discoveries in *Africa*, towards the Equator; others for examining the Coast of *Europe*, as far as the *Cimbric* *Oversnessus*; and, lastly, a third Sort, which were to sail up such Rivers, the Mouths of which were only known: The Vessels employed in these Courses, were styled *Naves Lusoriae*. In a Word, the *Romans* never undertook such perilous or important Voyages, as under the Reign of *Augustus*: That Emperor, who effaced, by his Virtues, and by his beneficent Actions, all Memory of the Cruelties committed during the *Triumvirate*, took care to send into the most distant Provinces, Men of the most quick and penetrating Parts; from whom he received a most sincere and accurate Detail of all that passed there: So that he was always possessed of the true State of every Part of his extensive Dominions; and could judge what was requisite to be done in them, either for remedying present Inconveniences, or that future Advantages might be procured. Such, then, was the State of the *Roman* Affairs; such the Genius, Character, and Conduct of the Prince, who was then at their Head, when *Egypt* was added to the Dominions of that State; and thereby, in a manner, completed their Conquests.

4. As the Reduction of *Egypt* into the Form of a Province was entirely the Work of *Augustus*, so he conceived himself at Liberty to dispose of it to whom he pleased; and to settle it as he thought proper. The Knowledge he had of the Country, and its Inhabitants, made him regard this as one of the most difficult Points that ever fell under his

Consideration. But his Parts, tho' slow, served him so effectually, when he considered any Subject maturely, that in this Case he settled so just, so excellent a Plan, that the Government of *Egypt* was regulated exactly according to his Maxims, by all his Successors. It would take up too much Time, and lead us too far from our Subject, should we attempt to explain the Manner in which the Provinces of the *Roman* Empire were distributed. It will sufficiently answer our Purpose to observe, that some of them were assigned by the Senate, and others were absolutely at the Will of the Prince; which Method of Distribution was settled by *Augustus*, and that, at the Time of his settling it, he reserved *Egypt*, and almost all the Countries depending upon it, to himself.

The first Maxim he established with regard to its Government, was, that the Prefect should be always chosen out of the Order of *Roman* Knights, from an Apprehension, that if it was in the Hands of a Man of great Family and Interest, he might be tempted to revolt; in which Case he forelaw, that it would be extremely difficult, if not impossible, to recover that Province to the Empire. His second Maxim was, that no Senator, or other Person of Distinction, should be permitted, upon any Pretence whatsoever, to enter that Province without a special Licence, which was very rarely granted either by him, or his Successors. In the third Place, he took care, that there should be but a small Body of Troops kept up there, for many Reasons: First, the Country itself was very defensible from its Situation; for its Coasts on the North had few Ports, and those very difficult to be entered; and the Navigation on the Coast extremely hazardous and dangerous: On the East and West it had the *Arabian* and *Libyan* Deserts, that were, in a manner, impassable. On the South lay the *Troglodytes*, and other Nations, who were rather desirous of preserving their own Freedom, than inclined to invade or disturb their Neighbours: And, as for the *Ethiopian*s, the Frontiers of *Egypt* towards them were narrow, well fortified, and easily guarded.

Secondly, though the People of *Egypt* were naturally mutinous and seditious, yet they were far from being of a warlike Nature; so that a few regular Troops were, at all Times, sufficient to repress their Insolence, and to keep the Province quiet. Thirdly, while the Prefect had but a few Troops, and those, for the most part, disposed into Garrisons, the Commanders of which were not absolutely under his Power, he had little Probability of maintaining himself in the Possession of the Country, in case his Ambition, at any time, tempted him to forget his Duty. His fourth Maxim was, to change its Governor frequently, that he might not have Time to form any Schemes to the Prejudice of the Empire, or be able to raise any considerable Party among the Inhabitants. His fifth and last Maxim was, to make an absolute Secret of the whole System of Government in this Province; so that under him, and most of his Successors, the Management of Affairs in *Egypt* was considered as one of the great Mysteries of State, into which few were admitted, and none were suffered to pry.

It was agreeable to these Maxims, that he appointed *Cornelius Gallus* the first Governor of the Province, a *Roman* Knight, raised by his own Merit and the Emperor's Favour; but of no great Family or Interest, and whose Talents were not of a Nature to excite any Jealousy of his undertaking great or dangerous Designs: Yet this Man held the Government but a little while; and, when he lost it, fell into absolute Disgrace. The Manner in which he directed the Affairs of the Province, and the needless Severity he made use of in exacting the first Tributes that were levied, occasioned Tumults in the Province, and Complaints against him to the Emperor, who immediately sent *P. Petronius* to succeed him, when he had not held that Government four Years. On the Return of *Gallus* to *Rome*, he very foolishly censured the Conduct of *Augustus*; upon which the Emperor forbid him his Palace, and left him to the Judgment of the Senate with respect to the Accusations that had been brought against him for his Male-administration in *Egypt*; and they entered so warmly
